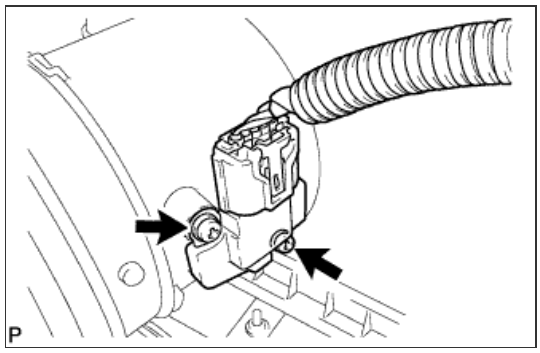
v. Blow air into the MAF meter, and check that the MAF value fluctuates. If the result is not as specified, check the MAF meter (Click here), or wiring and ECM (Click here).

for Preparation Click here

1. REMOVE ENGINE ROOM SIDE COVER RH



a. Remove the 7 clips and engine room side cover.

2. REMOVE MASS AIR FLOW METER

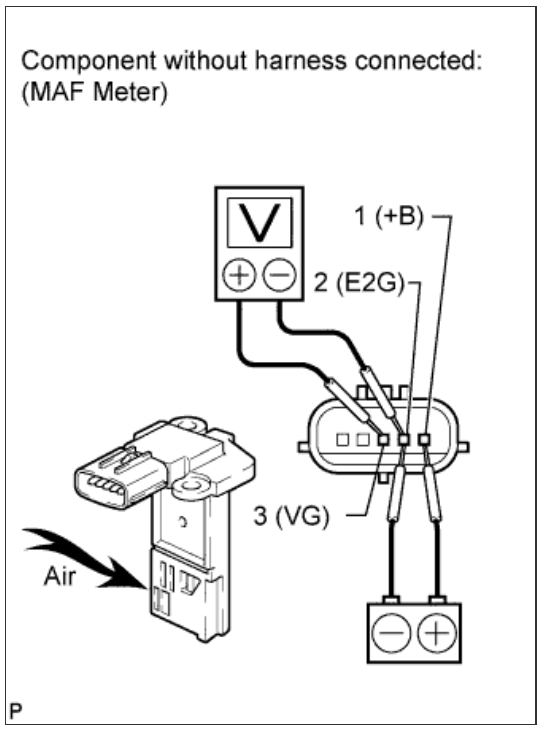
a. Disconnect the MAF connector.

b. Remove the 2 screws and MAF meter.

for Preparation Click here

1. INSPECT MASS AIR FLOW METER

a. Check the output voltage.

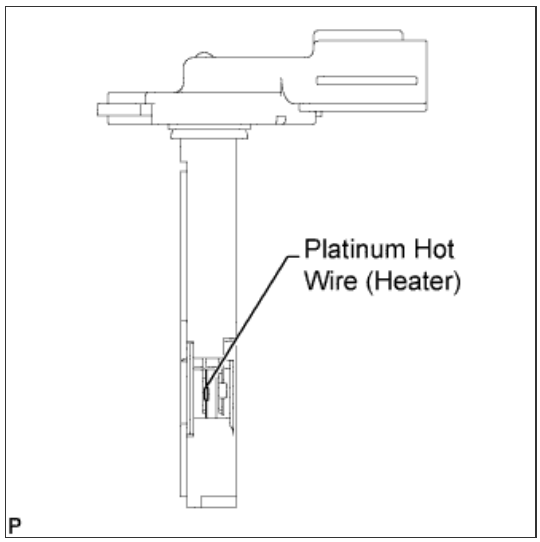


i. Apply battery voltage across terminals 1 (+B) and 2 (E2G).

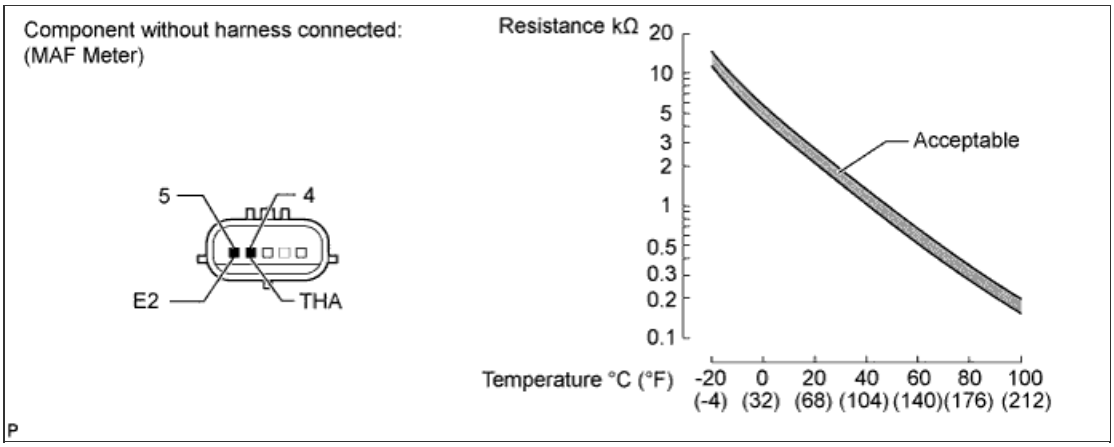
NOTICE:

While using the battery during inspection, do not bring the positive and negative tester probes too close to each other as a short circuit may occur.

ii. Using a voltmeter, connect the positive (+) tester probe to terminal 3 (VG), and the negative (-) tester probe to terminal 2 (E2G).



iii. Blow air into the MAF meter and check that the voltage fluctuates.
If the result is not as specified, replace the MAF meter.



b. Perform a visual check for any foreign matter on the platinum hot wire (heater) of the mass air flow meter shown in the illustration.

OK:
There is no foreign matter.

If the result is not as specified, replace the mass air flow meter.

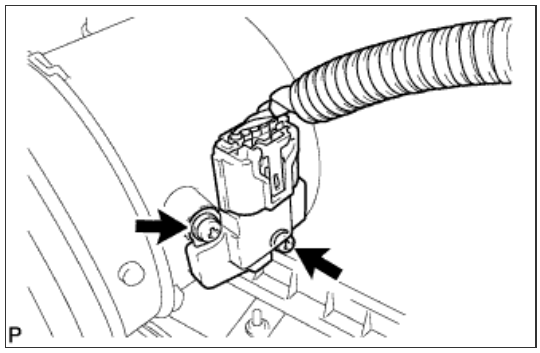
c. Check the IAT sensor.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
4 (THA) - 5 (E2)	-20°C (-4°F)	12.5 to 16.9 kΩ
	20°C (68°F)	2.19 to 2.67 kΩ
	60°C (140°F)	0.50 to 0.68 kΩ

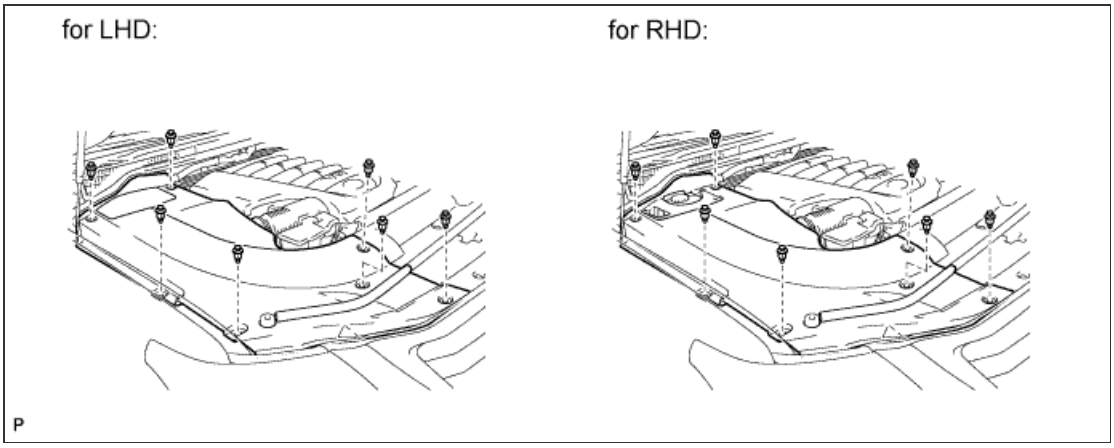
If the result is not as specified, replace the MAF meter.



for Preparation Click here

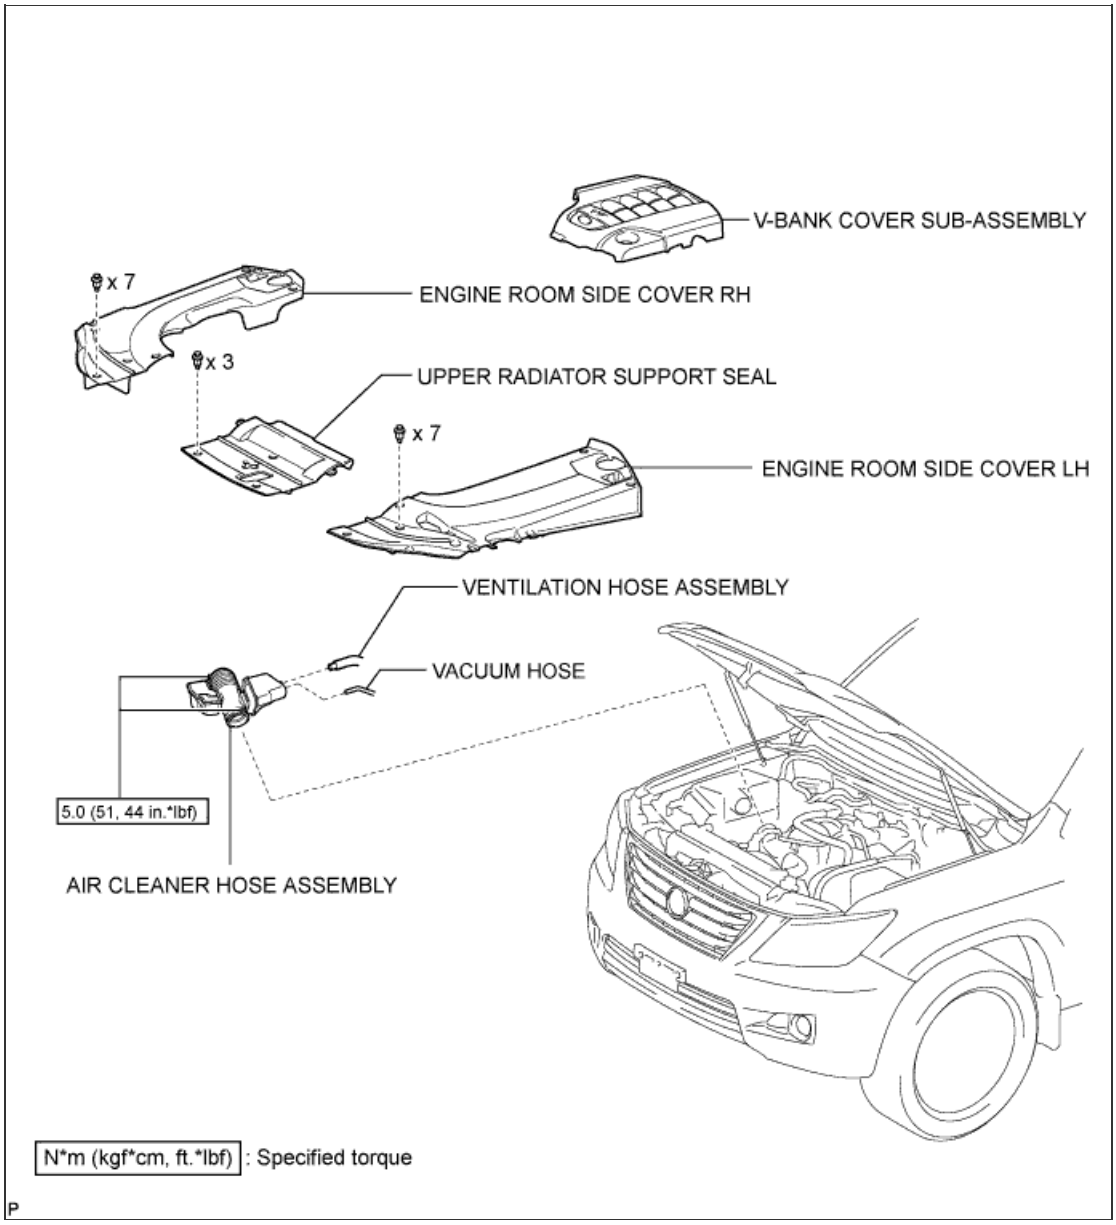
1. INSTALL MASS AIR FLOW METER

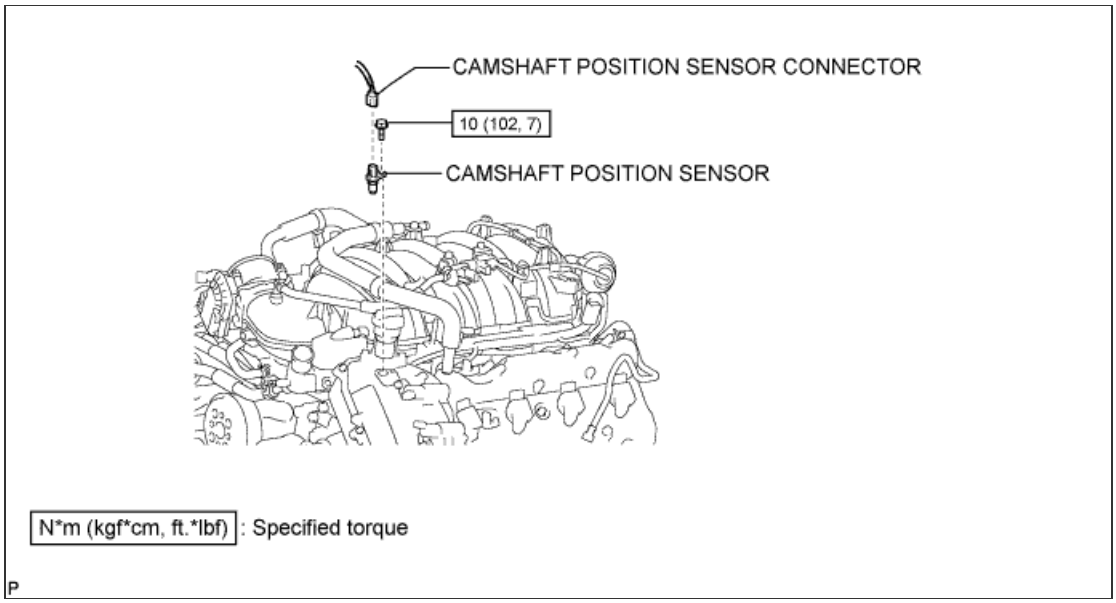
a. Install the MAF meter with the 2 screws.



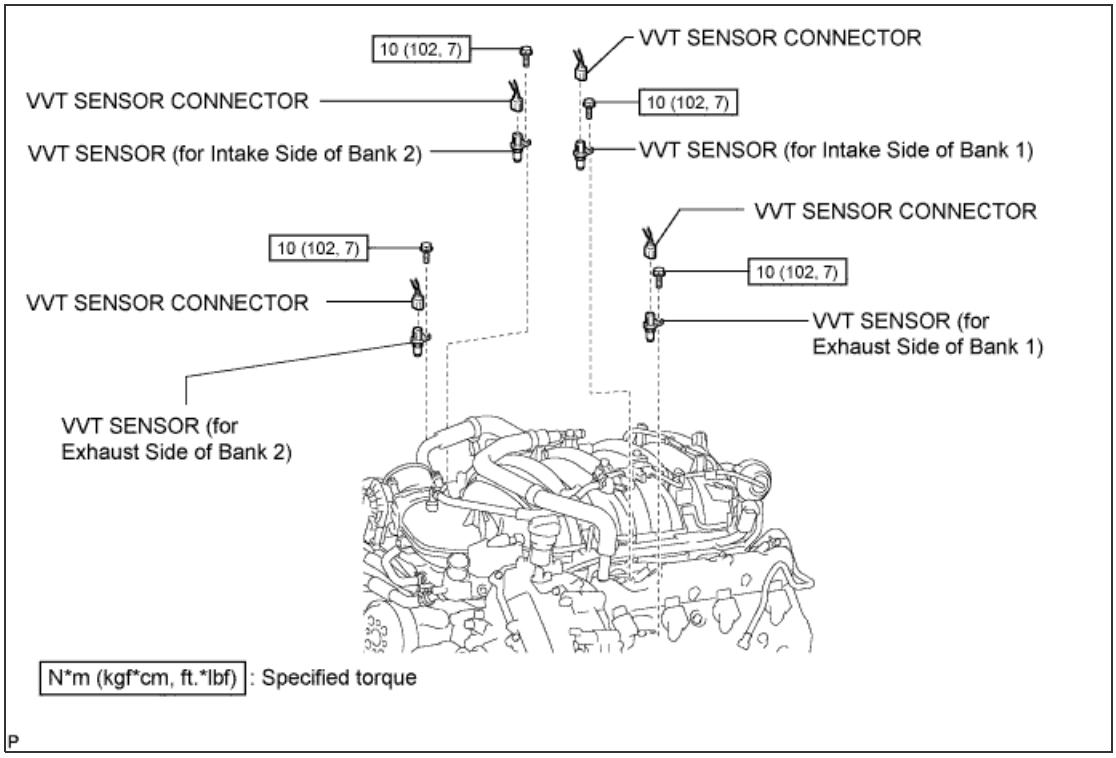
Torque:
1.7 N*m{ 17 kgf*cm , 15 in.*lbf }

b. Connect the MAF connector.





2. INSTALL ENGINE ROOM SIDE COVER RH



a. Install the engine room side cover with the 7 clips.

for Preparation Click here

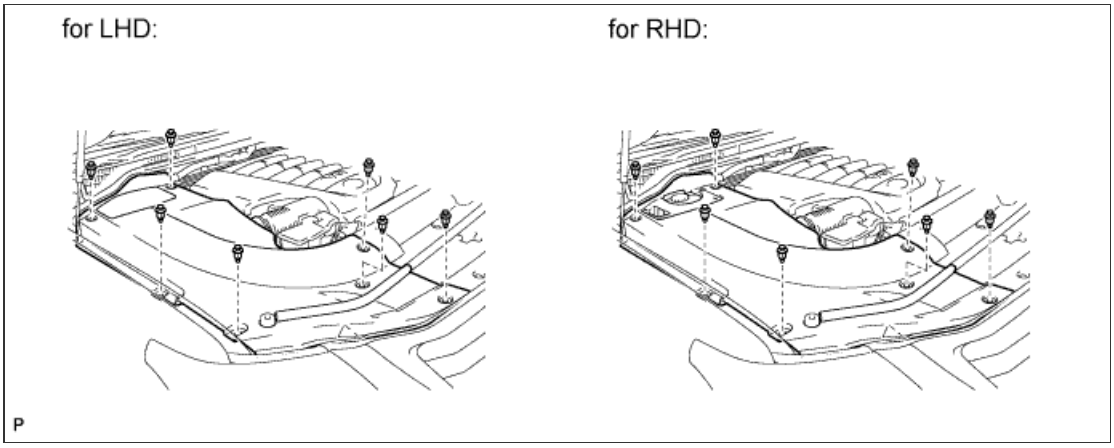
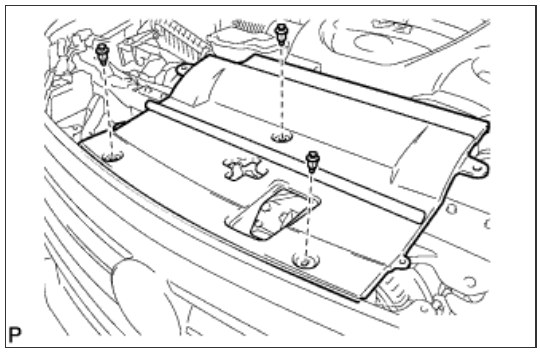
for Preparation Click here



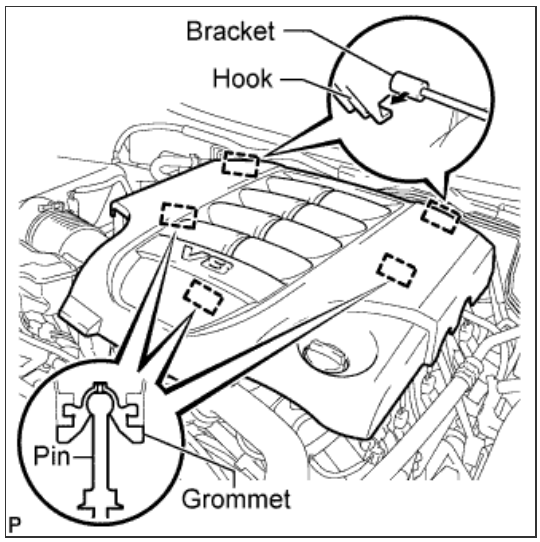
1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.



2. REMOVE ENGINE ROOM SIDE COVER RH

a. Remove the 7 clips and engine room side cover.

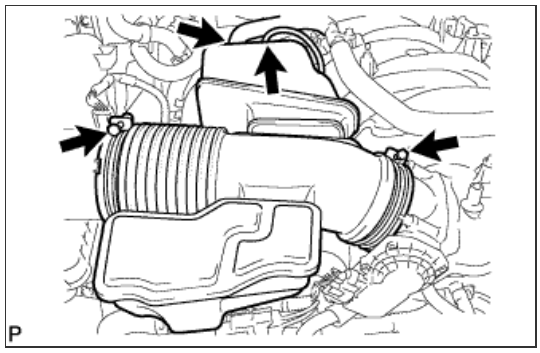


3. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 3 clips and upper radiator support seal.

4. REMOVE V-BANK COVER SUB-ASSEMBLY

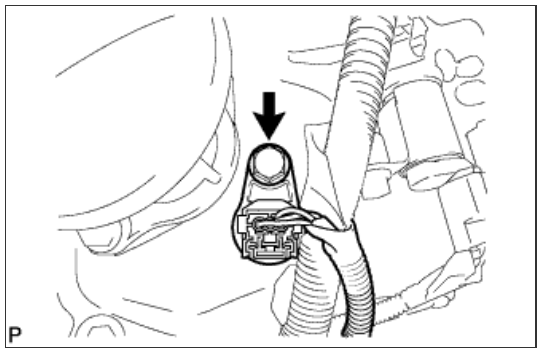
a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.



5. REMOVE AIR CLEANER HOSE ASSEMBLY

a. Disconnect the vacuum hose and No. 2 ventilation hose.

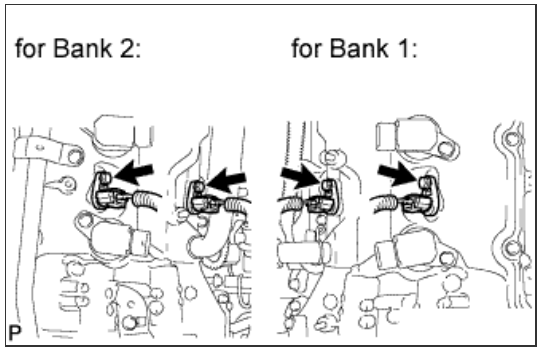
b. Loosen the 2 hose clamps.



c. Remove the air cleaner hose.

6. REMOVE CAMSHAFT POSITION SENSOR

a. Disconnect the sensor connector.

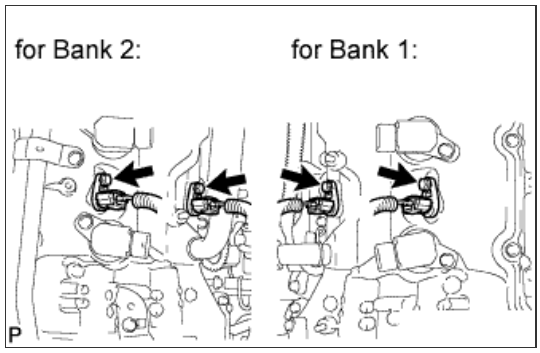


b. Remove the bolt and sensor.

7. REMOVE VVT SENSOR

a. Disconnect the 4 sensor connectors.

b. Remove the 4 bolts and 4 sensors.



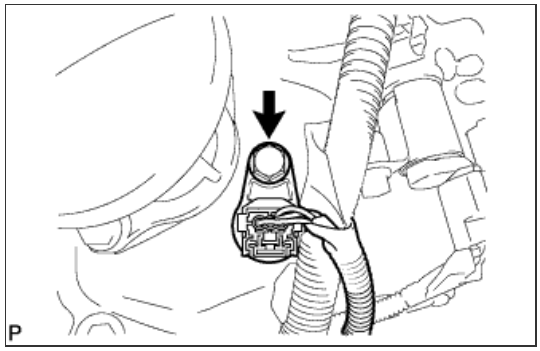
for Preparation Click here

1. INSTALL VVT SENSOR

a. Install the 4 sensors with the 4 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. Connect the 4 sensor connectors.



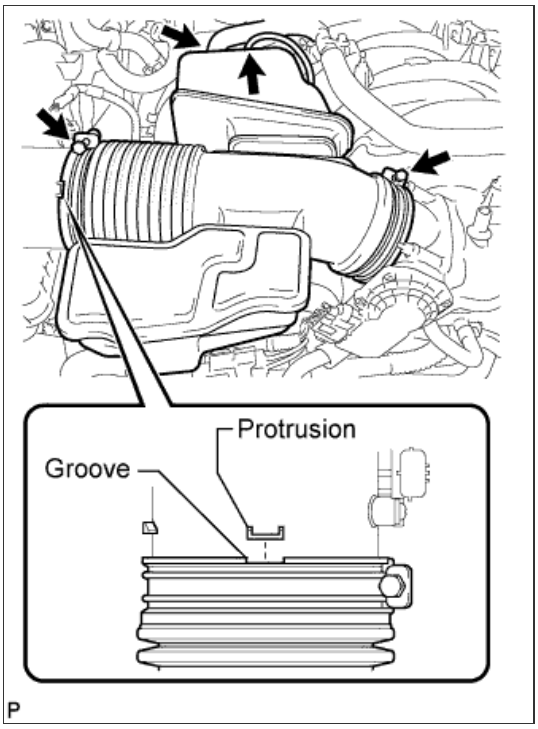
2. INSTALL CAMSHAFT POSITION SENSOR

a. Install the sensor with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. Connect the sensor connector.

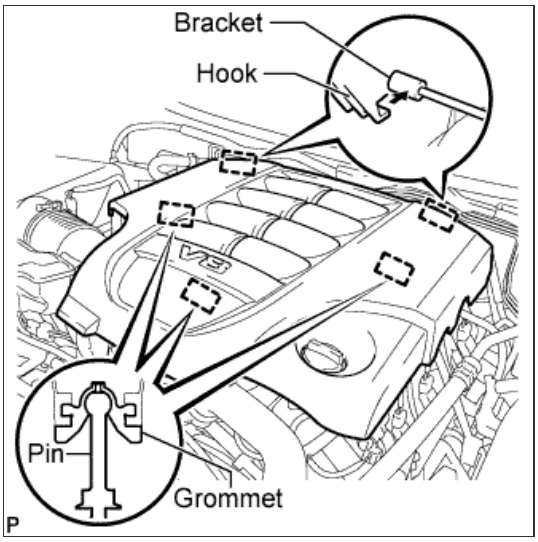
3. INSTALL AIR CLEANER HOSE ASSEMBLY



a. Install the air cleaner hose so that the protrusion of the air cleaner cap aligns with the groove of the hose as shown in the illustration.

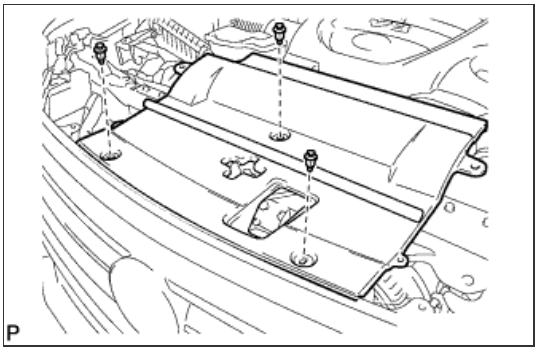
b. Tighten the 2 clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }



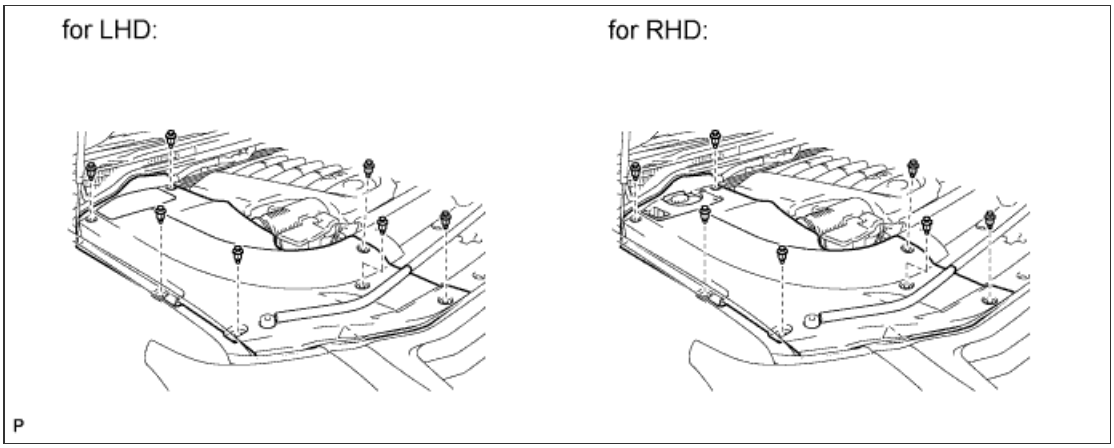
c. Connect the vacuum hose.

d. Connect the No. 2 ventilation hose.



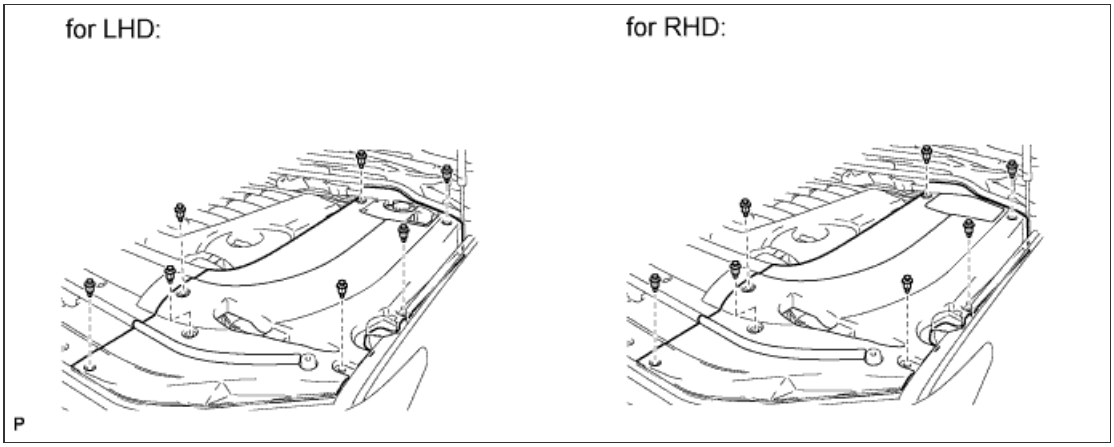
4. INSTALL V-BANK COVER SUB-ASSEMBLY

a. Attach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.



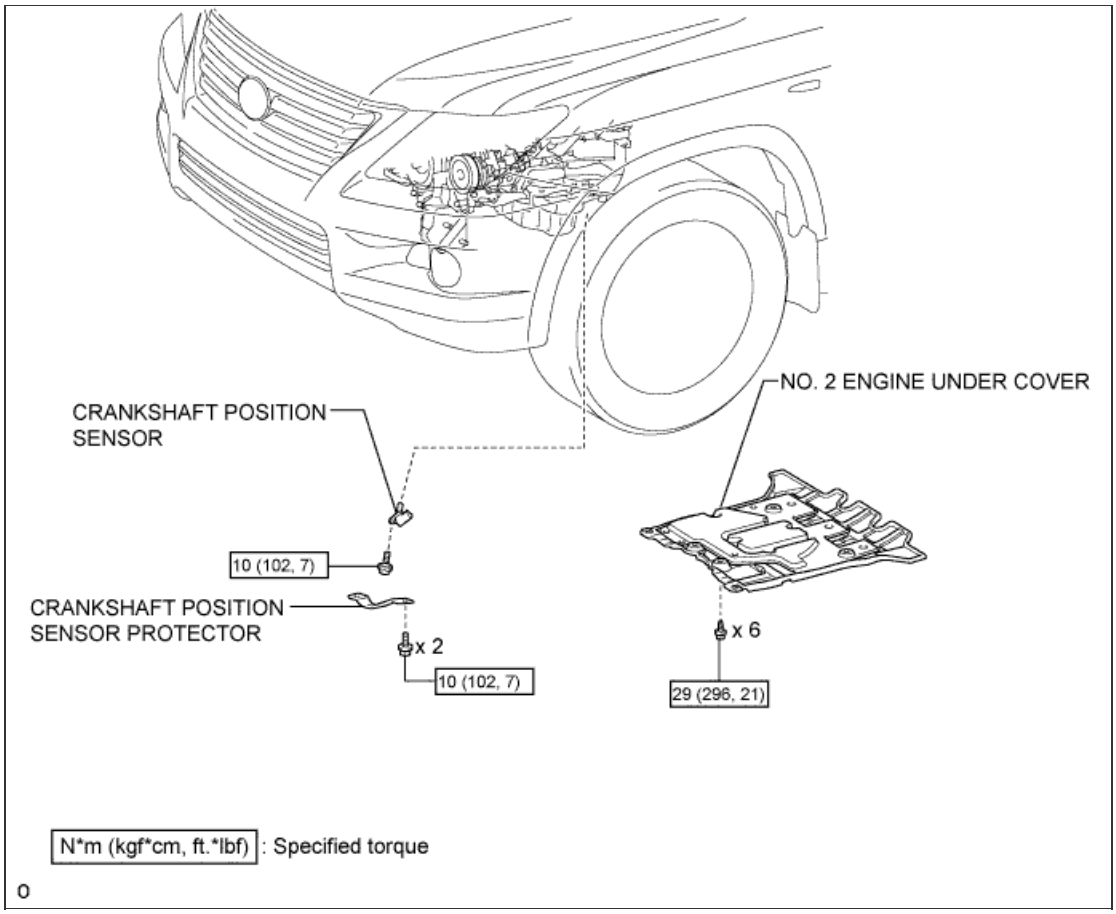
5. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the upper radiator support seal with the 3 clips.



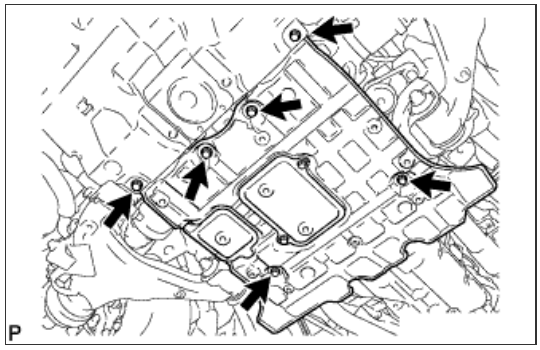
6. INSTALL ENGINE ROOM SIDE COVER RH

a. Install the engine room side cover with the 7 clips.



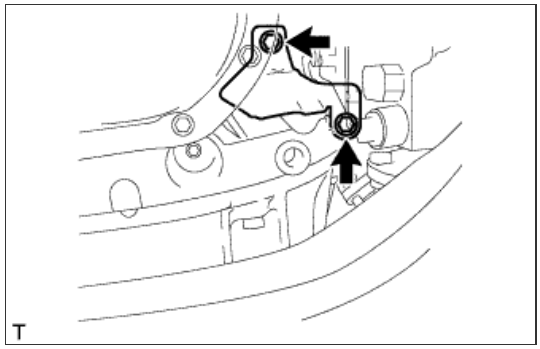
7. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.



for Preparation Click here

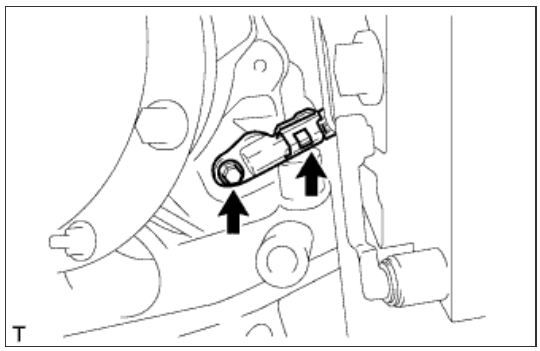
for Preparation Click here



1. REMOVE NO. 2 ENGINE UNDER COVER

a. Remove the 6 bolts and under cover.

2. REMOVE CRANKSHAFT POSITION SENSOR PROTECTOR

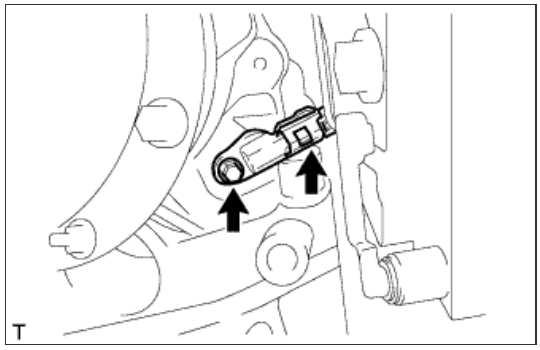


a. Remove the 2 bolts and sensor protector.

3. REMOVE CRANKSHAFT POSITION SENSOR

a. Disconnect the sensor connector.

b. Remove the bolt and sensor.

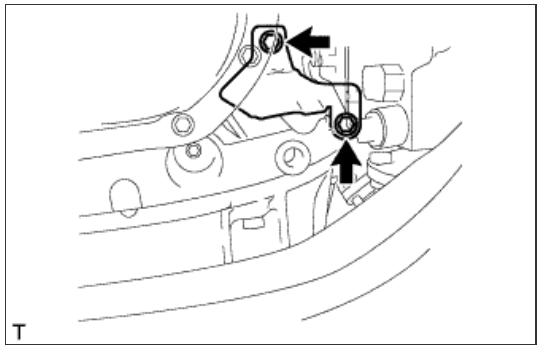


for Preparation Click here

1. INSTALL CRANKSHAFT POSITION SENSOR

a. Install the sensor with the bolt.

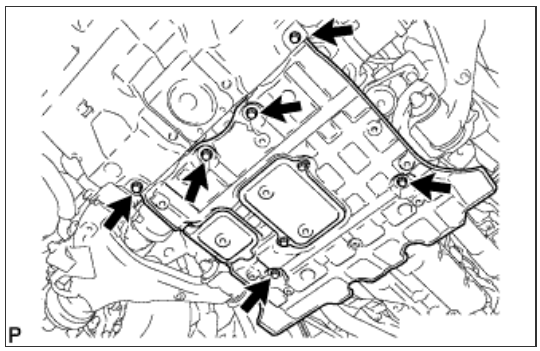
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



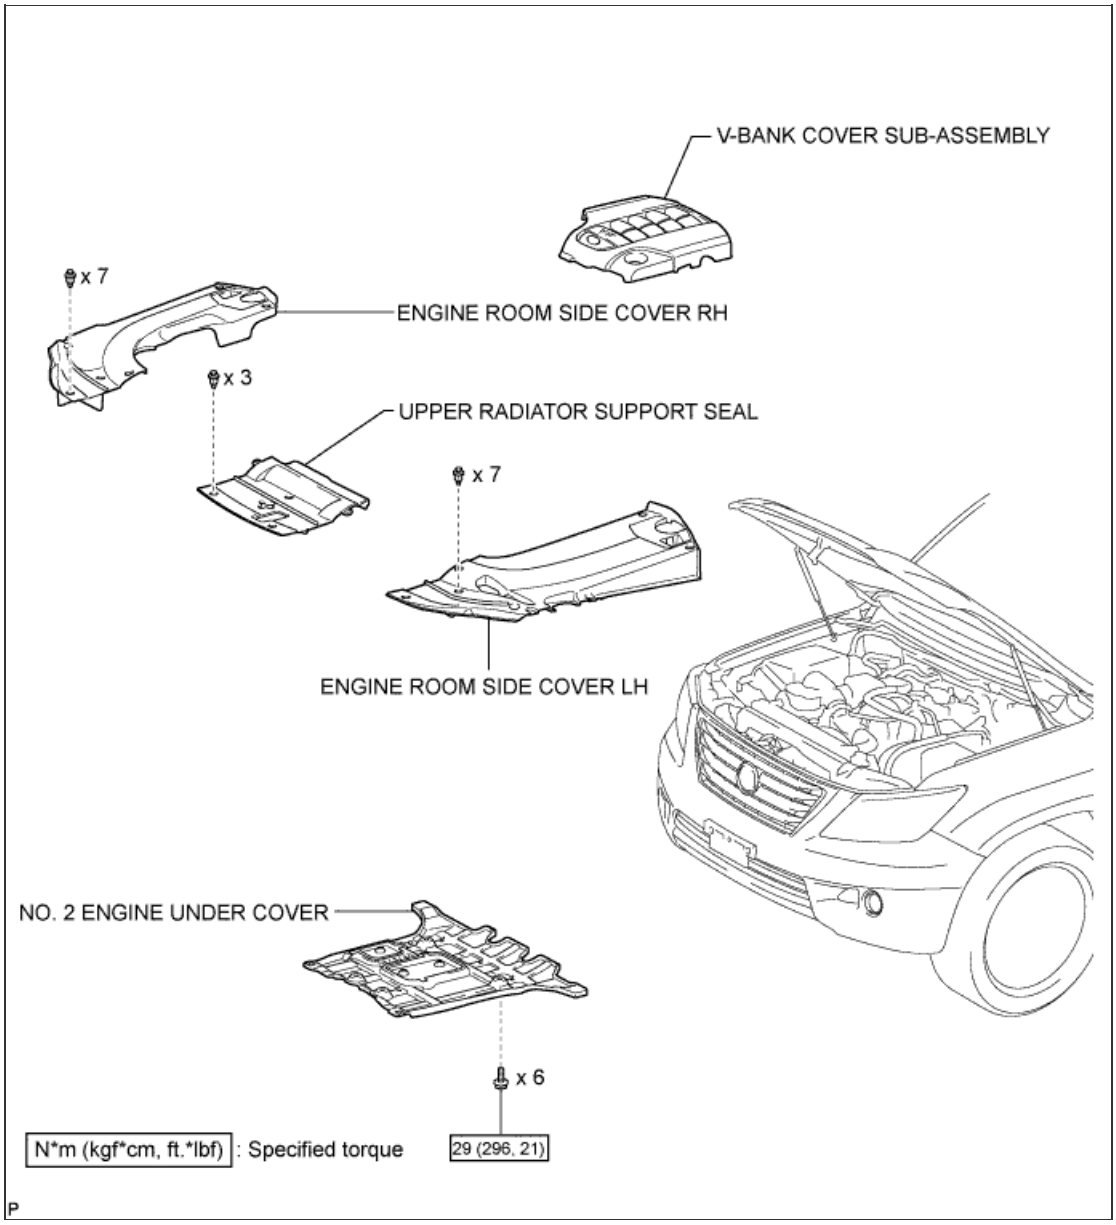
b. Connect the sensor connector.

2. INSTALL CRANKSHAFT POSITION SENSOR PROTECTOR

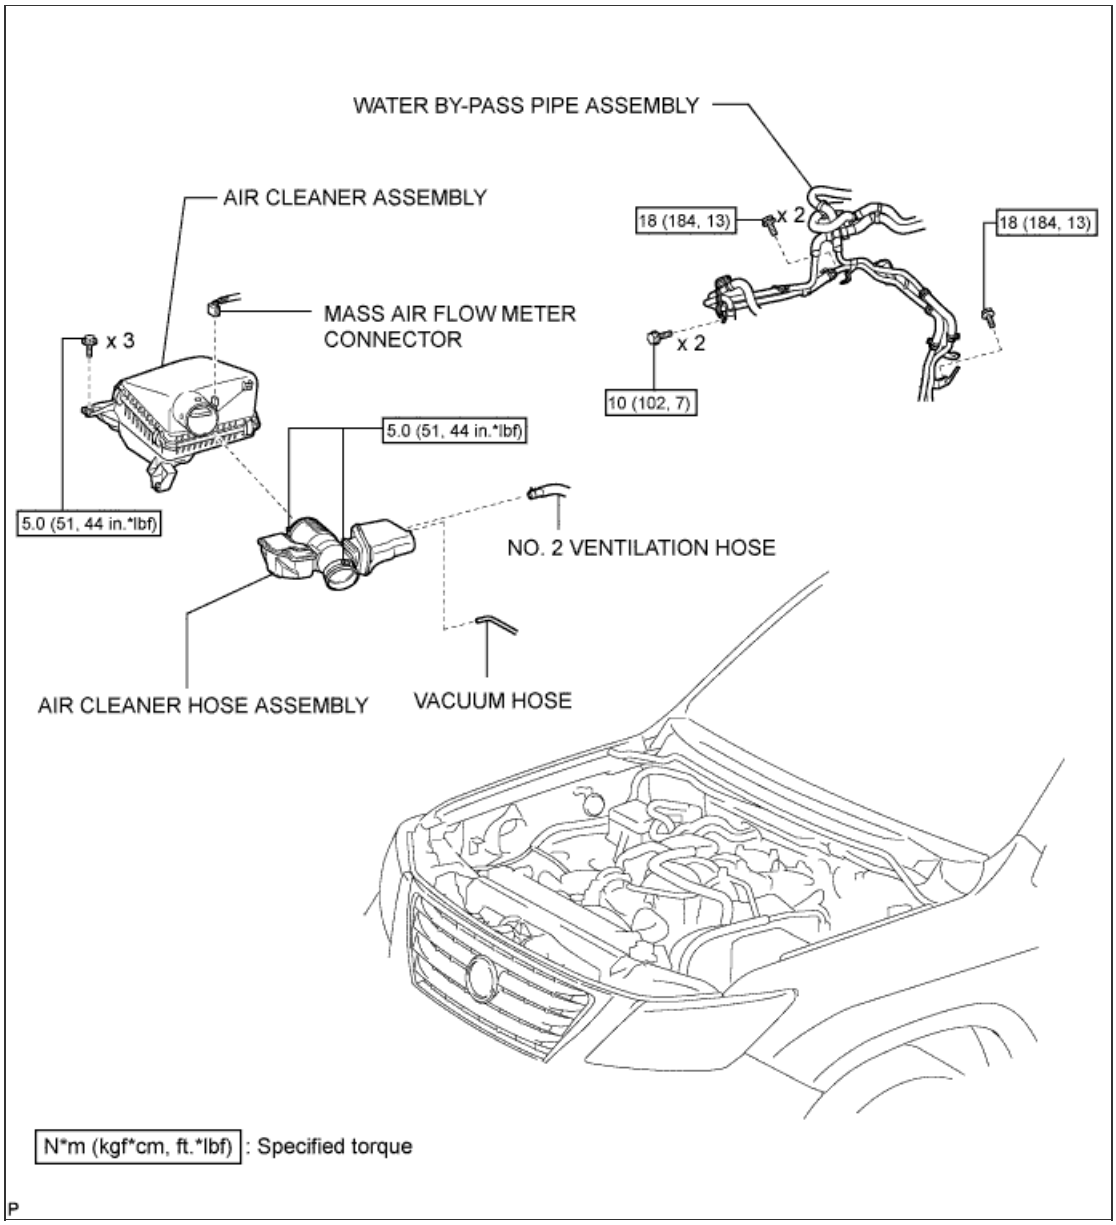
a. Install the sensor protector with the 2 bolts.



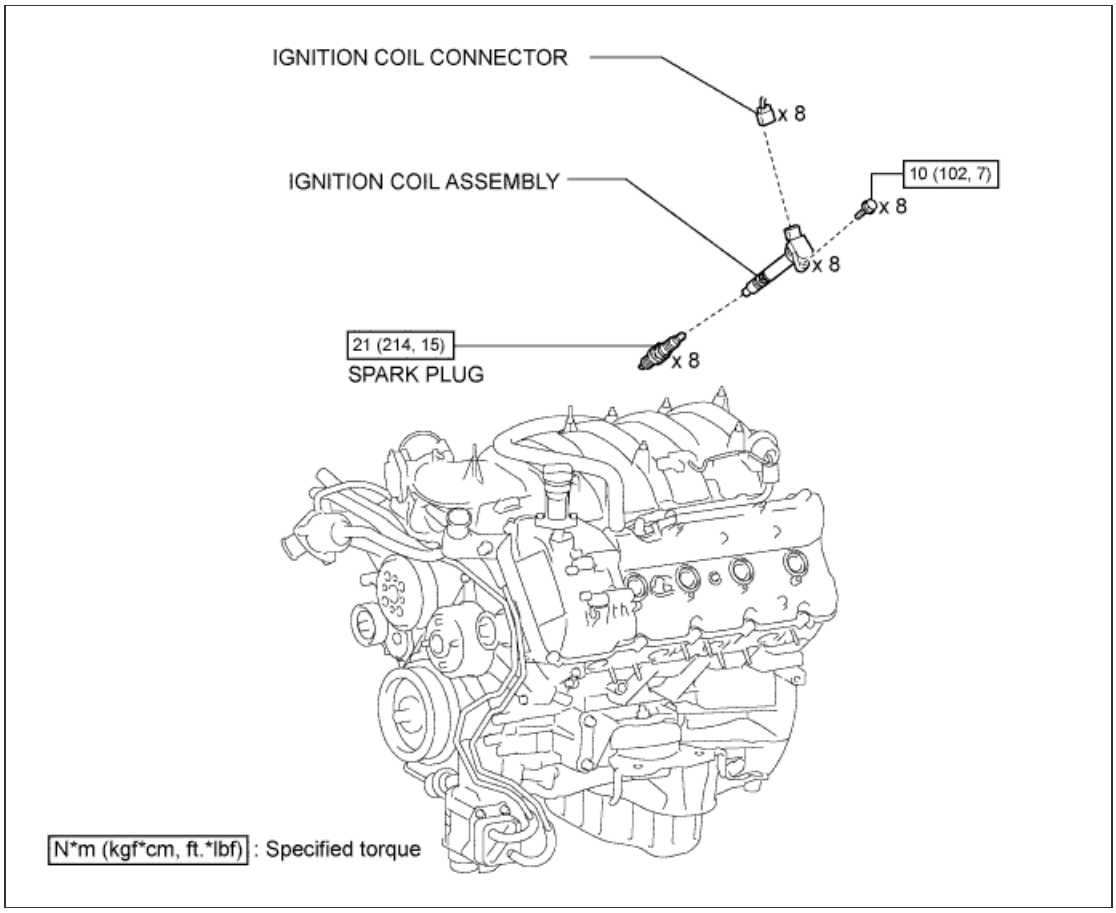
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



3. INSTALL NO. 2 ENGINE UNDER COVER



a. Install the under cover with the 6 bolts.



Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

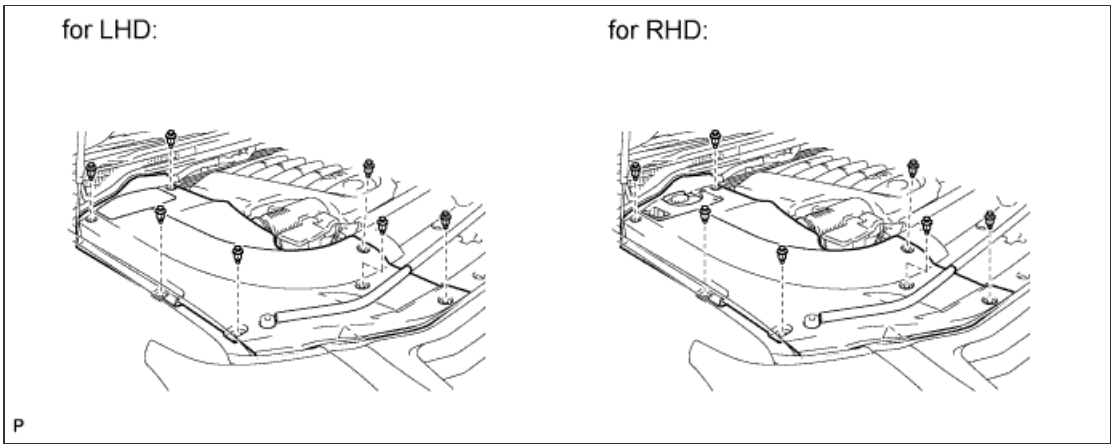
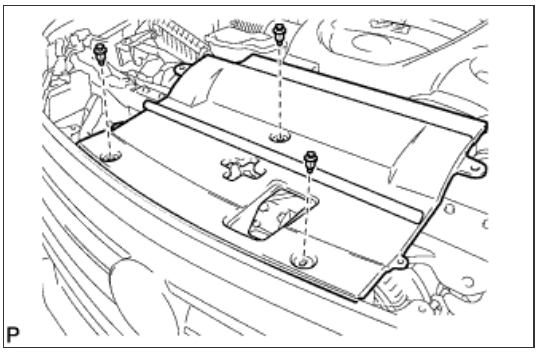
1. REMOVE NO. 2 ENGINE UNDER COVER

a. Remove the 6 bolts and under cover.



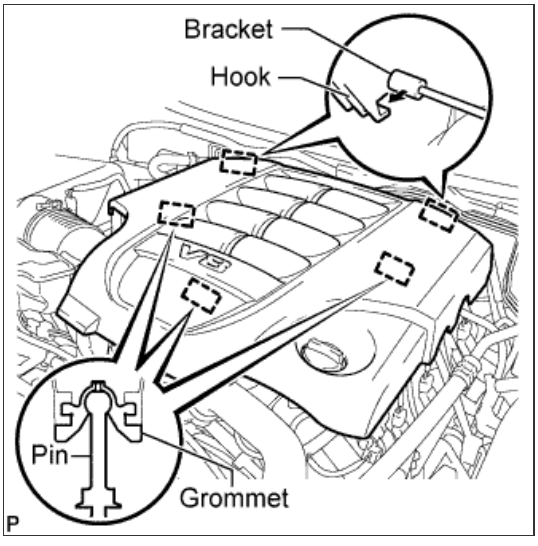
2. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.



3. REMOVE ENGINE ROOM SIDE COVER RH

a. Remove the 7 clips and engine room side cover.

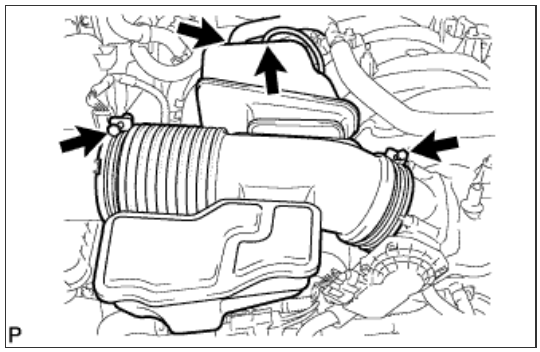


4. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 3 clips and upper radiator support seal.

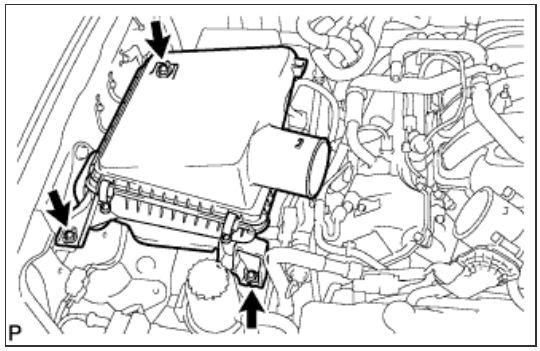
5. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.



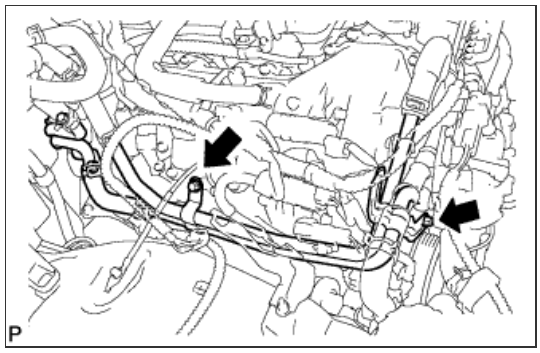
6. REMOVE AIR CLEANER HOSE ASSEMBLY

a. Disconnect the vacuum hose and No. 2 ventilation hose.



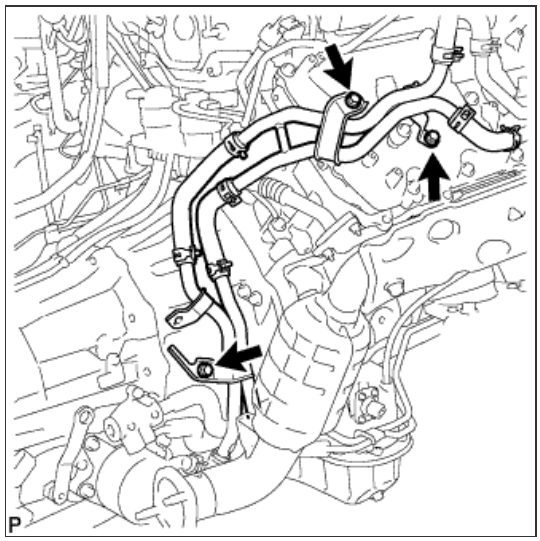
b. Loosen the 2 hose clamps.

c. Remove the air cleaner hose.



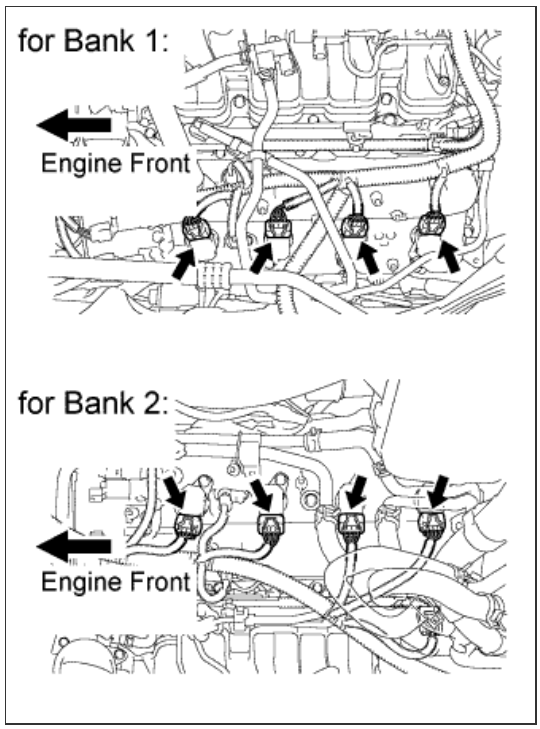
7. REMOVE AIR CLEANER ASSEMBLY

a. Remove the 3 bolts and air cleaner.



8. DISCONNECT WATER BY-PASS PIPE ASSEMBLY

a. Remove the 2 bolts and disconnect the water by-pass pipe from the cylinder head cover and timing chain cover.



b. Remove the 3 bolts and disconnect the water by-pass pipe from the cylinder head cover.

9. REMOVE IGNITION COIL ASSEMBLY

a. Disconnect the 8 ignition coil connectors.

b. Remove the 8 bolts and 8 ignition coils.

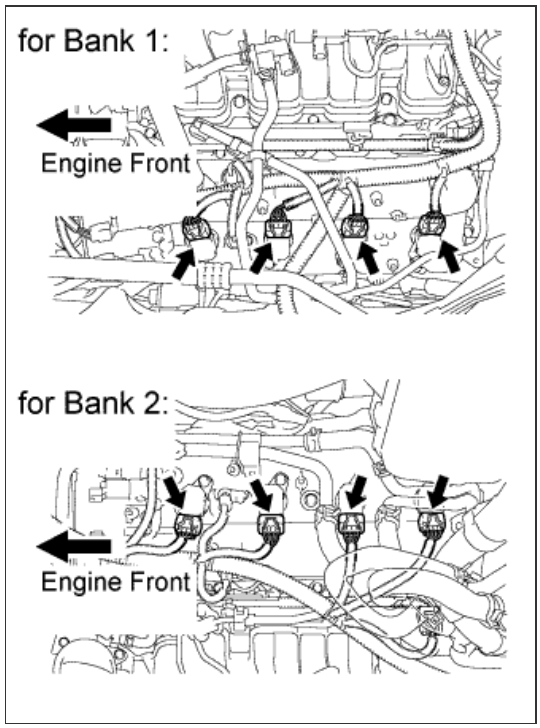
10. REMOVE SPARK PLUG

a. Remove the 8 spark plugs.

for Preparation Click here

1. INSTALL SPARK PLUG

a. Install the 8 spark plugs.

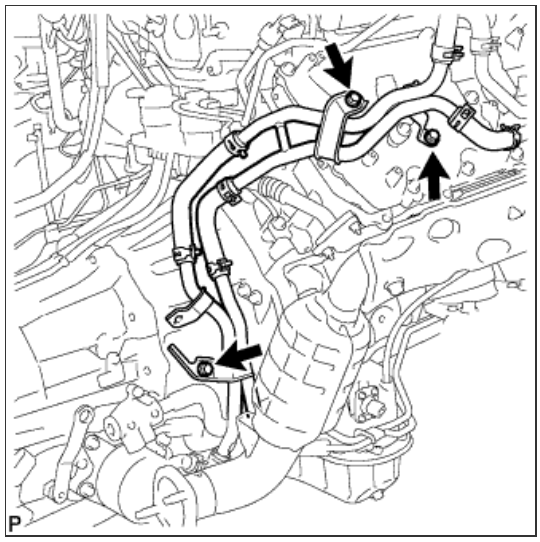


Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

2. INSTALL IGNITION COIL ASSEMBLY

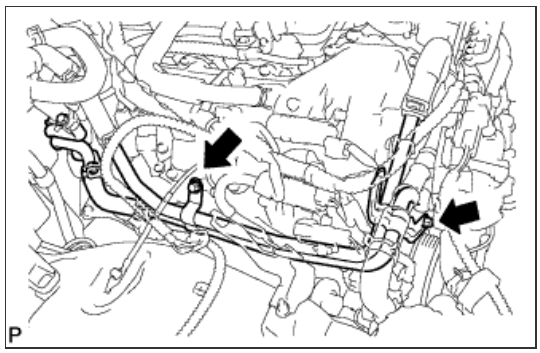
a. Install the 8 ignition coils with the 8 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



b. Connect the 8 ignition coil connectors.

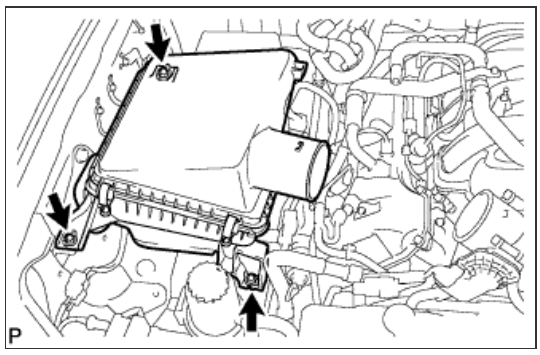
3. CONNECT WATER BY-PASS PIPE ASSEMBLY



a. Connect the water by-pass pipe to the cylinder head cover and automatic transmission with the 3 bolts.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

b. Connect the water by-pass pipe to the cylinder head cover and timing chain cover with the 2 bolts.



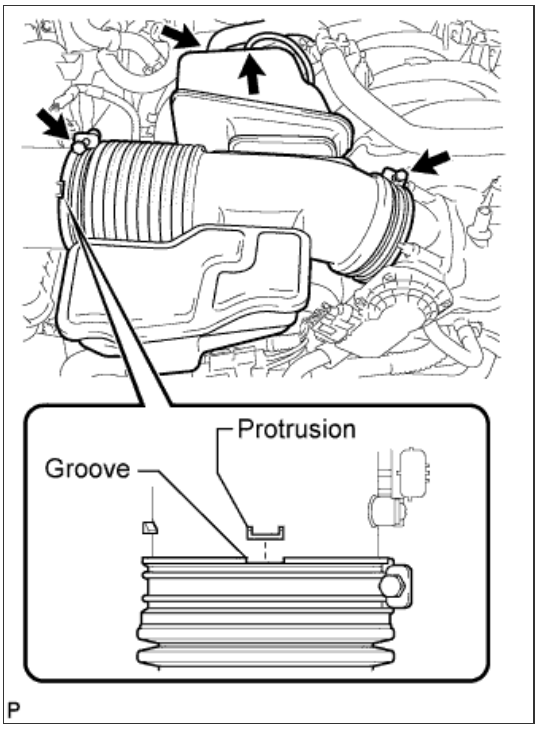
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

4. INSTALL AIR CLEANER ASSEMBLY

a. Install the air cleaner with the 3 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

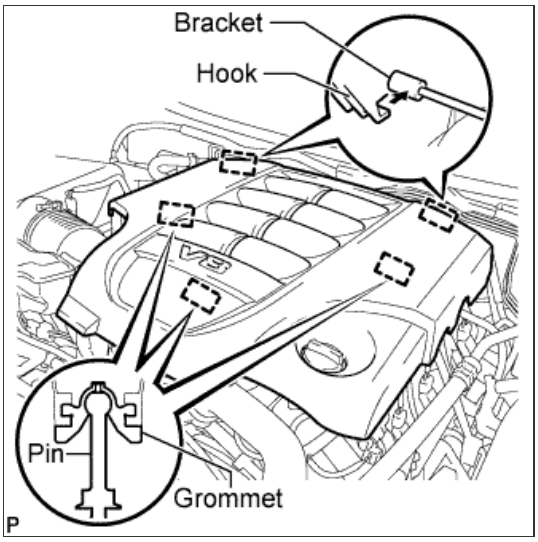
5. INSTALL AIR CLEANER HOSE ASSEMBLY



a. Install the air cleaner hose so that the protrusion of the air cleaner cap aligns with the groove of the hose as shown in the illustration.

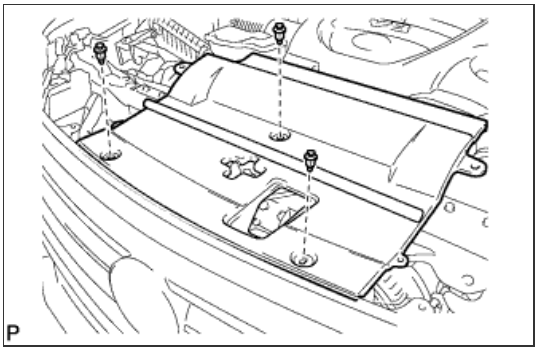
b. Tighten the 2 clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }



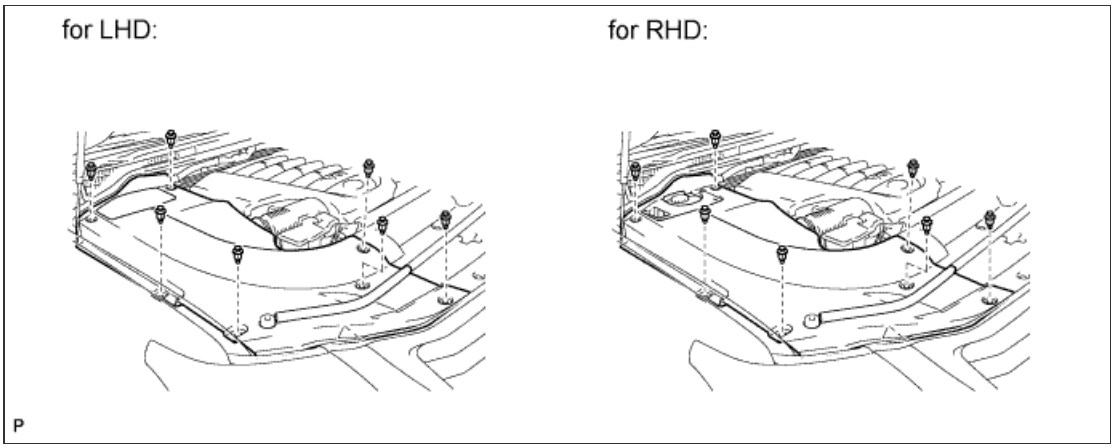
c. Connect the vacuum hose.

d. Connect the No. 2 ventilation hose.



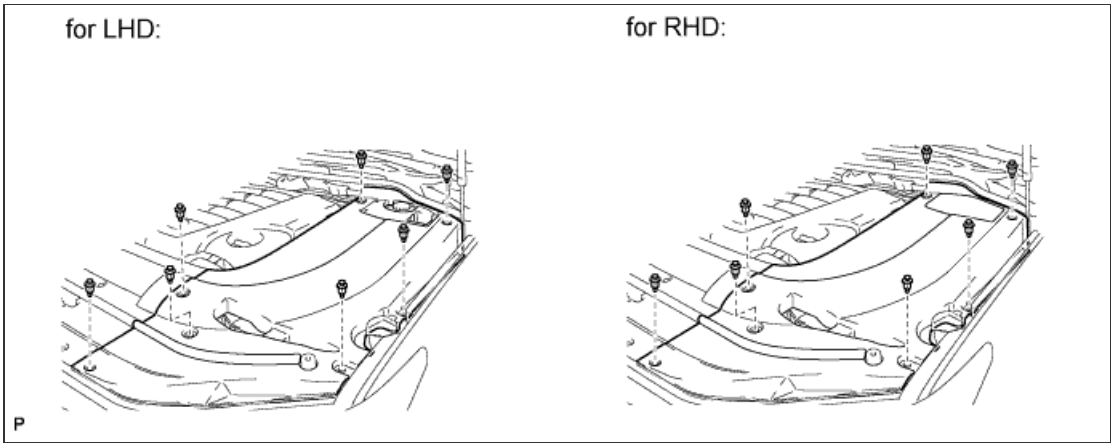
6. INSTALL V-BANK COVER SUB-ASSEMBLY

a. Attach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.



7. INSTALL UPPER RADIATOR SUPPORT SEAL

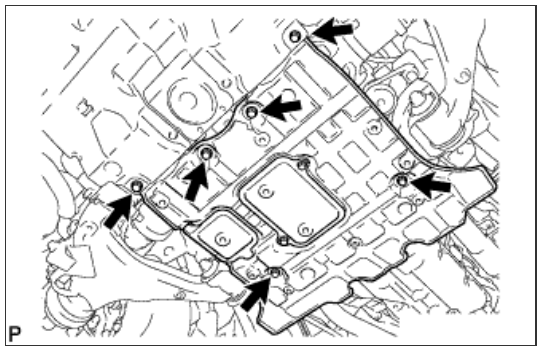
a. Install the upper radiator support seal with the 3 clips.



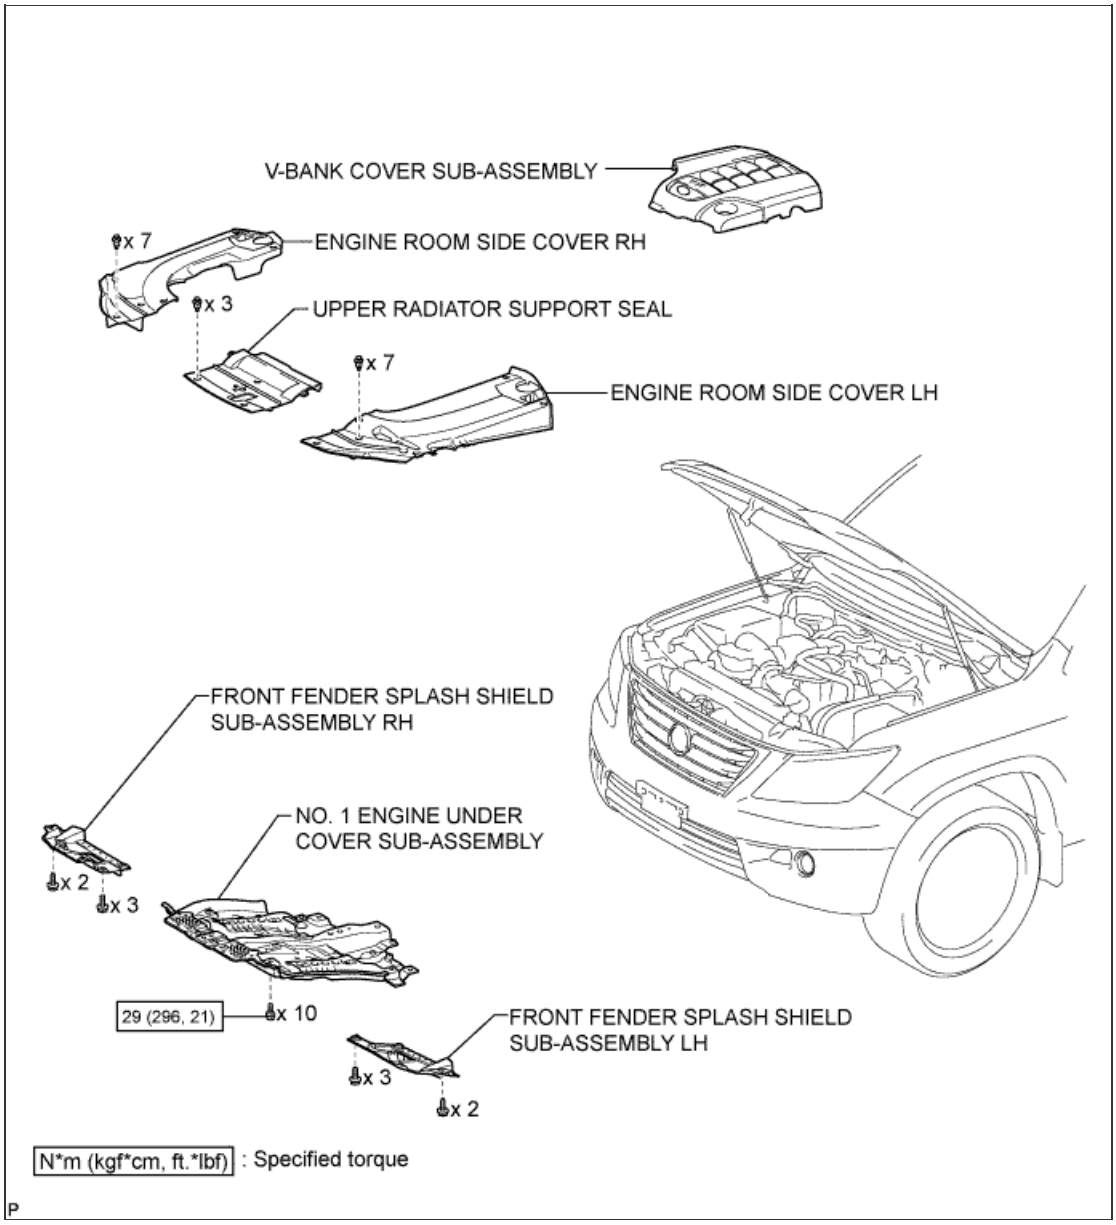
8. INSTALL ENGINE ROOM SIDE COVER RH

a. Install the engine room side cover with the 7 clips.

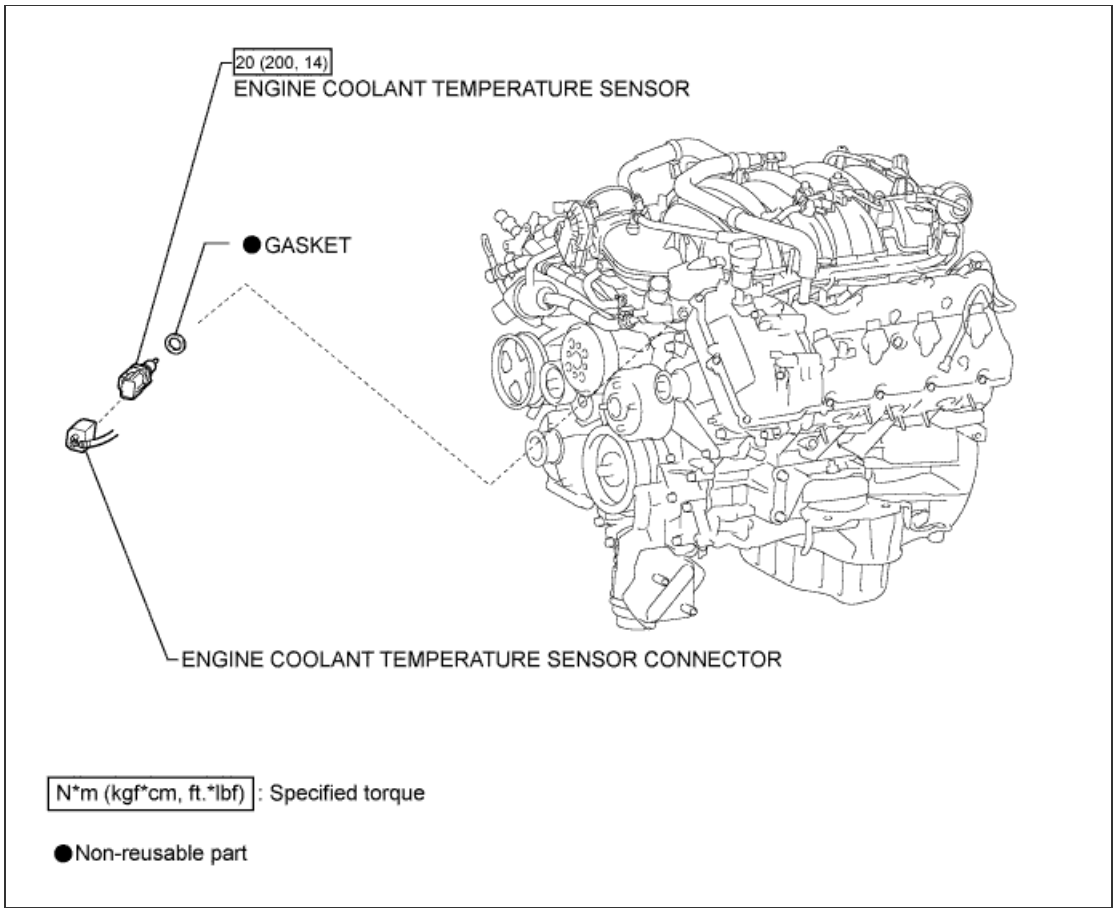
9. INSTALL ENGINE ROOM SIDE COVER LH



a. Install the engine room side cover with the 7 clips.



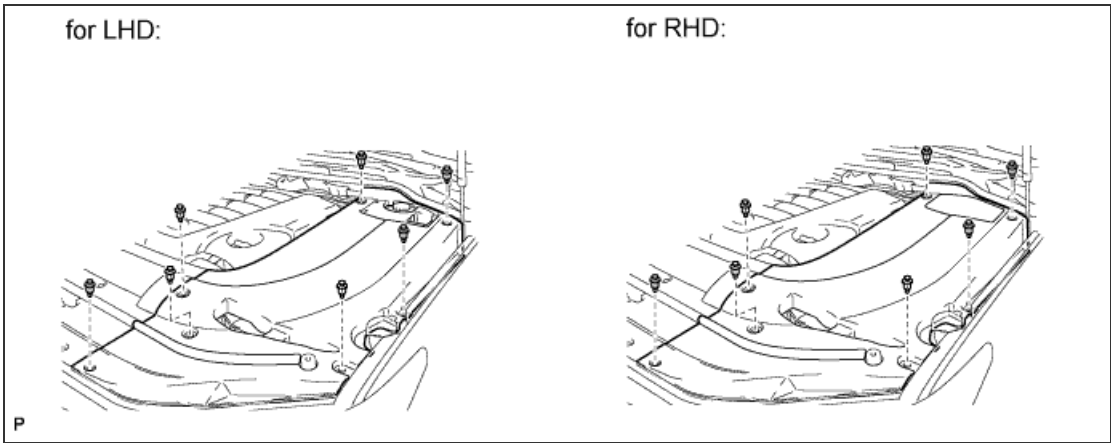
10. INSTALL NO. 2 ENGINE UNDER COVER



a. Install the under cover with the 6 bolts.

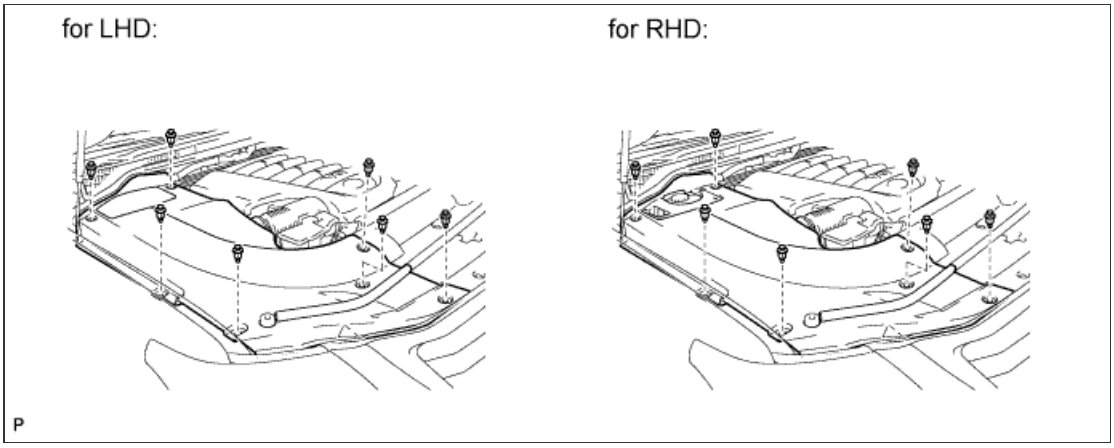
Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

for Preparation Click here



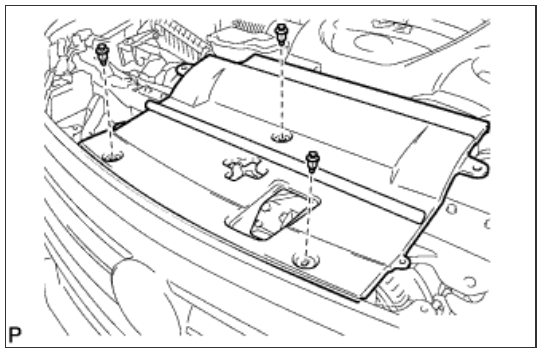
20 (200, 14)
ENGINE COOLANT TEMPERATURE SENSOR
●GASKET
ENGINE COOLANT TEMPERATURE SENSOR CONNECTOR
N*m (kgf*cm, ft.*lbf) : Specified torque
●Non-reusable part

for Preparation Click here



1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.



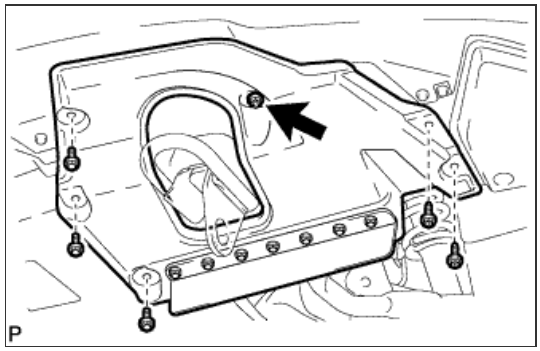
2. REMOVE ENGINE ROOM SIDE COVER RH

a. Remove the 7 clips and engine room side cover.

3. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 3 clips and upper radiator support seal.

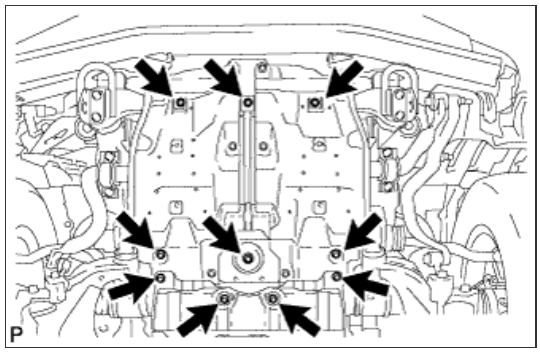
4. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH



HINT:

Use the same procedures described for the LH side.

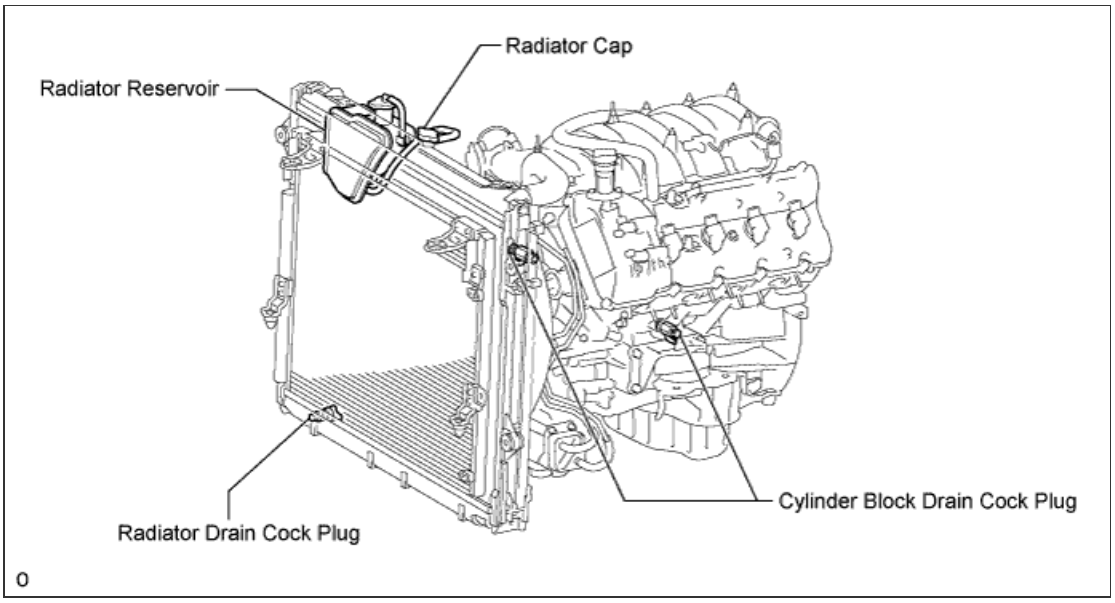
5. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH



a. Remove the 3 bolts and 2 screws.

b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.

6. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY



a. Remove the 10 bolts and No. 1 engine under cover.

7. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

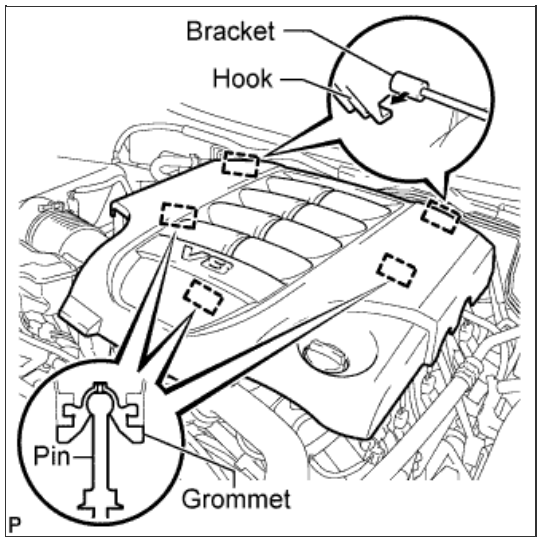
a. Loosen the radiator drain cock plug.

HINT:

Collect the coolant in a container and dispose of it according to the regulations in your area.

b. Remove the radiator cap. Then drain the coolant from the radiator.

c. Loosen the 2 cylinder block drain cock plugs. Then drain the coolant from the engine.



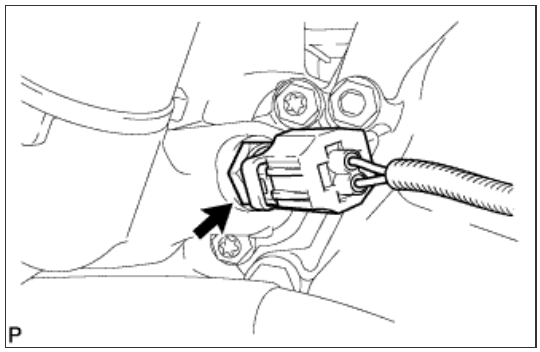
d. Tighten the 2 cylinder block drain cock plugs.

Torque:
13 N*m{ 130 kgf*cm , 10 ft.*lbf }

e. Tighten the radiator drain cock plug by hand.

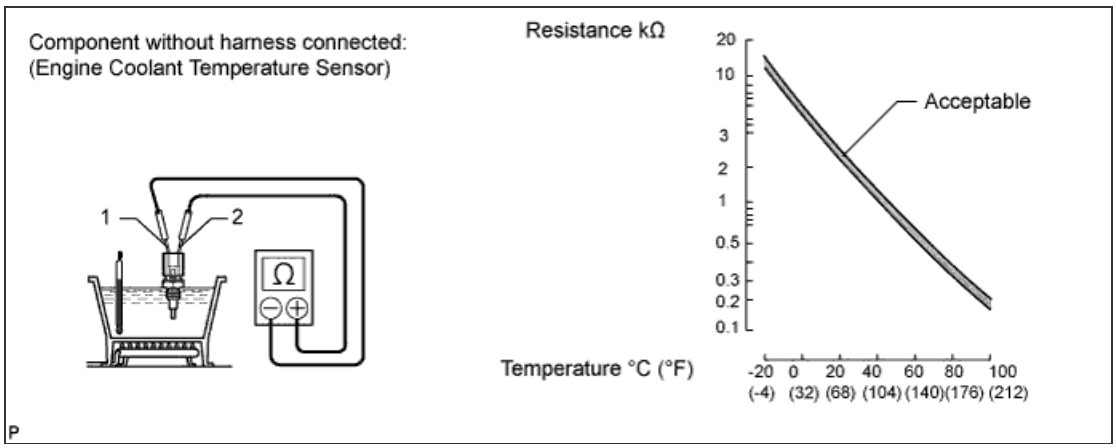
8. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.



9. REMOVE ENGINE COOLANT TEMPERATURE SENSOR

a. Disconnect the sensor connector.



b. Using a 19 mm deep socket wrench, remove the sensor.

c. Remove the gasket from the sensor.

for Preparation Click here

1. INSPECT ENGINE COOLANT TEMPERATURE SENSOR

a. Partially immerse the sensor in water and warm up the water.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

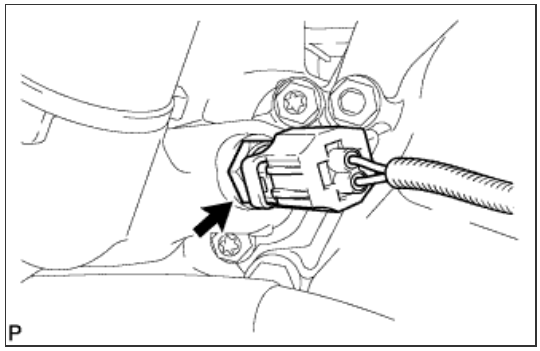
Tester Connection	Condition	Specified Condition
1 - 2	Approx. 20°C (68°F)	2.32 to 2.59 kΩ
1 - 2	Approx. 80°C (176°F)	0.310 to 0.326 kΩ

NOTICE:

When checking the sensor in water, keep the terminals dry. After the check, wipe the sensor dry.

If the result is not as specified, replace the engine coolant temperature sensor.

for Preparation Click here



1. INSTALL ENGINE COOLANT TEMPERATURE SENSOR

a. Install a new gasket to the sensor.

b. Using a 19 mm deep socked wrench, install the sensor.

Torque:
20 N*m{ 200 kgf*cm , 14 ft.*lbf }

c. Connect the sensor connector.

2. ADD ENGINE COOLANT

a. Add engine coolant.

Standard Capacity:

Item	Specified Condition
with transmission oil cooler	16.7 liters (17.6 US qts, 14.7 Imp. qts)
without transmission oil cooler	16.2 liters (17.1 US qts, 14.3 Imp. qts)

NOTICE:

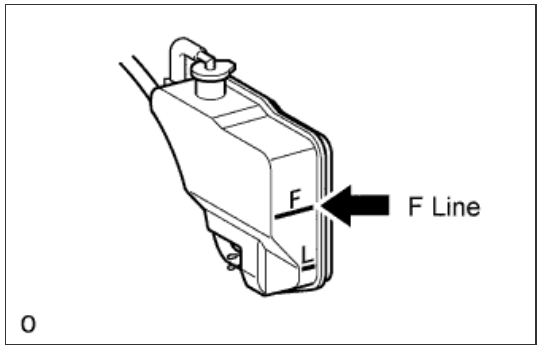
Do not substitute plain water for engine coolant.

HINT:

TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the reservoir cap.



d. Press the No. 1 and No. 2 radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Start the engine and warm it up until the thermostat opens.

NOTICE:

Switch off the A/C.

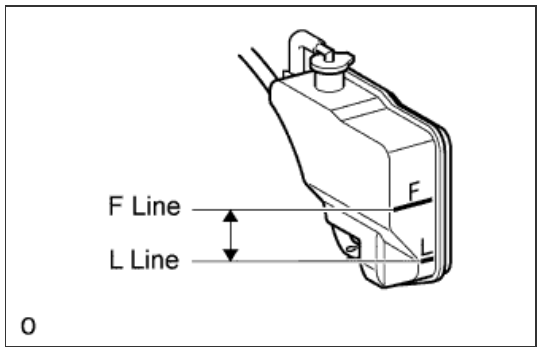
g. Maintain the engine speed at 2000 to 2500 rpm.

NOTICE:

- **Make sure that the radiator reservoir still has some coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**
- **Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the F line.**
- **Run the engine at 2000 rpm until the coolant level has stabilized.**

h. Press the No. 1 and No. 2 radiator hoses several times by hand to bleed air.

CAUTION:



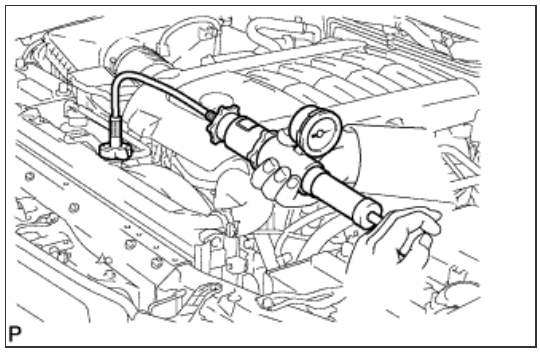
- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the fan.**

i. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

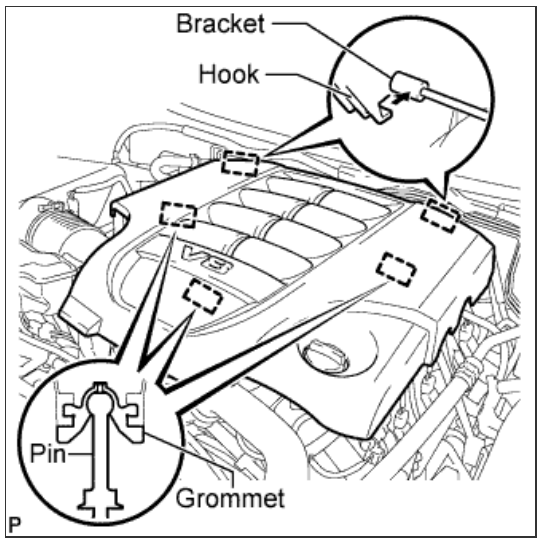
Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

j. Check that the coolant level is between the F and L lines.
If the coolant level is below the L line, repeat all of the procedures above.
If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.



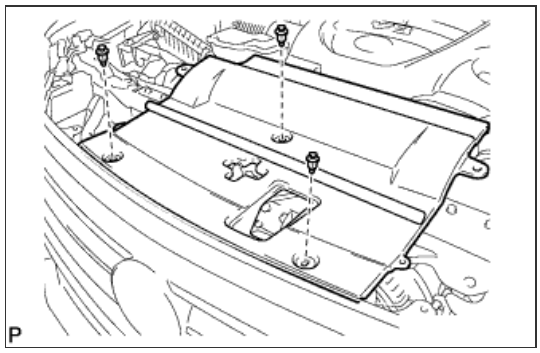
3. INSPECT FOR COOLANT LEAK

a. Fill the radiator with coolant and attach a radiator cap tester.



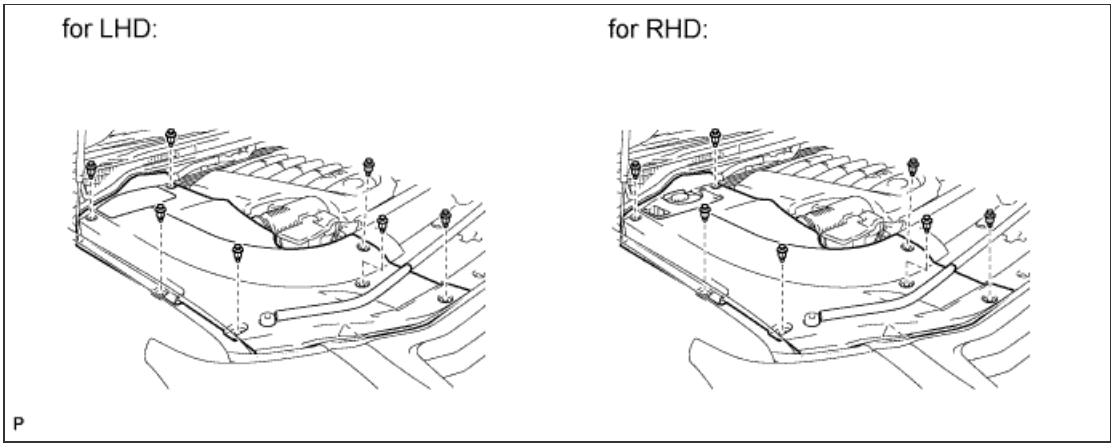
b. Warm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.



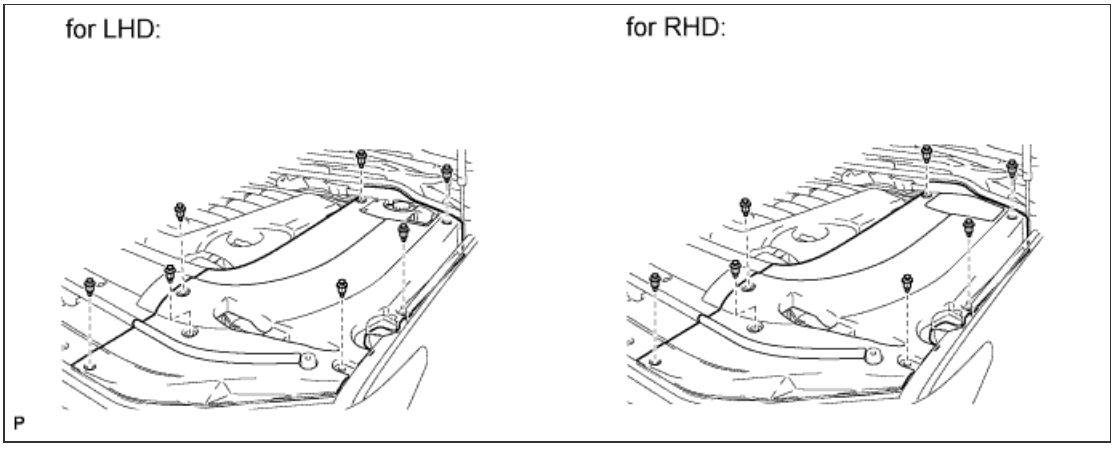
4. INSTALL V-BANK COVER SUB-ASSEMBLY

a. Attach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.



5. INSTALL UPPER RADIATOR SUPPORT SEAL

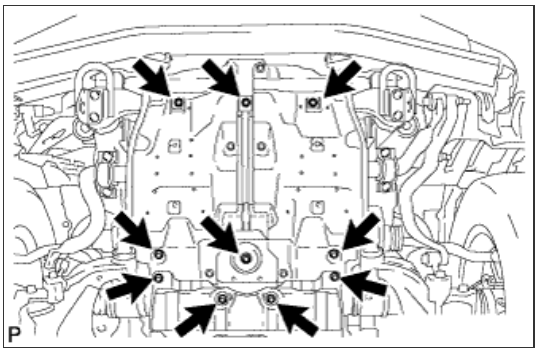
a. Install the upper radiator support seal with the 3 clips.



6. INSTALL ENGINE ROOM SIDE COVER RH

a. Install the engine room side cover with the 7 clips.

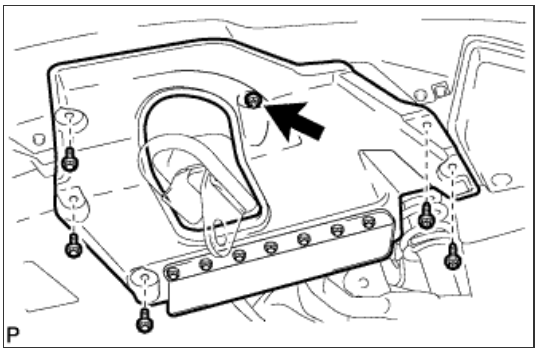
7. INSTALL ENGINE ROOM SIDE COVER LH



a. Install the engine room side cover with the 7 clips.

8. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.

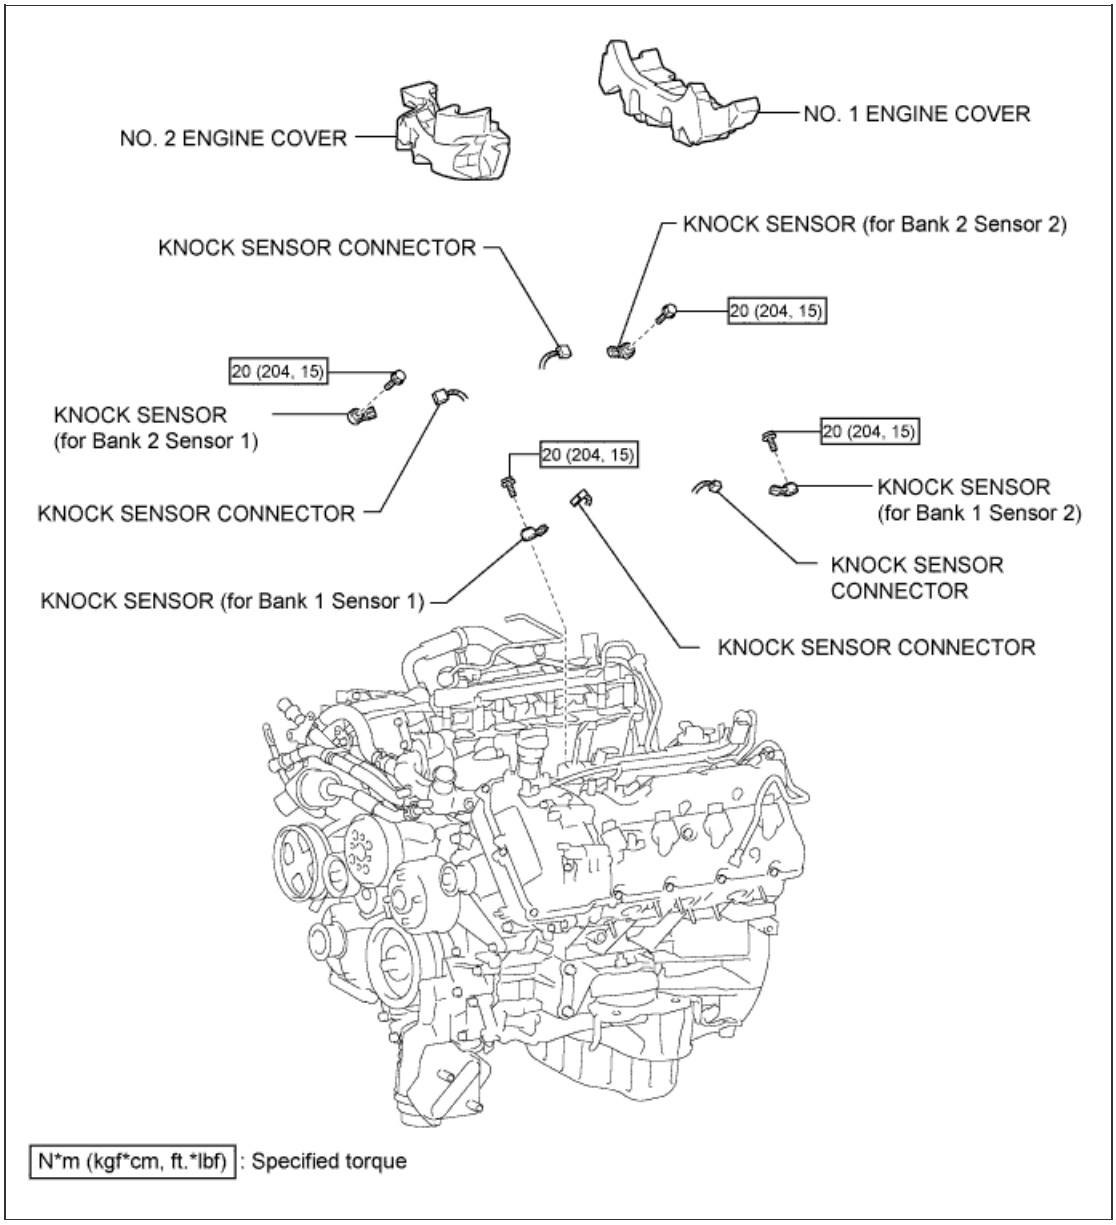


Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

9. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the 3 bolts and 2 screws.

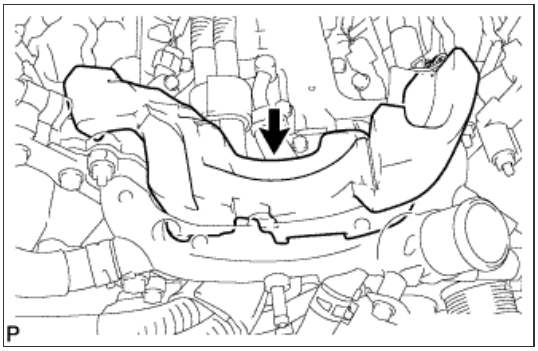


10. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

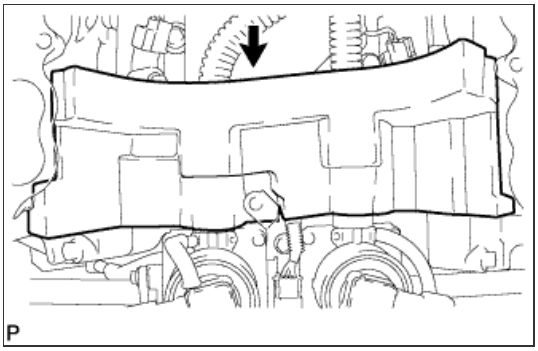
HINT:

Use the same procedures described for the LH side.

for Preparation Click here



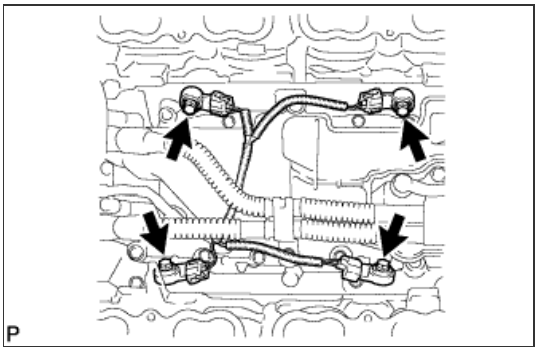
for Preparation Click here



1. REMOVE INTAKE MANIFOLD

a. Remove the intake manifold (Click here).

2. REMOVE NO. 2 ENGINE COVER



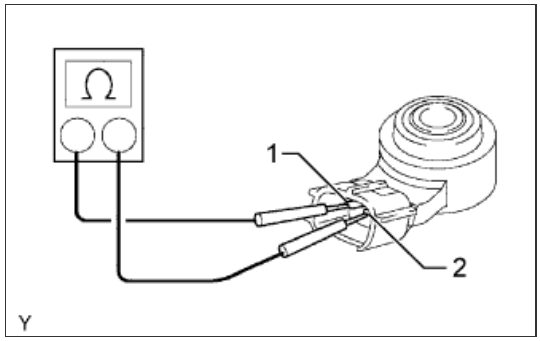
3. REMOVE NO. 1 ENGINE COVER

4. REMOVE KNOCK SENSOR

a. Disconnect the 4 knock sensor connectors.

b. Remove the 4 bolts and 4 knock sensors.

for Preparation Click here



1. INSPECT KNOCK SENSOR

a. Measure the resistance according to the value(s) in the table below.

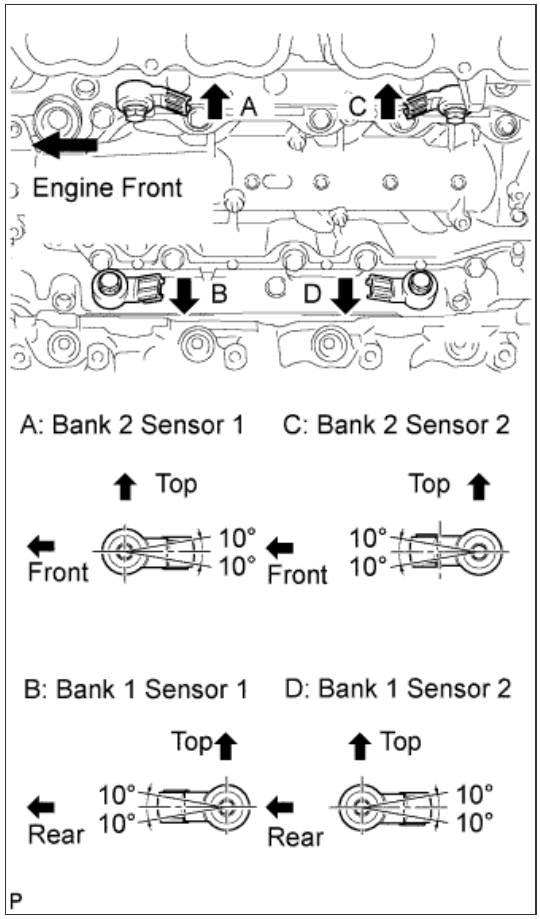
Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	120 to 280 kΩ

If the result is not as specified, replace the sensor.

for Preparation Click here

1. INSTALL KNOCK SENSOR



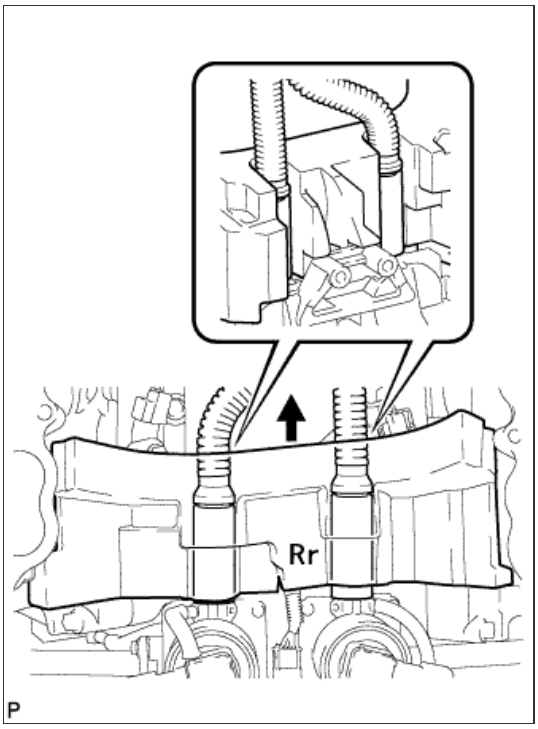
a. Install the 4 sensors with the 4 bolts so that the sensors are angled as shown in the illustration.

Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

NOTICE:

The acceptable installation angle of the sensor is between 10° upward and downward from the horizontal position.

b. Connect the 4 sensor connectors.



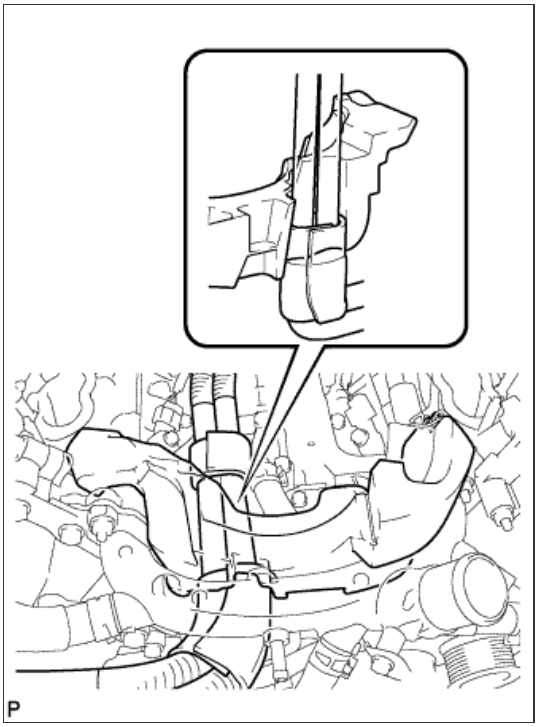
2. INSTALL NO. 1 ENGINE COVER

HINT:

- **Align the No. 1 engine cover cutouts with the air tube.**
- **Align the No. 1 engine cover with the air switching valve surface and cylinder head wall.**

NOTICE:

Make sure that the No. 1 engine cover is flush with the top surface of the intake port of the cylinder head for bank 1 and bank 2.

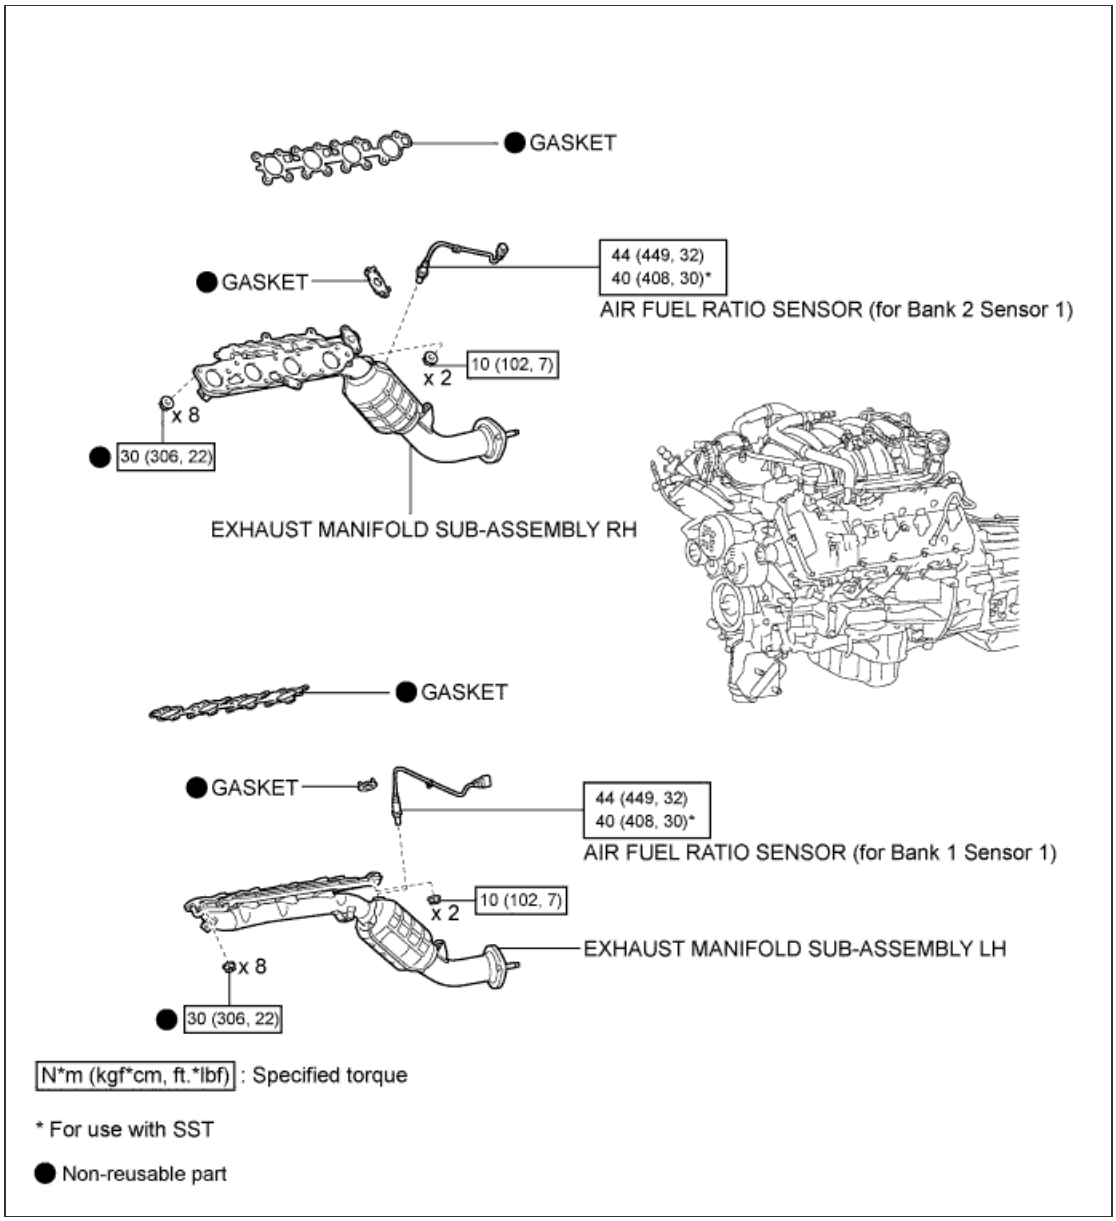


3. INSTALL NO. 2 ENGINE COVER

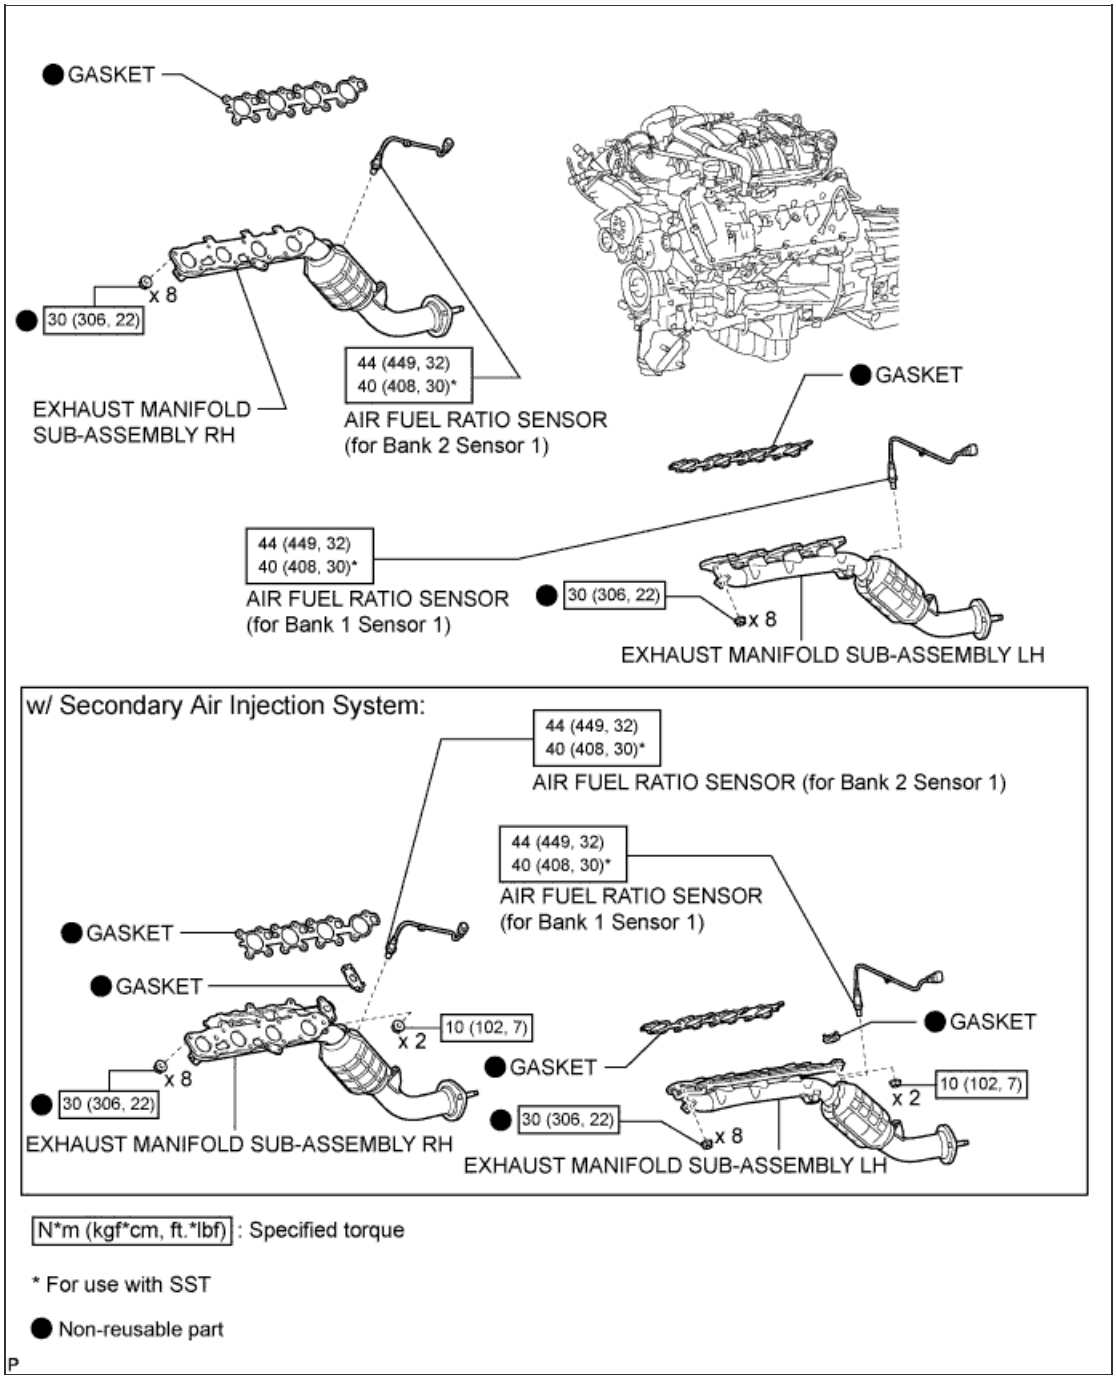
HINT:

- **Align the No. 2 engine cover cutout with the air tube.**
- **Align the No. 2 engine cover with the front water by-pass joint and cylinder head wall.**

NOTICE:



Make sure that the No. 2 engine cover is flush with the top surface of the intake port of the cylinder head.



4. INSTALL INTAKE MANIFOLD

a. Install the intake manifold (Click here).

for Preparation Click here

1. INSPECT POWER STEERING OIL PRESSURE SWITCH

a. Check the oil pressure switch.

i. Connect the intelligent tester to the DLC3.

ii. Turn the engine switch on (IG).

iii. Turn the intelligent tester main switch on.

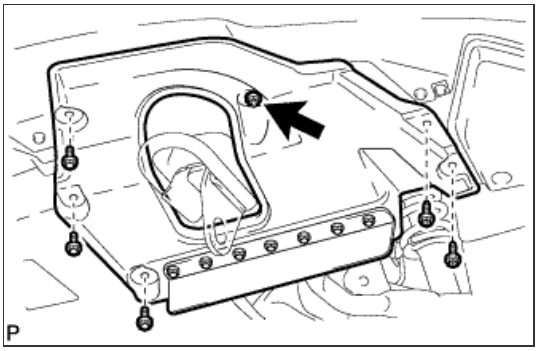
iv. Enter the following menus: Powertrain / Engine and ECT / Data List / All Data / Power Steering pressure.

v. Start the engine.

vi. Operate the steering wheel while idling, and read the value on the intelligent tester.

Standard:

Measurement Condition	Specified Condition
Power steering not operating	0 to 2 MPa (0 to 20 kgf/cm ^{2}, 0 to 290 psi)
Power steering operating	Values change from above value



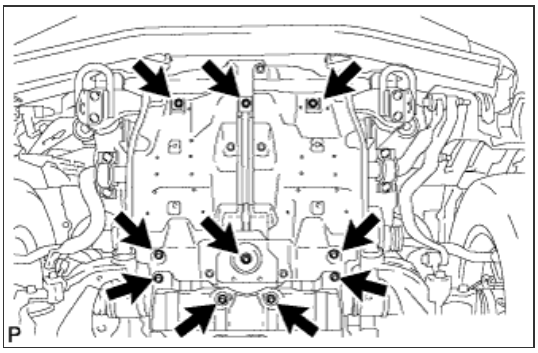
If not as specified, check for DTCs (Click here). If the power steering system inspection results are normal and a DTC is not output, replace the power steering oil pressure switch.
Inspect the power steering system (Click here). If the power steering system inspection results are normal and a DTC is not output, replace the power steering oil pressure switch.

for Preparation Click here

1. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and 2 screws.

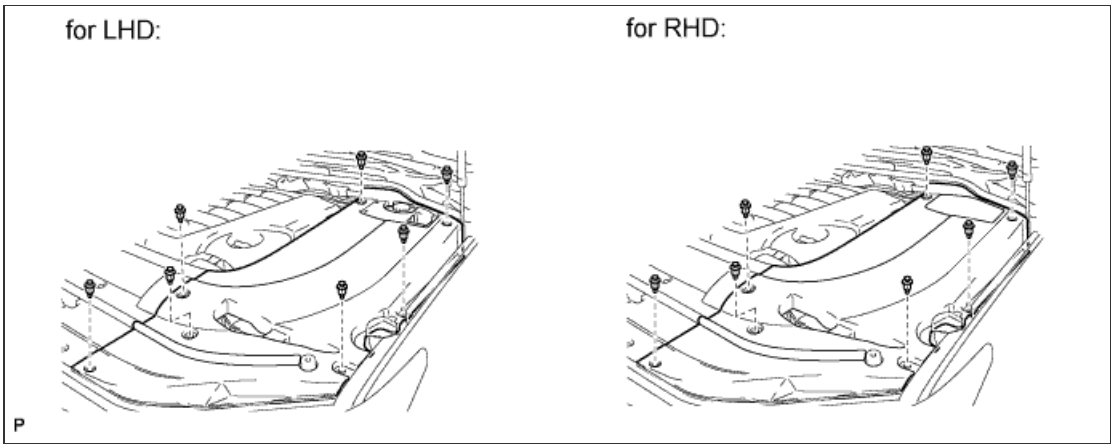
b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



2. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

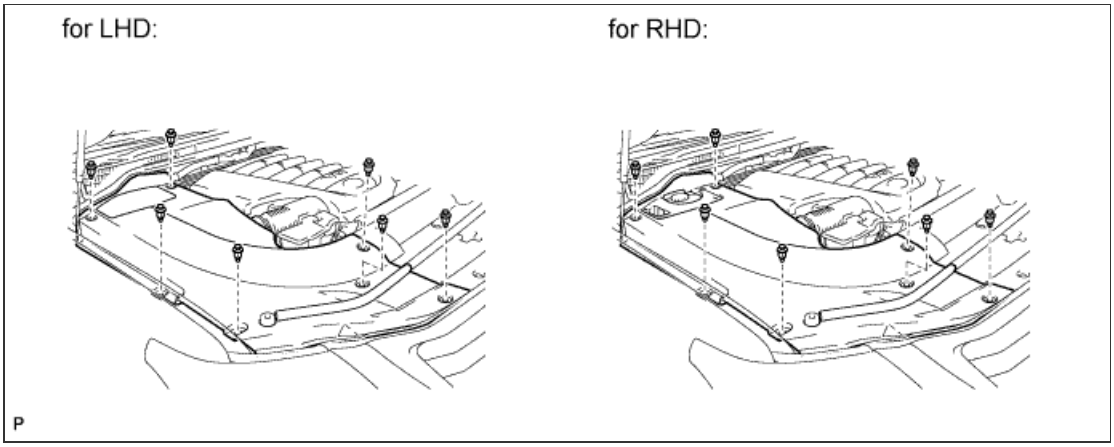
HINT:

Use the same procedures described for the LH side.



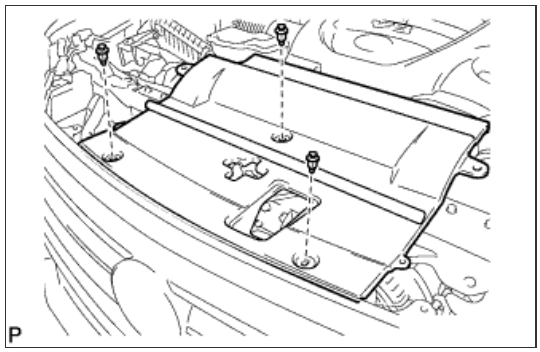
3. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and No. 1 engine under cover.



4. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.

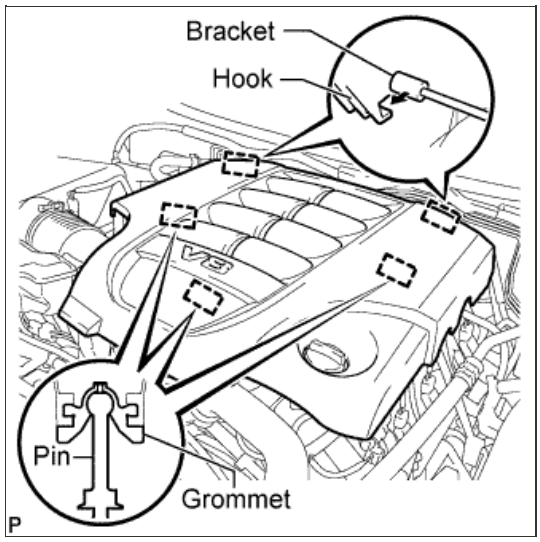


5. REMOVE ENGINE ROOM SIDE COVER RH

a. Remove the 7 clips and engine room side cover.

6. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 3 clips and upper radiator support seal.



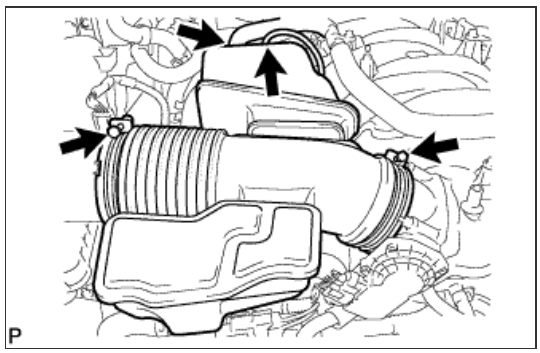
7. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

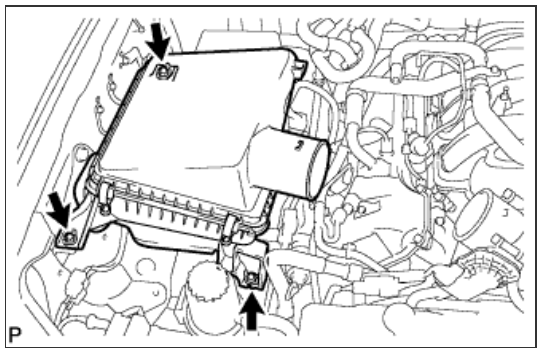
8. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.



9. REMOVE AIR CLEANER HOSE ASSEMBLY

a. Disconnect the vacuum hose and No. 2 ventilation hose.

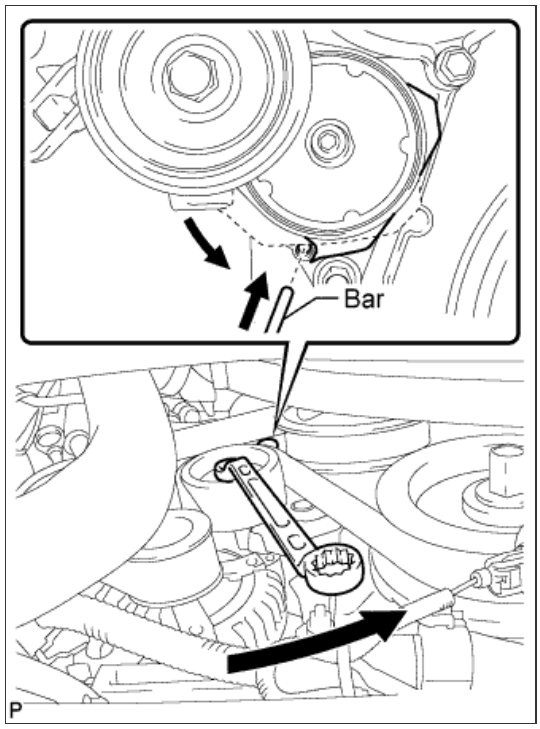


b. Loosen the 2 hose clamps.

c. Remove the air cleaner hose.

10. REMOVE AIR CLEANER ASSEMBLY

a. Remove the 3 bolts and air cleaner.



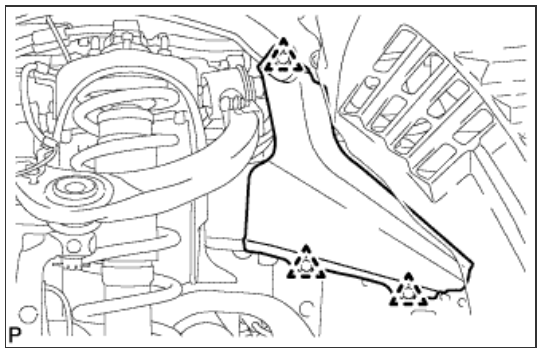
11. REMOVE FAN & GENERATOR V BELT

a. While turning the belt tensioner counterclockwise, align the service hole for the belt tensioner and the belt tensioner fixing position, and then insert a bar of φ5 mm (0.197 in.) into the service hole to fix the belt tensioner in place.

HINT:

The pulley bolt for the belt tensioner has a left-hand thread.

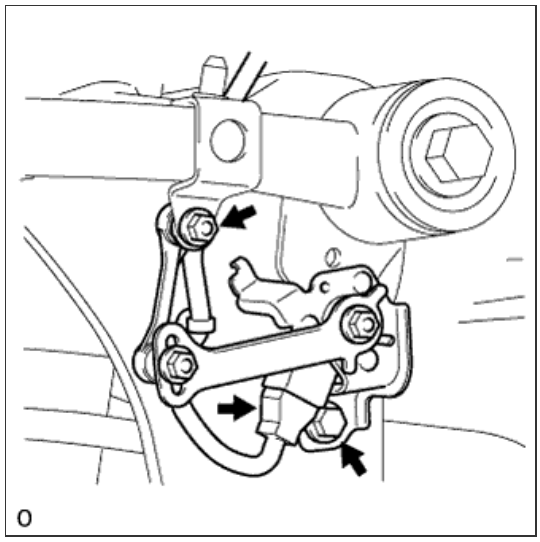
b. Remove the V belt.



12. DRAIN POWER STEERING FLUID

13. REMOVE FRONT WHEEL

14. REMOVE FRONT FENDER APRON SEAL FRONT RH

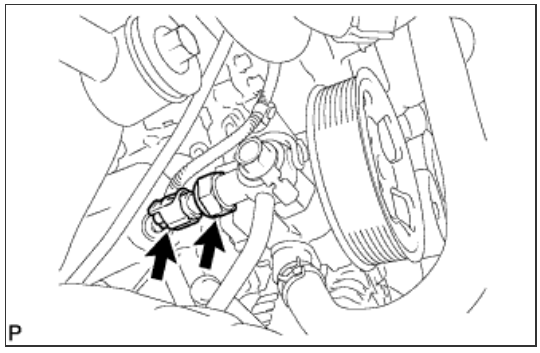


a. Using a clip remover, remove the 3 clips and fender apron seal.

15. REMOVE FRONT HEIGHT CONTROL SENSOR SUB-ASSEMBLY RH

a. Disconnect the connector.

b. Remove the nut, bolt and sensor.



16. REMOVE POWER STEERING OIL PRESSURE SWITCH

a. Disconnect the switch connector.

b. Using a 24 mm deep socket wrench, remove the oil pressure switch.

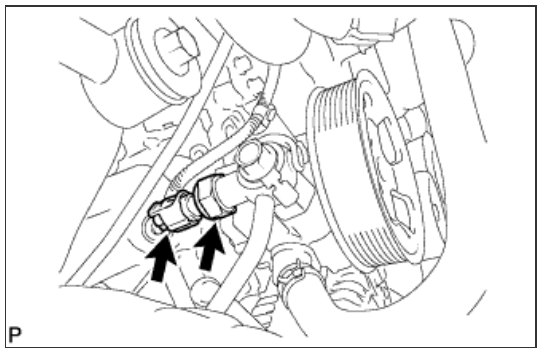
c. Remove the O-ring.

for Preparation Click here

1. INSTALL POWER STEERING OIL PRESSURE SWITCH

a. Install a new O-ring to the oil pressure switch.

b. Apply a light coat of engine oil to the O-ring of the oil pressure switch.



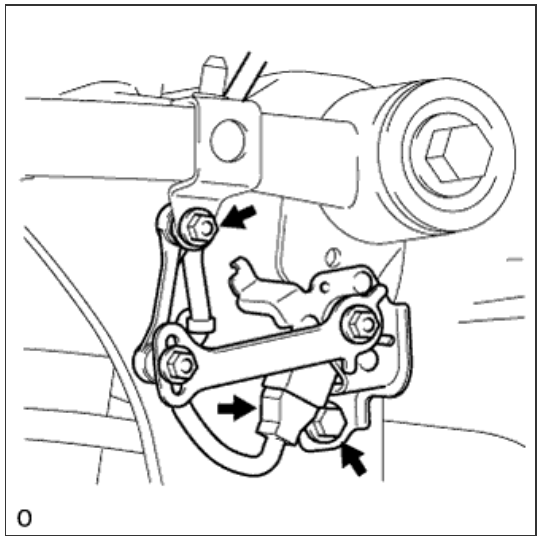
NOTICE:

- **When reusing the oil pressure switch, inspect the O-ring.**
- **If the O-ring has scratches or cuts, replace the oil pressure switch.**

c. Using a 24 mm deep socket wrench, install the oil pressure switch.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

d. Connect the oil pressure switch connector.

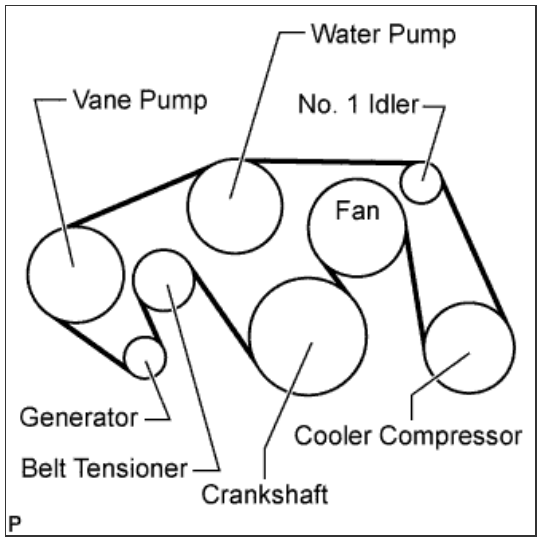


2. INSTALL FRONT HEIGHT CONTROL SENSOR SUB-ASSEMBLY RH

a. Install the sensor with the bolt and nut.

Torque:
for bolt:
13 N*m{ 127 kgf*cm , 9 ft.*lbf }
for nut:
5.6 N*m{ 57 kgf*cm , 56 in.*lbf }

b. Connect the connector.

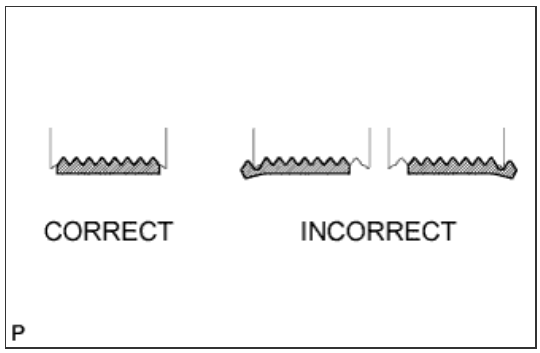


3. INSTALL FAN & GENERATOR V BELT

a. Set the V belt onto every part.

b. While turning the belt tensioner counterclockwise, remove the bar.

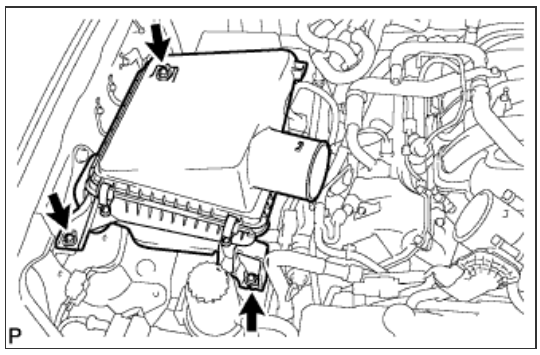
NOTICE:



Make sure that the V belt is properly set to each pulley.

c. After installing the belt, check that it fits properly in the ribbed grooves.

HINT:



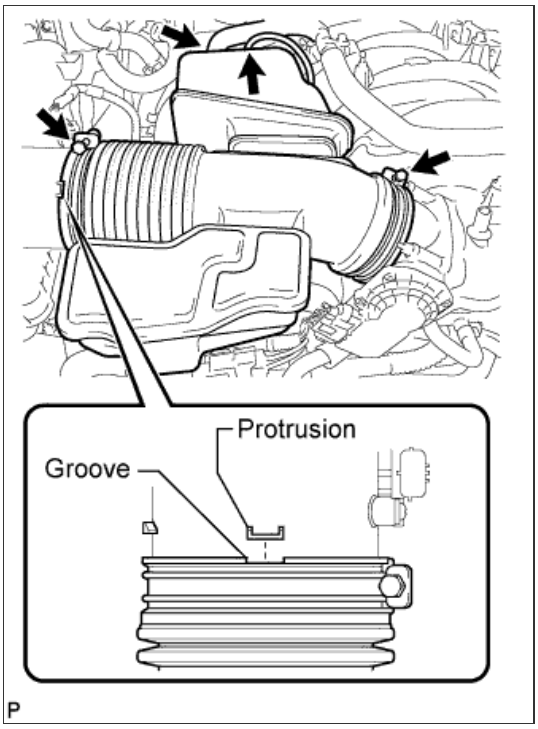
Make sure to check by hand that the belt has not slipped out of the grooves on the bottom of the pulley.

4. INSTALL AIR CLEANER ASSEMBLY

a. Install the air cleaner with the 3 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

5. INSTALL AIR CLEANER HOSE ASSEMBLY



a. Install the air cleaner hose so that the protrusion of the air cleaner cap aligns with the groove of the hose as shown in the illustration.

b. Tighten the 2 clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

c. Connect the vacuum hose.

d. Connect the No. 2 ventilation hose.

6. ADD POWER STEERING FLUID

7. BLEED POWER STEERING FLUID

a. Check the fluid level.

b. Jack up the front of the vehicle and support it with stands.

c. Turn the steering wheel.

i. With the engine stopped, turn the wheel slowly from lock to lock several times.

d. Lower the vehicle.

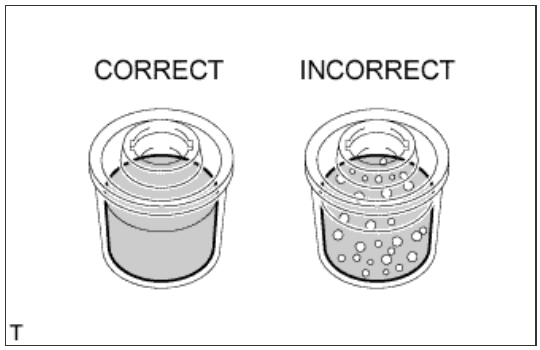
e. Start the engine.

f. Idle the engine for a few minutes.

g. Turn the steering wheel.

i. With the engine idling, turn the wheel left or right to the full lock position and keep it there for 2 to 3 seconds, then turn the wheel to the opposite full lock position and keep it there for 2 to 3 seconds.*1

ii. Repeat *1 several times.

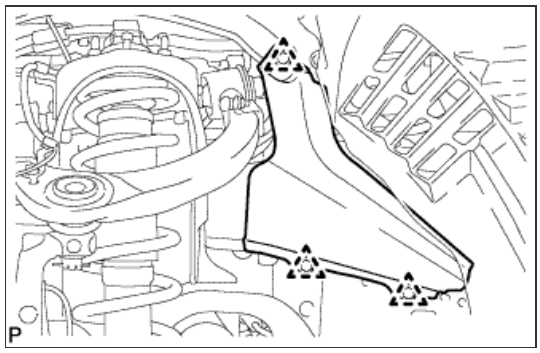


NOTICE:

For vehicles with VGRS, if the steering wheel is turned from lock to lock repeatedly, the system may stop operating and the amount of rotation before the steering wheel locks may increase due to operation of the overheating prevention function. When the system temperature drops, the system operation automatically returns to normal.

h. Stop the engine.

i. Check for foaming or emulsification.
If the system has to be bled twice because of foaming or emulsification, check for fluid leaks in the system.

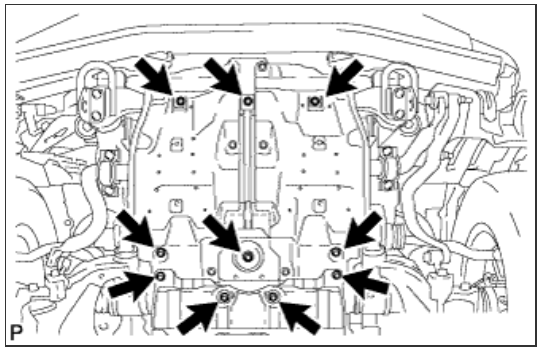


j. Check the fluid level.

8. INSPECT FOR POWER STEERING FLUID LEAK

9. INSTALL FRONT FENDER APRON SEAL FRONT RH

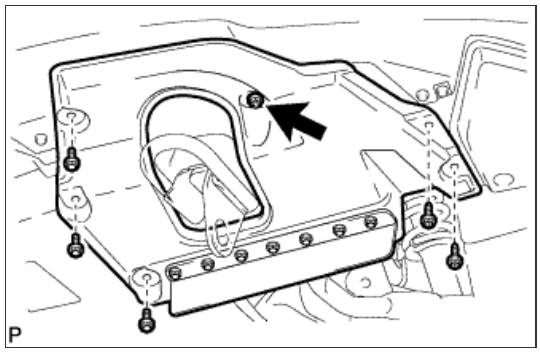
a. Install the fender apron seal with the 3 clips.



10. INSTALL FRONT WHEEL

11. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.



Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

12. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the 3 bolts and 2 screws.

13. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

14. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

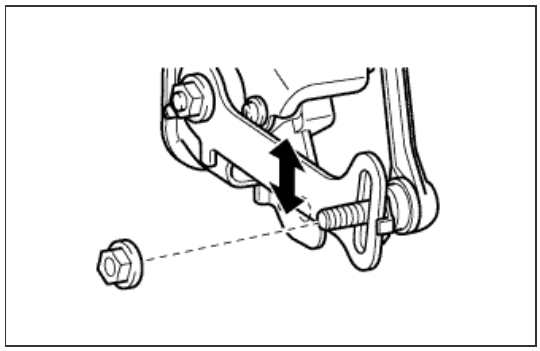
15. PERFORM VEHICLE HEIGHT OFFSET CALIBRATION

a. Perform the vehicle height offset calibration (Click here).

16. ADJUST FRONT HEIGHT CONTROL SENSOR LINK SUB-ASSEMBLY

NOTICE:

- **Make adjustments from the link that deviates the most from the specified vehicle height value.**
- **When the front and rear are at the same level, make adjustments from the front first.**
- **If adjustment cannot be completed through the vehicle height offset calibration, adjust the sensor link using the following procedure.**



a. Loosen the nut and adjust the link installation position by moving the height control sensor link up or down in the long hole of the bracket.

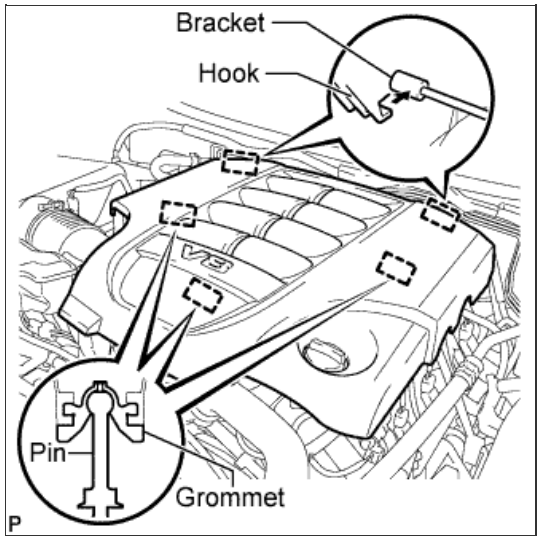
HINT:

When the link is moved 1 mm (0.0394 in.), the vehicle height changes by approximately 2 mm (0.0787 in.).

b. Tighten the nut of the height control sensor link.

Torque:
5.6 N*m{ 57 kgf*cm , 50 in.*lbf }

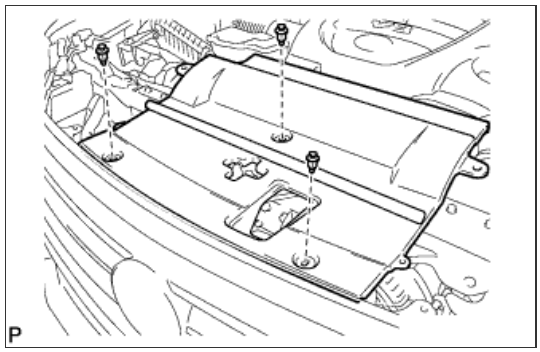
17. PERFORM ZERO POINT CALIBRATION OF G SENSOR



a. Perform the zero point calibration of the G sensor (Click here).

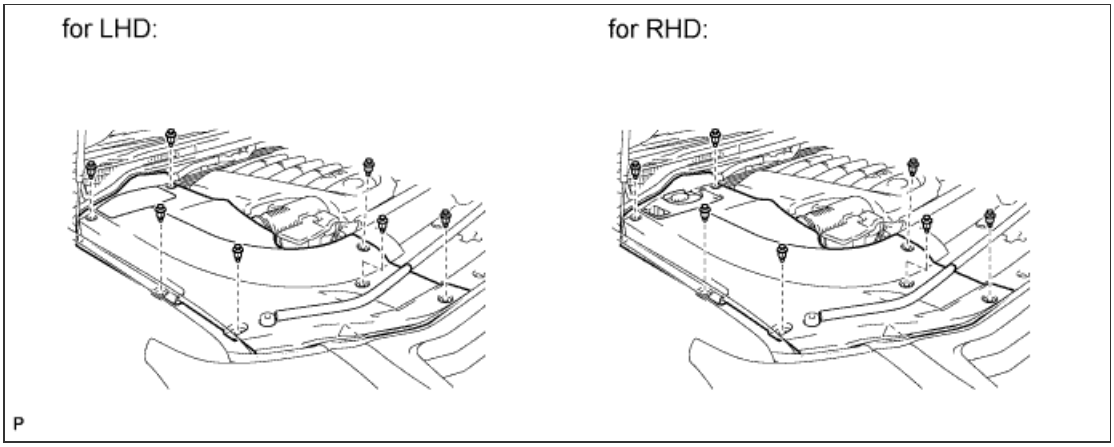
18. ADJUST HEADLIGHT ASSEMBLY

a. Adjust the headlight (Click here).



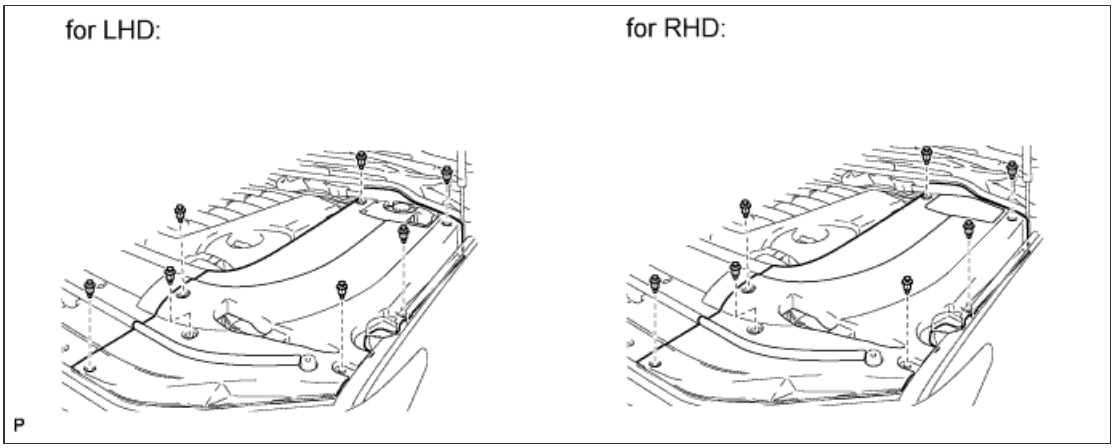
19. INSTALL V-BANK COVER SUB-ASSEMBLY

a. Attach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.



20. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the upper radiator support seal with the 3 clips.

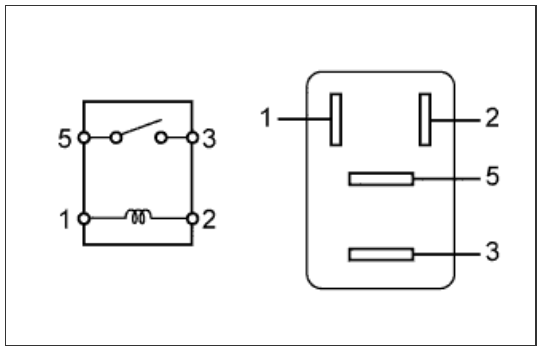


21. INSTALL ENGINE ROOM SIDE COVER RH

a. Install the engine room side cover with the 7 clips.

22. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.



for Preparation Click here

1. INSPECT CIRCUIT OPENING RELAY (C/OPN)

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 5	Battery voltage is not applied to terminals 1 and 2	10 kΩ or higher
	Battery voltage is applied to terminals 1 and 2	Below 1 Ω

If the result is not as specified, replace the relay.

2. INSPECT INTEGRATION RELAY (IG2)

a. Measure the resistance of the IG2 MAIN fuse.

i. Remove the IG2 MAIN fuse from the integration relay.

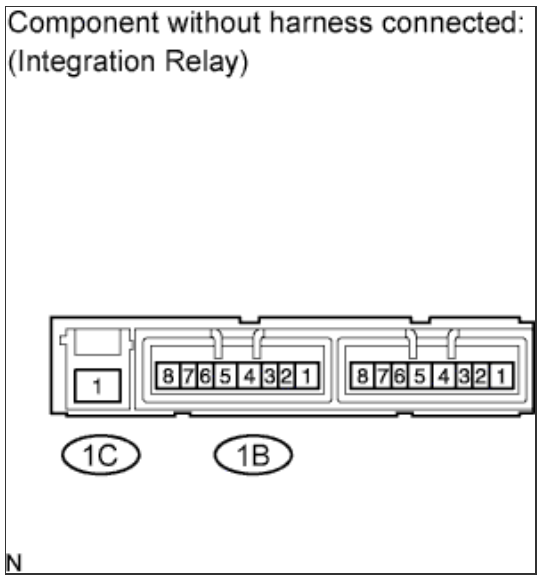
ii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
IG2 MAIN fuse	Always	Below 1 Ω

If the result is not as specified, replace the IG2 MAIN fuse.

iii. Install the IG2 MAIN fuse to the integration relay.



b. Measure the resistance of the ignition relay No. 2 (IG2) circuit.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1C-1 - 1B-8	Battery voltage is not applied to terminals 1B-6 and 1B-7	10 kΩ or higher
	Battery voltage is applied to terminals 1B-6 and 1B-7	Below 1 Ω

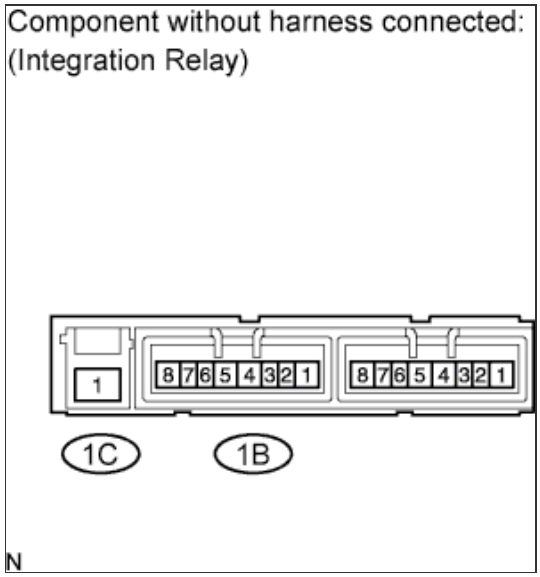
If the result is not as specified, replace the integration relay.

3. INSPECT INTEGRATION RELAY (EFI)

a. Measure the resistance of the EFI MAIN fuse.

i. Remove the EFI MAIN fuse from the integration relay.

ii. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

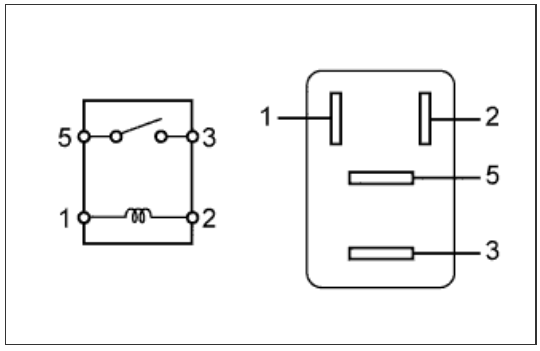
Tester Connection	Condition	Specified Condition
EFI MAIN fuse	Always	Below 1 Ω

If the result is not as specified, replace the EFI MAIN fuse.

iii. Install the EFI MAIN fuse to the integration relay.

b. Measure the resistance of the EFI relay circuit.

i. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
1C-1 - 1B-4	Battery voltage is not applied to terminals 1B-2 and 1B-3	10 kΩ or higher
	Battery voltage is applied to terminals 1B-2 and 1B-3	Below 1 Ω

If the result is not as specified, replace the integration relay.

4. INSPECT EFI NO. 2 RELAY

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 5	Battery voltage is not applied to terminals 1 and 2	10 kΩ or higher
	Battery voltage is applied to terminals 1 and 2	Below 1 Ω

If the result is not as specified, replace the relay.

5. INSPECT INTEGRATION RELAY (A/F)

a. Measure the resistance of the A/F fuse.

i. Remove the A/F fuse from the integration relay.

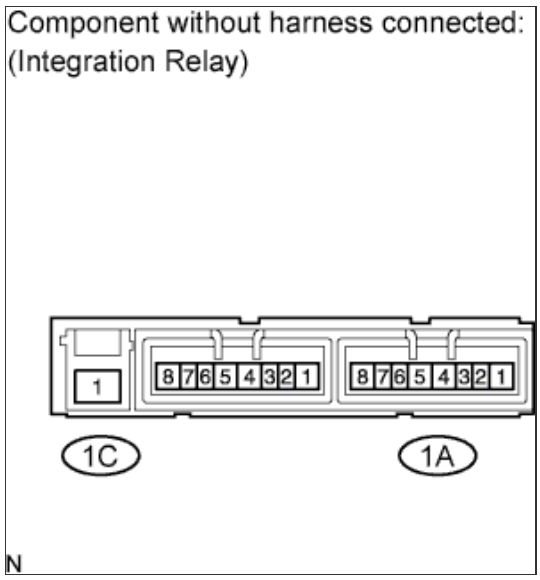
ii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A/F fuse	Always	Below 1 Ω

If the result is not as specified, replace the A/F fuse.

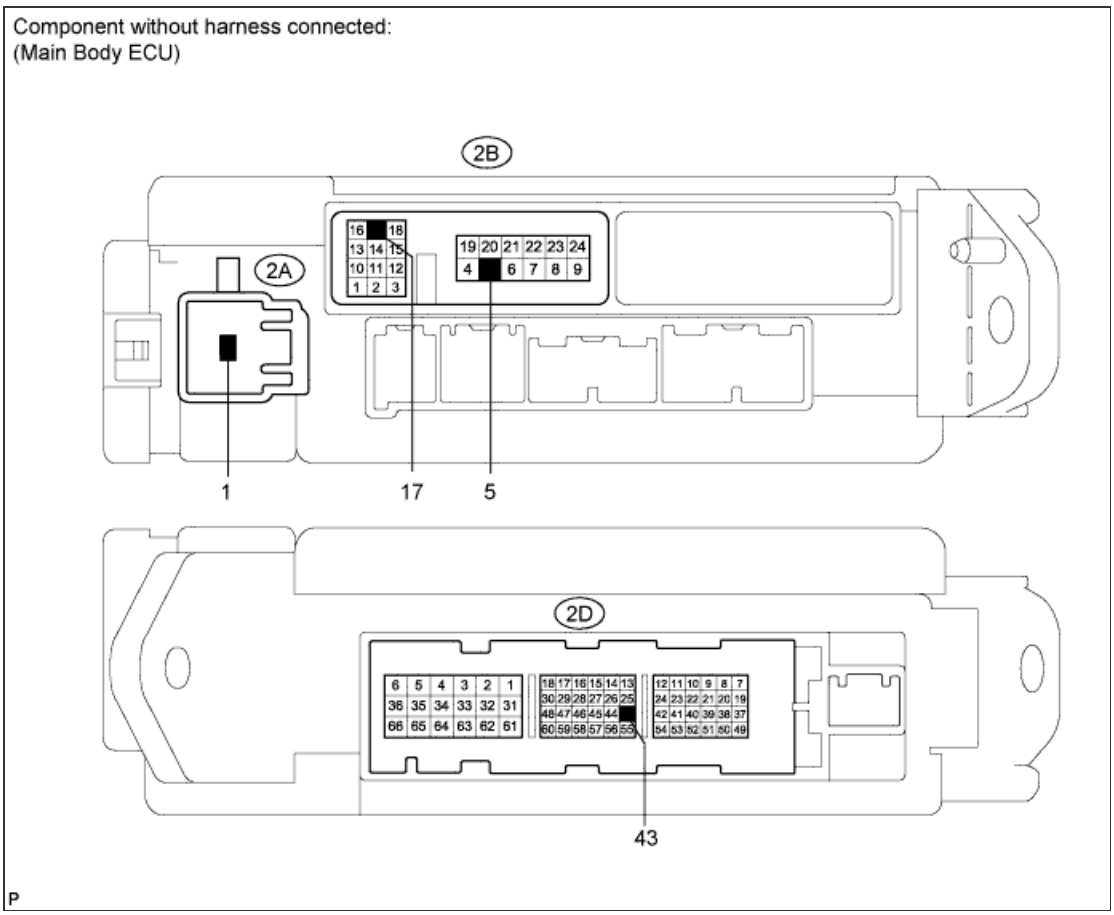
iii. Install the A/F fuse to the integration relay.



b. Measure the resistance of the A/F sensor heater relay circuit.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:



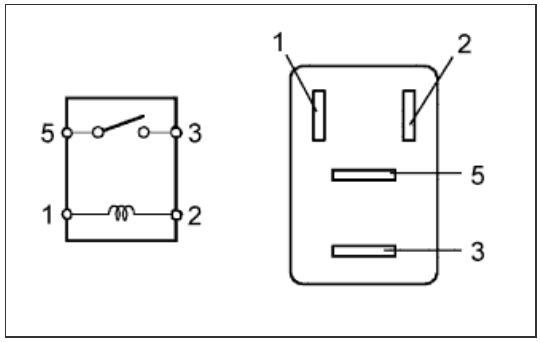
Tester Connection	Condition	Specified Condition
1C-1 - 1A-4	Battery voltage is not applied to terminals 1A-2 and 1A-3	10 kΩ or higher
	Battery voltage is applied to terminals 1 A-2 and 1A-3	Below 1 Ω

If the result is not as specified, replace the integration relay.

6. INSPECT MAIN BODY ECU (IG1 NO. 1)

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:



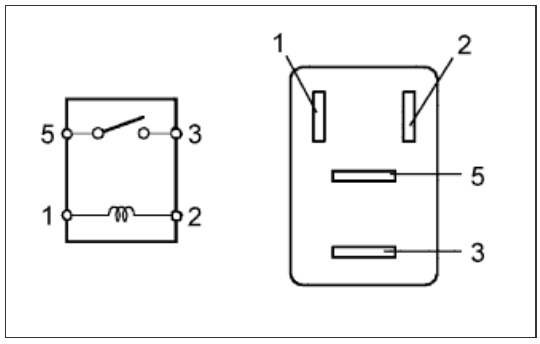
Tester Connection	Condition	Specified Condition

2A-1 - 2B-17	Battery voltage is not applied to terminals 2B-5 and 2D-43	10 kΩ or higher
	Battery voltage is applied to terminals 2B-5 and 2D-43	Below 1 Ω

If the result is not as specified, replace the main body ECU.

7. INSPECT STARTER RELAY (ST)

a. Measure the resistance according to the value(s) in the table below.



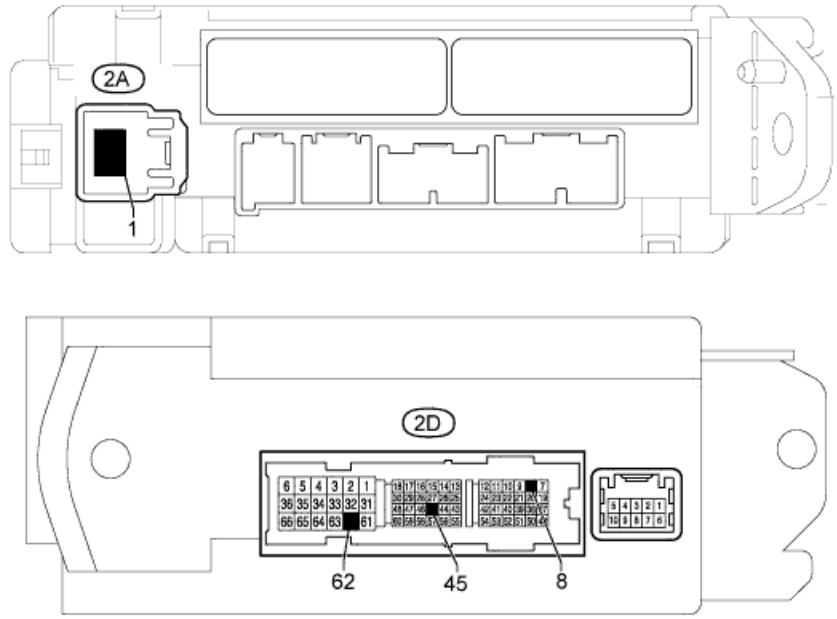
Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 5	Battery voltage not applied to terminals 1 and 2	10 kΩ or higher
	Battery voltage applied to terminals 1 and 2	Below 1 Ω

If the result is not as specified, replace the relay.

8. INSPECT STARTER CUT RELAY (ST CUT)

a. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 5	Battery voltage not applied to terminals 1 and 2	10 kΩ or higher
	Battery voltage applied to terminals 1 and 2	Below 1 Ω

If the result is not as specified, replace the relay.

9. INSPECT MAIN BODY ECU (ACC RELAY)

Component without harness connected: (Main Body ECU)

P

a. Measure the resistance of the ACC relay circuit.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
2A-1 - 2D-8	Battery voltage not applied between 2D-45 and 2D-62	10 kΩ or higher
	Battery voltage applied between 2D-45 and 2D-62	Below 1 Ω

If the result is not as specified, replace the main body ECU.

for Preparation Click here

1. INSPECT IGNITION TIMING

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. Remove the engine room side cover LH.

c. Remove the engine room side cover RH.

d. Remove the upper radiator support seal.

e. Remove the V-bank cover.

f. When using the intelligent tester:

i. Connect the intelligent tester to the DLC3.

ii. Start the engine and idle it.

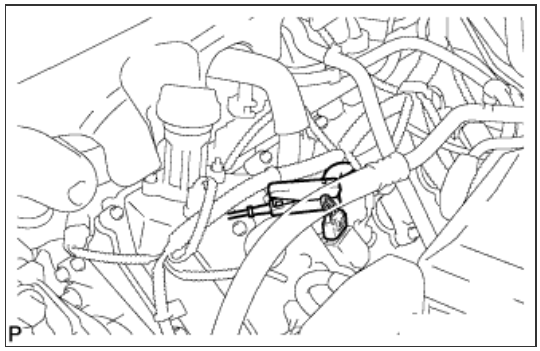
iii. Turn the intelligent tester ON.

iv. Enter the following menus: Powertrain / Engine and ECT / Data List / Primary / IGN Advance.

HINT:

Refer to the intelligent tester operator's manual for further details.

Standard ignition timing:
8 to 12° BTDC @ idle (transmission in neutral and A/C switch off)



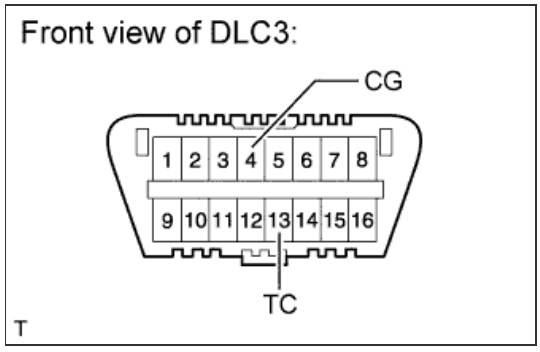
v. Disconnect the intelligent tester from the DLC3.

g. When not using the intelligent tester:

i. Connect the tester probe of a timing light to the wire of the ignition coil connector for the No. 1 cylinder.

NOTICE:

Use a timing light that detects primary signals.



ii. Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.

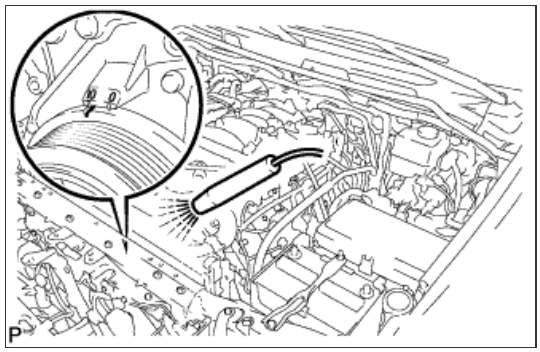
SST
09843-18040

NOTICE:

- **Confirm the terminal numbers before connecting them. Connecting the wrong terminals can damage the engine.**
- **Switch off all accessories and the A/C before connecting the terminals.**

iii. Using the timing light, check the ignition timing.

Standard ignition timing:
8 to 12° BTDC @ idle (transmission in neutral and A/C switch



off)

iv. Remove SST from the DLC3.

v. Check the ignition timing.

Standard ignition timing:
7 to 24° BTDC @ idle (transmission in neutral and A/C switch off)

vi. Disconnect the timing light from the engine.

h. Install the V-bank cover.

i. Install the upper radiator support seal.

j. Install the engine room side cover RH.

k. Install the engine room side cover LH.

2. INSPECT ENGINE IDLE SPEED

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. When using the intelligent tester:

i. Connect the intelligent tester to the DLC3.

NOTICE:

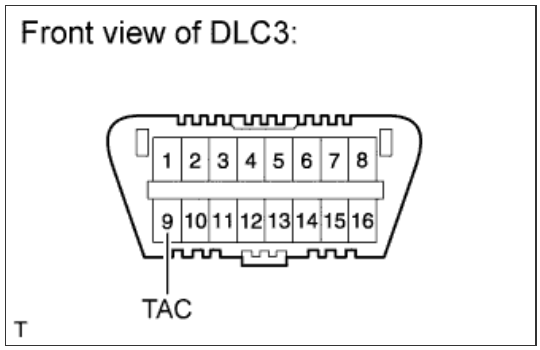
Switch off all accessories and the A/C before connecting the intelligent tester.

ii. Race the engine at 2500 rpm for approximately 90 seconds.

iii. Turn the intelligent tester ON.

iv. Enter the following menus: Powertrain / Engine and ECT / Data List / Primary / Engine Speed.

Standard idle speed:
650 to 750 rpm (transmission in neutral and A/C switch off)



HINT:

Refer to the intelligent tester operator's manual for further details.

If the idle speed is not as specified, check the air intake system.

v. Disconnect the intelligent tester from the DLC3.

c. When not using the intelligent tester:

i. Using SST, connect the tachometer probe to terminal 9 (TAC) of the DLC3.

SST
09843-18030

NOTICE:

- **Confirm the terminal number before connecting the probe. Connecting the probe to the wrong terminal can damage the engine.**
- **Switch off all accessories and the A/C before connecting the probe.**

ii. Race the engine at 2500 rpm for approximately 90 seconds.

iii. Check the idle speed.

Standard idle speed:
650 to 750 rpm (transmission in neutral and A/C switch off)

If the idle speed is not as specified, check the air intake system.

iv. Disconnect the tachometer probe from the DLC3.

3. INSPECT COMPRESSION

a. Warm up and stop the engine.

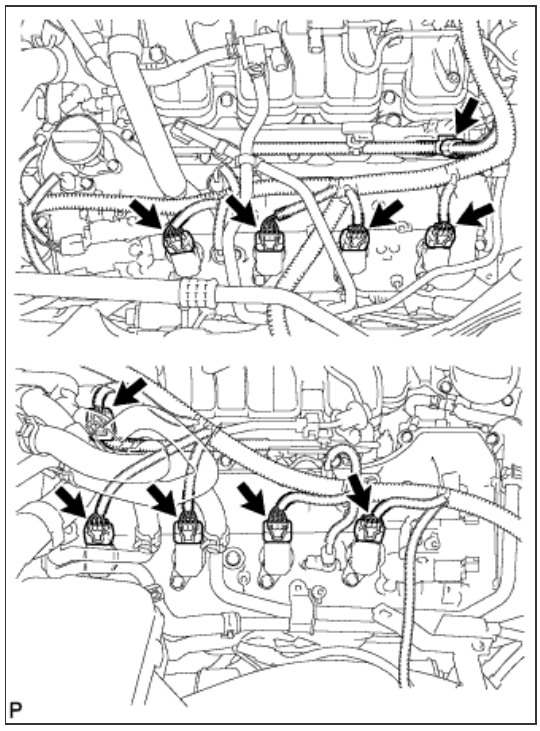
i. Allow the engine to warm up to a normal operating temperature.

b. Remove the engine room side cover LH.

c. Remove the engine room side cover RH.

d. Remove the V-bank cover.

e. Remove the air cleaner hose assembly (Click here).

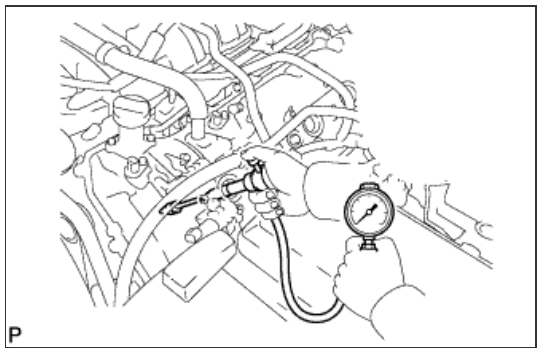


f. Remove the air cleaner assembly (Click here).

g. Disconnect the water by-pass pipe assembly (Click here).

h. Disconnect the 2 injector connectors and 8 ignition coil connectors.

i. Remove the 8 bolts and 8 ignition coils (Click here).



j. Remove the 8 spark plugs (Click here).

k. Check the cylinder compression pressure.

NOTICE:

Check the compression pressure of each cylinder in the same way.

i. Insert a compression gauge into the spark plug hole.

ii. Fully open the throttle.

iii. While cranking the engine, measure the compression pressure.

Standard compression pressure:
1300 kPa (13.3 kgf/cm^2, 189 psi) or more

Minimum pressure:
1000 kPa (10.2 kgf/cm^2, 145 psi)

Difference between each cylinder:
100 kPa (1.0 kgf/cm^2, 15 psi) or less

NOTICE:

- **Always use a fully charged battery to obtain an engine speed of 250 rpm or more.**
- **This measurement must be done as quickly as possible.**

iv. If the cylinder compression is low in one or more cylinders, pour a small amount of engine oil into the cylinder with low compression through its spark plug hole. Then inspect the cylinder compression pressure again.

HINT:

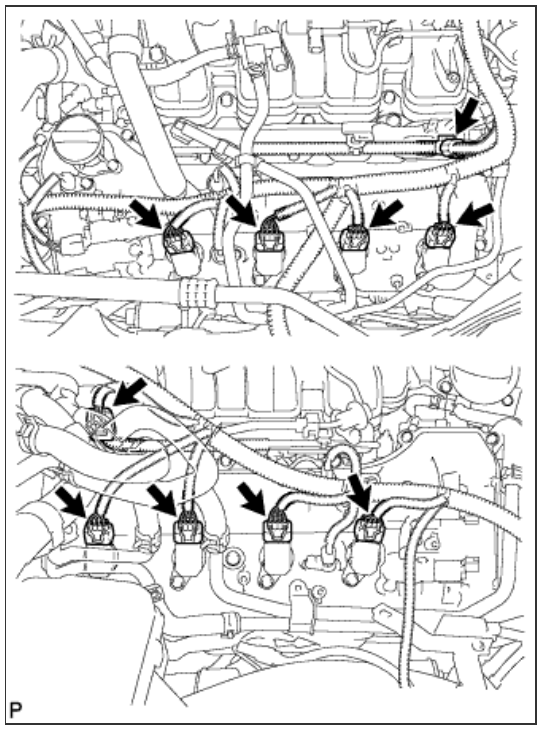
- **If adding oil helps boost the compression, it is likely that the piston rings and/or cylinder bore are worn or damaged.**
- **If pressure stays low, a valve may be stuck or seated improperly, or there may be leakage in the gasket.**

l. Install the 8 spark plugs (Click here).

m. Install the 8 ignition coils with the 8 bolts (Click here).

n. Connect the 2 injector connectors and 8 ignition coil connectors.

o. Connect the water by-pass pipe assembly (Click here).



p. Install the air cleaner assembly (Click here).

q. Install the air cleaner hose assembly (Click here).

r. Install the V-bank cover.

s. Install the engine room side cover RH.

t. Install the engine room side cover LH.

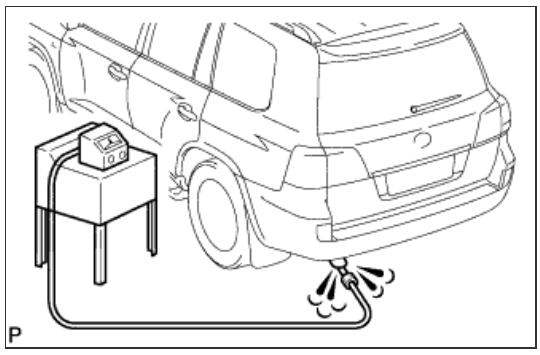
4. INSPECT CO/HC

HINT:

This check is used only to determine whether or not the idle CO/HC complies with regulations.

a. Start the engine.

b. Keep the engine speed at 2500 rpm for approximately 180 seconds.



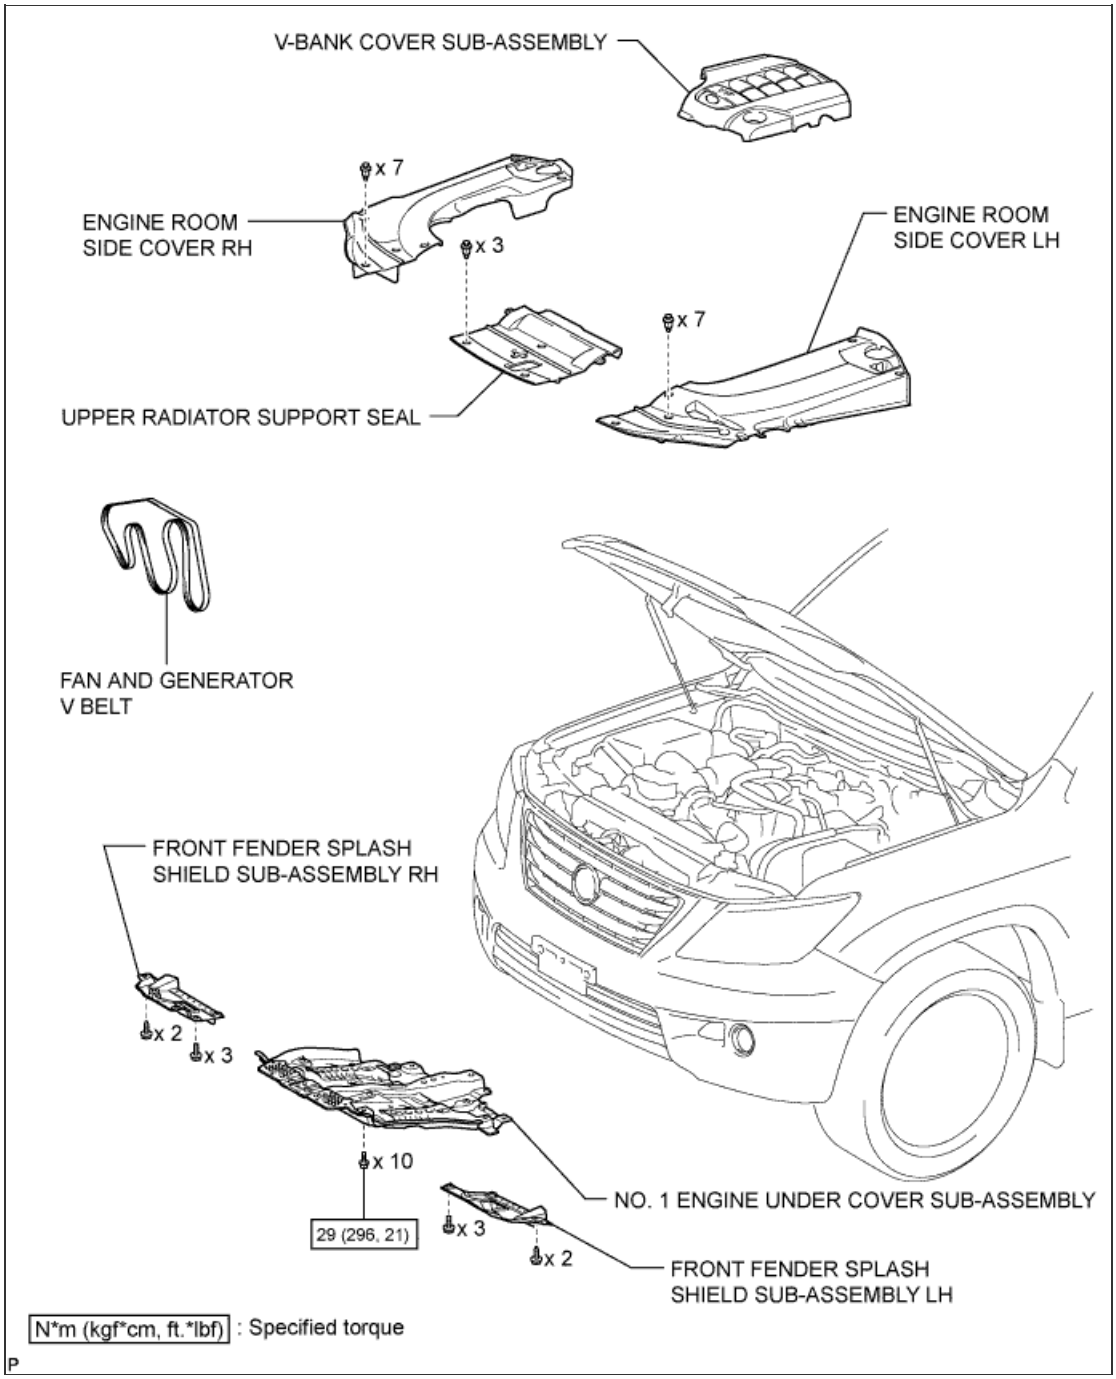
c. Insert the CO/HC meter testing probe at least 40 cm (1.31 ft.) into the tailpipe during idling.

d. Immediately check CO/HC concentration at idle and/or 2500 rpm.

HINT:

When performing the 2 mode (2500 rpm and idle) test, follow the measurement order prescribed by the applicable local regulations.

e. If the CO/HC concentration does not comply with the regulations, troubleshoot in the order given below.



i. Check the A/F sensor operation (Click here) and heated oxygen sensor operation (Click here).

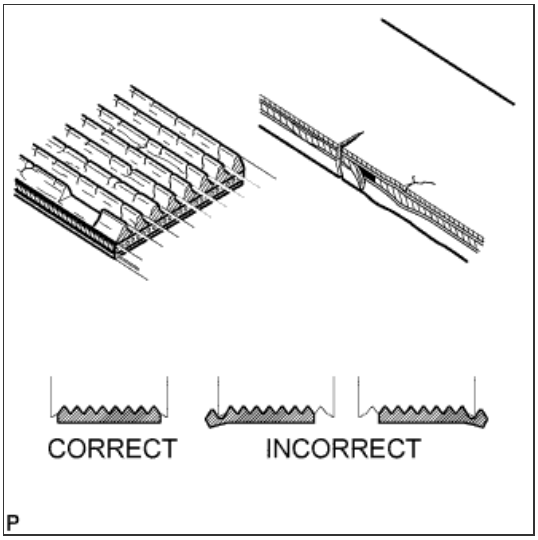
ii. See the table below for possible causes, and then inspect and correct the applicable causes if necessary.

CO	HC	Symptom	Cause
Normal	High	Rough idle	1. Faulty ignitions: • Incorrect timing • Plugs (contaminated, shorted or gaps are defective) 2. Incorrect valve clearance 3. Leaky intake and exhaust valves 4. Leaky cylinder
Low	High	Rough idle (Fluctuating HC reading)	1. Vacuum leaks: • PCV hose • Intake manifold • Throttle body 2. Lean mixture causing misfire
High	High	Rough idle (Black smoke from exhaust)	1. Restricted air filter 2. Faulty SFI system: • Faulty pressure regulator • Defective ECT sensor • Faulty ECM • Faulty injectors • Faulty throttle position sensor • Faulty MAF meter

for Preparation [Click here]

for Preparation Click here

1. INSPECT FAN & GENERATOR V BELT



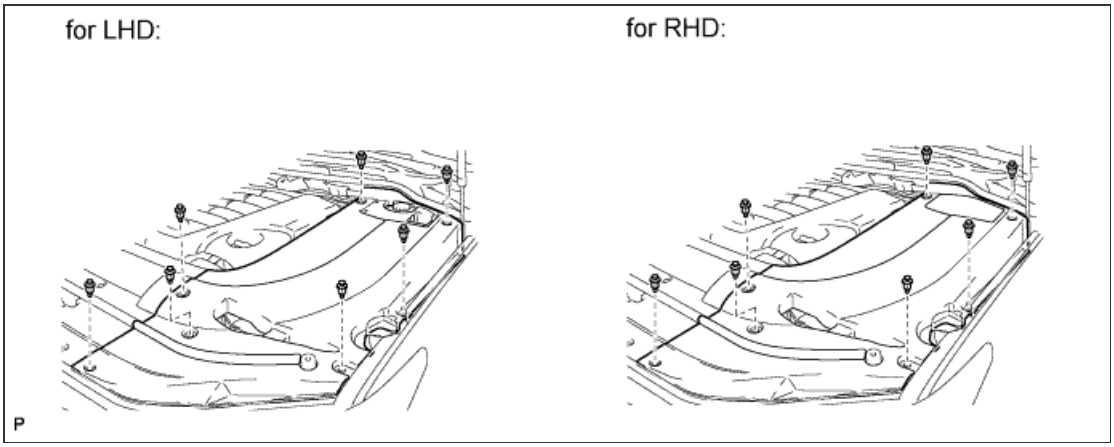
a. Check the belt for wear, cracks or other signs of damage.
If any of the following defects is found, replace the fan and generator V belt.

- The belt is cracked.
- The belt is worn out to the extent that the cords are exposed.
- The belt has chunks missing from the ribs.

b. Check that the belt fits properly in the ribbed grooves.

HINT:

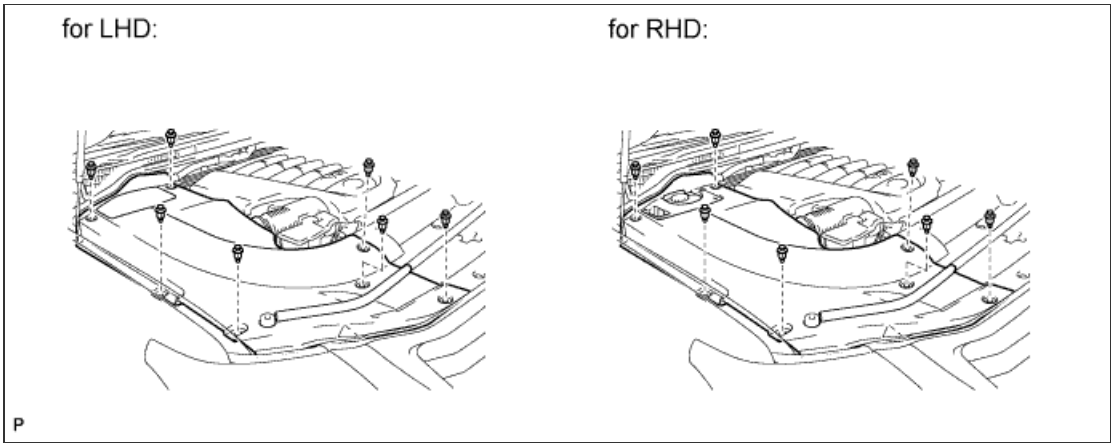
Check with your hand to confirm that the belt has not slipped out of the grooves on the bottom of the pulley. If it has slipped out, replace the fan and generator V belt. Install a new fan and generator V belt correctly.



2. INSPECT V-RIBBED BELT TENSIONER ASSEMBLY

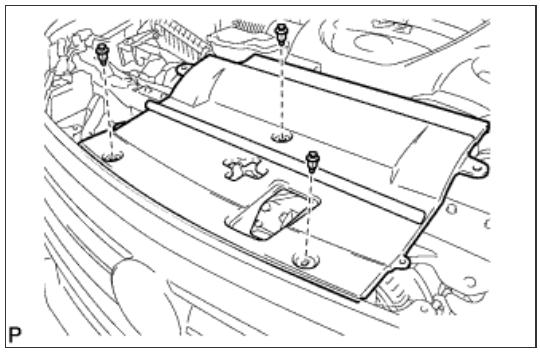
a. Check that nothing gets caught in the tensioner by turning it clockwise and counterclockwise. If a malfunction exists, replace the tensioner.

for Preparation Click here



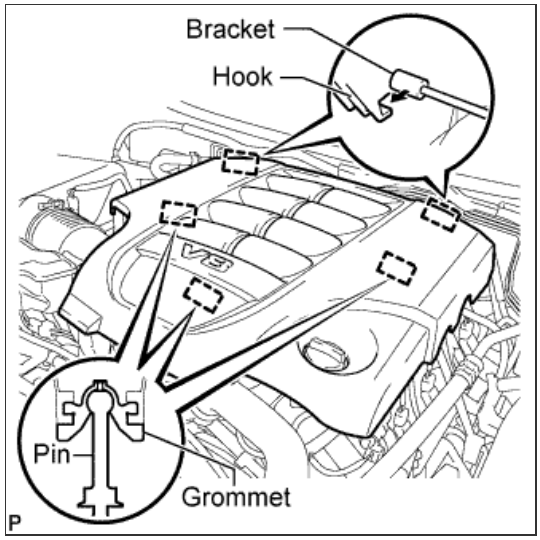
1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.



2. REMOVE ENGINE ROOM SIDE COVER RH

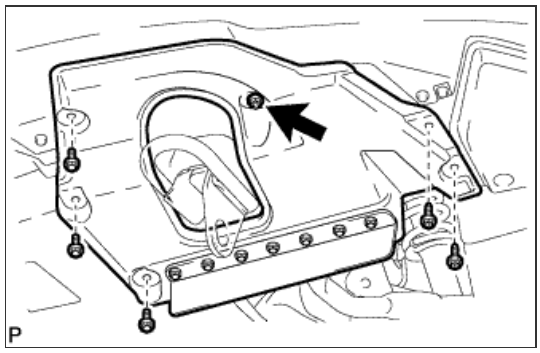
a. Remove the 7 clips and engine room side cover.



3. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 3 clips and upper radiator support seal.

4. REMOVE V-BANK COVER SUB-ASSEMBLY

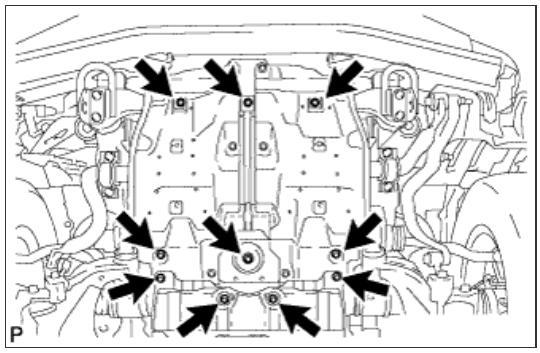


a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.

5. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and 2 screws.

b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



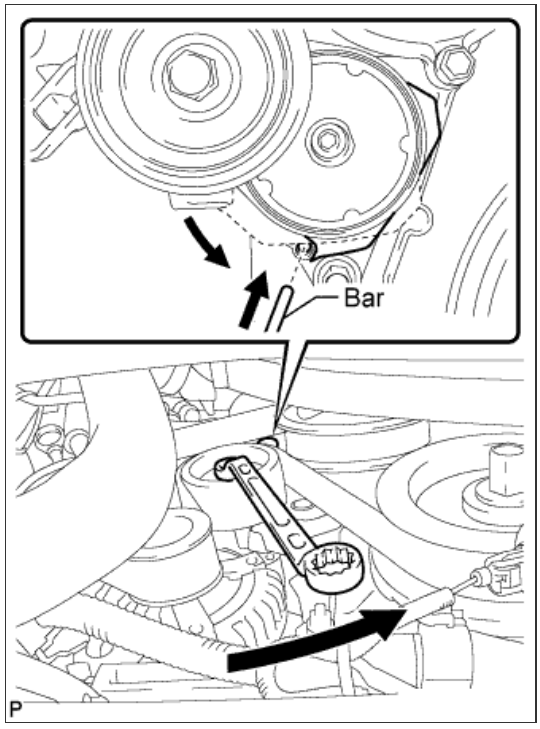
6. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

7. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and No. 1 engine under cover.



8. REMOVE FAN & GENERATOR V BELT

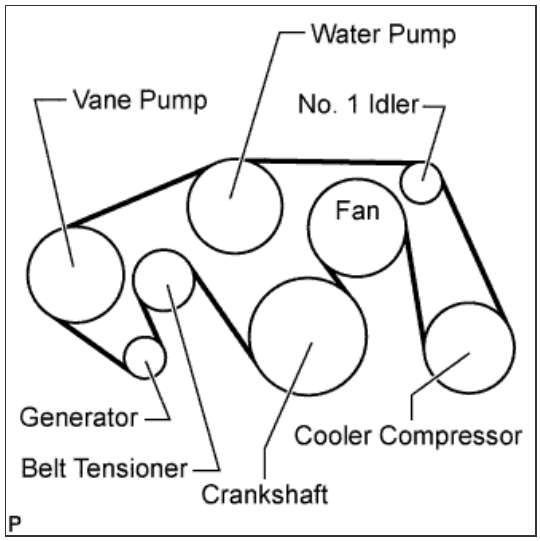
a. While turning the belt tensioner counterclockwise, align the service hole for the belt tensioner and the belt tensioner fixing position, and then insert a bar of φ5 mm (0.197 in.) into the service hole to fix the belt tensioner in place.

HINT:

The pulley bolt for the belt tensioner has a left-hand thread.

b. Remove the V belt.

for Preparation Click here

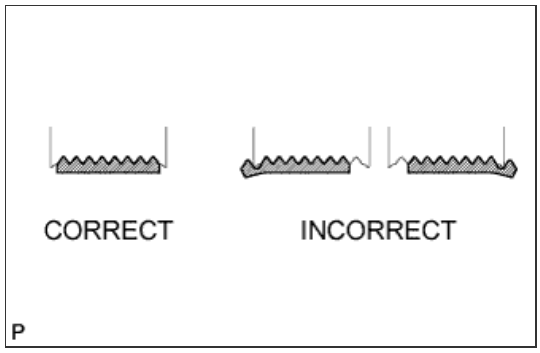


1. INSTALL FAN & GENERATOR V BELT

a. Set the V belt onto every part.

b. While turning the belt tensioner counterclockwise, remove the bar.

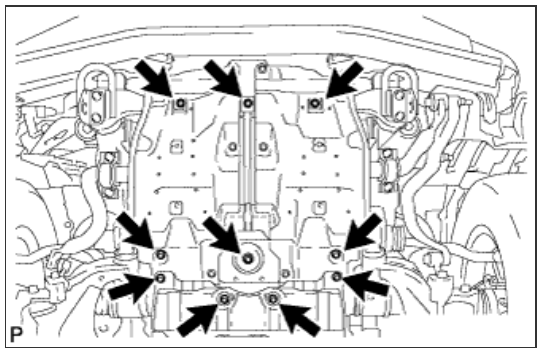
NOTICE:



Make sure that the V belt is properly set to each pulley.

c. After installing the belt, check that it fits properly in the ribbed grooves.

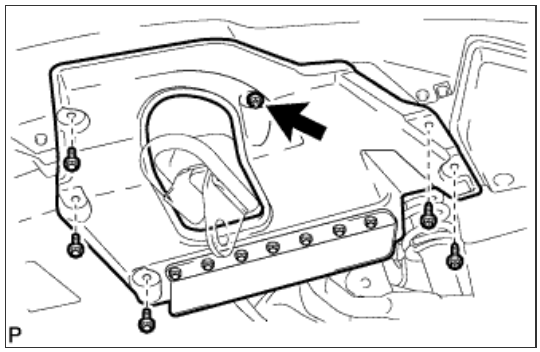
HINT:



Make sure to check by hand that the belt has not slipped out of the grooves on the bottom of the pulley.

2. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.

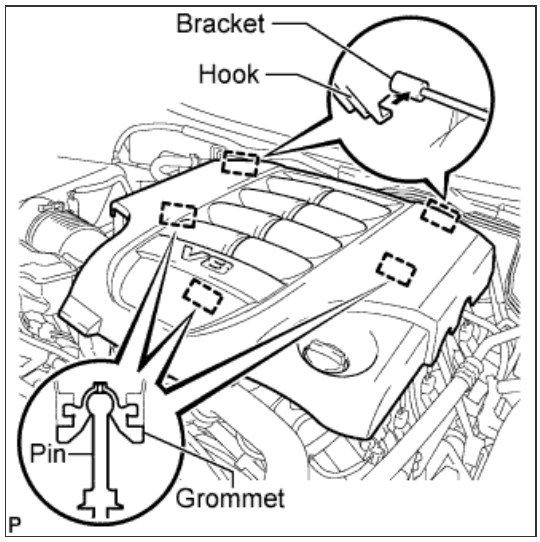


Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

3. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

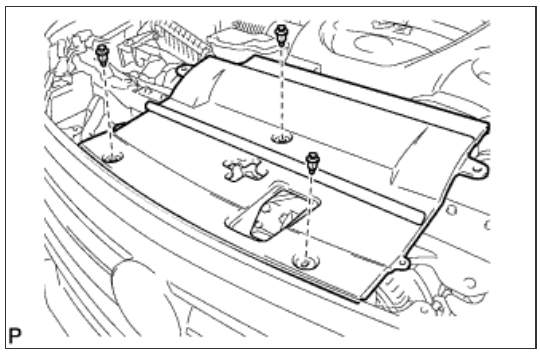
b. Install the 3 bolts and 2 screws.



4. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

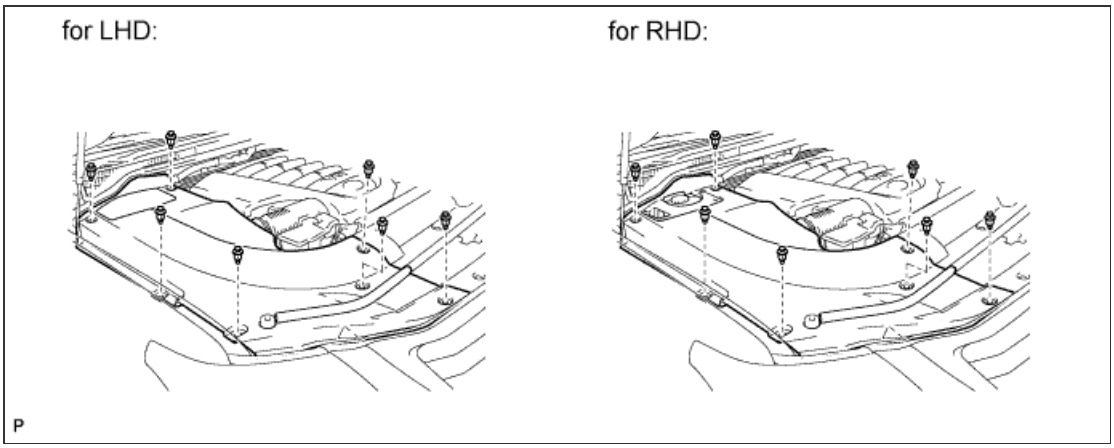
HINT:

Use the same procedures described for the LH side.



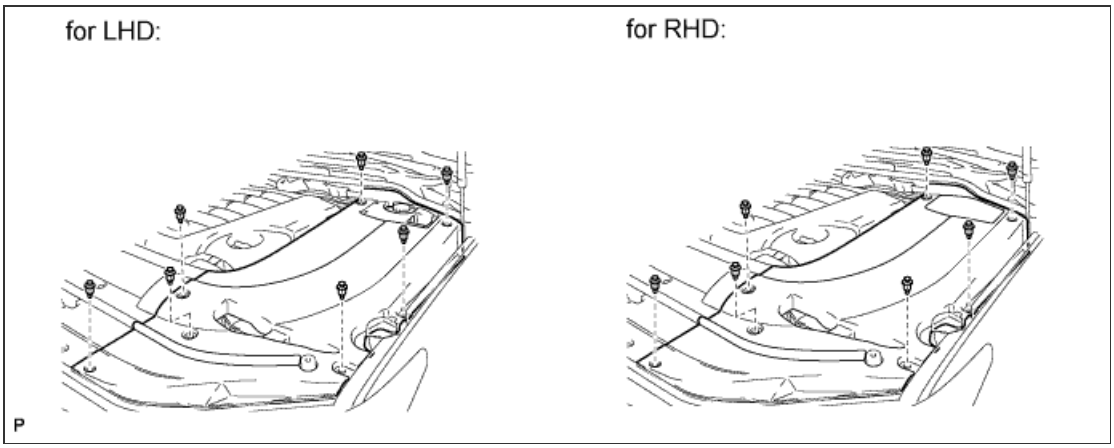
5. INSTALL V-BANK COVER SUB-ASSEMBLY

a. Attach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.



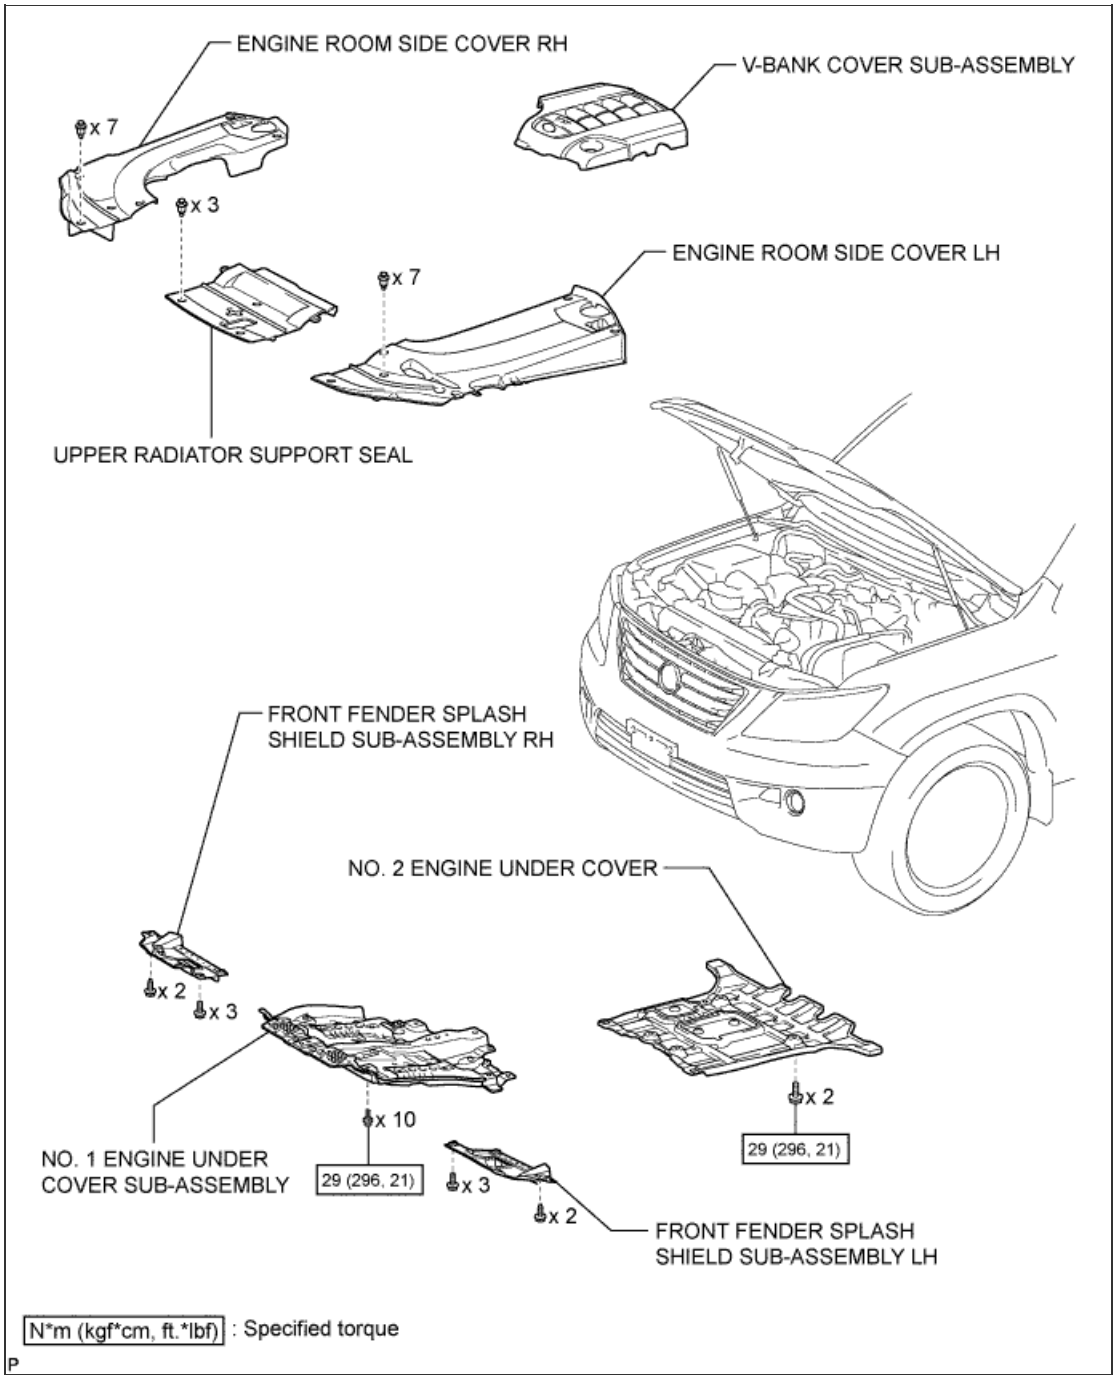
6. INSTALL UPPER RADIATOR SUPPORT SEAL

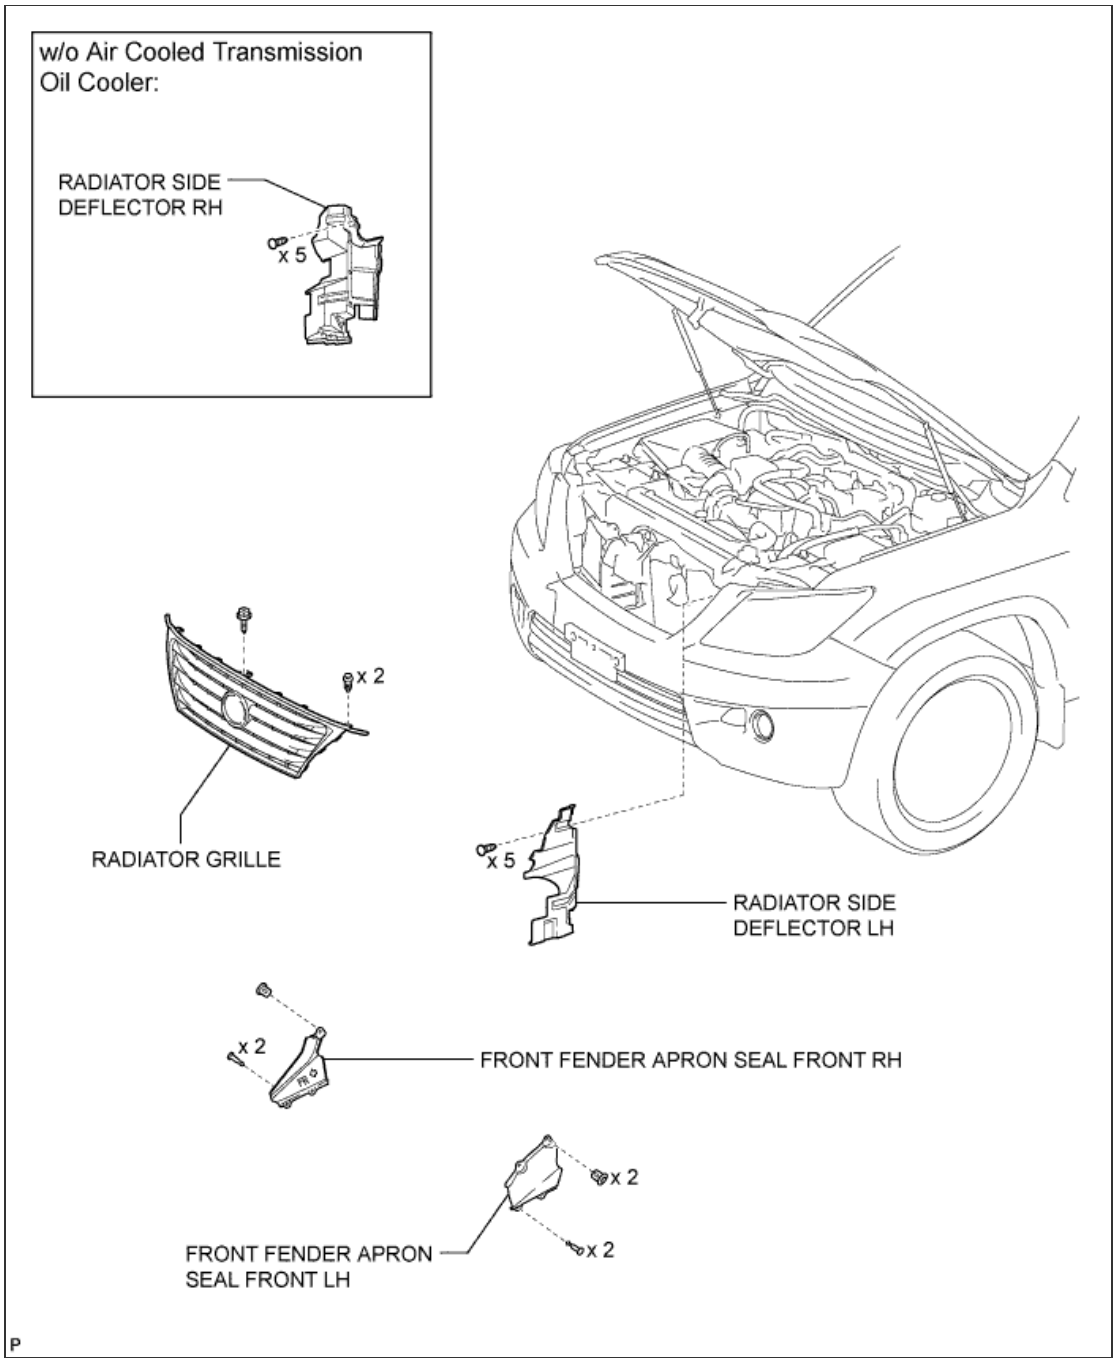
a. Install the upper radiator support seal with the 3 clips.



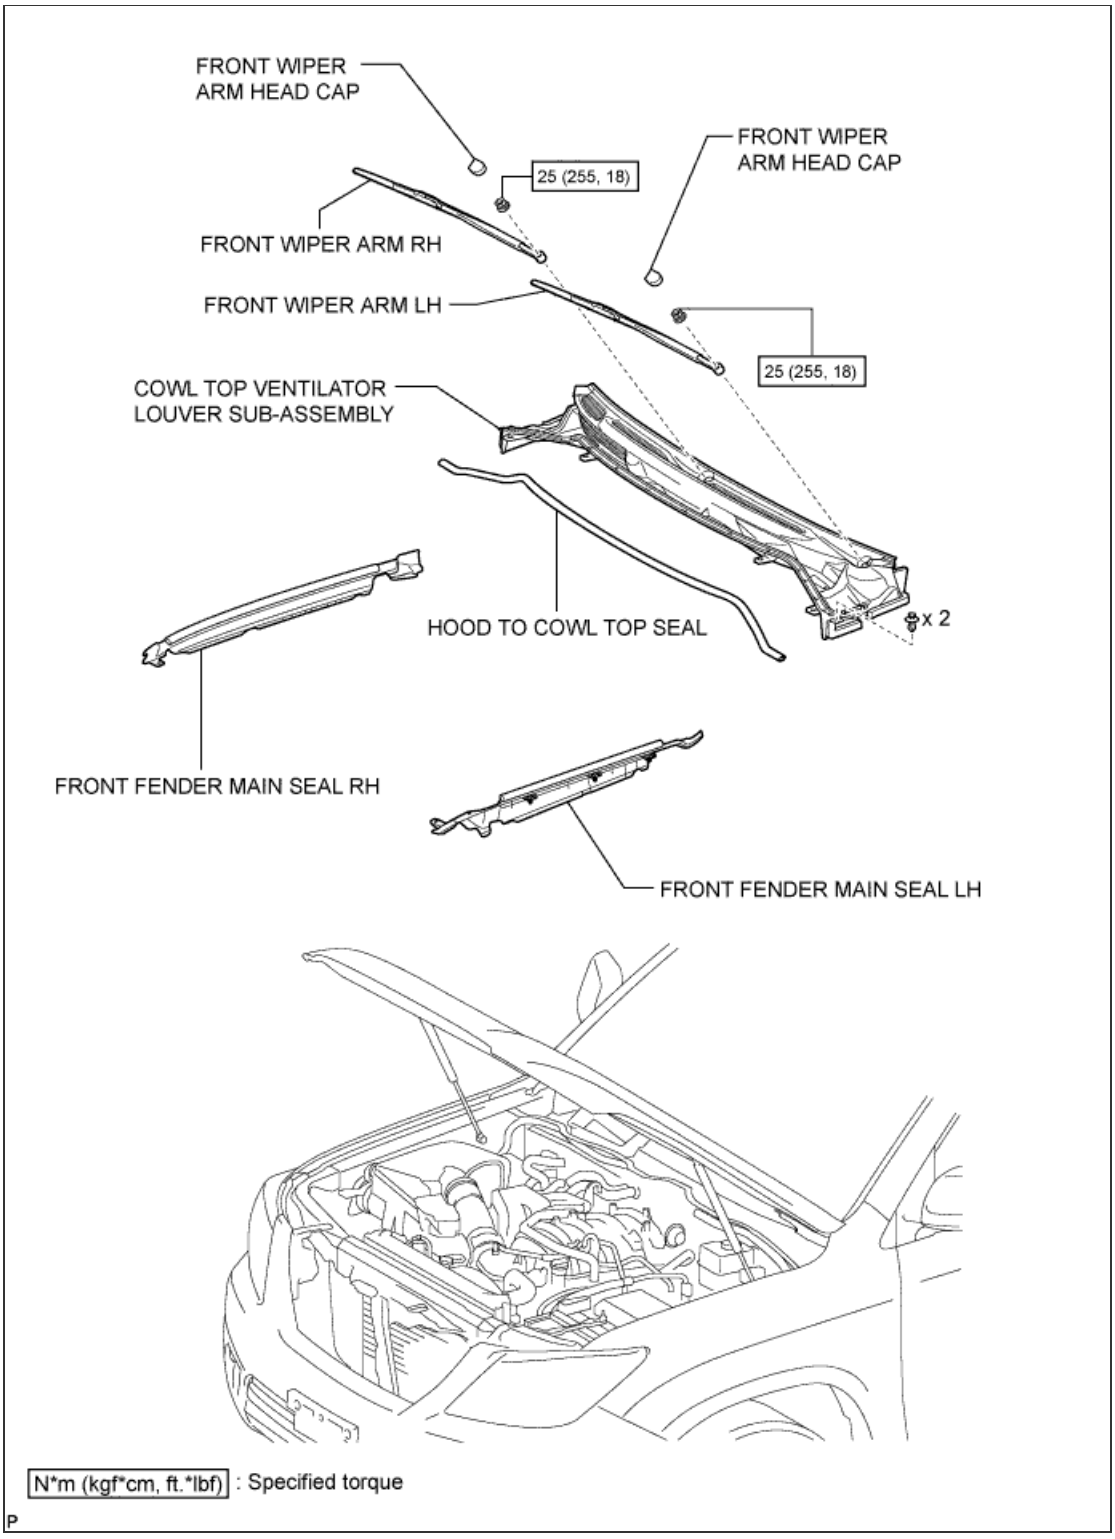
7. INSTALL ENGINE ROOM SIDE COVER RH

a. Install the engine room side cover with the 7 clips.





8. INSTALL ENGINE ROOM SIDE COVER LH



a. Install the engine room side cover with the 7 clips.

P

for Preparation Click here

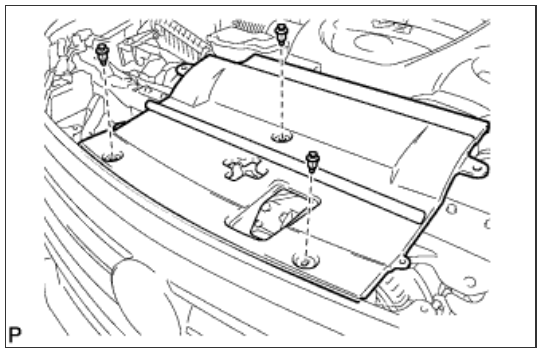
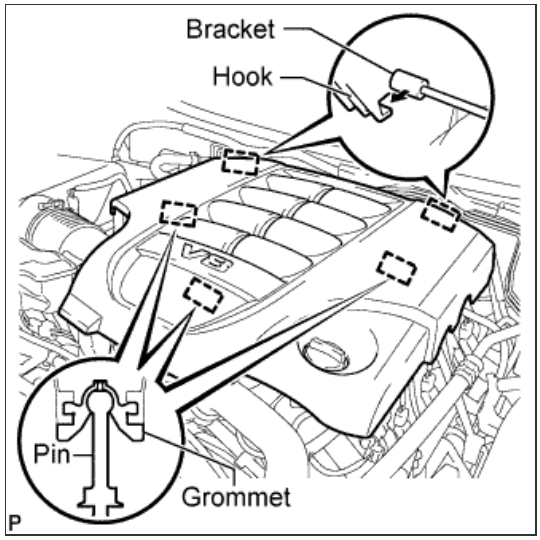
1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.



2. REMOVE ENGINE ROOM SIDE COVER RH

a. Remove the 7 clips and engine room side cover.



3. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 3 clips and upper radiator support seal.

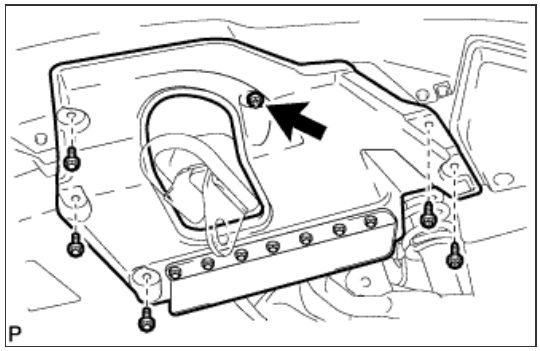
4. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.

5. DISCHARGE FUEL SYSTEM PRESSURE

a. Discharge the fuel system pressure (Click here).

6. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL



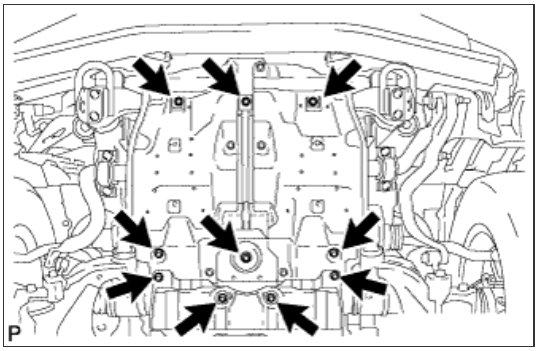
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable from the cable is reconnected (Click here).

7. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and 2 screws.

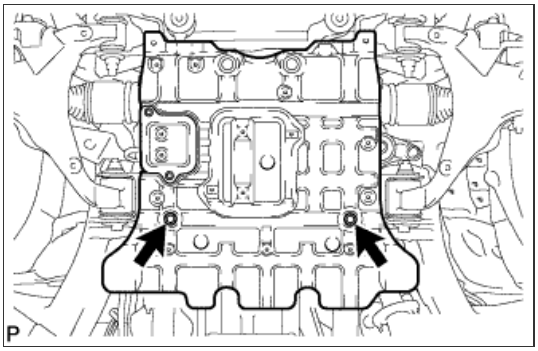
b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



8. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

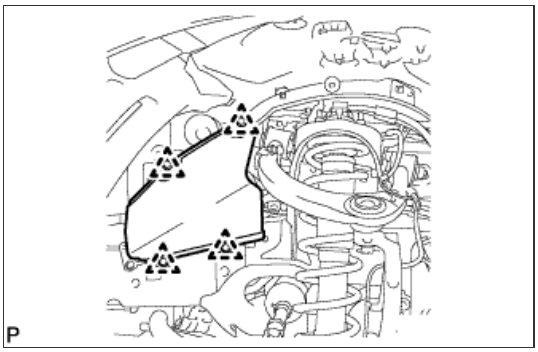
HINT:

Use the same procedures described for the LH side.



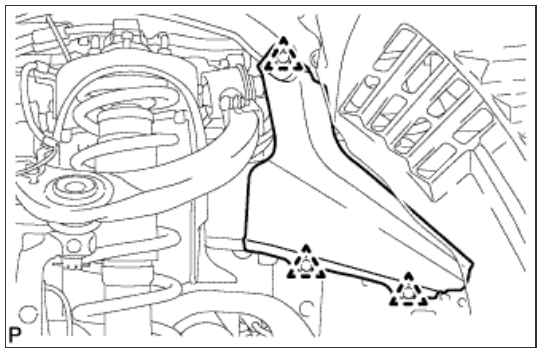
9. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and No. 1 engine under cover.



10. REMOVE NO. 2 ENGINE UNDER COVER

a. Remove the 2 bolts and No. 2 engine under cover.



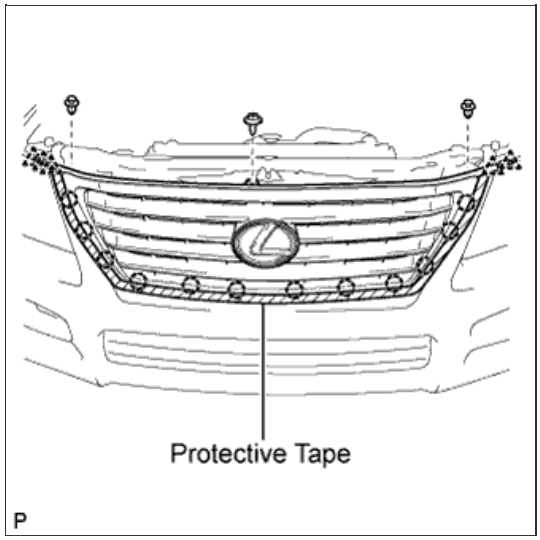
11. REMOVE FRONT FENDER APRON SEAL FRONT LH

a. Using a clip remover, remove the 4 clips and fender apron seal.

12. REMOVE FRONT FENDER APRON SEAL FRONT RH

a. Using a clip remover, remove the 3 clips and fender apron seal.

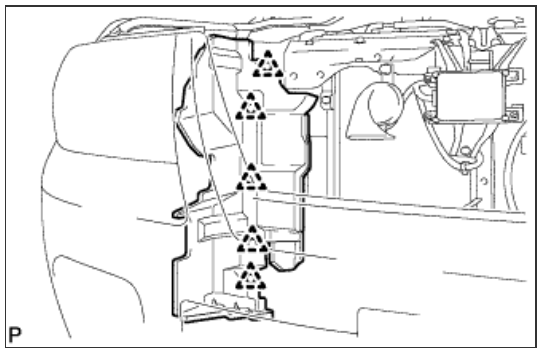
13. REMOVE RADIATOR GRILLE



a. Put protective tape around the radiator grille.

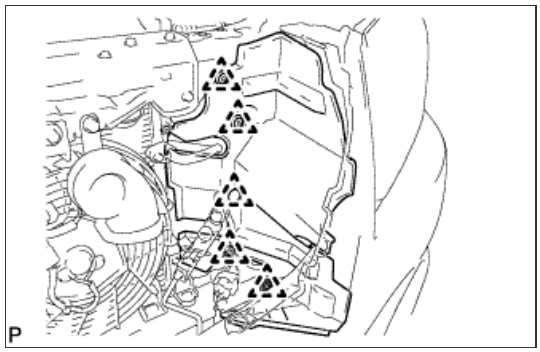
b. Remove the screw and 2 clips.

c. Detach the 5 clips and partially remove the upper radiator seal.



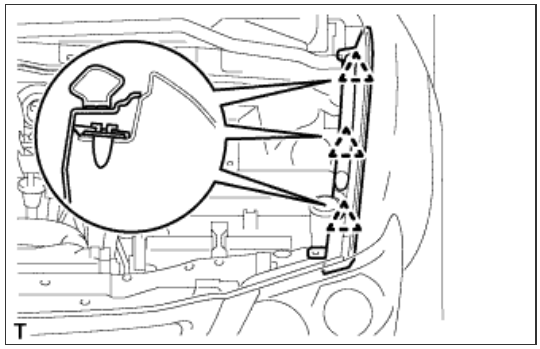
d. w/o Wide View Front Monitor System:
Detach the 12 claws and remove the radiator grille.

e. w/ Wide View Front Monitor System:
Detach the 12 claws, disconnect the connector and remove the radiator grille.



14. REMOVE RADIATOR SIDE DEFLECTOR RH (w/o Air Cooled Transmission Oil Cooler)

a. Using a clip remover, remove the 5 clips and side deflector.



15. REMOVE RADIATOR SIDE DEFLECTOR LH

a. Using a clip remover, remove the 5 clips and side deflector.

16. REMOVE FRONT FENDER MAIN SEAL LH

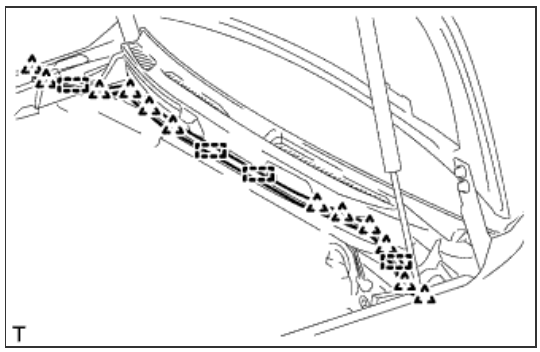
a. Using a clip remover, detach the 3 clips and remove the fender main seal.

17. REMOVE FRONT FENDER MAIN SEAL RH

HINT:

Use the same procedures described for the LH side.

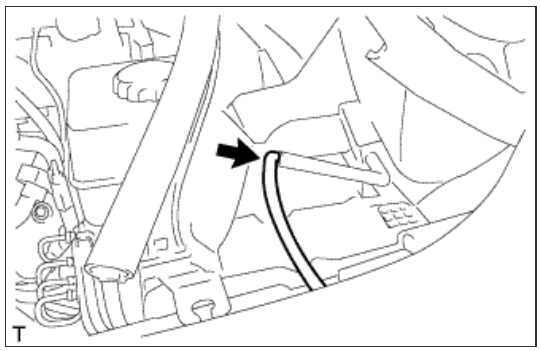
18. REMOVE FRONT WIPER ARM LH



a. Remove the nut, wiper arm and blade.

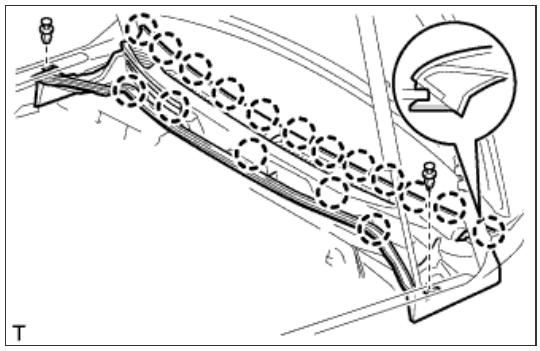
19. REMOVE FRONT WIPER ARM RH

a. Remove the nut, wiper arm and blade.



20. REMOVE HOOD TO COWL TOP SEAL

a. Using a clip remover, detach the 12 clips and 4 clamps, and remove the hood to cowl top seal.



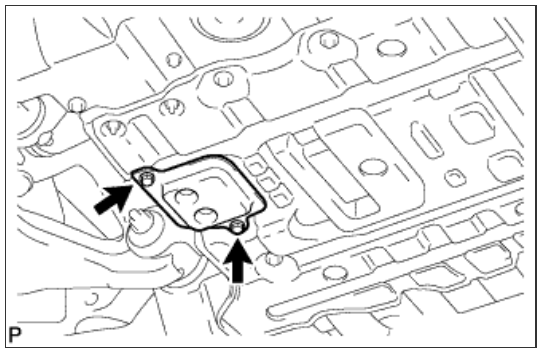
21. REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

a. Disconnect the washer hose.

b. Remove the 2 clips.

c. Detach the 17 claws and remove the cowl top ventilator louver sub-assembly.

22. DRAIN ENGINE OIL

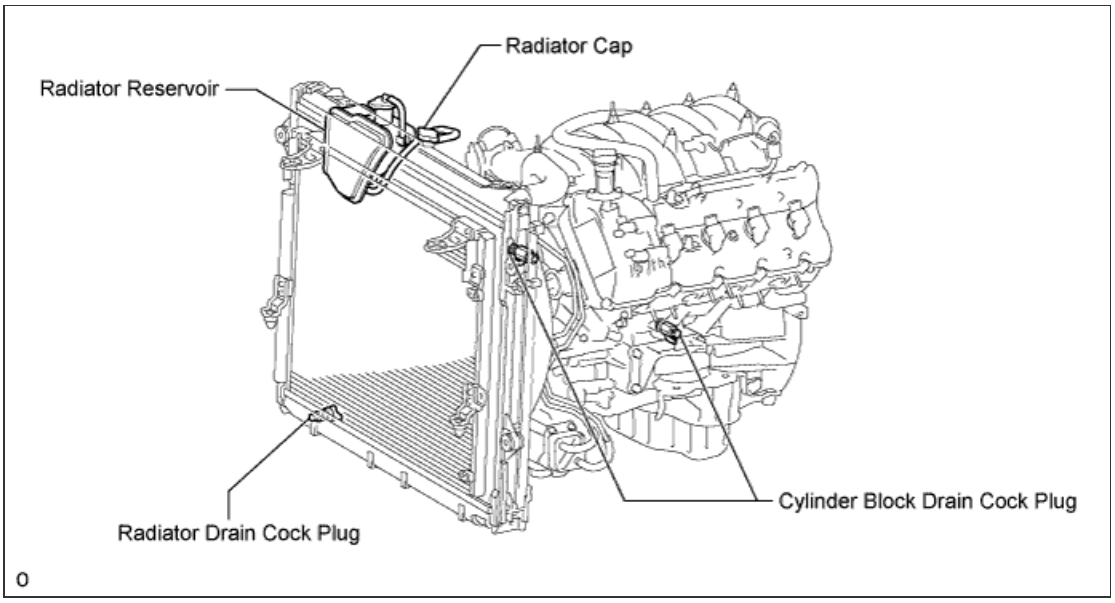


a. Remove the oil filler cap.

b. Remove the 2 bolts and No. 2 engine under cover seal.

c. Remove the oil pan drain plug and gasket, and drain the engine oil into a container.

d. Install a new gasket and the oil pan drain plug.



Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

23. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Loosen the radiator drain cock plug.

HINT:

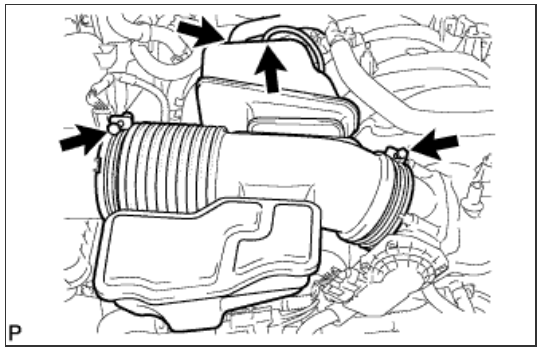
Collect the coolant in a container and dispose of it according to the regulations in your area.

b. Remove the radiator cap. Then drain the coolant from the radiator.

c. Loosen the 2 cylinder block drain cock plugs. Then drain the coolant from the engine.

d. Tighten the 2 cylinder block drain cock plugs.

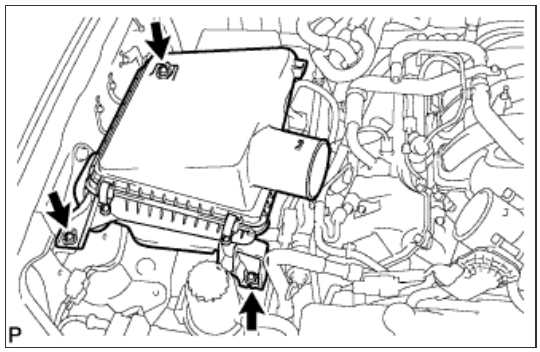
Torque:
13 N*m{ 130 kgf*cm , 10 ft.*lbf }



e. Tighten the radiator drain cock plug by hand.

24. REMOVE AIR CLEANER HOSE ASSEMBLY

a. Disconnect the vacuum hose and No. 2 ventilation hose.

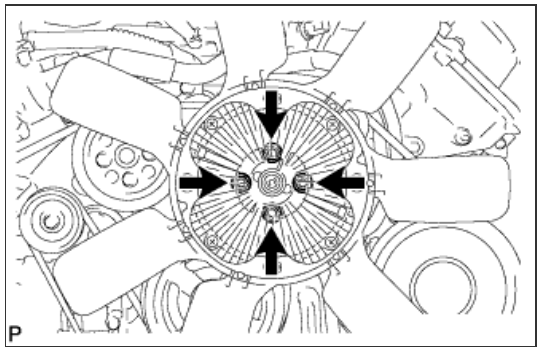


b. Loosen the 2 hose clamps.

c. Remove the air cleaner hose.

25. REMOVE AIR CLEANER ASSEMBLY

a. Remove the 3 bolts and air cleaner.



26. REMOVE NO. 1 RADIATOR HOSE

27. REMOVE NO. 2 RADIATOR HOSE

28. REMOVE FAN SHROUD

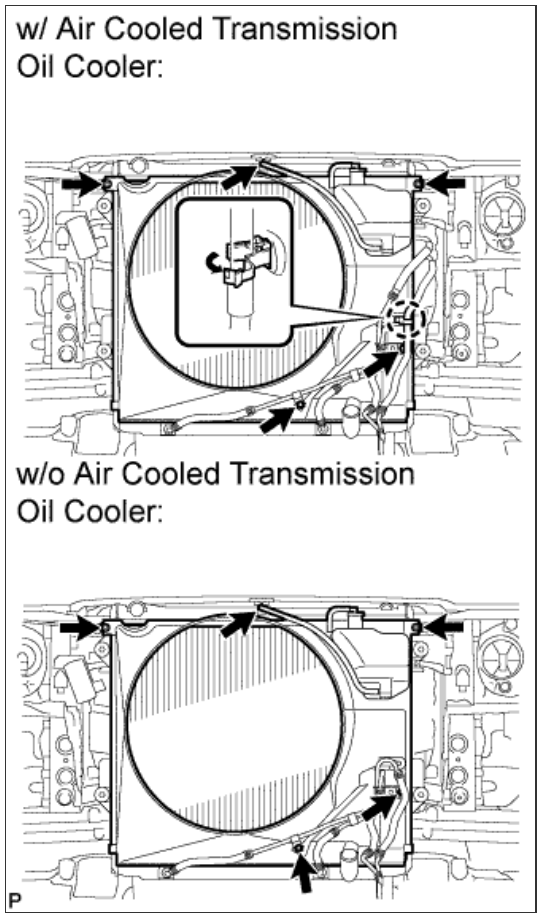
a. Loosen the 4 nuts holding the fluid coupling fan.

b. Remove the fan and generator V belt (Click here).

c. Disconnect the reservoir hose from the upper radiator tank.

d. w/ Air Cooled Transmission Oil Cooler:
Detach the claw to open the flexible hose clamp.

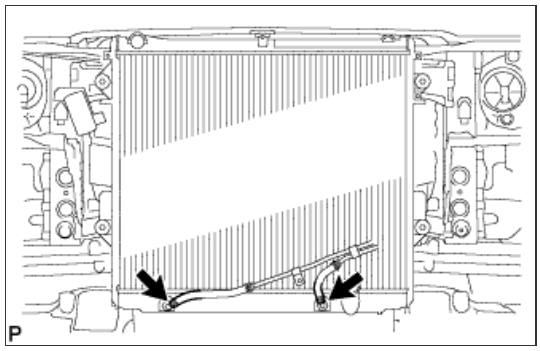
e. Remove the 2 bolts and disconnect the oil cooler tube from the fan shroud.



f. Remove the 2 bolts holding the fan shroud.

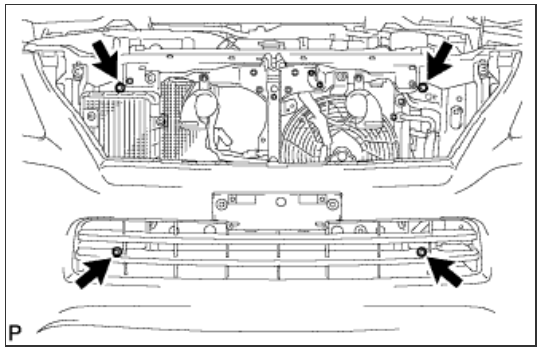
g. Remove the 4 nuts of the fluid coupling fan, and then remove the shroud together with the coupling fan.

NOTICE:



Be careful not to damage the radiator core.

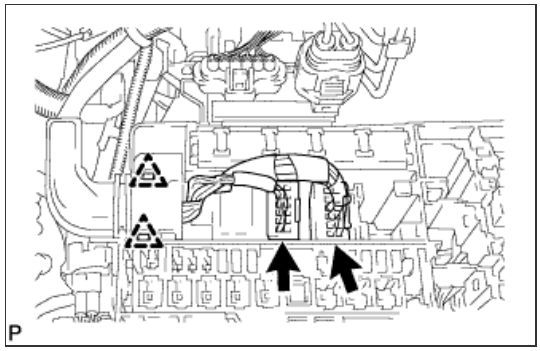
h. Remove the fan pulley.



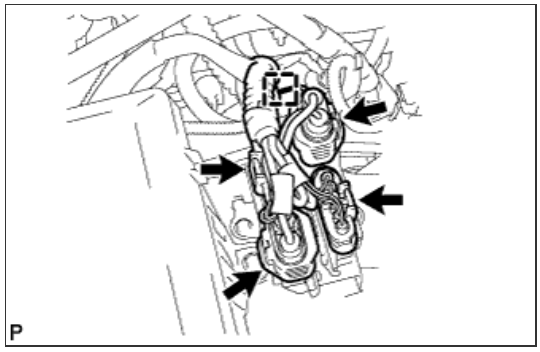
29. REMOVE RADIATOR ASSEMBLY

a. Disconnect the 2 oil cooler hoses.

b. Remove the 4 bolts and radiator.



30. DISCONNECT ENGINE WIRE



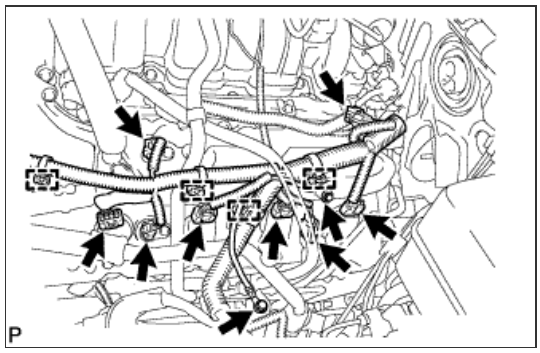
a. Engine Room LH Side:

i. Remove the engine room relay block cover.

ii. Disconnect the 2 connectors and 2 clips from the engine room junction block.

iii. Disconnect the 4 air injection control driver connectors and wire harness clamp.

iv. Disconnect the injector connector.



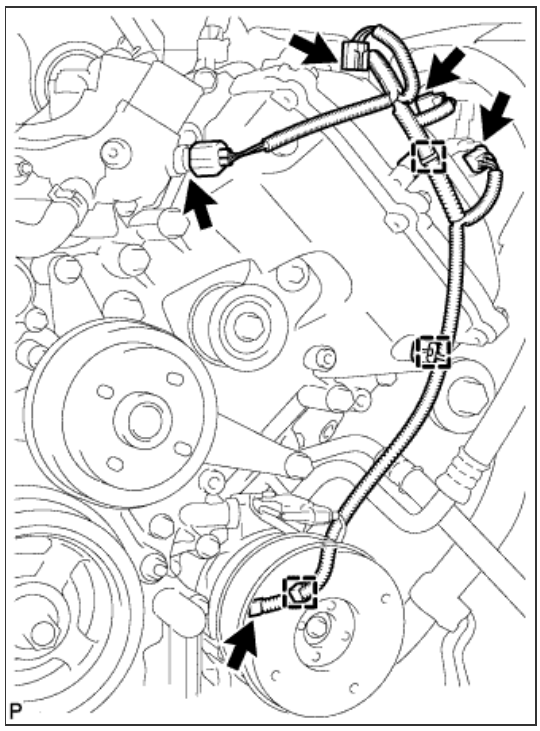
v. Disconnect the 4 ignition coil connectors.

vi. Disconnect the 2 VVT sensor connectors.

vii. Disconnect the 4 clamps.

viii. Remove the 2 bolts and ground wire.

ix. Disconnect the noise filter connector.



x. Disconnect the engine coolant temperature sensor connector.

xi. Disconnect the 2 camshaft timing oil control valve connectors.

xii. Disconnect the camshaft position sensor connector.

xiii. Disconnect the 3 clamps.

xiv. Disconnect the cooler compressor connector.

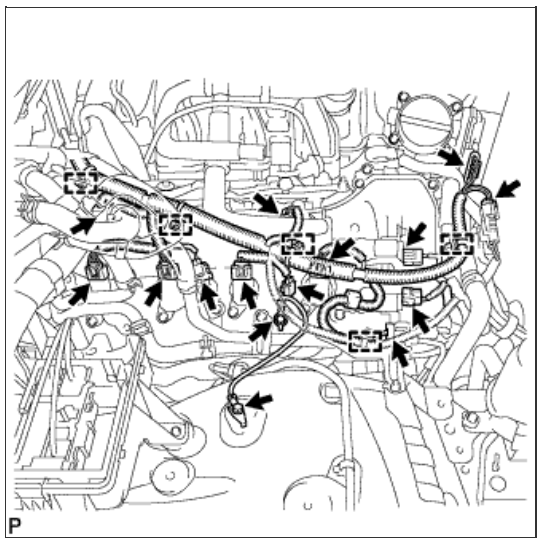
b. Engine Room RH Side:

i. Disconnect the 2 camshaft timing oil control valve connectors.

ii. Disconnect the 4 ignition coil connectors.

iii. Disconnect the injector connector.

iv. Disconnect the 2 VVT sensor connectors.

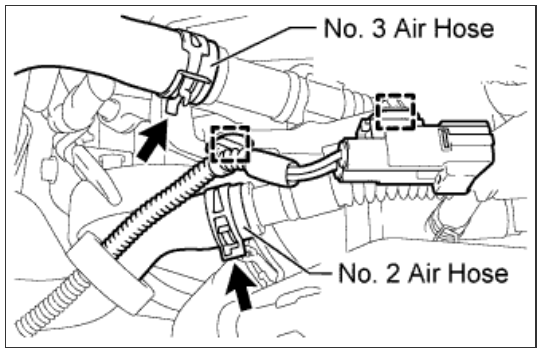


v. Disconnect the noise filter connector.

vi. Remove the 2 bolts and ground wire.

vii. Disconnect the 2 air pump connectors.

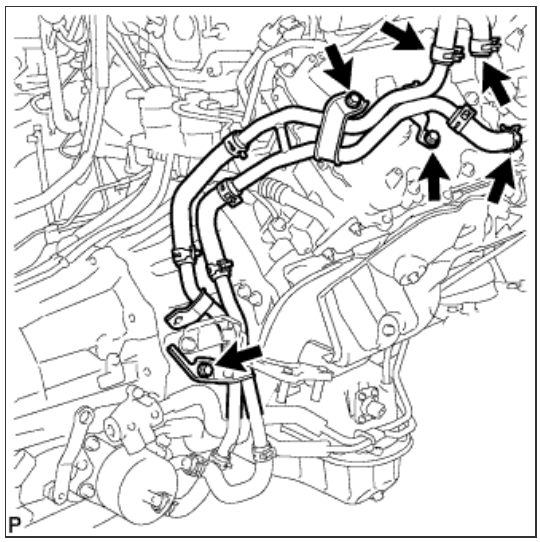
viii. Disconnect the throttle position sensor and throttle control motor connector.



ix. Disconnect the 5 clamps.

31. DISCONNECT AIR PUMP HOSE AND WIRE HARNESS

a. Disconnect the No. 2 and No. 3 air hoses.

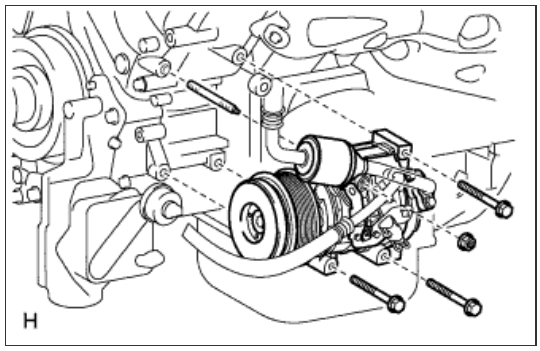


b. Disconnect the 2 clamps.

32. DISCONNECT NO. 2 WATER BY-PASS PIPE

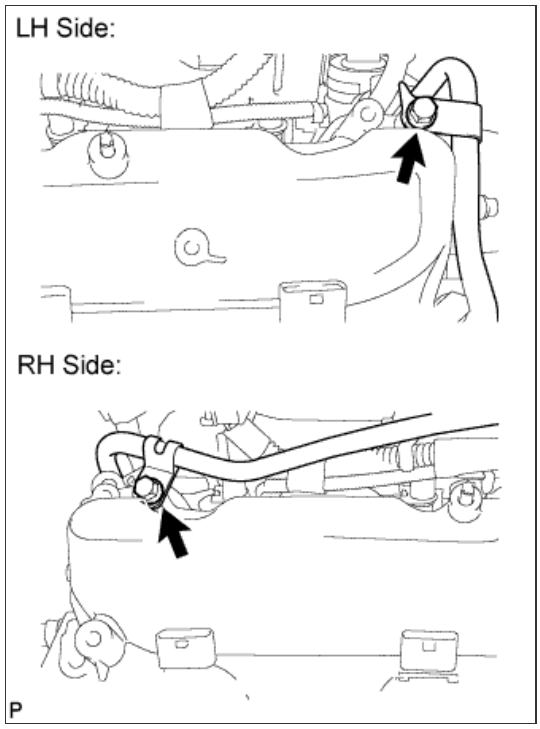
a. Disconnect the 3 hoses.

b. Remove the 3 bolts and disconnect the No. 2 water by-pass pipe from the cylinder head cover.



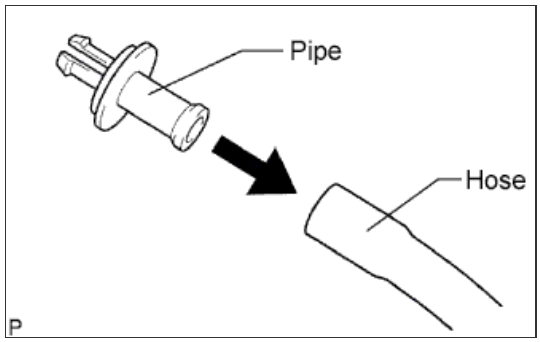
33. DISCONNECT COOLER COMPRESSOR ASSEMBLY

a. Remove the 3 bolts, nut and stud bolt, and disconnect the cooler compressor.



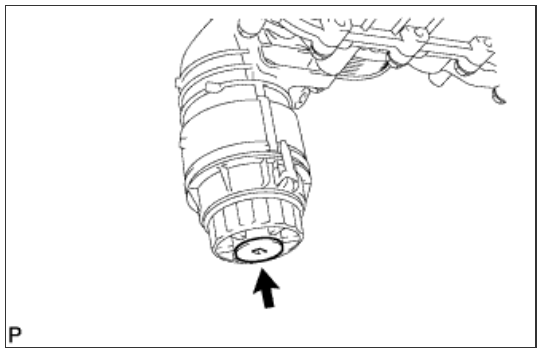
HINT:

It is not necessary to completely remove the compressor. With the hoses connected to the compressor, hang the compressor on the vehicle body with a rope.



34. DISCONNECT NO. 2 FUEL TUBE SUB-ASSEMBLY

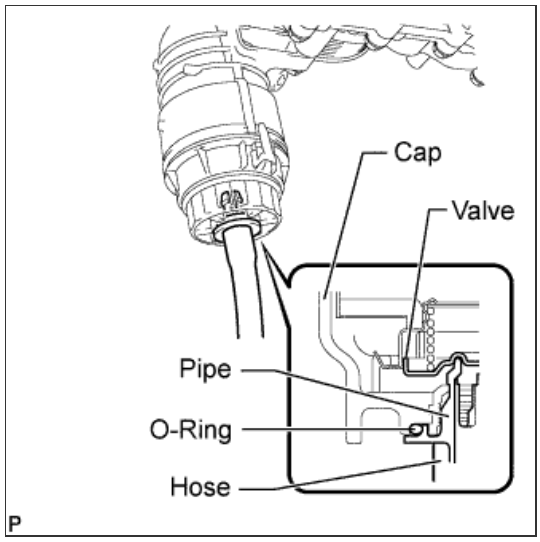
a. Remove the 2 bolts and disconnect the fuel tube.



35. REMOVE OIL FILTER ELEMENT

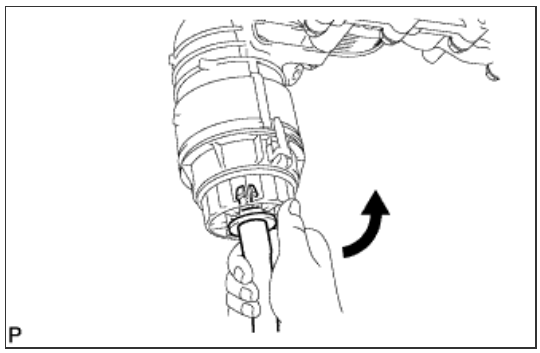
a. Connect a hose with an inside diameter of 15 mm (0.591 in.) to the pipe.

b. Remove the oil filter drain plug.



c. Install the pipe to the oil filter cap.

NOTICE:

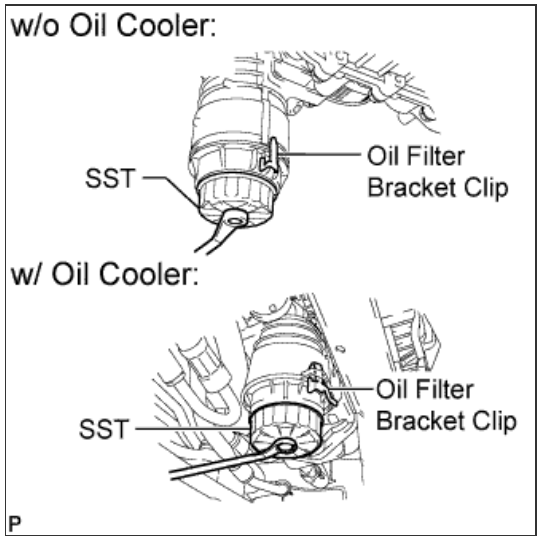


If the O-ring is removed with the drain plug, install the O-ring together with the pipe.

HINT:

Use a container to catch the draining oil.

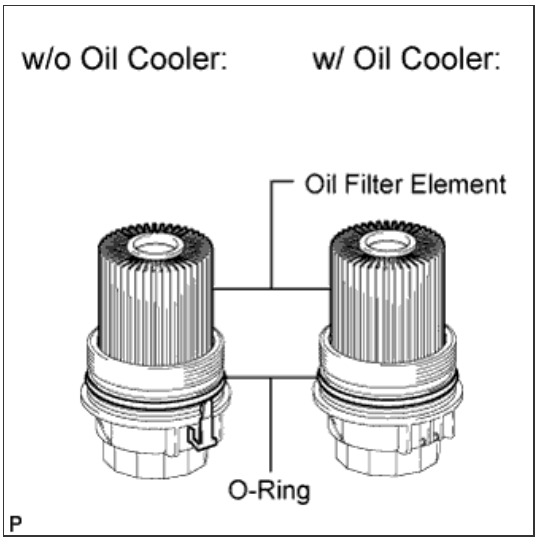
d. Check that oil is drained from the oil filter. Then disconnect the pipe and remove the O-ring as shown in the illustration.



e. Using SST, remove the oil filter cap.

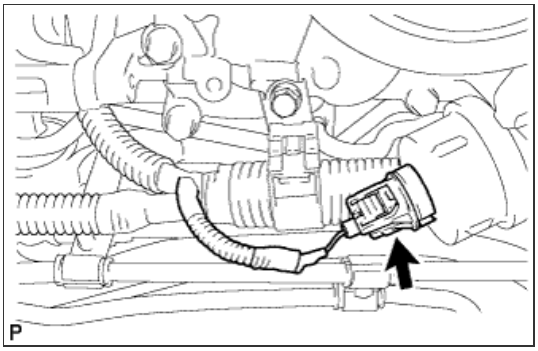
SST
09228-06501

NOTICE:



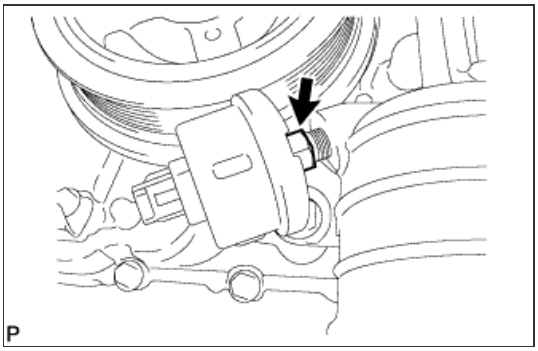
Do not remove the oil filter bracket clip.

f. Remove the oil filter element and O-ring from the oil filter cap.



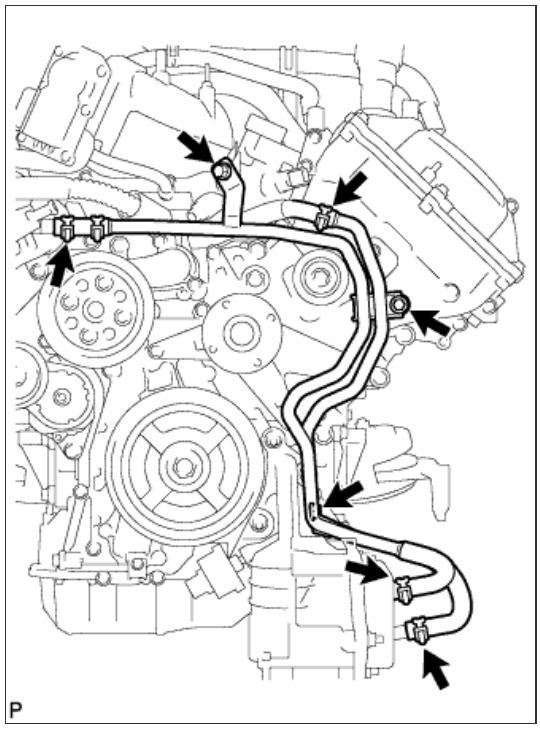
NOTICE:

Be sure to remove the cap O-ring by hand, without using any tools, to prevent damage to the cap O-ring groove.



36. REMOVE OIL PRESSURE SENDER GAUGE ASSEMBLY

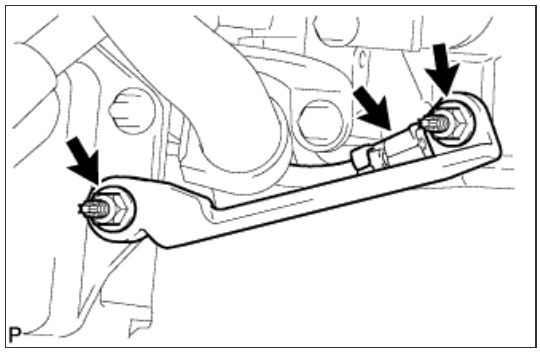
a. Disconnect the sender gauge connector.



b. Remove the oil pressure sender gauge.

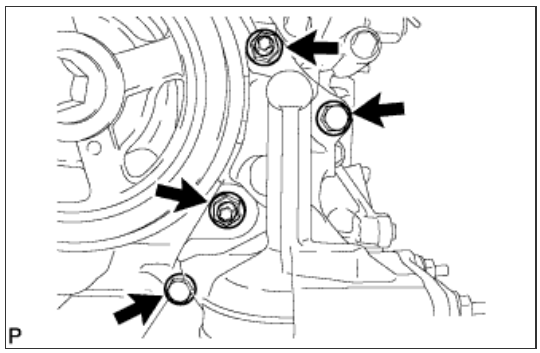
37. REMOVE NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY (w/ Oil Cooler)

a. Remove the 3 bolts.



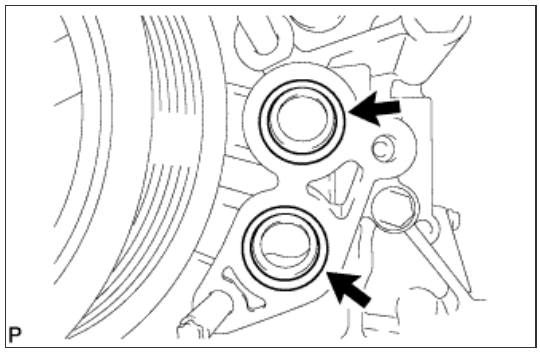
b. Disconnect the 4 hoses and remove the water by-pass pipe.

38. REMOVE NO. 1 OIL COOLER BRACKET (w/ Oil Cooler)



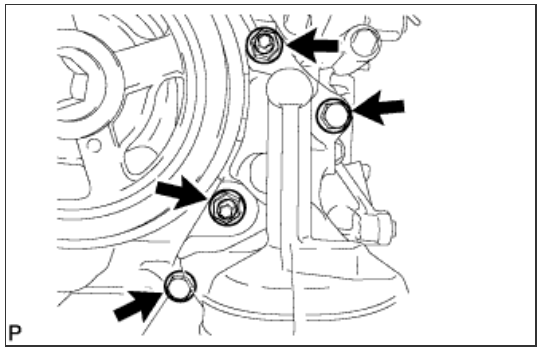
a. Remove the 2 nuts and bracket.

b. Disconnect the ground wire from the cylinder block.

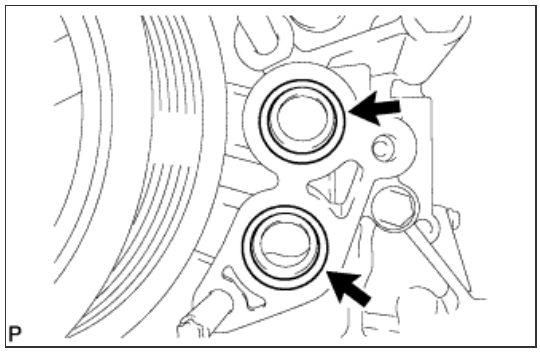


39. REMOVE OIL FILTER BRACKET (w/ Oil Cooler)

a. Remove the 2 bolts, 2 nuts and filter bracket.

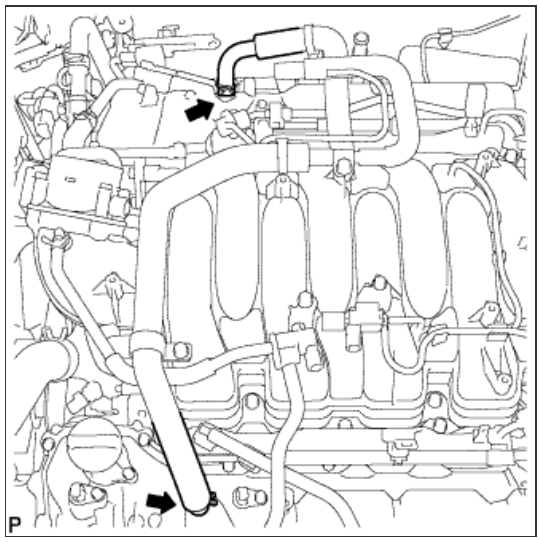


b. Remove the 2 O-rings.

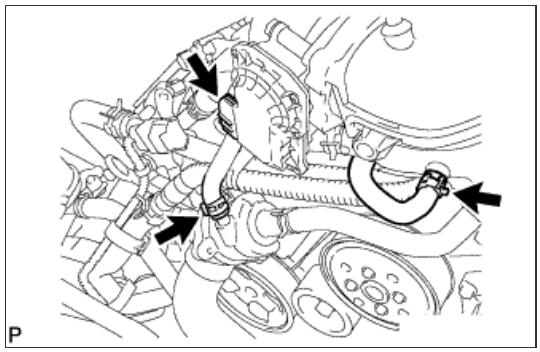


40. REMOVE OIL FILTER BRACKET (w/o Oil Cooler)

a. Remove the 2 bolts, 2 nuts and oil filter bracket.

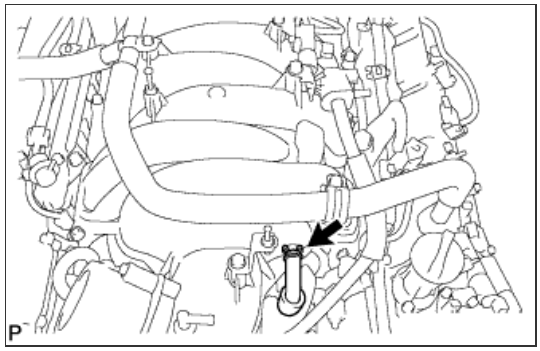


b. Remove the 2 O-rings.



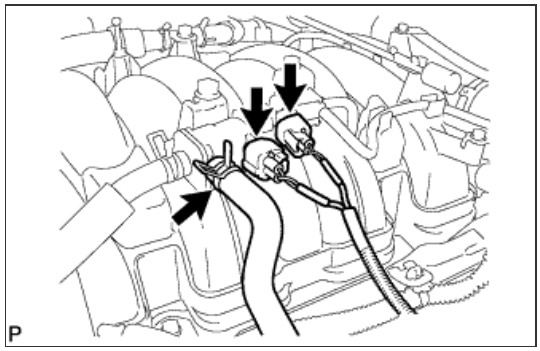
41. REMOVE INTAKE MANIFOLD

a. Disconnect the ventilation hose from the ventilation pipe of the cylinder head cover LH and RH.

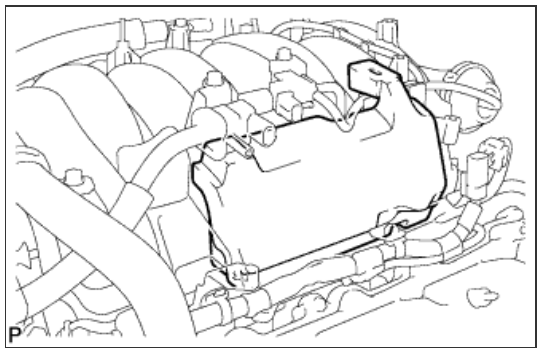


b. Disconnect the 2 water by-pass hoses.

c. Disconnect the throttle body connector.

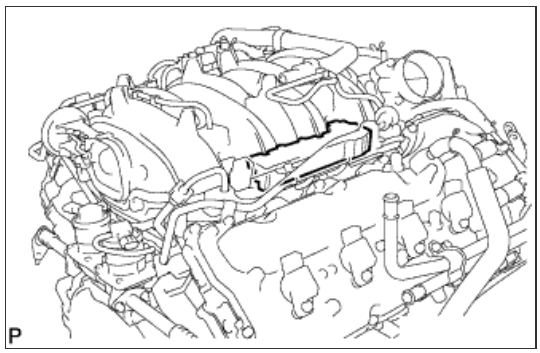


d. Disconnect the No. 1 ventilation hose.

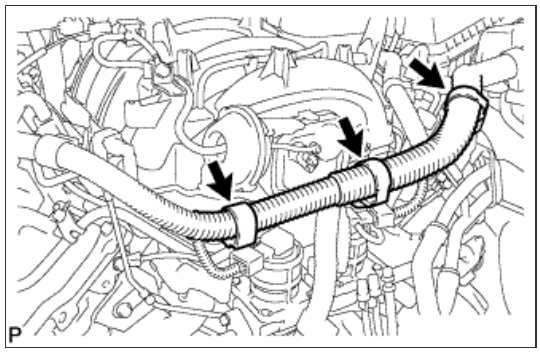


e. Disconnect the purge VSV connector.

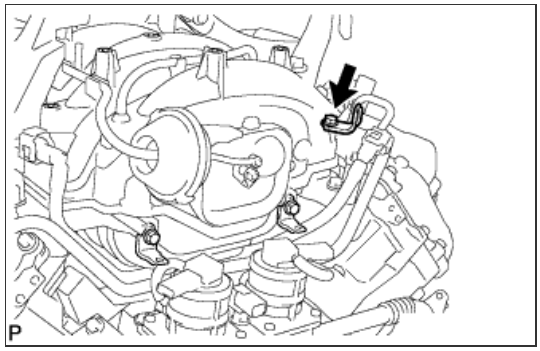
f. Disconnect the purge line hose from the purge VSV.



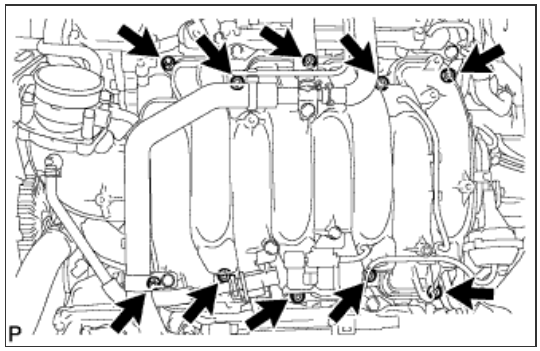
g. Disconnect the vacuum switching valve connector (for ACIS).



h. Remove the No. 1 engine cover sub-assembly.

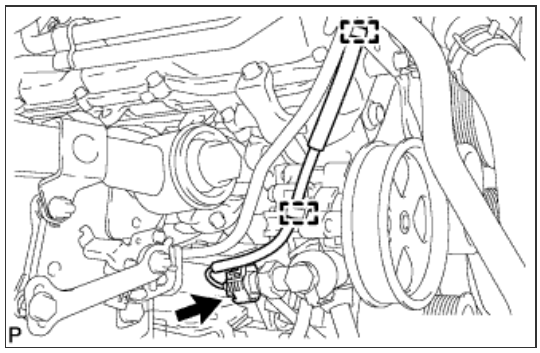


i. Remove the No. 3 engine cover.

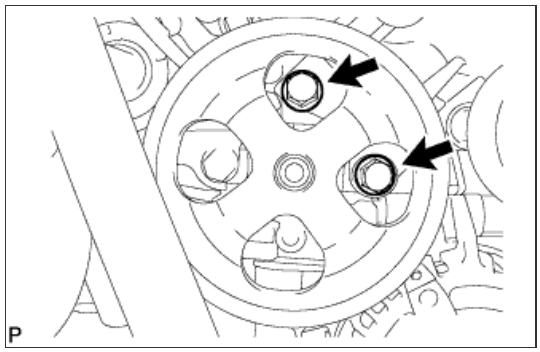


j. Disconnect the 3 wire clamps from the 3 wire brackets.

k. Remove the bolt and wire bracket from the intake manifold.



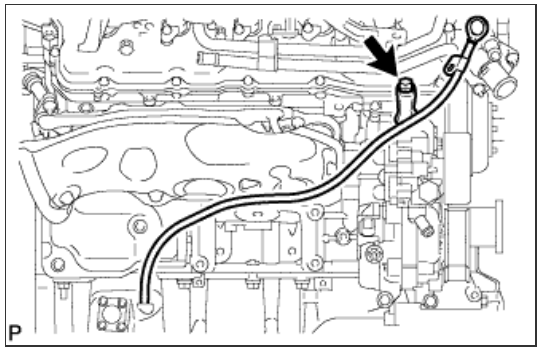
l. Remove the 2 nuts, 8 bolts, intake manifold and 2 gaskets.



42. DISCONNECT VANE PUMP ASSEMBLY

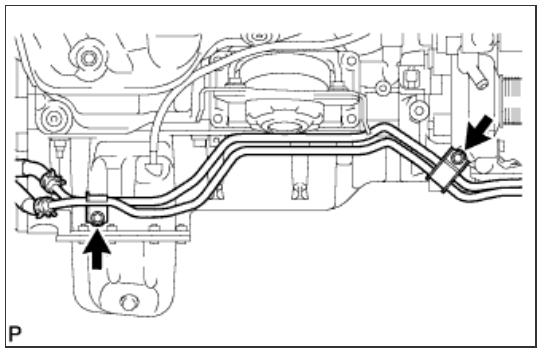
a. Disconnect the 2 clamps and power steering oil pressure switch connector.

b. Remove the 2 bolts and disconnect the vane pump.



43. REMOVE ENGINE OIL LEVEL DIPSTICK GUIDE

a. Remove the dipstick.

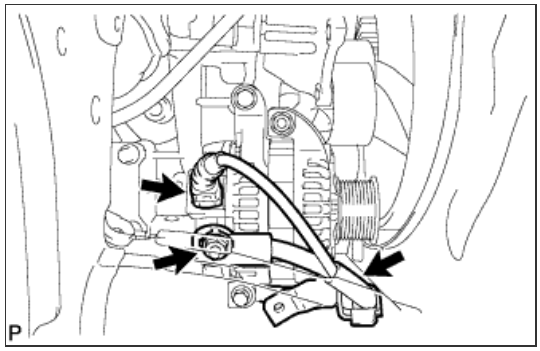


b. Remove the bolt and dipstick guide.

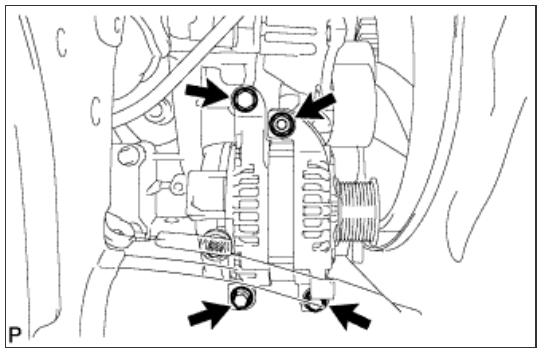
c. Remove the O-ring from the dipstick guide.

44. DISCONNECT OIL COOLER PIPE ASSEMBLY

a. Remove the 2 bolts and disconnect the oil cooler pipe.



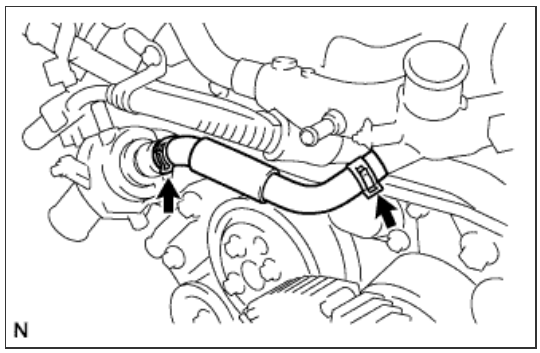
45. REMOVE GENERATOR ASSEMBLY



a. Disconnect the generator connector.

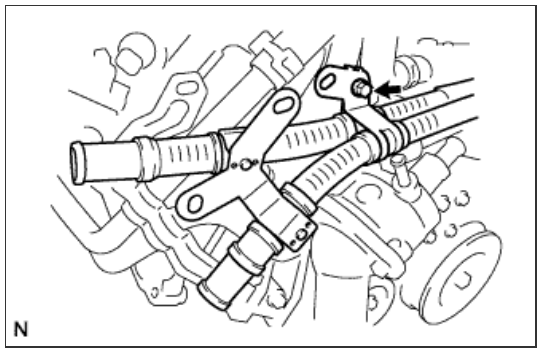
b. Remove the terminal cap and nut, and disconnect the generator wire.

c. Remove the bolt and wire harness bracket from the generator.

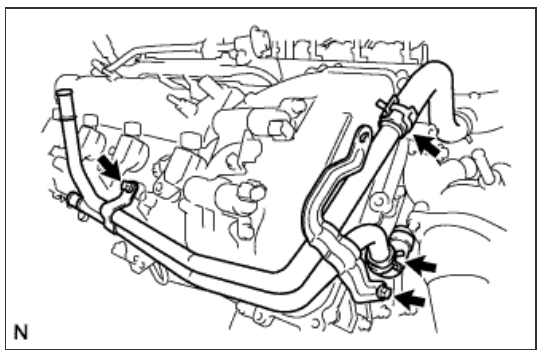


d. Remove the 3 bolts, nut and generator.

46. REMOVE NO. 1 WATER BY-PASS HOSE



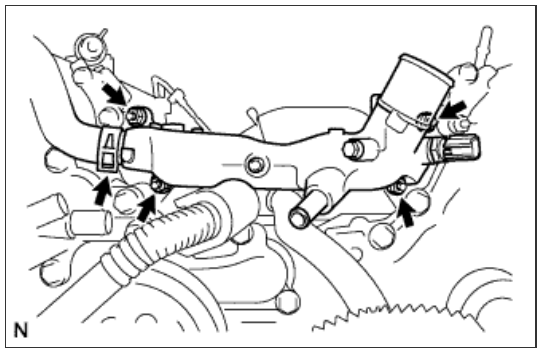
a. Remove the No. 1 water by-pass hose by disconnecting the hose from the water inlet housing and front water by-pass joint.



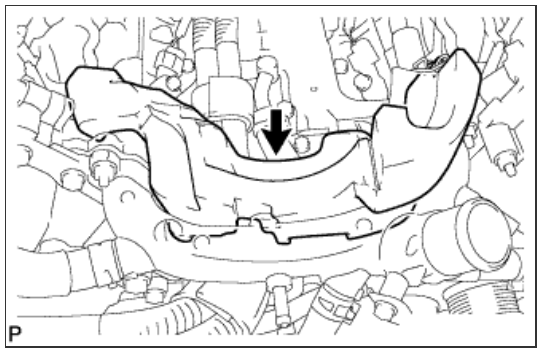
47. REMOVE WATER BY-PASS PIPE SUB-ASSEMBLY

a. Remove the bolt and disconnect the air tube.

b. Disconnect the 2 hoses.

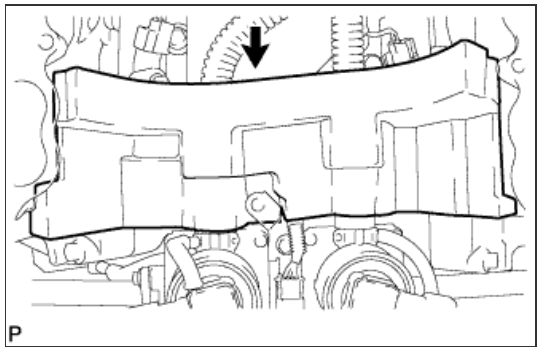


c. Remove the 2 bolts and water by-pass pipe.



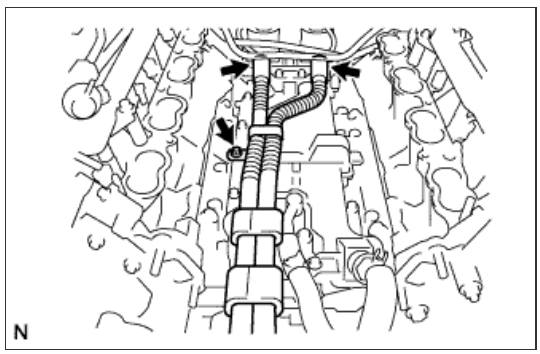
48. REMOVE FRONT WATER BY-PASS JOINT

a. Disconnect the No. 2 water by-pass hose from the water by-pass joint.

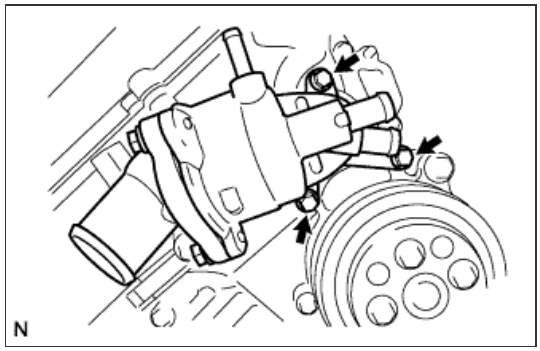


b. Remove the 4 nuts, water by-pass joint and 2 gaskets.

49. REMOVE NO. 2 ENGINE COVER



50. REMOVE NO. 1 ENGINE COVER

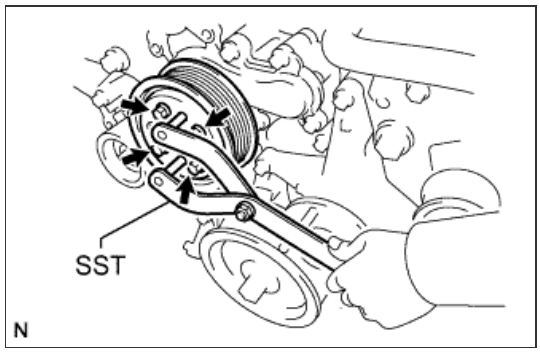


51. REMOVE AIR PIPE SUB-ASSEMBLY

a. Remove the bolt, disconnect the 2 hoses, and remove the air pipe.

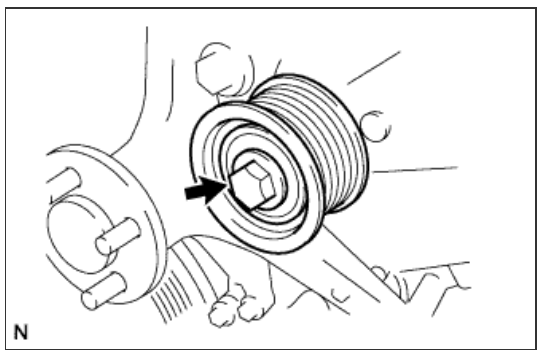
52. REMOVE WATER INLET HOUSING

a. Remove the 3 bolts, water inlet housing and gasket.



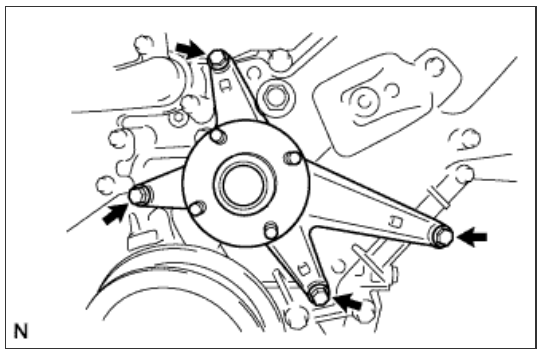
53. REMOVE WATER PUMP PULLEY

a. Using SST, hold the water pump pulley.



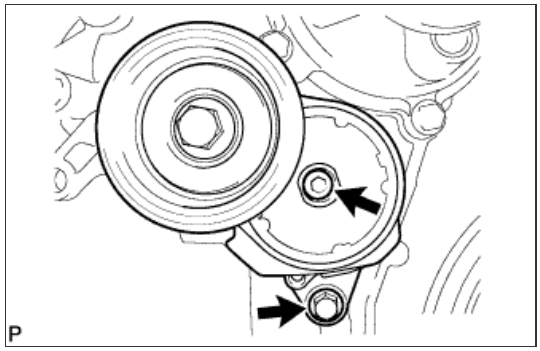
SST
09960-10010 (09962-01000, 09963-01000)

b. Remove the 4 bolts and water pump pulley.



54. REMOVE NO. 1 IDLER PULLEY SUB-ASSEMBLY

a. Remove the bolt and idler pulley.



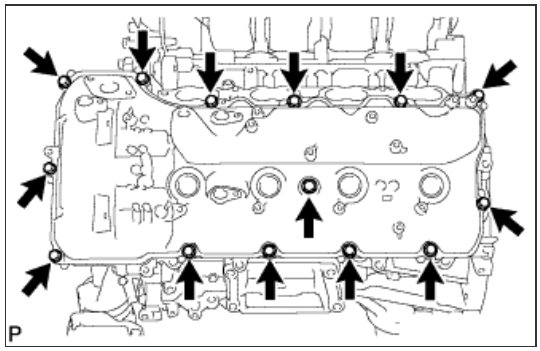
55. REMOVE FLUID COUPLING BRACKET

a. Remove the 4 bolts and fluid coupling bracket.

56. REMOVE V-RIBBED BELT TENSIONER ASSEMBLY

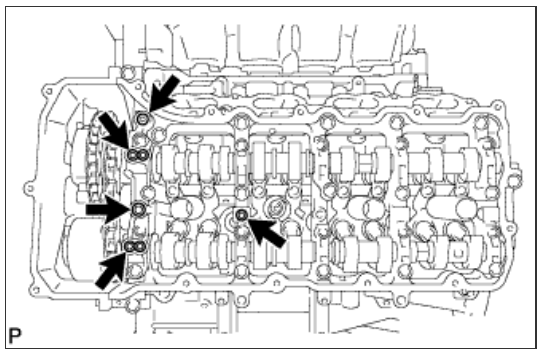
a. Remove the standard bolt, 6 mm hexagon wrench bolt and belt tensioner.

57. REMOVE IGNITION COIL ASSEMBLY



a. Remove the 8 bolts and 8 ignition coils.

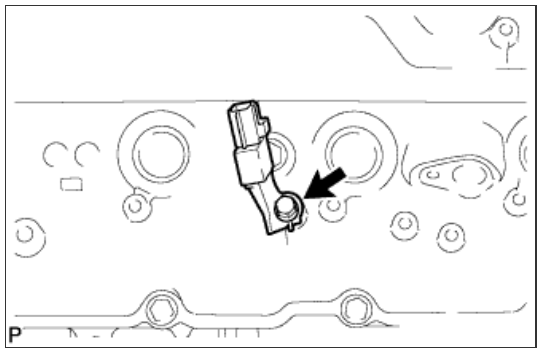
58. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY LH



a. Remove the 14 bolts, seal washer, cylinder head cover and gasket.

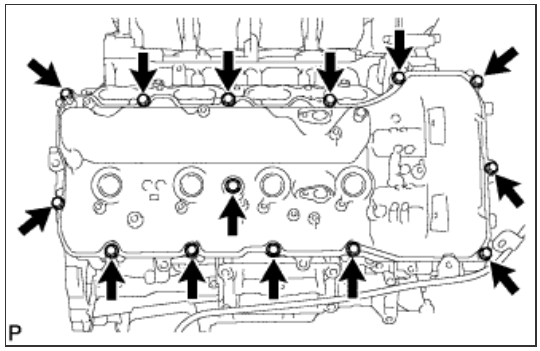
HINT:

Make sure the removed parts are returned to the same places they were removed from.

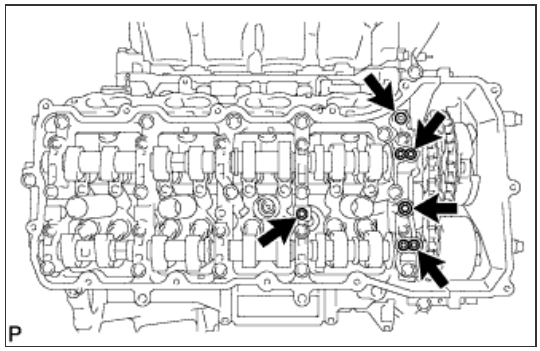


b. Remove the 5 gaskets from the camshaft bearing caps (No. 2, No. 3).

59. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY RH



a. Remove the bolt and noise filter.



b. Remove the 14 bolts, seal washer, cylinder head cover and gasket.

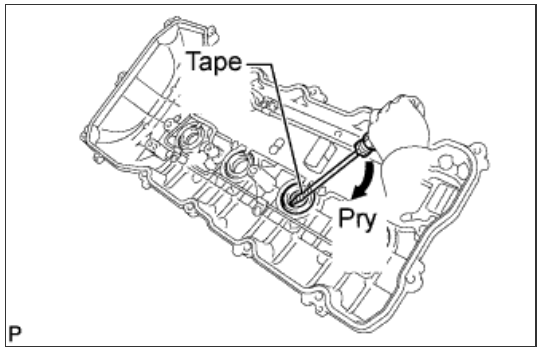
HINT:

Make sure the removed parts are returned to the same places they were removed from.

c. Remove the 5 gaskets from the camshaft bearing caps (No. 1, No. 3).

60. REMOVE SPARK PLUG TUBE GASKET

a. Bend the 4 ventilation baffle plate claws on the cylinder head cover to an angle of 90° or more.



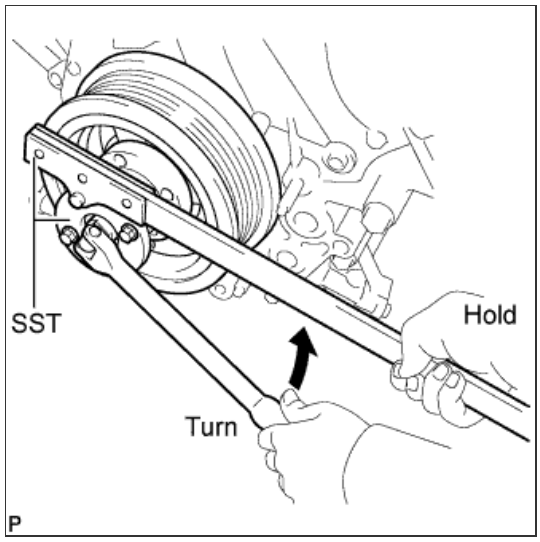
b. Using a screwdriver, pry out the gaskets.

HINT:

Tape the screwdriver tip before use.

NOTICE:

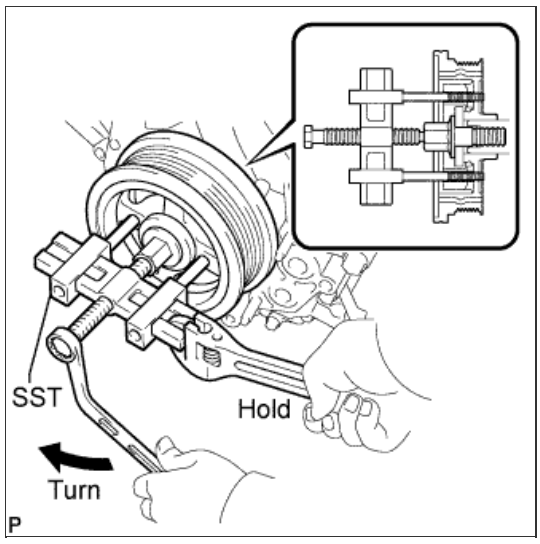
- **Be careful not to damage the cylinder head cover.**
- **Be careful not to damage the gasket when removing it, as the removed gasket needs to be used when installing a new one.**



61. REMOVE CRANKSHAFT PULLEY

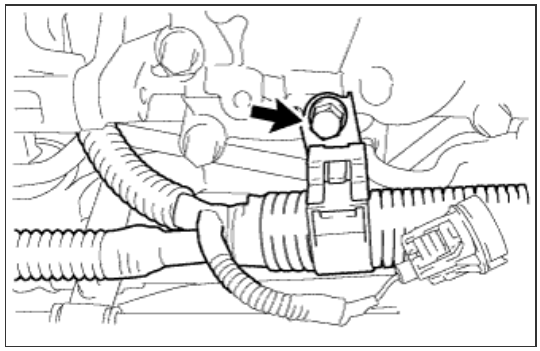
a. Using SST, loosen the crankshaft pulley set bolt until 2 or 3 threads are engaged.

SST



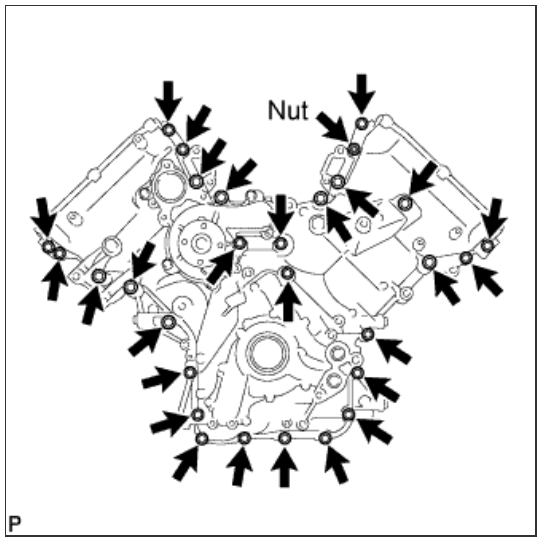
09213-70011 (09213-70020)
09330-00021

b. Using the pulley set bolt and SST, remove the crankshaft pulley.



SST

09950-50013 (09951-05010, 09952-05010, 09953-05010, 09954-05011)

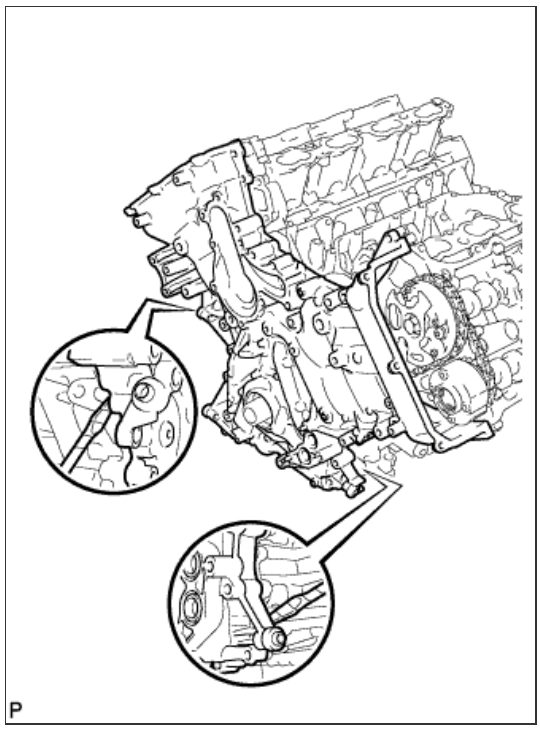


62. DISCONNECT WIRE HARNESS CLAMP BRACKET

a. Remove the bolt and disconnect the bracket.

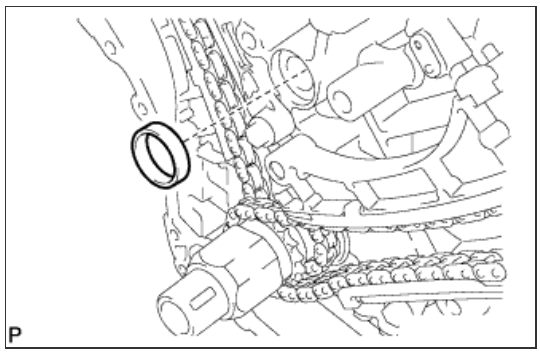
63. REMOVE TIMING CHAIN COVER SUB-ASSEMBLY

a. Remove the 28 bolts and nut shown in the illustration.



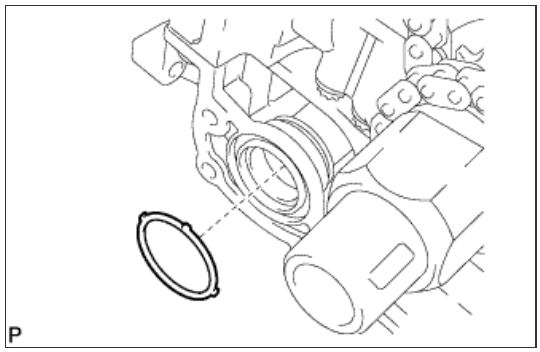
b. Remove the timing chain cover by prying between the timing chain cover and cylinder head or cylinder block with a screwdriver as shown in the illustration.

NOTICE:



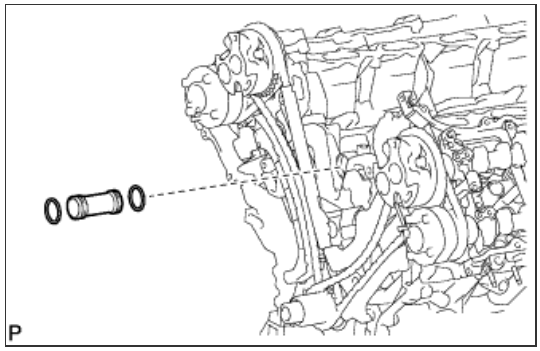
Be careful not to damage the contact surfaces of the cylinder head, cylinder block and chain cover.

HINT:



Tape the screwdriver tip before use.

c. Remove the oil pump gasket from the cylinder block.

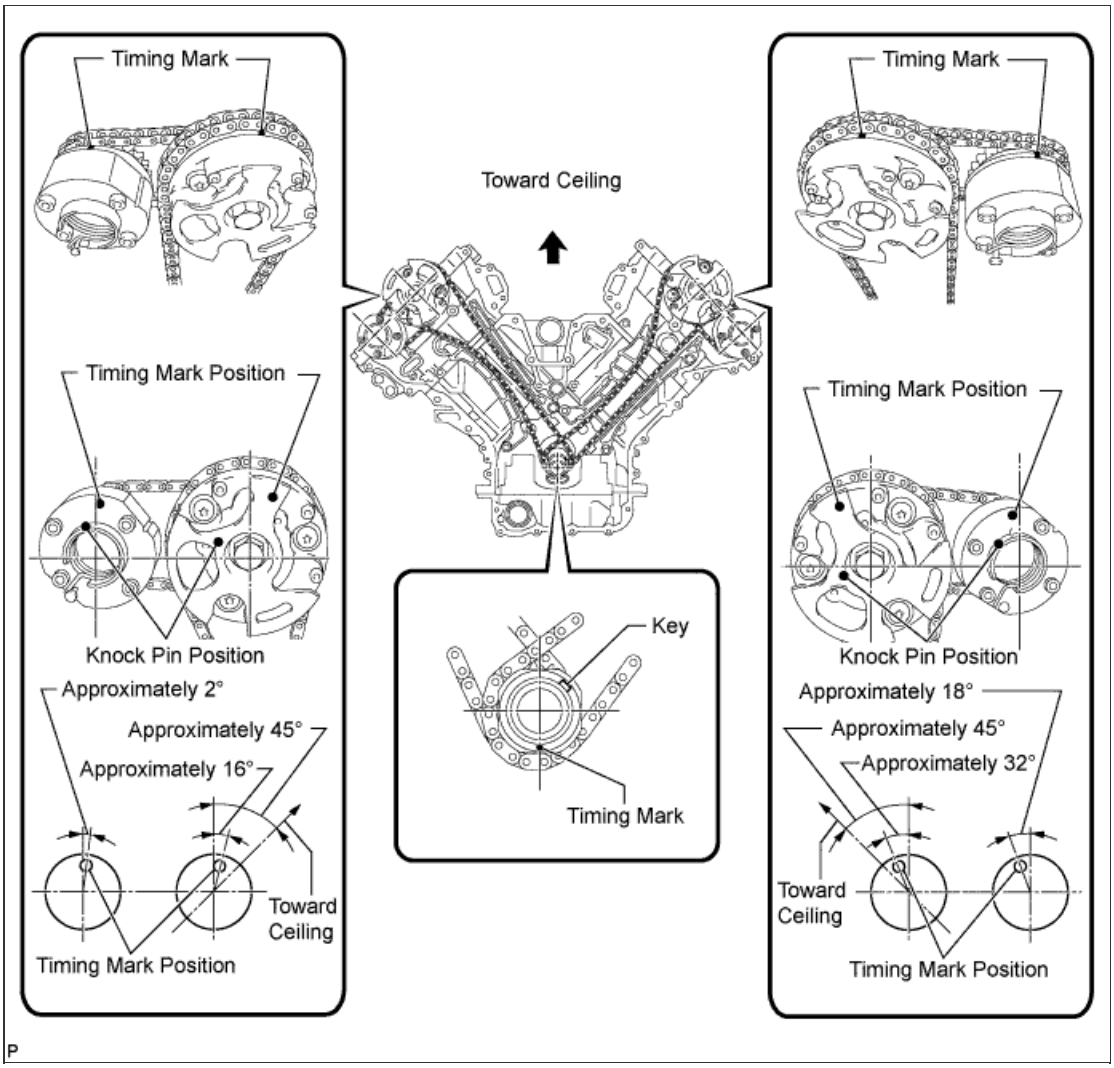


d. Remove the O-ring from the oil pan.

64. REMOVE WATER INLET PIPE

a. Remove the water inlet pipe.

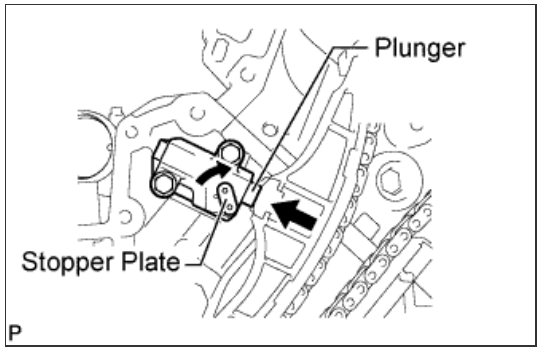
b. Remove the 2 O-rings from the water inlet pipe.



65. SET NO. 1 CYLINDER TO TDC/COMPRESSION

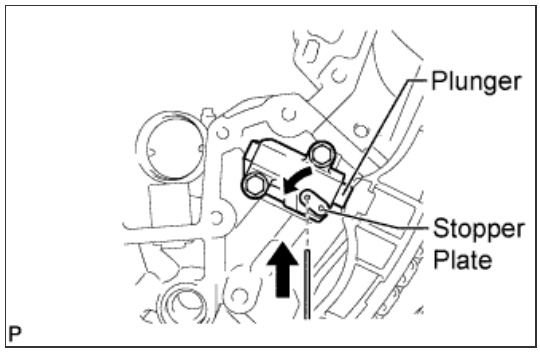
a. Temporarily install the crankshaft pulley bolt.

b. Rotate the crankshaft clockwise so that the timing marks on the crankshaft timing sprocket and camshaft timing gears are as shown in the illustration.

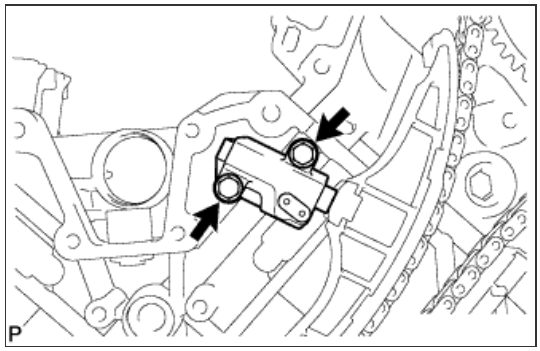


HINT:

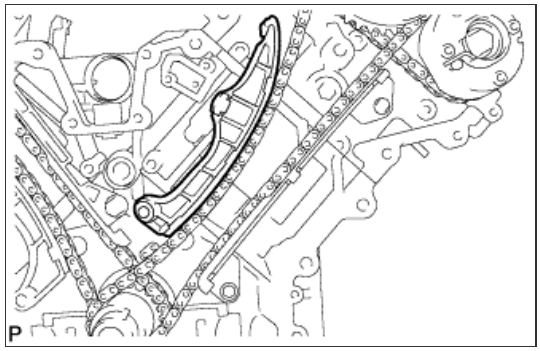
If the timing marks do not align, rotate the crankshaft clockwise again and align the timing marks.



66. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY LH

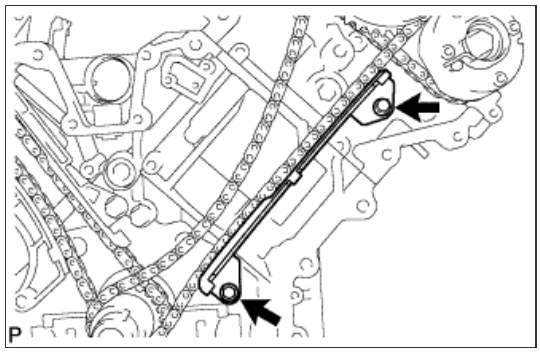


a. Move the stopper plate clockwise to release the lock, and push the plunger deep into the tensioner.

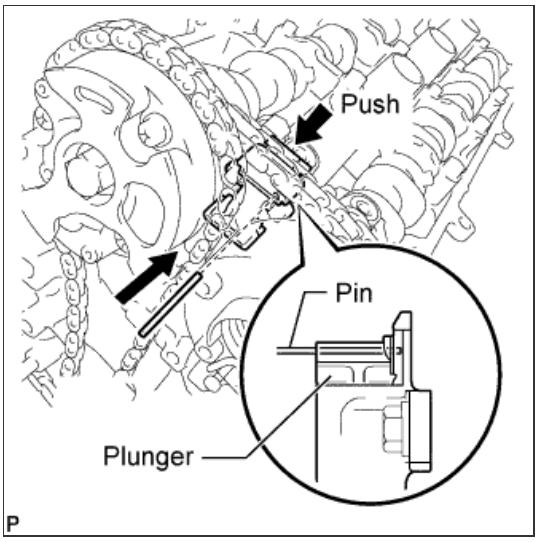


b. Move the stopper plate counterclockwise to set the lock, and insert a hexagon wrench into the stopper plate hole.

c. Remove the 2 bolts, chain tensioner and gasket.



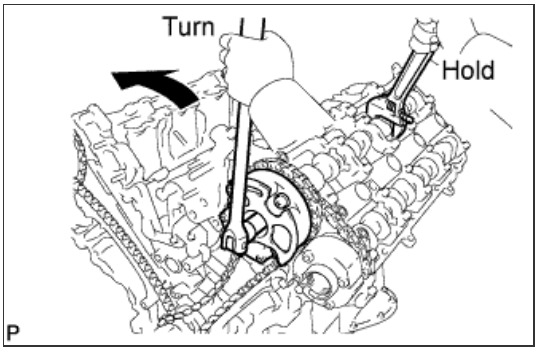
67. REMOVE NO. 1 CHAIN TENSIONER SLIPPER LH



68. REMOVE NO. 1 CHAIN VIBRATION DAMPER LH

a. Remove the 2 bolts and chain vibration damper.

69. REMOVE NO. 1 CHAIN SUB-ASSEMBLY LH

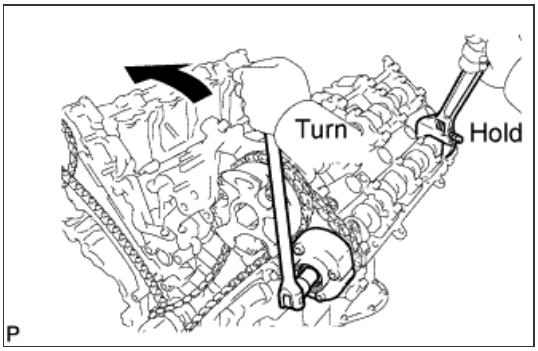


a. While pushing down the No. 3 chain tensioner, insert a pin of φ1.0 mm (0.0394 in.) into the hole to fix it in place.

b. Hold the hexagonal portion of the camshaft with a wrench and loosen the bolt.

NOTICE:

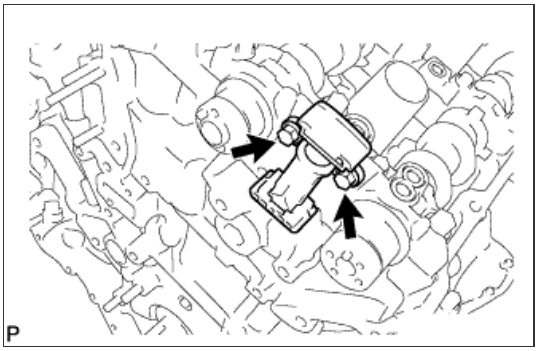
- **Be careful not to damage the cylinder head with the wrench.**
- **Do not disassemble the camshaft timing gear.**



c. Hold the hexagonal portion of the camshaft with a wrench and loosen the bolt.

NOTICE:

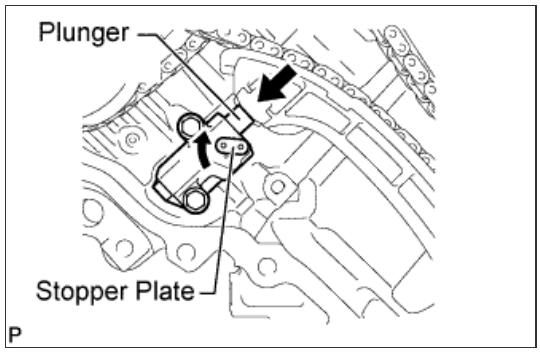
Be careful not to damage the cylinder head with the wrench.



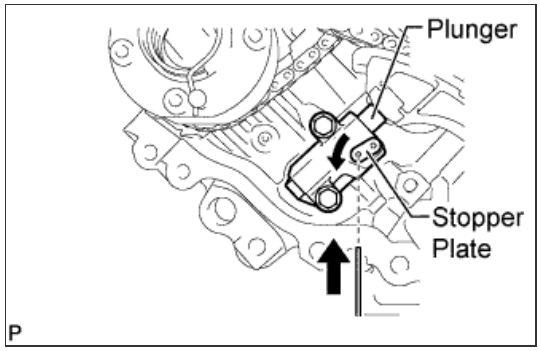
d. Remove the 2 bolts. Then with the No. 1 and No. 2 chains still connected to the gears, remove the camshaft timing gear, camshaft timing exhaust gear and crankshaft timing sprocket LH.

e. Remove the No. 1 and No. 2 chains from the gears.

70. REMOVE NO. 3 CHAIN TENSIONER ASSEMBLY

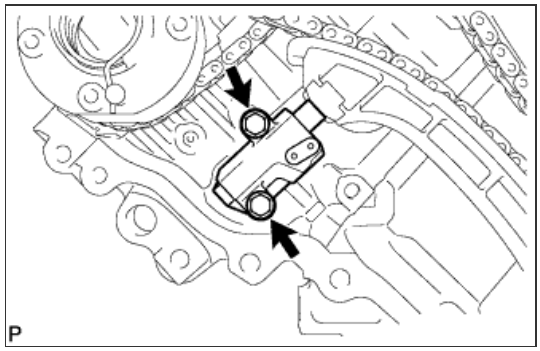


a. Remove the 2 bolts and chain tensioner.

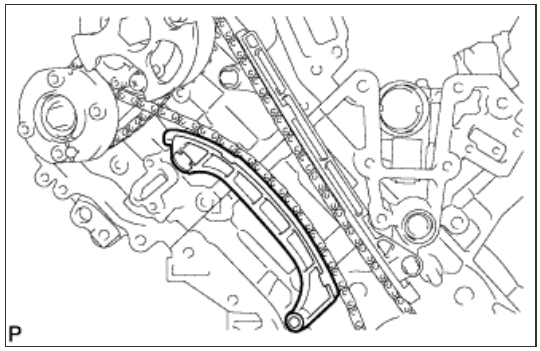


71. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY RH

a. Move the stopper plate clockwise to release the lock, and push the plunger deep

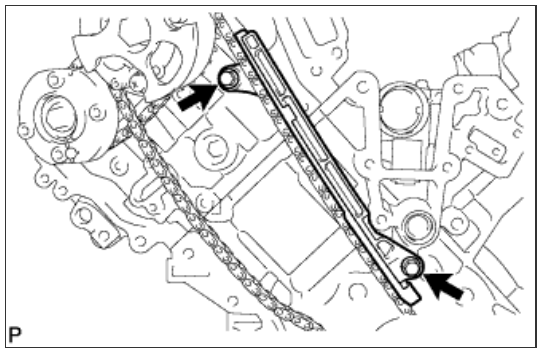


into the tensioner.

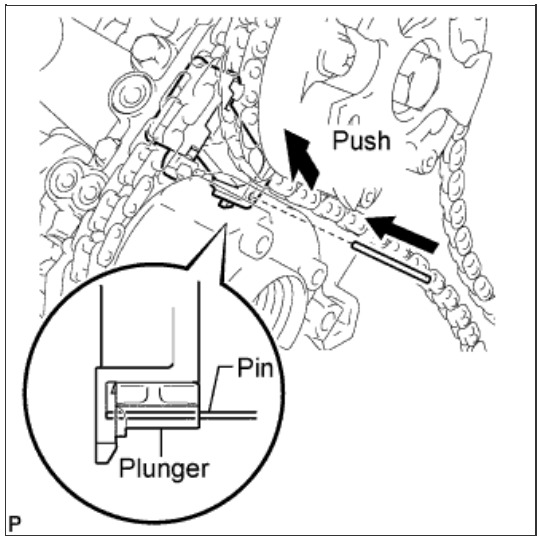


b. Move the stopper plate counterclockwise to set the lock, and insert a hexagon wrench into the stopper plate hole.

c. Remove the 2 bolts and chain tensioner.



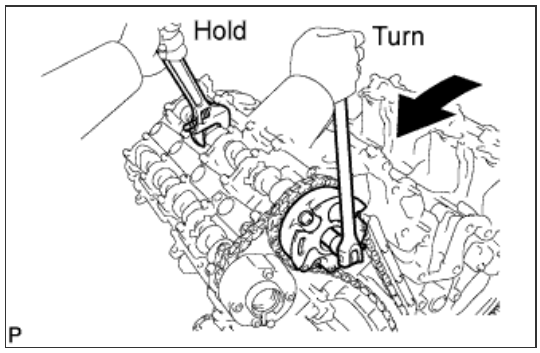
72. REMOVE NO. 1 CHAIN TENSIONER SLIPPER RH



73. REMOVE NO. 1 CHAIN VIBRATION DAMPER RH

a. Remove the 2 bolts and vibration damper.

74. REMOVE NO. 1 CHAIN SUB-ASSEMBLY RH

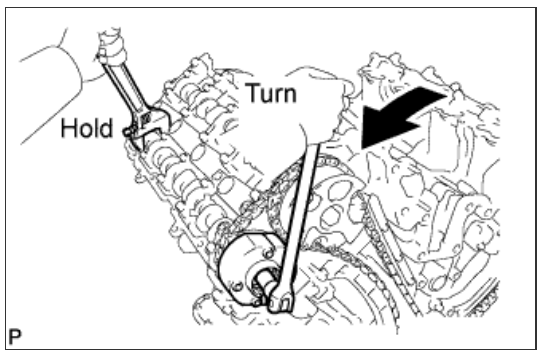


a. While raising up the No. 2 chain tensioner, insert a pin of φ1.0 mm (0.0394 in.) into the hole to fix it in place.

b. Hold the hexagonal portion of the camshaft with a wrench and loosen the bolt.

NOTICE:

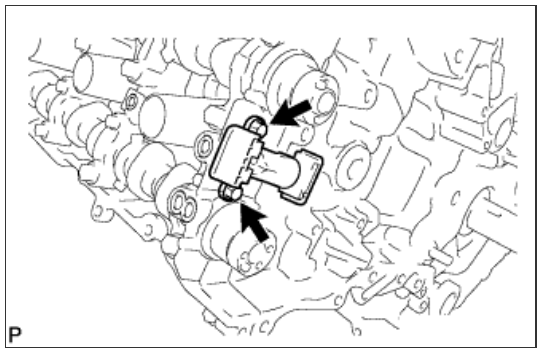
- **Be careful not to damage the cylinder head with the wrench.**
- **Do not disassemble the camshaft timing gear.**



c. Hold the hexagonal portion of the camshaft with a wrench and loosen the bolt.

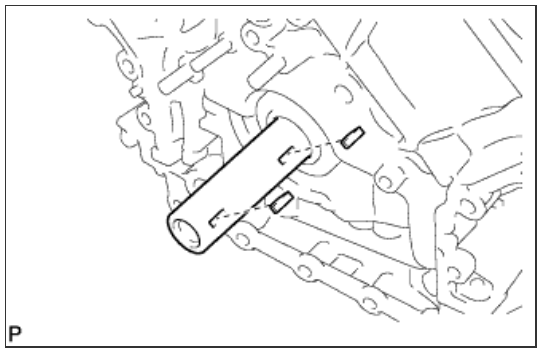
NOTICE:

Be careful not to damage the cylinder head with the wrench.



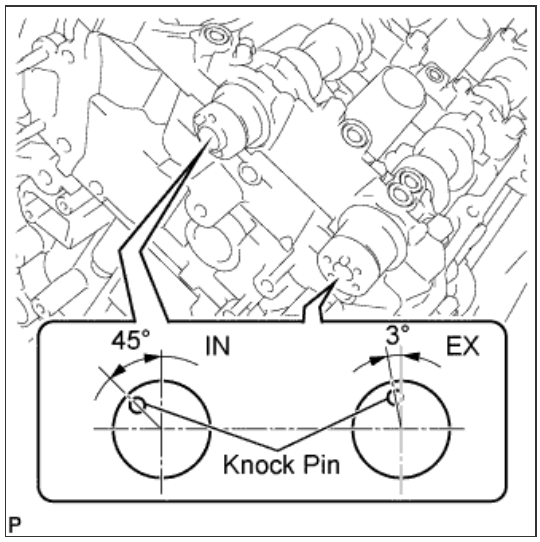
d. Remove the 2 bolts. Then with the No. 1 and No. 2 chains still connected to the gears, remove the camshaft timing gear, camshaft timing exhaust gear and crankshaft timing sprocket RH.

e. Remove the No. 1 and No. 2 chains from the gears.



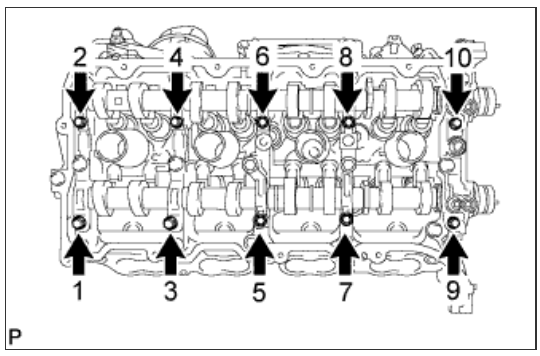
75. REMOVE NO. 2 CHAIN TENSIONER ASSEMBLY

a. Remove the 2 bolts and chain tensioner.



76. REMOVE CRANKSHAFT TIMING GEAR KEY

a. Using a screwdriver, remove the 2 timing gear keys from the crankshaft.



77. REMOVE CAMSHAFT BEARING CAP LH

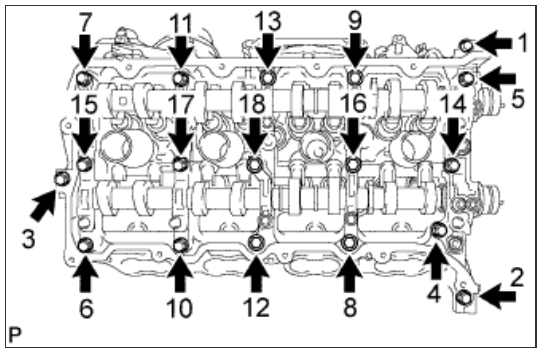
a. Make sure that the knock pin of the camshaft is positioned as shown in the illustration.

b. Uniformly loosen and remove the 10 bearing cap bolts in the sequence shown in the illustration.

c. Uniformly loosen and remove the 18 bearing cap bolts in the sequence shown in

the illustration.

NOTICE:



Uniformly loosen the bolts while keeping the camshaft level.

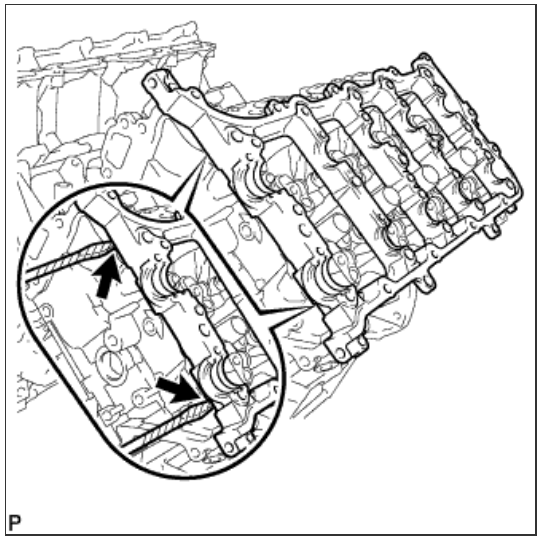
d. Remove the 6 bearing caps.

HINT:

Arrange the removed parts in the correct order.

e. Remove the No. 3 and No. 4 camshafts.

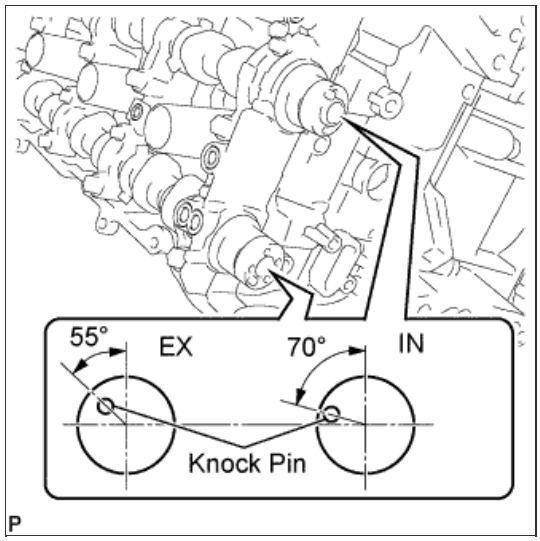
78. REMOVE CAMSHAFT HOUSING SUB-ASSEMBLY LH



a. Remove the camshaft housing by prying between the cylinder head and camshaft housing with a screwdriver.

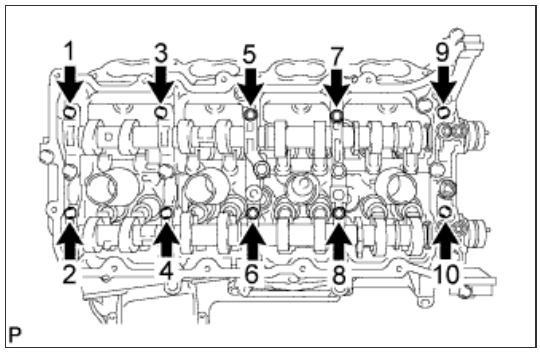
HINT:

Tape the screwdriver tip before use.



NOTICE:

Be careful not to damage the contact surfaces of the cylinder head and camshaft housing.



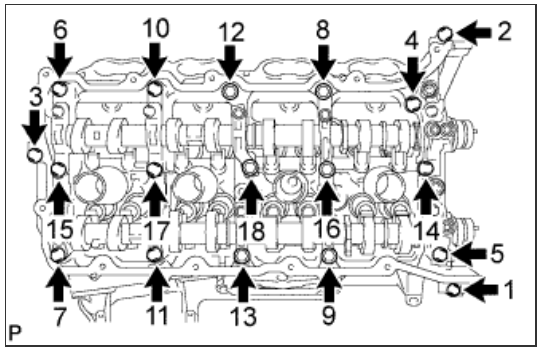
79. REMOVE CAMSHAFT BEARING CAP RH

a. Make sure that the knock pin of the camshaft is positioned as shown in the illustration.

b. Uniformly loosen and remove the 10 bearing cap bolts in the sequence shown in the illustration.

c. Uniformly loosen and remove the 18 bearing cap bolts in the sequence shown in the illustration.

NOTICE:



Uniformly loosen the bolts while keeping the camshaft level.

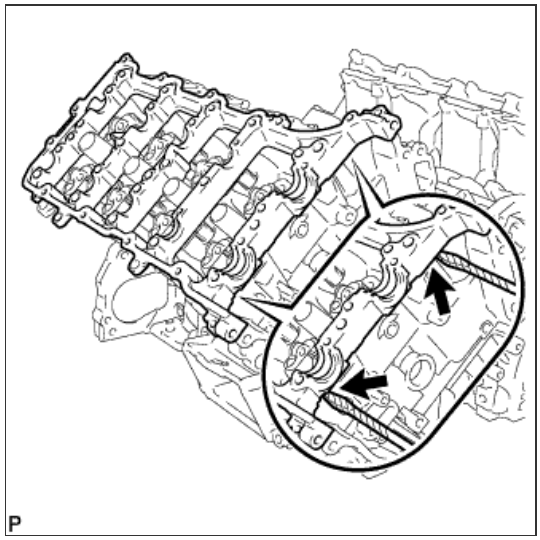
d. Remove the 6 bearing caps.

HINT:

Arrange the removed parts in the correct order.

e. Remove the No. 1 and No. 2 camshafts.

80. REMOVE CAMSHAFT HOUSING SUB-ASSEMBLY RH

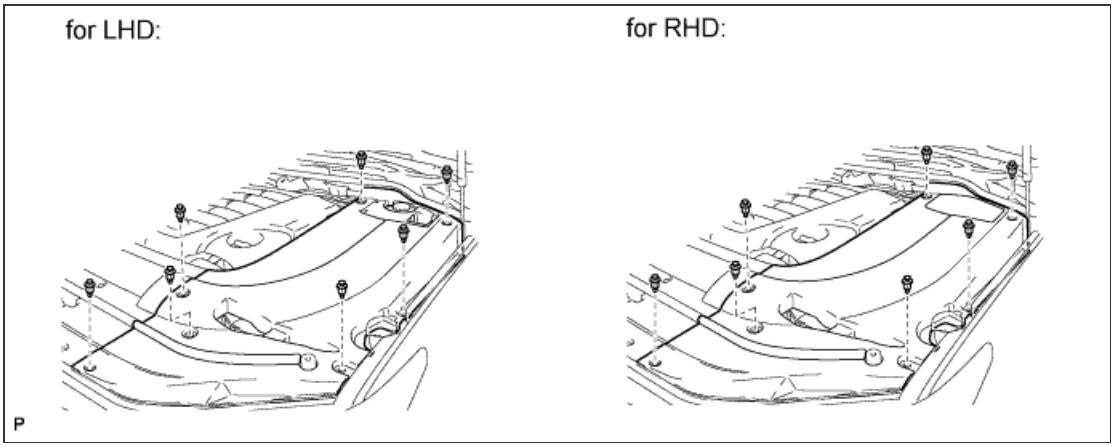


a. Remove the camshaft housing by prying between the cylinder head and camshaft housing with a screwdriver.

HINT:

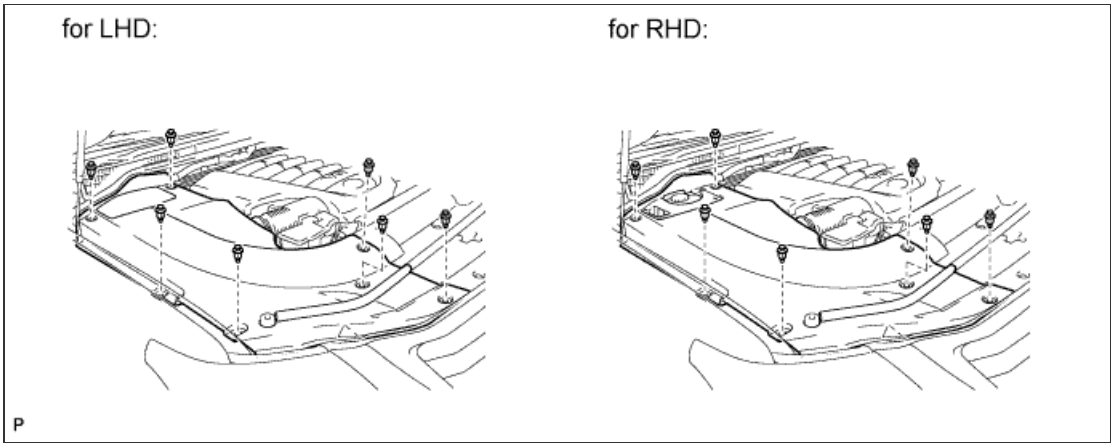
Tape the screwdriver tip before use.

NOTICE:



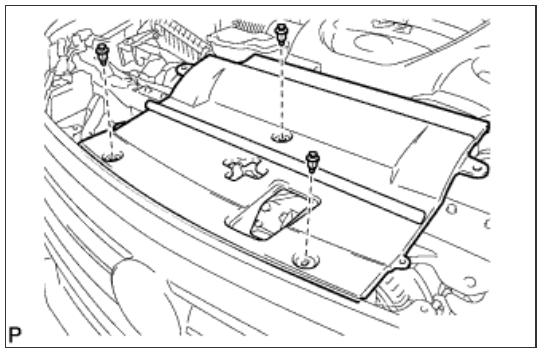
Be careful not to damage the contact surfaces of the cylinder head and camshaft housing.

for Preparation Click here



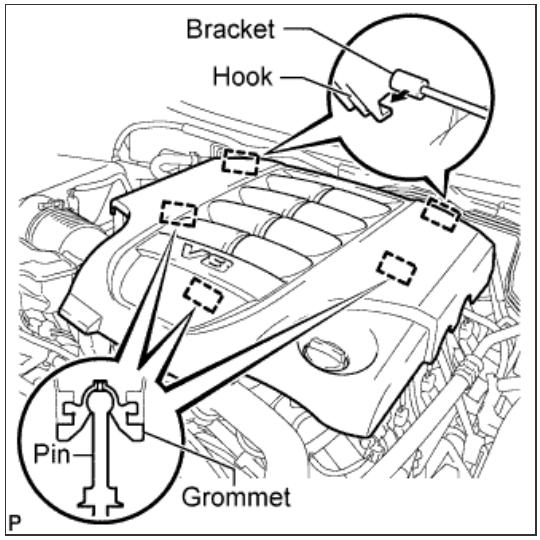
1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.



2. REMOVE ENGINE ROOM SIDE COVER RH

a. Remove the 7 clips and engine room side cover.



3. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 3 clips and upper radiator support seal.

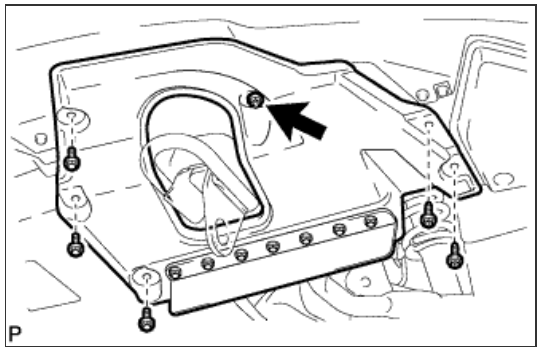
4. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.

5. DISCHARGE FUEL SYSTEM PRESSURE

a. Discharge the fuel system pressure (Click here).

6. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL



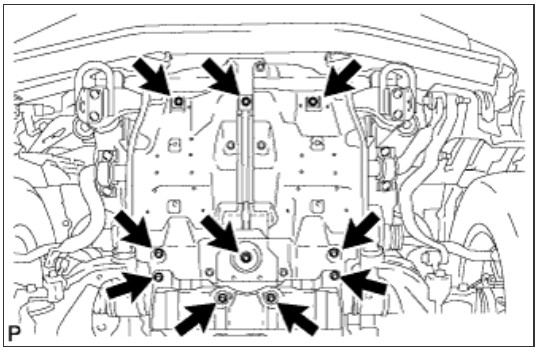
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable from the cable is reconnected (Click here).

7. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and 2 screws.

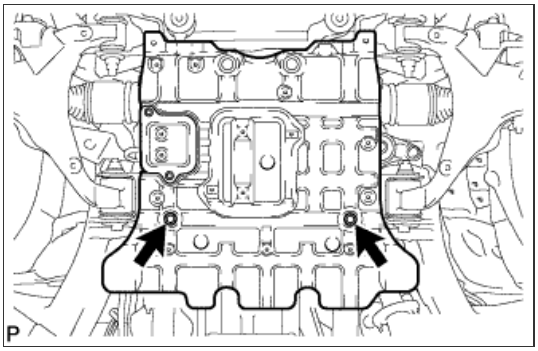
b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



8. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

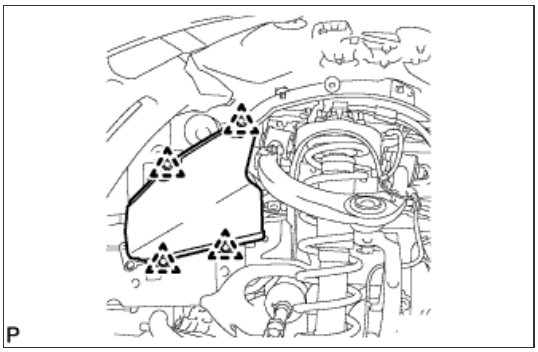
HINT:

Use the same procedures described for the LH side.



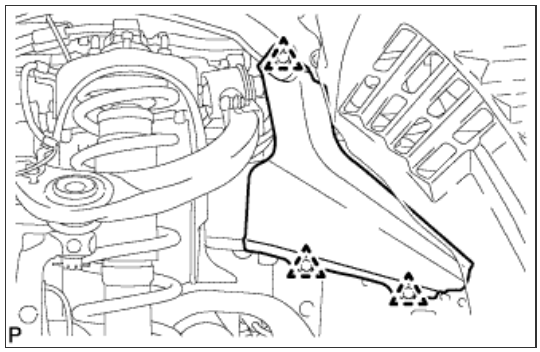
9. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and No. 1 engine under cover.



10. REMOVE NO. 2 ENGINE UNDER COVER

a. Remove the 2 bolts and No. 2 engine under cover.



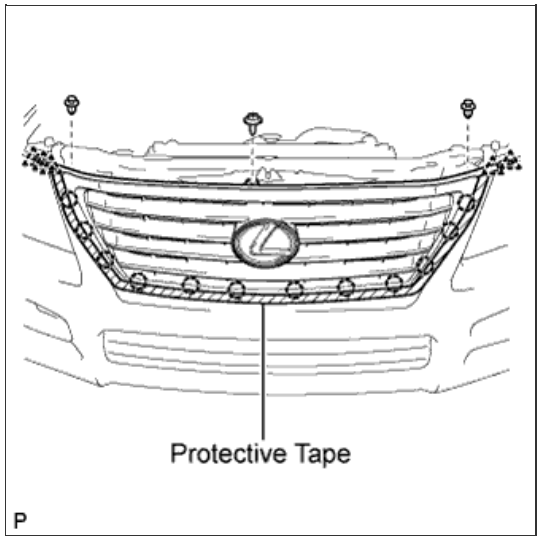
11. REMOVE FRONT FENDER APRON SEAL FRONT LH

a. Using a clip remover, remove the 4 clips and fender apron seal.

12. REMOVE FRONT FENDER APRON SEAL FRONT RH

a. Using a clip remover, remove the 3 clips and fender apron seal.

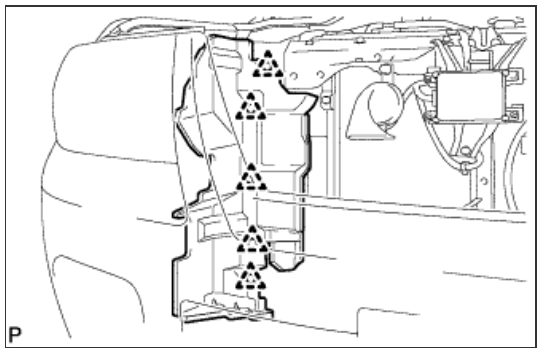
13. REMOVE RADIATOR GRILLE



a. Put protective tape around the radiator grille.

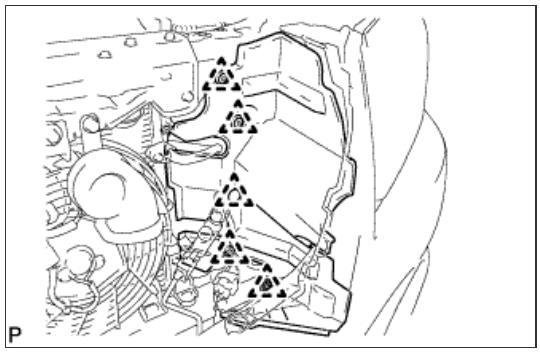
b. Remove the screw and 2 clips.

c. Detach the 5 clips and partially remove the upper radiator seal.



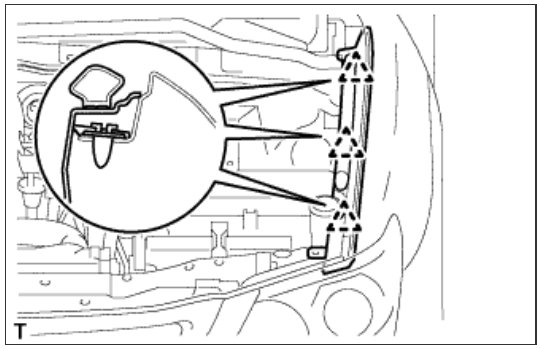
d. w/o Wide View Front Monitor System:
Detach the 12 claws and remove the radiator grille.

e. w/ Wide View Front Monitor System:
Detach the 12 claws, disconnect the connector and remove the radiator grille.



14. REMOVE RADIATOR SIDE DEFLECTOR RH (w/o Air Cooled Transmission Oil Cooler)

a. Using a clip remover, remove the 5 clips and side deflector.



15. REMOVE RADIATOR SIDE DEFLECTOR LH

a. Using a clip remover, remove the 5 clips and side deflector.

16. REMOVE FRONT FENDER MAIN SEAL LH

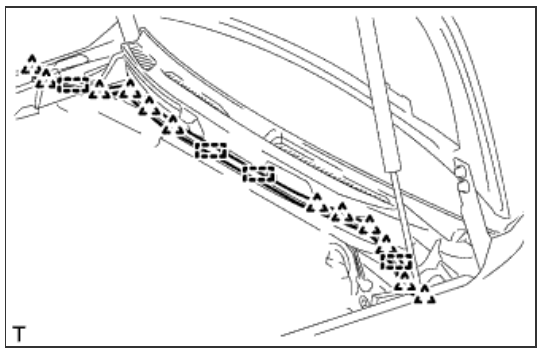
a. Using a clip remover, detach the 3 clips and remove the fender main seal.

17. REMOVE FRONT FENDER MAIN SEAL RH

HINT:

Use the same procedures described for the LH side.

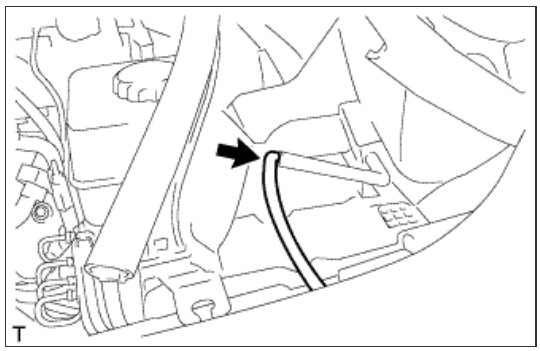
18. REMOVE FRONT WIPER ARM LH



a. Remove the nut, wiper arm and blade.

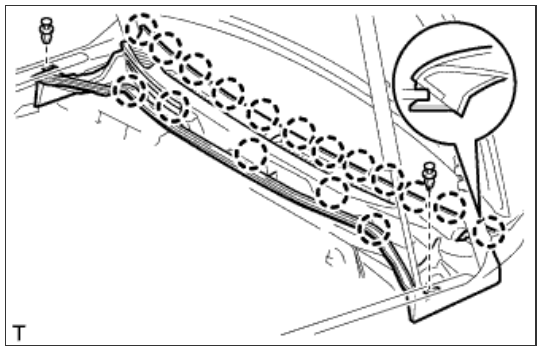
19. REMOVE FRONT WIPER ARM RH

a. Remove the nut, wiper arm and blade.



20. REMOVE HOOD TO COWL TOP SEAL

a. Using a clip remover, detach the 12 clips and 4 clamps, and remove the hood to cowl top seal.



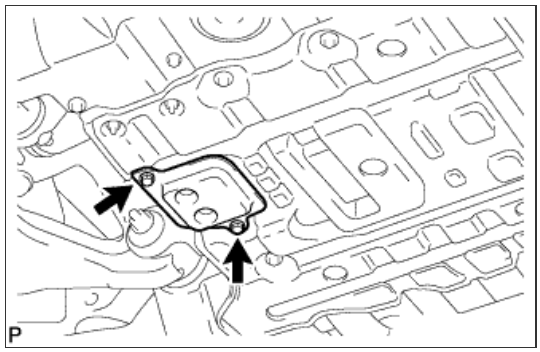
21. REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

a. Disconnect the washer hose.

b. Remove the 2 clips.

c. Detach the 17 claws and remove the cowl top ventilator louver sub-assembly.

22. DRAIN ENGINE OIL

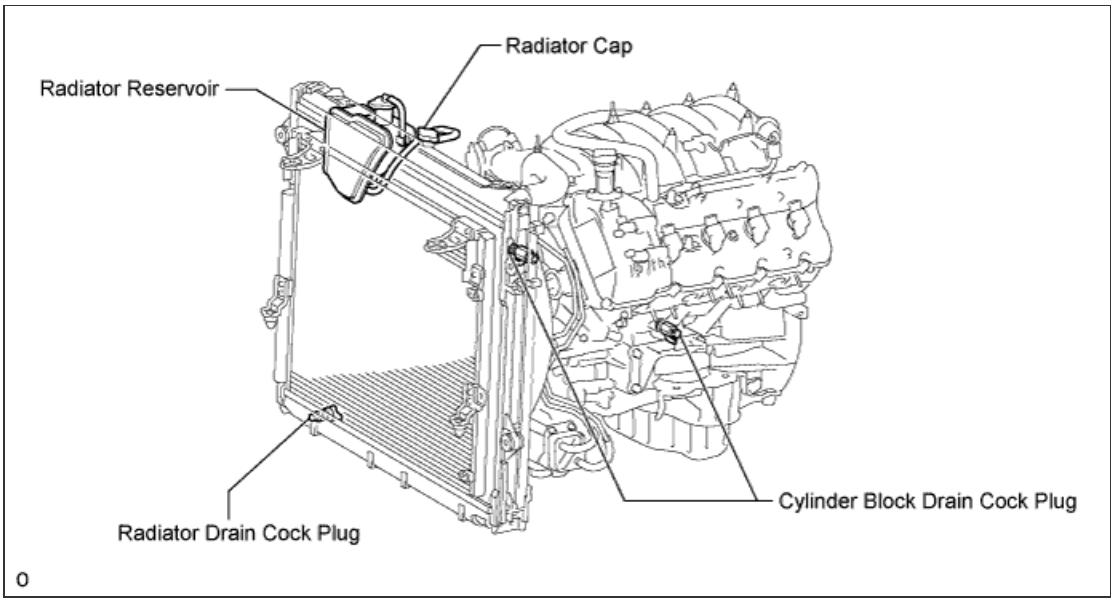


a. Remove the oil filler cap.

b. Remove the 2 bolts and No. 2 engine under cover seal.

c. Remove the oil pan drain plug and gasket, and drain the engine oil into a container.

d. Install a new gasket and the oil pan drain plug.



Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

23. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Loosen the radiator drain cock plug.

HINT:

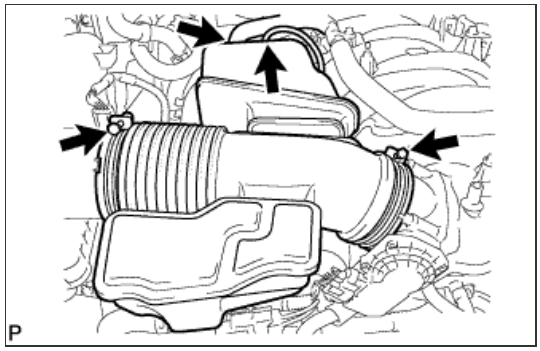
Collect the coolant in a container and dispose of it according to the regulations in your area.

b. Remove the radiator cap. Then drain the coolant from the radiator.

c. Loosen the 2 cylinder block drain cock plugs. Then drain the coolant from the engine.

d. Tighten the 2 cylinder block drain cock plugs.

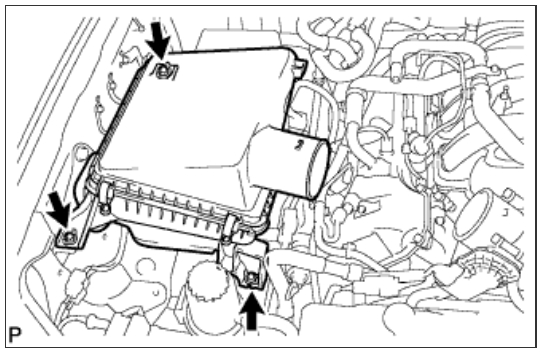
Torque:
13 N*m{ 130 kgf*cm , 10 ft.*lbf }



e. Tighten the radiator drain cock plug by hand.

24. REMOVE AIR CLEANER HOSE ASSEMBLY

a. Disconnect the vacuum hose and No. 2 ventilation hose.

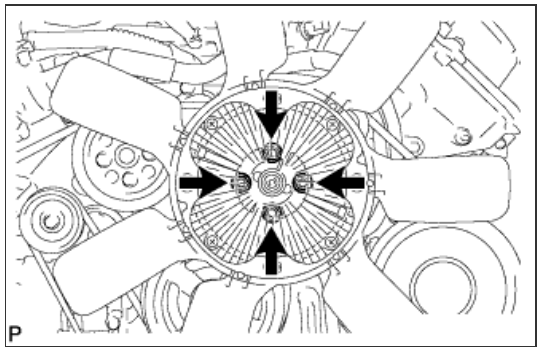


b. Loosen the 2 hose clamps.

c. Remove the air cleaner hose.

25. REMOVE AIR CLEANER ASSEMBLY

a. Remove the 3 bolts and air cleaner.



26. REMOVE NO. 1 RADIATOR HOSE

27. REMOVE NO. 2 RADIATOR HOSE

28. REMOVE FAN SHROUD

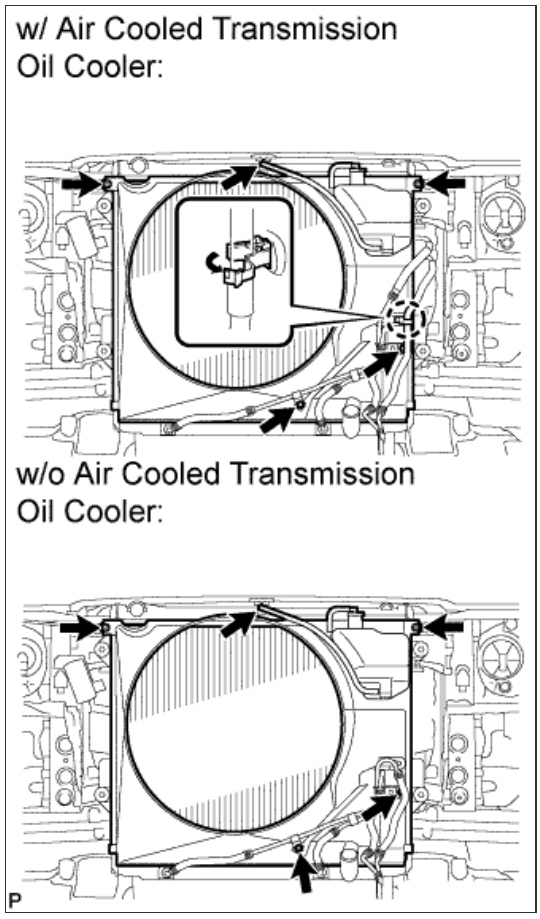
a. Loosen the 4 nuts holding the fluid coupling fan.

b. Remove the fan and generator V belt (Click here).

c. Disconnect the reservoir hose from the upper radiator tank.

d. w/ Air Cooled Transmission Oil Cooler:
Detach the claw to open the flexible hose clamp.

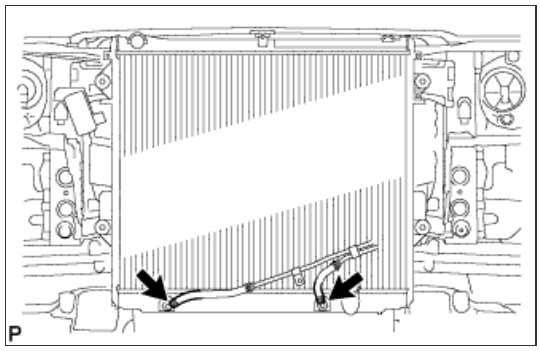
e. Remove the 2 bolts and disconnect the oil cooler tube from the fan shroud.



f. Remove the 2 bolts holding the fan shroud.

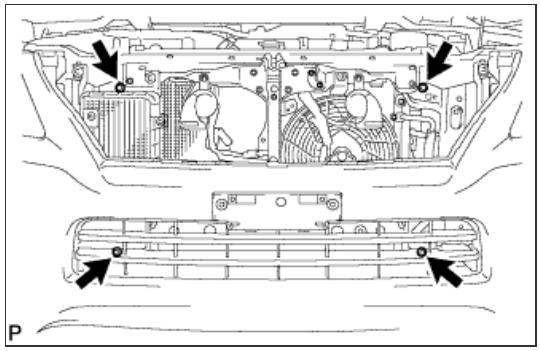
g. Remove the 4 nuts of the fluid coupling fan, and then remove the shroud together with the coupling fan.

NOTICE:



Be careful not to damage the radiator core.

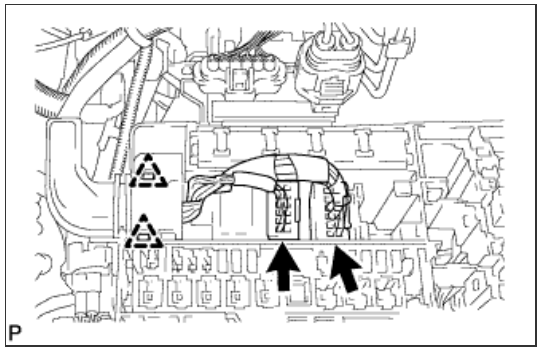
h. Remove the fan pulley.



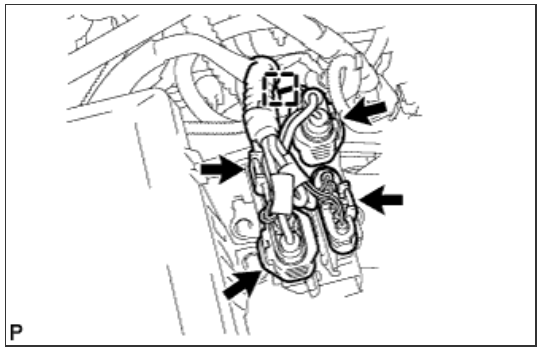
29. REMOVE RADIATOR ASSEMBLY

a. Disconnect the 2 oil cooler hoses.

b. Remove the 4 bolts and radiator.



30. DISCONNECT ENGINE WIRE



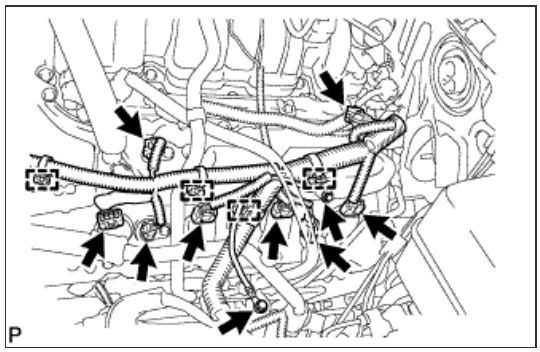
a. Engine Room LH Side:

i. Remove the engine room relay block cover.

ii. Disconnect the 2 connectors and 2 clips from the engine room junction block.

iii. w/ Secondary Air Injection System:
Disconnect the 4 air injection control driver connectors and wire harness clamp.

iv. Disconnect the injector connector.



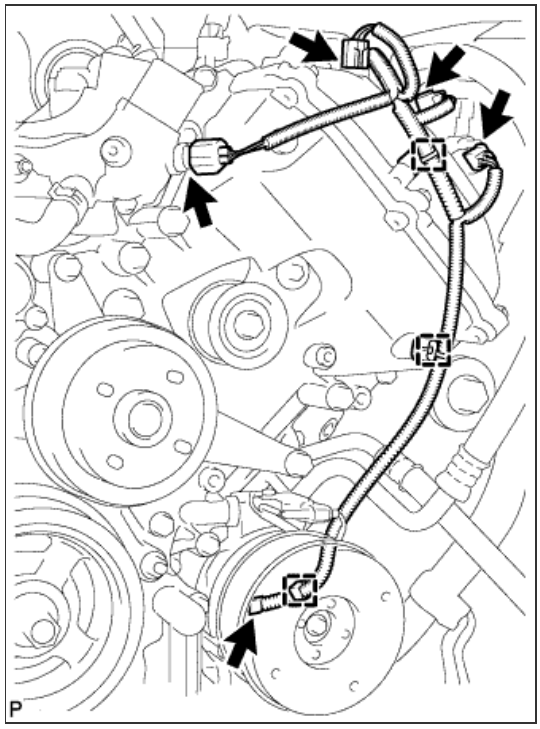
v. Disconnect the 4 ignition coil connectors.

vi. Disconnect the 2 VVT sensor connectors.

vii. Disconnect the 4 clamps.

viii. Remove the 2 bolts and ground wire.

ix. Disconnect the noise filter connector.



x. Disconnect the engine coolant temperature sensor connector.

xi. Disconnect the 2 camshaft timing oil control valve connectors.

xii. Disconnect the camshaft position sensor connector.

xiii. Disconnect the 3 clamps.

xiv. Disconnect the cooler compressor connector.

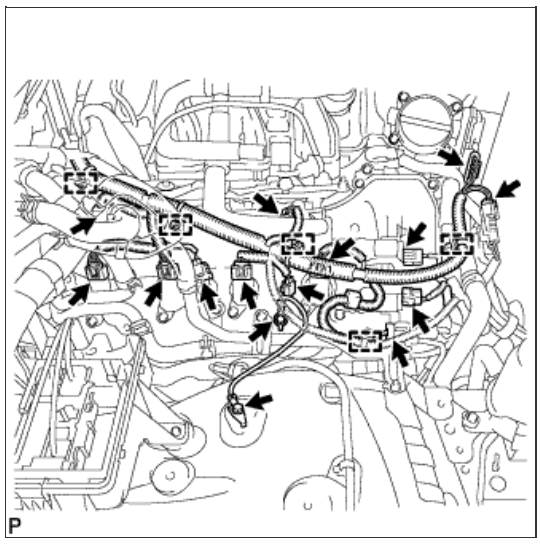
b. Engine Room RH Side:

i. Disconnect the 2 camshaft timing oil control valve connectors.

ii. Disconnect the 4 ignition coil connectors.

iii. Disconnect the injector connector.

iv. Disconnect the 2 VVT sensor connectors.

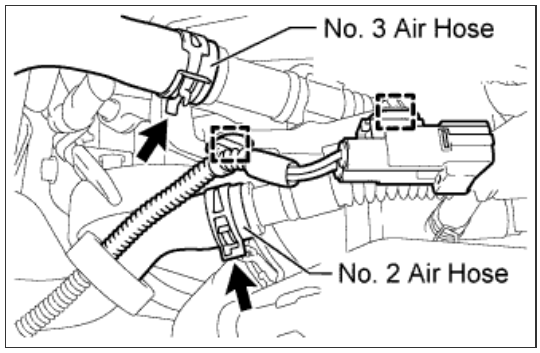


v. Disconnect the noise filter connector.

vi. Remove the 2 bolts and ground wire.

vii. w/ Secondary Air Injection System:
Disconnect the 2 air pump connectors.

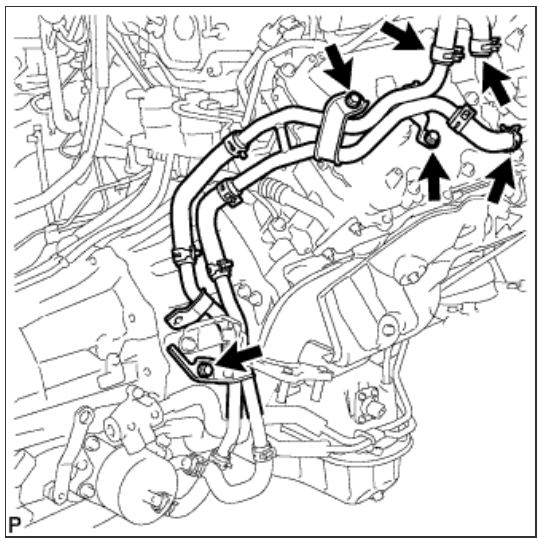
viii. Disconnect the throttle position sensor and throttle control motor connector.



ix. Disconnect the 5 clamps.

31. DISCONNECT AIR PUMP HOSE AND WIRE HARNESS (w/ Secondary Air Injection System)

a. Disconnect the No. 2 and No. 3 air hoses.

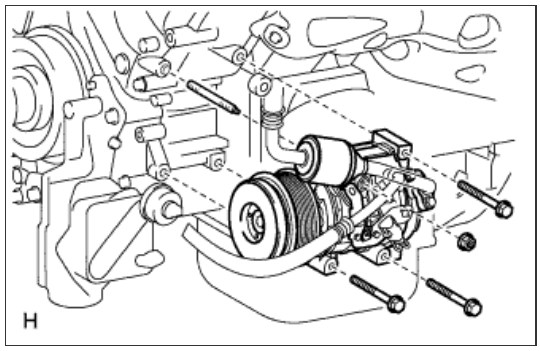


b. Disconnect the 2 clamps.

32. DISCONNECT NO. 2 WATER BY-PASS PIPE

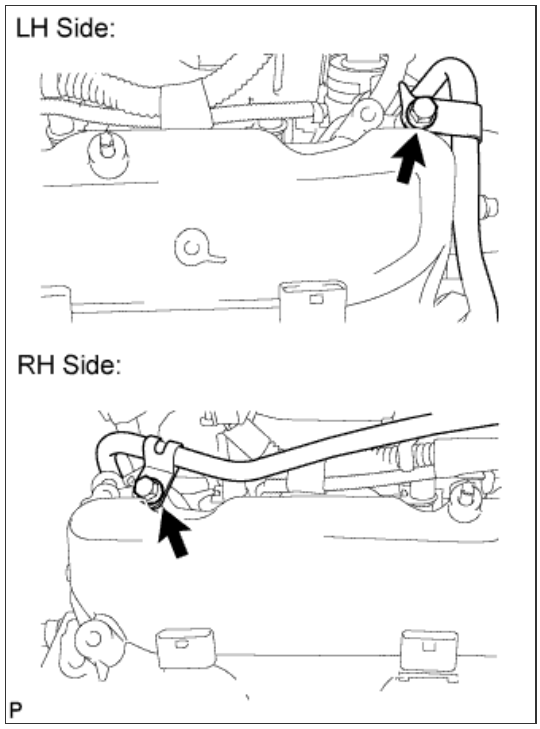
a. Disconnect the 3 hoses.

b. Remove the 3 bolts and disconnect the No. 2 water by-pass pipe from the cylinder head cover.



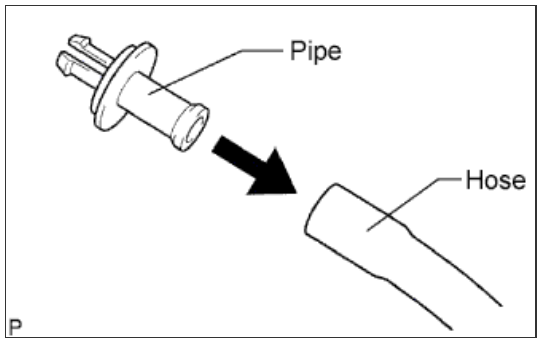
33. DISCONNECT COOLER COMPRESSOR ASSEMBLY

a. Remove the 3 bolts, nut and stud bolt, and disconnect the cooler compressor.



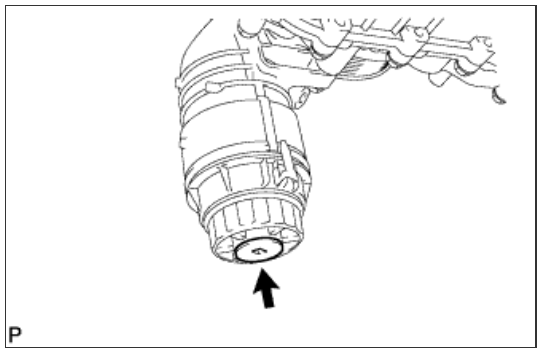
HINT:

It is not necessary to completely remove the compressor. With the hoses connected to the compressor, hang the compressor on the vehicle body with a rope.



34. DISCONNECT NO. 2 FUEL TUBE SUB-ASSEMBLY

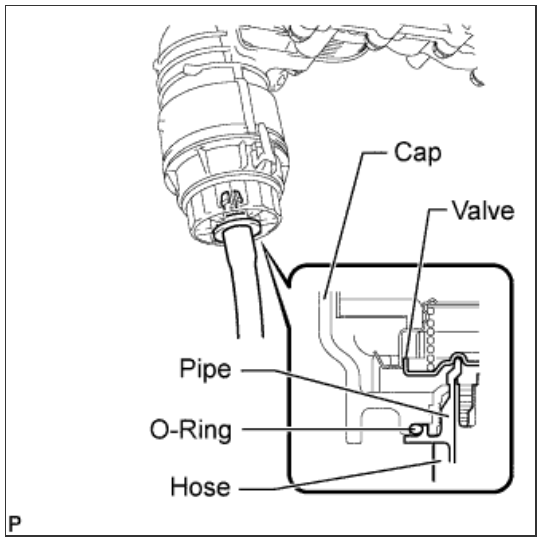
a. Remove the 2 bolts and disconnect the fuel tube.



35. REMOVE OIL FILTER ELEMENT

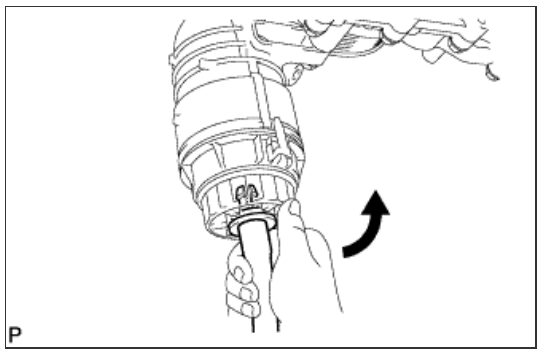
a. Connect a hose with an inside diameter of 15 mm (0.591 in.) to the pipe.

b. Remove the oil filter drain plug.



c. Install the pipe to the oil filter cap.

NOTICE:

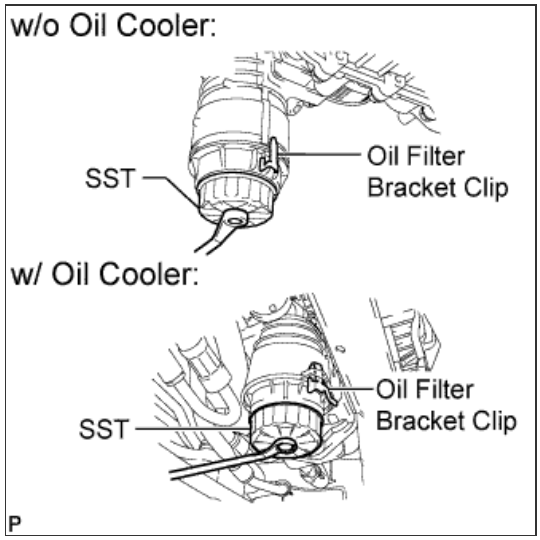


If the O-ring is removed with the drain plug, install the O-ring together with the pipe.

HINT:

Use a container to catch the draining oil.

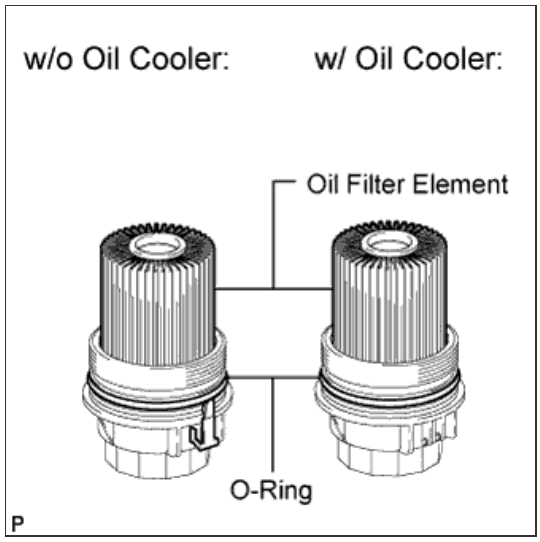
d. Check that oil is drained from the oil filter. Then disconnect the pipe and remove the O-ring as shown in the illustration.



e. Using SST, remove the oil filter cap.

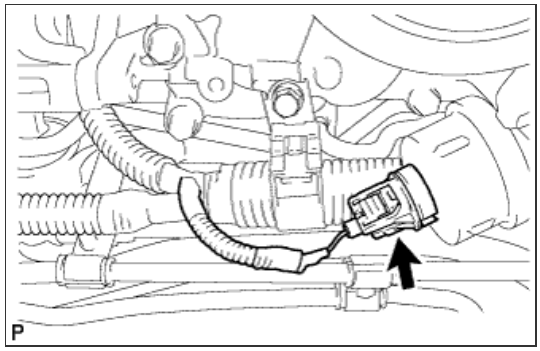
SST
09228-06501

NOTICE:



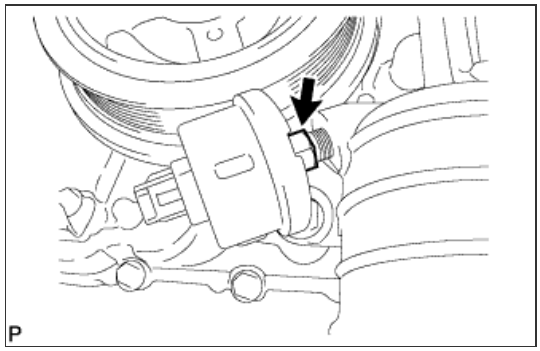
Do not remove the oil filter bracket clip.

f. Remove the oil filter element and O-ring from the oil filter cap.



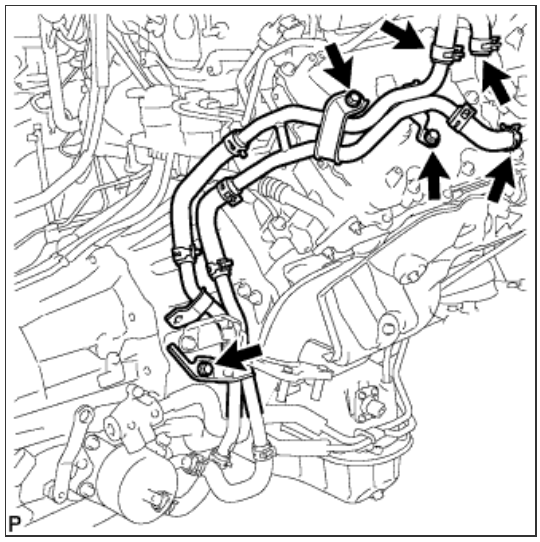
NOTICE:

Be sure to remove the cap O-ring by hand, without using any tools, to prevent damage to the cap O-ring groove.



36. REMOVE OIL PRESSURE SENDER GAUGE ASSEMBLY

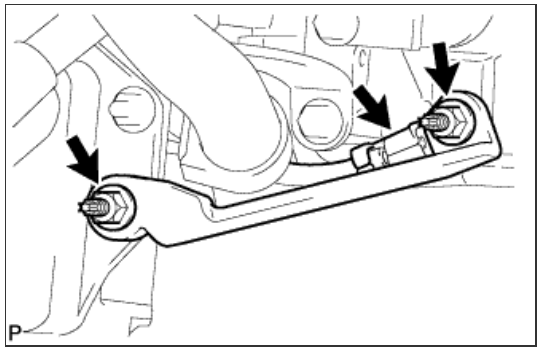
a. Disconnect the sender gauge connector.



b. Remove the oil pressure sender gauge.

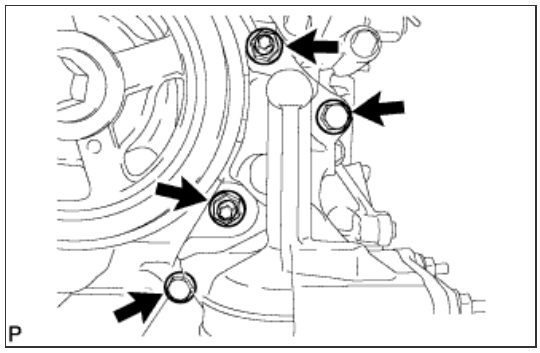
37. REMOVE NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY (w/ Oil Cooler)

a. Disconnect the 3 hoses.



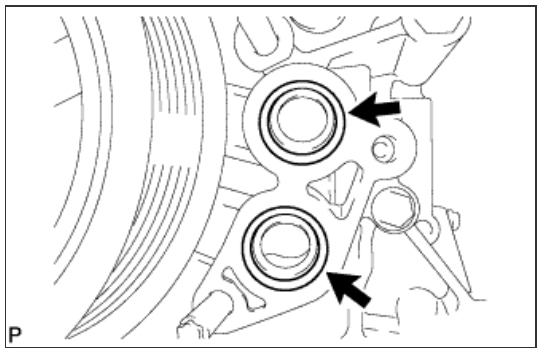
b. Remove the 3 bolts and disconnect the No. 2 water by-pass pipe from the cylinder head cover.

38. REMOVE NO. 1 OIL COOLER BRACKET (w/ Oil Cooler)



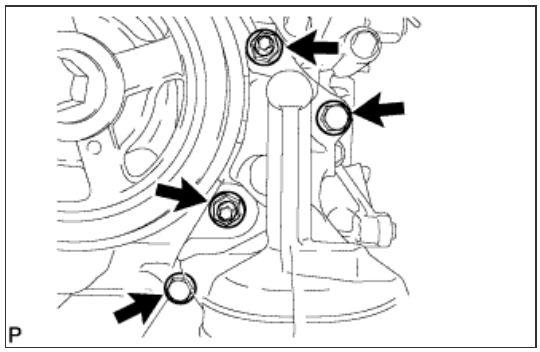
a. Remove the 2 nuts and bracket.

b. Disconnect the ground wire from the cylinder block.

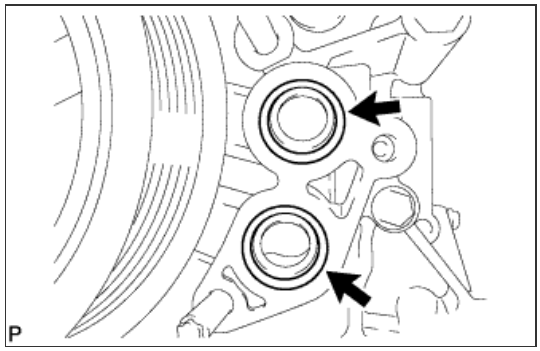


39. REMOVE OIL FILTER BRACKET (w/ Oil Cooler)

a. Remove the 2 bolts, 2 nuts and filter bracket.

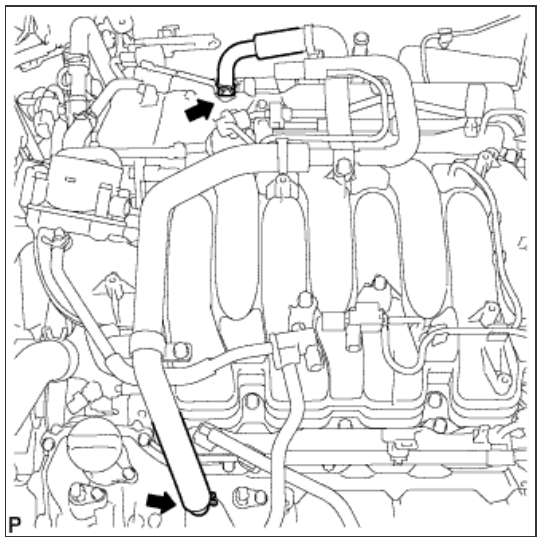


b. Remove the 2 O-rings.

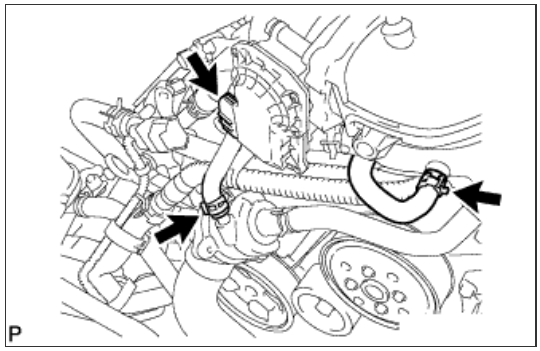


40. REMOVE OIL FILTER BRACKET (w/o Oil Cooler)

a. Remove the 2 bolts, 2 nuts and oil filter bracket.

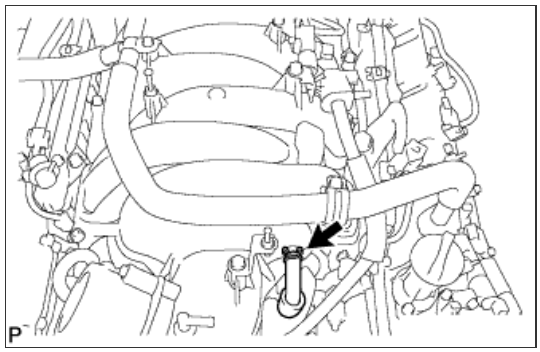


b. Remove the 2 O-rings.



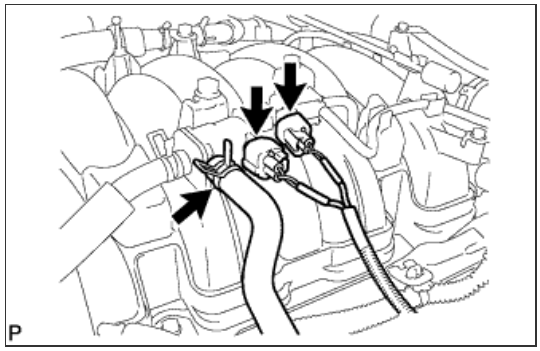
41. REMOVE INTAKE MANIFOLD

a. Disconnect the ventilation hose from the ventilation pipe of the cylinder head cover LH and RH.

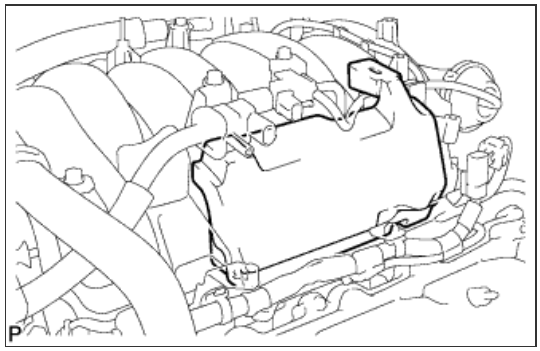


b. Disconnect the 2 water by-pass hoses.

c. Disconnect the throttle body connector.

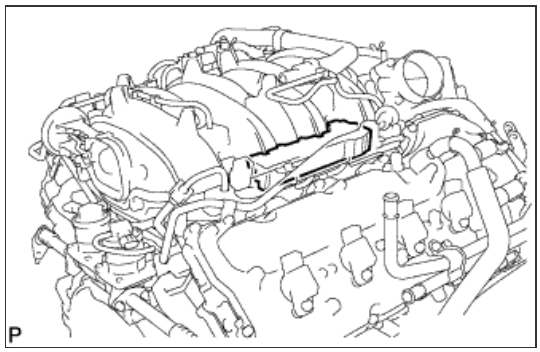


d. Disconnect the No. 1 ventilation hose.

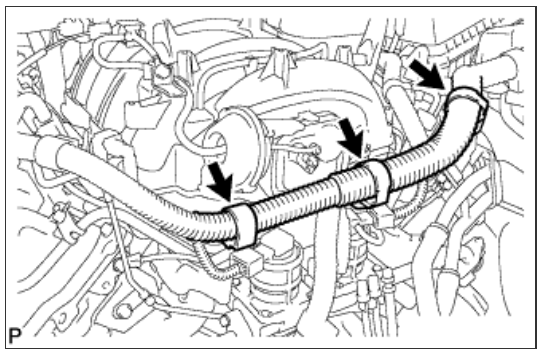


e. Disconnect the purge VSV connector.

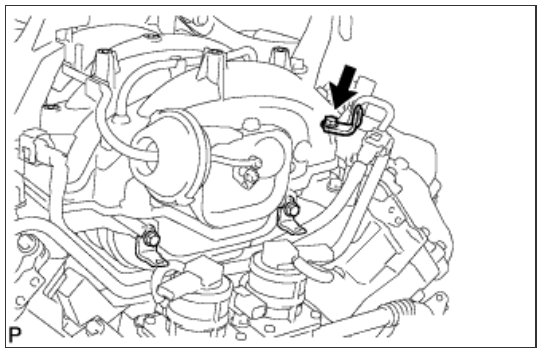
f. Disconnect the purge line hose from the purge VSV.



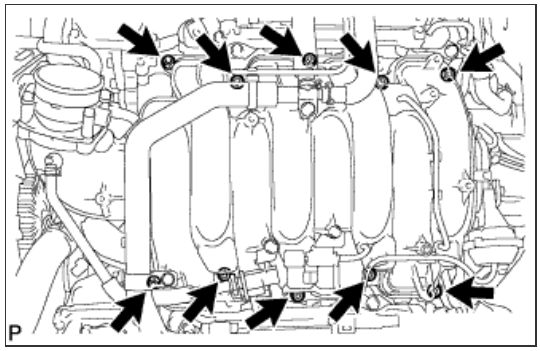
g. Disconnect the vacuum switching valve connector (for ACIS).



h. Remove the No. 1 engine cover sub-assembly.

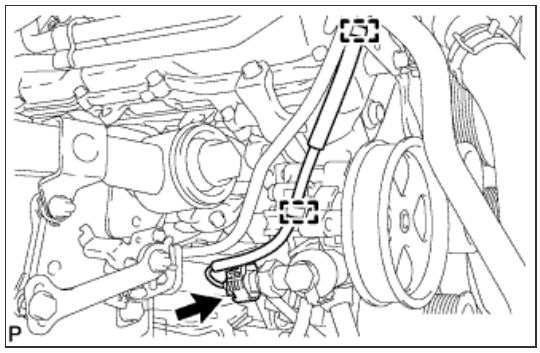


i. Remove the No. 3 engine cover.

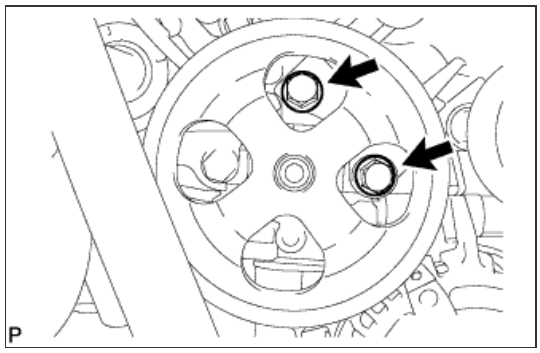


j. Disconnect the 3 wire clamps from the 3 wire brackets.

k. Remove the bolt and wire bracket from the intake manifold.



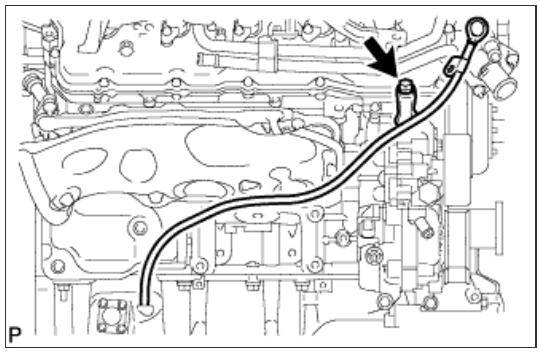
l. Remove the 2 nuts, 8 bolts, intake manifold and 2 gaskets.



42. DISCONNECT VANE PUMP ASSEMBLY

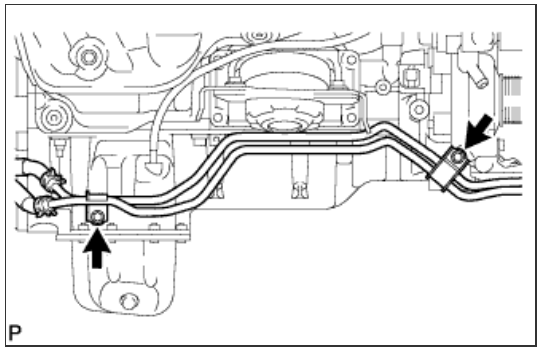
a. Disconnect the 2 clamps and power steering oil pressure switch connector.

b. Remove the 2 bolts and disconnect the vane pump.



43. REMOVE ENGINE OIL LEVEL DIPSTICK GUIDE

a. Remove the dipstick.

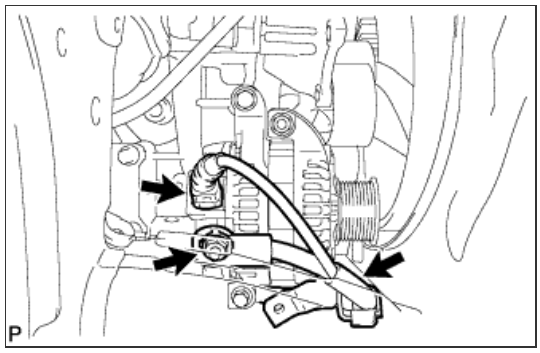


b. Remove the bolt and dipstick guide.

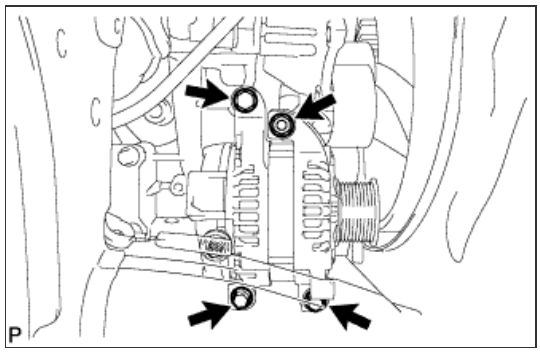
c. Remove the O-ring from the dipstick guide.

44. DISCONNECT OIL COOLER PIPE ASSEMBLY

a. Remove the 2 bolts and disconnect the oil cooler pipe.



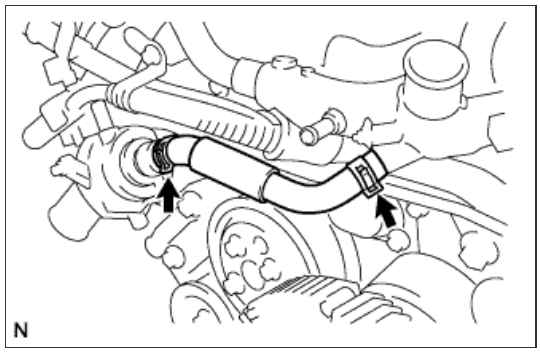
45. REMOVE GENERATOR ASSEMBLY



a. Disconnect the generator connector.

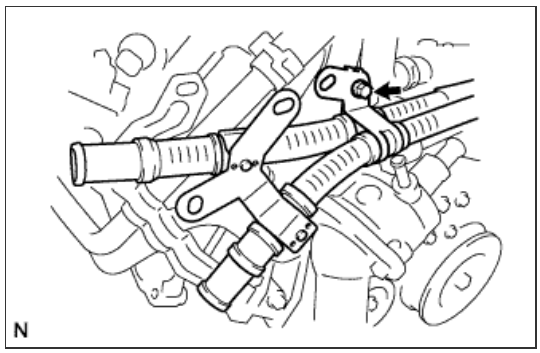
b. Remove the terminal cap and nut, and disconnect the generator wire.

c. Remove the bolt and wire harness bracket from the generator.

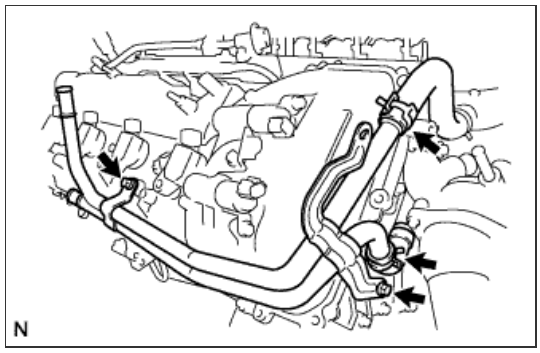


d. Remove the 3 bolts, nut and generator.

46. REMOVE NO. 1 WATER BY-PASS HOSE



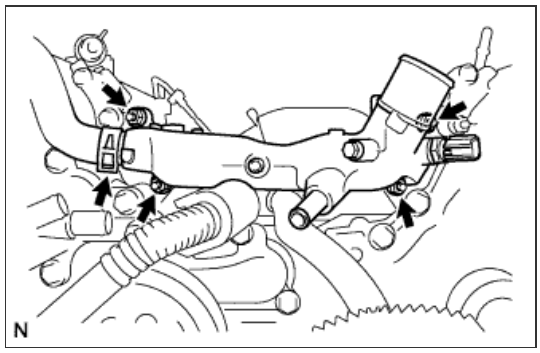
a. Remove the No. 1 water by-pass hose by disconnecting the hose from the water inlet housing and front water by-pass joint.



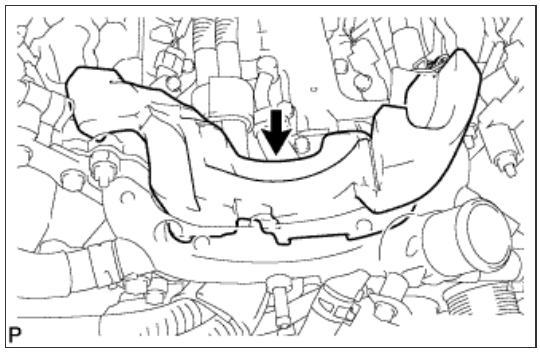
47. REMOVE WATER BY-PASS PIPE SUB-ASSEMBLY

a. w/ Secondary Air Injection System:
Remove the bolt and disconnect the air tube.

b. Disconnect the 2 hoses.

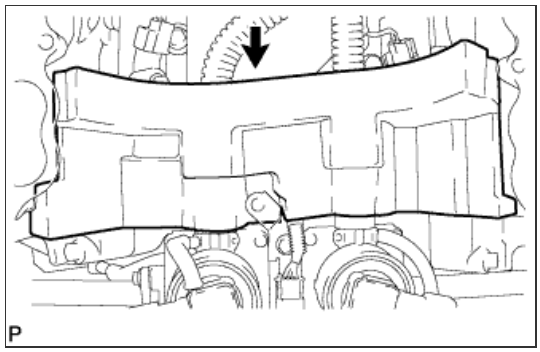


c. Remove the 2 bolts and water by-pass pipe.



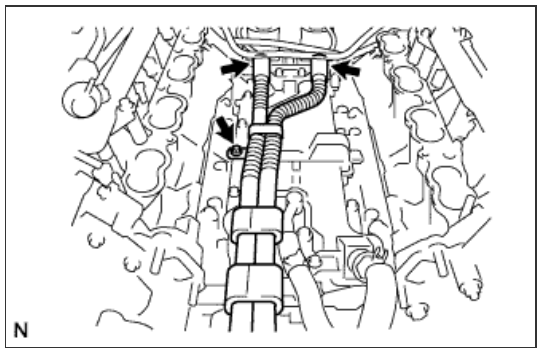
48. REMOVE FRONT WATER BY-PASS JOINT

a. Disconnect the No. 2 water by-pass hose from the water by-pass joint.

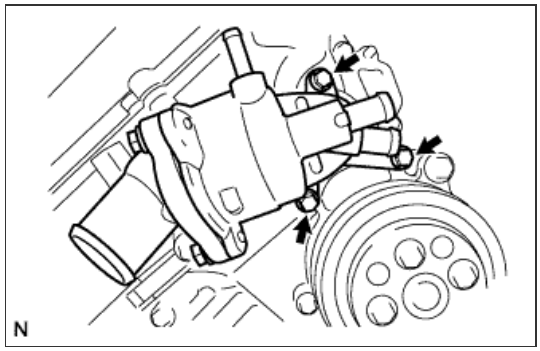


b. Remove the 4 nuts, water by-pass joint and 2 gaskets.

49. REMOVE NO. 2 ENGINE COVER



50. REMOVE NO. 1 ENGINE COVER

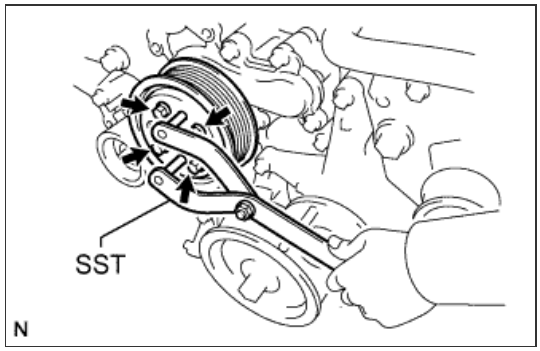


51. REMOVE AIR PIPE SUB-ASSEMBLY (w/ Secondary Air Injection System)

a. Remove the bolt, disconnect the 2 hoses, and remove the air pipe.

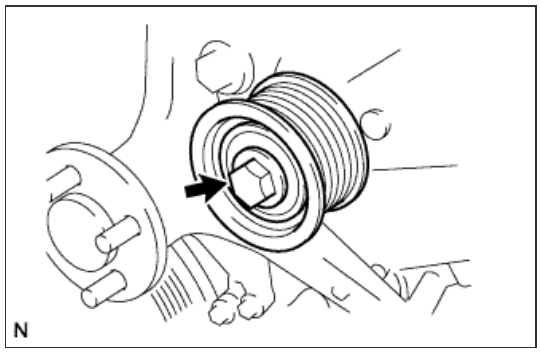
52. REMOVE WATER INLET HOUSING

a. Remove the 3 bolts, water inlet housing and gasket.



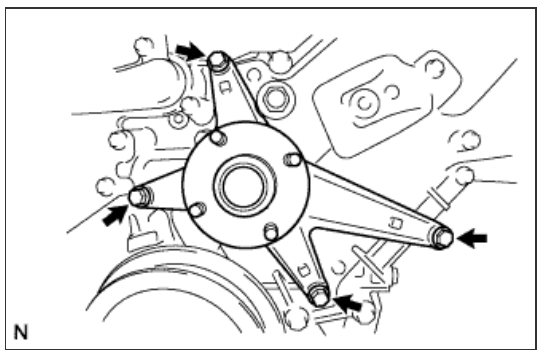
53. REMOVE WATER PUMP PULLEY

a. Using SST, hold the water pump pulley.



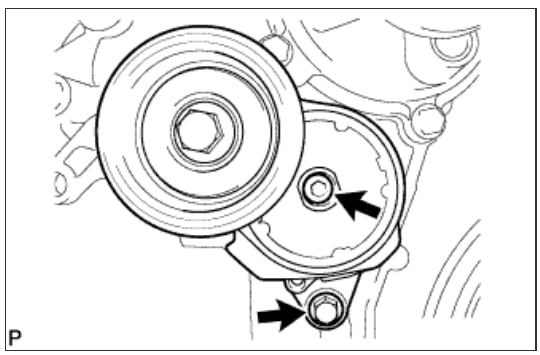
SST
09960-10010 (09962-01000, 09963-01000)

b. Remove the 4 bolts and water pump pulley.



54. REMOVE NO. 1 IDLER PULLEY SUB-ASSEMBLY

a. Remove the bolt and idler pulley.



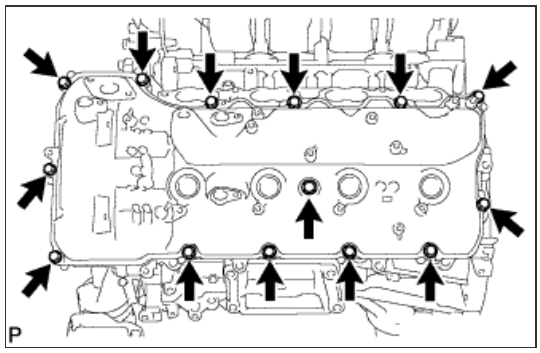
55. REMOVE FLUID COUPLING BRACKET

a. Remove the 4 bolts and fluid coupling bracket.

56. REMOVE V-RIBBED BELT TENSIONER ASSEMBLY

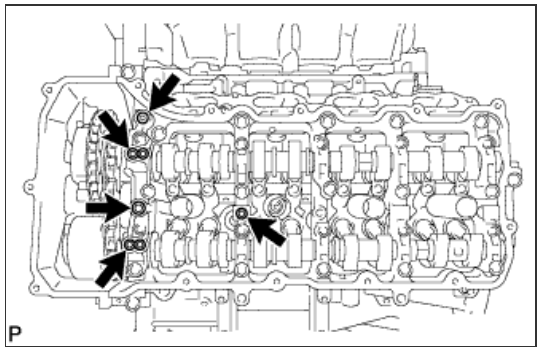
a. Remove the standard bolt, 6 mm hexagon wrench bolt and belt tensioner.

57. REMOVE IGNITION COIL ASSEMBLY



a. Remove the 8 bolts and 8 ignition coils.

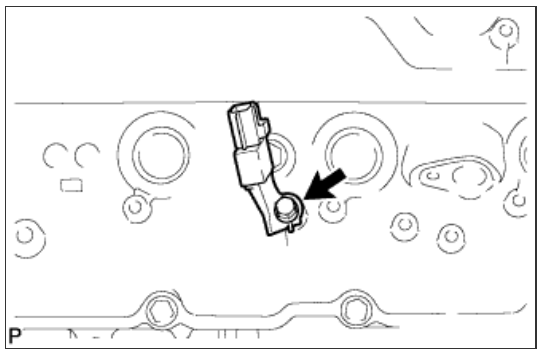
58. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY LH



a. Remove the 14 bolts, seal washer, cylinder head cover and gasket.

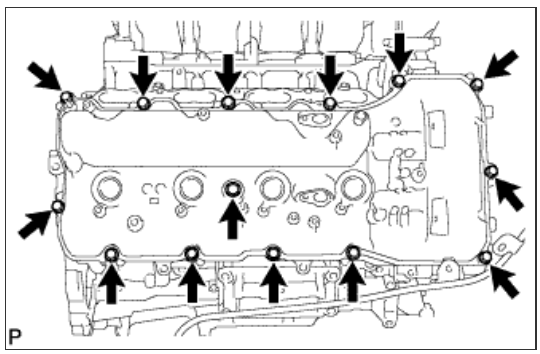
HINT:

Make sure the removed parts are returned to the same places they were removed from.

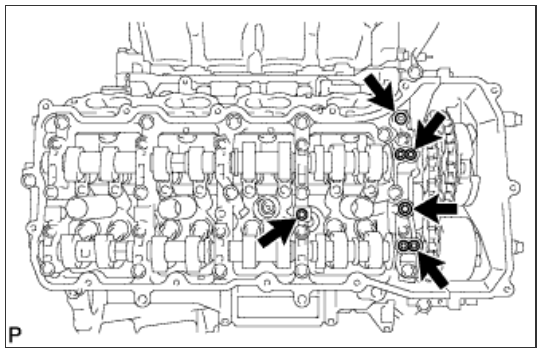


b. Remove the 5 gaskets from the camshaft bearing caps (No. 2, No. 3).

59. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY RH



a. Remove the bolt and noise filter.



b. Remove the 14 bolts, seal washer, cylinder head cover and gasket.

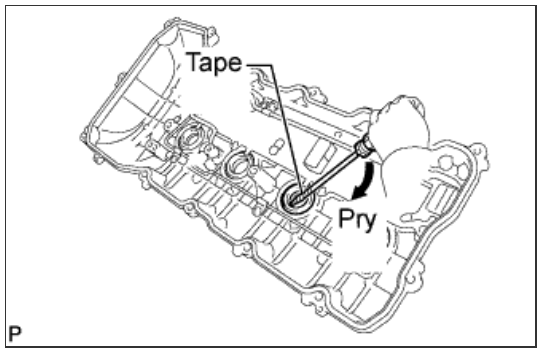
HINT:

Make sure the removed parts are returned to the same places they were removed from.

c. Remove the 5 gaskets from the camshaft bearing caps (No. 1, No. 3).

60. REMOVE SPARK PLUG TUBE GASKET

a. Bend the 4 ventilation baffle plate claws on the cylinder head cover to an angle of 90° or more.



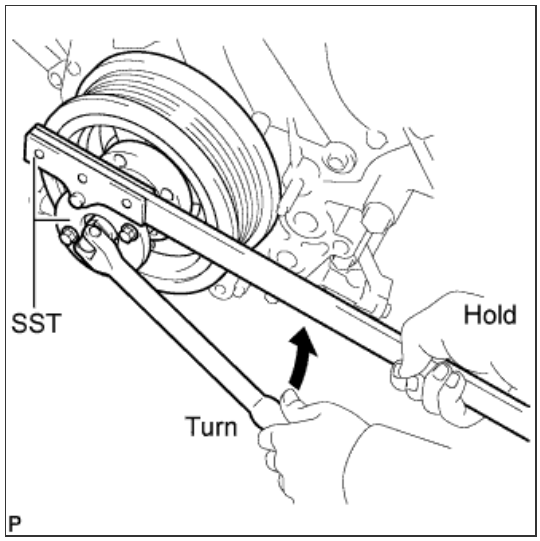
b. Using a screwdriver, pry out the gaskets.

HINT:

Tape the screwdriver tip before use.

NOTICE:

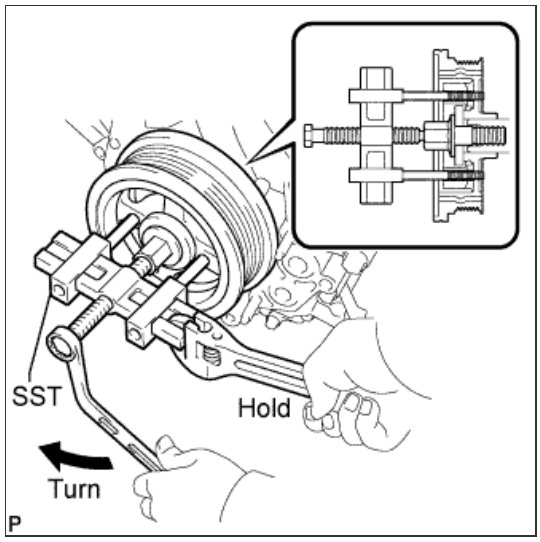
- **Be careful not to damage the cylinder head cover.**
- **Be careful not to damage the gasket when removing it, as the removed gasket needs to be used when installing a new one.**



61. REMOVE CRANKSHAFT PULLEY

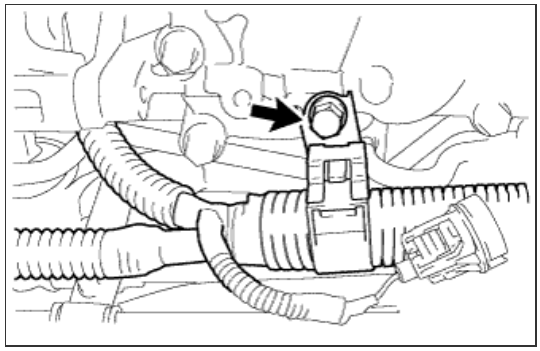
a. Using SST, loosen the crankshaft pulley set bolt until 2 or 3 threads are engaged.

SST



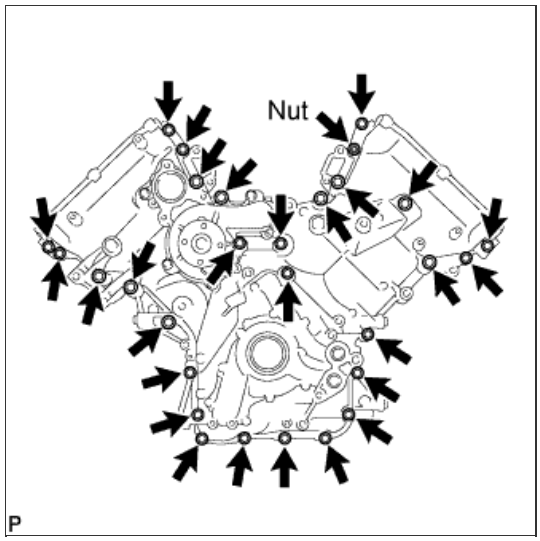
09213-70011 (09213-70020)
09330-00021

b. Using the pulley set bolt and SST, remove the crankshaft pulley.



SST

09950-50013 (09951-05010, 09952-05010, 09953-05010, 09954-05011)

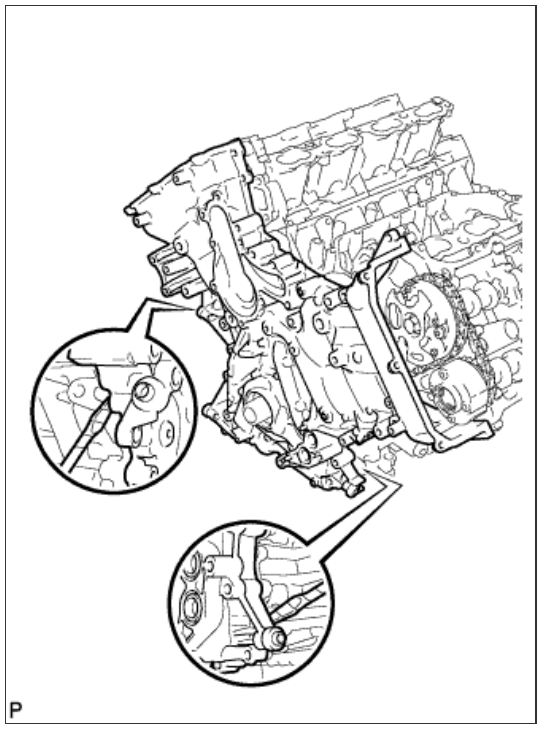


62. DISCONNECT WIRE HARNESS CLAMP BRACKET

a. Remove the bolt and disconnect the bracket.

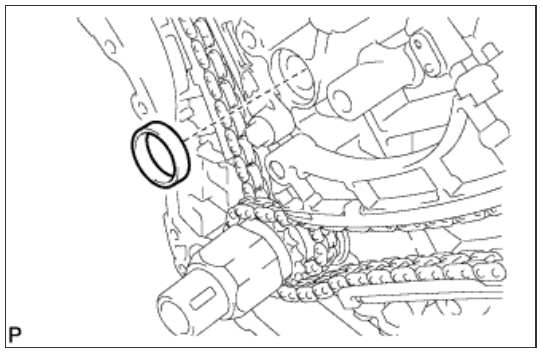
63. REMOVE TIMING CHAIN COVER SUB-ASSEMBLY

a. Remove the 28 bolts and nut shown in the illustration.



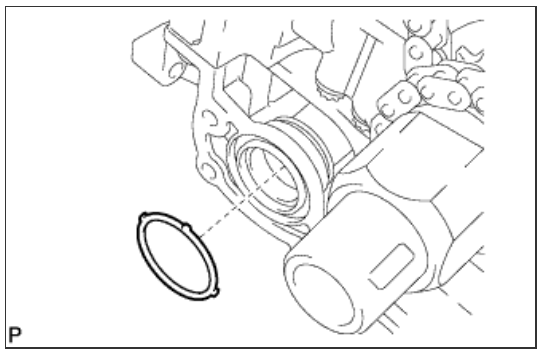
b. Remove the timing chain cover by prying between the timing chain cover and cylinder head or cylinder block with a screwdriver as shown in the illustration.

NOTICE:



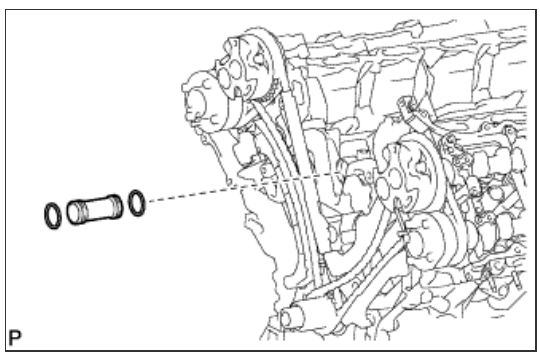
Be careful not to damage the contact surfaces of the cylinder head, cylinder block and chain cover.

HINT:



Tape the screwdriver tip before use.

c. Remove the oil pump gasket from the cylinder block.

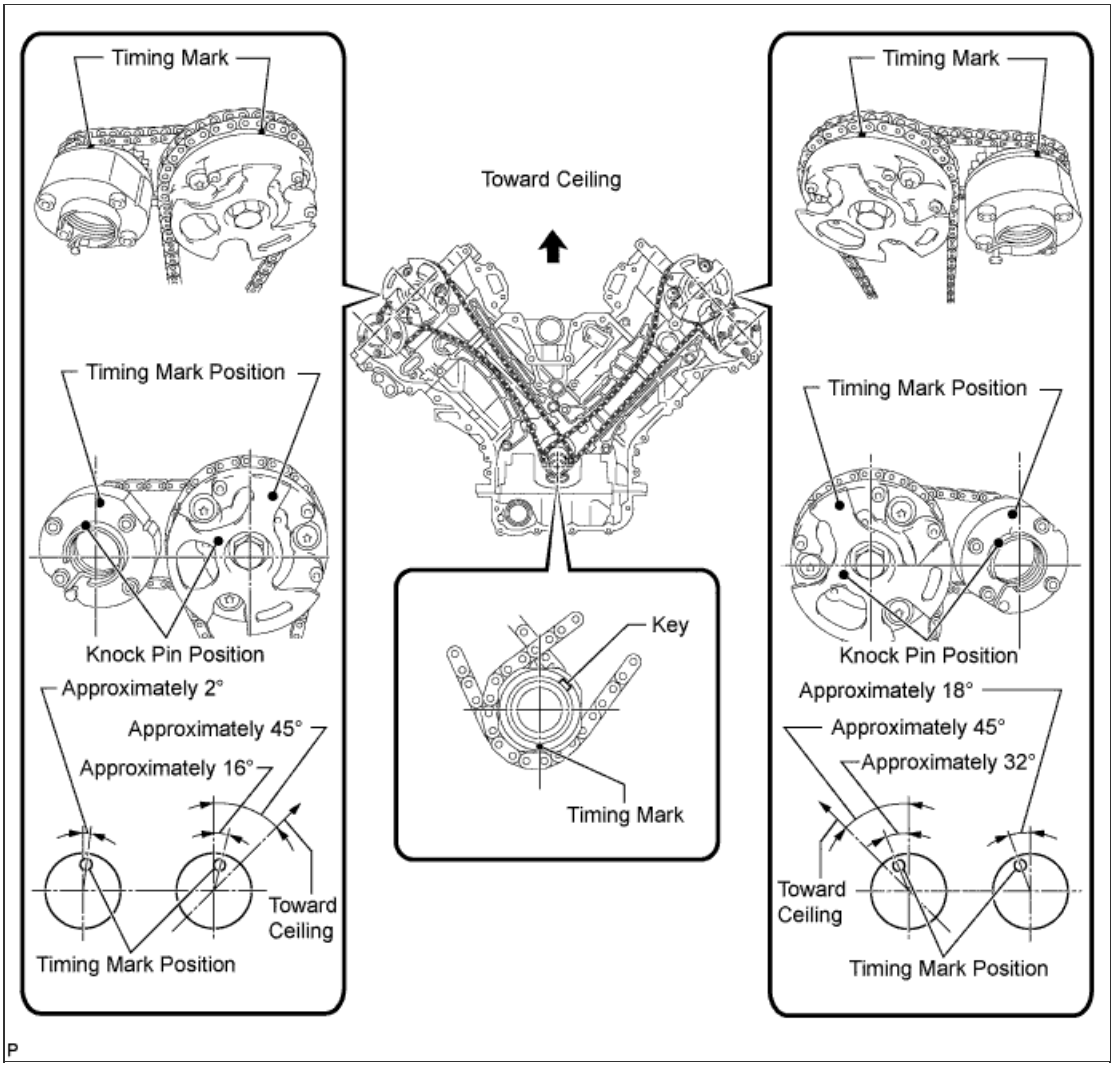


d. Remove the O-ring from the oil pan.

64. REMOVE WATER INLET PIPE

a. Remove the water inlet pipe.

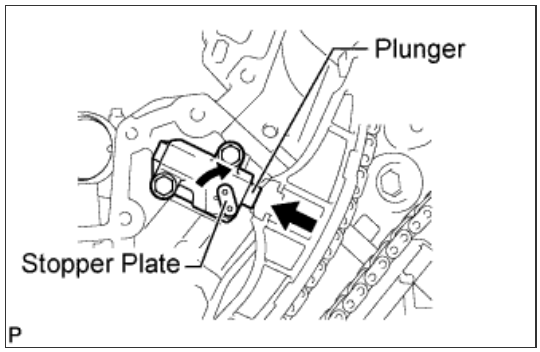
b. Remove the 2 O-rings from the water inlet pipe.



65. SET NO. 1 CYLINDER TO TDC/COMPRESSION

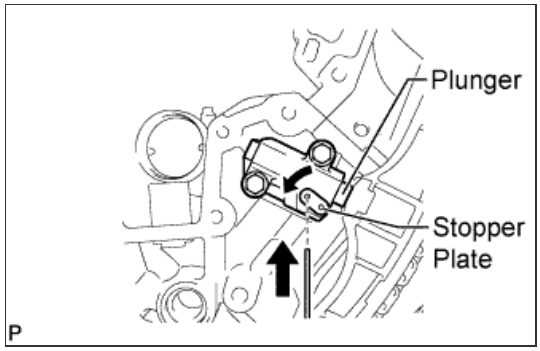
a. Temporarily install the crankshaft pulley bolt.

b. Rotate the crankshaft clockwise so that the timing marks on the crankshaft timing sprocket and camshaft timing gears are as shown in the illustration.

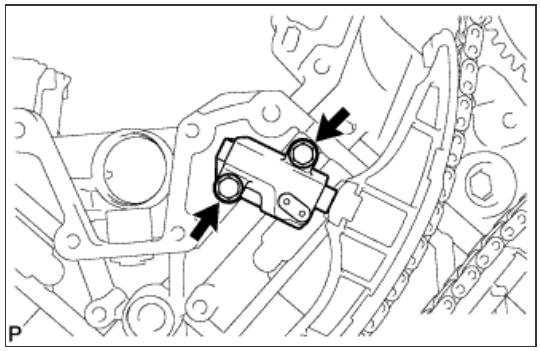


HINT:

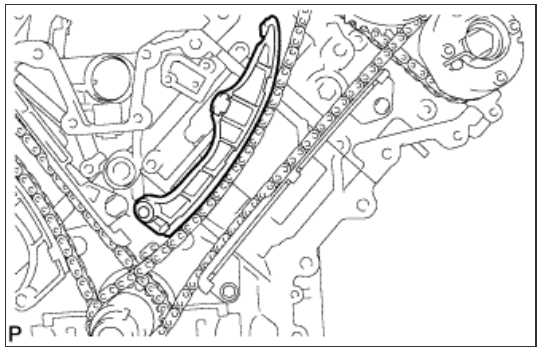
If the timing marks do not align, rotate the crankshaft clockwise again and align the timing marks.



66. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY LH

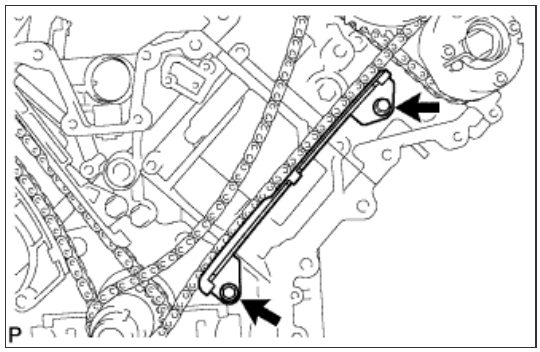


a. Move the stopper plate clockwise to release the lock, and push the plunger deep into the tensioner.

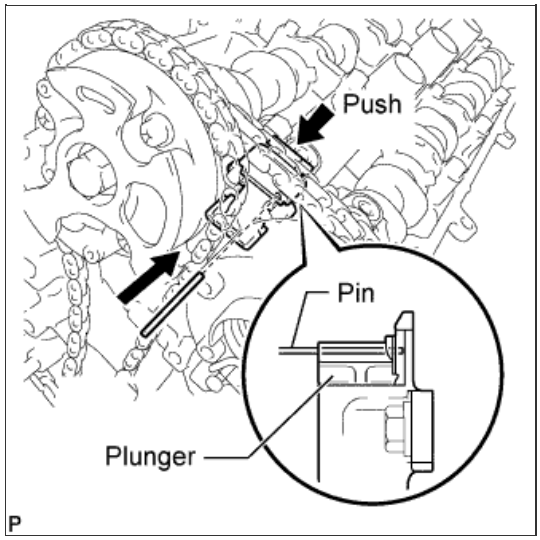


b. Move the stopper plate counterclockwise to set the lock, and insert a hexagon wrench into the stopper plate hole.

c. Remove the 2 bolts, chain tensioner and gasket.



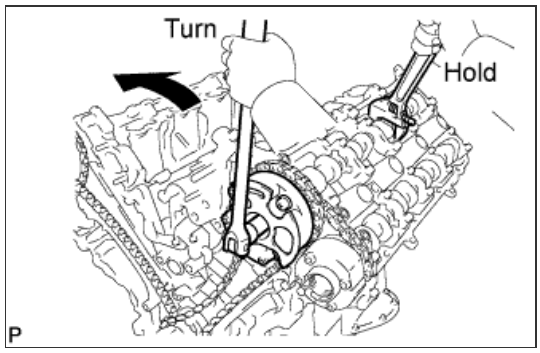
67. REMOVE NO. 1 CHAIN TENSIONER SLIPPER LH



68. REMOVE NO. 1 CHAIN VIBRATION DAMPER LH

a. Remove the 2 bolts and chain vibration damper.

69. REMOVE NO. 1 CHAIN SUB-ASSEMBLY LH

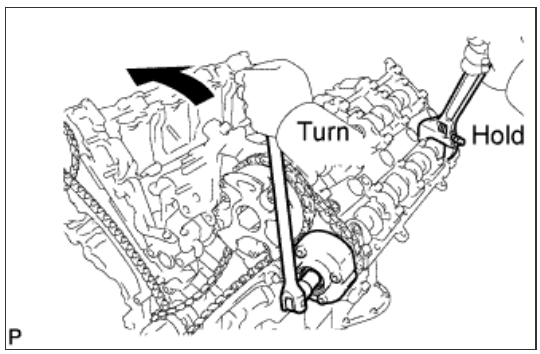


a. While pushing down the No. 3 chain tensioner, insert a pin of 1.0 mm (0.0394 in.) into the hole to fix it in place.

b. Hold the hexagonal portion of the camshaft with a wrench and loosen the bolt.

NOTICE:

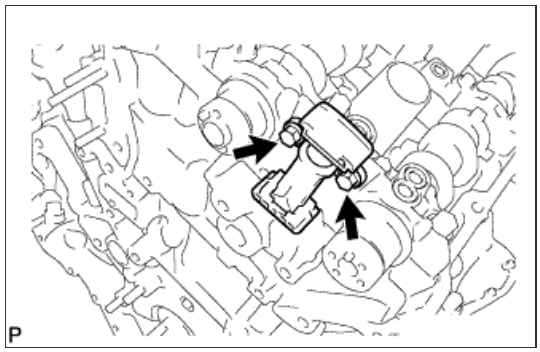
- **Be careful not to damage the cylinder head with the wrench.**
- **Do not disassemble the camshaft timing gear.**



c. Hold the hexagonal portion of the camshaft with a wrench and loosen the bolt.

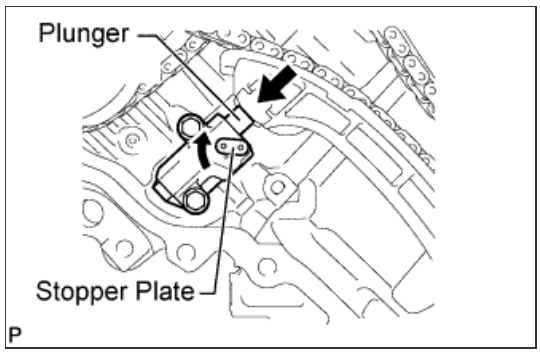
NOTICE:

Be careful not to damage the cylinder head with the wrench.



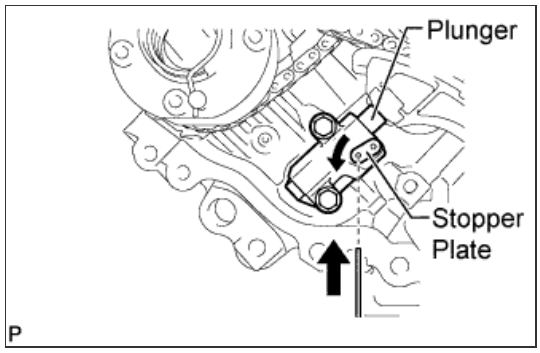
d. Remove the 2 bolts. Then with the No. 1 and No. 2 chains still connected to the gears, remove the camshaft timing gear, camshaft timing exhaust gear and crankshaft timing sprocket LH.

e. Remove the No. 1 and No. 2 chains from the gears.

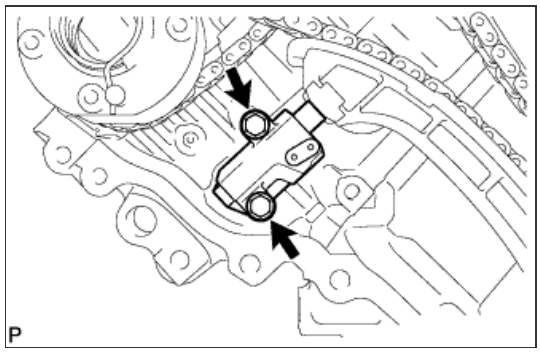


70. REMOVE NO. 3 CHAIN TENSIONER ASSEMBLY

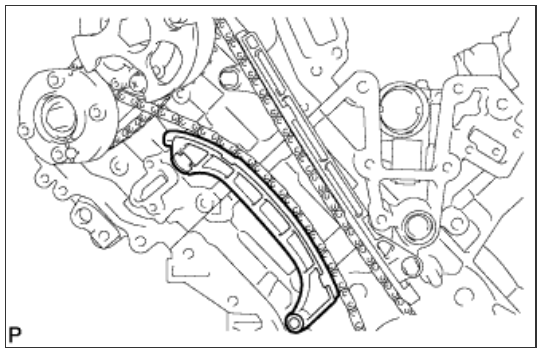
a. Remove the 2 bolts and chain tensioner.



71. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY RH

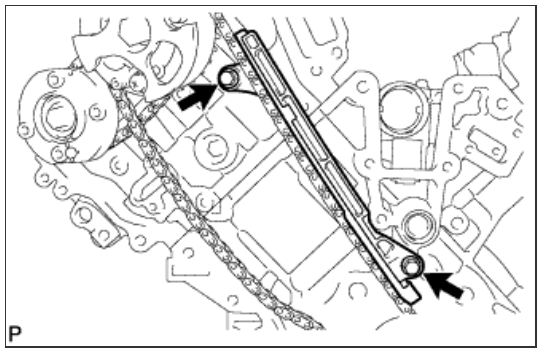


a. Move the stopper plate clockwise to release the lock, and push the plunger deep into the tensioner.

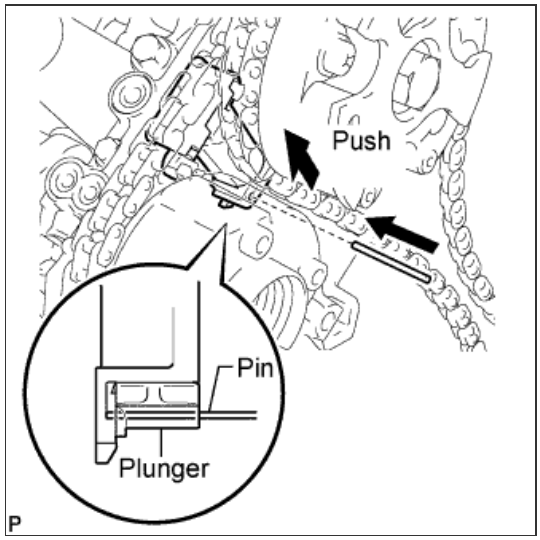


b. Move the stopper plate counterclockwise to set the lock, and insert a hexagon wrench into the stopper plate hole.

c. Remove the 2 bolts and chain tensioner.



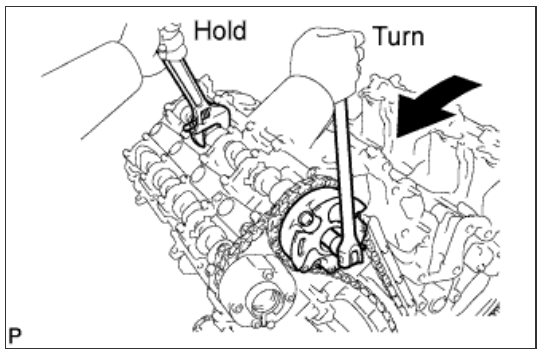
72. REMOVE NO. 1 CHAIN TENSIONER SLIPPER RH



73. REMOVE NO. 1 CHAIN VIBRATION DAMPER RH

a. Remove the 2 bolts and vibration damper.

74. REMOVE NO. 1 CHAIN SUB-ASSEMBLY RH

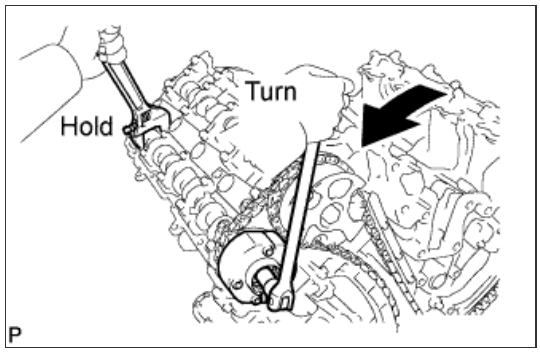


a. While raising up the No. 2 chain tensioner, insert a pin of 1.0 mm (0.0394 in.) into the hole to fix it in place.

b. Hold the hexagonal portion of the camshaft with a wrench and loosen the bolt.

NOTICE:

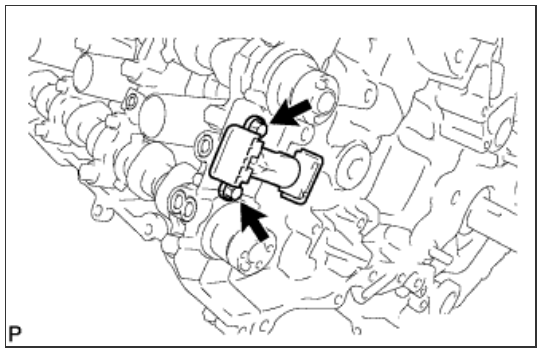
- **Be careful not to damage the cylinder head with the wrench.**
- **Do not disassemble the camshaft timing gear.**



c. Hold the hexagonal portion of the camshaft with a wrench and loosen the bolt.

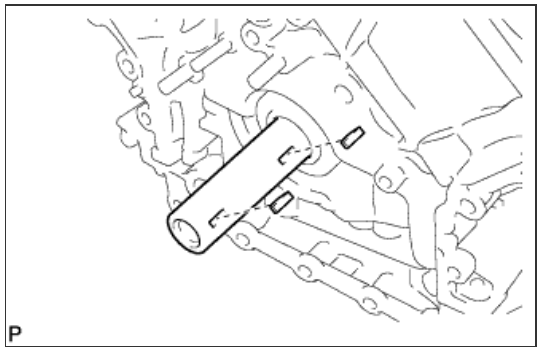
NOTICE:

Be careful not to damage the cylinder head with the wrench.



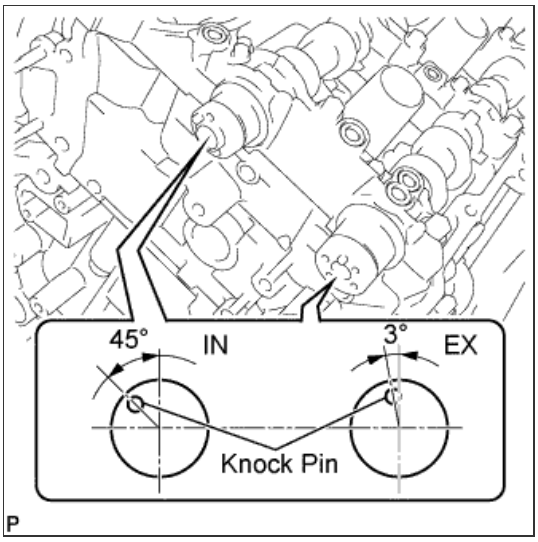
d. Remove the 2 bolts. Then with the No. 1 and No. 2 chains still connected to the gears, remove the camshaft timing gear, camshaft timing exhaust gear and crankshaft timing sprocket RH.

e. Remove the No. 1 and No. 2 chains from the gears.



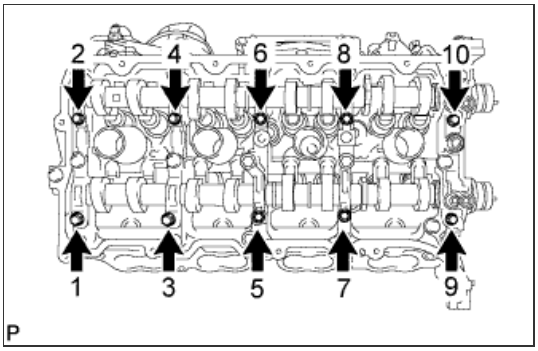
75. REMOVE NO. 2 CHAIN TENSIONER ASSEMBLY

a. Remove the 2 bolts and chain tensioner.



76. REMOVE CRANKSHAFT TIMING GEAR KEY

a. Using a screwdriver, remove the 2 timing gear keys from the crankshaft.



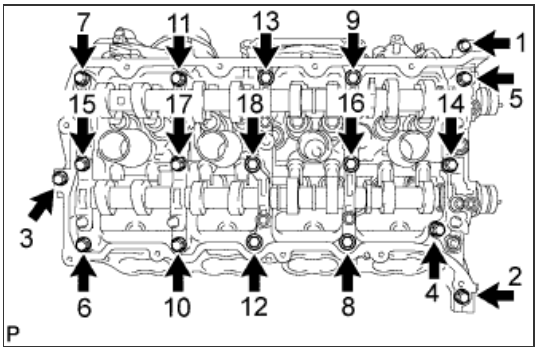
77. REMOVE CAMSHAFT BEARING CAP LH

a. Make sure that the knock pin of the camshaft is positioned as shown in the illustration.

b. Uniformly loosen and remove the 10 bearing cap bolts in the sequence shown in the illustration.

c. Uniformly loosen and remove the 18 bearing cap bolts in the sequence shown in the illustration.

NOTICE:



Uniformly loosen the bolts while keeping the camshaft level.

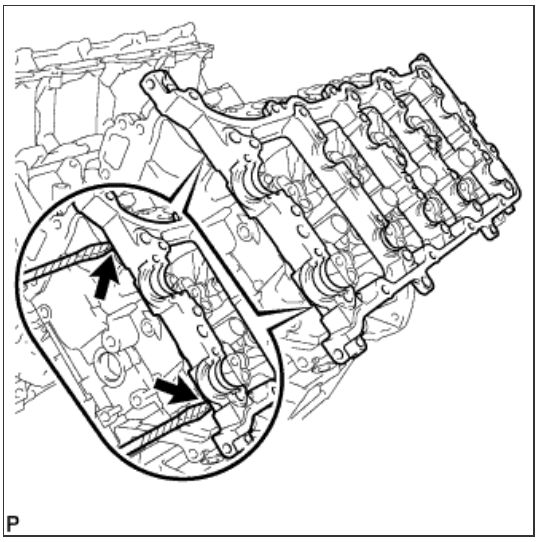
d. Remove the 6 bearing caps.

HINT:

Arrange the removed parts in the correct order.

e. Remove the No. 3 and No. 4 camshafts.

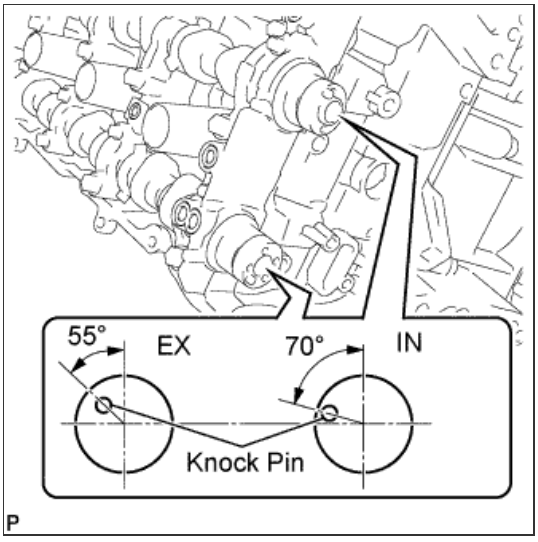
78. REMOVE CAMSHAFT HOUSING SUB-ASSEMBLY LH



a. Remove the camshaft housing by prying between the cylinder head and camshaft housing with a screwdriver.

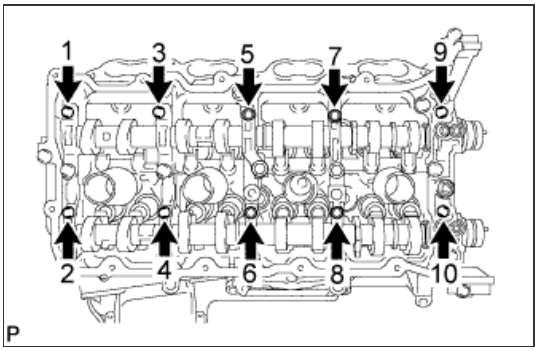
HINT:

Tape the screwdriver tip before use.



NOTICE:

Be careful not to damage the contact surfaces of the cylinder head and camshaft housing.



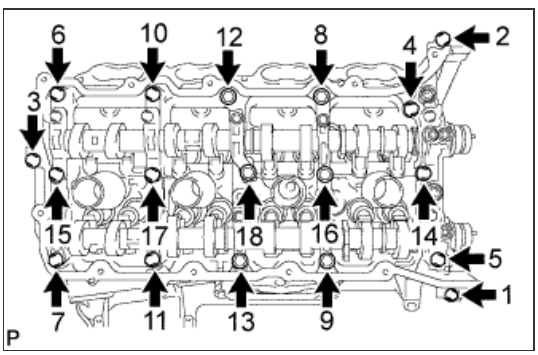
79. REMOVE CAMSHAFT BEARING CAP RH

a. Make sure that the knock pin of the camshaft is positioned as shown in the illustration.

b. Uniformly loosen and remove the 10 bearing cap bolts in the sequence shown in the illustration.

c. Uniformly loosen and remove the 18 bearing cap bolts in the sequence shown in the illustration.

NOTICE:



Uniformly loosen the bolts while keeping the camshaft level.

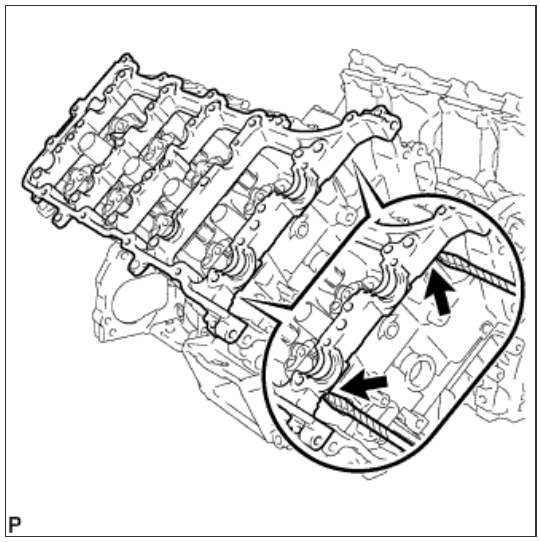
d. Remove the 6 bearing caps.

HINT:

Arrange the removed parts in the correct order.

e. Remove the No. 1 and No. 2 camshafts.

80. REMOVE CAMSHAFT HOUSING SUB-ASSEMBLY RH



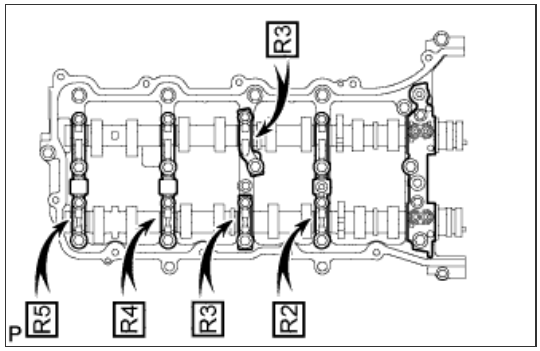
a. Remove the camshaft housing by prying between the cylinder head and camshaft housing with a screwdriver.

HINT:

Tape the screwdriver tip before use.

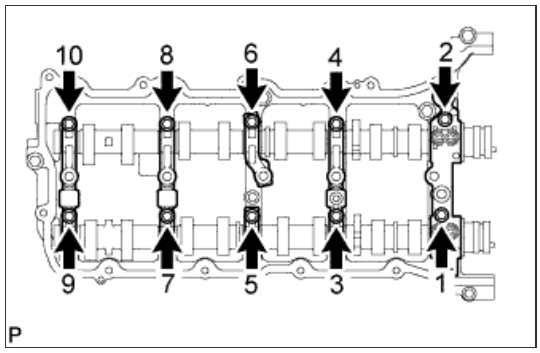
NOTICE:

Be careful not to damage the contact surfaces of the cylinder head and camshaft housing.



for Preparation Click here

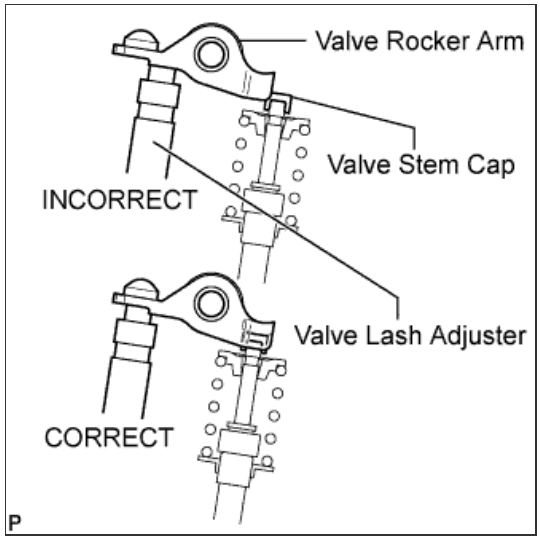
1. INSTALL CAMSHAFT BEARING CAP RH



a. Apply a light coat of engine oil to the camshaft journals, camshaft housings and bearing caps.

b. Install the No. 1 and No. 2 camshafts to the camshaft housing.

c. Confirm the marks and numbers on the camshaft bearing caps and place them in their proper positions and directions.

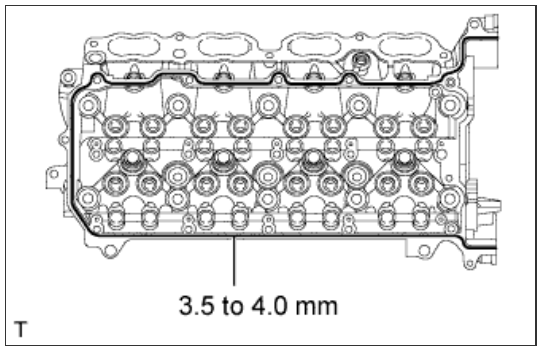


d. Temporarily install the 10 bolts in the order shown in the illustration.

2. INSTALL CAMSHAFT HOUSING SUB-ASSEMBLY RH

a. Make sure that the valve rocker arms are installed as shown in the illustration.

b. Apply seal packing in a continuous line as shown in the illustration.



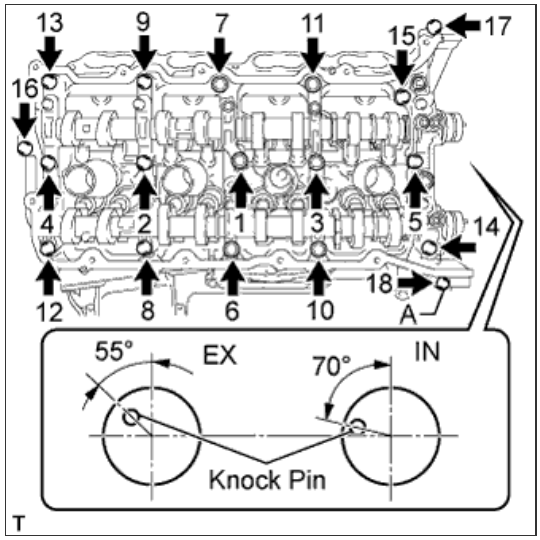
Seal packing:

Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
3.5 to 4.0 mm (0.138 to 0.157 in.)

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the camshaft housing within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**

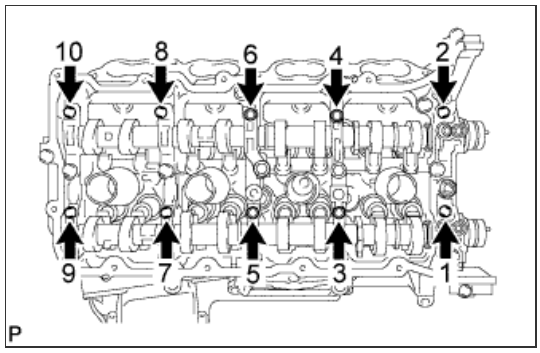


c. Install the camshaft housing, and install the 18 bolts in the order shown in the illustration.

Torque:
for bolt A:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }
except bolt A:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }

NOTICE:

- **Do not start the engine for at least 2 hours after the installation.**
- **Make sure that the knock pin of the camshaft is positioned as shown in the illustration before installing the camshaft housing.**

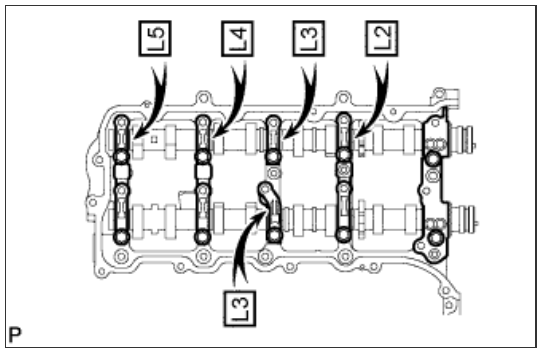


d. Tighten the 10 bolts in the order shown in the illustration.

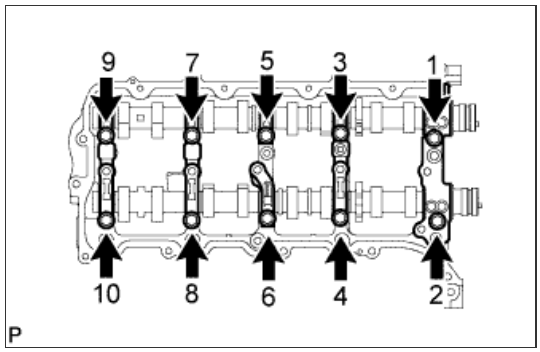
Torque:
16 N*m{ 163 kgf*cm , 12 ft.*lbf }

NOTICE:

Thoroughly wipe clean any seal packing.



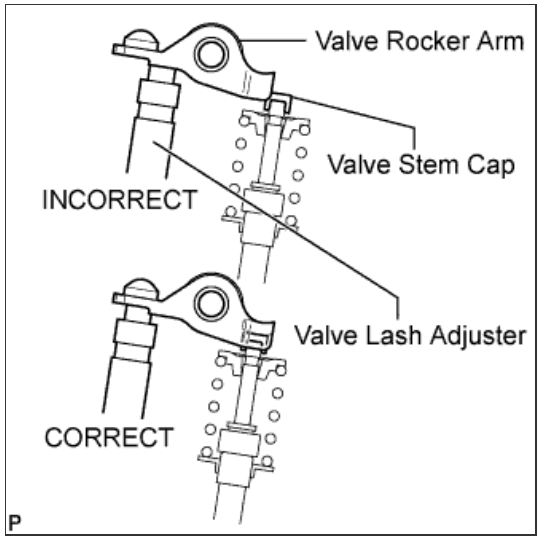
3. INSTALL CAMSHAFT BEARING CAP LH



a. Apply a light coat of engine oil to the camshaft journals, camshaft housings and bearing caps.

b. Install the No. 3 and No. 4 camshafts to the camshaft housing.

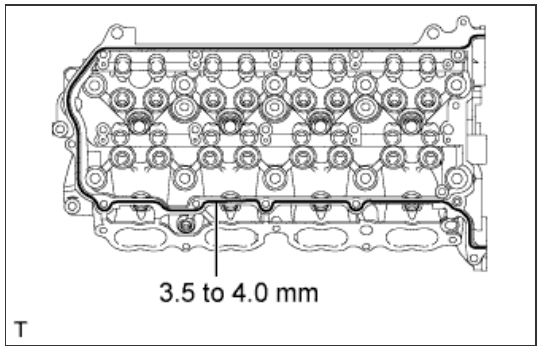
c. Confirm the marks and numbers on the camshaft bearing caps and place them in their proper positions and directions.



d. Temporarily install the 10 bolts in the order shown in the illustration.

4. INSTALL CAMSHAFT HOUSING SUB-ASSEMBLY LH

a. Make sure that the valve rocker arms are installed as shown in the illustration.



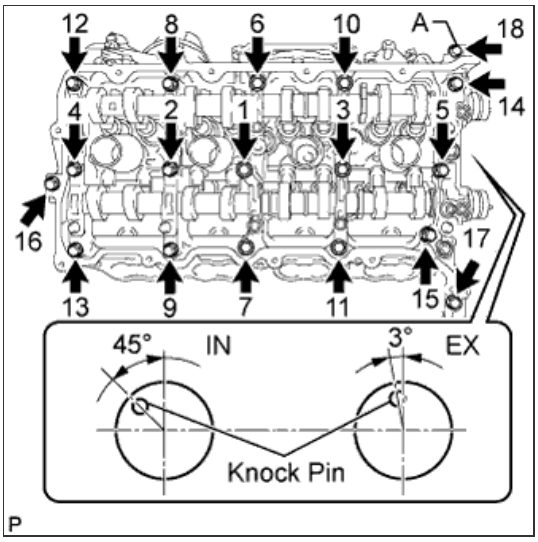
b. Apply seal packing in a continuous line as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
3.5 to 4.0 mm (0.138 to 0.157 in.)

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the camshaft housing within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**

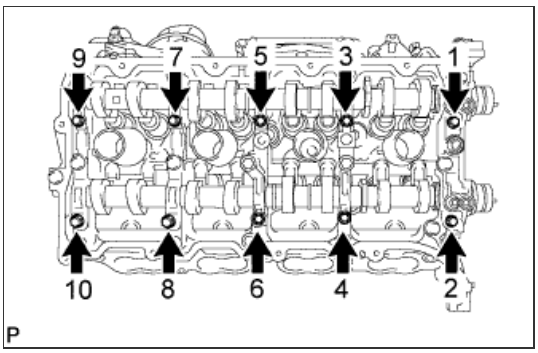


c. Install the camshaft housing, and install the 18 bolts in the order shown in the illustration.

Torque:
for bolt A:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }
except bolt A:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }

NOTICE:

- **Do not start the engine for at least 2 hours after the installation.**
- **Make sure that the knock pin of the camshaft is positioned as shown in the illustration before installing the camshaft housing.**

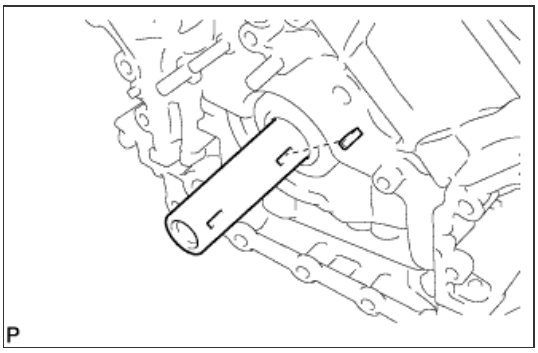


d. Tighten the 10 bolts in the order shown in the illustration.

Torque:
16 N*m{ 163 kgf*cm , 12 ft.*lbf }

NOTICE:

Thoroughly wipe clean any seal packing.



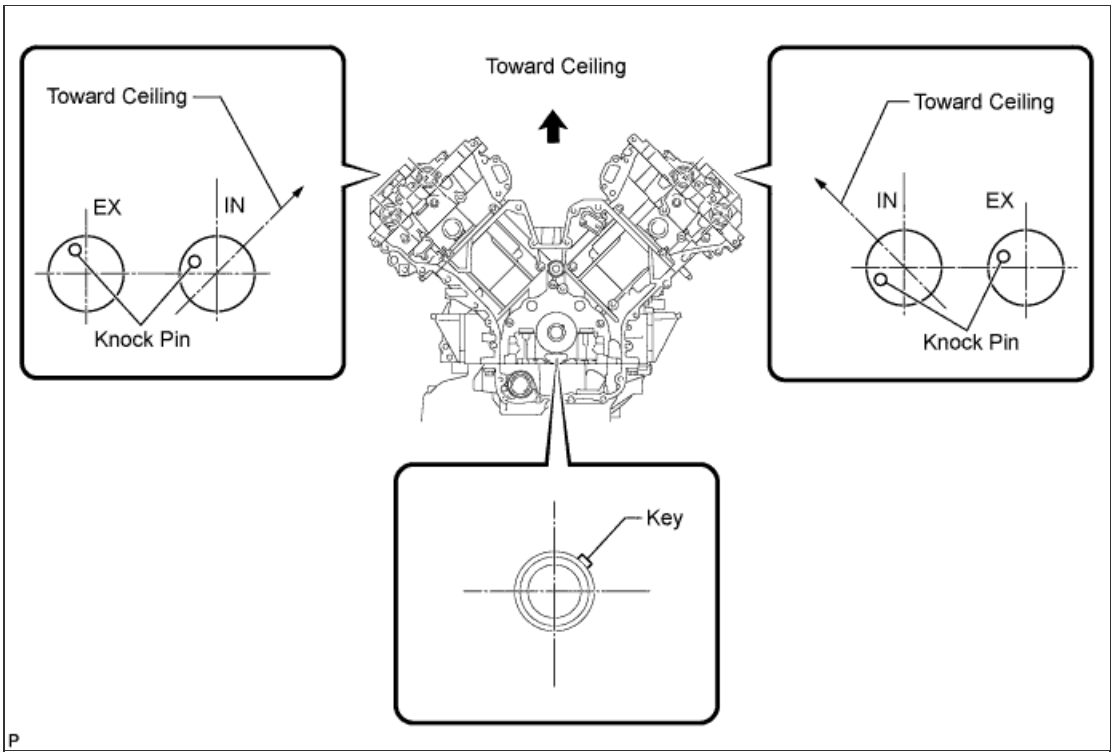
5. INSTALL CRANKSHAFT TIMING GEAR KEY

a. Install the timing gear key.

HINT:

The other timing gear key will be installed at a later step.

6. SET NO. 1 CYLINDER TO TDC/COMPRESSION



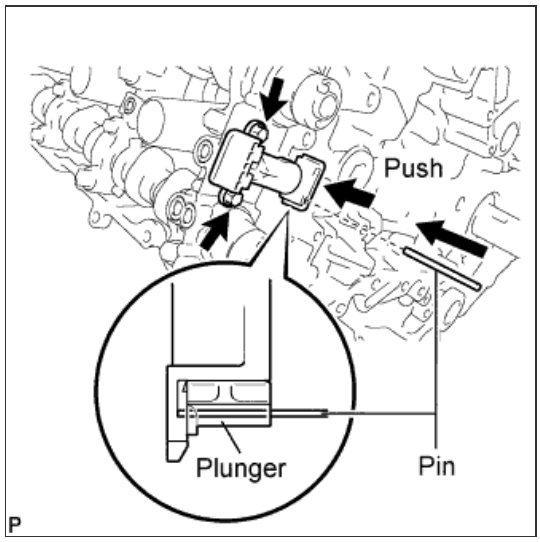
a. Temporarily install the crankshaft pulley bolt.

b. Rotate the crankshaft so that the timing gear key is as shown in the illustration. Then using a wrench, rotate each camshaft so that the timing marks are as shown in the illustration.

NOTICE:

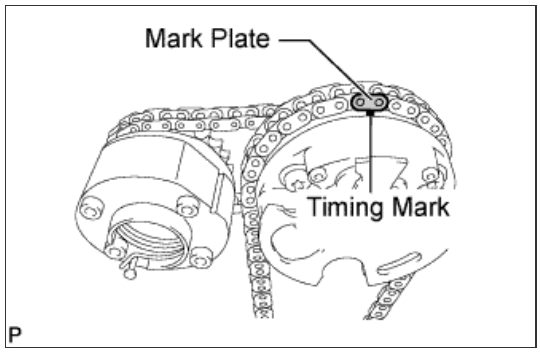
When the crankshaft or a camshaft is rotated excessively, the valves and pistons may interfere with each other.

c. Remove the crankshaft pulley bolt.



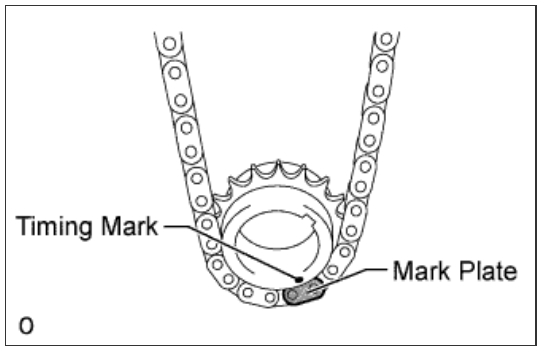
7. INSTALL NO. 2 CHAIN TENSIONER ASSEMBLY

a. Install the chain tensioner with the 2 bolts.



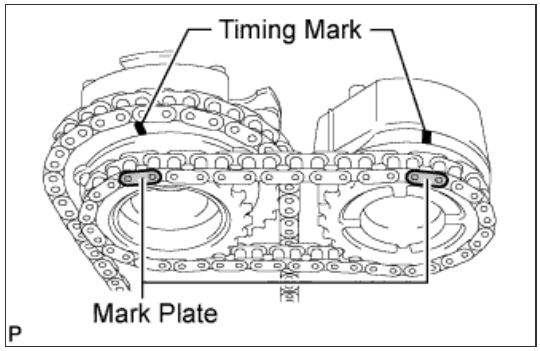
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. While raising up the No. 2 chain tensioner, insert a pin of φ1.0 mm (0.0394 in.) into the hole to fix it in place.



8. INSTALL NO. 1 CHAIN SUB-ASSEMBLY RH

a. Align the No. 1 chain orange mark plate with the camshaft timing gear timing mark, and attach the chain to the gear as shown in the illustration.



b. Align the No. 1 chain orange mark plate with the crankshaft timing sprocket timing mark, and attach the chain to the gear as shown in the illustration.

c. Align the No. 2 chain yellow mark plates with the timing marks of the camshaft timing gear assembly and camshaft timing exhaust gear assembly, and attach the No. 2 chain to the gears as shown in the illustration.

HINT:

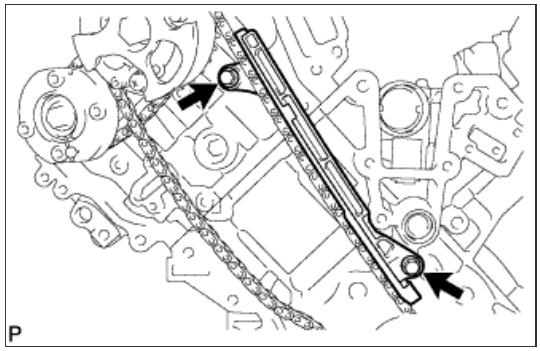
The crankshaft timing sprocket RH and camshaft timing exhaust gear will be installed with the No. 1 and No. 2 chains connected to the gears.

d. Install the crankshaft timing sprocket RH to the crankshaft.

e. Align and attach the knock pin of the No. 1 camshaft with the pin hole of the camshaft timing gear.

f. Using the hexagonal portion of the No. 2 camshaft, align and attach the knock pin of the No. 2 camshaft with the pin hole of the camshaft timing exhaust gear.

g. Remove the pin from the No. 2 chain tensioner.

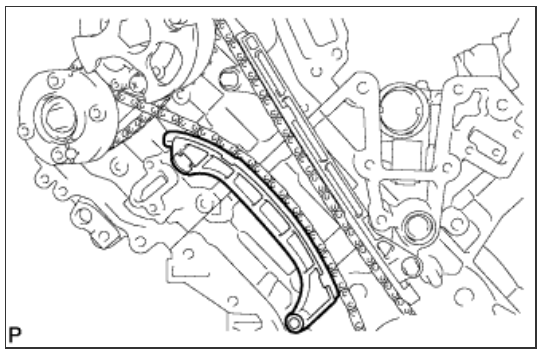


h. Using a wrench to hold the hexagonal portion of the No. 1 camshaft, temporarily install the bolt.

i. Using a wrench to hold the hexagonal portion of the No. 2 camshaft, temporarily install the bolt.

9. INSTALL NO. 1 CHAIN VIBRATION DAMPER RH

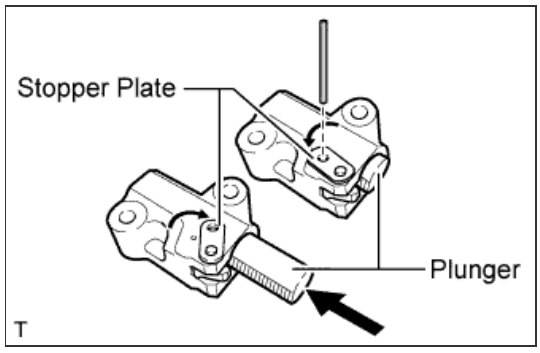
a. Install the vibration damper with the 2 bolts.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

10. INSTALL NO. 1 CHAIN TENSIONER SLIPPER RH

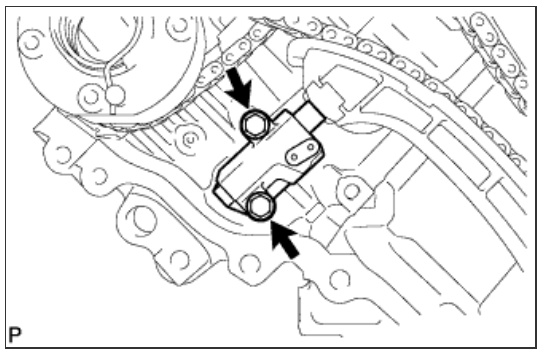
HINT:



If you cannot install the chain tensioner slipper due to the tension of the chain, use the hexagonal portion of the camshaft to loosen the chain, and then install the chain tensioner slipper.

11. INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY RH

a. Move the stopper plate clockwise to release the lock, and push the plunger deep into the tensioner.

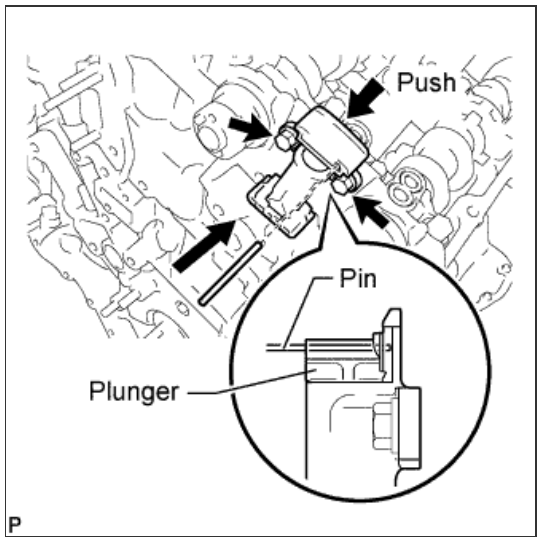


b. Move the stopper plate counterclockwise to set the lock, and insert a hexagon wrench into the hole of the stopper plate.

c. Install the chain tensioner with the 2 bolts.

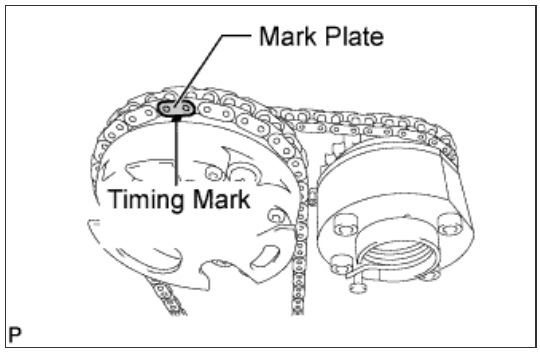
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

d. Remove the hexagon wrench from the chain tensioner.



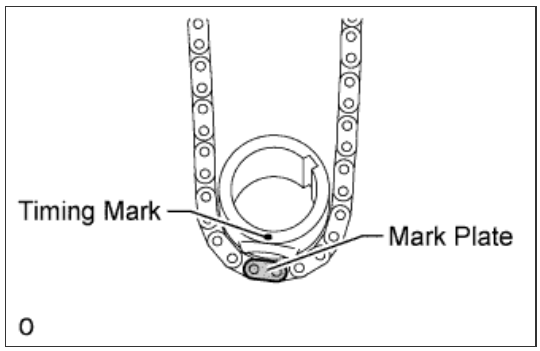
12. INSTALL NO. 3 CHAIN TENSIONER ASSEMBLY

a. Install the chain tensioner with the 2 bolts.



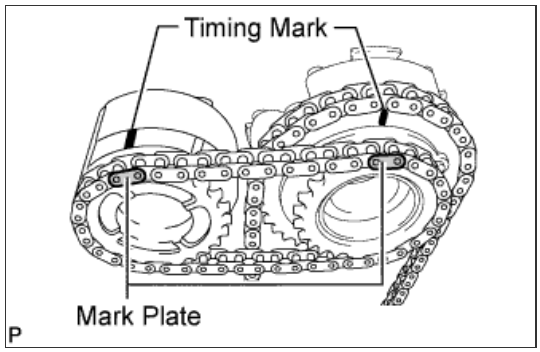
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. While pushing down the No. 2 chain tensioner, insert a pin of φ1.0 mm (0.0394 in.) into the hole to fix it in place.



13. INSTALL NO. 1 CHAIN SUB-ASSEMBLY LH

a. Align the No. 1 chain orange mark plate with the camshaft timing gear timing mark, and attach the chain to the gear as shown in the illustration.



b. Align the No. 1 chain orange mark plate with the crankshaft timing sprocket timing mark, and attach the chain to the gear as shown in the illustration.

c. Align the No. 2 chain yellow mark plates with the timing marks of the camshaft timing gear assembly and camshaft timing exhaust gear assembly, and attach the No. 2 chain to the gears as shown in the illustration.

HINT:

The crankshaft timing sprocket LH and camshaft timing exhaust gear will be installed with the No. 1 and No. 2 chains connected to the gears.

d. Install the crankshaft timing sprocket LH to the crankshaft.

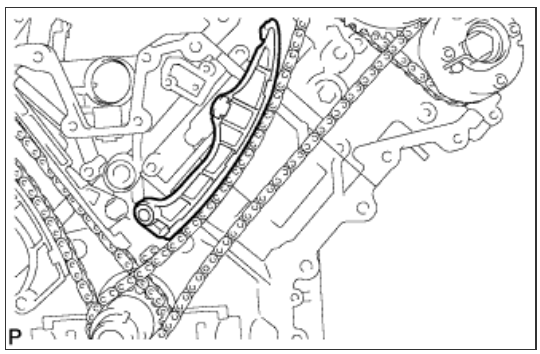
e. Align and attach the knock pin of the No. 3 camshaft with the pin hole of the camshaft timing gear.

f. Using the hexagonal portion of the No. 4 camshaft, align and attach the knock pin of the No. 4 camshaft with the pin hole of the camshaft timing exhaust gear.

NOTICE:

Because the timing mark positions of the gears may shift due to looseness of the No. 1 chain, use the hexagonal portion of the camshaft to hold the No. 3 camshaft in place until the No. 1 chain tensioner is installed.

g. Remove the pin from the No. 3 chain tensioner.

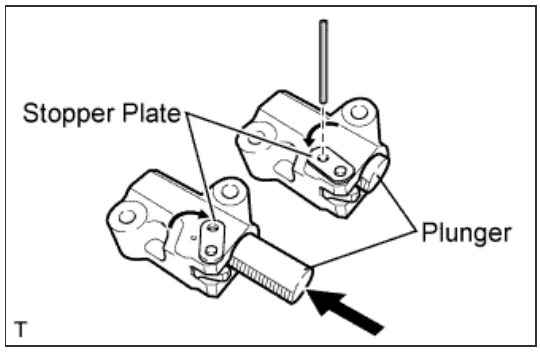


h. Using a wrench to hold the hexagonal portion of the No. 3 camshaft, temporarily install the bolt.

i. Using a wrench to hold the hexagonal portion of the No. 4 camshaft, temporarily install the bolt.

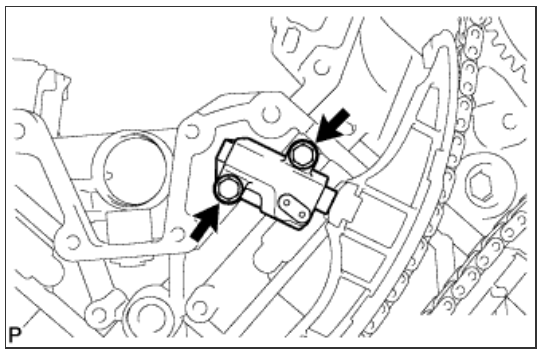
14. INSTALL NO. 1 CHAIN TENSIONER SLIPPER LH

HINT:



If you cannot install the chain tensioner slipper due to the tension of the chain, use the hexagonal portion of the camshaft to loosen the chain, and install the chain tensioner slipper.

15. INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY LH

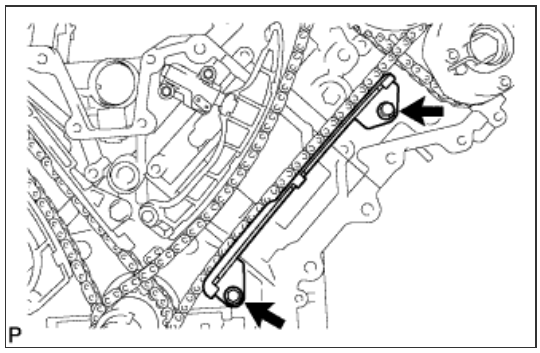


a. Move the stopper plate clockwise to release the lock, and push the plunger deep into the tensioner.

b. Move the stopper plate counterclockwise to set the lock, and insert a hexagon wrench into the hole of the stopper plate.

c. Install a new gasket and the chain tensioner with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

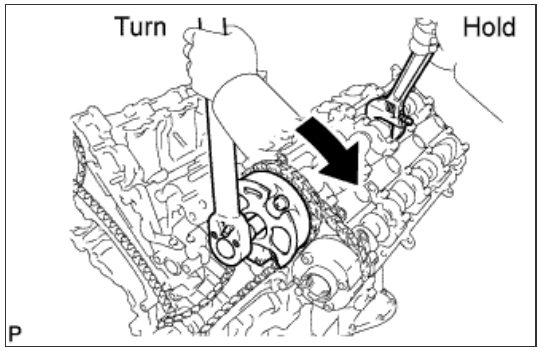


16. INSTALL NO. 1 CHAIN VIBRATION DAMPER LH

a. Install the vibration damper with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

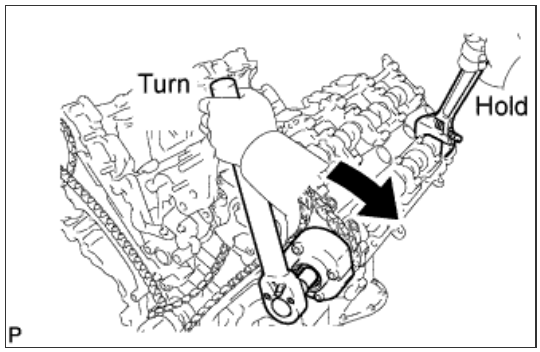
b. Remove the hexagon wrench from the No. 1 chain tensioner.



17. TIGHTEN CAMSHAFT TIMING GEAR ASSEMBLY

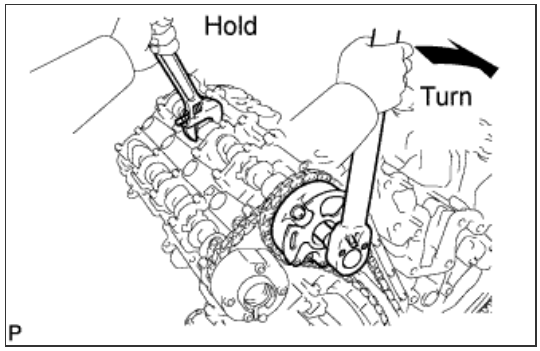
a. for Bank 1:

i. Using a wrench, hold the hexagonal portion of the No. 3 camshaft.



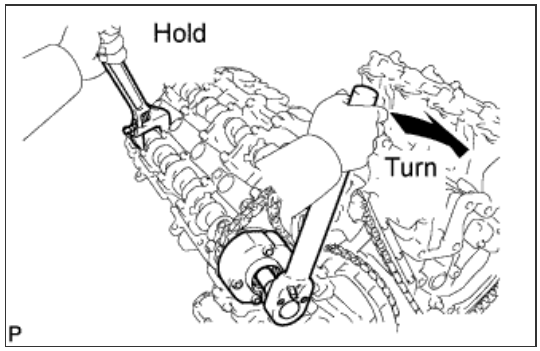
ii. Tighten the bolt of the camshaft timing gear.

Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }



iii. Using a wrench to hold the hexagonal portion of the No. 4 camshaft, tighten the bolt of the camshaft timing exhaust gear.

Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }



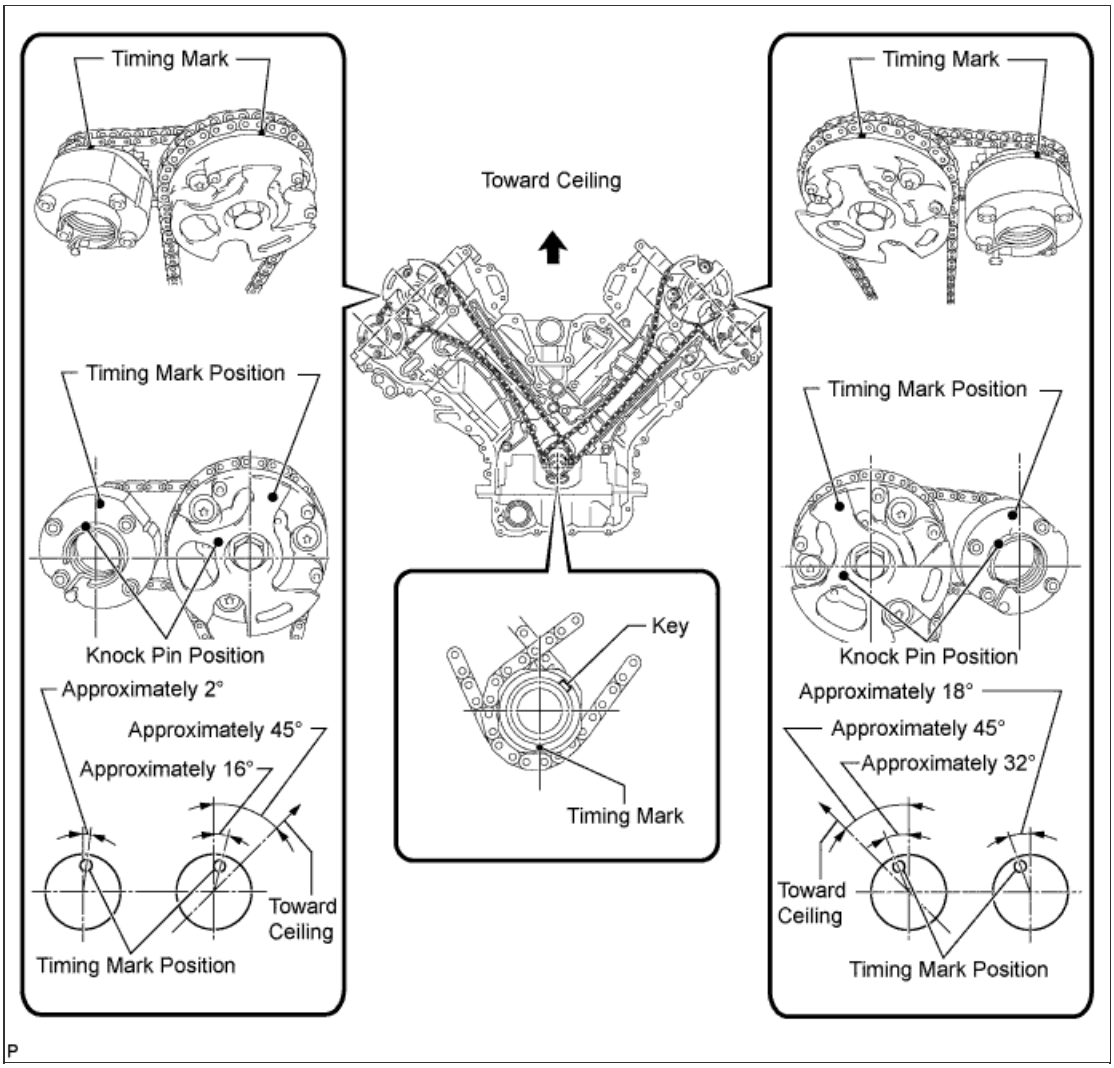
b. for Bank 2:

i. Using a wrench, hold the hexagonal portion of the No. 1 camshaft.

ii. Tighten the bolt of the camshaft timing gear.

Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

iii. Using a wrench to hold the hexagonal portion of the No. 2 camshaft, tighten the bolt of the camshaft timing exhaust gear.

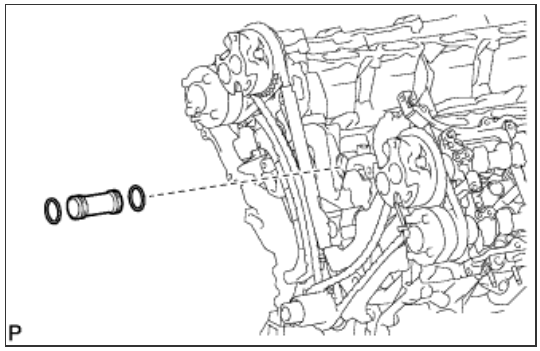


Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

18. CHECK NO. 1 CYLINDER TO TDC/COMPRESSION

a. Temporarily install the crankshaft pulley bolt.

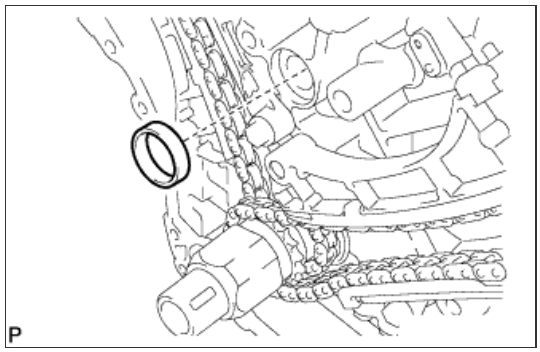
b. Rotate the crankshaft clockwise, and check that the timing marks on the crankshaft timing sprocket and camshaft timing gears are as shown in the illustration.



c. Remove the crankshaft pulley bolt.

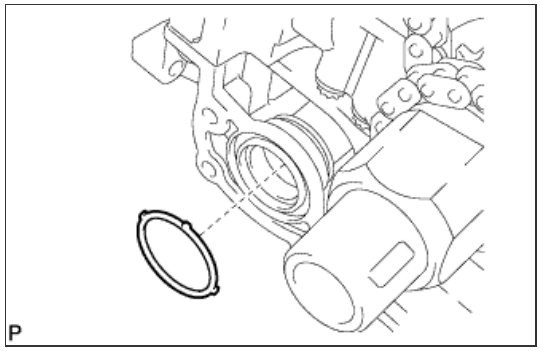
19. INSTALL WATER INLET PIPE

a. Apply soapy water to 2 new O-rings and install them to the inlet pipe.



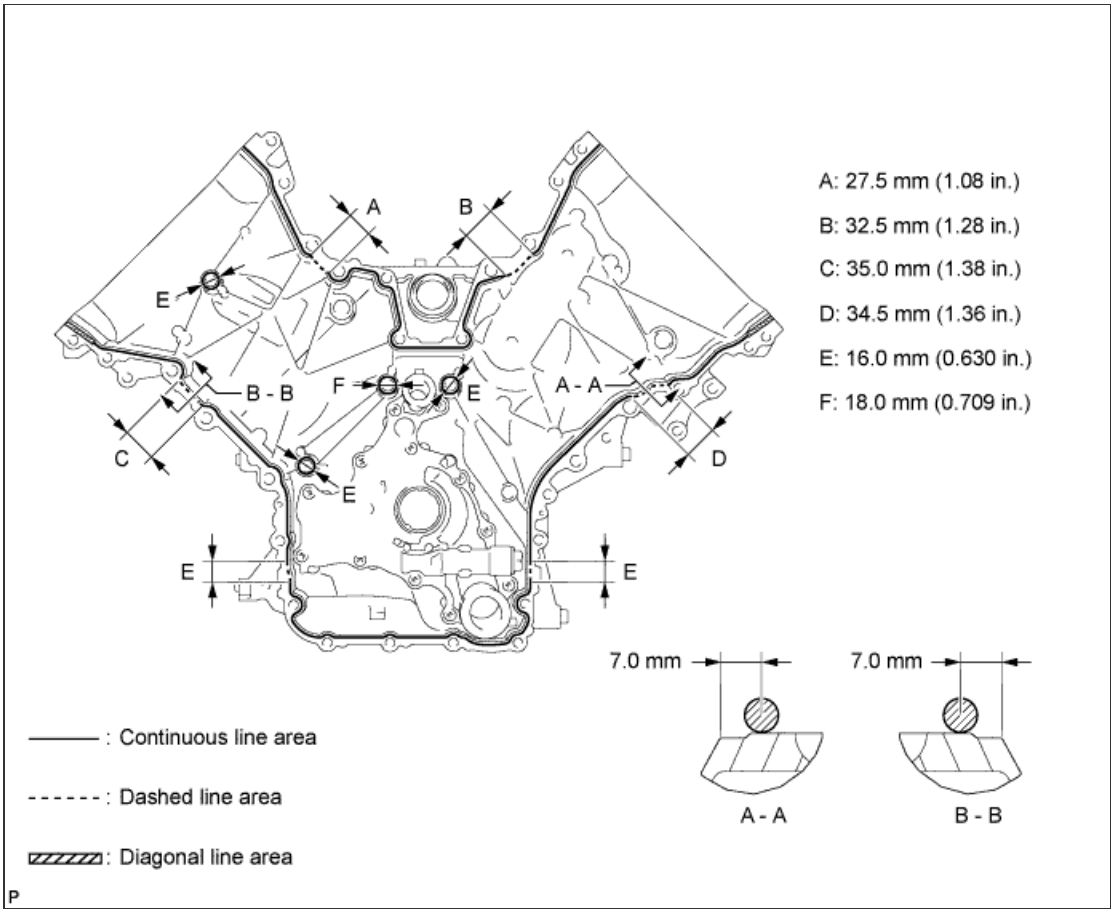
b. Install the inlet pipe to the No. 1 heat exchanger cover.

20. INSTALL TIMING CHAIN COVER SUB-ASSEMBLY



a. Apply a light coat of engine oil to a new oil pump gasket.

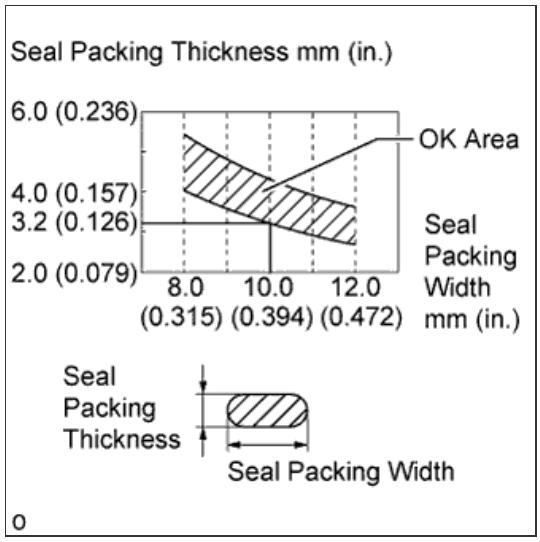
b. Install the oil pump gasket.



c. Apply a light coat of engine oil to a new O-ring.

d. Install the O-ring.

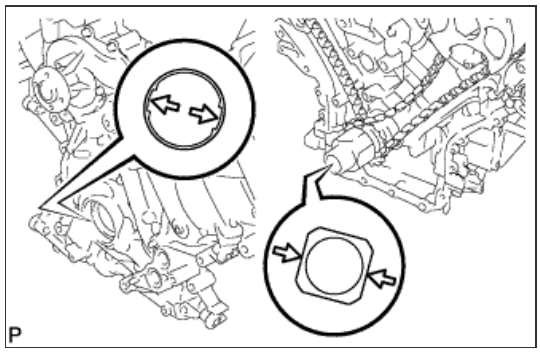
e. Apply seal packing in a continuous line to the timing chain cover as shown in the following illustration.



Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Apply seal packing as follows:

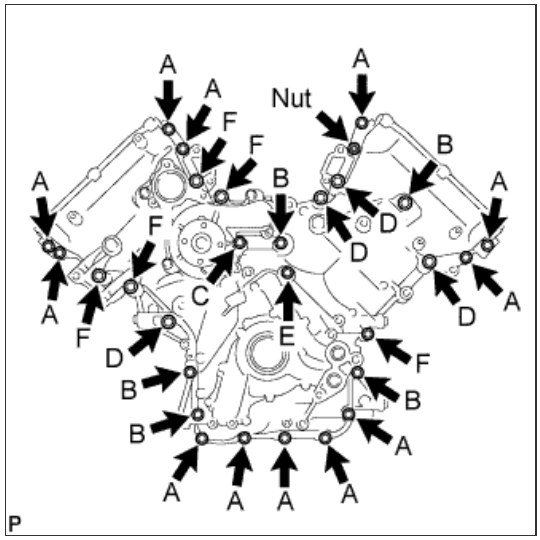
		Application Position from



Area	Seal Packing Diameter	Inside Edge of Cover
Continuous Line Area	3.0 to 4.0 mm (0.118 to 0.157 in.)	2.5 mm (0.0984 in.)
Dashed Line Area	6.4 mm (0.252 in.) or more, or within OK area shown in illustration	7.0 mm (0.276 in.)
Diagonal Line Area	3.0 to 4.0 mm (0.118 to 0.157 in.)	5.5 mm (0.217 in.)

NOTICE:

- **When the contact surfaces are wet, wipe them with an oil-free cloth before applying seal packing.**
- **Install the chain cover within 3 minutes and tighten the bolts within 10 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after installing.**

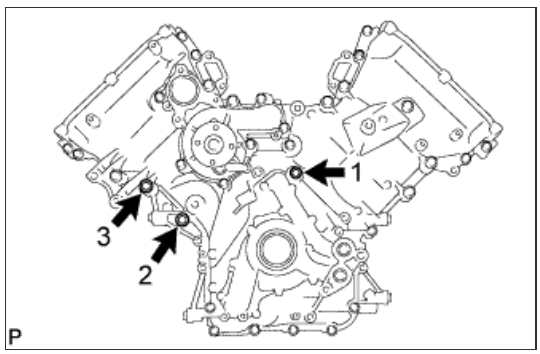


f. Align the oil pump drive rotor spline and crankshaft as shown in the illustration. Install the spline and chain cover to the crankshaft.

g. Temporarily install the timing chain cover with the 28 bolts and nut.

Standard Bolt:

Item	Length	Thread Diameter
Bolt A	25 mm (0.984 in.)	8 mm (0.315 in.)
Bolt B	55 mm (2.17 in.)	8 mm (0.315 in.)
Bolt C	70 mm (2.76 in.)	8 mm (0.315 in.)
Bolt D	35 mm (1.38 in.)	10 mm (0.394 in.)
Bolt E	55 mm (2.17 in.)	10 mm (0.394 in.)
Bolt F	80 mm (3.15 in.)	10 mm (0.394 in.)

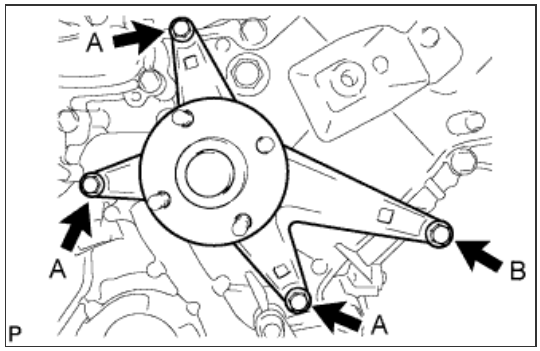


NOTICE:

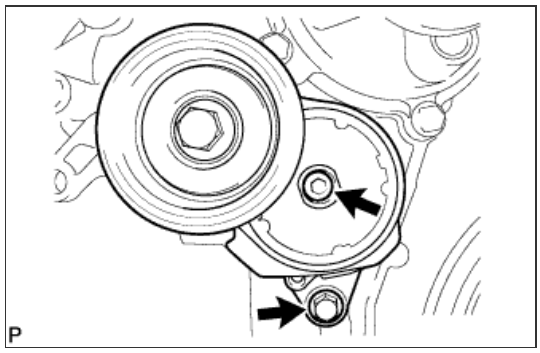
Make sure that there is no oil on the bolt threads.

h. Tighten the 3 bolts in several steps in the sequence shown in the illustration.

Torque:



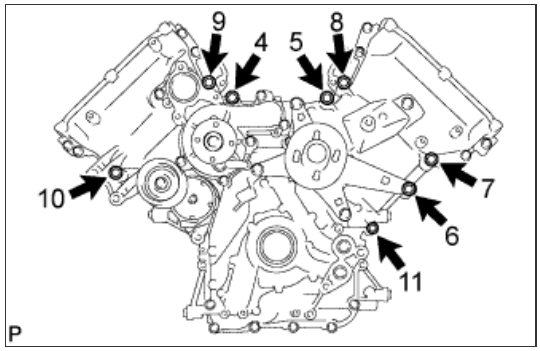
47 N*m{ 479 kgf*cm , 35 ft.*lbf }



i. Temporarily install the fluid coupling bracket with the 4 bolts.

Standard Bolt:

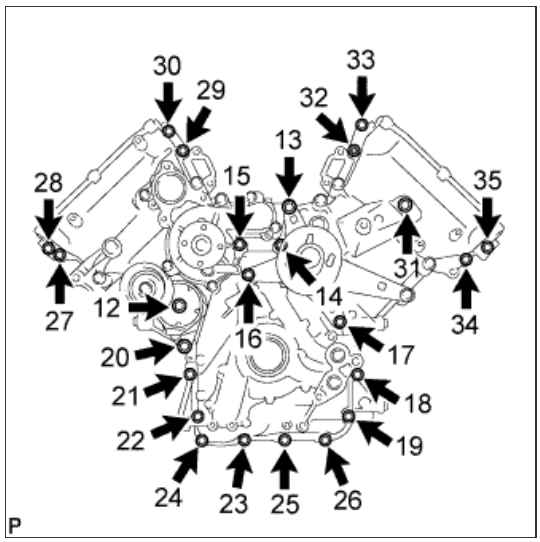
Item	Length	Thread Diameter
Bolt A	70 mm (2.76 in.)	8 mm (0.315 in.)
Bolt B	80 mm (3.15 in.)	10 mm (0.394 in.)



j. Temporarily install the belt tensioner with the standard bolt and 6 mm hexagon wrench bolt.

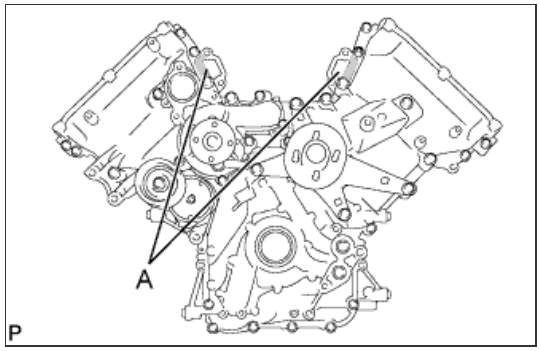
k. Tighten the 8 bolts labeled 4 to 11 in several steps in the sequence shown in the illustration.

Torque:



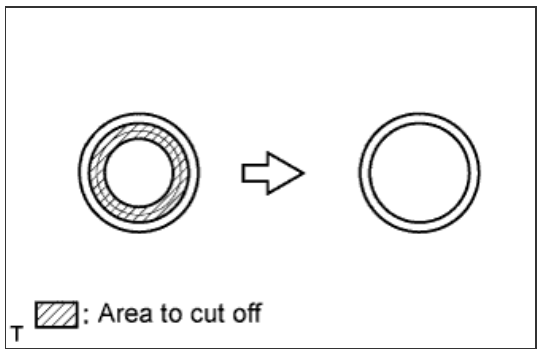
47 N*m{ 479 kgf*cm , 35 ft.*lbf }

l. Tighten the 23 bolts and nut labeled 12 to 35 in several steps in the sequence shown in the illustration.



Torque:

23 N*m{ 235 kgf*cm , 17 ft.*lbf }

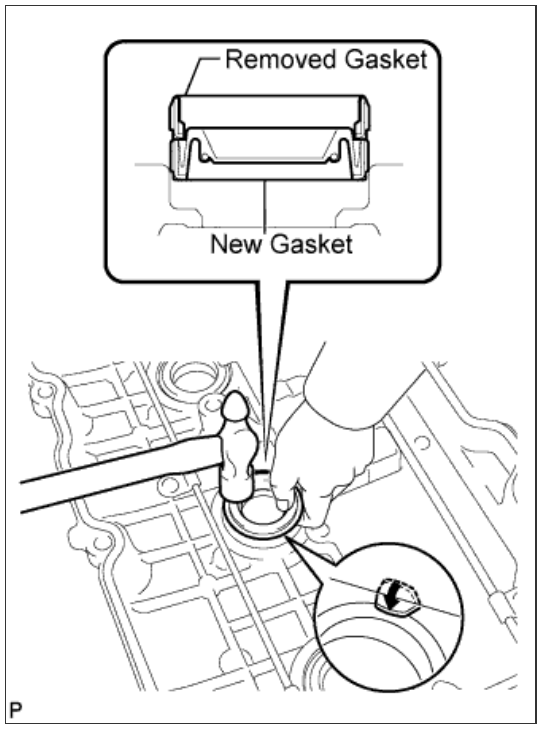


NOTICE:

After the installation, if the seal packing has seeped out at the areas labeled A shown in the illustration, wipe it off.

21. INSTALL SPARK PLUG TUBE GASKET

a. Using a cutter knife, cut off the seal part of the removed gasket.



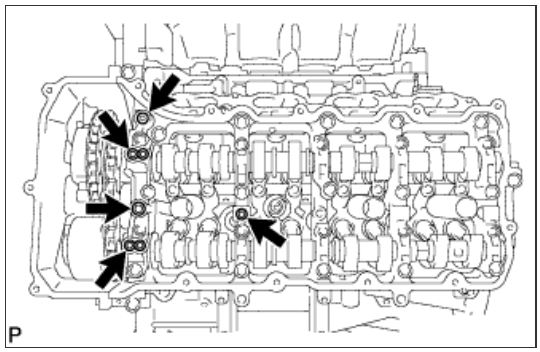
b. Using the removed gasket and a hammer, tap in a new gasket until it stops.

HINT:

If the removed gasket does not fit on the new one, correct the removed one with pliers.

c. Apply a light coat of MP grease to the lip of the gasket.

d. Return the 4 ventilation baffle plate claws to the original positions.



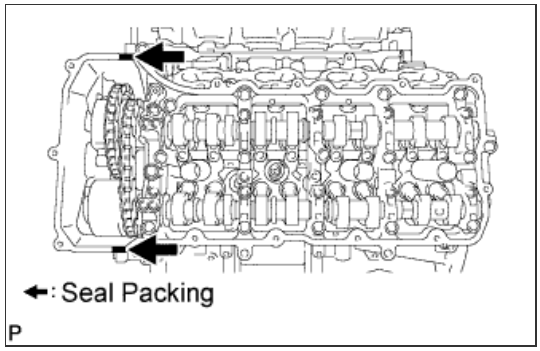
22. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY LH

a. Install 5 new gaskets to the camshaft bearing caps (No. 2, No. 3).

b. Install the gasket to the cylinder head cover.

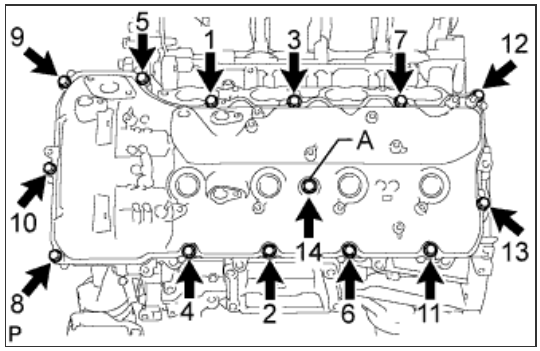
NOTICE:

Remove any oil from the contact surface.



c. Apply seal packing as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

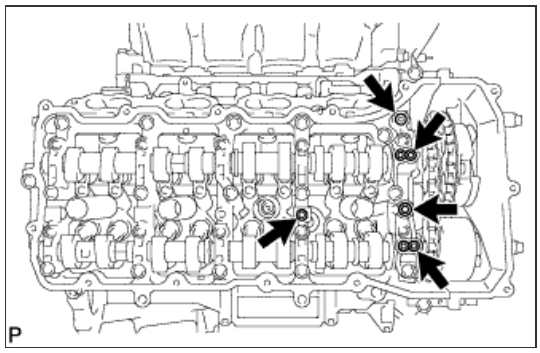


NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**

d. Install the cylinder head cover and the seal washer with the 14 bolts in the order shown in the illustration.

Torque:
for bolt A:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
except bolt A:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }



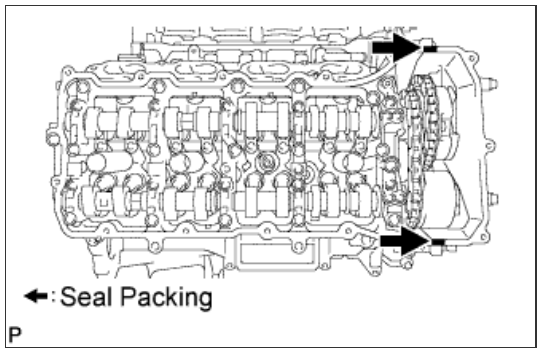
23. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY RH

a. Install 5 new gaskets to the camshaft bearing caps. (No. 1, No. 3).

b. Install the gasket to the cylinder head cover.

NOTICE:

Remove any oil from the contact surface.



c. Apply seal packing as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

NOTICE:

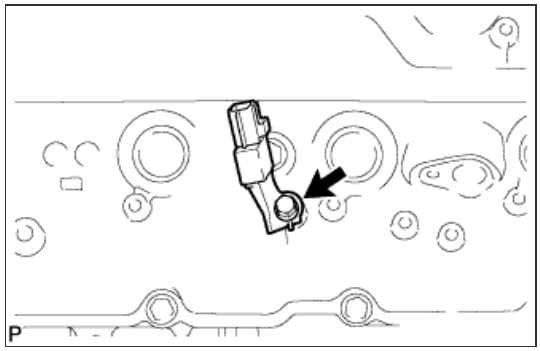
- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**

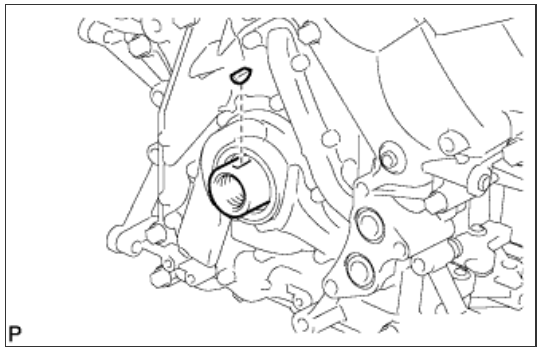


d. Install the cylinder head cover and the seal washer with the 14 bolts in the order shown in the illustration.

Torque:
for bolt A:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
except bolt A:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

e. Install the noise filter to the cylinder head cover with the bolt.

Torque:
7.0 N*m{ 71 kgf*cm , 62 in.*lbf }

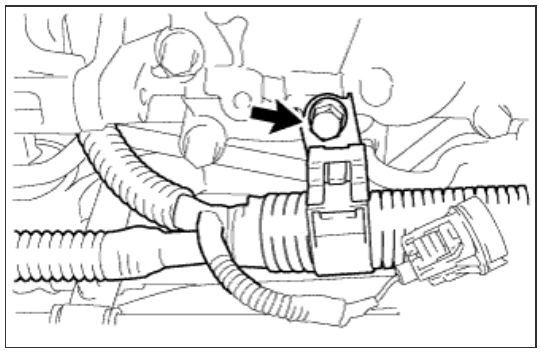


24. INSTALL IGNITION COIL ASSEMBLY

a. Install the 8 ignition coils with the 8 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

25. INSTALL CRANKSHAFT TIMING GEAR KEY

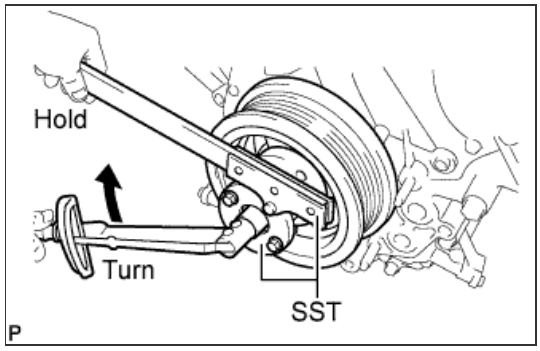


a. Install the crankshaft timing gear key to the crankshaft.

26. CONNECT WIRE HARNESS CLAMP BRACKET

a. Connect the bracket to the timing chain cover with the bolt.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

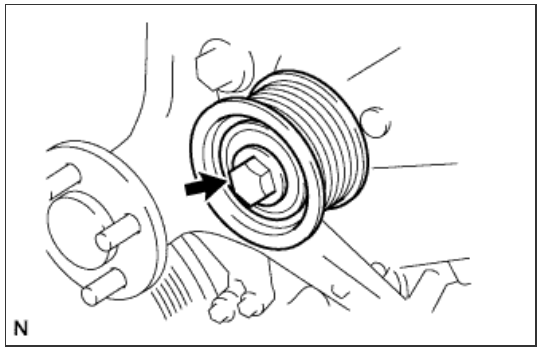


27. INSTALL CRANKSHAFT PULLEY

a. Align the pulley set key with the key groove of the pulley, and slide on the pulley.

b. Using SST, install the pulley set bolt.

SST
09213-70011 (09213-70020)
09330-00021

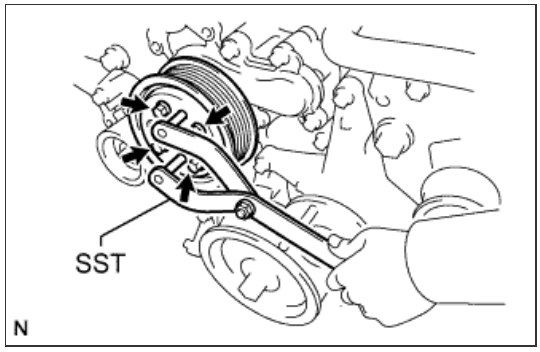


Torque:
300 N*m{ 3059 kgf*cm , 221 ft.*lbf }

28. INSTALL NO. 1 IDLER PULLEY SUB-ASSEMBLY

a. Install the idler pulley with the bolt.

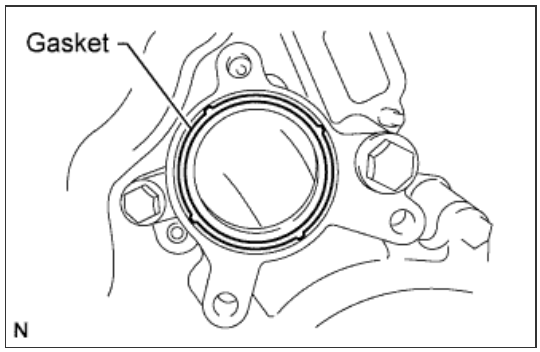
Torque:
43 N*m{ 438 kgf*cm , 32 ft.*lbf }



29. INSTALL WATER PUMP PULLEY

a. Temporarily install the pulley with the 4 bolts.

b. Using SST, hold the pulley and tighten the 4 bolts.



SST
09960-10010 (09962-01000, 09963-01000)

Torque:
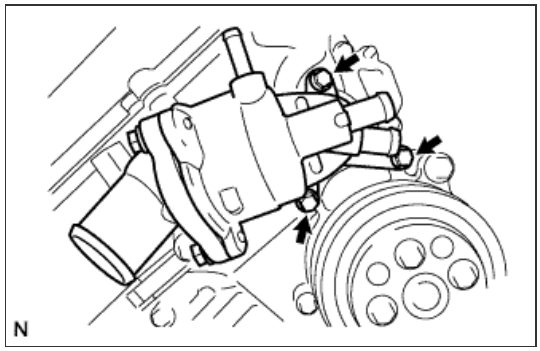
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



30. INSTALL WATER INLET HOUSING

a. Install a new gasket to the timing chain cover.

b. Install the water inlet with the 3 bolts.

Torque:
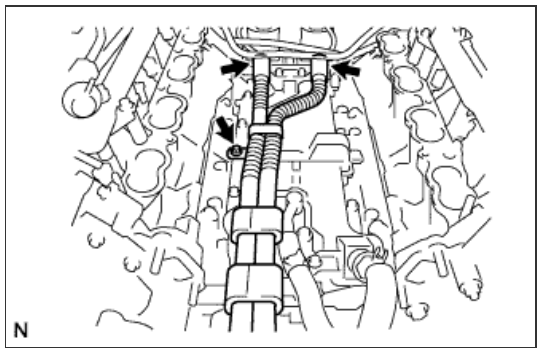
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

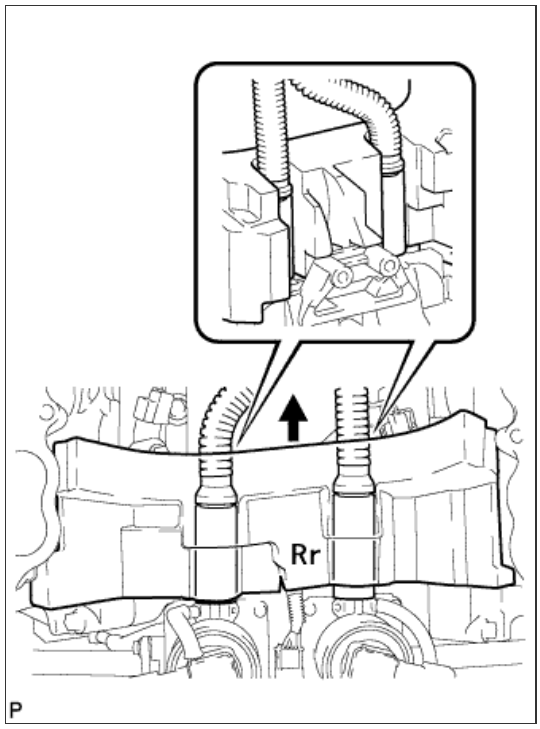


31. INSTALL AIR PIPE SUB-ASSEMBLY

a. Connect the 2 hoses.

b. Install the air pipe with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



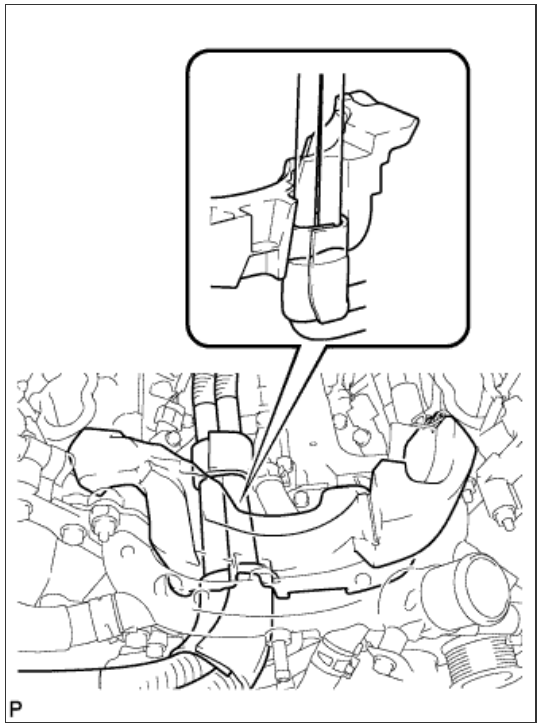
32. INSTALL NO. 1 ENGINE COVER

HINT:

- **Align the No. 1 engine cover cutouts with the air tube.**
- **Align the No. 1 engine cover with the air switching valve surface and cylinder head wall.**

NOTICE:

Make sure that the No. 1 engine cover is flush with the top surface of the intake port of the cylinder head for bank 1 and bank 2.



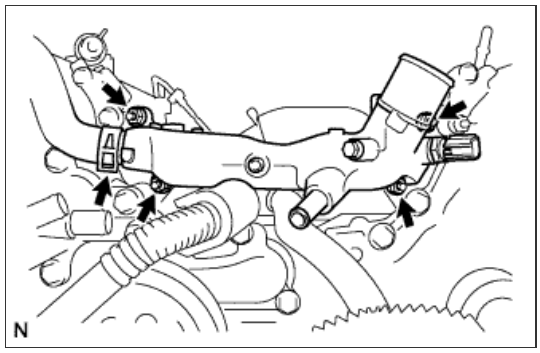
33. INSTALL NO. 2 ENGINE COVER

HINT:

- **Align the No. 2 engine cover cutout with the air tube.**
- **Align the No. 2 engine cover with the front water by-pass joint and cylinder head wall.**

NOTICE:

Make sure that the No. 2 engine cover is flush with the top surface of the intake port of the cylinder head.

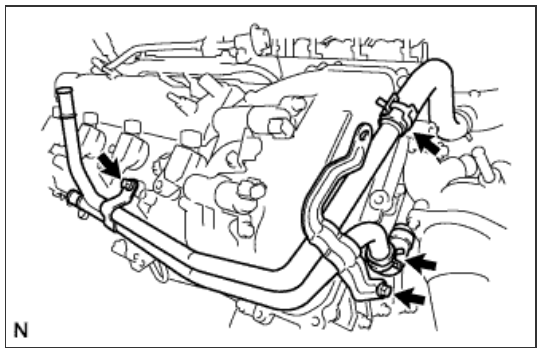


34. INSTALL FRONT WATER BY-PASS JOINT

a. Install 2 new gaskets and the water by-pass joint with the 4 nuts.

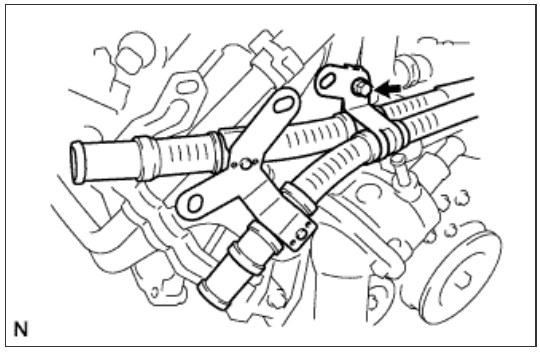
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. Connect the No. 2 water by-pass hose to the water by-pass joint.



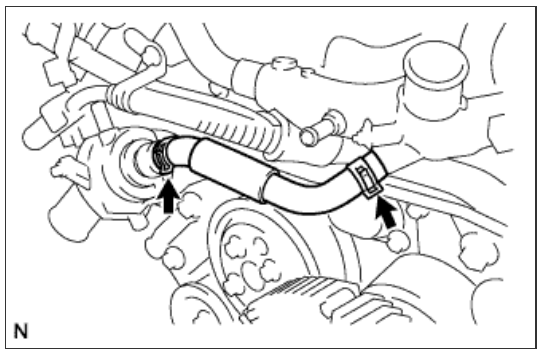
35. INSTALL WATER BY-PASS PIPE SUB-ASSEMBLY

a. Connect the 2 hoses.



b. Install the water by-pass pipe with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

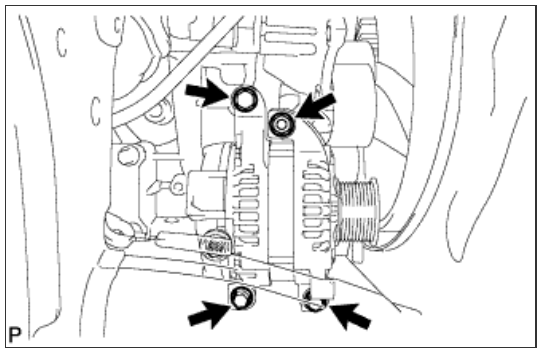


c. Connect the air tube with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

36. INSTALL NO. 1 WATER BY-PASS HOSE

a. Install the No. 1 water by-pass hose by connecting the hose to the water inlet housing and front water by-pass joint.



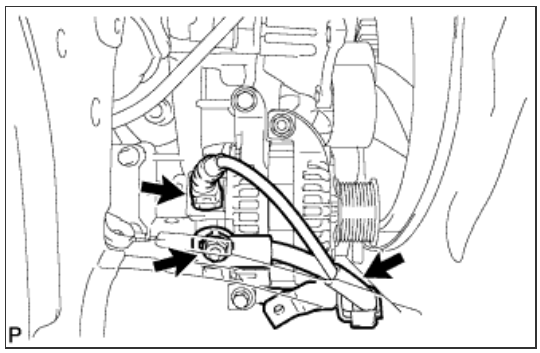
37. INSTALL GENERATOR ASSEMBLY

a. Install the generator with the 3 bolts and nut.

d. Install the generator with the 3 bolts and nut.

Torque:
43 N*m{ 438 kgf*cm , 32 ft.*lbf }

b. Connect the generator connector.

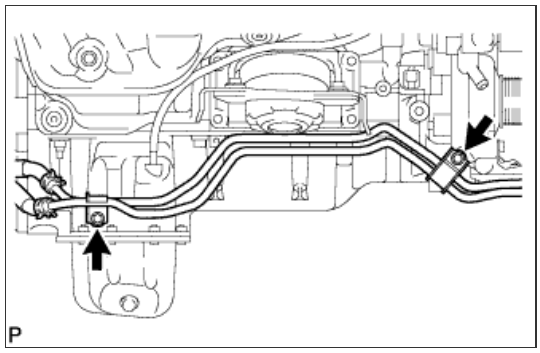


c. Connect the generator wire with the nut.

Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

d. Install the terminal cap.

e. Install the harness bracket to the generator with the bolt.



Torque:
31 N*m{ 316 kgf*cm , 23 ft.*lbf }

38. CONNECT OIL COOLER PIPE ASSEMBLY

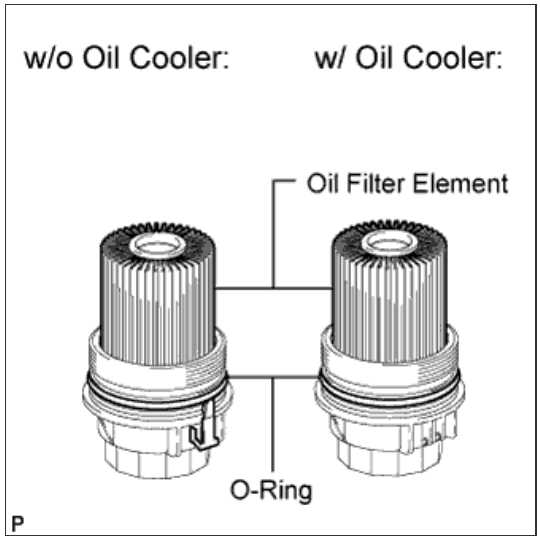
a. Connect the oil cooler pipe with the 2 bolts.

Torque:
14 N*m{ 143 kgf*cm , 10 ft.*lbf }

39. INSTALL OIL FILTER ELEMENT

a. Clean the inside of the oil filter cap, its threads and its O-ring groove.

b. Apply a small amount of engine oil to a new O-ring and install it to the oil filter cap.



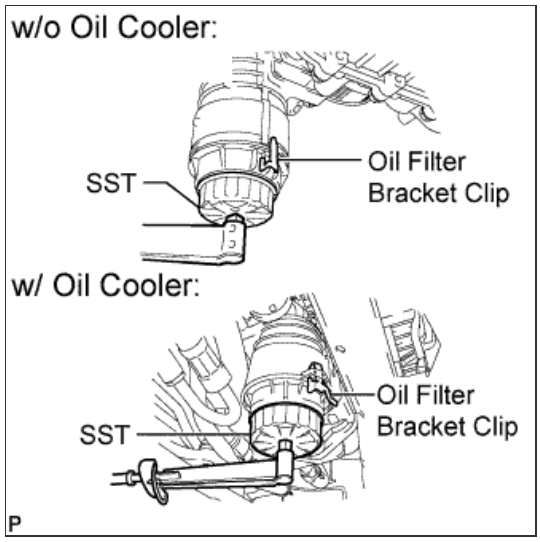
c. Set a new oil filter element to the oil filter cap.

d. Remove any dirt or foreign matter from the installation surface of the engine.

e. Apply a small amount of engine oil to the O-ring again and temporarily install the oil filter cap.

NOTICE:

Do not remove the oil filter bracket clip.



f. Using SST, tighten the oil filter cap.

SST
09228-06501

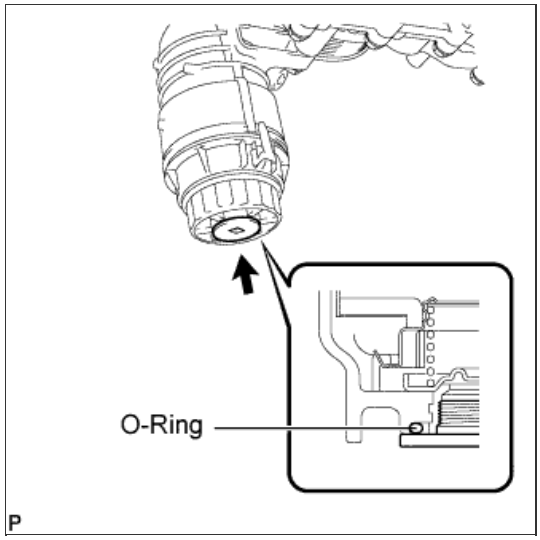
Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf }

NOTICE:

- **When tightening the oil filter cap, do not remove the oil filter bracket clip.**
- **Make sure that the oil filter is installed securely as shown in the illustration.**
- **Be careful that the O-ring does not get caught between any surrounding parts.**

g. Apply a small amount of engine oil to a new drain plug O-ring, and install it to the oil filter cap.

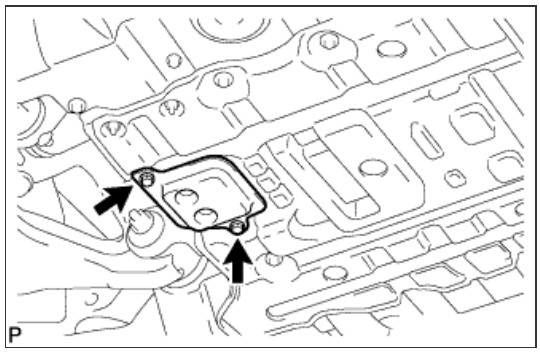
NOTICE:



Before installing the O-ring, remove any dirt or foreign matter from the installation surface of the oil filter cap.

h. Install the oil filter drain plug.

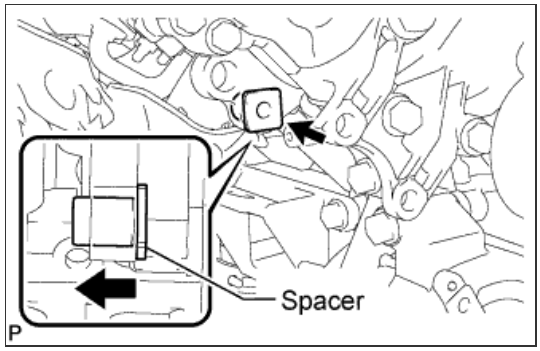
Torque:
13 N*m{ 127 kgf*cm , 9 ft.*lbf }



NOTICE:

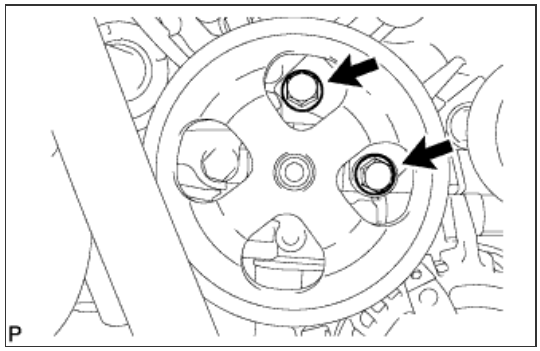
Be careful that the O-ring does not get caught between any surrounding parts.

i. Install the No. 2 engine under cover seal with the 2 bolts.



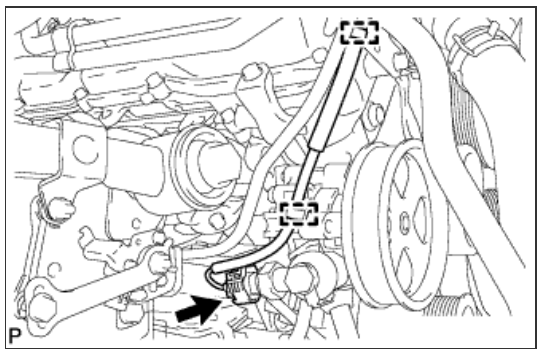
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

40. CONNECT VANE PUMP ASSEMBLY



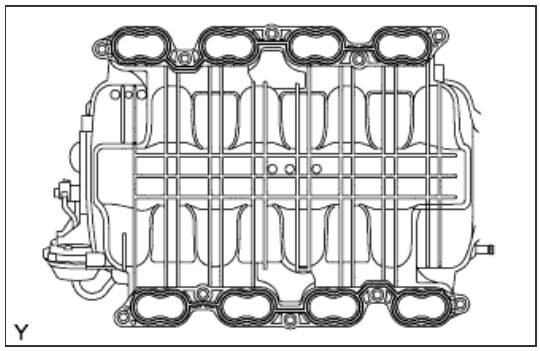
HINT:

Before performing the following procedures, move the spacer until the vane pump can be installed.



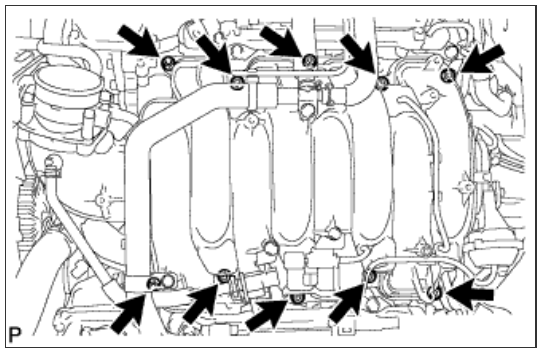
a. Connect the vane pump to the timing chain cover with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



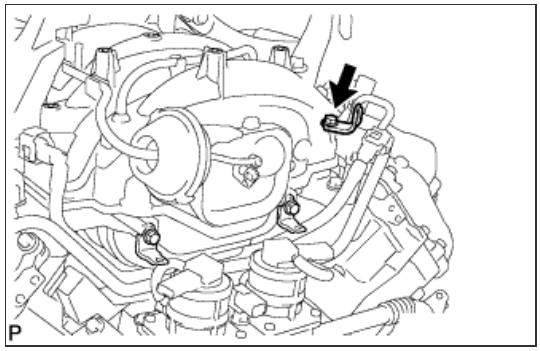
b. Connect the 2 clamps and power steering oil pressure switch connector.

41. INSTALL INTAKE MANIFOLD



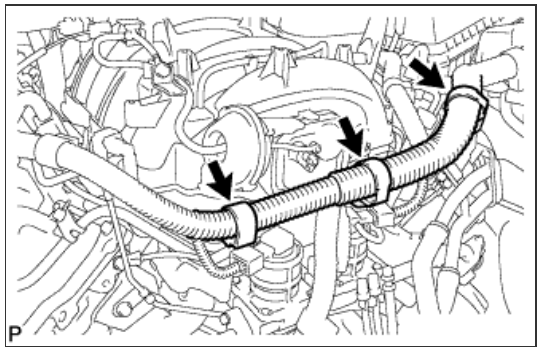
a. Place 2 new gaskets on the intake manifold.

b. Place the intake manifold on the cylinder head.

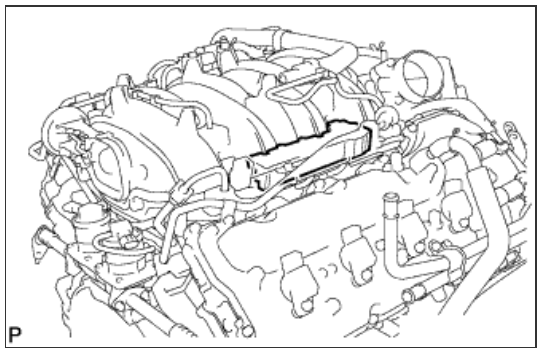


c. Install and uniformly tighten the 8 bolts and 2 nuts in several steps.

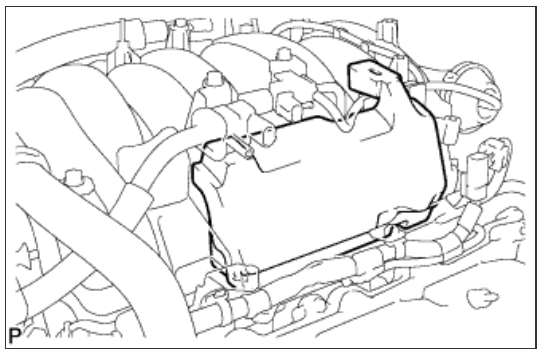
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



d. Install the wire bracket to the intake manifold with the bolt.

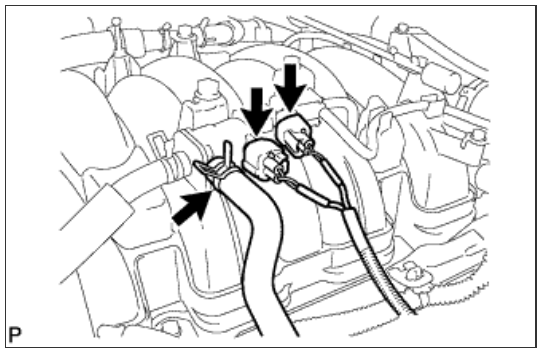


Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

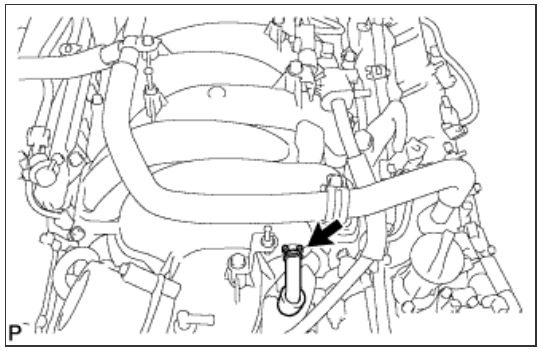


e. Connect the 3 wire clamps to the 3 wire brackets.

f. Install the No. 3 engine cover.



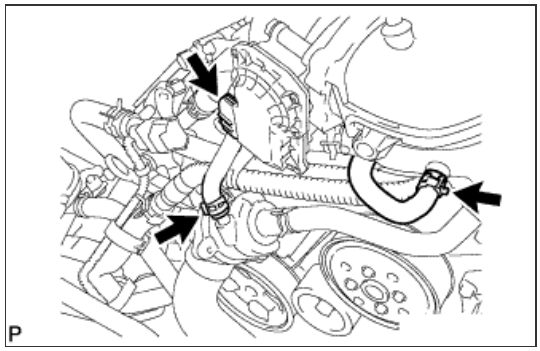
g. Install the No. 1 engine cover sub-assembly.



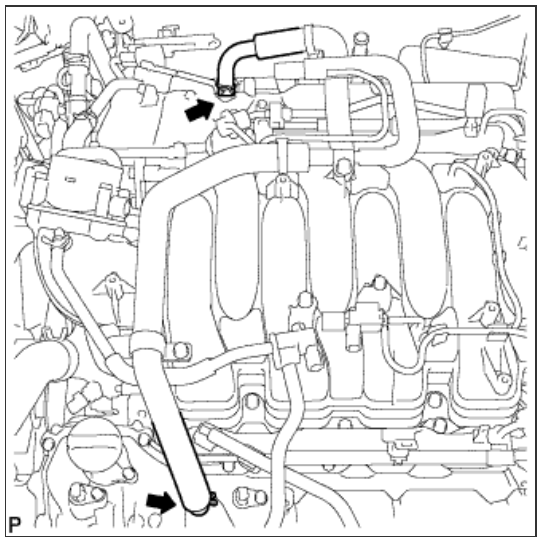
h. Connect the purge VSV connector.

i. Connect the purge line hose to the purge VSV.

j. Connect the vacuum switching valve connector (for ACIS).

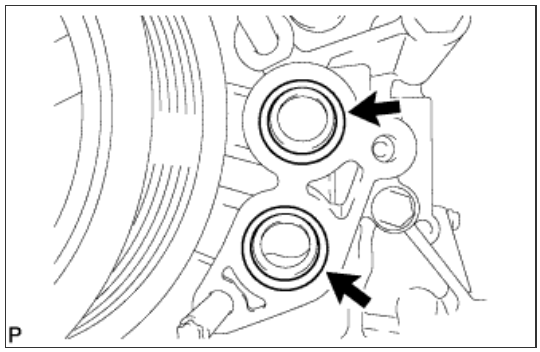


k. Connect the No. 1 ventilation hose.



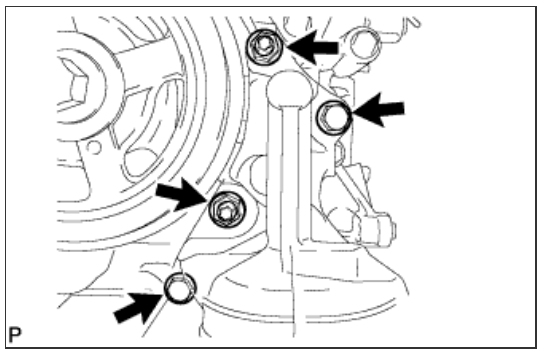
l. Connect the 2 water by-pass hoses.

m. Connect the throttle body connector.



n. Connect the ventilation hose to the ventilation pipe of the cylinder head cover LH and RH.

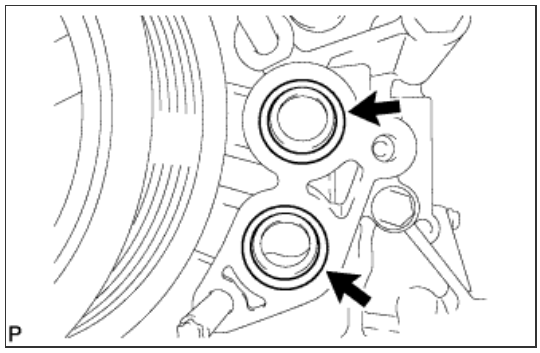
42. INSTALL OIL FILTER BRACKET (w/o Oil Cooler)



a. Apply a light coat of engine oil to 2 new O-rings.

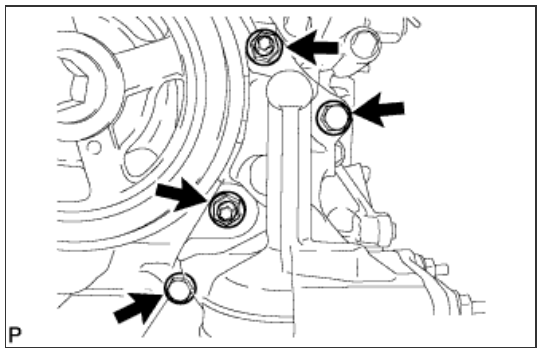
b. Install the 2 O-rings to the timing chain cover.

c. Install the oil filter bracket with the 2 bolts and 2 nuts.



Torque:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }

43. INSTALL OIL FILTER BRACKET (w/ Oil Cooler)

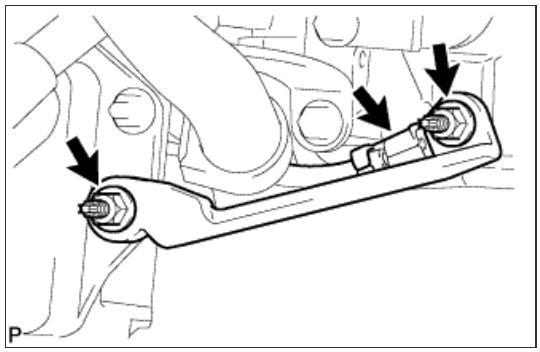


a. Apply a light coat of engine oil to 2 new O-rings.

b. Install the 2 O-rings to the timing chain cover.

c. Install the oil filter bracket with the 2 nuts and 2 bolts.

Torque:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }

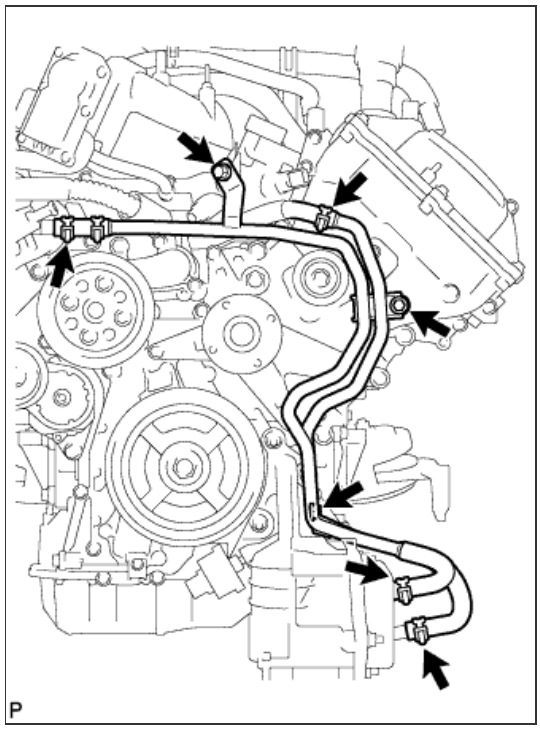


44. INSTALL NO. 1 OIL COOLER BRACKET (w/ Oil Cooler)

a. Connect the ground wire to the cylinder block.

b. Install the oil cooler bracket with the 2 nuts.

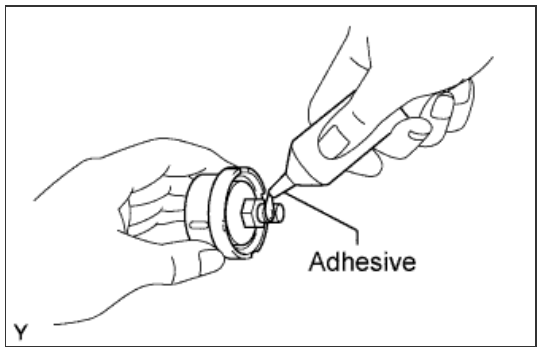
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



45. INSTALL NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY (w/ Oil Cooler)

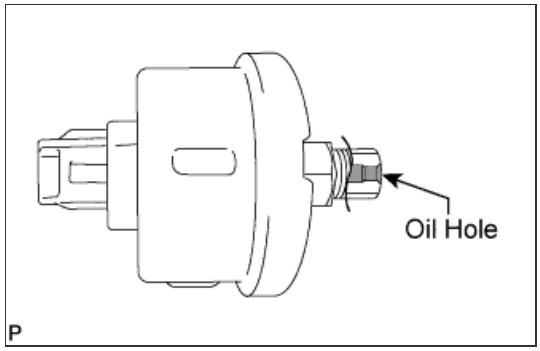
a. Connect the 4 hoses.

b. Install the water by-pass pipe with the 3 bolts.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

46. INSTALL OIL PRESSURE SENDER GAUGE ASSEMBLY

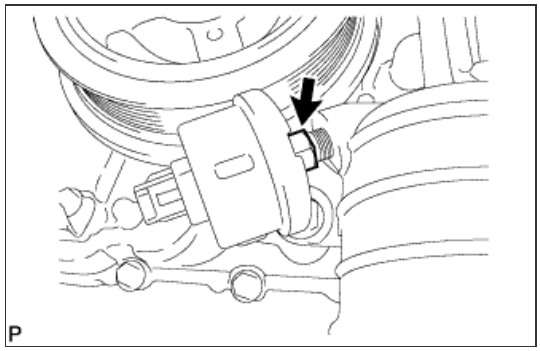


a. Apply adhesive to 2 or 3 threads of the oil pressure sender gauge.

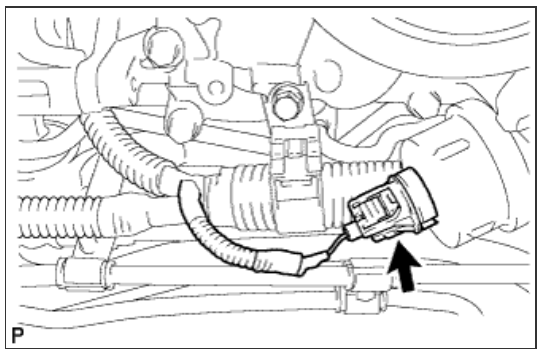
Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

NOTICE:

Do not allow adhesive to contact the oil hole.



b. Install the oil pressure sender gauge.



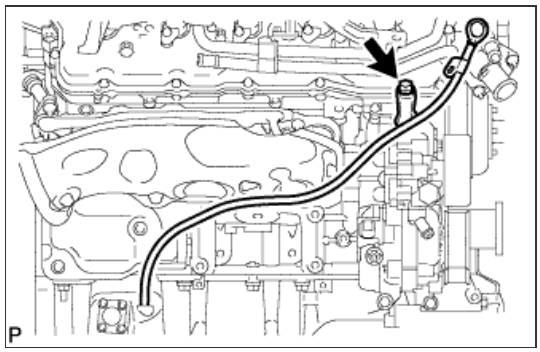
Torque:
15 N*m{ 153 kgf*cm , 11 ft.*lbf }

NOTICE:

Do not start the engine within 1 hour after installation.

c. Connect the sender gauge connector.

47. INSTALL ENGINE OIL LEVEL DIPSTICK GUIDE

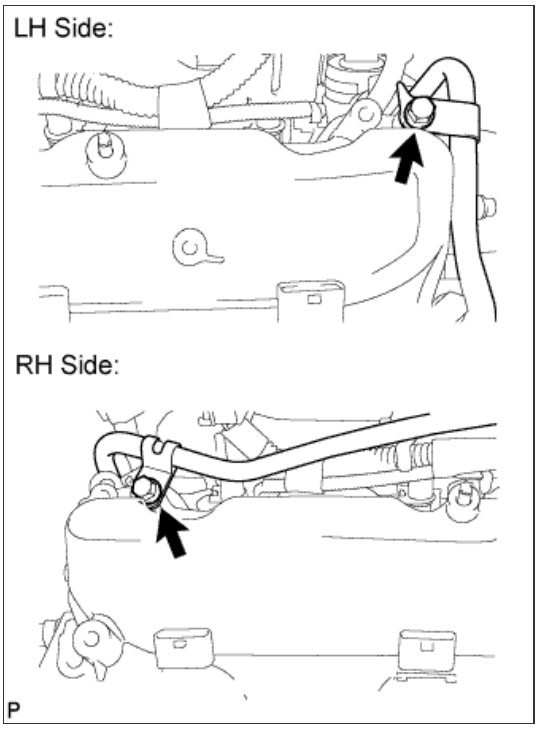


a. Apply a light coat of engine oil to a new O-ring.

b. Install the O-ring to the guide.

c. Install the dipstick guide with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



d. Install the dipstick.

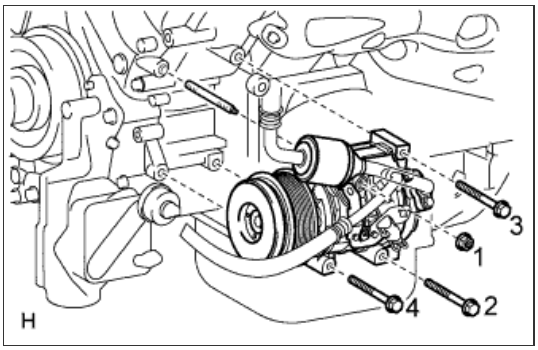
48. CONNECT NO. 2 FUEL TUBE SUB-ASSEMBLY

a. Connect the fuel tube with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

49. CONNECT COOLER COMPRESSOR ASSEMBLY

a. Install the cooler compressor with the stud bolt.



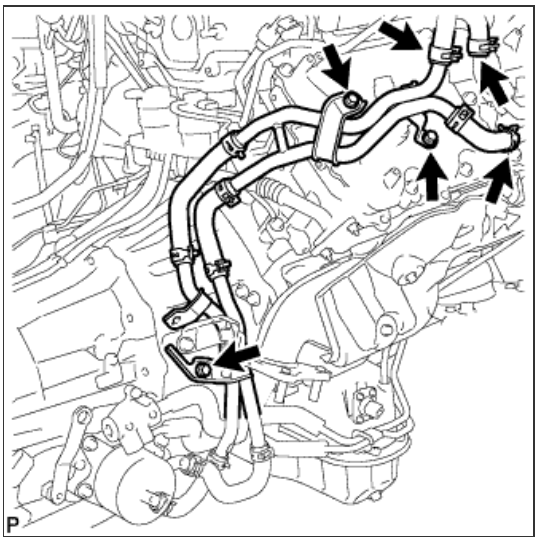
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. Install the 3 bolts and nut.

Torque:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }

NOTICE:

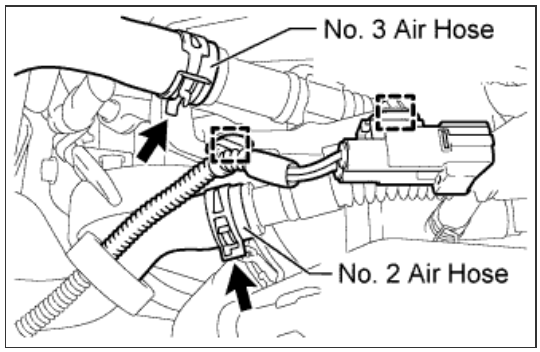
Tighten the bolts and nut in the order shown in the illustration to install the cooler compressor.



50. CONNECT NO. 2 WATER BY-PASS PIPE

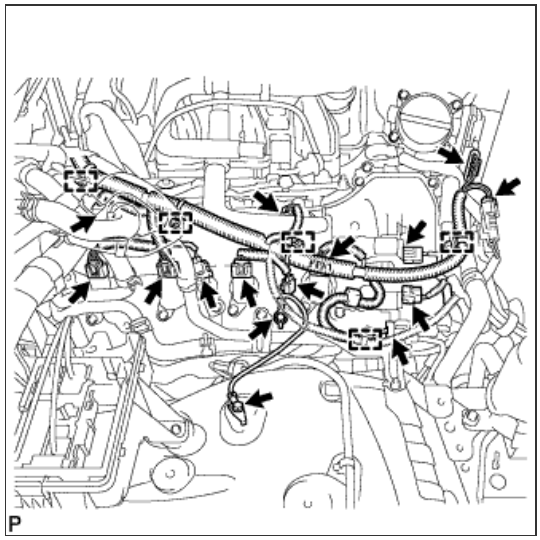
a. Connect the No. 2 water by-pass pipe to the cylinder head cover with the 3 bolts.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }



b. Connect the 3 hoses.

51. CONNECT AIR PUMP HOSE AND WIRE HARNESS



a. Connect the No. 2 and No. 3 air hoses.

b. Connect the 2 clamps and air pump wire harness.

52. CONNECT ENGINE WIRE

a. Engine Room RH Side:

i. Connect the 5 clamps.

ii. Connect the throttle position sensor and throttle control motor connector.

iii. Connect the 2 air pump connectors.

iv. Install the ground wire with the 2 bolts.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

v. Connect the noise filter connector.

vi. Connect the 2 VVT sensor connectors.

HINT:

The wire harnesses on the exhaust side are wrapped with white tape.

vii. Connect the injector connector.

viii. Connect the 4 ignition coil connectors.

ix. Connect the 2 camshaft timing oil control valve connectors.

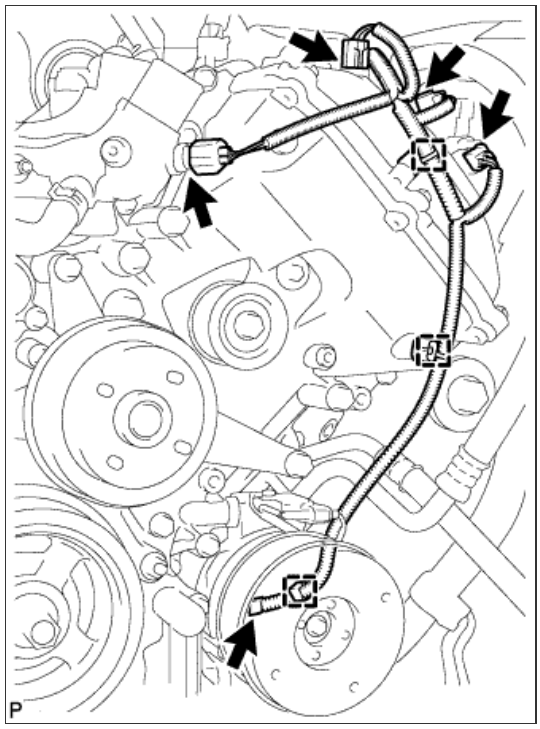
HINT:

The wire harnesses on the exhaust side are wrapped with white tape.

b. Engine Room LH Side:

i. Connect the cooler compressor connector.

ii. Connect the 3 clamps.



iii. Connect the camshaft position sensor connector.

iv. Connect the 2 camshaft timing oil control valve connectors.

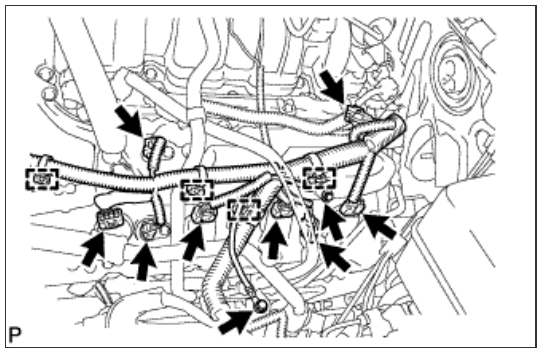
HINT:

The wire harnesses on the exhaust side are wrapped with white tape.

v. Connect the engine coolant temperature sensor connector.

vi. Connect the 4 clamps.

vii. Install the ground wire with the 2 bolts.

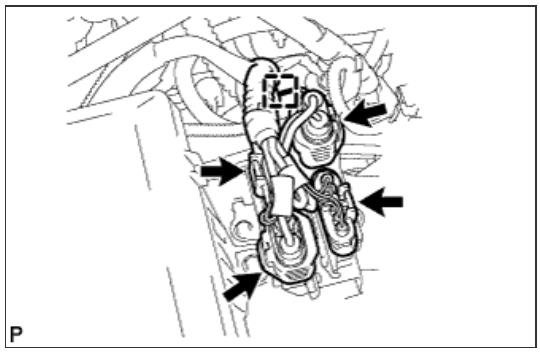


Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

viii. Connect the noise filter connector.

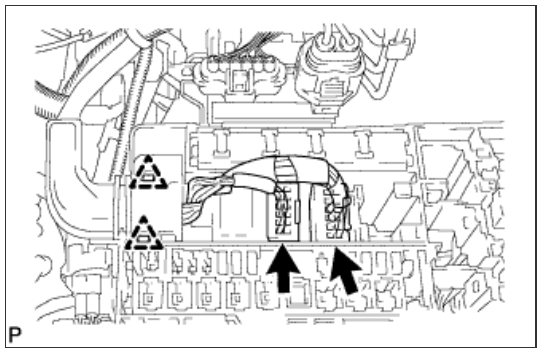
ix. Connect the 2 VVT sensor connectors.

HINT:



The wire harnesses on the exhaust side are wrapped with white tape.

x. Connect the 4 ignition coil connectors.

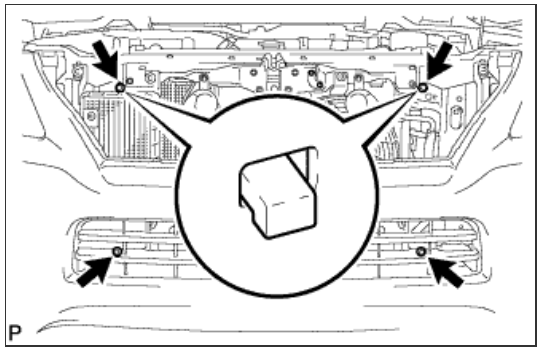


xi. Connect the injector connector.

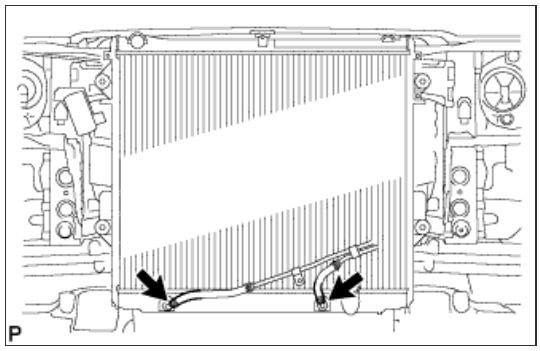
xii. Connect the wire harness clamp and 4 air injection control driver connectors.

xiii. Connect the 2 connectors and 2 clips to the engine room junction block.

xiv. Install the engine room relay block cover.



53. INSTALL RADIATOR ASSEMBLY



a. Set the radiator bracket hooks to the radiator support holes.

b. Install the radiator with the 4 bolts.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

c. Connect the 2 oil cooler hoses.

54. INSTALL FAN SHROUD

a. Install the fan pulley.

b. Place the shroud together with the coupling fan between the radiator and engine.

NOTICE:

Be careful not to damage the radiator core.

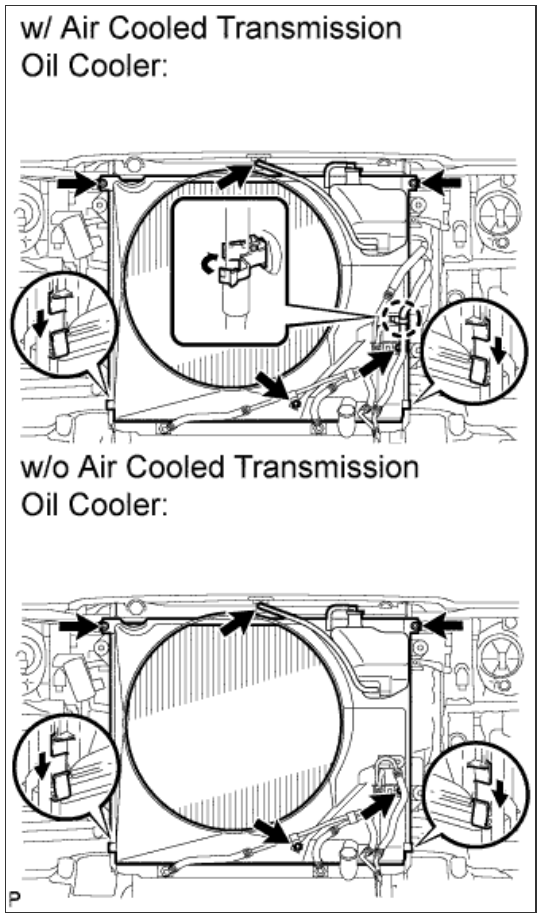
c. Temporarily install the fluid coupling fan to the fluid coupling bracket with the 4 nuts. Tighten the nuts as much as possible by hand.

d. Attach the claws of the shroud to the radiator as shown in the illustration.

e. Install the shroud with the 2 bolts.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

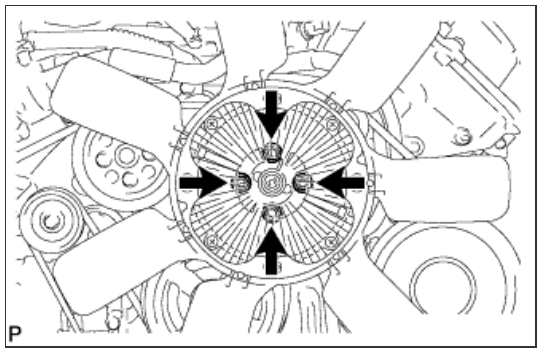
f. Connect the oil cooler tube to the fan shroud with the 2 bolts.



Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

g. w/ Air Cooled Transmission Oil Cooler:
Pass the hose through the flexible hose clamp and close the clamp as shown in

the illustration.

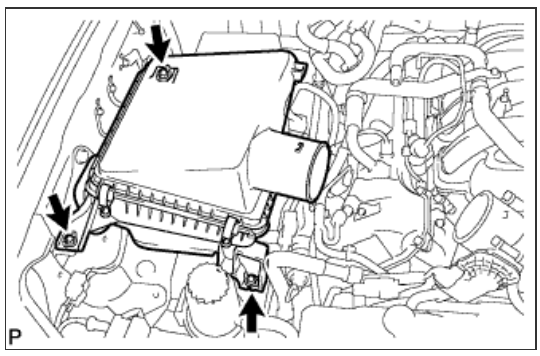


h. Connect the reservoir hose to the upper radiator tank.

i. Install the fan and generator V belt (Click here).

j. Tighten the 4 nuts of the fluid coupling fan.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



55. INSTALL NO. 2 RADIATOR HOSE

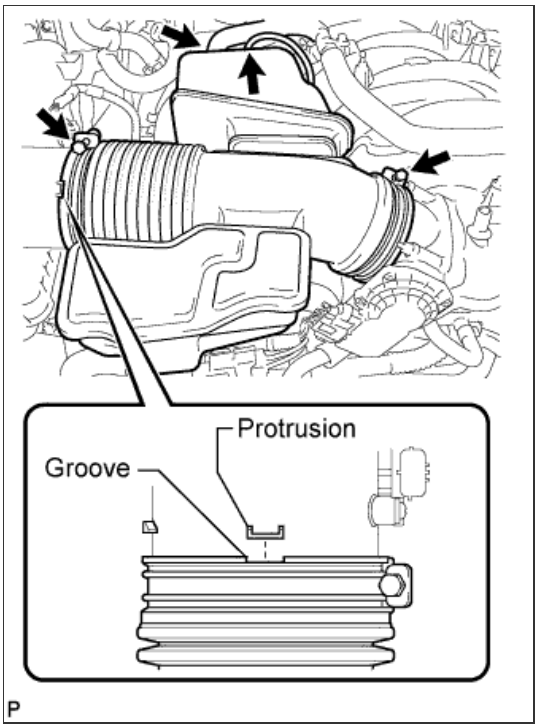
56. INSTALL NO. 1 RADIATOR HOSE

57. INSTALL AIR CLEANER ASSEMBLY

a. Install the air cleaner with the 3 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

58. INSTALL AIR CLEANER HOSE ASSEMBLY

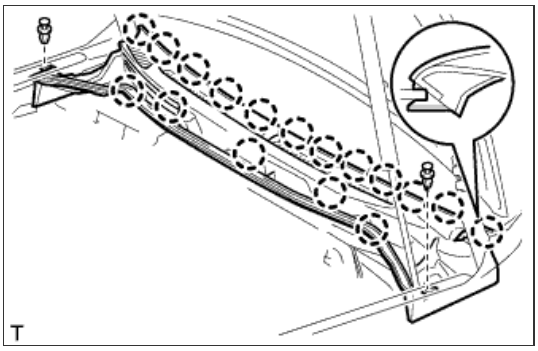


a. Install the air cleaner hose so that the protrusion of the air cleaner cap aligns with the groove of the hose as shown in the illustration.

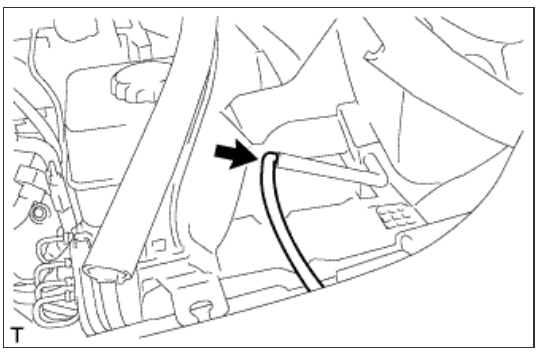
b. Tighten the 2 clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

c. Connect the vacuum hose.



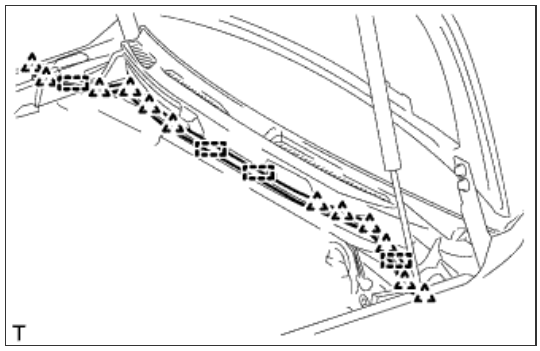
d. Connect the No. 2 ventilation hose.



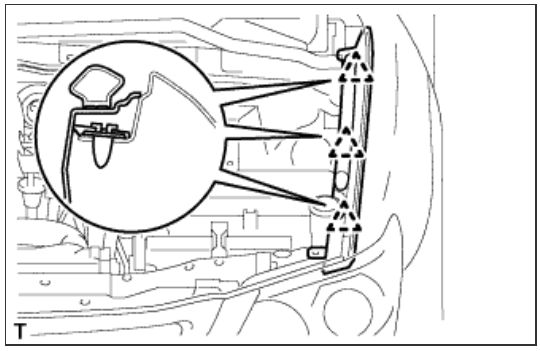
59. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

a. Push in the ventilator louver to attach the 17 claws and install the ventilator louver.

b. Install the 2 clips.



c. Connect the washer hose.



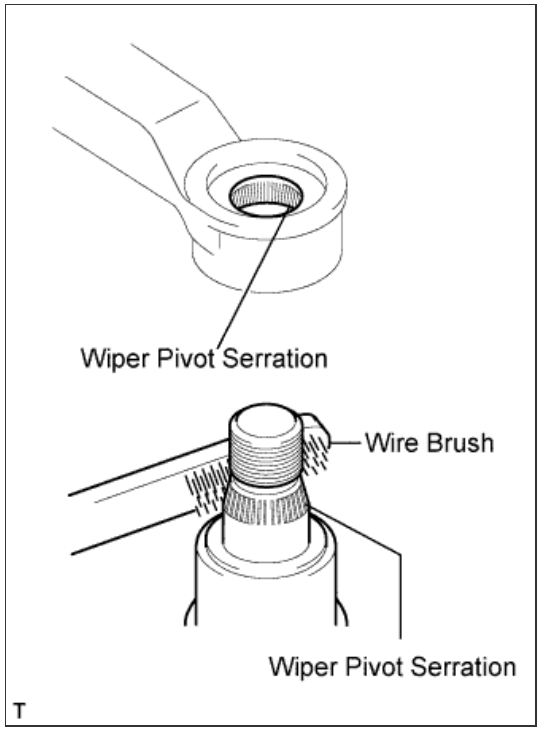
60. INSTALL HOOD TO COWL TOP SEAL

a. Attach the 12 clips and 4 clamps to install the hood to cowl top seal.

61. INSTALL FRONT FENDER MAIN SEAL LH

a. Attach the 3 clips to install the fender main seal.

62. INSTALL FRONT FENDER MAIN SEAL RH



HINT:

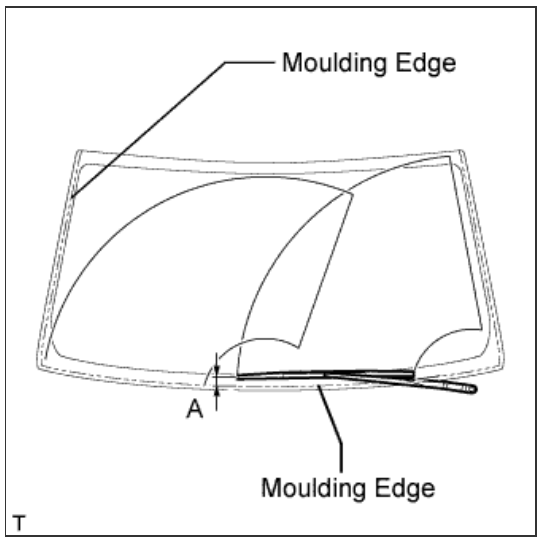
Use the same procedures described for the LH side.

63. INSTALL FRONT WIPER ARM LH

a. Stop the wiper motor at the automatic stop position.

b. Clean the wiper pivot serrations with a wire brush.

c. Install the wiper arm and blade with the nut. Make sure that the wiper arm and blade come to the position shown in the illustration.

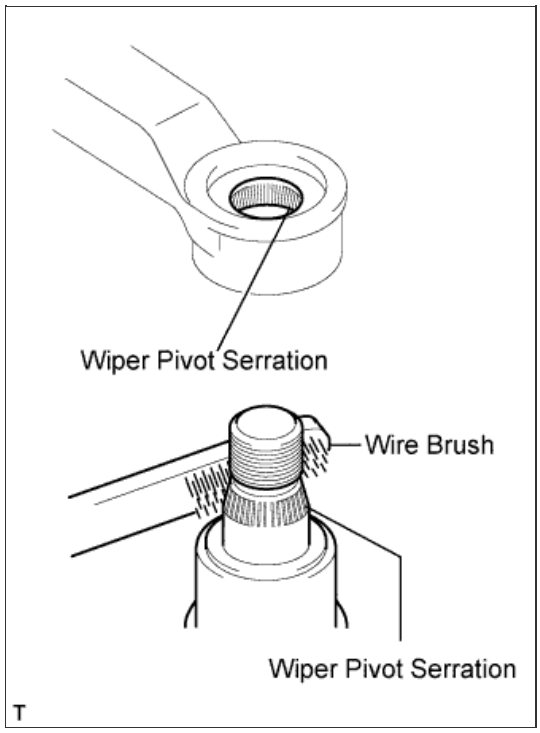


Standard:

Position	Specified Condition
A	16.8 to 36.8 mm (0.661 to 1.45 in.)

Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf }

HINT:



Hold down the wiper arm hinge with your hand while tightening the nut.

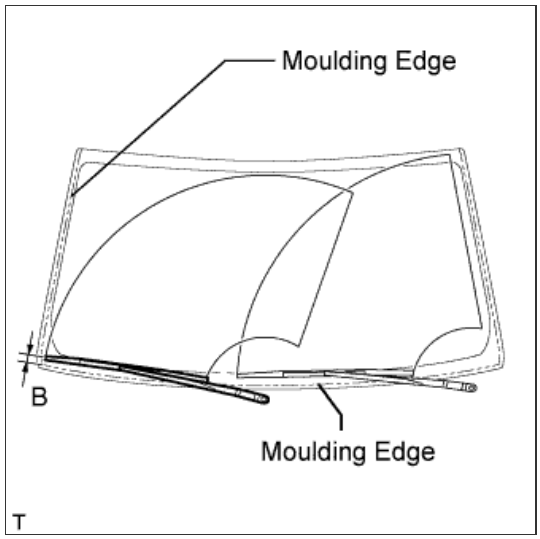
64. INSTALL FRONT WIPER ARM RH

a. Stop the wiper motor at the automatic stop position.

b. Clean the wiper pivot serrations with a wire brush.

c. Install the wiper arm and blade with the nut. Make sure that the wiper arm and blade come to the position shown in the illustration.

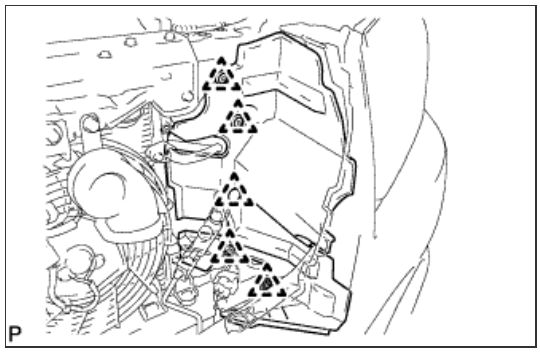
Standard:



Position	Specified Condition
B	20.0 to 40.0 mm (0.787 to 1.57 in.)

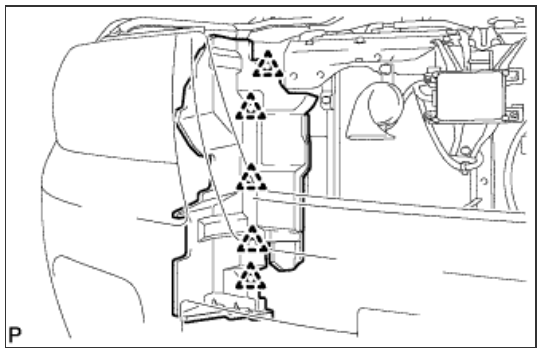
Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf }

HINT:



Hold down the wiper arm hinge with your hand while tightening the nut.

d. Operate the front wipers while spraying washer fluid on the windshield glass. Make sure that the front wipers function properly and there is no interference with the vehicle body.

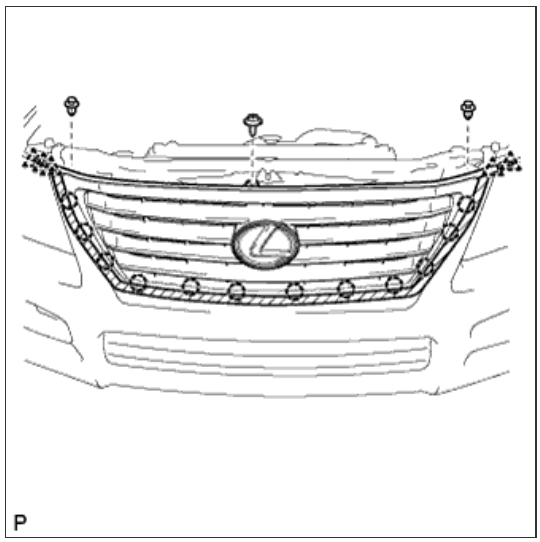


65. INSTALL RADIATOR SIDE DEFLECTOR LH

a. Install the side deflector with the 5 clips.

66. INSTALL RADIATOR SIDE DEFLECTOR RH (w/o Air Cooled Transmission Oil Cooler)

a. Install the side deflector with the 5 clips.



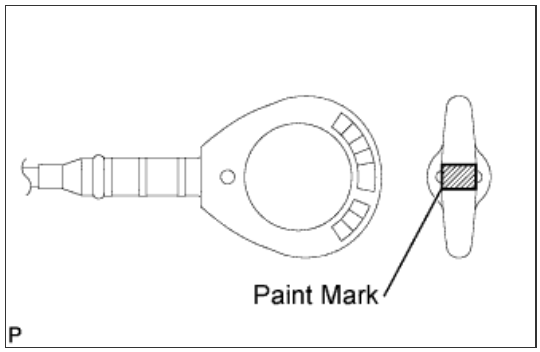
67. INSTALL RADIATOR GRILLE

a. w/ Wide View Front Monitor System:
Connect the connector.

b. Attach the 12 claws to install the radiator grille.

c. Attach the 5 clips to install the detached part of the upper radiator seal.

d. Install the screw and 2 clips.



68. ADD ENGINE OIL

a. Add fresh oil and install the oil filler cap.

Standard Oil Grade:

Oil Grade	Oil Viscosity (SAE)

API grade SL "Energy-Conserving", SM "Energy-Conserving" or ILSAC multigrade engine oil	0W-20 5W-20 5W-30 10W-30
API grade SL or SM multigrade engine oil	15W-40 20W-50

Standard Oil Capacity:

Paint Mark	Item	Specified Condition
Blue	Drain and refill with oil filter change	7.0 liters (7.4 US qts, 6.2 Imp. qts)
	Drain and refill without oil filter change	6.6 liters (7.0 US qts, 5.8 Imp. qts)
	Dry fill	8.4 liters (8.9 US qts, 7.4 Imp. qts)
Green	Drain and refill with oil filter change	7.5 liters (7.9 US qts, 6.6 Imp. qts)
	Drain and refill without oil filter change	7.1 liters (7.5 US qts, 6.2 Imp. qts)
	Dry fill	9.3 liters (9.8 US qts, 8.2 Imp. qts)

69. ADD ENGINE COOLANT

a. Add engine coolant.

Standard Capacity:

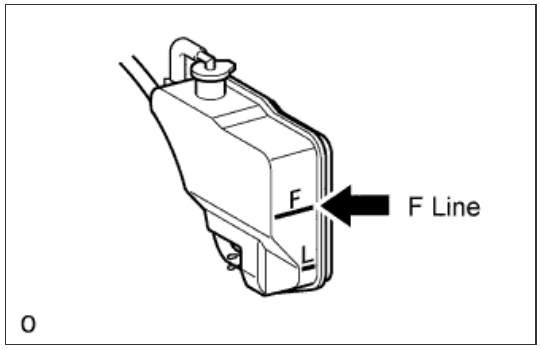
Item	Specified Condition
with transmission oil cooler	16.7 liters (17.6 US qts, 14.7 Imp. qts)
without transmission oil cooler	16.2 liters (17.1 US qts, 14.3 Imp. qts)

NOTICE:

Do not substitute plain water for engine coolant.

HINT:

TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).



b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the reservoir cap.

d. Press the No. 1 and No. 2 radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Start the engine and warm it up until the thermostat opens.

NOTICE:

Switch off the A/C.

g. Maintain the engine speed at 2000 to 2500 rpm.

NOTICE:

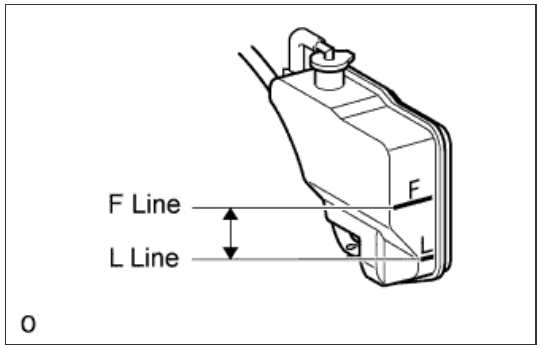
- **Make sure that the radiator reservoir still has some coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally**

high temperature.

- If there is not enough coolant, the engine may burn out or overheat.
- Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the F line.
- Run the engine at 2000 rpm until the coolant level has stabilized.

h. Press the No. 1 and No. 2 radiator hoses several times by hand to bleed air.

CAUTION:



- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the fan.**

i. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

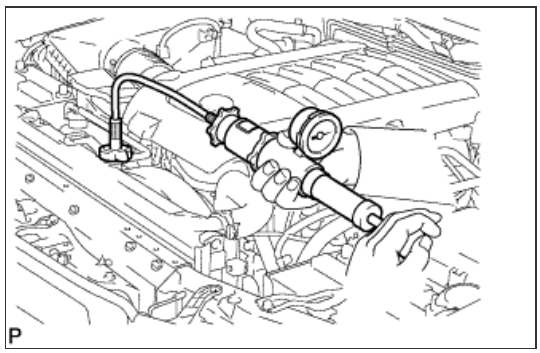
j. Check that the coolant level is between the F and L lines.
If the coolant level is below the L line, repeat all of the procedures above.
If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.

70. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable from the cable is reconnected (Click here).

71. INSPECT FOR OIL LEAK



a. Start the engine. Make sure that there are no oil leaks from the area that was worked on.

72. INSPECT FOR COOLANT LEAK

a. Fill the radiator with coolant and attach a radiator cap tester.

b. Warm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.

73. INSPECT ENGINE OIL LEVEL

a. Warm up the engine, stop the engine and wait 5 minutes. The oil level should be between the dipstick low level mark and full level mark.
If low, check for leakage and add oil up to the full level mark.

NOTICE:

Do not fill engine oil above the full level mark.

74. INSPECT IGNITION TIMING

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. Remove the engine room side cover LH.

c. Remove the engine room side cover RH.

d. Remove the upper radiator support seal.

e. Remove the V-bank cover.

f. When using the intelligent tester:

i. Connect the intelligent tester to the DLC3.

ii. Start the engine and idle it.

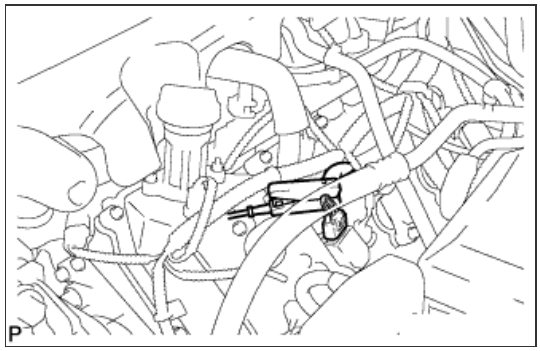
iii. Turn the intelligent tester ON.

iv. Enter the following menus: Powertrain / Engine and ECT / Data List / Primary / IGN Advance.

HINT:

Refer to the intelligent tester operator's manual for further details.

Standard ignition timing:
8 to 12° BTDC @ idle (transmission in neutral and A/C switch off)



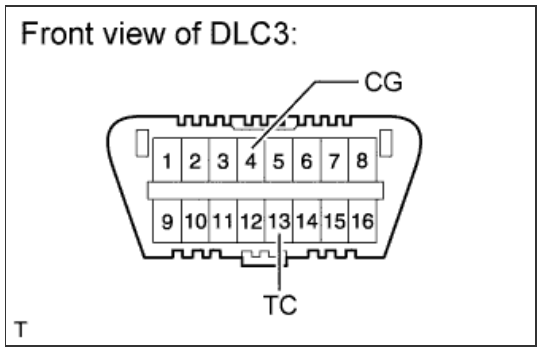
v. Disconnect the intelligent tester from the DLC3.

g. When not using the intelligent tester:

i. Connect the tester probe of a timing light to the wire of the ignition coil connector for the No. 1 cylinder.

NOTICE:

Use a timing light that detects primary signals.



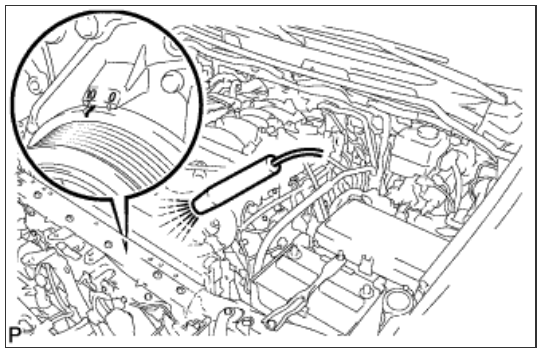
ii. Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.

SST
09843-18040

NOTICE:

- **Confirm the terminal numbers before connecting them. Connecting the wrong terminals can damage the engine.**
- **Switch off all accessories and the A/C before connecting the terminals.**

iii. Using the timing light, check the ignition timing.



Standard ignition timing:
8 to 12° BTDC @ idle (transmission in neutral and A/C switch off)

iv. Remove SST from the DLC3.

v. Check the ignition timing.

Standard ignition timing:
7 to 24° BTDC @ idle (transmission in neutral and A/C switch off)

vi. Disconnect the timing light from the engine.

h. Install the V-bank cover.

i. Install the upper radiator support seal.

j. Install the engine room side cover RH.

k. Install the engine room side cover LH.

75. INSPECT ENGINE IDLE SPEED

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. When using the intelligent tester:

i. Connect the intelligent tester to the DLC3.

NOTICE:

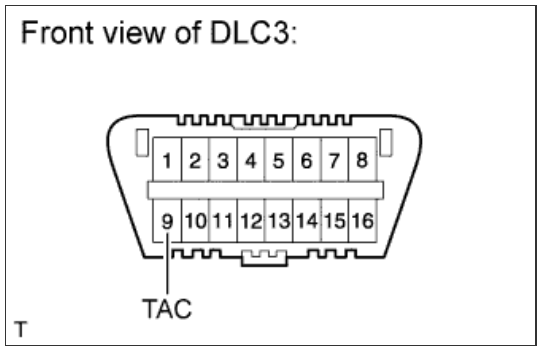
Switch off all accessories and the A/C before connecting the intelligent tester.

ii. Race the engine at 2500 rpm for approximately 90 seconds.

iii. Turn the intelligent tester ON.

iv. Enter the following menus: Powertrain / Engine and ECT / Data List / Primary / Engine Speed.

Standard idle speed:
650 to 750 rpm (transmission in neutral and A/C switch off)



HINT:

Refer to the intelligent tester operator's manual for further details.

If the idle speed is not as specified, check the air intake system.

v. Disconnect the intelligent tester from the DLC3.

c. When not using the intelligent tester:

i. Using SST, connect the tachometer probe to terminal 9 (TAC) of the DLC3.

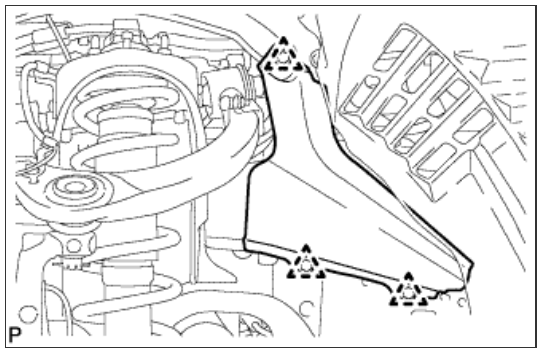
SST
09843-18030

NOTICE:

- **Confirm the terminal number before connecting the probe. Connecting the probe to the wrong terminal can damage the engine.**
- **Switch off all accessories and the A/C before connecting the probe.**

ii. Race the engine at 2500 rpm for approximately 90 seconds.

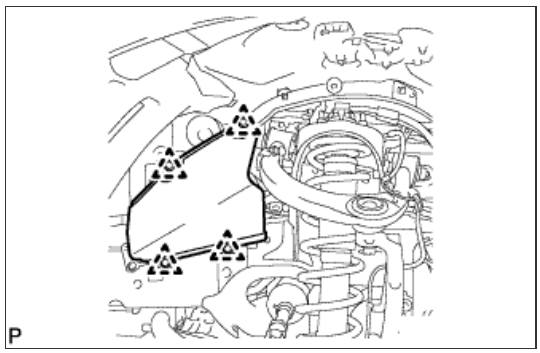
iii. Check the idle speed.



Standard idle speed:
650 to 750 rpm (transmission in neutral and A/C switch off)

If the idle speed is not as specified, check the air intake system.

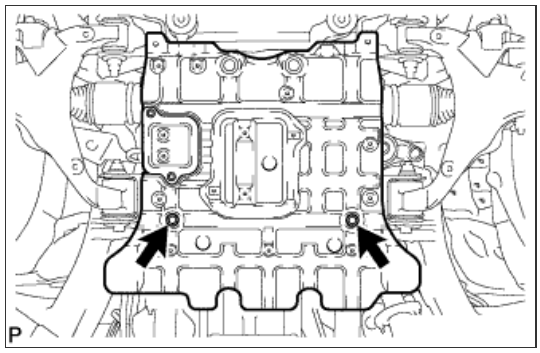
iv. Disconnect the tachometer probe from the DLC3.



76. INSTALL FRONT FENDER APRON SEAL FRONT RH

a. Install the fender apron seal with the 3 clips.

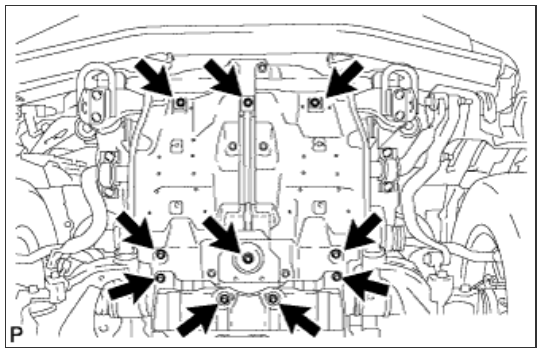
77. INSTALL FRONT FENDER APRON SEAL FRONT LH



a. Install the fender apron seal with the 4 clips.

78. INSTALL NO. 2 ENGINE UNDER COVER

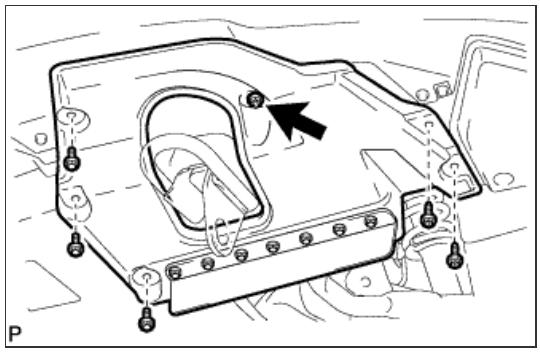
a. Install the No. 2 engine under cover with the 2 bolts.



Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

79. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.

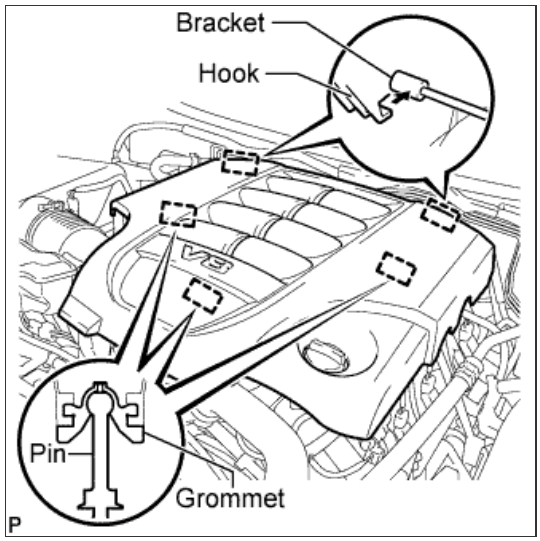


Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

80. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

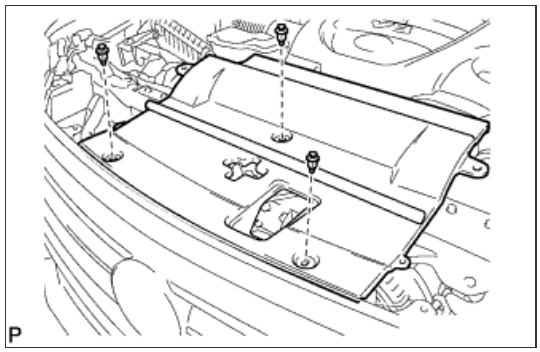
b. Install the 3 bolts and 2 screws.



81. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

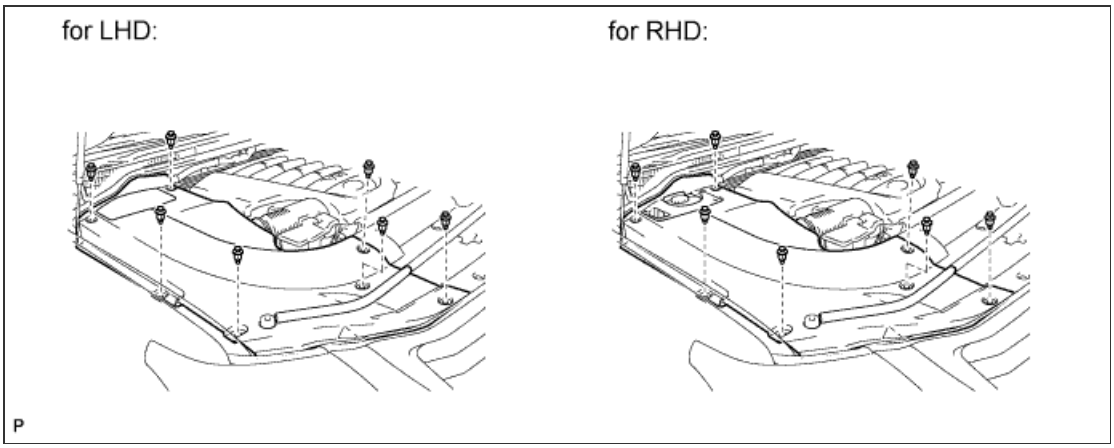
HINT:

Use the same procedures described for the LH side.



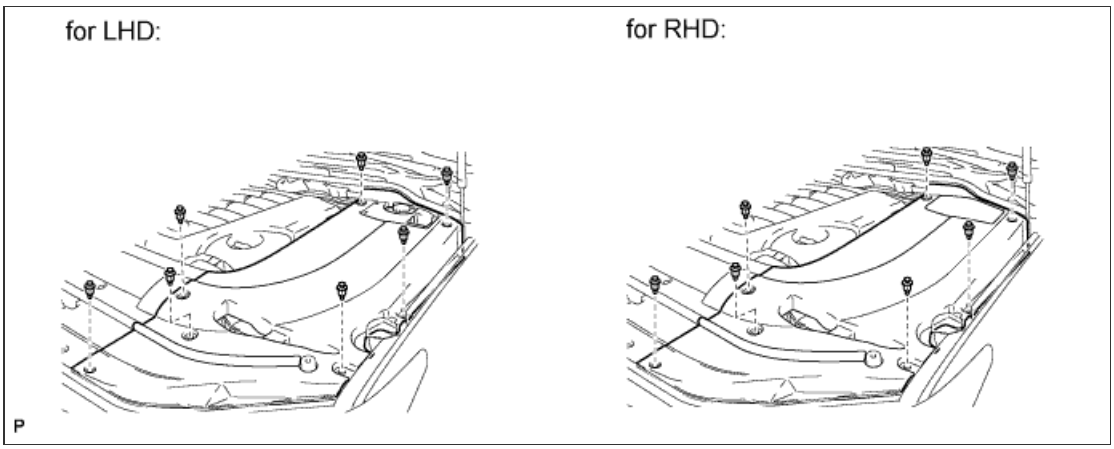
82. INSTALL V-BANK COVER SUB-ASSEMBLY

a. Attach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.



83. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the upper radiator support seal with the 3 clips.

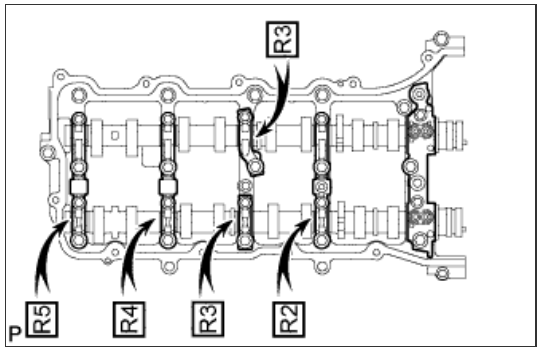


84. INSTALL ENGINE ROOM SIDE COVER RH

a. Install the engine room side cover with the 7 clips.

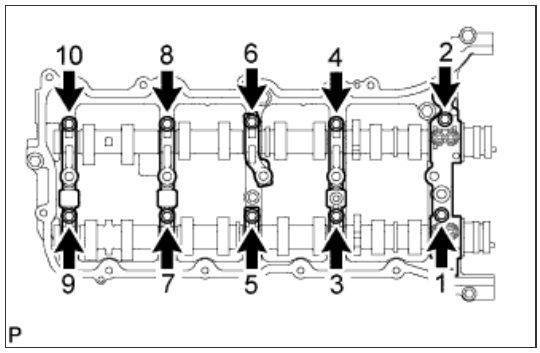
85. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.



for Preparation Click here

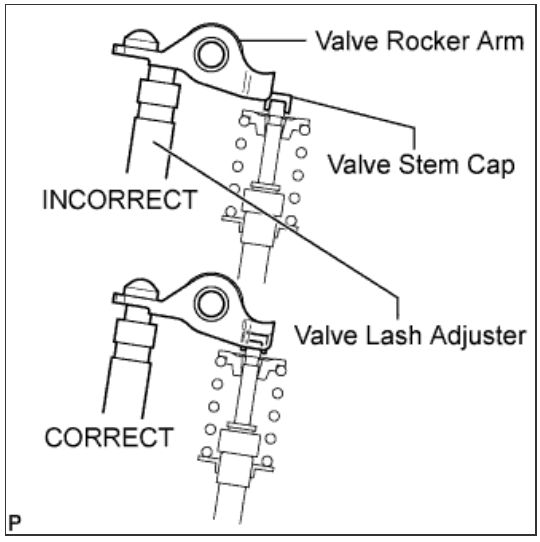
1. INSTALL CAMSHAFT BEARING CAP RH



a. Apply a light coat of engine oil to the camshaft journals, camshaft housings and bearing caps.

b. Install the No. 1 and No. 2 camshafts to the camshaft housing.

c. Confirm the marks and numbers on the camshaft bearing caps and place them in their proper positions and directions.

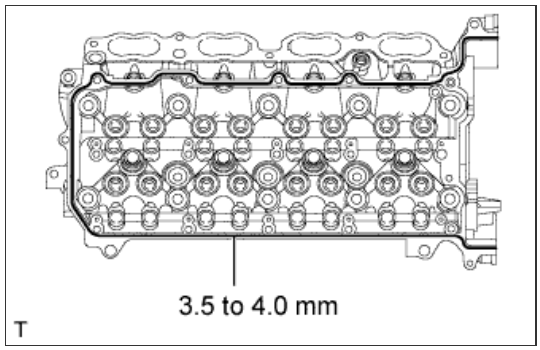


d. Temporarily install the 10 bolts in the order shown in the illustration.

2. INSTALL CAMSHAFT HOUSING SUB-ASSEMBLY RH

a. Make sure that the valve rocker arms are installed as shown in the illustration.

b. Apply seal packing in a continuous line as shown in the illustration.



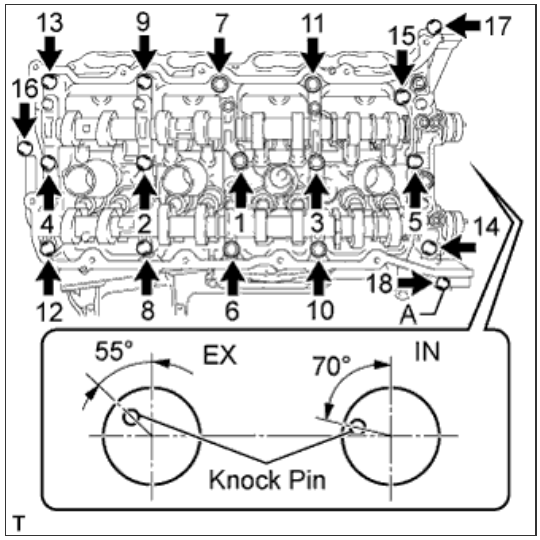
Seal packing:

Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
3.5 to 4.0 mm (0.138 to 0.157 in.)

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the camshaft housing within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**

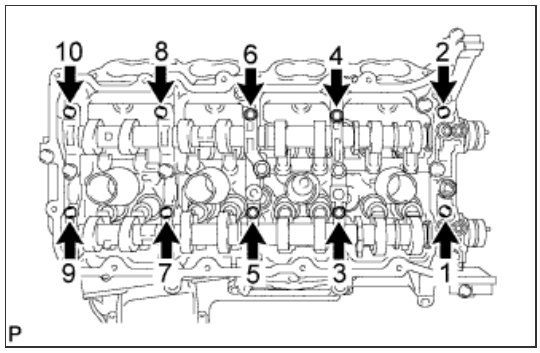


c. Install the camshaft housing, and install the 18 bolts in the order shown in the illustration.

Torque:
for bolt A:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }
except bolt A:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }

NOTICE:

- **Do not start the engine for at least 2 hours after the installation.**
- **Make sure that the knock pin of the camshaft is positioned as shown in the illustration before installing the camshaft housing.**

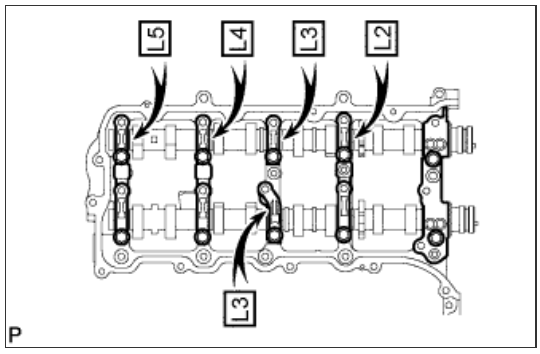


d. Tighten the 10 bolts in the order shown in the illustration.

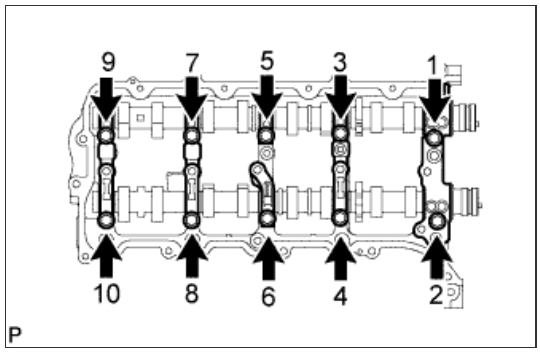
Torque:
16 N*m{ 163 kgf*cm , 12 ft.*lbf }

NOTICE:

Thoroughly wipe clean any seal packing.



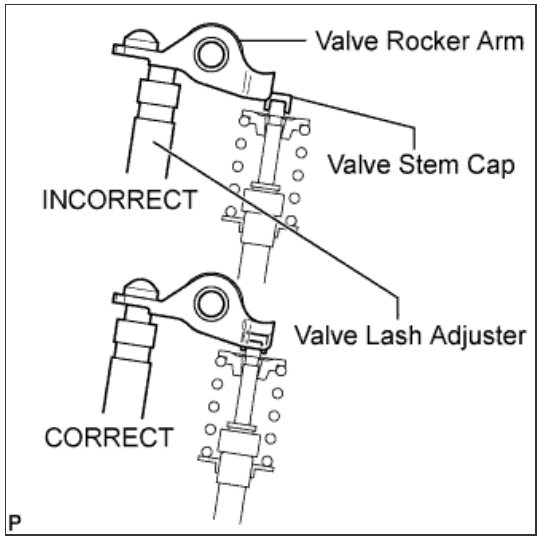
3. INSTALL CAMSHAFT BEARING CAP LH



a. Apply a light coat of engine oil to the camshaft journals, camshaft housings and bearing caps.

b. Install the No. 3 and No. 4 camshafts to the camshaft housing.

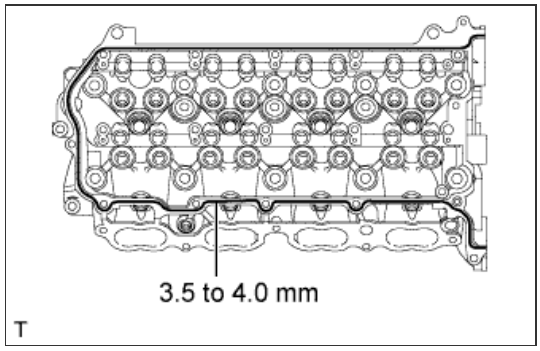
c. Confirm the marks and numbers on the camshaft bearing caps and place them in their proper positions and directions.



d. Temporarily install the 10 bolts in the order shown in the illustration.

4. INSTALL CAMSHAFT HOUSING SUB-ASSEMBLY LH

a. Make sure that the valve rocker arms are installed as shown in the illustration.



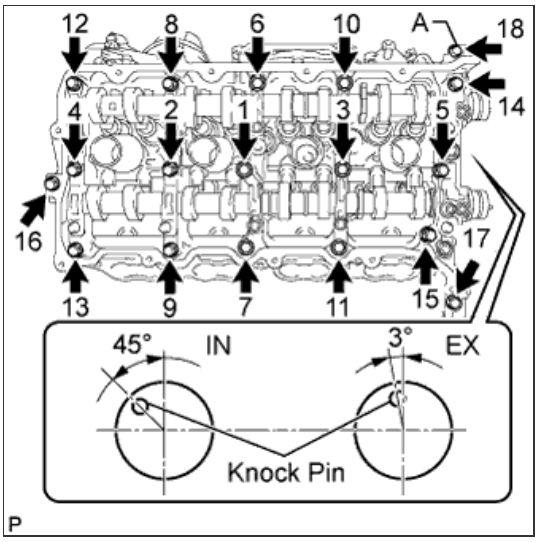
b. Apply seal packing in a continuous line as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
3.5 to 4.0 mm (0.138 to 0.157 in.)

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the camshaft housing within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**

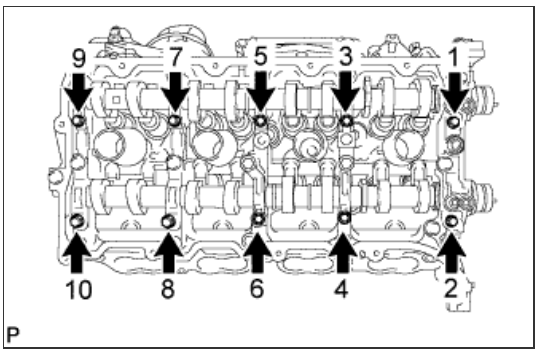


c. Install the camshaft housing, and install the 18 bolts in the order shown in the illustration.

Torque:
for bolt A:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }
except bolt A:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }

NOTICE:

- **Do not start the engine for at least 2 hours after the installation.**
- **Make sure that the knock pin of the camshaft is positioned as shown in the illustration before installing the camshaft housing.**

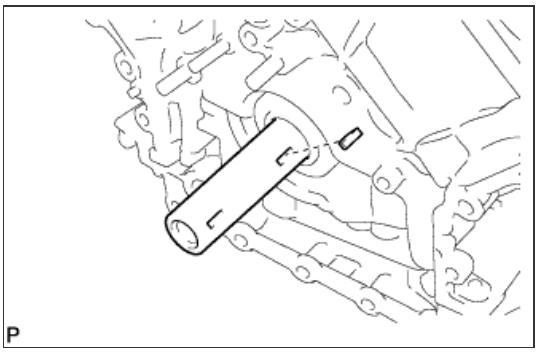


d. Tighten the 10 bolts in the order shown in the illustration.

Torque:
16 N*m{ 163 kgf*cm , 12 ft.*lbf }

NOTICE:

Thoroughly wipe clean any seal packing.



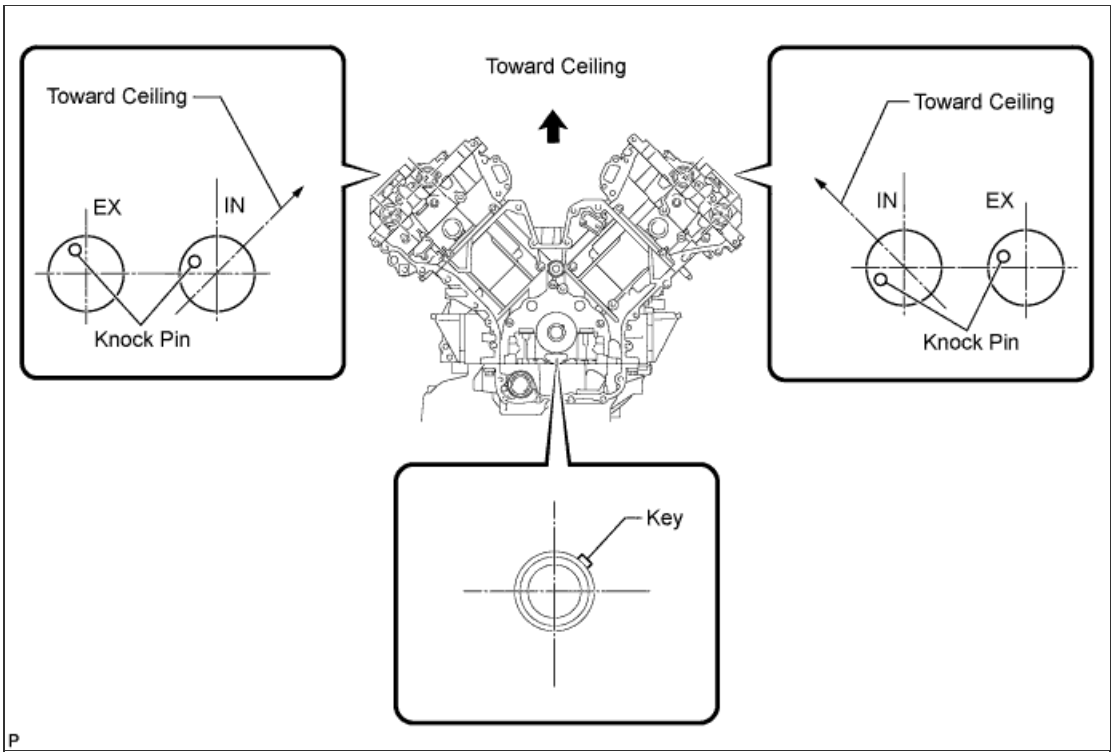
5. INSTALL CRANKSHAFT TIMING GEAR KEY

a. Install the timing gear key.

HINT:

The other timing gear key will be installed at a later step.

6. SET NO. 1 CYLINDER TO TDC/COMPRESSION



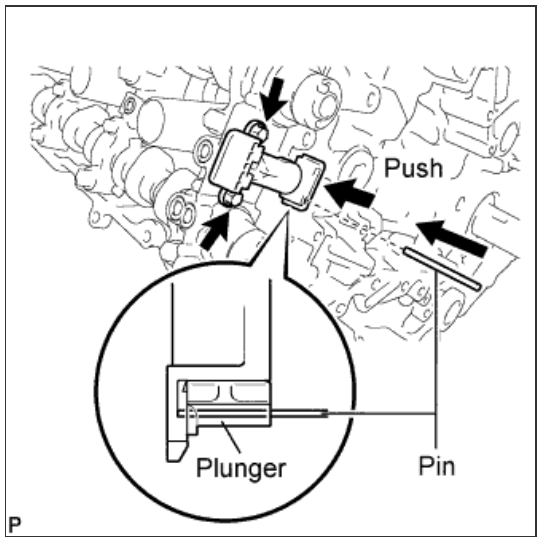
a. Temporarily install the crankshaft pulley bolt.

b. Rotate the crankshaft so that the timing gear key is as shown in the illustration. Then using a wrench, rotate each camshaft so that the timing marks are as shown in the illustration.

NOTICE:

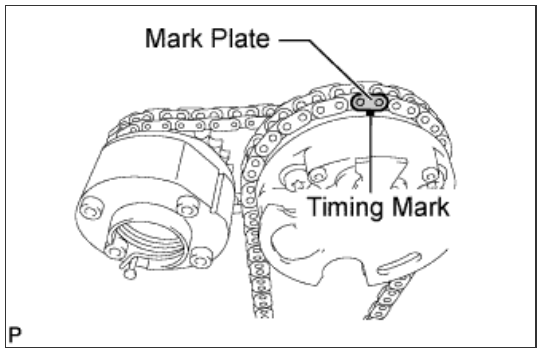
When the crankshaft or a camshaft is rotated excessively, the valves and pistons may interfere with each other.

c. Remove the crankshaft pulley bolt.



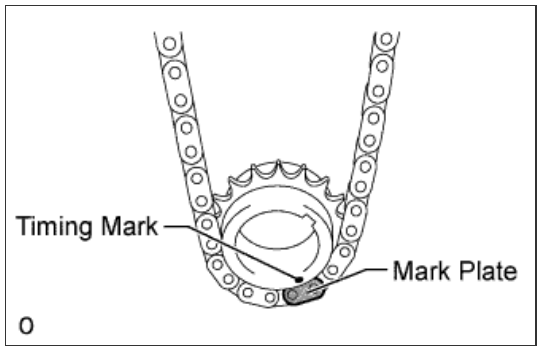
7. INSTALL NO. 2 CHAIN TENSIONER ASSEMBLY

a. Install the chain tensioner with the 2 bolts.



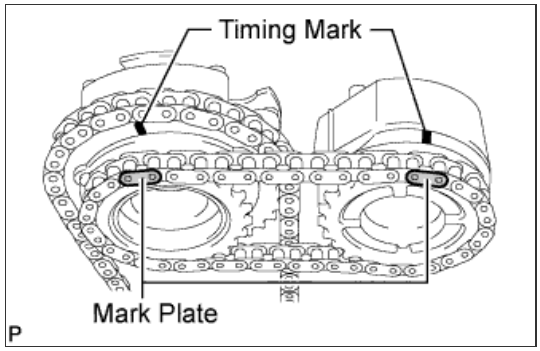
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. While raising up the No. 2 chain tensioner, insert a pin of 1.0 mm (0.0394 in.) into the hole to fix it in place.



8. INSTALL NO. 1 CHAIN SUB-ASSEMBLY RH

a. Align the No. 1 chain orange mark plate with the camshaft timing gear timing mark, and attach the chain to the gear as shown in the illustration.



b. Align the No. 1 chain orange mark plate with the crankshaft timing sprocket timing mark, and attach the chain to the gear as shown in the illustration.

c. Align the No. 2 chain yellow mark plates with the timing marks of the camshaft timing gear assembly and camshaft timing exhaust gear assembly, and attach the No. 2 chain to the gears as shown in the illustration.

HINT:

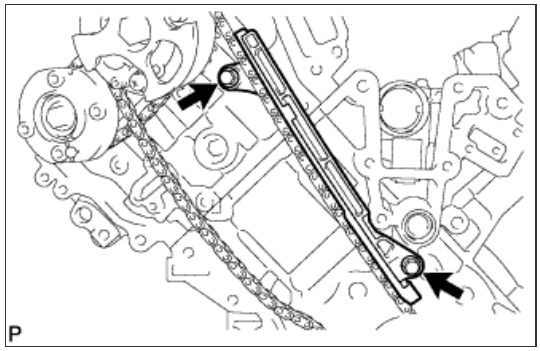
The crankshaft timing sprocket RH and camshaft timing exhaust gear will be installed with the No. 1 and No. 2 chains connected to the gears.

d. Install the crankshaft timing sprocket RH to the crankshaft.

e. Align and attach the knock pin of the No. 1 camshaft with the pin hole of the camshaft timing gear.

f. Using the hexagonal portion of the No. 2 camshaft, align and attach the knock pin of the No. 2 camshaft with the pin hole of the camshaft timing exhaust gear.

g. Remove the pin from the No. 2 chain tensioner.

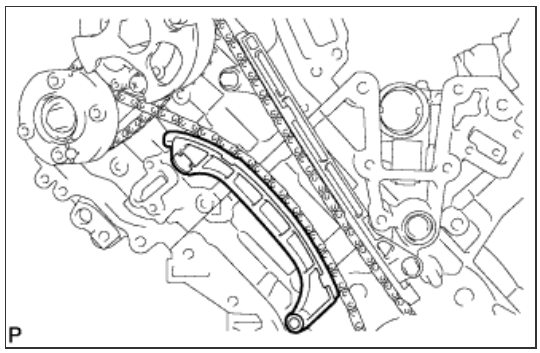


h. Using a wrench to hold the hexagonal portion of the No. 1 camshaft, temporarily install the bolt.

i. Using a wrench to hold the hexagonal portion of the No. 2 camshaft, temporarily install the bolt.

9. INSTALL NO. 1 CHAIN VIBRATION DAMPER RH

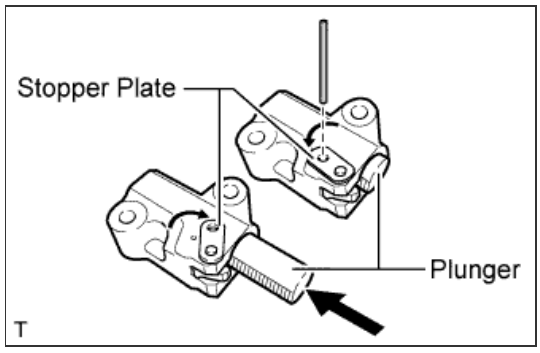
a. Install the vibration damper with the 2 bolts.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

10. INSTALL NO. 1 CHAIN TENSIONER SLIPPER RH

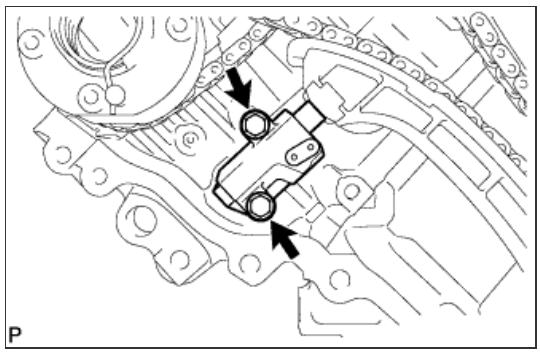
HINT:



If you cannot install the chain tensioner slipper due to the tension of the chain, use the hexagonal portion of the camshaft to loosen the chain, and then install the chain tensioner slipper.

11. INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY RH

a. Move the stopper plate clockwise to release the lock, and push the plunger deep into the tensioner.

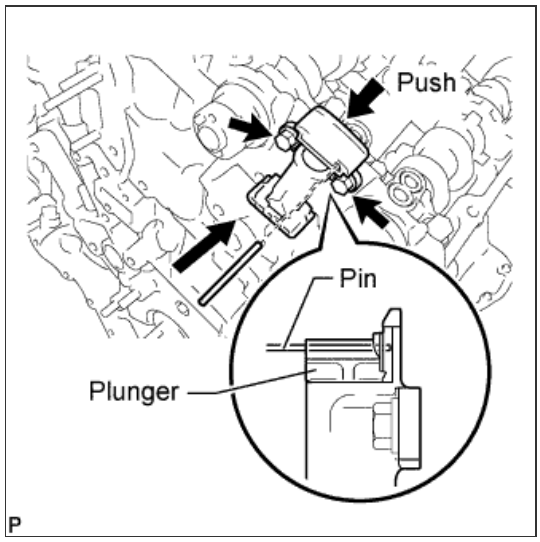


b. Move the stopper plate counterclockwise to set the lock, and insert a hexagon wrench into the hole of the stopper plate.

c. Install the chain tensioner with the 2 bolts.

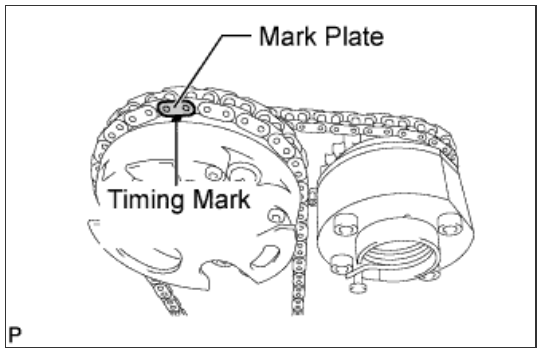
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

d. Remove the hexagon wrench from the chain tensioner.



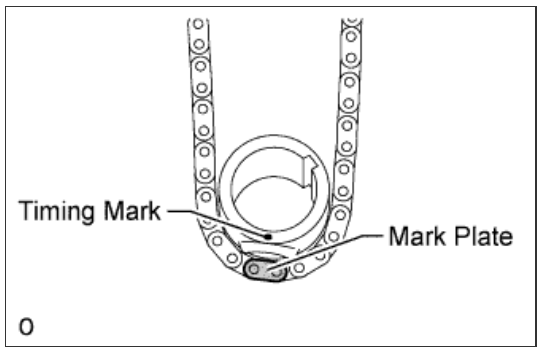
12. INSTALL NO. 3 CHAIN TENSIONER ASSEMBLY

a. Install the chain tensioner with the 2 bolts.



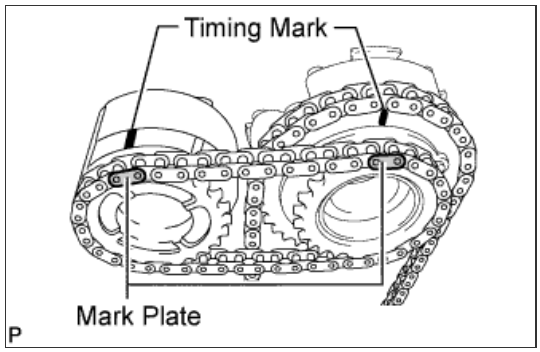
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. While pushing down the No. 2 chain tensioner, insert a pin of 1.0 mm (0.0394 in.) into the hole to fix it in place.



13. INSTALL NO. 1 CHAIN SUB-ASSEMBLY LH

a. Align the No. 1 chain orange mark plate with the camshaft timing gear timing mark, and attach the chain to the gear as shown in the illustration.



b. Align the No. 1 chain orange mark plate with the crankshaft timing sprocket timing mark, and attach the chain to the gear as shown in the illustration.

c. Align the No. 2 chain yellow mark plates with the timing marks of the camshaft timing gear assembly and camshaft timing exhaust gear assembly, and attach the No. 2 chain to the gears as shown in the illustration.

HINT:

The crankshaft timing sprocket LH and camshaft timing exhaust gear will be installed with the No. 1 and No. 2 chains connected to the gears.

d. Install the crankshaft timing sprocket LH to the crankshaft.

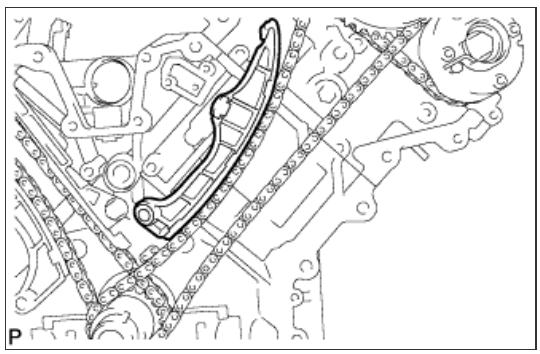
e. Align and attach the knock pin of the No. 3 camshaft with the pin hole of the camshaft timing gear.

f. Using the hexagonal portion of the No. 4 camshaft, align and attach the knock pin of the No. 4 camshaft with the pin hole of the camshaft timing exhaust gear.

NOTICE:

Because the timing mark positions of the gears may shift due to looseness of the No. 1 chain, use the hexagonal portion of the camshaft to hold the No. 3 camshaft in place until the No. 1 chain tensioner is installed.

g. Remove the pin from the No. 3 chain tensioner.

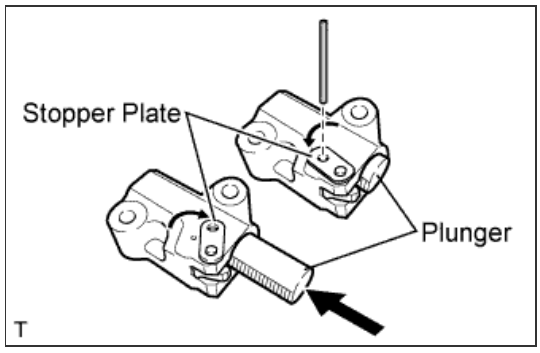


h. Using a wrench to hold the hexagonal portion of the No. 3 camshaft, temporarily install the bolt.

i. Using a wrench to hold the hexagonal portion of the No. 4 camshaft, temporarily install the bolt.

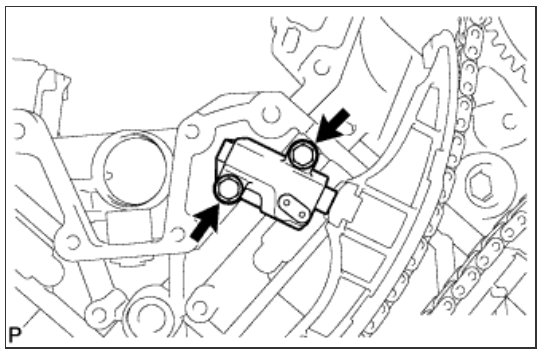
14. INSTALL NO. 1 CHAIN TENSIONER SLIPPER LH

HINT:



If you cannot install the chain tensioner slipper due to the tension of the chain, use the hexagonal portion of the camshaft to loosen the chain, and install the chain tensioner slipper.

15. INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY LH

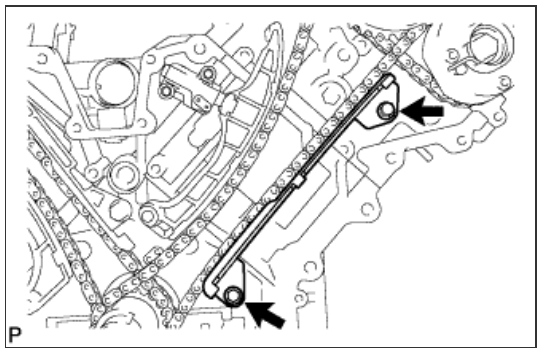


a. Move the stopper plate clockwise to release the lock, and push the plunger deep into the tensioner.

b. Move the stopper plate counterclockwise to set the lock, and insert a hexagon wrench into the hole of the stopper plate.

c. Install a new gasket and the chain tensioner with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

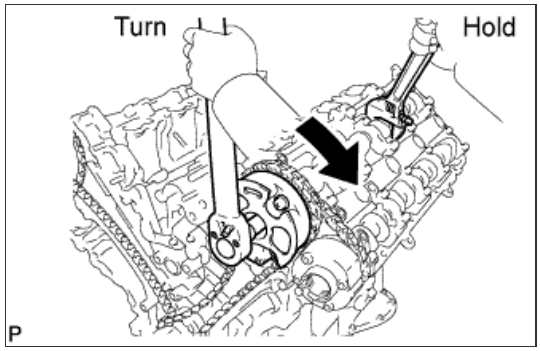


16. INSTALL NO. 1 CHAIN VIBRATION DAMPER LH

a. Install the vibration damper with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

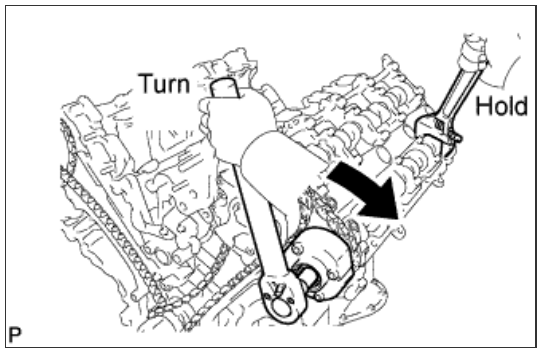
b. Remove the hexagon wrench from the No. 1 chain tensioner.



17. TIGHTEN CAMSHAFT TIMING GEAR ASSEMBLY

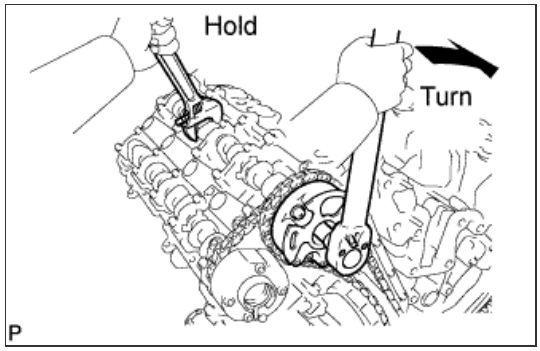
a. for Bank 1:

i. Using a wrench, hold the hexagonal portion of the No. 3 camshaft.



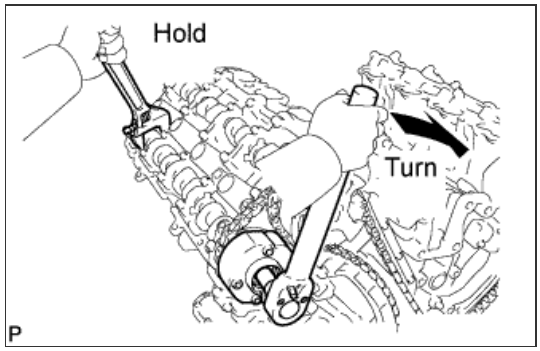
ii. Tighten the bolt of the camshaft timing gear.

Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }



iii. Using a wrench to hold the hexagonal portion of the No. 4 camshaft, tighten the bolt of the camshaft timing exhaust gear.

Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }



b. for Bank 2:

i. Using a wrench, hold the hexagonal portion of the No. 1 camshaft.

ii. Tighten the bolt of the camshaft timing gear.

Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

iii. Using a wrench to hold the hexagonal portion of the No. 2 camshaft, tighten the bolt of the camshaft timing exhaust gear.

Torque:
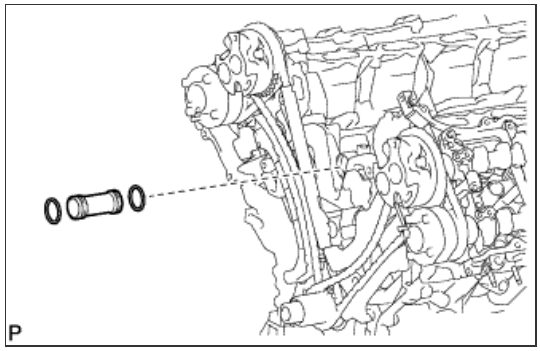
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

18. CHECK NO. 1 CYLINDER TO TDC/COMPRESSION

a. Temporarily install the crankshaft pulley bolt.

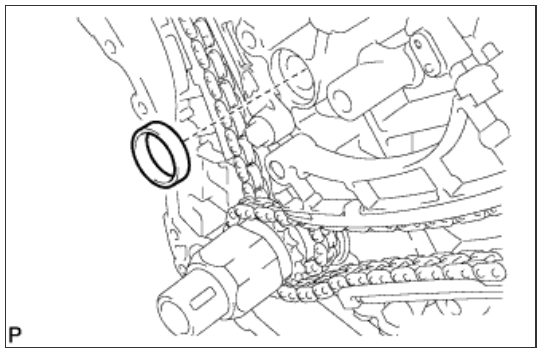
b. Rotate the crankshaft clockwise, and check that the timing marks on the crankshaft timing sprocket and camshaft timing gears are as shown in the illustration.



c. Remove the crankshaft pulley bolt.

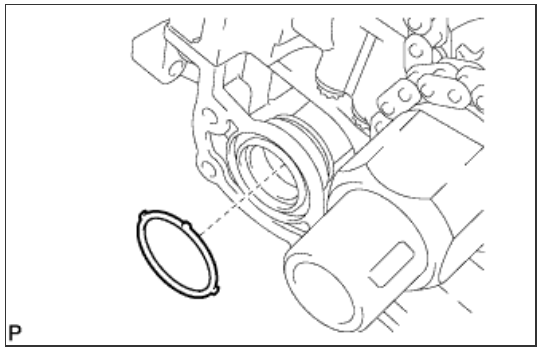
19. INSTALL WATER INLET PIPE

a. Apply soapy water to 2 new O-rings and install them to the inlet pipe.



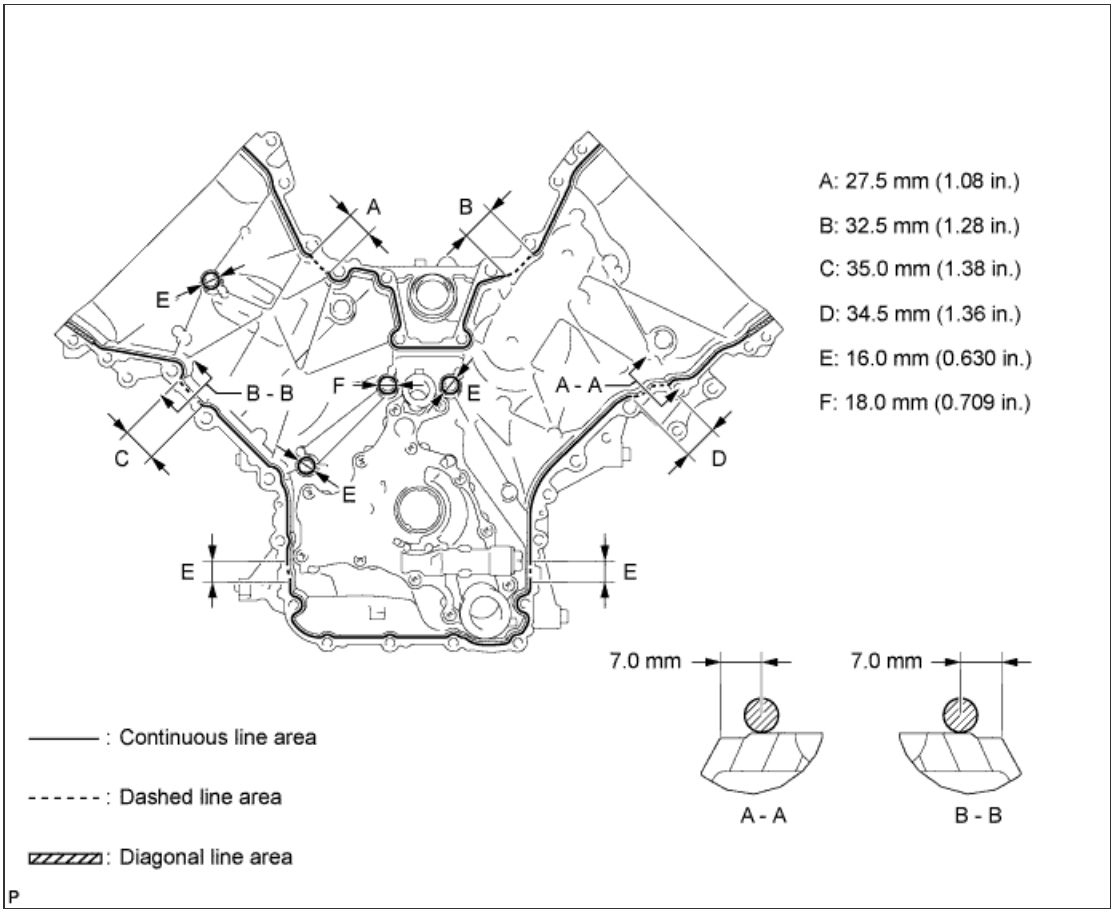
b. Install the inlet pipe to the No. 1 heat exchanger cover.

20. INSTALL TIMING CHAIN COVER SUB-ASSEMBLY



a. Apply a light coat of engine oil to a new oil pump gasket.

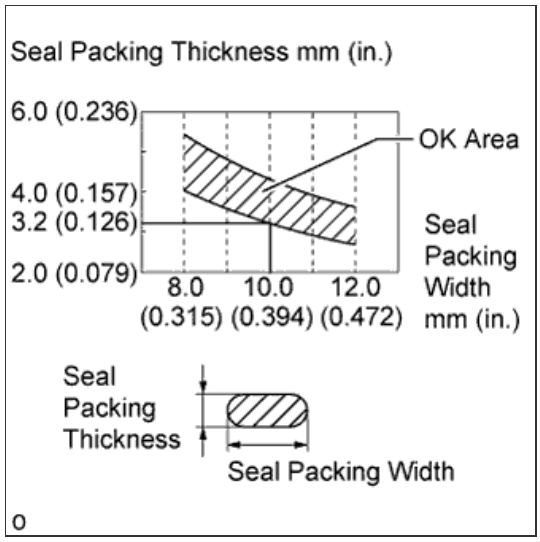
b. Install the oil pump gasket.



c. Apply a light coat of engine oil to a new O-ring.

d. Install the O-ring.

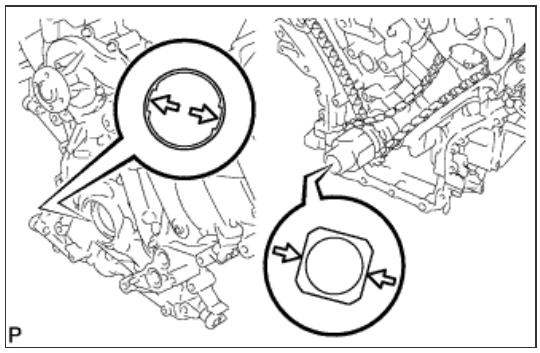
e. Apply seal packing in a continuous line to the timing chain cover as shown in the following illustration.



Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Apply Seal Packing as Follows:

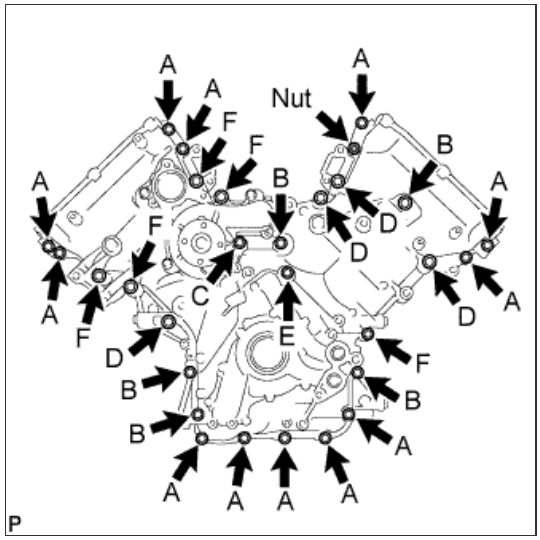
		Application Position from



Area	Seal Packing Diameter	Inside Edge of Cover
Continuous Line Area	3.0 to 4.0 mm (0.118 to 0.157 in.)	2.5 mm (0.0984 in.)
Dashed Line Area	6.4 mm (0.252 in.) or more, or within OK area shown in illustration	7.0 mm (0.276 in.)
Diagonal Line Area	3.0 to 4.0 mm (0.118 to 0.157 in.)	5.5 mm (0.217 in.)

NOTICE:

- **When the contact surfaces are wet, wipe them with an oil-free cloth before applying seal packing.**
- **Install the chain cover within 3 minutes and tighten the bolts within 10 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after installing.**

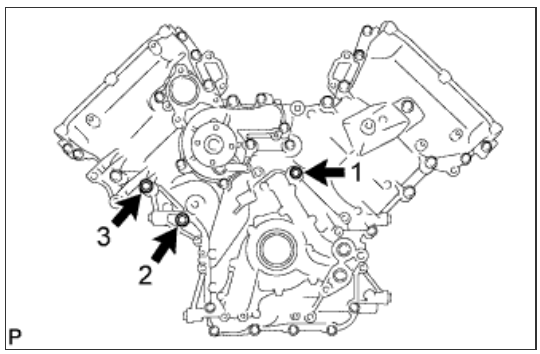


f. Align the oil pump drive rotor spline and crankshaft as shown in the illustration. Install the spline and chain cover to the crankshaft.

g. Temporarily install the timing chain cover with the 28 bolts and nut.

Standard Bolt:

Item	Length	Thread Diameter
Bolt A	25 mm (0.984 in.)	8 mm (0.315 in.)
Bolt B	55 mm (2.17 in.)	8 mm (0.315 in.)
Bolt C	70 mm (2.76 in.)	8 mm (0.315 in.)
Bolt D	35 mm (1.38 in.)	10 mm (0.394 in.)
Bolt E	55 mm (2.17 in.)	10 mm (0.394 in.)
Bolt F	80 mm (3.15 in.)	10 mm (0.394 in.)



NOTICE:

Make sure that there is no oil on the bolt threads.

h. Tighten the 3 bolts in several steps in the sequence shown in the illustration.

Torque:

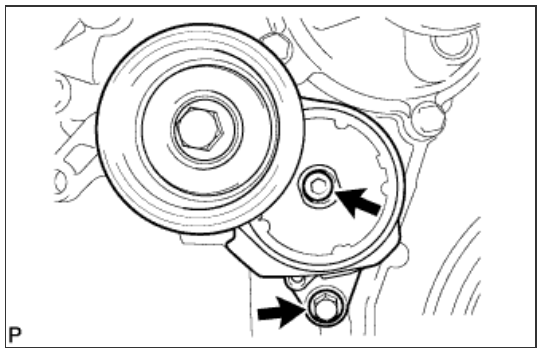
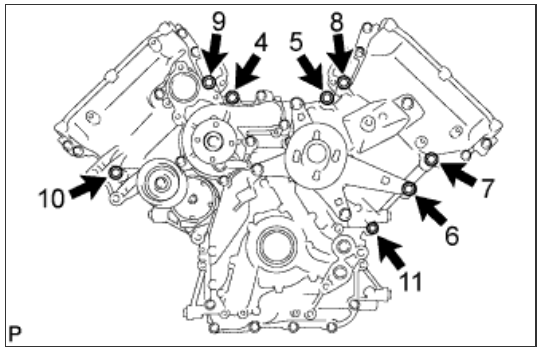
47 N*m{ 479 kgf*cm , 35 ft.*lbf }



i. Temporarily install the fluid coupling bracket with the 4 bolts.

Standard Bolt:

Item	Length	Thread Diameter
Bolt A	70 mm (2.76 in.)	8 mm (0.315 in.)
Bolt B	80 mm (3.15 in.)	10 mm (0.394 in.)



j. Temporarily install the belt tensioner with the standard bolt and 6 mm hexagon wrench bolt.

k. Tighten the 8 bolts labeled 4 to 11 in several steps in the sequence shown in the illustration.

Torque:

47 N*m{ 479 kgf*cm , 35 ft.*lbf }

l. Tighten the 23 bolts and nut labeled 12 to 35 in several steps in the sequence shown in the illustration.

Torque:

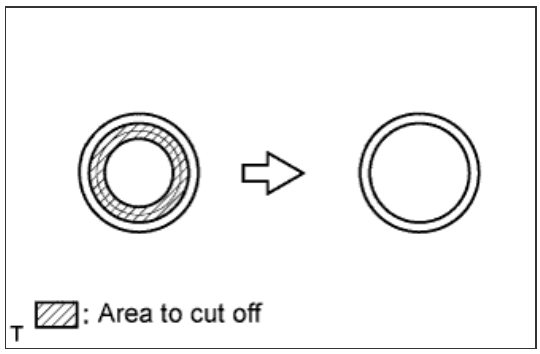
23 N*m{ 235 kgf*cm , 17 ft.*lbf }

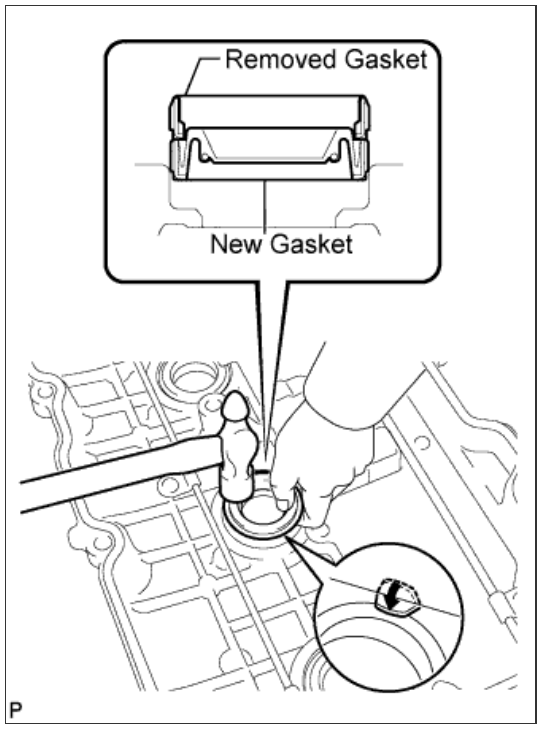


NOTICE:

After the installation, if the seal packing has seeped out at the areas labeled A shown in the illustration, wipe it off.

21. INSTALL SPARK PLUG TUBE GASKET

a. Using a cutter knife, cut off the seal part of the removed gasket.



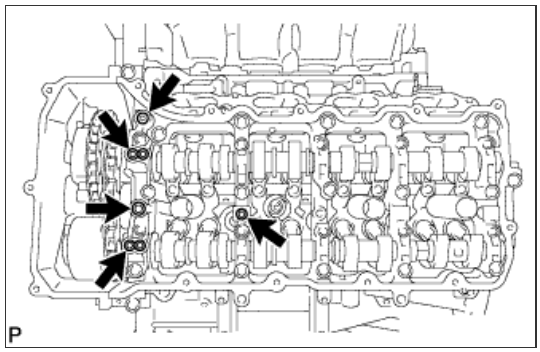
b. Using the removed gasket and a hammer, tap in a new gasket until it stops.

HINT:

If the removed gasket does not fit on the new one, correct the removed one with pliers.

c. Apply a light coat of MP grease to the lip of the gasket.

d. Return the 4 ventilation baffle plate claws to the original positions.



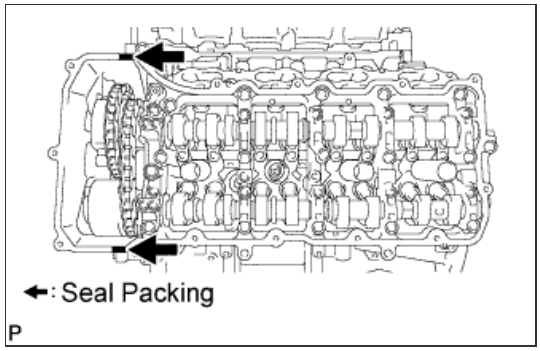
22. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY LH

a. Install 5 new gaskets to the camshaft bearing caps (No. 2, No. 3).

b. Install a new gasket to the cylinder head cover.

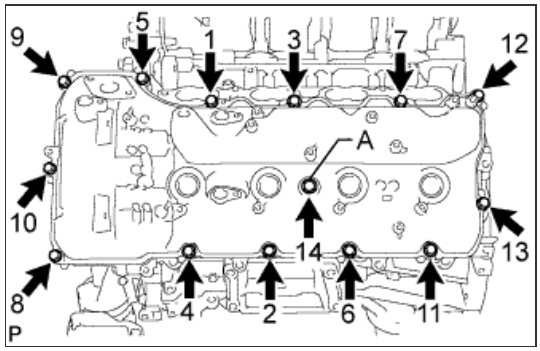
NOTICE:

Remove any oil from the contact surface.



c. Apply seal packing as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent



NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**

d. Install the cylinder head cover and a new seal washer with the 14 bolts in the order shown in the illustration.

Torque:
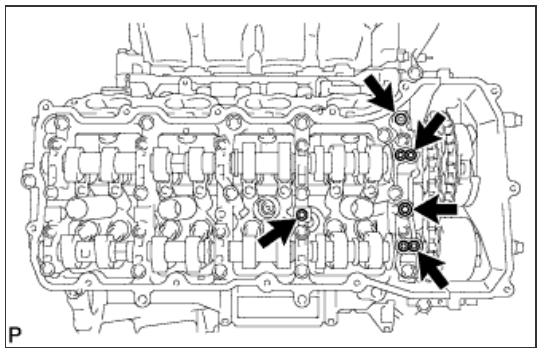
for bolt A:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
except bolt A:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }



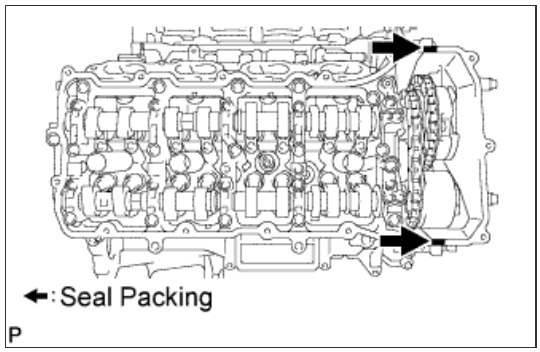
23. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY RH

a. Install 5 new gaskets to the camshaft bearing caps. (No. 1, No. 3).

b. Install a new gasket to the cylinder head cover.

NOTICE:

Remove any oil from the contact surface.



c. Apply seal packing as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

NOTICE:

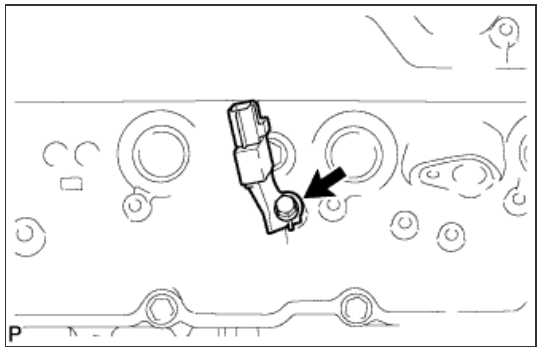
- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**



d. Install the cylinder head cover and a new seal washer with the 14 bolts in the order shown in the illustration.

Torque:
for bolt A:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
except bolt A:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

e. Install the noise filter to the cylinder head cover with the bolt.

Torque:
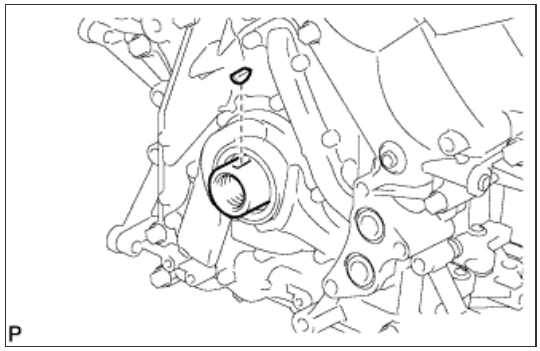
7.0 N*m{ 71 kgf*cm , 62 in.*lbf }



24. INSTALL IGNITION COIL ASSEMBLY

a. Install the 8 ignition coils with the 8 bolts.

Torque:
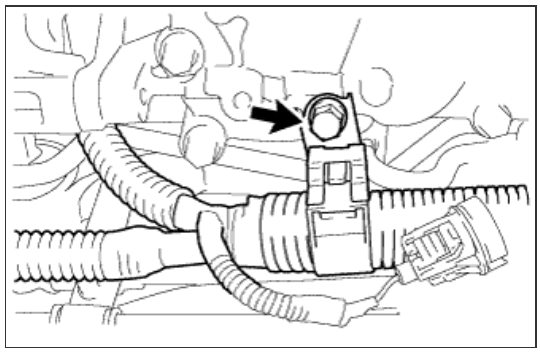
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

25. INSTALL CRANKSHAFT TIMING GEAR KEY



a. Install the crankshaft timing gear key to the crankshaft.

26. CONNECT WIRE HARNESS CLAMP BRACKET

a. Connect the bracket to the timing chain cover with the bolt.

Torque:
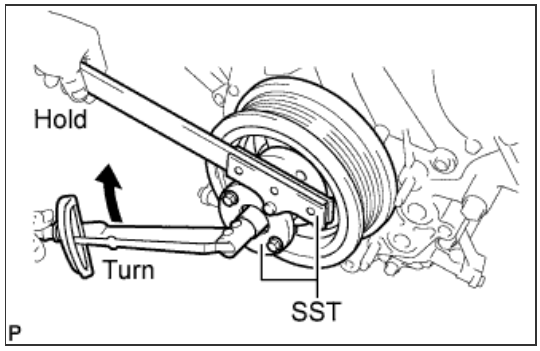
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



27. INSTALL CRANKSHAFT PULLEY

a. Align the pulley set key with the key groove of the pulley, and slide on the pulley.

b. Using SST, install the pulley set bolt.

SST
09213-70011 (09213-70020)
09330-00021

Torque:
300 N*m{ 3059 kgf*cm , 221 ft.*lbf }

28. INSTALL NO. 1 IDLER PULLEY SUB-ASSEMBLY

a. Install the idler pulley with the bolt.

Torque:
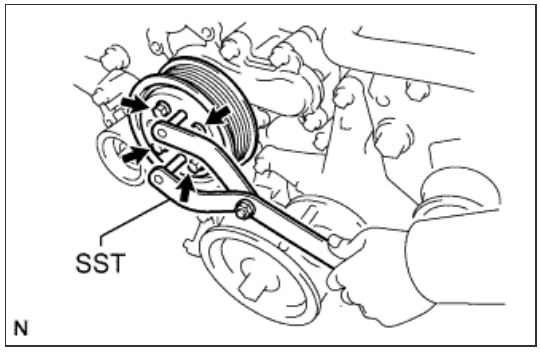
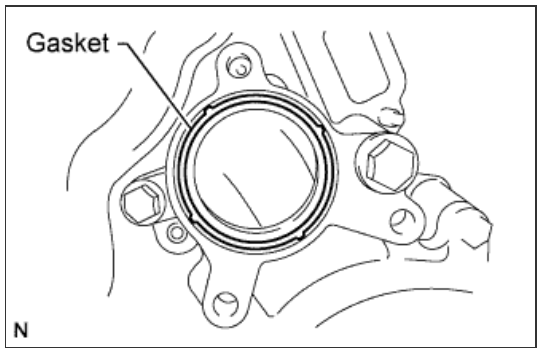
43 N*m{ 438 kgf*cm , 32 ft.*lbf }



29. INSTALL WATER PUMP PULLEY

a. Temporarily install the pulley with the 4 bolts.

b. Using SST, hold the pulley and tighten the 4 bolts.



SST
09960-10010 (09962-01000, 09963-01000)

Torque:
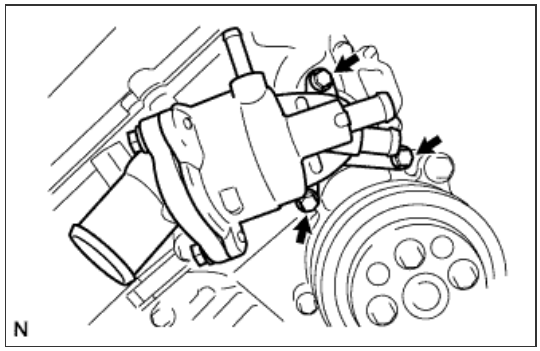
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



30. INSTALL WATER INLET HOUSING

a. Install a new gasket to the timing chain cover.

b. Install the water inlet with the 3 bolts.

Torque:
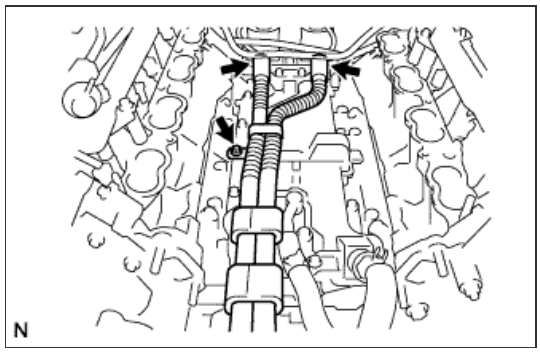
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

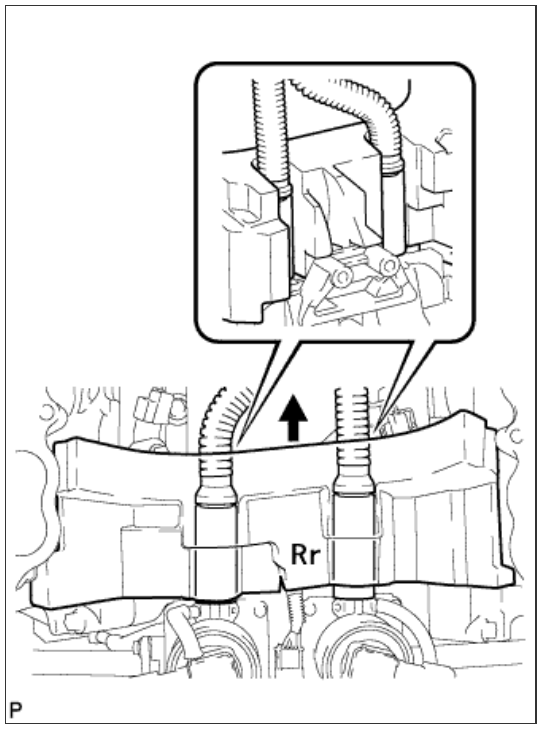


31. INSTALL AIR PIPE SUB-ASSEMBLY (w/ Secondary Air Injection System)

a. Connect the 2 hoses.

b. Install the air pipe with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



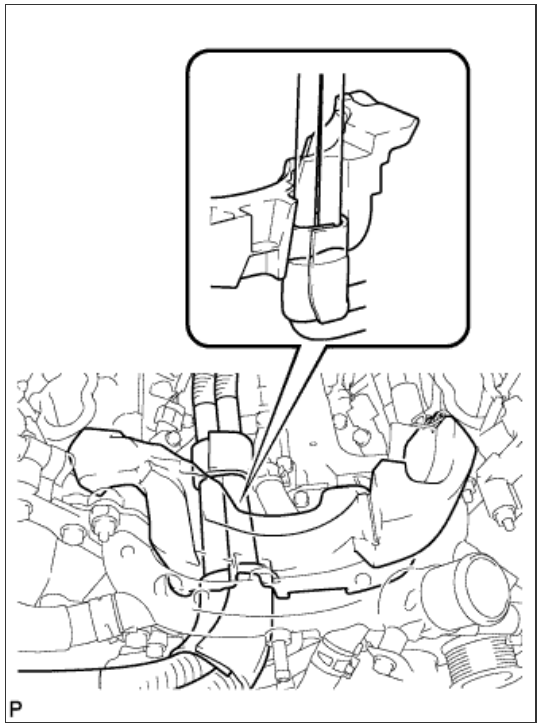
32. INSTALL NO. 1 ENGINE COVER

HINT:

- **Align the No. 1 engine cover cutouts with the air tube.**
- **Align the No. 1 engine cover with the air switching valve surface and cylinder head wall.**

NOTICE:

Make sure that the No. 1 engine cover is flush with the top surface of the intake port of the cylinder head for bank 1 and bank 2.



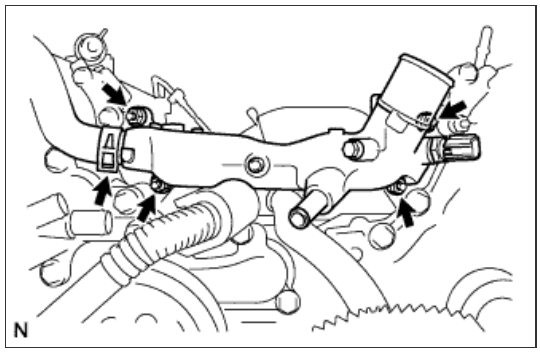
33. INSTALL NO. 2 ENGINE COVER

HINT:

- **Align the No. 2 engine cover cutout with the air tube.**
- **Align the No. 2 engine cover with the front water by-pass joint and cylinder head wall.**

NOTICE:

Make sure that the No. 2 engine cover is flush with the top surface of the intake port of the cylinder head.

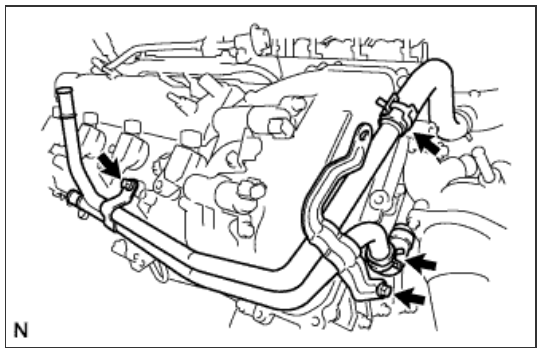


34. INSTALL FRONT WATER BY-PASS JOINT

a. Install 2 new gaskets and the water by-pass joint with the 4 nuts.

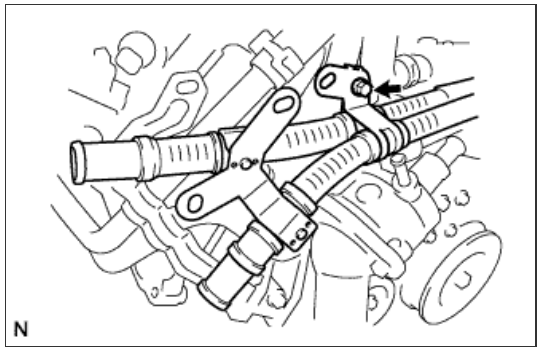
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. Connect the No. 2 water by-pass hose to the water by-pass joint.



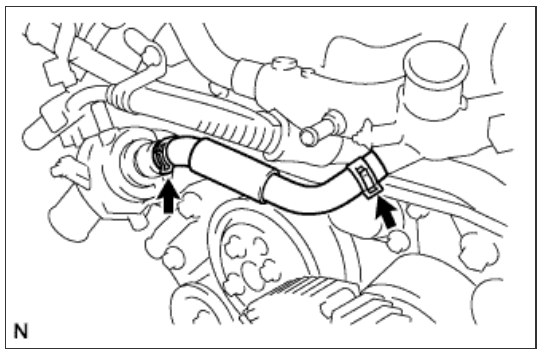
35. INSTALL WATER BY-PASS PIPE SUB-ASSEMBLY

a. Connect the 2 hoses.



b. Install the water by-pass pipe with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

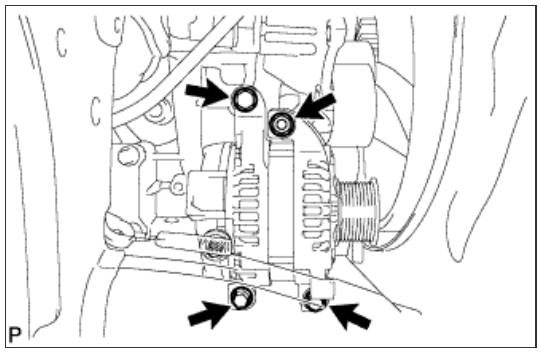


c. w/ Secondary Air Injection System:
Connect the air tube with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

36. INSTALL NO. 1 WATER BY-PASS HOSE

a. Install the No. 1 water by-pass hose by connecting the hose to the water inlet housing and front water by-pass joint.



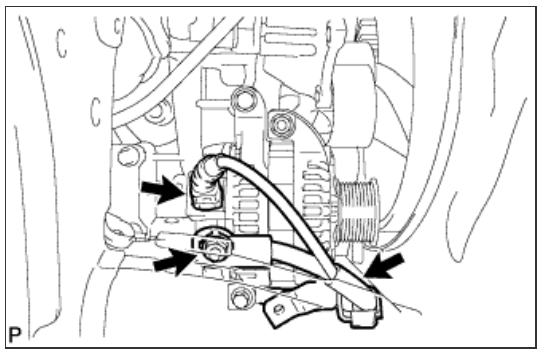
37. INSTALL GENERATOR ASSEMBLY

a. Install the generator with the 3 bolts and nut.

d. Install the generator with the 3 bolts and nut.

Torque:
43 N*m{ 438 kgf*cm , 32 ft.*lbf }

b. Connect the generator connector.

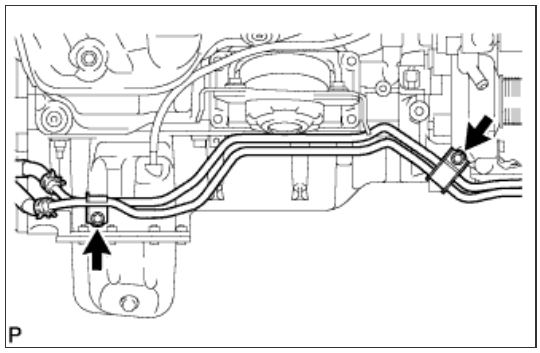


c. Connect the generator wire with the nut.

Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

d. Install the terminal cap.

e. Install the harness bracket to the generator with the bolt.



Torque:
31 N*m{ 316 kgf*cm , 23 ft.*lbf }

38. CONNECT OIL COOLER PIPE ASSEMBLY

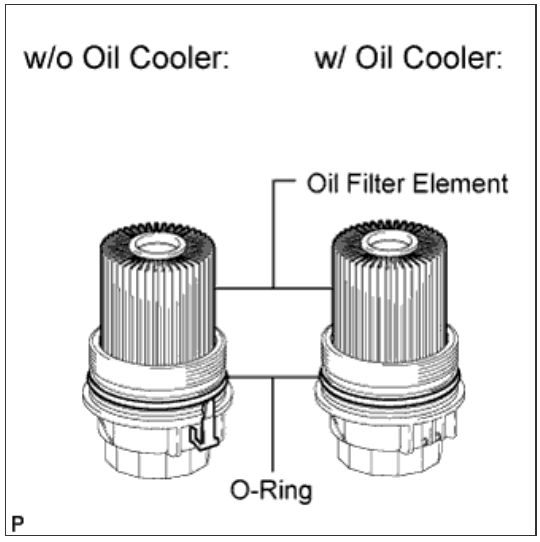
a. Connect the oil cooler pipe with the 2 bolts.

Torque:
14 N*m{ 143 kgf*cm , 10 ft.*lbf }

39. INSTALL OIL FILTER ELEMENT

a. Clean the inside of the oil filter cap, its threads and its O-ring groove.

b. Apply a small amount of engine oil to a new O-ring and install it to the oil filter cap.



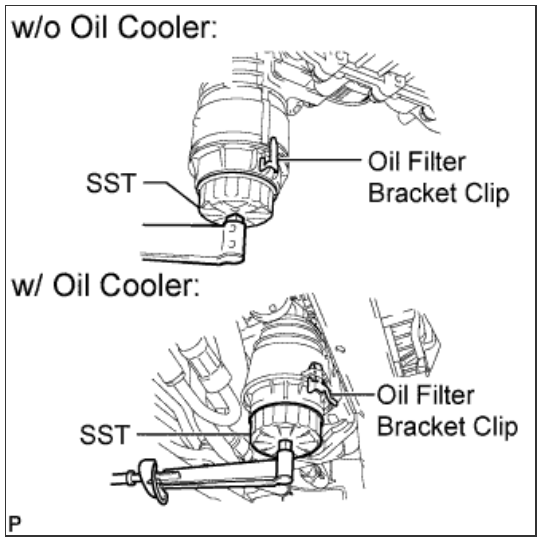
c. Set a new oil filter element to the oil filter cap.

d. Remove any dirt or foreign matter from the installation surface of the engine.

e. Apply a small amount of engine oil to the O-ring again and temporarily install the oil filter cap.

NOTICE:

Do not remove the oil filter bracket clip.



f. Using SST, tighten the oil filter cap.

SST
09228-06501

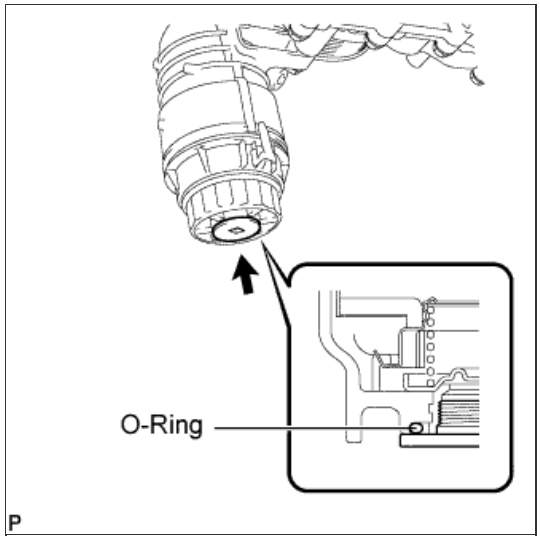
Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf }

NOTICE:

- **When tightening the oil filter cap, do not remove the oil filter bracket clip.**
- **Make sure that the oil filter is installed securely as shown in the illustration.**
- **Be careful that the O-ring does not get caught between any surrounding parts.**

g. Apply a small amount of engine oil to a new drain plug O-ring, and install it to the oil filter cap.

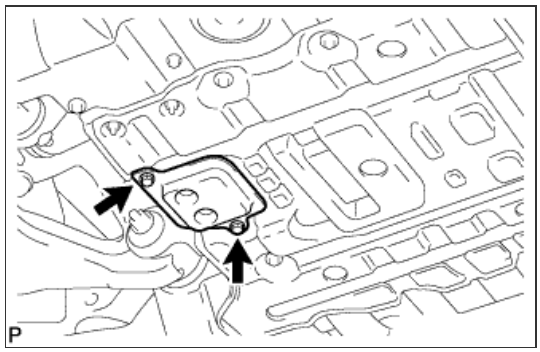
NOTICE:



Before installing the O-ring, remove any dirt or foreign matter from the installation surface of the oil filter cap.

h. Install the oil filter drain plug.

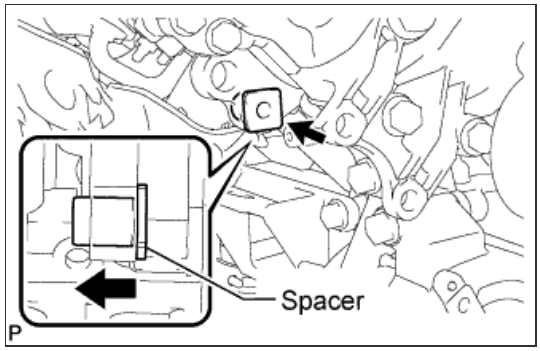
Torque:
13 N*m{ 127 kgf*cm , 9 ft.*lbf }



NOTICE:

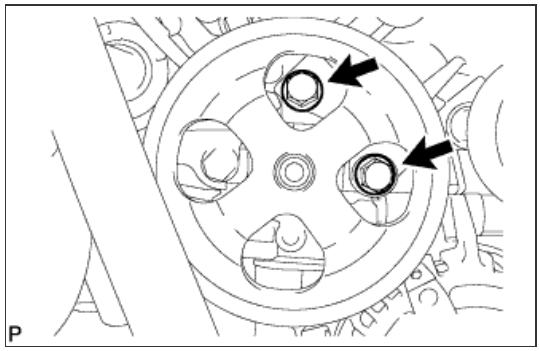
Be careful that the O-ring does not get caught between any surrounding parts.

i. Install the No. 2 engine under cover seal with the 2 bolts.



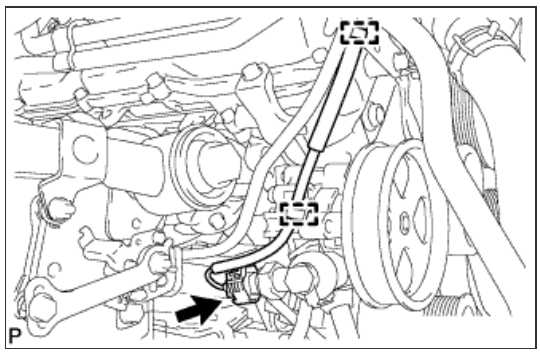
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

40. CONNECT VANE PUMP ASSEMBLY



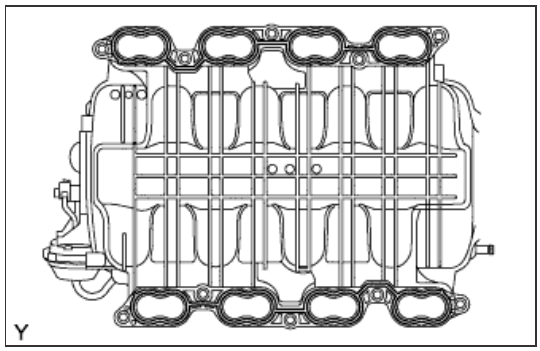
HINT:

Before performing the following procedures, move the spacer until the vane pump can be installed.



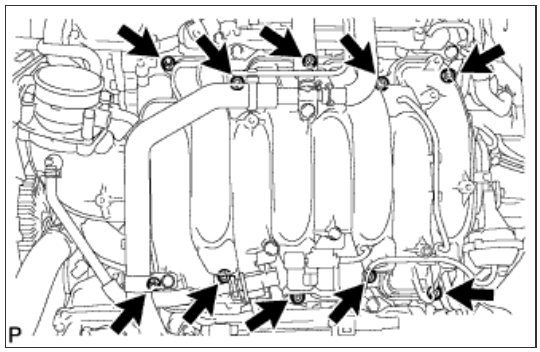
a. Connect the vane pump to the timing chain cover with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



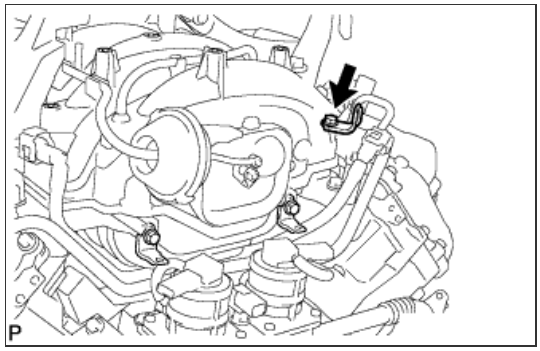
b. Connect the 2 clamps and power steering oil pressure switch connector.

41. INSTALL INTAKE MANIFOLD



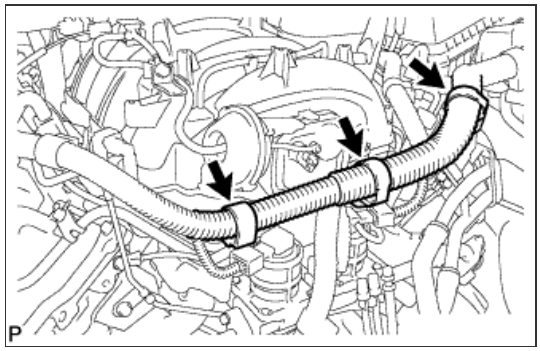
a. Place 2 new gaskets on the intake manifold.

b. Place the intake manifold on the cylinder head.

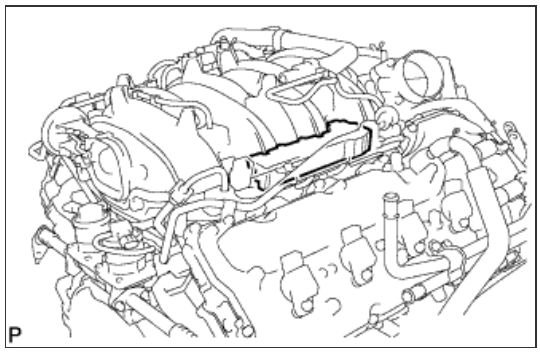


c. Install and uniformly tighten the 8 bolts and 2 nuts in several steps.

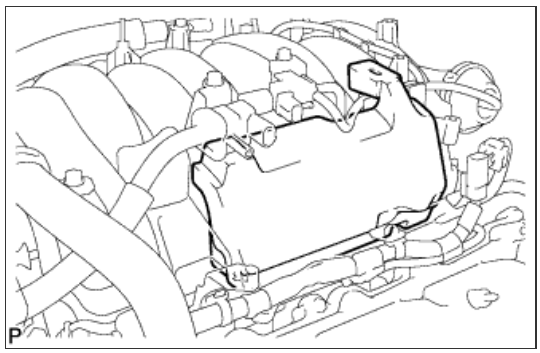
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



d. Install the wire bracket to the intake manifold with the bolt.

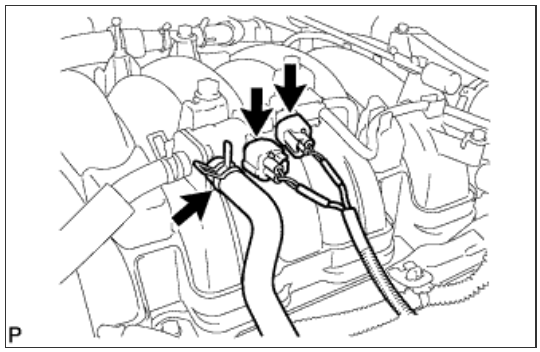


Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

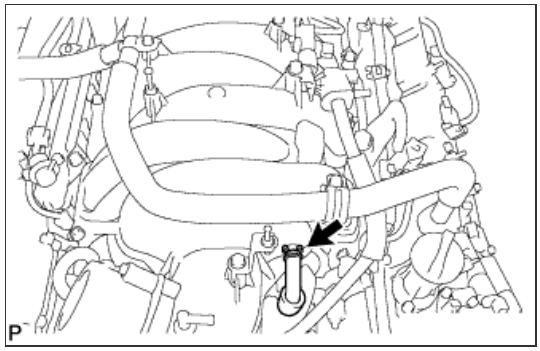


e. Connect the 3 wire clamps to the 3 wire brackets.

f. Install the No. 3 engine cover.



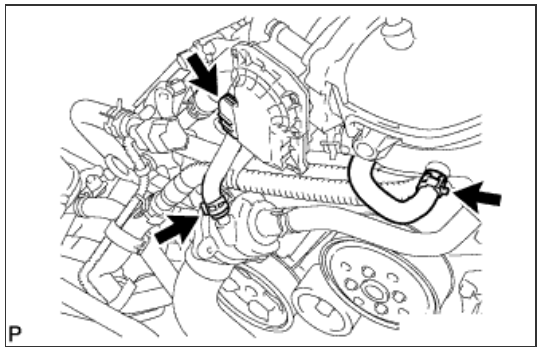
g. Install the No. 1 engine cover sub-assembly.



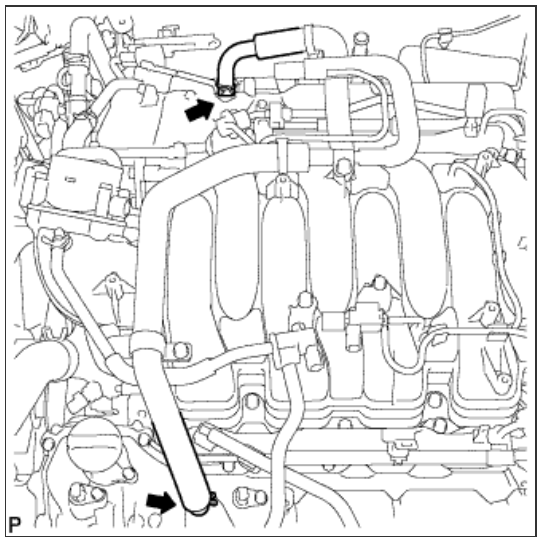
h. Connect the purge VSV connector.

i. Connect the purge line hose to the purge VSV.

j. Connect the vacuum switching valve connector (for ACIS).

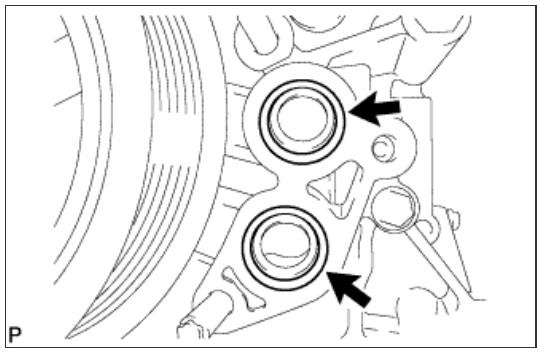


k. Connect the No. 1 ventilation hose.



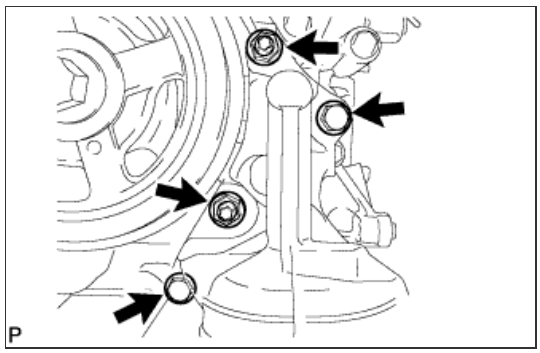
l. Connect the 2 water by-pass hoses.

m. Connect the throttle body connector.



n. Connect the ventilation hose to the ventilation pipe of the cylinder head cover LH and RH.

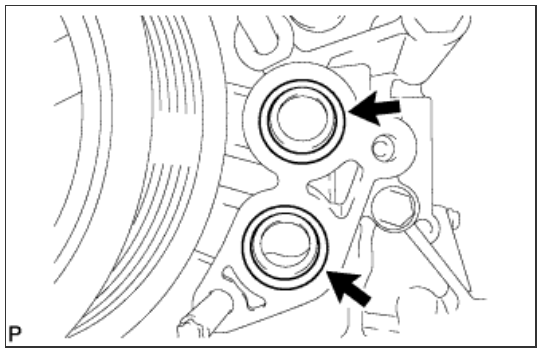
42. INSTALL OIL FILTER BRACKET (w/o Oil Cooler)



a. Apply a light coat of engine oil to 2 new O-rings.

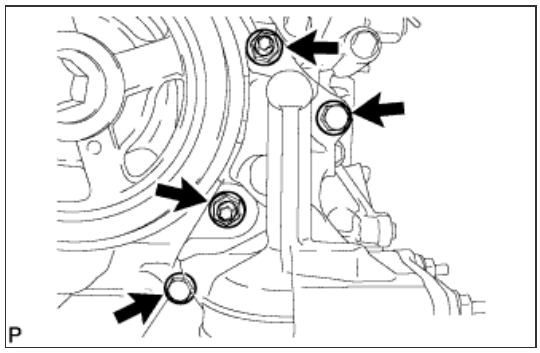
b. Install the 2 O-rings to the timing chain cover.

c. Install the oil filter bracket with the 2 bolts and 2 nuts.



Torque:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }

43. INSTALL OIL FILTER BRACKET (w/ Oil Cooler)

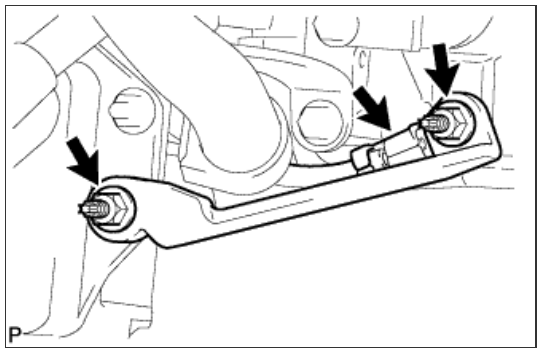


a. Apply a light coat of engine oil to 2 new O-rings.

b. Install the 2 O-rings to the timing chain cover.

c. Install the oil filter bracket with the 2 nuts and 2 bolts.

Torque:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }

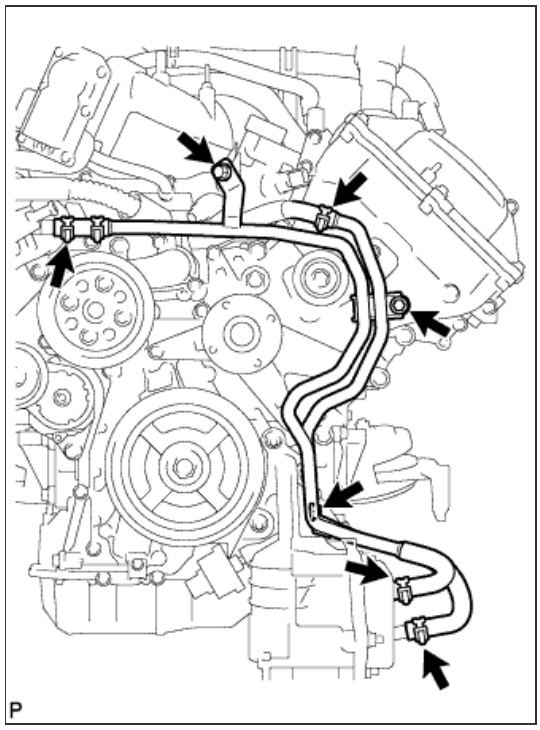


44. INSTALL NO. 1 OIL COOLER BRACKET (w/ Oil Cooler)

a. Connect the ground wire to the cylinder block.

b. Install the oil cooler bracket with the 2 nuts.

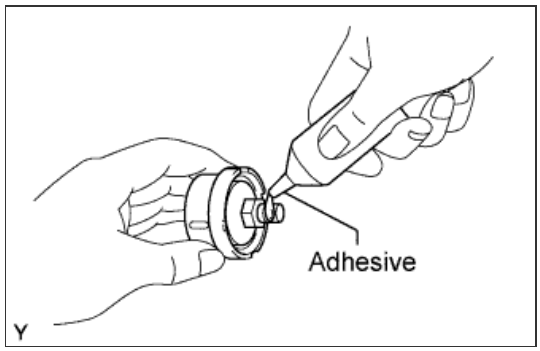
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



45. INSTALL NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY (w/ Oil Cooler)

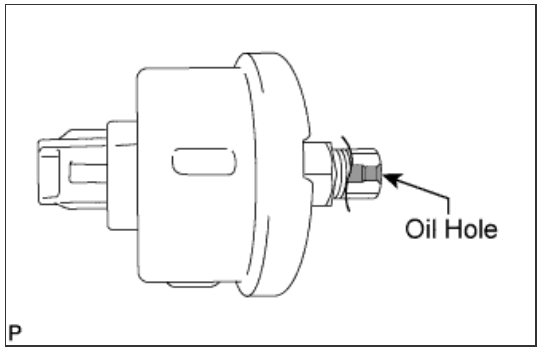
a. Connect the 4 hoses.

b. Install the water by-pass pipe with the 3 bolts.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

46. INSTALL OIL PRESSURE SENDER GAUGE ASSEMBLY

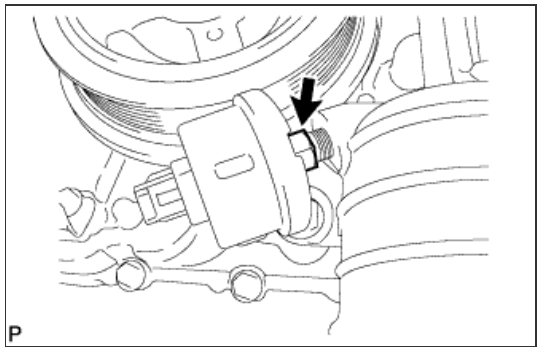


a. Apply adhesive to 2 or 3 threads of the oil pressure sender gauge.

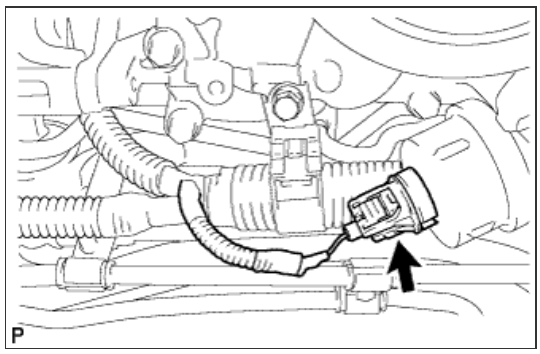
Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

NOTICE:

Do not allow adhesive to contact the oil hole.



b. Install the oil pressure sender gauge.



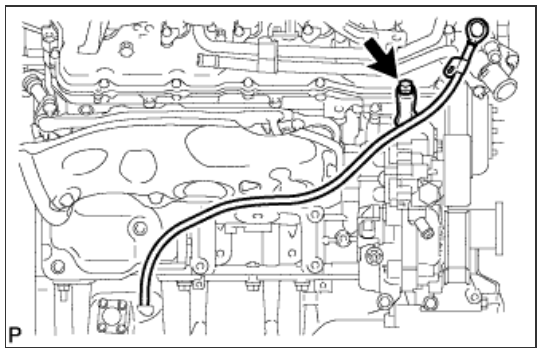
Torque:
15 N*m{ 153 kgf*cm , 11 ft.*lbf }

NOTICE:

Do not start the engine within 1 hour after installation.

c. Connect the sender gauge connector.

47. INSTALL ENGINE OIL LEVEL DIPSTICK GUIDE

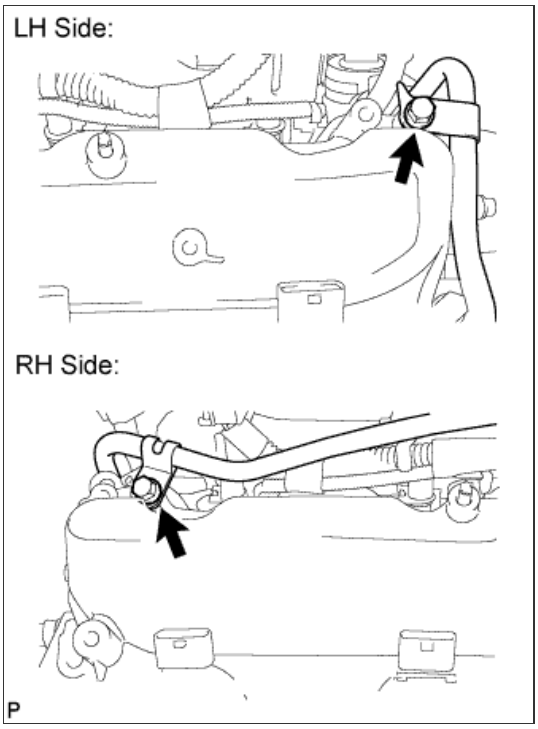


a. Apply a light coat of engine oil to a new O-ring.

b. Install the O-ring to the guide.

c. Install the dipstick guide with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



d. Install the dipstick.

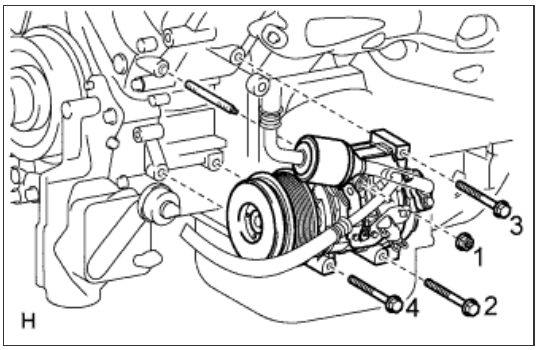
48. CONNECT NO. 2 FUEL TUBE SUB-ASSEMBLY

a. Connect the fuel tube with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

49. CONNECT COOLER COMPRESSOR ASSEMBLY

a. Install the cooler compressor with the stud bolt.



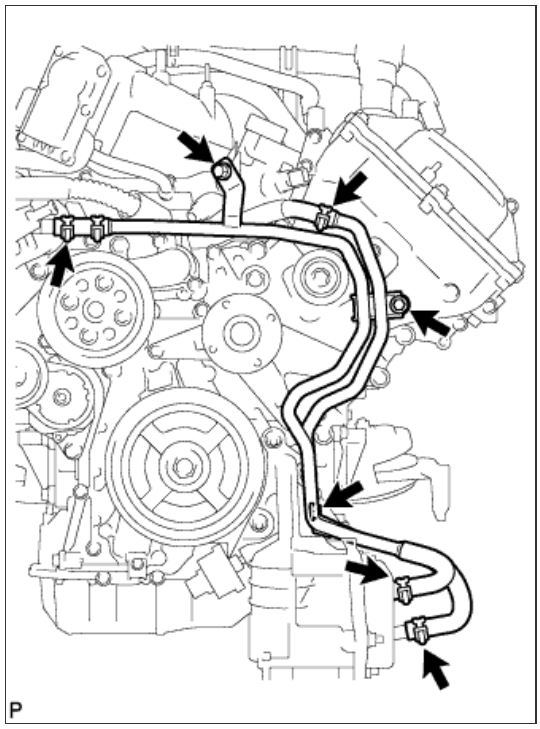
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. Install the 3 bolts and nut.

Torque:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }

NOTICE:

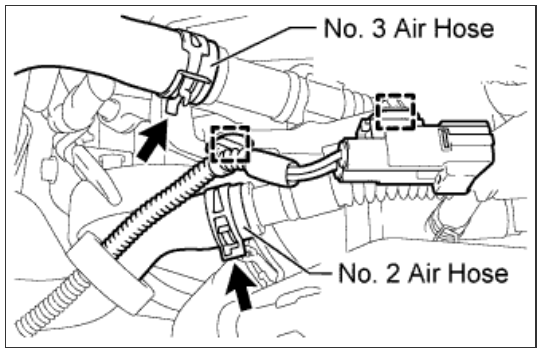
Tighten the bolts and nut in the order shown in the illustration to install the cooler compressor.



50. CONNECT NO. 2 WATER BY-PASS PIPE

a. Connect the 4 hoses.

b. Install the water by-pass pipe with the 3 bolts.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

51. CONNECT AIR PUMP HOSE AND WIRE HARNESS (w/ Secondary Air Injection System)

a. Connect the No. 2 and No. 3 air hoses.

b. Connect the 2 clamps and air pump wire harness.

52. CONNECT ENGINE WIRE

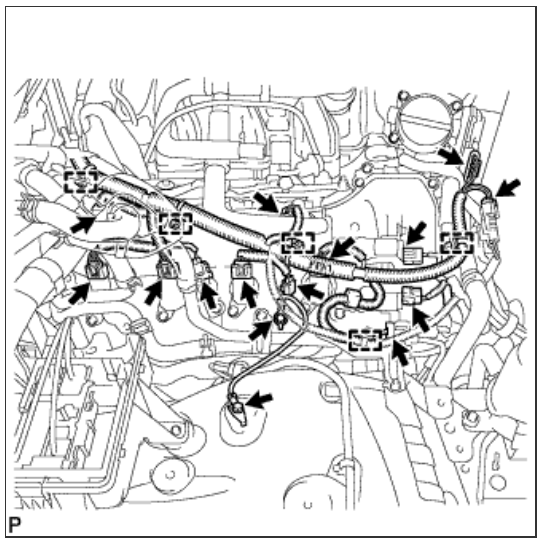
a. Engine Room RH Side:

i. Connect the 5 clamps.

ii. Connect the throttle position sensor and throttle control motor connector.

iii. w/ Secondary Air Injection System:
Connect the 2 air pump connectors.

iv. Install the ground wire with the 2 bolts.



Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

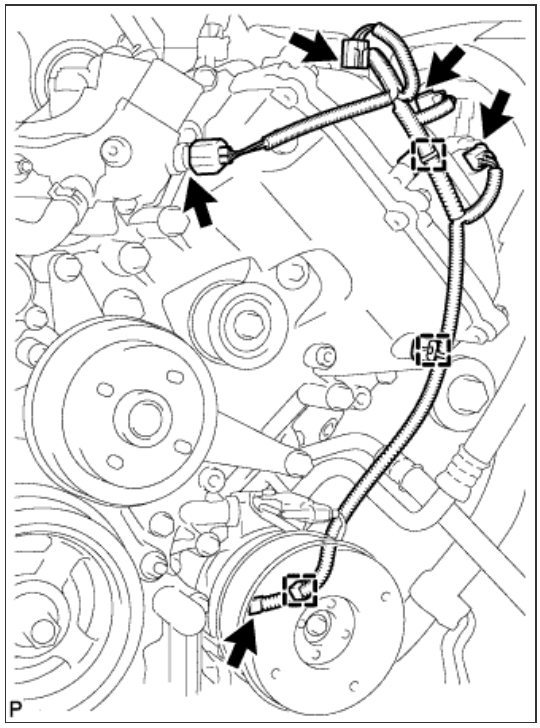
v. Connect the noise filter connector.

vi. Connect the 2 VVT sensor connectors.

HINT:

The wire harnesses on the exhaust side are wrapped with white tape.

vii. Connect the injector connector.



viii. Connect the 4 ignition coil connectors.

ix. Connect the 2 camshaft timing oil control valve connectors.

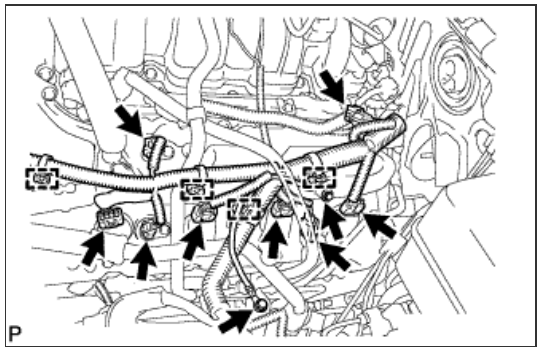
HINT:

The wire harnesses on the exhaust side are wrapped with white tape.

b. Engine Room LH Side:

i. Connect the cooler compressor connector.

ii. Connect the 3 clamps.



iii. Connect the camshaft position sensor connector.

iv. Connect the 2 camshaft timing oil control valve connectors.

HINT:

The wire harnesses on the exhaust side are wrapped with white tape.

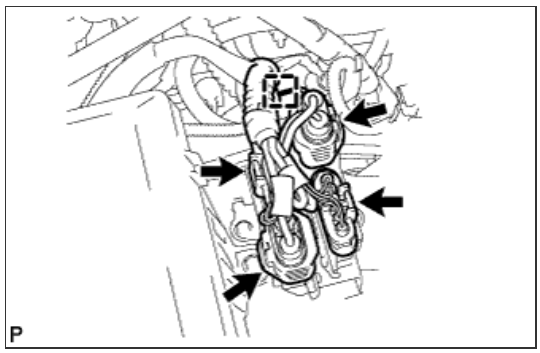
v. Connect the engine coolant temperature sensor connector.

vi. Connect the 4 clamps.

vii. Install the ground wire with the 2 bolts.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

viii. Connect the noise filter connector.

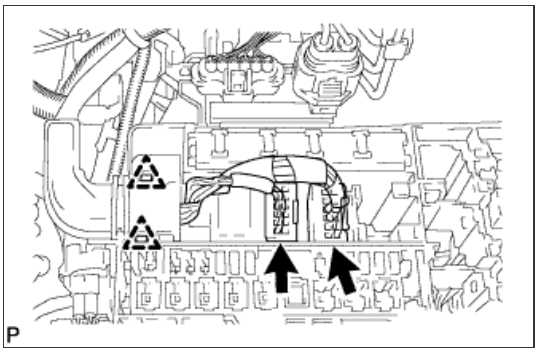


ix. Connect the 2 VVT sensor connectors.

HINT:

The wire harnesses on the exhaust side are wrapped with white tape.

x. Connect the 4 ignition coil connectors.

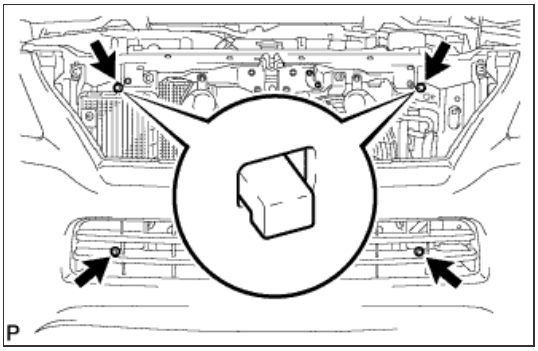


xi. Connect the injector connector.

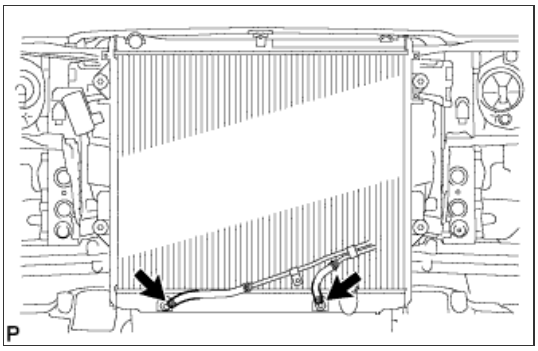
xii. w/ Secondary Air Injection System:
Connect the wire harness clamp and 4 air injection control driver connectors.

xiii. Connect the 2 connectors and 2 clips to the engine room junction block.

xiv. Install the engine room relay block cover.



53. INSTALL RADIATOR ASSEMBLY



a. Set the radiator bracket hooks to the radiator support holes.

b. Install the radiator with the 4 bolts.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

c. Connect the 2 oil cooler hoses.

54. INSTALL FAN SHROUD

a. Install the fan pulley.

b. Place the shroud together with the coupling fan between the radiator and engine.

NOTICE:

Be careful not to damage the radiator core.

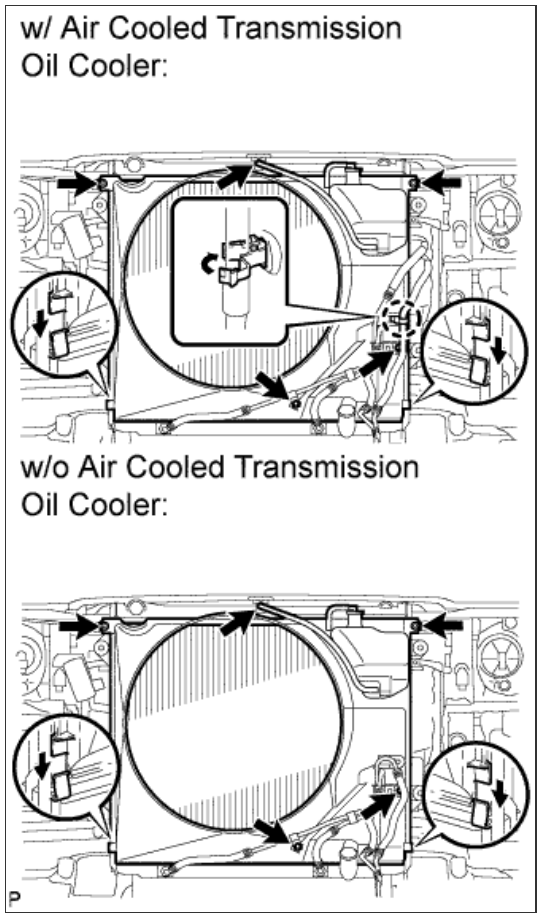
c. Temporarily install the fluid coupling fan to the fluid coupling bracket with the 4 nuts. Tighten the nuts as much as possible by hand.

d. Attach the claws of the shroud to the radiator as shown in the illustration.

e. Install the shroud with the 2 bolts.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

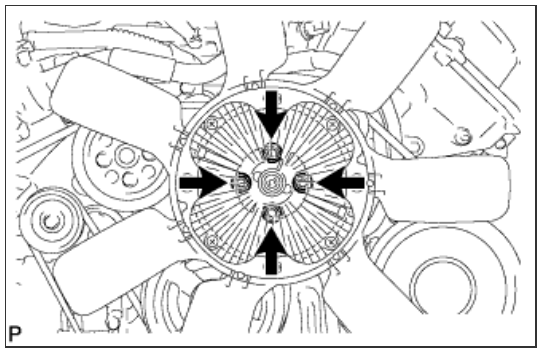
f. Connect the oil cooler tube to the fan shroud with the 2 bolts.



Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

g. w/ Air Cooled Transmission Oil Cooler:
Pass the hose through the flexible hose clamp and close the clamp as shown in

the illustration.

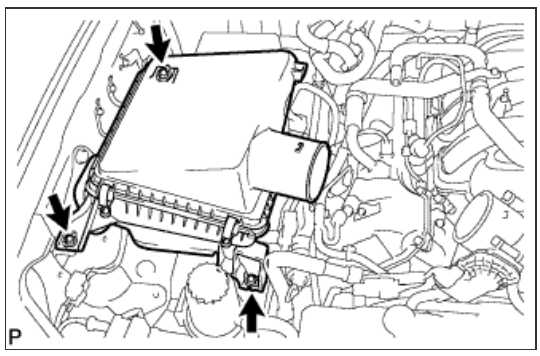


h. Connect the reservoir hose to the upper radiator tank.

i. Install the fan and generator V belt (Click here).

j. Tighten the 4 nuts of the fluid coupling fan.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



55. INSTALL NO. 2 RADIATOR HOSE

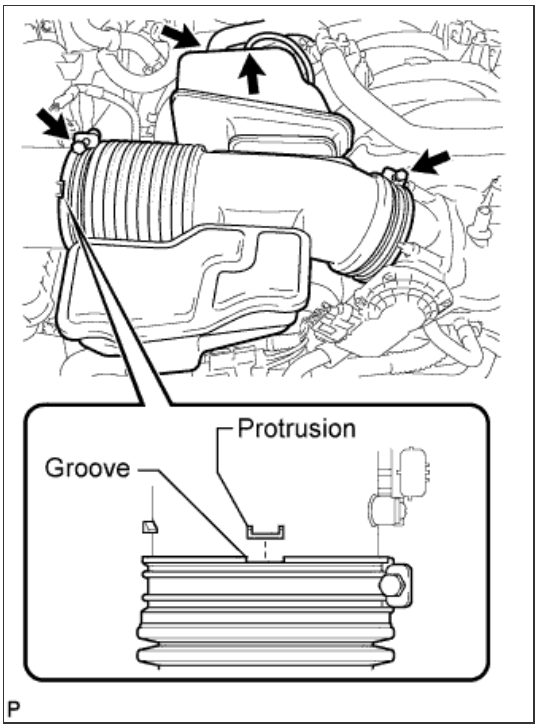
56. INSTALL NO. 1 RADIATOR HOSE

57. INSTALL AIR CLEANER ASSEMBLY

a. Install the air cleaner with the 3 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

58. INSTALL AIR CLEANER HOSE ASSEMBLY

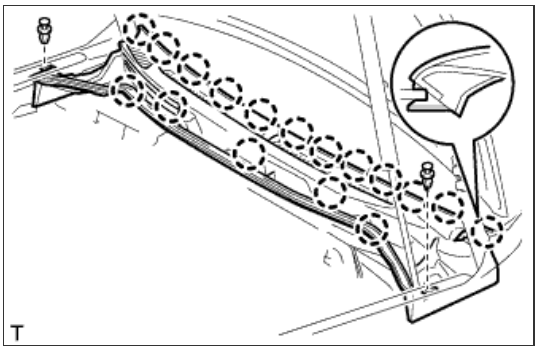


a. Install the air cleaner hose so that the protrusion of the air cleaner cap aligns with the groove of the hose as shown in the illustration.

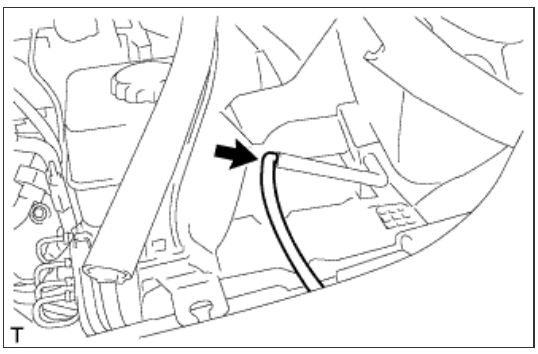
b. Tighten the 2 clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

c. Connect the vacuum hose.



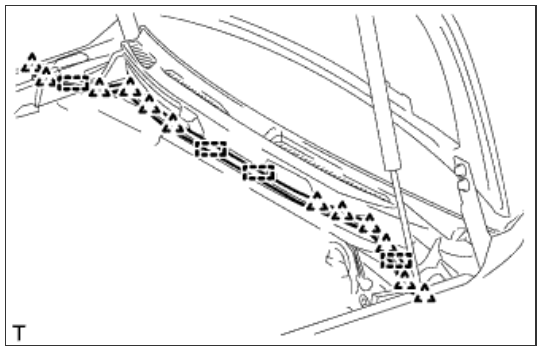
d. Connect the No. 2 ventilation hose.



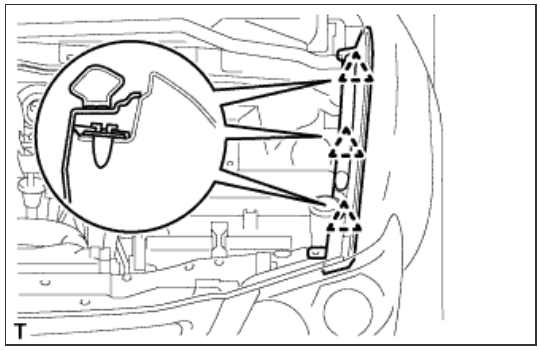
59. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

a. Push in the ventilator louver to attach the 17 claws and install the ventilator louver.

b. Install the 2 clips.



c. Connect the washer hose.



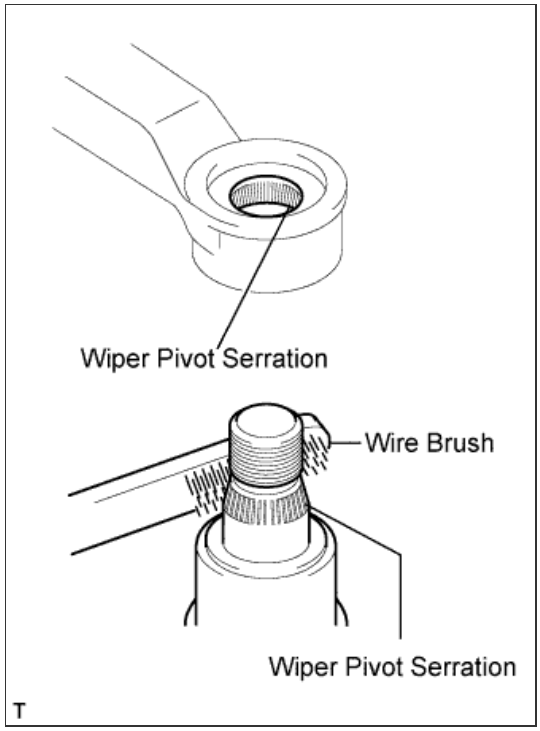
60. INSTALL HOOD TO COWL TOP SEAL

a. Attach the 12 clips and 4 clamps to install the hood to cowl top seal.

61. INSTALL FRONT FENDER MAIN SEAL LH

a. Attach the 3 clips to install the fender main seal.

62. INSTALL FRONT FENDER MAIN SEAL RH



HINT:

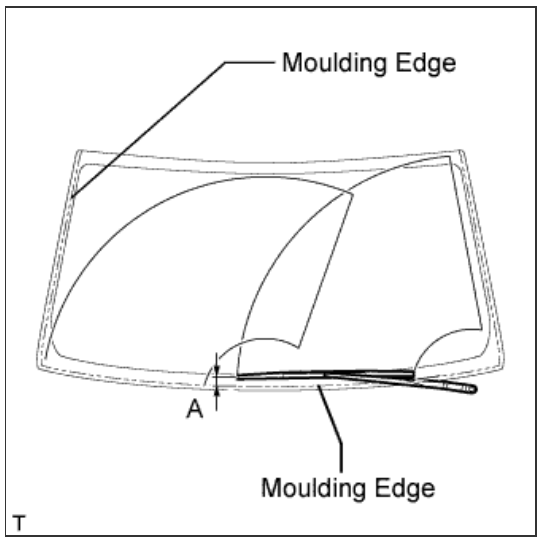
Use the same procedures described for the LH side.

63. INSTALL FRONT WIPER ARM LH

a. Stop the wiper motor at the automatic stop position.

b. Clean the wiper pivot serrations with a wire brush.

c. Install the wiper arm and blade with the nut. Make sure that the wiper arm and blade come to the position shown in the illustration.

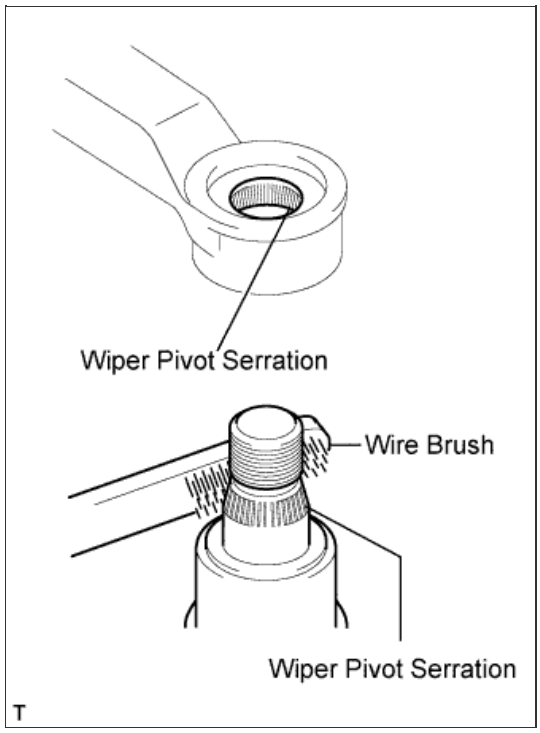


Standard:

Position	Specified Condition
A	16.8 to 36.8 mm (0.661 to 1.45 in.)

Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf }

HINT:



Hold down the wiper arm hinge with your hand while tightening the nut.

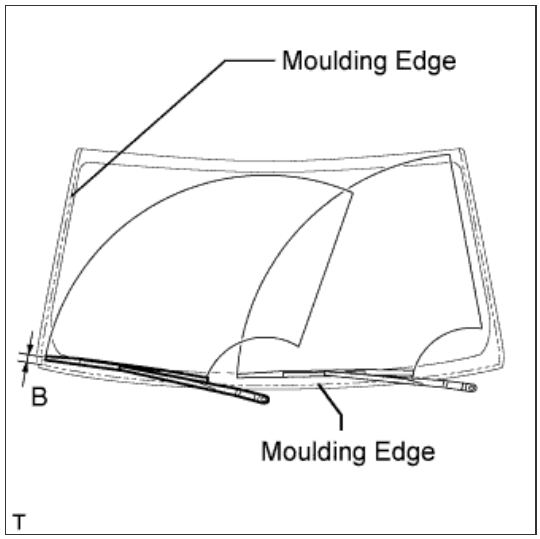
64. INSTALL FRONT WIPER ARM RH

a. Stop the wiper motor at the automatic stop position.

b. Clean the wiper pivot serrations with a wire brush.

c. Install the wiper arm and blade with the nut. Make sure that the wiper arm and blade come to the position shown in the illustration.

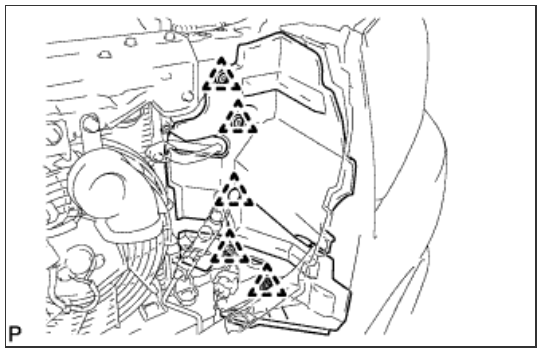
Standard:



Position	Specified Condition
B	20.0 to 40.0 mm (0.787 to 1.57 in.)

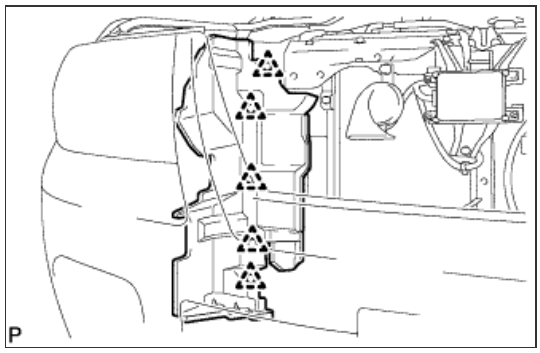
Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf }

HINT:



Hold down the wiper arm hinge with your hand while tightening the nut.

d. Operate the front wipers while spraying washer fluid on the windshield glass. Make sure that the front wipers function properly and there is no interference with the vehicle body.

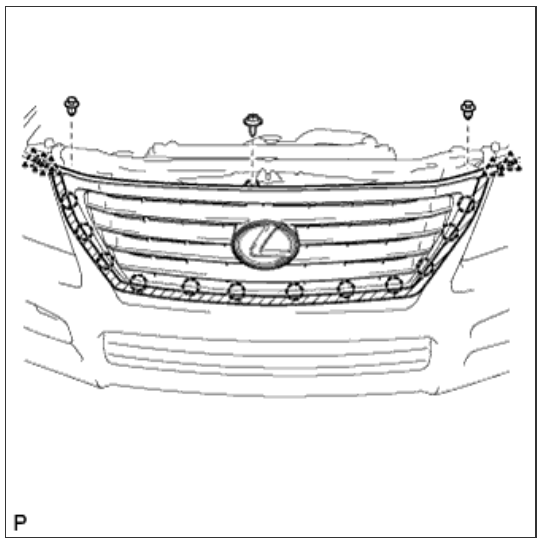


65. INSTALL RADIATOR SIDE DEFLECTOR LH

a. Install the side deflector with the 5 clips.

66. INSTALL RADIATOR SIDE DEFLECTOR RH (w/o Air Cooled Transmission Oil Cooler)

a. Install the side deflector with the 5 clips.



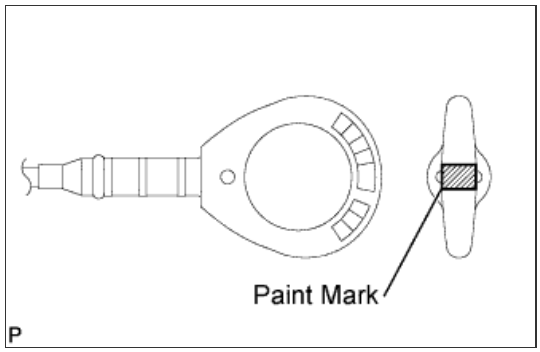
67. INSTALL RADIATOR GRILLE

a. w/ Wide View Front Monitor System:
Connect the connector.

b. Attach the 12 claws to install the radiator grille.

c. Attach the 5 clips to install the detached part of the upper radiator seal.

d. Install the screw and 2 clips.



68. ADD ENGINE OIL

a. Add fresh oil and install the oil filler cap.

Standard Oil Grade:

Oil Grade	Oil Viscosity (SAE)

API grade SL "Energy-Conserving", SM "Energy-Conserving" or ILSAC multigrade engine oil	0W-20 5W-20 5W-30 10W-30
API grade SL or SM multigrade engine oil	15W-40 20W-50

Standard Oil Capacity:

Paint Mark	Item	Specified Condition
Blue	Drain and refill with oil filter change	7.0 liters (7.4 US qts, 6.2 Imp. qts)
	Drain and refill without oil filter change	6.6 liters (7.0 US qts, 5.8 Imp. qts)
	Dry fill	8.4 liters (8.9 US qts, 7.4 Imp. qts)
Green	Drain and refill with oil filter change	7.5 liters (7.9 US qts, 6.6 Imp. qts)
	Drain and refill without oil filter change	7.1 liters (7.5 US qts, 6.2 Imp. qts)
	Dry fill	9.3 liters (9.8 US qts, 8.2 Imp. qts)

69. ADD ENGINE COOLANT

a. Add engine coolant.

Standard Capacity:

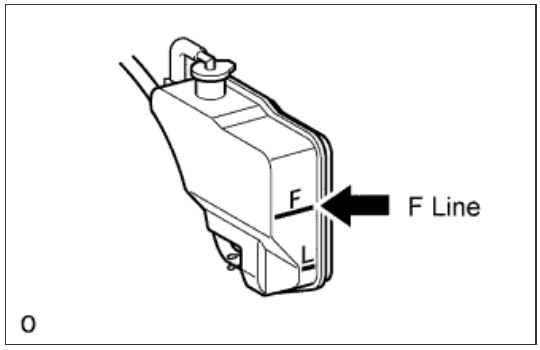
Item	Specified Condition
with transmission oil cooler	16.7 liters (17.6 US qts, 14.7 Imp. qts)
without transmission oil cooler	16.2 liters (17.1 US qts, 14.3 Imp. qts)

NOTICE:

Do not substitute plain water for engine coolant.

HINT:

TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).



b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the reservoir cap.

d. Press the No. 1 and No. 2 radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Start the engine and warm it up until the thermostat opens.

NOTICE:

Switch off the A/C.

g. Maintain the engine speed at 2000 to 2500 rpm.

NOTICE:

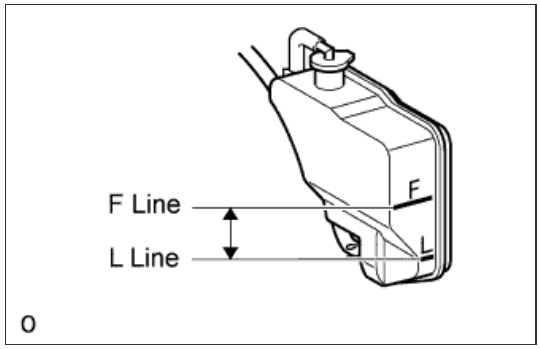
- **Make sure that the radiator reservoir still has some coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally**

high temperature.

- If there is not enough coolant, the engine may burn out or overheat.
- Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the F line.
- Run the engine at 2000 rpm until the coolant level has stabilized.

h. Press the No. 1 and No. 2 radiator hoses several times by hand to bleed air.

CAUTION:



- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the fan.**

i. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

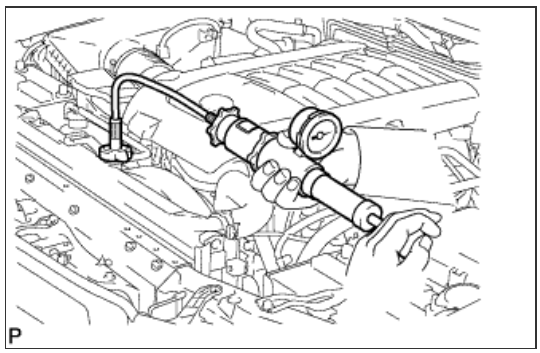
j. Check that the coolant level is between the F and L lines.
If the coolant level is below the L line, repeat all of the procedures above.
If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.

70. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable from the cable is reconnected (Click here).

71. INSPECT FOR OIL LEAK



a. Start the engine. Make sure that there are no oil leaks from the area that was worked on.

72. INSPECT FOR COOLANT LEAK

a. Fill the radiator with coolant and attach a radiator cap tester.

b. Warm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.

73. INSPECT ENGINE OIL LEVEL

a. Warm up the engine, stop the engine and wait 5 minutes. The oil level should be between the dipstick low level mark and full level mark.
If low, check for leakage and add oil up to the full level mark.

NOTICE:

Do not fill engine oil above the full level mark.

74. INSPECT IGNITION TIMING

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. Remove the engine room side cover LH.

c. Remove the engine room side cover RH.

d. Remove the upper radiator support seal.

e. Remove the V-bank cover.

f. When using the intelligent tester:

i. Connect the intelligent tester to the DLC3.

ii. Start the engine and idle it.

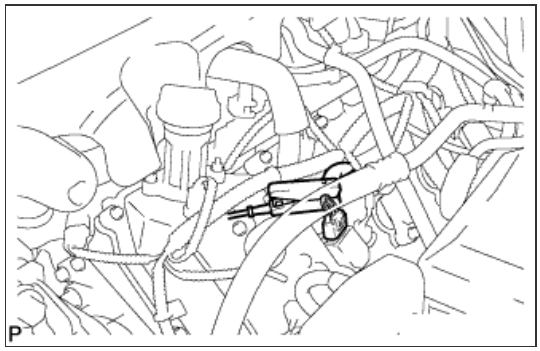
iii. Turn the intelligent tester ON.

iv. Enter the following menus: Powertrain / Engine and ECT / Data List / Primary / IGN Advance.

HINT:

Refer to the intelligent tester operator's manual for further details.

Standard ignition timing:
8 to 12° BTDC @ idle (transmission in neutral and A/C switch off)



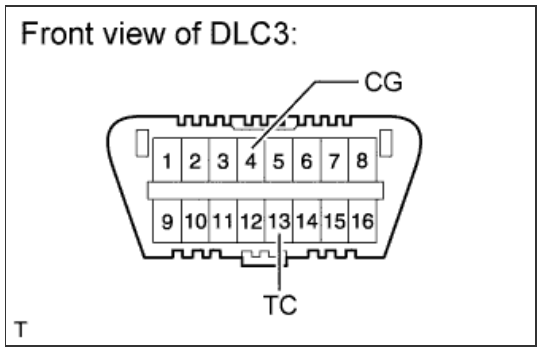
v. Disconnect the intelligent tester from the DLC3.

g. When not using the intelligent tester:

i. Connect the tester probe of a timing light to the wire of the ignition coil connector for the No. 1 cylinder.

NOTICE:

Use a timing light that detects primary signals.



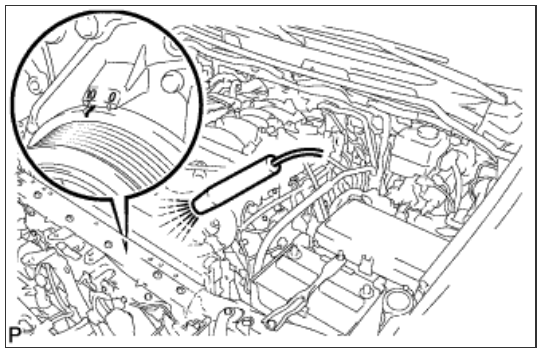
ii. Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.

SST
09843-18040

NOTICE:

- **Confirm the terminal numbers before connecting them. Connecting the wrong terminals can damage the engine.**
- **Switch off all accessories and the A/C before connecting the terminals.**

iii. Using the timing light, check the ignition timing.



Standard ignition timing:
8 to 12° BTDC @ idle (transmission in neutral and A/C switch off)

iv. Remove SST from the DLC3.

v. Check the ignition timing.

Standard ignition timing:
7 to 24° BTDC @ idle (transmission in neutral and A/C switch off)

vi. Disconnect the timing light from the engine.

h. Install the V-bank cover.

i. Install the upper radiator support seal.

j. Install the engine room side cover RH.

k. Install the engine room side cover LH.

75. INSPECT ENGINE IDLE SPEED

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. When using the intelligent tester:

i. Connect the intelligent tester to the DLC3.

NOTICE:

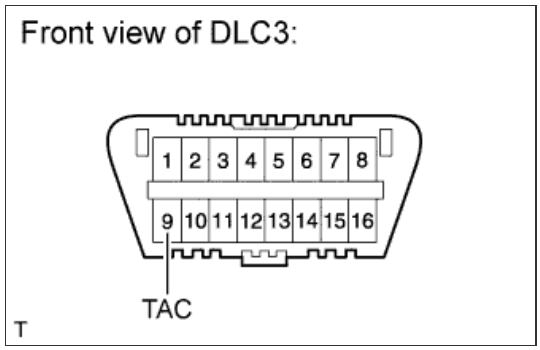
Switch off all accessories and the A/C before connecting the intelligent tester.

ii. Race the engine at 2500 rpm for approximately 90 seconds.

iii. Turn the intelligent tester ON.

iv. Enter the following menus: Powertrain / Engine and ECT / Data List / Primary / Engine Speed.

Standard idle speed:
650 to 750 rpm (transmission in neutral and A/C switch off)



HINT:

Refer to the intelligent tester operator's manual for further details.

If the idle speed is not as specified, check the air intake system.

v. Disconnect the intelligent tester from the DLC3.

c. When not using the intelligent tester:

i. Using SST, connect the tachometer probe to terminal 9 (TAC) of the DLC3.

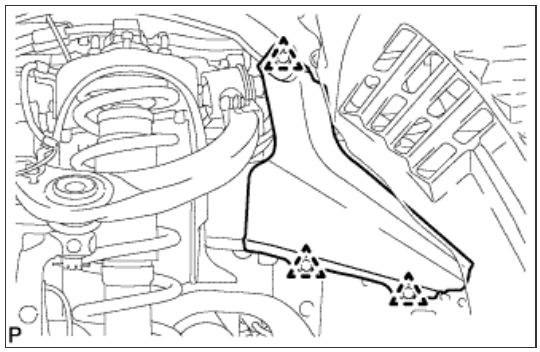
SST
09843-18030

NOTICE:

- **Confirm the terminal number before connecting the probe. Connecting the probe to the wrong terminal can damage the engine.**
- **Switch off all accessories and the A/C before connecting the probe.**

ii. Race the engine at 2500 rpm for approximately 90 seconds.

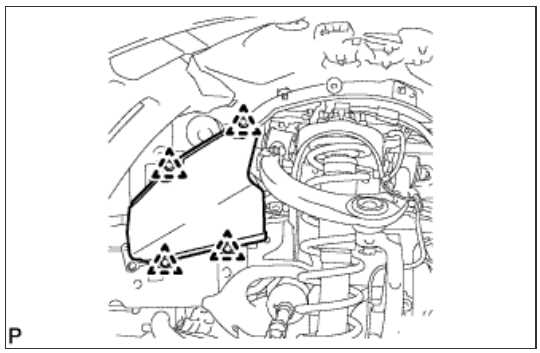
iii. Check the idle speed.



Standard idle speed:
650 to 750 rpm (transmission in neutral and A/C switch off)

If the idle speed is not as specified, check the air intake system.

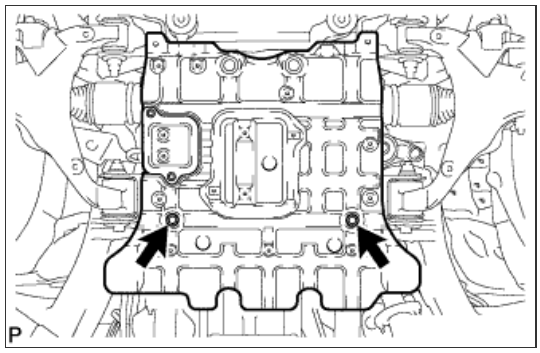
iv. Disconnect the tachometer probe from the DLC3.



76. INSTALL FRONT FENDER APRON SEAL FRONT RH

a. Install the fender apron seal with the 3 clips.

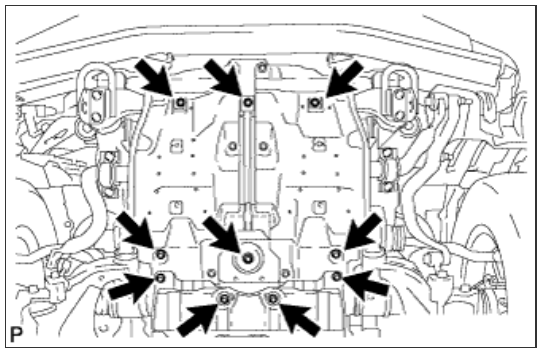
77. INSTALL FRONT FENDER APRON SEAL FRONT LH



a. Install the fender apron seal with the 4 clips.

78. INSTALL NO. 2 ENGINE UNDER COVER

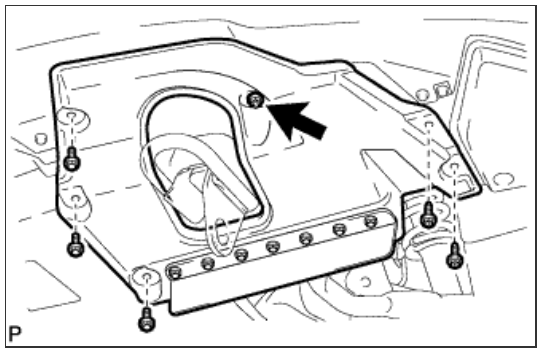
a. Install the No. 2 engine under cover with the 2 bolts.



Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

79. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.

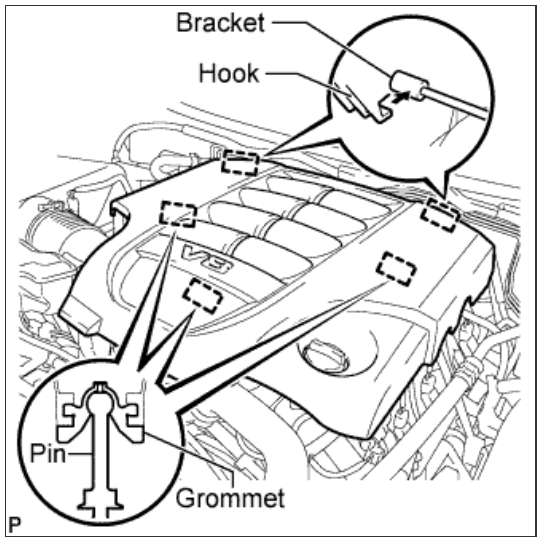


Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

80. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

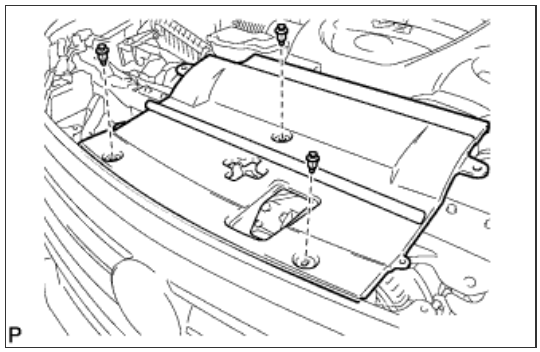
b. Install the 3 bolts and 2 screws.



81. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

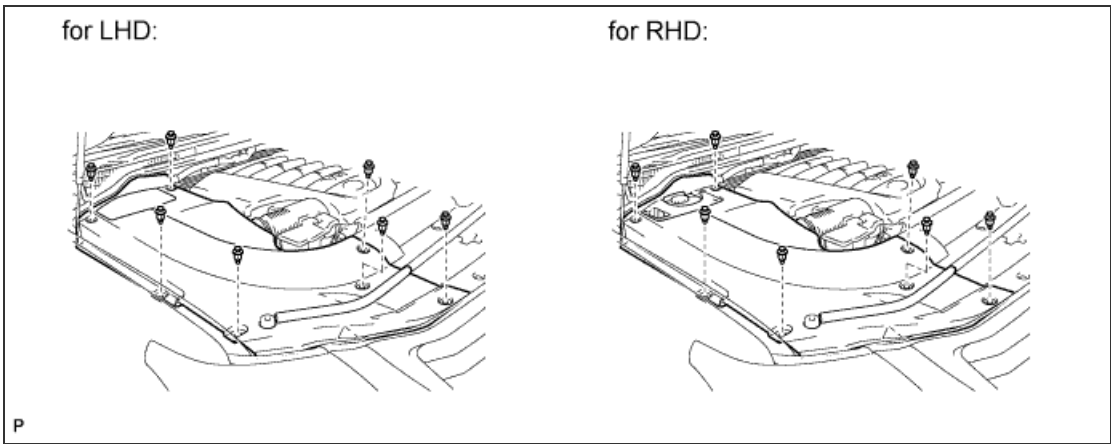
HINT:

Use the same procedures described for the LH side.



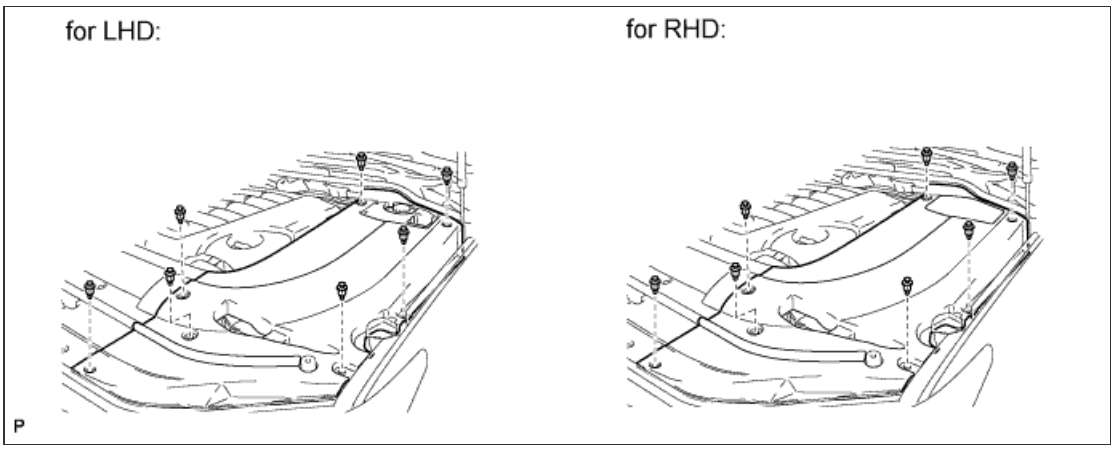
82. INSTALL V-BANK COVER SUB-ASSEMBLY

a. Attach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.



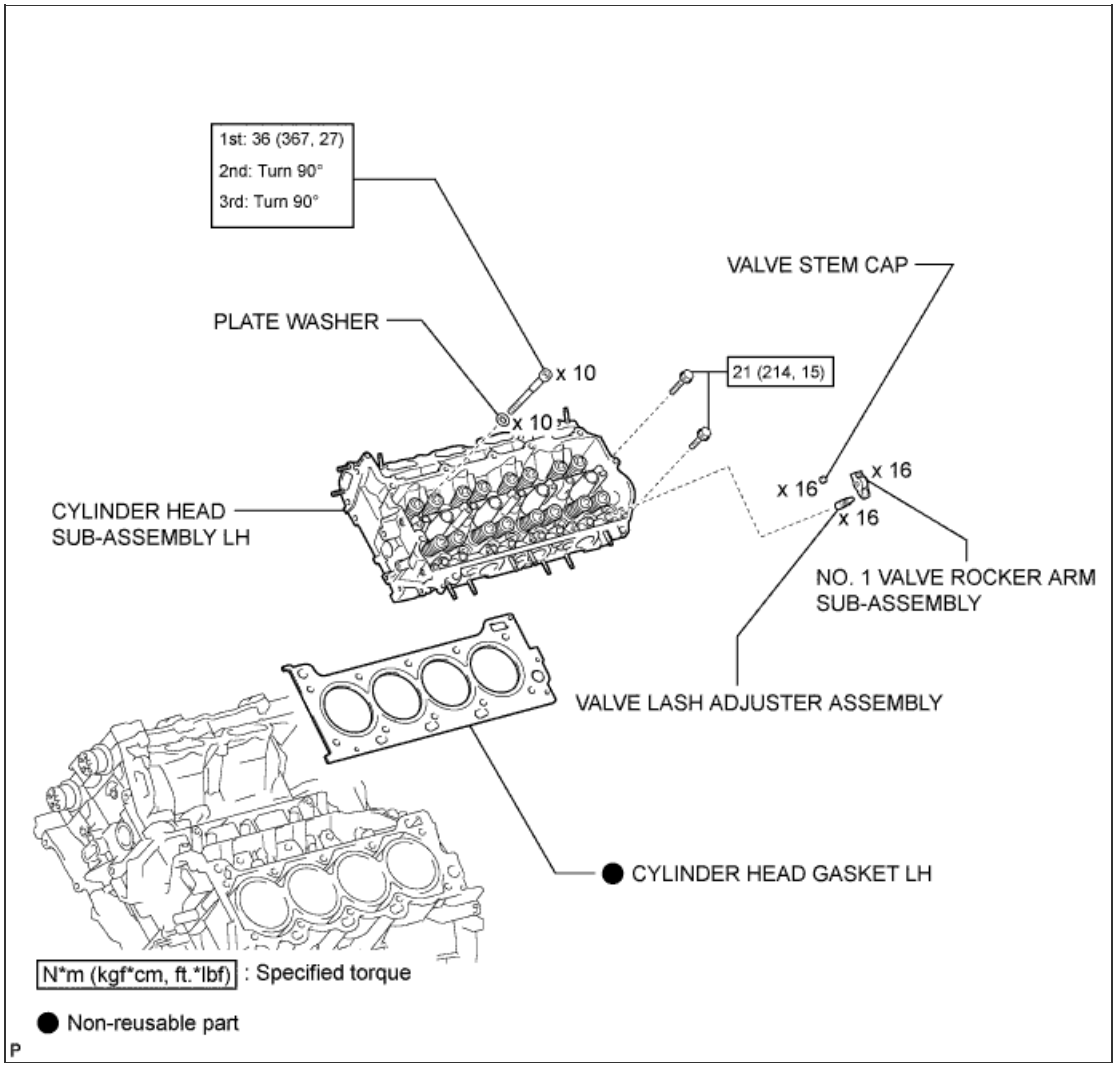
83. INSTALL UPPER RADIATOR SUPPORT SEAL

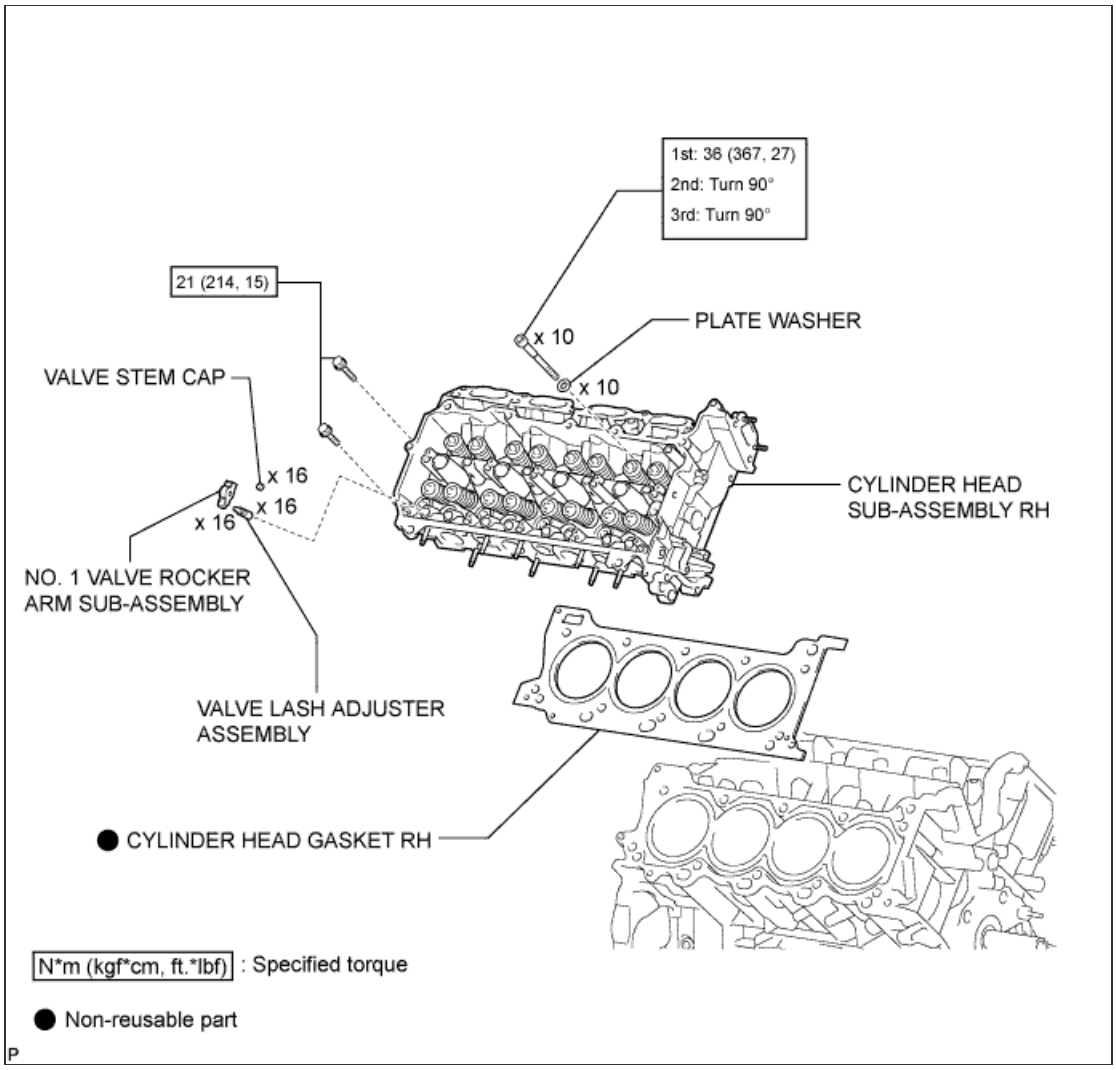
a. Install the upper radiator support seal with the 3 clips.



84. INSTALL ENGINE ROOM SIDE COVER RH

a. Install the engine room side cover with the 7 clips.





85. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.

for Preparation Click here

1. DISCHARGE FUEL SYSTEM PRESSURE

a. Discharge the fuel system pressure (Click here).

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable from the cable is reconnected (Click here).

3. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY

a. Remove the exhaust manifold (Click here).

4. REMOVE CAMSHAFT

a. Remove the camshaft (Click here).

5. REMOVE NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY

a. Remove the 32 valve rocker arms from the cylinder heads.

HINT:

Arrange the removed parts in the correct order.

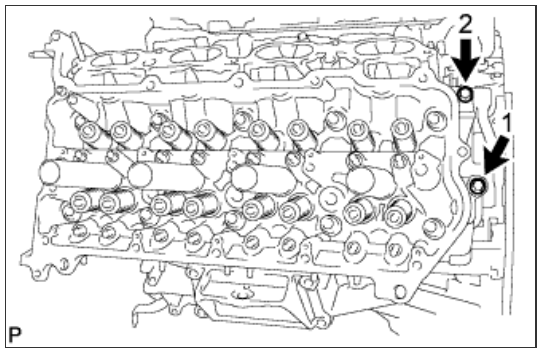
6. REMOVE VALVE LASH ADJUSTER ASSEMBLY

a. Remove the 32 valve lash adjusters from the cylinder heads.

HINT:

Arrange the removed parts in the correct order.

7. REMOVE VALVE STEM CAP



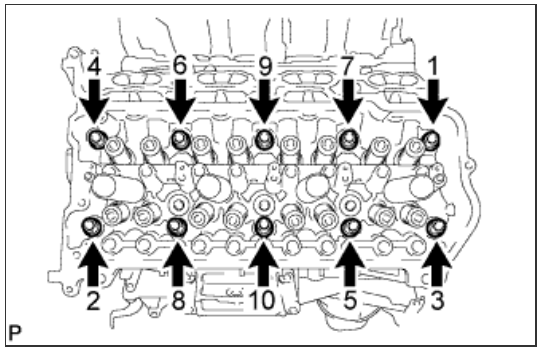
a. Remove the 32 valve stem caps from the cylinder heads.

HINT:

Arrange the removed parts in the correct order.

8. REMOVE CYLINDER HEAD SUB-ASSEMBLY LH

a. Uniformly loosen and remove the 2 bolts in the sequence shown in the illustration.

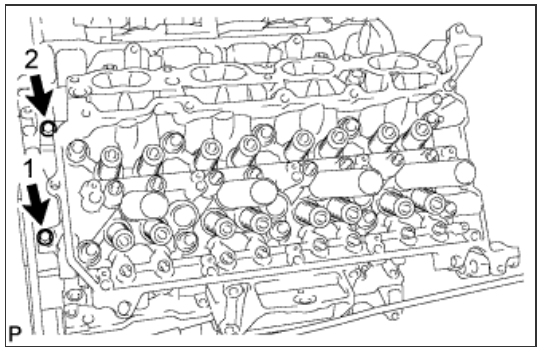


b. Using a 10 mm bi-hexagon wrench, uniformly loosen the 10 cylinder head bolts in the sequence shown in the illustration. Remove the 10 cylinder head bolts and plate washers.

HINT:

Be sure to arrange the removed parts for each installation position separately.

NOTICE:

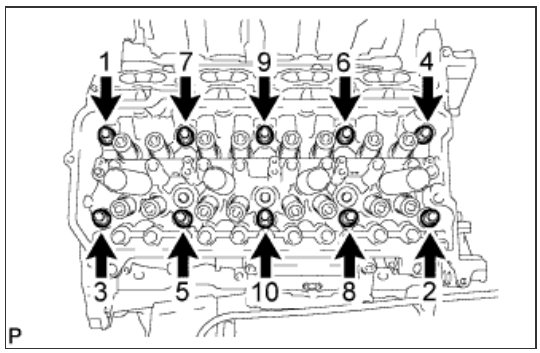


- **Be careful not to drop washers into the cylinder head.**
- **Head warpage or cracking could result from removing bolts in an incorrect order.**

c. Remove the cylinder head and gasket.

9. REMOVE CYLINDER HEAD SUB-ASSEMBLY RH

a. Uniformly loosen and remove the 2 bolts in the sequence shown in the illustration.



b. Using a 10 mm bi-hexagon wrench, uniformly loosen the 10 cylinder head bolts in the sequence shown in the illustration. Remove the 10 cylinder head bolts and plate washers.

HINT:

Be sure to arrange the removed parts for each installation position separately.

NOTICE:

- **Be careful not to drop washers into the cylinder head.**
- **Head warpage or cracking could result from removing bolts in an incorrect order.**

c. Remove the cylinder head and gasket.

for Preparation Click here

1. DISCHARGE FUEL SYSTEM PRESSURE

a. Discharge the fuel system pressure (Click here).

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable from the cable is reconnected (Click here).

3. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY

a. Remove the exhaust manifold (Click here).

4. REMOVE CAMSHAFT

a. Remove the camshaft (Click here).

5. REMOVE NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY

a. Remove the 32 valve rocker arms from the cylinder heads.

HINT:

Arrange the removed parts in the correct order.

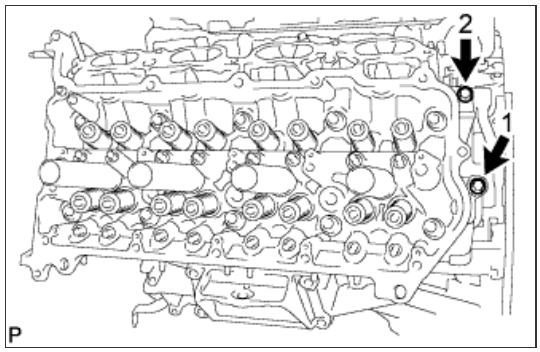
6. REMOVE VALVE LASH ADJUSTER ASSEMBLY

a. Remove the 32 valve lash adjusters from the cylinder heads.

HINT:

Arrange the removed parts in the correct order.

7. REMOVE VALVE STEM CAP



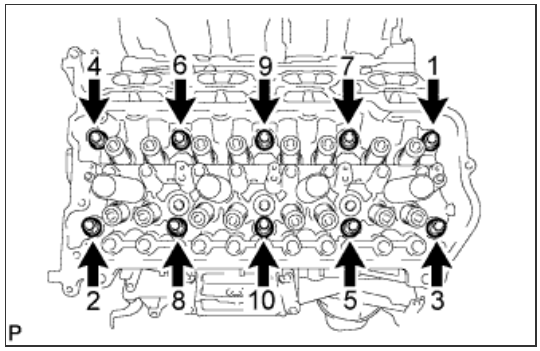
a. Remove the 32 valve stem caps from the cylinder heads.

HINT:

Arrange the removed parts in the correct order.

8. REMOVE CYLINDER HEAD SUB-ASSEMBLY LH

a. Uniformly loosen and remove the 2 bolts in the sequence shown in the illustration.

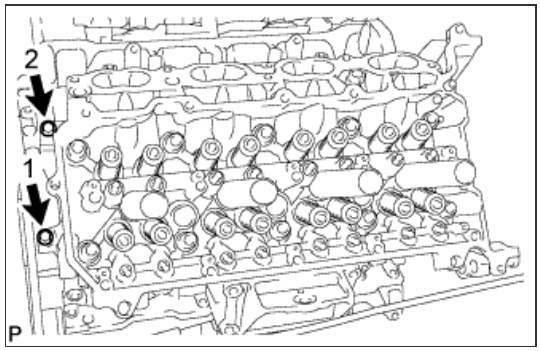


b. Using a 10 mm bi-hexagon wrench, uniformly loosen the 10 cylinder head bolts in the sequence shown in the illustration. Remove the 10 cylinder head bolts and plate washers.

HINT:

Be sure to arrange the removed parts for each installation position separately.

NOTICE:

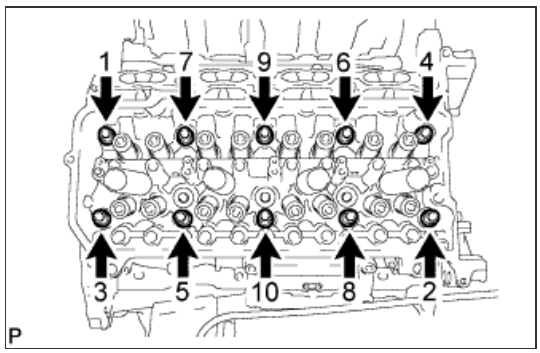


- **Be careful not to drop washers into the cylinder head.**
- **Head warpage or cracking could result from removing bolts in an incorrect order.**

c. Remove the cylinder head and gasket.

9. REMOVE CYLINDER HEAD SUB-ASSEMBLY RH

a. Uniformly loosen and remove the 2 bolts in the sequence shown in the illustration.



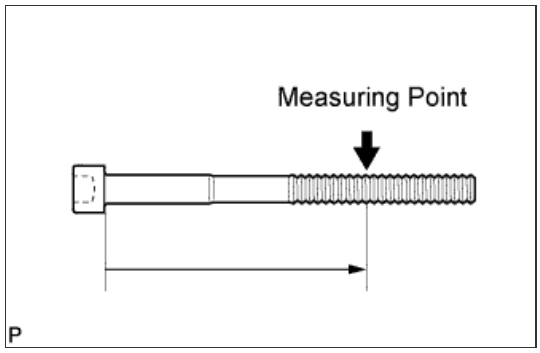
b. Using a 10 mm bi-hexagon wrench, uniformly loosen the 10 cylinder head bolts in the sequence shown in the illustration. Remove the 10 cylinder head bolts and plate washers.

HINT:

Be sure to arrange the removed parts for each installation position separately.

NOTICE:

- **Be careful not to drop washers into the cylinder head.**
- **Head warpage or cracking could result from removing bolts in an incorrect order.**



c. Remove the cylinder head and gasket.

for Preparation Click here

1. INSPECT CYLINDER HEAD SET BOLT

a. Using a vernier caliper, measure the diameter of the elongated thread at the measuring point.

Measuring point:
94 mm (3.70 in.) for intake side bolt
89 mm (3.50 in.) for exhaust side bolt

Standard diameter:
10.85 to 11.00 mm (0.427 to 0.433 in.)

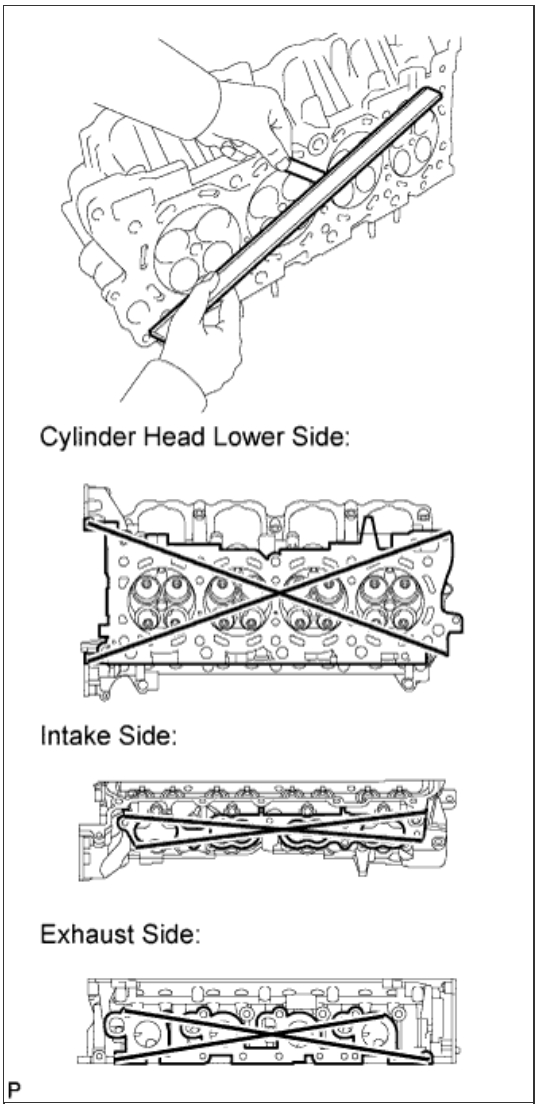
Minimum diameter:
10.6 mm (0.417 in.)

If the diameter is less than the minimum, replace the cylinder head bolt.

HINT:

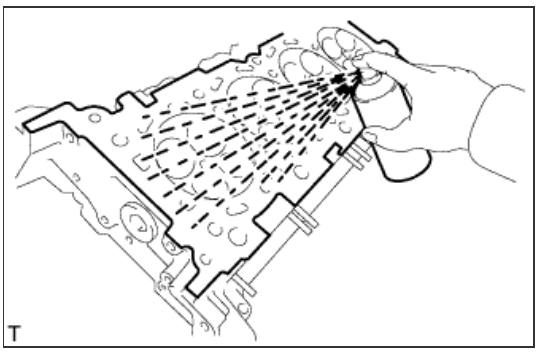
If a visual check reveals no excessively thin areas, check the center of the bolt (see illustration) and find the area that has the smallest diameter.

2. INSPECT CYLINDER HEAD SUB-ASSEMBLY



a. Using a precision straightedge and feeler gauge, measure the warpage of the surfaces where the cylinder head contacts the cylinder block and manifold.

Standard Warpage:



Item	Specified Condition
Cylinder head lower side	0.05 mm (0.00197 in.)
Intake side	0.08 mm (0.00315 in.)
Exhaust side	0.05 mm (0.00197 in.)

Maximum warpage:
0.10 mm (0.00394 in.)

If the warpage is more than the maximum, replace the cylinder head.

b. Using a dye penetrant, check the intake ports, exhaust ports and cylinder surface for cracks.
If cracked, replace the cylinder head.

3. INSTALL CYLINDER HEAD SUB-ASSEMBLY RH

a. Clean the cylinder block with solvent.

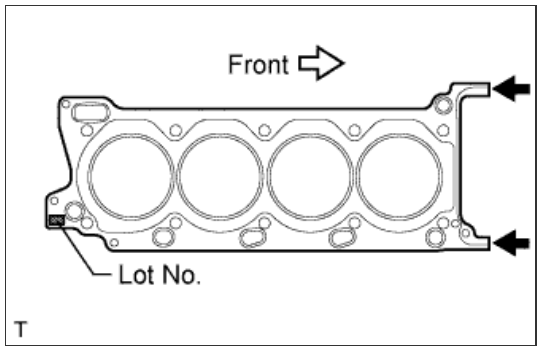
b. Set the piston of the No. 1 cylinder to slightly ATDC.

c. Place the cylinder head gasket on the cylinder block surface with the front face of the Lot No. stamp upward.

NOTICE:

- **Be careful of the installation direction.**
- **Make sure that no oil is on the front end (indicated by the arrows) of the cylinder head gasket.**

d. Place the cylinder head on the cylinder block.

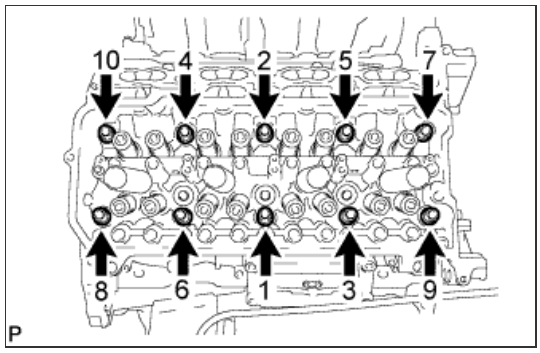


HINT:

The cylinder head bolts are tightened in 3 progressive steps.

NOTICE:

- **Ensure that no oil is on the mounting surface of the cylinder head.**
- **Gently place the cylinder head in order not to damage the gasket with the bottom part of the head.**



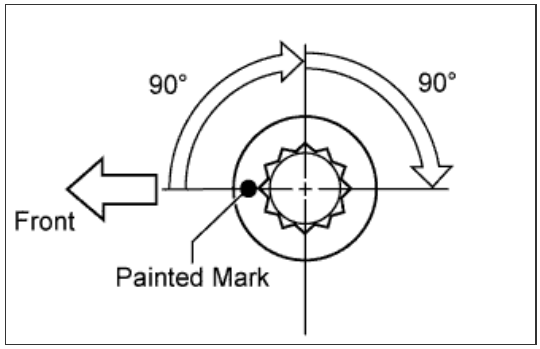
e. Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.

f. Step 1:

i. Using a 10 mm bi-hexagon wrench, install and uniformly tighten the 10 cylinder head bolts with the plate washers in several steps in the sequence shown in the illustration.

Torque:
36 N*m{ 367 kgf*cm , 27 ft.*lbf }

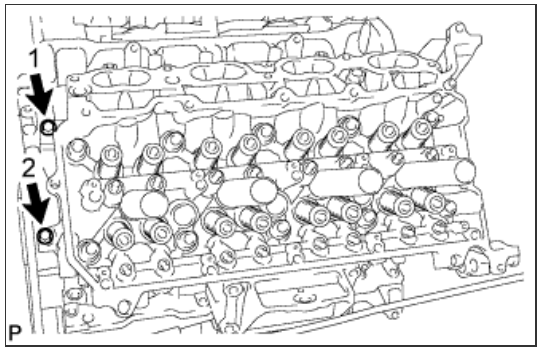
g. Step 2:



i. Mark each cylinder head bolt head with paint as shown in the illustration.

ii. Tighten the cylinder head bolts 90° in the sequence shown in step 1.

h. Step 3:



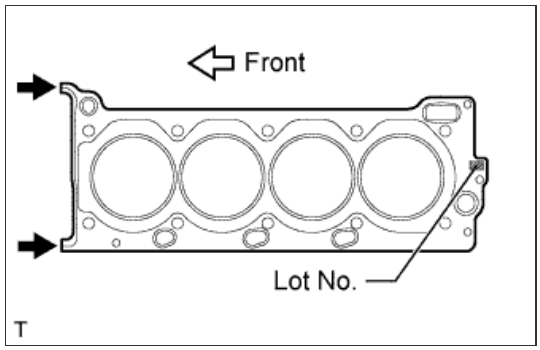
i. Tighten the cylinder head bolts another 90° in the sequence shown in step 1.

ii. Check that the painting marks are now facing rearward.

i. Uniformly install the 2 bolts in the sequence shown in the illustration.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

4. INSTALL CYLINDER HEAD SUB-ASSEMBLY LH



a. Clean the cylinder block with solvent.

b. Set the piston of the No. 1 cylinder to slightly ATDC.

c. Place the cylinder head gasket on the cylinder block surface with the front face of the Lot No. stamp upward.

NOTICE:

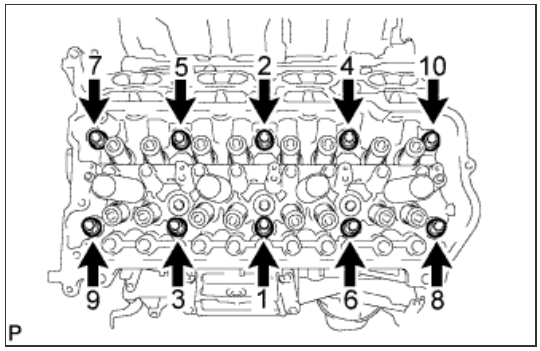
- **Be careful of the installation direction.**
- **Make sure that no oil is on the front end (indicated by the arrows) of the cylinder head gasket.**

d. Place the cylinder head on the cylinder block.

HINT:

The cylinder head bolts are tightened in 3 progressive steps.

NOTICE:



- **Ensure that no oil is on the mounting surface of the cylinder head.**
- **Gently place the cylinder head in order not to damage the gasket with the bottom part of the head.**

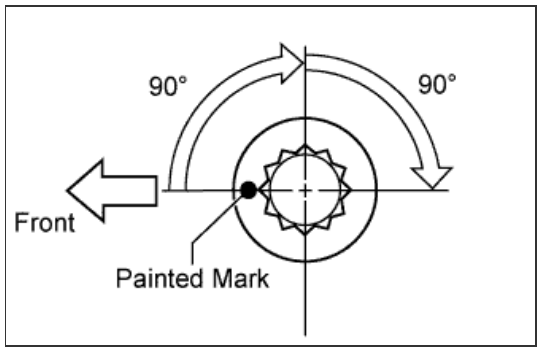
e. Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.

f. Step 1:

i. Using a 10 mm bi-hexagon wrench, install and uniformly tighten the 10 cylinder head bolts with the plate washers in several steps in the sequence shown in the illustration.

Torque:
36 N*m{ 367 kgf*cm , 27 ft.*lbf }

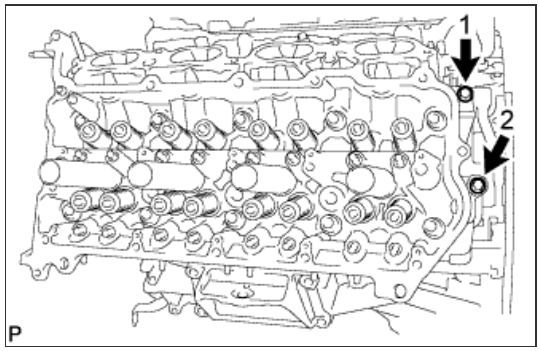
g. Step 2:



i. Mark each cylinder head bolt head with paint as shown in the illustration.

ii. Tighten the cylinder head bolts 90° in the sequence shown in step 1.

h. Step 3:



i. Tighten the cylinder head bolts another 90° in the sequence shown in step 1.

ii. Check that the painted marks are now facing rearward.

i. Uniformly install the 2 bolts in the sequence shown in the illustration.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

5. INSTALL VALVE STEM CAP

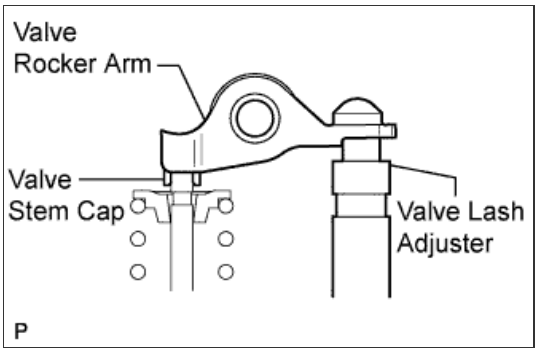
a. Apply a light coat of engine oil to the valve stem caps.

b. Install the 32 valve stem caps to the cylinder heads.

6. INSTALL VALVE LASH ADJUSTER ASSEMBLY

a. Inspect the valve lash adjuster before installing it (Click here).

b. Install the 32 valve lash adjusters to the cylinder heads.



NOTICE:

Install the lash adjuster to the same place it was removed from.

7. INSTALL NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY

a. Apply engine oil to the lash adjuster tips and valve stem cap ends.

b. Install the 32 valve rocker arms as shown in the illustration.

8. INSTALL CAMSHAFT

a. Install the camshaft (Click here).

9. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY

a. Install the exhaust manifold (Click here).

10. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable from the cable is reconnected (Click here).

11. INSPECT FOR EXHAUST GAS LEAK

12. INSPECT IGNITION TIMING

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. Remove the engine room side cover LH.

c. Remove the engine room side cover RH.

d. Remove the upper radiator support seal.

e. Remove the V-bank cover.

f. When using the intelligent tester:

i. Connect the intelligent tester to the DLC3.

ii. Start the engine and idle it.

iii. Turn the intelligent tester ON.

iv. Enter the following menus: Powertrain / Engine and ECT / Data List / Primary / IGN Advance.

HINT:

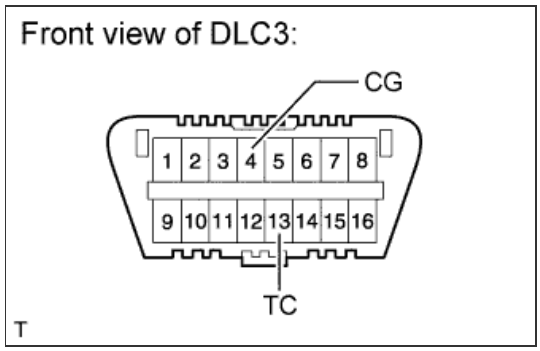
Refer to the intelligent tester operator's manual for further details.

Standard ignition timing:
8 to 12° BTDC @ idle (transmission in neutral and A/C switch off)

v. Disconnect the intelligent tester from the DLC3.

g. When not using the intelligent tester:

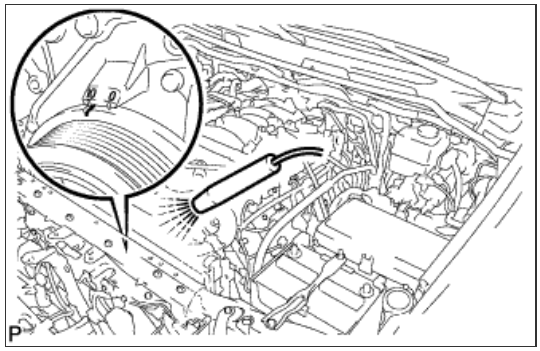


i. Connect the tester probe of a timing light to the wire of the ignition coil connector for the No. 1 cylinder.

NOTICE:

Use a timing light that detects primary signals.

ii. Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.



SST
09843-18040

NOTICE:

- **Confirm the terminal numbers before connecting them. Connecting the wrong terminals can damage the engine.**
- **Switch off all accessories and the A/C before connecting the terminals.**

iii. Using the timing light, check the ignition timing.

Standard ignition timing:
8 to 12° BTDC @ idle (transmission in neutral and A/C switch off)

iv. Remove SST from the DLC3.

v. Check the ignition timing.

Standard ignition timing:
7 to 24° BTDC @ idle (transmission in neutral and A/C switch off)

vi. Disconnect the timing light from the engine.

h. Install the V-bank cover.

i. Install the upper radiator support seal.

j. Install the engine room side cover RH.

k. Install the engine room side cover LH.

13. INSPECT ENGINE IDLE SPEED

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. When using the intelligent tester:

i. Connect the intelligent tester to the DLC3.

NOTICE:

Switch off all accessories and the A/C before connecting the intelligent tester.

ii. Race the engine at 2500 rpm for approximately 90 seconds.

iii. Turn the intelligent tester ON.

iv. Enter the following menus: Powertrain / Engine and ECT / Data List / Primary / Engine Speed.

Standard idle speed:
650 to 750 rpm (transmission in neutral and A/C switch off)

HINT:

Refer to the intelligent tester operator's manual for further details.

If the idle speed is not as specified, check the air intake system.

v. Disconnect the intelligent tester from the DLC3.

c. When not using the intelligent tester:

i. Using SST, connect the tachometer probe to terminal 9 (TAC) of the DLC3.

SST
09843-18030

NOTICE:

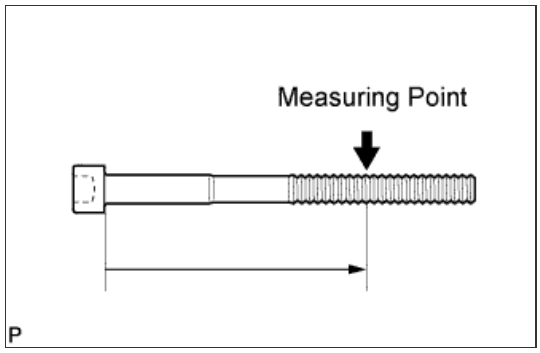
- **Confirm the terminal number before connecting the probe. Connecting the probe to the wrong terminal can damage the engine.**
- **Switch off all accessories and the A/C before connecting the probe.**

ii. Race the engine at 2500 rpm for approximately 90 seconds.

iii. Check the idle speed.

Standard idle speed:
650 to 750 rpm (transmission in neutral and A/C switch off)



If the idle speed is not as specified, check the air intake system.

iv. Disconnect the tachometer probe from the DLC3.

for Preparation Click here

1. INSPECT CYLINDER HEAD SET BOLT

a. Using a vernier caliper, measure the diameter of the elongated thread at the measuring point.

Measuring point:
94 mm (3.70 in.) for intake side bolt
89 mm (3.50 in.) for exhaust side bolt

Standard diameter:
10.85 to 11.00 mm (0.427 to 0.433 in.)

Minimum diameter:
10.6 mm (0.417 in.)

If the diameter is less than the minimum, replace the cylinder head bolt.

HINT:

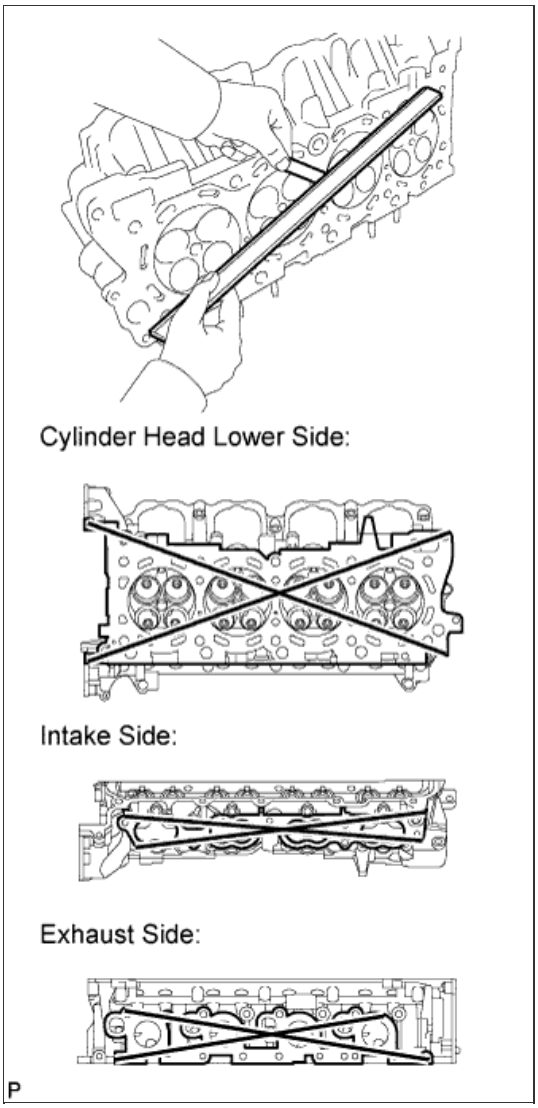
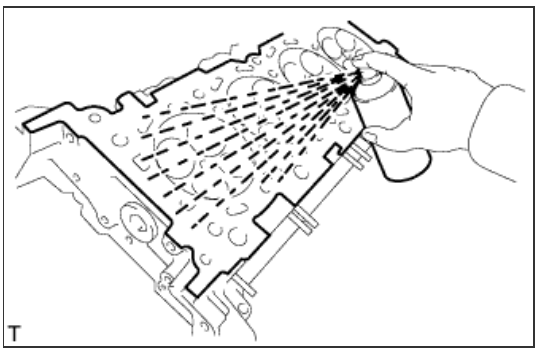
If a visual check reveals no excessively thin areas, check the center of the bolt (see illustration) and find the area that has the smallest diameter.

2. INSPECT CYLINDER HEAD SUB-ASSEMBLY



a. Using a precision straightedge and feeler gauge, measure the warpage of the surfaces where the cylinder head contacts the cylinder block and manifold.

Standard Warpage:



Item	Specified Condition
Cylinder head lower side	0.05 mm (0.00197 in.)
Intake side	0.08 mm (0.00315 in.)
Exhaust side	0.05 mm (0.00197 in.)

Maximum warpage:
0.10 mm (0.00394 in.)

If the warpage is more than the maximum, replace the cylinder head.

b. Using a dye penetrant, check the intake ports, exhaust ports and cylinder surface for cracks.
If cracked, replace the cylinder head.

3. INSTALL CYLINDER HEAD SUB-ASSEMBLY RH

a. Clean the cylinder block with solvent.

b. Set the piston of the No. 1 cylinder to slightly ATDC.

c. Place the cylinder head gasket on the cylinder block surface with the front face of the Lot No. stamp upward.

NOTICE:

- **Be careful of the installation direction.**
- **Make sure that no oil is on the front end (indicated by the arrows) of the cylinder head gasket.**

d. Place the cylinder head on the cylinder block.

HINT:

The cylinder head bolts are tightened in 3 progressive steps.

NOTICE:

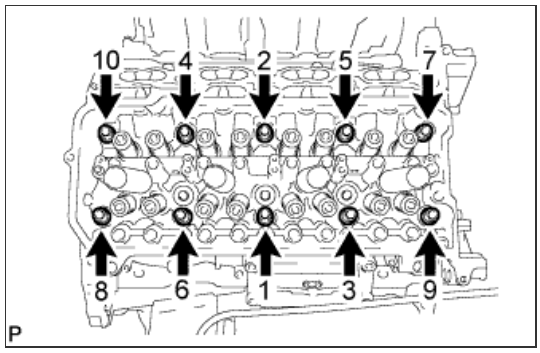
- **Ensure that no oil is on the mounting surface of the cylinder head.**
- **Gently place the cylinder head in order not to damage the gasket with the bottom part of the head.**



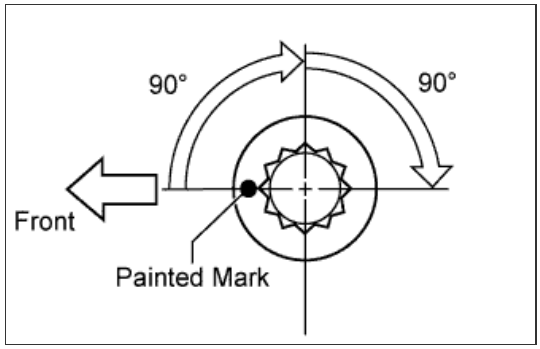
e. Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.

f. Step 1:

i. Using a 10 mm bi-hexagon wrench, install and uniformly tighten the 10 cylinder head bolts with the plate washers in several steps in the sequence shown in the illustration.

Torque:
36 N*m{ 367 kgf*cm , 27 ft.*lbf }

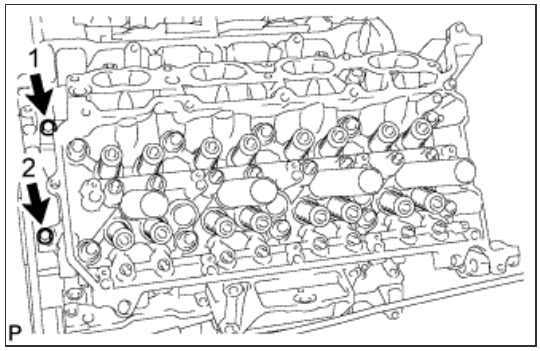
g. Step 2:



i. Mark each cylinder head bolt head with paint as shown in the illustration.

ii. Tighten the cylinder head bolts 90° in the sequence shown in step 1.

h. Step 3:



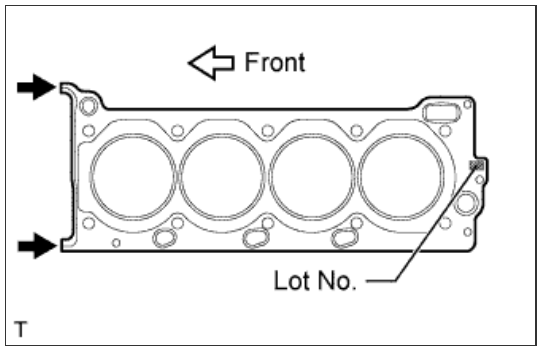
i. Tighten the cylinder head bolts another 90° in the sequence shown in step 1.

ii. Check that the painting marks are now facing rearward.

i. Uniformly install the 2 bolts in the sequence shown in the illustration.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

4. INSTALL CYLINDER HEAD SUB-ASSEMBLY LH



a. Clean the cylinder block with solvent.

b. Set the piston of the No. 1 cylinder to slightly ATDC.

c. Place the cylinder head gasket on the cylinder block surface with the front face of the Lot No. stamp upward.

NOTICE:

- **Be careful of the installation direction.**
- **Make sure that no oil is on the front end (indicated by the arrows) of the cylinder head gasket.**

d. Place the cylinder head on the cylinder block.

HINT:

The cylinder head bolts are tightened in 3 progressive steps.

NOTICE:

- **Ensure that no oil is on the mounting surface of the cylinder head.**
- **Gently place the cylinder head in order not to damage the gasket with the bottom part of the head.**

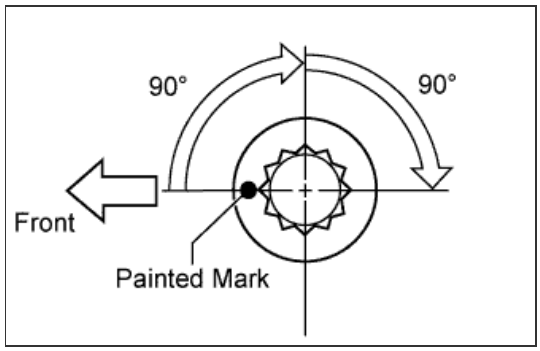
e. Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.

f. Step 1:

i. Using a 10 mm bi-hexagon wrench, install and uniformly tighten the 10 cylinder head bolts with the plate washers in several steps in the sequence shown in the illustration.

Torque:
36 N*m{ 367 kgf*cm , 27 ft.*lbf }

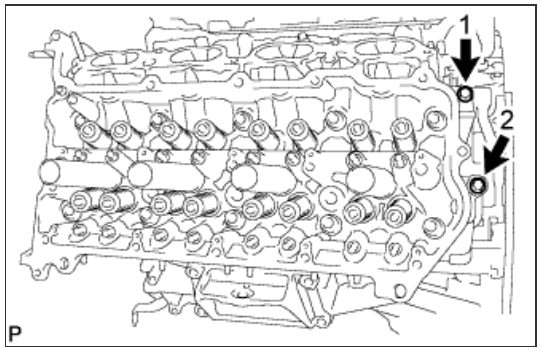
g. Step 2:



i. Mark each cylinder head bolt head with paint as shown in the illustration.

ii. Tighten the cylinder head bolts 90° in the sequence shown in step 1.

h. Step 3:



i. Tighten the cylinder head bolts another 90° in the sequence shown in step 1.

ii. Check that the painted marks are now facing rearward.

i. Uniformly install the 2 bolts in the sequence shown in the illustration.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

5. INSTALL VALVE STEM CAP

a. Apply a light coat of engine oil to the valve stem caps.

b. Install the 32 valve stem caps to the cylinder heads.

6. INSTALL VALVE LASH ADJUSTER ASSEMBLY

a. Inspect the valve lash adjuster before installing it (Click here).

b. Install the 32 valve lash adjusters to the cylinder heads.

NOTICE:

Install the lash adjuster to the same place it was removed from.

7. INSTALL NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY

a. Apply engine oil to the lash adjuster tips and valve stem cap ends.

b. Install the 32 valve rocker arms as shown in the illustration.

8. INSTALL CAMSHAFT

a. Install the camshaft (Click here).

9. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY

a. Install the exhaust manifold (Click here).

10. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable from the cable is reconnected (Click here).

11. INSPECT FOR EXHAUST GAS LEAK

12. INSPECT IGNITION TIMING

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. Remove the engine room side cover LH.

c. Remove the engine room side cover RH.

d. Remove the upper radiator support seal.

e. Remove the V-bank cover.

f. When using the intelligent tester:

i. Connect the intelligent tester to the DLC3.

ii. Start the engine and idle it.

iii. Turn the intelligent tester ON.

iv. Enter the following menus: Powertrain / Engine and ECT / Data List / Primary / IGN Advance.

HINT:

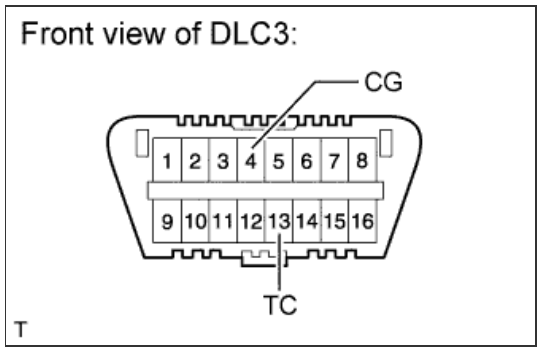
Refer to the intelligent tester operator's manual for further details.

Standard ignition timing:
8 to 12° BTDC @ idle (transmission in neutral and A/C switch off)

v. Disconnect the intelligent tester from the DLC3.

g. When not using the intelligent tester:



i. Connect the tester probe of a timing light to the wire of the ignition coil connector for the No. 1 cylinder.

NOTICE:

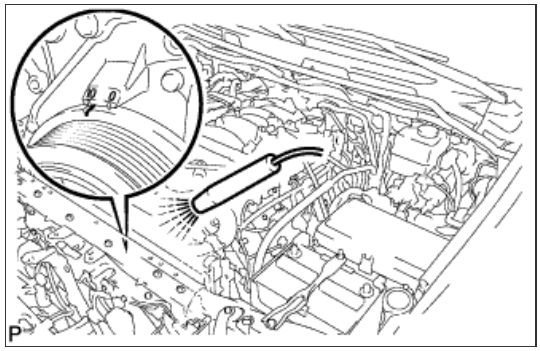
Use a timing light that detects primary signals.

ii. Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.



SST
09843-18040

NOTICE:

- **Confirm the terminal numbers before connecting them. Connecting the wrong terminals can damage the engine.**
- **Switch off all accessories and the A/C before connecting the terminals.**

iii. Using the timing light, check the ignition timing.

Standard ignition timing:
8 to 12° BTDC @ idle (transmission in neutral and A/C switch off)

iv. Remove SST from the DLC3.

v. Check the ignition timing.

Standard ignition timing:
7 to 24° BTDC @ idle (transmission in neutral and A/C switch off)

vi. Disconnect the timing light from the engine.

h. Install the V-bank cover.

i. Install the upper radiator support seal.

j. Install the engine room side cover RH.

k. Install the engine room side cover LH.

13. INSPECT ENGINE IDLE SPEED

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. When using the intelligent tester:

i. Connect the intelligent tester to the DLC3.

NOTICE:

Switch off all accessories and the A/C before connecting the intelligent tester.

ii. Race the engine at 2500 rpm for approximately 90 seconds.

iii. Turn the intelligent tester ON.

iv. Enter the following menus: Powertrain / Engine and ECT / Data List / Primary / Engine Speed.

Standard idle speed:
650 to 750 rpm (transmission in neutral and A/C switch off)

HINT:

Refer to the intelligent tester operator's manual for further details.

If the idle speed is not as specified, check the air intake system.

v. Disconnect the intelligent tester from the DLC3.

c. When not using the intelligent tester:

i. Using SST, connect the tachometer probe to terminal 9 (TAC) of the DLC3.

SST
09843-18030

NOTICE:

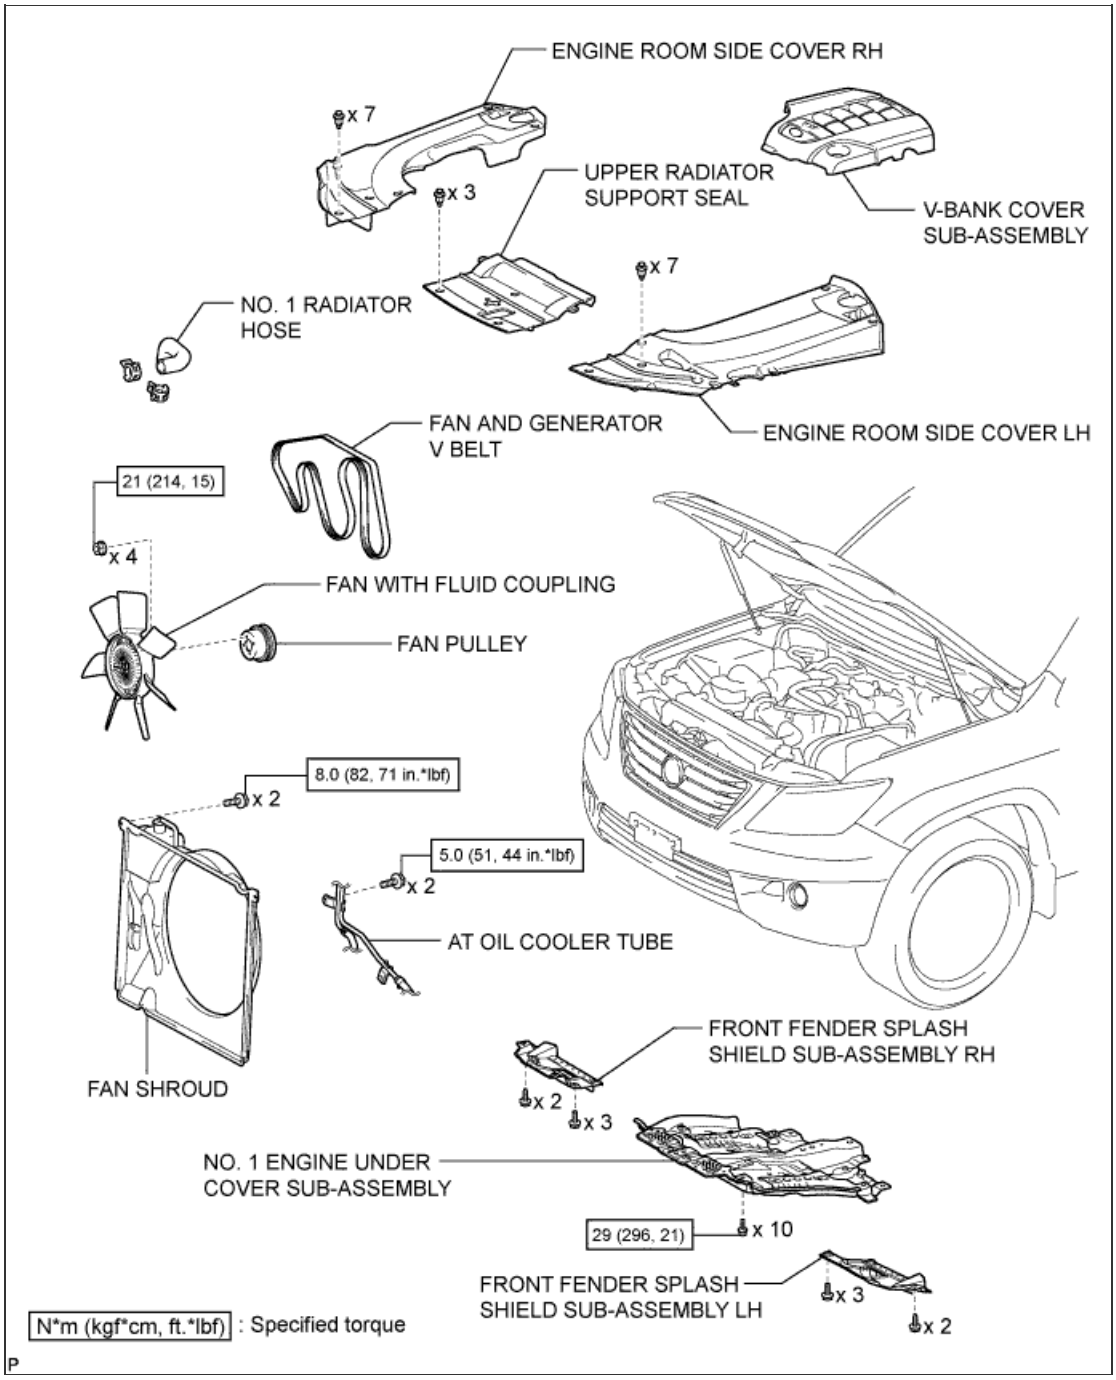
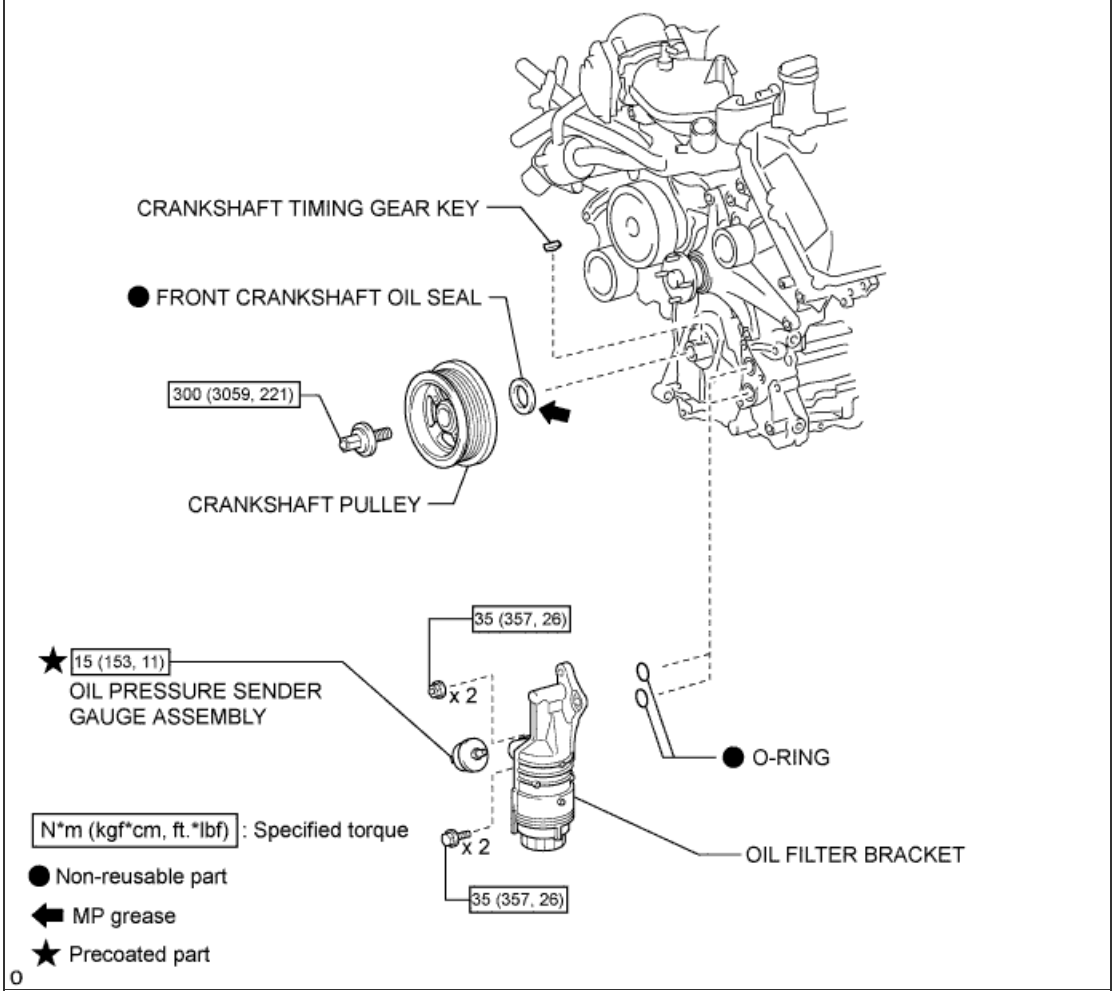
- **Confirm the terminal number before connecting the probe. Connecting the probe to the wrong terminal can damage the engine.**
- **Switch off all accessories and the A/C before connecting the probe.**

ii. Race the engine at 2500 rpm for approximately 90 seconds.



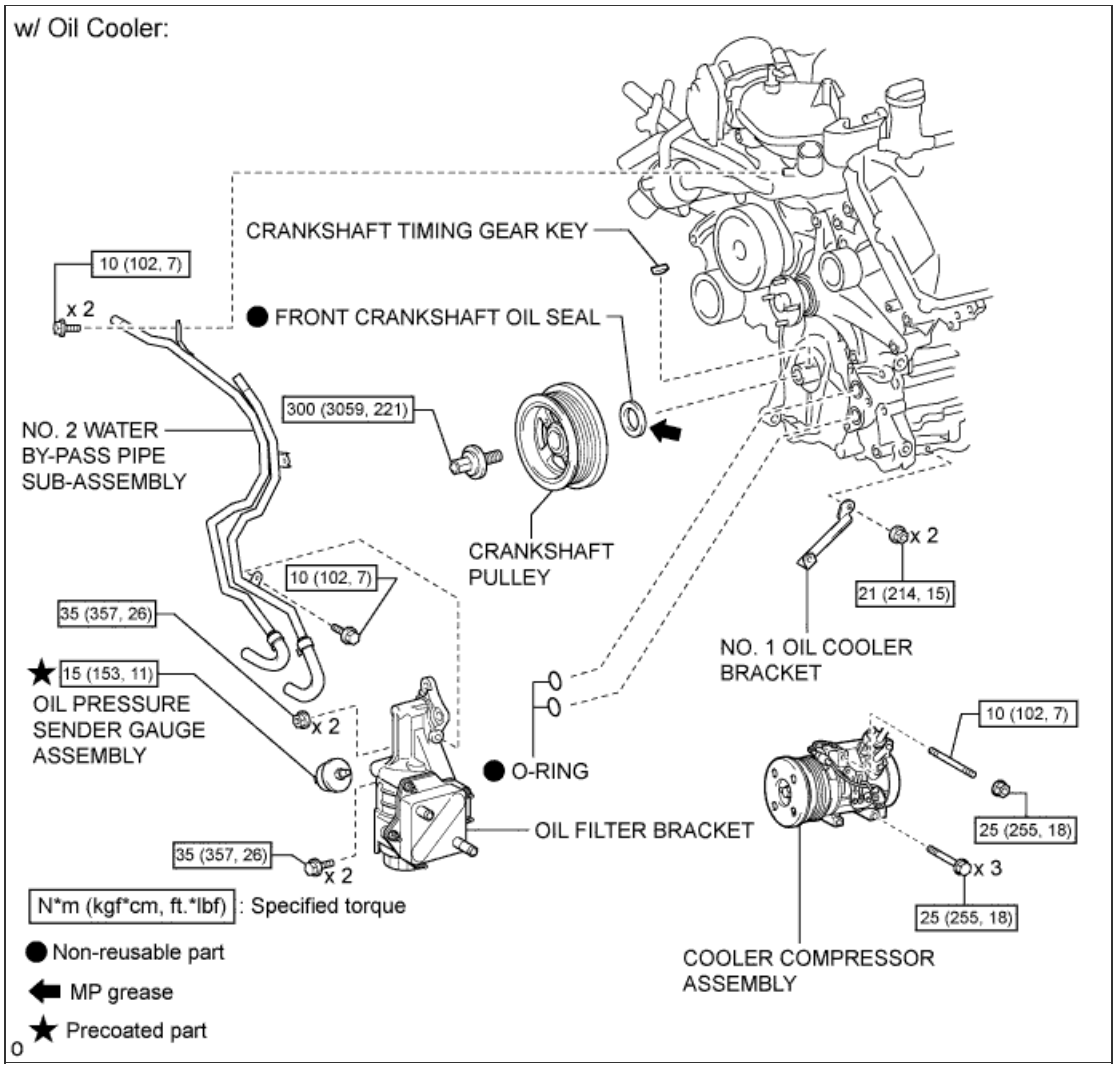
iii. Check the idle speed.

Standard idle speed:
650 to 750 rpm (transmission in neutral and A/C switch off)



If the idle speed is not as specified, check the air intake system.

iv. Disconnect the tachometer probe from the DLC3.



for Preparation Click here

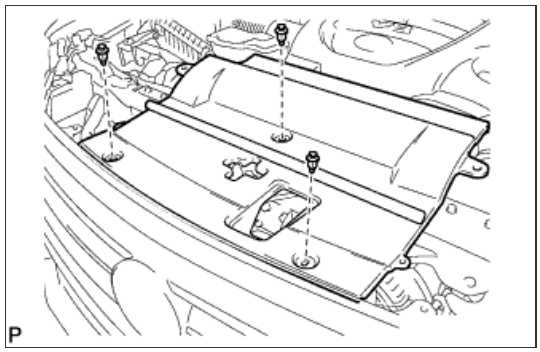
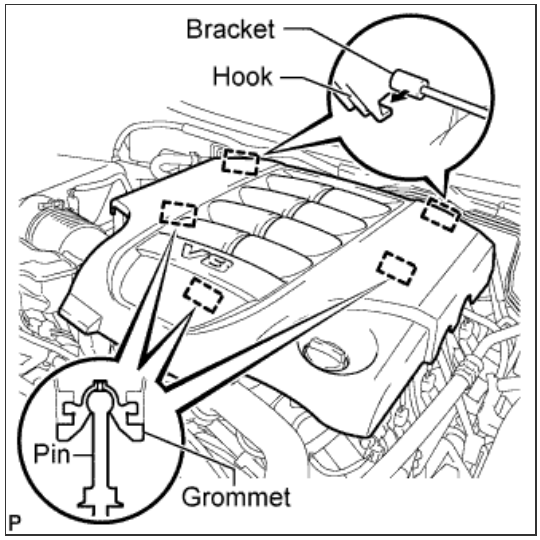
1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.



2. REMOVE ENGINE ROOM SIDE COVER RH

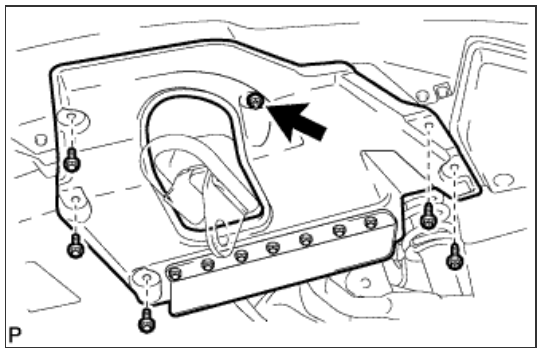
a. Remove the 7 clips and engine room side cover.



3. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 3 clips and upper radiator support seal.

4. REMOVE V-BANK COVER SUB-ASSEMBLY

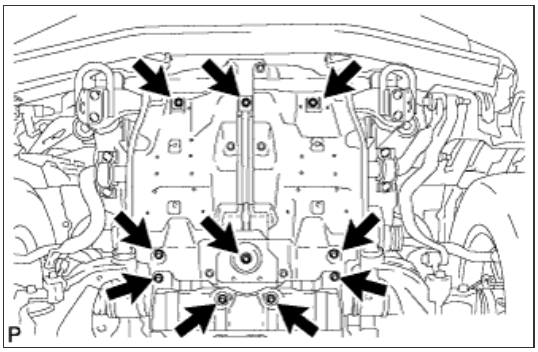


a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.

5. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and 2 screws.

b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



6. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

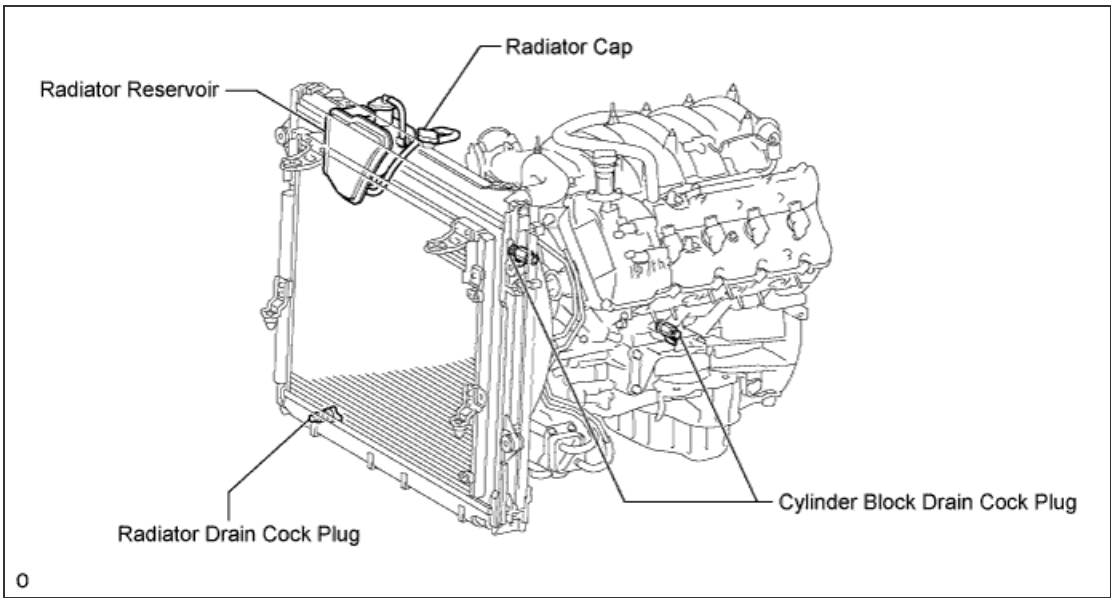
Use the same procedures described for the LH side.

7. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY



a. Remove the 10 bolts and No. 1 engine under cover.

8. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Loosen the radiator drain cock plug.

HINT:

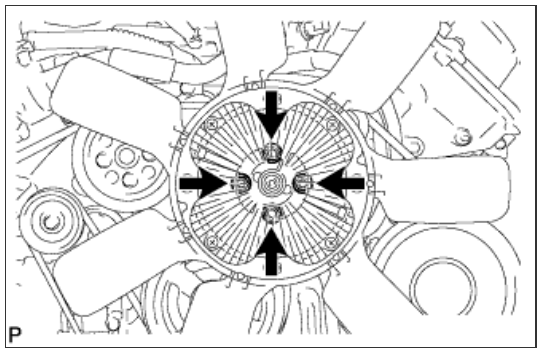
Collect the coolant in a container and dispose of it according to the regulations in your area.

b. Remove the radiator cap. Then drain the coolant from the radiator.

c. Loosen the 2 cylinder block drain cock plugs. Then drain the coolant from the engine.

d. Tighten the 2 cylinder block drain cock plugs.

Torque:
13 N*m{ 130 kgf*cm , 10 ft.*lbf }



e. Tighten the radiator drain cock plug by hand.

9. REMOVE NO. 1 RADIATOR HOSE

10. REMOVE FAN SHROUD

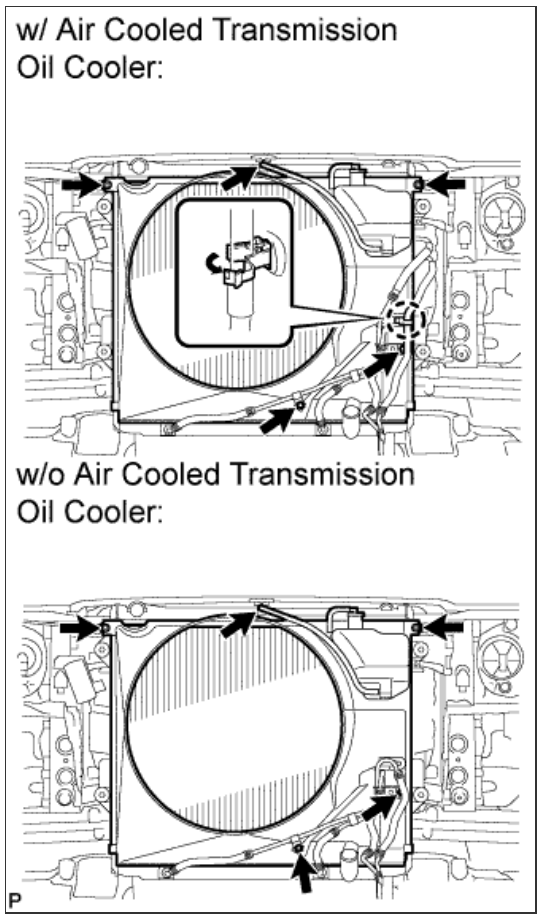
a. Loosen the 4 nuts holding the fluid coupling fan.

b. Remove the fan and generator V belt (Click here).

c. Disconnect the reservoir hose from the upper radiator tank.

d. w/ Air Cooled Transmission Oil Cooler:
Detach the claw to open the flexible hose clamp.

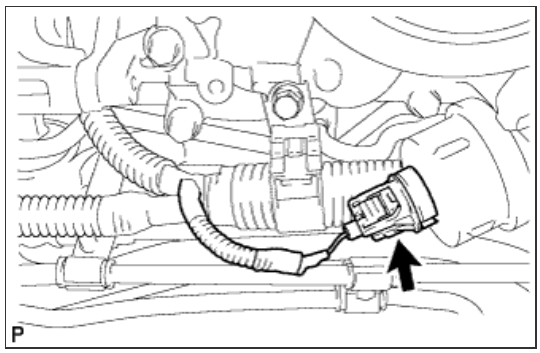
e. Remove the 2 bolts and disconnect the oil cooler tube from the fan shroud.



f. Remove the 2 bolts holding the fan shroud.

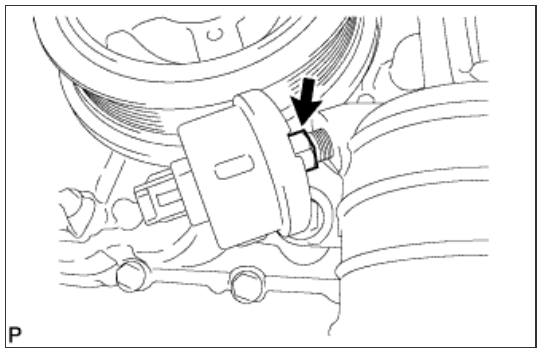
g. Remove the 4 nuts of the fluid coupling fan, and then remove the shroud together with the coupling fan.

NOTICE:



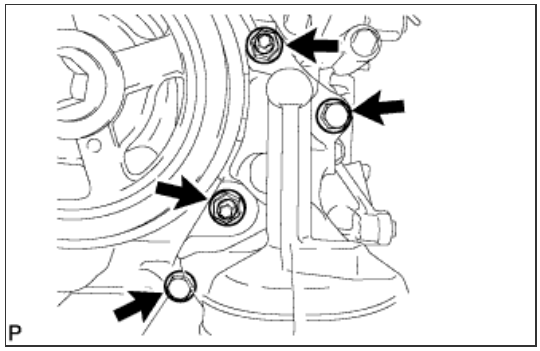
Be careful not to damage the radiator core.

h. Remove the fan pulley.

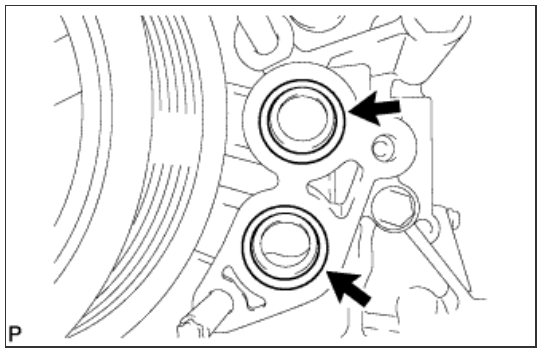


11. REMOVE OIL PRESSURE SENDER GAUGE ASSEMBLY

a. Disconnect the sender gauge connector.



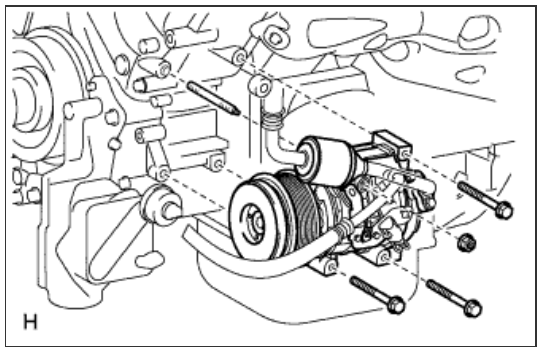
b. Remove the oil pressure sender gauge.



12. REMOVE OIL FILTER BRACKET (w/o Oil Cooler)

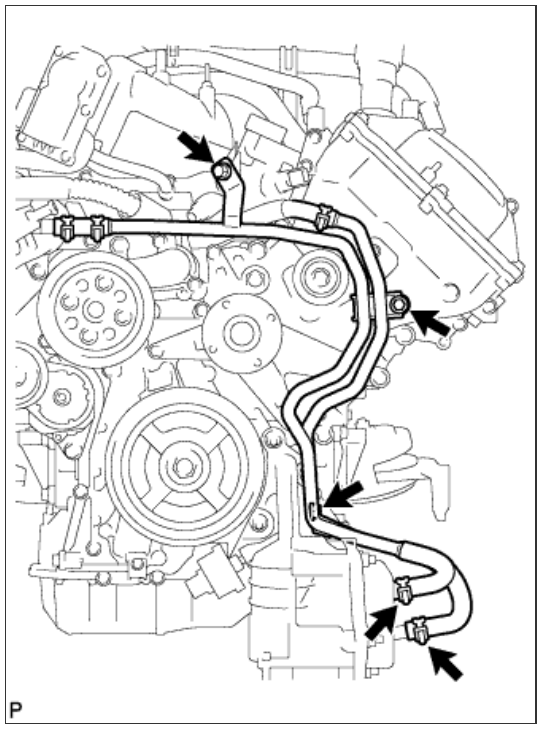
a. Remove the 2 bolts, 2 nuts and oil filter bracket.

b. Remove the 2 O-rings.



13. DISCONNECT COOLER COMPRESSOR ASSEMBLY (w/ Oil Cooler)

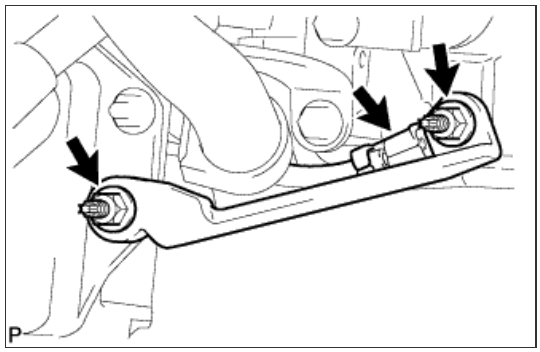
a. Remove the 3 bolts, nut and stud bolt, and disconnect the cooler compressor.



HINT:

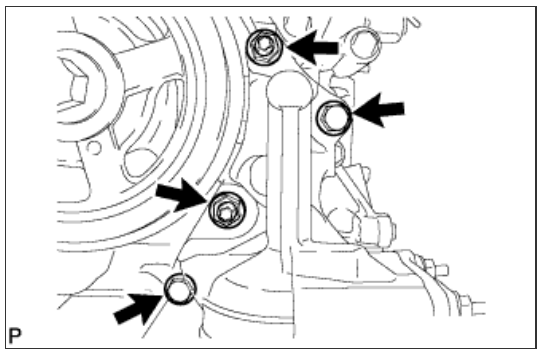
It is not necessary to completely remove the compressor. With the hoses connected to the compressor, hang the compressor on the vehicle body with a rope.

14. DISCONNECT NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY (w/ Oil Cooler)



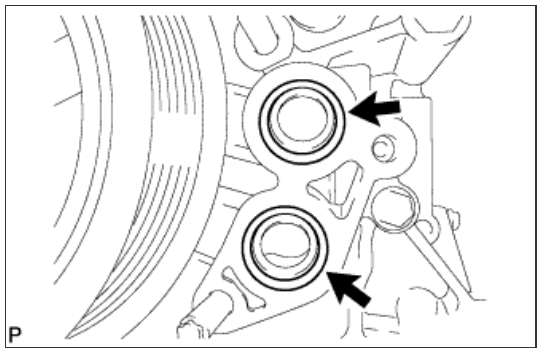
a. Remove the 3 bolts and disconnect the 2 water by-pass hoses from the oil cooler.

15. REMOVE NO. 1 OIL COOLER BRACKET (w/ Oil Cooler)



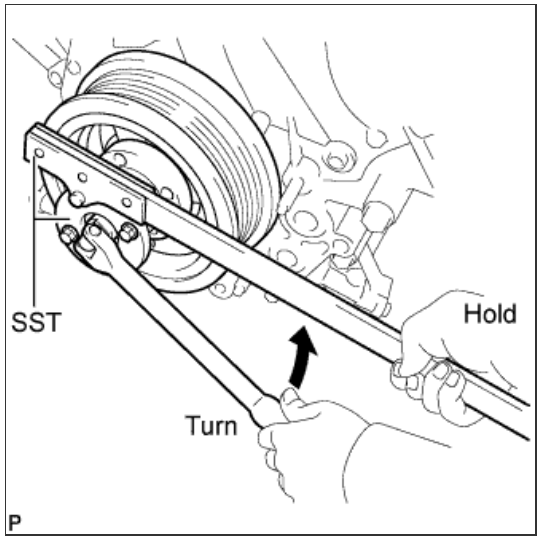
a. Remove the 2 nuts and bracket.

b. Disconnect the ground wire from the cylinder block.



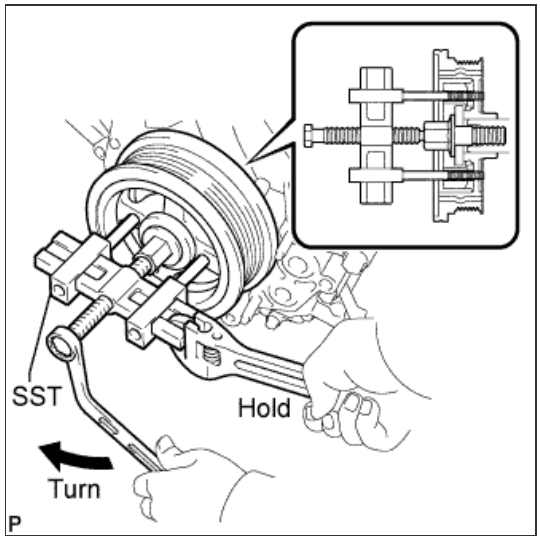
16. REMOVE OIL FILTER BRACKET (w/ Oil Cooler)

a. Remove the 2 bolts, 2 nuts and filter bracket.



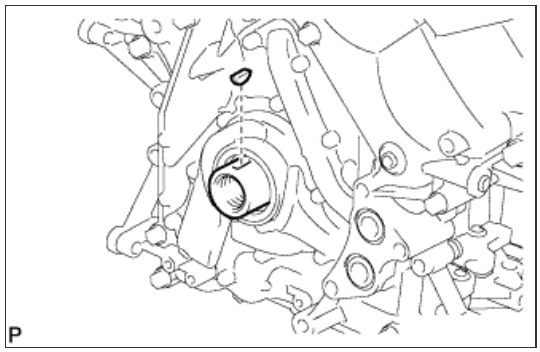
b. Remove the 2 O-rings.

17. REMOVE CRANKSHAFT PULLEY



a. Using SST, loosen the crankshaft pulley set bolt until 2 or 3 threads are engaged.

SST
09213-70011 (09213-70020)
09330-00021



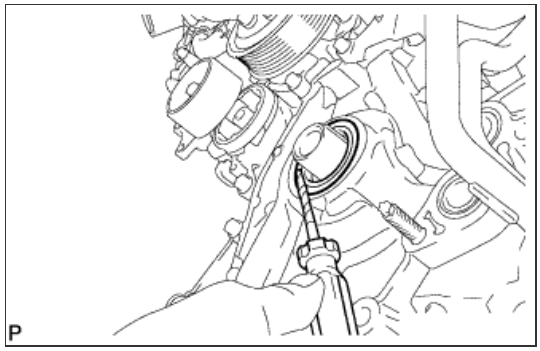
b. Using the pulley set bolt and SST, remove the crankshaft pulley.

SST
09950-50013 (09951-05010, 09952-05010, 09953-05010, 09954-05011)

18. REMOVE CRANKSHAFT TIMING GEAR KEY

a. Remove the crankshaft timing gear key from the crankshaft.

19. REMOVE FRONT CRANKSHAFT OIL SEAL



a. Using a screwdriver, pry out the oil seal.

HINT:

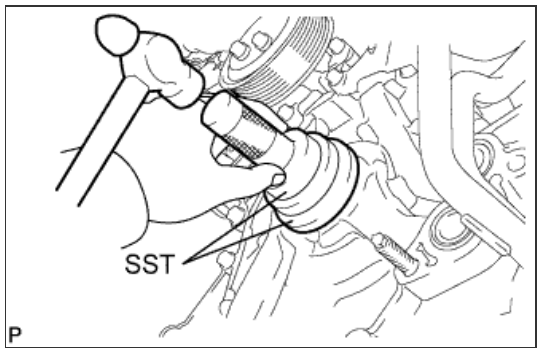
Tape the screwdriver tip before use.

NOTICE:

Do not damage the surface of the oil seal press fit hole and crankshaft.

for Preparation Click here

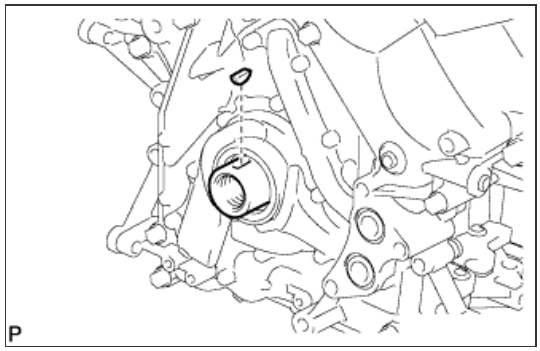
1. INSTALL FRONT CRANKSHAFT OIL SEAL



a. Apply MP grease to the lip of a new oil seal.

b. Using SST and a hammer, tap in the oil seal to a depth between 0 and 1.0 mm (0 and 0.0394 in.) from the timing chain cover edge.

SST
09223-22010
09506-35010

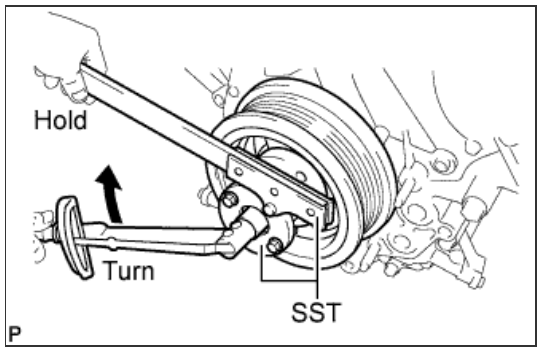


NOTICE:

- **Keep the lip free from foreign matter.**
- **Do not tap the oil seal at an angle.**

2. INSTALL CRANKSHAFT TIMING GEAR KEY

a. Install the crankshaft timing gear key.

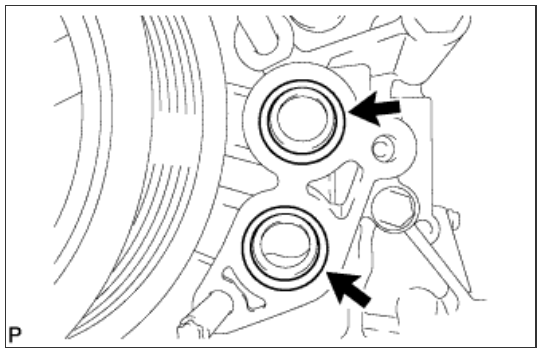


3. INSTALL CRANKSHAFT PULLEY

a. Align the pulley set key with the key groove of the pulley, and slide on the pulley.

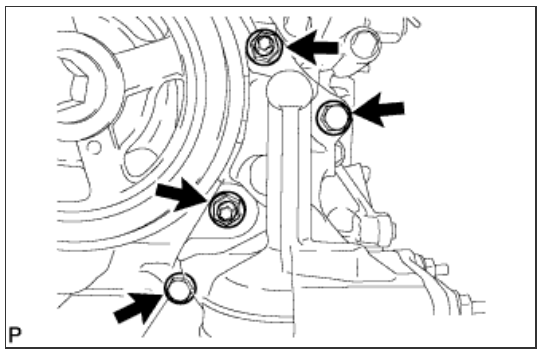
b. Using SST, install the pulley set bolt.

SST
09213-70011 (09213-70020)
09330-00021



Torque:
300 N*m{ 3059 kgf*cm , 221 ft.*lbf }

4. INSTALL OIL FILTER BRACKET (w/ Oil Cooler)

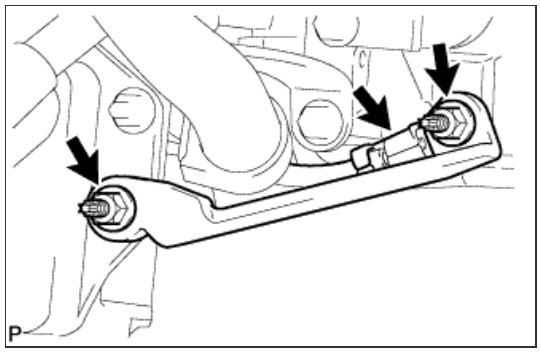


a. Apply a light coat of engine oil to 2 new O-rings.

b. Install the 2 O-rings to the timing chain cover.

c. Install the oil filter bracket with the 2 nuts and 2 bolts.

Torque:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }

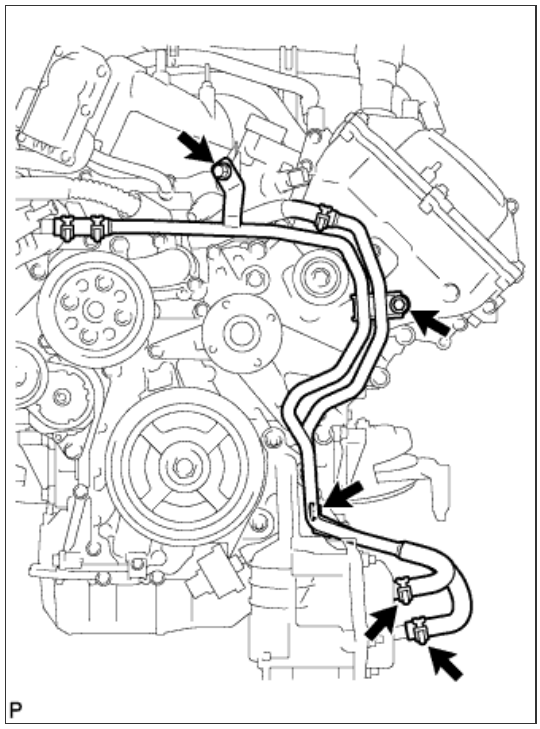


5. INSTALL NO. 1 OIL COOLER BRACKET (w/ Oil Cooler)

a. Connect the ground wire to the cylinder block.

b. Install the oil cooler bracket with the 2 nuts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



6. CONNECT NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY (w/ Oil Cooler)

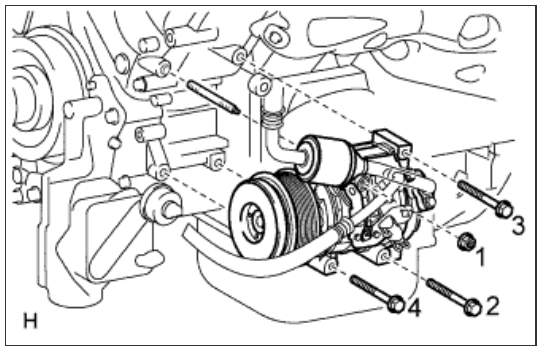
a. Connect the 2 water by-pass hoses to the oil cooler.

b. Install the 3 by-pass pipe bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

7. CONNECT COOLER COMPRESSOR ASSEMBLY (w/ Oil Cooler)

a. Install the cooler compressor with the stud bolt.

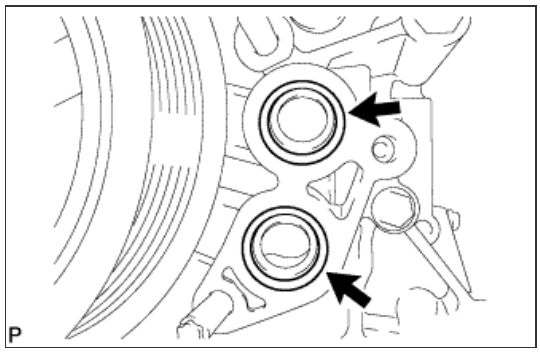


Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. Install the 3 bolts and nut.

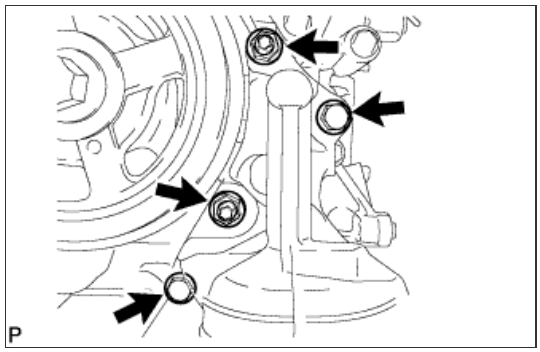
Torque:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }

NOTICE:



Tighten the bolts and nut in the order shown in the illustration to install the cooler compressor.

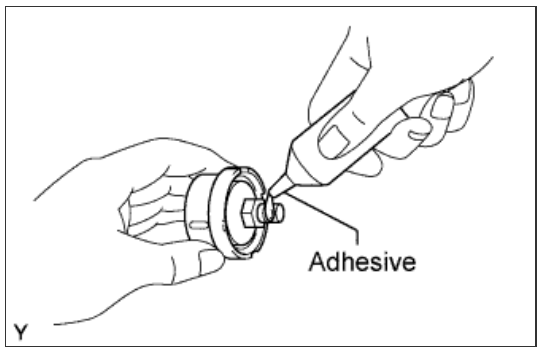
8. INSTALL OIL FILTER BRACKET (w/o Oil Cooler)



a. Apply a light coat of engine oil to 2 new O-rings.

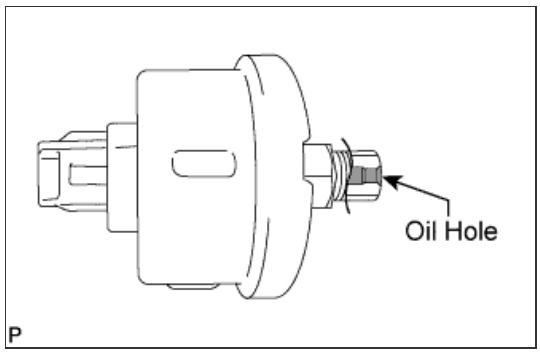
b. Install the 2 O-rings to the timing chain cover.

c. Install the oil filter bracket with the 2 bolts and 2 nuts.



Torque:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }

9. INSTALL OIL PRESSURE SENDER GAUGE ASSEMBLY

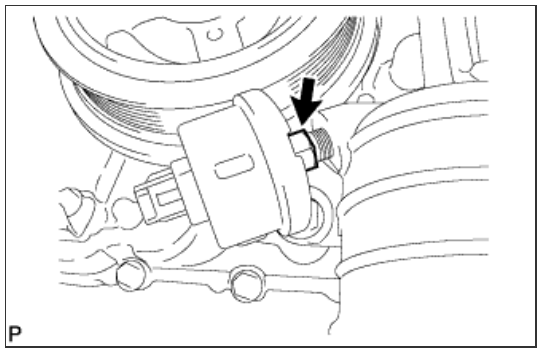


a. Apply adhesive to 2 or 3 threads of the oil pressure sender gauge.

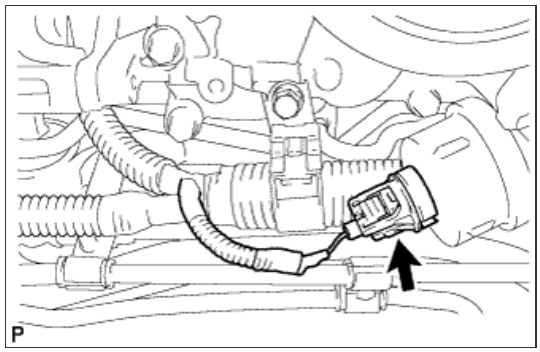
Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

NOTICE:

Do not allow adhesive to contact the oil hole.



b. Install the oil pressure sender gauge.



Torque:
15 N*m{ 153 kgf*cm , 11 ft.*lbf }

NOTICE:

Do not start the engine within 1 hour after installation.

c. Connect the sender gauge connector.

10. INSTALL FAN SHROUD

a. Install the fan pulley.

b. Place the shroud together with the coupling fan between the radiator and engine.

NOTICE:

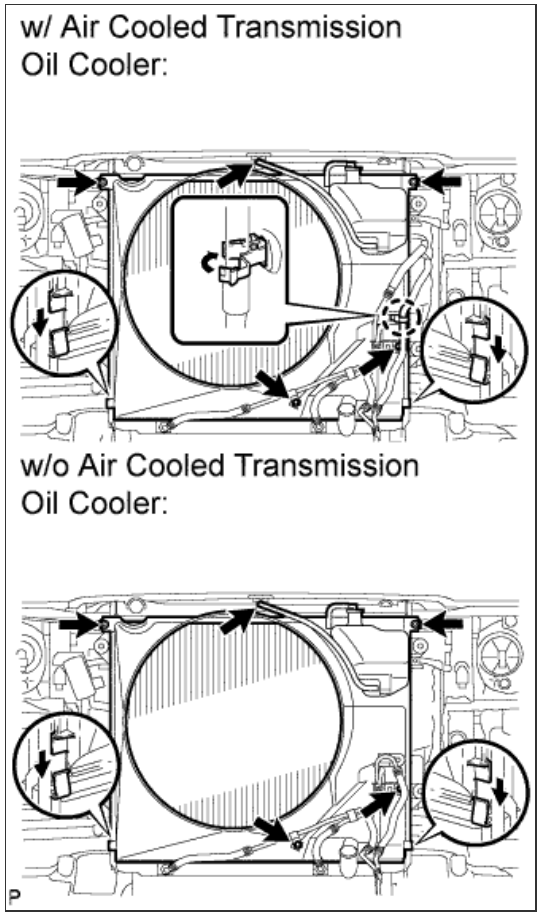
Be careful not to damage the radiator core.

c. Temporarily install the fluid coupling fan to the fluid coupling bracket with the 4 nuts. Tighten the nuts as much as possible by hand.

d. Attach the claws of the shroud to the radiator as shown in the illustration.

e. Install the shroud with the 2 bolts.

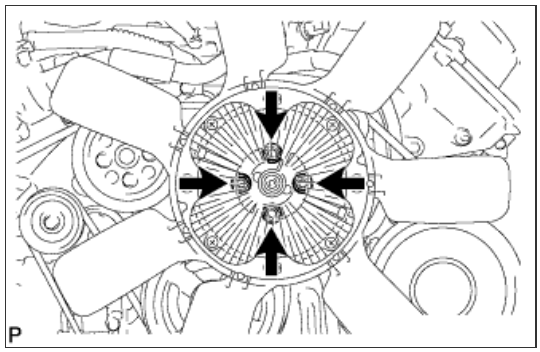
Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



f. Connect the oil cooler tube to the fan shroud with the 2 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

g. w/ Air Cooled Transmission Oil Cooler:
Pass the hose through the flexible hose clamp and close the clamp as shown in the illustration.



h. Connect the reservoir hose to the upper radiator tank.

i. Install the fan and generator V belt (Click here).

j. Tighten the 4 nuts of the fluid coupling fan.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

11. INSTALL NO. 1 RADIATOR HOSE

12. ADD ENGINE COOLANT

a. Add engine coolant.

Standard Capacity:

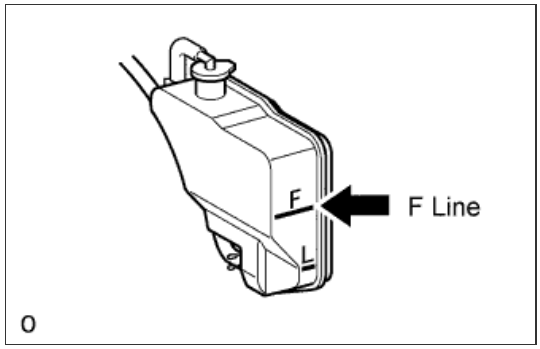
Item	Specified Condition
with transmission oil cooler	16.7 liters (17.6 US qts, 14.7 Imp. qts)
without transmission oil cooler	16.2 liters (17.1 US qts, 14.3 Imp. qts)

NOTICE:

Do not substitute plain water for engine coolant.

HINT:

TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).



b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the reservoir cap.

d. Press the No. 1 and No. 2 radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Start the engine and warm it up until the thermostat opens.

NOTICE:

Switch off the A/C.

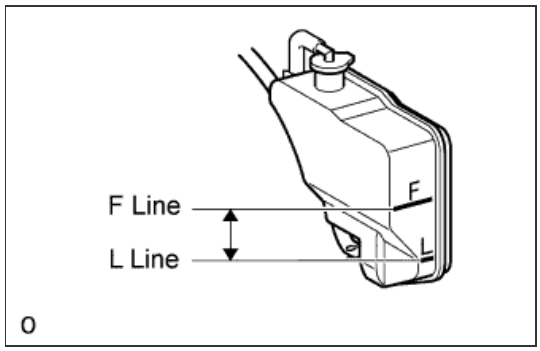
g. Maintain the engine speed at 2000 to 2500 rpm.

NOTICE:

- **Make sure that the radiator reservoir still has some coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**
- **Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the F line.**
- **Run the engine at 2000 rpm until the coolant level has stabilized.**

h. Press the No. 1 and No. 2 radiator hoses several times by hand to bleed air.

CAUTION:



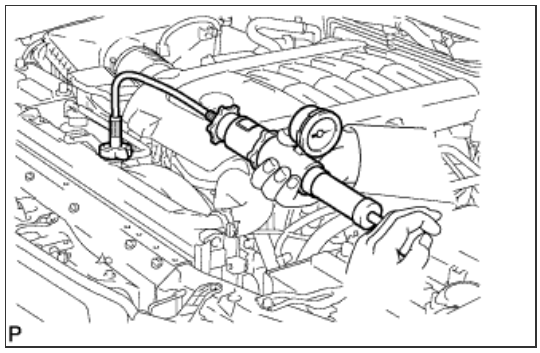
- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the fan.**

i. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

j. Check that the coolant level is between the F and L lines.
If the coolant level is below the L line, repeat all of the procedures above.
If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.



13. INSPECT FOR COOLANT LEAK

a. Fill the radiator with coolant and attach a radiator cap tester.

b. Warm up the engine.

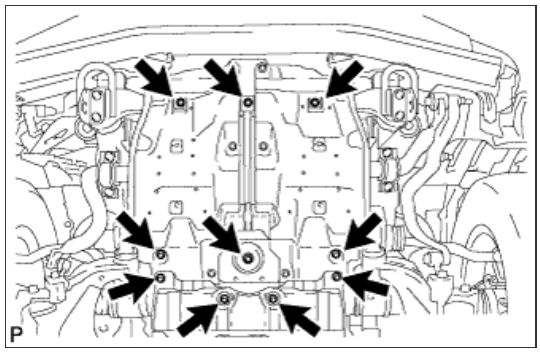
c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.

14. INSPECT FOR OIL LEAK

a. Start the engine. Make sure that there are no oil leaks from the area that was worked on.

15. INSPECT ENGINE OIL LEVEL

a. Warm up the engine, stop the engine and wait 5 minutes. The oil level should be between the dipstick low level mark and full level mark.
If low, check for leakage and add oil up to the full level mark.

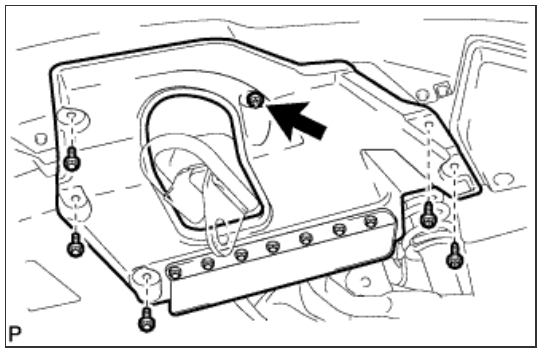


NOTICE:

Do not fill engine oil above the full level mark.

16. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.

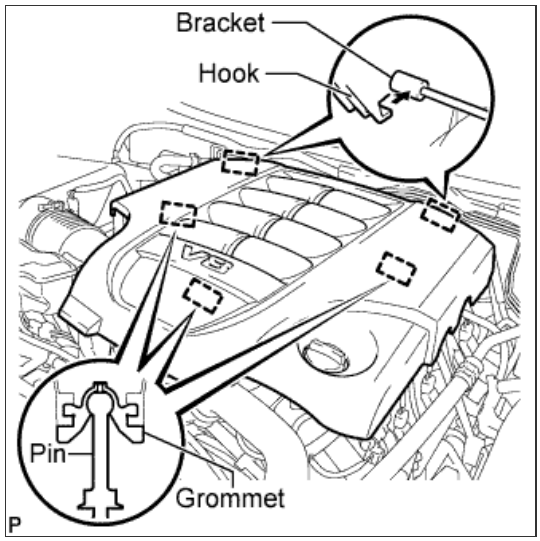


Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

17. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

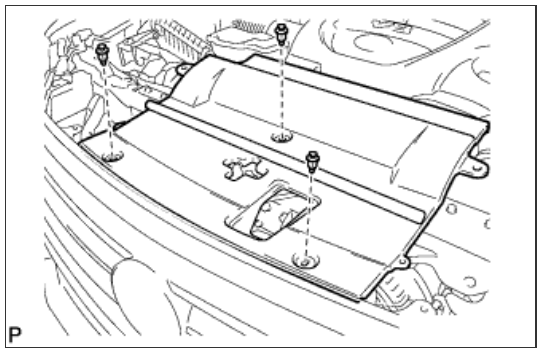
b. Install the 3 bolts and 2 screws.



18. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

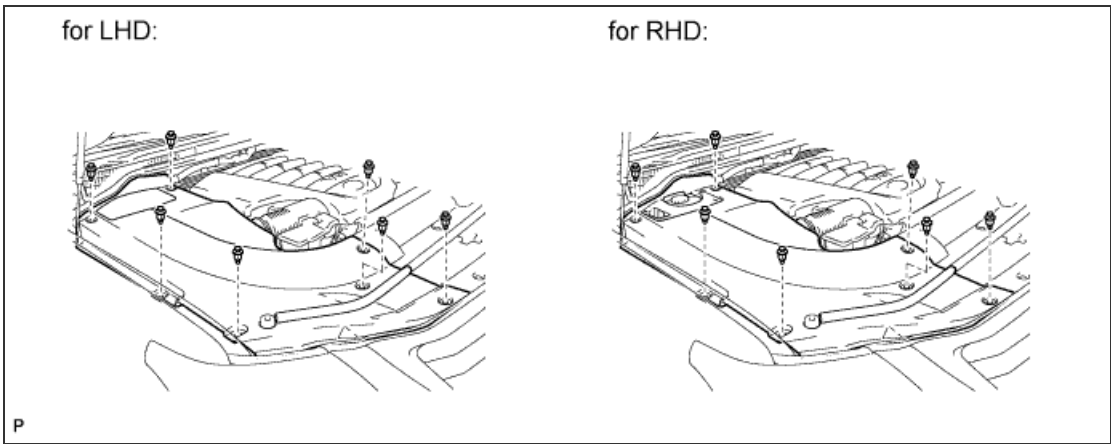
HINT:

Use the same procedures described for the LH side.



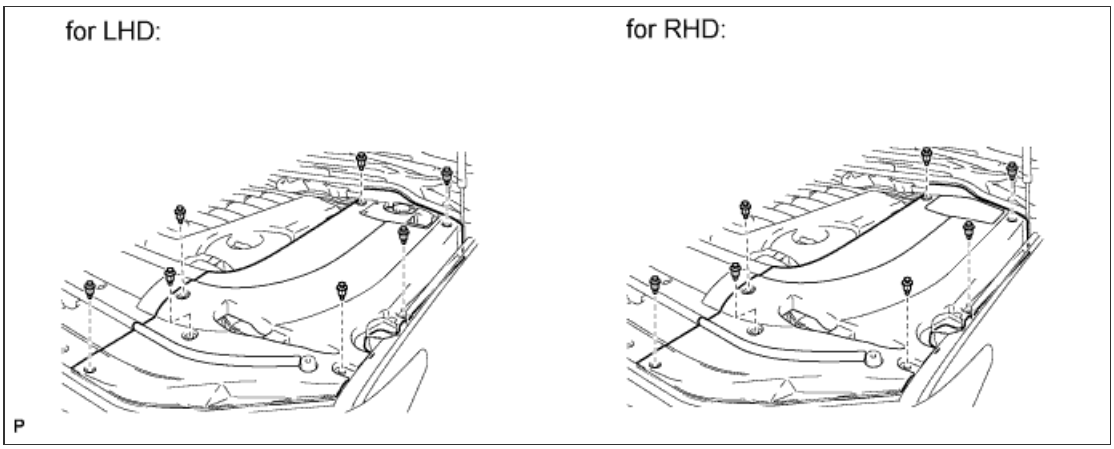
19. INSTALL V-BANK COVER SUB-ASSEMBLY

a. Attach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.



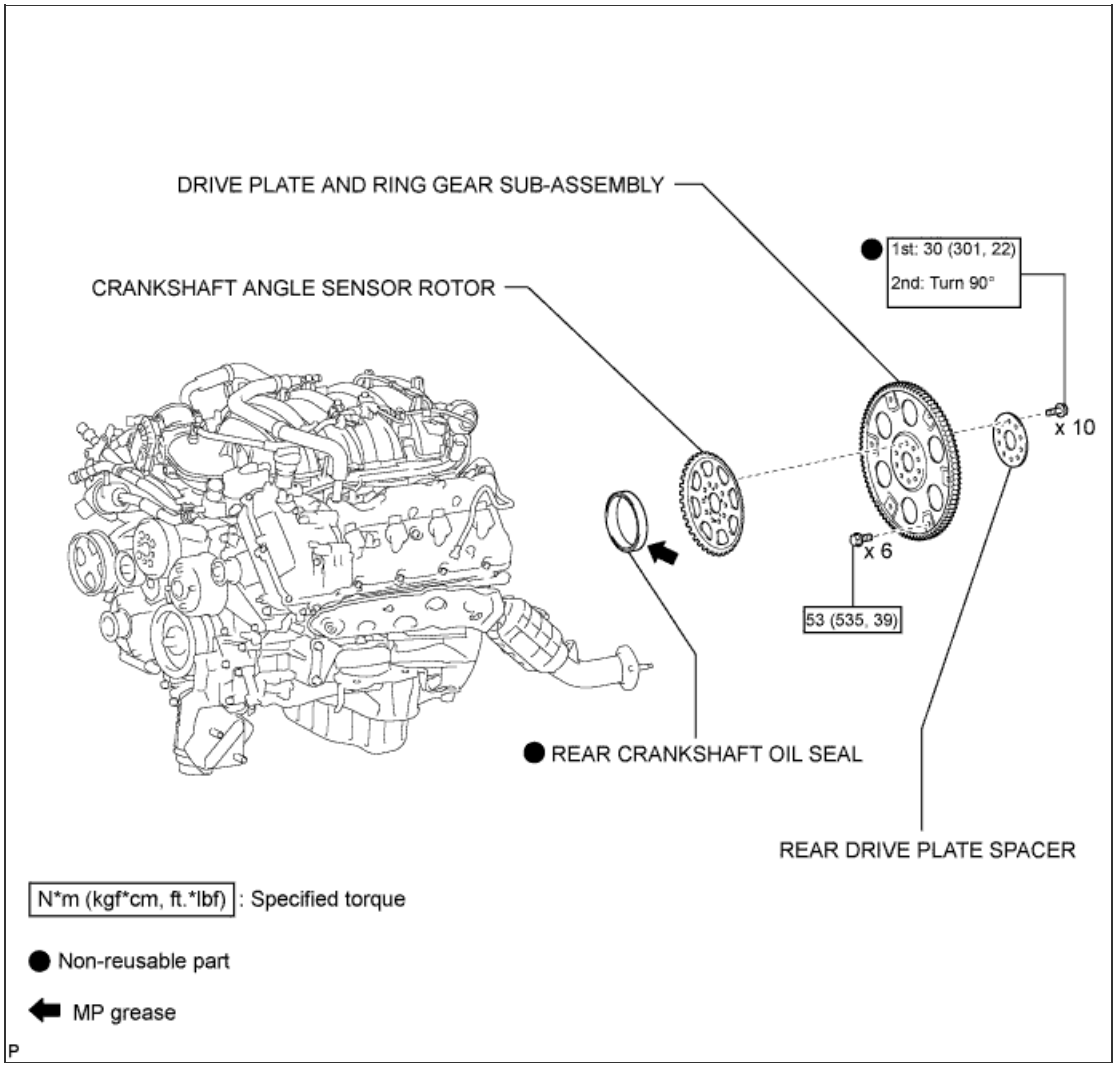
20. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the upper radiator support seal with the 3 clips.



21. INSTALL ENGINE ROOM SIDE COVER RH

a. Install the engine room side cover with the 7 clips.



22. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.

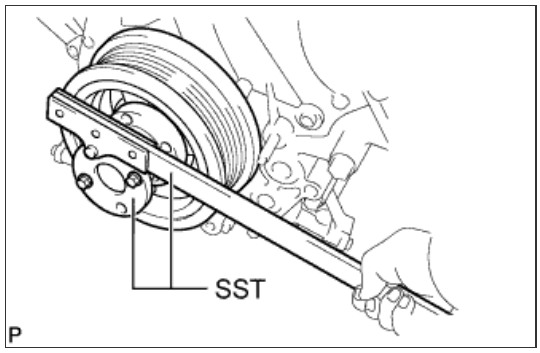
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

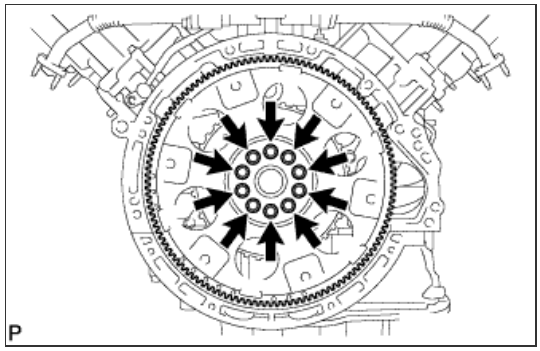
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable from the cable is reconnected (Click here).



2. REMOVE AUTOMATIC TRANSMISSION ASSEMBLY

a. Remove the automatic transmission (Click here).



3. REMOVE DRIVE PLATE AND RING GEAR SUB-ASSEMBLY

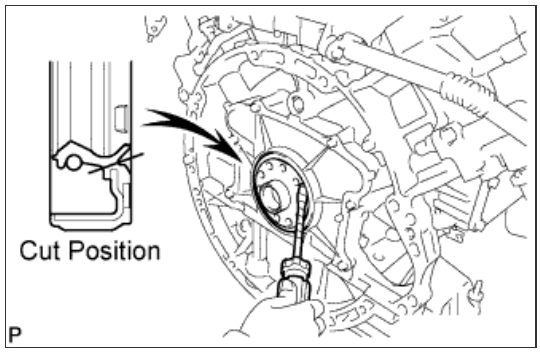
a. Using SST, hold the crankshaft.

SST
09213-70011 (09213-70020)
09330-00021

b. Remove the 10 bolts, rear drive plate spacer, drive plate and crankshaft angle sensor rotor.

4. REMOVE REAR CRANKSHAFT OIL SEAL

a. Using a knife, cut off the lip of the oil seal.



b. Using a screwdriver, pry out the oil seal.

HINT:

Tape the screwdriver tip before use.

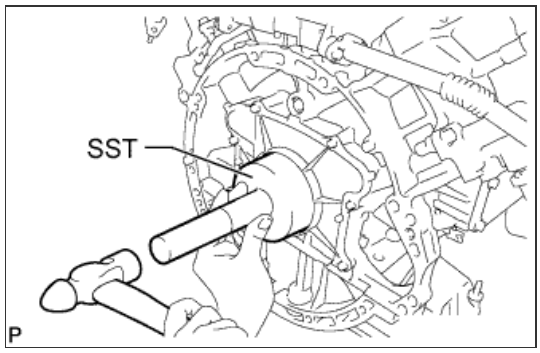
NOTICE:

Do not damage the surface of the oil seal press fit hole and crankshaft.

Cut Position
P

for Preparation Click here

1. INSTALL REAR CRANKSHAFT OIL SEAL



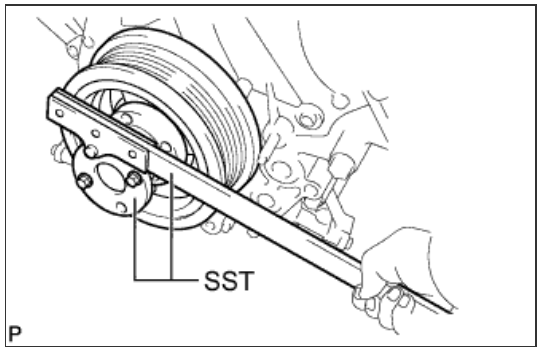
a. Apply MP grease to the lip of a new oil seal.

b. Using SST and a hammer, tap in the oil seal until its surface is flush with the rear oil seal retainer edge.

SST
09223-56010

NOTICE:

- **Keep the lip free from foreign matter.**
- **Do not tap on the oil seal at an angle.**

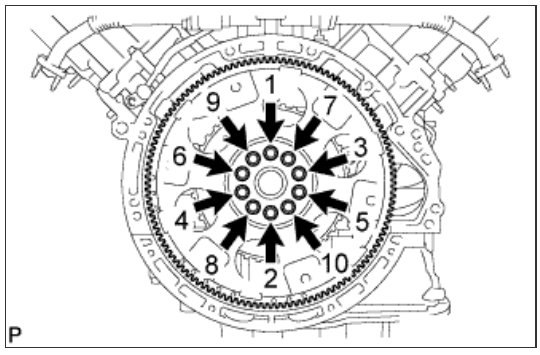


2. INSTALL DRIVE PLATE AND RING GEAR SUB-ASSEMBLY

a. Using SST, hold the crankshaft.

SST
09213-70011 (09213-70020)
09330-00021

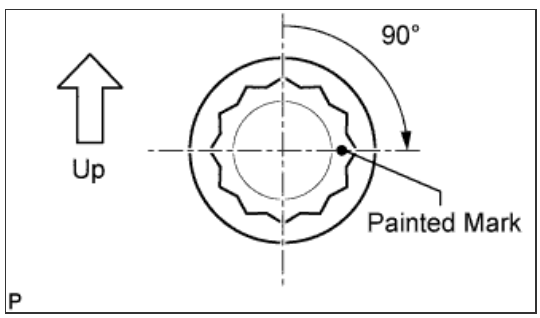
b. Install the crankshaft angle sensor rotor, drive plate and rear drive plate spacer to the crankshaft.



c. Install and uniformly tighten 10 new bolts in the sequence shown in the illustration.

Torque:
30 N*m{ 301 kgf*cm , 22 ft.*lbf }

NOTICE:



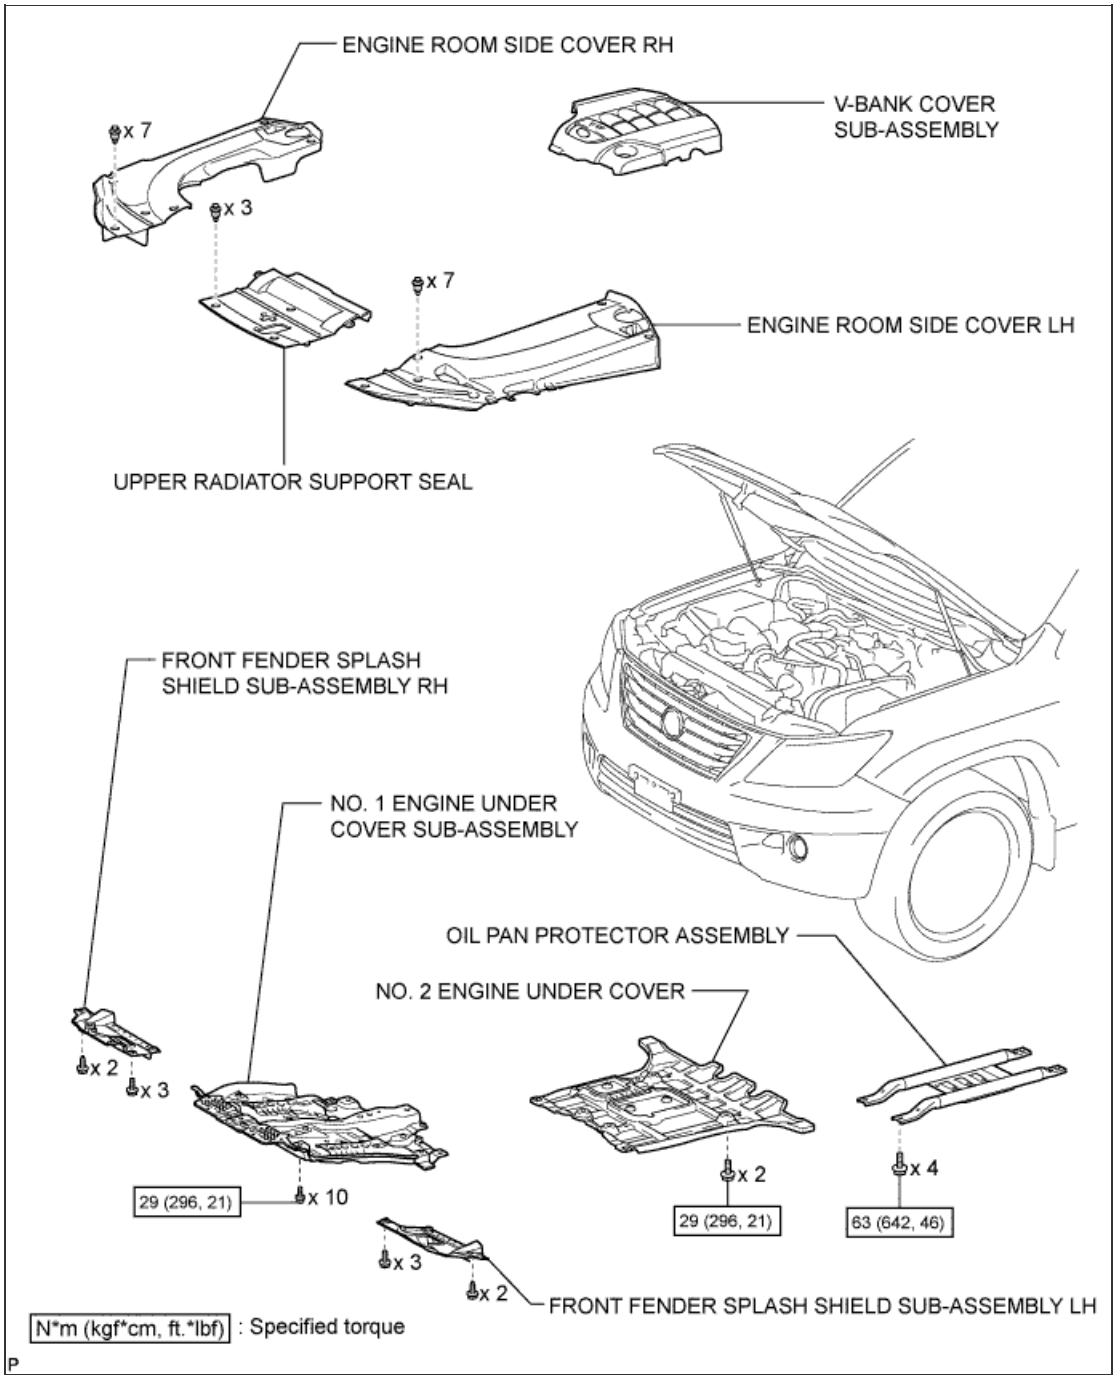
- **Do not reuse the flywheel installation bolts.**
- **Do not strike or damage the flywheel installation bolts. Be sure to handle them carefully.**

d. Mark the upside of each flywheel installation bolt with paint.

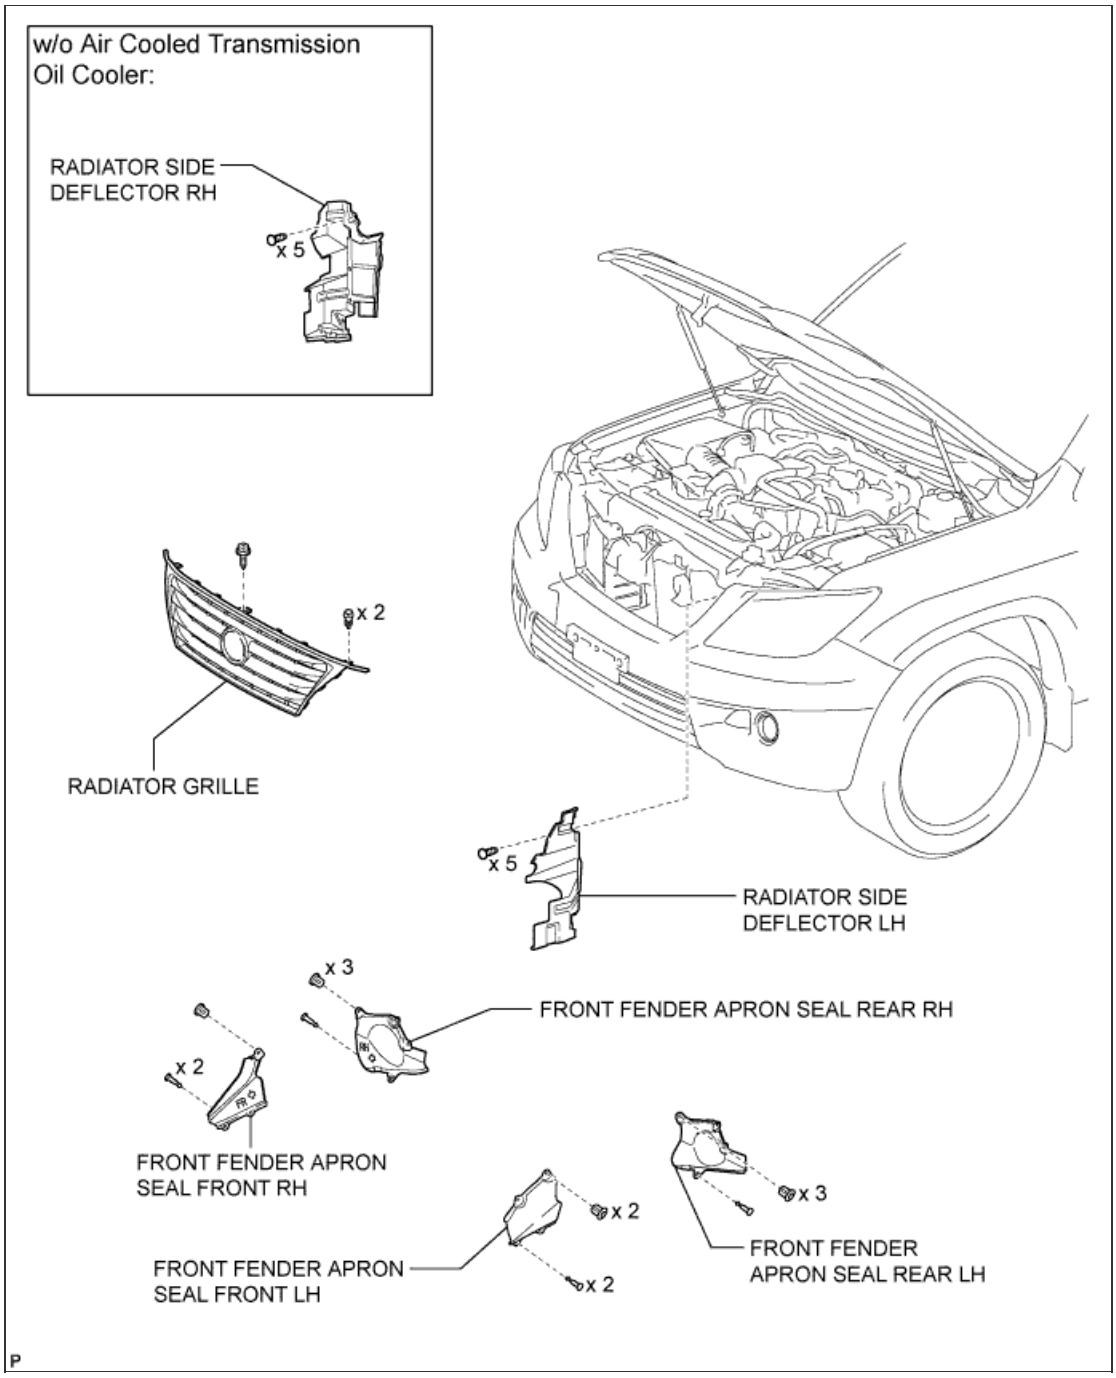
e. Tighten the flywheel installation bolts 90° as shown in the illustration.

f. Check that the painted marks are now at a 90° angle to the upside.

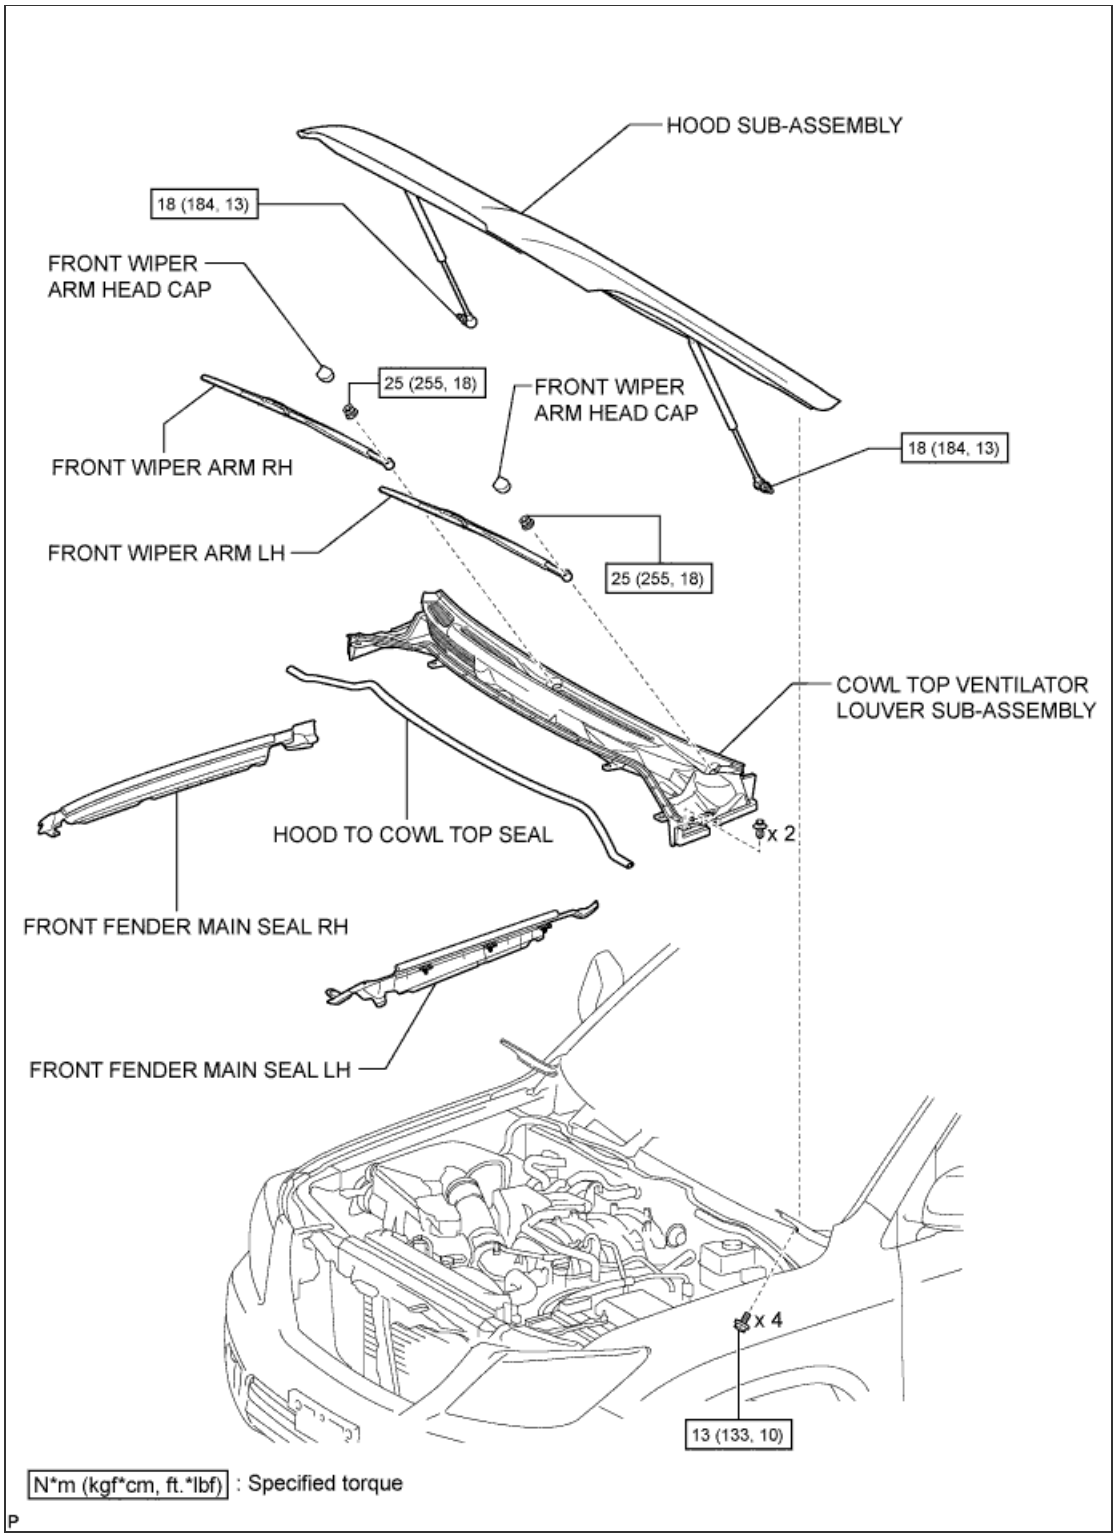
3. INSTALL AUTOMATIC TRANSMISSION ASSEMBLY



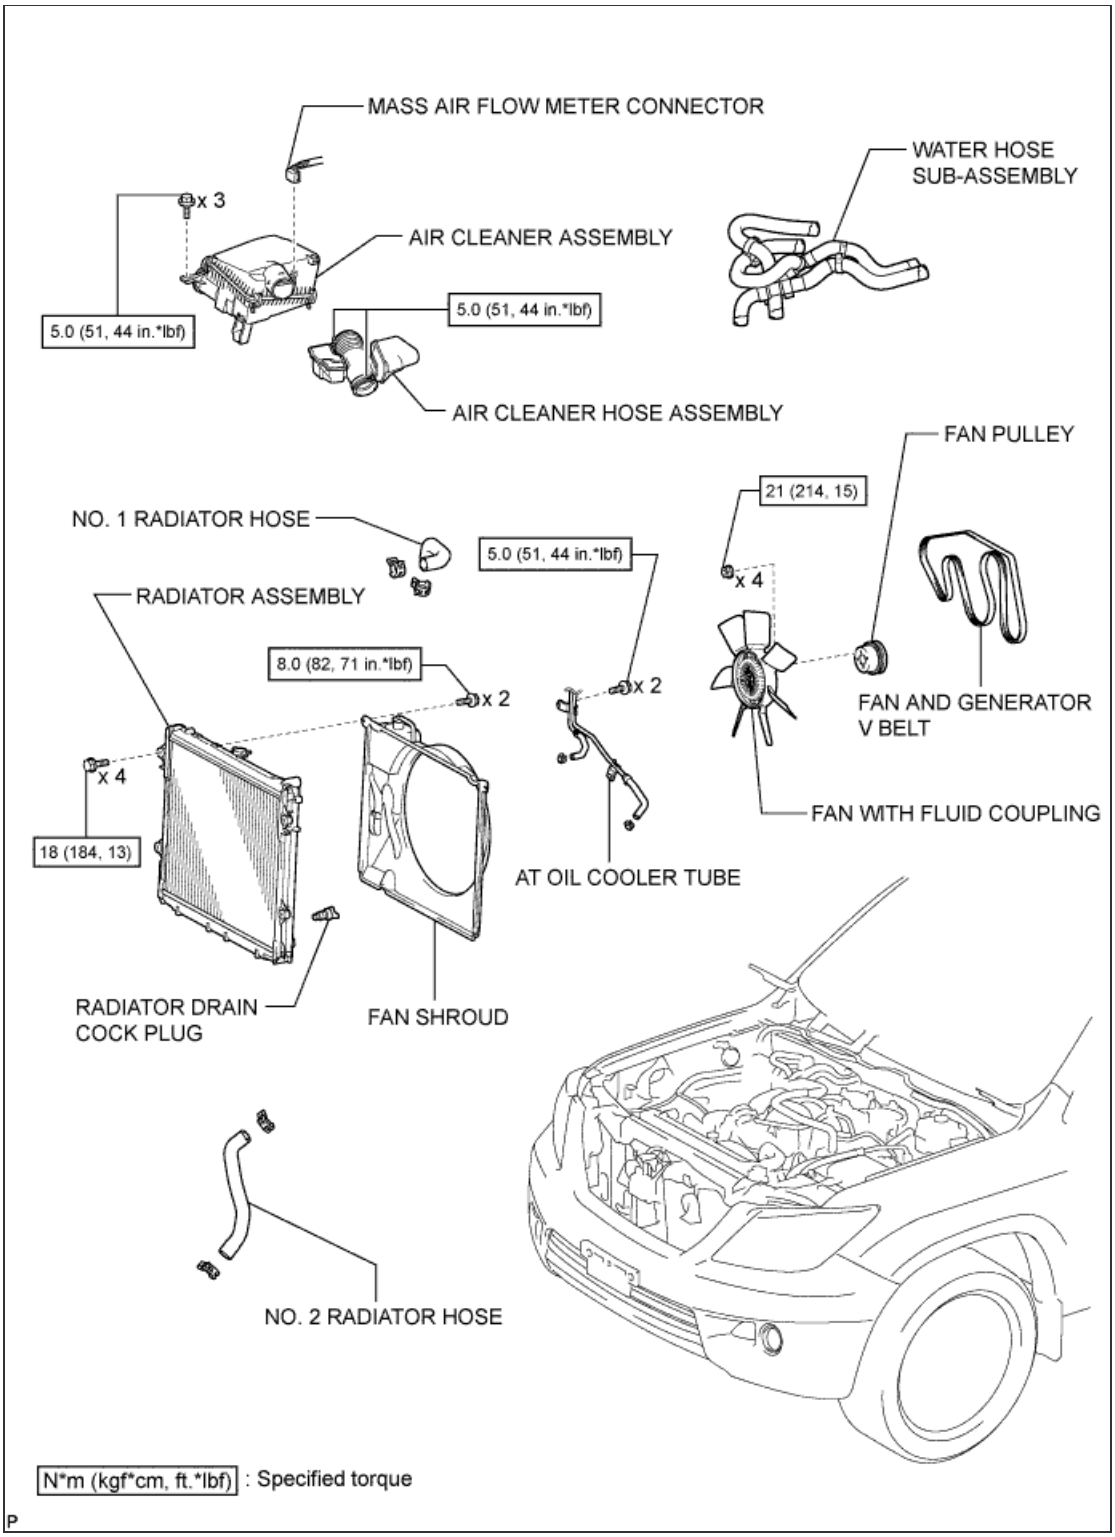
a. Install the automatic transmission (Click here).



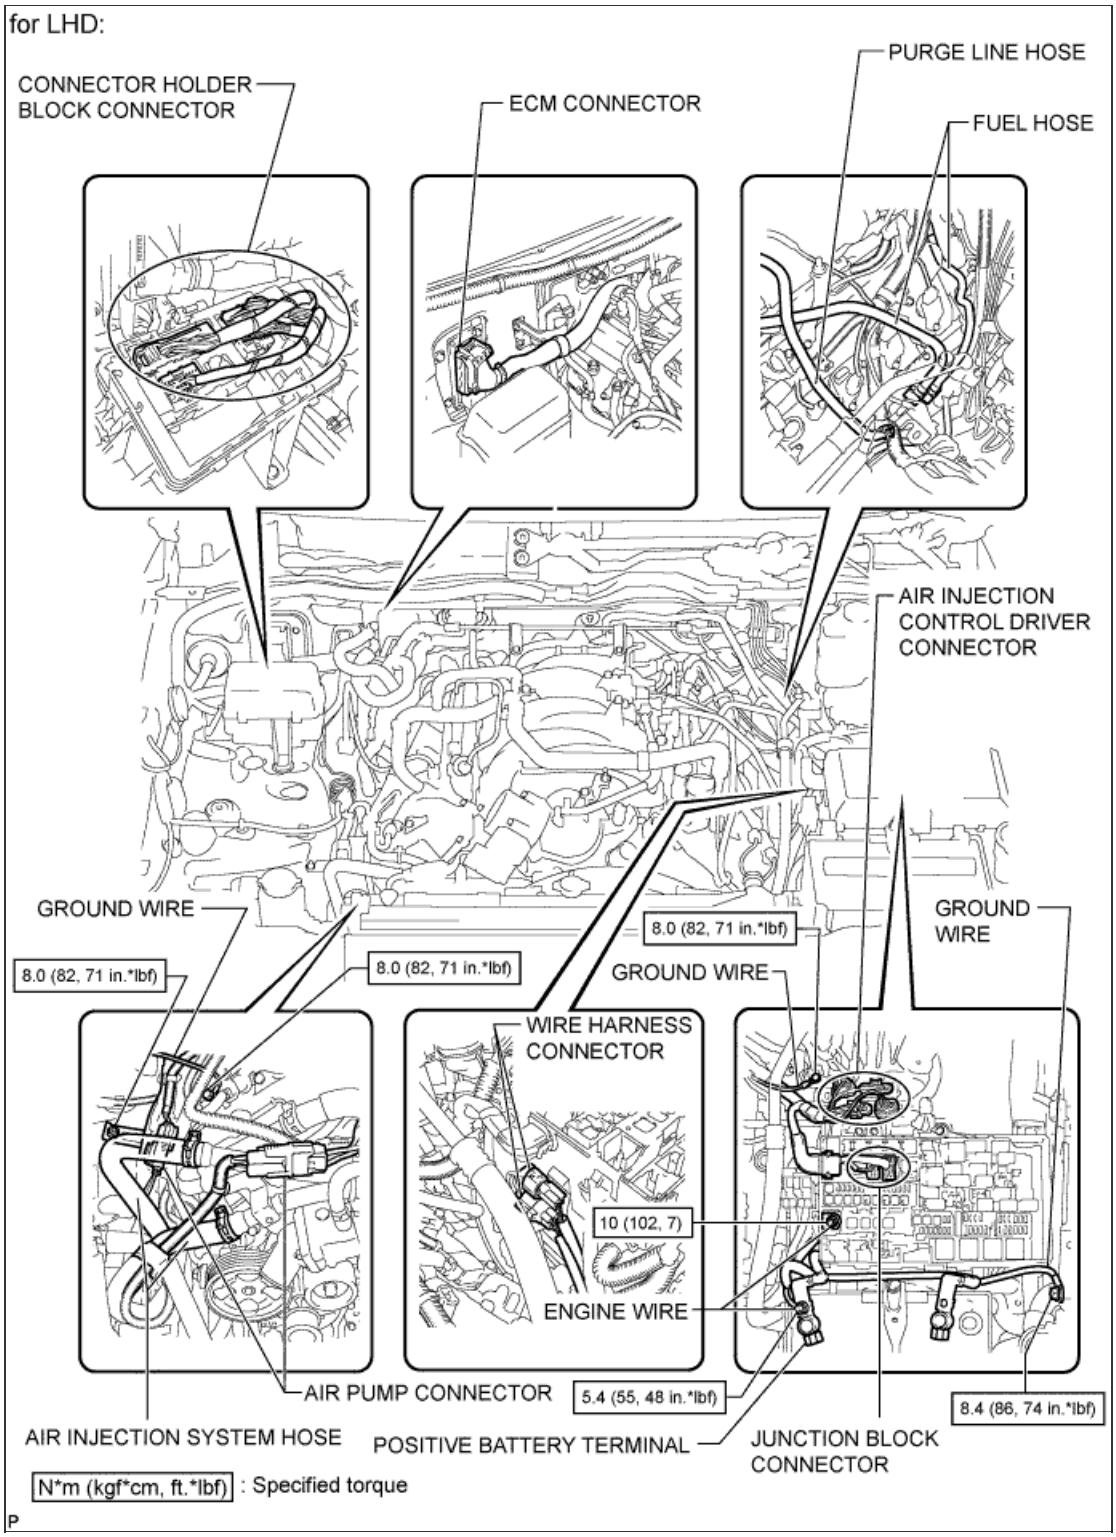
4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



NOTICE:



When disconnecting the cable, some systems need to be initialized after the cable from the cable is reconnected (Click here).



for Preparation Click here

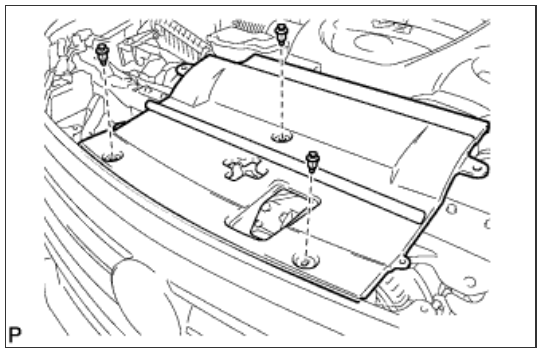
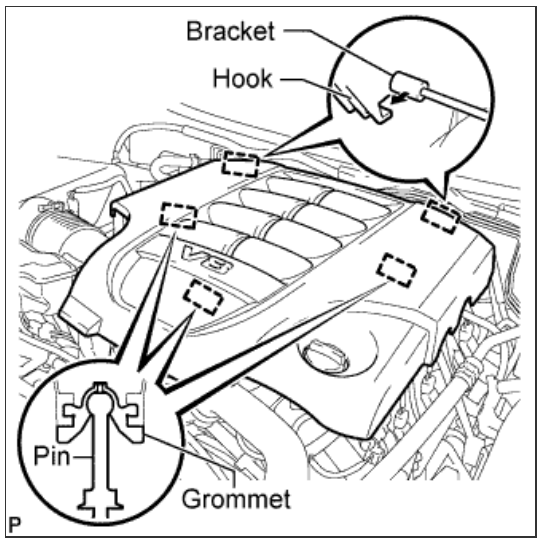
1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.



2. REMOVE ENGINE ROOM SIDE COVER RH

a. Remove the 7 clips and engine room side cover.



3. REMOVE UPPER RADIATOR SUPPORT SEAL

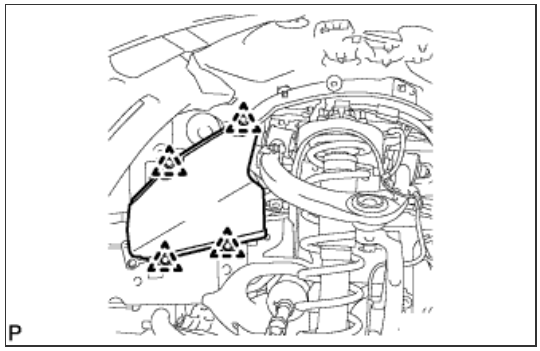
a. Remove the 3 clips and upper radiator support seal.

4. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.

5. DISCHARGE FUEL SYSTEM PRESSURE

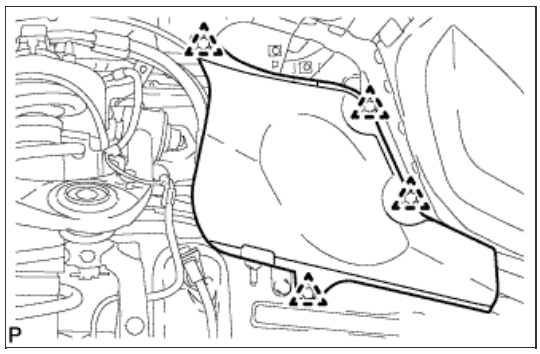
a. Discharge the fuel system pressure (Click here).



6. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

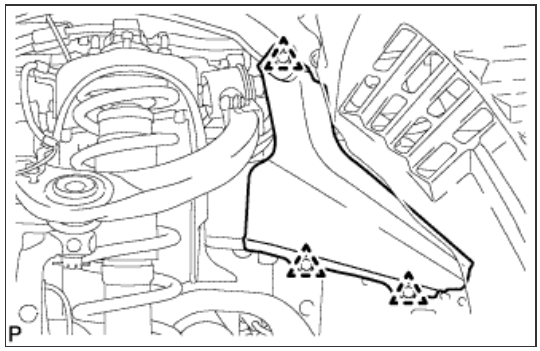
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable from the cable is reconnected (Click here).



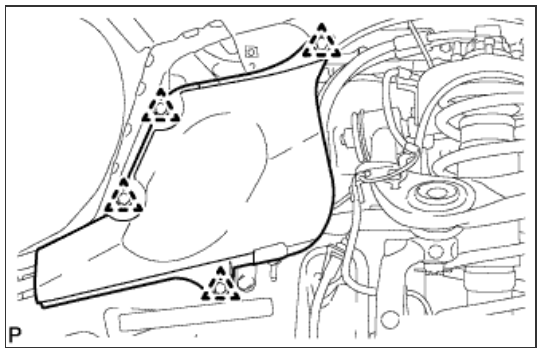
7. REMOVE FRONT FENDER APRON SEAL FRONT LH

a. Using a clip remover, remove the 4 clips and fender apron seal.



8. REMOVE FRONT FENDER APRON SEAL REAR LH

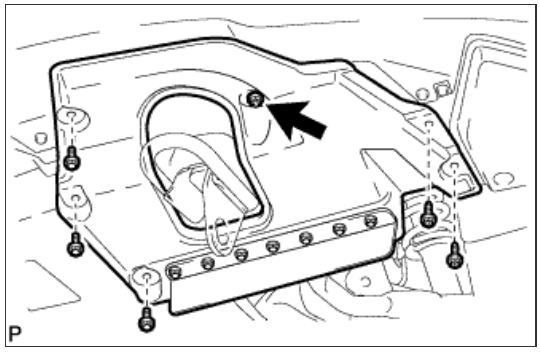
a. Using a clip remover, remove the 4 clips and fender apron seal.



9. REMOVE FRONT FENDER APRON SEAL FRONT RH

a. Using a clip remover, remove the 3 clips and fender apron seal.

10. REMOVE FRONT FENDER APRON SEAL REAR RH

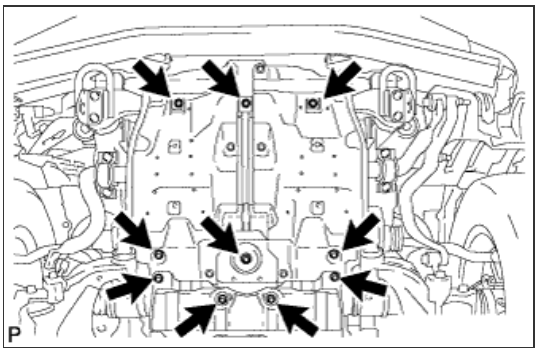


a. Using a clip remover, remove the 4 clips and fender apron seal.

11. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and 2 screws.

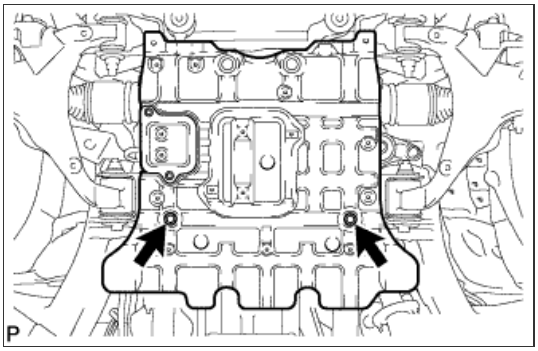
b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



12. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

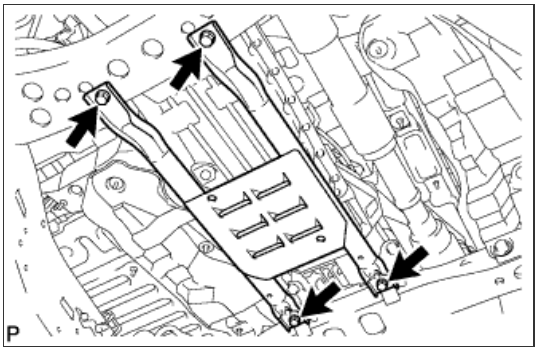
HINT:

Use the same procedures described for the LH side.



13. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and No. 1 engine under cover.



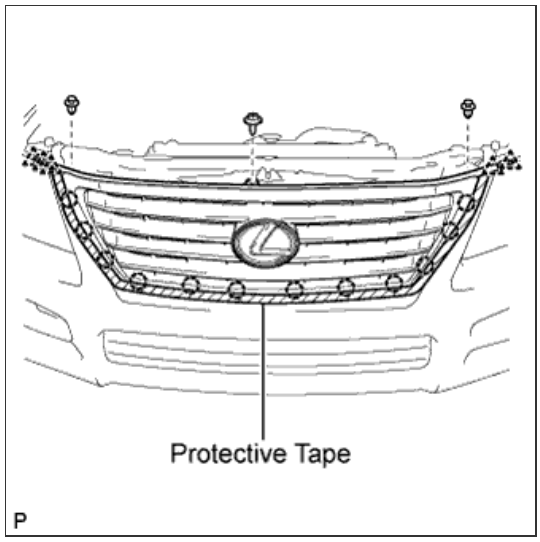
14. REMOVE NO. 2 ENGINE UNDER COVER

a. Remove the 2 bolts and No. 2 engine under cover.

15. REMOVE OIL PAN PROTECTOR ASSEMBLY

a. Remove the 4 bolts and oil pan protector.

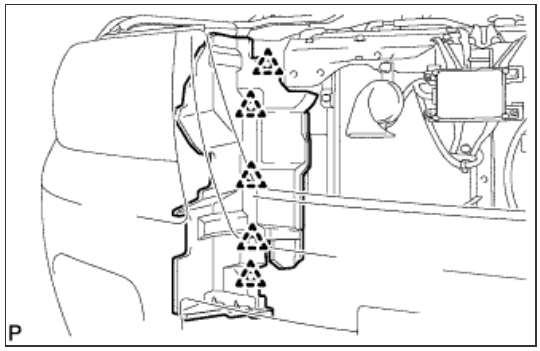
16. REMOVE RADIATOR GRILLE



a. Put protective tape around the radiator grille.

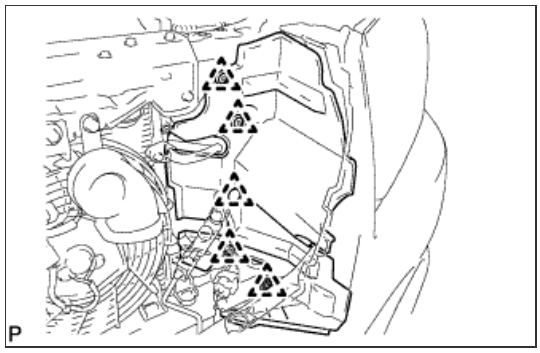
b. Remove the screw and 2 clips.

c. Detach the 5 clips and partially remove the upper radiator seal.



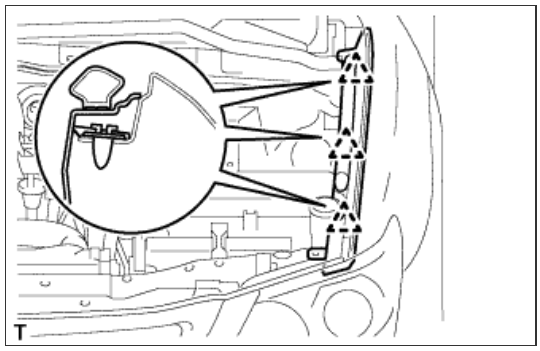
d. w/o Wide View Front Monitor System:
Detach the 12 claws and remove the radiator grille.

e. w/ Wide View Front Monitor System:
Detach the 12 claws, disconnect the connector and remove the radiator grille.



17. REMOVE RADIATOR SIDE DEFLECTOR RH (w/o Air Cooled Transmission Oil Cooler)

a. Using a clip remover, remove the 5 clips and side deflector.



18. REMOVE RADIATOR SIDE DEFLECTOR LH

a. Using a clip remover, remove the 5 clips and side deflector.

19. REMOVE FRONT FENDER MAIN SEAL LH

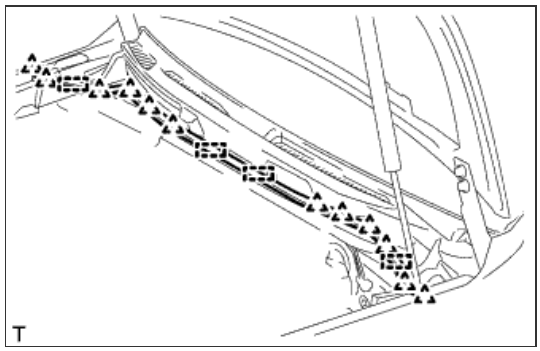
a. Using a clip remover, detach the 3 clips and remove the fender main seal.

20. REMOVE FRONT FENDER MAIN SEAL RH

HINT:

Use the same procedures described for the LH side.

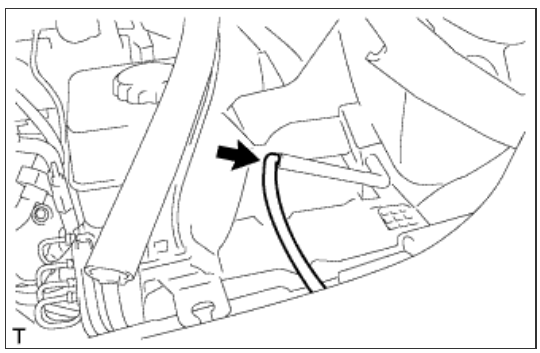
21. REMOVE FRONT WIPER ARM LH



a. Remove the nut, wiper arm and blade.

22. REMOVE FRONT WIPER ARM RH

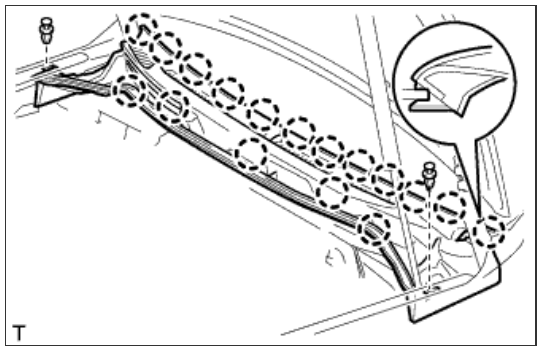
a. Remove the nut, wiper arm and blade.



23. REMOVE HOOD TO COWL TOP SEAL

a. Using a clip remover, detach the 12 clips and 4 clamps, and remove the hood to cowl top seal.

24. REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

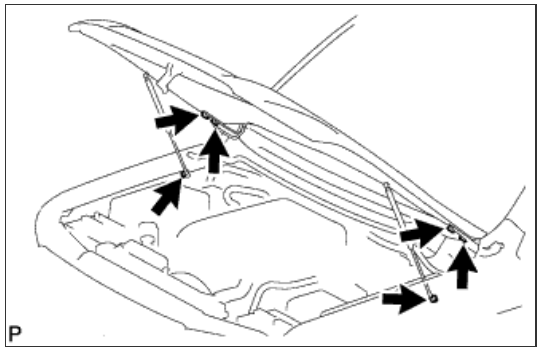


a. Disconnect the washer hose.

b. Remove the 2 clips.

b. Remove the 2 clips.

c. Detach the 17 claws and remove the cowl top ventilator louver sub-assembly.



25. REMOVE HOOD SUB-ASSEMBLY

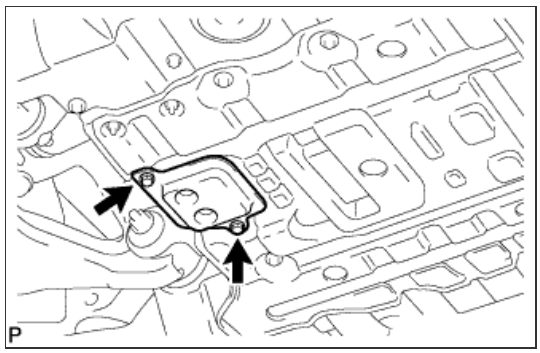
a. Remove the 2 hood support bolts and disconnect the hood supports.

CAUTION:

Remove the hood support assembly while supporting the hood by hand.

b. Remove the 4 bolts and hood.

26. DRAIN ENGINE OIL

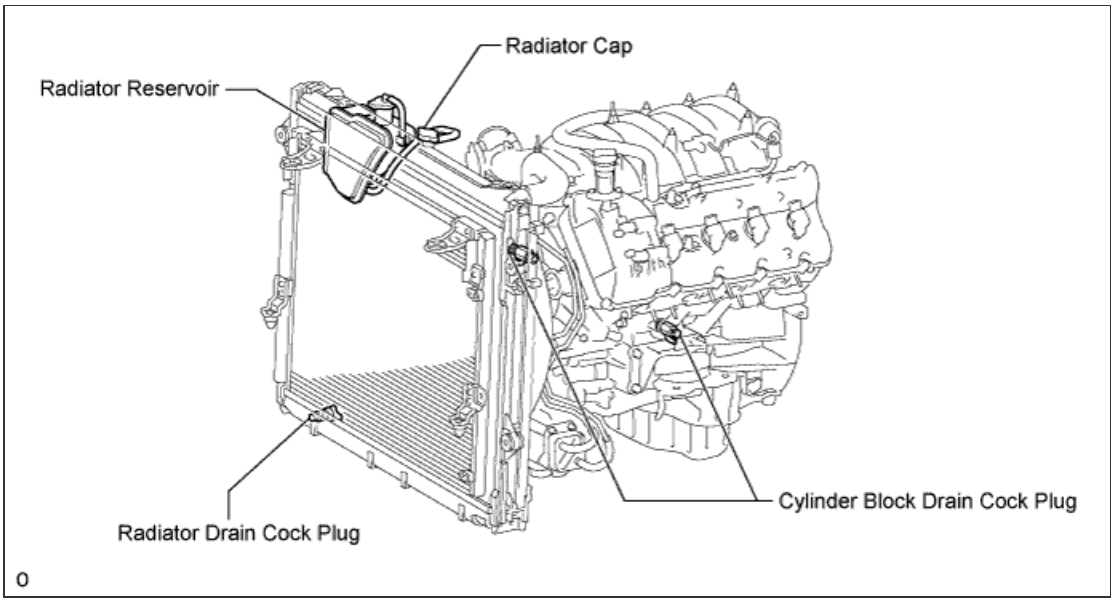


a. Remove the oil filler cap.

b. Remove the 2 bolts and No. 2 engine under cover seal.

c. Remove the oil pan drain plug and gasket, and drain the engine oil into a container.

d. Install a new gasket and the oil pan drain plug.



Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

27. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Loosen the radiator drain cock plug.

HINT:

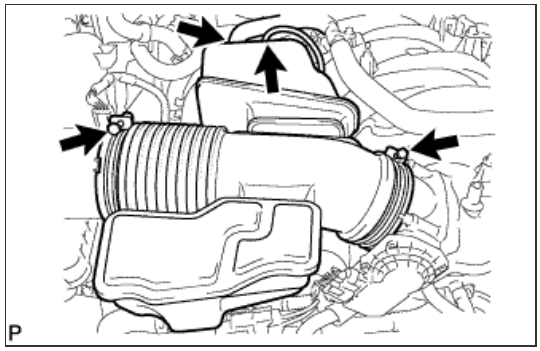
Collect the coolant in a container and dispose of it according to the regulations in your area.

b. Remove the radiator cap. Then drain the coolant from the radiator.

c. Loosen the 2 cylinder block drain cock plugs. Then drain the coolant from the engine.

d. Tighten the 2 cylinder block drain cock plugs.

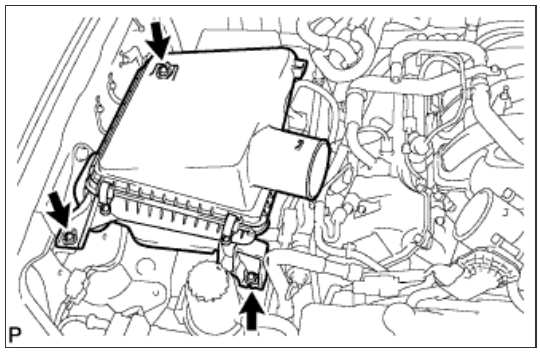
Torque:
13 N*m{ 130 kgf*cm , 10 ft.*lbf }



e. Tighten the radiator drain cock plug by hand.

28. REMOVE AIR CLEANER HOSE ASSEMBLY

a. Disconnect the vacuum hose and No. 2 ventilation hose.

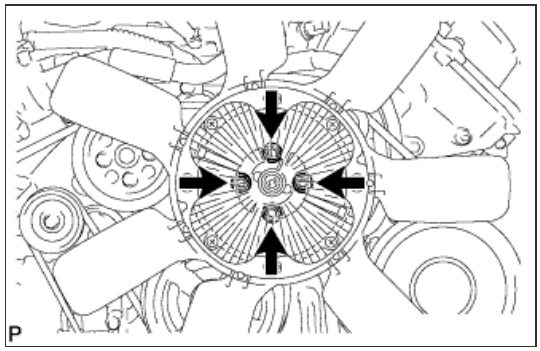


b. Loosen the 2 hose clamps.

c. Remove the air cleaner hose.

29. REMOVE AIR CLEANER ASSEMBLY

a. Remove the 3 bolts and air cleaner.



30. REMOVE NO. 1 RADIATOR HOSE

31. REMOVE NO. 2 RADIATOR HOSE

32. REMOVE FAN SHROUD

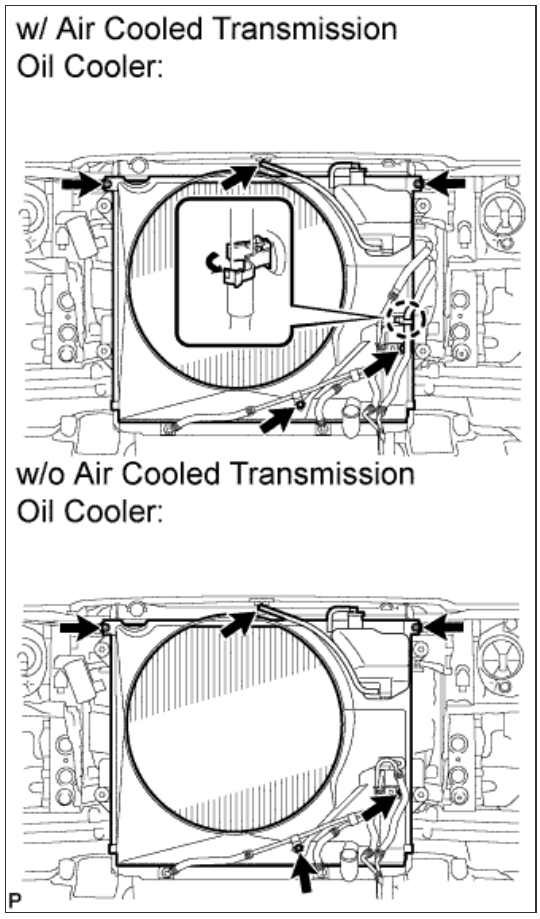
a. Loosen the 4 nuts holding the fluid coupling fan.

b. Remove the fan and generator V belt (Click here).

c. Disconnect the reservoir hose from the upper radiator tank.

d. w/ Air Cooled Transmission Oil Cooler:
Detach the claw to open the flexible hose clamp.

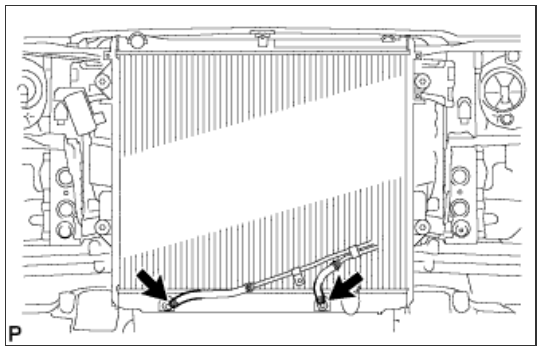
e. Remove the 2 bolts and disconnect the oil cooler tube from the fan shroud.



f. Remove the 2 bolts holding the fan shroud.

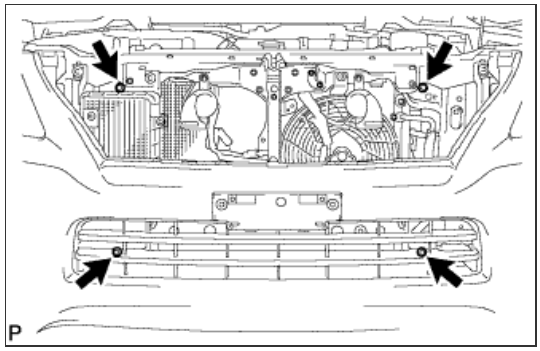
g. Remove the 4 nuts of the fluid coupling fan, and then remove the shroud together with the coupling fan.

NOTICE:

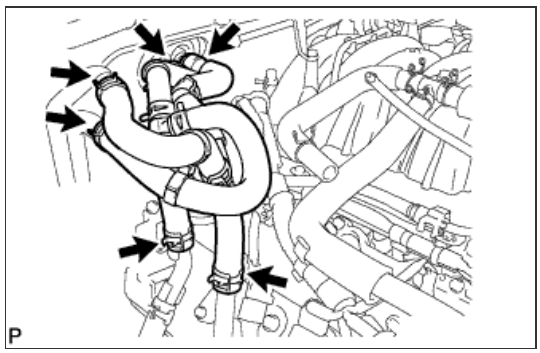


Be careful not to damage the radiator core.

h. Remove the fan pulley.

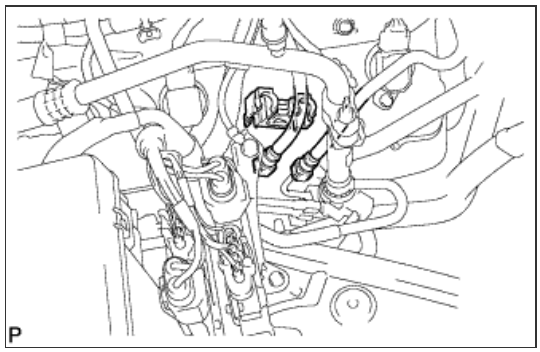


33. REMOVE RADIATOR ASSEMBLY



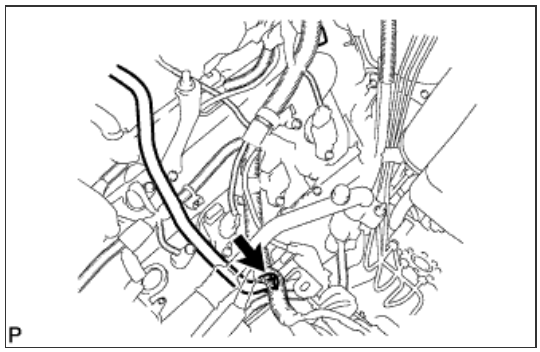
a. Disconnect the 2 oil cooler hoses.

b. Remove the 4 bolts and radiator.



34. REMOVE WATER HOSE SUB-ASSEMBLY

35. DISCONNECT FUEL MAIN AND RETURN HOSE

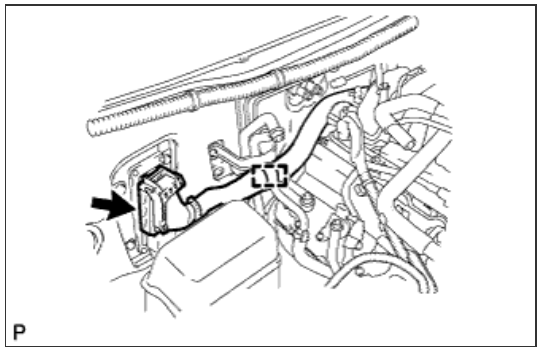


a. Remove the fuel pipe clamp.

b. Disconnect the fuel main and return hoses (Click here).

36. DISCONNECT WIRE HARNESS AND HOSE

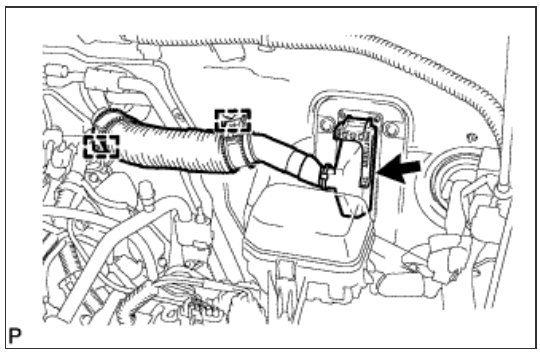
a. Disconnect the purge line hose.



b. Disconnect the ECM connector.

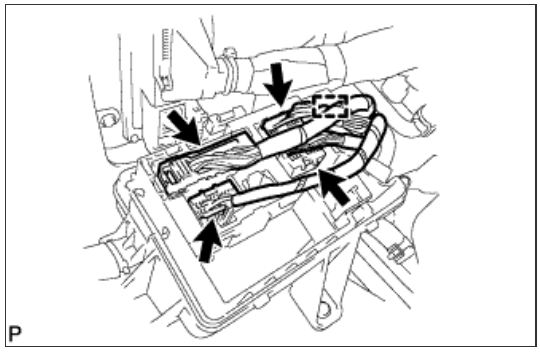
i. for LHD:
Disconnect the clamp and ECM connector.

HINT:



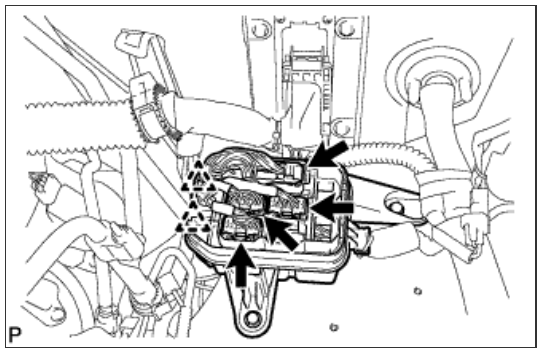
Refer to the following procedures to disconnect the ECM connector (Click here).

ii. for RHD:
Disconnect the 2 clamps and ECM connector.



HINT:

Refer to the following procedures to disconnect the ECM connector (Click here).

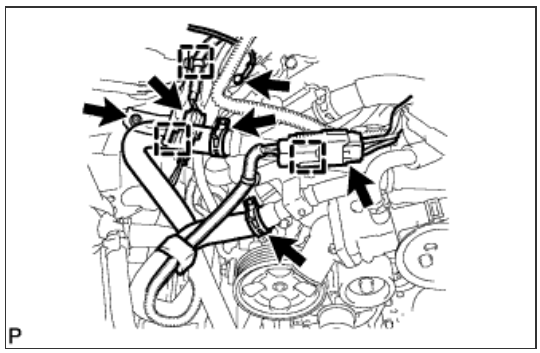


c. Disconnect the 4 connectors.

i. for LHD:
Disconnect the 4 connectors and clamp from the connector holder block.

ii. for RHD:

Disconnect the 4 connectors and 2 clips from the connector holder block.



d. Disconnect the 2 air pump connectors and 3 clamps.

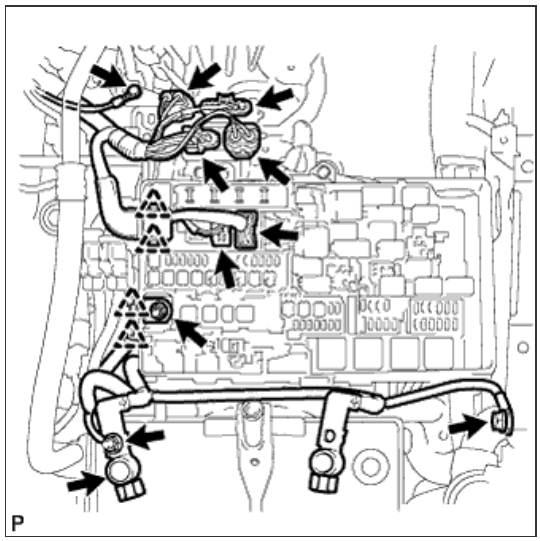
e. Remove the nut and connector bracket.

f. Remove the bolt and disconnect the ground wire.

g. Disconnect the 2 air injection system hoses.

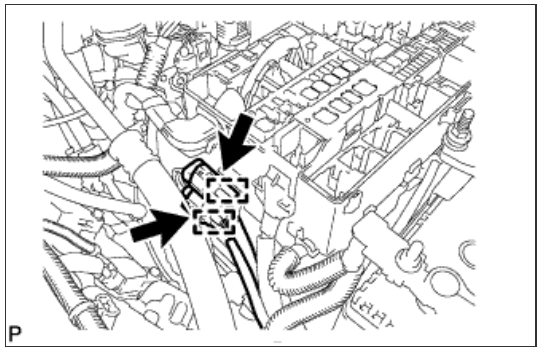
h. Remove the nut and disconnect the wire from the positive (+) battery cable.

i. Disconnect the cable from the positive (+) battery terminal.



j. Remove the bolt and disconnect the ground wire from the body.

k. Remove the bolt and disconnect the ground wire from the air injection control bracket.

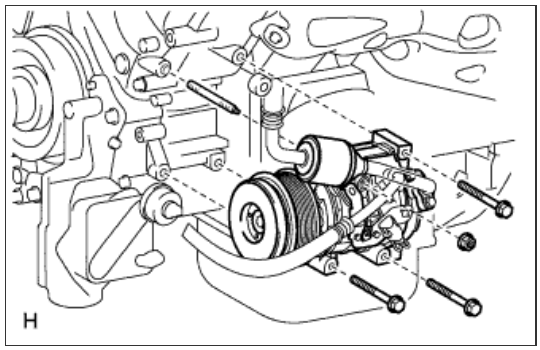


l. Disconnect the 4 air injection control driver connectors.

m. Remove the nut and disconnect the wire and 2 clips from the engine room junction block.

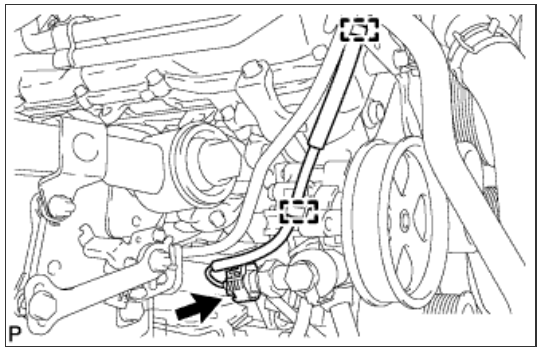
n. Disconnect the 2 connectors and 2 clips from the engine room junction block.

o. Disconnect the 2 connectors and clamps.



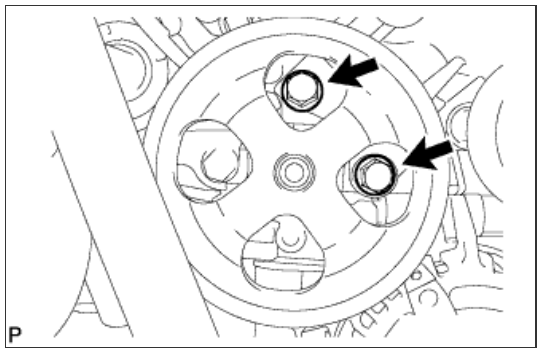
37. DISCONNECT COOLER COMPRESSOR ASSEMBLY

a. Remove the 3 bolts, nut and stud bolt, and disconnect the cooler compressor.



HINT:

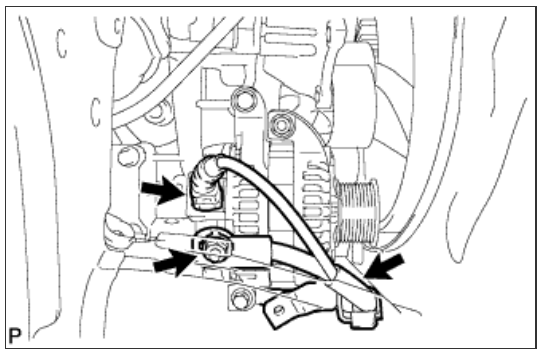
It is not necessary to completely remove the compressor. With the hoses connected to the compressor, hang the compressor on the vehicle body with a rope.



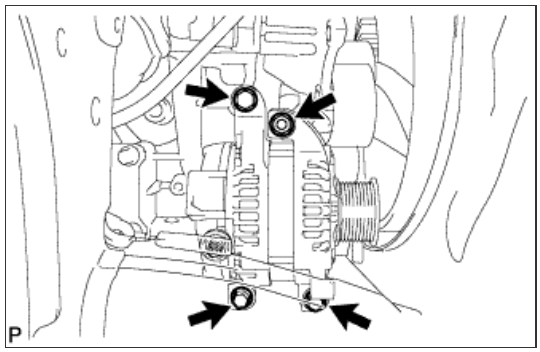
38. DISCONNECT VANE PUMP ASSEMBLY

a. Disconnect the 2 clamps and power steering oil pressure switch connector.

b. Remove the 2 bolts and disconnect the vane pump.



39. REMOVE GENERATOR ASSEMBLY

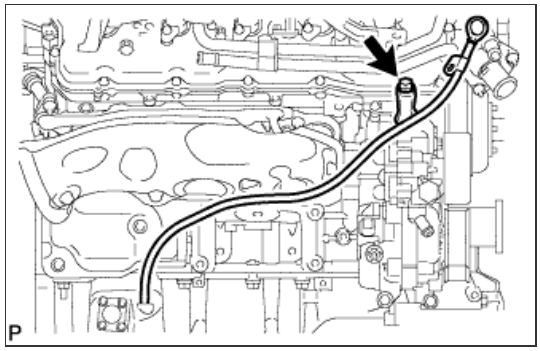


a. Disconnect the generator connector.

b. Remove the terminal cap and nut, and disconnect the generator wire.

c. Remove the bolt and wire harness bracket from the generator.

d. Remove the 3 bolts, nut and generator.



40. REMOVE ENGINE OIL LEVEL DIPSTICK GUIDE

a. Remove the dipstick.

b. Remove the bolt and dipstick guide.

c. Remove the O-ring from the dipstick guide.

41. REMOVE TAILPIPE ASSEMBLY

a. Remove the bolt, clamp and gasket.

b. Remove the tailpipe from the 2 exhaust pipe supports.

c. Remove the bolt and clamp, and then disconnect the tailpipe from the center exhaust pipe.

42. REMOVE CENTER EXHAUST PIPE ASSEMBLY

a. Remove the 4 bolts.

b. Remove the center exhaust pipe from the 3 exhaust pipe supports.

c. Remove the 2 gaskets from the front exhaust pipe and front No. 2 exhaust pipe.

43. REMOVE FRONT NO. 2 EXHAUST PIPE ASSEMBLY

a. Disconnect the heated oxygen sensor connector.

b. Remove the bolt and disconnect the wire harness clamp bracket of the oxygen sensor from the transmission.

c. Remove the 2 nuts, front No. 2 exhaust pipe and gasket from the exhaust manifold LH.

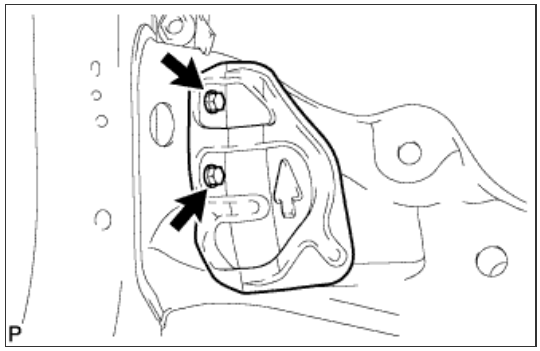
44. REMOVE FRONT EXHAUST PIPE ASSEMBLY

a. Disconnect the heated oxygen sensor connector.

b. Remove the bolt and disconnect the wire harness clamp bracket of the oxygen sensor from the transmission.

c. Remove the 2 nuts, front exhaust pipe and gasket from the exhaust manifold RH.

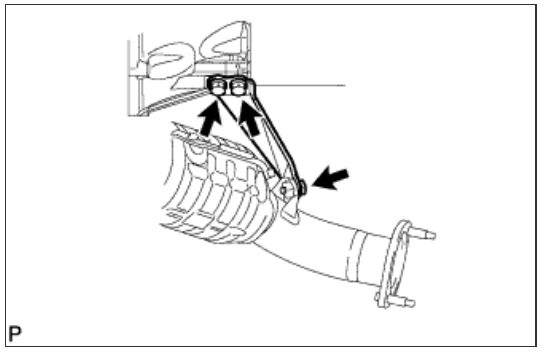
45. REMOVE FRONT PROPELLER SHAFT ASSEMBLY



a. Remove the front propeller shaft (Click here).

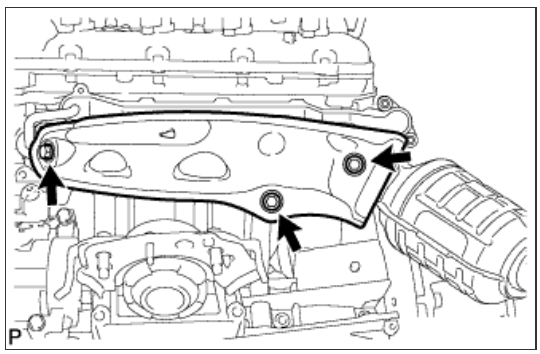
46. REMOVE REAR PROPELLER SHAFT ASSEMBLY

a. Remove the rear propeller shaft (Click here).



47. REMOVE PROPELLER SHAFT HEAT INSULATOR

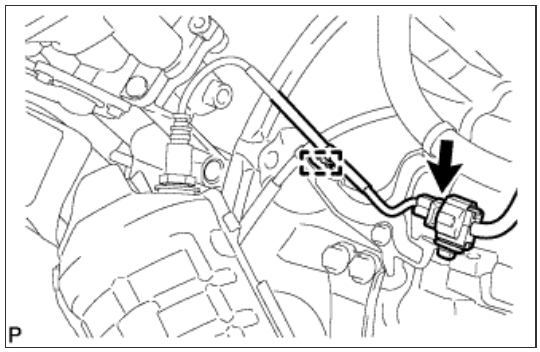
a. Remove the 2 bolts and heat insulator.



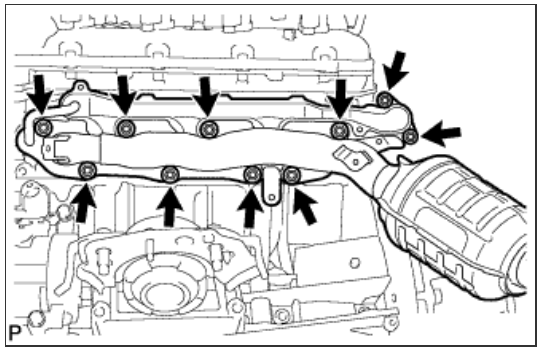
48. REMOVE NO. 2 MANIFOLD STAY

a. Remove the 3 bolts and manifold stay.

49. REMOVE NO. 2 EXHAUST MANIFOLD HEAT INSULATOR



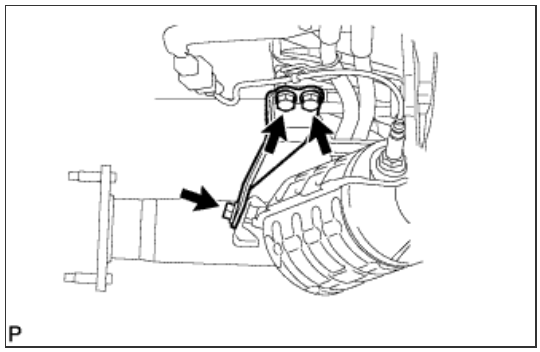
a. Remove the 3 bolts and heat insulator.



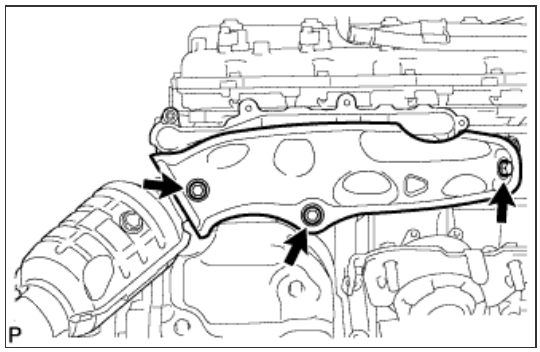
50. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY LH

a. Disconnect the connector.

b. Using a clip remover, detach the wire harness clamp.



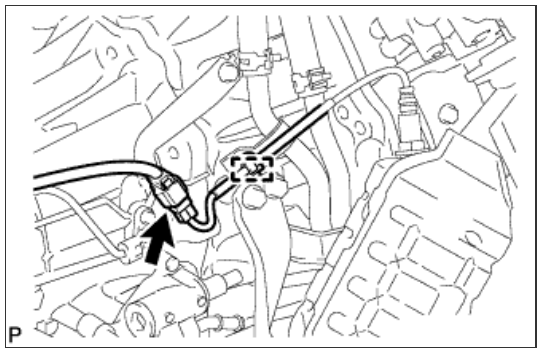
c. Remove the 10 nuts, exhaust manifold and 2 gaskets.



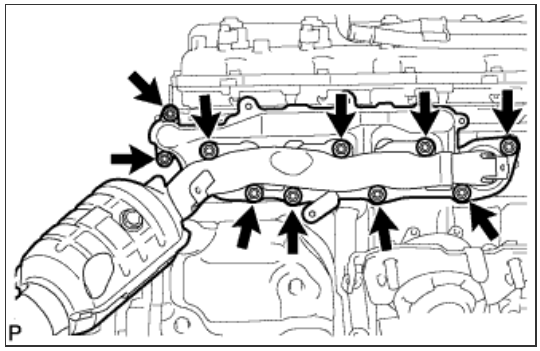
51. REMOVE NO. 1 MANIFOLD STAY

a. Remove the 3 bolts and manifold stay.

52. REMOVE NO. 1 EXHAUST MANIFOLD HEAT INSULATOR



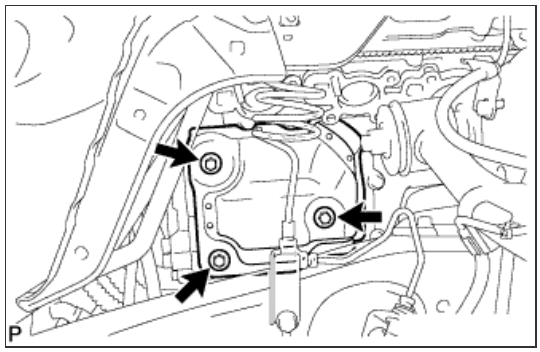
a. Remove the 3 bolts and heat insulator.



53. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY RH

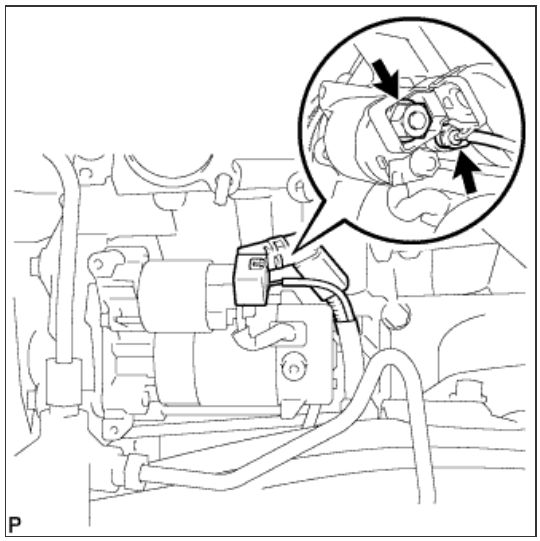
a. Disconnect the connector.

b. Using a clip remover, detach the wire harness clamp.

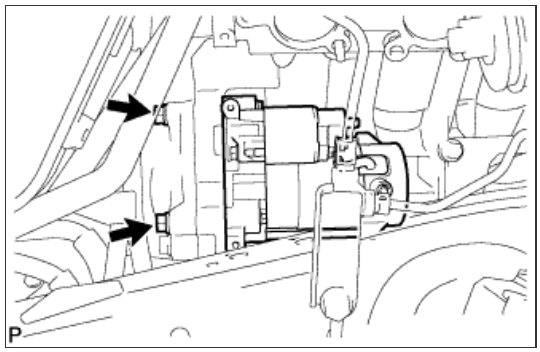


c. Remove the 10 nuts, exhaust manifold and 2 gaskets.

54. REMOVE STARTER COVER

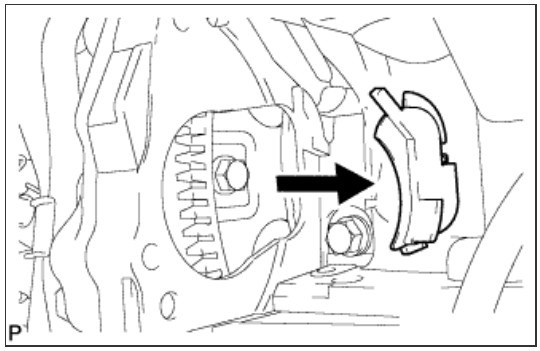


a. Remove the 3 bolts and starter cover.



55. REMOVE STARTER ASSEMBLY

a. Disconnect the starter connector.



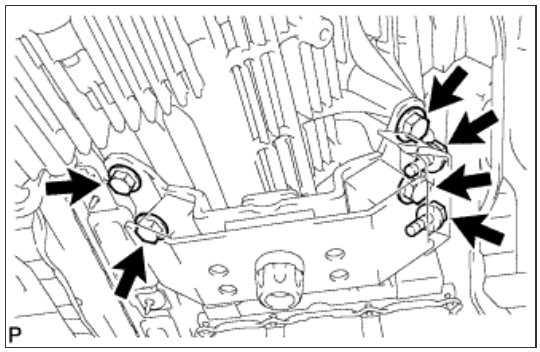
b. Remove the nut and disconnect the starter wire.

c. Remove the 2 bolts and starter.

d. Remove the flywheel housing side cover.

56. REMOVE AUTOMATIC TRANSMISSION ASSEMBLY

a. Remove the automatic transmission (Click here).



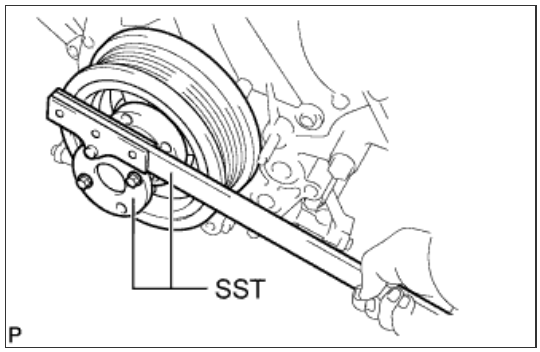
57. REMOVE REAR NO. 1 ENGINE MOUNTING INSULATOR

HINT:

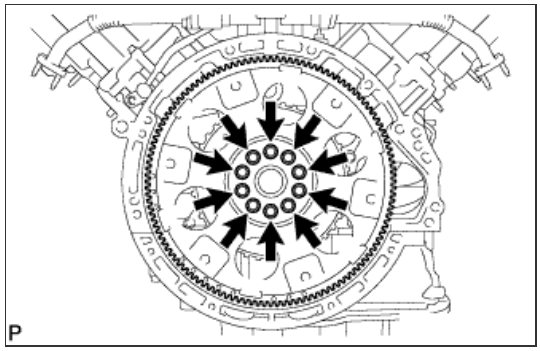
Only perform this procedure when replacement of the engine mounting insulator is necessary.

a. Remove the 2 bolts and front engine mounting insulator RH.

b. Remove the 4 bolts and rear engine mounting insulator from the transmission.



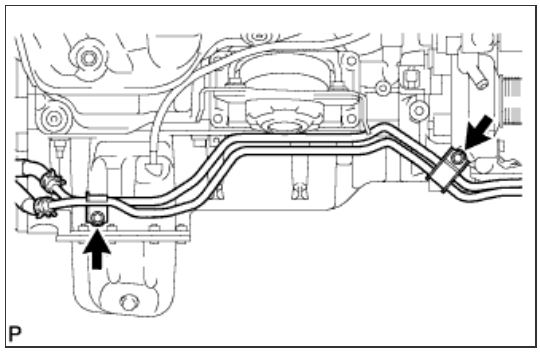
58. REMOVE DRIVE PLATE AND RING GEAR SUB-ASSEMBLY



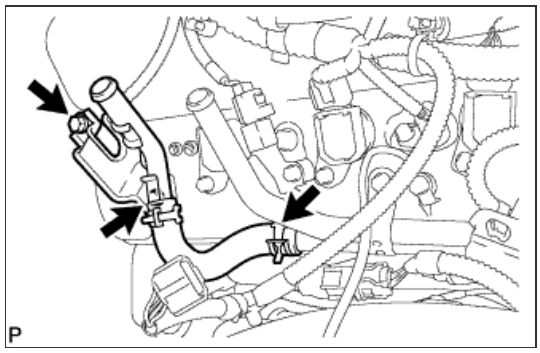
a. Using SST, hold the crankshaft.

SST

09213-70011 (09213-70020)
09330-00021

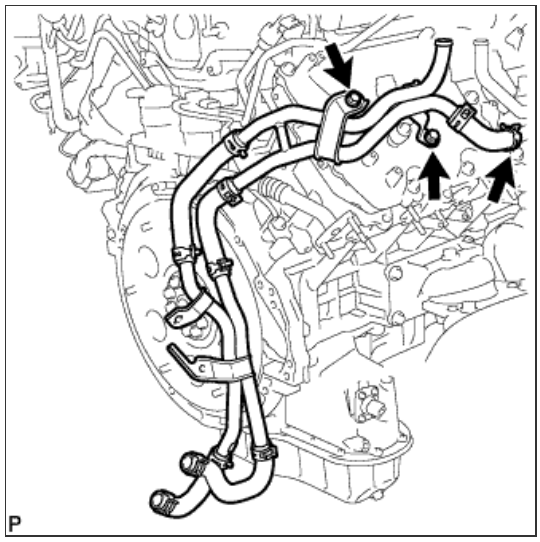


b. Remove the 10 bolts, rear drive plate spacer, drive plate and crankshaft angle sensor rotor.



59. DISCONNECT OIL COOLER PIPE ASSEMBLY

a. Remove the 2 bolts and disconnect the oil cooler pipe.



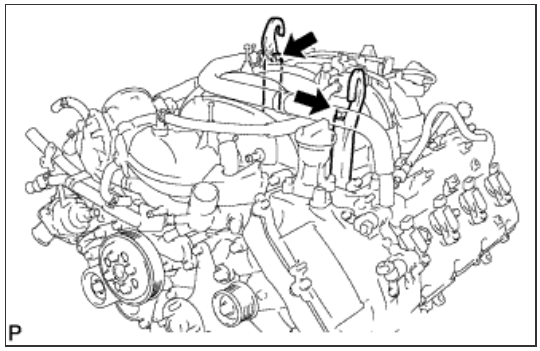
60. REMOVE WATER PIPE AND HOSE SUB-ASSEMBLY (w/ Air Cooled Transmission Oil Cooler)

a. Remove the 2 bolts and disconnect the hose. Then remove the water pipe and hose.

61. REMOVE NO. 2 WATER BY-PASS PIPE (w/o Air Cooled Transmission Oil Cooler)

a. Remove the 2 bolts and disconnect the hose. Then remove the water by-pass pipe.

62. REMOVE ENGINE ASSEMBLY



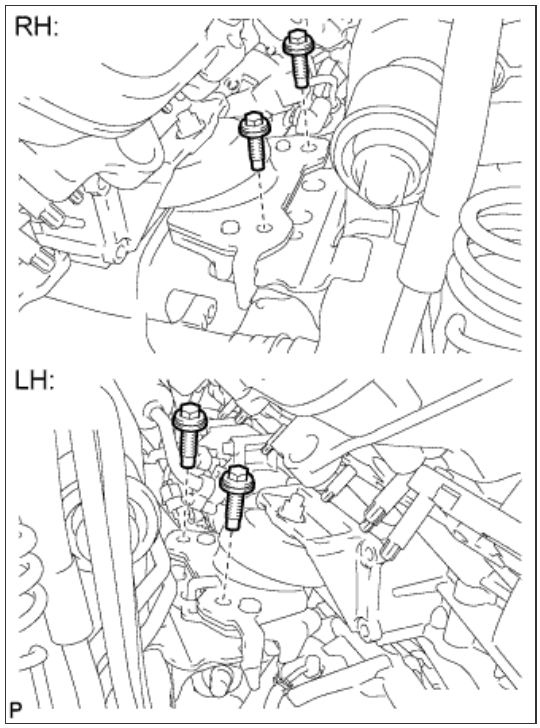
a. Install 2 engine hangers with 2 bolts as shown in the illustration.

Part No.:

Item	Part No.
Engine hanger	12281-38030
Bolt	90119-14120

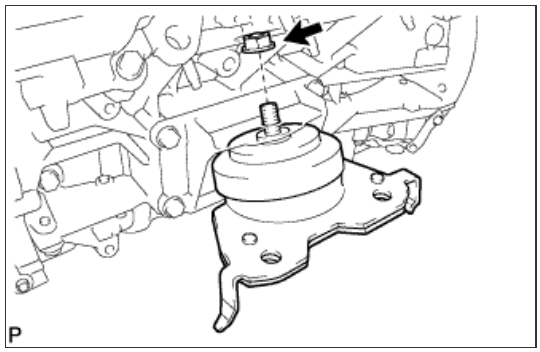
Torque:
43 N*m{ 438 kgf*cm , 32 ft.*lbf }

b. Attach an engine sling device and hang the engine with a chain block.



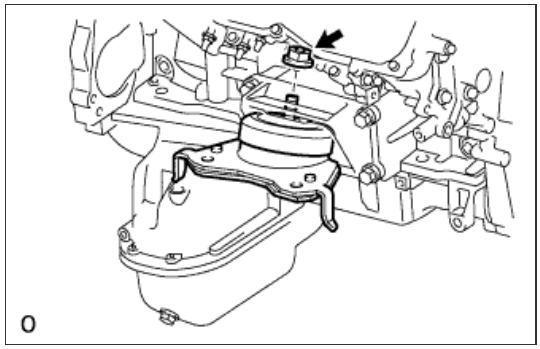
c. Remove the 4 engine mounting insulator bolts.

d. Lift the engine out from the vehicle slowly and carefully.



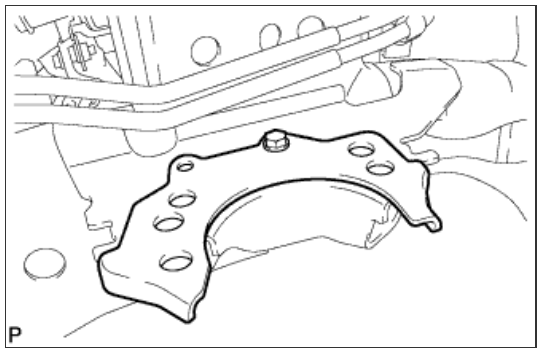
NOTICE:

Make sure the engine is clear of all wiring, hoses and cables.



63. REMOVE FRONT ENGINE MOUNTING INSULATOR LH

a. Remove the nut and mounting insulator.



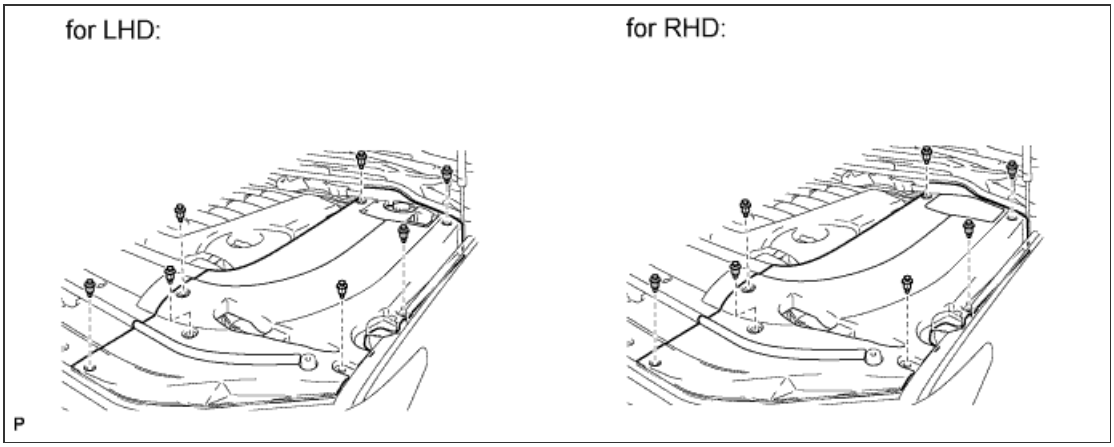
64. REMOVE FRONT ENGINE MOUNTING INSULATOR RH

a. Remove the nut and mounting insulator.

65. REMOVE FRONT NO. 2 ENGINE MOUNTING BRACKET LH

a. Remove the bolt and engine mounting bracket LH.

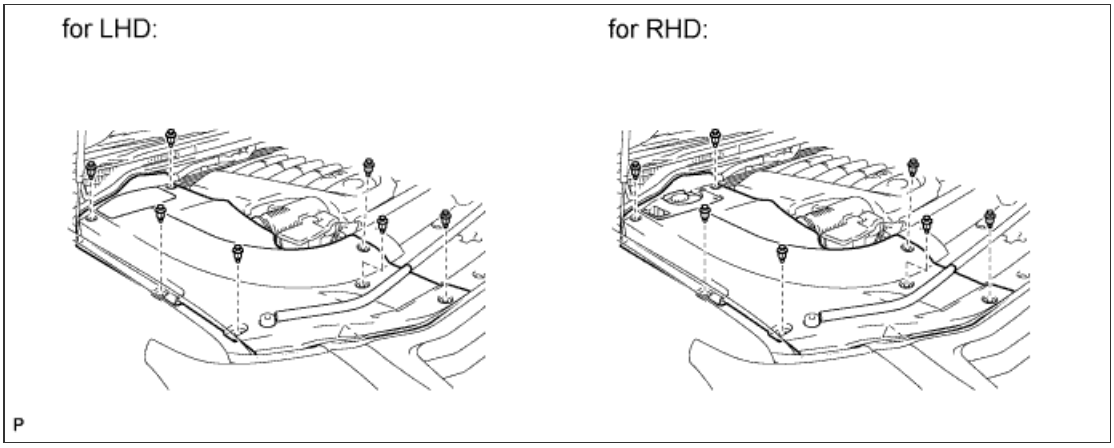
66. INSTALL ENGINE ON ENGINE STAND



a. Install the engine onto an engine stand with bolts.

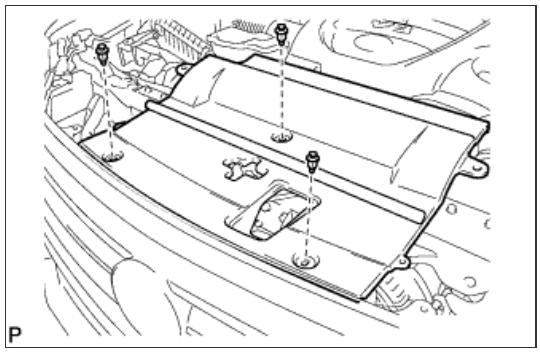
b. Remove the 2 bolts and 2 engine hangers.

for Preparation Click here



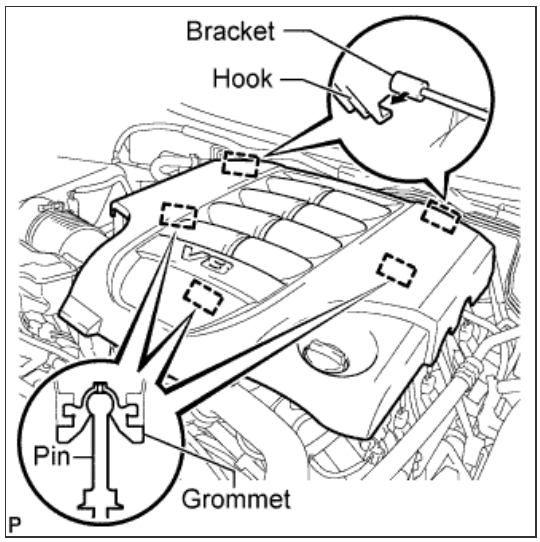
1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.



2. REMOVE ENGINE ROOM SIDE COVER RH

a. Remove the 7 clips and engine room side cover.



3. REMOVE UPPER RADIATOR SUPPORT SEAL

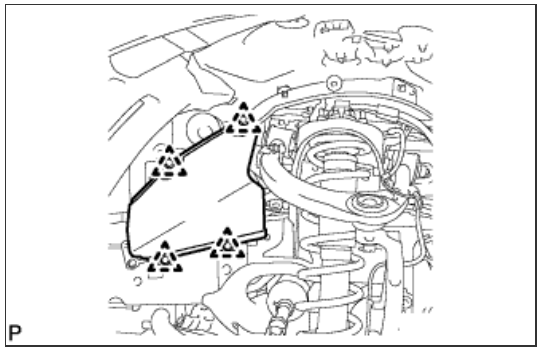
a. Remove the 3 clips and upper radiator support seal.

4. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.

5. DISCHARGE FUEL SYSTEM PRESSURE

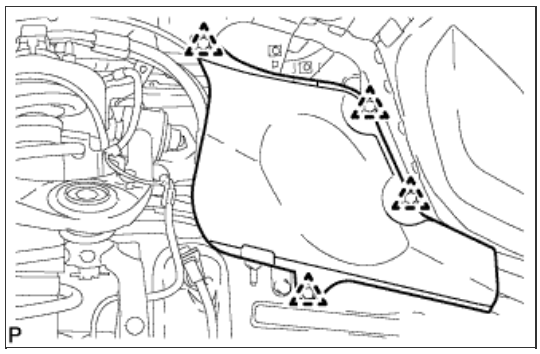
a. Discharge the fuel system pressure (Click here).



6. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

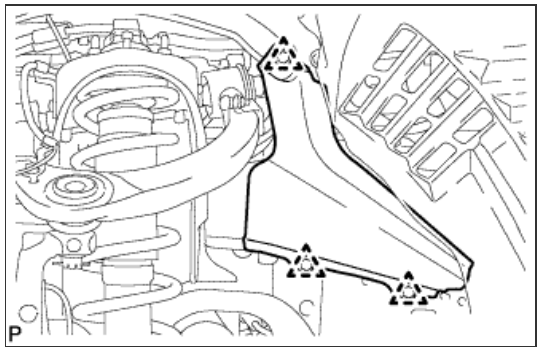
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable from the cable is reconnected (Click here).



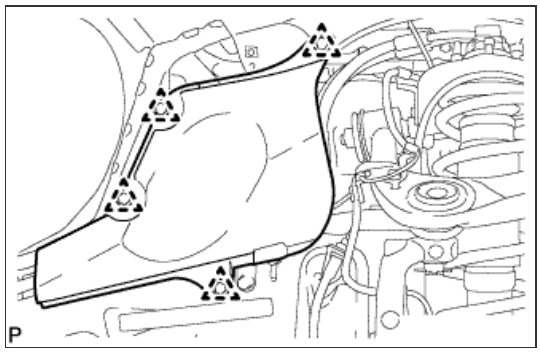
7. REMOVE FRONT FENDER APRON SEAL FRONT LH

a. Using a clip remover, remove the 4 clips and fender apron seal.



8. REMOVE FRONT FENDER APRON SEAL REAR LH

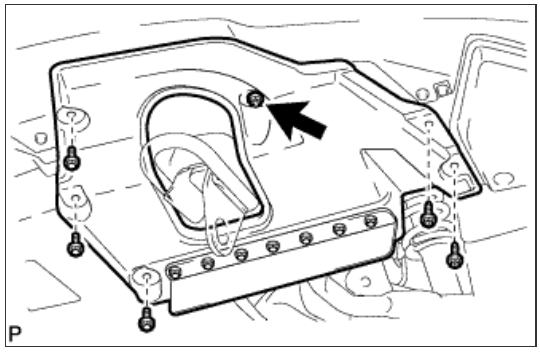
a. Using a clip remover, remove the 4 clips and fender apron seal.



9. REMOVE FRONT FENDER APRON SEAL FRONT RH

a. Using a clip remover, remove the 3 clips and fender apron seal.

10. REMOVE FRONT FENDER APRON SEAL REAR RH

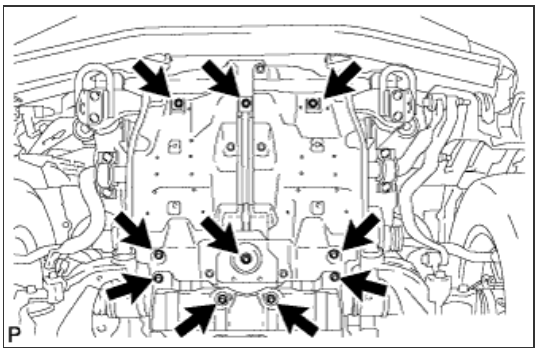


a. Using a clip remover, remove the 4 clips and fender apron seal.

11. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and 2 screws.

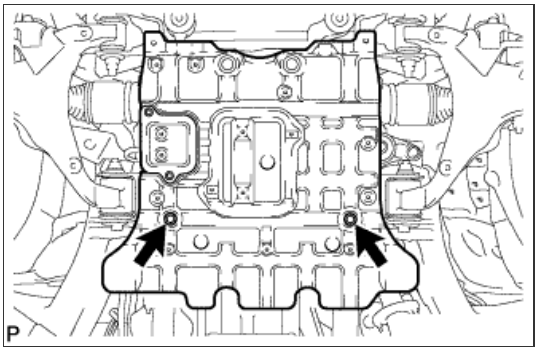
b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



12. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

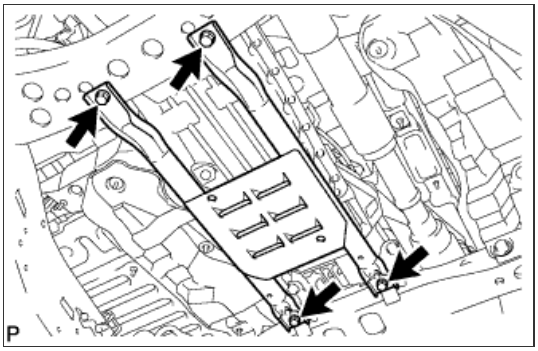
HINT:

Use the same procedures described for the LH side.



13. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and No. 1 engine under cover.



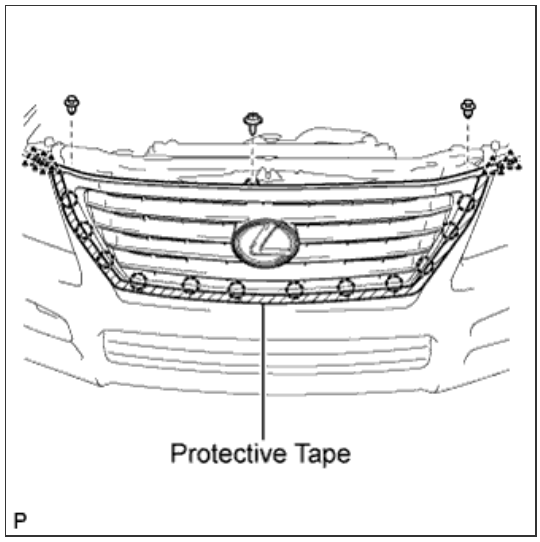
14. REMOVE NO. 2 ENGINE UNDER COVER

a. Remove the 2 bolts and No. 2 engine under cover.

15. REMOVE OIL PAN PROTECTOR ASSEMBLY

a. Remove the 4 bolts and oil pan protector.

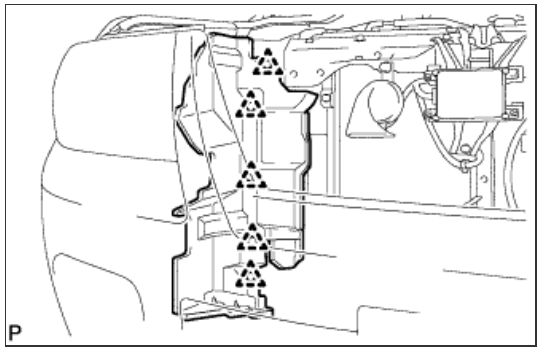
16. REMOVE RADIATOR GRILLE



a. Put protective tape around the radiator grille.

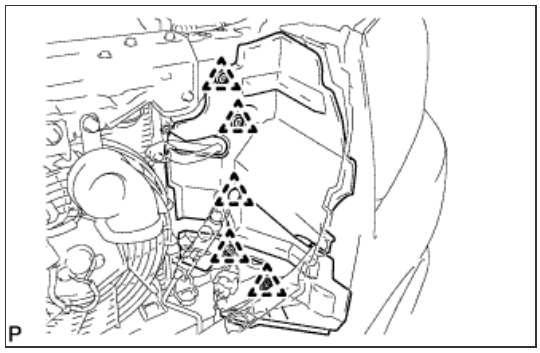
b. Remove the screw and 2 clips.

c. Detach the 5 clips and partially remove the upper radiator seal.



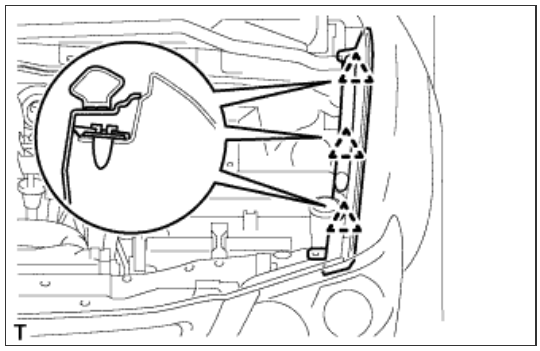
d. w/o Wide View Front Monitor System:
Detach the 12 claws and remove the radiator grille.

e. w/ Wide View Front Monitor System:
Detach the 12 claws, disconnect the connector and remove the radiator grille.



17. REMOVE RADIATOR SIDE DEFLECTOR RH (w/o Air Cooled Transmission Oil Cooler)

a. Using a clip remover, remove the 5 clips and side deflector.



18. REMOVE RADIATOR SIDE DEFLECTOR LH

a. Using a clip remover, remove the 5 clips and side deflector.

19. REMOVE FRONT FENDER MAIN SEAL LH

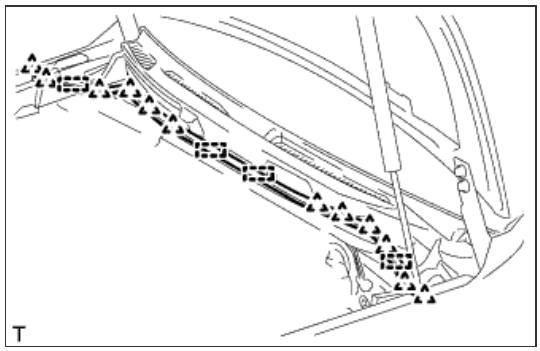
a. Using a clip remover, detach the 3 clips and remove the fender main seal.

20. REMOVE FRONT FENDER MAIN SEAL RH

HINT:

Use the same procedures described for the LH side.

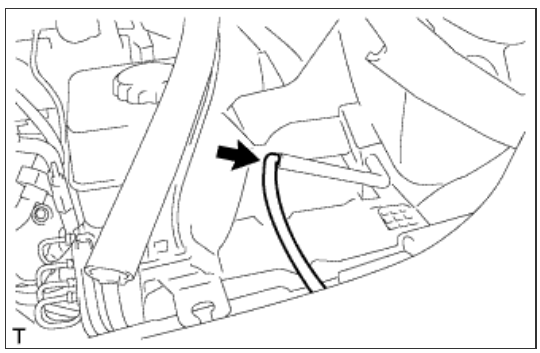
21. REMOVE FRONT WIPER ARM LH



a. Remove the nut, wiper arm and blade.

22. REMOVE FRONT WIPER ARM RH

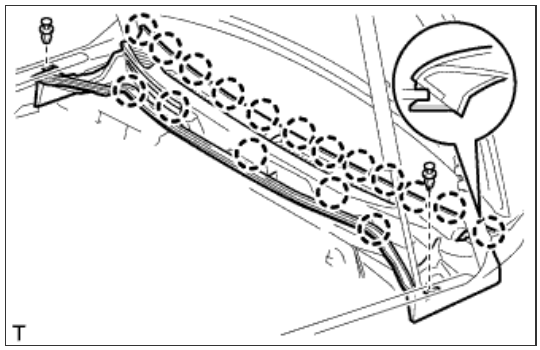
a. Remove the nut, wiper arm and blade.



23. REMOVE HOOD TO COWL TOP SEAL

a. Using a clip remover, detach the 12 clips and 4 clamps, and remove the hood to cowl top seal.

24. REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

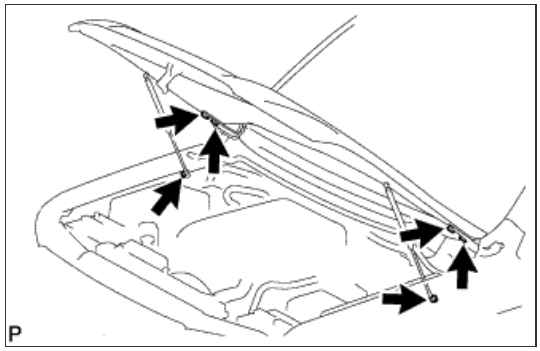


a. Disconnect the washer hose.

b. Remove the 2 clips.

b. Remove the 2 clips.

c. Detach the 17 claws and remove the cowl top ventilator louver sub-assembly.



25. REMOVE HOOD SUB-ASSEMBLY

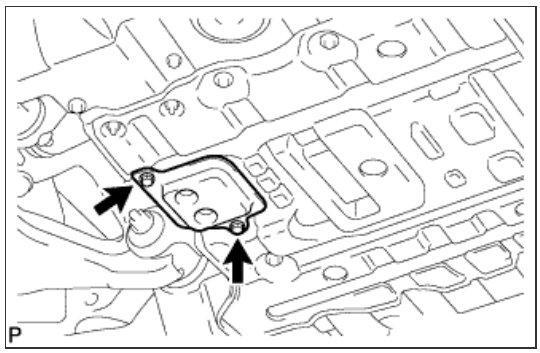
a. Remove the 2 hood support bolts and disconnect the hood supports.

CAUTION:

Remove the hood support assembly while supporting the hood by hand.

b. Remove the 4 bolts and hood.

26. DRAIN ENGINE OIL

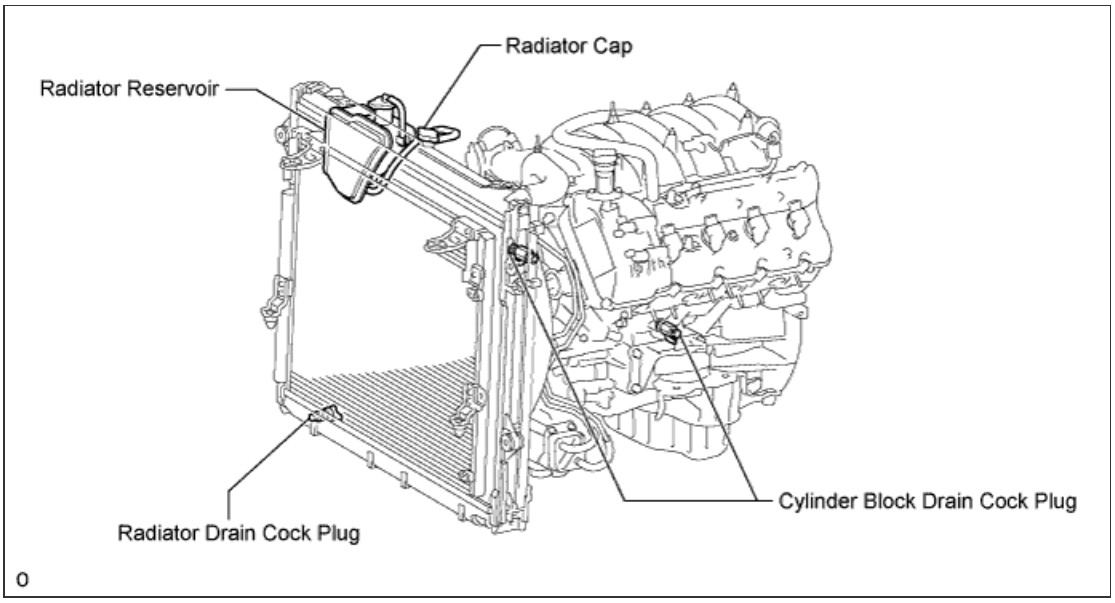


a. Remove the oil filler cap.

b. Remove the 2 bolts and No. 2 engine under cover seal.

c. Remove the oil pan drain plug and gasket, and drain the engine oil into a container.

d. Install a new gasket and the oil pan drain plug.



Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

27. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Loosen the radiator drain cock plug.

HINT:

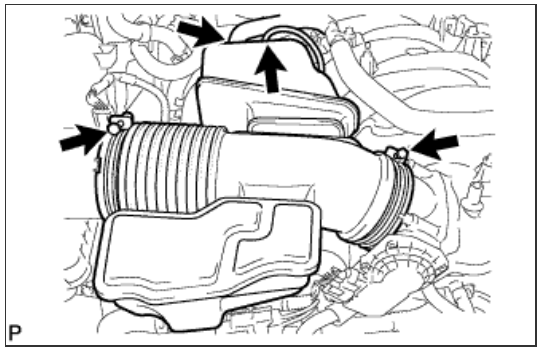
Collect the coolant in a container and dispose of it according to the regulations in your area.

b. Remove the radiator cap. Then drain the coolant from the radiator.

c. Loosen the 2 cylinder block drain cock plugs. Then drain the coolant from the engine.

d. Tighten the 2 cylinder block drain cock plugs.

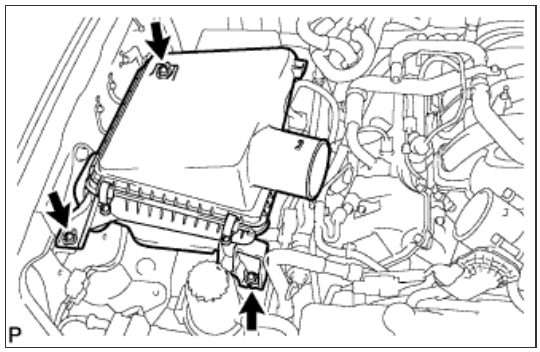
Torque:
13 N*m{ 130 kgf*cm , 10 ft.*lbf }



e. Tighten the radiator drain cock plug by hand.

28. REMOVE AIR CLEANER HOSE ASSEMBLY

a. Disconnect the vacuum hose and No. 2 ventilation hose.

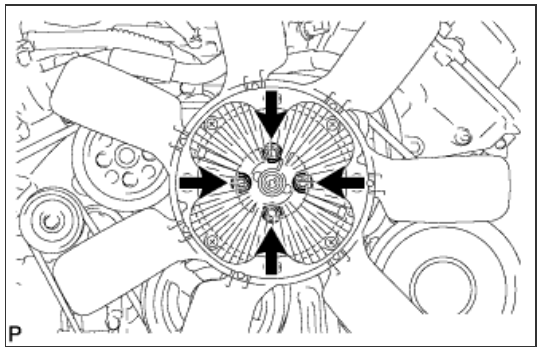


b. Loosen the 2 hose clamps.

c. Remove the air cleaner hose.

29. REMOVE AIR CLEANER ASSEMBLY

a. Remove the 3 bolts and air cleaner.



30. REMOVE NO. 1 RADIATOR HOSE

31. REMOVE NO. 2 RADIATOR HOSE

32. REMOVE FAN SHROUD

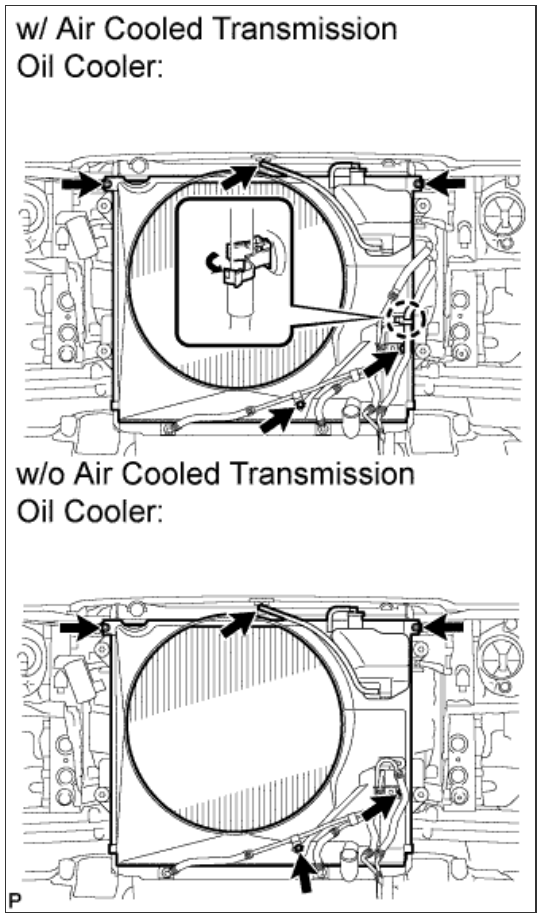
a. Loosen the 4 nuts holding the fluid coupling fan.

b. Remove the fan and generator V belt (Click here).

c. Disconnect the reservoir hose from the upper radiator tank.

d. w/ Air Cooled Transmission Oil Cooler:
Detach the claw to open the flexible hose clamp.

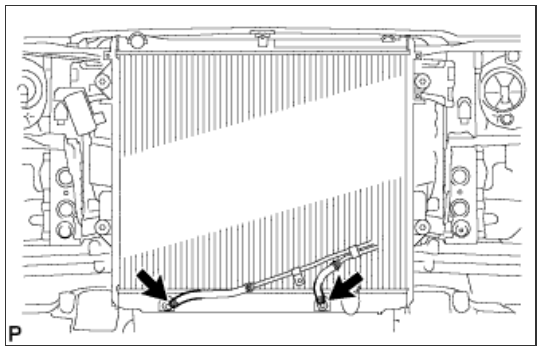
e. Remove the 2 bolts and disconnect the oil cooler tube from the fan shroud.



f. Remove the 2 bolts holding the fan shroud.

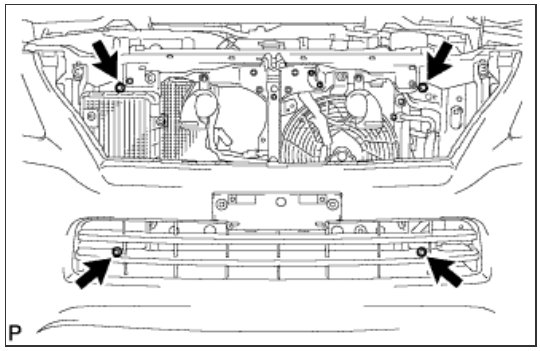
g. Remove the 4 nuts of the fluid coupling fan, and then remove the shroud together with the coupling fan.

NOTICE:

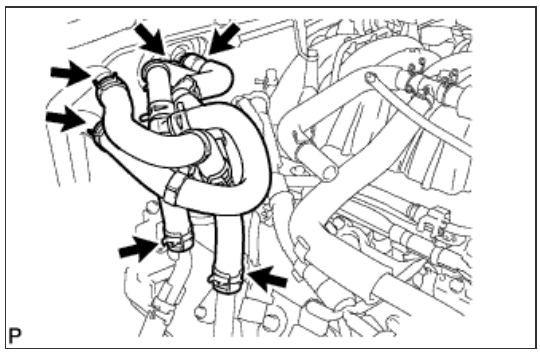


Be careful not to damage the radiator core.

h. Remove the fan pulley.

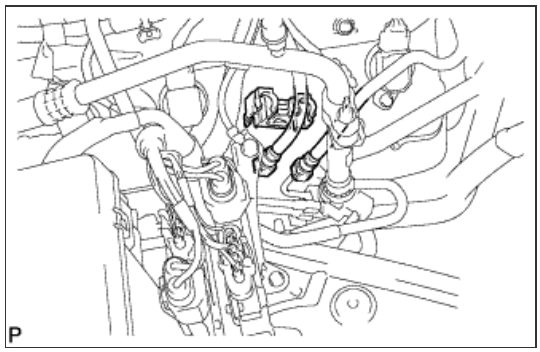


33. REMOVE RADIATOR ASSEMBLY



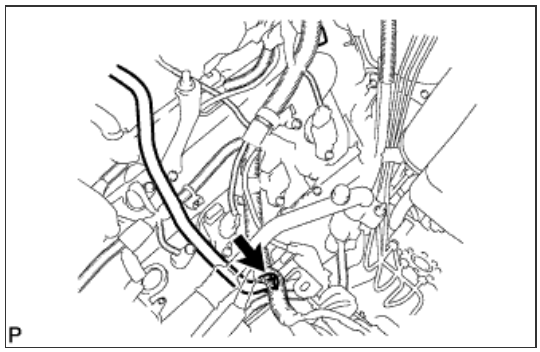
a. Disconnect the 2 oil cooler hoses.

b. Remove the 4 bolts and radiator.



34. REMOVE WATER HOSE SUB-ASSEMBLY

35. DISCONNECT FUEL MAIN AND RETURN HOSE

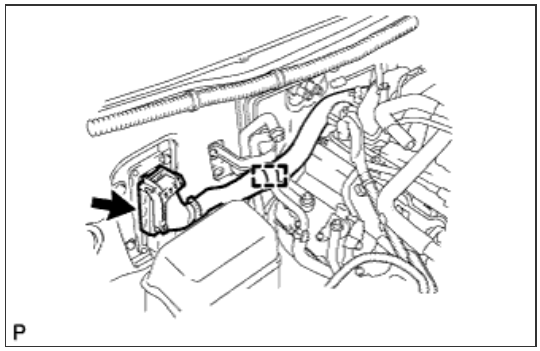


a. Remove the fuel pipe clamp.

b. Disconnect the fuel main and return hoses (Click here).

36. DISCONNECT WIRE HARNESS AND HOSE

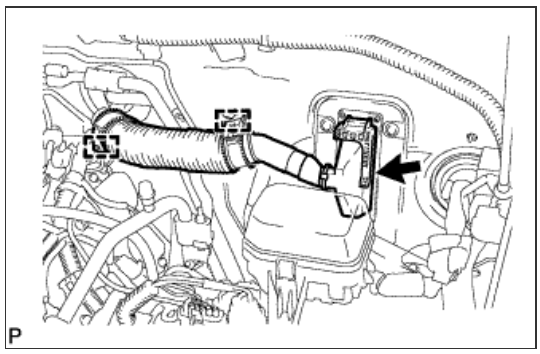
a. Disconnect the purge line hose.



b. Disconnect the ECM connector.

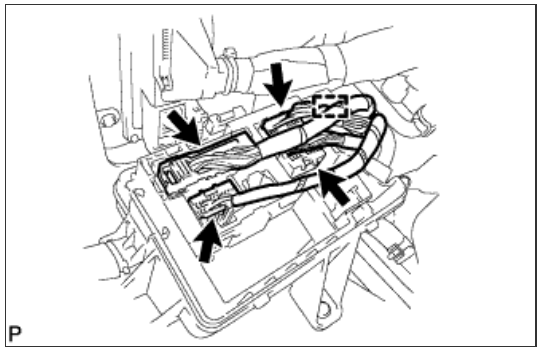
i. for LHD:
Disconnect the clamp and ECM connector.

HINT:



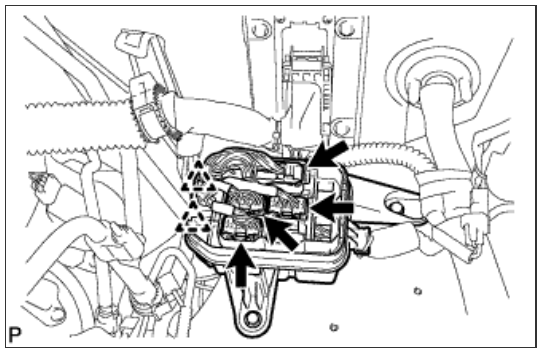
Refer to the following procedures to disconnect the ECM connector (Click here).

ii. for RHD:
Disconnect the 2 clamps and ECM connector.



HINT:

Refer to the following procedures to disconnect the ECM connector (Click here).

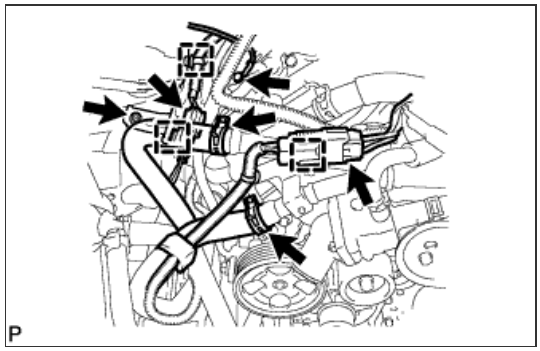


c. Disconnect the 4 connectors.

i. for LHD:
Disconnect the 4 connectors and clamp from the connector holder block.

ii. for RHD:

Disconnect the 4 connectors and 2 clips from the connector holder block.



d. w/ Secondary Air Injection System:
Disconnect the 2 air pump connectors and 3 clamps.

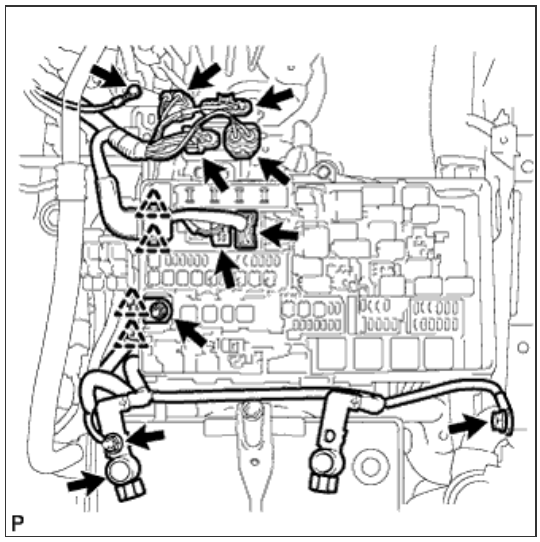
e. w/ Secondary Air Injection System:
Remove the nut and connector bracket.

f. Remove the bolt and disconnect the ground wire.

g. w/ Secondary Air Injection System:
Disconnect the 2 air injection system hoses.

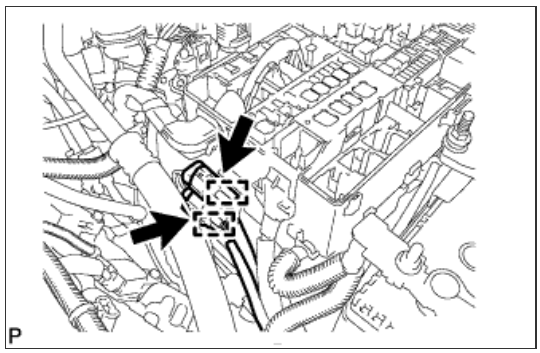
h. Remove the nut and disconnect the wire from the positive (+) battery cable.

i. Disconnect the cable from the positive (+) battery terminal.



j. Remove the bolt and disconnect the ground wire from the body.

k. Remove the bolt and disconnect the ground wire from the bracket.

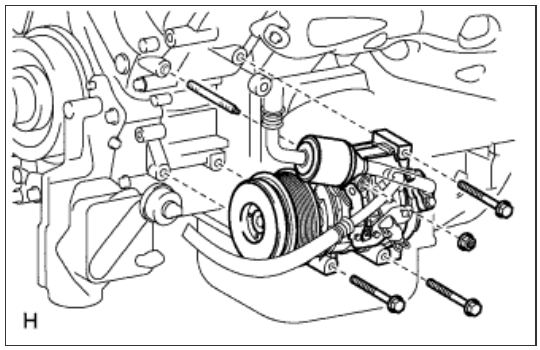


l. w/ Secondary Air Injection System:
Disconnect the 4 air injection control driver connectors.

m. Remove the nut and disconnect the wire and 2 clips from the engine room junction block.

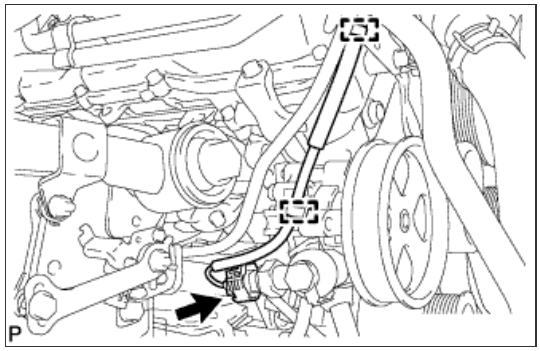
n. Disconnect the 2 connectors and 2 clips from the engine room junction block.

o. Disconnect the 2 connectors and clamps.



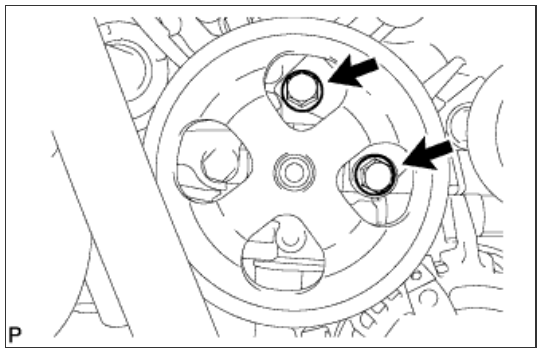
37. DISCONNECT COOLER COMPRESSOR ASSEMBLY

a. Remove the 3 bolts, nut and stud bolt, and disconnect the cooler compressor.



HINT:

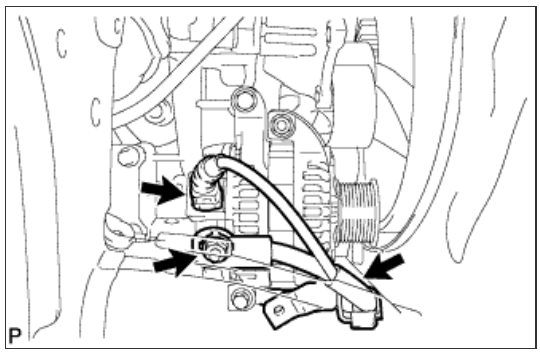
It is not necessary to completely remove the compressor. With the hoses connected to the compressor, hang the compressor on the vehicle body with a rope.



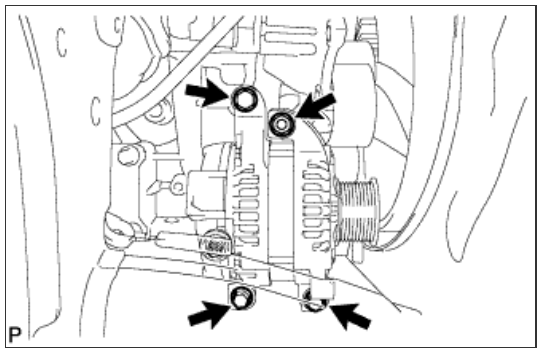
38. DISCONNECT VANE PUMP ASSEMBLY

a. Disconnect the 2 clamps and power steering oil pressure switch connector.

b. Remove the 2 bolts and disconnect the vane pump.



39. REMOVE GENERATOR ASSEMBLY

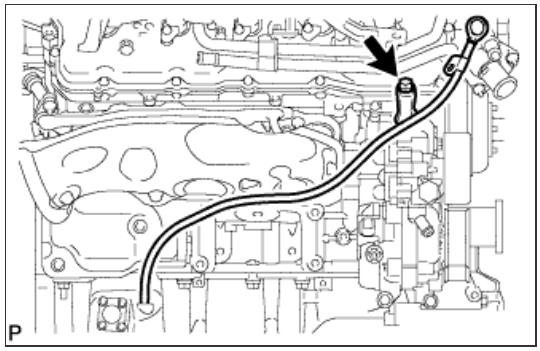


a. Disconnect the generator connector.

b. Remove the terminal cap and nut, and disconnect the generator wire.

c. Remove the bolt and wire harness bracket from the generator.

d. Remove the 3 bolts, nut and generator.



40. REMOVE ENGINE OIL LEVEL DIPSTICK GUIDE

a. Remove the dipstick.

b. Remove the bolt and dipstick guide.

c. Remove the O-ring from the dipstick guide.

41. REMOVE TAILPIPE ASSEMBLY

a. Remove the bolt, clamp and gasket.

b. Remove the tailpipe from the 2 exhaust pipe supports.

c. Remove the bolt and clamp, and then disconnect the tailpipe from the center exhaust pipe.

42. REMOVE CENTER EXHAUST PIPE ASSEMBLY

a. Remove the 4 bolts.

b. Remove the center exhaust pipe from the 3 exhaust pipe supports.

c. Remove the 2 gaskets from the front exhaust pipe and front No. 2 exhaust pipe.

43. REMOVE FRONT NO. 2 EXHAUST PIPE ASSEMBLY

a. Disconnect the heated oxygen sensor connector.

b. Remove the bolt and disconnect the wire harness clamp bracket of the oxygen sensor from the transmission.

c. Remove the 2 nuts, front No. 2 exhaust pipe and gasket from the exhaust manifold LH.

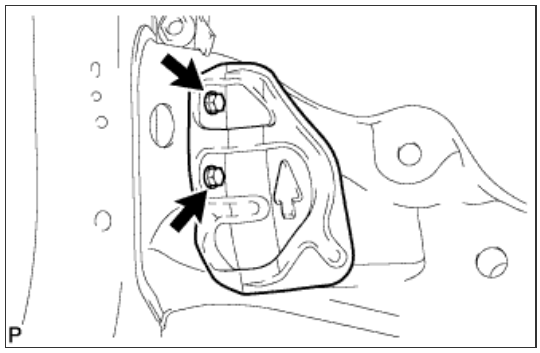
44. REMOVE FRONT EXHAUST PIPE ASSEMBLY

a. Disconnect the heated oxygen sensor connector.

b. Remove the bolt and disconnect the wire harness clamp bracket of the oxygen sensor from the transmission.

c. Remove the 2 nuts, front exhaust pipe and gasket from the exhaust manifold RH.

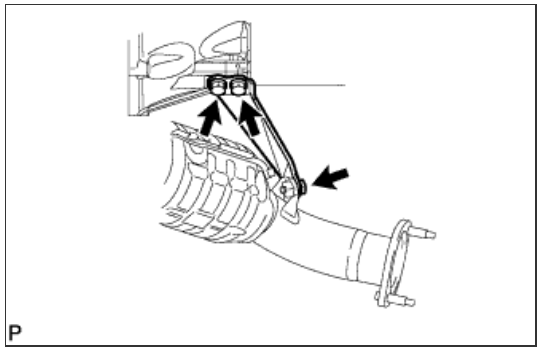
45. REMOVE FRONT PROPELLER SHAFT ASSEMBLY



(Click here)

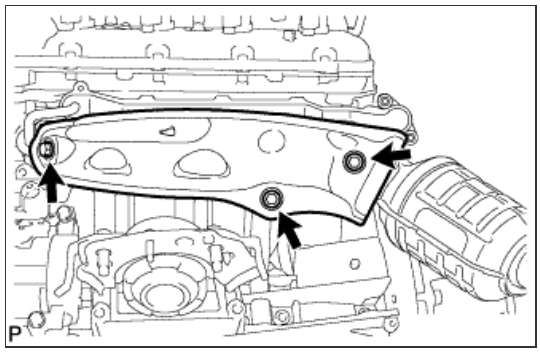
46. REMOVE REAR PROPELLER SHAFT ASSEMBLY

(Click here)



47. REMOVE PROPELLER SHAFT HEAT INSULATOR

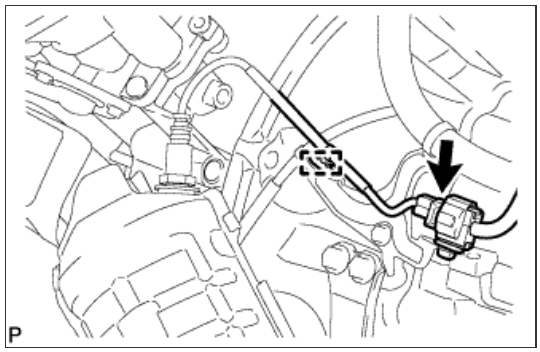
a. Remove the 2 bolts and heat insulator.



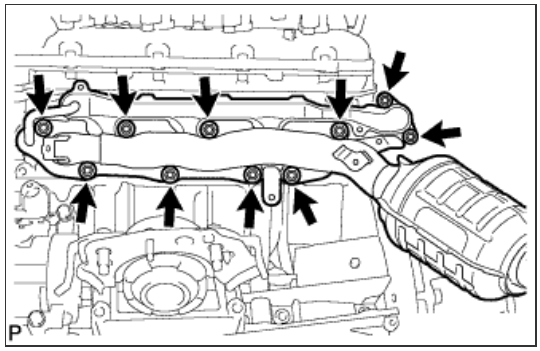
48. REMOVE NO. 2 MANIFOLD STAY

a. Remove the 3 bolts and manifold stay.

49. REMOVE NO. 2 EXHAUST MANIFOLD HEAT INSULATOR

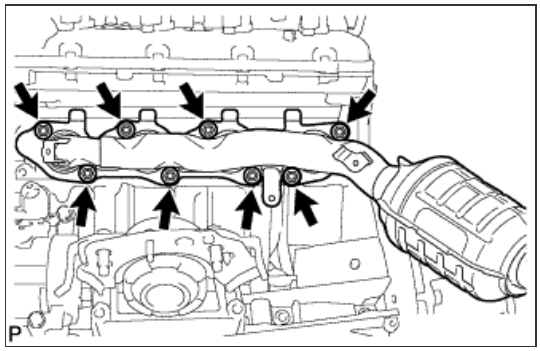


a. Remove the 3 bolts and heat insulator.



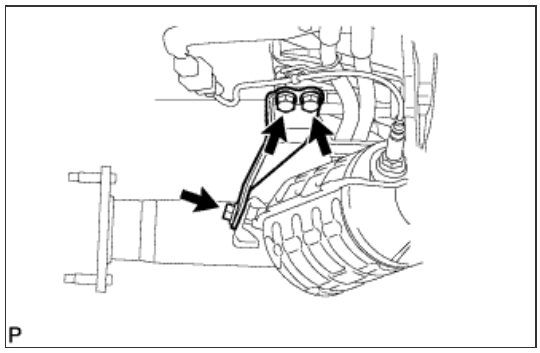
50. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY LH

a. Disconnect the connector.

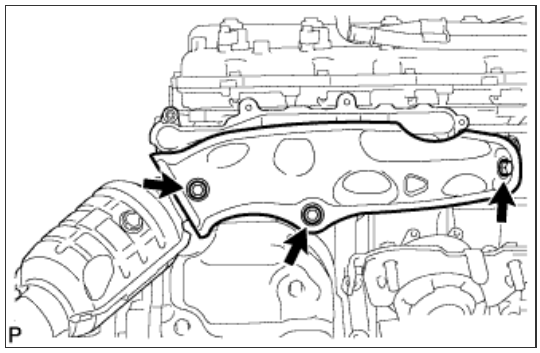


b. Using a clip remover, detach the wire harness clamp.

c. w/ Secondary Air Injection System:
Remove the 10 nuts, exhaust manifold and 2 gaskets.



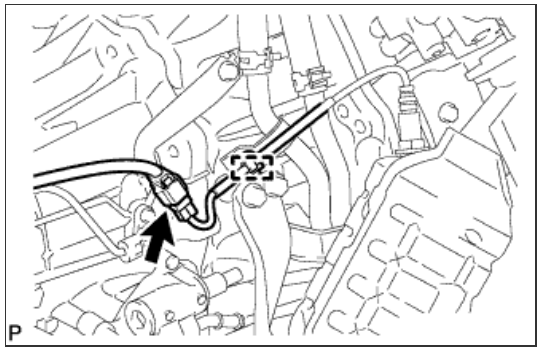
d. w/o Secondary Air Injection System:
Remove the 8 nuts, exhaust manifold and gasket.



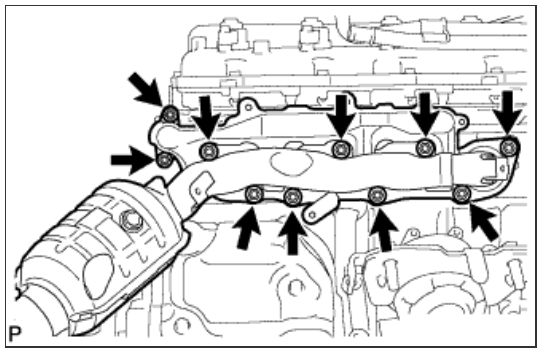
51. REMOVE NO. 1 MANIFOLD STAY

a. Remove the 3 bolts and manifold stay.

52. REMOVE NO. 1 EXHAUST MANIFOLD HEAT INSULATOR

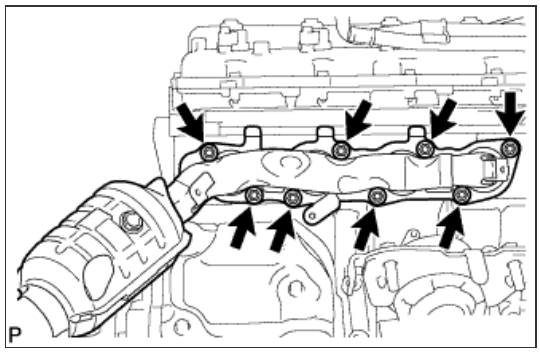


a. Remove the 3 bolts and heat insulator.



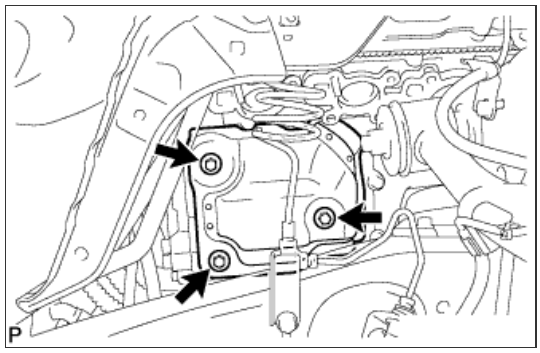
53. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY RH

a. Disconnect the connector.



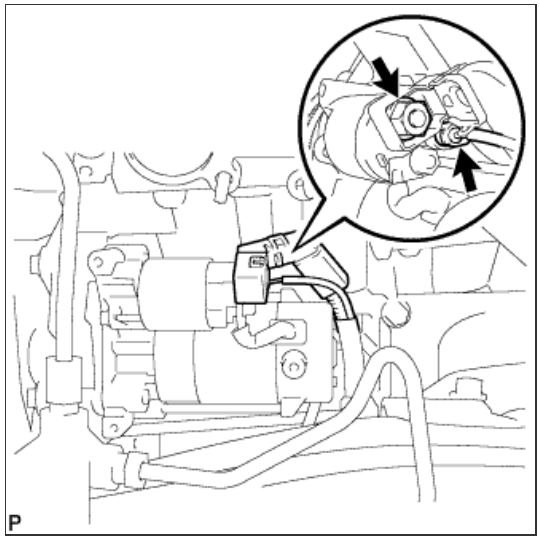
b. Using a clip remover, detach the wire harness clamp.

c. w/ Secondary Air Injection System:
Remove the 10 nuts, exhaust manifold and 2 gaskets.

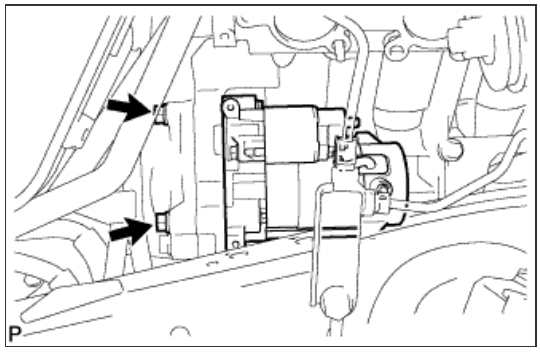


d. w/o Secondary Air Injection System:
Remove the 8 nuts, exhaust manifold and gasket.

54. REMOVE STARTER COVER

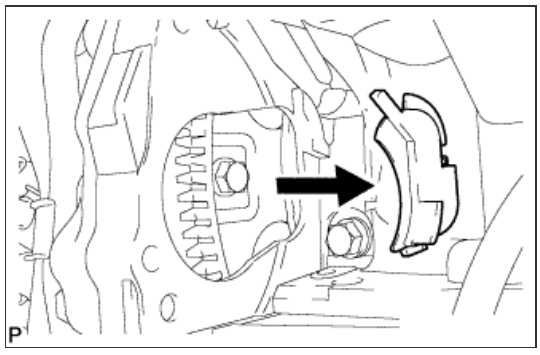


a. Remove the 3 bolts and starter cover.



55. REMOVE STARTER ASSEMBLY

a. Disconnect the starter connector.



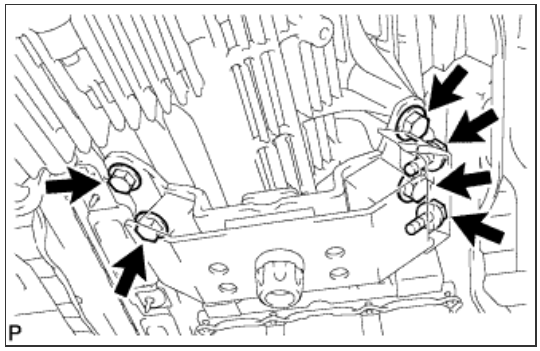
b. Remove the nut and disconnect the starter wire.

c. Remove the 2 bolts and starter.

d. Remove the flywheel housing side cover.

56. REMOVE AUTOMATIC TRANSMISSION ASSEMBLY

(Click here)

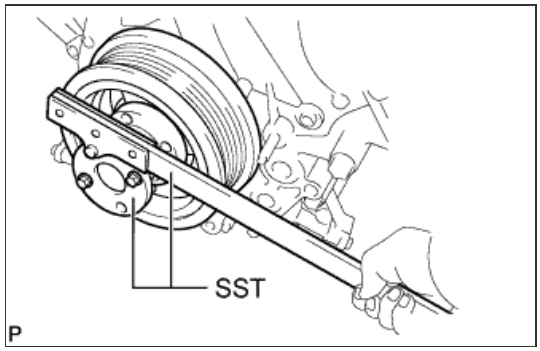


57. REMOVE REAR NO. 1 ENGINE MOUNTING INSULATOR

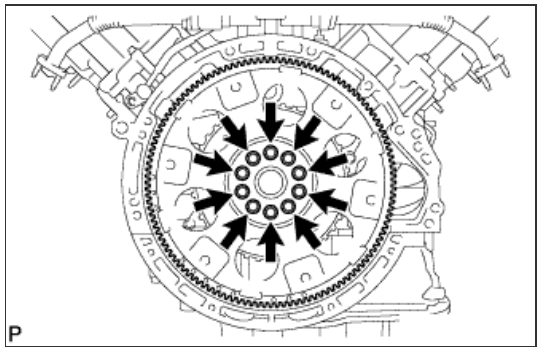
HINT:

Only perform this procedure when replacement of the engine mounting insulator is necessary.

a. Remove the 2 bolts and front engine mounting insulator RH.



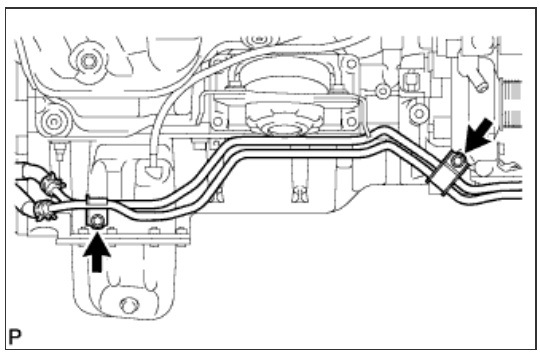
b. Remove the 4 bolts and rear engine mounting insulator from the transmission.



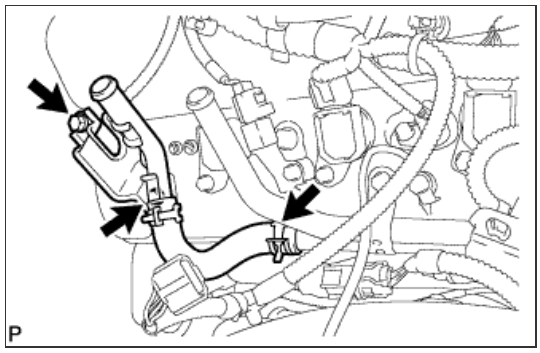
58. REMOVE DRIVE PLATE AND RING GEAR SUB-ASSEMBLY

a. Using SST, hold the crankshaft.

SST
09213-70011 (09213-70020)
09330-00021

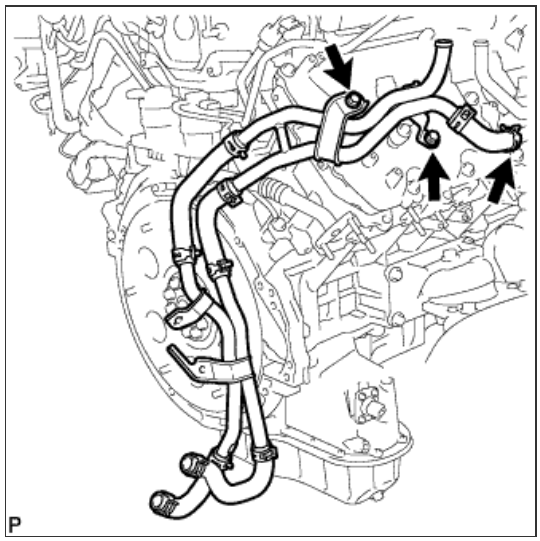


b. Remove the 10 bolts, rear drive plate spacer, drive plate and crankshaft angle sensor rotor.



59. DISCONNECT OIL COOLER PIPE ASSEMBLY

a. Remove the 2 bolts and disconnect the oil cooler pipe.



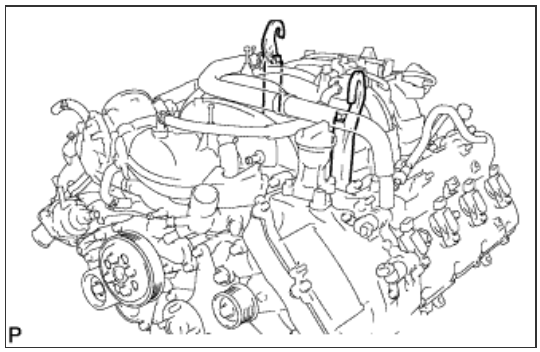
60. REMOVE WATER PIPE AND HOSE SUB-ASSEMBLY (w/ Air Cooled Transmission Oil Cooler)

a. Remove the 2 bolts and disconnect the hose. Then remove the water pipe and hose.

61. REMOVE NO. 2 WATER BY-PASS PIPE (w/o Air Cooled Transmission Oil Cooler)

a. Remove the 2 bolts and disconnect the hose. Then remove the water by-pass pipe.

62. REMOVE ENGINE ASSEMBLY

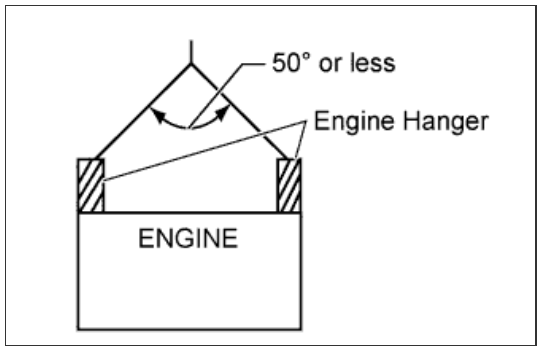


a. Install 2 engine hangers with 2 bolts as shown in the illustration.

Torque:

43 N*m{ 438 kgf*cm , 32 ft.*lbf }

HINT:

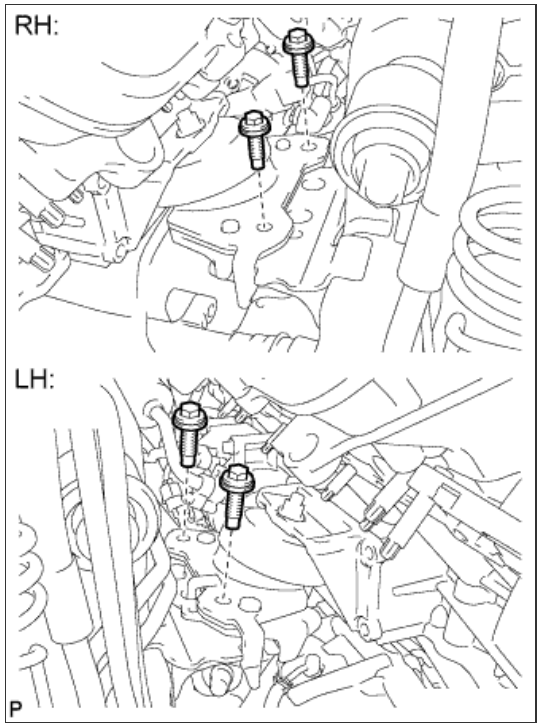


Item	Part No.
Engine hanger	12281-38150
Bolt	90119-14120

b. Attach an engine sling device and hang the engine with a chain block.

NOTICE:

When hanging the engine, make sure to hang the engine with the sling device's hanging angle at 50° or less. If not, the engine or engine hangers may be damaged.

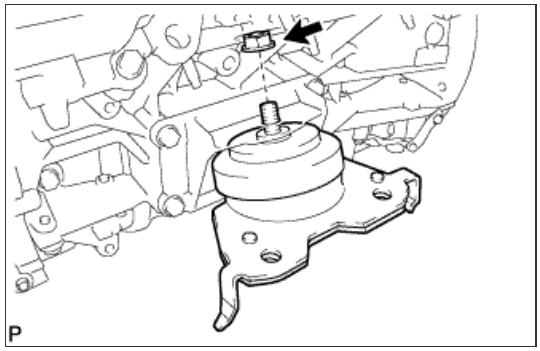


c. Remove the 4 engine mounting insulator bolts.

d. Lift the engine out from the vehicle slowly and carefully.

NOTICE:

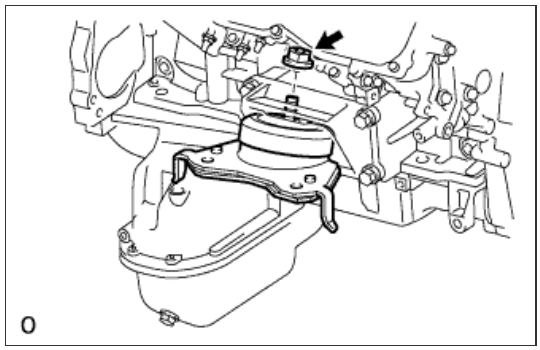
- **Make sure the engine is clear of all wiring, hoses and cables.**
- **With the exception of installing the engine assembly to an engine stand or removing the engine assembly from an engine stand, do not perform any work on the engine while it is suspended, as doing so is dangerous.**
- **Pay attention to the angle of the sling device as the engine assembly or engine hangers may be damaged or deformed if the angle is incorrect.**



63. INSTALL ENGINE ON ENGINE STAND

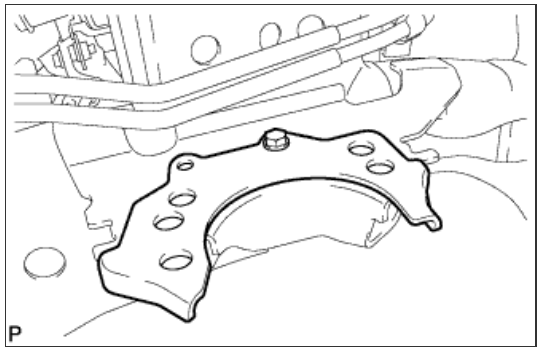
a. Install the engine onto an engine stand with bolts.

b. Remove the 2 bolts and 2 engine hangers.



64. REMOVE FRONT ENGINE MOUNTING INSULATOR LH

a. Remove the nut and mounting insulator.



65. REMOVE FRONT ENGINE MOUNTING INSULATOR RH

a. Remove the nut and mounting insulator.

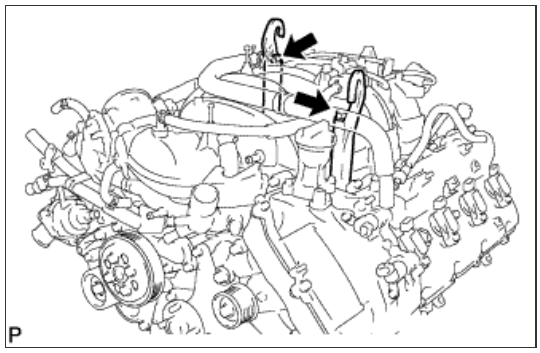
66. REMOVE FRONT NO. 2 ENGINE MOUNTING BRACKET LH

a. Remove the bolt and engine mounting bracket LH.

for Preparation Click here

1. REMOVE ENGINE STAND

a. Install 2 engine hangers with 2 bolts as shown in the illustration.

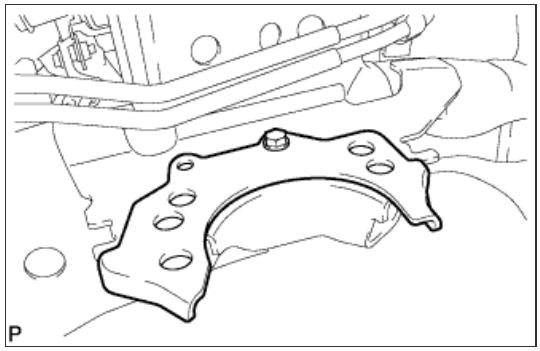


Part No.:

Item	Part No.
Engine hanger	12281-38030
Bolt	90119-14120

Torque:
43 N*m{ 438 kgf*cm , 32 ft.*lbf }

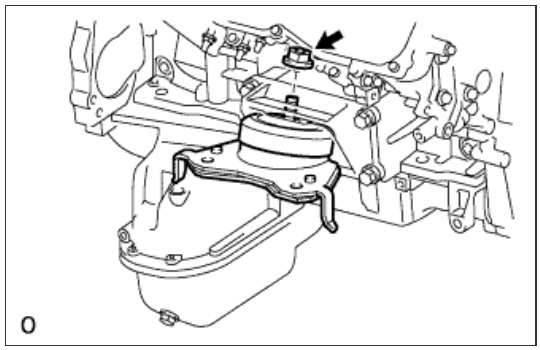
b. Attach an engine sling device and hang the engine with a chain block.



c. Remove the bolts and engine assembly from the engine stand.

2. INSTALL FRONT NO. 2 ENGINE MOUNTING BRACKET LH

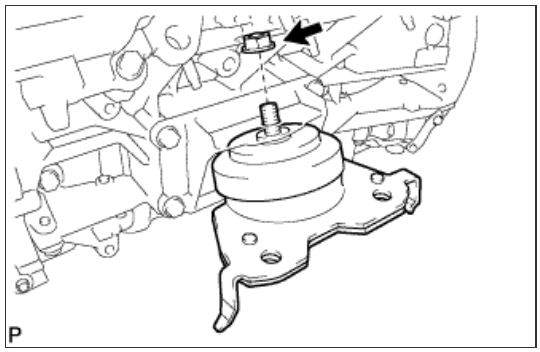
a. Install the engine mounting bracket LH with the bolt.



Torque:
32 N*m{ 326 kgf*cm , 24 ft.*lbf }

3. INSTALL FRONT ENGINE MOUNTING INSULATOR RH

a. Install the mounting insulator with the nut.



Torque:
72 N*m{ 734 kgf*cm , 53 ft.*lbf }

4. INSTALL FRONT ENGINE MOUNTING INSULATOR LH

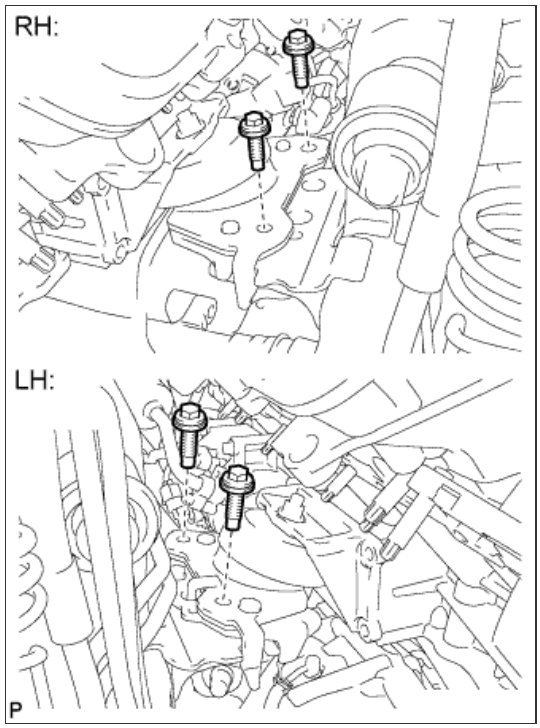
a. Install the mounting insulator with the nut.

Torque:
72 N*m{ 734 kgf*cm , 53 ft.*lbf }

5. INSTALL ENGINE ASSEMBLY

a. Slowly lower the engine assembly into the engine compartment.

NOTICE:

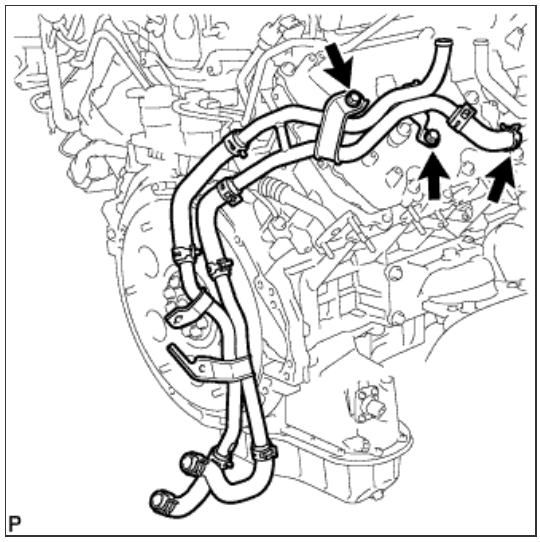


Make sure that the engine is clear of all wiring and hoses.

b. Attach the engine mounting insulators to the vehicle.

c. Install the 4 engine mounting insulator bolts.

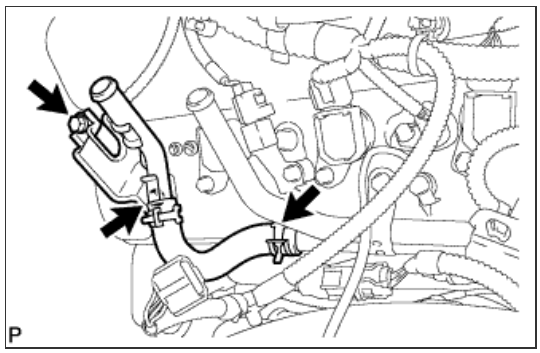
Torque:
79 N*m{ 806 kgf*cm , 58 ft.*lbf }



d. Remove the 2 bolts and 2 engine hangers.

6. INSTALL NO. 2 WATER BY-PASS PIPE (w/o Air Cooled Transmission Oil Cooler)

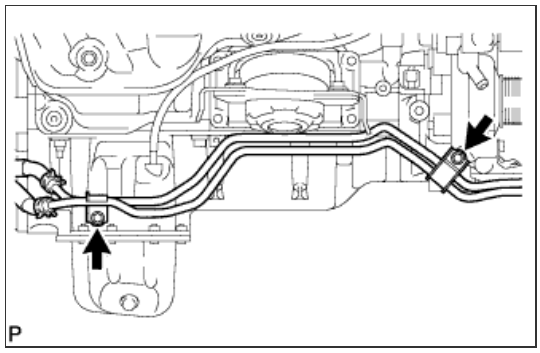
a. Connect the hose and install the water by-pass pipe with the 2 bolts.



Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

7. INSTALL WATER PIPE AND HOSE SUB-ASSEMBLY (w/ Air Cooled Transmission Oil Cooler)

a. Connect the hose and install the water pipe and hose with the 2 bolts.

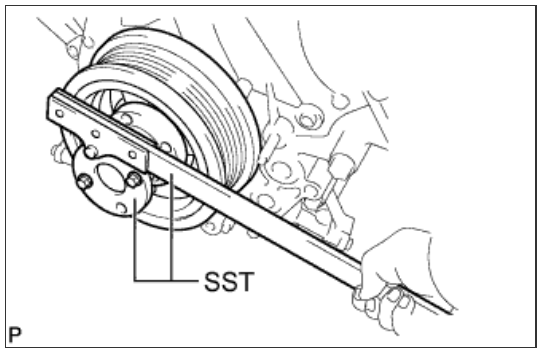


Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

8. CONNECT OIL COOLER PIPE ASSEMBLY

a. Connect the oil cooler pipe with the 2 bolts.

Torque:
14 N*m{ 143 kgf*cm , 10 ft.*lbf }

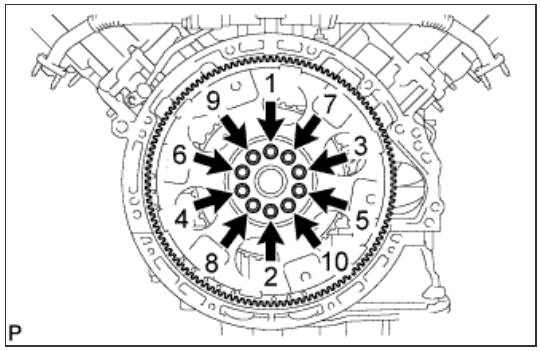


9. INSTALL DRIVE PLATE AND RING GEAR SUB-ASSEMBLY

a. Using SST, hold the crankshaft.

SST
09213-70011 (09213-70020)
09330-00021

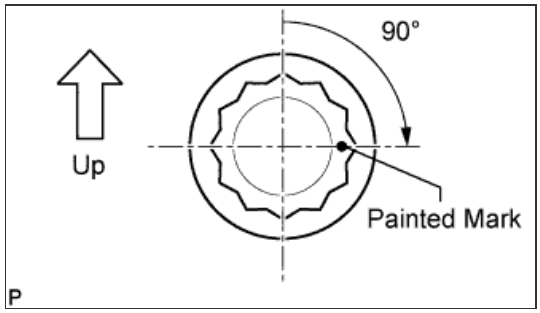
b. Install the crankshaft angle sensor rotor, drive plate and rear drive plate spacer to the crankshaft.



c. Install and uniformly tighten 10 new bolts in the sequence shown in the illustration.

Torque:
30 N*m{ 301 kgf*cm , 22 ft.*lbf }

NOTICE:

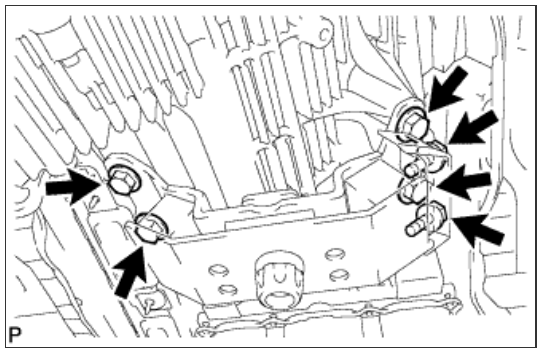


- **Do not reuse the flywheel installation bolts.**
- **Do not strike or damage the flywheel installation bolts. Be sure to handle them carefully.**

d. Mark the upside of each flywheel installation bolt with paint.

e. Tighten the flywheel installation bolts 90° as shown in the illustration.

f. Check that the painted marks are now at a 90° angle to the upside.



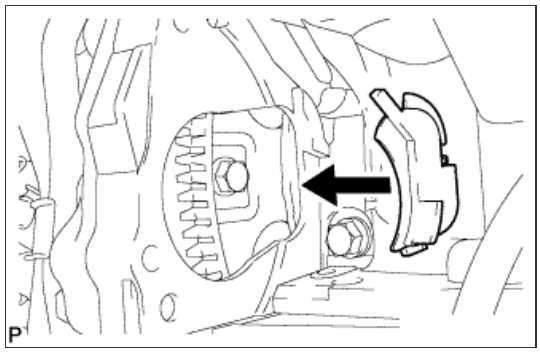
10. INSTALL REAR NO. 1 ENGINE MOUNTING INSULATOR

a. Install the rear engine mounting insulator to the transmission with the 4 bolts.

Torque:
59 N*m{ 602 kgf*cm , 44 ft.*lbf }

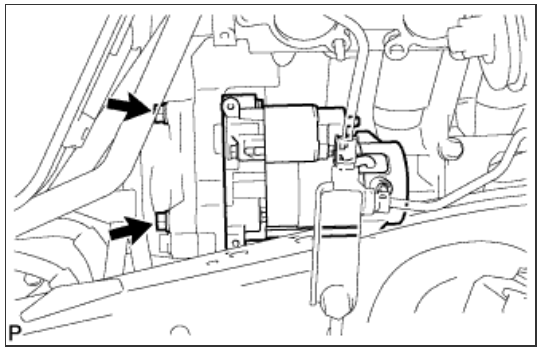
b. Install the front engine mounting insulator RH with the 2 bolts.

Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }



11. INSTALL AUTOMATIC TRANSMISSION ASSEMBLY

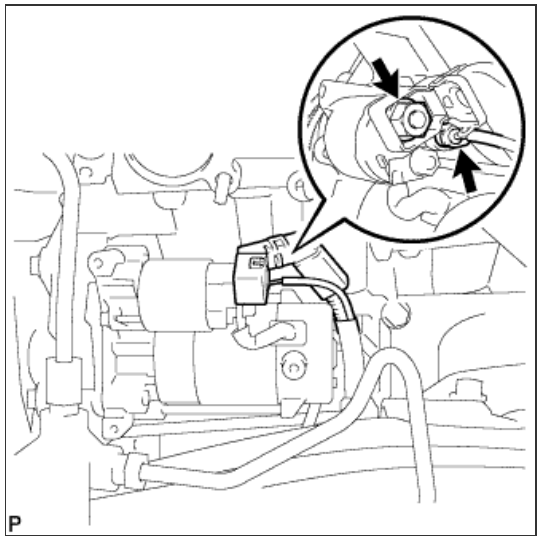
a. Install the automatic transmission (Click here).



12. INSTALL STARTER ASSEMBLY

a. Install the flywheel housing side cover.

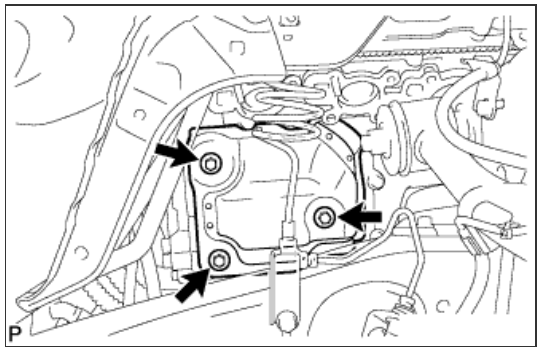
b. Install the starter with the 2 bolts.



Torque:
37 N*m{ 377 kgf*cm , 27 ft.*lbf }

c. Install the starter wire with the nut.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

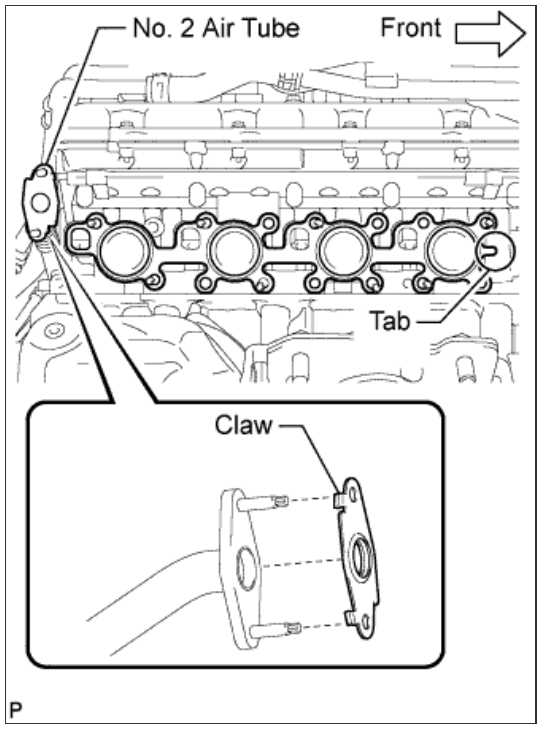


d. Connect the starter connector.

13. INSTALL STARTER COVER

a. Install the starter cover with the 3 bolts.

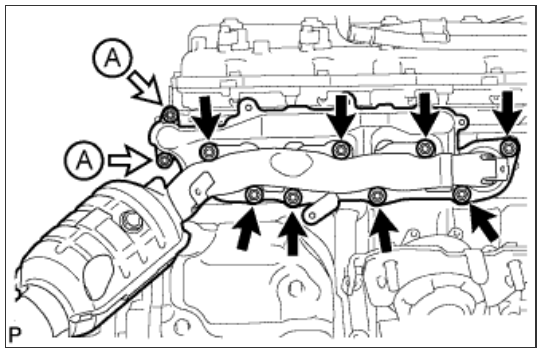
Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }



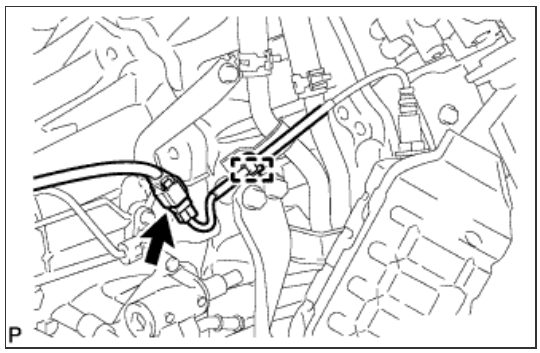
14. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY RH

a. Install a new gasket to the cylinder head and a new gasket to the No. 2 air tube.

HINT:



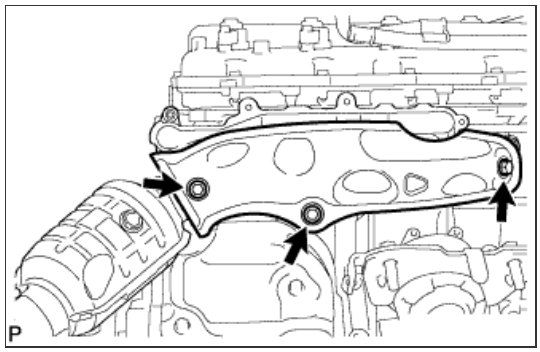
- **Install the exhaust manifold gasket with the gasket tab facing toward the front of the engine.**
- **Install the air tube gasket with the gasket claws facing the tube side.**



b. Temporarily install the exhaust manifold with the 2 nuts labeled A and 8 new nuts.

c. Uniformly tighten the nuts that are not labeled A, and then tighten the 2 nuts labeled A.

Torque:
for nut A:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }
except nut A:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }

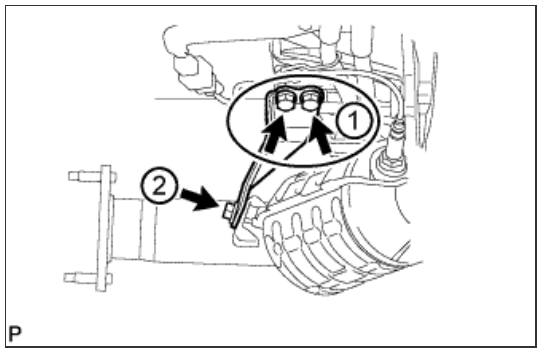


d. Attach the wire harness clamp to the bracket and connect the connector.

15. INSTALL NO. 1 EXHAUST MANIFOLD HEAT INSULATOR

a. Install the heat insulator with the 3 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

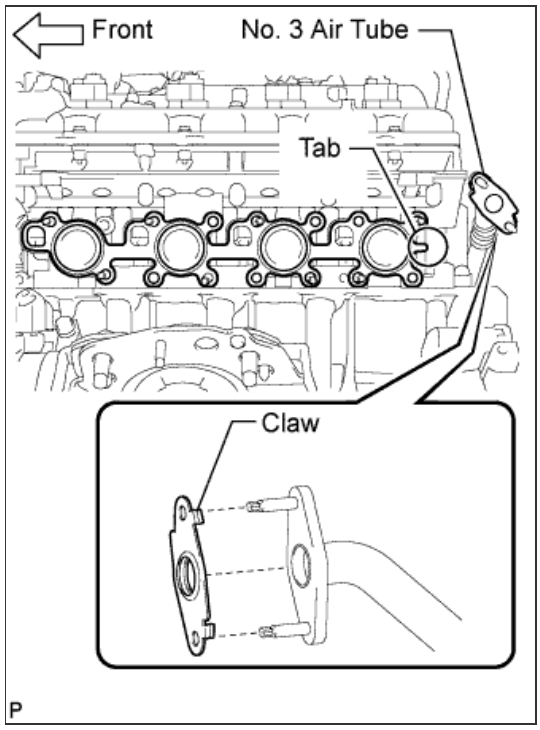


16. INSTALL NO. 1 MANIFOLD STAY

a. Temporarily install the manifold stay with the 3 bolts.

b. Tighten the 3 bolts in the order shown in the illustration.

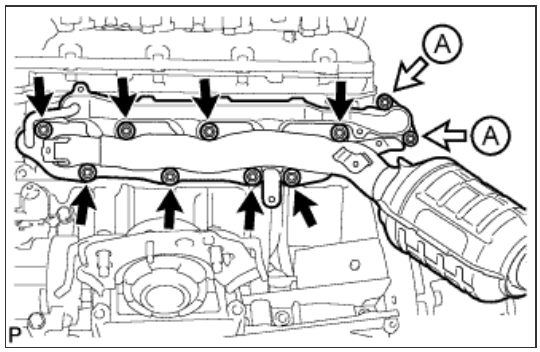
Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }



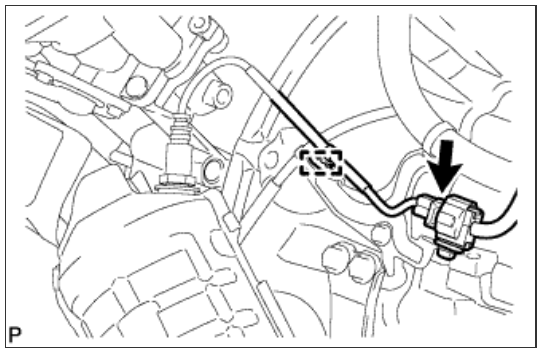
17. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY LH

a. Install a new gasket to the cylinder head and a new gasket to the No. 3 air tube.

HINT:



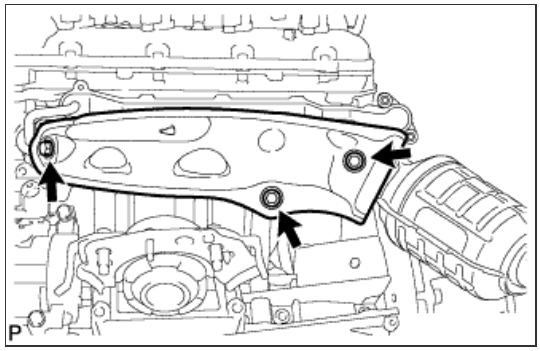
- **Install the exhaust manifold gasket with the gasket tab facing toward the rear of the engine.**
- **Install the air tube gasket with the gasket claws facing the tube side.**



b. Temporarily install the exhaust manifold with the 2 nuts labeled A and 8 new nuts.

c. Uniformly tighten the nuts that are not labeled A, and then tighten the 2 nuts labeled A.

Torque:
for nut A:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }
except nut A:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }

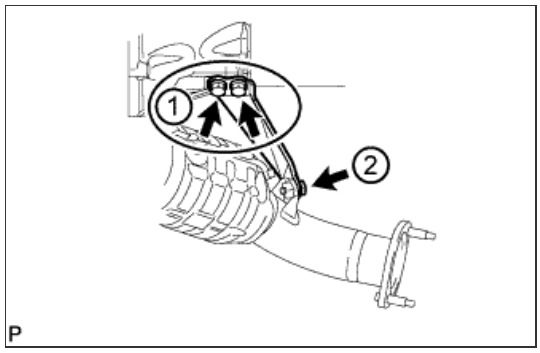


d. Attach the wire harness clamp to the bracket and connect the connector.

18. INSTALL NO. 2 EXHAUST MANIFOLD HEAT INSULATOR

a. Install the heat insulator with the 3 bolts.

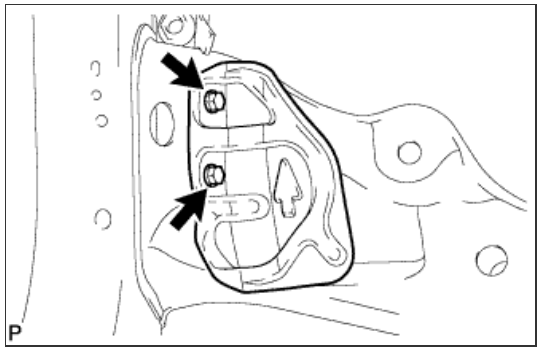
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



19. INSTALL NO. 2 MANIFOLD STAY

a. Temporarily install the manifold stay with the 3 bolts.

b. Tighten the 3 bolts in the order shown in the illustration.



Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

20. INSTALL PROPELLER SHAFT HEAT INSULATOR

a. Install the heat insulator with the 2 bolts.

Torque:
16 N*m{ 160 kgf*cm , 12 ft.*lbf }

21. INSTALL REAR PROPELLER SHAFT ASSEMBLY

a. Install the rear propeller shaft (Click here).

22. INSTALL FRONT PROPELLER SHAFT ASSEMBLY

a. Install the front propeller shaft (Click here).

23. INSTALL FRONT EXHAUST PIPE ASSEMBLY

a. Install a new gasket and the front exhaust pipe to the exhaust manifold RH with 2 new nuts.

Torque:
54 N*m{ 551 kgf*cm , 40 ft.*lbf }

b. Install the wire harness clamp bracket of the oxygen sensor to the transmission with the bolt.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

c. Connect the heated oxygen sensor connector.

24. INSTALL FRONT NO. 2 EXHAUST PIPE ASSEMBLY

a. Install a new gasket and the front No. 2 exhaust pipe to the exhaust manifold LH with 2 new nuts.

Torque:
54 N*m{ 551 kgf*cm , 40 ft.*lbf }

b. Install the wire harness clamp bracket of the oxygen sensor to the transmission with the bolt.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

c. Connect the heated oxygen sensor connector.

25. INSTALL CENTER EXHAUST PIPE ASSEMBLY

a. Install 2 new gaskets to the front exhaust pipe and front No. 2 exhaust pipe.

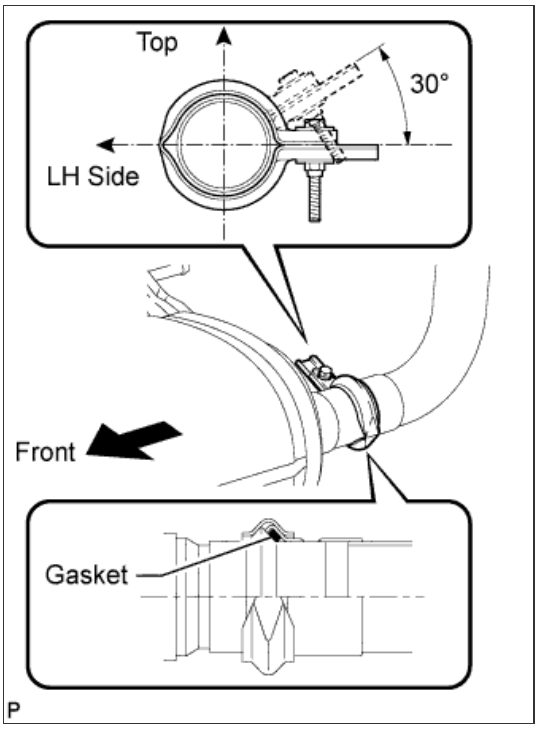
b. Install the center exhaust pipe to the 3 exhaust pipe supports, and then install the 4 bolts.

Torque:
48 N*m{ 489 kgf*cm , 35 ft.*lbf }

26. INSTALL TAILPIPE ASSEMBLY

a. Install the tailpipe to the 2 exhaust pipe supports.

b. Install a new gasket to the center exhaust pipe.



c. Connect the tailpipe to the center exhaust pipe.

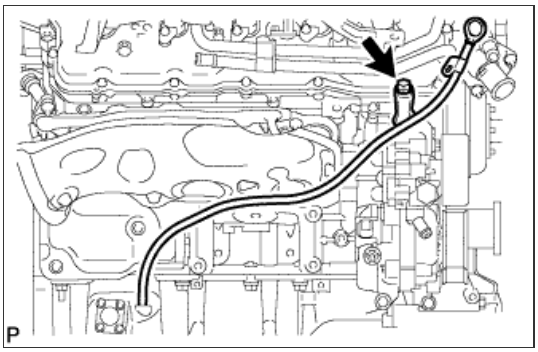
d. Attach a new clamp to the tailpipe and center exhaust pipe. Then install the bolt to the clamp.

Torque:
32 N*m{ 326 kgf*cm , 24 ft.*lbf }

HINT:

Install the clamp within the angle range shown in the illustration.

27. INSTALL ENGINE OIL LEVEL DIPSTICK GUIDE

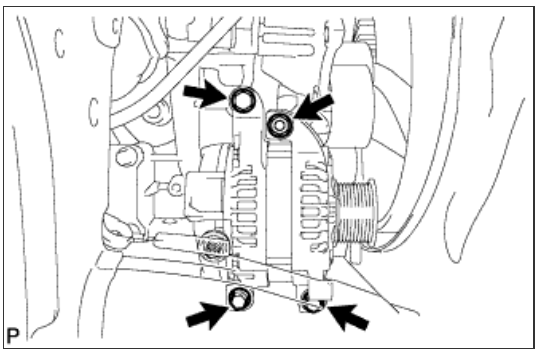


a. Apply a light coat of engine oil to a new O-ring.

b. Install the O-ring to the guide.

c. Install the dipstick guide with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



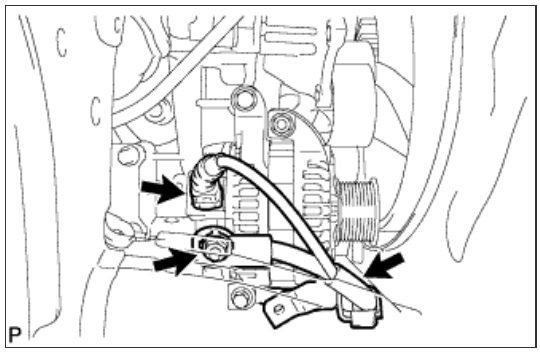
d. Install the dipstick.

28. INSTALL GENERATOR ASSEMBLY

a. Install the generator with the 3 bolts and nut.

Torque:
43 N*m{ 438 kgf*cm , 32 ft.*lbf }

b. Connect the generator connector.

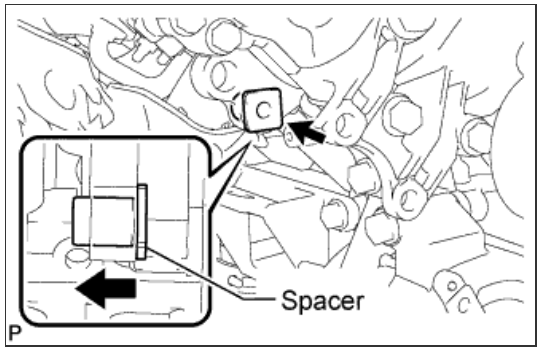


c. Connect the generator wire with the nut.

Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

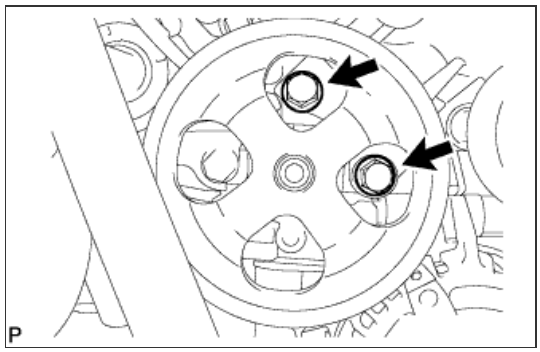
d. Install the terminal cap.

e. Install the harness bracket to the generator with the bolt.



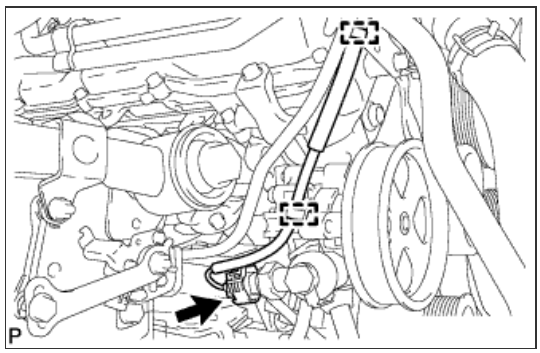
Torque:
31 N*m{ 316 kgf*cm , 23 ft.*lbf }

29. CONNECT VANE PUMP ASSEMBLY



HINT:

Before performing the following procedures, move the spacer until the vane pump can be installed.



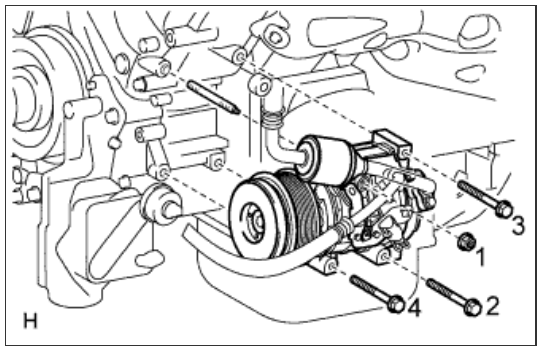
a. Connect the vane pump to the timing chain cover with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. Connect the 2 clamps and power steering oil pressure switch connector.

30. CONNECT COOLER COMPRESSOR ASSEMBLY

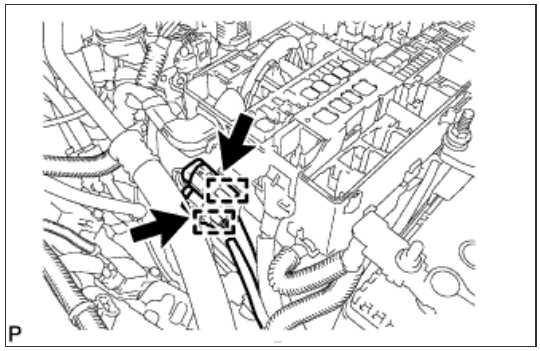
a. Install the cooler compressor with the stud bolt.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. Install the 3 bolts and nut.

Torque:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }



NOTICE:

Tighten the bolts and nut in the order shown in the illustration to install the cooler compressor.

31. CONNECT WIRE HARNESS AND HOSE

a. Connect the clamp and 2 connectors.

b. Connect the 2 connectors and 2 clips to the engine room junction block.

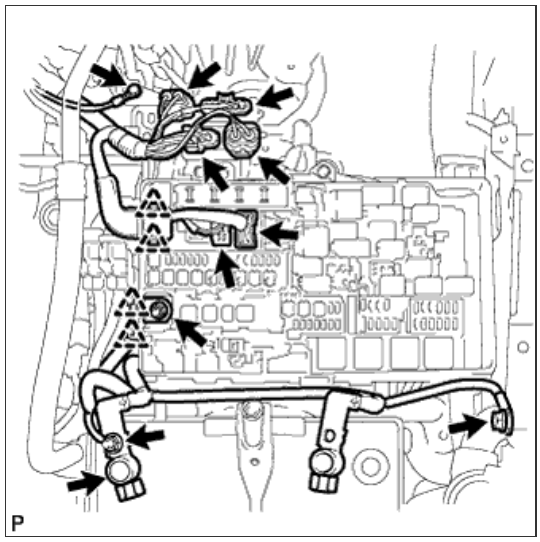
c. Install the engine wire with the nut. Then connect the 2 clips.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

d. Connect the 4 air injection control driver connectors.

e. Install the ground wire to the air injection control bracket with the bolt.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



f. Install the ground wire to the body with the bolt.

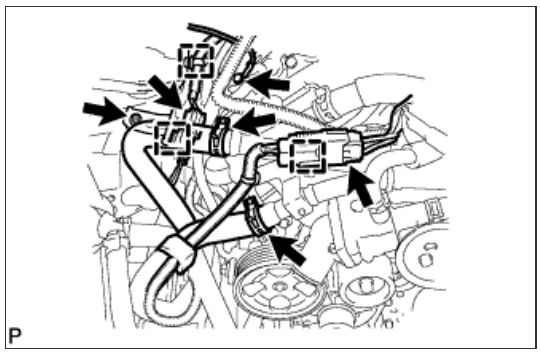
Torque:
8.4 N*m{ 86 kgf*cm , 74 in.*lbf }

g. Connect the cable to the positive (+) battery terminal.

h. Install the wire to the positive (+) battery cable with the nut.

Torque:
5.4 N*m{ 55 kgf*cm , 48 in.*lbf }

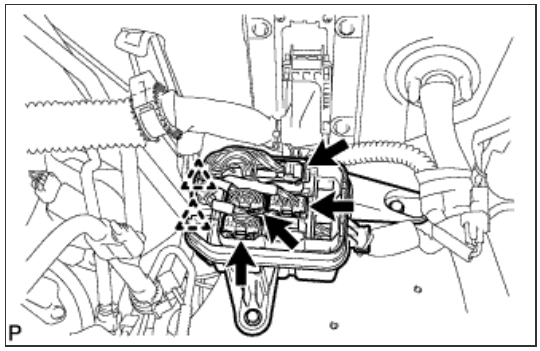
i. Connect the 2 air injection system hoses.



j. Install the ground wire with the bolt.

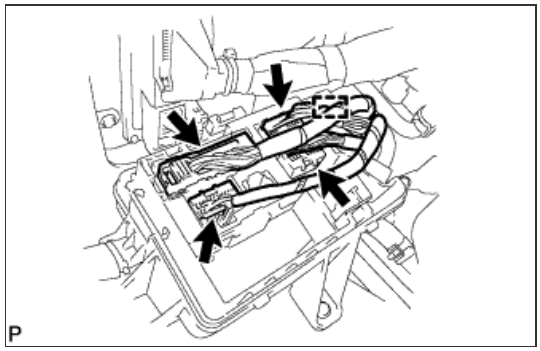
Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

k. Connect the 3 clamps and 2 air pump connectors.



l. Install the connector bracket with the nut.

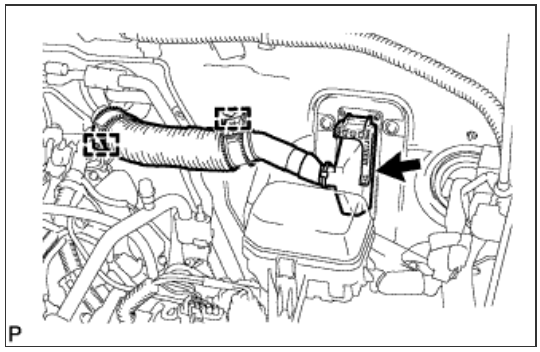
Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



m. Connect the 4 connectors.

i. for RHD:
Connect the 4 connectors and 2 clips to the connector holder block.

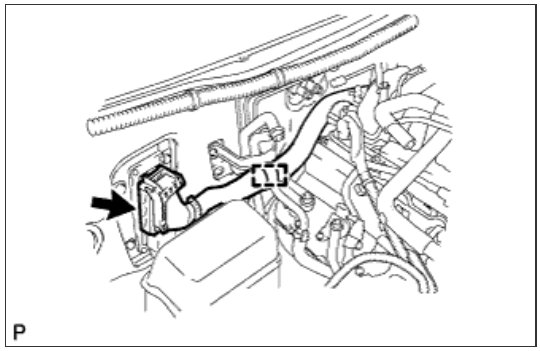
ii. for LHD:
Connect the 4 connectors and clamp to the connector holder block.



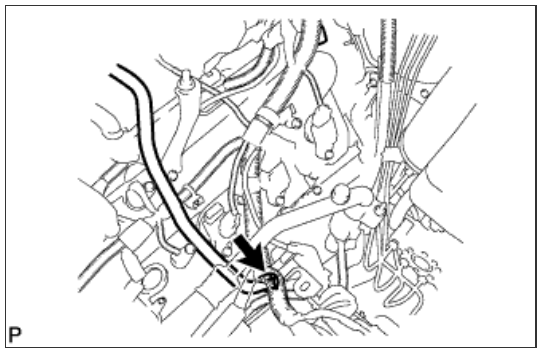
n. Connect the ECM connector.

i. for RHD:
Connect the 2 clamps and ECM connector.

HINT:



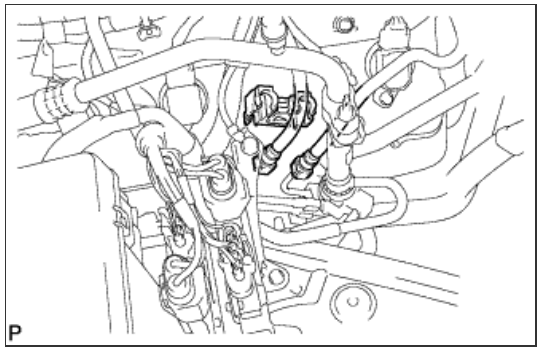
Refer to the following procedures to connect the ECM connector (Click here).



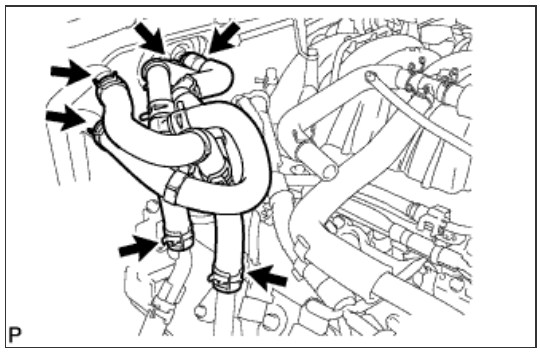
ii. for LHD:
Connect the clamp and ECM connector.

HINT:

Refer to the following procedures to connect the ECM connector (Click here).



o. Connect the purge line hose.

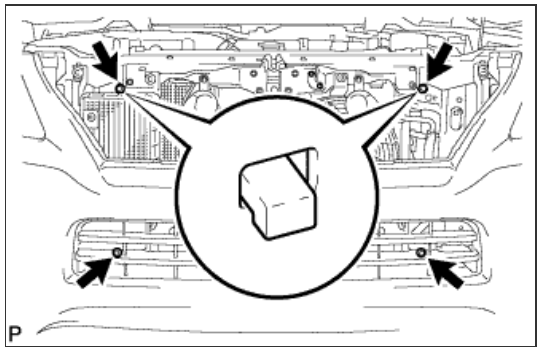


32. CONNECT FUEL MAIN AND RETURN HOSE

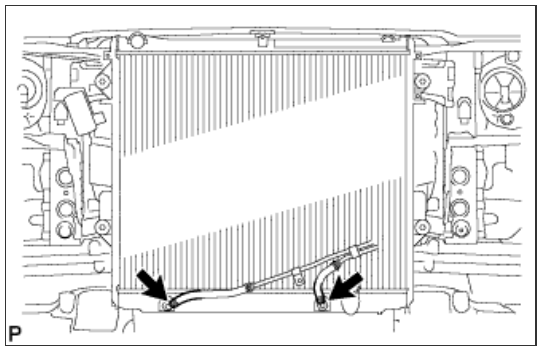
a. Connect the fuel main and return hoses (Click here).

b. Install the fuel pipe clamp.

33. INSTALL WATER HOSE SUB-ASSEMBLY



34. INSTALL RADIATOR ASSEMBLY



a. Set the radiator bracket hooks to the radiator support holes.

b. Install the radiator with the 4 bolts.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

c. Connect the 2 oil cooler hoses.

35. INSTALL FAN SHROUD

a. Install the fan pulley.

b. Place the shroud together with the coupling fan between the radiator and engine.

NOTICE:

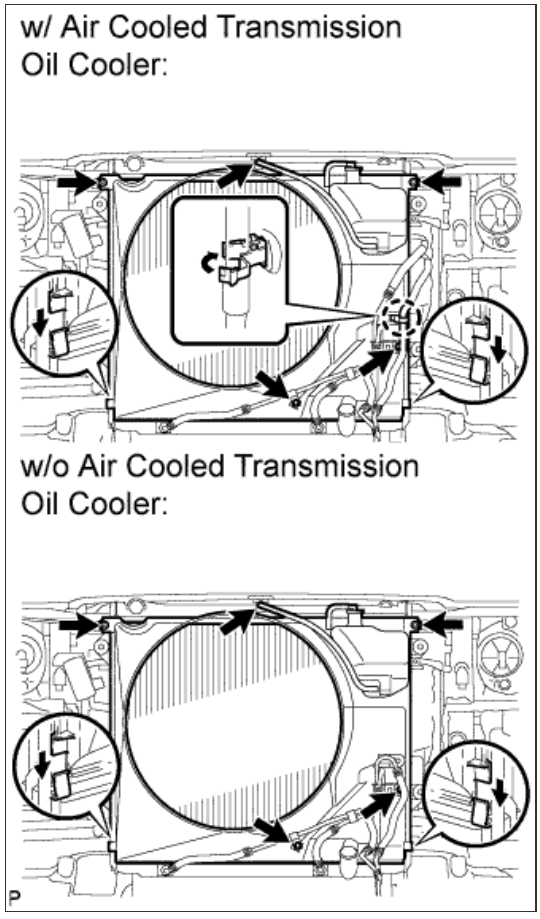
Be careful not to damage the radiator core.

c. Temporarily install the fluid coupling fan to the fluid coupling bracket with the 4 nuts. Tighten the nuts as much as possible by hand.

d. Attach the claws of the shroud to the radiator as shown in the illustration.

e. Install the shroud with the 2 bolts.

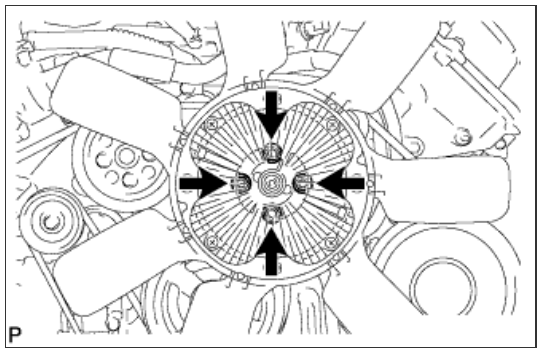
Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



f. Connect the oil cooler tube to the fan shroud with the 2 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

g. w/ Air Cooled Transmission Oil Cooler:
Pass the hose through the flexible hose clamp and close the clamp as shown in the illustration.

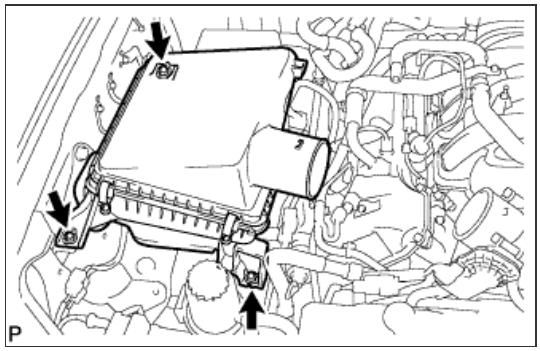


h. Connect the reservoir hose to the upper radiator tank.

i. Install the fan and generator V belt (Click here).

j. Tighten the 4 nuts of the fluid coupling fan.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



36. INSTALL NO. 2 RADIATOR HOSE

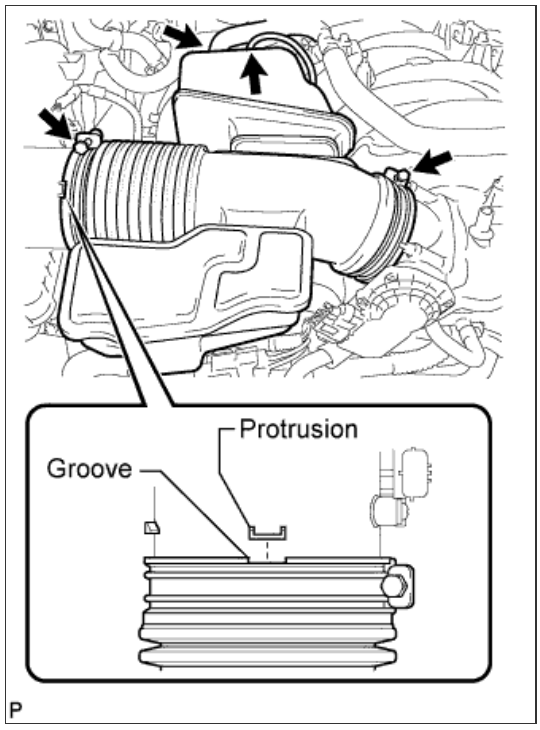
37. INSTALL NO. 1 RADIATOR HOSE

38. INSTALL AIR CLEANER ASSEMBLY

a. Install the air cleaner with the 3 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

39. INSTALL AIR CLEANER HOSE ASSEMBLY



a. Install the air cleaner hose so that the protrusion of the air cleaner cap aligns with the groove of the hose as shown in the illustration.

b. Tighten the 2 clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

c. Connect the vacuum hose.

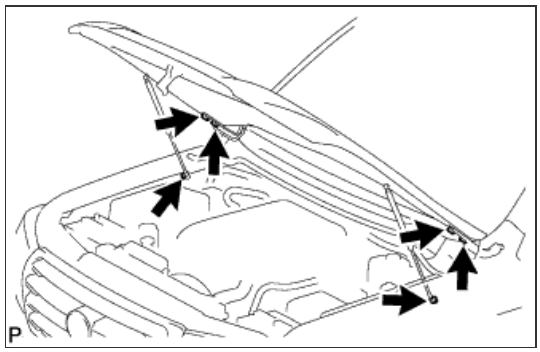
d. Connect the No. 2 ventilation hose.

40. INSTALL HOOD SUB-ASSEMBLY

a. Install the hood with the 4 bolts.

Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }

b. Connect the 2 hood supports with the 2 hood support bolts.



Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

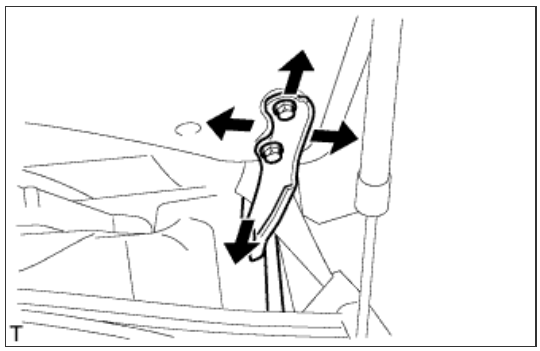
CAUTION:

Install the hood support while supporting the hood by hand.

NOTICE:

Check that the hood support is engaged in the ball joint and that it cannot be pulled out.

41. ADJUST HOOD SUB-ASSEMBLY

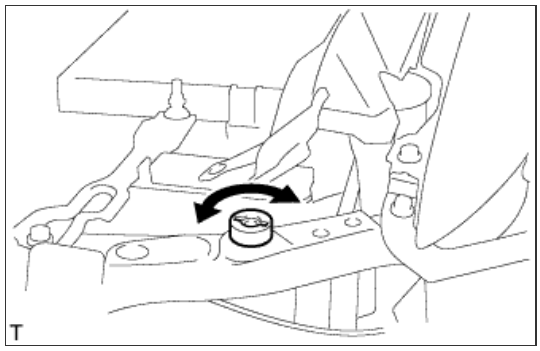


a. Adjust the hood position.

i. Loosen the 4 hinge bolts of the hood.

ii. Move the hood and adjust the clearance between the hood and front fender.

iii. Tighten the 4 hinge bolts of the hood after the adjustment.



Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }

iv. Adjust the cushion rubber so that the height of the hood and fender are aligned.

HINT:

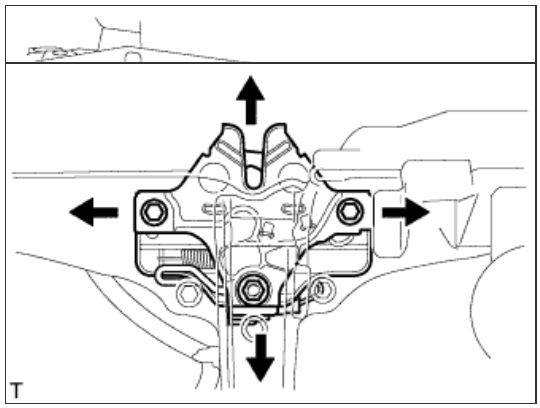
Raise or lower the front end of the hood by turning the cushion rubber.

b. Adjust the hood lock.

i. Using a screwdriver, remove the hood lock nut cap as shown in the illustration.

HINT:

Tape the screwdriver tip before use.

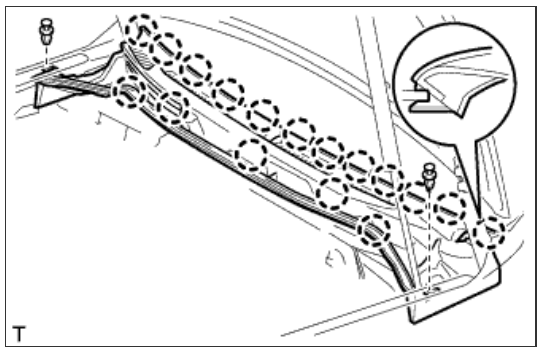


ii. Loosen the 2 bolts and hood lock nut.

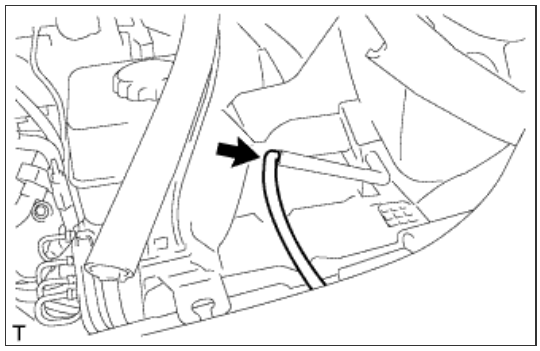
iii. Adjust the hood lock position so that the striker can enter it smoothly.

iv. Tighten the bolts and nut after the adjustment.

Torque:
5.5 N*m{ 56 kgf*cm , 49 in.*lbf }



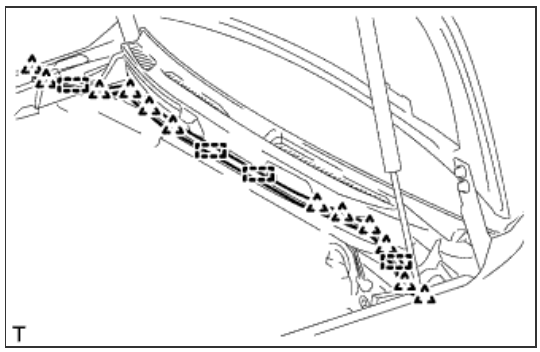
v. Install a new cap.



42. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

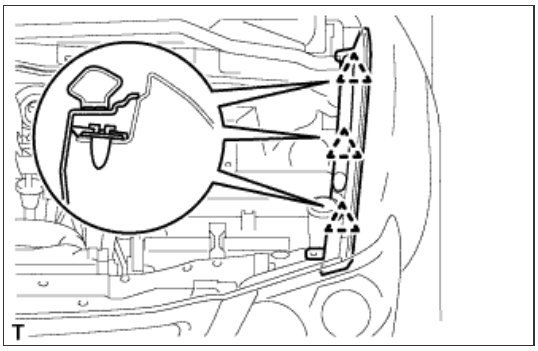
a. Push in the ventilator louver to attach the 17 claws and install the ventilator louver.

b. Install the 2 clips.



c. Connect the washer hose.

43. INSTALL HOOD TO COWL TOP SEAL



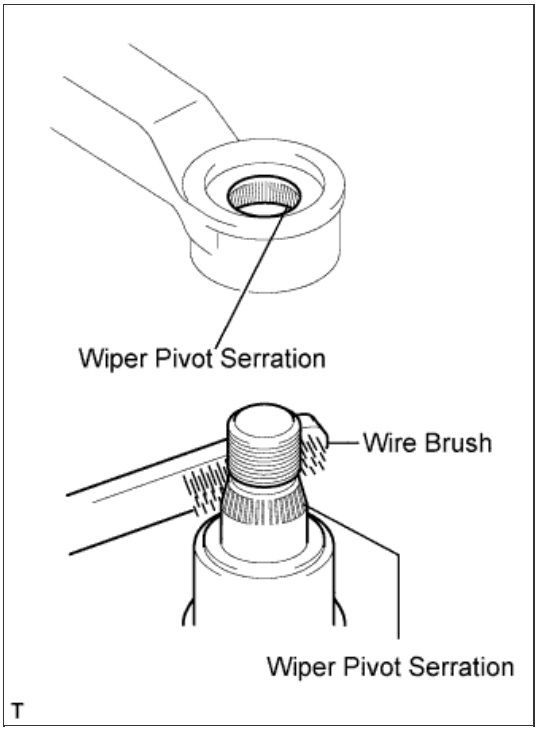
a. Attach the 12 clips and 4 clamps to install the hood to cowl top seal.

44. INSTALL FRONT FENDER MAIN SEAL LH

a. Attach the 3 clips to install the fender main seal

a. Attach the 3 clips to install the fender main seal.

45. INSTALL FRONT FENDER MAIN SEAL RH



HINT:

Use the same procedures described for the LH side.

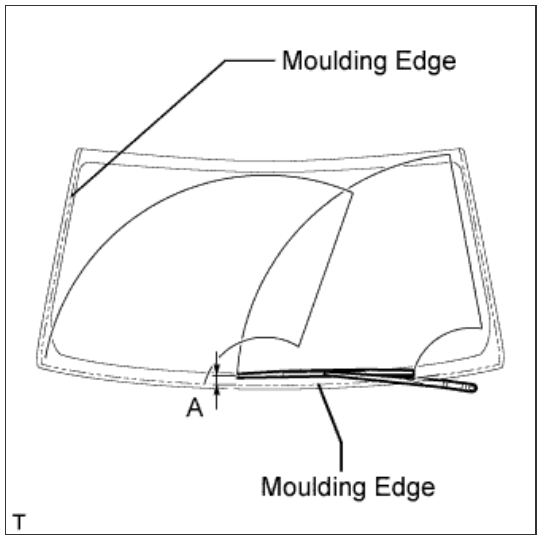
46. INSTALL FRONT WIPER ARM LH

a. Stop the wiper motor at the automatic stop position.

b. Clean the wiper pivot serrations with a wire brush.

c. Install the wiper arm and blade with the nut. Make sure that the wiper arm and blade come to the position shown in the illustration.

Standard:

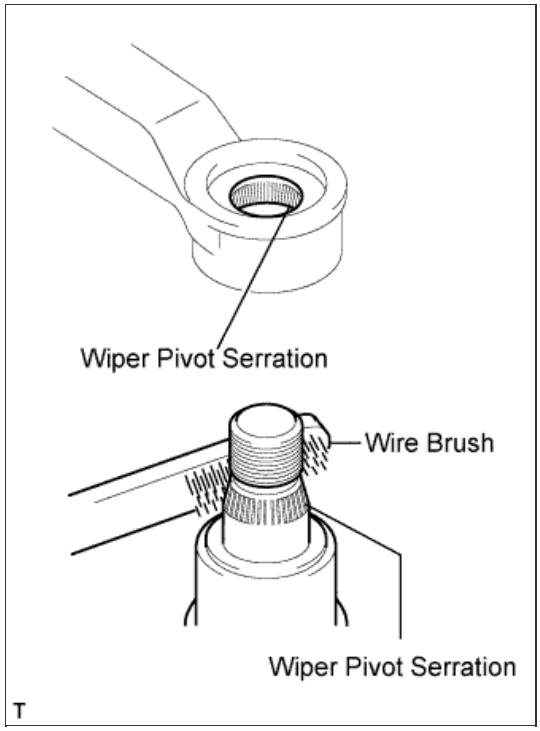


Position	Specified Condition
A	16.8 to 36.8 mm (0.661 to 1.45 in.)

Torque:

25 N*m{ 255 kgf*cm , 18 ft.*lbf }

HINT:



Hold down the wiper arm hinge with your hand while tightening the nut.

47. INSTALL FRONT WIPER ARM RH

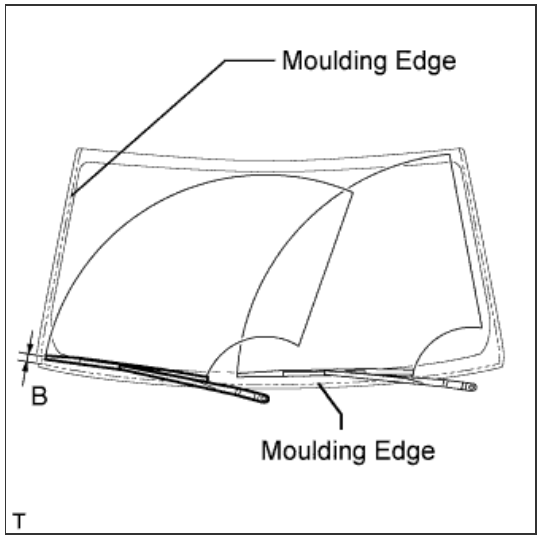
a. Stop the wiper motor at the automatic stop position.

b. Clean the wiper pivot serrations with a wire brush.

c. Install the wiper arm and blade with the nut. Make sure that the wiper arm and blade come to the position shown in the illustration.

Standard:

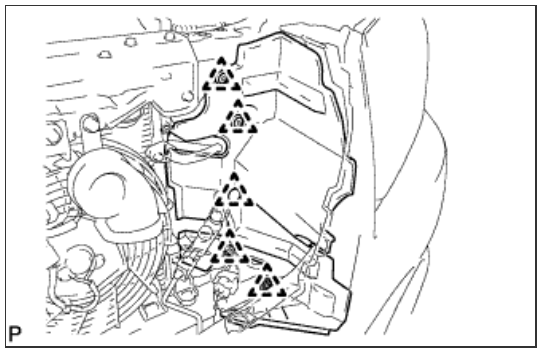
Position	Specified Condition
B	20.0 to 40.0 mm (0.787 to 1.57 in.)



Torque:

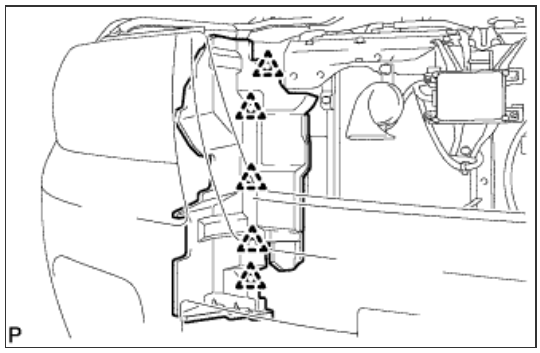
25 N*m{ 255 kgf*cm , 18 ft.*lbf }

HINT:



Hold down the wiper arm hinge with your hand while tightening the nut.

d. Operate the front wipers while spraying washer fluid on the windshield glass. Make sure that the front wipers function properly and there is no interference with the vehicle body.

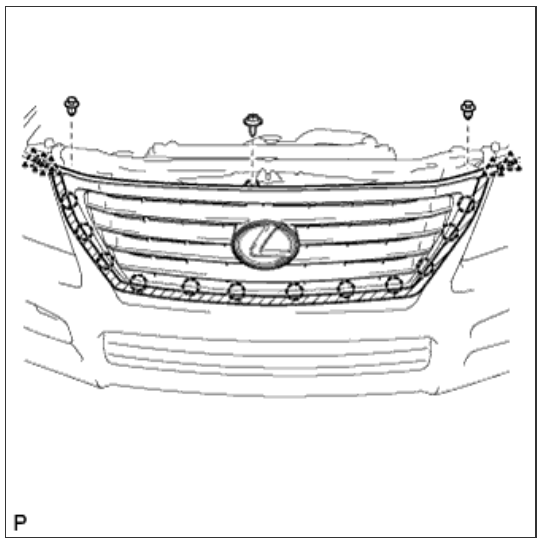


48. INSTALL RADIATOR SIDE DEFLECTOR LH

a. Install the side deflector with the 5 clips.

49. INSTALL RADIATOR SIDE DEFLECTOR RH (w/o Air Cooled Transmission Oil Cooler)

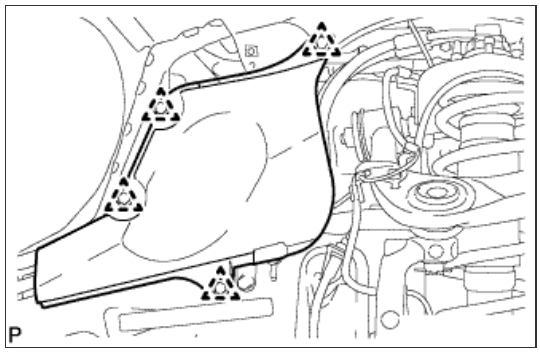
a. Install the side deflector with the 5 clips.



50. INSTALL RADIATOR GRILLE

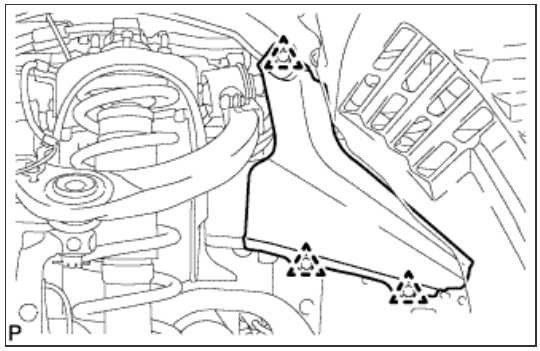
a. w/ Wide View Front Monitor System:
Connect the connector.

b. Attach the 12 claws to install the radiator grille.



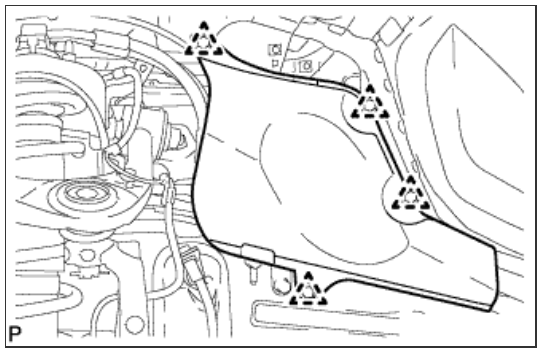
c. Attach the 5 clips to install the detached part of the upper radiator seal.

d. Install the screw and 2 clips.



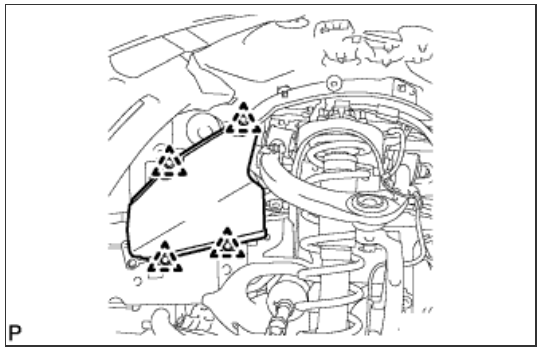
51. INSTALL FRONT FENDER APRON SEAL REAR RH

a. Install the fender apron seal with the 4 clips.



52. INSTALL FRONT FENDER APRON SEAL FRONT RH

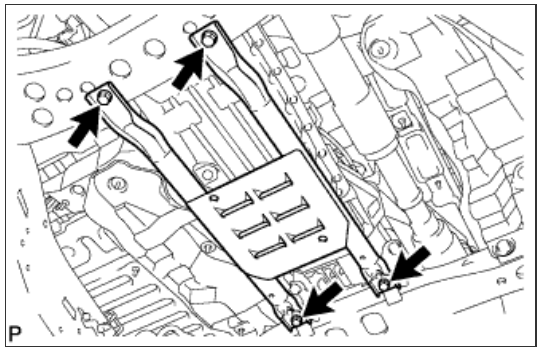
a. Install the fender apron seal with the 3 clips.



53. INSTALL FRONT FENDER APRON SEAL REAR LH

a. Install the fender apron seal with the 4 clips.

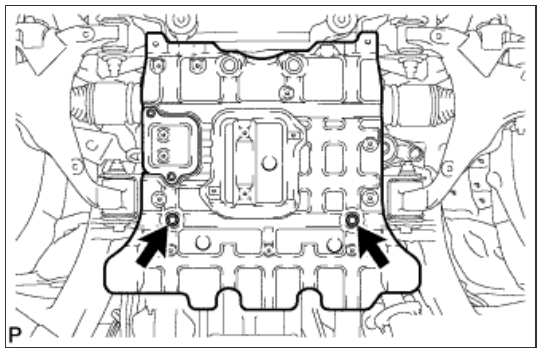
54. INSTALL FRONT FENDER APRON SEAL FRONT LH



a. Install the fender apron seal with the 4 clips.

55. INSTALL OIL PAN PROTECTOR ASSEMBLY

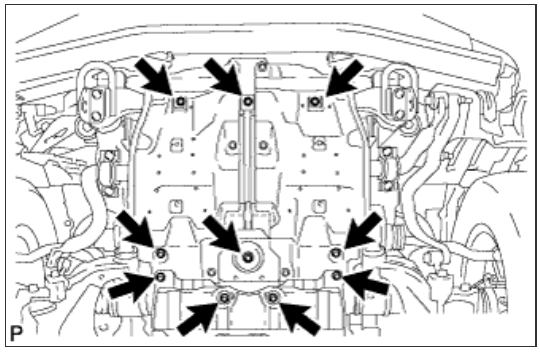
a. Install the oil pan protector with the 4 bolts.



Torque:
63 N*m{ 642 kgf*cm , 46 ft.*lbf }

56. INSTALL NO. 2 ENGINE UNDER COVER

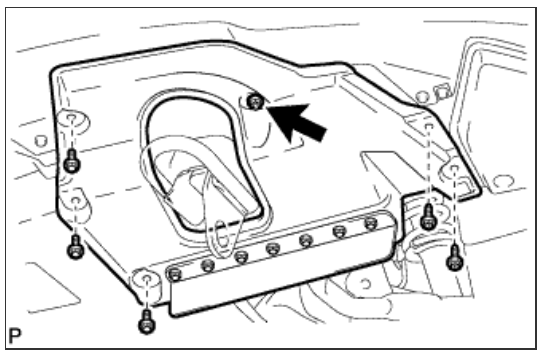
a. Install the No. 2 engine under cover with the 2 bolts.



Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

57. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.

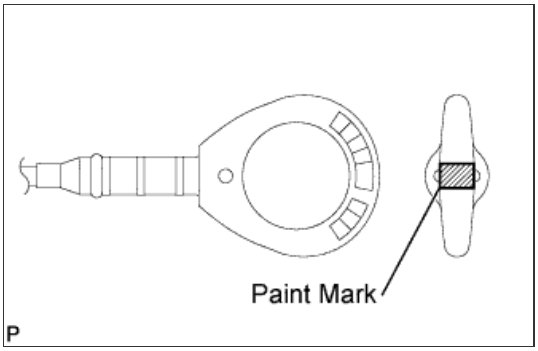


Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

58. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the 3 bolts and 2 screws.



59. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

60. ADD ENGINE OIL

a. Add fresh oil and install the oil filler cap.

Standard Oil Grade:

Oil Grade	Oil Viscosity (SAE)
API grade SL "Energy-Conserving", SM "Energy-Conserving" or ILSAC multigrade engine oil API grade SL or SM multigrade engine oil	0W-20 5W-20 5W-30 10W-30 15W-40 20W-50

Standard Oil Capacity:

Paint Mark	Item	Specified Condition
Blue	Drain and refill with oil filter change	7.0 liters (7.4 US qts, 6.2 Imp. qts)
	Drain and refill without oil filter change	6.6 liters (7.0 US qts, 5.8 Imp. qts)
	Dry fill	8.4 liters (8.9 US qts, 7.4 Imp. qts)
Green	Drain and refill with oil filter change	7.5 liters (7.9 US qts, 6.6 Imp. qts)
	Drain and refill without oil filter change	7.1 liters (7.5 US qts, 6.2 Imp. qts)
	Dry fill	9.3 liters (9.8 US qts, 8.2 Imp. qts)

61. ADD ENGINE COOLANT

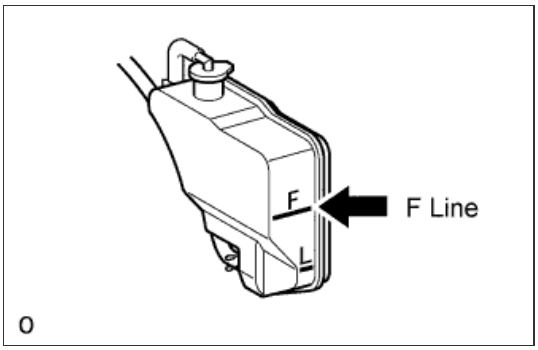
a. Add engine coolant.

Standard Capacity:

Item	Specified Condition
with transmission oil cooler	16.7 liters (17.6 US qts, 14.7 Imp. qts)
without transmission oil cooler	16.2 liters (17.1 US qts, 14.3 Imp. qts)

NOTICE:

Do not substitute plain water for engine coolant.



HINT:

TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the reservoir cap.

d. Press the No. 1 and No. 2 radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Start the engine and warm it up until the thermostat opens.

NOTICE:

Switch off the A/C.

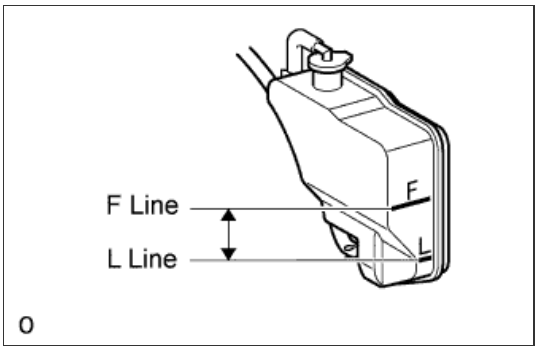
g. Maintain the engine speed at 2000 to 2500 rpm.

NOTICE:

- **Make sure that the radiator reservoir still has some coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**
- **Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the F line.**
- **Run the engine at 2000 rpm until the coolant level has stabilized.**

h. Press the No. 1 and No. 2 radiator hoses several times by hand to bleed air.

CAUTION:



- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the fan.**

i. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

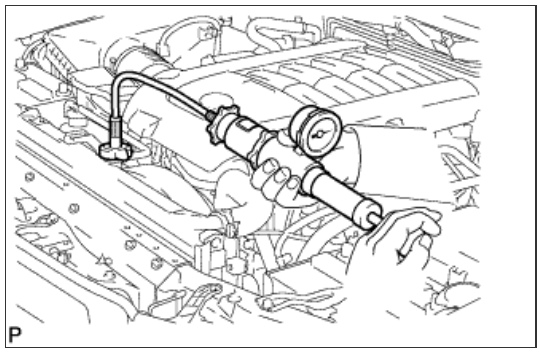
j. Check that the coolant level is between the F and L lines.
If the coolant level is below the L line, repeat all of the procedures above.
If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.

62. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable from the cable is reconnected (Click here).

63. INSPECT FOR OIL LEAK



a. Start the engine. Make sure that there are no oil leaks from the area that was worked on.

64. INSPECT FOR COOLANT LEAK

a. Fill the radiator with coolant and attach a radiator cap tester.

b. Warm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.

65. INSPECT FOR EXHAUST GAS LEAK

66. INSPECT FOR FUEL LEAK

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG) and intelligent tester on.

NOTICE:

Do not start the engine.

c. Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Fuel Pump Speed Control.

d. Check that there are no fuel leaks after doing maintenance anywhere on the fuel system.

67. INSPECT SHIFT LEVER POSITION

a. When moving the shift lever from P to R with the engine switch on (IG) and the brake pedal depressed, make sure that it moves smoothly and correctly into position.

b. Check that the shift lever does not stop when moving the shift lever from R to P, and check that the shift lever does not stick when moving the shift lever from D to S.

c. Start the engine and make sure that the vehicle moves forward after moving the shift lever from N to D and moves rearward after moving the shift lever to R.
If the operation cannot be performed as specified, inspect the park/neutral position switch assembly and check the shift lever assembly installation condition.

68. INSPECT IGNITION TIMING

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. Remove the engine room side cover LH.

c. Remove the engine room side cover RH.

d. Remove the upper radiator support seal.

e. Remove the V-bank cover.

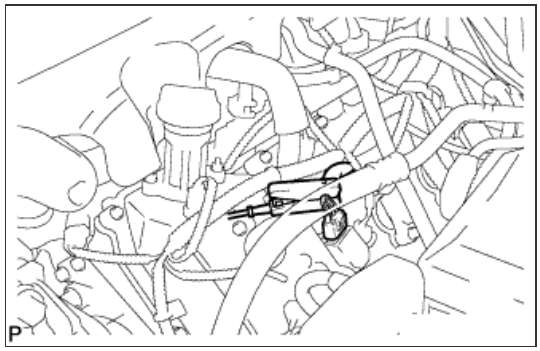
f. When using the intelligent tester:

i. Connect the intelligent tester to the DLC3.

ii. Start the engine and idle it.

iii. Turn the intelligent tester ON.

iv. Enter the following menus: Powertrain / Engine and ECT / Data List / Primary / IGN Advance.



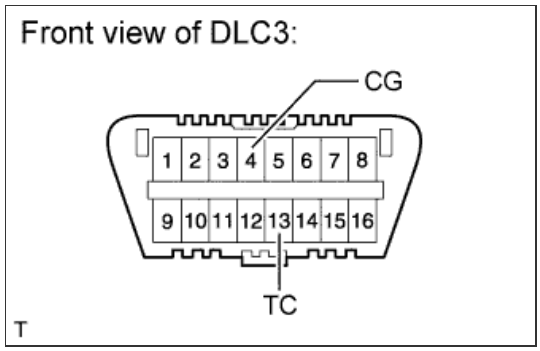
HINT:

Refer to the intelligent tester operator's manual for further details.

Standard ignition timing:
8 to 12° BTDC @ idle (transmission in neutral and A/C switch off)

v. Disconnect the intelligent tester from the DLC3.

g. When not using the intelligent tester:

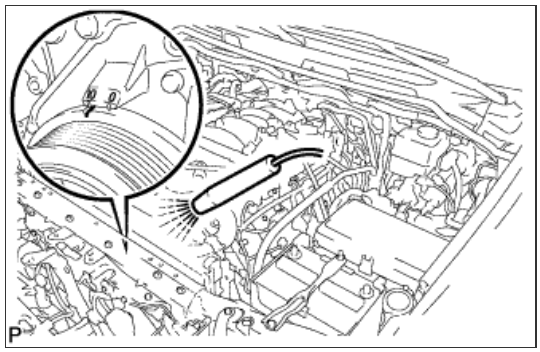


i. Connect the tester probe of a timing light to the wire of the ignition coil connector for the No. 1 cylinder.

NOTICE:

Use a timing light that detects primary signals.

ii. Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.



SST
09843-18040

NOTICE:

- **Confirm the terminal numbers before connecting them. Connecting the wrong terminals can damage the engine.**
- **Switch off all accessories and the A/C before connecting the terminals.**

iii. Using the timing light, check the ignition timing.

Standard ignition timing:
8 to 12° BTDC @ idle (transmission in neutral and A/C switch off)

iv. Remove SST from the DLC3.

v. Check the ignition timing.

Standard ignition timing:
7 to 24° BTDC @ idle (transmission in neutral and A/C switch off)

vi. Disconnect the timing light from the engine.

h. Install the V-bank cover.

i. Install the upper radiator support seal.

j. Install the engine room side cover RH.

k. Install the engine room side cover LH.

69. INSPECT ENGINE IDLE SPEED

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. When using the intelligent tester:

i. Connect the intelligent tester to the DLC3.

NOTICE:

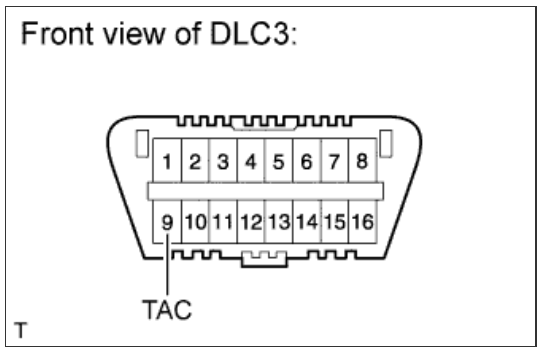
Switch off all accessories and the A/C before connecting the intelligent tester.

ii. Race the engine at 2500 rpm for approximately 90 seconds.

iii. Turn the intelligent tester ON.

iv. Enter the following menus: Powertrain / Engine and ECT / Data List / Primary / Engine Speed.

Standard idle speed:
650 to 750 rpm (transmission in neutral and A/C switch off)



HINT:

Refer to the intelligent tester operator's manual for further details.

If the idle speed is not as specified, check the air intake system.

v. Disconnect the intelligent tester from the DLC3.

c. When not using the intelligent tester:

i. Using SST, connect the tachometer probe to terminal 9 (TAC) of the DLC3.

SST
09843-18030

NOTICE:

- **Confirm the terminal number before connecting the probe. Connecting the probe to the wrong terminal can damage the engine.**
- **Switch off all accessories and the A/C before connecting the probe.**

ii. Race the engine at 2500 rpm for approximately 90 seconds.

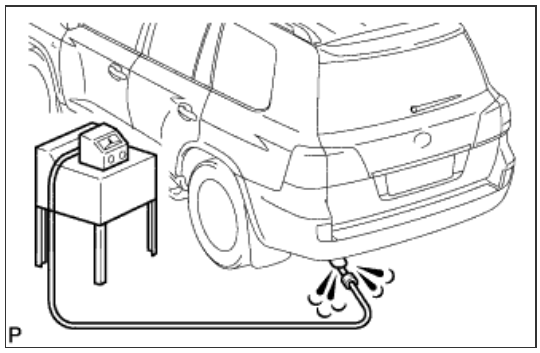
iii. Check the idle speed.

Standard idle speed:
650 to 750 rpm (transmission in neutral and A/C switch off)

If the idle speed is not as specified, check the air intake system.

iv. Disconnect the tachometer probe from the DLC3.

70. INSPECT CO/HC



HINT:

This check is used only to determine whether or not the idle CO/HC complies with regulations.

a. Start the engine.

b. Keep the engine speed at 2500 rpm for approximately 180 seconds.

c. Insert the CO/HC meter testing probe at least 40 cm (1.31 ft.) into the tailpipe during idling.

d. Immediately check CO/HC concentration at idle and/or 2500 rpm.

HINT:

When performing the 2 mode (2500 rpm and idle) test, follow the measurement order prescribed by the applicable local regulations.

e. If the CO/HC concentration does not comply with the regulations, troubleshoot in the order given below.

i. Check the A/F sensor operation (Click here) and heated oxygen sensor operation (Click here).

ii. See the table below for possible causes, and then inspect and correct the applicable causes if necessary.

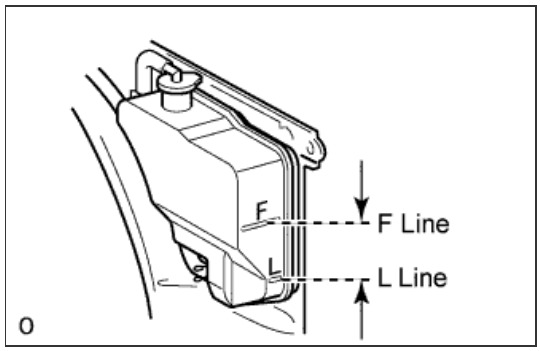
CO	HC	Symptom	Cause
Normal	High	Rough idle	1. Faulty ignitions: • Incorrect timing • Plugs (contaminated, shorted or gaps are defective) 2. Incorrect valve clearance 3. Leaky intake and exhaust valves 4. Leaky cylinder
Low	High	Rough idle (Fluctuating HC reading)	1. Vacuum leaks: • PCV hose • Intake manifold • Throttle body 2. Lean mixture causing misfire
High	High	Rough idle (Black smoke from exhaust)	1. Restricted air filter 2. Faulty SFI system: • Faulty pressure regulator • Defective ECT sensor • Faulty ECM • Faulty injectors • Faulty throttle position sensor • Faulty MAF meter

71. INSPECT ENGINE OIL LEVEL

a. Warm up the engine, stop the engine and wait 5 minutes. The oil level should be between the dipstick low level mark and full level mark. If low, check for leakage and add oil up to the full level mark.

NOTICE:

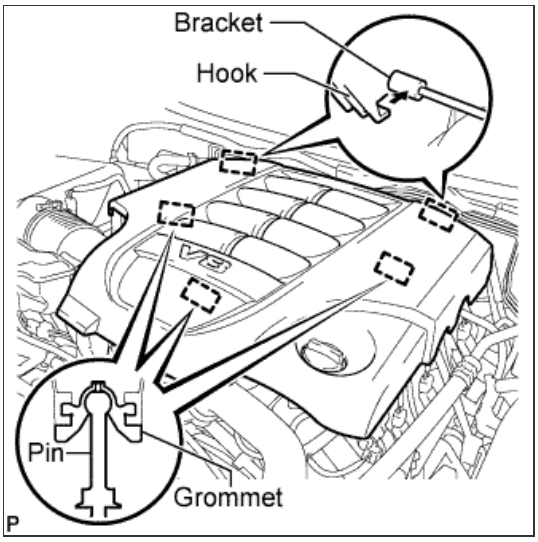
Do not fill engine oil above the full level mark.



72. INSPECT ENGINE COOLANT LEVEL

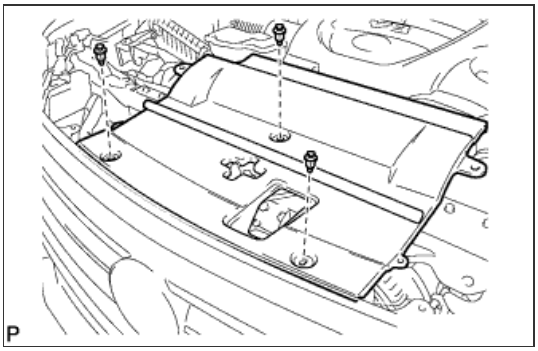
a. Check that the engine coolant level is between the L and F lines when the engine is cold.
If the engine coolant is below the L line, check for leaks and add "TOYOTA Super Long Life Coolant" or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite and non-borate coolant with long-life hybrid organic acid technology to the F line.

NOTICE:



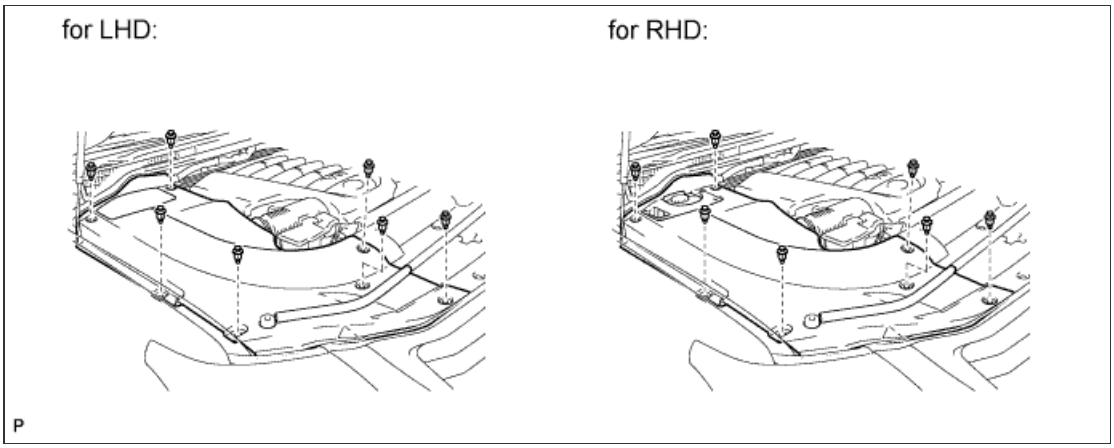
Do not substitute plain water for engine coolant.

b. Remove the radiator cap, and check that the coolant level is up to the radiator filler hole.



73. INSTALL V-BANK COVER SUB-ASSEMBLY

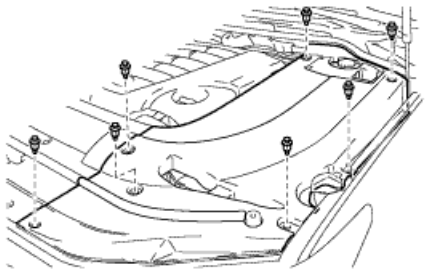
a. Attach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.



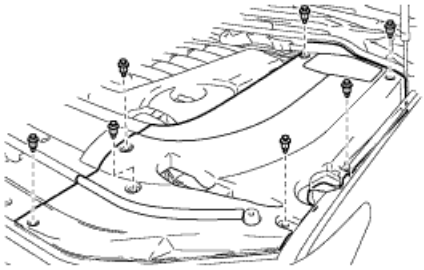
74. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the upper radiator support seal with the 3 clips.

75. INSTALL ENGINE ROOM SIDE COVER RH



a. Install the engine room side cover with the 7 clips.

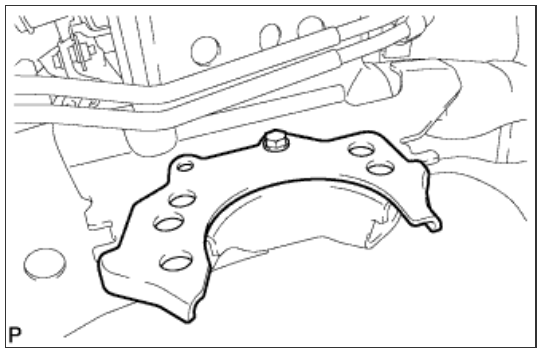


76. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.

for LHD:

for RHD:

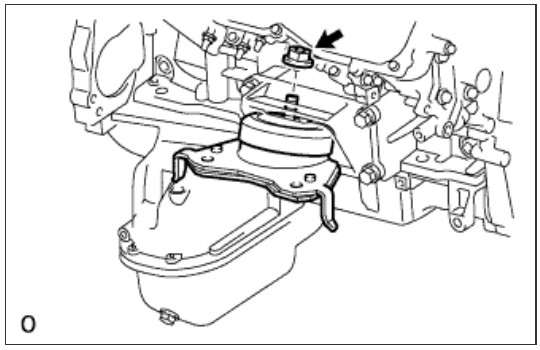


P

for Preparation Click here

1. INSTALL FRONT NO. 2 ENGINE MOUNTING BRACKET LH

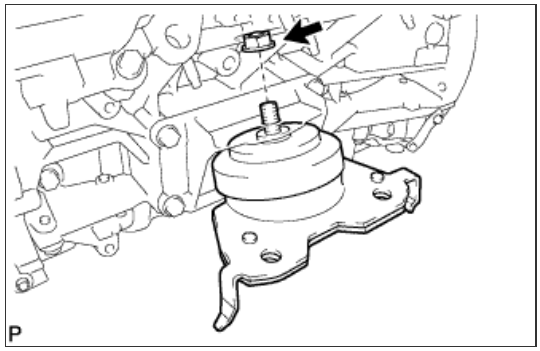
a. Install the engine mounting bracket LH with the bolt.



Torque:
32 N*m{ 326 kgf*cm , 24 ft.*lbf }

2. INSTALL FRONT ENGINE MOUNTING INSULATOR RH

a. Install the mounting insulator with the nut.

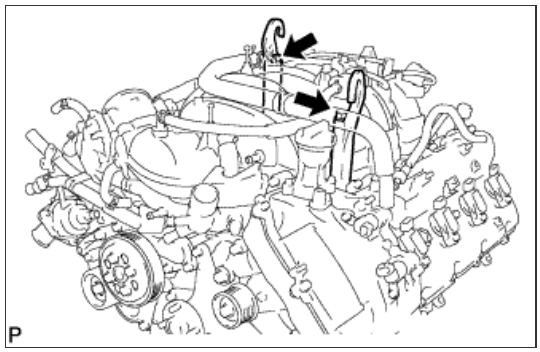


Torque:
72 N*m{ 734 kgf*cm , 53 ft.*lbf }

3. INSTALL FRONT ENGINE MOUNTING INSULATOR LH

a. Install the mounting insulator with the nut.

Torque:
72 N*m{ 734 kgf*cm , 53 ft.*lbf }



4. REMOVE ENGINE STAND

a. Install 2 engine hangers with 2 bolts as shown in the illustration.

Torque:
43 N*m{ 438 kgf*cm , 32 ft.*lbf }

HINT:

Item	Part No.
Engine hanger	12281-38150
Bolt	90119-14120

b. Attach an engine sling device and hang the engine with a chain block.

c. Remove the bolts and engine assembly from the engine stand.

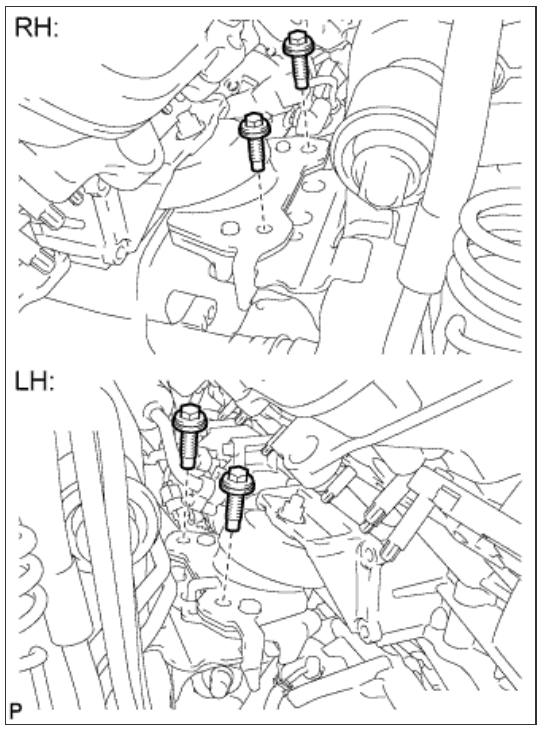
NOTICE:

- **With the exception of installing the engine assembly to an engine stand or removing the engine assembly from an engine stand, do not perform any work on the engine while it is suspended, as doing so is dangerous.**
- **Pay attention to the angle of the sling device as the engine assembly or engine hangers may be damaged or deformed if the angle is incorrect.**

5. INSTALL ENGINE ASSEMBLY

a. Slowly lower the engine assembly into the engine compartment.

NOTICE:

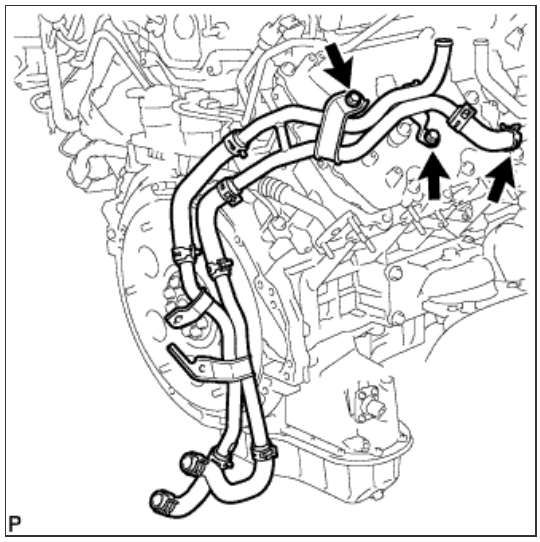


Make sure that the engine is clear of all wiring and hoses.

b. Attach the engine mounting insulators to the vehicle.

c. Install the 4 engine mounting insulator bolts.

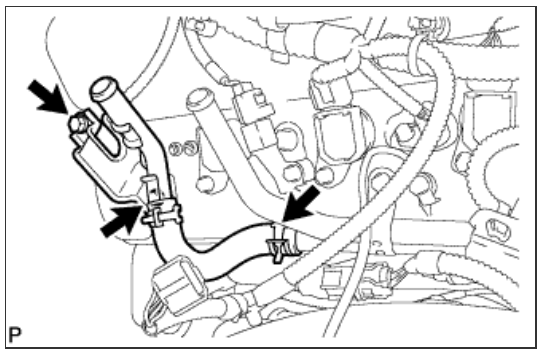
Torque:
79 N*m{ 806 kgf*cm , 58 ft.*lbf }



d. Remove the 2 bolts and 2 engine hangers.

6. INSTALL NO. 2 WATER BY-PASS PIPE (w/o Air Cooled Transmission Oil Cooler)

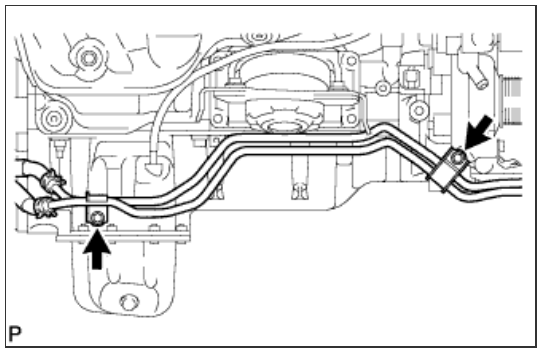
a. Connect the hose and install the water by-pass pipe with the 2 bolts.



Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

7. INSTALL WATER PIPE AND HOSE SUB-ASSEMBLY (w/ Air Cooled Transmission Oil Cooler)

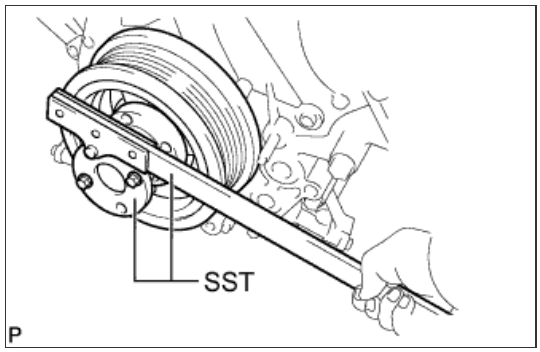
a. Connect the hose and install the water pipe and hose with the 2 bolts.



Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

8. CONNECT OIL COOLER PIPE ASSEMBLY

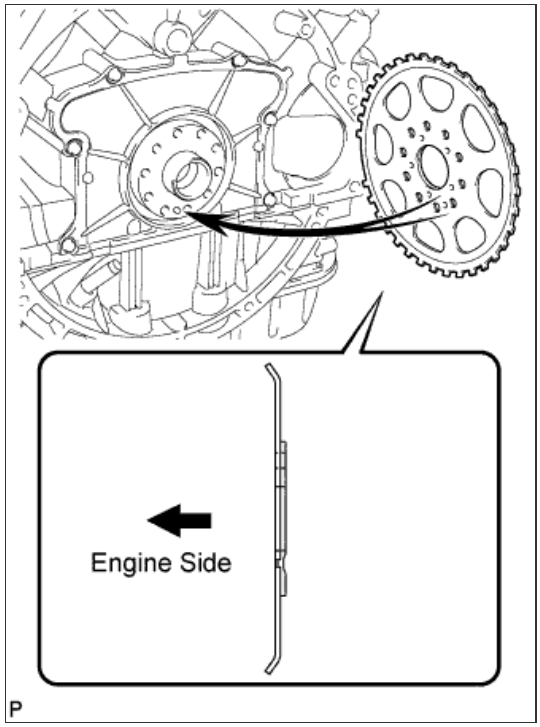
a. Connect the oil cooler pipe with the 2 bolts.



Torque:
14 N*m{ 143 kgf*cm , 10 ft.*lbf }

9. INSTALL DRIVE PLATE AND RING GEAR SUB-ASSEMBLY

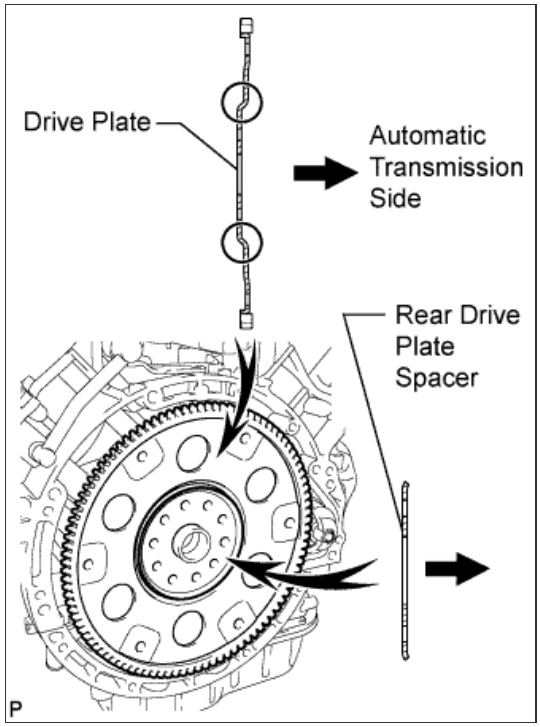
a. Using SST, hold the crankshaft.



SST
09213-70011
09330-00021

b. Install the crankshaft angle sensor rotor.

HINT:



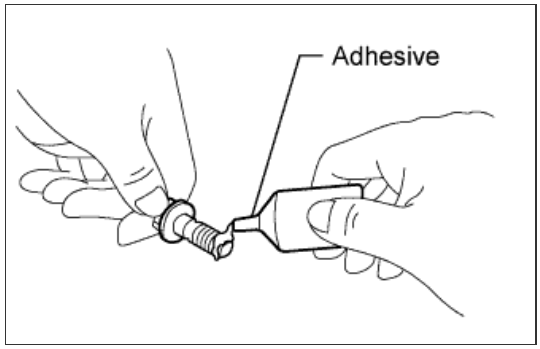
- **Align the pin hole of the crankshaft angle sensor rotor with the pin of the crankshaft.**
- **As the crankshaft angle sensor rotor is not reversible, be sure to install it so that it is facing in the direction shown in the illustration.**

c. Install the drive plate and rear drive plate spacer onto the crankshaft.

HINT:

As the rear drive plate spacer and the drive plate are not reversible, be sure to install them so that they are facing in the direction shown in the illustration.

d. Install the drive plate and ring gear and bolts.



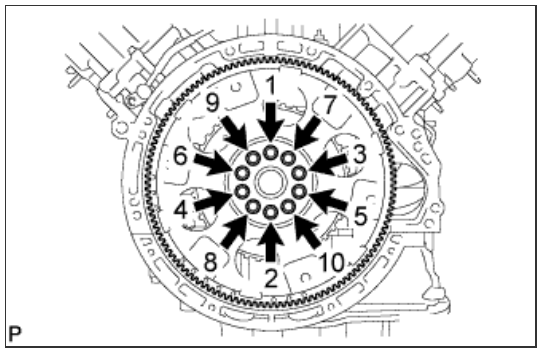
HINT:

The bolts are tightened in 2 progressive steps.

i. Clean the bolts and bolt holes.

ii. Apply adhesive to 2 or 3 threads at the end of each of the 10 bolts.

Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent

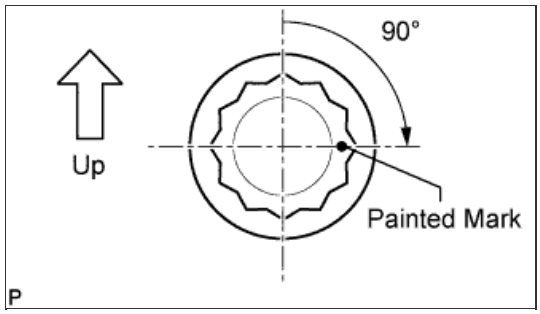


iii. Step 1:
Install and uniformly tighten 10 new bolts in the sequence shown in the illustration.

Torque:
30 N*m{ 301 kgf*cm , 22 ft.*lbf }

NOTICE:

- **Do not reuse the flywheel installation bolts.**
- **Do not strike or damage the flywheel installation bolts. Be sure to handle them carefully.**



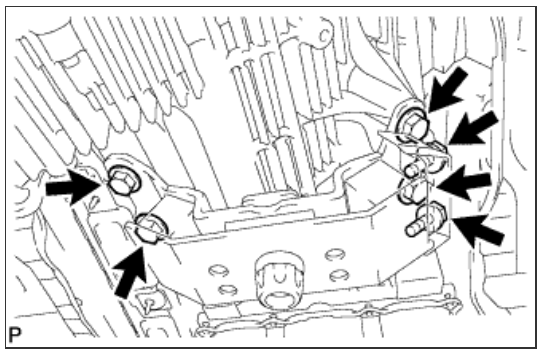
iv. Mark the upside of each flywheel installation bolt with paint.

v. Step 2:
Tighten the flywheel installation bolts 90° as shown in the illustration.

vi. Check that the painted marks are now at a 90° angle to the upside.

NOTICE:

Do not start the engine for at least an hour after installing the drive plate.



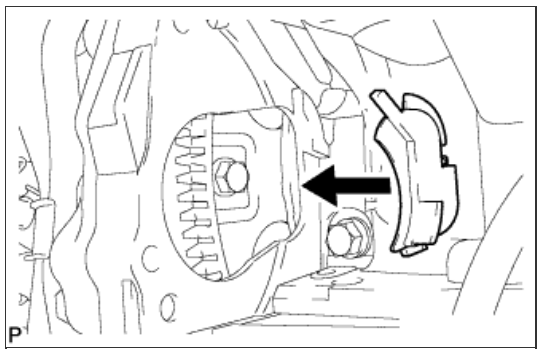
10. INSTALL REAR NO. 1 ENGINE MOUNTING INSULATOR

a. Install the rear engine mounting insulator to the transmission with the 4 bolts.

Torque:
59 N*m{ 602 kgf*cm , 44 ft.*lbf }

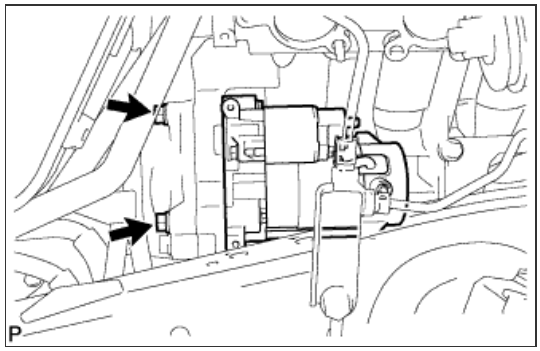
b. Install the front engine mounting insulator RH with the 2 bolts.

Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }



11. INSTALL AUTOMATIC TRANSMISSION ASSEMBLY

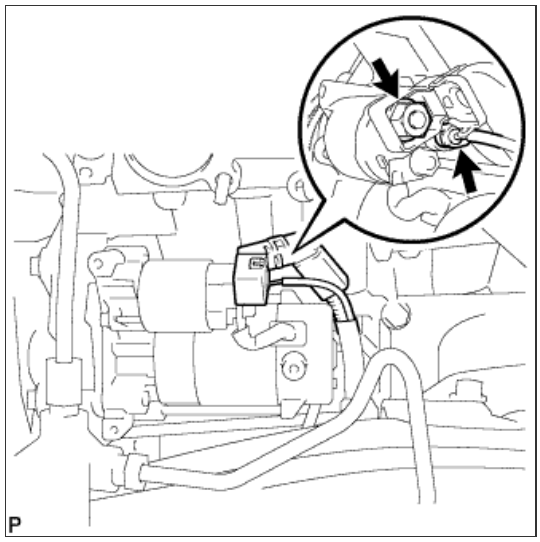
(Click here)



12. INSTALL STARTER ASSEMBLY

a. Install the flywheel housing side cover.

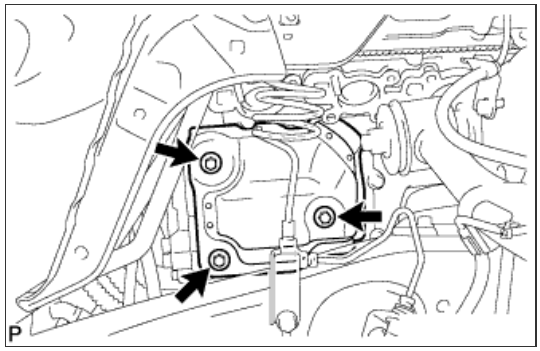
b. Install the starter with the 2 bolts.



Torque:
37 N*m{ 377 kgf*cm , 27 ft.*lbf }

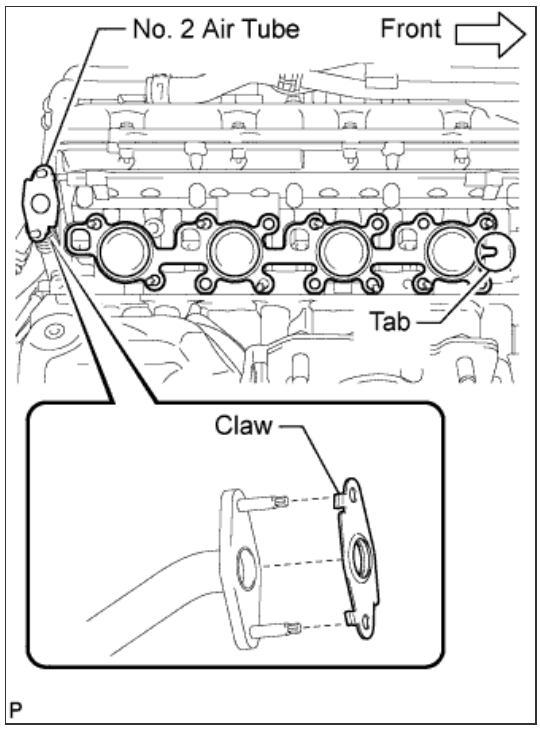
c. Install the starter wire with the nut.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }



d. Connect the starter connector.

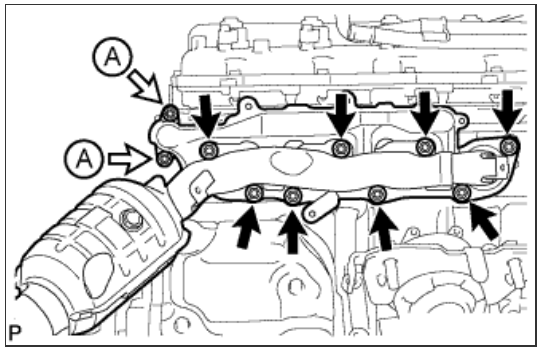
13. INSTALL STARTER COVER



a. Install the starter cover with the 3 bolts.

Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

14. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY RH

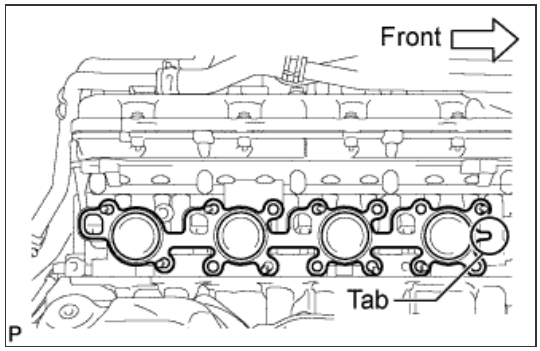


a. w/ Secondary Air Injection System:

i. Install a new gasket to the cylinder head and a new gasket to the No. 2 air tube.

HINT:

- **Install the exhaust manifold gasket with the gasket tab facing toward the front of the engine.**
- **Install the air tube gasket with the gasket claws facing the tube side.**



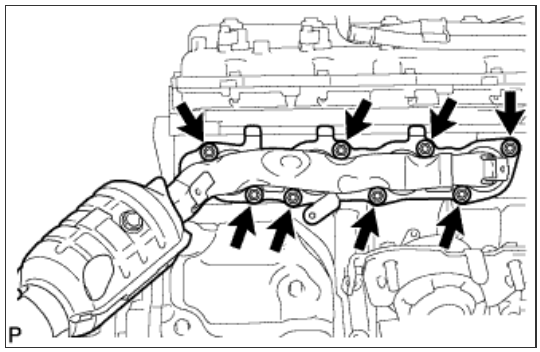
ii. Temporarily install the exhaust manifold with the 2 nuts labeled A and 8 new nuts.

iii. Uniformly tighten the nuts that are not labeled A, and then tighten the 2 nuts labeled A.

Torque:
for nut A:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }
except nut A:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }

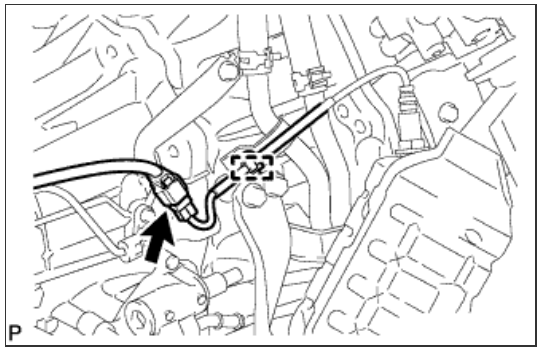
b. w/o Secondary Air Injection System:

i. Install a new gasket to the cylinder head.



HINT:

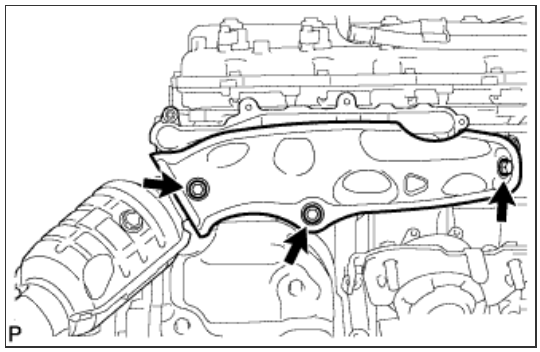
Install the exhaust manifold gasket with the gasket tab facing toward the front of the engine.



ii. Temporarily install the exhaust manifold with the 8 new nuts.

iii. Uniformly tighten the 8 nuts.

Torque:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }

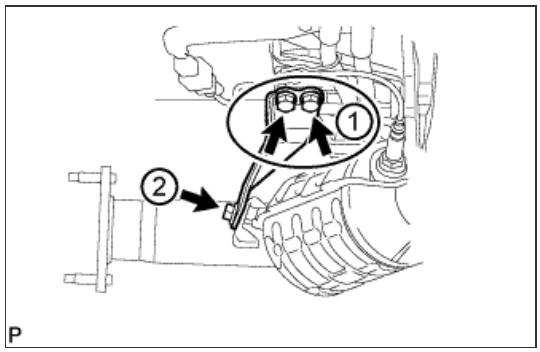


c. Attach the wire harness clamp to the bracket and connect the connector.

15. INSTALL NO. 1 EXHAUST MANIFOLD HEAT INSULATOR

a. Install the heat insulator with the 3 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

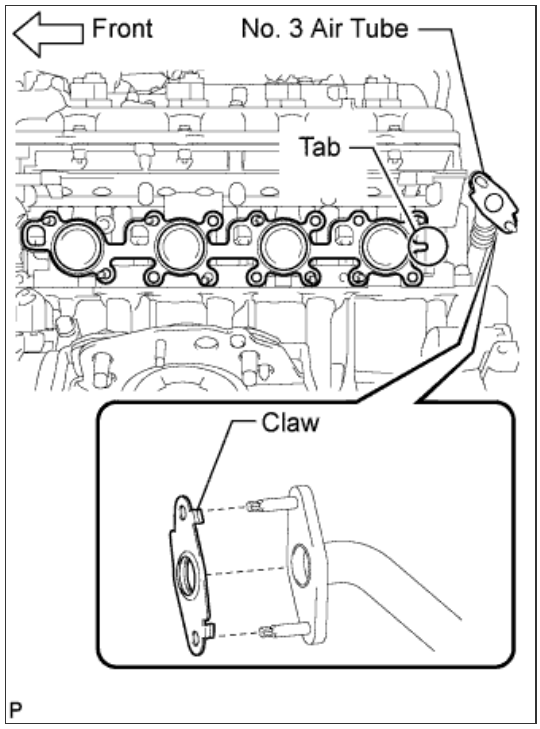


16. INSTALL NO. 1 MANIFOLD STAY

a. Temporarily install the manifold stay with the 3 bolts.

b. Tighten the 3 bolts in the order shown in the illustration.

Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

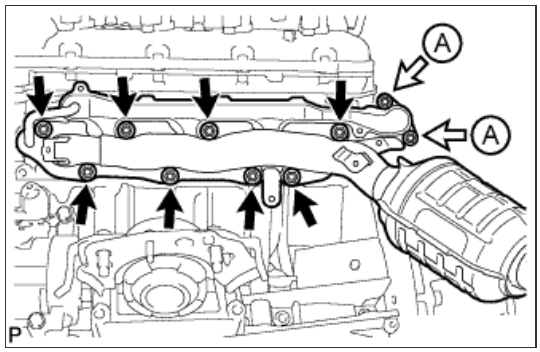


17. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY LH

a. w/ Secondary Air Injection System:

i. Install a new gasket to the cylinder head and a new gasket to the No. 3 air tube.

HINT:

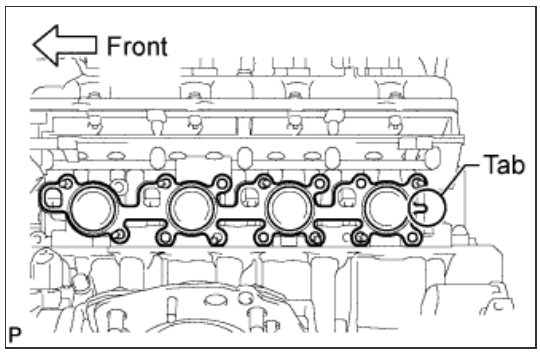


- **Install the exhaust manifold gasket with the gasket tab facing toward the rear of the engine.**
- **Install the air tube gasket with the gasket claws facing the tube side.**

ii. Temporarily install the exhaust manifold with the 2 nuts labeled A and 8 new nuts.

iii. Uniformly tighten the nuts that are not labeled A, and then tighten the 2 nuts labeled A.

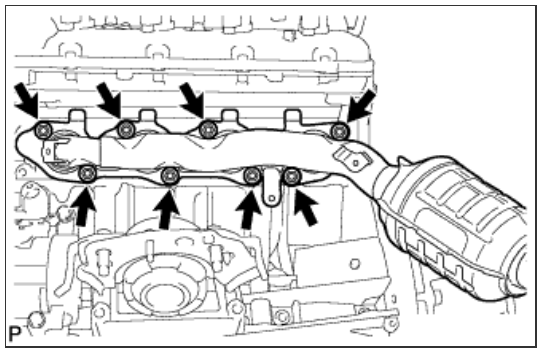
Torque:
for nut A:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }
except nut A:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }



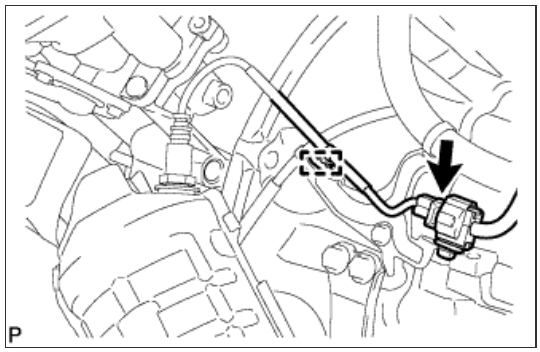
b. w/o Secondary Air Injection System:

i. Install a new gasket to the cylinder head.

HINT:



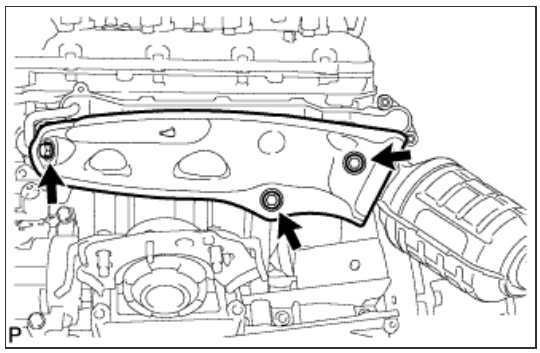
Install the exhaust manifold gasket with the gasket tab facing toward the front of the engine.



ii. Temporarily install the exhaust manifold with the 8 new nuts.

iii. Uniformly tighten the 8 nuts.

Torque:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }

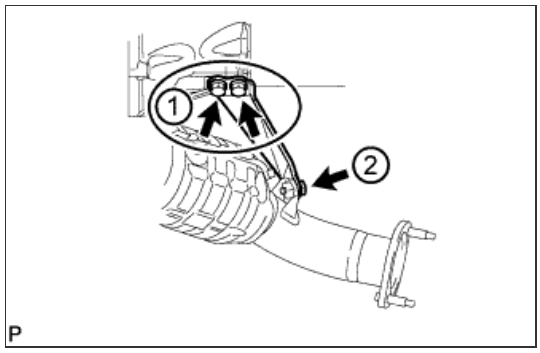


c. Attach the wire harness clamp to the bracket and connect the connector.

18. INSTALL NO. 2 EXHAUST MANIFOLD HEAT INSULATOR

a. Install the heat insulator with the 3 bolts.

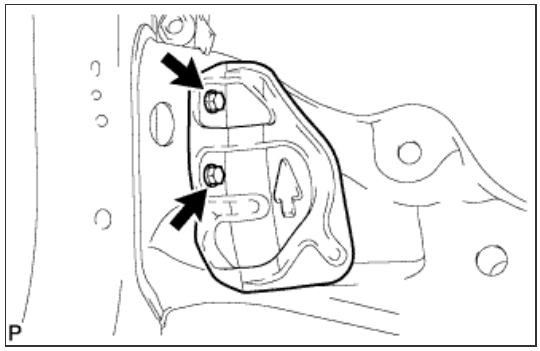
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



19. INSTALL NO. 2 MANIFOLD STAY

a. Temporarily install the manifold stay with the 3 bolts.

b. Tighten the 3 bolts in the order shown in the illustration.



Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

20. INSTALL PROPELLER SHAFT HEAT INSULATOR

a. Install the heat insulator with the 2 bolts.

Torque:
16 N*m{ 160 kgf*cm , 12 ft.*lbf }

21. INSTALL REAR PROPELLER SHAFT ASSEMBLY

(Click here)

22. INSTALL FRONT PROPELLER SHAFT ASSEMBLY

(Click here)

23. INSTALL FRONT EXHAUST PIPE ASSEMBLY

a. Install a new gasket and the front exhaust pipe to the exhaust manifold RH with 2 new nuts.

Torque:
54 N*m{ 551 kgf*cm , 40 ft.*lbf }

b. Install the wire harness clamp bracket of the oxygen sensor to the transmission with the bolt.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

c. Connect the heated oxygen sensor connector.

24. INSTALL FRONT NO. 2 EXHAUST PIPE ASSEMBLY

a. Install a new gasket and the front No. 2 exhaust pipe to the exhaust manifold LH with 2 new nuts.

Torque:
54 N*m{ 551 kgf*cm , 40 ft.*lbf }

b. Install the wire harness clamp bracket of the oxygen sensor to the transmission with the bolt.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

c. Connect the heated oxygen sensor connector.

25. INSTALL CENTER EXHAUST PIPE ASSEMBLY

a. Install 2 new gaskets to the front exhaust pipe and front No. 2 exhaust pipe.

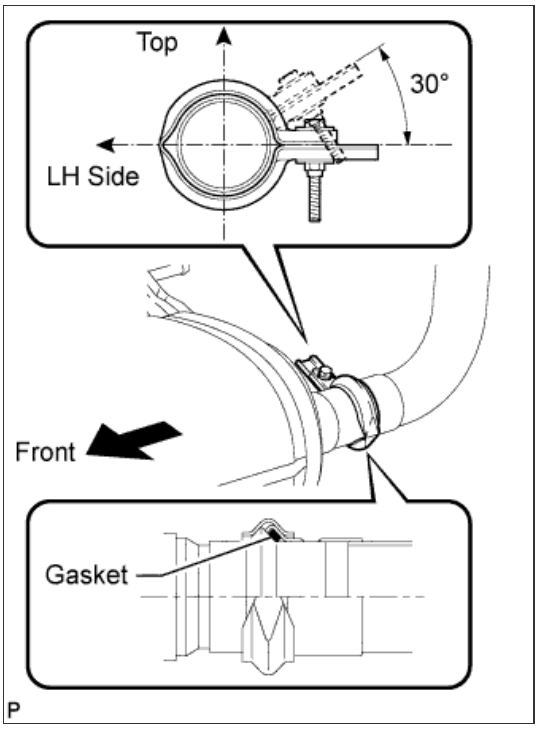
b. Install the center exhaust pipe to the 3 exhaust pipe supports, and then install the 4 bolts.

Torque:
48 N*m{ 489 kgf*cm , 35 ft.*lbf }

26. INSTALL TAILPIPE ASSEMBLY

a. Install the tailpipe to the 2 exhaust pipe supports.

b. Install a new gasket to the center exhaust pipe.



c. Connect the tailpipe to the center exhaust pipe.

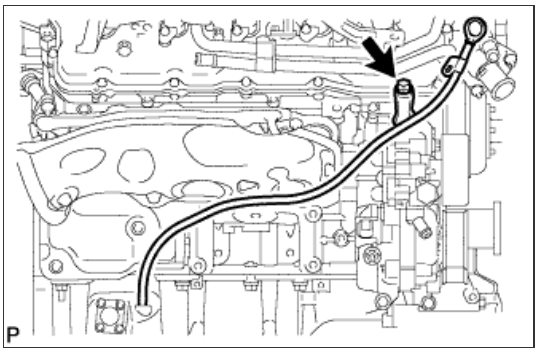
d. Attach a new clamp to the tailpipe and center exhaust pipe. Then install the bolt to the clamp.

Torque:
32 N*m{ 326 kgf*cm , 24 ft.*lbf }

HINT:

Install the clamp within the angle range shown in the illustration.

27. INSTALL ENGINE OIL LEVEL DIPSTICK GUIDE

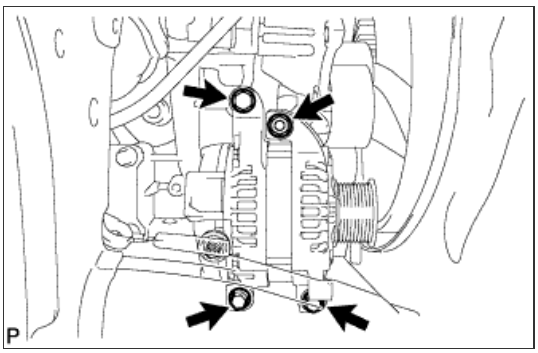


a. Apply a light coat of engine oil to a new O-ring.

b. Install the O-ring to the guide.

c. Install the dipstick guide with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



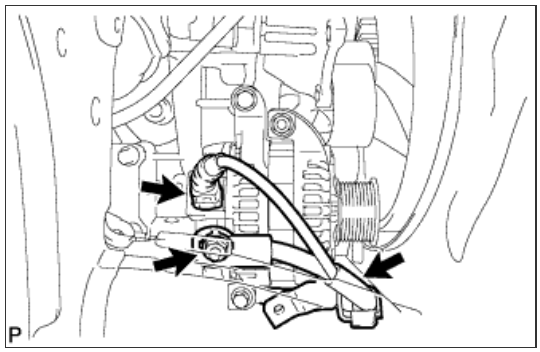
d. Install the dipstick.

28. INSTALL GENERATOR ASSEMBLY

a. Install the generator with the 3 bolts and nut.

Torque:
43 N*m{ 438 kgf*cm , 32 ft.*lbf }

b. Connect the generator connector.

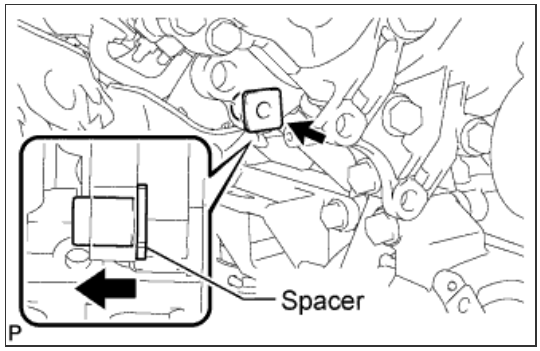


c. Connect the generator wire with the nut.

Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

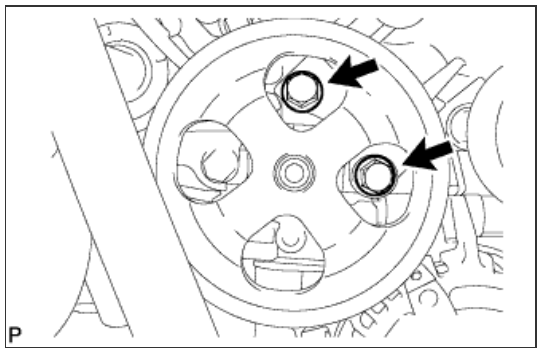
d. Install the terminal cap.

e. Install the harness bracket to the generator with the bolt.



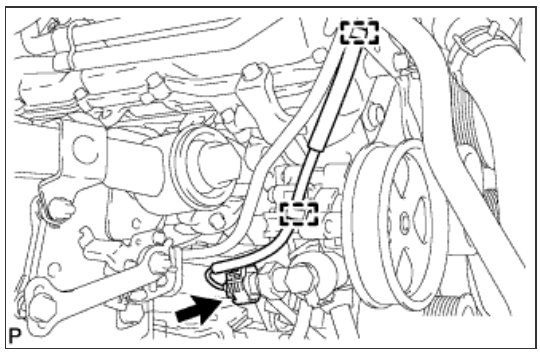
Torque:
31 N*m{ 316 kgf*cm , 23 ft.*lbf }

29. CONNECT VANE PUMP ASSEMBLY



HINT:

Before performing the following procedures, move the spacer until the vane pump can be installed.



a. Connect the vane pump to the timing chain cover with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. Connect the 2 clamps and power steering oil pressure switch connector.

30. CONNECT COOLER COMPRESSOR ASSEMBLY

a. Install the cooler compressor with the stud bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. Install the 3 bolts and nut.

Torque:
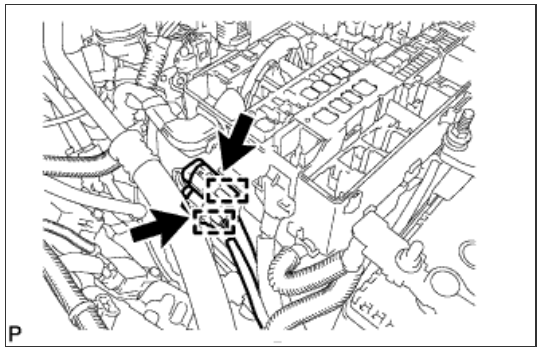
25 N*m{ 250 kgf*cm , 18 ft.*lbf }



NOTICE:

Tighten the bolts and nut in the order shown in the illustration to install the cooler compressor.

31. CONNECT WIRE HARNESS AND HOSE

a. Connect the clamp and 2 connectors.

b. Connect the 2 connectors and 2 clips to the engine room junction block.

c. Install the engine wire with the nut. Then connect the 2 clips.

Torque:
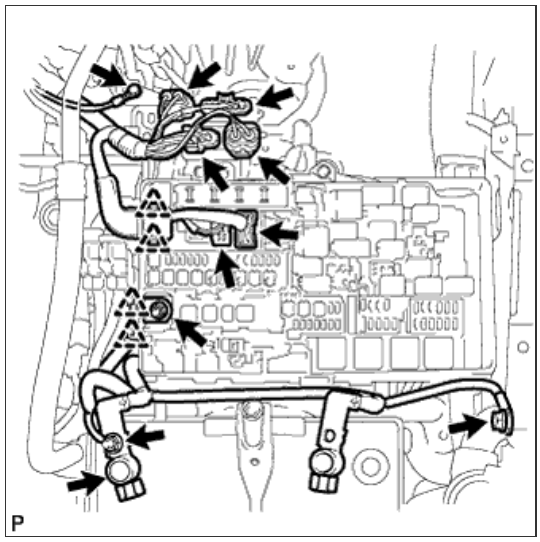
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

d. w/ Secondary Air Injection System:
Connect the 4 air injection control driver connectors.

e. Install the ground wire to the bracket with the bolt.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



f. Install the ground wire to the body with the bolt.

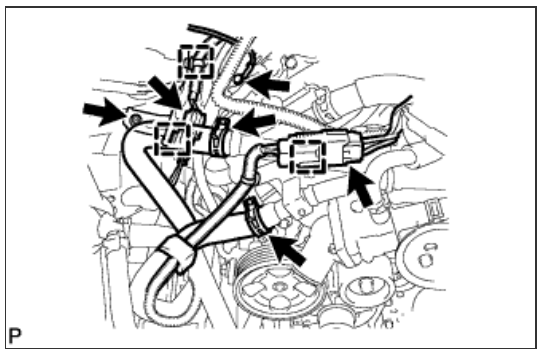
Torque:
8.4 N*m{ 86 kgf*cm , 74 in.*lbf }

g. Connect the cable to the positive (+) battery terminal.

h. Install the wire to the positive (+) battery cable with the nut.

Torque:
5.4 N*m{ 55 kgf*cm , 48 in.*lbf }

i. w/ Secondary Air Injection System:
Connect the 2 air injection system hoses.

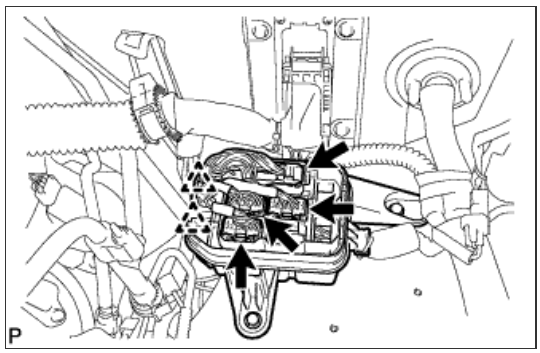


j. Install the ground wire with the bolt.

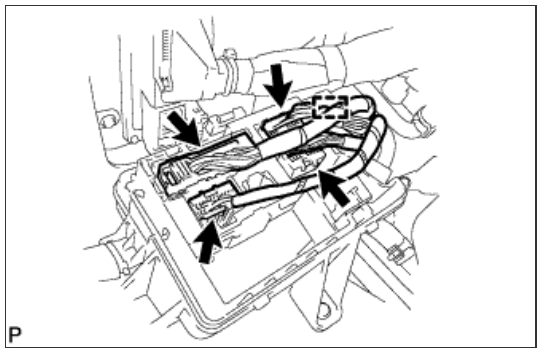
Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

k. w/ Secondary Air Injection System:
Connect the 3 clamps and 2 air pump connectors.

l. w/ Secondary Air Injection System:
Install the connector bracket with the nut.



Torque:

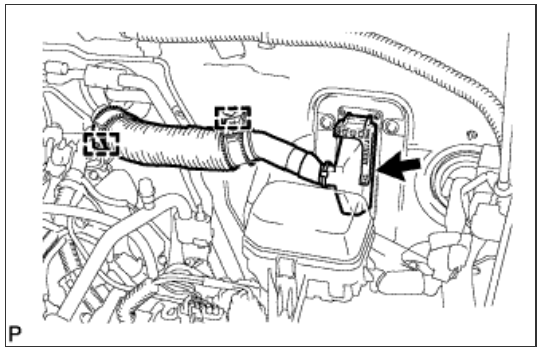


8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

m. Connect the 4 connectors.

i. for RHD:
Connect the 4 connectors and 2 clips to the connector holder block.

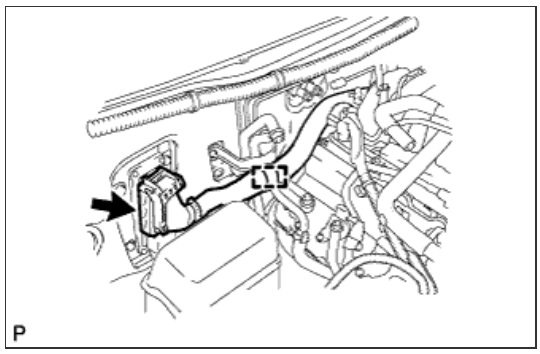
ii. for LHD:
Connect the 4 connectors and clamp to the connector holder block.



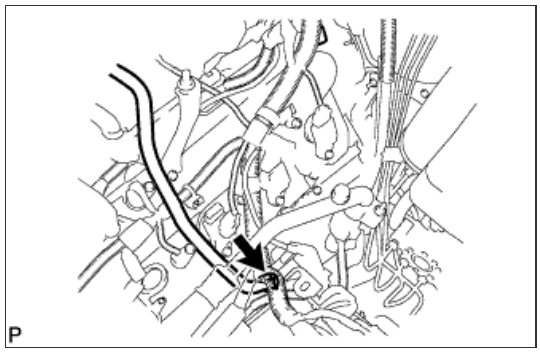
n. Connect the ECM connector.

i. for RHD:
Connect the 2 clamps and ECM connector.

HINT:



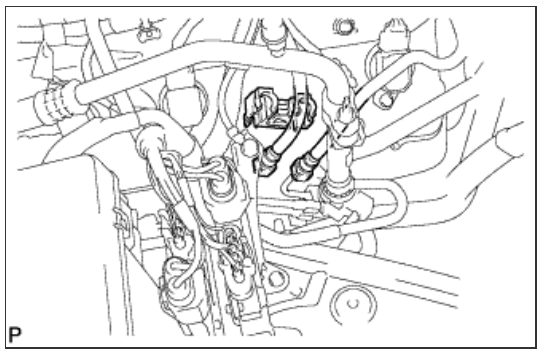
Refer to the following procedures to connect the ECM connector (Click here).



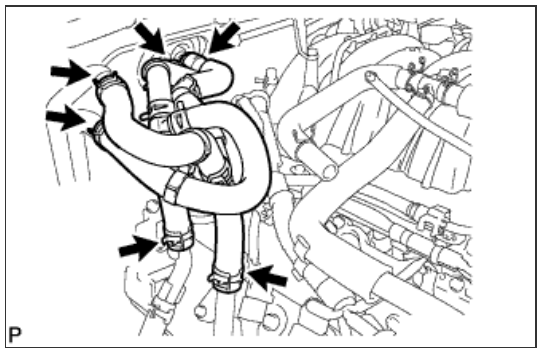
ii. for LHD:
Connect the clamp and ECM connector.

HINT:

Refer to the following procedures to connect the ECM connector (Click here).



o. Connect the purge line hose.

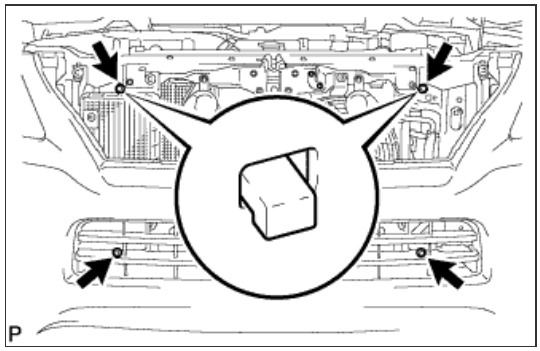


32. CONNECT FUEL MAIN AND RETURN HOSE

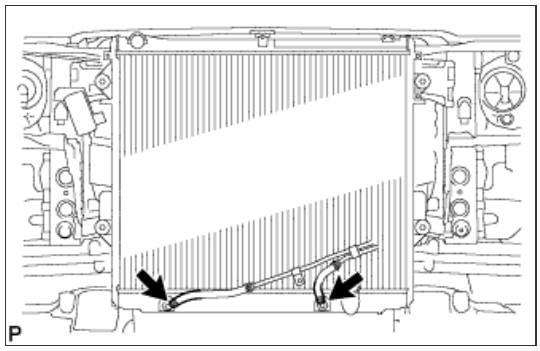
a. Connect the fuel main and return hoses (Click here).

b. Install the fuel pipe clamp.

33. INSTALL WATER HOSE SUB-ASSEMBLY



34. INSTALL RADIATOR ASSEMBLY



a. Set the radiator bracket hooks to the radiator support holes.

b. Install the radiator with the 4 bolts.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

c. Connect the 2 oil cooler hoses.

35. INSTALL FAN SHROUD

a. Install the fan pulley.

b. Place the shroud together with the coupling fan between the radiator and engine.

NOTICE:

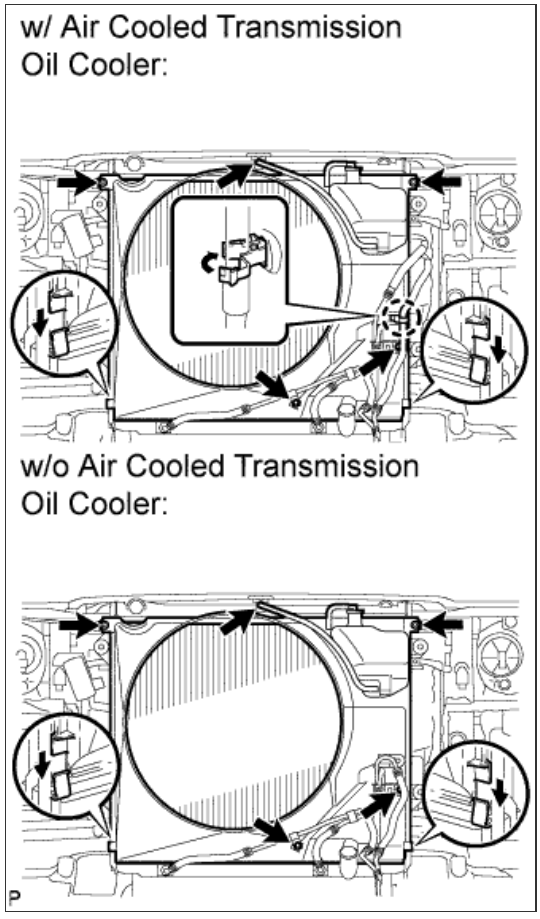
Be careful not to damage the radiator core.

c. Temporarily install the fluid coupling fan to the fluid coupling bracket with the 4 nuts. Tighten the nuts as much as possible by hand.

d. Attach the claws of the shroud to the radiator as shown in the illustration.

e. Install the shroud with the 2 bolts.

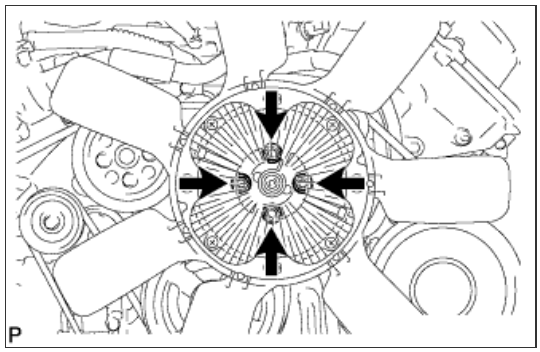
Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



f. Connect the oil cooler tube to the fan shroud with the 2 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

g. w/ Air Cooled Transmission Oil Cooler:
Pass the hose through the flexible hose clamp and close the clamp as shown in the illustration.

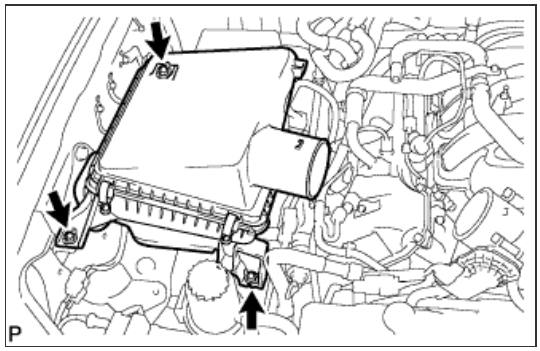


h. Connect the reservoir hose to the upper radiator tank.

i. Install the fan and generator V belt (Click here).

j. Tighten the 4 nuts of the fluid coupling fan.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



36. INSTALL NO. 2 RADIATOR HOSE

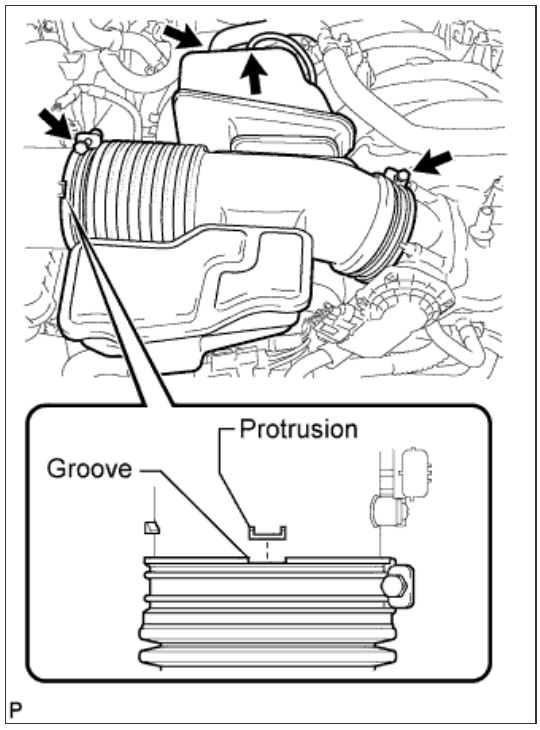
37. INSTALL NO. 1 RADIATOR HOSE

38. INSTALL AIR CLEANER ASSEMBLY

a. Install the air cleaner with the 3 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

39. INSTALL AIR CLEANER HOSE ASSEMBLY



a. Install the air cleaner hose so that the protrusion of the air cleaner cap aligns with the groove of the hose as shown in the illustration.

b. Tighten the 2 clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

c. Connect the vacuum hose.

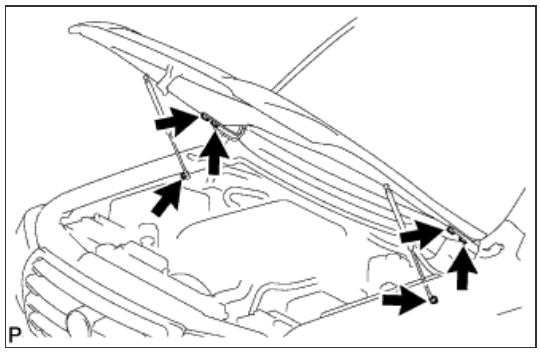
d. Connect the No. 2 ventilation hose.

40. INSTALL HOOD SUB-ASSEMBLY

a. Install the hood with the 4 bolts.

Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }

b. Connect the 2 hood supports with the 2 hood support bolts.



Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

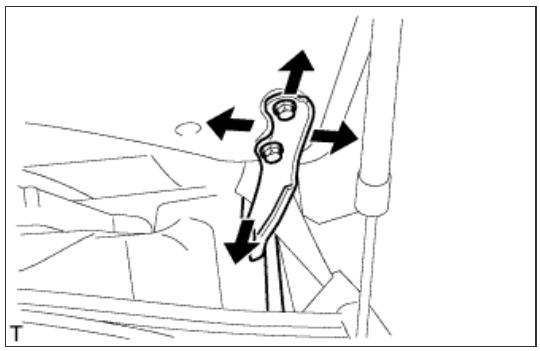
CAUTION:

Install the hood support while supporting the hood by hand.

NOTICE:

Check that the hood support is engaged in the ball joint and that it cannot be pulled out.

41. ADJUST HOOD SUB-ASSEMBLY

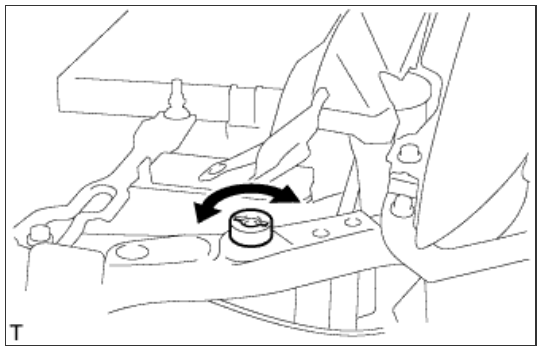


a. Adjust the hood position.

i. Loosen the 4 hinge bolts of the hood.

ii. Move the hood and adjust the clearance between the hood and front fender.

iii. Tighten the 4 hinge bolts of the hood after the adjustment.



Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }

iv. Adjust the cushion rubber so that the height of the hood and fender are aligned.

HINT:

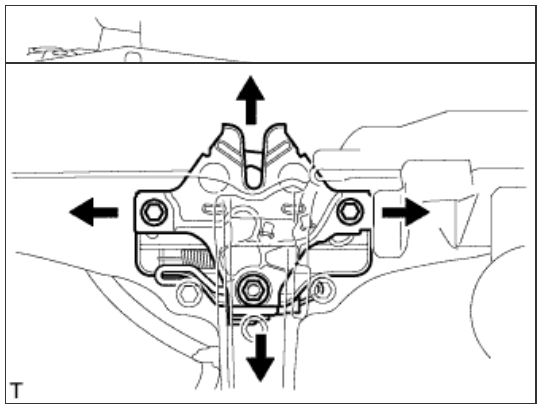
Raise or lower the front end of the hood by turning the cushion rubber.

b. Adjust the hood lock.

i. Using a screwdriver, remove the hood lock nut cap as shown in the illustration.

HINT:

Tape the screwdriver tip before use.

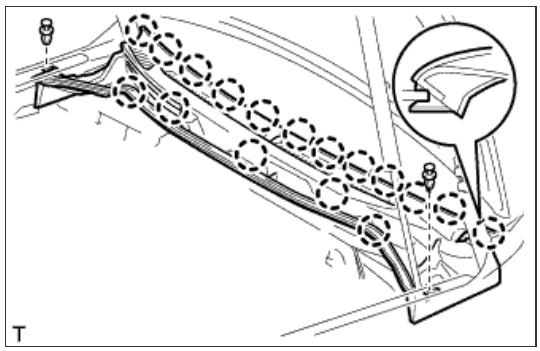


ii. Loosen the 2 bolts and hood lock nut.

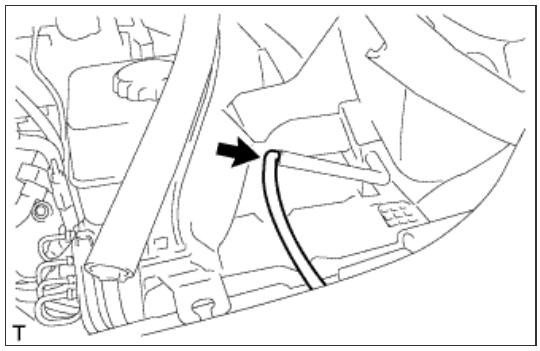
iii. Adjust the hood lock position so that the striker can enter it smoothly.

iv. Tighten the bolts and nut after the adjustment.

Torque:
5.5 N*m{ 56 kgf*cm , 49 in.*lbf }



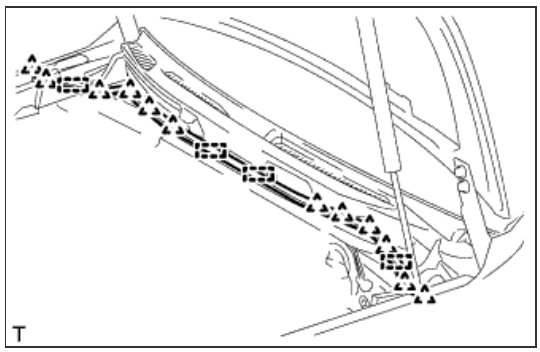
v. Install a new cap.



42. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

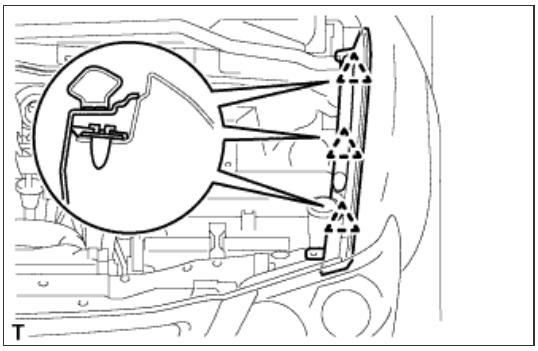
a. Push in the ventilator louver to attach the 17 claws and install the ventilator louver.

b. Install the 2 clips.



c. Connect the washer hose.

43. INSTALL HOOD TO COWL TOP SEAL



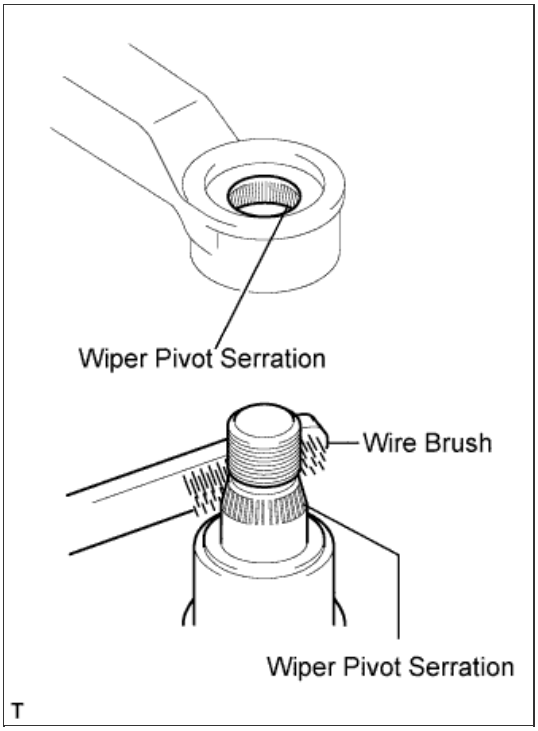
a. Attach the 12 clips and 4 clamps to install the hood to cowl top seal.

44. INSTALL FRONT FENDER MAIN SEAL LH

a. Attach the 3 clips to install the fender main seal

a. Attach the 3 clips to install the fender main seal.

45. INSTALL FRONT FENDER MAIN SEAL RH



HINT:

Use the same procedures described for the LH side.

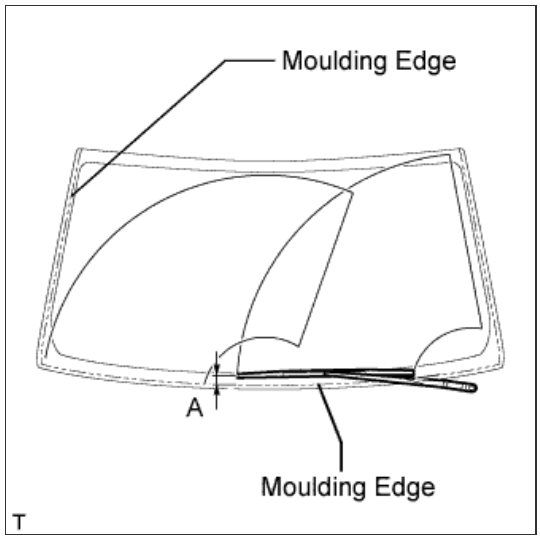
46. INSTALL FRONT WIPER ARM LH

a. Stop the wiper motor at the automatic stop position.

b. Clean the wiper pivot serrations with a wire brush.

c. Install the wiper arm and blade with the nut. Make sure that the wiper arm and blade come to the position shown in the illustration.

Standard:

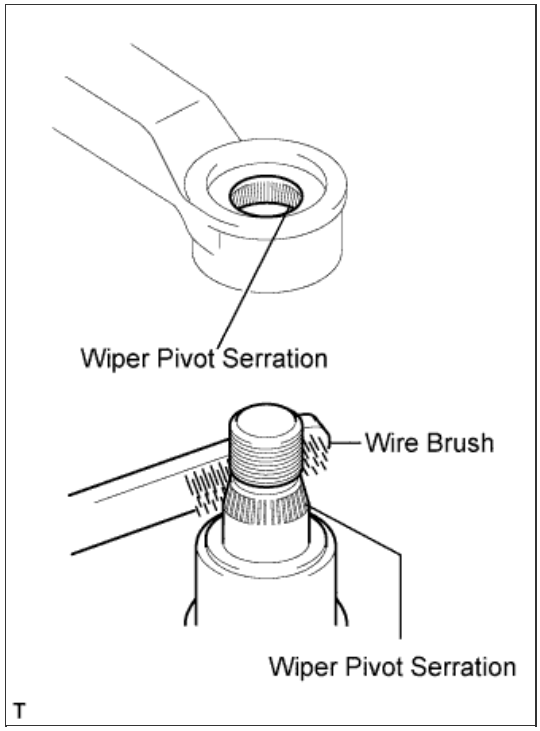


Position	Specified Condition
A	16.8 to 36.8 mm (0.661 to 1.45 in.)

Torque:

25 N*m{ 255 kgf*cm , 18 ft.*lbf }

HINT:



Hold down the wiper arm hinge with your hand while tightening the nut.

47. INSTALL FRONT WIPER ARM RH

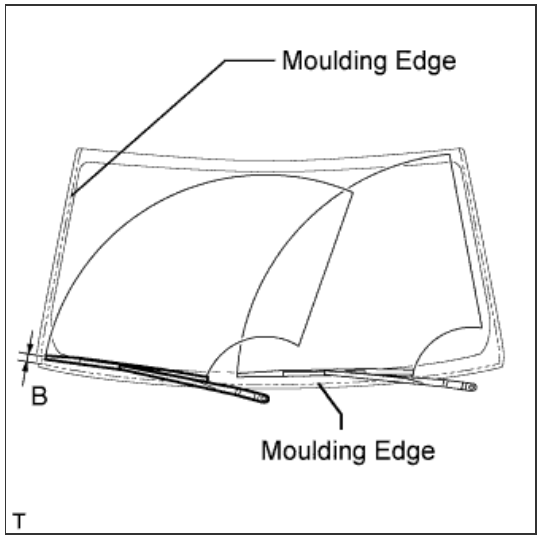
a. Stop the wiper motor at the automatic stop position.

b. Clean the wiper pivot serrations with a wire brush.

c. Install the wiper arm and blade with the nut. Make sure that the wiper arm and blade come to the position shown in the illustration.

Standard:

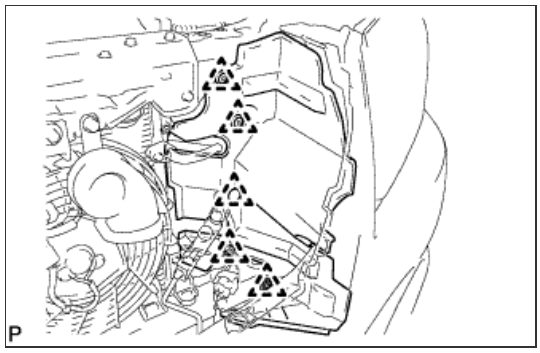
Position	Specified Condition
B	20.0 to 40.0 mm (0.787 to 1.57 in.)



Torque:

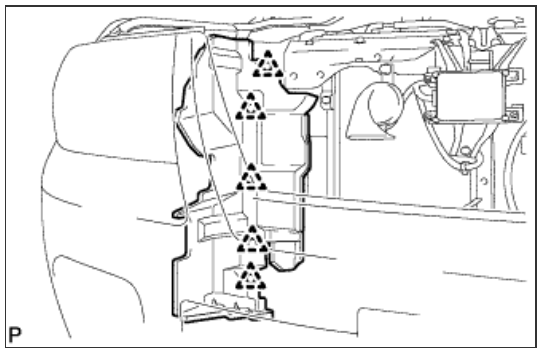
25 N*m{ 255 kgf*cm , 18 ft.*lbf }

HINT:



Hold down the wiper arm hinge with your hand while tightening the nut.

d. Operate the front wipers while spraying washer fluid on the windshield glass. Make sure that the front wipers function properly and there is no interference with the vehicle body.

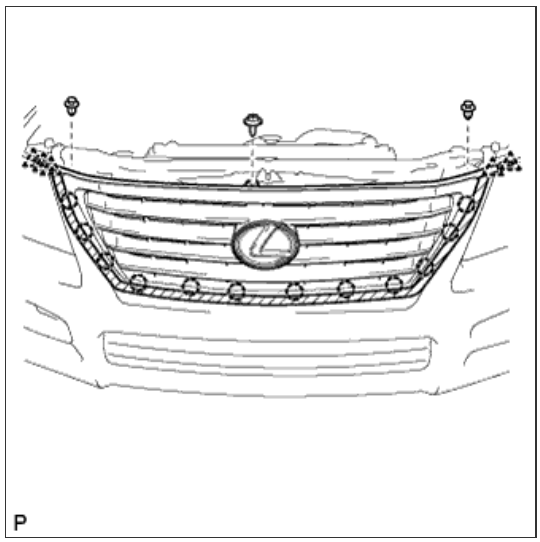


48. INSTALL RADIATOR SIDE DEFLECTOR LH

a. Install the side deflector with the 5 clips.

49. INSTALL RADIATOR SIDE DEFLECTOR RH (w/o Air Cooled Transmission Oil Cooler)

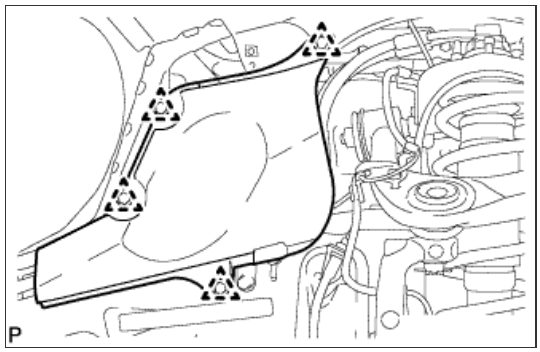
a. Install the side deflector with the 5 clips.



50. INSTALL RADIATOR GRILLE

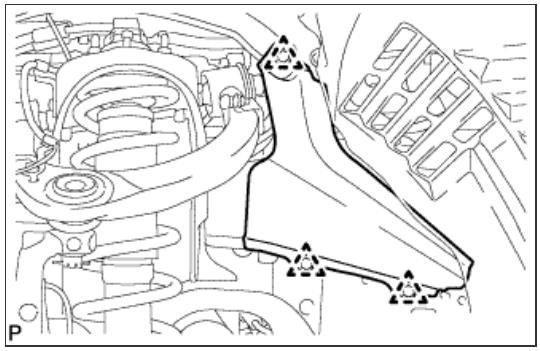
a. w/ Wide View Front Monitor System:
Connect the connector.

b. Attach the 12 claws to install the radiator grille.



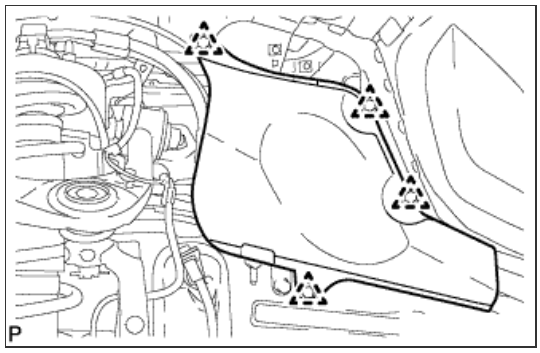
c. Attach the 5 clips to install the detached part of the upper radiator seal.

d. Install the screw and 2 clips.



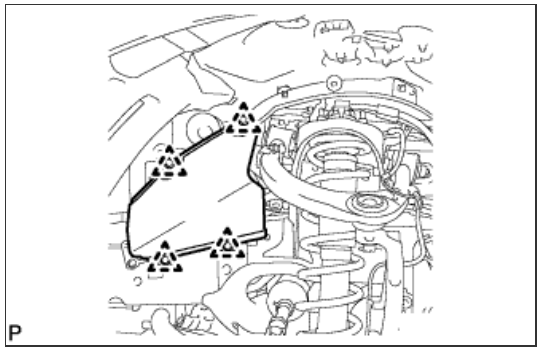
51. INSTALL FRONT FENDER APRON SEAL REAR RH

a. Install the fender apron seal with the 4 clips.



52. INSTALL FRONT FENDER APRON SEAL FRONT RH

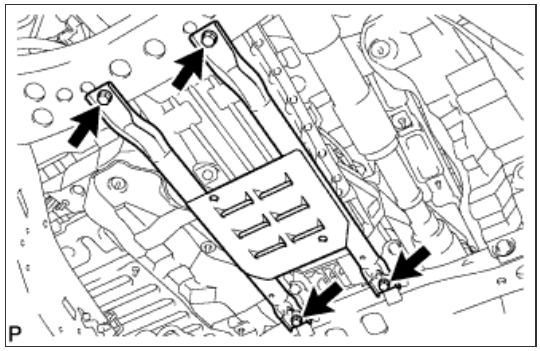
a. Install the fender apron seal with the 3 clips.



53. INSTALL FRONT FENDER APRON SEAL REAR LH

a. Install the fender apron seal with the 4 clips.

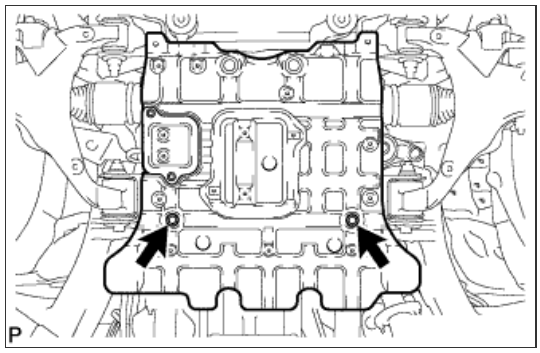
54. INSTALL FRONT FENDER APRON SEAL FRONT LH



a. Install the fender apron seal with the 4 clips.

55. INSTALL OIL PAN PROTECTOR ASSEMBLY

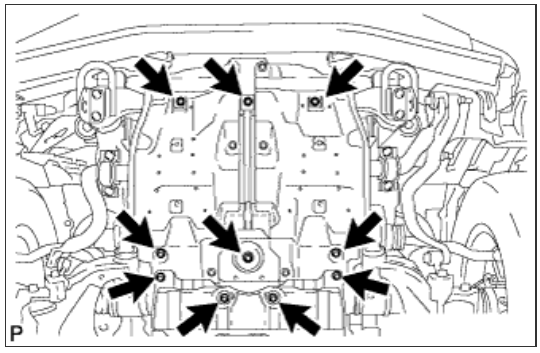
a. Install the oil pan protector with the 4 bolts.



Torque:
63 N*m{ 642 kgf*cm , 46 ft.*lbf }

56. INSTALL NO. 2 ENGINE UNDER COVER

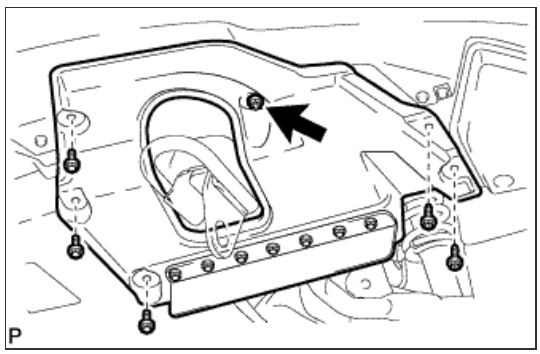
a. Install the No. 2 engine under cover with the 2 bolts.



Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

57. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.

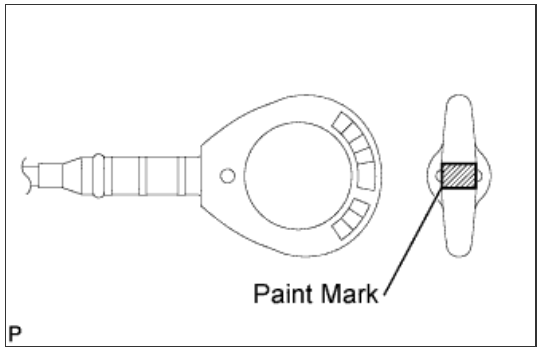


Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

58. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the 3 bolts and 2 screws.



59. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

60. ADD ENGINE OIL

a. Add fresh oil and install the oil filler cap.

Standard Oil Grade:

Oil Grade	Oil Viscosity (SAE)
API grade SL "Energy-Conserving", SM "Energy-Conserving" or ILSAC multigrade engine oil API grade SL or SM multigrade engine oil	0W-20 5W-20 5W-30 10W-30 15W-40 20W-50

Standard Oil Capacity:

Paint Mark	Item	Specified Condition
Blue	Drain and refill with oil filter change	7.0 liters (7.4 US qts, 6.2 Imp. qts)
	Drain and refill without oil filter change	6.6 liters (7.0 US qts, 5.8 Imp. qts)
	Dry fill	8.4 liters (8.9 US qts, 7.4 Imp. qts)
Green	Drain and refill with oil filter change	7.5 liters (7.9 US qts, 6.6 Imp. qts)
	Drain and refill without oil filter change	7.1 liters (7.5 US qts, 6.2 Imp. qts)
	Dry fill	9.3 liters (9.8 US qts, 8.2 Imp. qts)

61. ADD ENGINE COOLANT

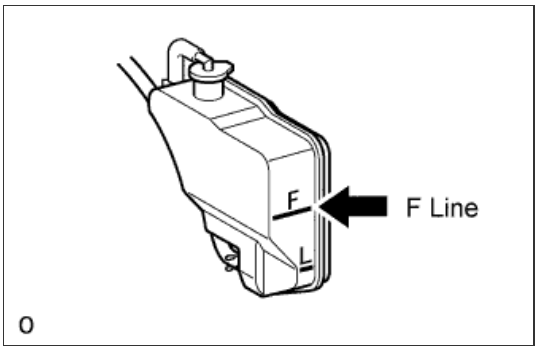
a. Add engine coolant.

Standard Capacity:

Item	Specified Condition
with transmission oil cooler	16.7 liters (17.6 US qts, 14.7 Imp. qts)
without transmission oil cooler	16.2 liters (17.1 US qts, 14.3 Imp. qts)

NOTICE:

Do not substitute plain water for engine coolant.



HINT:

TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the reservoir cap.

d. Press the No. 1 and No. 2 radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Start the engine and warm it up until the thermostat opens.

NOTICE:

Switch off the A/C.

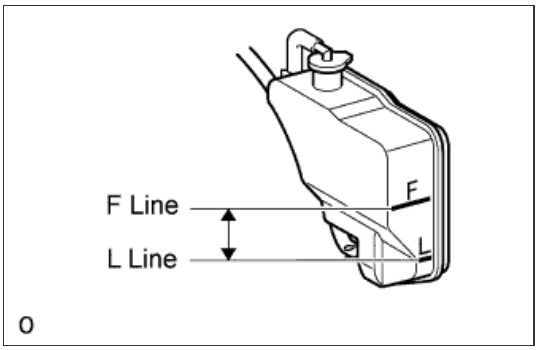
g. Maintain the engine speed at 2000 to 2500 rpm.

NOTICE:

- **Make sure that the radiator reservoir still has some coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**
- **Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the F line.**
- **Run the engine at 2000 rpm until the coolant level has stabilized.**

h. Press the No. 1 and No. 2 radiator hoses several times by hand to bleed air.

CAUTION:



- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the fan.**

i. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

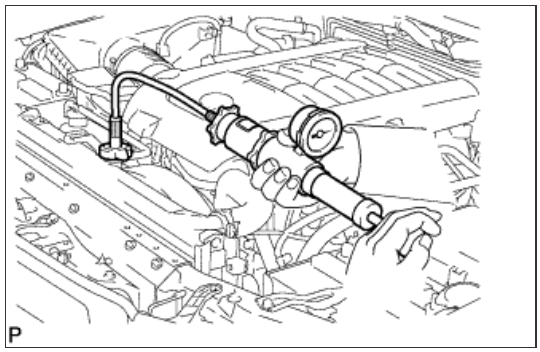
j. Check that the coolant level is between the F and L lines.
If the coolant level is below the L line, repeat all of the procedures above.
If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.

62. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable from the cable is reconnected (Click here).

63. INSPECT FOR OIL LEAK



a. Start the engine. Make sure that there are no oil leaks from the area that was worked on.

64. INSPECT FOR COOLANT LEAK

a. Fill the radiator with coolant and attach a radiator cap tester.

b. Warm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.

65. INSPECT FOR EXHAUST GAS LEAK

66. INSPECT FOR FUEL LEAK

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG) and intelligent tester on.

NOTICE:

Do not start the engine.

c. Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Fuel Pump Speed Control.

d. Check that there are no fuel leaks after doing maintenance anywhere on the fuel system.

67. INSPECT SHIFT LEVER POSITION

a. When moving the shift lever from P to R with the engine switch on (IG) and the brake pedal depressed, make sure that it moves smoothly and correctly into position.

b. Check that the shift lever does not stop when moving the shift lever from R to P, and check that the shift lever does not stick when moving the shift lever from D to S.

c. Start the engine and make sure that the vehicle moves forward after moving the shift lever from N to D and moves rearward after moving the shift lever to R.
If the operation cannot be performed as specified, inspect the park/neutral position switch assembly and check the shift lever assembly installation condition.

68. INSPECT IGNITION TIMING

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. Remove the engine room side cover LH.

c. Remove the engine room side cover RH.

d. Remove the upper radiator support seal.

e. Remove the V-bank cover.

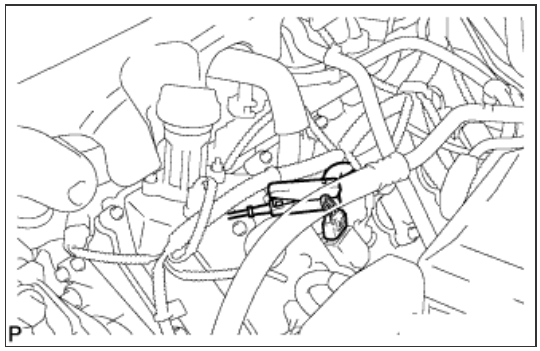
f. When using the intelligent tester:

i. Connect the intelligent tester to the DLC3.

ii. Start the engine and idle it.

iii. Turn the intelligent tester ON.

iv. Enter the following menus: Powertrain / Engine and ECT / Data List / Primary / IGN Advance.



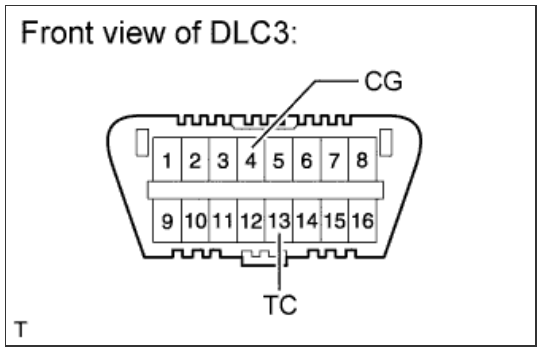
HINT:

Refer to the intelligent tester operator's manual for further details.

Standard ignition timing:
8 to 12° BTDC @ idle (transmission in neutral and A/C switch off)

v. Disconnect the intelligent tester from the DLC3.

g. When not using the intelligent tester:

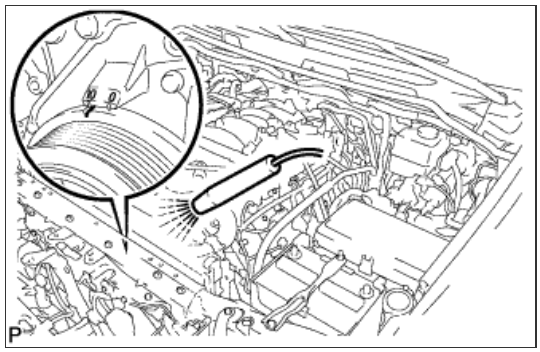


i. Connect the tester probe of a timing light to the wire of the ignition coil connector for the No. 1 cylinder.

NOTICE:

Use a timing light that detects primary signals.

ii. Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.



SST
09843-18040

NOTICE:

- **Confirm the terminal numbers before connecting them. Connecting the wrong terminals can damage the engine.**
- **Switch off all accessories and the A/C before connecting the terminals.**

iii. Using the timing light, check the ignition timing.

Standard ignition timing:
8 to 12° BTDC @ idle (transmission in neutral and A/C switch off)

iv. Remove SST from the DLC3.

v. Check the ignition timing.

Standard ignition timing:
7 to 24° BTDC @ idle (transmission in neutral and A/C switch off)

vi. Disconnect the timing light from the engine.

h. Install the V-bank cover.

i. Install the upper radiator support seal.

j. Install the engine room side cover RH.

k. Install the engine room side cover LH.

69. INSPECT ENGINE IDLE SPEED

a. Warm up and stop the engine.

i. Allow the engine to warm up to a normal operating temperature.

b. When using the intelligent tester:

i. Connect the intelligent tester to the DLC3.

NOTICE:

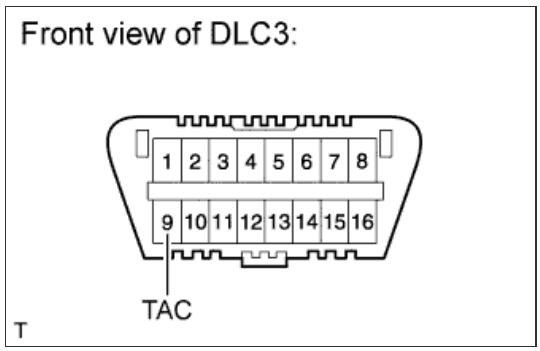
Switch off all accessories and the A/C before connecting the intelligent tester.

ii. Race the engine at 2500 rpm for approximately 90 seconds.

iii. Turn the intelligent tester ON.

iv. Enter the following menus: Powertrain / Engine and ECT / Data List / Primary / Engine Speed.

Standard idle speed:
650 to 750 rpm (transmission in neutral and A/C switch off)



HINT:

Refer to the intelligent tester operator's manual for further details.

If the idle speed is not as specified, check the air intake system.

v. Disconnect the intelligent tester from the DLC3.

c. When not using the intelligent tester:

i. Using SST, connect the tachometer probe to terminal 9 (TAC) of the DLC3.

SST
09843-18030

NOTICE:

- **Confirm the terminal number before connecting the probe. Connecting the probe to the wrong terminal can damage the engine.**
- **Switch off all accessories and the A/C before connecting the probe.**

ii. Race the engine at 2500 rpm for approximately 90 seconds.

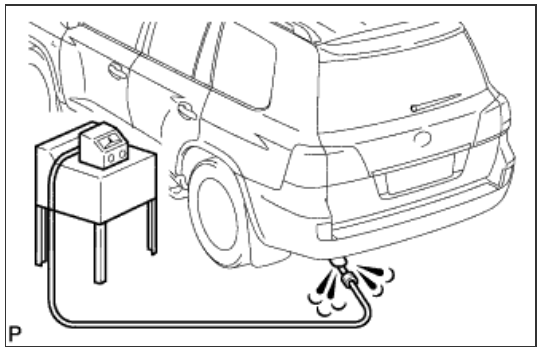
iii. Check the idle speed.

Standard idle speed:
650 to 750 rpm (transmission in neutral and A/C switch off)

If the idle speed is not as specified, check the air intake system.

iv. Disconnect the tachometer probe from the DLC3.

70. INSPECT CO/HC



HINT:

This check is used only to determine whether or not the idle CO/HC complies with regulations.

a. Start the engine.

b. Keep the engine speed at 2500 rpm for approximately 180 seconds.

c. Insert the CO/HC meter testing probe at least 40 cm (1.31 ft.) into the tailpipe during idling.

d. Immediately check CO/HC concentration at idle and/or 2500 rpm.

HINT:

When performing the 2 mode (2500 rpm and idle) test, follow the measurement order prescribed by the applicable local regulations.

e. If the CO/HC concentration does not comply with the regulations, troubleshoot in the order given below.

i. Check the A/F sensor operation (Click here) and heated oxygen sensor operation (Click here).

ii. See the table below for possible causes, and then inspect and correct the applicable causes if necessary.

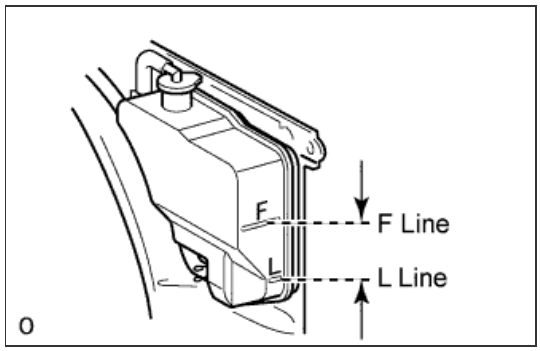
CO	HC	Symptom	Cause
Normal	High	Rough idle	1. Faulty ignitions: • Incorrect timing • Plugs (contaminated, shorted or gaps are defective) 2. Incorrect valve clearance 3. Leaky intake and exhaust valves 4. Leaky cylinder
Low	High	Rough idle (Fluctuating HC reading)	1. Vacuum leaks: • PCV hose • Intake manifold • Throttle body 2. Lean mixture causing misfire
High	High	Rough idle (Black smoke from exhaust)	1. Restricted air filter 2. Faulty SFI system: • Faulty pressure regulator • Defective ECT sensor • Faulty ECM • Faulty injectors • Faulty throttle position sensor • Faulty MAF meter

71. INSPECT ENGINE OIL LEVEL

a. Warm up the engine, stop the engine and wait 5 minutes. The oil level should be between the dipstick low level mark and full level mark. If low, check for leakage and add oil up to the full level mark.

NOTICE:

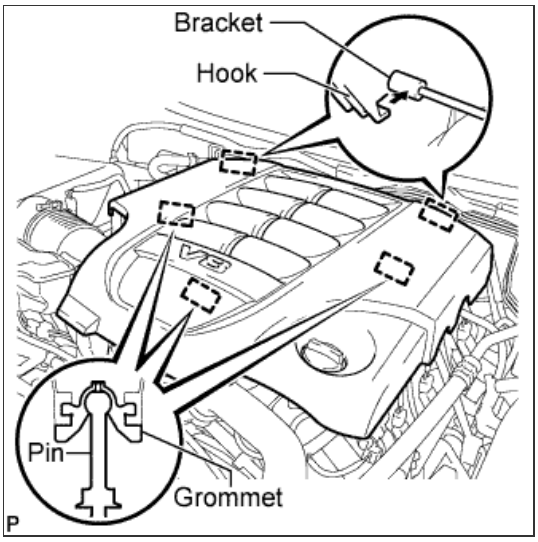
Do not fill engine oil above the full level mark.



72. INSPECT ENGINE COOLANT LEVEL

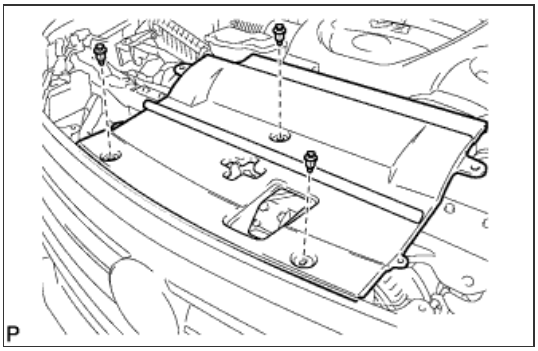
a. Check that the engine coolant level is between the L and F lines when the engine is cold.
If the engine coolant is below the L line, check for leaks and add "TOYOTA Super Long Life Coolant" or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite and non-borate coolant with long-life hybrid organic acid technology to the F line.

NOTICE:



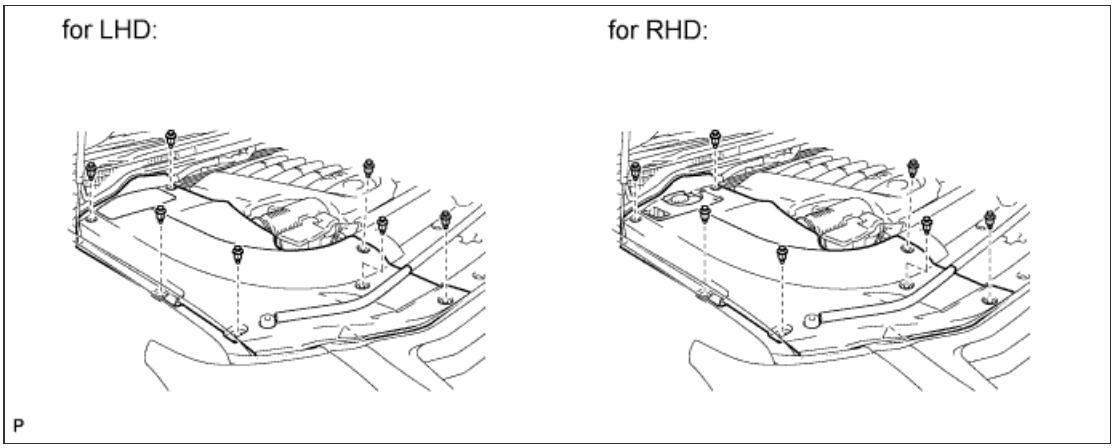
Do not substitute plain water for engine coolant.

b. Remove the radiator cap, and check that the coolant level is up to the radiator filler hole.



73. INSTALL V-BANK COVER SUB-ASSEMBLY

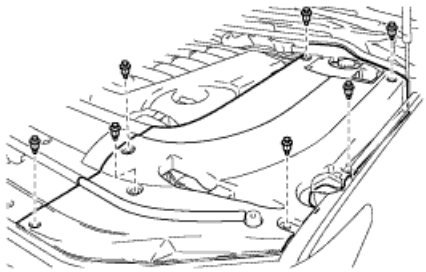
a. Attach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.



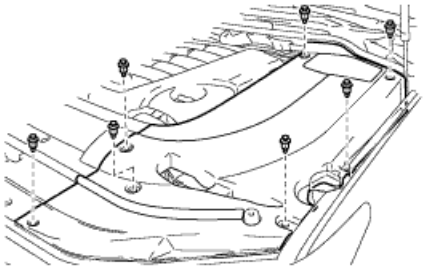
74. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the upper radiator support seal with the 3 clips.

75. INSTALL ENGINE ROOM SIDE COVER RH



a. Install the engine room side cover with the 7 clips.



76. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.

for Preparation Click here

1. REMOVE ENGINE WIRE

a. Engine LH Side:

i. Disconnect the 2 camshaft timing control valve connectors.

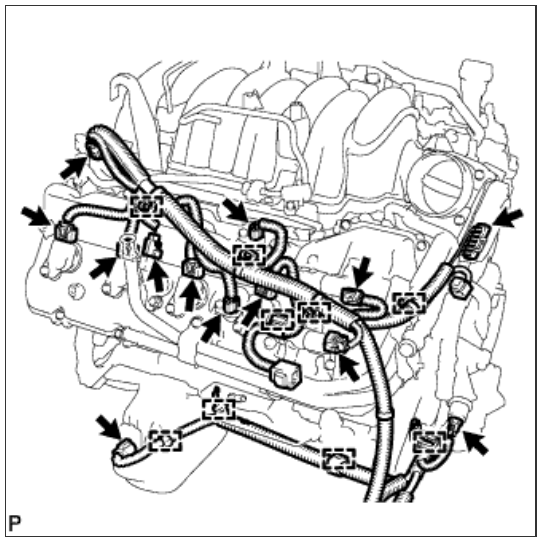
ii. Disconnect the 4 ignition coil connectors.

iii. Disconnect the 2 VVT sensor connectors.

iv. Disconnect the camshaft position sensor connector.

v. Disconnect the vacuum switching valve connector (for ACIS).

vi. Disconnect the purge VSV connector.



vii. Disconnect the engine coolant temperature sensor connector.

viii. Disconnect the fuel injector connector.

ix. Disconnect the noise filter connector.

x. Remove the bolt and disconnect the 7 clamps.

b. Engine RH Side:

i. Disconnect the 2 camshaft timing control valve connectors.

ii. Disconnect the 4 ignition coil connectors.

iii. Disconnect the 2 VVT sensor connectors.

iv. Disconnect the fuel injector connector.

v. Disconnect the noise filter connector.

vi. Disconnect the throttle sensor connector.

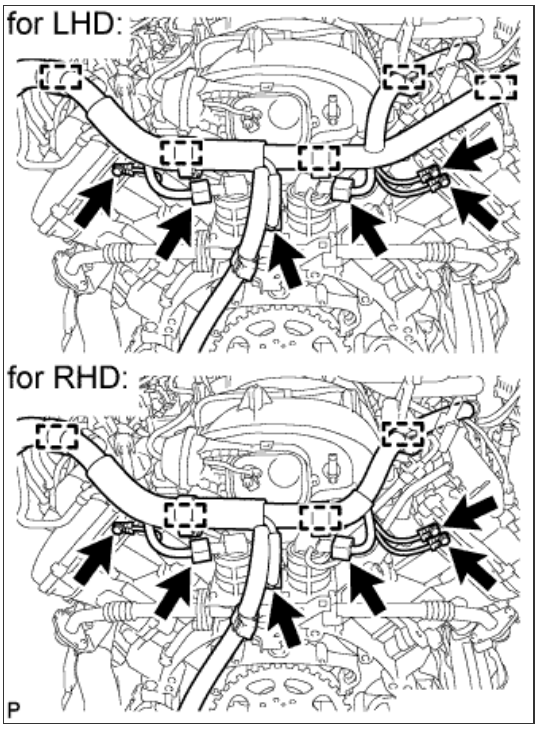
vii. Disconnect the oil pressure sender gauge connector.

viii. Disconnect the oil level sensor connector.

ix. Disconnect the 9 clamps.

c. Engine Rear Side:

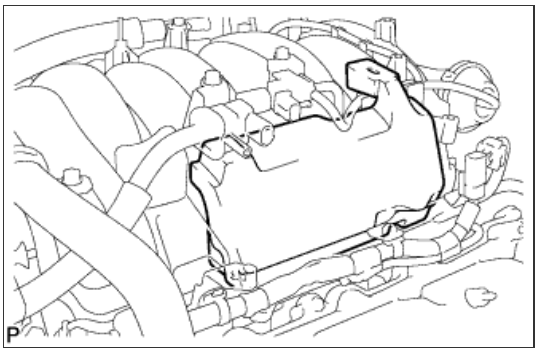
i. Disconnect the 2 air switching valve connectors.



ii. Disconnect the sensor wire connector.

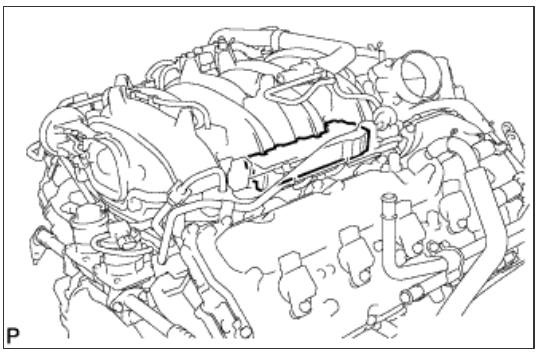
iii. for LHD:
Disconnect the 5 clamps.

iv. for RHD:
Disconnect the 4 clamps.



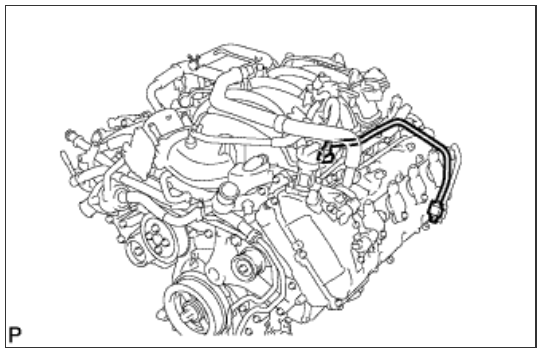
v. Remove the 3 bolts.

d. Remove the engine wire.



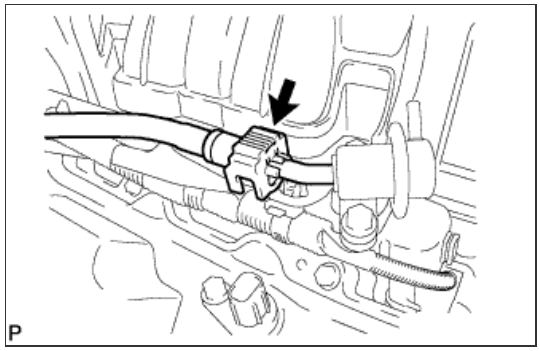
2. REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY

a. Remove the No. 1 engine cover sub-assembly.



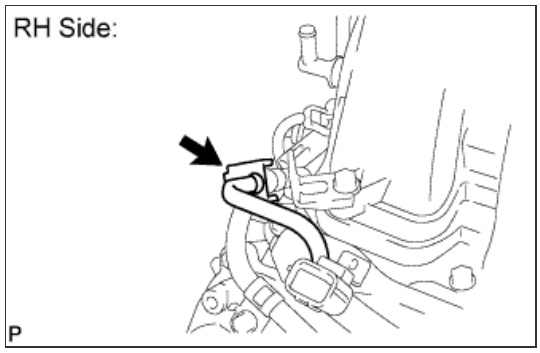
3. REMOVE NO. 3 ENGINE COVER

a. Remove the No. 3 engine cover.



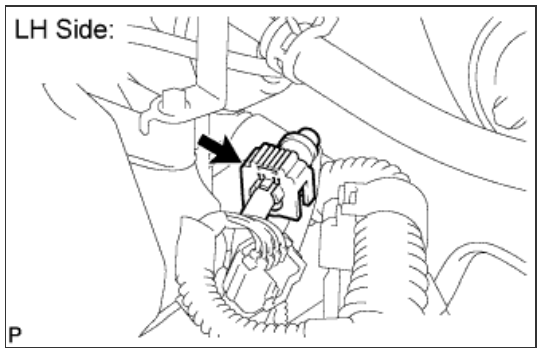
4. REMOVE NO. 1 FUEL HOSE

a. Remove the fuel hose (Click here).



5. DISCONNECT NO. 2 FUEL TUBE

a. Disconnect the No. 2 fuel tube from the fuel pressure regulator (Click here).



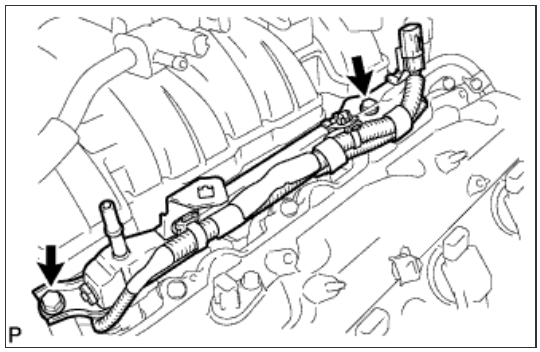
6. DISCONNECT NO. 1 FUEL TUBE

a. RH Side:
Disconnect the No. 1 fuel tube from the fuel delivery pipe RH (Click here).

b. LH Side:
Disconnect the No. 1 fuel tube from the fuel delivery pipe LH (Click here).

7. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY LH

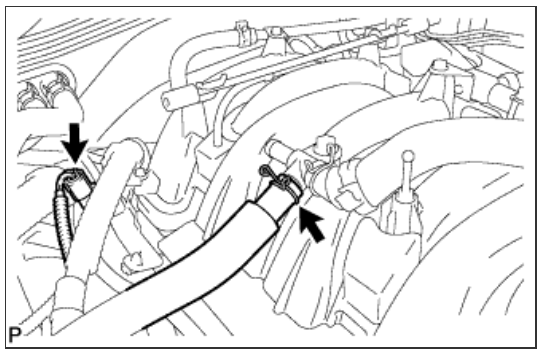
a. Disconnect the No. 7 wire harness connector.



b. Remove the 2 bolts and fuel delivery pipe LH

b. Remove the 2 bolts and fuel delivery pipe LH.

NOTICE:

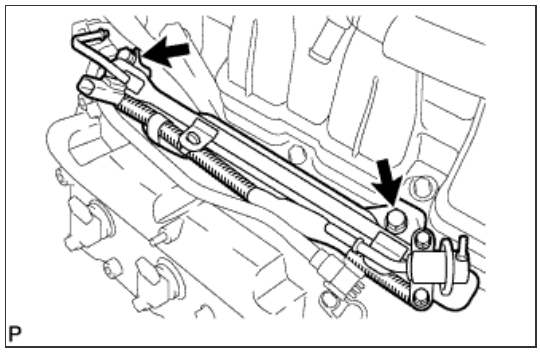


When removing the delivery pipe, hold the pipe by both ends and pull it straight upward.

c. Remove the 2 delivery pipe spacers and 4 insulators from the cylinder head LH.

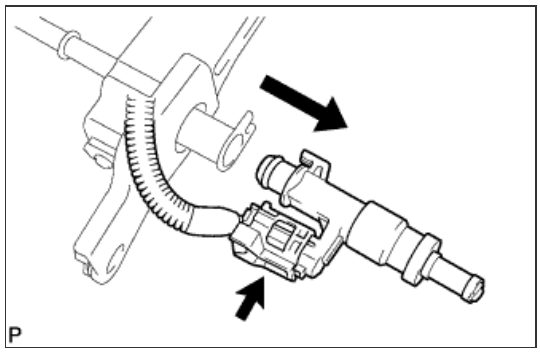
8. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY RH

a. Disconnect the ventilation hose and No. 6 wire harness connector.



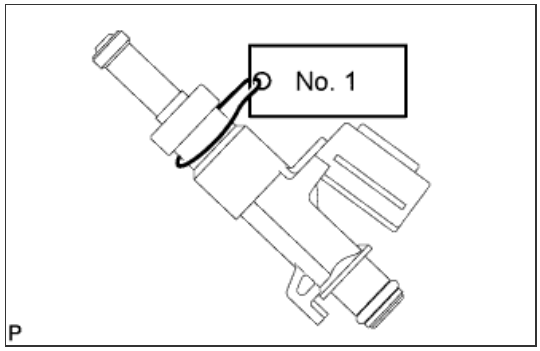
b. Remove the 2 bolts and fuel delivery pipe RH.

NOTICE:



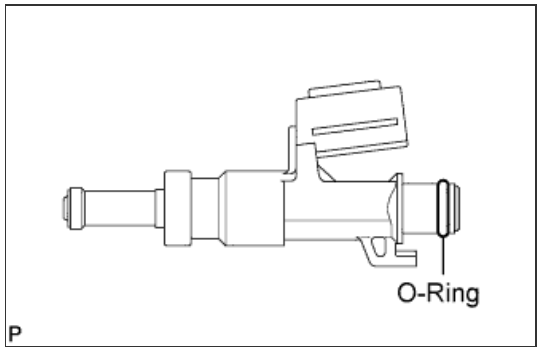
When removing the delivery pipe, hold the pipe by both ends and pull it straight upward.

c. Remove the 2 delivery pipe spacers and 4 insulators from the cylinder head RH.

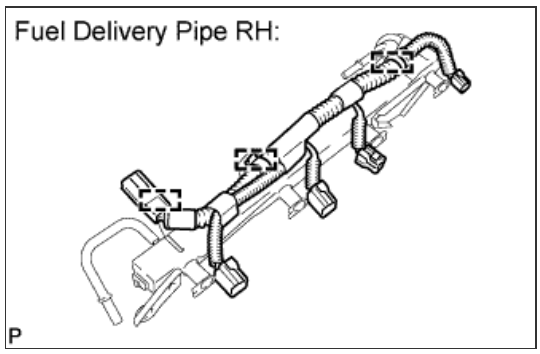


9. REMOVE FUEL INJECTOR ASSEMBLY

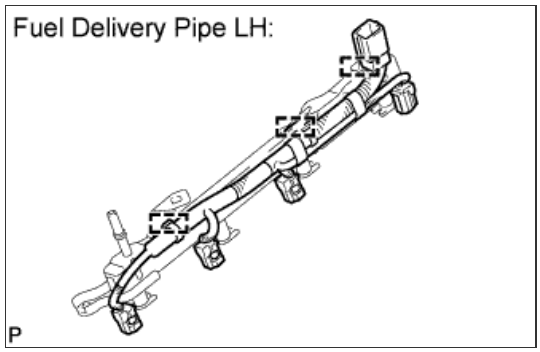
a. Remove the fuel injector from the fuel delivery pipe, and then disconnect the injector connector.



NOTICE:

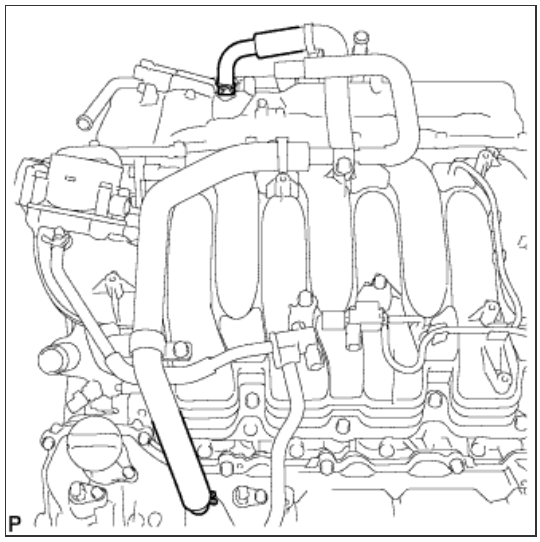


For reinstallation, attach a tag or label to the injector shaft.

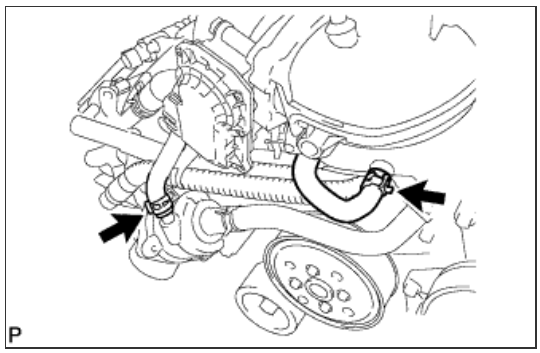


b. Remove the O-ring from the fuel injector.

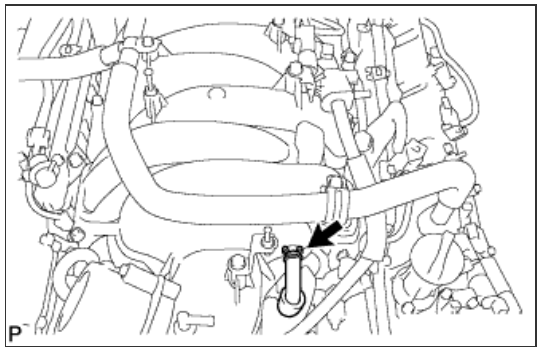
c. Detach the 3 clamps and then remove the No. 6 wire harness from the delivery pipe RH.



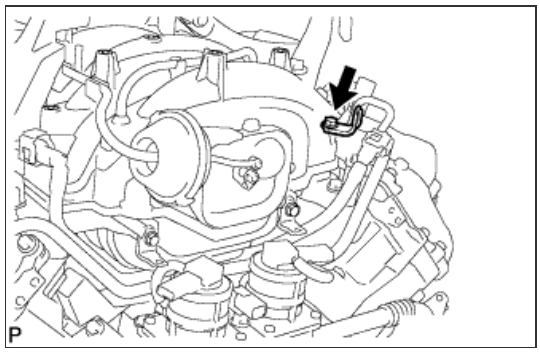
d. Detach the 3 clamps and then remove the No. 7 wire harness from the delivery pipe LH.



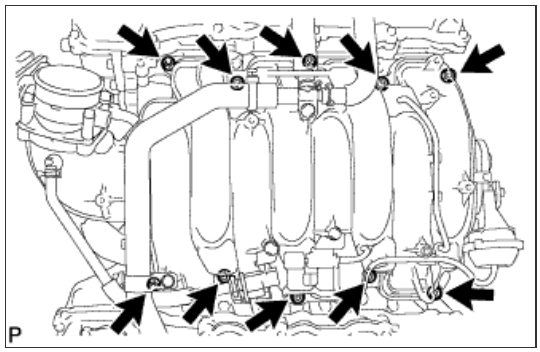
10. REMOVE INTAKE MANIFOLD



a. Disconnect the ventilation hose from the ventilation pipe of the cylinder head cover LH and RH.

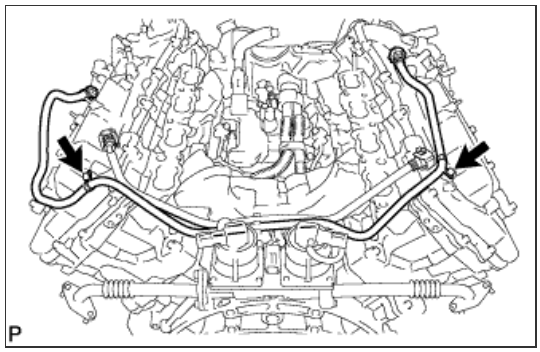


b. Disconnect the 2 water by-pass hoses.

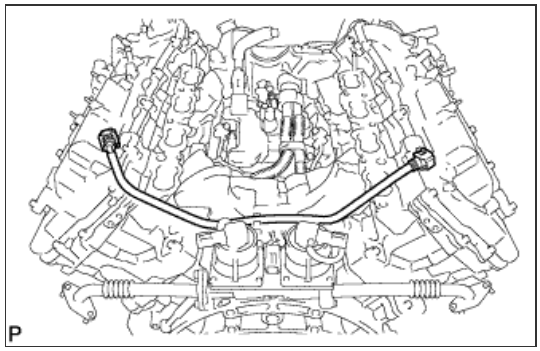


c. Disconnect the No. 1 ventilation hose.

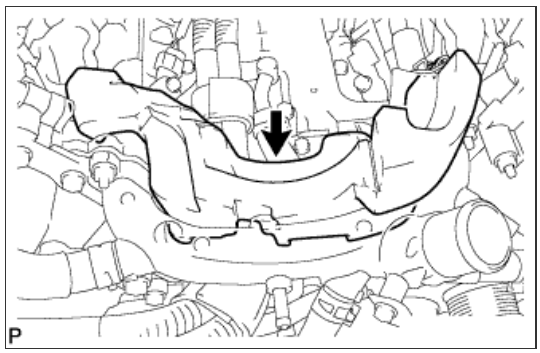
d. Remove the bolt and wire bracket from the intake manifold.



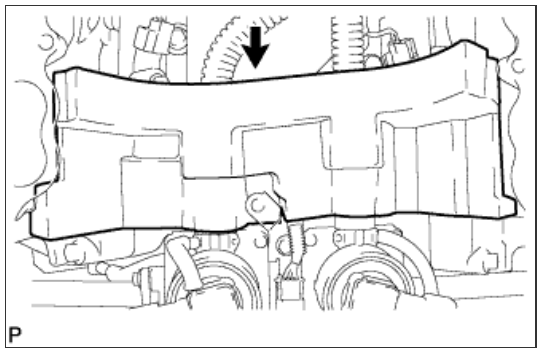
e. Remove the 2 nuts, 8 bolts, intake manifold and 2 gaskets.



11. REMOVE NO. 2 FUEL TUBE

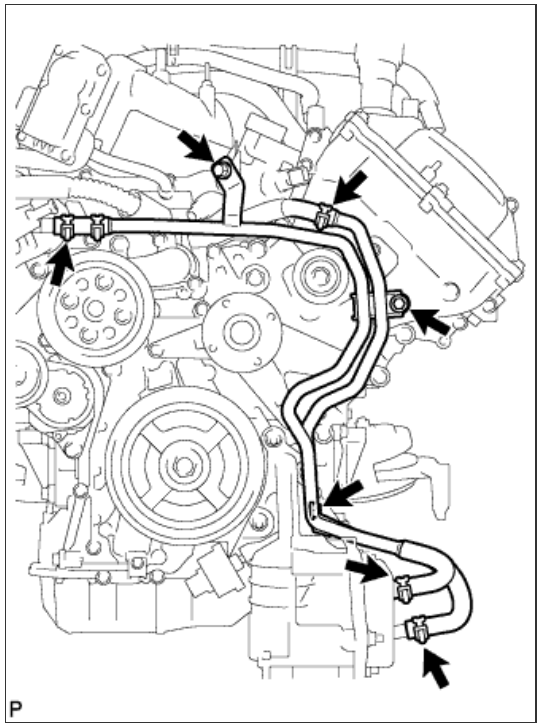


a. Remove the 2 bolts and No. 2 fuel tube.



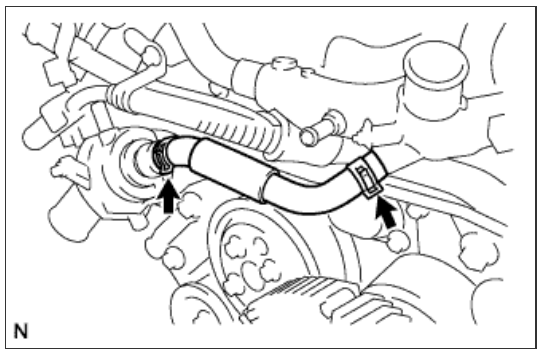
12. REMOVE NO. 1 FUEL TUBE

13. REMOVE NO. 2 ENGINE COVER



14. REMOVE NO. 1 ENGINE COVER

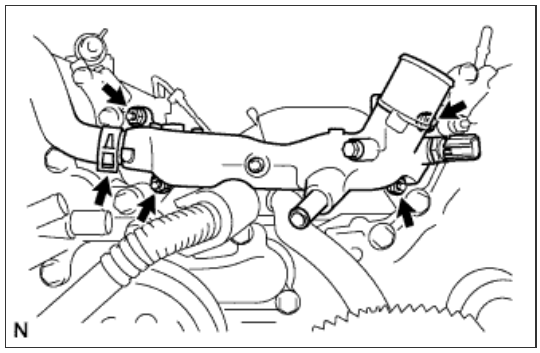
15. REMOVE NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY (w/ Oil Cooler)



a. Remove the 3 bolts.

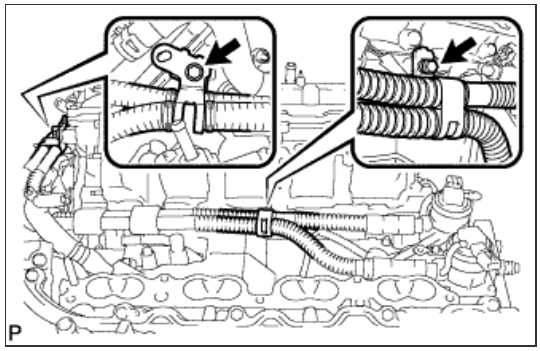
b. Disconnect the 4 hoses and remove the water by-pass pipe.

16. REMOVE NO. 1 WATER BY-PASS HOSE



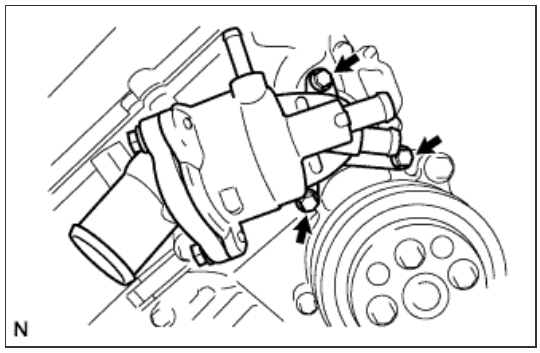
a. Remove the No. 1 water by-pass hose by disconnecting the hose from the water inlet housing and front water by-pass joint.

17. REMOVE FRONT WATER BY-PASS JOINT



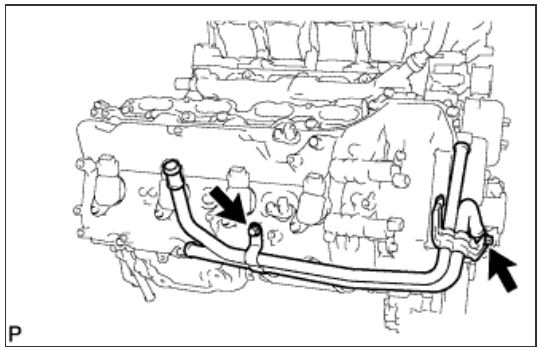
a. Disconnect the No. 2 water by-pass hose from the water by-pass joint.

b. Remove the 4 nuts, water by-pass joint and 2 gaskets.



18. REMOVE AIR PIPE SUB-ASSEMBLY

a. Remove the 2 bolts, air pipe and 2 No. 1 air hoses.

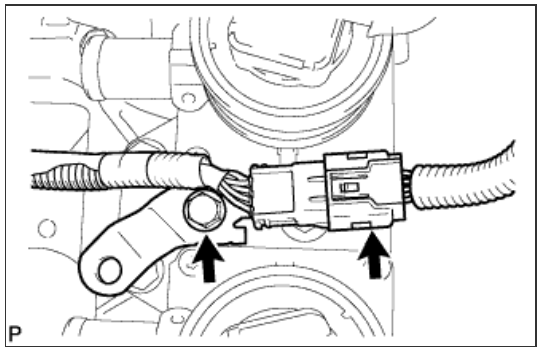


19. REMOVE WATER INLET HOUSING

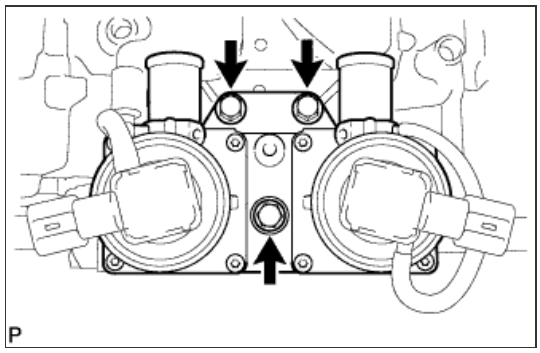
a. Remove the 3 bolts, water inlet housing and gasket.

20. REMOVE WATER BY-PASS PIPE SUB-ASSEMBLY

a. Remove the 2 bolts and water by-pass pipe.



21. REMOVE AIR SWITCHING VALVE ASSEMBLY

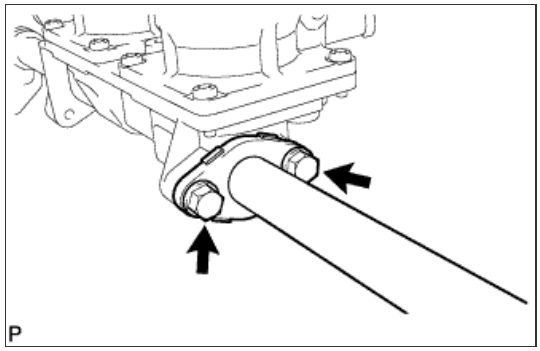


a. Disconnect the knock sensor connector.

b. Remove the bolt and bracket.

c. Disconnect the 2 air switching valve connectors.

d. Remove the 3 bolts and air switching valve.

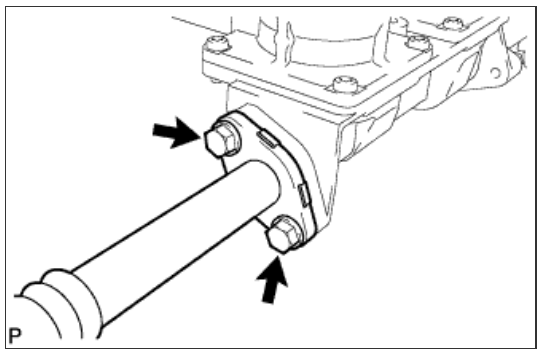


22. REMOVE NO. 2 AIR TUBE

a. Remove the 2 bolts, No. 2 air tube and gasket.

NOTICE:

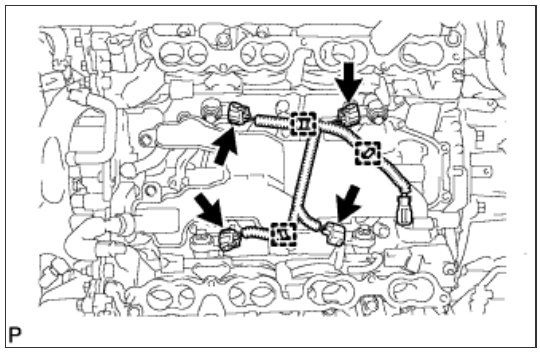
Be careful not to damage the installation surface of the gaskets.



23. REMOVE NO. 3 AIR TUBE

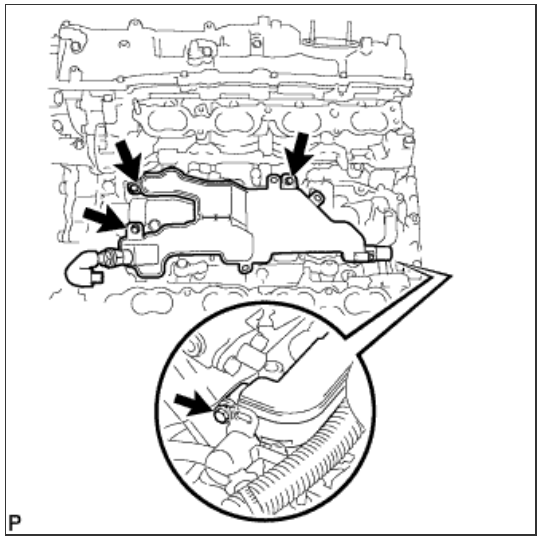
a. Remove the 2 bolts, No. 3 air tube and gasket.

NOTICE:



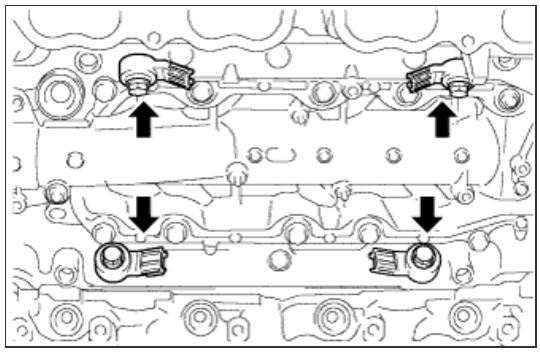
Be careful not to damage the installation surface of the gaskets.

24. REMOVE SENSOR WIRE



a. Disconnect the 4 knock sensor connectors.

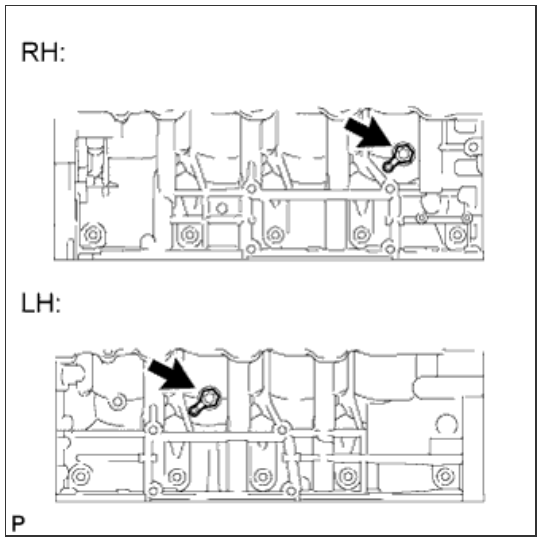
b. Disconnect the 3 clamps. Then remove the sensor wire.



25. REMOVE SEPARATOR CASE

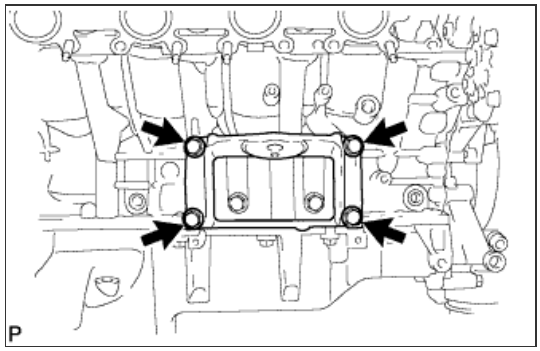
a. Remove the 4 bolts and separator case.

26. REMOVE KNOCK SENSOR



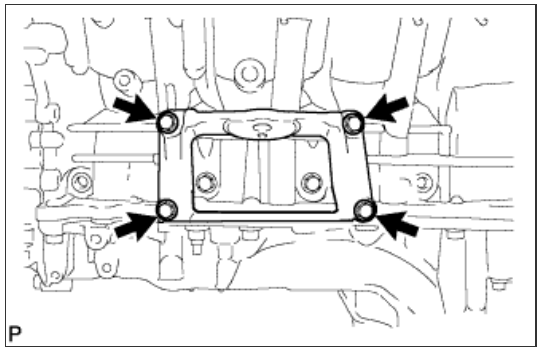
a. Remove the 4 bolts and 4 knock sensors.

27. REMOVE CYLINDER BLOCK WATER DRAIN COCK SUB-ASSEMBLY



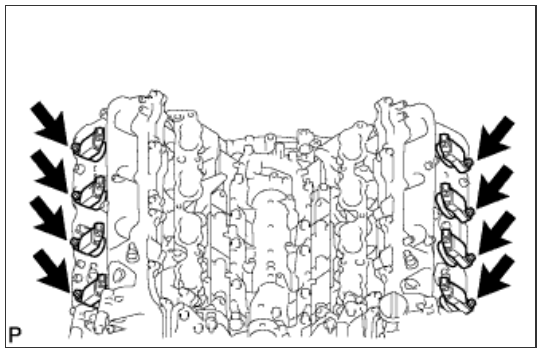
a. Remove the 2 water drain cock plugs from the water drain cocks.

b. Remove the 2 water drain cocks from the cylinder block.



28. REMOVE FRONT NO. 1 ENGINE MOUNTING BRACKET RH

a. Remove the 4 bolts and mounting bracket.



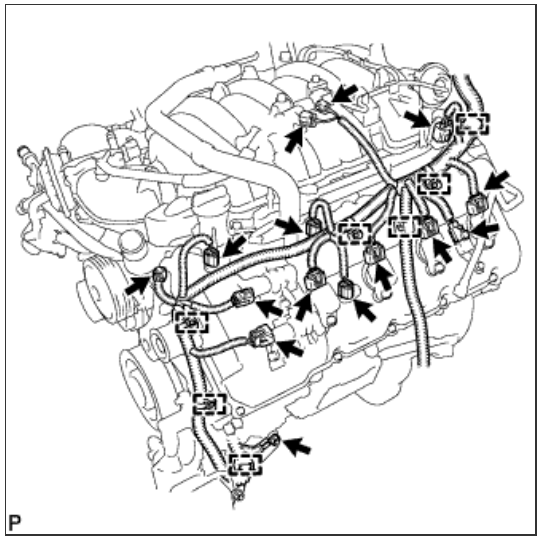
29. REMOVE FRONT NO. 1 ENGINE MOUNTING BRACKET LH

a. Remove the 4 bolts and mounting bracket.

30. REMOVE IGNITION COIL ASSEMBLY

a. Remove the 8 bolts and 8 ignition coils.

31. REMOVE NOISE FILTER



a. LH:
Remove the bolt and noise filter from the cylinder head cover.

b. RH:
Remove the bolt and noise filter from the cylinder head cover.

for Preparation Click here

1. REMOVE ENGINE WIRE

a. Engine LH Side:

i. Disconnect the 2 camshaft timing control valve connectors.

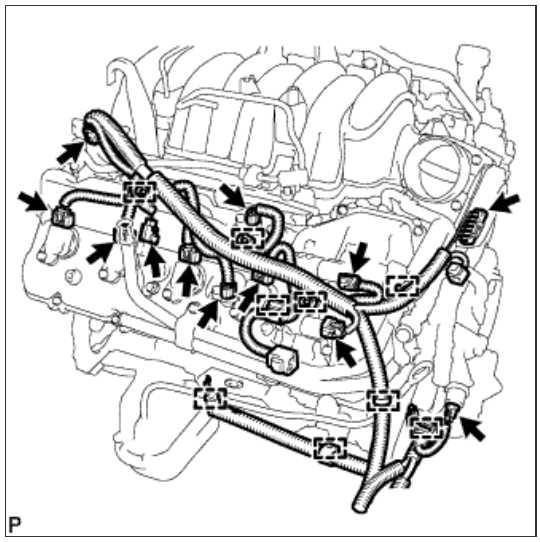
ii. Disconnect the 4 ignition coil connectors.

iii. Disconnect the 2 VVT sensor connectors.

iv. Disconnect the camshaft position sensor connector.

v. Disconnect the vacuum switching valve connector (for ACIS).

vi. Disconnect the purge VSV connector.



vii. Disconnect the engine coolant temperature sensor connector.

viii. Disconnect the fuel injector connector.

ix. Disconnect the noise filter connector.

x. Remove the bolt and disconnect the 7 clamps.

b. Engine RH Side:

i. Disconnect the 2 camshaft timing control valve connectors.

ii. Disconnect the 4 ignition coil connectors.

iii. Disconnect the 2 VVT sensor connectors.

iv. Disconnect the fuel injector connector.

v. Disconnect the noise filter connector.

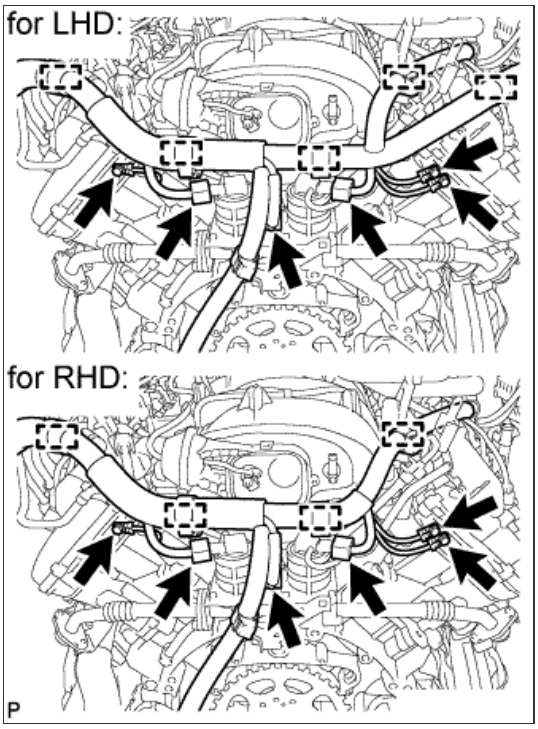
vi. Disconnect the throttle sensor connector.

vii. Disconnect the oil pressure sender gauge connector.

viii. Disconnect the 9 clamps.

c. Engine Rear Side:

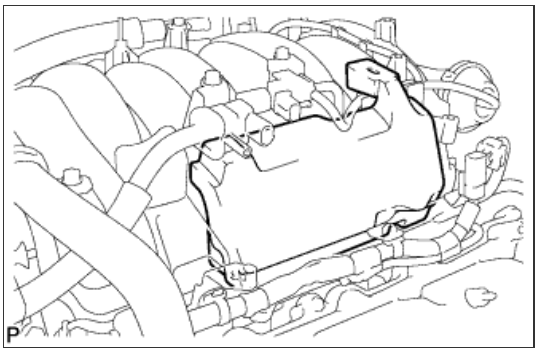
i. w/ Secondary Air Injection System:
Disconnect the 2 air switching valve connectors.



ii. Disconnect the sensor wire connector.

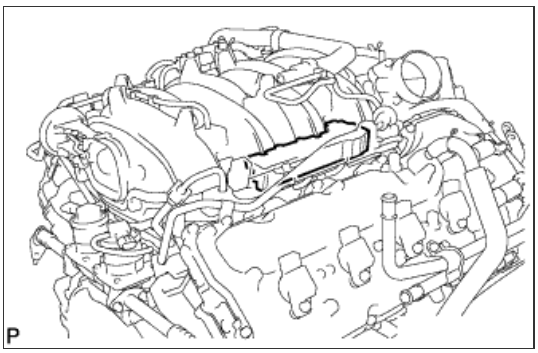
iii. for LHD:
Disconnect the 5 clamps.

iv. for RHD:
Disconnect the 4 clamps.



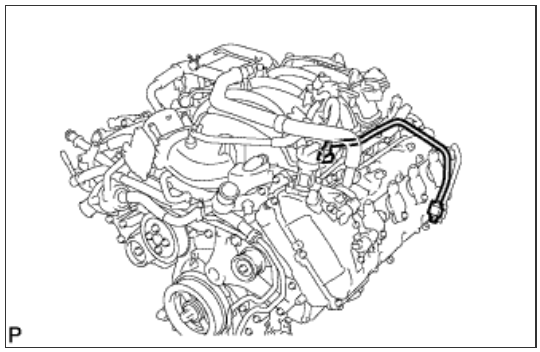
v. Remove the 3 bolts.

d. Remove the engine wire.



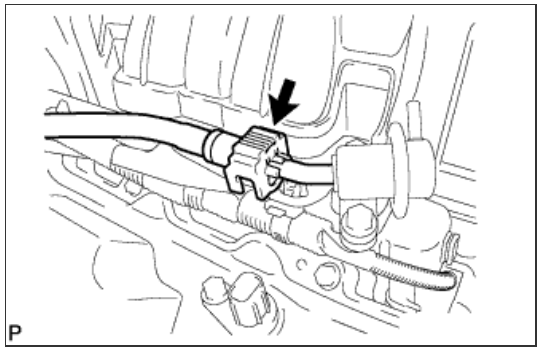
2. REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY

a. Remove the No. 1 engine cover sub-assembly.



3. REMOVE NO. 3 ENGINE COVER

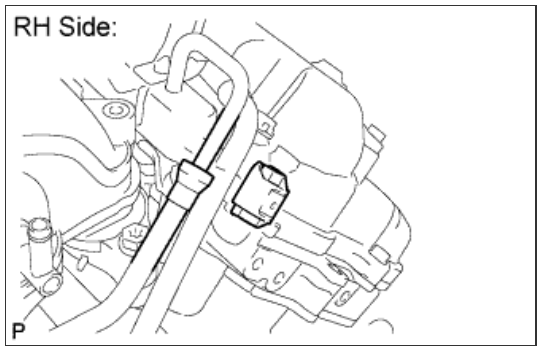
a. Remove the No. 3 engine cover.



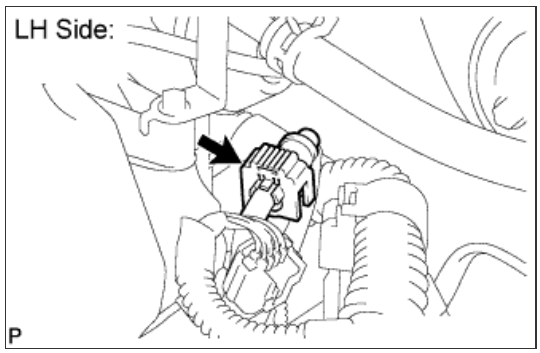
4. REMOVE NO. 1 FUEL HOSE

a. Remove the fuel hose (Click here).

5. DISCONNECT NO. 2 FUEL TUBE



a. Disconnect the No. 2 fuel tube from the fuel pressure regulator (Click here).



6. DISCONNECT NO. 1 FUEL TUBE

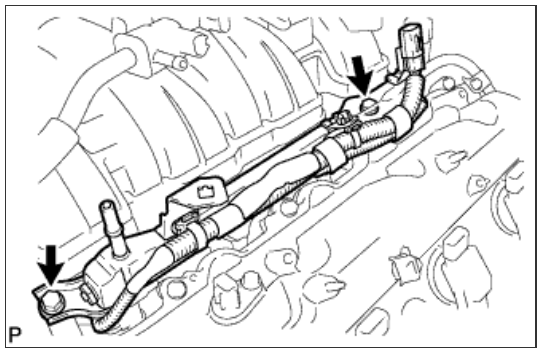
a. RH Side:
Disconnect the No. 1 fuel tube from the fuel delivery pipe RH (for metallic type) (Click here).

SST
09268-21011

b. LH Side:
Disconnect the No. 1 fuel tube from the fuel delivery pipe LH (Click here).

7. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY LH

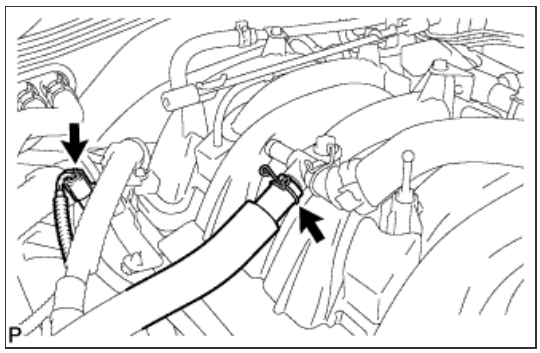
a. Disconnect the No. 7 wire harness connector.



b. Remove the 2 bolts and fuel delivery pipe LH.

b. Remove the 2 bolts and fuel delivery pipe LH.

NOTICE:

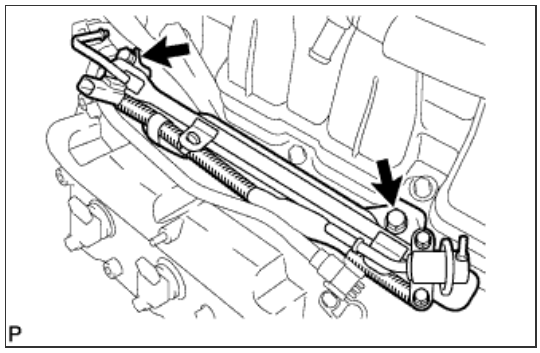


When removing the delivery pipe, hold the pipe by both ends and pull it straight upward.

c. Remove the 2 delivery pipe spacers and 4 insulators from the cylinder head LH.

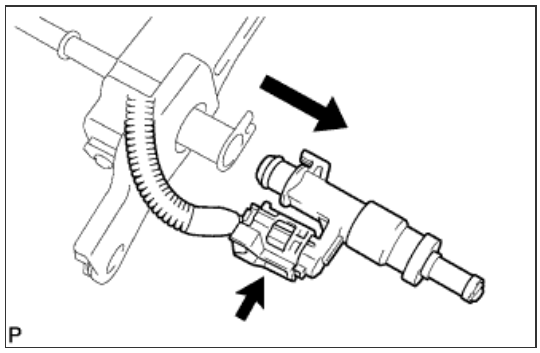
8. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY RH

a. Disconnect the ventilation hose and No. 6 wire harness connector.



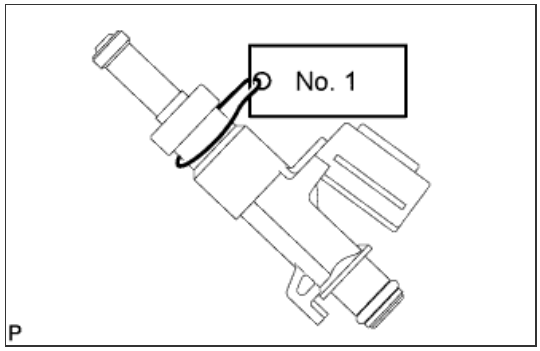
b. Remove the 2 bolts and fuel delivery pipe RH.

NOTICE:



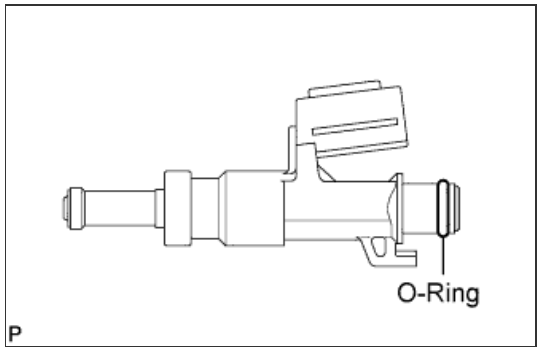
When removing the delivery pipe, hold the pipe by both ends and pull it straight upward.

c. Remove the 2 delivery pipe spacers and 4 insulators from the cylinder head RH.

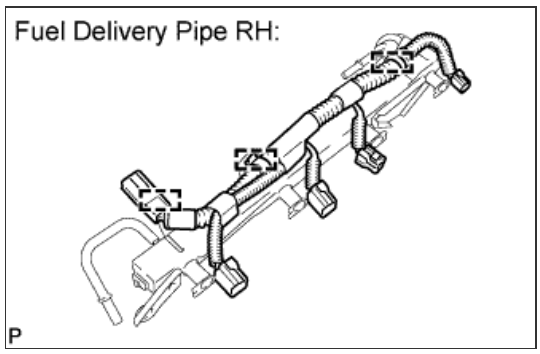


9. REMOVE FUEL INJECTOR ASSEMBLY

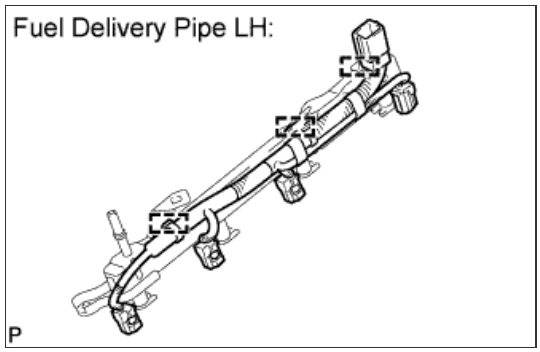
a. Remove the fuel injector from the fuel delivery pipe, and then disconnect the injector connector.



NOTICE:

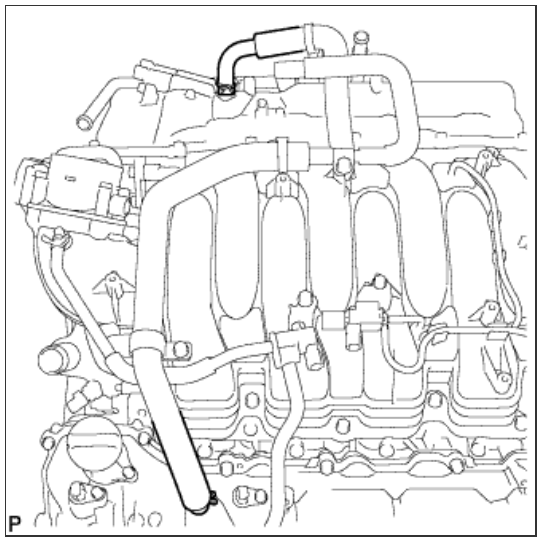


For reinstallation, attach a tag or label to the injector shaft.

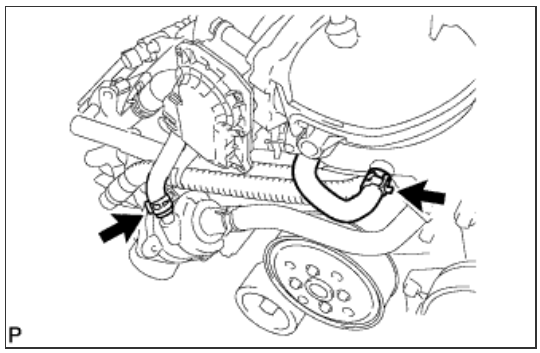


b. Remove the O-ring from the fuel injector.

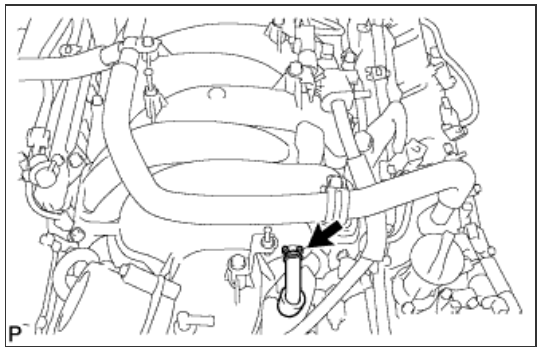
c. Detach the 3 clamps and then remove the No. 6 wire harness from the delivery pipe RH.



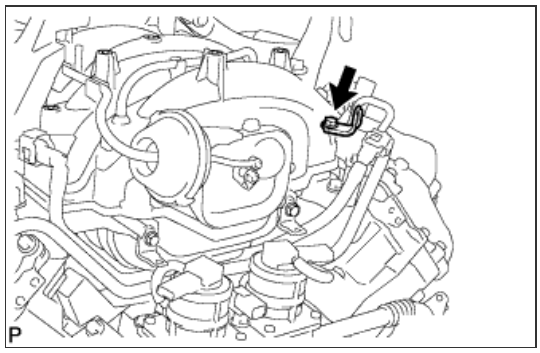
d. Detach the 3 clamps and then remove the No. 7 wire harness from the delivery pipe LH.



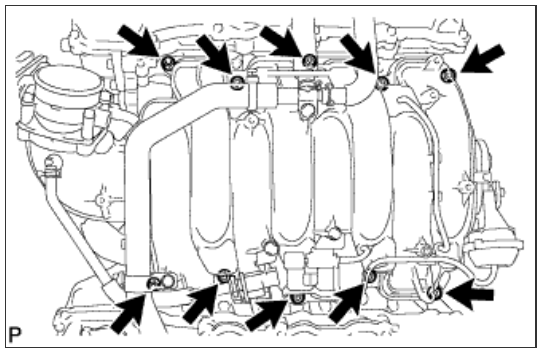
10. REMOVE INTAKE MANIFOLD



a. Disconnect the ventilation hose from the ventilation pipe of the cylinder head cover LH and RH.

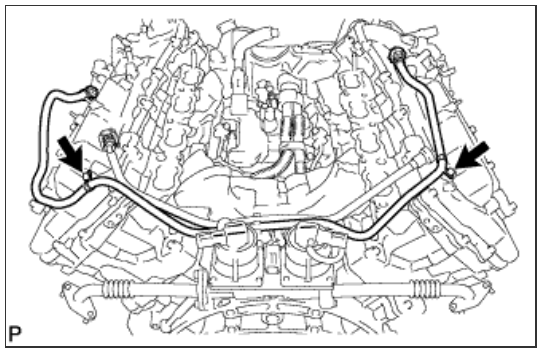


b. Disconnect the 2 water by-pass hoses.

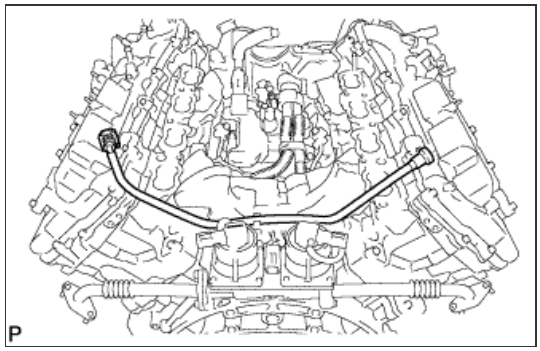


c. Disconnect the No. 1 ventilation hose.

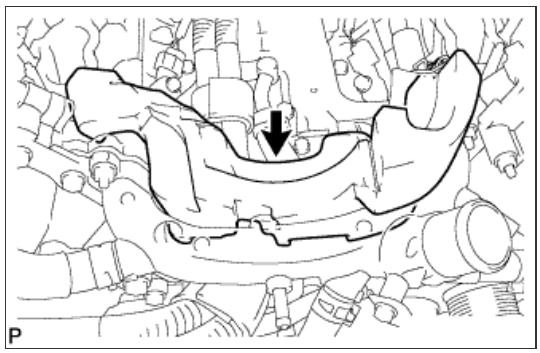
d. Remove the bolt and wire bracket from the intake manifold.



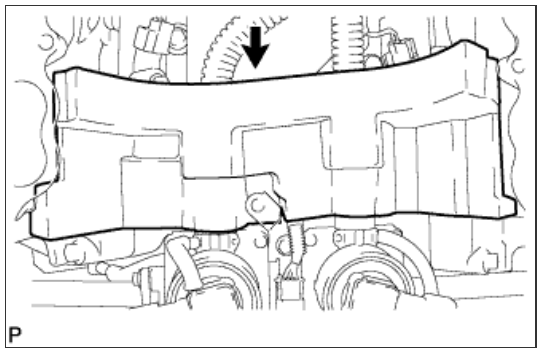
e. Remove the 2 nuts, 8 bolts, intake manifold and 2 gaskets.



11. REMOVE NO. 2 FUEL TUBE

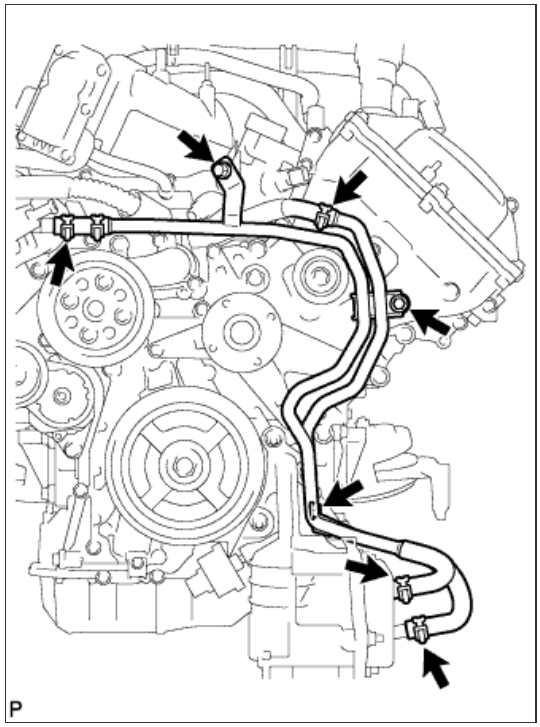


a. Remove the 2 bolts and No. 2 fuel tube.



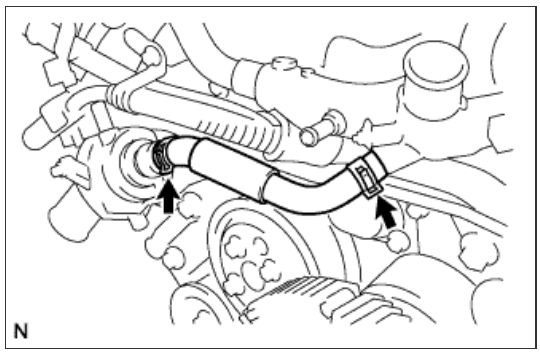
12. REMOVE NO. 1 FUEL TUBE

13. REMOVE NO. 2 ENGINE COVER



14. REMOVE NO. 1 ENGINE COVER

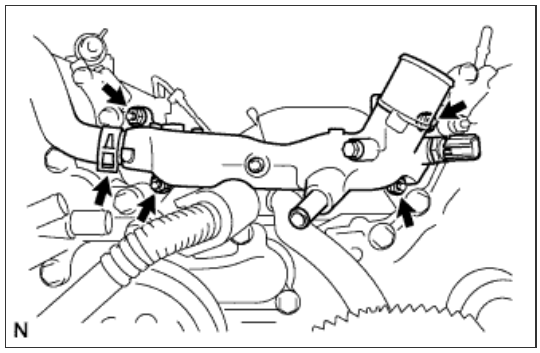
15. REMOVE NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY (w/ Oil Cooler)



a. Remove the 3 bolts.

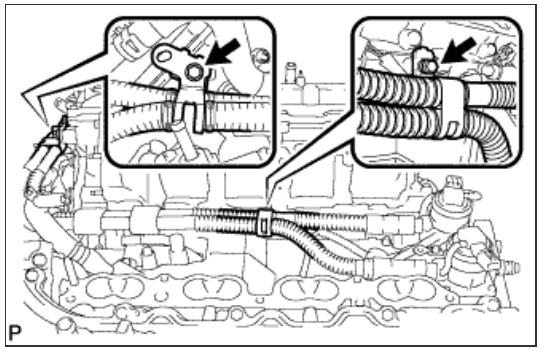
b. Disconnect the 4 hoses and remove the water by-pass pipe.

16. REMOVE NO. 1 WATER BY-PASS HOSE



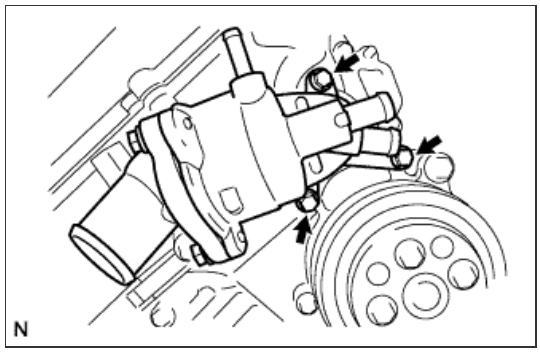
a. Remove the No. 1 water by-pass hose by disconnecting the hose from the water inlet housing and front water by-pass joint.

17. REMOVE FRONT WATER BY-PASS JOINT



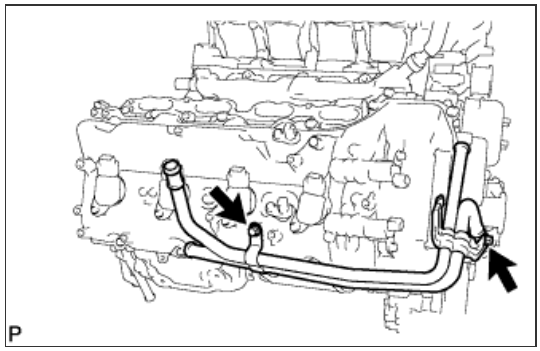
a. Disconnect the No. 2 water by-pass hose from the water by-pass joint.

b. Remove the 4 nuts, water by-pass joint and 2 gaskets.



18. REMOVE AIR PIPE SUB-ASSEMBLY (w/ Secondary Air Injection System)

a. Remove the 2 bolts, air pipe and 2 No. 1 air hoses.

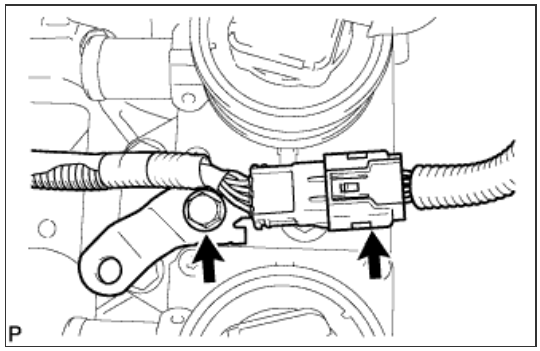


19. REMOVE WATER INLET HOUSING

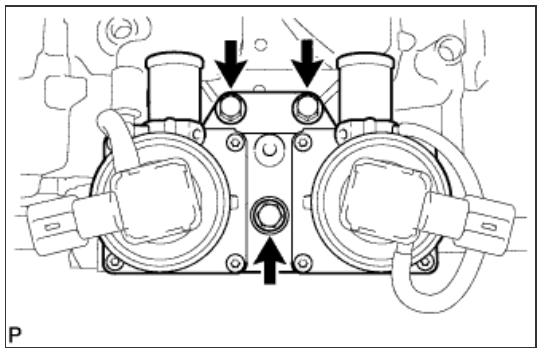
a. Remove the 3 bolts, water inlet housing and gasket.

20. REMOVE WATER BY-PASS PIPE SUB-ASSEMBLY

a. Remove the 2 bolts and water by-pass pipe.



21. REMOVE AIR SWITCHING VALVE ASSEMBLY (w/ Secondary Air Injection System)

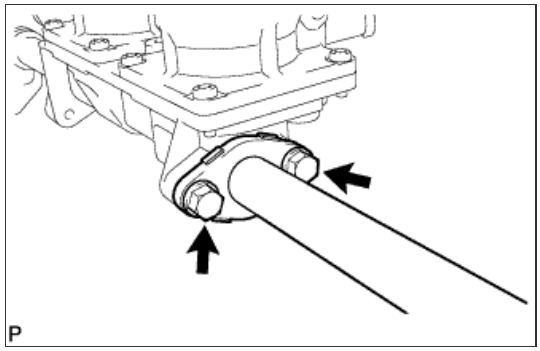


a. Disconnect the knock sensor connector.

b. Remove the bolt and bracket.

c. Disconnect the 2 air switching valve connectors.

d. Remove the 3 bolts and air switching valve.

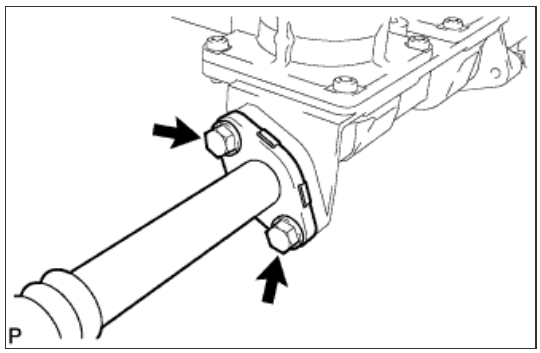


22. REMOVE NO. 2 AIR TUBE (w/ Secondary Air Injection System)

a. Remove the 2 bolts, No. 2 air tube and gasket.

NOTICE:

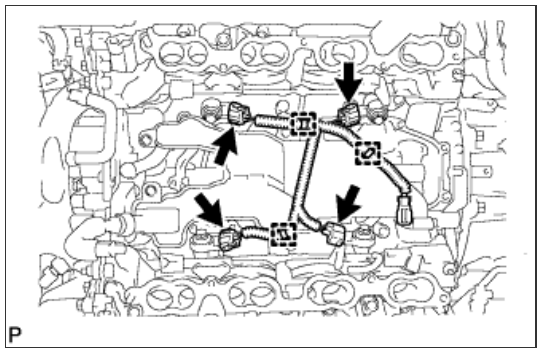
Be careful not to damage the installation surface of the gaskets.



23. REMOVE NO. 3 AIR TUBE (w/ Secondary Air Injection System)

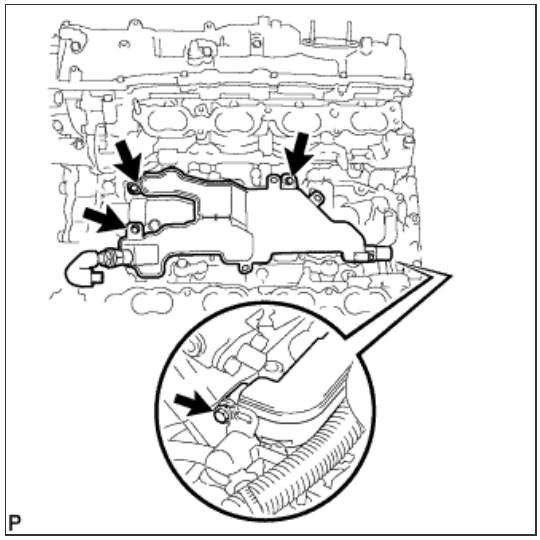
a. Remove the 2 bolts, No. 3 air tube and gasket.

NOTICE:



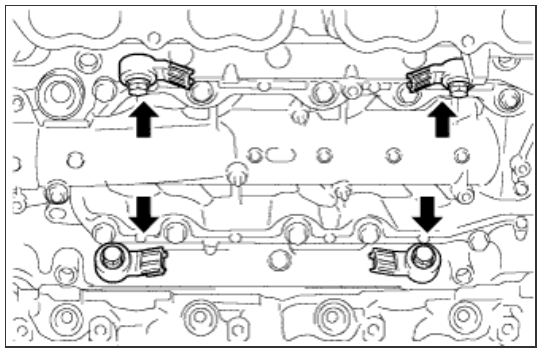
Be careful not to damage the installation surface of the gaskets.

24. REMOVE SENSOR WIRE



a. Disconnect the 4 knock sensor connectors.

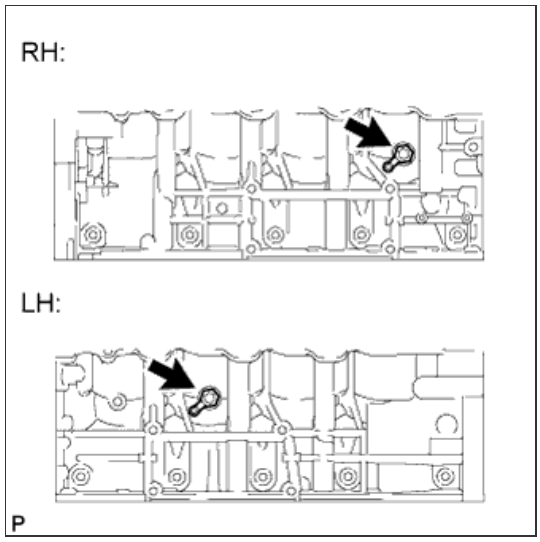
b. Disconnect the 3 clamps. Then remove the sensor wire.



25. REMOVE SEPARATOR CASE

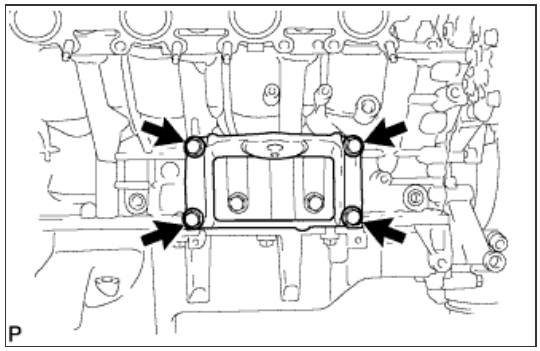
a. Remove the 4 bolts and separator case.

26. REMOVE KNOCK SENSOR



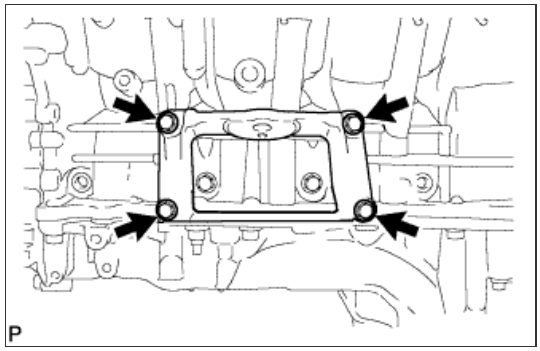
a. Remove the 4 bolts and 4 knock sensors.

27. REMOVE CYLINDER BLOCK WATER DRAIN COCK SUB-ASSEMBLY



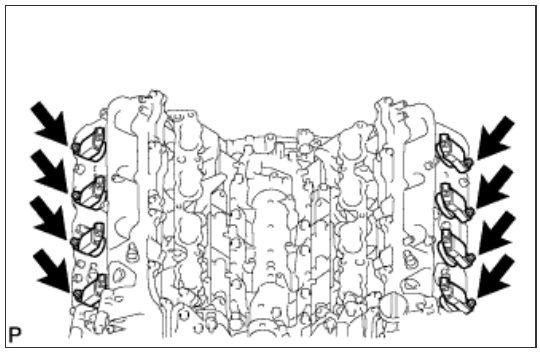
a. Remove the 2 water drain cock plugs from the water drain cocks.

b. Remove the 2 water drain cocks from the cylinder block.



28. REMOVE FRONT NO. 1 ENGINE MOUNTING BRACKET RH

a. Remove the 4 bolts and mounting bracket.



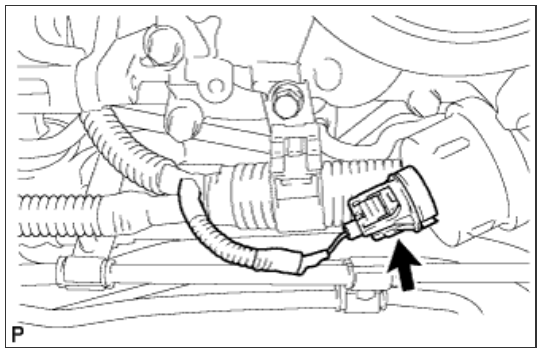
29. REMOVE FRONT NO. 1 ENGINE MOUNTING BRACKET LH

a. Remove the 4 bolts and mounting bracket.

30. REMOVE IGNITION COIL ASSEMBLY

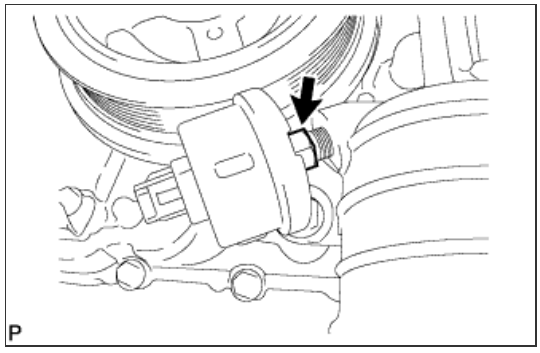
a. Remove the 8 bolts and 8 ignition coils.

31. REMOVE NOISE FILTER



a. LH:
Remove the bolt and noise filter from the cylinder head cover.

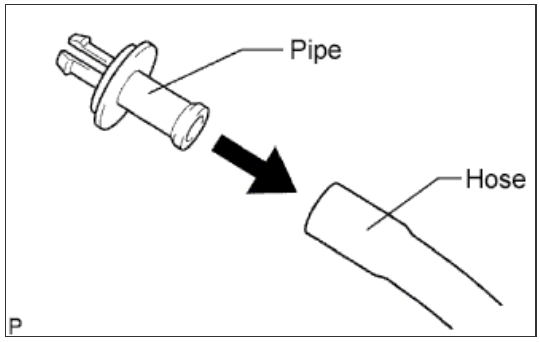
b. RH:
Remove the bolt and noise filter from the cylinder head cover.



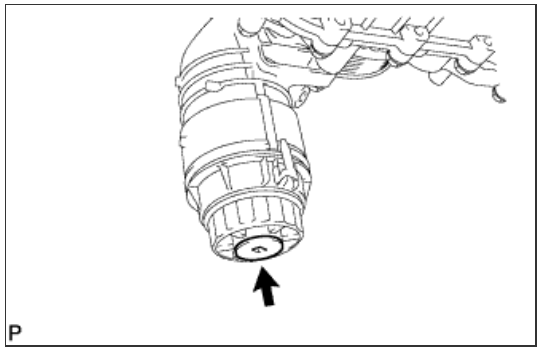
for Preparation Click here

1. REMOVE OIL PRESSURE SENDER GAUGE ASSEMBLY

a. Disconnect the sender gauge connector.



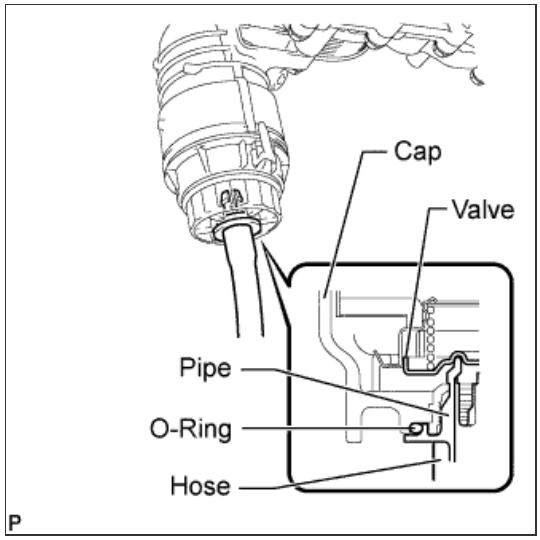
b. Remove the oil pressure sender gauge.



2. REMOVE OIL FILTER ELEMENT

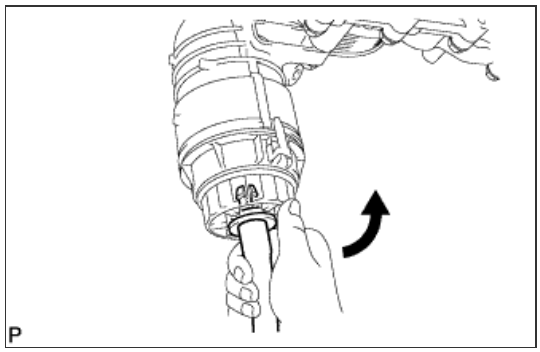
a. Connect a hose with an inside diameter of 15 mm (0.591 in.) to the pipe.

b. Remove the oil filter drain plug.



c. Install the pipe to the oil filter cap.

NOTICE:

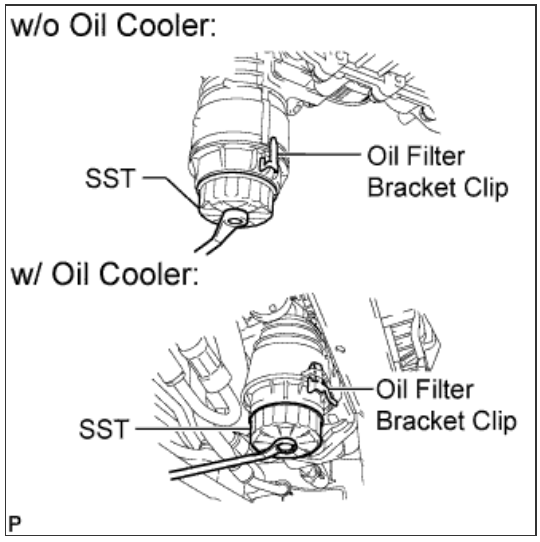


If the O-ring is removed with the drain plug, install the O-ring together with the pipe.

HINT:

Use a container to catch the draining oil.

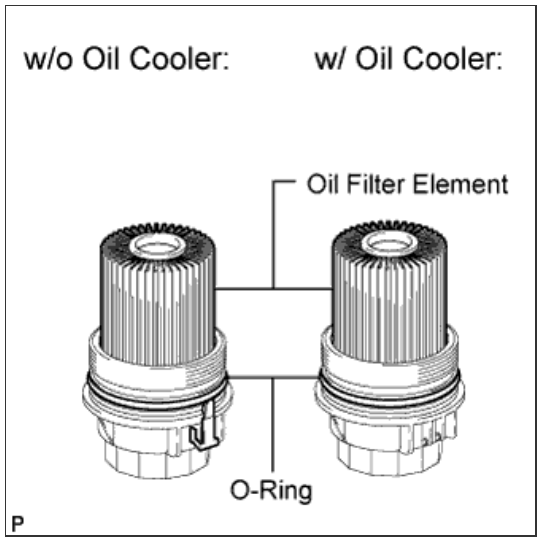
d. Check that oil is drained from the oil filter. Then disconnect the pipe and remove the O-ring as shown in the illustration.



e. Using SST, remove the oil filter cap.

SST
09228-06501

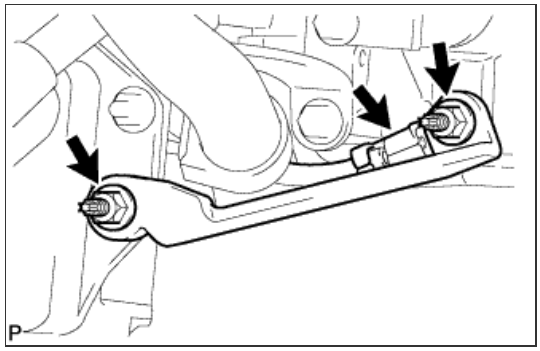
NOTICE:



Do not remove the oil filter bracket clip.

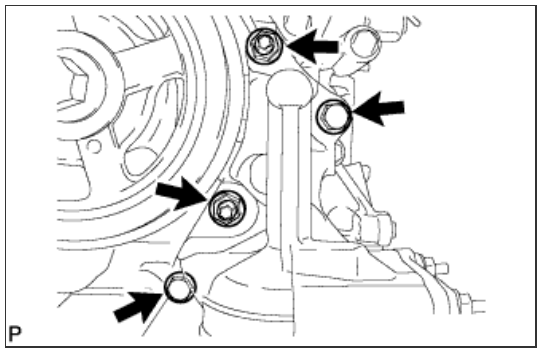
f. Remove the oil filter element and O-ring from the oil filter cap.

NOTICE:



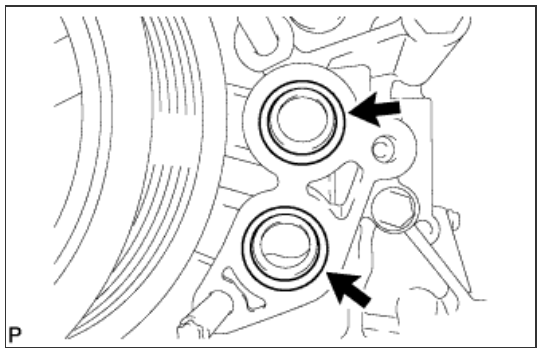
Be sure to remove the cap O-ring by hand, without using any tools, to prevent damage to the cap O-ring groove.

3. REMOVE NO. 1 OIL COOLER BRACKET (w/ Oil Cooler)



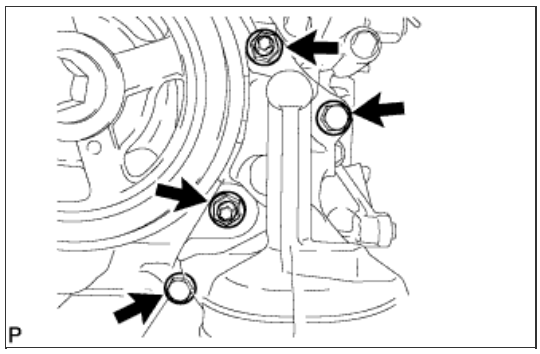
a. Remove the 2 nuts and bracket.

b. Disconnect the ground wire from the cylinder block.

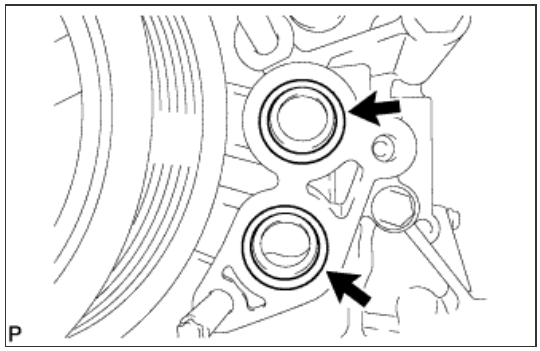


4. REMOVE OIL FILTER BRACKET (w/ Oil Cooler)

a. Remove the 2 bolts, 2 nuts and filter bracket.

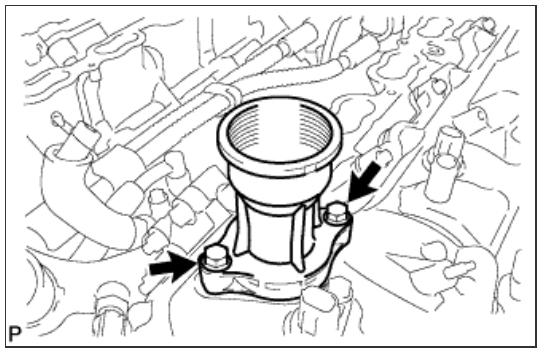


b. Remove the 2 O-rings.



5. REMOVE OIL FILTER BRACKET (w/o Oil Cooler)

a. Remove the 2 bolts, 2 nuts and oil filter bracket.

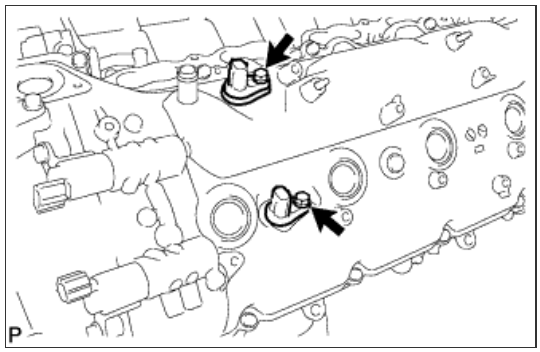


b. Remove the 2 O-rings.

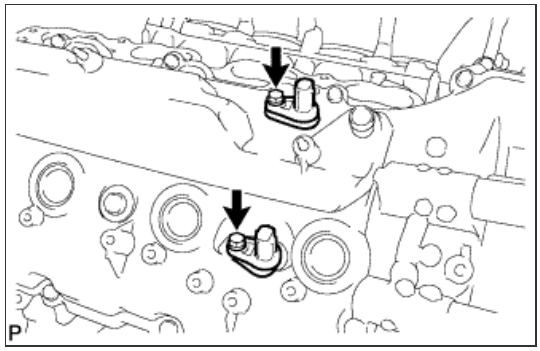
6. REMOVE OIL FILLER CAP SUB-ASSEMBLY

7. REMOVE OIL FILLER CAP HOUSING

a. Remove the 2 bolts, filler cap housing and gasket.



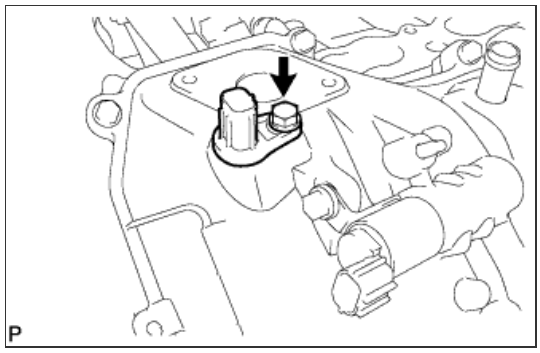
8. REMOVE SPARK PLUG



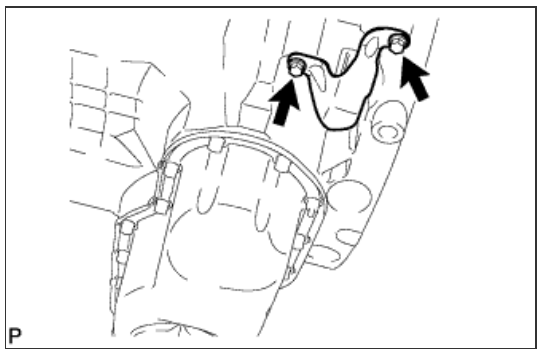
a. Using a 16 mm plug wrench, remove the 8 spark plugs.

9. REMOVE VVT SENSOR

a. LH:
Remove the 2 bolts and 2 VVT sensors.

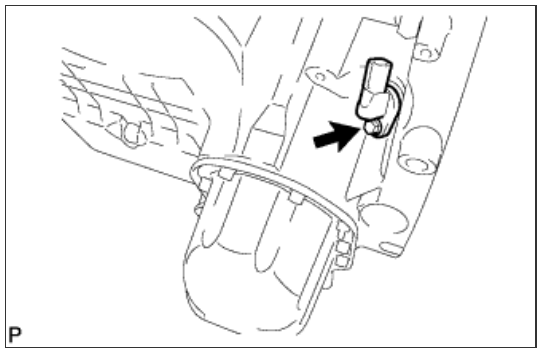


b. RH:
Remove the 2 bolts and 2 VVT sensors.



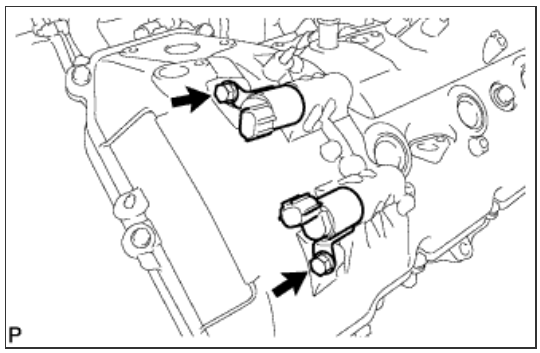
10. REMOVE CAMSHAFT POSITION SENSOR

a. Remove the bolt and camshaft position sensor.



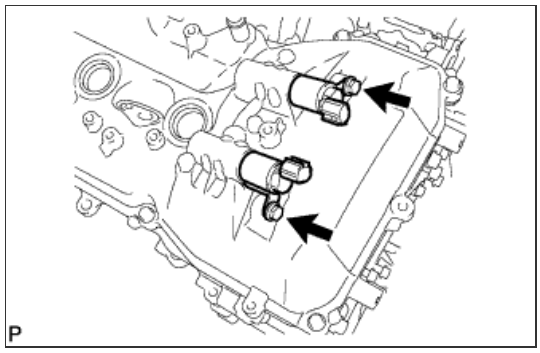
11. REMOVE CRANK POSITION SENSOR PROTECTOR

a. Remove the 2 bolts and sensor protector.



12. REMOVE CRANKSHAFT POSITION SENSOR

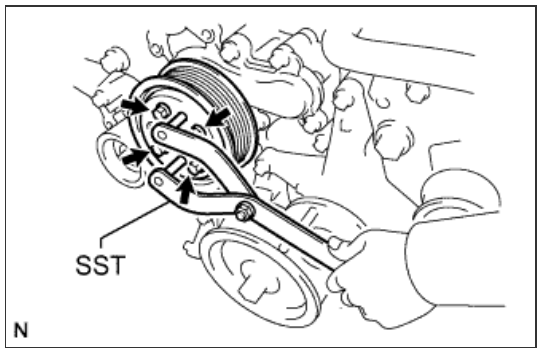
a. Remove the bolt and crankshaft position sensor.



13. REMOVE CAMSHAFT OIL CONTROL VALVE ASSEMBLY

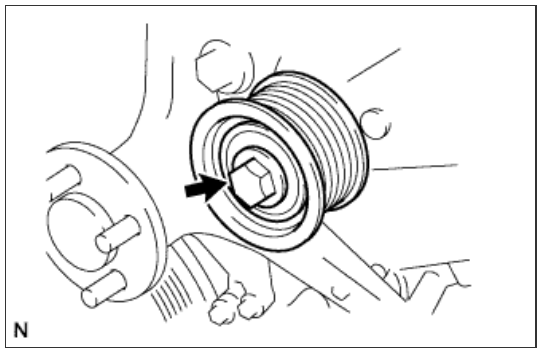
a. LH:
Remove the 2 bolts and 2 oil control valves.

b. RH:
Remove the 2 bolts and 2 oil control valves.



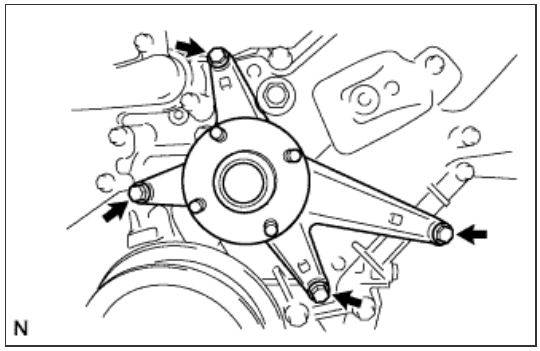
14. REMOVE WATER PUMP PULLEY

a. Using SST, hold the water pump pulley.



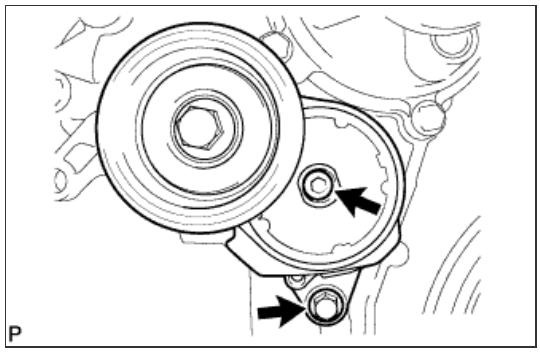
SST
09960-10010 (09962-01000, 09963-01000)

b. Remove the 4 bolts and water pump pulley.



15. REMOVE NO. 1 IDLER PULLEY SUB-ASSEMBLY

a. Remove the bolt and idler pulley.

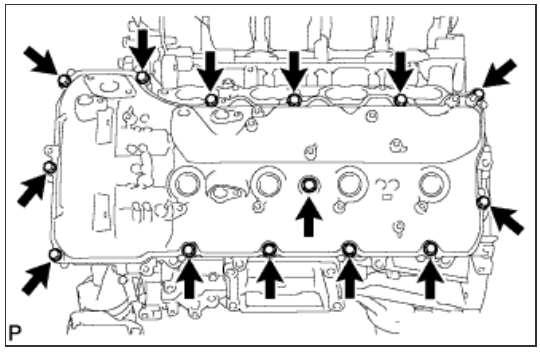


16. REMOVE FLUID COUPLING BRACKET

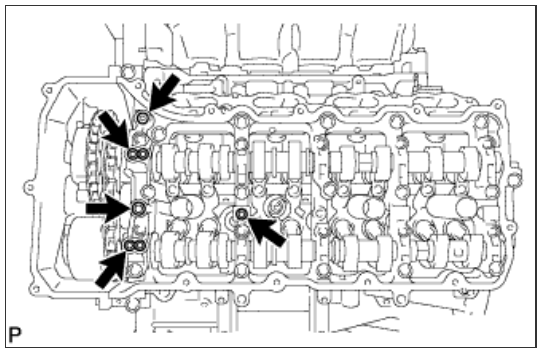
a. Remove the 4 bolts and fluid coupling bracket.

17. REMOVE V-RIBBED BELT TENSIONER ASSEMBLY

a. Remove the standard bolt, 6 mm hexagon wrench bolt and belt tensioner.



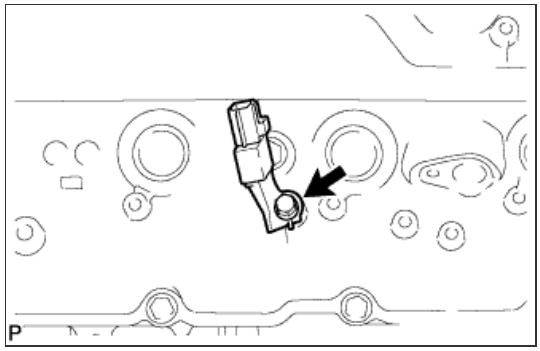
18. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY LH



a. Remove the 14 bolts, seal washer, cylinder head cover and gasket.

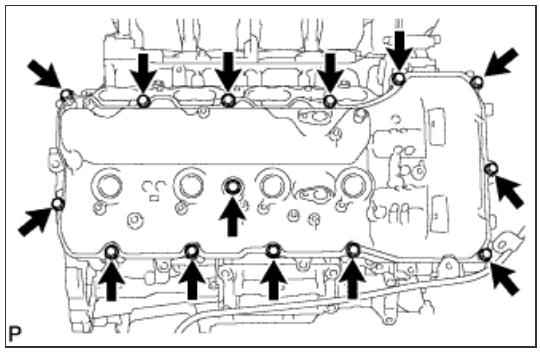
HINT:

Make sure the removed parts are returned to the same places they were removed from.

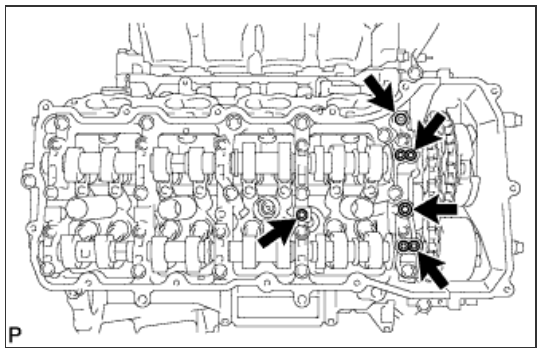


b. Remove the 5 gaskets from the camshaft bearing caps (No. 2, No. 3).

19. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY RH



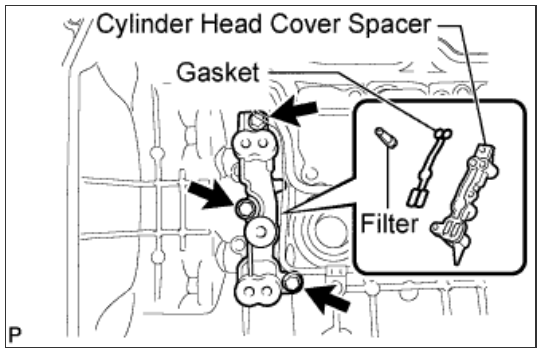
a. Remove the bolt and noise filter.



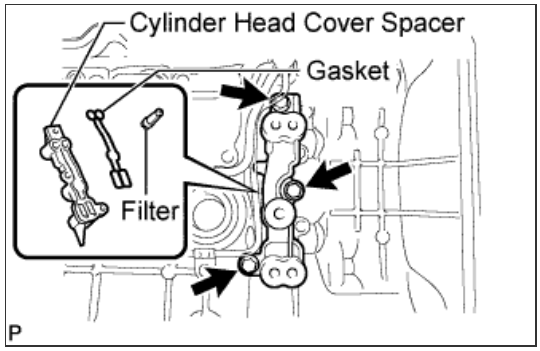
b. Remove the 14 bolts, seal washer, cylinder head cover and gasket.

HINT:

Make sure the removed parts are returned to the same places they were removed from.



c. Remove the 5 gaskets from the camshaft bearing caps (No. 1, No. 3).



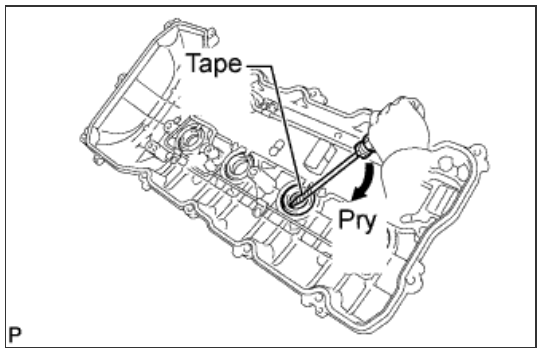
20. REMOVE OIL CONTROL VALVE FILTER

a. LH:
Remove the 3 bolts, cylinder head cover spacer, gasket and filter.

b. RH:
Remove the 3 bolts, cylinder head cover spacer, gasket and filter.

21. REMOVE SPARK PLUG TUBE GASKET

a. Bend the 4 ventilation baffle plate claws on the cylinder head cover to an angle of 90° or more.



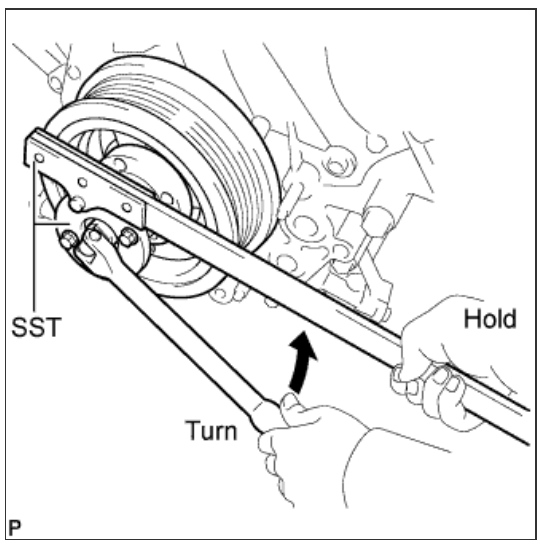
b. Using a screwdriver, pry out the gaskets.

HINT:

Tape the screwdriver tip before use.

NOTICE:

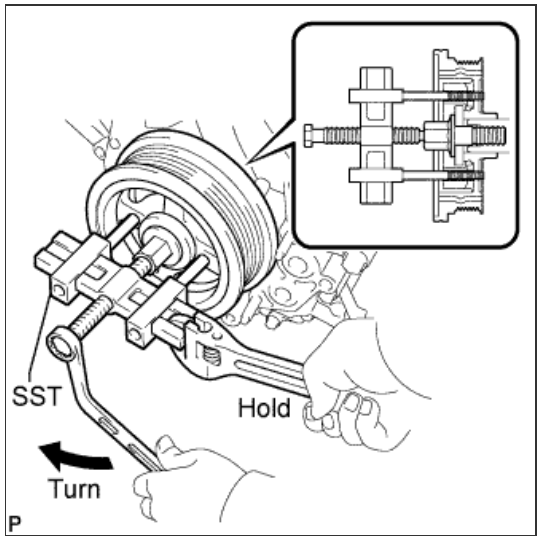
- **Be careful not to damage the cylinder head cover.**
- **Be careful not to damage the gasket when removing it, as the removed gasket needs to be used when installing a new one.**



22. REMOVE CRANKSHAFT PULLEY

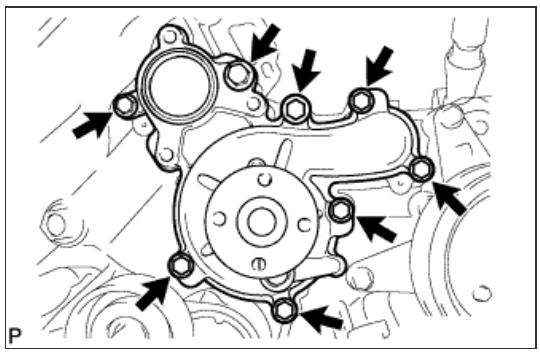
a. Using SST, loosen the crankshaft pulley set bolt until 2 or 3 threads are engaged.

SST



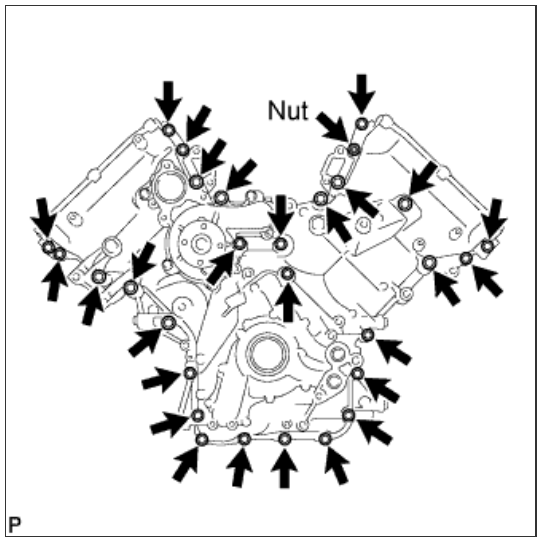
09213-70011 (09213-70020)
09330-00021

b. Using the pulley set bolt and SST, remove the crankshaft pulley.



SST

09950-50013 (09951-05010, 09952-05010, 09953-05010, 09954-05011)

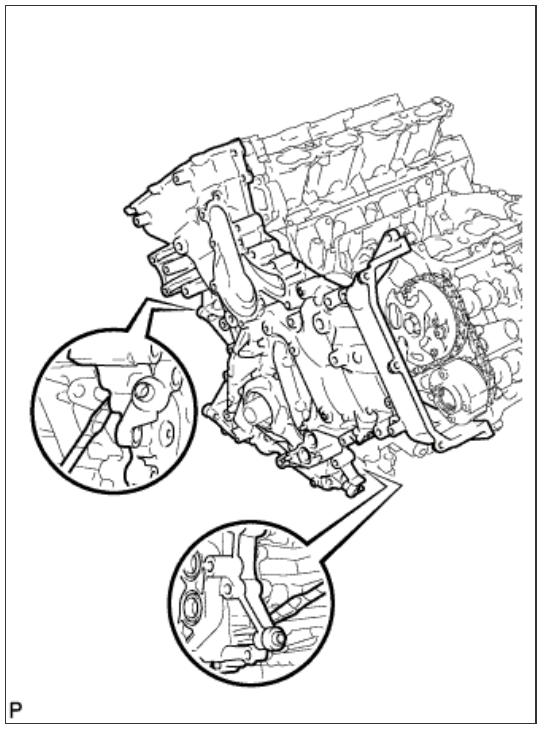


23. REMOVE WATER PUMP ASSEMBLY

a. Remove the 8 bolts, water pump and gasket.

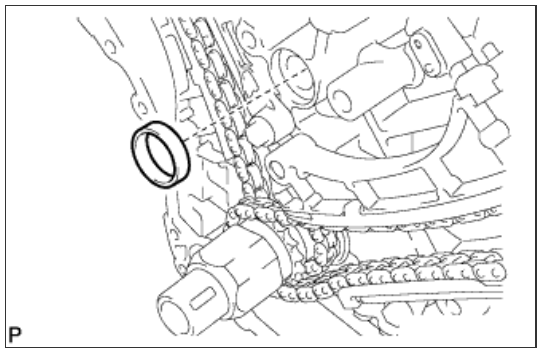
24. REMOVE TIMING CHAIN COVER SUB-ASSEMBLY

a. Remove the 28 bolts and nut shown in the illustration.



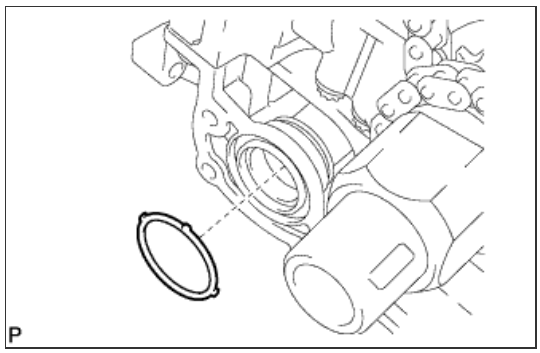
b. Remove the timing chain cover by prying between the timing chain cover and cylinder head or cylinder block with a screwdriver as shown in the illustration.

NOTICE:



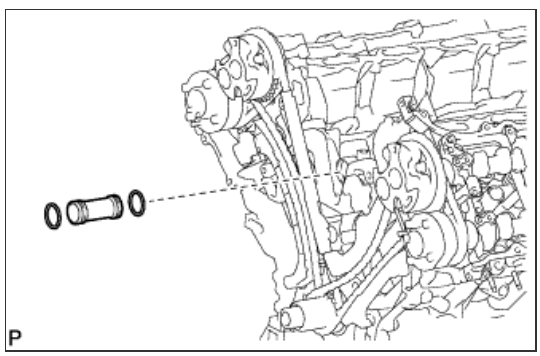
Be careful not to damage the contact surfaces of the cylinder head, cylinder block and chain cover.

HINT:



Tape the screwdriver tip before use.

c. Remove the oil pump gasket from the cylinder block.



d. Remove the O-ring from the oil pan.

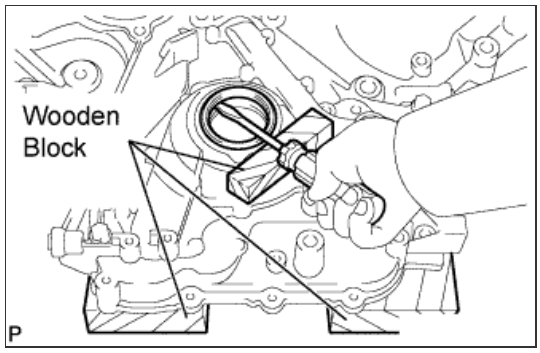
25. REMOVE WATER INLET PIPE

a. Remove the water inlet pipe.

b. Remove the 2 O-rings from the water inlet pipe.

26. REMOVE FRONT CRANKSHAFT OIL SEAL

a. Place the timing chain cover on wooden blocks.



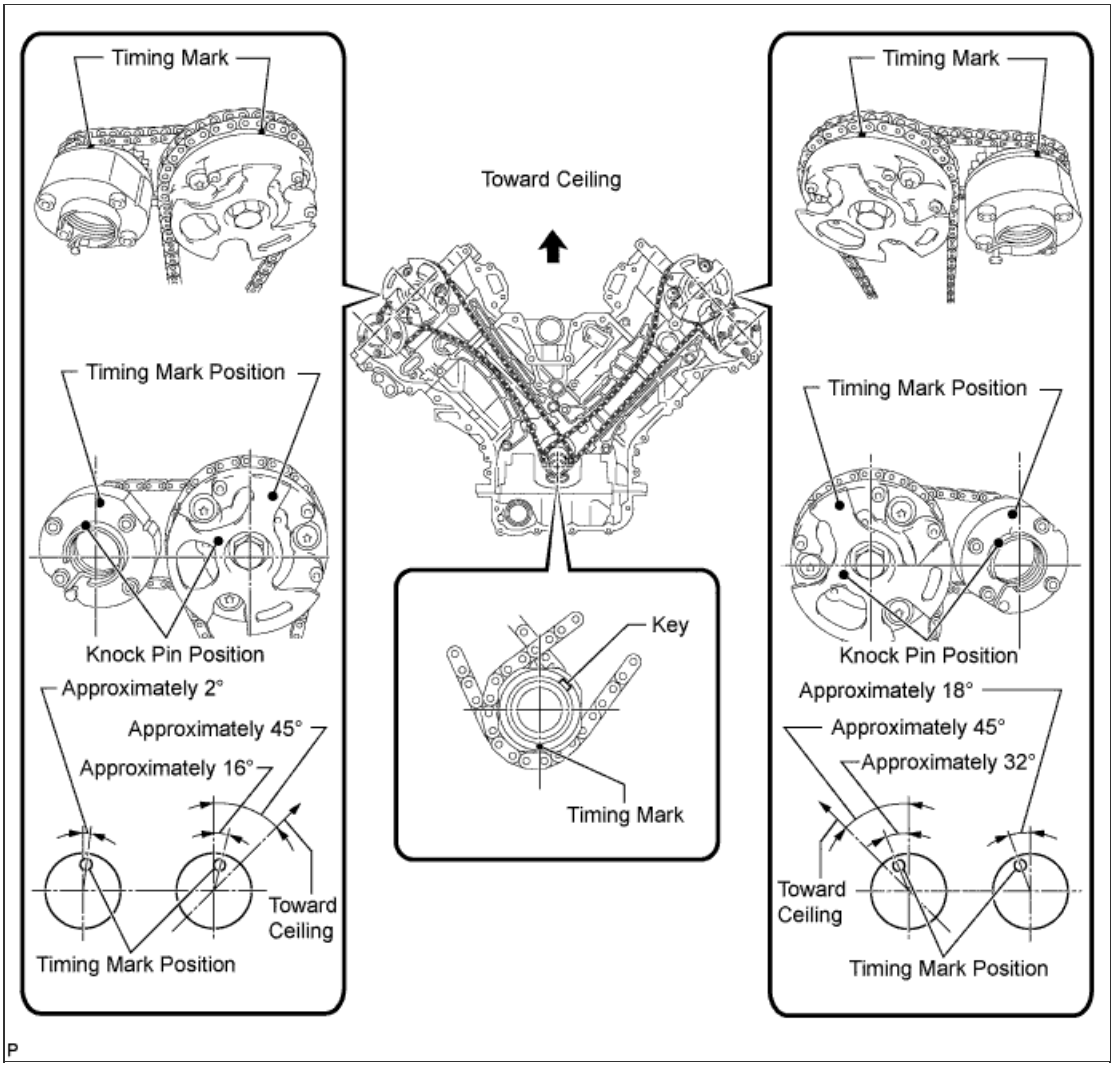
b. Using a screwdriver and wooden block, pry out the oil seal.

HINT:

Tape the screwdriver tip before use.

NOTICE:

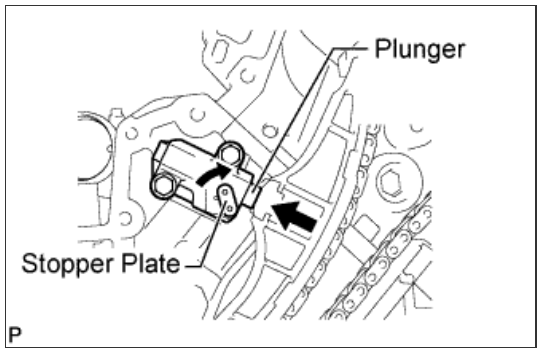
Do not damage the surface of the oil seal press fit hole.



27. SET NO. 1 CYLINDER TO TDC/COMPRESSION

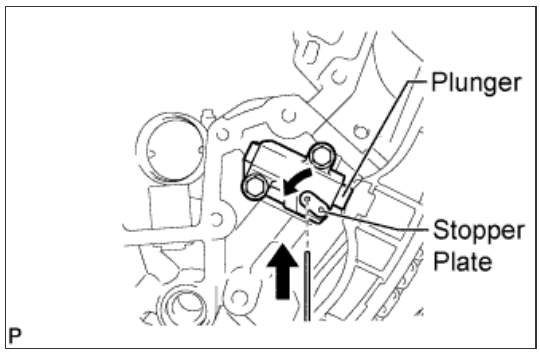
a. Temporarily install the crankshaft pulley bolt.

b. Rotate the crankshaft clockwise so that the timing marks on the crankshaft timing sprocket and camshaft timing gears are as shown in the illustration.

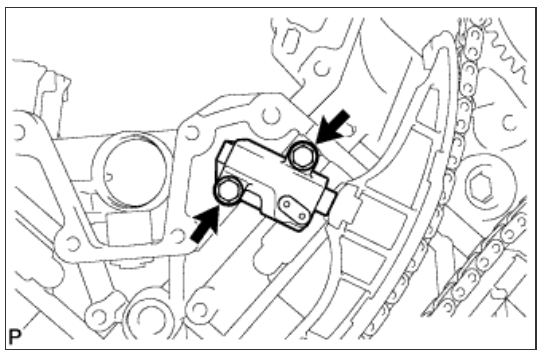


HINT:

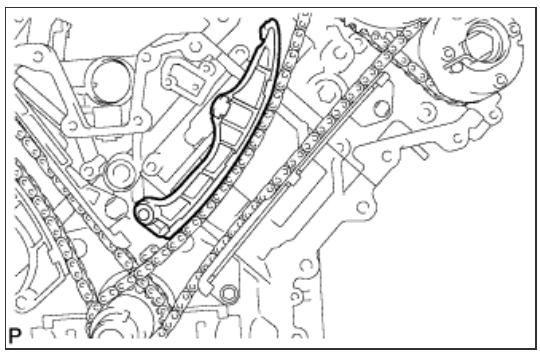
If the timing marks do not align, rotate the crankshaft clockwise again and align the timing marks.



28. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY LH

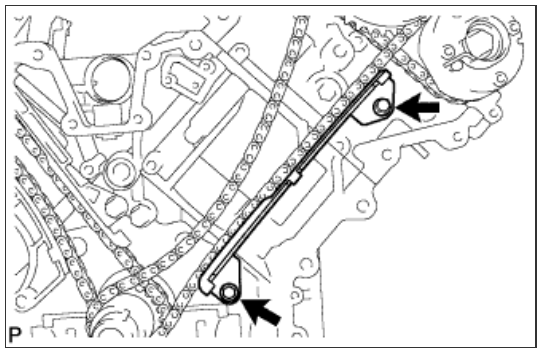


a. Move the stopper plate clockwise to release the lock, and push the plunger deep into the tensioner.

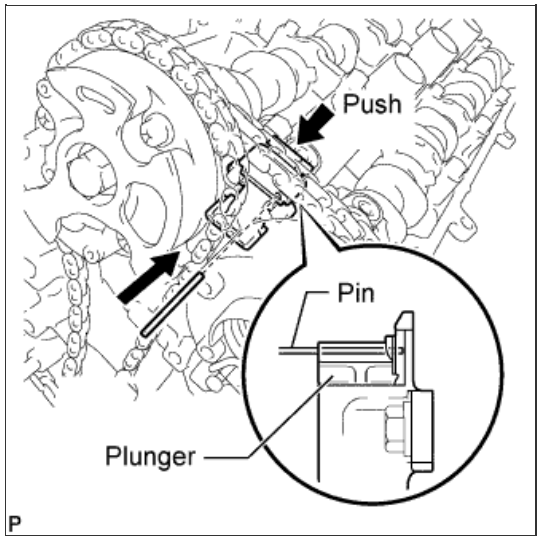


b. Move the stopper plate counterclockwise to set the lock, and insert a hexagon wrench into the stopper plate hole.

c. Remove the 2 bolts, chain tensioner and gasket.



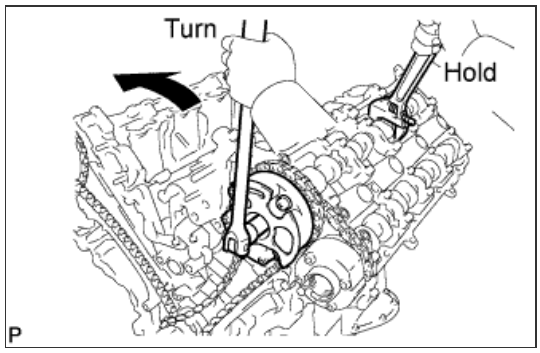
29. REMOVE NO. 1 CHAIN TENSIONER SLIPPER LH



30. REMOVE NO. 1 CHAIN VIBRATION DAMPER LH

a. Remove the 2 bolts and chain vibration damper.

31. REMOVE NO. 1 CHAIN SUB-ASSEMBLY LH

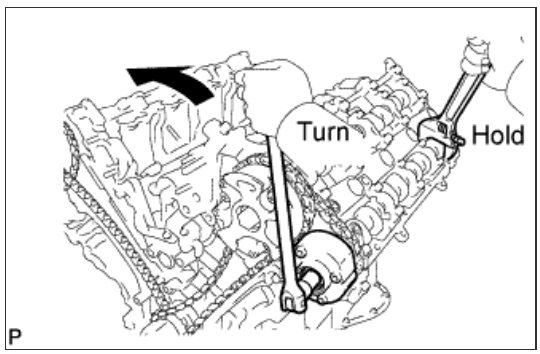


a. While pushing down the No. 3 chain tensioner, insert a pin of φ1.0 mm (0.0394 in.) into the hole to fix it in place.

b. Hold the hexagonal portion of the camshaft with a wrench and loosen the bolt.

NOTICE:

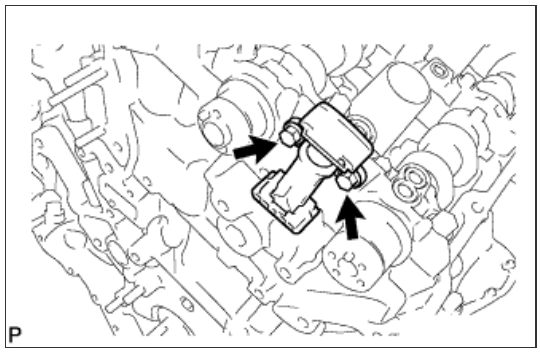
- **Be careful not to damage the cylinder head with the wrench.**
- **Do not disassemble the camshaft timing gear.**



c. Hold the hexagonal portion of the camshaft with a wrench and loosen the bolt.

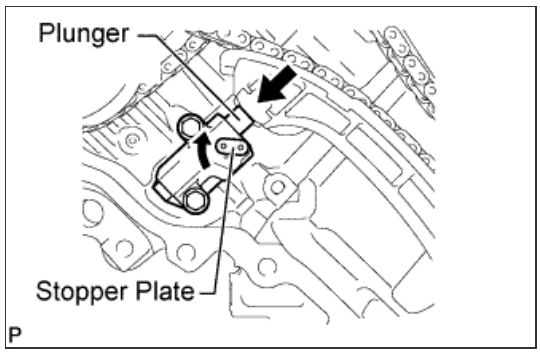
NOTICE:

Be careful not to damage the cylinder head with the wrench.



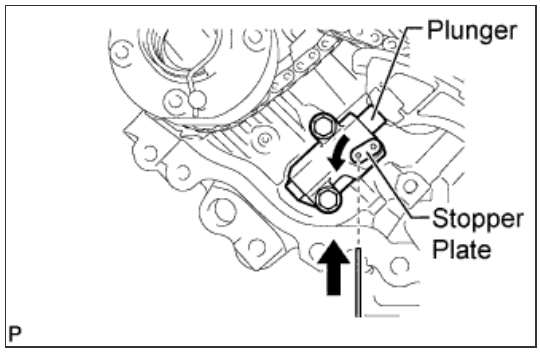
d. Remove the 2 bolts. Then with the No. 1 and No. 2 chains still connected to the gears, remove the camshaft timing gear, camshaft timing exhaust gear and crankshaft timing sprocket LH.

e. Remove the No. 1 and No. 2 chains from the gears.

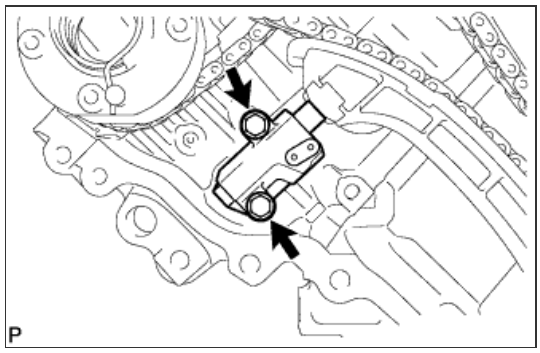


32. REMOVE NO. 3 CHAIN TENSIONER ASSEMBLY

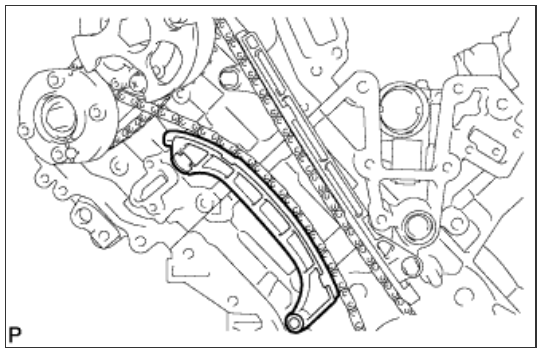
a. Remove the 2 bolts and chain tensioner.



33. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY RH

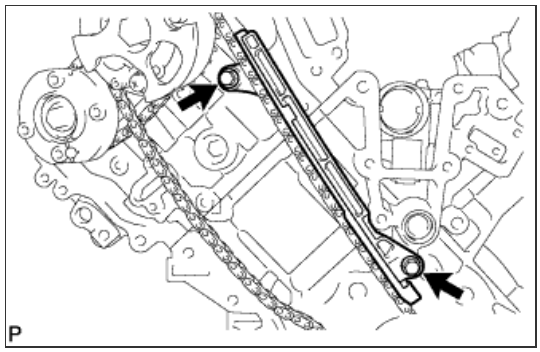


a. Move the stopper plate clockwise to release the lock, and push the plunger deep into the tensioner.

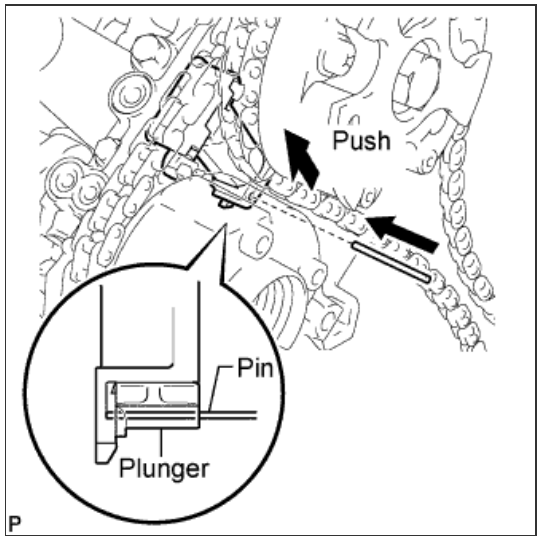


b. Move the stopper plate counterclockwise to set the lock, and insert a hexagon wrench into the stopper plate hole.

c. Remove the 2 bolts and chain tensioner.



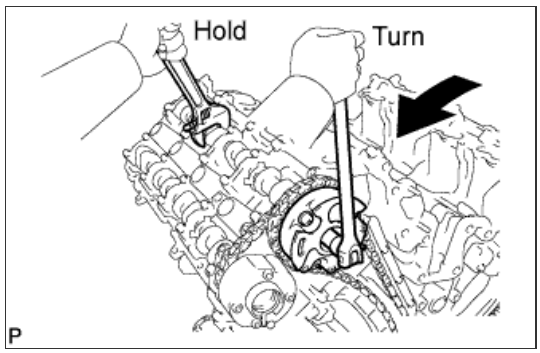
34. REMOVE NO. 1 CHAIN TENSIONER SLIPPER RH



35. REMOVE NO. 1 CHAIN VIBRATION DAMPER RH

a. Remove the 2 bolts and vibration damper.

36. REMOVE NO. 1 CHAIN SUB-ASSEMBLY RH

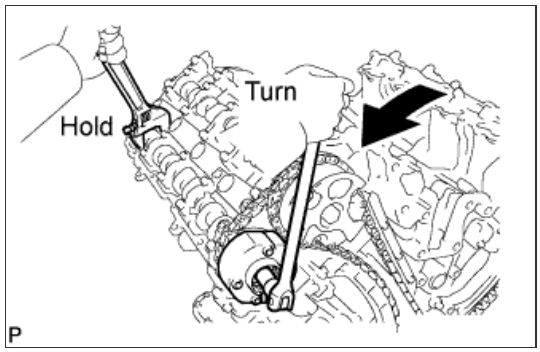


a. While raising up the No. 2 chain tensioner, insert a pin of φ1.0 mm (0.0394 in.) into the hole to fix it in place.

b. Hold the hexagonal portion of the camshaft with a wrench and loosen the bolt.

NOTICE:

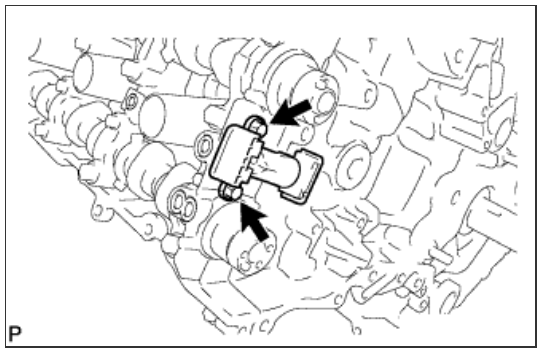
- **Be careful not to damage the cylinder head with the wrench.**
- **Do not disassemble the camshaft timing gear.**



c. Hold the hexagonal portion of the camshaft with a wrench and loosen the bolt.

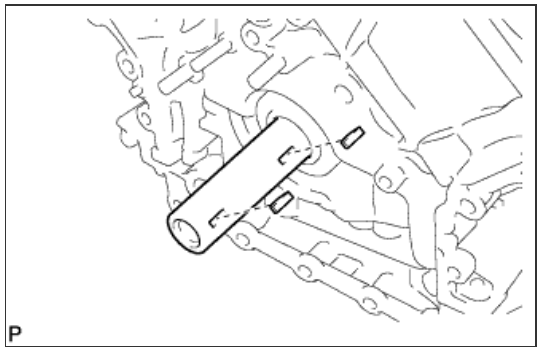
NOTICE:

Be careful not to damage the cylinder head with the wrench.



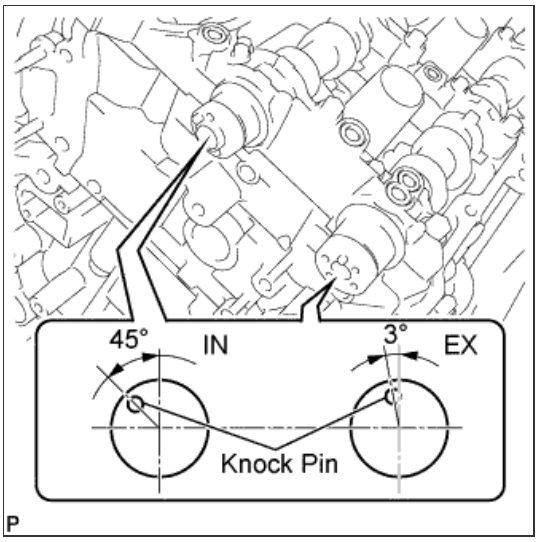
d. Remove the 2 bolts. Then with the No. 1 and No. 2 chains still connected to the gears, remove the camshaft timing gear, camshaft timing exhaust gear and crankshaft timing sprocket RH.

e. Remove the No. 1 and No. 2 chains from the gears.



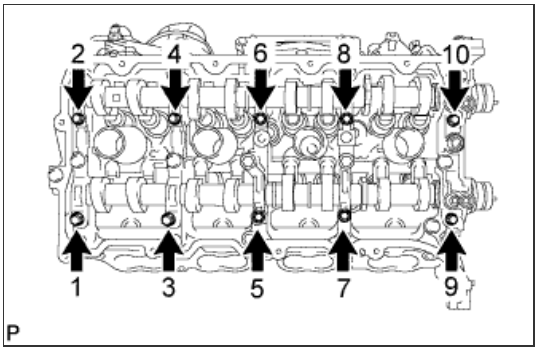
37. REMOVE NO. 2 CHAIN TENSIONER ASSEMBLY

a. Remove the 2 bolts and chain tensioner.



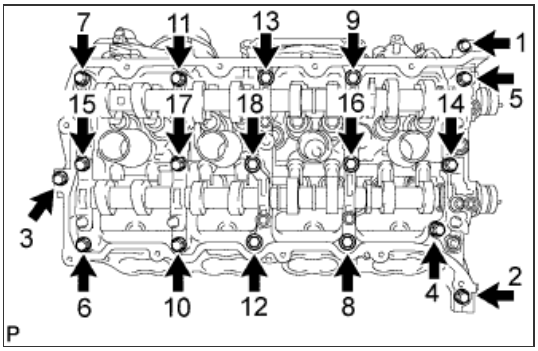
38. REMOVE CRANKSHAFT TIMING GEAR KEY

a. Using a screwdriver, remove the 2 timing gear keys from the crankshaft.



39. REMOVE CAMSHAFT BEARING CAP LH

a. Make sure that the knock pin of the camshaft is positioned as shown in the illustration.



b. Uniformly loosen and remove the 10 bearing cap bolts in the sequence shown in the illustration.

c. Uniformly loosen and remove the 18 bearing cap bolts in the sequence shown in the illustration.

NOTICE:

Uniformly loosen the bolts while keeping the camshaft level.

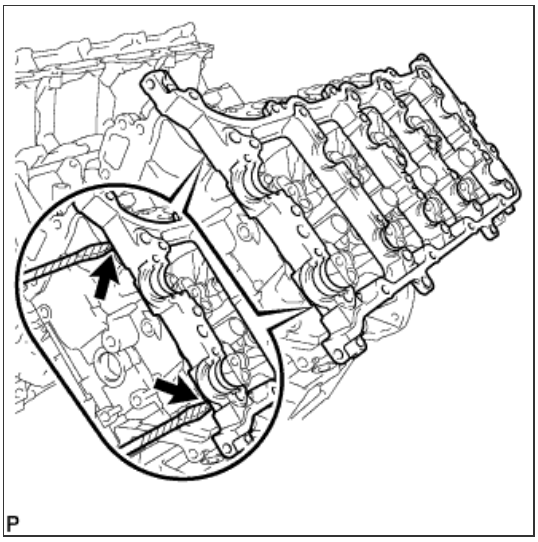
d. Remove the 6 bearing caps.

HINT:

Arrange the removed parts in the correct order.

e. Remove the No. 3 and No. 4 camshafts.

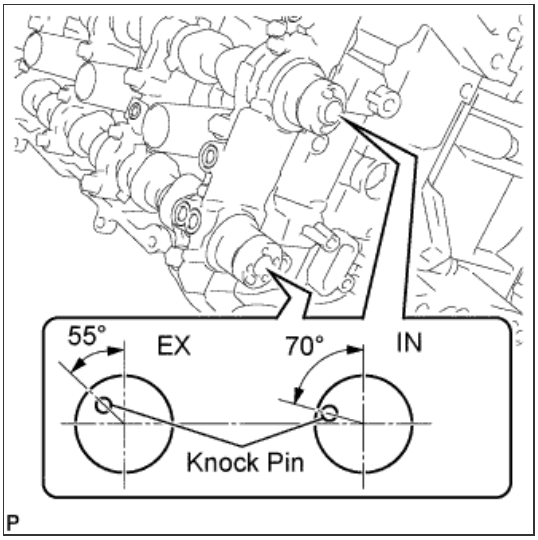
40. REMOVE CAMSHAFT HOUSING SUB-ASSEMBLY LH



a. Remove the camshaft housing by prying between the cylinder head and camshaft housing with a screwdriver.

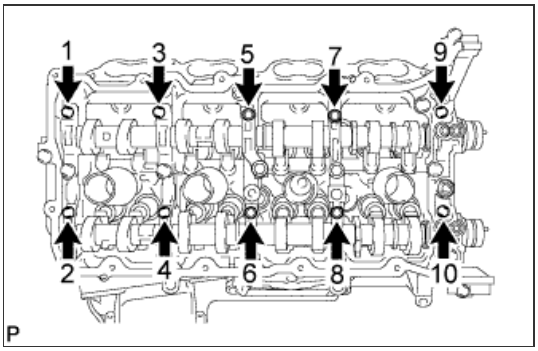
HINT:

Tape the screwdriver tip before use.



NOTICE:

Be careful not to damage the contact surfaces of the cylinder head and camshaft housing.



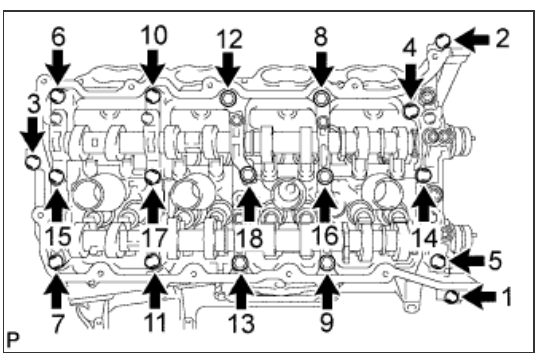
41. REMOVE CAMSHAFT BEARING CAP RH

a. Make sure that the knock pin of the camshaft is positioned as shown in the illustration.

b. Uniformly loosen and remove the 10 bearing cap bolts in the sequence shown in the illustration.

c. Uniformly loosen and remove the 18 bearing cap bolts in the sequence shown in the illustration.

NOTICE:



Uniformly loosen the bolts while keeping the camshaft level.

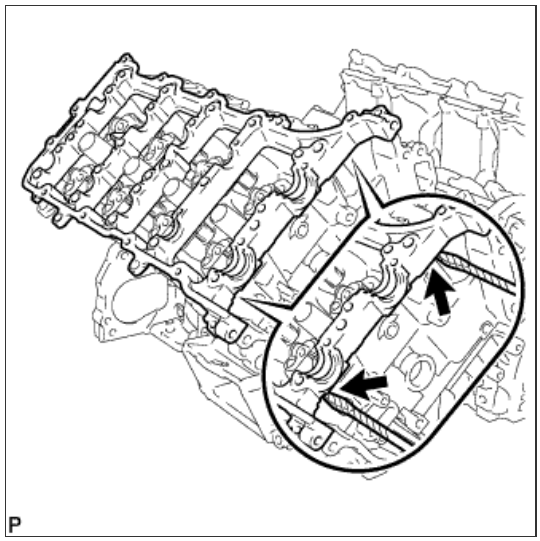
d. Remove the 6 bearing caps.

HINT:

Arrange the removed parts in the correct order.

e. Remove the No. 1 and No. 2 camshafts.

42. REMOVE CAMSHAFT HOUSING SUB-ASSEMBLY RH



a. Remove the camshaft housing by prying between the cylinder head and camshaft housing with a screwdriver.

HINT:

Tape the screwdriver tip before use.

NOTICE:

Be careful not to damage the contact surfaces of the cylinder head and camshaft housing.

43. REMOVE NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY

a. Remove the 32 valve rocker arms from the cylinder heads.

HINT:

Arrange the removed parts in the correct order.

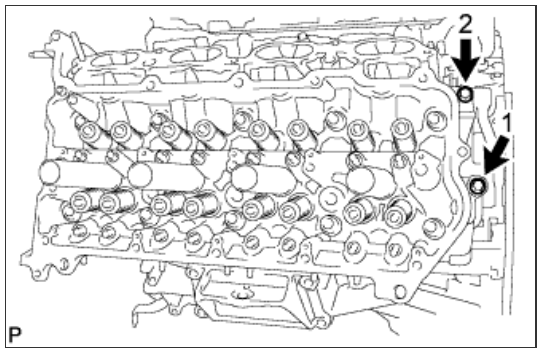
44. REMOVE VALVE LASH ADJUSTER ASSEMBLY

a. Remove the 32 valve lash adjusters from the cylinder heads.

HINT:

Arrange the removed parts in the correct order.

45. REMOVE VALVE STEM CAP



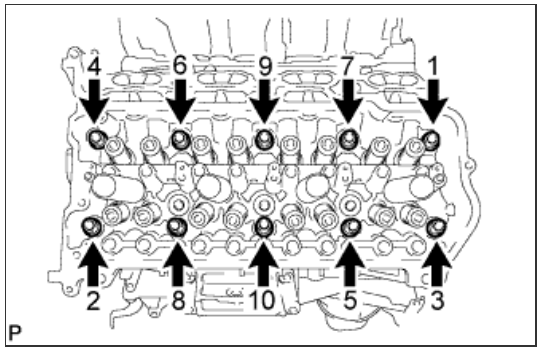
a. Remove the 32 valve stem caps from the cylinder heads.

HINT:

Arrange the removed parts in the correct order.

46. REMOVE CYLINDER HEAD SUB-ASSEMBLY LH

a. Uniformly loosen and remove the 2 bolts in the sequence shown in the illustration.

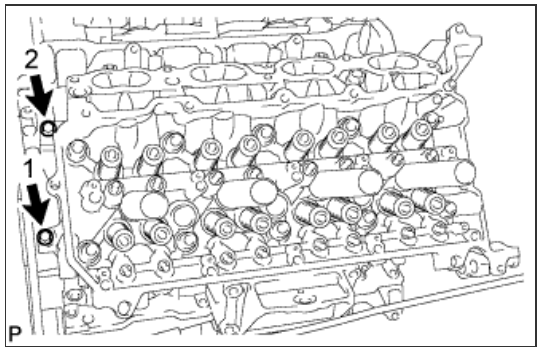


b. Using a 10 mm bi-hexagon wrench, uniformly loosen the 10 cylinder head bolts in the sequence shown in the illustration. Remove the 10 cylinder head bolts and plate washers.

HINT:

Be sure to arrange the removed parts for each installation position separately.

NOTICE:

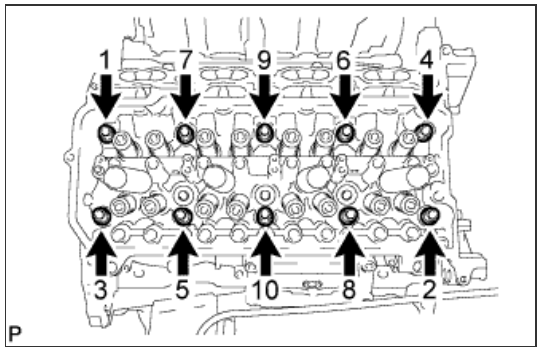


- **Be careful not to drop washers into the cylinder head.**
- **Head warpage or cracking could result from removing bolts in an incorrect order.**

c. Remove the cylinder head and gasket.

47. REMOVE CYLINDER HEAD SUB-ASSEMBLY RH

a. Uniformly loosen and remove the 2 bolts in the sequence shown in the illustration.



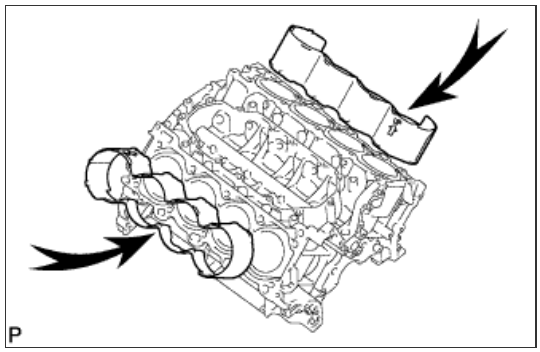
b. Using a 10 mm bi-hexagon wrench, uniformly loosen the 10 cylinder head bolts in the sequence shown in the illustration. Remove the 10 cylinder head bolts and plate washers.

HINT:

Be sure to arrange the removed parts for each installation position separately.

NOTICE:

- **Be careful not to drop washers into the cylinder head.**
- **Head warpage or cracking could result from removing bolts in an incorrect order.**



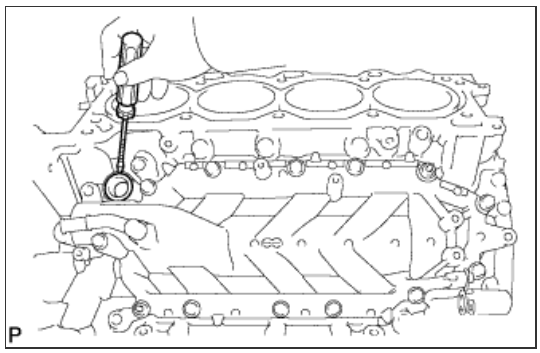
c. Remove the cylinder head and gasket.

48. REMOVE CYLINDER BLOCK WATER JACKET SPACER

a. Remove the 2 water jacket spacers from the cylinder block.

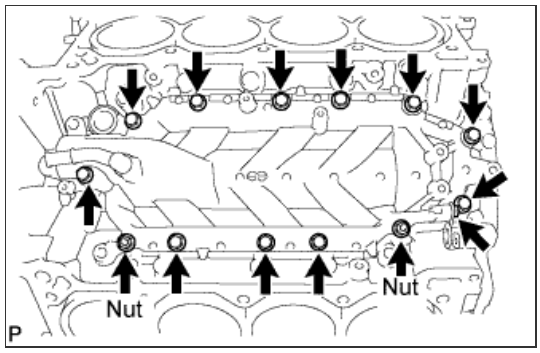
NOTICE:

Be sure to remove the water jacket spacers. If not, they may fall and become damaged when the cylinder block is inverted.



49. REMOVE VENTILATION PIPE GASKET

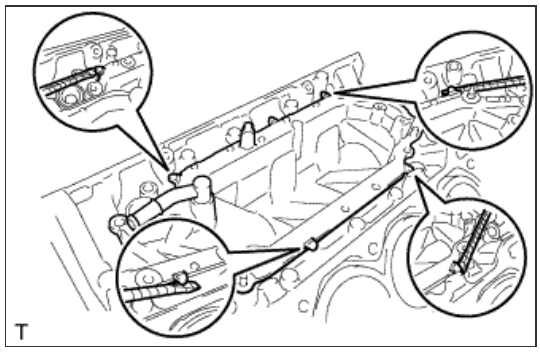
a. Using a screwdriver, pry out the ventilation pipe gasket.



HINT:

Tape the screwdriver tip before use.

50. REMOVE NO. 1 HEAT EXCHANGER COVER

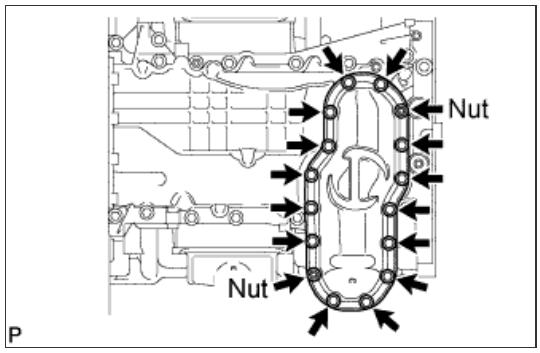


a. Remove the 12 bolts and 2 nuts.

b. Remove the heat exchanger by prying between the heat exchanger and cylinder block with a screwdriver.

HINT:

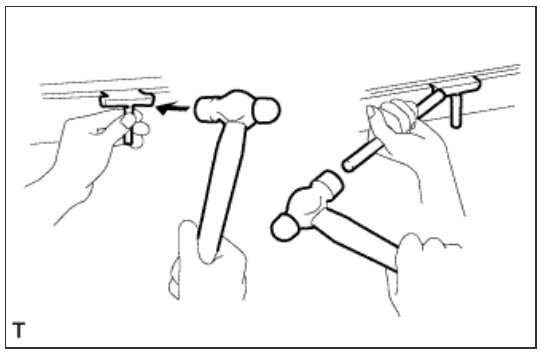
Tape the screwdriver tip before use.



51. REMOVE NO. 2 OIL PAN SUB-ASSEMBLY

a. Remove the engine oil level sensor (Click here).

b. Remove the 14 bolts and 2 nuts.

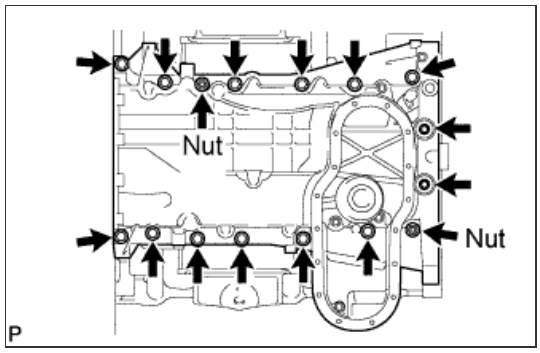


b. Remove the 14 bolts and 2 nuts.

c. Insert the blade of an oil pan seal cutter between the oil pans. Cut through the applied sealer and remove the No. 2 oil pan.

NOTICE:

Be careful not to damage the contact surfaces of the oil pans.

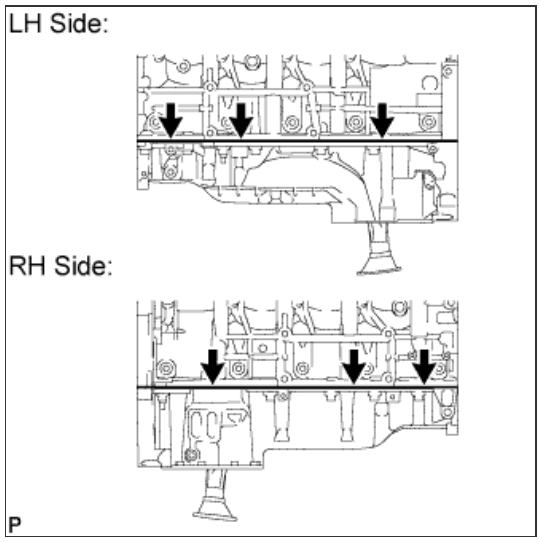


52. REMOVE NO. 1 OIL PAN SUB-ASSEMBLY

a. Remove the 14 bolts and 2 nuts.

HINT:

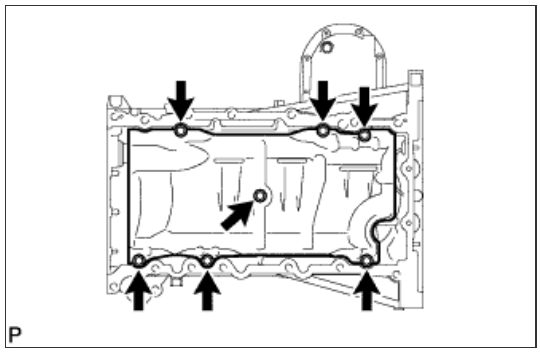
Be sure to clean the bolts and stud bolts, and check the threads for cracks or other damage.



b. Remove the oil pan by prying between the oil pan and cylinder block with a screwdriver.

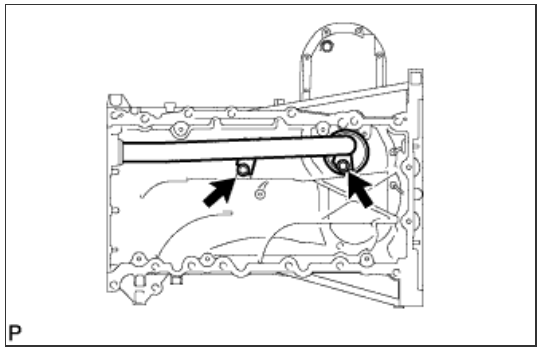
HINT:

Tape the screwdriver tip before use.



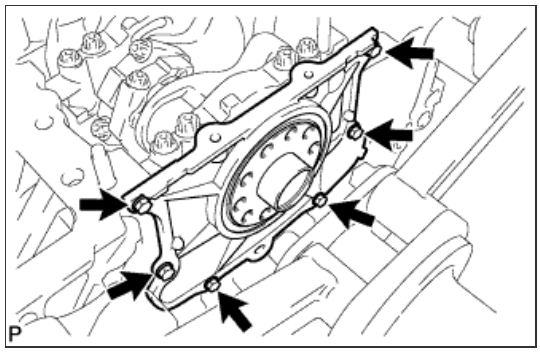
NOTICE:

Be careful not to damage the contact surfaces of the cylinder block and oil pan.



53. REMOVE NO. 1 OIL PAN BAFFLE PLATE

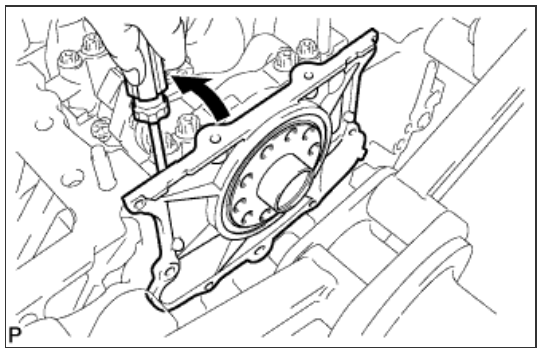
a. Remove the 7 bolts and baffle plate.



54. REMOVE OIL STRAINER SUB-ASSEMBLY

a. Remove the 2 bolts, oil strainer and O-ring.

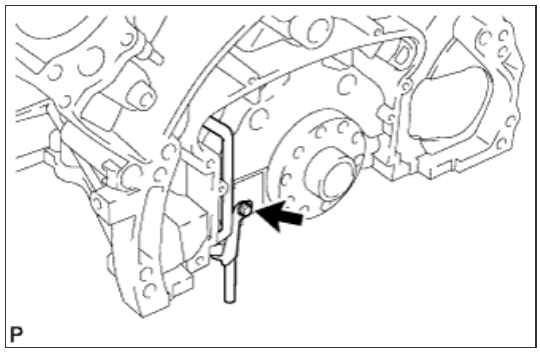
55. REMOVE ENGINE REAR OIL SEAL RETAINER



a. Remove the 6 bolts and oil seal retainer.

b. Using a screwdriver, pry out the oil seal retainer.

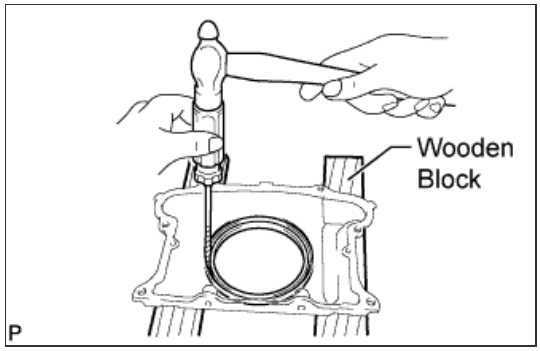
HINT:



Tape the screwdriver tip before use.

56. REMOVE OIL DRAIN PIPE SUB-ASSEMBLY

a. Remove the bolt and oil drain pipe.



b. Remove the O-ring.

57. REMOVE REAR CRANKSHAFT OIL SEAL

a. Place the oil seal retainer on wooden blocks.

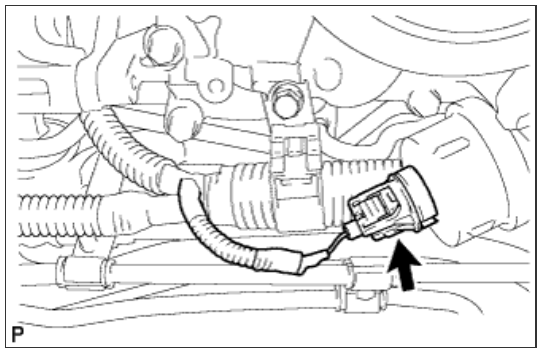
b. Using a screwdriver and hammer, tap out the oil seal.

58. REMOVE RING PIN

NOTICE:

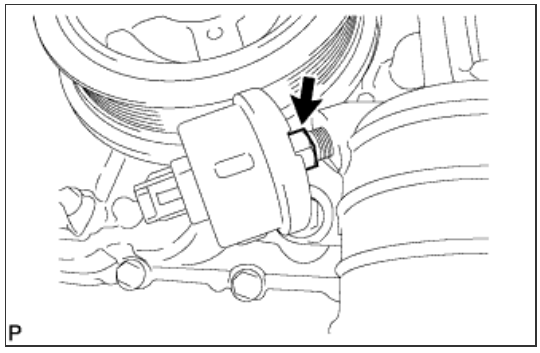
It is not necessary to remove the ring pin unless it is being replaced.

59. REMOVE STUD BOLT



NOTICE:

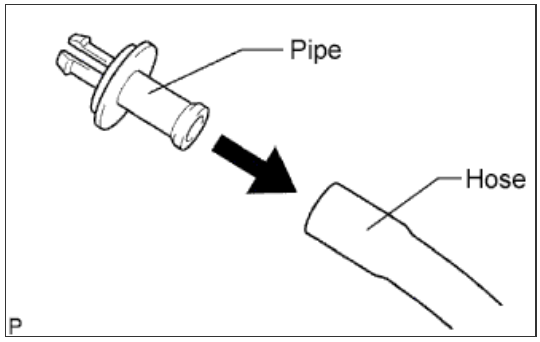
If the stud bolt is deformed or its threads are damaged, replace it.



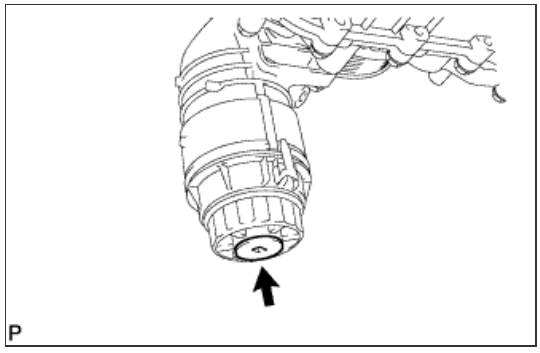
for Preparation Click here

1. REMOVE OIL PRESSURE SENDER GAUGE ASSEMBLY

a. Disconnect the sender gauge connector.



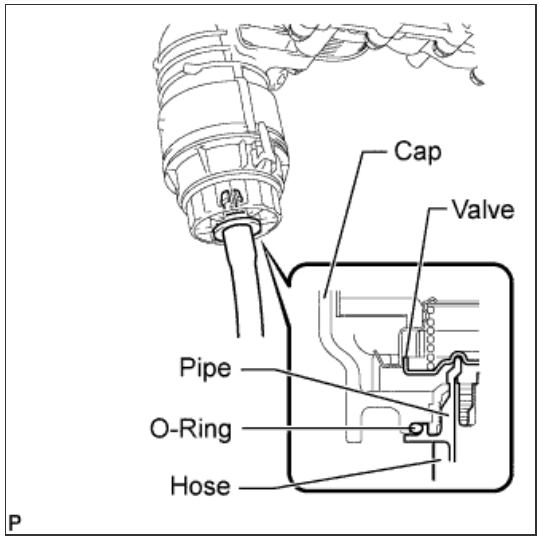
b. Remove the oil pressure sender gauge.



2. REMOVE OIL FILTER ELEMENT

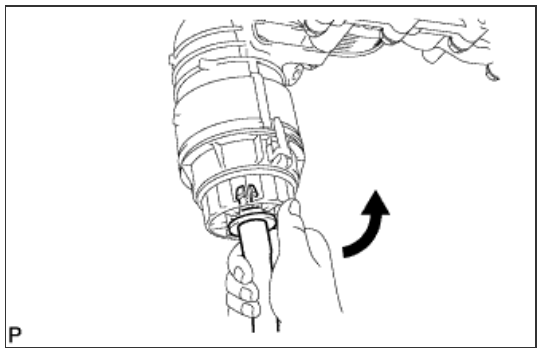
a. Connect a hose with an inside diameter of 15 mm (0.591 in.) to the pipe.

b. Remove the oil filter drain plug.



c. Install the pipe to the oil filter cap.

NOTICE:

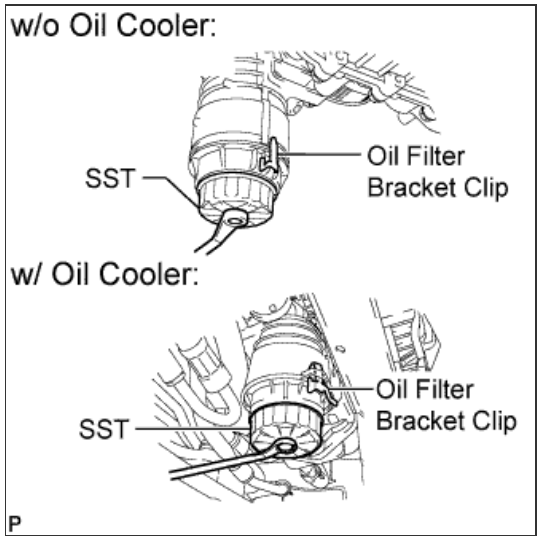


If the O-ring is removed with the drain plug, install the O-ring together with the pipe.

HINT:

Use a container to catch the draining oil.

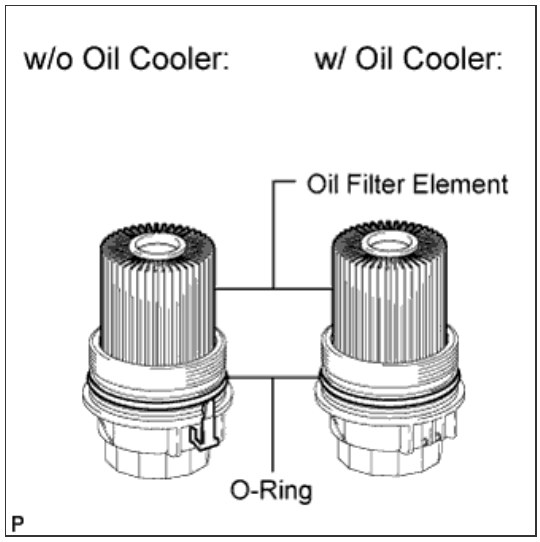
d. Check that oil is drained from the oil filter. Then disconnect the pipe and remove the O-ring as shown in the illustration.



e. Using SST, remove the oil filter cap.

SST
09228-06501

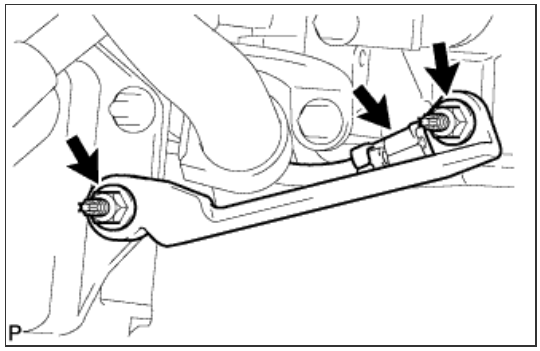
NOTICE:



Do not remove the oil filter bracket clip.

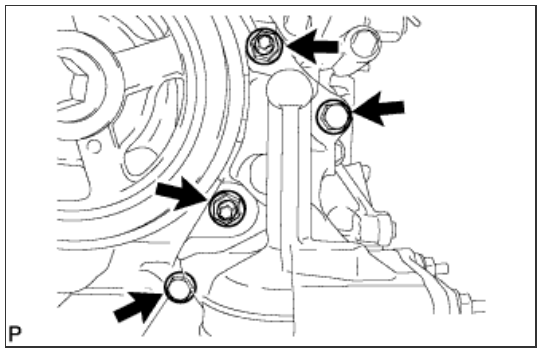
f. Remove the oil filter element and O-ring from the oil filter cap.

NOTICE:



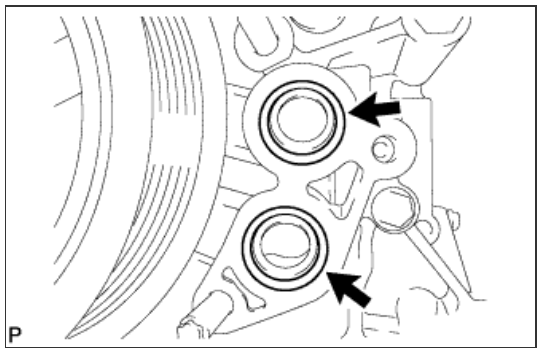
Be sure to remove the cap O-ring by hand, without using any tools, to prevent damage to the cap O-ring groove.

3. REMOVE NO. 1 OIL COOLER BRACKET (w/ Oil Cooler)



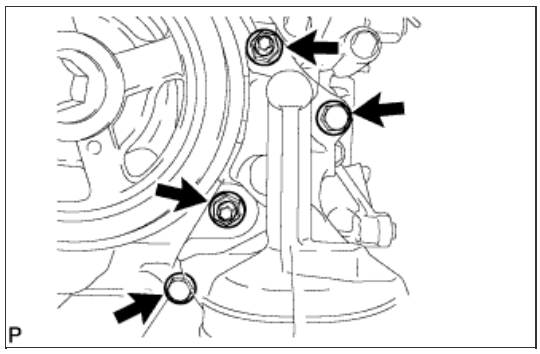
a. Remove the 2 nuts and bracket.

b. Disconnect the ground wire from the cylinder block.

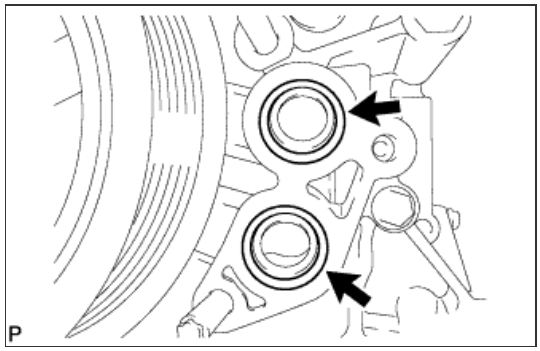


4. REMOVE OIL FILTER BRACKET (w/ Oil Cooler)

a. Remove the 2 bolts, 2 nuts and filter bracket.

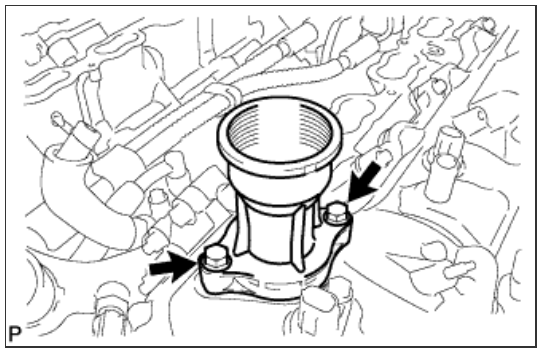


b. Remove the 2 O-rings.



5. REMOVE OIL FILTER BRACKET (w/o Oil Cooler)

a. Remove the 2 bolts, 2 nuts and oil filter bracket.

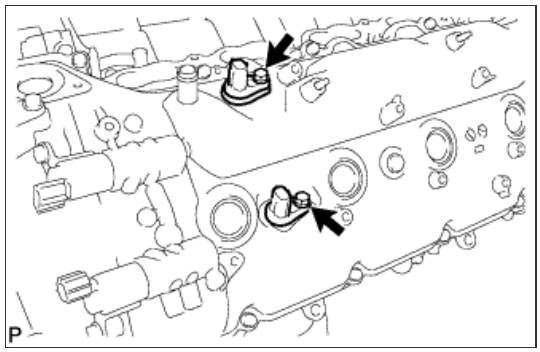


b. Remove the 2 O-rings.

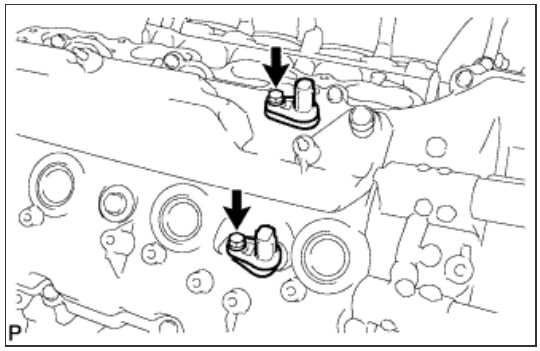
6. REMOVE OIL FILLER CAP SUB-ASSEMBLY

7. REMOVE OIL FILLER CAP HOUSING

a. Remove the 2 bolts, filler cap housing and gasket.



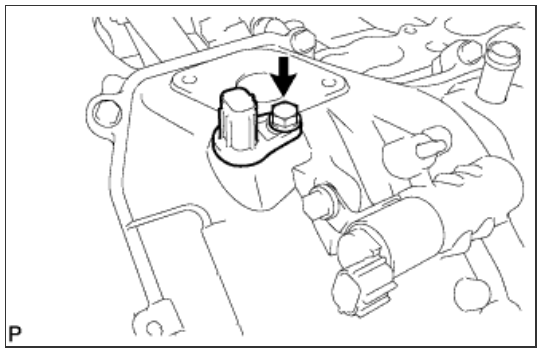
8. REMOVE SPARK PLUG



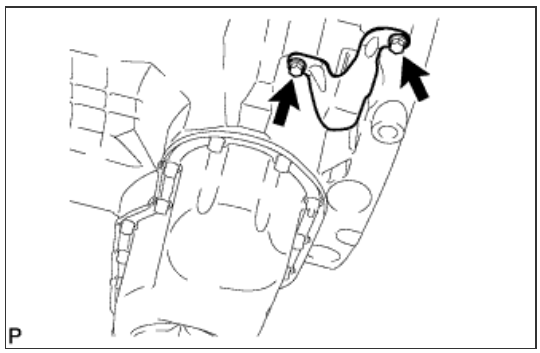
a. Using a 16 mm plug wrench, remove the 8 spark plugs.

9. REMOVE VVT SENSOR

a. LH:
Remove the 2 bolts and 2 VVT sensors.

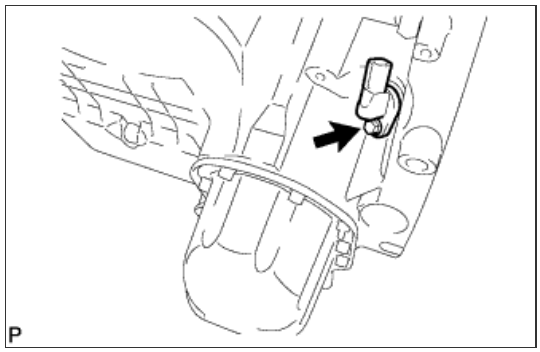


b. RH:
Remove the 2 bolts and 2 VVT sensors.



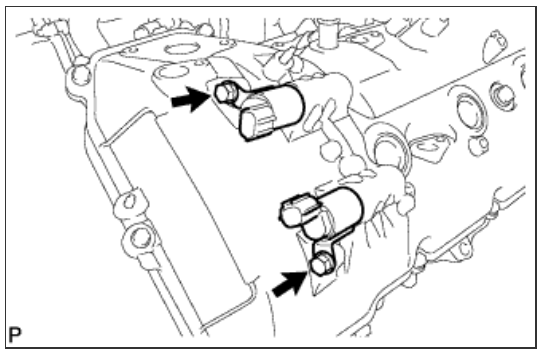
10. REMOVE CAMSHAFT POSITION SENSOR

a. Remove the bolt and camshaft position sensor.



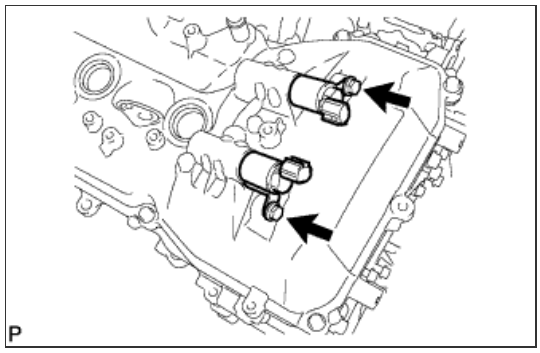
11. REMOVE CRANK POSITION SENSOR PROTECTOR

a. Remove the 2 bolts and sensor protector.



12. REMOVE CRANKSHAFT POSITION SENSOR

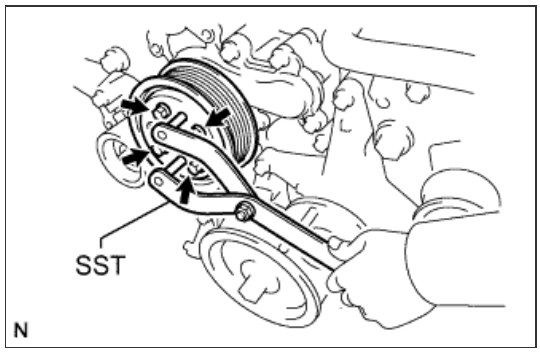
a. Remove the bolt and crankshaft position sensor.



13. REMOVE CAMSHAFT OIL CONTROL VALVE ASSEMBLY

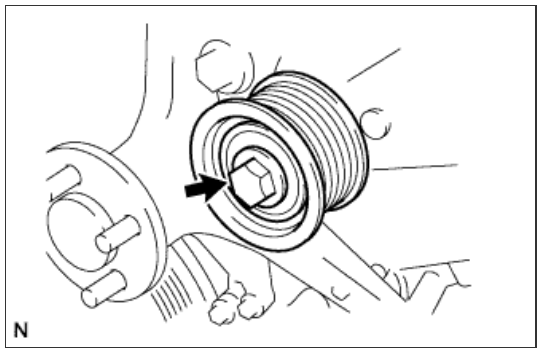
a. LH:
Remove the 2 bolts and 2 oil control valves.

b. RH:
Remove the 2 bolts and 2 oil control valves.



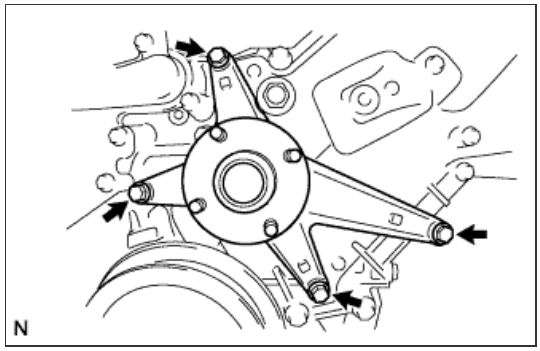
14. REMOVE WATER PUMP PULLEY

a. Using SST, hold the water pump pulley.



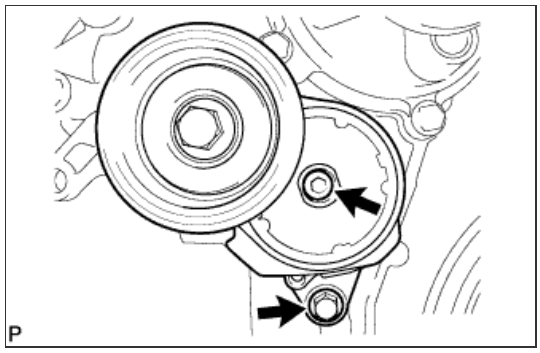
SST
09960-10010 (09962-01000, 09963-01000)

b. Remove the 4 bolts and water pump pulley.



15. REMOVE NO. 1 IDLER PULLEY SUB-ASSEMBLY

a. Remove the bolt and idler pulley.

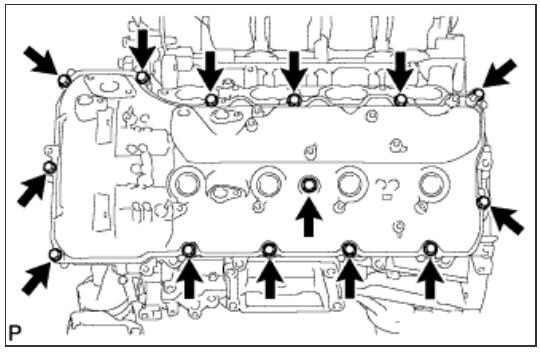


16. REMOVE FLUID COUPLING BRACKET

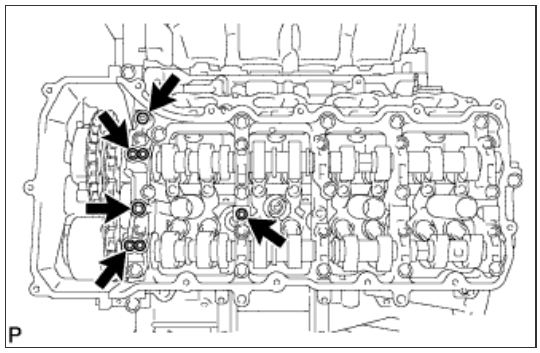
a. Remove the 4 bolts and fluid coupling bracket.

17. REMOVE V-RIBBED BELT TENSIONER ASSEMBLY

a. Remove the standard bolt, 6 mm hexagon wrench bolt and belt tensioner.



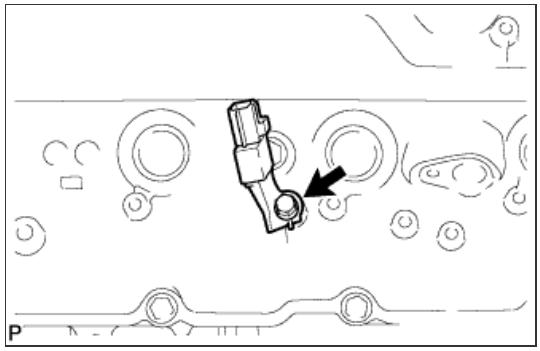
18. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY LH



a. Remove the 14 bolts, seal washer, cylinder head cover and gasket.

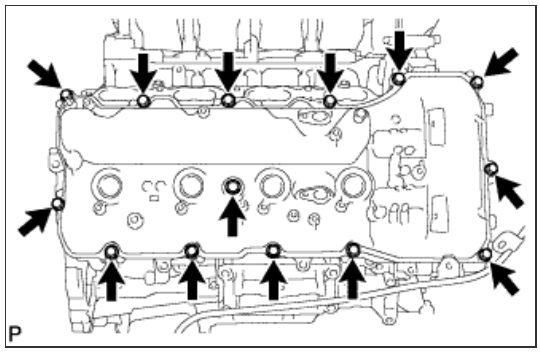
HINT:

Make sure the removed parts are returned to the same places they were removed from.

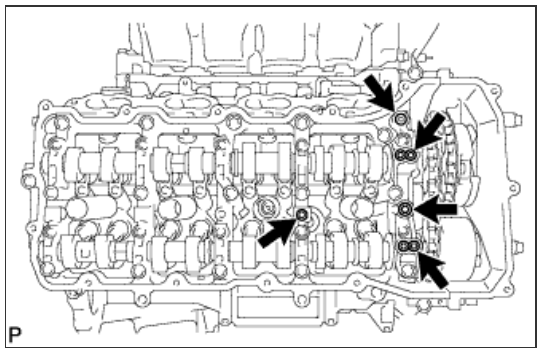


b. Remove the 5 gaskets from the camshaft bearing caps (No. 2, No. 3).

19. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY RH



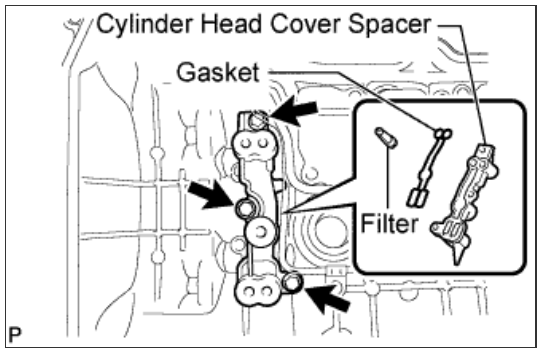
a. Remove the bolt and noise filter.



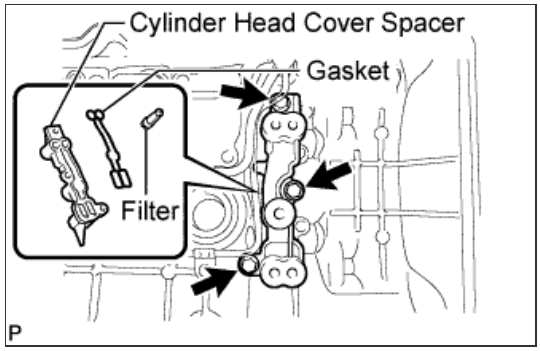
b. Remove the 14 bolts, seal washer, cylinder head cover and gasket.

HINT:

Make sure the removed parts are returned to the same places they were removed from.



c. Remove the 5 gaskets from the camshaft bearing caps (No. 1, No. 3).



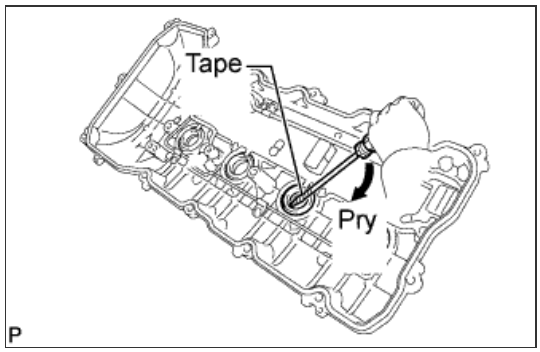
20. REMOVE OIL CONTROL VALVE FILTER

a. LH:
Remove the 3 bolts, cylinder head cover spacer, gasket and filter.

b. RH:
Remove the 3 bolts, cylinder head cover spacer, gasket and filter.

21. REMOVE SPARK PLUG TUBE GASKET

a. Bend the 4 ventilation baffle plate claws on the cylinder head cover to an angle of 90° or more.



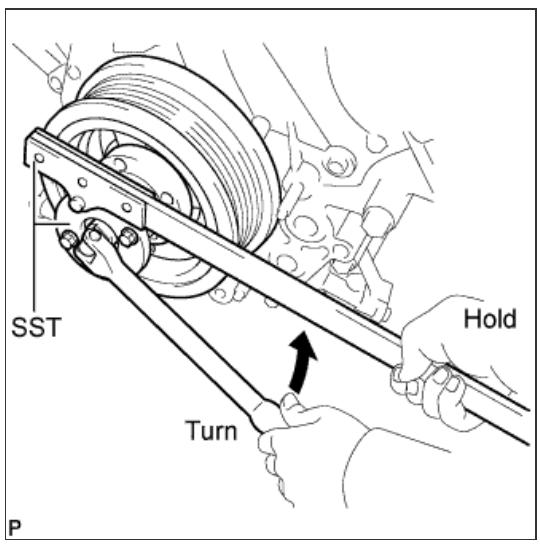
b. Using a screwdriver, pry out the gaskets.

HINT:

Tape the screwdriver tip before use.

NOTICE:

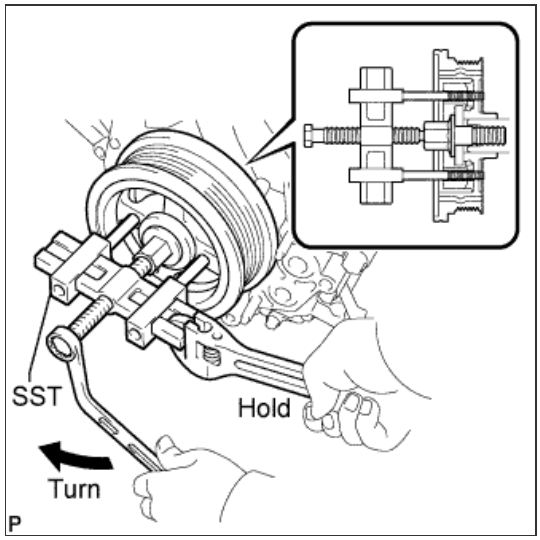
- **Be careful not to damage the cylinder head cover.**
- **Be careful not to damage the gasket when removing it, as the removed gasket needs to be used when installing a new one.**



22. REMOVE CRANKSHAFT PULLEY

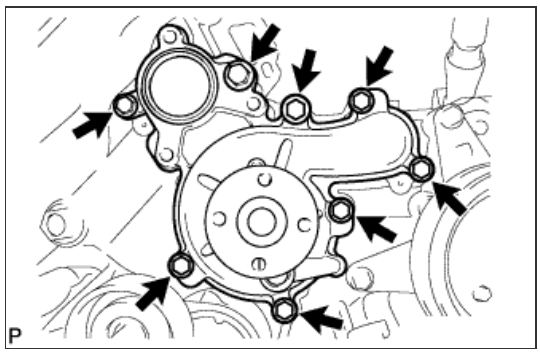
a. Using SST, loosen the crankshaft pulley set bolt until 2 or 3 threads are engaged.

SST



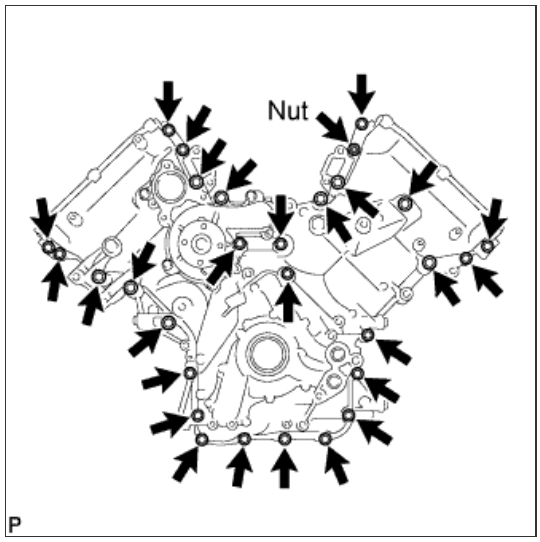
09213-70011 (09213-70020)
09330-00021

b. Using the pulley set bolt and SST, remove the crankshaft pulley.



SST

09950-50013 (09951-05010, 09952-05010, 09953-05010, 09954-05011)

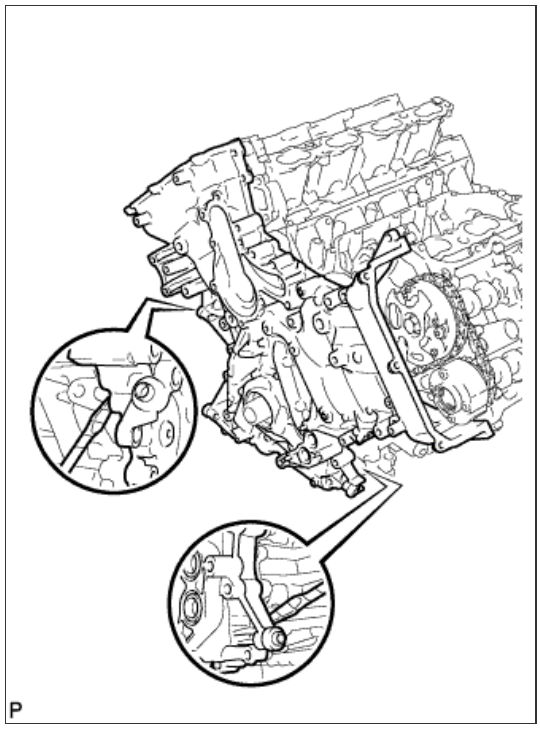


23. REMOVE WATER PUMP ASSEMBLY

a. Remove the 8 bolts, water pump and gasket.

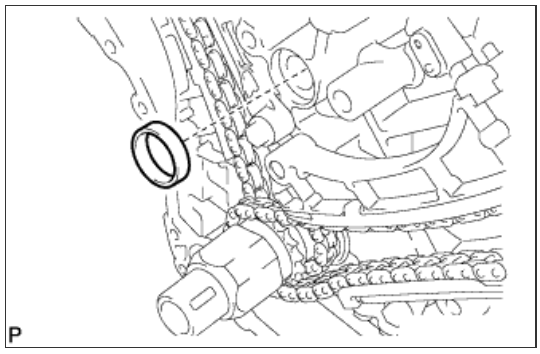
24. REMOVE TIMING CHAIN COVER SUB-ASSEMBLY

a. Remove the 28 bolts and nut shown in the illustration.



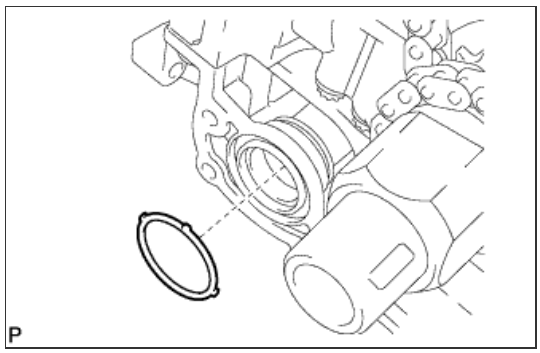
b. Remove the timing chain cover by prying between the timing chain cover and cylinder head or cylinder block with a screwdriver as shown in the illustration.

NOTICE:



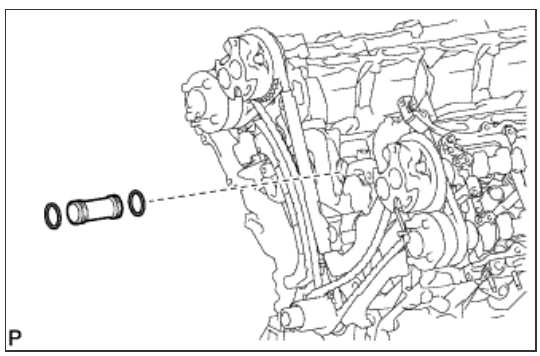
Be careful not to damage the contact surfaces of the cylinder head, cylinder block and chain cover.

HINT:



Tape the screwdriver tip before use.

c. Remove the oil pump gasket from the cylinder block.



d. Remove the O-ring from the oil pan.

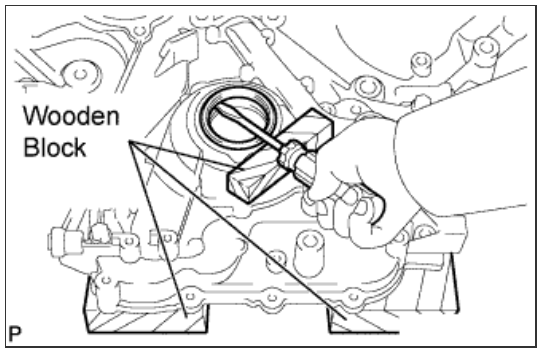
25. REMOVE WATER INLET PIPE

a. Remove the water inlet pipe.

b. Remove the 2 O-rings from the water inlet pipe.

26. REMOVE FRONT CRANKSHAFT OIL SEAL

a. Place the timing chain cover on wooden blocks.



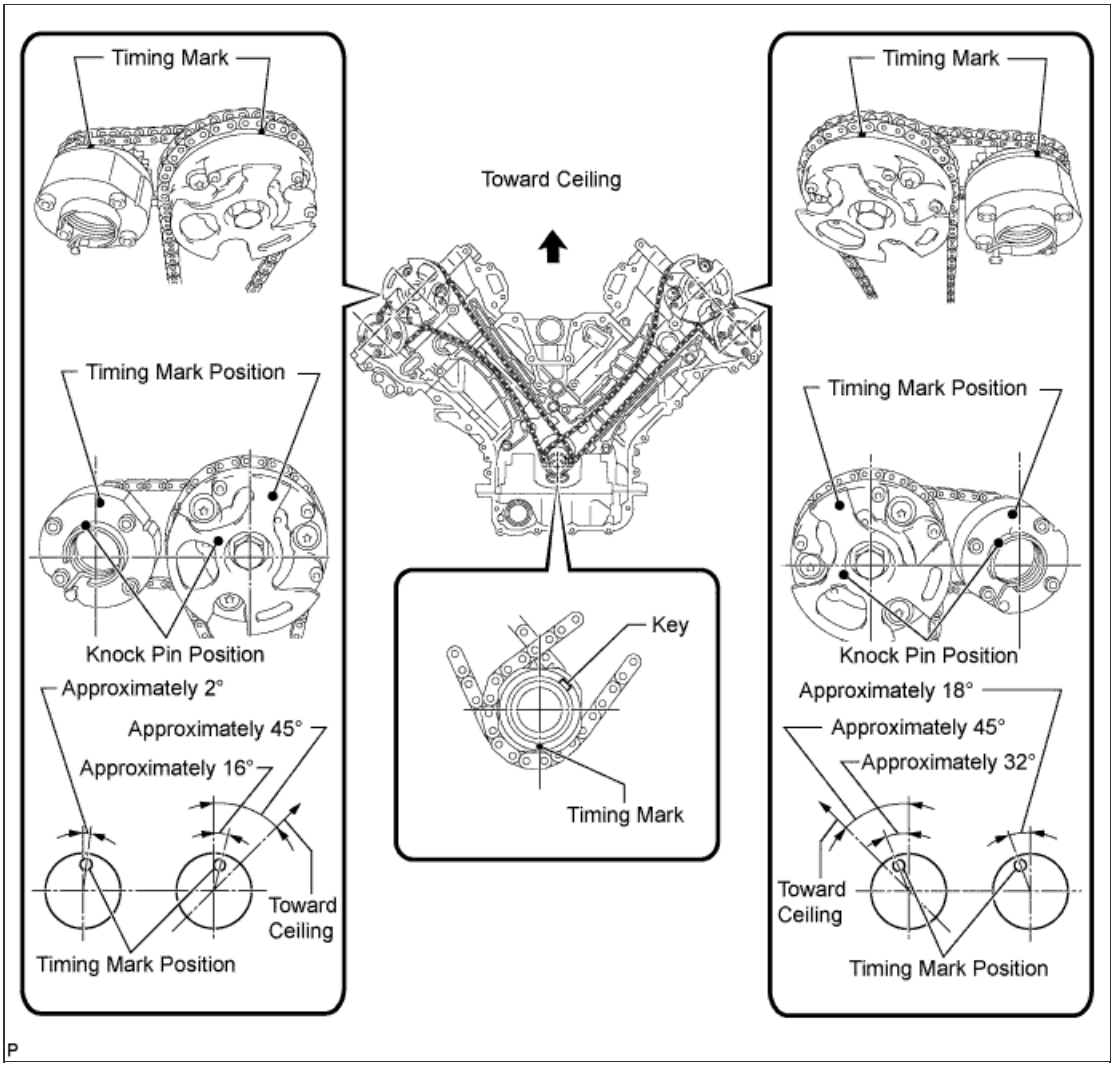
b. Using a screwdriver and wooden block, pry out the oil seal.

HINT:

Tape the screwdriver tip before use.

NOTICE:

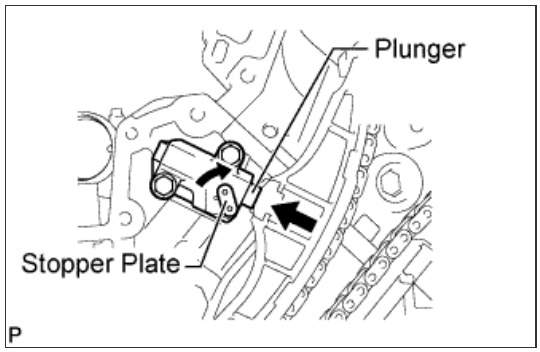
Do not damage the surface of the oil seal press fit hole.



27. SET NO. 1 CYLINDER TO TDC/COMPRESSION

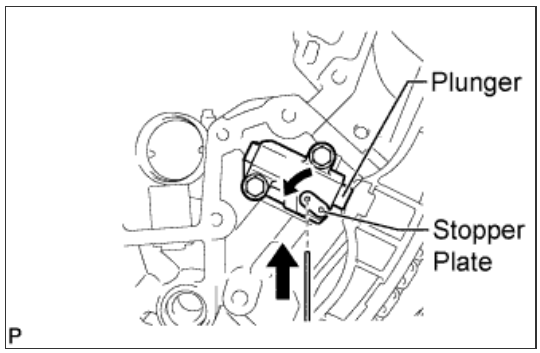
a. Temporarily install the crankshaft pulley bolt.

b. Rotate the crankshaft clockwise so that the timing marks on the crankshaft timing sprocket and camshaft timing gears are as shown in the illustration.

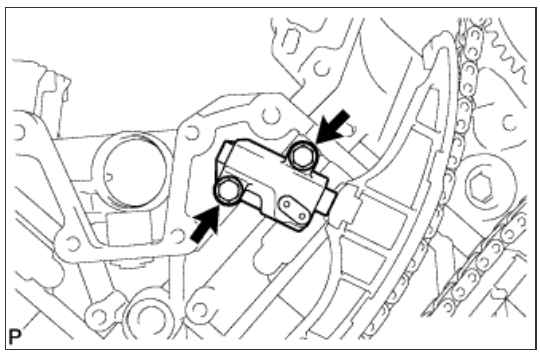


HINT:

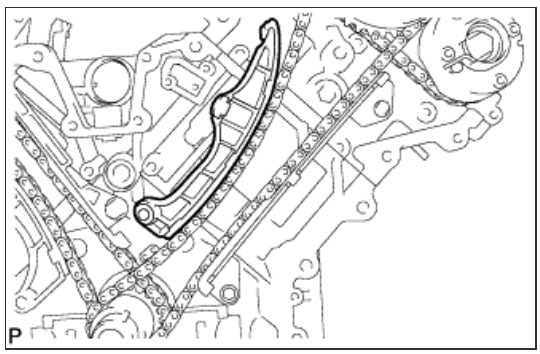
If the timing marks do not align, rotate the crankshaft clockwise again and align the timing marks.



28. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY LH

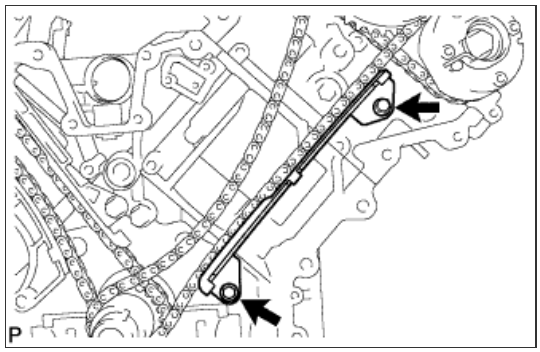


a. Move the stopper plate clockwise to release the lock, and push the plunger deep into the tensioner.

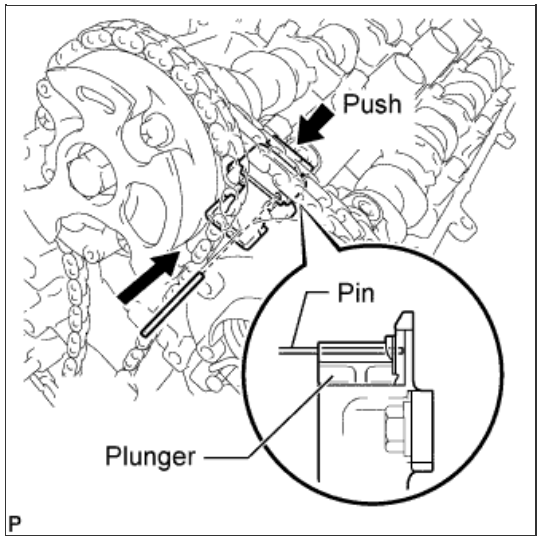


b. Move the stopper plate counterclockwise to set the lock, and insert a hexagon wrench into the stopper plate hole.

c. Remove the 2 bolts, chain tensioner and gasket.



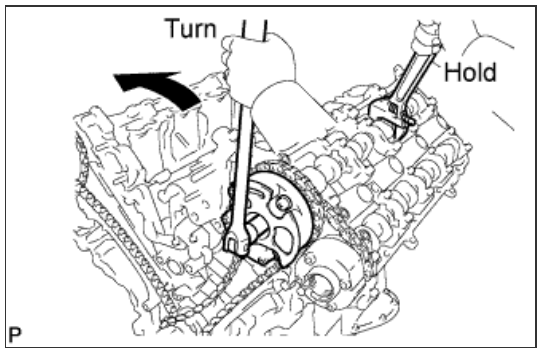
29. REMOVE NO. 1 CHAIN TENSIONER SLIPPER LH



30. REMOVE NO. 1 CHAIN VIBRATION DAMPER LH

a. Remove the 2 bolts and chain vibration damper.

31. REMOVE NO. 1 CHAIN SUB-ASSEMBLY LH

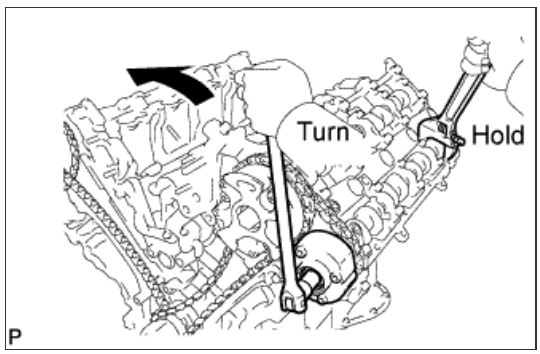


a. While pushing down the No. 3 chain tensioner, insert a pin of 1.0 mm (0.0394 in.) into the hole to fix it in place.

b. Hold the hexagonal portion of the camshaft with a wrench and loosen the bolt.

NOTICE:

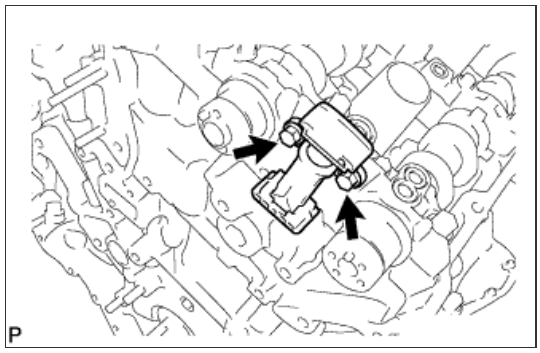
- **Be careful not to damage the cylinder head with the wrench.**
- **Do not disassemble the camshaft timing gear.**



c. Hold the hexagonal portion of the camshaft with a wrench and loosen the bolt.

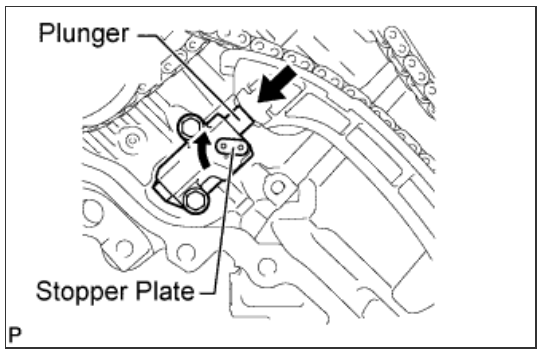
NOTICE:

Be careful not to damage the cylinder head with the wrench.



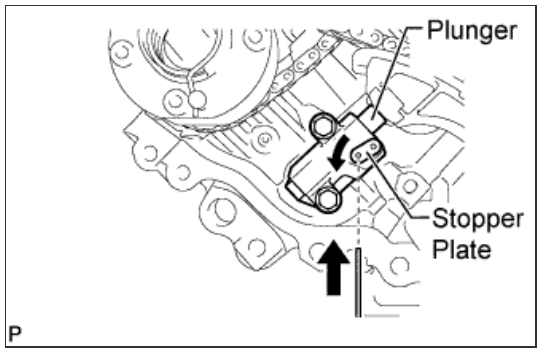
d. Remove the 2 bolts. Then with the No. 1 and No. 2 chains still connected to the gears, remove the camshaft timing gear, camshaft timing exhaust gear and crankshaft timing sprocket LH.

e. Remove the No. 1 and No. 2 chains from the gears.

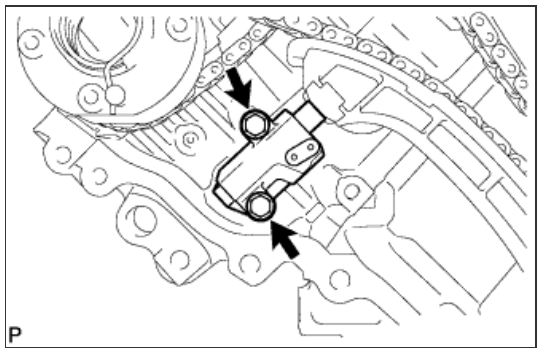


32. REMOVE NO. 3 CHAIN TENSIONER ASSEMBLY

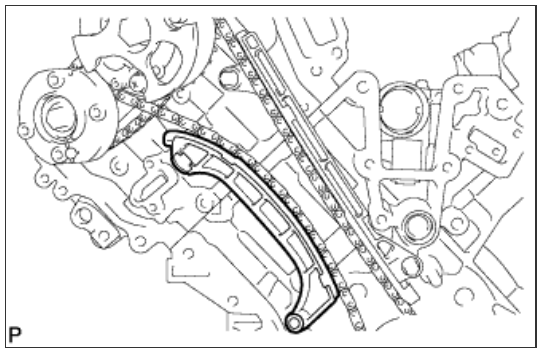
a. Remove the 2 bolts and chain tensioner.



33. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY RH

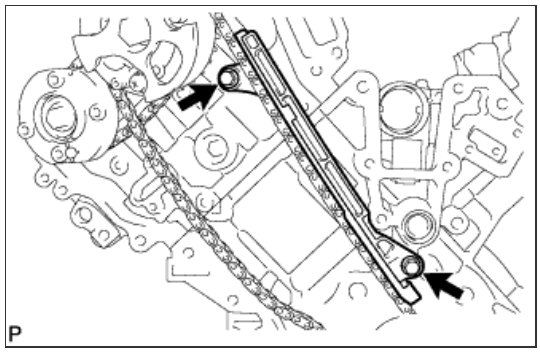


a. Move the stopper plate clockwise to release the lock, and push the plunger deep into the tensioner.

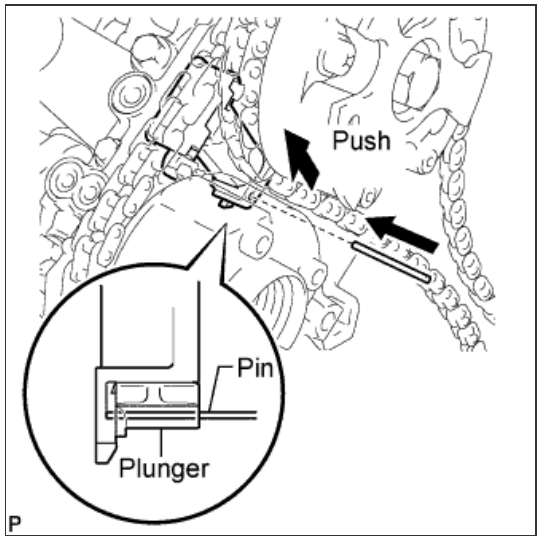


b. Move the stopper plate counterclockwise to set the lock, and insert a hexagon wrench into the stopper plate hole.

c. Remove the 2 bolts and chain tensioner.



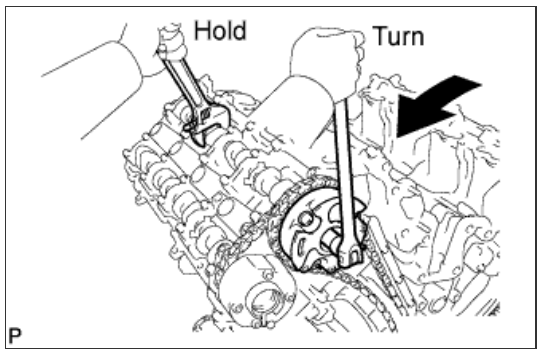
34. REMOVE NO. 1 CHAIN TENSIONER SLIPPER RH



35. REMOVE NO. 1 CHAIN VIBRATION DAMPER RH

a. Remove the 2 bolts and vibration damper.

36. REMOVE NO. 1 CHAIN SUB-ASSEMBLY RH

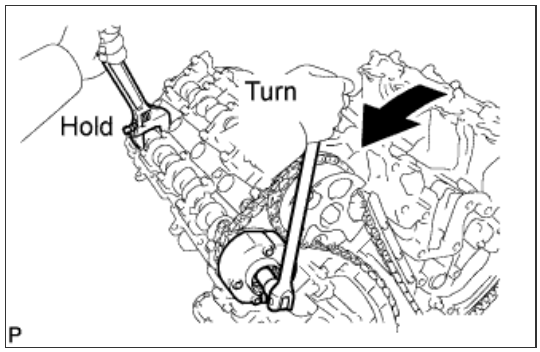


a. While raising up the No. 2 chain tensioner, insert a pin of 1.0 mm (0.0394 in.) into the hole to fix it in place.

b. Hold the hexagonal portion of the camshaft with a wrench and loosen the bolt.

NOTICE:

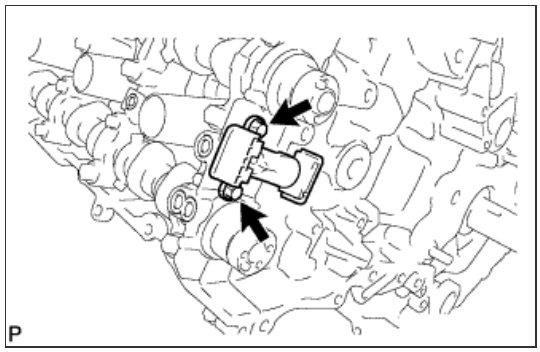
- **Be careful not to damage the cylinder head with the wrench.**
- **Do not disassemble the camshaft timing gear.**



c. Hold the hexagonal portion of the camshaft with a wrench and loosen the bolt.

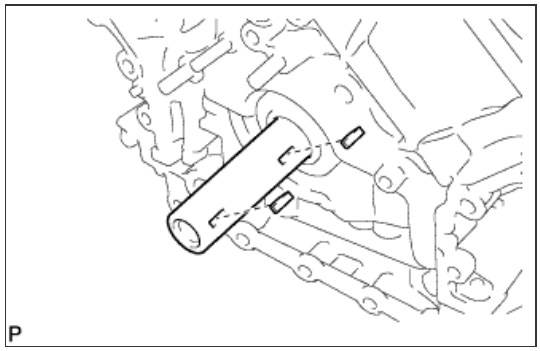
NOTICE:

Be careful not to damage the cylinder head with the wrench.



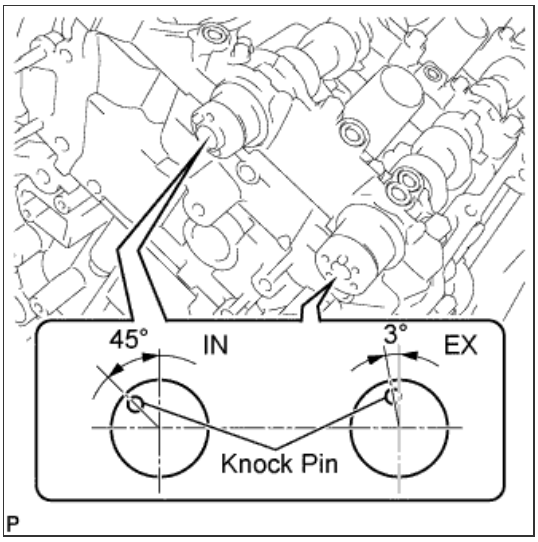
d. Remove the 2 bolts. Then with the No. 1 and No. 2 chains still connected to the gears, remove the camshaft timing gear, camshaft timing exhaust gear and crankshaft timing sprocket RH.

e. Remove the No. 1 and No. 2 chains from the gears.



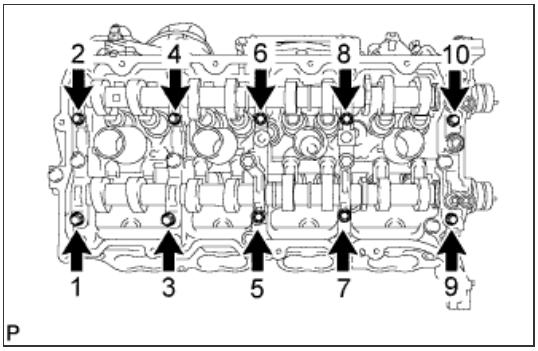
37. REMOVE NO. 2 CHAIN TENSIONER ASSEMBLY

a. Remove the 2 bolts and chain tensioner.



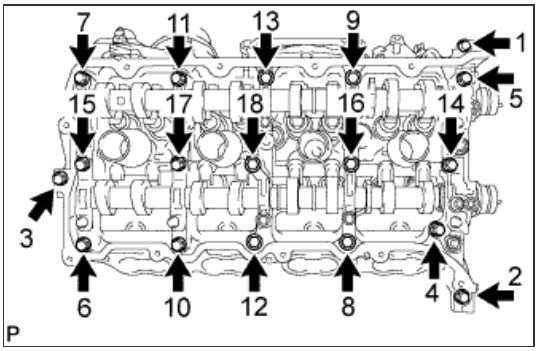
38. REMOVE CRANKSHAFT TIMING GEAR KEY

a. Using a screwdriver, remove the 2 timing gear keys from the crankshaft.



39. REMOVE CAMSHAFT BEARING CAP LH

a. Make sure that the knock pin of the camshaft is positioned as shown in the illustration.



b. Uniformly loosen and remove the 10 bearing cap bolts in the sequence shown in the illustration.

c. Uniformly loosen and remove the 18 bearing cap bolts in the sequence shown in the illustration.

NOTICE:

Uniformly loosen the bolts while keeping the camshaft level.

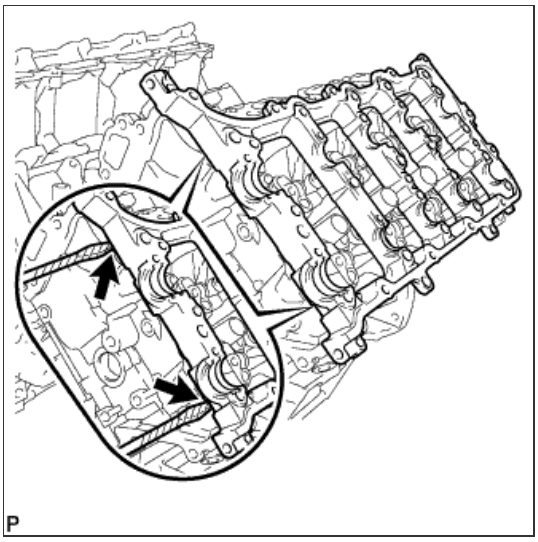
d. Remove the 6 bearing caps.

HINT:

Arrange the removed parts in the correct order.

e. Remove the No. 3 and No. 4 camshafts.

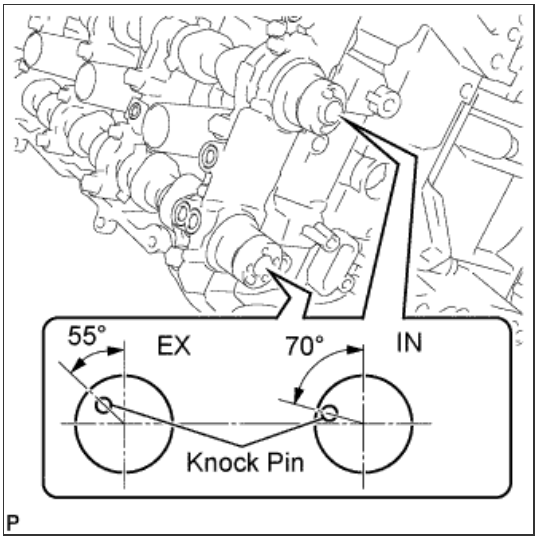
40. REMOVE CAMSHAFT HOUSING SUB-ASSEMBLY LH



a. Remove the camshaft housing by prying between the cylinder head and camshaft housing with a screwdriver.

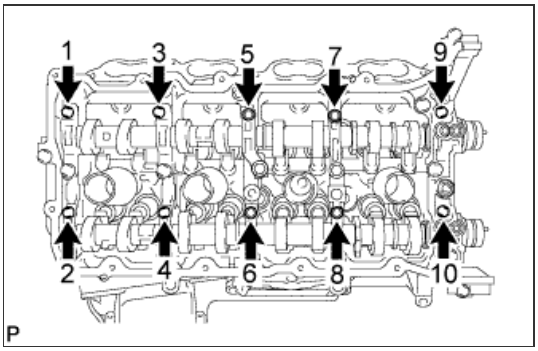
HINT:

Tape the screwdriver tip before use.



NOTICE:

Be careful not to damage the contact surfaces of the cylinder head and camshaft housing.



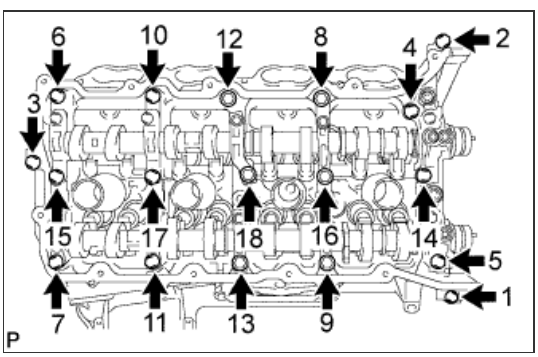
41. REMOVE CAMSHAFT BEARING CAP RH

a. Make sure that the knock pin of the camshaft is positioned as shown in the illustration.

b. Uniformly loosen and remove the 10 bearing cap bolts in the sequence shown in the illustration.

c. Uniformly loosen and remove the 18 bearing cap bolts in the sequence shown in the illustration.

NOTICE:



Uniformly loosen the bolts while keeping the camshaft level.

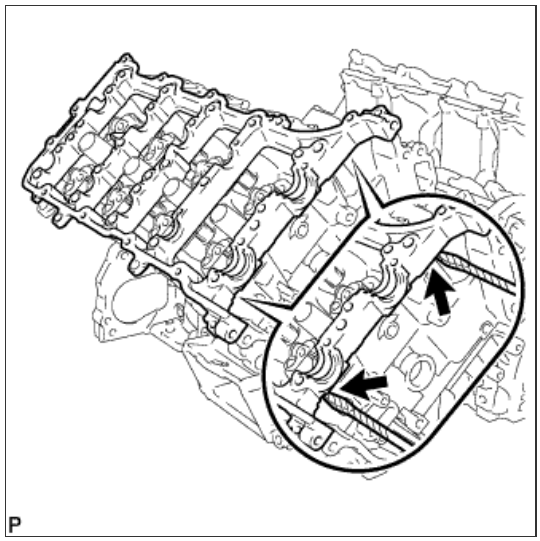
d. Remove the 6 bearing caps.

HINT:

Arrange the removed parts in the correct order.

e. Remove the No. 1 and No. 2 camshafts.

42. REMOVE CAMSHAFT HOUSING SUB-ASSEMBLY RH



a. Remove the camshaft housing by prying between the cylinder head and camshaft housing with a screwdriver.

HINT:

Tape the screwdriver tip before use.

NOTICE:

Be careful not to damage the contact surfaces of the cylinder head and camshaft housing.

43. REMOVE NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY

a. Remove the 32 valve rocker arms from the cylinder heads.

HINT:

Arrange the removed parts in the correct order.

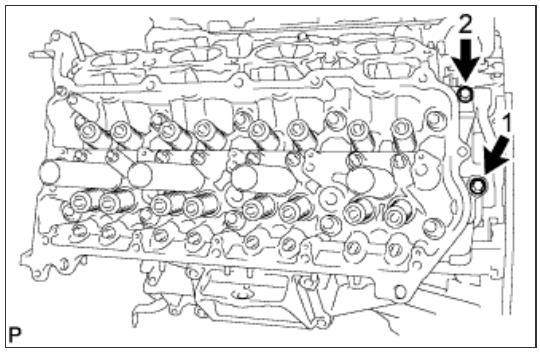
44. REMOVE VALVE LASH ADJUSTER ASSEMBLY

a. Remove the 32 valve lash adjusters from the cylinder heads.

HINT:

Arrange the removed parts in the correct order.

45. REMOVE VALVE STEM CAP



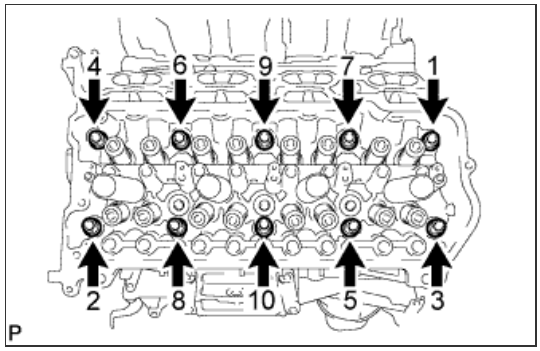
a. Remove the 32 valve stem caps from the cylinder heads.

HINT:

Arrange the removed parts in the correct order.

46. REMOVE CYLINDER HEAD SUB-ASSEMBLY LH

a. Uniformly loosen and remove the 2 bolts in the sequence shown in the illustration.

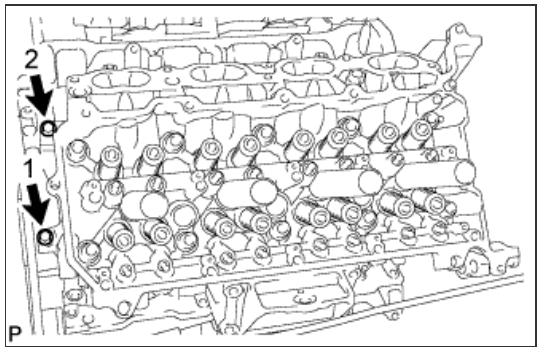


b. Using a 10 mm bi-hexagon wrench, uniformly loosen the 10 cylinder head bolts in the sequence shown in the illustration. Remove the 10 cylinder head bolts and plate washers.

HINT:

Be sure to arrange the removed parts for each installation position separately.

NOTICE:

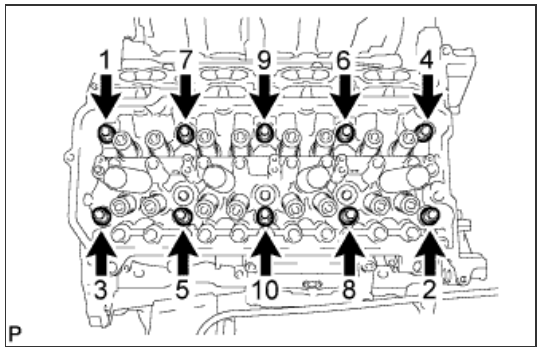


- **Be careful not to drop washers into the cylinder head.**
- **Head warpage or cracking could result from removing bolts in an incorrect order.**

c. Remove the cylinder head and gasket.

47. REMOVE CYLINDER HEAD SUB-ASSEMBLY RH

a. Uniformly loosen and remove the 2 bolts in the sequence shown in the illustration.



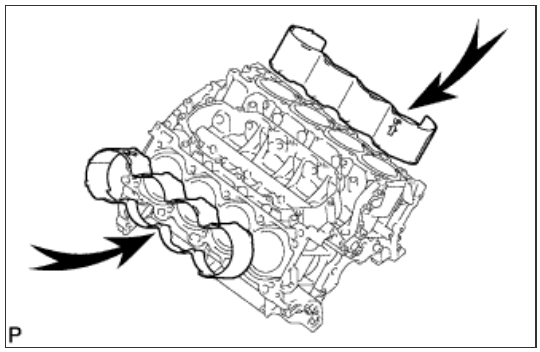
b. Using a 10 mm bi-hexagon wrench, uniformly loosen the 10 cylinder head bolts in the sequence shown in the illustration. Remove the 10 cylinder head bolts and plate washers.

HINT:

Be sure to arrange the removed parts for each installation position separately.

NOTICE:

- **Be careful not to drop washers into the cylinder head.**
- **Head warpage or cracking could result from removing bolts in an incorrect order.**



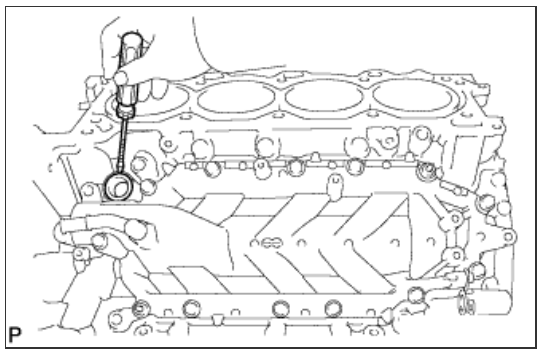
c. Remove the cylinder head and gasket.

48. REMOVE CYLINDER BLOCK WATER JACKET SPACER

a. Remove the 2 water jacket spacers from the cylinder block.

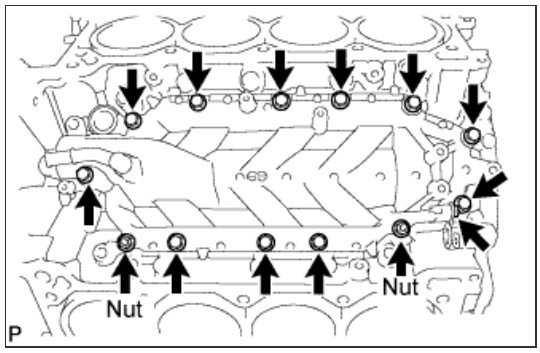
NOTICE:

Be sure to remove the water jacket spacers. If not, they may fall and become damaged when the cylinder block is inverted.



49. REMOVE VENTILATION PIPE GASKET

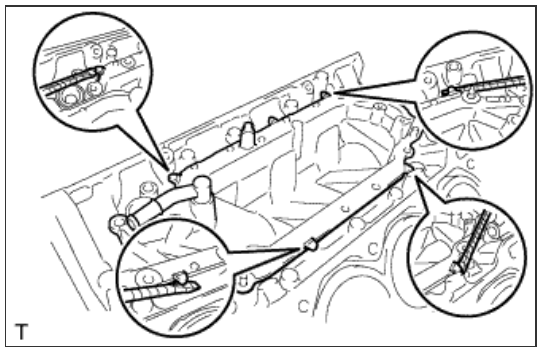
a. Using a screwdriver, pry out the ventilation pipe gasket.



HINT:

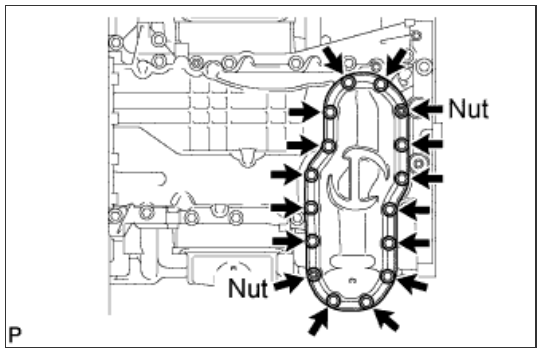
Tape the screwdriver tip before use.

50. REMOVE NO. 1 HEAT EXCHANGER COVER



a. Remove the 12 bolts and 2 nuts.

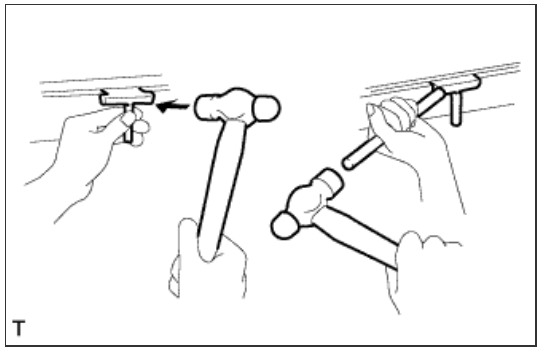
b. Remove the heat exchanger by prying between the heat exchanger and cylinder block with a screwdriver.



HINT:

Tape the screwdriver tip before use.

51. REMOVE NO. 2 OIL PAN SUB-ASSEMBLY

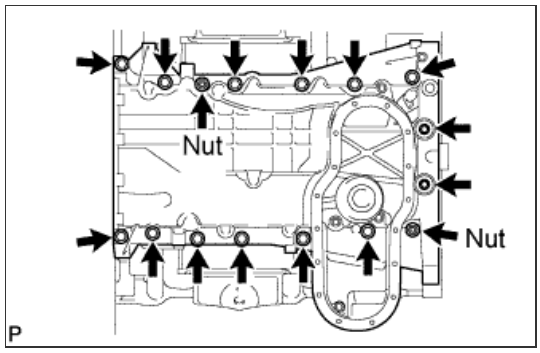


a. Remove the 14 bolts and 2 nuts.

b. Insert the blade of an oil pan seal cutter between the oil pans. Cut through the applied sealer and remove the No. 2 oil pan.

NOTICE:

Be careful not to damage the contact surfaces of the oil pans.

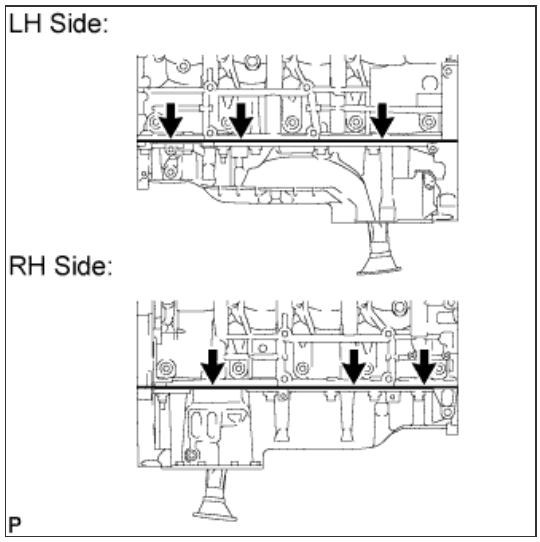


52. REMOVE NO. 1 OIL PAN SUB-ASSEMBLY

a. Remove the 14 bolts and 2 nuts.

HINT:

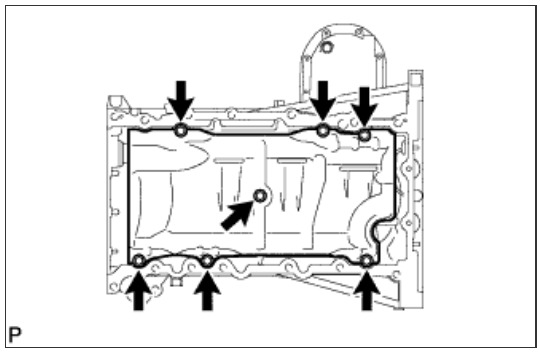
Be sure to clean the bolts and stud bolts, and check the threads for cracks or other damage.



b. Remove the oil pan by prying between the oil pan and cylinder block with a screwdriver.

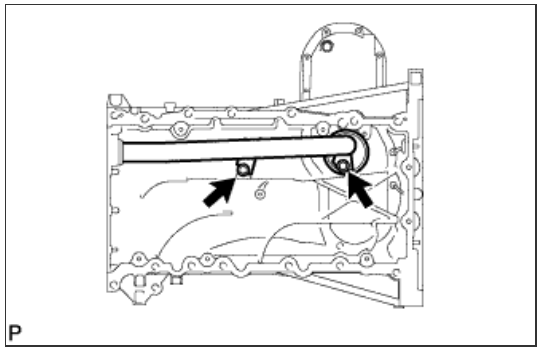
HINT:

Tape the screwdriver tip before use.



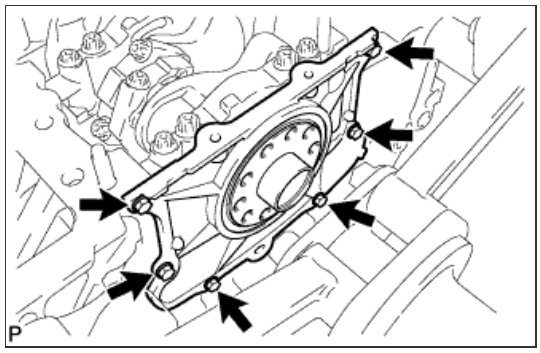
NOTICE:

Be careful not to damage the contact surfaces of the cylinder block and oil pan.



53. REMOVE NO. 1 OIL PAN BAFFLE PLATE

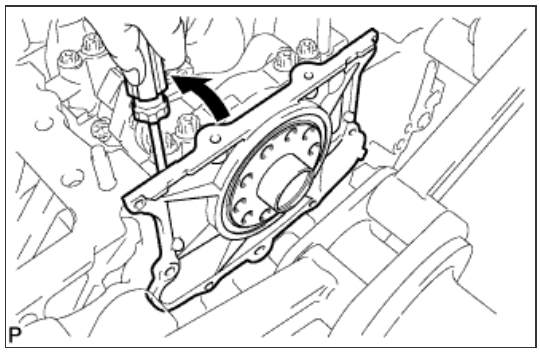
a. Remove the 7 bolts and baffle plate.



54. REMOVE OIL STRAINER SUB-ASSEMBLY

a. Remove the 2 bolts, oil strainer and O-ring.

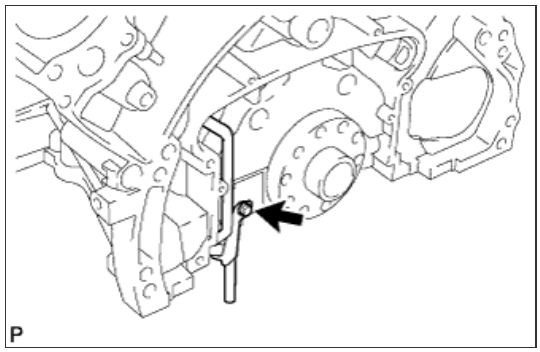
55. REMOVE ENGINE REAR OIL SEAL RETAINER



a. Remove the 6 bolts and oil seal retainer.

b. Using a screwdriver, pry out the oil seal retainer.

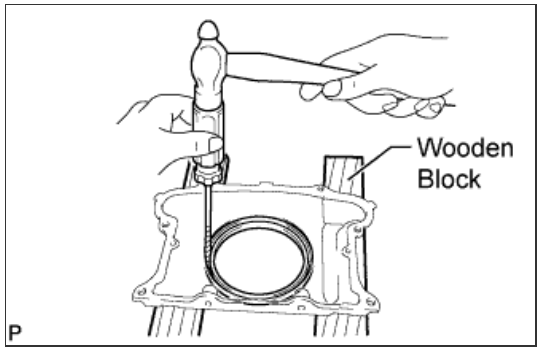
HINT:



Tape the screwdriver tip before use.

56. REMOVE OIL DRAIN PIPE SUB-ASSEMBLY

a. Remove the bolt and oil drain pipe.



b. Remove the O-ring.

57. REMOVE REAR CRANKSHAFT OIL SEAL

a. Place the oil seal retainer on wooden blocks.

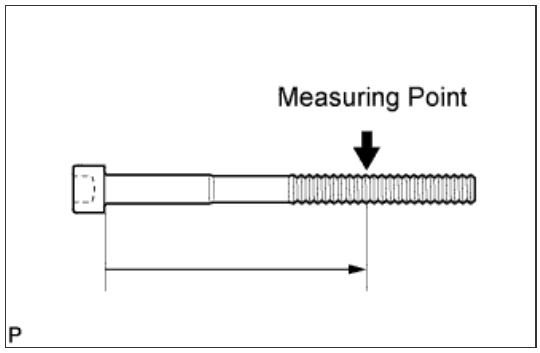
b. Using a screwdriver and hammer, tap out the oil seal.

58. REMOVE RING PIN

NOTICE:

It is not necessary to remove the ring pin unless it is being replaced.

59. REMOVE STUD BOLT



NOTICE:

If the stud bolt is deformed or its threads are damaged, replace it.

for Preparation Click here

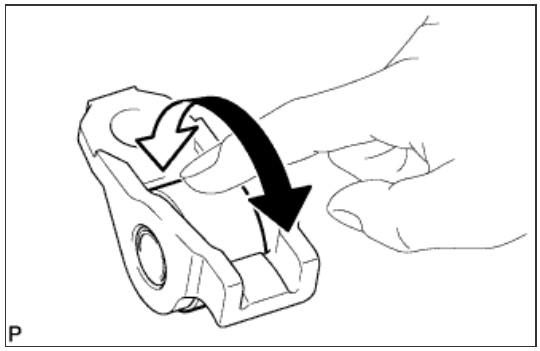
1. INSPECT CYLINDER HEAD SET BOLT

a. Using a vernier caliper, measure the diameter of the elongated thread at the measuring point.

Measuring point:
94 mm (3.70 in.) for intake side bolt
89 mm (3.50 in.) for exhaust side bolt

Standard diameter:
10.85 to 11.00 mm (0.427 to 0.433 in.)

Minimum diameter:
10.6 mm (0.417 in.)



If the diameter is less than the minimum, replace the cylinder head bolt.

HINT:

If a visual check reveals no excessively thin areas, check the center of the bolt (see illustration) and find the area that has the smallest diameter.

2. INSPECT NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY

a. Turn the roller by hand to check that it turns smoothly.
If the roller does not turn smoothly, replace the valve rocker arm.

3. INSPECT VALVE LASH ADJUSTER ASSEMBLY

NOTICE:

- **Keep the adjuster free from dirt and foreign objects.**
- **Use only clean engine oil.**

a. Place the lash adjuster into a container full of new engine oil.

b. Insert the tip of SST into the lash adjuster plunger and use the tip to press down on the check ball inside the plunger.

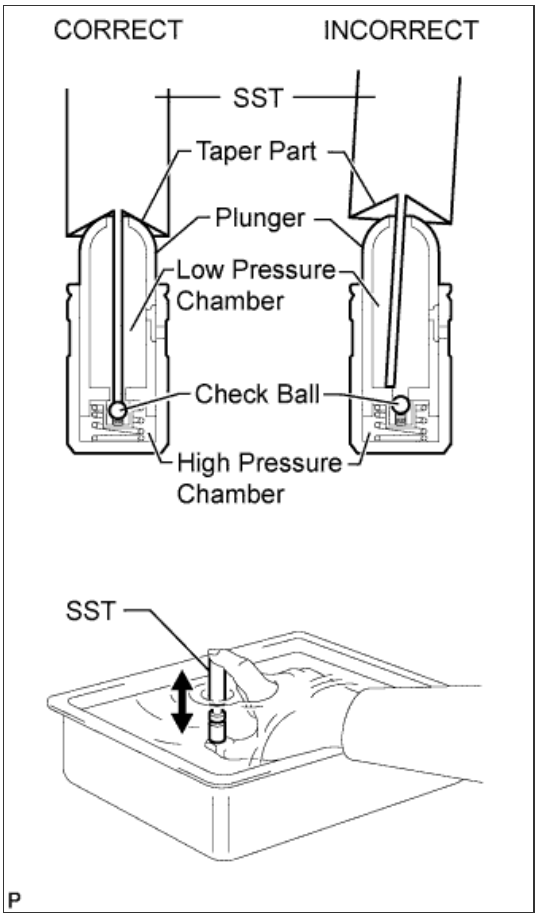
SST
09276-75010

c. Squeeze SST and the lash adjuster together to move the plunger up and down 5 to 6 times.

d. Check the movement of the plunger and bleed air.

OK:

Plunger moves up and down.



NOTICE:

When bleeding high-pressure air from the compression chamber, make sure that the tip of SST is actually pressing the check ball as shown in the illustration. If the check ball is not pressed, air will not bleed.

e. After bleeding the air, remove SST. Then try to quickly and firmly press the plunger with your fingers.

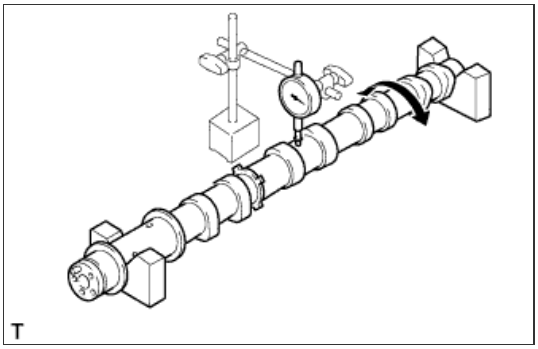
OK:
Plunger can be pressed 3 times.

If the plunger can still be compressed after pressing it 3 times, replace the valve lash adjuster with a new one.

4. INSPECT CAMSHAFT SUB-ASSEMBLY

a. Inspect the camshaft for runout.

i. Place the camshaft on V-blocks.



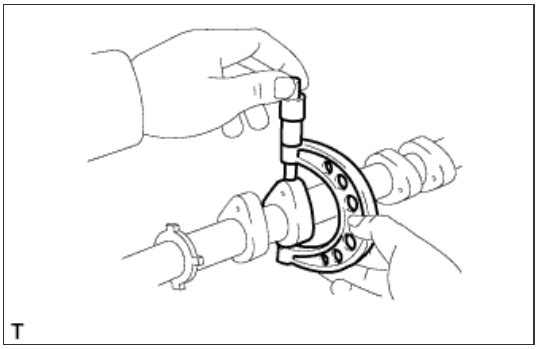
ii. Using a dial indicator, measure the circle runout at the center journal.

Maximum circle runout:
0.04 mm (0.00157 in.)

If the circle runout is more than the maximum, replace the camshaft sub-assembly.

HINT:

Check the oil clearance after replacing the camshaft.



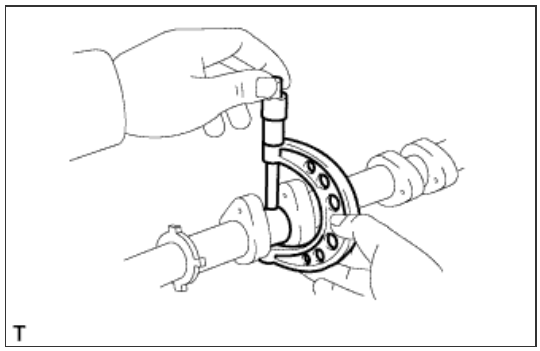
b. Using a micrometer, measure the cam lobe height.

Standard Cam Lobe Height:

Item	Specified Condition
Intake	44.291 to 44.441 mm (1.744 to 1.750 in.)
Exhaust	44.196 to 44.346 mm (1.740 to 1.746 in.)

Minimum Cam Lobe Height:

Item	Specified Condition
Intake	44.241 mm (1.742 in.)
Exhaust	44.146 mm (1.738 in.)



If the cam lobe height is less than the minimum, replace the camshaft sub-assembly.

c. Using a micrometer, measure the journal diameter.

Standard Journal Diameter:

Item	Specified Condition
No. 1 journal	29.956 to 29.970 mm (1.179 to 1.180 in.)
Other journals	25.959 to 25.975 mm (1.022 to 1.023 in.)

If the journal diameter is not as specified, check the oil clearance.

5. INSPECT CAMSHAFT OIL CLEARANCE

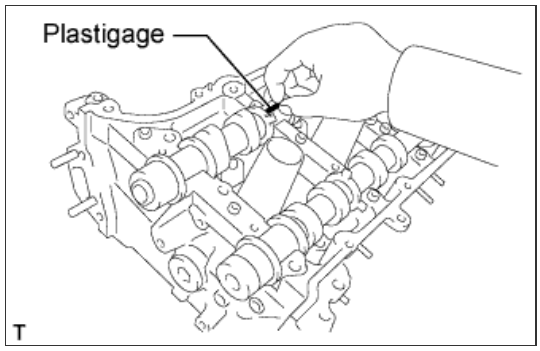
a. Clean the bearing caps, camshaft housing and camshaft journals.

b. Place the camshafts on the camshaft housing.

c. Lay a strip of Plastigage across each of the camshaft journals.

d. Install the camshaft bearing caps (Click here).

NOTICE:



Do not turn the camshaft.

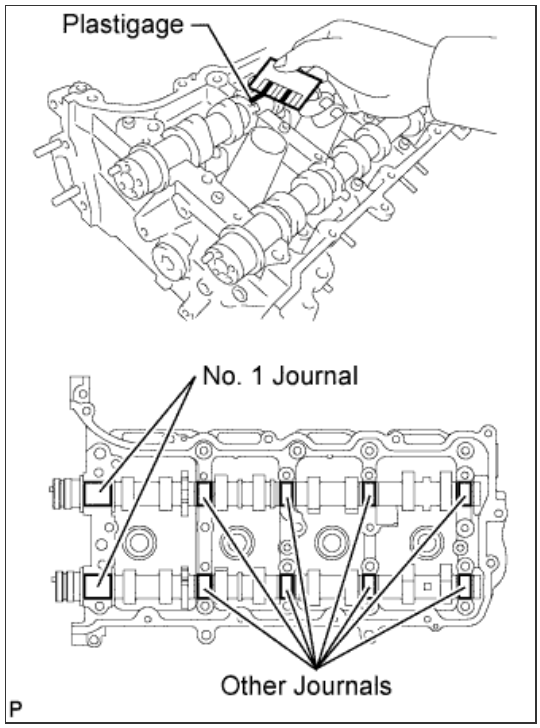
e. Install the camshaft housing (Click here).

NOTICE:

Do not turn the camshaft.

f. Remove the camshaft bearing caps (Click here).

g. Measure the Plastigage at its widest point.



Standard Oil Clearance:

Item	Specified Condition
No. 1 journal	0.030 to 0.065 mm (0.00118 to 0.00256 in.)
Other journals	0.025 to 0.062 mm (0.000984 to 0.00244 in.)

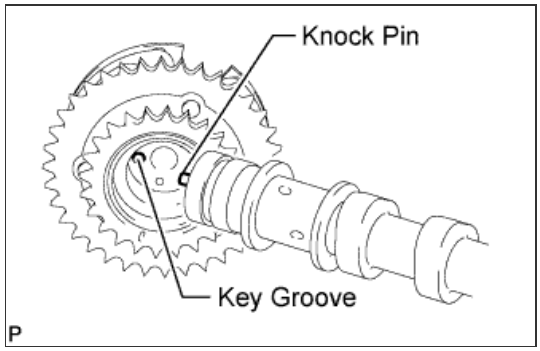
Maximum Oil Clearance:

Item	Specified Condition
No. 1 journal	0.10 mm (0.00394 in.)
Other journals	0.09 mm (0.00354 in.)

If the oil clearance is more than the maximum, replace the camshaft. If necessary, replace the camshaft housing.

6. INSPECT CAMSHAFT TIMING GEAR

a. Install the camshaft bearing caps (Click here).

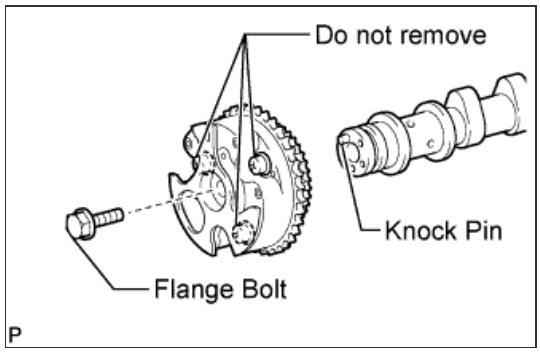


HINT:

Only install the intake camshaft.

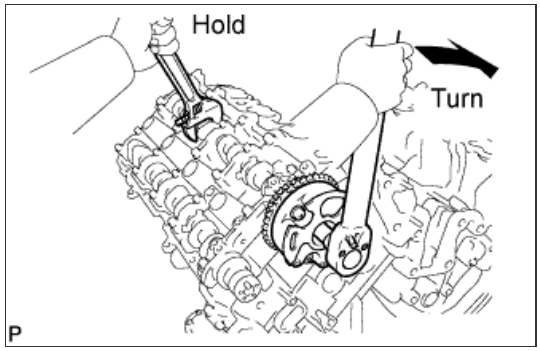
b. Install the camshaft housing (Click here).

c. Apply a light coat of engine oil to the camshaft and camshaft timing gear.



d. Using the hexagonal portion of the camshaft, align and attach the knock pin of the camshaft with the pin hole of the camshaft timing gear.

NOTICE:



- **Do not forcefully push on the camshaft timing gear. This may cause the camshaft knock pin tip to damage the installation surface of the camshaft timing gear.**

- **Do not loosen or remove the 3 bolts shown in the illustration. If any of them are loosened or removed, the backlash of the gear in the timing tube will go out of adjustment. In this case, replace the camshaft timing gear assembly with a new one.**

e. Apply a light coat of engine oil to the threads and under the head of the bolt.

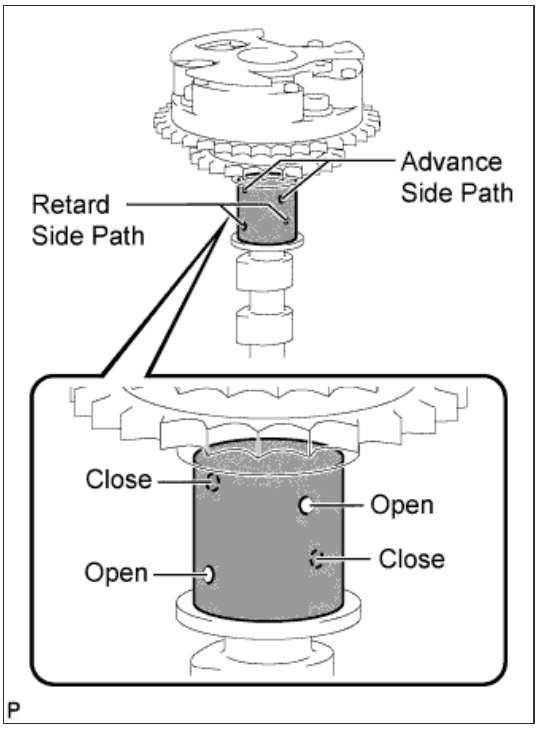
f. Using a wrench to hold the hexagonal portion of the camshaft, install the camshaft timing gear with the bolt.

Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

g. Remove the camshaft bearing caps (Click here).

h. Check the lock of the camshaft timing gear.

i. Make sure that the camshaft timing gear is locked.

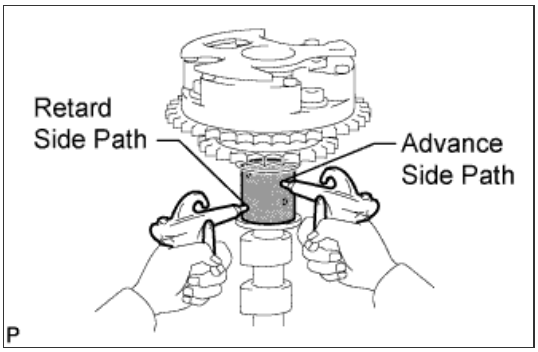


NOTICE:

Be careful not to damage the camshaft.

i. Release the lock pin.

i. Cover the 4 oil paths of the cam journal with vinyl tape as shown in the illustration.



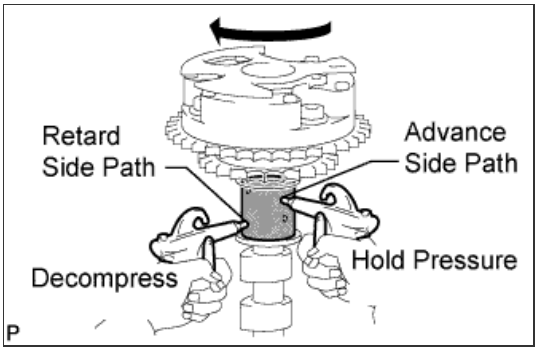
ii. Break through the tape of the advance side path and retard side path as shown in the illustration.

iii. Apply approximately 200 kPa (2.0 kgf/cm^2, 29 psi) of air pressure to the two broken paths.

NOTICE:

Cover the paths with a piece of cloth when applying pressure to keep oil from splashing.

iv. Check that the camshaft timing gear revolves in the advance direction when reducing the air pressure applied to the retard side path.



HINT:

This operation releases the lock pin for the most retarded position.

v. When the camshaft timing gear reaches the most advanced position, release the air pressure from the retard side path and advance side path, in that order.

NOTICE:

Do not release the air pressure from the advance side path first. The gear may abruptly shift in the retard direction and break the lock pin.

j. Check for smooth rotation.

i. Turn the camshaft timing gear within its movable range (21°) 2 or 3 times, but do not turn it to the most retarded position. Make sure that the gear turns smoothly.

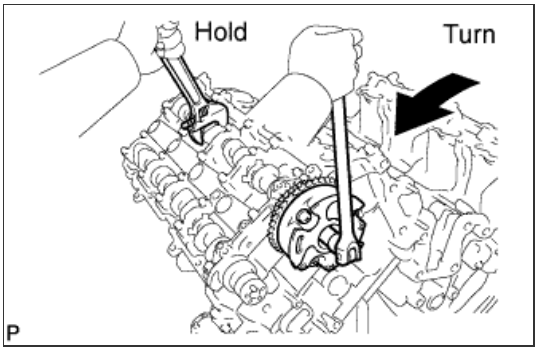
NOTICE:

Do not use air pressure to perform the smooth rotation check.

k. Check the lock in the most retarded position.

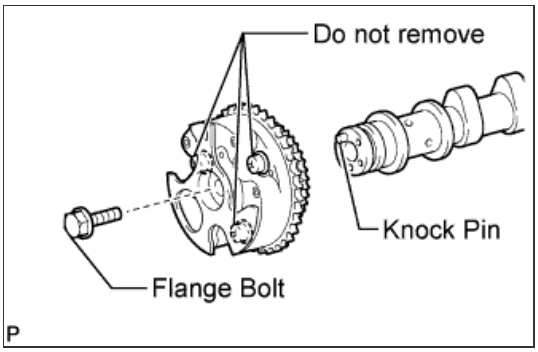
i. Confirm that the camshaft timing gear is locked at the most retarded position.

l. Install the camshaft bearing caps (Click here).



HINT:

Only install the intake camshaft.



m. Install the camshaft housing (Click here).

n. Hold the hexagonal portion of the camshaft with a wrench and loosen the bolt.

o. Remove the camshaft bearing caps (Click here).

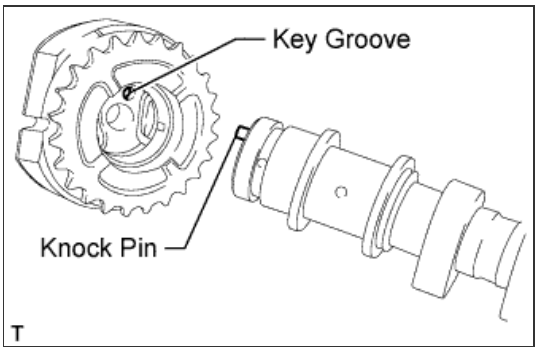
p. Remove the flange bolt and camshaft timing gear.

7. INSPECT CAMSHAFT TIMING EXHAUST GEAR

a. Install the camshaft bearing caps (Click here).

HINT:

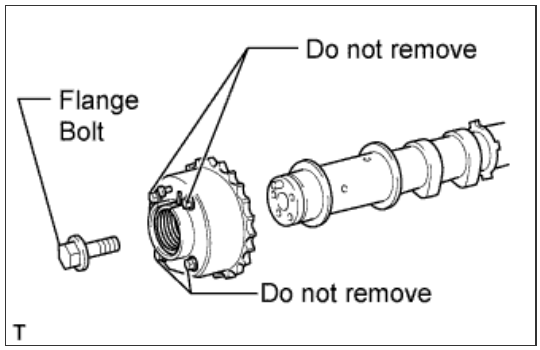
Only install the exhaust camshaft.



b. Install the camshaft housing (Click here).

c. Apply a light coat of engine oil to the camshaft and camshaft timing exhaust gear.

d. Using the hexagonal portion of the camshaft, align and attach the knock pin of the camshaft with the pin hole of the camshaft timing exhaust gear.

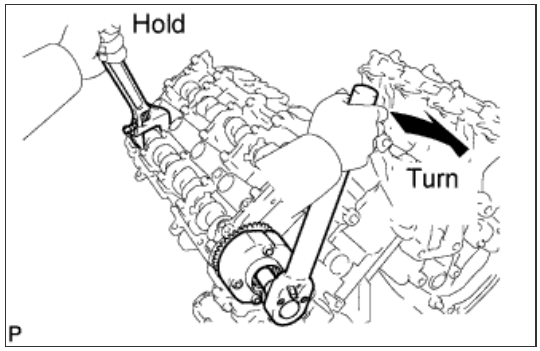


NOTICE:

- **Do not forcefully push on the camshaft timing exhaust gear. This may cause the camshaft knock pin tip to damage the installation surface of the camshaft timing exhaust gear.**

- **Do not loosen or remove the 4 bolts shown in the illustration. If any of them are loosened or removed, the backlash of the gear in the timing tube will go out of adjustment. In this case, replace the camshaft timing exhaust gear assembly with a new one.**

e. Apply a light coat of engine oil to the threads and under the head of the bolt.

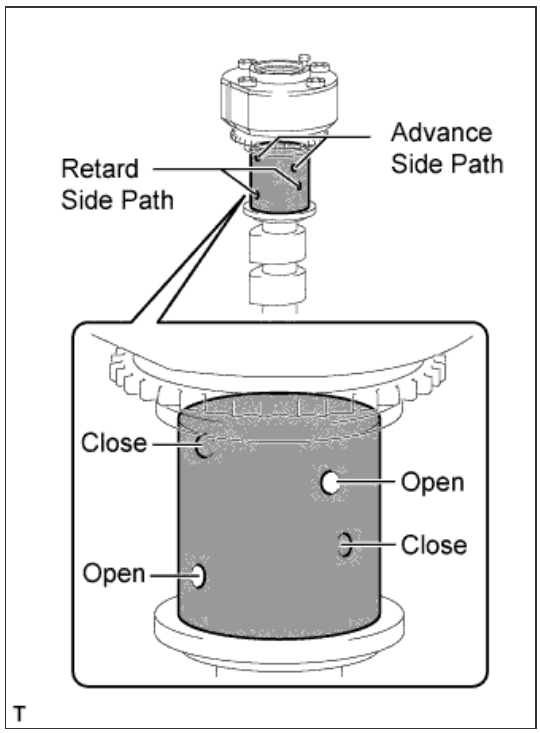


f. Using a wrench to hold the hexagonal portion of the camshaft, install the camshaft timing exhaust gear with the bolt.

Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

g. Remove the camshaft bearing caps (Click here).

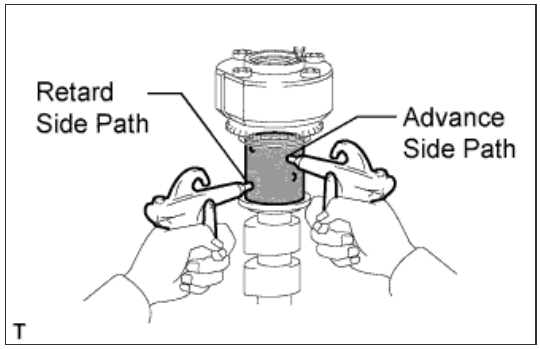
h. Check the camshaft timing exhaust gear lock.



i. Make sure that the camshaft timing exhaust gear is locked.

i. Release the lock pin.

i. Cover the 4 oil paths of the cam journal with vinyl tape as shown in the illustration.

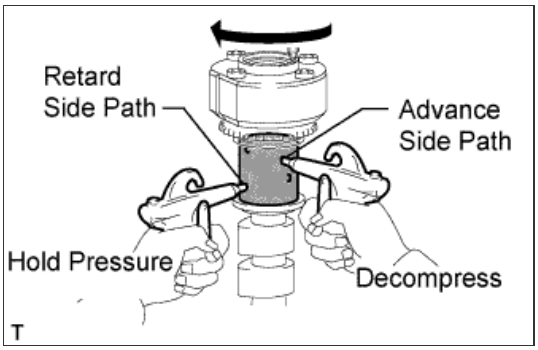


ii. Break through the tape of the advance side path and retard side path as shown in the illustration.

iii. Apply approximately 200 kPa (2.0 kgf/cm^2, 29 psi) of air pressure to the two broken paths (the advance side path and the retard side path).

NOTICE:

Cover the paths with a piece of cloth when applying pressure to keep oil from splashing.



iv. Check that the camshaft timing exhaust gear turns in the retard direction when reducing the air pressure applied to the advance side

path.

HINT:

The lock pin is released and the camshaft timing exhaust gear turns in the retard direction.

v. When the camshaft timing exhaust gear moves to the most retarded position, release the air pressure from the advance side path, and then release the air pressure from the retard side path.

NOTICE:

Be sure to release the air pressure from the advance side path first. If the air pressure of the retard side path is released first, the camshaft timing exhaust gear may abruptly shift in the advance direction and break the lock pin or other parts.

j. Check for smooth rotation.

i. Turn the camshaft timing exhaust gear within its movable range (18.5°) 2 or 3 times, but do not turn it to the most advanced position. Make sure that the gear turns smoothly.

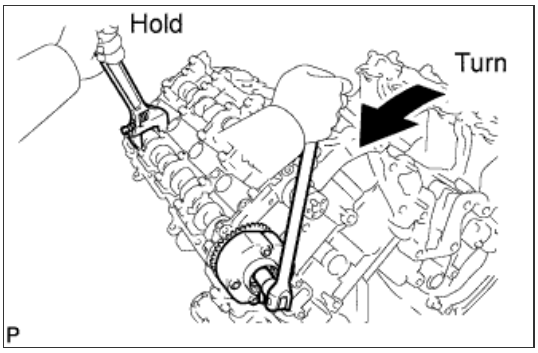
NOTICE:

When the air pressure is released from the advance side path and then from the retard side path, the gear automatically returns to the most advanced position due to the advance assist spring operation, and locks. Gradually release the air pressure from the retard side path before performing the smooth rotation check.

k. Check the lock at the most advanced position.

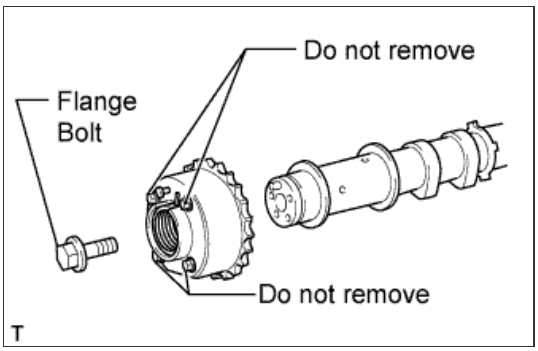
i. Make sure that the camshaft timing exhaust gear is locked at the most advanced position.

l. Install the camshaft bearing caps (Click here).



HINT:

Only install the exhaust camshaft.



m. Install the camshaft housing (Click here).

n. Hold the hexagonal portion of the camshaft with a wrench and loosen the bolt.

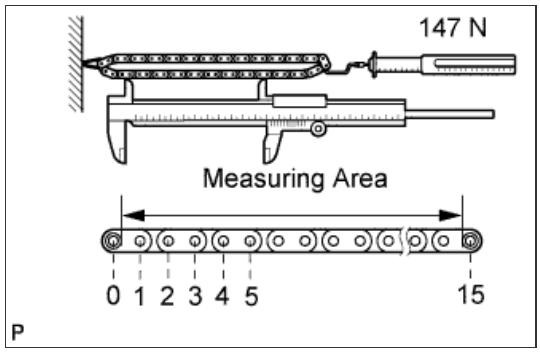
o. Remove the camshaft bearing caps (Click here).

p. Remove the flange bolt and camshaft timing exhaust gear.

8. INSPECT NO. 1 CHAIN SUB-ASSEMBLY

a. Using a spring scale, pull the chain with a force of 147 N (15 kgf, 33.0 lbf) as

shown in the illustration.



b. Using a vernier caliper, measure the length of 15 pins.

Maximum chain elongation:
136.9 mm (5.39 in.)

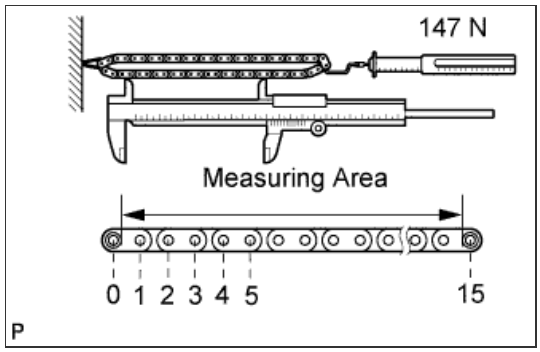
HINT:

Perform the measurement at 3 random places.

If the elongation is more than the maximum, replace the No. 1 chain.

9. INSPECT NO. 2 CHAIN SUB-ASSEMBLY

a. Using a spring scale, pull the chain with a force of 147 N (15 kgf, 33.0 lbf) as shown in the illustration.



b. Using a vernier caliper, measure the length of 15 pins.

Maximum chain elongation:
137.6 mm (5.42 in.)

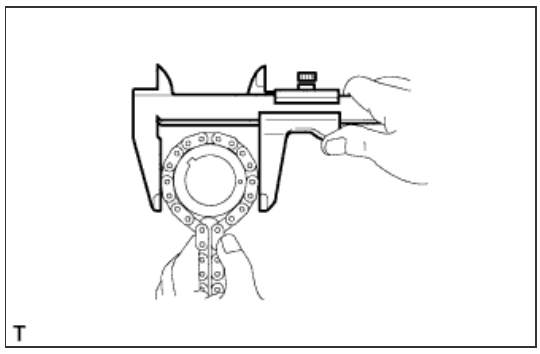
HINT:

Perform the measurement at 3 random places.

If the elongation is more than the maximum, replace the No. 2 chain.

10. INSPECT CRANKSHAFT TIMING SPROCKET RH

a. Wrap the chain around the sprocket.



b. Using a vernier caliper, measure the sprocket diameter with the chain.

Minimum sprocket diameter (with chain):
61.4 mm (2.42 in.)

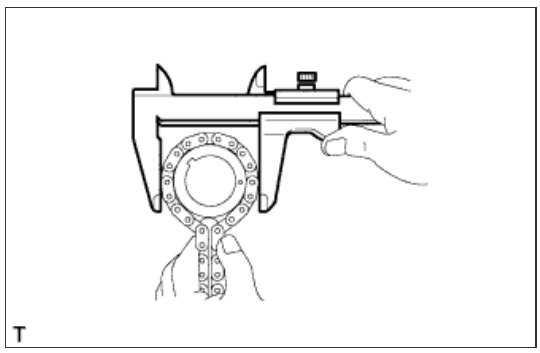
If the diameter is less than the minimum, replace the chain and crankshaft timing sprocket RH.

HINT:

The vernier caliper must contact the chain rollers for the measurement.

11. INSPECT CRANKSHAFT TIMING SPROCKET LH

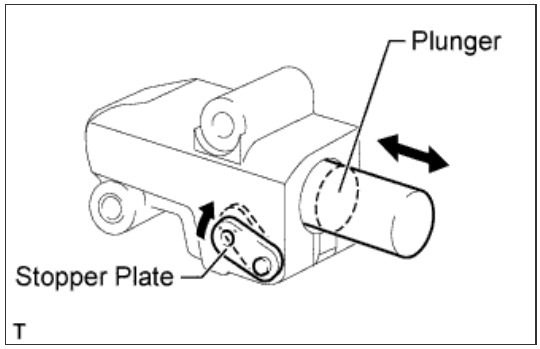
a. Wrap the chain around the sprocket.



b. Using a vernier caliper, measure the sprocket diameter with the chain.

Minimum sprocket diameter (with chain):
61.4 mm (2.42 in.)

If the diameter is less than the minimum, replace the chain and crankshaft timing sprocket LH.

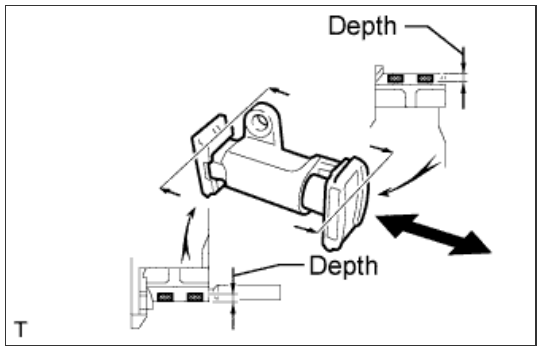


HINT:

The vernier caliper must contact the chain rollers for the measurement.

12. INSPECT NO. 1 CHAIN TENSIONER ASSEMBLY

a. Move the stopper plate clockwise to release the lock. Push the plunger and check that it moves smoothly.
If necessary, replace the No. 1 chain tensioner.



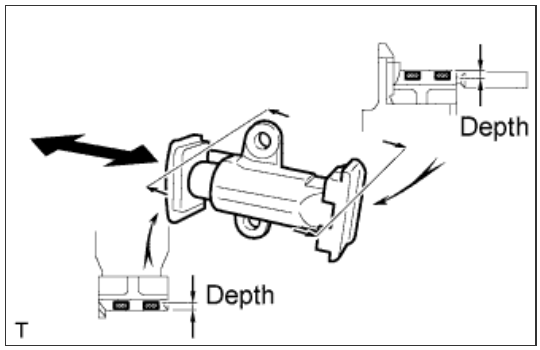
13. INSPECT NO. 2 CHAIN TENSIONER ASSEMBLY

a. Check that the plunger moves smoothly.

b. Measure the worn depth of the chain tensioner.

Maximum depth:
0.9 mm (0.0354 in.)

If the depth is more than the maximum, replace the No. 2 chain tensioner.



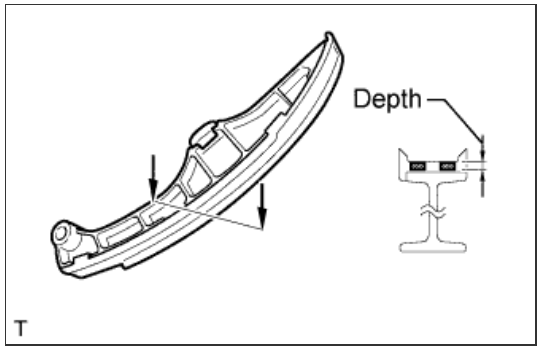
14. INSPECT NO. 3 CHAIN TENSIONER ASSEMBLY

a. Check that the plunger moves smoothly.

b. Measure the worn depth of the chain tensioner.

Maximum depth:
0.9 mm (0.0354 in.)

If the depth is more than the maximum, replace the No. 3 chain tensioner.



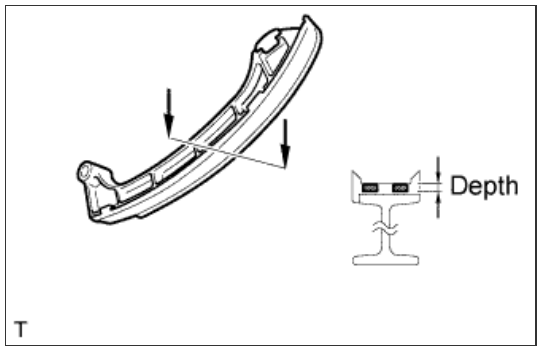
15. INSPECT NO. 1 CHAIN TENSIONER SLIPPER

a. for LH:

i. Measure the worn depth of the chain tensioner slipper.

Maximum depth:
1.0 mm (0.0394 in.)

If the depth is more than the maximum, replace the No. 1 chain tensioner slipper.

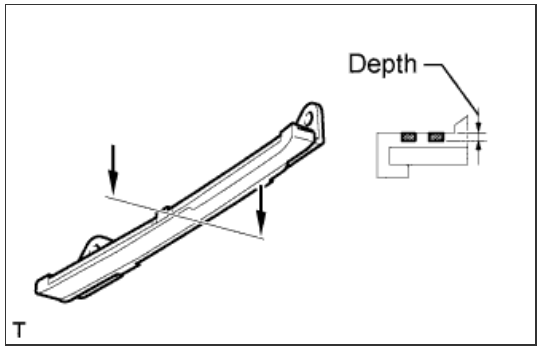


b. for RH:

i. Measure the worn depth of the chain tensioner slipper.

Maximum depth:
1.0 mm (0.0394 in.)

If the depth is more than the maximum, replace the No. 1 chain tensioner slipper.



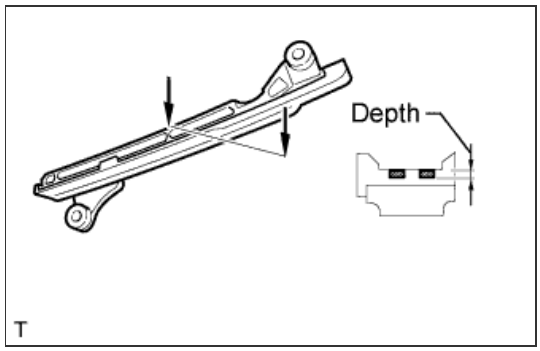
16. INSPECT NO. 1 CHAIN VIBRATION DAMPER

a. for LH:

i. Measure the worn depth of the chain vibration damper.

Maximum depth:
1.0 mm (0.0394 in.)

If the depth is more than the maximum, replace the No. 1 chain vibration damper.

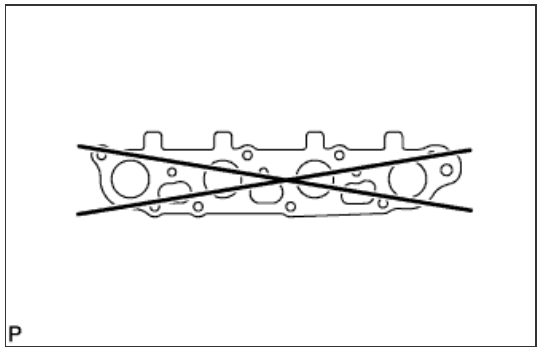


b. for RH:

i. Measure the worn depth of the chain vibration damper.

Maximum depth:
1.0 mm (0.0394 in.)

If the depth is more than the maximum, replace the No. 1 chain vibration damper.

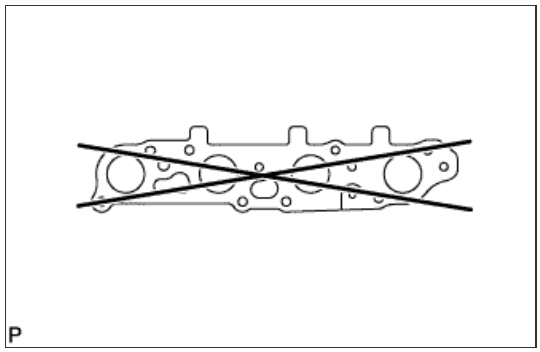


17. INSPECT EXHAUST MANIFOLD SUB-ASSEMBLY LH

a. Using a precision straightedge and feeler gauge, measure the warpage of the surface where the exhaust manifold LH contacts the cylinder head.

Maximum warpage:
0.7 mm (0.0276 in.)

If the warpage is more than the maximum, replace the exhaust manifold LH.



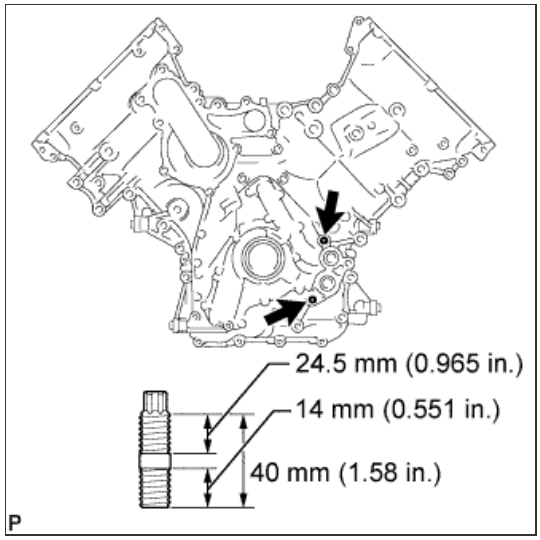
18. INSPECT EXHAUST MANIFOLD SUB-ASSEMBLY RH

a. Using a precision straightedge and feeler gauge, measure the warpage of the surface where the exhaust manifold RH contacts the cylinder head.

Maximum warpage:

0.7 mm (0.0276 in.)

If the warpage is more than the maximum, replace the exhaust manifold RH.

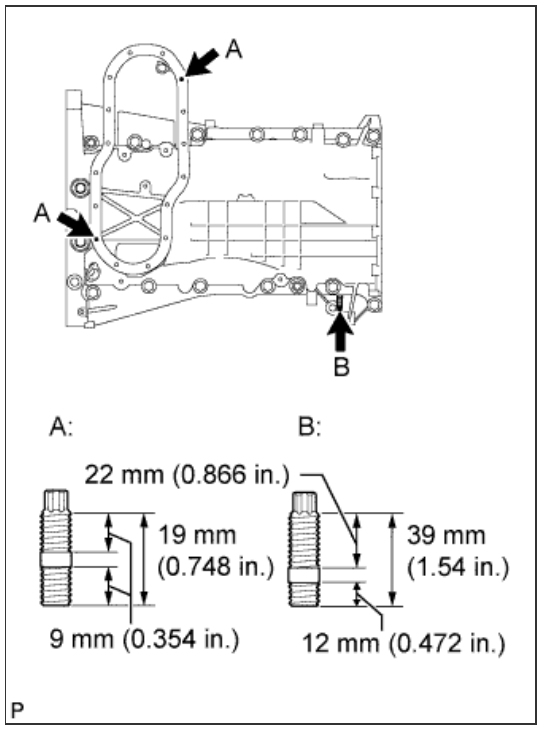


for Preparation Click here

1. INSTALL STUD BOLT

a. Install the timing chain cover stud bolt.

i. Using an E10 "TORX" socket wrench, install the 2 stud bolts as shown in the illustration.

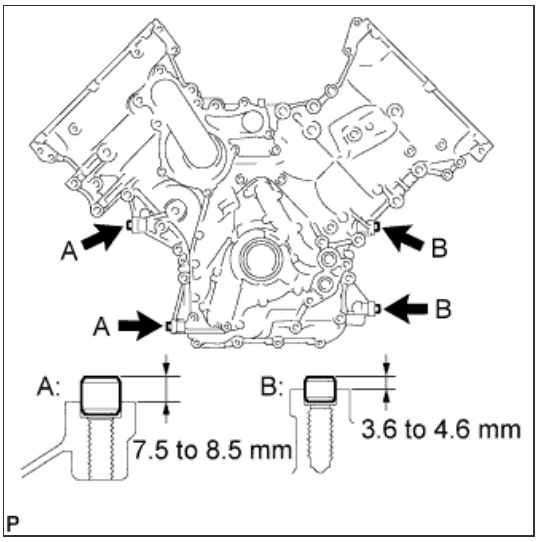


Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

b. Install the oil pan stud bolt.

i. Using an E6 and E7 "TORX" socket wrench, install the 3 stud bolts as shown in the illustration.

Torque:
for stud bolt A:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }
for stud bolt B:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }



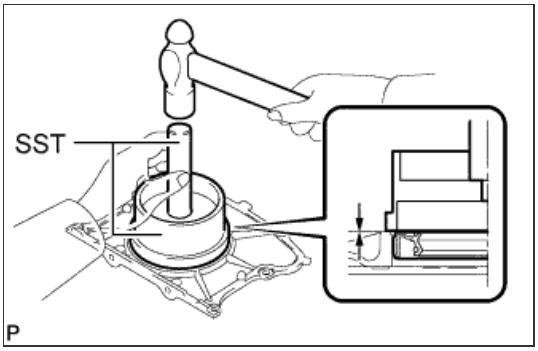
2. INSTALL RING PIN

a. Using a plastic-faced hammer, tap in new ring pins to the timing chain cover.

Standard Protrusion:

Item	Ring Pin Diameter	Specified Condition
Ring pin A	13 mm (0.512 in.)	7.5 to 8.5 mm (0.295 to 0.335 in.)
Ring pin B	11 mm (0.433 in.)	3.6 to 4.6 mm (0.142 to 0.181 in.)

3. INSTALL REAR CRANKSHAFT OIL SEAL



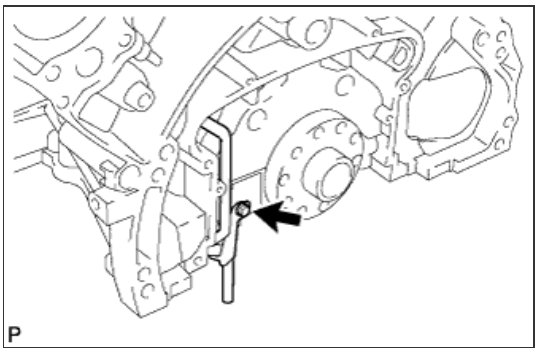
a. Using SST, tap in a new oil seal until its surface is flush with the oil seal retainer edge.

SST
09223-15030
09950-70010 (09951-07100)

Standard depth:
0 to 1.0 mm (0 to 0.0394 in.)

NOTICE:

- **Keep the lip free from foreign matter.**
- **Do not tap on the oil seal at an angle.**



4. INSTALL OIL DRAIN PIPE SUB-ASSEMBLY

a. Apply a light coat of engine oil to a new O-ring.

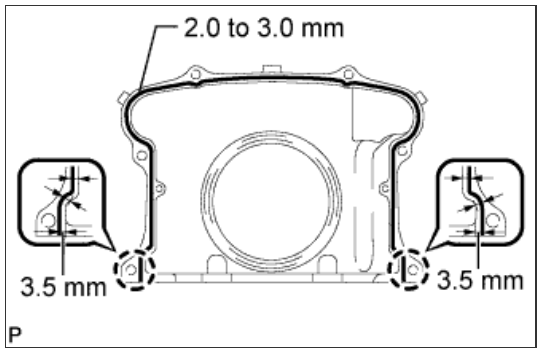
b. Install the O-ring to the drain pipe.

c. Install the oil drain pipe with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

5. INSTALL ENGINE REAR OIL SEAL RETAINER

a. Apply seal packing in a continuous line as shown in the illustration.



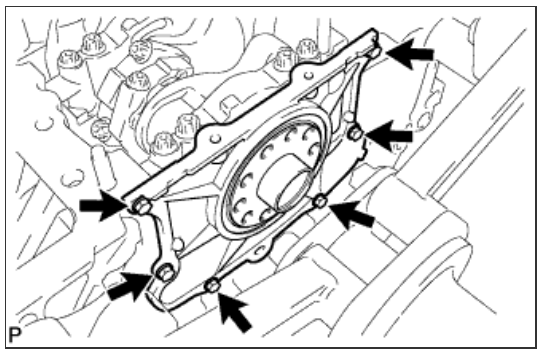
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
2.0 to 3.0 mm (0.0787 to 0.118 in.)

Application position from inside edge of retainer:
3.5 mm (0.138 in.)

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the oil seal retainer within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**



b. Install the oil seal retainer with the 6 bolts.

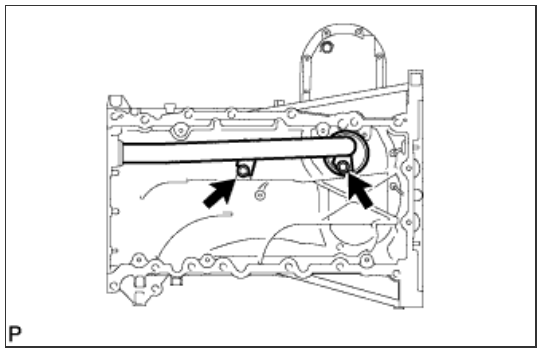
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

NOTICE:

- **Do not start the engine for at least 2 hours after installing.**
- **When installing the oil seal retainer, make sure the lip of the oil seal is not damaged.**
- **When installing the oil seal retainer, make sure the lip of the oil seal is not folded incorrectly.**

6. INSTALL OIL STRAINER SUB-ASSEMBLY

a. Apply a light coat of engine oil to a new O-ring.

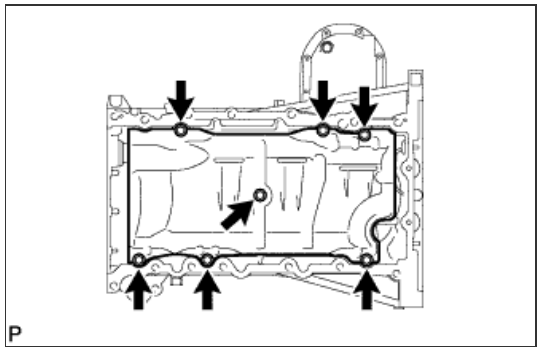


b. Install the O-ring to the oil strainer.

c. Install the oil strainer with the 2 bolts.

Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

NOTICE:



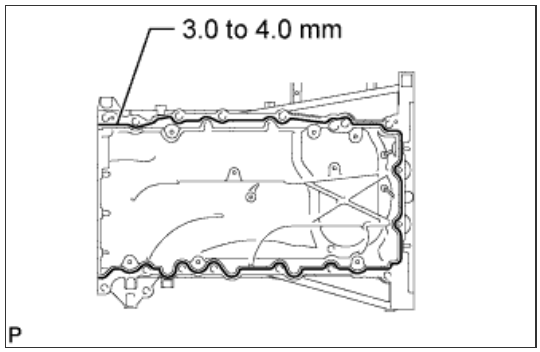
Make sure the O-ring is not twisted or damaged.

7. INSTALL NO. 1 OIL PAN BAFFLE PLATE

a. Install the baffle plate with the 7 bolts.

Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

8. INSTALL NO. 1 OIL PAN SUB-ASSEMBLY



a. Apply seal packing in a continuous line as shown in the illustration.

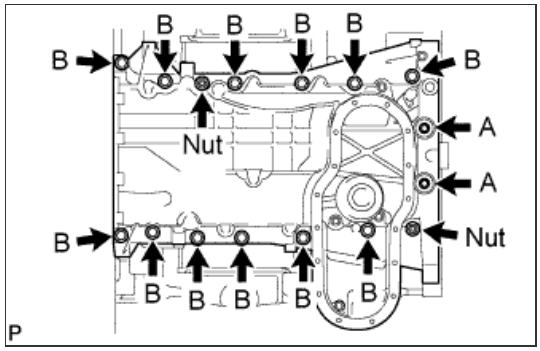
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
3.0 to 4.0 mm (0.118 to 0.157 in.)

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the oil pan within 3 minutes and tighten the bolts and nuts within 15 minutes after applying seal packing.**

b. Install the oil pan with the 14 bolts and 2 nuts.



Torque:
for bolt A:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }
for bolt B:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }
for nut:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }

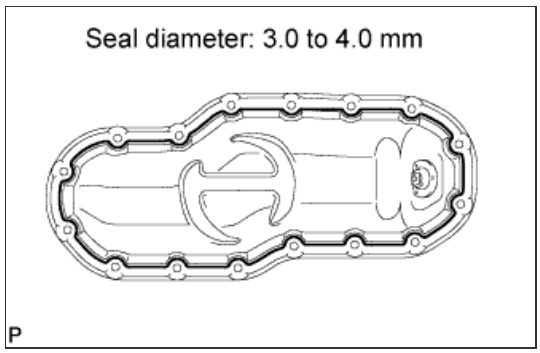
NOTICE:

Do not start the engine for at least 2 hours after installing.

Standard Bolt:

Item	Length	Thread Diameter
Bolt A	92 mm (3.62 in.)	6 mm (0.236 in.)
Bolt B	30 mm (1.18 in.)	10 mm (0.394 in.)

9. INSTALL NO. 2 OIL PAN SUB-ASSEMBLY



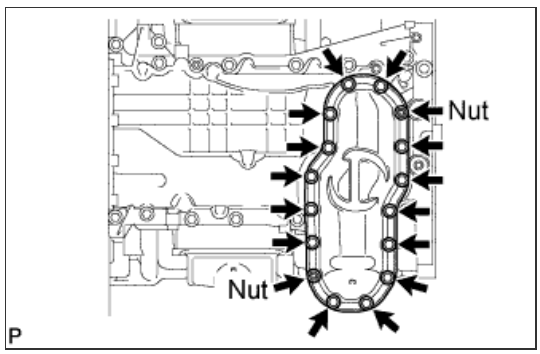
a. Apply seal packing in a continuous line as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
3.0 to 4.0 mm (0.118 to 0.156 in.)

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the oil pan within 3 minutes and tighten the bolts and nuts within 15 minutes after applying seal packing.**



b. Install the oil pan with the 14 bolts and 2 nuts.

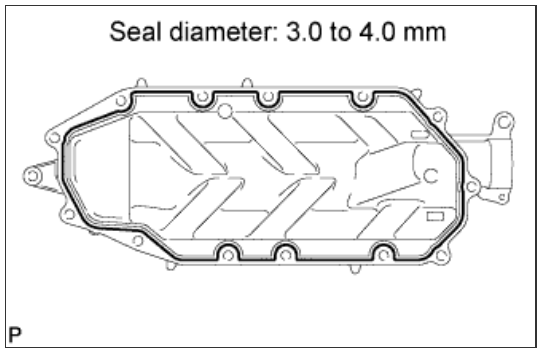
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

NOTICE:

Do not start the engine for at least 2 hours after installing.

c. Install the engine oil level sensor (Click here).

10. INSTALL NO. 1 HEAT EXCHANGER COVER



a. Apply seal packing in a continuous line as shown in the illustration.

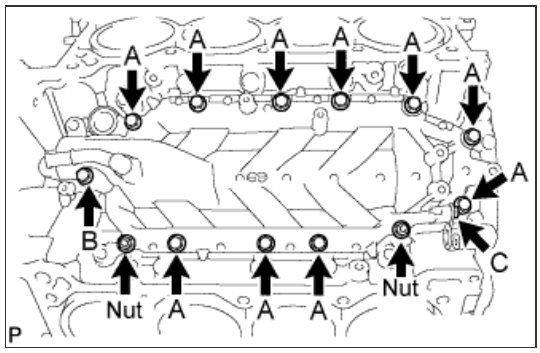
Seal packing:
Toyota Genuine Seal Packing 1282B, Three Bond 1282B or equivalent

Standard seal diameter:
3.0 to 4.0 mm (0.118 to 0.157 in.)

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the heat exchanger cover within 3 minutes and tighten the bolts and nuts within 15 minutes after applying seal packing.**

b. Install the heat exchanger cover with the 12 bolts and 2 nuts.



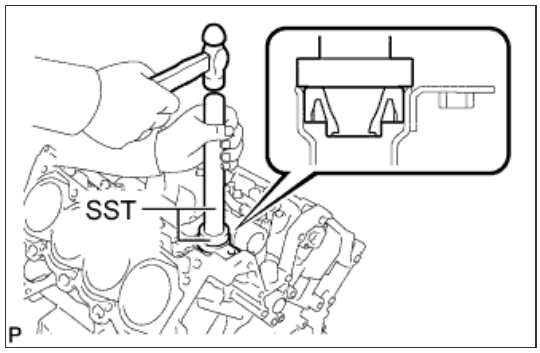
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

NOTICE:

Do not start the engine for at least 2 hours after installing.

Standard Bolt:

Item	Length	Thread Diameter
Bolt A	20 mm (0.787 in.)	8 mm (0.315 in.)
Bolt B	70 mm (2.76 in.)	8 mm (0.315 in.)
Bolt C	16 mm (0.630 in.)	6 mm (0.236 in.)



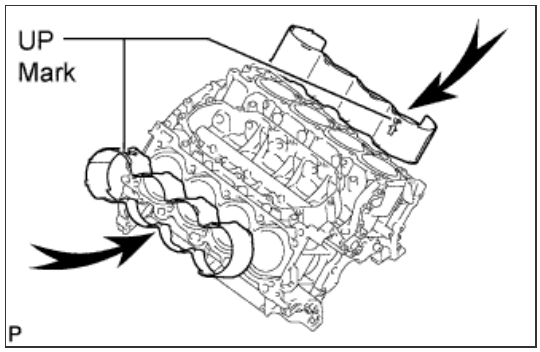
11. INSTALL VENTILATION PIPE GASKET

a. Using SST, evenly tap in a new ventilation pipe gasket until its surface is flush with the lip of the ventilation pipe.

SST
09950-60010 (09951-00360)
09950-70010 (09951-07100)

NOTICE:

- **Do not tap the gasket at an angle.**
- **Do not tap the gasket excessively.**

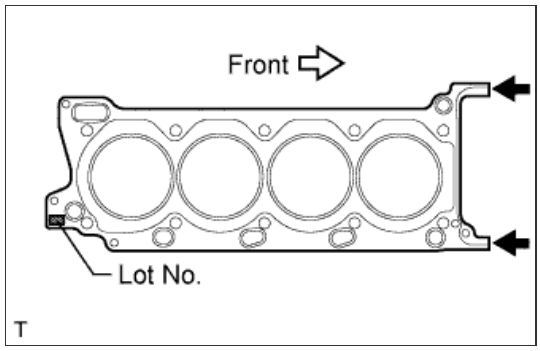


12. INSTALL CYLINDER BLOCK WATER JACKET SPACER

a. Install the 2 water jacket spacers as shown in the illustration.

HINT:

- **Face the cutouts indicated by the arrows in illustration away from the engine.**
- **Face the "UP" mark as shown in the illustration.**



13. INSTALL CYLINDER HEAD SUB-ASSEMBLY RH

a. Clean the cylinder block with solvent.

b. Set the piston of the No. 1 cylinder to slightly ATDC.

c. Place the cylinder head gasket on the cylinder block surface with the front face of the Lot No. stamp upward.

NOTICE:

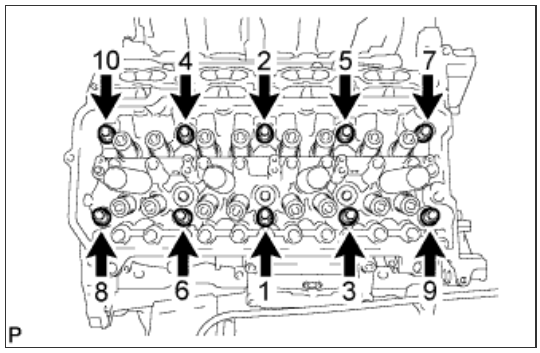
- **Be careful of the installation direction.**
- **Make sure that no oil is on the front end (indicated by the arrows) of the cylinder head gasket.**

d. Place the cylinder head on the cylinder block.

HINT:

The cylinder head bolts are tightened in 3 progressive steps.

NOTICE:



- **Ensure that no oil is on the mounting surface of the cylinder head.**
- **Gently place the cylinder head in order not to damage the gasket with the bottom part of the head.**

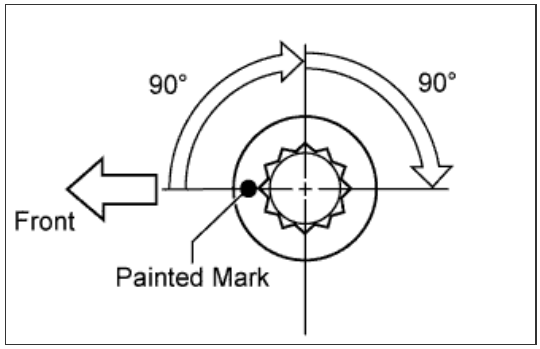
e. Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.

f. Step 1:

i. Using a 10 mm bi-hexagon wrench, install and uniformly tighten the 10 cylinder head bolts with the plate washers in several steps in the sequence shown in the illustration.

Torque:
36 N*m{ 367 kgf*cm , 27 ft.*lbf }

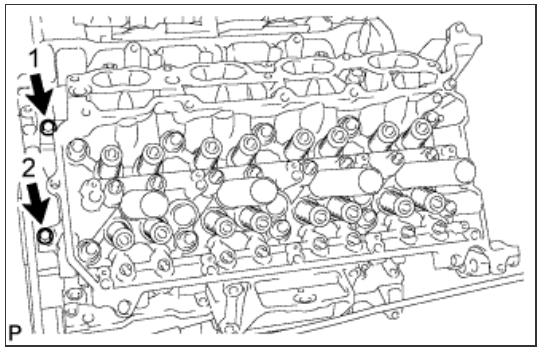
g. Step 2:



i. Mark each cylinder head bolt head with paint as shown in the illustration.

ii. Tighten the cylinder head bolts 90° in the sequence shown in step 1.

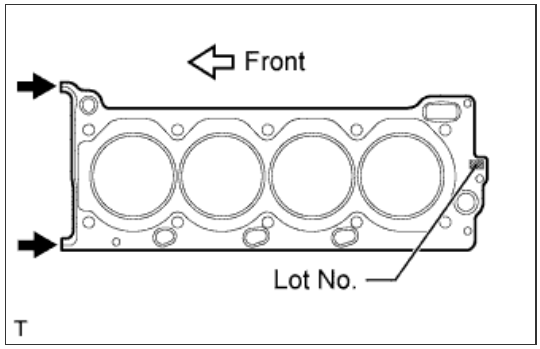
h. Step 3:



i. Tighten the cylinder head bolts another 90° in the sequence shown in step 1.

ii. Check that the painting marks are now facing rearward.

i. Uniformly install the 2 bolts in the sequence shown in the illustration.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

a. Clean the cylinder block with solvent.

b. Set the piston of the No. 1 cylinder to slightly ATDC.

c. Place the cylinder head gasket on the cylinder block surface with the front face of the Lot No. stamp upward.

NOTICE:

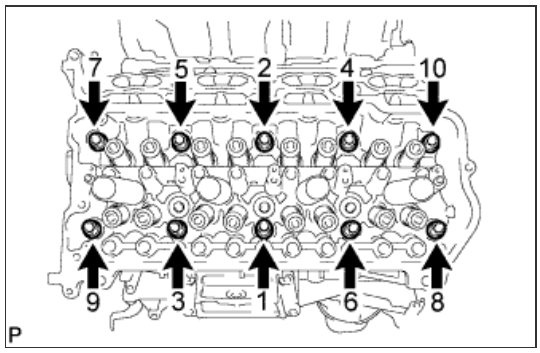
- **Be careful of the installation direction.**
- **Make sure that no oil is on the front end (indicated by the arrows) of the cylinder head gasket.**

d. Place the cylinder head on the cylinder block.

HINT:

The cylinder head bolts are tightened in 3 progressive steps.

NOTICE:

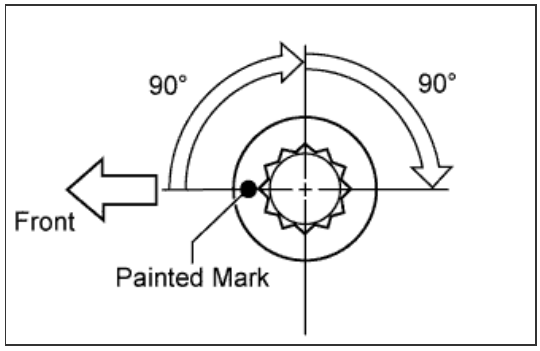


- **Ensure that no oil is on the mounting surface of the cylinder head.**
- **Gently place the cylinder head in order not to damage the gasket with the bottom part of the head.**

e. Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.

f. Step 1:

i. Using a 10 mm bi-hexagon wrench, install and uniformly tighten the 10 cylinder head bolts with the plate washers in several steps in the sequence shown in the illustration.

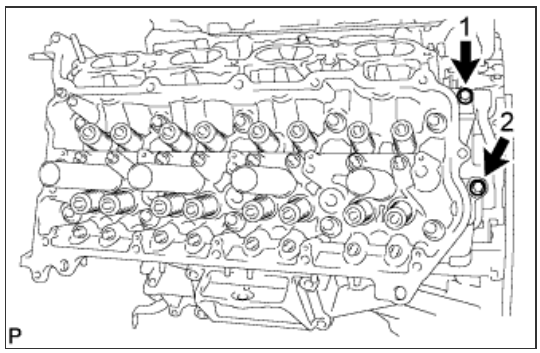


Torque:
36 N*m{ 367 kgf*cm , 27 ft.*lbf }

g. Step 2:

i. Mark each cylinder head bolt head with paint as shown in the illustration.

ii. Tighten the cylinder head bolts 90° in the sequence shown in step 1.



h. Step 3:

i. Tighten the cylinder head bolts another 90° in the sequence shown in step 1.

ii. Check that the painted marks are now facing rearward.

i. Uniformly install the 2 bolts in the sequence shown in the illustration.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

15. INSTALL VALVE STEM CAP

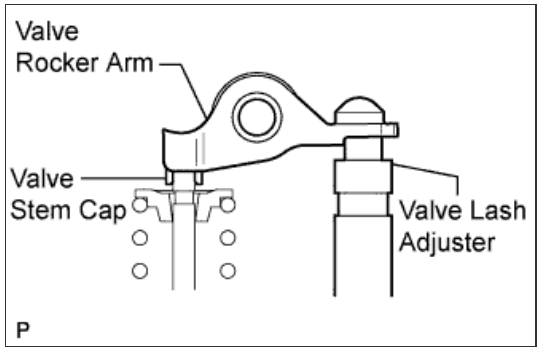
a. Apply a light coat of engine oil to the valve stem caps.

b. Install the 32 valve stem caps to the cylinder heads.

16. INSTALL VALVE LASH ADJUSTER ASSEMBLY

a. Inspect the valve lash adjuster before installing it (Click here).

b. Install the 32 valve lash adjusters to the cylinder heads.



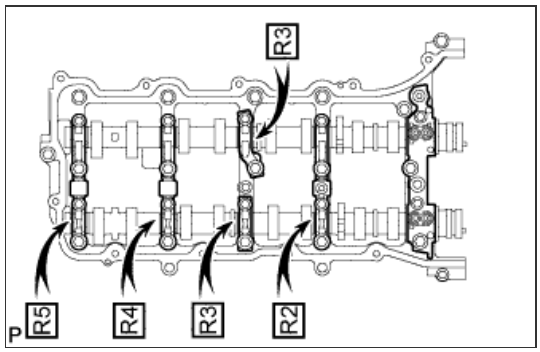
NOTICE:

Install the lash adjuster to the same place it was removed from.

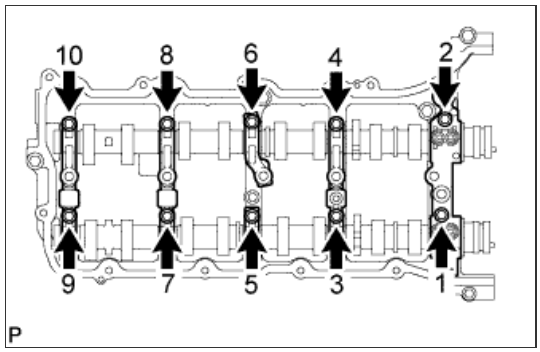
17. INSTALL NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY

a. Apply engine oil to the lash adjuster tips and valve stem cap ends.

b. Install the 32 valve rocker arms as shown in the illustration.



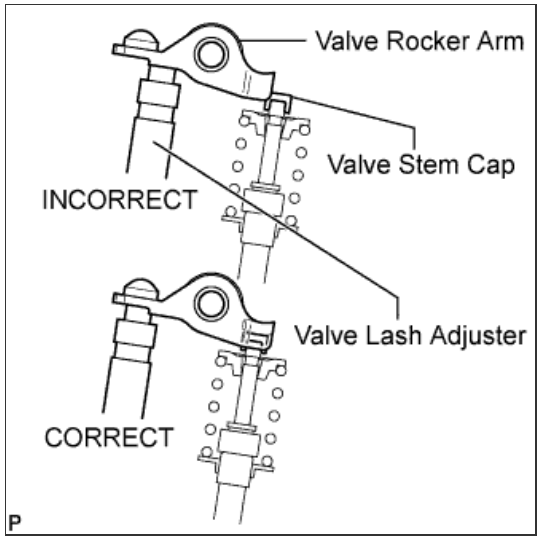
18. INSTALL CAMSHAFT BEARING CAP RH



a. Apply a light coat of engine oil to the camshaft journals, camshaft housings and bearing caps.

b. Install the No. 1 and No. 2 camshafts to the camshaft housing.

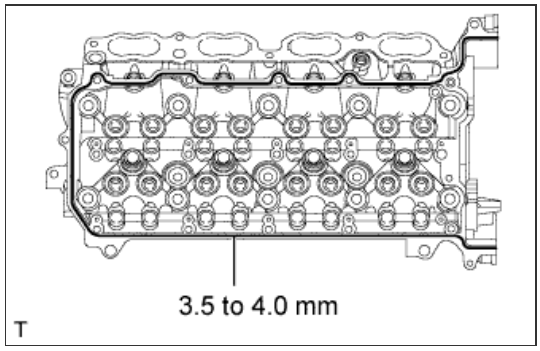
c. Confirm the marks and numbers on the camshaft bearing caps and place them in their proper positions and directions.



d. Temporarily install the 10 bolts in the order shown in the illustration.

19. INSTALL CAMSHAFT HOUSING SUB-ASSEMBLY RH

a. Make sure that the valve rocker arms are installed as shown in the illustration.



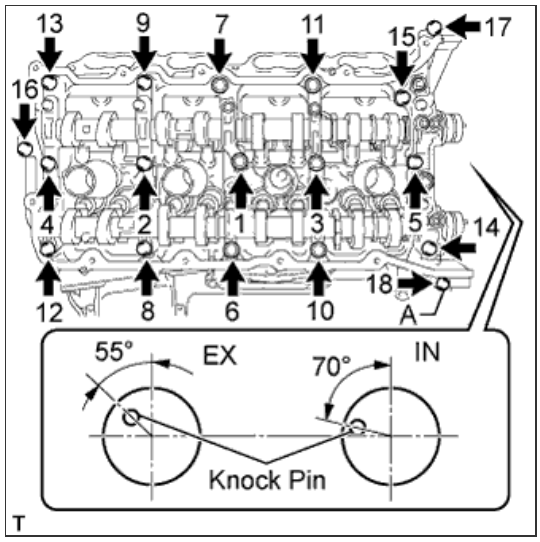
b. Apply seal packing in a continuous line as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
3.5 to 4.0 mm (0.138 to 0.157 in.)

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the camshaft housing within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**

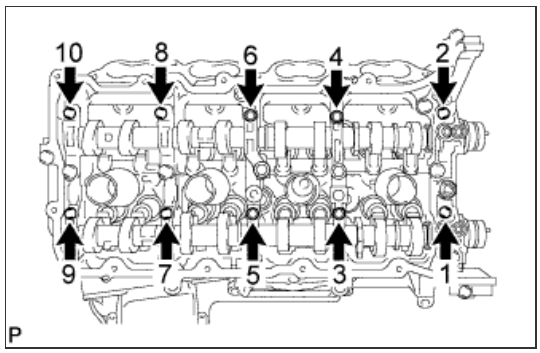


c. Install the camshaft housing, and install the 18 bolts in the order shown in the illustration.

Torque:
for bolt A:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }
except bolt A:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }

NOTICE:

- **Do not start the engine for at least 2 hours after the installation.**
- **Make sure that the knock pin of the camshaft is positioned as shown in the illustration before installing the camshaft housing.**

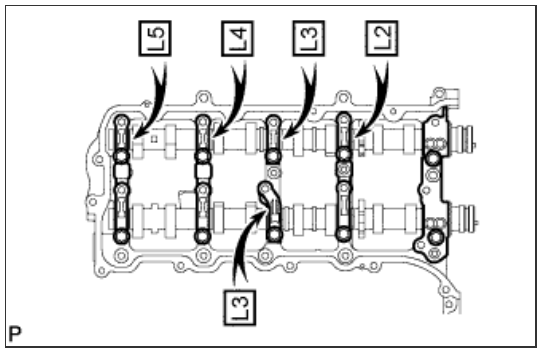


d. Tighten the 10 bolts in the order shown in the illustration.

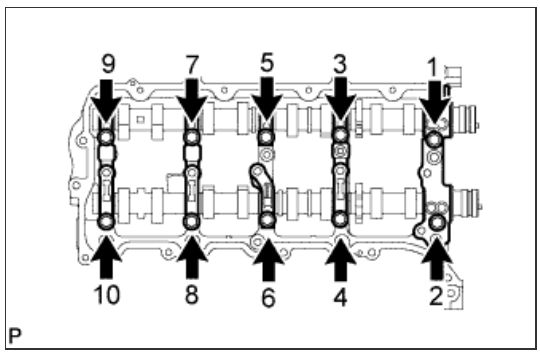
Torque:
16 N*m{ 163 kgf*cm , 12 ft.*lbf }

NOTICE:

Thoroughly wipe clean any seal packing.



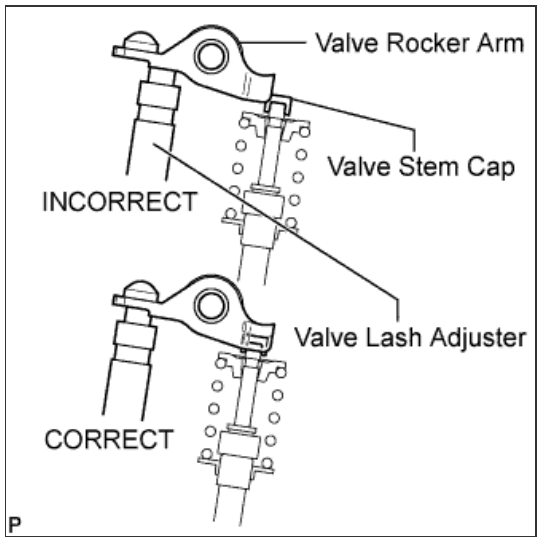
20. INSTALL CAMSHAFT BEARING CAP LH



a. Apply a light coat of engine oil to the camshaft journals, camshaft housings and bearing caps.

b. Install the No. 3 and No. 4 camshafts to the camshaft housing.

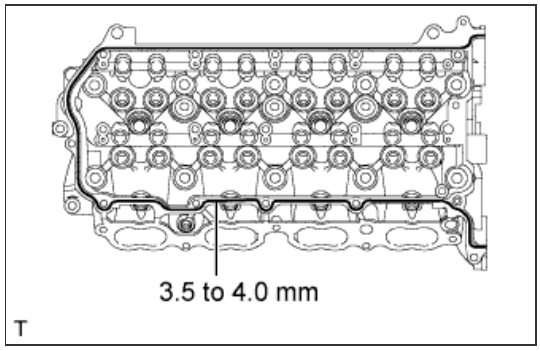
c. Confirm the marks and numbers on the camshaft bearing caps and place them in their proper positions and directions.



d. Temporarily install the 10 bolts in the order shown in the illustration.

21. INSTALL CAMSHAFT HOUSING SUB-ASSEMBLY LH

a. Make sure that the valve rocker arms are installed as shown in the illustration.



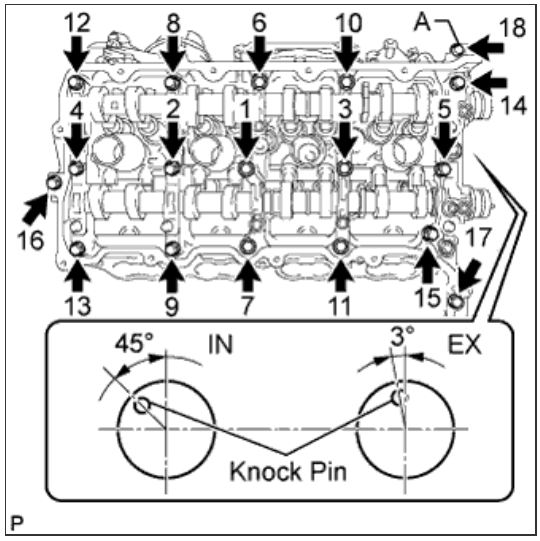
b. Apply seal packing in a continuous line as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
3.5 to 4.0 mm (0.138 to 0.157 in.)

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the camshaft housing within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**

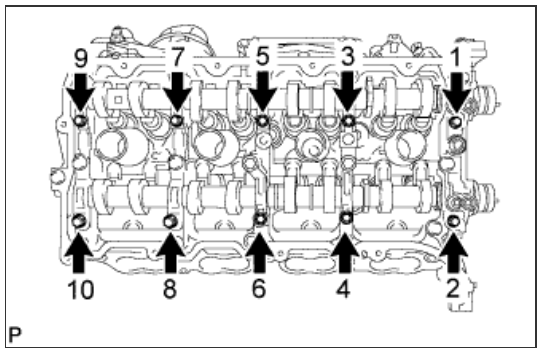


c. Install the camshaft housing, and install the 18 bolts in the order shown in the illustration.

Torque:
for bolt A:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }
except bolt A:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }

NOTICE:

- **Do not start the engine for at least 2 hours after the installation.**
- **Make sure that the knock pin of the camshaft is positioned as shown in the illustration before installing the camshaft housing.**

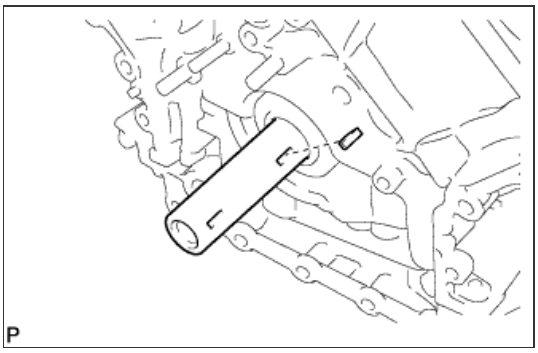


d. Tighten the 10 bolts in the order shown in the illustration.

Torque:
16 N*m{ 163 kgf*cm , 12 ft.*lbf }

NOTICE:

Thoroughly wipe clean any seal packing.



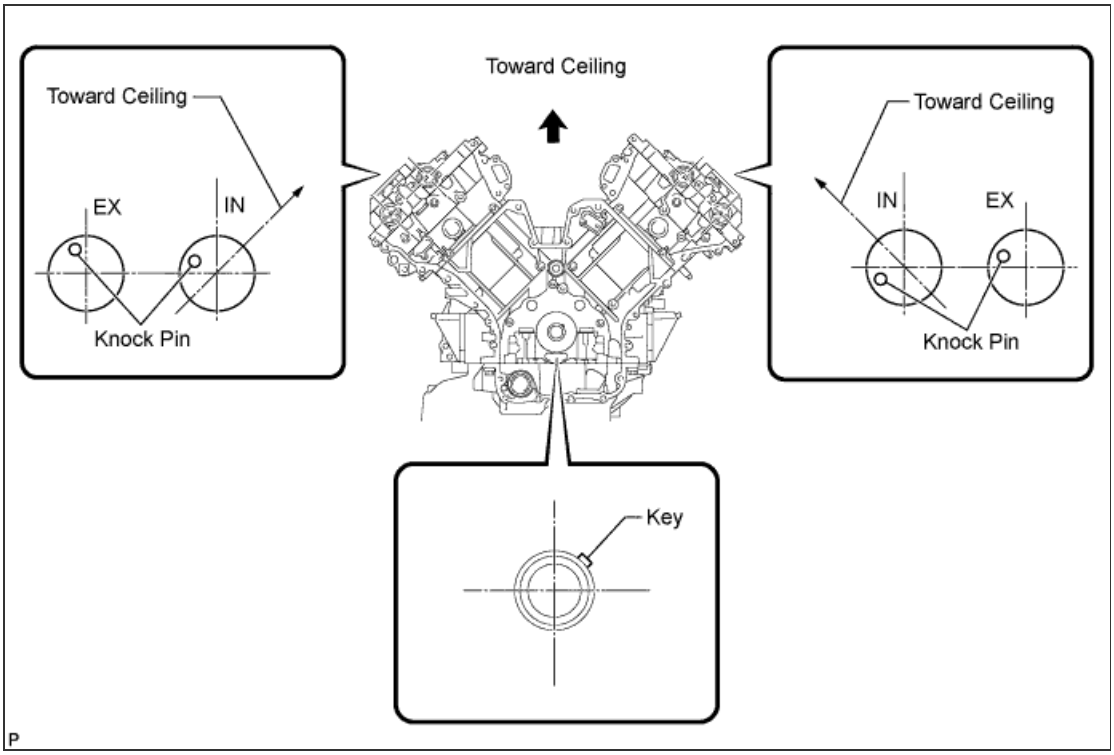
22. INSTALL CRANKSHAFT TIMING GEAR KEY

a. Install the timing gear key.

HINT:

The other timing gear key will be installed at a later step.

23. SET NO. 1 CYLINDER TO TDC/COMPRESSION



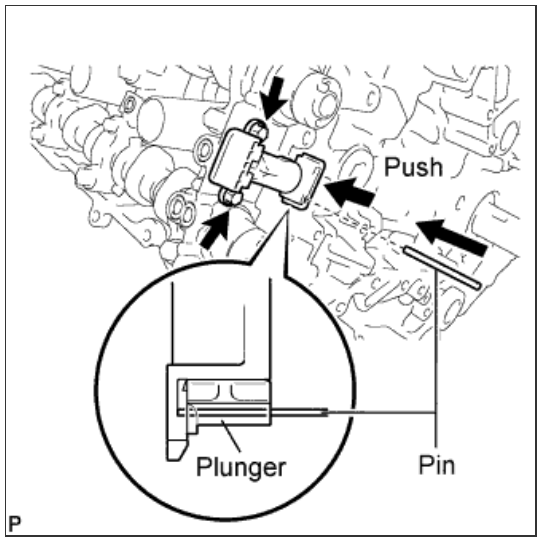
a. Temporarily install the crankshaft pulley bolt.

b. Rotate the crankshaft so that the timing gear key is as shown in the illustration. Then using a wrench, rotate each camshaft so that the timing marks are as shown in the illustration.

NOTICE:

When the crankshaft or a camshaft is rotated excessively, the valves and pistons may interfere with each other.

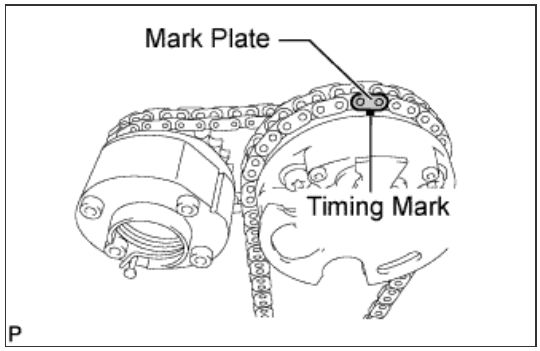
c. Remove the crankshaft pulley bolt.



24. INSTALL NO. 2 CHAIN TENSIONER ASSEMBLY

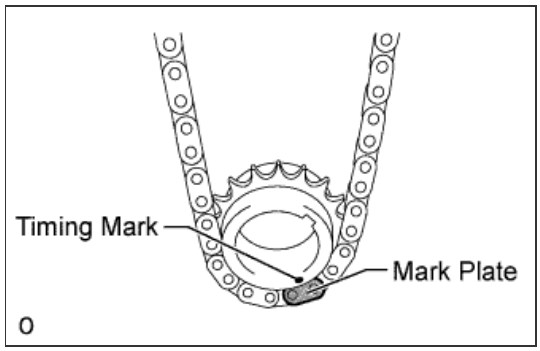
a. Install the chain tensioner with the 2 bolts.

Torque:



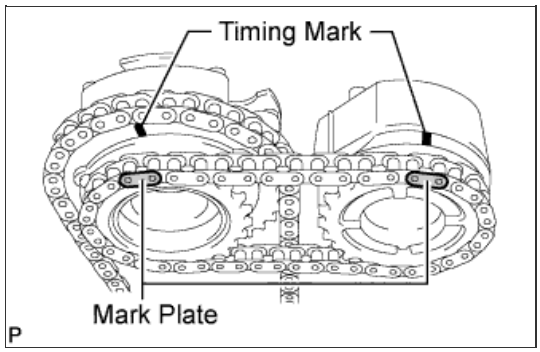
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. While raising up the No. 2 chain tensioner, insert a pin of φ1.0 mm (0.0394 in.) into the hole to fix it in place.



25. INSTALL NO. 1 CHAIN SUB-ASSEMBLY RH

a. Align the No. 1 chain orange mark plate with the camshaft timing gear timing mark, and attach the chain to the gear as shown in the illustration.



b. Align the No. 1 chain orange mark plate with the crankshaft timing sprocket timing mark, and attach the chain to the gear as shown in the illustration.

c. Align the No. 2 chain yellow mark plates with the timing marks of the camshaft timing gear assembly and camshaft timing exhaust gear assembly, and attach the No. 2 chain to the gears as shown in the illustration.

HINT:

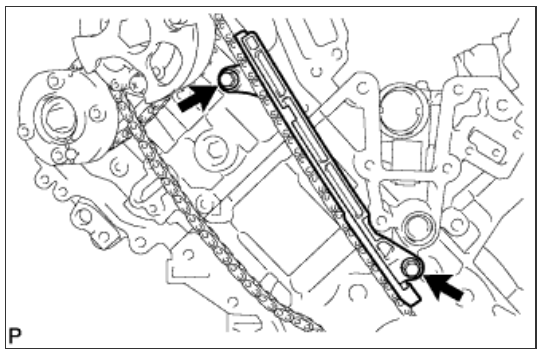
The crankshaft timing sprocket RH and camshaft timing exhaust gear will be installed with the No. 1 and No. 2 chains connected to the gears.

d. Install the crankshaft timing sprocket RH to the crankshaft.

e. Align and attach the knock pin of the No. 1 camshaft with the pin hole of the camshaft timing gear.

f. Using the hexagonal portion of the No. 2 camshaft, align and attach the knock pin of the No. 2 camshaft with the pin hole of the camshaft timing exhaust gear.

g. Remove the pin from the No. 2 chain tensioner.

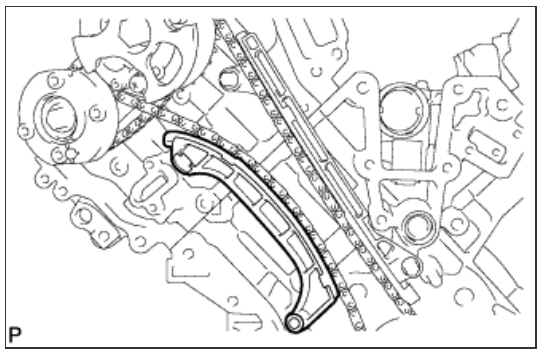


h. Using a wrench to hold the hexagonal portion of the No. 1 camshaft, temporarily install the bolt.

i. Using a wrench to hold the hexagonal portion of the No. 2 camshaft, temporarily install the bolt.

26. INSTALL NO. 1 CHAIN VIBRATION DAMPER RH

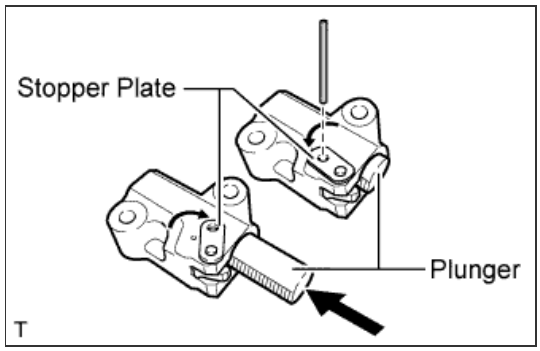
a. Install the vibration damper with the 2 bolts.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

27. INSTALL NO. 1 CHAIN TENSIONER SLIPPER RH

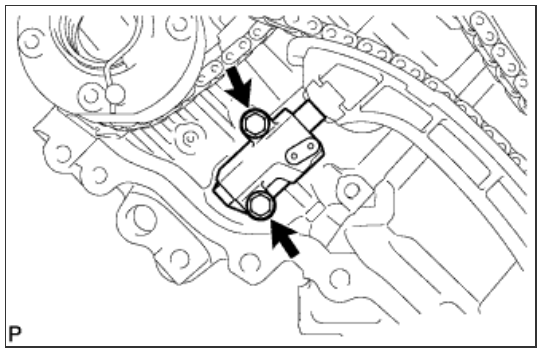
HINT:



If you cannot install the chain tensioner slipper due to the tension of the chain, use the hexagonal portion of the camshaft to loosen the chain, and then install the chain tensioner slipper.

28. INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY RH

a. Move the stopper plate clockwise to release the lock, and push the plunger deep into the tensioner.

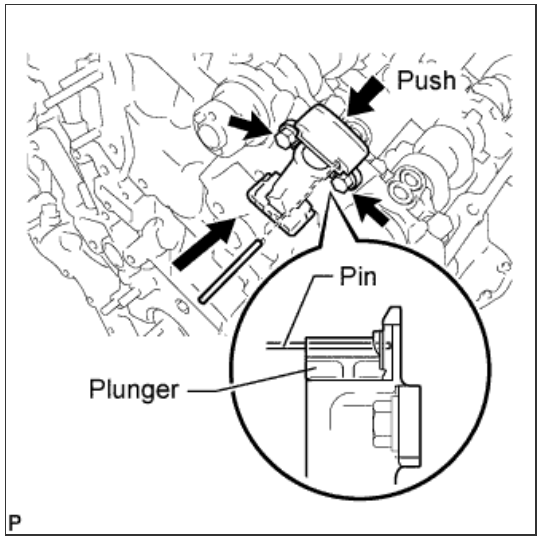


b. Move the stopper plate counterclockwise to set the lock, and insert a hexagon wrench into the hole of the stopper plate.

c. Install the chain tensioner with the 2 bolts.

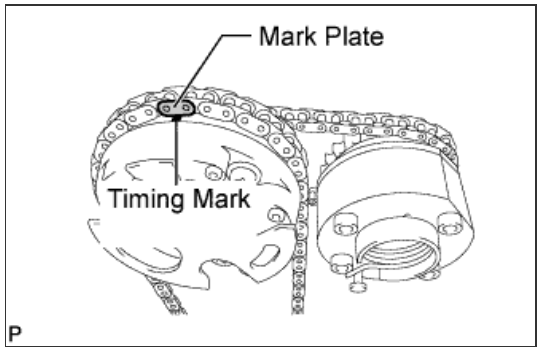
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

d. Remove the hexagon wrench from the chain tensioner.



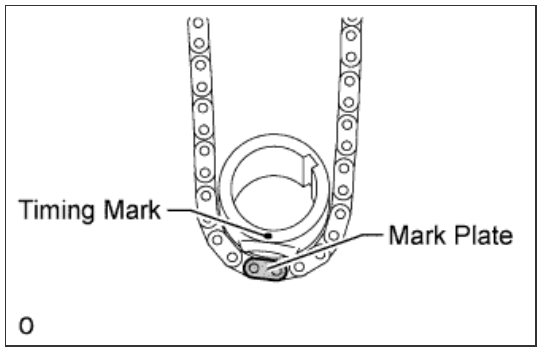
29. INSTALL NO. 3 CHAIN TENSIONER ASSEMBLY

a. Install the chain tensioner with the 2 bolts.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. While pushing down the No. 2 chain tensioner, insert a pin of φ1.0 mm (0.0394 in.) into the hole to fix it in place.

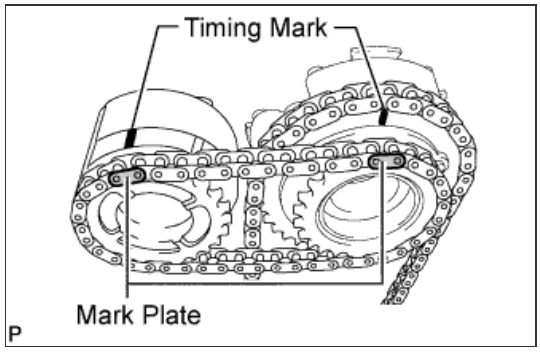


30. INSTALL NO. 1 CHAIN SUB-ASSEMBLY LH

a. Align the No. 1 chain orange mark plate with the camshaft timing gear timing mark, and attach the chain to the gear as shown in the illustration.

b. Align the No. 1 chain orange mark plate with the crankshaft timing sprocket timing mark, and attach the chain to the gear as shown in the illustration.

c. Align the No. 2 chain yellow mark plates with the timing marks of the camshaft timing gear assembly and camshaft timing exhaust gear assembly, and attach the No. 2 chain to the gears as shown in the illustration.



HINT:

The crankshaft timing sprocket LH and camshaft timing exhaust gear will be installed with the No. 1 and No. 2 chains connected to the gears.

d. Install the crankshaft timing sprocket LH to the crankshaft.

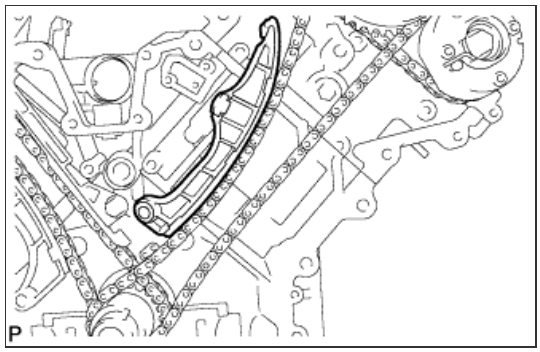
e. Align and attach the knock pin of the No. 3 camshaft with the pin hole of the camshaft timing gear.

f. Using the hexagonal portion of the No. 4 camshaft, align and attach the knock pin of the No. 4 camshaft with the pin hole of the camshaft timing exhaust gear.

NOTICE:

Because the timing mark positions of the gears may shift due to looseness of the No. 1 chain, use the hexagonal portion of the camshaft to hold the No. 3 camshaft in place until the No. 1 chain tensioner is installed.

g. Remove the pin from the No. 3 chain tensioner.

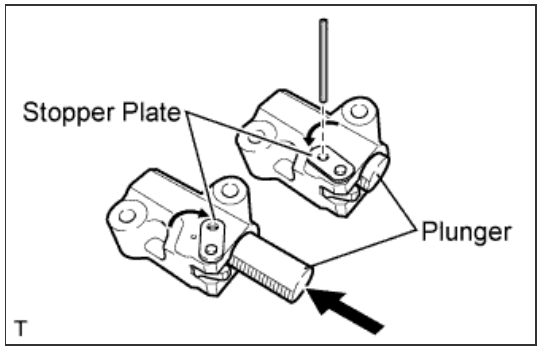


h. Using a wrench to hold the hexagonal portion of the No. 3 camshaft, temporarily install the bolt.

i. Using a wrench to hold the hexagonal portion of the No. 4 camshaft, temporarily install the bolt.

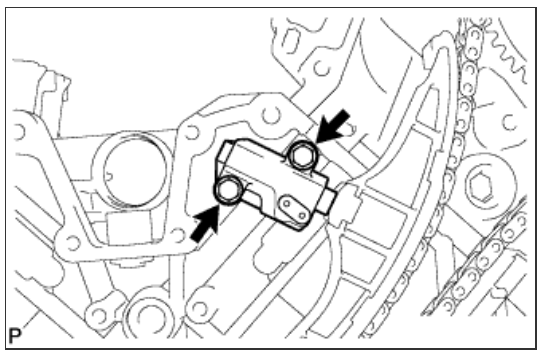
31. INSTALL NO. 1 CHAIN TENSIONER SLIPPER LH

HINT:



If you cannot install the chain tensioner slipper due to the tension of the chain, use the hexagonal portion of the camshaft to loosen the chain, and install the chain tensioner slipper.

32. INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY LH

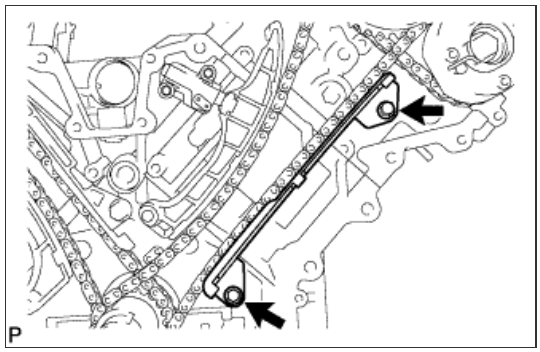


a. Move the stopper plate clockwise to release the lock, and push the plunger deep into the tensioner.

b. Move the stopper plate counterclockwise to set the lock, and insert a hexagon wrench into the hole of the stopper plate.

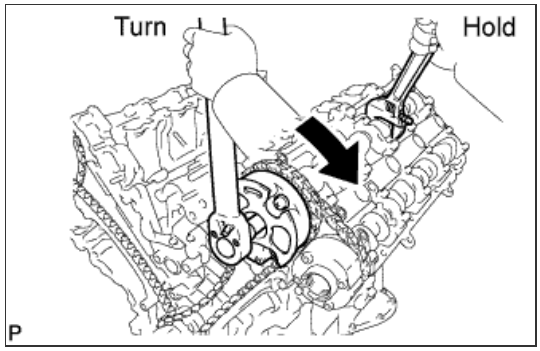
c. Install a new gasket and the chain tensioner with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



33. INSTALL NO. 1 CHAIN VIBRATION DAMPER LH

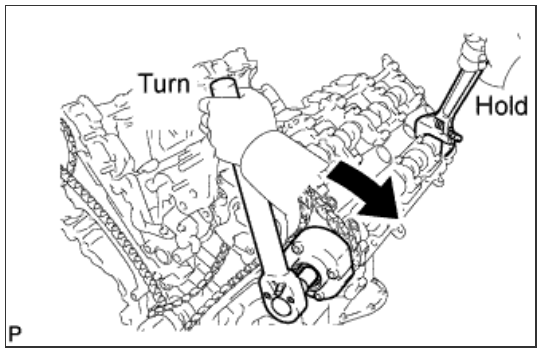
a. Install the vibration damper with the 2 bolts.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. Remove the hexagon wrench from the No. 1 chain tensioner.

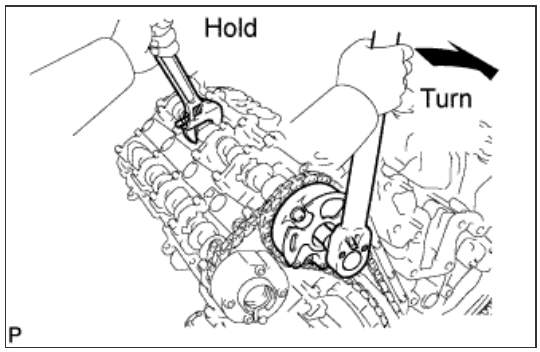
34. TIGHTEN CAMSHAFT TIMING GEAR



a. for Bank 1:

i. Using a wrench, hold the hexagonal portion of the No. 3 camshaft.

ii. Tighten the bolt of the camshaft timing gear.

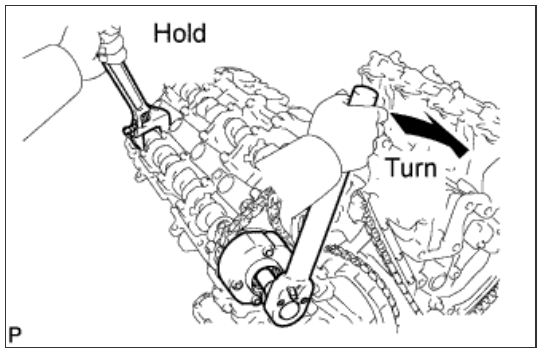


Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

iii. Using a wrench to hold the hexagonal portion of the No. 4 camshaft, tighten the bolt of the camshaft timing exhaust gear.

Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

b. for Bank 2:



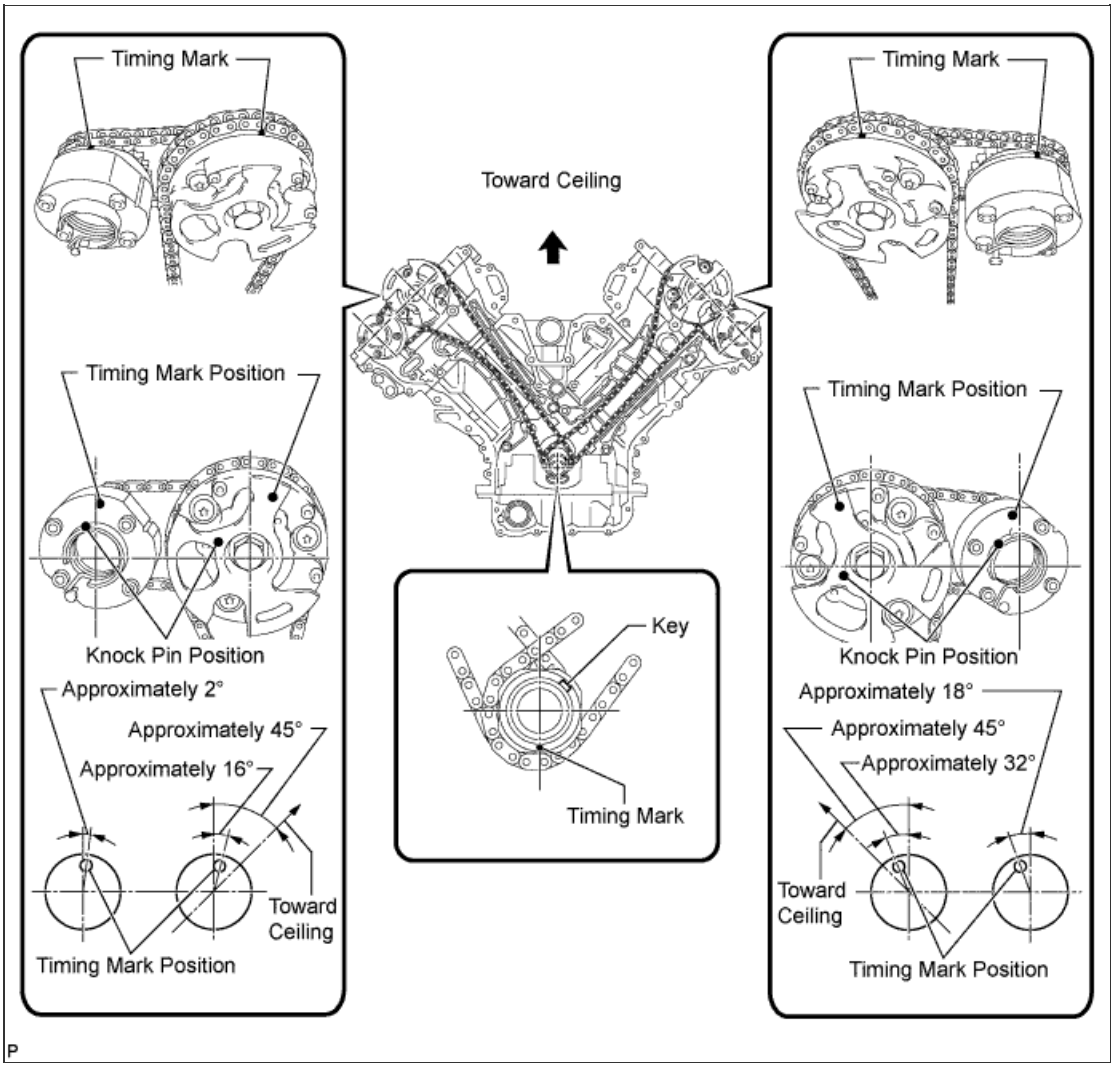
i. Using a wrench, hold the hexagonal portion of the No. 1 camshaft.

ii. Tighten the bolt of the camshaft timing gear.

Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

iii. Using a wrench to hold the hexagonal portion of the No. 2 camshaft, tighten the bolt of the camshaft timing exhaust gear.

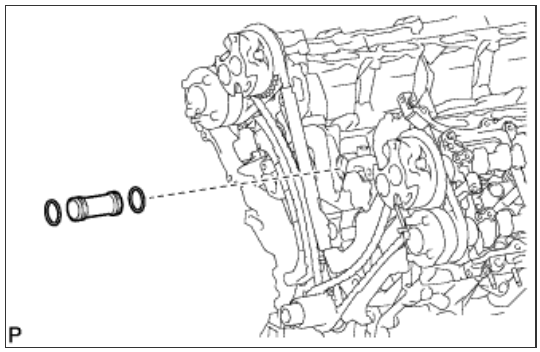
Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }



35. CHECK NO. 1 CYLINDER TO TDC/COMPRESSION

a. Temporarily install the crankshaft pulley bolt.

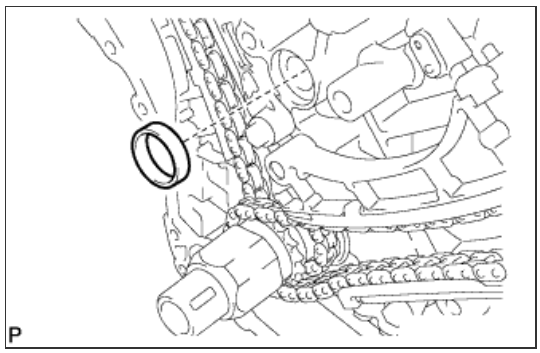
b. Rotate the crankshaft clockwise, and check that the timing marks on the crankshaft timing sprocket and camshaft timing gears are as shown in the illustration.



c. Remove the crankshaft pulley bolt.

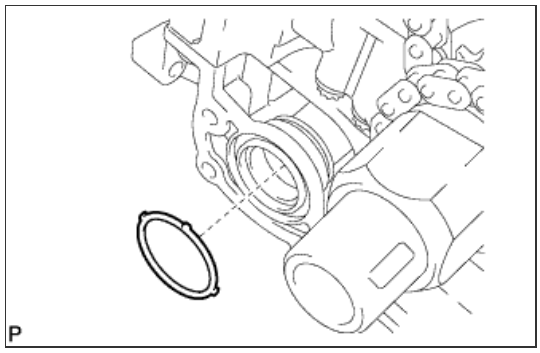
36. INSTALL WATER INLET PIPE

a. Apply soapy water to 2 new O-rings and install them to the inlet pipe.



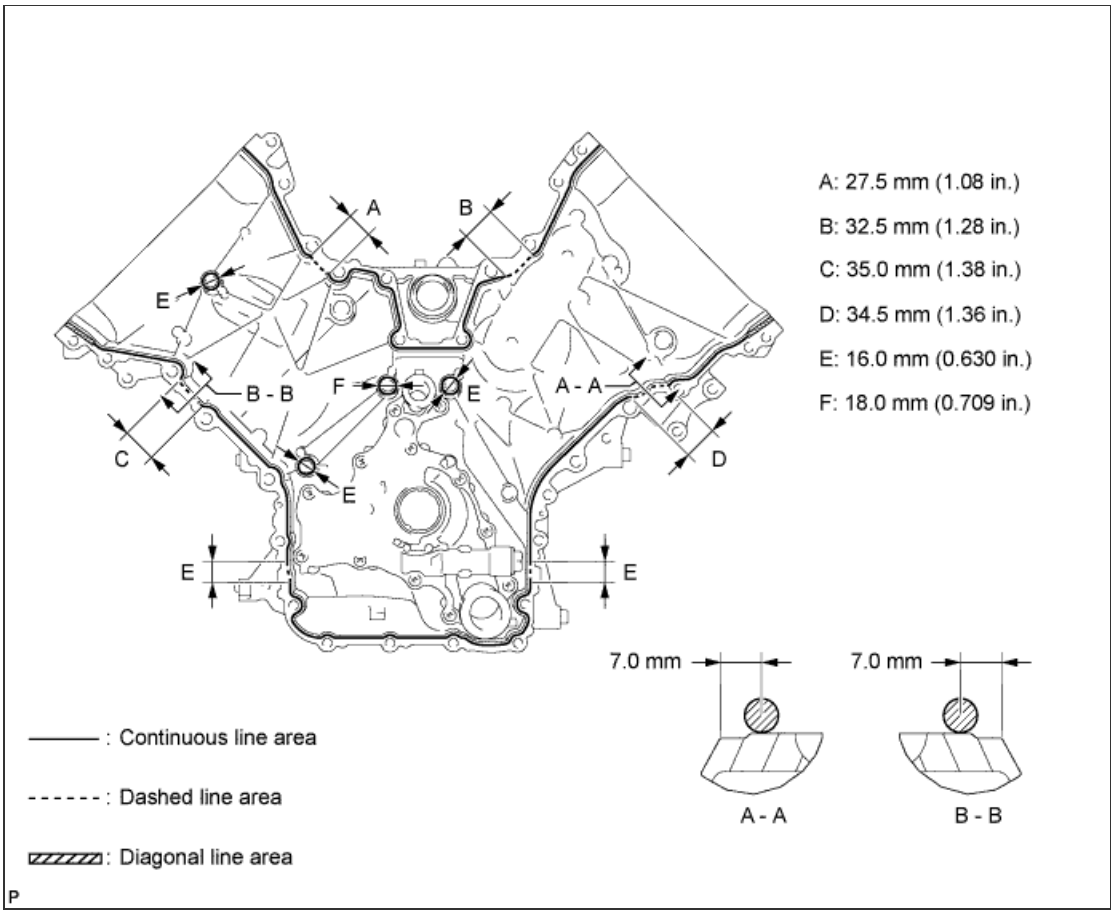
b. Install the inlet pipe to the No. 1 heat exchanger cover.

37. INSTALL TIMING CHAIN COVER SUB-ASSEMBLY



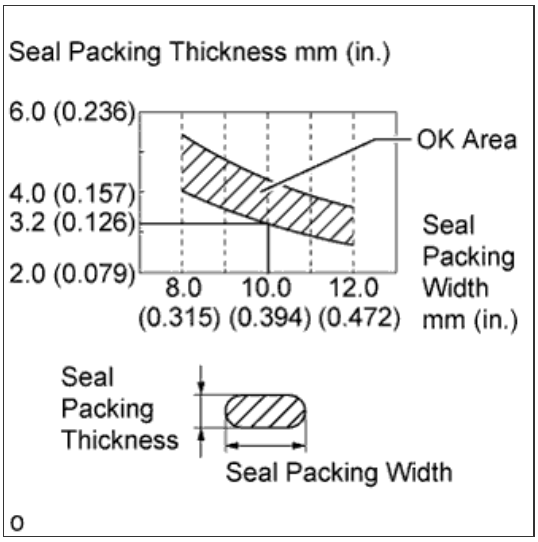
a. Apply a light coat of engine oil to a new oil pump gasket.

b. Install the oil pump gasket.



c. Apply a light coat of engine oil to a new O-ring.

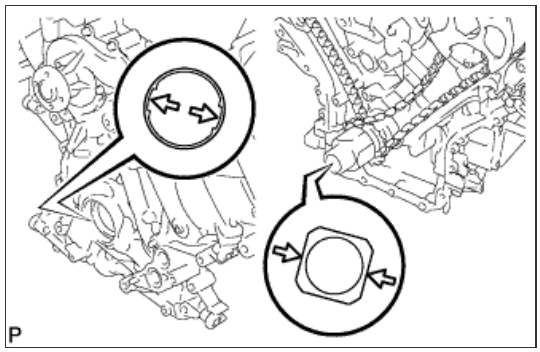
d. Install the O-ring.



e. Apply seal packing in a continuous line to the timing chain cover as shown in the following illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Apply seal packing as follows:

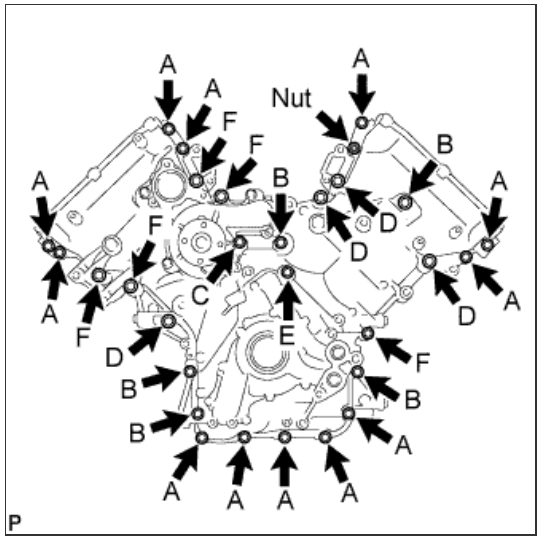


Area	Seal Packing Diameter	Application Position from Inside Edge of Cover
Continuous Line Area	3.0 to 4.0 mm (0.118 to 0.157 in.)	2.5 mm (0.0984 in.)
Dashed Line Area	6.4 mm (0.252 in.) or more, or within OK area shown in illustration	7.0 mm (0.276 in.)
Diagonal Line Area	3.0 to 4.0 mm (0.118 to 0.157 in.)	5.5 mm (0.217 in.)

NOTICE:

- **When the contact surfaces are wet, wipe them with an oil-free cloth before applying seal packing.**
- **Install the chain cover within 3 minutes and tighten the bolts within 10 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after installing.**

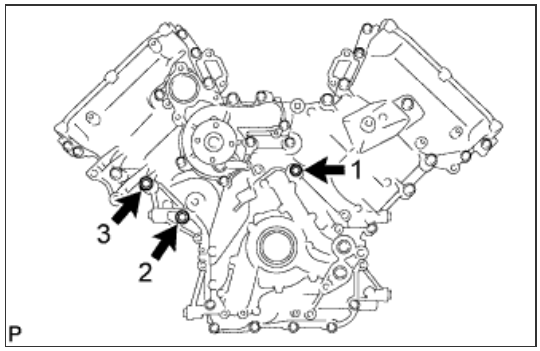
f. Align the oil pump drive rotor spline and crankshaft as shown in the illustration.
Install the spline and chain cover to the crankshaft.



g. Temporarily install the timing chain cover with the 28 bolts and nut.

Standard Bolt:

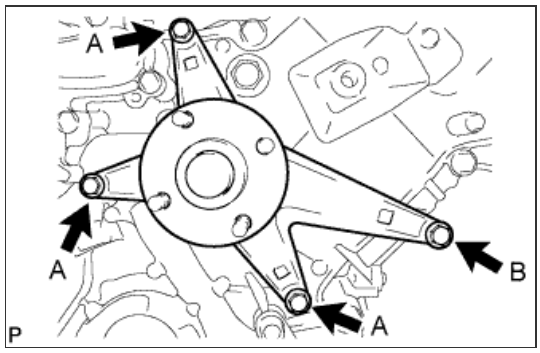
Item	Length	Thread Diameter
Bolt A	25 mm (0.984 in.)	8 mm (0.315 in.)
Bolt B	55 mm (2.17 in.)	8 mm (0.315 in.)
Bolt C	70 mm (2.76 in.)	8 mm (0.315 in.)
Bolt D	35 mm (1.38 in.)	10 mm (0.394 in.)
Bolt E	55 mm (2.17 in.)	10 mm (0.394 in.)
Bolt F	80 mm (3.15 in.)	10 mm (0.394 in.)



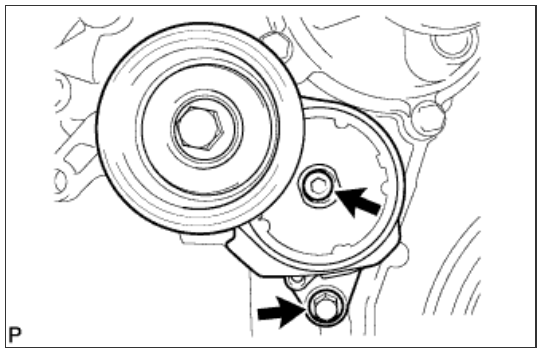
NOTICE:

Make sure that there is no oil on the bolt threads.

h. Tighten the 3 bolts in several steps in the sequence shown in the illustration.



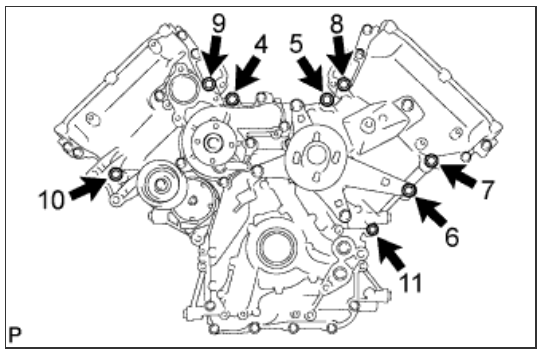
Torque:
47 N*m{ 479 kgf*cm , 35 ft.*lbf }



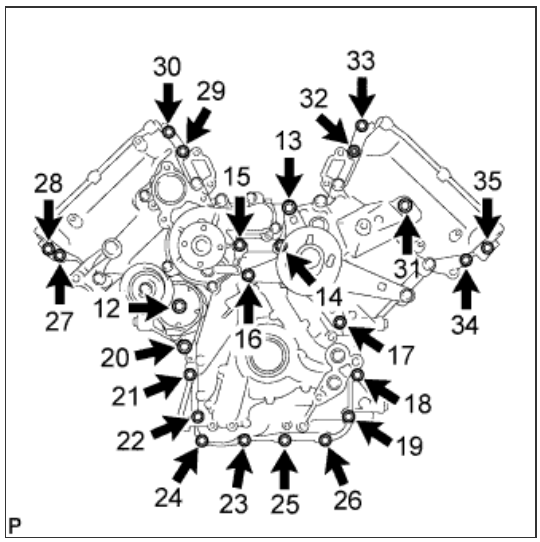
i. Temporarily install the fluid coupling bracket with the 4 bolts.

Standard Bolt:

Item	Length	Thread Diameter
Bolt A	70 mm (2.76 in.)	8 mm (0.315 in.)
Bolt B	80 mm (3.15 in.)	10 mm (0.394 in.)

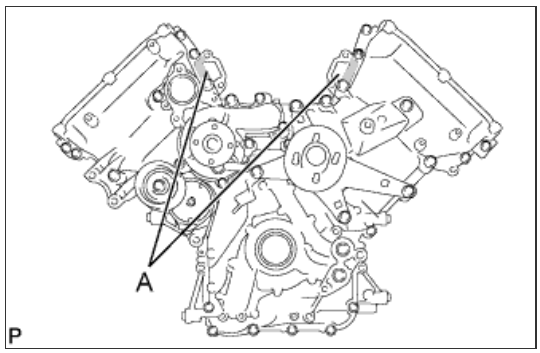


j. Temporarily install the belt tensioner with the standard bolt and 6 mm hexagon wrench bolt.



k. Tighten the 8 bolts labeled 4 to 11 in several steps in the sequence shown in the illustration.

Torque:
47 N*m{ 479 kgf*cm , 35 ft.*lbf }



l. Tighten the 23 bolts and nut labeled 12 to 35 in several steps in the sequence shown in the illustration.

Torque:
23 N*m{ 235 kgf*cm , 17 ft.*lbf }

NOTICE:

After the installation, if the seal packing has seeped out at the areas labeled A shown in the illustration, wipe it off.

38. INSTALL WATER PUMP ASSEMBLY

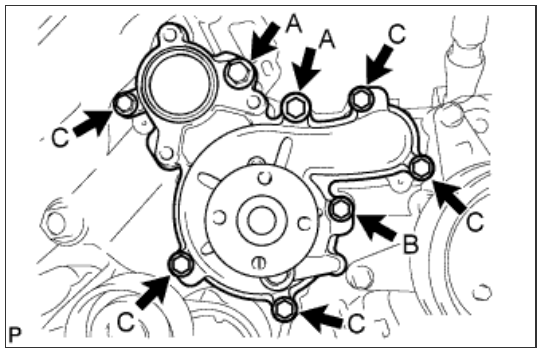
a. Install a new gasket and the water pump with the 8 bolts shown in the illustration.

Torque:

for bolt A:

47 N*m{ 479 kgf*cm , 35 ft.*lbf }

for bolt B:



23 N*m{ 235 kgf*cm , 17 ft.*lbf }

for bolt C:

20 N*m{ 204 kgf*cm , 15 ft.*lbf }

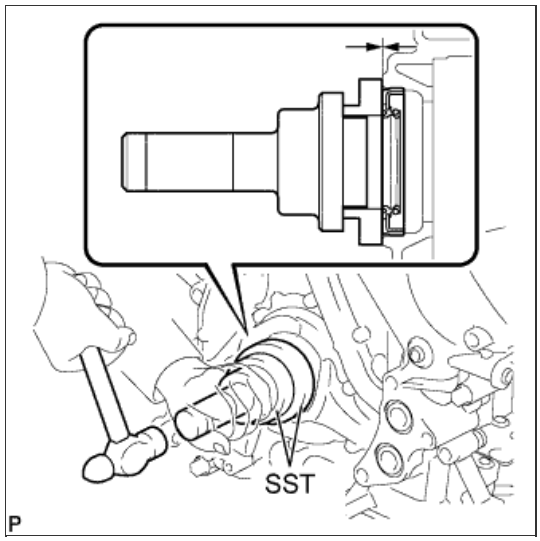
Standard Bolt:

Item	Length	Thread Diameter
Bolt A	80 mm (3.15 in.)	10 mm (0.394 in.)
Bolt B	70 mm (2.76 in.)	8 mm (0.315 in.)
Bolt C	25 mm (0.984 in.)	8 mm (0.315 in.)

39. INSTALL FRONT CRANKSHAFT OIL SEAL

a. Apply MP grease to the lip of a new oil seal.

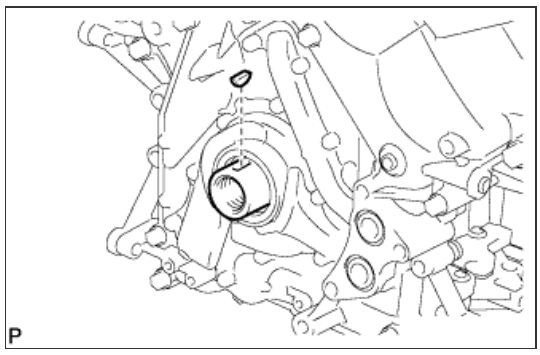
b. Using SST and a hammer, tap in the oil seal to a depth between 0 and 1.0 mm (0 and 0.0394 in.) from the timing chain cover edge.



SST

09223-22010

09506-35010



NOTICE:

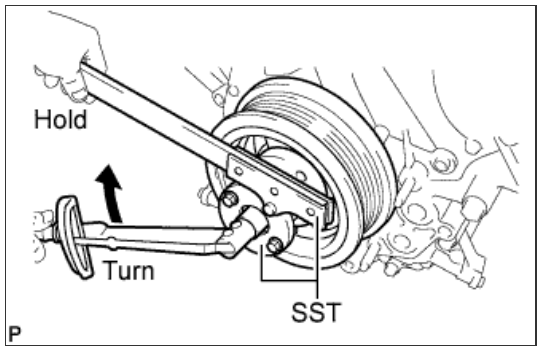
- **Keep the lip free from foreign matter.**
- **Do not tap the oil seal at an angle.**

40. INSTALL CRANKSHAFT TIMING GEAR KEY

a. Install the crankshaft timing gear key to the crankshaft.

41. INSTALL CRANKSHAFT PULLEY

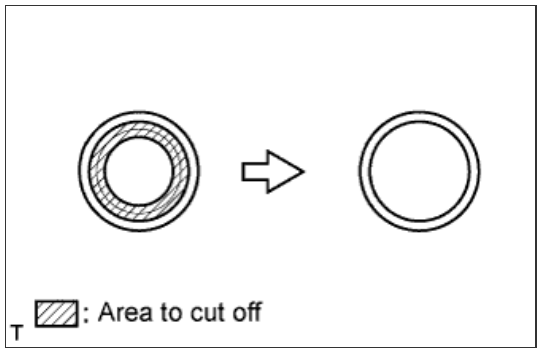
a. Align the pulley set key with the key groove of the pulley, and slide on the pulley.



b. Using SST, install the pulley set bolt.

SST

09213-70011 (09213-70020)

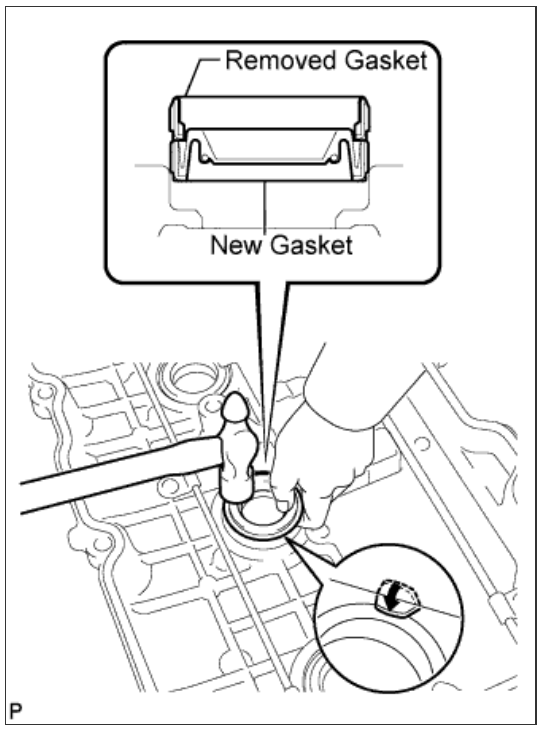


09330-00021

Torque:
300 N*m{ 3059 kgf*cm , 221 ft.*lbf }

42. INSTALL SPARK PLUG TUBE GASKET

a. Using a cutter knife, cut off the seal part of the removed gasket.



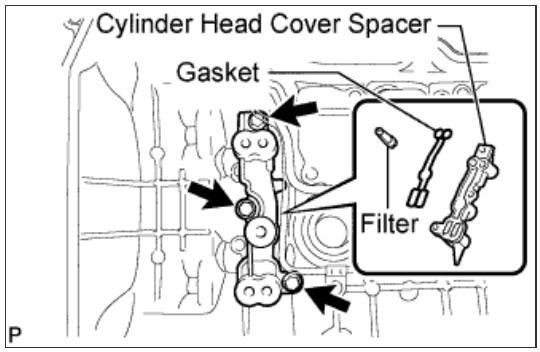
b. Using the removed gasket and a hammer, tap in a new gasket until it stops.

HINT:

If the removed gasket does not fit on the new one, correct the removed one with pliers.

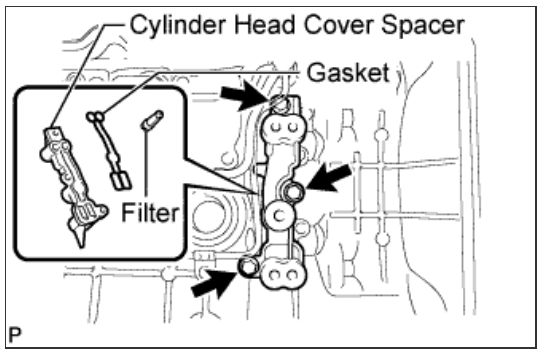
c. Apply a light coat of MP grease to the lip of the gasket.

d. Return the 4 ventilation baffle plate claws to the original positions.



43. INSTALL OIL CONTROL VALVE FILTER

a. LH:



i. Install the filter in the cylinder head.

ii. Install a new gasket and the cylinder head cover spacer with the 3 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. RH:

i. Install the filter in the cylinder head.

ii. Install a new gasket and the cylinder head cover spacer with the 3 bolts.

Torque:
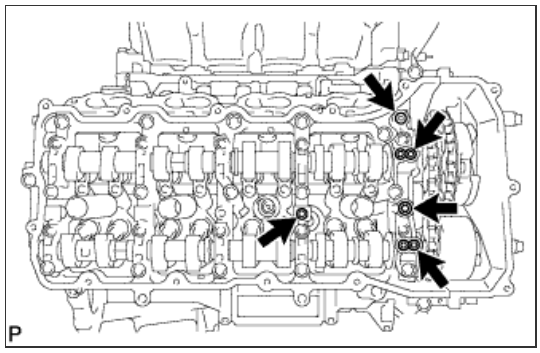
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



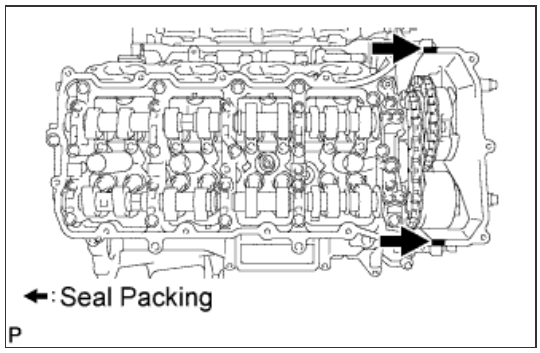
44. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY RH

a. Install 5 new gaskets to the camshaft bearing caps. (No. 1, No. 3).

b. Install the gasket to the cylinder head cover.

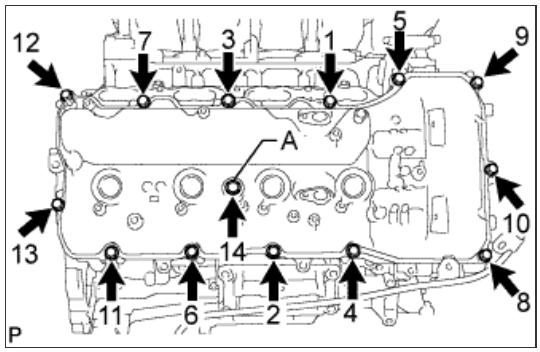
NOTICE:

Remove any oil from the contact surface.



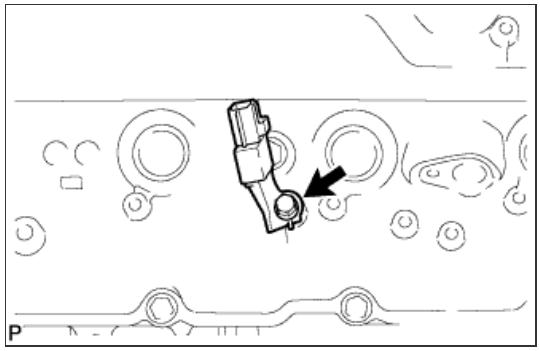
c. Apply seal packing as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent



NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**



d. Install the cylinder head cover and the seal washer with the 14 bolts in the order shown in the illustration.

Torque:
for bolt A:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
except bolt A:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

e. Install the noise filter to the cylinder head cover with the bolt.

Torque:
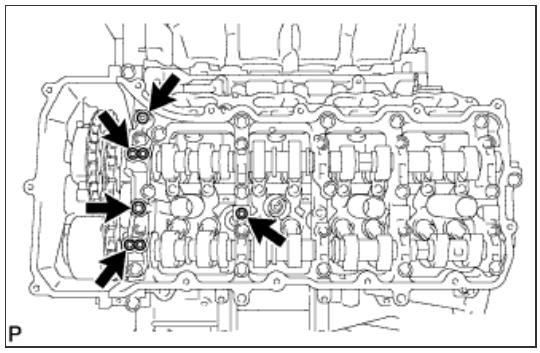
7.0 N*m{ 71 kgf*cm , 62 in.*lbf }



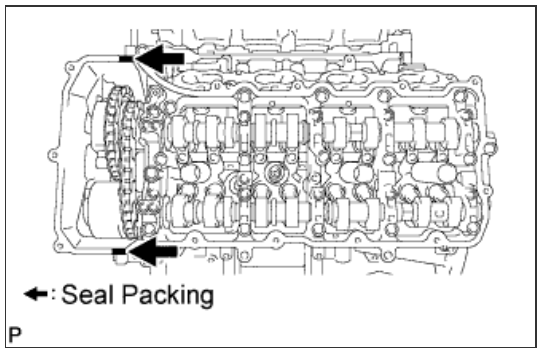
45. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY LH

a. Install 5 new gaskets to the camshaft bearing caps (No. 2, No. 3).

b. Install the gasket to the cylinder head cover.

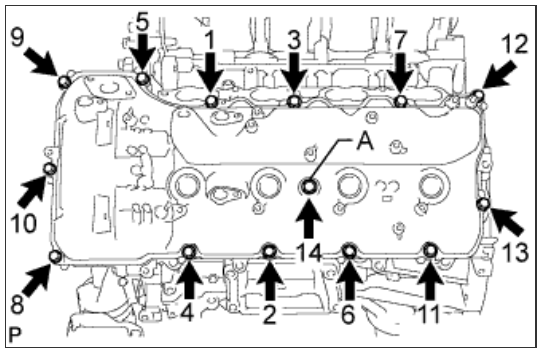
NOTICE:

Remove any oil from the contact surface.



c. Apply seal packing as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent



NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**

d. Install the cylinder head cover and the seal washer with the 14 bolts in the order shown in the illustration.

Torque:
for bolt A:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
except bolt A:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

46. INSTALL NO. 1 IDLER PULLEY SUB-ASSEMBLY

a. Install the idler pulley with the bolt.

Torque:
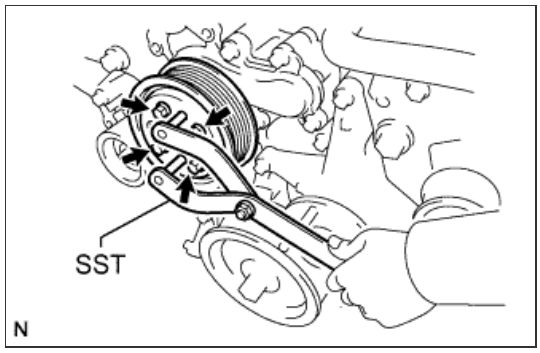
43 N*m{ 438 kgf*cm , 32 ft.*lbf }



47. INSTALL WATER PUMP PULLEY

a. Temporarily install the pulley with the 4 bolts.

b. Using SST, hold the pulley and tighten the 4 bolts.

SST
09960-10010 (09962-01000, 09963-01000)

Torque:
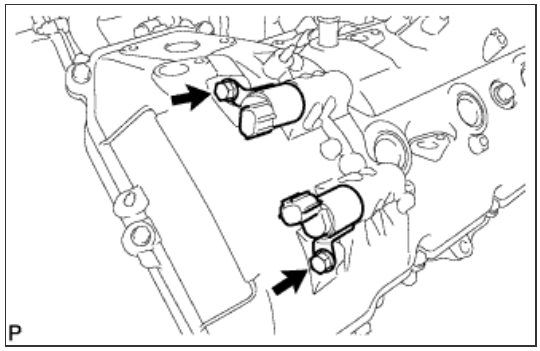
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

48. INSTALL CAMSHAFT OIL CONTROL VALVE ASSEMBLY



a. for Bank 1:

i. Apply a light coat of engine oil to 2 new O-rings.

ii. Install the 2 O-rings to the 2 oil control valves.

iii. Install the 2 oil control valves with the 2 bolts.

Torque:
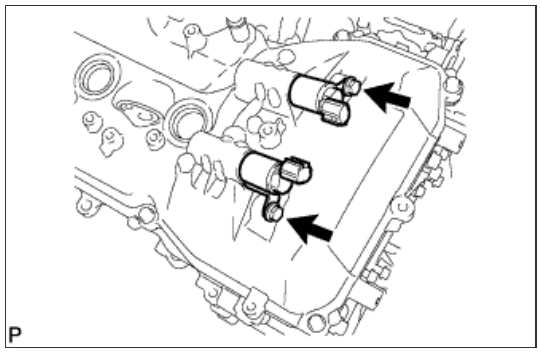
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



b. for Bank 2:

i. Apply a light coat of engine oil to 2 new O-rings.

ii. Install the 2 O-rings to the 2 oil control valves.

iii. Install the 2 oil control valves with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

49. INSTALL CRANKSHAFT POSITION SENSOR

a. Install the crankshaft position sensor with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

50. INSTALL CRANK POSITION SENSOR PROTECTOR

a. Install the sensor protector with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

51. INSTALL CAMSHAFT POSITION SENSOR

a. Install the camshaft position sensor with the bolt.

Torque:
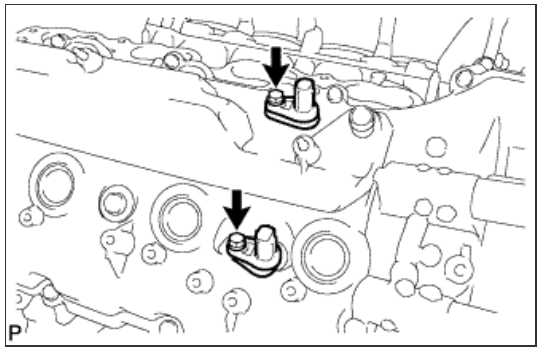
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

52. INSTALL VVT SENSOR



a. for Bank 1:
Install the 2 VVT sensors with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. for Bank 2:
Install the 2 VVT sensors with the 2 bolts.

Torque:
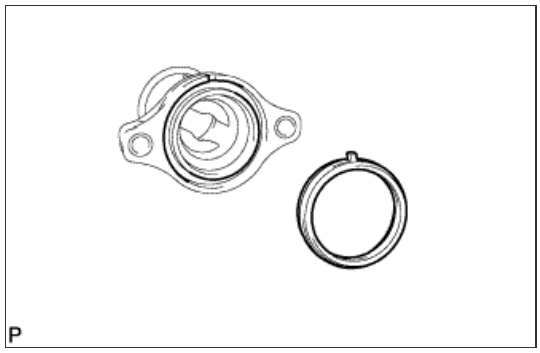
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



53. INSTALL SPARK PLUG

a. Using a 16 mm plug wrench, install the 8 spark plugs.

Torque:
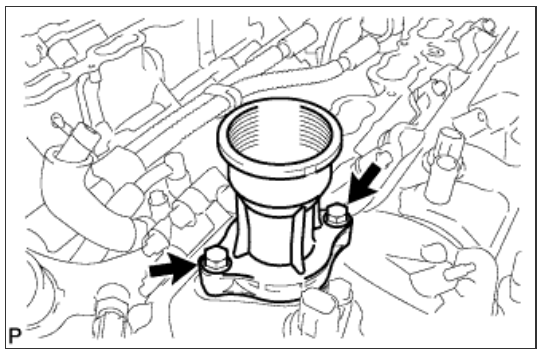
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



54. INSTALL OIL FILLER CAP HOUSING

a. Align the protrusion of a new gasket with the cutout of the oil filler cap housing, and install the gasket to the housing.

b. Install the cap housing with the 2 bolts.

Torque:
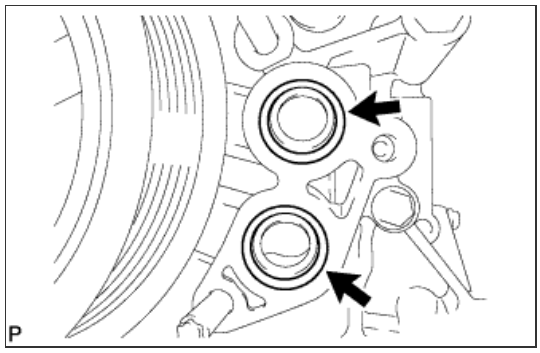
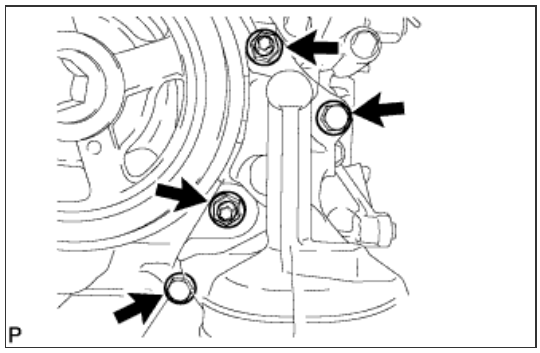
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



55. INSTALL OIL FILLER CAP SUB-ASSEMBLY

56. INSTALL OIL FILTER BRACKET (w/o Oil Cooler)



a. Apply a light coat of engine oil to 2 new O-rings.

b. Install the 2 O-rings to the timing chain cover.

c. Install the oil filter bracket with the 2 bolts and 2 nuts.

Torque:
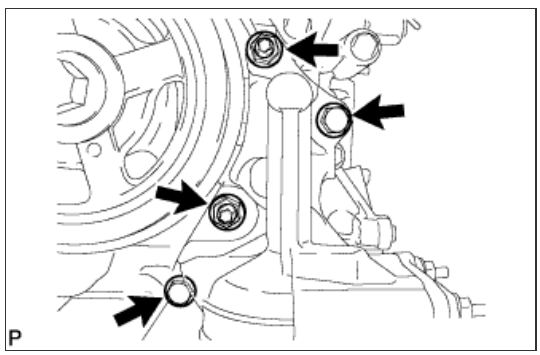
35 N*m{ 357 kgf*cm , 26 ft.*lbf }

57. INSTALL OIL FILTER BRACKET (w/ Oil Cooler)



a. Apply a light coat of engine oil to 2 new O-rings.

b. Install the 2 O-rings to the timing chain cover.

c. Install the oil filter bracket with the 2 nuts and 2 bolts.

Torque:
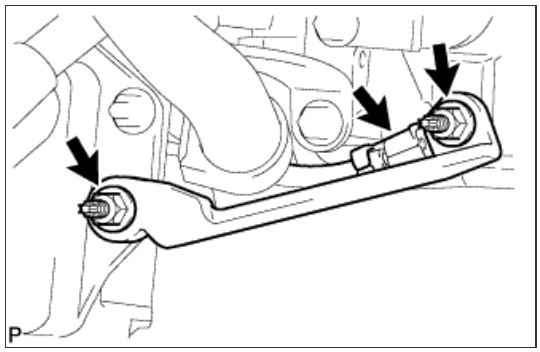
35 N*m{ 357 kgf*cm , 26 ft.*lbf }



58. INSTALL NO. 1 OIL COOLER BRACKET (w/ Oil Cooler)

a. Connect the ground wire to the cylinder block

d. Connect the ground wire to the cylinder block.

b. Install the oil cooler bracket with the 2 nuts.

Torque:
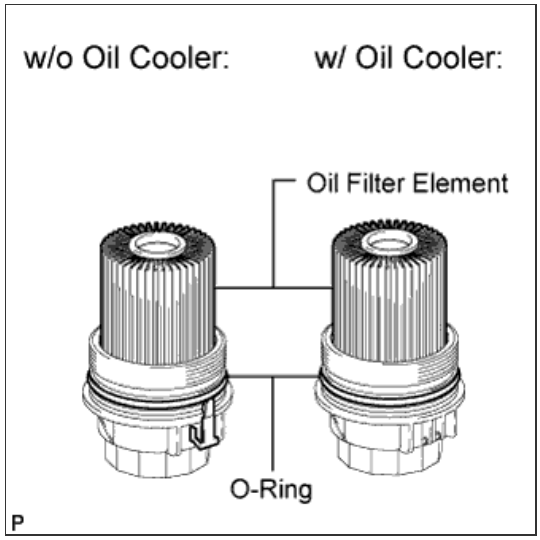
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

59. INSTALL OIL FILTER ELEMENT

a. Clean the inside of the oil filter cap, its threads and its O-ring groove.

b. Apply a small amount of engine oil to a new O-ring and install it to the oil filter cap.



c. Set a new oil filter element to the oil filter cap.

d. Remove any dirt or foreign matter from the installation surface of the engine.

e. Apply a small amount of engine oil to the O-ring again and temporarily install the oil filter cap.

NOTICE:

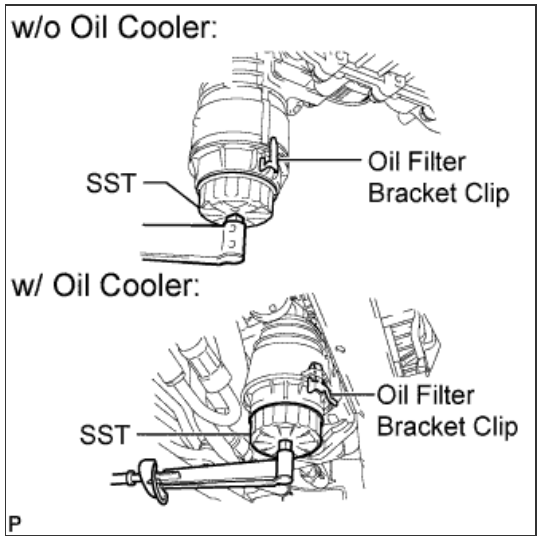
Do not remove the oil filter bracket clip.



f. Using SST, tighten the oil filter cap.

SST
09228-06501

Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf }

NOTICE:

- **When tightening the oil filter cap, do not remove the oil filter bracket clip.**
- **Make sure that the oil filter is installed securely as shown in the illustration.**
- **Be careful that the O-ring does not get caught between any surrounding parts.**

g. Apply a small amount of engine oil to a new drain plug O-ring, and install it to the oil filter cap.

NOTICE:

Before installing the O-ring, remove any dirt or foreign matter from the installation surface of the oil filter cap.

h. Install the oil filter drain plug.

Torque:
13 N*m{ 127 kgf*cm , 9 ft.*lbf }

NOTICE:

Be careful that the O-ring does not get caught between any surrounding parts.

i. Install the No. 2 engine under cover seal with the 2 bolts.

Torque:
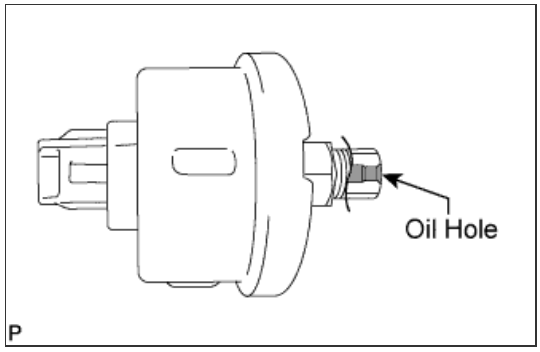
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

60. INSTALL OIL PRESSURE SENDER GAUGE ASSEMBLY



a. Apply adhesive to 2 or 3 threads of the oil pressure sender gauge.

Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

NOTICE:

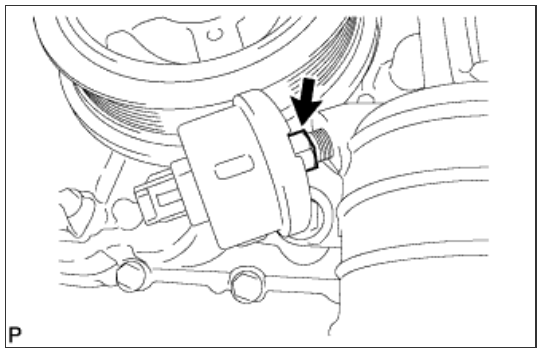
Do not allow adhesive to contact the oil hole.



b. Install the oil pressure sender gauge.

Torque:

15 N*m{ 153 kgf*cm , 11 ft.*lbf }

NOTICE:

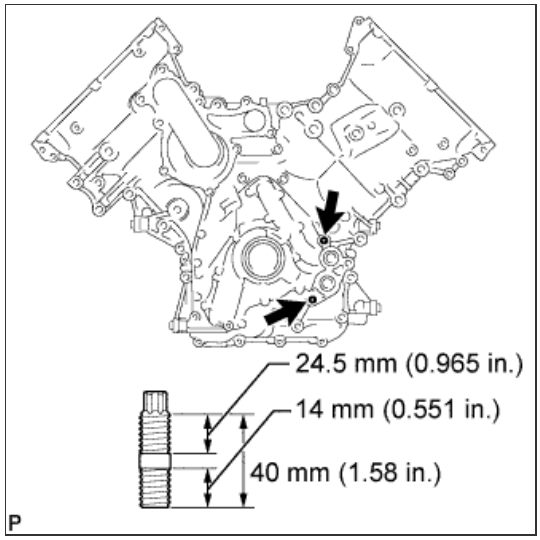
Do not start the engine within 1 hour after installation.

c. Connect the sender gauge connector.



for Preparation Click here

1. INSTALL STUD BOLT

a. Install the timing chain cover stud bolt.

i. Using an E10 "TORX" socket wrench, install the 2 stud bolts as shown in the illustration.

Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

b. Install the oil pan stud bolt.

i. Using an E6 and E7 "TORX" socket wrench, install the 3 stud bolts as shown in the illustration.

Torque:
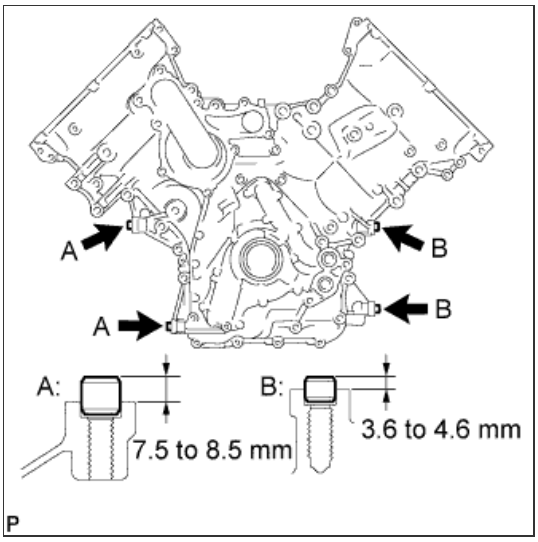
for stud bolt A:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }
for stud bolt B:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }



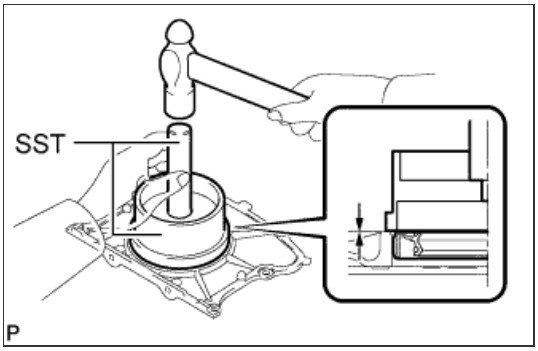
2. INSTALL RING PIN

a. Using a plastic-faced hammer, tap in new ring pins to the timing chain cover.

Standard Protrusion:

Item	Ring Pin Diameter	Specified Condition
Ring pin A	13 mm (0.512 in.)	7.5 to 8.5 mm (0.295 to 0.335 in.)
Ring pin B	11 mm (0.433 in.)	3.6 to 4.6 mm (0.142 to 0.181 in.)

3. INSTALL REAR CRANKSHAFT OIL SEAL



a. Using SST, tap in a new oil seal until its surface is flush with the oil seal retainer edge.

SST
09223-15030
09950-70010 (09951-07100)

Standard depth:
0 to 1.0 mm (0 to 0.0394 in.)

NOTICE:

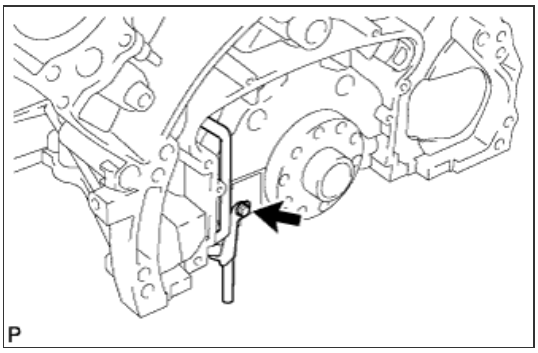
- **Keep the lip free from foreign matter.**
- **Do not tap on the oil seal at an angle.**



4. INSTALL OIL DRAIN PIPE SUB-ASSEMBLY

a. Apply a light coat of engine oil to a new O-ring.

b. Install the O-ring to the drain pipe.

c. Install the oil drain pipe with the bolt.

Torque:
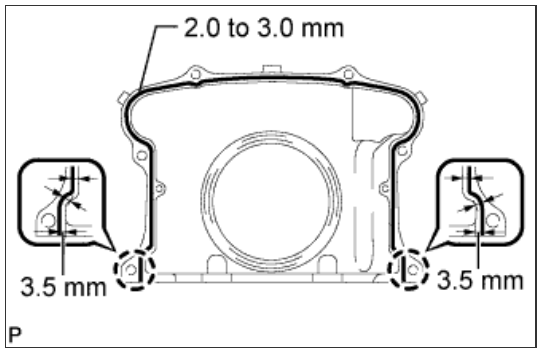
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

5. INSTALL ENGINE REAR OIL SEAL RETAINER

a. Apply seal packing in a continuous line as shown in the illustration.



Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
2.0 to 3.0 mm (0.0787 to 0.118 in.)

Application position from inside edge of retainer:
3.5 mm (0.138 in.)

NOTICE:

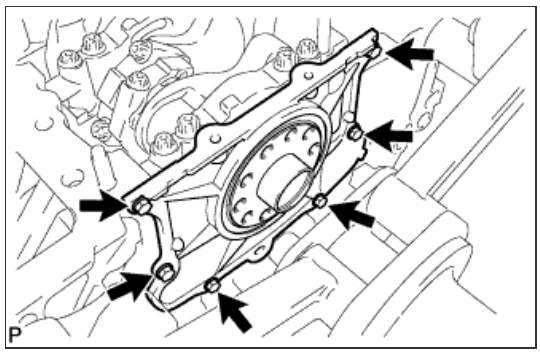
- **Remove any oil from the contact surface.**
- **Install the oil seal retainer within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**



b. Install the oil seal retainer with the 6 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

NOTICE:

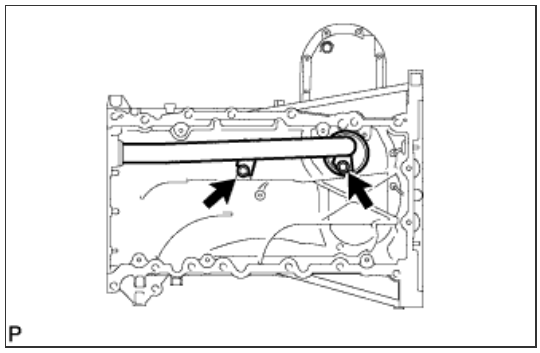
- **Do not start the engine for at least 2 hours after installing.**
- **When installing the oil seal retainer, make sure the lip of the oil seal is not damaged.**
- **When installing the oil seal retainer, make sure the lip of the oil seal is not folded incorrectly.**

6. INSTALL OIL STRAINER SUB-ASSEMBLY

a. Apply a light coat of engine oil to a new O-ring.



b. Install the O-ring to the oil strainer.

c. Install the oil strainer with the 2 bolts.

Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

NOTICE:

Make sure the O-ring is not twisted or damaged.

7. INSTALL NO. 1 OIL PAN BAFFLE PLATE

a. Install the baffle plate with the 7 bolts.

Torque:
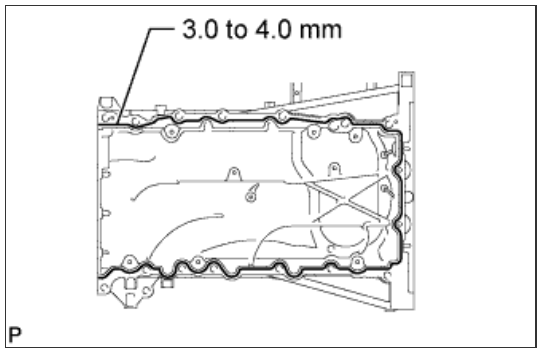
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

8. INSTALL NO. 1 OIL PAN SUB-ASSEMBLY



a. Apply seal packing in a continuous line as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
3.0 to 4.0 mm (0.118 to 0.157 in.)

NOTICE:

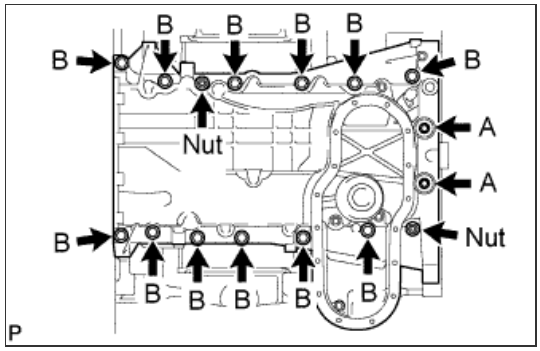
- **Remove any oil from the contact surface.**
- **Install the oil pan within 3 minutes and tighten the bolts and nuts within 15 minutes after applying seal packing.**



b. Install the oil pan with the 14 bolts and 2 nuts.

Torque:
for bolt A:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }
for bolt B:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }
for nut:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }

NOTICE:

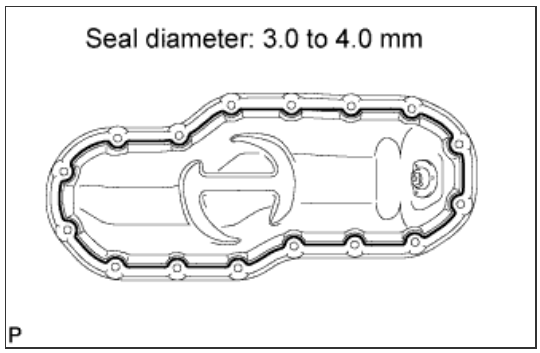
Do not start the engine for at least 2 hours after installing.

Standard Bolt:

Item	Length	Thread Diameter
Bolt A	92 mm (3.62 in.)	6 mm (0.236 in.)
Bolt B	30 mm (1.18 in.)	10 mm (0.394 in.)

9. INSTALL NO. 2 OIL PAN SUB-ASSEMBLY



a. Apply seal packing in a continuous line as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
3.0 to 4.0 mm (0.118 to 0.156 in.)

NOTICE:

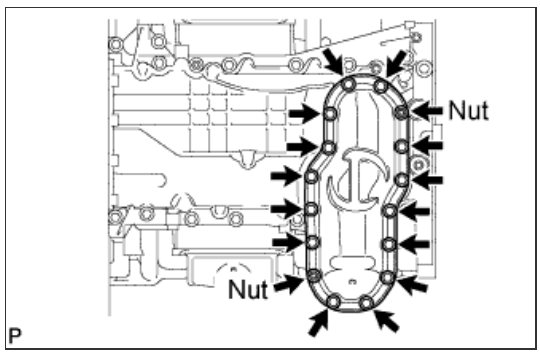
- **Remove any oil from the contact surface.**
- **Install the oil pan within 3 minutes and tighten the bolts and nuts within 15 minutes after applying seal packing.**



b. Install the oil pan with the 14 bolts and 2 nuts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

NOTICE:

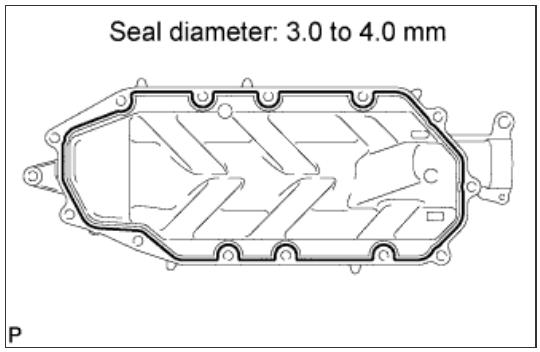
Do not start the engine for at least 2 hours after installing.

10. INSTALL NO. 1 HEAT EXCHANGER COVER



a. Apply seal packing in a continuous line as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing 1282B, Three Bond 1282B or equivalent

Standard seal diameter:
3.0 to 4.0 mm (0.118 to 0.157 in.)

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the heat exchanger cover within 3 minutes and tighten the bolts and nuts within 15 minutes after applying seal packing.**

b. Install the heat exchanger cover with the 12 bolts and 2 nuts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

NOTICE:

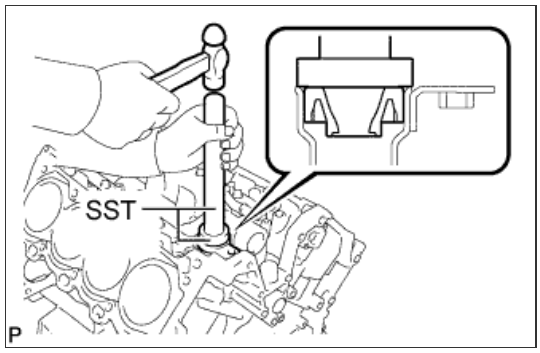
Do not start the engine for at least 2 hours after installing.

Standard Bolt:

Item	Length	Thread Diameter
Bolt A	20 mm (0.787 in.)	8 mm (0.315 in.)
Bolt B	70 mm (2.76 in.)	8 mm (0.315 in.)
Bolt C	16 mm (0.630 in.)	6 mm (0.236 in.)



11. INSTALL VENTILATION PIPE GASKET

a. Using SST, evenly tap in a new ventilation pipe gasket until its surface is flush with the lip of the ventilation pipe.

SST
09950-60010 (09951-00360)
09950-70010 (09951-07100)

NOTICE:

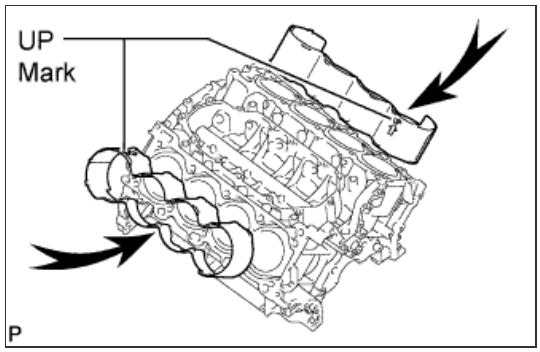
- **Do not tap the gasket at an angle.**
- **Do not tap the gasket excessively.**

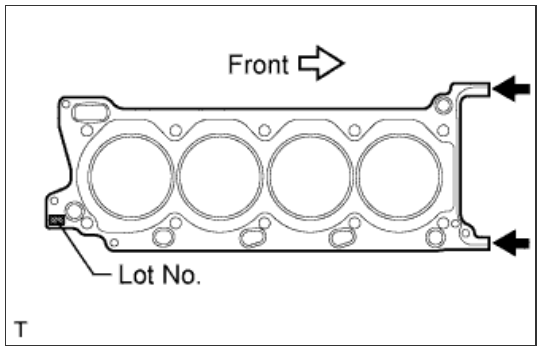


12. INSTALL CYLINDER BLOCK WATER JACKET SPACER

a. Install the 2 water jacket spacers as shown in the illustration.

HINT:

- **Face the cutouts indicated by the arrows in illustration away from the engine.**
- **Face the "UP" mark as shown in the illustration.**



13. INSTALL CYLINDER HEAD SUB-ASSEMBLY RH

a. Clean the cylinder block with solvent.

b. Set the piston of the No. 1 cylinder to slightly ATDC.

c. Place the cylinder head gasket on the cylinder block surface with the front face of the Lot No. stamp upward.

NOTICE:

- **Be careful of the installation direction.**
- **Make sure that no oil is on the front end (indicated by the arrows) of the cylinder head gasket.**

d. Place the cylinder head on the cylinder block.

HINT:

The cylinder head bolts are tightened in 3 progressive steps.

NOTICE:

- **Ensure that no oil is on the mounting surface of the cylinder head.**
- **Gently place the cylinder head in order not to damage the gasket with the bottom part of the head.**

e. Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.

f. Step 1:

i. Using a 10 mm bi-hexagon wrench, install and uniformly tighten the 10 cylinder head bolts with the plate washers in several steps in the sequence shown in the illustration.

Torque:
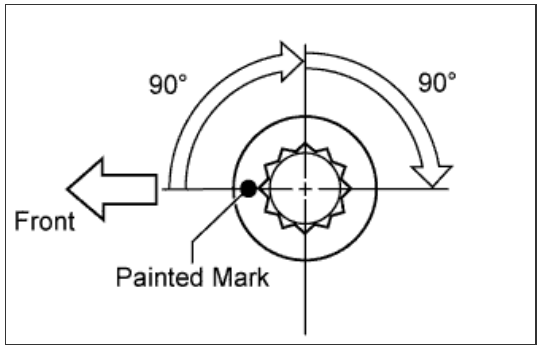
36 N*m{ 367 kgf*cm , 27 ft.*lbf }

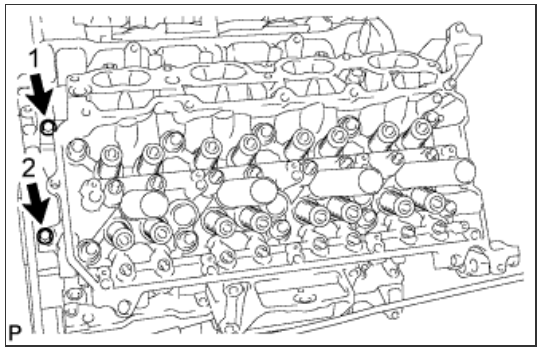
g. Step 2:



i. Mark each cylinder head bolt head with paint as shown in the illustration.

ii. Tighten the cylinder head bolts 90° in the sequence shown in step 1.

h. Step 3:



i. Tighten the cylinder head bolts another 90° in the sequence shown in step 1.

ii. Check that the painting marks are now facing rearward.

i. Uniformly install the 2 bolts in the sequence shown in the illustration.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

a. Clean the cylinder block with solvent.

b. Set the piston of the No. 1 cylinder to slightly ATDC.

c. Place the cylinder head gasket on the cylinder block surface with the front face of the Lot No. stamp upward.

NOTICE:

- **Be careful of the installation direction.**
- **Make sure that no oil is on the front end (indicated by the arrows) of the cylinder head gasket.**

d. Place the cylinder head on the cylinder block.

HINT:

The cylinder head bolts are tightened in 3 progressive steps.

NOTICE:

- **Ensure that no oil is on the mounting surface of the cylinder head.**
- **Gently place the cylinder head in order not to damage the gasket with the bottom part of the head.**

e. Apply a light coat of engine oil to the threads and under the heads of the cylinder head bolts.

f. Step 1:

i. Using a 10 mm bi-hexagon wrench, install and uniformly tighten the 10 cylinder head bolts with the plate washers in several steps in the sequence shown in the illustration.

Torque:
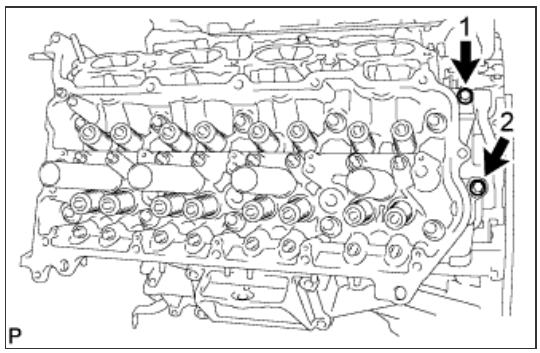
36 N*m{ 367 kgf*cm , 27 ft.*lbf }

g. Step 2:

i. Mark each cylinder head bolt head with paint as shown in the illustration.

ii. Tighten the cylinder head bolts 90° in the sequence shown in step 1.



h. Step 3:

i. Tighten the cylinder head bolts another 90° in the sequence shown in step 1.

ii. Check that the painted marks are now facing rearward.

i. Uniformly install the 2 bolts in the sequence shown in the illustration.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

15. INSTALL VALVE STEM CAP

a. Apply a light coat of engine oil to the valve stem caps.

b. Install the 32 valve stem caps to the cylinder heads.

16. INSTALL VALVE LASH ADJUSTER ASSEMBLY

a. Inspect the valve lash adjuster before installing it (Click here).

b. Install the 32 valve lash adjusters to the cylinder heads.

NOTICE:

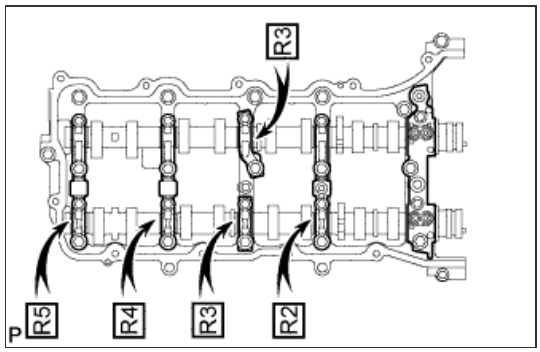
Install the lash adjuster to the same place it was removed from.

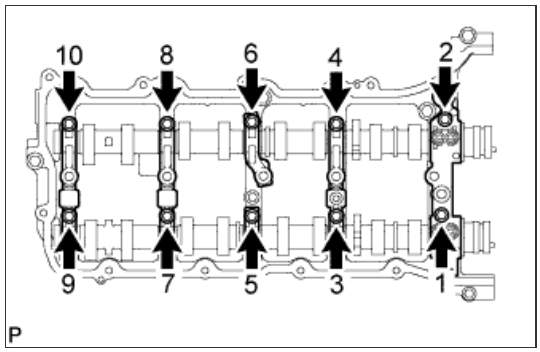
17. INSTALL NO. 1 VALVE ROCKER ARM SUB-ASSEMBLY

a. Apply engine oil to the lash adjuster tips and valve stem cap ends.

b. Install the 32 valve rocker arms as shown in the illustration.



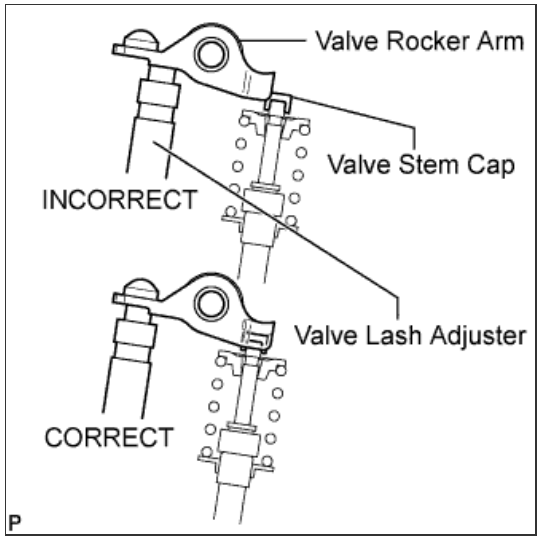
18. INSTALL CAMSHAFT BEARING CAP RH



a. Apply a light coat of engine oil to the camshaft journals, camshaft housings and bearing caps.

b. Install the No. 1 and No. 2 camshafts to the camshaft housing.

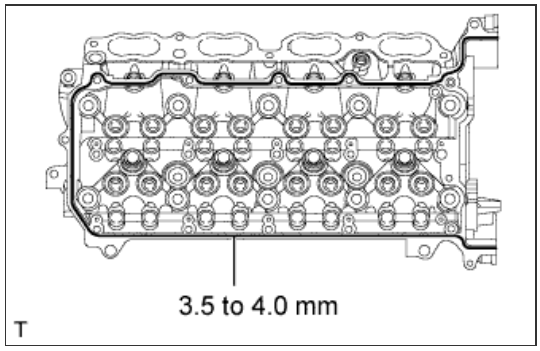
c. Confirm the marks and numbers on the camshaft bearing caps and place them in their proper positions and directions.



d. Temporarily install the 10 bolts in the order shown in the illustration.

19. INSTALL CAMSHAFT HOUSING SUB-ASSEMBLY RH

a. Make sure that the valve rocker arms are installed as shown in the illustration.



b. Apply seal packing in a continuous line as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
3.5 to 4.0 mm (0.138 to 0.157 in.)

NOTICE:

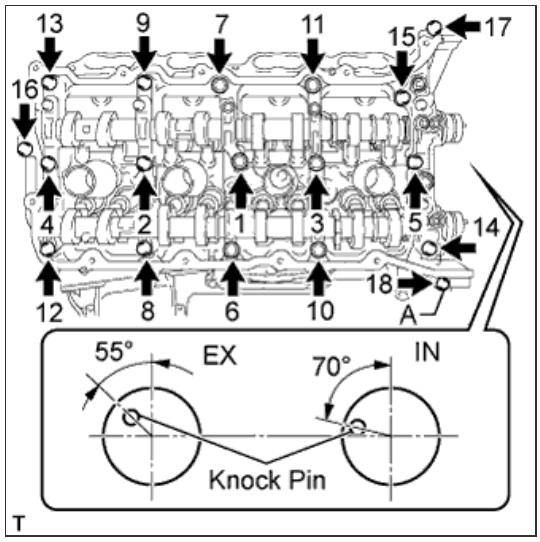
- **Remove any oil from the contact surface.**
- **Install the camshaft housing within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**



c. Install the camshaft housing, and install the 18 bolts in the order shown in the illustration.

Torque:
for bolt A:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }
except bolt A:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }

NOTICE:

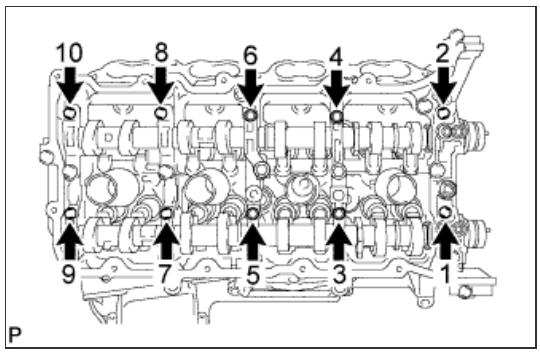
- **Do not start the engine for at least 2 hours after the installation.**
- **Make sure that the knock pin of the camshaft is positioned as shown in the illustration before installing the camshaft housing.**



d. Tighten the 10 bolts in the order shown in the illustration.

Torque:
16 N*m{ 163 kgf*cm , 12 ft.*lbf }

NOTICE:

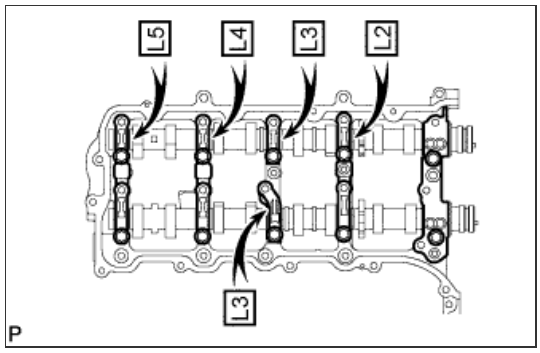
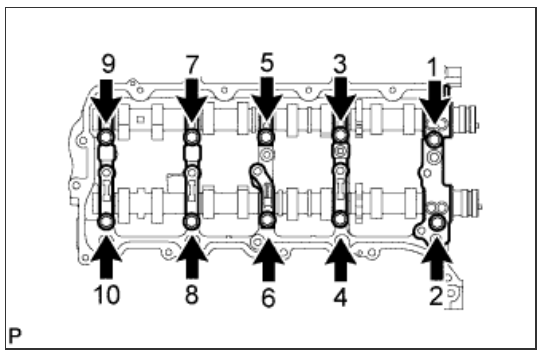
Thoroughly wipe clean any seal packing.



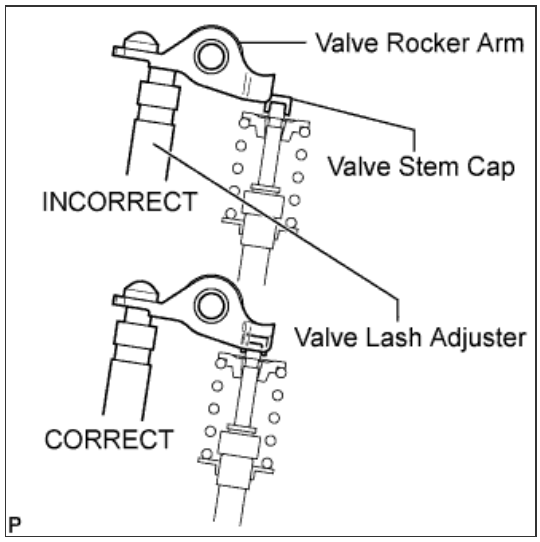
20. INSTALL CAMSHAFT BEARING CAP LH



a. Apply a light coat of engine oil to the camshaft journals, camshaft housings and bearing caps.

b. Install the No. 3 and No. 4 camshafts to the camshaft housing.

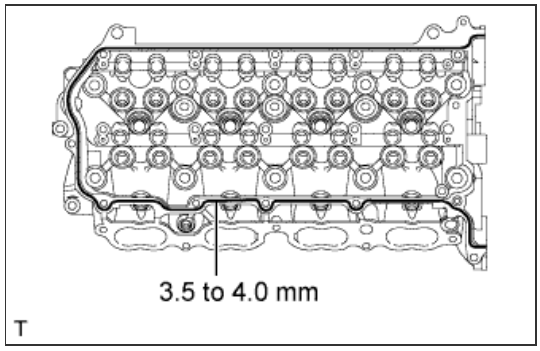
c. Confirm the marks and numbers on the camshaft bearing caps and place them in their proper positions and directions.



d. Temporarily install the 10 bolts in the order shown in the illustration.

21. INSTALL CAMSHAFT HOUSING SUB-ASSEMBLY LH

a. Make sure that the valve rocker arms are installed as shown in the illustration.



b. Apply seal packing in a continuous line as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Standard seal diameter:
3.5 to 4.0 mm (0.138 to 0.157 in.)

NOTICE:

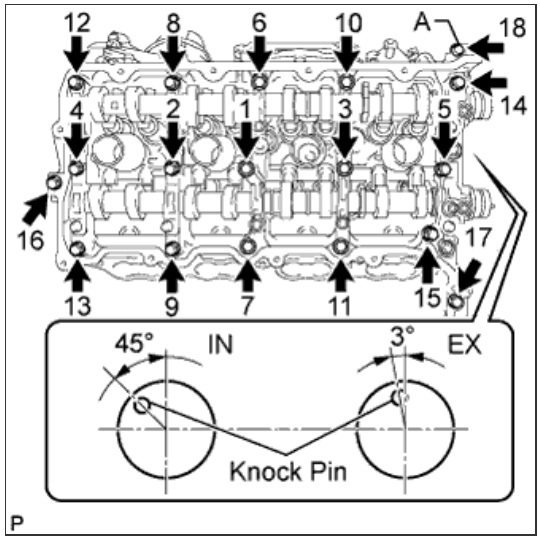
- **Remove any oil from the contact surface.**
- **Install the camshaft housing within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**



c. Install the camshaft housing, and install the 18 bolts in the order shown in the illustration.

Torque:
for bolt A:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }
except bolt A:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }

NOTICE:

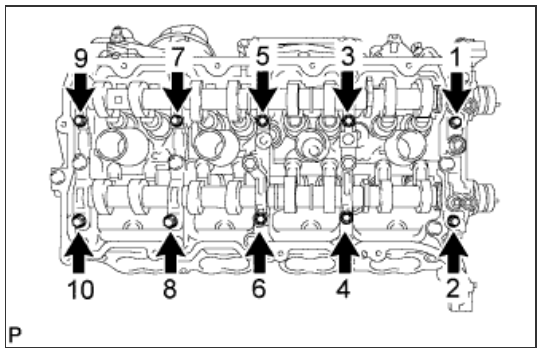
- **Do not start the engine for at least 2 hours after the installation.**
- **Make sure that the knock pin of the camshaft is positioned as shown in the illustration before installing the camshaft housing.**



d. Tighten the 10 bolts in the order shown in the illustration.

Torque:
16 N*m{ 163 kgf*cm , 12 ft.*lbf }

NOTICE:

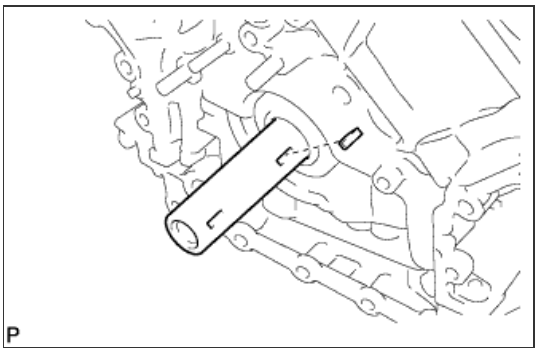
Thoroughly wipe clean any seal packing.



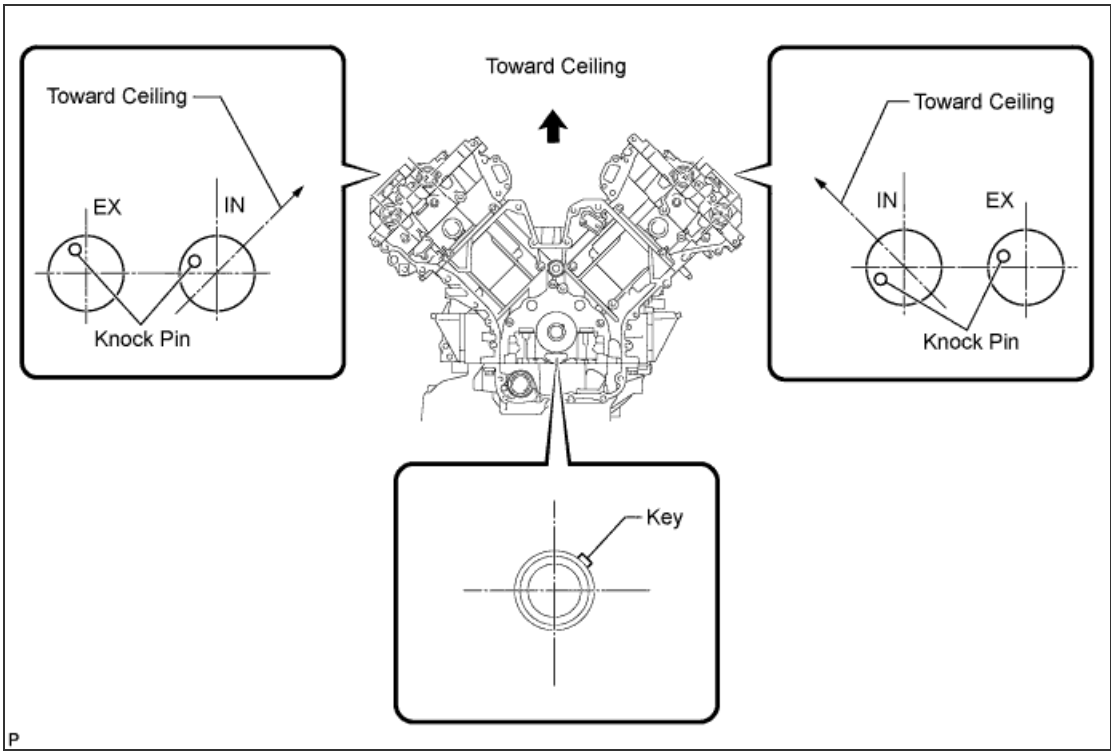
22. INSTALL CRANKSHAFT TIMING GEAR KEY

a. Install the timing gear key.

HINT:

The other timing gear key will be installed at a later step.

23. SET NO. 1 CYLINDER TO TDC/COMPRESSION



a. Temporarily install the crankshaft pulley bolt.

b. Rotate the crankshaft so that the timing gear key is as shown in the illustration. Then using a wrench, rotate each camshaft so that the timing marks are as shown in the illustration.

NOTICE:

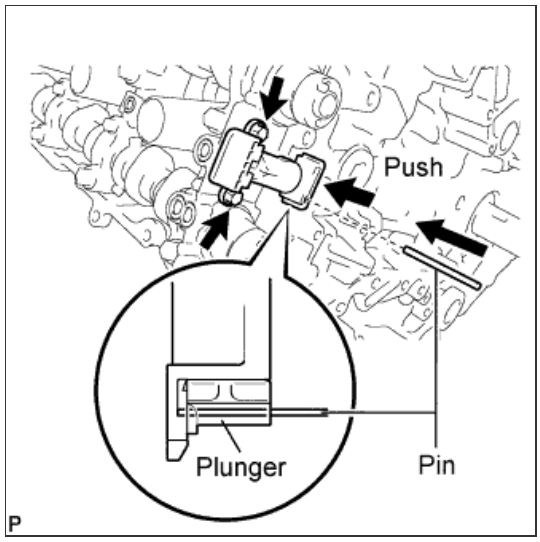
When the crankshaft or a camshaft is rotated excessively, the valves and pistons may interfere with each other.

c. Remove the crankshaft pulley bolt.



24. INSTALL NO. 2 CHAIN TENSIONER ASSEMBLY

a. Install the chain tensioner with the 2 bolts.

Torque:

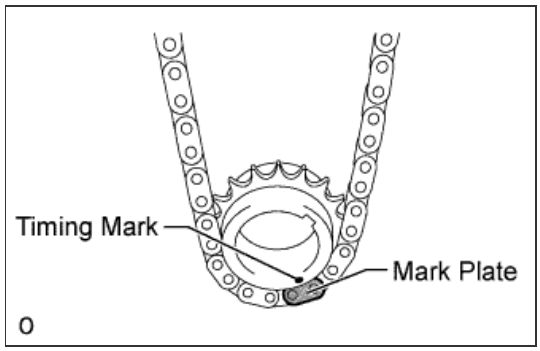
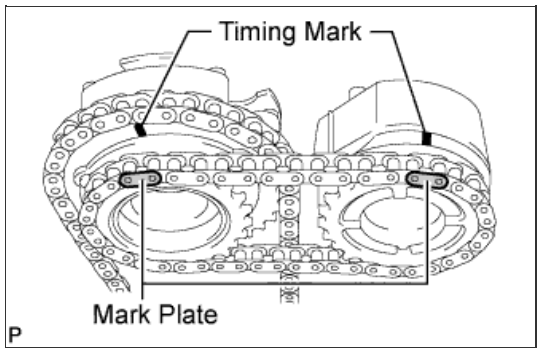
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. While raising up the No. 2 chain tensioner, insert a pin of 1.0 mm (0.0394 in.) into the hole to fix it in place.



25. INSTALL NO. 1 CHAIN SUB-ASSEMBLY RH

a. Align the No. 1 chain orange mark plate with the camshaft timing gear timing mark, and attach the chain to the gear as shown in the illustration.



b. Align the No. 1 chain orange mark plate with the crankshaft timing sprocket timing mark, and attach the chain to the gear as shown in the illustration.

c. Align the No. 2 chain yellow mark plates with the timing marks of the camshaft timing gear assembly and camshaft timing exhaust gear assembly, and attach the No. 2 chain to the gears as shown in the illustration.

HINT:

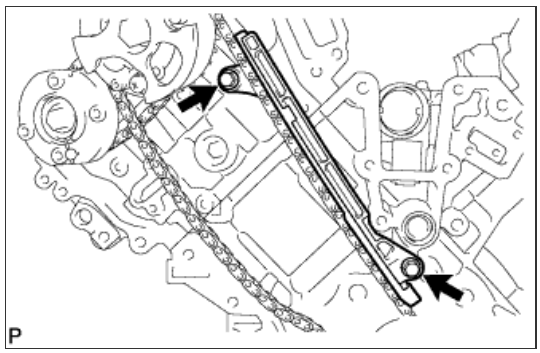
The crankshaft timing sprocket RH and camshaft timing exhaust gear will be installed with the No. 1 and No. 2 chains connected to the gears.

d. Install the crankshaft timing sprocket RH to the crankshaft.

e. Align and attach the knock pin of the No. 1 camshaft with the pin hole of the camshaft timing gear.

f. Using the hexagonal portion of the No. 2 camshaft, align and attach the knock pin of the No. 2 camshaft with the pin hole of the camshaft timing exhaust gear.

g. Remove the pin from the No. 2 chain tensioner.



h. Using a wrench to hold the hexagonal portion of the No. 1 camshaft, temporarily install the bolt.

i. Using a wrench to hold the hexagonal portion of the No. 2 camshaft, temporarily install the bolt.

26. INSTALL NO. 1 CHAIN VIBRATION DAMPER RH

a. Install the vibration damper with the 2 bolts.

Torque:
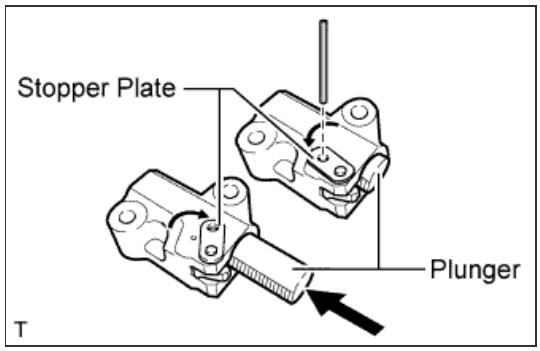
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

27. INSTALL NO. 1 CHAIN TENSIONER SLIPPER RH

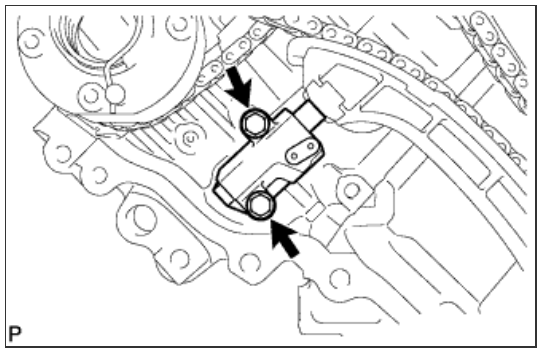
HINT:



If you cannot install the chain tensioner slipper due to the tension of the chain, use the hexagonal portion of the camshaft to loosen the chain, and then install the chain tensioner slipper.

28. INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY RH

a. Move the stopper plate clockwise to release the lock, and push the plunger deep into the tensioner.



b. Move the stopper plate counterclockwise to set the lock, and insert a hexagon wrench into the hole of the stopper plate.

c. Install the chain tensioner with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

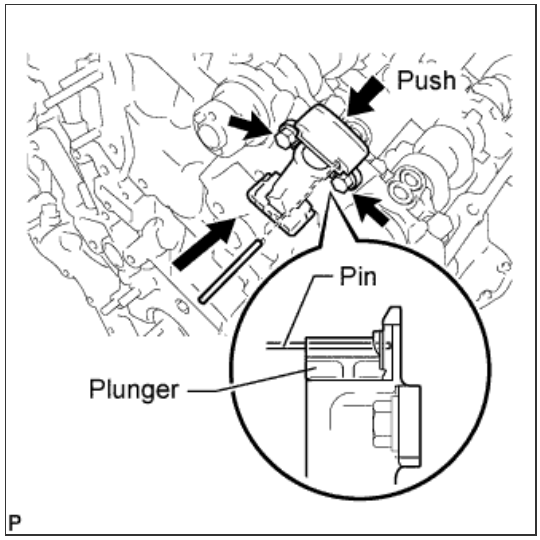
d. Remove the hexagon wrench from the chain tensioner.



29. INSTALL NO. 3 CHAIN TENSIONER ASSEMBLY

a. Install the chain tensioner with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

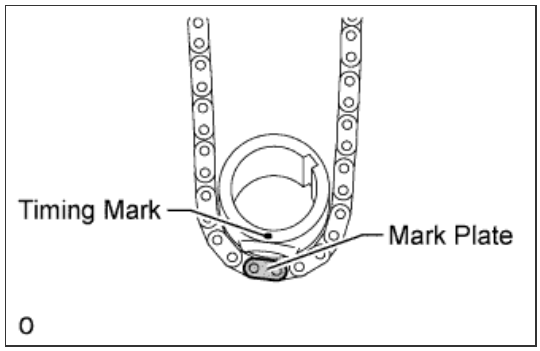
b. While pushing down the No. 2 chain tensioner, insert a pin of 1.0 mm (0.0394 in.) into the hole to fix it in place.

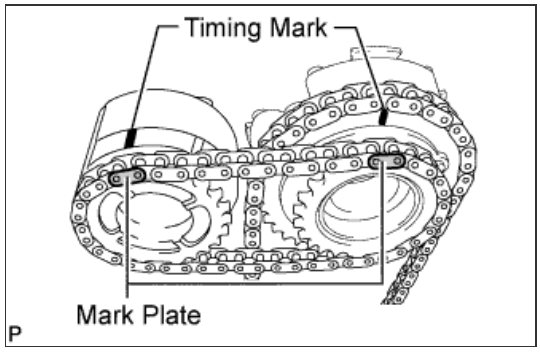


30. INSTALL NO. 1 CHAIN SUB-ASSEMBLY LH

a. Align the No. 1 chain orange mark plate with the camshaft timing gear timing mark, and attach the chain to the gear as shown in the illustration.

b. Align the No. 1 chain orange mark plate with the crankshaft timing sprocket timing mark, and attach the chain to the gear as shown in the illustration.

c. Align the No. 2 chain yellow mark plates with the timing marks of the camshaft timing gear assembly and camshaft timing exhaust gear assembly, and attach the No. 2 chain to the gears as shown in the illustration.



HINT:

The crankshaft timing sprocket LH and camshaft timing exhaust gear will be installed with the No. 1 and No. 2 chains connected to the gears.

d. Install the crankshaft timing sprocket LH to the crankshaft.

e. Align and attach the knock pin of the No. 3 camshaft with the pin hole of the camshaft timing gear.

f. Using the hexagonal portion of the No. 4 camshaft, align and attach the knock pin of the No. 4 camshaft with the pin hole of the camshaft timing exhaust gear.

NOTICE:

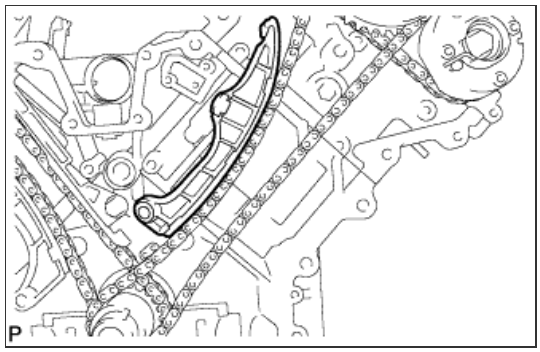
Because the timing mark positions of the gears may shift due to looseness of the No. 1 chain, use the hexagonal portion of the camshaft to hold the No. 3 camshaft in place until the No. 1 chain tensioner is installed.

g. Remove the pin from the No. 3 chain tensioner.

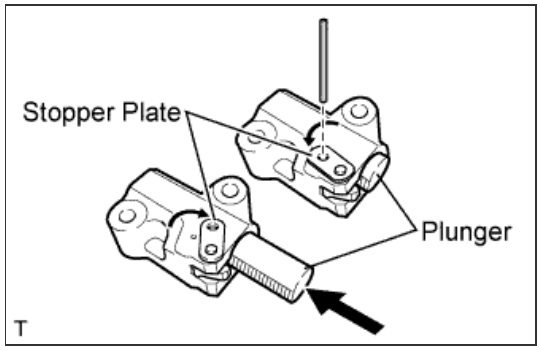


h. Using a wrench to hold the hexagonal portion of the No. 3 camshaft, temporarily install the bolt.

i. Using a wrench to hold the hexagonal portion of the No. 4 camshaft, temporarily install the bolt.

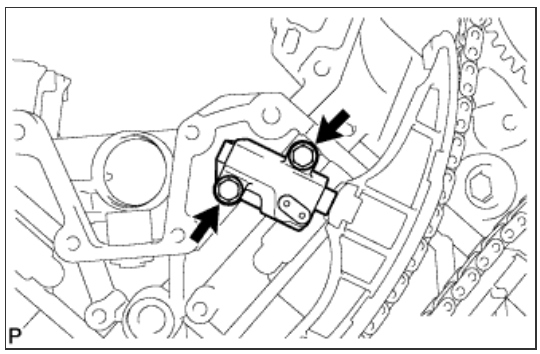
31. INSTALL NO. 1 CHAIN TENSIONER SLIPPER LH

HINT:



If you cannot install the chain tensioner slipper due to the tension of the chain, use the hexagonal portion of the camshaft to loosen the chain, and install the chain tensioner slipper.

32. INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY LH



a. Move the stopper plate clockwise to release the lock, and push the plunger deep into the tensioner.

b. Move the stopper plate counterclockwise to set the lock, and insert a hexagon wrench into the hole of the stopper plate.

c. Install a new gasket and the chain tensioner with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

33. INSTALL NO. 1 CHAIN VIBRATION DAMPER LH

a. Install the vibration damper with the 2 bolts.

Torque:
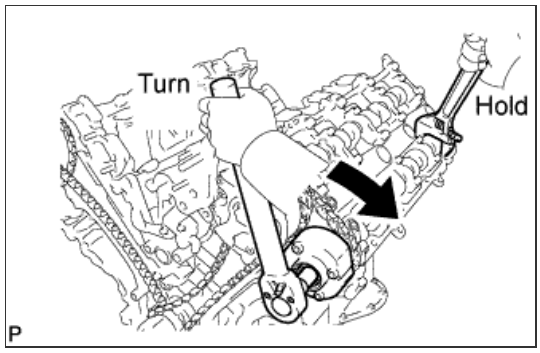
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. Remove the hexagon wrench from the No. 1 chain tensioner.

34. TIGHTEN CAMSHAFT TIMING GEAR



a. for Bank 1:

i. Using a wrench, hold the hexagonal portion of the No. 3 camshaft.

ii. Tighten the bolt of the camshaft timing gear.

Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

iii. Using a wrench to hold the hexagonal portion of the No. 4 camshaft, tighten the bolt of the camshaft timing exhaust gear.

Torque:
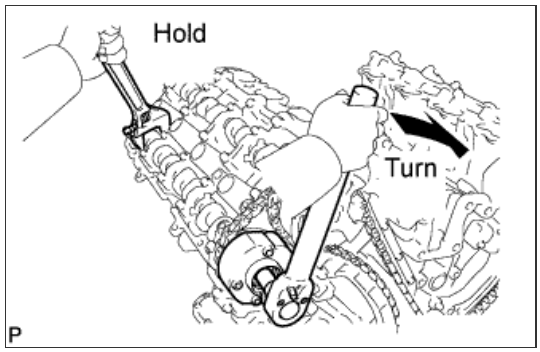
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

b. for Bank 2:



i. Using a wrench, hold the hexagonal portion of the No. 1 camshaft.

ii. Tighten the bolt of the camshaft timing gear.

Torque:
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }

iii. Using a wrench to hold the hexagonal portion of the No. 2 camshaft, tighten the bolt of the camshaft timing exhaust gear.

Torque:
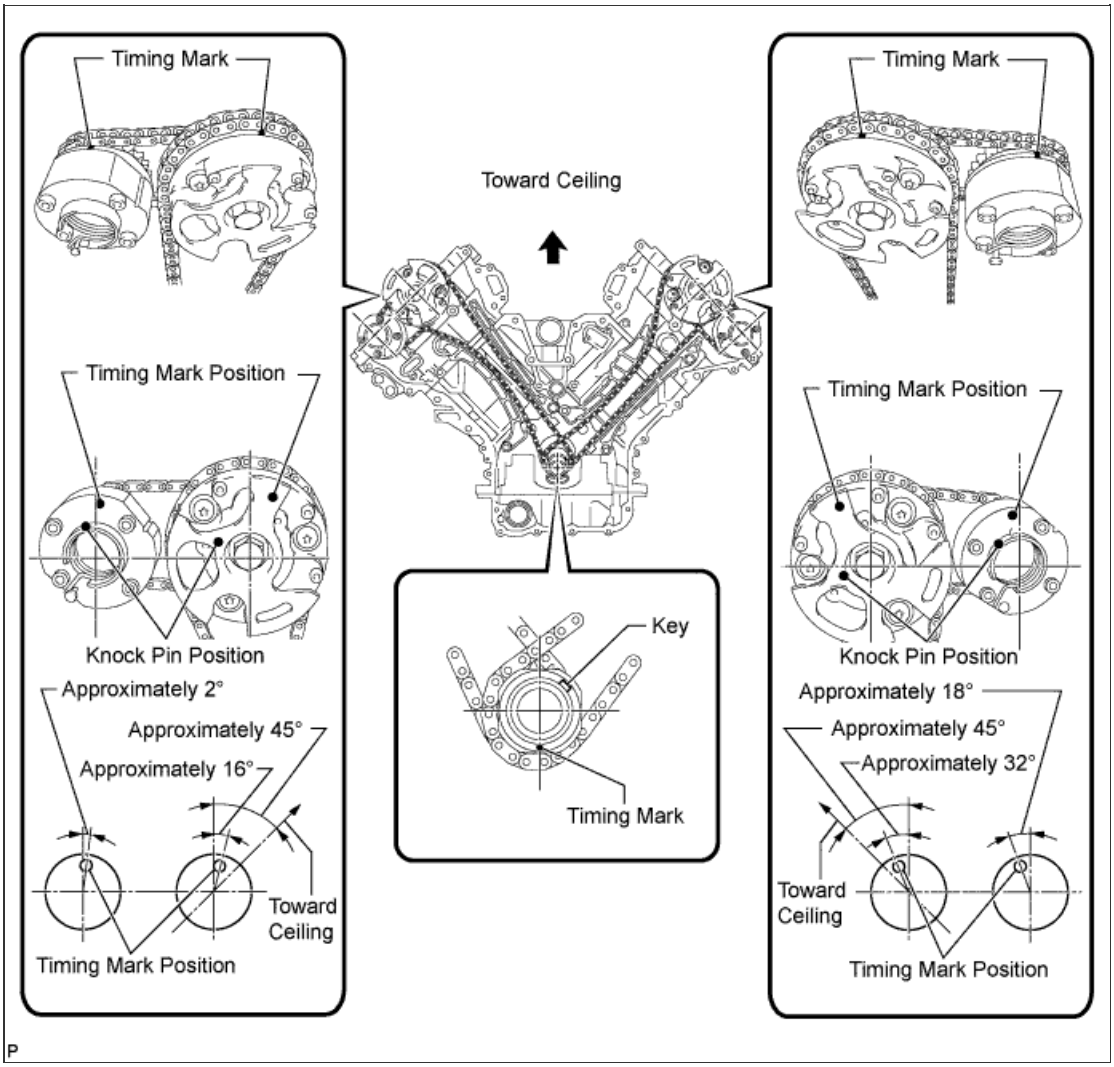
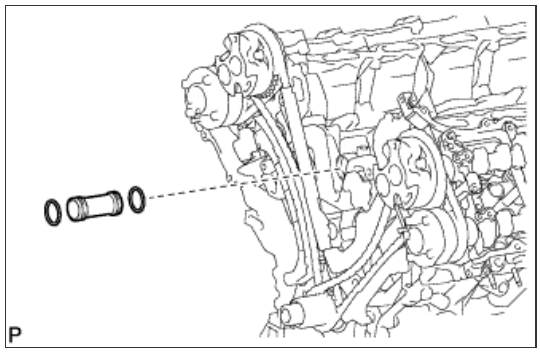
100 N*m{ 1020 kgf*cm , 74 ft.*lbf }



35. CHECK NO. 1 CYLINDER TO TDC/COMPRESSION

a. Temporarily install the crankshaft pulley bolt.

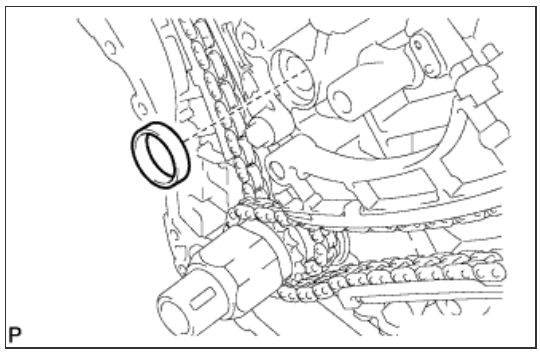
b. Rotate the crankshaft clockwise, and check that the timing marks on the crankshaft timing sprocket and camshaft timing gears are as shown in the illustration.



c. Remove the crankshaft pulley bolt.

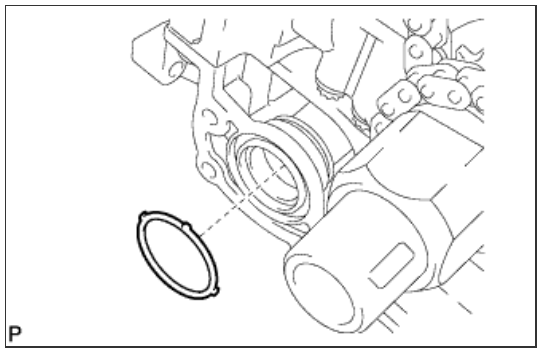
36. INSTALL WATER INLET PIPE

a. Apply soapy water to 2 new O-rings and install them to the inlet pipe.



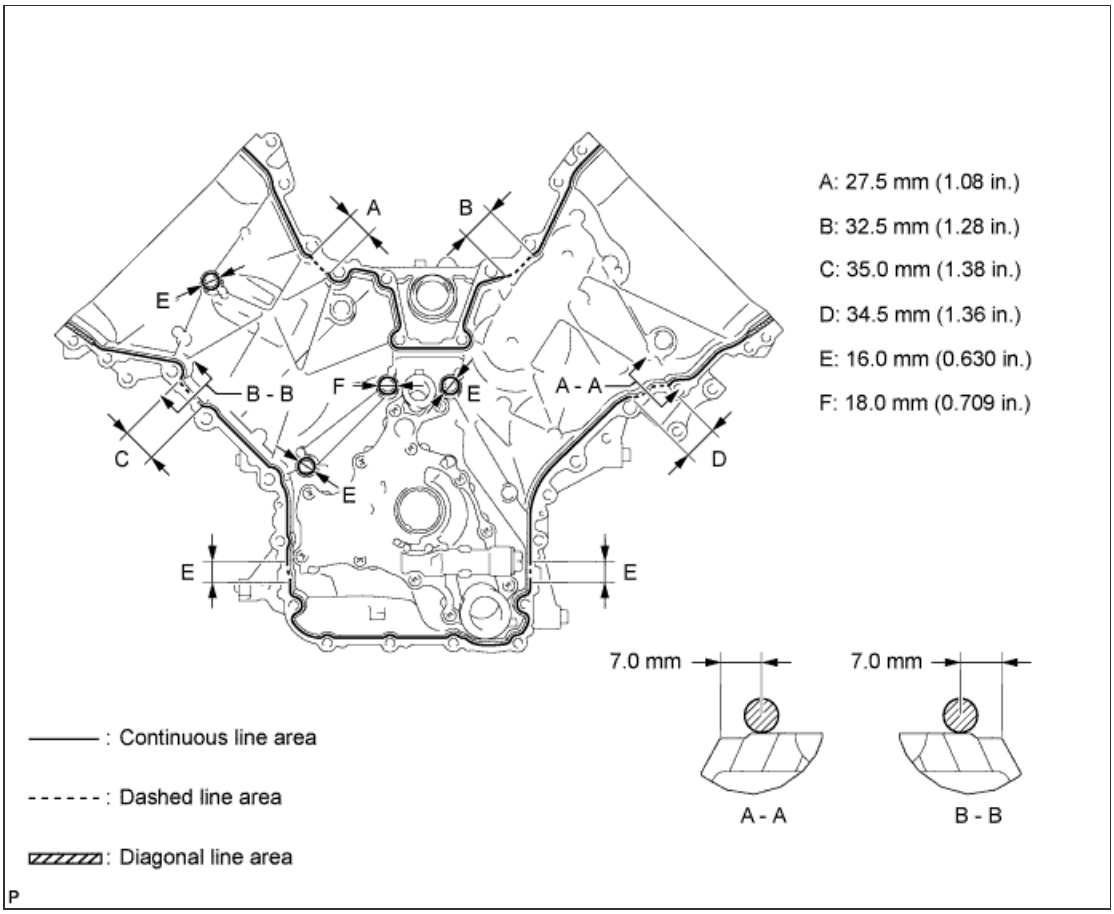
b. Install the inlet pipe to the No. 1 heat exchanger cover.

37. INSTALL TIMING CHAIN COVER SUB-ASSEMBLY



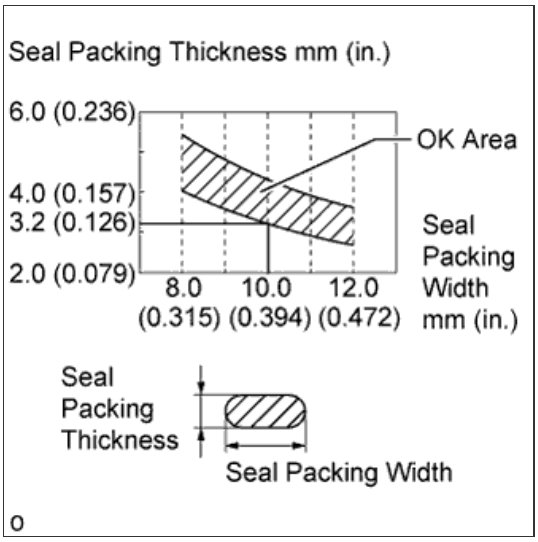
a. Apply a light coat of engine oil to a new oil pump gasket.

b. Install the oil pump gasket.



c. Apply a light coat of engine oil to a new O-ring.

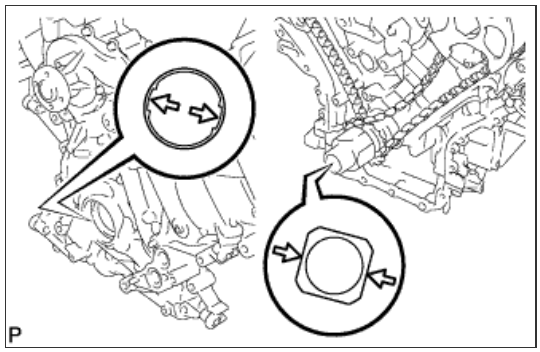
d. Install the O-ring.



e. Apply seal packing in a continuous line to the timing chain cover as shown in the following illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Apply Seal Packing as Follows:



Area	Seal Packing Diameter	Application Position from Inside Edge of Cover
Continuous Line Area	3.0 to 4.0 mm (0.118 to 0.157 in.)	2.5 mm (0.0984 in.)
Dashed Line Area	6.4 mm (0.252 in.) or more, or within OK area shown in illustration	7.0 mm (0.276 in.)
Diagonal Line Area	3.0 to 4.0 mm (0.118 to 0.157 in.)	5.5 mm (0.217 in.)

NOTICE:

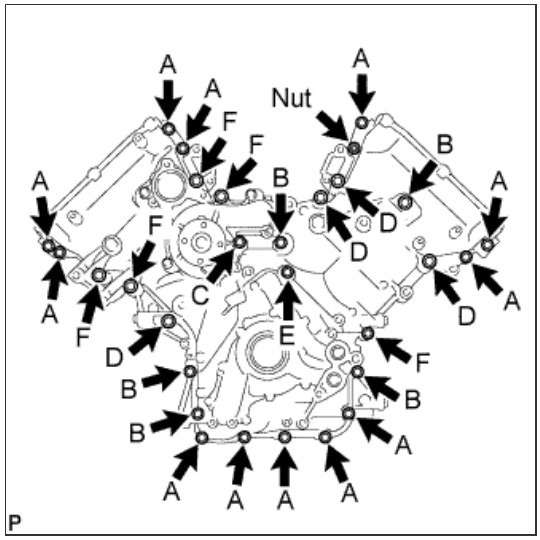
- **When the contact surfaces are wet, wipe them with an oil-free cloth before applying seal packing.**
- **Install the chain cover within 3 minutes and tighten the bolts within 10 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after installing.**

f. Align the oil pump drive rotor spline and crankshaft as shown in the illustration.
Install the spline and chain cover to the crankshaft.



g. Temporarily install the timing chain cover with the 28 bolts and nut.

Standard Bolt:

Item	Length	Thread Diameter
Bolt A	25 mm (0.984 in.)	8 mm (0.315 in.)
Bolt B	55 mm (2.17 in.)	8 mm (0.315 in.)
Bolt C	70 mm (2.76 in.)	8 mm (0.315 in.)
Bolt D	35 mm (1.38 in.)	10 mm (0.394 in.)
Bolt E	55 mm (2.17 in.)	10 mm (0.394 in.)
Bolt F	80 mm (3.15 in.)	10 mm (0.394 in.)

NOTICE:

Make sure that there is no oil on the bolt threads.

h. Tighten the 3 bolts in several steps in the sequence shown in the illustration.

Torque:
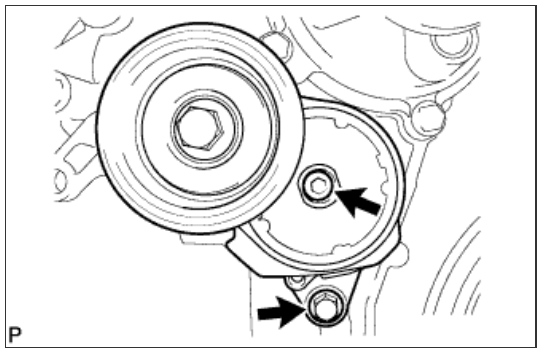
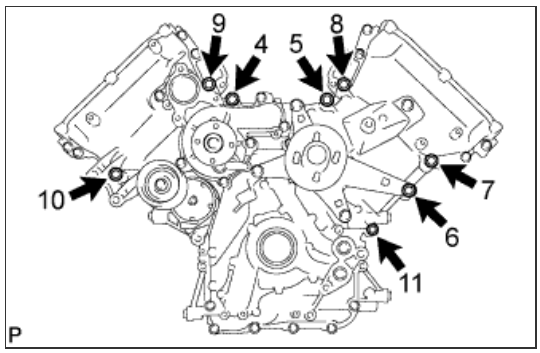
47 N*m{ 479 kgf*cm , 35 ft.*lbf }



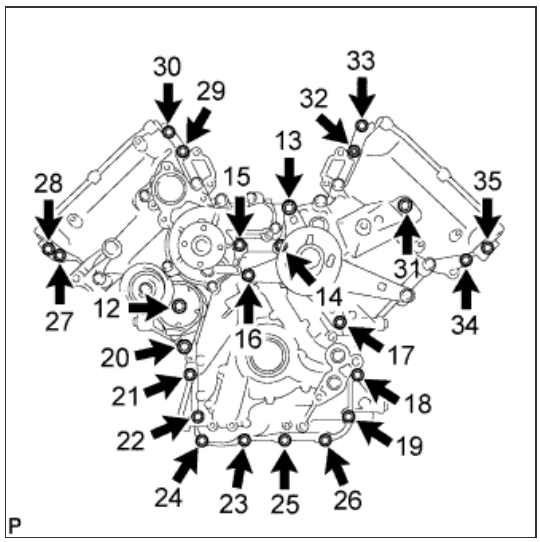
i. Temporarily install the fluid coupling bracket with the 4 bolts.

Standard Bolt:

Item	Length	Thread Diameter
Bolt A	70 mm (2.76 in.)	8 mm (0.315 in.)
Bolt B	80 mm (3.15 in.)	10 mm (0.394 in.)



j. Temporarily install the belt tensioner with the standard bolt and 6 mm hexagon wrench bolt.



k. Tighten the 8 bolts labeled 4 to 11 in several steps in the sequence shown in the illustration.

Torque:
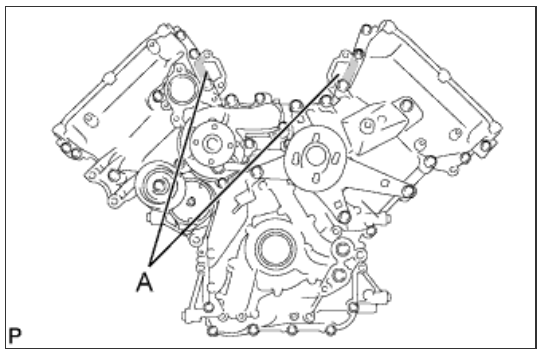
47 N*m{ 479 kgf*cm , 35 ft.*lbf }



l. Tighten the 23 bolts and nut labeled 12 to 35 in several steps in the sequence shown in the illustration.

Torque:
23 N*m{ 235 kgf*cm , 17 ft.*lbf }

NOTICE:

After the installation, if the seal packing has seeped out at the areas labeled A shown in the illustration, wipe it off.

38. INSTALL WATER PUMP ASSEMBLY

a. Install a new gasket and the water pump with the 8 bolts shown in the illustration.

Torque:

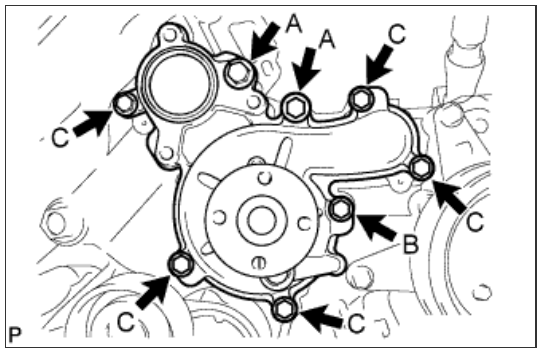
for bolt A:

47 N*m{ 479 kgf*cm , 35 ft.*lbf }

for bolt B:



23 N*m{ 235 kgf*cm , 17 ft.*lbf }

for bolt C:

20 N*m{ 204 kgf*cm , 15 ft.*lbf }

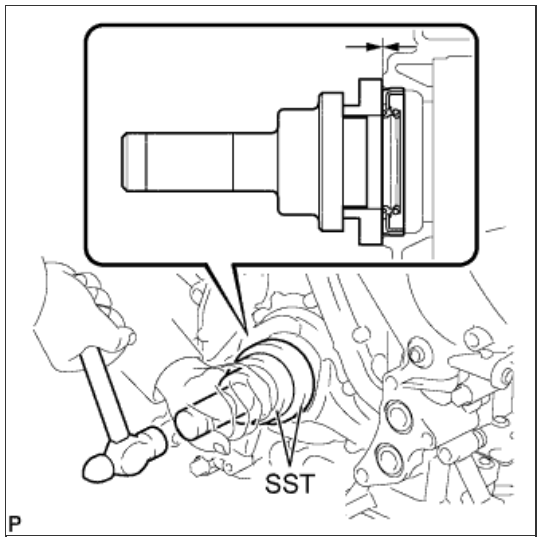
Standard Bolt:

Item	Length	Thread Diameter
Bolt A	80 mm (3.15 in.)	10 mm (0.394 in.)
Bolt B	70 mm (2.76 in.)	8 mm (0.315 in.)
Bolt C	25 mm (0.984 in.)	8 mm (0.315 in.)

39. INSTALL FRONT CRANKSHAFT OIL SEAL

a. Apply MP grease to the lip of a new oil seal.

b. Using SST and a hammer, tap in the oil seal to a depth between 0 and 1.0 mm (0 and 0.0394 in.) from the timing chain cover edge.



SST

09223-22010

09506-35010

NOTICE:

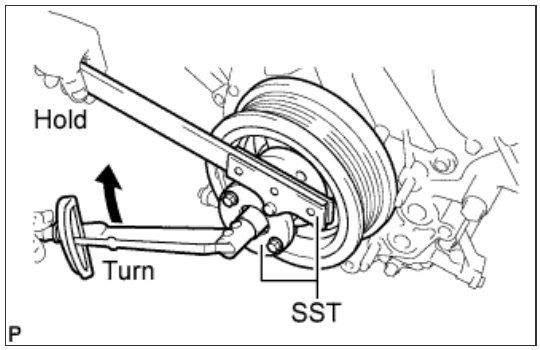
- **Keep the lip free from foreign matter.**
- **Do not tap the oil seal at an angle.**

40. INSTALL CRANKSHAFT TIMING GEAR KEY

a. Install the crankshaft timing gear key to the crankshaft.

41. INSTALL CRANKSHAFT PULLEY

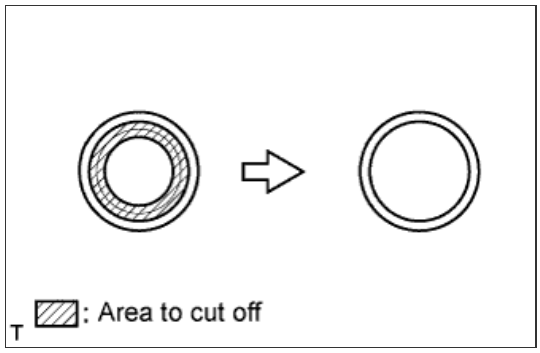
a. Align the pulley set key with the key groove of the pulley, and slide on the pulley.



b. Using SST, install the pulley set bolt.

SST

09213-70011 (09213-70020)



09330-00021

Torque:
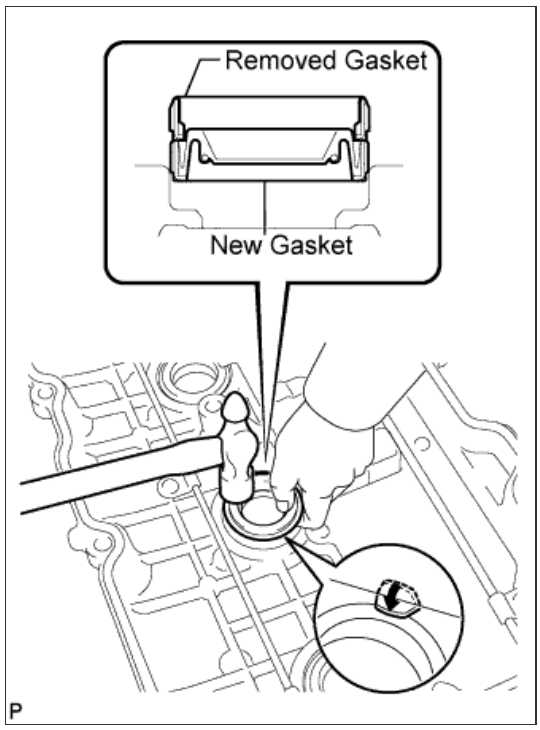
300 N*m{ 3059 kgf*cm , 221 ft.*lbf }

42. INSTALL SPARK PLUG TUBE GASKET

a. Using a cutter knife, cut off the seal part of the removed gasket.



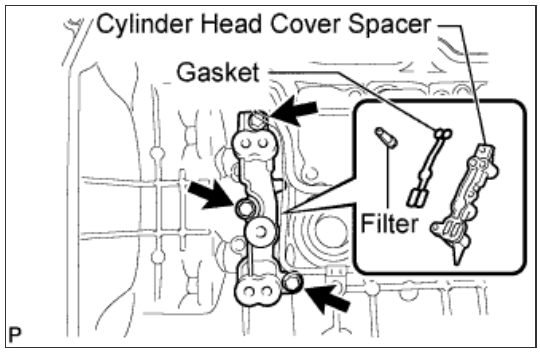
b. Using the removed gasket and a hammer, tap in a new gasket until it stops.

HINT:

If the removed gasket does not fit on the new one, correct the removed one with pliers.

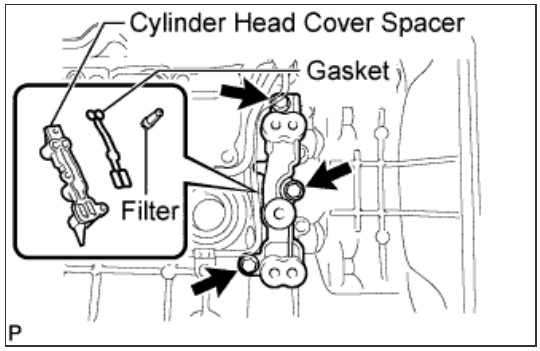
c. Apply a light coat of MP grease to the lip of the gasket.

d. Return the 4 ventilation baffle plate claws to the original positions.



43. INSTALL OIL CONTROL VALVE FILTER

a. LH:



i. Install the filter in the cylinder head.

ii. Install a new gasket and the cylinder head cover spacer with the 3 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. RH:

i. Install the filter in the cylinder head.

ii. Install a new gasket and the cylinder head cover spacer with the 3 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

44. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY RH

a. Install 5 new gaskets to the camshaft bearing caps. (No. 1, No. 3).

b. Install a new gasket to the cylinder head cover.

NOTICE:

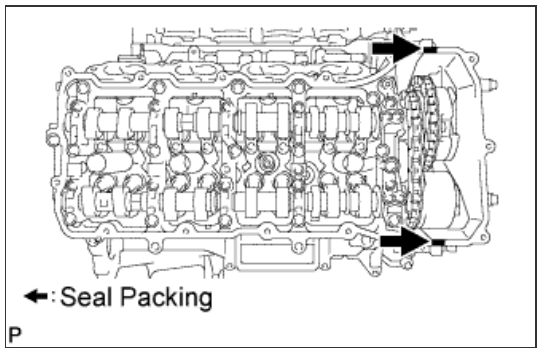
Remove any oil from the contact surface.



c. Apply seal packing as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

NOTICE:

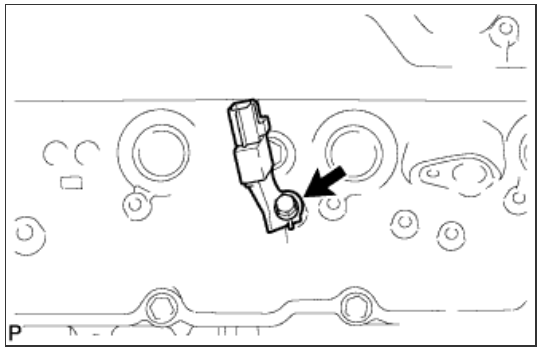
- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**



d. Install the cylinder head cover and a new seal washer with the 14 bolts in the order shown in the illustration.

Torque:
for bolt A:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
except bolt A:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

e. Install the noise filter to the cylinder head cover with the bolt.

Torque:
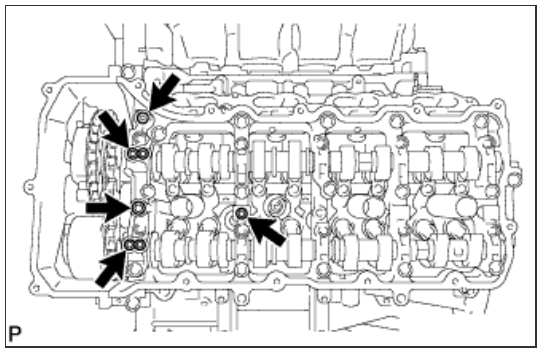
7.0 N*m{ 71 kgf*cm , 62 in.*lbf }



45. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY LH

a. Install 5 new gaskets to the camshaft bearing caps (No. 2, No. 3).

b. Install a new gasket to the cylinder head cover.

NOTICE:

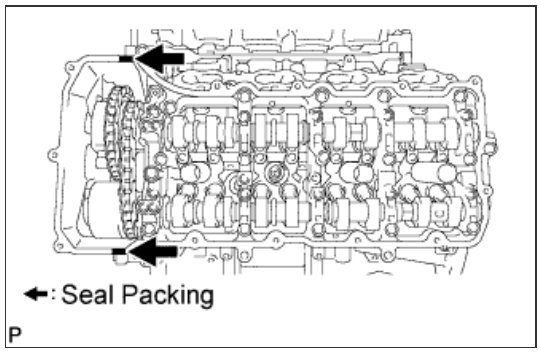
Remove any oil from the contact surface.



c. Apply seal packing as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**

d. Install the cylinder head cover and a new seal washer with the 14 bolts in the order shown in the illustration.

Torque:
for bolt A:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
except bolt A:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

46. INSTALL NO. 1 IDLER PULLEY SUB-ASSEMBLY

a. Install the idler pulley with the bolt.

Torque:
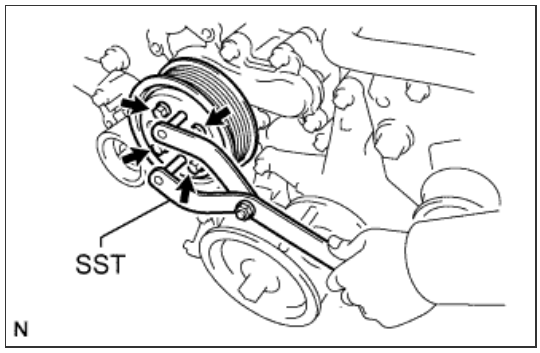
43 N*m{ 438 kgf*cm , 32 ft.*lbf }



47. INSTALL WATER PUMP PULLEY

a. Temporarily install the pulley with the 4 bolts.

b. Using SST, hold the pulley and tighten the 4 bolts.

SST
09960-10010 (09962-01000, 09963-01000)

Torque:
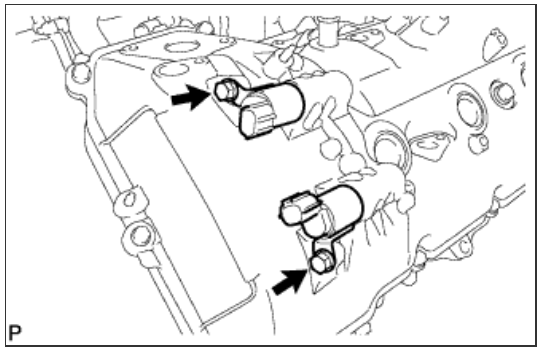
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

48. INSTALL CAMSHAFT OIL CONTROL VALVE ASSEMBLY



a. for Bank 1:

i. Apply a light coat of engine oil to 2 new O-rings.

ii. Install the 2 O-rings to the 2 oil control valves.

iii. Install the 2 oil control valves with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. for Bank 2:

i. Apply a light coat of engine oil to 2 new O-rings.

ii. Install the 2 O-rings to the 2 oil control valves.

iii. Install the 2 oil control valves with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

49. INSTALL CRANKSHAFT POSITION SENSOR

a. Install the crankshaft position sensor with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

50. INSTALL CRANK POSITION SENSOR PROTECTOR

a. Install the sensor protector with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

51. INSTALL CAMSHAFT POSITION SENSOR

a. Install the camshaft position sensor with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

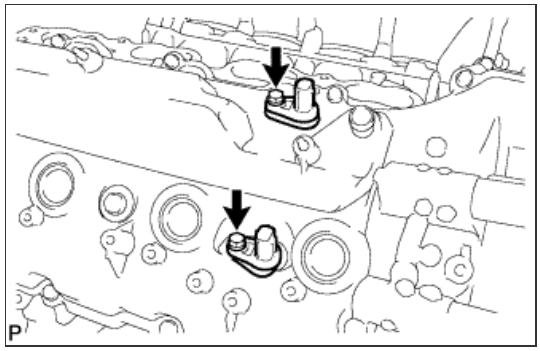
52. INSTALL VVT SENSOR



a. for Bank 1:
Install the 2 VVT sensors with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. for Bank 2:
Install the 2 VVT sensors with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

53. INSTALL SPARK PLUG

a. Using a 16 mm plug wrench, install the 8 spark plugs.

Torque:
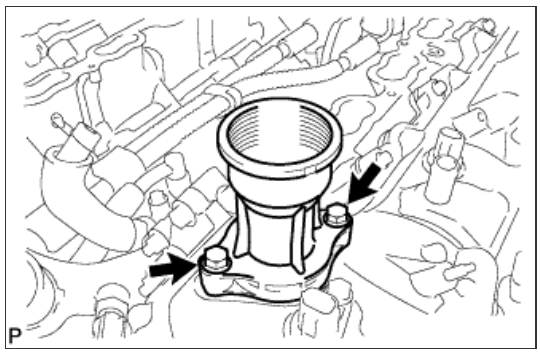
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



54. INSTALL OIL FILLER CAP HOUSING

a. Align the protrusion of a new gasket with the cutout of the oil filler cap housing, and install the gasket to the housing.

b. Install the cap housing with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

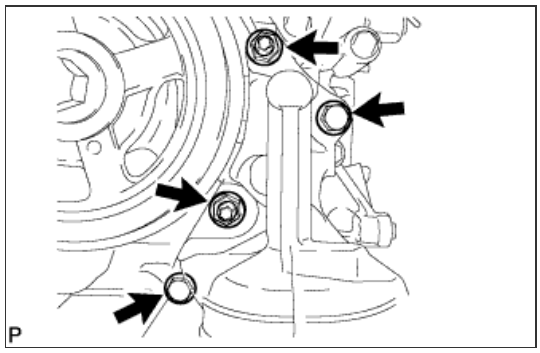
55. INSTALL OIL FILLER CAP SUB-ASSEMBLY

56. INSTALL OIL FILTER BRACKET (w/o Oil Cooler)



a. Apply a light coat of engine oil to 2 new O-rings.

b. Install the 2 O-rings to the timing chain cover.

c. Install the oil filter bracket with the 2 bolts and 2 nuts.

Torque:
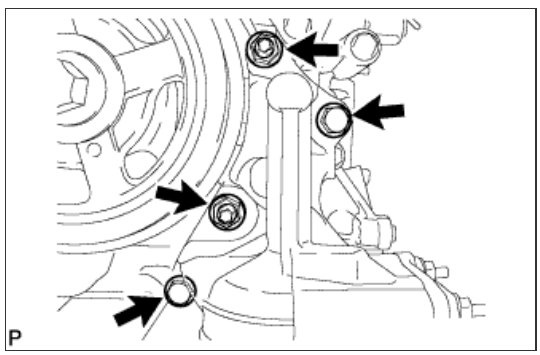
35 N*m{ 357 kgf*cm , 26 ft.*lbf }

57. INSTALL OIL FILTER BRACKET (w/ Oil Cooler)



a. Apply a light coat of engine oil to 2 new O-rings.

b. Install the 2 O-rings to the timing chain cover.

c. Install the oil filter bracket with the 2 nuts and 2 bolts.

Torque:
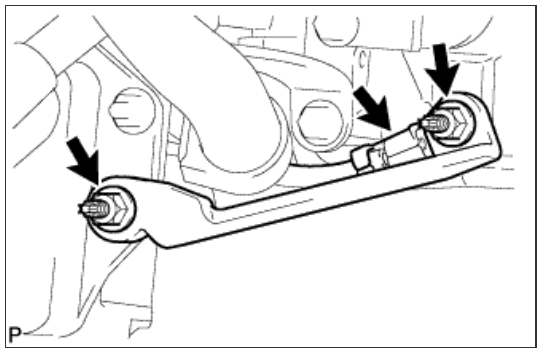
35 N*m{ 357 kgf*cm , 26 ft.*lbf }



58. INSTALL NO. 1 OIL COOLER BRACKET (w/ Oil Cooler)

a. Connect the ground wire to the cylinder block

d. Connect the ground wire to the cylinder block.

b. Install the oil cooler bracket with the 2 nuts.

Torque:
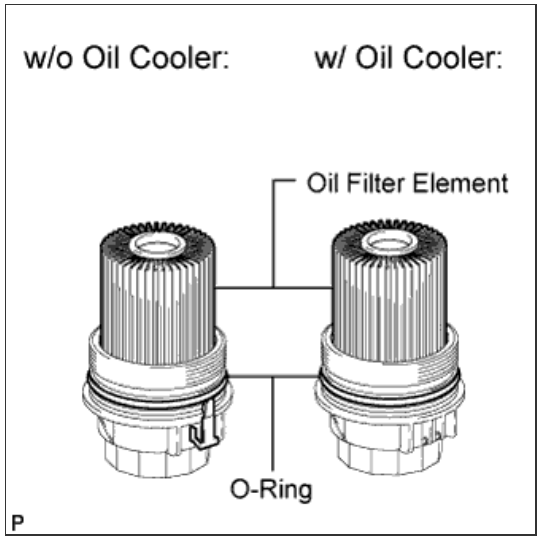
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

59. INSTALL OIL FILTER ELEMENT

a. Clean the inside of the oil filter cap, its threads and its O-ring groove.

b. Apply a small amount of engine oil to a new O-ring and install it to the oil filter cap.



c. Set a new oil filter element to the oil filter cap.

d. Remove any dirt or foreign matter from the installation surface of the engine.

e. Apply a small amount of engine oil to the O-ring again and temporarily install the oil filter cap.

NOTICE:

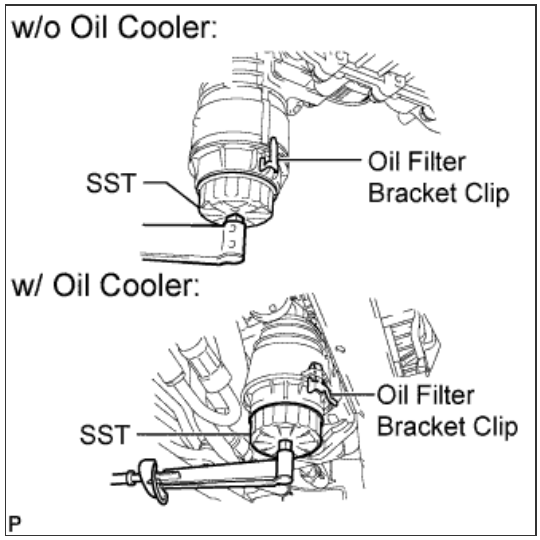
Do not remove the oil filter bracket clip.



f. Using SST, tighten the oil filter cap.

SST
09228-06501

Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf }

NOTICE:

- **When tightening the oil filter cap, do not remove the oil filter bracket clip.**
- **Make sure that the oil filter is installed securely as shown in the illustration.**
- **Be careful that the O-ring does not get caught between any surrounding parts.**

g. Apply a small amount of engine oil to a new drain plug O-ring, and install it to the oil filter cap.

NOTICE:

Before installing the O-ring, remove any dirt or foreign matter from the installation surface of the oil filter cap.

h. Install the oil filter drain plug.

Torque:
13 N*m{ 127 kgf*cm , 9 ft.*lbf }

NOTICE:

Be careful that the O-ring does not get caught between any surrounding parts.

i. Install the No. 2 engine under cover seal with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

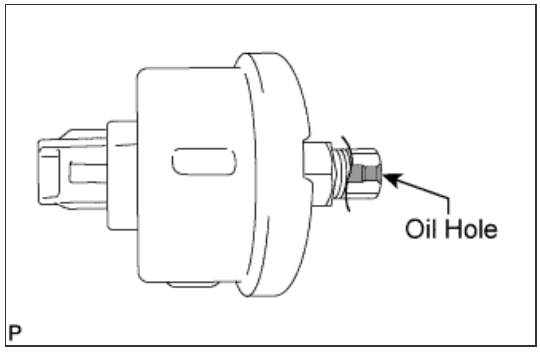
60. INSTALL OIL PRESSURE SENDER GAUGE ASSEMBLY



a. Apply adhesive to 2 or 3 threads of the oil pressure sender gauge.

Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

NOTICE:

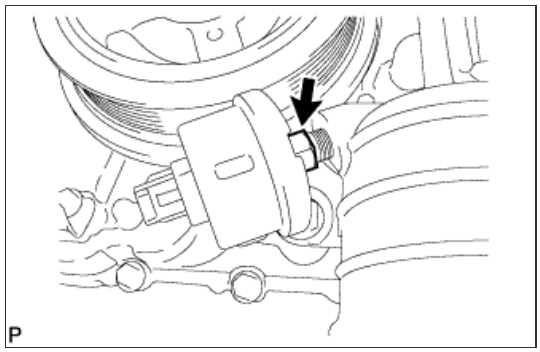
Do not allow adhesive to contact the oil hole.



b. Install the oil pressure sender gauge.

Torque:

15 N*m{ 153 kgf*cm , 11 ft.*lbf }

NOTICE:

Do not start the engine within 1 hour after installation.

c. Connect the sender gauge connector.

for Preparation Click here

1. INSTALL NOISE FILTER

a. RH:
Install the noise filter to the cylinder head cover with the bolt.

Torque:
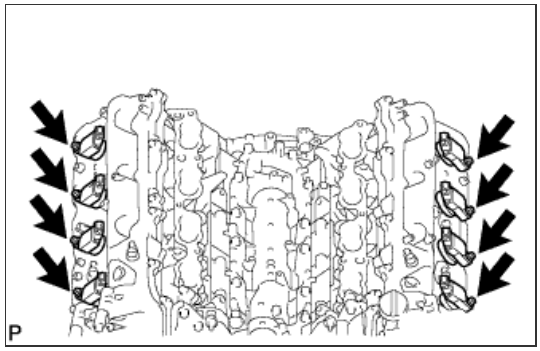
7.0 N*m{ 71 kgf*cm , 62 in.*lbf }



b. LH:
Install the noise filter to the cylinder head cover with the bolt.

Torque:
7.0 N*m{ 71 kgf*cm , 62 in.*lbf }

2. INSTALL IGNITION COIL ASSEMBLY

a. Install the 8 ignition coils with the 8 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

3. INSTALL FRONT NO. 1 ENGINE MOUNTING BRACKET LH

a. Install the mounting bracket with the 4 bolts.

Torque:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }

4. INSTALL FRONT NO. 1 ENGINE MOUNTING BRACKET RH

a. Install the mounting bracket with the 4 bolts.

Torque:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }

5. INSTALL CYLINDER BLOCK WATER DRAIN COCK SUB-ASSEMBLY

a. Apply adhesive to 2 or 3 threads of the drain cocks.

Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

b. Install the water drain cocks as shown in the illustration.

Torque:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }

NOTICE:

- **Do not rotate the drain cocks more than 1 revolution (360°) after tightening the drain cocks to the specified torque.**
- **Do not loosen the drain cocks to adjust them. If an adjustment is necessary, remove the drain cocks and reinstall them.**

c. Install the water drain cock plugs to the water drain cocks.

Torque:
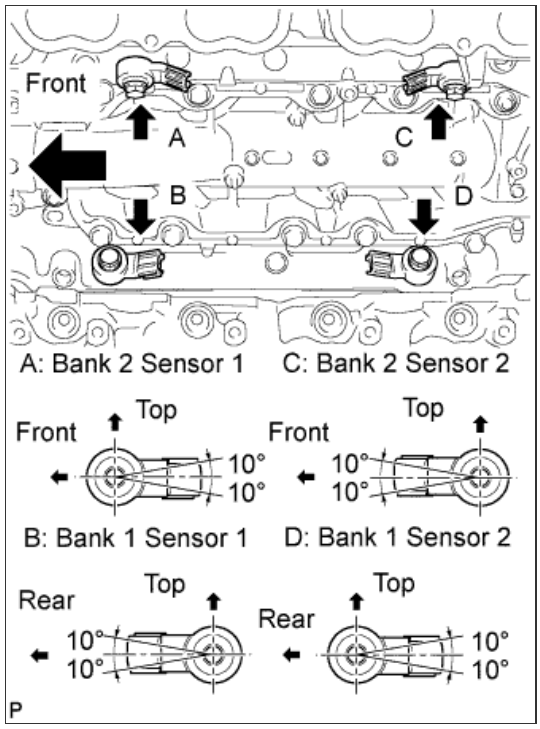
13 N*m{ 130 kgf*cm , 10 ft.*lbf }

6. INSTALL KNOCK SENSOR



a. Install the 4 sensors with the 4 bolts so that the sensors are angled as shown in the illustration.

Torque:

20 N*m{ 204 kgf*cm , 15 ft.*lbf }

NOTICE:

The acceptable installation angle of the sensor is between 10° upward and downward from the horizontal position.

7. INSTALL SEPARATOR CASE

a. After inserting the pipe on the rear of the separator case into the oil return pipe and the pipe on the front into the ventilation pipe, temporarily install bolt A.

b. Temporarily install bolt B and tighten bolt A.

Torque:

10 N*m{ 102 kgf*cm , 7 ft.*lbf }

c. Install the bolts labeled C.

Torque:

10 N*m{ 102 kgf*cm , 7 ft.*lbf }

d. Tighten bolt B.

Torque:

10 N*m{ 102 kgf*cm , 7 ft.*lbf }

Standard Bolt:

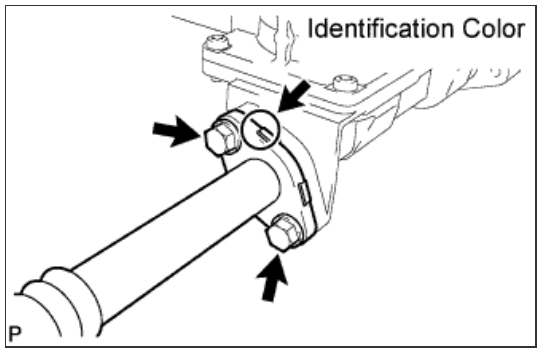
Item	Length	Thread Diameter
Bolt A	25 mm (0.984 in.)	6 mm (0.236 in.)
Bolt B and C	16 mm (0.630 in.)	6 mm (0.236 in.)

8. INSTALL SENSOR WIRE

a. Connect the 3 clamps and 4 knock sensor connectors.

9. INSTALL NO. 3 AIR TUBE

a. Install a new gasket and the No. 3 air tube with the 2 bolts.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

HINT:

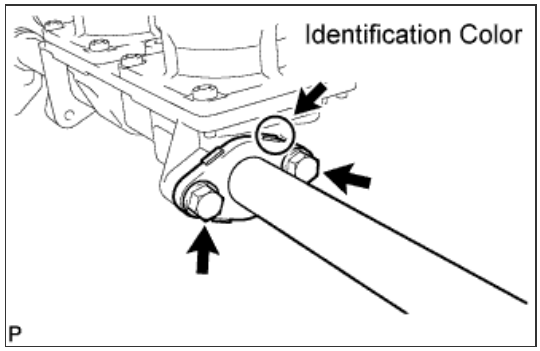
The identification color on the flange is orange.

NOTICE:

Make sure the claws on the gasket are not caught between the air tube and air switching valve.

10. INSTALL NO. 2 AIR TUBE

a. Install a new gasket and the No. 2 air tube with the 2 bolts.



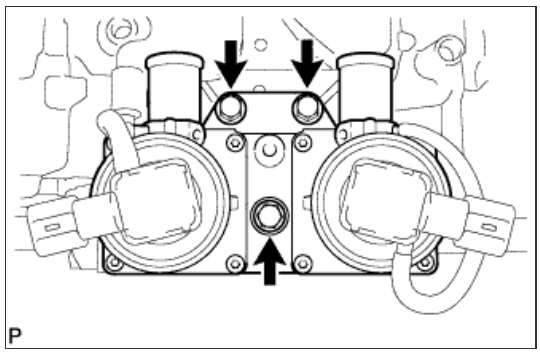
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

HINT:

The identification color on the flange is blue.

NOTICE:

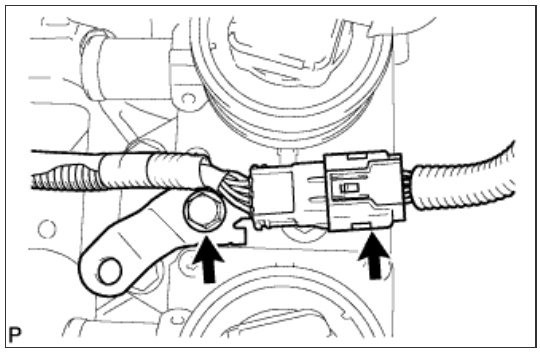
Make sure the claws on the gasket are not caught between the air tube and air switching valve.



11. INSTALL AIR SWITCHING VALVE ASSEMBLY

a. Install the air switching valve with the 3 bolts.

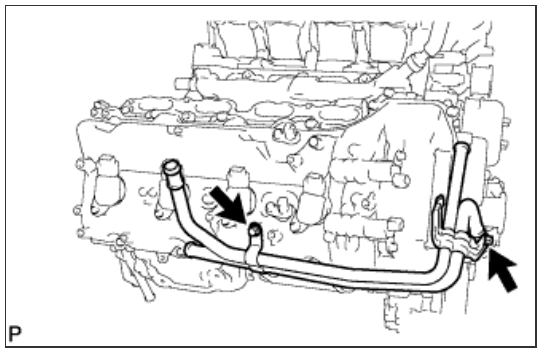
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



b. Connect the 2 air switching valve connectors.

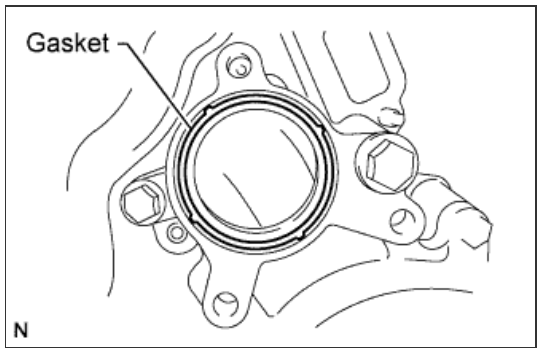
c. Install the bracket with the bolt.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



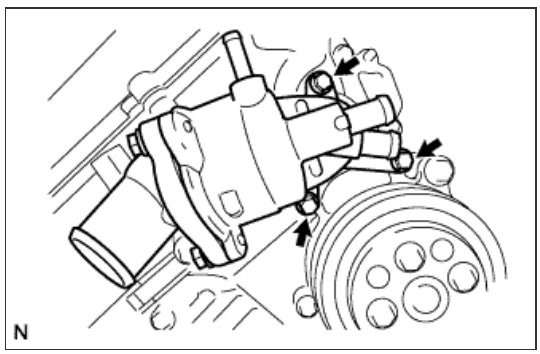
d. Connect the knock sensor connector.

12. INSTALL WATER BY-PASS PIPE SUB-ASSEMBLY



a. Install the water by-pass pipe with the 2 bolts.

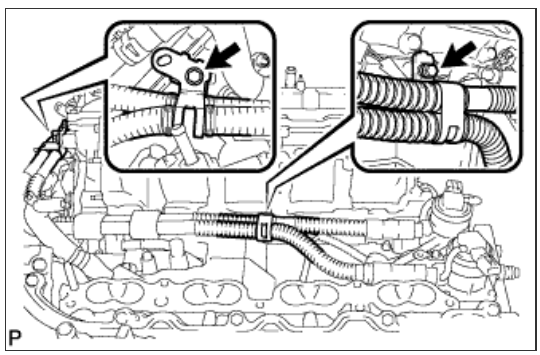
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



13. INSTALL WATER INLET HOUSING

a. Install a new gasket to the timing chain cover.

b. Install the water inlet with the 3 bolts.

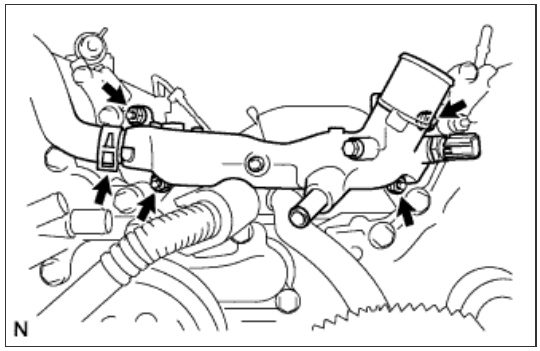


Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

14. INSTALL AIR PIPE SUB-ASSEMBLY

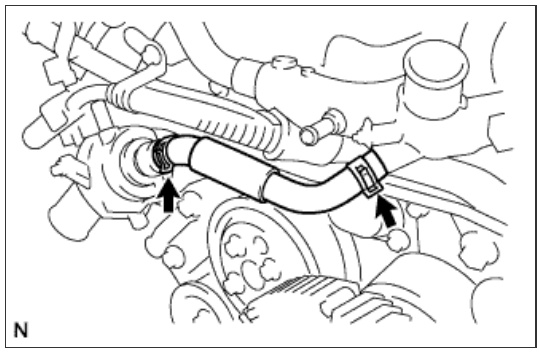
a. Install the 2 No. 1 air hoses and air pipe with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



15. INSTALL FRONT WATER BY-PASS JOINT

a. Install 2 new gaskets and the water by-pass joint with the 4 nuts.

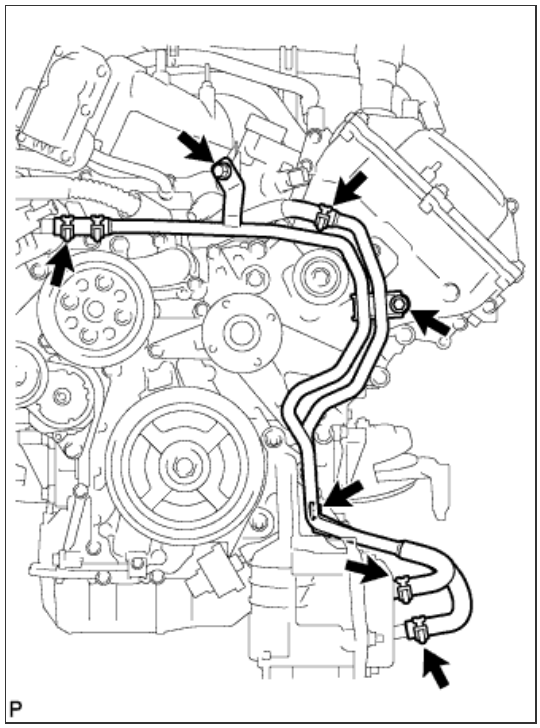


Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. Connect the No. 2 water by-pass hose to the water by-pass joint.

16. INSTALL NO. 1 WATER BY-PASS HOSE

a. Install the No. 1 water by-pass hose by connecting the hose to the water inlet housing and front water by-pass joint.

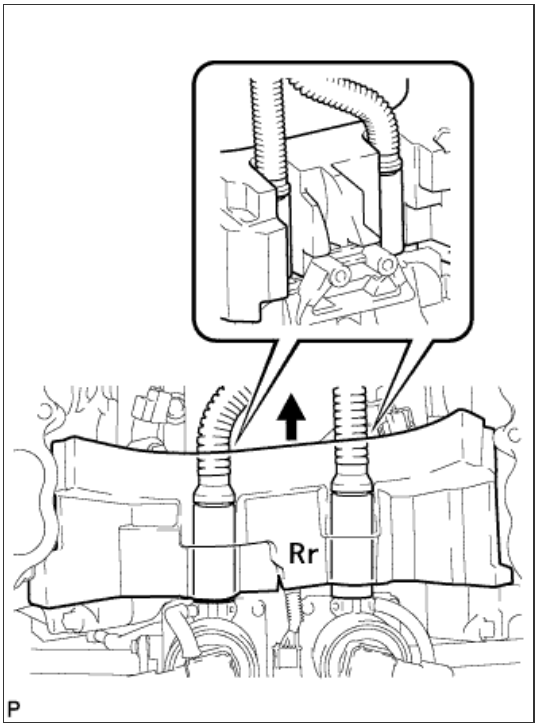


17. INSTALL NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY (w/ Oil Cooler)

a. Connect the 4 hoses.

b. Install the water by-pass pipe with the 3 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



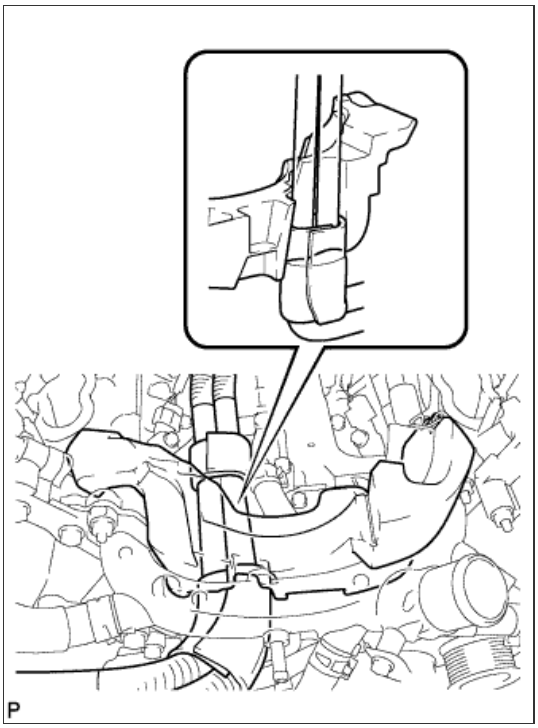
18. INSTALL NO. 1 ENGINE COVER

HINT:

- **Align the No. 1 engine cover cutouts with the air tube.**
- **Align the No. 1 engine cover with the air switching valve surface and cylinder head wall.**

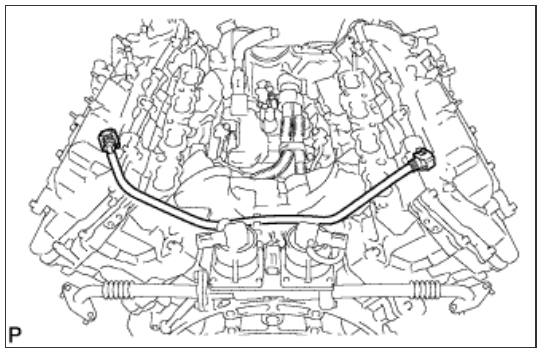
NOTICE:

Make sure that the No. 1 engine cover is flush with the top surface of the intake port of the cylinder head for bank 1 and bank 2.



19. INSTALL NO. 2 ENGINE COVER

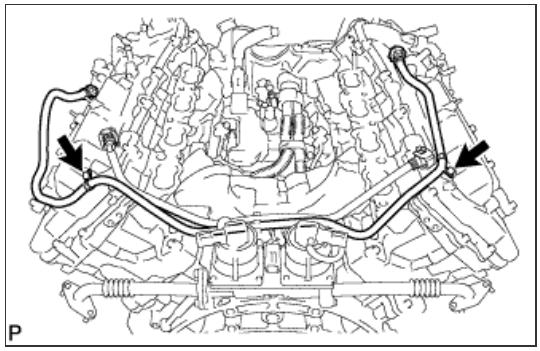
HINT:



- **Align the No. 2 engine cover cutout with the air tube.**
- **Align the No. 2 engine cover with the front water by-pass joint and cylinder head wall.**

NOTICE:

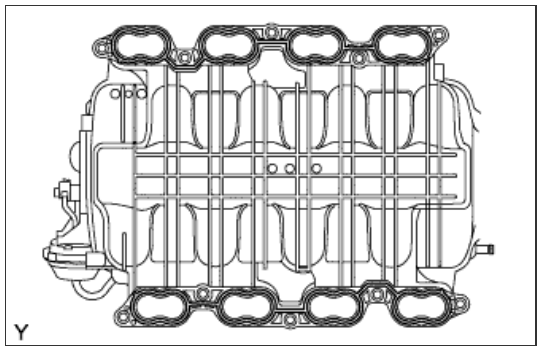
Make sure that the No. 2 engine cover is flush with the top surface of the intake port of the cylinder head.



20. INSTALL NO. 1 FUEL TUBE

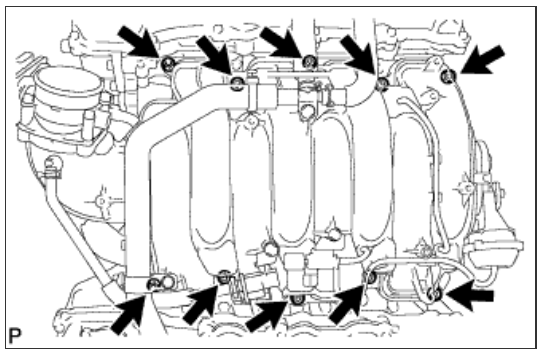
21. INSTALL NO. 2 FUEL TUBE

a. Install the No. 2 fuel tube with the 2 bolts.



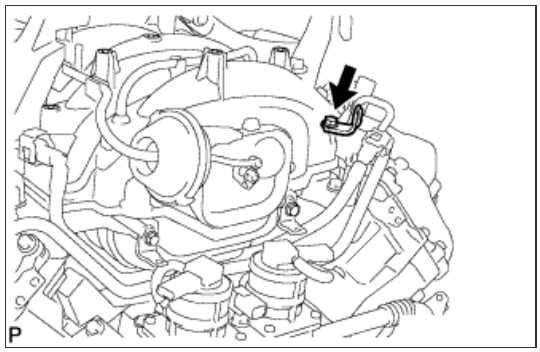
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

22. INSTALL INTAKE MANIFOLD



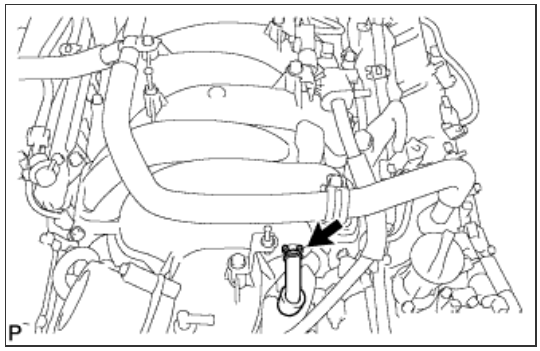
a. Place 2 new gaskets on the intake manifold.

b. Place the intake manifold on the cylinder head.

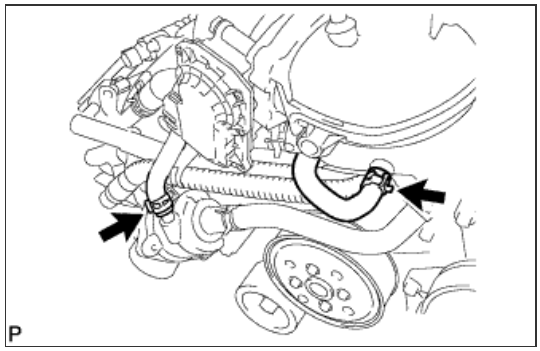


c. Install and uniformly tighten the 8 bolts and 2 nuts in several steps.

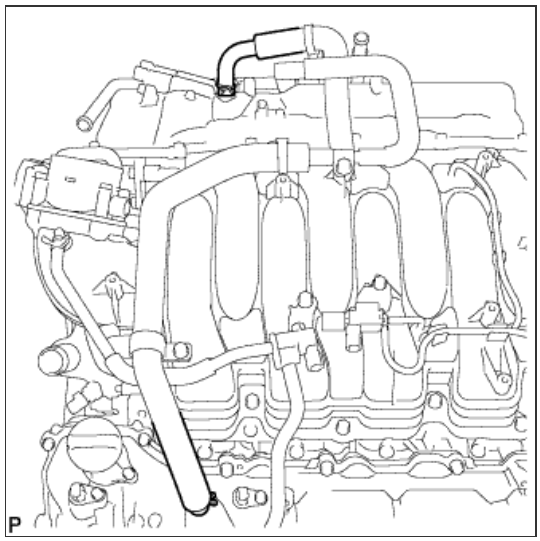
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



d. Install the wire bracket to the intake manifold with the bolt.

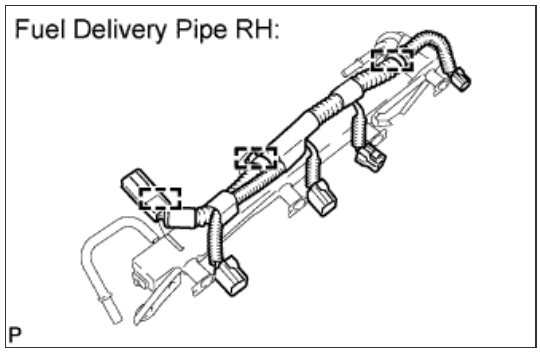


Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

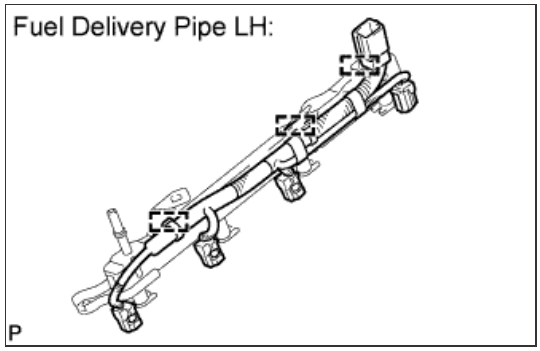


e. Connect the No. 1 ventilation hose.

f. Connect the 2 water by-pass hoses.

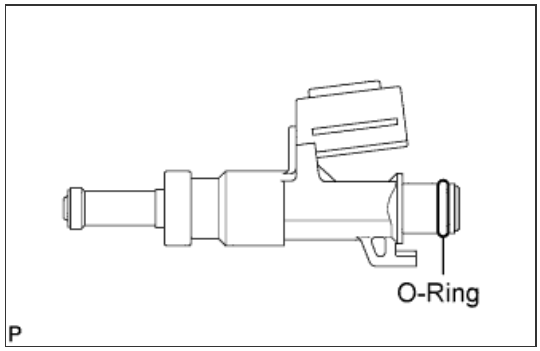


g. Connect the ventilation hose to the ventilation pipe of the cylinder head cover LH and RH.

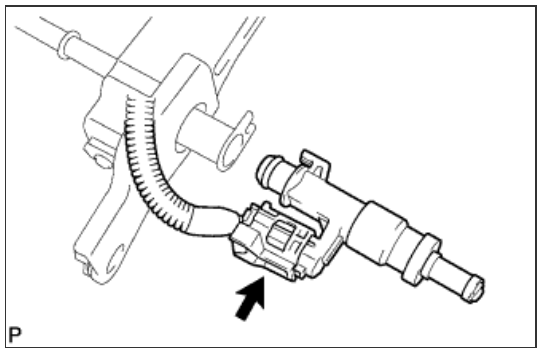


23. INSTALL FUEL INJECTOR ASSEMBLY

a. Attach the 3 clamps to install the No. 6 wire harness to the delivery pipe RH.



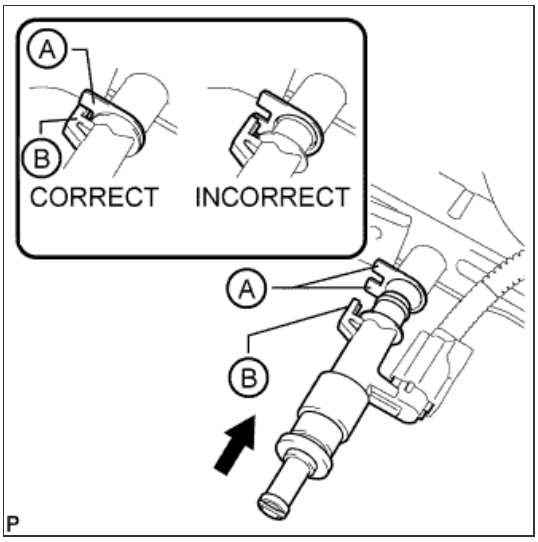
b. Attach the 3 clamps to install the No. 7 wire harness to the delivery pipe LH.



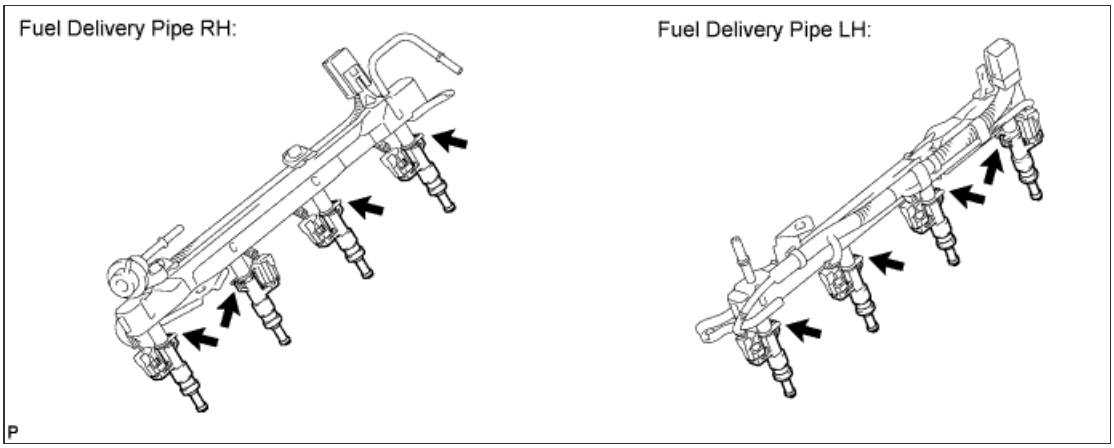
c. Apply gasoline or spindle oil to a new O-ring and install it to the injector.

NOTICE:

Make sure that there is no damage or foreign material in the groove of the injector when installing the O-ring.



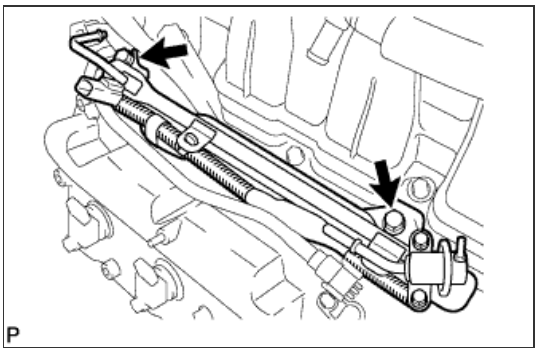
d. Connect the injector connector.



e. Install the injector to the delivery pipe as shown in the illustration.

NOTICE:

- **Make sure that there are no scratches or foreign matter in or around the insertion hole of the delivery pipe.**
- **When inserting the injector, be careful not to damage the O-ring.**
- **Attach the part of the injector labeled B between the parts of the delivery pipe labeled A.**

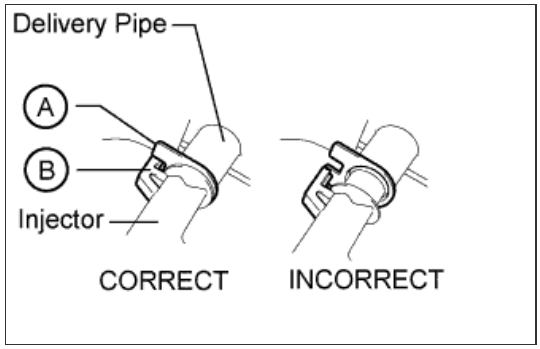


f. Check that each injector is installed to the delivery pipe facing the direction shown in the illustration.

24. INSTALL FUEL DELIVERY PIPE SUB-ASSEMBLY RH

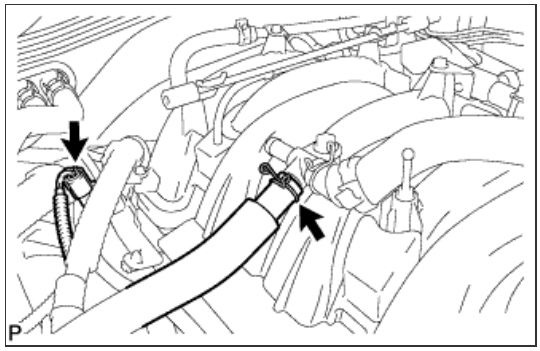
a. Install the 2 delivery pipe spacers and 4 insulators to the cylinder head RH.

b. Install the delivery pipe (with injectors) to the cylinder head RH.



c. Install the 2 bolts.

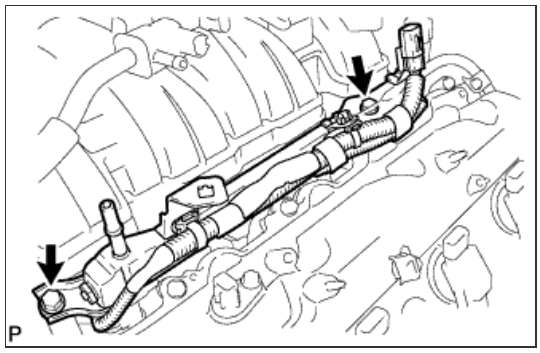
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



NOTICE:

Make sure that the part of the injector labeled B is between the parts of the delivery pipe labeled A.

d. Connect the No. 6 wire harness connector.

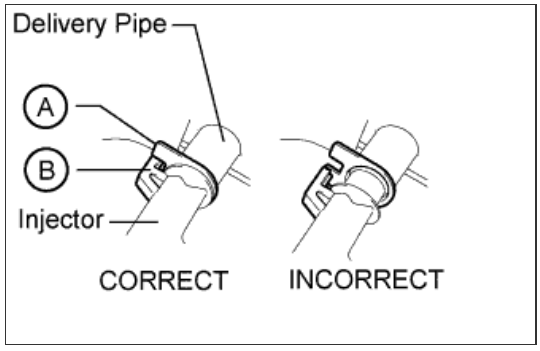


e. Connect the ventilation hose.

25. INSTALL FUEL DELIVERY PIPE SUB-ASSEMBLY LH

a. Install the 2 delivery pipe spacers and 4 insulators to the cylinder head LH.

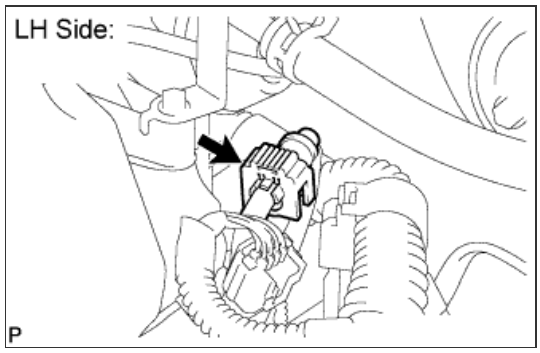
b. Install the delivery pipe (with injectors) to the cylinder head LH.



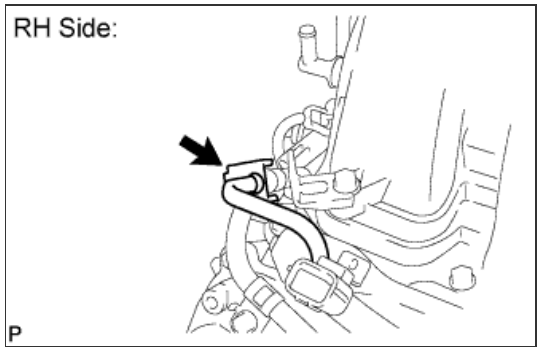
c. Install the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

NOTICE:



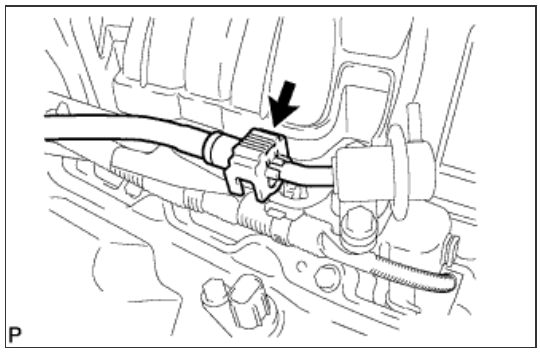
Make sure that the part of the injector labeled B is between the parts of the delivery pipe labeled A.



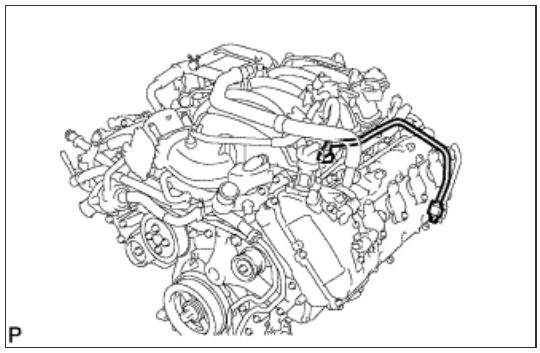
d. Connect the No. 7 wire harness connector.

26. CONNECT NO. 1 FUEL TUBE

a. LH Side:
Connect the No. 1 fuel tube to the delivery pipe LH (Click here).

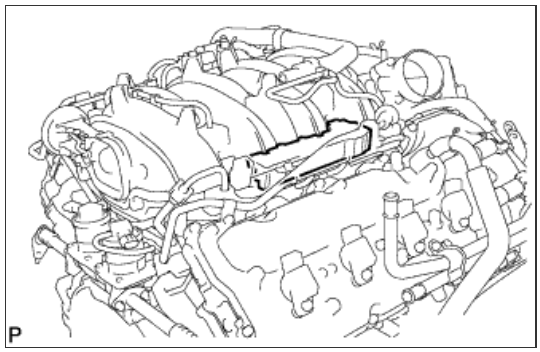


b. RH Side:
Connect the No. 1 fuel tube to the delivery pipe RH (Click here).



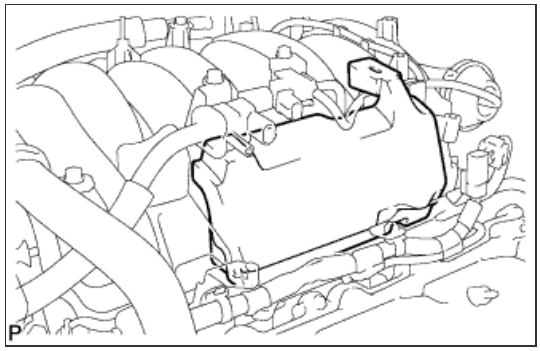
27. CONNECT NO. 2 FUEL TUBE

a. Connect the No. 2 fuel tube to the fuel pressure regulator (Click here).



28. INSTALL NO. 1 FUEL HOSE

a. Install the fuel hose (Click here).



29. INSTALL NO. 3 ENGINE COVER

a. Install the No. 3 engine cover.

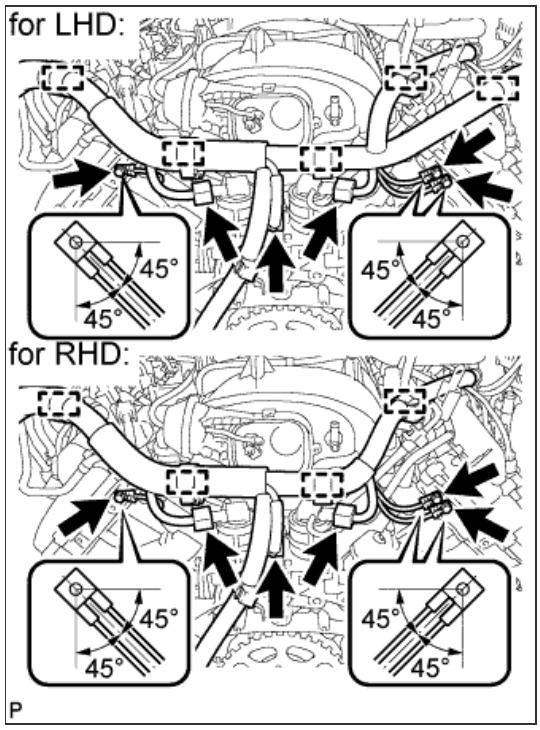
30. INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY

a. Install the No. 1 engine cover sub-assembly.

31. INSTALL ENGINE WIRE

a. Install the engine wire.

b. Engine Rear Side:



i. Install the 3 bolts as shown in the illustration.

Torque:
8.5 N*m{ 87 kgf*cm , 75 in.*lbf }

ii. for RHD:
Connect the 4 clamps.

iii. for LHD:
Connect the 5 clamps.

iv. Connect the 2 air switching valve connectors.

c. Engine RH Side:

i. Connect the 9 clamps.

ii. Connect the oil level sensor connector.

iii. Connect the oil pressure sender gauge connector.

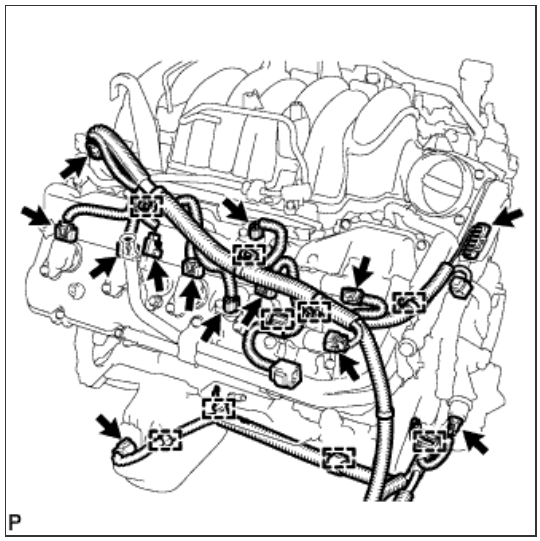
iv. Connect the throttle sensor connector.

v. Connect the noise filter connector.

vi. Connect the fuel injector connector.

vii. Connect the 2 VVT sensor connectors.

HINT:



The wire harnesses on the exhaust side are wrapped with white tape.

viii. Connect the 4 ignition coil connectors.

ix. Connect the 2 camshaft timing control valve connectors.

HINT:

The wire harnesses on the exhaust side are wrapped with white tape.

d. Engine LH Side:

i. Connect the 7 clamps and install the engine wire with the bolt.

Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

ii. Connect the noise filter connector.

iii. Connect the fuel injector connector.

iv. Connect the engine coolant temperature sensor connector.

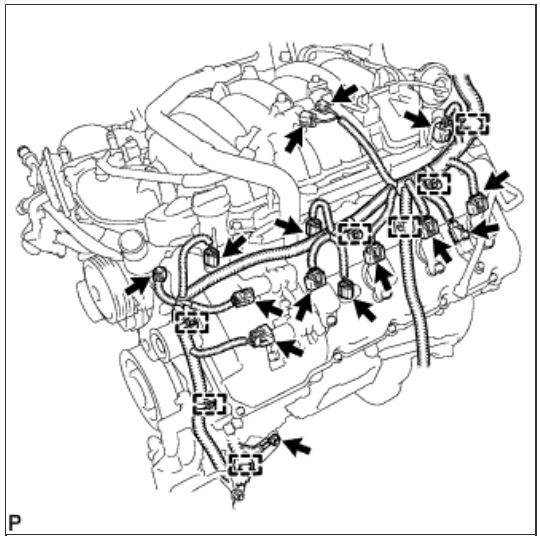
v. Connect the purge VSV connector.

vi. Connect the vacuum switching valve connector (for ACIS).

vii. Connect the camshaft position sensor connector.

viii. Connect the 2 VVT sensor connectors.

HINT:



The wire harnesses on the exhaust side are wrapped with white tape.

ix. Connect the 4 ignition coil connectors.

x. Connect the 2 camshaft timing control valve connectors.

HINT:

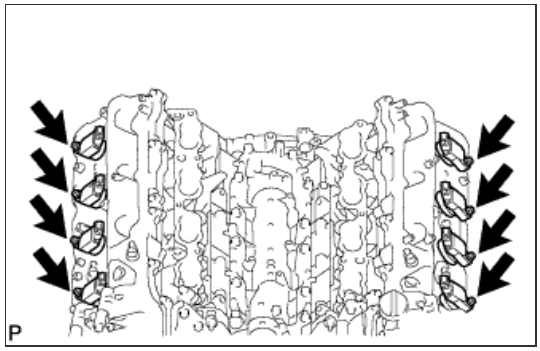
The wire harnesses on the exhaust side are wrapped with white tape.

for Preparation Click here

1. INSTALL NOISE FILTER

a. RH:
Install the noise filter to the cylinder head cover with the bolt.

Torque:
7.0 N*m{ 71 kgf*cm , 62 in.*lbf }

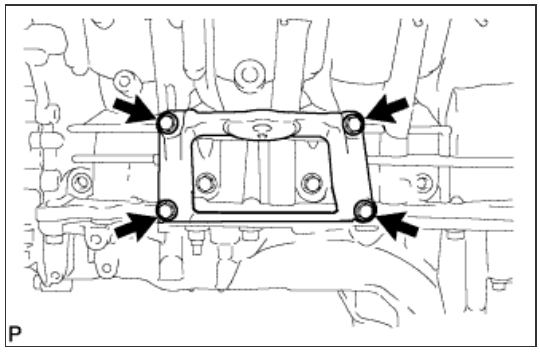


b. LH:
Install the noise filter to the cylinder head cover with the bolt.

Torque:
7.0 N*m{ 71 kgf*cm , 62 in.*lbf }

2. INSTALL IGNITION COIL ASSEMBLY

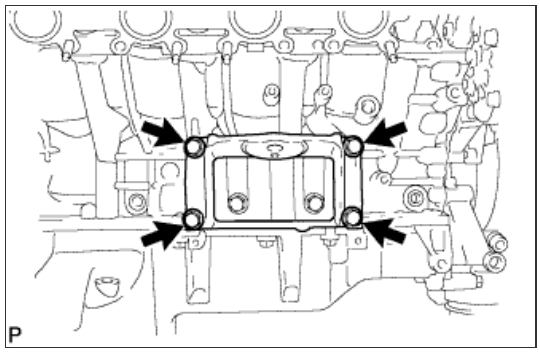
a. Install the 8 ignition coils with the 8 bolts.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

3. INSTALL FRONT NO. 1 ENGINE MOUNTING BRACKET LH

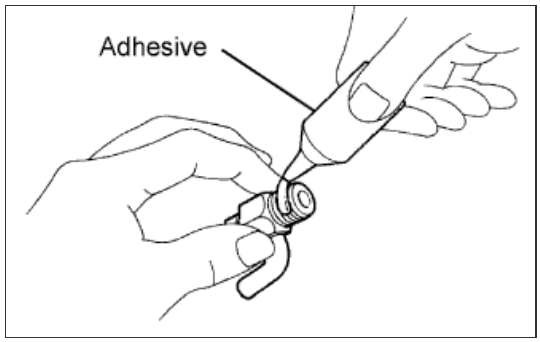
a. Install the mounting bracket with the 4 bolts.



Torque:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }

4. INSTALL FRONT NO. 1 ENGINE MOUNTING BRACKET RH

a. Install the mounting bracket with the 4 bolts.



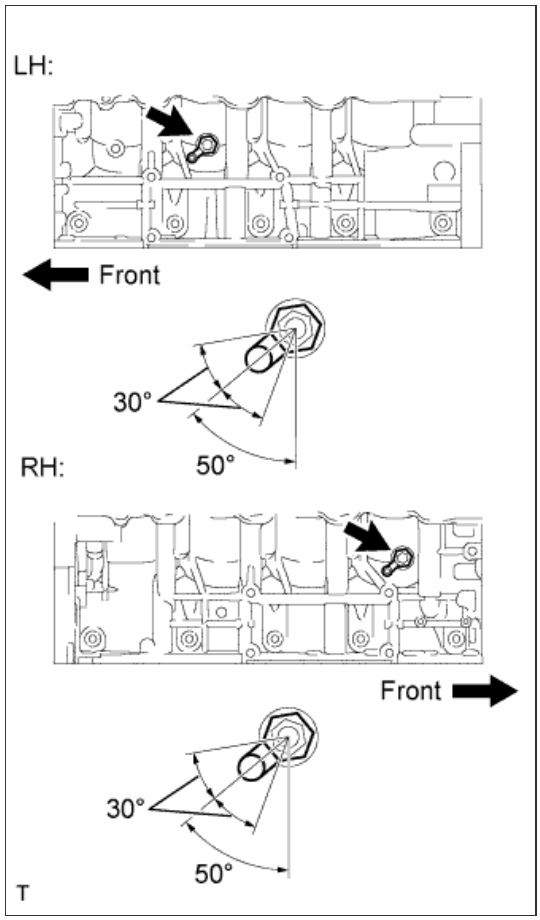
Torque:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }

5. INSTALL CYLINDER BLOCK WATER DRAIN COCK SUB-ASSEMBLY

a. Apply adhesive to 2 or 3 threads of the drain cocks.

Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

b. Install the water drain cocks as shown in the illustration.



Torque:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }

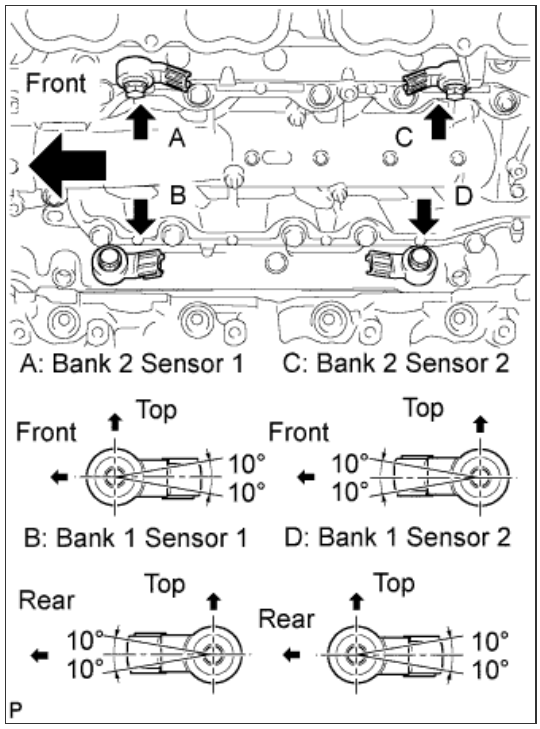
NOTICE:

- **Do not rotate the drain cocks more than 1 revolution (360°) after tightening the drain cocks to the specified torque.**
- **Do not loosen the drain cocks to adjust them. If an adjustment is necessary, remove the drain cocks and reinstall them.**

c. Install the water drain cock plugs to the water drain cocks.

Torque:
13 N*m{ 130 kgf*cm , 10 ft.*lbf }

6. INSTALL KNOCK SENSOR



a. Install the 4 sensors with the 4 bolts so that the sensors are angled as shown in the illustration.

Torque:

20 N*m{ 204 kgf*cm , 15 ft.*lbf }

NOTICE:

The acceptable installation angle of the sensor is between 10° upward and downward from the horizontal position.

7. INSTALL SEPARATOR CASE

a. After inserting the pipe on the rear of the separator case into the oil return pipe and the pipe on the front into the ventilation pipe, temporarily install bolt A.

b. Temporarily install bolt B and tighten bolt A.

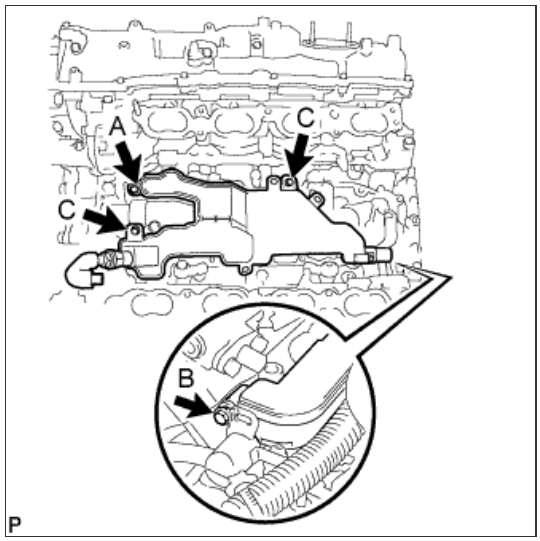
Torque:

10 N*m{ 102 kgf*cm , 7 ft.*lbf }

c. Install the bolts labeled C.

Torque:

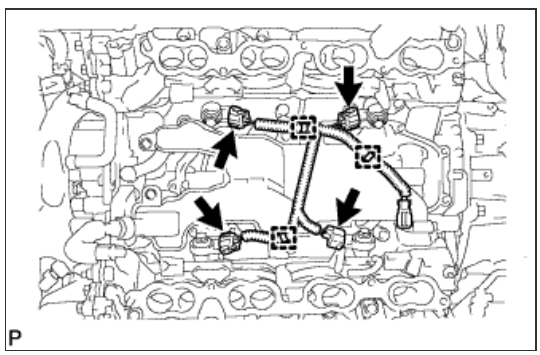
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



d. Tighten bolt B.

Torque:

10 N*m{ 102 kgf*cm , 7 ft.*lbf }



Standard Bolt:

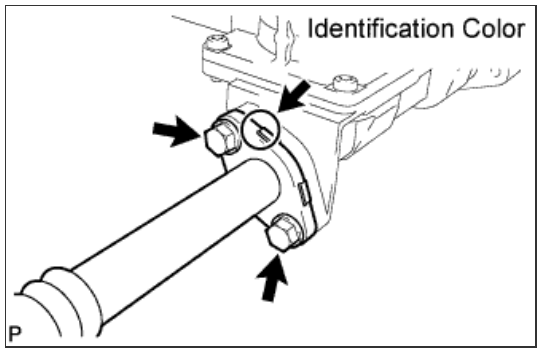
Item	Length	Thread Diameter
Bolt A	25 mm (0.984 in.)	6 mm (0.236 in.)
Bolt B and C	16 mm (0.630 in.)	6 mm (0.236 in.)

8. INSTALL SENSOR WIRE

a. Connect the 3 clamps and 4 knock sensor connectors.

9. INSTALL NO. 3 AIR TUBE (w/ Secondary Air Injection System)

a. Install a new gasket and the No. 3 air tube with the 2 bolts.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

HINT:

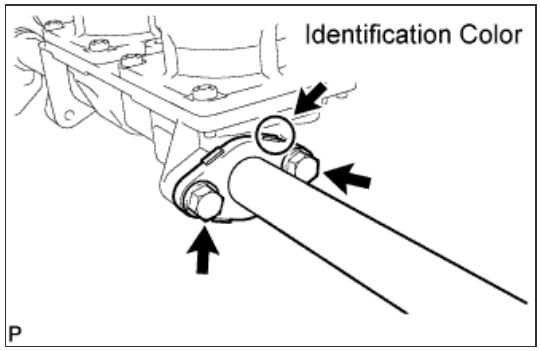
The identification color on the flange is orange.

NOTICE:

Make sure the claws on the gasket are not caught between the air tube and air switching valve.

10. INSTALL NO. 2 AIR TUBE (w/ Secondary Air Injection System)

a. Install a new gasket and the No. 2 air tube with the 2 bolts.



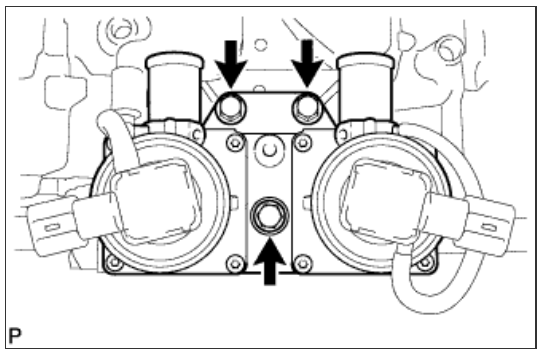
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

HINT:

The identification color on the flange is blue.

NOTICE:

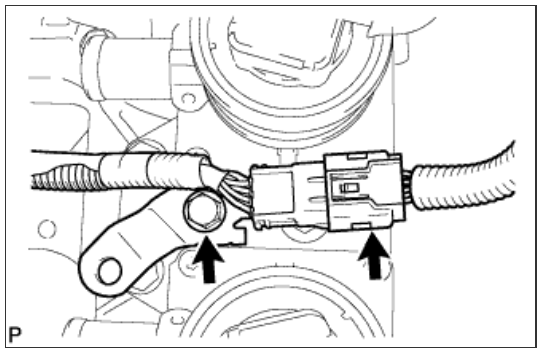
Make sure the claws on the gasket are not caught between the air tube and air switching valve.



11. INSTALL AIR SWITCHING VALVE ASSEMBLY (w/ Secondary Air Injection System)

a. Install the air switching valve with the 3 bolts.

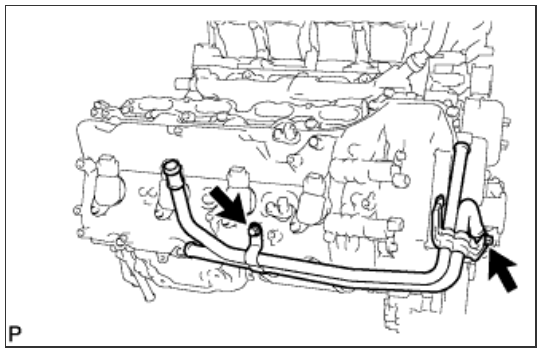
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



b. Connect the 2 air switching valve connectors.

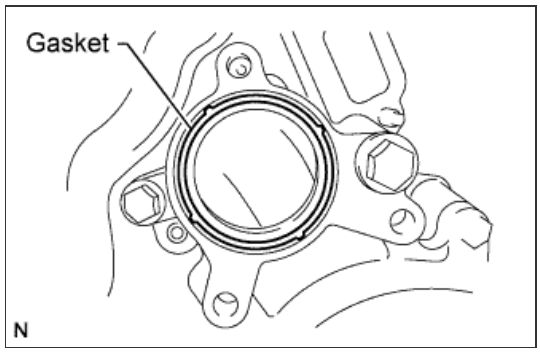
c. Install the bracket with the bolt.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



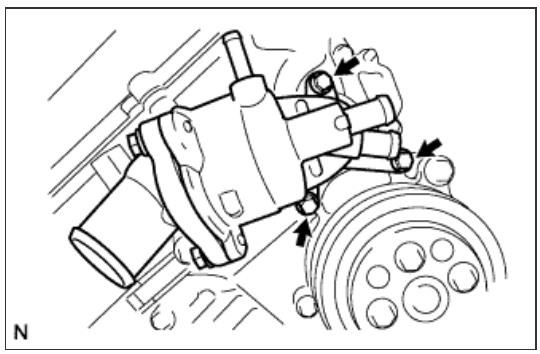
d. Connect the knock sensor connector.

12. INSTALL WATER BY-PASS PIPE SUB-ASSEMBLY



a. Install the water by-pass pipe with the 2 bolts.

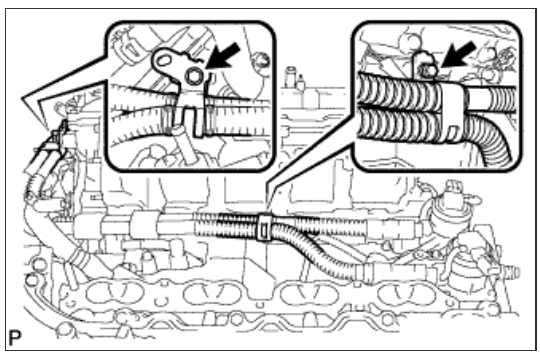
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



13. INSTALL WATER INLET HOUSING

a. Install a new gasket to the timing chain cover.

b. Install the water inlet with the 3 bolts.

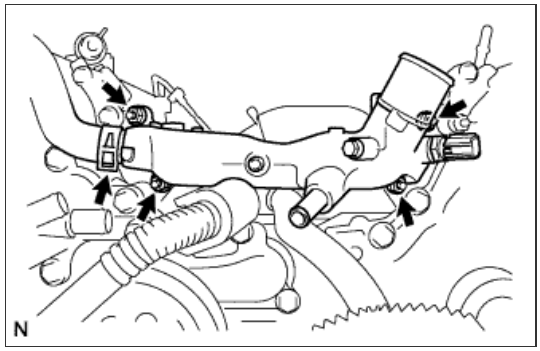


Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

14. INSTALL AIR PIPE SUB-ASSEMBLY (w/ Secondary Air Injection System)

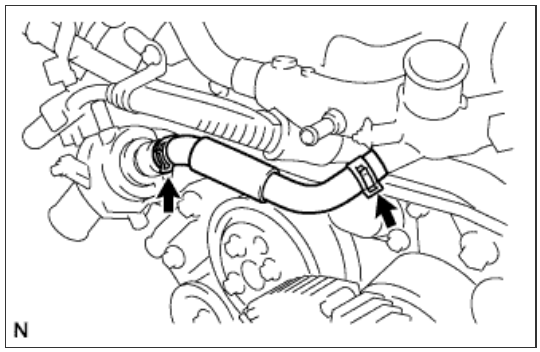
a. Install the 2 No. 1 air hoses and air pipe with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



15. INSTALL FRONT WATER BY-PASS JOINT

a. Install 2 new gaskets and the water by-pass joint with the 4 nuts.

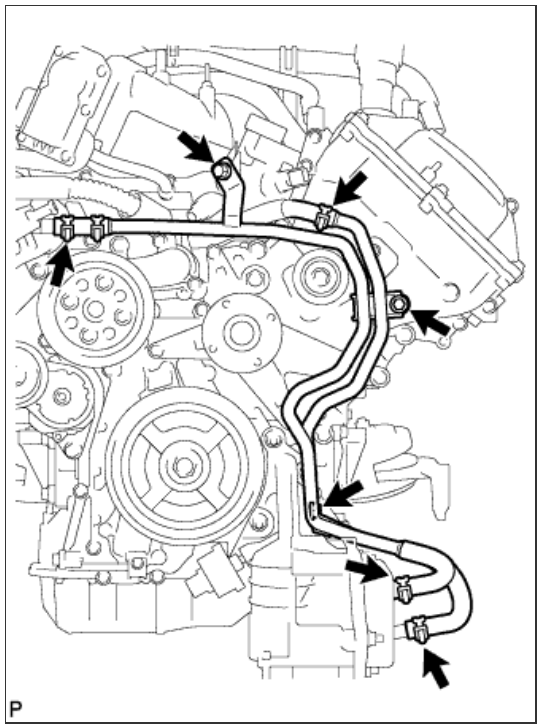


Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. Connect the No. 2 water by-pass hose to the water by-pass joint.

16. INSTALL NO. 1 WATER BY-PASS HOSE

a. Install the No. 1 water by-pass hose by connecting the hose to the water inlet housing and front water by-pass joint.

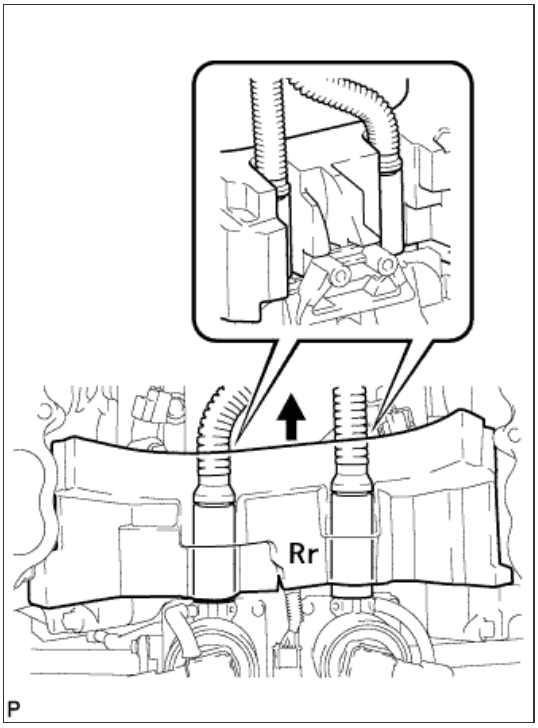


17. INSTALL NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY (w/ Oil Cooler)

a. Connect the 4 hoses.

b. Install the water by-pass pipe with the 3 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



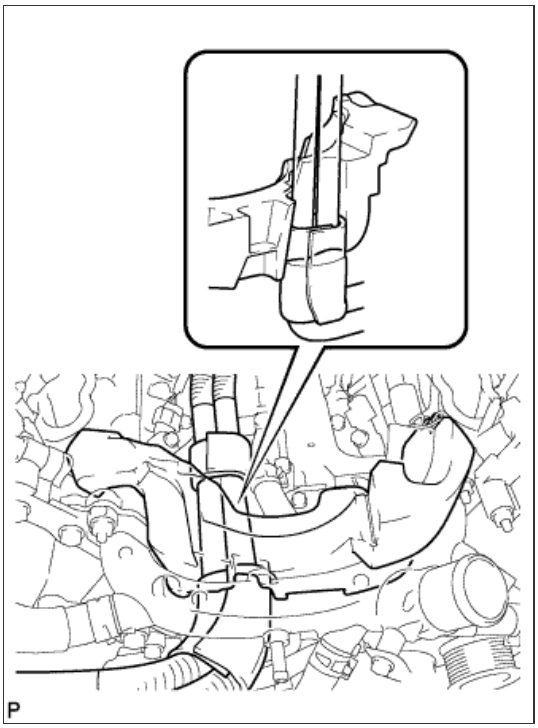
18. INSTALL NO. 1 ENGINE COVER

HINT:

- **Align the No. 1 engine cover cutouts with the air tube.**
- **Align the No. 1 engine cover with the air switching valve surface and cylinder head wall.**

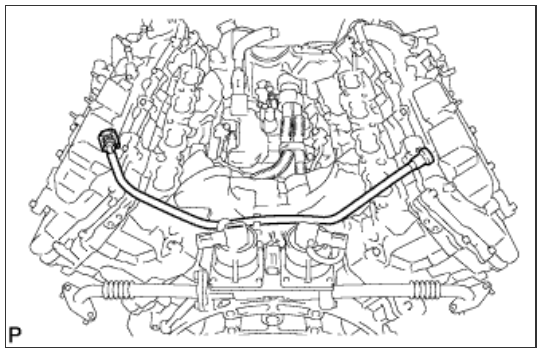
NOTICE:

Make sure that the No. 1 engine cover is flush with the top surface of the intake port of the cylinder head for bank 1 and bank 2.



19. INSTALL NO. 2 ENGINE COVER

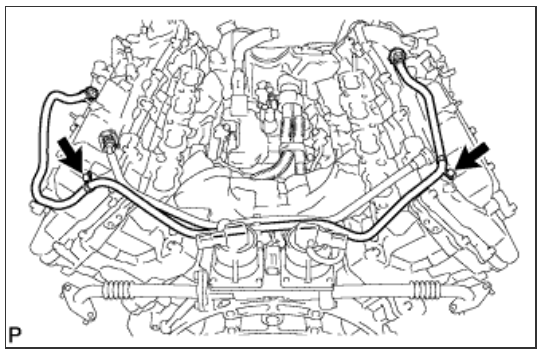
HINT:



- **Align the No. 2 engine cover cutout with the air tube.**
- **Align the No. 2 engine cover with the front water by-pass joint and cylinder head wall.**

NOTICE:

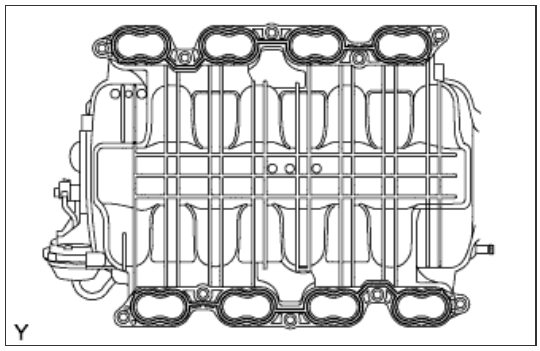
Make sure that the No. 2 engine cover is flush with the top surface of the intake port of the cylinder head.



20. INSTALL NO. 1 FUEL TUBE

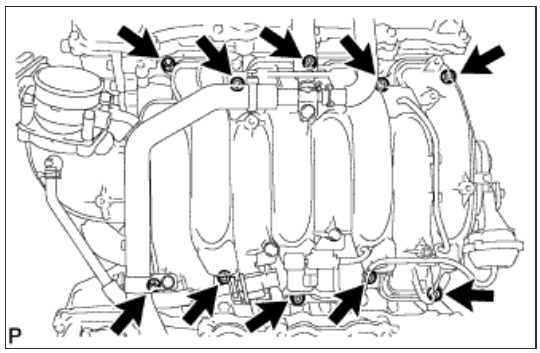
21. INSTALL NO. 2 FUEL TUBE

a. Install the No. 2 fuel tube with the 2 bolts.



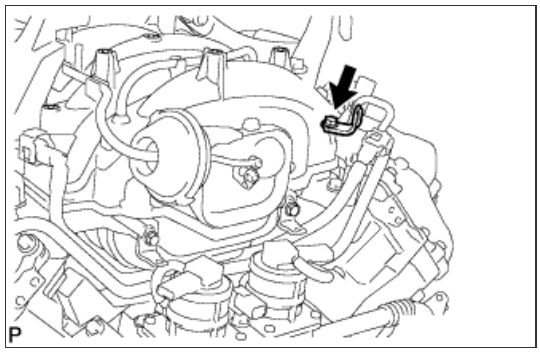
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

22. INSTALL INTAKE MANIFOLD



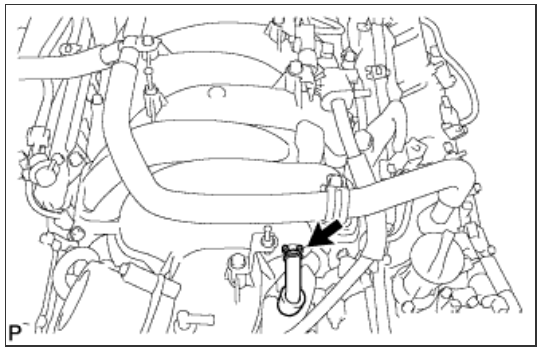
a. Place 2 new gaskets on the intake manifold.

b. Place the intake manifold on the cylinder head.

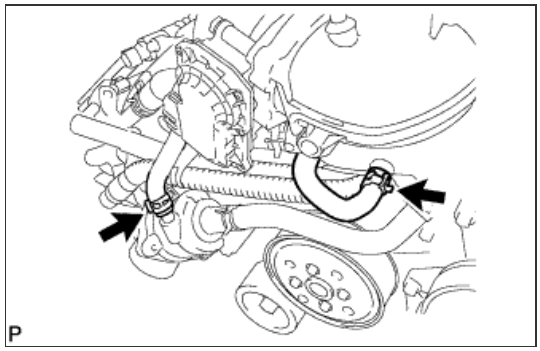


c. Install and uniformly tighten the 8 bolts and 2 nuts in several steps.

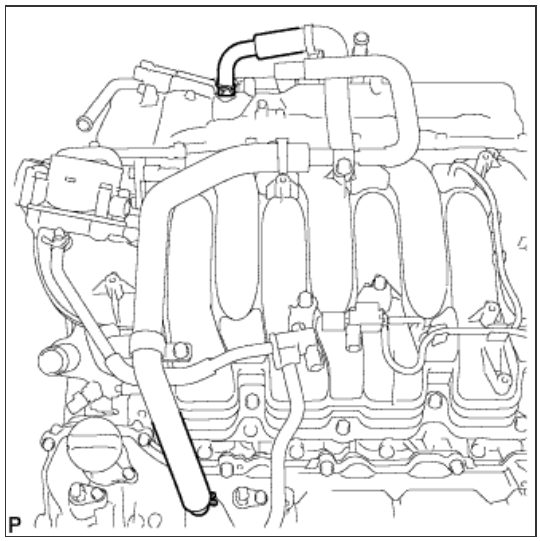
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



d. Install the wire bracket to the intake manifold with the bolt.

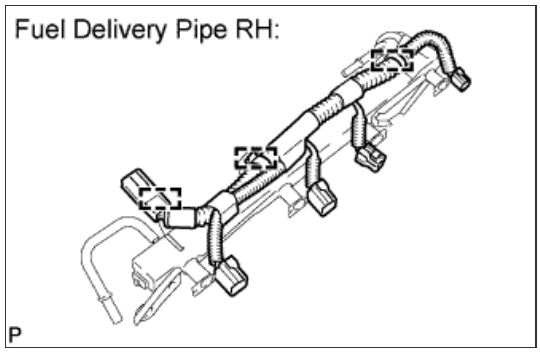


Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

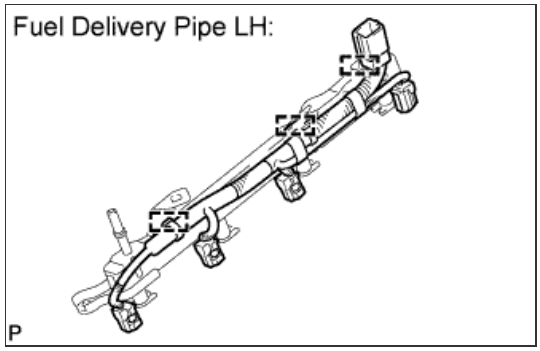


e. Connect the No. 1 ventilation hose.

f. Connect the 2 water by-pass hoses.

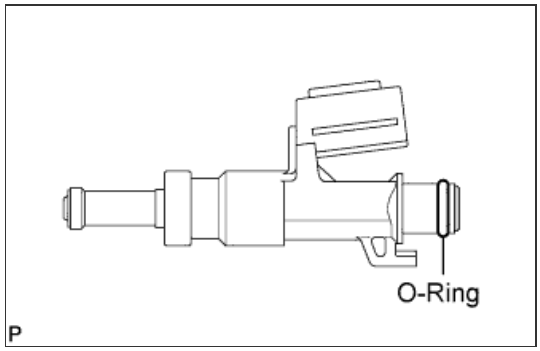


g. Connect the ventilation hose to the ventilation pipe of the cylinder head cover LH and RH.

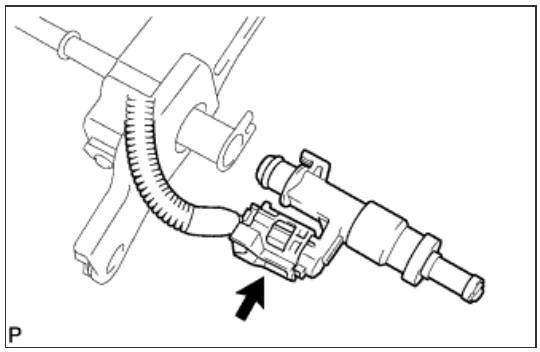


23. INSTALL FUEL INJECTOR ASSEMBLY

a. Attach the 3 clamps to install the No. 6 wire harness to the delivery pipe RH.



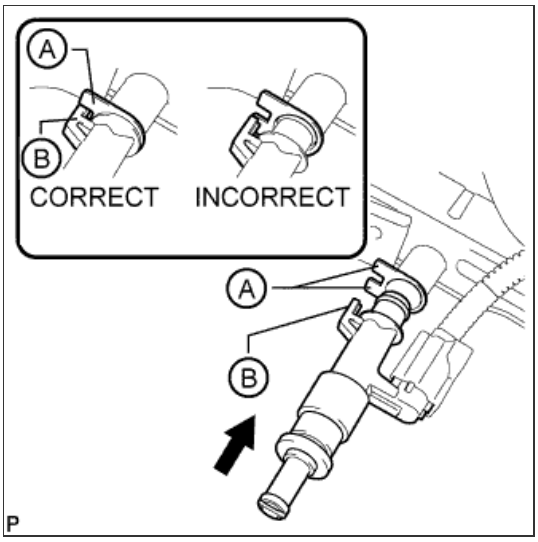
b. Attach the 3 clamps to install the No. 7 wire harness to the delivery pipe LH.



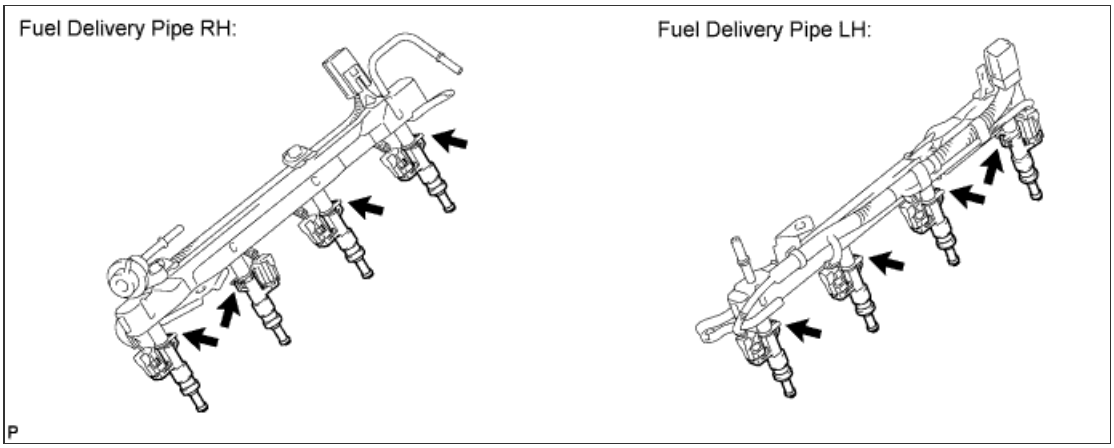
c. Apply gasoline or spindle oil to a new O-ring and install it to the injector.

NOTICE:

Make sure that there is no damage or foreign material in the groove of the injector when installing the O-ring.



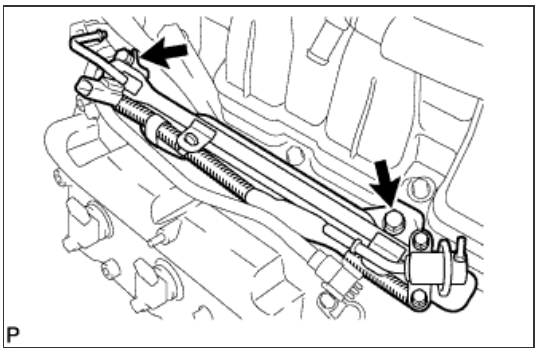
d. Connect the injector connector.



e. Install the injector to the delivery pipe as shown in the illustration.

NOTICE:

- **Make sure that there are no scratches or foreign matter in or around the insertion hole of the delivery pipe.**
- **When inserting the injector, be careful not to damage the O-ring.**
- **Attach the part of the injector labeled B between the parts of the delivery pipe labeled A.**

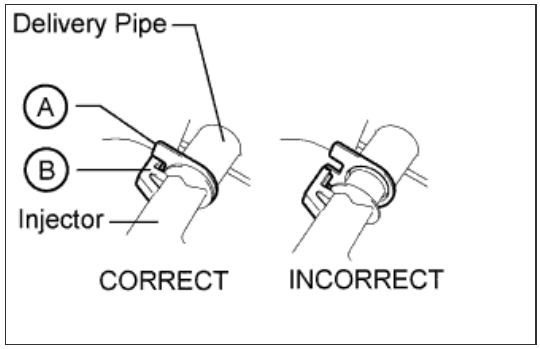


f. Check that each injector is installed to the delivery pipe facing the direction shown in the illustration.

24. INSTALL FUEL DELIVERY PIPE SUB-ASSEMBLY RH

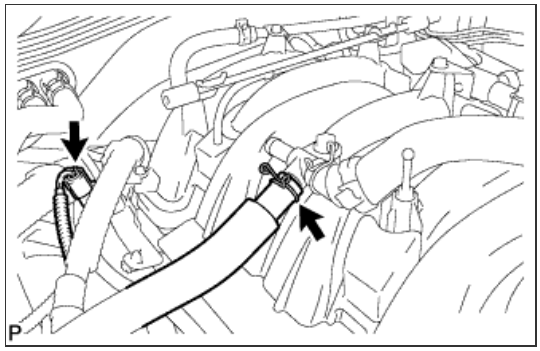
a. Install the 2 delivery pipe spacers and 4 insulators to the cylinder head RH.

b. Install the delivery pipe (with injectors) to the cylinder head RH.



c. Install the 2 bolts.

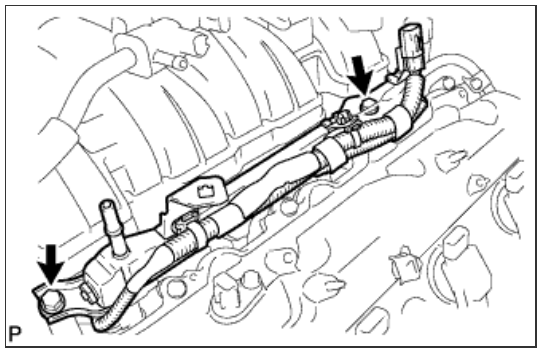
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



NOTICE:

Make sure that the part of the injector labeled B is between the parts of the delivery pipe labeled A.

d. Connect the No. 6 wire harness connector.

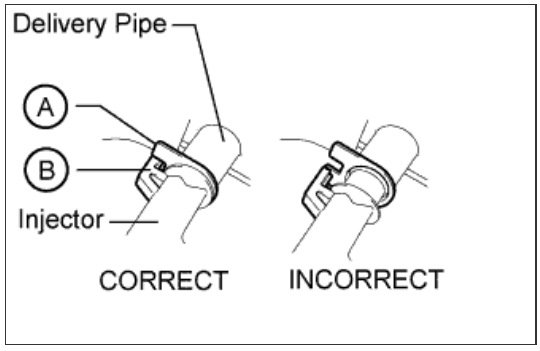


e. Connect the ventilation hose.

25. INSTALL FUEL DELIVERY PIPE SUB-ASSEMBLY LH

a. Install the 2 delivery pipe spacers and 4 insulators to the cylinder head LH.

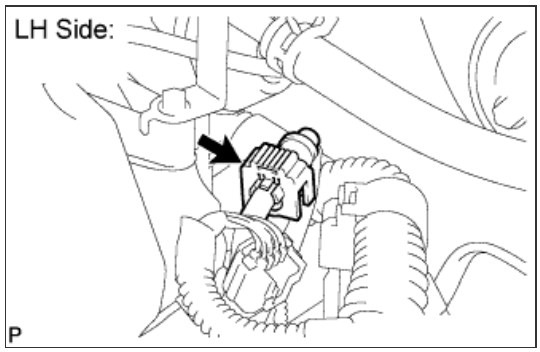
b. Install the delivery pipe (with injectors) to the cylinder head LH.



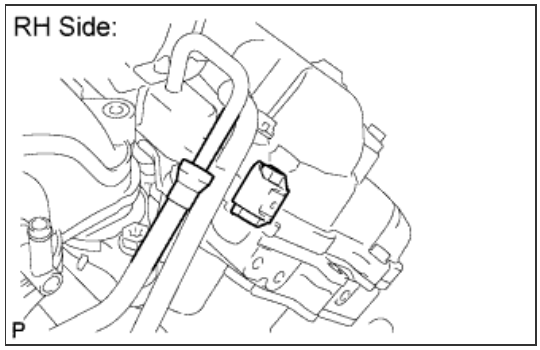
c. Install the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

NOTICE:



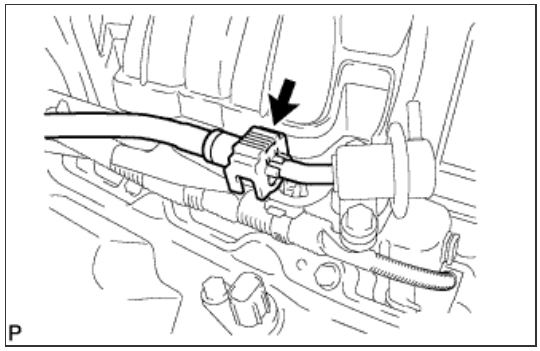
Make sure that the part of the injector labeled B is between the parts of the delivery pipe labeled A.



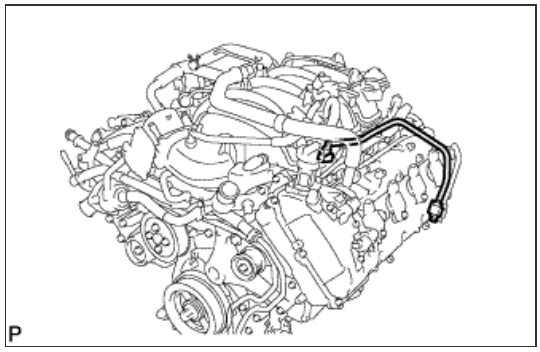
d. Connect the No. 7 wire harness connector.

26. CONNECT NO. 1 FUEL TUBE

a. LH Side:
Connect the No. 1 fuel tube to the delivery pipe LH (Click here).

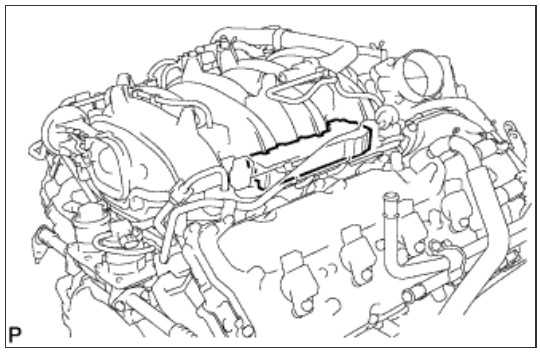


b. RH Side:
Connect the No. 1 fuel tube to the delivery pipe RH (for metallic type) (Click here).



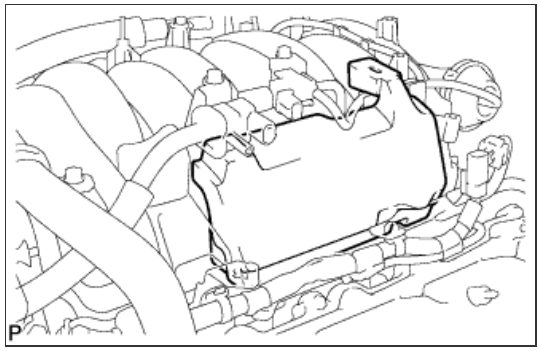
27. CONNECT NO. 2 FUEL TUBE

a. Connect the No. 2 fuel tube to the fuel pressure regulator (Click here).



28. INSTALL NO. 1 FUEL HOSE

a. Install the fuel hose (Click here).



29. INSTALL NO. 3 ENGINE COVER

a. Install the No. 3 engine cover.

30. INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY

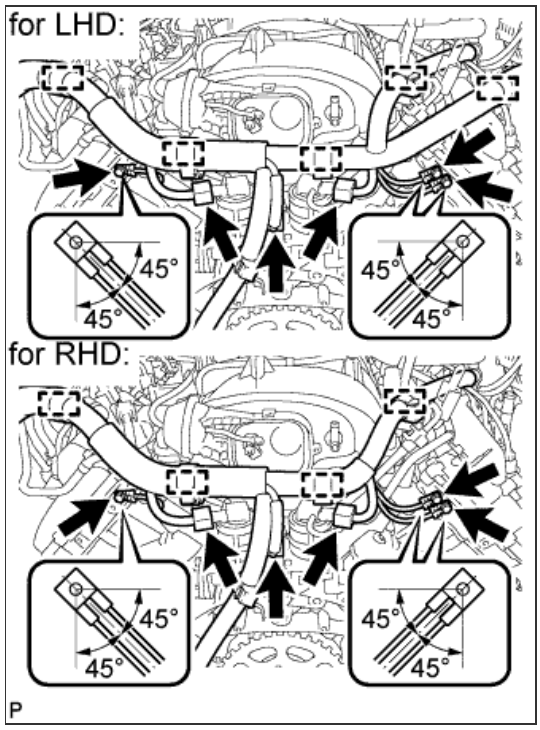
a. Install the No. 1 engine cover sub-assembly.

31. INSTALL ENGINE WIRE

a. Install the engine wire.

b. Engine Rear Side:

i. Install the 3 bolts as shown in the illustration.



Torque:
8.5 N*m{ 87 kgf*cm , 75 in.*lbf }

ii. for RHD:
Connect the 4 clamps.

iii. for LHD:
Connect the 5 clamps.

iv. Connect the sensor wire connector.

v. w/ Secondary Air Injection System:
Connect the 2 air switching valve connectors.

c. Engine RH Side:

i. Connect the 9 clamps.

ii. Connect the oil pressure sender gauge connector.

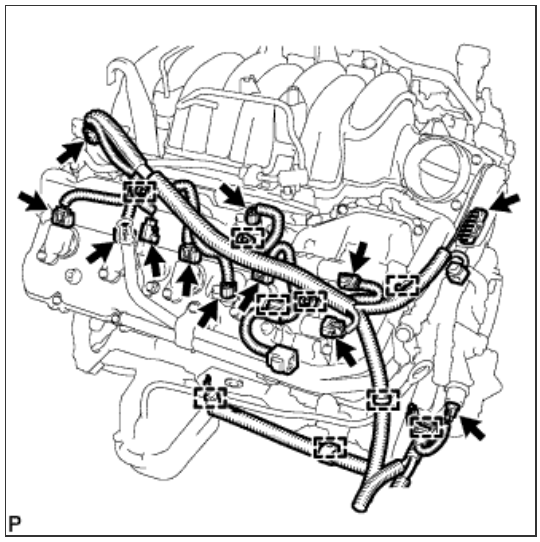
iii. Connect the throttle sensor connector.

iv. Connect the noise filter connector.

v. Connect the fuel injector connector.

vi. Connect the 2 VVT sensor connectors.

HINT:



The wire harnesses on the exhaust side are wrapped with white tape.

vii. Connect the 4 ignition coil connectors.

viii. Connect the 2 camshaft timing control valve connectors.

HINT:

The wire harnesses on the exhaust side are wrapped with white tape.

d. Engine LH Side:

i. Connect the 7 clamps and install the engine wire with the bolt.

Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

ii. Connect the noise filter connector.

iii. Connect the fuel injector connector.

iv. Connect the engine coolant temperature sensor connector.

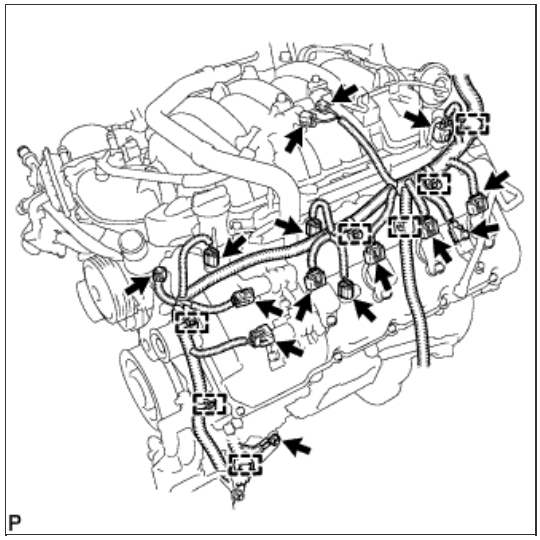
v. Connect the purge VSV connector.

vi. Connect the vacuum switching valve connector (for ACIS).

vii. Connect the camshaft position sensor connector.

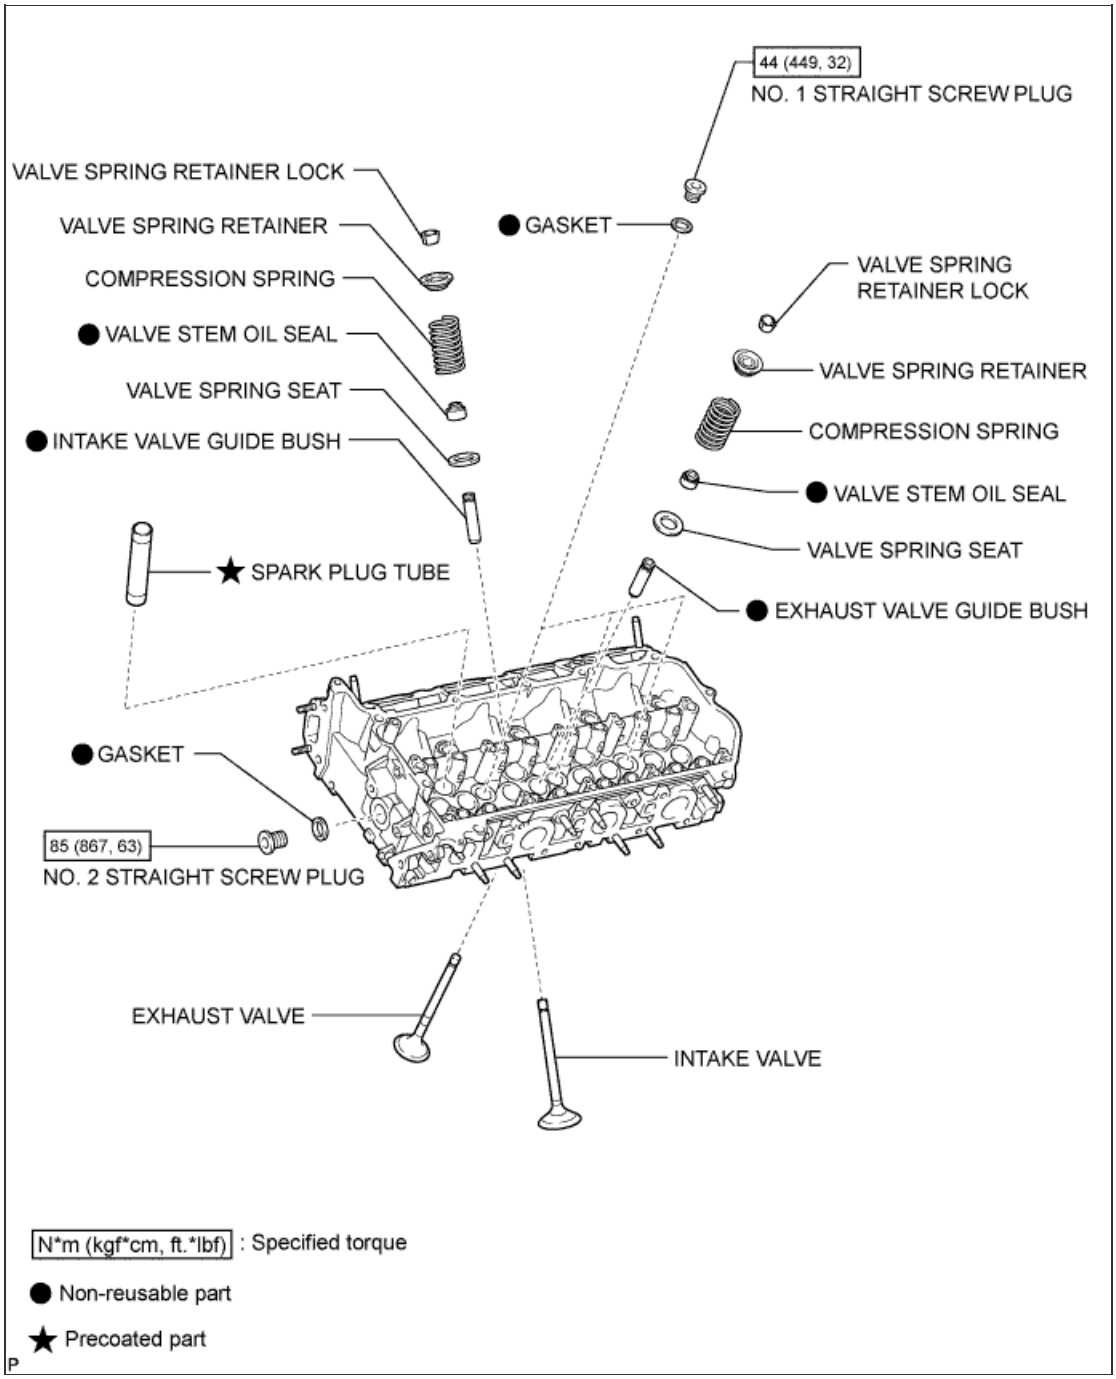
viii. Connect the 2 VVT sensor connectors.

HINT:



The wire harnesses on the exhaust side are wrapped with white tape.

ix. Connect the 4 ignition coil connectors.



x. Connect the 2 camshaft timing control valve connectors.

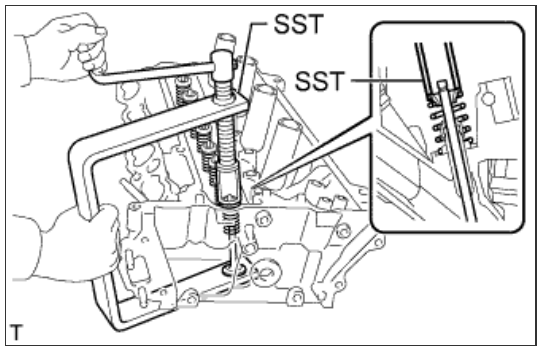
HINT:

The wire harnesses on the exhaust side are wrapped with white tape.

for Preparation Click here

for Preparation Click here

1. REMOVE INTAKE VALVE



a. Using SST and wooden blocks, compress the compression spring and remove the valve spring retainer locks.

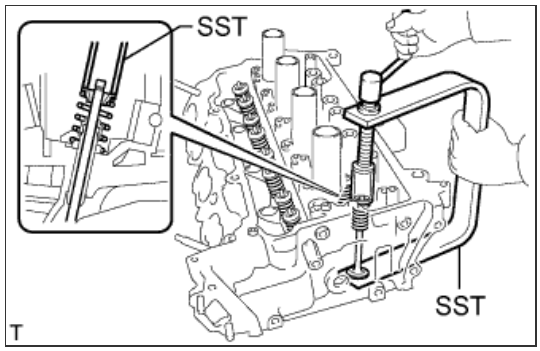
SST
09202-70020 (09202-00010, 09202-01010, 09202-01020)

b. Remove the retainer, compression spring and valve.

HINT:

Arrange the removed parts in the correct order.

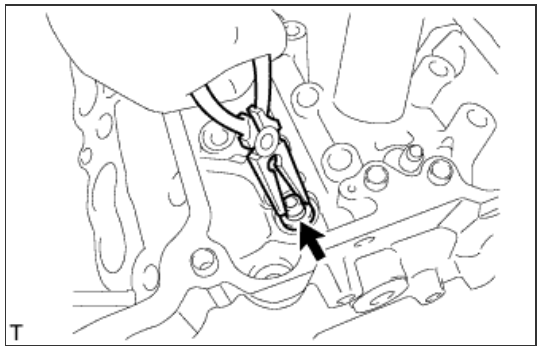
2. REMOVE EXHAUST VALVE



a. Using SST and wooden blocks, compress the compression spring and remove the valve spring retainer locks.

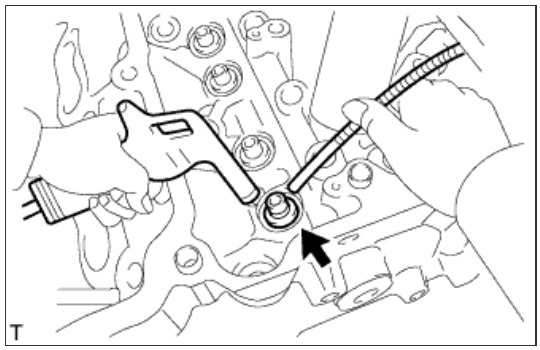
SST
09202-70020 (09202-00010, 09202-01010, 09202-01020)

b. Remove the retainer, compression spring and valve.



HINT:

Arrange the removed parts in the correct order.

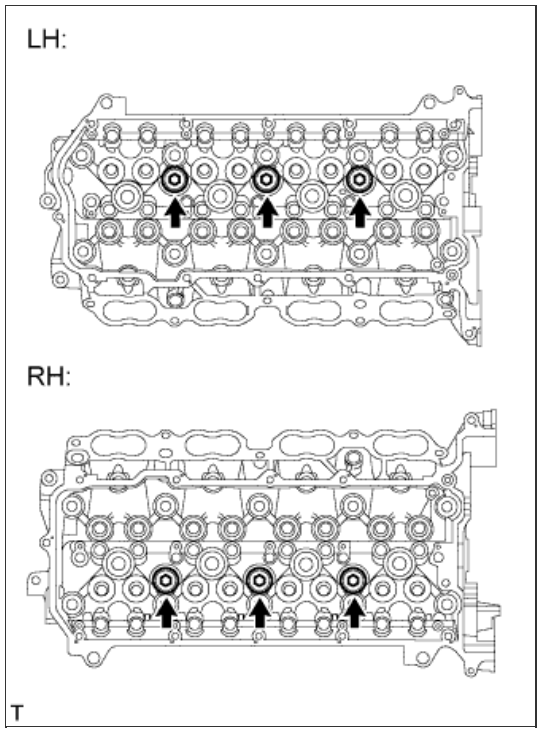


3. REMOVE VALVE STEM OIL SEAL

a. Using needle-nose pliers, remove the oil seals.

4. REMOVE VALVE SPRING SEAT

a. Using compressed air and a magnetic finger, remove the valve spring seat by blowing air onto it.

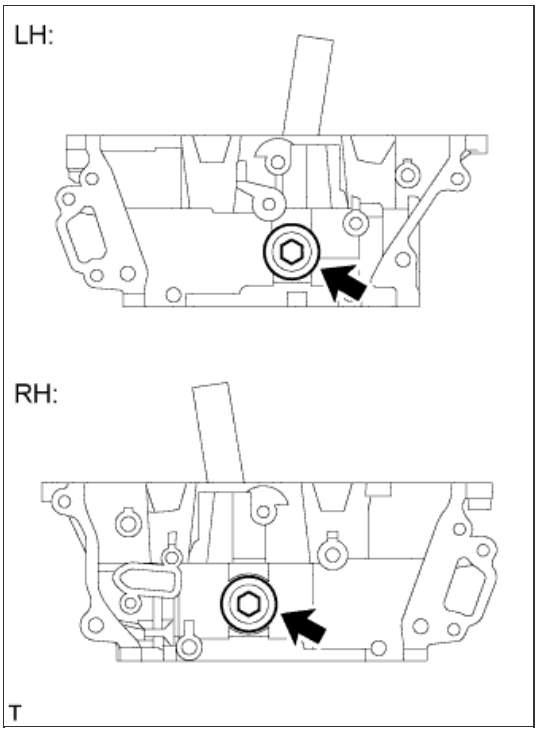


5. REMOVE NO. 1 STRAIGHT SCREW PLUG

NOTICE:

If water leaks from the No. 1 straight screw plug or the plug is corroded, replace it.

a. Using a 10 mm hexagon wrench, remove the 6 screw plugs and 6 gaskets.



6. REMOVE NO. 2 STRAIGHT SCREW PLUG

NOTICE:

If water leaks from the No. 2 straight screw plug or the plug is corroded, replace it.

a. Using a 14 mm hexagon wrench, remove the 2 screw plugs and 2 gaskets.

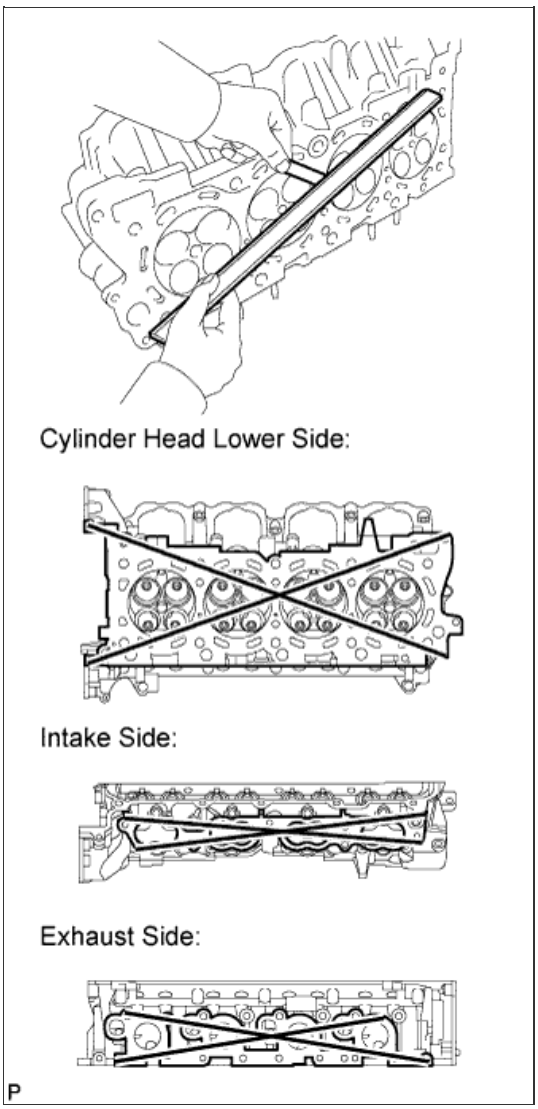
7. REMOVE STUD BOLT

NOTICE:

If the stud bolt is deformed or its threads are damaged, replace it.

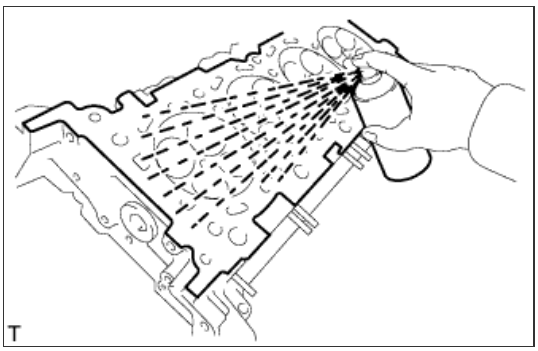
for Preparation Click here

1. INSPECT CYLINDER HEAD SUB-ASSEMBLY



a. Using a precision straightedge and feeler gauge, measure the warpage of the surfaces where the cylinder head contacts the cylinder block and manifold.

Standard Warpage:

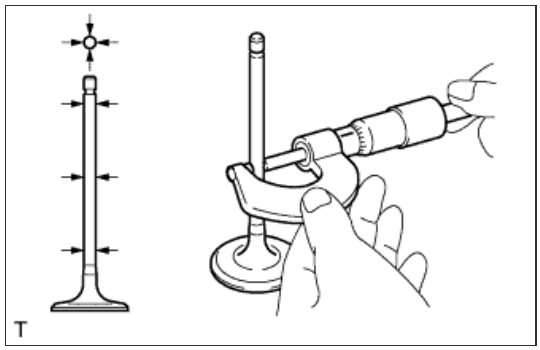


Item	Specified Condition
Cylinder head lower side	0.05 mm (0.00197 in.)
Intake side	0.08 mm (0.00315 in.)
Exhaust side	0.05 mm (0.00197 in.)

Maximum warpage:
0.10 mm (0.00394 in.)

If the warpage is more than the maximum, replace the cylinder head.

b. Using a dye penetrant, check the intake ports, exhaust ports and cylinder surface for cracks.
If cracked, replace the cylinder head.

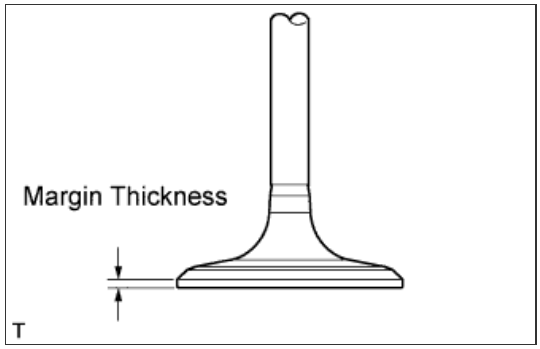


2. INSPECT INTAKE VALVE

a. Using a micrometer, measure the diameter of the valve stem.

Standard valve stem diameter:
5.470 to 5.485 mm (0.215 to 0.216 in.)

If the diameter is not as specified, replace the valve and guide bush.

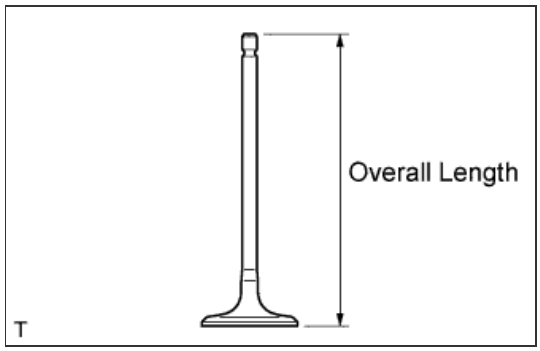


b. Using a vernier caliper, measure the valve head margin thickness.

Standard margin thickness:
1.25 mm (0.0492 in.)

Minimum margin thickness:
0.50 mm (0.0197 in.)

If the margin thickness is less than the minimum, replace the intake valve.

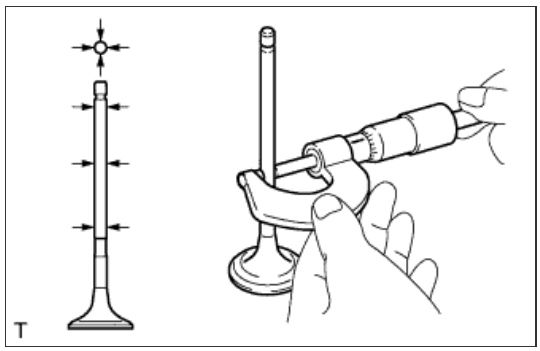


c. Using a vernier caliper, measure the valve overall length.

Standard overall length:
105.85 mm (4.17 in.)

Minimum overall length:
105.35 mm (4.15 in.)

If the overall length is less than the minimum, replace the intake valve.

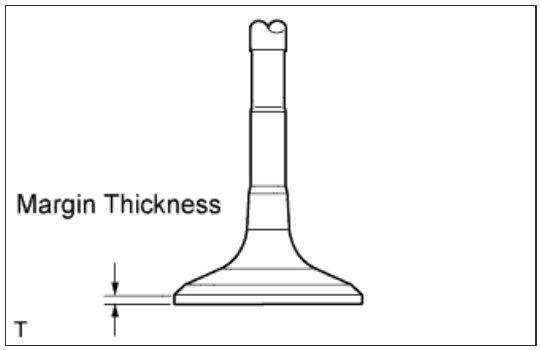


3. INSPECT EXHAUST VALVE

a. Using a micrometer, measure the diameter of the valve stem.

Standard valve stem diameter:
5.465 to 5.480 mm (0.215 to 0.216 in.)

If the diameter is not as specified, replace the valve and guide bush.

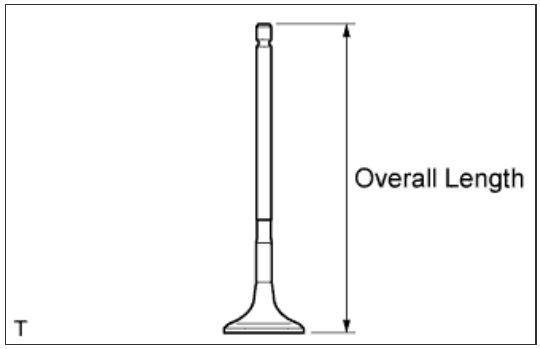


b. Using a vernier caliper, measure the valve head margin thickness.

Standard margin thickness:
1.4 mm (0.0551 in.)

Minimum margin thickness:
0.50 mm (0.0197 in.)

If the margin thickness is less than the minimum, replace the exhaust valve.



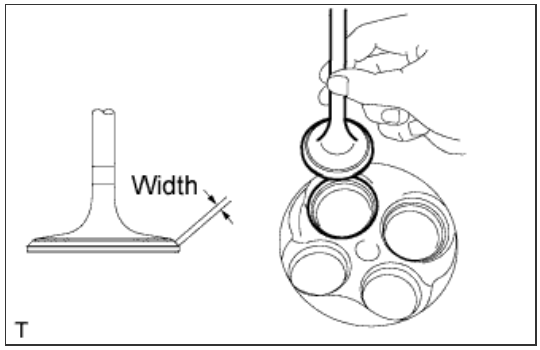
c. Using a vernier caliper, measure the valve overall length.

Standard overall length:
110.40 mm (4.35 in.)

Minimum overall length:
109.90 mm (4.33 in.)

If the overall length is less than the minimum, replace the exhaust valve.

4. INSPECT INTAKE VALVE SEAT



a. Apply a light coat of Prussian blue to the valve face.

b. Lightly press the valve face against the valve seat.

HINT:

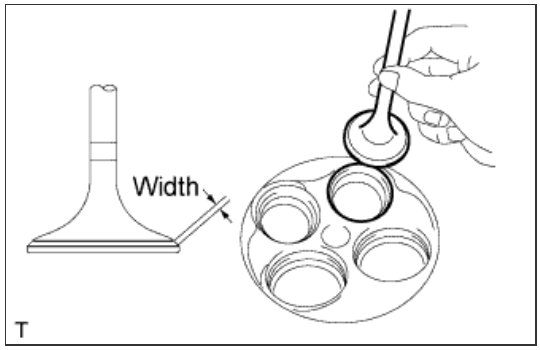
Do not rotate the valve while pressing the valve.

c. Check the valve face and valve seat.

i. Check that the contact surfaces of the valve seat and valve face are in the middle area of their respective surfaces, with the width between 1.1 and 1.5 mm (0.0433 and 0.0591 in.).
If not, correct the valve seat.

ii. Check that the contact surfaces of the valve seat and valve face are even around the entire valve seat.
If not, correct the valve seat.

5. INSPECT EXHAUST VALVE SEAT



a. Apply a light coat of Prussian blue to the valve face.

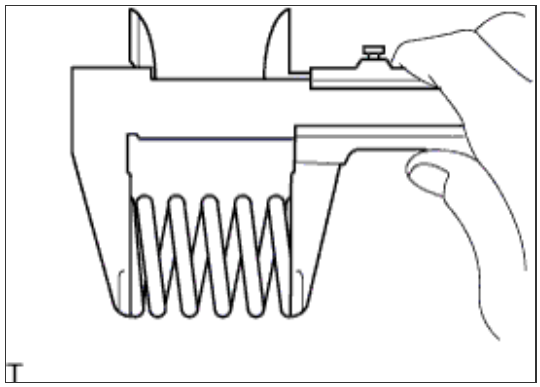
b. Lightly press the valve face against the valve seat.

HINT:

Do not rotate the valve while pressing the valve.

c. Check the valve face and valve seat.

i. Check that the contact surfaces of the valve seat and valve face are in the middle area of their respective surfaces, with the width between 1.1 and 1.5 mm (0.0433 and 0.0591 in.).
If not, correct the valve seat.



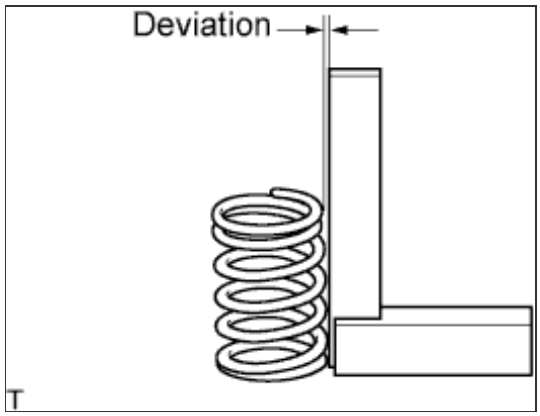
ii. Check that the contact surfaces of the valve seat and valve face are even around the entire valve seat.
If not, correct the valve seat.

6. INSPECT COMPRESSION SPRING

a. Using a vernier caliper, measure the free length of the inner compression spring.

Standard free length:
49.39 mm (1.94 in.)

If the free length is not as specified, replace the spring.



b. Using a steel square, measure the deviation of the inner compression spring.

Maximum deviation:
1.0 mm (0.0394 in.)

Maximum angle (reference):
2°

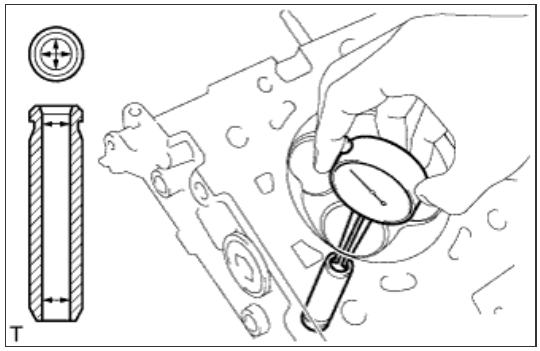
If the deviation is more than the maximum, replace the spring.

7. INSPECT VALVE GUIDE BUSH OIL CLEARANCE

a. Using a caliper gauge, measure the inside diameter of the guide bush.

Standard bush inside diameter:
5.51 to 5.53 mm (0.217 to 0.218 in.)

b. Subtract the valve stem diameter measurement from the guide bush inside diameter measurement.



Standard Oil Clearance:

Item	Specified Condition
Intake	0.025 to 0.060 mm (0.000984 to 0.00236 in.)
Exhaust	0.030 to 0.065 mm (0.00118 to 0.00256 in.)

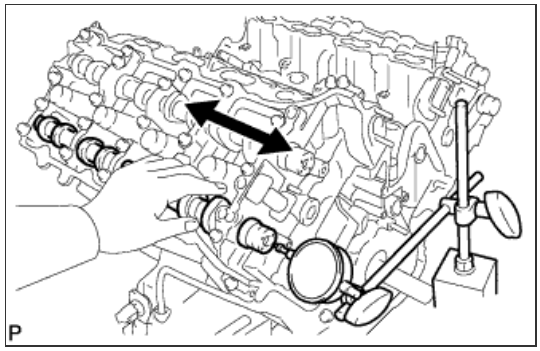
Maximum Oil Clearance:

Item	Specified Condition
Intake	0.08 mm (0.00315 in.)
Exhaust	0.10 mm (0.00394 in.)

If the oil clearance is more than the maximum, replace the valve and guide bush.

8. INSPECT CAMSHAFT THRUST CLEARANCE

a. Inspect the bank 1 camshafts.



i. Install the bank 1 camshafts.

ii. Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.

Standard thrust clearance:
0.08 to 0.135 mm (0.00315 to 0.00531 in.)

Maximum thrust clearance:
0.15 mm (0.00591 in.)

If the thrust clearance is more than the maximum, replace the camshaft housing. If the thrust surface is damaged, replace the camshaft.

b. Inspect the bank 2 camshafts.

i. Install the bank 2 camshafts.

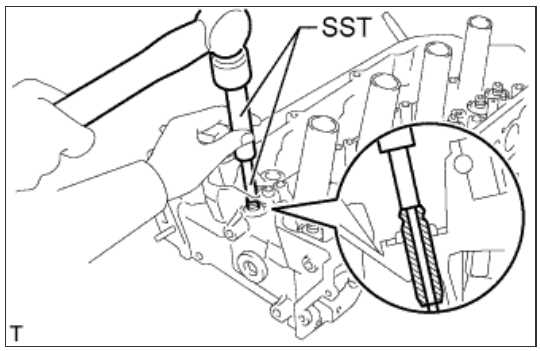
ii. Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.

Standard thrust clearance:
0.08 to 0.135 mm (0.00315 to 0.00531 in.)

Maximum thrust clearance:
0.15 mm (0.00591 in.)

If the thrust clearance is more than the maximum, replace the camshaft housing. If the thrust surface is damaged, replace the camshaft.

for Preparation Click here

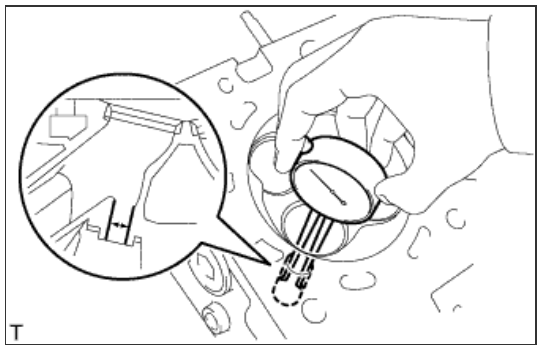


1. REPLACE INTAKE VALVE GUIDE BUSH

a. Heat the cylinder head to approximately 80 to 100°C (176 to 212°F).

b. Place the cylinder head on wooden blocks.

c. Using SST and a hammer, tap out the valve guide bush.



SST
09201-10000 (09201-01050)
09950-70010 (09951-07100)

d. Using a caliper gauge, measure the bush bore diameter of the cylinder head side.

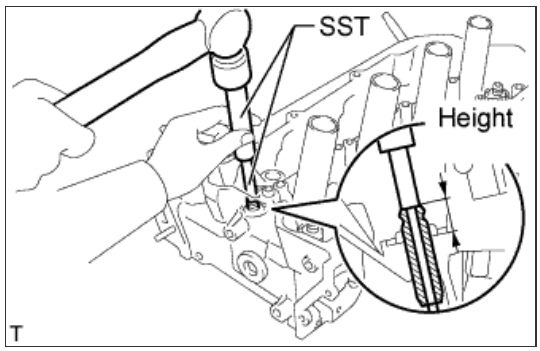
Standard bush bore diameter:
10.285 to 10.306 mm (0.405 to 0.406 in.)

If the bush bore diameter of the cylinder head is between 10.285 and 10.306 mm (0.405 and 0.406 in.), proceed to the next step.
If the bush bore diameter of the cylinder head is 10.356 mm (0.408 in.) or more, replace the cylinder head.

e. Select a new guide bush (STD or O/S 0.05), and measure its diameter.

f. Machine the bush bore diameter of the cylinder head side to the diameter of the selected guide bush.

Bush Bore Diameter:

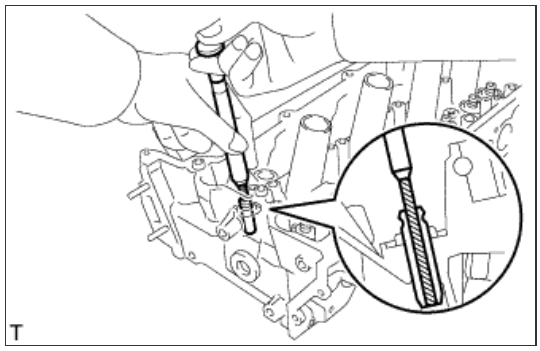


Bush Size	Specified Condition
STD	10.333 to 10.344 mm (0.4068 to 0.4072 in.)
O/S 0.05	10.383 to 10.394 mm (0.4088 to 0.4092 in.)

Standard bush length:
41.3 to 41.7 mm (1.63 to 1.64 in.)

g. Using SST and a hammer, tap in a new guide bush to the standard protrusion height.

SST
09201-10000 (09201-01050)
09950-70010 (09951-07100)

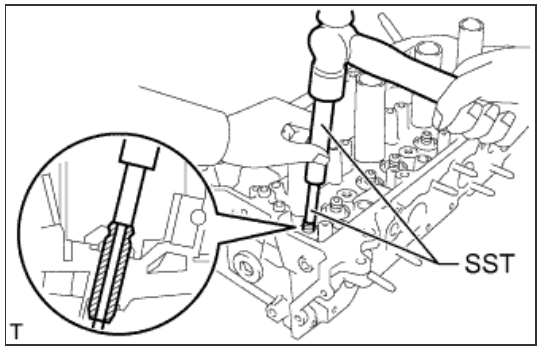


Standard protrusion height:
14.3 to 14.7 mm (0.563 to 0.579 in.)

h. Using a sharp 5.5 mm reamer, ream the guide bush to obtain the standard oil

clearance between the guide bush and valve stem.

Standard oil clearance:
0.025 to 0.060 mm (0.000984 to 0.00236 in.)

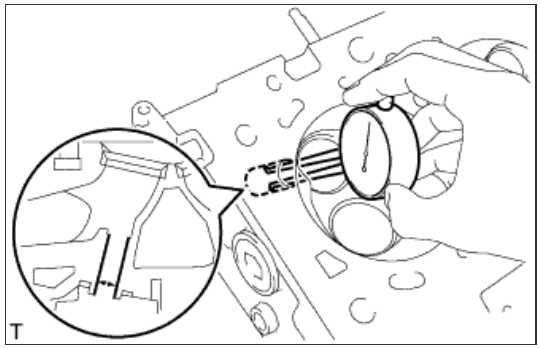


2. REPLACE EXHAUST VALVE GUIDE BUSH

a. Heat the cylinder head to approximately 80 to 100°C (176 to 212°F).

b. Place the cylinder head on wooden blocks.

c. Using SST and a hammer, tap out the valve guide bush.



SST
09201-10000 (09201-01050)
09950-70010 (09951-07100)

d. Using a caliper gauge, measure the bush bore diameter of the cylinder head.

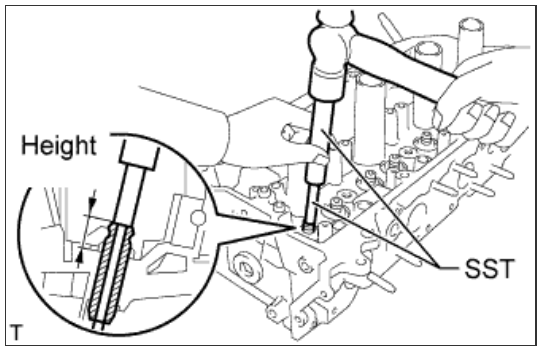
Standard bush bore diameter:
10.285 to 10.306 mm (0.405 to 0.406 in.)

If the bush bore diameter of the cylinder head is between 10.285 and 10.306 mm (0.405 and 0.406 in.), proceed to the next step.
If the bush bore diameter of the cylinder head is 10.356 mm (0.408 in.) or more, replace the cylinder head.

e. Select a new guide bush (STD or O/S 0.05), and measure its diameter.

f. Machine the bush bore diameter of the cylinder head side to the diameter of the selected guide bush.

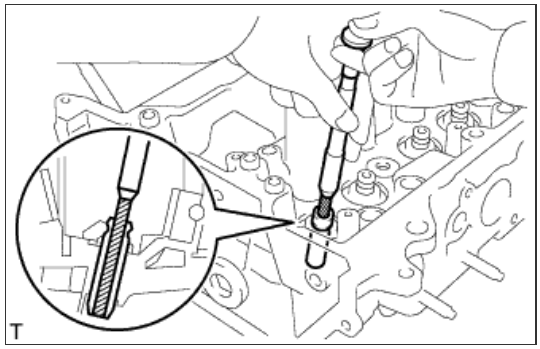
Bush Bore Diameter:



Bush Size	Specified Condition
STD	10.333 to 10.344 mm (0.4068 to 0.4072 in.)
O/S 0.05	10.383 to 10.394 mm (0.4088 to 0.4092 in.)

Standard bush length:
46.8 to 47.2 mm (1.84 to 1.86 in.)

g. Using SST and a hammer, tap in a new guide bush to the standard protrusion height.



SST
09201-10000 (09201-01050)
09950-70010 (09951-07100)

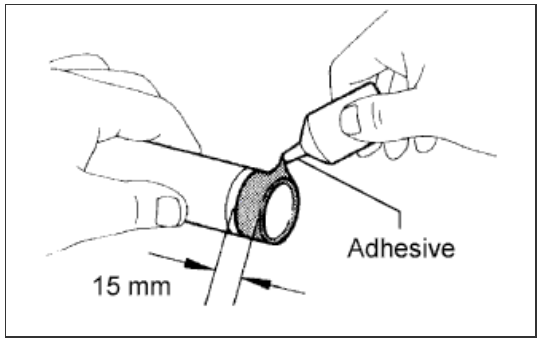
Standard protrusion height:
14.3 to 14.7 mm (0.563 to 0.579 in.)

h. Using a sharp 5.5 mm reamer, ream the guide bush to obtain the standard oil clearance between the guide bush and valve stem.

Standard oil clearance:
0.030 to 0.065 mm (0.00118 to 0.00256 in.)

3. REPLACE SPARK PLUG TUBE

HINT:



When using a new cylinder head, the spark plug tubes must be replaced.

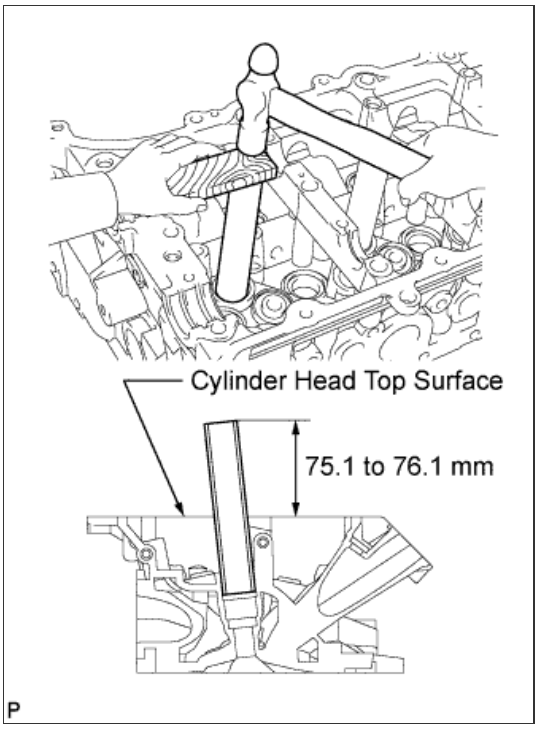
a. Remove the spark plug tube.

b. Apply adhesive to the end of a new spark plug tube.

Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent.

Standard seal diameter:
15 mm (0.591 in.)

NOTICE:



- **Install the spark plug tube within 3 minutes after applying adhesive.**
- **Be careful not to deform the spark plug tube.**
- **Be careful not to expose the seal to coolant for at least 1 hour after installing it.**

c. Using a wooden block and hammer, tap in the spark plug tube to the specified protrusion height.

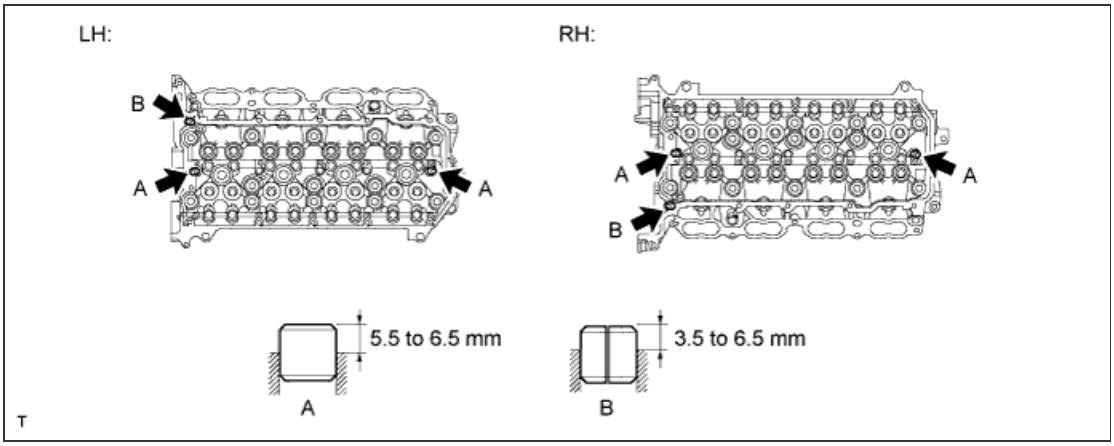
Standard protrusion height:
75.1 to 76.1 mm (2.96 to 3.00 in.)

NOTICE:

To avoid tapping in the spark plug tube too far, measure the protrusion height while tapping it.

4. REPLACE RING PIN

NOTICE:



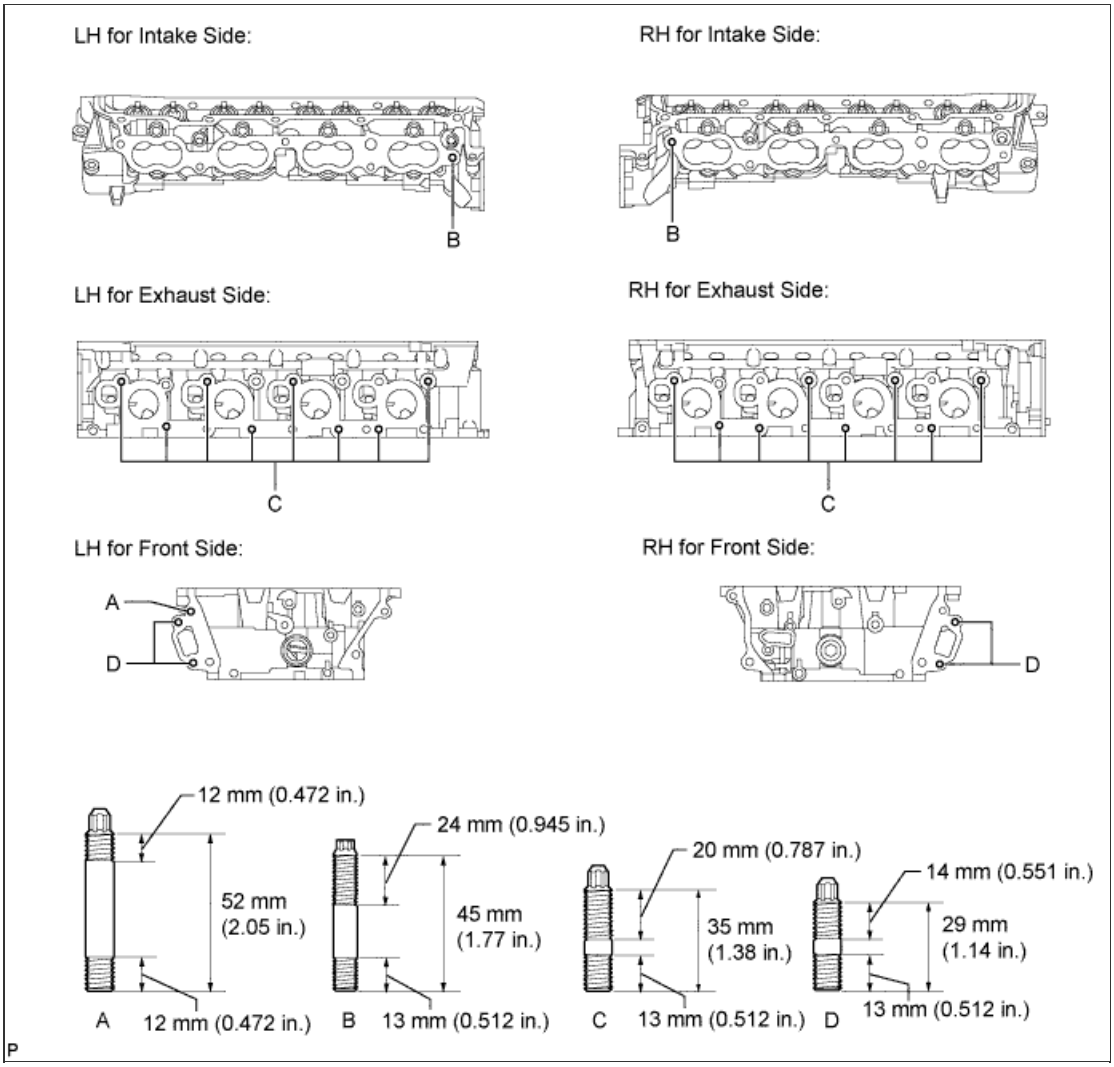
It is not necessary to remove the ring pin unless it is being replaced.

a. Remove the ring pins.

b. Using a plastic-faced hammer, tap in new ring pins to the cylinder head.

Standard Protrusion:

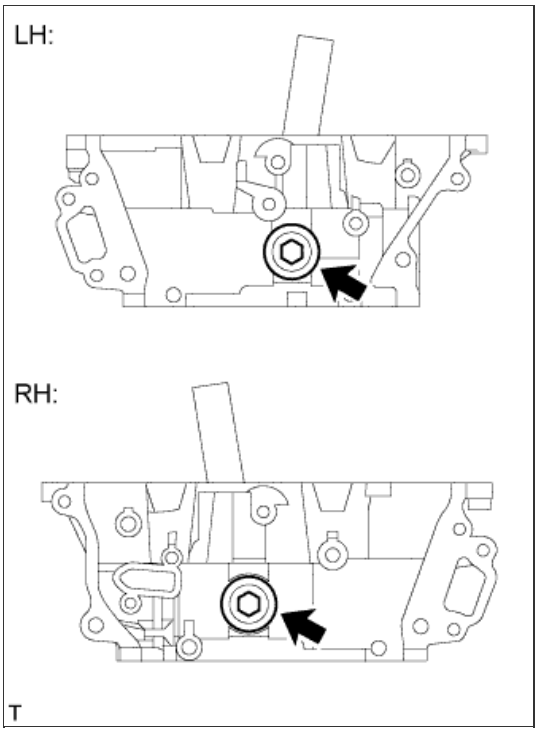
Item	Specified Condition
Ring pin A	5.5 to 6.5 mm (0.217 to 0.256 in.)
Ring pin B	3.5 to 6.5 mm (0.138 to 0.256 in.)



for Preparation Click here

1. INSTALL STUD BOLT

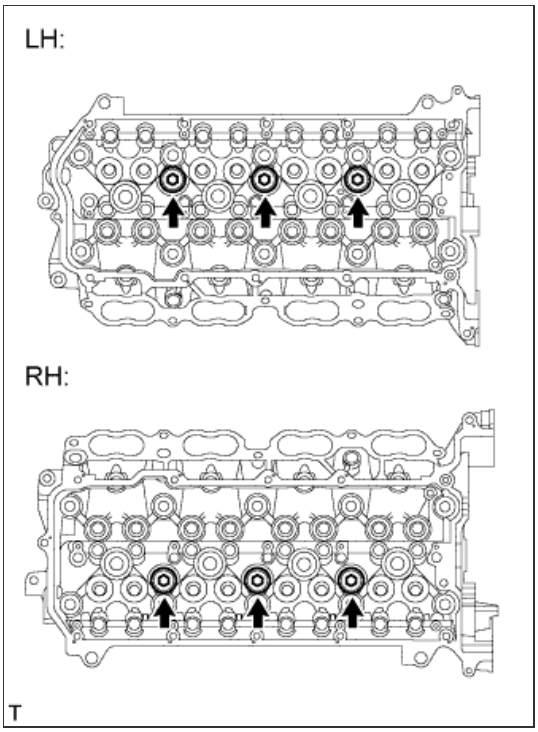
a. Using E7 and E8 "TORX" socket wrenches, install the stud bolts.



Torque:
for stud bolts A, B, C and D:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

2. INSTALL NO. 2 STRAIGHT SCREW PLUG

a. Using a 14 mm hexagon wrench, install 2 new gaskets and the 2 straight screw plugs.



Torque:
85 N*m{ 867 kgf*cm , 63 ft.*lbf }

3. INSTALL NO. 1 STRAIGHT SCREW PLUG

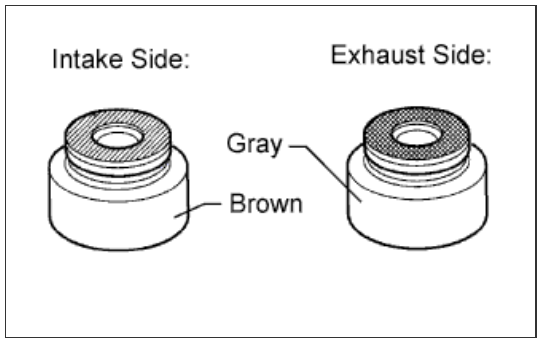
a. Using a 10 mm hexagon wrench, install 6 new gaskets and the 6 straight screw plugs.

Torque:
44 N*m{ 449 kgf*cm , 32 ft.*lbf }

4. INSTALL VALVE SPRING SEAT

a. Install the valve spring seats to the cylinder head.

5. INSTALL VALVE STEM OIL SEAL



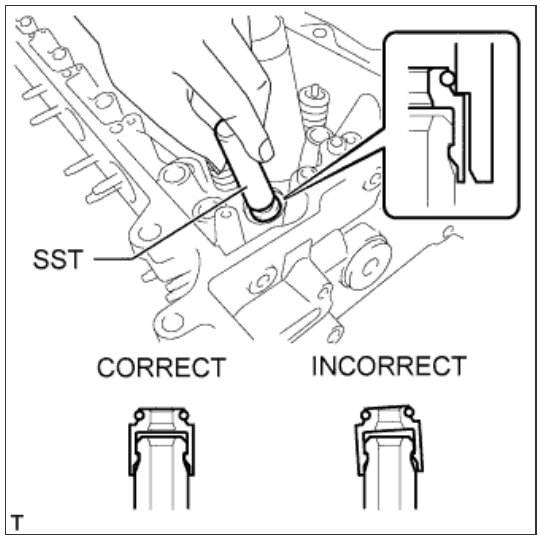
a. Apply a light coat of engine oil to new oil seals.

NOTICE:

Pay attention when installing the intake and exhaust oil seals. For example, installing the intake oil seal into the exhaust side or installing the exhaust oil seal into the intake side can cause installation problems later.

HINT:

The intake valve oil seals are brown and the exhaust valve oil seals are gray.

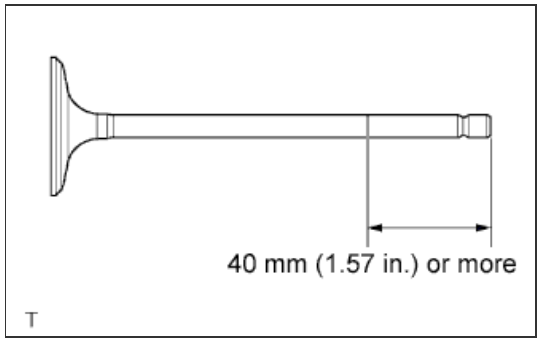


b. Using SST, push in the oil seals.

SST
09201-41020

NOTICE:

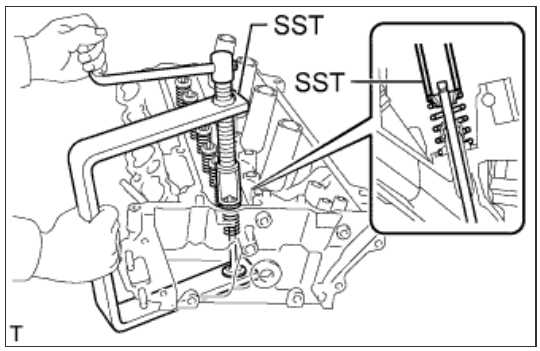
Failure to use SST will cause the seal to be damaged or improperly seated.



6. INSTALL INTAKE VALVE

a. Apply plenty of engine oil to the tip area of the intake valve shown in the illustration.

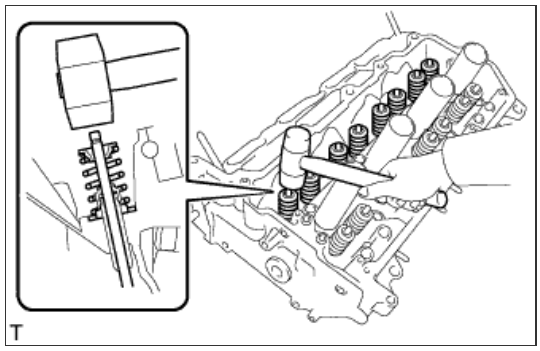
b. Install the valve, compression spring and spring retainer to the cylinder head.



NOTICE:

Install the same parts in the same combination to their original locations.

c. Using SST and wooden blocks, compress the spring and install the retainer locks.

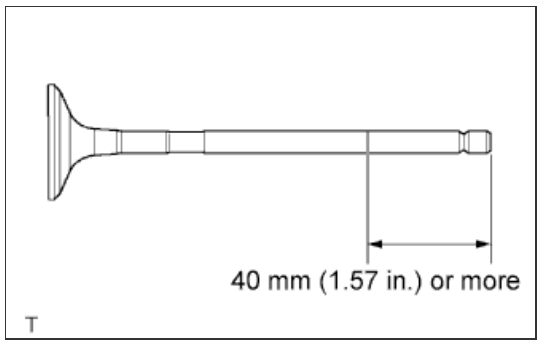


SST
09202-70020 (09202-00010, 09202-01010, 09202-01020)

d. Using a plastic-faced hammer, lightly tap the valve stem tip to ensure a proper fit.

NOTICE:

Be careful not to damage the retainer.

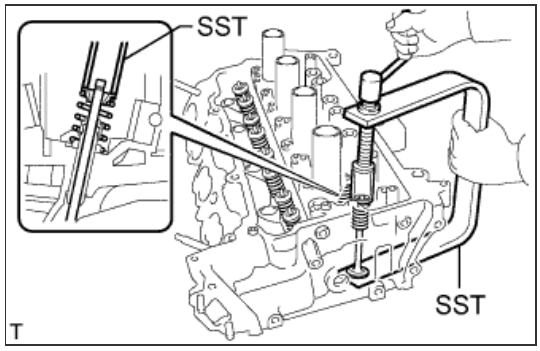


7. INSTALL EXHAUST VALVE

a. Apply plenty of engine oil to the tip area of the exhaust valve shown in the illustration.

b. Install the valve, compression spring and spring retainer to the cylinder head.

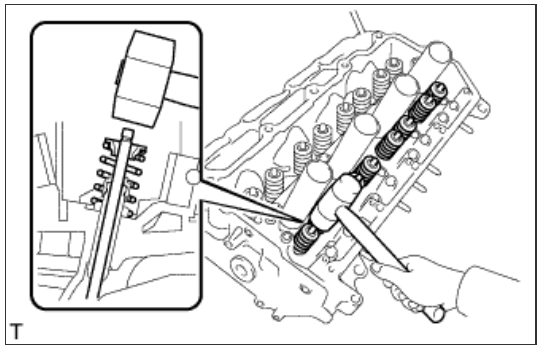
NOTICE:



Install the same parts in the same combination to their original locations.

c. Using SST and wooden blocks, compress the spring and install the retainer locks.

SST

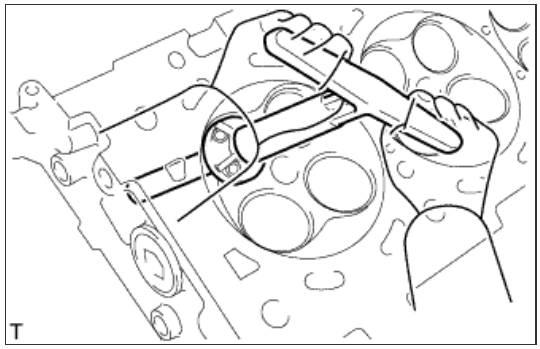


09202-70020 (09202-00010, 09202-01010, 09202-01020)

d. Using a plastic-faced hammer, lightly tap the valve stem tip to ensure a proper fit.

NOTICE:

Be careful not to damage the retainer.



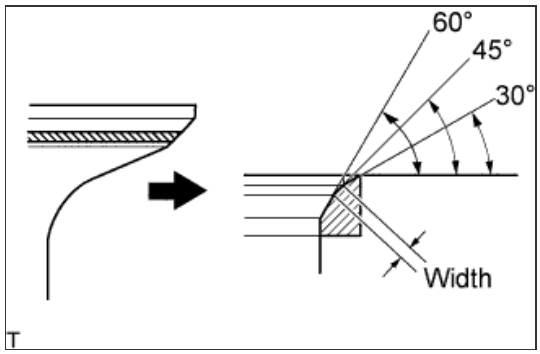
for Preparation Click here

1. REPAIR INTAKE VALVE SEAT

NOTICE:

- **Repair the seat while checking the seating position.**
- **Keep the lip free of foreign matter.**

a. Using a 45° cutter, resurface the valve seat so that the valve seat width is more than the specification.

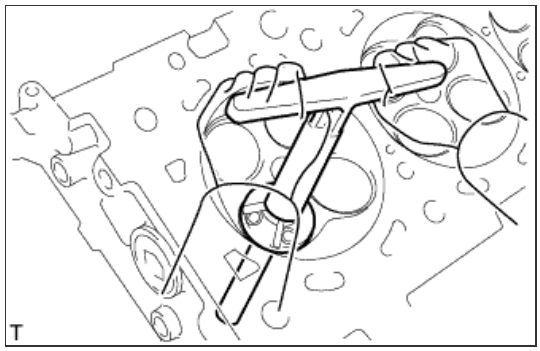


b. Using 30° and 60° cutters, correct the valve seat so that the valve contacts the entire circumference of the seat. The contact should be in the center of the valve seat, and the valve seat width should be maintained within the specified range around the entire circumference of the seat.

Standard width:
1.1 to 1.5 mm (0.0433 to 0.0591 in.)

c. Hand-lap the valve and valve seat with an abrasive compound.

d. Check the valve seating position.

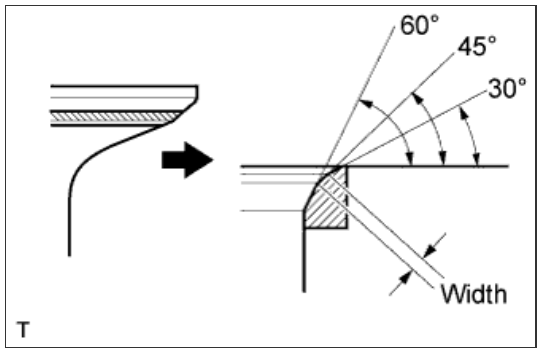


2. REPAIR EXHAUST VALVE SEAT

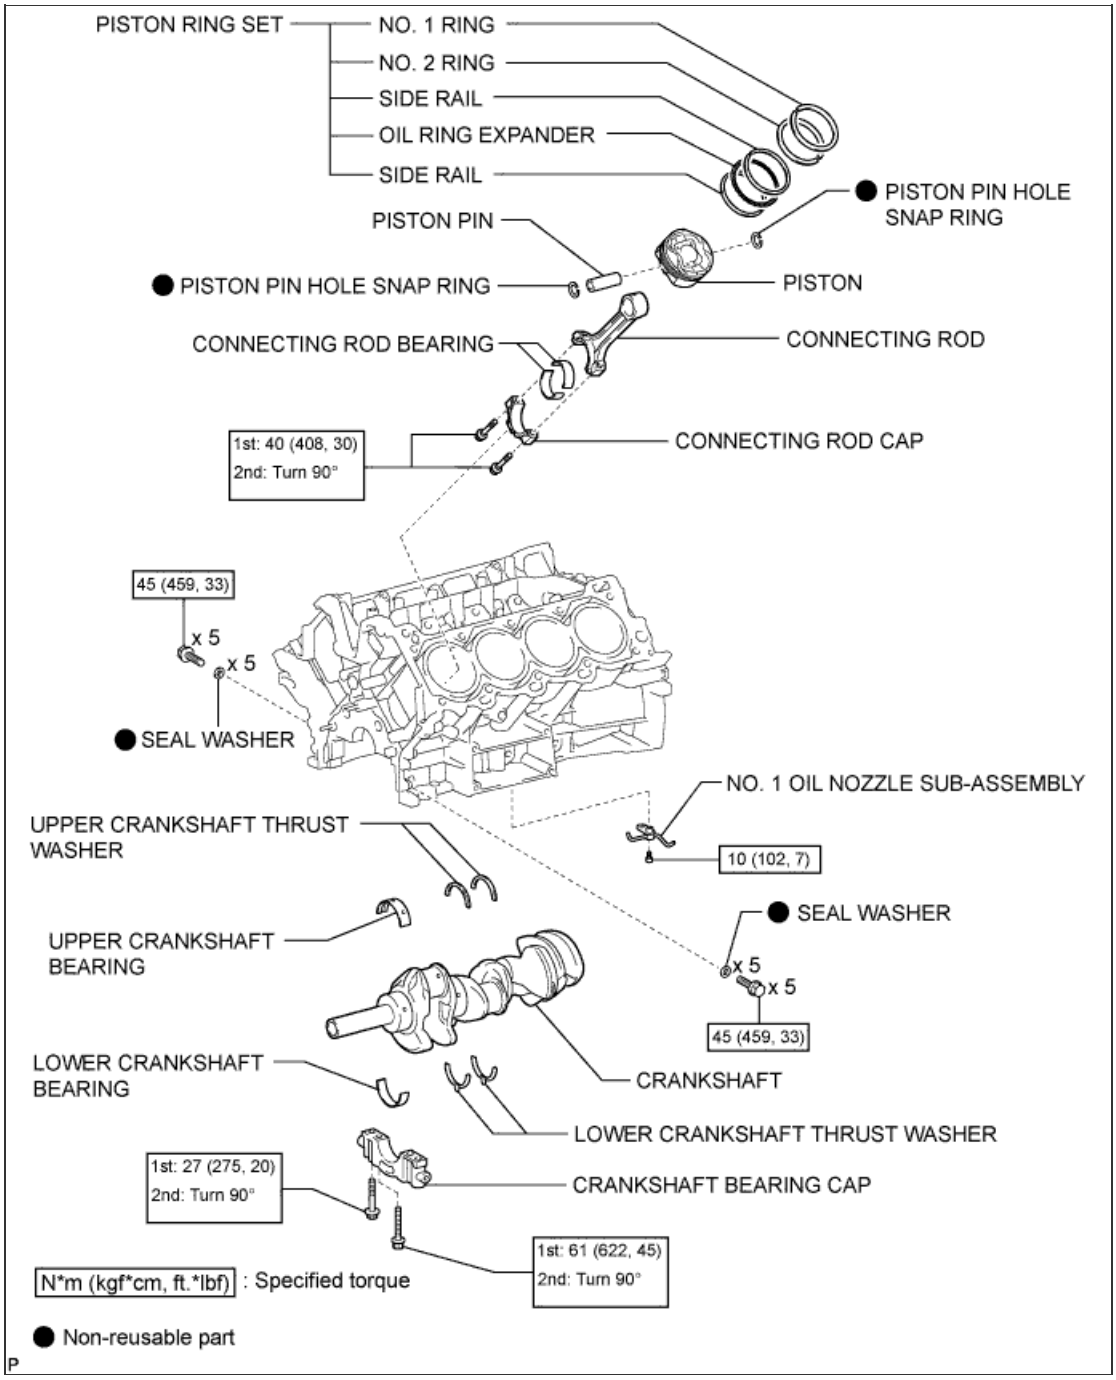
NOTICE:

- **Repair the seat while checking the seating position.**
- **Keep the lip free of foreign matter.**

a. Using a 45° cutter, resurface the valve seat so that the valve seat width is more than the specification.



b. Using 30° and 60° cutters, correct the valve seat so that the valve contacts the entire circumference of the seat. The contact should be in the center of the valve seat, and the valve seat width should be maintained within the specified range around the entire circumference of the seat.



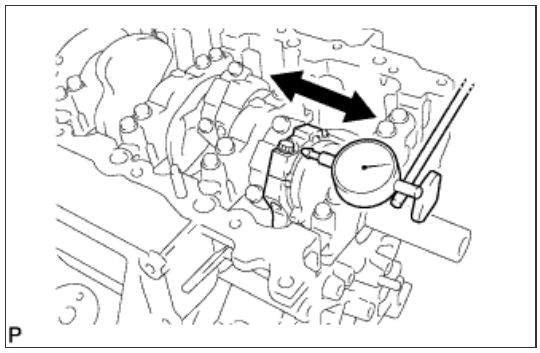
Standard width:
1.1 to 1.5 mm (0.0433 to 0.0591 in.)

c. Hand-lap the valve and valve seat with an abrasive compound.

d. Check the valve seating position.

for Preparation Click here

for Preparation Click here

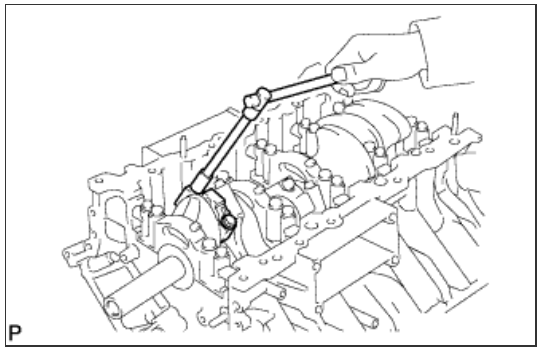


1. INSPECT CONNECTING ROD THRUST CLEARANCE

a. Using a dial indicator, measure the thrust clearance while moving the connecting rod back and forth.

Standard thrust clearance:
0.15 to 0.55 mm (0.00591 to 0.0217 in.)

Maximum thrust clearance:
0.70 mm (0.0276 in.)

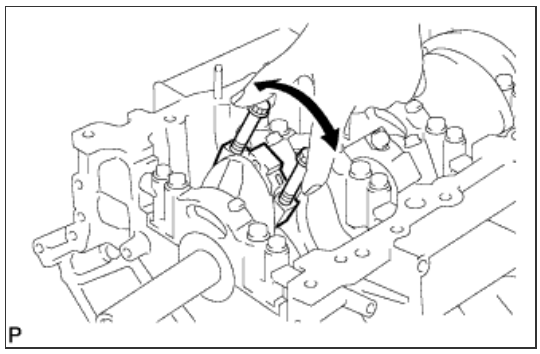


If the thrust clearance is more than the maximum, replace one or more connecting rods as necessary.
If necessary, replace the crankshaft.

2. INSPECT CONNECTING ROD OIL CLEARANCE

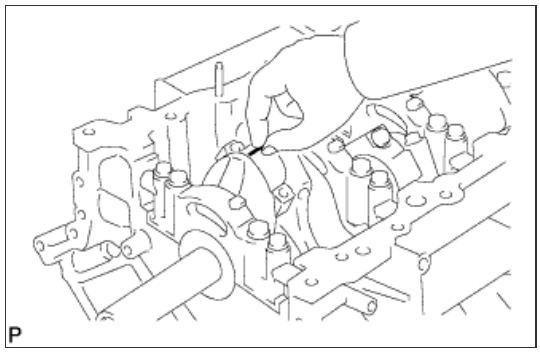
a. Check that the front mark on the connecting rod and cap are aligned to ensure correct reassembly.

b. Remove the 2 connecting rod cap bolts.



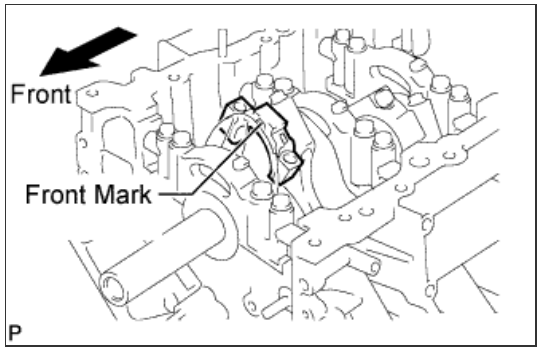
c. Using the 2 removed connecting rod cap bolts, remove the connecting rod cap and lower bearing by wiggling the connecting rod cap right and left.

HINT:



Keep the lower bearing inserted to the connecting rod cap.

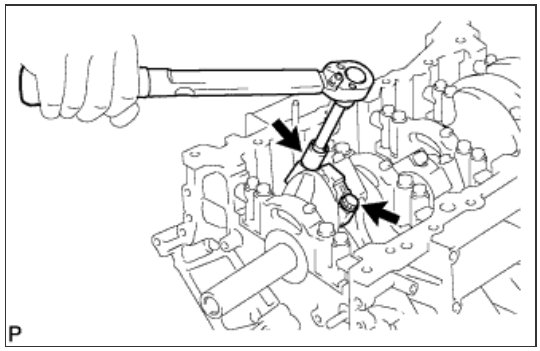
d. Check the crank pin and bearing for pitting and scratches.
If the crank pin or bearing is damaged, replace the bearings. If necessary, replace the crankshaft.



e. Clean the crank pin and bearing.

f. Lay a strip of Plastigage on the crank pin.

g. Place the connecting rod cap on the connecting rod with the front mark facing forward.



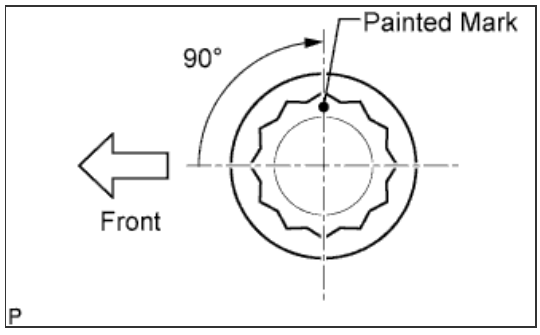
h. Install and alternately tighten the bolts of the connecting rod cap in several steps.

Torque:

40 N*m{ 408 kgf*cm , 30 ft.*lbf }

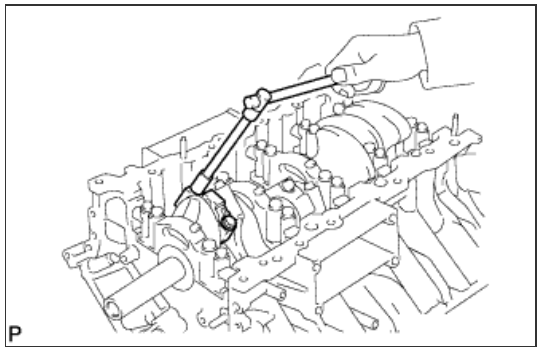
NOTICE:

Do not turn the crankshaft.



i. Mark the front side of each connecting rod cap bolt with paint.

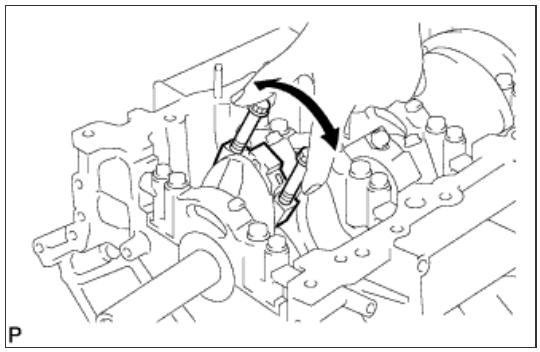
j. Tighten the cap bolts 90° as shown in the illustration.



k. Check that the painted marks are now at a 90° angle to the front.

NOTICE:

Do not turn the crankshaft.



l. Remove the 2 connecting rod cap bolts.

m. Using the 2 removed connecting rod cap bolts, remove the connecting rod cap and lower bearing by wiggling the connecting rod cap right and left.

HINT:

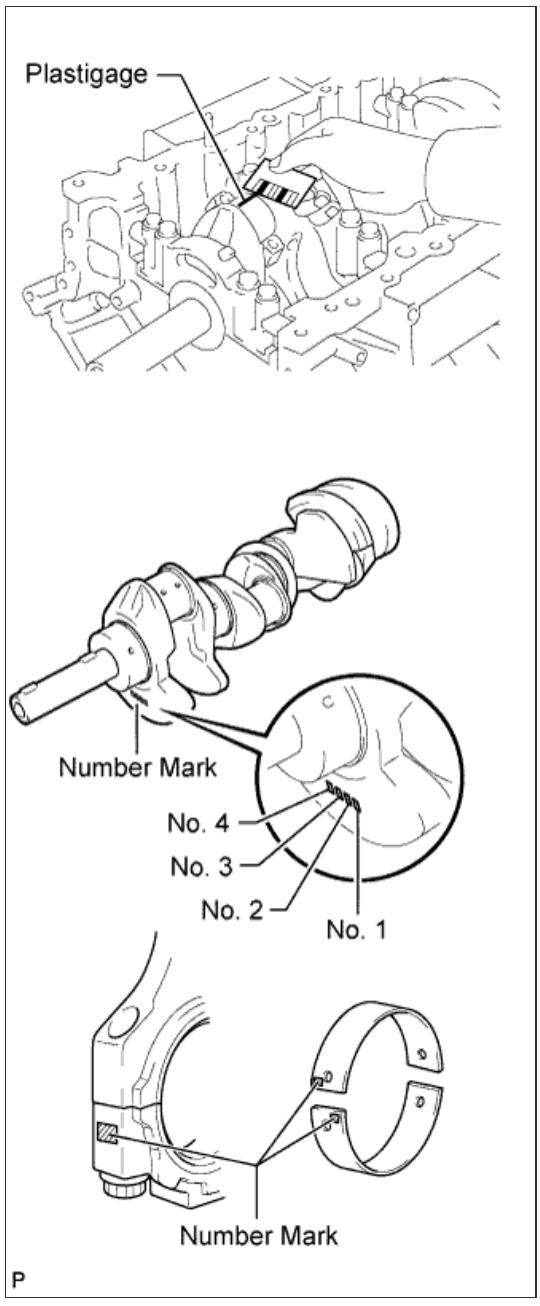
Keep the lower bearing inserted to the connecting rod cap.

n. Measure the Plastigage at its widest point.

Standard oil clearance:
0.025 to 0.050 mm (0.000984 to 0.00197 in.)

Maximum oil clearance:
0.070 mm (0.00276 in.)

If the oil clearance is more than the maximum, replace the bearings. If necessary, replace the crankshaft.



HINT:

- **If replacing a bearing, replace it with one that has the same number as its respective connecting rod cap. The standard thickness of each bearing is indicated by a 1, 2, 3 or 4 mark on its surface.**
- **Select the correct bearing by adding together the number marks imprinted on the connecting rod big end and crank pin.**

Example:

Connecting rod "1" + Crank pin "2" = 3 (Use bearing "3")

Reference:

Standard Sized Bearing Center Wall Thickness:

Mark	Thickness
2	1.489 to 1.492 mm (0.0586 to 0.0587 in.)
3	1.492 to 1.495 mm (0.0587 to 0.0589 in.)
4	1.495 to 1.498 mm (0.0589 to 0.0590 in.)
5	1.498 to 1.501 mm (0.0590 to 0.0591 in.)
6	1.501 to 1.504 mm (0.0591 to 0.0592 in.)
7	1.504 to 1.507 mm (0.0592 to 0.0593 in.)

Connecting Rod Big End Inside Diameter:

Mark	Thickness
1	59.000 to 59.006 mm (2.32283 to 2.32307 in.)
2	59.006 to 59.012 mm (2.32307 to 2.32330 in.)
3	59.012 to 59.018 mm (2.32330 to 2.32354 in.)
4	59.018 to 59.024 mm (2.32354 to 2.32377 in.)

Crankshaft Pin Diameter:

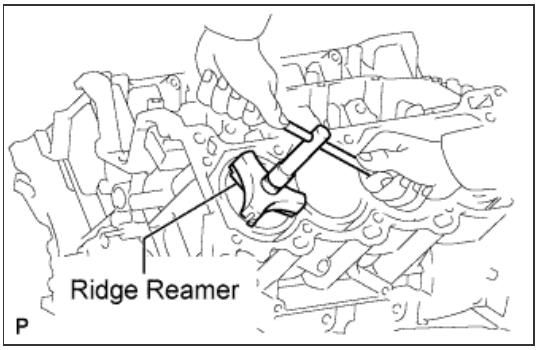
Mark	Thickness
1	55.994 to 56.000 mm (2.20448 to 2.20472 in.)
2	55.988 to 55.994 mm (2.20425 to 2.20448 in.)

3	55.982 to 55.988 mm (2.20401 to 2.20425 in.)

o. Completely remove the Plastigage.

p. Perform the inspection above for each cylinder.

3. REMOVE PISTON AND CONNECTING ROD



a. Using a ridge reamer, remove all the carbon from the top of the cylinder.

b. Remove the 16 cap bolts, 8 connecting rod caps and 8 lower bearings.

c. Push the 8 pistons and 8 connecting rods through the top of the cylinder block.

HINT:

- **Keep the bearing, connecting rod and cap together.**
- **Arrange the piston and connecting rods in the correct order.**

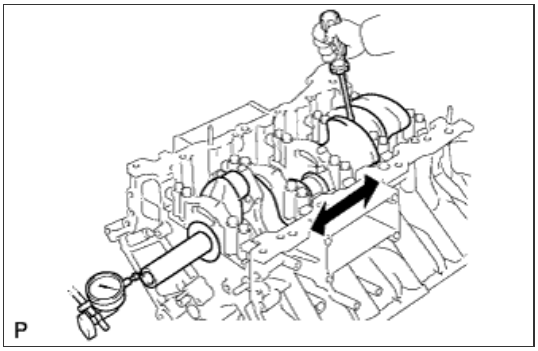
4. REMOVE CONNECTING ROD BEARING

a. Remove the connecting rod bearings from the connecting rods and connecting rod caps.

HINT:

Arrange the removed parts in the correct order.

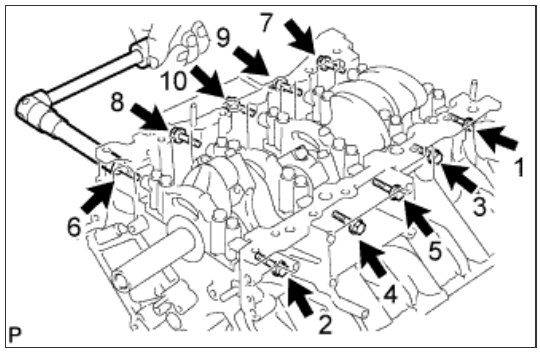
5. INSPECT CRANKSHAFT THRUST CLEARANCE



a. Using a dial indicator, measure the thrust clearance while prying the crankshaft back and forth with a screwdriver.

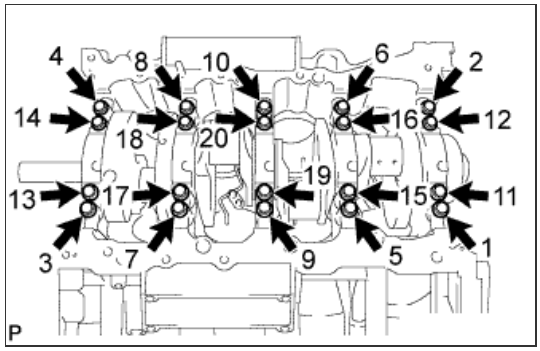
Standard thrust clearance:
0.020 to 0.220 mm (0.000787 to 0.00866 in.)

Maximum thrust clearance:
0.30 mm (0.0118 in.)



If the thrust clearance is more than the maximum, replace the thrust washers as a set. If necessary, replace the crankshaft.

Standard thrust washer thickness:
2.44 to 2.49 mm (0.0961 to 0.0980 in.)



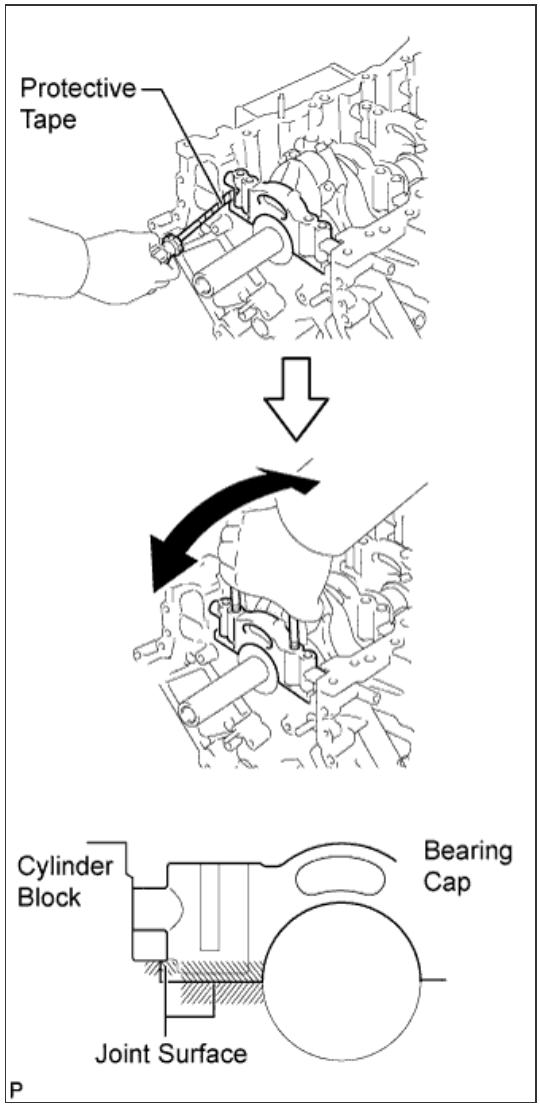
6. REMOVE CRANKSHAFT

a. Uniformly loosen and remove the 10 bearing cap bolts and 10 seal washers in several steps in the sequence shown in the illustration.

b. Uniformly loosen and remove the 20 bearing cap bolts in several steps in the sequence shown in the illustration.

c. Using a screwdriver, slightly pry up the 5 main bearing caps.

HINT:



Tape the screwdriver tip before use.

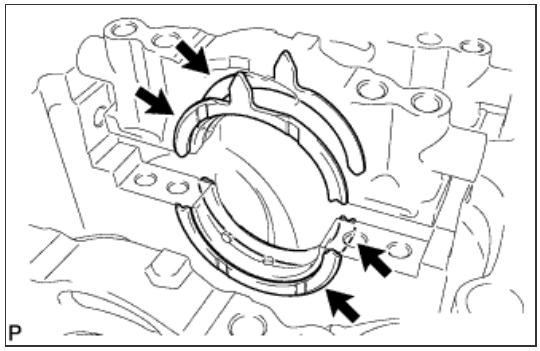
NOTICE:

- **Be careful not to damage the joint surface of the cylinder block and main bearing caps.**
- **Pry up the left and right side of the cap little by little.**

d. Using the 2 inside position crankshaft bearing cap bolts, loosen each crankshaft bearing cap by moving it forward and backward, and remove each crankshaft bearing cap.

e. Remove the crankshaft.

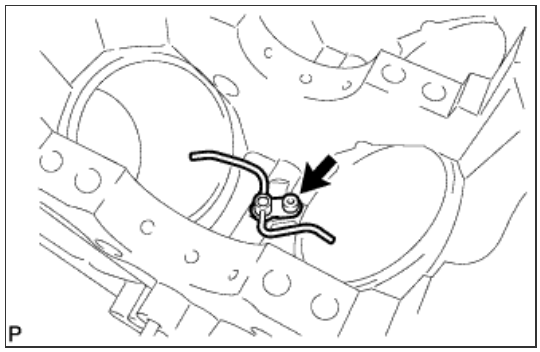
7. REMOVE CRANKSHAFT BEARING



a. Remove the crankshaft bearings from the bearing caps and cylinder block.

HINT:

Arrange the removed parts in the correct order.

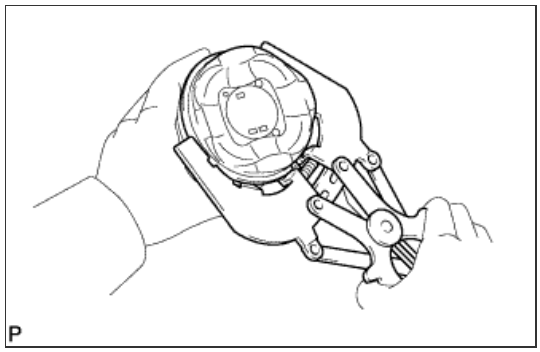


8. REMOVE CRANKSHAFT THRUST WASHER SET

a. Remove the thrust washer set from the cylinder block and No. 3 bearing cap.

9. REMOVE NO. 1 OIL NOZZLE SUB-ASSEMBLY

a. Using a 5 mm hexagon wrench, remove the 4 bolts and 4 oil nozzles.

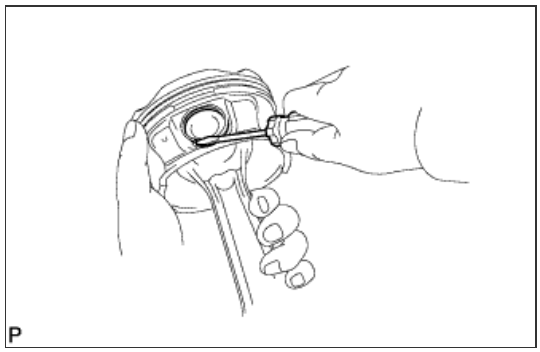


10. REMOVE PISTON RING SET

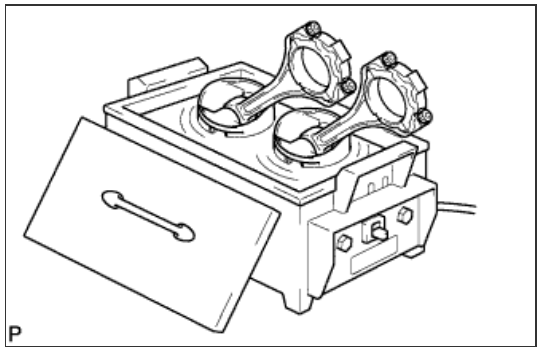
HINT:

Arrange the piston rings in the correct order.

a. Using a piston ring expander, remove the 2 compression rings.



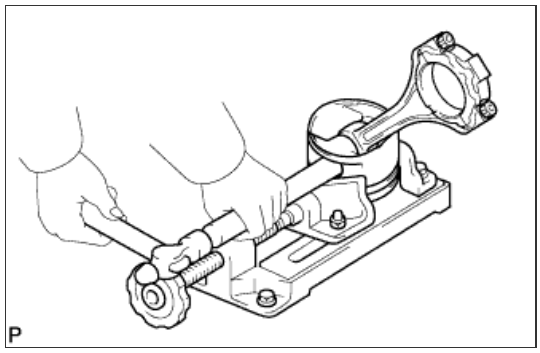
b. Remove the 2 side rails and oil ring expander by hand.



11. REMOVE PISTON WITH PIN SUB-ASSEMBLY

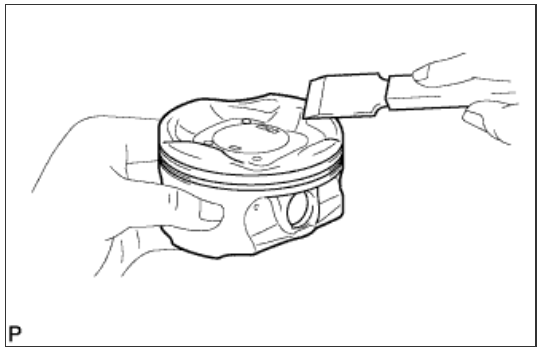
a. Disconnect the connecting rod from the piston.

i. Using a small screwdriver, pry off the 2 snap rings from the piston.



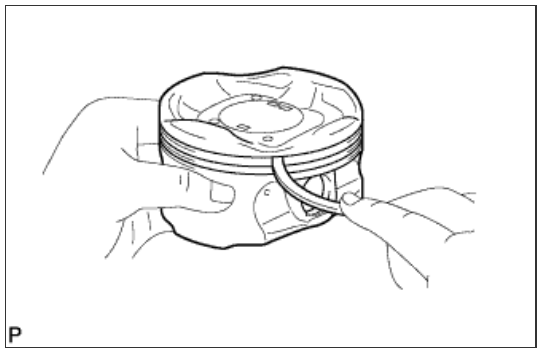
ii. Gradually heat the piston to approximately 80°C (176°F).

iii. Using a brass bar and plastic-faced hammer, lightly tap out the piston pin. Then remove the connecting rod.



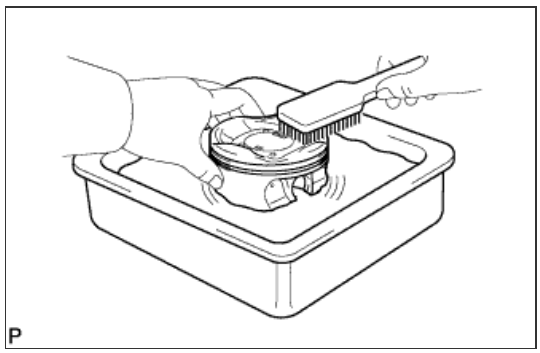
HINT:

- **The piston and pin are a matched set.**
- **Arrange the pistons, pins, rings, connecting rods and bearings in the correct order.**



b. Clean the piston.

i. Using a gasket scraper, remove the carbon from the piston top.



ii. Using a groove cleaning tool or broken ring, clean the piston ring grooves.

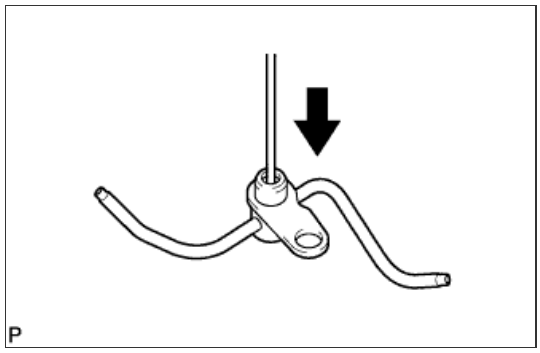
iii. Using solvent and a brush, thoroughly clean the piston.

NOTICE:

Do not use a wire brush.

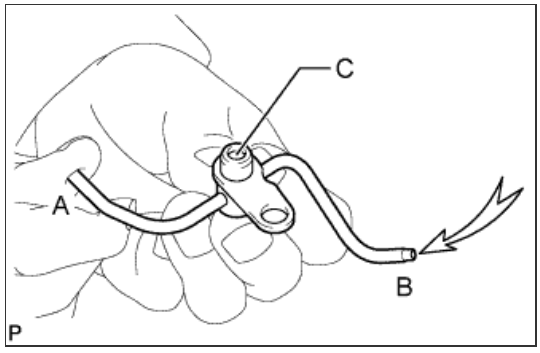
12. REMOVE STUD BOLT

NOTICE:



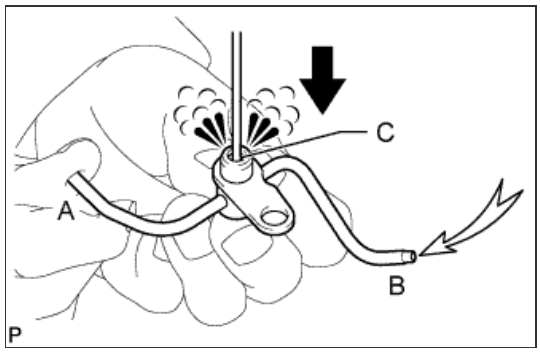
If the stud bolt is deformed or its threads are damaged, replace it.

for Preparation Click here



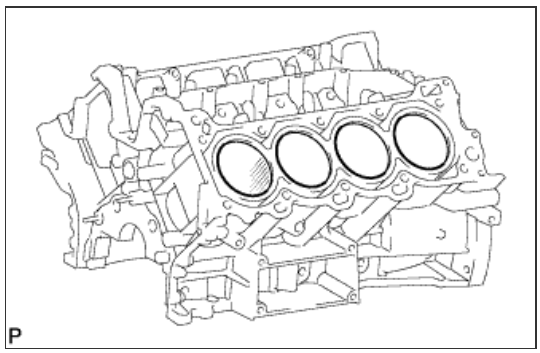
1. INSPECT NO. 1 OIL NOZZLE SUB-ASSEMBLY

a. Push the check valve with a pin to check if it is stuck.
If stuck, replace the No. 1 oil nozzle sub-assembly.



b. Push the check valve with a pin to check if it moves smoothly.
If it does not move smoothly, clean or replace the No. 1 oil nozzle sub-assembly.

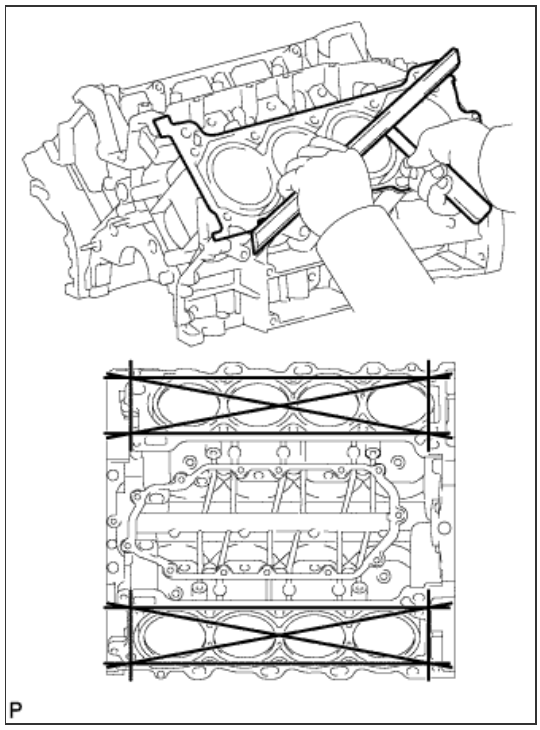
c. While covering A, apply air into B. Check that air does not leak through C.
Perform the check again while covering B and applying air into A.
If air leaks, clean or replace the No. 1 oil nozzle sub-assembly.



d. Push the check valve while covering A, and apply air into B. Check that air passes through C. Perform the check again while covering B, pushing the check valve and applying air into A.
If air does not pass through C, clean or replace the No. 1 oil nozzle sub-assembly.

2. CHECK CYLINDER BLOCK SUB-ASSEMBLY

a. Visually check the cylinder for vertical scratches. If deep scratches are present, rebore all 8 cylinders. If necessary, replace the cylinder block.

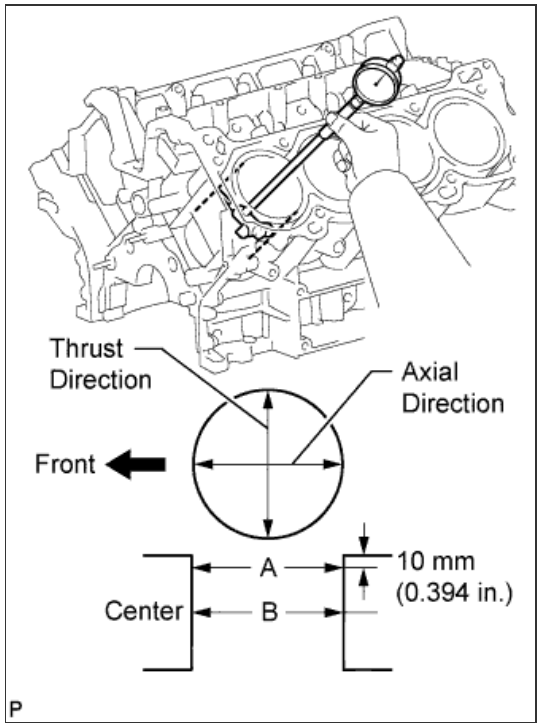


3. INSPECT CYLINDER BLOCK FOR WARPAGE

a. Using a precision straightedge and feeler gauge, measure the warpage of the surfaces where the cylinder head gaskets contact the cylinder block.

Maximum warpage:
0.07 mm (0.00276 in.)

If the warpage is more than the maximum, replace the cylinder block.



4. INSPECT CYLINDER BORE

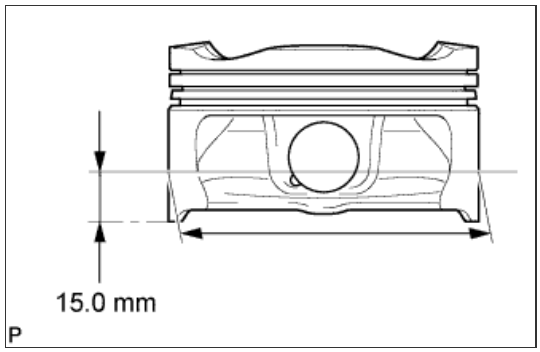
a. Using a cylinder gauge, measure the cylinder bore diameter at positions A and B in the thrust and axial directions.

Standard diameter:
94.000 to 94.012 mm (3.7008 to 3.7013 in.)

Maximum diameter:
94.200 mm (3.7087 in.)

If the diameter is more than the maximum, replace the cylinder block.

5. INSPECT PISTON SUB-ASSEMBLY WITH PIN



a. Using a micrometer, measure the piston diameter at a position that is 15.0 mm (0.591 in.) from the bottom of the piston (refer to the illustration).

Standard diameter:

93.950 to 93.960 mm (3.6988 to 3.6992 in.)

Minimum diameter:
93.815 mm (3.6935 in.)

If the diameter is less than the minimum, replace the piston.

6. INSPECT PISTON OIL CLEARANCE

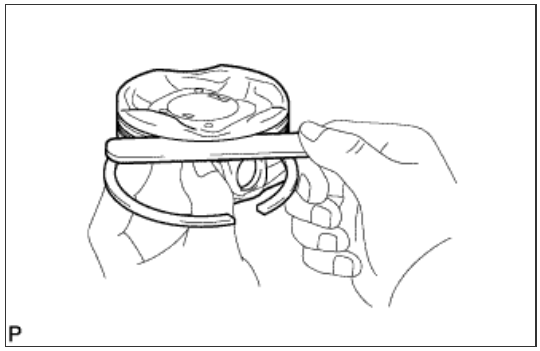
a. Measure the cylinder bore diameter in the thrust direction.

b. Subtract the piston diameter measurement from the cylinder bore diameter measurement.

Standard oil clearance:
0.040 to 0.062 mm (0.00157 to 0.00244 in.)

Maximum oil clearance:
0.385 mm (0.0152 in.)

If the oil clearance is more than the maximum, replace all the pistons. If necessary, replace the cylinder block.

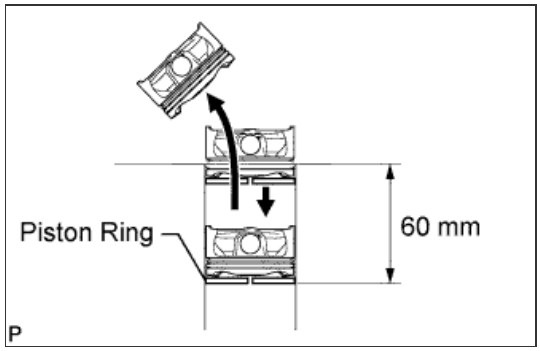


7. INSPECT RING GROOVE CLEARANCE

a. Using a feeler gauge, measure the clearance between a new piston ring and the wall of the ring groove.

Standard Ring Groove Clearance:

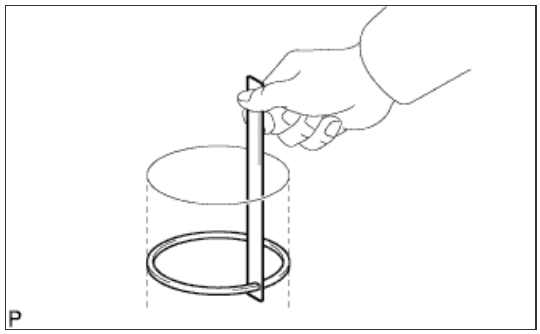
Item	Specified Condition
No. 1 ring	0.020 to 0.070 mm (0.000787 to 0.00276 in.)
No. 2 ring	0.020 to 0.060 mm (0.000787 to 0.00236 in.)
Oil ring expander	0.070 to 0.145 mm (0.00276 to 0.00571 in.)



If the clearance is not as specified, replace the piston.

8. INSPECT PISTON RING END GAP

a. Insert the piston ring into the cylinder bore.

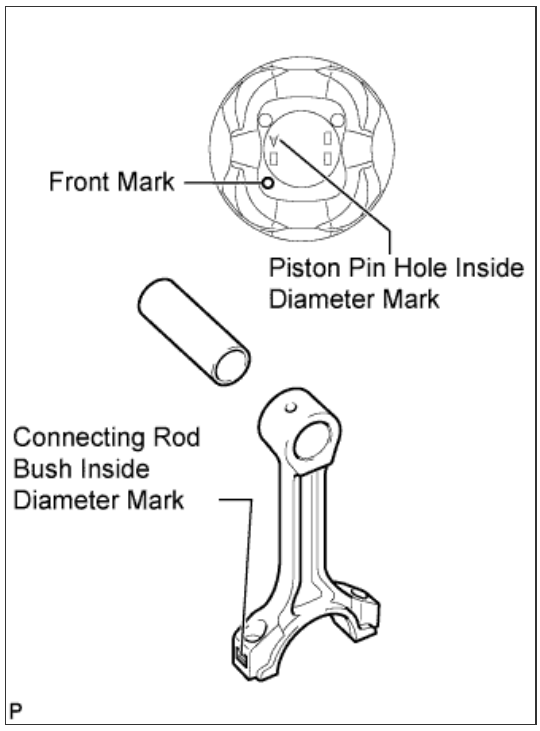


b. Using a piston, push the piston ring a little beyond the bottom of the ring travel, 60 mm (2.36 in.) from the top of the cylinder block.

c. Using a feeler gauge, measure the end gap.

Standard End Gap:

Item	Specified Condition
No. 1 ring	0.25 to 0.35 mm (0.00984 to 0.0138 in.)
No. 2 ring	0.40 to 0.50 mm (0.0157 to 0.0197 in.)
Oil ring expander	0.10 to 0.40 mm (0.00394 to 0.0157 in.)

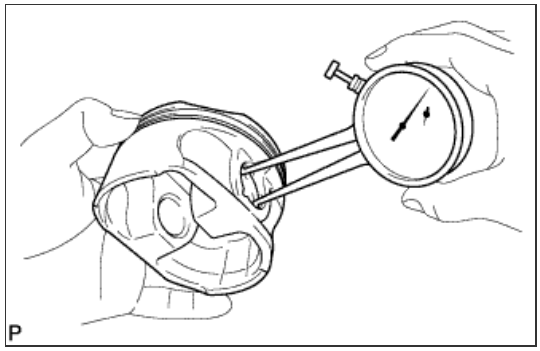


Maximum End Gap:

Item	Specified Condition
No. 1 ring	0.42 mm (0.0165 in.)
No. 2 ring	0.55 mm (0.0217 in.)
Oil ring expander	0.45 mm (0.0177 in.)

If the end gap is more than the maximum, replace the piston ring. If the end gap is more than the maximum even with a new piston ring, replace the cylinder block.

9. INSPECT PISTON PIN OIL CLEARANCE

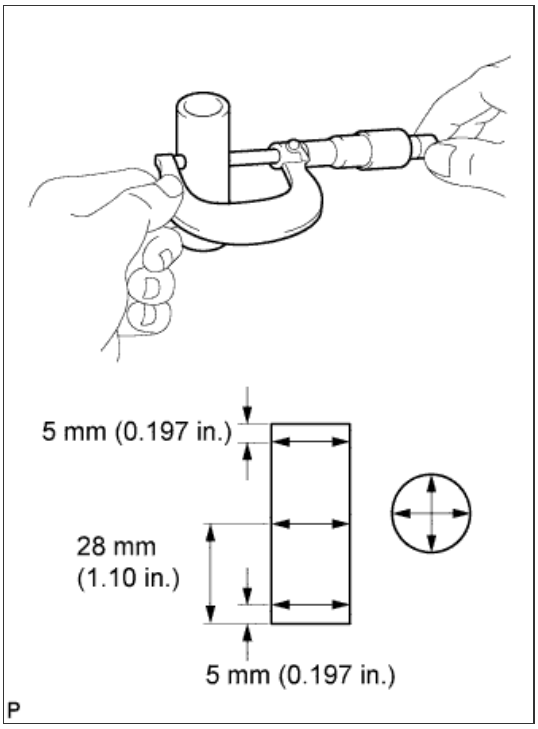


a. Check each mark on the piston, piston pin and connecting rod.

b. Using a caliper gauge, measure the inside diameter of the piston pin hole.

Standard Piston Pin Hole Inside Diameter:

Mark	Specified Condition
A	21.998 to 22.001 mm (0.86606 to 0.86618 in.)
B	22.001 to 22.004 mm (0.86618 to 0.86630 in.)
C	22.004 to 22.007 mm (0.86630 to 0.86642 in.)

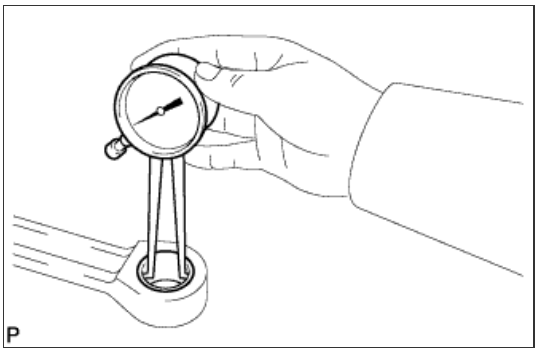


c. Using a micrometer, measure the piston pin diameter.

Standard Piston Pin Diameter:

Mark	Specified Condition

A	21.998 to 22.001 mm (0.86606 to 0.86618 in.)
B	22.001 to 22.004 mm (0.86618 to 0.86630 in.)
C	22.004 to 22.007 mm (0.86630 to 0.86642 in.)



d. Subtract the piston pin diameter measurement from the piston pin hole diameter measurement.

Standard oil clearance:
-0.002 to 0.004 mm (-0.0000787 to 0.000157 in.)

Maximum oil clearance:
0.015 mm (0.000591 in.)

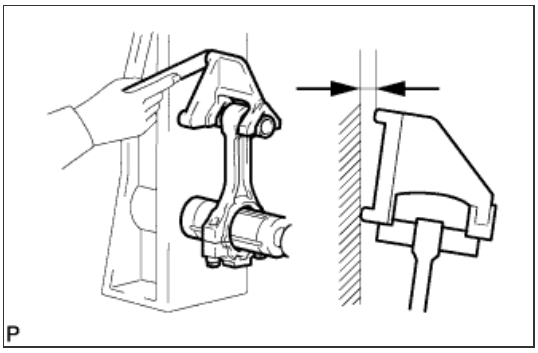
If the oil clearance is more than the maximum, replace the piston and piston pin as a set.

e. Using a caliper gauge, measure the inside diameter of the connecting rod bush.

Standard Bush Inside Diameter:

Mark	Specified Condition
A	22.005 to 22.008 mm (0.86634 to 0.86645 in.)
B	22.008 to 22.011 mm (0.86645 to 0.86657 in.)
C	22.011 to 22.014 mm (0.86657 to 0.86669 in.)

f. Subtract the piston pin diameter measurement from the bush inside diameter measurement.



Standard oil clearance:
0.005 to 0.011 mm (0.000197 to 0.000433 in.)

Maximum oil clearance:
0.03 mm (0.00118 in.)

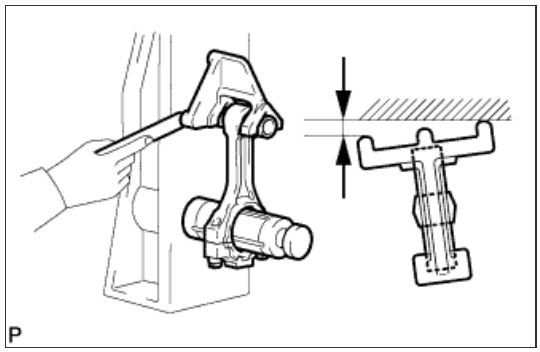
If the oil clearance is more than the maximum, replace the connecting rod, and replace the piston and pin as a set.

10. INSPECT CONNECTING ROD SUB-ASSEMBLY

a. Using a rod aligner and feeler gauge, check the connecting rod alignment.

i. Check for bend.

Maximum bend:
0.05 mm (0.00197 in.) per 100 mm (3.94 in.)



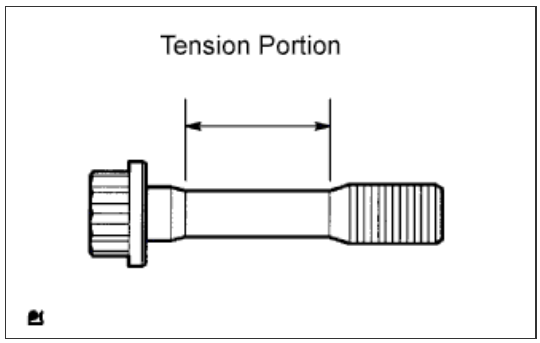
If the bend is more than the maximum, replace the connecting rod.

ii. Check for twist.

Maximum twist:

0.15 mm (0.00591 in.) per 100 mm (3.94 in.)

If the twist is more than the maximum, replace the connecting rod.



11. INSPECT CONNECTING ROD BOLT

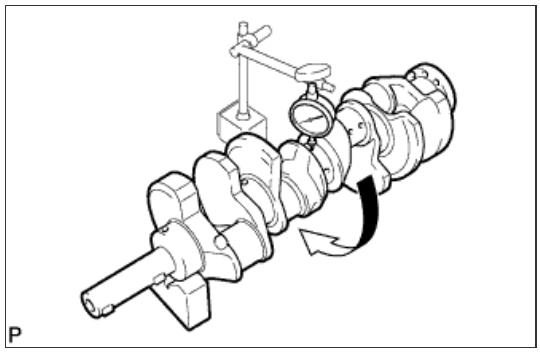
a. Using a vernier caliper, measure the tension portion diameter of the bolt.

Standard diameter:
8.5 to 8.6 mm (0.335 to 0.339 in.)

Minimum diameter:
8.3 mm (0.327 in.)

If the diameter is less than the minimum, replace the bolt.

12. INSPECT CRANKSHAFT



a. Inspect circle runout.

i. Place the crankshaft on V-blocks.

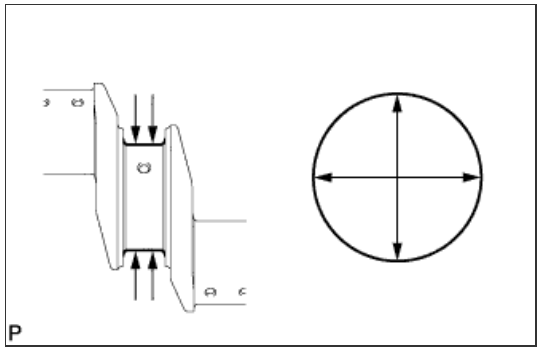
ii. Using a dial indicator, measure the circle runout at the center journal.

Maximum circle runout:
0.06 mm (0.00236 in.)

If the circle runout is more than the maximum, replace the crankshaft.

b. Inspect the main journals.

i. Using a micrometer, measure the diameter of each main journal.



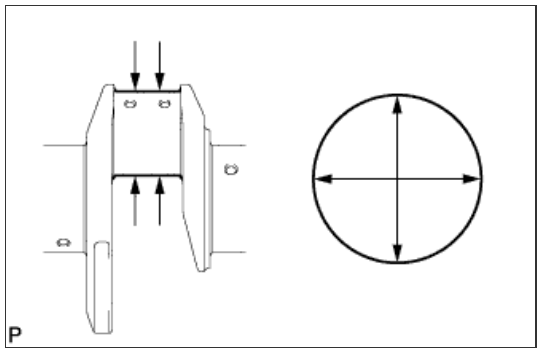
Standard journal diameter:
66.988 to 67.000 mm (2.6373 to 2.6378 in.)

If the diameter is not as specified, check the oil clearance. If necessary, replace the crankshaft.

ii. Check each main journal for taper and out-of-round as shown in the illustration.

Maximum taper and out-of-round:
0.02 mm (0.000787 in.)

If the taper and out-of-round is more than the maximum, replace the crankshaft.



c. Inspect the crank pins.

i. Using a micrometer, measure the diameter of each crank pin.

Standard crank pin diameter:
55.982 to 56.000 mm (2.2040 to 2.2047 in.)

If the diameter is not as specified, check the oil clearance. If necessary, replace the crankshaft.

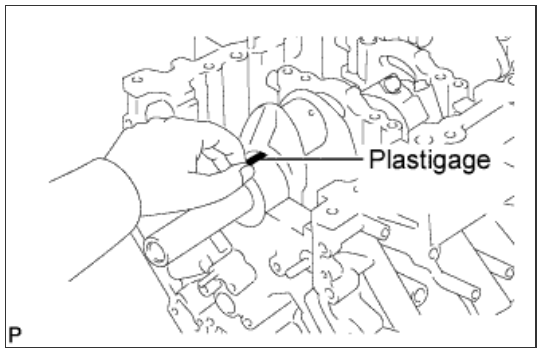
ii. Check each crank pin for taper and out-of-round as shown in the illustration.

Maximum taper and out-of-round:
0.02 mm (0.000787 in.)

If the taper and out-of-round is more than the maximum, replace the crankshaft.

13. INSPECT CRANKSHAFT OIL CLEARANCE

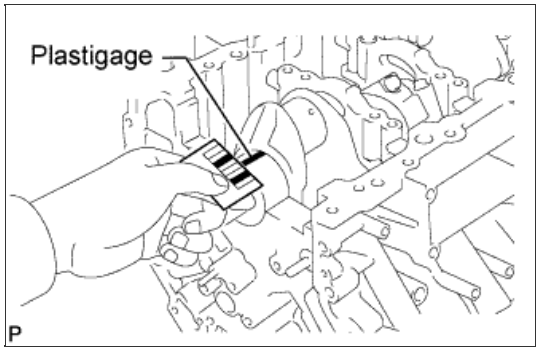
a. Clean each main journal and bearing.



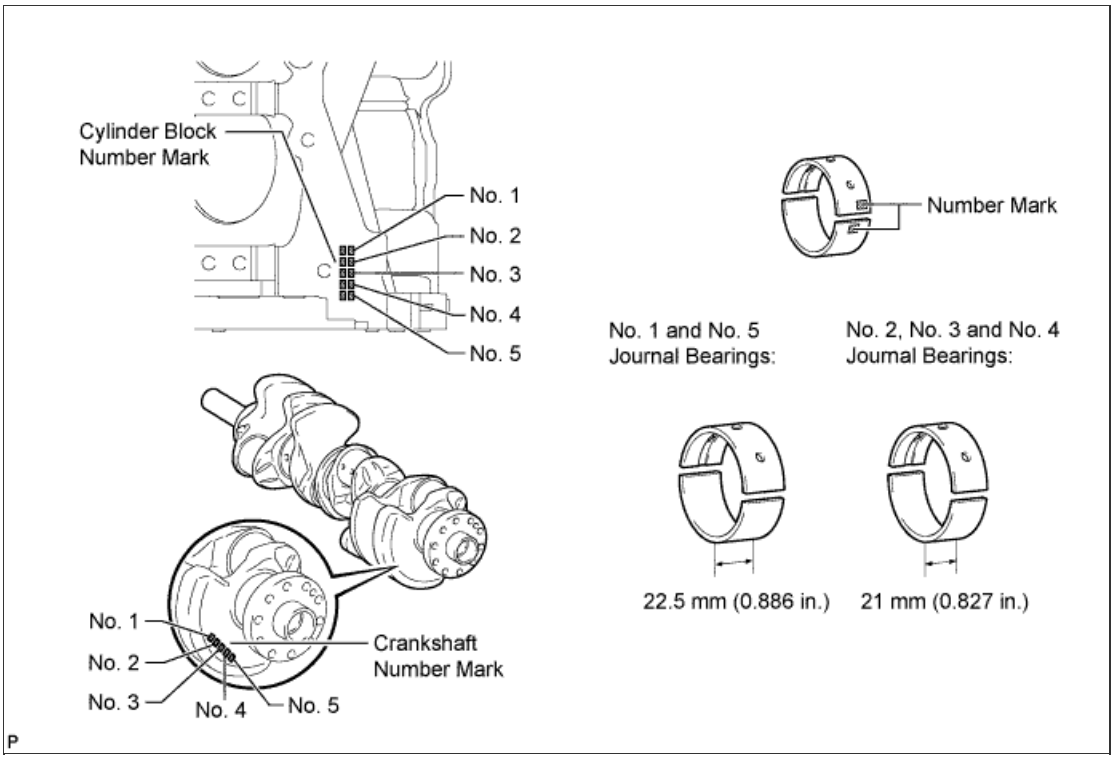
b. Check each main journal and bearing for pitting and scratches.
If the journal or bearing is damaged, replace the bearing.

c. Place the crankshaft on the cylinder block.

d. Lay a strip of Plastigage across each journal.



e. Install the crankshaft bearing caps (Click here).



f. Remove the 30 bolts and bearing caps.

g. Measure the Plastigage at its widest point.

Standard Oil Clearance:

Number Mark	Specified Condition
No. 1 and No. 5 journals	0.017 to 0.030 mm (0.000669 to 0.00118 in.)
Other journals	0.024 to 0.037 mm (0.000945 to 0.00146 in.)

Maximum Oil Clearance:

Number Mark	Specified Condition
No. 1 and No. 5 journals	0.050 mm (0.00197 in.)
Other journals	0.060 mm (0.00236 in.)

If the oil clearance is more than the maximum, replace the bearings. If necessary, replace the crankshaft.

HINT:

If replacing a bearing, replace it with one that has the same number. If the number of the bearing cannot be determined, select the correct bearing by adding together the numbers imprinted on the cylinder block and crankshaft. Refer to the table below for the appropriate bearing number. There are 6 sizes of standard bearings. For the No. 1 and No. 5 position bearings, use bearings marked 4, 5, 6, 7, 8 or 9. For other bearings, use bearings marked 3, 4, 5, 6, 7 or 8.

Example:
Cylinder block "07" + Crankshaft "06" = Total number 13 (Use upper bearing "6" and lower bearing "7")

HINT:

A = Cylinder block number mark

B = Crankshaft number mark

Standard Bearing Center Wall Thickness:

No. 1 and No. 5 Journals

(A) + (B)	Upper Bearing		Lower Bearing	
	Number Mark	Specified Condition	Number Mark	Specified Condition
00 to 02	4	2.501 to 2.504 (0.0985 to 0.0986 in.)	5	2.488 to 2.491 (0.0980 to 0.0981 in.)
03 to 05	5	2.504 to 2.507 (0.0986 to 0.0987 in.)	5	2.488 to 2.491 (0.0980 to 0.0981 in.)

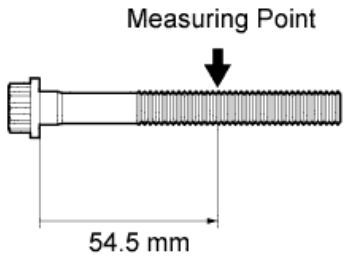
h. Completely remove the Plastigage.

14. INSPECT CRANKSHAFT BEARING CAP SET BOLT

a. Using a vernier caliper, measure the minimum diameter of the elongated thread at the measuring point.

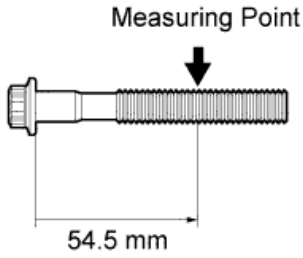
Measuring point:
54.5 mm (2.15 in.)

Standard Diameter:



Item	Specified Condition
Bolt A	10.5 to 11.0 mm (0.413 to 0.433 in.)
Bolt B	9.5 to 10.0 mm (0.374 to 0.394 in.)

Minimum Diameter:



Item	Specified Condition
Bolt A	10.4 mm (0.409 in.)
Bolt B	9.4 mm (0.370 in.)

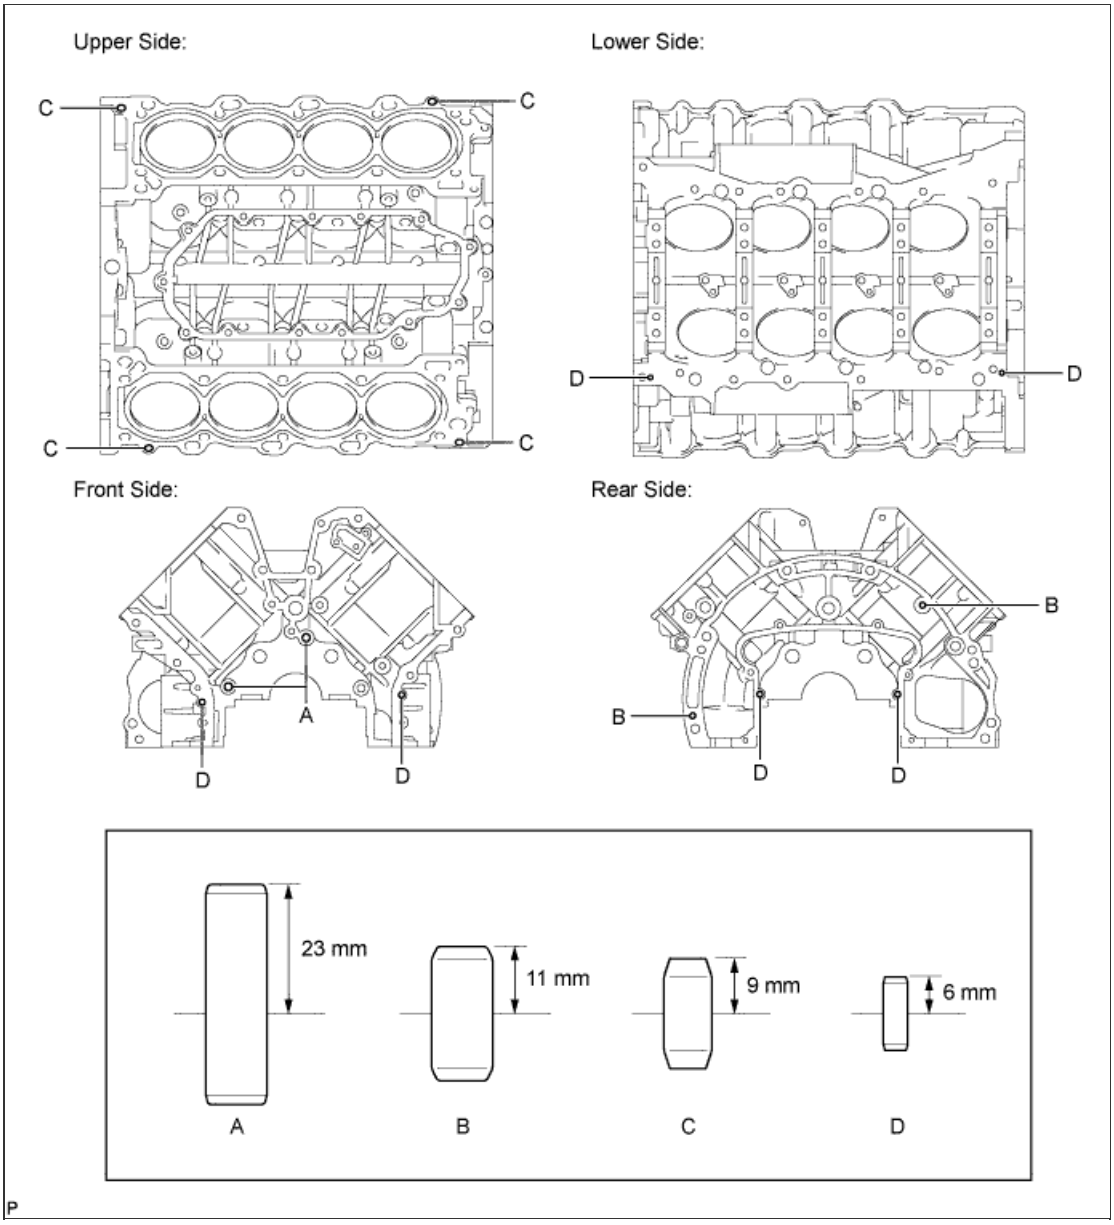
If the diameter is less than the minimum, replace the bolt.

Bolt A:

Bolt B:

T

for Preparation Click here



1. REPLACE STRAIGHT PIN

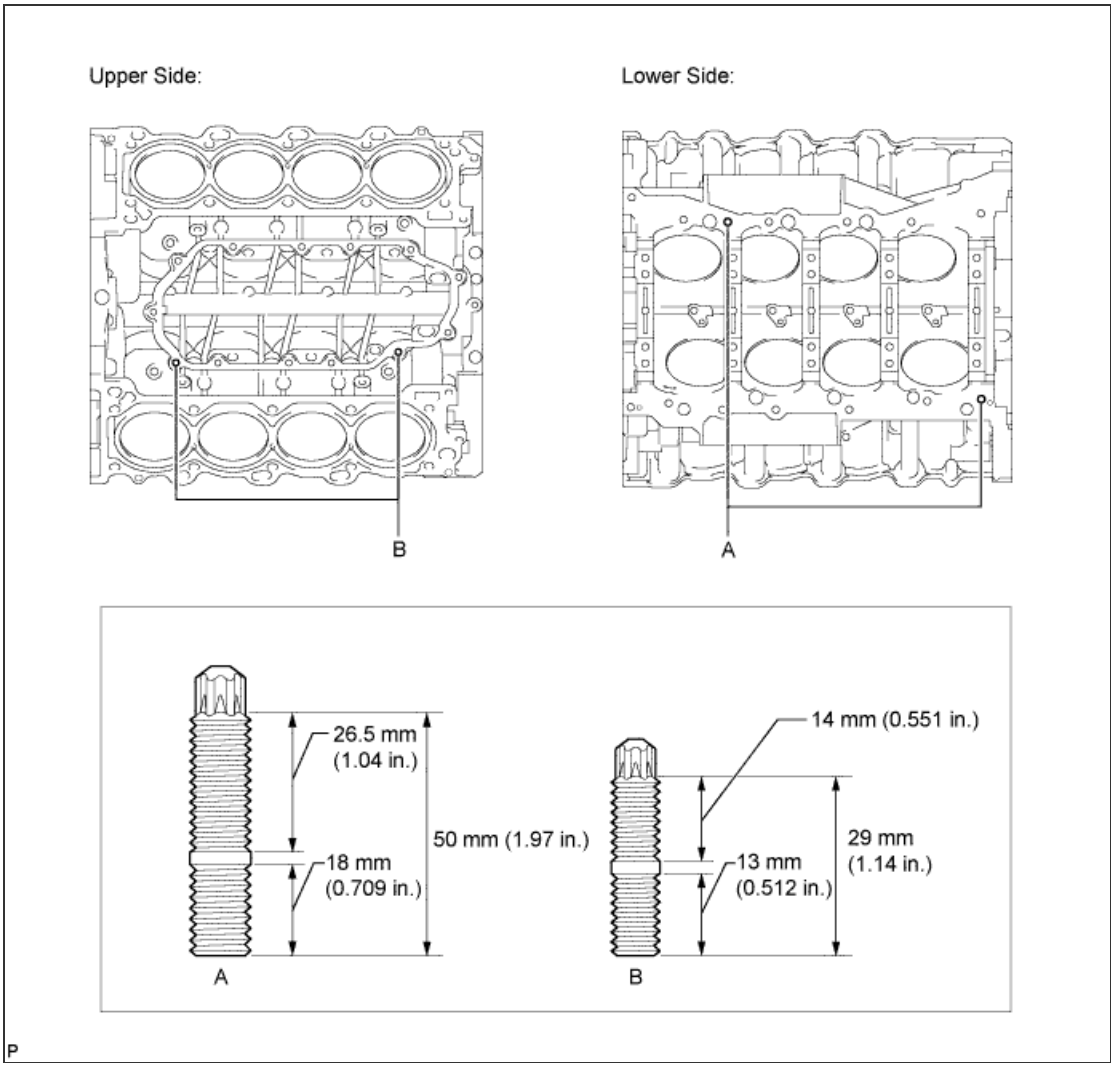
NOTICE:

It is not necessary to remove the straight pin unless it is being replaced.

a. Remove the straight pins.

b. Using a plastic-faced hammer, tap in new straight pins to the cylinder block.

Standard Protrusion:



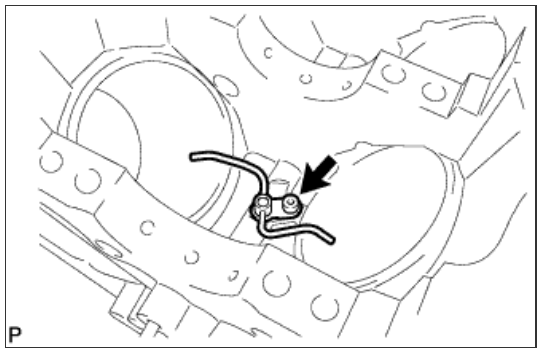
Item	Pin Diameter	Specified Condition
Pin A	10 mm (0.394 in.)	23 mm (0.906 in.)
Pin B	10 mm (0.394 in.)	11 mm (0.433 in.)
Pin C	8 mm (0.315 in.)	9 mm (0.354 in.)

Pin D	4 mm (0.157 in.)	6 mm (0.236 in.)

for Preparation Click here

1. INSTALL STUD BOLT

a. Using an E8 "TORX" socket wrench, install the stud bolts.

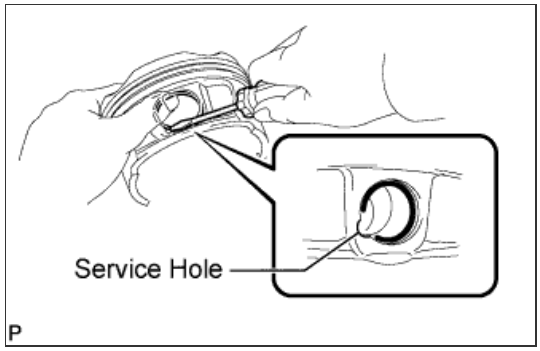


Torque:
for stud bolt A:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }
for stud bolt B:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

2. INSTALL NO. 1 OIL NOZZLE SUB-ASSEMBLY

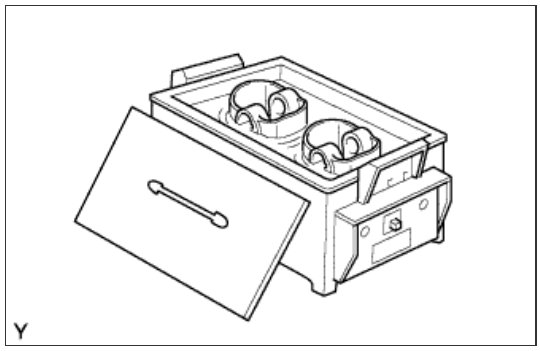
a. Using a 5 mm hexagon wrench, install the 4 oil nozzles with the 4 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



3. INSTALL PISTON WITH PIN SUB-ASSEMBLY

a. Using a small screwdriver, install a new snap ring at one end of the piston pin hole.

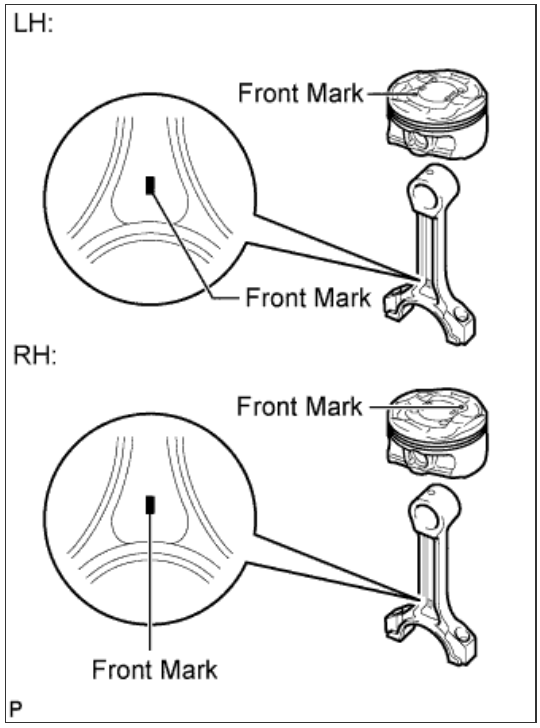


HINT:

Be sure that the end gap of the snap ring is not aligned with the service hole of the piston.

b. Gradually heat the piston to approximately 80°C (176°F).

c. Coat the piston pin and connecting rod with engine oil.

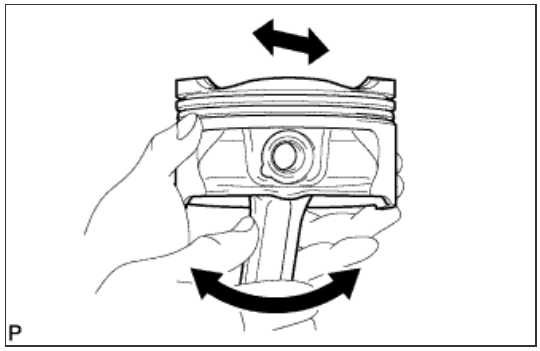


d. Align the front marks of the piston and connecting rod as shown in the illustration. Then push in the piston pin with your thumb until the piston pin contacts the snap ring.

HINT:

The piston and pin are a matched set.

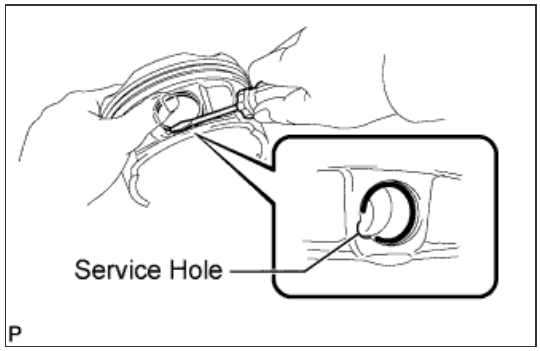
NOTICE:



For the LH side, perform the assembly so that the front marks of the piston and connecting rod are on the same side. For the RH side, perform the assembly so that the front marks of the piston and connecting rod are on opposite sides.

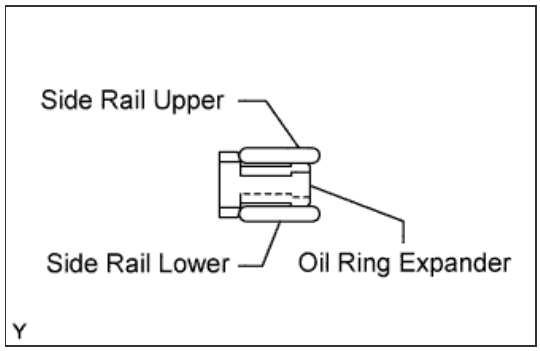
e. Check the fitting condition between the piston and piston pin.

i. Move the connecting rod back and forth on the piston pin. Check the fitting condition.
If abnormal movement is felt, replace the piston and pin as a set.



ii. Rotate the piston back and forth on the piston pin. Check the fitting condition.
If abnormal movement is felt, replace the piston and pin as a set.

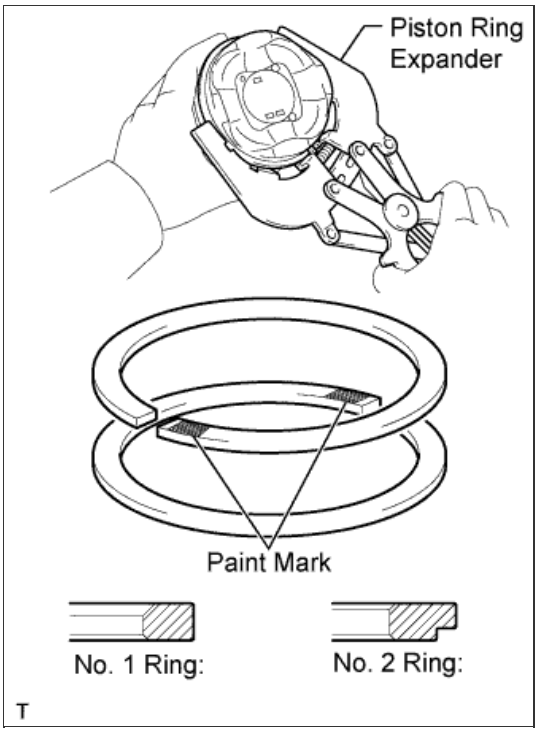
f. Using a small screwdriver, install a new snap ring at the other end of the piston pin hole.



HINT:

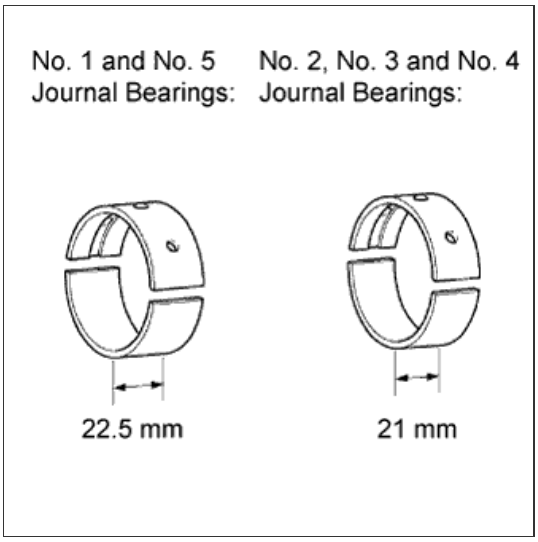
Be sure that the end gap of the snap ring is not aligned with the service hole of the piston.

4. INSTALL PISTON RING SET



a. Install the oil ring expander and 2 side rails by hand.

b. Using a piston ring expander, install the 2 compression rings so that the paint marks are positioned as shown in the illustration.



Paint Mark:

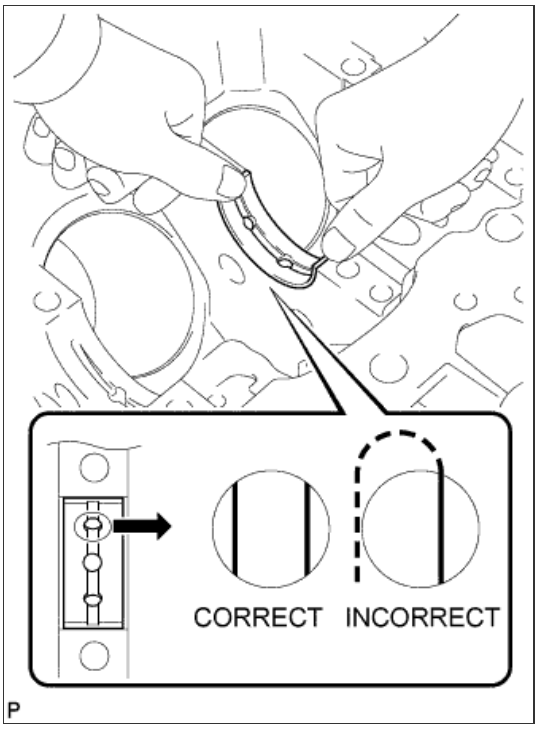
Piston Ring	Paint Mark
No. 1	Blue
No. 2	Orange

5. INSTALL CRANKSHAFT BEARING

a. Clean the main journal and both surfaces of the bearing.

b. Install the upper bearing.

NOTICE:



Main bearings come in widths of 21 mm (0.827 in.) and 22.5 mm (0.886 in.). Install the 22.5 mm (0.886 in.) bearings in the No. 1 and No. 5 cylinder block journal positions with the main bearing caps. Install the 21 mm (0.827 in.) bearings in the No. 2, No. 3 and No. 4 positions.

i. Install the upper bearing to the cylinder block as shown in the illustration.

NOTICE:

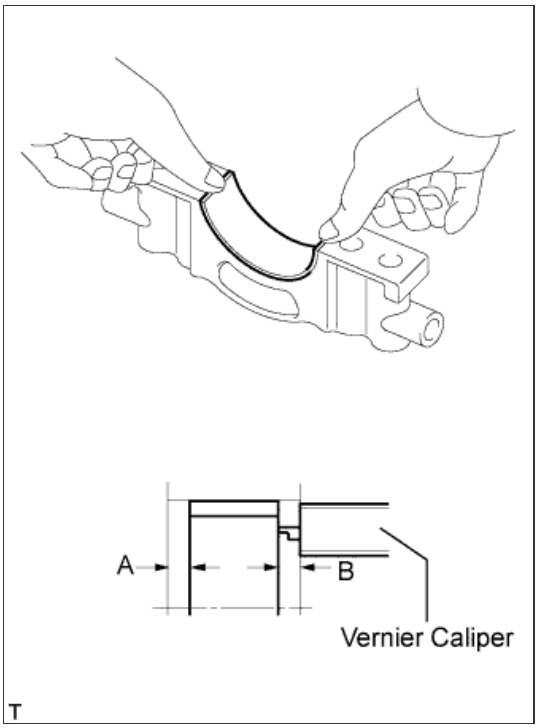
- **Do not apply engine oil to the bearings and the contact surfaces.**
- **Both sides of the oil groove in the cylinder block should be visible through the oil feed holes in the bearing. The amount visible on each side of the holes should be equal.**

- **Do not allow coolant to come into contact with the bearing inner surface.**
- **If any coolant comes into contact with the bearing inner surface, replace the bearing with a new one.**

c. Install the lower bearing.

NOTICE:

- **Be sure to install the selected bearing.**
- **Main bearings come in widths of 21 mm (0.827 in.) and 22.5 mm (0.886 in.). Install the 22.5 mm (0.886 in.) bearings in the No. 1 and No. 5 cylinder block journal positions with the main bearing caps. Install the 21 mm (0.827 in.) bearings in the No. 2, No. 3 and No. 4 positions.**

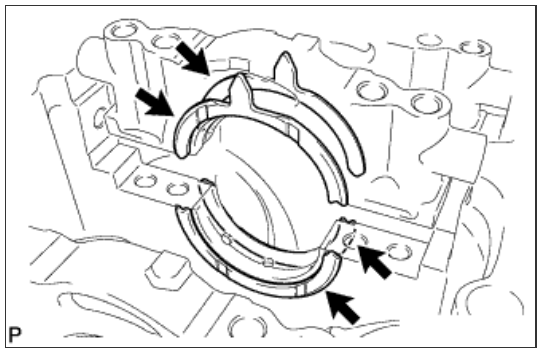


i. Install the lower bearings to the crankshaft bearing caps.

ii. Using a vernier caliper, measure the distance between the crankshaft bearing cap edge and the lower bearing edge.

Dimension A - B or B - A:
0 to 0.7 mm (0 to 0.0276 in.)

NOTICE:



- **Do not apply engine oil to the bearings and the contact surfaces.**
- **Do not allow coolant to come into contact with the bearing inner surface.**
- **If any coolant comes into contact with the bearing inner surface, replace the bearing with a new one.**

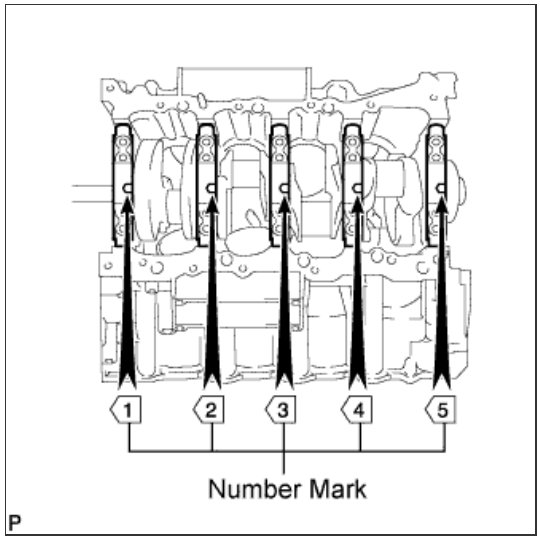
6. INSTALL CRANKSHAFT THRUST WASHER SET

a. Apply engine oil to the thrust washer set.

b. Install the 4 thrust washers to the No. 3 journal position of the cylinder block and crankshaft bearing cap with the oil grooves facing outward.

7. INSTALL CRANKSHAFT

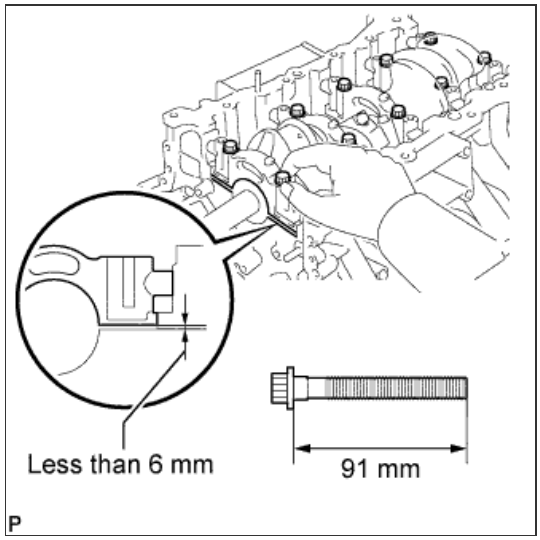
a. Apply engine oil to the upper bearing and lower bearing, then place the crankshaft on the cylinder block.



b. Confirm the front marks and numbers of the crankshaft bearing caps, and install the crankshaft bearing caps on the cylinder block.

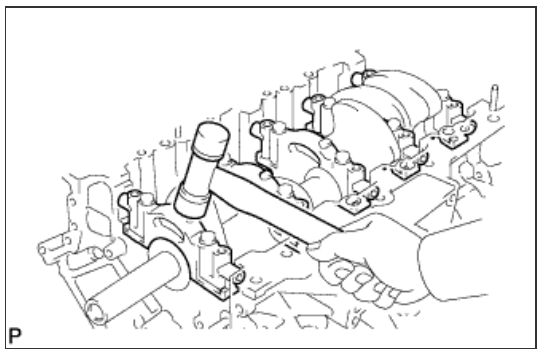
HINT:

A number is marked on each main bearing cap to indicate the installation position.



c. Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.

d. Temporarily install the 10 crankshaft bearing cap bolts to the inside positions.

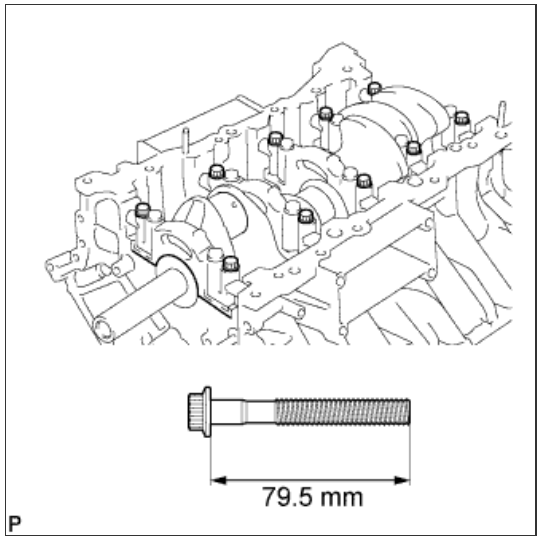


e. Push the crankshaft bearing cap by hand until the clearance between the crankshaft bearing cap and cylinder block is less than 6 mm (0.236 in.).

Standard Bolt length:
91 mm (3.58 in.)

f. Using a plastic-faced hammer, lightly tap the crankshaft bearing cap to ensure a proper fit.

g. Apply a light coat of engine oil to the threads and under the heads of the 10 crankshaft bearing cap bolts.

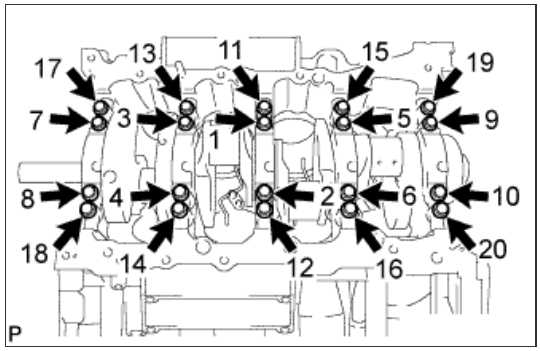


h. Temporarily install the 10 crankshaft bearing cap bolts to the outside positions.

Standard Bolt length:
79.5 mm (3.13 in.)

HINT:

The main bearing cap bolts are tightened in 2 progressive steps.

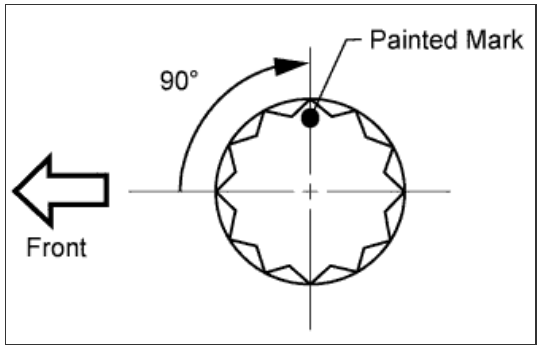


i. Step 1:

i. Uniformly tighten the 20 crankshaft bearing cap bolts in the sequence shown in the illustration.

Torque:
for inside position:
61 N*m{ 622 kgf*cm , 45 ft.*lbf }
for outside position:
27 N*m{ 275 kgf*cm , 20 ft.*lbf }

If any of the main bearing cap bolts does not meet the specified torque, replace it.

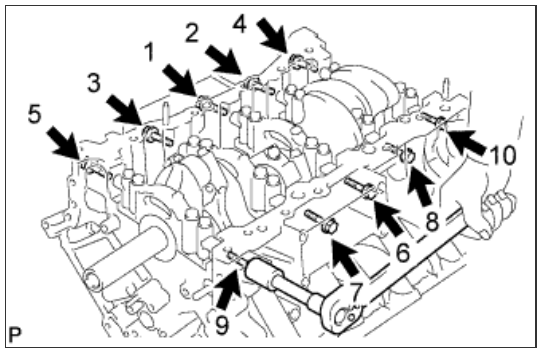


j. Step 2:

i. Mark the front of the bearing cap bolts with paint.

ii. Tighten the bearing cap bolts 90° in the order shown in step 1.

iii. Check that the painted marks are now at a 90° angle to the front.



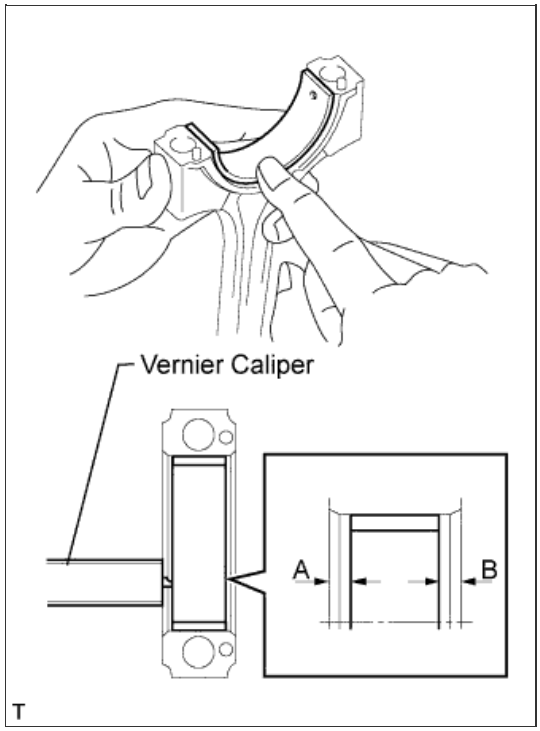
k. Check that the crankshaft turns smoothly.

l. Install and uniformly tighten the 10 crankshaft bearing cap bolts and 10 new seal washers in several steps in the sequence shown in the illustration.

Torque:
45 N*m{ 459 kgf*cm , 33 ft.*lbf }

m. Check that the crankshaft turns smoothly.

8. INSTALL CONNECTING ROD BEARING



a. Install the connecting rod bearings to the connecting rods and bearing caps.

b. Using a vernier caliper, measure the distance between the connecting rod and bearing cap edges, and each connecting rod bearing edge.

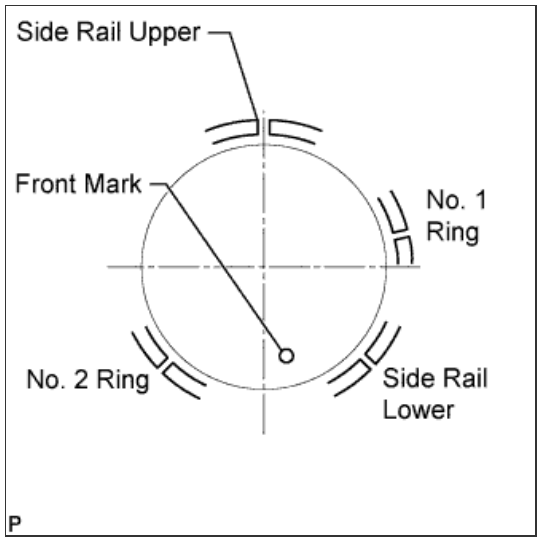
Dimension A - B or B - A:
0 to 0.7 mm (0 to 0.0276 in.)

NOTICE:

- **Do not apply engine oil to the bearings and the contact surfaces.**
- **Do not allow coolant to come into contact with the bearing inner surface.**
- **If any coolant comes into contact with the bearing inner surface, replace the bearing with a new one.**

9. INSTALL PISTON AND CONNECTING ROD

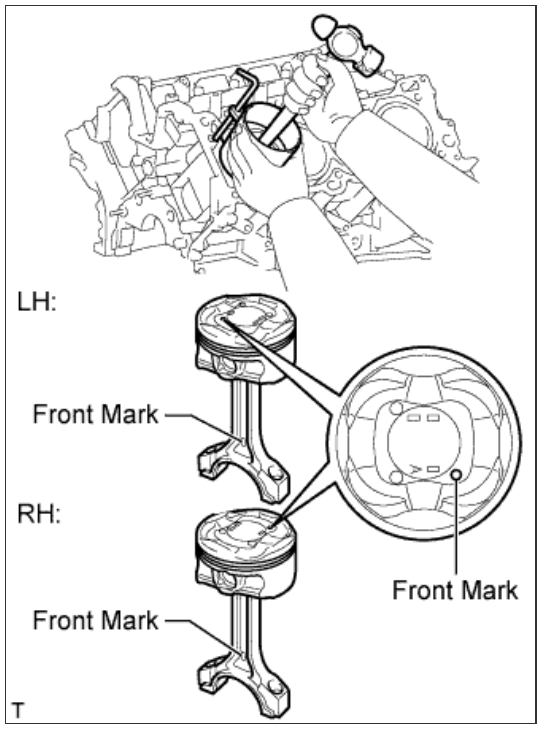
a. Apply engine oil to the cylinder walls, the pistons, and the surfaces of the connecting rod bearings.



b. Position the piston rings so that the ring ends are as shown in the illustration.

HINT:

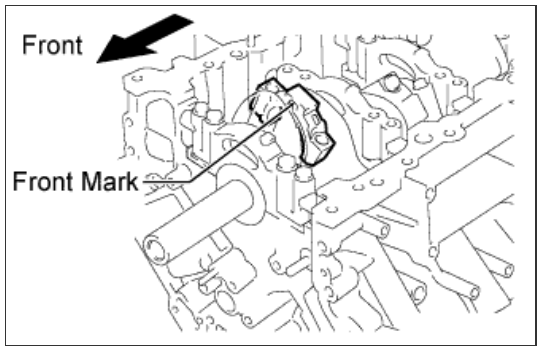
The expander ends can be placed anywhere.



NOTICE:

Do not align the ring ends.

c. Using a hammer handle and piston ring compressor, push the correctly numbered piston and connecting rod into the cylinder with the front mark of the



piston facing forward.

d. Place the connecting rod cap on the connecting rod.

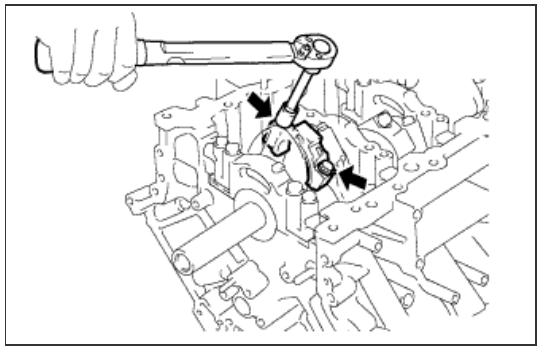
i. Match the numbered connecting rod cap with the connecting rod.

ii. Place the connecting rod cap on the connecting rod, and check that the front mark of the connecting rod cap is facing the direction indicated in the chart below.

Front Mark:

Item	Front Mark
Bank 1	Front side
Bank 2	Rear side

e. Apply a light coat of engine oil to the threads and under the heads of the connecting rod cap bolts.



f. Temporarily install the connecting rod cap bolts.

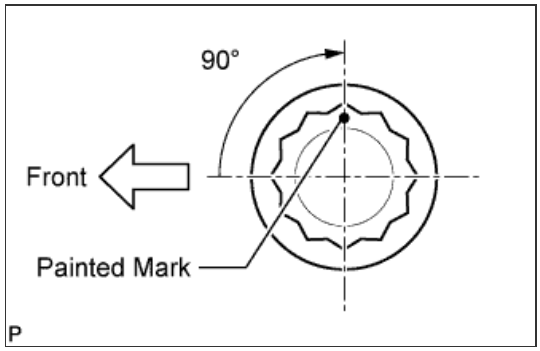
HINT:

The connecting rod cap bolts are tightened in 2 progressive steps.

g. Step 1:

i. Install and alternately tighten the bolts of the connecting rod cap in several steps.

Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }



h. Step 2:

   i. Mark the front side of each connecting rod cap bolt with paint.

   ii. Tighten the cap bolts 90° as shown in the illustration in the order in step 1.

   iii. Check that the painted marks are now at a 90° angle to the front.

i. Check that the crankshaft turns smoothly.

for Preparation Click here

CAUTION:

- **Before working on the fuel system, disconnect the cable from the negative (-) battery terminal.**
- **Do not smoke or be near an open flame when working on the fuel system.**
- **Keep gasoline away from rubber and leather parts.**

1.DISCHARGE FUEL SYSTEM PRESSURE

CAUTION:

- **Do not disconnect any part of the fuel system until you have discharged the fuel system pressure.**
- **After discharging the fuel pressure, place a cloth or equivalent over fittings as you separate them to reduce the risk of fuel spray on yourself or in the engine compartment.**

a. Remove the engine room side cover LH.

b. Remove the engine room relay block cover.

c. Remove the circuit opening relay (C/OPN).

d. Start the engine. After the engine has stopped on its own, turn the engine switch off.

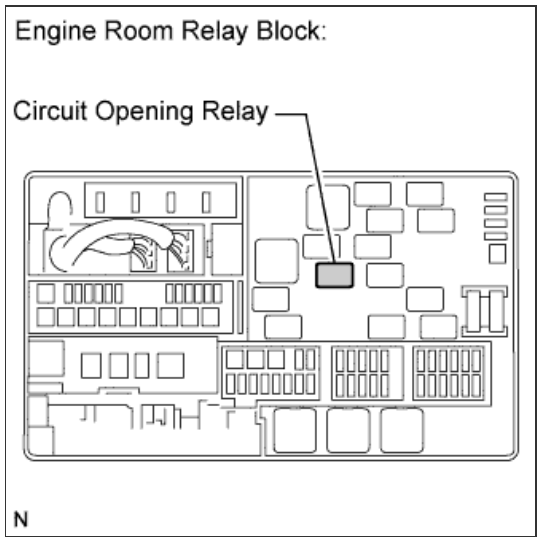
HINT:

If DTC P0230 is output, clear the DTC (Click here).

e. Crank the engine, then check that the engine does not start.

f. Loosen the fuel tank cap, then discharge the pressure in the fuel tank completely.

g. Disconnect the cable from the negative (-) battery terminal.



NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

h. Install the circuit opening relay (C/OPN).

i. Install the engine room relay block cover.

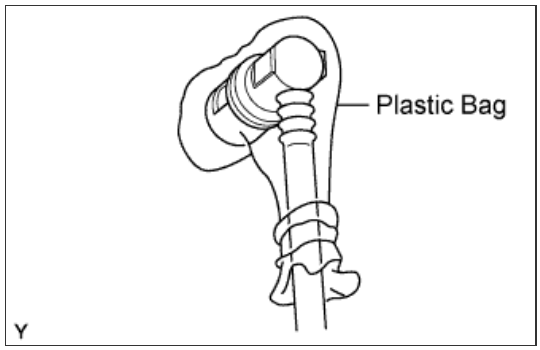
j. Install the engine room side cover LH.

2.FUEL SYSTEM

a. When disconnecting the high fuel pressure line, a large amount of gasoline will spill out. Follow these procedures.

i. Perform the "Discharge Fuel System Pressure" procedures above.

ii. Put a container under the connecting part of the pressure line.

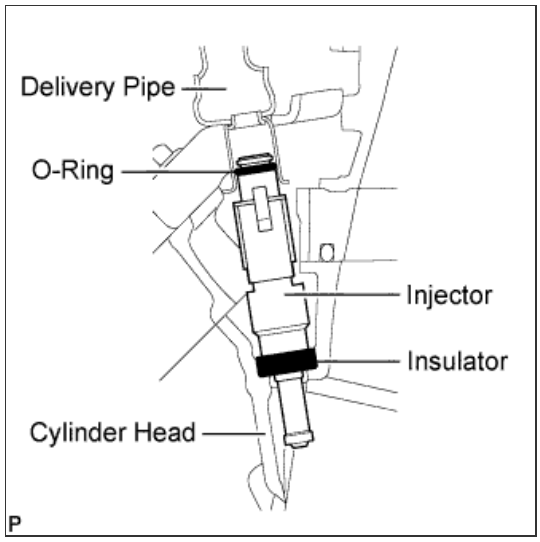


iii. Slowly loosen the connection.

iv. Disconnect the connection.

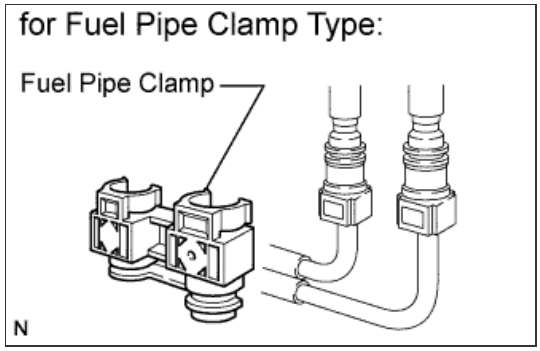
v. Plug the connection with a rubber plug and cover it with a plastic bag.

b. Observe these precautions when installing the injectors:



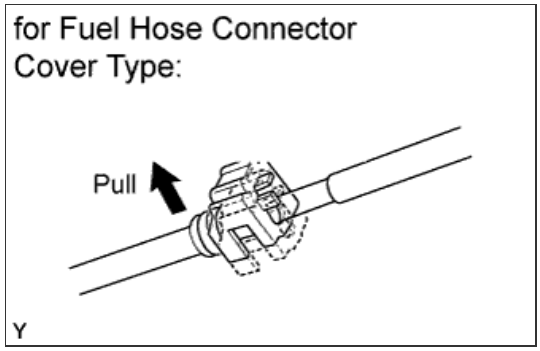
- Never reuse the O-ring.
- When placing a new O-ring on the injector, do not damage it.
- Coat a new O-ring with spindle oil or gasoline before installing it. Do not use engine oil, gear oil or brake oil.

c. Install the injector to the delivery pipe and cylinder head as shown in the illustration.



NOTICE:

Before installing the injector, apply spindle oil or gasoline on the place where the delivery pipe contacts the O-ring of the injector.

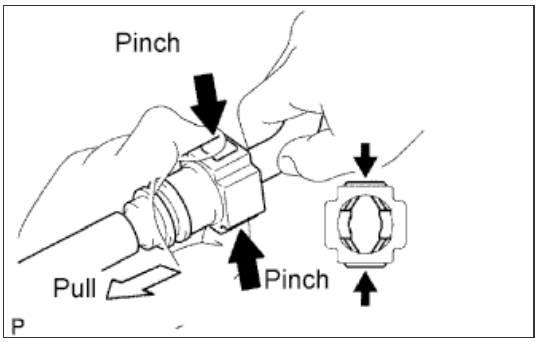


d. Observe these precautions when disconnecting the fuel tube connector (for quick type A).

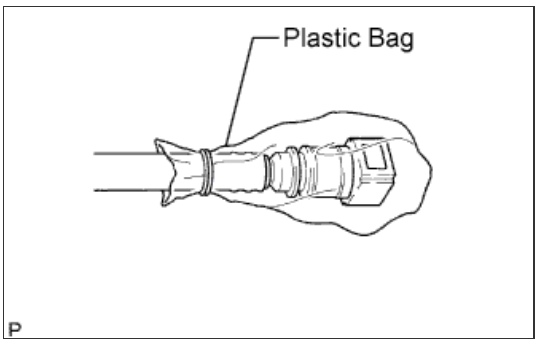
i. for Fuel Pipe Clamp Type:
Remove the fuel pipe clamp from the fuel tube connector.

ii. for Fuel Hose Connector Cover Type:
Detach the lock claw by lifting up the cover, as shown in the illustration.

iii. Check for dirt or mud on the pipe and around the connector before disconnection. Clean if necessary.



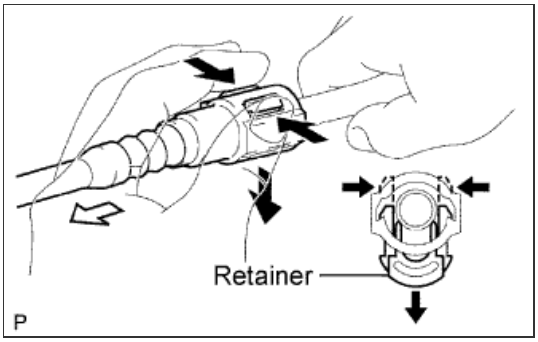
iv. Pinch the connector and disconnect the connector and pipe.
If the connector and the pipe are stuck together, pinch the connector, then push and pull the pipe to disconnect the pipe and pull it out.



NOTICE:

Do not use any tools in this procedure.

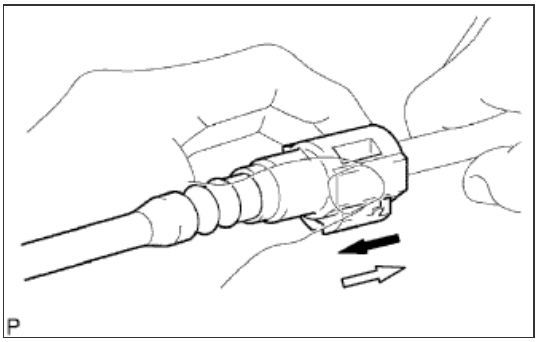
v. Check for dirt or mud on the seal surface of the disconnected pipe. Clean if necessary.



vi. To protect the disconnected pipe and connector from damage and contamination, cover it with a plastic bag.

e. Observe these precautions when disconnecting the fuel tube connector (for quick type B).

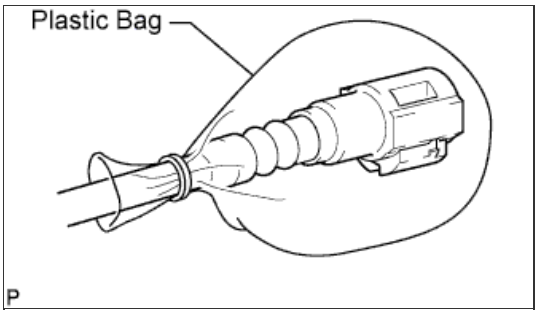
i. Check that there is no damage or foreign matter on the part of the pipe that contacts the connector.



ii. Detach the 2 claws of the connector retainer. Push down on the connector and disconnect it from the pipe.

HINT:

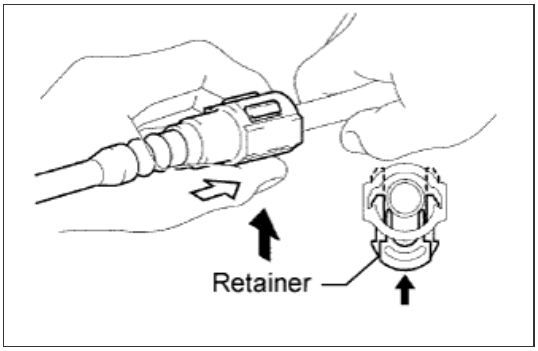
If the connector and pipe are stuck, pinch the fuel pipe by hand, and push and pull the connector to disconnect it.



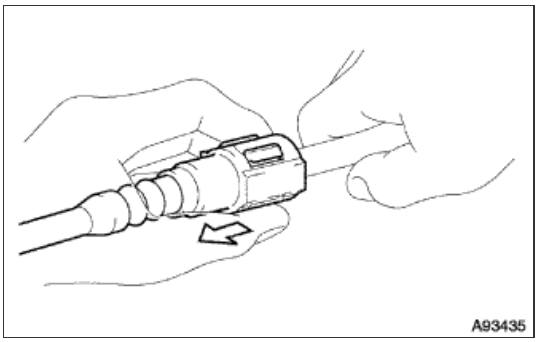
NOTICE:

Do not use any tools in this procedure.

iii. Check for foreign matter on the seal surface of the disconnected pipe. Clean it if necessary.



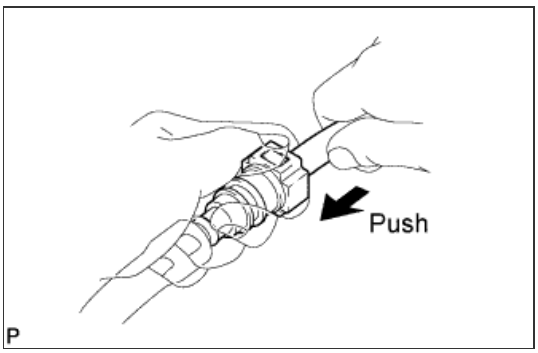
iv. To protect the disconnected pipe and connector from damage and foreign matter, cover it with a plastic bag.



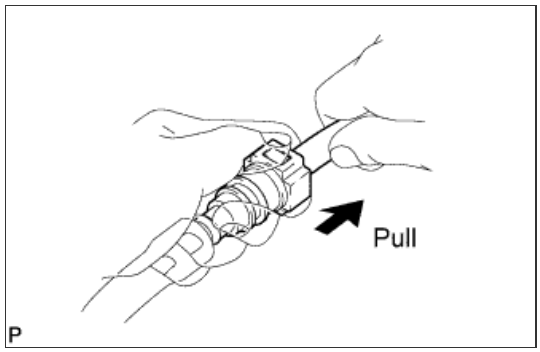
f. Observe these precautions when connecting the fuel tube connector (for quick type B).

i. Check for foreign matter on the pipe and around the connector before connecting it. Clean it if necessary.

ii. Align the axis of the connector with the axis of the pipe. Push the pipe into the connector, and push up on the retainer.

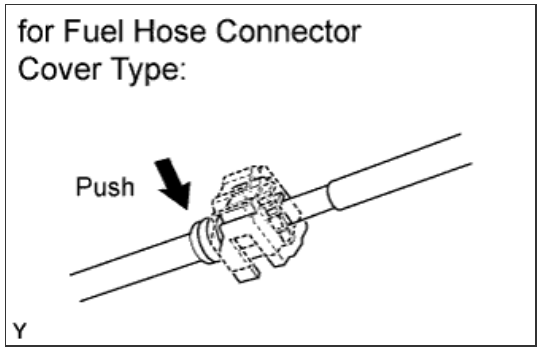


iii. After connecting the pipe and connector, try to pull them apart to confirm that they are securely connected.



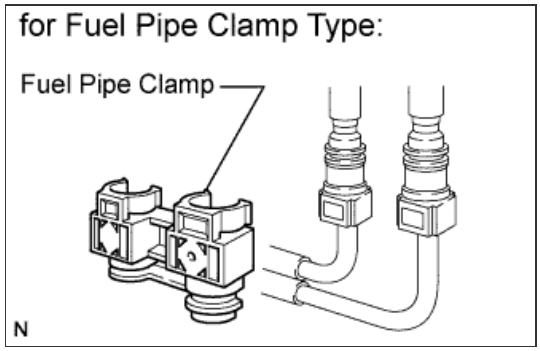
g. Observe these precautions when connecting the fuel tube connector (for quick type A).

i. Check that there is no damage or contamination in the connection part of the pipe.



ii. Align the axis of the connector with the axis of the pipe. Push the pipe into the connector until the connector makes a "click" sound. If the connection is tight, apply a small amount of fresh spindle oil or gasoline on the tip of the pipe.

iii. After having finished the connection, try to pull apart the pipe and the connector to confirm that they are securely connected.



iv. for Fuel Hose Connector Cover Type:
Attach the lock claw to the connector by pushing down on the cover, as shown in the illustration.

v. for Fuel Pipe Clamp Type:
Install the fuel pipe clamp to the connector.

vi. Check that there is no fuel leakage.

3.CHECK FOR FUEL LEAK

a. Check that there are no fuel leaks after performing maintenance anywhere on the fuel system (Click here).

for Preparation Click here

CAUTION:

- **Before working on the fuel system, disconnect the cable from the negative (-) battery terminal.**
- **Do not smoke or be near an open flame when working on the fuel system.**
- **Keep gasoline away from rubber and leather parts.**

1.DISCHARGE FUEL SYSTEM PRESSURE

CAUTION:

- **Do not disconnect any part of the fuel system until you have discharged the fuel system pressure.**
- **After discharging the fuel pressure, place a cloth or equivalent over fittings as you separate them to reduce the risk of fuel spray on yourself or in the engine compartment.**

a. Remove the engine room side cover LH.

b. Remove the engine room relay block cover.

c. Remove the circuit opening relay (C/OPN).

d. Start the engine. After the engine has stopped on its own, turn the engine switch off.

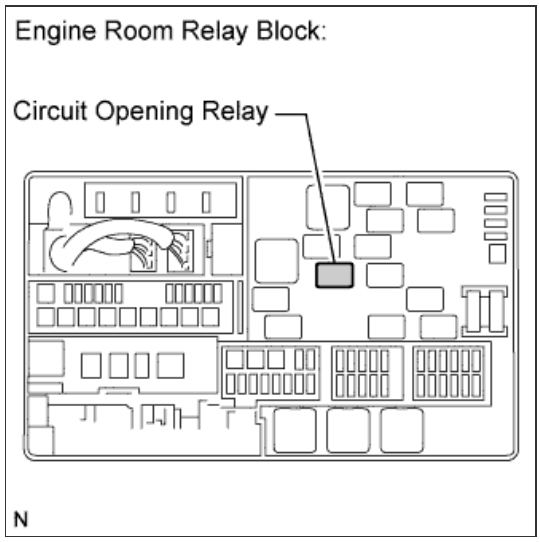
HINT:

If DTC P0230 is output, clear the DTC (Click here).

e. Crank the engine, then check that the engine does not start.

f. Loosen the fuel tank cap, then discharge the pressure in the fuel tank completely.

g. Disconnect the cable from the negative (-) battery terminal.



NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

h. Install the circuit opening relay (C/OPN).

i. Install the engine room relay block cover.

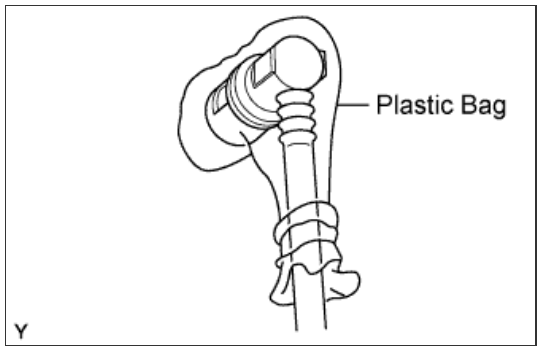
j. Install the engine room side cover LH.

2.FUEL SYSTEM

a. When disconnecting the high fuel pressure line, a large amount of gasoline will spill out. Follow these procedures.

i. Perform the "Discharge Fuel System Pressure" procedures above.

ii. Put a container under the connecting part of the pressure line.

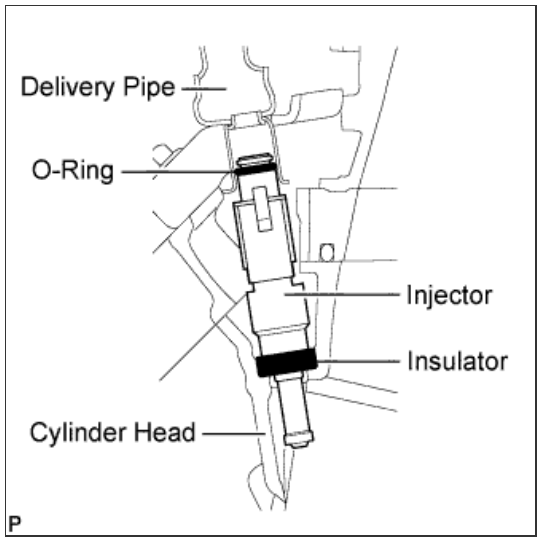


iii. Slowly loosen the connection.

iv. Disconnect the connection.

v. Plug the connection with a rubber plug and cover it with a plastic bag.

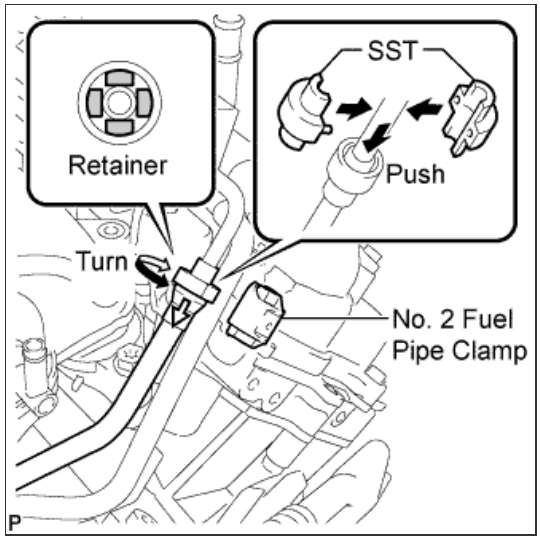
b. Observe these precautions when installing the injectors:



- Never reuse the O-ring.
- When placing a new O-ring on the injector, do not damage it.
- Coat a new O-ring with spindle oil or gasoline before installing it. Do not use engine oil, gear oil or brake oil.

c. Install the injector to the delivery pipe and cylinder head as shown in the illustration.

NOTICE:



Before installing the injector, apply spindle oil or gasoline on the place where the delivery pipe contacts the O-ring of the injector.

d. Observe these precautions when disconnecting the fuel tube connector (for metallic type):

NOTICE:

Do not forcibly bend or twist the fuel main tube.

i. Remove the No. 2 fuel pipe clamp.

NOTICE:

Do not reuse the No. 2 fuel pipe clamp.

ii. Wipe off any dirt on the fuel tube connector.

iii. Hold the fuel tube connector and install SST.

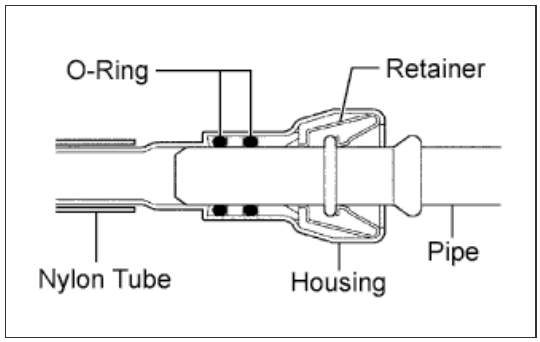
SST
09268-21011

iv. Turn SST to align the retainer inside the fuel tube connector with the chamfered part of SST.

v. Insert SST into the fuel tube connector and hold it. Then push the fuel tube connector toward SST.

vi. Mount the retainer of the fuel tube connector onto the chamfered part of SST.

vii. Slide SST and the fuel tube connector together towards the fuel tube until they make a "click" sound, and then disconnect the fuel tube.



HINT:

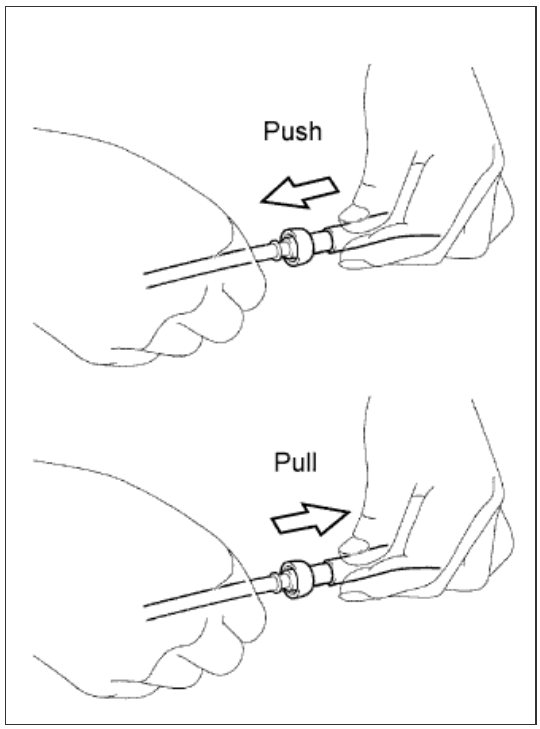
The structure of a fuel tube connector is as shown in the illustration.

viii. Drain the fuel remaining inside the fuel tube.

ix. Cover the fuel tube and fuel pipe with a plastic bag to protect the

disconnected parts.

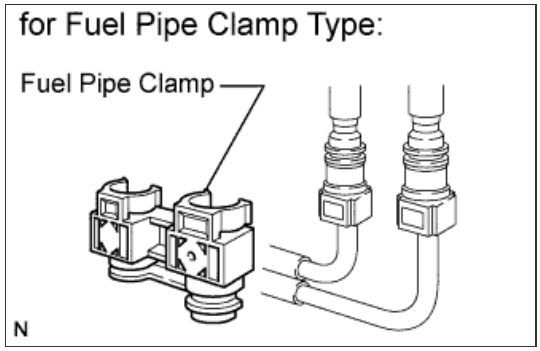
e. Observe these precautions when connecting the fuel tube connector (for metallic type):



i. Check if there is any damage or foreign objects on the pipe connection area.

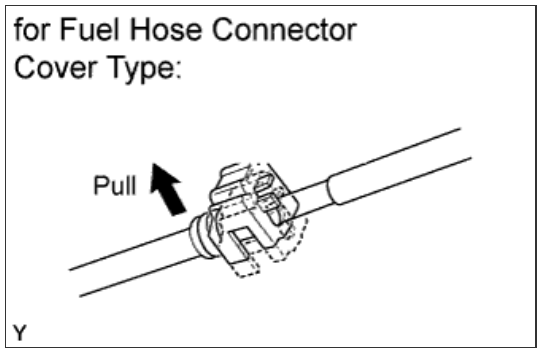
ii. Match the axis of the connector with the axis of the pipe, and push the pipe into the connector until the connector makes a "click" sound. If the pipe is difficult to push into the connector, apply a small amount of clean engine oil to the tip of the pipe.

iii. After connecting, check if the pipe and the connector are securely connected by pulling on them.



iv. Install a new No. 2 fuel pipe clamp.

v. Check that there is no fuel leakage.

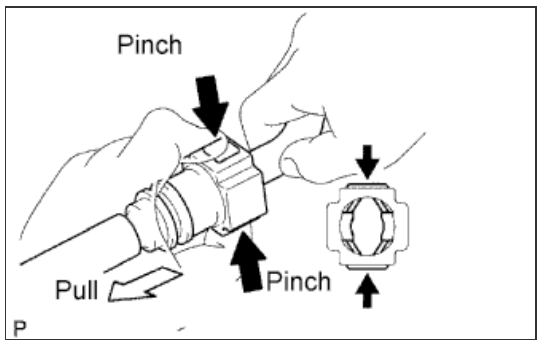


f. Observe these precautions when disconnecting the fuel tube connector (for quick type A).

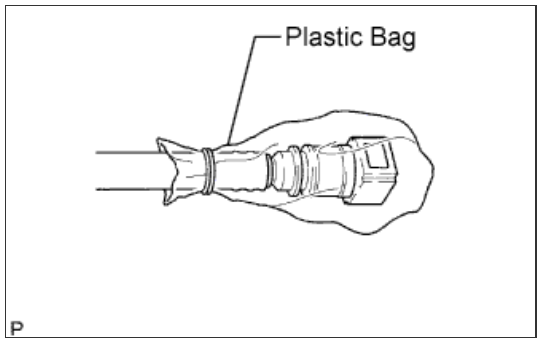
i. for Fuel Pipe Clamp Type:
Remove the fuel pipe clamp from the fuel tube connector.

ii. for Fuel Hose Connector Cover Type:
Detach the lock claw by lifting up the cover, as shown in the illustration.

iii. Check for dirt or mud on the pipe and around the connector before disconnection. Clean if necessary.



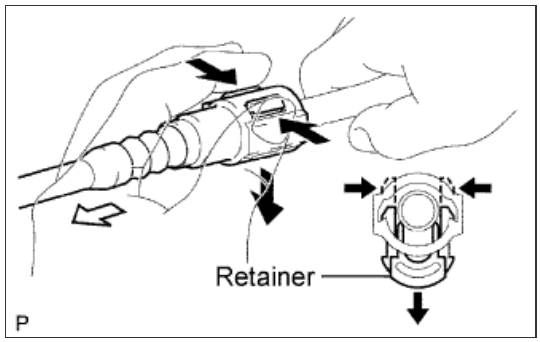
iv. Pinch the connector and disconnect the connector and pipe.
If the connector and the pipe are stuck together, pinch the connector, then push and pull the pipe to disconnect the pipe and pull it out.



NOTICE:

Do not use any tools in this procedure.

v. Check for dirt or mud on the seal surface of the disconnected pipe. Clean if necessary.

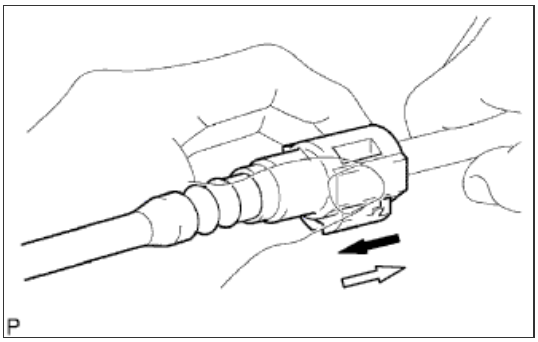


vi. To protect the disconnected pipe and connector from damage and contamination, cover it with a plastic bag.

g. Observe these precautions when disconnecting the fuel tube connector (for quick type B).

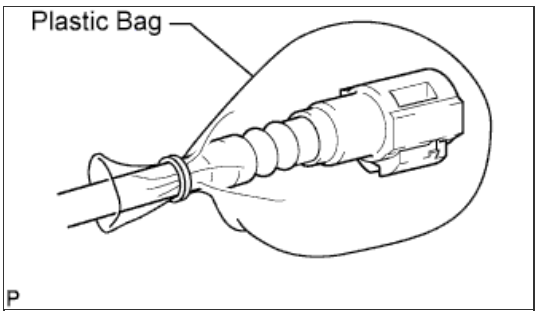
i. Check that there is no damage or foreign matter on the part of the pipe that contacts the connector.

ii. Detach the 2 claws of the connector retainer. Push down on the connector and disconnect it from the pipe.



HINT:

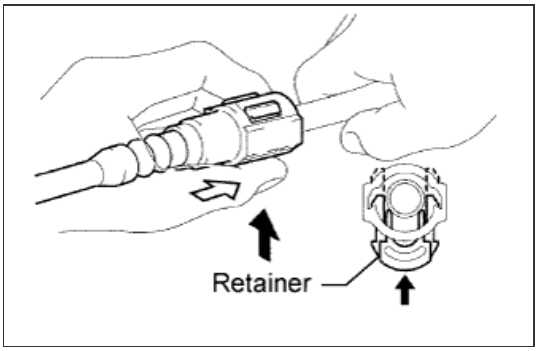
If the connector and pipe are stuck, pinch the fuel pipe by hand, and push and pull the connector to disconnect it.



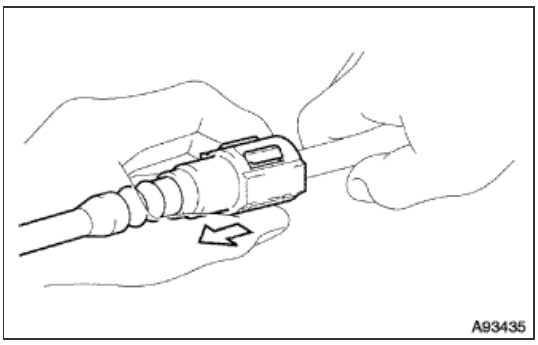
NOTICE:

Do not use any tools in this procedure.

iii. Check for foreign matter on the seal surface of the disconnected pipe. Clean it if necessary.



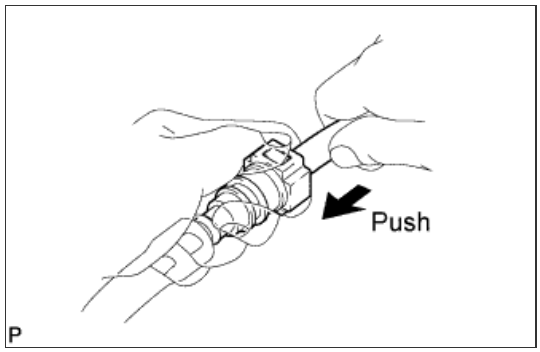
iv. To protect the disconnected pipe and connector from damage and foreign matter, cover it with a plastic bag.



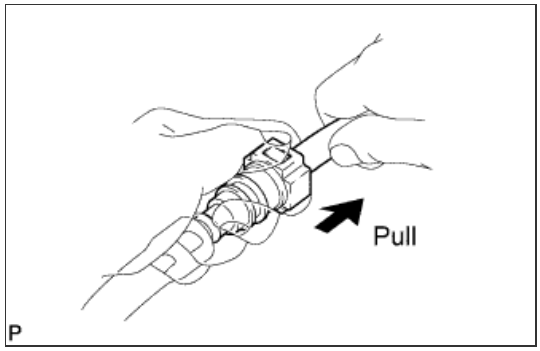
h. Observe these precautions when connecting the fuel tube connector (for quick type B).

i. Check for foreign matter on the pipe and around the connector before connecting it. Clean it if necessary.

ii. Align the axis of the connector with the axis of the pipe. Push the pipe into the connector, and push up on the retainer.

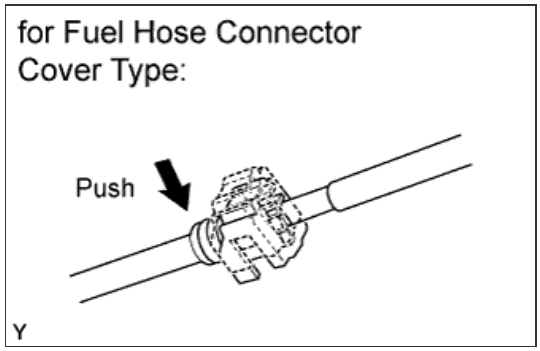


iii. After connecting the pipe and connector, try to pull them apart to confirm that they are securely connected.



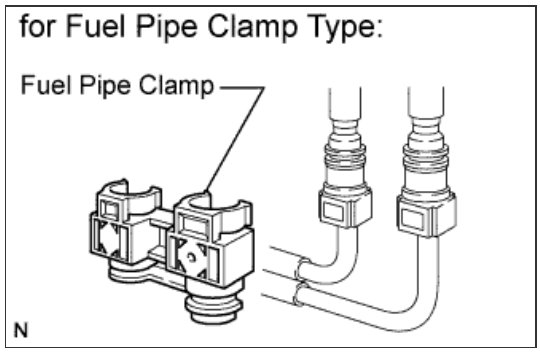
i. Observe these precautions when connecting the fuel tube connector (for quick type A).

i. Check that there is no damage or contamination in the connection part of the pipe.



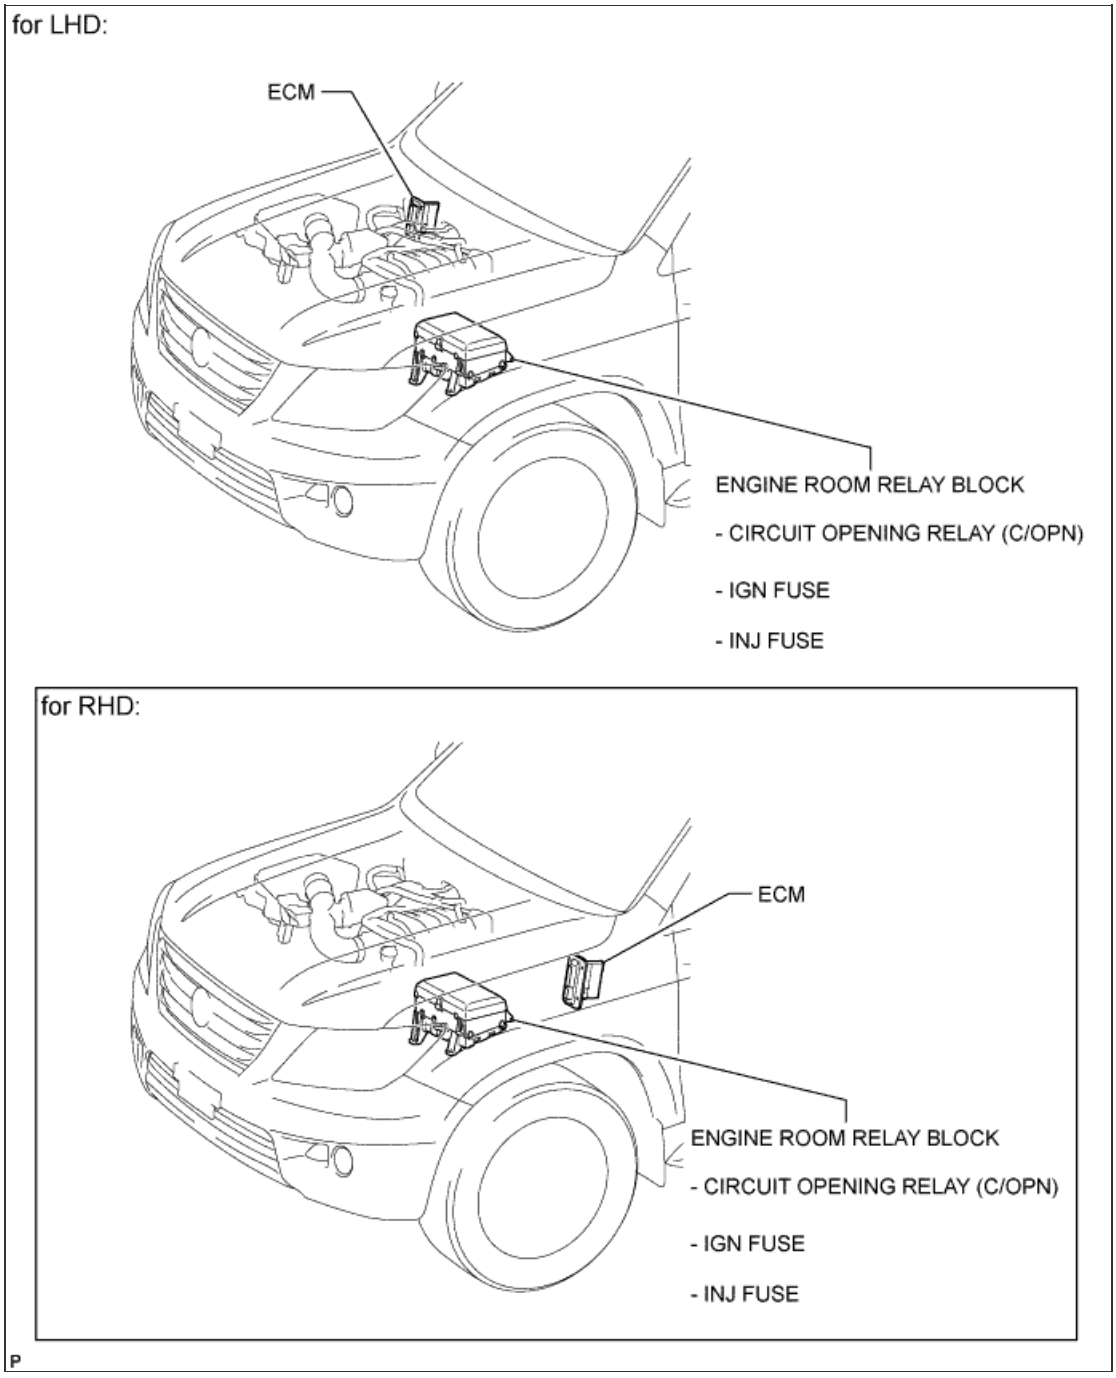
ii. Align the axis of the connector with the axis of the pipe. Push the pipe into the connector until the connector makes a "click" sound. If the connection is tight, apply a small amount of fresh spindle oil or gasoline on the tip of the pipe.

iii. After having finished the connection, try to pull apart the pipe and the connector to confirm that they are securely connected.

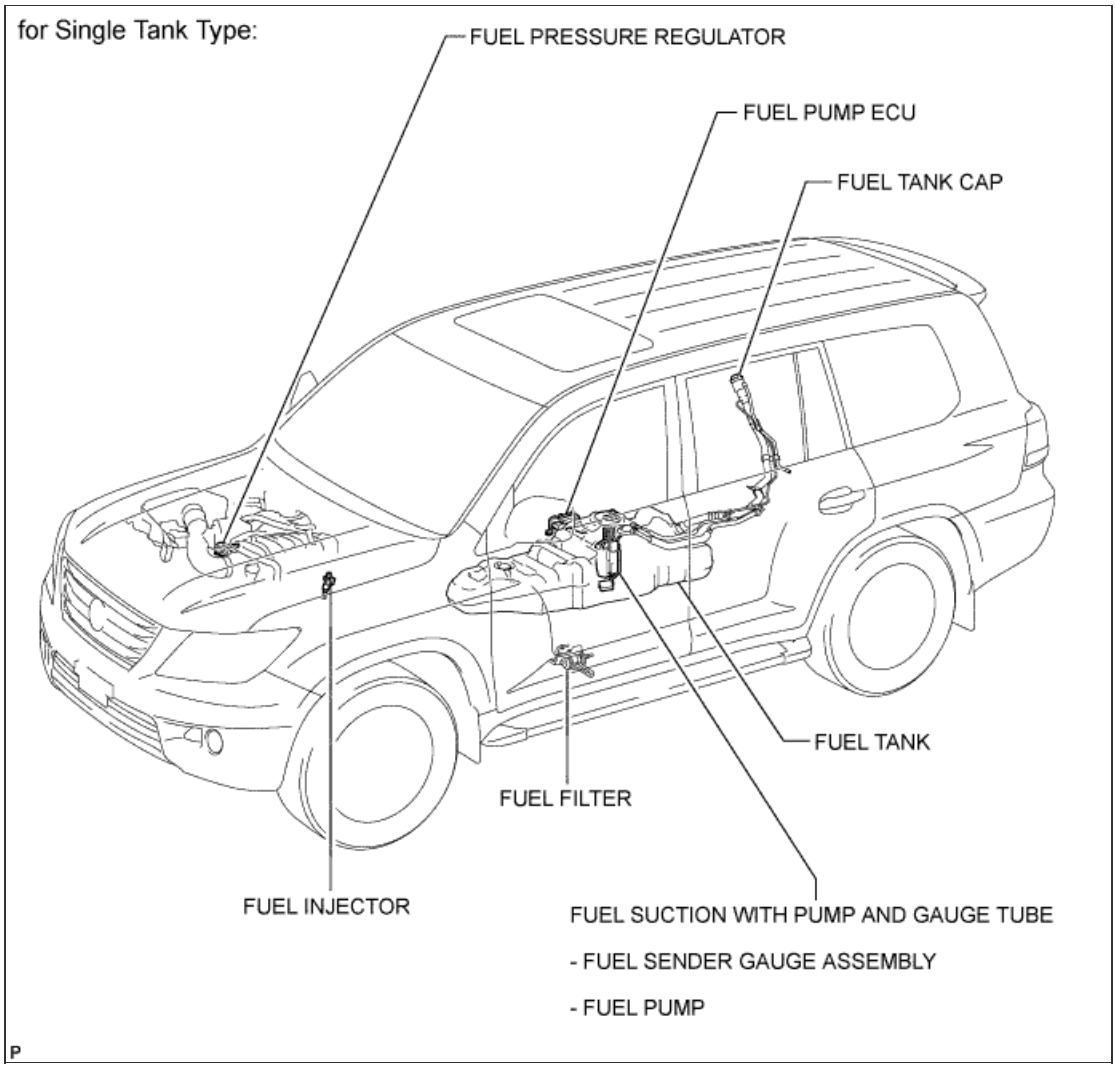


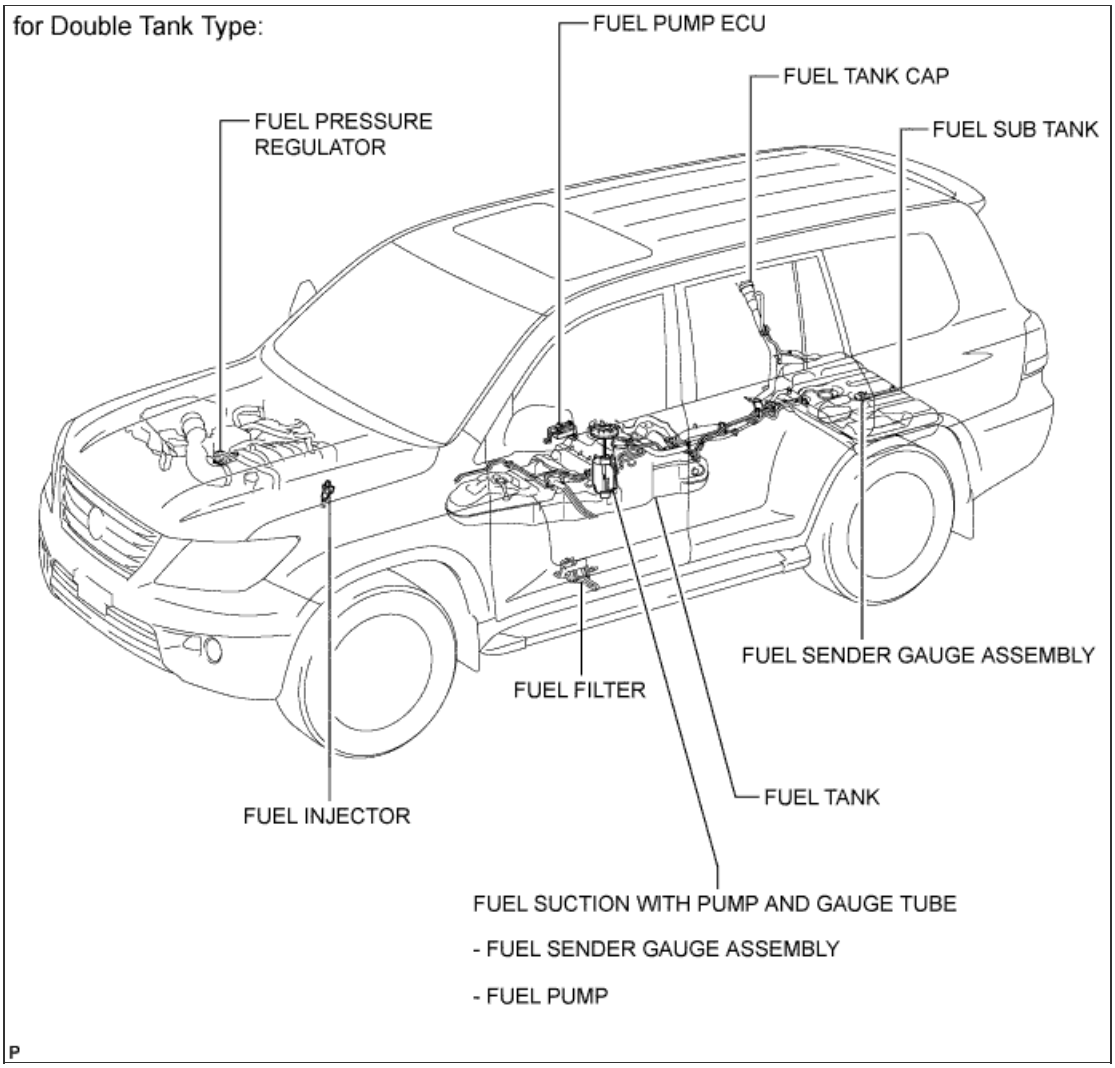
iv. for Fuel Hose Connector Cover Type:
Attach the lock claw to the connector by pushing down on the cover, as shown in the illustration.

v. for Fuel Pipe Clamp Type:
Install the fuel pipe clamp to the connector.



vi. Check that there is no fuel leakage.





3.CHECK FOR FUEL LEAK

a. Check that there are no fuel leaks after performing maintenance anywhere on the fuel system (Click here).

for Preparation Click here

1. CHECK FUEL PUMP OPERATION AND FOR FUEL LEAK

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

NOTICE:

Do not start the engine.

c. Turn the intelligent tester on.

d. Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Fuel Pump Speed Control.

e. Check the fuel pump operation.

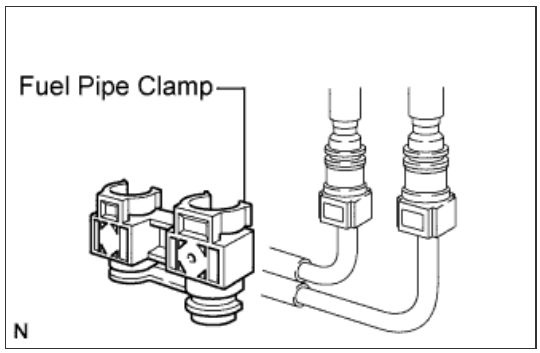
i. Check for pressure in the fuel inlet tube from the fuel line. Check that the sound of fuel flowing in the fuel tank can be heard.
If there is no sound, check the integration relay, fuel pump, ECM and wiring connector.

f. Check for fuel leak.

i. Check that there are no fuel leaks after performing maintenance anywhere on the system.
If there are fuel leaks, repair or replace parts as necessary.

2. CHECK FUEL PRESSURE

a. Check that the battery voltage is 11 to 14 V.

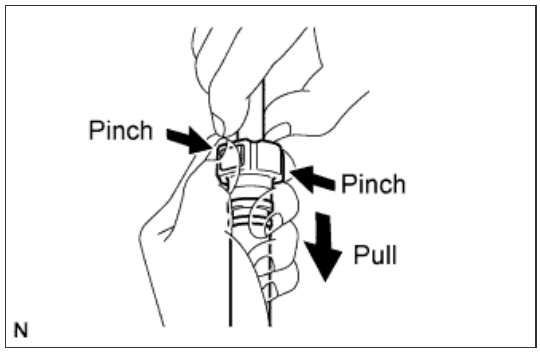


b. Perform the "Discharge Fuel System Pressure" procedures (Click here).

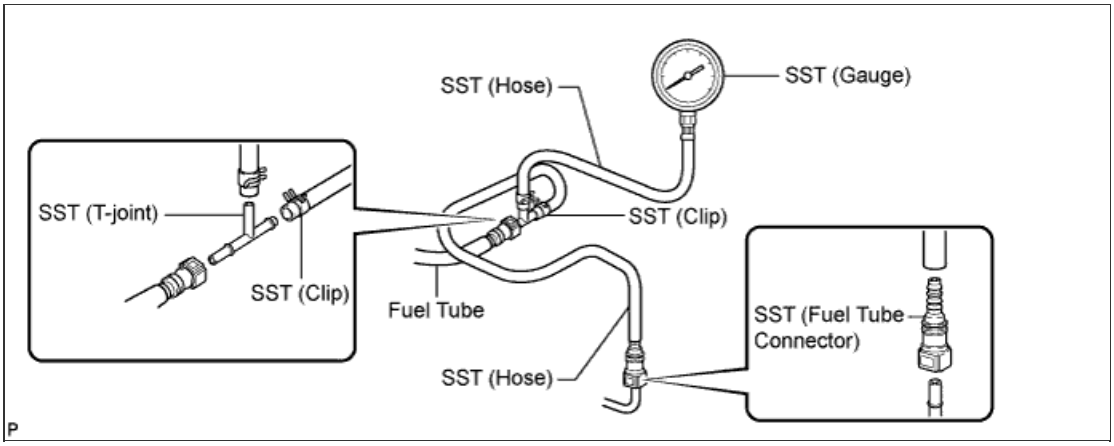
c. Disconnect the cable from the negative (-) battery terminal.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).



d. Remove the fuel pipe clamp from the fuel tube connector.



e. Pinch and pull the fuel tube (fuel tube connector) to disconnect it.

CAUTION:

- **Always read the precautions (Click here) before disconnecting the fuel tube connector (quick type).**
- **The fuel tube may spray fuel as a result of pressure that remains in it. Do not allow fuel to be sprayed in the engine compartment.**

f. Install SST (pressure gauge) as shown in the illustration.

SST
09268-31012 (09268-41120, 09268-41500, 90467-13001, 95336-08070)
09268-45014 (09268-41200, 09268-41220)

g. Wipe off any gasoline.

h. Reconnect the cable to the negative (-) battery terminal.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

i. Operate the fuel pump.

i. Connect the intelligent tester to the DLC3.

ii. Turn the engine switch on (IG).

NOTICE:

Do not start the engine.

iii. Turn the intelligent tester on.

iv. Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Fuel Pump Speed Control.

j. Measure the fuel pressure.

Standard fuel pressure:
281 to 287 kPa (2.87 to 2.93 kgf/cm ^{2}, 41 to 42 psi)

If the pressure is higher than the specification, replace the fuel pressure regulator.
If the pressure is below the specification, check the fuel hoses and connections, fuel pump, fuel filter and fuel pressure regulator assembly.

k. Start the engine.

l. Measure the fuel pressure.

Standard fuel pressure:
281 to 287 kPa (2.87 to 2.93 kgf/cm ^{2}, 41 to 42 psi)

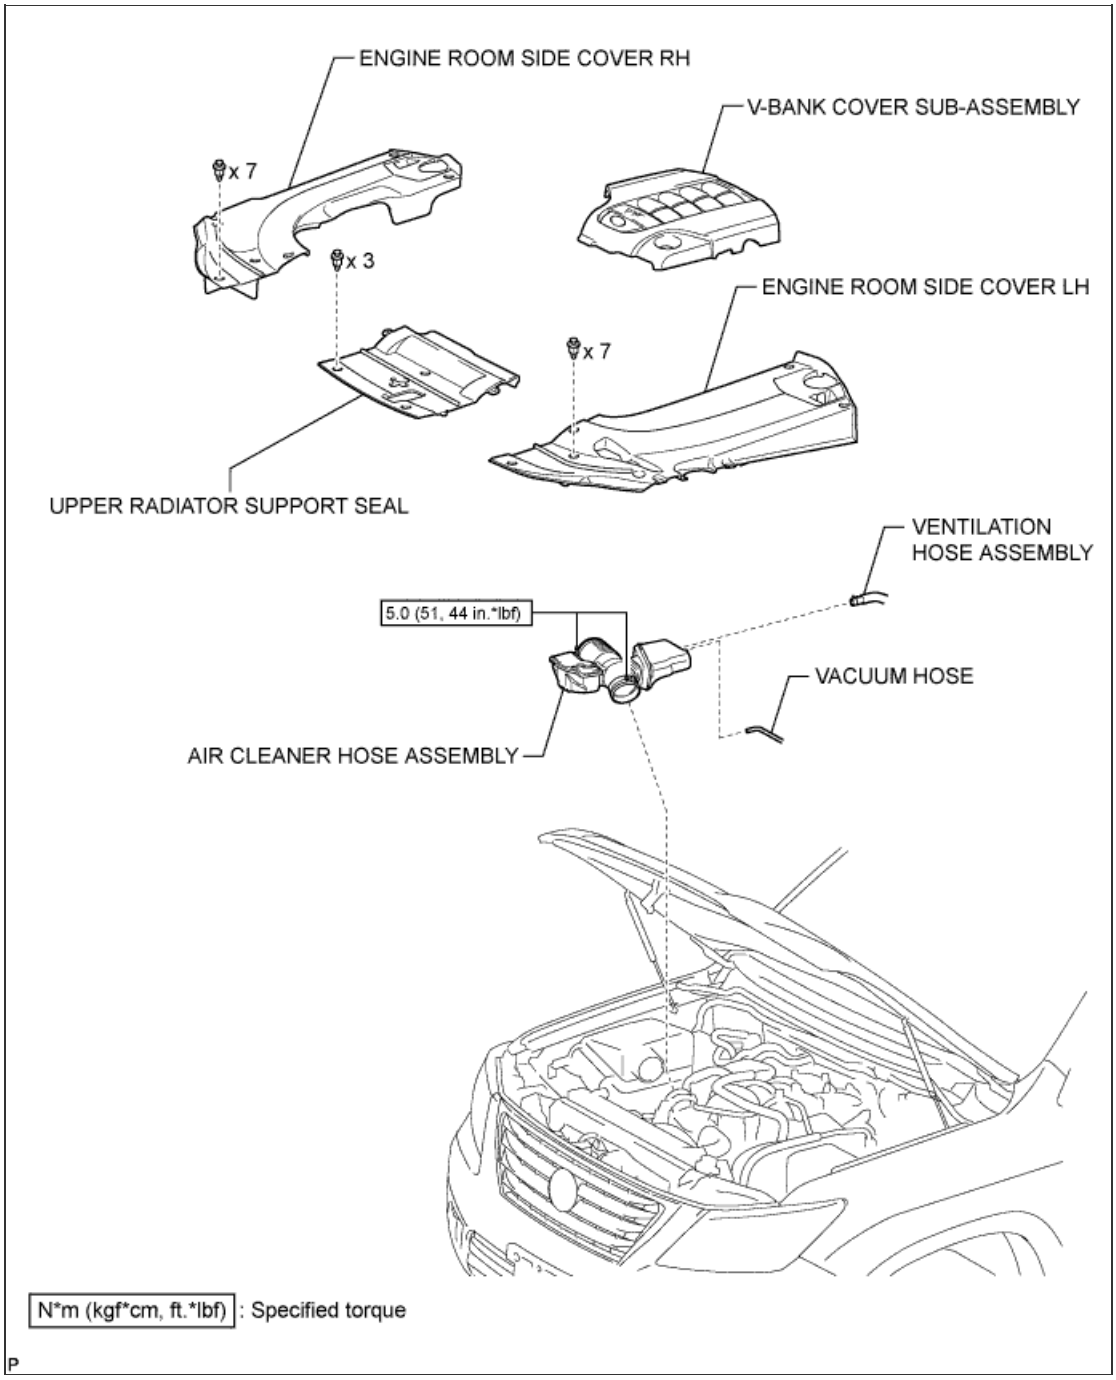
If the pressure is not as specified, check the fuel pump, pressure regulator and/or injectors.

m. Stop the engine.

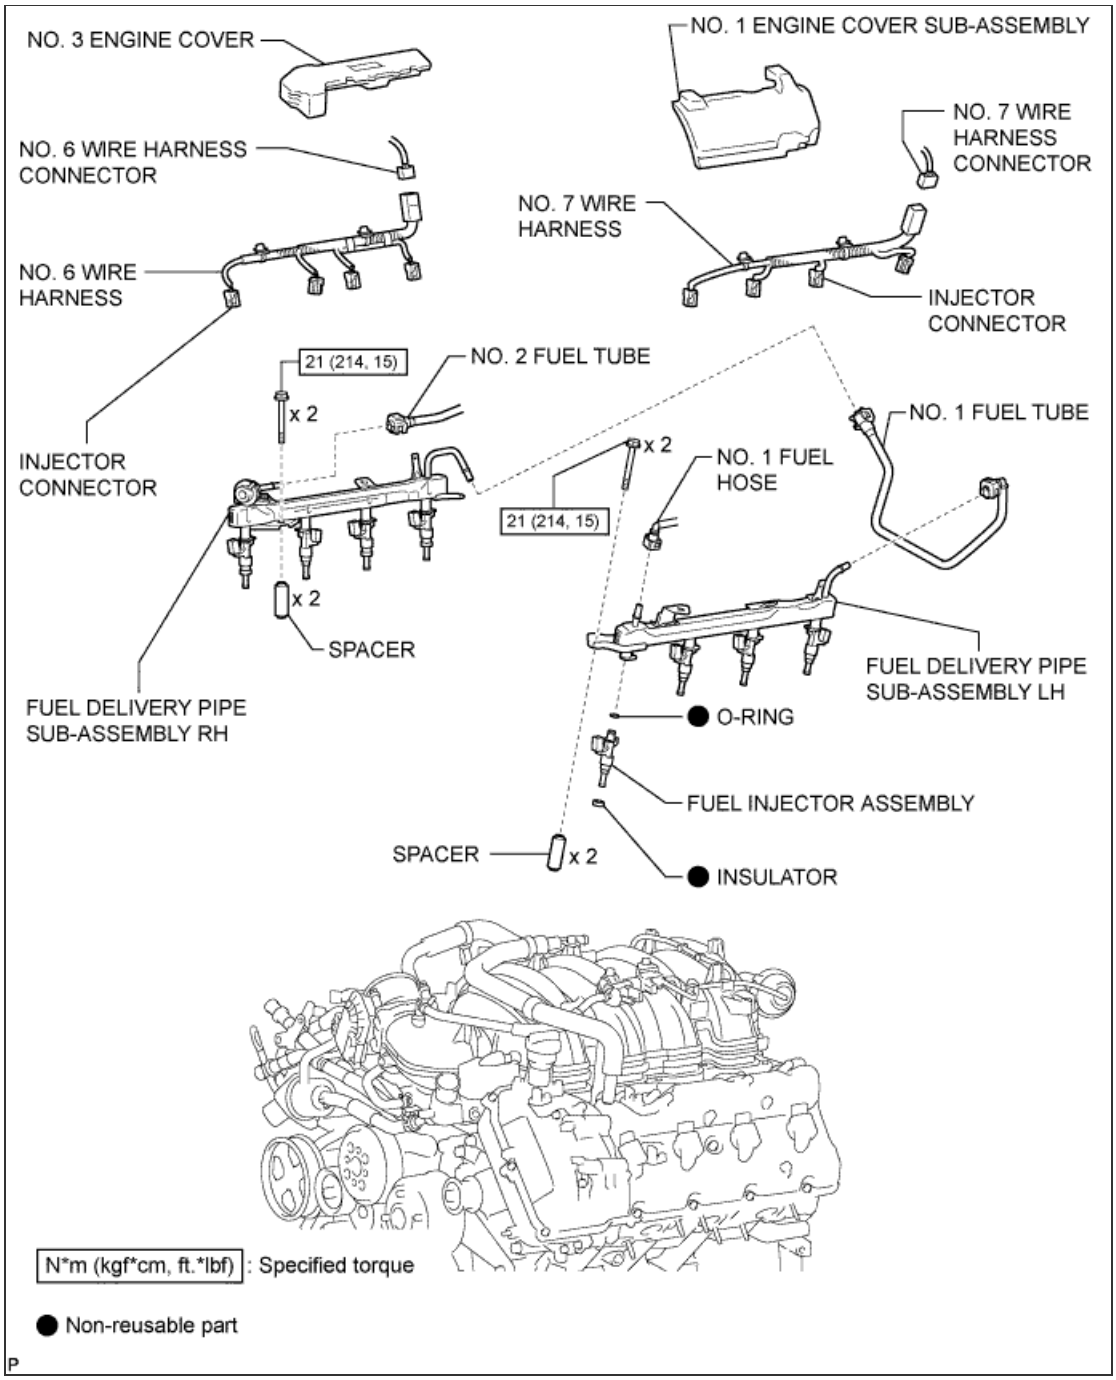
n. Check that the fuel pressure remains as specified for 5 minutes after the engine has stopped.

Standard fuel pressure:
147 kPa (1.5 kgf/cm^2, 21 psi) or more

If the pressure is not as specified, check the fuel pump, pressure regulator and/or injectors.

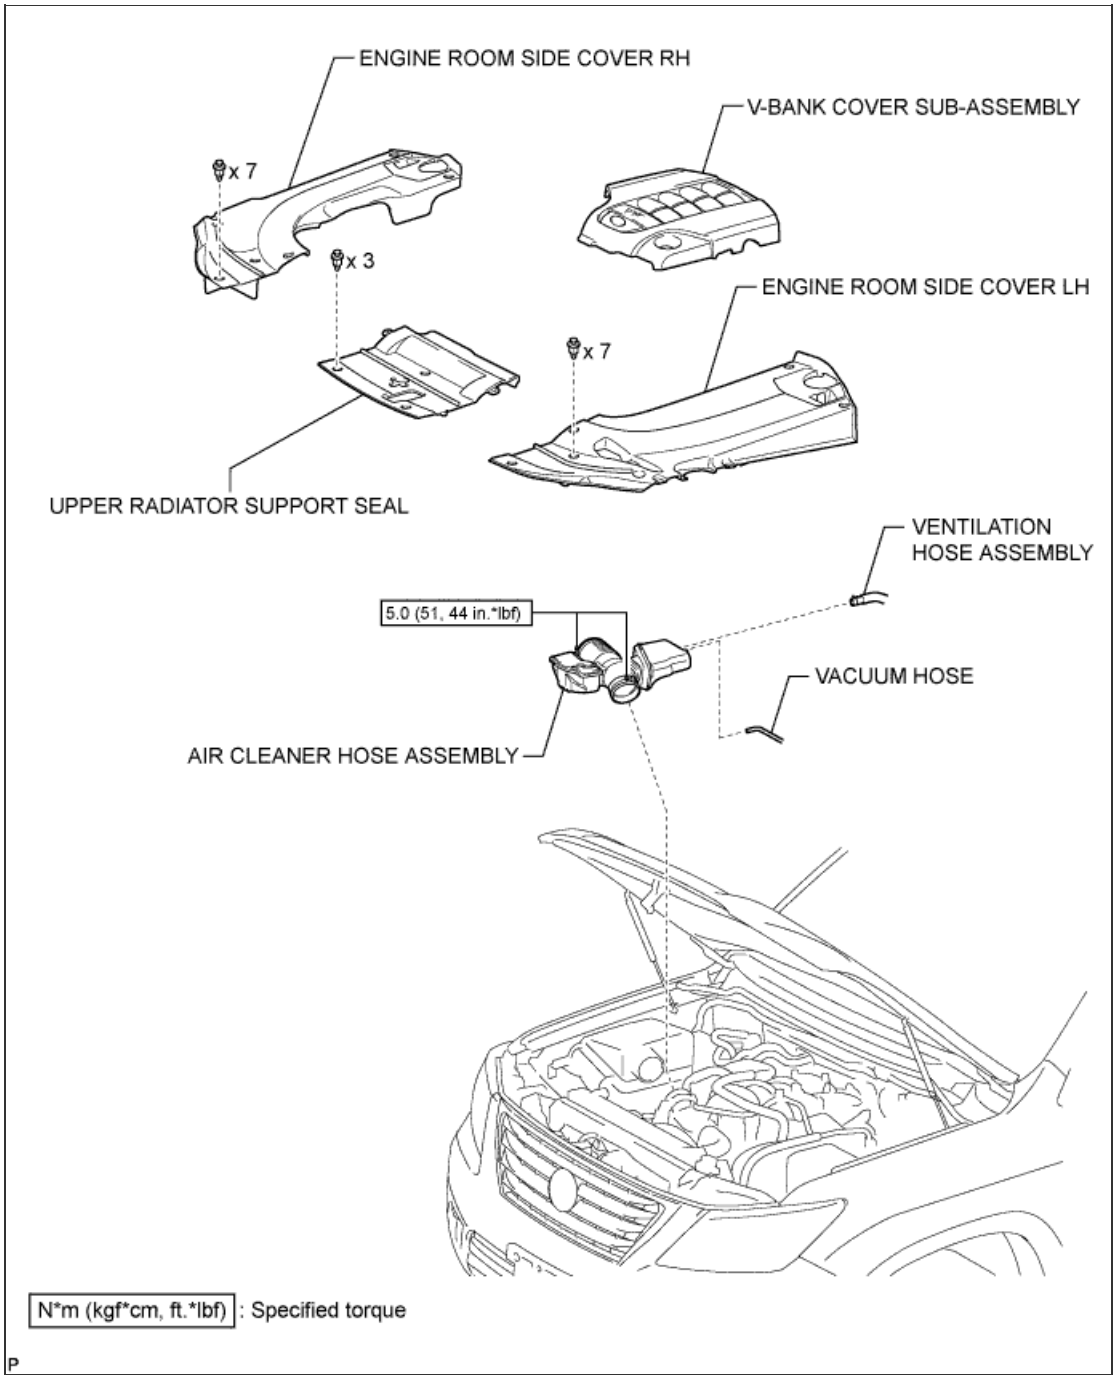


o. Disconnect the cable from the negative (-) battery terminal and carefully remove SST and the fuel tube connector to prevent gasoline from spraying.

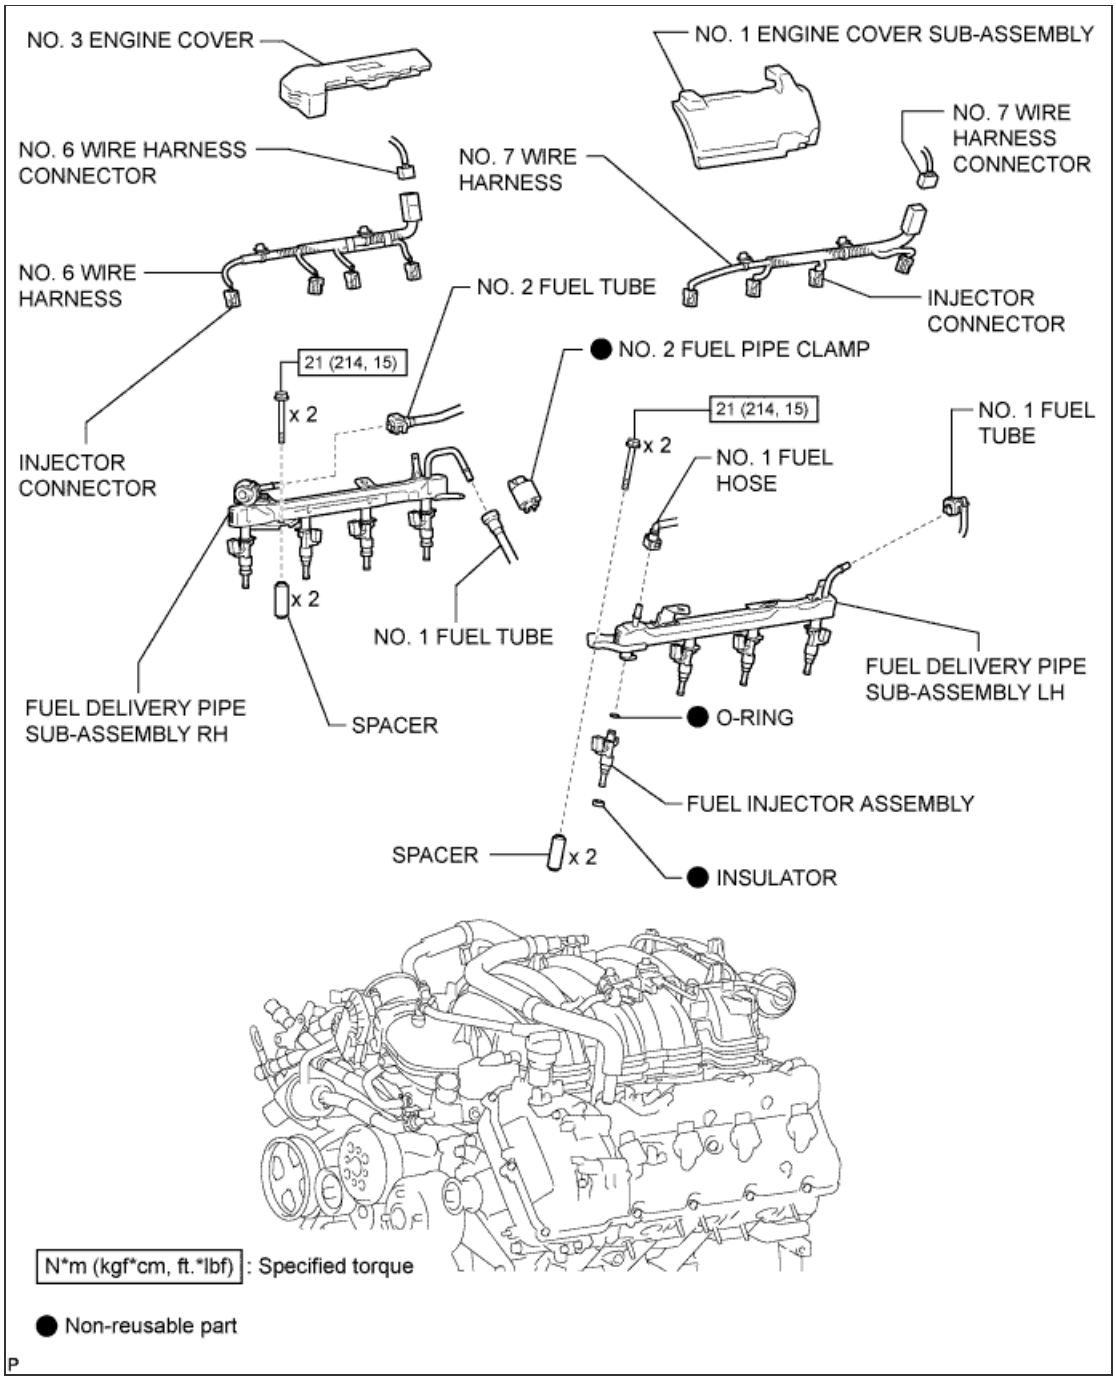


p. Reconnect the fuel tube (fuel tube connector).

q. Check for fuel leaks.



i. Check that there are no fuel leaks after performing maintenance anywhere on the system.
If there are fuel leaks, repair or replace parts as necessary.



for Preparation Click here

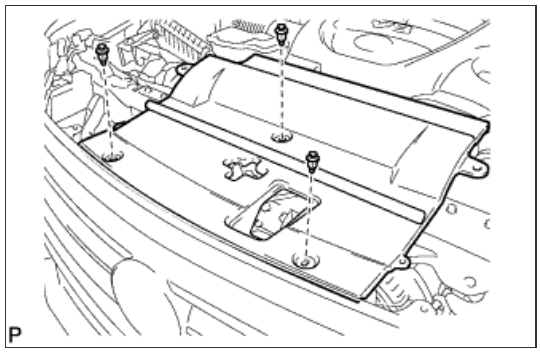
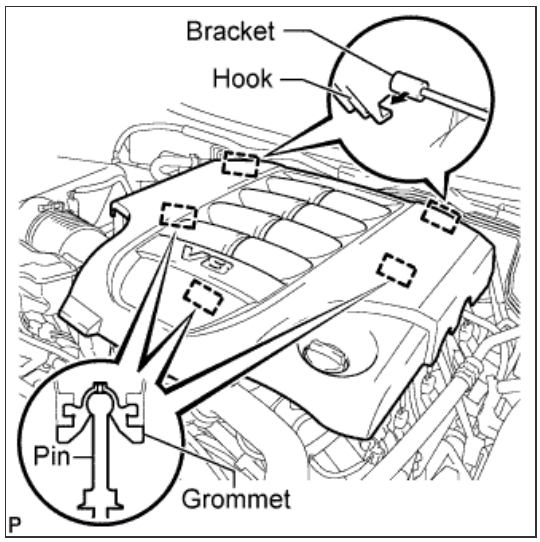
1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.



2. REMOVE ENGINE ROOM SIDE COVER RH

a. Remove the 7 clips and engine room side cover.



3. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 3 clips and upper radiator support seal.

4. REMOVE V-BANK COVER SUB-ASSEMBLY

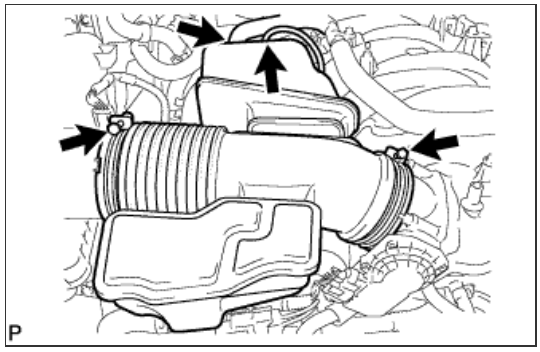
a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.

5. DISCHARGE FUEL SYSTEM PRESSURE

a. Discharge the fuel system pressure (Click here).

6. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

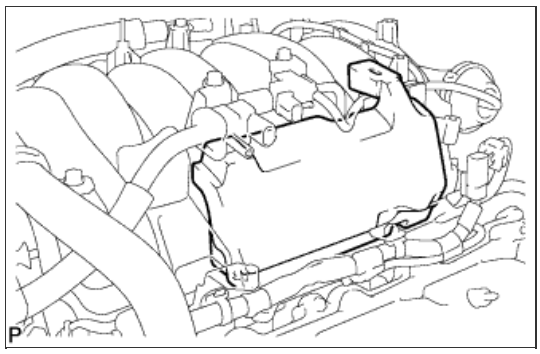
NOTICE:



When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

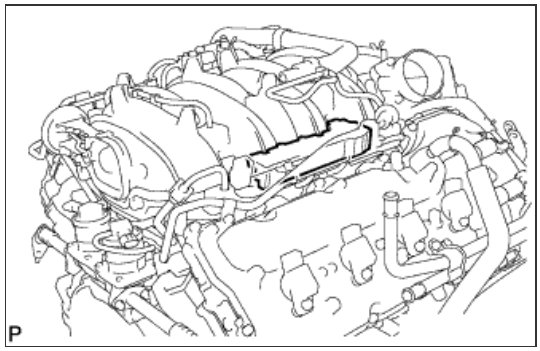
7. REMOVE AIR CLEANER HOSE ASSEMBLY

a. Disconnect the vacuum hose and No. 2 ventilation hose.



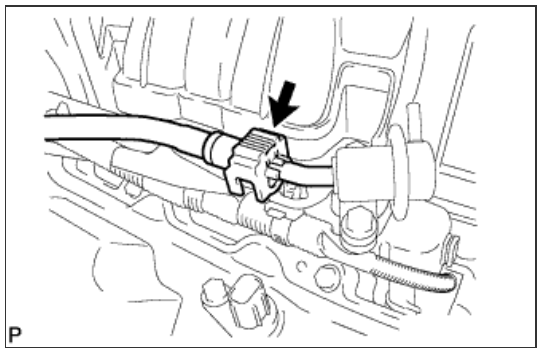
b. Loosen the 2 hose clamps.

c. Remove the air cleaner hose.



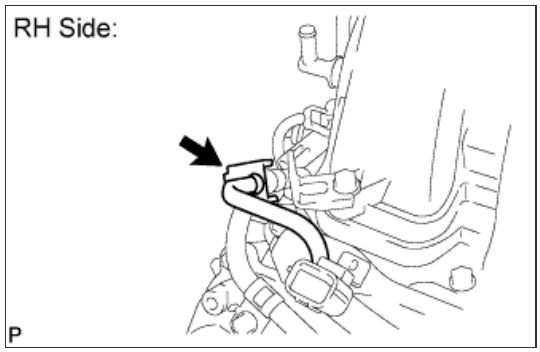
8. REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY

a. Remove the No. 1 engine cover sub-assembly.



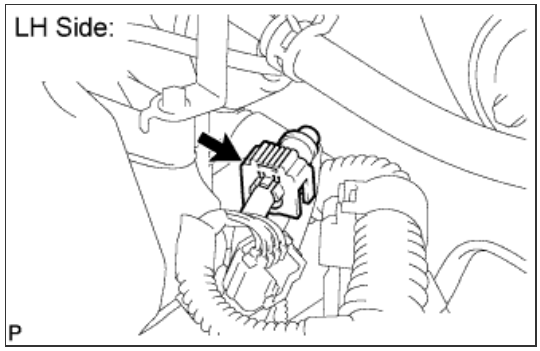
9. REMOVE NO. 3 ENGINE COVER

a. Remove the No. 3 engine cover.



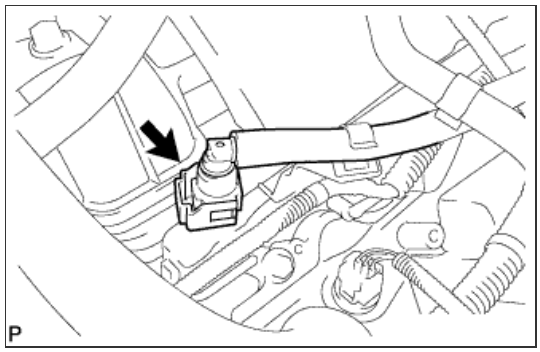
10. DISCONNECT NO. 2 FUEL TUBE

a. Disconnect the No. 2 fuel tube from the fuel pressure regulator (Click here).

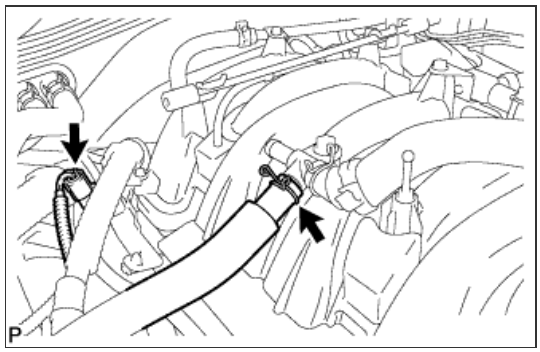


11. DISCONNECT NO. 1 FUEL TUBE

a. RH Side:
Disconnect the No. 1 fuel tube from the fuel delivery pipe RH (Click here).



b. LH Side:
Disconnect the No. 1 fuel tube from the fuel delivery pipe LH (Click here).

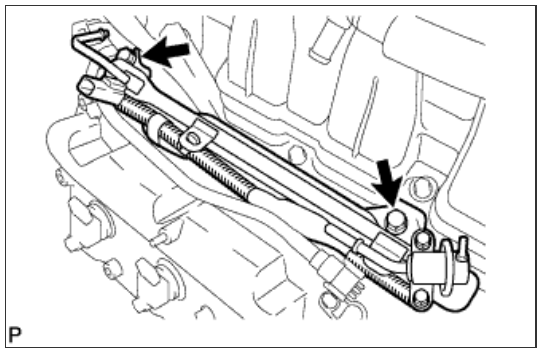


12. DISCONNECT NO. 1 FUEL HOSE

a. Disconnect the fuel hose from the fuel delivery pipe LH (Click here).

13. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY RH

a. Disconnect the ventilation hose and No. 6 wire harness connector.

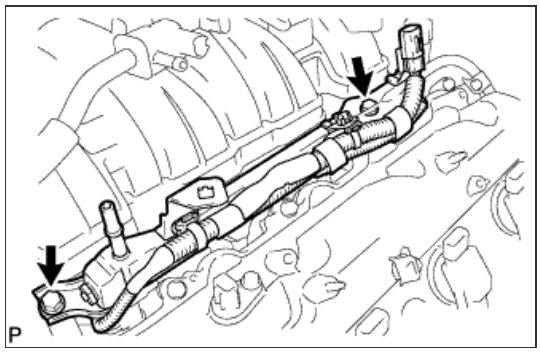


b. Remove the 2 bolts and fuel delivery pipe RH.

NOTICE:

When removing the delivery pipe, hold the pipe by both ends and pull it straight upward.

c. Remove the 2 delivery pipe spacers and 4 insulators from the cylinder head RH.

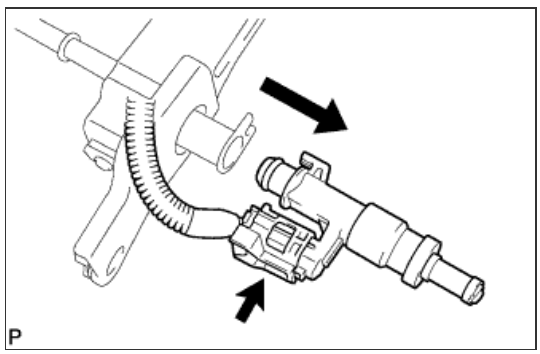


14. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY LH

a. Disconnect the No. 7 wire harness connector.

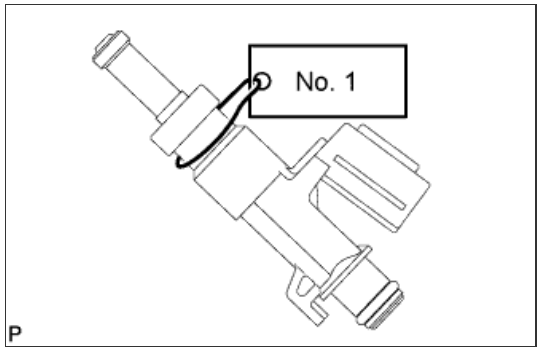
b. Remove the 2 bolts and fuel delivery pipe LH.

NOTICE:



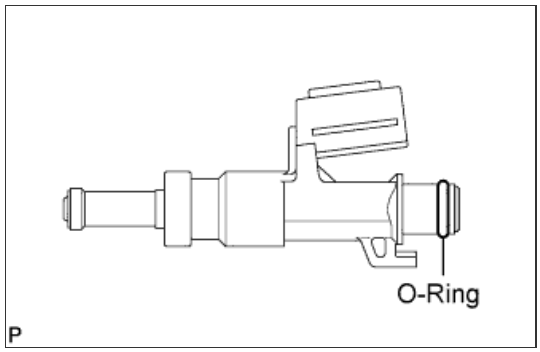
When removing the delivery pipe, hold the pipe by both ends and pull it straight upward.

c. Remove the 2 delivery pipe spacers and 4 insulators from the cylinder head LH.

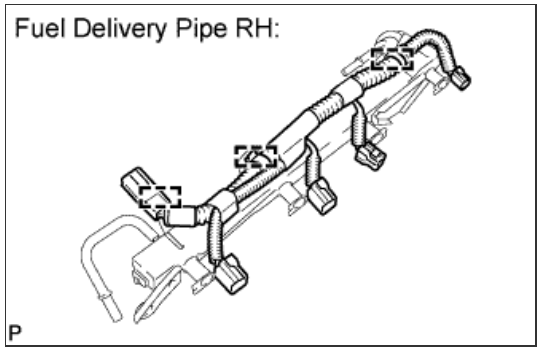


15. REMOVE FUEL INJECTOR ASSEMBLY

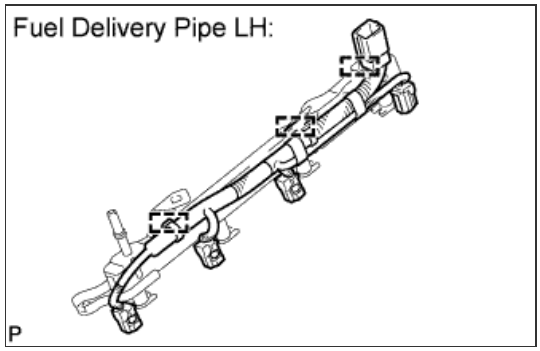
a. Remove the fuel injector from the fuel delivery pipe, and then disconnect the injector connector.



NOTICE:

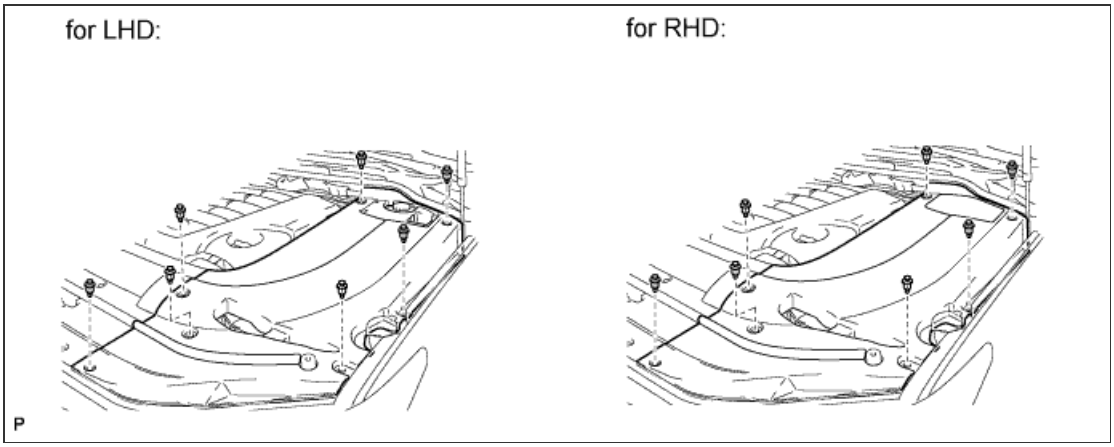


For reinstallation, attach a tag or label to the injector shaft.



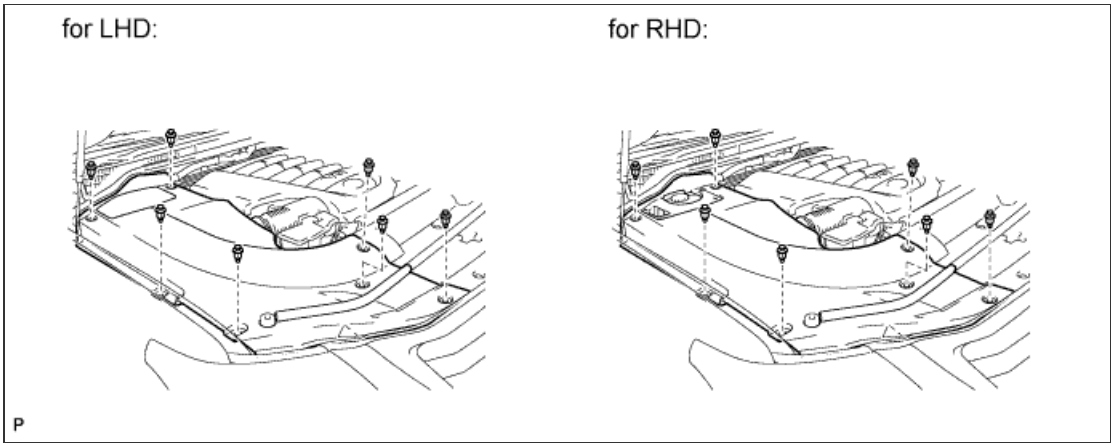
b. Remove the O-ring from the fuel injector.

c. Detach the 3 clamps and then remove the No. 6 wire harness from the delivery pipe RH.



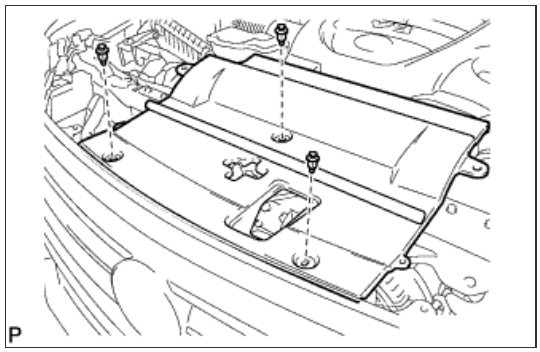
d. Detach the 3 clamps and then remove the No. 7 wire harness from the delivery pipe LH.

for Preparation Click here



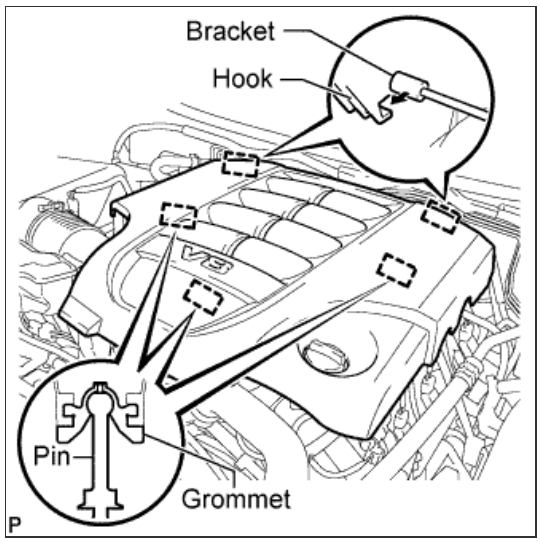
1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.



2. REMOVE ENGINE ROOM SIDE COVER RH

a. Remove the 7 clips and engine room side cover.



3. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 3 clips and upper radiator support seal.

4. REMOVE V-BANK COVER SUB-ASSEMBLY

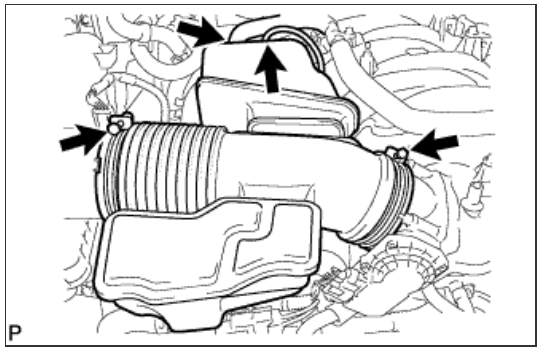
a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.

5. DISCHARGE FUEL SYSTEM PRESSURE

a. Discharge the fuel system pressure (Click here).

6. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

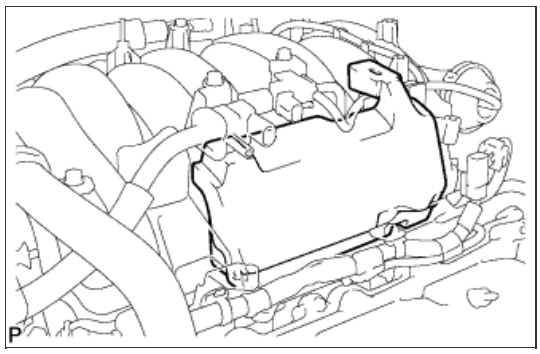
NOTICE:



When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

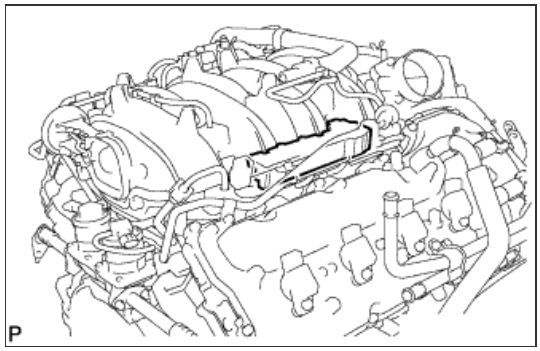
7. REMOVE AIR CLEANER HOSE ASSEMBLY

a. Disconnect the vacuum hose and No. 2 ventilation hose.



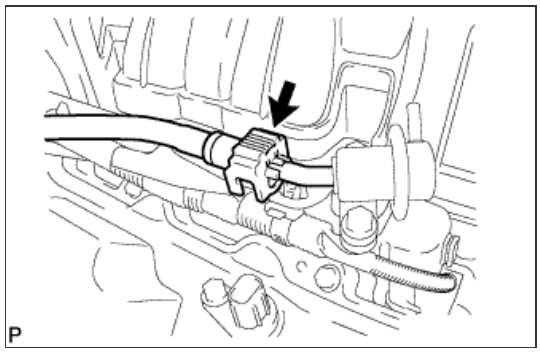
b. Loosen the 2 hose clamps.

c. Remove the air cleaner hose.



8. REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY

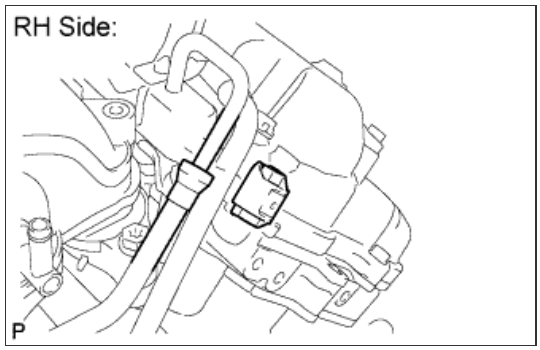
a. Remove the No. 1 engine cover sub-assembly.



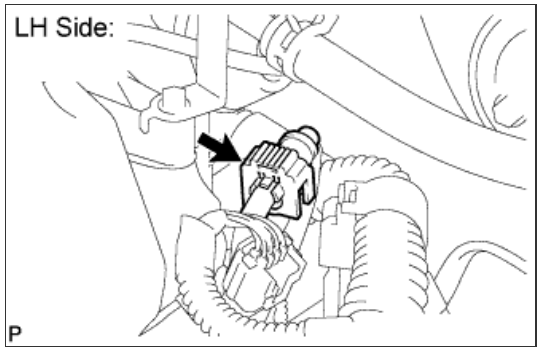
9. REMOVE NO. 3 ENGINE COVER

a. Remove the No. 3 engine cover.

10. DISCONNECT NO. 2 FUEL TUBE



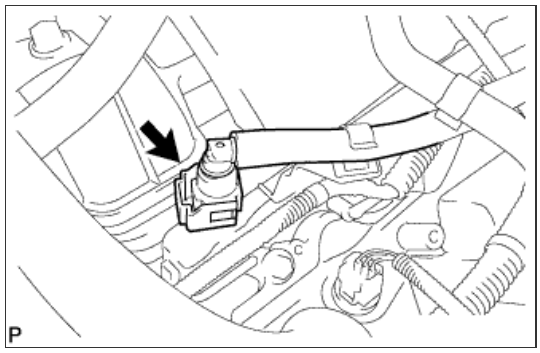
a. Disconnect the No. 2 fuel tube from the fuel pressure regulator (Click here).



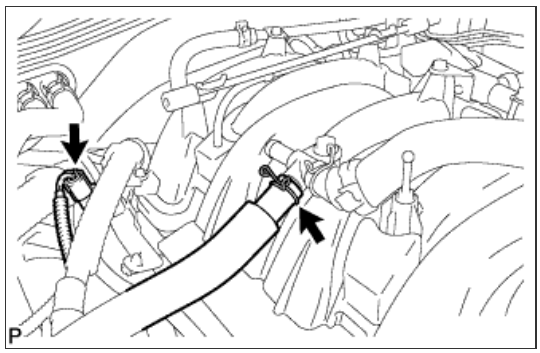
11. DISCONNECT NO. 1 FUEL TUBE

a. RH Side:
Disconnect the No. 1 fuel tube from the fuel delivery pipe RH (for metallic type) (Click here).

SST
09268-21011



b. LH Side:
Disconnect the No. 1 fuel tube from the fuel delivery pipe LH (Click here).

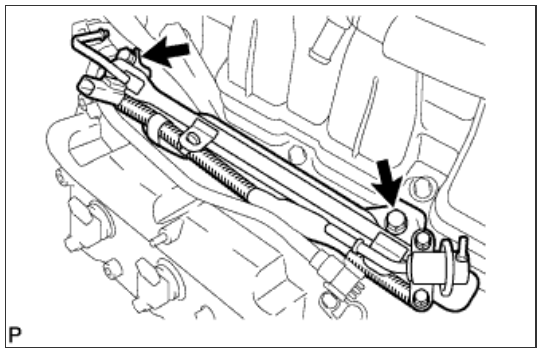


12. DISCONNECT NO. 1 FUEL HOSE

a. Disconnect the fuel hose from the fuel delivery pipe LH (Click here).

13. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY RH

a. Disconnect the ventilation hose and No. 6 wire harness connector.

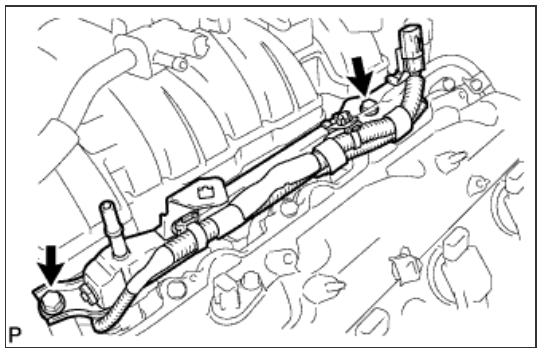


b. Remove the 2 bolts and fuel delivery pipe RH.

NOTICE:

When removing the delivery pipe, hold the pipe by both ends and pull it straight upward.

c. Remove the 2 delivery pipe spacers and 4 insulators from the cylinder head RH.

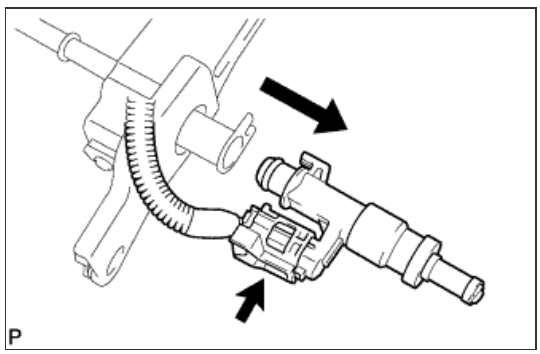


14. REMOVE FUEL DELIVERY PIPE SUB-ASSEMBLY LH

a. Disconnect the No. 7 wire harness connector.

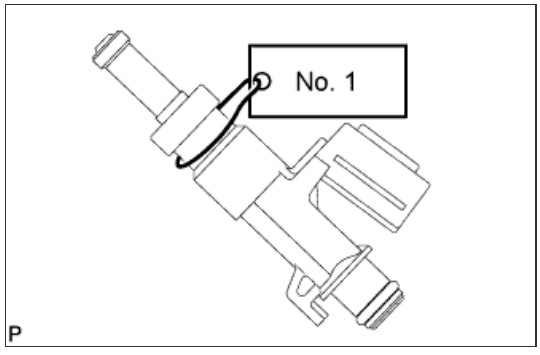
b. Remove the 2 bolts and fuel delivery pipe LH.

NOTICE:



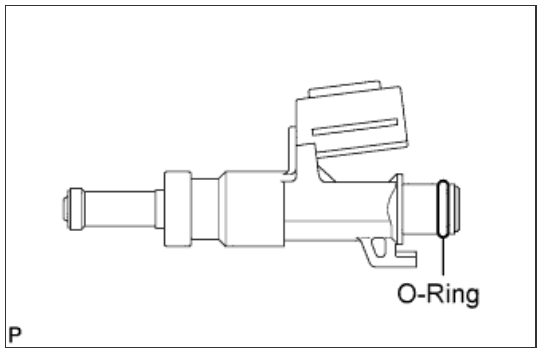
When removing the delivery pipe, hold the pipe by both ends and pull it straight upward.

c. Remove the 2 delivery pipe spacers and 4 insulators from the cylinder head LH.

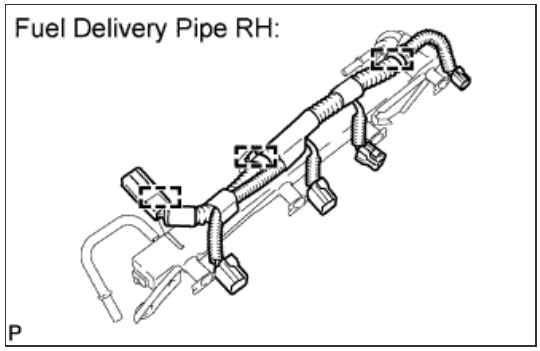


15. REMOVE FUEL INJECTOR ASSEMBLY

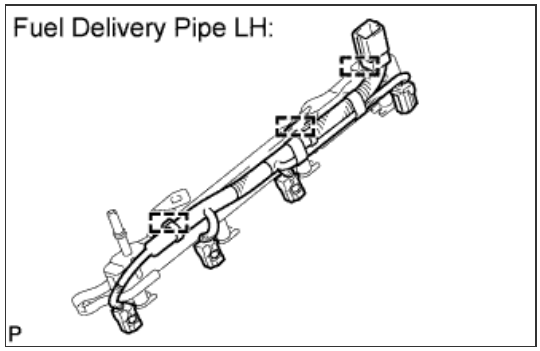
a. Remove the fuel injector from the fuel delivery pipe, and then disconnect the injector connector.



NOTICE:



For reinstallation, attach a tag or label to the injector shaft.

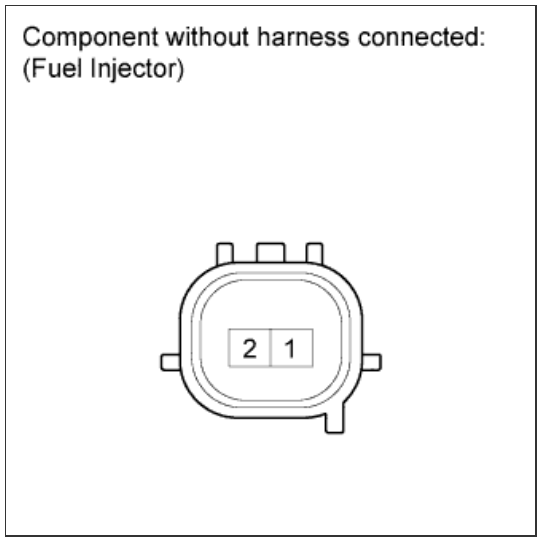


b. Remove the O-ring from the fuel injector.

c. Detach the 3 clamps and then remove the No. 6 wire harness from the delivery pipe RH.

d. Detach the 3 clamps and then remove the No. 7 wire harness from the delivery pipe LH.

for Preparation Click here



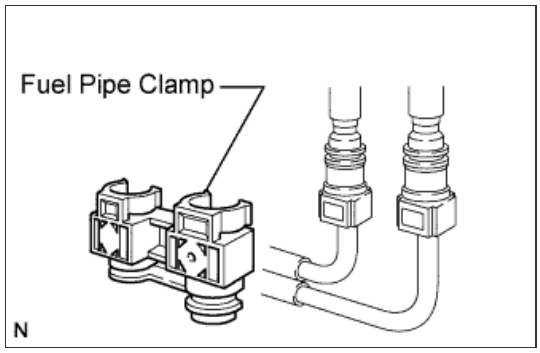
1. INSPECT FUEL INJECTOR ASSEMBLY

a. Measure the resistance according to the value(s) in the table below.

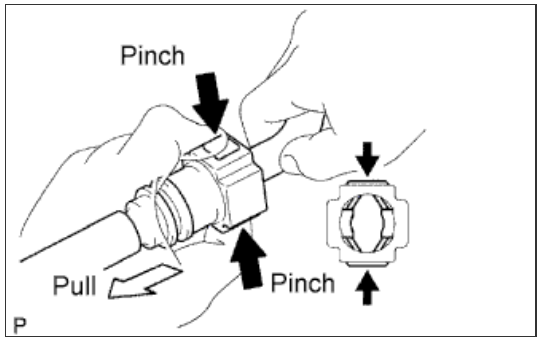
Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	11.6 to 12.4 Ω

If the result is not as specified, replace the injector assembly.

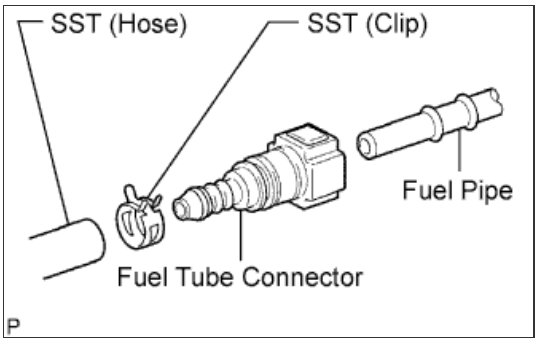


b. Inspect the injection volume.



CAUTION:

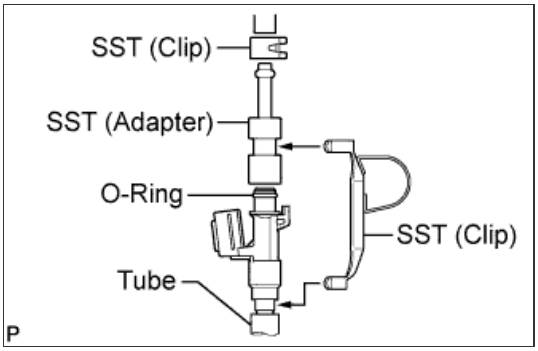
This test involves high-pressure fuel and electricity. Take all precautions regarding safe handling of both the fuel and the electricity. Perform this test in a safe area, and avoid any sparks or flames. Do not smoke.



i. Remove the fuel pipe clamp.

ii. Disconnect the fuel tube.

iii. Connect SST to the fuel pipe (the vehicle side).



iv. Install the O-ring to the fuel injector.

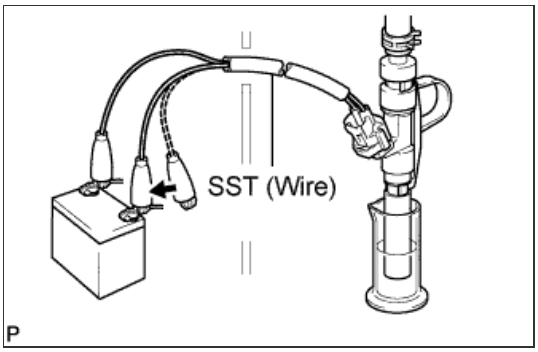
v. Install SST and the tube to the fuel injector.

SST

09268-31012 (09268-41300, 09268-41500, 09268-41600, 90467-13001, 95336-08070)

vi. Put the injector into a graduated cylinder.

CAUTION:



Install a strong rubber tube onto the injector to prevent gasoline from splashing.

vii. Operate the fuel pump (turn the engine switch on (IG)).

viii. Connect SST (wire) to the injector and the battery for 15 seconds, and measure the injection volume with the graduated cylinder. Test each injector 2 or 3 times.

SST

09842-30090

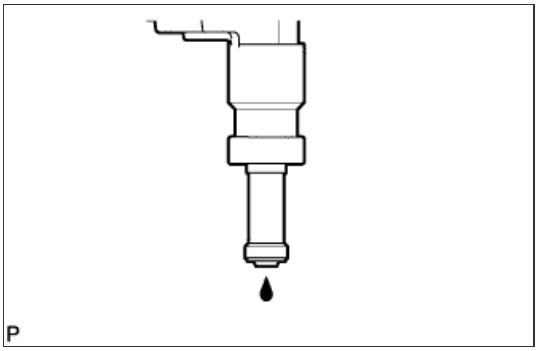
Standard injection volume:

83 to 99 cm^3 (5.0 to 6.0 cu in.) per 15 seconds

Difference between each injector:

16 cm^3 (1.0 cu in.) or less

If the injection volume is not as specified, replace the injector assembly.

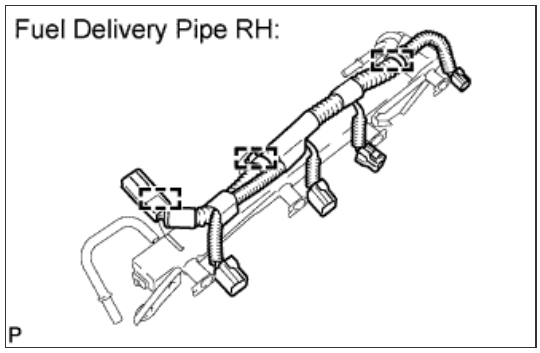


c. Check for fuel drop.

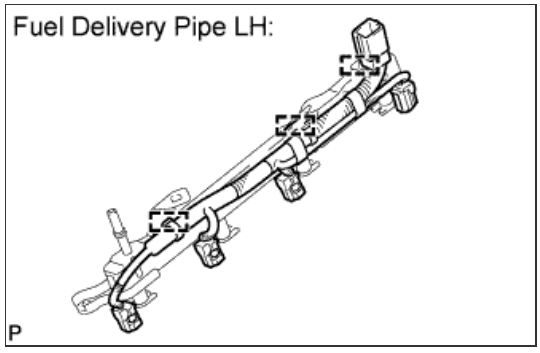
i. In the condition above, disconnect the tester probes of SST (wire) from the battery and check for fuel drop from the injector.

Standard fuel drop:

1 drop or less in 12 minutes



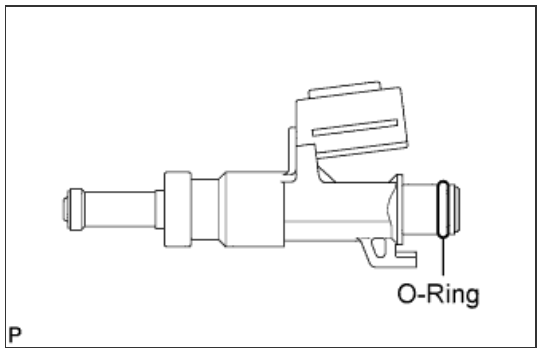
If the fuel drop is not as specified, replace the injector assembly.



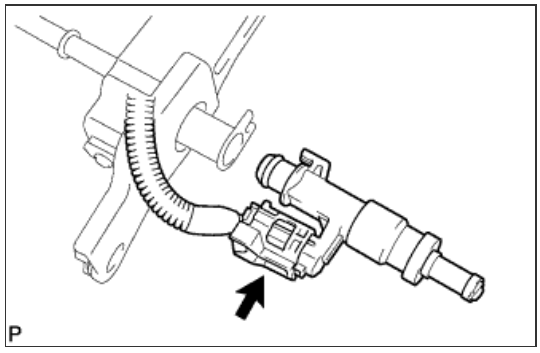
for Preparation Click here

1. INSTALL FUEL INJECTOR ASSEMBLY

a. Attach the 3 clamps to install the No. 6 wire harness to the delivery pipe RH.



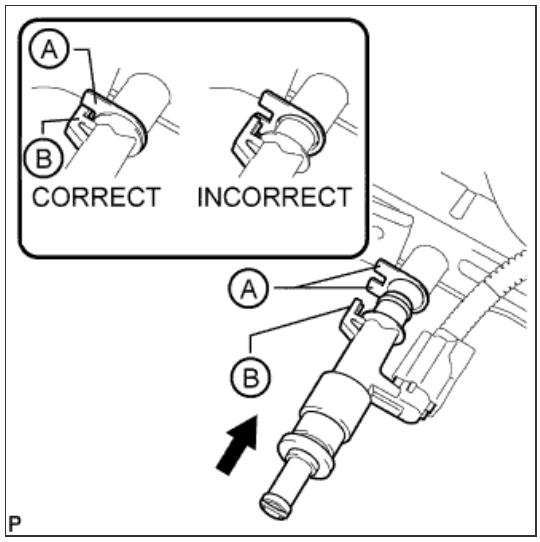
b. Attach the 3 clamps to install the No. 7 wire harness to the delivery pipe LH.



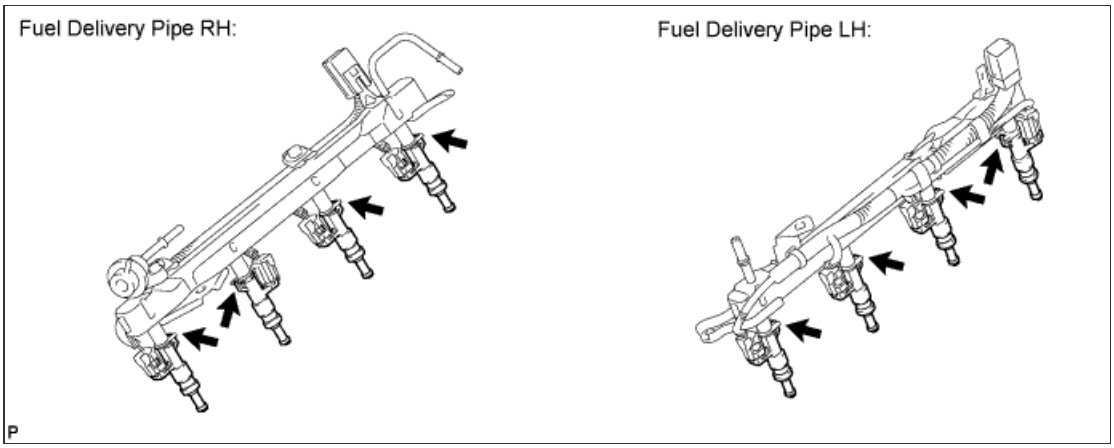
c. Apply gasoline or spindle oil to a new O-ring and install it to the injector.

NOTICE:

Make sure that there is no damage or foreign material in the groove of the injector when installing the O-ring.



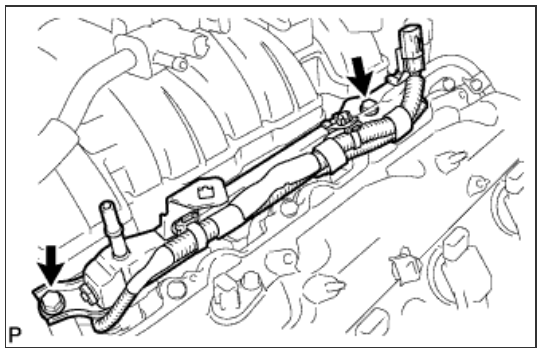
d. Connect the injector connector.



e. Install the injector to the delivery pipe as shown in the illustration.

NOTICE:

- **Make sure that there are no scratches or foreign matter in or around the insertion hole of the delivery pipe.**
- **When inserting the injector, be careful not to damage the O-ring.**
- **Attach the part of the injector labeled B between the parts of the delivery pipe labeled A.**

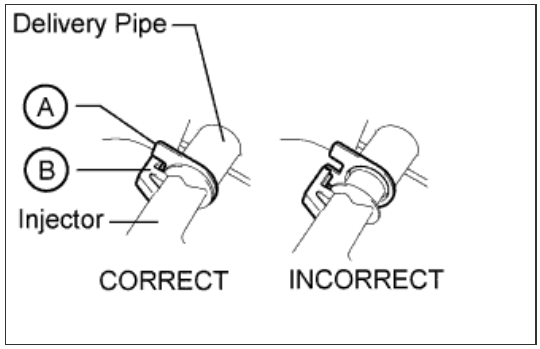


f. Check that each injector is installed to the delivery pipe facing the direction shown in the illustration.

2. INSTALL FUEL DELIVERY PIPE SUB-ASSEMBLY LH

a. Install the 2 delivery pipe spacers and 4 insulators to the cylinder head LH.

b. Install the delivery pipe (with injectors) to the cylinder head LH.

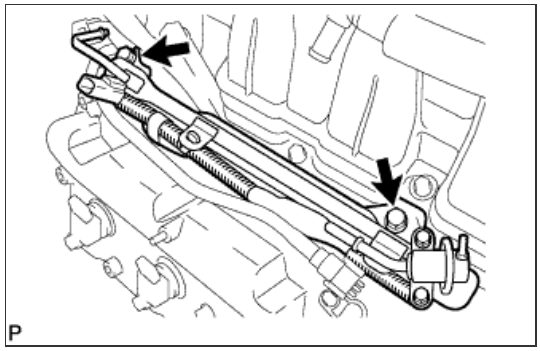


c. Install the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

NOTICE:

Make sure that the part of the injector labeled B is between the parts of the delivery pipe labeled A.

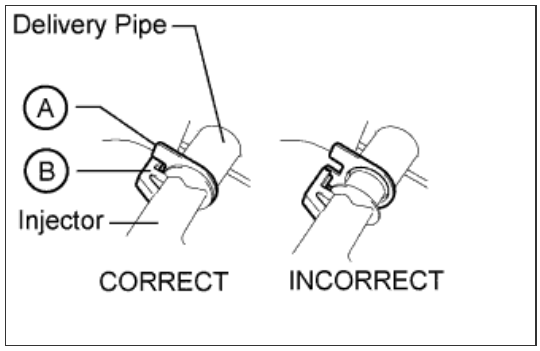


d. Connect the No. 7 wire harness connector.

3. INSTALL FUEL DELIVERY PIPE SUB-ASSEMBLY RH

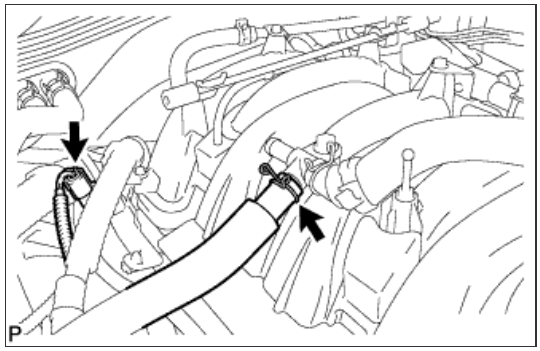
a. Install the 2 delivery pipe spacers and 4 insulators to the cylinder head RH.

b. Install the delivery pipe (with injectors) to the cylinder head RH.



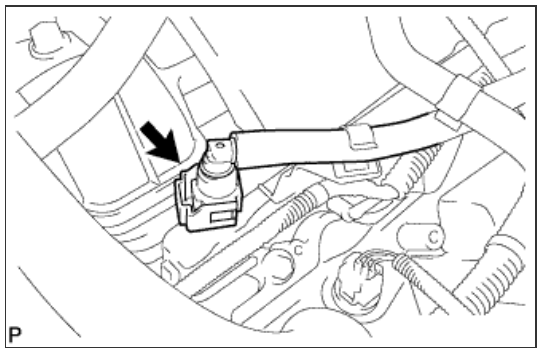
c. Install the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



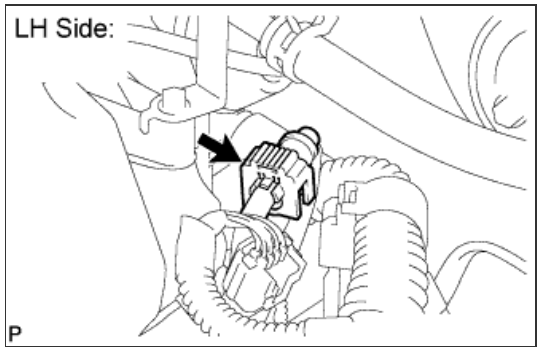
NOTICE:

Make sure that the part of the injector labeled B is between the parts of the delivery pipe labeled A.



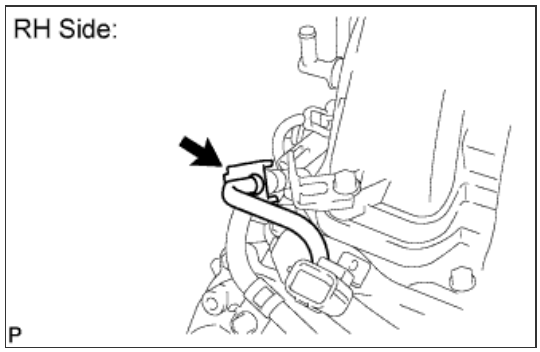
d. Connect the No. 6 wire harness connector.

e. Connect the ventilation hose.



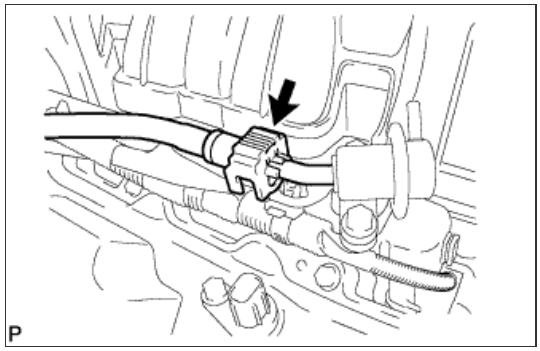
4. CONNECT NO. 1 FUEL HOSE

a. Connect the No. 1 fuel hose to the fuel delivery pipe LH (Click here).

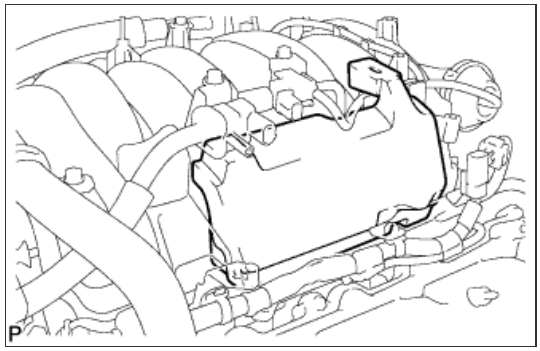


5. CONNECT NO. 1 FUEL TUBE

a. LH Side:
Connect the No. 1 fuel tube to the delivery pipe LH (Click here).

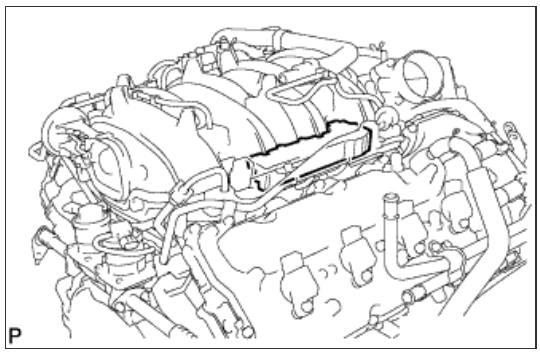


b. RH Side:
Connect the No. 1 fuel tube to the delivery pipe RH (Click here).



6. CONNECT NO. 2 FUEL TUBE

a. Connect the No. 2 fuel tube to the fuel pressure regulator (Click here).



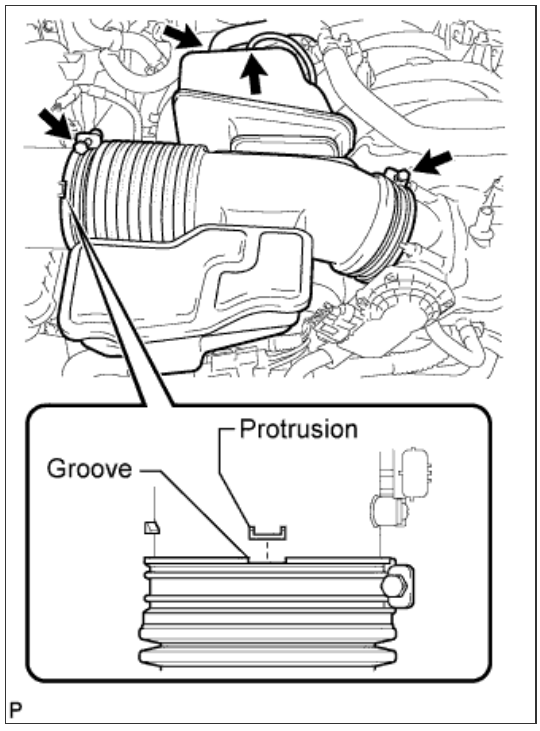
7. INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY

a. Install the No. 1 engine cover sub-assembly.

8. INSTALL NO. 3 ENGINE COVER

a. Install the No. 3 engine cover.

9. INSTALL AIR CLEANER HOSE ASSEMBLY



a. Install the air cleaner hose so that the protrusion of the air cleaner cap aligns with the groove of the hose as shown in the illustration.

b. Tighten the 2 clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

c. Connect the vacuum hose.

d. Connect the No. 2 ventilation hose.

10. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

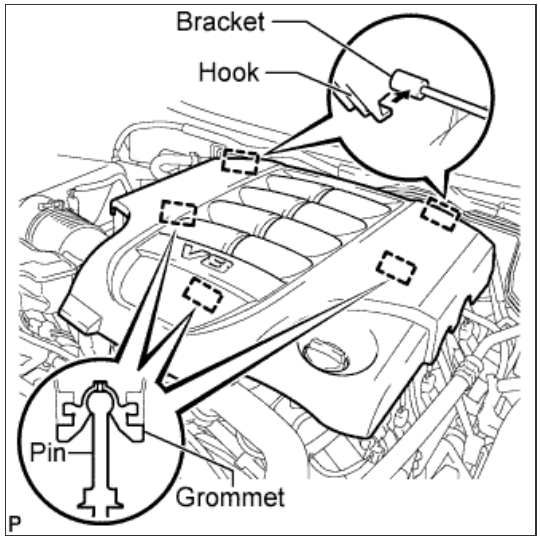
When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

11. INSPECT FOR FUEL LEAK

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG) and intelligent tester on.

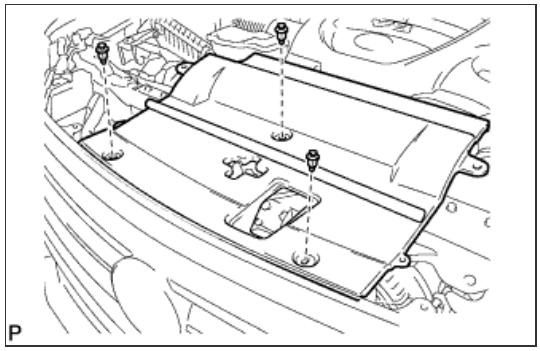
NOTICE:



Do not start the engine.

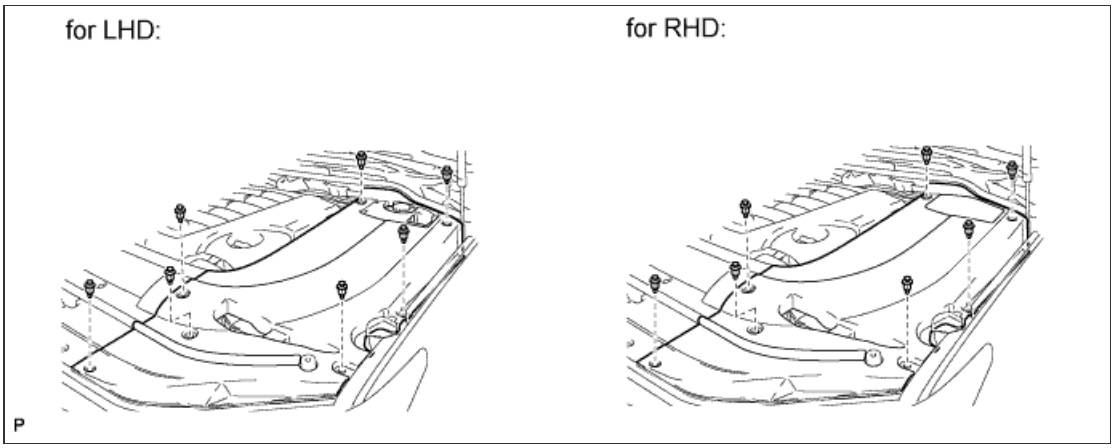
c. Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Fuel Pump Speed Control.

d. Check that there are no fuel leaks after doing maintenance anywhere on the fuel system.



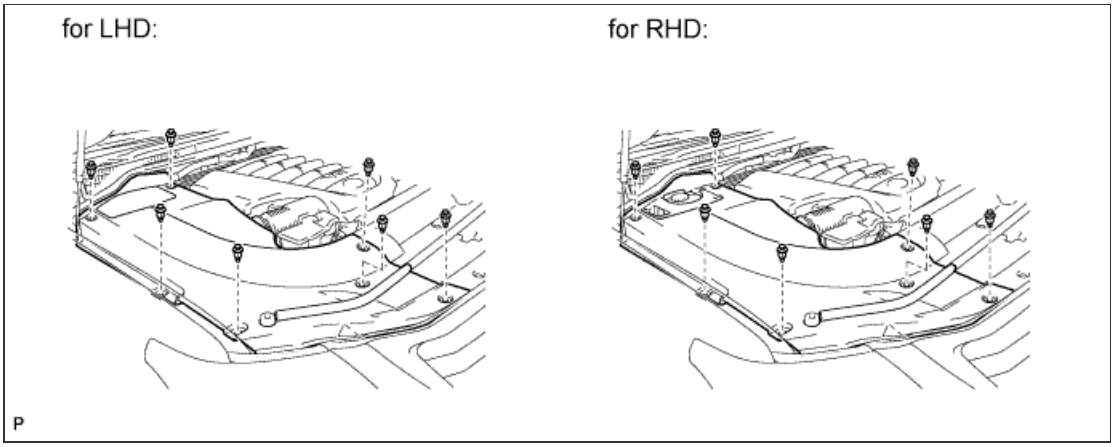
12. INSTALL V-BANK COVER SUB-ASSEMBLY

a. Attach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.



13. INSTALL UPPER RADIATOR SUPPORT SEAL

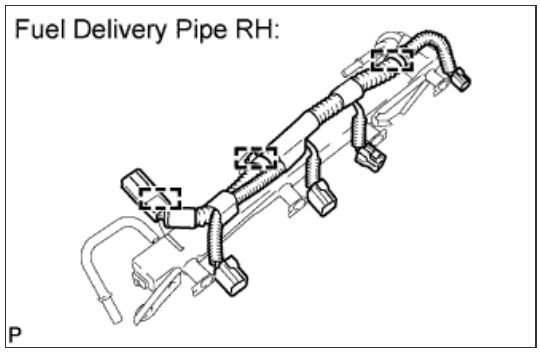
a. Install the upper radiator support seal with the 3 clips.



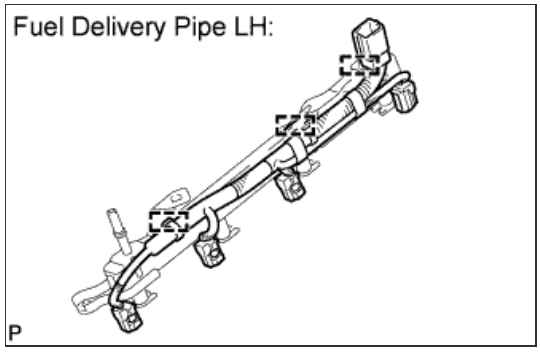
14. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.

15. INSTALL ENGINE ROOM SIDE COVER RH



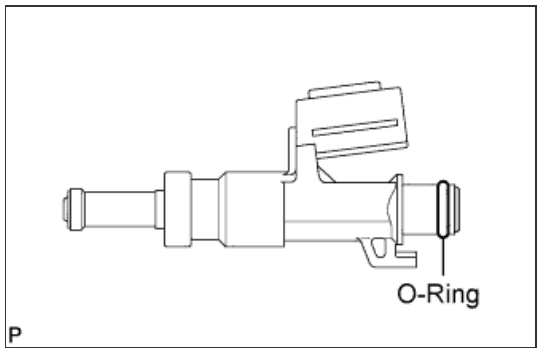
a. Install the engine room side cover with the 7 clips.



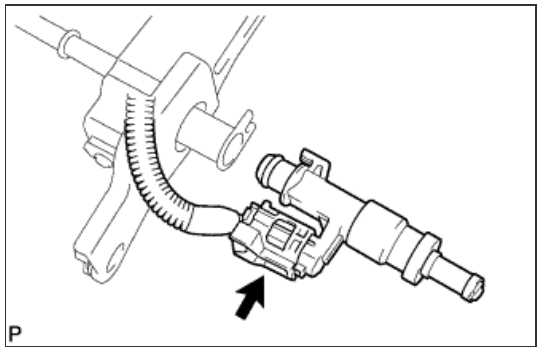
for Preparation Click here

1. INSTALL FUEL INJECTOR ASSEMBLY

a. Attach the 3 clamps to install the No. 6 wire harness to the delivery pipe RH.



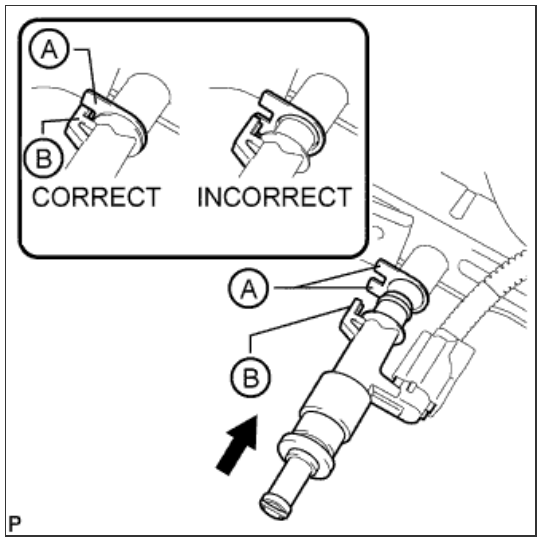
b. Attach the 3 clamps to install the No. 7 wire harness to the delivery pipe LH.



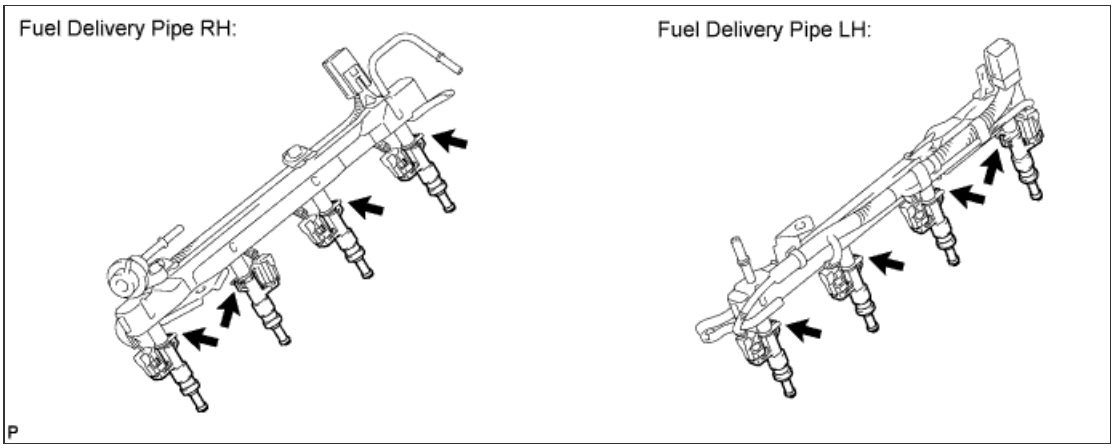
c. Apply gasoline or spindle oil to a new O-ring and install it to the injector.

NOTICE:

Make sure that there is no damage or foreign material in the groove of the injector when installing the O-ring.



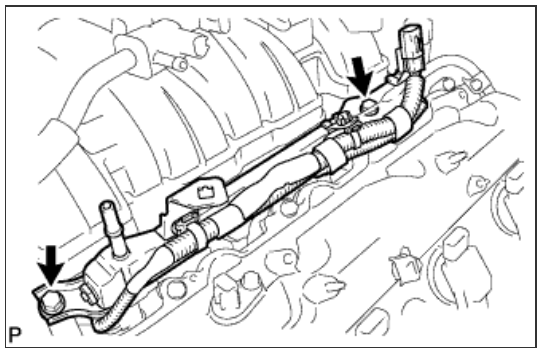
d. Connect the injector connector.



e. Install the injector to the delivery pipe as shown in the illustration.

NOTICE:

- **Make sure that there are no scratches or foreign matter in or around the insertion hole of the delivery pipe.**
- **When inserting the injector, be careful not to damage the O-ring.**
- **Attach the part of the injector labeled B between the parts of the delivery pipe labeled A.**

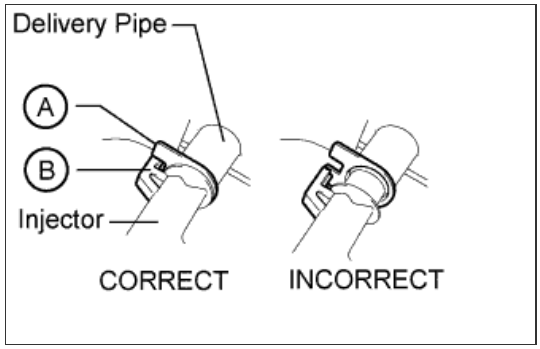


f. Check that each injector is installed to the delivery pipe facing the direction shown in the illustration.

2. INSTALL FUEL DELIVERY PIPE SUB-ASSEMBLY LH

a. Install the 2 delivery pipe spacers and 4 insulators to the cylinder head LH.

b. Install the delivery pipe (with injectors) to the cylinder head LH.

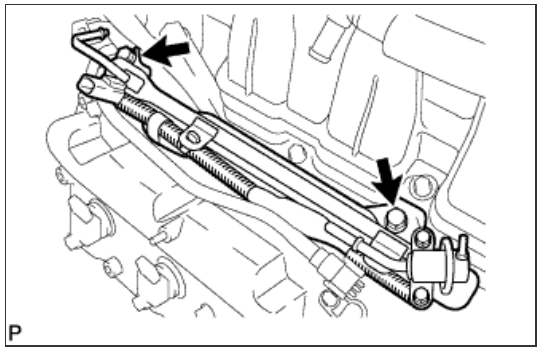


c. Install the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

NOTICE:

Make sure that the part of the injector labeled B is between the parts of the delivery pipe labeled A.

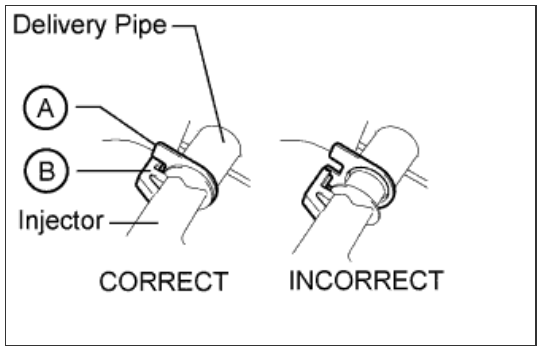


d. Connect the No. 7 wire harness connector.

3. INSTALL FUEL DELIVERY PIPE SUB-ASSEMBLY RH

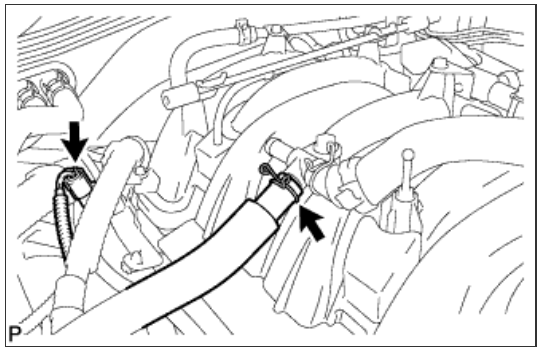
a. Install the 2 delivery pipe spacers and 4 insulators to the cylinder head RH.

b. Install the delivery pipe (with injectors) to the cylinder head RH.



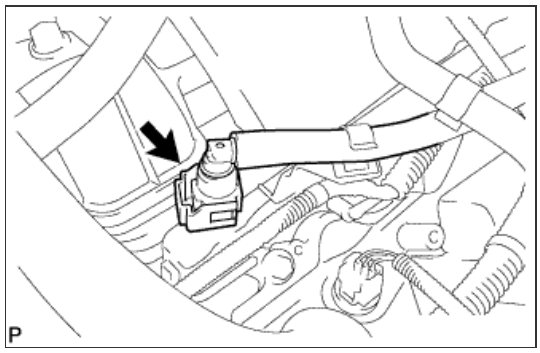
c. Install the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



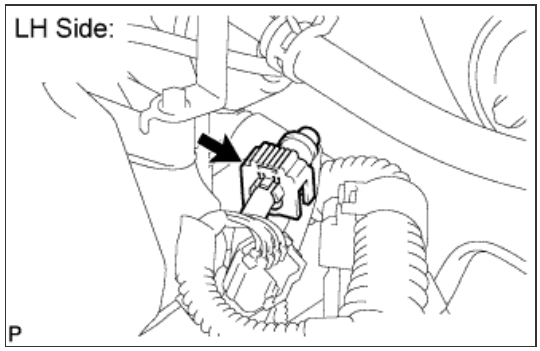
NOTICE:

Make sure that the part of the injector labeled B is between the parts of the delivery pipe labeled A.



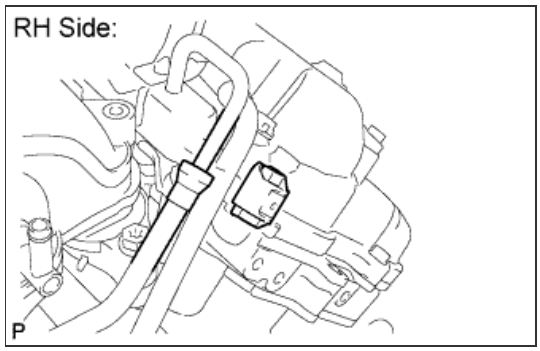
d. Connect the No. 6 wire harness connector.

e. Connect the ventilation hose.



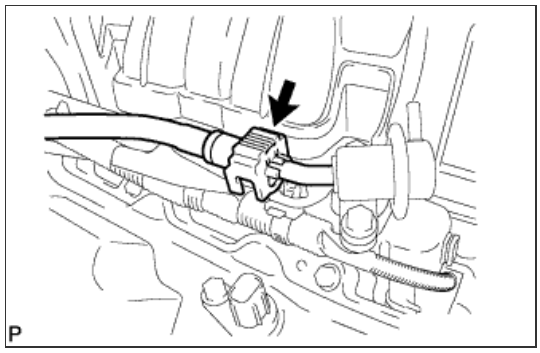
4. CONNECT NO. 1 FUEL HOSE

a. Connect the No. 1 fuel hose to the fuel delivery pipe LH (Click here).

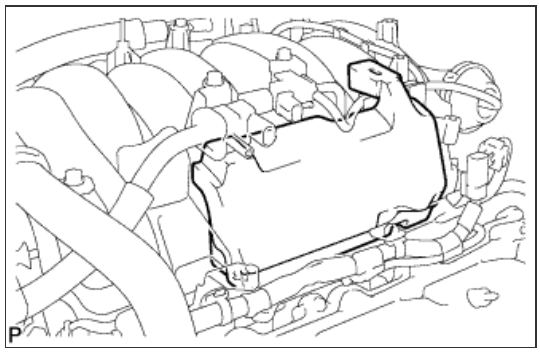


5. CONNECT NO. 1 FUEL TUBE

a. LH Side:
Connect the No. 1 fuel tube to the delivery pipe LH (Click here).

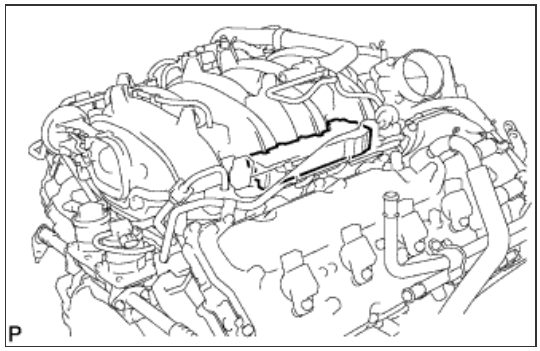


b. RH Side:
Connect the No. 1 fuel tube to the delivery pipe RH (for metallic type) (Click here).



6. CONNECT NO. 2 FUEL TUBE

a. Connect the No. 2 fuel tube to the fuel pressure regulator (Click here).



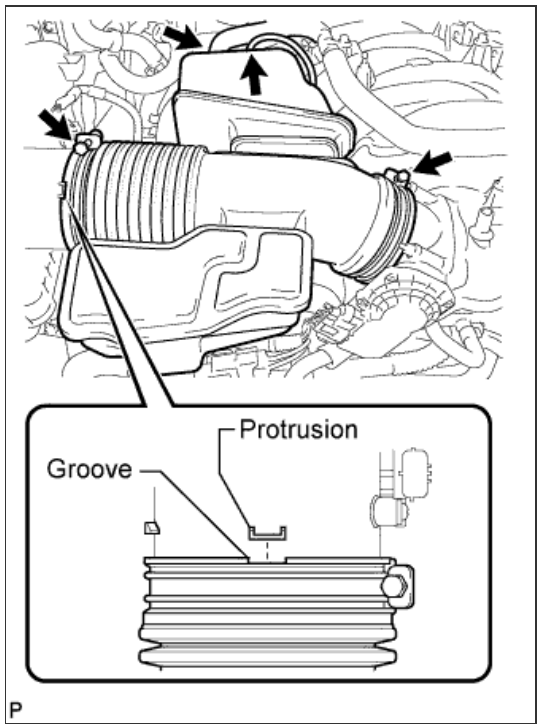
7. INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY

a. Install the No. 1 engine cover sub-assembly.

8. INSTALL NO. 3 ENGINE COVER

a. Install the No. 3 engine cover.

9. INSTALL AIR CLEANER HOSE ASSEMBLY



a. Install the air cleaner hose so that the protrusion of the air cleaner cap aligns with the groove of the hose as shown in the illustration.

b. Tighten the 2 clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

c. Connect the vacuum hose.

d. Connect the No. 2 ventilation hose.

10. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

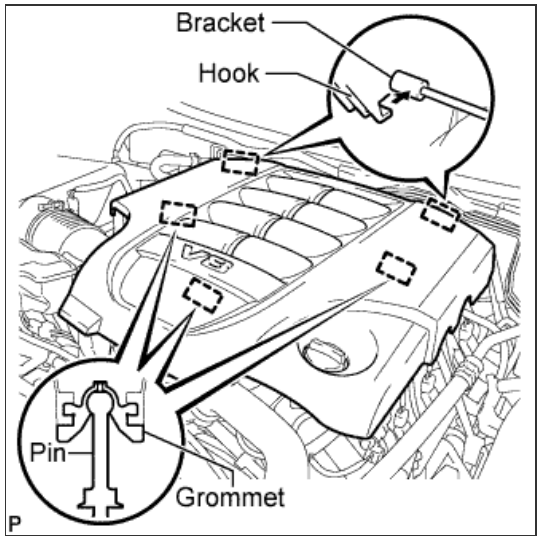
When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

11. INSPECT FOR FUEL LEAK

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG) and intelligent tester on.

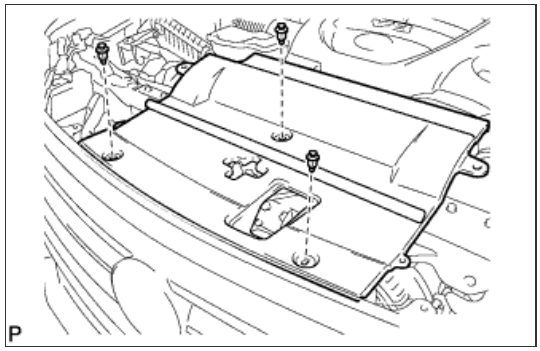
NOTICE:



Do not start the engine.

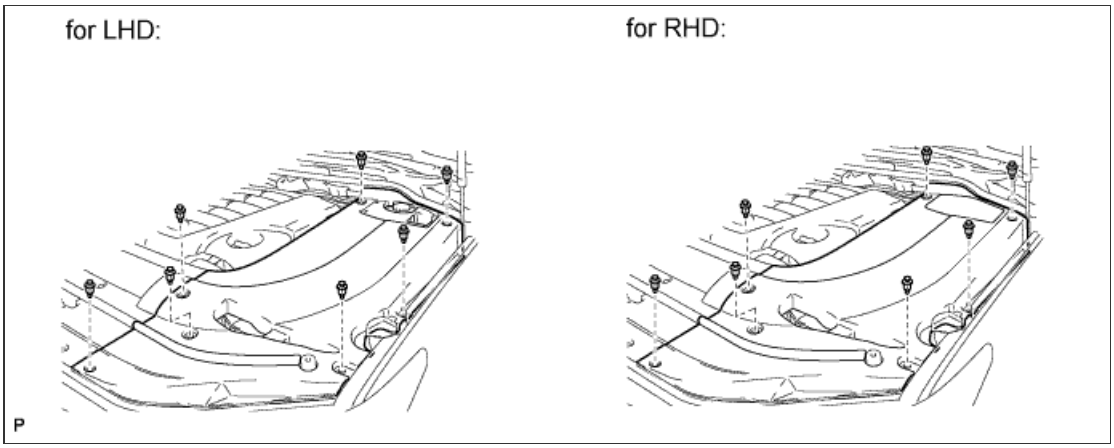
c. Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Fuel Pump Speed Control.

d. Check that there are no fuel leaks after doing maintenance anywhere on the fuel system.



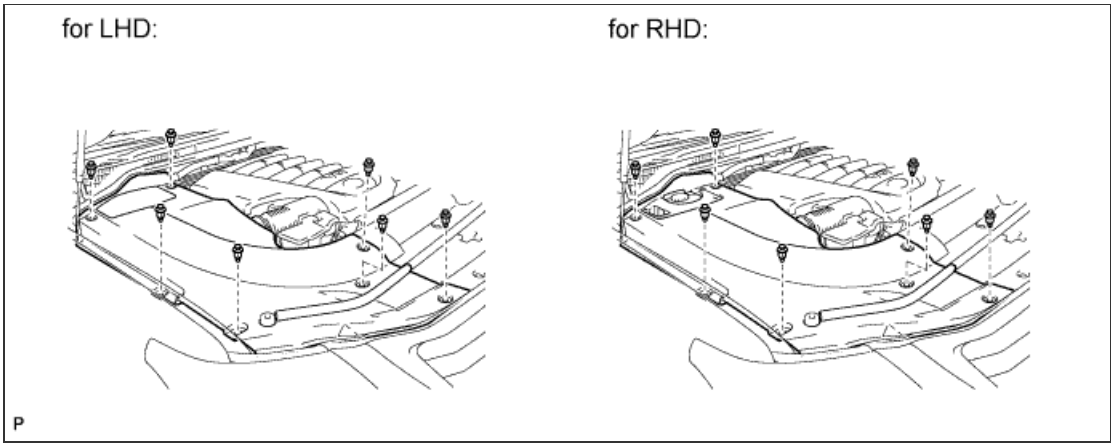
12. INSTALL V-BANK COVER SUB-ASSEMBLY

a. Attach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.



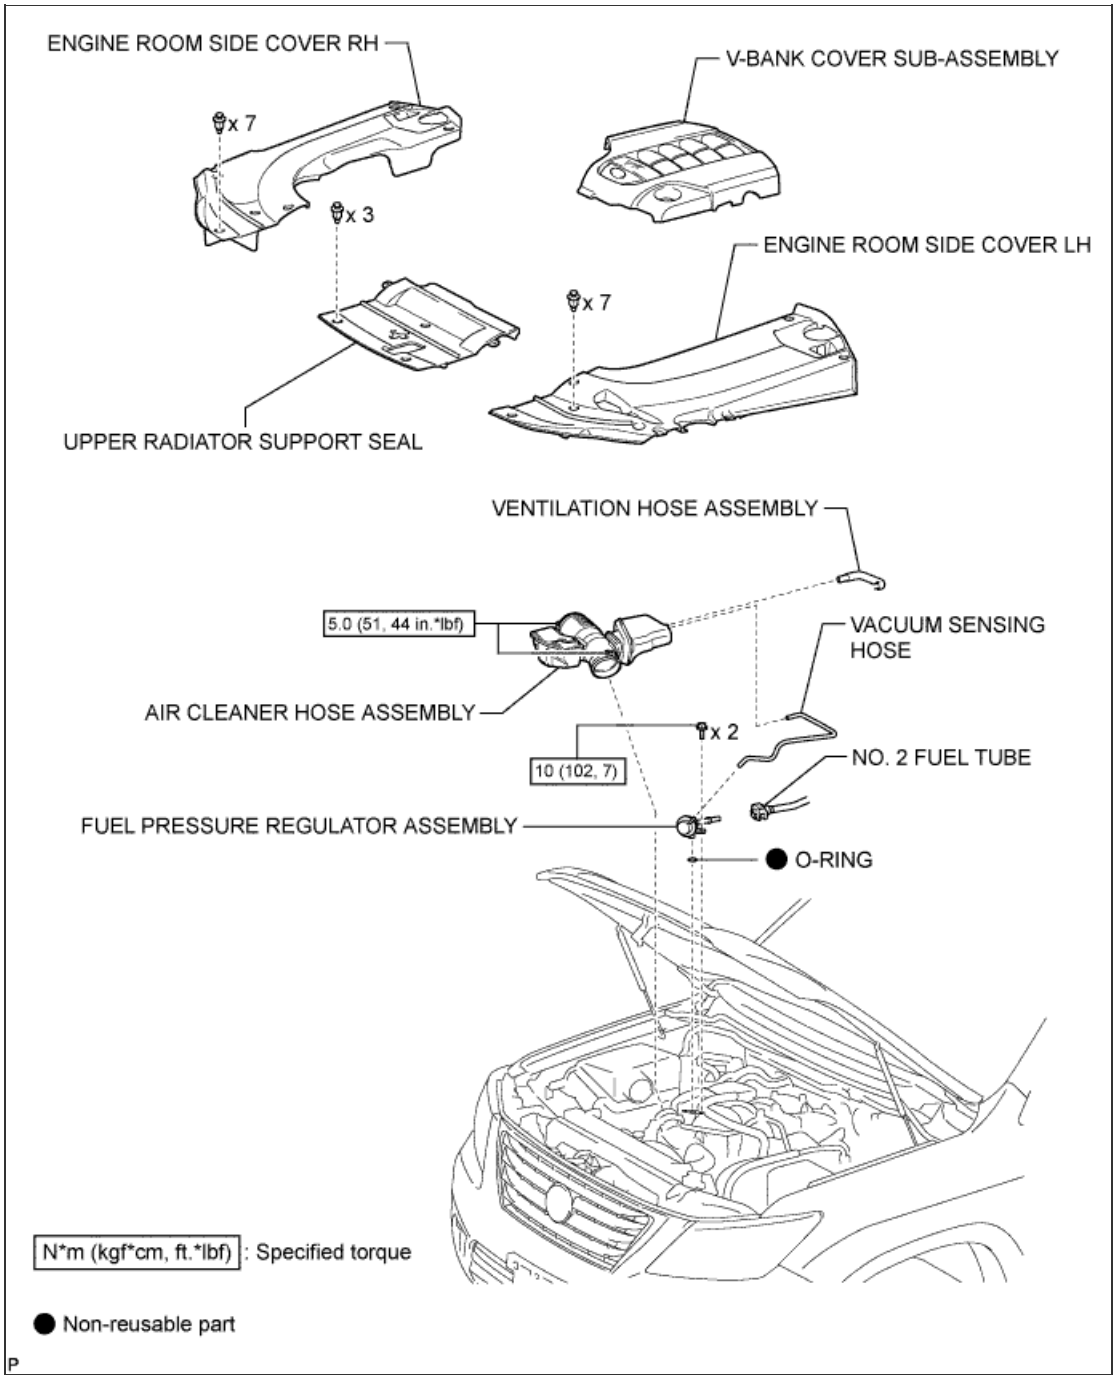
13. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the upper radiator support seal with the 3 clips.



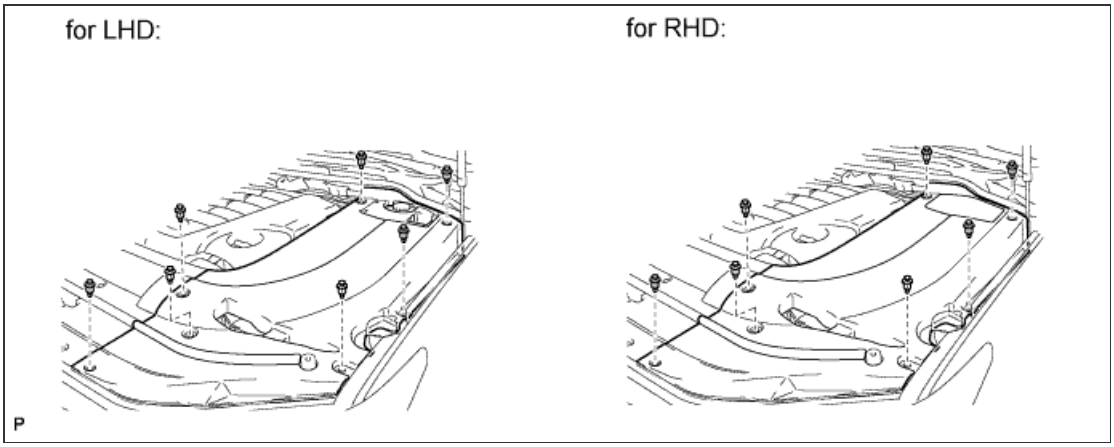
14. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.



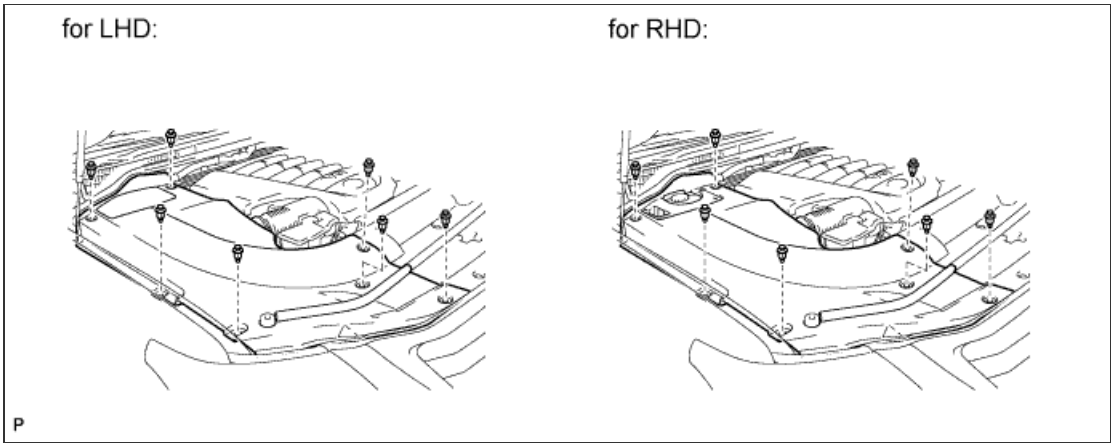
15. INSTALL ENGINE ROOM SIDE COVER RH

a. Install the engine room side cover with the 7 clips.



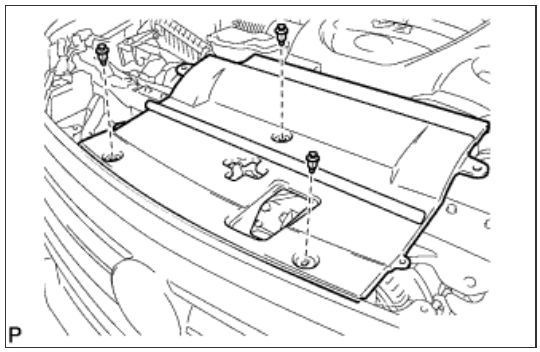
for Preparation Click here

for Preparation Click here



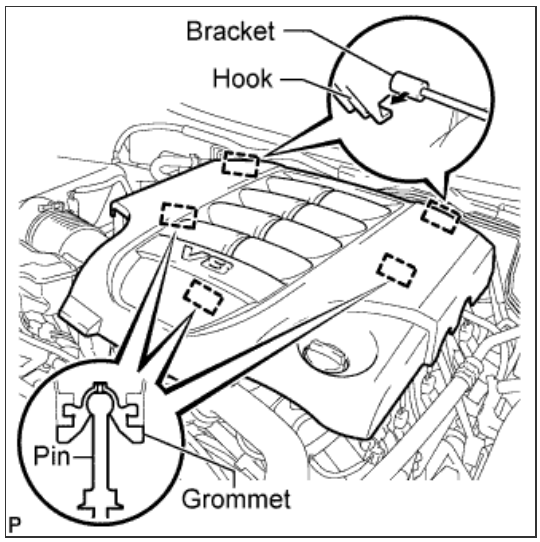
1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.



2. REMOVE ENGINE ROOM SIDE COVER RH

a. Remove the 7 clips and engine room side cover.



3. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 3 clips and upper radiator support seal.

4. REMOVE V-BANK COVER SUB-ASSEMBLY

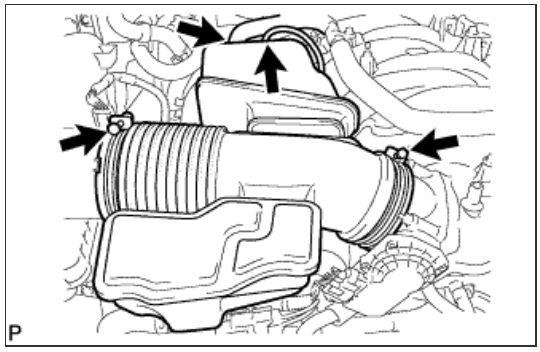
a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.

5. DISCHARGE FUEL SYSTEM PRESSURE

a. Discharge the fuel system pressure (Click here).

6. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:



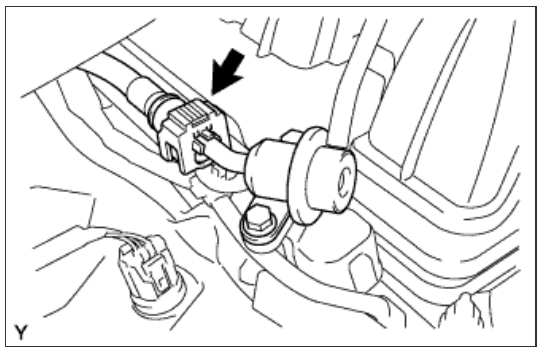
When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

7. REMOVE AIR CLEANER HOSE ASSEMBLY

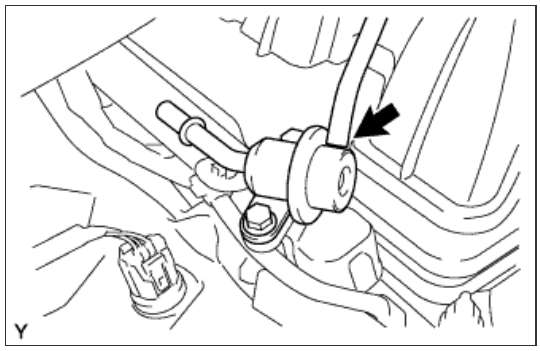
a. Disconnect the vacuum hose and No. 2 ventilation hose.

b. Loosen the 2 hose clamps.

c. Remove the air cleaner hose.



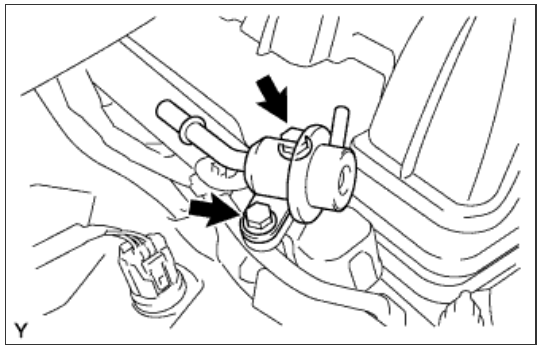
8. REMOVE FUEL PRESSURE REGULATOR ASSEMBLY



a. Disconnect the No. 2 fuel tube from the pressure regulator (Click here).

CAUTION:

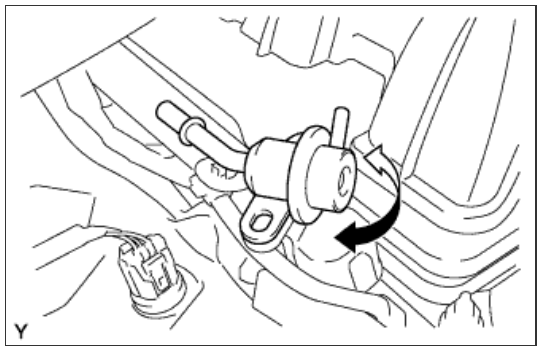
Put a cloth or equivalent under the pressure regulator.



b. Disconnect the vacuum sensing hose from the pressure regulator.

c. Remove the 2 bolts, and pull out the pressure regulator.

d. Remove the O-ring from the pressure regulator.

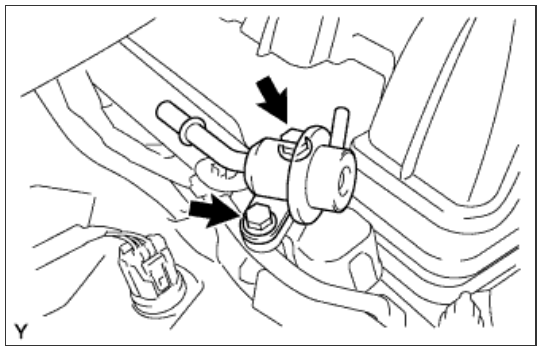


for Preparation Click here

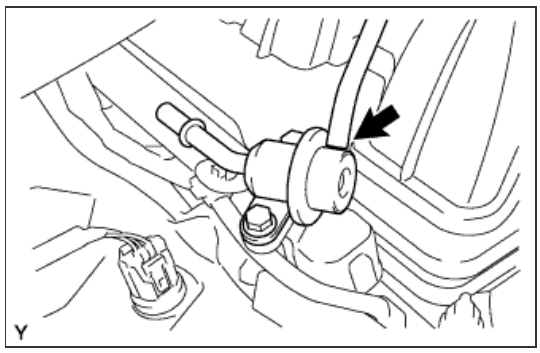
1. INSTALL FUEL PRESSURE REGULATOR ASSEMBLY

a. Apply a light coat of gasoline or spindle oil to a new O-ring, and install it to the pressure regulator.

NOTICE:

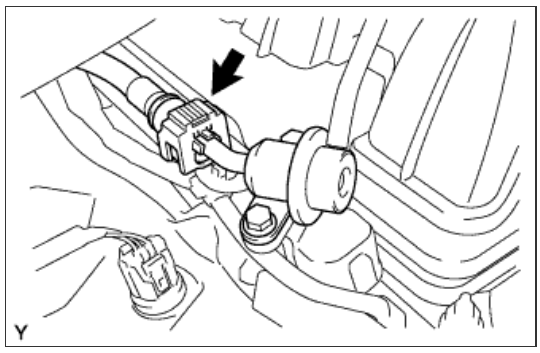


- **Make sure that there are no scratches or foreign matter in or around the insertion hole of the delivery pipe.**
- **When inserting the injector, be careful not to damage the O-ring.**



b. While turning the pressure regulator left and right, install it to the delivery pipe.

c. Install the 2 bolts.

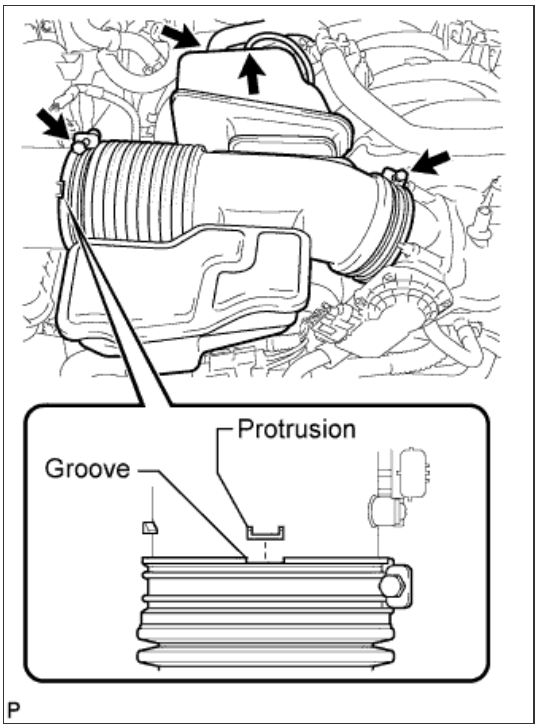


Torque:
10 N*m{ 107 kgf*cm , 7 ft.*lbf }

d. Connect the vacuum sensing hose to the pressure regulator.

e. Connect the No. 2 fuel tube to the pressure regulator (Click here).

2. INSTALL AIR CLEANER HOSE ASSEMBLY



a. Install the air cleaner hose so that the protrusion of the air cleaner cap aligns with the groove of the hose as shown in the illustration.

b. Tighten the 2 clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

c. Connect the vacuum hose.

d. Connect the No. 2 ventilation hose.

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

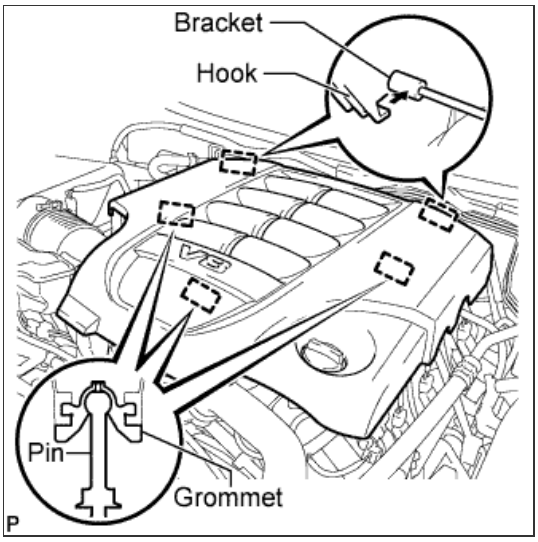
When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

4. INSPECT FOR FUEL LEAK

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG) and intelligent tester on.

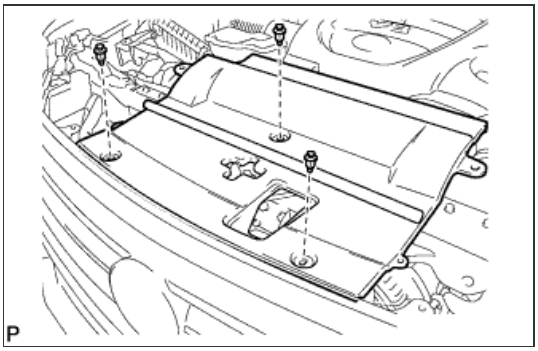
NOTICE:



Do not start the engine.

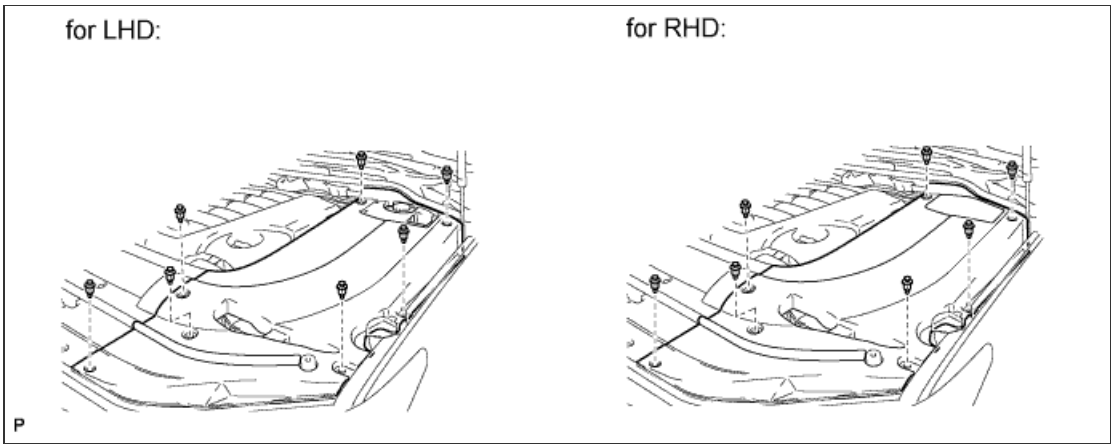
c. Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Fuel Pump Speed Control.

d. Check that there are no fuel leaks after doing maintenance anywhere on the fuel system.



5. INSTALL V-BANK COVER SUB-ASSEMBLY

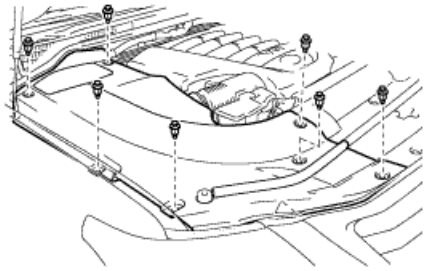
a. Attach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.



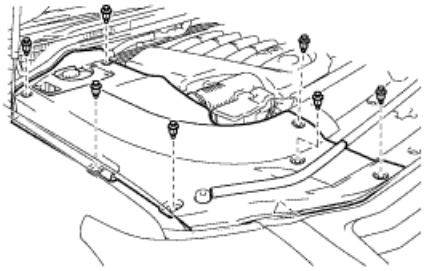
6. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the upper radiator support seal with the 3 clips.

7. INSTALL ENGINE ROOM SIDE COVER LH



a. Install the engine room side cover with the 7 clips.



8. INSTALL ENGINE ROOM SIDE COVER RH

a. Install the engine room side cover with the 7 clips.

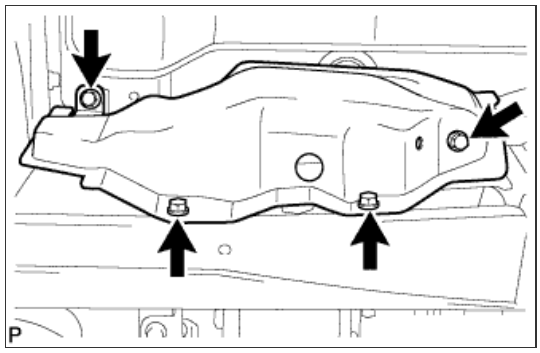
1. DISCHARGE FUEL SYSTEM PRESSURE

a. Discharge the fuel system pressure (Click here).



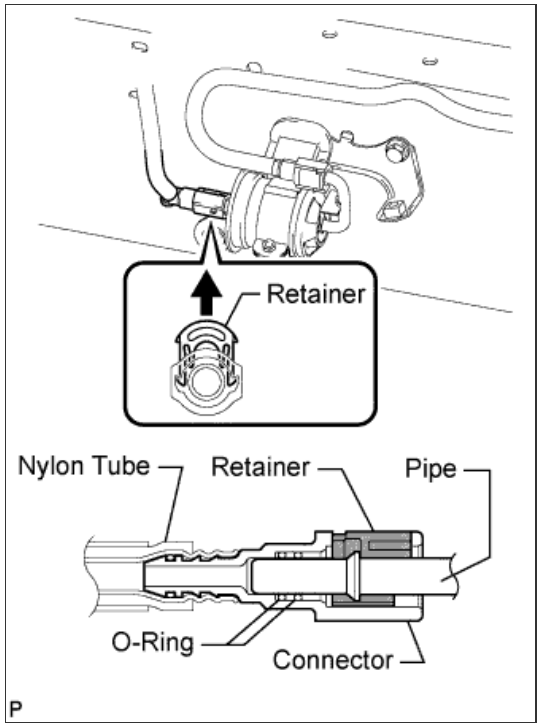
2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

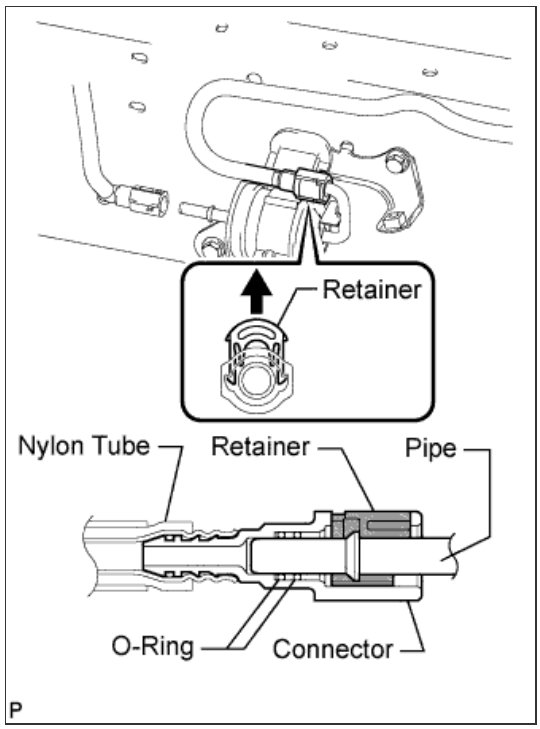
3. REMOVE NO. 1 FUEL TUBE PROTECTOR

a. Remove the 4 bolts and No. 1 fuel tube protector.



4. DISCONNECT NO. 2 FUEL MAIN TUBE SUB-ASSEMBLY

a. Pull up the retainer and disconnect the No. 2 fuel main tube.

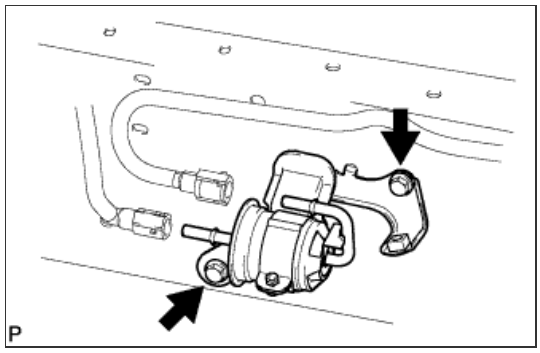


NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**

5. DISCONNECT FUEL MAIN TUBE

a. Pull up the retainer and disconnect the fuel main tube.



NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**

6. REMOVE FUEL FILTER ASSEMBLY

a. Remove the 2 bolts and fuel filter.

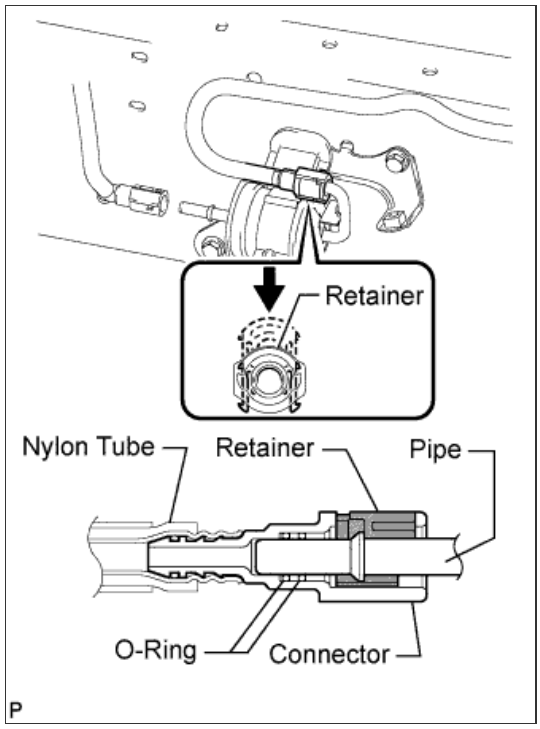
7. INSTALL FUEL FILTER ASSEMBLY

a. Install the fuel filter with the 2 bolts.

Torque:
20 N*m{ 199 kgf*cm , 14 ft.*lbf }

8. CONNECT FUEL MAIN TUBE

a. Connect the fuel main tube and push the retainer.



HINT:

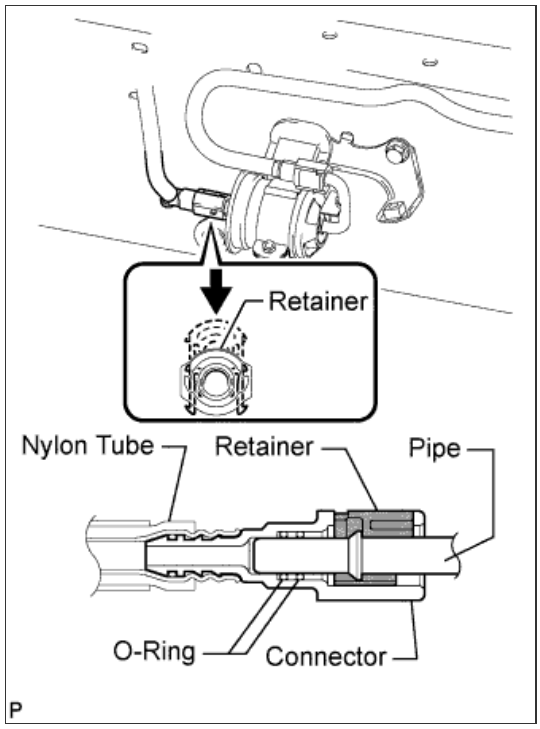
Push the parts together firmly until a "click" sound is heard.

NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**

- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

9. CONNECT NO. 2 FUEL MAIN TUBE SUB-ASSEMBLY



a. Connect the No. 2 fuel main tube and push the retainer.

HINT:

Push the parts together firmly until a "click" sound is heard.

NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

10. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

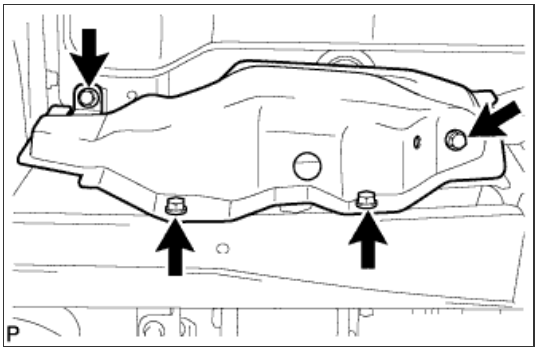
11. INSPECT FOR FUEL LEAK

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG) and intelligent tester on.

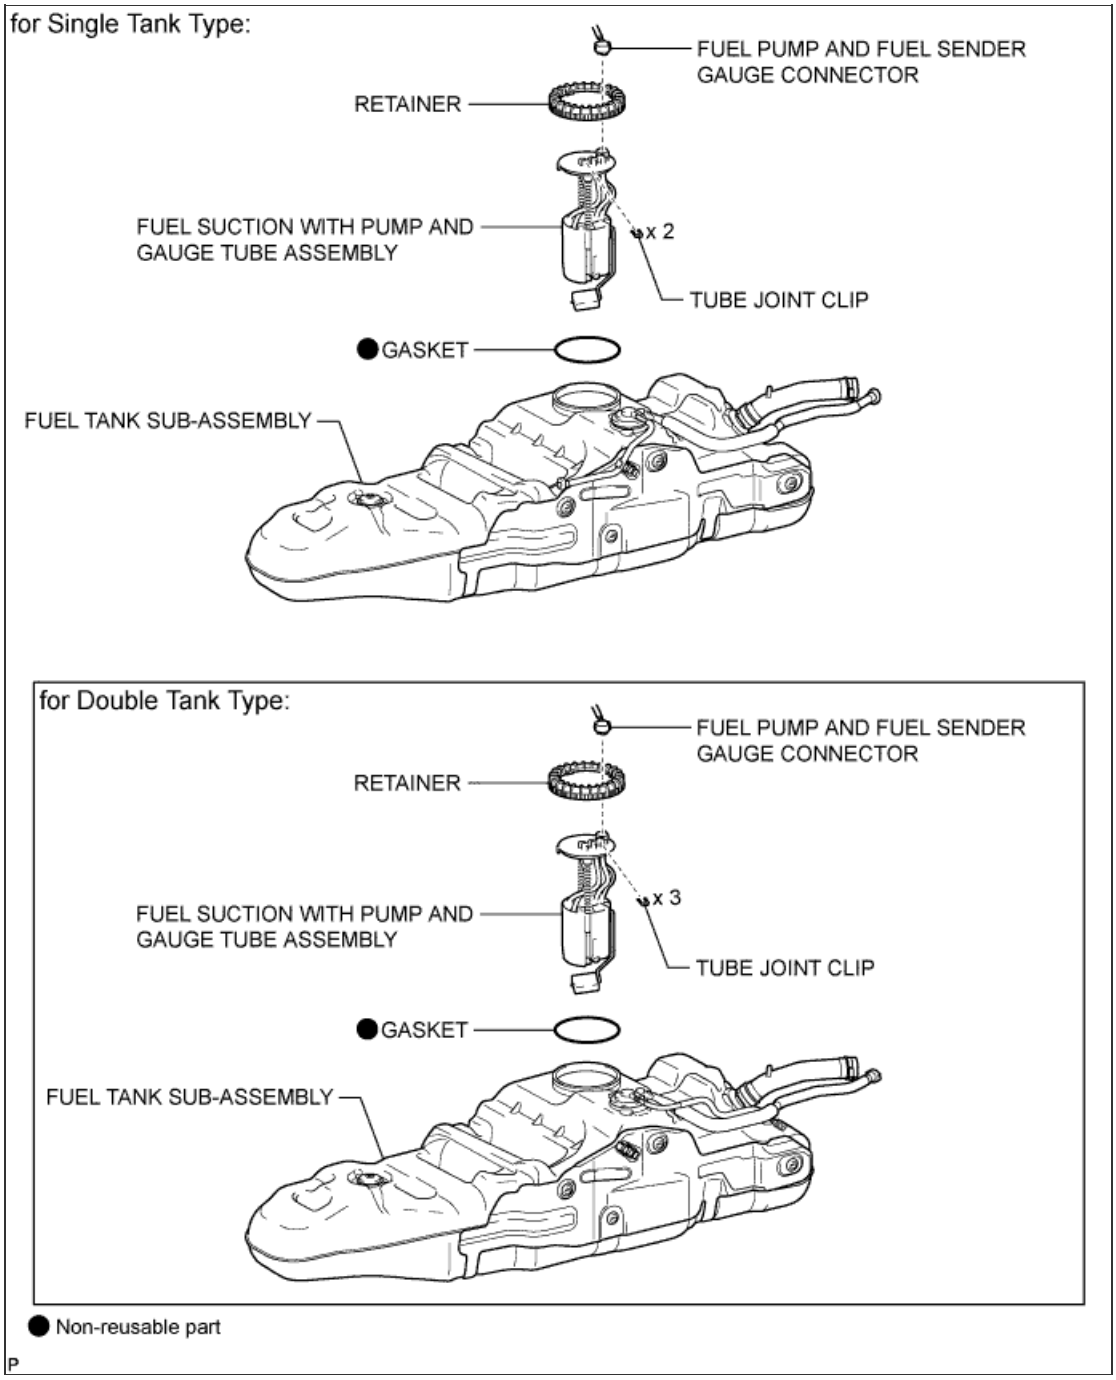
NOTICE:

Do not start the engine.



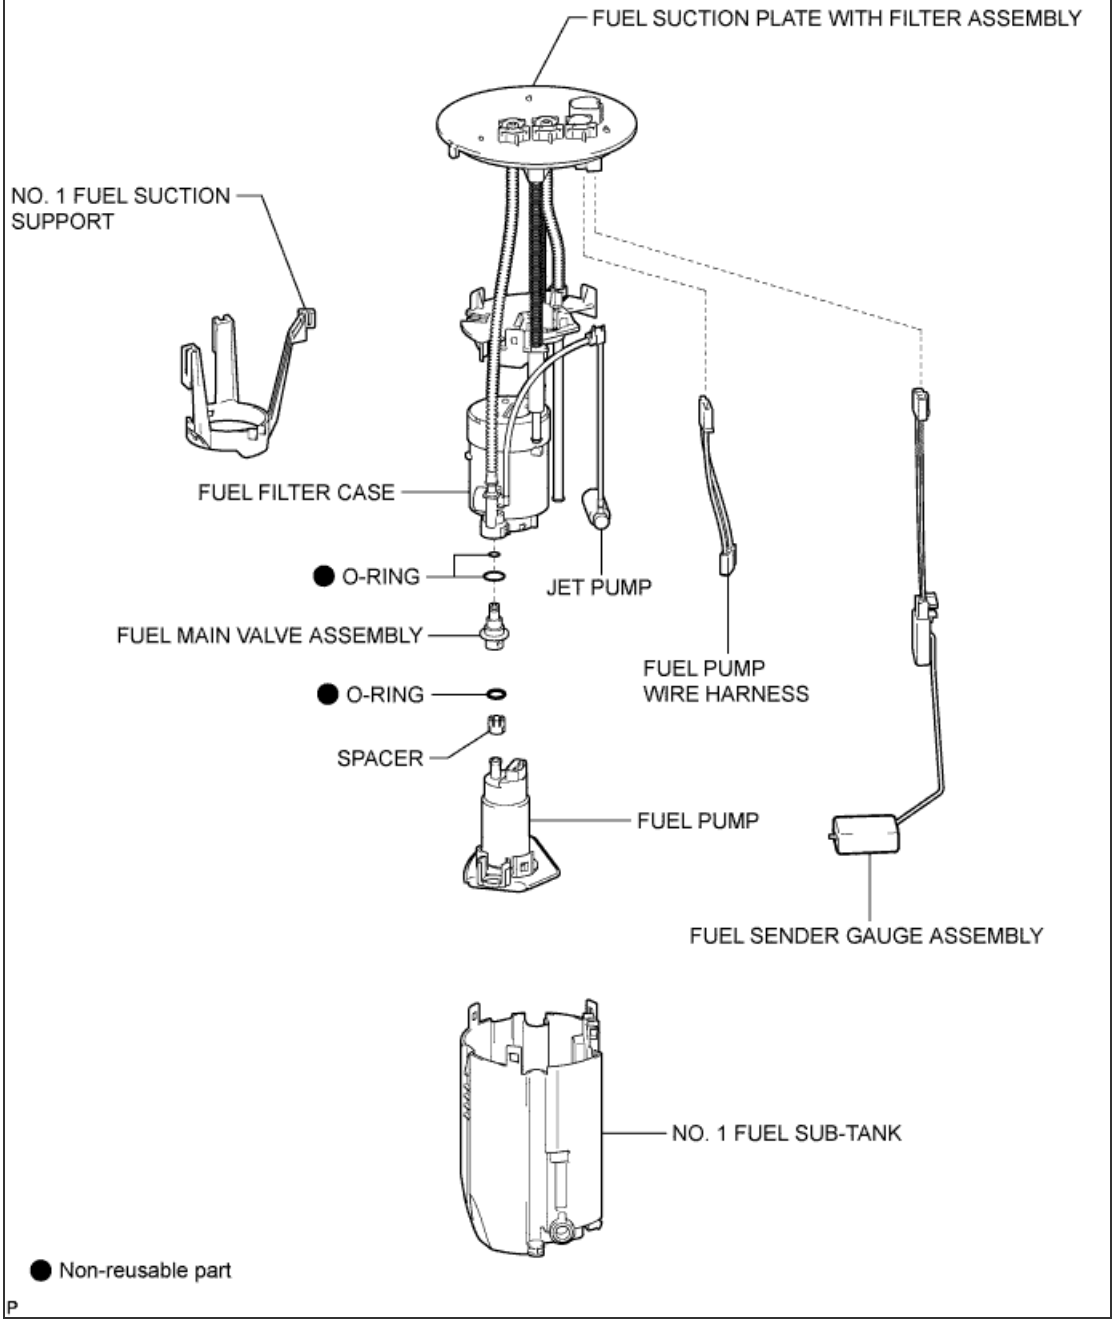
c. Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Fuel Pump Speed Control.

d. Check that there are no fuel leaks after doing maintenance anywhere on the fuel system.



12. INSTALL NO. 1 FUEL TUBE PROTECTOR

a. Install the No. 1 fuel tube protector with the 4 bolts.



Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

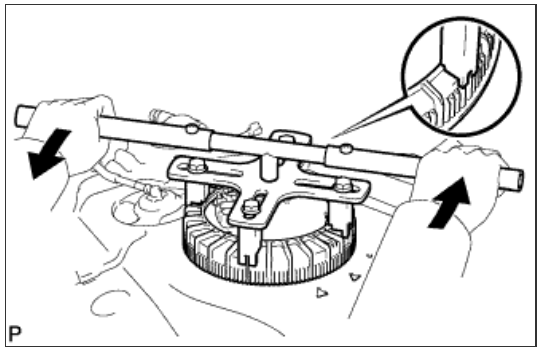
a. Set SST on the fuel pump gauge retainer.

SST
09808-14030

HINT:

- **Engage the claws of SST securely with the fuel pump gauge retainer holes to secure SST.**
- **Install SST while pressing the claws of SST against the fuel pump gauge retainer (towards the center of SST).**

b. Using SST, loosen the retainer.



SST
09808-14030

Text in Illustration

➡	Turn

HINT:

Fit the tips of SST onto the ribs of the retainer.

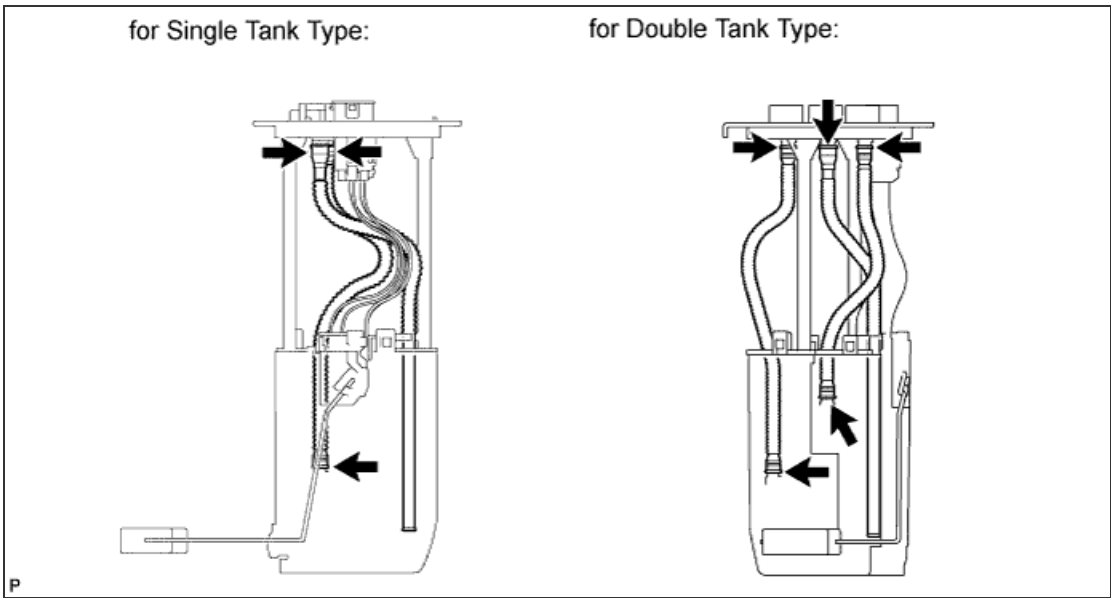
NOTICE:

- **When the retainer is loosened, be careful as the pump and gauge tube will spring upward from the force of the spring.**
- **Remove foreign matter around the fuel suction with pump and gauge before this operation.**

c. Remove the retainer.

d. Remove the fuel suction with pump and gauge tube assembly from the fuel tank.

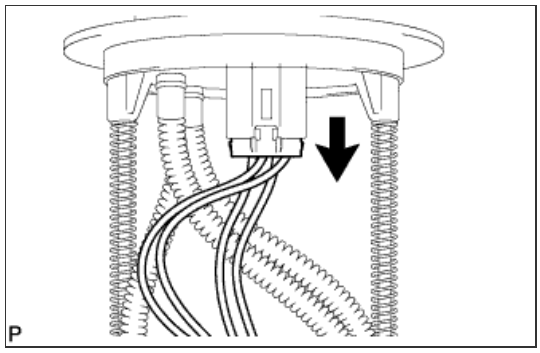
NOTICE:



Be careful not to bend the arm of the fuel sender gauge.

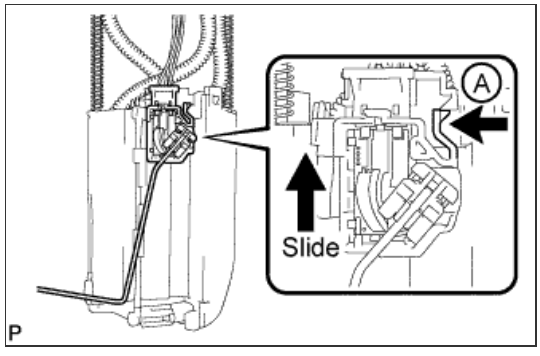
e. Remove the gasket from the fuel tank.

for Preparation Click here



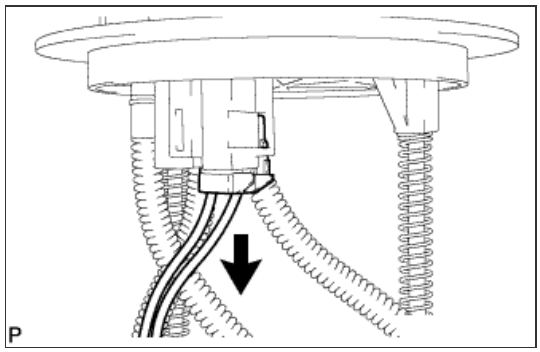
NOTICE:

Do not disconnect the hoses indicated in the illustration.



1. REMOVE FUEL SENDER GAUGE ASSEMBLY

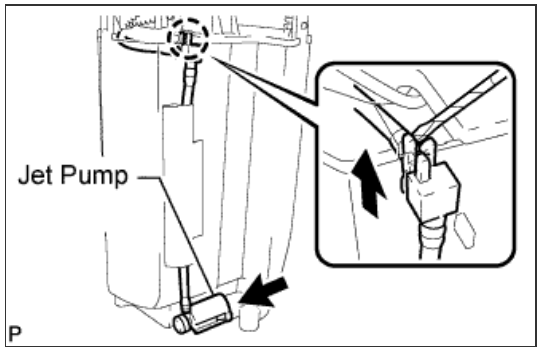
a. Disconnect the fuel sender gauge connector.



b. Press down on the sender gauge claw labeled A. Then slide the sender gauge upward to remove it.

2. REMOVE NO. 1 FUEL SUB-TANK (for Single Tank Type)

a. Disconnect the fuel pump connector.



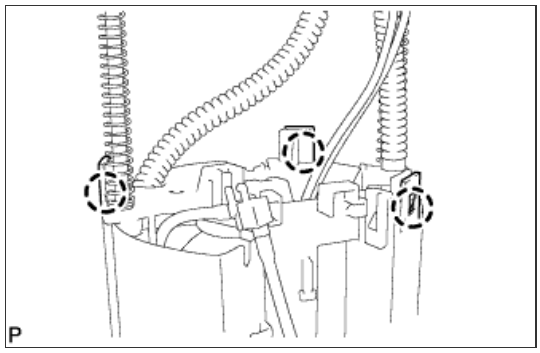
b. Disconnect the jet pump from the sub-tank.

c. Using a small screwdriver, detach the claw from the sub-tank.

HINT:

Tape the screwdriver tip before use.

d. Detach the tube from the 2 clamps on the sub-tank.



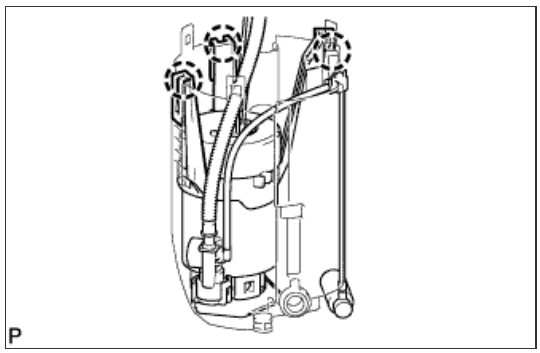
e. Using a screwdriver, detach the 3 claws from the claw holes.

NOTICE:

Do not damage the fuel sub-tank.

HINT:

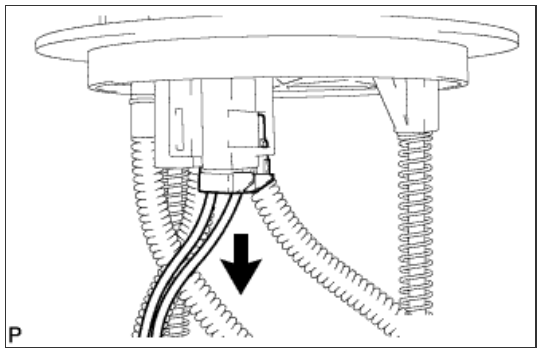
Tape the screwdriver tip before use.



f. Using a screwdriver, detach the 3 claws from the claw holes and remove the No. 1 fuel sub-tank.

NOTICE:

Do not damage the fuel sub-tank.

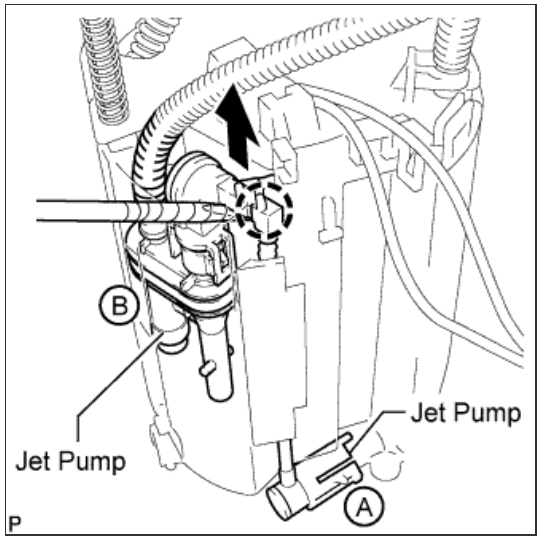


HINT:

Tape the screwdriver tip before use.

3. REMOVE NO. 1 FUEL SUB-TANK (for Double Tank Type)

a. Disconnect the fuel pump connector.



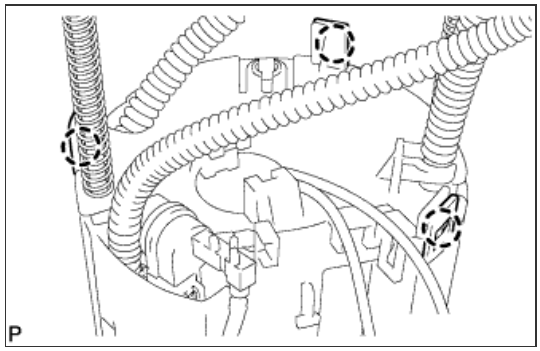
b. Disconnect the jet pump (labeled A) from the sub-tank.

c. Disconnect the jet pump (labeled B) from the sub-tank.

i. Using a small screwdriver, detach the claw from the sub-tank.

HINT:

Tape the screwdriver tip before use.



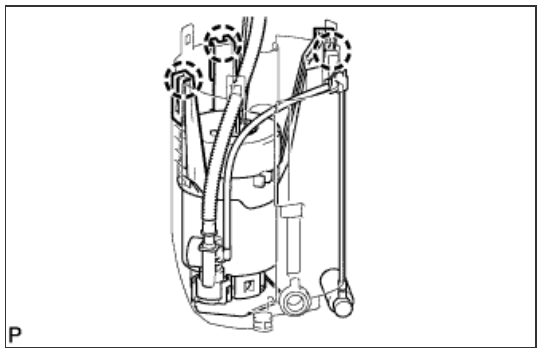
d. Using a screwdriver, detach the 3 claws from the claw holes.

NOTICE:

Do not damage the fuel sub-tank.

HINT:

Tape the screwdriver tip before use.



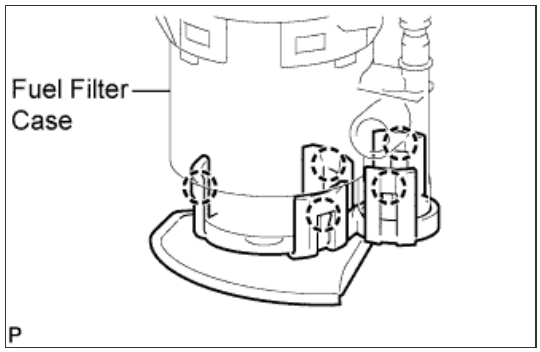
e. Using a screwdriver, detach the 3 claws from the claw holes.

NOTICE:

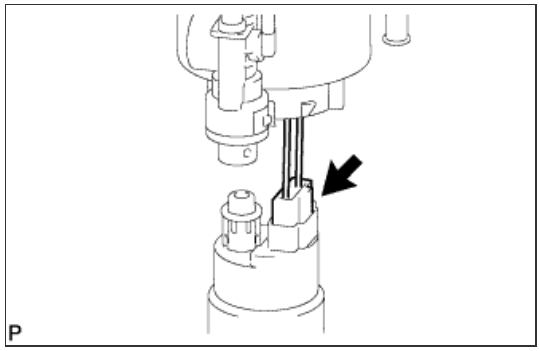
Do not damage the fuel sub-tank.

HINT:

Tape the screwdriver tip before use.

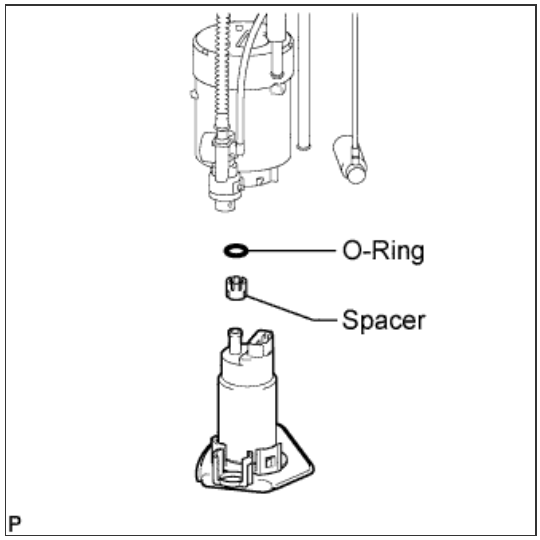


4. REMOVE FUEL PUMP



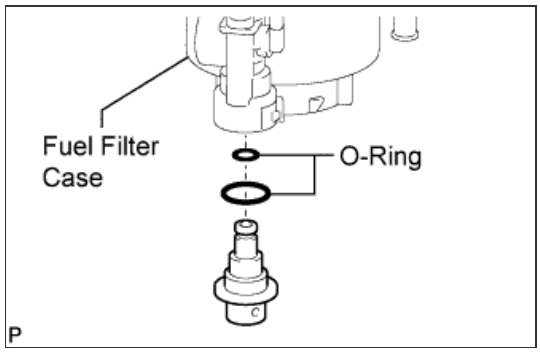
a. Using a screwdriver, detach the 5 claws from the claw holes and disconnect the fuel pump from the fuel filter case.

HINT:



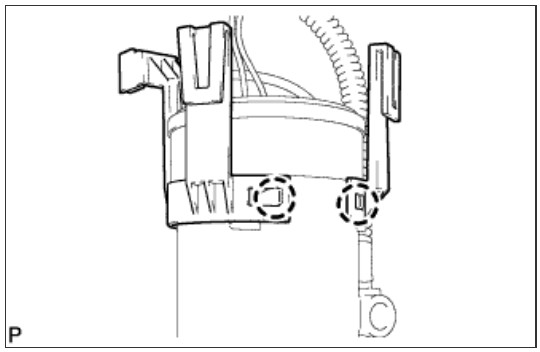
Tape the screwdriver tip before use.

b. Disconnect the fuel pump wire harness connector from the fuel pump to remove it.



c. Remove the O-ring and spacer from the fuel pump.

5. REMOVE FUEL MAIN VALVE ASSEMBLY



a. Remove the fuel main valve from the fuel filter case.

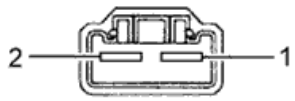
b. Remove the 2 O-rings from the fuel main valve.

6. REMOVE NO. 1 FUEL SUCTION SUPPORT

a. Detach the 2 claws from the claw holes to remove the fuel suction support.

for Preparation Click here

1. INSPECT FUEL PUMP



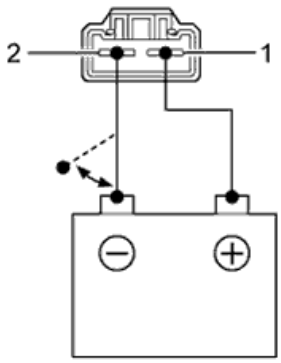
a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	0.2 to 3.0 Ω

If the result is not as specified, replace the fuel pump assembly.

Component without harness connected:
(Fuel Pump)

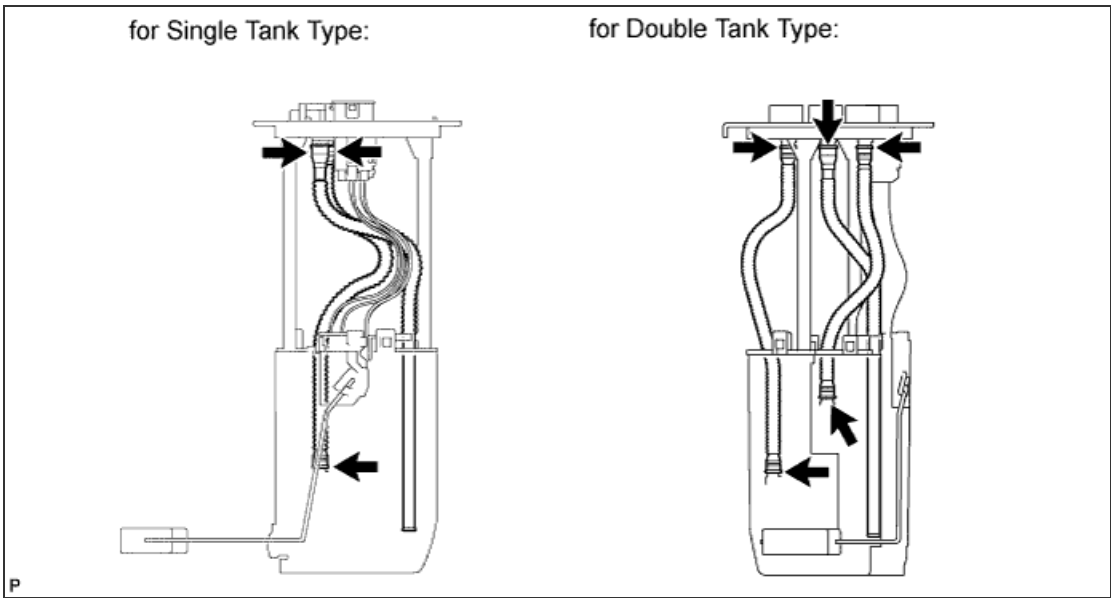


b. Inspect the operation of the fuel pump.

i. Connect the positive (+) lead of the battery to terminal 1 of the connector, and the negative (-) lead to terminal 2. Check that the fuel pump operates.
If the result is not as specified, replace the fuel pump and fuel pump ECU.

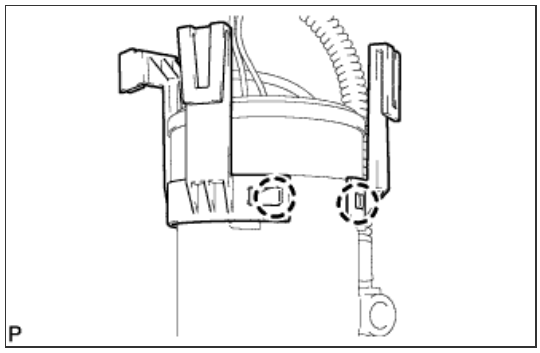
NOTICE:

- **These tests must be performed within 10 seconds to prevent the coil from burning out.**
- **Keep the fuel pump as far away from the battery as possible.**
- **Always turn the voltage on and off on the battery side, not the fuel pump side.**
- **When the pump is locked and does not operate due to foreign matter being stuck, etc., replace the fuel pump ECU together with the fuel pump, as the fuel pump ECU may be damaged electrically.**



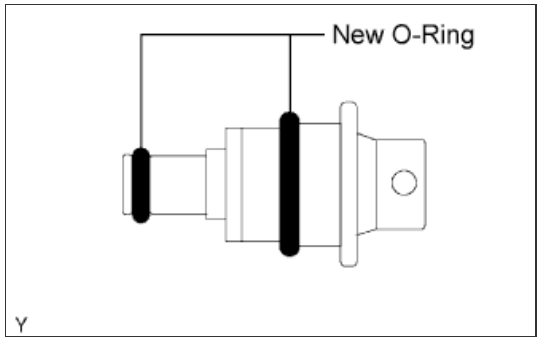
Component without harness connected:
(Fuel Pump)

for Preparation Click here



NOTICE:

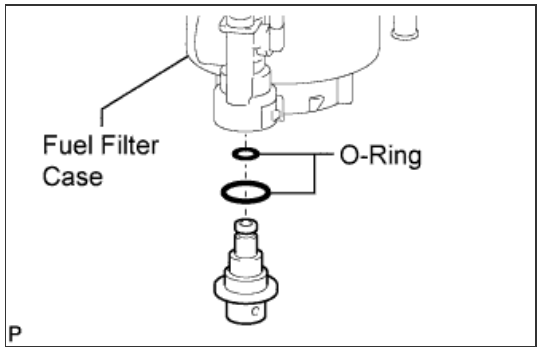
Do not disconnect the hoses indicated in the illustration.



1. INSTALL NO. 1 FUEL SUCTION SUPPORT

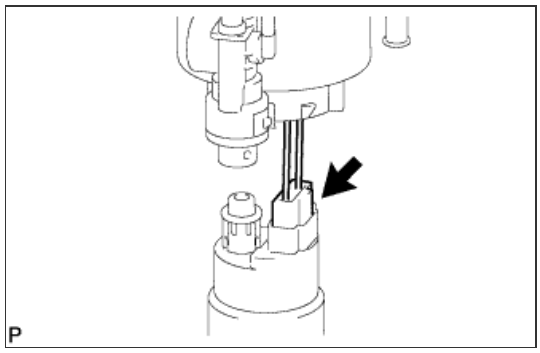
a. Attach the 2 claws to the claw holes to install the fuel suction support.

2. INSTALL FUEL MAIN VALVE ASSEMBLY



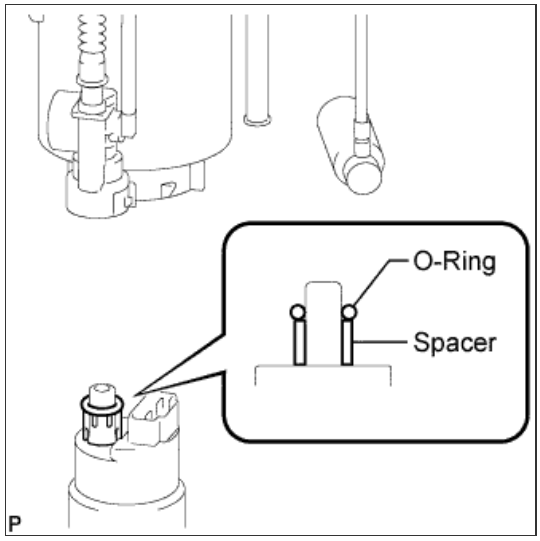
a. Apply a light coat of gasoline to 2 new O-rings, and install them onto the fuel main valve.

b. Install the fuel main valve to the fuel filter case.

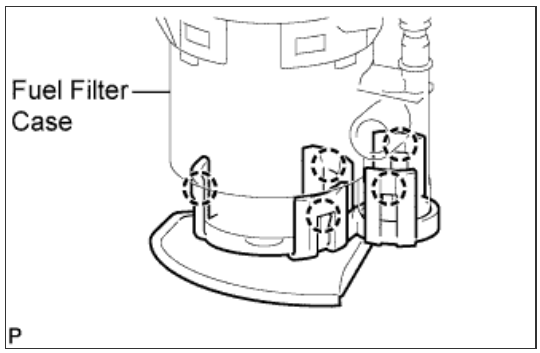


NOTICE:

Make sure the O-rings are not cut or pinched during the installation.

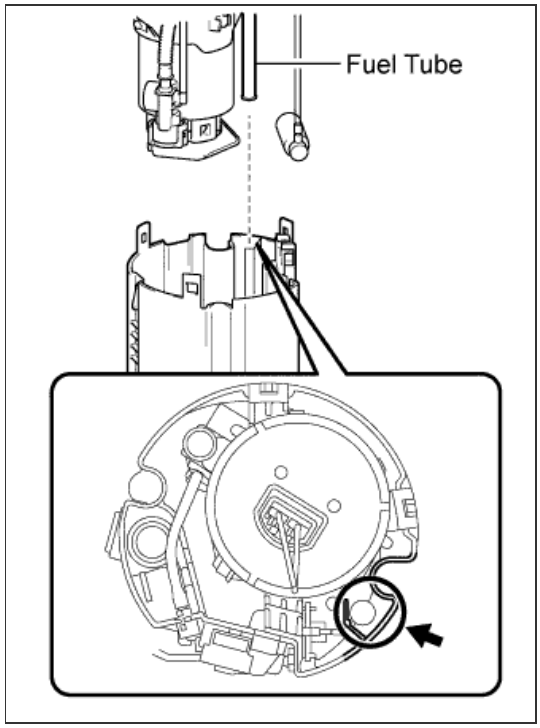


3. INSTALL FUEL PUMP

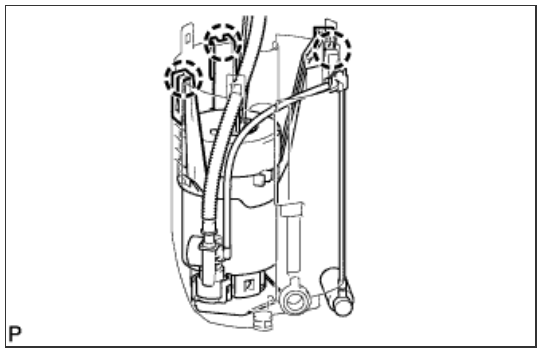


a. Connect the fuel pump wire harness connector to the fuel pump.

b. Apply a light coat of gasoline to a new O-ring. Then install the O-ring and spacer to the fuel pump.

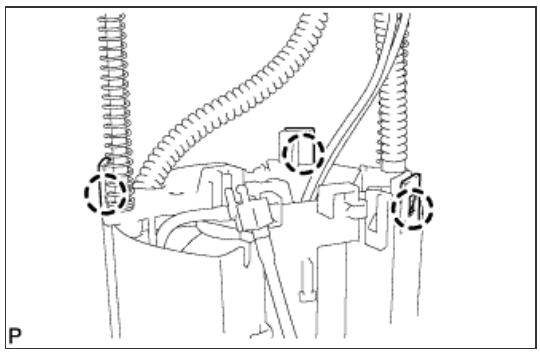


c. Attach the 5 claws to the claw holes and install the fuel pump to the fuel filter case.



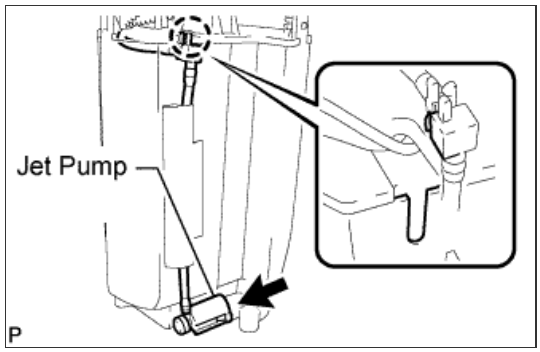
4. INSTALL NO. 1 FUEL SUB-TANK (for Single Tank Type)

NOTICE:



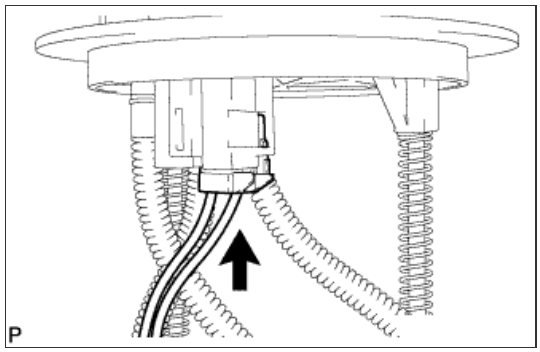
Make sure that the fuel tube passes into the section marked by the circle.

a. Attach the 3 claws to the claw holes to install the fuel sub-tank.



b. Attach the 3 claws to the claw holes.

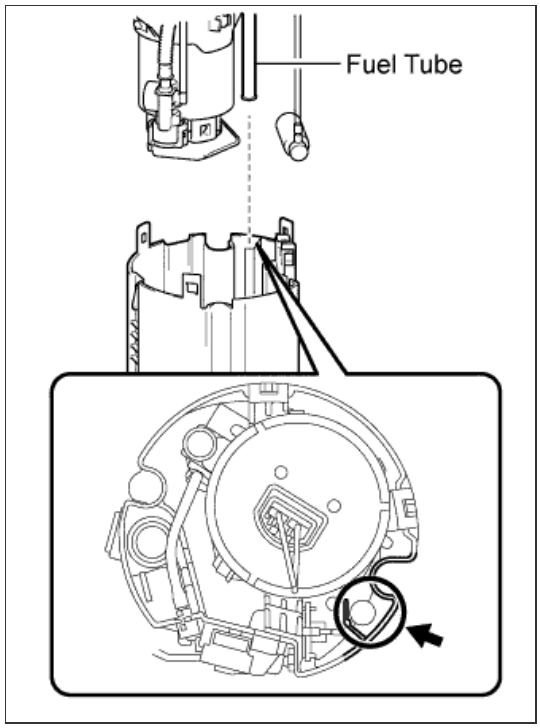
c. Install the tube part to the sub-tank.



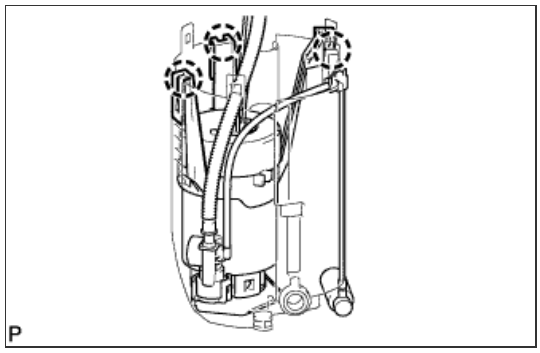
i. Attach the claw on the end of the tube to the claw hole. Install the tube to the 2 clamps on the sub-tank.

d. Connect the jet pump to the sub-tank.

e. Connect the fuel pump connector.

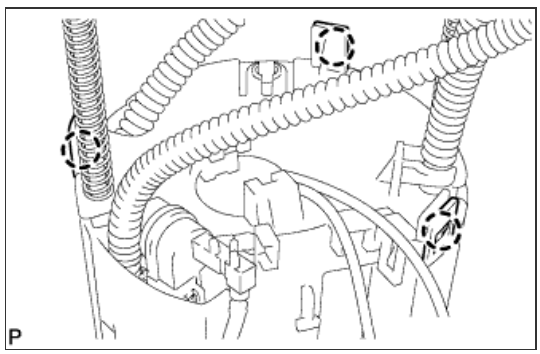


e. Connect the fuel pump connector.



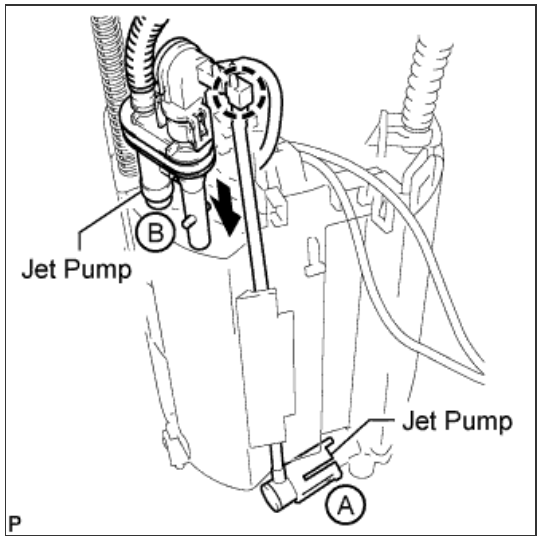
5. INSTALL NO. 1 FUEL SUB-TANK (for Double Tank Type)

NOTICE:

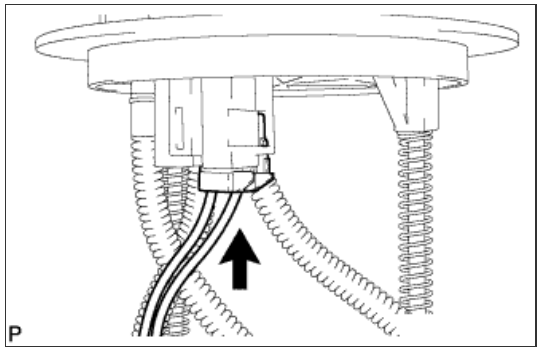


Make sure that the fuel tube passes into the section marked by the circle.

a. Attach the 3 claws to the claw holes and install the fuel sub-tank.



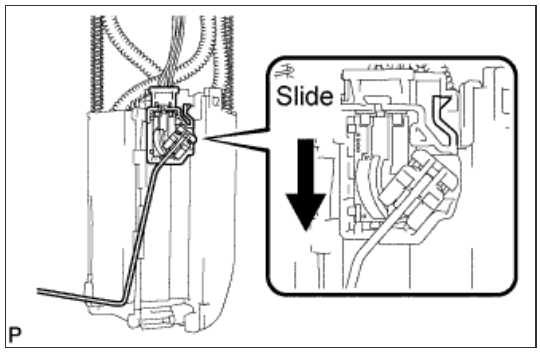
b. Attach the 3 claws to the claw holes.



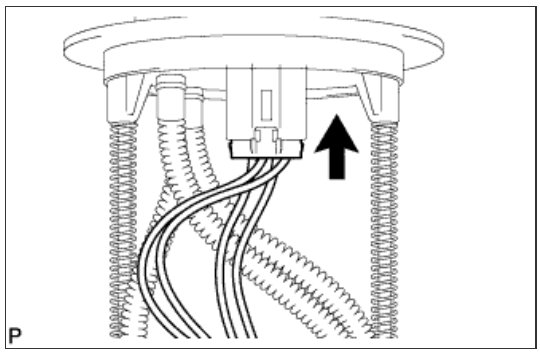
c. Connect the jet pump (labeled B) to the sub-tank.

i. Attach the claw on the end of the tube to the claw hole.

d. Connect the jet pump (labeled A) to the sub-tank.



e. Connect the fuel pump connector.



6. INSTALL FUEL SENDER GAUGE ASSEMBLY

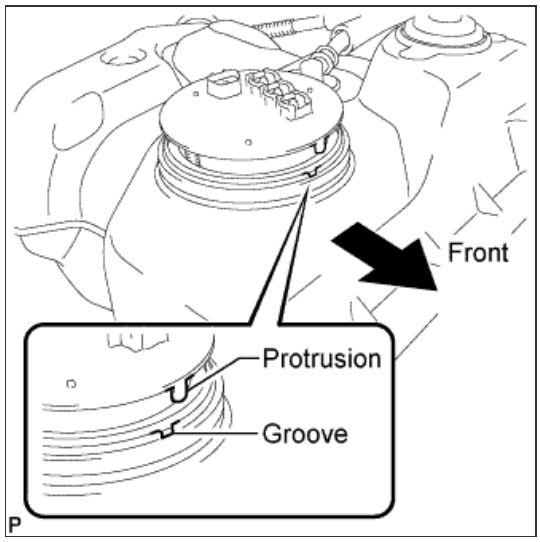
a. Set the sender gauge to the fuel sub-tank. Then slide the sender gauge downward to install it.

b. Connect the fuel sender gauge connector.

for Preparation Click here

1. INSTALL FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY

a. Apply a light coat of gasoline or grease to a new gasket, and install it to the fuel tank.



b. Install the fuel suction with pump and gauge tube into the fuel tank.

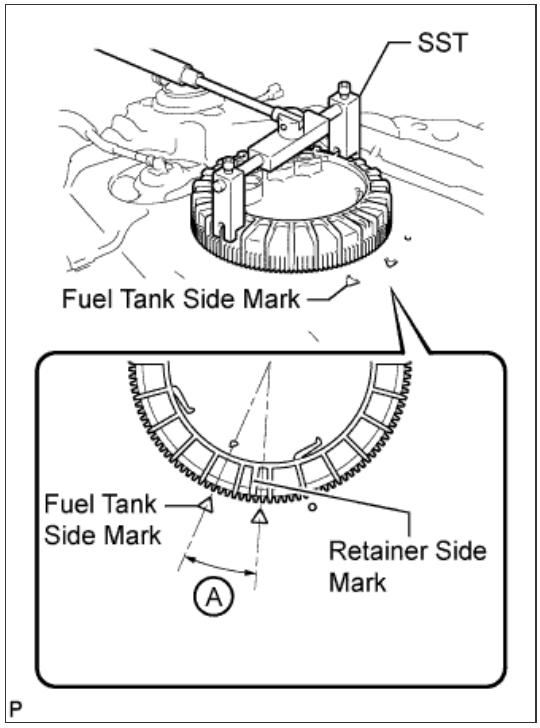
NOTICE:

Be careful not to bend the arm of the fuel sender gauge.

HINT:

Align the protrusion of the fuel suction with pump and gauge tube with the groove of the fuel tank.

c. Put the retainer on the fuel tank. While holding the fuel suction with pump and gauge tube, tighten the retainer 1 complete turn by hand.



d. Using SST, tighten the retainer until the mark on the retainer is within range A on the fuel tank, as shown in the illustration.

SST

09808-14020 (09808-01410, 09808-01420, 09808-01430)

HINT:

Fit the tips of SST onto the ribs of the retainer.

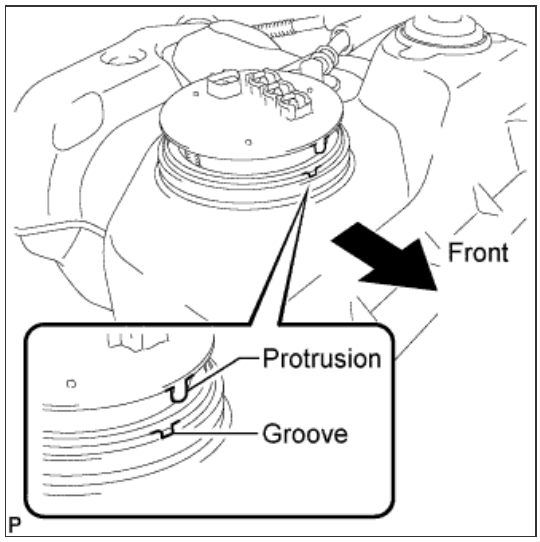
2. INSTALL FUEL TANK SUB-ASSEMBLY

a. Install the fuel tank sub-assembly (Click here).

for Preparation Click here

1. INSTALL FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY

a. Apply a light coat of gasoline or grease to a new gasket, and install it to the fuel tank.



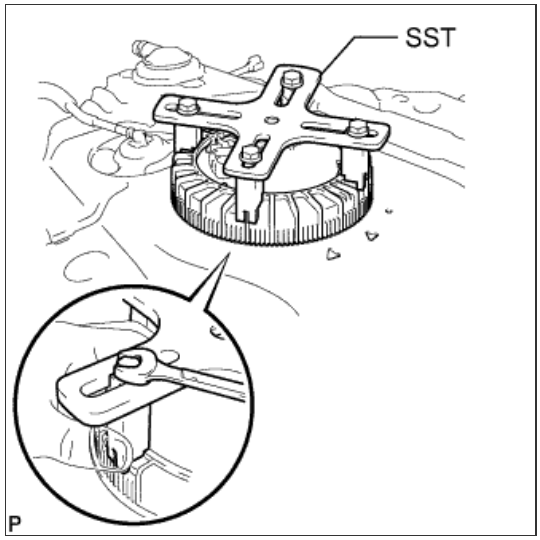
b. Install the fuel suction with pump and gauge tube into the fuel tank.

NOTICE:

Be careful not to bend the arm of the fuel sender gauge.

HINT:

Align the protrusion of the fuel suction with pump and gauge tube with the groove of the fuel tank.



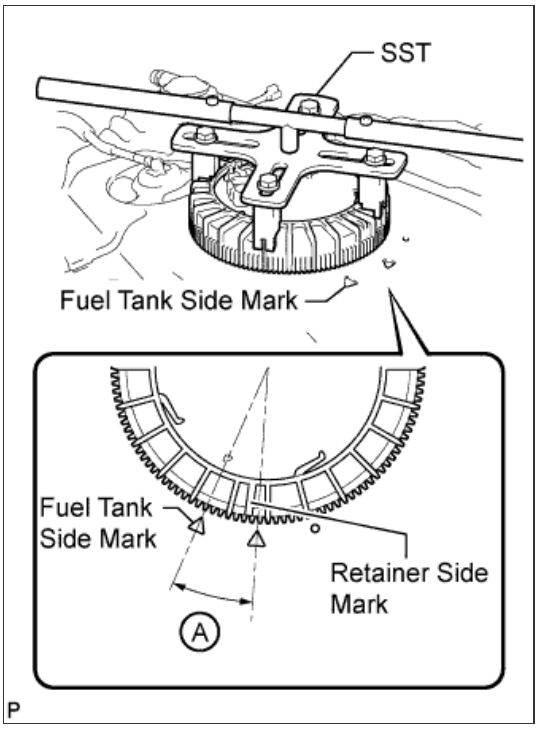
c. Put the retainer on the fuel tank. While holding the fuel suction with pump and gauge tube, tighten the retainer 1 complete turn by hand.

d. Set SST on the retainer.

SST
09808-14030

HINT:

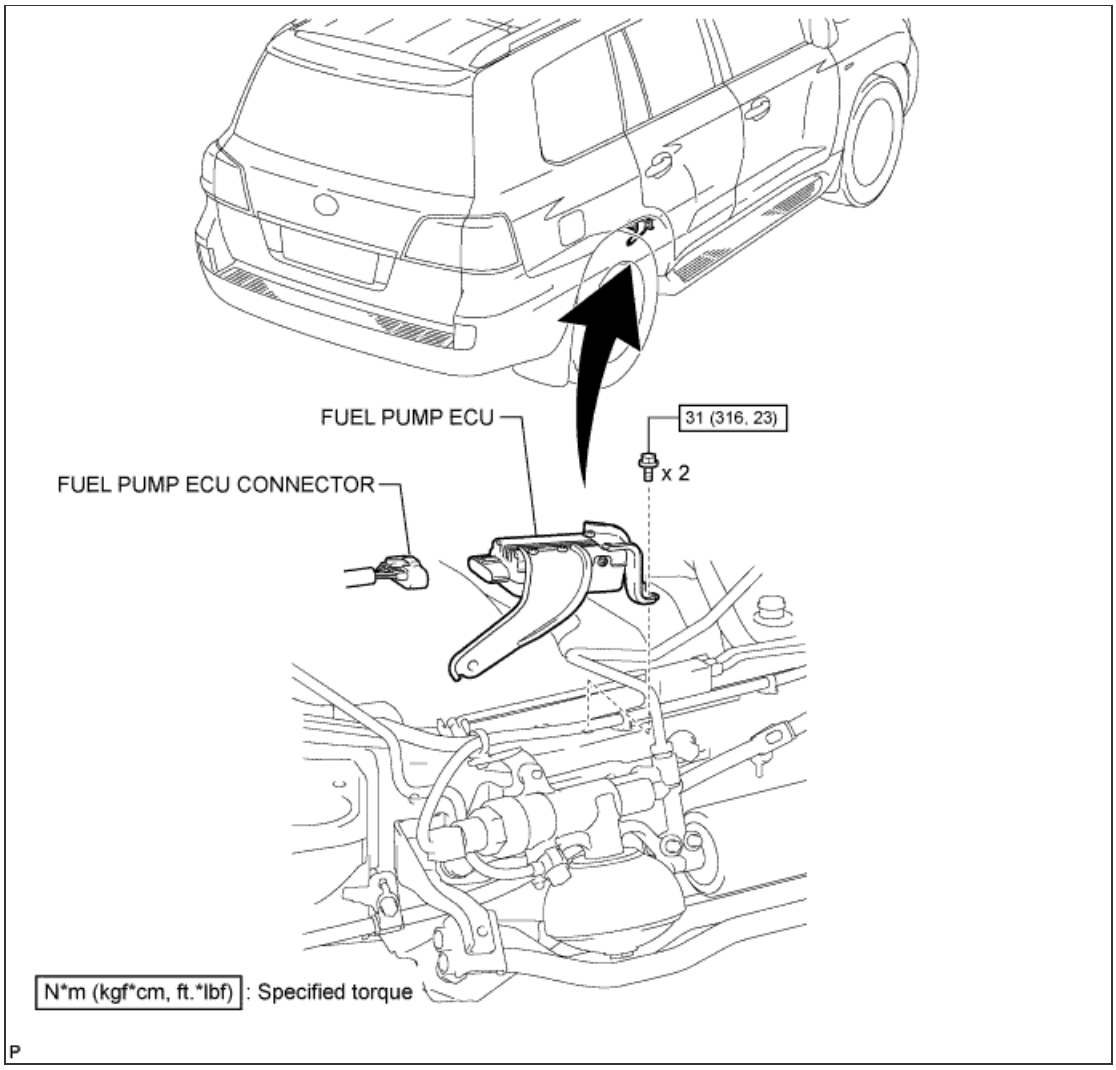
- **Hold the fuel suction tube assembly upright by hand to ensure that the fuel suction tube gasket is not moved out of position.**
- **Engage the claws of SST securely with the fuel pump gauge retainer holes to secure SST.**
- **Install SST while pressing the claws of SST against the fuel pump gauge retainer (toward the center of SST).**



e. Using SST, tighten the retainer until the mark on the retainer is within range A on the fuel tank, as shown in the illustration.

SST
09808-14030

HINT:



Fit the tips of SST onto the ribs of the retainer.

2. INSTALL FUEL TANK SUB-ASSEMBLY

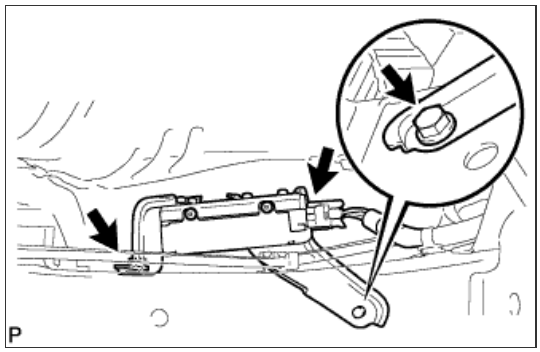
a. Install the fuel tank sub-assembly (Click here).

for Preparation Click here

for Preparation Click here

1. REMOVE FUEL TANK SUB-ASSEMBLY

a. Remove the fuel tank sub-assembly (Click here).



2. REMOVE FUEL PUMP ECU

a. Disconnect the ECU connector.

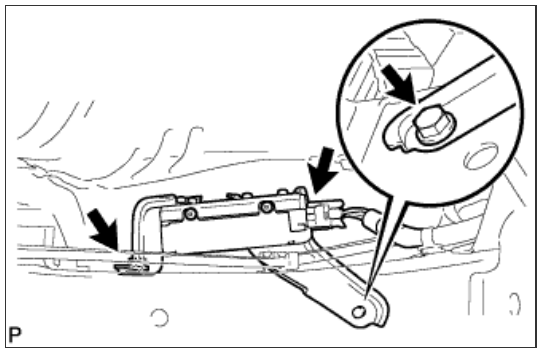
b. Remove the 2 bolts and ECU.

NOTICE:

Make sure the ECU is not subjected to physical shocks such as being dropped, etc.

for Preparation Click here

1. INSTALL FUEL PUMP ECU

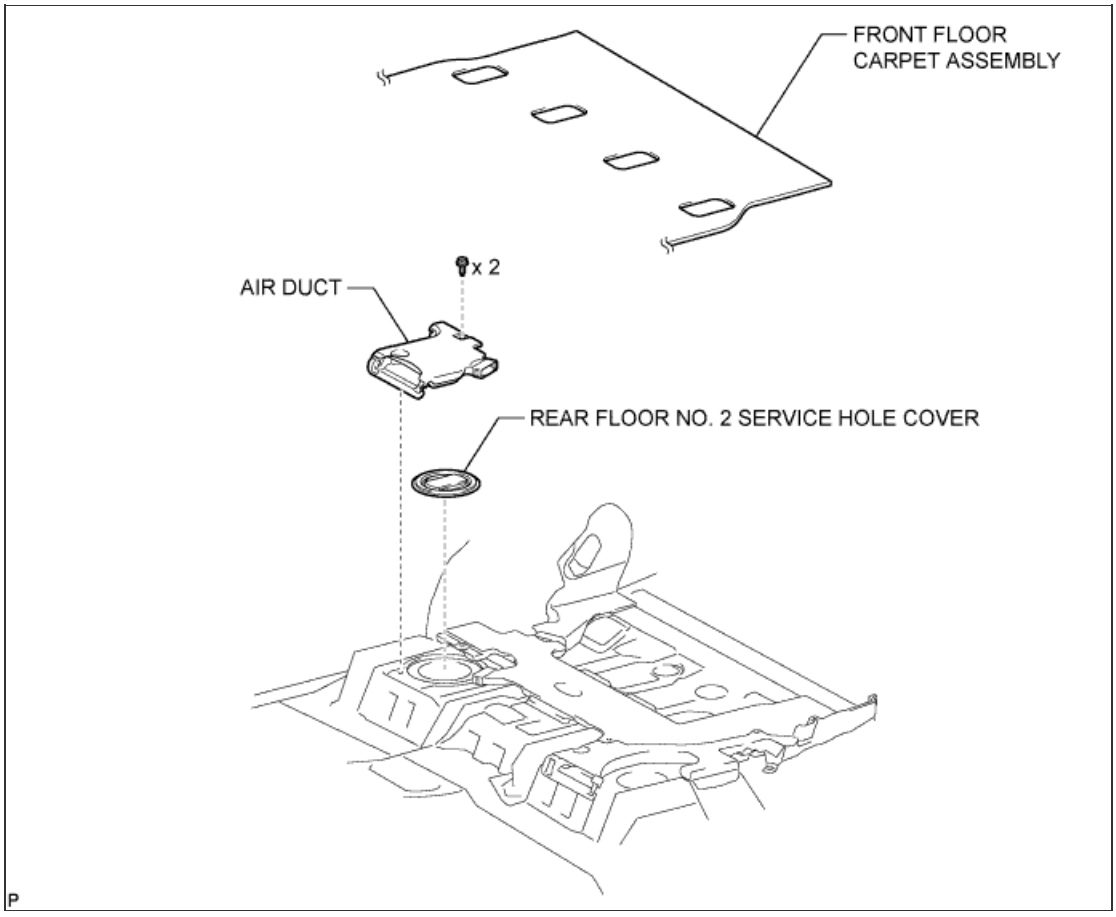


a. Install the ECU with the 2 bolts.

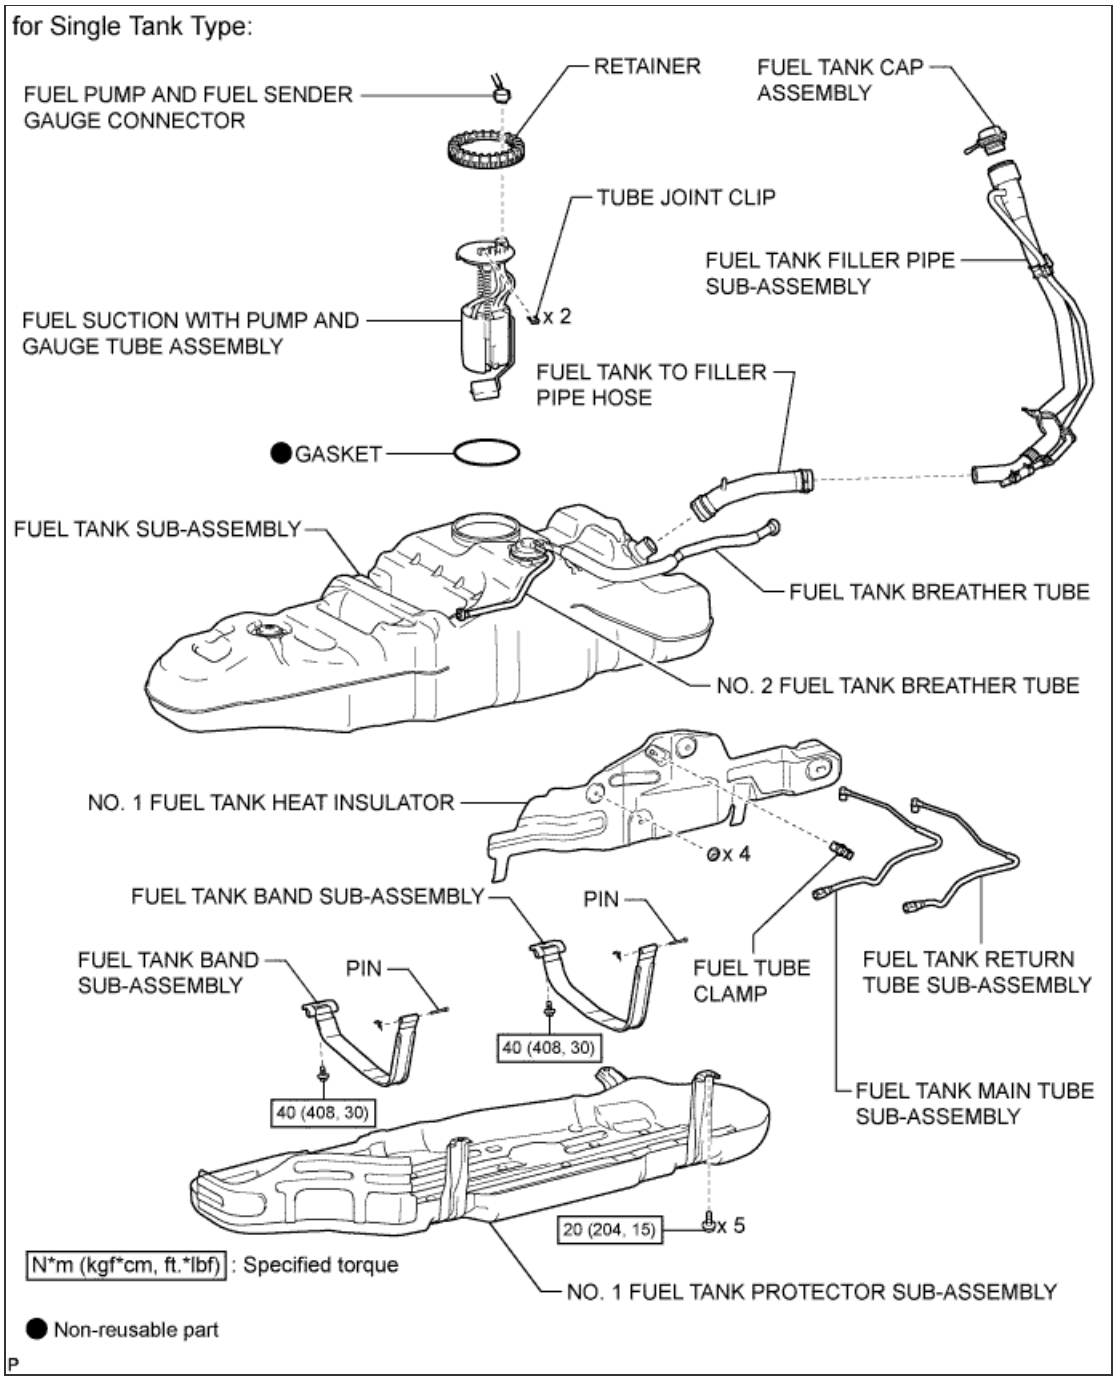
Torque:
31 N*m{ 316 kgf*cm , 23 ft.*lbf }

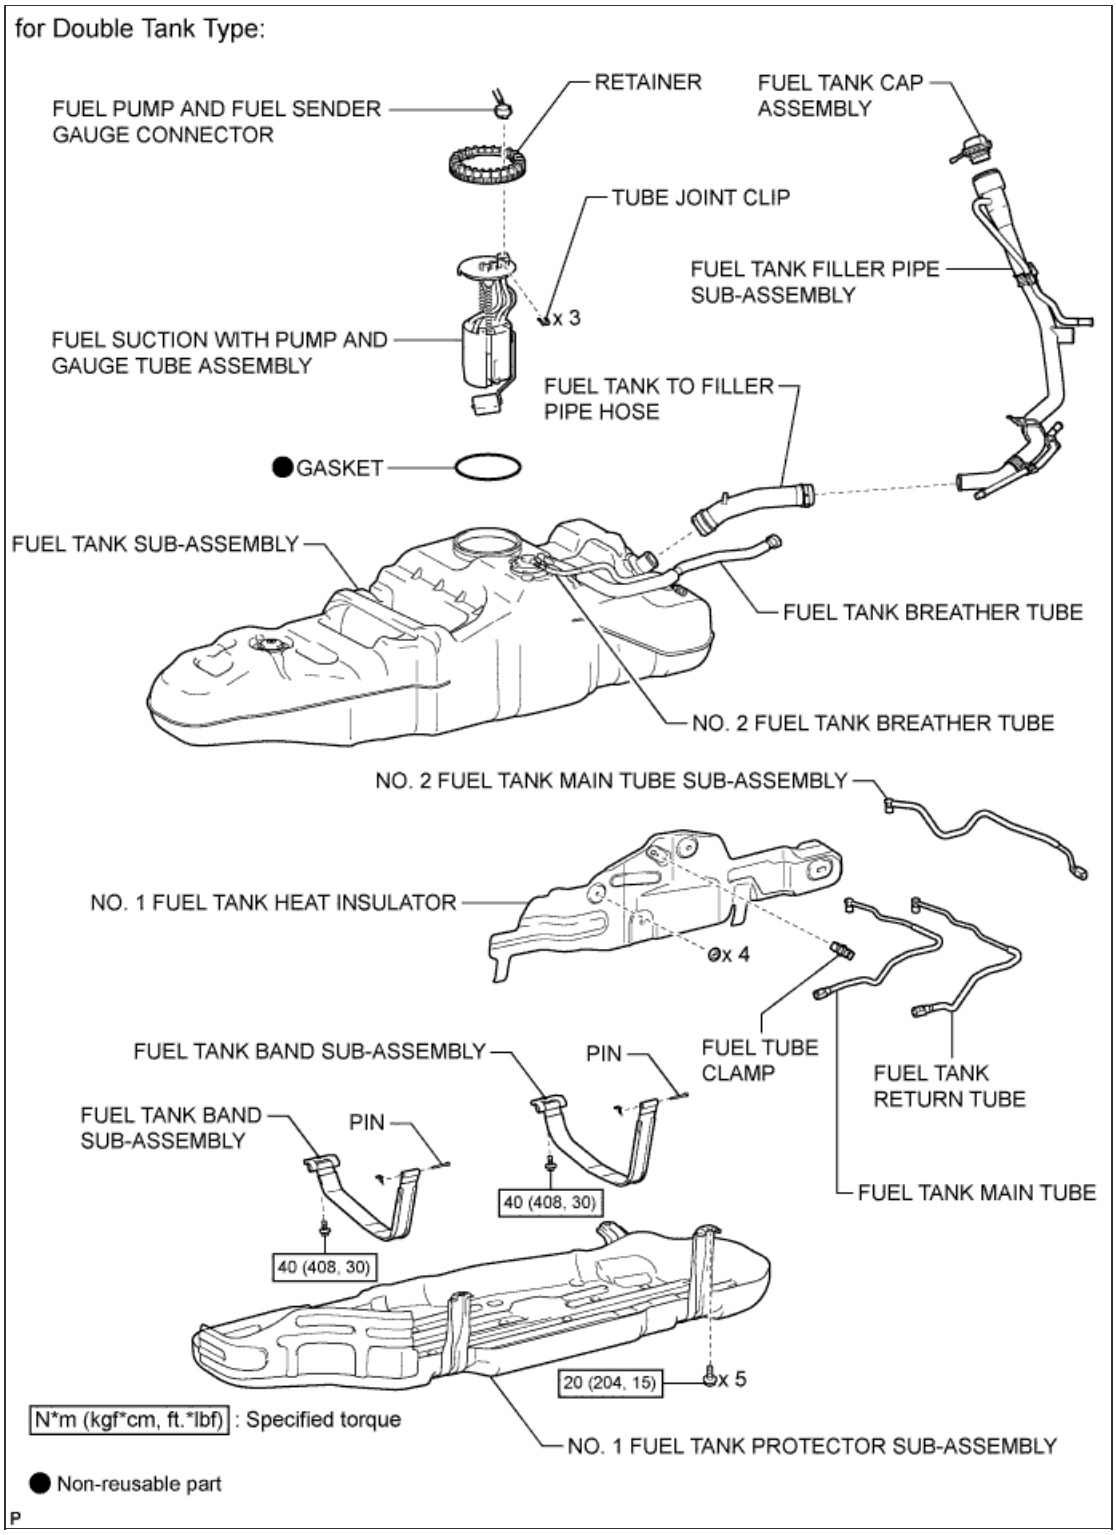
NOTICE:

Do not use the ECU if it has been subjected to physical shocks such as being dropped, etc.



b. Connect the ECU connector.





2. INSTALL FUEL TANK SUB-ASSEMBLY

a. Install the fuel tank sub-assembly (Click here).

for Preparation [Click here]

for Preparation Click here

1. DISCHARGE FUEL SYSTEM PRESSURE

a. Discharge the fuel system pressure (Click here).

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

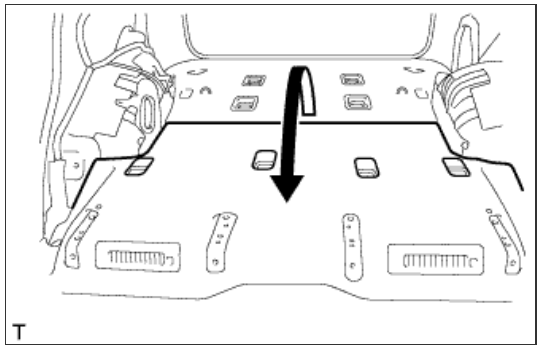
CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

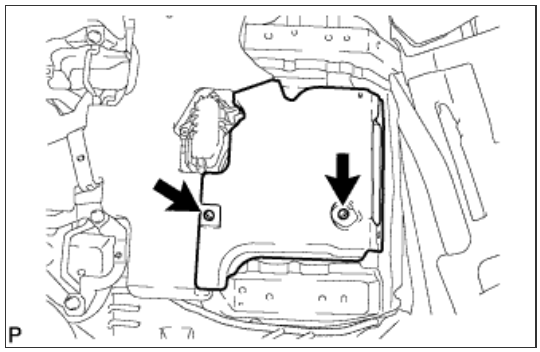
3. REMOVE REAR SEAT ASSEMBLY



a. Remove the rear No. 1 seat assembly and rear No. 2 seat assembly (Click here).

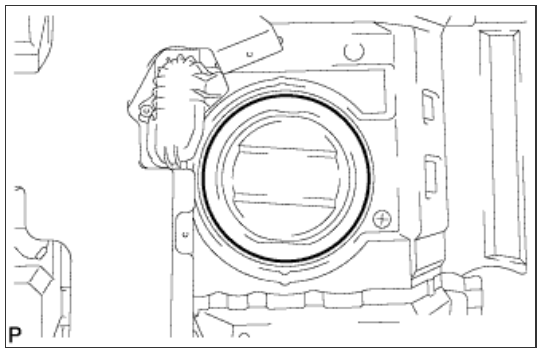
4. REMOVE FRONT FLOOR CARPET ASSEMBLY

a. Turn over the floor carpet.



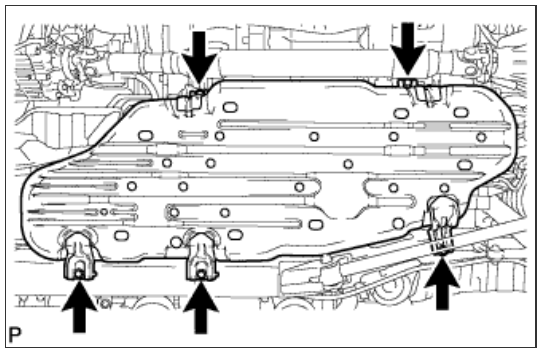
HINT:

Fold back the floor carpet so that the air duct can be removed.



5. REMOVE REAR FLOOR NO. 2 SERVICE HOLE COVER

a. Remove the 2 screws and air duct.

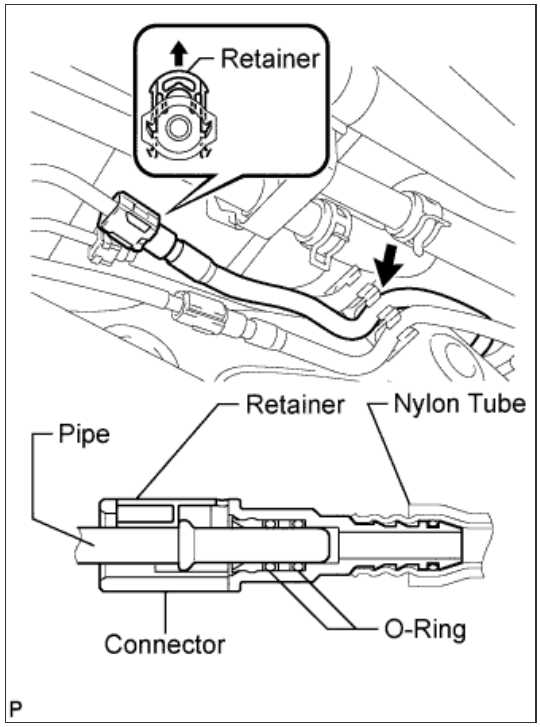


b. Remove the service hole cover.

6. REMOVE FUEL TANK CAP ASSEMBLY

7. REMOVE NO. 1 FUEL TANK PROTECTOR SUB-ASSEMBLY

a. Remove the 5 bolts and fuel tank protector.



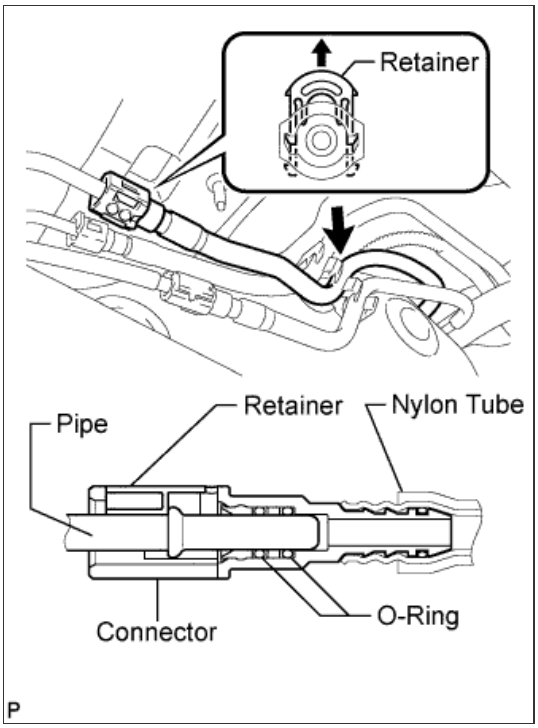
8. DISCONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY (for Single Tank Type)

a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank main tube.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**



9. DISCONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY (for Double Tank Type)

a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank main tube.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**

10. DRAIN FUEL

a. Connect the cable to the negative (-) battery terminal.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

b. Connect the intelligent tester to the DLC3.

c. Turn the engine switch on (IG).

NOTICE:

Do not start the engine.

d. Turn the intelligent tester ON.

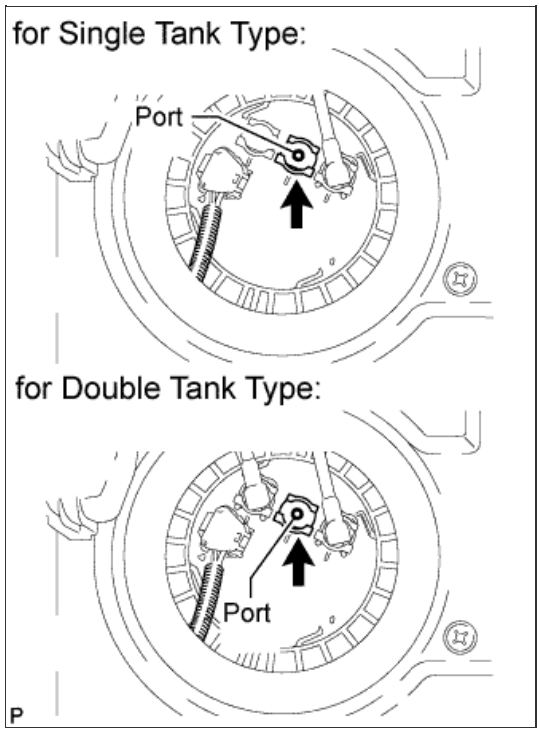
e. Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Fuel Pump / Speed.

CAUTION:

- **Do not smoke or be near an open flame when working on the fuel system.**
- **Secure good ventilation.**
- **Keep gasoline away from rubber or leather parts.**

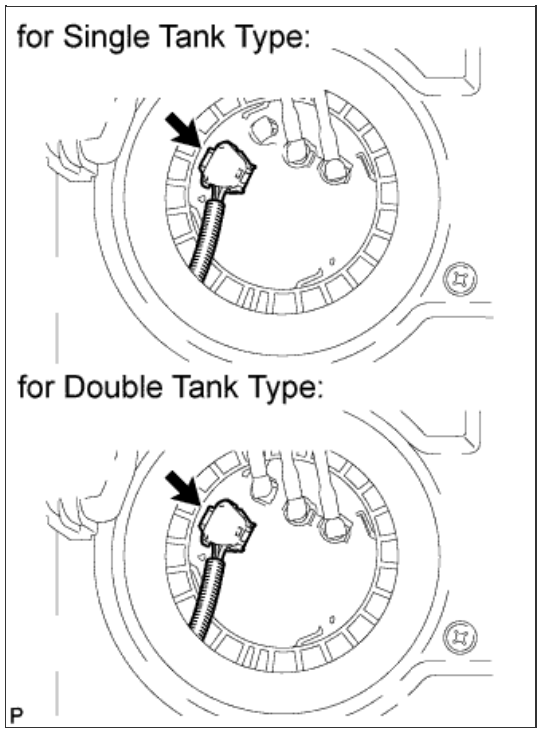
HINT:

If the fuel pump does not operate, remove the fuel tube joint clip and disconnect the fuel tank return tube, and drain fuel from the port shown in the illustration.



f. Disconnect the cable from the negative (-) battery terminal.

CAUTION:



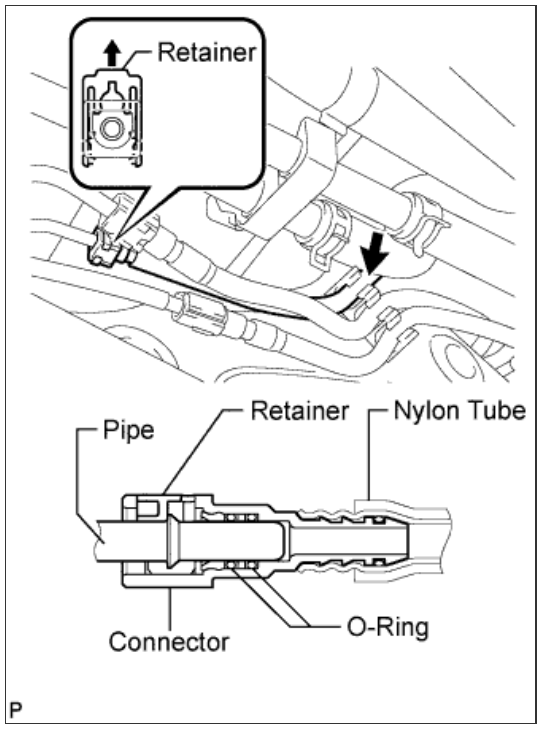
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

g. Disconnect the fuel pump and fuel sender gauge connector.

11. DISCONNECT NO. 2 FUEL TANK BREATHER TUBE (for Single Tank Type)



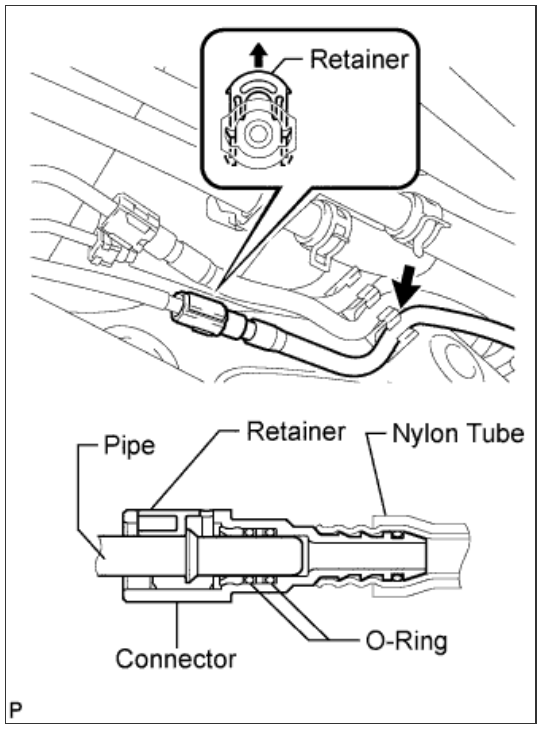
a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank breather tube.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**

- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**



12. DISCONNECT FUEL TANK RETURN TUBE (for Single Tank Type)

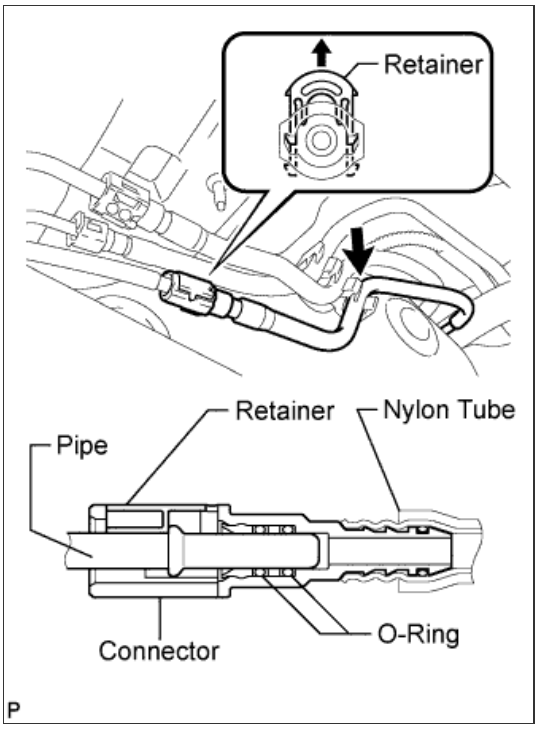
a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank return tube.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**

13. DISCONNECT FUEL TANK RETURN TUBE (for Double Tank Type)



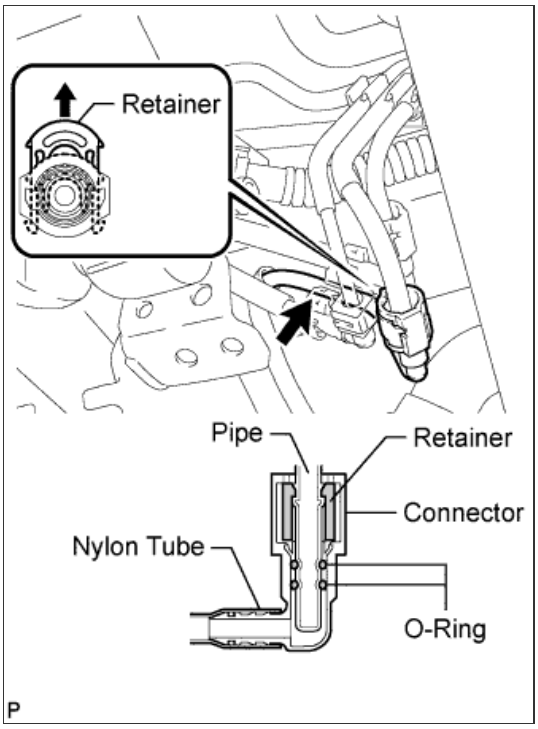
a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank return tube.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**

- Do not forcefully bend or twist the nylon tube.
- Check for foreign matter on the pipe seal surface. Clean if necessary.
- Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.
- If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.



14. DISCONNECT NO. 2 FUEL MAIN TUBE SUB-ASSEMBLY (for Double Tank Type)

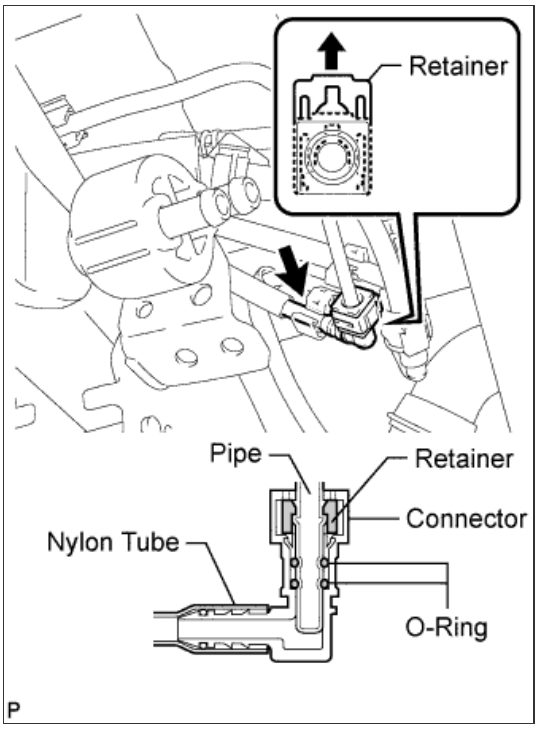
a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank main tube.

NOTICE:

- Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.
- Do not use any tools to separate the pipe and connector.
- Do not forcefully bend or twist the nylon tube.
- Check for foreign matter on the pipe seal surface. Clean if necessary.
- Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.
- If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.

15. DISCONNECT NO. 2 FUEL TANK BREATHER TUBE (for Double Tank Type)



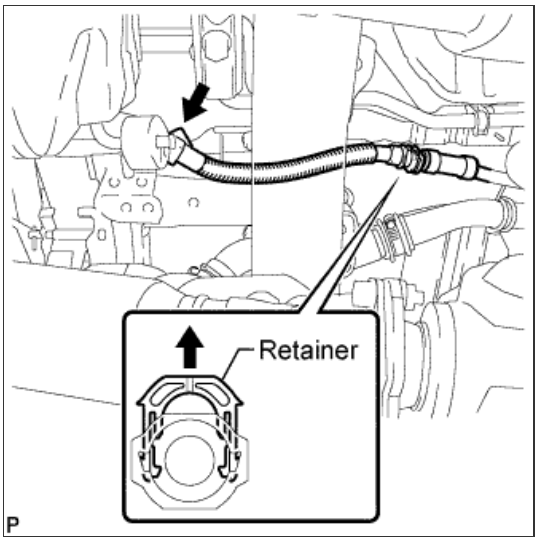
a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank breather tube.

NOTICE:

- Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.
- Do not use any tools to separate the pipe and connector.

- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**



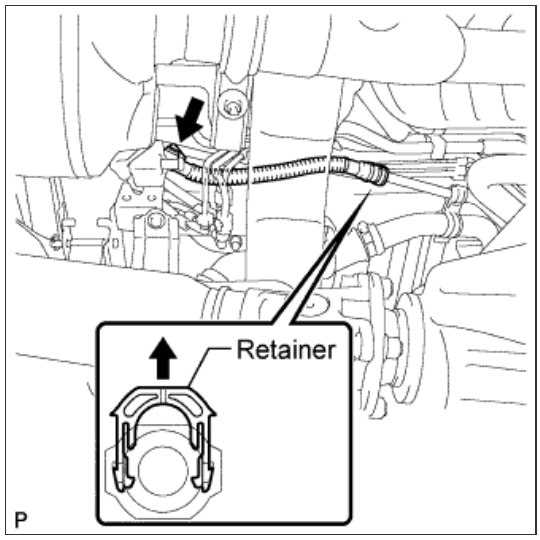
16. DISCONNECT FUEL TANK BREATHER TUBE (for Single Tank Type)

a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank breather tube from the filler pipe.

NOTICE:

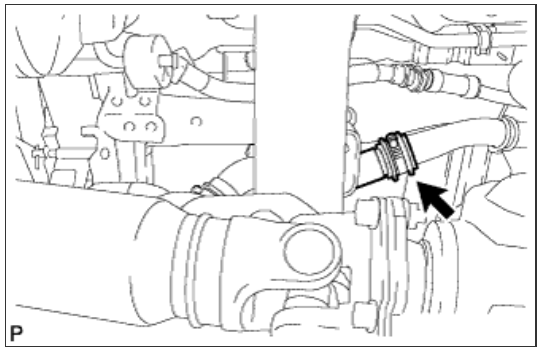
- **Do not use any tools in this procedure.**
- **Check for any dirt and foreign matter contamination in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**



17. DISCONNECT FUEL TANK BREATHER TUBE (for Double Tank Type)

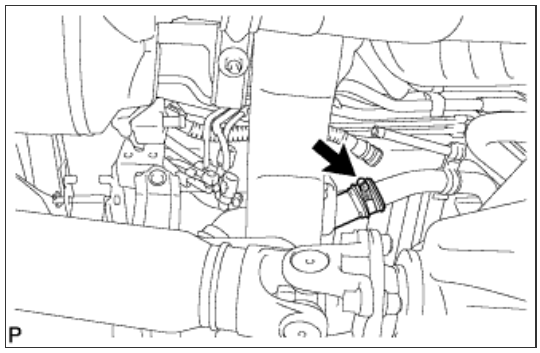
a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank breather tube from the filler pipe.



NOTICE:

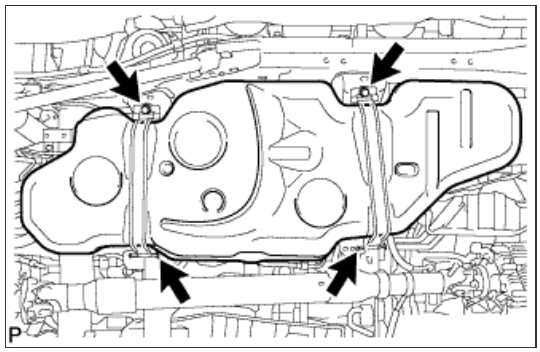
- **Do not use any tools in this procedure.**
- **Check for any dirt and foreign matter contamination in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**



18. DISCONNECT FUEL TANK TO FILLER PIPE HOSE (for Single Tank Type)

a. Disconnect the hose from the filler pipe.

19. DISCONNECT FUEL TANK TO FILLER PIPE HOSE (for Double Tank Type)

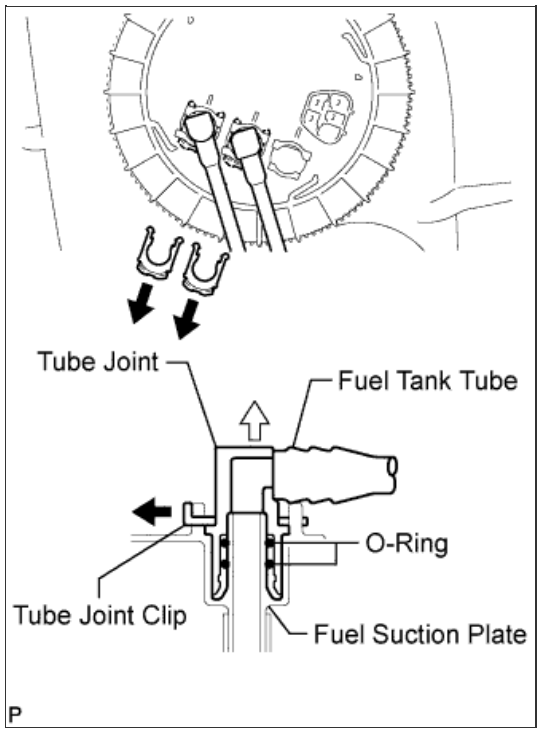


a. Disconnect the hose from the filler pipe.

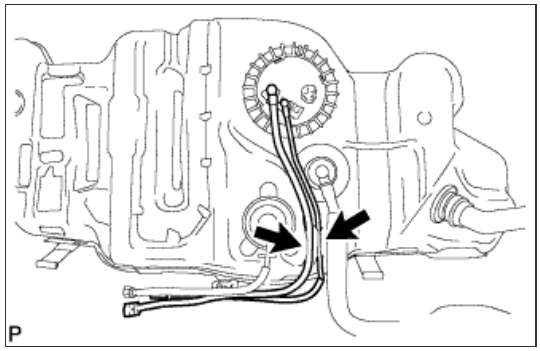
20. REMOVE FUEL TANK SUB-ASSEMBLY

a. Place a transmission jack under the fuel tank.

b. Remove the 2 bolts, 2 clips, 2 pins and 2 fuel tank bands.



21. REMOVE FUEL TANK MAIN TUBE SUB-ASSEMBLY AND FUEL TANK RETURN TUBE SUB-ASSEMBLY (for Single Tank Type)



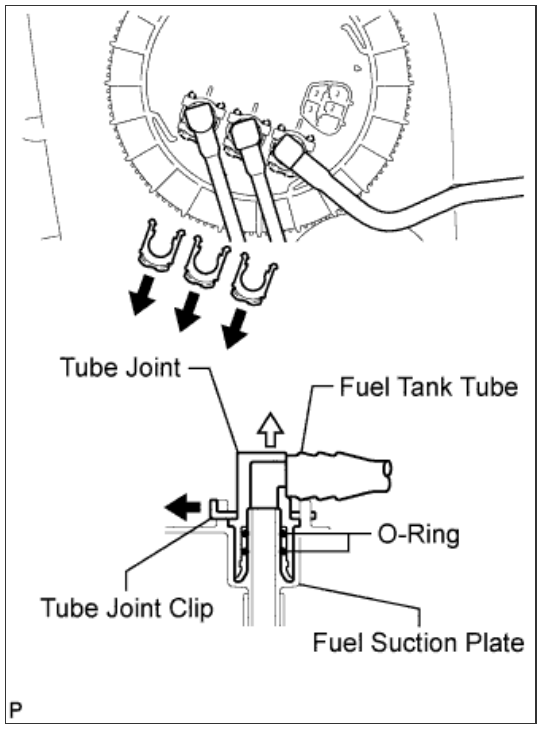
a. Remove the 2 fuel tube joint clips and pull out the 2 fuel tubes.

NOTICE:

- **Remove any dirt and foreign matter on the fuel tube joint before performing this work.**
- **Do not allow any scratches or foreign matter on the parts when disconnecting them, as the fuel tube joint contains the O-rings that seal the plug.**
- **Perform this work by hand. Do not use any tools.**
- **Do not forcibly bend, twist or turn the nylon tube.**
- **Protect the disconnected part by covering it with a plastic bag and tape after disconnecting the fuel tubes.**

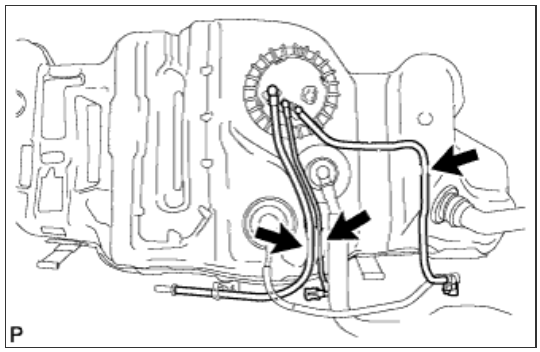
b. Remove the 2 fuel tubes from the fuel tank.

22. REMOVE FUEL TANK MAIN TUBE, FUEL TANK RETURN TUBE AND NO. 2 FUEL TANK MAIN TUBE SUB-ASSEMBLY (for Double Tank Type)



a. Remove the 3 fuel tube joint clips and pull out the 3 fuel tubes.

NOTICE:



- **Remove any dirt and foreign matter on the fuel tube joint before performing this work.**
- **Do not allow any scratches or foreign matter on the parts when**

disconnecting them, as the fuel tube joint contains the O-rings that seal the plug.

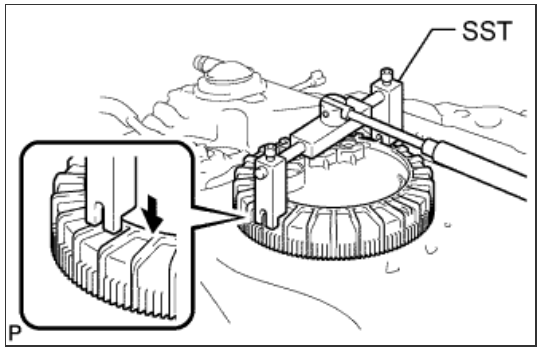
- **Perform this work by hand. Do not use any tools.**
- **Do not forcibly bend, twist or turn the nylon tube.**
- **Protect the disconnected part by covering it with a plastic bag and tape after disconnecting the fuel tubes.**

b. Remove the 3 fuel tubes from the fuel tank.

23. REMOVE FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY

a. Using SST, loosen the retainer.

SST



09808-14020 (09808-01410, 09808-01420, 09808-01430)

HINT:

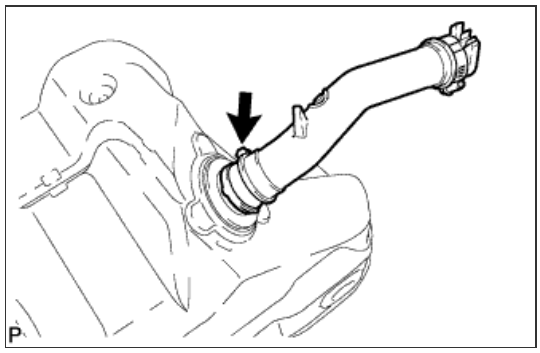
Fit the tips of SST onto the ribs of the retainer.

NOTICE:

- **When the retainer is loosened, be careful as the pump and gauge tube will spring upward from the force of the spring.**
- **Remove foreign matter around the fuel suction with pump and gauge before this operation.**

b. Remove the retainer.

c. Remove the fuel suction with pump and gauge tube assembly from the fuel tank.

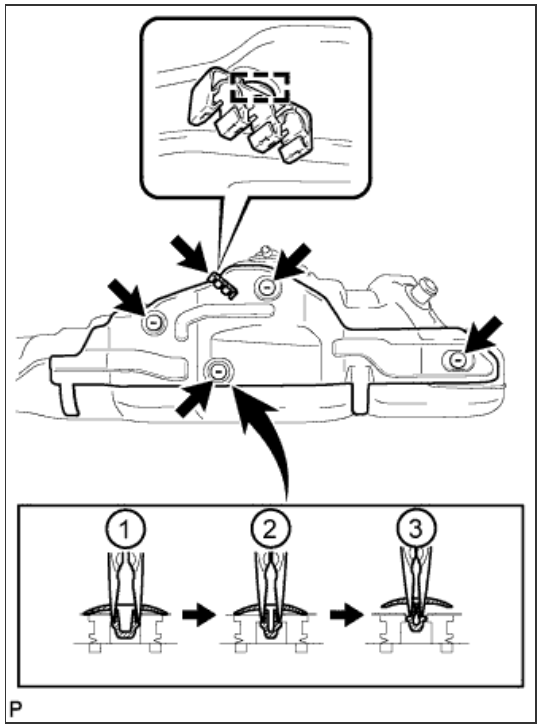


NOTICE:

Be careful not to bend the arm of the fuel sender gauge.

d. Remove the gasket from the fuel tank.

24. REMOVE FUEL TANK TO FILLER PIPE HOSE



a. Remove the hose from the fuel tank.

25. REMOVE NO. 1 FUEL TANK HEAT INSULATOR

a. Remove the fuel tube clamp from the heat insulator.

b. Using needle-nose pliers, remove the 4 clips shown in the illustration and then remove the heat insulator.

for Preparation Click here

1. DISCHARGE FUEL SYSTEM PRESSURE

a. Discharge the fuel system pressure (Click here).

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

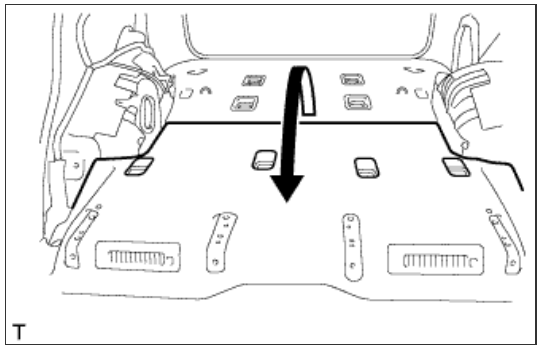
CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

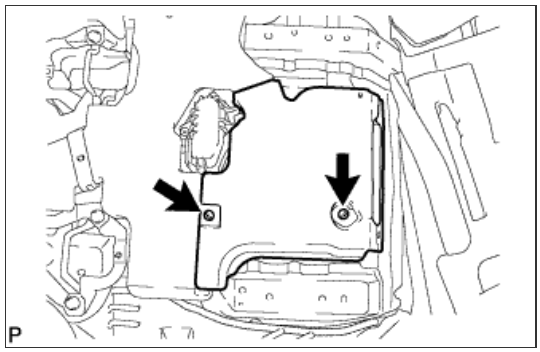
3. REMOVE REAR SEAT ASSEMBLY



a. Remove the rear No. 1 seat assembly and rear No. 2 seat assembly (Click here).

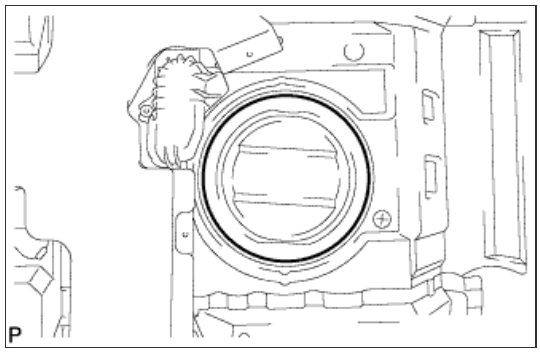
4. REMOVE FRONT FLOOR CARPET ASSEMBLY

a. Turn over the floor carpet.



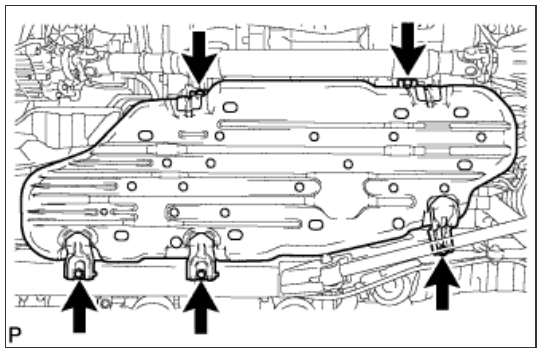
HINT:

Fold back the floor carpet so that the air duct can be removed.



5. REMOVE REAR FLOOR NO. 2 SERVICE HOLE COVER

a. Remove the 2 screws and air duct.

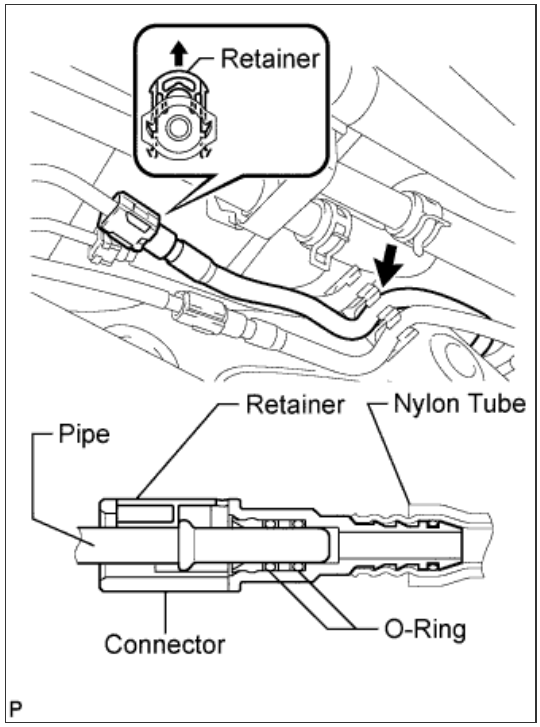


b. Remove the service hole cover.

6. REMOVE FUEL TANK CAP ASSEMBLY

7. REMOVE NO. 1 FUEL TANK PROTECTOR SUB-ASSEMBLY

a. Remove the 5 bolts and fuel tank protector.



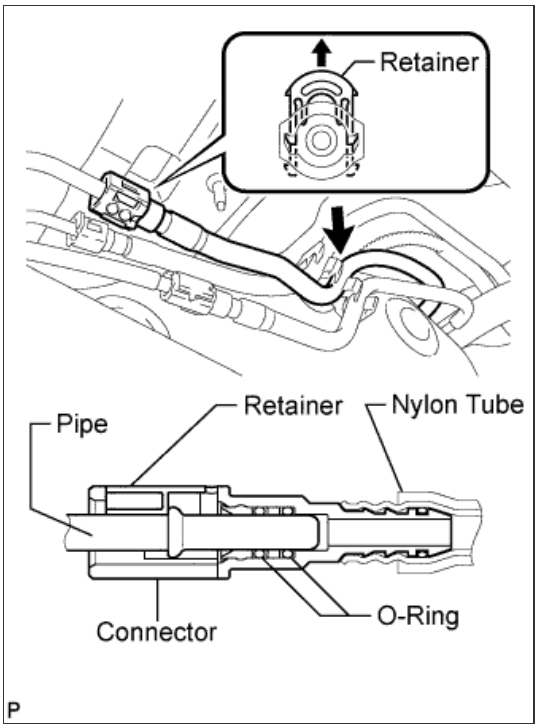
8. DISCONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY (for Single Tank Type)

a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank main tube.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**



9. DISCONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY (for Double Tank Type)

a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank main tube.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**

10. DRAIN FUEL

a. Connect the cable to the negative (-) battery terminal.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

b. Connect the intelligent tester to the DLC3.

c. Turn the engine switch on (IG).

NOTICE:

Do not start the engine.

d. Turn the intelligent tester ON.

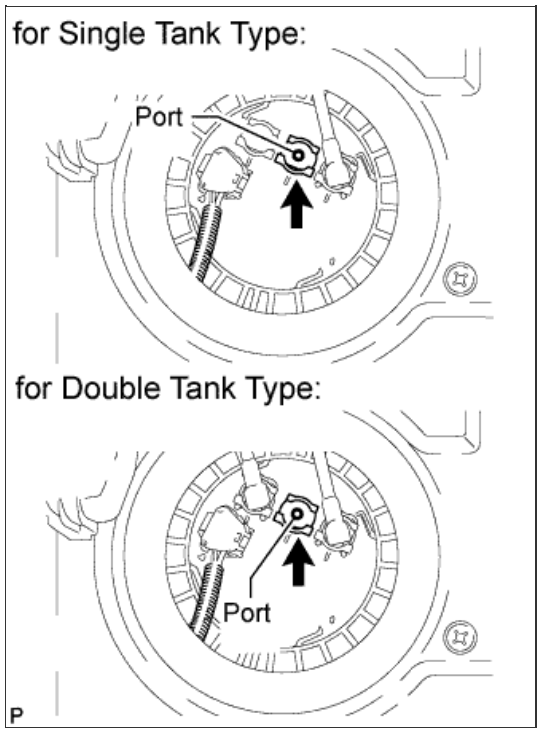
e. Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Fuel Pump / Speed.

CAUTION:

- **Do not smoke or be near an open flame when working on the fuel system.**
- **Secure good ventilation.**
- **Keep gasoline away from rubber or leather parts.**

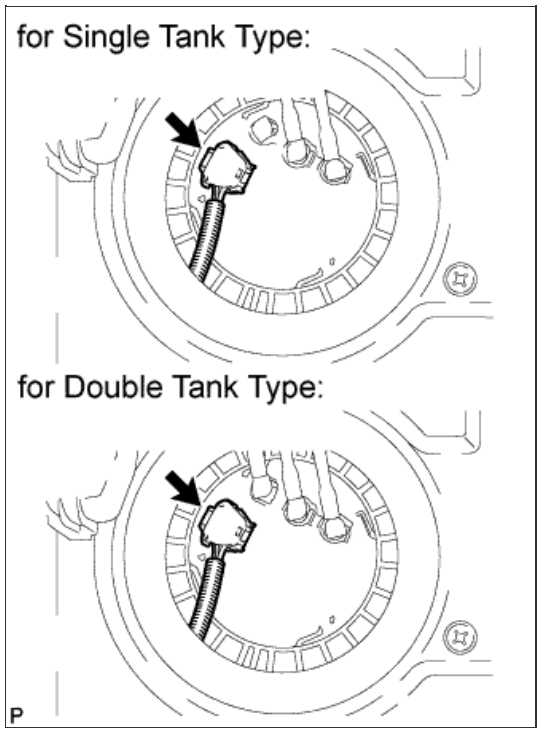
HINT:

If the fuel pump does not operate, remove the fuel tube joint clip and disconnect the fuel tank return tube, and drain fuel from the port shown in the illustration.



f. Disconnect the cable from the negative (-) battery terminal.

CAUTION:



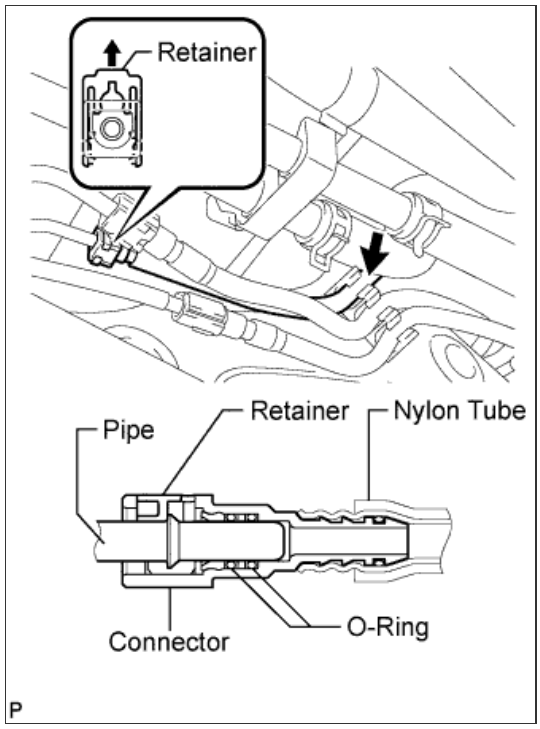
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

g. Disconnect the fuel pump and fuel sender gauge connector.

11. DISCONNECT NO. 2 FUEL TANK BREATHER TUBE (for Single Tank Type)



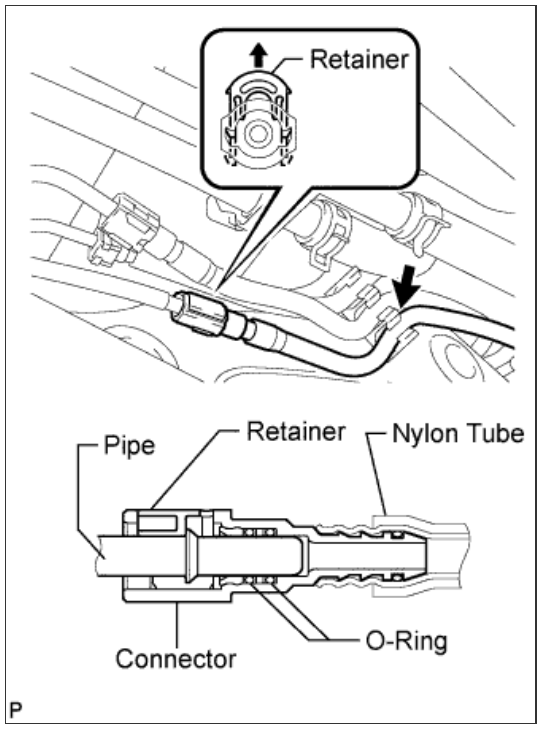
a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank breather tube.

NOTICE:

- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**

- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**



12. DISCONNECT FUEL TANK RETURN TUBE (for Single Tank Type)

a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank return tube.

NOTICE:

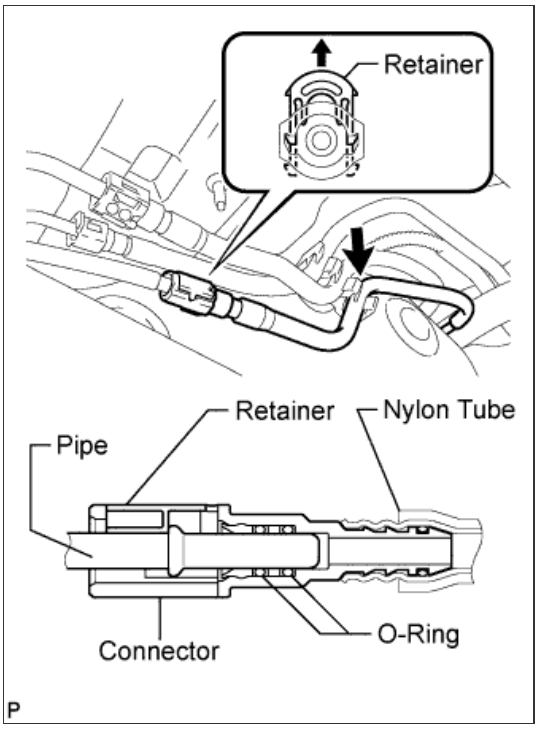
- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**
- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**

13. DISCONNECT FUEL TANK RETURN TUBE (for Double Tank Type)



a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank return tube.

NOTICE:

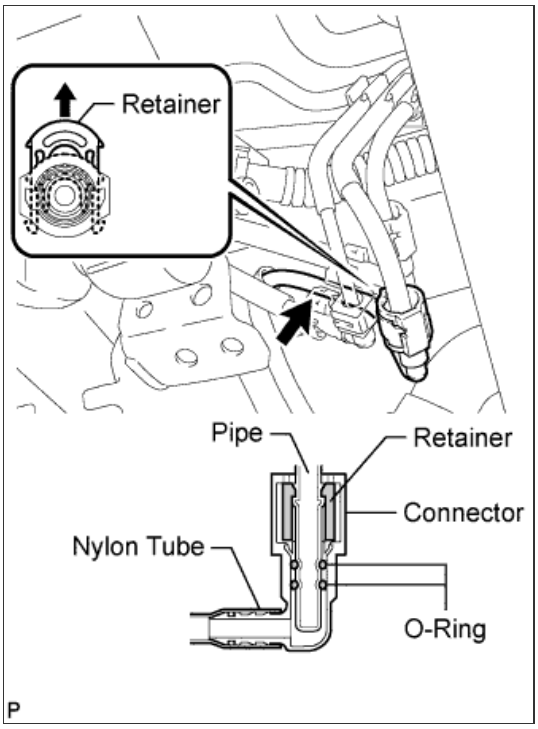
- **Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**
- **Do not use any tools to separate the pipe and connector.**

- Do not forcefully bend or twist the nylon tube.
- Check for foreign matter on the pipe seal surface. Clean if necessary.
- Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.
- If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.



14. DISCONNECT NO. 2 FUEL MAIN TUBE SUB-ASSEMBLY (for Double Tank Type)

a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank main tube.

NOTICE:

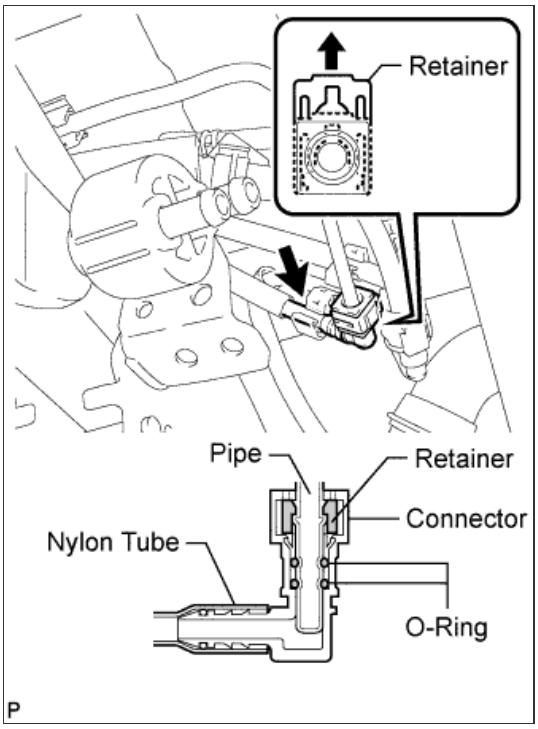
- Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.
- Do not use any tools to separate the pipe and connector.
- Do not forcefully bend or twist the nylon tube.
- Check for foreign matter on the pipe seal surface. Clean if necessary.
- Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.
- If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.

15. DISCONNECT NO. 2 FUEL TANK BREATHER TUBE (for Double Tank Type)



a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank breather tube.

NOTICE:

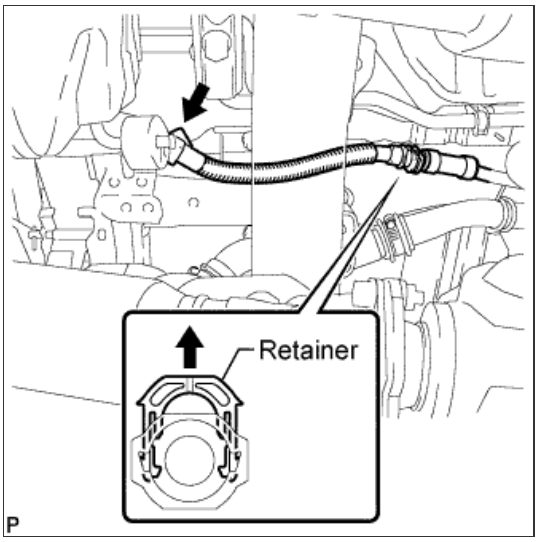
- Check for foreign matter in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.
- Do not use any tools to separate the pipe and connector.

- **Do not forcefully bend or twist the nylon tube.**
- **Check for foreign matter on the pipe seal surface. Clean if necessary.**
- **Put the pipe and connector ends in plastic bags to prevent damage and foreign matter contamination.**
- **If the pipe and connector are stuck together, pinch the connector between your fingers and turn it carefully to disconnect it.**



16. DISCONNECT FUEL TANK BREATHER TUBE (for Single Tank Type)

a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank breather tube from the filler pipe.

NOTICE:

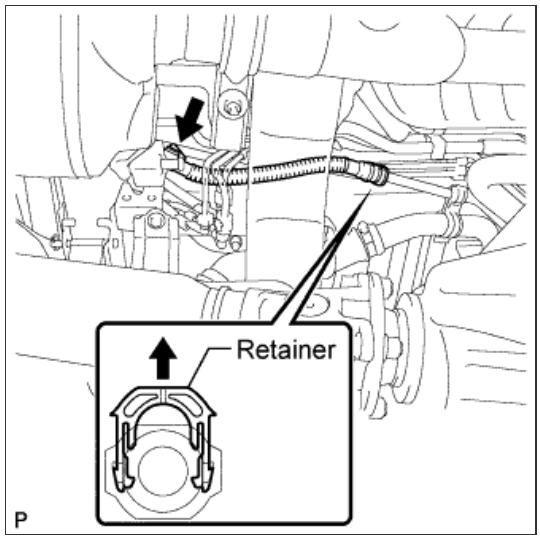
- **Do not use any tools in this procedure.**
- **Check for any dirt and foreign matter contamination in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**



17. DISCONNECT FUEL TANK BREATHER TUBE (for Double Tank Type)

a. Detach the fuel tube clamp.

b. Pull up the retainer and disconnect the fuel tank breather tube from the filler pipe.

NOTICE:

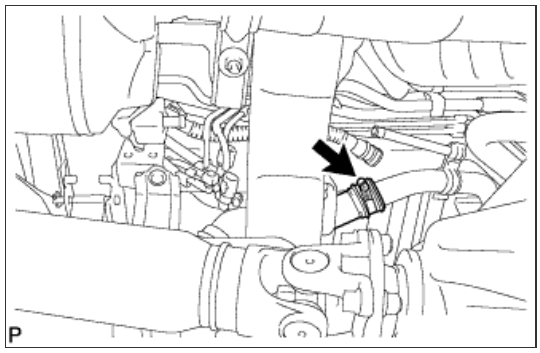
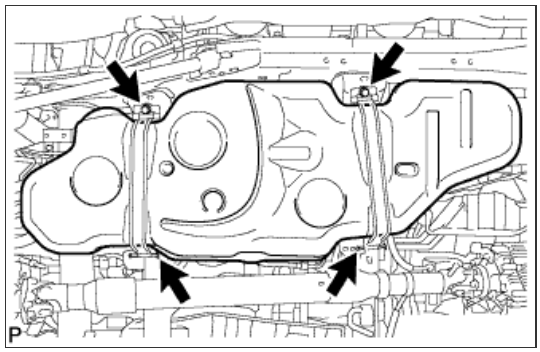
- **Do not use any tools in this procedure.**
- **Check for any dirt and foreign matter contamination in the pipe and around the connector. Clean if necessary. Foreign matter may damage the O-ring or cause leaks in the seal between the pipe and connector.**



18. DISCONNECT FUEL TANK TO FILLER PIPE HOSE (for Single Tank Type)

a. Disconnect the hose from the filler pipe.

19. DISCONNECT FUEL TANK TO FILLER PIPE HOSE (for Double Tank Type)

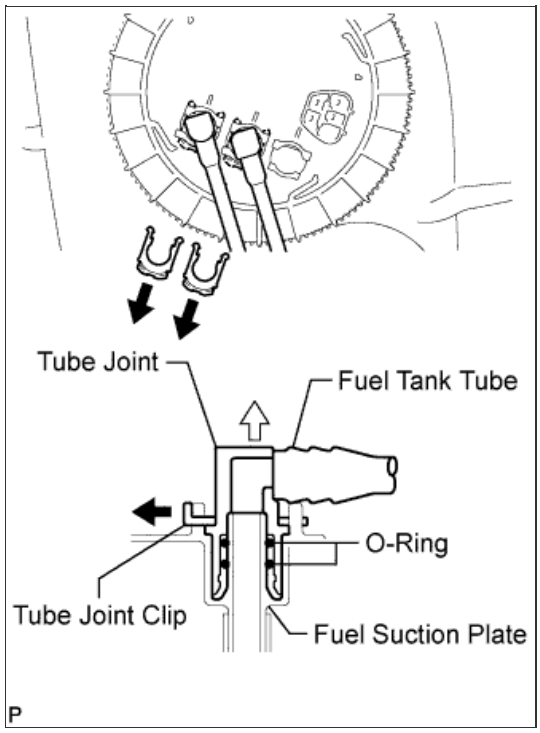


a. Disconnect the hose from the filler pipe.

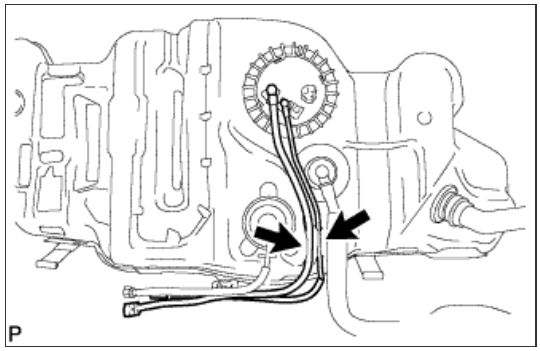
20. REMOVE FUEL TANK SUB-ASSEMBLY

a. Place a transmission jack under the fuel tank.

b. Remove the 2 bolts, 2 clips, 2 pins and 2 fuel tank bands.



21. REMOVE FUEL TANK MAIN TUBE SUB-ASSEMBLY AND FUEL TANK RETURN TUBE SUB-ASSEMBLY (for Single Tank Type)



a. Remove the 2 fuel tube joint clips and pull out the 2 fuel tubes.

NOTICE:

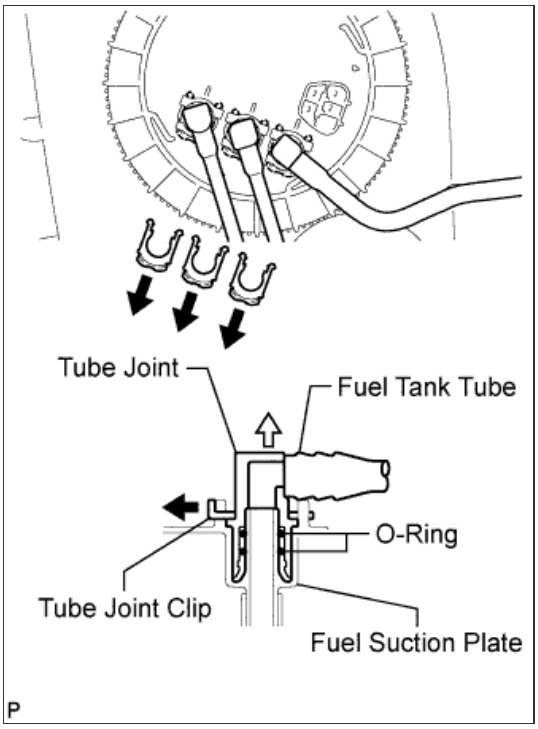
- **Remove any dirt and foreign matter on the fuel tube joint before performing this work.**
- **Do not allow any scratches or foreign matter on the parts when disconnecting them, as the fuel tube joint contains the O-rings that seal the plug.**
- **Perform this work by hand. Do not use any tools.**
- **Do not forcibly bend, twist or turn the nylon tube.**
- **Protect the disconnected part by covering it with a plastic bag and tape after disconnecting the fuel tubes.**

b. Remove the 2 fuel tubes from the fuel tank.

22. REMOVE FUEL TANK MAIN TUBE, FUEL TANK RETURN TUBE AND NO. 2 FUEL TANK MAIN TUBE SUB-ASSEMBLY (for Double Tank Type)



a. Remove the 3 fuel tube joint clips and pull out the 3 fuel tubes.

NOTICE:

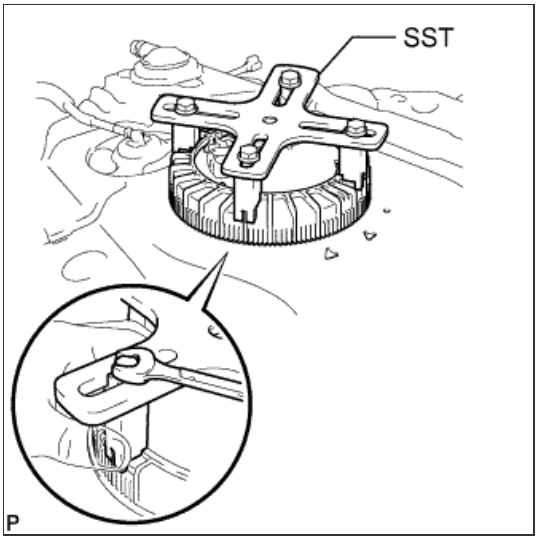
- **Remove any dirt and foreign matter on the fuel tube joint before performing this work.**
- **Do not allow any scratches or foreign matter on the parts when**

disconnecting them, as the fuel tube joint contains the O-rings that seal the plug.

- Perform this work by hand. Do not use any tools.
- Do not forcibly bend, twist or turn the nylon tube.
- Protect the disconnected part by covering it with a plastic bag and tape after disconnecting the fuel tubes.

b. Remove the 3 fuel tubes from the fuel tank.



23. REMOVE FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY

a. Set SST on the fuel pump gauge retainer.

SST
09808-14030

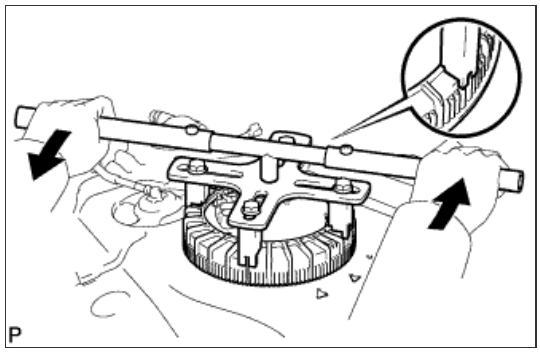
HINT:

- Engage the claws of SST securely with the fuel pump gauge retainer holes to secure SST.
- Install SST while pressing the claws of SST against the fuel pump gauge retainer (towards the center of SST).

b. Using SST, loosen the retainer.

SST
09808-14030

Text in Illustration



➡	Turn

HINT:

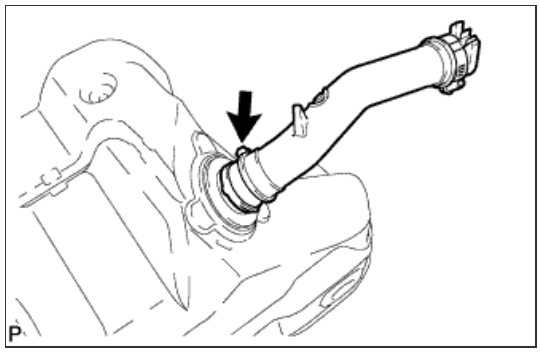
Fit the tips of SST onto the ribs of the retainer.

NOTICE:

- **When the retainer is loosened, be careful as the pump and gauge tube will spring upward from the force of the spring.**
- **Remove foreign matter around the fuel suction with pump and gauge before this operation.**

c. Remove the retainer.

d. Remove the fuel suction with pump and gauge tube assembly from the fuel tank.

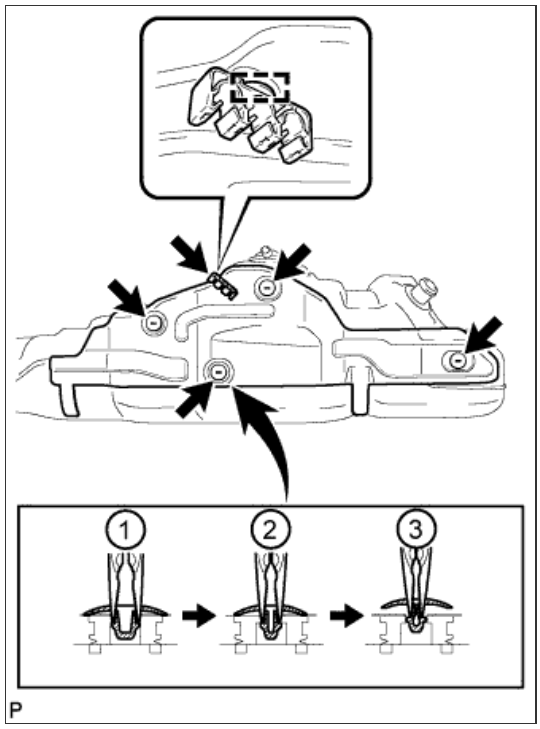


NOTICE:

Be careful not to bend the arm of the fuel sender gauge.

e. Remove the gasket from the fuel tank.

24. REMOVE FUEL TANK TO FILLER PIPE HOSE

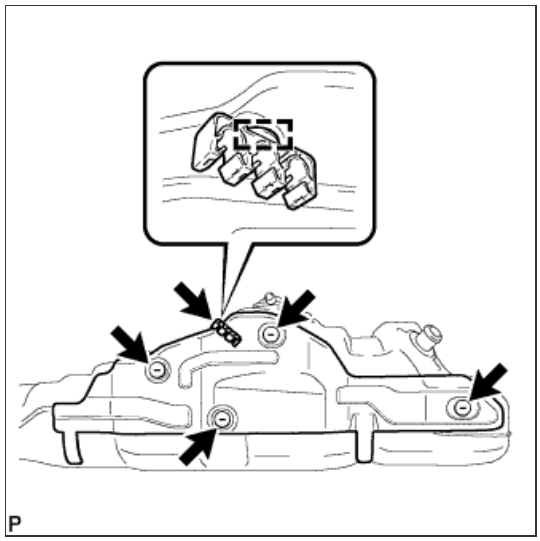


a. Remove the hose from the fuel tank.

25. REMOVE NO. 1 FUEL TANK HEAT INSULATOR

a. Remove the fuel tube clamp from the heat insulator.

b. Using needle-nose pliers, remove the 4 clips shown in the illustration and then remove the heat insulator.



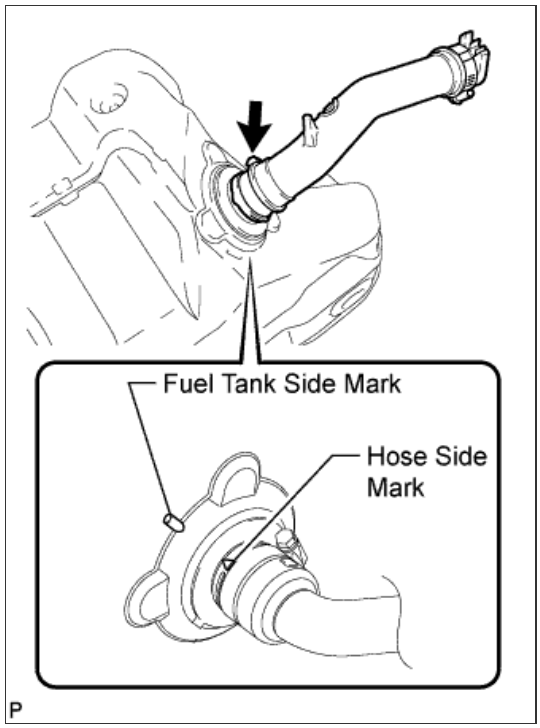
1
2
3
P

for Preparation Click here

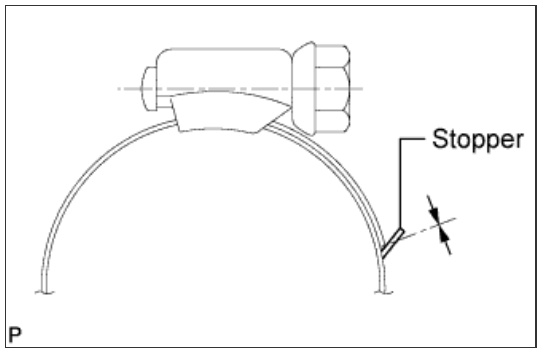
1. INSTALL NO. 1 FUEL TANK HEAT INSULATOR

a. Install the heat insulator with the 4 clips.

b. Install the fuel tube clamp to the heat insulator.



2. INSTALL FUEL TANK TO FILLER PIPE HOSE



a. Install the hose to the fuel tank as shown in the illustration.

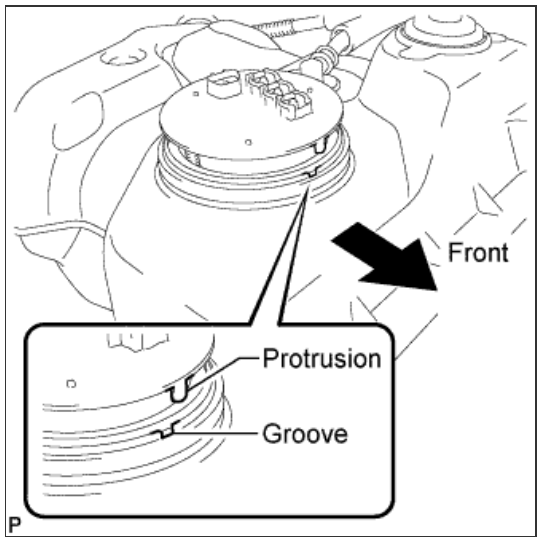
HINT:

- **Align the fuel tank side mark with the hose side mark when installing the hose.**

- **Tighten the hose clamp until the end of the hose clamp contacts the stopper as shown in the illustration.**

3. INSTALL FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY

a. Apply a light coat of gasoline or grease to a new gasket, and install it to the fuel tank.



b. Install the fuel suction with pump and gauge tube into the fuel tank.

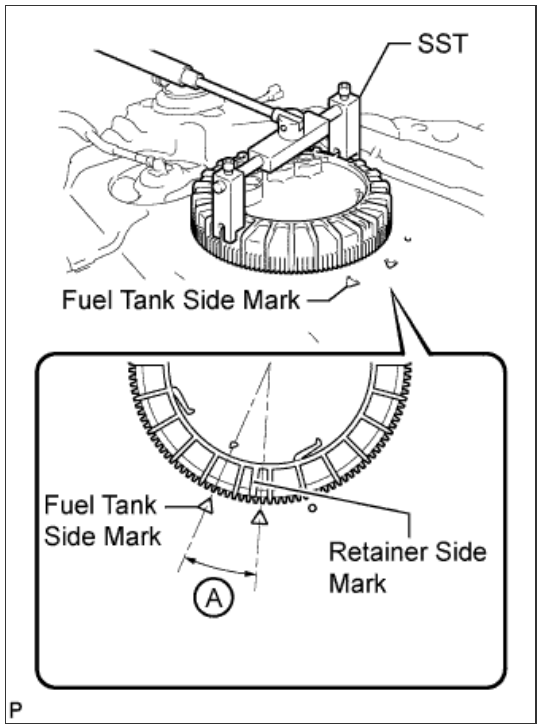
NOTICE:

Be careful not to bend the arm of the fuel sender gauge.

HINT:

Align the protrusion of the fuel suction with pump and gauge tube with the groove of the fuel tank.

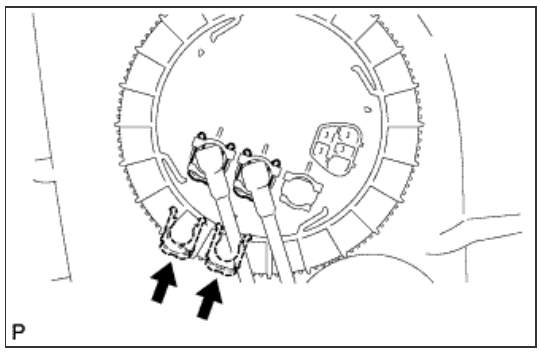
c. Put the retainer on the fuel tank. While holding the fuel suction with pump and gauge tube, tighten the retainer 1 complete turn by hand.



d. Using SST, tighten the retainer until the mark on the retainer is within range A on the fuel tank, as shown in the illustration.

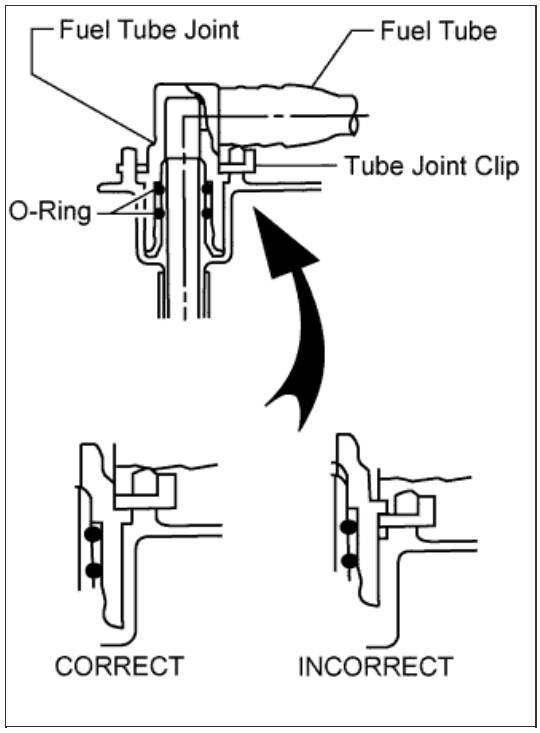
SST

09808-14020 (09808-01410, 09808-01420, 09808-01430)



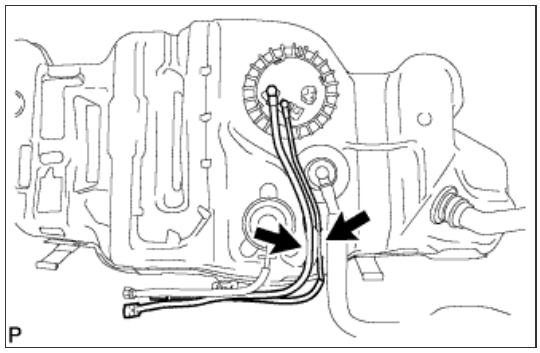
HINT:

Fit the tips of SST onto the ribs of the retainer.



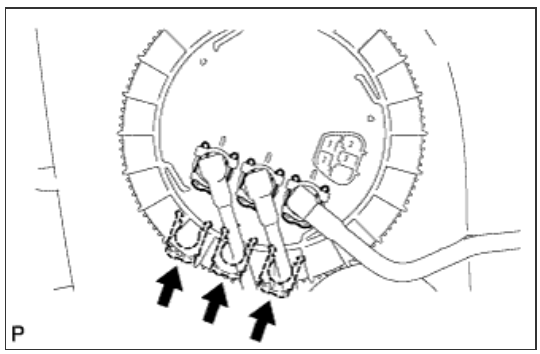
4. INSTALL FUEL TANK MAIN TUBE SUB-ASSEMBLY AND FUEL TANK RETURN TUBE SUB-ASSEMBLY (for Single Tank Type)

a. Install the 2 fuel tank tubes with the 2 tube joint clips.

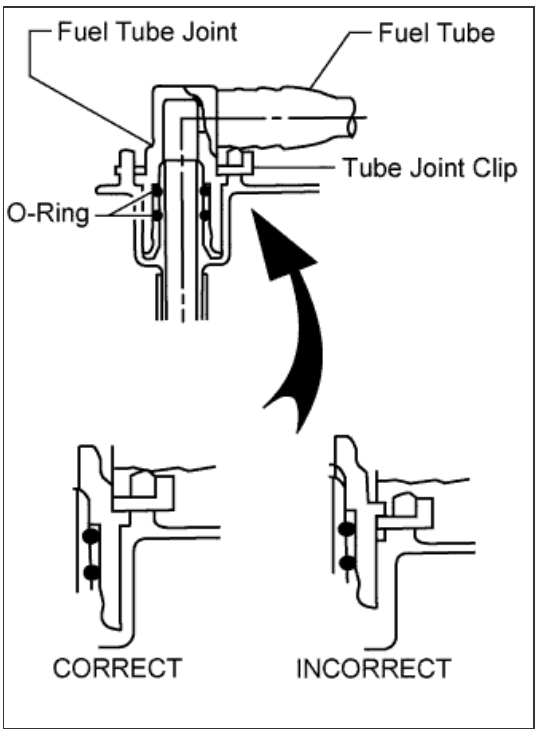


NOTICE:

- **Check that there are no scratches or foreign objects on the connecting parts.**
- **Check that the fuel tube joints are inserted securely.**
- **Check that the tube joint clips are on the collars of the fuel tube joints.**
- **After installing the tube joint clips, check that the fuel tube joints cannot be pulled off.**

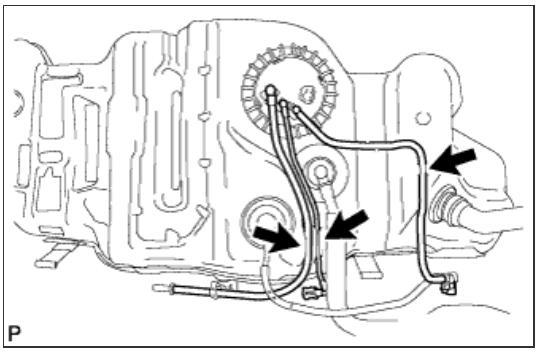


b. Install the 2 fuel tank tubes to the fuel tank.



5. INSTALL FUEL TANK MAIN TUBE, FUEL TANK RETURN TUBE AND NO. 2 FUEL TANK MAIN TUBE SUB-ASSEMBLY (for Double Tank Type)

a. Install the 3 fuel tank tubes with the 3 tube joint clips.



NOTICE:

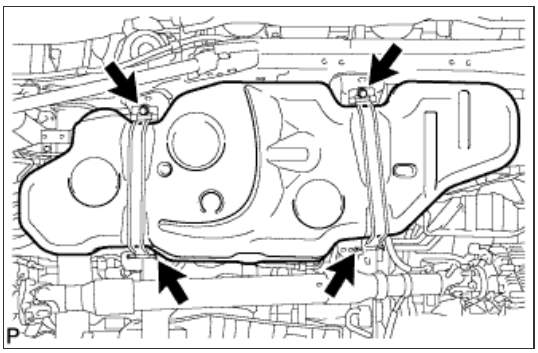
- **Check that there are no scratches or foreign objects on the connecting parts.**
- **Check that the fuel tube joints are inserted securely.**
- **Check that the tube joint clips are on the collars of the fuel tube joints.**
- **After installing the tube joint clips, check that the fuel tube joints cannot be pulled off.**

b. Install the 3 fuel tank tubes to the fuel tank.

6. INSTALL FUEL TANK SUB-ASSEMBLY

a. Set the fuel tank on a transmission jack and raise the fuel tank.

NOTICE:



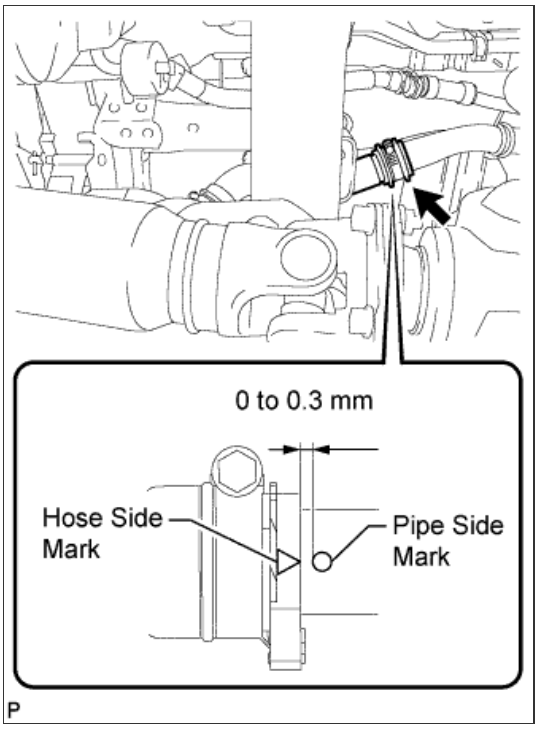
Do not allow the fuel tank to contact the vehicle, especially the differential.

b. Raise the transmission jack.

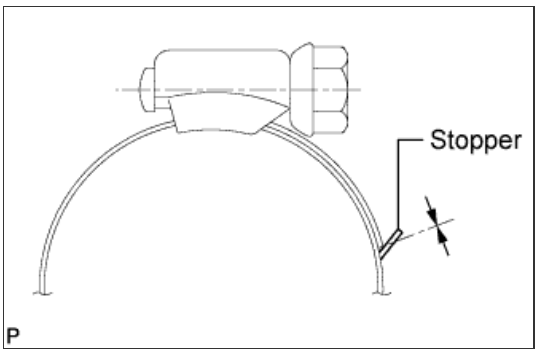
c. Install the 2 fuel tank bands with the 2 pins and 2 clips.

d. Connect the 2 fuel tank bands with the 2 bolts.

Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }



7. CONNECT FUEL TANK TO FILLER PIPE HOSE (for Single Tank Type)

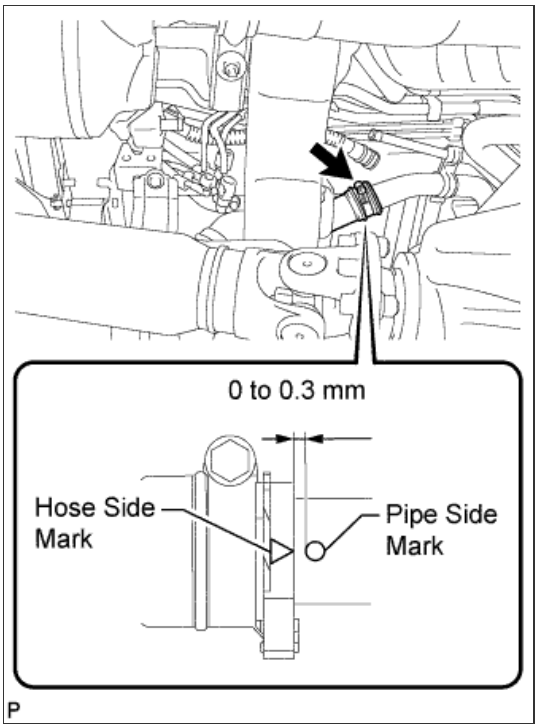


a. Connect the hose to the filler pipe as shown in the illustration.

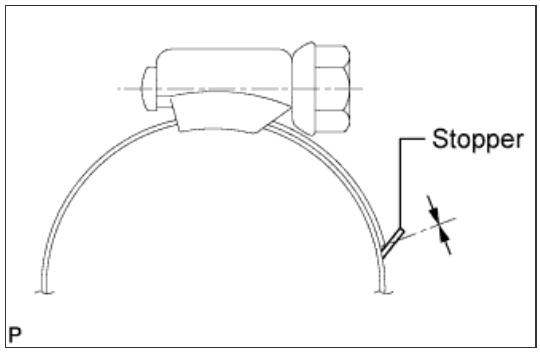
HINT:

- **Install the hose so that the distance between the fuel tank inlet pipe side mark and fuel tank to filler pipe hose side mark is 0 to 0.3 mm (0 to 0.0118 in.) as shown in the illustration.**

- **Tighten the hose clamp until the end of the hose clamp contacts the stopper as shown in the illustration.**



8. CONNECT FUEL TANK TO FILLER PIPE HOSE (for Double Tank Type)



a. Connect the hose to the filler pipe as shown in the illustration.

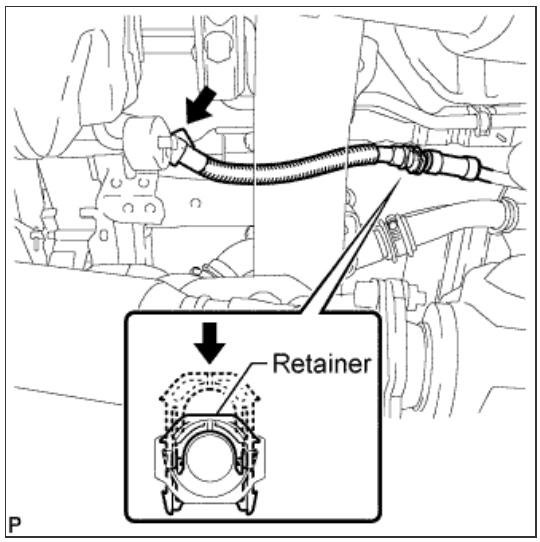
HINT:

- **Install the hose so that the distance between the fuel tank inlet pipe side mark and fuel tank to filler pipe hose side mark is 0 to 0.3 mm (0 to 0.0118 in.) as shown in the illustration.**

- **Tighten the hose clamp until the end of the hose clamp contacts the stopper as shown in the illustration.**

9. CONNECT FUEL TANK BREATHER TUBE (for Single Tank Type)

a. Connect the fuel tank breather tube to the filler pipe and push the retainer.



HINT:

Push the parts together firmly until a "click" sound is heard.

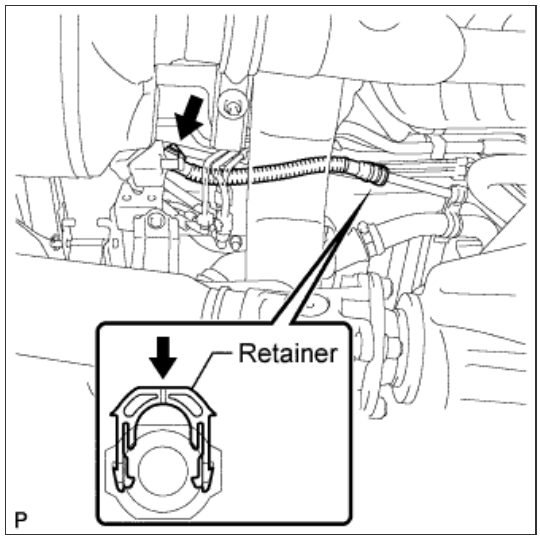
NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

10. CONNECT FUEL TANK BREATHER TUBE (for Double Tank Type)

a. Connect the fuel tank breather tube to the filler pipe and push the retainer.



HINT:

Push the parts together firmly until a "click" sound is heard.

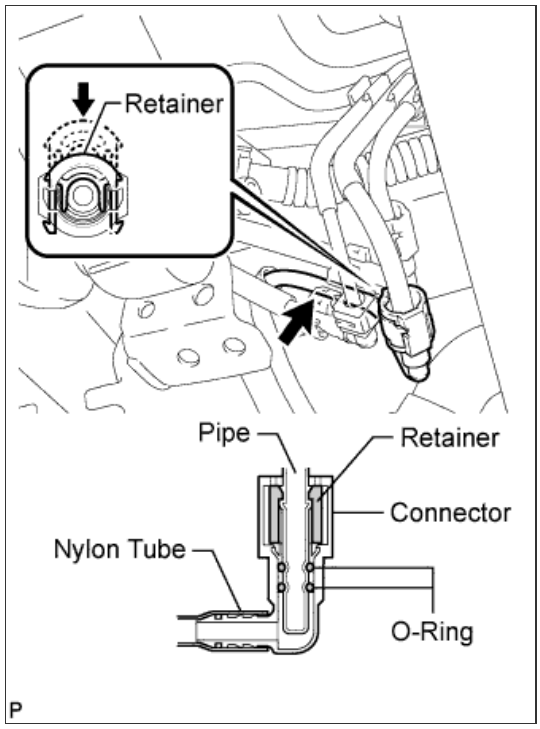
NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

11. CONNECT NO. 2 FUEL MAIN TUBE SUB-ASSEMBLY (for Double Tank Type)

a. Connect the fuel main tube and push the retainer.



HINT:

Push the parts together firmly until a "click" sound is heard.

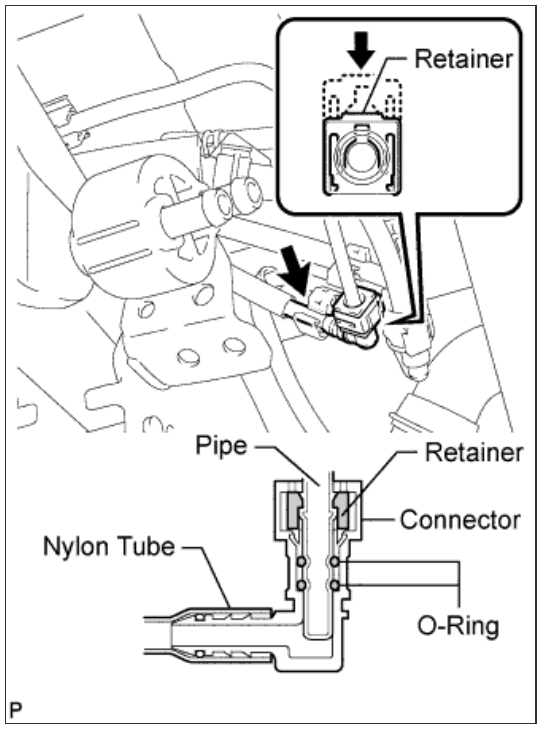
NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

12. CONNECT NO. 2 FUEL TANK BREATHER TUBE (for Double Tank Type)

a. Connect the fuel tank breather tube and push the retainer.



HINT:

Push the parts together firmly until a "click" sound is heard.

NOTICE:

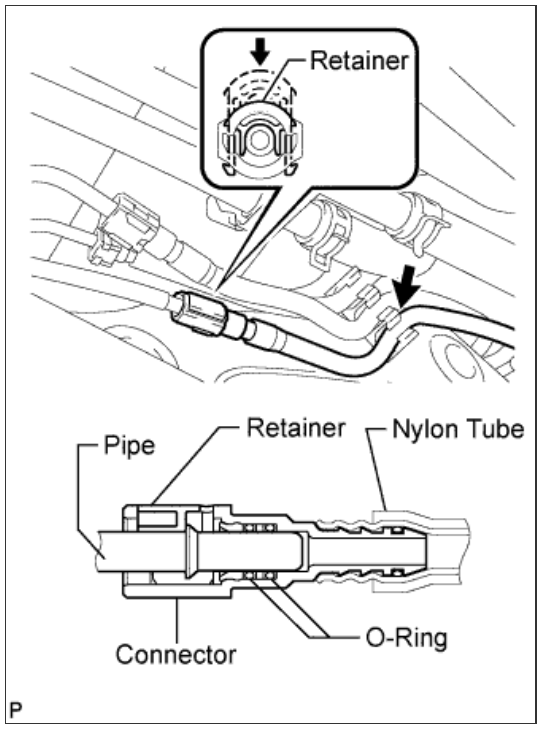
- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

13. CONNECT FUEL TANK RETURN TUBE (for Single Tank Type)

a. Connect the fuel tank return tube and push the retainer.

HINT:



Push the parts together firmly until a "click" sound is heard.

NOTICE:

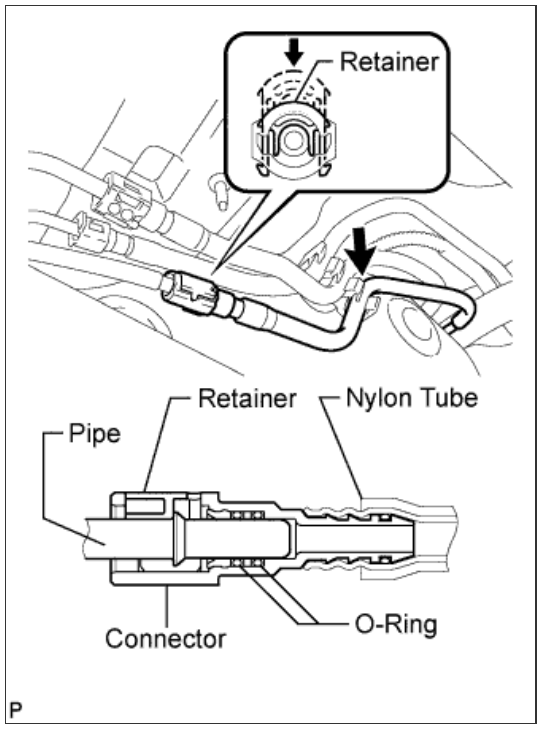
- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**

- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

14. CONNECT FUEL TANK RETURN TUBE (for Double Tank Type)

a. Connect the fuel tank return tube and push the retainer.



HINT:

Push the parts together firmly until a "click" sound is heard.

NOTICE:

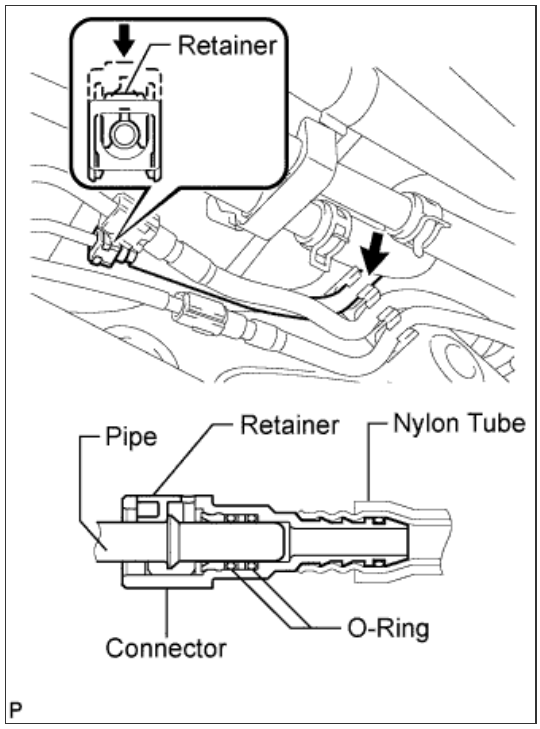
- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

15. CONNECT NO. 2 FUEL TANK BREATHER TUBE (for Single Tank Type)

a. Connect the fuel tank breather tube and push the retainer.

HINT:



Push the parts together firmly until a "click" sound is heard.

NOTICE:

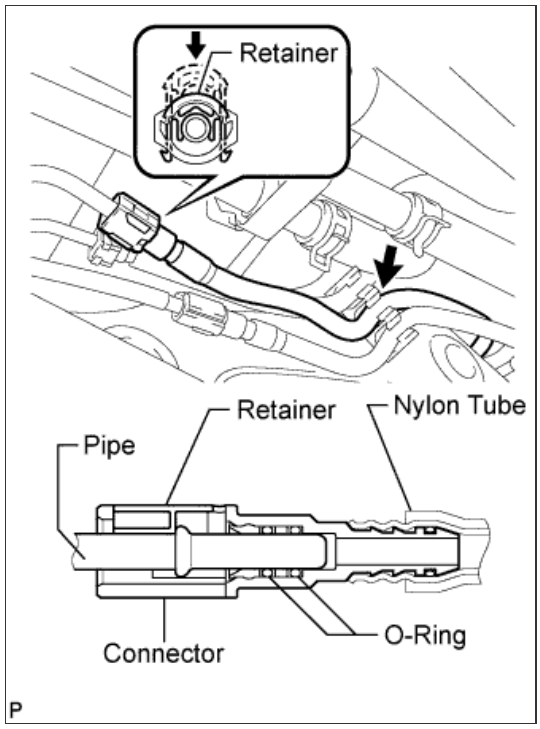
- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**

- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

16. CONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY (for Single Tank Type)

a. Connect the fuel tank main tube and push the retainer.



HINT:

Push the parts together firmly until a "click" sound is heard.

NOTICE:

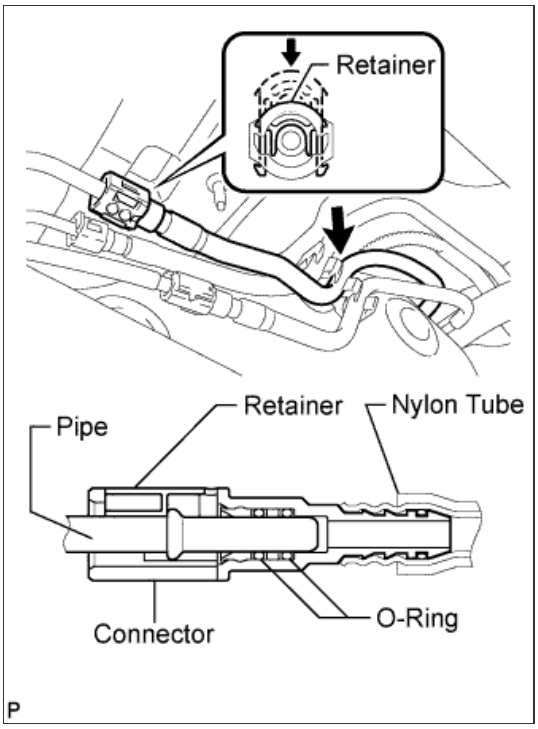
- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

17. CONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY (for Double Tank Type)

a. Connect the fuel tank main tube and push the retainer.

HINT:

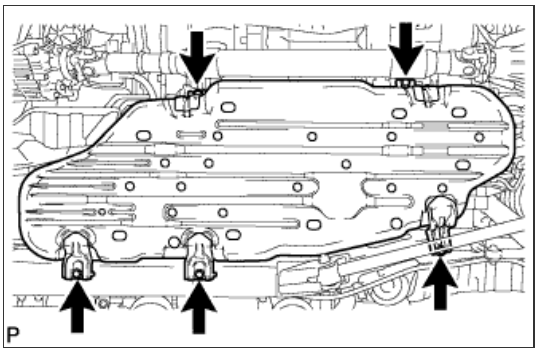


Push the parts together firmly until a "click" sound is heard.

NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**

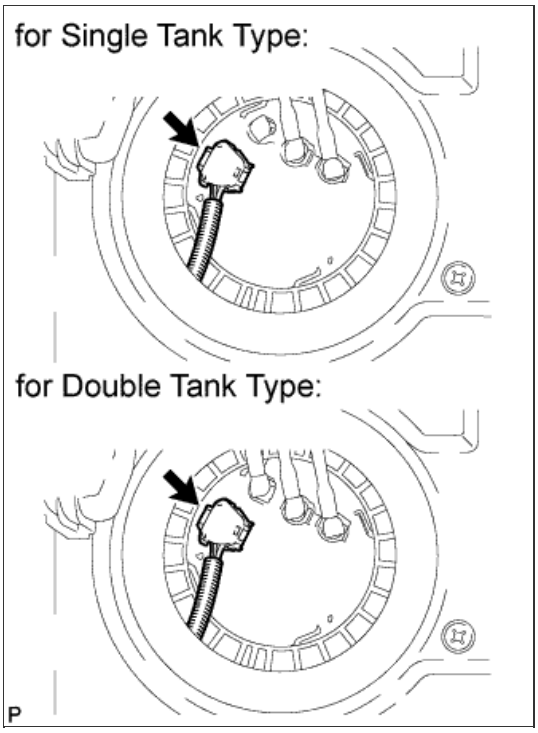
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**



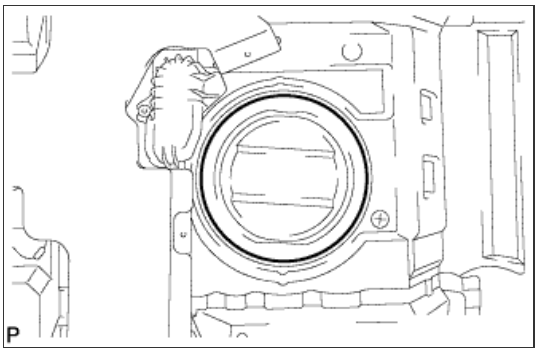
b. Attach the fuel tube clamp.

18. INSTALL NO. 1 FUEL TANK PROTECTOR SUB-ASSEMBLY

a. Install the tank protector with the 5 bolts.

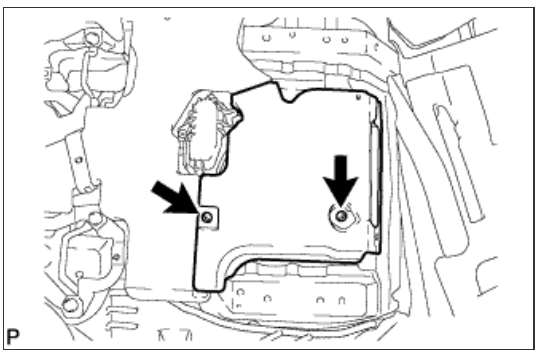


Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }



19. INSTALL FUEL TANK CAP ASSEMBLY

20. INSTALL REAR FLOOR NO. 2 SERVICE HOLE COVER



a. Connect the fuel pump and fuel sender gauge connector.

b. Install the service hole cover with new butyl tape.

c. Install the air duct and 2 screws.

21. INSTALL FRONT FLOOR CARPET ASSEMBLY

22. INSTALL REAR SEAT ASSEMBLY

a. Install the rear No. 1 seat assembly and rear No. 2 seat assembly (Click here).

23. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

24. ADD FUEL

25. INSPECT FOR FUEL LEAK

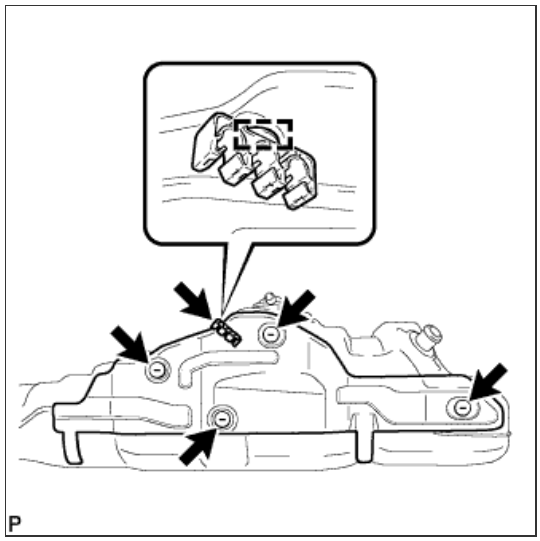
a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG) and intelligent tester on.

NOTICE:

Do not start the engine.

c. Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Fuel Pump Speed Control.



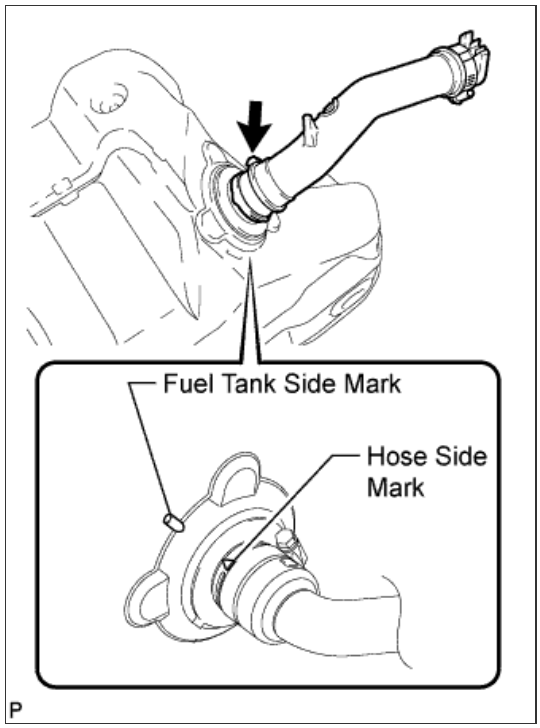
d. Check that there are no fuel leaks after doing maintenance anywhere on the fuel system.

for Preparation Click here

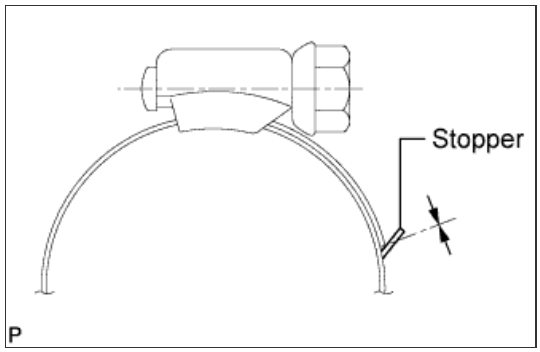
1. INSTALL NO. 1 FUEL TANK HEAT INSULATOR

a. Install the heat insulator with the 4 clips.

b. Install the fuel tube clamp to the heat insulator.



2. INSTALL FUEL TANK TO FILLER PIPE HOSE



a. Install the hose to the fuel tank as shown in the illustration.

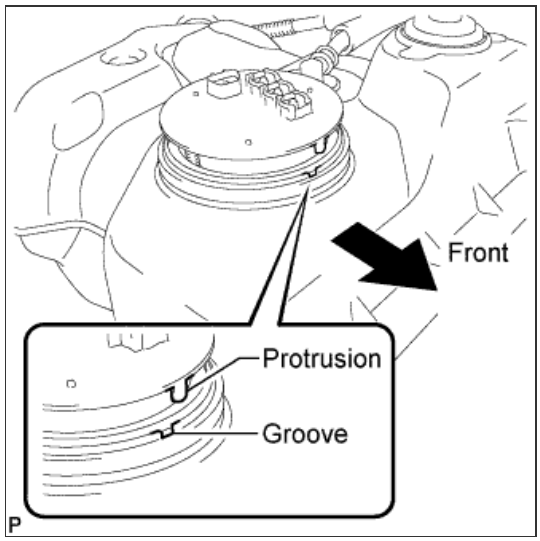
HINT:

- **Align the fuel tank side mark with the hose side mark when installing the hose.**

- **Tighten the hose clamp until the end of the hose clamp contacts the stopper as shown in the illustration.**

3. INSTALL FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY

a. Apply a light coat of gasoline or grease to a new gasket, and install it to the fuel tank.



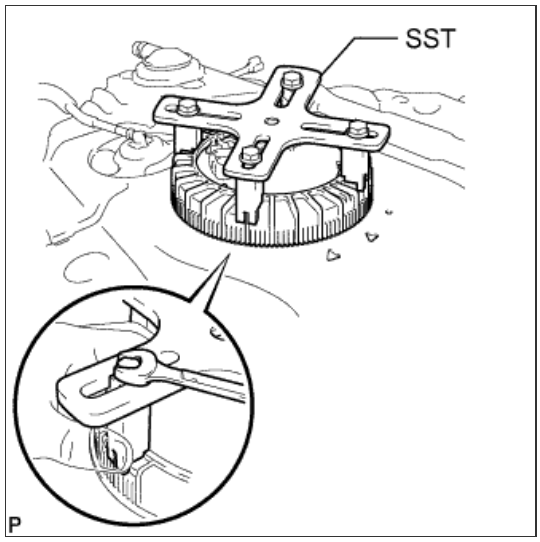
b. Install the fuel suction with pump and gauge tube into the fuel tank.

NOTICE:

Be careful not to bend the arm of the fuel sender gauge.

HINT:

Align the protrusion of the fuel suction with pump and gauge tube with the groove of the fuel tank.



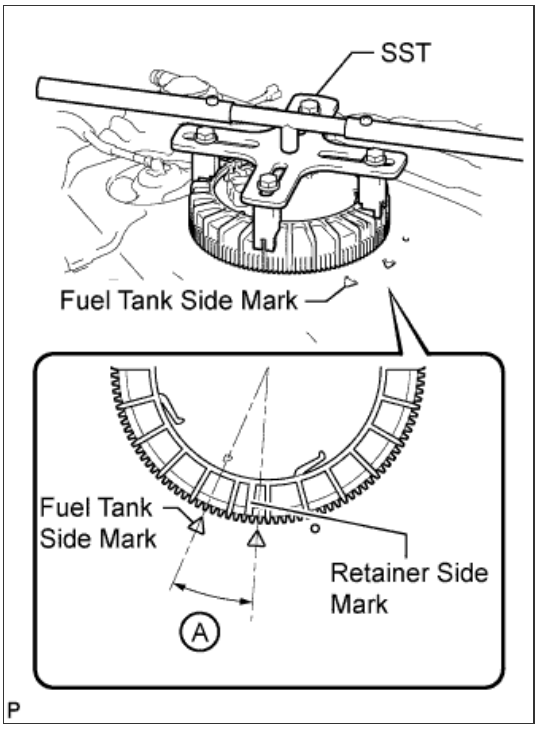
c. Put the retainer on the fuel tank. While holding the fuel suction with pump and gauge tube, tighten the retainer 1 complete turn by hand.

d. Set SST on the retainer.

SST
09808-14030

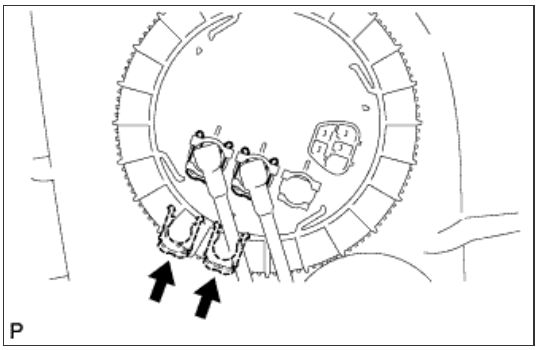
HINT:

- **Hold the fuel suction tube assembly upright by hand to ensure that the fuel suction tube gasket is not moved out of position.**
- **Engage the claws of SST securely with the fuel pump gauge retainer holes to secure SST.**
- **Install SST while pressing the claws of SST against the fuel pump gauge retainer (toward the center of SST).**



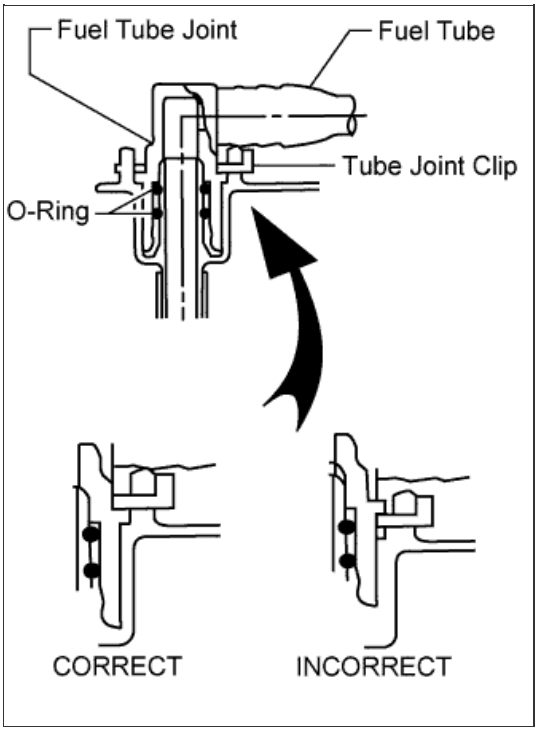
e. Using SST, tighten the retainer until the mark on the retainer is within range A on the fuel tank, as shown in the illustration.

SST
09808-14030



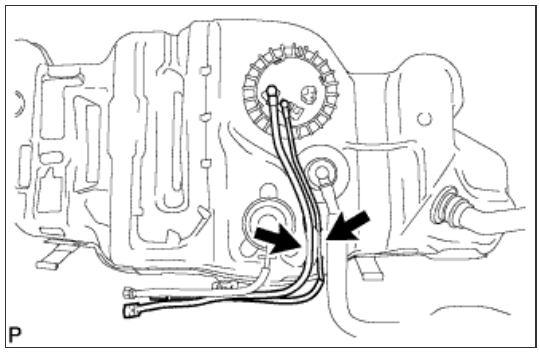
HINT:

Fit the tips of SST onto the ribs of the retainer.



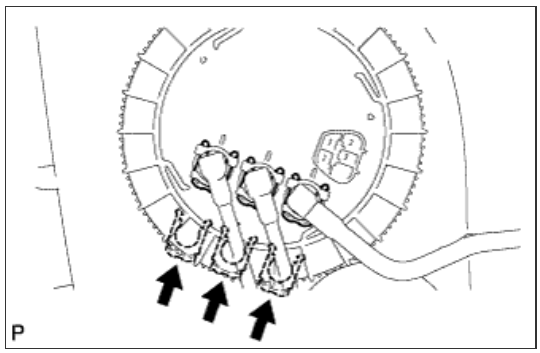
4. INSTALL FUEL TANK MAIN TUBE SUB-ASSEMBLY AND FUEL TANK RETURN TUBE SUB-ASSEMBLY (for Single Tank Type)

a. Install the 2 fuel tank tubes with the 2 tube joint clips.

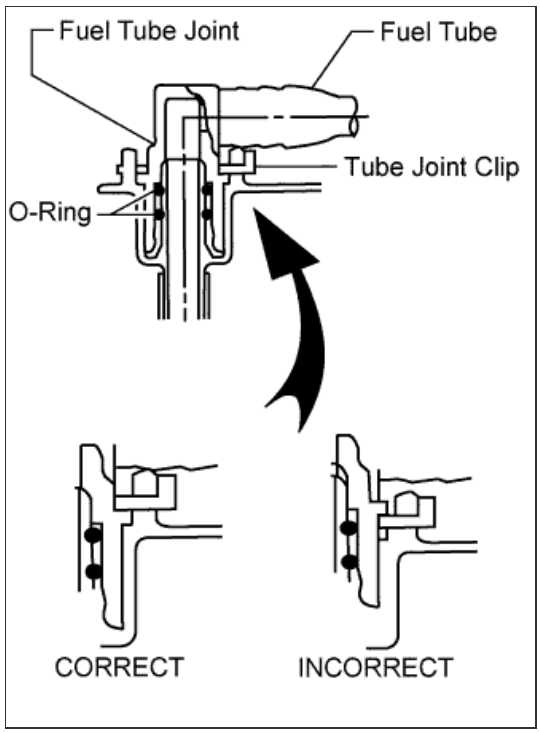


NOTICE:

- **Check that there are no scratches or foreign objects on the connecting parts.**
- **Check that the fuel tube joints are inserted securely.**
- **Check that the tube joint clips are on the collars of the fuel tube joints.**
- **After installing the tube joint clips, check that the fuel tube joints cannot be pulled off.**

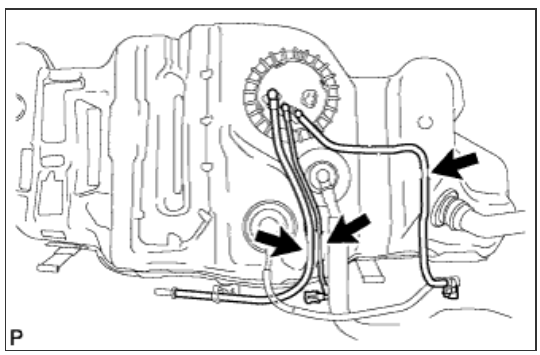


b. Install the 2 fuel tank tubes to the fuel tank.



5. INSTALL FUEL TANK MAIN TUBE, FUEL TANK RETURN TUBE AND NO. 2 FUEL TANK MAIN TUBE SUB-ASSEMBLY (for Double Tank Type)

a. Install the 3 fuel tank tubes with the 3 tube joint clips.



NOTICE:

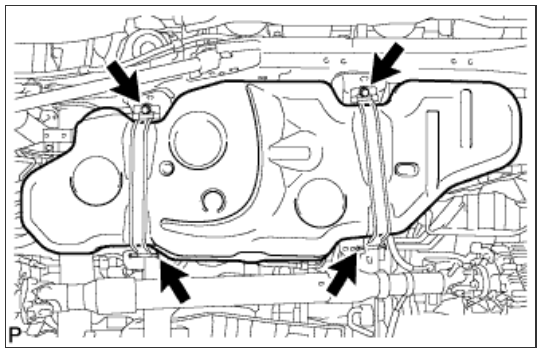
- **Check that there are no scratches or foreign objects on the connecting parts.**
- **Check that the fuel tube joints are inserted securely.**
- **Check that the tube joint clips are on the collars of the fuel tube joints.**
- **After installing the tube joint clips, check that the fuel tube joints cannot be pulled off.**

b. Install the 3 fuel tank tubes to the fuel tank.

6. INSTALL FUEL TANK SUB-ASSEMBLY

a. Set the fuel tank on a transmission jack and raise the fuel tank.

NOTICE:



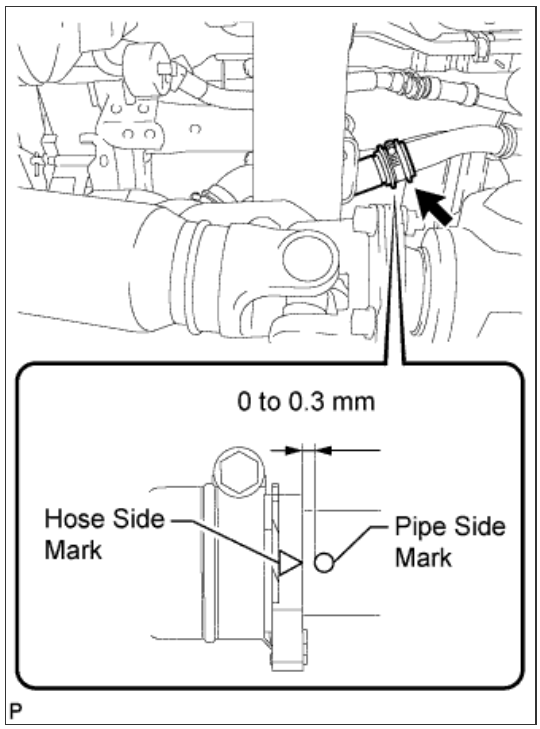
Do not allow the fuel tank to contact the vehicle, especially the differential.

b. Raise the transmission jack.

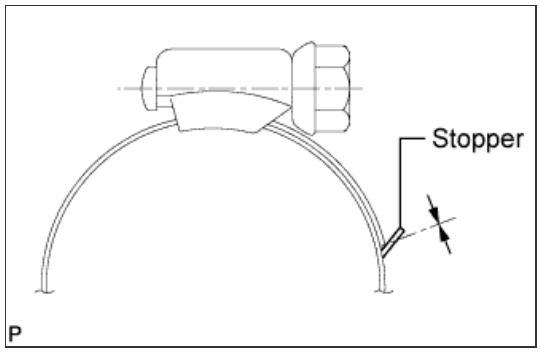
c. Install the 2 fuel tank bands with the 2 pins and 2 clips.

d. Connect the 2 fuel tank bands with the 2 bolts.

Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }



7. CONNECT FUEL TANK TO FILLER PIPE HOSE (for Single Tank Type)

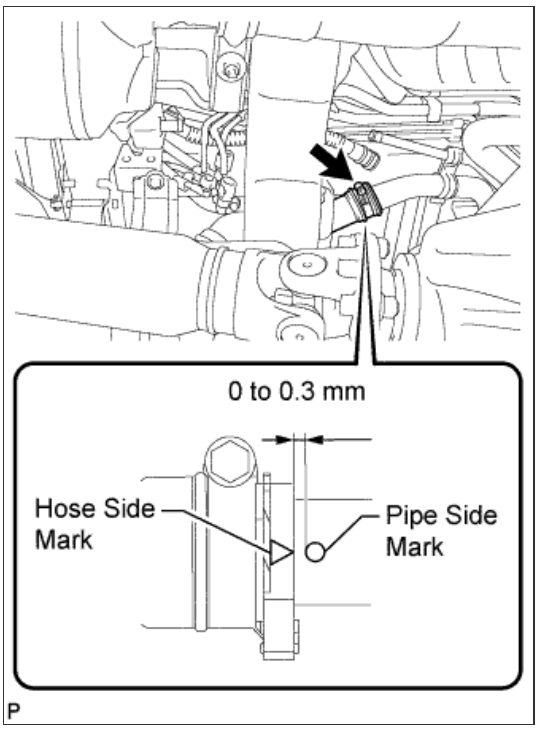


a. Connect the hose to the filler pipe as shown in the illustration.

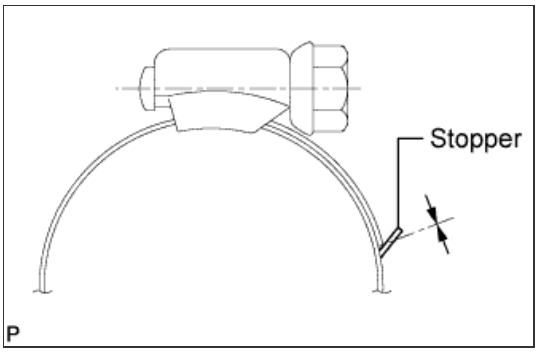
HINT:

- **Install the hose so that the distance between the fuel tank inlet pipe side mark and fuel tank to filler pipe hose side mark is 0 to 0.3 mm (0 to 0.0118 in.) as shown in the illustration.**

- **Tighten the hose clamp until the end of the hose clamp contacts the stopper as shown in the illustration.**



8. CONNECT FUEL TANK TO FILLER PIPE HOSE (for Double Tank Type)



a. Connect the hose to the filler pipe as shown in the illustration.

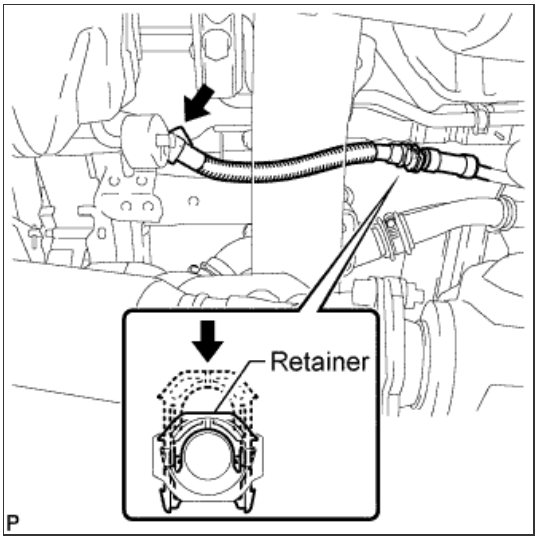
HINT:

- **Install the hose so that the distance between the fuel tank inlet pipe side mark and fuel tank to filler pipe hose side mark is 0 to 0.3 mm (0 to 0.0118 in.) as shown in the illustration.**

- **Tighten the hose clamp until the end of the hose clamp contacts the stopper as shown in the illustration.**

9. CONNECT FUEL TANK BREATHER TUBE (for Single Tank Type)

a. Connect the fuel tank breather tube to the filler pipe and push the retainer.



HINT:

Push the parts together firmly until a "click" sound is heard.

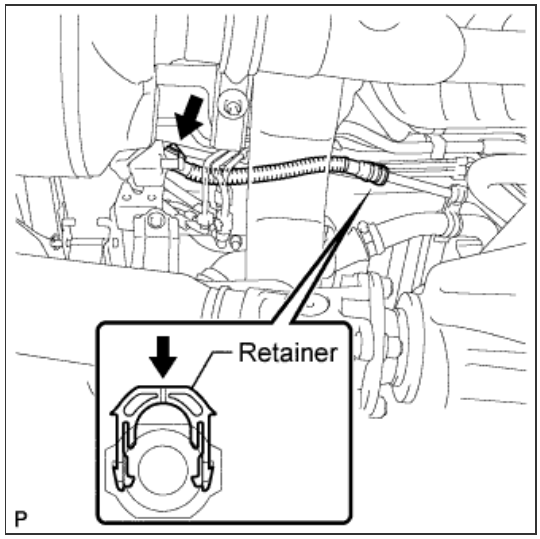
NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

10. CONNECT FUEL TANK BREATHER TUBE (for Double Tank Type)

a. Connect the fuel tank breather tube to the filler pipe and push the retainer.



HINT:

Push the parts together firmly until a "click" sound is heard.

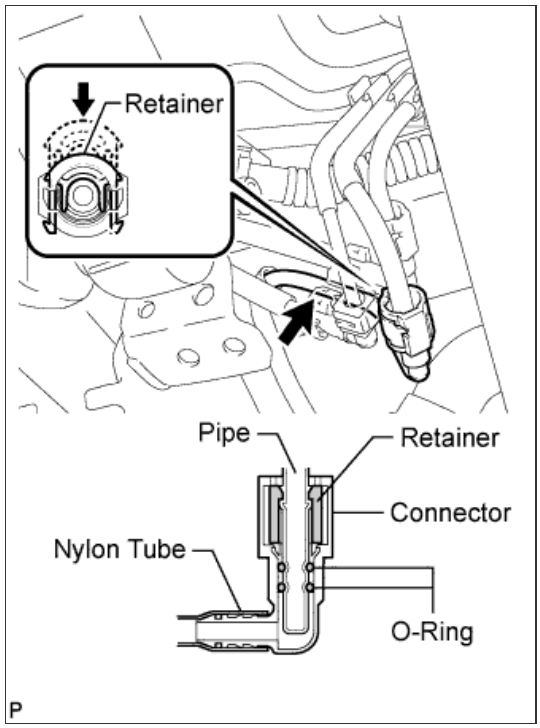
NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

11. CONNECT NO. 2 FUEL MAIN TUBE SUB-ASSEMBLY (for Double Tank Type)

a. Connect the fuel main tube and push the retainer.



HINT:

Push the parts together firmly until a "click" sound is heard.

NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

12. CONNECT NO. 2 FUEL TANK BREATHER TUBE (for Double Tank Type)

a. Connect the fuel tank breather tube and push the retainer.

HINT:

Push the parts together firmly until a "click" sound is heard.

NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

13. CONNECT FUEL TANK RETURN TUBE (for Single Tank Type)

a. Connect the fuel tank return tube and push the retainer.

HINT:

Push the parts together firmly until a "click" sound is heard.

NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

14. CONNECT FUEL TANK RETURN TUBE (for Double Tank Type)

a. Connect the fuel tank return tube and push the retainer.

HINT:

Push the parts together firmly until a "click" sound is heard.

NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**

- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

15. CONNECT NO. 2 FUEL TANK BREATHER TUBE (for Single Tank Type)

a. Connect the fuel tank breather tube and push the retainer.

HINT:

Push the parts together firmly until a "click" sound is heard.

NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

16. CONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY (for Single Tank Type)

a. Connect the fuel tank main tube and push the retainer.

HINT:

Push the parts together firmly until a "click" sound is heard.

NOTICE:

- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**

- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**

b. Attach the fuel tube clamp.

17. CONNECT FUEL TANK MAIN TUBE SUB-ASSEMBLY (for Double Tank Type)

a. Connect the fuel tank main tube and push the retainer.

HINT:

Push the parts together firmly until a "click" sound is heard.

NOTICE:

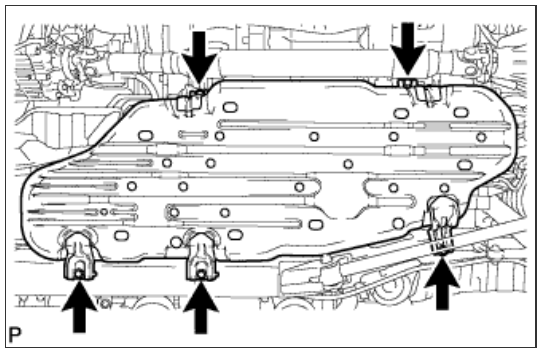
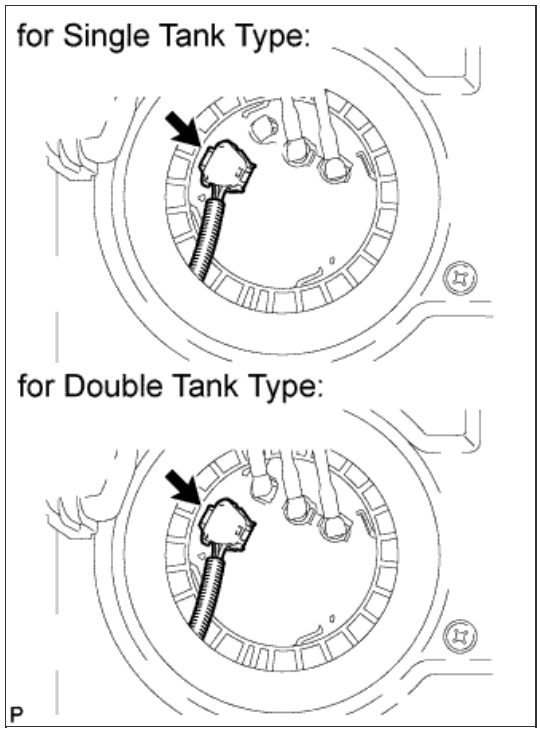
- **Before installing the tube connectors to the pipes, check if there is any damage or foreign matter in the connectors.**
- **After the connection, check if the connectors and pipes are securely connected by trying to pull them apart.**



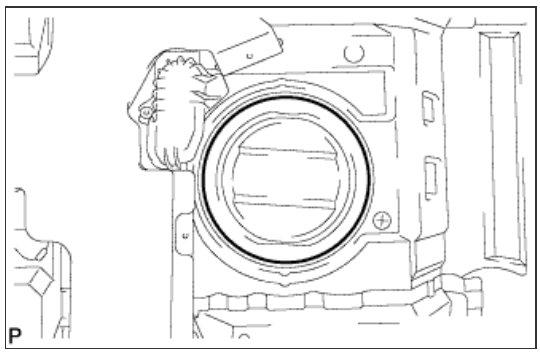
b. Attach the fuel tube clamp.

18. INSTALL NO. 1 FUEL TANK PROTECTOR SUB-ASSEMBLY

a. Install the tank protector with the 5 bolts.

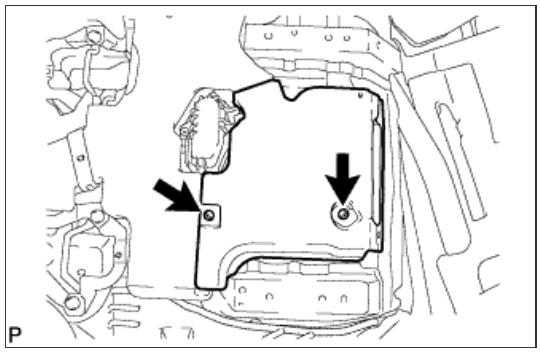


Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }



19. INSTALL FUEL TANK CAP ASSEMBLY

20. INSTALL REAR FLOOR NO. 2 SERVICE HOLE COVER



a. Connect the fuel pump and fuel sender gauge connector.

b. Install the service hole cover with new butyl tape.

c. Install the air duct and 2 screws.

21. INSTALL FRONT FLOOR CARPET ASSEMBLY

22. INSTALL REAR SEAT ASSEMBLY

a. Install the rear No. 1 seat assembly and rear No. 2 seat assembly (Click here).

23. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

24. ADD FUEL

for Preparation Click here

1. DISCHARGE FUEL SYSTEM PRESSURE

a. Discharge the fuel system pressure (Click here).

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

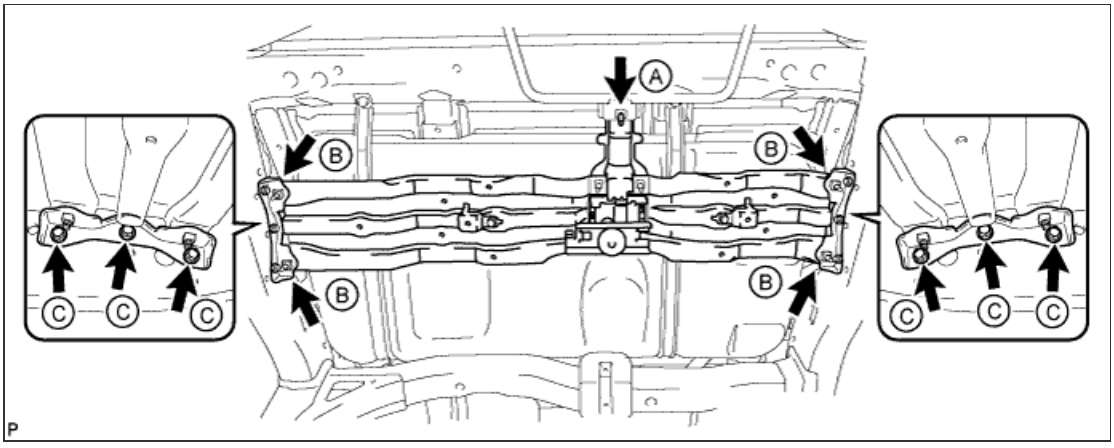
When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

3. REMOVE SPARE TIRE

4. REMOVE TAILPIPE ASSEMBLY

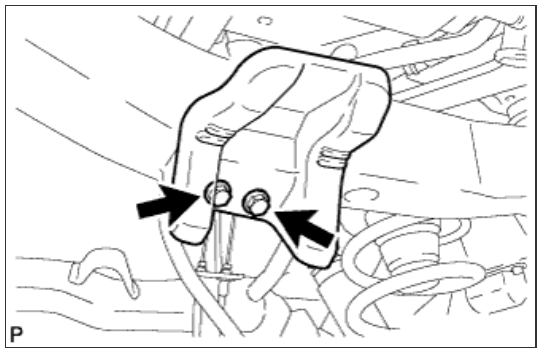


a. Remove the bolt, clamp and gasket.

b. Remove the tailpipe from the 2 exhaust pipe supports.

c. Remove the bolt and clamp, and then disconnect the tailpipe from the center exhaust pipe.

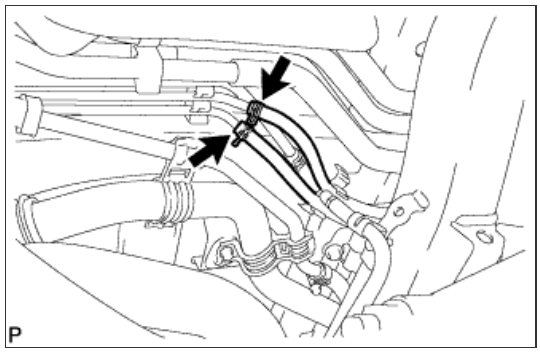
5. REMOVE SPARE WHEEL CARRIER CROSSMEMBER AND SPARE WHEEL CARRIER BRACKET



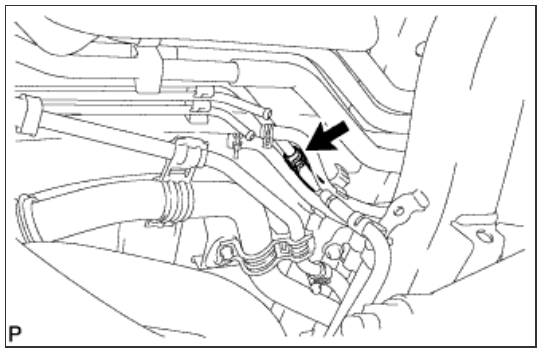
a. Remove the bolt labeled A, and then loosen the 4 bolts labeled B.

b. Slightly raise the spare wheel carrier crossmember, and then remove the 6 bolts labeled C, spare wheel carrier crossmember and 2 brackets.

6. REMOVE NO. 1 SPARE WHEEL STOPPER



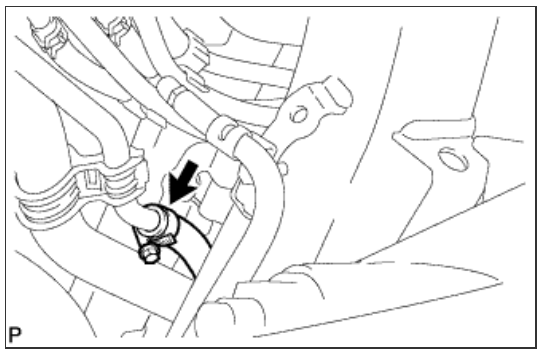
a. Remove the 2 bolts and spare wheel stopper.



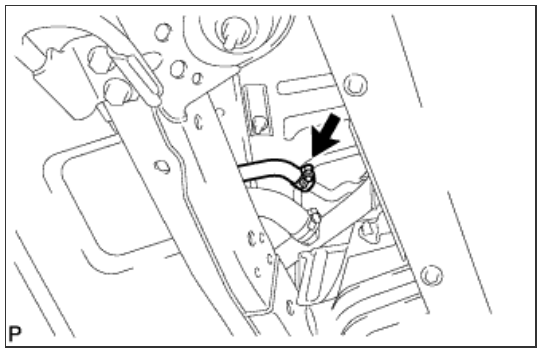
7. REMOVE FUEL TANK CAP ASSEMBLY

8. DISCONNECT FUEL TANK EVAPORATION VENT TUBE SUB-ASSEMBLY

a. Disconnect the 2 fuel tank evaporation vent tubes.

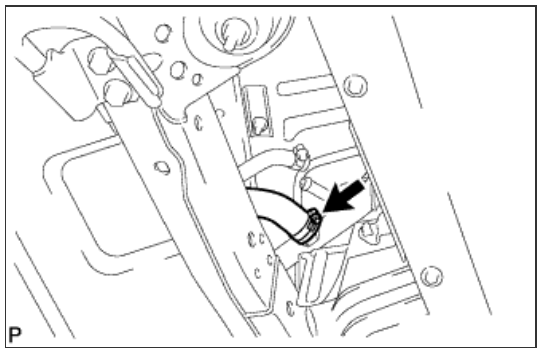


9. DISCONNECT FUEL HOSE



10. DISCONNECT FUEL TANK BREATHER HOSE

a. Disconnect the breather hose from the filler pipe.

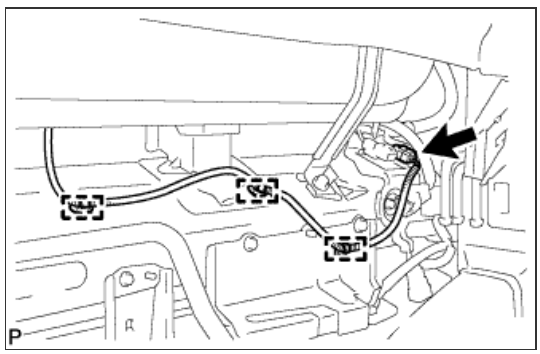


11. DISCONNECT NO. 3 FUEL HOSE

a. Disconnect the fuel hose from the filler pipe.

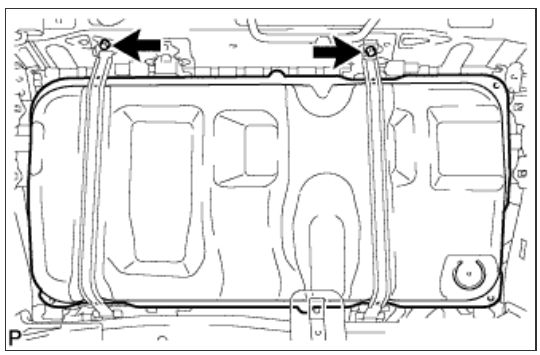
12. DISCONNECT FUEL TANK TO FILLER PIPE HOSE

a. Disconnect the hose from the filler pipe.



13. REMOVE FUEL SUB TANK SUB-ASSEMBLY

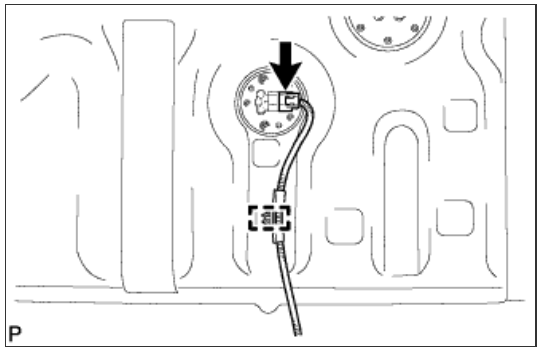
a. Disconnect the floor No. 3 wire connector.



b. Using a clip remover, detach the 3 wire harness clamps.

c. Set a transmission jack underneath the fuel sub tank.

d. Remove the 2 bolts and disconnect the 2 fuel tank bands.

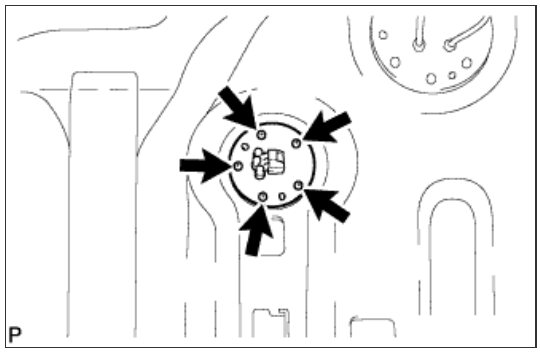


e. Remove the fuel sub tank.

14. REMOVE FLOOR NO. 3 WIRE

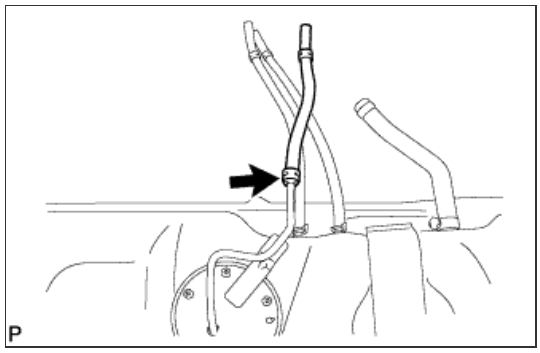
a. Disconnect the sender gauge connector.

b. Using a clip remover, detach the wire harness clamp.



15. REMOVE FUEL SENDER GAUGE ASSEMBLY

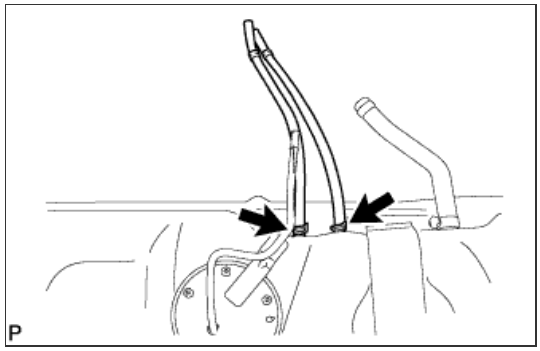
a. Remove the 5 screws and sender gauge.



NOTICE:

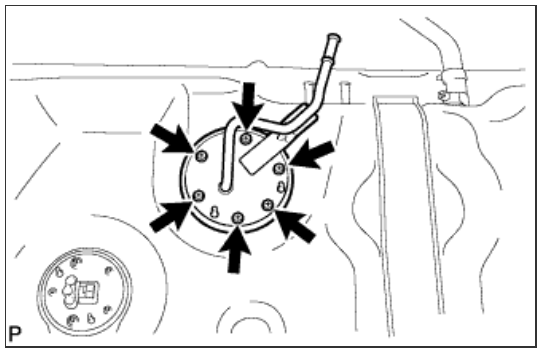
Be careful not to bend the arm of the fuel sender gauge.

b. Remove the gasket from the sender gauge.



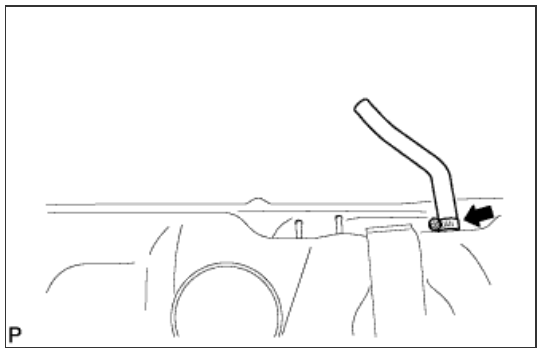
16. REMOVE FUEL HOSE

17. REMOVE FUEL TANK EVAPORATION VENT TUBE SUB-ASSEMBLY



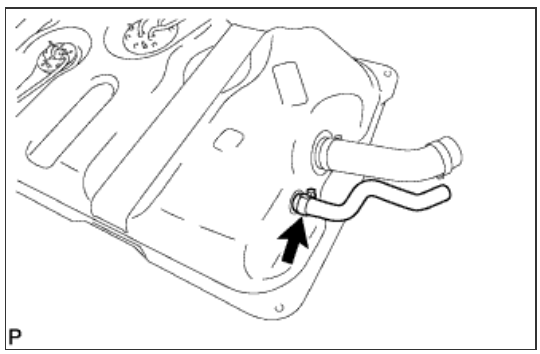
a. Remove the 2 fuel tank evaporation vent tubes.

18. REMOVE FUEL AND EVAPORATION VENT TUBE SUB-ASSEMBLY



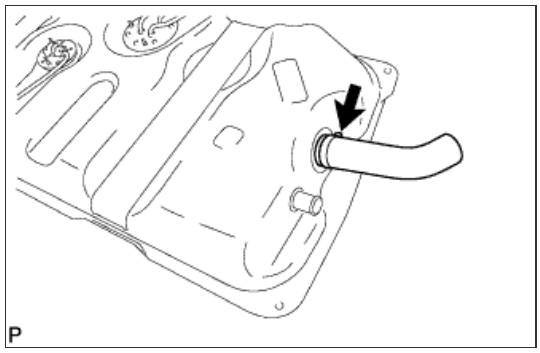
a. Remove the 6 bolts and fuel and evaporation vent tube.

b. Remove the gasket from the fuel and evaporation vent tube.



19. REMOVE FUEL TANK BREATHER HOSE

a. Remove the breather hose from the fuel sub tank.



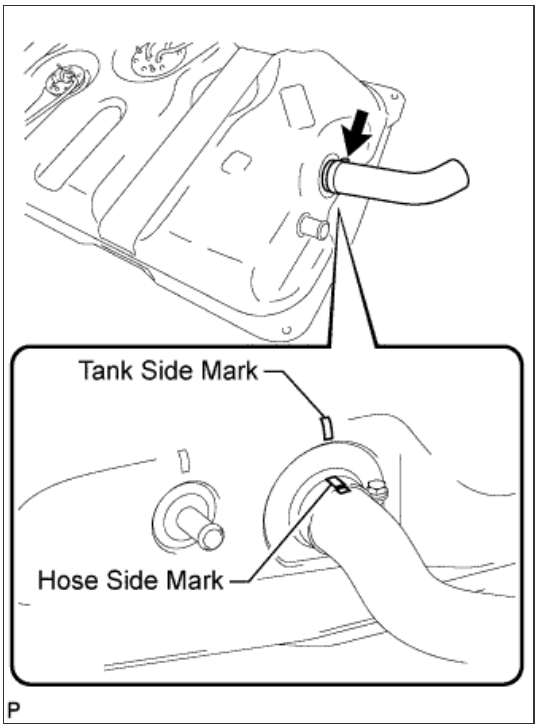
20. REMOVE NO. 3 FUEL HOSE

a. Remove the fuel hose from the fuel sub tank.

21. REMOVE FUEL TANK TO FILLER PIPE HOSE

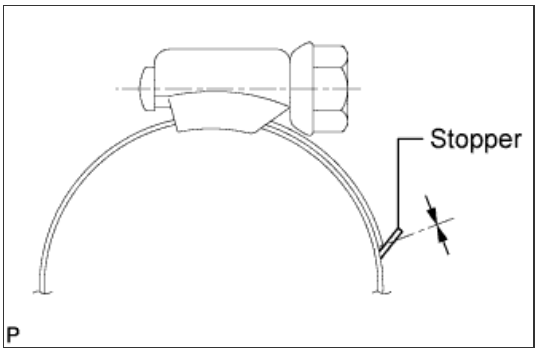
a. Remove the hose from the fuel sub tank.

P



for Preparation Click here

1. INSTALL FUEL TANK TO FILLER PIPE HOSE

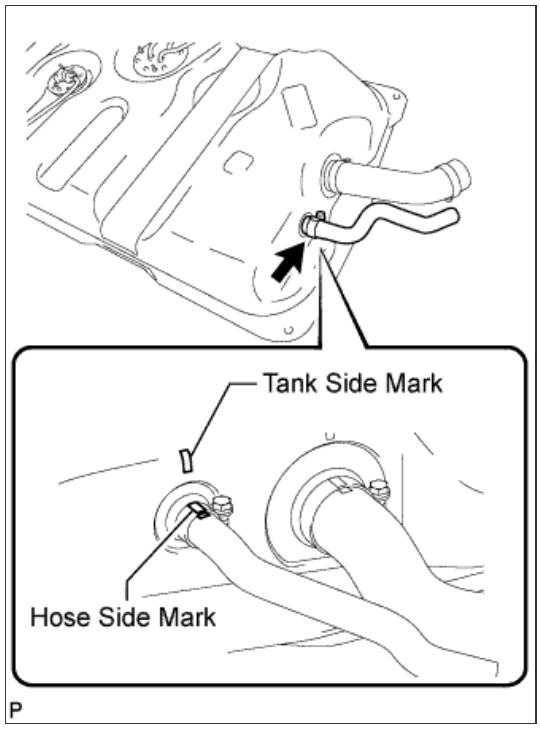


a. Install the hose to the fuel sub tank as shown in the illustration.

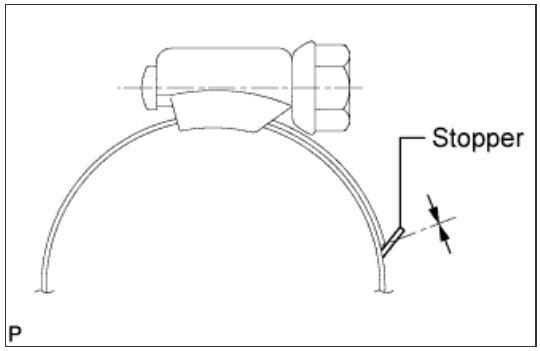
HINT:

- **Align the fuel sub tank side mark with the hose side mark when installing the hose.**

- **Tighten the hose clamp until the end of the hose clamp contacts the stopper as shown in the illustration.**



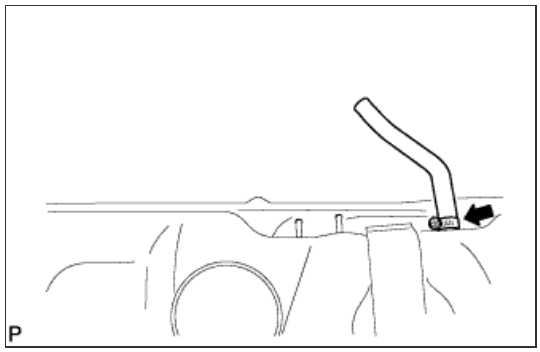
2. INSTALL NO. 3 FUEL HOSE



a. Install the fuel hose to the fuel sub tank as shown in the illustration.

HINT:

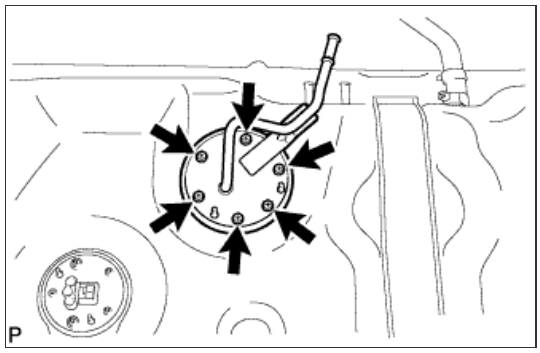
- **Align the fuel sub tank side mark with the hose side mark when installing the hose.**



- **Tighten the hose clamp until the end of the hose clamp contacts the stopper as shown in the illustration.**

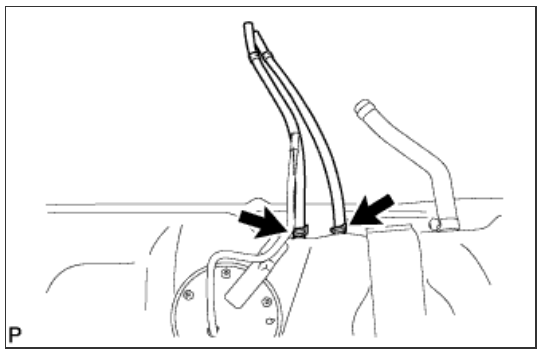
3. INSTALL FUEL TANK BREATHER HOSE

a. Install the breather hose to the fuel sub tank.



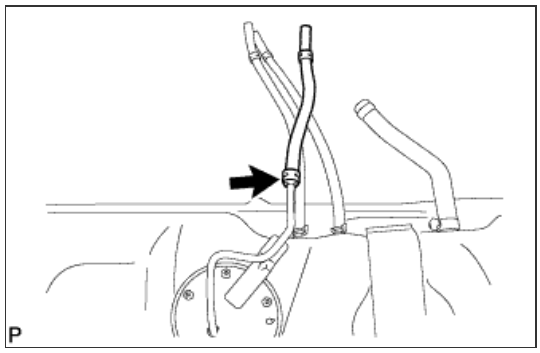
4. INSTALL FUEL AND EVAPORATION VENT TUBE SUB-ASSEMBLY

a. Install a new gasket to the fuel and evaporation vent tube.



b. Install the fuel and evaporation vent tube with the 6 bolts.

Torque:
3.5 N*m{ 36 kgf*cm , 31 in.*lbf }

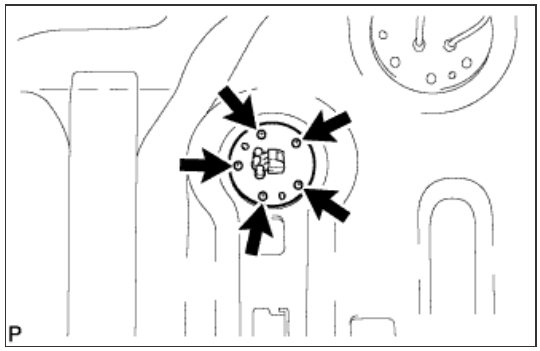


5. INSTALL FUEL TANK EVAPORATION VENT TUBE SUB-ASSEMBLY

a. Install the 2 fuel tank evaporation vent tubes.

6. INSTALL FUEL HOSE

7. INSTALL FUEL SENDER GAUGE ASSEMBLY

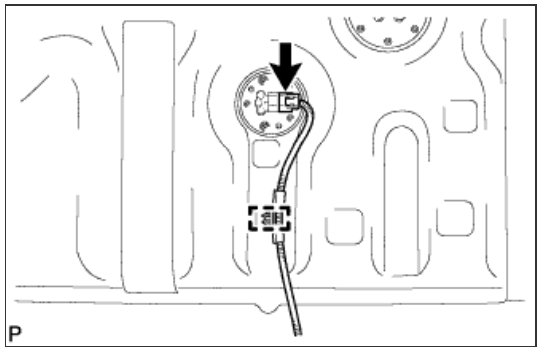


a. Install a new gasket to the sender gauge.

NOTICE:

Be careful not to bend the arm of the fuel sender gauge.

b. Install the sender gauge with the 5 screws.

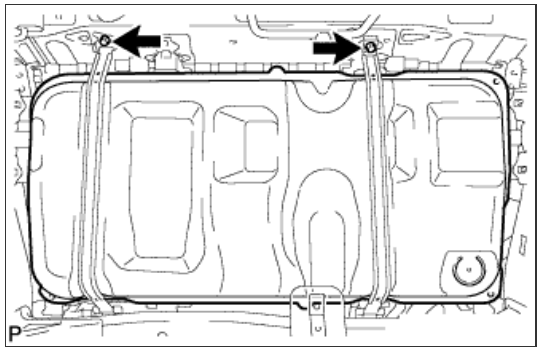


Torque:
1.5 N*m{ 15 kgf*cm , 13 in.*lbf }

8. INSTALL FLOOR NO. 3 WIRE

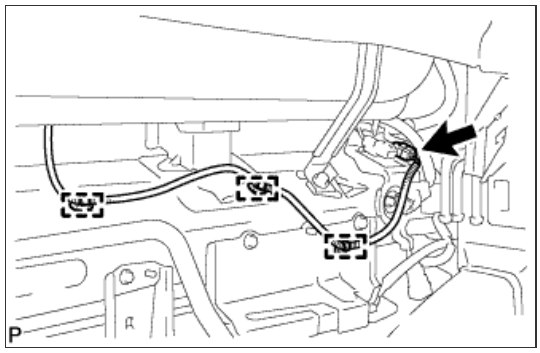
a. Attach the wire harness clamp to the fuel sub tank.

b. Connect the sender gauge connector.



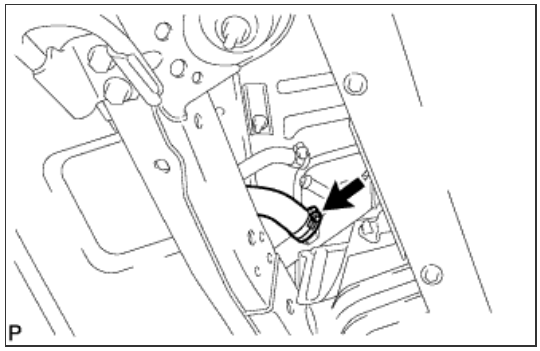
9. INSTALL FUEL SUB TANK SUB-ASSEMBLY

a. Set the fuel sub tank on a transmission jack and raise the fuel sub tank.



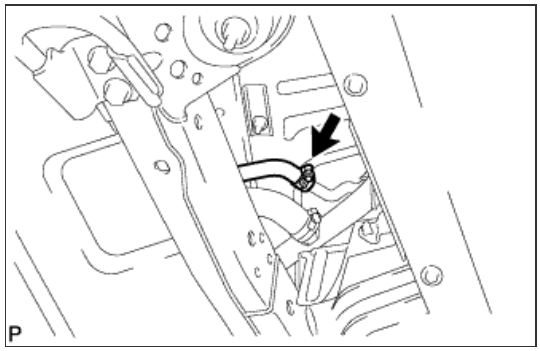
b. Connect the 2 fuel tank bands with the 2 bolts.

Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }



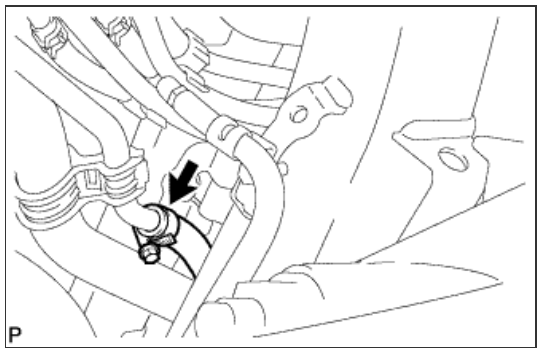
c. Connect the floor No. 3 wire connector.

d. Attach the 3 wire harness clamps.



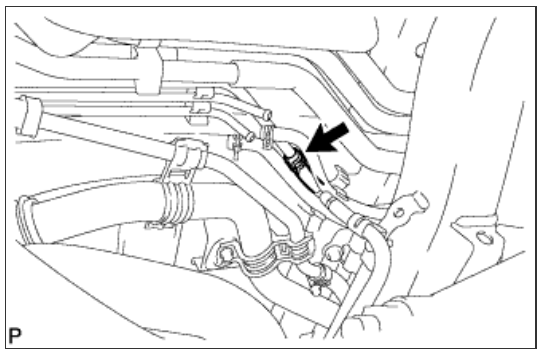
10. CONNECT FUEL TANK TO FILLER PIPE HOSE

a. Connect the hose to the filler pipe.



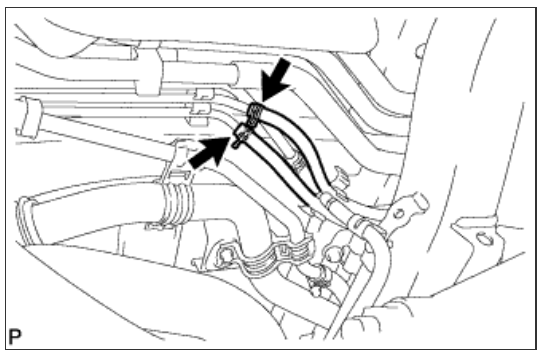
11. CONNECT NO. 3 FUEL HOSE

a. Connect the fuel hose to the filler pipe.



12. CONNECT FUEL TANK BREATHER HOSE

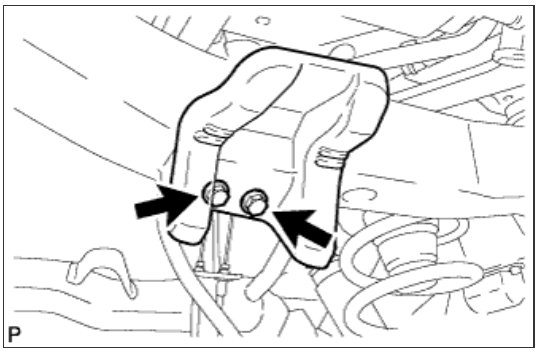
a. Connect the breather hose to the filler pipe.



13. CONNECT FUEL HOSE

14. CONNECT FUEL TANK EVAPORATION VENT TUBE SUB-ASSEMBLY

a. Connect the 2 fuel tubes.

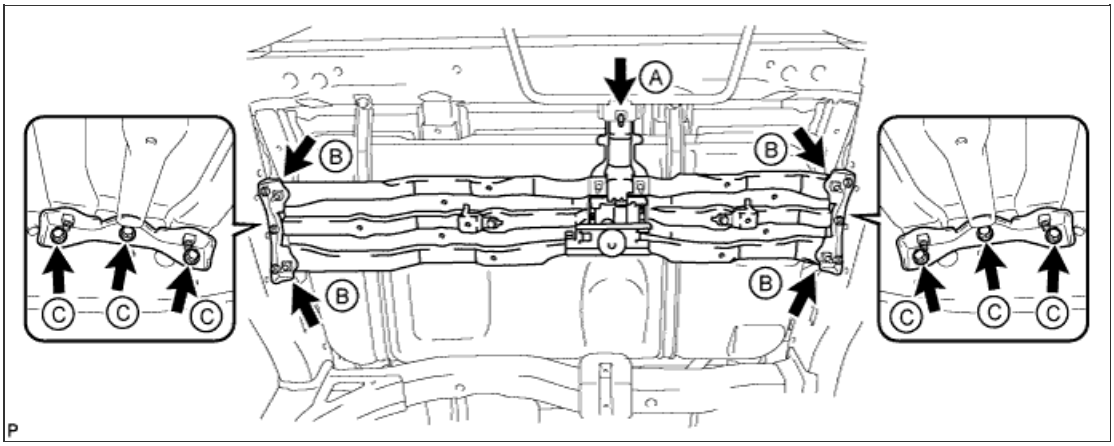


15. INSTALL FUEL TANK CAP ASSEMBLY

16. INSTALL NO. 1 SPARE WHEEL STOPPER

a. Install the spare wheel stopper with the 2 bolts.

Torque:
32 N*m{ 326 kgf*cm , 24 ft.*lbf }



17. INSTALL SPARE WHEEL CARRIER CROSSMEMBER AND SPARE WHEEL CARRIER BRACKET

a. Install the spare wheel carrier crossmember and 2 brackets to the vehicle with the 6 bolts labeled C.

Torque:
for bolt C:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

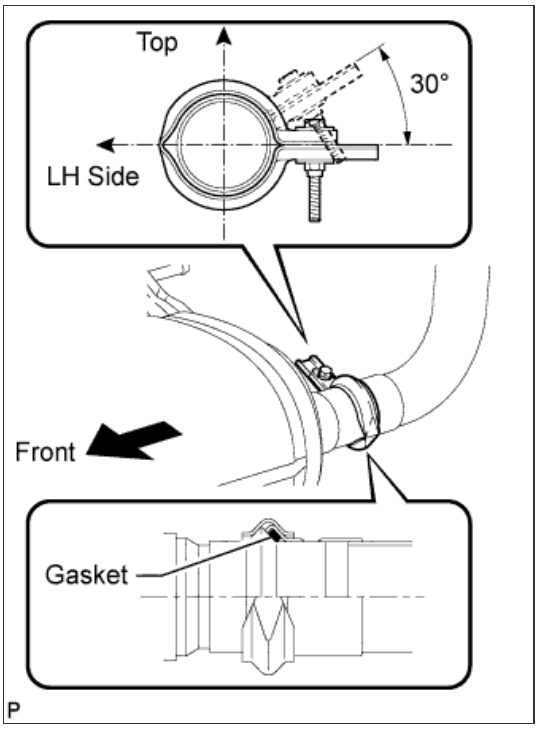
b. Temporarily install the bolt labeled A, and then tighten the bolt labeled A and bolts labeled B.

Torque:
for bolt A:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }
for bolt B:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

18. INSTALL TAILPIPE ASSEMBLY

a. Install the tailpipe to the 2 exhaust pipe supports.

b. Install a new gasket to the center exhaust pipe.



c. Connect the tailpipe to the center exhaust pipe.

d. Attach a new clamp to the tailpipe and center exhaust pipe. Then install the bolt to the clamp.

Torque:
32 N*m{ 326 kgf*cm , 24 ft.*lbf }

HINT:

Install the clamp within the angle range shown in the illustration.

19. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

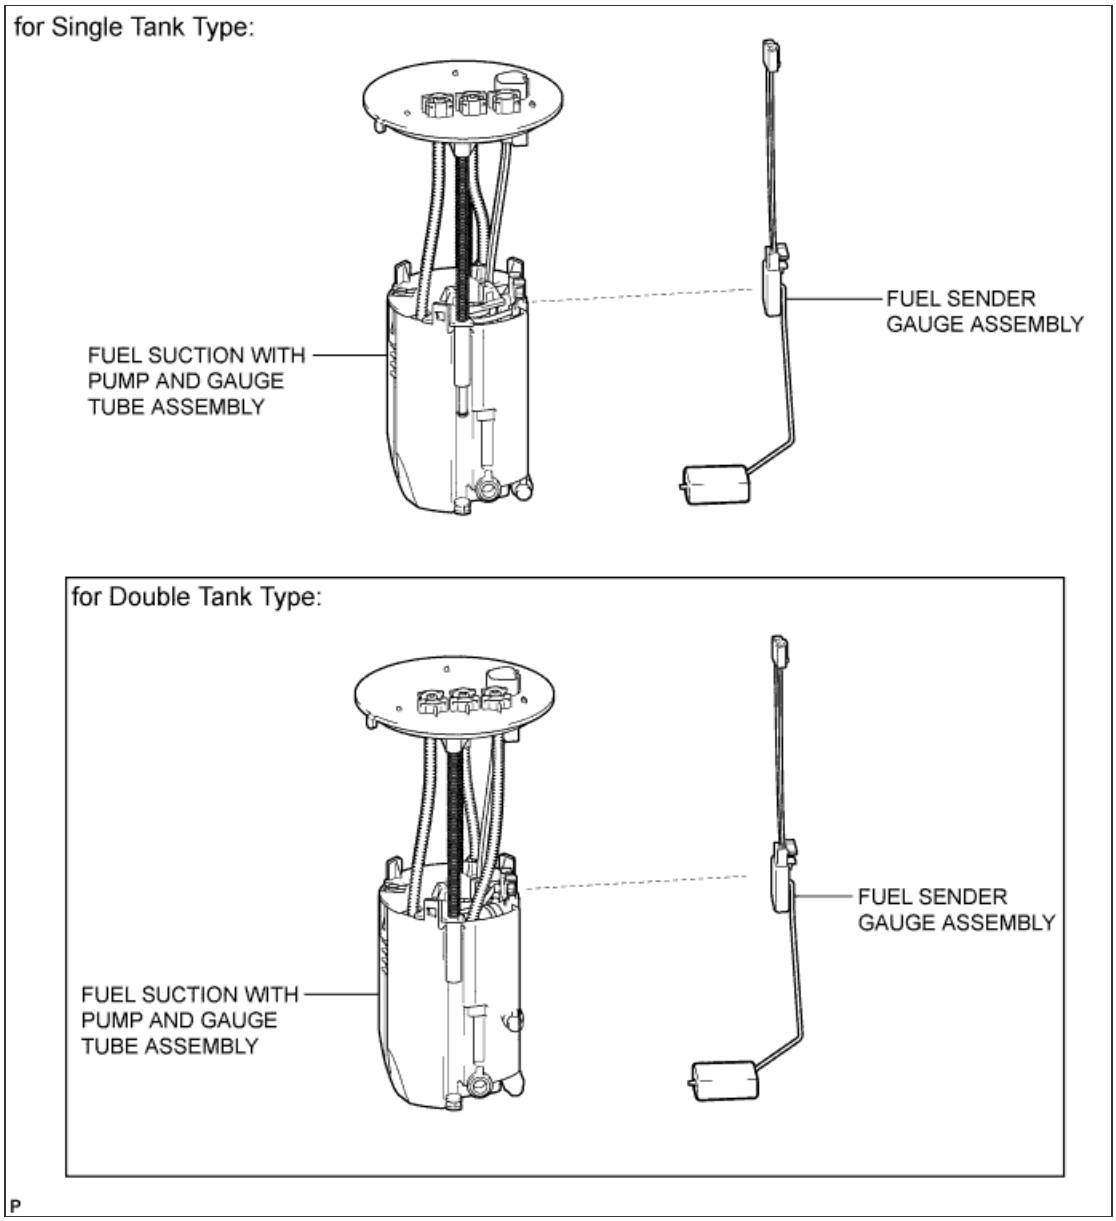
20. INSPECT FOR FUEL LEAK

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG) and intelligent tester on.

NOTICE:

Do not start the engine.



c. Enter the following menus: Powertrain / Engine and ECT / Active Test / Control the Fuel Pump Speed Control.

d. Check that there are no fuel leaks after doing maintenance anywhere on the fuel system.

21. INSPECT FOR EXHAUST GAS LEAK

22. INSTALL SPARE TIRE

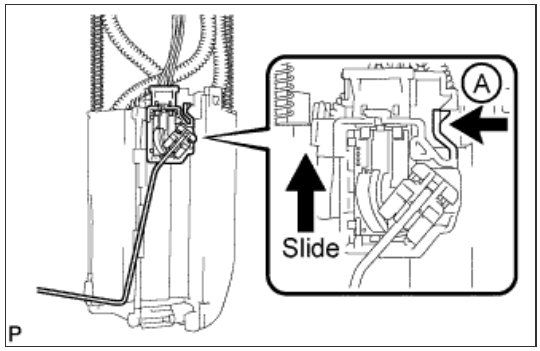
1. REMOVE FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY

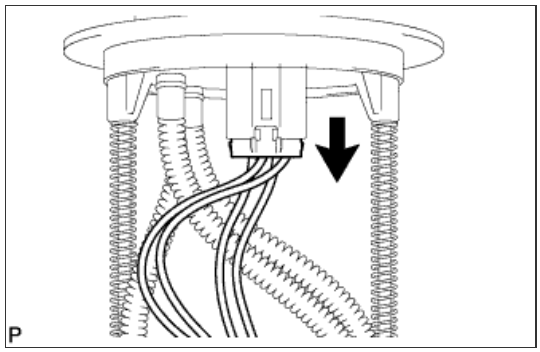


a. Remove the fuel suction with pump and gauge tube assembly (Click here).

2. REMOVE FUEL SENDER GAUGE ASSEMBLY

a. Disconnect the fuel sender gauge connector.

b. Press down on the sender gauge claw labeled A. Then slide the sender gauge upward to remove it.



for Preparation Click here

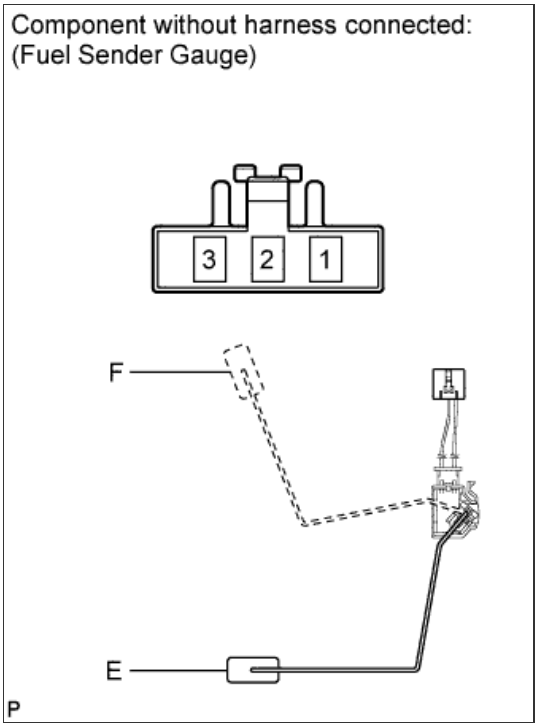
1. INSPECT FUEL SENDER GAUGE ASSEMBLY



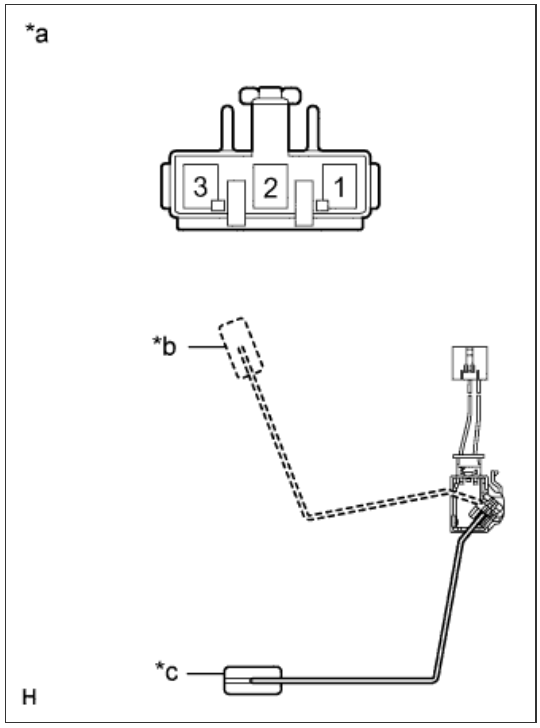
a. Check that the float moves smoothly between F and E.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
2 - 3	Float level is F (upper)	12 to 18 Ω
	Float level is E (lower)	405 to 415 Ω

If the result is not as specified, replace the fuel sender gauge assembly.



for Preparation Click here

1. INSPECT FUEL SENDER GAUGE ASSEMBLY

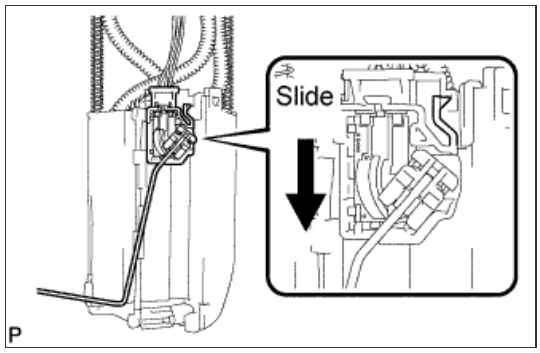
Text in Illustration

*a	Component without harness connected (Fuel Sender Gauge)
*b	F (Upper)
*c	E (Lower)

a. Check that the float moves smoothly between F and E.

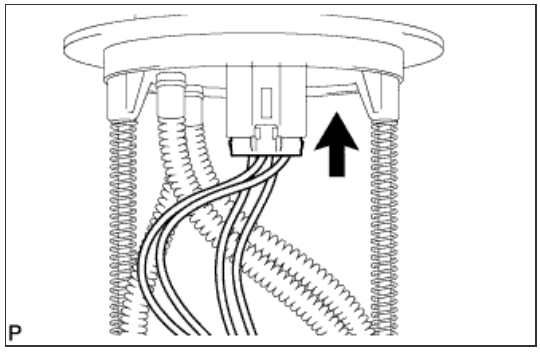
b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:



Tester Connection	Condition	Specified Condition
2 - 3	Float level is F (upper)	13.5 to 16.5 Ω
	Float level is E (lower)	405.5 to 414.5 Ω

If the result is not as specified, replace the fuel sender gauge assembly.

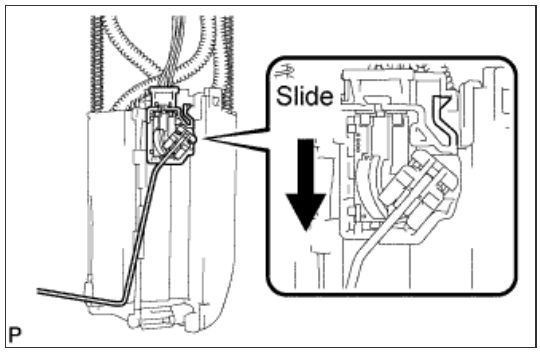


for Preparation Click here

1. INSTALL FUEL SENDER GAUGE ASSEMBLY

a. Set the sender gauge to the fuel sub-tank. Then slide the sender gauge downward to install it.

b. Connect the fuel sender gauge connector.



2. INSTALL FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY

a. Install the fuel suction with pump and gauge tube assembly (Click here).

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

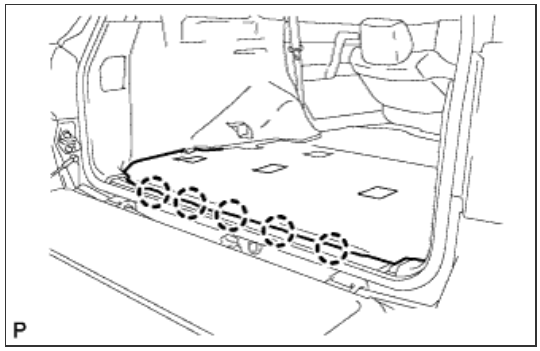
CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

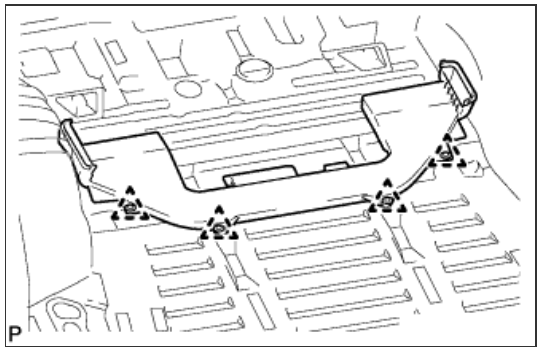
2. REMOVE REAR SEAT ASSEMBLY



a. Remove the rear No. 1 seat assembly and rear No. 2 seat assembly (Click here).

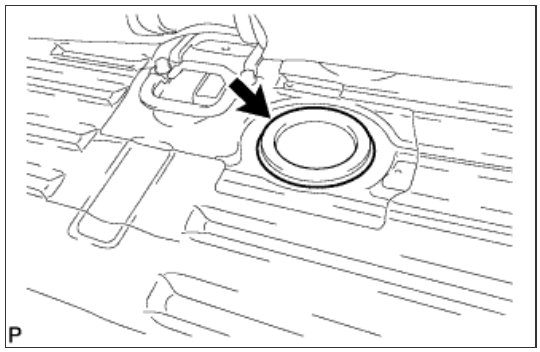
3. REMOVE REAR FLOOR MAT ASSEMBLY

a. Detach the 5 clips and fold back the floor mat toward the front of the vehicle.



HINT:

Fold back the floor mat so that the rear No. 7 air duct can be removed.

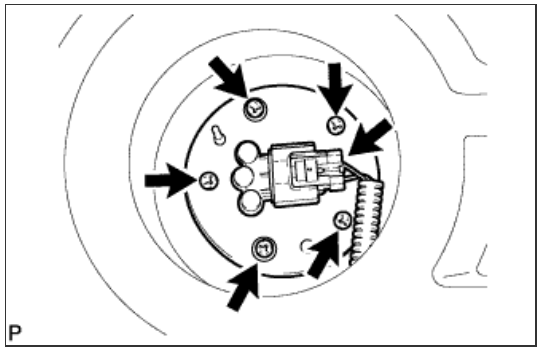


4. REMOVE REAR NO. 7 AIR DUCT

a. Detach the 4 clips and remove the air duct.

5. REMOVE REAR FLOOR SERVICE HOLE COVER

6. REMOVE FUEL SENDER GAUGE ASSEMBLY



a. Disconnect the sender gauge connector.

b. Remove the 5 screws and sender gauge.

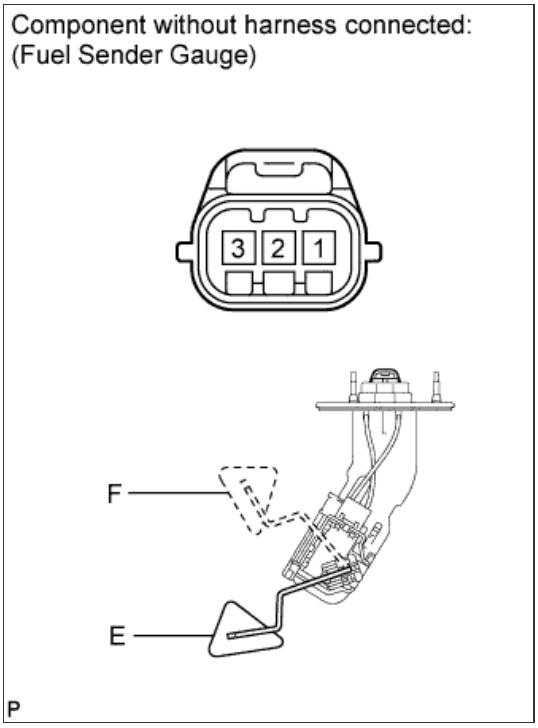
NOTICE:

Be careful not to bend the arm of the fuel sender gauge.

c. Remove the gasket from the sender gauge.

for Preparation Click here

1. INSPECT FUEL SENDER GAUGE ASSEMBLY



a. Check that the float moves smoothly between F and E.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

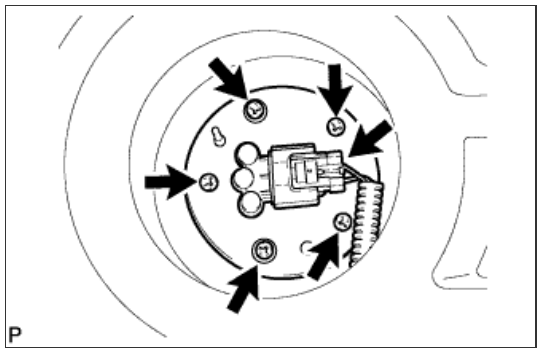
Tester Connection	Condition	Specified Condition
2 - 3	Float level is F (upper)	12 to 18 Ω
	Float level is E (lower)	405 to 415 Ω

If the result is not as specified, replace the fuel sender gauge assembly.

for Preparation Click here

1. INSTALL FUEL SENDER GAUGE ASSEMBLY

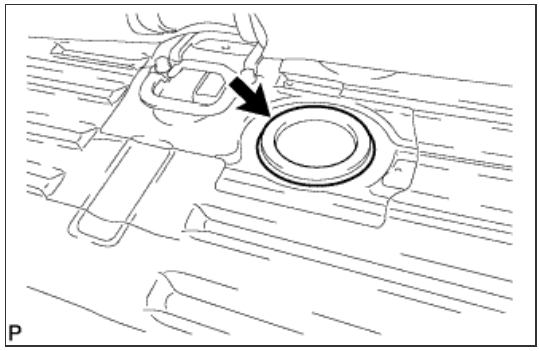
a. Install a new gasket to the sender gauge.



b. Install the sender gauge with the 5 screws.

Torque:
1.5 N*m{ 15 kgf*cm , 13 in.*lbf }

NOTICE:

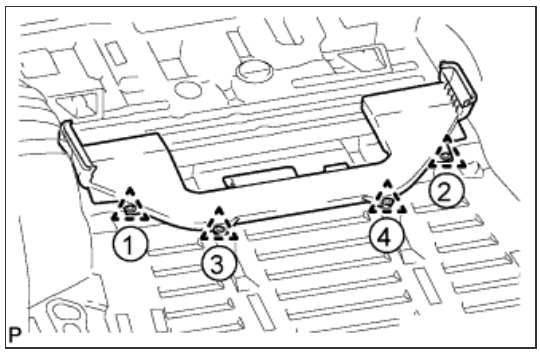


Be careful not to bend the arm of the fuel sender gauge.

c. Connect the sender gauge connector.

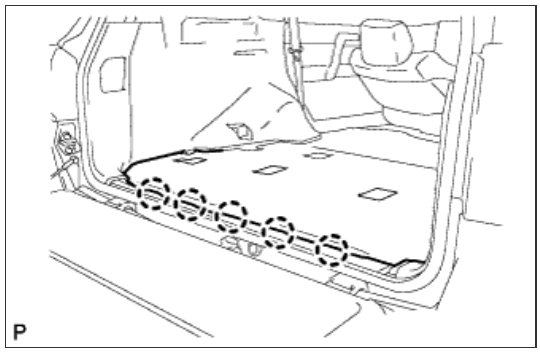
2. INSTALL REAR FLOOR SERVICE HOLE COVER

a. Install the service hole cover with new butyl tape.



3. INSTALL REAR NO. 7 AIR DUCT

a. Attach the 4 clips to install the air duct.



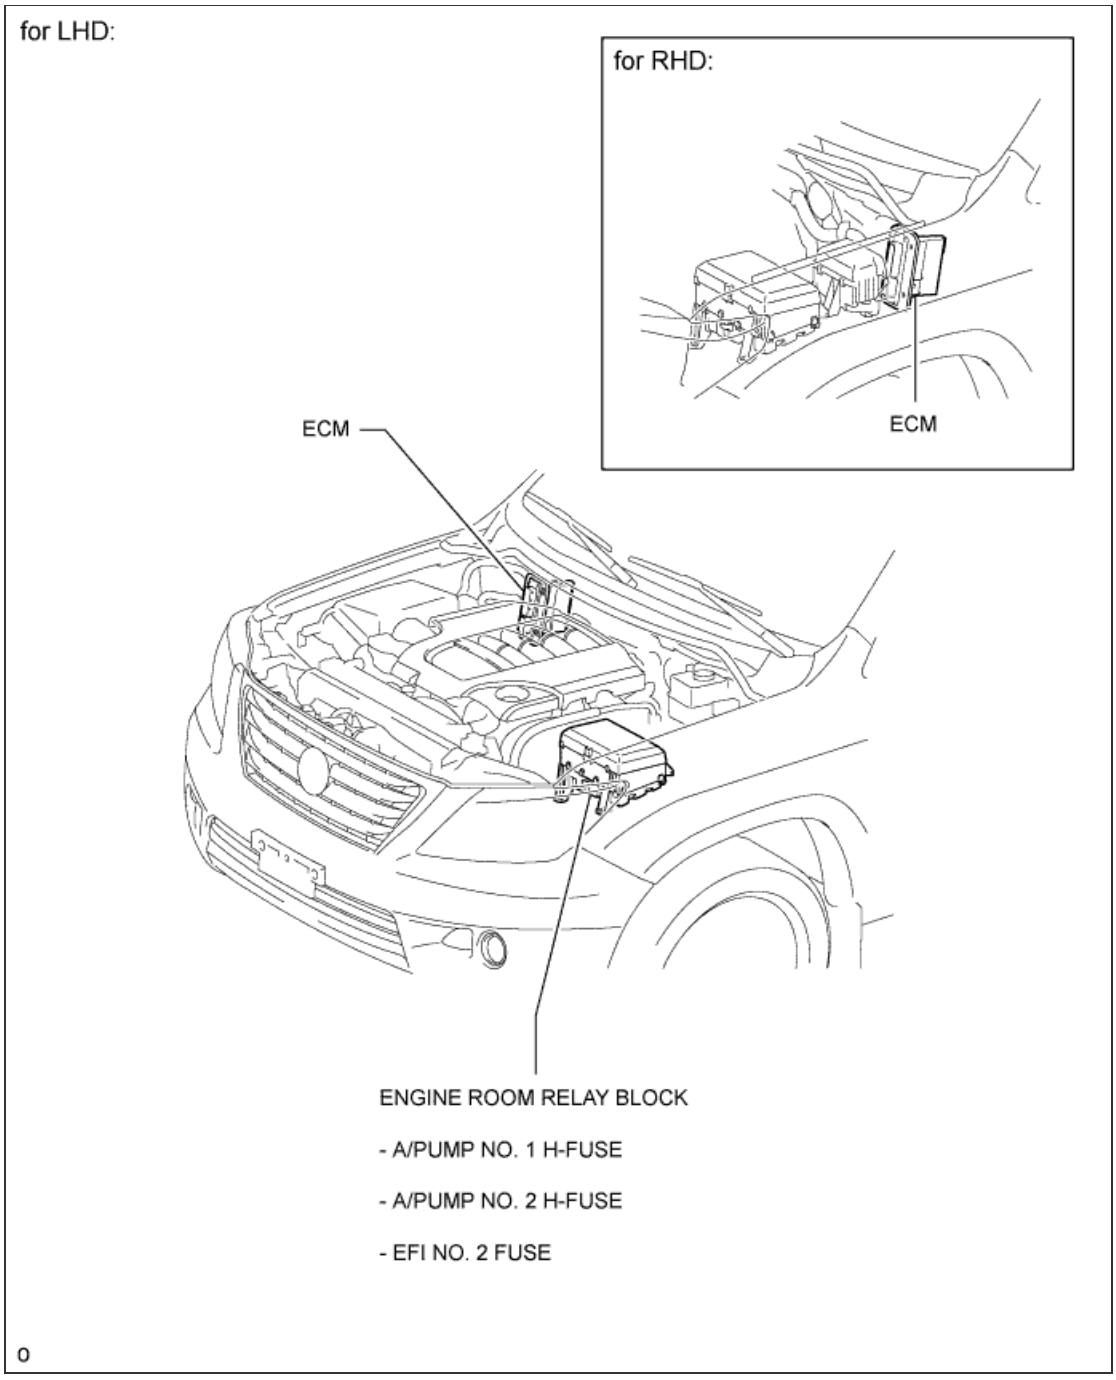
HINT:

Attach the clips in the order shown in the illustration.

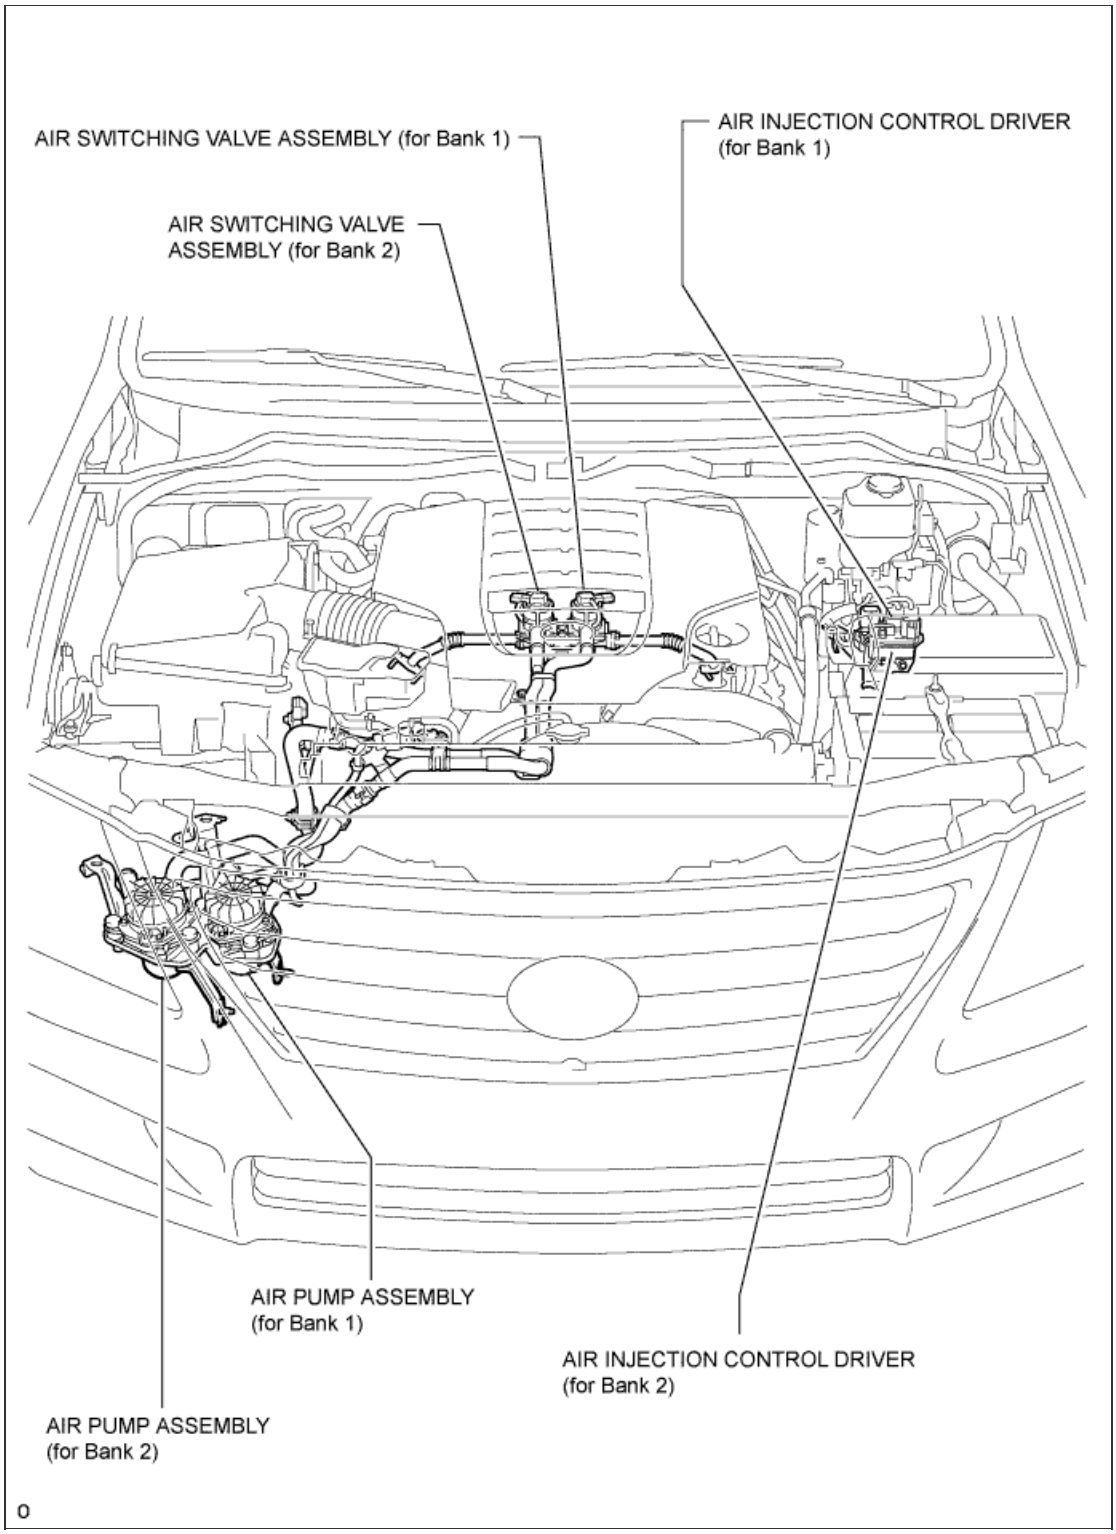
4. INSTALL REAR FLOOR MAT ASSEMBLY

a. Attach the 5 clips to install the floor mat.

5. INSTALL REAR SEAT ASSEMBLY



a. Install the rear No. 1 seat assembly and rear No. 2 seat assembly (Click here).



6. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

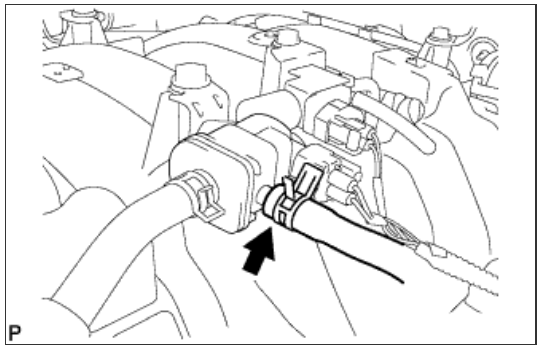
EVAP CONTROL SYSTEM DIAGRAM

EVAP SYSTEM WIRING DIAGRAM



for Preparation Click here

1. CHECK PURGE VSV

a. Connect the intelligent tester to the DLC3.

b. Remove the V-bank cover (Click here).

c. Disconnect the hose (connected to the canister) from the purge VSV.

d. Start the engine and turn the tester main switch on.

e. Enter the following menus: Powertrain / Engine and ECT / Active Test / Activate the VSV for Evap Control.

OK:

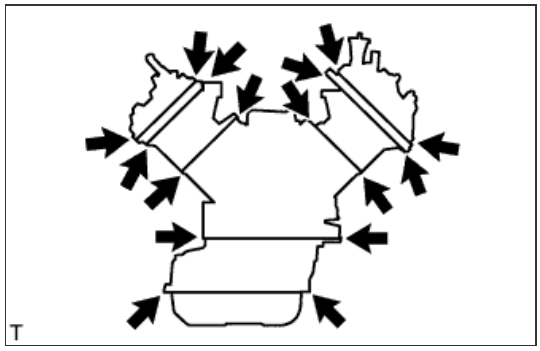
Tester Operation	Specified Condition
Activate the VSV for Evap Control: OFF	Purge VSV has no suction
Activate the VSV for Evap Control: ON	Purge VSV has suction

f. Connect the hose (connected to the canister) to the purge VSV.

g. Install the V-bank cover (Click here).

2. INSPECT FUEL CUT-OFF RPM

a. Start and warm up the engine.



b. Open the throttle valve and keep the engine speed at 3000 rpm.

c. Use a sound scope to check for injector operating noise.

d. Check that when the accelerator pedal is released, the injector operation noise stops momentarily and then resumes.
If the result is as not specified, check the injector, wiring and ECM.

3. VISUALLY INSPECT HOSES, CONNECTIONS AND GASKETS

a. Check that there are no cracks, leaks or damage.

HINT:

Separation of the engine oil dipstick, oil filler cap, ventilation hose, etc. may cause an engine failure or engine malfunctions. Disconnection, looseness or cracks in the parts of the air induction system between the throttle body and cylinder head will allow air suction and cause an engine failure or engine malfunctions.

NOTICE:

- **Detachment or other problems with the engine oil dipstick, filler cap, ventilation hose and other components may cause the engine to run improperly.**
- **Disconnection, looseness or cracks in the parts of the air induction system between the throttle body and cylinder head will allow air suction and cause an engine failure or engine malfunctions.**

If the result is not as specified, replace parts as necessary.

4. CHECK HOSES AND CONNECTORS

a. Visually check for loose connections, sharp bends or damage.

5. CHECK FUEL TANK ASSEMBLY

a. Visually check for deformation, cracks or fuel leakage.

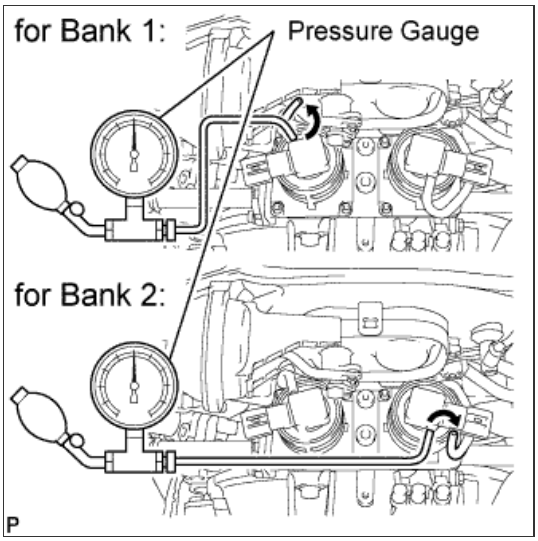
6. INSPECT PRESSURE SENSOR

a. Connect a pressure gauge to the air pressure sensor as shown in the illustration.

b. Connect the intelligent tester to the DLC3.

c. Turn the engine switch on (IG) and turn the tester main switch on.

d. Enter the following menus: Powertrain / Engine and ECT / Data List / All Data / Air pump pressure (absolute).



e. Check that the pressure displayed on the intelligent tester fluctuates when applying pressure to the pressure sensor with the pressure gauge.

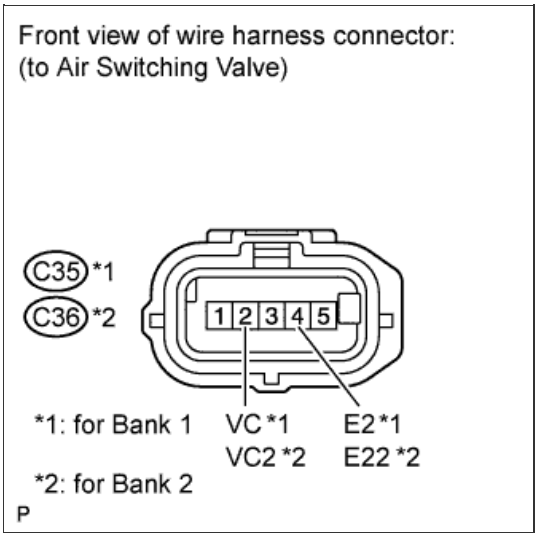
NOTICE:

Do not let foreign matter enter the sensor when applying pressure.

OK:

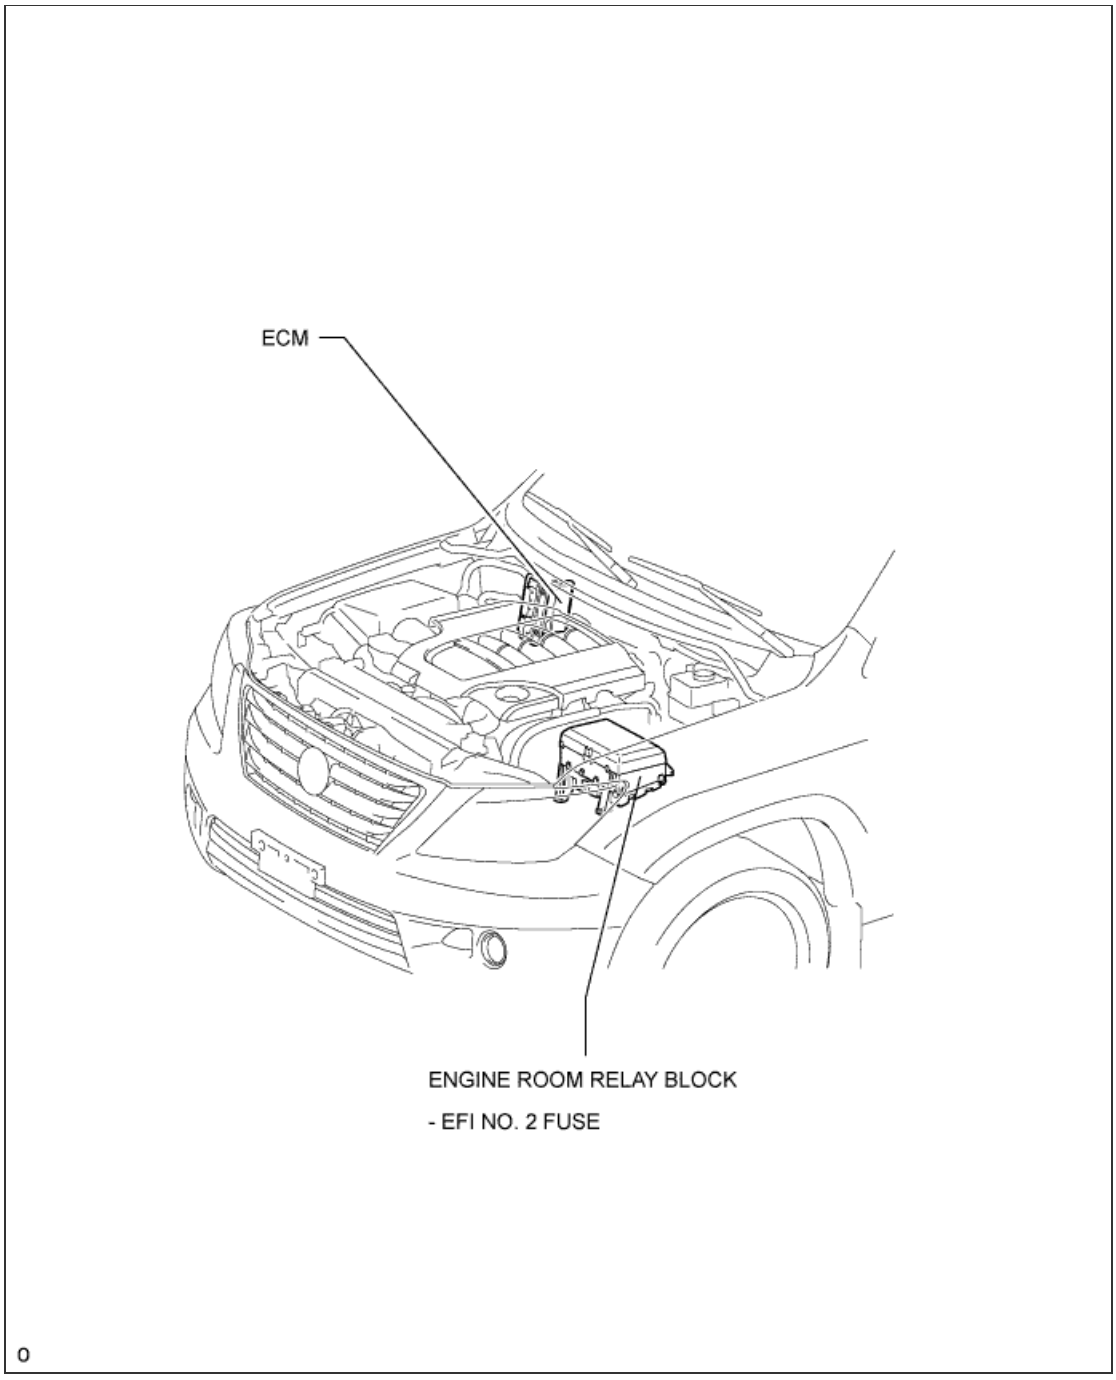
Pressure fluctuates in response to pressure applied with pressure gauge.

f. Check the power source voltage.

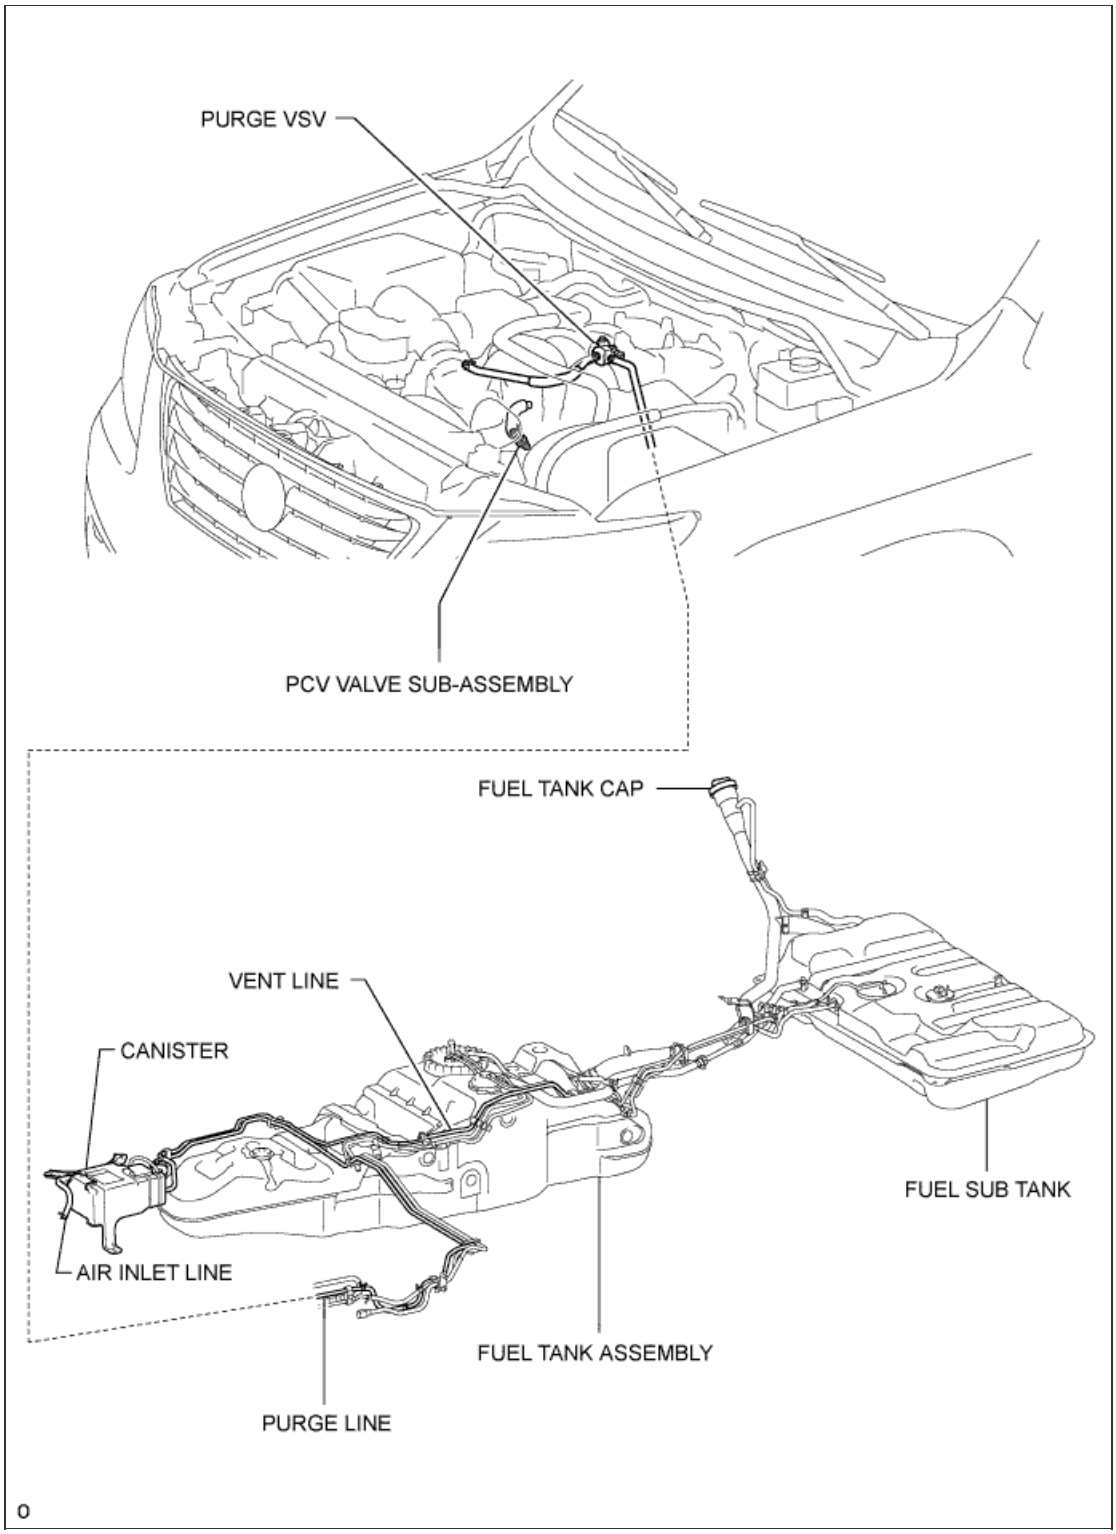


i. Disconnect the connector.

ii. Measure the voltage according to the value(s) in the table below.



Standard Voltage:



Tester Connection	Switch Condition	Specified Condition
C35-2 (VC) - C35-4 (E2)	Engine switch on (IG)	4.75 to 5.25 V
C36-2 (VC2) - C36-4 (E22)		

If the result is not as specified, check the wiring and ECM (Click here).

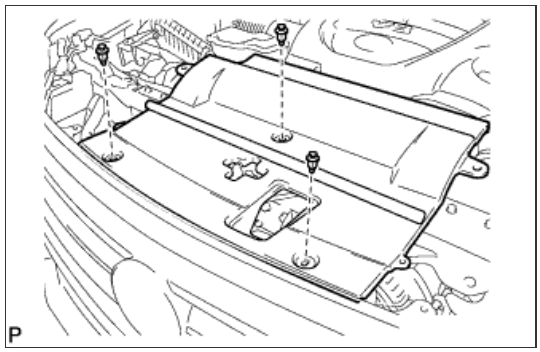
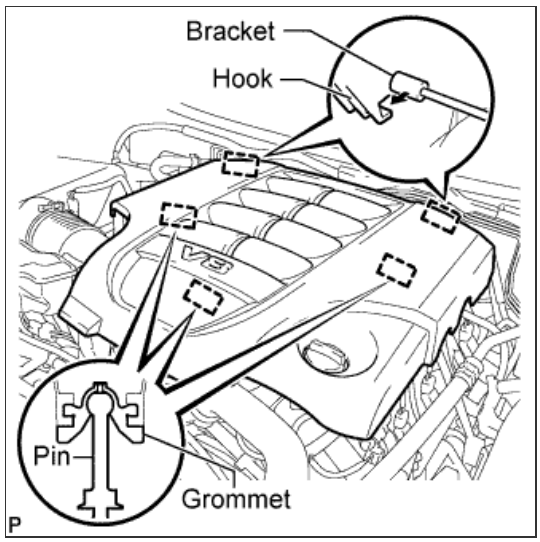
1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.



2. REMOVE ENGINE ROOM SIDE COVER RH

a. Remove the 7 clips and engine room side cover.



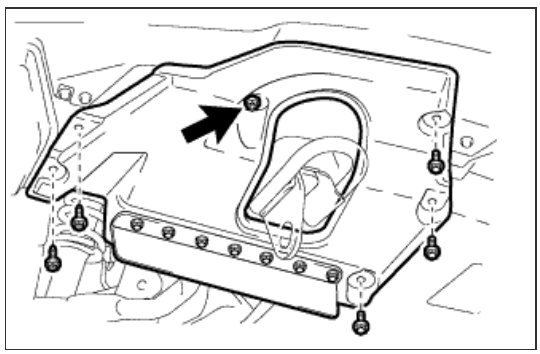
3. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 3 clips and upper radiator support seal.

4. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.

5. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL



NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable from the cable is reconnected (Click here).

6. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

a. Remove the 3 bolts and 2 screws.

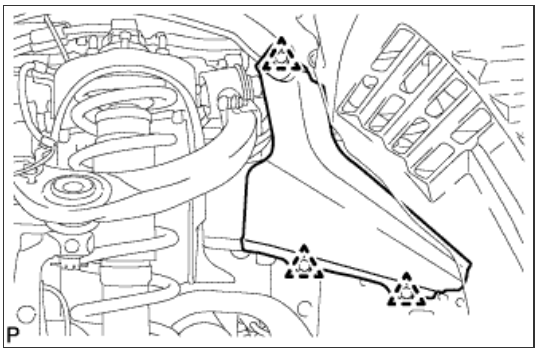
b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.

7. REMOVE FRONT FENDER LINER RH

a. Remove the screw, and disconnect the liner from the front bumper cover.

b. Using a T30 "TORX" socket, remove the 3 screws.

c. Remove the 5 clips.



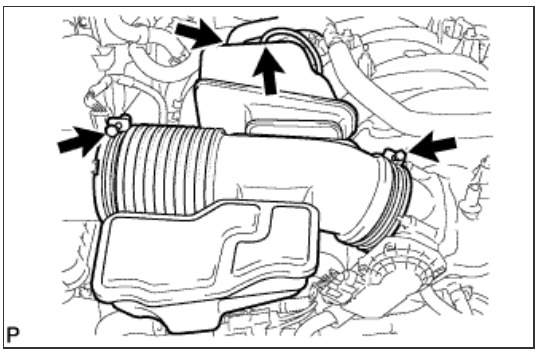
d. Partially remove the fender liner.

HINT:

It is not necessary to fully remove the fender liner. Partially remove it so that the air pump can be removed.

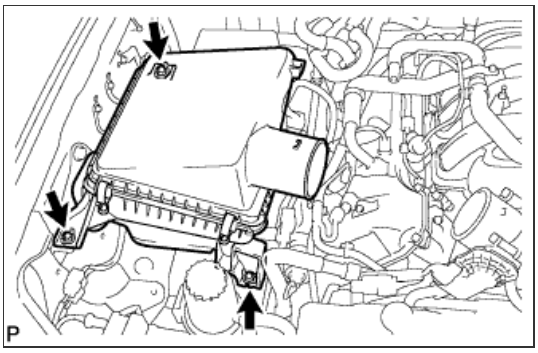
8. REMOVE FRONT FENDER APRON SEAL FRONT RH

a. Using a clip remover, remove the 3 clips and fender apron seal.



9. REMOVE AIR CLEANER HOSE ASSEMBLY

a. Disconnect the vacuum hose and No. 2 ventilation hose.



b. Loosen the 2 hose clamps.

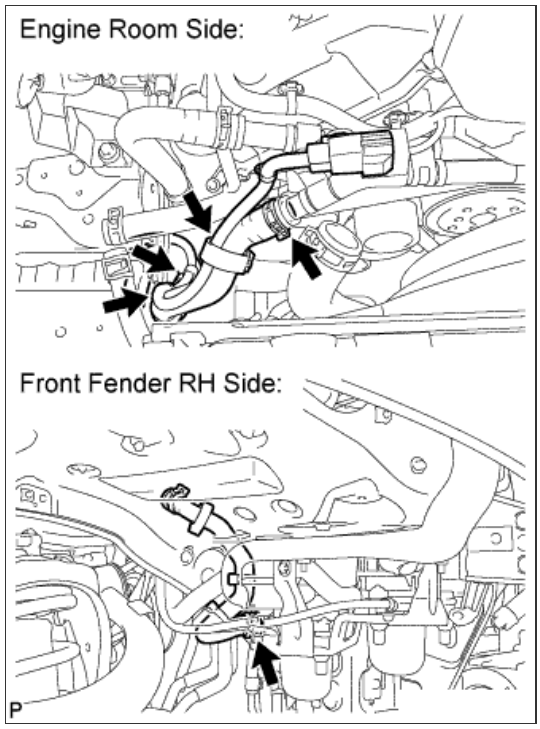
c. Remove the air cleaner hose.

10. REMOVE AIR CLEANER ASSEMBLY

a. Remove the 3 bolts and air cleaner.

11. REMOVE NO. 2 AIR INJECTION SYSTEM HOSE

a. Engine Room Side:



i. Disconnect the 3 clamps.

ii. Disconnect the No. 2 hose.

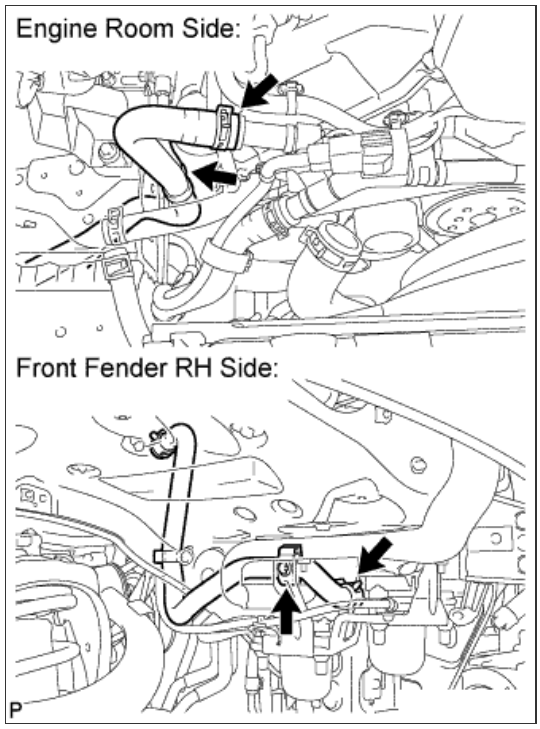
iii. Using a clip remover, remove the clamp from the body panel.

b. Front Fender RH Inside:

i. Disconnect the No. 2 hose from the air pump.

12. REMOVE NO. 3 AIR INJECTION SYSTEM HOSE

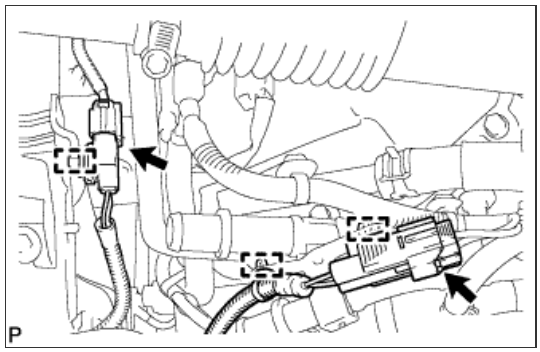
a. Engine Room Side:



i. Disconnect the clamp and No. 3 hose.

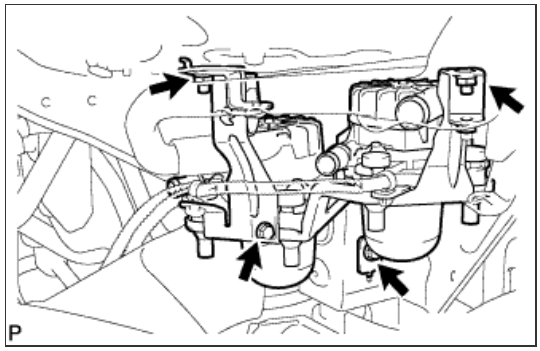
ii. Using a clip remover, remove the clamp from the body panel.

b. Front Fender RH Inside:



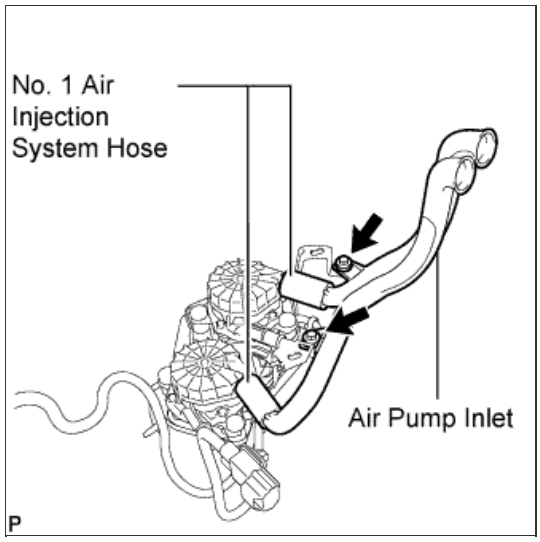
i. Disconnect the clamp and No. 3 hose from the air pump.

ii. Using a clip remover, remove the clamp from the bracket.



13. REMOVE AIR PUMP ASSEMBLY WITH BRACKET

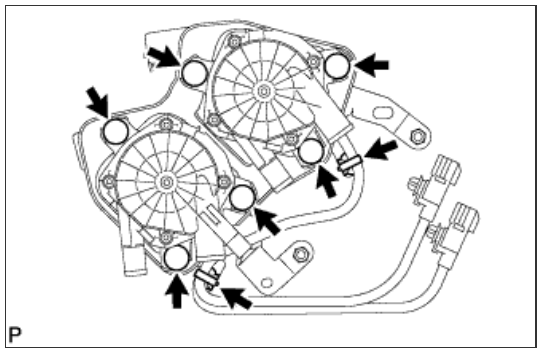
a. Disconnect the 2 air pump connectors and detach the 3 wire harness claws.



b. Remove the 2 bolts, 2 nuts and air pump assembly with bracket.

14. REMOVE AIR PUMP INLET

a. Remove the 2 bolts and air pump inlet.



15. DISCONNECT NO. 1 AIR INJECTION SYSTEM HOSE

a. Disconnect the 2 hoses.

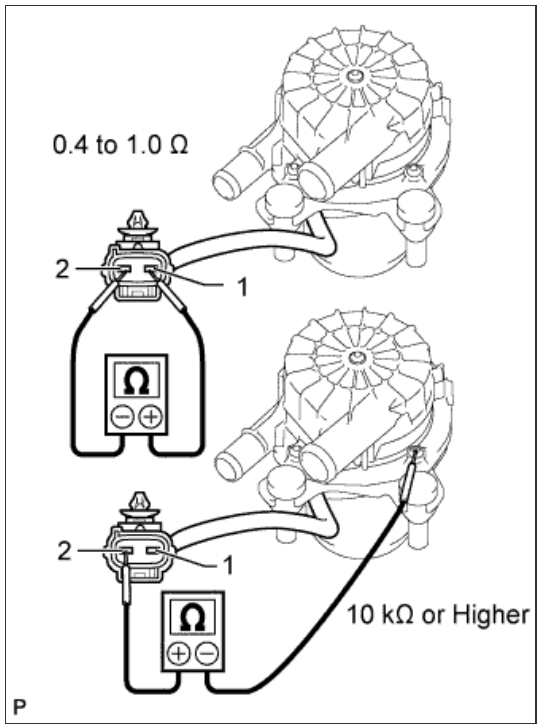
16. REMOVE AIR PUMP ASSEMBLY

a. Using a clip remover, detach the 2 clamps and remove the air pump from the bracket.

b. Disconnect the 6 air pump insulators.

P

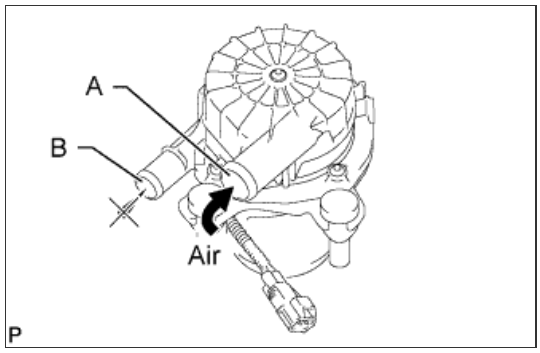
for Preparation Click here



1. INSPECT AIR PUMP ASSEMBLY

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

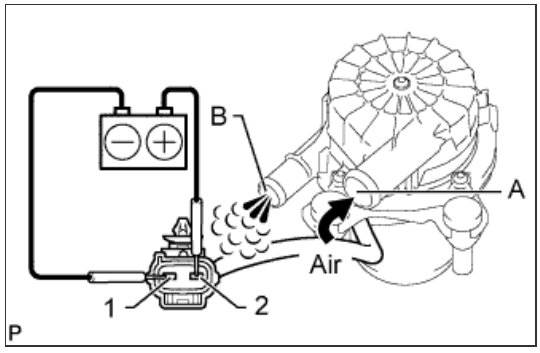


Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	0.4 to 1.0 Ω
1 - Body ground	Always	10 kΩ or higher
2 - Body ground		

If the result is not as specified, replace the air pump assembly.

b. Check the operation of the air pump.

i. Check that air does not flow from port A to port B.



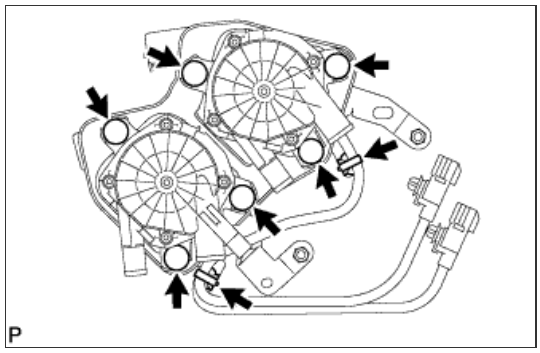
ii. Apply battery voltage to the connector, and check the air pump operation.

OK:

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 2 Battery negative (-) → Terminal 1	Air flows from port A to port B

If the result is not as specified, replace the air pump assembly.

NOTICE:



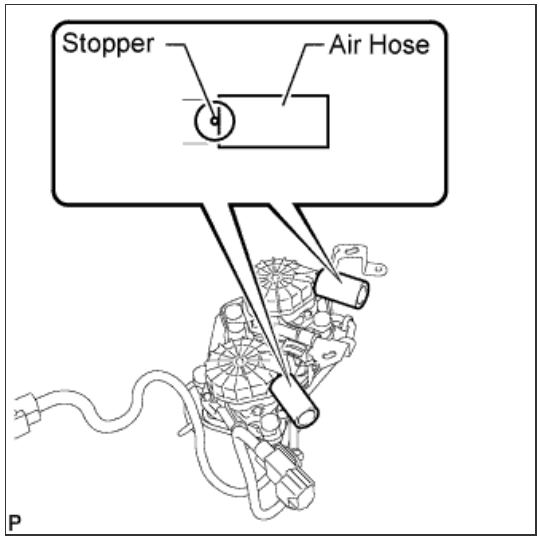
- **Do not operate the air pump continuously for 2 minutes or more.**
- **When operating the air pump, wait 5 minutes until the pump has cooled down between each operation. If the pump has not cooled down sufficiently, the motor will burn out.**

for Preparation Click here

1. INSTALL AIR PUMP ASSEMBLY

a. Connect the 6 air pump insulators to the air pump and install the air pump to the bracket.

b. Attach the 2 wire harness clamps to the bracket.



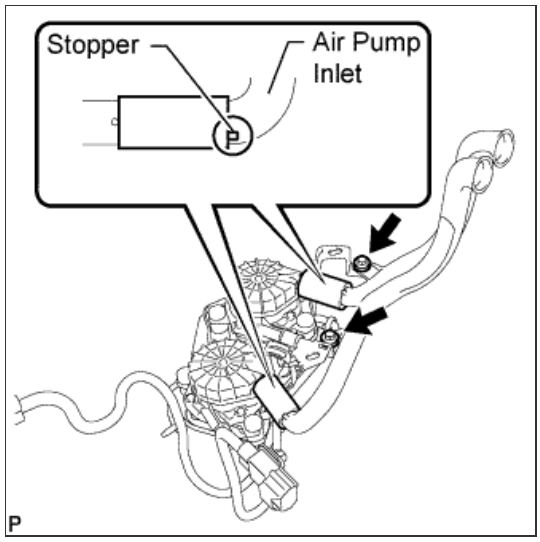
2. CONNECT NO. 1 AIR INJECTION SYSTEM HOSE

a. Connect the 2 hoses to the air pump.

HINT:

Connect the hoses so that the hose ends are aligned with the stoppers.

3. INSTALL AIR PUMP INLET



a. Connect the air pump inlet to the 2 No. 1 air injection system hoses.

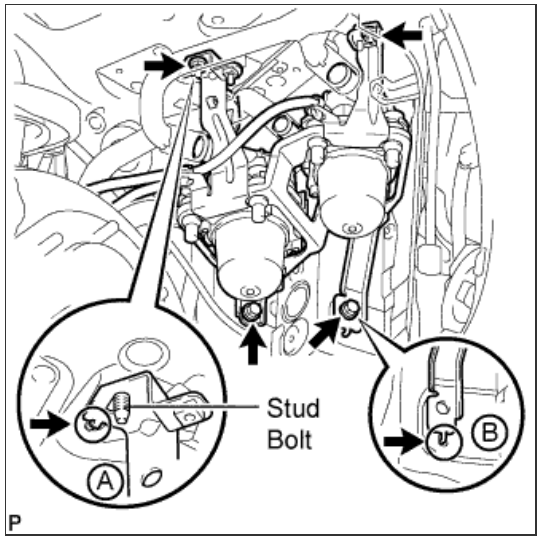
HINT:

Insert the inlet until the inlet stoppers are aligned with the hose ends.

b. Install the 2 bolts.

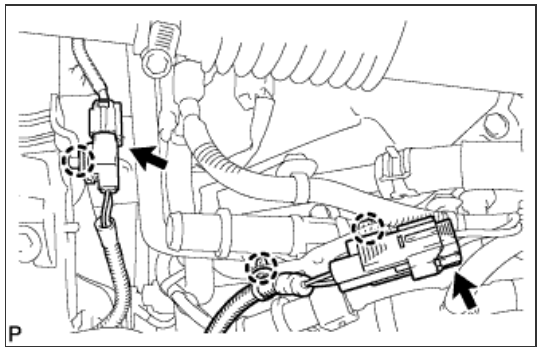
Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

4. INSTALL AIR PUMP ASSEMBLY WITH BRACKET



a. Install the air pump assembly with bracket to the vehicle.

i. Insert the bracket tab into the slot and insert the stud bolt into the bracket hole as shown in illustration A. Then slide the bracket.



ii. Insert the bracket tab into the slot shown in illustration B.

iii. Install the 2 bolts and 2 nuts.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

b. Connect the 2 air pump connectors and attach the 3 wire harness claws.

5. INSTALL NO. 3 AIR INJECTION SYSTEM HOSE

a. Connect the No. 3 hose so that its paint mark aligns with the rib of the air pump as shown in the illustration below labeled A.

HINT:

Make sure the direction of the hose clamp is as shown in the illustration.

b. Connect the clamp to the No. 3 hose shown in the illustration below labeled B. Then insert the clip of the clamp into the bracket.

HINT:

Align the paint mark of the No. 3 hose with the edge of the clamp.

c. Connect the No. 3 hose to the air tube shown in the illustration below labeled C.

HINT:

- **Make sure the paint mark of the No. 3 hose is facing upward.**
- **Make sure the direction of the hose clamp is as shown in the illustration.**

d. Connect the clamp to the No. 3 hose and wire harness shown in the illustration below labeled D. Then insert the clip of the clamp into the body hole.

HINT:

Align the paint mark of the No. 3 hose and paint mark of the wire harness with the edge of the clamp.

6. INSTALL NO. 2 AIR INJECTION SYSTEM HOSE

a. Connect the No. 2 hose so that its paint mark aligns with the rib of the air pump as shown in the illustration below labeled E.

HINT:

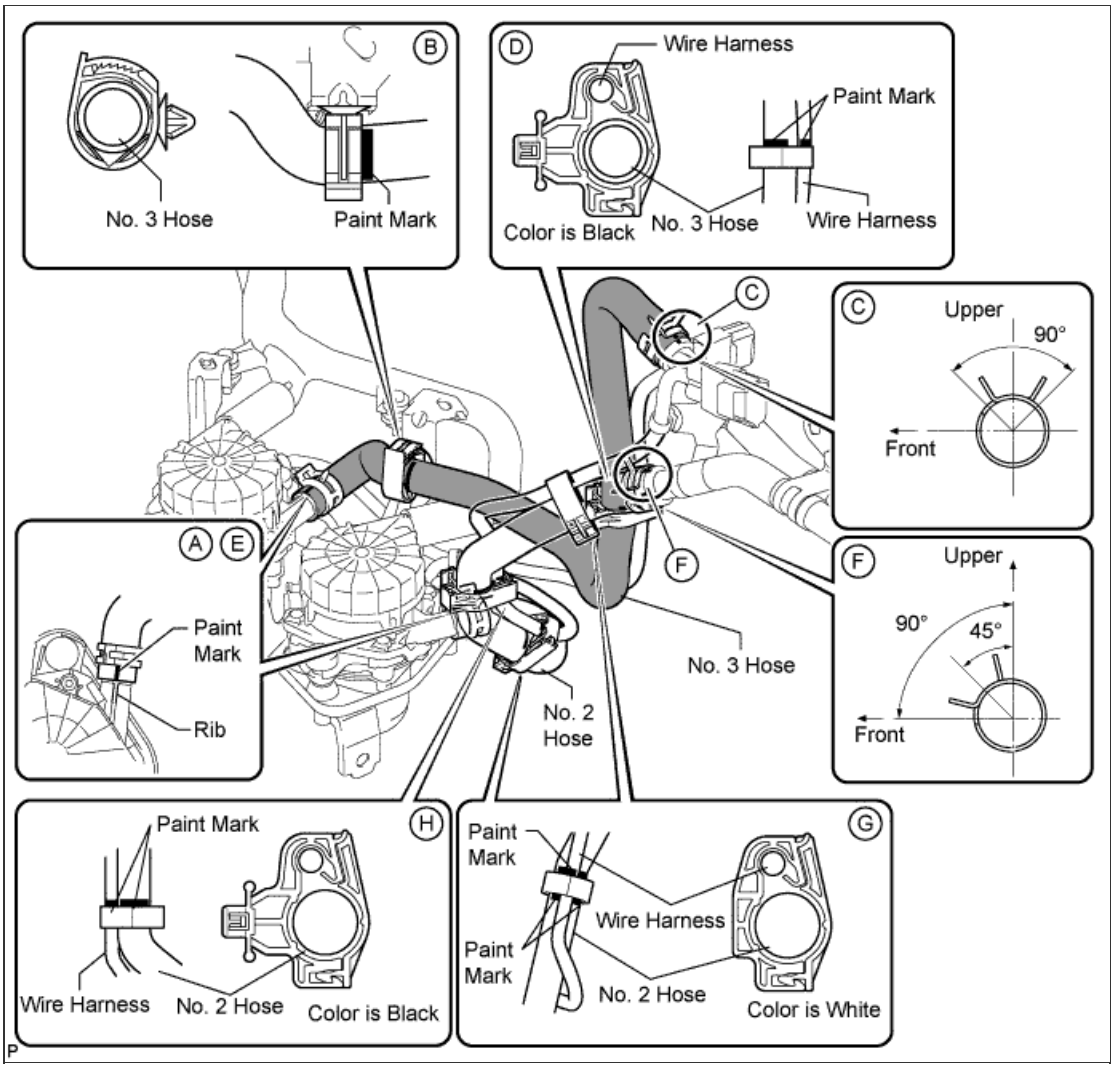
Make sure the direction of the hose clamp is as shown in the illustration.

b. Connect the No. 2 hose to the air tube shown in the illustration below labeled F.

HINT:

- **Make sure the paint mark of the No. 2 hose is facing upward.**
- **Make sure the direction of the hose clamp is as shown in the illustration.**

c. Connect the 2 white colored clamps to the No. 2 hose and wire harness shown in the illustration below labeled G.

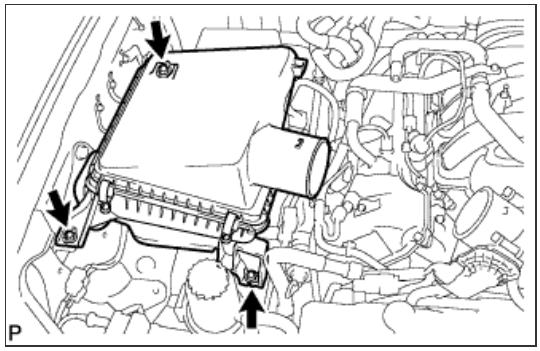


HINT:

- **Make sure the paint mark of the No. 2 hose is facing upward.**
- **Make sure the position of the hose clamp is as shown in the illustration.**

d. Connect the black colored clamp to the No. 2 hose and wire harness shown in the illustration below labeled H. Then insert the clip of the clamp into the body hole.

HINT:



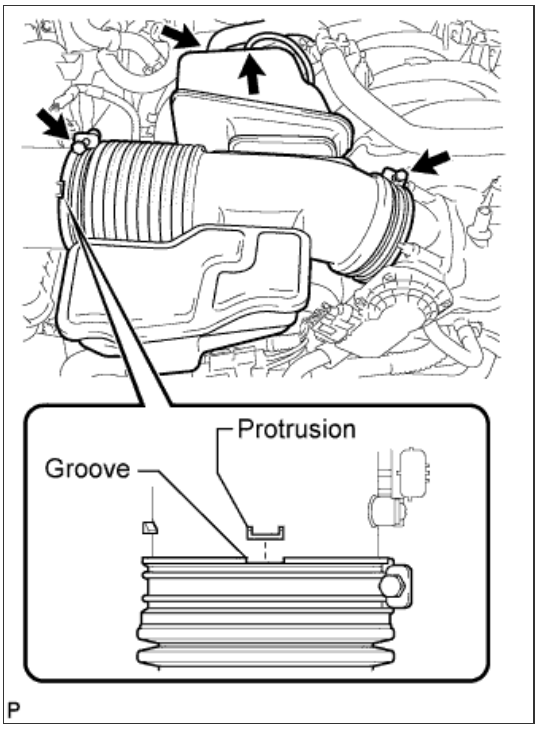
Align the paint mark of the No. 2 hose and paint mark of the wire harness with the edge of the clamp.

7. INSTALL AIR CLEANER ASSEMBLY

a. Install the air cleaner with the 3 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

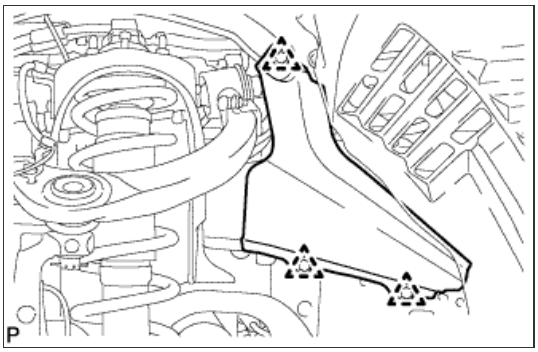
8. INSTALL AIR CLEANER HOSE ASSEMBLY



a. Install the air cleaner hose so that the protrusion of the air cleaner cap aligns with the groove of the hose as shown in the illustration.

b. Tighten the 2 clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }



c. Connect the vacuum hose.

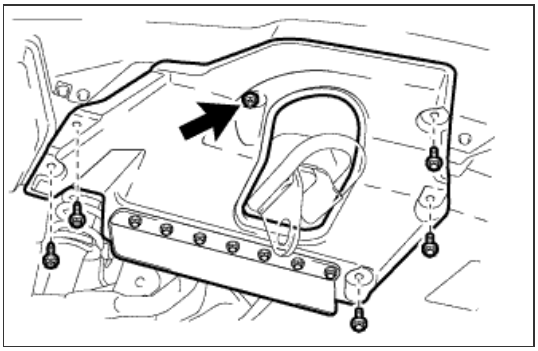
d. Connect the No. 2 ventilation hose.

9. INSTALL FRONT FENDER APRON SEAL FRONT RH

a. Install the fender apron seal with the 3 clips.

10. INSTALL FRONT FENDER LINER RH

a. Install the fender liner with the 5 clips.



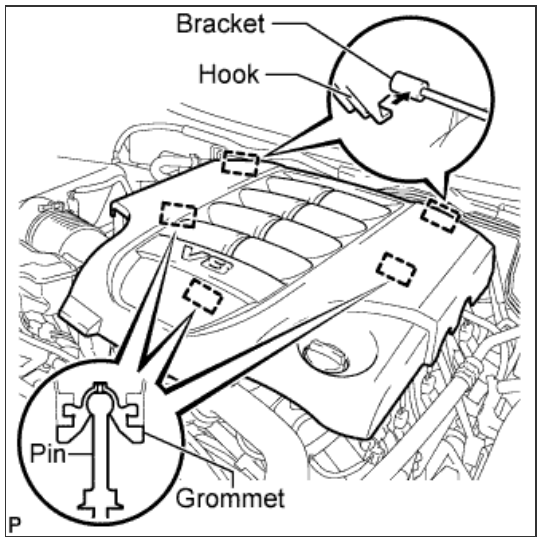
b. Using a T30 "TORX" socket, install the 3 screws.

c. Connect the liner to the front bumper cover with the screw.

11. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

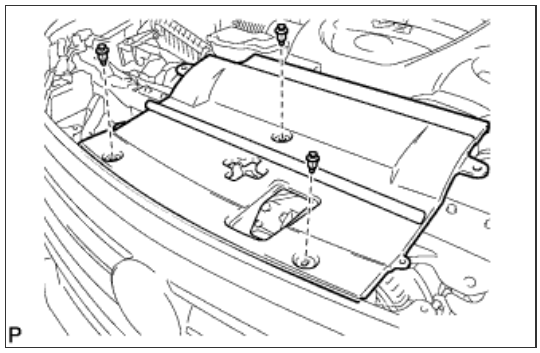
b. Install the 3 bolts and 2 screws.



12. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

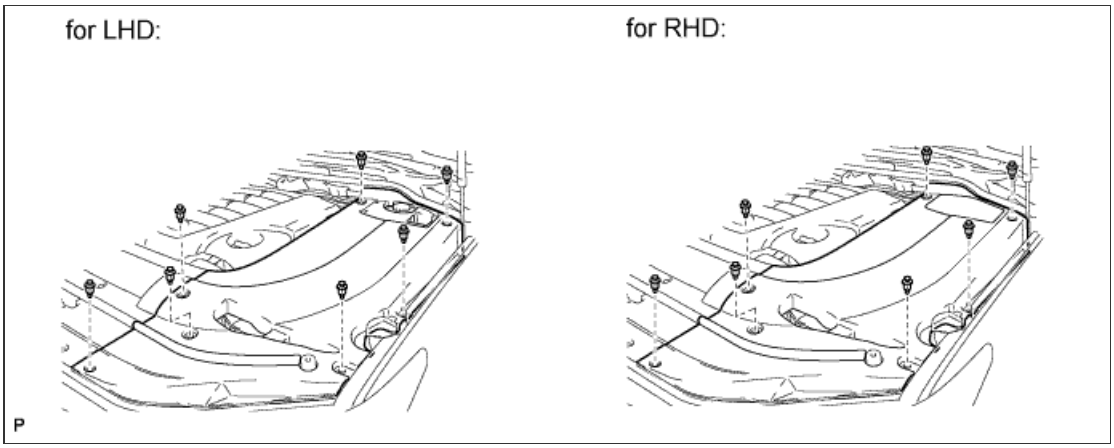
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable from the cable is reconnected (Click here).



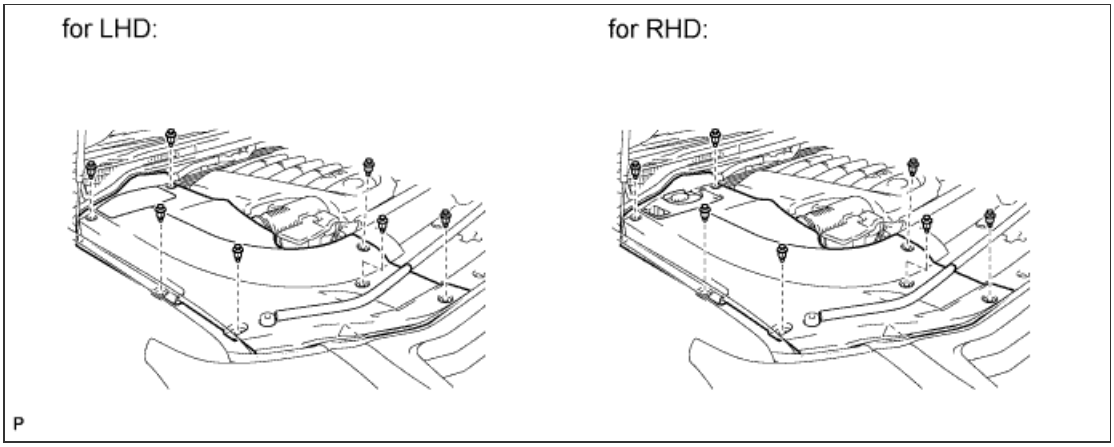
13. INSTALL V-BANK COVER SUB-ASSEMBLY

a. Attach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.



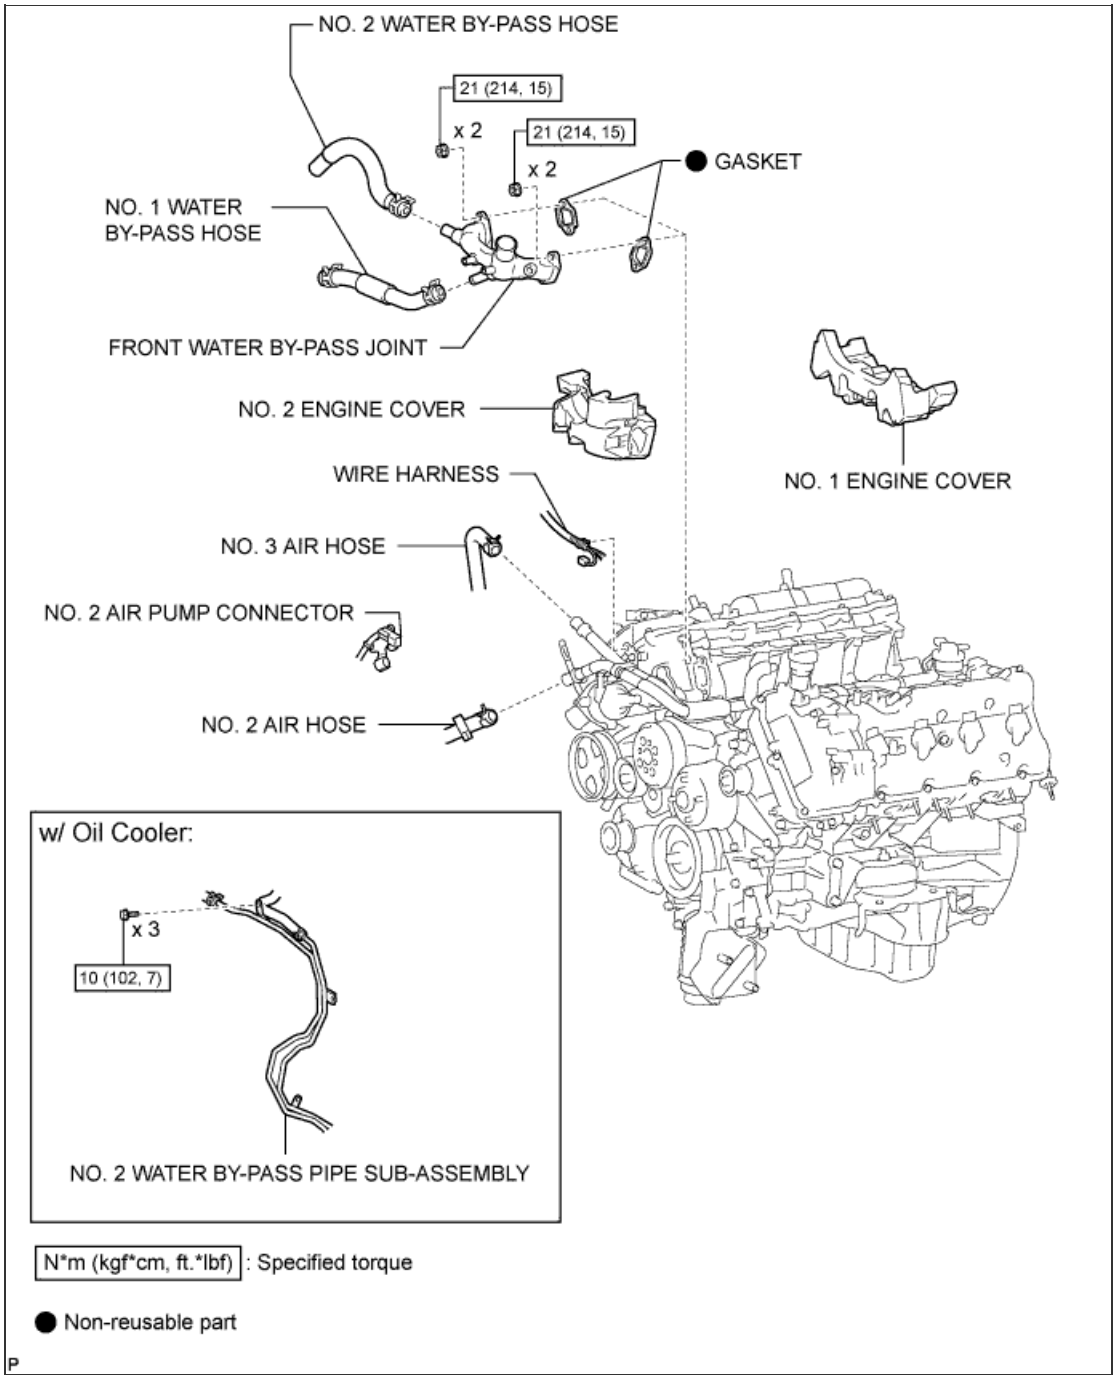
14. INSTALL UPPER RADIATOR SUPPORT SEAL

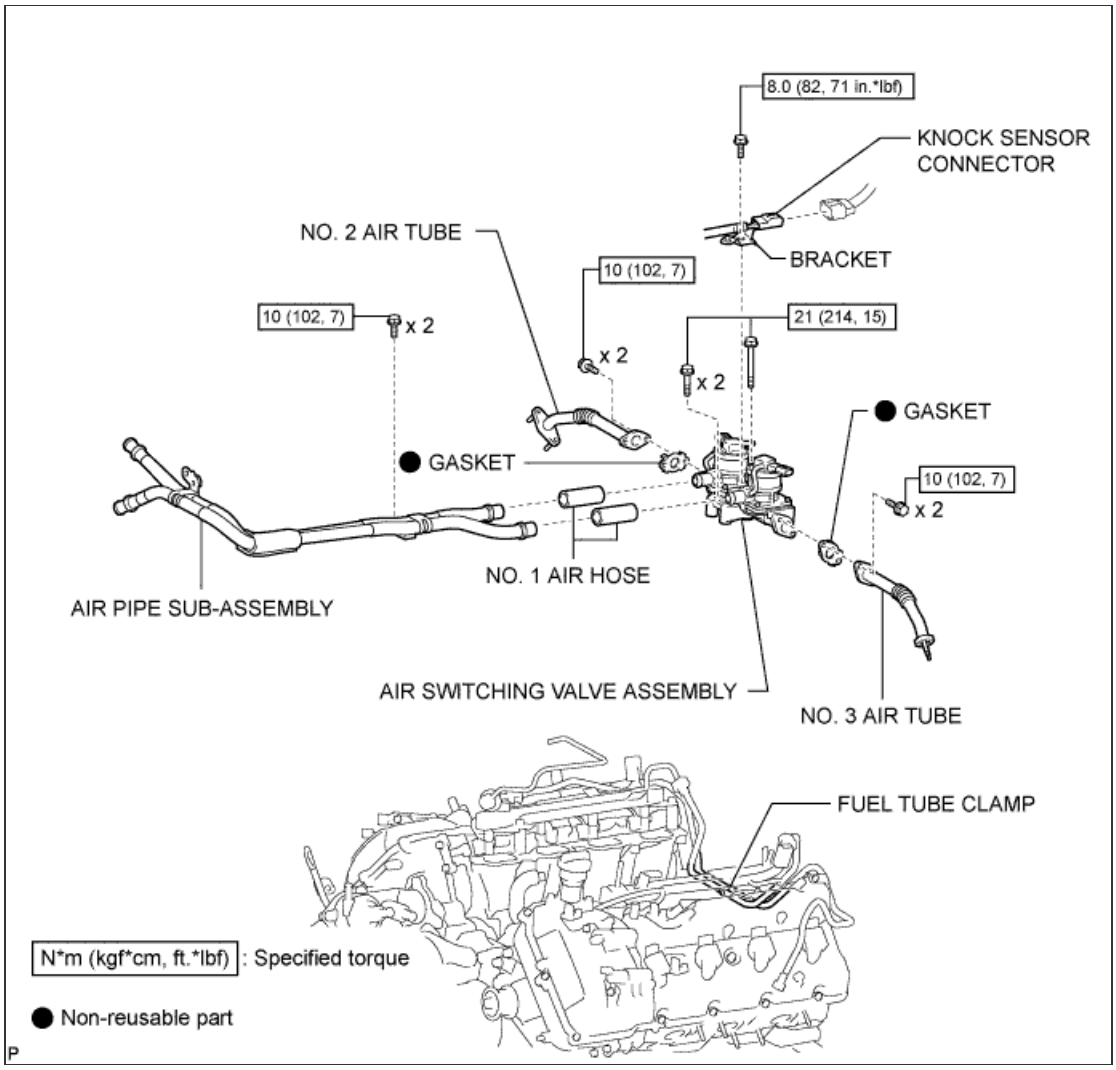
a. Install the upper radiator support seal with the 3 clips.



15. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.





16. INSTALL ENGINE ROOM SIDE COVER RH

a. Install the engine room side cover with the 7 clips.

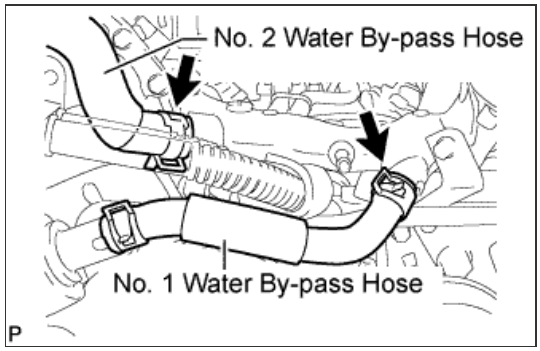
1. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY



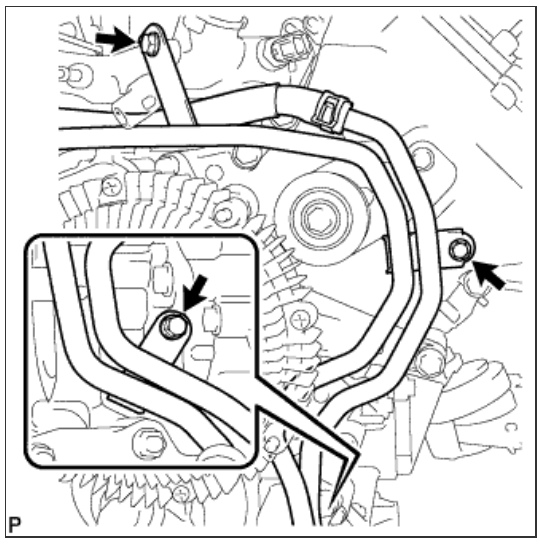
a. Remove the exhaust manifold (Click here).

2. REMOVE INTAKE MANIFOLD

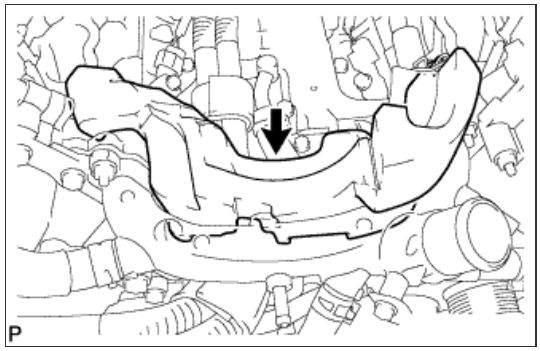
a. Remove the intake manifold (Click here).

3. DISCONNECT NO. 1 WATER BY-PASS HOSE

a. Disconnect the No. 1 water by-pass hose from the water by-pass joint and water inlet housing.



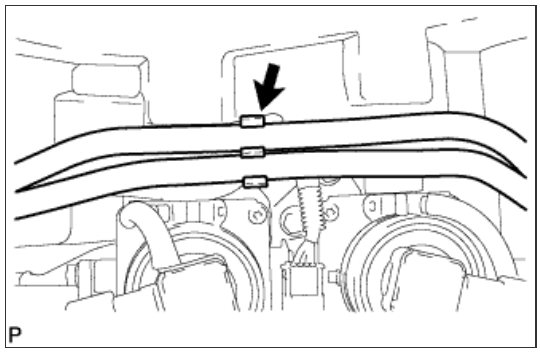
4. DISCONNECT NO. 2 WATER BY-PASS HOSE



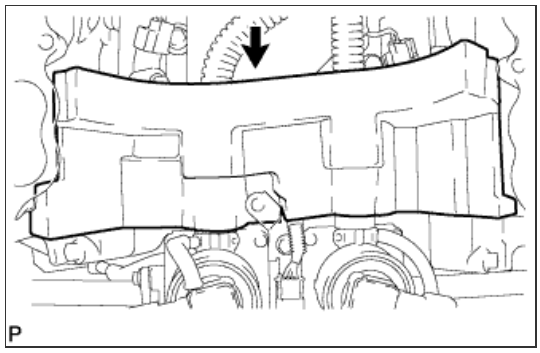
a. Disconnect the No. 2 water by-pass hose from the water by-pass joint.

5. DISCONNECT NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY (w/ Oil Cooler)

a. Remove the 3 bolts and disconnect the No. 2 water by-pass pipe.

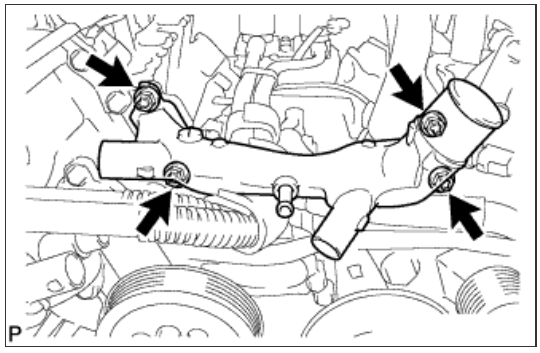


6. REMOVE NO. 2 ENGINE COVER



7. DISCONNECT FUEL TUBE CLAMP

a. Disconnect the fuel tube clamp from the bracket.

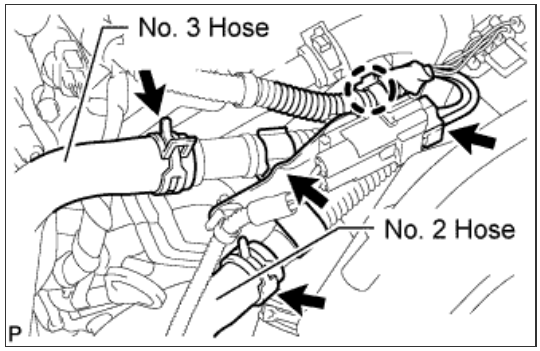


8. REMOVE NO. 1 ENGINE COVER

9. REMOVE FRONT WATER BY-PASS JOINT

a. Disconnect the engine coolant temperature sensor connector.

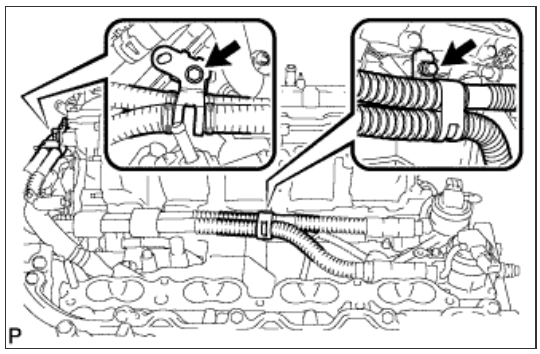
b. Remove the 4 nuts, front water by-pass joint and 2 gaskets.



10. REMOVE AIR PIPE SUB-ASSEMBLY

a. Disconnect the No. 2 and No. 3 hoses.

b. Disconnect the air pump connector.

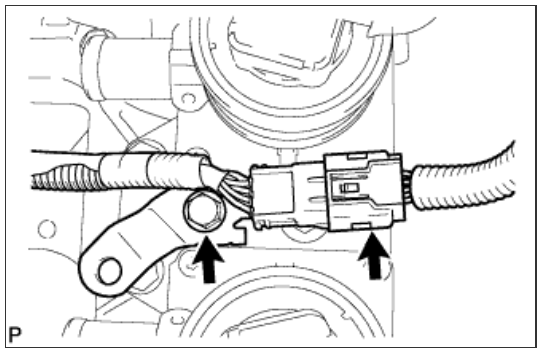


c. Disconnect the air pump connector clamp holder.

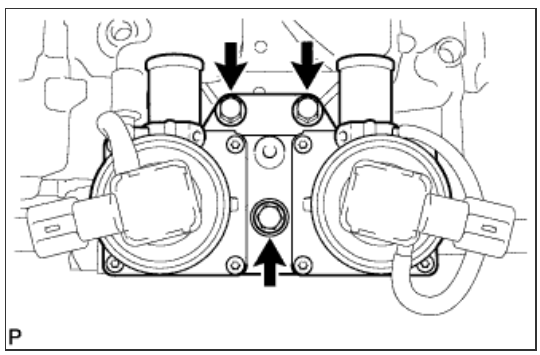
d. Using a clip remover, detach the wire harness claw.

e. Remove the 2 bolts and air pipe.

f. Disconnect the 2 No. 1 air hoses from the air pipe.



11. REMOVE AIR SWITCHING VALVE ASSEMBLY

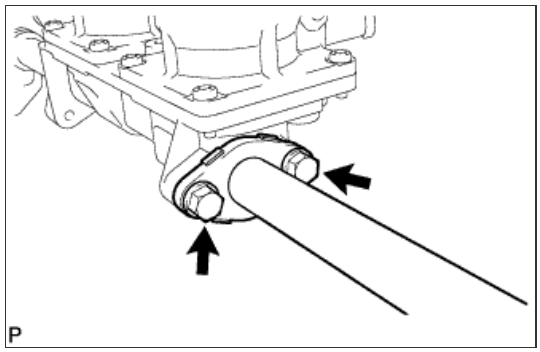


a. Disconnect the knock sensor connector.

b. Remove the bolt and bracket.

c. Disconnect the 2 air switching valve connectors.

d. Remove the 3 bolts and air switching valve.

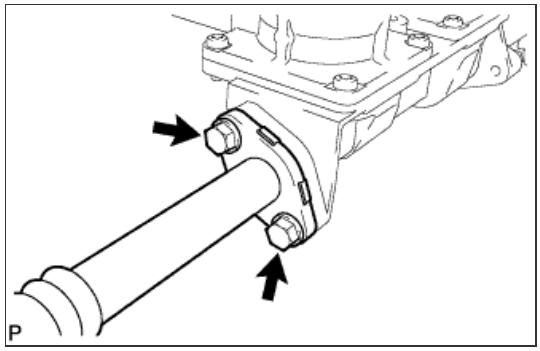


12. REMOVE NO. 2 AIR TUBE

a. Remove the 2 bolts, No. 2 air tube and gasket.

NOTICE:

Be careful not to damage the installation surface of the gaskets.



13. REMOVE NO. 3 AIR TUBE

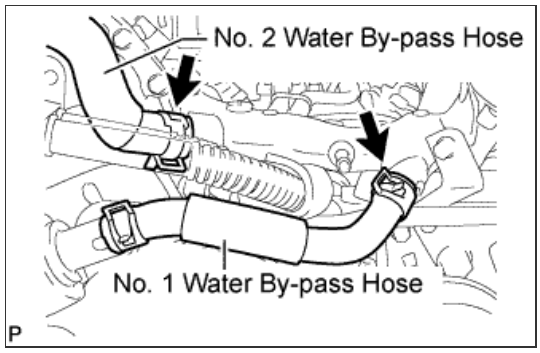
a. Remove the 2 bolts, No. 3 air tube and gasket.

NOTICE:

Be careful not to damage the installation surface of the gaskets.

for Preparation Click here

1. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY



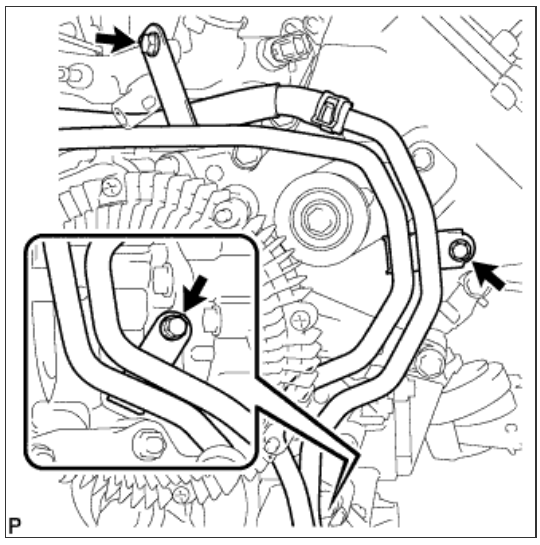
(Click here)

2. REMOVE INTAKE MANIFOLD

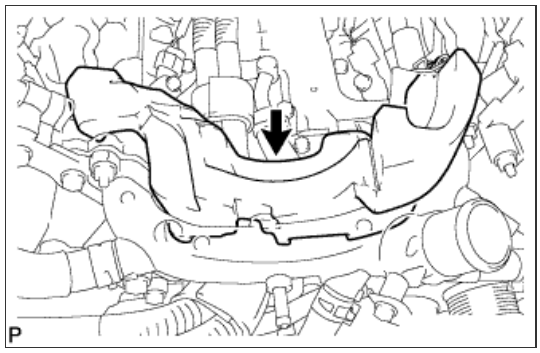
(Click here)

3. DISCONNECT NO. 1 WATER BY-PASS HOSE

a. Disconnect the No. 1 water by-pass hose from the water by-pass joint and water inlet housing.



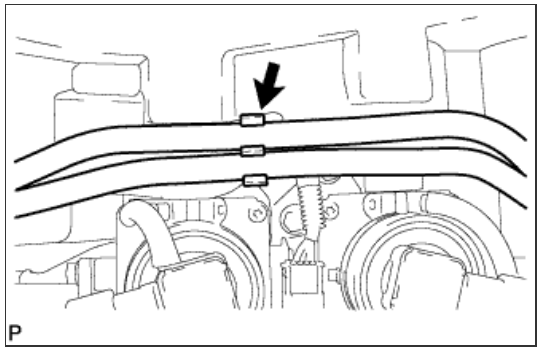
4. DISCONNECT NO. 2 WATER BY-PASS HOSE



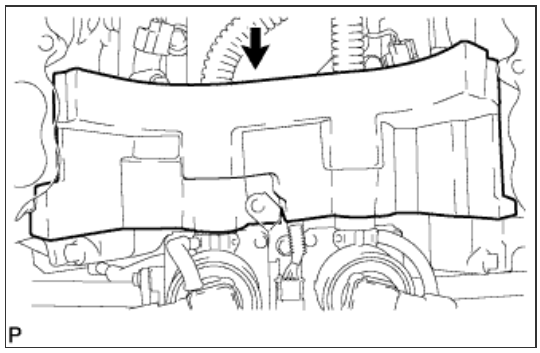
a. Disconnect the No. 2 water by-pass hose from the water by-pass joint.

5. DISCONNECT NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY (w/ Oil Cooler)

a. Remove the 3 bolts and disconnect the No. 2 water by-pass pipe.

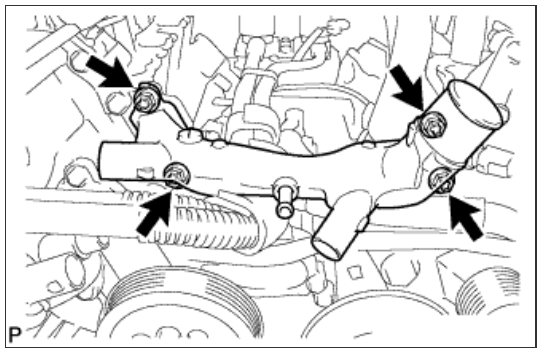


6. REMOVE NO. 2 ENGINE COVER



7. DISCONNECT FUEL TUBE CLAMP

a. Disconnect the fuel tube clamp from the bracket.

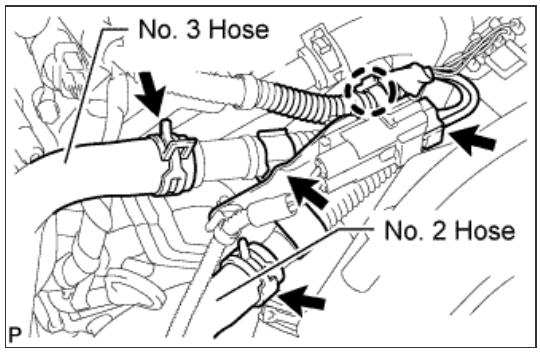


8. REMOVE NO. 1 ENGINE COVER

9. REMOVE FRONT WATER BY-PASS JOINT

a. Disconnect the engine coolant temperature sensor connector.

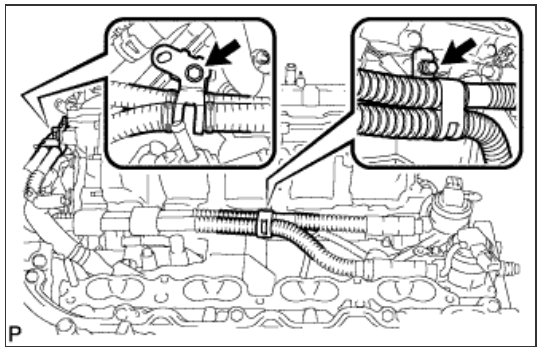
b. Remove the 4 nuts, front water by-pass joint and 2 gaskets.



10. REMOVE AIR PIPE SUB-ASSEMBLY

a. Disconnect the No. 2 and No. 3 hoses.

b. Disconnect the air pump connector.

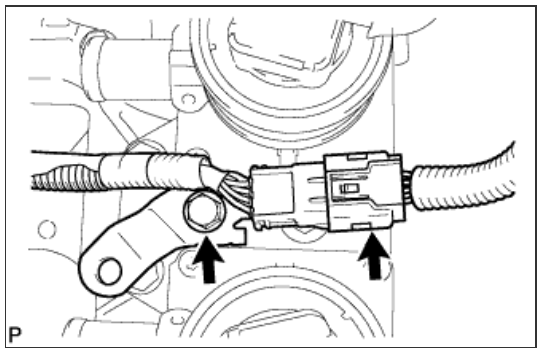


c. Disconnect the air pump connector clamp holder.

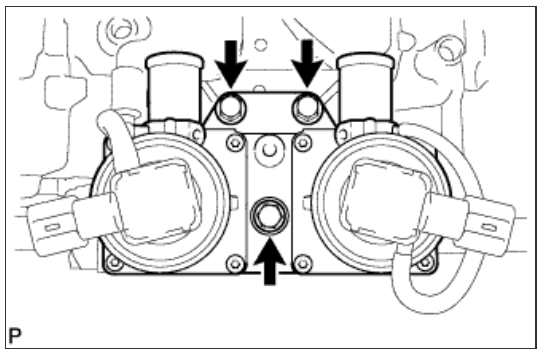
d. Using a clip remover, detach the wire harness claw.

e. Remove the 2 bolts and air pipe.

f. Disconnect the 2 No. 1 air hoses from the air pipe.



11. REMOVE AIR SWITCHING VALVE ASSEMBLY

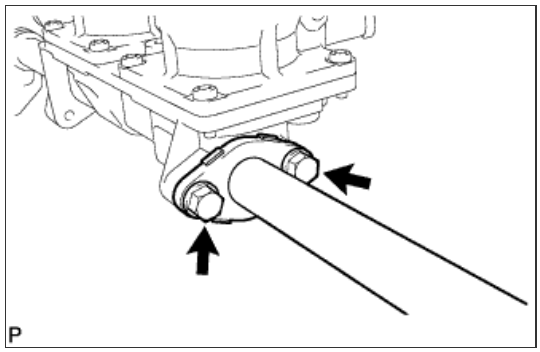


a. Disconnect the knock sensor connector.

b. Remove the bolt and bracket.

c. Disconnect the 2 air switching valve connectors.

d. Remove the 3 bolts and air switching valve.

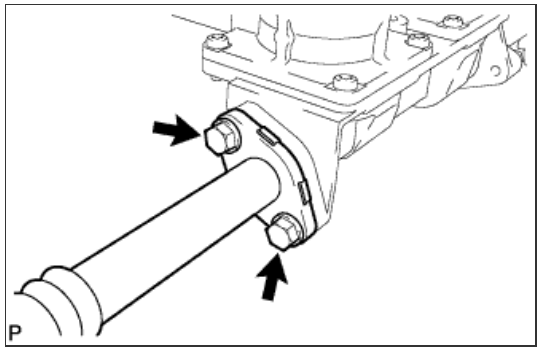


12. REMOVE NO. 2 AIR TUBE

a. Remove the 2 bolts, No. 2 air tube and gasket.

NOTICE:

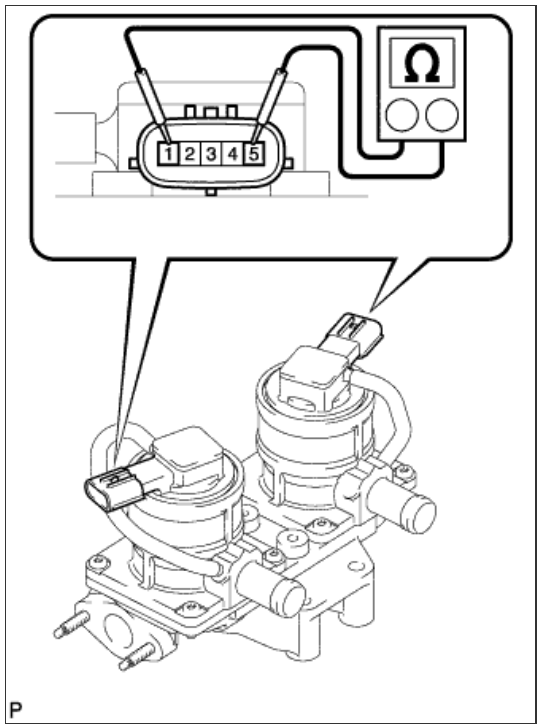
Be careful not to damage the installation surface of the gaskets.



13. REMOVE NO. 3 AIR TUBE

a. Remove the 2 bolts, No. 3 air tube and gasket.

NOTICE:



Be careful not to damage the installation surface of the gaskets.

for Preparation Click here

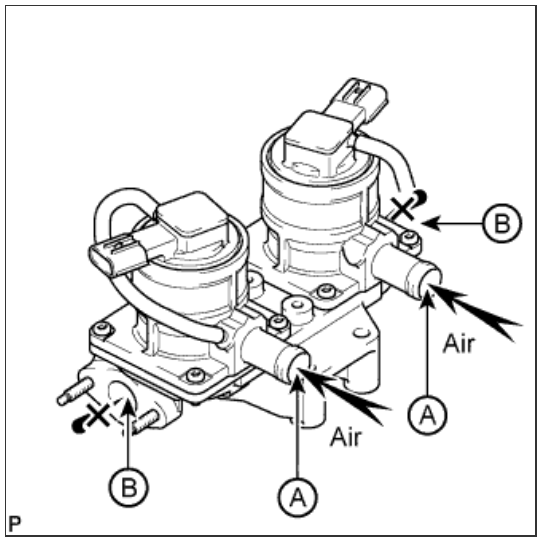
1. INSPECT AIR SWITCHING VALVE ASSEMBLY

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 5	20°C (68°F)*	4.5 to 5.5 Ω
1 - Body ground	Always	1 MΩ or higher
5 - Body ground		

HINT:



*: Make sure that the air switching valve is at ambient temperature before measuring the resistance.

NOTICE:

When measuring the resistance, do not touch terminals 2, 3 and 4.

If the result is not as specified, replace the air switching valve assembly.

b. Check the operation of the air switching valve.

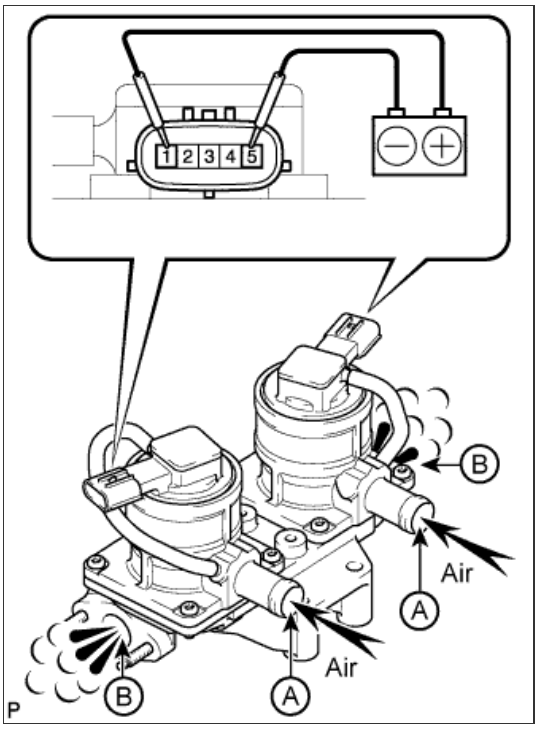
i. Check that air does not flow from port A to port B.

NOTICE:

Make sure the applied pressure is 30 kPa (0.3 kgf/cm^2, 4.4 psi) or less

If the result is not as specified, replace the air switching valve assembly.

ii. Apply battery voltage to the connector, and check the air switching valve operation.



OK:

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 5	Air flows from port A to port B

NOTICE:

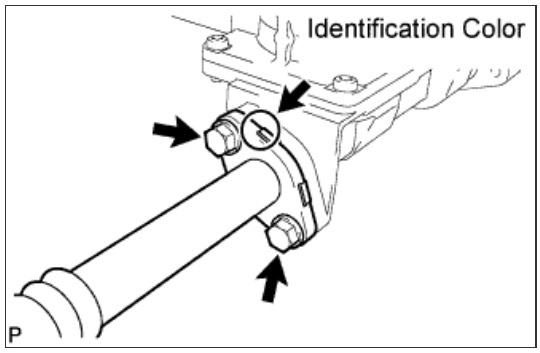
When applying voltage, do not touch terminals 2, 3 and 4.

If the result is not as specified, replace the air switching valve assembly.

for Preparation Click here

1. INSTALL NO. 3 AIR TUBE

a. Install a new gasket and the No. 3 air tube with the 2 bolts.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

HINT:

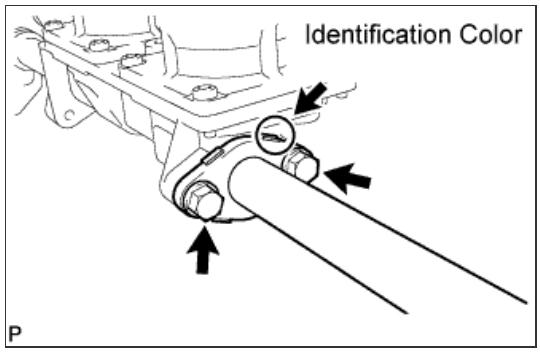
The identification color on the flange is orange.

NOTICE:

Make sure the claws on the gasket are not caught between the air tube and air switching valve.

2. INSTALL NO. 2 AIR TUBE

a. Install a new gasket and the No. 2 air tube with the 2 bolts.



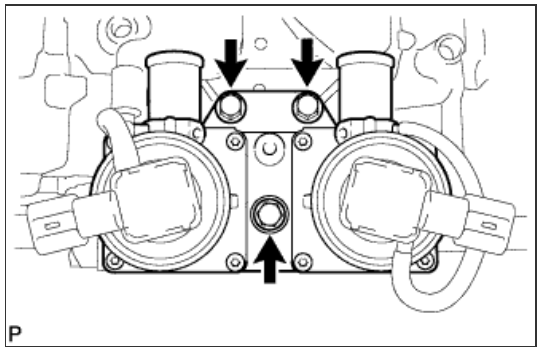
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

HINT:

The identification color on the flange is blue.

NOTICE:

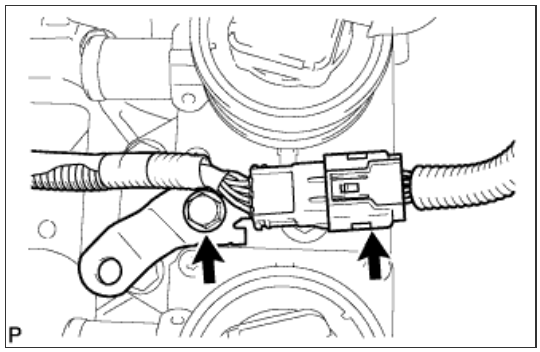
Make sure the claws on the gasket are not caught between the air tube and air switching valve.



3. INSTALL AIR SWITCHING VALVE ASSEMBLY

a. Install the air switching valve with the 3 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

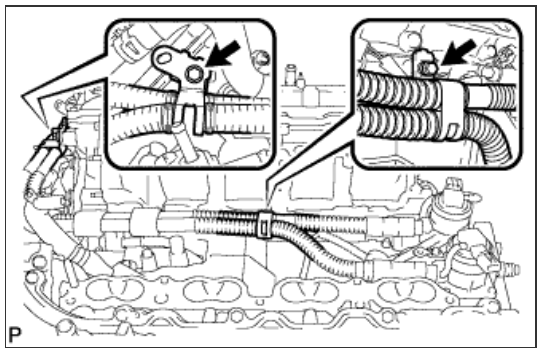


b. Connect the 2 air switching valve connectors.

c. Install the bracket with the bolt.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

d. Connect the knock sensor connector.

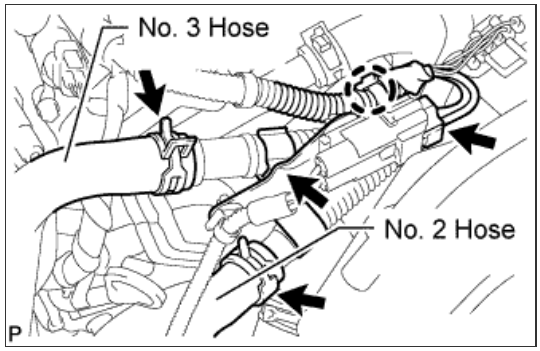


4. INSTALL AIR PIPE SUB-ASSEMBLY

a. Connect the 2 No. 1 air hoses to the air pipe.

b. Connect the air pipe to the air switching valve, and install the air pipe with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

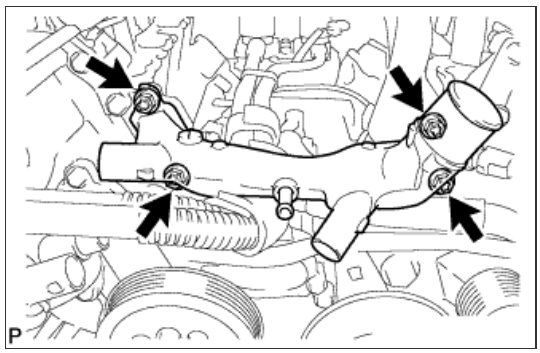


c. Connect the air pump connector clamp holder.

d. Attach the wire harness claw.

e. Connect the air pump connector.

f. Connect the No. 2 and No. 3 hoses.

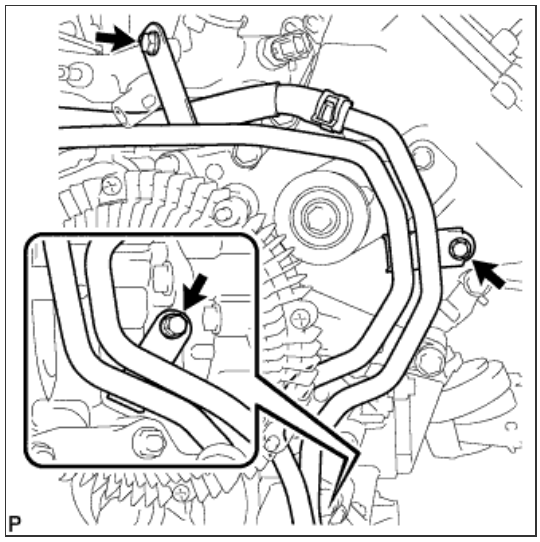


5. INSTALL FRONT WATER BY-PASS JOINT

a. Install 2 new gaskets and the front water by-pass joint with the 4 nuts.

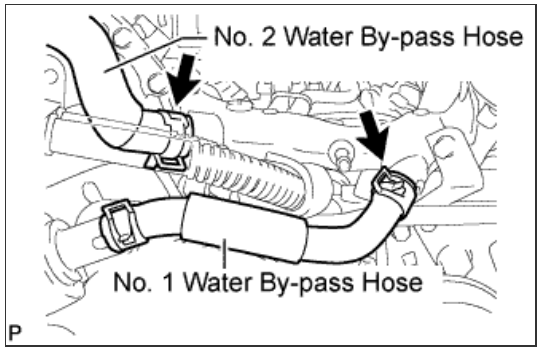
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. Connect the engine coolant temperature sensor connector.



6. CONNECT NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY (w/ Oil Cooler)

a. Connect the No. 2 water by-pass pipe with the 3 bolts.



a. Connect the No. 2 water by-pass pipe with the 3 bolts.

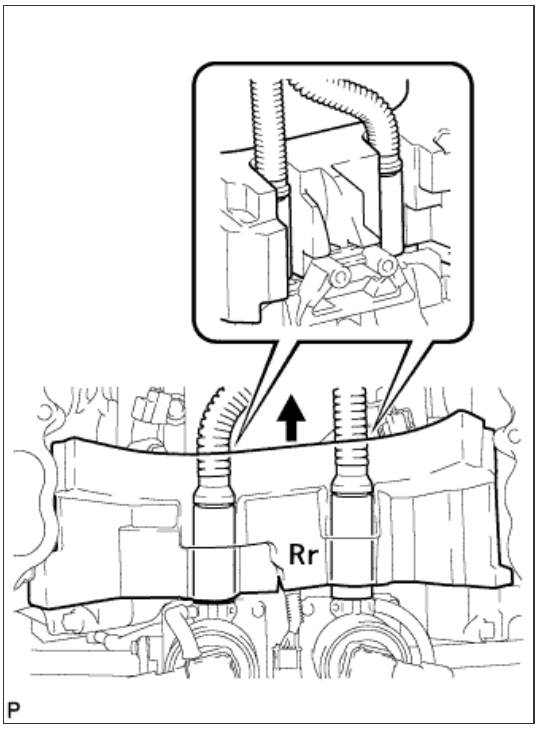
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

7. CONNECT NO. 2 WATER BY-PASS HOSE

a. Connect the No. 2 water by-pass hose to the water by-pass joint.

8. CONNECT NO. 1 WATER BY-PASS HOSE

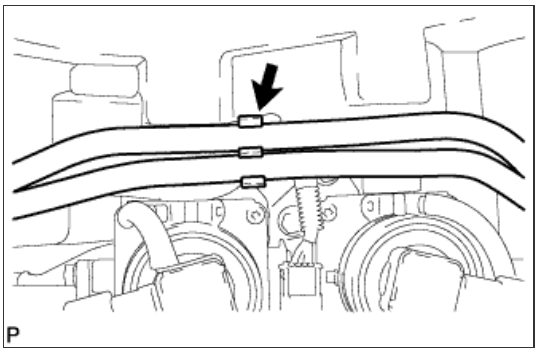
a. Connect the No. 1 water by-pass hose to the water by-pass joint and water inlet housing.



9. INSTALL NO. 1 ENGINE COVER

HINT:

- **Align the No. 1 engine cover cutouts with the air tube.**
- **Align the No. 1 engine cover with the air switching valve surface and cylinder head wall.**

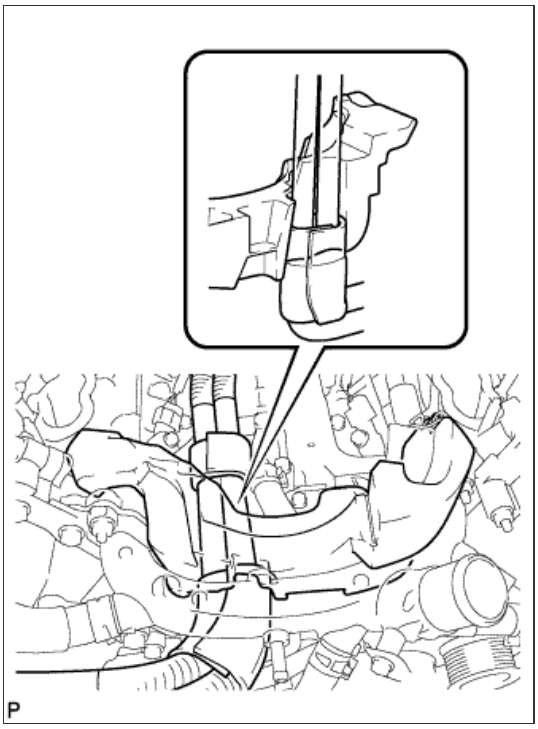


NOTICE:

Make sure that the No. 1 engine cover is flush with the top surface of the intake port of the cylinder head for bank 1 and bank 2.

10. CONNECT FUEL TUBE CLAMP

a. Connect the fuel tube clamp to the bracket.



11. INSTALL NO. 2 ENGINE COVER

HINT:

- **Align the No. 2 engine cover cutout with the air tube.**
- **Align the No. 2 engine cover with the front water by-pass joint and cylinder head wall.**

NOTICE:

Make sure that the No. 2 engine cover is flush with the top surface of the intake port of the cylinder head.

12. INSTALL INTAKE MANIFOLD

a. Install the intake manifold (Click here).

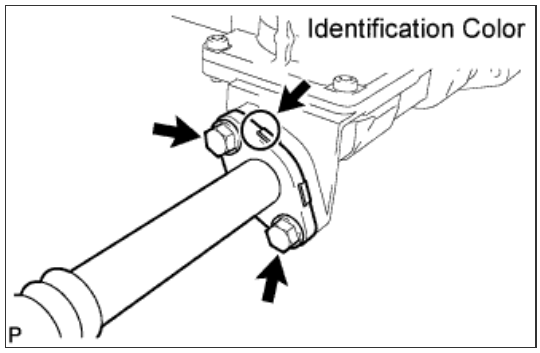
13. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY

a. Install the exhaust manifold (Click here).

for Preparation Click here

1. INSTALL NO. 3 AIR TUBE

a. Install a new gasket and the No. 3 air tube with the 2 bolts.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

HINT:

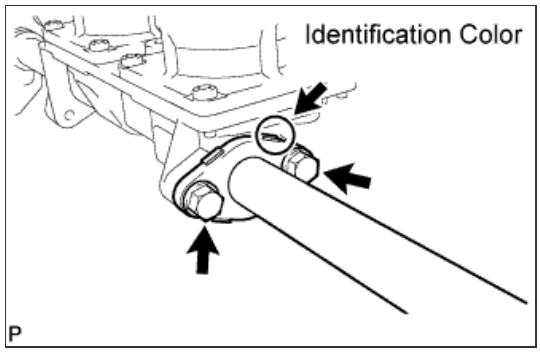
The identification color on the flange is orange.

NOTICE:

Make sure the claws on the gasket are not caught between the air tube and air switching valve.

2. INSTALL NO. 2 AIR TUBE

a. Install a new gasket and the No. 2 air tube with the 2 bolts.



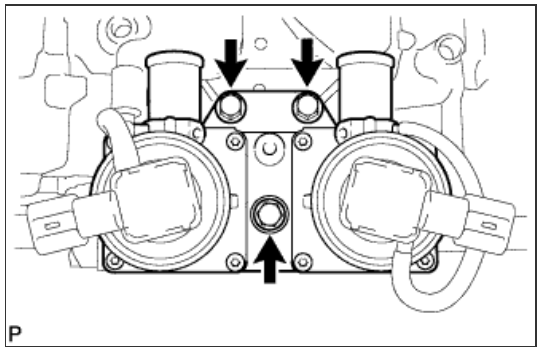
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

HINT:

The identification color on the flange is blue.

NOTICE:

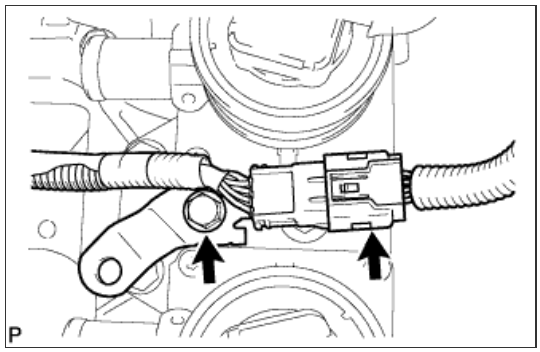
Make sure the claws on the gasket are not caught between the air tube and air switching valve.



3. INSTALL AIR SWITCHING VALVE ASSEMBLY

a. Install the air switching valve with the 3 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

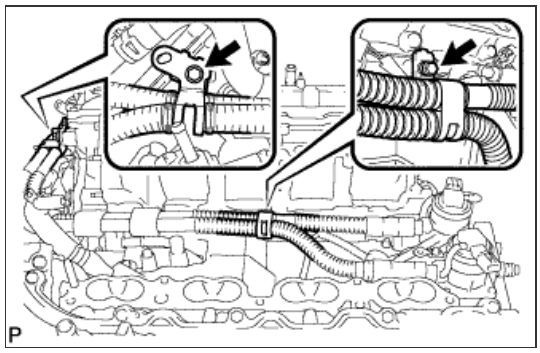


b. Connect the 2 air switching valve connectors.

c. Install the bracket with the bolt.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

d. Connect the knock sensor connector.

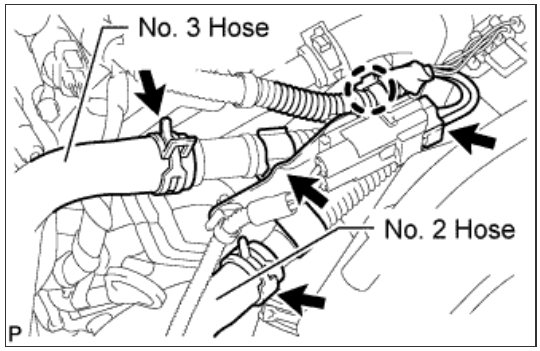


4. INSTALL AIR PIPE SUB-ASSEMBLY

a. Connect the 2 No. 1 air hoses to the air pipe.

b. Connect the air pipe to the air switching valve, and install the air pipe with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

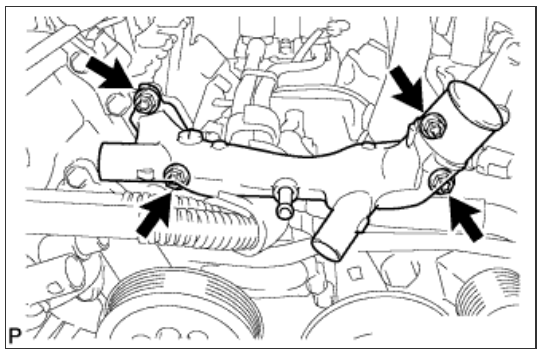


c. Connect the air pump connector clamp holder.

d. Attach the wire harness claw.

e. Connect the air pump connector.

f. Connect the No. 2 and No. 3 hoses.

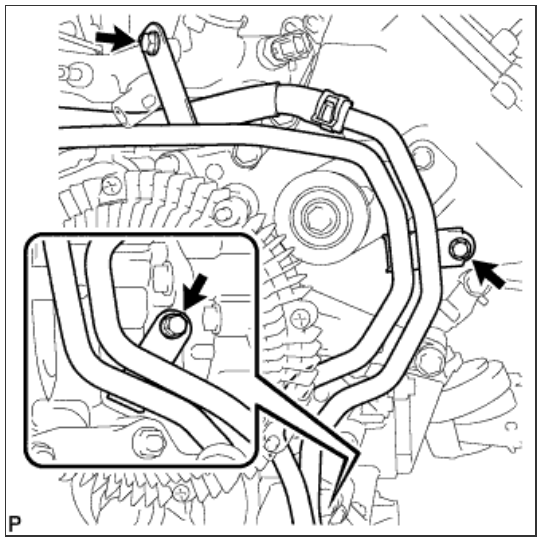


5. INSTALL FRONT WATER BY-PASS JOINT

a. Install 2 new gaskets and the front water by-pass joint with the 4 nuts.

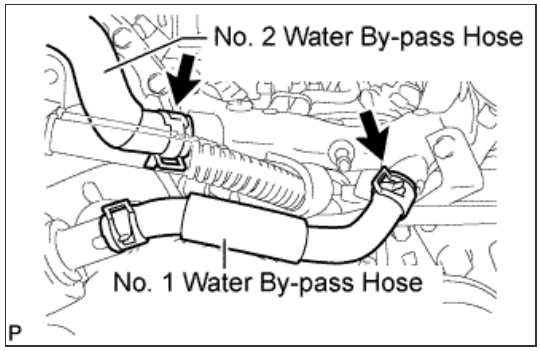
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. Connect the engine coolant temperature sensor connector.



6. CONNECT NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY (w/ Oil Cooler)

a. Connect the No. 2 water by-pass pipe with the 3 bolts.



a. Connect the No. 2 water by-pass pipe with the 3 bolts.

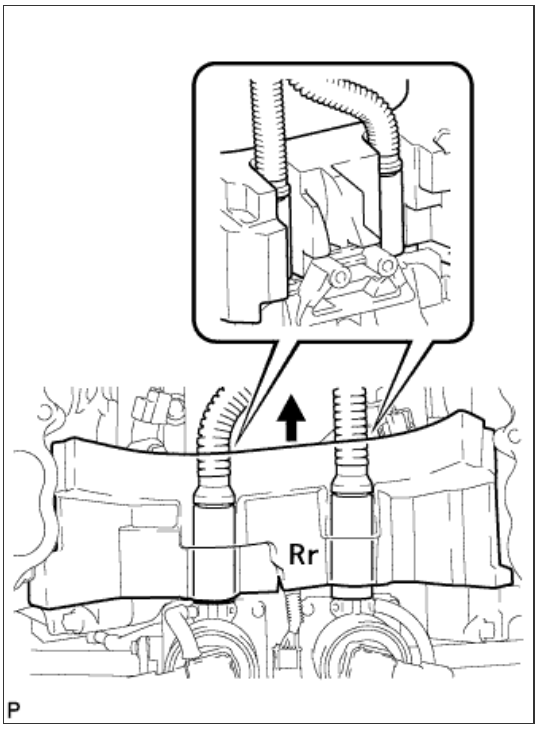
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

7. CONNECT NO. 2 WATER BY-PASS HOSE

a. Connect the No. 2 water by-pass hose to the water by-pass joint.

8. CONNECT NO. 1 WATER BY-PASS HOSE

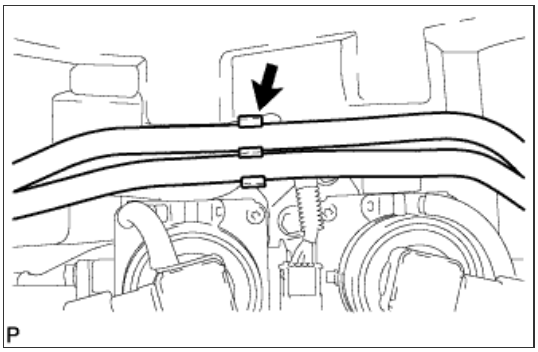
a. Connect the No. 1 water by-pass hose to the water by-pass joint and water inlet housing.



9. INSTALL NO. 1 ENGINE COVER

HINT:

- **Align the No. 1 engine cover cutouts with the air tube.**
- **Align the No. 1 engine cover with the air switching valve surface and cylinder head wall.**

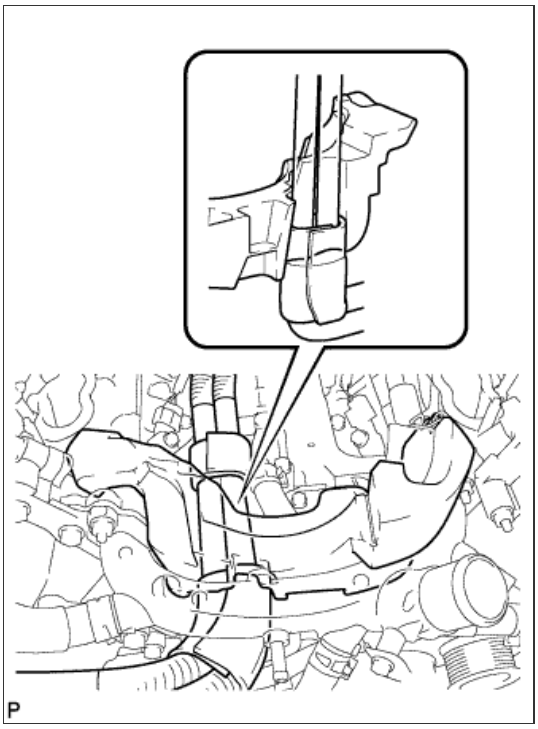


NOTICE:

Make sure that the No. 1 engine cover is flush with the top surface of the intake port of the cylinder head for bank 1 and bank 2.

10. CONNECT FUEL TUBE CLAMP

a. Connect the fuel tube clamp to the bracket.



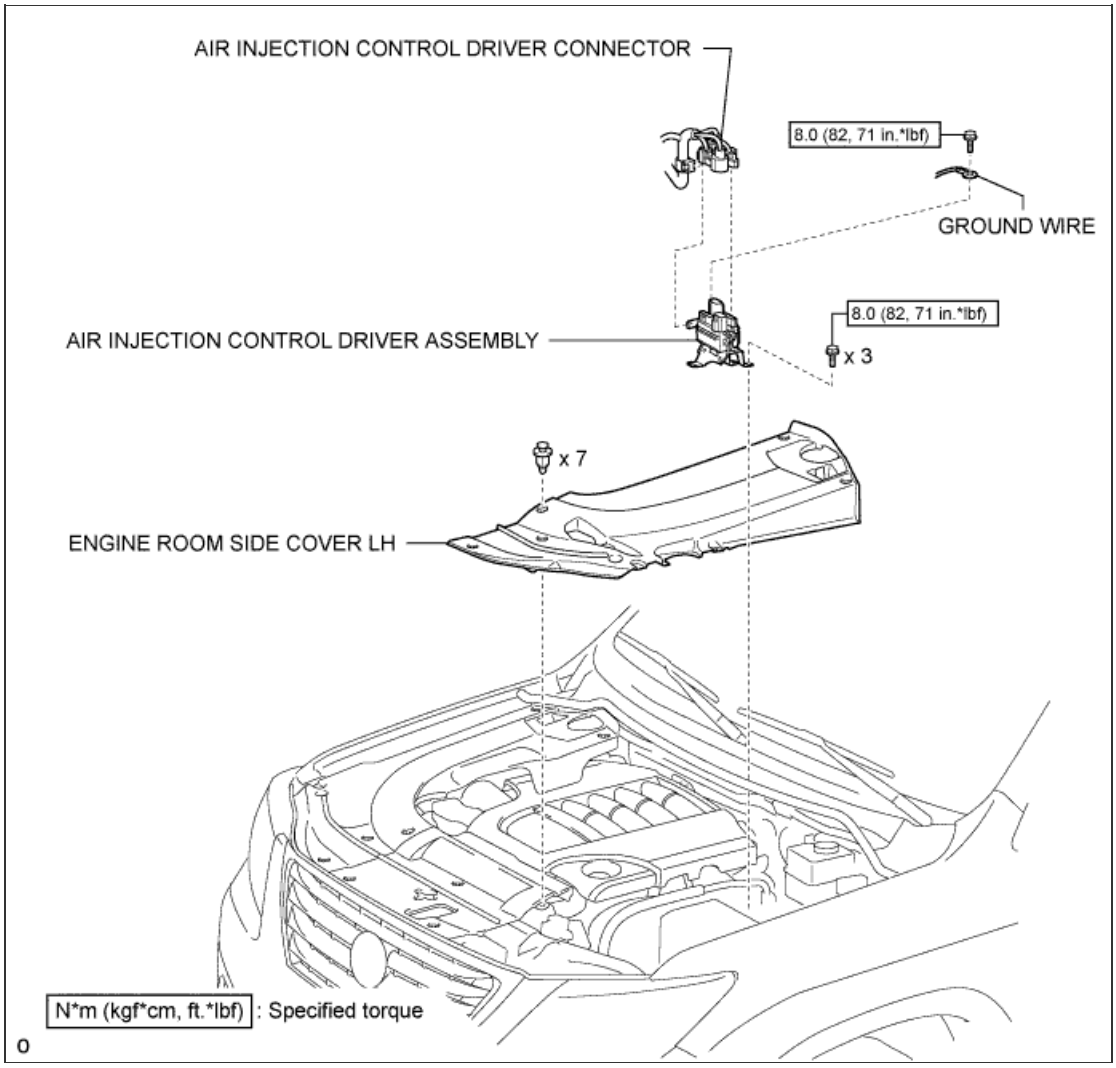
11. INSTALL NO. 2 ENGINE COVER

HINT:

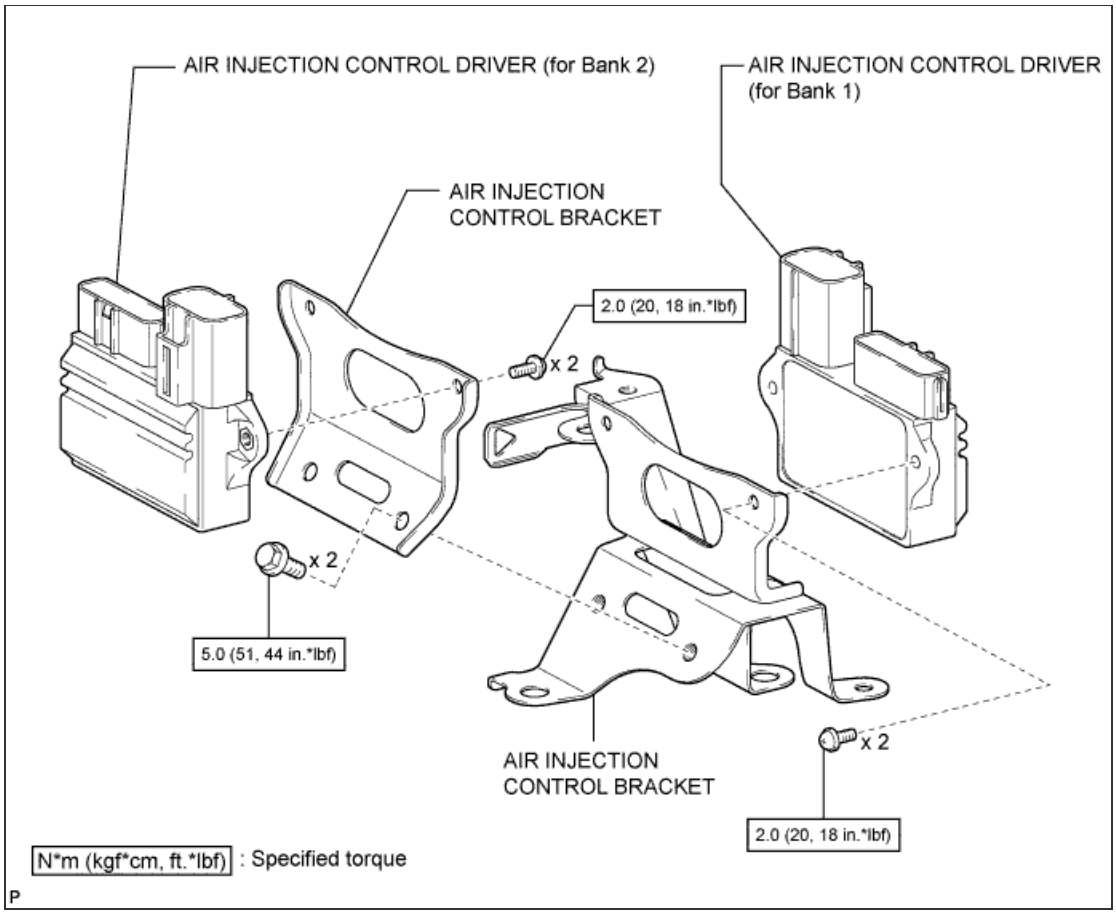
- **Align the No. 2 engine cover cutout with the air tube.**
- **Align the No. 2 engine cover with the front water by-pass joint and cylinder head wall.**

NOTICE:

Make sure that the No. 2 engine cover is flush with the top surface of the intake port of the cylinder head.



12. INSTALL INTAKE MANIFOLD



(Click here)

13. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY

(Click here)

for Preparation Click here

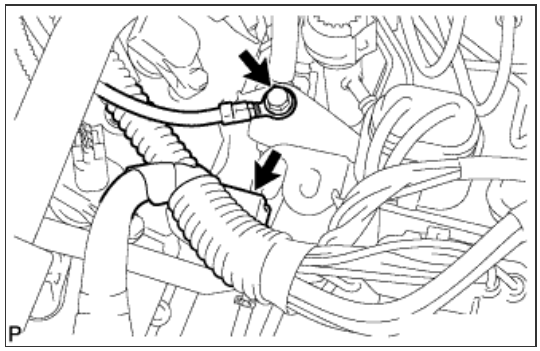
1. REMOVE ENGINE ROOM SIDE COVER LH

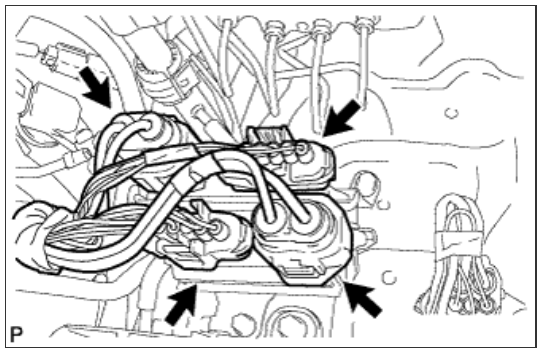
a. Remove the 7 clips and engine room side cover.

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL



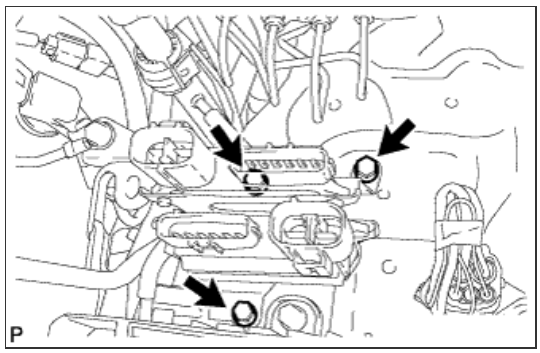
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable from the cable is reconnected (Click here).



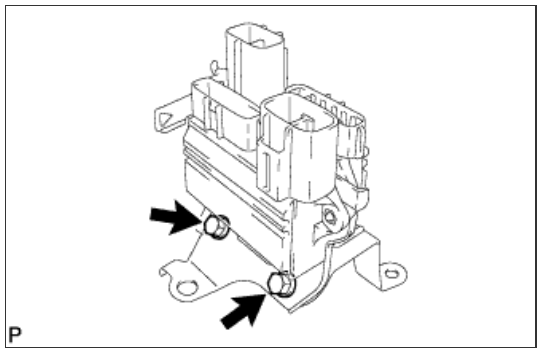
3. REMOVE AIR INJECTION CONTROL DRIVER ASSEMBLY

a. Remove the bolt and disconnect the ground wire.

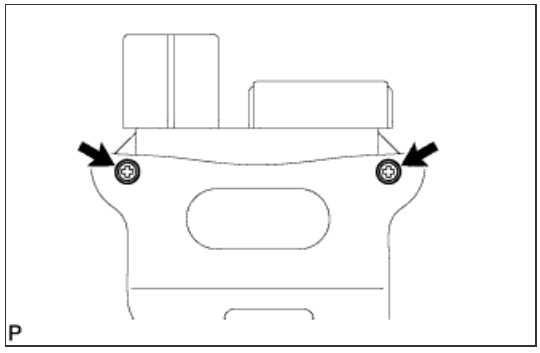


b. Disconnect the wire harness clamp.

c. Disconnect the 4 air injection control driver connectors.



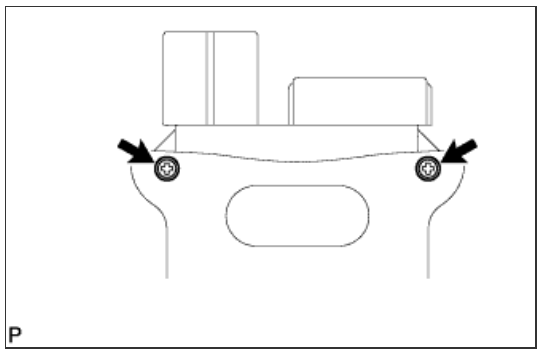
d. Remove the 3 bolts and air injection control driver.



for Preparation Click here

1. REMOVE AIR INJECTION CONTROL DRIVER (for Bank 2)

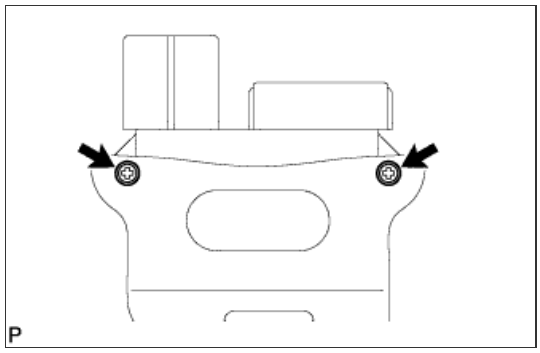
a. Remove the 2 bolts.



b. Remove the 2 screws and air injection control driver.

2. REMOVE AIR INJECTION CONTROL DRIVER (for Bank 1)

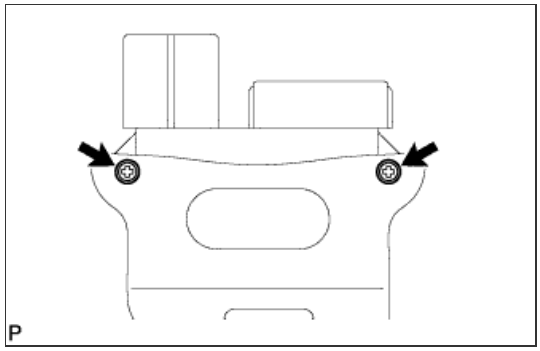
a. Remove the 2 screws and air injection control driver.



for Preparation Click here

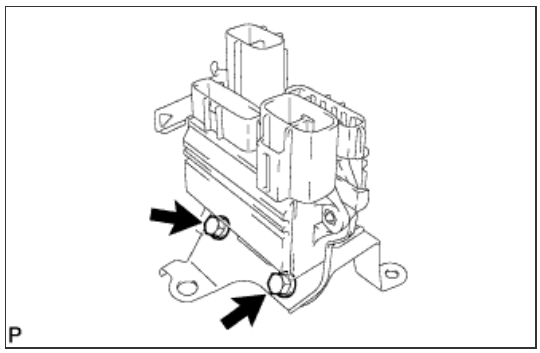
1. INSTALL AIR INJECTION CONTROL DRIVER (for Bank 1)

a. Install the air injection control driver with the 2 screws.



Torque:
2.0 N*m{ 20 kgf*cm , 18 in.*lbf }

2. INSTALL AIR INJECTION CONTROL DRIVER (for Bank 2)

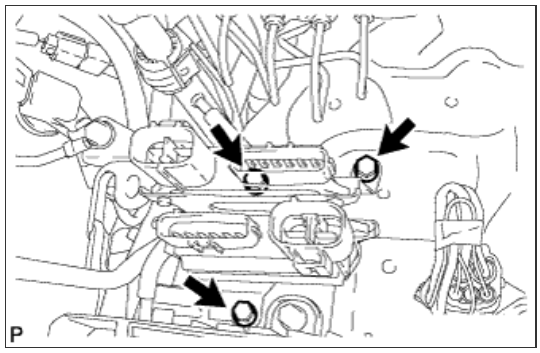


a. Install the air injection control driver with the 2 screws.

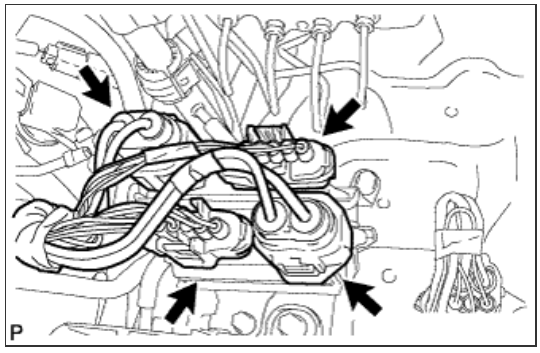
Torque:
2.0 N*m{ 20 kgf*cm , 18 in.*lbf }

b. Install the 2 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }



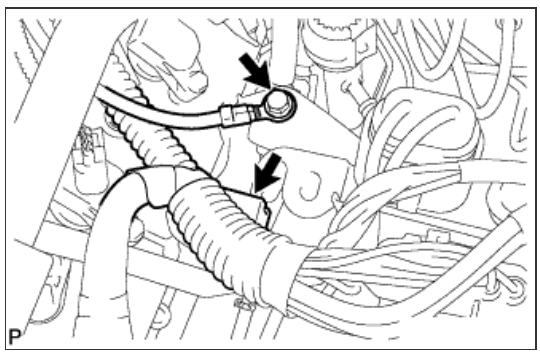
for Preparation Click here



1. INSTALL AIR INJECTION CONTROL DRIVER ASSEMBLY

a. Install the air injection control driver with the 3 bolts.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



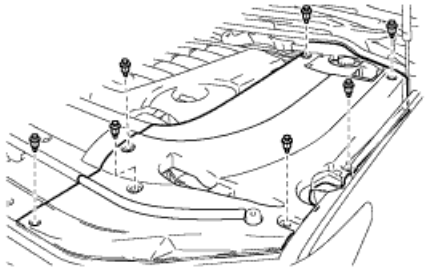
b. Connect the 4 air injection control driver connectors.

c. Connect the wire harness clamp.

d. Connect the ground wire with the bolt.

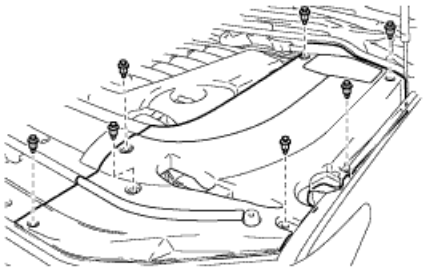
Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

2. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable from the cable is reconnected (Click here).



3. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.

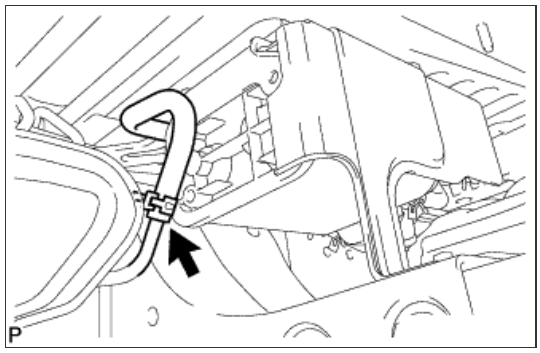
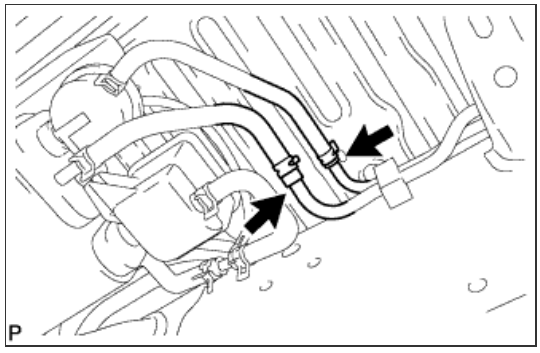
P

for Preparation Click here



PURGE LINE HOSE
VENT LINE HOSE
FUEL HOSE CLAMP
P

for Preparation Click here

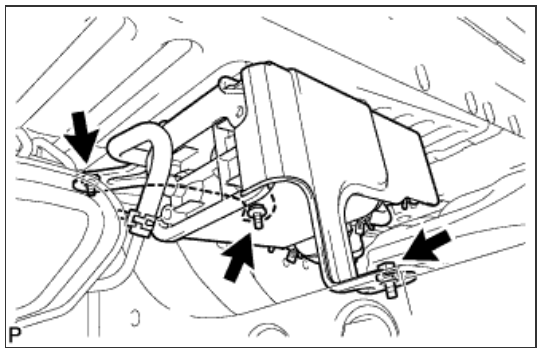


1. REMOVE CANISTER

a. Disconnect the air inlet line hose.

b. Disconnect the vent line hose.

c. Disconnect the purge line hose.

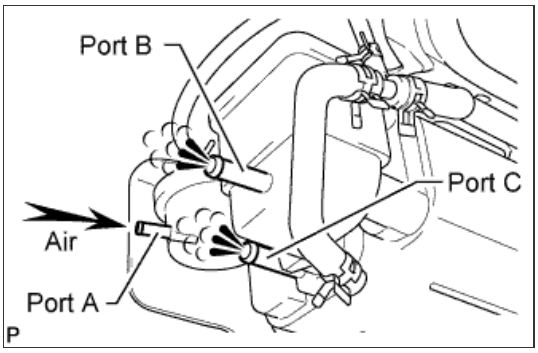


d. Remove the 3 bolts and canister.

e. Remove the 2 fuel hose clamps from the canister.

f. Remove the purge line hose.

g. Remove the vent line hose.



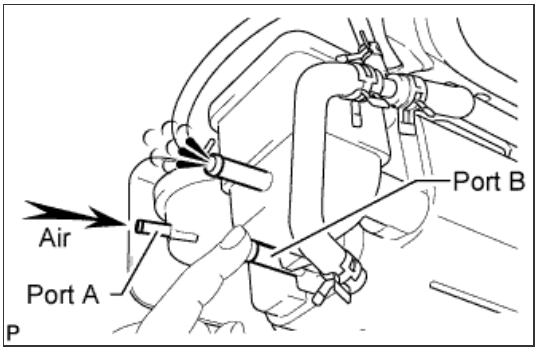
for Preparation Click here

1. INSPECT CANISTER

a. Visually check the canister for cracks or damage.

b. Blow compressed air of 4.9 kPa (50 gf/cm ^{2}, 0.71 psi) into port A and check that air flows without resistance from port B and port C.
If the result is not as specified, replace the canister.

c. Apply a vacuum of 1.96 kPa (20 gf/cm^2, 0.28 psi) to port A. Check that the vacuum does not decrease when ports B and C are closed, and check that the vacuum does not decrease when port B is released.
If the result is not as specified, replace the canister.



2. CLEAN FILTER IN CANISTER

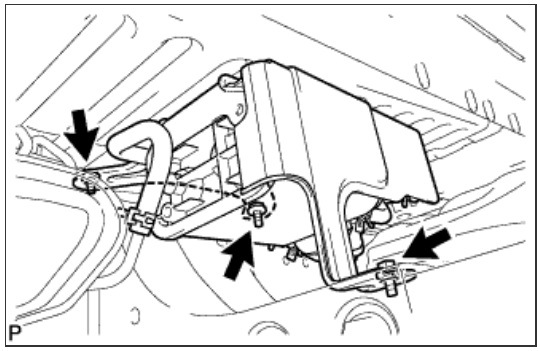
a. Clean the filter by blowing compressed air of 4.9 kPa (50 gf/cm ^{2}, 0.71 psi) into port A while holding port B closed.

NOTICE:

Do not attempt to wash the canister.

for Preparation Click here

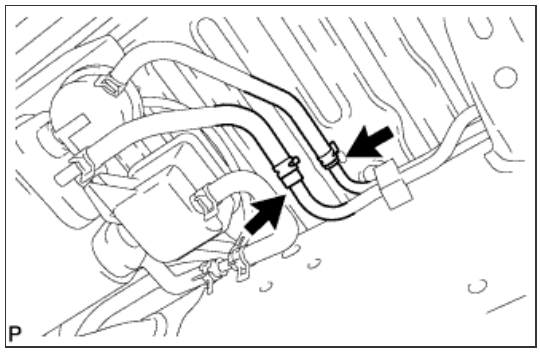
1. INSTALL CANISTER



a. Install the vent line hose to the canister.

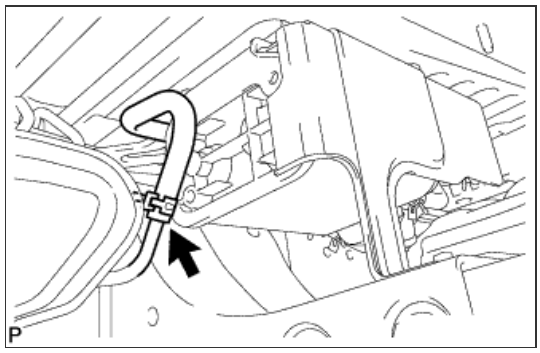
b. Install the purge line hose to the canister.

c. Install the 2 fuel hose clamps to the canister.

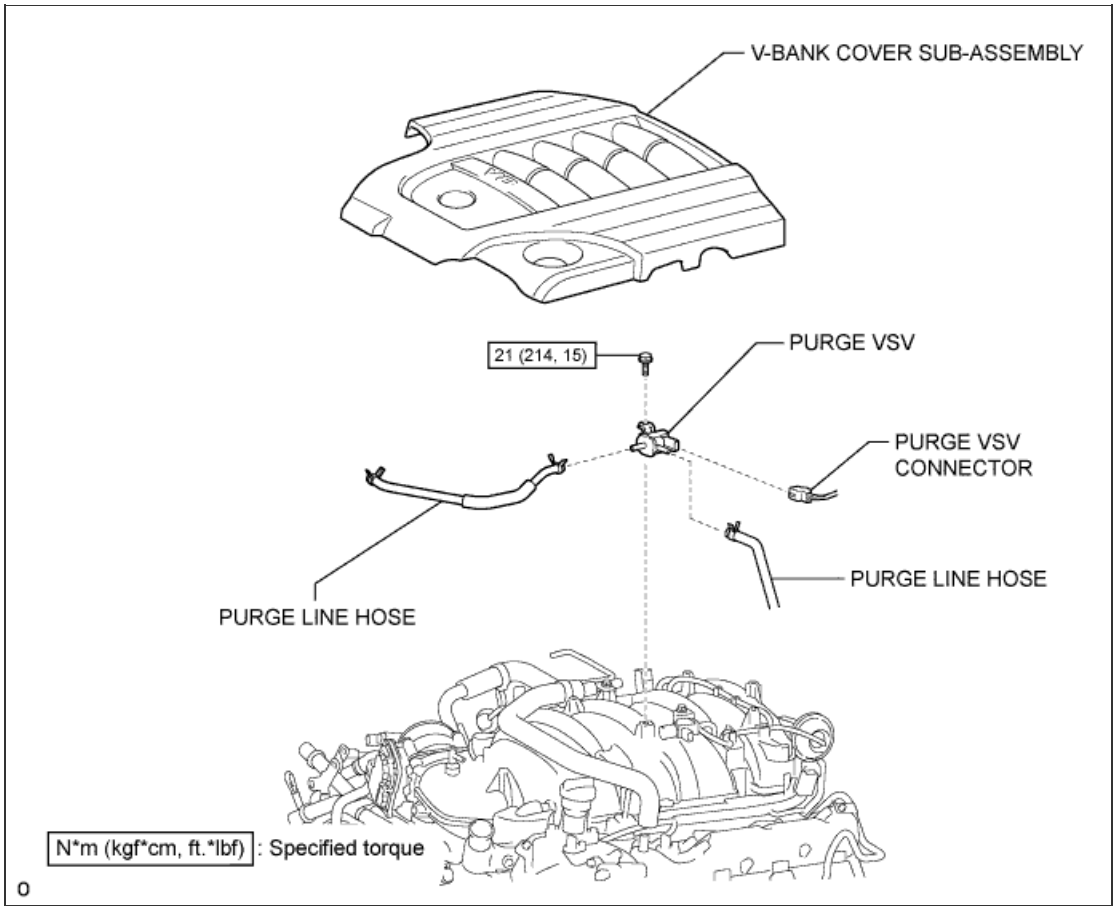


d. Install the canister with the 3 bolts.

Torque:
20 N*m{ 199 kgf*cm , 14 ft.*lbf }

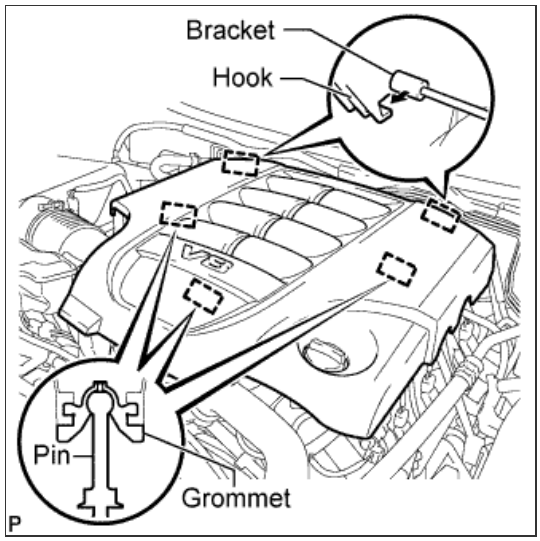


e. Connect the vent line hose.



f. Connect the purge line hose.

g. Connect the air inlet line hose.

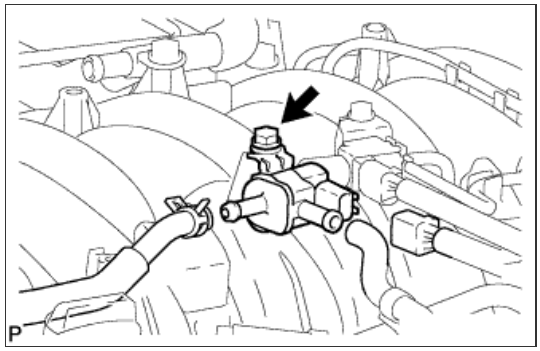


for Preparation Click here

for Preparation Click here

1. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.



2. DISCONNECT PURGE LINE HOSE

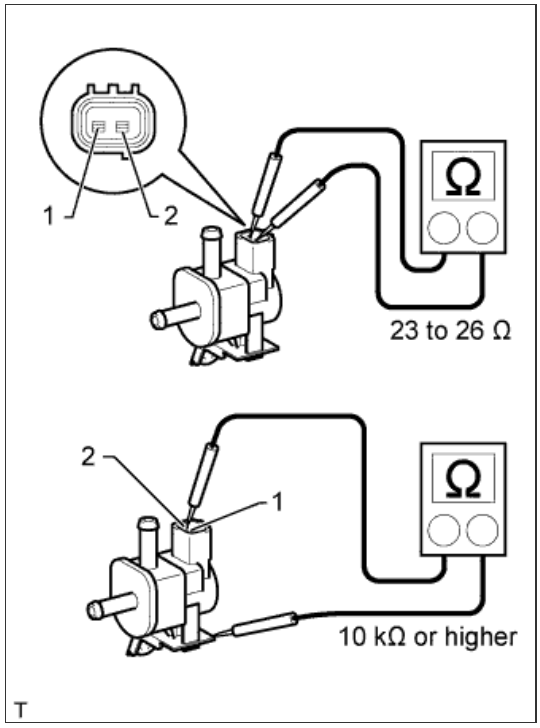
a. Disconnect the 2 purge line hoses.

3. REMOVE PURGE VSV

a. Disconnect the purge VSV connector.

b. Remove the bolt and purge VSV.

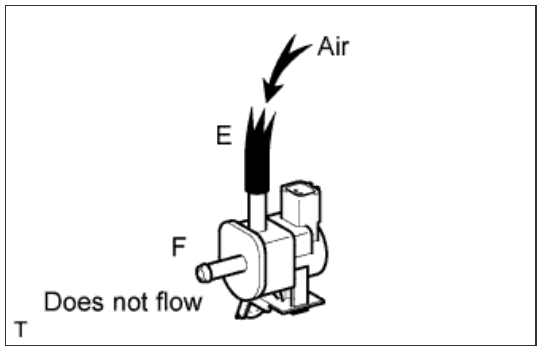
for Preparation Click here



1. INSPECT PURGE VSV

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

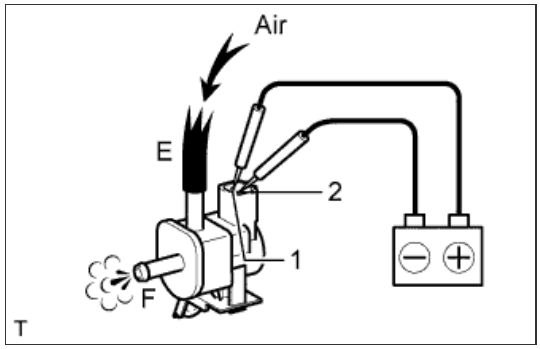


Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	23 to 26 Ω
1 - VSV body ground	Always	10 kΩ or higher
2 - VSV body ground		10 kΩ or higher

If the result is not as specified, replace the purge VSV.

b. Check the operation of the purge VSV.

i. Check that air does not flow from port F when air is applied to port E.

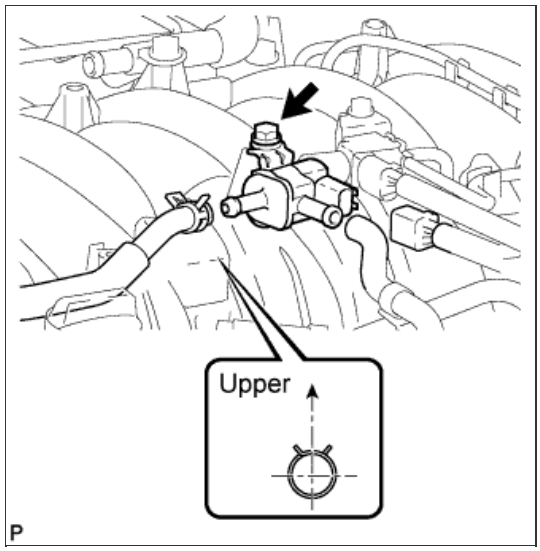


ii. Apply battery voltage to the connector, and check the VSV operation.

OK:

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Air flows from port E to port F

If the result is not as specified, replace the purge VSV.



for Preparation Click here

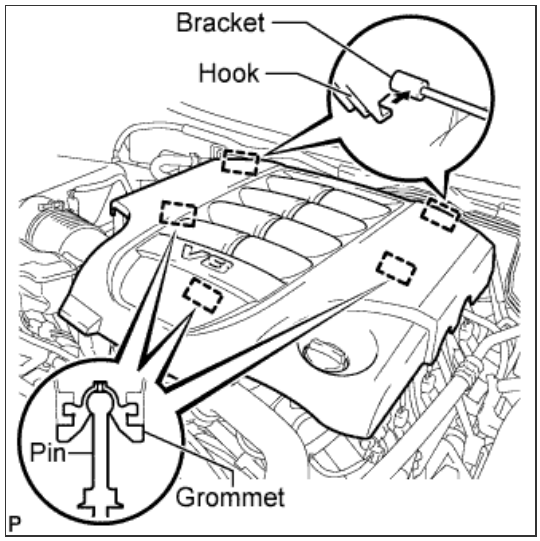
1. INSTALL PURGE VSV

a. Install the purge VSV with the bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. Connect the purge VSV connector.

2. CONNECT PURGE LINE HOSE

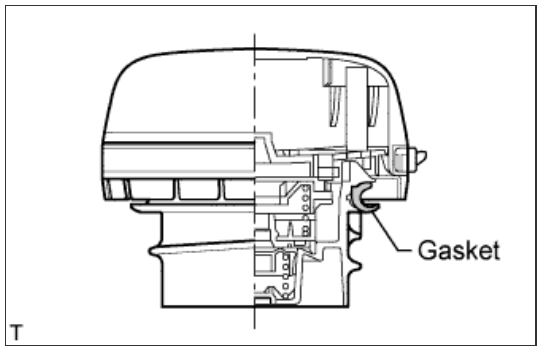


a. Connect the 2 hoses.

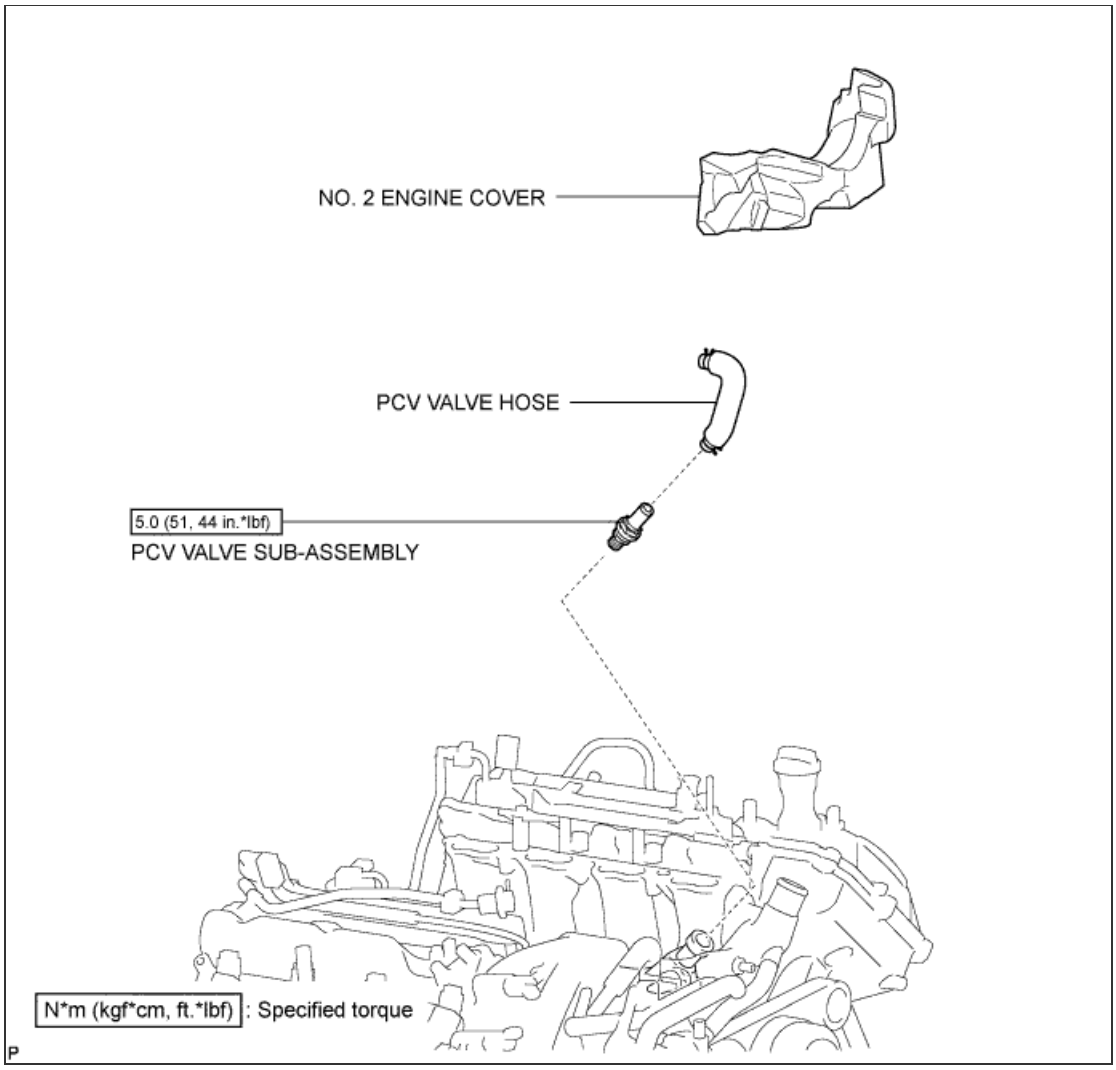
HINT:

Turn the claw of the clip to the upper side.

3. INSTALL V-BANK COVER SUB-ASSEMBLY



a. Attach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.

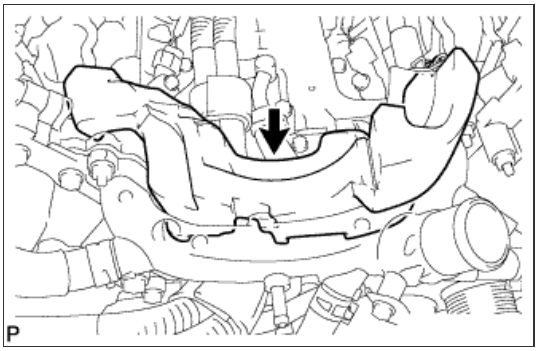


for Preparation Click here

1. INSPECT FUEL TANK CAP ASSEMBLY

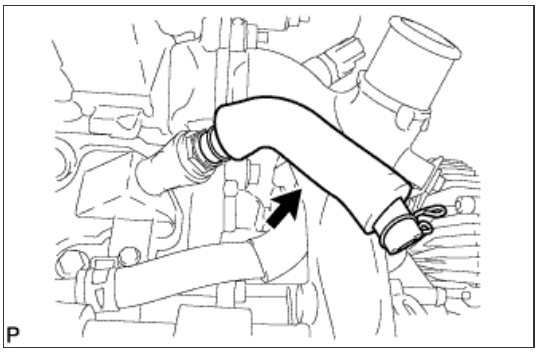
a. Visually check if the cap and/or gasket are deformed or damaged.
If the result is not as specified, replace the fuel tank cap assembly.

for Preparation Click here



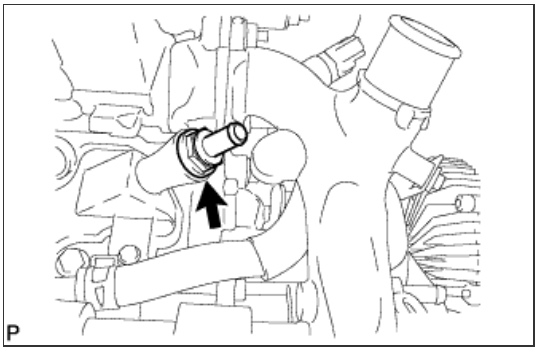
for Preparation Click here

1. REMOVE INTAKE MANIFOLD



a. Remove the intake manifold (Click here).

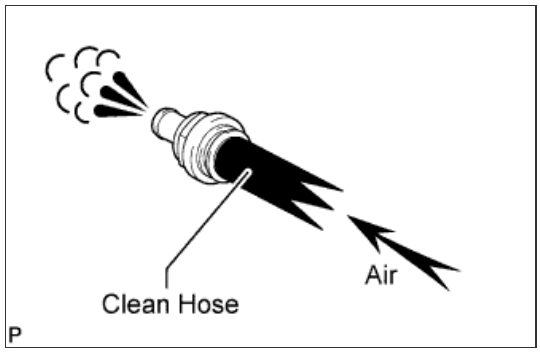
2. REMOVE NO. 2 ENGINE COVER



3. REMOVE PCV VALVE HOSE

a. Remove the hose from the PCV valve.

4. REMOVE PCV VALVE SUB-ASSEMBLY



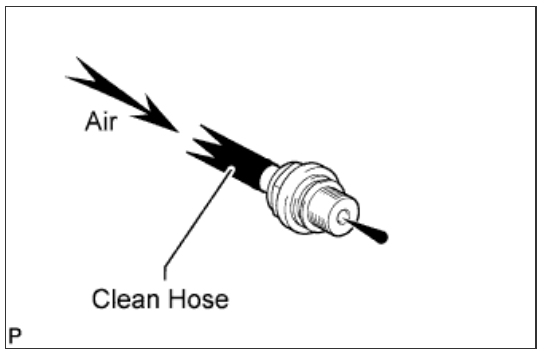
a. Remove the PCV valve.

for Preparation Click here

1. INSPECT PCV VALVE SUB-ASSEMBLY

a. Install a clean hose to the PCV valve.

b. Check the PCV valve operation.



i. Blow air into the cylinder head side, and check that air passes through easily.

CAUTION:

Do not suck air through the valve.

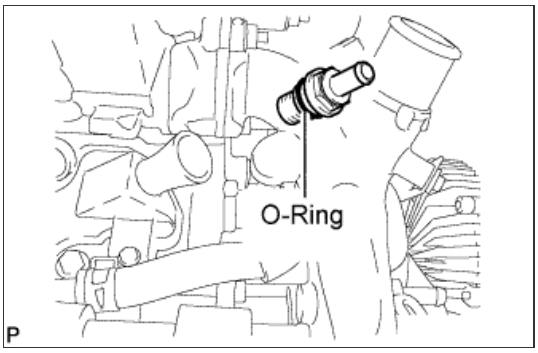
Petroleum substances inside the valve are hazardous to your health.

ii. Blow air into the intake manifold side, and check that air passes through with difficulty.
If the result is not as specified, replace the PCV valve sub-assembly.

c. Remove the hose from the PCV valve.

for Preparation Click here

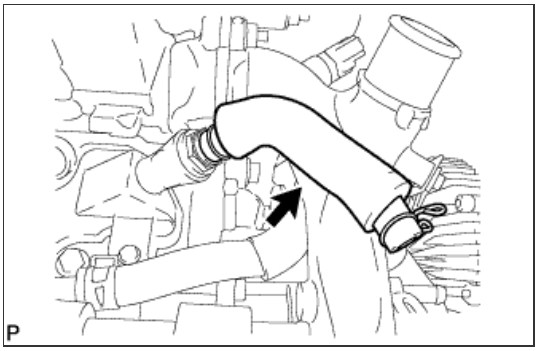
1. INSTALL PCV VALVE SUB-ASSEMBLY



a. Apply a light coat of engine oil to the O-ring of the valve.

HINT:

When reusing the PCV valve, inspect the O-ring. If the O-ring has scratches or cuts, replace the PCV valve.

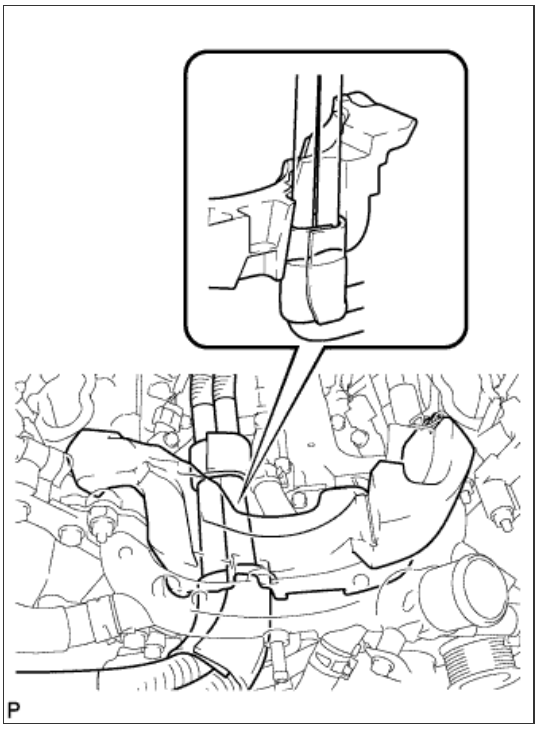


b. Install the PCV valve.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

2. INSTALL PCV VALVE HOSE

a. Install the hose to the PCV valve.

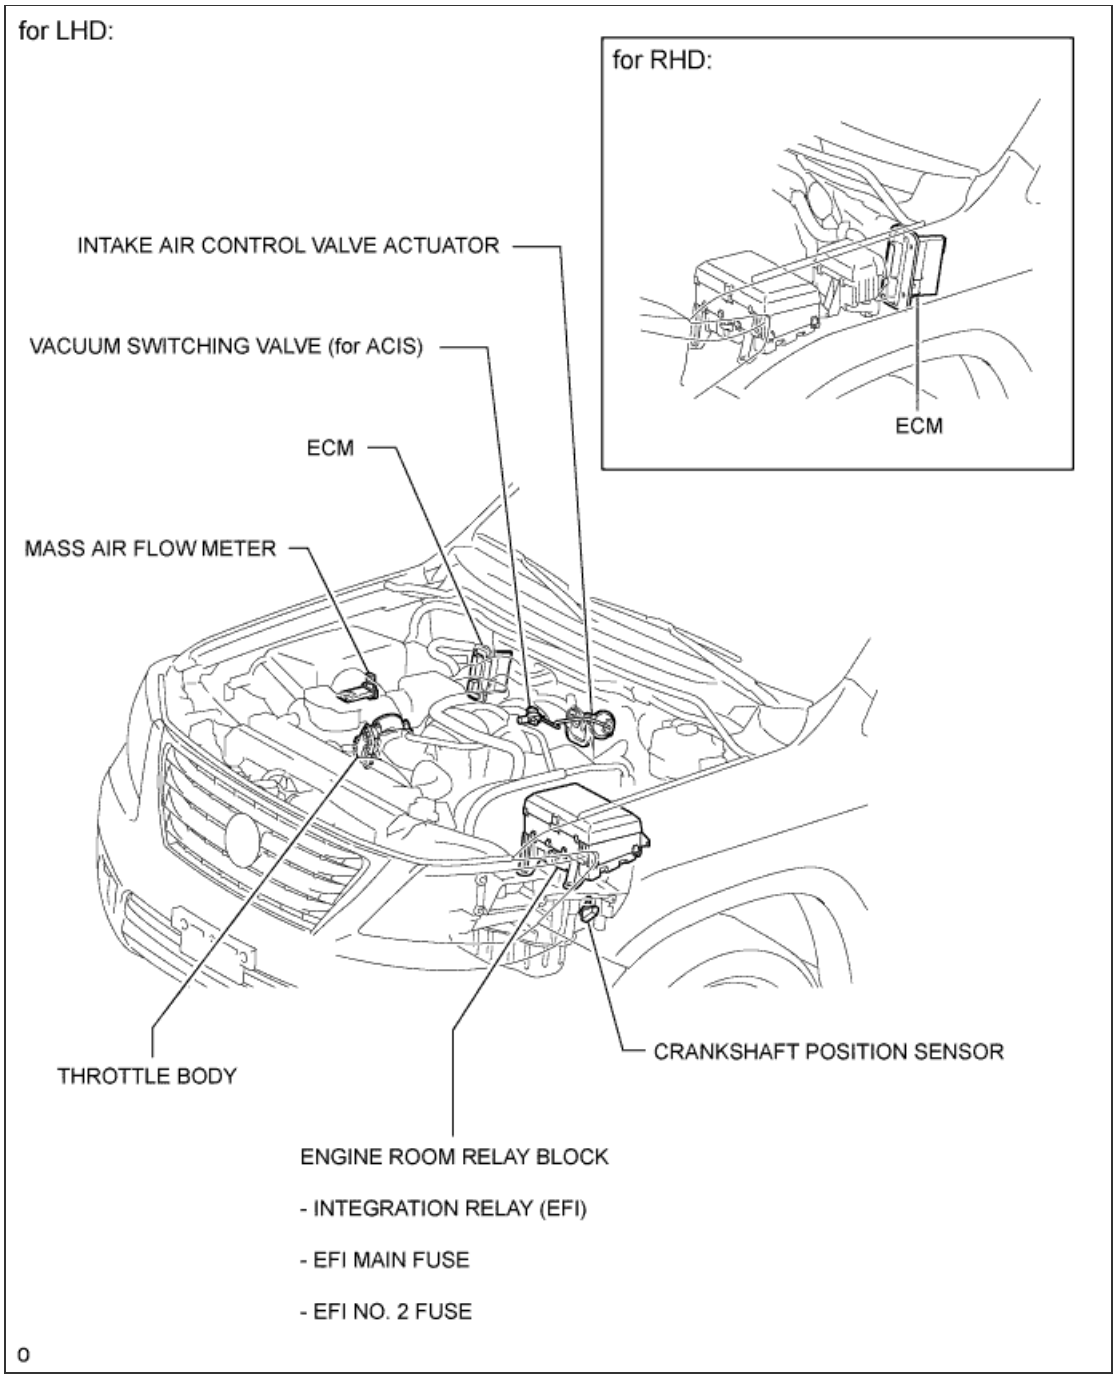


3. INSTALL NO. 2 ENGINE COVER

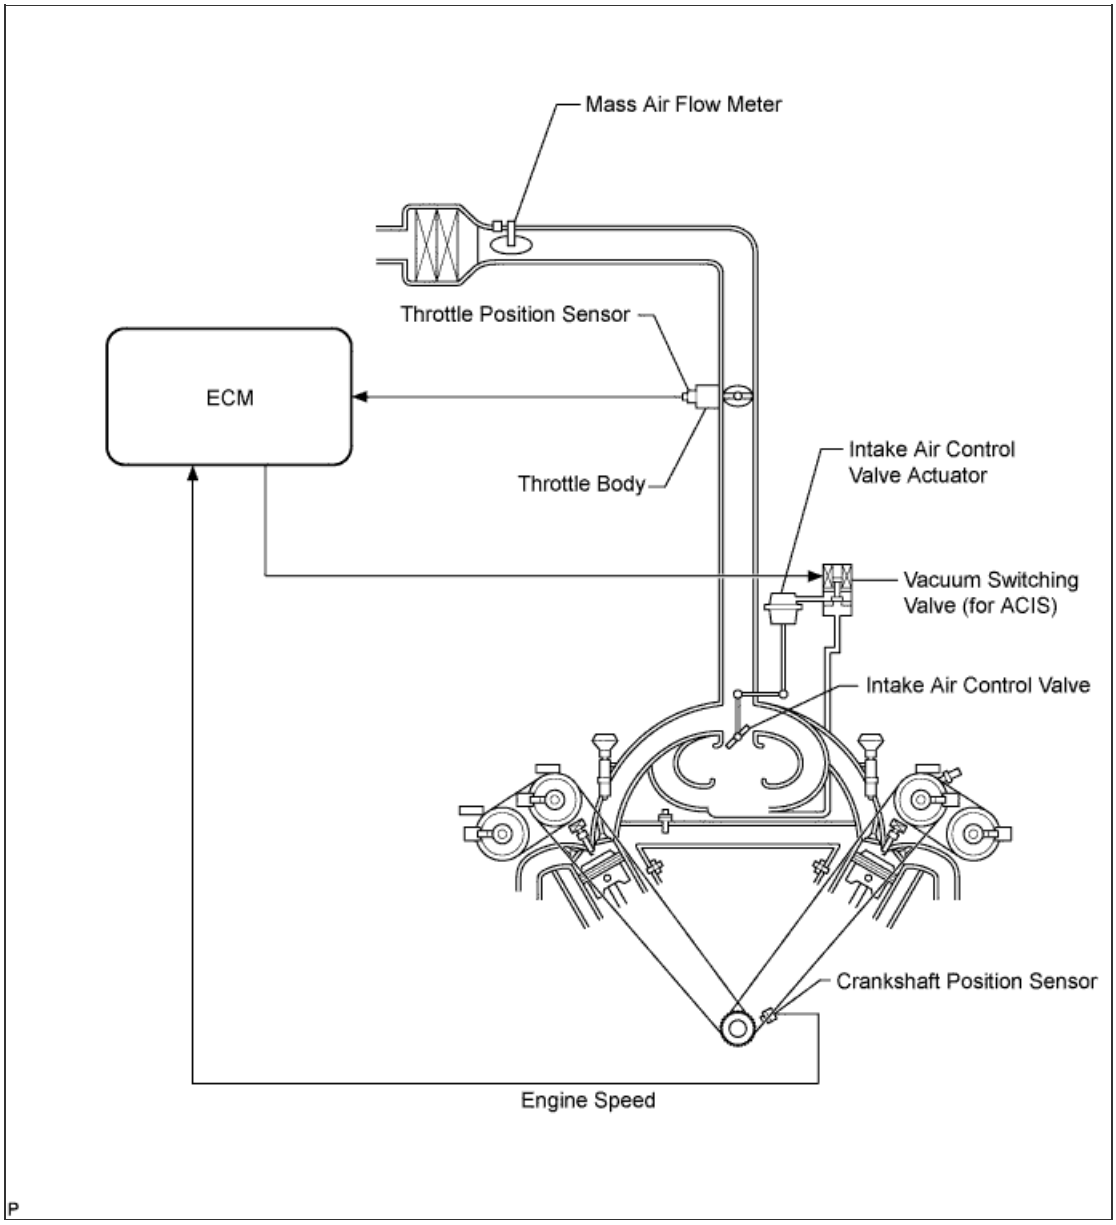
HINT:

- **Align the No. 2 engine cover cutout with the air tube.**
- **Align the No. 2 engine cover with the front water by-pass joint and cylinder head wall.**

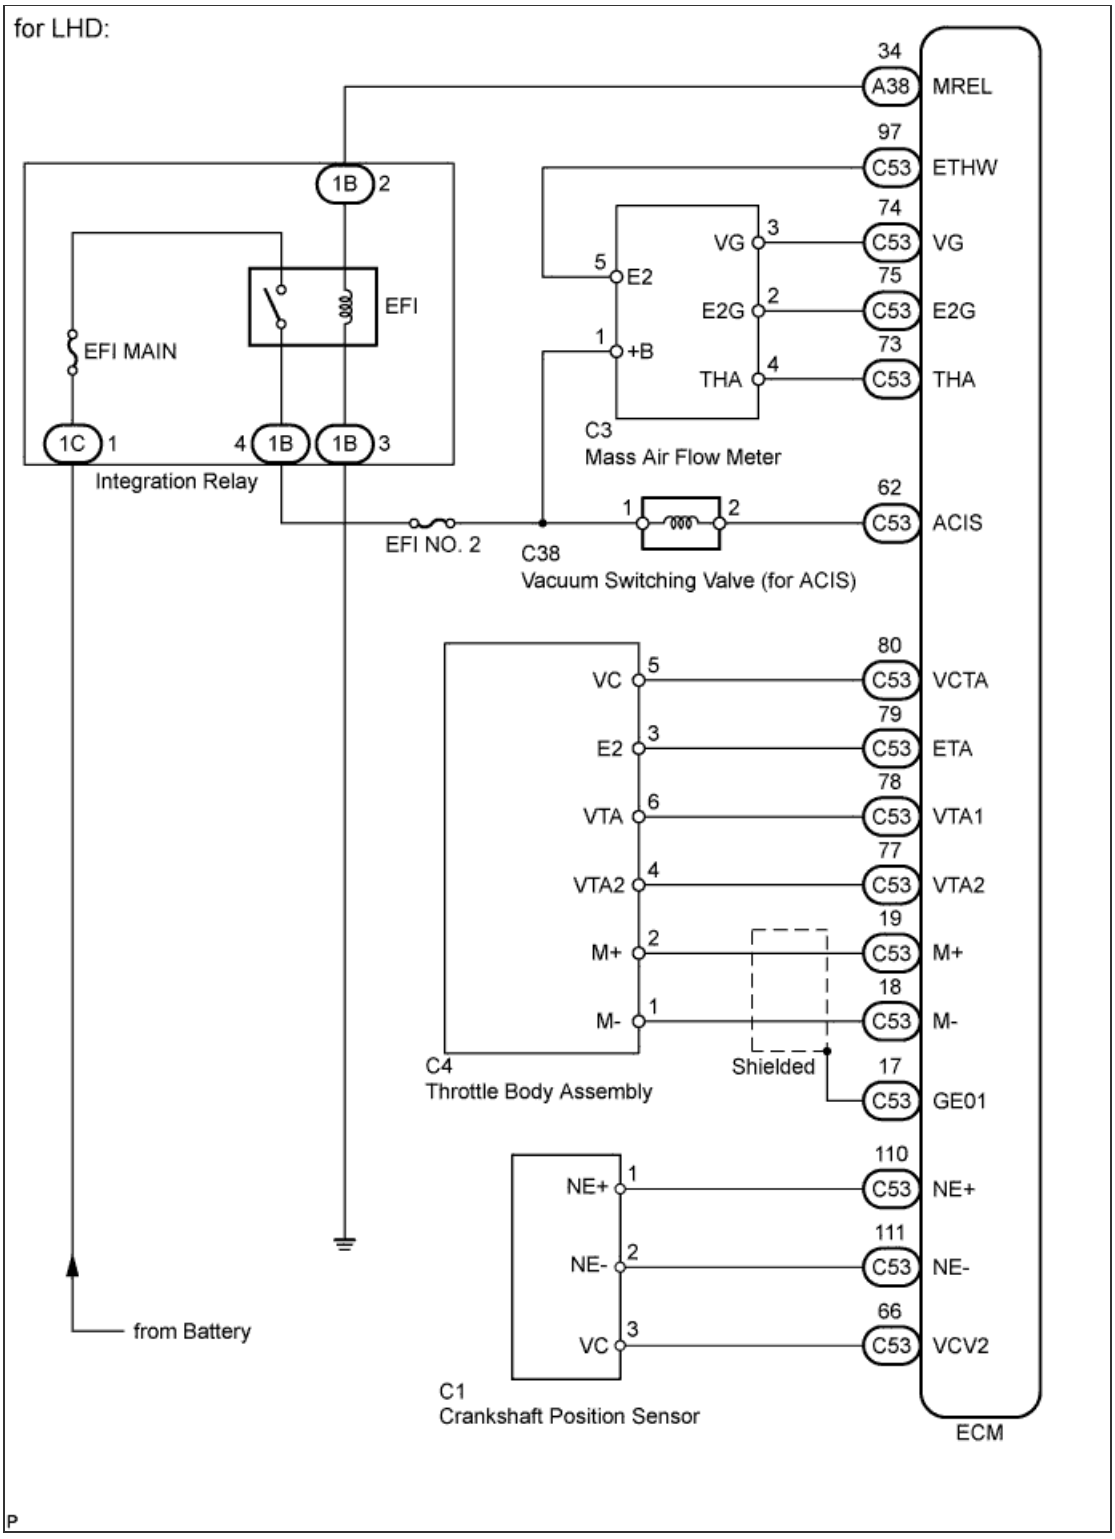
NOTICE:



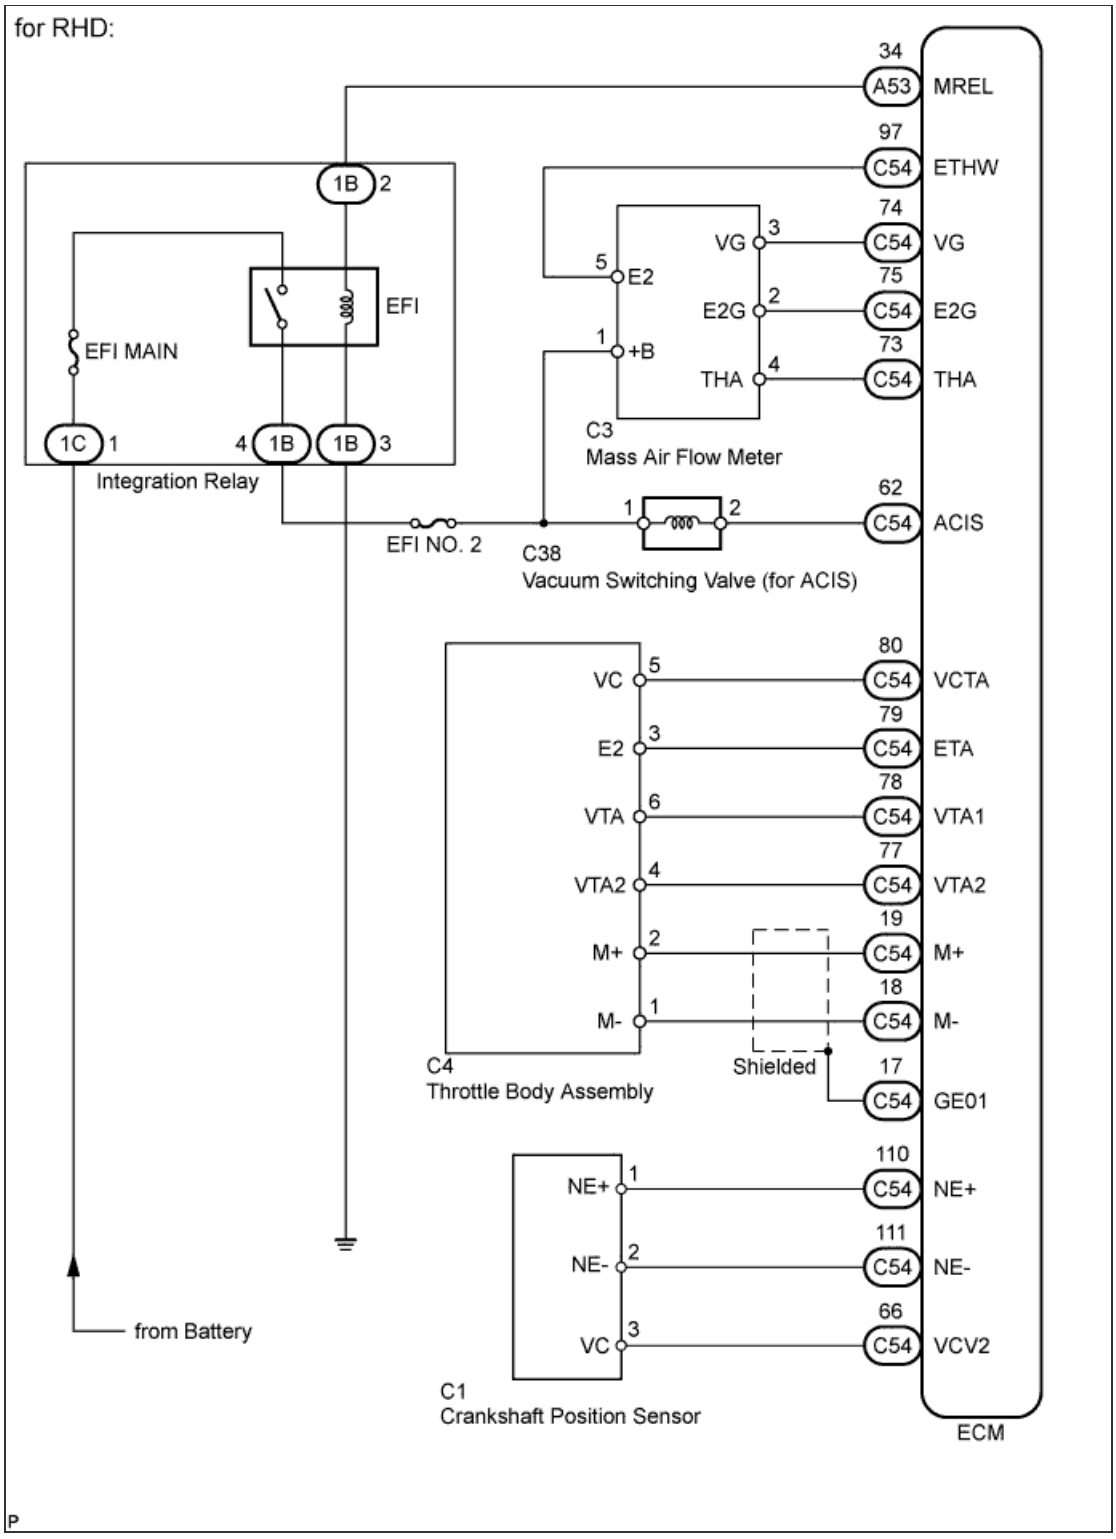
Make sure that the No. 2 engine cover is flush with the top surface of the intake port of the cylinder head.



4. INSTALL INTAKE MANIFOLD



a. Install the intake manifold (Click here).



for Preparation Click here

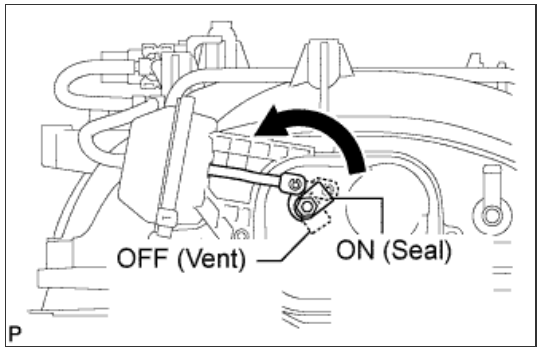
1. INSPECT INTAKE AIR CONTROL VALVE

a. Remove the V-bank cover.

b. Start the engine.

c. Check that the VSV (for ACIS) is ON (seal) under both of the following conditions:



- Depressing the accelerator pedal to achieve a throttle valve opening angle of 50° or more.
- Racing the engine to 4700 rpm or less.

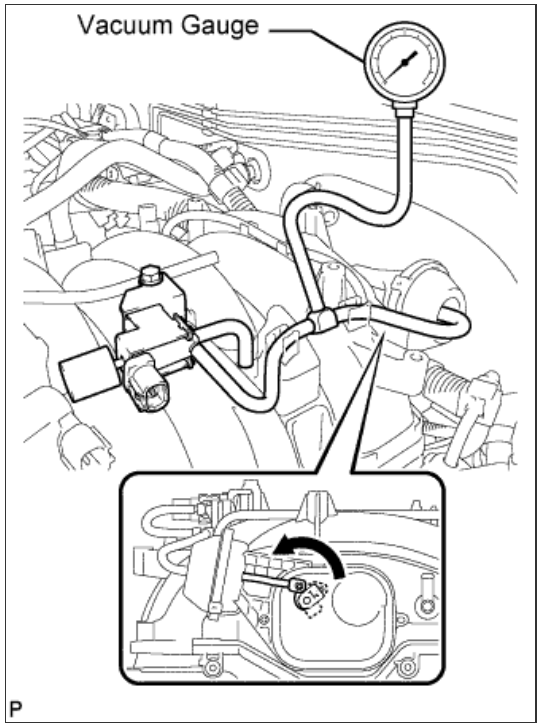
NOTICE:

Do not increase the engine speed to 5400 rpm or more.

d. Check that the VSV (for ACIS) is OFF (vent) under the following conditions:

- After releasing the accelerator pedal while under the VSV (for ACIS) ON condition.
- The engine is idling.

e. Connect the intelligent tester to the DLC3.



f. Perform the Active Test, and then check that the actuator rod operates.
If the result is not as specified, inspect the intake air control valve, vacuum tank and VSV (for ACIS) for normal operation. Replace malfunctioning parts as necessary.

g. Install the V-bank cover.

2. CHECK INTAKE AIR CONTROL VALVE OPERATION

a. Remove the V-bank cover.

b. Using a 3-way connector, connect a vacuum gauge to the actuator hose.

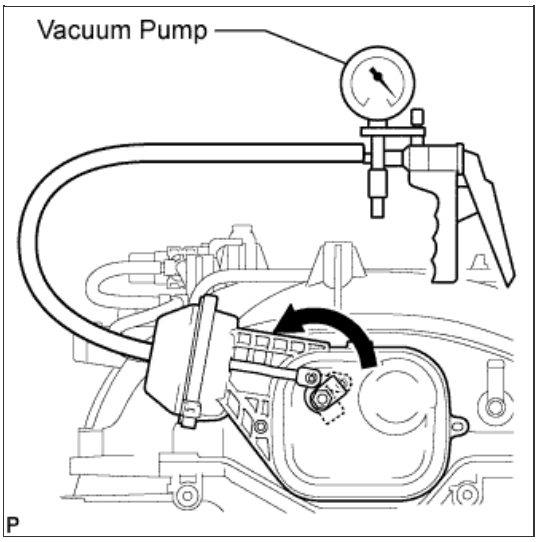
c. Start the engine.

d. While the engine is idling, check that the vacuum gauge indicates 0 kPa (0 mmHg, 0 in.Hg) and the rod is at the OFF position

e. Fully depress the accelerator pedal quickly. Check that the VSV (for ACIS) turns ON and the rod moves in the ON direction.

NOTICE:

Make sure to fully depress and release the accelerator pedal within 1 second.



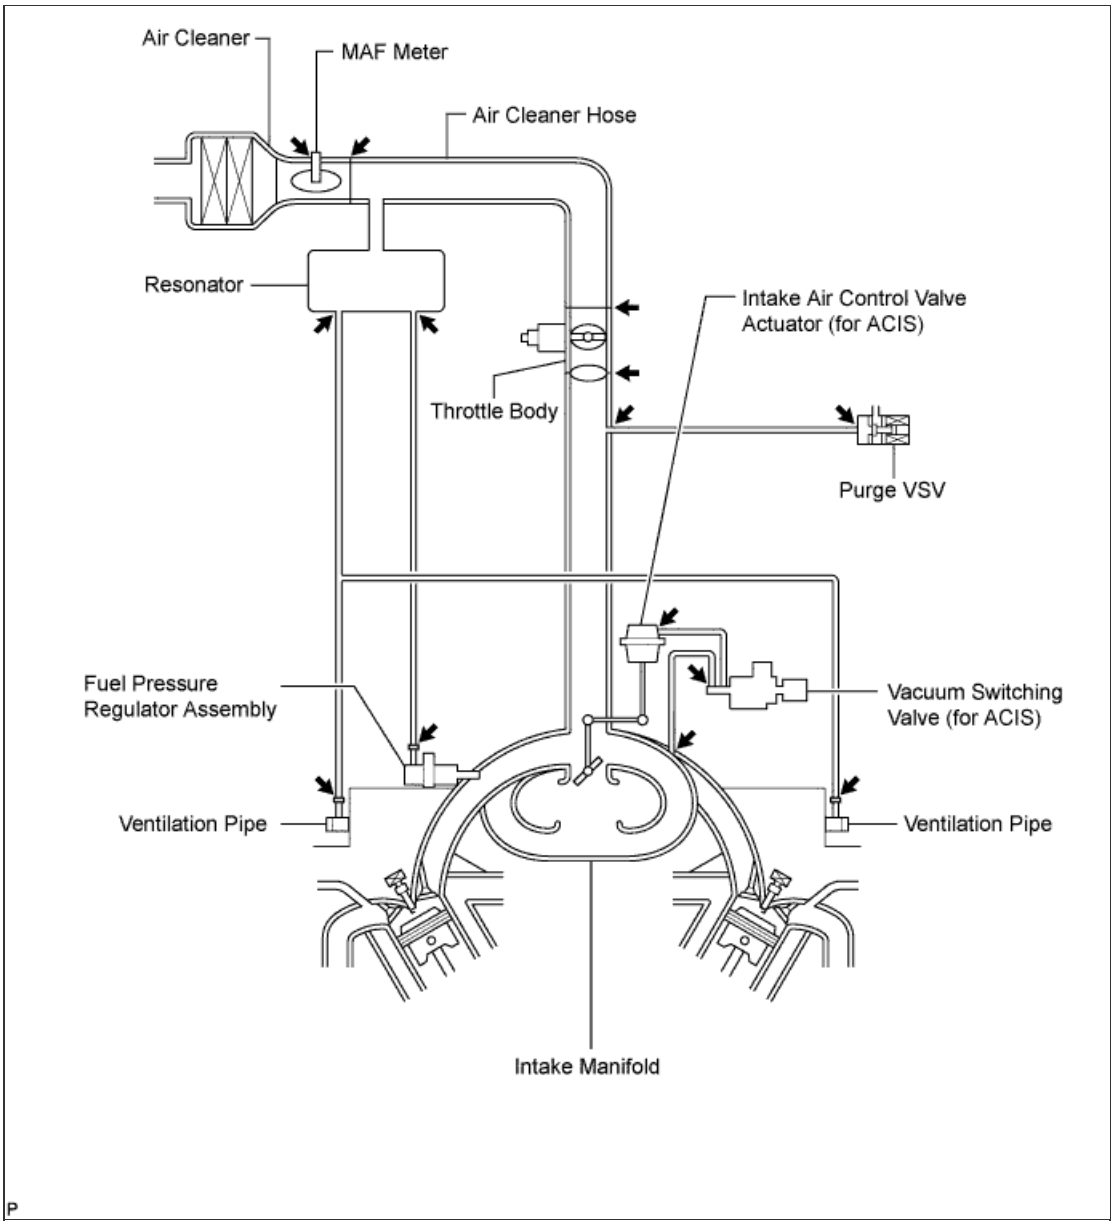
f. Remove the vacuum gauge, and connect the vacuum hose to the actuator.

g. Install the V-bank cover.

3. INSPECT INTAKE AIR CONTROL VALVE

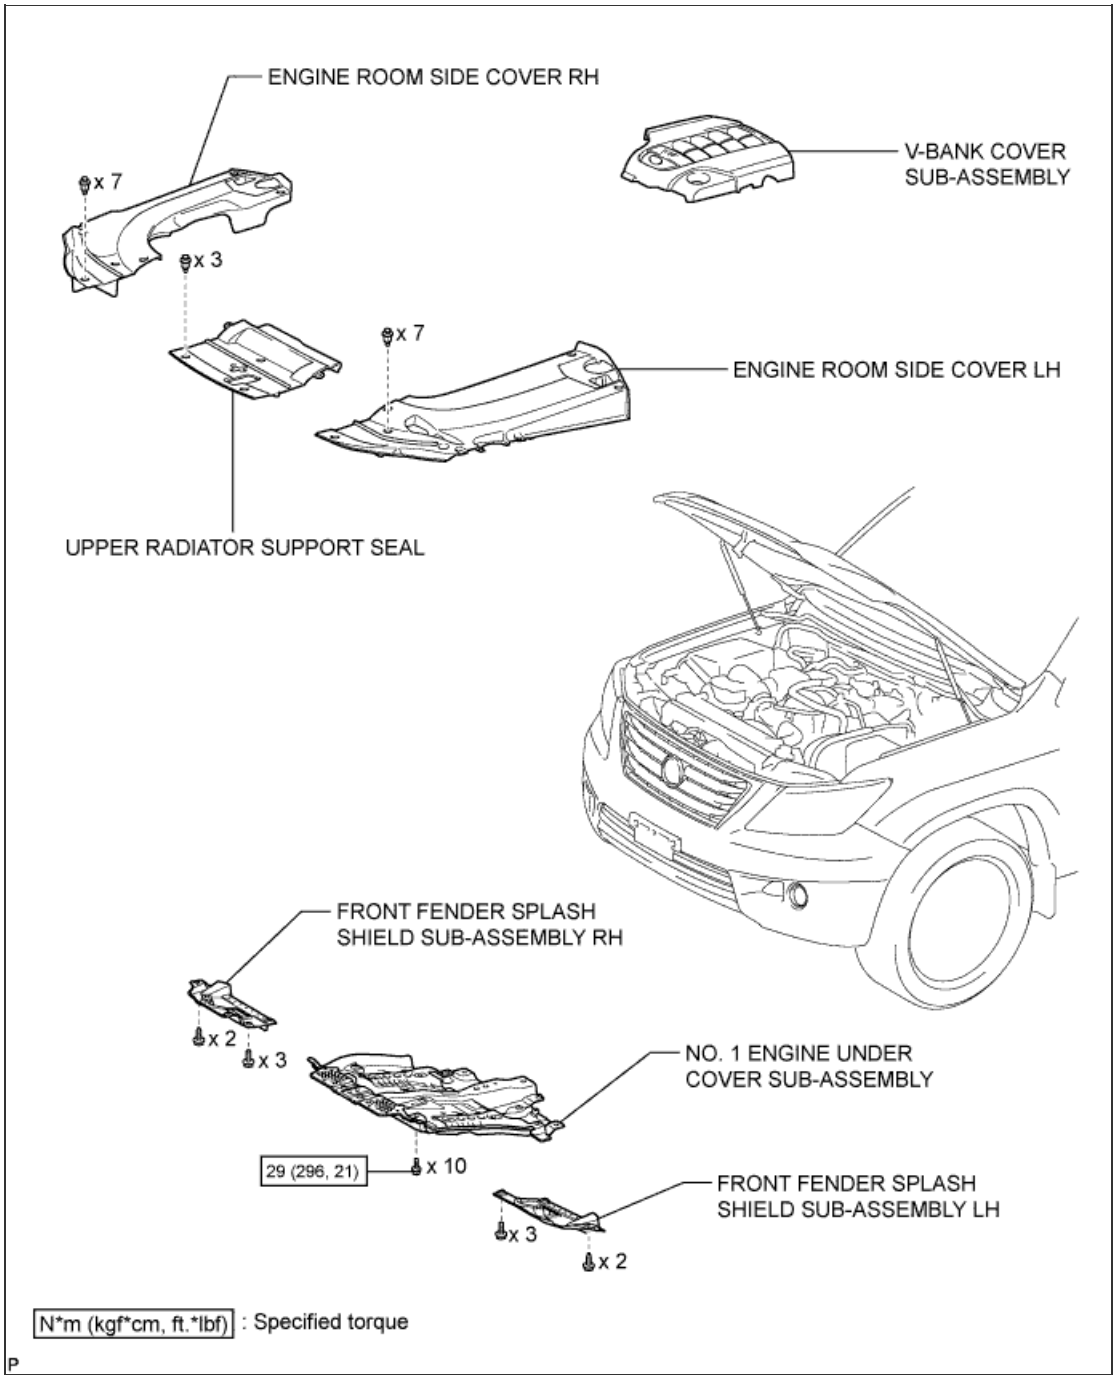
a. Inspect the diaphragm.

i. Using a vacuum pump, apply a vacuum of 27 kPa (200 mmHg, 7.85 in.Hg). Check that the lever moves.
If the result is not as specified, replace the intake air surge tank.

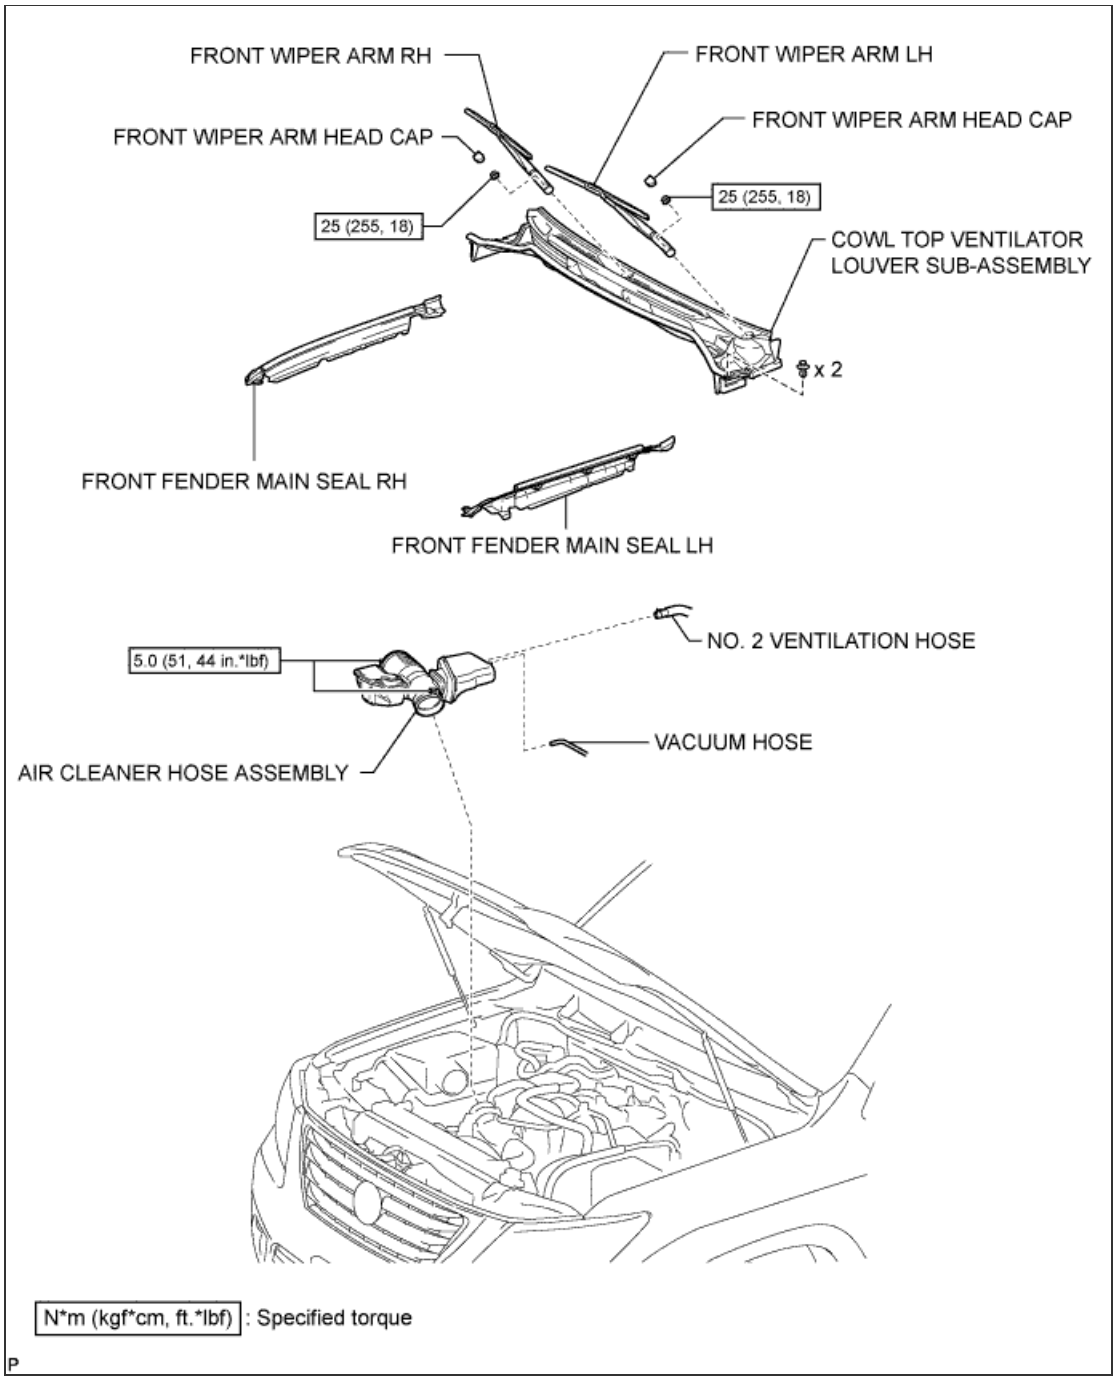


4. CHECK AIR INDUCTION SYSTEM

HINT:



The illustration shows the areas that may draw in secondary air, which could lead to idling problems.



a. Check that the hoses are installed correctly.

b. Check for cracks, etc. in the hoses.

for Preparation Click here

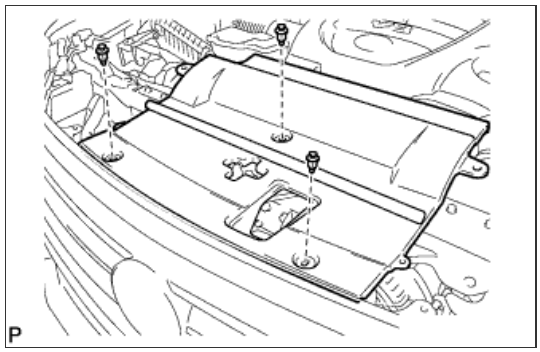
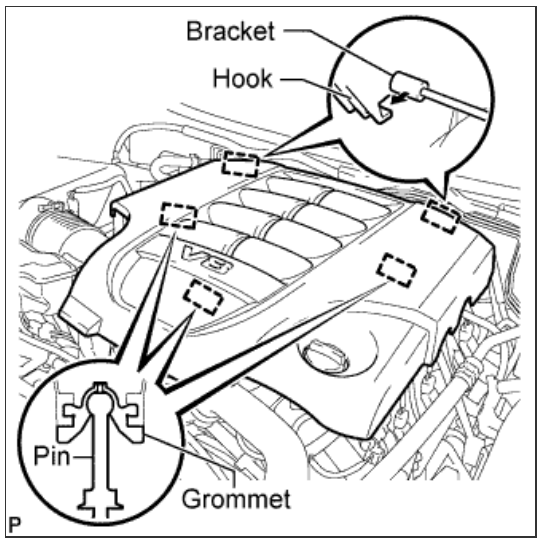
1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.



2. REMOVE ENGINE ROOM SIDE COVER RH

a. Remove the 7 clips and engine room side cover.



3. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 3 clips and upper radiator support seal.

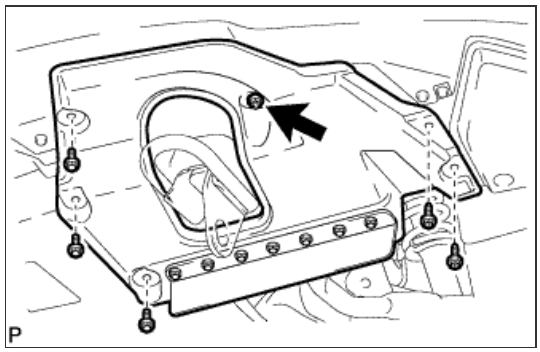
4. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.

5. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable from the cable is reconnected (Click here).



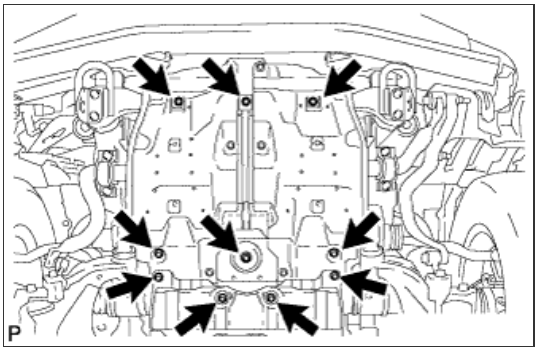
6. REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

a. Remove the cowl top ventilator louver (Click here).

7. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and 2 screws.

b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.

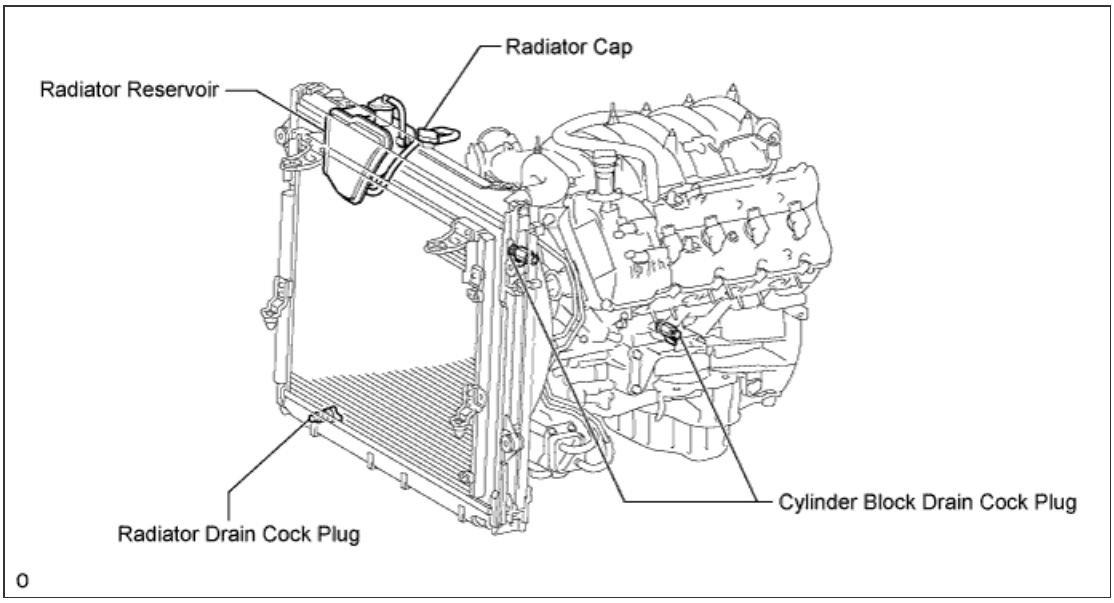


8. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

9. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY



a. Remove the 10 bolts and No. 1 engine under cover.

10. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Loosen the radiator drain cock plug.

HINT:

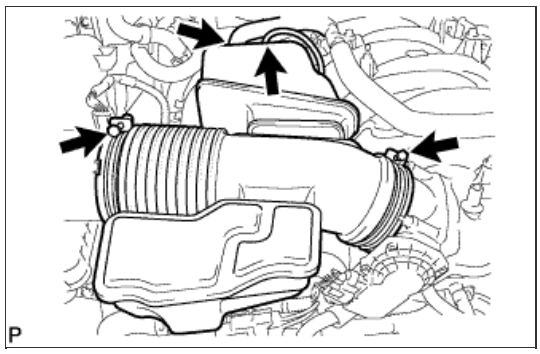
Collect the coolant in a container and dispose of it according to the regulations in your area.

b. Remove the radiator cap. Then drain the coolant from the radiator.

c. Loosen the 2 cylinder block drain cock plugs. Then drain the coolant from the engine.

d. Tighten the 2 cylinder block drain cock plugs.

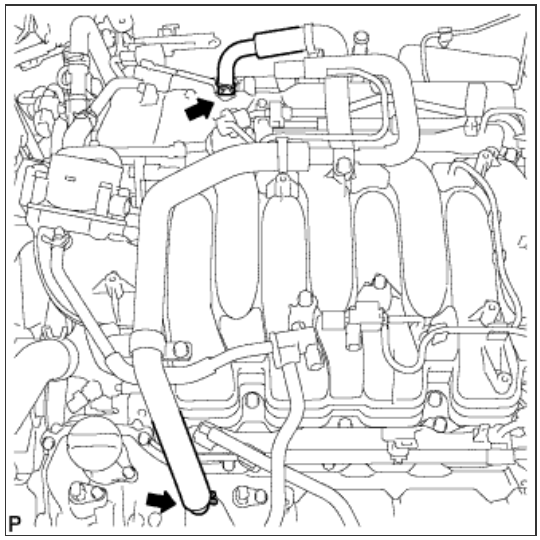
Torque:
13 N*m{ 130 kgf*cm , 10 ft.*lbf }



e. Tighten the radiator drain cock plug by hand.

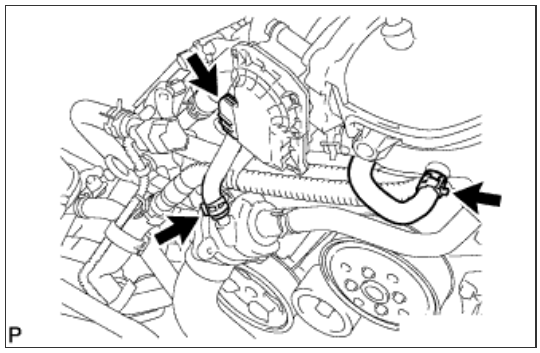
11. REMOVE AIR CLEANER HOSE ASSEMBLY

a. Disconnect the vacuum hose and No. 2 ventilation hose.



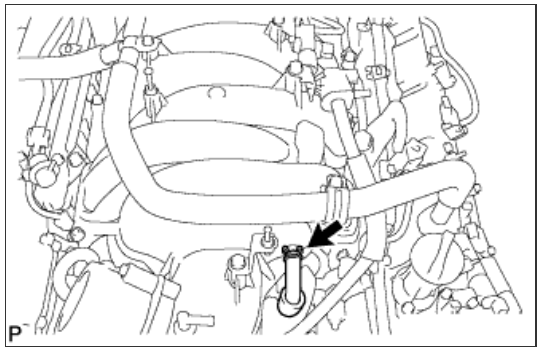
b. Loosen the 2 hose clamps.

c. Remove the air cleaner hose.



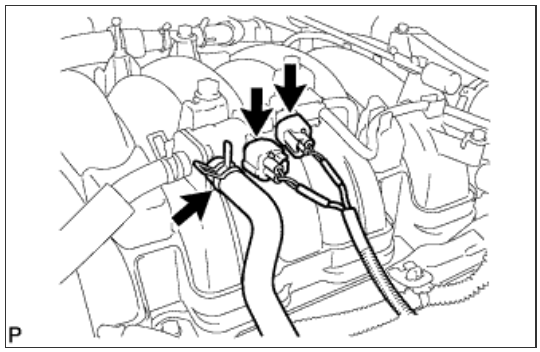
12. REMOVE INTAKE MANIFOLD

a. Disconnect the ventilation hose from the ventilation pipe of the cylinder head cover LH and RH.

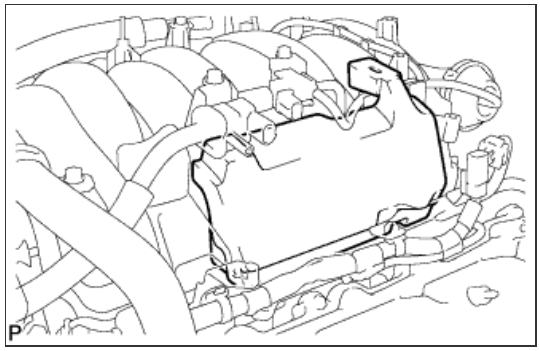


b. Disconnect the 2 water by-pass hoses.

c. Disconnect the throttle body connector.

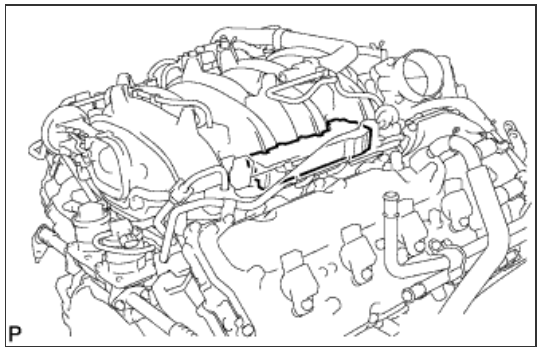


d. Disconnect the No. 1 ventilation hose.

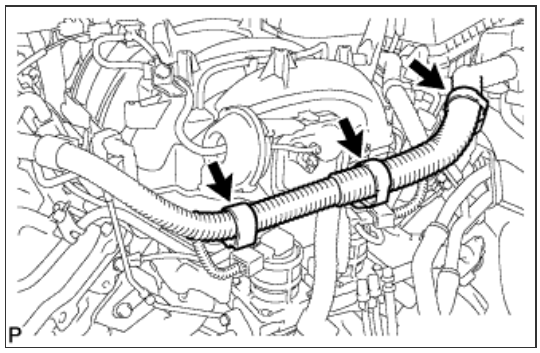


e. Disconnect the purge VSV connector.

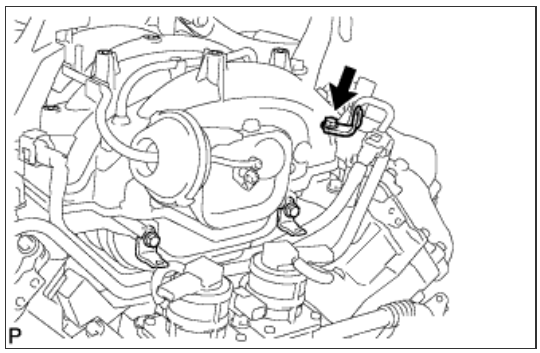
f. Disconnect the purge line hose from the purge VSV.



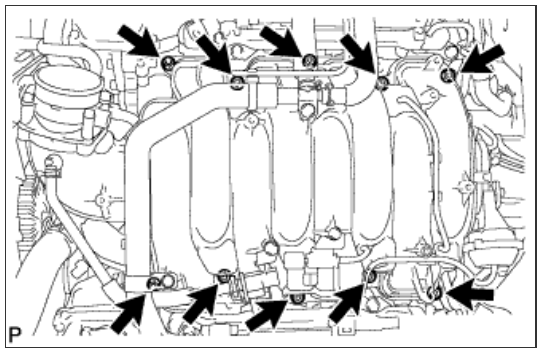
g. Disconnect the vacuum switching valve connector (for ACIS).



h. Remove the No. 1 engine cover sub-assembly.

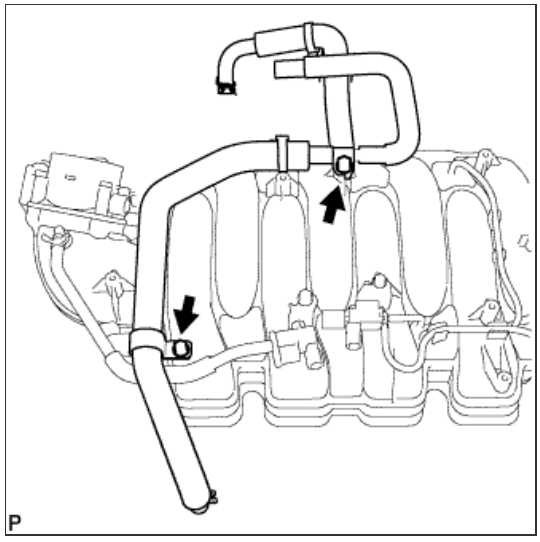


i. Remove the No. 3 engine cover.

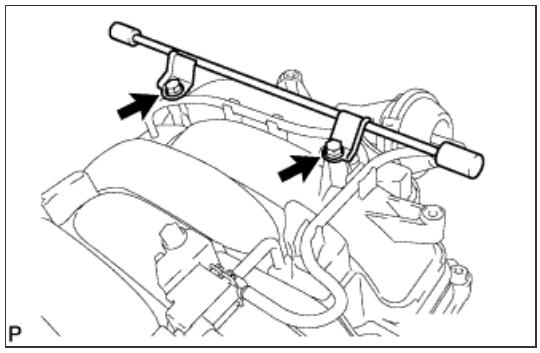


j. Disconnect the 3 wire clamps from the 3 wire brackets.

k. Remove the bolt and wire bracket from the intake manifold.

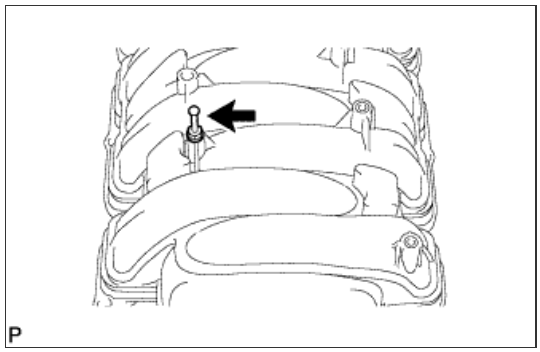


l. Remove the 2 nuts, 8 bolts, intake manifold and 2 gaskets.



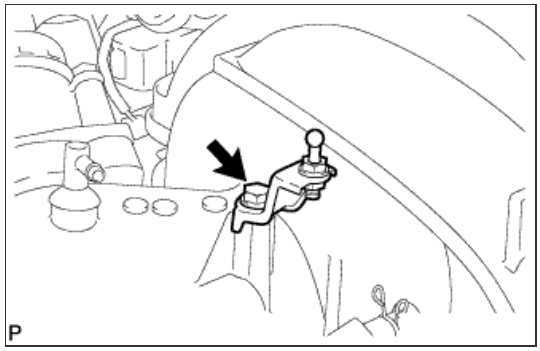
13. REMOVE VENTILATION HOSE ASSEMBLY

a. Remove the 2 bolts and ventilation hose from the intake manifold.



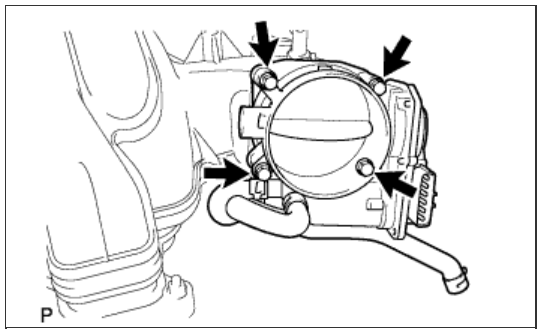
14. REMOVE NO. 1 V-BANK COVER BRACKET

a. Remove the 2 bolts and bracket.



15. REMOVE V-BANK COVER BOLT

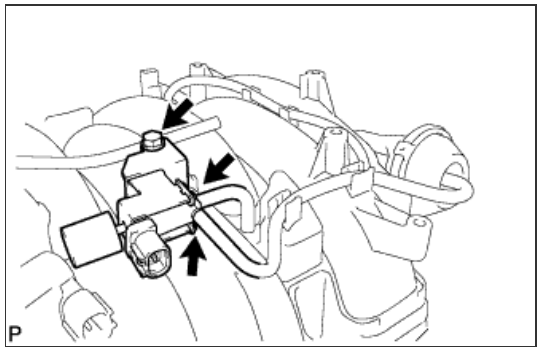
a. Remove the cover bolt from the intake manifold.



16. REMOVE NO. 2 V-BANK COVER BRACKET SUB-ASSEMBLY

a. Remove the bolt and bracket.

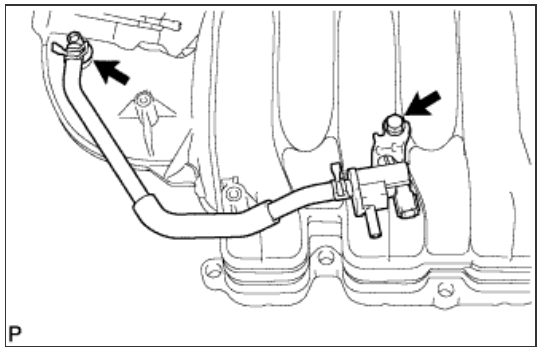
17. REMOVE THROTTLE BODY ASSEMBLY



a. Remove the 4 bolts, throttle body and gasket.

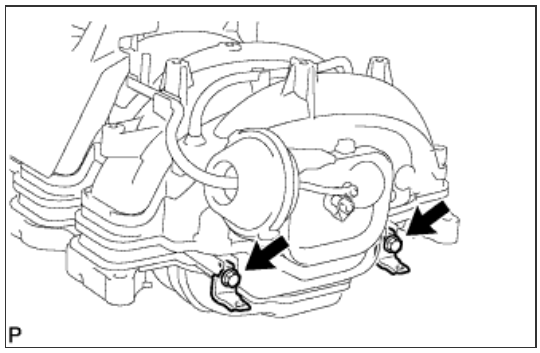
18. REMOVE VACUUM SWITCHING VALVE ASSEMBLY (for ACIS)

a. Disconnect the 2 vacuum hoses from the vacuum switching valve.



b. Remove the bolt and vacuum switching valve.

19. REMOVE PURGE VSV

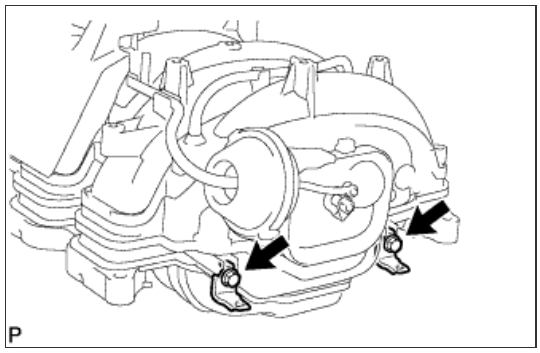


a. Disconnect the purge line hose from the intake manifold.

b. Remove the bolt and purge VSV.

20. REMOVE WIRE HARNESS CLAMP BRACKET

a. Remove the 2 bolts and 2 wire harness clamp brackets.

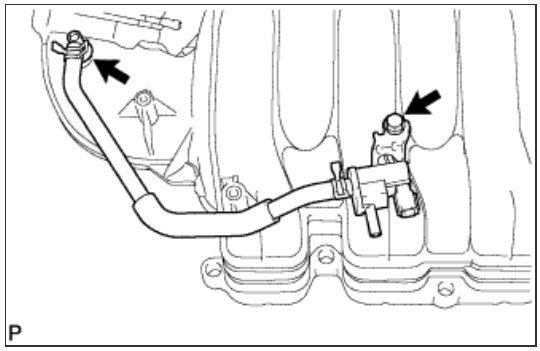


for Preparation Click here

1. INSTALL WIRE HARNESS CLAMP BRACKET

a. Install the 2 wire harness clamp brackets with the 2 bolts.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

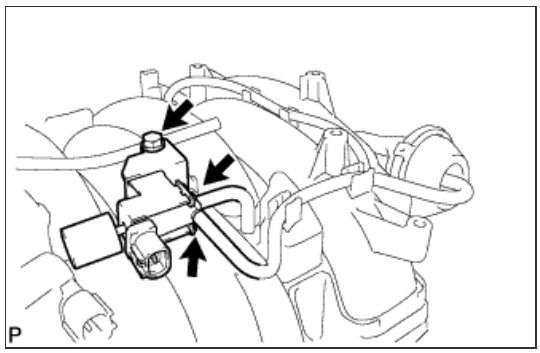


2. INSTALL PURGE VSV

a. Connect the purge line hose to the intake manifold.

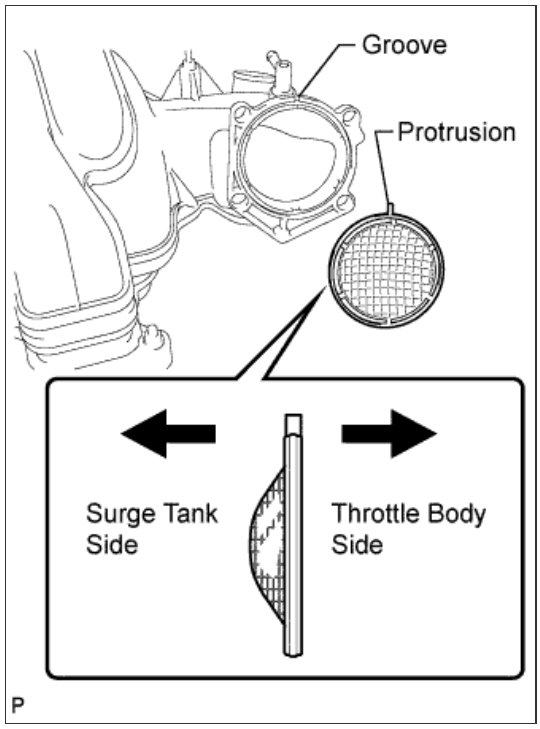
b. Install the purge VSV to the intake manifold with the bolt.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



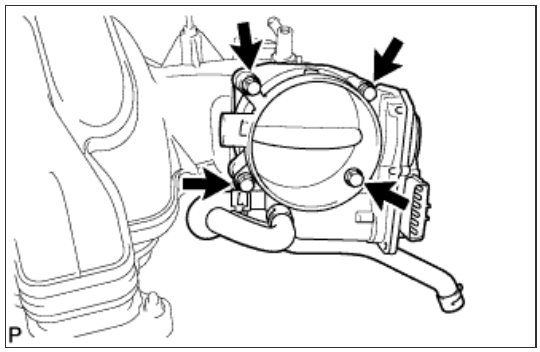
3. INSTALL VACUUM SWITCHING VALVE ASSEMBLY (for ACIS)

a. Install the vacuum switching valve to the intake manifold with the bolt.



Torque:
9.0 N*m{ 92 kgf*cm , 80 in.*lbf }

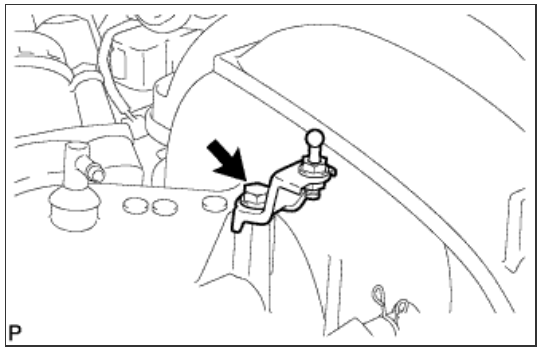
b. Connect the 2 vacuum hoses to the vacuum switching valve.



4. INSTALL THROTTLE BODY ASSEMBLY

a. Align the protrusion of a new gasket with the groove of the intake manifold, and install the gasket.

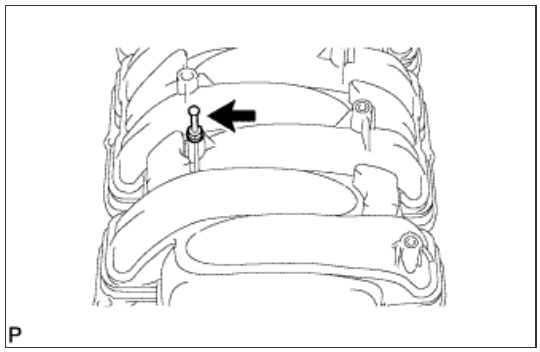
b. Install the throttle body with the 4 bolts.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

5. INSTALL NO. 2 V-BANK COVER BRACKET SUB-ASSEMBLY

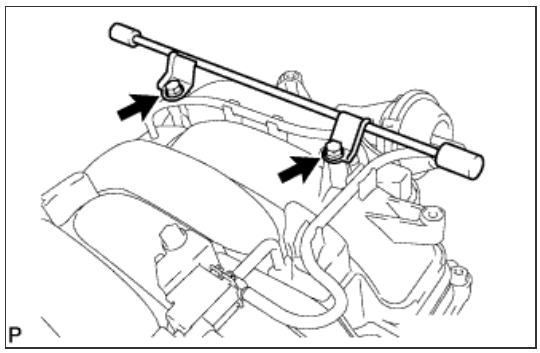
a. Install the bracket with the bolt.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

6. INSTALL V-BANK COVER BOLT

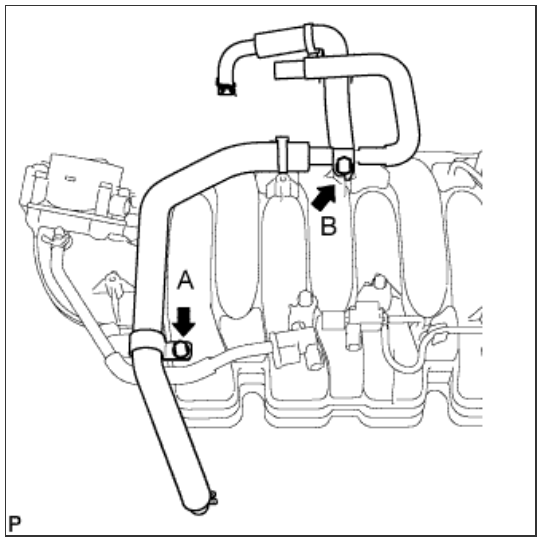
a. Install the cover bolt to the intake manifold.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

7. INSTALL NO. 1 V-BANK COVER BRACKET

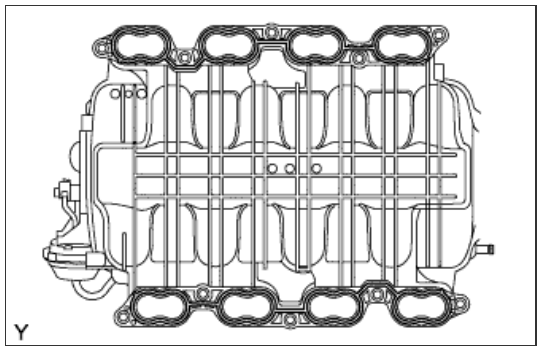
a. Install the bracket with the 2 bolts.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

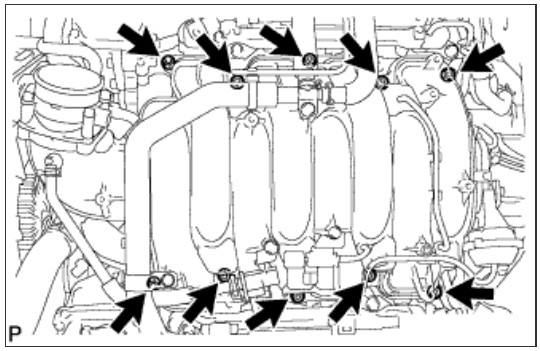
8. INSTALL VENTILATION HOSE ASSEMBLY

a. Install the ventilation hose to the intake manifold with the 2 bolts.



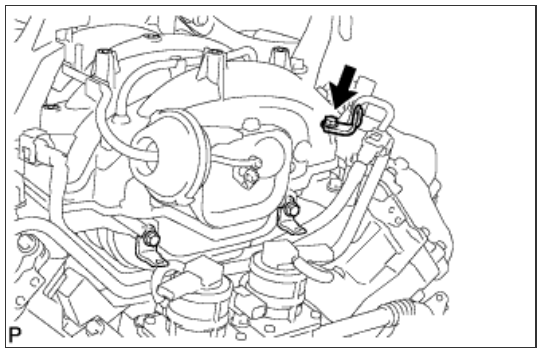
Torque:
for bolt A:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
for bolt B:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

9. INSTALL INTAKE MANIFOLD



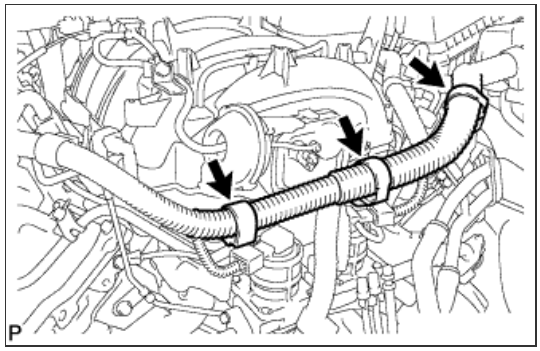
a. Place 2 new gaskets on the intake manifold.

b. Place the intake manifold on the cylinder head.

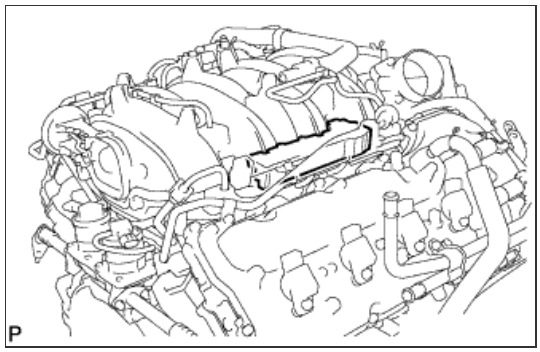


c. Install and uniformly tighten the 8 bolts and 2 nuts in several steps.

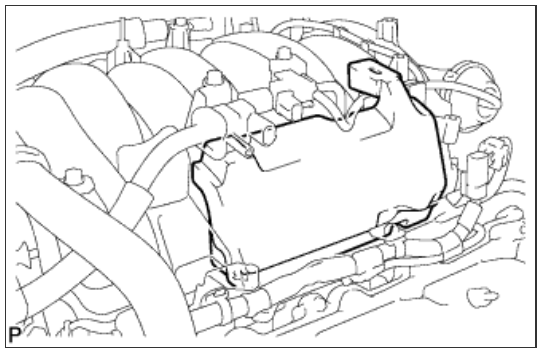
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



d. Install the wire bracket to the intake manifold with the bolt.

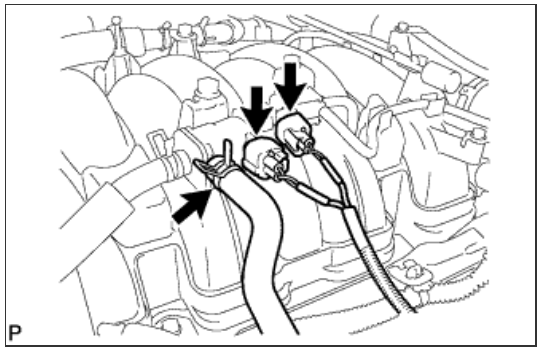


Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

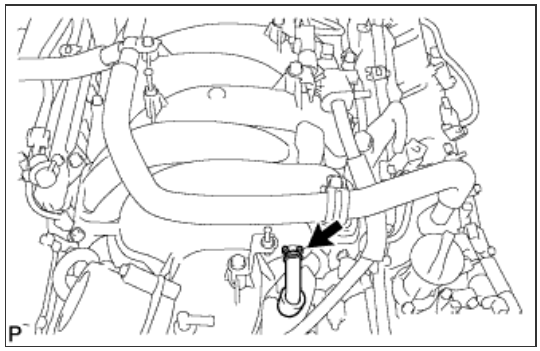


e. Connect the 3 wire clamps to the 3 wire brackets.

f. Install the No. 3 engine cover.



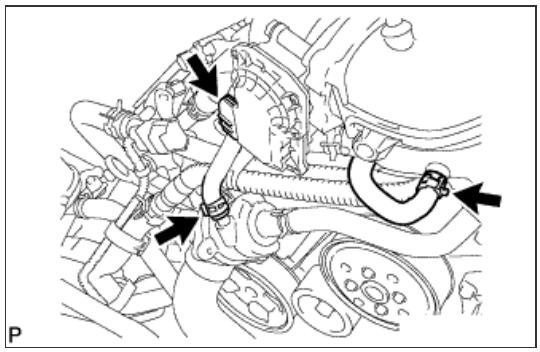
g. Install the No. 1 engine cover sub-assembly.



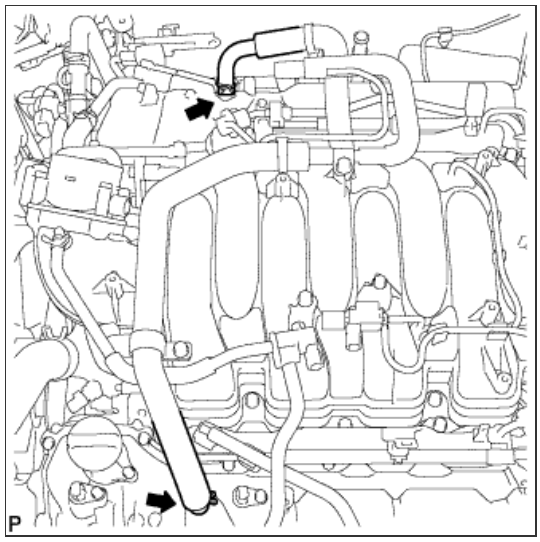
h. Connect the purge VSV connector.

i. Connect the purge line hose to the purge VSV.

j. Connect the vacuum switching valve connector (for ACIS).



k. Connect the No. 1 ventilation hose.

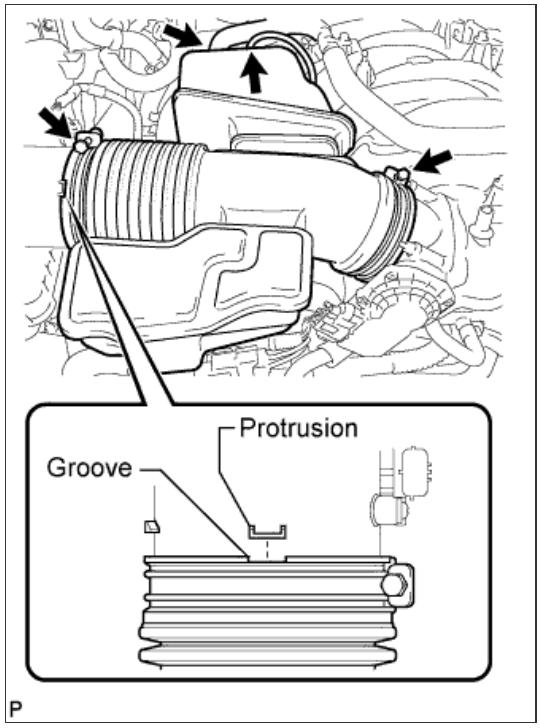


l. Connect the 2 water by-pass hoses.

m. Connect the throttle body connector.

n. Connect the ventilation hose to the ventilation pipe of the cylinder head cover LH and RH.

10. INSTALL AIR CLEANER HOSE ASSEMBLY



a. Install the air cleaner hose so that the protrusion of the air cleaner cap aligns with the groove of the hose as shown in the illustration.

b. Tighten the 2 clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

c. Connect the vacuum hose.

d. Connect the No. 2 ventilation hose.

11. ADD ENGINE COOLANT

a. Add engine coolant.

Standard Capacity:

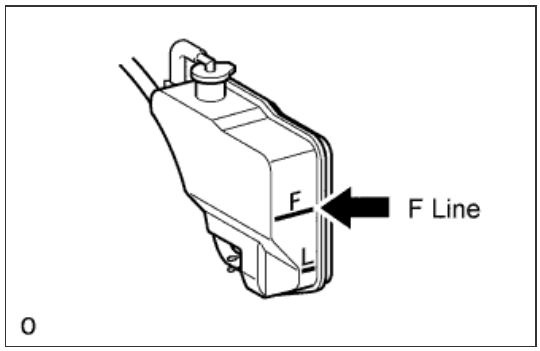
Item	Specified Condition
with transmission oil cooler	16.7 liters (17.6 US qts, 14.7 Imp. qts)
without transmission oil cooler	16.2 liters (17.1 US qts, 14.3 Imp. qts)

NOTICE:

Do not substitute plain water for engine coolant.

HINT:

TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).



b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the reservoir cap.

d. Press the No. 1 and No. 2 radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Start the engine and warm it up until the thermostat opens.

NOTICE:

Switch off the A/C.

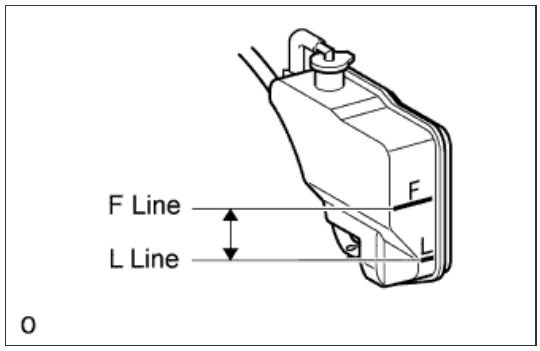
g. Maintain the engine speed at 2000 to 2500 rpm.

NOTICE:

- **Make sure that the radiator reservoir still has some coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**
- **Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the F line.**
- **Run the engine at 2000 rpm until the coolant level has stabilized.**

h. Press the No. 1 and No. 2 radiator hoses several times by hand to bleed air.

CAUTION:



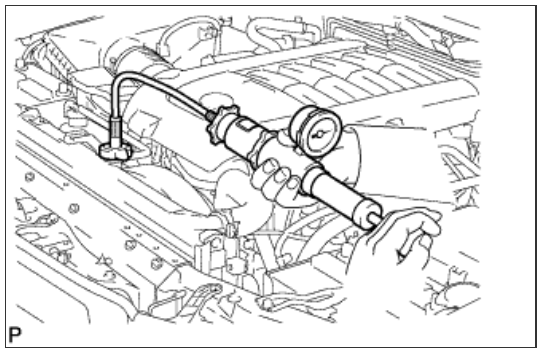
- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the fan.**

i. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

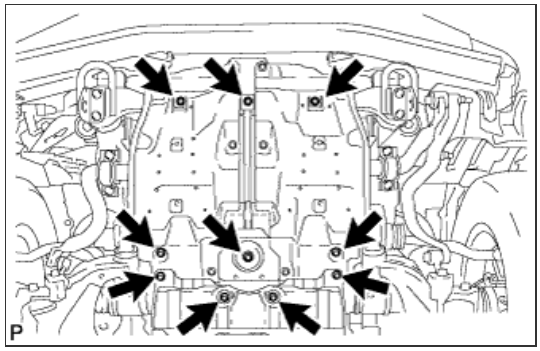
j. Check that the coolant level is between the F and L lines.
If the coolant level is below the L line, repeat all of the procedures above.
If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.



12. INSPECT FOR COOLANT LEAK

a. Fill the radiator with coolant and attach a radiator cap tester.

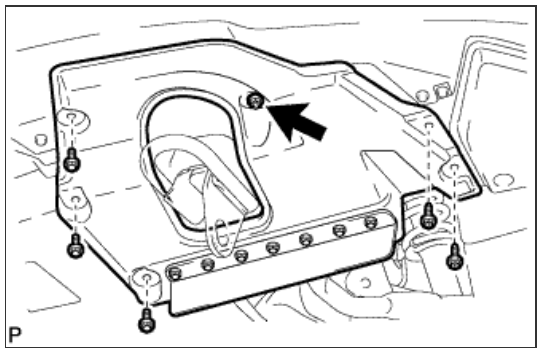
b. Warm up the engine.



c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.

13. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.



Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

14. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the 3 bolts and 2 screws.

15. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

16. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

a. Install the cowl top ventilator louver (Click here).

17. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable from the cable is reconnected (Click here).

18. CHECK THROTTLE BODY ASSEMBLY

a. Check the throttle control motor operating sounds.

i. Turn the engine switch on (IG).

ii. When depressing the accelerator pedal, check the operating sound of the running motor. Make sure that no friction noises are emitted from the motor.
If friction noise exists, replace the throttle body.

b. Check the throttle position sensor.

i. Connect the intelligent tester to the DLC3.

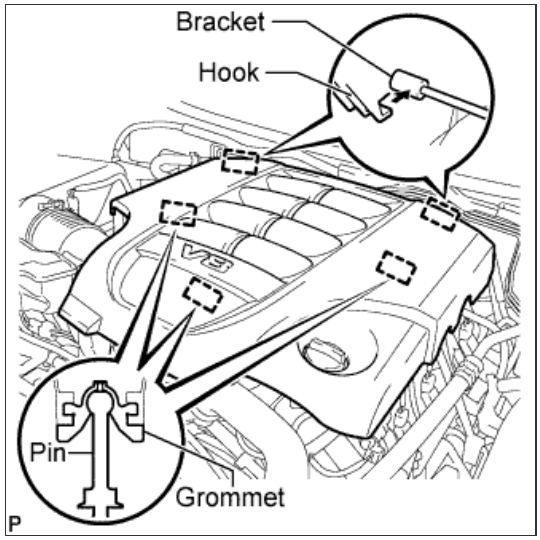
ii. Turn the engine switch on (IG).

iii. Turn the intelligent tester main switch on.

iv. Enter the following menus: Powertrain / Engine and ECT / Data List / All Data / Throttle Sensor Position.

v. Depress the accelerator pedal. When the throttle valve is fully opened, check that the value of "Throttle Sensor Position" is within the specification.

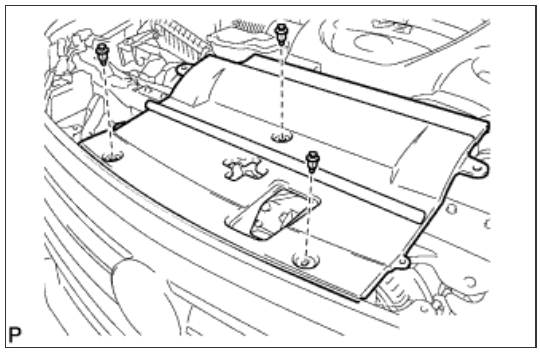
Standard throttle valve opening percentage:
60% or more



HINT:

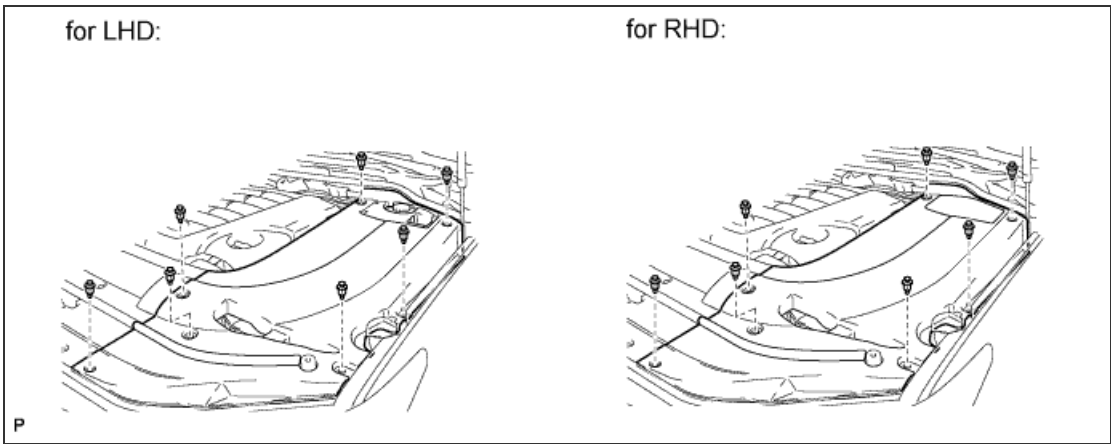
When checking the standard throttle valve opening percentage, the shift lever should be in N.

If the percentage is less than 60%, replace the throttle body assembly.



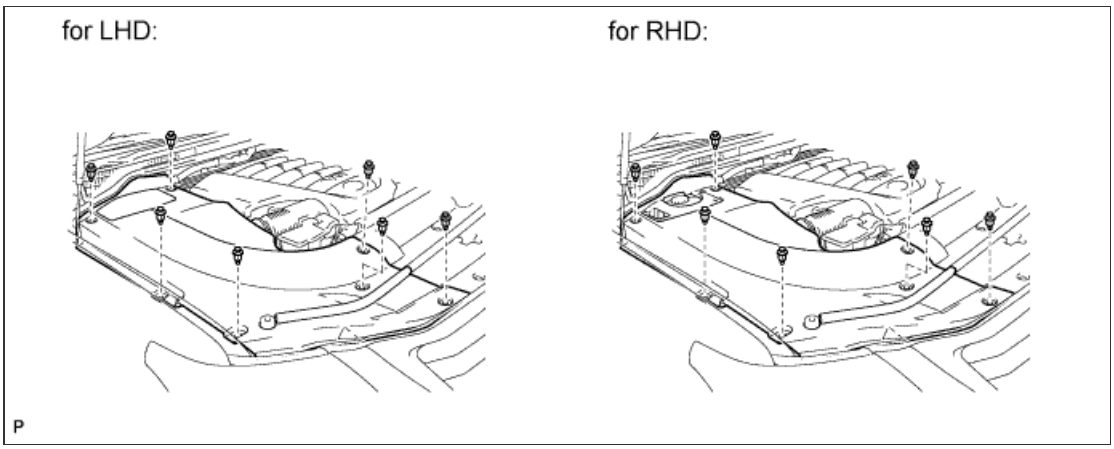
19. INSTALL V-BANK COVER SUB-ASSEMBLY

a. Attach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.



20. INSTALL UPPER RADIATOR SUPPORT SEAL

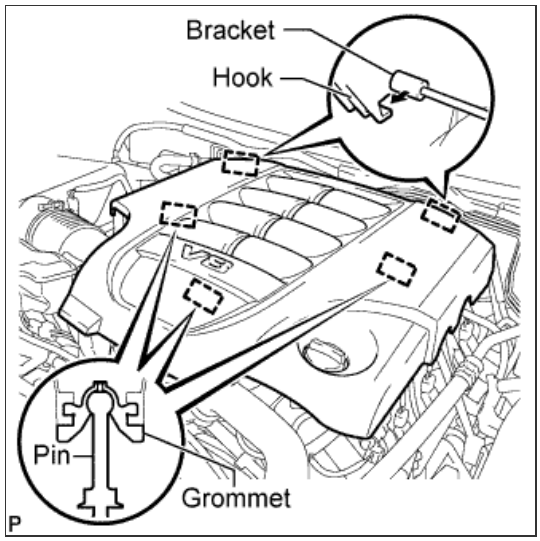
a. Install the upper radiator support seal with the 3 clips.



21. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.

22. INSTALL ENGINE ROOM SIDE COVER RH



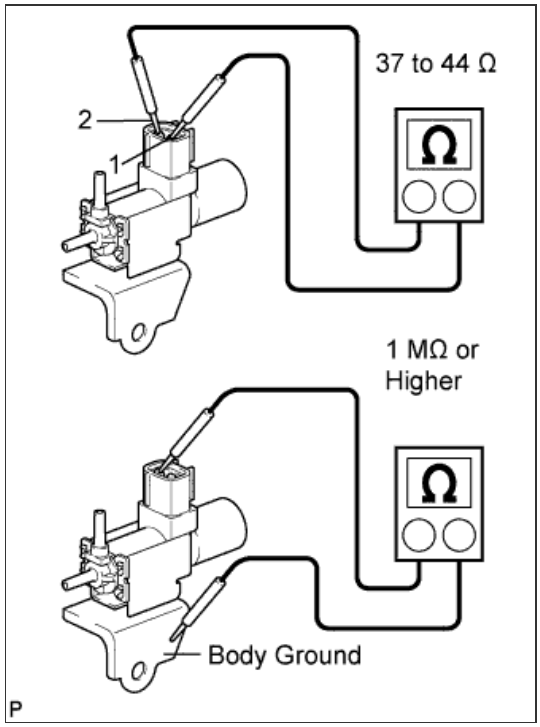
a. Install the engine room side cover with the 7 clips.

for Preparation Click here

1. REMOVE V-BANK COVER SUB-ASSEMBLY

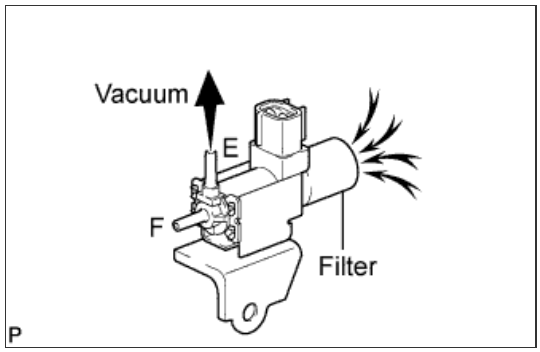
a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.

2. INSPECT VACUUM SWITCHING VALVE ASSEMBLY (for ACIS)



a. Disconnect the vacuum switching valve connector.

b. Measure the resistance according to the value(s) in the table below.

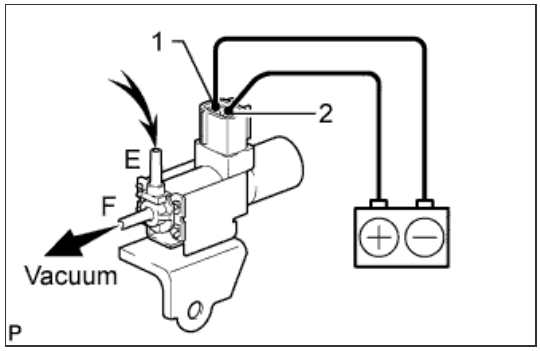


Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	20°C (68°F)	37 to 44 Ω
1 - Body ground	Always	1 MΩ or higher
2 - Body ground		

If the result is not as specified, replace the vacuum switching valve assembly.

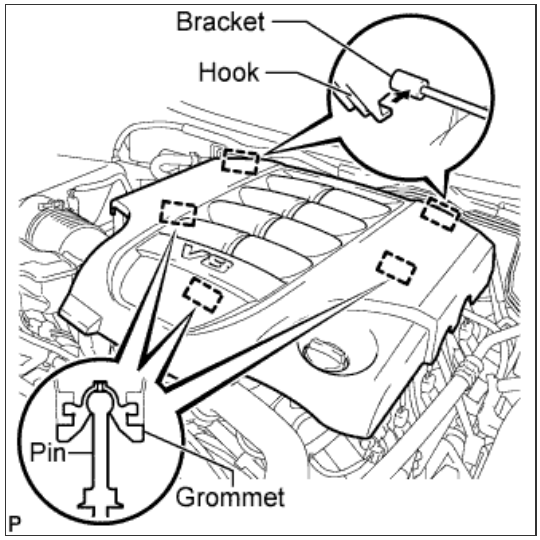
c. When applying vacuum to port E, check that air is sucked into the filter.
If the result is not as specified, replace the vacuum switching valve assembly.



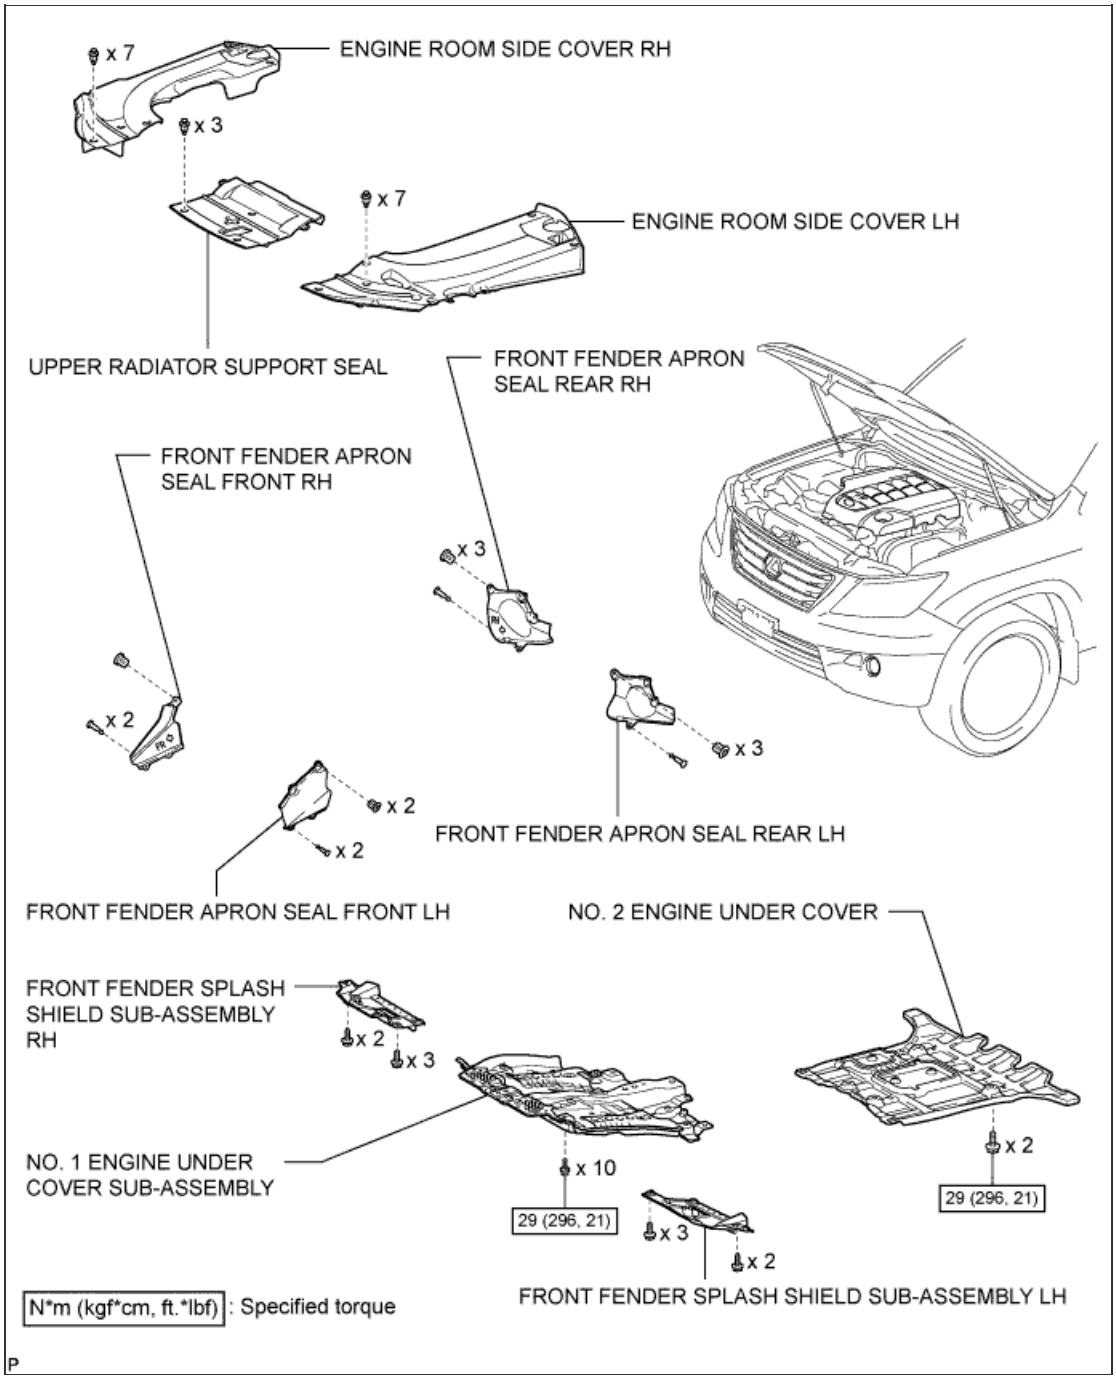
d. Apply battery voltage to the connector, and check the VSV operation.

OK:

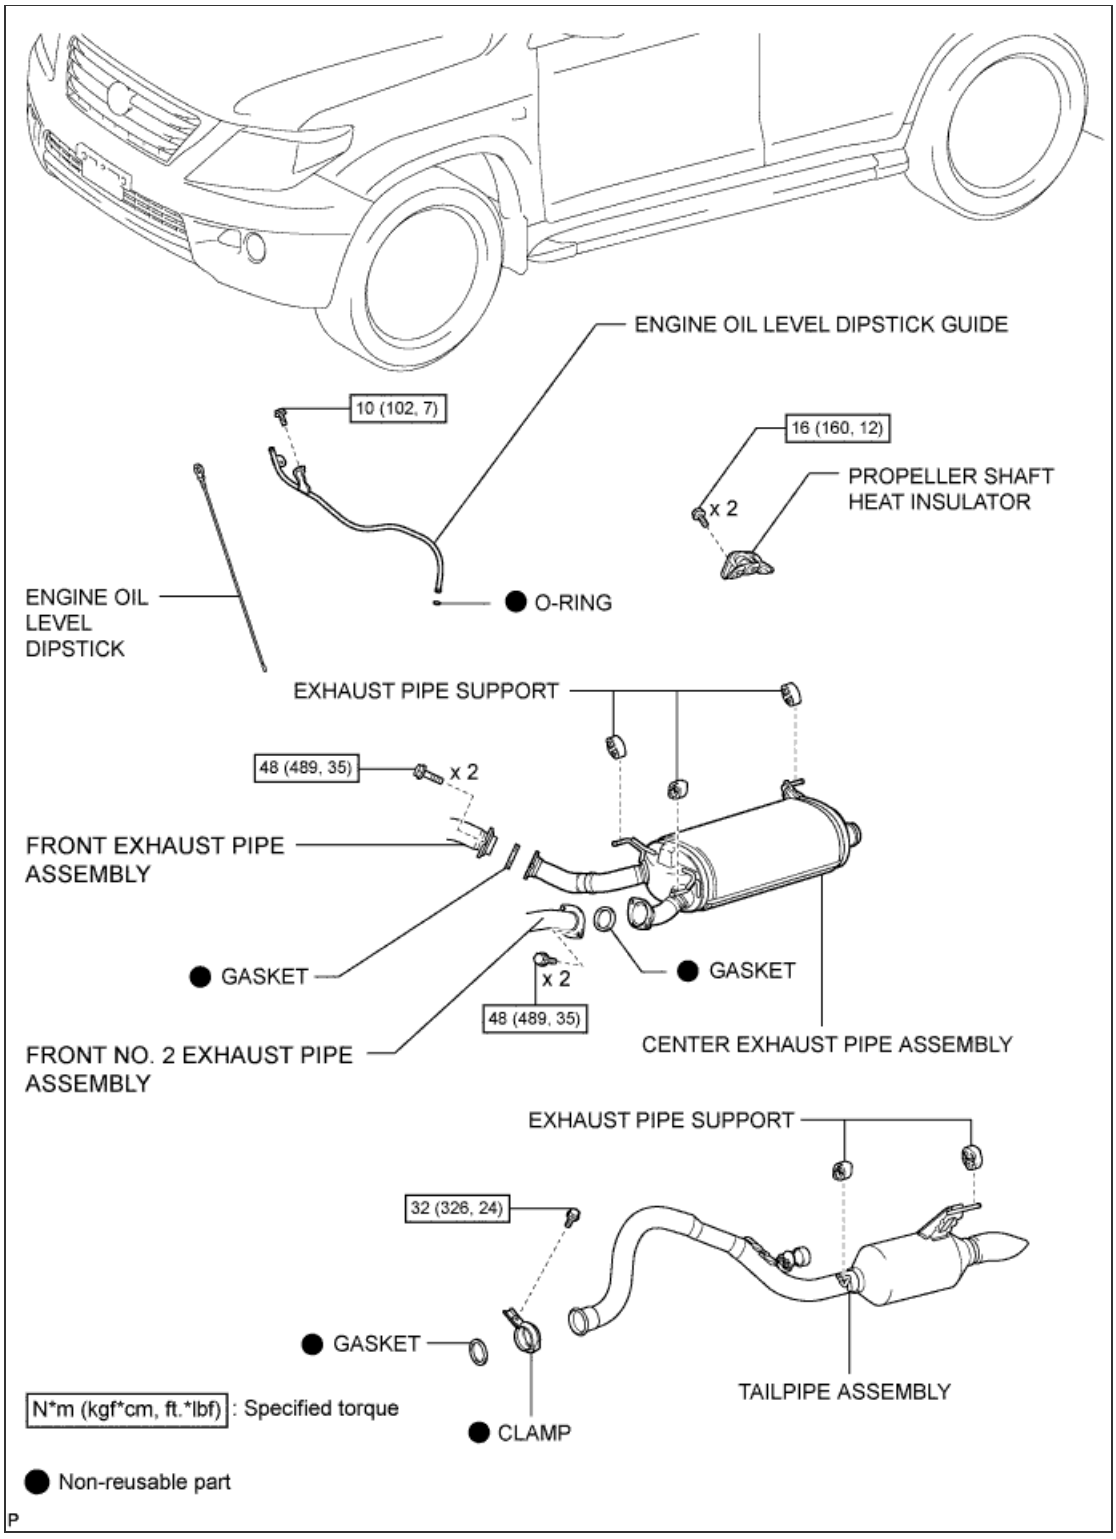
Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Air is sucked into port E when a vacuum is applied to port F



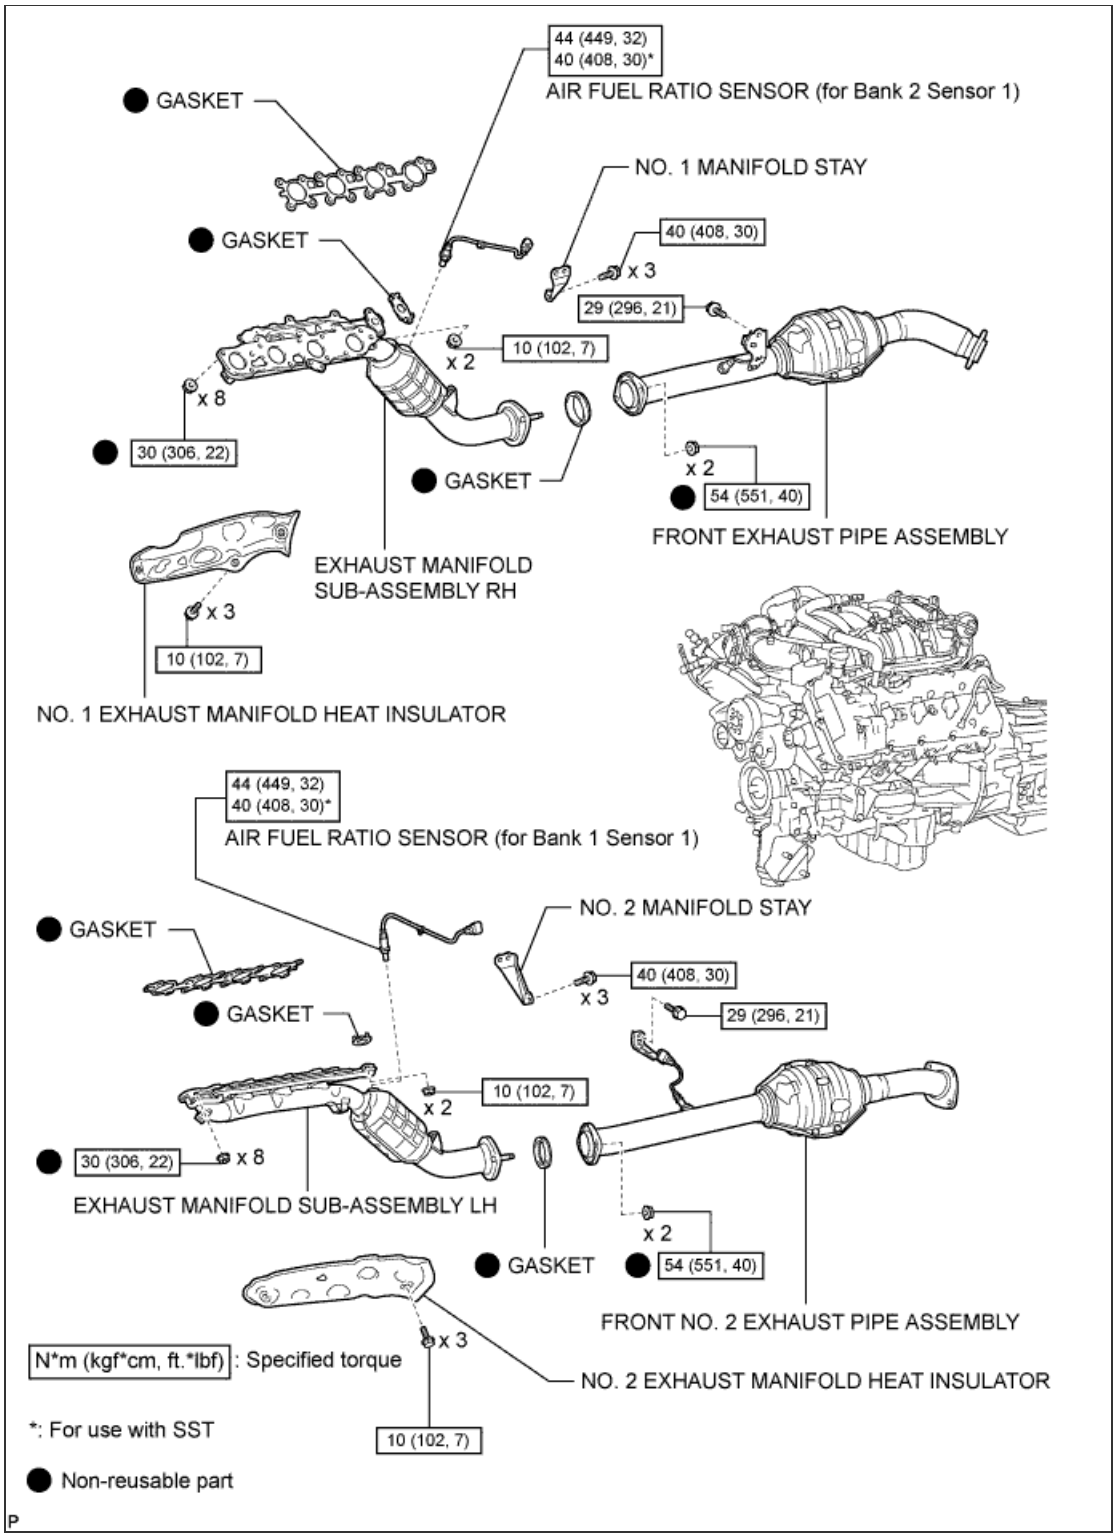
If the result is not as specified, replace the vacuum switching valve assembly.



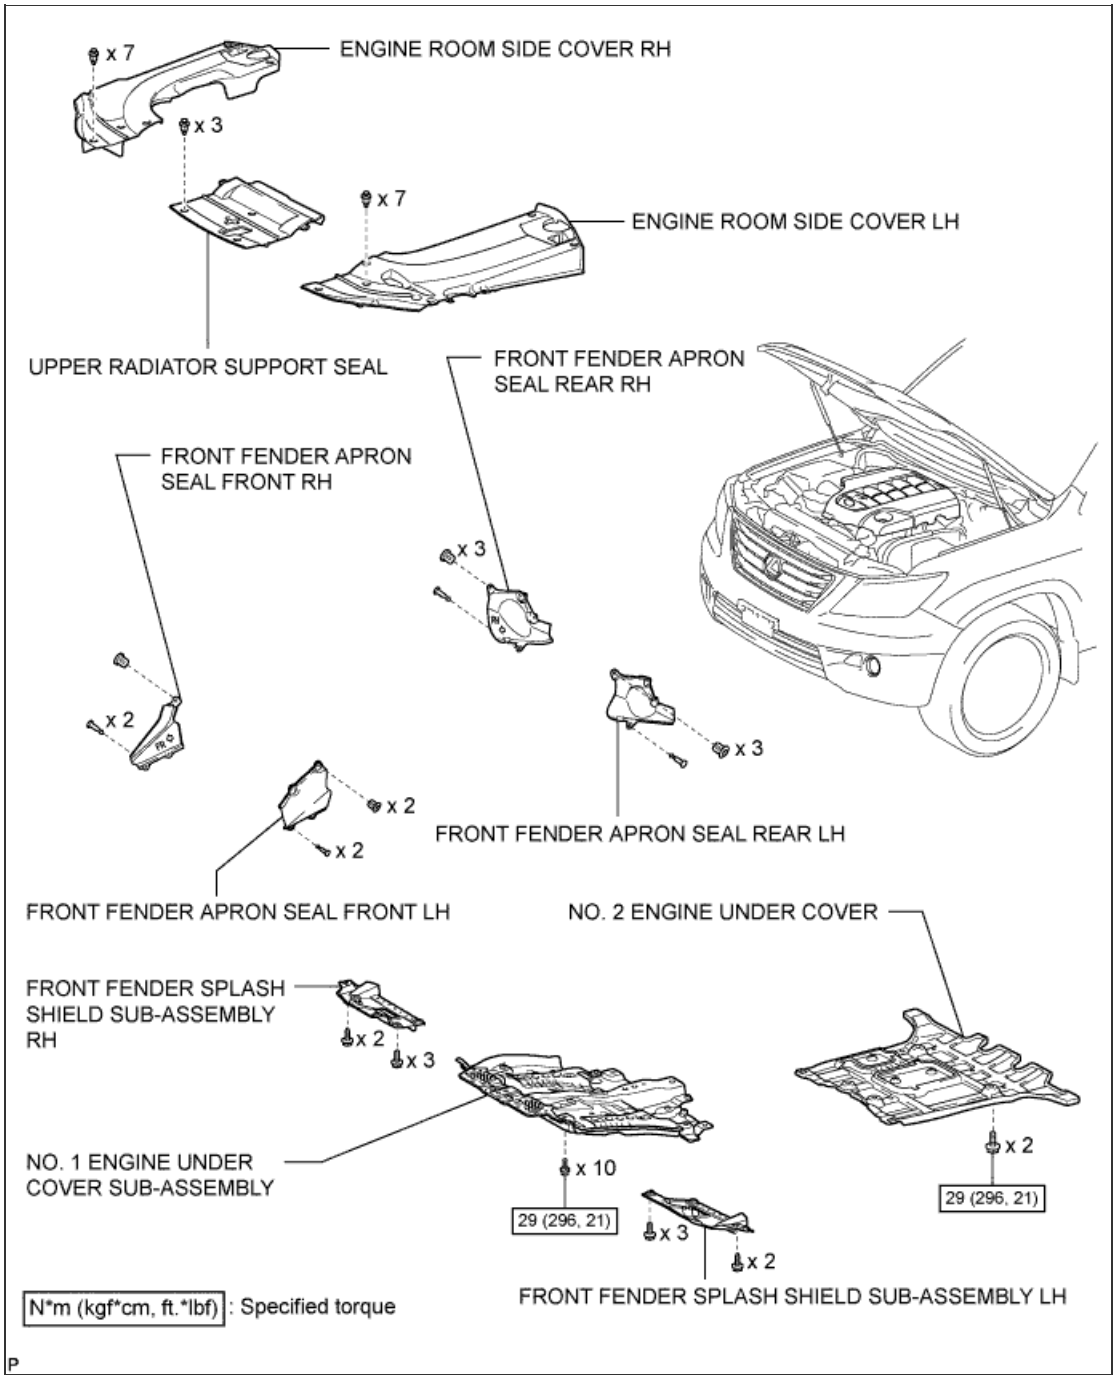
e. Connect the vacuum switching valve connector.



3. INSTALL V-BANK COVER SUB-ASSEMBLY



a. Attach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.



for Preparation Click here

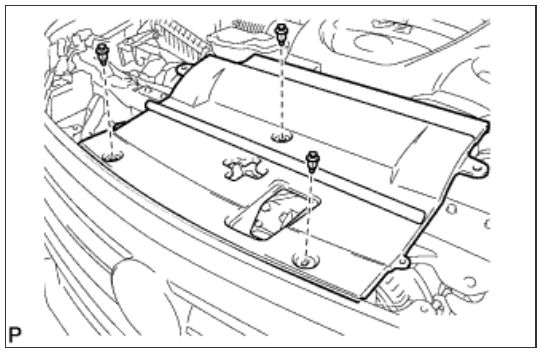
1. REMOVE ENGINE ROOM SIDE COVER LH

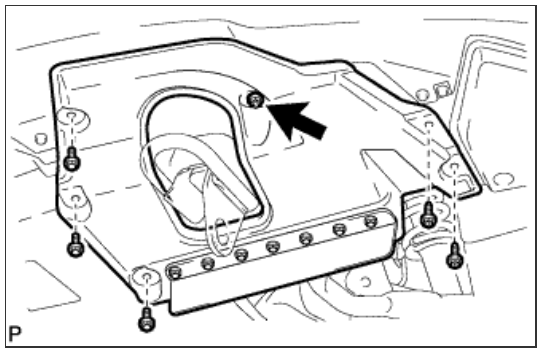
a. Remove the 7 clips and engine room side cover.



2. REMOVE ENGINE ROOM SIDE COVER RH

a. Remove the 7 clips and engine room side cover.

3. REMOVE UPPER RADIATOR SUPPORT SEAL

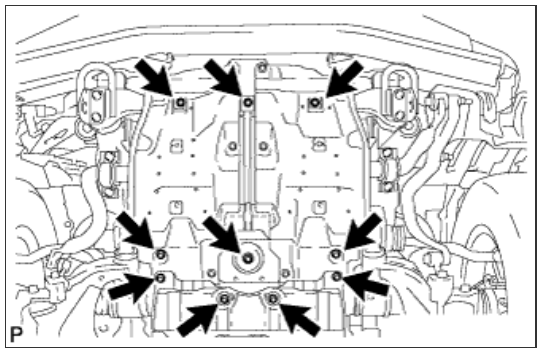


a. Remove the 3 clips and upper radiator support seal.

4. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and 2 screws.

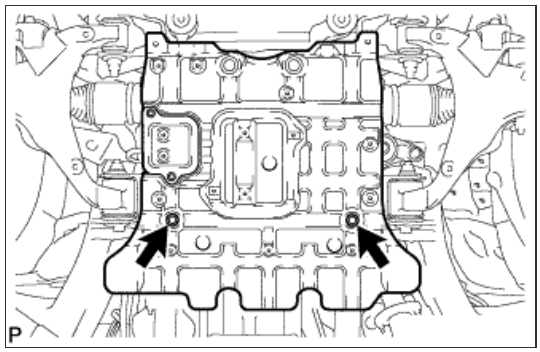
b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



5. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

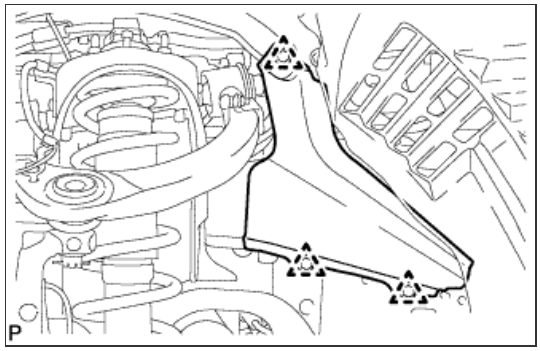
HINT:

Use the same procedures described for the LH side.



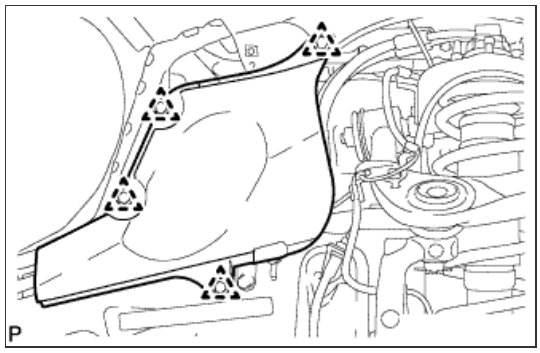
6. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and No. 1 engine under cover.



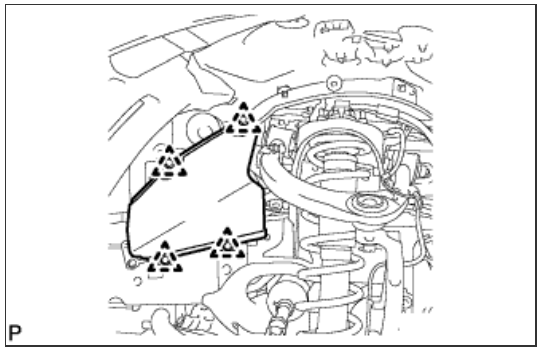
7. REMOVE NO. 2 ENGINE UNDER COVER

a. Remove the 2 bolts and No. 2 engine under cover.



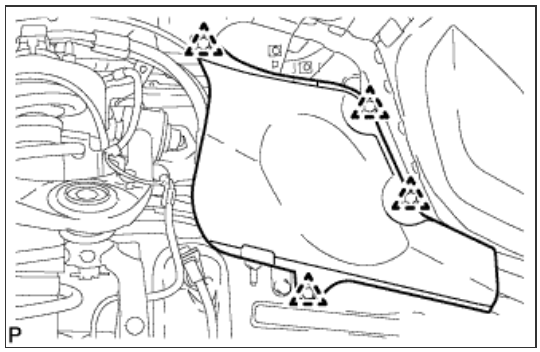
8. REMOVE FRONT FENDER APRON SEAL FRONT RH

a. Using a clip remover, remove the 3 clips and fender apron seal.



9. REMOVE FRONT FENDER APRON SEAL REAR RH

a. Using a clip remover, remove the 4 clips and fender apron seal.

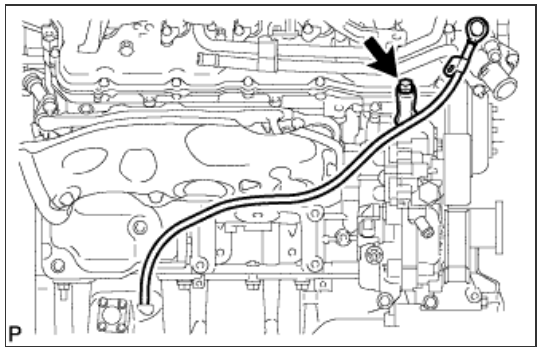


10. REMOVE FRONT FENDER APRON SEAL FRONT LH

a. Using a clip remover, remove the 4 clips and fender apron seal.

11. REMOVE FRONT FENDER APRON SEAL REAR LH

a. Using a clip remover, remove the 4 clips and fender apron seal.



12. REMOVE ENGINE OIL LEVEL DIPSTICK GUIDE

a. Remove the dipstick.

b. Remove the bolt and dipstick guide.

c. Remove the O-ring from the dipstick guide.

13. REMOVE TAILPIPE ASSEMBLY

a. Remove the bolt, clamp and gasket.

b. Remove the tailpipe from the 2 exhaust pipe supports.

c. Remove the bolt and clamp, and then disconnect the tailpipe from the center exhaust pipe.

14. REMOVE CENTER EXHAUST PIPE ASSEMBLY

a. Remove the 4 bolts.

b. Remove the center exhaust pipe from the 3 exhaust pipe supports.

c. Remove the 2 gaskets from the front exhaust pipe and front No. 2 exhaust pipe.

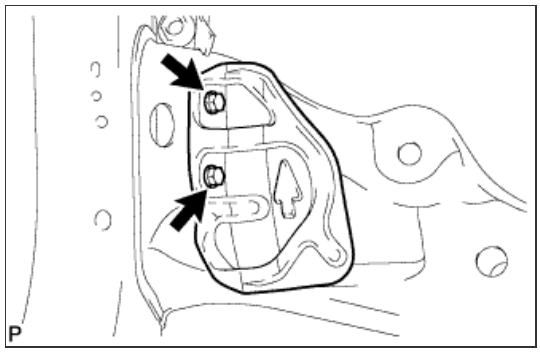
15. REMOVE FRONT NO. 2 EXHAUST PIPE ASSEMBLY

a. Disconnect the heated oxygen sensor connector.

b. Remove the bolt and disconnect the wire harness clamp bracket of the oxygen sensor from the transmission.

c. Remove the 2 nuts, front No. 2 exhaust pipe and gasket from the exhaust manifold LH.

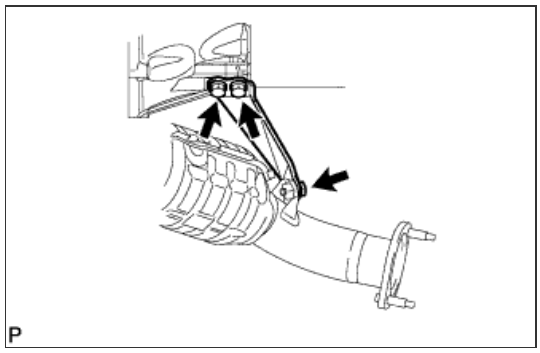
16. REMOVE FRONT EXHAUST PIPE ASSEMBLY



a. Disconnect the heated oxygen sensor connector.

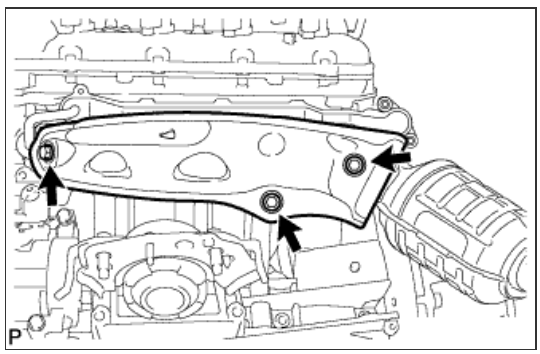
b. Remove the bolt and disconnect the wire harness clamp bracket of the oxygen sensor from the transmission.

c. Remove the 2 nuts, front exhaust pipe and gasket from the exhaust manifold RH.



17. REMOVE PROPELLER SHAFT HEAT INSULATOR

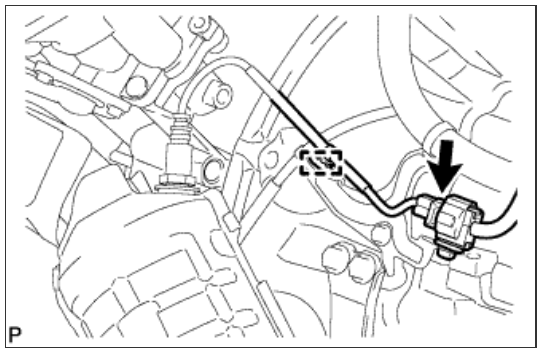
a. Remove the 2 bolts and heat insulator.



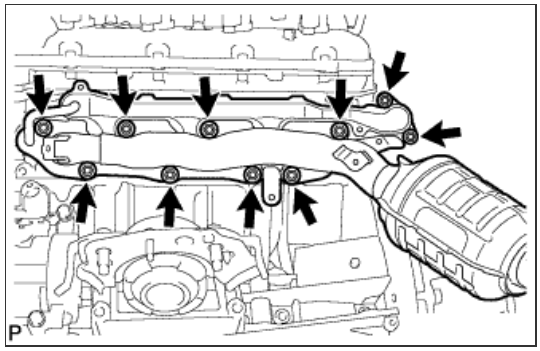
18. REMOVE NO. 2 MANIFOLD STAY

a. Remove the 3 bolts and manifold stay.

19. REMOVE NO. 2 EXHAUST MANIFOLD HEAT INSULATOR



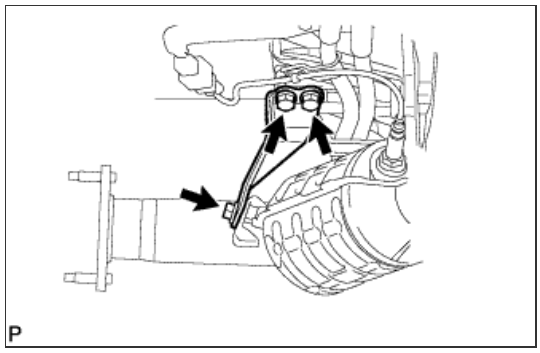
a. Remove the 3 bolts and heat insulator.



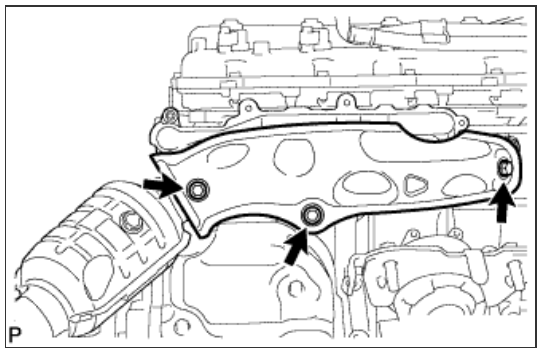
20. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY LH

a. Disconnect the connector.

b. Using a clip remover, detach the wire harness clamp.



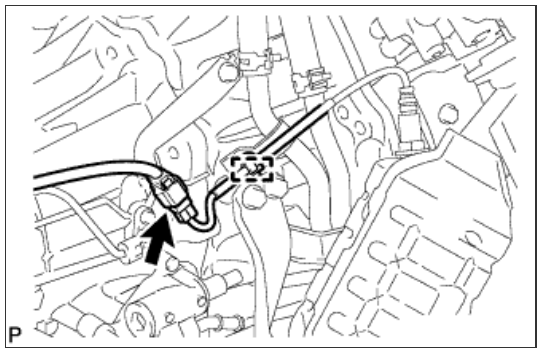
c. Remove the 10 nuts, exhaust manifold and 2 gaskets.



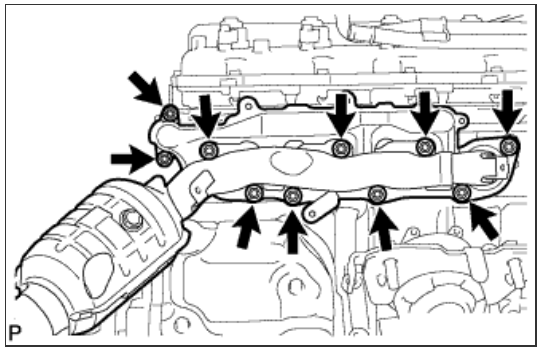
21. REMOVE NO. 1 MANIFOLD STAY

a. Remove the 3 bolts and manifold stay.

22. REMOVE NO. 1 EXHAUST MANIFOLD HEAT INSULATOR



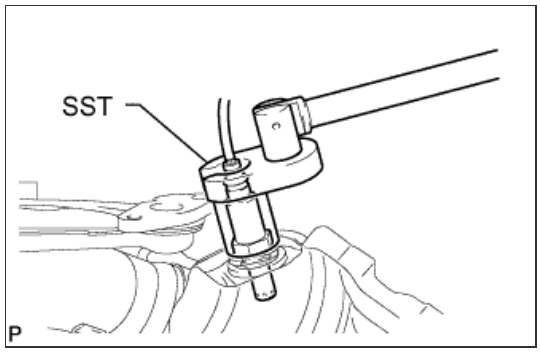
a. Remove the 3 bolts and heat insulator.



23. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY RH

a. Disconnect the connector.

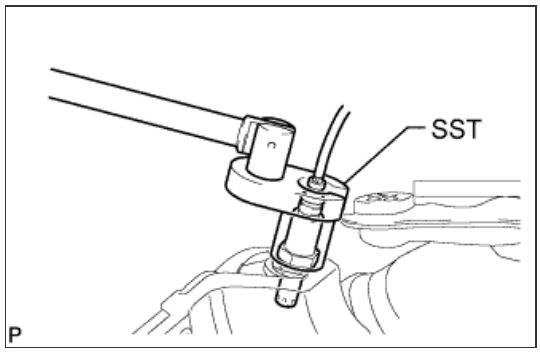
b. Using a clip remover, detach the wire harness clamp.



c. Remove the 10 nuts, exhaust manifold and 2 gaskets.

24. REMOVE AIR FUEL RATIO SENSOR (for Bank 1 Sensor 1)

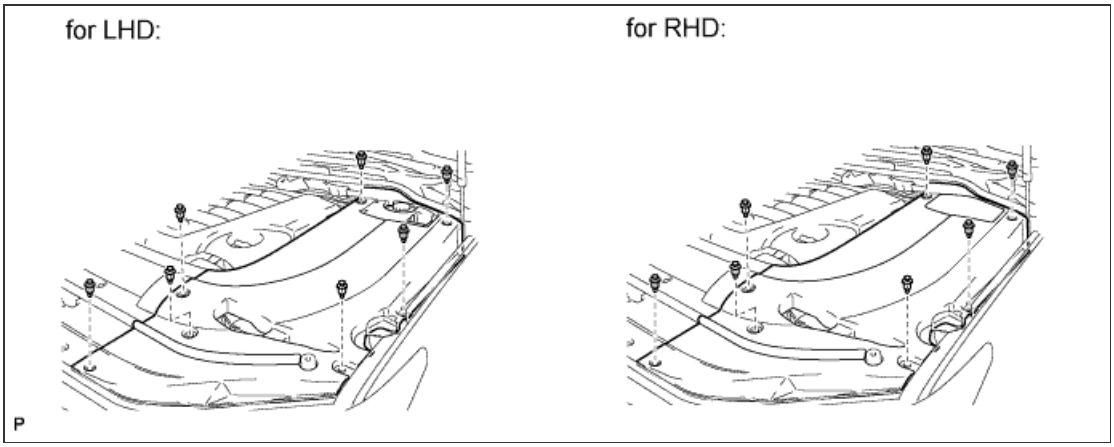
a. Using SST, remove the sensor.



SST
09224-00010

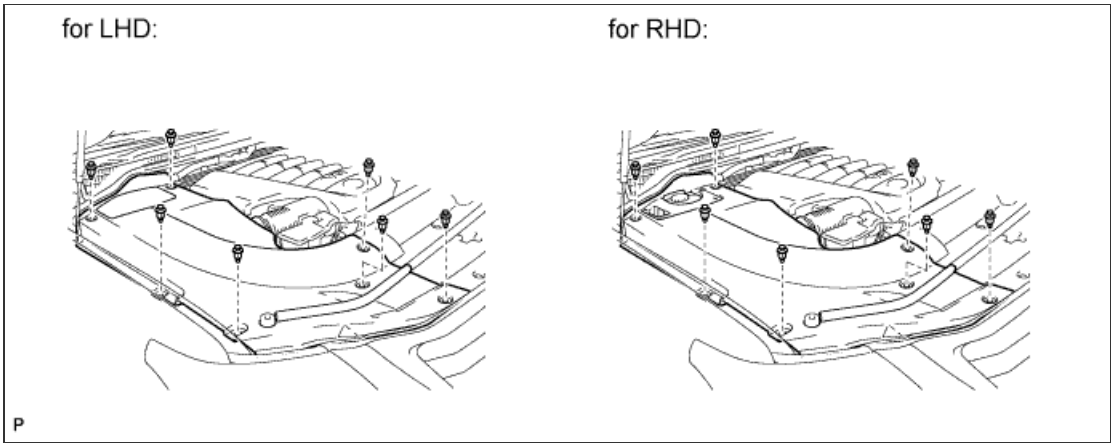
25. REMOVE AIR FUEL RATIO SENSOR (for Bank 2 Sensor 1)

a. Using SST, remove the sensor.



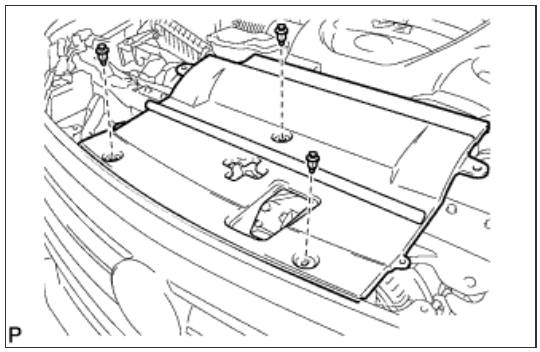
SST
09224-00010

for Preparation Click here



1. REMOVE ENGINE ROOM SIDE COVER LH

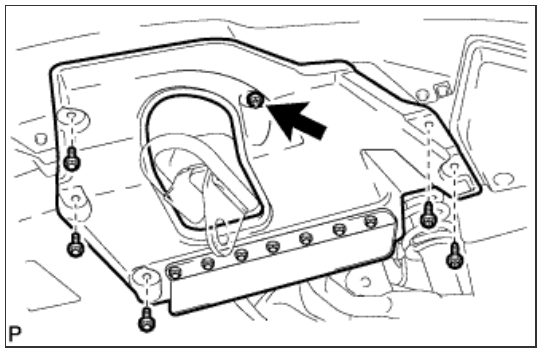
a. Remove the 7 clips and engine room side cover.



2. REMOVE ENGINE ROOM SIDE COVER RH

a. Remove the 7 clips and engine room side cover.

3. REMOVE UPPER RADIATOR SUPPORT SEAL

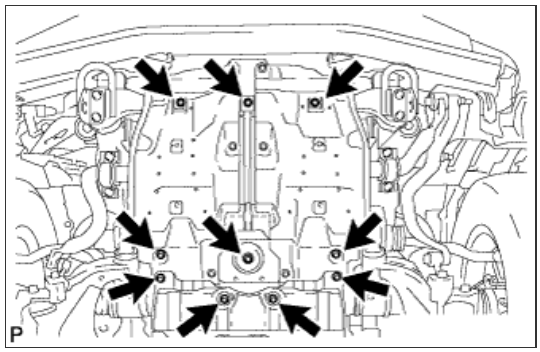


a. Remove the 3 clips and upper radiator support seal.

4. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and 2 screws.

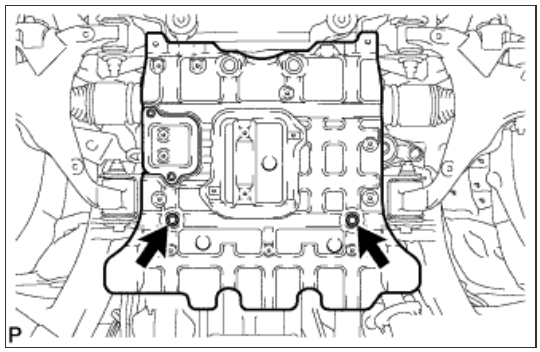
b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



5. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

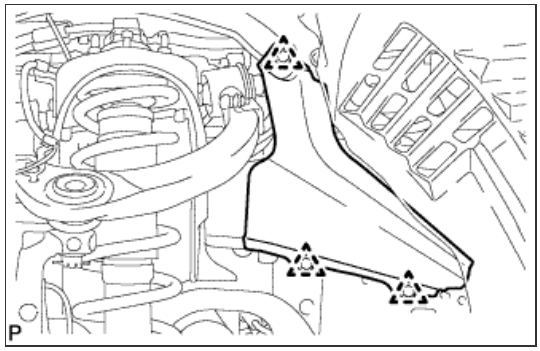
HINT:

Use the same procedures described for the LH side.



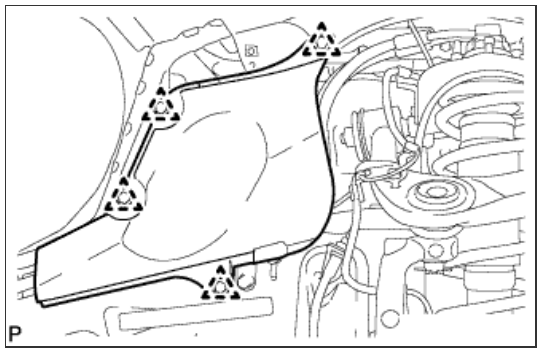
6. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and No. 1 engine under cover.



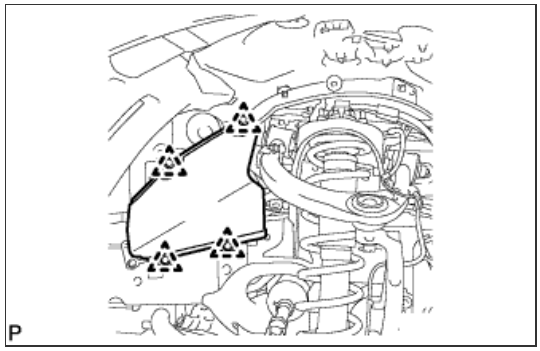
7. REMOVE NO. 2 ENGINE UNDER COVER

a. Remove the 2 bolts and No. 2 engine under cover.



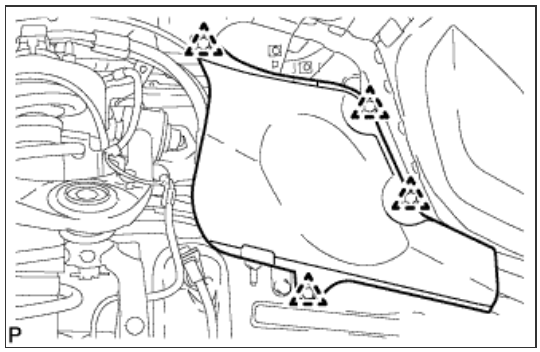
8. REMOVE FRONT FENDER APRON SEAL FRONT RH

a. Using a clip remover, remove the 3 clips and fender apron seal.



9. REMOVE FRONT FENDER APRON SEAL REAR RH

a. Using a clip remover, remove the 4 clips and fender apron seal.

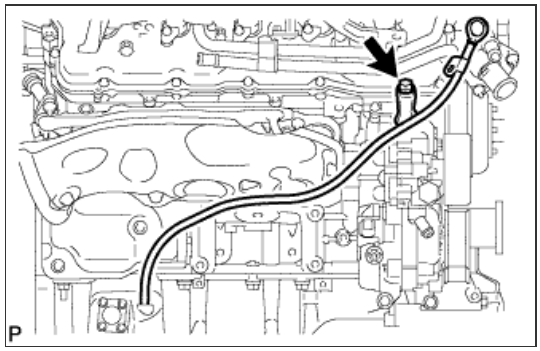


10. REMOVE FRONT FENDER APRON SEAL FRONT LH

a. Using a clip remover, remove the 4 clips and fender apron seal.

11. REMOVE FRONT FENDER APRON SEAL REAR LH

a. Using a clip remover, remove the 4 clips and fender apron seal.



12. REMOVE ENGINE OIL LEVEL DIPSTICK GUIDE

a. Remove the dipstick.

b. Remove the bolt and dipstick guide.

c. Remove the O-ring from the dipstick guide.

13. REMOVE TAILPIPE ASSEMBLY

a. Remove the bolt, clamp and gasket.

b. Remove the tailpipe from the 2 exhaust pipe supports.

c. Remove the bolt and clamp, and then disconnect the tailpipe from the center exhaust pipe.

14. REMOVE CENTER EXHAUST PIPE ASSEMBLY

a. Remove the 4 bolts.

b. Remove the center exhaust pipe from the 3 exhaust pipe supports.

c. Remove the 2 gaskets from the front exhaust pipe and front No. 2 exhaust pipe.

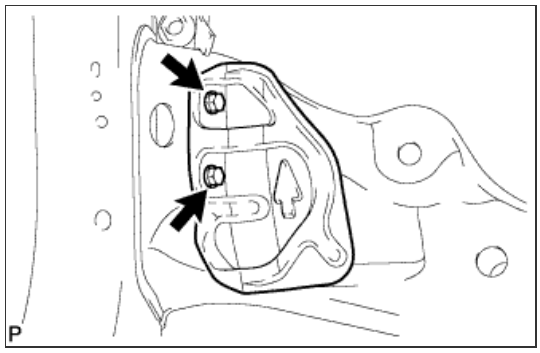
15. REMOVE FRONT NO. 2 EXHAUST PIPE ASSEMBLY

a. Disconnect the heated oxygen sensor connector.

b. Remove the bolt and disconnect the wire harness clamp bracket of the oxygen sensor from the transmission.

c. Remove the 2 nuts, front No. 2 exhaust pipe and gasket from the exhaust manifold LH.

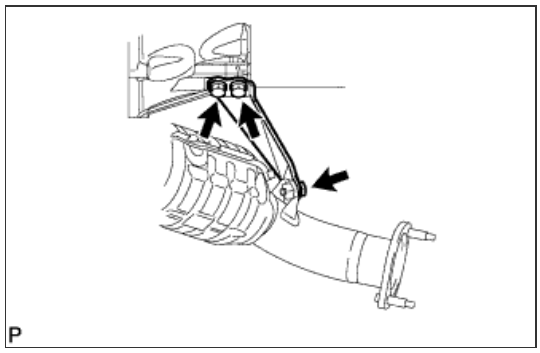
16. REMOVE FRONT EXHAUST PIPE ASSEMBLY



a. Disconnect the heated oxygen sensor connector.

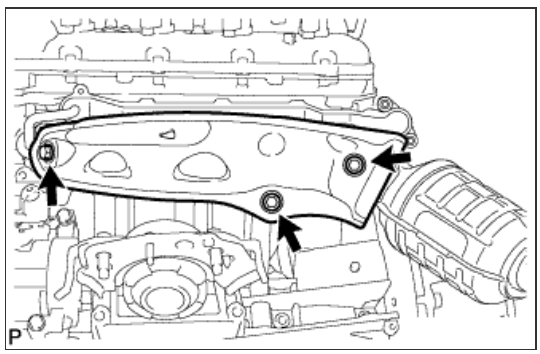
b. Remove the bolt and disconnect the wire harness clamp bracket of the oxygen sensor from the transmission.

c. Remove the 2 nuts, front exhaust pipe and gasket from the exhaust manifold RH.



17. REMOVE PROPELLER SHAFT HEAT INSULATOR

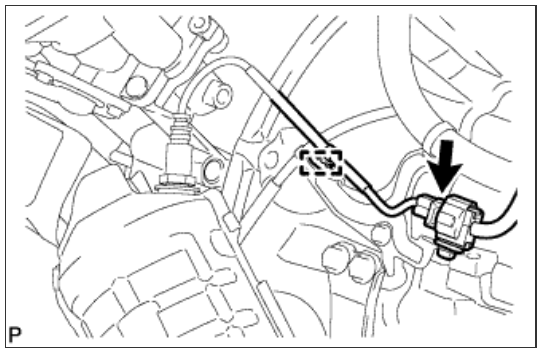
a. Remove the 2 bolts and heat insulator.



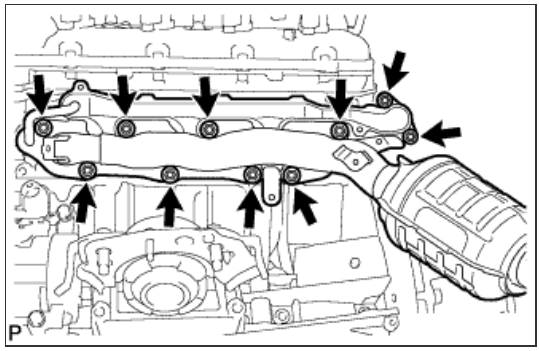
18. REMOVE NO. 2 MANIFOLD STAY

a. Remove the 3 bolts and manifold stay.

19. REMOVE NO. 2 EXHAUST MANIFOLD HEAT INSULATOR

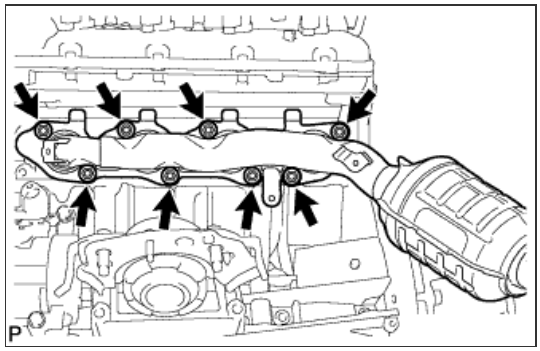


a. Remove the 3 bolts and heat insulator.



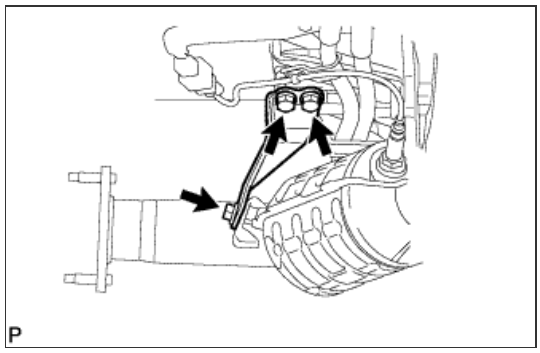
20. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY LH

a. Disconnect the connector.

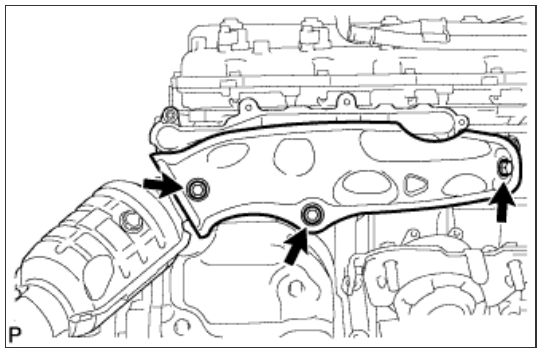


b. Using a clip remover, detach the wire harness clamp.

c. w/ Secondary Air Injection System:
Remove the 10 nuts, exhaust manifold and 2 gaskets.



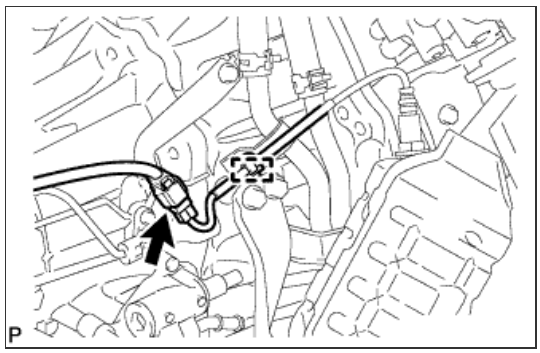
d. w/o Secondary Air Injection System:
Remove the 8 nuts, exhaust manifold and gasket.



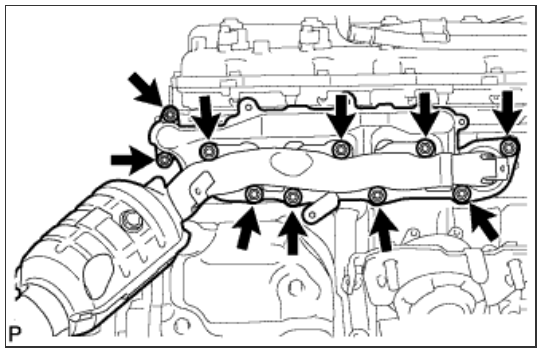
21. REMOVE NO. 1 MANIFOLD STAY

a. Remove the 3 bolts and manifold stay.

22. REMOVE NO. 1 EXHAUST MANIFOLD HEAT INSULATOR

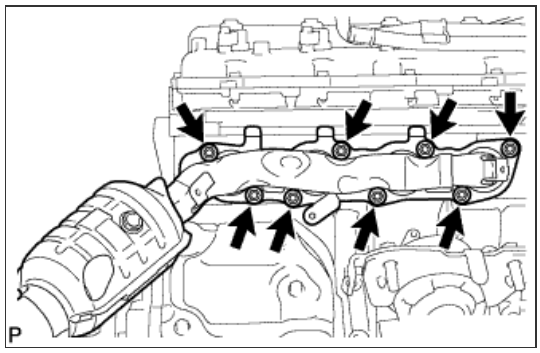


a. Remove the 3 bolts and heat insulator.



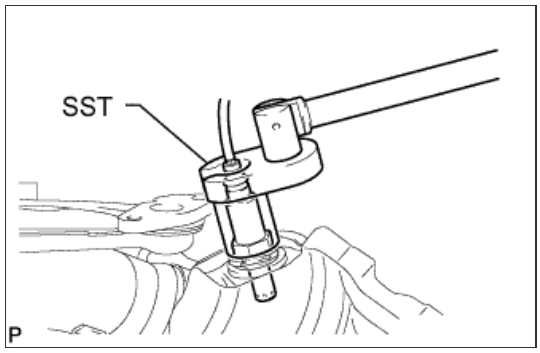
23. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY RH

a. Disconnect the connector.



b. Using a clip remover, detach the wire harness clamp.

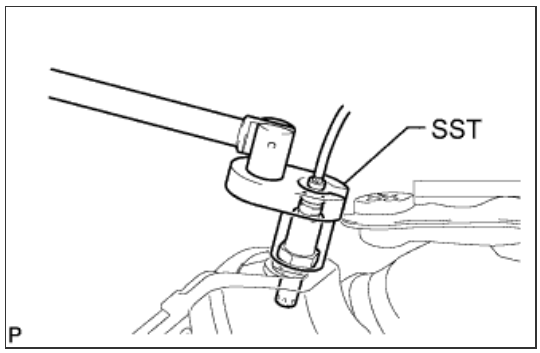
c. w/ Secondary Air Injection System:
Remove the 10 nuts, exhaust manifold and 2 gaskets.



d. w/o Secondary Air Injection System:
Remove the 8 nuts, exhaust manifold and gasket.

24. REMOVE AIR FUEL RATIO SENSOR (for Bank 1 Sensor 1)

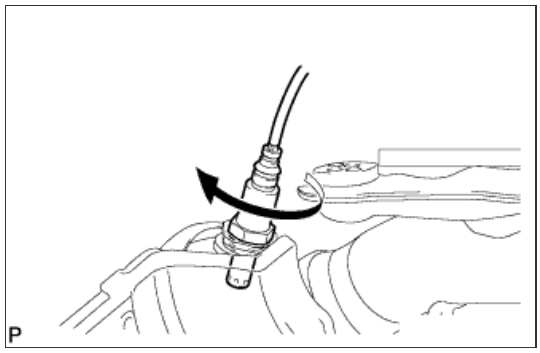
a. Using SST, remove the sensor.



SST
09224-00010

25. REMOVE AIR FUEL RATIO SENSOR (for Bank 2 Sensor 1)

a. Using SST, remove the sensor.

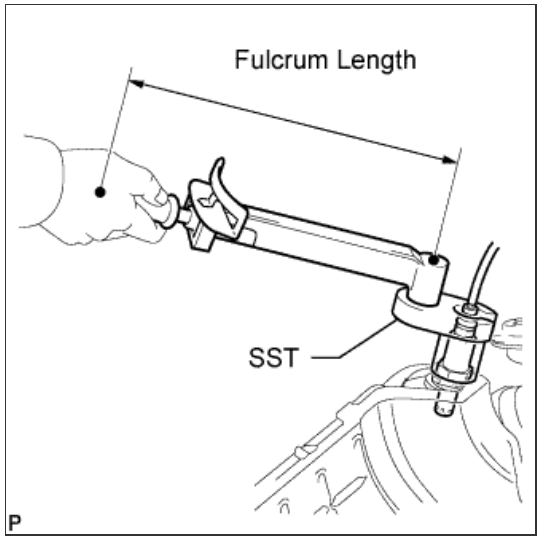


SST
09224-00010

for Preparation Click here

1. INSTALL AIR FUEL RATIO SENSOR (for Bank 2 Sensor 1)

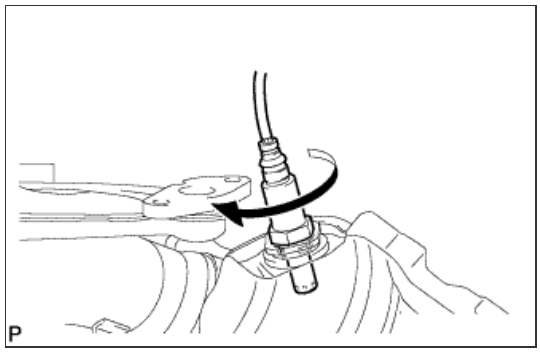
a. Temporarily install the sensor to the exhaust pipe by hand.



b. Using SST, tighten the sensor.

SST
09224-00010

Torque:
without SST:
44 N*m{ 449 kgf*cm , 32 ft.*lbf }
with SST:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }



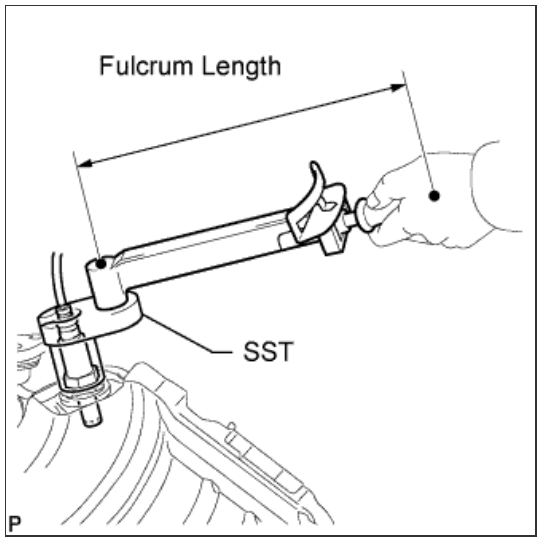
HINT:

- **Use a torque wrench with a fulcrum length of 300 mm (11.8 in.). If using a torque wrench with a length that is not 300 mm (11.8 in.), calculate the torque specification for the torque wrench and SST based on the "without SST" torque specification (Click here).**
- **Make sure SST and the wrench are connected in a straight line.**

2. INSTALL AIR FUEL RATIO SENSOR (for Bank 1 Sensor 1)

a. Temporarily install the sensor to the exhaust pipe by hand.

b. Using SST, tighten the sensor.



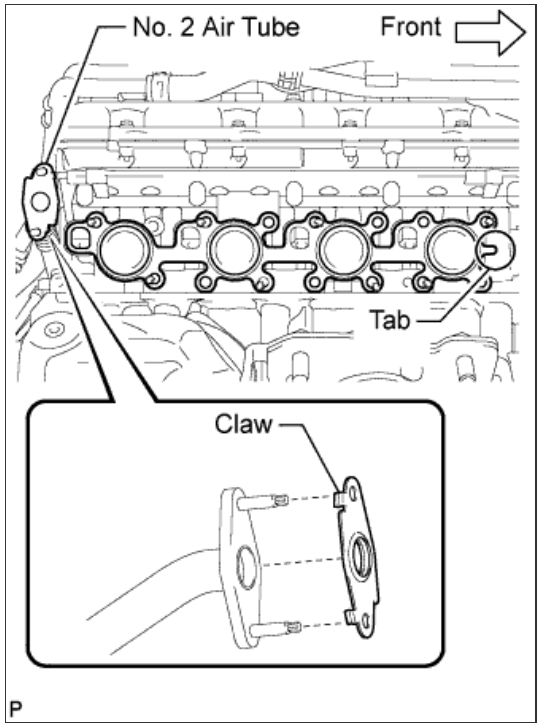
SST
09224-00010

Torque:
without SST:

44 N*m{ 449 kgf*cm , 32 ft.*lbf }
with SST:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

HINT:

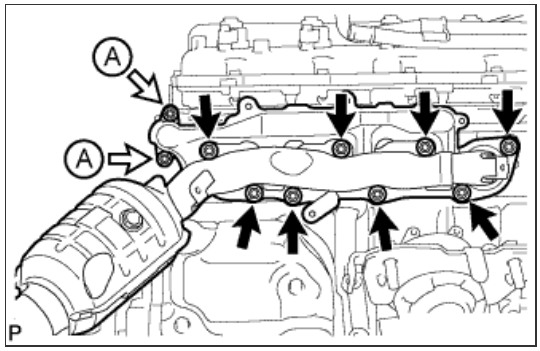
- **Use a torque wrench with a fulcrum length of 300 mm (11.8 in.). If using a torque wrench with a length that is not 300 mm (11.8 in.), calculate the torque specification for the torque wrench and SST based on the "without SST" torque specification (Click here).**
- **Make sure SST and the wrench are connected in a straight line.**



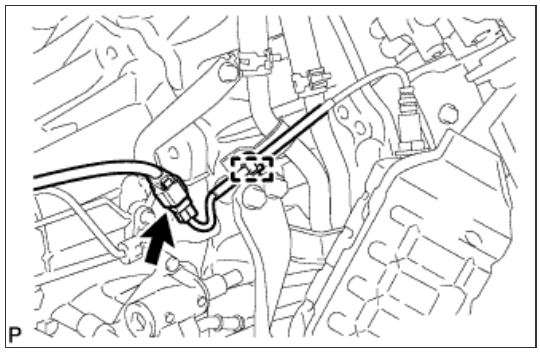
3. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY RH

a. Install a new gasket to the cylinder head and a new gasket to the No. 2 air tube.

HINT:



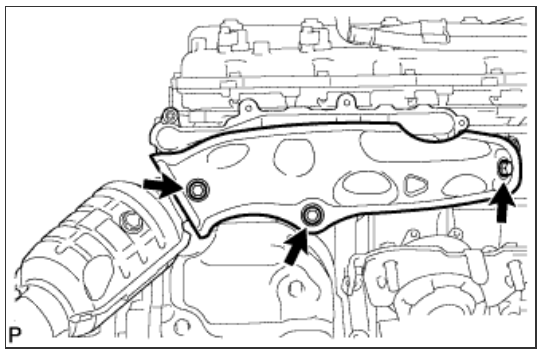
- **Install the exhaust manifold gasket with the gasket tab facing toward the front of the engine.**
- **Install the air tube gasket with the gasket claws facing the tube side.**



b. Temporarily install the exhaust manifold with the 2 nuts labeled A and 8 new nuts.

c. Uniformly tighten the nuts that are not labeled A, and then tighten the 2 nuts labeled A.

Torque:
for nut A:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }
except nut A:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }

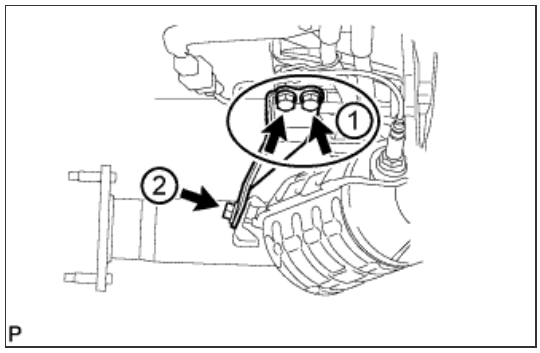


d. Attach the wire harness clamp to the bracket and connect the connector.

4. INSTALL NO. 1 EXHAUST MANIFOLD HEAT INSULATOR

a. Install the heat insulator with the 3 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

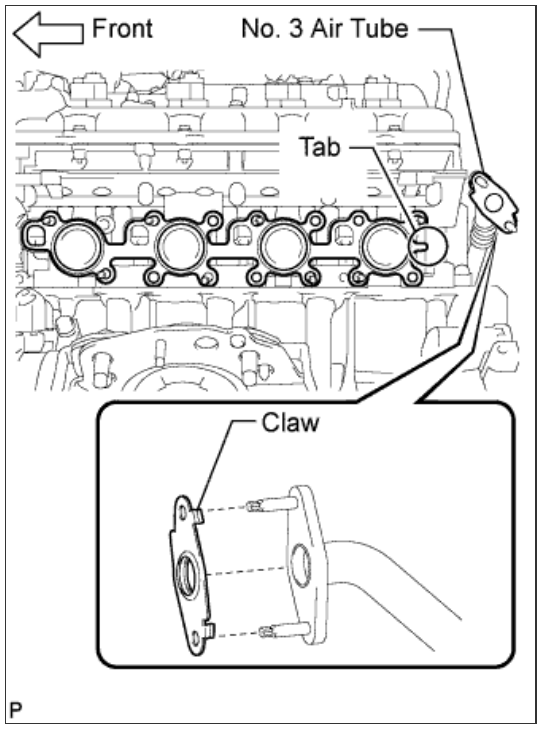


5. INSTALL NO. 1 MANIFOLD STAY

a. Temporarily install the manifold stay with the 3 bolts.

b. Tighten the 3 bolts in the order shown in the illustration.

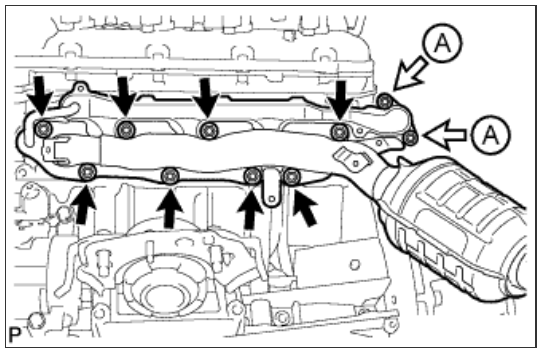
Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }



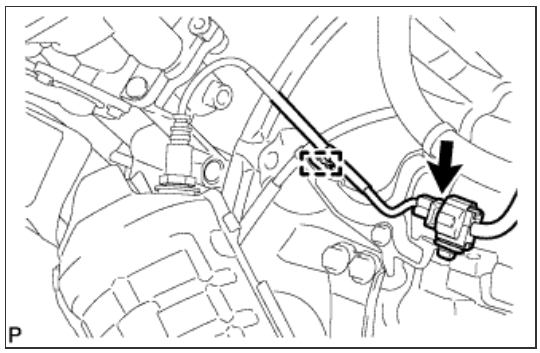
6. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY LH

a. Install a new gasket to the cylinder head and a new gasket to the No. 3 air tube.

HINT:



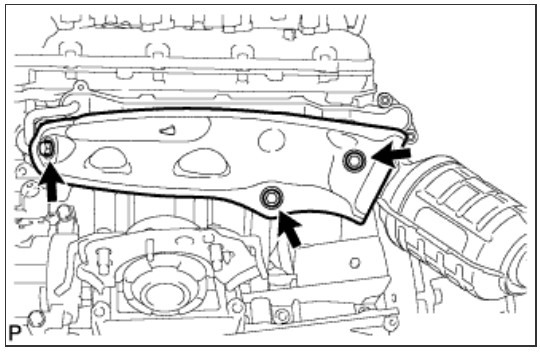
- **Install the exhaust manifold gasket with the gasket tab facing toward the rear of the engine.**
- **Install the air tube gasket with the gasket claws facing the tube side.**



b. Temporarily install the exhaust manifold with the 2 nuts labeled A and 8 new nuts.

c. Uniformly tighten the nuts that are not labeled A, and then tighten the 2 nuts labeled A.

Torque:
for nut A:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }
except nut A:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }

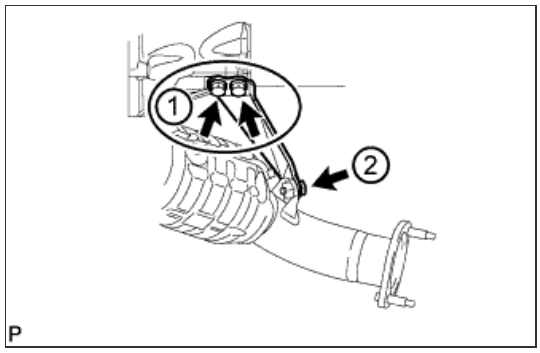


d. Attach the wire harness clamp to the bracket and connect the connector.

7. INSTALL NO. 2 EXHAUST MANIFOLD HEAT INSULATOR

a. Install the heat insulator with the 3 bolts.

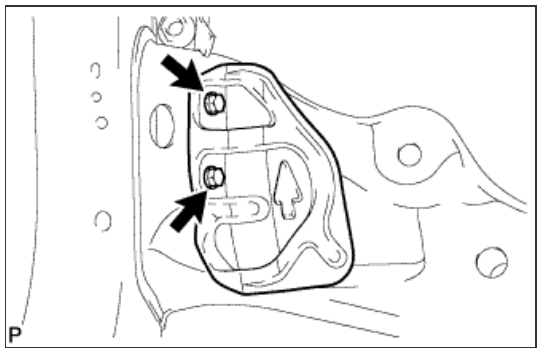
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



8. INSTALL NO. 2 MANIFOLD STAY

a. Temporarily install the manifold stay with the 3 bolts.

b. Tighten the 3 bolts in the order shown in the illustration.



Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

9. INSTALL PROPELLER SHAFT HEAT INSULATOR

a. Install the heat insulator with the 2 bolts.

Torque:
16 N*m{ 160 kgf*cm , 12 ft.*lbf }

10. INSTALL FRONT EXHAUST PIPE ASSEMBLY

a. Install a new gasket and the front exhaust pipe to the exhaust manifold RH with 2 new nuts.

Torque:
54 N*m{ 551 kgf*cm , 40 ft.*lbf }

b. Install the wire harness clamp bracket of the oxygen sensor to the transmission with the bolt.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

c. Connect the heated oxygen sensor connector.

11. INSTALL FRONT NO. 2 EXHAUST PIPE ASSEMBLY

a. Install a new gasket and the front No. 2 exhaust pipe to the exhaust manifold LH with 2 new nuts.

Torque:
54 N*m{ 551 kgf*cm , 40 ft.*lbf }

b. Install the wire harness clamp bracket of the oxygen sensor to the transmission with the bolt.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

c. Connect the heated oxygen sensor connector.

12. INSTALL CENTER EXHAUST PIPE ASSEMBLY

a. Install 2 new gaskets to the front exhaust pipe and front No. 2 exhaust pipe.

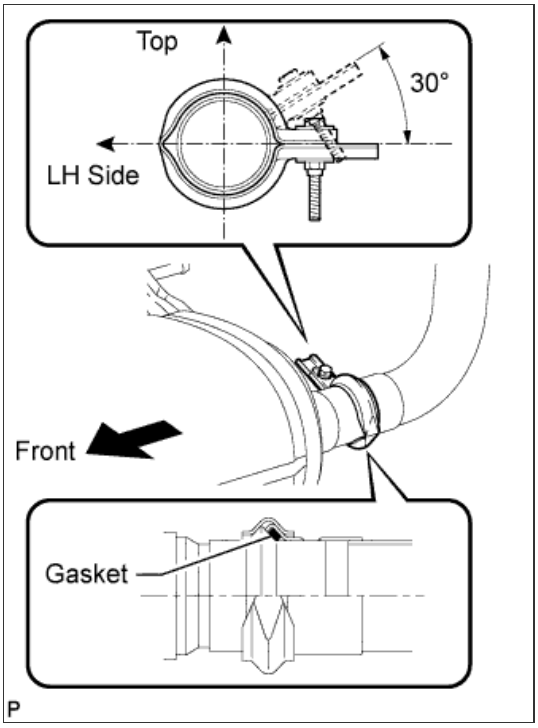
b. Install the center exhaust pipe to the 3 exhaust pipe supports, and then install the 4 bolts.

Torque:
48 N*m{ 489 kgf*cm , 35 ft.*lbf }

13. INSTALL TAILPIPE ASSEMBLY

a. Install the tailpipe to the 2 exhaust pipe supports.

b. Install a new gasket to the center exhaust pipe.



c. Connect the tailpipe to the center exhaust pipe.

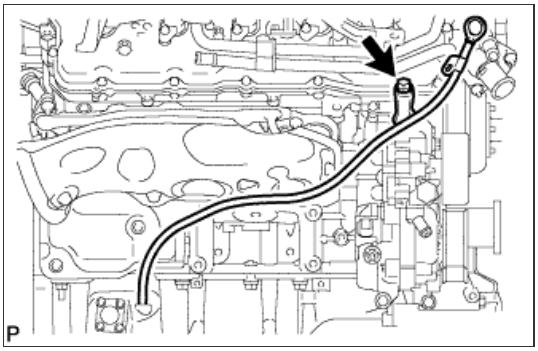
d. Attach a new clamp to the tailpipe and center exhaust pipe. Then install the bolt to the clamp.

Torque:
32 N*m{ 326 kgf*cm , 24 ft.*lbf }

HINT:

Install the clamp within the angle range shown in the illustration.

14. INSTALL ENGINE OIL LEVEL DIPSTICK GUIDE

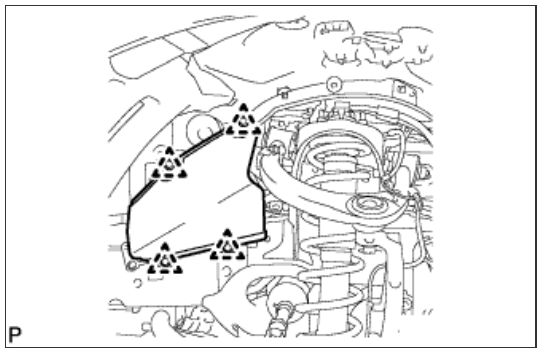


a. Apply a light coat of engine oil to a new O-ring.

b. Install the O-ring to the guide.

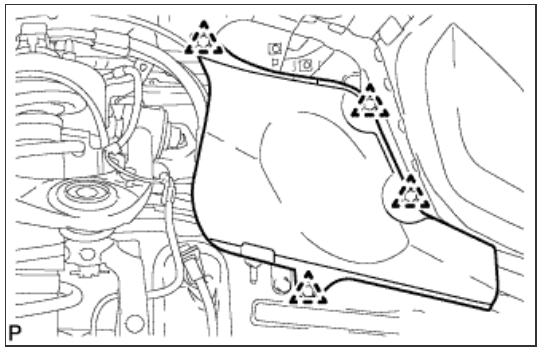
c. Install the dipstick guide with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



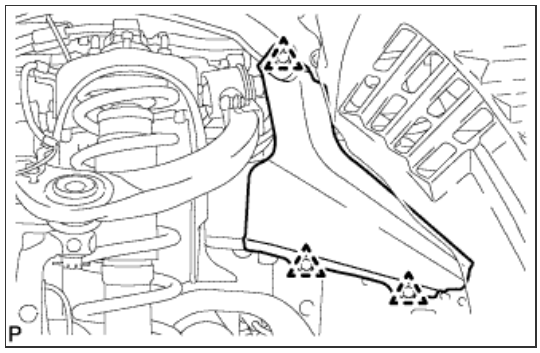
d. Install the dipstick.

15. INSPECT FOR EXHAUST GAS LEAK



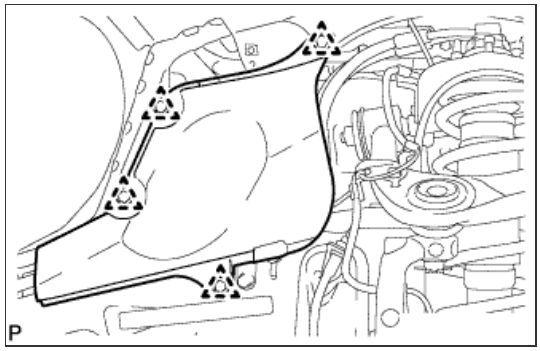
16. INSTALL FRONT FENDER APRON SEAL FRONT LH

a. Install the fender apron seal with the 4 clips.



17. INSTALL FRONT FENDER APRON SEAL REAR LH

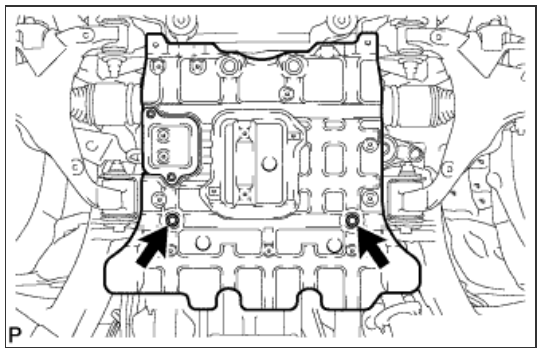
a. Install the fender apron seal with the 4 clips.



18. INSTALL FRONT FENDER APRON SEAL FRONT RH

a. Install the fender apron seal with the 3 clips.

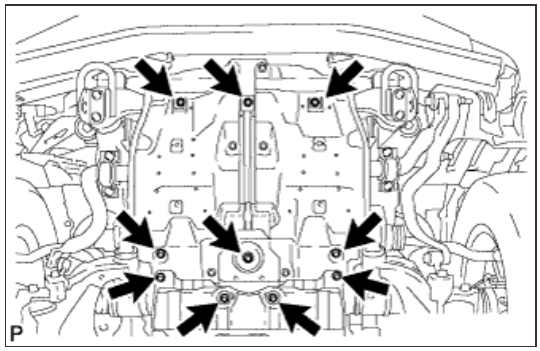
19. INSTALL FRONT FENDER APRON SEAL REAR RH



a. Install the fender apron seal with the 4 clips.

20. INSTALL NO. 2 ENGINE UNDER COVER

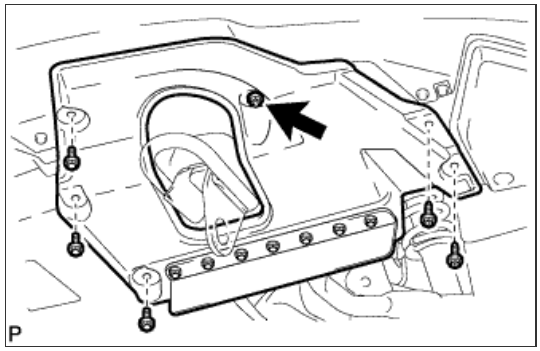
a. Install the No. 2 engine under cover with the 2 bolts.



Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

21. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.

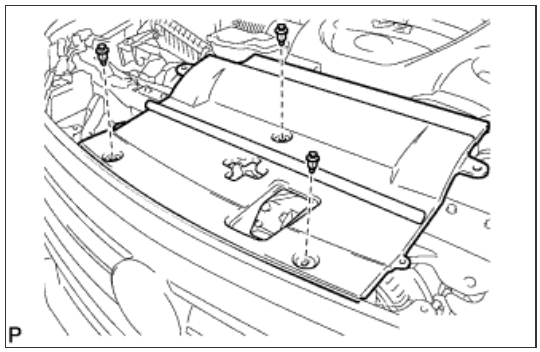


Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

22. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

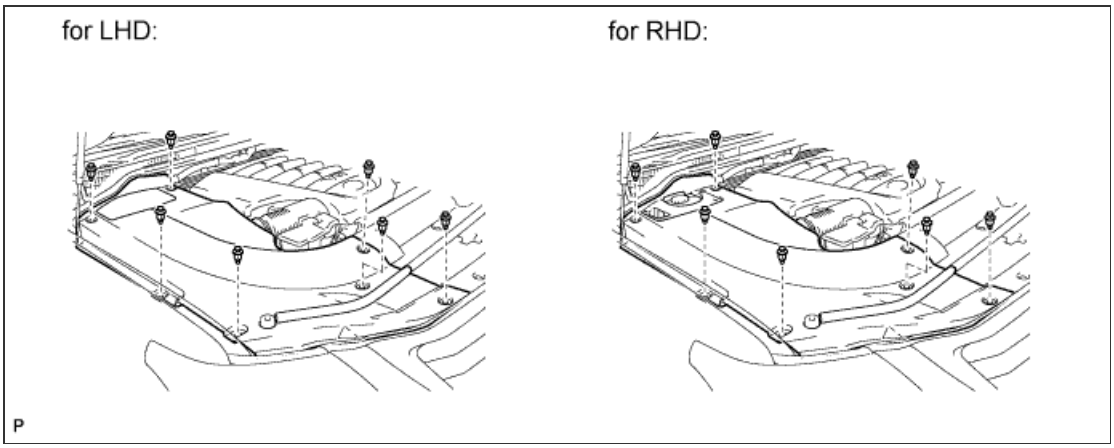
b. Install the 3 bolts and 2 screws.



23. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

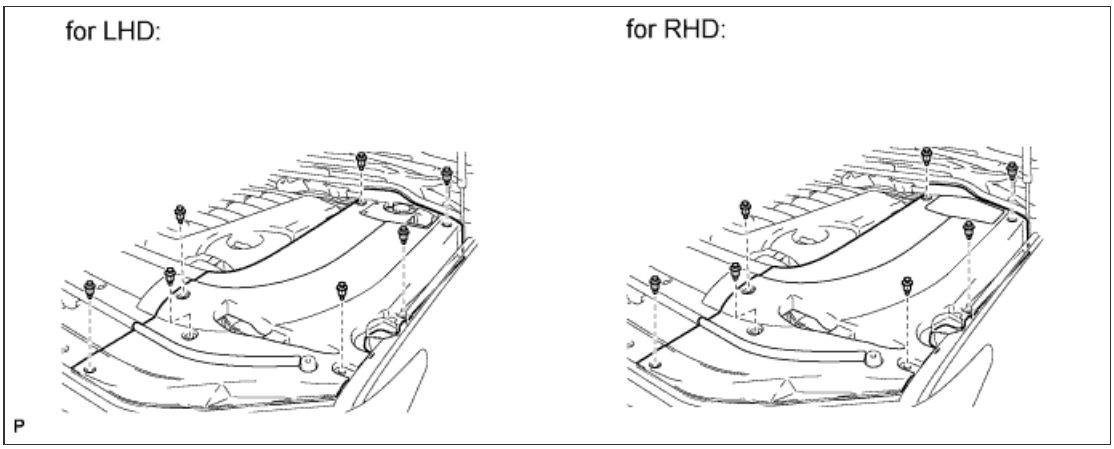
HINT:

Use the same procedures described for the LH side.



24. INSTALL UPPER RADIATOR SUPPORT SEAL

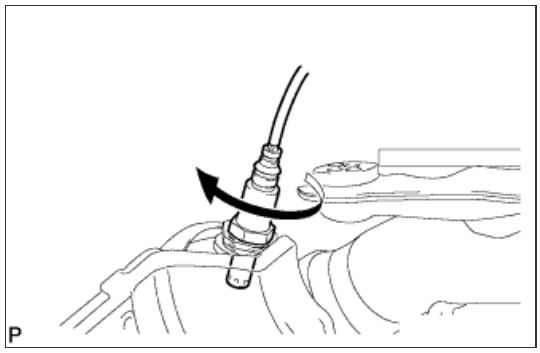
a. Install the upper radiator support seal with the 3 clips.



25. INSTALL ENGINE ROOM SIDE COVER RH

a. Install the engine room side cover with the 7 clips.

26. INSTALL ENGINE ROOM SIDE COVER LH

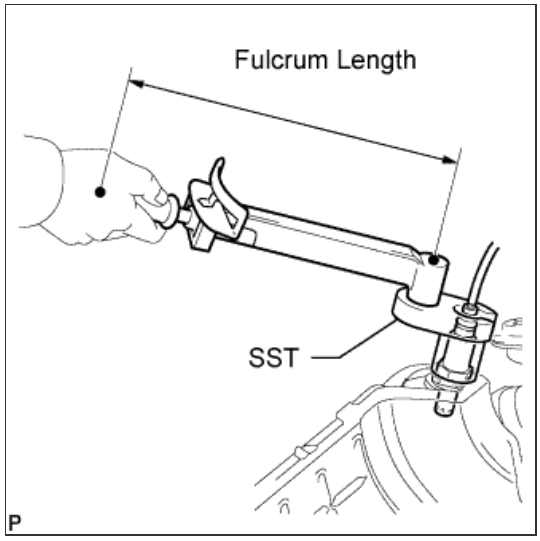


a. Install the engine room side cover with the 7 clips.

for Preparation Click here

1. INSTALL AIR FUEL RATIO SENSOR (for Bank 2 Sensor 1)

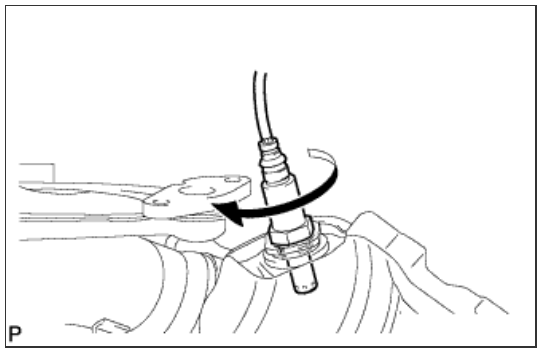
a. Temporarily install the sensor to the exhaust pipe by hand.



b. Using SST, tighten the sensor.

SST
09224-00010

Torque:
without SST:
44 N*m{ 449 kgf*cm , 32 ft.*lbf }
with SST:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }



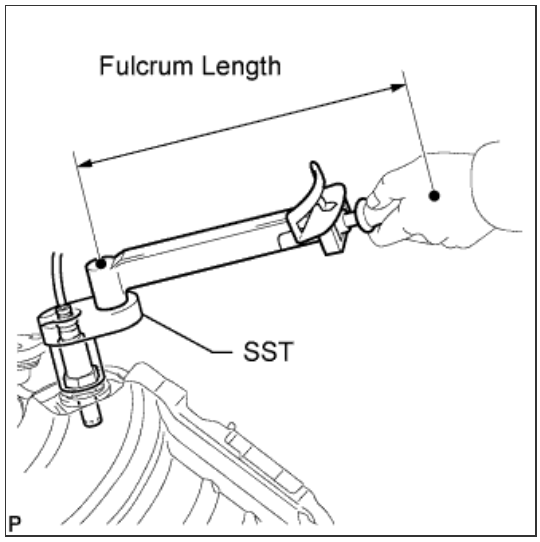
HINT:

- **Use a torque wrench with a fulcrum length of 300 mm (11.8 in.). If using a torque wrench with a length that is not 300 mm (11.8 in.), calculate the torque specification for the torque wrench and SST based on the "without SST" torque specification (Click here).**
- **Make sure SST and the wrench are connected in a straight line.**

2. INSTALL AIR FUEL RATIO SENSOR (for Bank 1 Sensor 1)

a. Temporarily install the sensor to the exhaust pipe by hand.

b. Using SST, tighten the sensor.



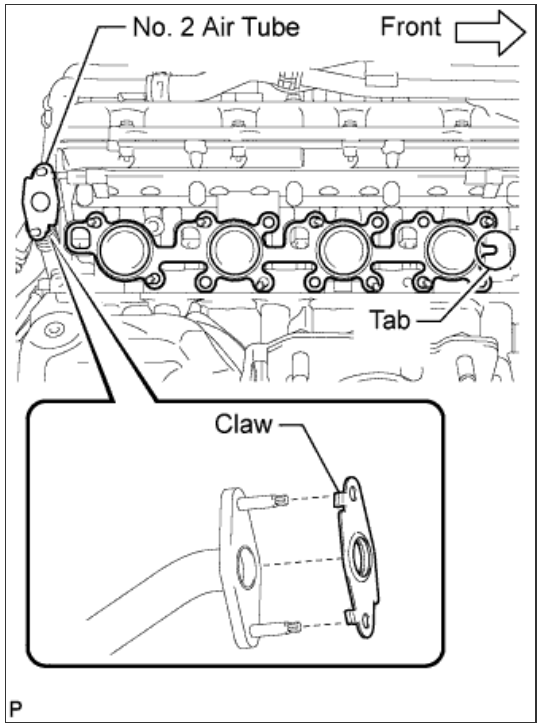
SST
09224-00010

Torque:
without SST:

44 N*m{ 449 kgf*cm , 32 ft.*lbf }
with SST:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

HINT:

- **Use a torque wrench with a fulcrum length of 300 mm (11.8 in.). If using a torque wrench with a length that is not 300 mm (11.8 in.), calculate the torque specification for the torque wrench and SST based on the "without SST" torque specification (Click here).**
- **Make sure SST and the wrench are connected in a straight line.**

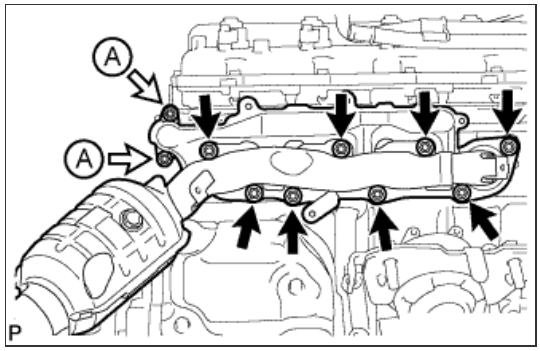


3. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY RH

a. w/ Secondary Air Injection System:

i. Install a new gasket to the cylinder head and a new gasket to the No. 2 air tube.

HINT:

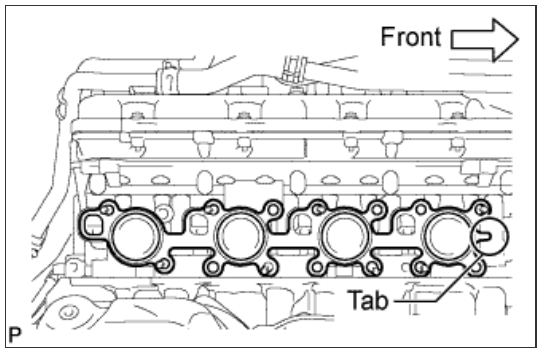


- **Install the exhaust manifold gasket with the gasket tab facing toward the front of the engine.**
- **Install the air tube gasket with the gasket claws facing the tube side.**

ii. Temporarily install the exhaust manifold with the 2 nuts labeled A and 8 new nuts.

iii. Uniformly tighten the nuts that are not labeled A, and then tighten the 2 nuts labeled A.

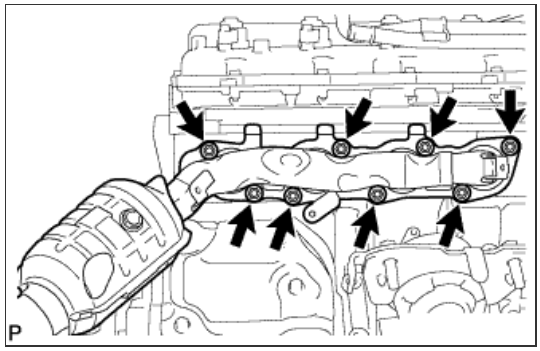
Torque:
for nut A:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }
except nut A:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }



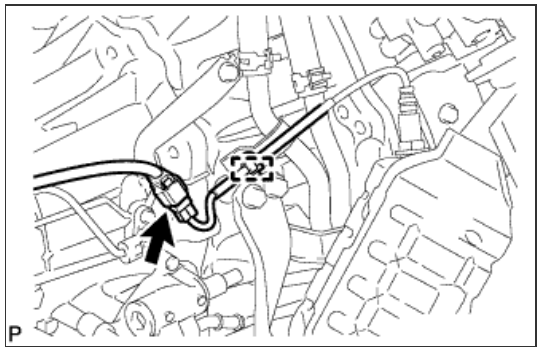
b. w/o Secondary Air Injection System:

i. Install a new gasket to the cylinder head.

HINT:



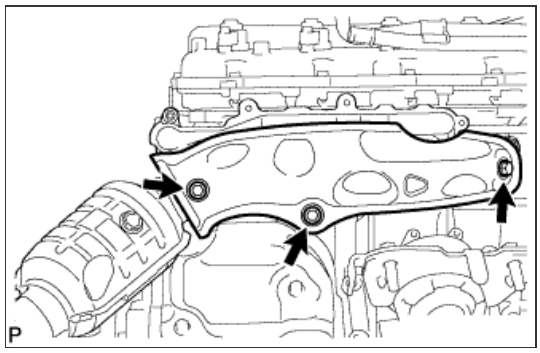
Install the exhaust manifold gasket with the gasket tab facing toward the front of the engine.



ii. Temporarily install the exhaust manifold with the 8 new nuts.

iii. Uniformly tighten the 8 nuts.

Torque:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }

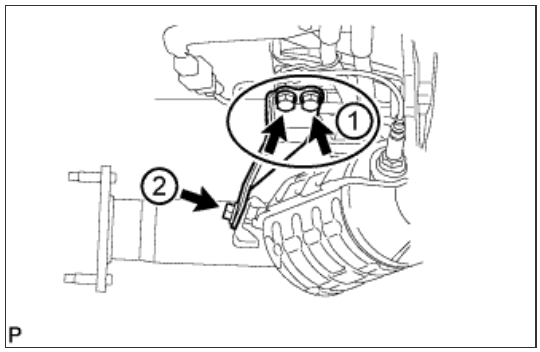


c. Attach the wire harness clamp to the bracket and connect the connector.

4. INSTALL NO. 1 EXHAUST MANIFOLD HEAT INSULATOR

a. Install the heat insulator with the 3 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

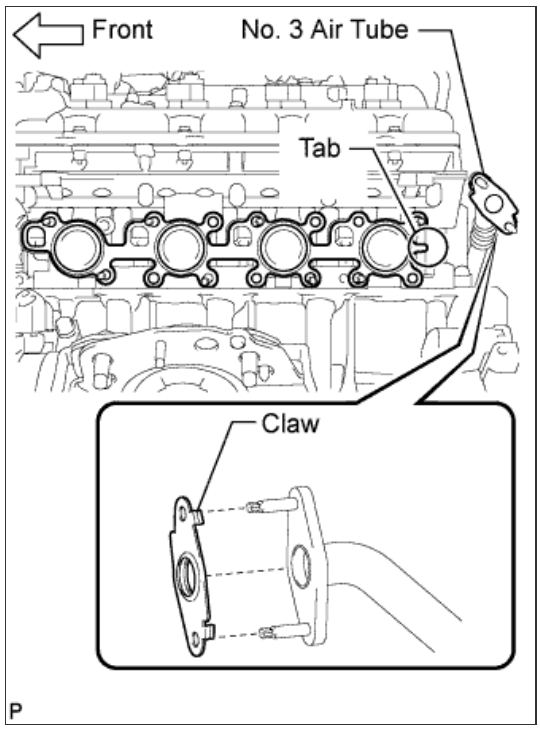


5. INSTALL NO. 1 MANIFOLD STAY

a. Temporarily install the manifold stay with the 3 bolts.

b. Tighten the 3 bolts in the order shown in the illustration.

Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

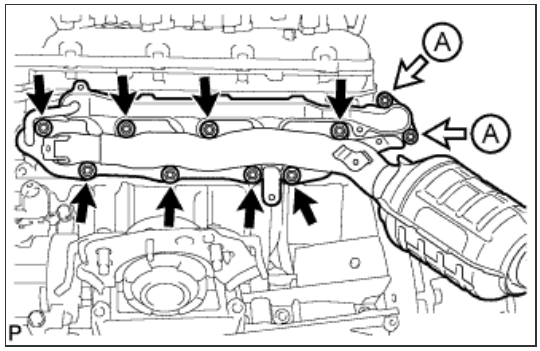


6. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY LH

a. w/ Secondary Air Injection System:

i. Install a new gasket to the cylinder head and a new gasket to the No. 3 air tube.

HINT:



- **Install the exhaust manifold gasket with the gasket tab facing toward the rear of the engine.**
- **Install the air tube gasket with the gasket claws facing the tube side.**

ii. Temporarily install the exhaust manifold with the 2 nuts labeled A and 8 new nuts.

iii. Uniformly tighten the nuts that are not labeled A, and then tighten the 2 nuts labeled A.

Torque:
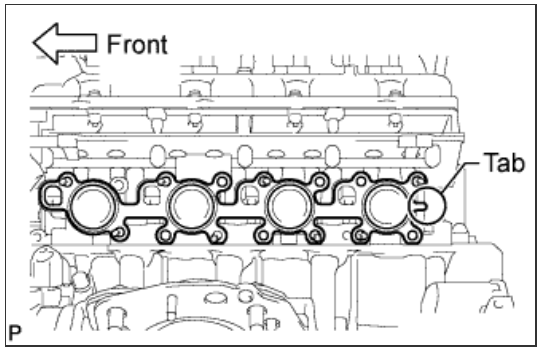
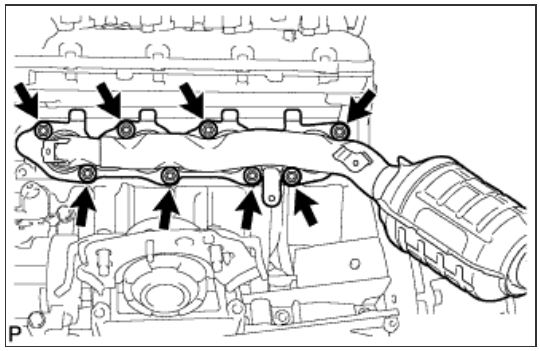
for nut A:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }
except nut A:
30 N*m{ 306 kgf*cm , 22 ft.*lbf }



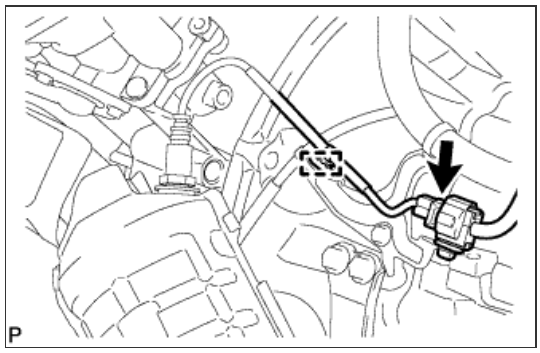
b. w/o Secondary Air Injection System:

i. Install a new gasket to the cylinder head.

HINT:



Install the exhaust manifold gasket with the gasket tab facing toward the front of the engine.



ii. Temporarily install the exhaust manifold with the 8 new nuts.

iii. Uniformly tighten the 8 nuts.

Torque:
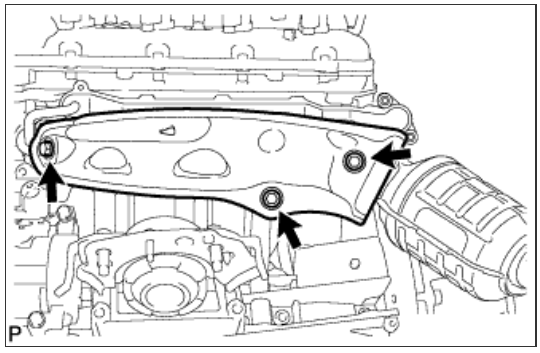
30 N*m{ 306 kgf*cm , 22 ft.*lbf }



c. Attach the wire harness clamp to the bracket and connect the connector.

7. INSTALL NO. 2 EXHAUST MANIFOLD HEAT INSULATOR

a. Install the heat insulator with the 3 bolts.

Torque:
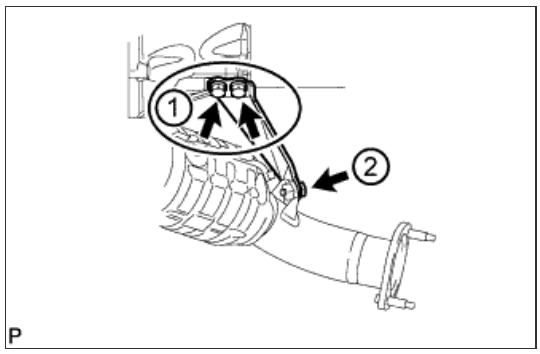
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



8. INSTALL NO. 2 MANIFOLD STAY

a. Temporarily install the manifold stay with the 3 bolts.

b. Tighten the 3 bolts in the order shown in the illustration.

Torque:
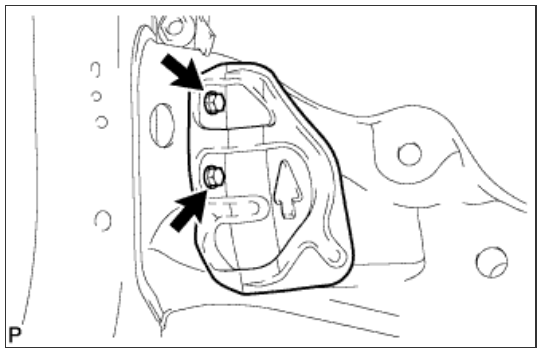
40 N*m{ 408 kgf*cm , 30 ft.*lbf }



9. INSTALL PROPELLER SHAFT HEAT INSULATOR

a. Install the heat insulator with the 2 bolts.

d. Install the heat insulator with the 2 bolts.

Torque:
16 N*m{ 160 kgf*cm , 12 ft.*lbf }

10. INSTALL FRONT EXHAUST PIPE ASSEMBLY

a. Install a new gasket and the front exhaust pipe to the exhaust manifold RH with 2 new nuts.

Torque:
54 N*m{ 551 kgf*cm , 40 ft.*lbf }

b. Install the wire harness clamp bracket of the oxygen sensor to the transmission with the bolt.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

c. Connect the heated oxygen sensor connector.

11. INSTALL FRONT NO. 2 EXHAUST PIPE ASSEMBLY

a. Install a new gasket and the front No. 2 exhaust pipe to the exhaust manifold LH with 2 new nuts.

Torque:
54 N*m{ 551 kgf*cm , 40 ft.*lbf }

b. Install the wire harness clamp bracket of the oxygen sensor to the transmission with the bolt.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

c. Connect the heated oxygen sensor connector.

12. INSTALL CENTER EXHAUST PIPE ASSEMBLY

a. Install 2 new gaskets to the front exhaust pipe and front No. 2 exhaust pipe.

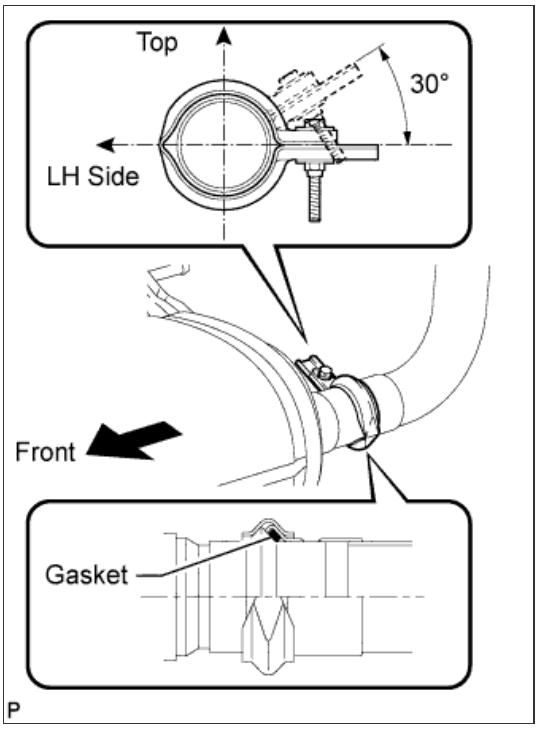
b. Install the center exhaust pipe to the 3 exhaust pipe supports, and then install the 4 bolts.

Torque:
48 N*m{ 489 kgf*cm , 35 ft.*lbf }

13. INSTALL TAILPIPE ASSEMBLY

a. Install the tailpipe to the 2 exhaust pipe supports.

b. Install a new gasket to the center exhaust pipe.



c. Connect the tailpipe to the center exhaust pipe.

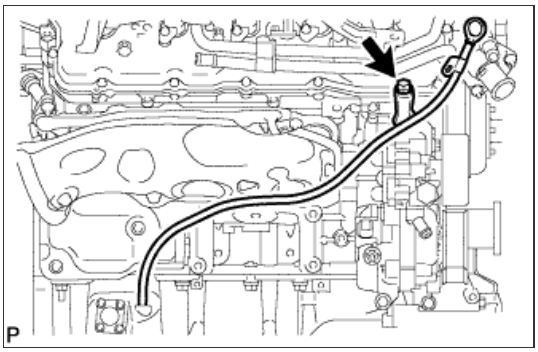
d. Attach a new clamp to the tailpipe and center exhaust pipe. Then install the bolt to the clamp.

Torque:
32 N*m{ 326 kgf*cm , 24 ft.*lbf }

HINT:

Install the clamp within the angle range shown in the illustration.

14. INSTALL ENGINE OIL LEVEL DIPSTICK GUIDE

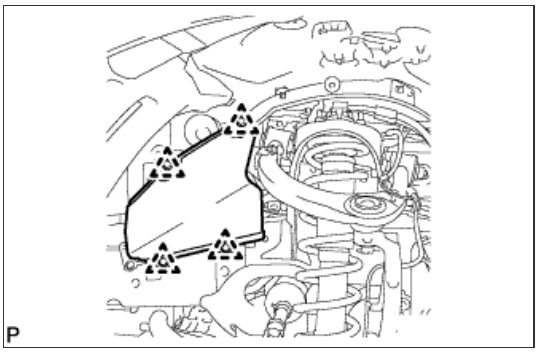


a. Apply a light coat of engine oil to a new O-ring.

b. Install the O-ring to the guide.

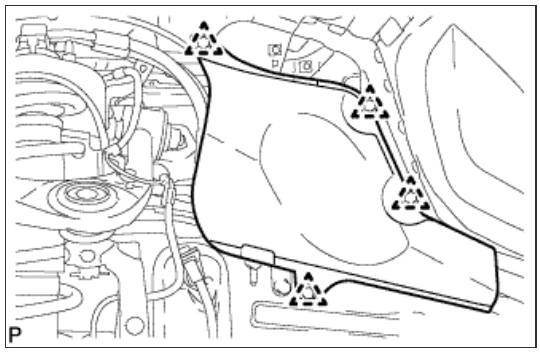
c. Install the dipstick guide with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



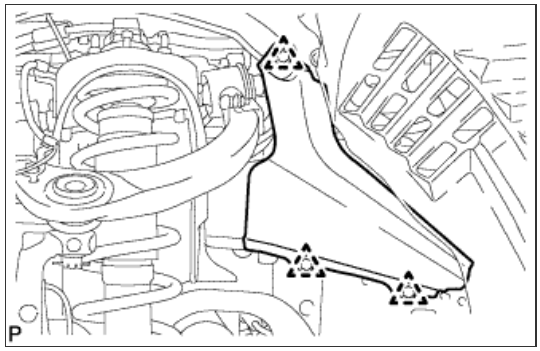
d. Install the dipstick.

15. INSPECT FOR EXHAUST GAS LEAK



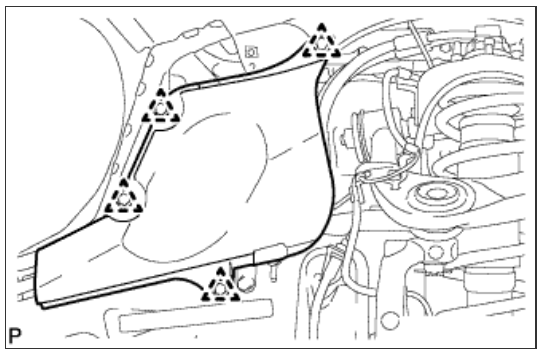
16. INSTALL FRONT FENDER APRON SEAL FRONT LH

a. Install the fender apron seal with the 4 clips.



17. INSTALL FRONT FENDER APRON SEAL REAR LH

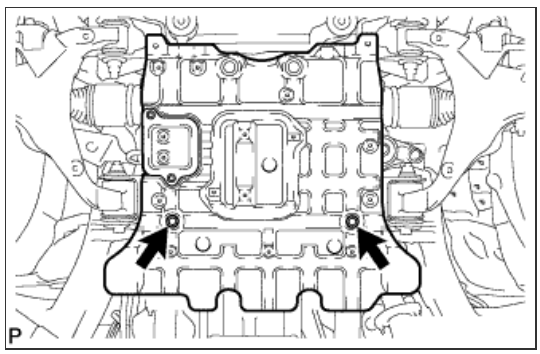
a. Install the fender apron seal with the 4 clips.



18. INSTALL FRONT FENDER APRON SEAL FRONT RH

a. Install the fender apron seal with the 3 clips.

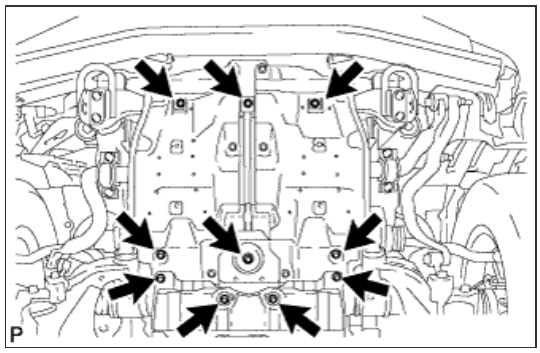
19. INSTALL FRONT FENDER APRON SEAL REAR RH



a. Install the fender apron seal with the 4 clips.

20. INSTALL NO. 2 ENGINE UNDER COVER

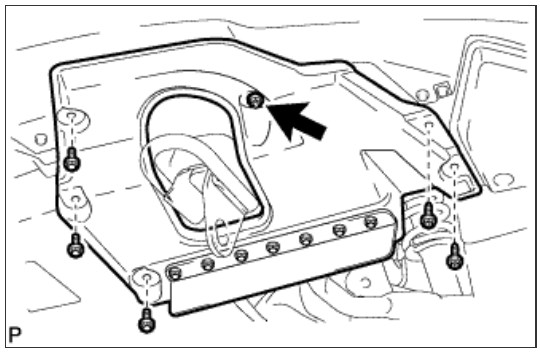
a. Install the No. 2 engine under cover with the 2 bolts.



Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

21. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.

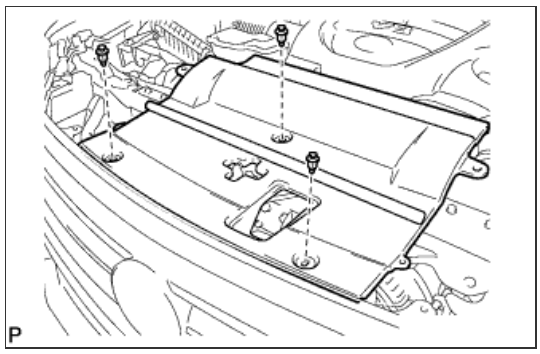


Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

22. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

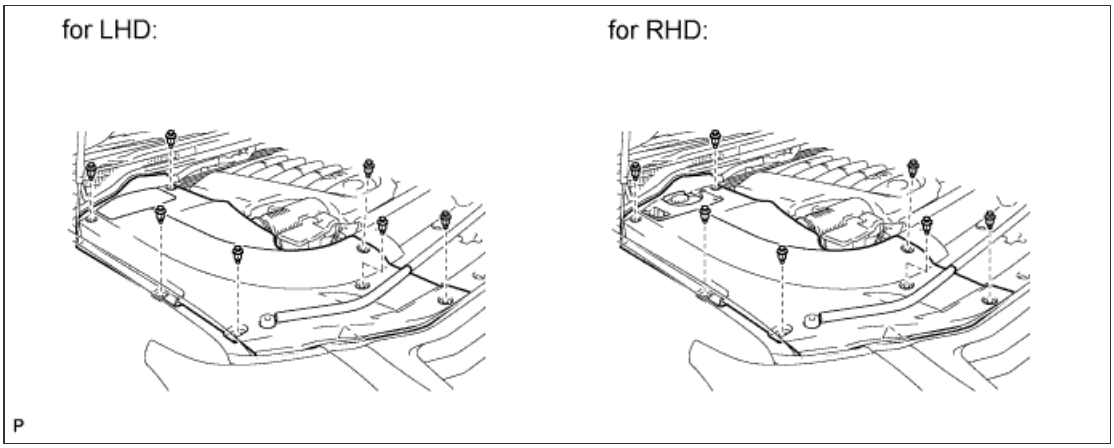
b. Install the 3 bolts and 2 screws.



23. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

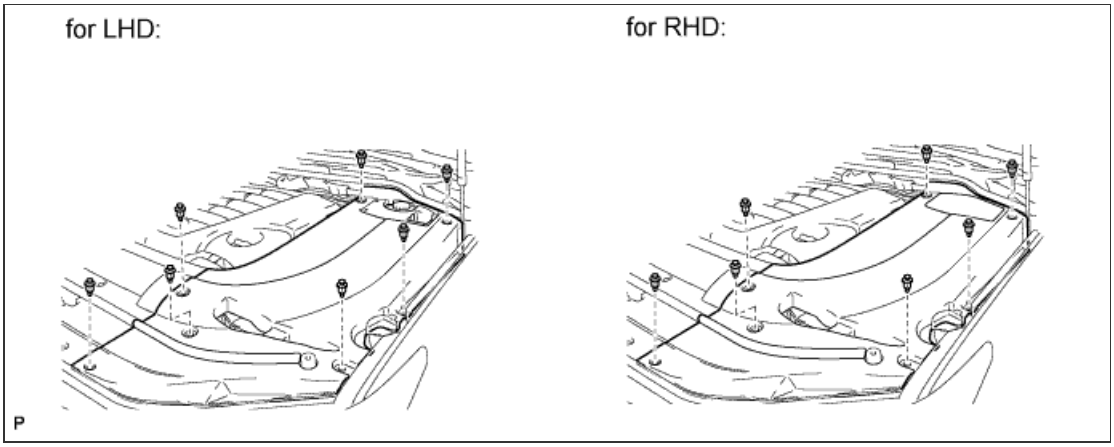
HINT:

Use the same procedures described for the LH side.



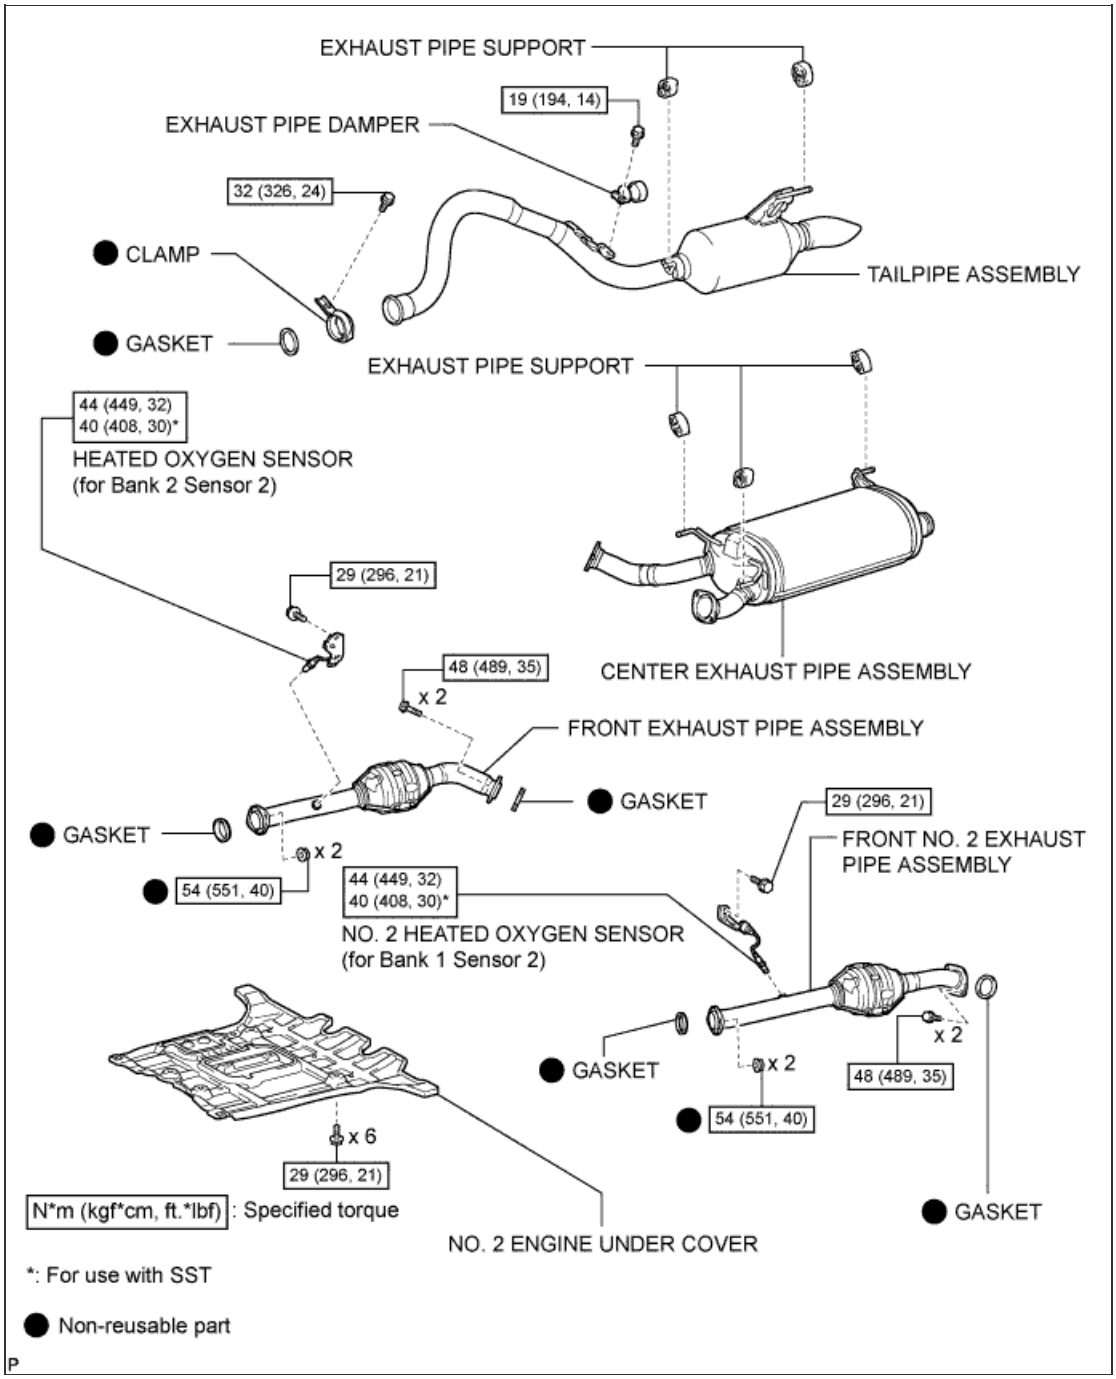
24. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the upper radiator support seal with the 3 clips.



25. INSTALL ENGINE ROOM SIDE COVER RH

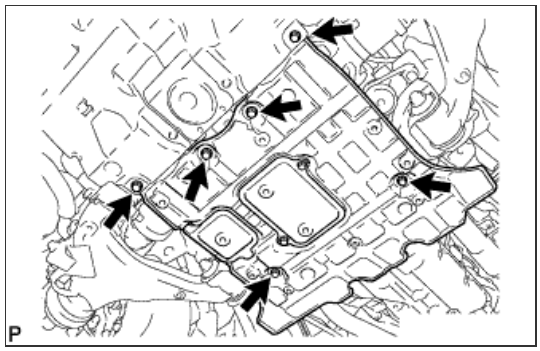
a. Install the engine room side cover with the 7 clips.



26. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.

for Preparation Click here



for Preparation Click here

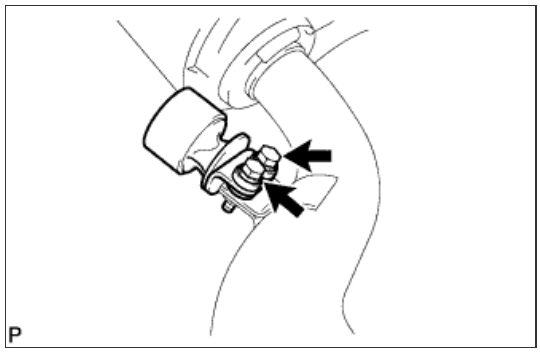
CAUTION:

- **Wear protective gloves when removing the exhaust pipe.**
- **The exhaust pipe is extremely hot immediately after the engine has stopped.**
- **Confirm that the exhaust pipe has cooled down before removing it.**

1. REMOVE NO. 2 ENGINE UNDER COVER

a. Remove the 6 bolts and under cover.

2. REMOVE TAILPIPE ASSEMBLY



a. Remove the bolt, clamp and gasket.

b. Remove the tailpipe from the 2 exhaust pipe supports.

c. Remove the bolt and clamp, and then disconnect the tailpipe from the center exhaust pipe.

3. REMOVE EXHAUST PIPE DAMPER

a. Remove the 2 bolts and exhaust pipe damper from the tailpipe.

4. REMOVE CENTER EXHAUST PIPE ASSEMBLY

a. Remove the 4 bolts.

b. Remove the center exhaust pipe from the 3 exhaust pipe supports.

c. Remove the 2 gaskets from the front exhaust pipe and front No. 2 exhaust pipe.

5. REMOVE FRONT NO. 2 EXHAUST PIPE ASSEMBLY

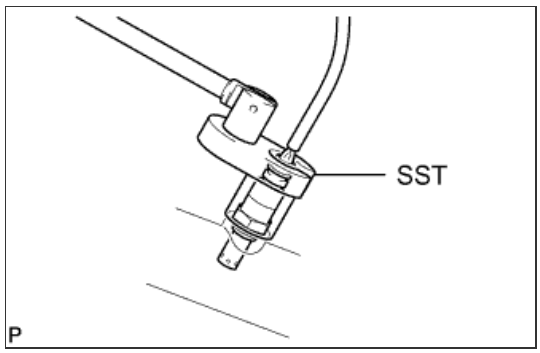
a. Disconnect the heated oxygen sensor connector.

b. Remove the bolt and disconnect the wire harness clamp bracket of the oxygen sensor from the transmission.

c. Remove the 2 nuts, front No. 2 exhaust pipe and gasket from the exhaust manifold LH.

6. REMOVE FRONT EXHAUST PIPE ASSEMBLY

a. Disconnect the heated oxygen sensor connector.

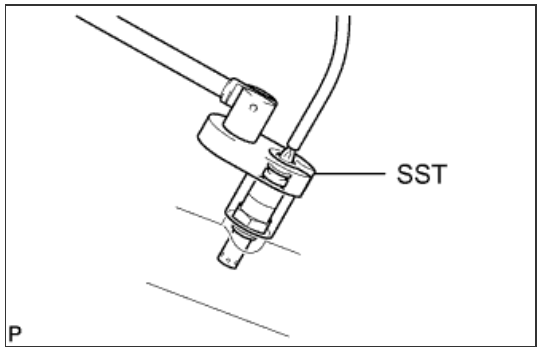


b. Remove the bolt and disconnect the wire harness clamp bracket of the oxygen sensor from the transmission.

c. Remove the 2 nuts, front exhaust pipe and gasket from the exhaust manifold RH.

7. REMOVE NO. 2 HEATED OXYGEN SENSOR (for Bank 1 Sensor 2)

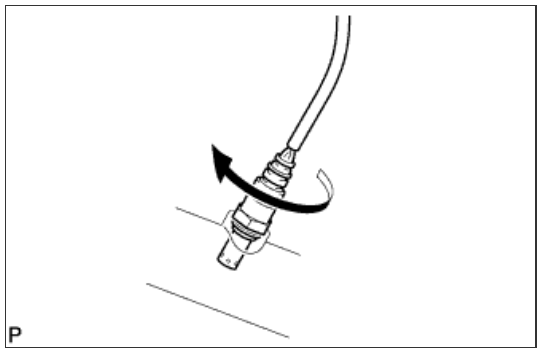
a. Using SST, remove the sensor.



SST
09224-00010

8. REMOVE HEATED OXYGEN SENSOR (for Bank 2 Sensor 2)

a. Using SST, remove the sensor.

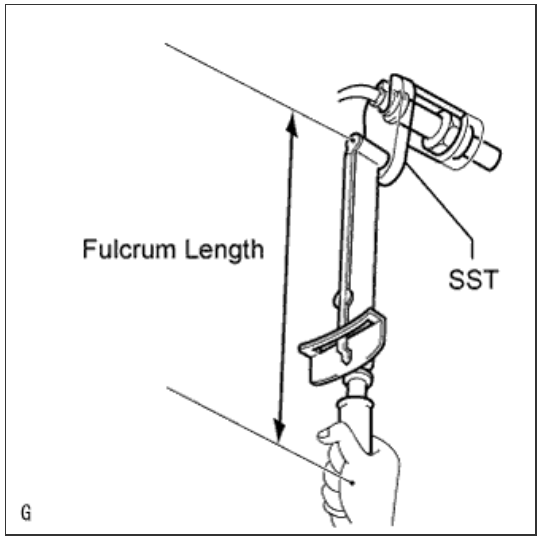


SST
09224-00010

for Preparation Click here

1. INSTALL NO. 2 HEATED OXYGEN SENSOR (for Bank 1 Sensor 2)

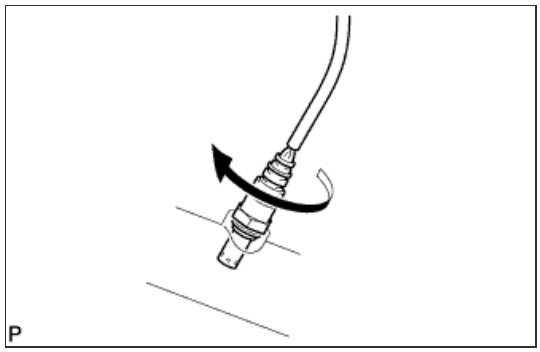
a. Temporarily install the sensor to the exhaust pipe by hand.



b. Using SST, tighten the sensor.

SST
09224-00010

Torque:
without SST:
44 N*m{ 449 kgf*cm , 32 ft.*lbf }
with SST:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }



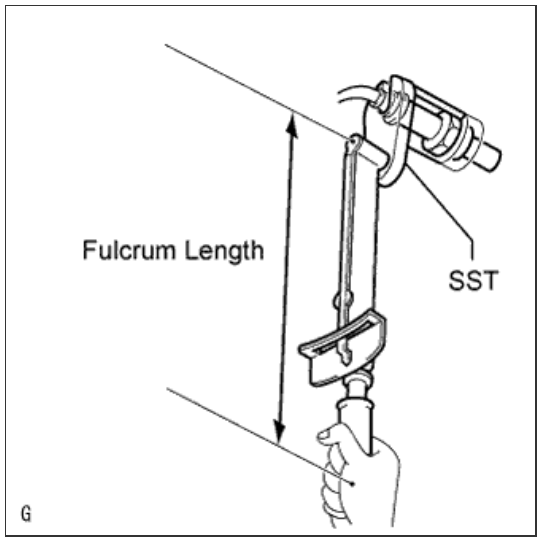
HINT:

- **Use a torque wrench with a fulcrum length of 300 mm (11.8 in.). If using a torque wrench with a length that is not 300 mm (11.8 in.), calculate the torque specification for the torque wrench and SST based on the "without SST" torque specification (Click here).**
- **Make sure SST and the wrench are connected in a straight line.**

2. INSTALL HEATED OXYGEN SENSOR (for Bank 2 Sensor 2)

a. Temporarily install the sensor to the exhaust pipe by hand.

b. Using SST, tighten the sensor.



SST
09224-00010

Torque:
without SST:

44 N*m{ 449 kgf*cm , 32 ft.*lbf }
with SST:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

HINT:

- **Use a torque wrench with a fulcrum length of 300 mm (11.8 in.). If using a torque wrench with a length that is not 300 mm (11.8 in.), calculate the torque specification for the torque wrench and SST based on the "without SST" torque specification (Click here).**
- **Make sure SST and the wrench are connected in a straight line.**

3. INSTALL FRONT EXHAUST PIPE ASSEMBLY

a. Install a new gasket and the front exhaust pipe to the exhaust manifold RH with 2 new nuts.

Torque:
54 N*m{ 551 kgf*cm , 40 ft.*lbf }

b. Install the wire harness clamp bracket of the oxygen sensor to the transmission with the bolt.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

c. Connect the heated oxygen sensor connector.

4. INSTALL FRONT NO. 2 EXHAUST PIPE ASSEMBLY

a. Install a new gasket and the front No. 2 exhaust pipe to the exhaust manifold LH with 2 new nuts.

Torque:
54 N*m{ 551 kgf*cm , 40 ft.*lbf }

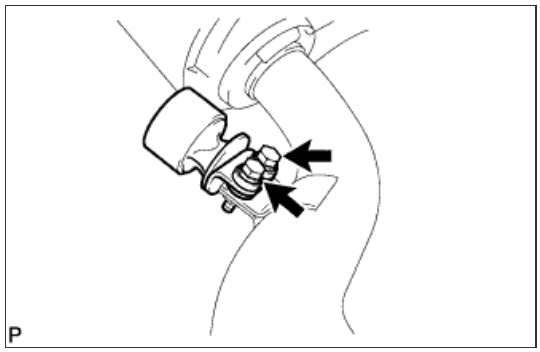
b. Install the wire harness clamp bracket of the oxygen sensor to the transmission with the bolt.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

c. Connect the heated oxygen sensor connector.

5. INSTALL CENTER EXHAUST PIPE ASSEMBLY

a. Install 2 new gaskets to the front exhaust pipe and front No. 2 exhaust pipe.



b. Install the center exhaust pipe to the 3 exhaust pipe supports, and then install the 4 bolts.

Torque:
48 N*m{ 489 kgf*cm , 35 ft.*lbf }

6. INSTALL EXHAUST PIPE DAMPER

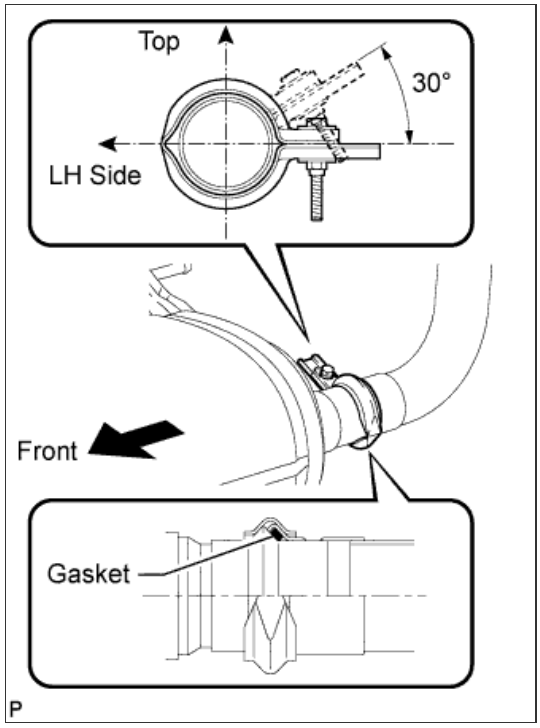
a. Install the exhaust pipe damper to the tailpipe with the 2 bolts.

Torque:
19 N*m{ 194 kgf*cm , 14 ft.*lbf }

7. INSTALL TAILPIPE ASSEMBLY

a. Install the tailpipe to the 2 exhaust pipe supports.

b. Install a new gasket to the center exhaust pipe.



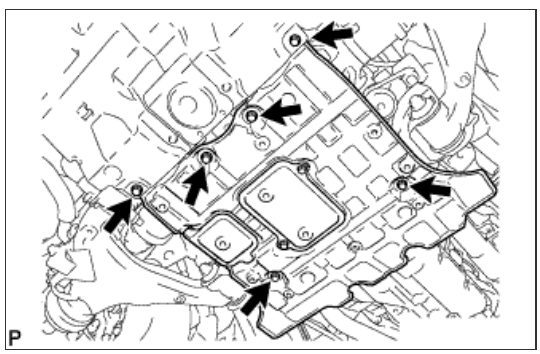
c. Connect the tailpipe to the center exhaust pipe.

d. Attach a new clamp to the tailpipe and center exhaust pipe. Then install the bolt to the clamp.

Torque:
32 N*m{ 326 kgf*cm , 24 ft.*lbf }

HINT:

Install the clamp within the angle range shown in the illustration.



8. INSPECT FOR EXHAUST GAS LEAK

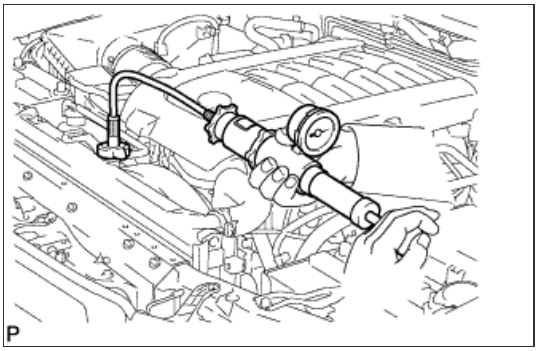
9. INSTALL NO. 2 ENGINE UNDER COVER

a. Install the under cover with the 6 bolts.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

for Preparation Click here

CAUTION:



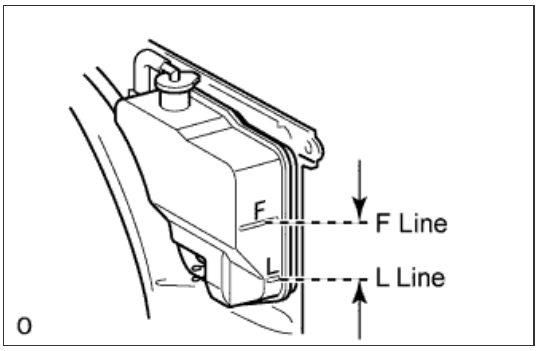
Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

1. INSPECT FOR COOLANT LEAK

a. Fill the radiator with coolant and attach a radiator cap tester.

b. Warm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.



2. INSPECT ENGINE COOLANT LEVEL

a. Check that the engine coolant level is between the L and F lines when the engine is cold.
If the engine coolant is below the L line, check for leaks and add "TOYOTA Super Long Life Coolant" or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite and non-borate coolant with long-life hybrid organic acid technology to the F line.

NOTICE:

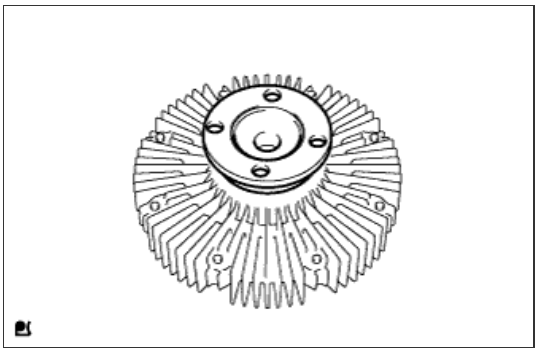
Do not substitute plain water for engine coolant.

b. Remove the radiator cap, and check that the coolant level is up to the radiator filler hole.

3. INSPECT ENGINE COOLANT QUALITY

a. Remove the radiator cap.

b. Check if there are any excessive deposits of rust or scales around the radiator cap and radiator filler hole. Also, the coolant should be free of oil.
If excessively dirty, clean the coolant passage and replace the coolant.

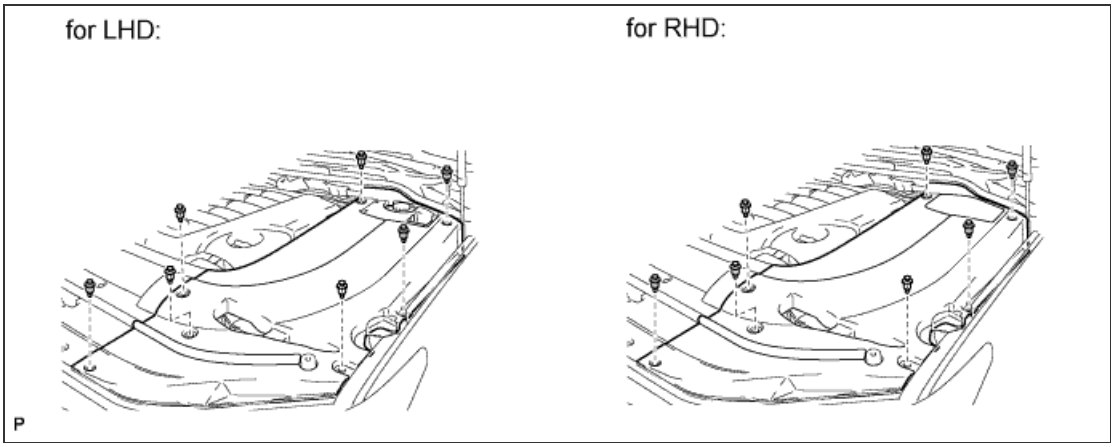


c. Install the radiator cap.

4. INSPECT FLUID COUPLING ASSEMBLY

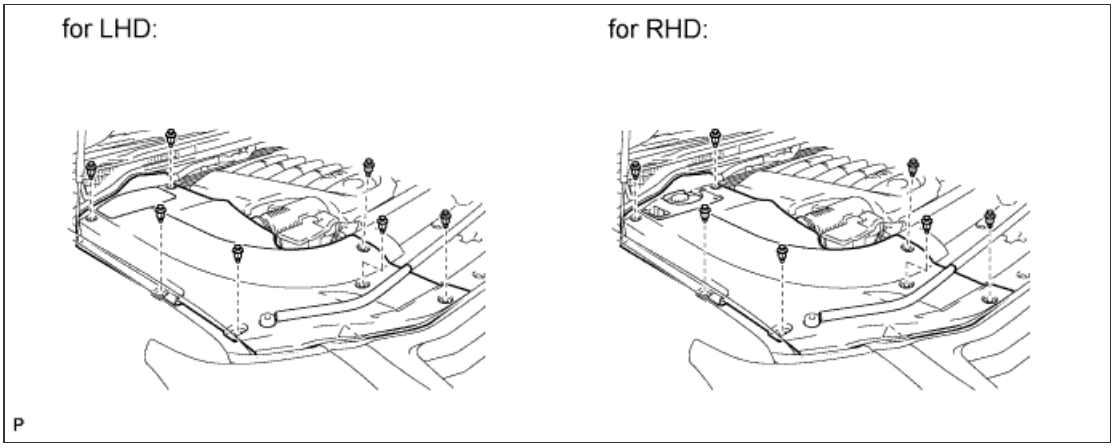
a. Check the turning smoothness of the fluid coupling.
If necessary, replace the fluid coupling assembly.

b. Check the fluid coupling for damage or silicon oil leaks.



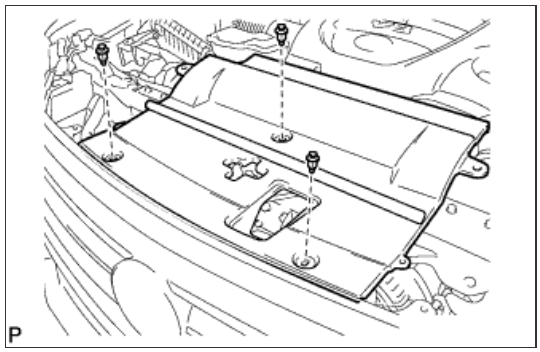
If necessary, replace the fluid coupling assembly.

for Preparation Click here



1. REMOVE ENGINE ROOM SIDE COVER LH

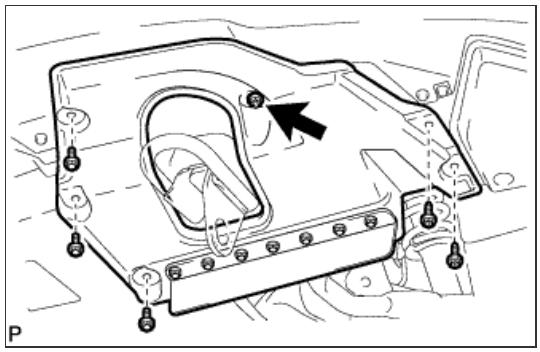
a. Remove the 7 clips and engine room side cover.



2. REMOVE ENGINE ROOM SIDE COVER RH

a. Remove the 7 clips and engine room side cover.

3. REMOVE UPPER RADIATOR SUPPORT SEAL

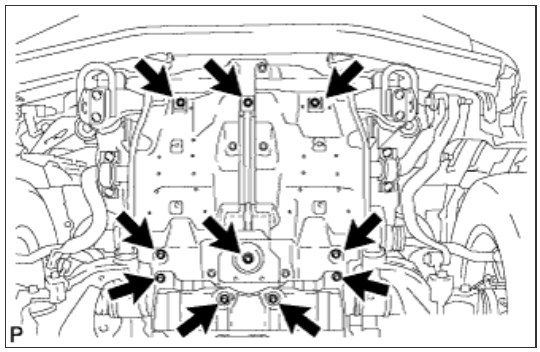


a. Remove the 3 clips and upper radiator support seal.

4. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and 2 screws.

b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.

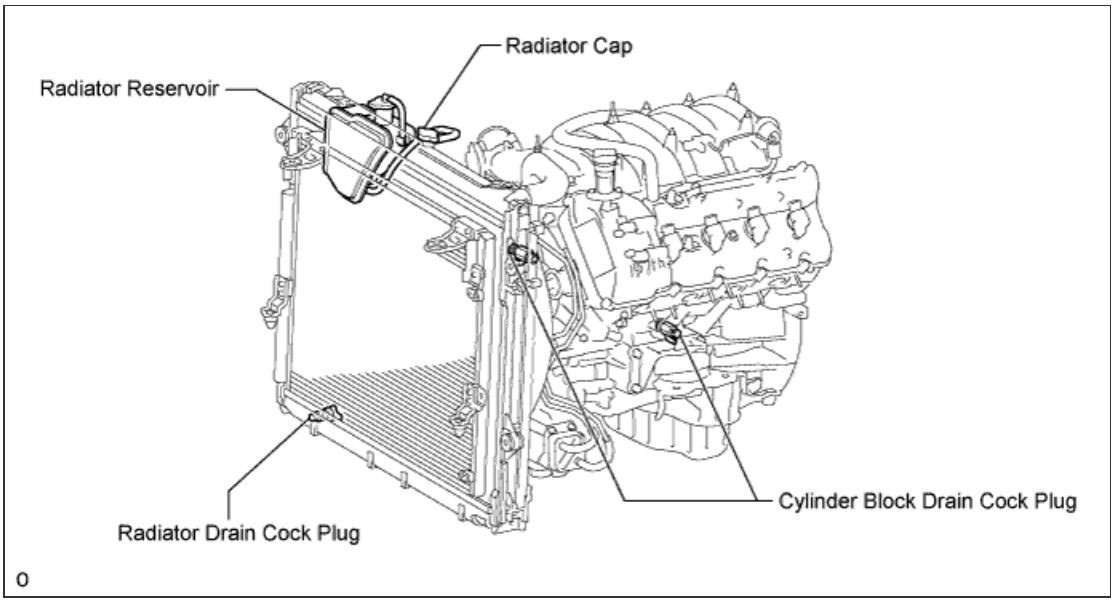


5. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

6. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY



a. Remove the 10 bolts and No. 1 engine under cover.

7. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Loosen the radiator drain cock plug.

HINT:

Collect the coolant in a container and dispose of it according to the regulations in your area.

b. Remove the radiator cap. Then drain the coolant from the radiator.

c. Loosen the 2 cylinder block drain cock plugs. Then drain the coolant from the engine.

d. Tighten the 2 cylinder block drain cock plugs.

Torque:
13 N*m{ 130 kgf*cm , 10 ft.*lbf }

e. Tighten the radiator drain cock plug by hand.

8. ADD ENGINE COOLANT

a. Add engine coolant.

Standard Capacity:

Item	Specified Condition
with transmission oil cooler	16.7 liters (17.6 US qts, 14.7 Imp. qts)
without transmission oil cooler	16.2 liters (17.1 US qts, 14.3 Imp. qts)

NOTICE:

Do not substitute plain water for engine coolant.

HINT:

TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

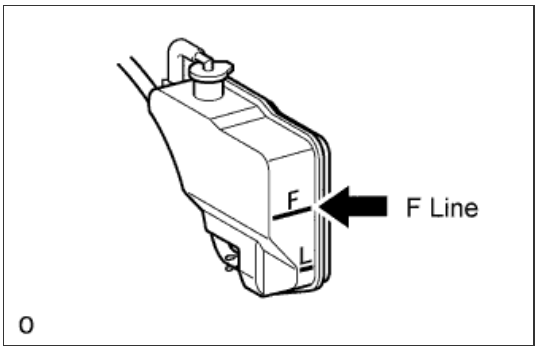
b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the reservoir cap.

d. Press the No. 1 and No. 2 radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Start the engine and warm it up until the thermostat opens.



NOTICE:

Switch off the A/C.

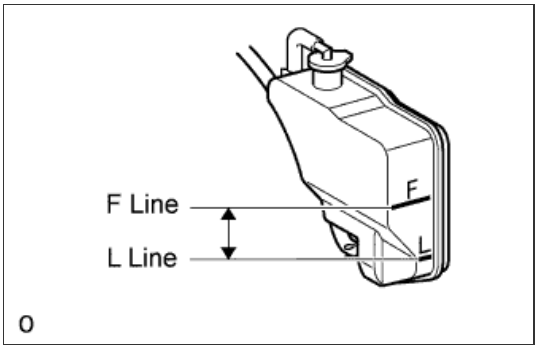
g. Maintain the engine speed at 2000 to 2500 rpm.

NOTICE:

- **Make sure that the radiator reservoir still has some coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**
- **Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the F line.**
- **Run the engine at 2000 rpm until the coolant level has stabilized.**

h. Press the No. 1 and No. 2 radiator hoses several times by hand to bleed air.

CAUTION:



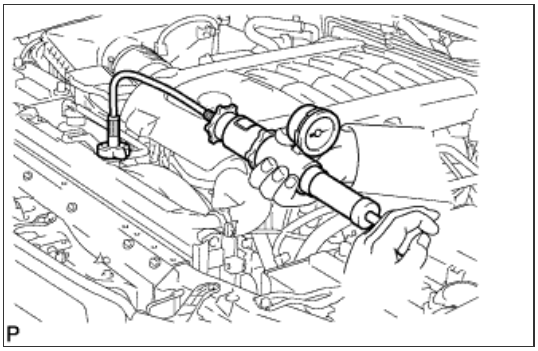
- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the fan.**

i. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

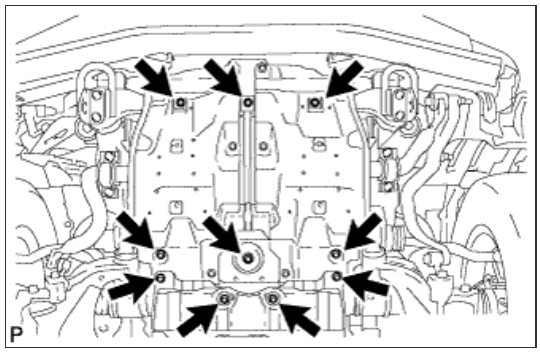
j. Check that the coolant level is between the F and L lines.
If the coolant level is below the L line, repeat all of the procedures above.
If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.



9. INSPECT FOR COOLANT LEAK

a. Fill the radiator with coolant and attach a radiator cap tester.

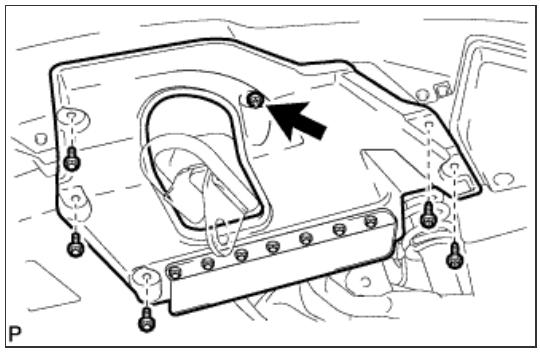
b. Warm up the engine.



c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.

10. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.



Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

11. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

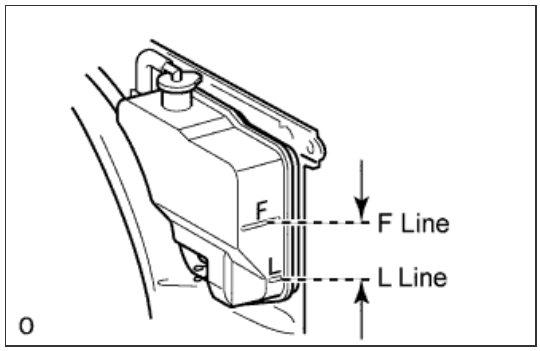
a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the 3 bolts and 2 screws.

12. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

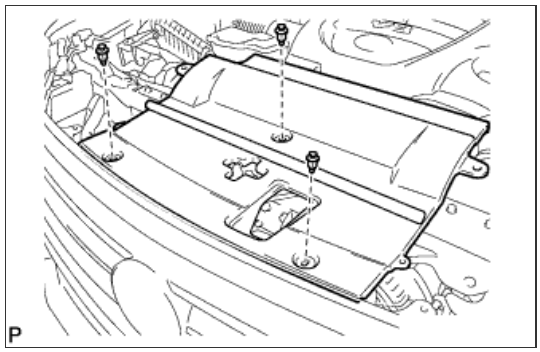
Use the same procedures described for the LH side.



13. INSPECT ENGINE COOLANT LEVEL

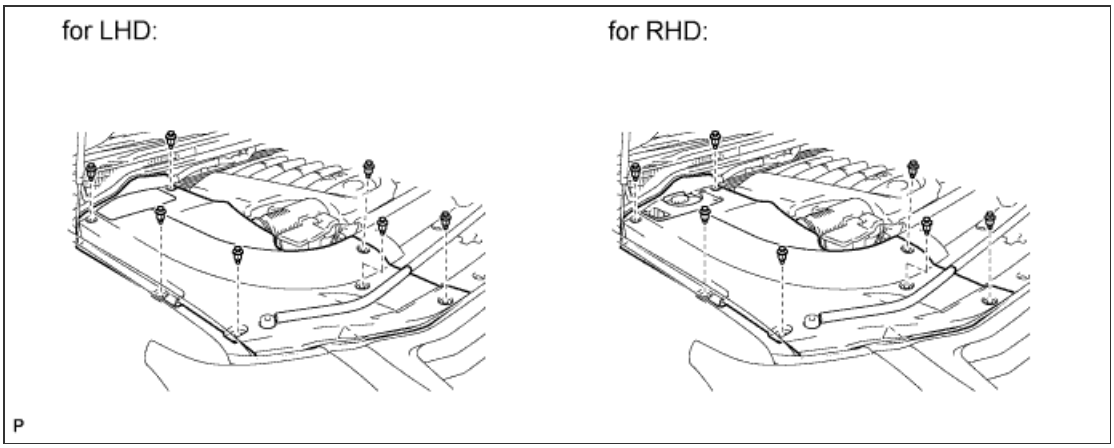
a. Check that the engine coolant level is between the L and F lines when the engine is cold.
If the engine coolant is below the L line, check for leaks and add "TOYOTA Super Long Life Coolant" or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite and non-borate coolant with long-life hybrid organic acid technology to the F line.

NOTICE:



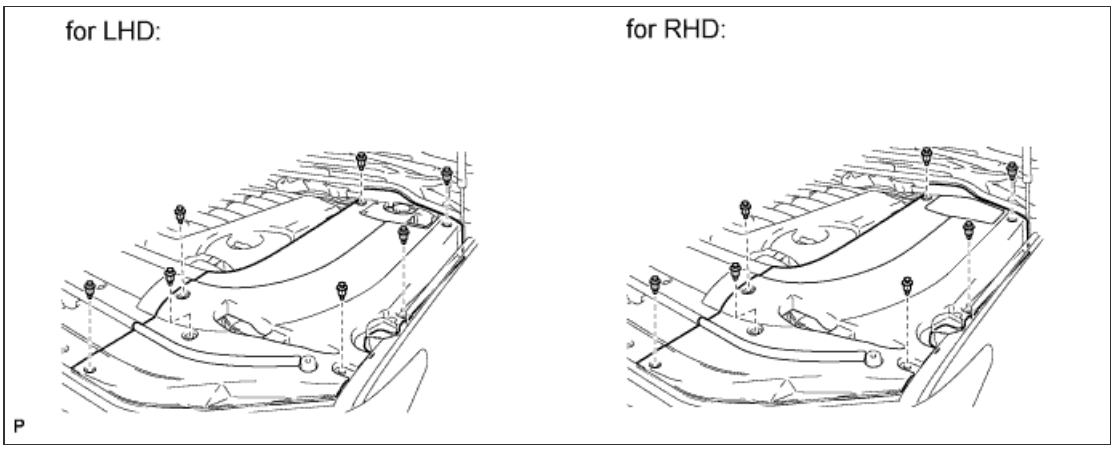
Do not substitute plain water for engine coolant.

b. Remove the radiator cap, and check that the coolant level is up to the radiator filler hole.



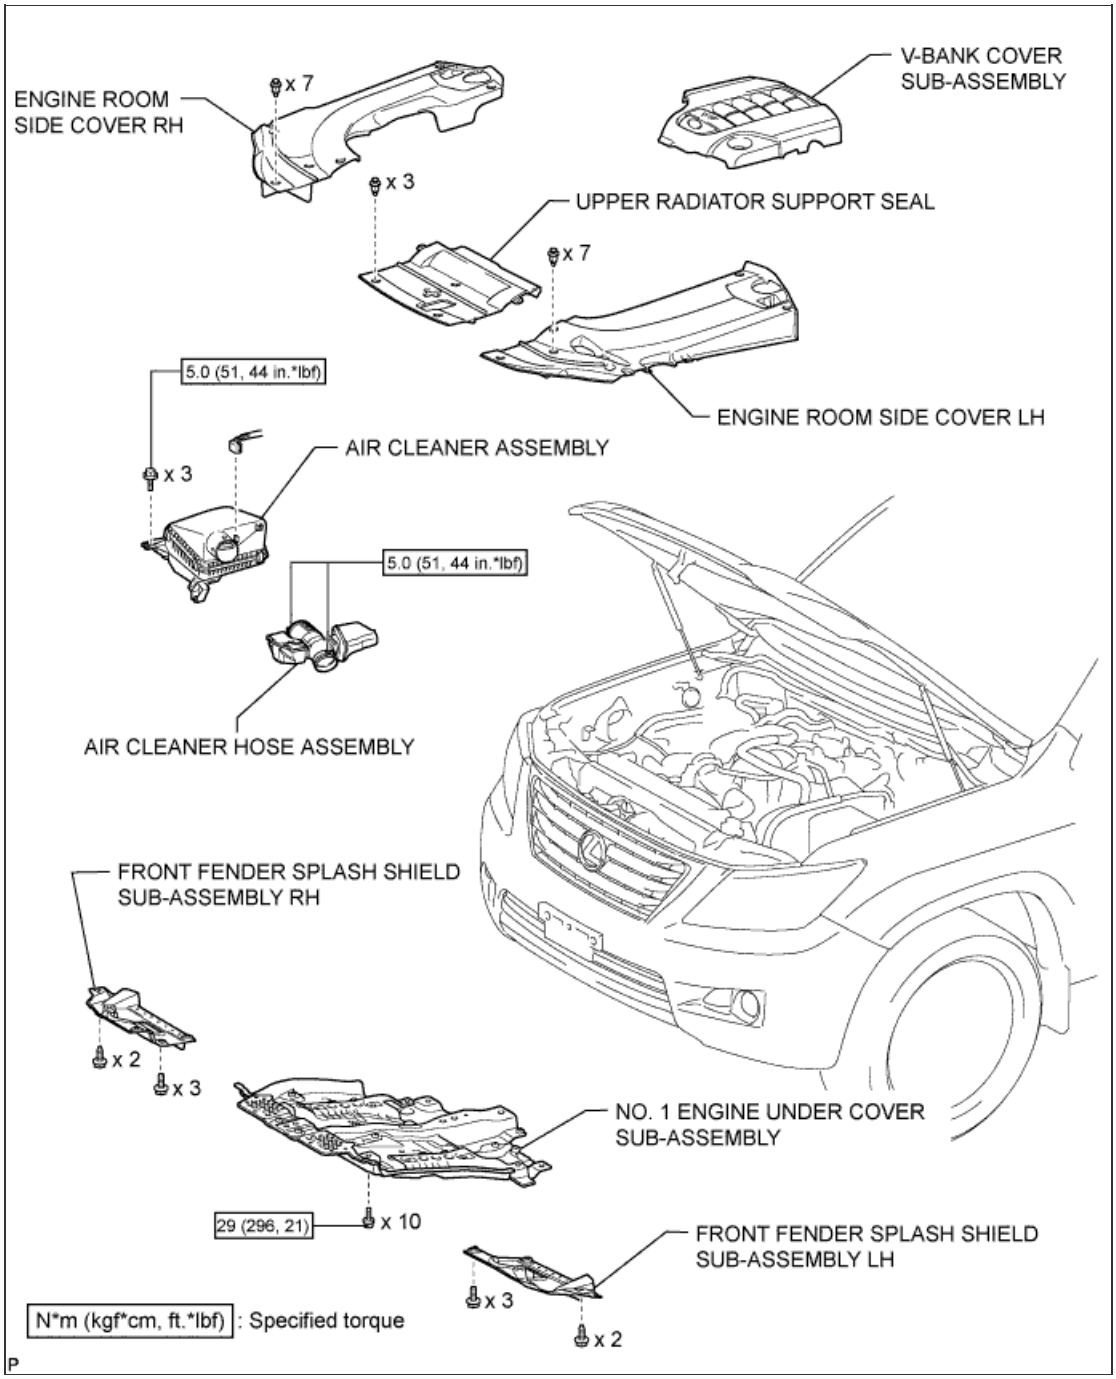
14. INSTALL UPPER RADIATOR SUPPORT SEAL

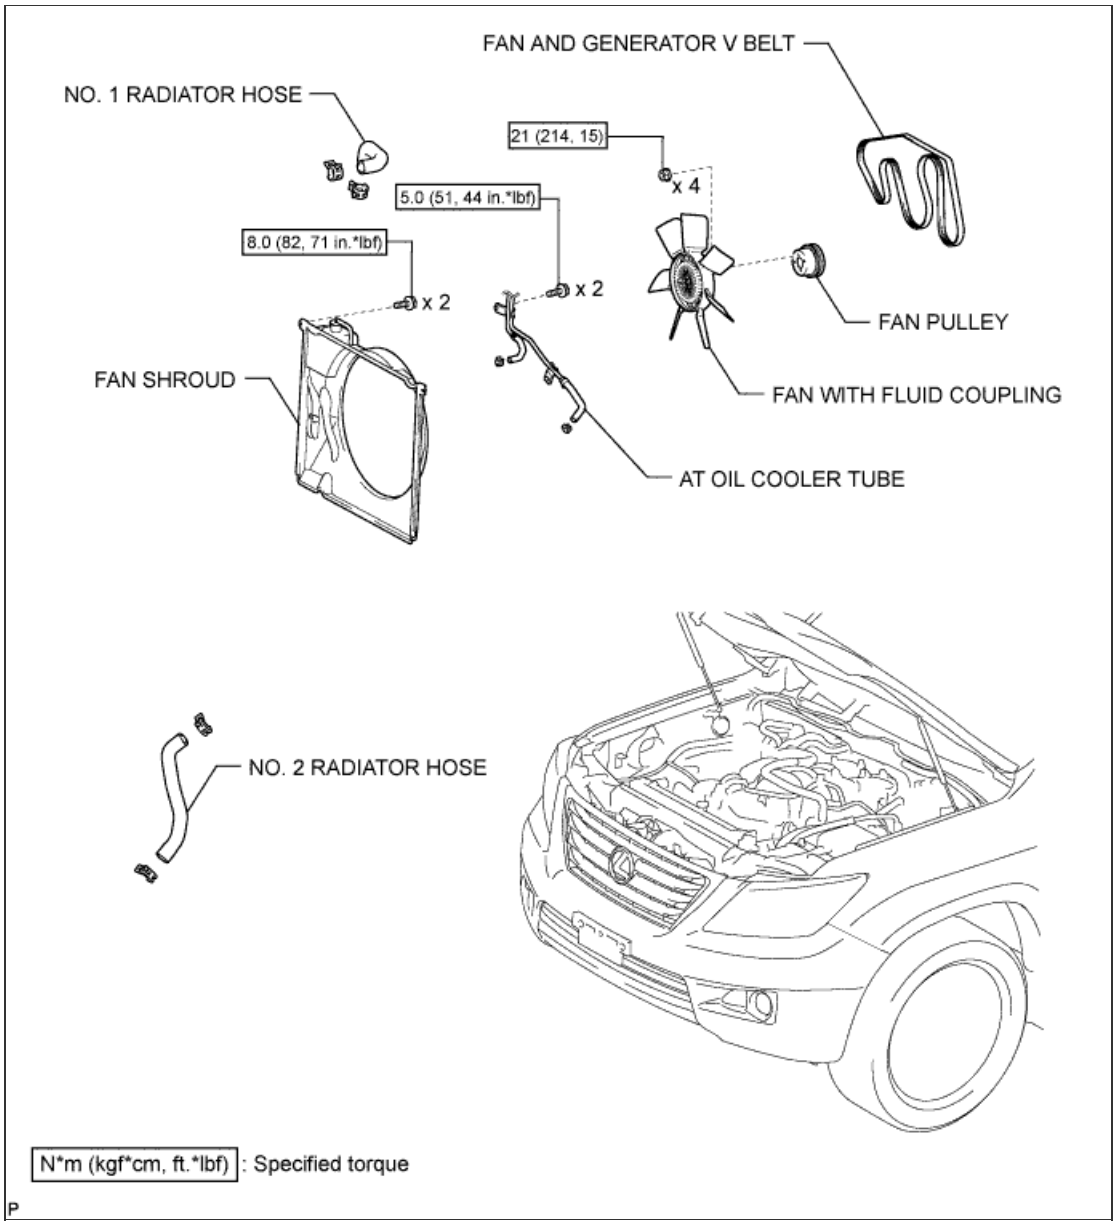
a. Install the upper radiator support seal with the 3 clips.



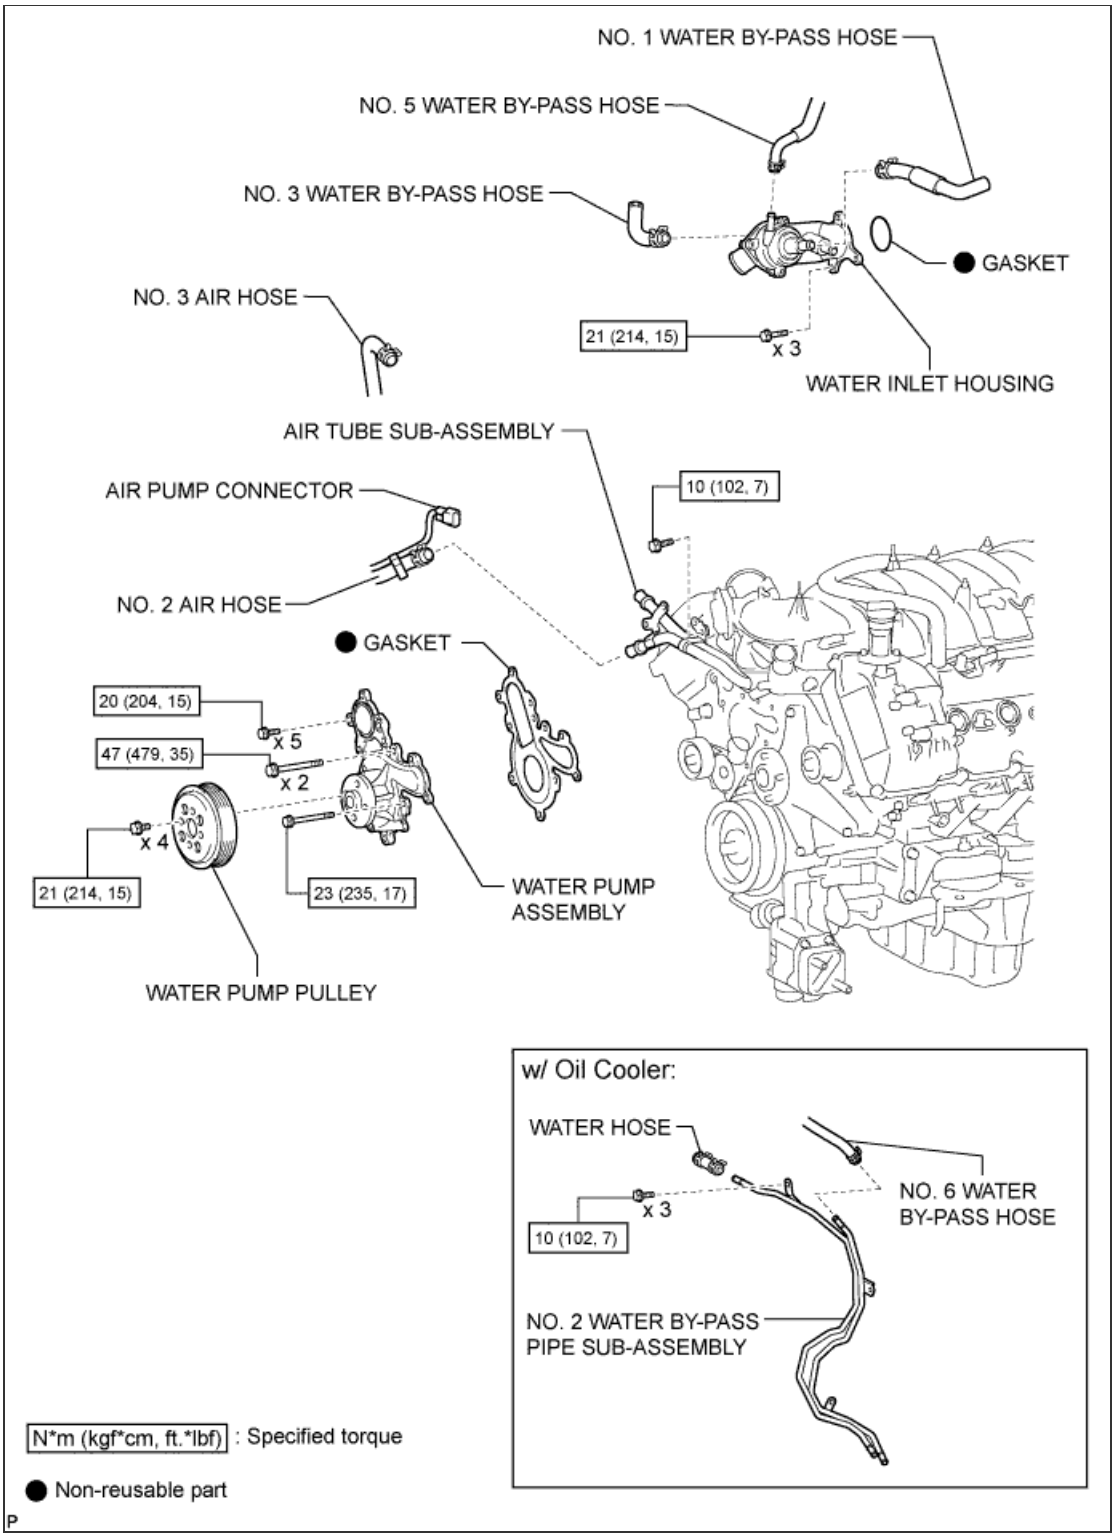
15. INSTALL ENGINE ROOM SIDE COVER RH

a. Install the engine room side cover with the 7 clips.





16. INSTALL ENGINE ROOM SIDE COVER LH



a. Install the engine room side cover with the 7 clips.

for Preparation Click here

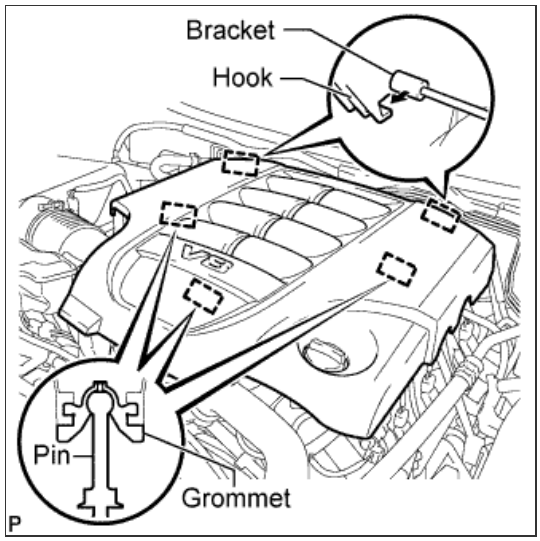
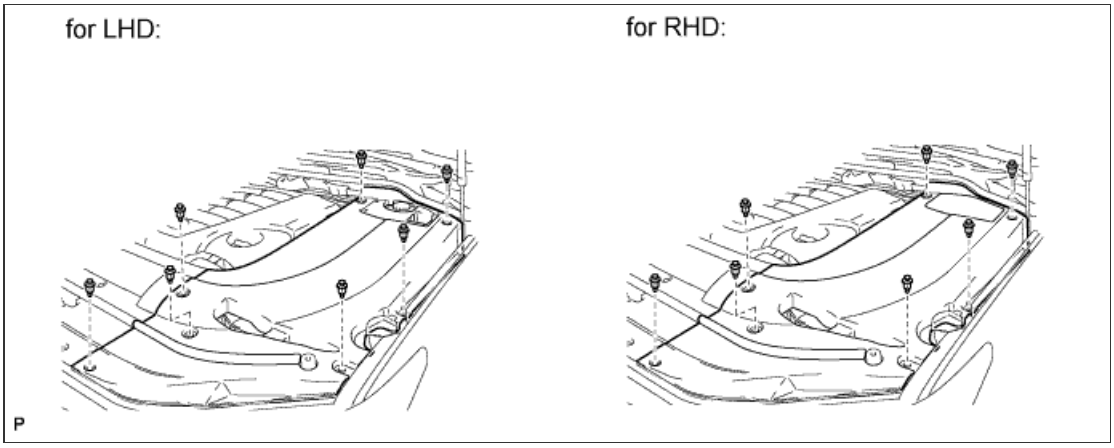
1. INSPECT WATER PUMP ASSEMBLY

a. Turn the pulley and check that the water pump bearing moves smoothly and quietly.
If necessary, replace the water pump assembly.



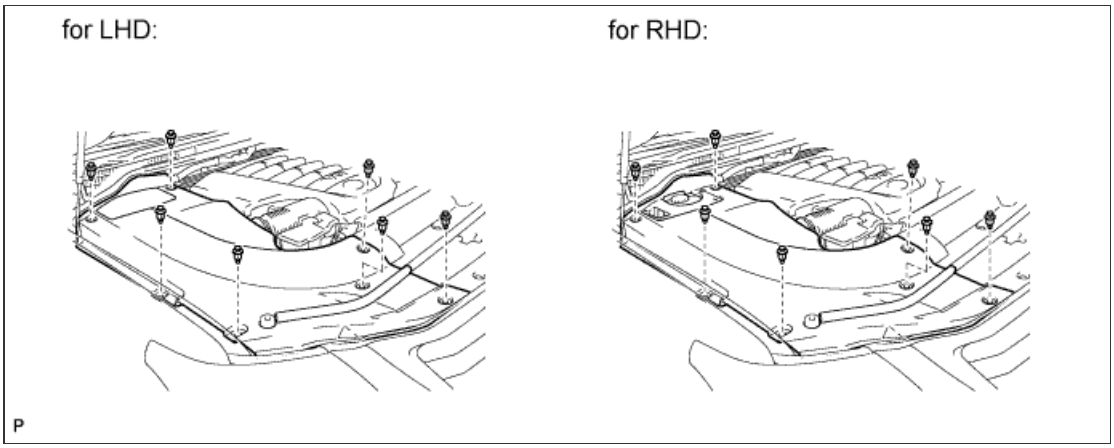
b. Visually check the air hole and drain hole for coolant leakage.
If leakage is found, replace the water pump assembly.

for Preparation Click here



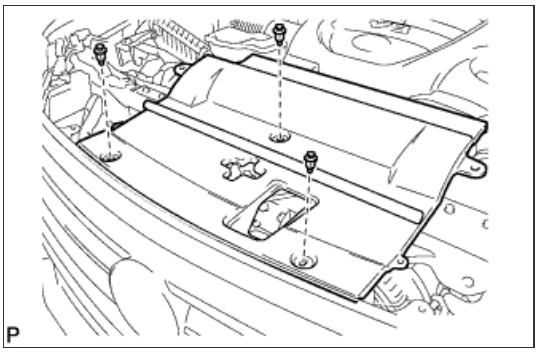
1. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.



2. REMOVE ENGINE ROOM SIDE COVER LH

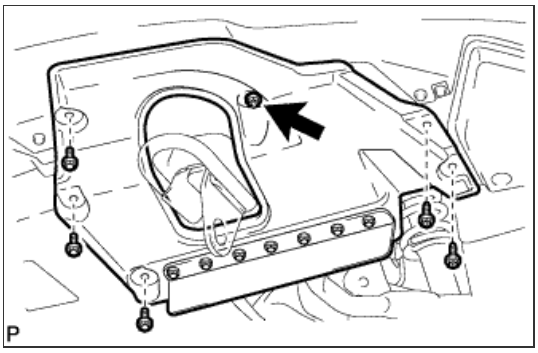
a. Remove the 7 clips and engine room side cover.



3. REMOVE ENGINE ROOM SIDE COVER RH

a. Remove the 7 clips and engine room side cover.

4. REMOVE UPPER RADIATOR SUPPORT SEAL

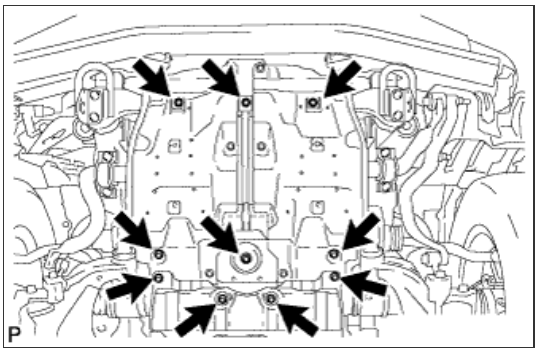


a. Remove the 3 clips and upper radiator support seal.

5. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and 2 screws.

b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.

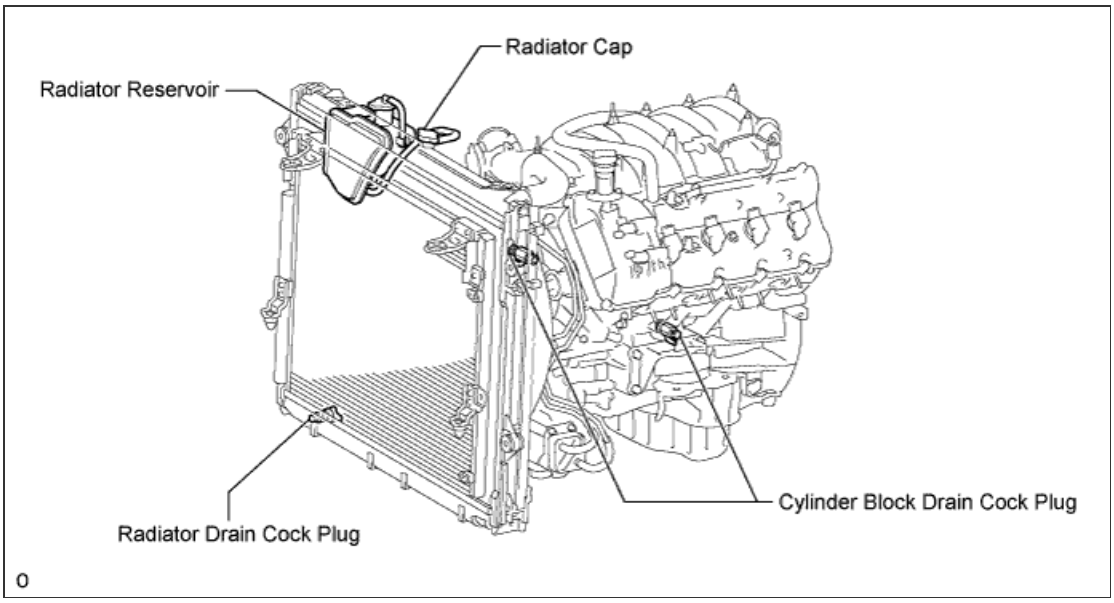


6. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

7. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY



a. Remove the 10 bolts and No. 1 engine under cover.

8. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Loosen the radiator drain cock plug.

HINT:

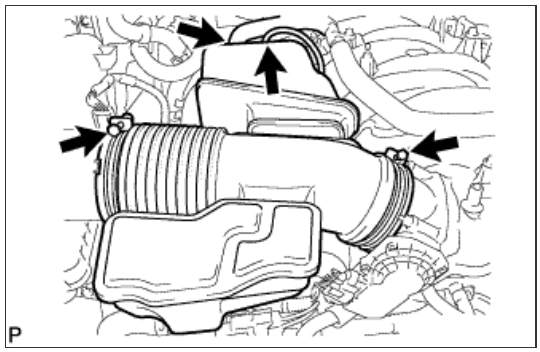
Collect the coolant in a container and dispose of it according to the regulations in your area.

b. Remove the radiator cap. Then drain the coolant from the radiator.

c. Loosen the 2 cylinder block drain cock plugs. Then drain the coolant from the engine.

d. Tighten the 2 cylinder block drain cock plugs.

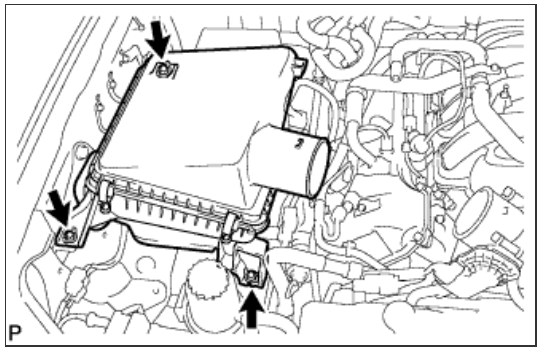
Torque:
13 N*m{ 130 kgf*cm , 10 ft.*lbf }



e. Tighten the radiator drain cock plug by hand.

9. REMOVE AIR CLEANER HOSE ASSEMBLY

a. Disconnect the vacuum hose and No. 2 ventilation hose.

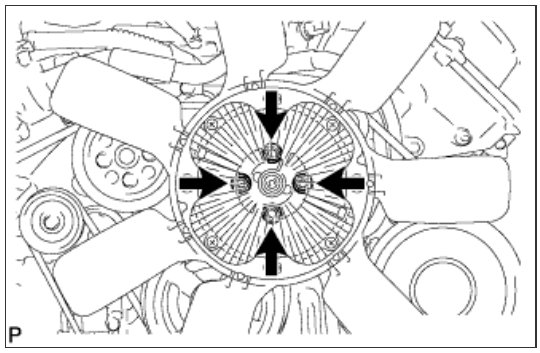


b. Loosen the 2 hose clamps.

c. Remove the air cleaner hose.

10. REMOVE AIR CLEANER ASSEMBLY

a. Remove the 3 bolts and air cleaner.



11. REMOVE NO. 1 RADIATOR HOSE

12. REMOVE NO. 2 RADIATOR HOSE

13. REMOVE FAN SHROUD

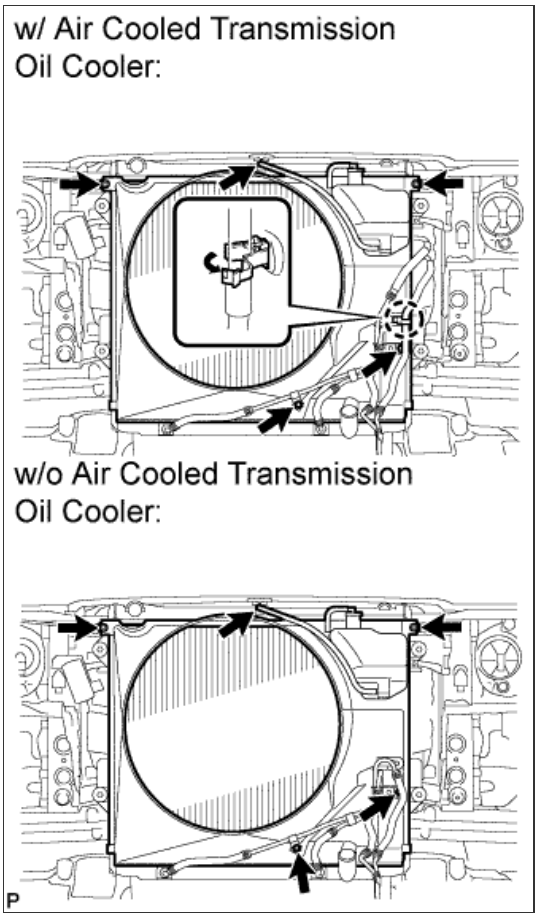
a. Loosen the 4 nuts holding the fluid coupling fan.

b. Remove the fan and generator V belt (Click here).

c. Disconnect the reservoir hose from the upper radiator tank.

d. w/ Air Cooled Transmission Oil Cooler:
Detach the claw to open the flexible hose clamp.

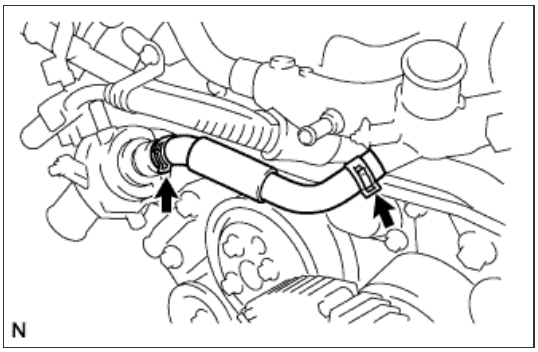
e. Remove the 2 bolts and disconnect the oil cooler tube from the fan shroud.



f. Remove the 2 bolts holding the fan shroud.

g. Remove the 4 nuts of the fluid coupling fan, and then remove the shroud together with the coupling fan.

NOTICE:

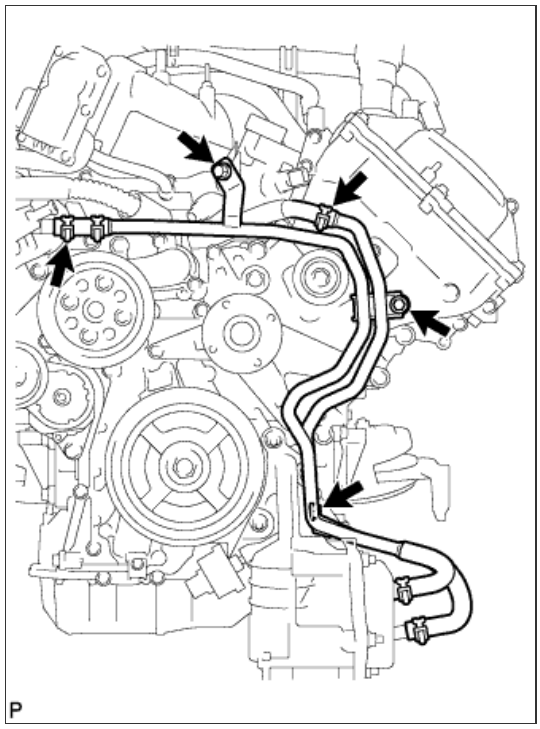


Be careful not to damage the radiator core.

h. Remove the fan pulley.

14. REMOVE NO. 1 WATER BY-PASS HOSE

a. Remove the No. 1 water by-pass hose by disconnecting the hose from the water inlet housing and front water by-pass joint.

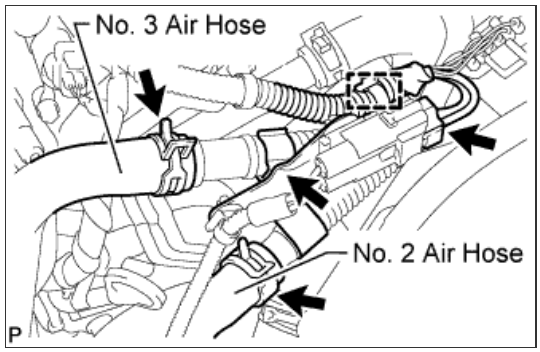


15. DISCONNECT NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY (w/ Oil Cooler)

a. Disconnect the No. 6 water by-pass hose.

b. Remove the 3 bolts.

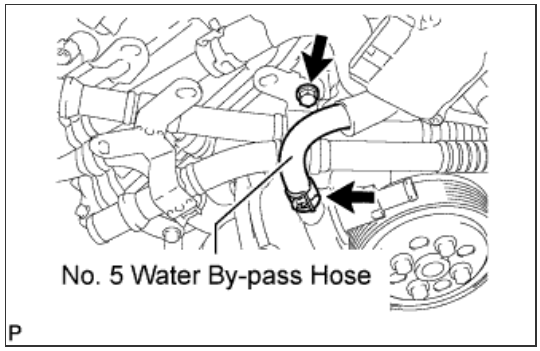
c. Disconnect the water by-pass pipe with water hose.



16. REMOVE WATER INLET HOUSING

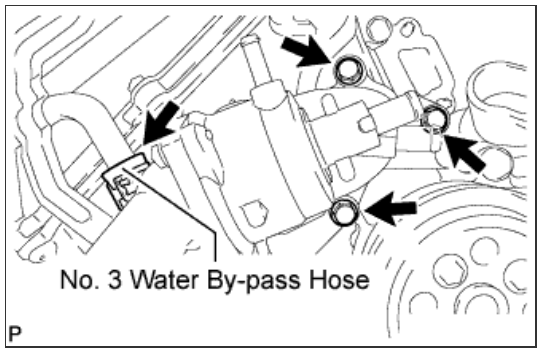
a. Disconnect the No. 2 and No. 3 air hoses.

b. Disconnect the air pump connector.



c. Disconnect the air pump connector clamp holder.

d. Using a clip remover, detach the wire harness clamp.

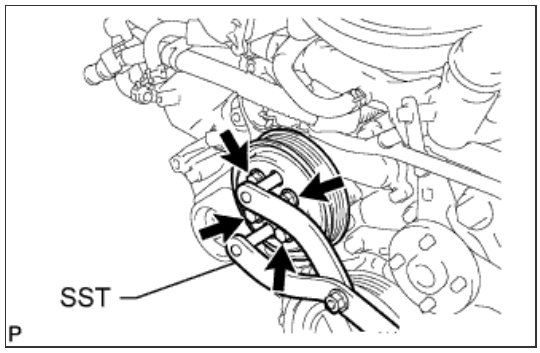


e. Disconnect the No. 5 water by-pass hose.

f. Remove the air tube bracket bolt.

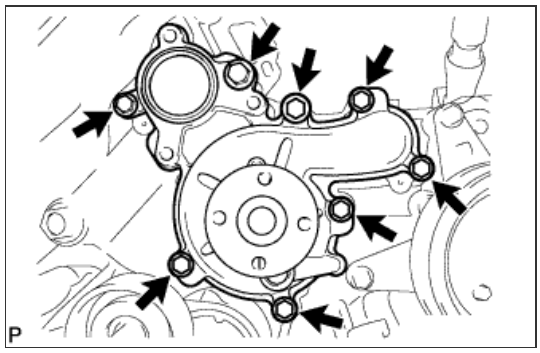
g. Disconnect the No. 3 water by-pass hose and remove the 3 bolts and water inlet housing.

h. Remove the gasket from the water pump.



17. REMOVE WATER PUMP PULLEY

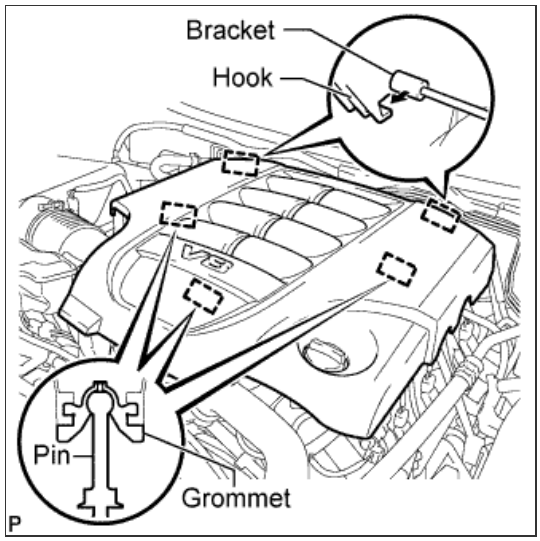
a. Using SST, hold the water pump pulley.



SST
09960-10010 (09962-01000, 09963-01000)

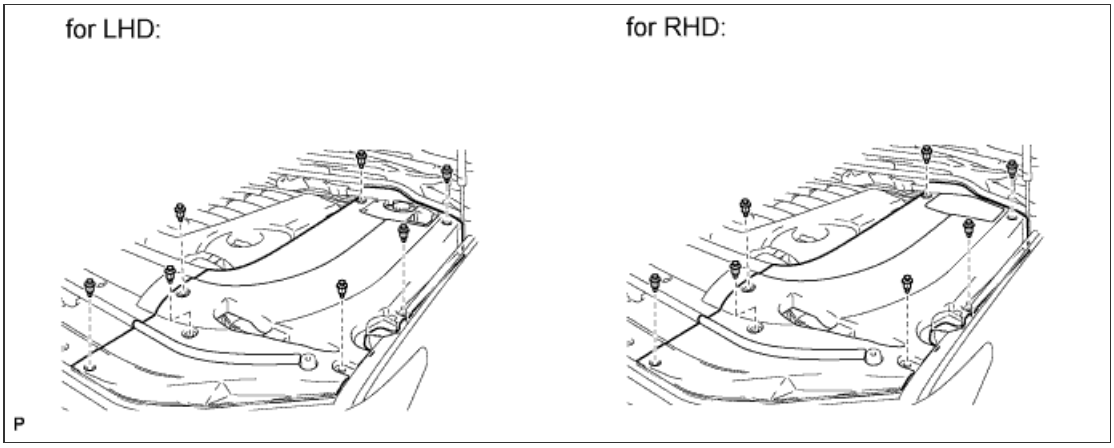
b. Remove the 4 bolts and water pump pulley.

18. REMOVE WATER PUMP ASSEMBLY



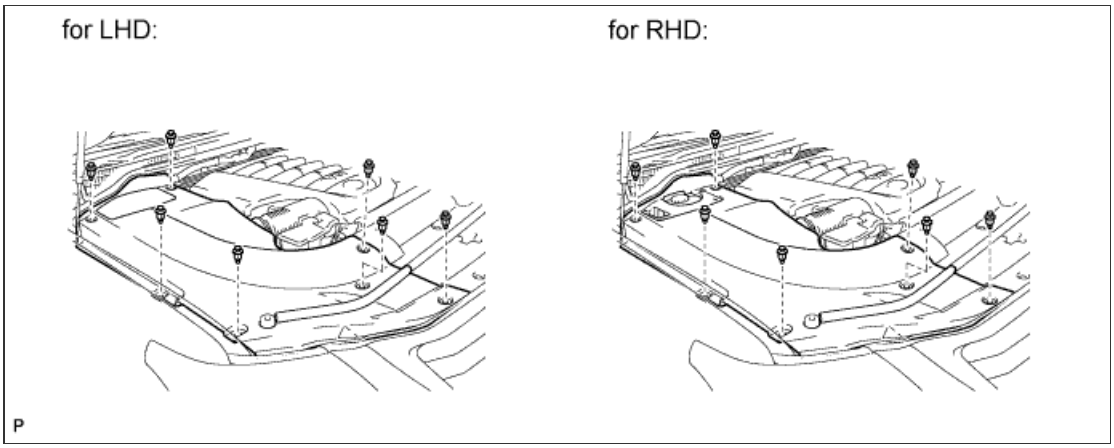
a. Remove the 8 bolts, water pump and gasket.

for Preparation Click here



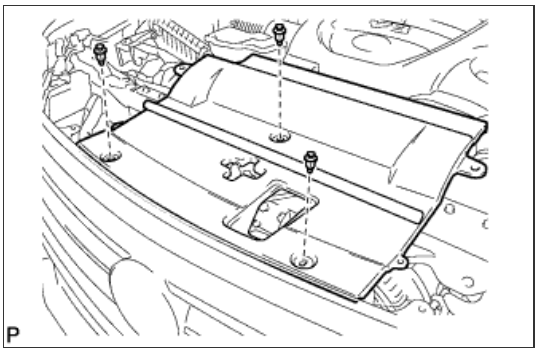
1. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.



2. REMOVE ENGINE ROOM SIDE COVER LH

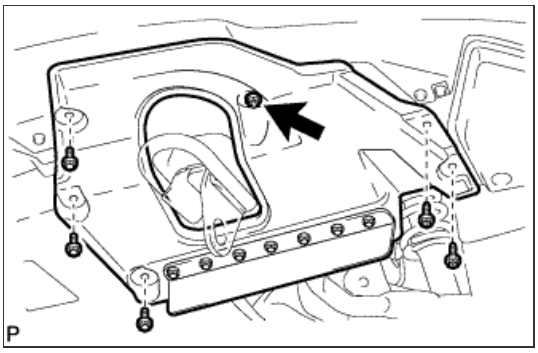
a. Remove the 7 clips and engine room side cover.



3. REMOVE ENGINE ROOM SIDE COVER RH

a. Remove the 7 clips and engine room side cover.

4. REMOVE UPPER RADIATOR SUPPORT SEAL

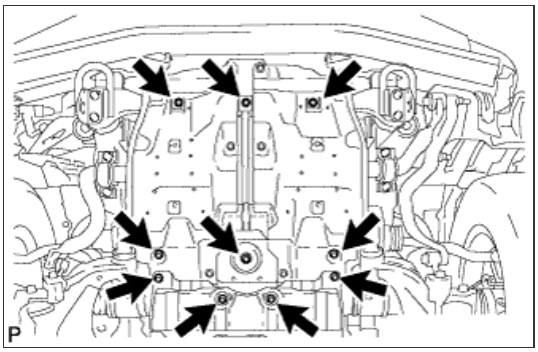


a. Remove the 3 clips and upper radiator support seal.

5. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and 2 screws.

b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.

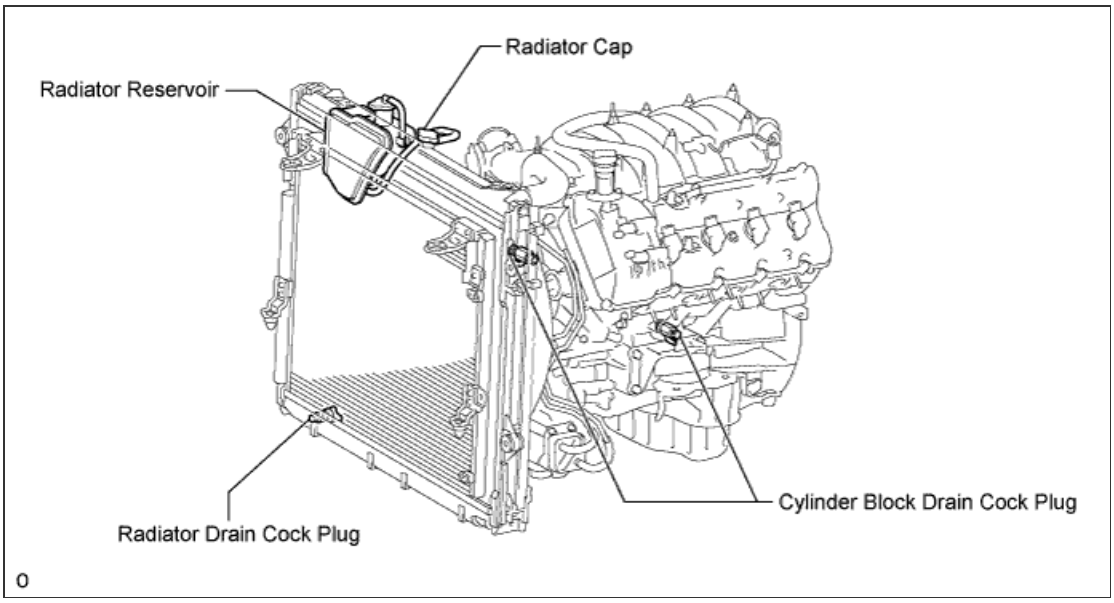


6. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

7. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY



a. Remove the 10 bolts and No. 1 engine under cover.

8. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Loosen the radiator drain cock plug.

HINT:

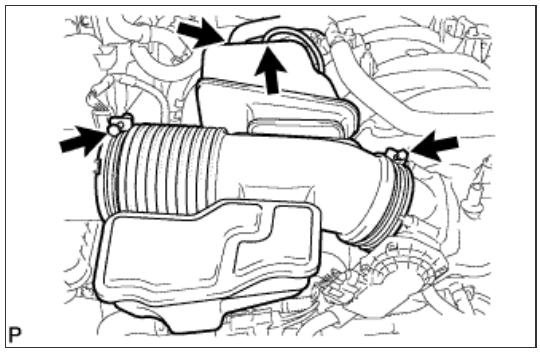
Collect the coolant in a container and dispose of it according to the regulations in your area.

b. Remove the radiator cap. Then drain the coolant from the radiator.

c. Loosen the 2 cylinder block drain cock plugs. Then drain the coolant from the engine.

d. Tighten the 2 cylinder block drain cock plugs.

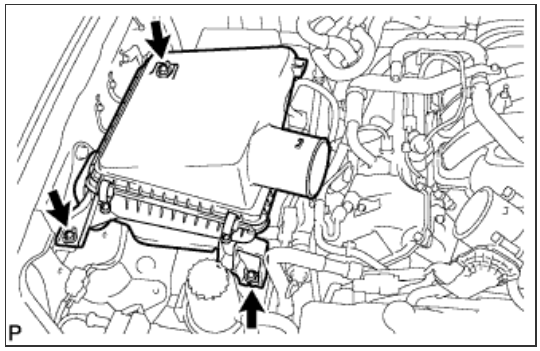
Torque:
13 N*m{ 130 kgf*cm , 10 ft.*lbf }



e. Tighten the radiator drain cock plug by hand.

9. REMOVE AIR CLEANER HOSE ASSEMBLY

a. Disconnect the vacuum hose and No. 2 ventilation hose.

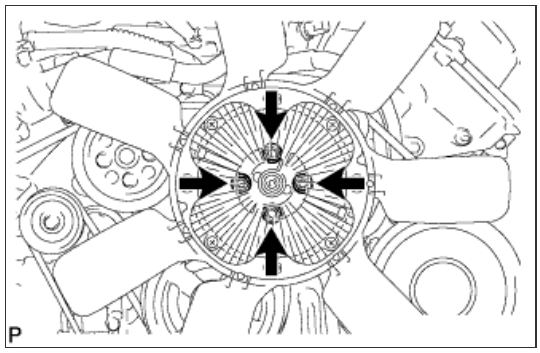


b. Loosen the 2 hose clamps.

c. Remove the air cleaner hose.

10. REMOVE AIR CLEANER ASSEMBLY

a. Remove the 3 bolts and air cleaner.



11. REMOVE NO. 1 RADIATOR HOSE

12. REMOVE NO. 2 RADIATOR HOSE

13. REMOVE FAN SHROUD

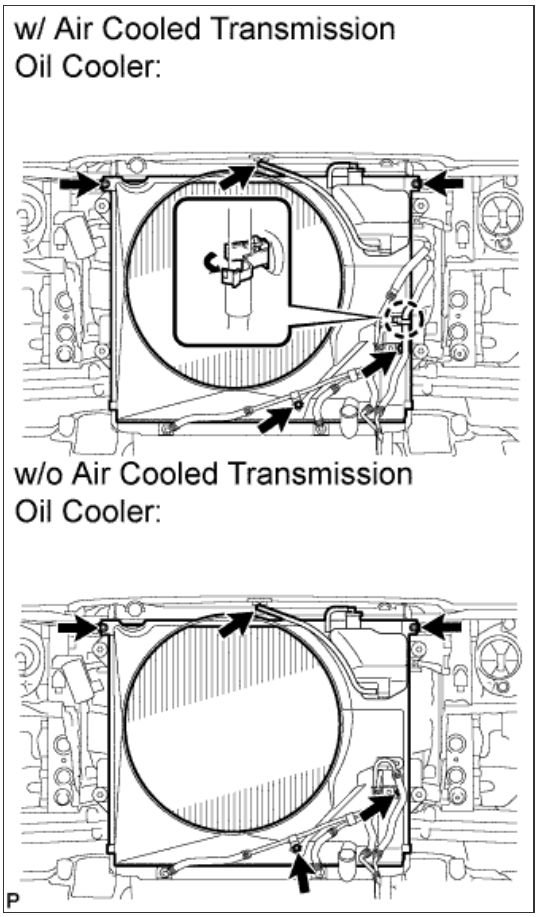
a. Loosen the 4 nuts holding the fluid coupling fan.

b. Remove the fan and generator V belt (Click here).

c. Disconnect the reservoir hose from the upper radiator tank.

d. w/ Air Cooled Transmission Oil Cooler:
Detach the claw to open the flexible hose clamp.

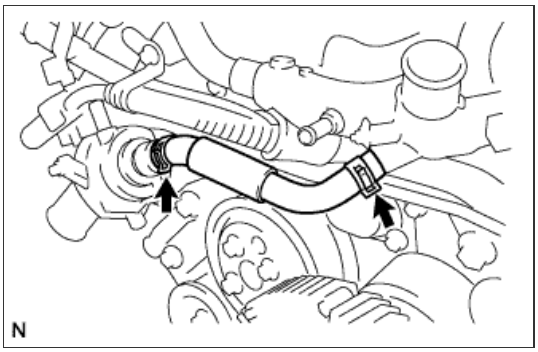
e. Remove the 2 bolts and disconnect the oil cooler tube from the fan shroud.



f. Remove the 2 bolts holding the fan shroud.

g. Remove the 4 nuts of the fluid coupling fan, and then remove the shroud together with the coupling fan.

NOTICE:

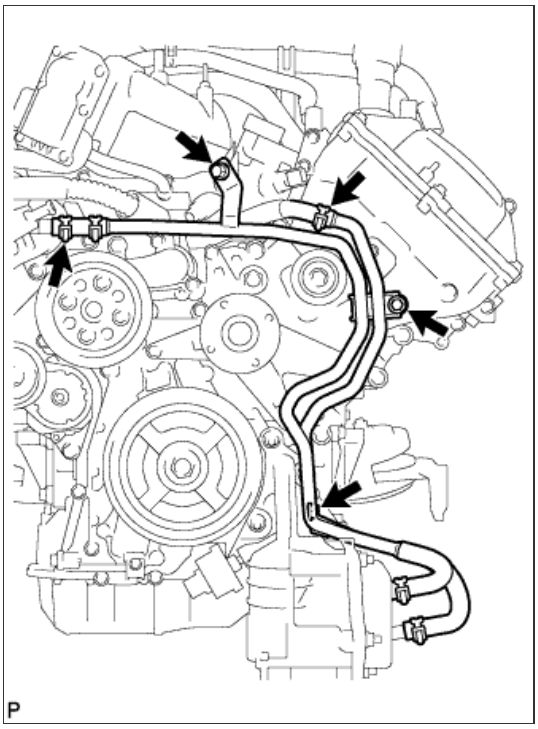


Be careful not to damage the radiator core.

h. Remove the fan pulley.

14. REMOVE NO. 1 WATER BY-PASS HOSE

a. Remove the No. 1 water by-pass hose by disconnecting the hose from the water inlet housing and front water by-pass joint.



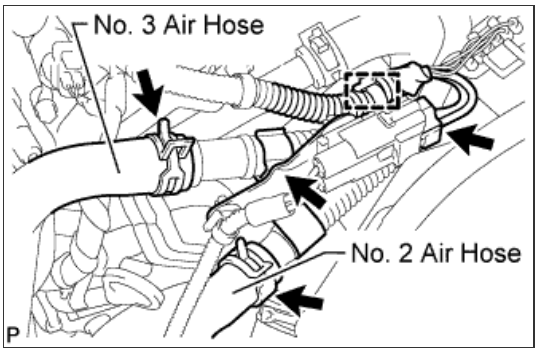
15. DISCONNECT NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY (w/ Oil Cooler)

a. Disconnect the No. 6 water by-pass hose.

b. Remove the 3 bolts.

c. Disconnect the water by-pass pipe with water hose.

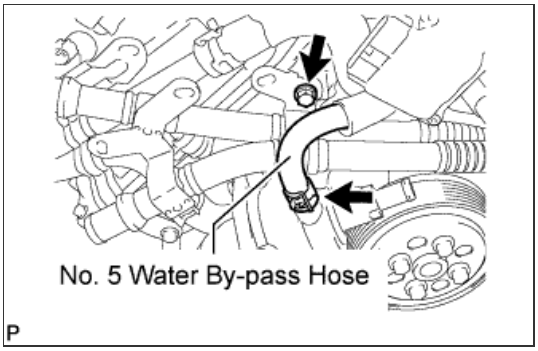
16. REMOVE WATER INLET HOUSING



a. w/ Secondary Air Injection System:

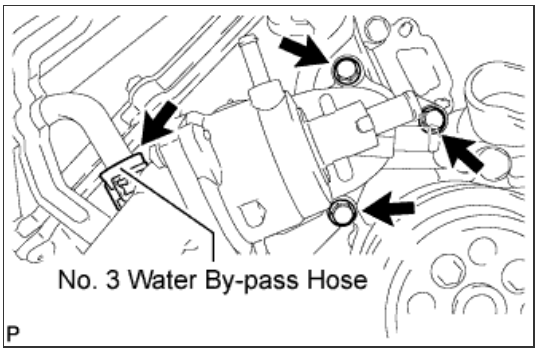
i. Disconnect the No. 2 and No. 3 air hoses.

ii. Disconnect the air pump connector.



iii. Disconnect the air pump connector clamp holder.

iv. Using a clip remover, detach the wire harness clamp.

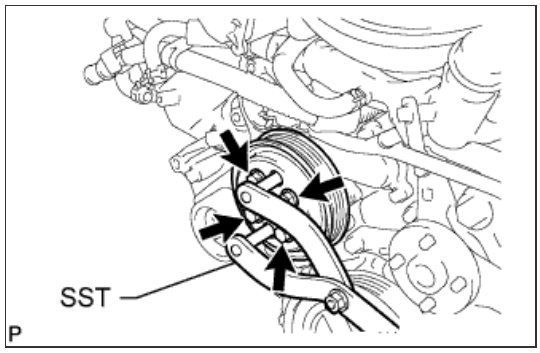


b. Disconnect the No. 5 water by-pass hose.

c. w/ Secondary Air Injection System:
Remove the air tube bracket bolt.

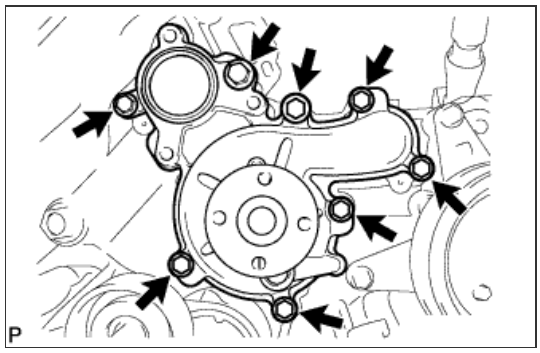
d. Disconnect the No. 3 water by-pass hose and remove the 3 bolts and water inlet housing.

e. Remove the gasket from the water pump.



17. REMOVE WATER PUMP PULLEY

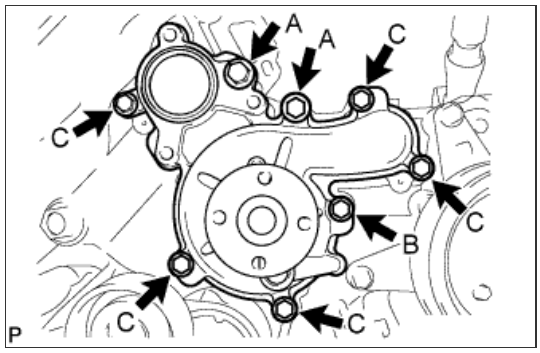
a. Using SST, hold the water pump pulley.



SST
09960-10010 (09962-01000, 09963-01000)

b. Remove the 4 bolts and water pump pulley.

18. REMOVE WATER PUMP ASSEMBLY



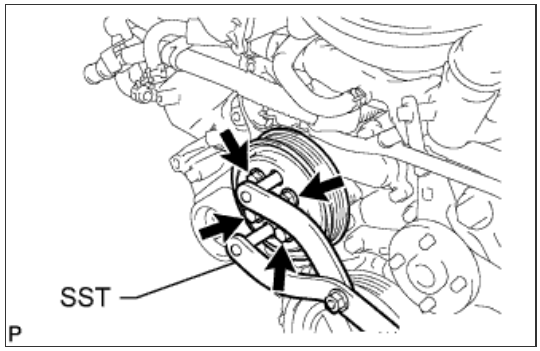
a. Remove the 8 bolts, water pump and gasket.

for Preparation Click here

1. INSTALL WATER PUMP ASSEMBLY

a. Install a new gasket and the water pump with the 8 bolts shown in the illustration.

Torque:
for bolt A:
47 N*m{ 479 kgf*cm , 35 ft.*lbf }
for bolt B:
23 N*m{ 235 kgf*cm , 17 ft.*lbf }
for bolt C:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }



Standard Bolt:

Item	Length	Thread Diameter
Bolt A	80 mm (3.15 in.)	10 mm (0.394 in.)
Bolt B	70 mm (2.76 in.)	8 mm (0.315 in.)
Bolt C	25 mm (0.984 in.)	8 mm (0.315 in.)

2. INSTALL WATER PUMP PULLEY

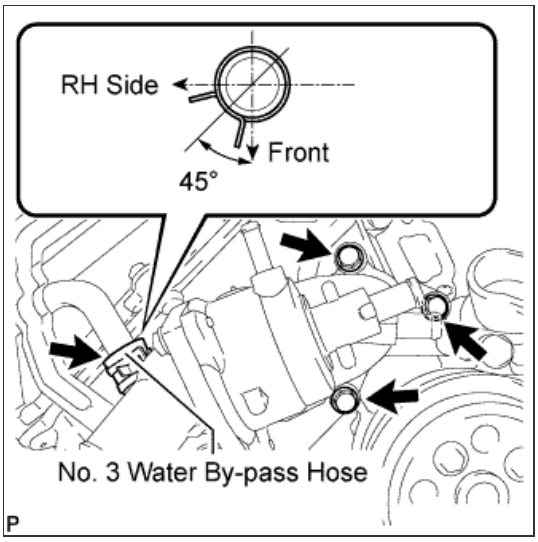
a. Temporarily install the pulley with the 4 bolts.

b. Using SST, hold the pulley and tighten the 4 bolts.

SST
09960-10010 (09962-01000, 09963-01000)

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

3. INSTALL WATER INLET HOUSING



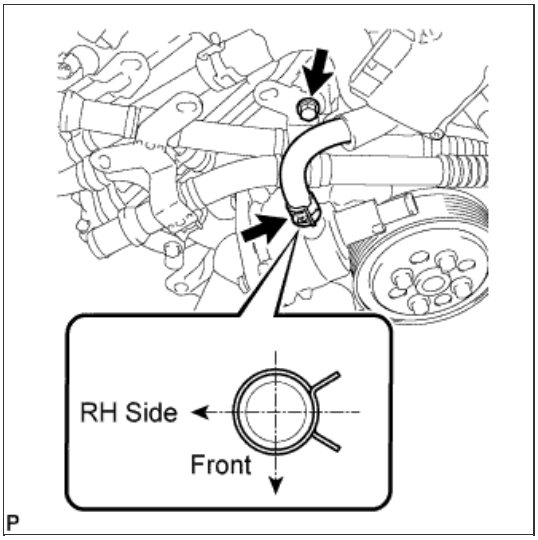
a. Install a new gasket to the water pump.

b. Install the water inlet housing with the 3 bolts and connect the No. 3 water by-pass hose.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

HINT:

Install the hose so that the direction of the hose clamp is as indicated in the illustration.



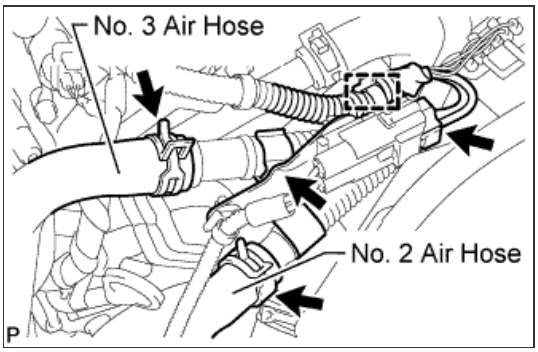
c. Install the air tube bracket bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

d. Connect the No. 5 water by-pass hose.

HINT:

Install the hose so that the direction of the hose clamp is as indicated in the illustration.



e. Connect the air pump connector clamp holder.

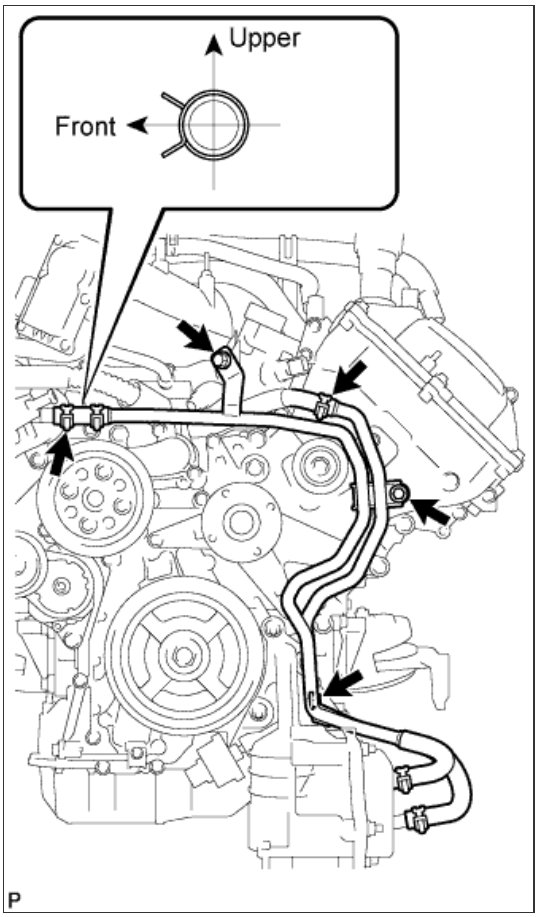
f. Attach the wire harness clamp.

g. Connect the air pump connector.

h. Connect the No. 2 and No. 3 air hoses.

4. CONNECT NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY (w/ Oil Cooler)

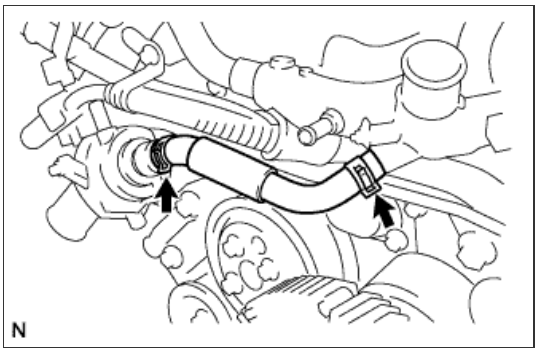
a. Connect the water by-pass pipe with water hose.



HINT:

Install the hose so that the direction of the hose clamp is as indicated in the illustration.

b. Install the 3 bolts.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

c. Connect the No. 6 water by-pass hose.

5. INSTALL NO. 1 WATER BY-PASS HOSE

a. Install the No. 1 water by-pass hose by connecting the hose to the water inlet housing and front water by-pass joint.

6. INSTALL FAN SHROUD

a. Install the fan pulley.

b. Place the shroud together with the coupling fan between the radiator and engine.

NOTICE:

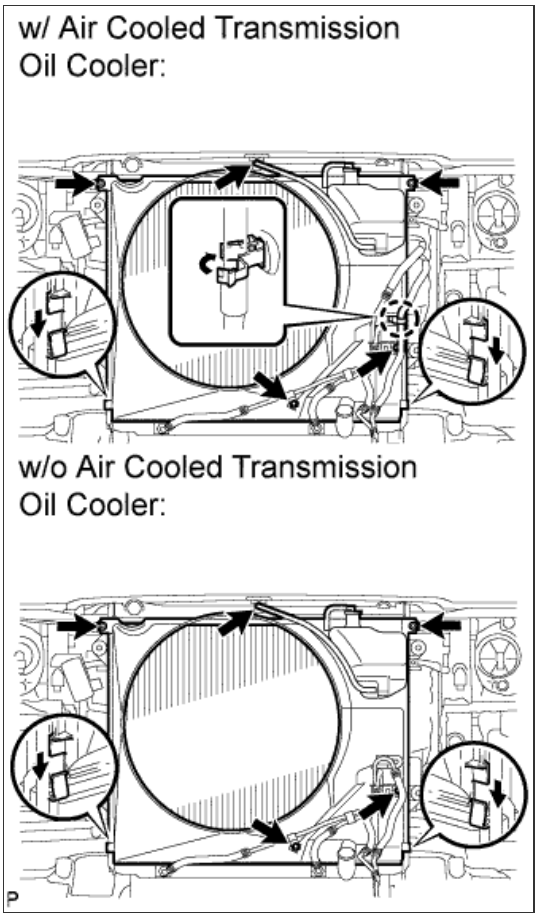
Be careful not to damage the radiator core.

c. Temporarily install the fluid coupling fan to the fluid coupling bracket with the 4 nuts. Tighten the nuts as much as possible by hand.

d. Attach the claws of the shroud to the radiator as shown in the illustration.

e. Install the shroud with the 2 bolts.

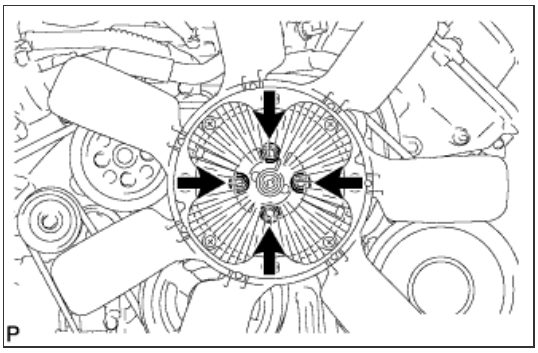
Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



f. Connect the oil cooler tube to the fan shroud with the 2 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

g. w/ Air Cooled Transmission Oil Cooler:
Pass the hose through the flexible hose clamp and close the clamp as shown in the illustration.

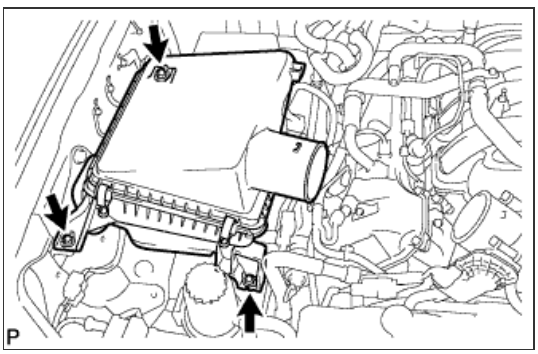


h. Connect the reservoir hose to the upper radiator tank.

i. Install the fan and generator V belt (Click here).

j. Tighten the 4 nuts of the fluid coupling fan.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



7. INSTALL NO. 1 RADIATOR HOSE

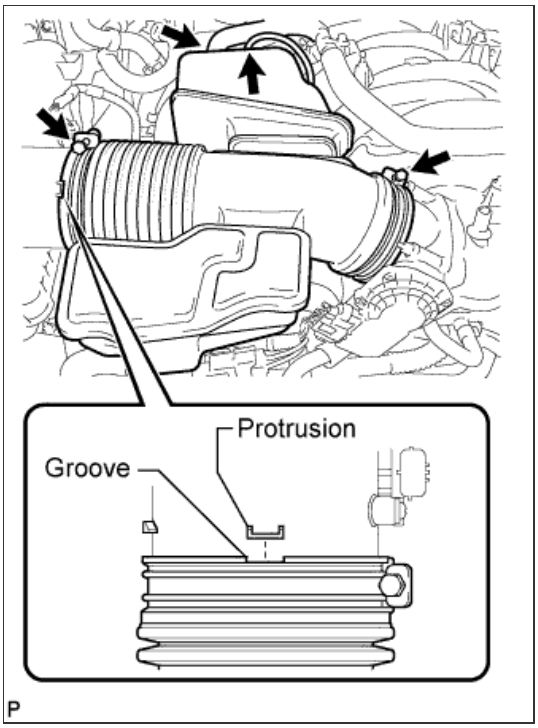
8. INSTALL NO. 2 RADIATOR HOSE

9. INSTALL AIR CLEANER ASSEMBLY

a. Install the air cleaner with the 3 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

10. INSTALL AIR CLEANER HOSE ASSEMBLY



a. Install the air cleaner hose so that the protrusion of the air cleaner cap aligns with the groove of the hose as shown in the illustration.

b. Tighten the 2 clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

c. Connect the vacuum hose.

d. Connect the No. 2 ventilation hose.

11. ADD ENGINE COOLANT

a. Add engine coolant.

Standard Capacity:

Item	Specified Condition
with transmission oil cooler	16.7 liters (17.6 US qts, 14.7 Imp. qts)
without transmission oil cooler	16.2 liters (17.1 US qts, 14.3 Imp. qts)

NOTICE:

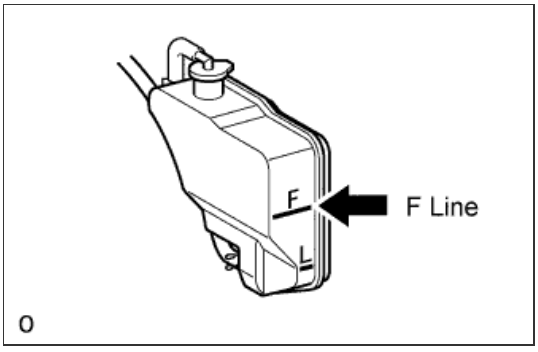
Do not substitute plain water for engine coolant.

HINT:

TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the reservoir cap.



d. Press the No. 1 and No. 2 radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Start the engine and warm it up until the thermostat opens.

NOTICE:

Switch off the A/C.

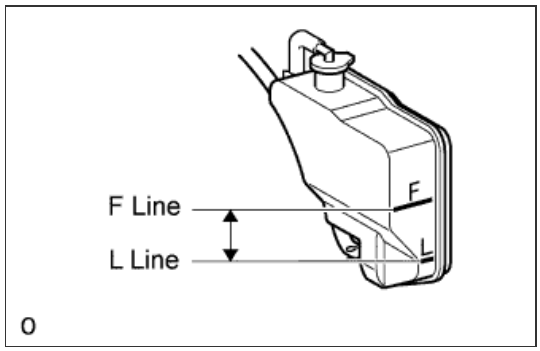
g. Maintain the engine speed at 2000 to 2500 rpm.

NOTICE:

- **Make sure that the radiator reservoir still has some coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**
- **Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the F line.**
- **Run the engine at 2000 rpm until the coolant level has stabilized.**

h. Press the No. 1 and No. 2 radiator hoses several times by hand to bleed air.

CAUTION:



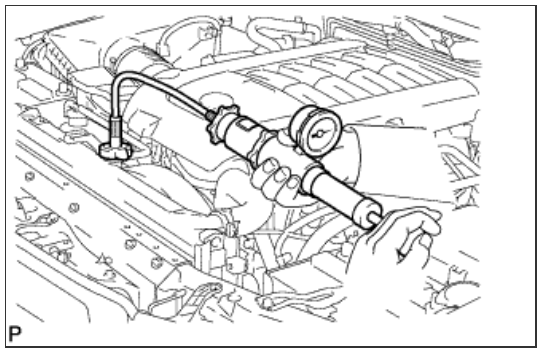
- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the fan.**

i. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

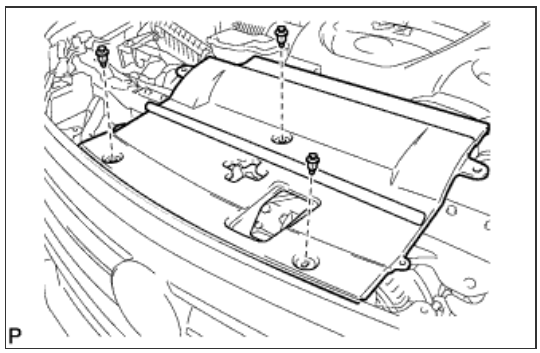
Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

j. Check that the coolant level is between the F and L lines.
If the coolant level is below the L line, repeat all of the procedures above.
If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.



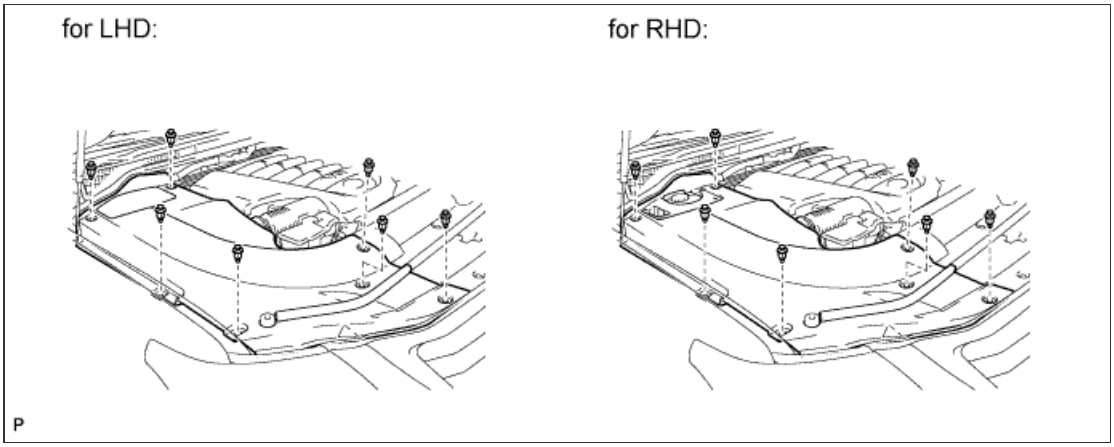
12. INSPECT FOR COOLANT LEAK

a. Fill the radiator with coolant and attach a radiator cap tester.



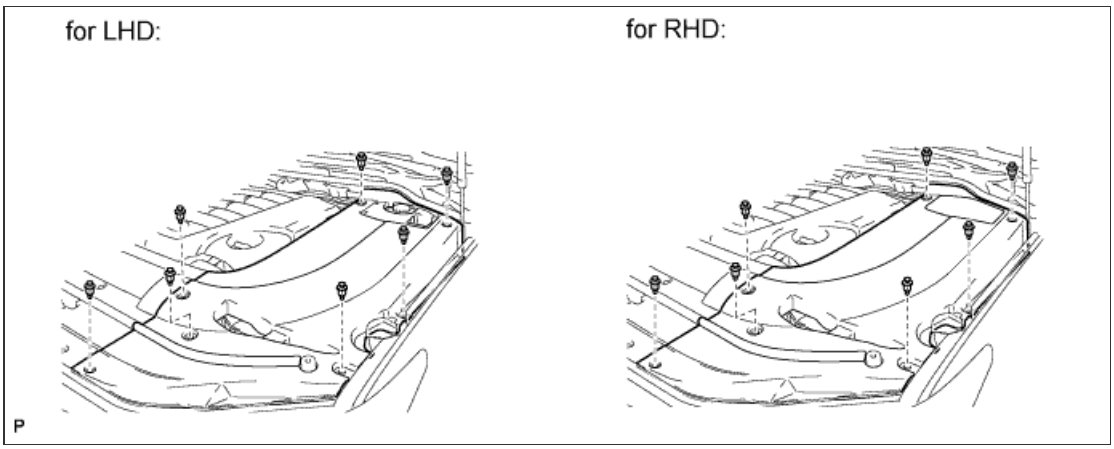
b. Warm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.



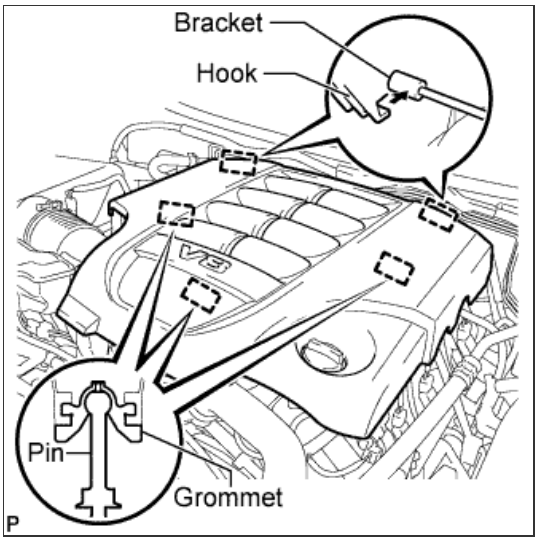
13. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the upper radiator support seal with the 3 clips.



14. INSTALL ENGINE ROOM SIDE COVER RH

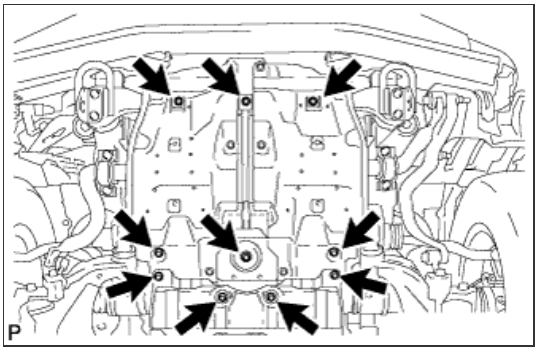
a. Install the engine room side cover with the 7 clips.



15. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.

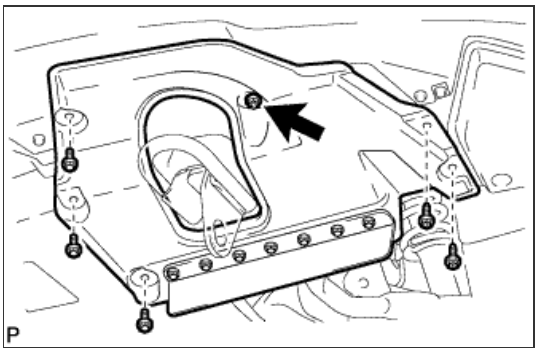
16. INSTALL V-BANK COVER SUB-ASSEMBLY



a. Attach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.

17. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.



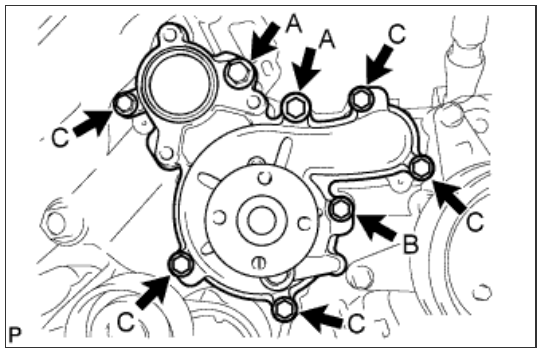
Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

18. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the 3 bolts and 2 screws.

19. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH



HINT:

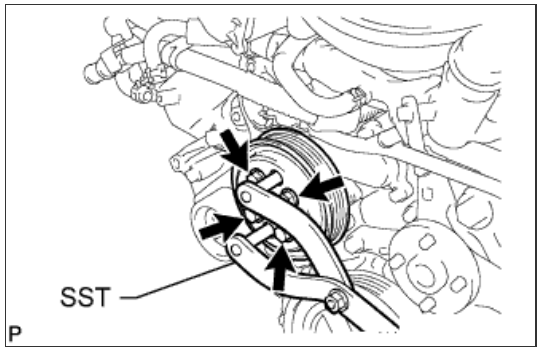
Use the same procedures described for the LH side.

for Preparation Click here

1. INSTALL WATER PUMP ASSEMBLY

a. Install a new gasket and the water pump with the 8 bolts shown in the illustration.

Torque:
for bolt A:
47 N*m{ 479 kgf*cm , 35 ft.*lbf }
for bolt B:
23 N*m{ 235 kgf*cm , 17 ft.*lbf }
for bolt C:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }



Standard Bolt:

Item	Length	Thread Diameter
Bolt A	80 mm (3.15 in.)	10 mm (0.394 in.)
Bolt B	70 mm (2.76 in.)	8 mm (0.315 in.)
Bolt C	25 mm (0.984 in.)	8 mm (0.315 in.)

2. INSTALL WATER PUMP PULLEY

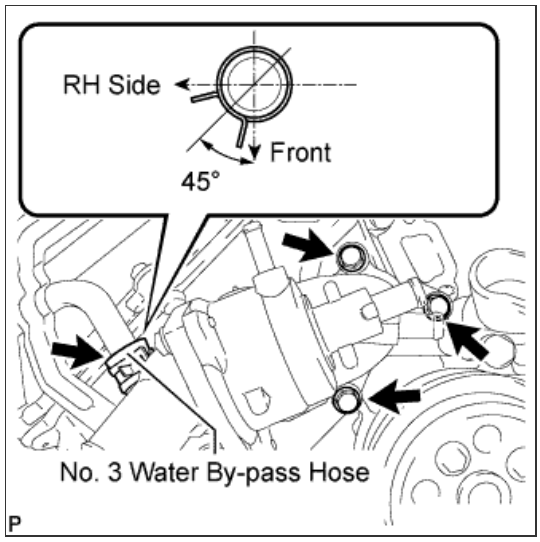
a. Temporarily install the pulley with the 4 bolts.

b. Using SST, hold the pulley and tighten the 4 bolts.

SST
09960-10010 (09962-01000, 09963-01000)

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

3. INSTALL WATER INLET HOUSING



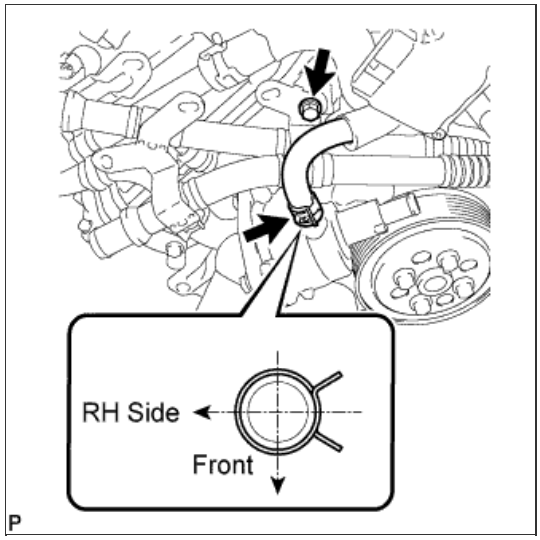
a. Install a new gasket to the water pump.

b. Install the water inlet housing with the 3 bolts and connect the No. 3 water by-pass hose.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

HINT:

Install the hose so that the direction of the hose clamp is as indicated in the illustration.



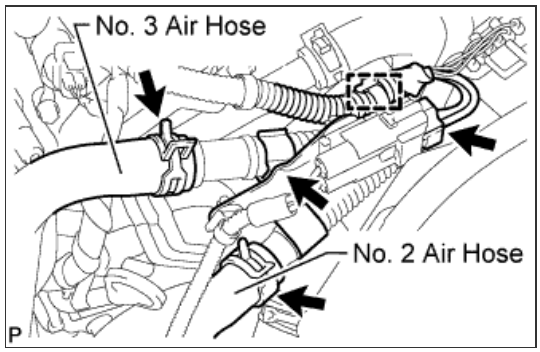
c. w/ Secondary Air Injection System:
Install the air tube bracket bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

d. Connect the No. 5 water by-pass hose.

HINT:

Install the hose so that the direction of the hose clamp is as indicated in the illustration.



e. w/ Secondary Air Injection System:

i. Connect the air pump connector clamp holder.

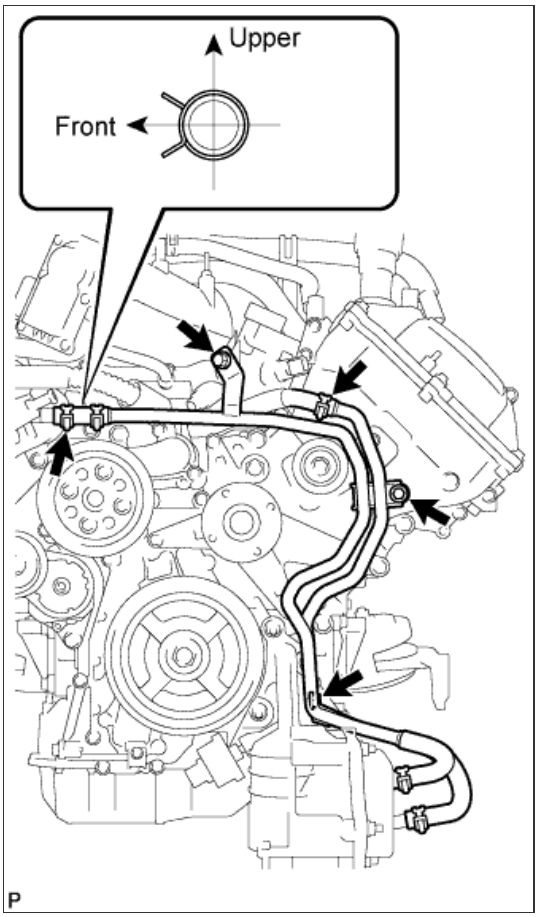
ii. Attach the wire harness clamp.

iii. Connect the air pump connector.

iv. Connect the No. 2 and No. 3 air hoses.

4. CONNECT NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY (w/ Oil Cooler)

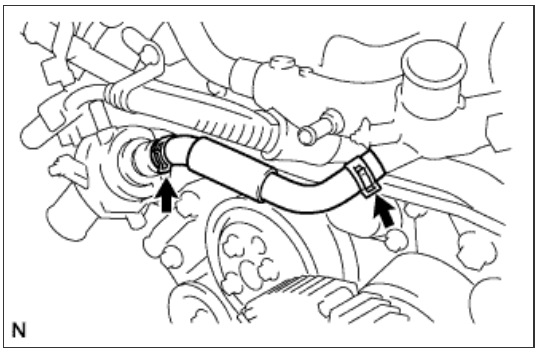
a. Connect the water by-pass pipe with water hose.



HINT:

Install the hose so that the direction of the hose clamp is as indicated in the illustration.

b. Install the 3 bolts.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

c. Connect the No. 6 water by-pass hose.

5. INSTALL NO. 1 WATER BY-PASS HOSE

a. Install the No. 1 water by-pass hose by connecting the hose to the water inlet housing and front water by-pass joint.

6. INSTALL FAN SHROUD

a. Install the fan pulley.

b. Place the shroud together with the coupling fan between the radiator and engine.

NOTICE:

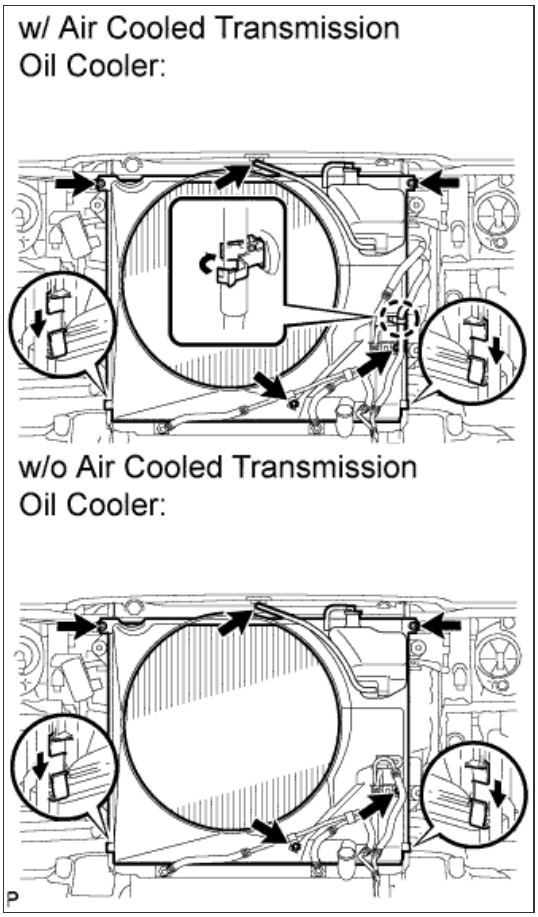
Be careful not to damage the radiator core.

c. Temporarily install the fluid coupling fan to the fluid coupling bracket with the 4 nuts. Tighten the nuts as much as possible by hand.

d. Attach the claws of the shroud to the radiator as shown in the illustration.

e. Install the shroud with the 2 bolts.

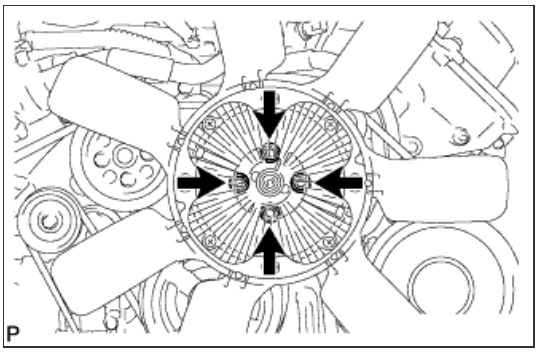
Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



f. Connect the oil cooler tube to the fan shroud with the 2 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

g. w/ Air Cooled Transmission Oil Cooler:
Pass the hose through the flexible hose clamp and close the clamp as shown in the illustration.

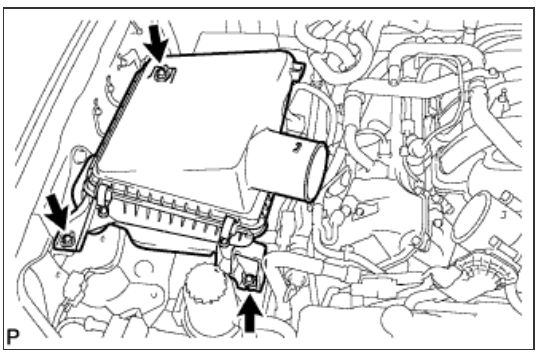


h. Connect the reservoir hose to the upper radiator tank.

i. Install the fan and generator V belt (Click here).

j. Tighten the 4 nuts of the fluid coupling fan.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



7. INSTALL NO. 1 RADIATOR HOSE

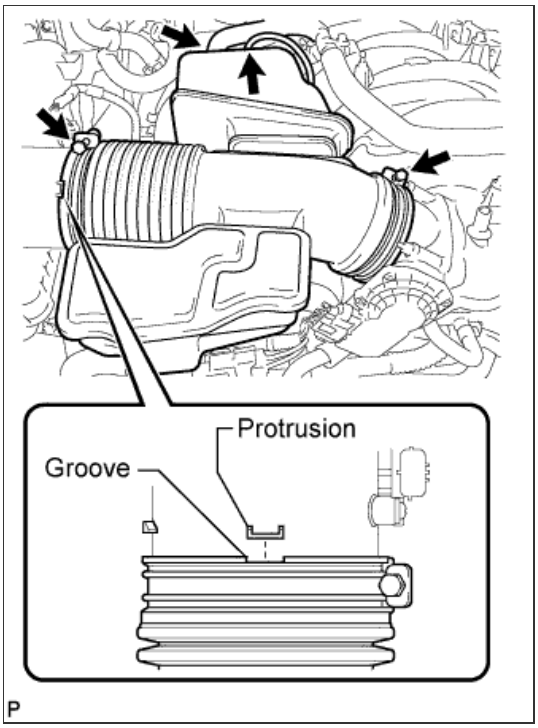
8. INSTALL NO. 2 RADIATOR HOSE

9. INSTALL AIR CLEANER ASSEMBLY

a. Install the air cleaner with the 3 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

10. INSTALL AIR CLEANER HOSE ASSEMBLY



a. Install the air cleaner hose so that the protrusion of the air cleaner cap aligns with the groove of the hose as shown in the illustration.

b. Tighten the 2 clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

c. Connect the vacuum hose.

d. Connect the No. 2 ventilation hose.

11. ADD ENGINE COOLANT

a. Add engine coolant.

Standard Capacity:

Item	Specified Condition
with transmission oil cooler	16.7 liters (17.6 US qts, 14.7 Imp. qts)
without transmission oil cooler	16.2 liters (17.1 US qts, 14.3 Imp. qts)

NOTICE:

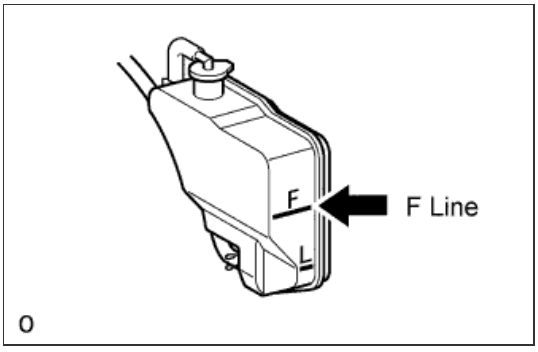
Do not substitute plain water for engine coolant.

HINT:

TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the reservoir cap.



d. Press the No. 1 and No. 2 radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Start the engine and warm it up until the thermostat opens.

NOTICE:

Switch off the A/C.

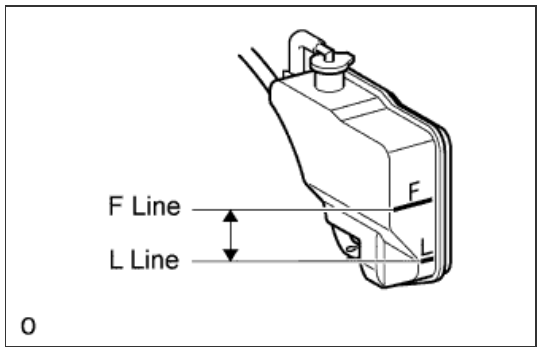
g. Maintain the engine speed at 2000 to 2500 rpm.

NOTICE:

- **Make sure that the radiator reservoir still has some coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**
- **Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the F line.**
- **Run the engine at 2000 rpm until the coolant level has stabilized.**

h. Press the No. 1 and No. 2 radiator hoses several times by hand to bleed air.

CAUTION:



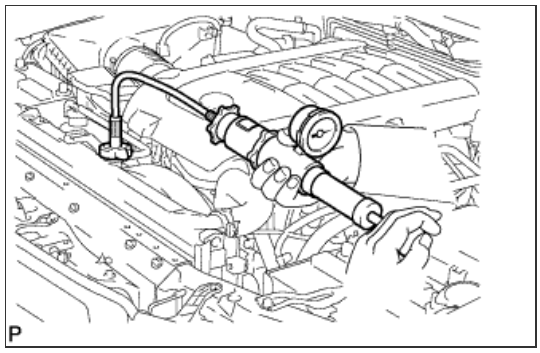
- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the fan.**

i. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

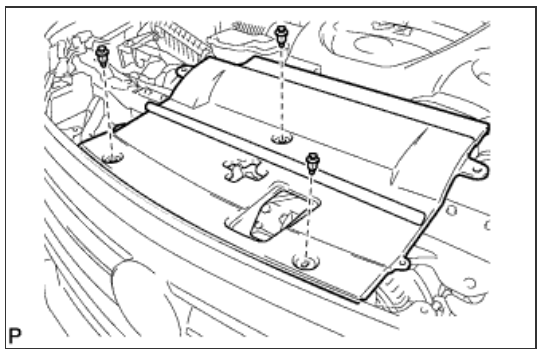
Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

j. Check that the coolant level is between the F and L lines.
If the coolant level is below the L line, repeat all of the procedures above.
If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.



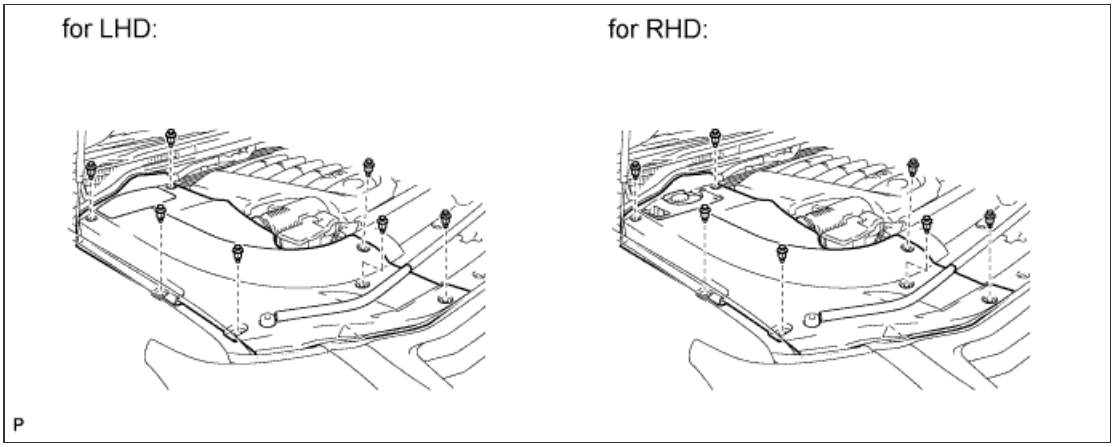
12. INSPECT FOR COOLANT LEAK

a. Fill the radiator with coolant and attach a radiator cap tester.



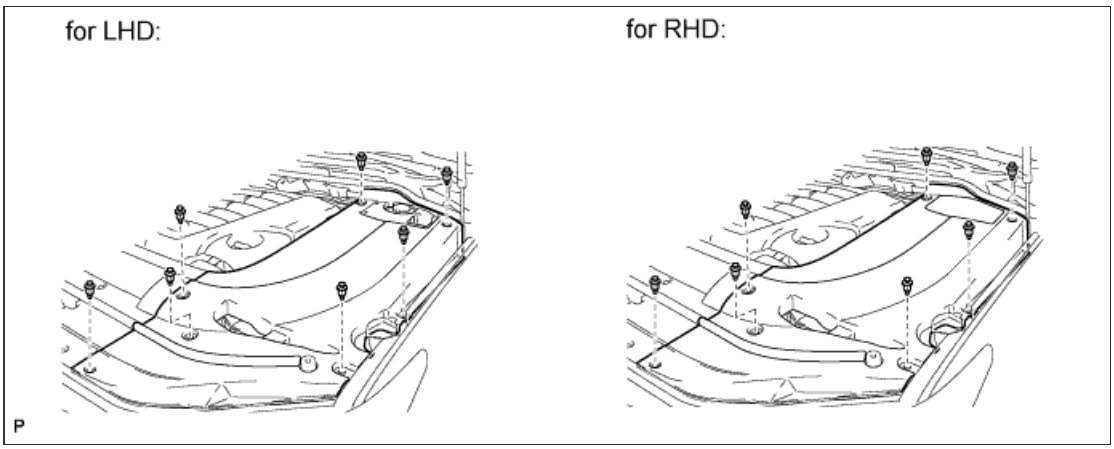
b. Warm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.



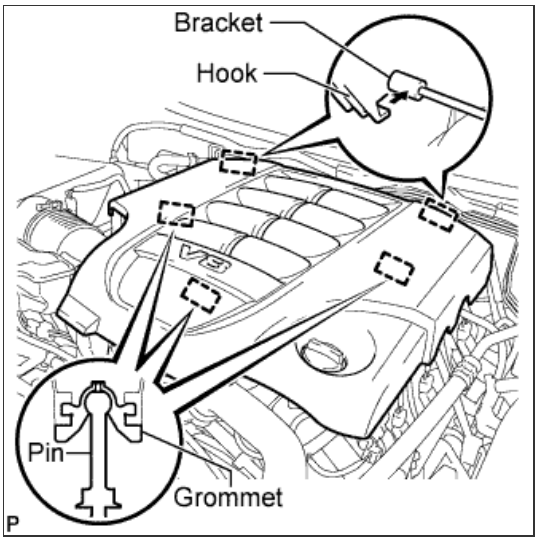
13. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the upper radiator support seal with the 3 clips.



14. INSTALL ENGINE ROOM SIDE COVER RH

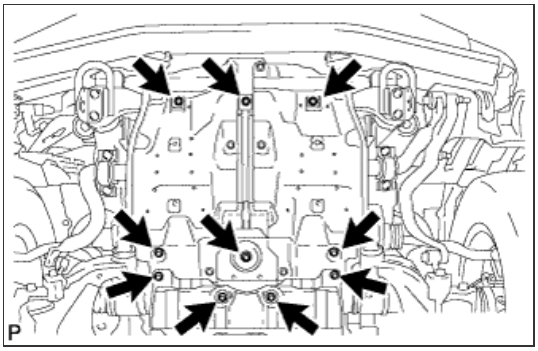
a. Install the engine room side cover with the 7 clips.



15. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.

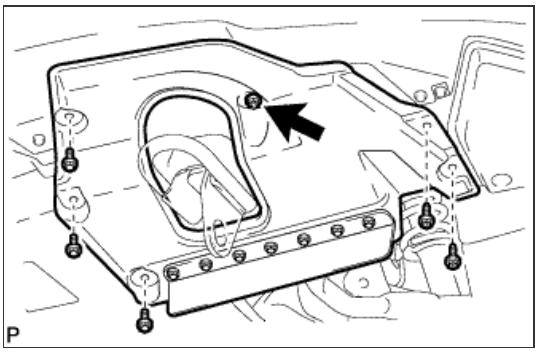
16. INSTALL V-BANK COVER SUB-ASSEMBLY



a. Attach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.

17. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.

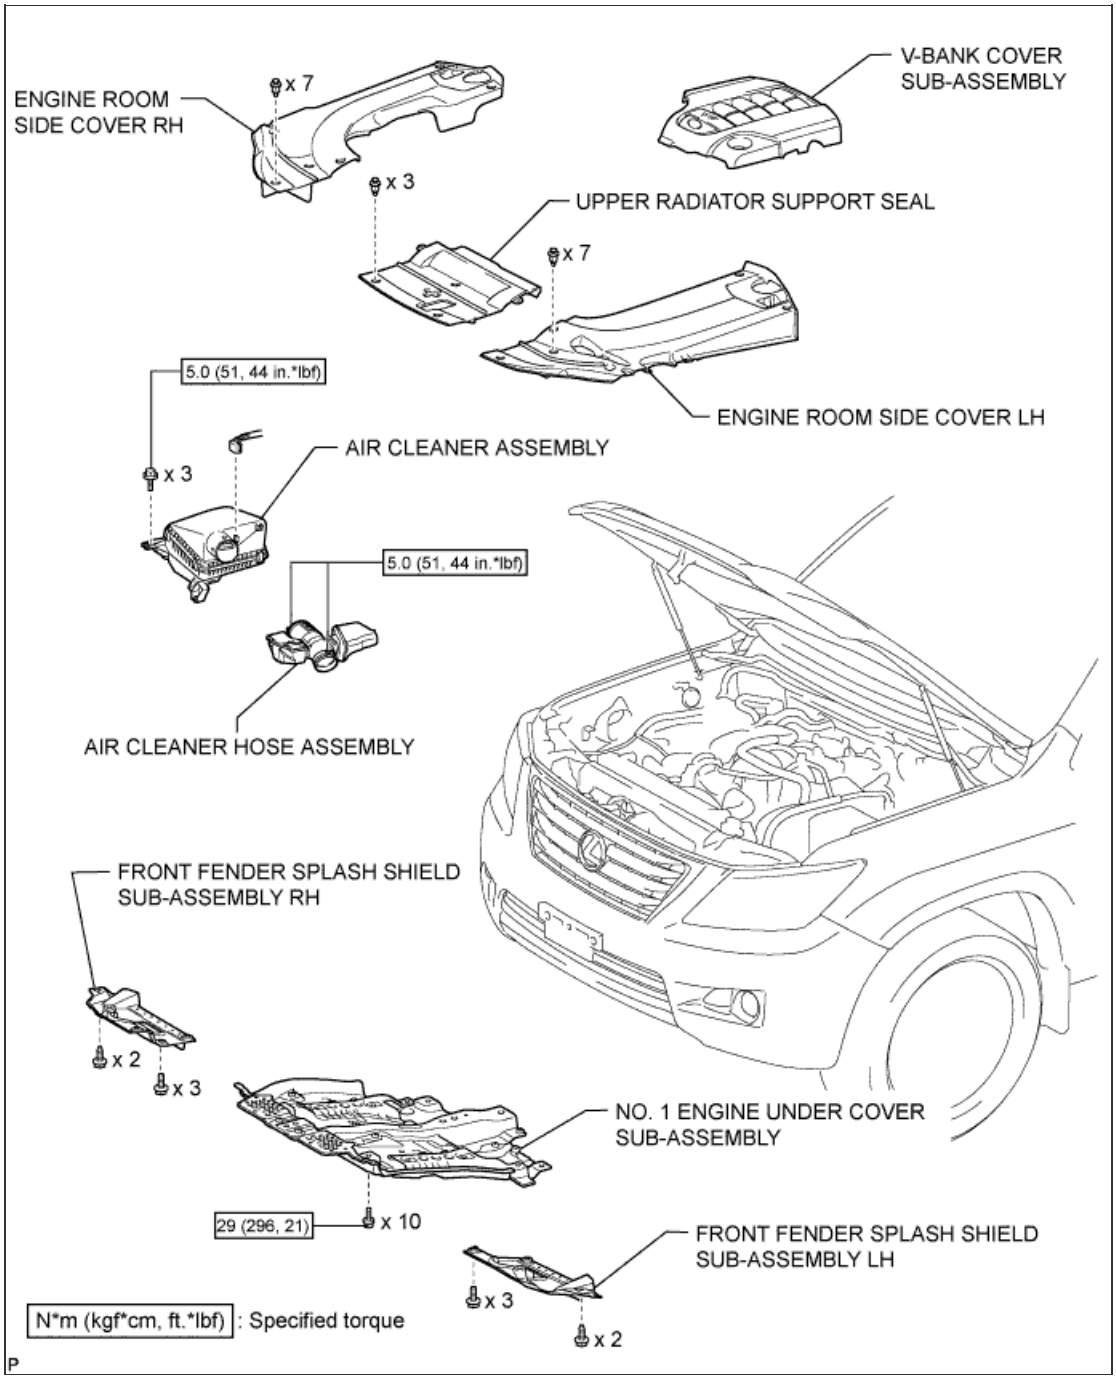


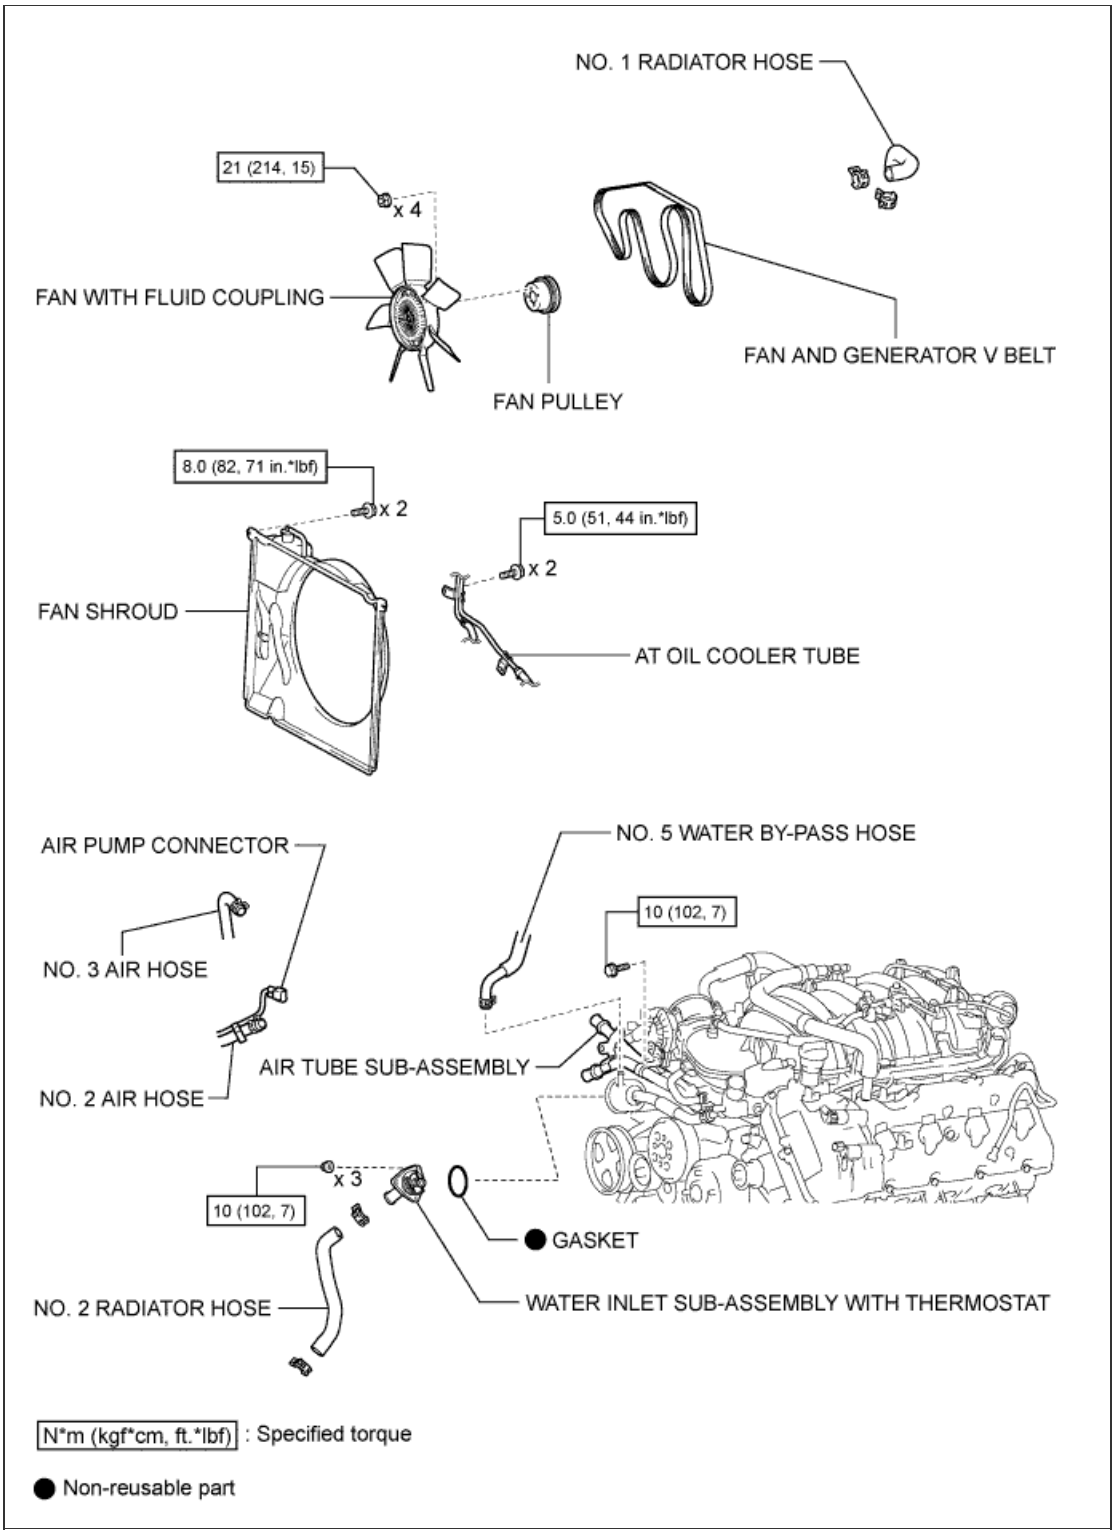
Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

18. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

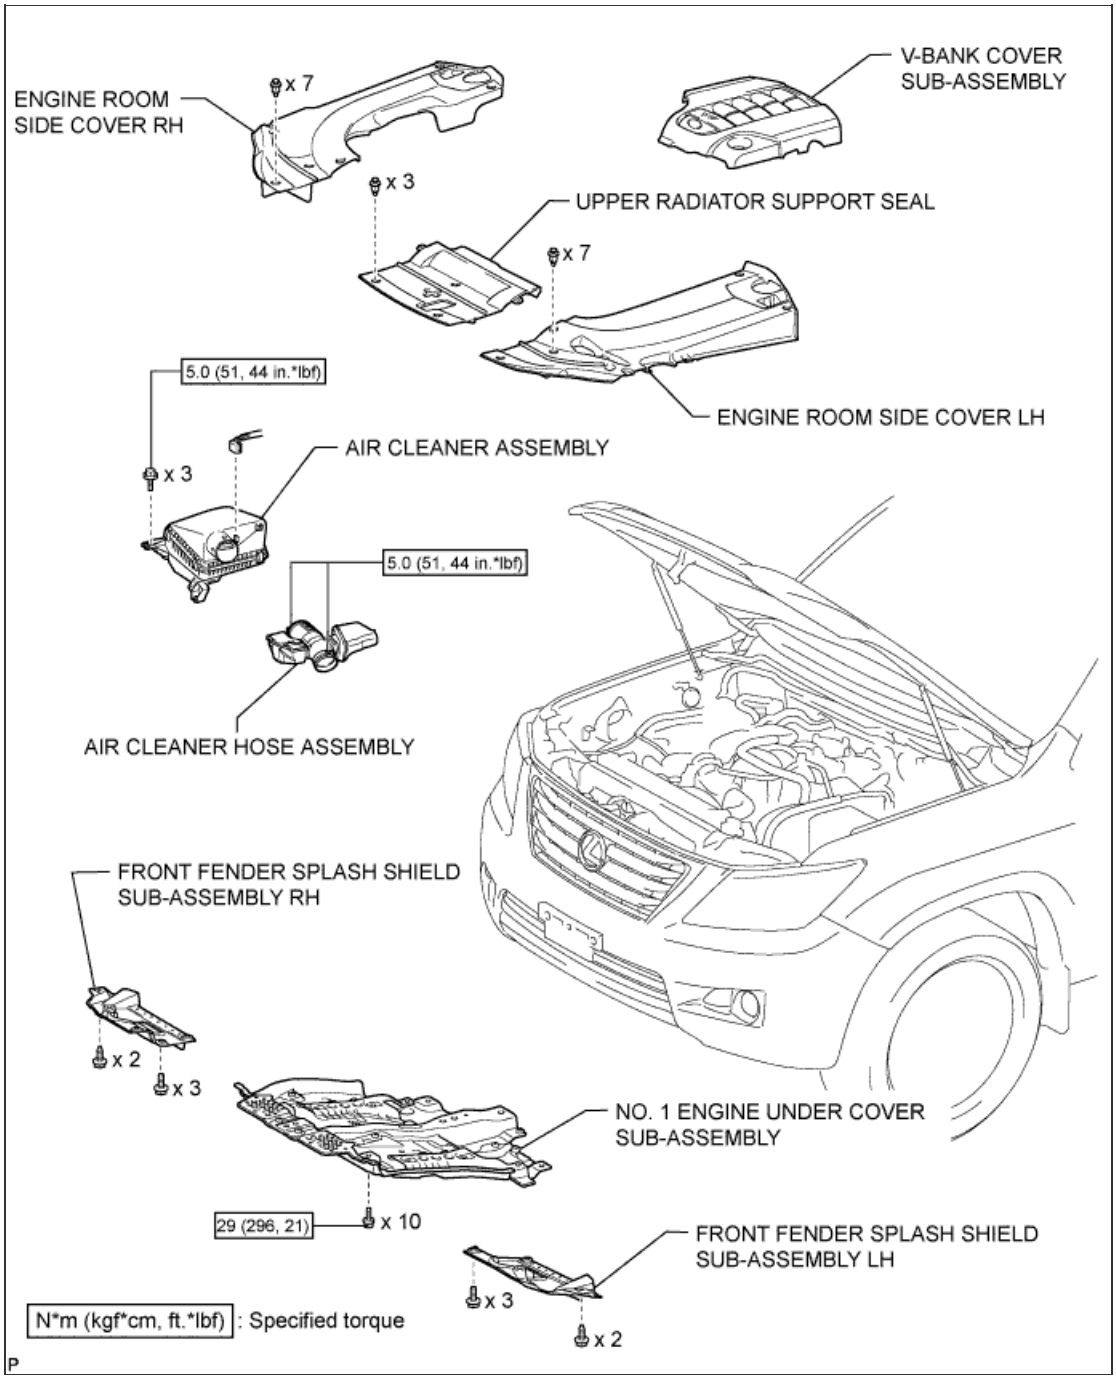
b. Install the 3 bolts and 2 screws.





19. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:



Use the same procedures described for the LH side.

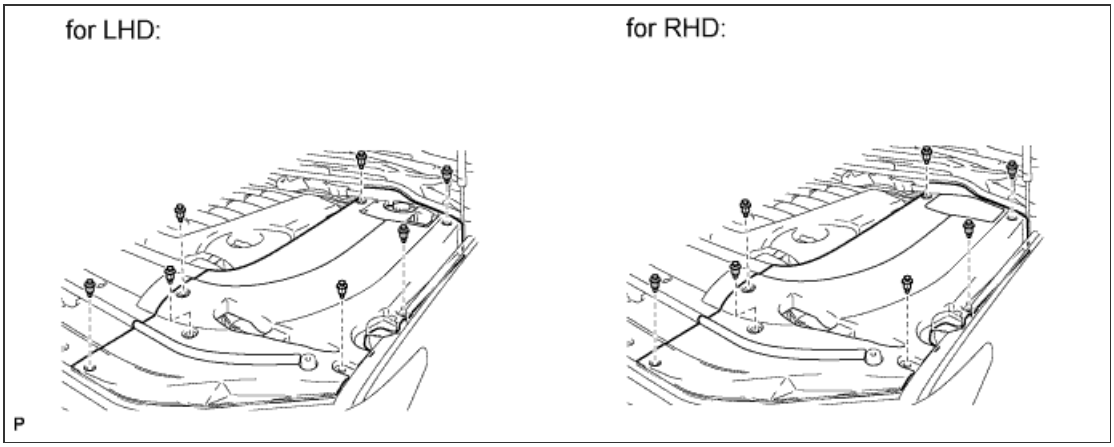
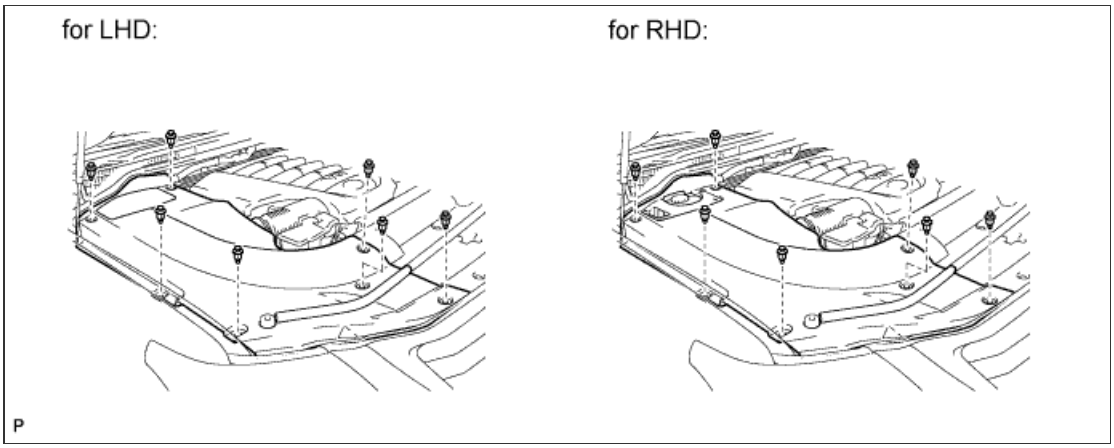
HINT:

If the thermostat is not installed, cooling efficiency decreases. Do not remove the thermostat as this will cause the engine to overheat easily.



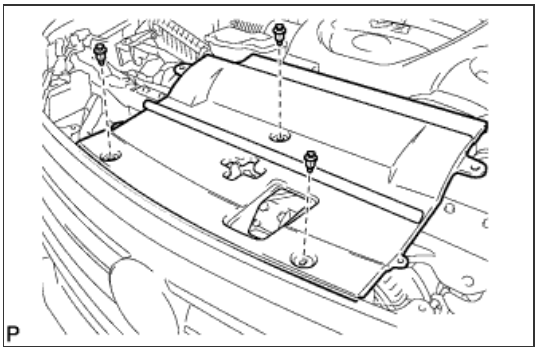
1. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.



2. REMOVE ENGINE ROOM SIDE COVER LH

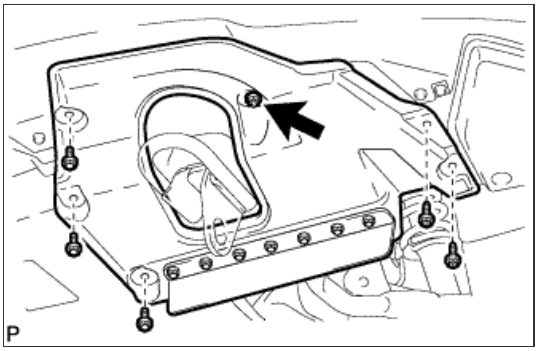
a. Remove the 7 clips and engine room side cover.



3. REMOVE ENGINE ROOM SIDE COVER RH

a. Remove the 7 clips and engine room side cover.

4. REMOVE UPPER RADIATOR SUPPORT SEAL

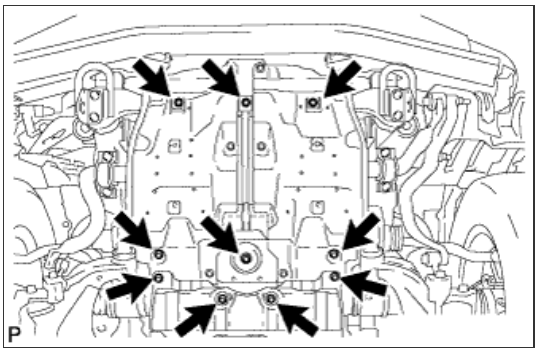


a. Remove the 3 clips and upper radiator support seal.

5. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and 2 screws.

b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.

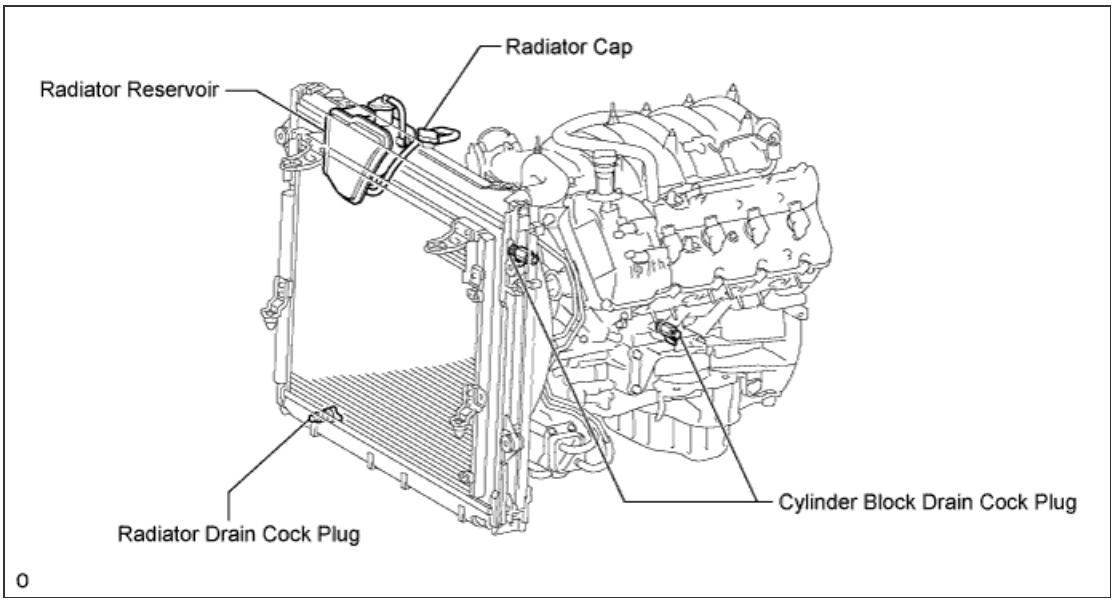


6. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

7. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY



a. Remove the 10 bolts and No. 1 engine under cover.

8. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Loosen the radiator drain cock plug.

HINT:

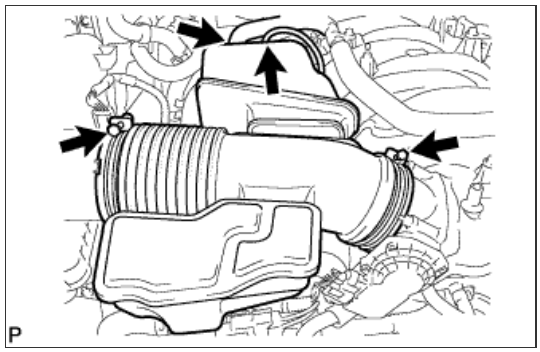
Collect the coolant in a container and dispose of it according to the regulations in your area.

b. Remove the radiator cap. Then drain the coolant from the radiator.

c. Loosen the 2 cylinder block drain cock plugs. Then drain the coolant from the engine.

d. Tighten the 2 cylinder block drain cock plugs.

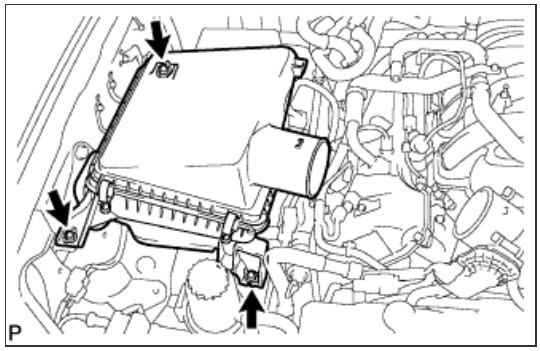
Torque:
13 N*m{ 130 kgf*cm , 10 ft.*lbf }



e. Tighten the radiator drain cock plug by hand.

9. REMOVE AIR CLEANER HOSE ASSEMBLY

a. Disconnect the vacuum hose and No. 2 ventilation hose.

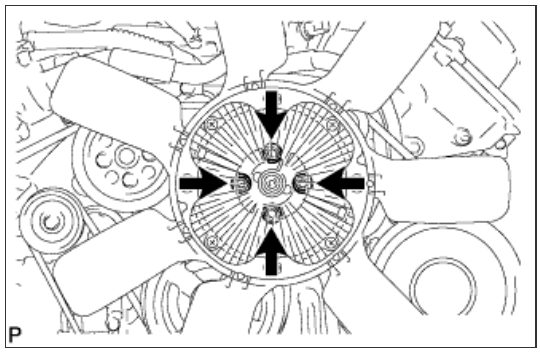


b. Loosen the 2 hose clamps.

c. Remove the air cleaner hose.

10. REMOVE AIR CLEANER ASSEMBLY

a. Remove the 3 bolts and air cleaner.



11. REMOVE NO. 1 RADIATOR HOSE

12. REMOVE NO. 2 RADIATOR HOSE

13. REMOVE FAN SHROUD

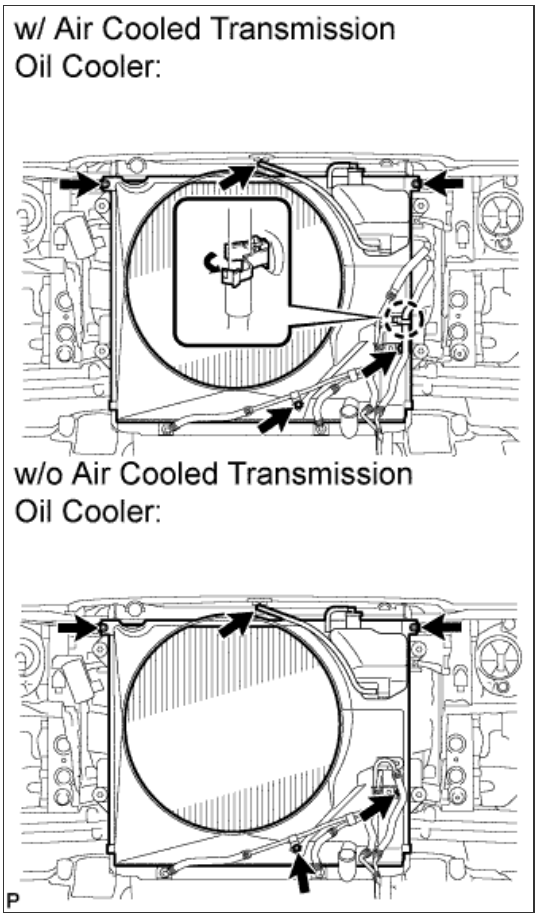
a. Loosen the 4 nuts holding the fluid coupling fan.

b. Remove the fan and generator V belt (Click here).

c. Disconnect the reservoir hose from the upper radiator tank.

d. w/ Air Cooled Transmission Oil Cooler:
Detach the claw to open the flexible hose clamp.

e. Remove the 2 bolts and disconnect the oil cooler tube from the fan shroud.



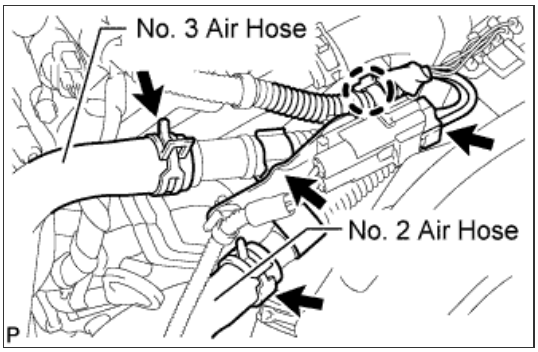
f. Remove the 2 bolts holding the fan shroud.

g. Remove the 4 nuts of the fluid coupling fan, and then remove the shroud together with the coupling fan.

NOTICE:

Be careful not to damage the radiator core.

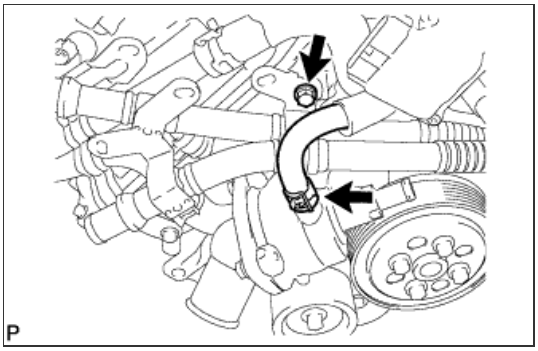
h. Remove the fan pulley.



14. REMOVE WATER INLET SUB-ASSEMBLY WITH THERMOSTAT

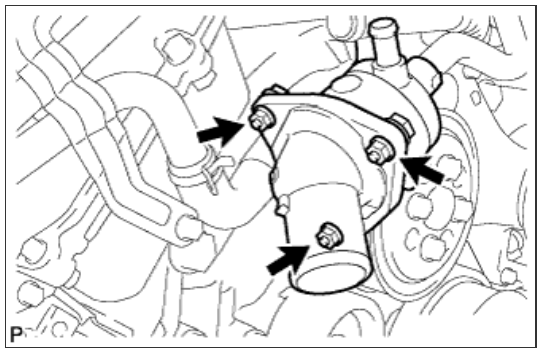
a. Disconnect the No. 2 and No. 3 air hoses.

b. Disconnect the air pump connector.



c. Disconnect the air pump connector clamp holder.

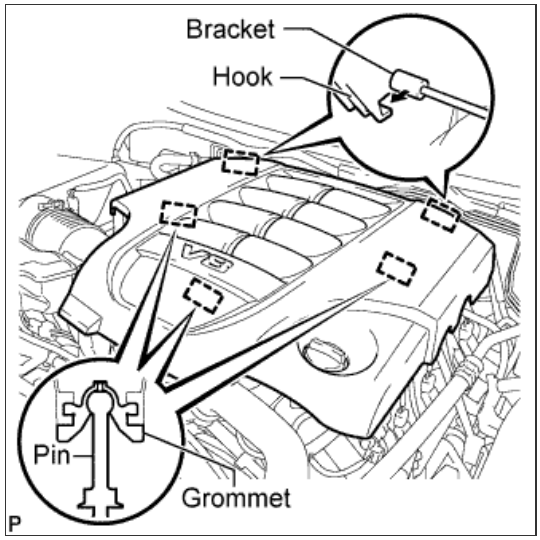
d. Using a clip remover, detach the wire harness clamp.



e. Disconnect the No. 5 water by-pass hose.

f. Remove the air tube bracket bolt.

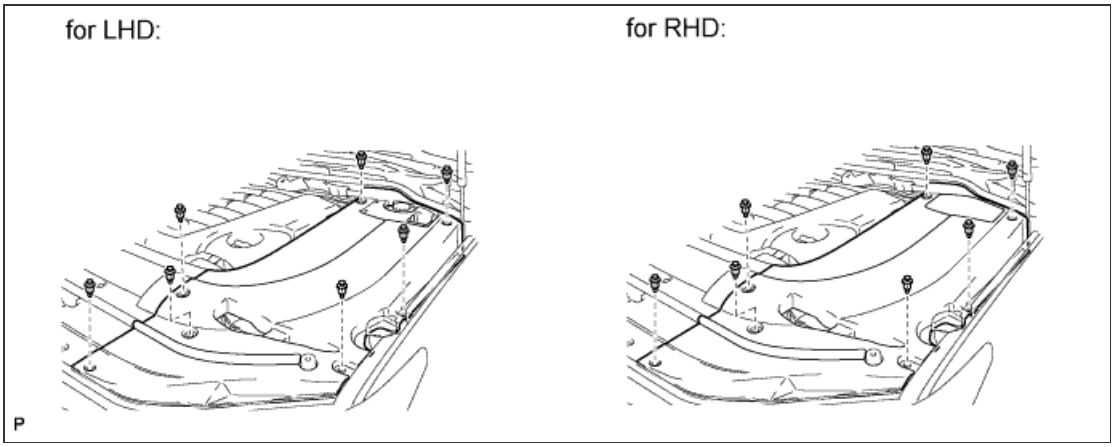
g. Remove the 3 nuts, water inlet with thermostat and gasket.



for Preparation Click here

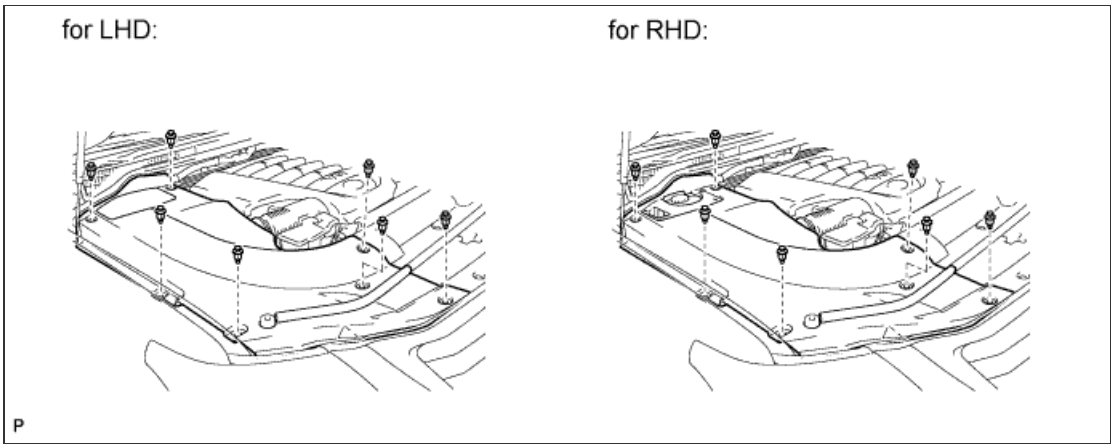
HINT:

If the thermostat is not installed, cooling efficiency decreases. Do not remove the thermostat as this will cause the engine to overheat easily.



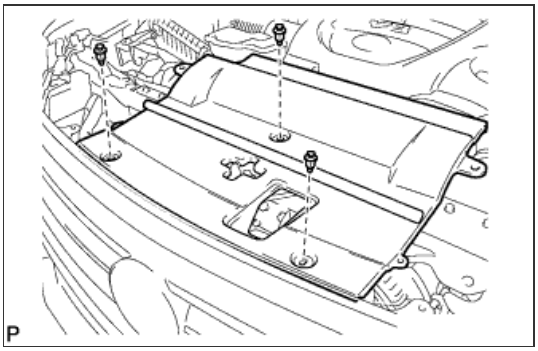
1. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.



2. REMOVE ENGINE ROOM SIDE COVER LH

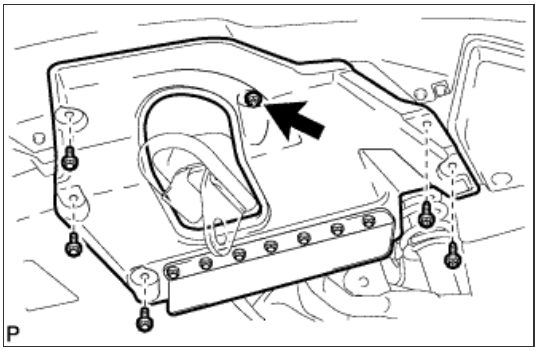
a. Remove the 7 clips and engine room side cover.



3. REMOVE ENGINE ROOM SIDE COVER RH

a. Remove the 7 clips and engine room side cover.

4. REMOVE UPPER RADIATOR SUPPORT SEAL

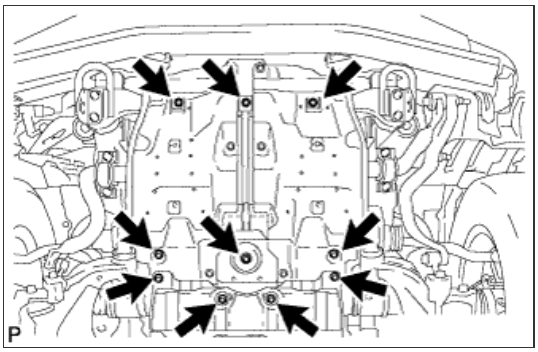


a. Remove the 3 clips and upper radiator support seal.

5. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and 2 screws.

b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.

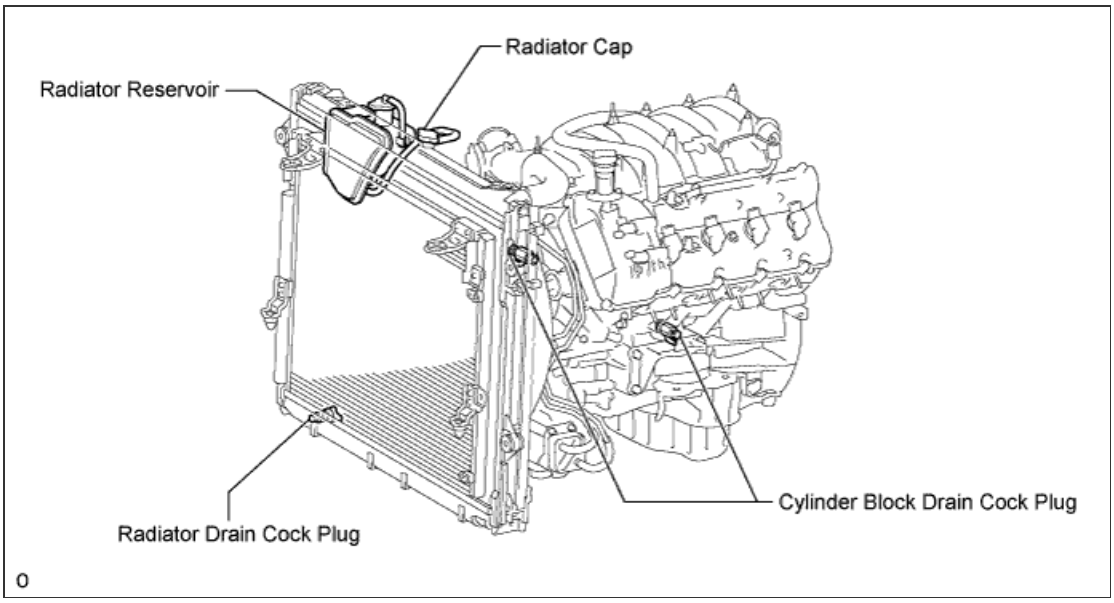


6. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

7. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY



a. Remove the 10 bolts and No. 1 engine under cover.

8. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Loosen the radiator drain cock plug.

HINT:

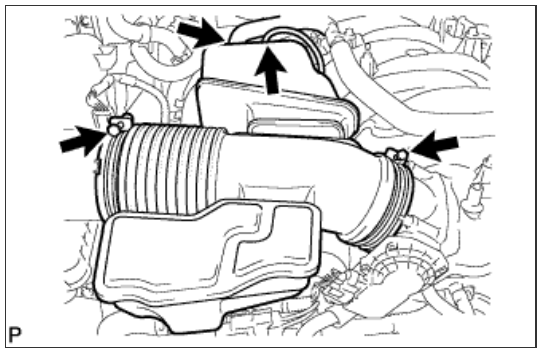
Collect the coolant in a container and dispose of it according to the regulations in your area.

b. Remove the radiator cap. Then drain the coolant from the radiator.

c. Loosen the 2 cylinder block drain cock plugs. Then drain the coolant from the engine.

d. Tighten the 2 cylinder block drain cock plugs.

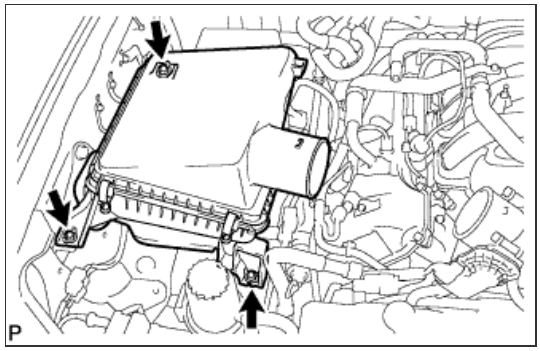
Torque:
13 N*m{ 130 kgf*cm , 10 ft.*lbf }



e. Tighten the radiator drain cock plug by hand.

9. REMOVE AIR CLEANER HOSE ASSEMBLY

a. Disconnect the vacuum hose and No. 2 ventilation hose.

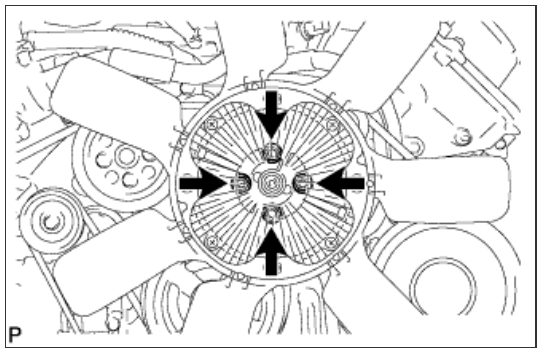


b. Loosen the 2 hose clamps.

c. Remove the air cleaner hose.

10. REMOVE AIR CLEANER ASSEMBLY

a. Remove the 3 bolts and air cleaner.



11. REMOVE NO. 1 RADIATOR HOSE

12. REMOVE NO. 2 RADIATOR HOSE

13. REMOVE FAN SHROUD

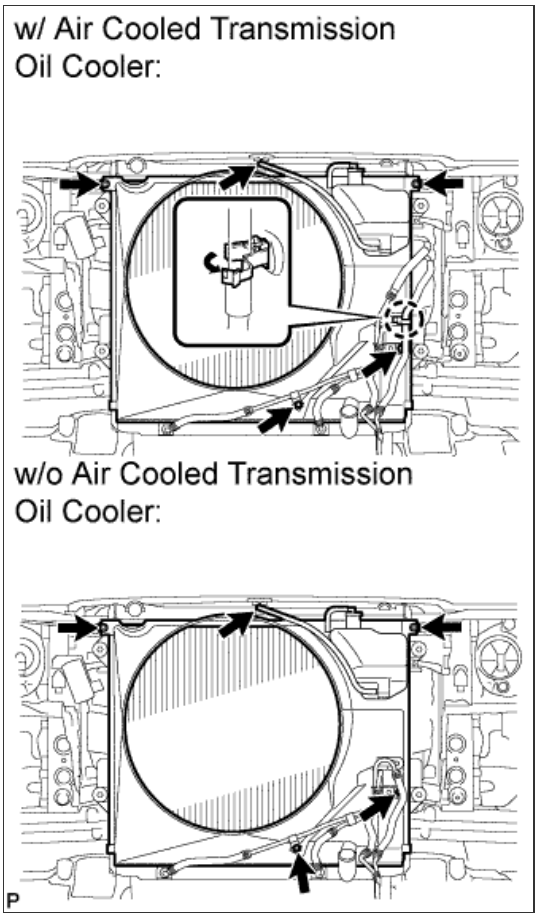
a. Loosen the 4 nuts holding the fluid coupling fan.

b. Remove the fan and generator V belt (Click here).

c. Disconnect the reservoir hose from the upper radiator tank.

d. w/ Air Cooled Transmission Oil Cooler:
Detach the claw to open the flexible hose clamp.

e. Remove the 2 bolts and disconnect the oil cooler tube from the fan shroud.



f. Remove the 2 bolts holding the fan shroud.

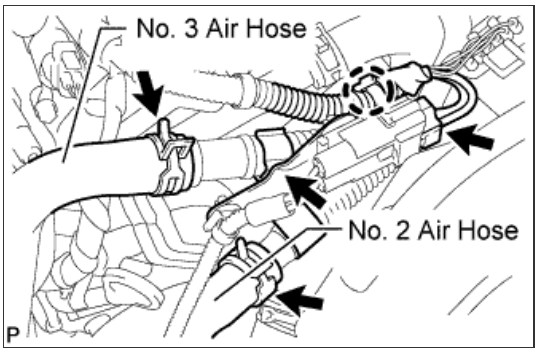
g. Remove the 4 nuts of the fluid coupling fan, and then remove the shroud together with the coupling fan.

NOTICE:

Be careful not to damage the radiator core.

h. Remove the fan pulley.

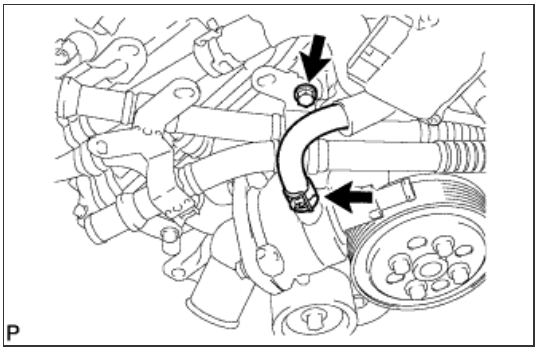
14. REMOVE WATER INLET SUB-ASSEMBLY WITH THERMOSTAT



a. w/ Secondary Air Injection System:

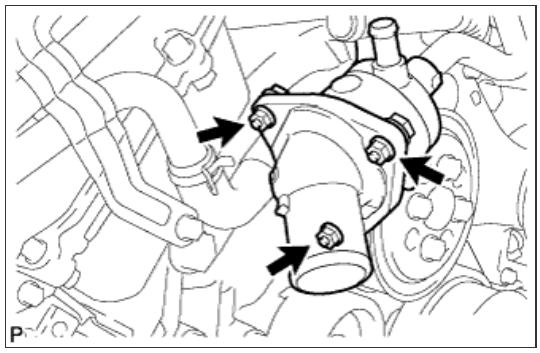
i. Disconnect the No. 2 and No. 3 air hoses.

ii. Disconnect the air pump connector.



iii. Disconnect the air pump connector clamp holder.

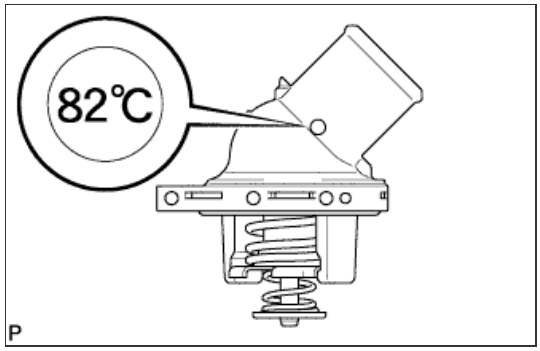
iv. Using a clip remover, detach the wire harness clamp.



b. Disconnect the No. 5 water by-pass hose.

c. w/ Secondary Air Injection System:
Remove the air tube bracket bolt.

d. Remove the 3 nuts, water inlet with thermostat and gasket.

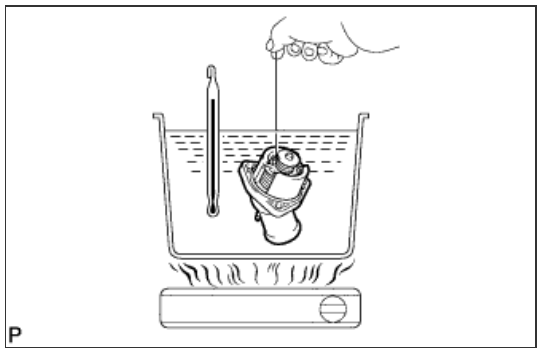


for Preparation Click here

1. INSPECT WATER INLET SUB-ASSEMBLY WITH THERMOSTAT

HINT:

The valve opening temperature is stamped on the water inlet with thermostat.

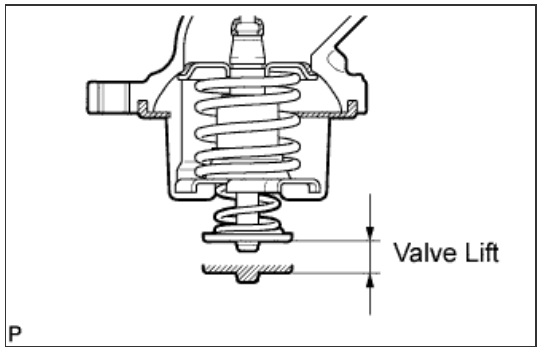


a. Immerse the water inlet with thermostat in water and gradually heat the water.

b. Check the valve opening temperature.

Standard valve opening temperature:
80 to 84°C (176 to 183°F)

If the valve opening temperature is not within the specified range, replace the water inlet sub-assembly with thermostat.

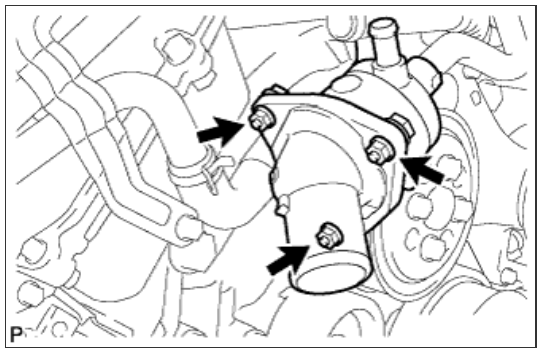


c. Check the valve lift.

Standard valve lift:
10.0 mm (0.394 in.) or more at 95°C (203°F)

If the valve lift is not as specified, replace the water inlet with thermostat.

d. Check that the valve is fully closed when the water inlet with thermostat is at a low temperature (below 77°C (171°F)).
If it is not fully closed, replace the water inlet sub-assembly with thermostat.

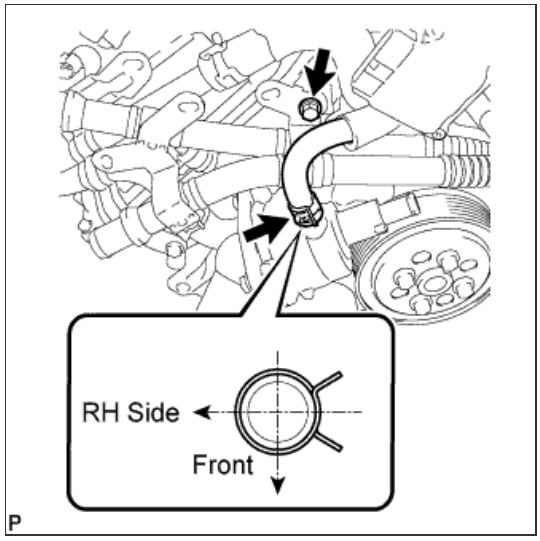


for Preparation Click here

1. INSTALL WATER INLET SUB-ASSEMBLY WITH THERMOSTAT

a. Install a new gasket and the water inlet with thermostat with the 3 nuts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



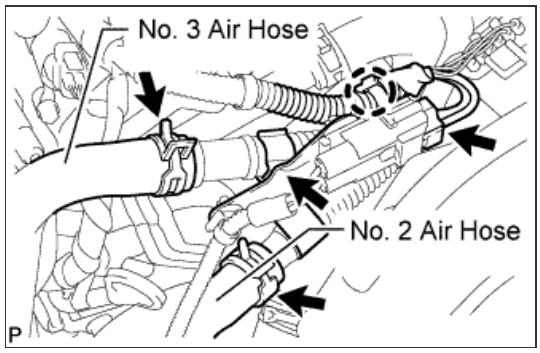
b. Install the air tube bracket bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

c. Connect the No. 5 water by-pass hose.

HINT:

Install the hose so that the direction of the hose clamp is as indicated in the illustration.



d. Connect the air pump connector clamp holder.

e. Attach the wire harness clamp.

f. Connect the air pump connector.

g. Connect the No. 2 and No. 3 air hoses.

2. INSTALL FAN SHROUD

a. Install the fan pulley.

b. Place the shroud together with the coupling fan between the radiator and engine.

NOTICE:

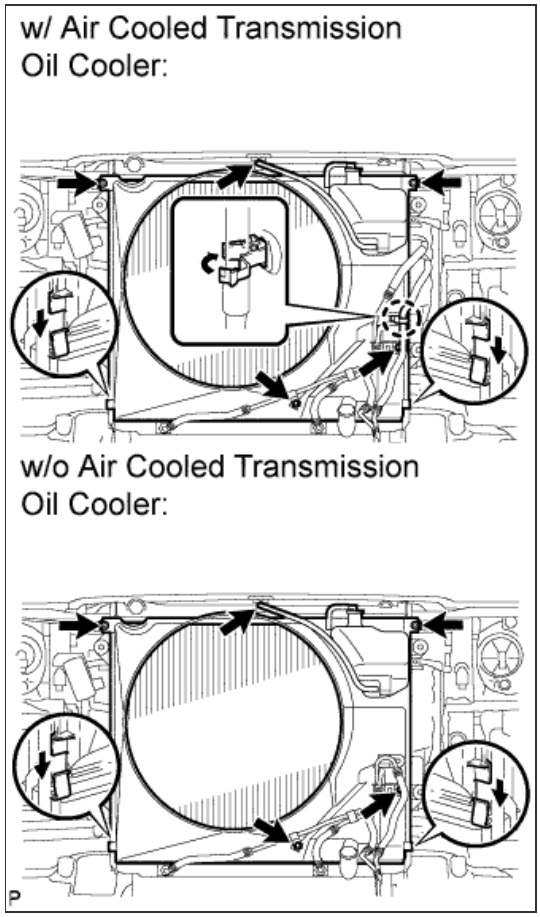
Be careful not to damage the radiator core.

c. Temporarily install the fluid coupling fan to the fluid coupling bracket with the 4 nuts. Tighten the nuts as much as possible by hand.

d. Attach the claws of the shroud to the radiator as shown in the illustration.

e. Install the shroud with the 2 bolts.

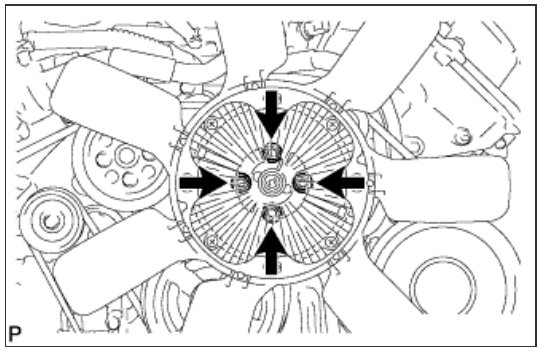
Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



f. Connect the oil cooler tube to the fan shroud with the 2 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

g. w/ Air Cooled Transmission Oil Cooler:
Pass the hose through the flexible hose clamp and close the clamp as shown in the illustration.

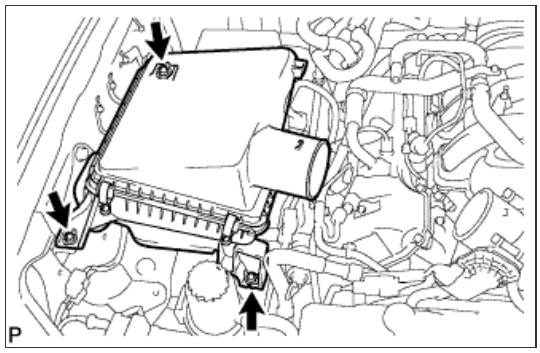


h. Connect the reservoir hose to the upper radiator tank.

i. Install the fan and generator V belt (Click here).

j. Tighten the 4 nuts of the fluid coupling fan.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



3. INSTALL NO. 2 RADIATOR HOSE

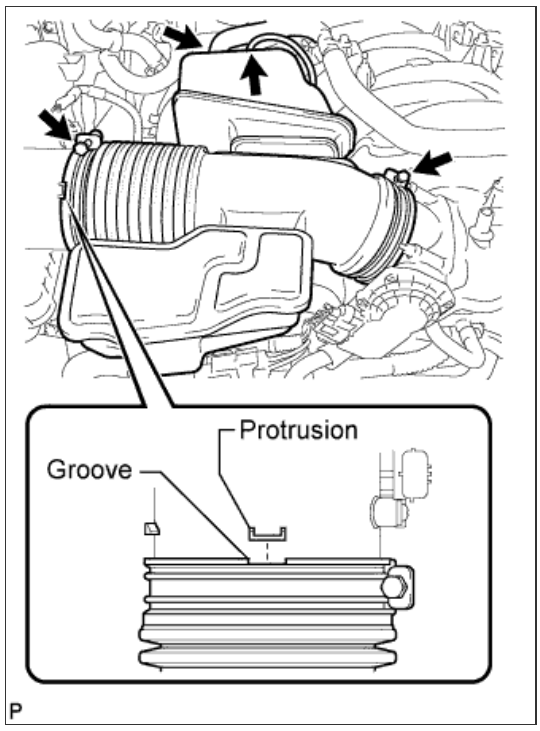
4. INSTALL NO. 1 RADIATOR HOSE

5. INSTALL AIR CLEANER ASSEMBLY

a. Install the air cleaner with the 3 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

6. INSTALL AIR CLEANER HOSE ASSEMBLY



a. Install the air cleaner hose so that the protrusion of the air cleaner cap aligns with the groove of the hose as shown in the illustration.

b. Tighten the 2 clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

c. Connect the vacuum hose.

d. Connect the No. 2 ventilation hose.

7. ADD ENGINE COOLANT

a. Add engine coolant.

Standard Capacity:

Item	Specified Condition
with transmission oil cooler	16.7 liters (17.6 US qts, 14.7 Imp. qts)
without transmission oil cooler	16.2 liters (17.1 US qts, 14.3 Imp. qts)

NOTICE:

Do not substitute plain water for engine coolant.

HINT:

TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

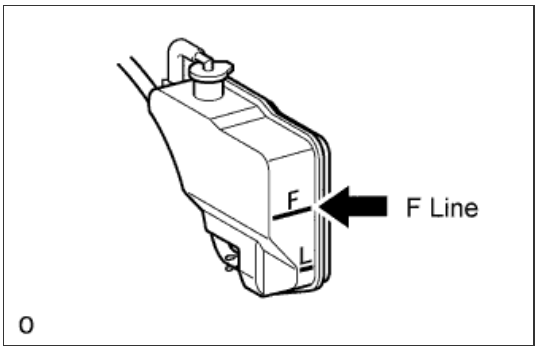
b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the reservoir cap.

d. Press the No. 1 and No. 2 radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Start the engine and warm it up until the thermostat opens.



NOTICE:

Switch off the A/C.

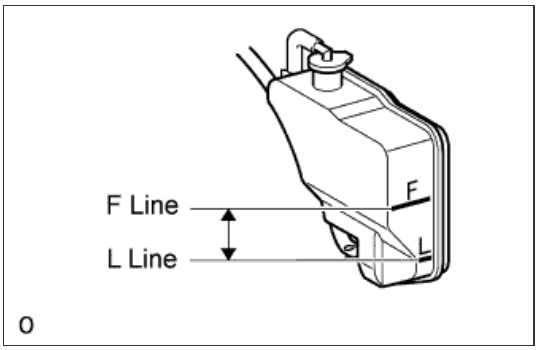
g. Maintain the engine speed at 2000 to 2500 rpm.

NOTICE:

- **Make sure that the radiator reservoir still has some coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**
- **Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the F line.**
- **Run the engine at 2000 rpm until the coolant level has stabilized.**

h. Press the No. 1 and No. 2 radiator hoses several times by hand to bleed air.

CAUTION:



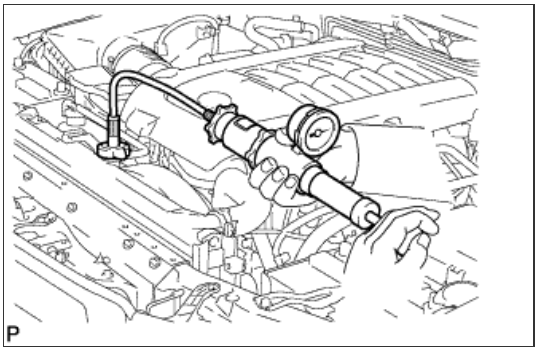
- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the fan.**

i. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

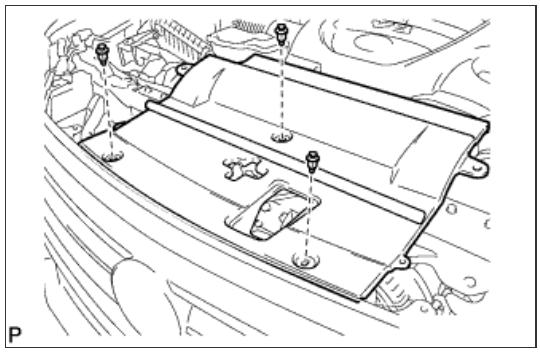
Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

j. Check that the coolant level is between the F and L lines.
If the coolant level is below the L line, repeat all of the procedures above.
If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.



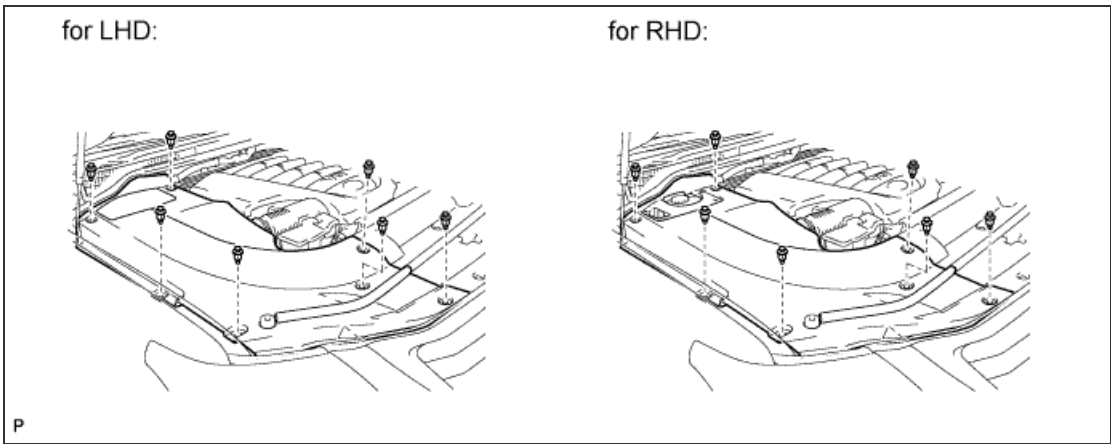
8. INSPECT FOR COOLANT LEAK

a. Fill the radiator with coolant and attach a radiator cap tester.



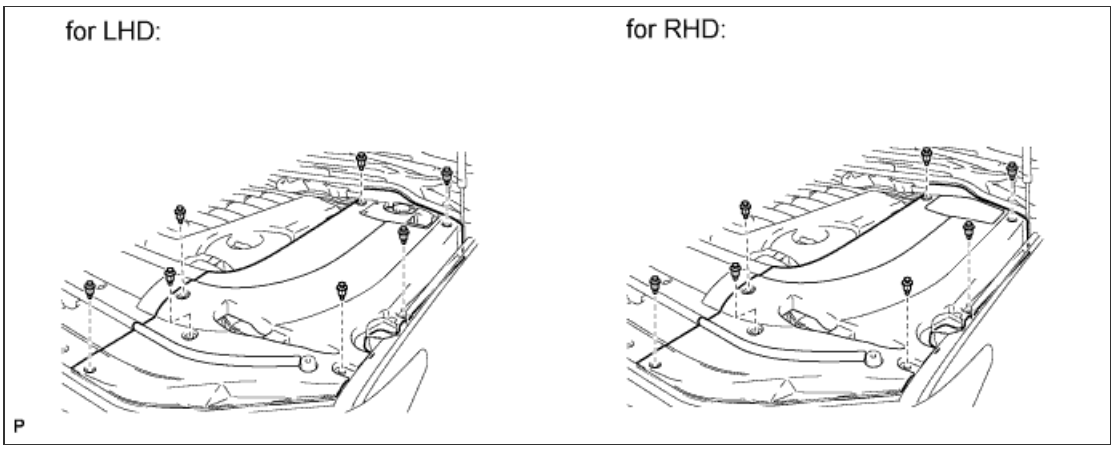
b. Warm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.



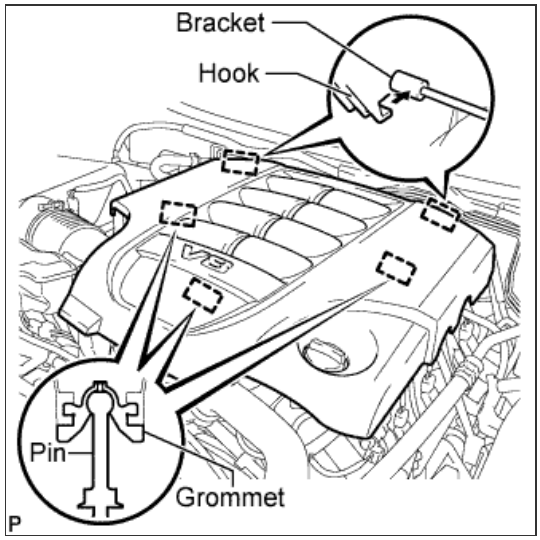
9. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the upper radiator support seal with the 3 clips.



10. INSTALL ENGINE ROOM SIDE COVER RH

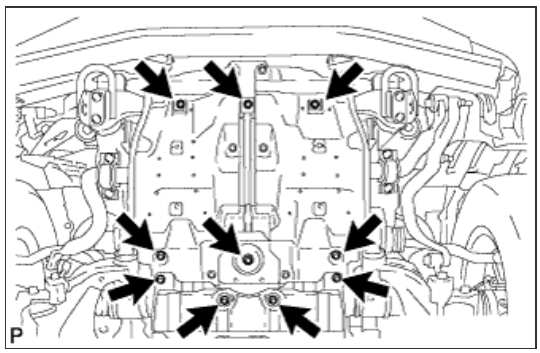
a. Install the engine room side cover with the 7 clips.



11. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.

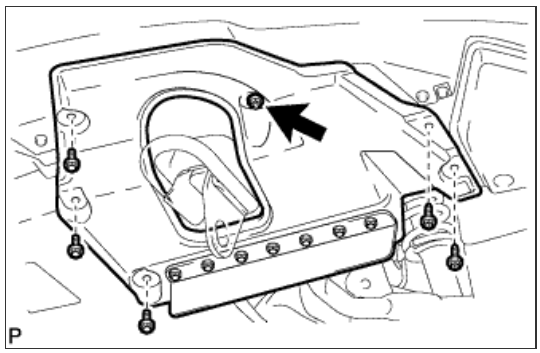
12. INSTALL V-BANK COVER SUB-ASSEMBLY



a. Attach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.

13. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.



Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

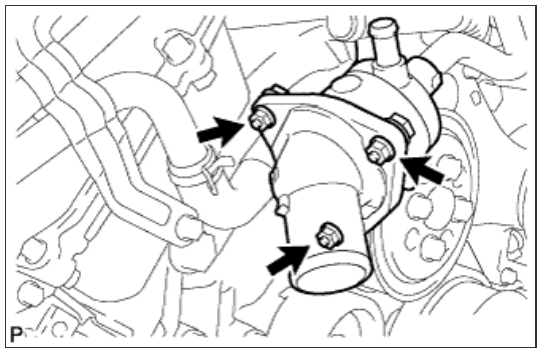
14. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the 3 bolts and 2 screws.

15. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:



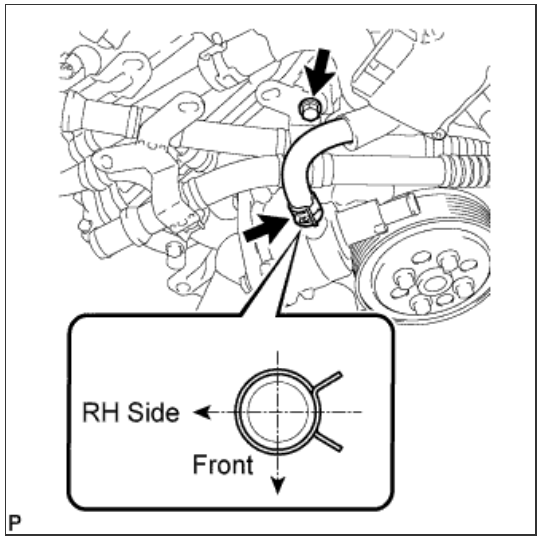
Use the same procedures described for the LH side.

for Preparation Click here

1. INSTALL WATER INLET SUB-ASSEMBLY WITH THERMOSTAT

a. Install a new gasket and the water inlet with thermostat with the 3 nuts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



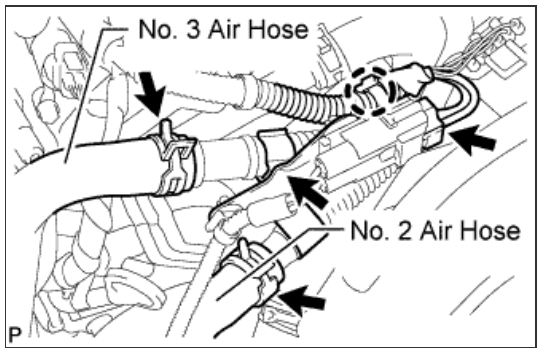
b. w/ Secondary Air Injection System:
Install the air tube bracket bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

c. Connect the No. 5 water by-pass hose.

HINT:

Install the hose so that the direction of the hose clamp is as indicated in the illustration.



d. w/ Secondary Air Injection System:

i. Connect the air pump connector clamp holder.

ii. Attach the wire harness clamp.

iii. Connect the air pump connector.

iv. Connect the No. 2 and No. 3 air hoses.

2. INSTALL FAN SHROUD

a. Install the fan pulley.

b. Place the shroud together with the coupling fan between the radiator and engine.

NOTICE:

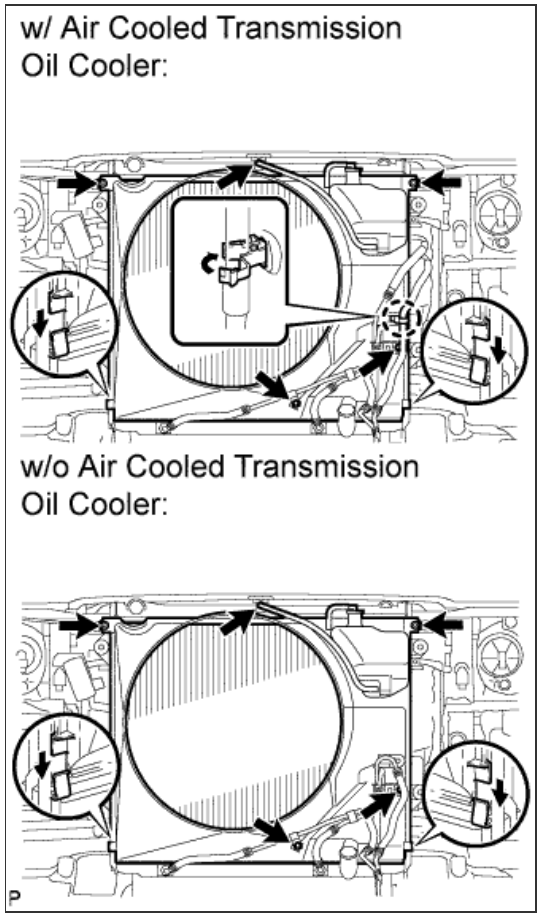
Be careful not to damage the radiator core.

c. Temporarily install the fluid coupling fan to the fluid coupling bracket with the 4 nuts. Tighten the nuts as much as possible by hand.

d. Attach the claws of the shroud to the radiator as shown in the illustration.

e. Install the shroud with the 2 bolts.

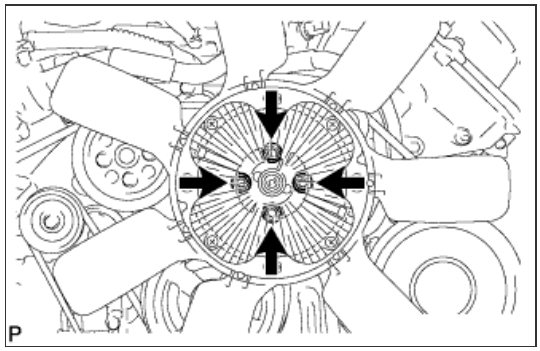
Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



f. Connect the oil cooler tube to the fan shroud with the 2 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

g. w/ Air Cooled Transmission Oil Cooler:
Pass the hose through the flexible hose clamp and close the clamp as shown in the illustration.

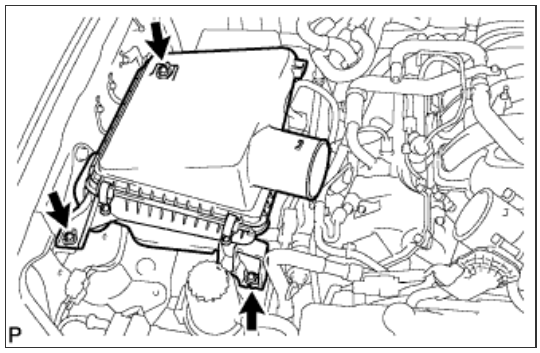


h. Connect the reservoir hose to the upper radiator tank.

i. Install the fan and generator V belt (Click here).

j. Tighten the 4 nuts of the fluid coupling fan.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



3. INSTALL NO. 2 RADIATOR HOSE

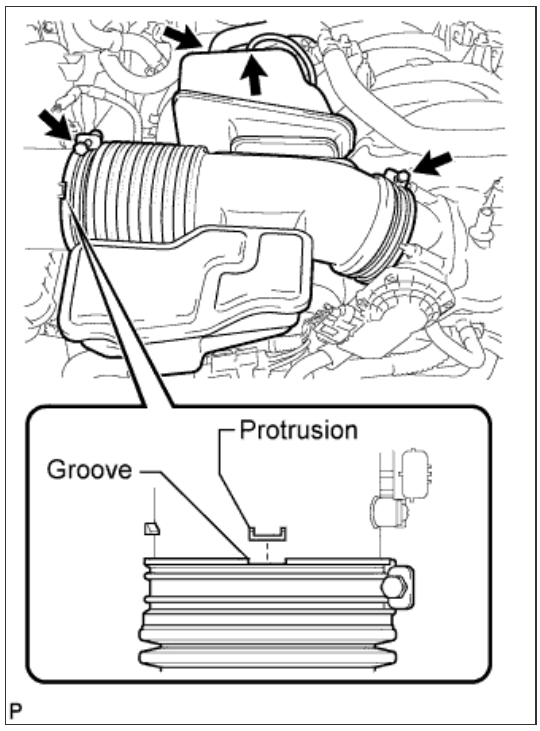
4. INSTALL NO. 1 RADIATOR HOSE

5. INSTALL AIR CLEANER ASSEMBLY

a. Install the air cleaner with the 3 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

6. INSTALL AIR CLEANER HOSE ASSEMBLY



a. Install the air cleaner hose so that the protrusion of the air cleaner cap aligns with the groove of the hose as shown in the illustration.

b. Tighten the 2 clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

c. Connect the vacuum hose.

d. Connect the No. 2 ventilation hose.

7. ADD ENGINE COOLANT

a. Add engine coolant.

Standard Capacity:

Item	Specified Condition
with transmission oil cooler	16.7 liters (17.6 US qts, 14.7 Imp. qts)
without transmission oil cooler	16.2 liters (17.1 US qts, 14.3 Imp. qts)

NOTICE:

Do not substitute plain water for engine coolant.

HINT:

TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

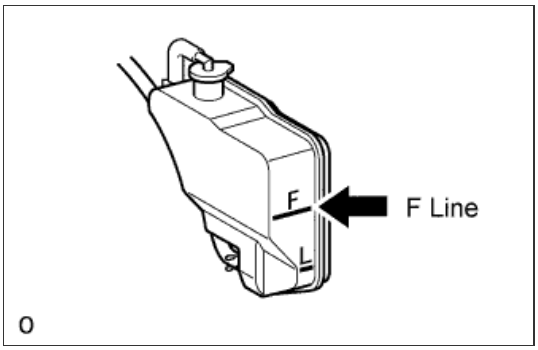
b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the reservoir cap.

d. Press the No. 1 and No. 2 radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Start the engine and warm it up until the thermostat opens.



NOTICE:

Switch off the A/C.

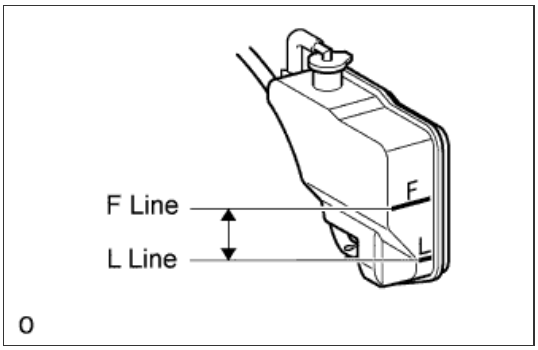
g. Maintain the engine speed at 2000 to 2500 rpm.

NOTICE:

- **Make sure that the radiator reservoir still has some coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**
- **Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the F line.**
- **Run the engine at 2000 rpm until the coolant level has stabilized.**

h. Press the No. 1 and No. 2 radiator hoses several times by hand to bleed air.

CAUTION:



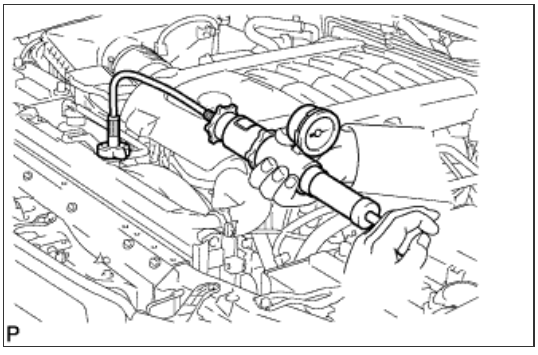
- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the fan.**

i. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

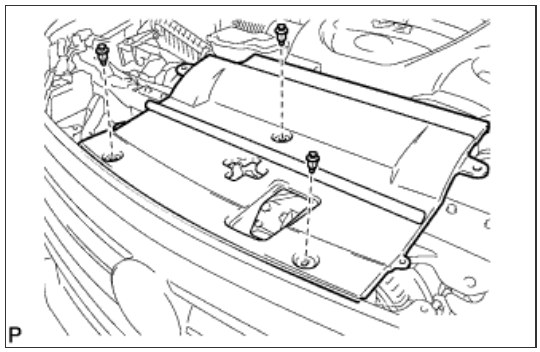
Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

j. Check that the coolant level is between the F and L lines.
If the coolant level is below the L line, repeat all of the procedures above.
If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.



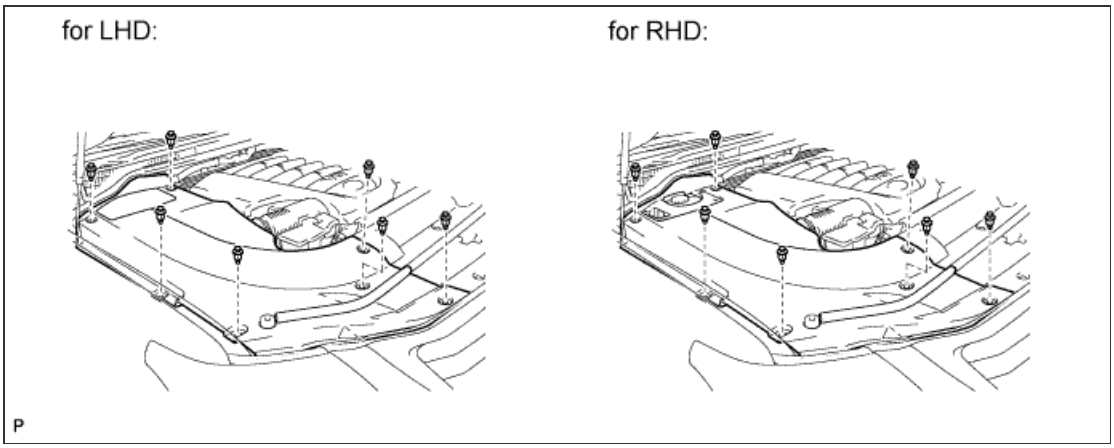
8. INSPECT FOR COOLANT LEAK

a. Fill the radiator with coolant and attach a radiator cap tester.



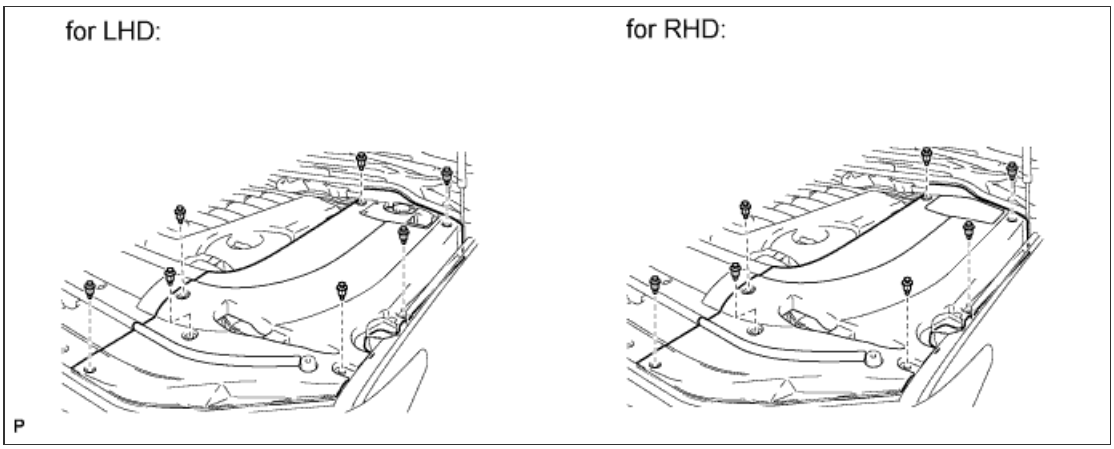
b. Warm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.



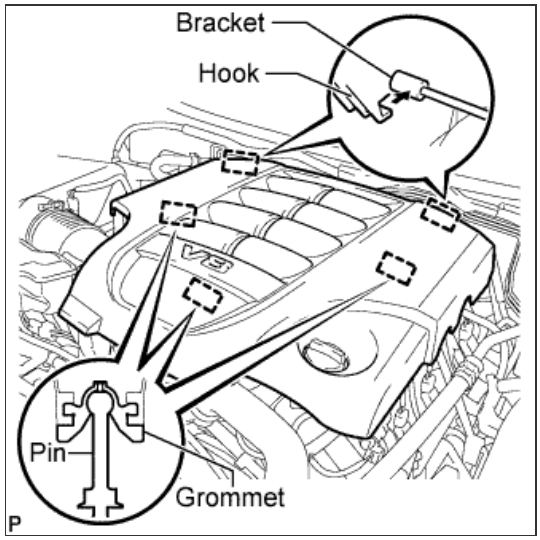
9. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the upper radiator support seal with the 3 clips.



10. INSTALL ENGINE ROOM SIDE COVER RH

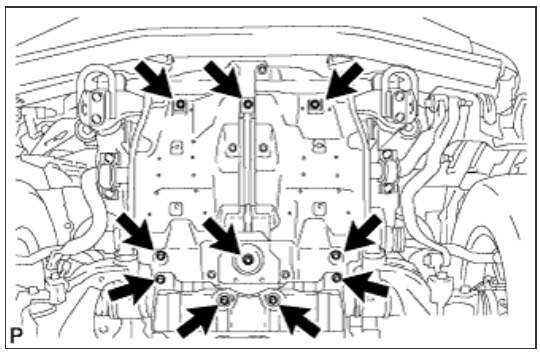
a. Install the engine room side cover with the 7 clips.



11. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.

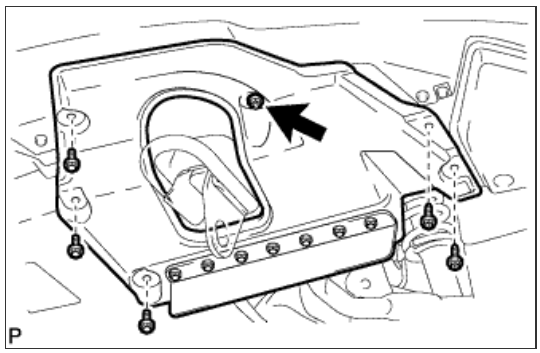
12. INSTALL V-BANK COVER SUB-ASSEMBLY



a. Attach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.

13. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.

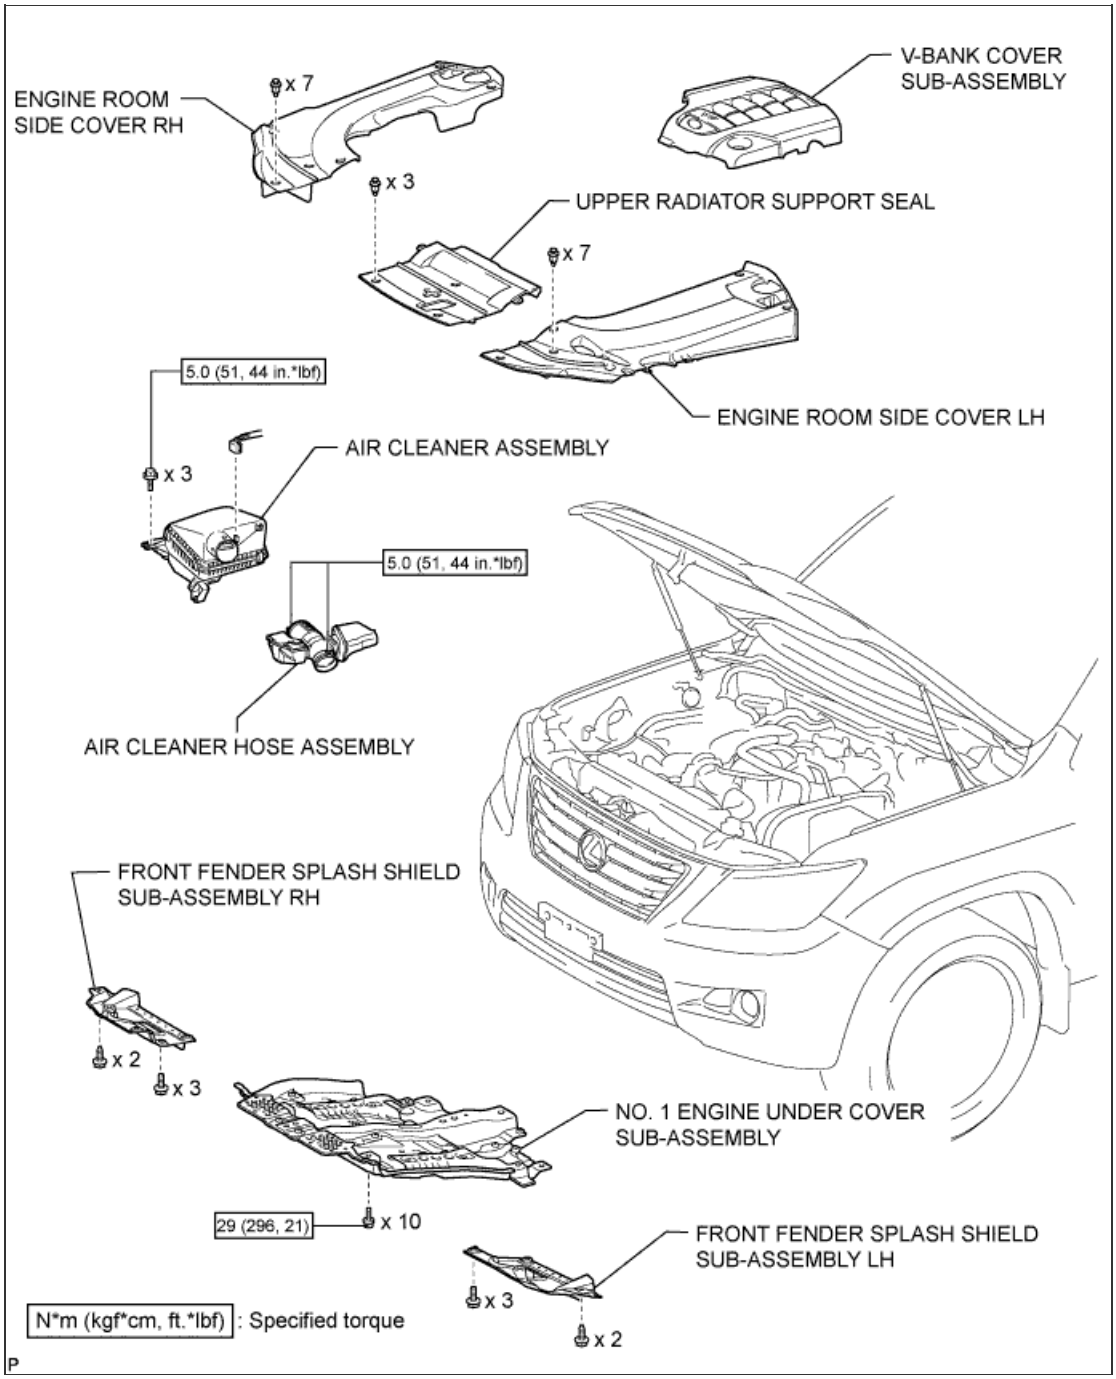


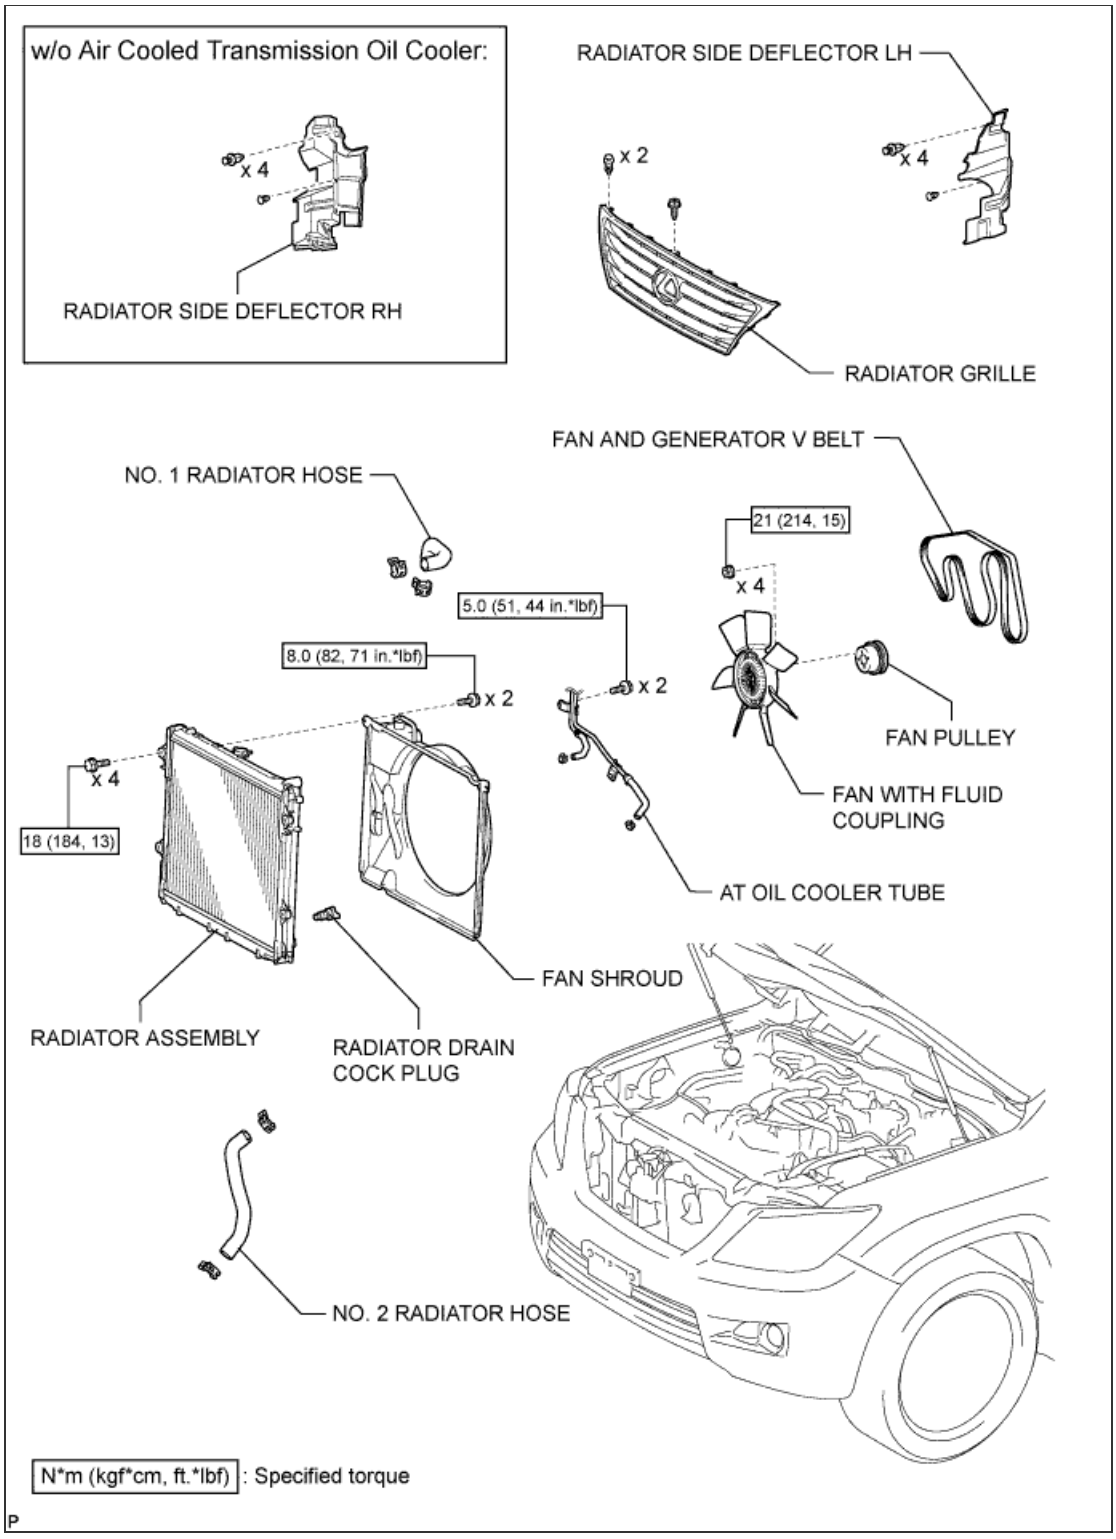
Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

14. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the 3 bolts and 2 screws.





15. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

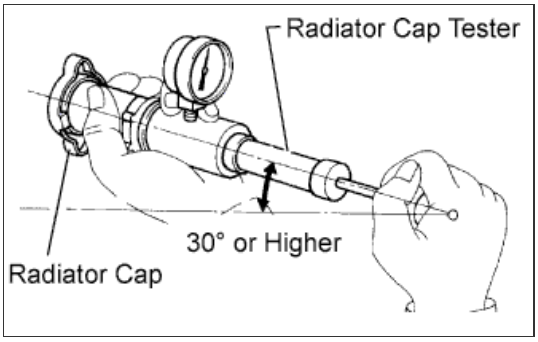
1. INSPECT RADIATOR CAP SUB-ASSEMBLY

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.



a. Visually check the radiator cap.

i. If there are water stains or foreign matter on rubber packing 1, 2 or 3, clean it with water and finger scouring.

ii. Check that rubber packing 1, 2 and 3 are not deformed, cracked or swollen.

iii. Check that rubber packing 3 and 4 are not stuck together.

b. Measure the valve opening pressure.

i. Apply engine coolant to rubber packing 2 and 3 before using a radiator cap tester.

ii. When using the cap tester, tilt it more than 30°.

iii. Pump the cap tester several times, and check the maximum pressure.

Pumping speed:
1 pump per second

HINT:

Even if the cap cannot maintain the maximum pressure, it is not a defect.

Standard Judgment Criterion:

Item	Specified Condition
Standard value (for brand-new cap)	93 to 123 kPa (1.0 to 1.3 kgf/cm^2, 13.5 to 18 psi)
Minimum standard value (after using cap)	79 kPa (0.8 kgf/cm^2, 11.4 psi)

If the maximum pressure is less than the minimum standard value, replace the radiator cap sub-assembly.

2. INSPECT FINS FOR BLOCKAGE

a. Check that the radiator and condenser are not blocked with leaves, dirt, or insects. Clean the hose connections.
If the fins are blocked, wash them with water or a steam cleaner.

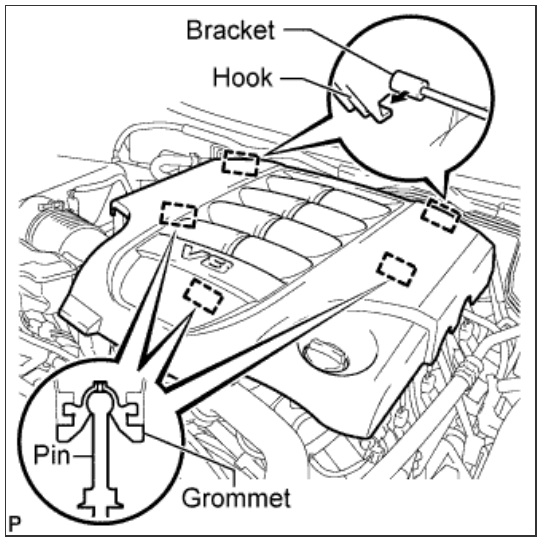
NOTICE:

- **If the distance between the steam cleaner and core is too close, the fins may be damaged.**
- **Keep the following injection distance.**

Standard Injection Distance:

Injection Condition	Injection Pressure
300 mm (11.8 in.)	2942 to 4903 kPa (30.0 to 50.0 kgf/cm^2,

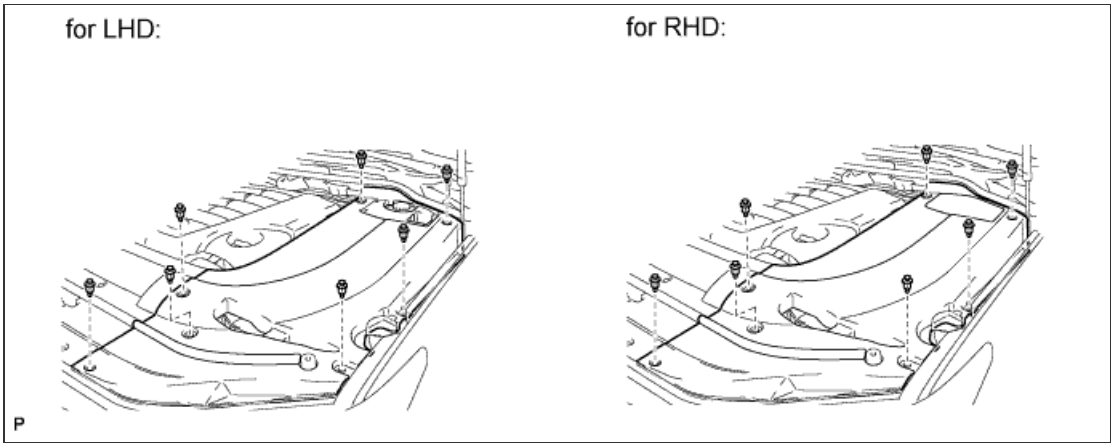
	427 to 711 psi)
500 mm (19.7 in.)	4903 to 7845 kPa (50.0 to 80.0 kgf/cm^2, 711 to 1138 psi)



- **If the fins are bent, straighten them with a screwdriver or pliers.**
- **Never apply water directly onto the electric components.**

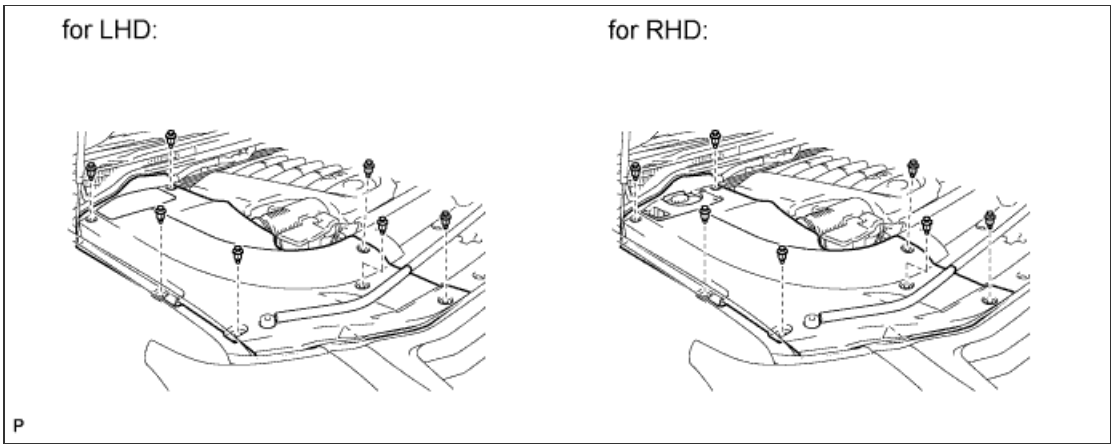
b. Dry the fins with compressed air.

for Preparation Click here



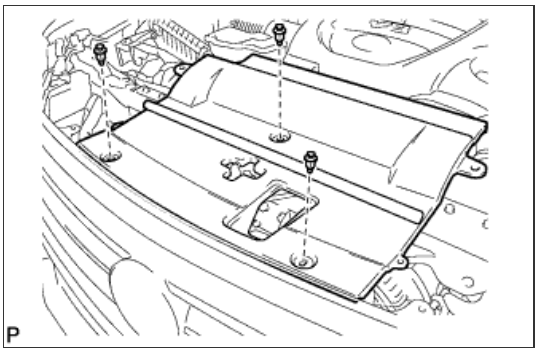
1. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.



2. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.



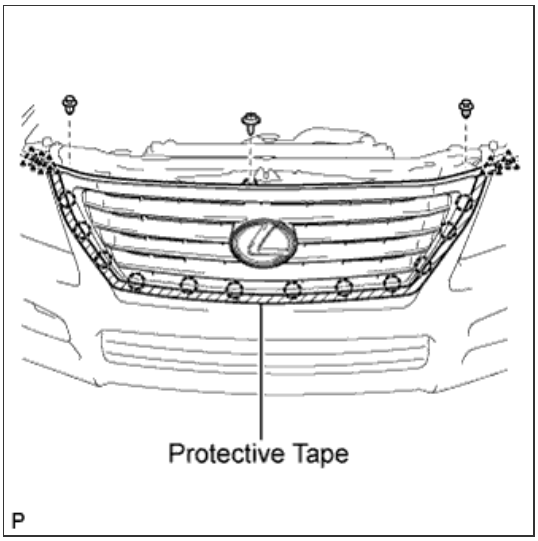
3. REMOVE ENGINE ROOM SIDE COVER RH

a. Remove the 7 clips and engine room side cover.

4. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 3 clips and upper radiator support seal.

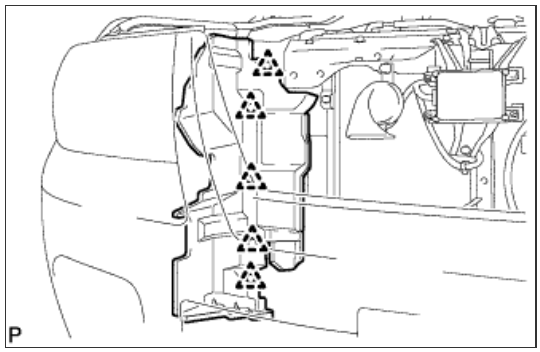
5. REMOVE RADIATOR GRILLE



a. Put protective tape around the radiator grille.

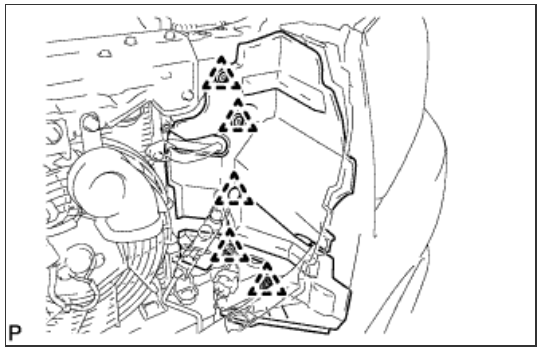
b. Remove the screw and 2 clips.

c. Detach the 5 clips and partially remove the upper radiator seal.



d. w/o Wide View Front Monitor System:
Detach the 12 claws and remove the radiator grille.

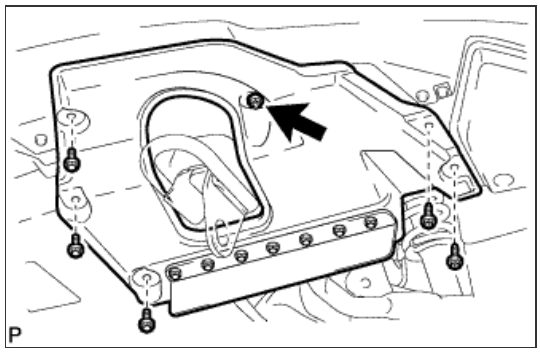
e. w/ Wide View Front Monitor System:
Detach the 12 claws, disconnect the connector and remove the radiator grille.



6. REMOVE RADIATOR SIDE DEFLECTOR RH (w/o Air Cooled Transmission Oil Cooler)

a. Using a clip remover, remove the 5 clips and side deflector.

7. REMOVE RADIATOR SIDE DEFLECTOR LH

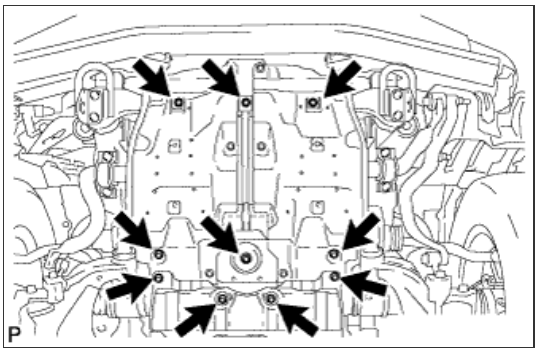


a. Using a clip remover, remove the 5 clips and side deflector.

8. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and 2 screws.

b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.

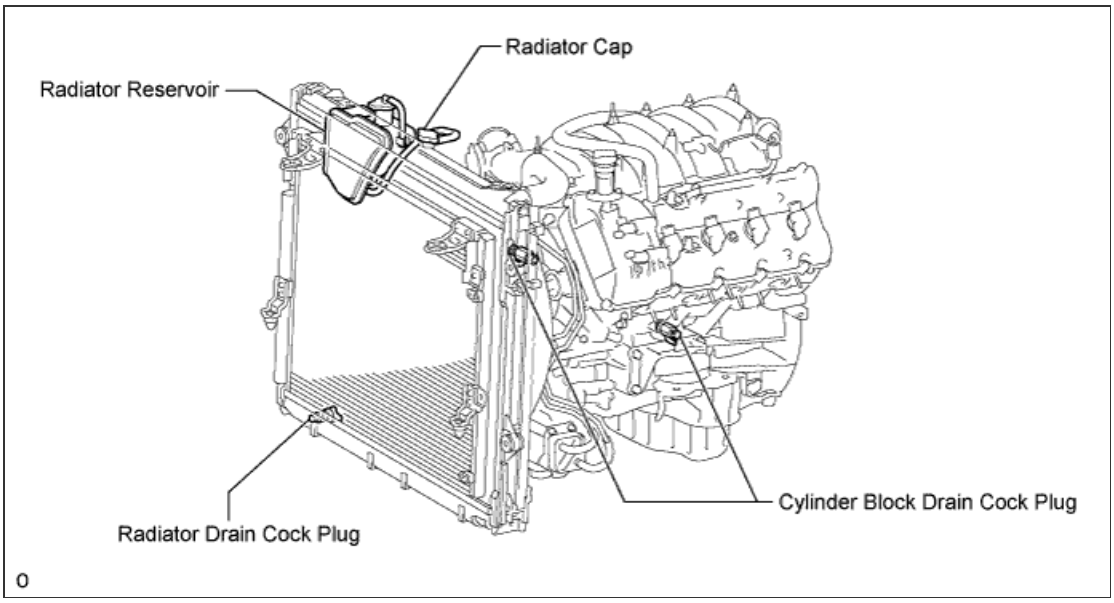


9. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

10. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY



a. Remove the 10 bolts and No. 1 engine under cover.

11. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Loosen the radiator drain cock plug.

HINT:

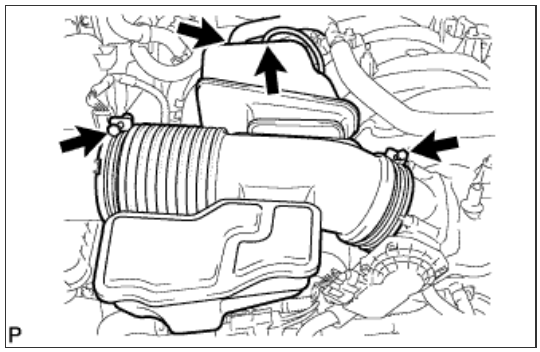
Collect the coolant in a container and dispose of it according to the regulations in your area.

b. Remove the radiator cap. Then drain the coolant from the radiator.

c. Loosen the 2 cylinder block drain cock plugs. Then drain the coolant from the engine.

d. Tighten the 2 cylinder block drain cock plugs.

Torque:
13 N*m{ 130 kgf*cm , 10 ft.*lbf }



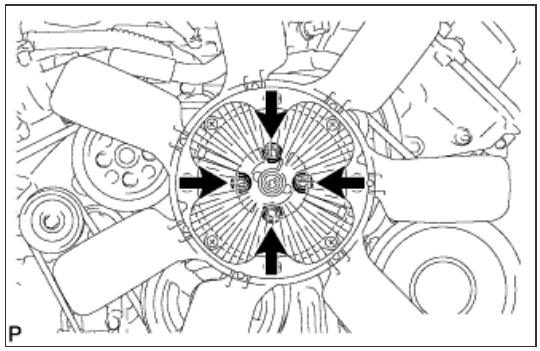
e. Tighten the radiator drain cock plug by hand.

12. REMOVE AIR CLEANER HOSE ASSEMBLY

a. Disconnect the vacuum hose and No. 2 ventilation hose.

b. Loosen the 2 hose clamps.

c. Remove the air cleaner hose.



13. REMOVE NO. 1 RADIATOR HOSE

14. REMOVE NO. 2 RADIATOR HOSE

15. REMOVE FAN SHROUD

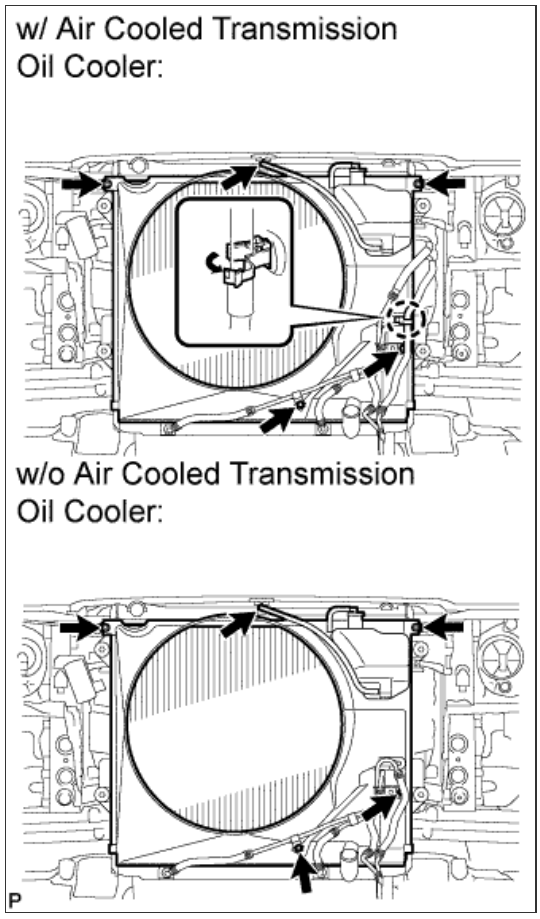
a. Loosen the 4 nuts holding the fluid coupling fan.

b. Remove the fan and generator V belt (Click here).

c. Disconnect the reservoir hose from the upper radiator tank.

d. w/ Air Cooled Transmission Oil Cooler:
Detach the claw to open the flexible hose clamp.

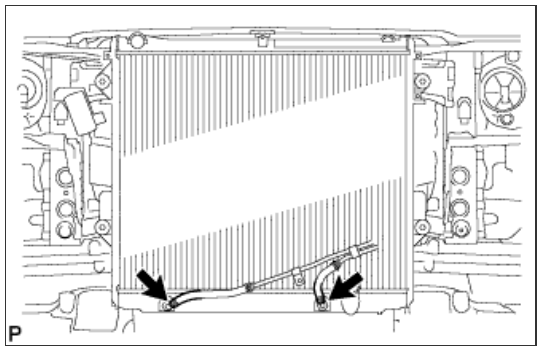
e. Remove the 2 bolts and disconnect the oil cooler tube from the fan shroud.



f. Remove the 2 bolts holding the fan shroud.

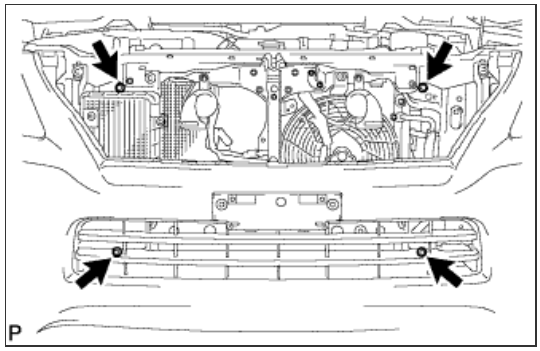
g. Remove the 4 nuts of the fluid coupling fan, and then remove the shroud together with the coupling fan.

NOTICE:



Be careful not to damage the radiator core.

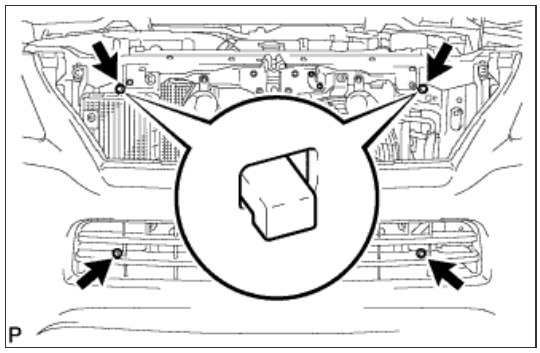
h. Remove the fan pulley.



16. REMOVE RADIATOR ASSEMBLY

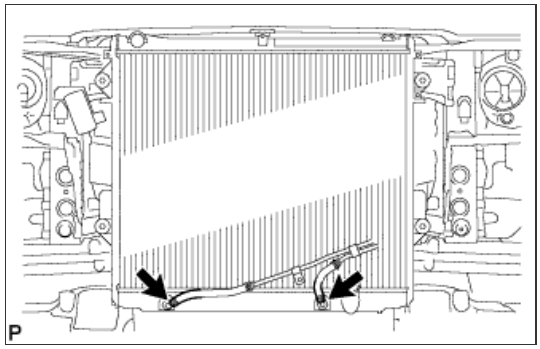
a. Disconnect the 2 oil cooler hoses.

b. Remove the 4 bolts and radiator.



for Preparation Click here

1. INSTALL RADIATOR ASSEMBLY



a. Set the radiator bracket hooks to the radiator support holes.

b. Install the radiator with the 4 bolts.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

c. Connect the 2 oil cooler hoses.

2. INSTALL FAN SHROUD

a. Install the fan pulley.

b. Place the shroud together with the coupling fan between the radiator and engine.

NOTICE:

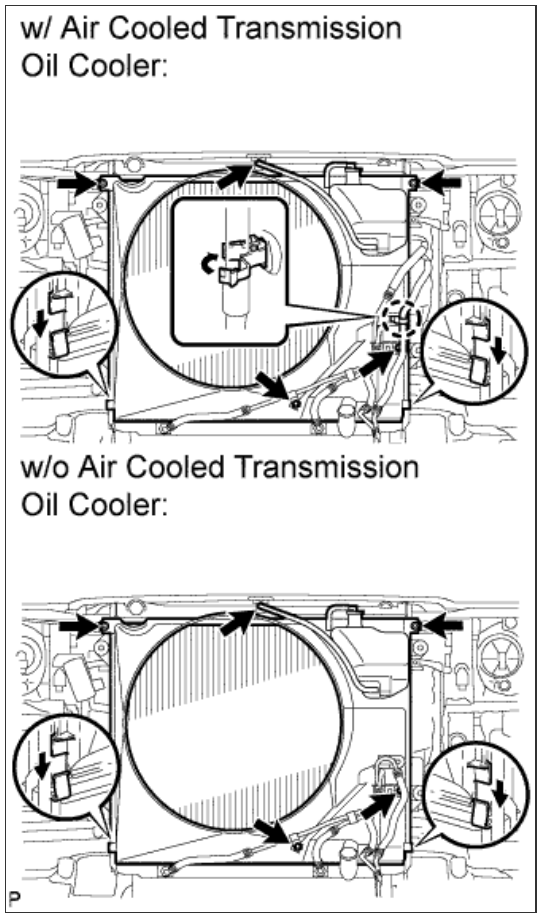
Be careful not to damage the radiator core.

c. Temporarily install the fluid coupling fan to the fluid coupling bracket with the 4 nuts. Tighten the nuts as much as possible by hand.

d. Attach the claws of the shroud to the radiator as shown in the illustration.

e. Install the shroud with the 2 bolts.

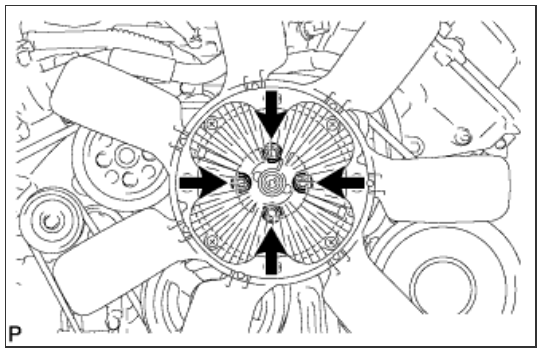
Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



f. Connect the oil cooler tube to the fan shroud with the 2 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

g. w/ Air Cooled Transmission Oil Cooler:
Pass the hose through the flexible hose clamp and close the clamp as shown in the illustration.



h. Connect the reservoir hose to the upper radiator tank.

i. Install the fan and generator V belt (Click here).

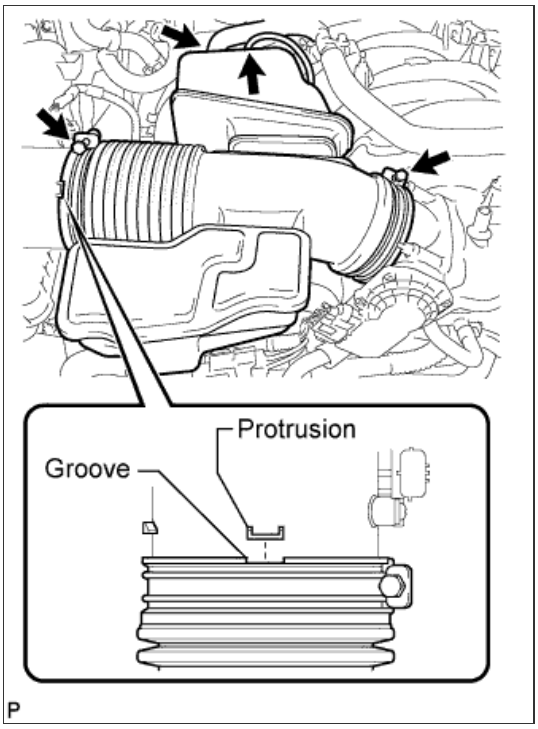
j. Tighten the 4 nuts of the fluid coupling fan.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

3. INSTALL NO. 2 RADIATOR HOSE

4. INSTALL NO. 1 RADIATOR HOSE

5. INSTALL AIR CLEANER HOSE ASSEMBLY



a. Install the air cleaner hose so that the protrusion of the air cleaner cap aligns with the groove of the hose as shown in the illustration.

b. Tighten the 2 clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

c. Connect the vacuum hose.

d. Connect the No. 2 ventilation hose.

6. ADD ENGINE COOLANT

a. Add engine coolant.

Standard Capacity:

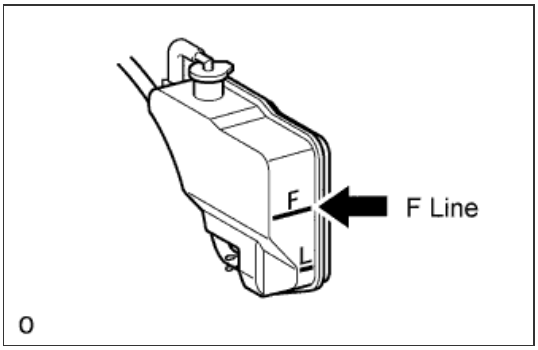
Item	Specified Condition
with transmission oil cooler	16.7 liters (17.6 US qts, 14.7 Imp. qts)
without transmission oil cooler	16.2 liters (17.1 US qts, 14.3 Imp. qts)

NOTICE:

Do not substitute plain water for engine coolant.

HINT:

TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).



b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the reservoir cap.

d. Press the No. 1 and No. 2 radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Start the engine and warm it up until the thermostat opens.

NOTICE:

Switch off the A/C.

g. Maintain the engine speed at 2000 to 2500 rpm.

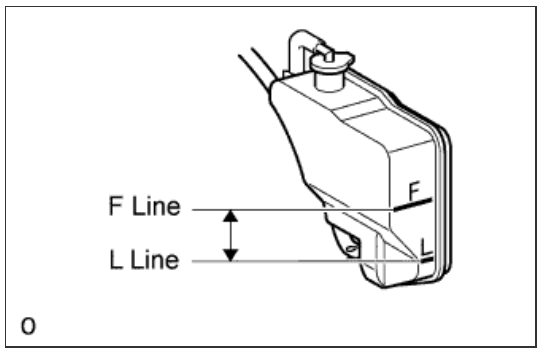
NOTICE:

- **Make sure that the radiator reservoir still has some coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**
- **Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the F line.**

- **Run the engine at 2000 rpm until the coolant level has stabilized.**

h. Press the No. 1 and No. 2 radiator hoses several times by hand to bleed air.

CAUTION:



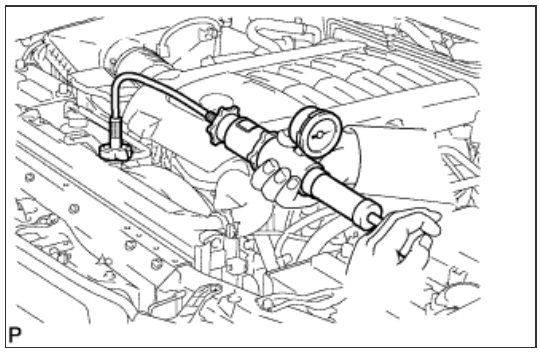
- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the fan.**

i. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

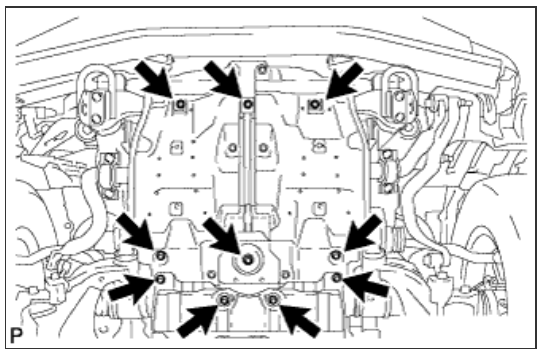
j. Check that the coolant level is between the F and L lines.
If the coolant level is below the L line, repeat all of the procedures above.
If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.



7. INSPECT FOR COOLANT LEAK

a. Fill the radiator with coolant and attach a radiator cap tester.

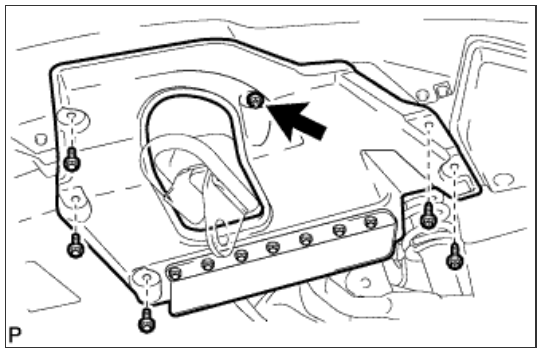
b. Warm up the engine.



c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.

8. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.

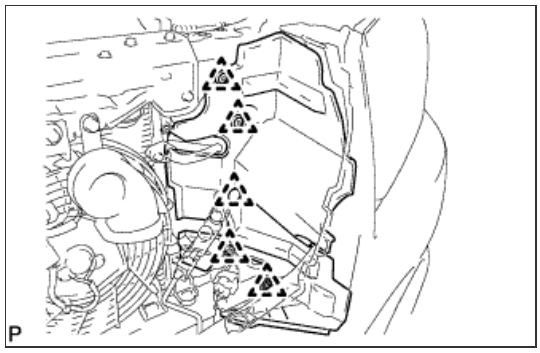


Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

9. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

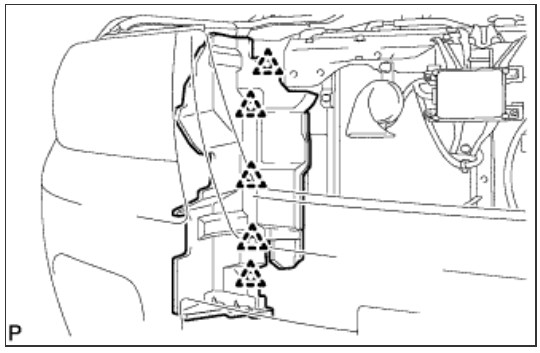
b. Install the 3 bolts and 2 screws.



10. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

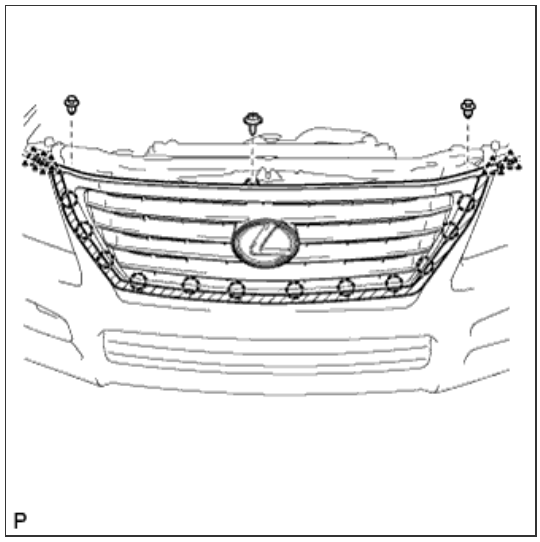


11. INSTALL RADIATOR SIDE DEFLECTOR LH

a. Install the side deflector with the 5 clips.

12. INSTALL RADIATOR SIDE DEFLECTOR RH (w/o Air Cooled Transmission Oil Cooler)

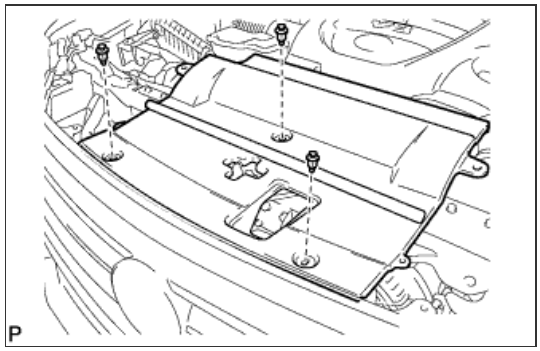
a. Install the side deflector with the 5 clips.



13. INSTALL RADIATOR GRILLE

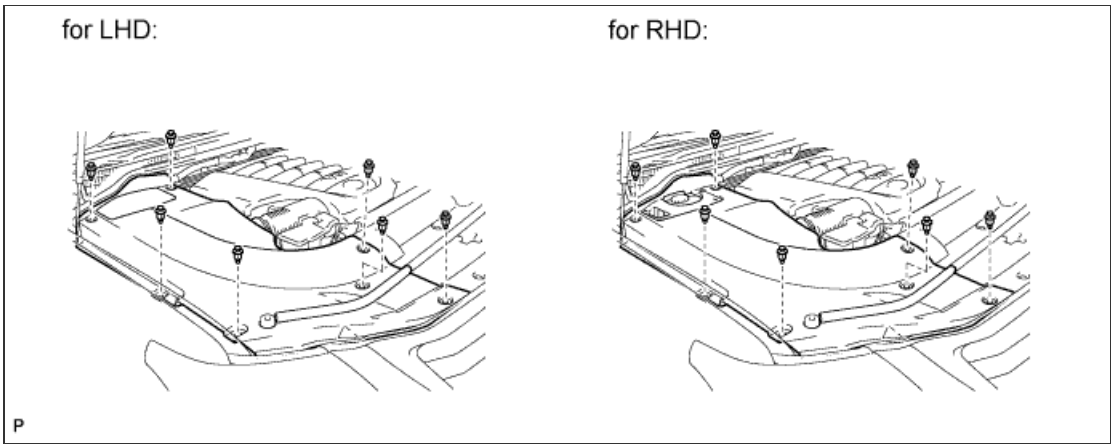
a. w/ Wide View Front Monitor System:
Connect the connector.

b. Attach the 12 claws to install the radiator grille.



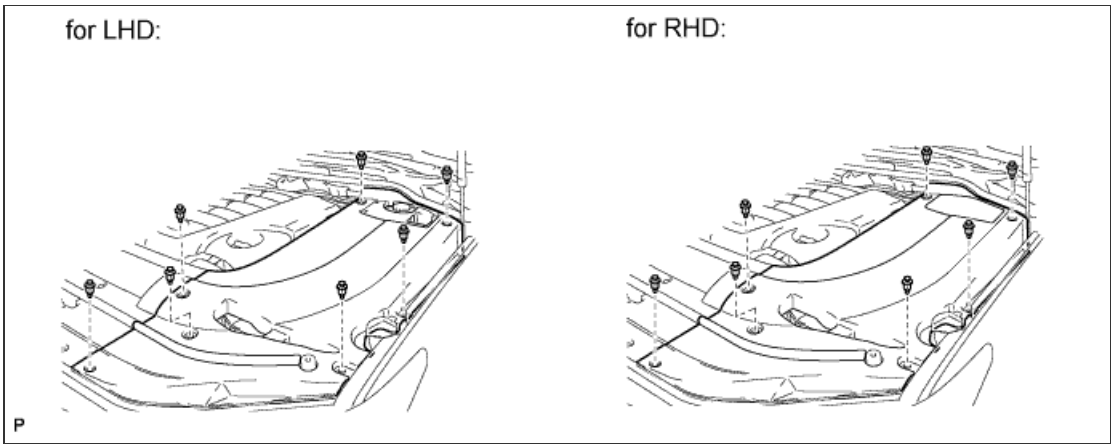
c. Attach the 5 clips to install the detached part of the upper radiator seal.

d. Install the screw and 2 clips.



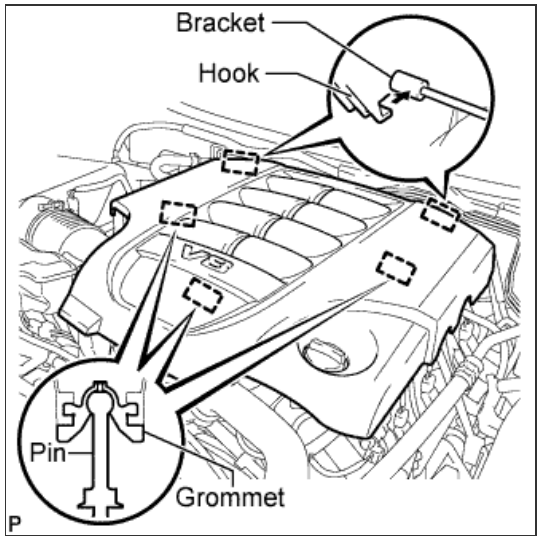
14. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the upper radiator support seal with the 3 clips.



15. INSTALL ENGINE ROOM SIDE COVER RH

a. Install the engine room side cover with the 7 clips.



16. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.

17. INSTALL V-BANK COVER SUB-ASSEMBLY

a. Attach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.

for Preparation Click here

1. CHECK OIL QUALITY

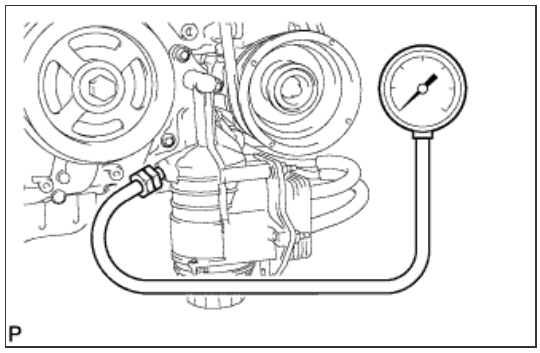
a. Check the oil for deterioration, water contamination, discoloring or thinning.
If the quality is visibly poor, replace the oil and filter (Click here).

2. INSPECT ENGINE OIL LEVEL

a. Warm up the engine, stop the engine and wait 5 minutes. The oil level should be between the dipstick low level mark and full level mark.
If low, check for leakage and add oil up to the full level mark.

NOTICE:

Do not fill engine oil above the full level mark.



3. INSPECT OIL PRESSURE

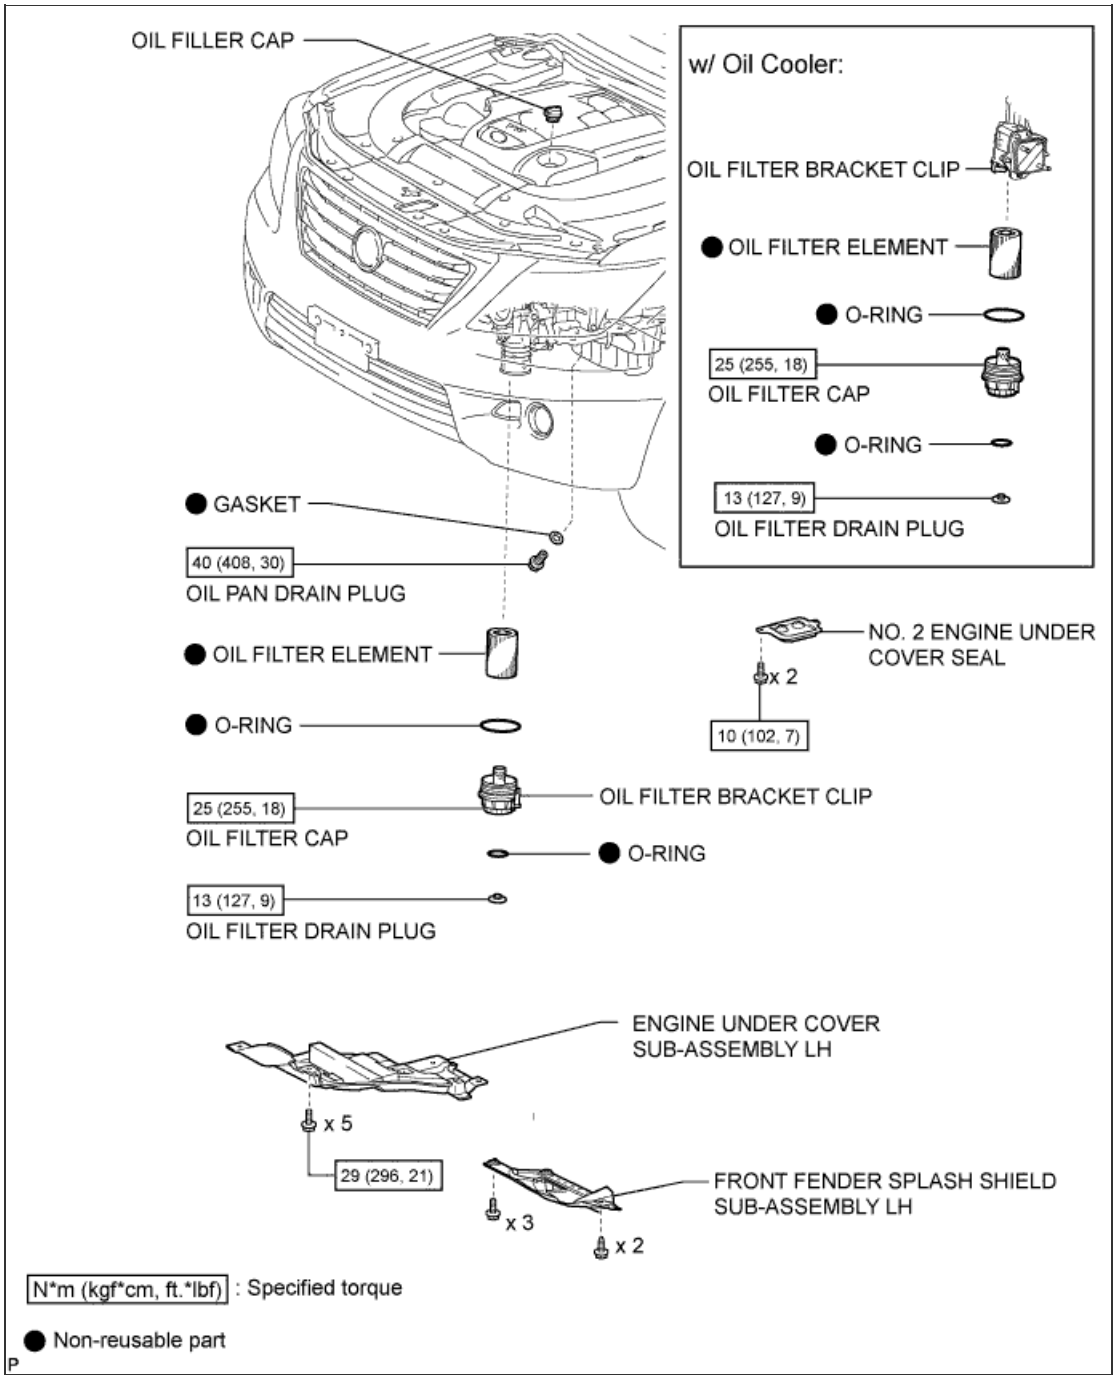
a. Remove the oil pressure sender gauge (Click here).

b. Install an oil pressure gauge with an adapter.

c. Warm up the engine.

d. Measure the engine oil pressure.

Standard Oil Pressure:



Condition	Specified Condition
Idle	70 kPa (0.7 kgf/cm^2, 10.1 psi) or higher
2500 rpm	220 kPa (2.2 kgf/cm^2, 32 psi) or higher

If the pressure is not as specified, check the oil pump (Click here).

e. Remove the oil pressure gauge and adapter.

f. Install the oil pressure sender gauge (Click here).

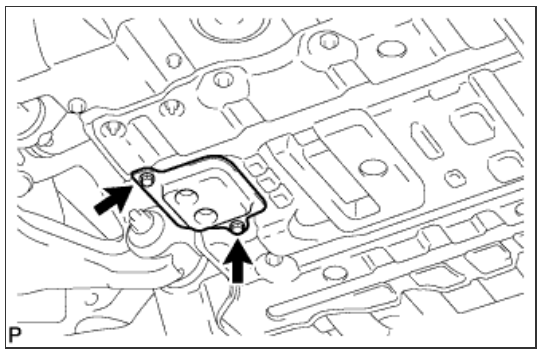
for Preparation [Click here]

for Preparation Click here

CAUTION:

- **Prolonged and repeated contact with engine oil will result in the removal of natural oils from the skin, leading to dryness, irritation and dermatitis. In addition, used engine oil contains potentially harmful contaminants which may cause skin cancer.**
- **Precautions should be taken when replacing engine oil to minimize the risk of your skin making contact with used engine oil. Protective clothing and gloves that cannot be penetrated by oil should be worn. The skin should be washed with soap and water, or use waterless hand cleaner, to remove any used engine oil thoroughly. Do not use gasoline, thinners, or solvents.**
- **In order to protect the environment, used oil and used oil filters must be disposed of at designated disposal sites.**

1. DRAIN ENGINE OIL

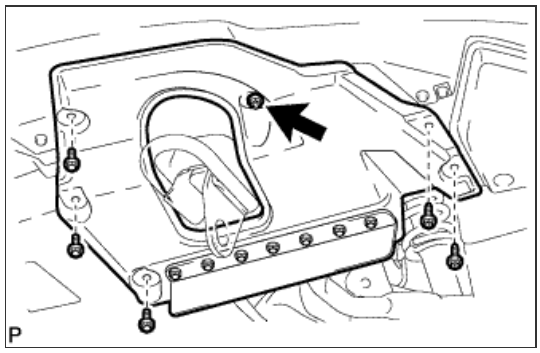


a. Remove the oil filler cap.

b. Remove the 2 bolts and No. 2 engine under cover seal.

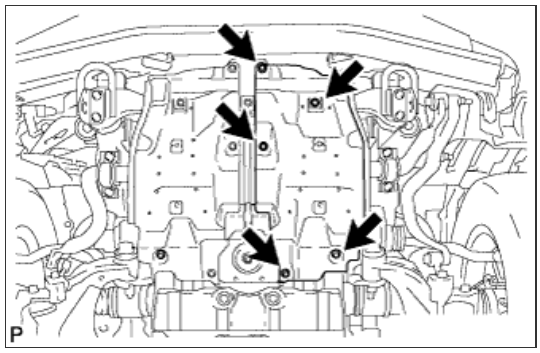
c. Remove the oil pan drain plug and gasket, and drain the engine oil into a container.

d. Install a new gasket and the oil pan drain plug.



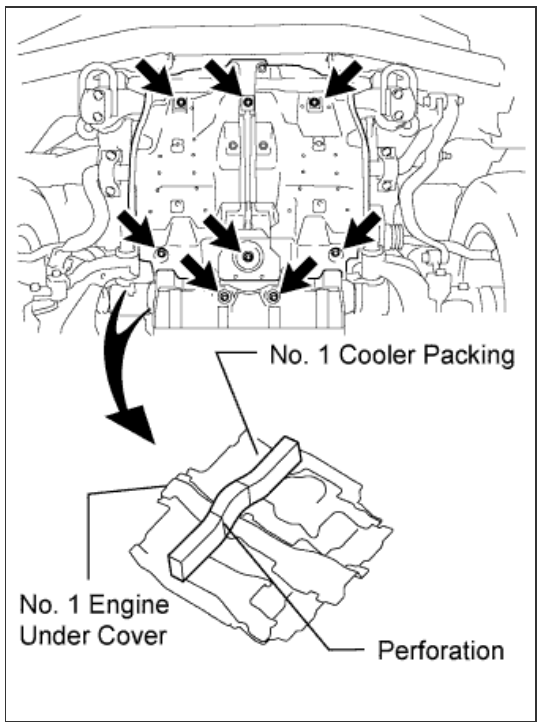
Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

2. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH



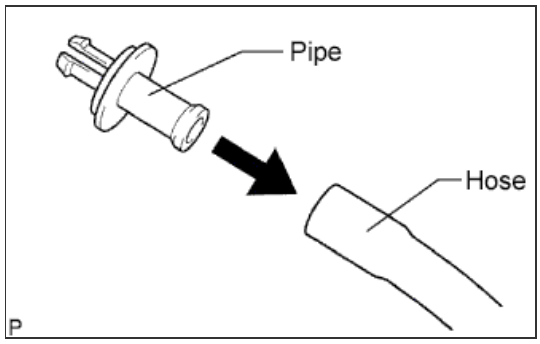
a. Remove the 3 bolts and 2 screws.

b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



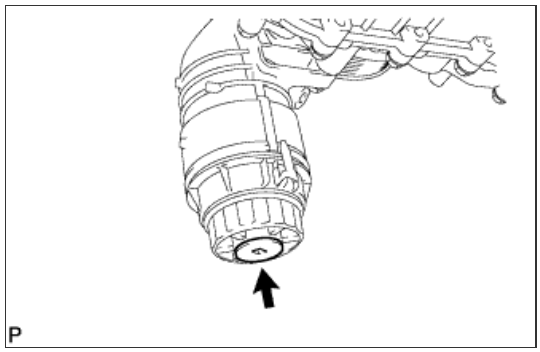
3. REMOVE ENGINE UNDER COVER SUB-ASSEMBLY LH

a. Remove the 5 bolts and engine under cover sub-assembly LH.



HINT:

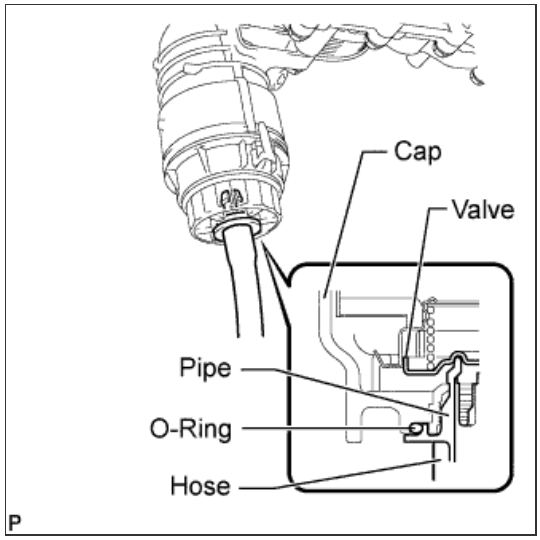
If the No. 1 cooler packing is not divided, remove both sides of the engine under cover assembly and cut the packing at the perforation indicated in the illustration.



4. REMOVE OIL FILTER ELEMENT

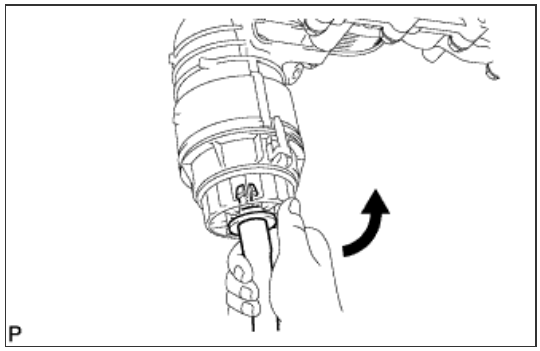
a. Connect a hose with an inside diameter of 15 mm (0.591 in.) to the pipe.

b. Remove the oil filter drain plug.



c. Install the pipe to the oil filter cap.

NOTICE:

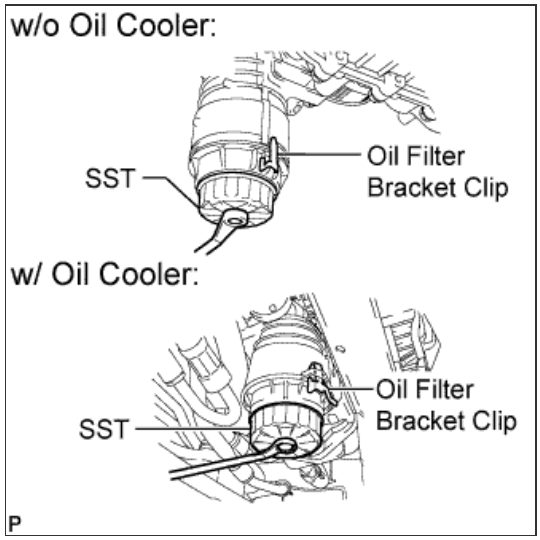


If the O-ring is removed with the drain plug, install the O-ring together with the pipe.

HINT:

Use a container to catch the draining oil.

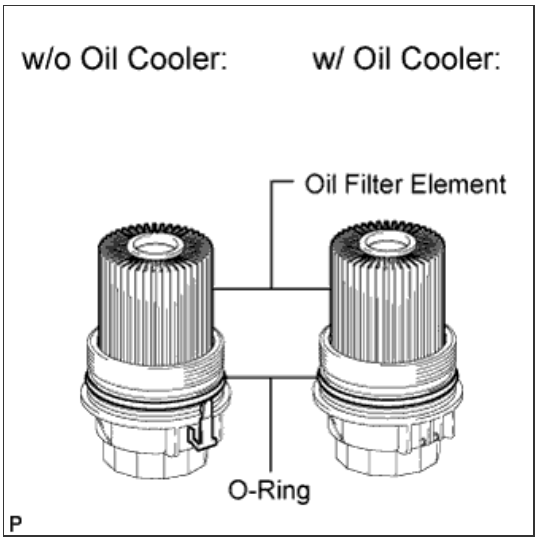
d. Check that oil is drained from the oil filter. Then disconnect the pipe and remove the O-ring as shown in the illustration.



e. Using SST, remove the oil filter cap.

SST
09228-06501

NOTICE:



Do not remove the oil filter bracket clip.

f. Remove the oil filter element and O-ring from the oil filter cap.

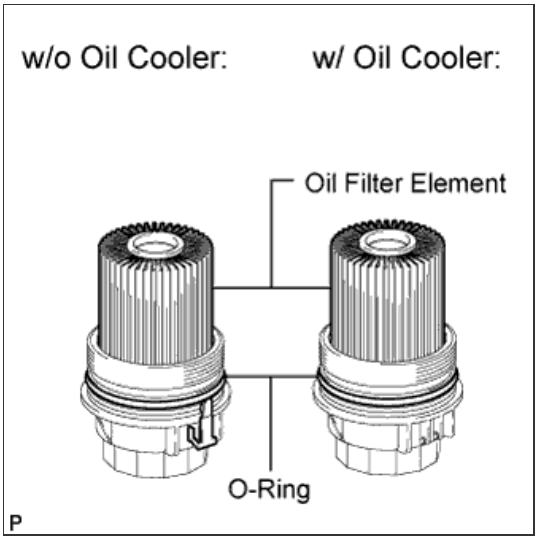
NOTICE:

Be sure to remove the cap O-ring by hand, without using any tools, to prevent damage to the cap O-ring groove.

5. INSTALL OIL FILTER ELEMENT

a. Clean the inside of the oil filter cap, its threads and its O-ring groove.

b. Apply a small amount of engine oil to a new O-ring and install it to the oil filter cap.



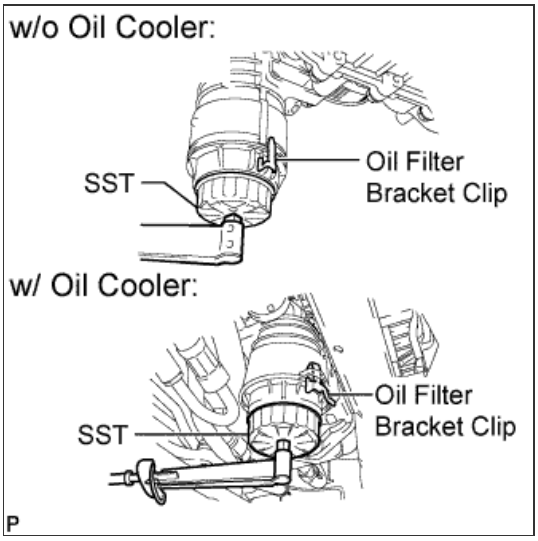
c. Set a new oil filter element to the oil filter cap.

d. Remove any dirt or foreign matter from the installation surface of the engine.

e. Apply a small amount of engine oil to the O-ring again and temporarily install the oil filter cap.

NOTICE:

Do not remove the oil filter bracket clip.



f. Using SST, tighten the oil filter cap.

SST
09228-06501

Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf }

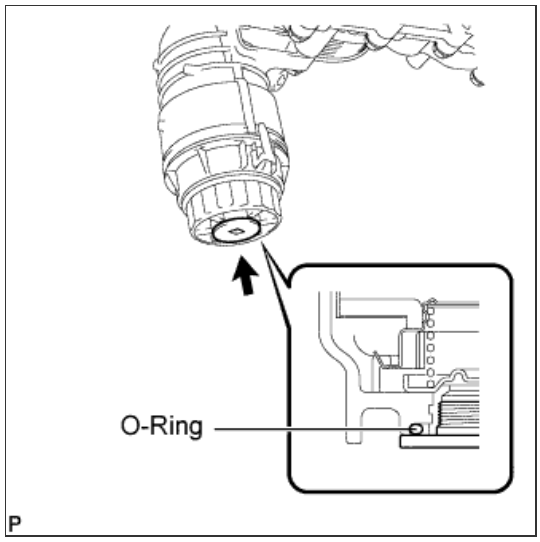
NOTICE:

- **When tightening the oil filter cap, do not remove the oil filter bracket clip.**
- **Make sure that the oil filter is installed securely as shown in the illustration.**
- **Be careful that the O-ring does not get caught between any surrounding parts.**

g. Apply a small amount of engine oil to a new drain plug O-ring, and install it to the oil filter cap.

NOTICE:

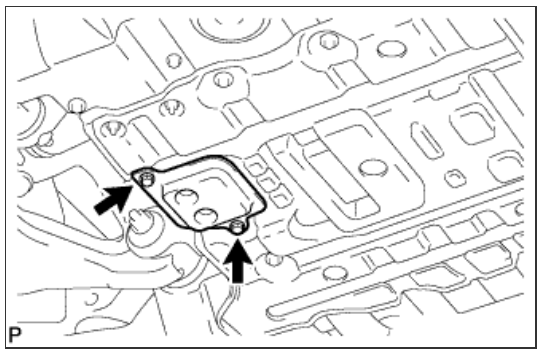
Before installing the O-ring, remove any dirt or foreign matter from the



installation surface of the oil filter cap.

h. Install the oil filter drain plug.

Torque:
13 N*m{ 127 kgf*cm , 9 ft.*lbf }



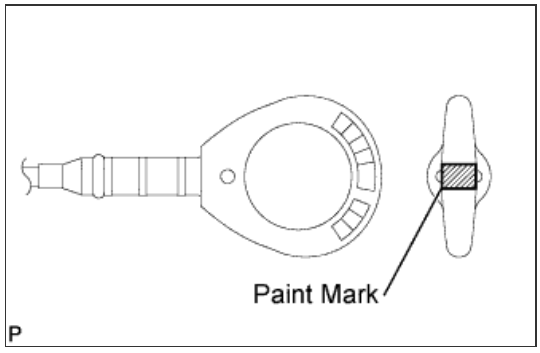
NOTICE:

Be careful that the O-ring does not get caught between any surrounding parts.

i. Install the No. 2 engine under cover seal with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

6. ADD ENGINE OIL



a. Add fresh oil and install the oil filler cap.

Standard Oil Grade:

Oil Grade	Oil Viscosity (SAE)
API grade SL "Energy-Conserving", SM "Energy-Conserving" or ILSAC multigrade engine oil API grade SL or SM multigrade engine oil	0W-20 5W-20 5W-30 10W-30 15W-40 20W-50

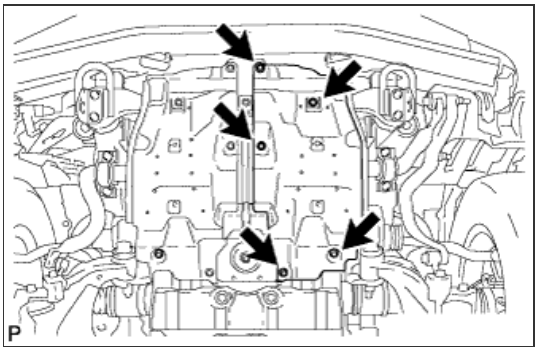
Standard Oil Capacity:

Paint Mark	Item	Specified Condition
Blue	Drain and refill with oil filter change	7.0 liters (7.4 US qts, 6.2 Imp. qts)
	Drain and refill without oil filter change	6.6 liters (7.0 US qts, 5.8 Imp. qts)
	Dry fill	8.4 liters (8.9 US qts, 7.4 Imp. qts)
Green	Drain and refill with oil filter change	7.5 liters (7.9 US qts, 6.6 Imp. qts)
	Drain and refill without oil filter change	7.1 liters (7.5 US qts, 6.2 Imp. qts)
	Dry fill	9.3 liters (9.8 US qts, 8.2 Imp. qts)

7. INSPECT FOR OIL LEAK

a. Start the engine. Make sure that there are no oil leaks from the area that was worked on.

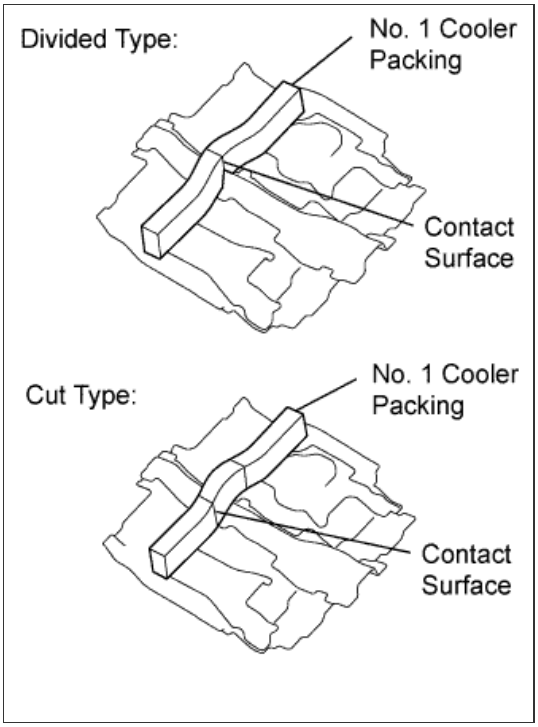
8. INSPECT ENGINE OIL LEVEL



a. Warm up the engine, stop the engine and wait 5 minutes. The oil level should be between the dipstick low level mark and full level mark. If low, check for leakage and add oil up to the full level mark.

NOTICE:

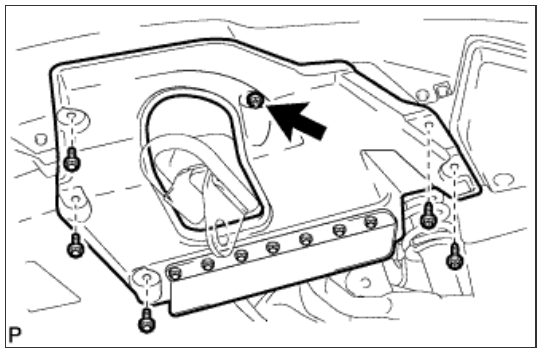
Do not fill engine oil above the full level mark.



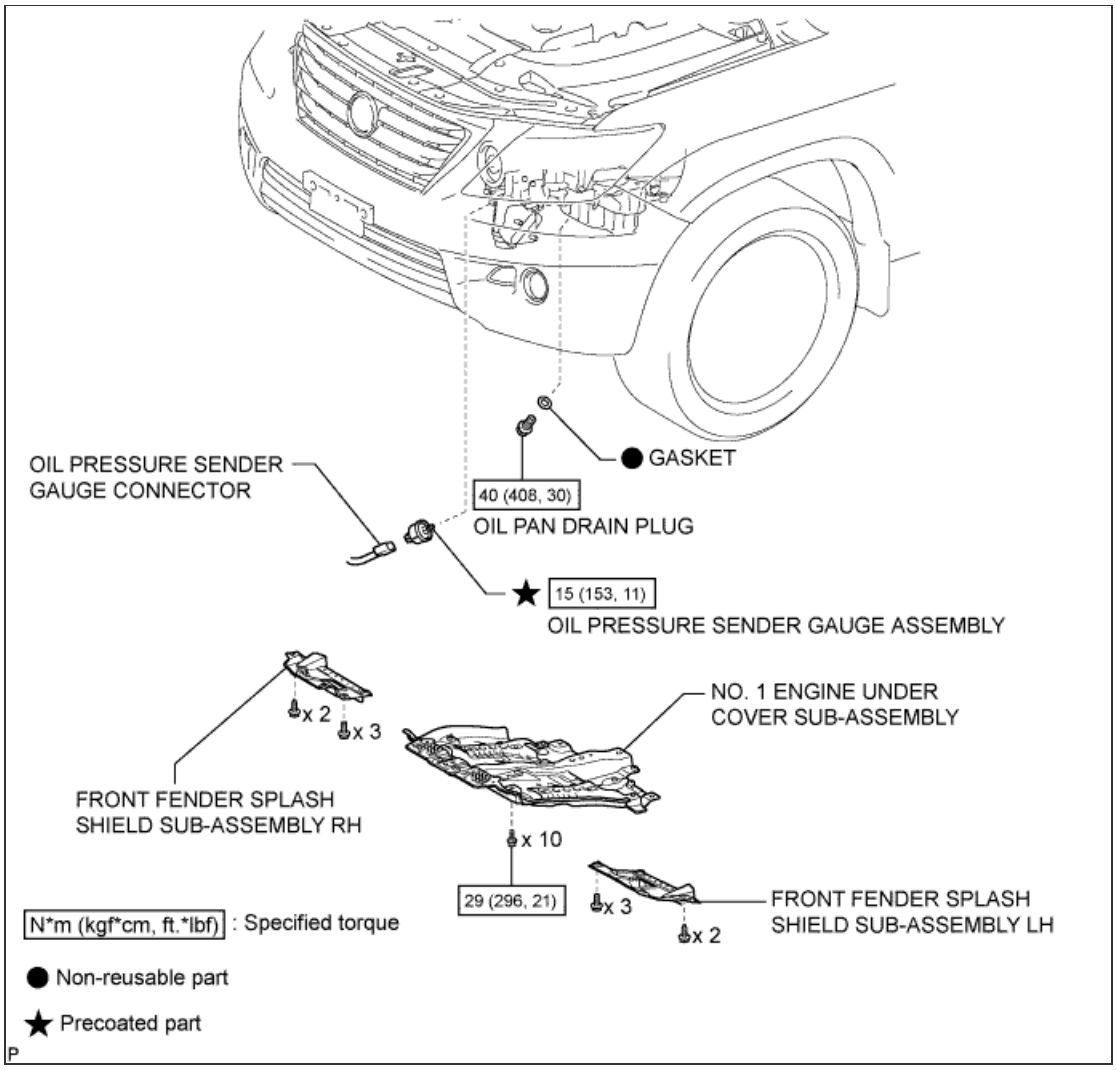
9. INSTALL ENGINE UNDER COVER SUB-ASSEMBLY LH

a. Install the engine under cover sub-assembly LH with the 5 bolts.

HINT:



Make sure there is no gap between the ends of the No. 1 cooler packing.

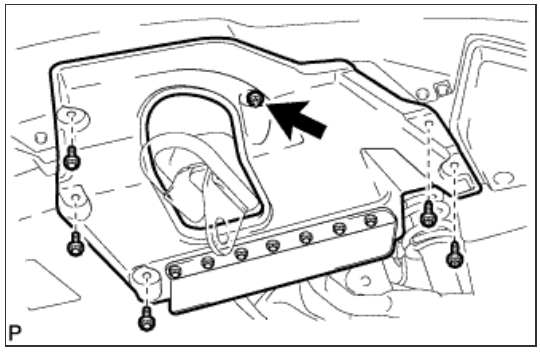


10. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the 3 bolts and 2 screws.

for Preparation Click here

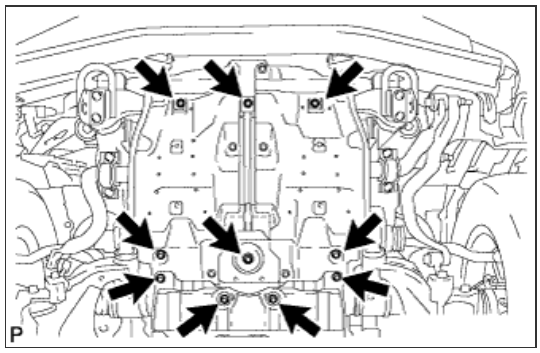


for Preparation Click here

1. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and 2 screws.

b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



2. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

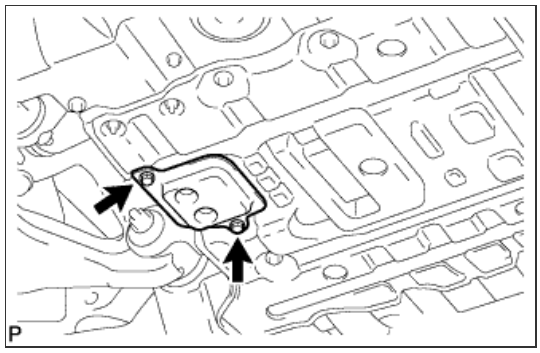
HINT:

Use the same procedures described for the LH side.

3. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and No. 1 engine under cover.

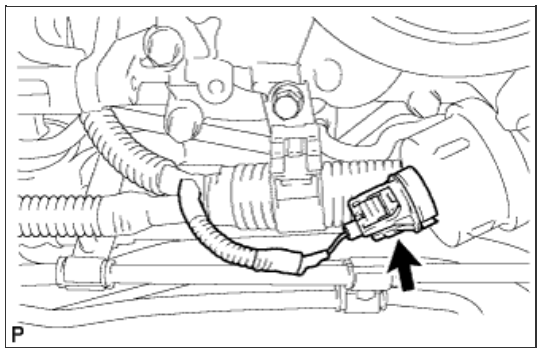
4. DRAIN ENGINE OIL



a. Remove the oil filler cap.

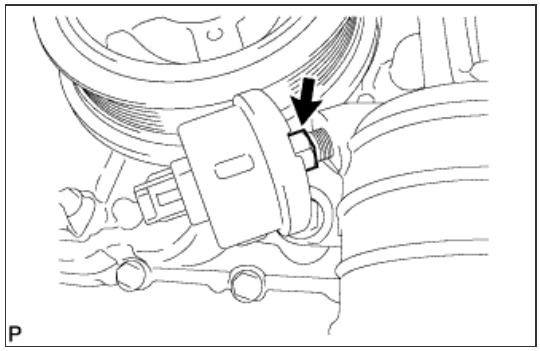
b. Remove the 2 bolts and No. 2 engine under cover seal.

c. Remove the oil pan drain plug and gasket, and drain the engine oil into a container.



d. Install a new gasket and the oil pan drain plug.

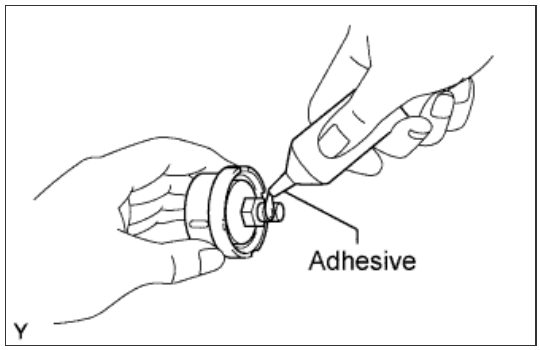
Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }



5. REMOVE OIL PRESSURE SENDER GAUGE ASSEMBLY

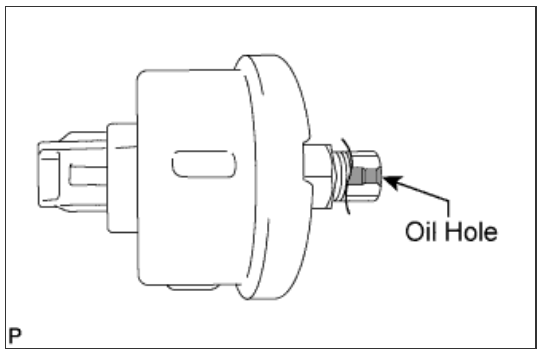
a. Disconnect the sender gauge connector.

b. Remove the oil pressure sender gauge.



for Preparation Click here

1. INSTALL OIL PRESSURE SENDER GAUGE ASSEMBLY

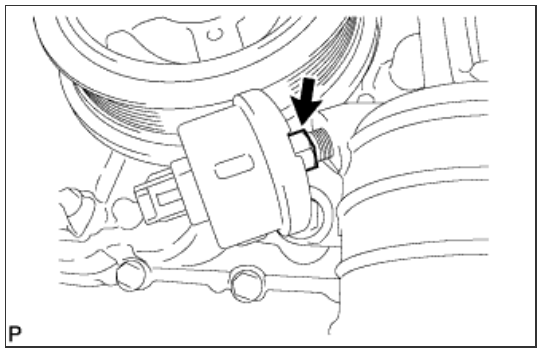


a. Apply adhesive to 2 or 3 threads of the oil pressure sender gauge.

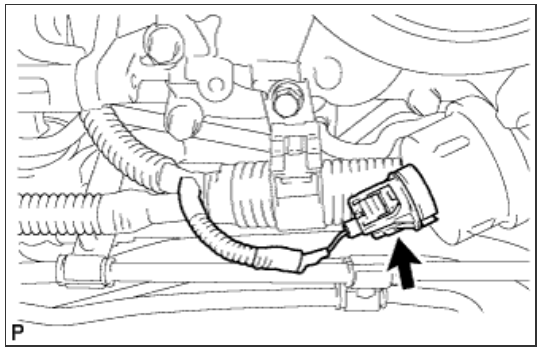
Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

NOTICE:

Do not allow adhesive to contact the oil hole.



b. Install the oil pressure sender gauge.



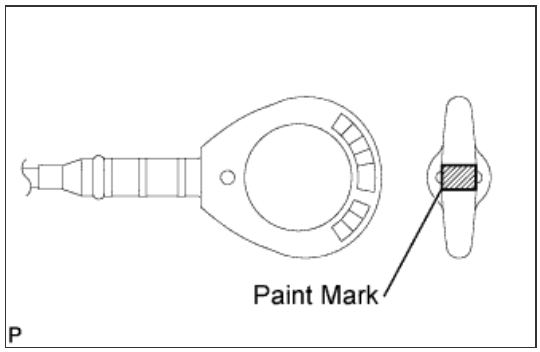
Torque:
15 N*m{ 153 kgf*cm , 11 ft.*lbf }

NOTICE:

Do not start the engine within 1 hour after installation.

c. Connect the sender gauge connector.

2. ADD ENGINE OIL



a. Add fresh oil and install the oil filler cap.

Standard Oil Grade:

Oil Grade	Oil Viscosity (SAE)
API grade SL "Energy-Conserving", SM "Energy-Conserving" or ILSAC multigrade engine oil API grade SL or SM multigrade engine oil	0W-20 5W-20 5W-30 10W-30 15W-40 20W-50

Standard Oil Capacity:

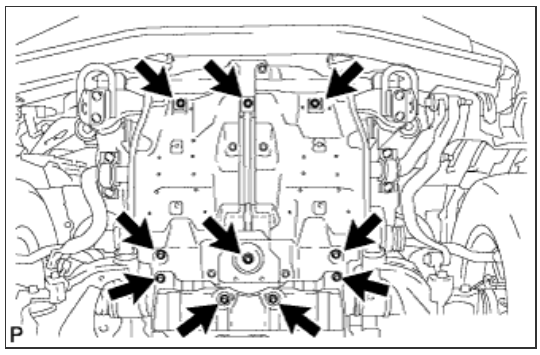
Paint Mark	Item	Specified Condition
Blue	Drain and refill with oil filter change	7.0 liters (7.4 US qts, 6.2 Imp. qts)
	Drain and refill without oil filter change	6.6 liters (7.0 US qts, 5.8 Imp. qts)
	Dry fill	8.4 liters (8.9 US qts, 7.4 Imp. qts)
Green	Drain and refill with oil filter change	7.5 liters (7.9 US qts, 6.6 Imp. qts)
	Drain and refill without oil filter change	7.1 liters (7.5 US qts, 6.2 Imp. qts)
	Dry fill	9.3 liters (9.8 US qts, 8.2 Imp. qts)

3. INSPECT FOR OIL LEAK

a. Start the engine. Make sure that there are no oil leaks from the area that was worked on.

4. INSPECT ENGINE OIL LEVEL

a. Warm up the engine, stop the engine and wait 5 minutes. The oil level should be between the dipstick low level mark and full level mark. If low, check for leakage and add oil up to the full level mark.

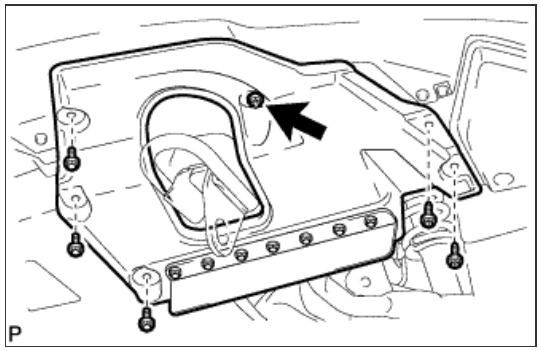


NOTICE:

Do not fill engine oil above the full level mark.

5. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.

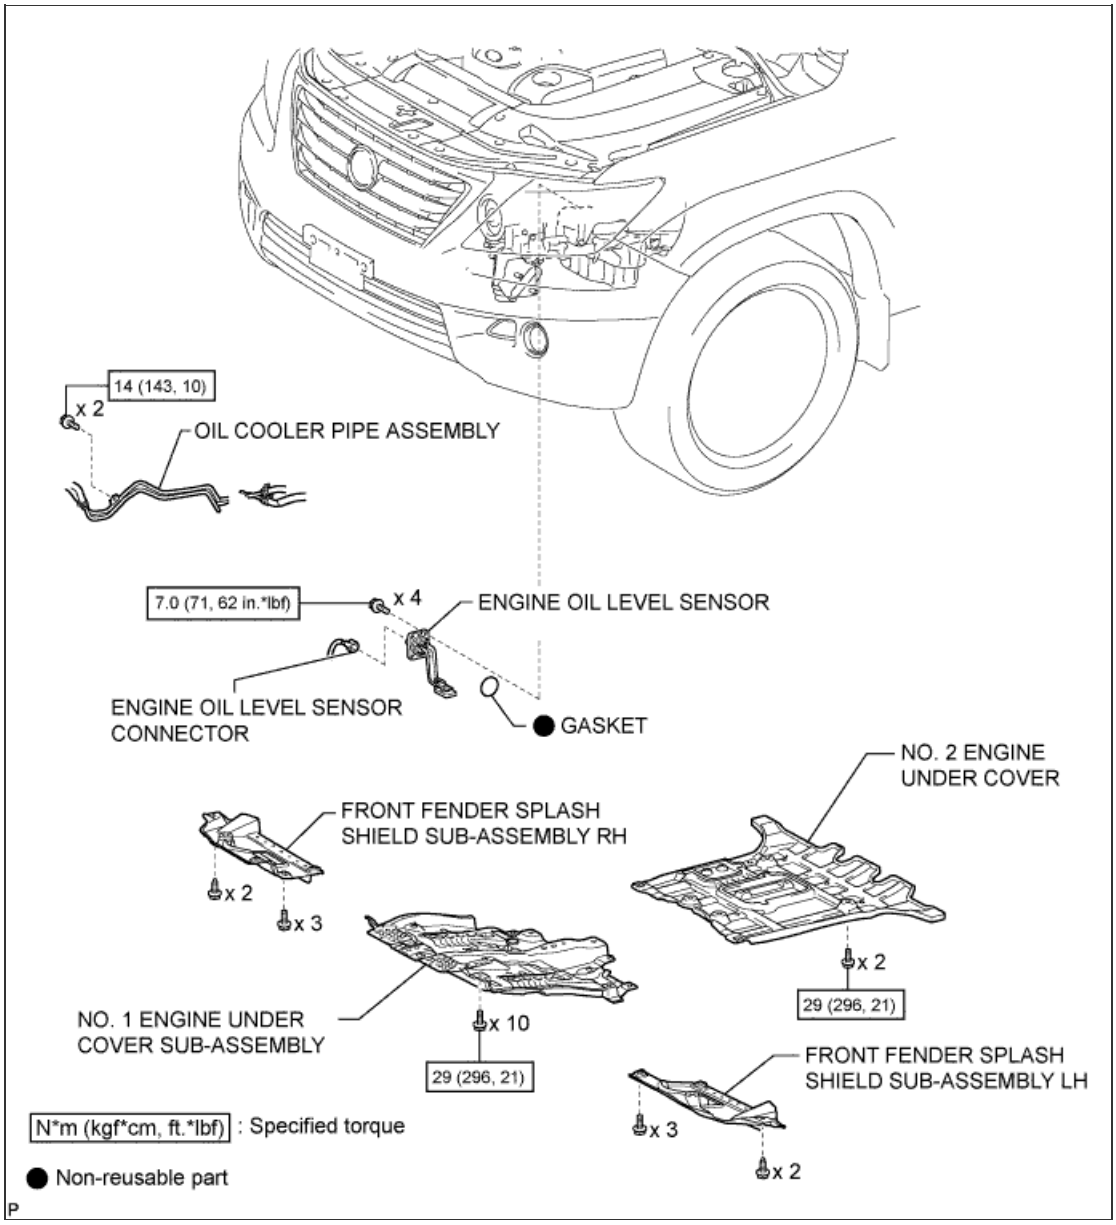


Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

6. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the 3 bolts and 2 screws.

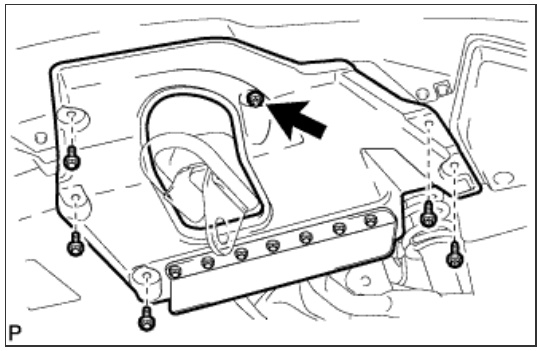


7. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

for Preparation Click here

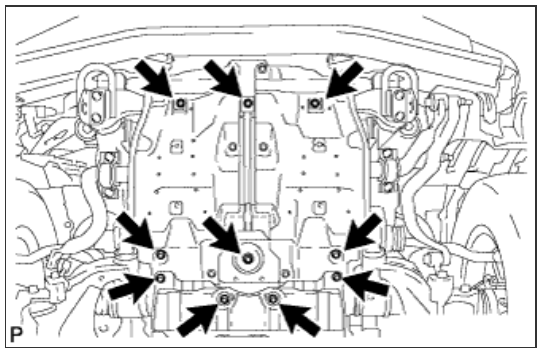


for Preparation Click here

1. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and 2 screws.

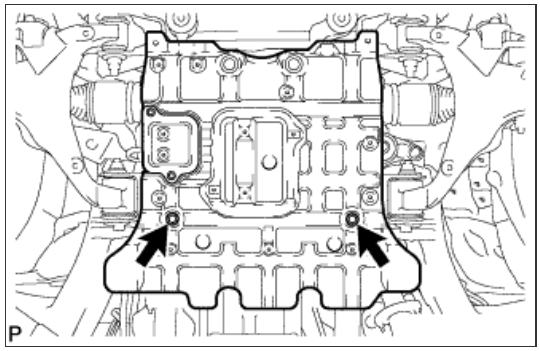
b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



2. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.



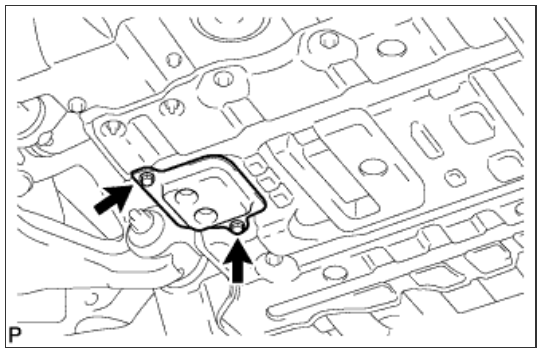
3. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and No. 1 engine under cover.

4. REMOVE NO. 2 ENGINE UNDER COVER

a. Remove the 2 bolts and No. 2 engine under cover.

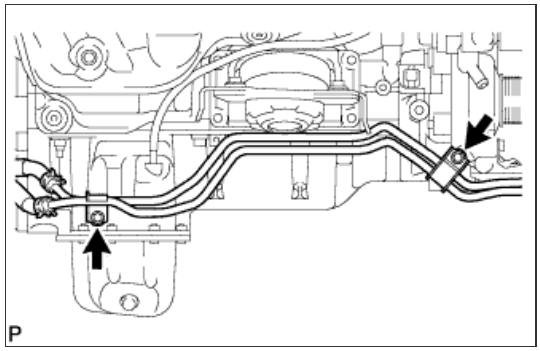
5. DRAIN ENGINE OIL



a. Remove the oil filler cap.

b. Remove the 2 bolts and No. 2 engine under cover seal.

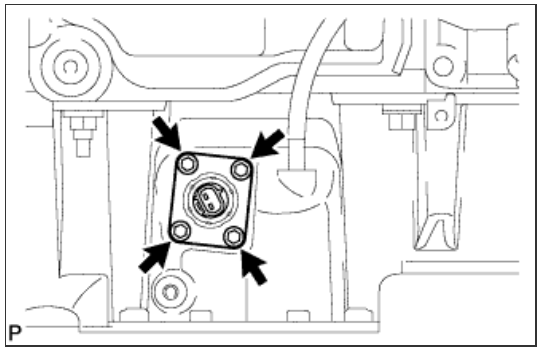
c. Remove the oil pan drain plug and gasket, and drain the engine oil into a container.



d. Install a new gasket and the oil pan drain plug.

Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

6. DISCONNECT OIL COOLER PIPE ASSEMBLY

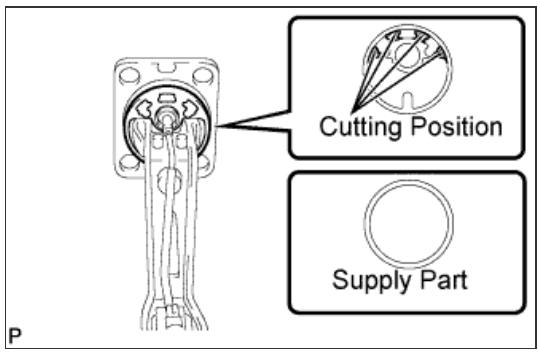


a. Remove the 2 bolts and disconnect the oil cooler pipe.

7. REMOVE ENGINE OIL LEVEL SENSOR

a. Disconnect the oil level sensor connector.

b. Remove the 4 bolts and oil level sensor.



c. Cut off the gasket as shown in the illustration.

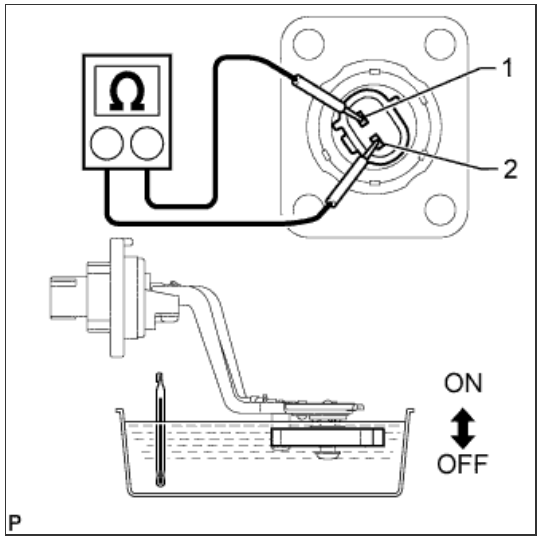
d. Remove the gasket from the oil level sensor.

HINT:

After cutting away the parts of the gasket shown in the illustration, remove only the outer part of the gasket.

for Preparation Click here

1. INSPECT ENGINE OIL LEVEL SENSOR



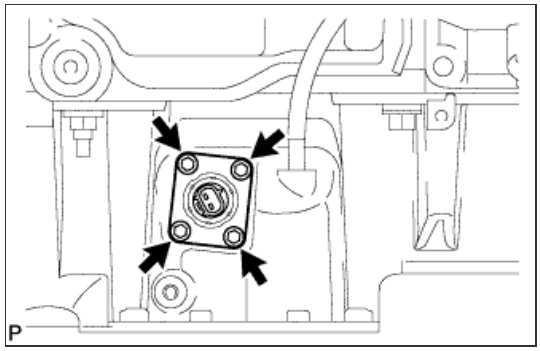
a. Partially immerse the sensor in an oil bath and warm up the oil bath.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	ON, 20°C (68°F)	Below 1 Ω
	OFF, 20°C (68°F)	
	ON, 60°C (140°F)	
	OFF, 60°C (140°F)	10 kΩ or higher

If the result is not as specified, replace the sensor.

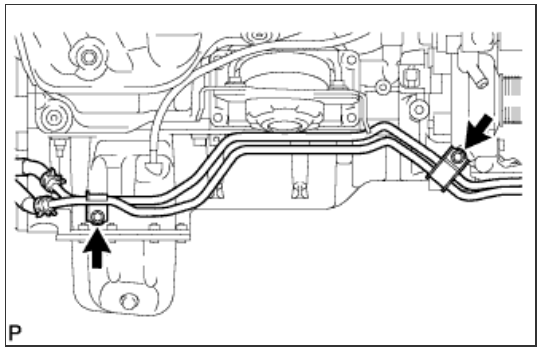


for Preparation Click here

1. INSTALL ENGINE OIL LEVEL SENSOR

a. Install a new gasket and the oil level sensor with the 4 bolts.

Torque:
7.0 N*m{ 71 kgf*cm , 62 in.*lbf }



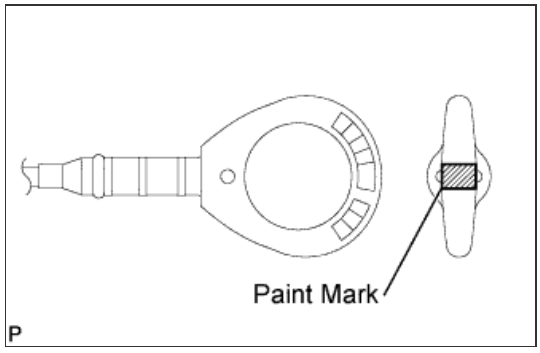
b. Connect the oil level sensor connector.

2. CONNECT OIL COOLER PIPE ASSEMBLY

a. Connect the oil cooler pipe with the 2 bolts.

Torque:
14 N*m{ 143 kgf*cm , 10 ft.*lbf }

3. ADD ENGINE OIL



a. Add fresh oil and install the oil filler cap.

Standard Oil Grade:

Oil Grade	Oil Viscosity (SAE)
API grade SL "Energy-Conserving", SM "Energy-Conserving" or ILSAC multigrade engine oil API grade SL or SM multigrade engine oil	0W-20 5W-20 5W-30 10W-30 15W-40 20W-50

Standard Oil Capacity:

Paint Mark	Item	Specified Condition
Blue	Drain and refill with oil filter change	7.0 liters (7.4 US qts, 6.2 Imp. qts)
	Drain and refill without oil filter change	6.6 liters (7.0 US qts, 5.8 Imp. qts)
	Dry fill	8.4 liters (8.9 US qts, 7.4 Imp. qts)
	Drain and refill	

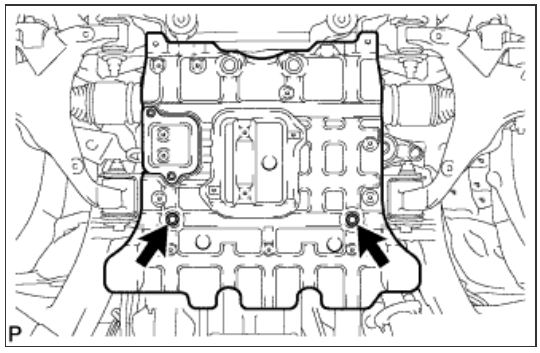
Green	with oil filter change	7.5 liters (7.9 US qts, 6.6 Imp. qts)
	Drain and refill without oil filter change	7.1 liters (7.5 US qts, 6.2 Imp. qts)
	Dry fill	9.3 liters (9.8 US qts, 8.2 Imp. qts)

4. INSPECT FOR OIL LEAK

a. Start the engine. Make sure that there are no oil leaks from the area that was worked on.

5. INSPECT ENGINE OIL LEVEL

a. Warm up the engine, stop the engine and wait 5 minutes. The oil level should be between the dipstick low level mark and full level mark. If low, check for leakage and add oil up to the full level mark.

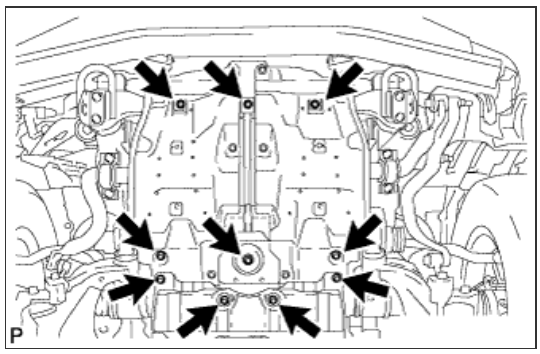


NOTICE:

Do not fill engine oil above the full level mark.

6. INSTALL NO. 2 ENGINE UNDER COVER

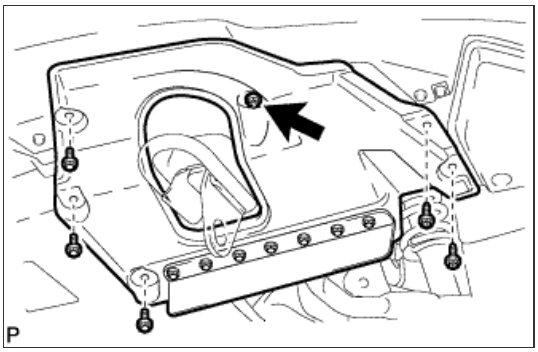
a. Install the No. 2 engine under cover with the 2 bolts.



Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

7. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.

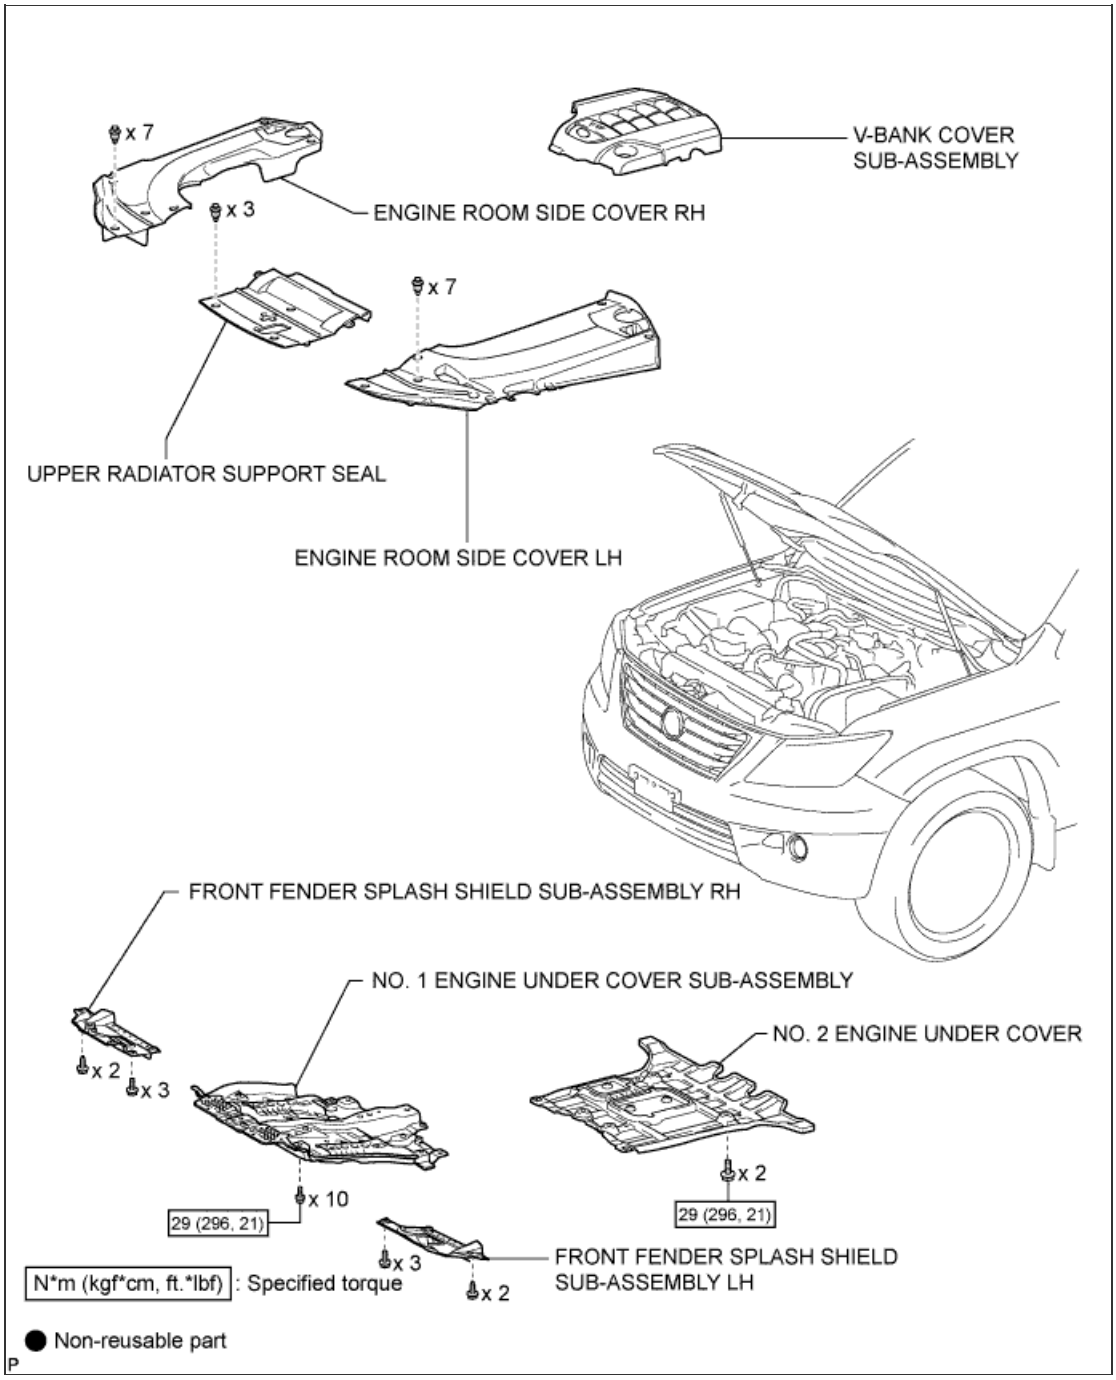


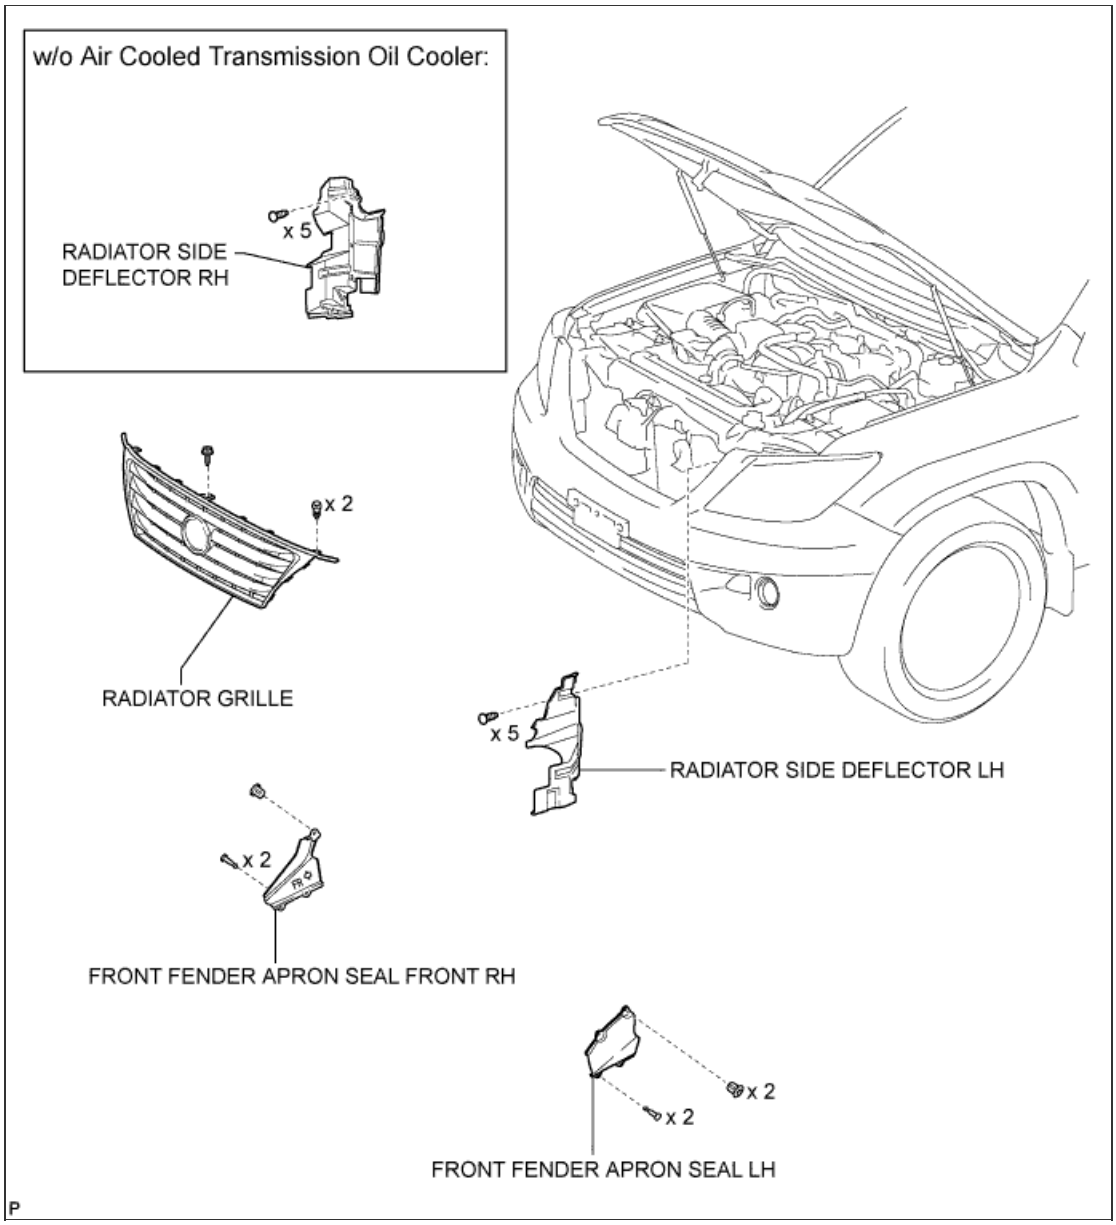
Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

8. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

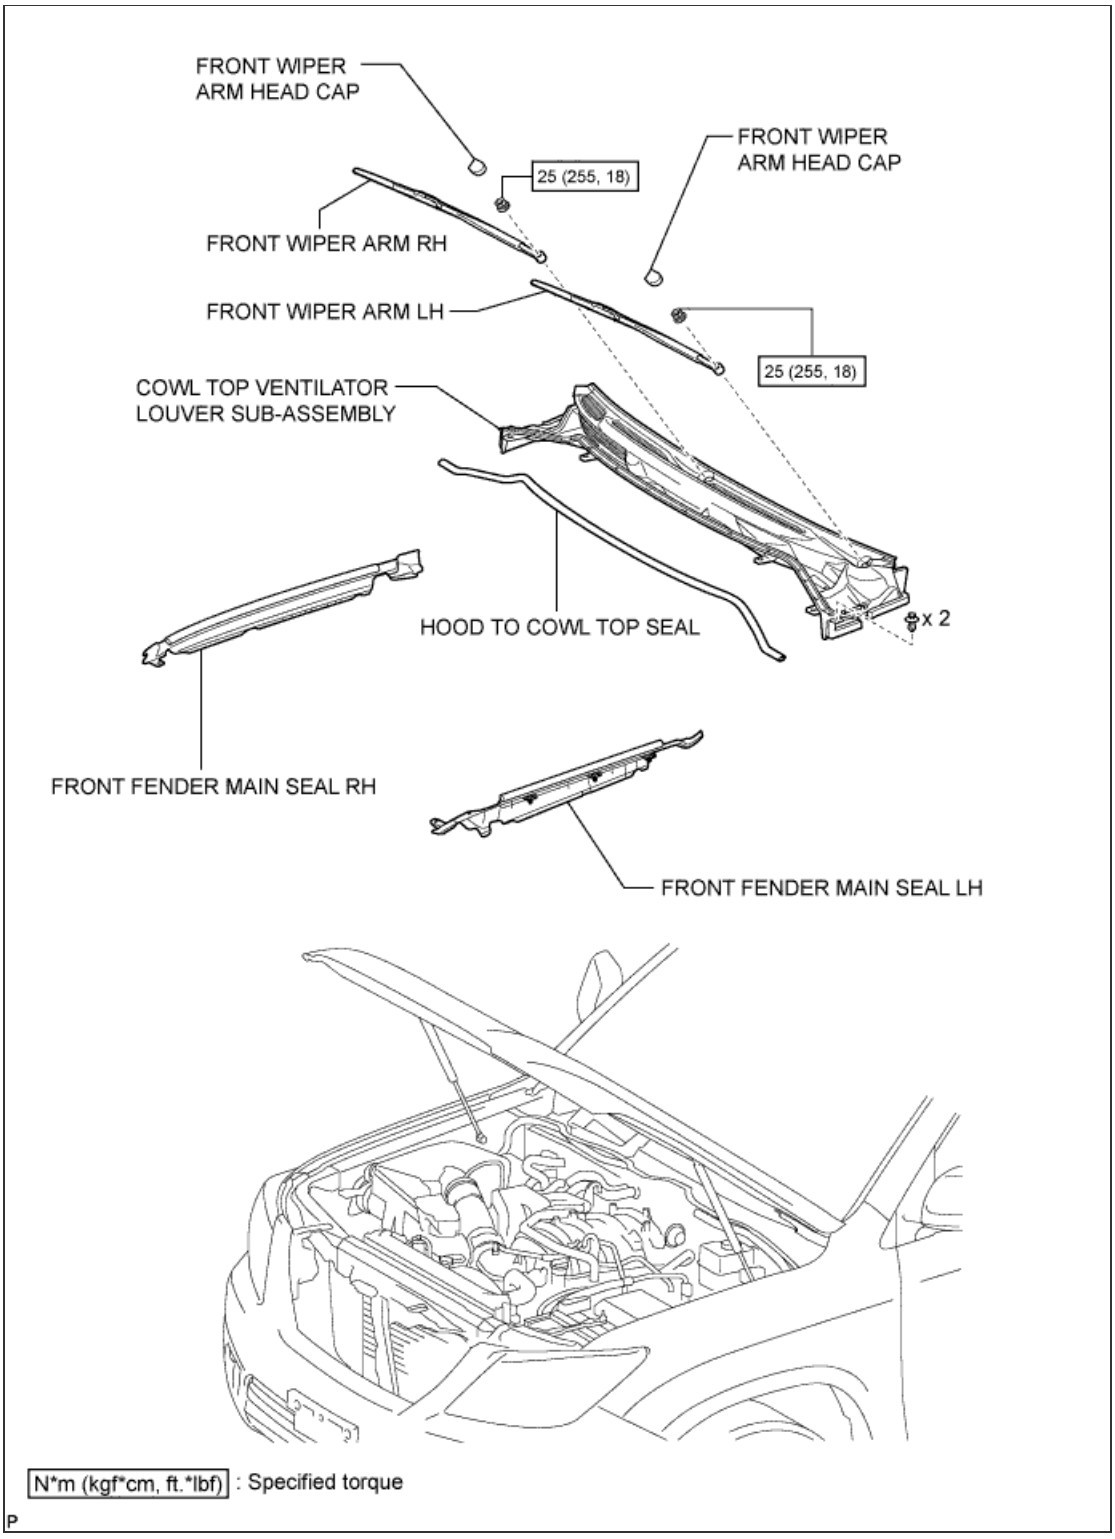
a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the 3 bolts and 2 screws.

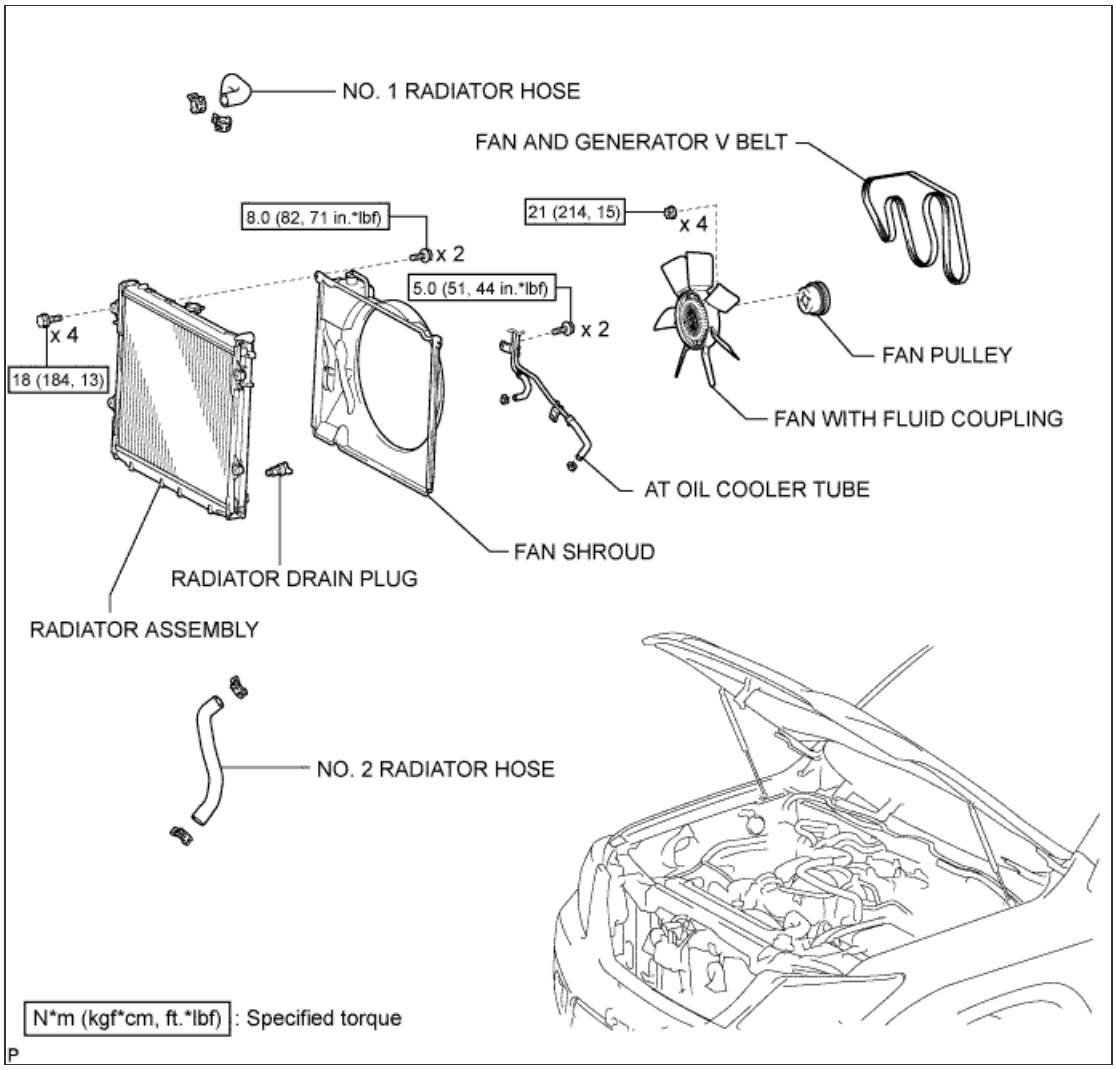




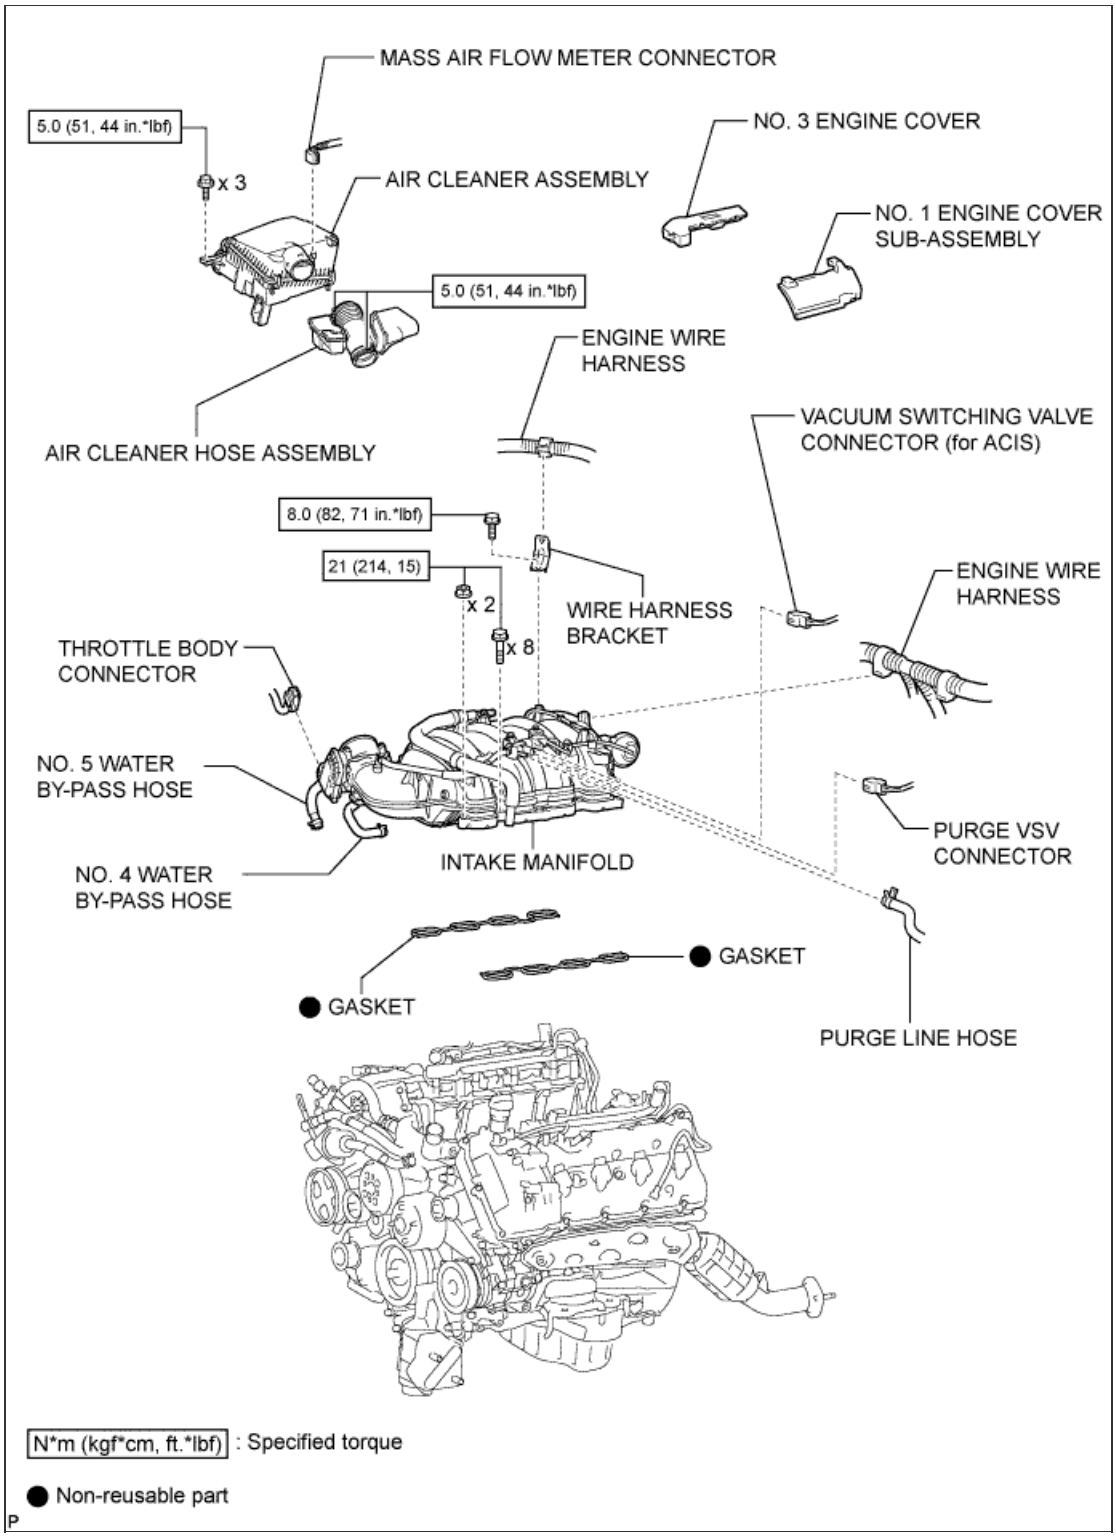
9. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH



HINT:



Use the same procedures described for the LH side.



for Preparation Click here

1. REMOVE ENGINE ROOM SIDE COVER LH

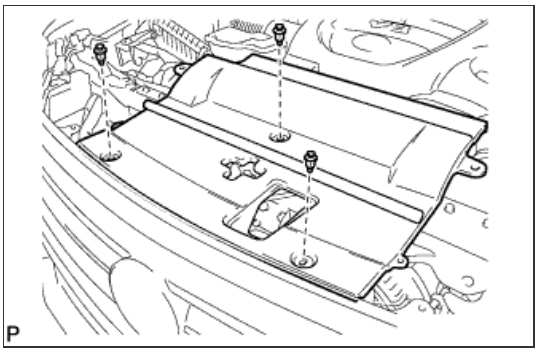
a. Remove the 7 clips and engine room side cover.

2. REMOVE ENGINE ROOM SIDE COVER RH

a. Remove the 7 clips and engine room side cover.

3. DISCHARGE FUEL SYSTEM PRESSURE

a. Discharge the fuel system pressure (Click here).



4. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

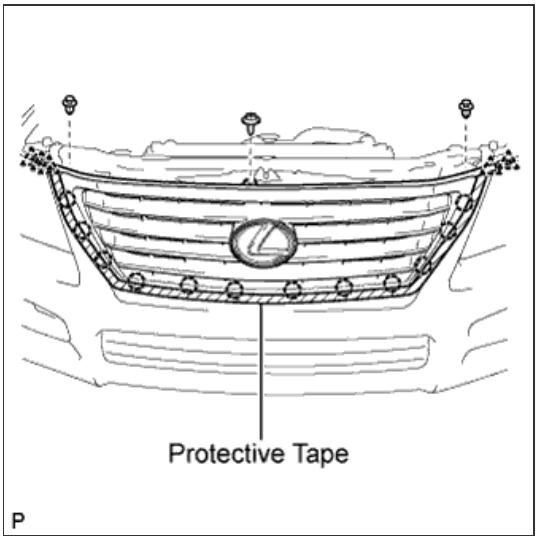
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

5. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 3 clips and upper radiator support seal.

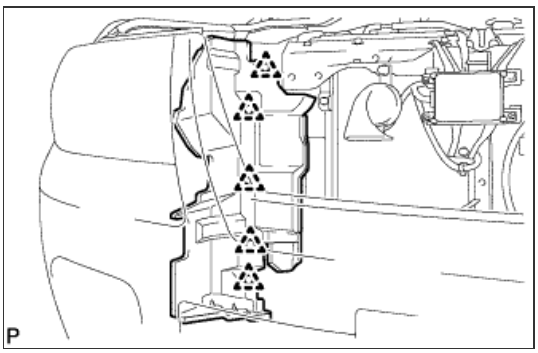
6. REMOVE RADIATOR GRILLE



a. Put protective tape around the radiator grille.

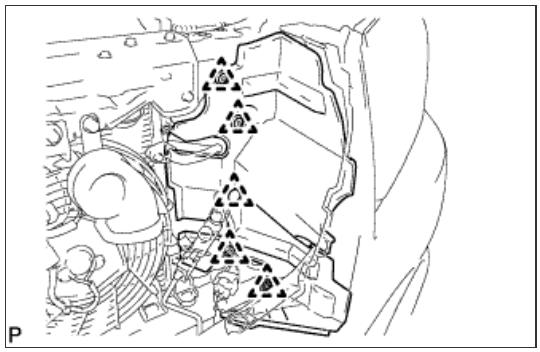
b. Remove the screw and 2 clips.

c. Detach the 5 clips and partially remove the upper radiator seal.



d. w/o Wide View Front Monitor System:
Detach the 12 claws and remove the radiator grille.

e. w/ Wide View Front Monitor System:
Detach the 12 claws, disconnect the connector and remove the radiator grille.

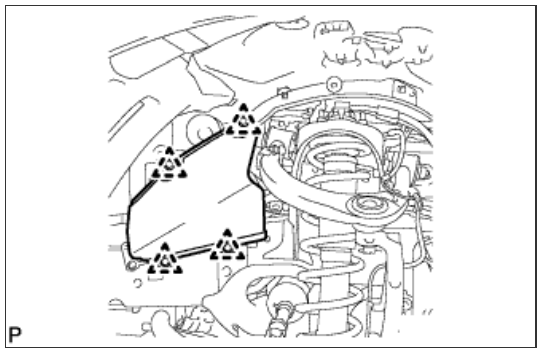


7. DISCONNECT RADIATOR SIDE DEFLECTOR RH (w/o Air Cooled Transmission Oil Cooler)

a. Using a clip remover, remove the 5 clips and side deflector.

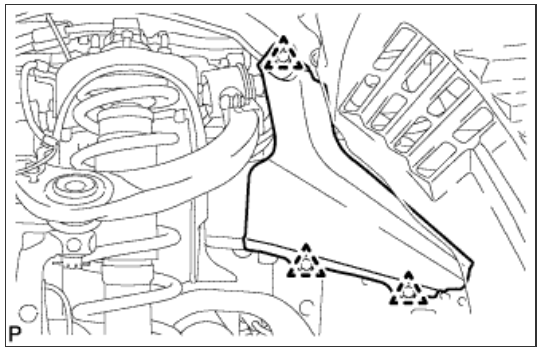
8. DISCONNECT RADIATOR SIDE DEFLECTOR LH

a. Using a clip remover, remove the 5 clips and side deflector.



9. REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

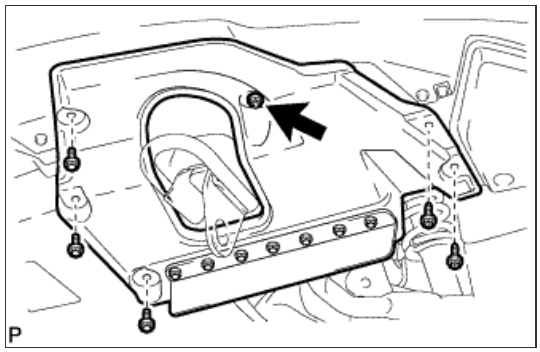
a. Remove the cowl top ventilator louver (Click here).



10. REMOVE FRONT FENDER APRON SEAL LH

a. Using a clip remover, remove the 4 clips and fender apron seal.

11. REMOVE FRONT FENDER APRON SEAL FRONT RH

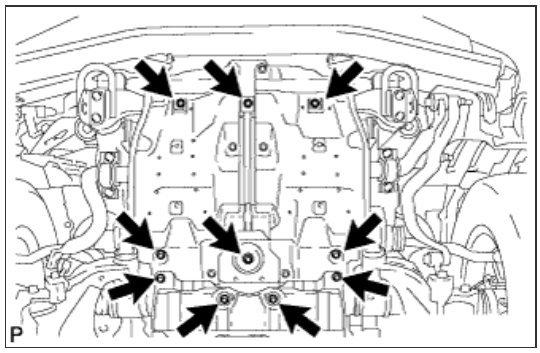


a. Using a clip remover, remove the 3 clips and fender apron seal.

12. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and 2 screws.

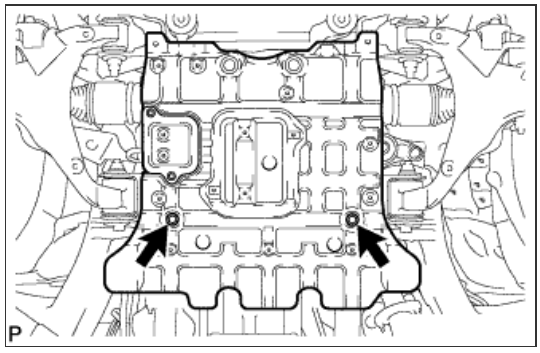
b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



13. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.



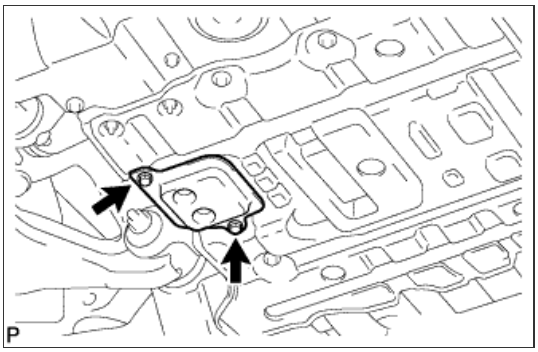
14. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and No. 1 engine under cover.

15. REMOVE NO. 2 ENGINE UNDER COVER

a. Remove the 2 bolts and No. 2 engine under cover.

16. DRAIN ENGINE OIL

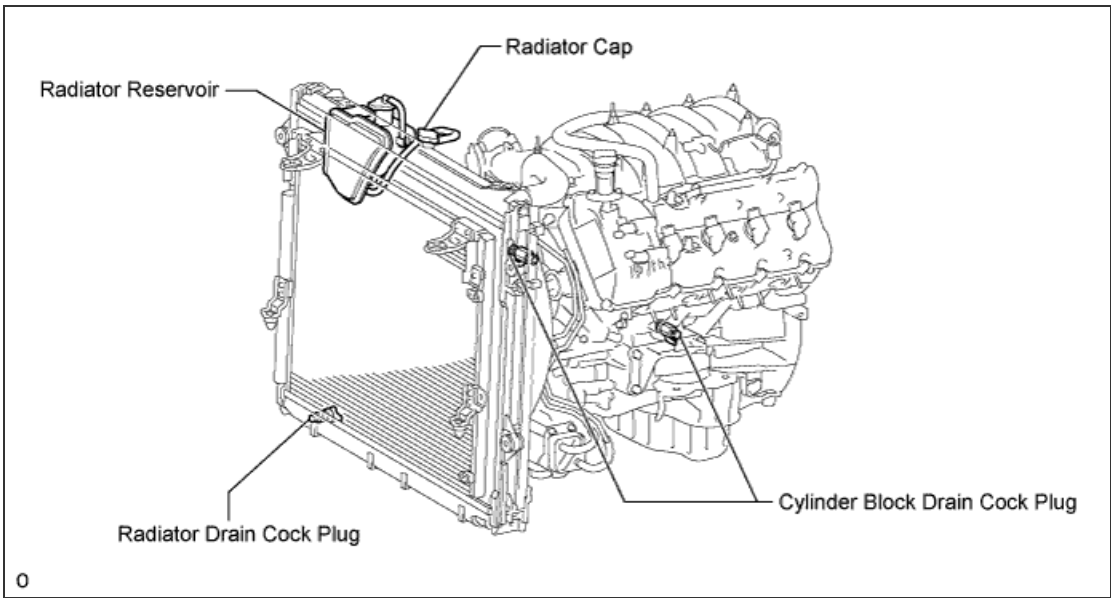


a. Remove the oil filler cap.

b. Remove the 2 bolts and No. 2 engine under cover seal.

c. Remove the oil pan drain plug and gasket, and drain the engine oil into a container.

d. Install a new gasket and the oil pan drain plug.



Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

17. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

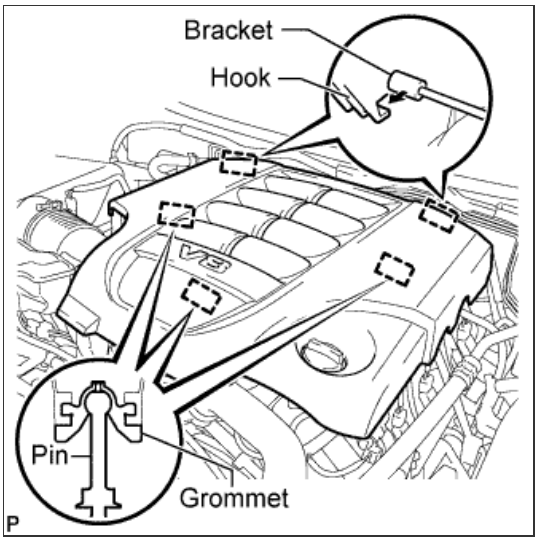
a. Loosen the radiator drain cock plug.

HINT:

Collect the coolant in a container and dispose of it according to the regulations in your area.

b. Remove the radiator cap. Then drain the coolant from the radiator.

c. Loosen the 2 cylinder block drain cock plugs. Then drain the coolant from the engine.



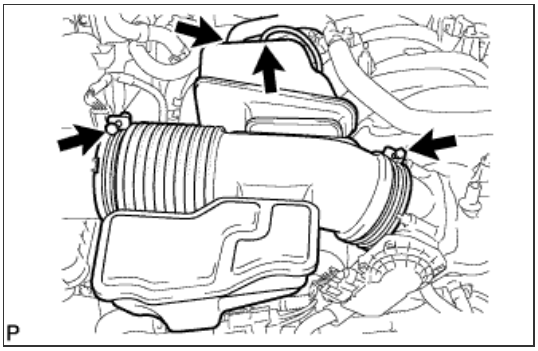
d. Tighten the 2 cylinder block drain cock plugs.

Torque:
13 N*m{ 130 kgf*cm , 10 ft.*lbf }

e. Tighten the radiator drain cock plug by hand.

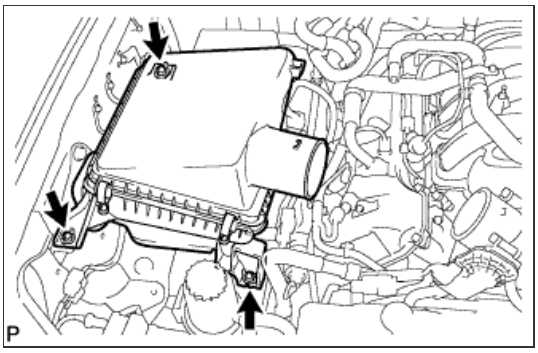
18. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.



19. REMOVE AIR CLEANER HOSE ASSEMBLY

a. Disconnect the vacuum hose and No. 2 ventilation hose.



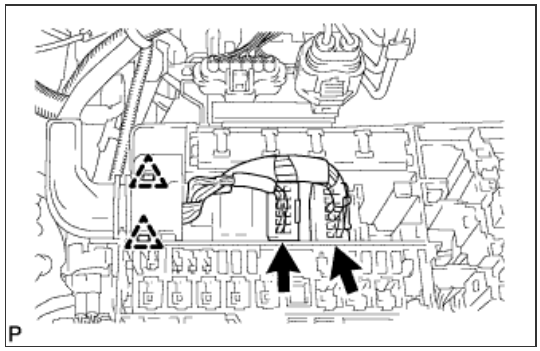
b. Loosen the 2 hose clamps.

c. Remove the air cleaner hose.

20. REMOVE AIR CLEANER ASSEMBLY

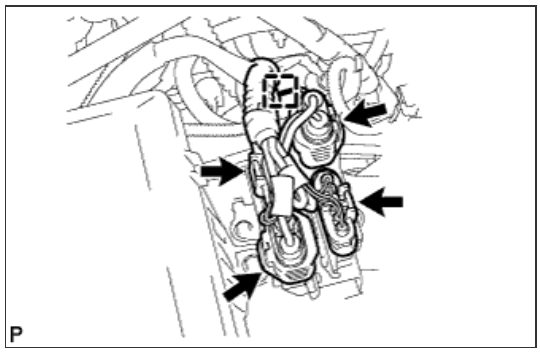
a. Remove the 3 bolts and air cleaner.

21. REMOVE RADIATOR ASSEMBLY



a. Remove the radiator (Click here).

22. DISCONNECT ENGINE WIRE



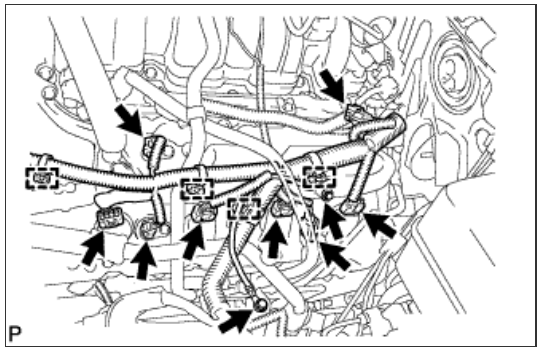
a. Engine Room LH Side:

i. Remove the engine room relay block cover.

ii. Disconnect the 2 connectors and 2 clips from the engine room junction block.

iii. Disconnect the 4 air injection control driver connectors and wire harness clamp.

iv. Disconnect the injector connector.



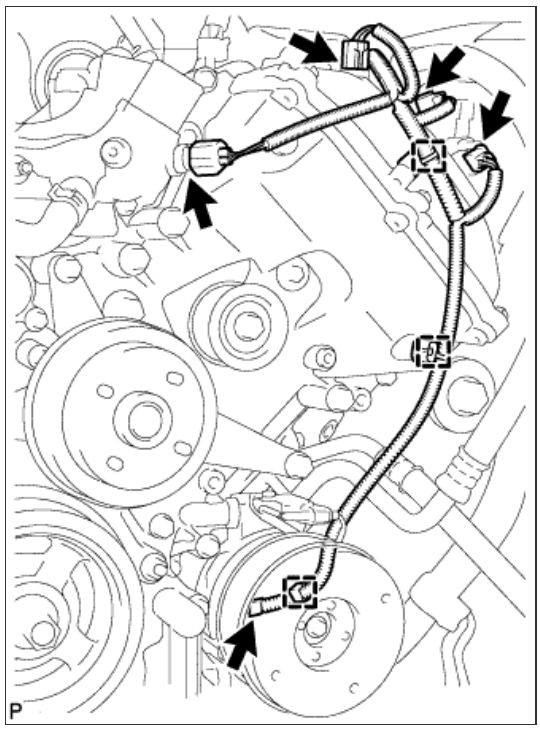
v. Disconnect the 4 ignition coil connectors.

vi. Disconnect the 2 VVT sensor connectors.

vii. Disconnect the 4 clamps.

viii. Remove the 2 bolts and ground wire.

ix. Disconnect the noise filter connector.



x. Disconnect the engine coolant temperature sensor connector.

xi. Disconnect the 2 camshaft timing oil control valve connectors.

xii. Disconnect the camshaft position sensor connector.

xiii. Disconnect the 3 clamps.

xiv. Disconnect the cooler compressor connector.

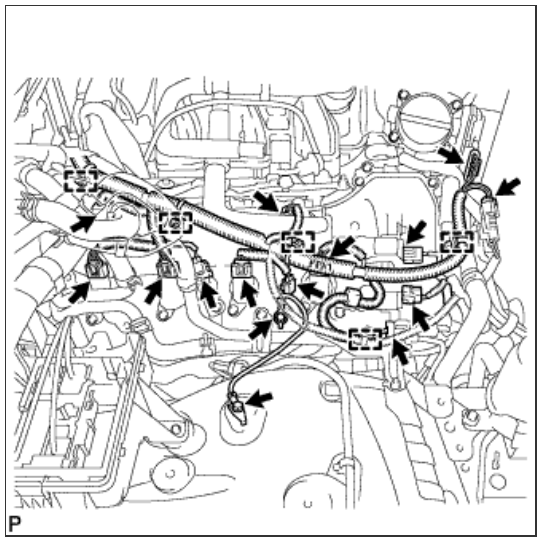
b. Engine Room RH Side:

i. Disconnect the 2 camshaft timing oil control valve connectors.

ii. Disconnect the 4 ignition coil connectors.

iii. Disconnect the injector connector.

iv. Disconnect the 2 VVT sensor connectors.

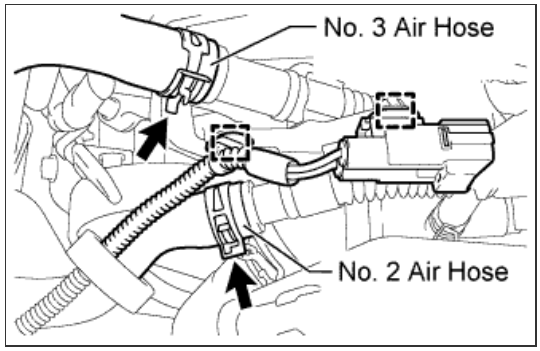


v. Disconnect the noise filter connector.

vi. Remove the 2 bolts and ground wire.

vii. Disconnect the 2 air pump connectors.

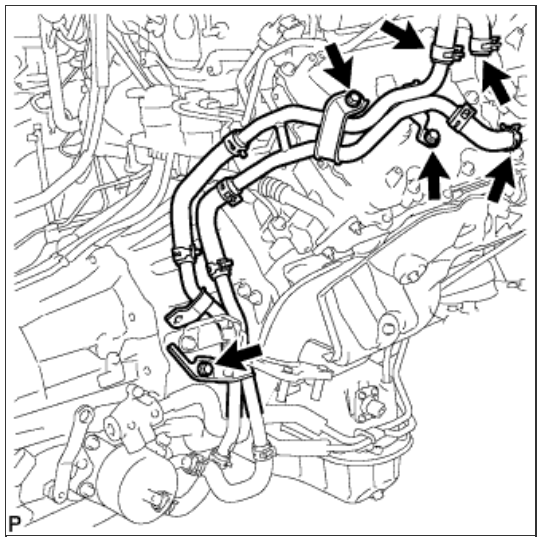
viii. Disconnect the throttle position sensor and throttle control motor connector.



ix. Disconnect the 5 clamps.

23. DISCONNECT AIR PUMP HOSE AND WIRE HARNESS

a. Disconnect the No. 2 and No. 3 air hoses.

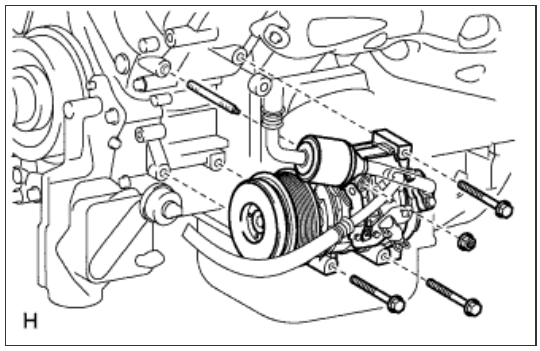


b. Disconnect the 2 clamps.

24. DISCONNECT NO. 2 WATER BY-PASS PIPE

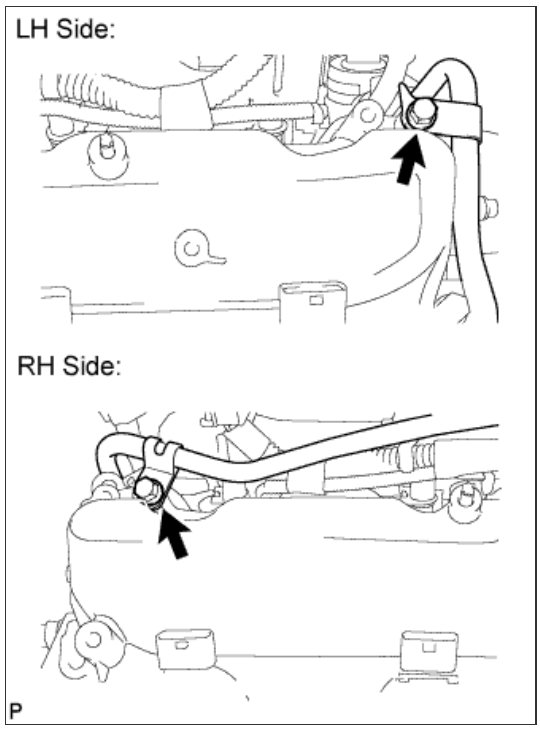
a. Disconnect the 3 hoses.

b. Remove the 3 bolts and disconnect the No. 2 water by-pass pipe from the cylinder head cover.



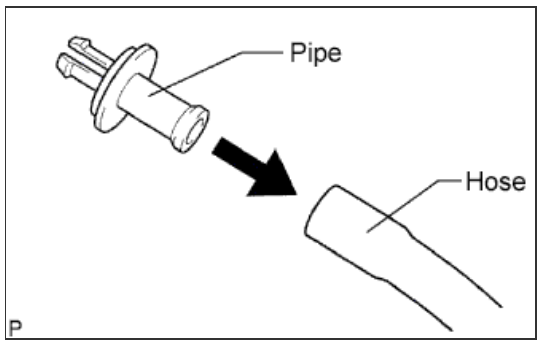
25. DISCONNECT COOLER COMPRESSOR ASSEMBLY

a. Remove the 3 bolts, nut and stud bolt, and disconnect the cooler compressor.



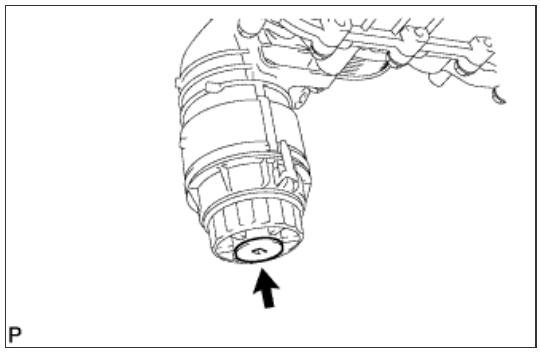
HINT:

It is not necessary to completely remove the compressor. With the hoses connected to the compressor, hang the compressor on the vehicle body with a rope.



26. DISCONNECT NO. 2 FUEL TUBE SUB-ASSEMBLY

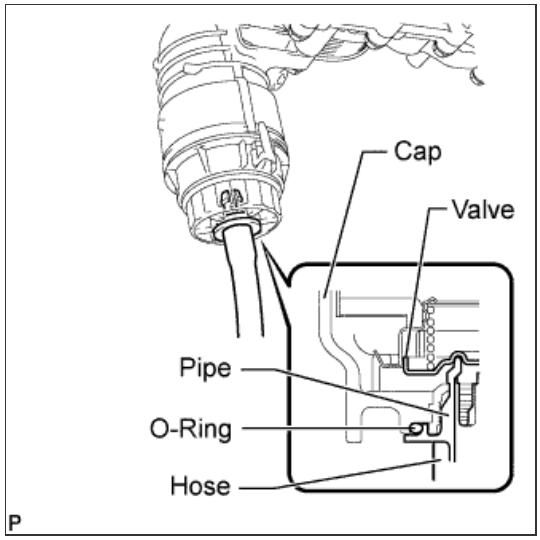
a. Remove the 2 bolts and disconnect the fuel tube.



27. REMOVE OIL FILTER ELEMENT

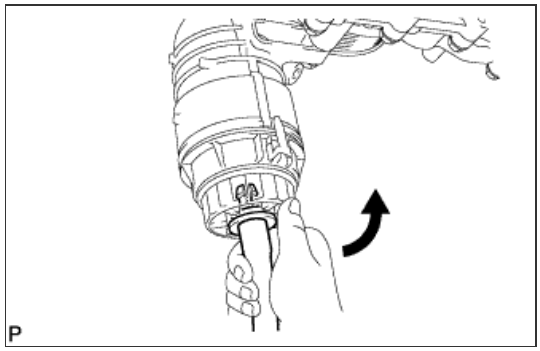
a. Connect a hose with an inside diameter of 15 mm (0.591 in.) to the pipe.

b. Remove the oil filter drain plug.



c. Install the pipe to the oil filter cap.

NOTICE:

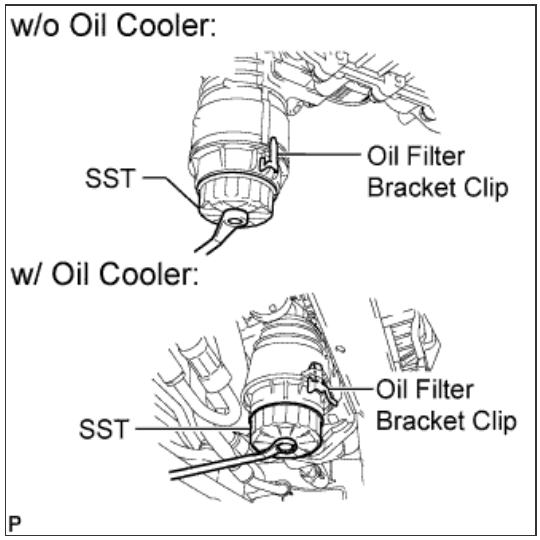


If the O-ring is removed with the drain plug, install the O-ring together with the pipe.

HINT:

Use a container to catch the draining oil.

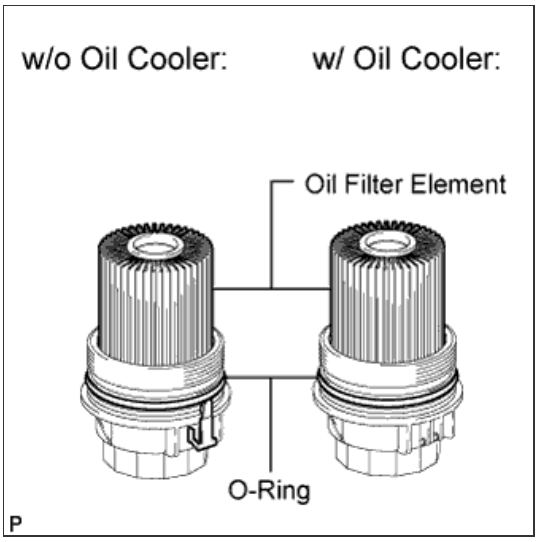
d. Check that oil is drained from the oil filter. Then disconnect the pipe and remove the O-ring as shown in the illustration.



e. Using SST, remove the oil filter cap.

SST
09228-06501

NOTICE:

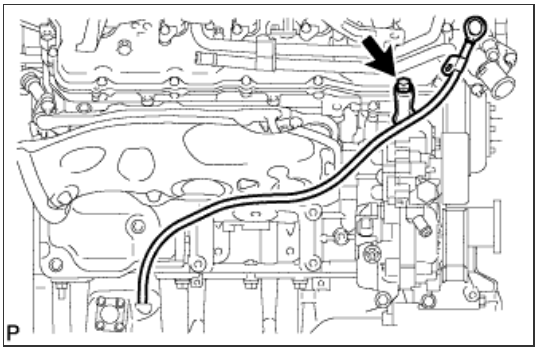


Do not remove the oil filter bracket clip.

f. Remove the oil filter element and O-ring from the oil filter cap.

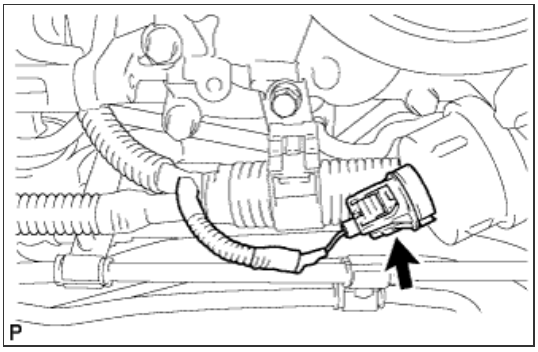
NOTICE:

Be sure to remove the cap O-ring by hand, without using any tools, to prevent damage to the cap O-ring groove.



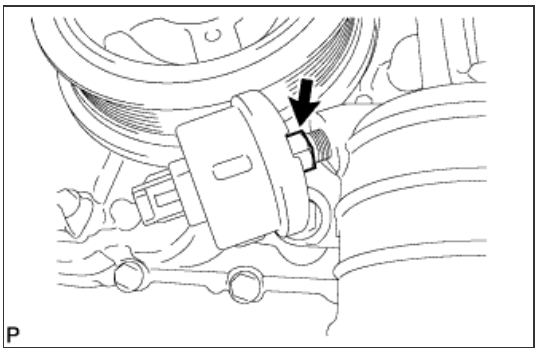
28. REMOVE ENGINE OIL LEVEL DIPSTICK GUIDE

a. Remove the dipstick.



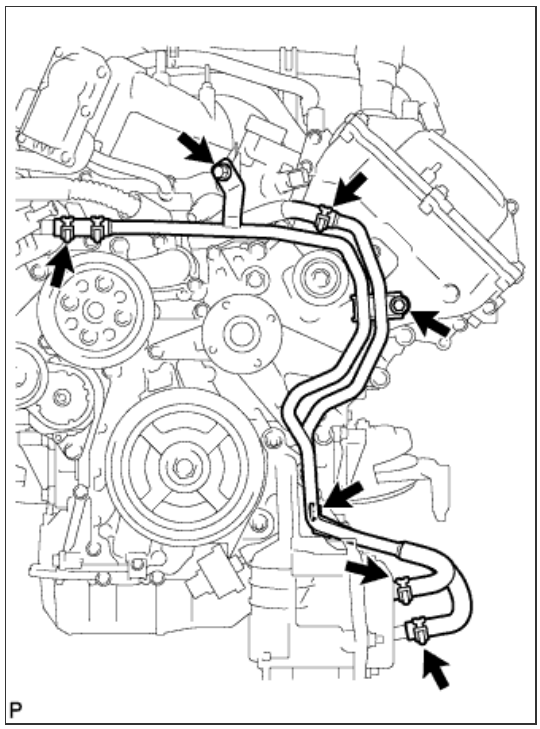
b. Remove the bolt and dipstick guide.

c. Remove the O-ring from the dipstick guide.



29. REMOVE OIL PRESSURE SENDER GAUGE ASSEMBLY

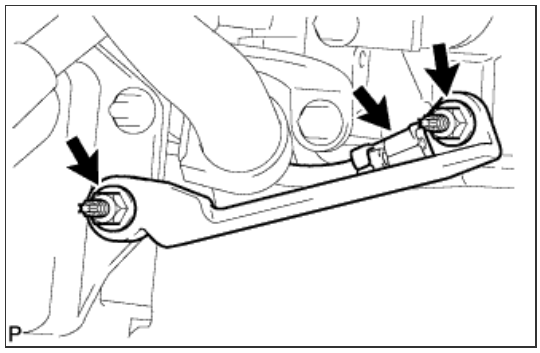
a. Disconnect the sender gauge connector.



b. Remove the oil pressure sender gauge.

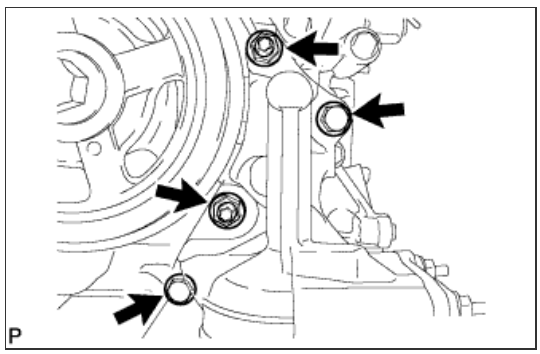
30. REMOVE NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY (w/ Oil Cooler)

a. Remove the 3 bolts.



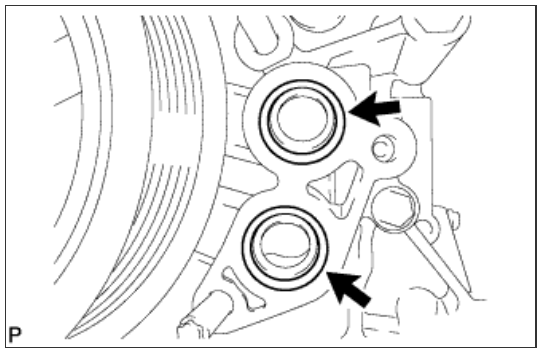
b. Disconnect the 4 hoses and remove the water by-pass pipe.

31. REMOVE NO. 1 OIL COOLER BRACKET (w/ Oil Cooler)



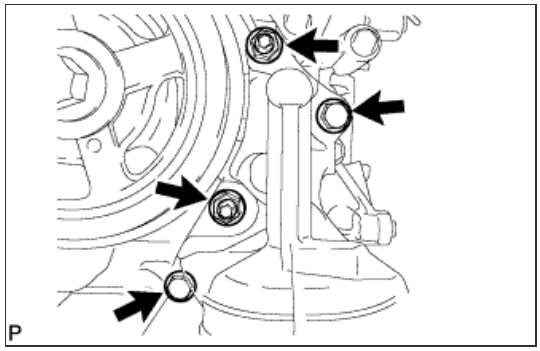
a. Remove the 2 nuts and bracket.

b. Disconnect the ground wire from the cylinder block.

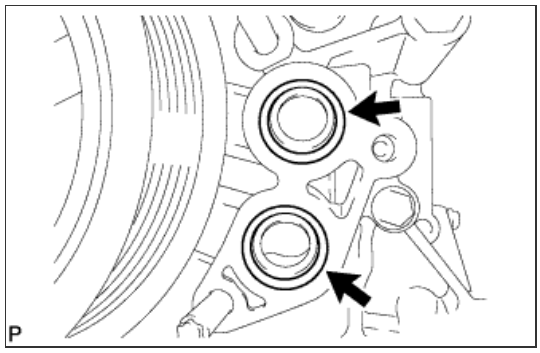


32. REMOVE OIL FILTER BRACKET (w/ Oil Cooler)

a. Remove the 2 bolts, 2 nuts and filter bracket.

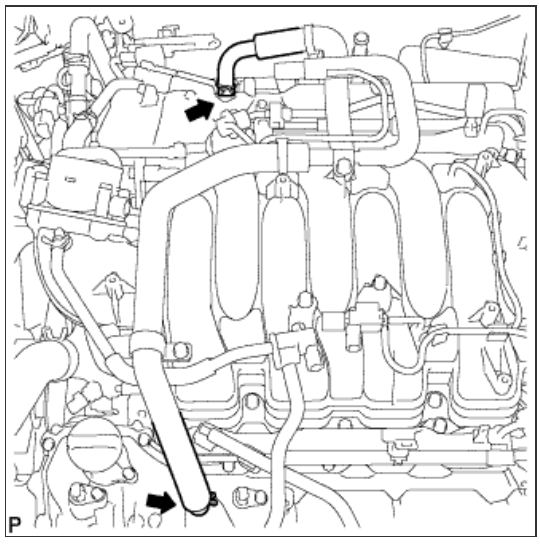


b. Remove the 2 O-rings.

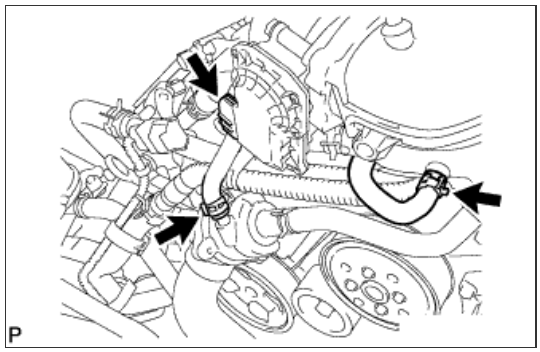


33. REMOVE OIL FILTER BRACKET (w/o Oil Cooler)

a. Remove the 2 bolts, 2 nuts and oil filter bracket.

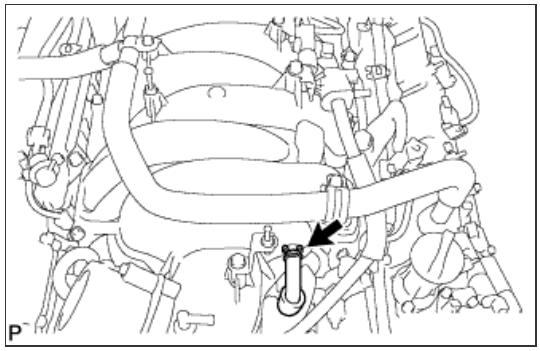


b. Remove the 2 O-rings.



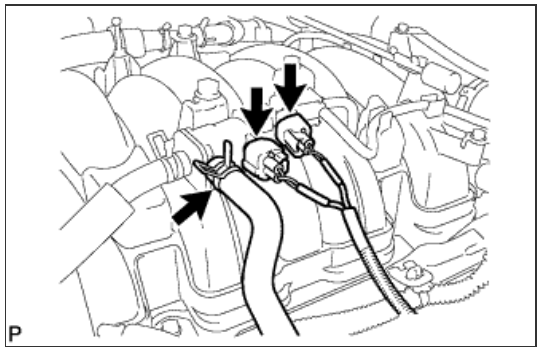
34. REMOVE INTAKE MANIFOLD

a. Disconnect the ventilation hose from the ventilation pipe of the cylinder head cover LH and RH.

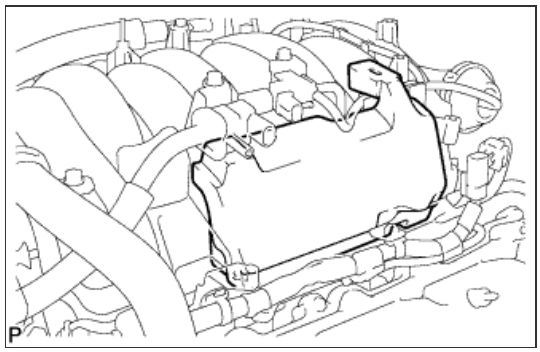


b. Disconnect the 2 water by-pass hoses.

c. Disconnect the throttle body connector.

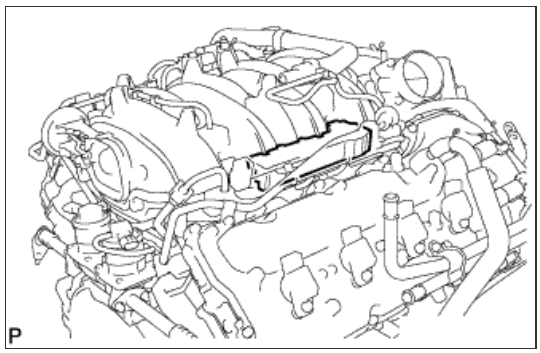


d. Disconnect the No. 1 ventilation hose.

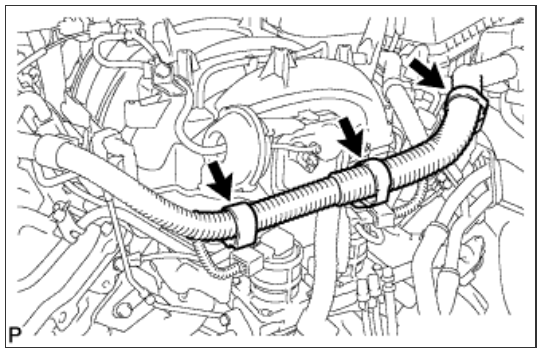


e. Disconnect the purge VSV connector.

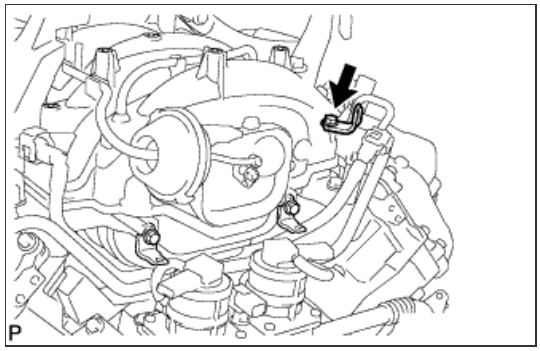
f. Disconnect the purge line hose from the purge VSV.



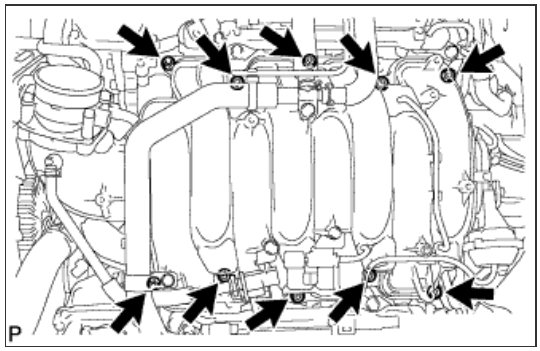
g. Disconnect the vacuum switching valve connector (for ACIS).



h. Remove the No. 1 engine cover sub-assembly.

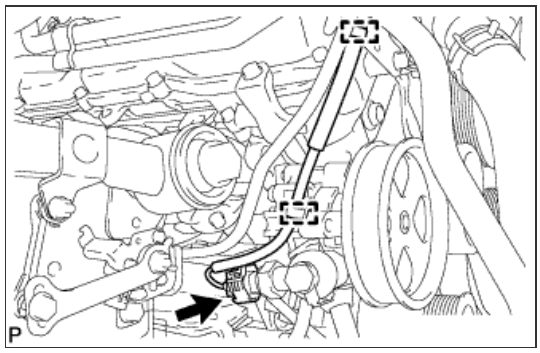


i. Remove the No. 3 engine cover.

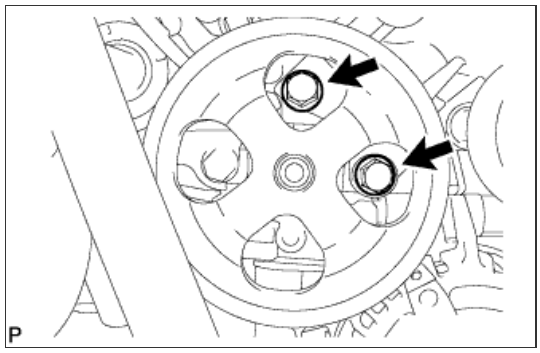


j. Disconnect the 3 wire clamps from the 3 wire brackets.

k. Remove the bolt and wire bracket from the intake manifold.

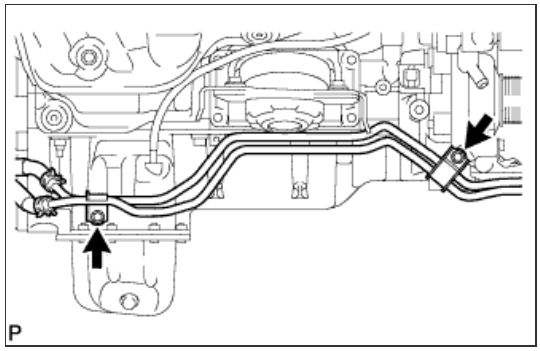


l. Remove the 2 nuts, 8 bolts, intake manifold and 2 gaskets.



35. DISCONNECT VANE PUMP ASSEMBLY

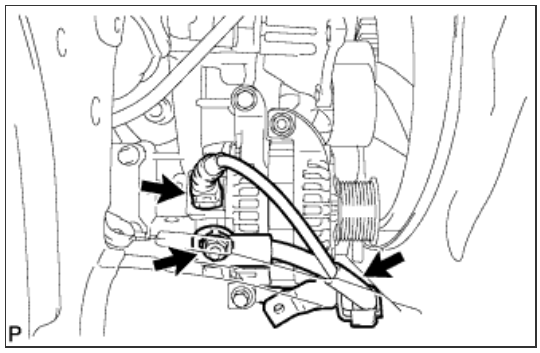
a. Disconnect the 2 clamps and power steering oil pressure switch connector.



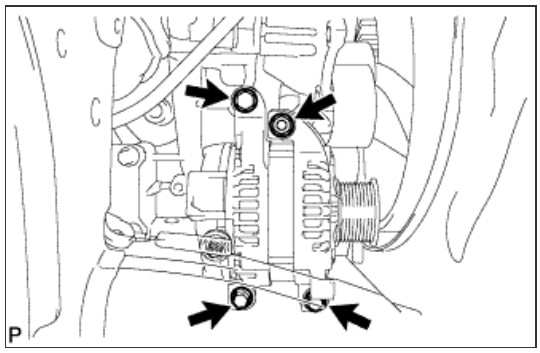
b. Remove the 2 bolts and disconnect the vane pump.

36. DISCONNECT OIL COOLER PIPE ASSEMBLY

a. Remove the 2 bolts and disconnect the oil cooler pipe.



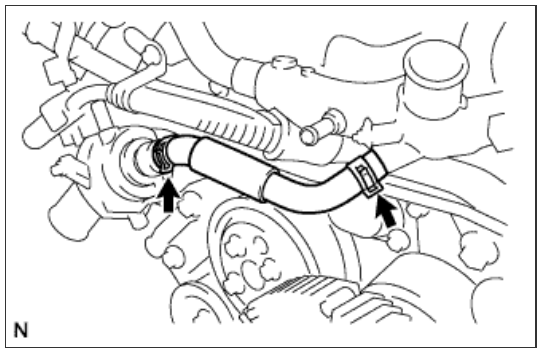
37. REMOVE GENERATOR ASSEMBLY



a. Disconnect the generator connector.

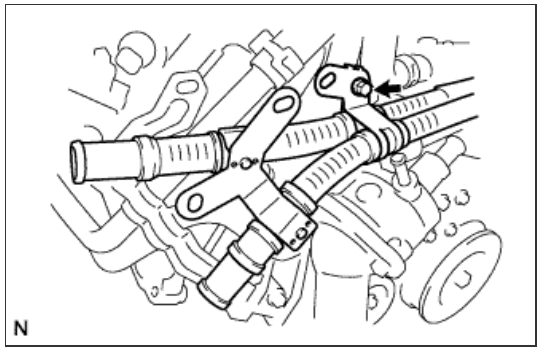
b. Remove the terminal cap and nut, and disconnect the generator wire.

c. Remove the bolt and wire harness bracket from the generator.

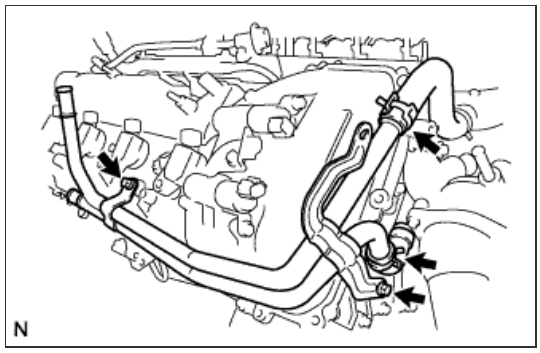


d. Remove the 3 bolts, nut and generator.

38. REMOVE NO. 1 WATER BY-PASS HOSE



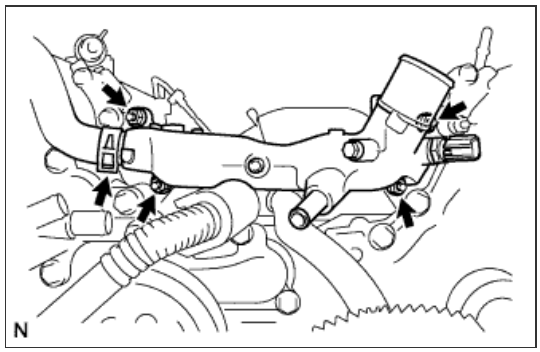
a. Remove the No. 1 water by-pass hose by disconnecting the hose from the water inlet housing and front water by-pass joint.



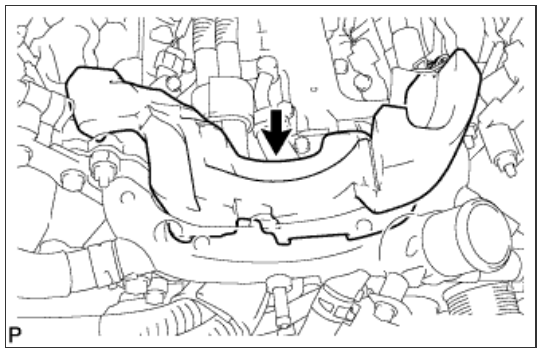
39. REMOVE WATER BY-PASS PIPE SUB-ASSEMBLY

a. Remove the bolt and disconnect the air tube.

b. Disconnect the 2 hoses.

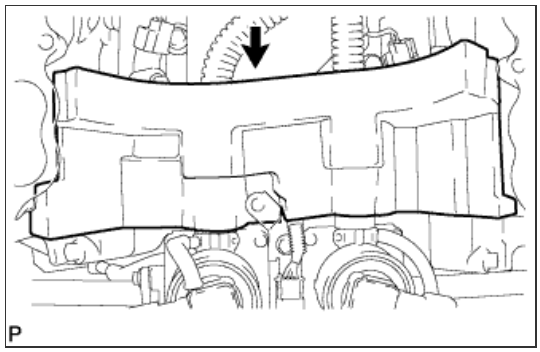


c. Remove the 2 bolts and water by-pass pipe.



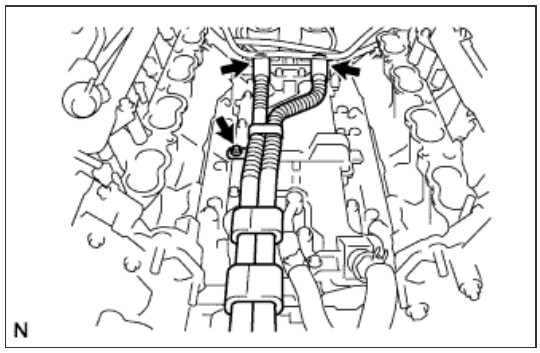
40. REMOVE FRONT WATER BY-PASS JOINT

a. Disconnect the No. 2 water by-pass hose from the water by-pass joint.

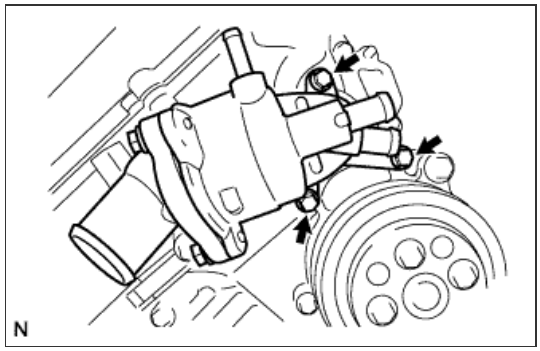


b. Remove the 4 nuts, water by-pass joint and 2 gaskets.

41. REMOVE NO. 2 ENGINE COVER



42. REMOVE NO. 1 ENGINE COVER

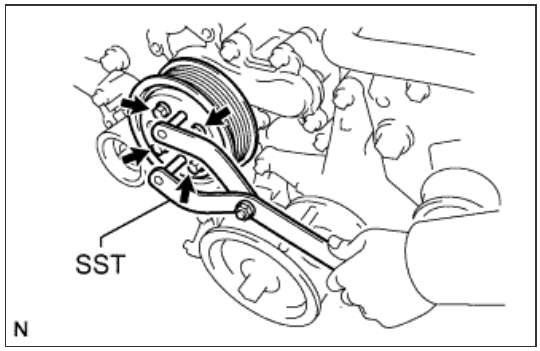


43. REMOVE AIR PIPE SUB-ASSEMBLY

a. Remove the bolt, disconnect the 2 hoses, and remove the air pipe.

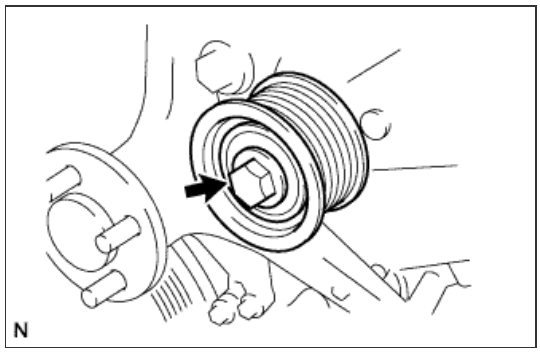
44. REMOVE WATER INLET HOUSING

a. Remove the 3 bolts, water inlet housing and gasket.



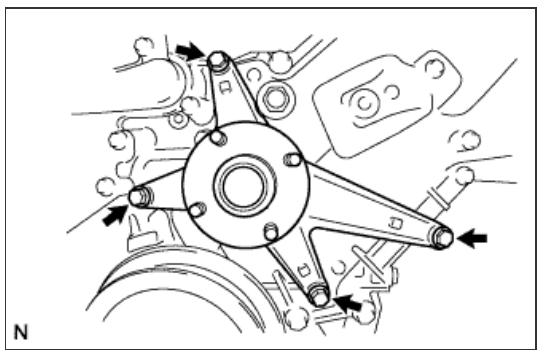
45. REMOVE WATER PUMP PULLEY

a. Using SST, hold the water pump pulley.



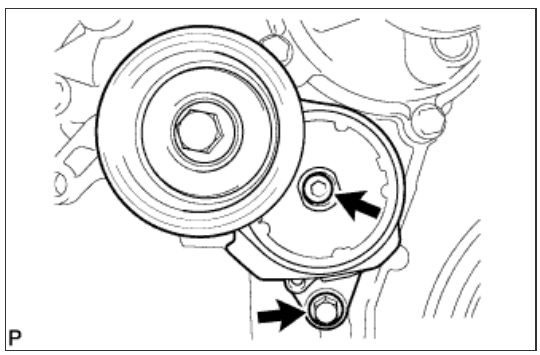
SST
09960-10010 (09962-01000, 09963-01000)

b. Remove the 4 bolts and water pump pulley.



46. REMOVE NO. 1 IDLER PULLEY SUB-ASSEMBLY

a. Remove the bolt and idler pulley.



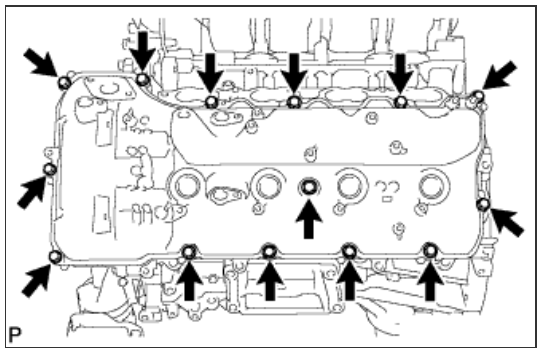
47. REMOVE FLUID COUPLING BRACKET

a. Remove the 4 bolts and fluid coupling bracket.

48. REMOVE V-RIBBED BELT TENSIONER ASSEMBLY

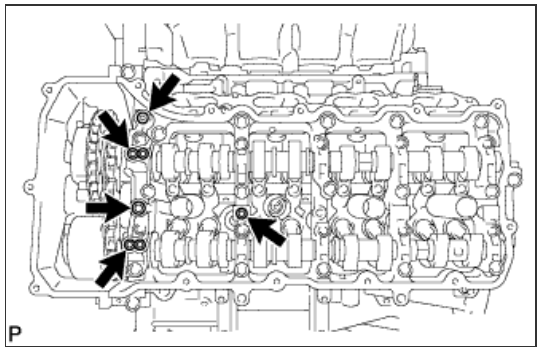
a. Remove the standard bolt, 6 mm hexagon wrench bolt and belt tensioner.

49. REMOVE IGNITION COIL ASSEMBLY



a. Remove the 8 bolts and 8 ignition coils.

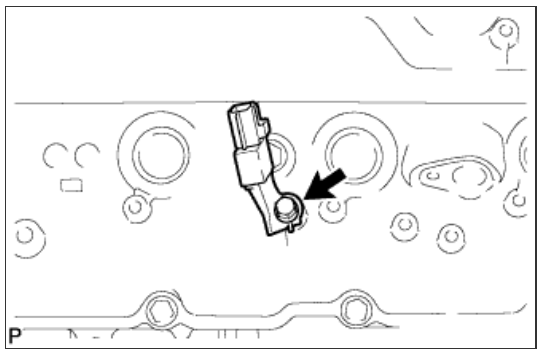
50. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY LH



a. Remove the 14 bolts, seal washer, cylinder head cover and gasket.

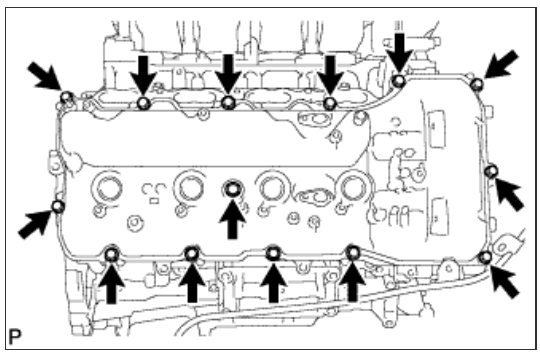
HINT:

Make sure the removed parts are returned to the same places they were removed from.

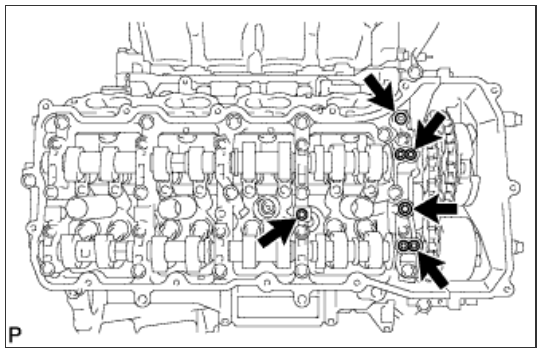


b. Remove the 5 gaskets from the camshaft bearing caps (No. 2, No. 3).

51. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY RH



a. Remove the bolt and noise filter.



b. Remove the 14 bolts, seal washer, cylinder head cover and gasket.

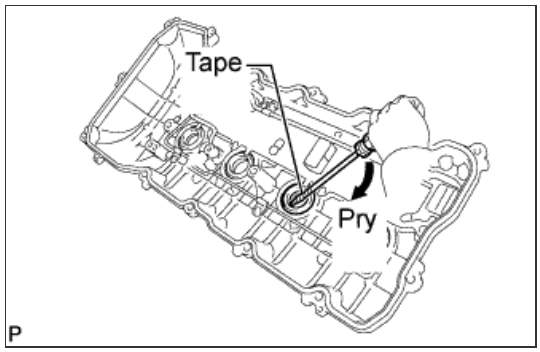
HINT:

Make sure the removed parts are returned to the same places they were removed from.

c. Remove the 5 gaskets from the camshaft bearing caps (No. 1, No. 3).

52. REMOVE SPARK PLUG TUBE GASKET

a. Bend the 4 ventilation baffle plate claws on the cylinder head cover to an angle of 90° or more.



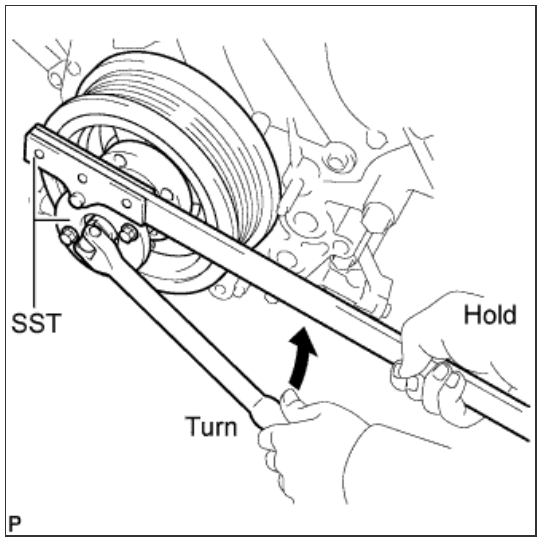
b. Using a screwdriver, pry out the gaskets.

HINT:

Tape the screwdriver tip before use.

NOTICE:

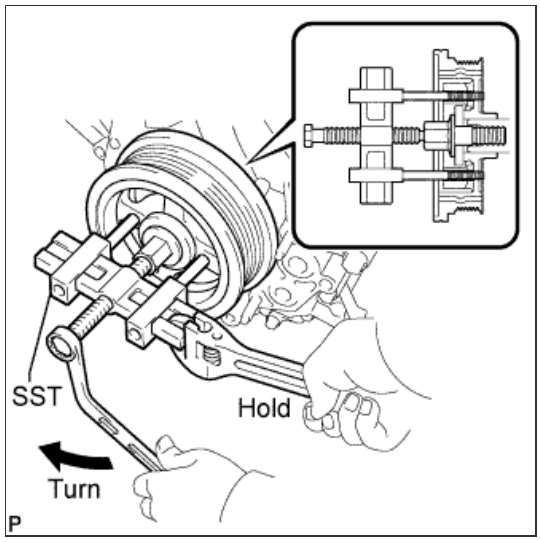
- **Be careful not to damage the cylinder head cover.**
- **Be careful not to damage the gasket when removing it, as the removed gasket needs to be used when installing a new one.**



53. REMOVE CRANKSHAFT PULLEY

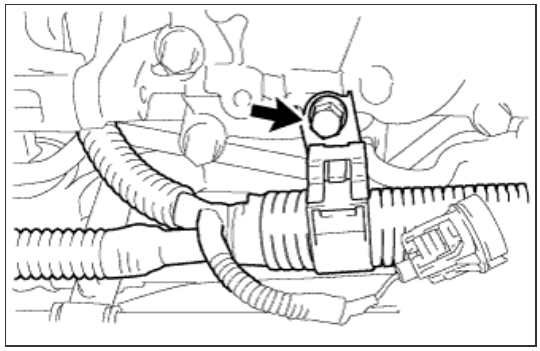
a. Using SST, loosen the crankshaft pulley set bolt until 2 or 3 threads are engaged.

SST



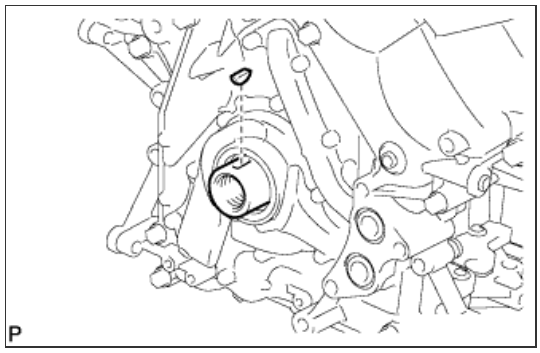
09213-70011 (09213-70020)
09330-00021

b. Using the pulley set bolt and SST, remove the crankshaft pulley.



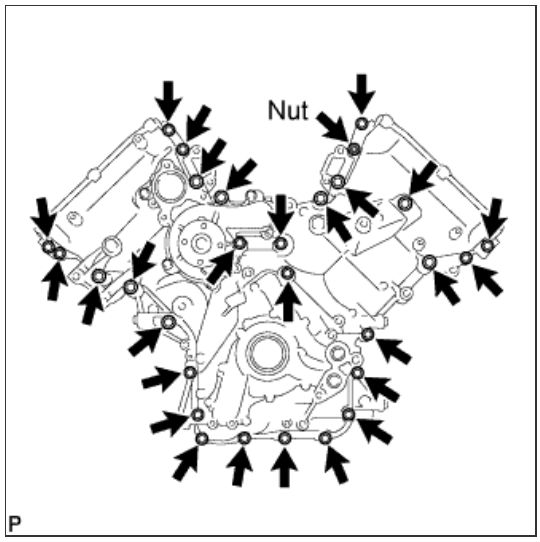
SST

09950-50013 (09951-05010, 09952-05010, 09953-05010, 09954-05011)



54. DISCONNECT WIRE HARNESS CLAMP BRACKET

a. Remove the bolt and disconnect the bracket.

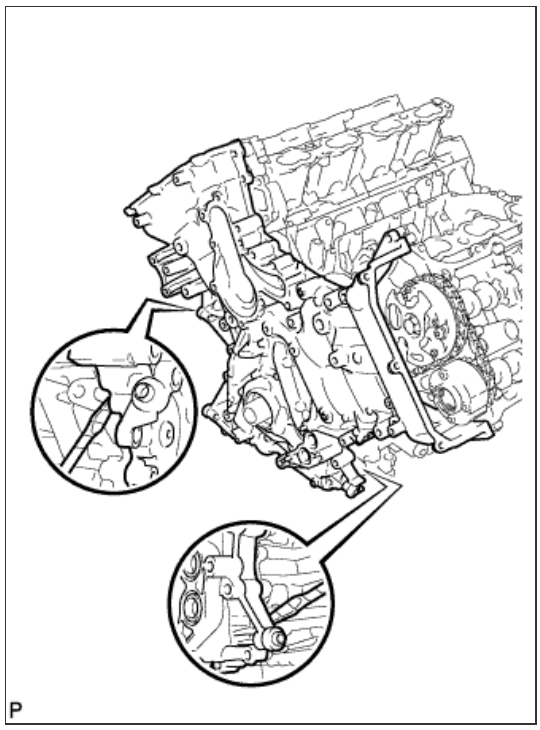


55. REMOVE CRANKSHAFT TIMING GEAR KEY

a. Using a screwdriver, remove the timing gear key from the crankshaft.

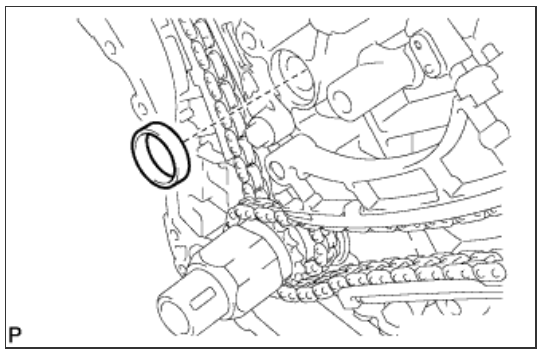
56. REMOVE TIMING CHAIN COVER SUB-ASSEMBLY

a. Remove the 28 bolts and nut shown in the illustration.



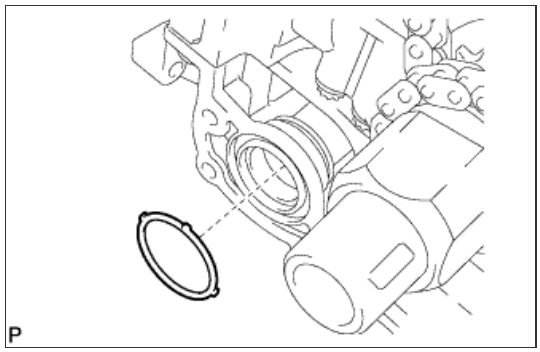
b. Remove the timing chain cover by prying between the timing chain cover and cylinder head or cylinder block with a screwdriver as shown in the illustration.

NOTICE:



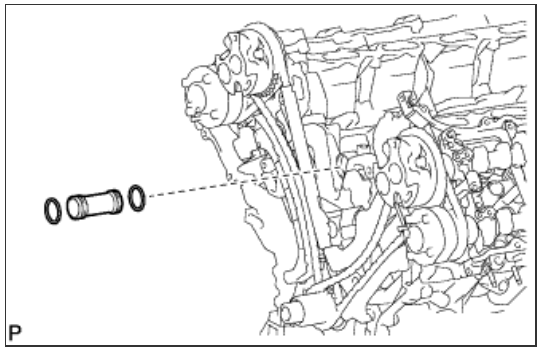
Be careful not to damage the contact surfaces of the cylinder head, cylinder block and chain cover.

HINT:



Tape the screwdriver tip before use.

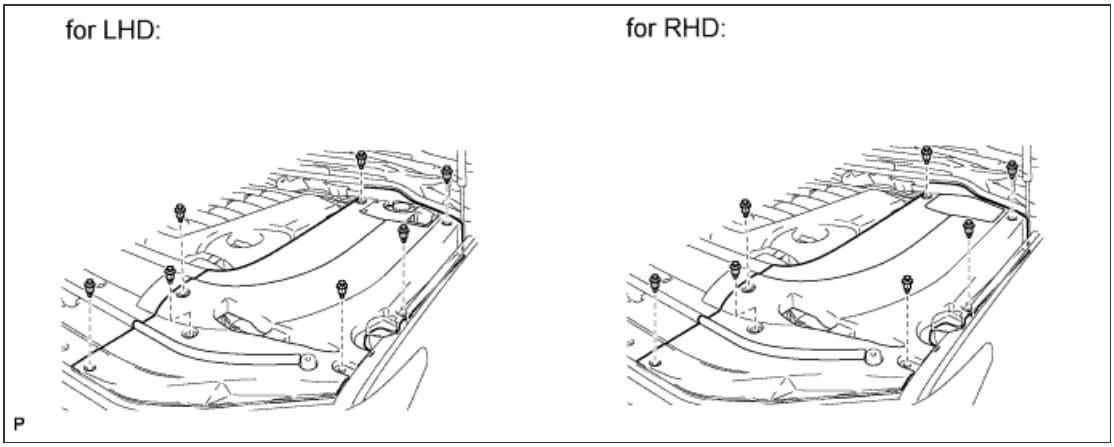
c. Remove the oil pump gasket from the cylinder block.



d. Remove the O-ring from the oil pan.

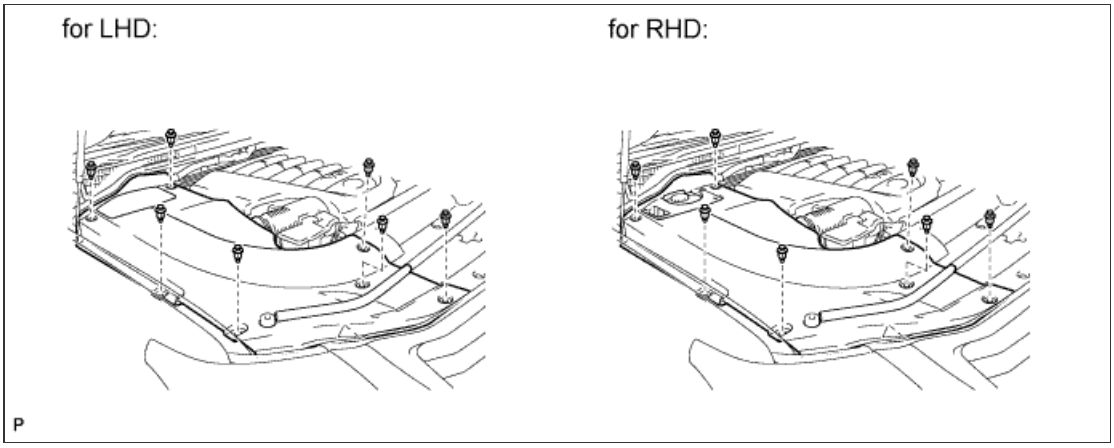
57. REMOVE WATER INLET PIPE

a. Remove the water inlet pipe.



b. Remove the 2 O-rings from the water inlet pipe.

for Preparation Click here



1. REMOVE ENGINE ROOM SIDE COVER LH

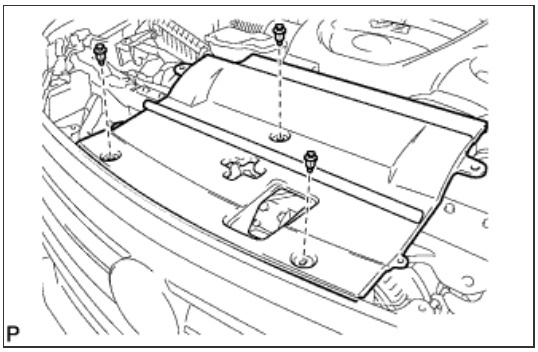
a. Remove the 7 clips and engine room side cover.

2. REMOVE ENGINE ROOM SIDE COVER RH

a. Remove the 7 clips and engine room side cover.

3. DISCHARGE FUEL SYSTEM PRESSURE

a. Discharge the fuel system pressure (Click here).



4. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

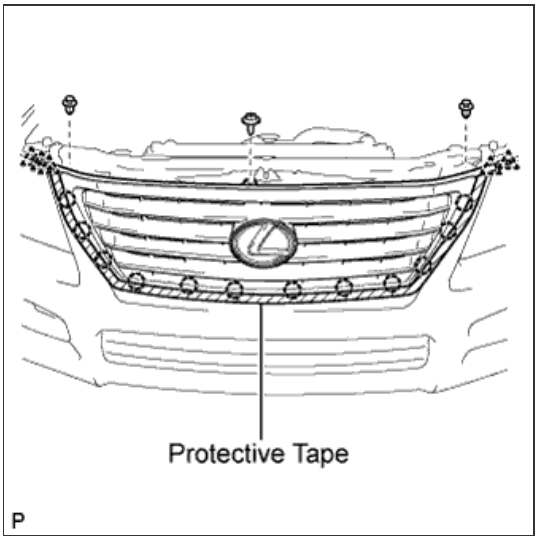
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

5. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 3 clips and upper radiator support seal.

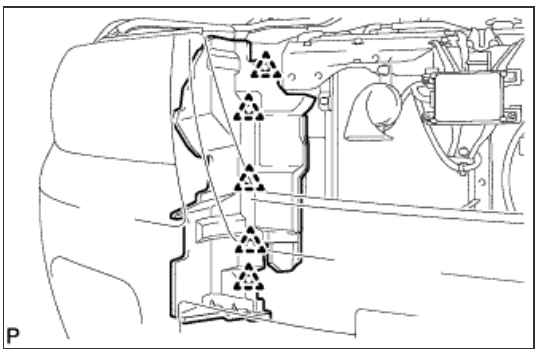
6. REMOVE RADIATOR GRILLE



a. Put protective tape around the radiator grille.

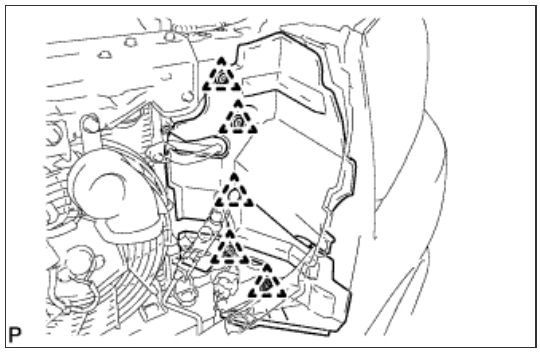
b. Remove the screw and 2 clips.

c. Detach the 5 clips and partially remove the upper radiator seal.



d. w/o Wide View Front Monitor System:
Detach the 12 claws and remove the radiator grille.

e. w/ Wide View Front Monitor System:
Detach the 12 claws, disconnect the connector and remove the radiator grille.

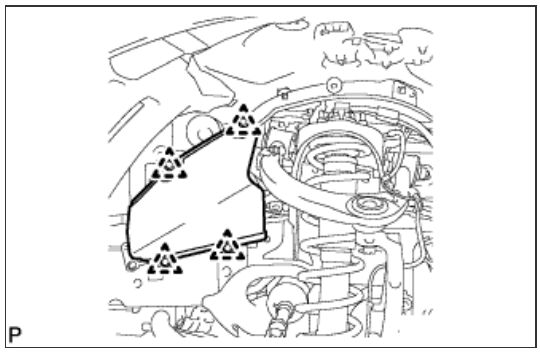


7. DISCONNECT RADIATOR SIDE DEFLECTOR RH (w/o Air Cooled Transmission Oil Cooler)

a. Using a clip remover, remove the 5 clips and side deflector.

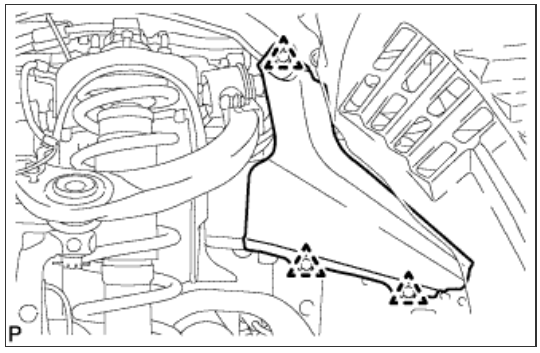
8. DISCONNECT RADIATOR SIDE DEFLECTOR LH

a. Using a clip remover, remove the 5 clips and side deflector.



9. REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

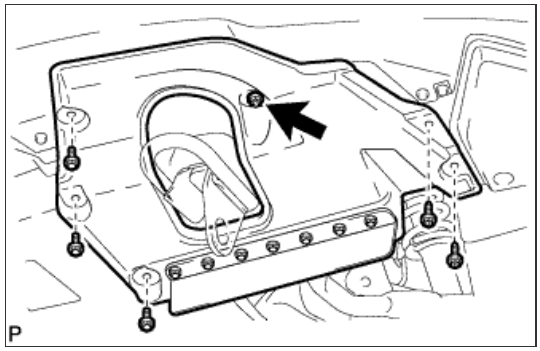
(Click here)



10. REMOVE FRONT FENDER APRON SEAL FRONT LH

a. Using a clip remover, remove the 4 clips and fender apron seal.

11. REMOVE FRONT FENDER APRON SEAL FRONT RH

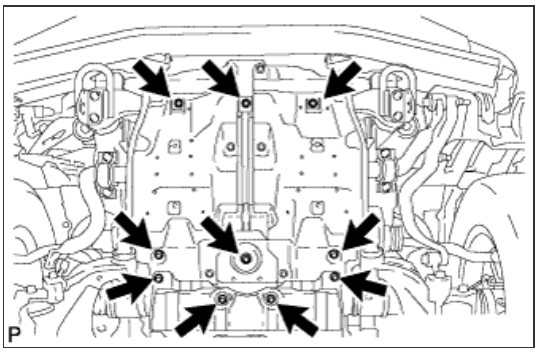


a. Using a clip remover, remove the 3 clips and fender apron seal.

12. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and 2 screws.

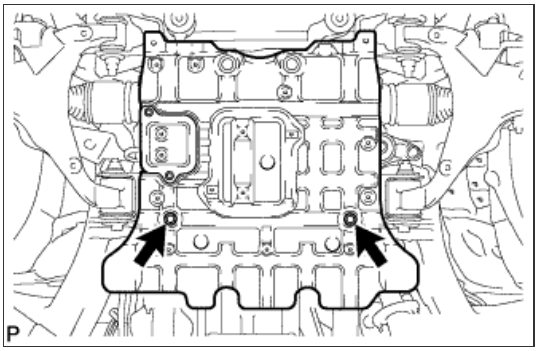
b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



13. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.



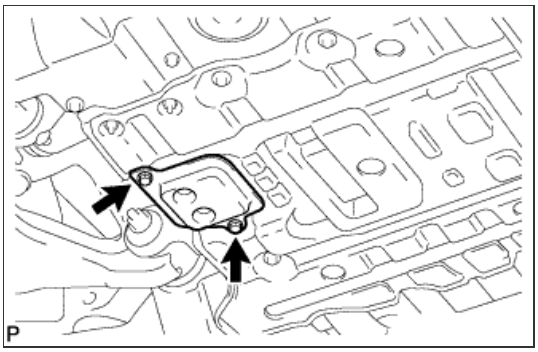
14. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and No. 1 engine under cover.

15. REMOVE NO. 2 ENGINE UNDER COVER

a. Remove the 2 bolts and No. 2 engine under cover.

16. DRAIN ENGINE OIL

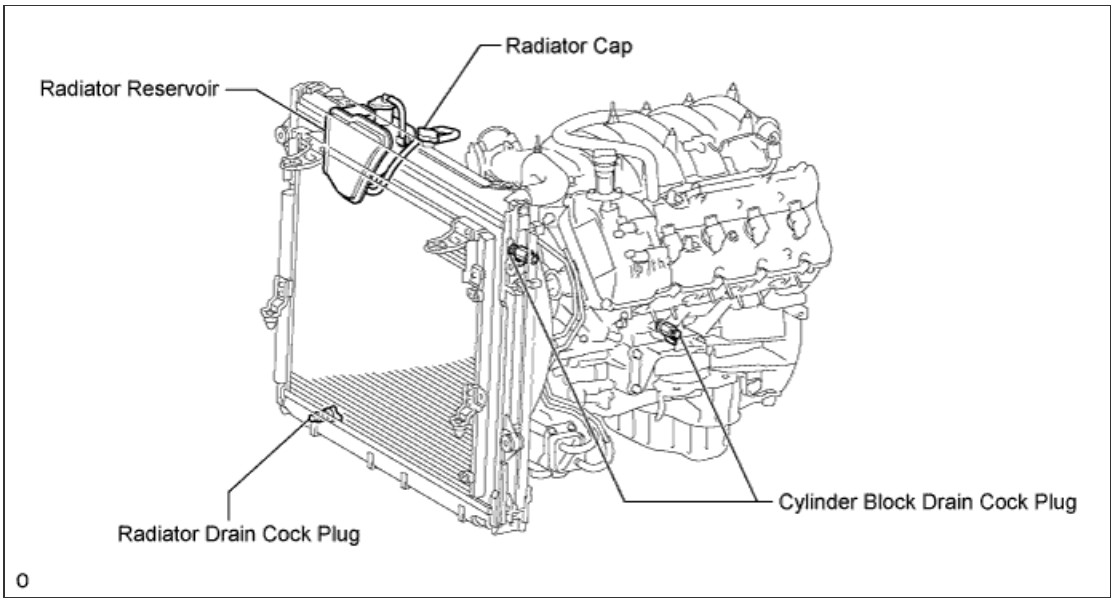


a. Remove the oil filler cap.

b. Remove the 2 bolts and No. 2 engine under cover seal.

c. Remove the oil pan drain plug and gasket, and drain the engine oil into a container.

d. Install a new gasket and the oil pan drain plug.



Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

17. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

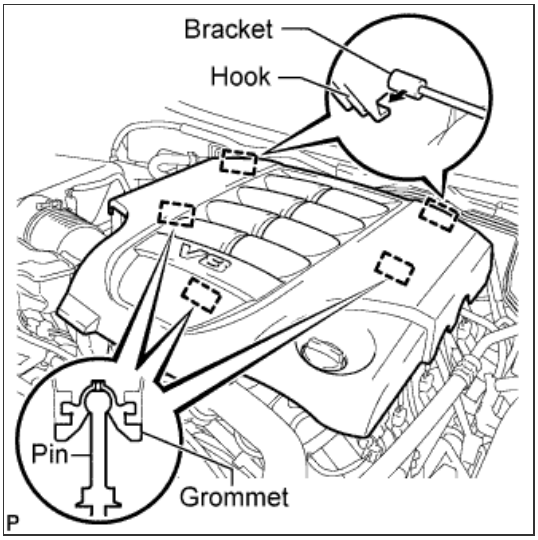
a. Loosen the radiator drain cock plug.

HINT:

Collect the coolant in a container and dispose of it according to the regulations in your area.

b. Remove the radiator cap. Then drain the coolant from the radiator.

c. Loosen the 2 cylinder block drain cock plugs. Then drain the coolant from the engine.



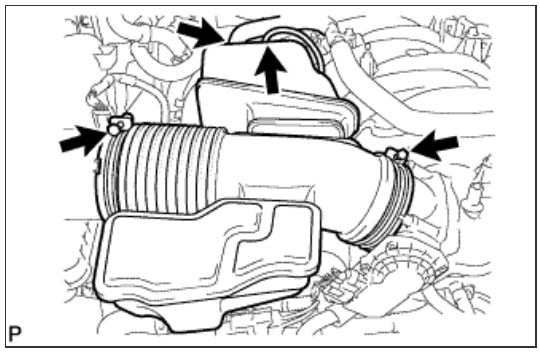
d. Tighten the 2 cylinder block drain cock plugs.

Torque:
13 N*m{ 130 kgf*cm , 10 ft.*lbf }

e. Tighten the radiator drain cock plug by hand.

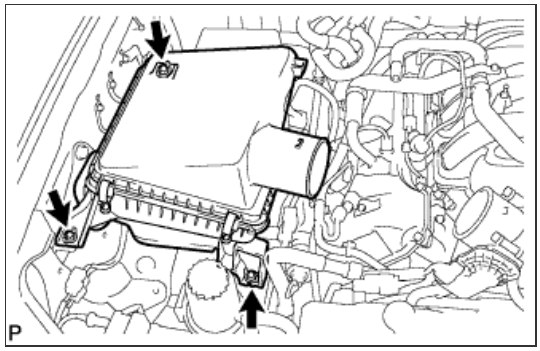
18. REMOVE V-BANK COVER SUB-ASSEMBLY

a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.



19. REMOVE AIR CLEANER HOSE ASSEMBLY

a. Disconnect the vacuum hose and No. 2 ventilation hose.



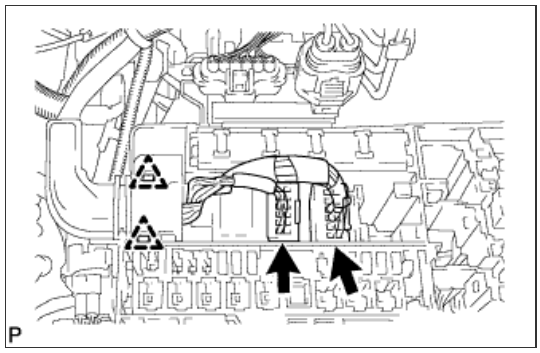
b. Loosen the 2 hose clamps.

c. Remove the air cleaner hose.

20. REMOVE AIR CLEANER ASSEMBLY

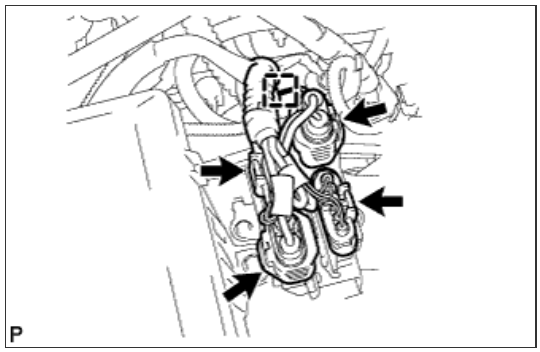
a. Remove the 3 bolts and air cleaner.

21. REMOVE RADIATOR ASSEMBLY



(Click here)

22. DISCONNECT ENGINE WIRE



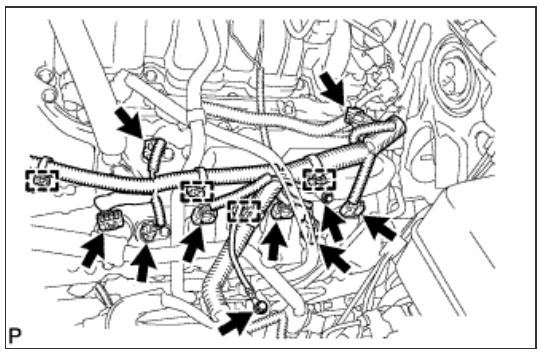
a. Engine Room LH Side:

i. Remove the engine room relay block cover.

ii. Disconnect the 2 connectors and 2 clips from the engine room junction block.

iii. w/ Secondary Air Injection System:
Disconnect the 4 air injection control driver connectors and wire harness clamp.

iv. Disconnect the injector connector.



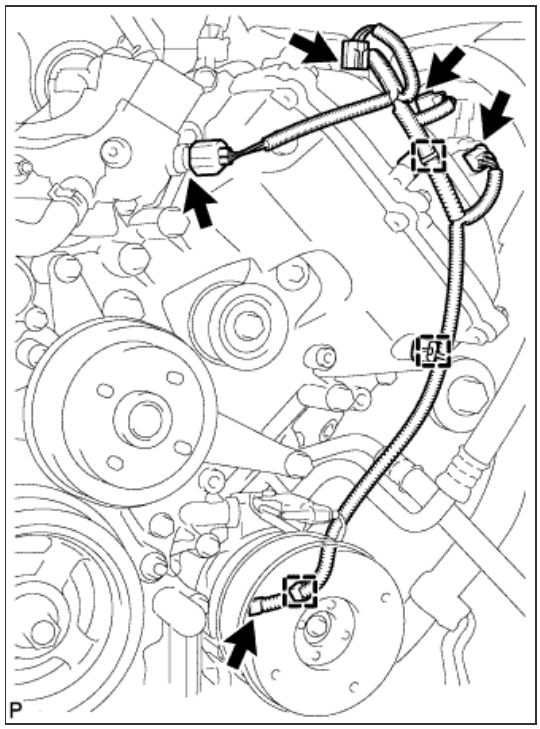
v. Disconnect the 4 ignition coil connectors.

vi. Disconnect the 2 VVT sensor connectors.

vii. Disconnect the 4 clamps.

viii. Remove the 2 bolts and ground wire.

ix. Disconnect the noise filter connector.



x. Disconnect the engine coolant temperature sensor connector.

xi. Disconnect the 2 camshaft timing oil control valve connectors.

xii. Disconnect the camshaft position sensor connector.

xiii. Disconnect the 3 clamps.

xiv. Disconnect the cooler compressor connector.

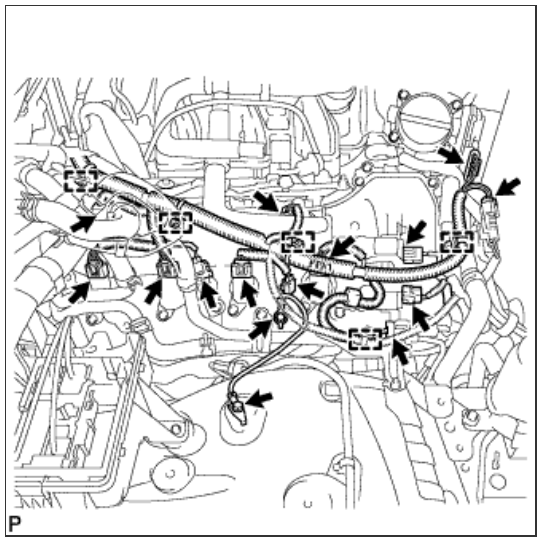
b. Engine Room RH Side:

i. Disconnect the 2 camshaft timing oil control valve connectors.

ii. Disconnect the 4 ignition coil connectors.

iii. Disconnect the injector connector.

iv. Disconnect the 2 VVT sensor connectors.

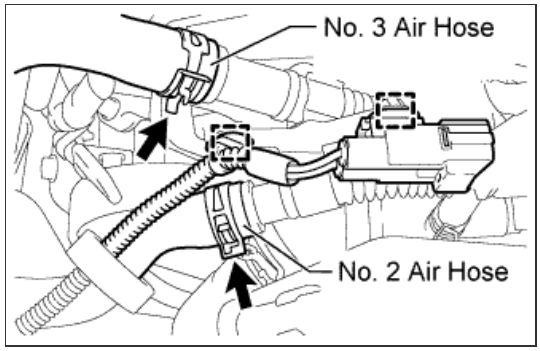


v. Disconnect the noise filter connector.

vi. Remove the 2 bolts and ground wire.

vii. w/ Secondary Air Injection System:
Disconnect the 2 air pump connectors.

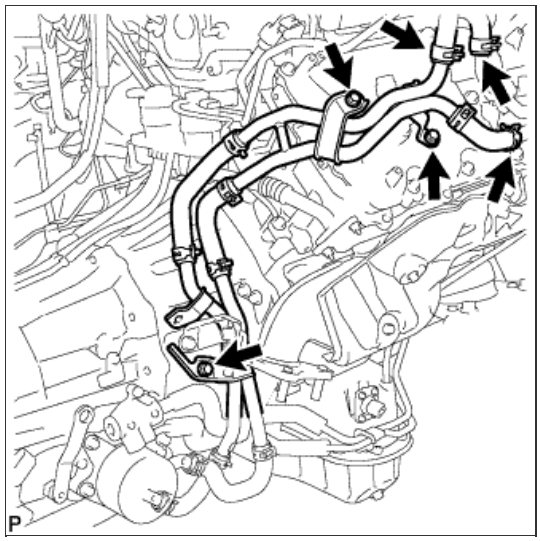
viii. Disconnect the throttle position sensor and throttle control motor connector.



ix. Disconnect the 5 clamps.

23. DISCONNECT AIR PUMP HOSE AND WIRE HARNESS (w/ Secondary Air Injection System)

a. Disconnect the No. 2 and No. 3 air hoses.

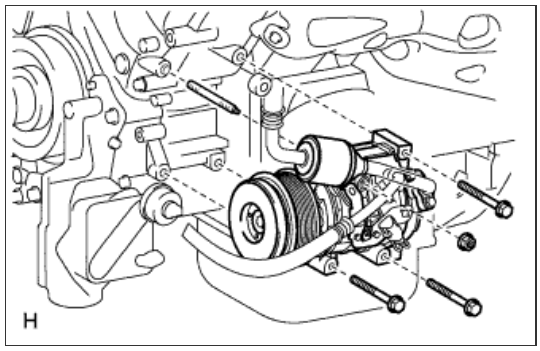


b. Disconnect the 2 clamps.

24. DISCONNECT NO. 2 WATER BY-PASS PIPE

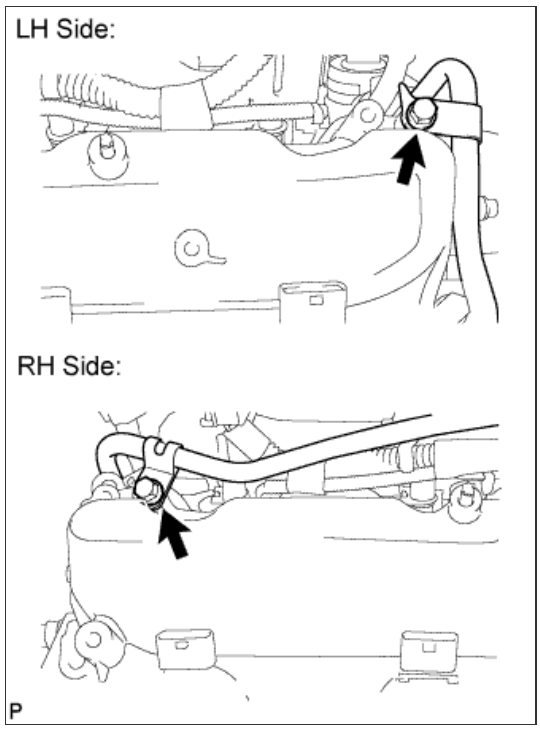
a. Disconnect the 3 hoses.

b. Remove the 3 bolts and disconnect the No. 2 water by-pass pipe from the cylinder head cover.



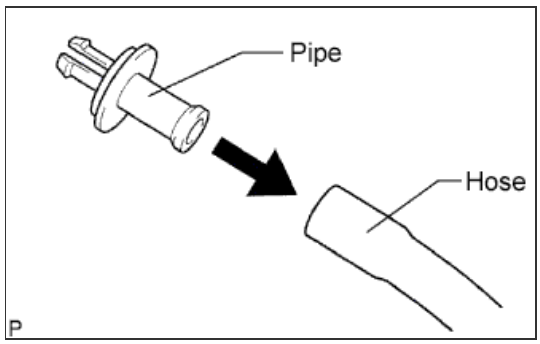
25. DISCONNECT COOLER COMPRESSOR ASSEMBLY

a. Remove the 3 bolts, nut and stud bolt, and disconnect the cooler compressor.



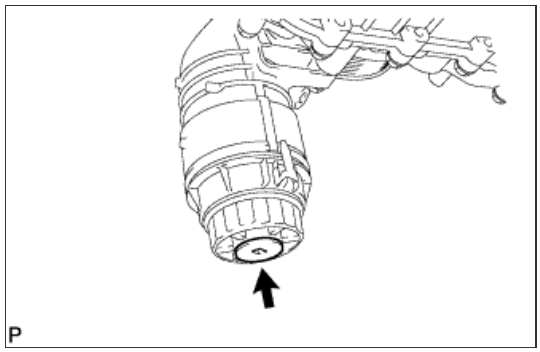
HINT:

It is not necessary to completely remove the compressor. With the hoses connected to the compressor, hang the compressor on the vehicle body with a rope.



26. DISCONNECT NO. 2 FUEL TUBE SUB-ASSEMBLY

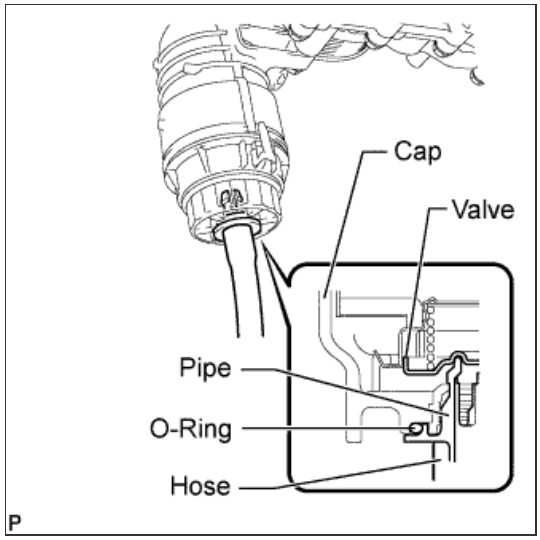
a. Remove the 2 bolts and disconnect the fuel tube.



27. REMOVE OIL FILTER ELEMENT

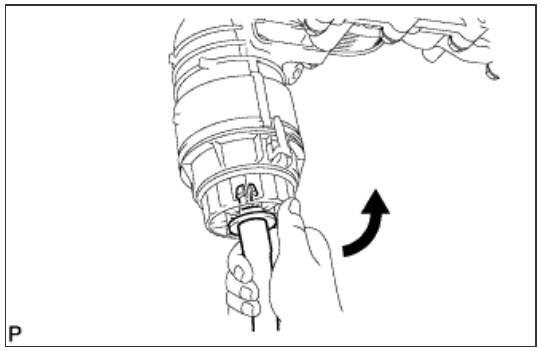
a. Connect a hose with an inside diameter of 15 mm (0.591 in.) to the pipe.

b. Remove the oil filter drain plug.



c. Install the pipe to the oil filter cap.

NOTICE:

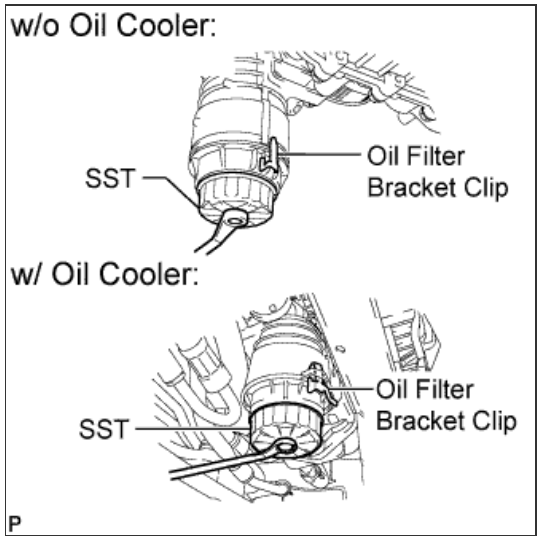


If the O-ring is removed with the drain plug, install the O-ring together with the pipe.

HINT:

Use a container to catch the draining oil.

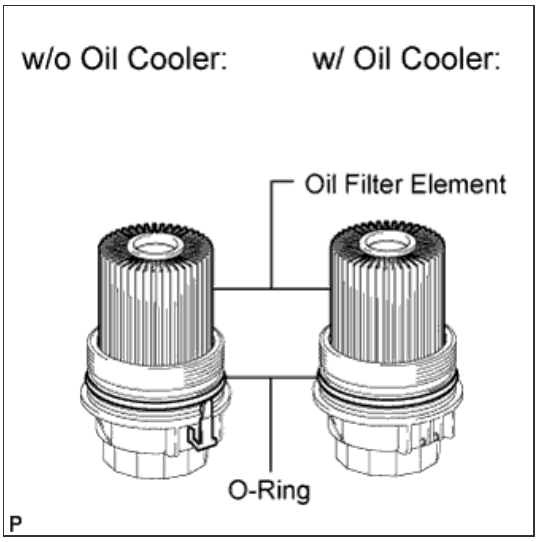
d. Check that oil is drained from the oil filter. Then disconnect the pipe and remove the O-ring as shown in the illustration.



e. Using SST, remove the oil filter cap.

SST
09228-06501

NOTICE:

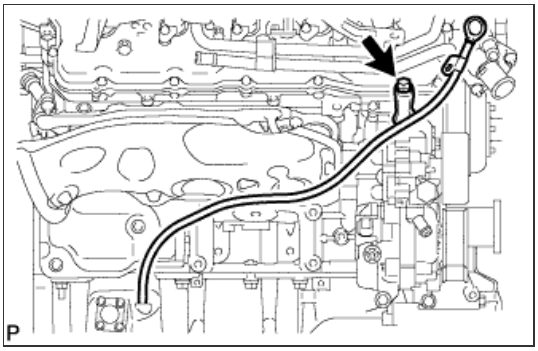


Do not remove the oil filter bracket clip.

f. Remove the oil filter element and O-ring from the oil filter cap.

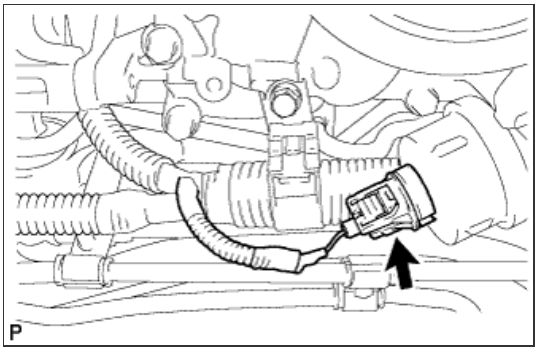
NOTICE:

Be sure to remove the cap O-ring by hand, without using any tools, to prevent damage to the cap O-ring groove.



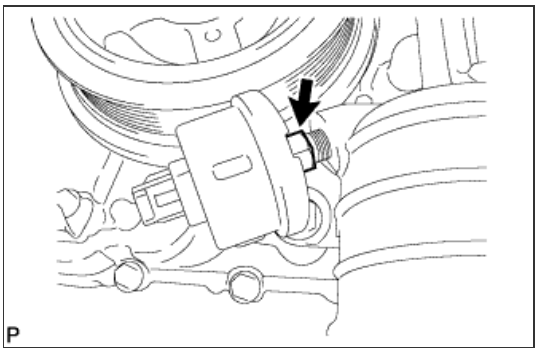
28. REMOVE ENGINE OIL LEVEL DIPSTICK GUIDE

a. Remove the dipstick.



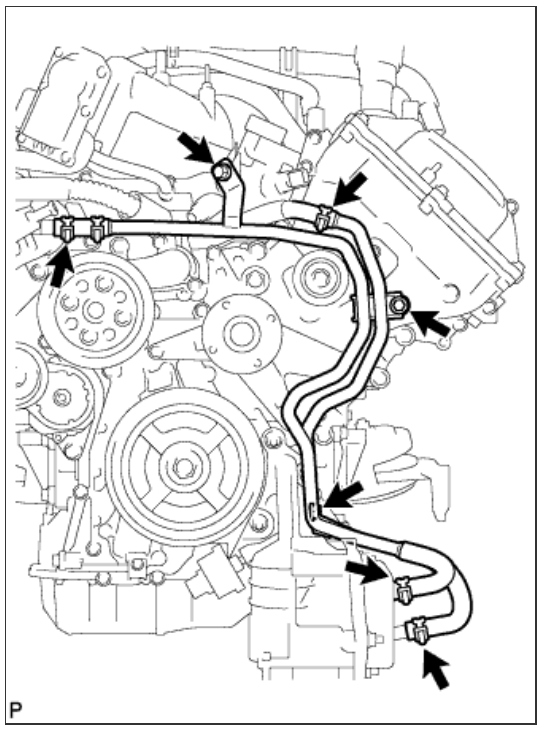
b. Remove the bolt and dipstick guide.

c. Remove the O-ring from the dipstick guide.



29. REMOVE OIL PRESSURE SENDER GAUGE ASSEMBLY

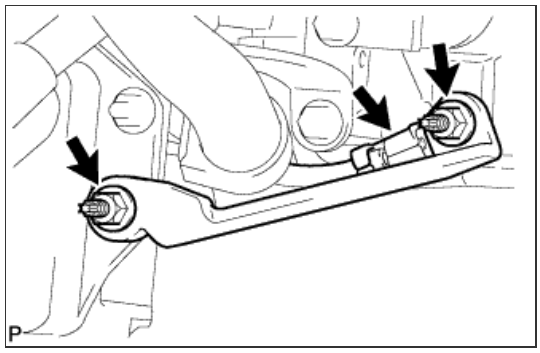
a. Disconnect the sender gauge connector.



b. Remove the oil pressure sender gauge.

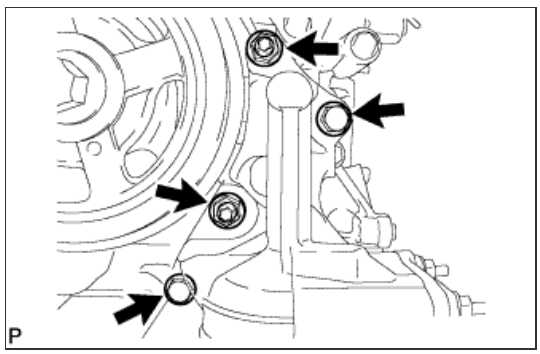
30. REMOVE NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY (w/ Oil Cooler)

a. Remove the 3 bolts.



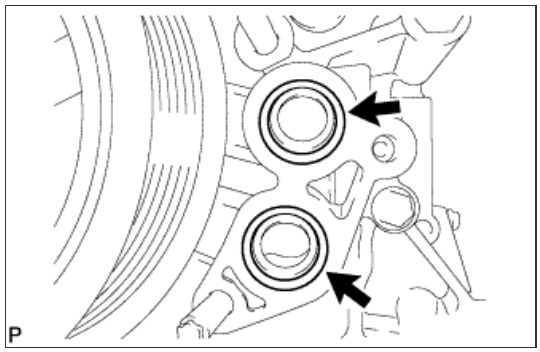
b. Disconnect the 4 hoses and remove the water by-pass pipe.

31. REMOVE NO. 1 OIL COOLER BRACKET (w/ Oil Cooler)



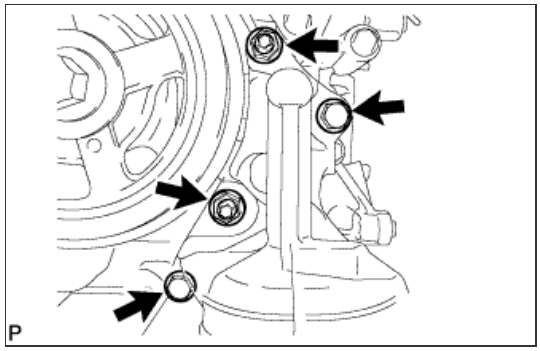
a. Remove the 2 nuts and bracket.

b. Disconnect the ground wire from the cylinder block.

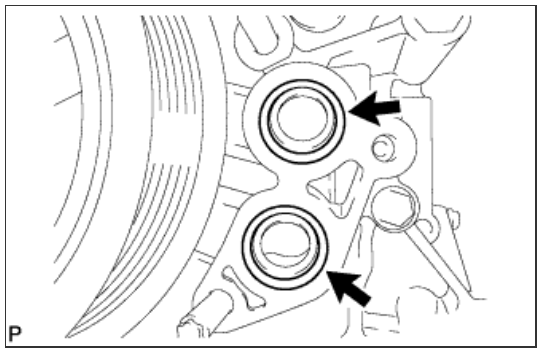


32. REMOVE OIL FILTER BRACKET (w/ Oil Cooler)

a. Remove the 2 bolts, 2 nuts and filter bracket.

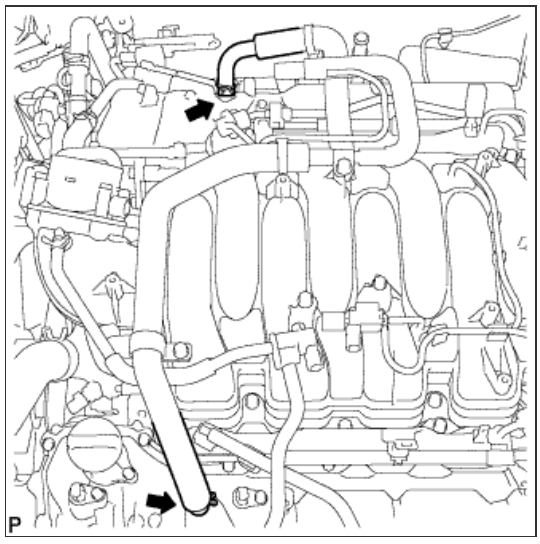


b. Remove the 2 O-rings.

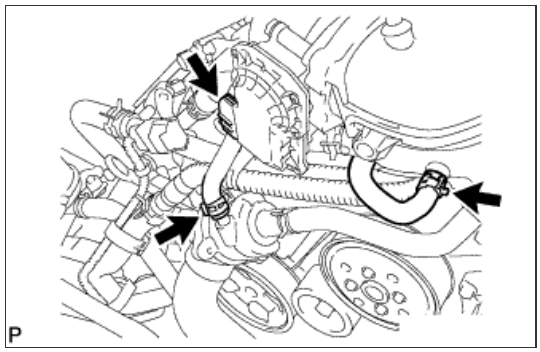


33. REMOVE OIL FILTER BRACKET (w/o Oil Cooler)

a. Remove the 2 bolts, 2 nuts and oil filter bracket.

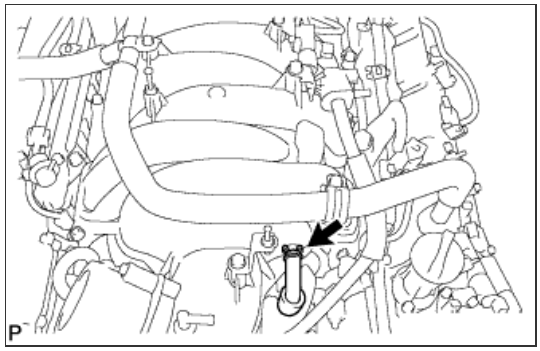


b. Remove the 2 O-rings.



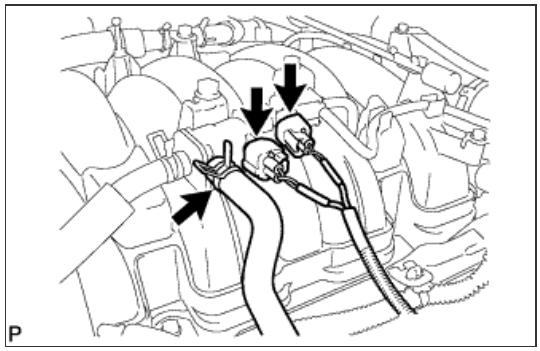
34. REMOVE INTAKE MANIFOLD

a. Disconnect the ventilation hose from the ventilation pipe of the cylinder head cover LH and RH.

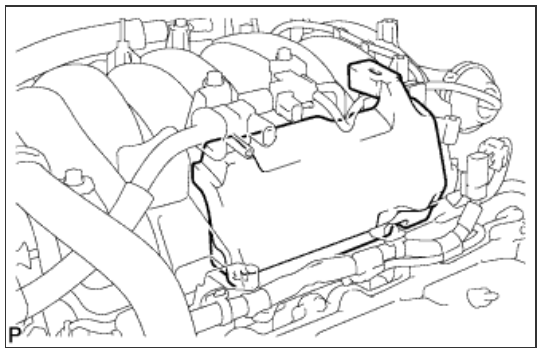


b. Disconnect the 2 water by-pass hoses.

c. Disconnect the throttle body connector.

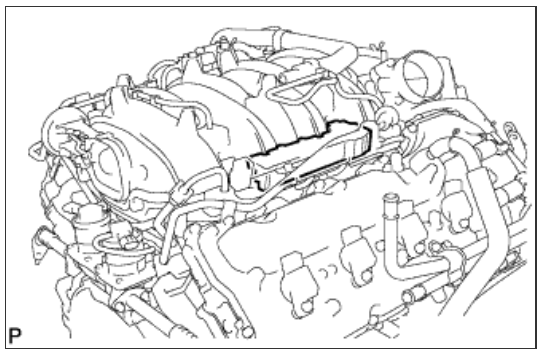


d. Disconnect the No. 1 ventilation hose.

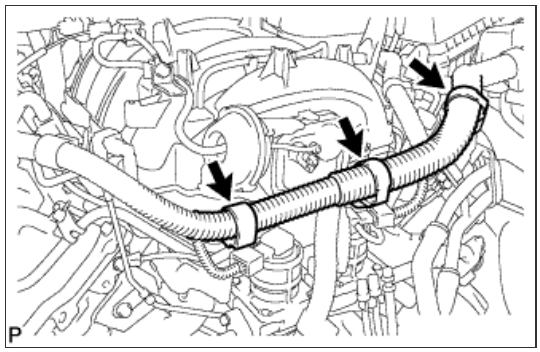


e. Disconnect the purge VSV connector.

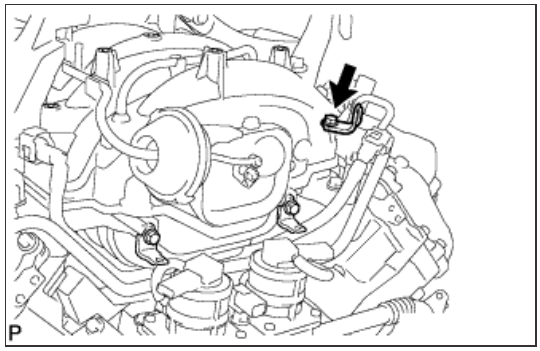
f. Disconnect the purge line hose from the purge VSV.



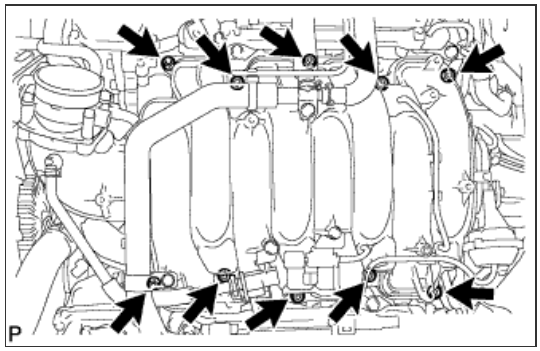
g. Disconnect the vacuum switching valve connector (for ACIS).



h. Remove the No. 1 engine cover sub-assembly.

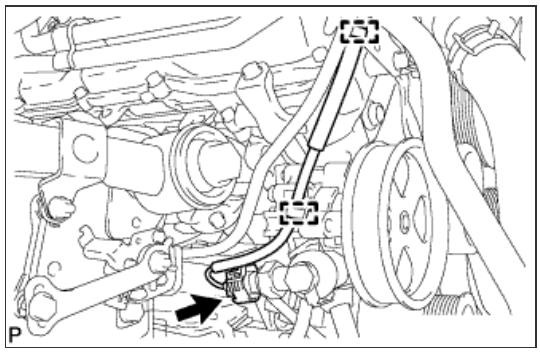


i. Remove the No. 3 engine cover.

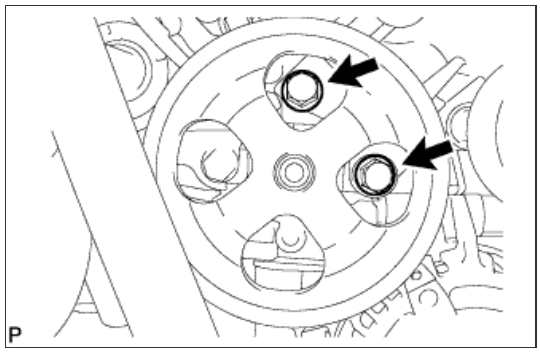


j. Disconnect the 3 wire clamps from the 3 wire brackets.

k. Remove the bolt and wire bracket from the intake manifold.

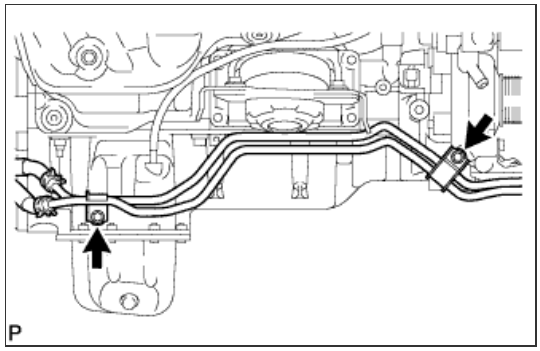


l. Remove the 2 nuts, 8 bolts, intake manifold and 2 gaskets.



35. DISCONNECT VANE PUMP ASSEMBLY

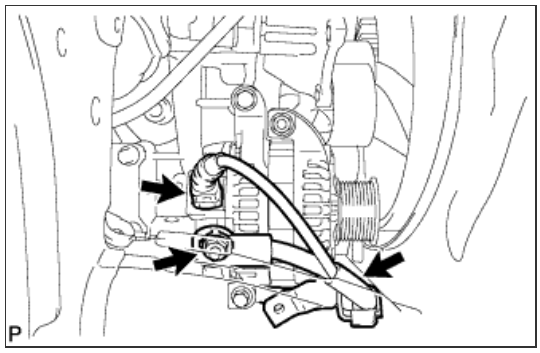
a. Disconnect the 2 clamps and power steering oil pressure switch connector.



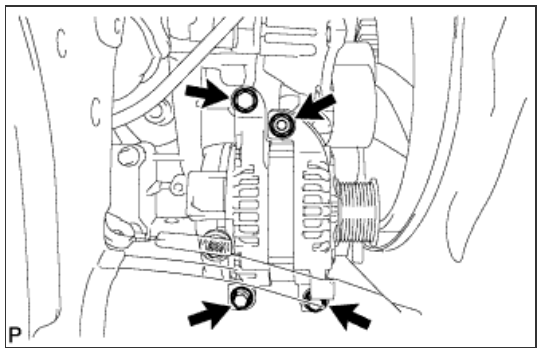
b. Remove the 2 bolts and disconnect the vane pump.

36. DISCONNECT OIL COOLER PIPE ASSEMBLY

a. Remove the 2 bolts and disconnect the oil cooler pipe.



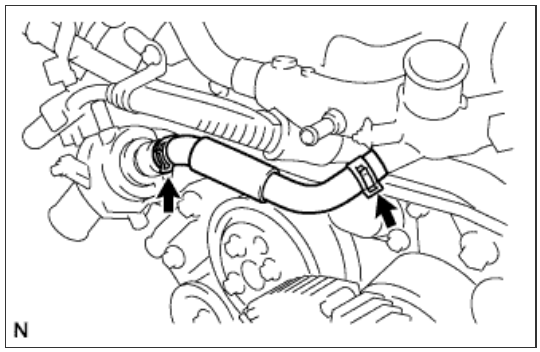
37. REMOVE GENERATOR ASSEMBLY



a. Disconnect the generator connector.

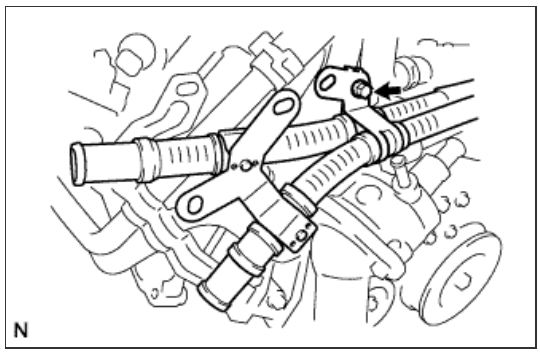
b. Remove the terminal cap and nut, and disconnect the generator wire.

c. Remove the bolt and wire harness bracket from the generator.

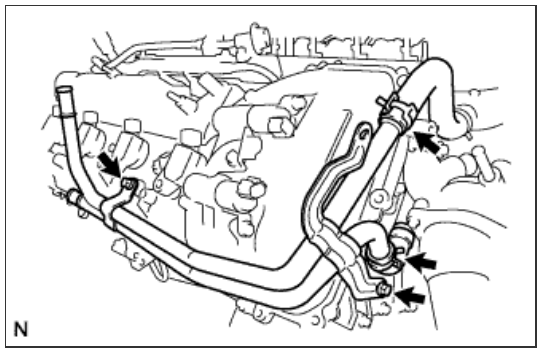


d. Remove the 3 bolts, nut and generator.

38. REMOVE NO. 1 WATER BY-PASS HOSE



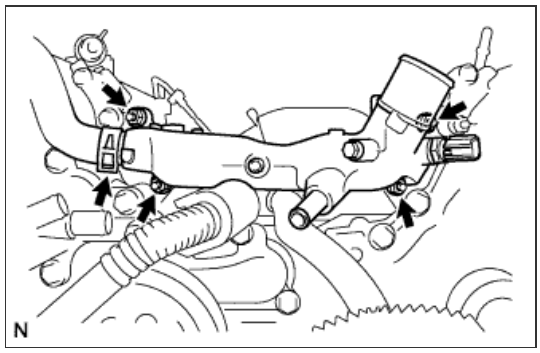
a. Remove the No. 1 water by-pass hose by disconnecting the hose from the water inlet housing and front water by-pass joint.



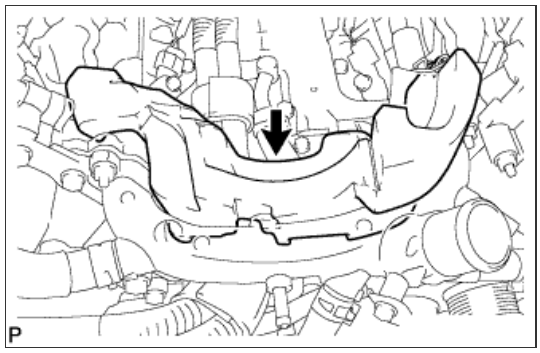
39. REMOVE WATER BY-PASS PIPE SUB-ASSEMBLY

a. w/ Secondary Air Injection System:
Remove the bolt and disconnect the air tube.

b. Disconnect the 2 hoses.

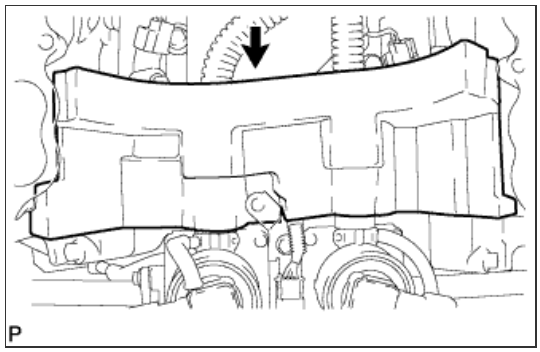


c. Remove the 2 bolts and water by-pass pipe.



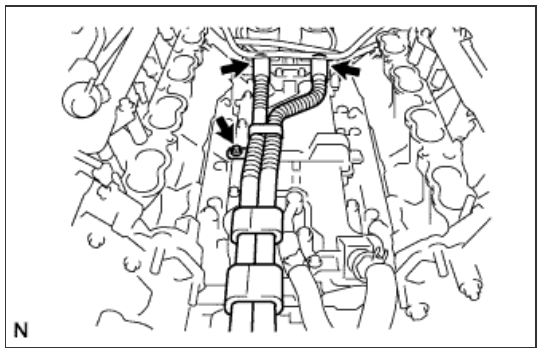
40. REMOVE FRONT WATER BY-PASS JOINT

a. Disconnect the No. 2 water by-pass hose from the water by-pass joint.

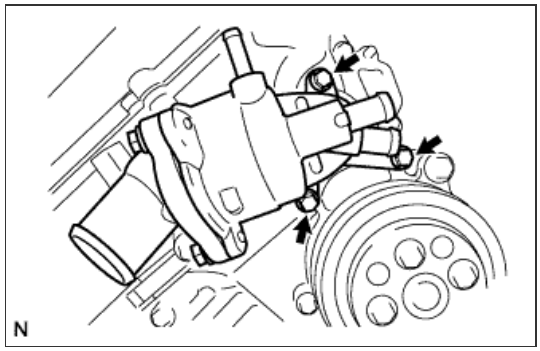


b. Remove the 4 nuts, water by-pass joint and 2 gaskets.

41. REMOVE NO. 2 ENGINE COVER



42. REMOVE NO. 1 ENGINE COVER

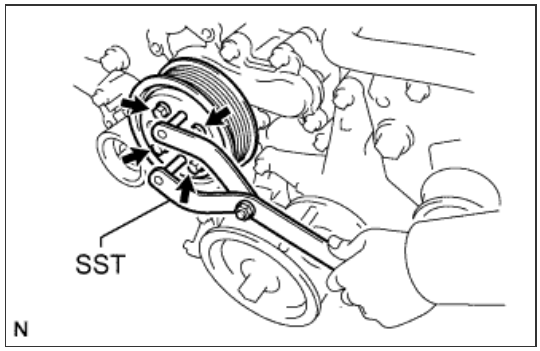


43. REMOVE AIR PIPE SUB-ASSEMBLY (w/ Secondary Air Injection System)

a. Remove the bolt, disconnect the 2 hoses, and remove the air pipe.

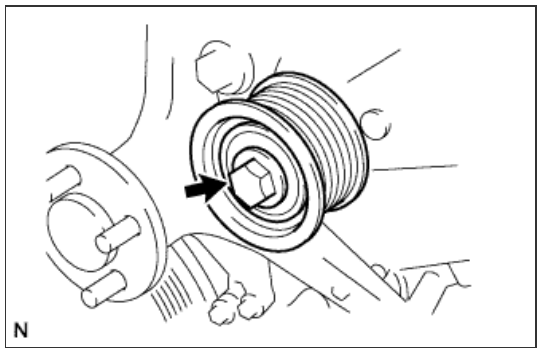
44. REMOVE WATER INLET HOUSING

a. Remove the 3 bolts, water inlet housing and gasket.



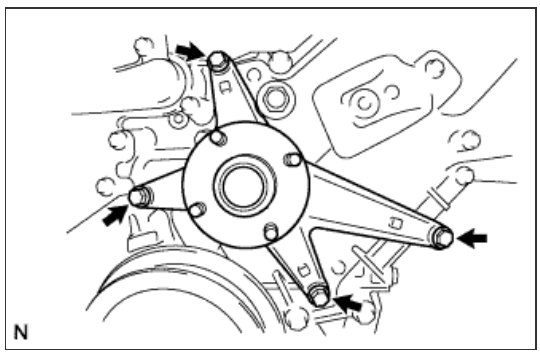
45. REMOVE WATER PUMP PULLEY

a. Using SST, hold the water pump pulley.



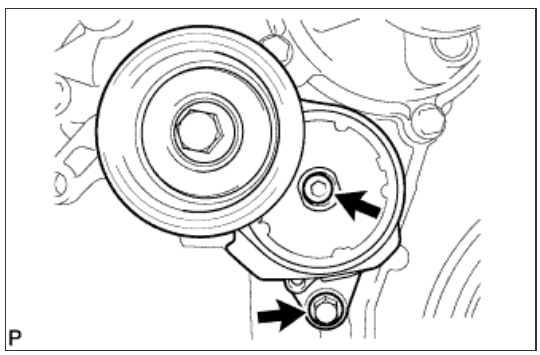
SST
09960-10010 (09962-01000, 09963-01000)

b. Remove the 4 bolts and water pump pulley.



46. REMOVE NO. 1 IDLER PULLEY SUB-ASSEMBLY

a. Remove the bolt and idler pulley.



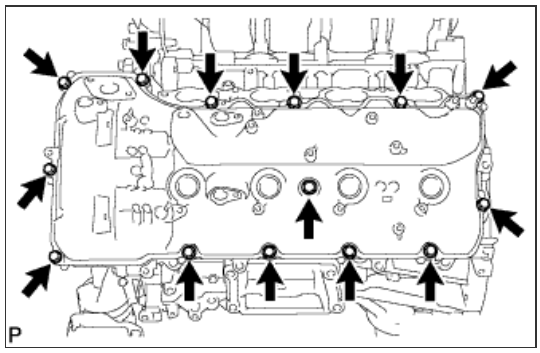
47. REMOVE FLUID COUPLING BRACKET

a. Remove the 4 bolts and fluid coupling bracket.

48. REMOVE V-RIBBED BELT TENSIONER ASSEMBLY

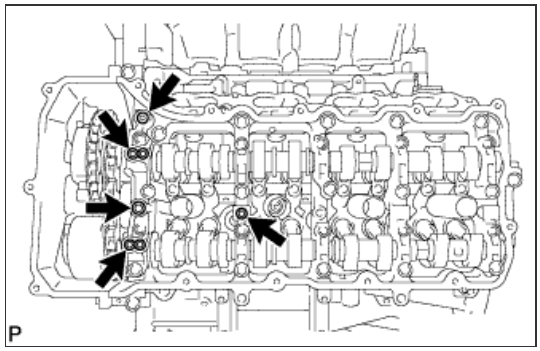
a. Remove the standard bolt, 6 mm hexagon wrench bolt and belt tensioner.

49. REMOVE IGNITION COIL ASSEMBLY



a. Remove the 8 bolts and 8 ignition coils.

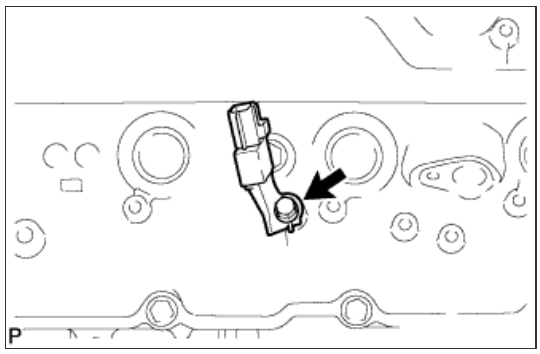
50. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY LH



a. Remove the 14 bolts, seal washer, cylinder head cover and gasket.

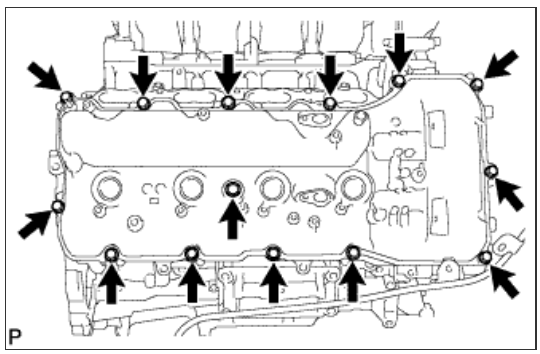
HINT:

Make sure the removed parts are returned to the same places they were removed from.

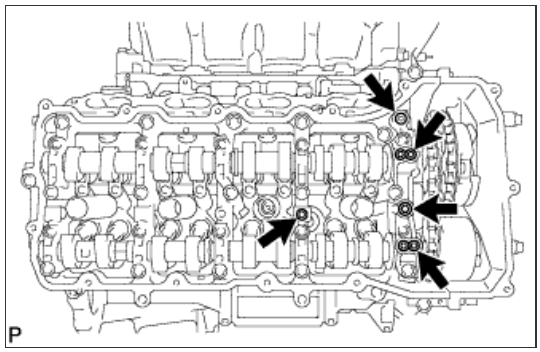


b. Remove the 5 gaskets from the camshaft bearing caps (No. 2, No. 3).

51. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY RH



a. Remove the bolt and noise filter.



b. Remove the 14 bolts, seal washer, cylinder head cover and gasket.

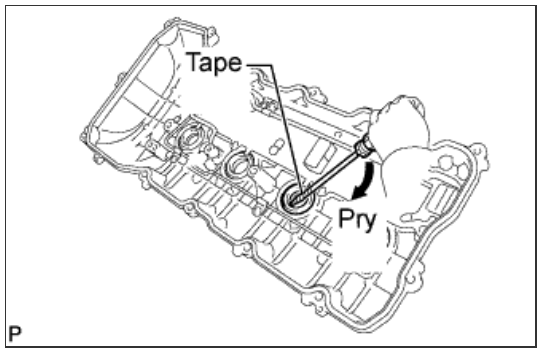
HINT:

Make sure the removed parts are returned to the same places they were removed from.

c. Remove the 5 gaskets from the camshaft bearing caps (No. 1, No. 3).

52. REMOVE SPARK PLUG TUBE GASKET

a. Bend the 4 ventilation baffle plate claws on the cylinder head cover to an angle of 90° or more.



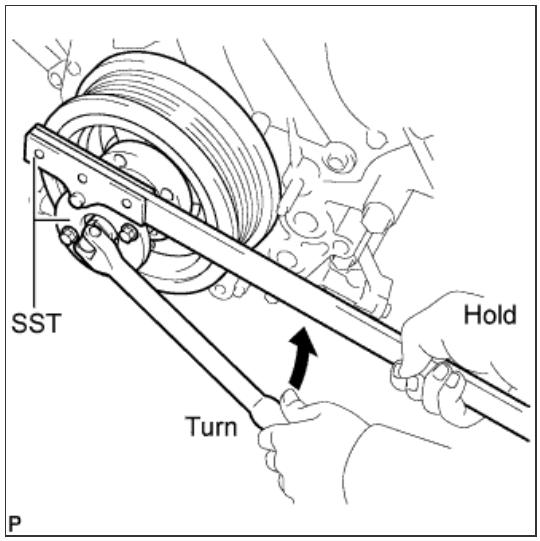
b. Using a screwdriver, pry out the gaskets.

HINT:

Tape the screwdriver tip before use.

NOTICE:

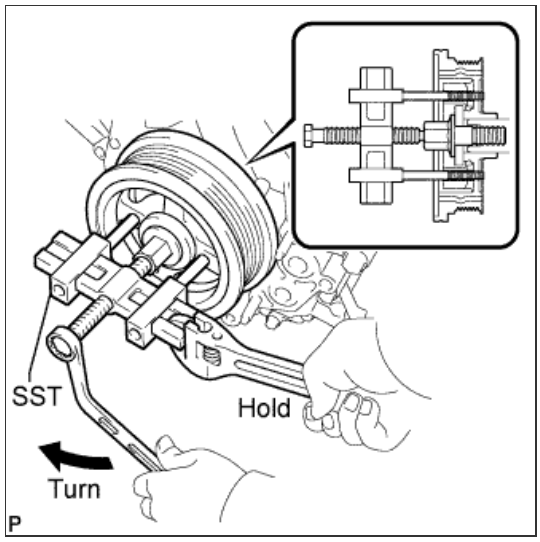
- **Be careful not to damage the cylinder head cover.**
- **Be careful not to damage the gasket when removing it, as the removed gasket needs to be used when installing a new one.**



53. REMOVE CRANKSHAFT PULLEY

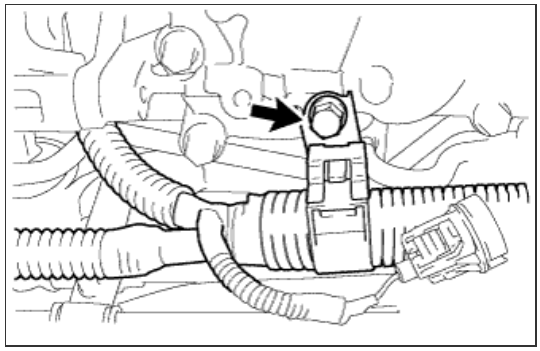
a. Using SST, loosen the crankshaft pulley set bolt until 2 or 3 threads are engaged.

SST



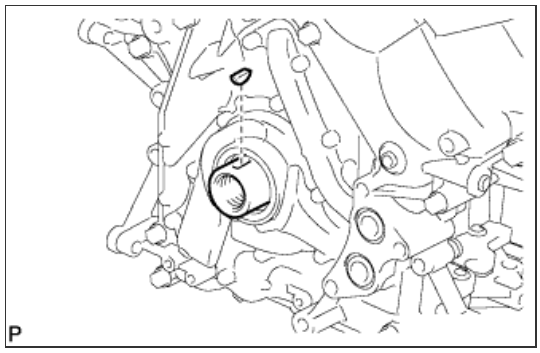
09213-70011 (09213-70020)
09330-00021

b. Using the pulley set bolt and SST, remove the crankshaft pulley.



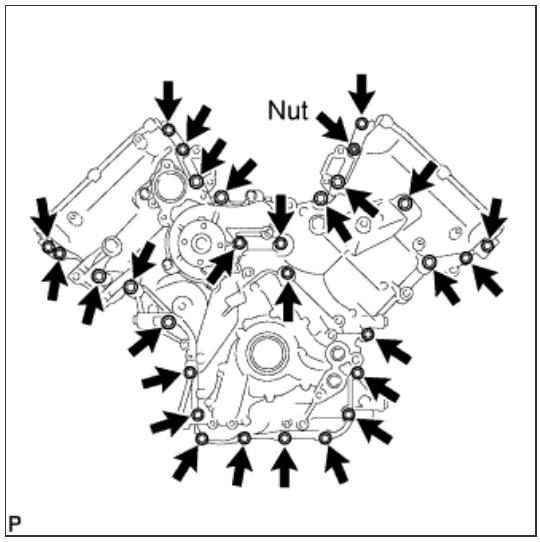
SST

09950-50013 (09951-05010, 09952-05010, 09953-05010, 09954-05011)



54. DISCONNECT WIRE HARNESS CLAMP BRACKET

a. Remove the bolt and disconnect the bracket.

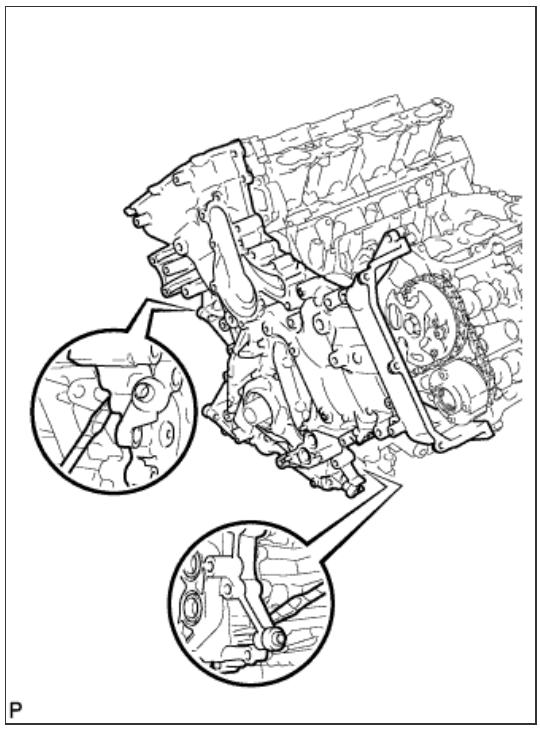


55. REMOVE CRANKSHAFT TIMING GEAR KEY

a. Using a screwdriver, remove the timing gear key from the crankshaft.

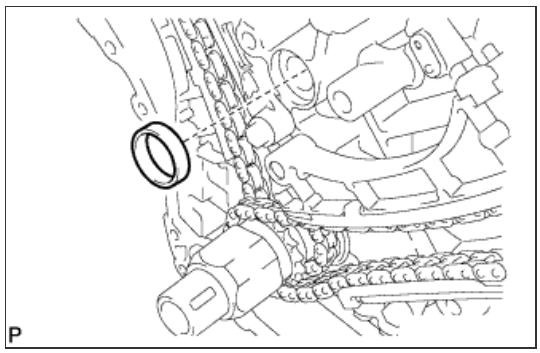
56. REMOVE TIMING CHAIN COVER SUB-ASSEMBLY

a. Remove the 28 bolts and nut shown in the illustration.



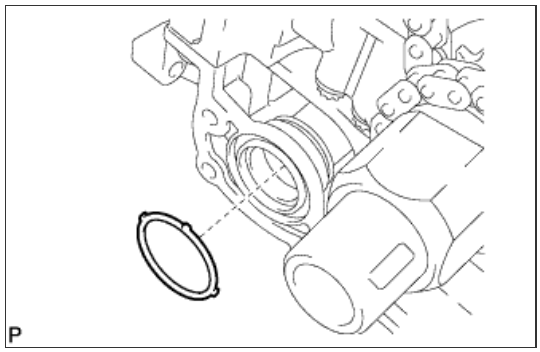
b. Remove the timing chain cover by prying between the timing chain cover and cylinder head or cylinder block with a screwdriver as shown in the illustration.

NOTICE:



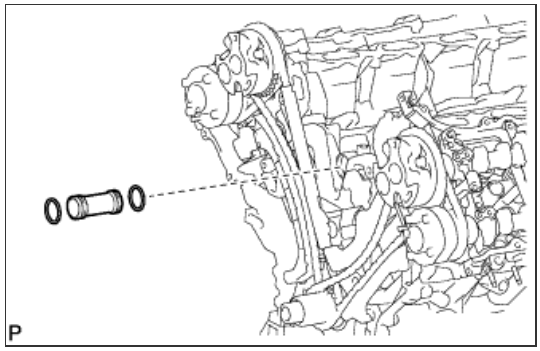
Be careful not to damage the contact surfaces of the cylinder head, cylinder block and chain cover.

HINT:



Tape the screwdriver tip before use.

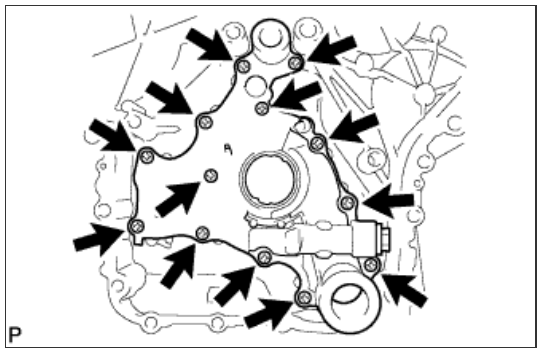
c. Remove the oil pump gasket from the cylinder block.



d. Remove the O-ring from the oil pan.

57. REMOVE WATER INLET PIPE

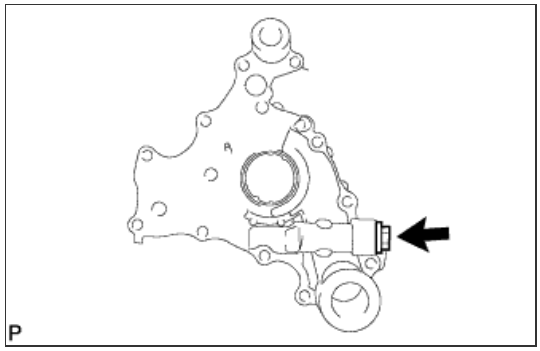
a. Remove the water inlet pipe.



b. Remove the 2 O-rings from the water inlet pipe.

for Preparation Click here

1. REMOVE OIL PUMP COVER

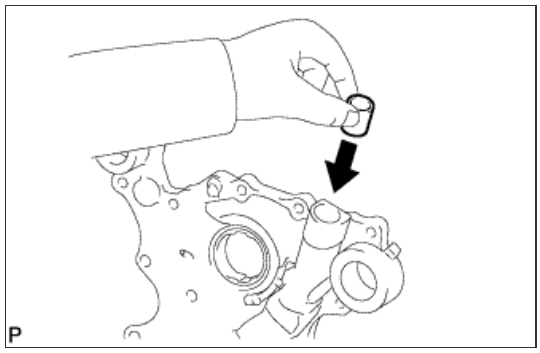


a. Remove the 13 bolts, oil pump cover, drive rotor and driven rotor.

2. REMOVE OIL PUMP RELIEF VALVE

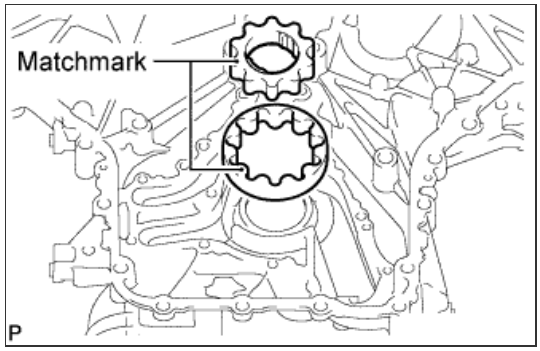
a. Remove the relief valve plug.

b. Remove the valve spring and oil pump relief valve.



for Preparation Click here

1. INSPECT OIL PUMP RELIEF VALVE

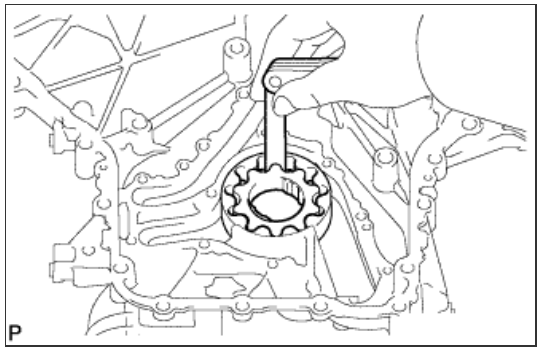


a. Coat the relief valve with engine oil.

b. Check that the relief valve falls smoothly into the valve hole by its own weight. If the relief valve does not fall smoothly, replace it. If necessary, replace the timing chain cover sub-assembly.

2. INSPECT OIL PUMP ROTOR SET

a. Install the rotors to the timing chain cover with the marks of the rotors facing outward. Check that the rotors revolve smoothly.



b. Check the tip clearance.

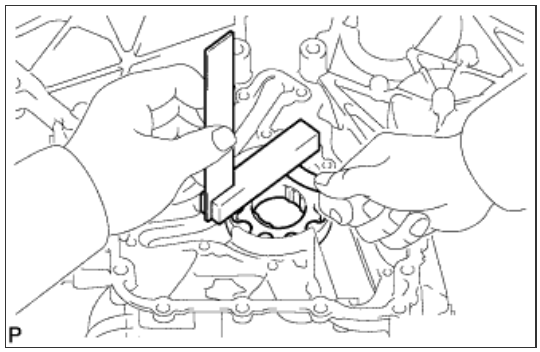
i. Using a feeler gauge, measure the clearance between the drive and driven rotor tips, as shown in the illustration.

Standard tip clearance:
0.180 to 0.300 mm (0.00709 to 0.0118 in.)

Maximum tip clearance:
0.300 mm (0.0118 in.)

If the tip clearance is more than the maximum, replace the drive and driven rotors together.

c. Check the side clearance.



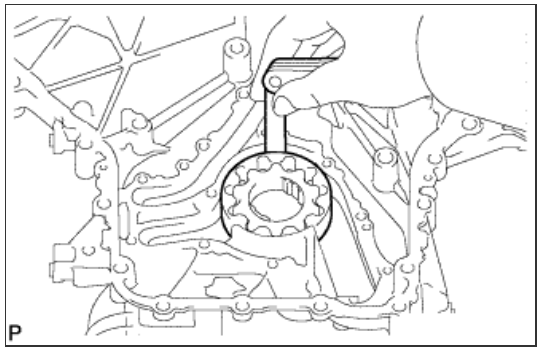
i. Using a feeler gauge and steel square, measure the clearance between the rotors and steel square as shown in the illustration.

Standard side clearance:
0.030 to 0.090 mm (0.00118 to 0.00354 in.)

Maximum side clearance:
0.090 mm (0.00354 in.)

If the side clearance is more than the maximum, replace the timing

chain cover sub-assembly.



d. Check the body clearance.

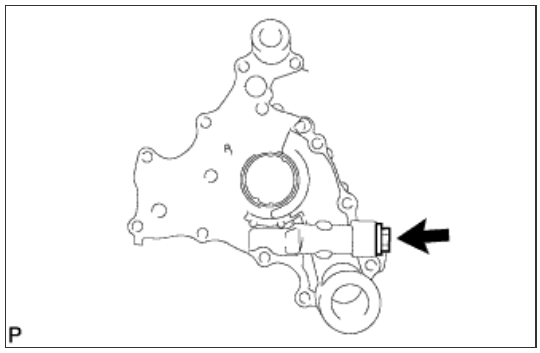
i. Using a feeler gauge, measure the clearance between the timing chain cover and driven rotor as shown in the illustration.

Standard body clearance:
0.175 to 0.250 mm (0.00689 to 0.00984 in.)

Maximum body clearance:
0.250 mm (0.00984 in.)

If the body clearance is more than the maximum, replace the timing chain cover sub-assembly.

for Preparation Click here

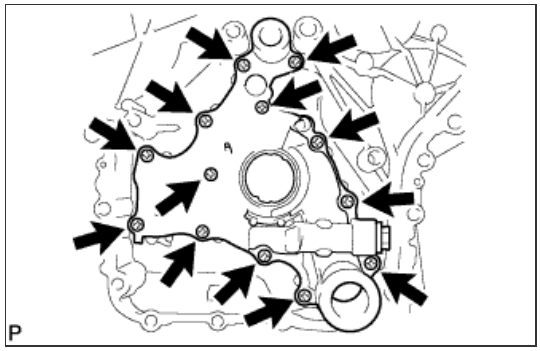


1. INSTALL OIL PUMP RELIEF VALVE

a. Coat the oil pump relief valve with engine oil.

b. Install the relief valve and relief valve spring into the oil pump cover hole.

c. Install the plug.

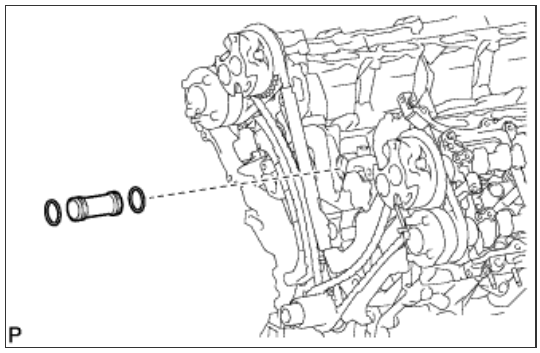


Torque:
53 N*m{ 540 kgf*cm , 39 ft.*lbf }

2. INSTALL OIL PUMP COVER

a. Install the driven rotor, drive rotor and oil pump cover with the 13 bolts.

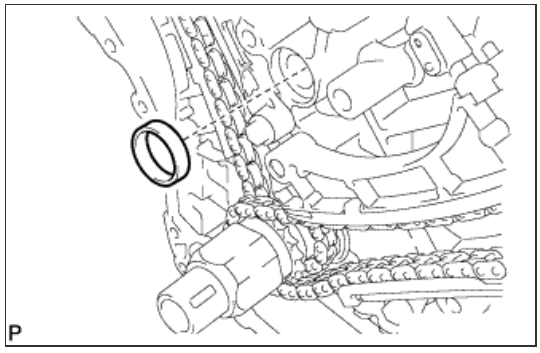
Torque:
10 N*m{ 105 kgf*cm , 8 ft.*lbf }



for Preparation Click here

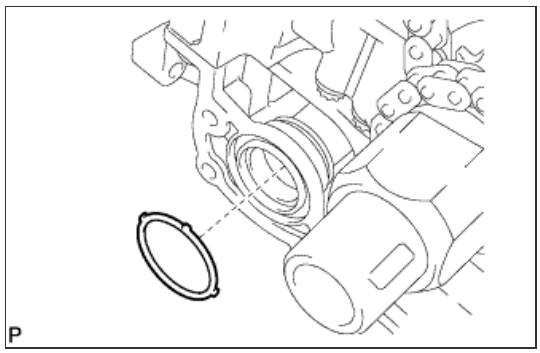
1. INSTALL WATER INLET PIPE

a. Apply soapy water to 2 new O-rings and install them to the inlet pipe.



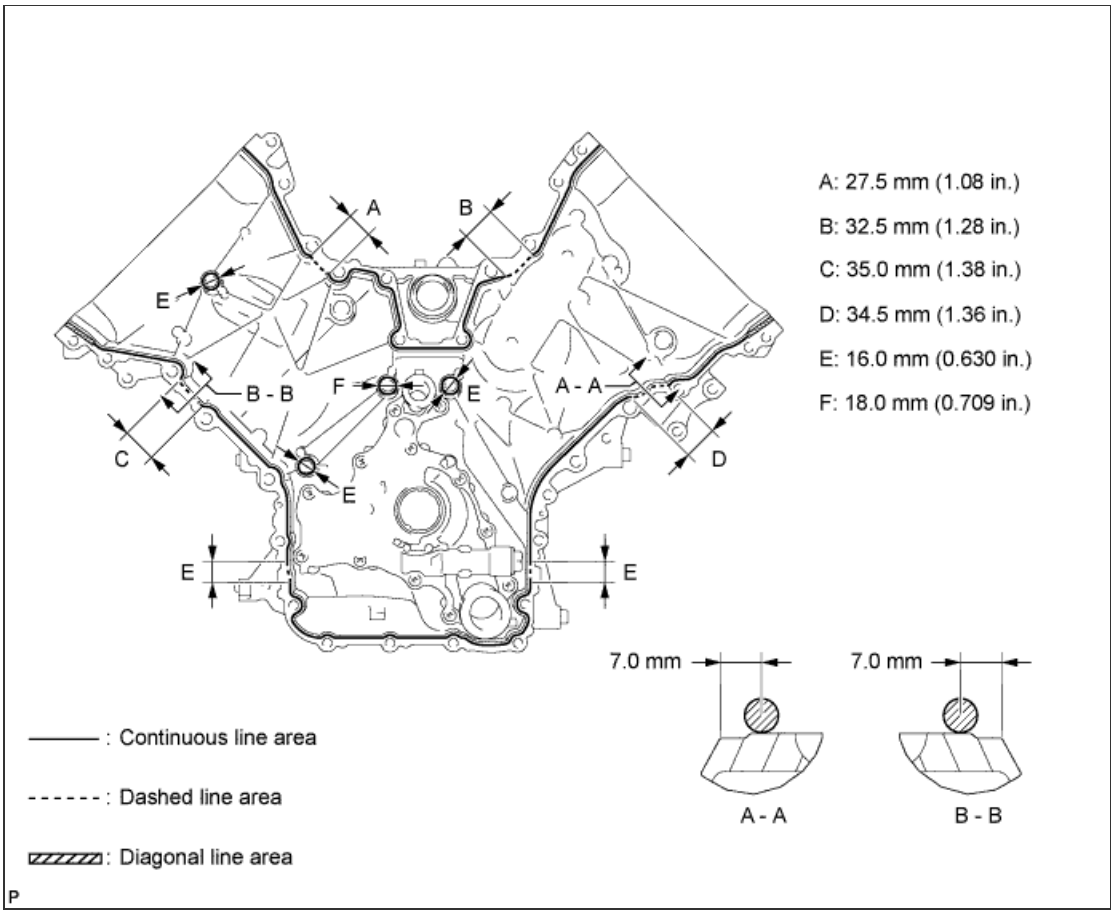
b. Install the inlet pipe to the No. 1 heat exchanger cover.

2. INSTALL TIMING CHAIN COVER SUB-ASSEMBLY



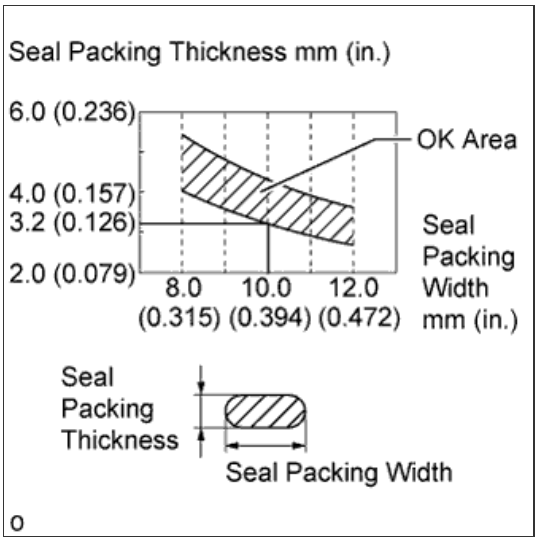
a. Apply a light coat of engine oil to a new oil pump gasket.

b. Install the oil pump gasket.



c. Apply a light coat of engine oil to a new O-ring.

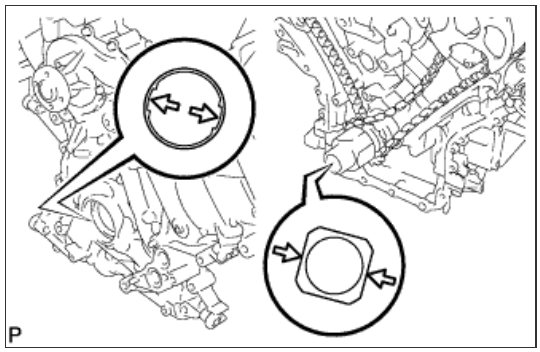
d. Install the O-ring.



e. Apply seal packing in a continuous line to the timing chain cover as shown in the following illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Apply seal packing as follows:

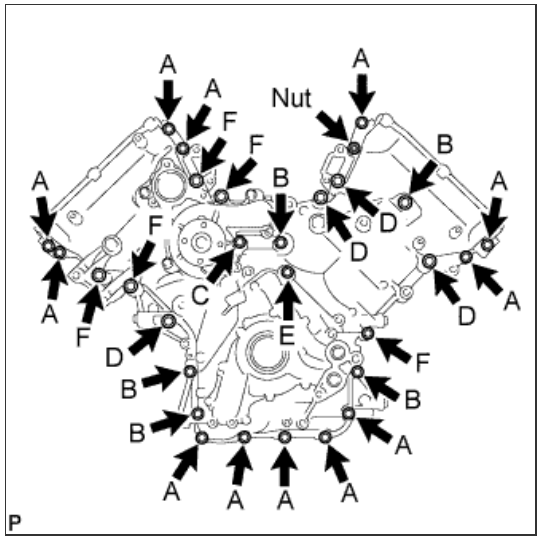


Area	Seal Packing Diameter	Application Position from Inside Edge of Cover
Continuous Line Area	3.0 to 4.0 mm (0.118 to 0.157 in.)	2.5 mm (0.0984 in.)
Dashed Line Area	6.4 mm (0.252 in.) or more, or within OK area shown in illustration	7.0 mm (0.276 in.)
Diagonal Line Area	3.0 to 4.0 mm (0.118 to 0.157 in.)	5.5 mm (0.217 in.)

NOTICE:

- **When the contact surfaces are wet, wipe them with an oil-free cloth before applying seal packing.**
- **Install the chain cover within 3 minutes and tighten the bolts within 10 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after installing.**

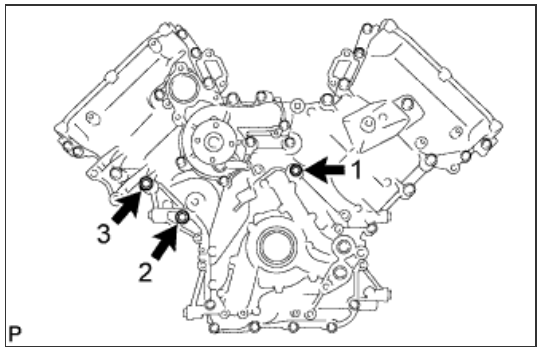
f. Align the oil pump drive rotor spline and crankshaft as shown in the illustration.
Install the spline and chain cover to the crankshaft.



g. Temporarily install the timing chain cover with the 28 bolts and nut.

Standard Bolt:

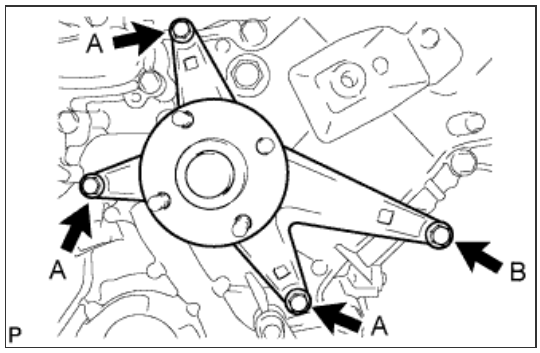
Item	Length	Thread Diameter
Bolt A	25 mm (0.984 in.)	8 mm (0.315 in.)
Bolt B	55 mm (2.17 in.)	8 mm (0.315 in.)
Bolt C	70 mm (2.76 in.)	8 mm (0.315 in.)
Bolt D	35 mm (1.38 in.)	10 mm (0.394 in.)
Bolt E	55 mm (2.17 in.)	10 mm (0.394 in.)
Bolt F	80 mm (3.15 in.)	10 mm (0.394 in.)



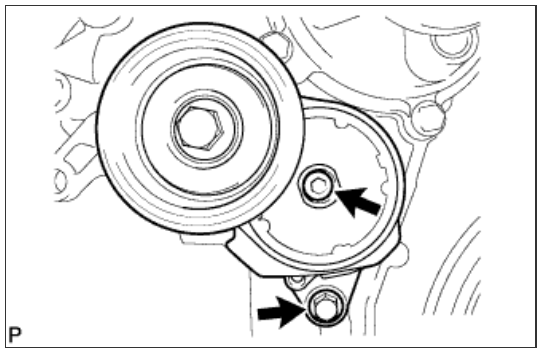
NOTICE:

Make sure that there is no oil on the bolt threads.

h. Tighten the 3 bolts in several steps in the sequence shown in the illustration.



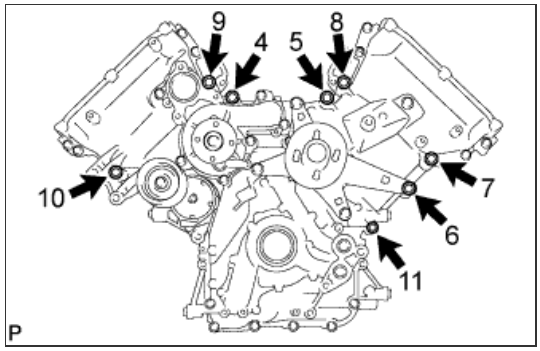
Torque:
47 N*m{ 479 kgf*cm , 35 ft.*lbf }



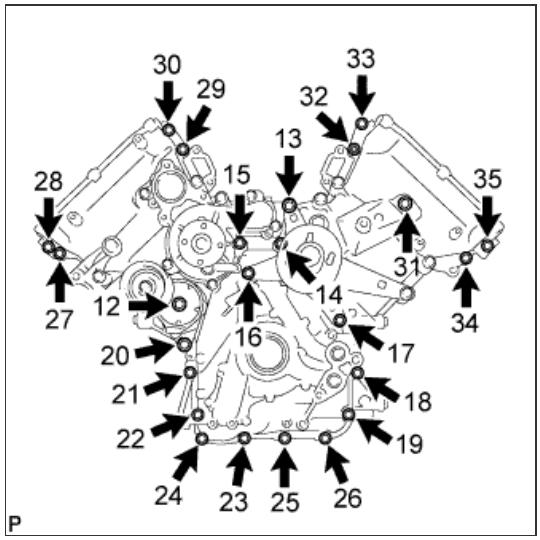
i. Temporarily install the fluid coupling bracket with the 4 bolts.

Standard Bolt:

Item	Length	Thread Diameter
Bolt A	70 mm (2.76 in.)	8 mm (0.315 in.)
Bolt B	80 mm (3.15 in.)	10 mm (0.394 in.)

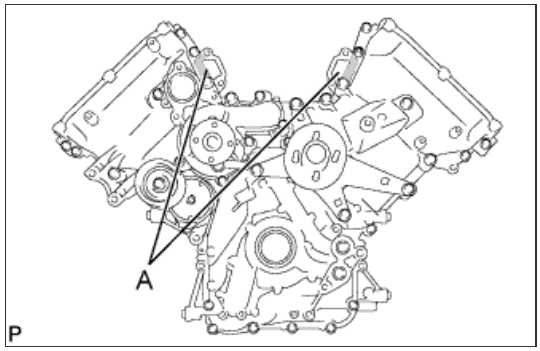


j. Temporarily install the belt tensioner with the standard bolt and 6 mm hexagon wrench bolt.



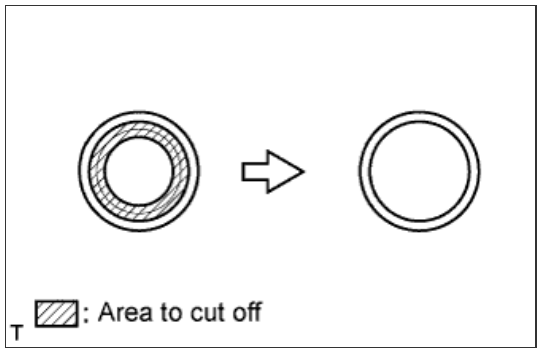
k. Tighten the 8 bolts labeled 4 to 11 in several steps in the sequence shown in the illustration.

Torque:
47 N*m{ 479 kgf*cm , 35 ft.*lbf }



l. Tighten the 23 bolts and nut labeled 12 to 35 in several steps in the sequence shown in the illustration.

Torque:
23 N*m{ 235 kgf*cm , 17 ft.*lbf }

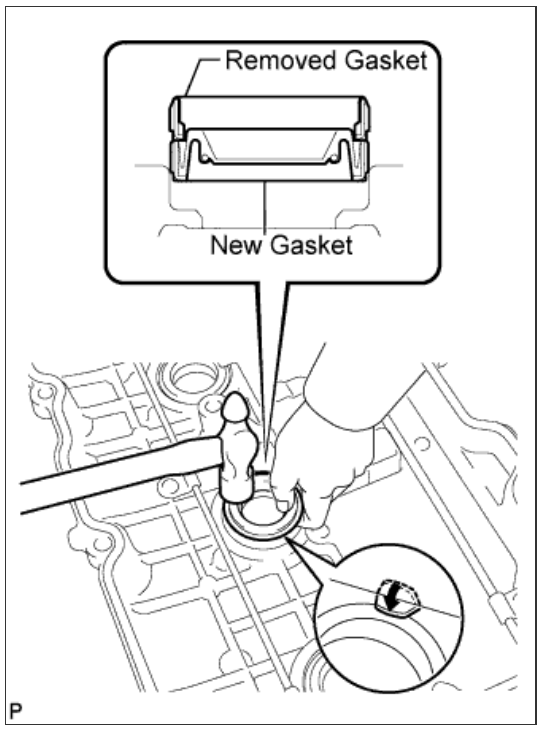


NOTICE:

After the installation, if the seal packing has seeped out at the areas labeled A shown in the illustration, wipe it off.

3. INSTALL SPARK PLUG TUBE GASKET

a. Using a cutter knife, cut off the seal part of the removed gasket.



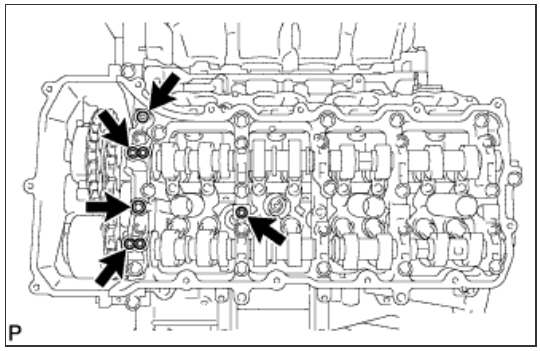
b. Using the removed gasket and a hammer, tap in a new gasket until it stops.

HINT:

If the removed gasket does not fit on the new one, correct the removed one with pliers.

c. Apply a light coat of MP grease to the lip of the gasket.

d. Return the 4 ventilation baffle plate claws to the original positions.



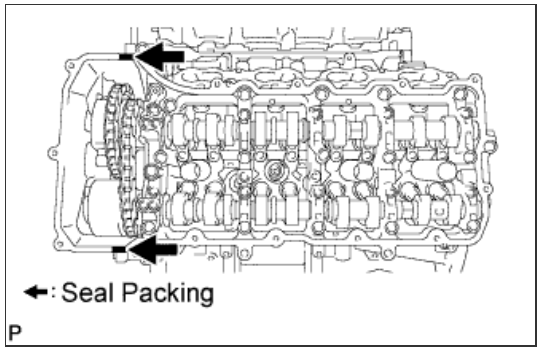
4. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY LH

a. Install 5 new gaskets to the camshaft bearing caps (No. 2, No. 3).

b. Install the gasket to the cylinder head cover.

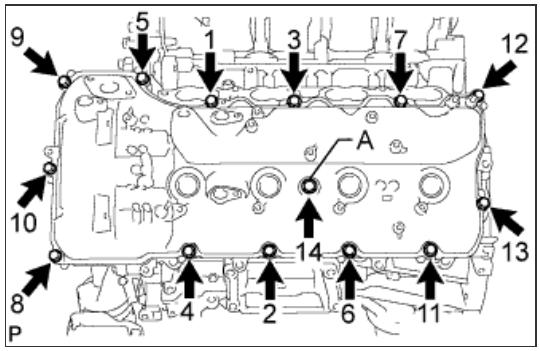
NOTICE:

Remove any oil from the contact surface.



c. Apply seal packing as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

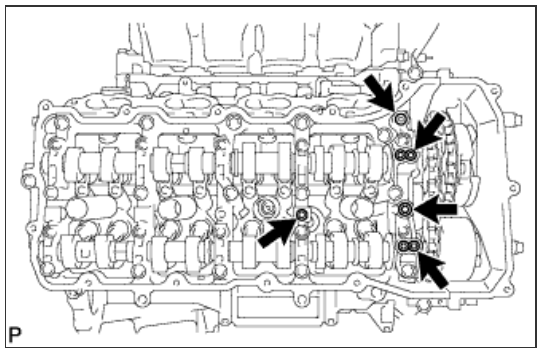


NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**

d. Install the cylinder head cover and the seal washer with the 14 bolts in the order shown in the illustration.

Torque:
for bolt A:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
except bolt A:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }



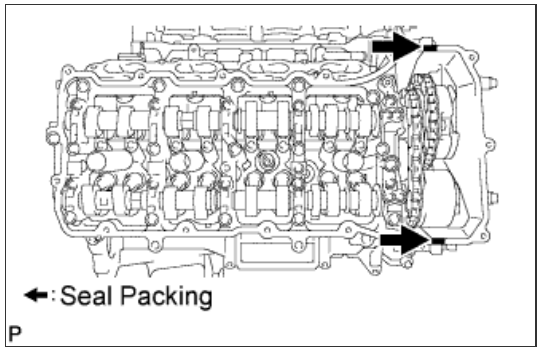
5. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY RH

a. Install 5 new gaskets to the camshaft bearing caps. (No. 1, No. 3).

b. Install the gasket to the cylinder head cover.

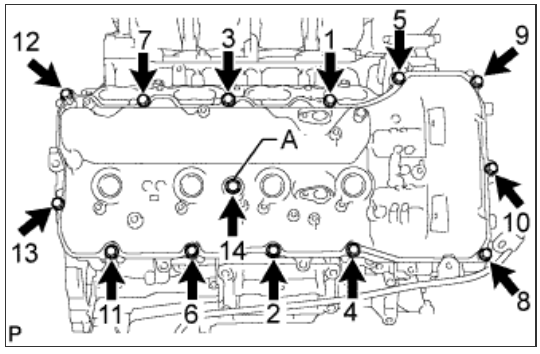
NOTICE:

Remove any oil from the contact surface.



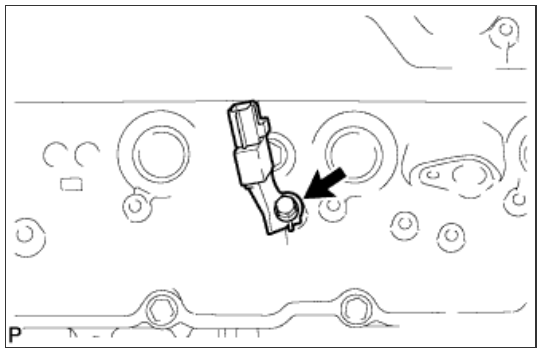
c. Apply seal packing as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent



NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**

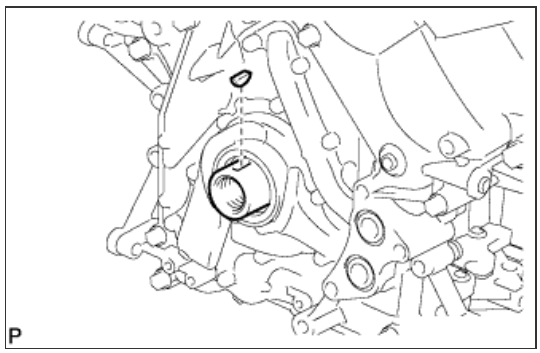


d. Install the cylinder head cover and the seal washer with the 14 bolts in the order shown in the illustration.

Torque:
for bolt A:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
except bolt A:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

e. Install the noise filter to the cylinder head cover with the bolt.

Torque:
7.0 N*m{ 71 kgf*cm , 62 in.*lbf }

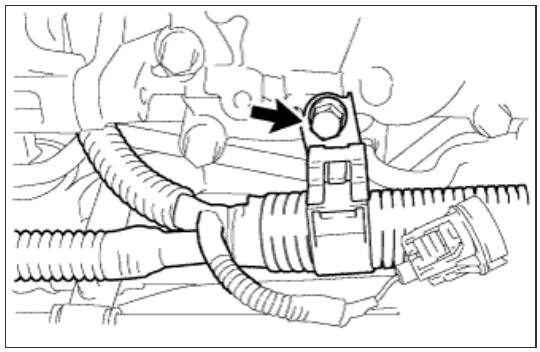


6. INSTALL IGNITION COIL ASSEMBLY

a. Install the 8 ignition coils with the 8 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

7. INSTALL CRANKSHAFT TIMING GEAR KEY

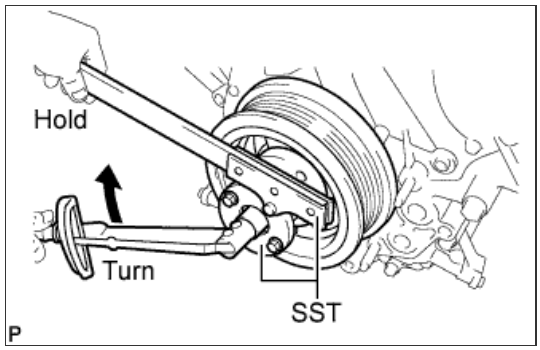


a. Install the crankshaft timing gear key to the crankshaft.

8. CONNECT WIRE HARNESS CLAMP BRACKET

a. Connect the bracket to the timing chain cover with the bolt.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

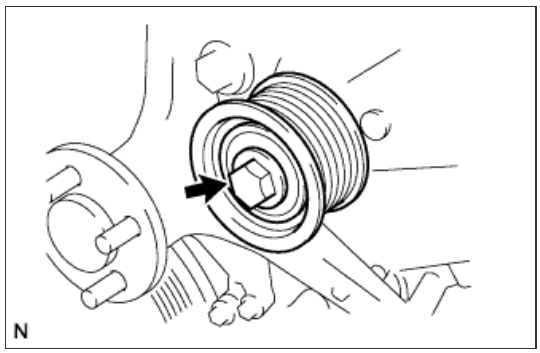


9. INSTALL CRANKSHAFT PULLEY

a. Align the pulley set key with the key groove of the pulley, and slide on the pulley.

b. Using SST, install the pulley set bolt.

SST
09213-70011 (09213-70020)
09330-00021

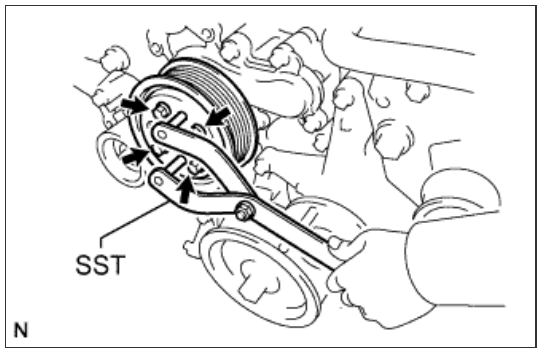


Torque:
300 N*m{ 3059 kgf*cm , 221 ft.*lbf }

10. INSTALL NO. 1 IDLER PULLEY SUB-ASSEMBLY

a. Install the idler pulley with the bolt.

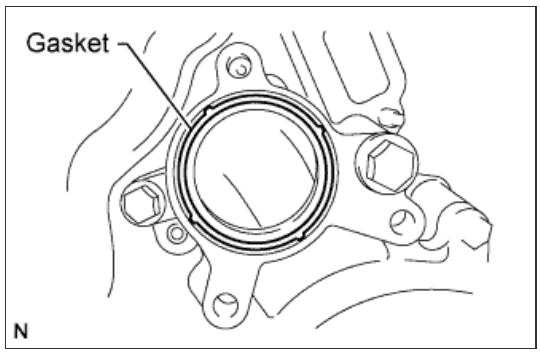
Torque:
43 N*m{ 438 kgf*cm , 32 ft.*lbf }



11. INSTALL WATER PUMP PULLEY

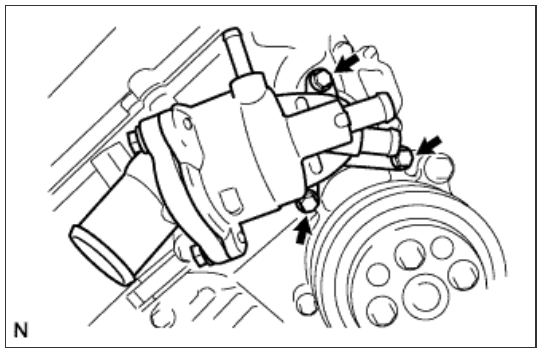
a. Temporarily install the pulley with the 4 bolts.

b. Using SST, hold the pulley and tighten the 4 bolts.



SST
09960-10010 (09962-01000, 09963-01000)

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

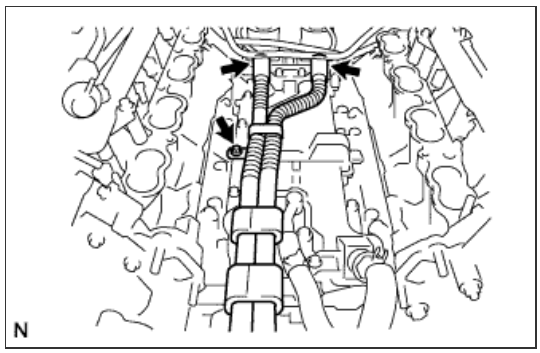


12. INSTALL WATER INLET HOUSING

a. Install a new gasket to the timing chain cover.

b. Install the water inlet with the 3 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

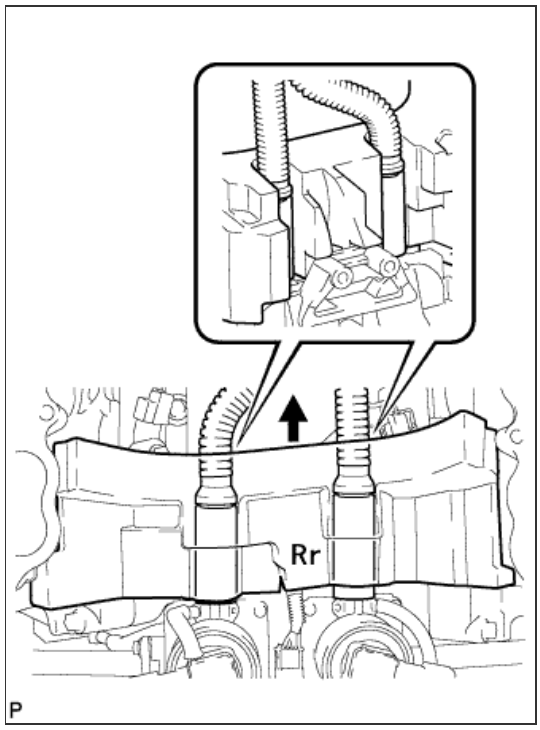


13. INSTALL AIR PIPE SUB-ASSEMBLY

a. Connect the 2 hoses.

b. Install the air pipe with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



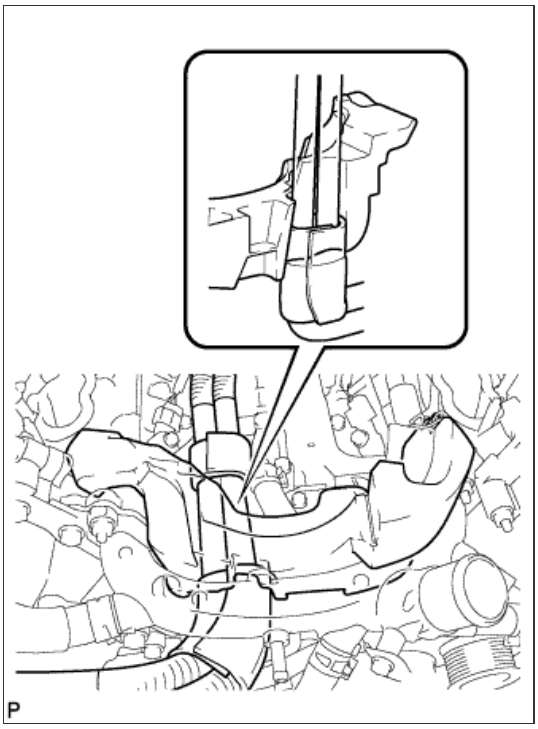
14. INSTALL NO. 1 ENGINE COVER

HINT:

- **Align the No. 1 engine cover cutouts with the air tube.**
- **Align the No. 1 engine cover with the air switching valve surface and cylinder head wall.**

NOTICE:

Make sure that the No. 1 engine cover is flush with the top surface of the intake port of the cylinder head for bank 1 and bank 2.



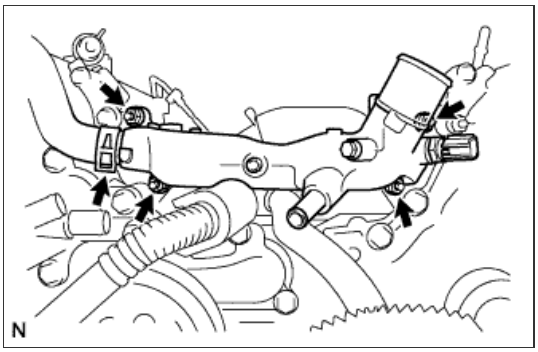
15. INSTALL NO. 2 ENGINE COVER

HINT:

- **Align the No. 2 engine cover cutout with the air tube.**
- **Align the No. 2 engine cover with the front water by-pass joint and cylinder head wall.**

NOTICE:

Make sure that the No. 2 engine cover is flush with the top surface of the intake port of the cylinder head.

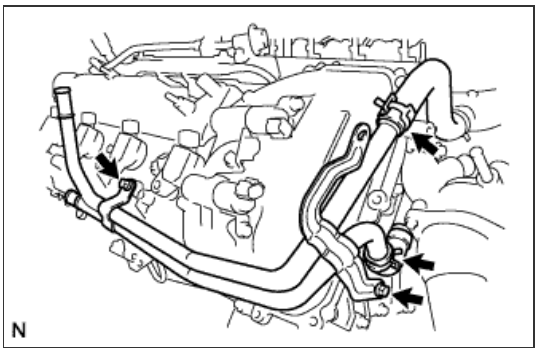


16. INSTALL FRONT WATER BY-PASS JOINT

a. Install 2 new gaskets and the water by-pass joint with the 4 nuts.

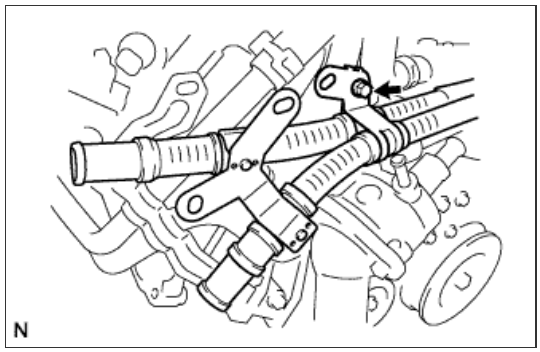
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. Connect the No. 2 water by-pass hose to the water by-pass joint.



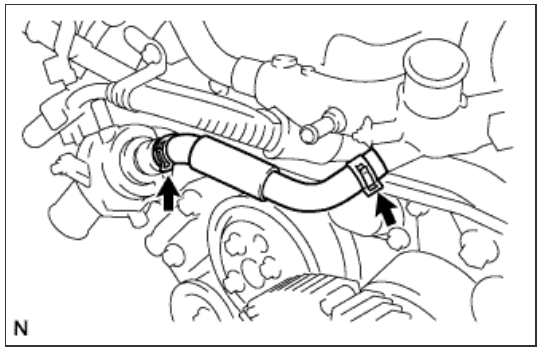
17. INSTALL WATER BY-PASS PIPE SUB-ASSEMBLY

a. Connect the 2 hoses.



b. Install the water by-pass pipe with the 2 bolts.

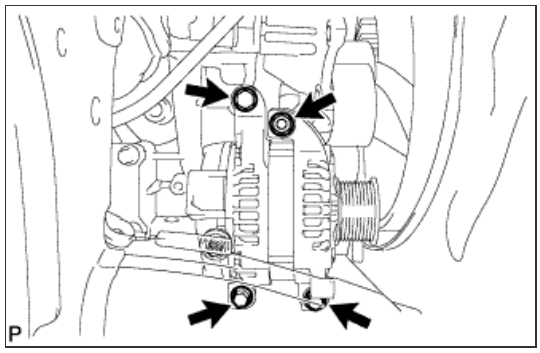
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



c. Connect the air tube with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

18. INSTALL NO. 1 WATER BY-PASS HOSE



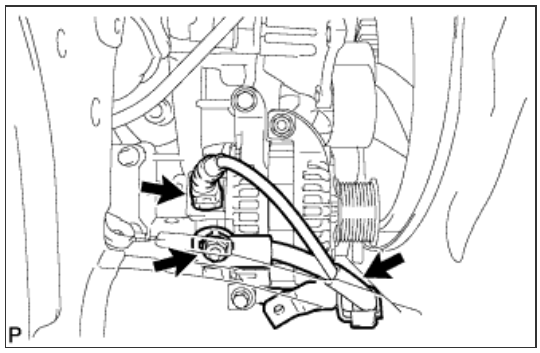
a. Install the No. 1 water by-pass hose by connecting the hose to the water inlet housing and front water by-pass joint.

19. INSTALL GENERATOR ASSEMBLY

a. Install the generator with the 3 bolts and nut.

Torque:
43 N*m{ 438 kgf*cm , 32 ft.*lbf }

b. Connect the generator connector.

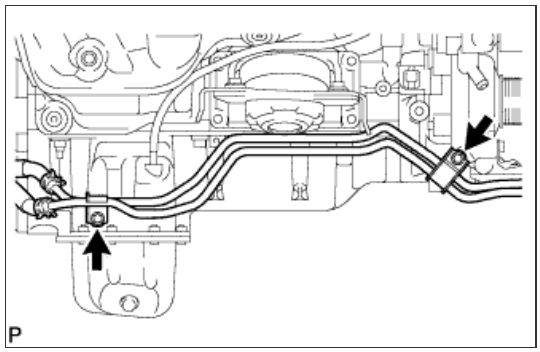


c. Connect the generator wire with the nut.

Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

d. Install the terminal cap.

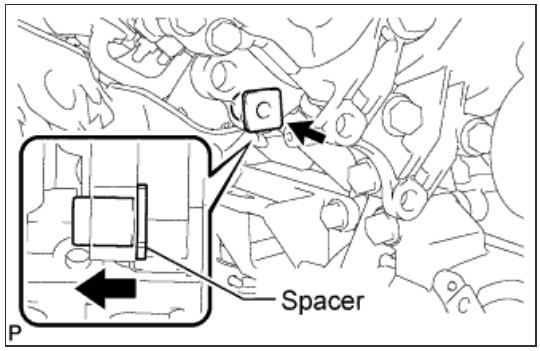
e. Install the harness bracket to the generator with the bolt.



Torque:
31 N*m{ 316 kgf*cm , 23 ft.*lbf }

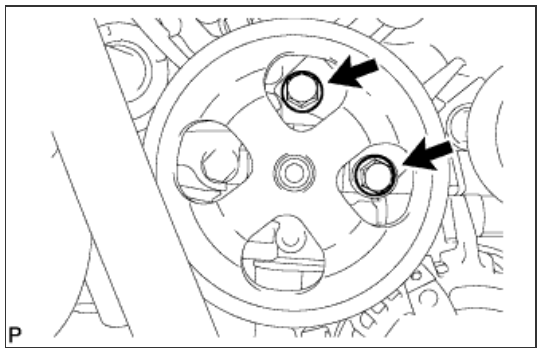
20. CONNECT OIL COOLER PIPE ASSEMBLY

a. Connect the oil cooler pipe with the 2 bolts.



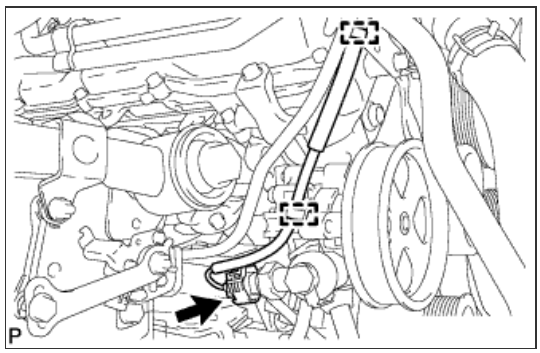
Torque:
14 N*m{ 143 kgf*cm , 10 ft.*lbf }

21. CONNECT VANE PUMP ASSEMBLY



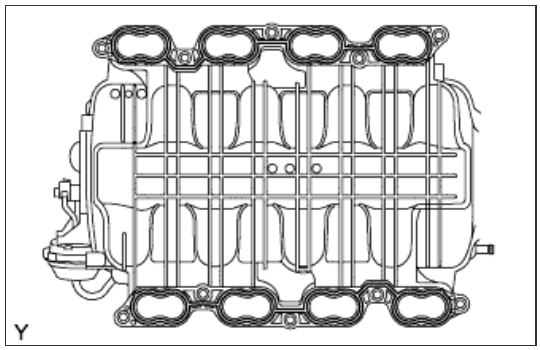
HINT:

Before performing the following procedures, move the spacer until the vane pump can be installed.



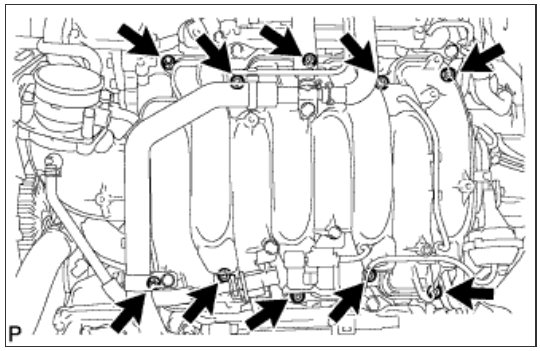
a. Connect the vane pump to the timing chain cover with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



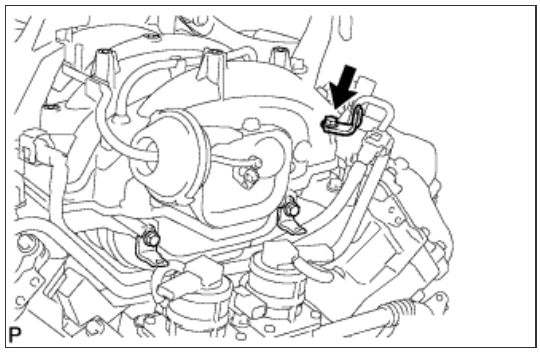
b. Connect the 2 clamps and power steering oil pressure switch connector.

22. INSTALL INTAKE MANIFOLD



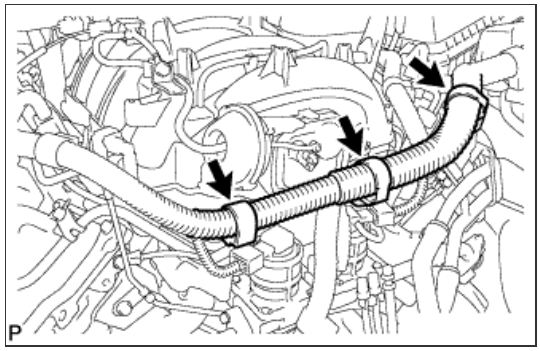
a. Place 2 new gaskets on the intake manifold.

b. Place the intake manifold on the cylinder head.

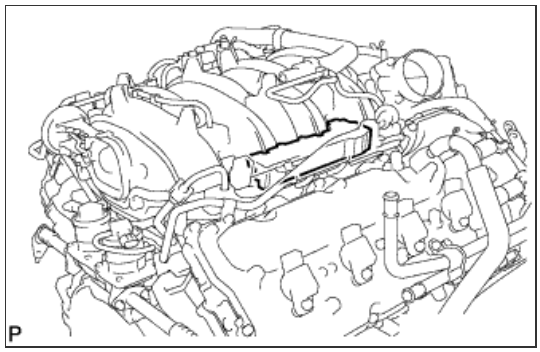


c. Install and uniformly tighten the 8 bolts and 2 nuts in several steps.

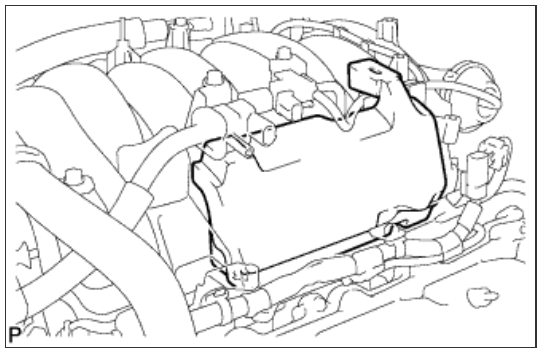
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



d. Install the wire bracket to the intake manifold with the bolt.

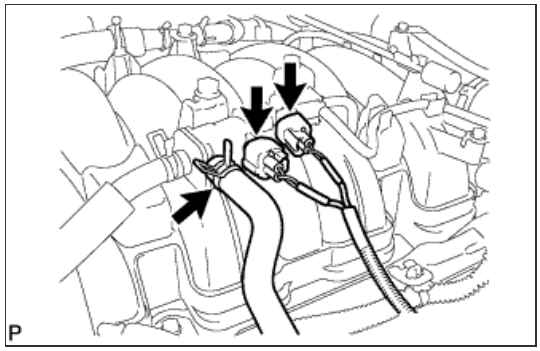


Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

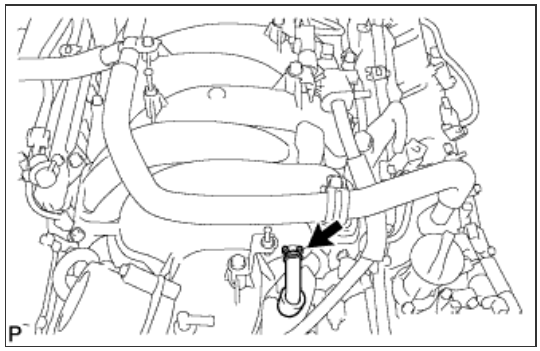


e. Connect the 3 wire clamps to the 3 wire brackets.

f. Install the No. 3 engine cover.



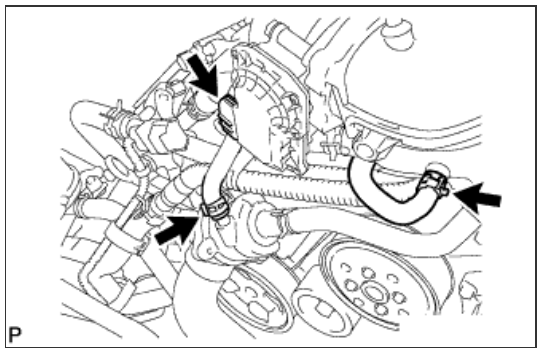
g. Install the No. 1 engine cover sub-assembly.



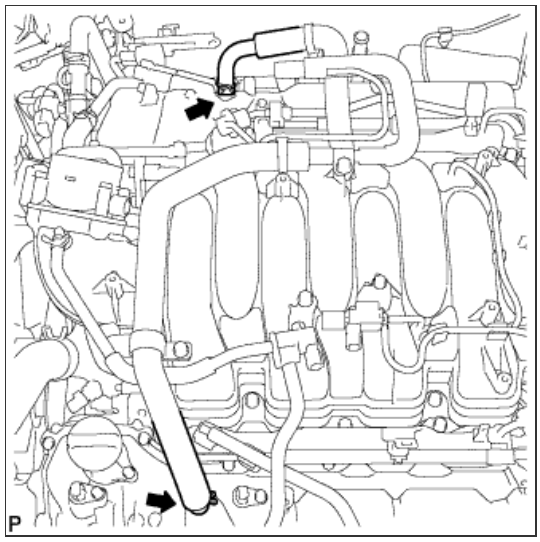
h. Connect the purge VSV connector.

i. Connect the purge line hose to the purge VSV.

j. Connect the vacuum switching valve connector (for ACIS).

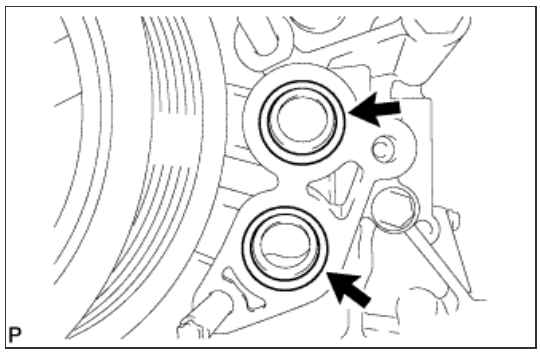


k. Connect the No. 1 ventilation hose.



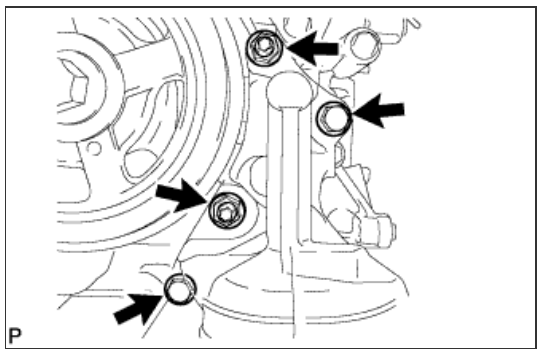
l. Connect the 2 water by-pass hoses.

m. Connect the throttle body connector.



n. Connect the ventilation hose to the ventilation pipe of the cylinder head cover LH and RH.

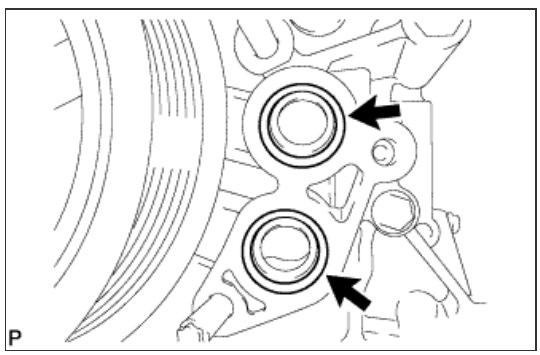
23. INSTALL OIL FILTER BRACKET (w/o Oil Cooler)



a. Apply a light coat of engine oil to 2 new O-rings.

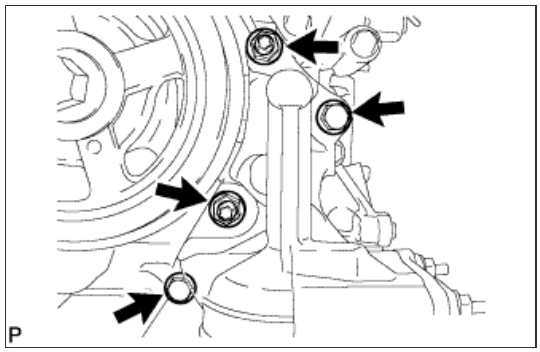
b. Install the 2 O-rings to the timing chain cover.

c. Install the oil filter bracket with the 2 bolts and 2 nuts.



Torque:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }

24. INSTALL OIL FILTER BRACKET (w/ Oil Cooler)

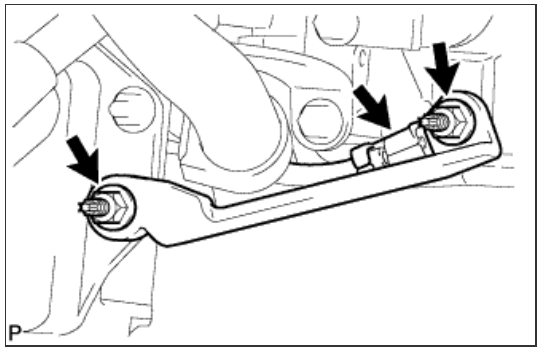


a. Apply a light coat of engine oil to 2 new O-rings.

b. Install the 2 O-rings to the timing chain cover.

c. Install the oil filter bracket with the 2 nuts and 2 bolts.

Torque:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }

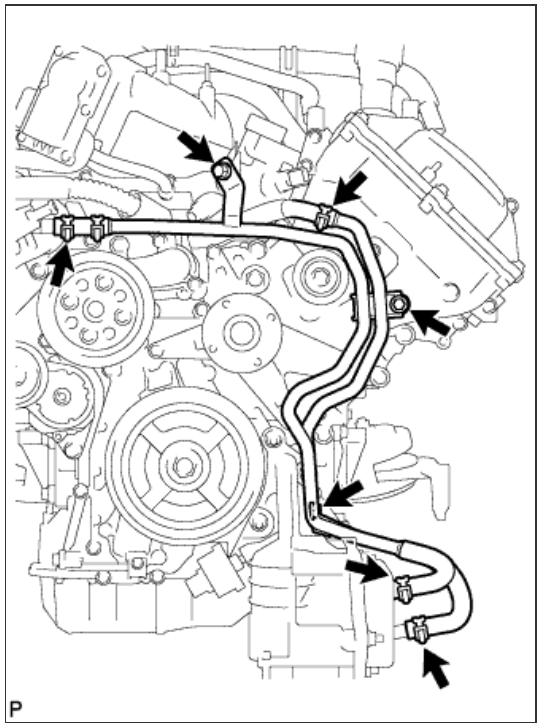


25. INSTALL NO. 1 OIL COOLER BRACKET (w/ Oil Cooler)

a. Connect the ground wire to the cylinder block.

b. Install the oil cooler bracket with the 2 nuts.

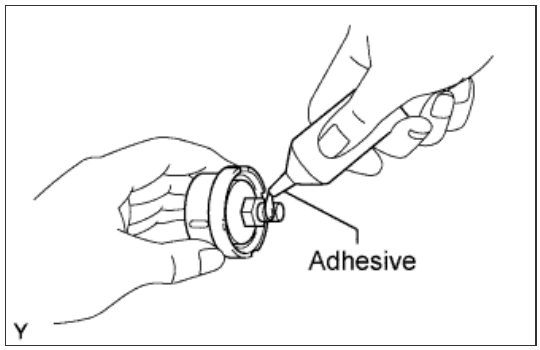
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



26. INSTALL NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY (w/ Oil Cooler)

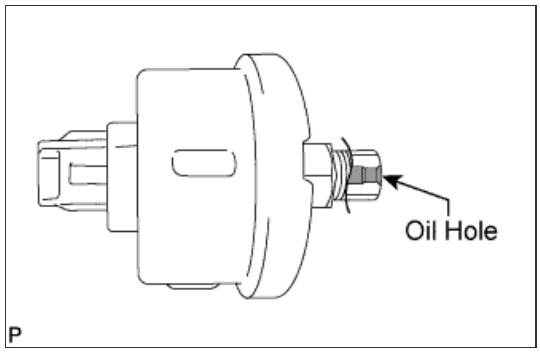
a. Connect the 4 hoses.

b. Install the water by-pass pipe with the 3 bolts.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

27. INSTALL OIL PRESSURE SENDER GAUGE ASSEMBLY

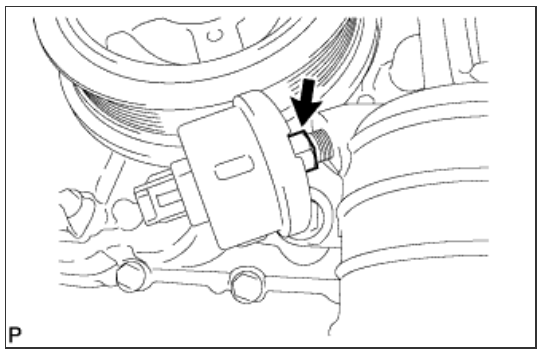


a. Apply adhesive to 2 or 3 threads of the oil pressure sender gauge.

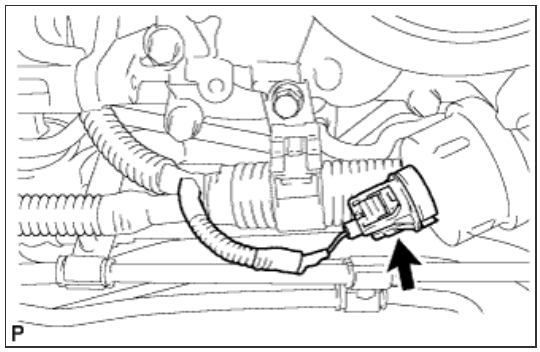
Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

NOTICE:

Do not allow adhesive to contact the oil hole.



b. Install the oil pressure sender gauge.



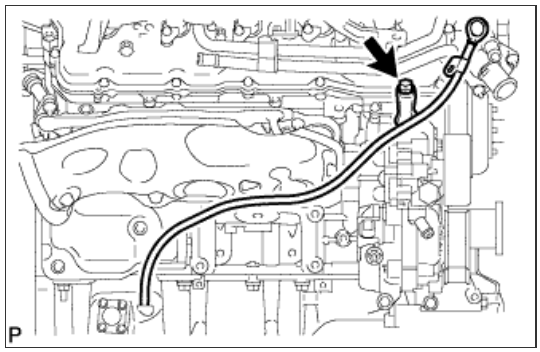
Torque:
15 N*m{ 153 kgf*cm , 11 ft.*lbf }

NOTICE:

Do not start the engine within 1 hour after installation.

c. Connect the sender gauge connector.

28. INSTALL ENGINE OIL LEVEL DIPSTICK GUIDE



a. Apply a light coat of engine oil to a new O-ring.

b. Install the O-ring to the guide.

c. Install the dipstick guide with the bolt.

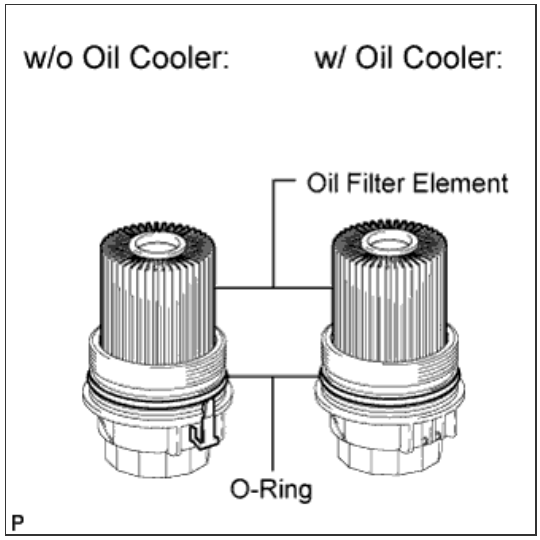
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

d. Install the dipstick.

29. INSTALL OIL FILTER ELEMENT

a. Clean the inside of the oil filter cap, its threads and its O-ring groove.

b. Apply a small amount of engine oil to a new O-ring and install it to the oil filter cap.



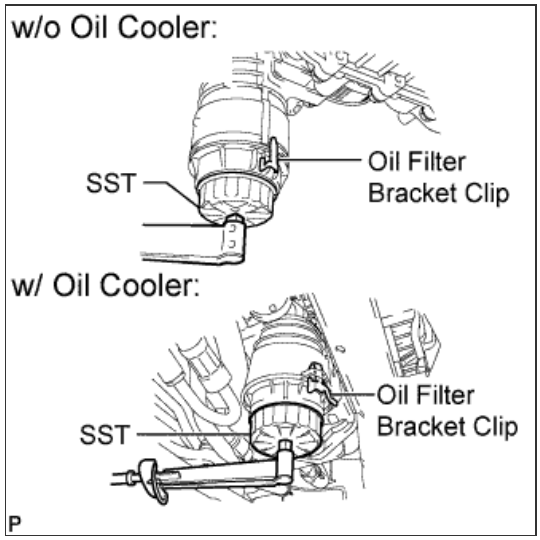
c. Set a new oil filter element to the oil filter cap.

d. Remove any dirt or foreign matter from the installation surface of the engine.

e. Apply a small amount of engine oil to the O-ring again and temporarily install the oil filter cap.

NOTICE:

Do not remove the oil filter bracket clip.



f. Using SST, tighten the oil filter cap.

SST
09228-06501

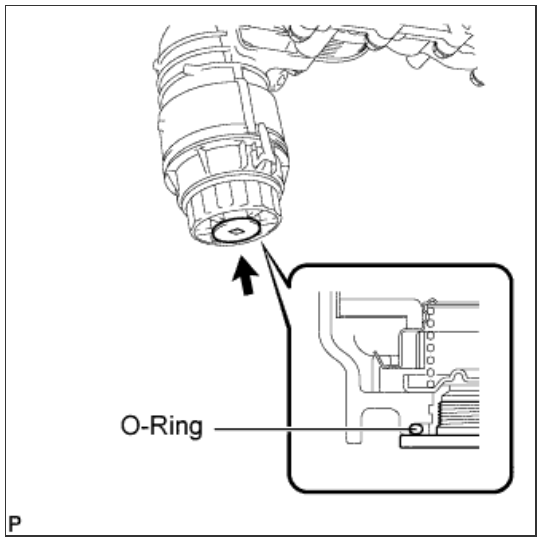
Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf }

NOTICE:

- **When tightening the oil filter cap, do not remove the oil filter bracket clip.**
- **Make sure that the oil filter is installed securely as shown in the illustration.**
- **Be careful that the O-ring does not get caught between any surrounding parts.**

g. Apply a small amount of engine oil to a new drain plug O-ring, and install it to the oil filter cap.

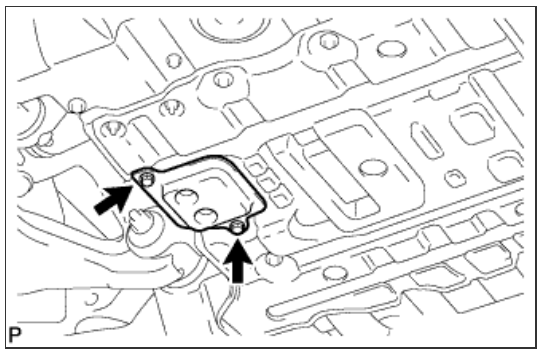
NOTICE:



Before installing the O-ring, remove any dirt or foreign matter from the installation surface of the oil filter cap.

h. Install the oil filter drain plug.

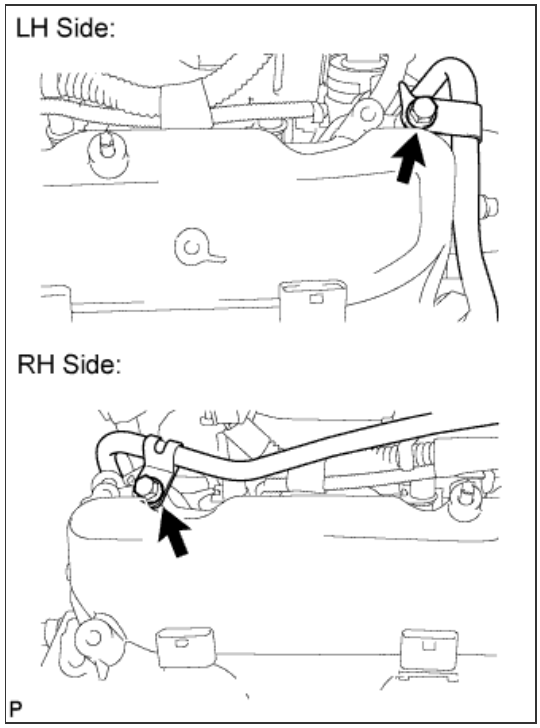
Torque:
13 N*m{ 127 kgf*cm , 9 ft.*lbf }



NOTICE:

Be careful that the O-ring does not get caught between any surrounding parts.

i. Install the No. 2 engine under cover seal with the 2 bolts.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

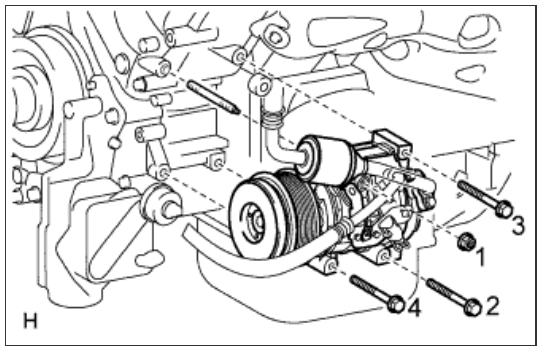
30. CONNECT NO. 2 FUEL TUBE SUB-ASSEMBLY

a. Connect the fuel tube with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

31. CONNECT COOLER COMPRESSOR ASSEMBLY

a. Install the cooler compressor with the stud bolt.



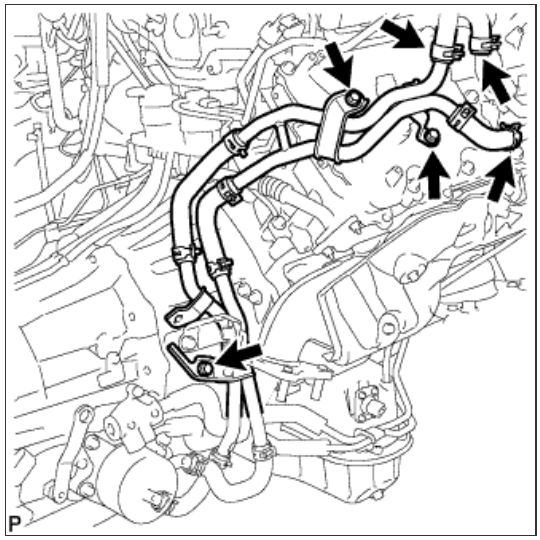
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. Install the 3 bolts and nut.

Torque:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }

NOTICE:

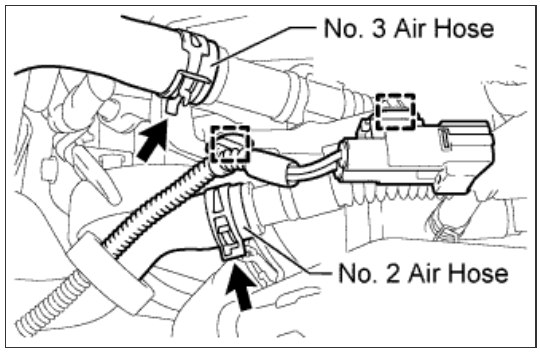
Tighten the bolts and nut in the order shown in the illustration to install the cooler compressor.



32. CONNECT NO. 2 WATER BY-PASS PIPE

a. Connect the No. 2 water by-pass pipe to the cylinder head cover with the 3 bolts.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }



b. Connect the 3 hoses.

33. CONNECT AIR PUMP HOSE AND WIRE HARNESS

a. Connect the No. 2 and No. 3 air hoses.

b. Connect the 2 clamps and air pump wire harness.

34. CONNECT ENGINE WIRE

a. Engine Room RH Side:

i. Connect the 5 clamps.

ii. Connect the throttle position sensor and throttle control motor connector.

iii. Connect the 2 air pump connectors.

iv. Install the ground wire with the 2 bolts.

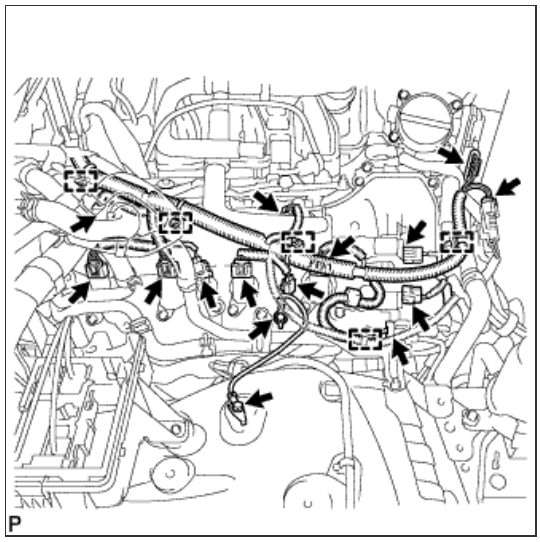
Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

v. Connect the noise filter connector.

vi. Connect the 2 VVT sensor connectors.

HINT:

The wire harnesses on the exhaust side are wrapped with white tape.



vii. Connect the injector connector.

viii. Connect the 4 ignition coil connectors.

ix. Connect the 2 camshaft timing oil control valve connectors.

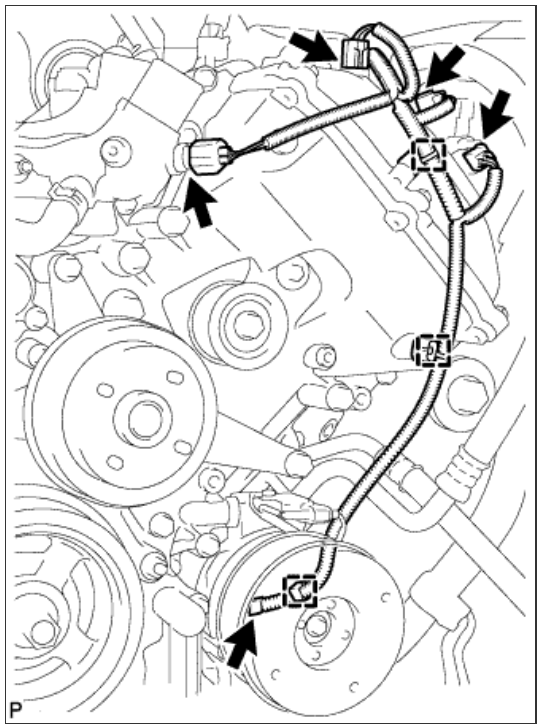
HINT:

The wire harnesses on the exhaust side are wrapped with white tape.

b. Engine Room LH Side:

i. Connect the cooler compressor connector.

ii. Connect the 3 clamps.



iii. Connect the camshaft position sensor connector.

iv. Connect the 2 camshaft timing oil control valve connectors.

HINT:

The wire harnesses on the exhaust side are wrapped with white tape.

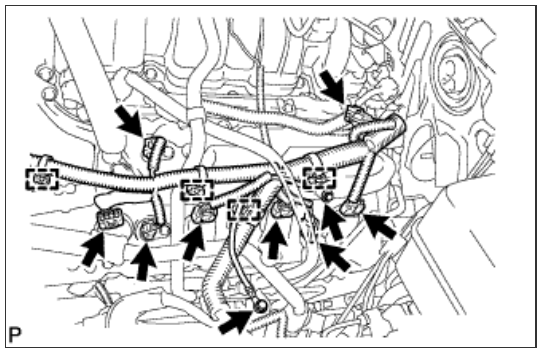
v. Connect the engine coolant temperature sensor connector.

vi. Connect the 4 clamps.

vii. Install the ground wire with the 2 bolts.

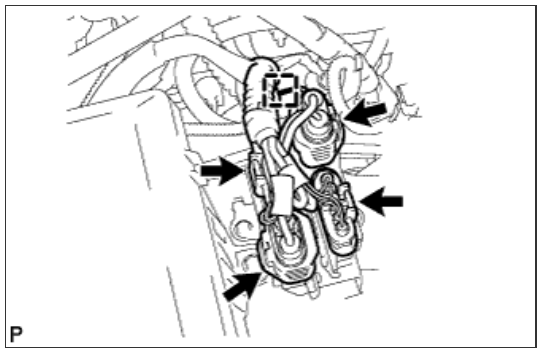
Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

viii. Connect the noise filter connector.



ix. Connect the 2 VVT sensor connectors.

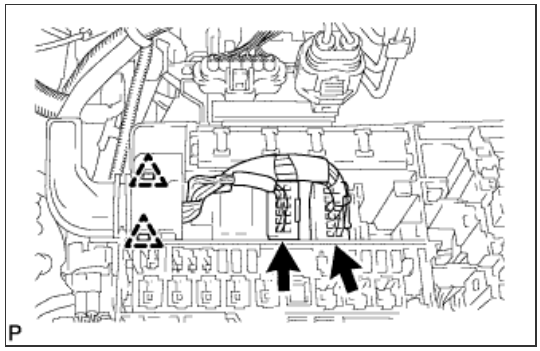
HINT:



The wire harnesses on the exhaust side are wrapped with white tape.

x. Connect the 4 ignition coil connectors.

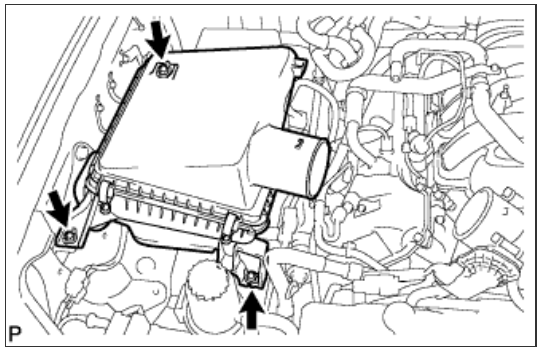
xi. Connect the injector connector.



xii. Connect the wire harness clamp and 4 air injection control driver connectors.

xiii. Connect the 2 connectors and 2 clips to the engine room junction block.

xiv. Install the engine room relay block cover.



35. INSTALL RADIATOR ASSEMBLY

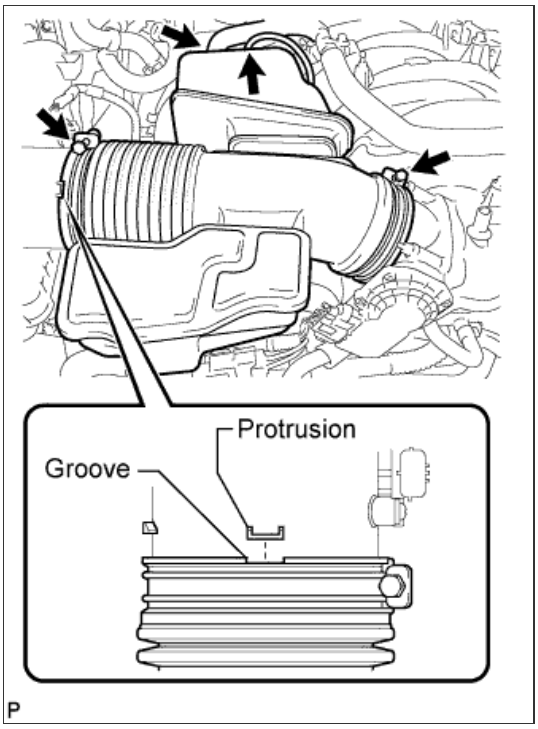
a. Install the radiator (Click here).

36. INSTALL AIR CLEANER ASSEMBLY

a. Install the air cleaner with the 3 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

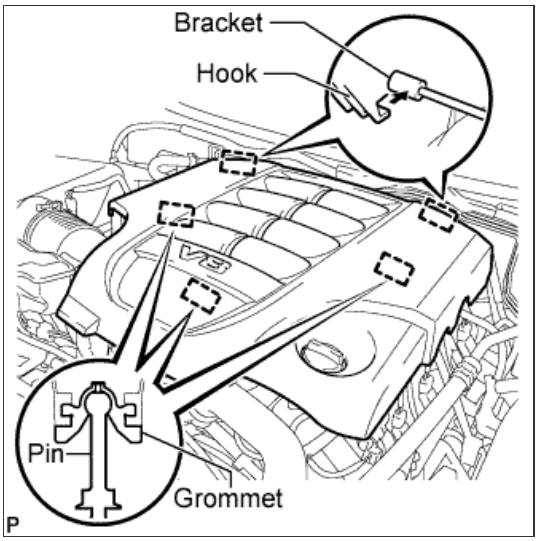
37. INSTALL AIR CLEANER HOSE ASSEMBLY



a. Install the air cleaner hose so that the protrusion of the air cleaner cap aligns with the groove of the hose as shown in the illustration.

b. Tighten the 2 clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }



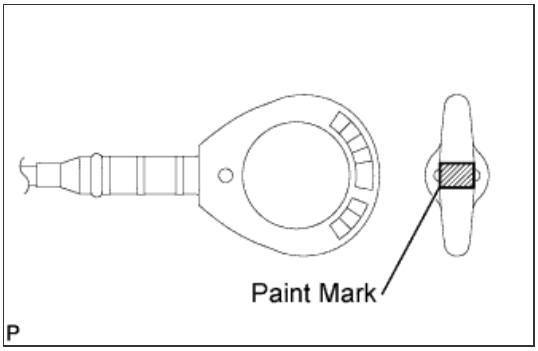
c. Connect the vacuum hose.

d. Connect the No. 2 ventilation hose.

38. INSTALL V-BANK COVER SUB-ASSEMBLY

a. Attach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.

39. ADD ENGINE OIL



a. Add fresh oil and install the oil filler cap.

Standard Oil Grade:

Oil Grade	Oil Viscosity (SAE)
API grade SL "Energy-Conserving", SM "Energy-Conserving" or ILSAC multigrade engine oil API grade SL or SM multigrade engine oil	0W-20 5W-20 5W-30 10W-30 15W-40 20W-50

Standard Oil Capacity:

Paint Mark	Item	Specified Condition
	Drain and refill	7.0 liters (7.4 US

Blue	with oil filter change	qts, 6.2 Imp. qts)
	Drain and refill without oil filter change	6.6 liters (7.0 US qts, 5.8 Imp. qts)
	Dry fill	8.4 liters (8.9 US qts, 7.4 Imp. qts)
Green	Drain and refill with oil filter change	7.5 liters (7.9 US qts, 6.6 Imp. qts)
	Drain and refill without oil filter change	7.1 liters (7.5 US qts, 6.2 Imp. qts)
	Dry fill	9.3 liters (9.8 US qts, 8.2 Imp. qts)

40. ADD ENGINE COOLANT

a. Add engine coolant.

Standard Capacity:

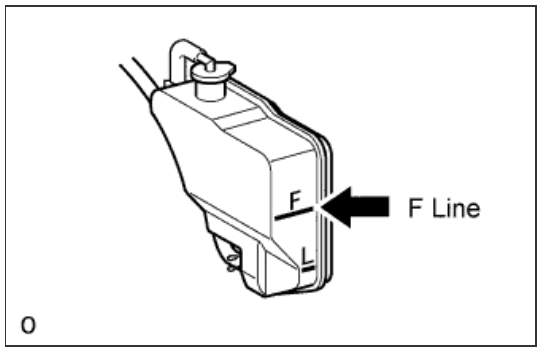
Item	Specified Condition
with transmission oil cooler	16.7 liters (17.6 US qts, 14.7 Imp. qts)
without transmission oil cooler	16.2 liters (17.1 US qts, 14.3 Imp. qts)

NOTICE:

Do not substitute plain water for engine coolant.

HINT:

TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).



b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the reservoir cap.

d. Press the No. 1 and No. 2 radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Start the engine and warm it up until the thermostat opens.

NOTICE:

Switch off the A/C.

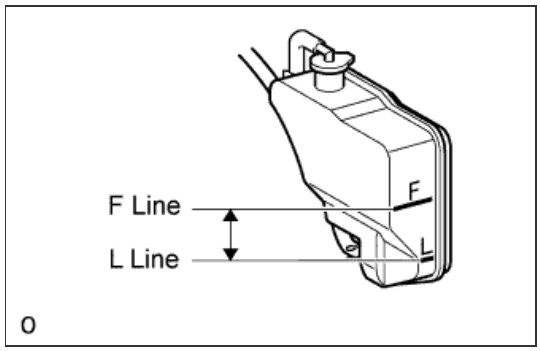
g. Maintain the engine speed at 2000 to 2500 rpm.

NOTICE:

- **Make sure that the radiator reservoir still has some coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**
- **Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the F line.**
- **Run the engine at 2000 rpm until the coolant level has stabilized.**

h. Press the No. 1 and No. 2 radiator hoses several times by hand to bleed air.

CAUTION:



- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the fan.**

i. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

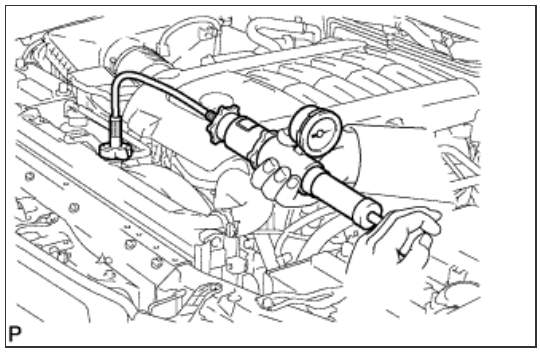
j. Check that the coolant level is between the F and L lines.
If the coolant level is below the L line, repeat all of the procedures above.
If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.

41. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

42. INSPECT FOR OIL LEAK



a. Start the engine. Make sure that there are no oil leaks from the area that was worked on.

43. INSPECT FOR COOLANT LEAK

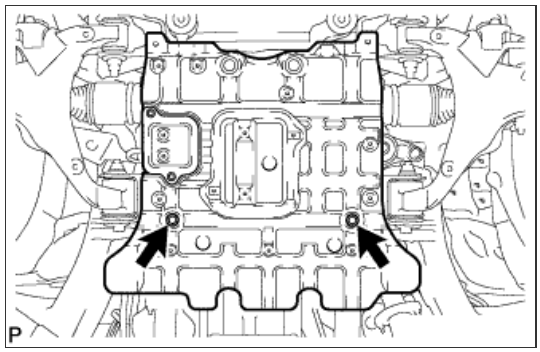
a. Fill the radiator with coolant and attach a radiator cap tester.

b. Warm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.

44. INSPECT ENGINE OIL LEVEL

a. Warm up the engine, stop the engine and wait 5 minutes. The oil level should be between the dipstick low level mark and full level mark.
If low, check for leakage and add oil up to the full level mark.

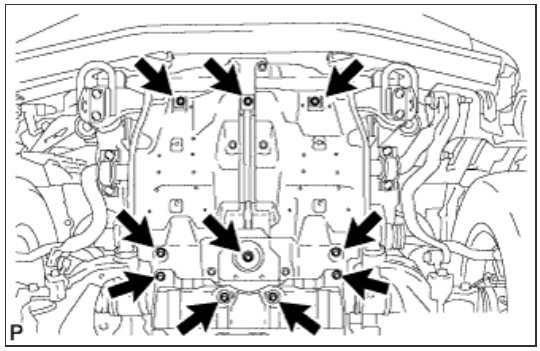


NOTICE:

Do not fill engine oil above the full level mark.

45. INSTALL NO. 2 ENGINE UNDER COVER

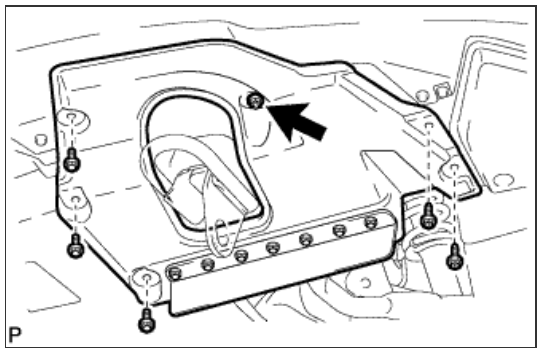
a. Install the No. 2 engine under cover with the 2 bolts.



Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

46. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.

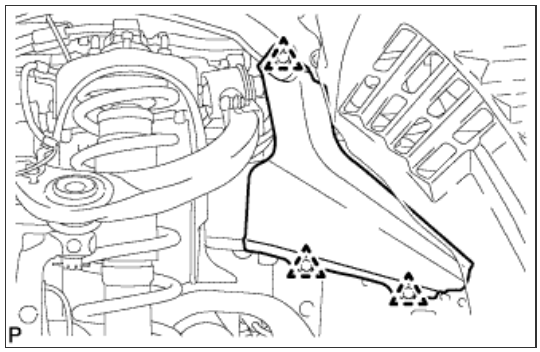


Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

47. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

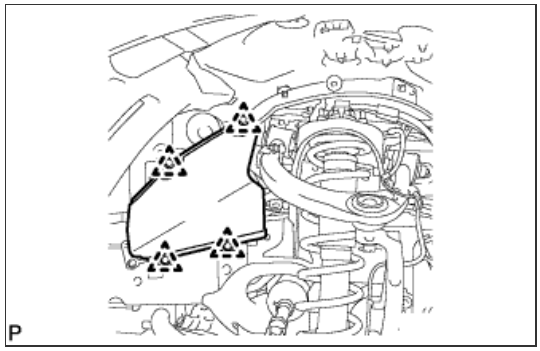
b. Install the 3 bolts and 2 screws.



48. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

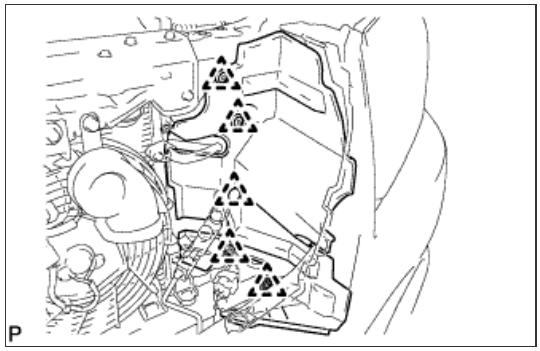


49. INSTALL FRONT FENDER APRON SEAL FRONT RH

a. Install the fender apron seal with the 3 clips.

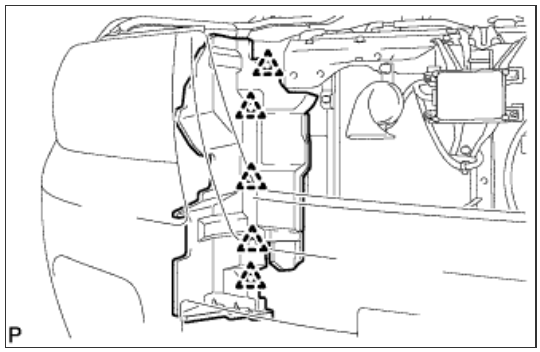
50. INSTALL FRONT FENDER APRON SEAL LH

a. Install the fender apron seal with the 4 clips.



51. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

a. Install the cowl top ventilator louver (Click here).

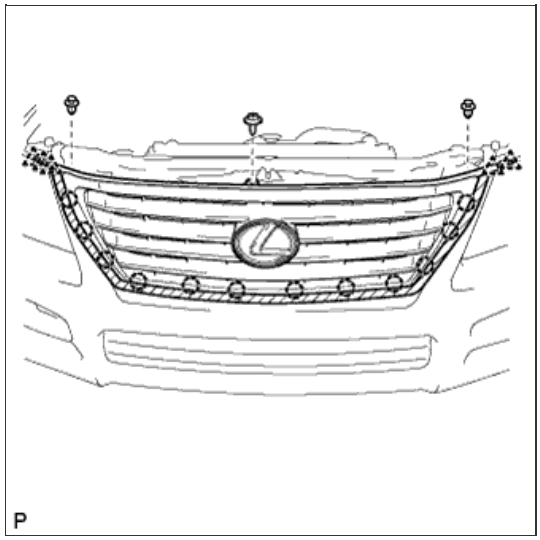


52. CONNECT RADIATOR SIDE DEFLECTOR LH

a. Install the side deflector with the 5 clips.

53. CONNECT RADIATOR SIDE DEFLECTOR RH (w/o Air Cooled Transmission Oil Cooler)

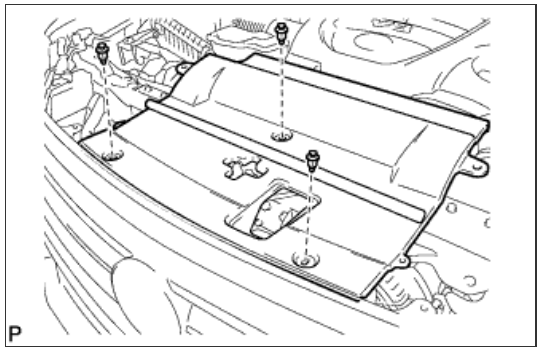
a. Install the side deflector with the 5 clips.



54. INSTALL RADIATOR GRILLE

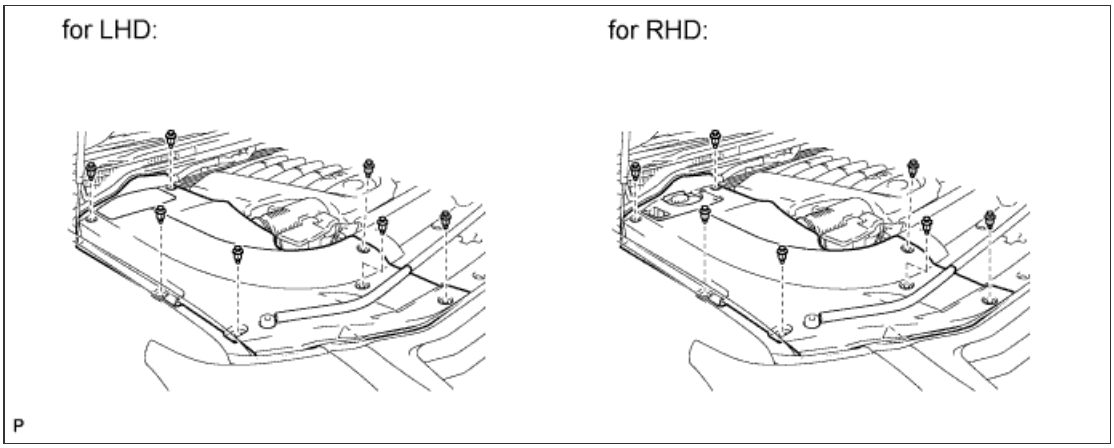
a. w/ Wide View Front Monitor System:
Connect the connector.

b. Attach the 12 claws to install the radiator grille.



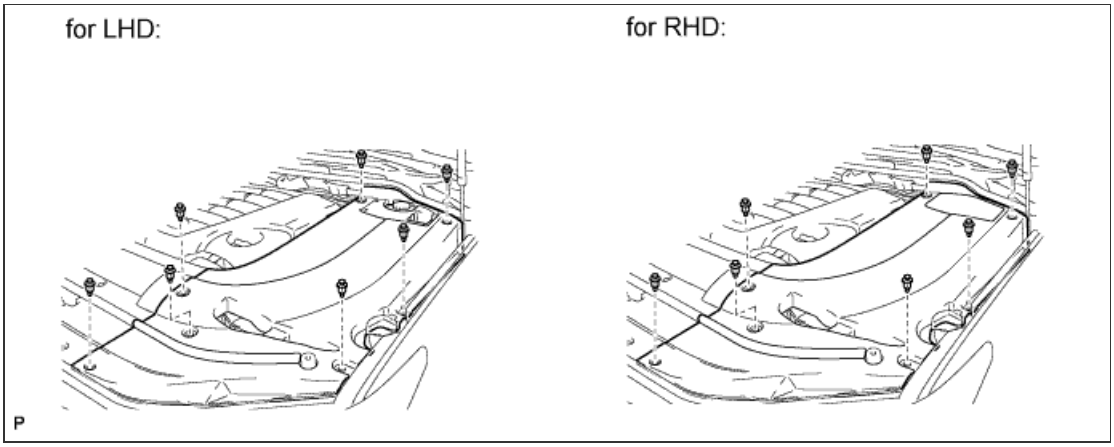
c. Attach the 5 clips to install the detached part of the upper radiator seal.

d. Install the screw and 2 clips.



55. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the upper radiator support seal with the 3 clips.

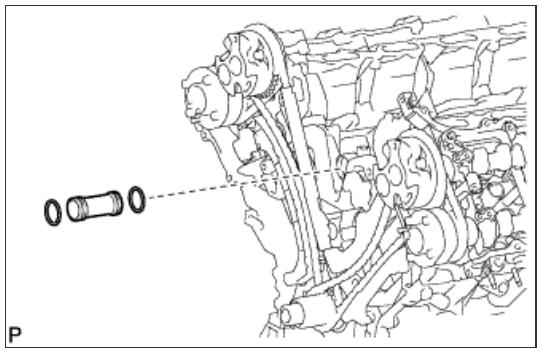


56. INSTALL ENGINE ROOM SIDE COVER RH

a. Install the engine room side cover with the 7 clips.

57. INSTALL ENGINE ROOM SIDE COVER LH

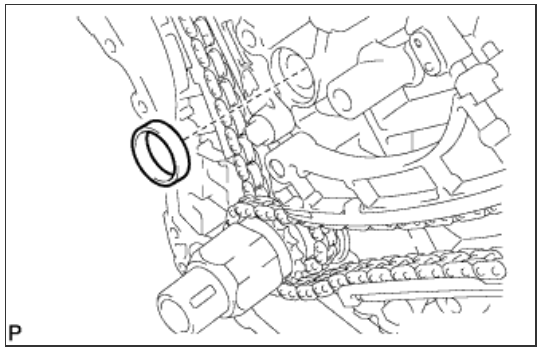
a. Install the engine room side cover with the 7 clips.



for Preparation Click here

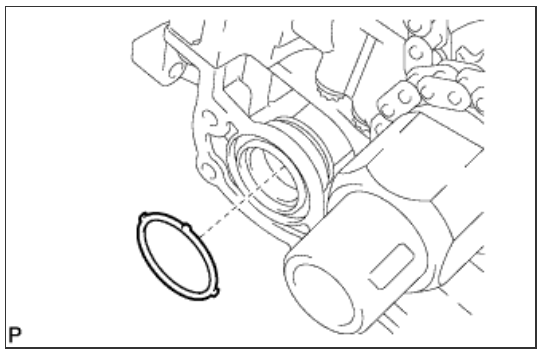
1. INSTALL WATER INLET PIPE

a. Apply soapy water to 2 new O-rings and install them to the inlet pipe.



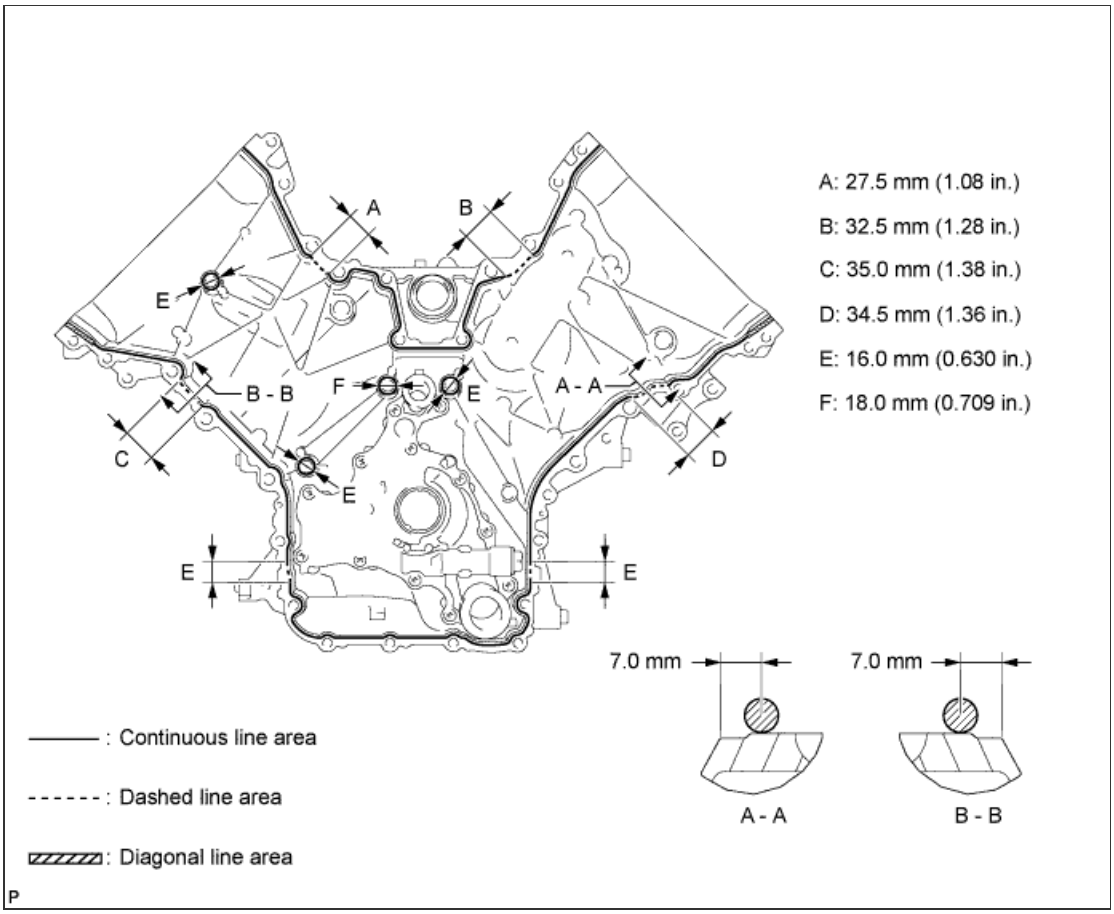
b. Install the inlet pipe to the No. 1 heat exchanger cover.

2. INSTALL TIMING CHAIN COVER SUB-ASSEMBLY



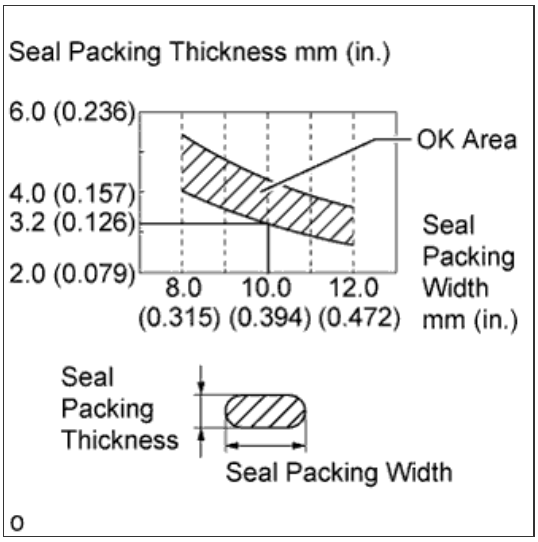
a. Apply a light coat of engine oil to a new oil pump gasket.

b. Install the oil pump gasket.



c. Apply a light coat of engine oil to a new O-ring.

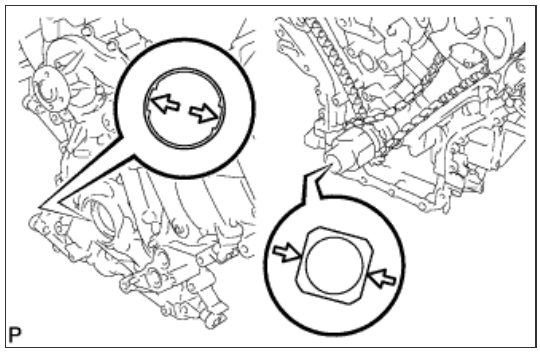
d. Install the O-ring.



e. Apply seal packing in a continuous line to the timing chain cover as shown in the following illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

Apply Seal Packing as Follows:

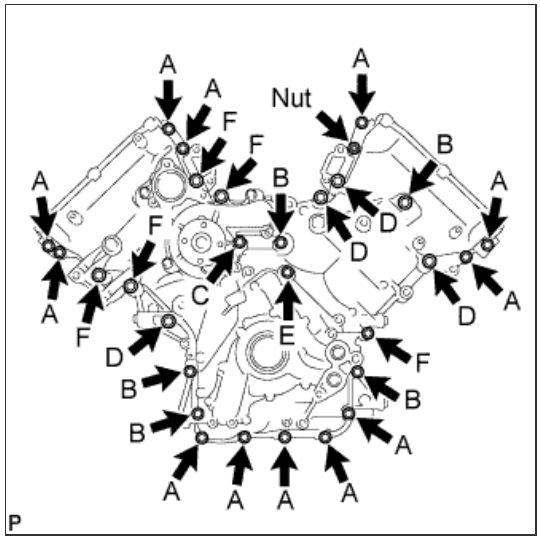


Area	Seal Packing Diameter	Application Position from Inside Edge of Cover
Continuous Line Area	3.0 to 4.0 mm (0.118 to 0.157 in.)	2.5 mm (0.0984 in.)
Dashed Line Area	6.4 mm (0.252 in.) or more, or within OK area shown in illustration	7.0 mm (0.276 in.)
Diagonal Line Area	3.0 to 4.0 mm (0.118 to 0.157 in.)	5.5 mm (0.217 in.)

NOTICE:

- **When the contact surfaces are wet, wipe them with an oil-free cloth before applying seal packing.**
- **Install the chain cover within 3 minutes and tighten the bolts within 10 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after installing.**

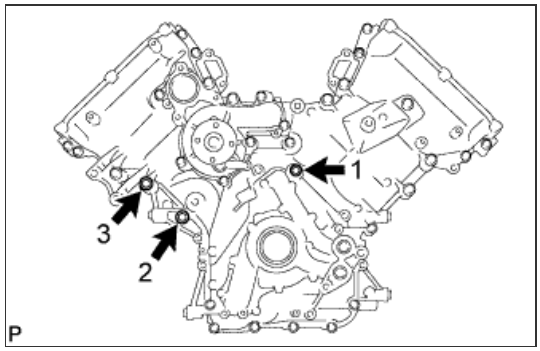
f. Align the oil pump drive rotor spline and crankshaft as shown in the illustration.
Install the spline and chain cover to the crankshaft.



g. Temporarily install the timing chain cover with the 28 bolts and nut.

Standard Bolt:

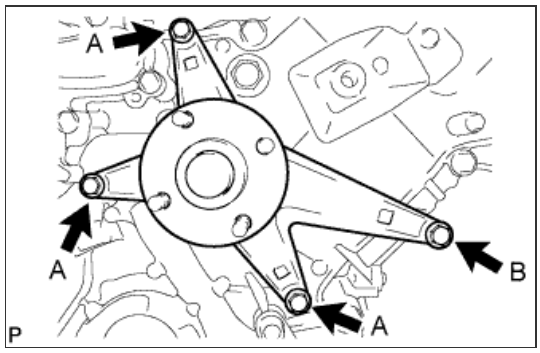
Item	Length	Thread Diameter
Bolt A	25 mm (0.984 in.)	8 mm (0.315 in.)
Bolt B	55 mm (2.17 in.)	8 mm (0.315 in.)
Bolt C	70 mm (2.76 in.)	8 mm (0.315 in.)
Bolt D	35 mm (1.38 in.)	10 mm (0.394 in.)
Bolt E	55 mm (2.17 in.)	10 mm (0.394 in.)
Bolt F	80 mm (3.15 in.)	10 mm (0.394 in.)



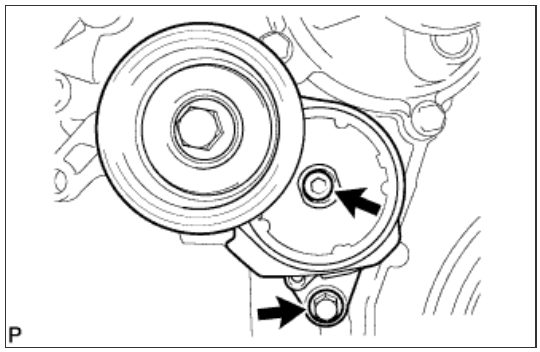
NOTICE:

Make sure that there is no oil on the bolt threads.

h. Tighten the 3 bolts in several steps in the sequence shown in the illustration.



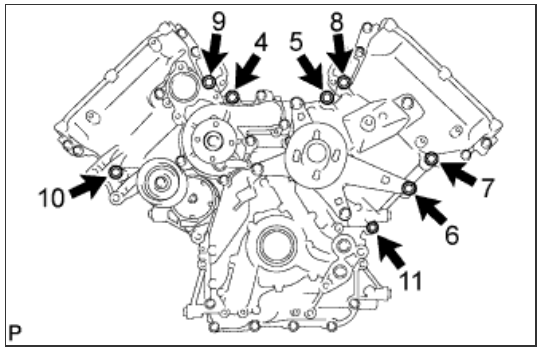
Torque:
47 N*m{ 479 kgf*cm , 35 ft.*lbf }



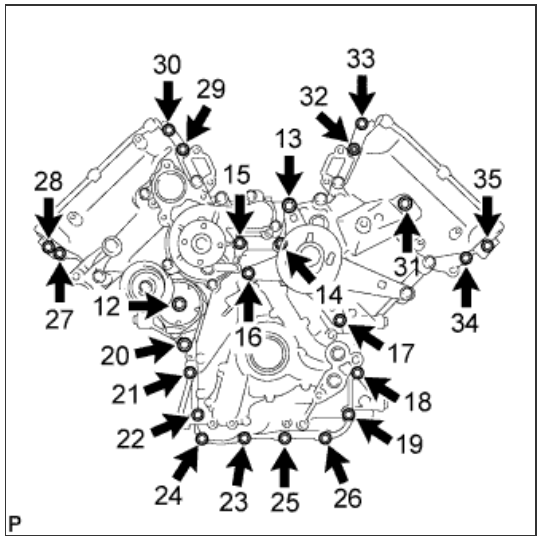
i. Temporarily install the fluid coupling bracket with the 4 bolts.

Standard Bolt:

Item	Length	Thread Diameter
Bolt A	70 mm (2.76 in.)	8 mm (0.315 in.)
Bolt B	80 mm (3.15 in.)	10 mm (0.394 in.)

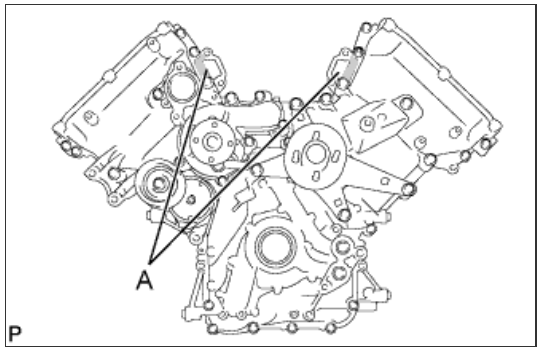


j. Temporarily install the belt tensioner with the standard bolt and 6 mm hexagon wrench bolt.



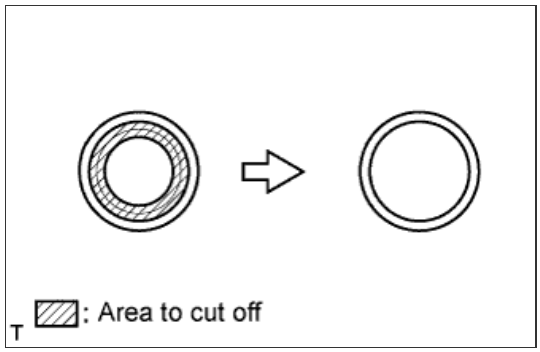
k. Tighten the 8 bolts labeled 4 to 11 in several steps in the sequence shown in the illustration.

Torque:
47 N*m{ 479 kgf*cm , 35 ft.*lbf }



l. Tighten the 23 bolts and nut labeled 12 to 35 in several steps in the sequence shown in the illustration.

Torque:
23 N*m{ 235 kgf*cm , 17 ft.*lbf }

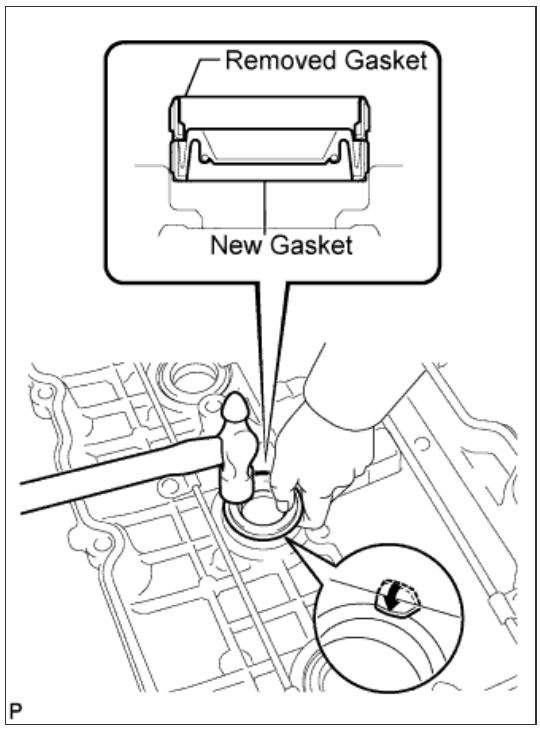


NOTICE:

After the installation, if the seal packing has seeped out at the areas labeled A shown in the illustration, wipe it off.

3. INSTALL SPARK PLUG TUBE GASKET

a. Using a cutter knife, cut off the seal part of the removed gasket.



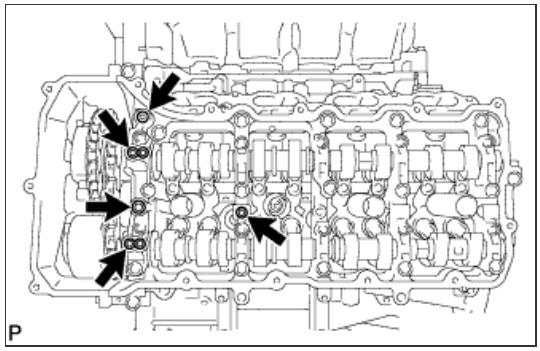
b. Using the removed gasket and a hammer, tap in a new gasket until it stops.

HINT:

If the removed gasket does not fit on the new one, correct the removed one with pliers.

c. Apply a light coat of MP grease to the lip of the gasket.

d. Return the 4 ventilation baffle plate claws to the original positions.



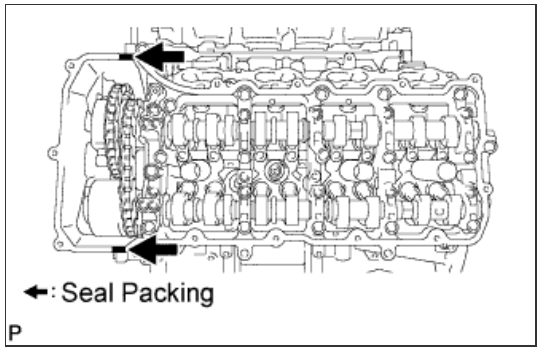
4. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY LH

a. Install 5 new gaskets to the camshaft bearing caps (No. 2, No. 3).

b. Install a new gasket to the cylinder head cover.

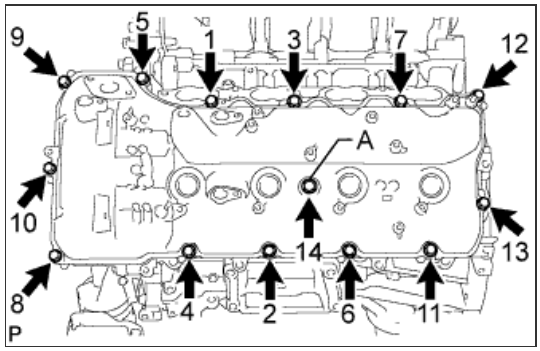
NOTICE:

Remove any oil from the contact surface.



c. Apply seal packing as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

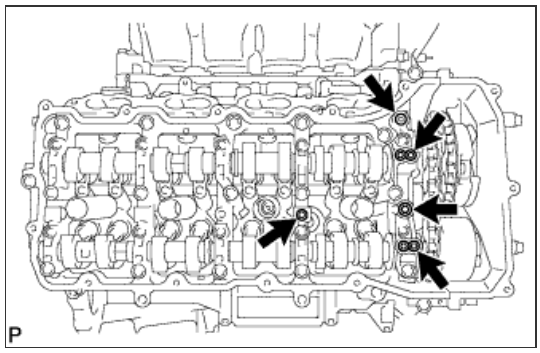


NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**

d. Install the cylinder head cover and a new seal washer with the 14 bolts in the order shown in the illustration.

Torque:
for bolt A:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
except bolt A:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }



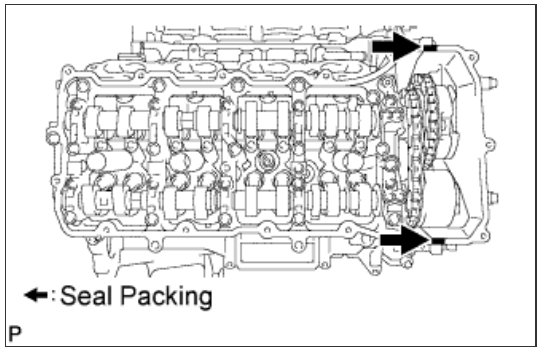
5. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY RH

a. Install 5 new gaskets to the camshaft bearing caps. (No. 1, No. 3).

b. Install a new gasket to the cylinder head cover.

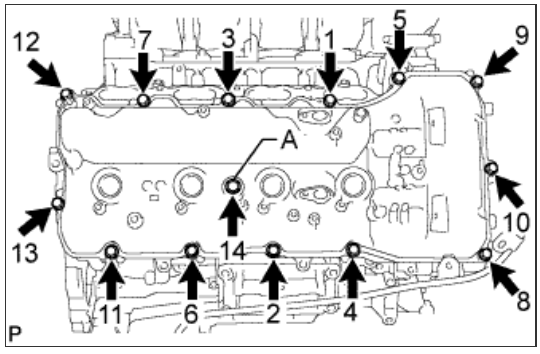
NOTICE:

Remove any oil from the contact surface.



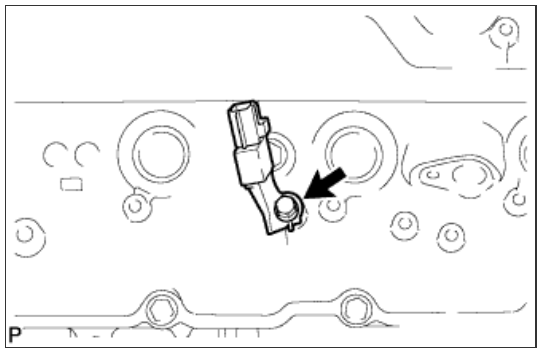
c. Apply seal packing as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent



NOTICE:

- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes and tighten the bolts within 15 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after the installation.**

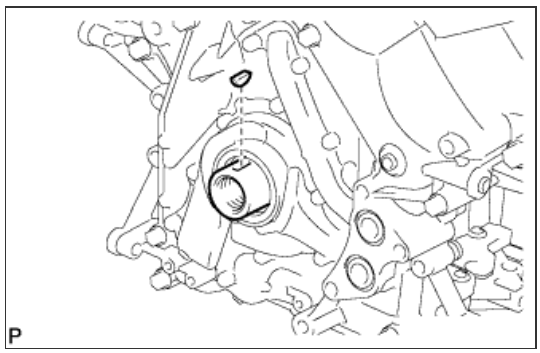


d. Install the cylinder head cover and a new seal washer with the 14 bolts in the order shown in the illustration.

Torque:
for bolt A:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }
except bolt A:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

e. Install the noise filter to the cylinder head cover with the bolt.

Torque:
7.0 N*m{ 71 kgf*cm , 62 in.*lbf }

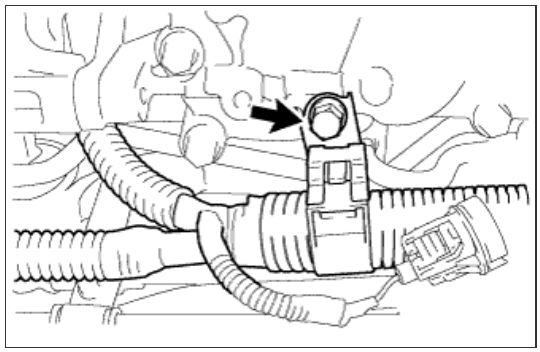


6. INSTALL IGNITION COIL ASSEMBLY

a. Install the 8 ignition coils with the 8 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

7. INSTALL CRANKSHAFT TIMING GEAR KEY

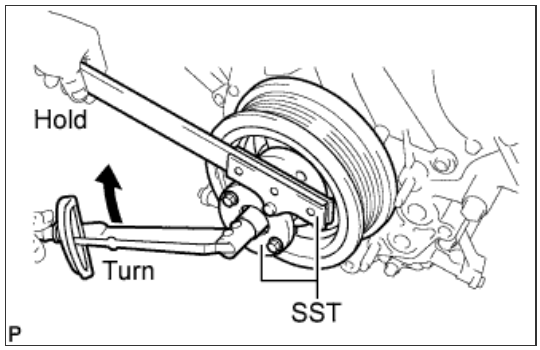


a. Install the crankshaft timing gear key to the crankshaft.

8. CONNECT WIRE HARNESS CLAMP BRACKET

a. Connect the bracket to the timing chain cover with the bolt.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

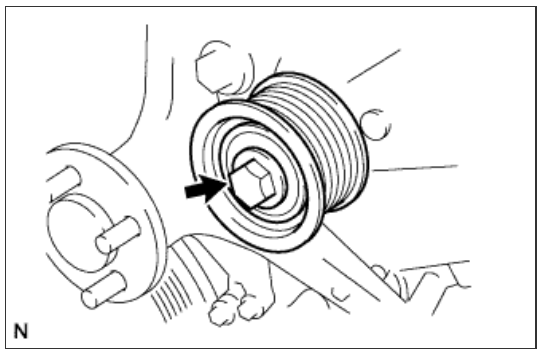


9. INSTALL CRANKSHAFT PULLEY

a. Align the pulley set key with the key groove of the pulley, and slide on the pulley.

b. Using SST, install the pulley set bolt.

SST
09213-70011 (09213-70020)
09330-00021

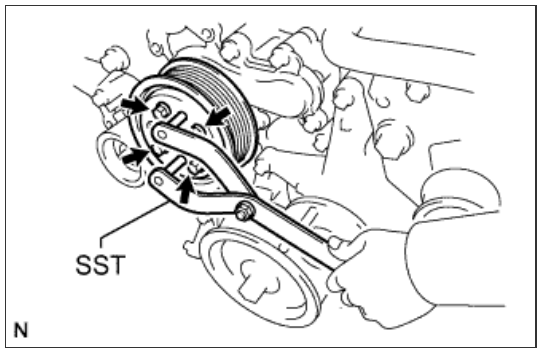


Torque:
300 N*m{ 3059 kgf*cm , 221 ft.*lbf }

10. INSTALL NO. 1 IDLER PULLEY SUB-ASSEMBLY

a. Install the idler pulley with the bolt.

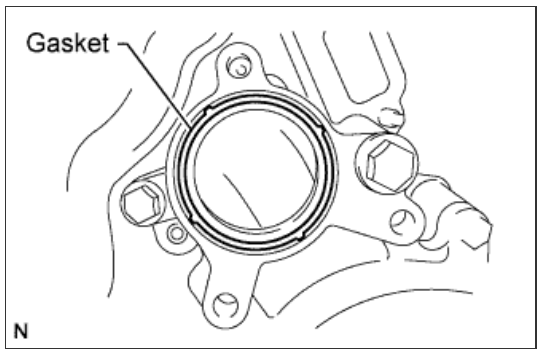
Torque:
43 N*m{ 438 kgf*cm , 32 ft.*lbf }



11. INSTALL WATER PUMP PULLEY

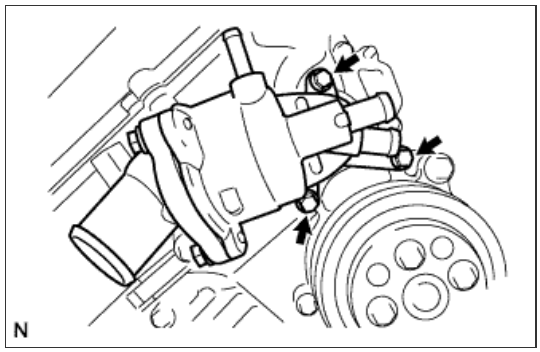
a. Temporarily install the pulley with the 4 bolts.

b. Using SST, hold the pulley and tighten the 4 bolts.



SST
09960-10010 (09962-01000, 09963-01000)

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

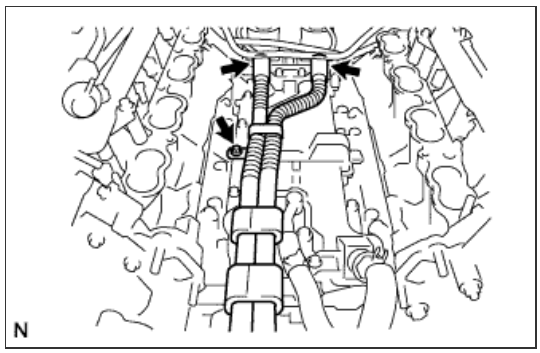


12. INSTALL WATER INLET HOUSING

a. Install a new gasket to the timing chain cover.

b. Install the water inlet with the 3 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

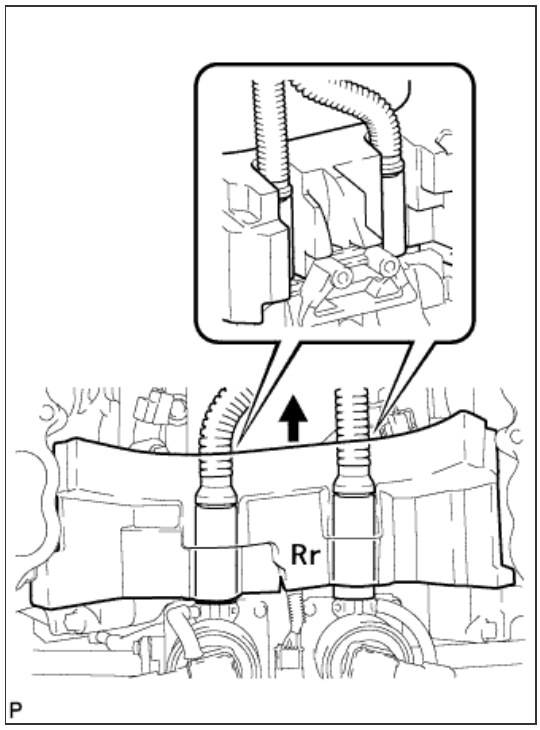


13. INSTALL AIR PIPE SUB-ASSEMBLY (w/ Secondary Air Injection System)

a. Connect the 2 hoses.

b. Install the air pipe with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



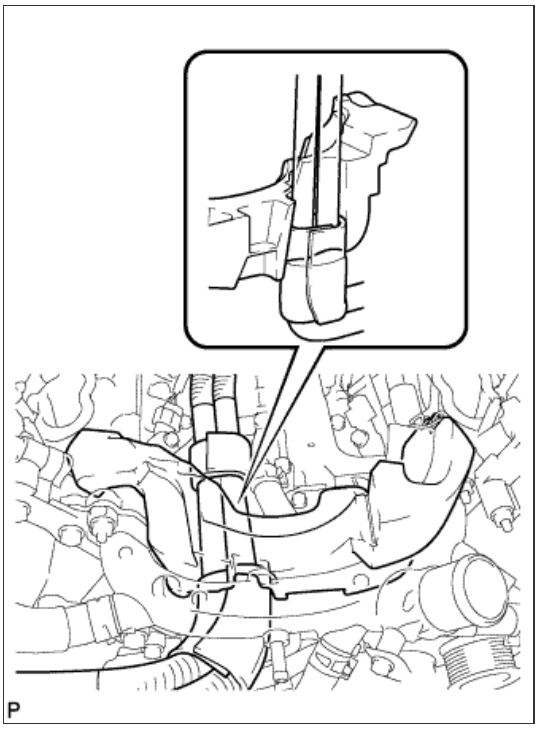
14. INSTALL NO. 1 ENGINE COVER

HINT:

- **Align the No. 1 engine cover cutouts with the air tube.**
- **Align the No. 1 engine cover with the air switching valve surface and cylinder head wall.**

NOTICE:

Make sure that the No. 1 engine cover is flush with the top surface of the intake port of the cylinder head for bank 1 and bank 2.



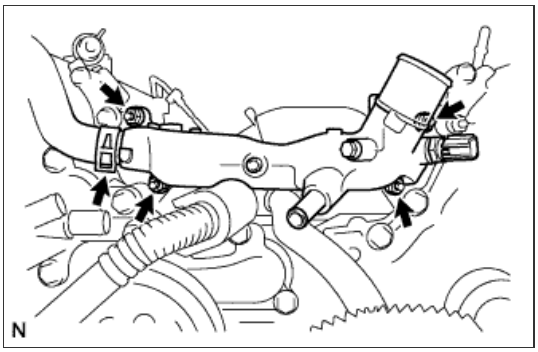
15. INSTALL NO. 2 ENGINE COVER

HINT:

- **Align the No. 2 engine cover cutout with the air tube.**
- **Align the No. 2 engine cover with the front water by-pass joint and cylinder head wall.**

NOTICE:

Make sure that the No. 2 engine cover is flush with the top surface of the intake port of the cylinder head.

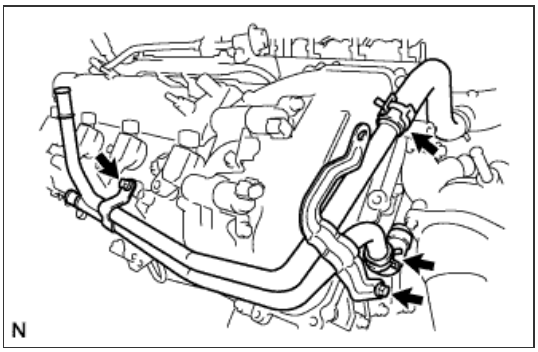


16. INSTALL FRONT WATER BY-PASS JOINT

a. Install 2 new gaskets and the water by-pass joint with the 4 nuts.

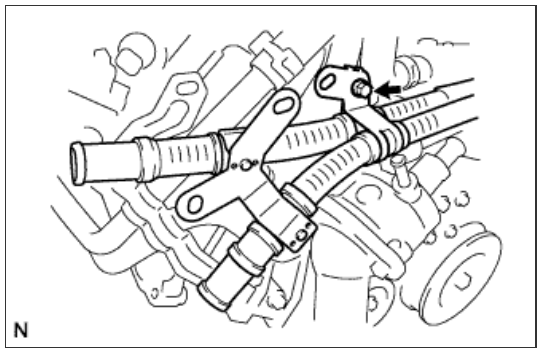
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

b. Connect the No. 2 water by-pass hose to the water by-pass joint.



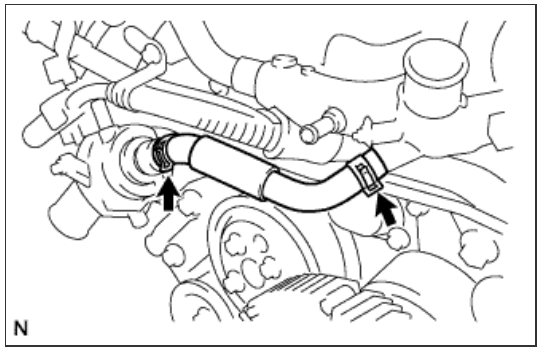
17. INSTALL WATER BY-PASS PIPE SUB-ASSEMBLY

a. Connect the 2 hoses.



b. Install the water by-pass pipe with the 2 bolts.

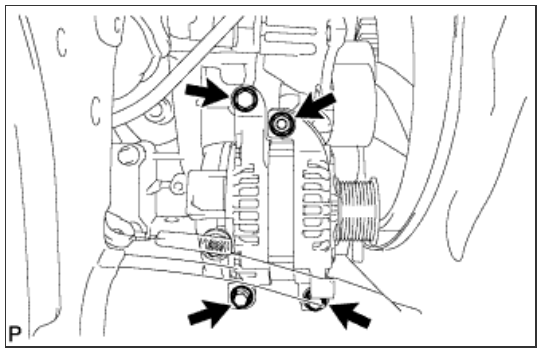
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



c. w/ Secondary Air Injection System:
Connect the air tube with the bolt.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

18. INSTALL NO. 1 WATER BY-PASS HOSE



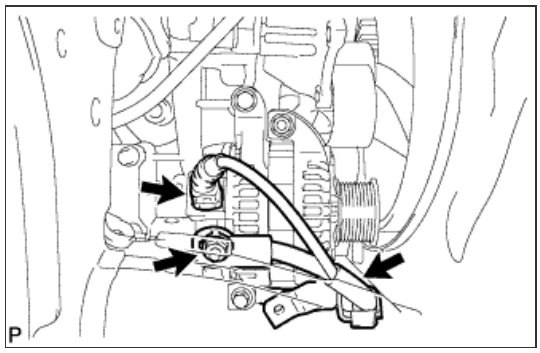
a. Install the No. 1 water by-pass hose by connecting the hose to the water inlet housing and front water by-pass joint.

19. INSTALL GENERATOR ASSEMBLY

a. Install the generator with the 3 bolts and nut.

Torque:
43 N*m{ 438 kgf*cm , 32 ft.*lbf }

b. Connect the generator connector.

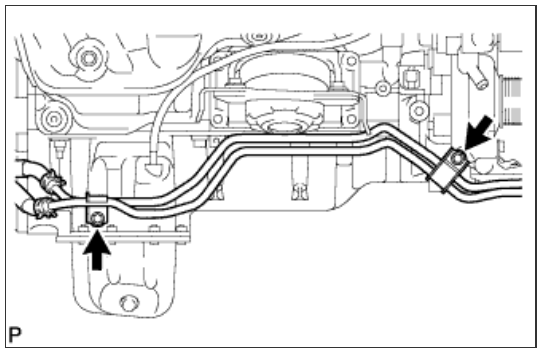


c. Connect the generator wire with the nut.

Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

d. Install the terminal cap.

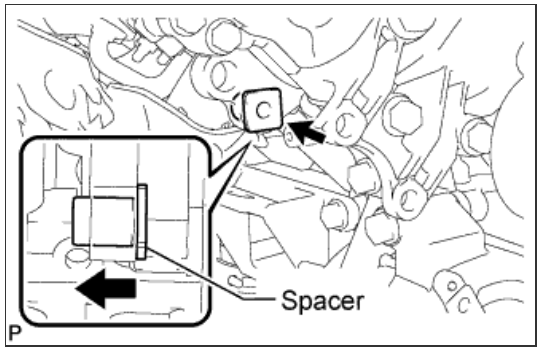
e. Install the harness bracket to the generator with the bolt.



Torque:
31 N*m{ 316 kgf*cm , 23 ft.*lbf }

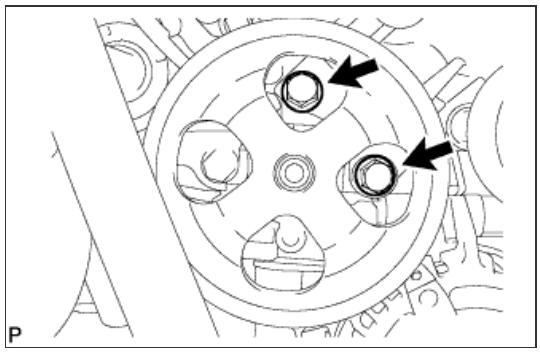
20. CONNECT OIL COOLER PIPE ASSEMBLY

a. Connect the oil cooler pipe with the 2 bolts.



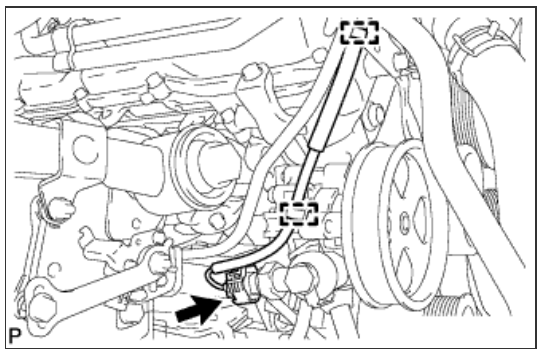
Torque:
14 N*m{ 143 kgf*cm , 10 ft.*lbf }

21. CONNECT VANE PUMP ASSEMBLY



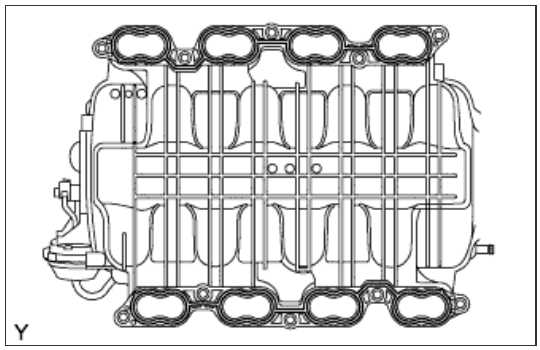
HINT:

Before performing the following procedures, move the spacer until the vane pump can be installed.



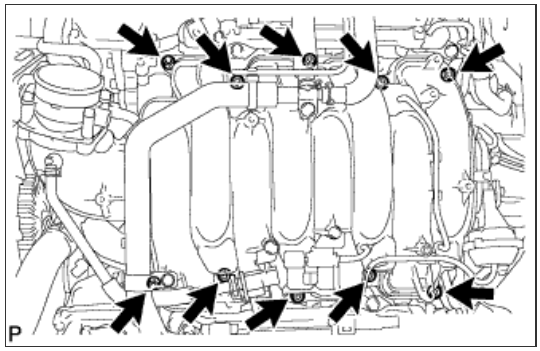
a. Connect the vane pump to the timing chain cover with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



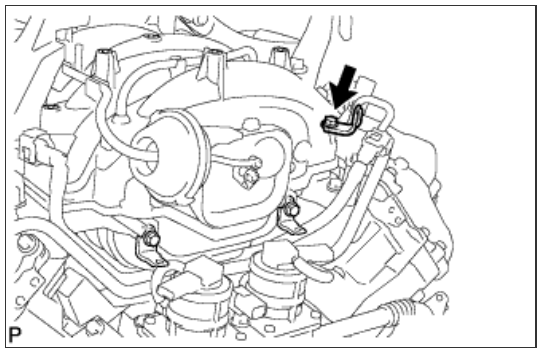
b. Connect the 2 clamps and power steering oil pressure switch connector.

22. INSTALL INTAKE MANIFOLD



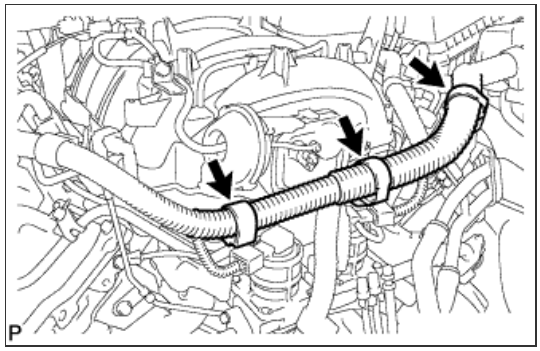
a. Place 2 new gaskets on the intake manifold.

b. Place the intake manifold on the cylinder head.

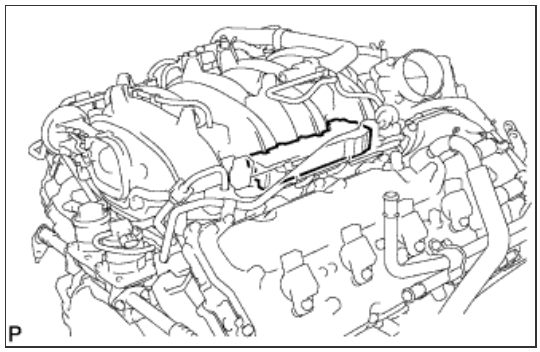


c. Install and uniformly tighten the 8 bolts and 2 nuts in several steps.

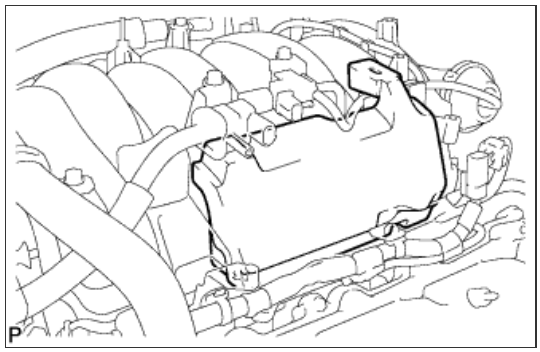
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



d. Install the wire bracket to the intake manifold with the bolt.

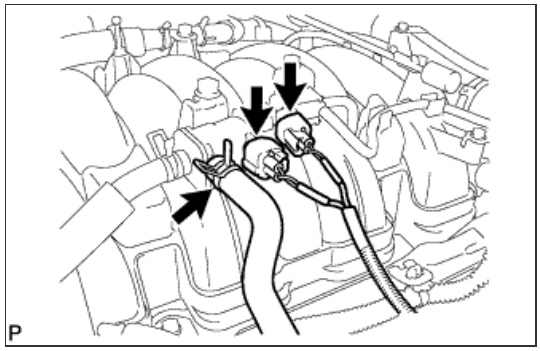


Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

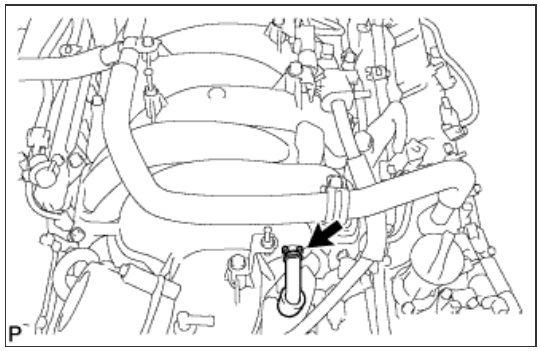


e. Connect the 3 wire clamps to the 3 wire brackets.

f. Install the No. 3 engine cover.



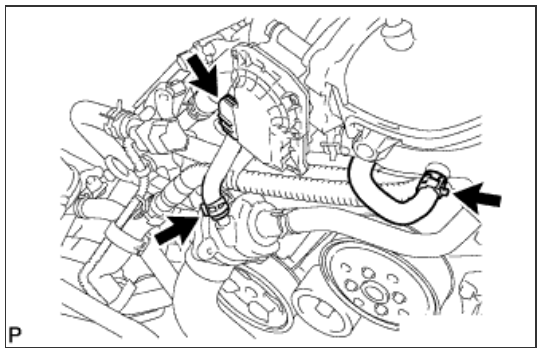
g. Install the No. 1 engine cover sub-assembly.



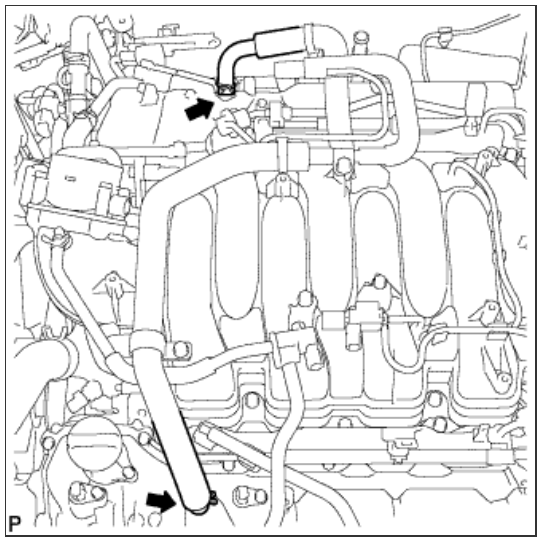
h. Connect the purge VSV connector.

i. Connect the purge line hose to the purge VSV.

j. Connect the vacuum switching valve connector (for ACIS).

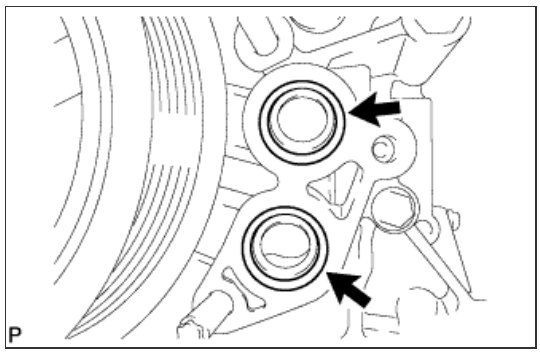


k. Connect the No. 1 ventilation hose.



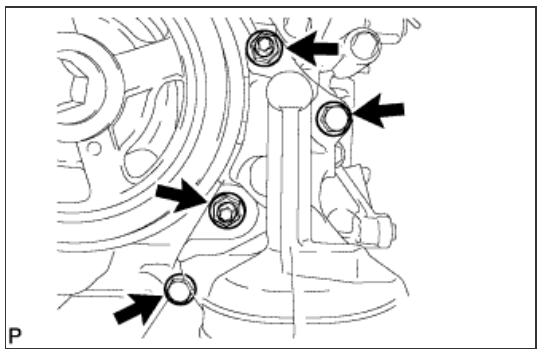
l. Connect the 2 water by-pass hoses.

m. Connect the throttle body connector.



n. Connect the ventilation hose to the ventilation pipe of the cylinder head cover LH and RH.

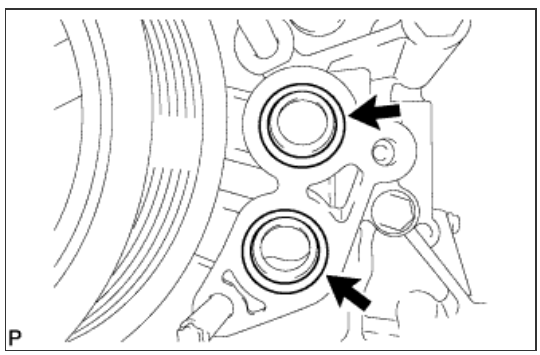
23. INSTALL OIL FILTER BRACKET (w/o Oil Cooler)



a. Apply a light coat of engine oil to 2 new O-rings.

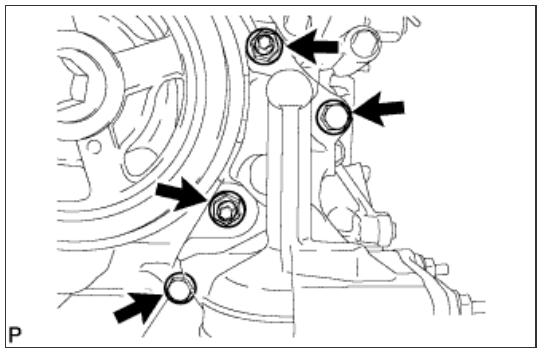
b. Install the 2 O-rings to the timing chain cover.

c. Install the oil filter bracket with the 2 bolts and 2 nuts.



Torque:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }

24. INSTALL OIL FILTER BRACKET (w/ Oil Cooler)

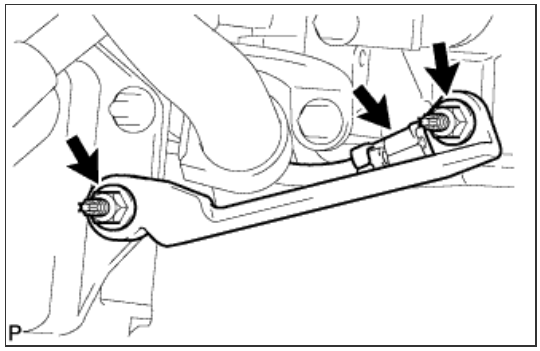


a. Apply a light coat of engine oil to 2 new O-rings.

b. Install the 2 O-rings to the timing chain cover.

c. Install the oil filter bracket with the 2 nuts and 2 bolts.

Torque:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }

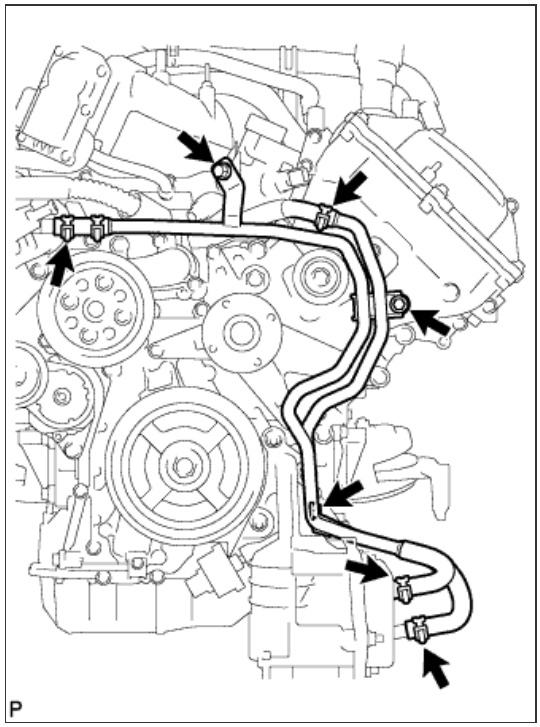


25. INSTALL NO. 1 OIL COOLER BRACKET (w/ Oil Cooler)

a. Connect the ground wire to the cylinder block.

b. Install the oil cooler bracket with the 2 nuts.

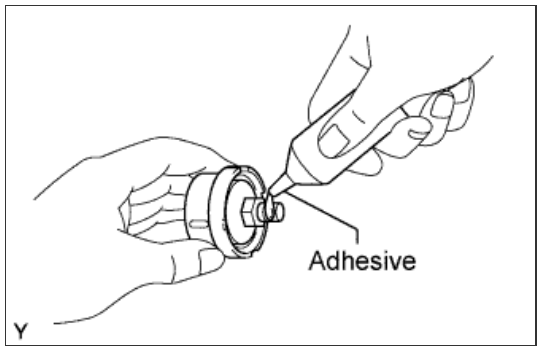
Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



26. INSTALL NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY (w/ Oil Cooler)

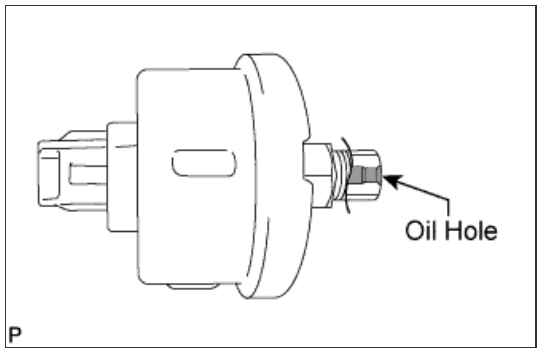
a. Connect the 4 hoses.

b. Install the water by-pass pipe with the 3 bolts.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

27. INSTALL OIL PRESSURE SENDER GAUGE ASSEMBLY

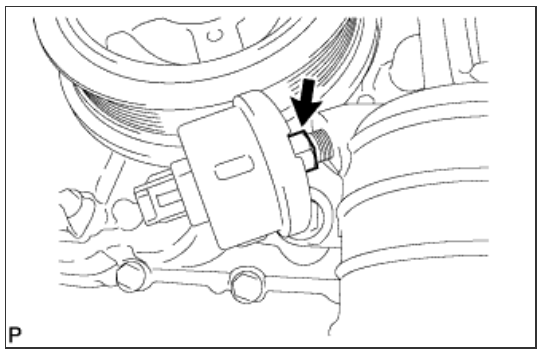


a. Apply adhesive to 2 or 3 threads of the oil pressure sender gauge.

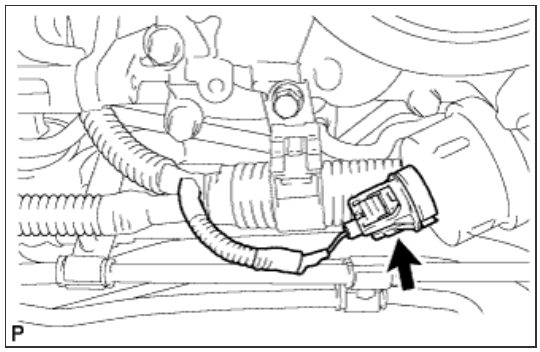
Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

NOTICE:

Do not allow adhesive to contact the oil hole.



b. Install the oil pressure sender gauge.



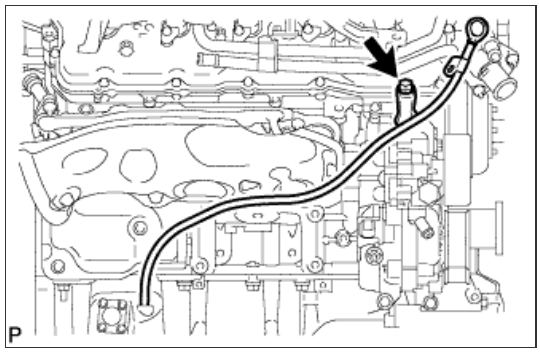
Torque:
15 N*m{ 153 kgf*cm , 11 ft.*lbf }

NOTICE:

Do not start the engine within 1 hour after installation.

c. Connect the sender gauge connector.

28. INSTALL ENGINE OIL LEVEL DIPSTICK GUIDE



a. Apply a light coat of engine oil to a new O-ring.

b. Install the O-ring to the guide.

c. Install the dipstick guide with the bolt.

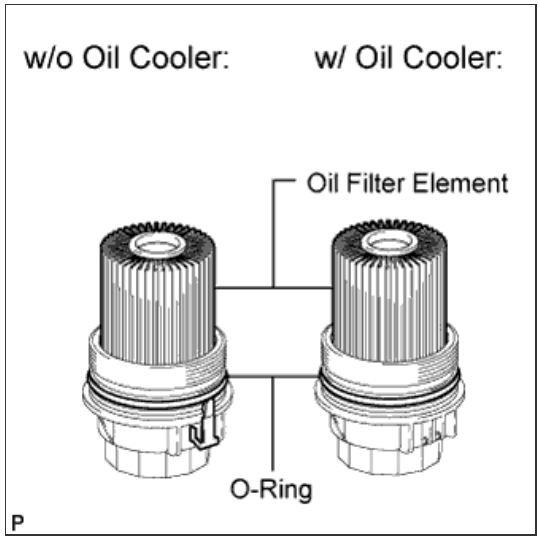
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

d. Install the dipstick.

29. INSTALL OIL FILTER ELEMENT

a. Clean the inside of the oil filter cap, its threads and its O-ring groove.

b. Apply a small amount of engine oil to a new O-ring and install it to the oil filter cap.



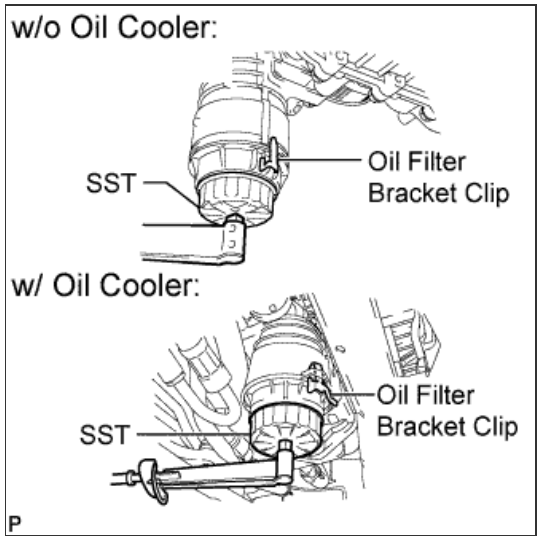
c. Set a new oil filter element to the oil filter cap.

d. Remove any dirt or foreign matter from the installation surface of the engine.

e. Apply a small amount of engine oil to the O-ring again and temporarily install the oil filter cap.

NOTICE:

Do not remove the oil filter bracket clip.



f. Using SST, tighten the oil filter cap.

SST
09228-06501

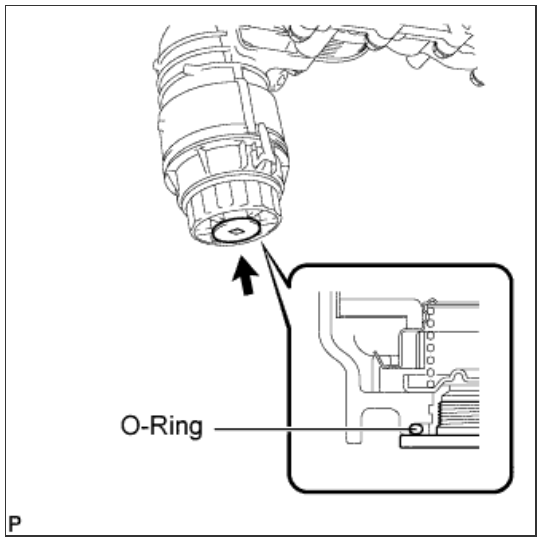
Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf }

NOTICE:

- **When tightening the oil filter cap, do not remove the oil filter bracket clip.**
- **Make sure that the oil filter is installed securely as shown in the illustration.**
- **Be careful that the O-ring does not get caught between any surrounding parts.**

g. Apply a small amount of engine oil to a new drain plug O-ring, and install it to the oil filter cap.

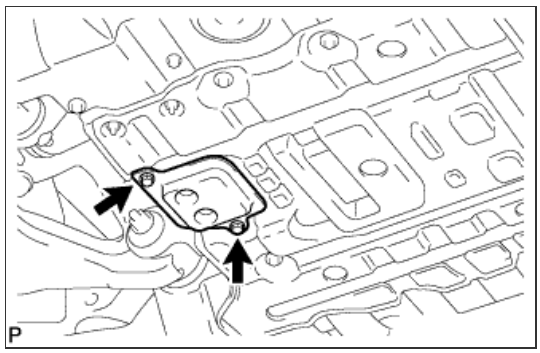
NOTICE:



Before installing the O-ring, remove any dirt or foreign matter from the installation surface of the oil filter cap.

h. Install the oil filter drain plug.

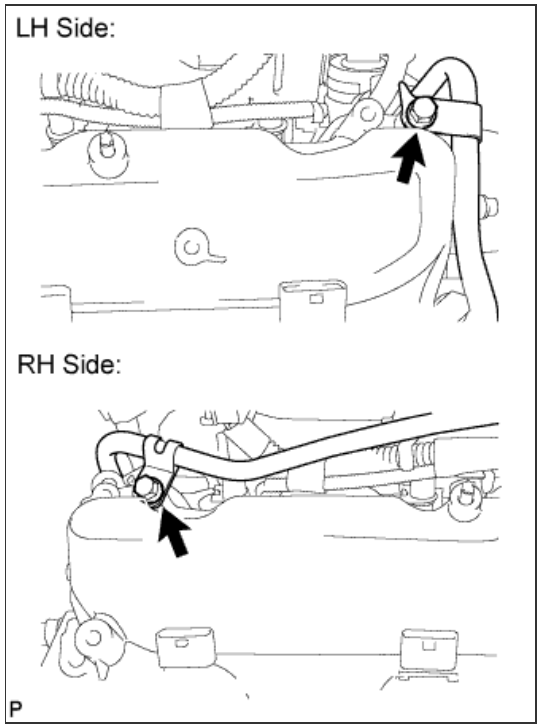
Torque:
13 N*m{ 127 kgf*cm , 9 ft.*lbf }



NOTICE:

Be careful that the O-ring does not get caught between any surrounding parts.

i. Install the No. 2 engine under cover seal with the 2 bolts.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

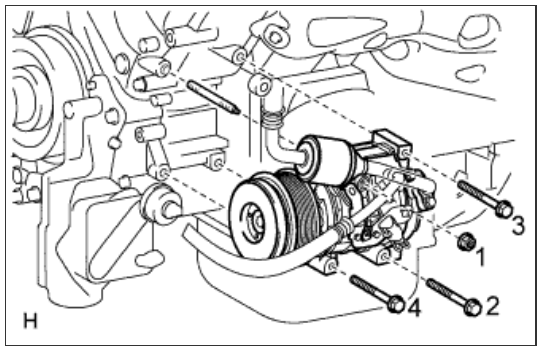
30. CONNECT NO. 2 FUEL TUBE SUB-ASSEMBLY

a. Connect the fuel tube with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

31. CONNECT COOLER COMPRESSOR ASSEMBLY

a. Install the cooler compressor with the stud bolt.



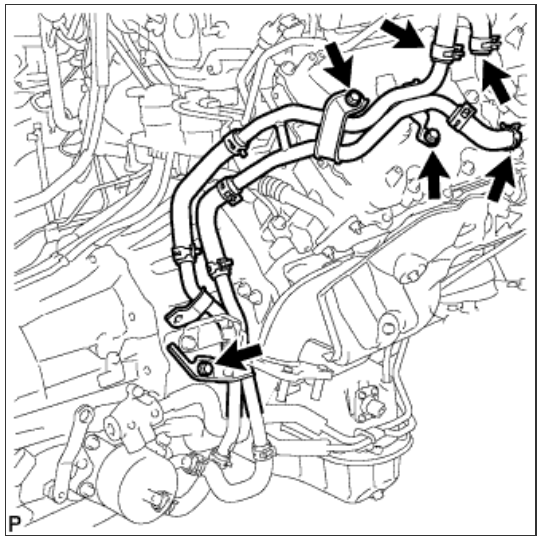
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. Install the 3 bolts and nut.

Torque:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }

NOTICE:

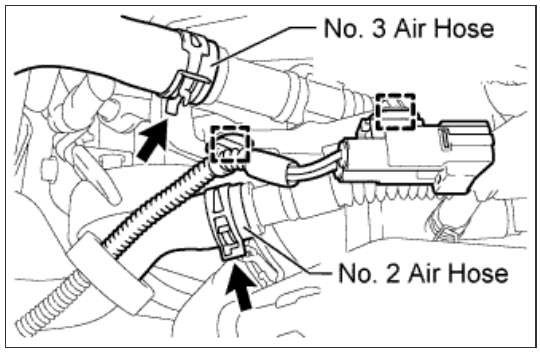
Tighten the bolts and nut in the order shown in the illustration to install the cooler compressor.



32. CONNECT NO. 2 WATER BY-PASS PIPE

a. Connect the No. 2 water by-pass pipe to the cylinder head cover with the 3 bolts.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }



b. Connect the 3 hoses.

33. CONNECT AIR PUMP HOSE AND WIRE HARNESS (w/ Secondary Air Injection System)

a. Connect the No. 2 and No. 3 air hoses.

b. Connect the 2 clamps and air pump wire harness.

34. CONNECT ENGINE WIRE

a. Engine Room RH Side:

i. Connect the 5 clamps.

ii. Connect the throttle position sensor and throttle control motor connector.

iii. w/ Secondary Air Injection System:
Connect the 2 air pump connectors.

iv. Install the ground wire with the 2 bolts.

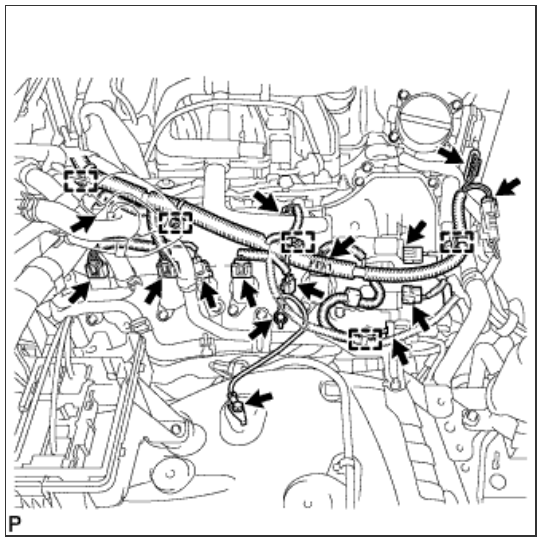
Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

v. Connect the noise filter connector.

vi. Connect the 2 VVT sensor connectors.

HINT:

The wire harnesses on the exhaust side are wrapped with white tape.



vii. Connect the injector connector.

viii. Connect the 4 ignition coil connectors.

ix. Connect the 2 camshaft timing oil control valve connectors.

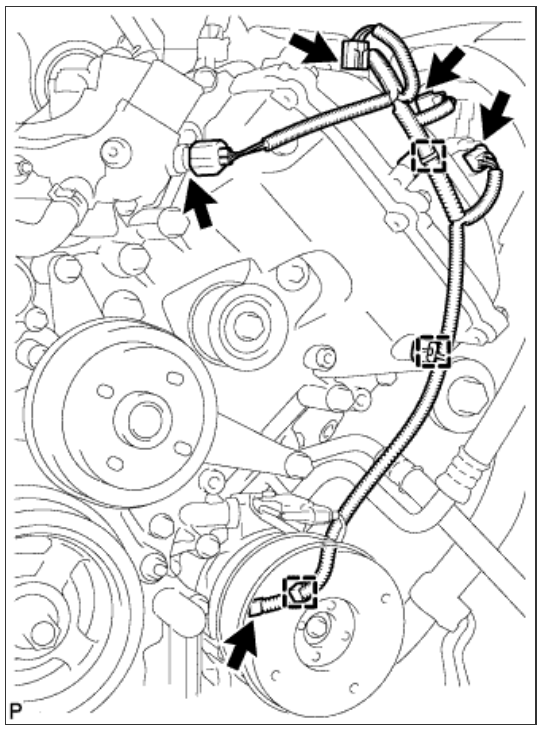
HINT:

The wire harnesses on the exhaust side are wrapped with white tape.

b. Engine Room LH Side:

i. Connect the cooler compressor connector.

ii. Connect the 3 clamps.



iii. Connect the camshaft position sensor connector.

iv. Connect the 2 camshaft timing oil control valve connectors.

HINT:

The wire harnesses on the exhaust side are wrapped with white tape.

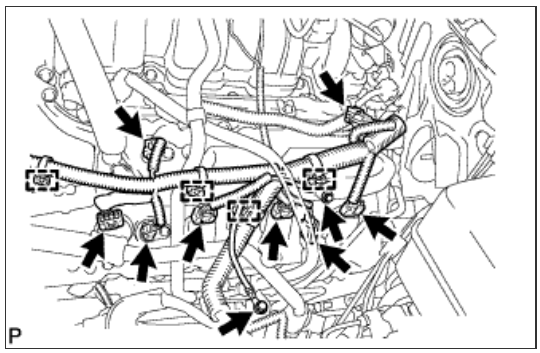
v. Connect the engine coolant temperature sensor connector.

vi. Connect the 4 clamps.

vii. Install the ground wire with the 2 bolts.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

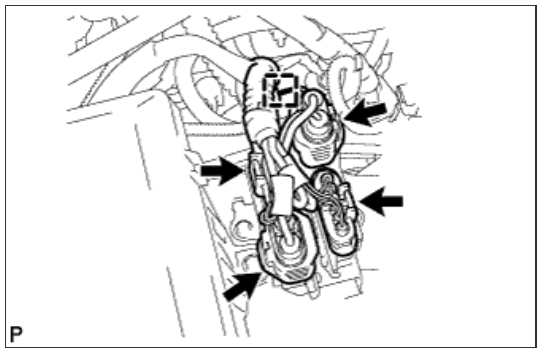
viii. Connect the noise filter connector.



ix. Connect the 2 VVT sensor connectors.

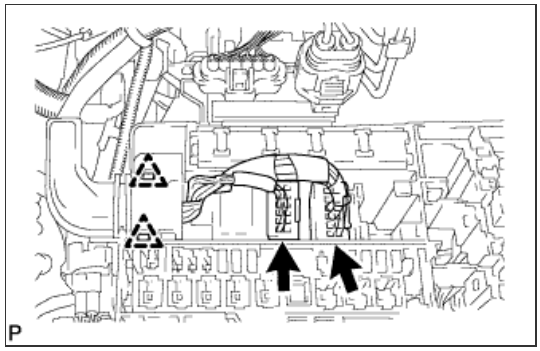
HINT:

The wire harnesses on the exhaust side are wrapped with white tape.



x. Connect the 4 ignition coil connectors.

xi. Connect the injector connector.

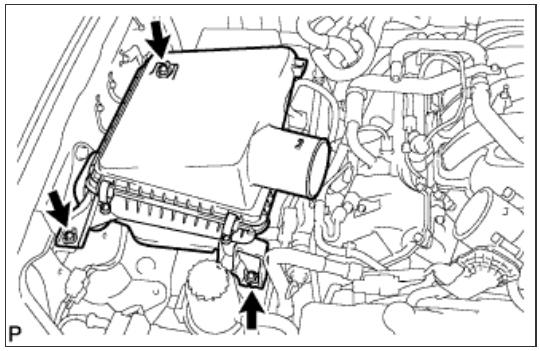


xii. w/ Secondary Air Injection System:

Connect the wire harness clamp and 4 air injection control driver connectors.

xiii. Connect the 2 connectors and 2 clips to the engine room junction block.

xiv. Install the engine room relay block cover.



35. INSTALL RADIATOR ASSEMBLY

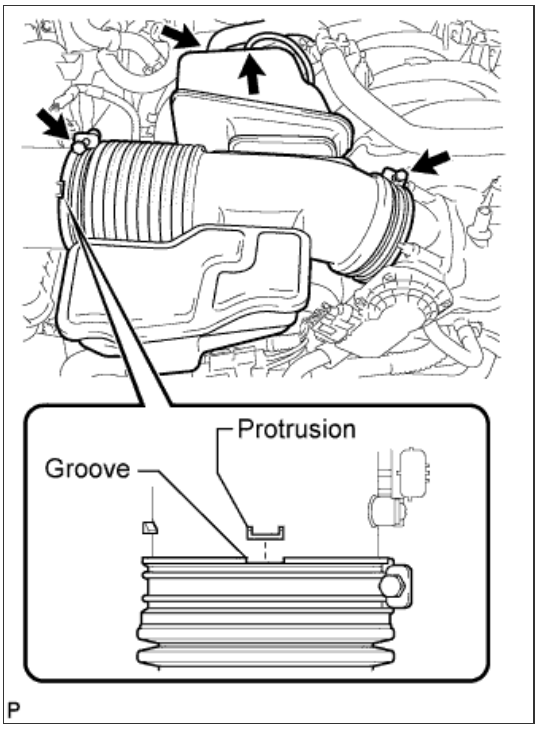
(Click here)

36. INSTALL AIR CLEANER ASSEMBLY

a. Install the air cleaner with the 3 bolts.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

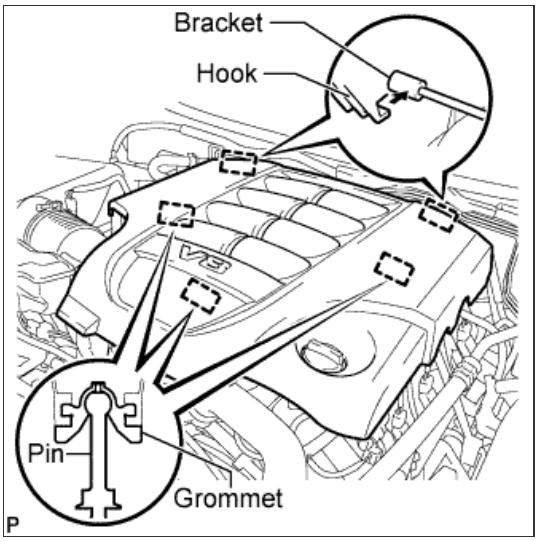
37. INSTALL AIR CLEANER HOSE ASSEMBLY



a. Install the air cleaner hose so that the protrusion of the air cleaner cap aligns with the groove of the hose as shown in the illustration.

b. Tighten the 2 clamps.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }



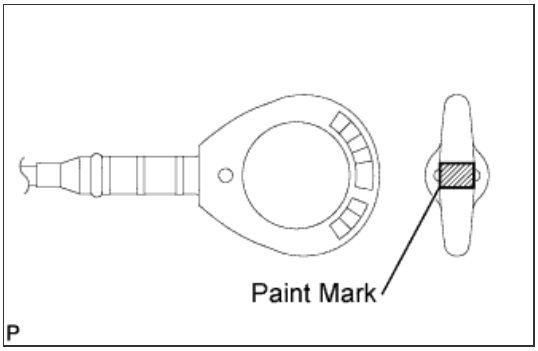
c. Connect the vacuum hose.

d. Connect the No. 2 ventilation hose.

38. INSTALL V-BANK COVER SUB-ASSEMBLY

a. Attach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.

39. ADD ENGINE OIL



a. Add fresh oil and install the oil filler cap.

Standard Oil Grade:

Oil Grade	Oil Viscosity (SAE)
API grade SL "Energy-Conserving", SM "Energy-Conserving" or ILSAC multigrade engine oil API grade SL or SM multigrade engine oil	0W-20 5W-20 5W-30 10W-30 15W-40 20W-50

Standard Oil Capacity:

Paint Mark	Item	Specified Condition
	Drain and refill	7.0 liters (7.4 US

Blue	with oil filter change	qts, 6.2 Imp. qts)
	Drain and refill without oil filter change	6.6 liters (7.0 US qts, 5.8 Imp. qts)
	Dry fill	8.4 liters (8.9 US qts, 7.4 Imp. qts)
Green	Drain and refill with oil filter change	7.5 liters (7.9 US qts, 6.6 Imp. qts)
	Drain and refill without oil filter change	7.1 liters (7.5 US qts, 6.2 Imp. qts)
	Dry fill	9.3 liters (9.8 US qts, 8.2 Imp. qts)

40. ADD ENGINE COOLANT

a. Add engine coolant.

Standard Capacity:

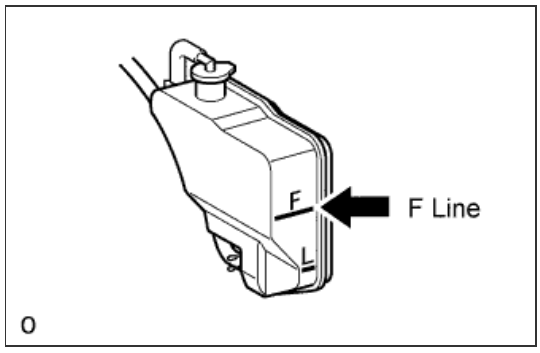
Item	Specified Condition
with transmission oil cooler	16.7 liters (17.6 US qts, 14.7 Imp. qts)
without transmission oil cooler	16.2 liters (17.1 US qts, 14.3 Imp. qts)

NOTICE:

Do not substitute plain water for engine coolant.

HINT:

TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).



b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the reservoir cap.

d. Press the No. 1 and No. 2 radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Start the engine and warm it up until the thermostat opens.

NOTICE:

Switch off the A/C.

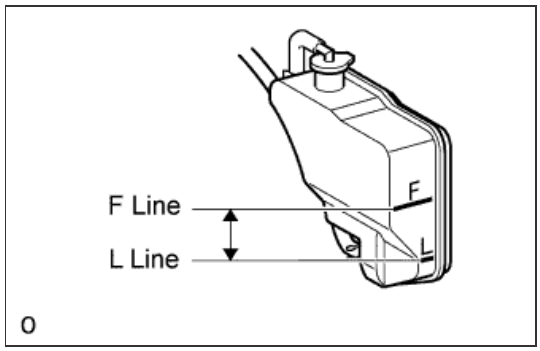
g. Maintain the engine speed at 2000 to 2500 rpm.

NOTICE:

- **Make sure that the radiator reservoir still has some coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**
- **Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the F line.**
- **Run the engine at 2000 rpm until the coolant level has stabilized.**

h. Press the No. 1 and No. 2 radiator hoses several times by hand to bleed air.

CAUTION:



- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the fan.**

i. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

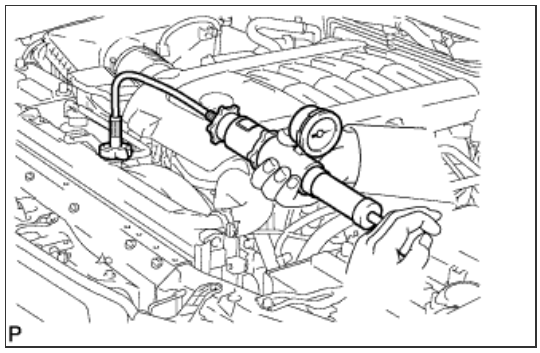
j. Check that the coolant level is between the F and L lines.
If the coolant level is below the L line, repeat all of the procedures above.
If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.

41. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

42. INSPECT FOR OIL LEAK



a. Start the engine. Make sure that there are no oil leaks from the area that was worked on.

43. INSPECT FOR COOLANT LEAK

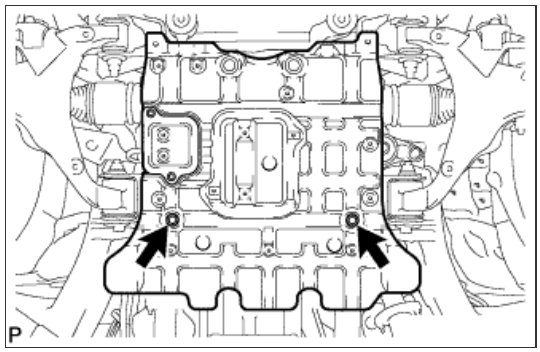
a. Fill the radiator with coolant and attach a radiator cap tester.

b. Warm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.

44. INSPECT ENGINE OIL LEVEL

a. Warm up the engine, stop the engine and wait 5 minutes. The oil level should be between the dipstick low level mark and full level mark.
If low, check for leakage and add oil up to the full level mark.

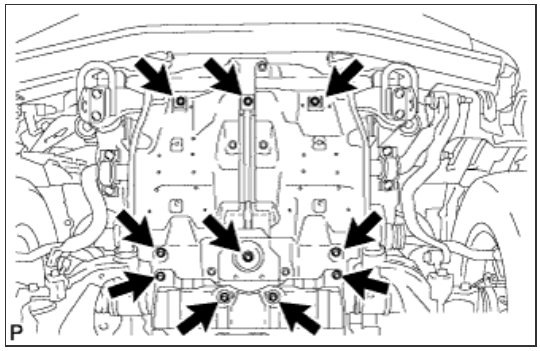


NOTICE:

Do not fill engine oil above the full level mark.

45. INSTALL NO. 2 ENGINE UNDER COVER

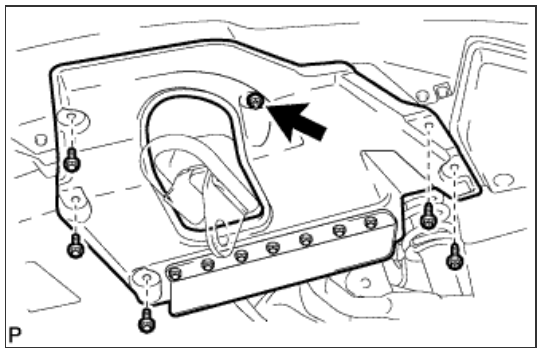
a. Install the No. 2 engine under cover with the 2 bolts.



Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

46. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.

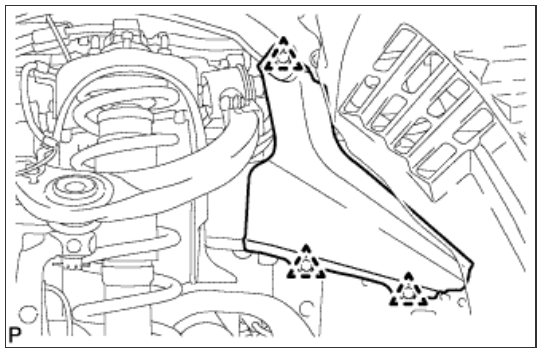


Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

47. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

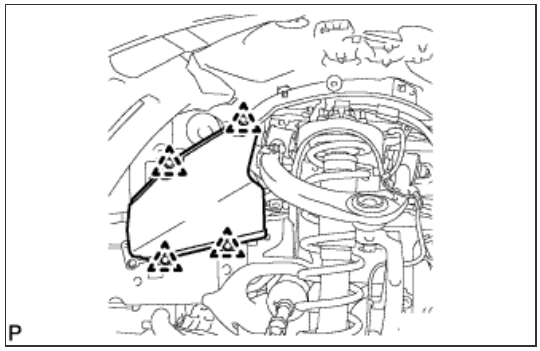
b. Install the 3 bolts and 2 screws.



48. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

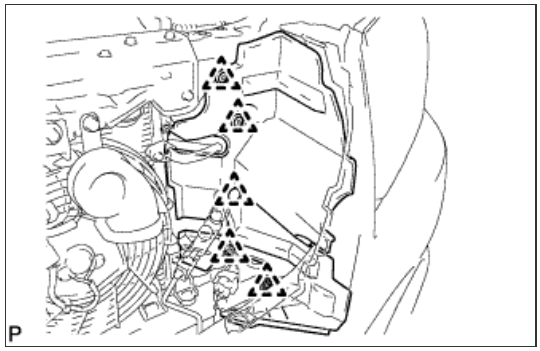


49. INSTALL FRONT FENDER APRON SEAL FRONT RH

a. Install the fender apron seal with the 3 clips.

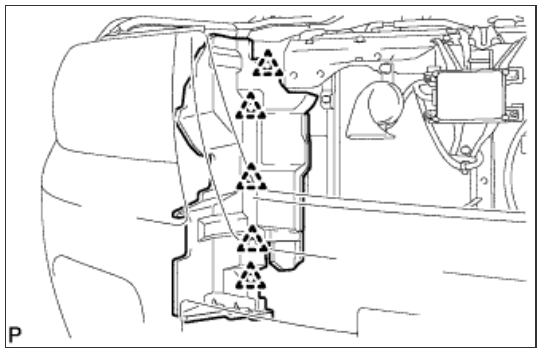
50. INSTALL FRONT FENDER APRON SEAL FRONT LH

a. Install the fender apron seal with the 4 clips.



51. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY

(Click here)

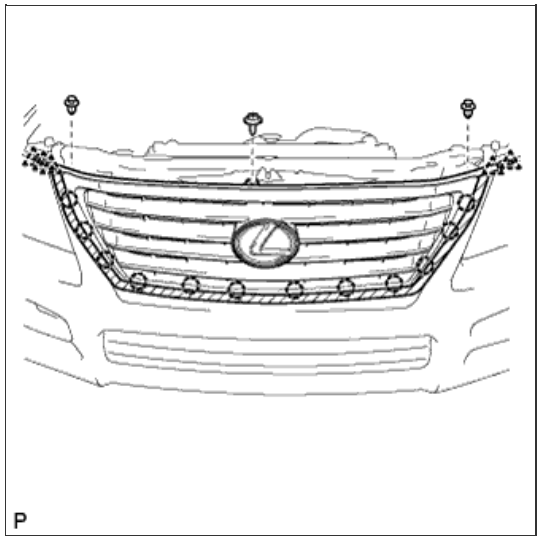


52. CONNECT RADIATOR SIDE DEFLECTOR LH

a. Install the side deflector with the 5 clips.

53. CONNECT RADIATOR SIDE DEFLECTOR RH (w/o Air Cooled Transmission Oil Cooler)

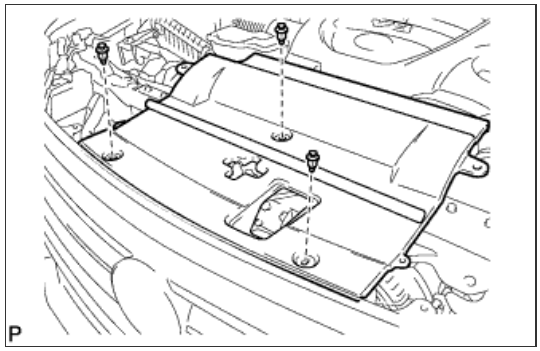
a. Install the side deflector with the 5 clips.



54. INSTALL RADIATOR GRILLE

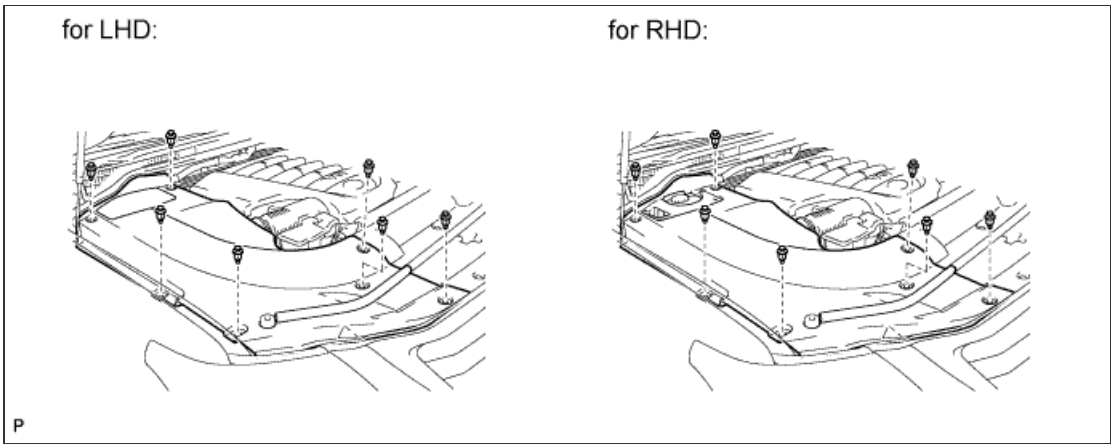
a. w/ Wide View Front Monitor System:
Connect the connector.

b. Attach the 12 claws to install the radiator grille.



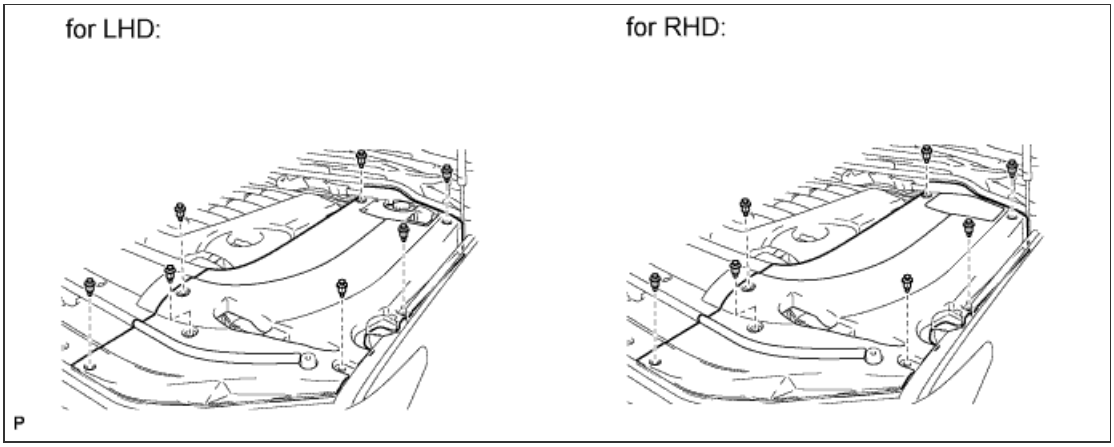
c. Attach the 5 clips to install the detached part of the upper radiator seal.

d. Install the screw and 2 clips.



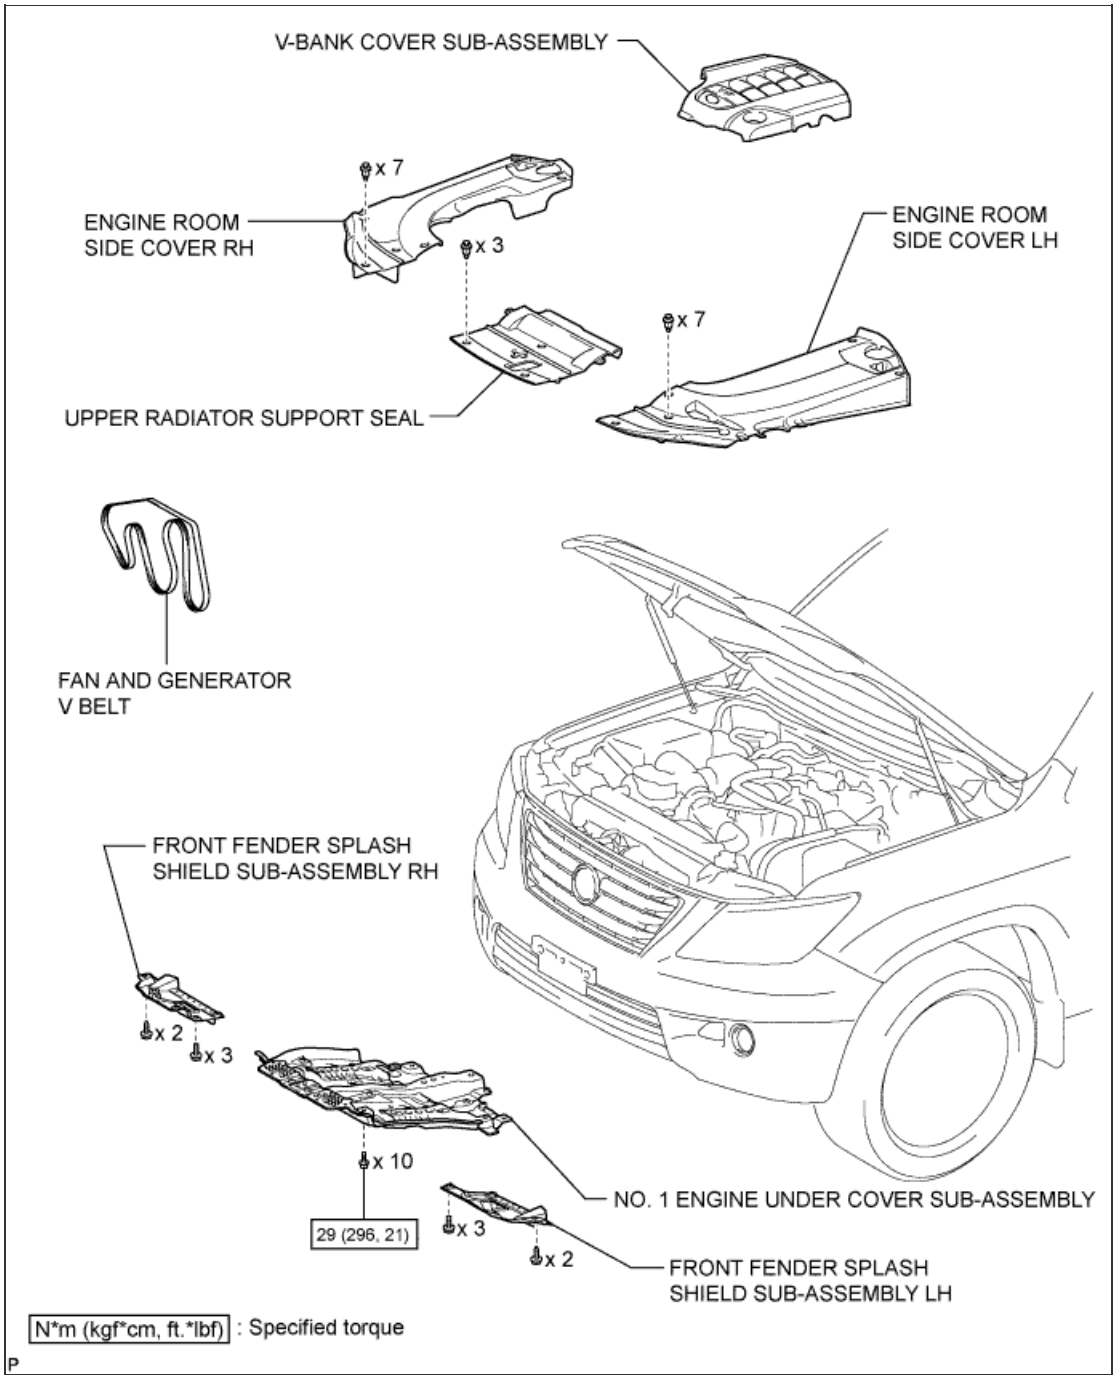
55. INSTALL UPPER RADIATOR SUPPORT SEAL

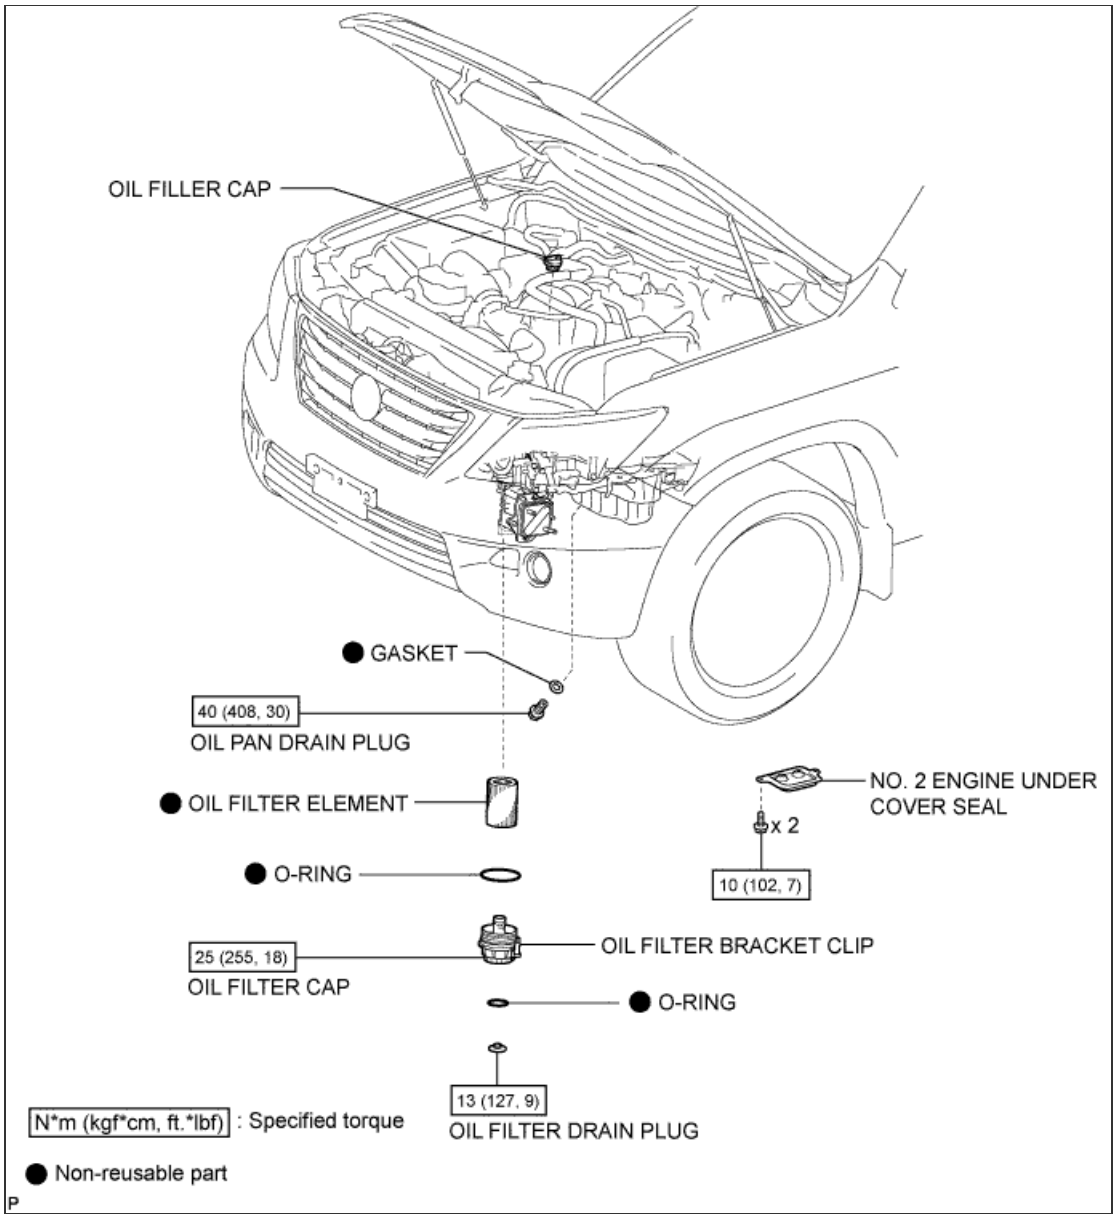
a. Install the upper radiator support seal with the 3 clips.



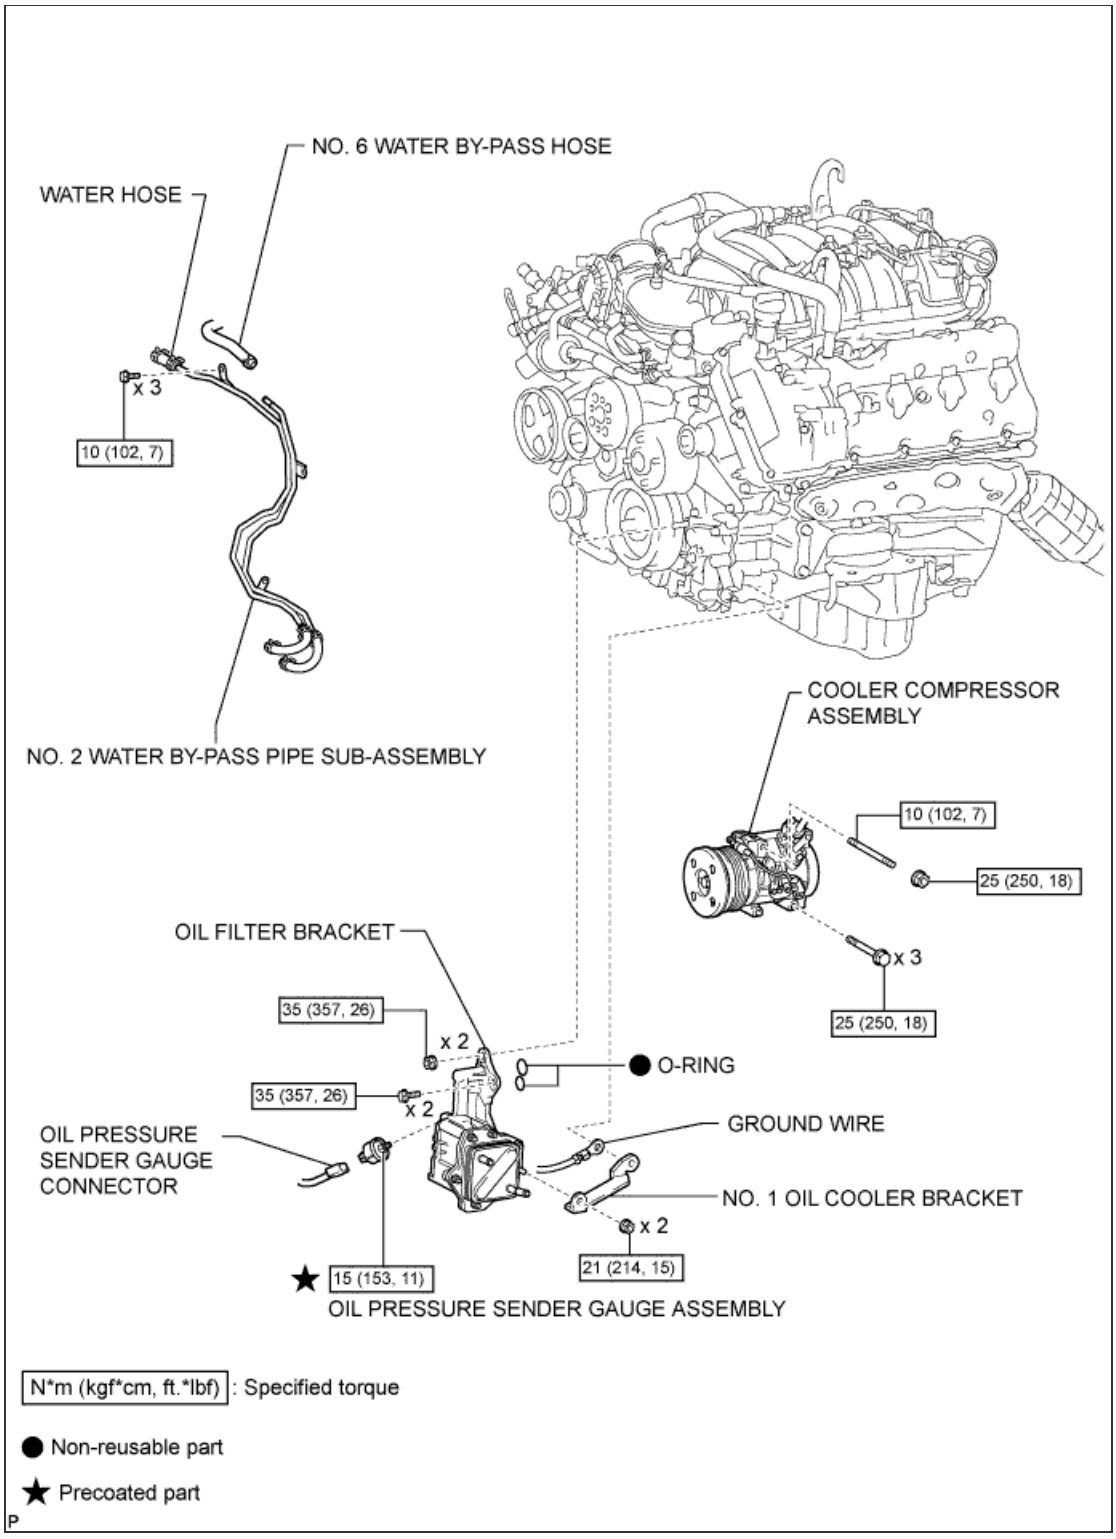
56. INSTALL ENGINE ROOM SIDE COVER RH

a. Install the engine room side cover with the 7 clips.





57. INSTALL ENGINE ROOM SIDE COVER LH



a. Install the engine room side cover with the 7 clips.

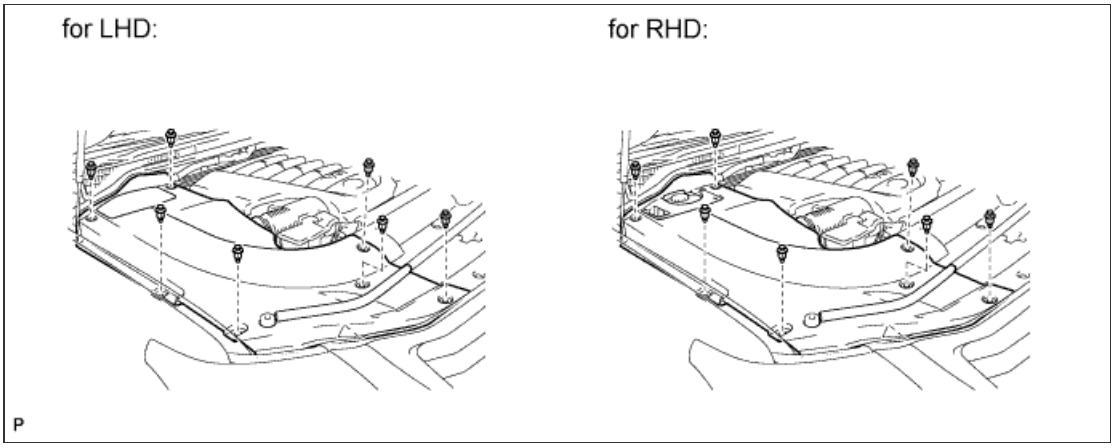
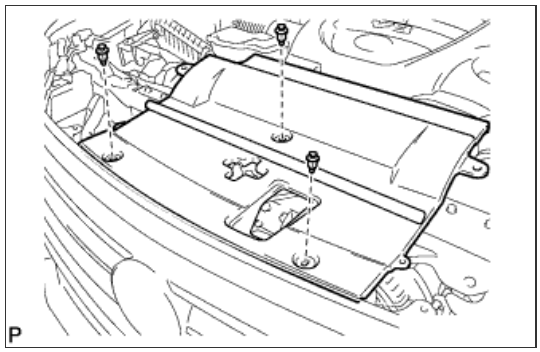
for Preparation Click here



1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.



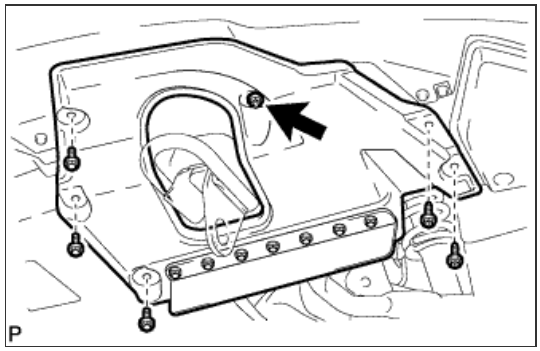
2. REMOVE ENGINE ROOM SIDE COVER RH

a. Remove the 7 clips and engine room side cover.

3. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 3 clips and upper radiator support seal.

4. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL



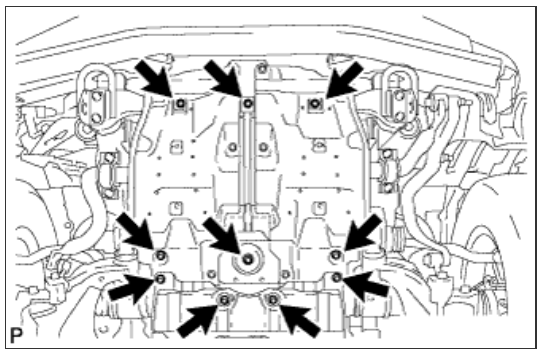
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

5. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and 2 screws.

b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



6. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

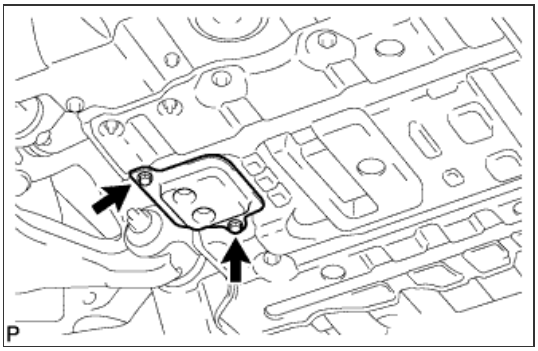
HINT:

Use the same procedures described for the LH side.

7. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and No. 1 engine under cover.

8. DRAIN ENGINE OIL

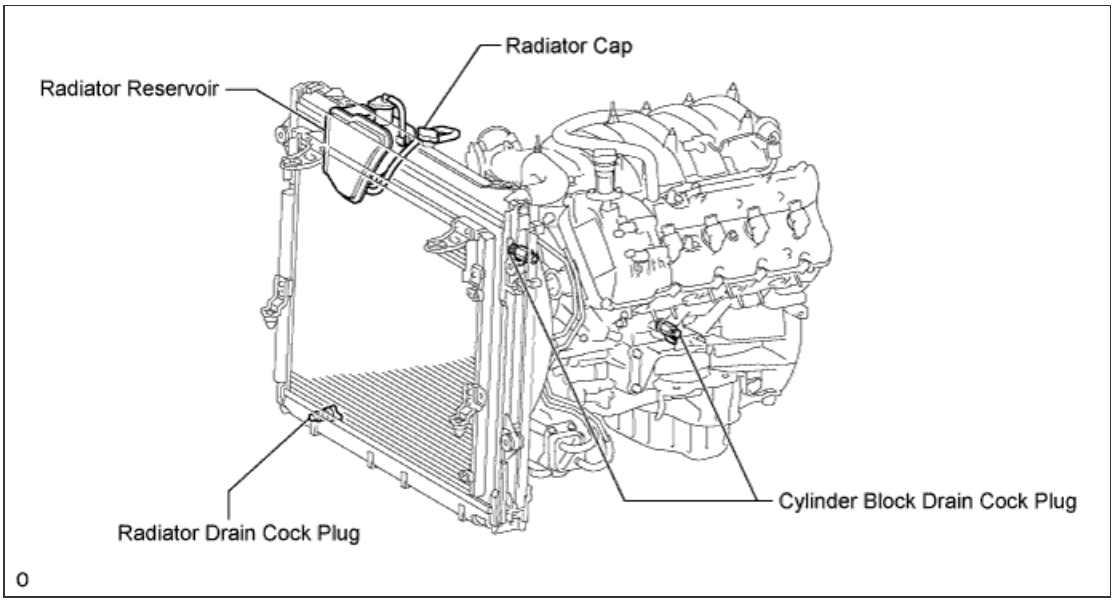


a. Remove the oil filler cap.

b. Remove the 2 bolts and No. 2 engine under cover seal.

c. Remove the oil pan drain plug and gasket, and drain the engine oil into a container.

d. Install a new gasket and the oil pan drain plug.



Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }

9. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

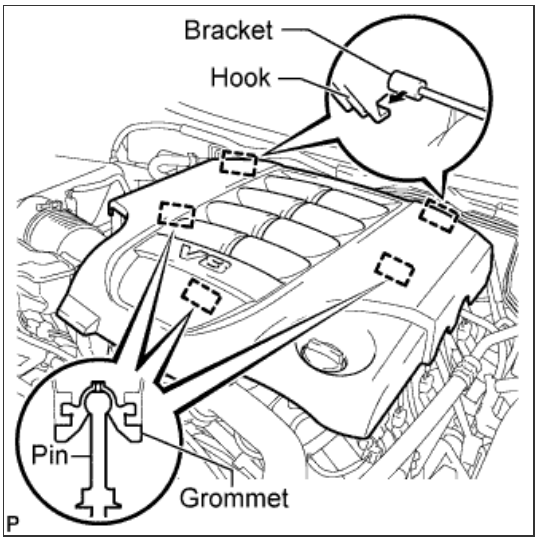
a. Loosen the radiator drain cock plug.

HINT:

Collect the coolant in a container and dispose of it according to the regulations in your area.

b. Remove the radiator cap. Then drain the coolant from the radiator.

c. Loosen the 2 cylinder block drain cock plugs. Then drain the coolant from the engine.



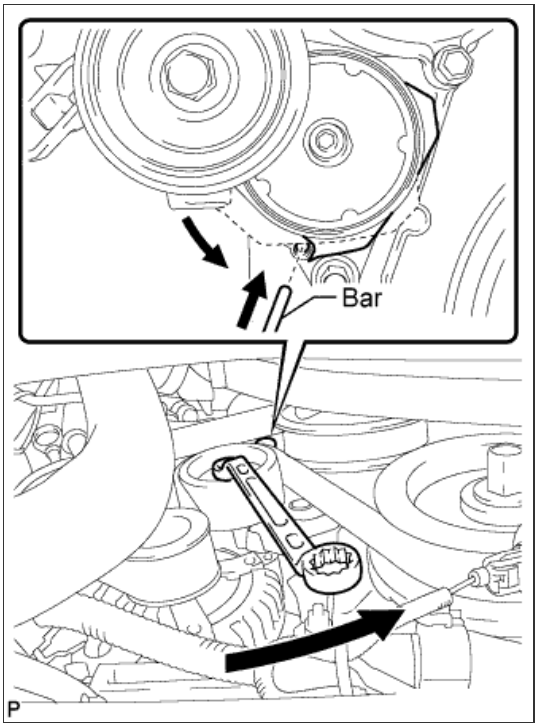
d. Tighten the 2 cylinder block drain cock plugs.

Torque:
13 N*m{ 130 kgf*cm , 10 ft.*lbf }

e. Tighten the radiator drain cock plug by hand.

10. REMOVE V-BANK COVER SUB-ASSEMBLY

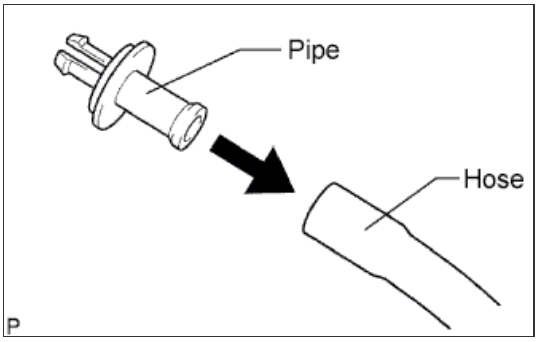
a. Raise the front of the V-bank cover to detach the 3 pins. Then remove the 2 V-bank cover hooks from the bracket, and remove the V-bank cover.



11. REMOVE FAN & GENERATOR V BELT

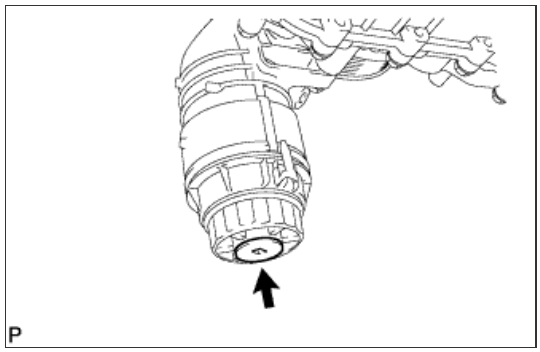
a. While turning the belt tensioner counterclockwise, align the service hole for the belt tensioner and the belt tensioner fixing position, and then insert a bar of φ5 mm (0.197 in.) into the service hole to fix the belt tensioner in place.

HINT:



The pulley bolt for the belt tensioner has a left-hand thread.

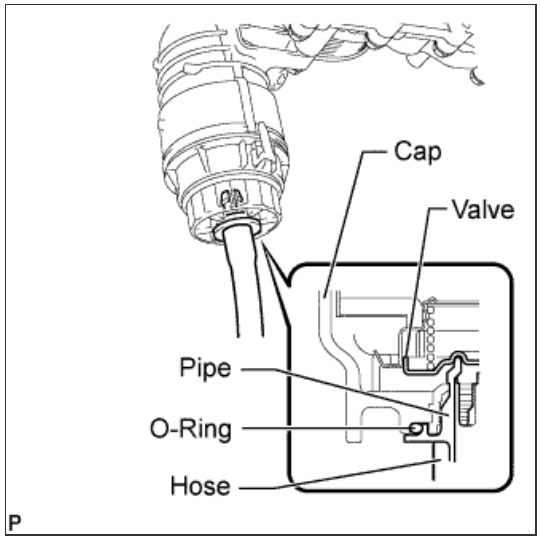
b. Remove the V belt.



12. REMOVE OIL FILTER ELEMENT

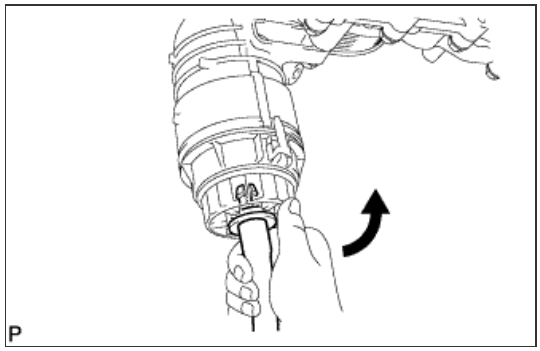
a. Connect a hose with an inside diameter of 15 mm (0.591 in.) to the pipe.

b. Remove the oil filter drain plug.



c. Install the pipe to the oil filter cap.

NOTICE:

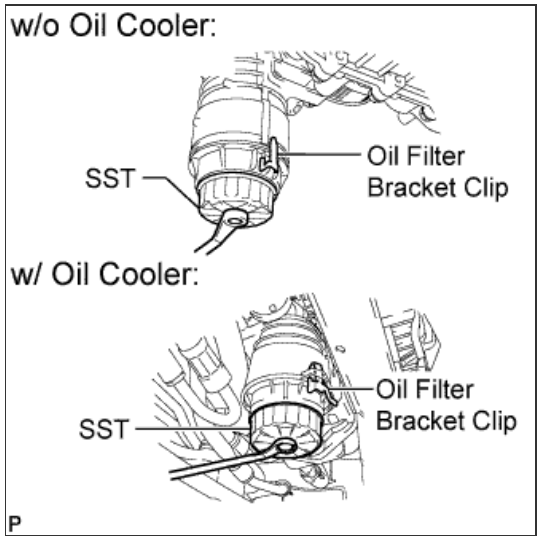


If the O-ring is removed with the drain plug, install the O-ring together with the pipe.

HINT:

Use a container to catch the draining oil.

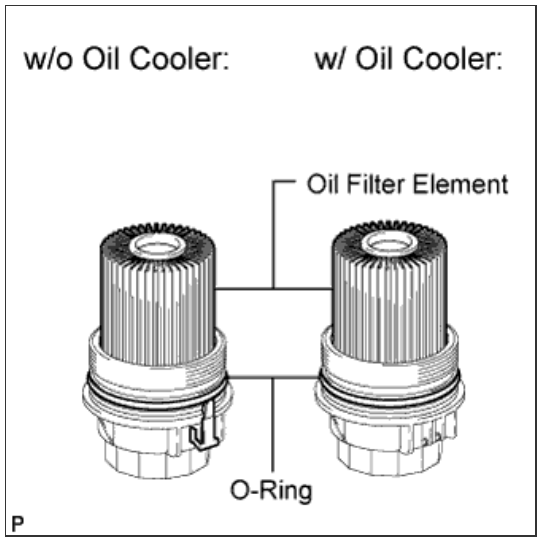
d. Check that oil is drained from the oil filter. Then disconnect the pipe and remove the O-ring as shown in the illustration.



e. Using SST, remove the oil filter cap.

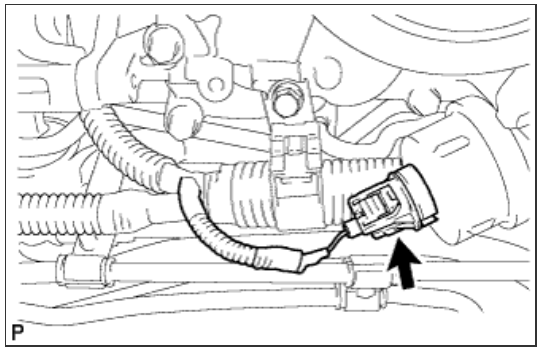
SST
09228-06501

NOTICE:



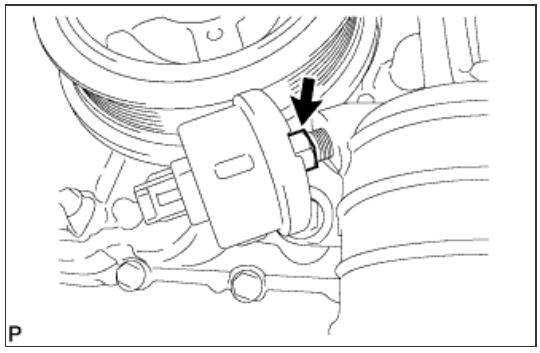
Do not remove the oil filter bracket clip.

f. Remove the oil filter element and O-ring from the oil filter cap.



NOTICE:

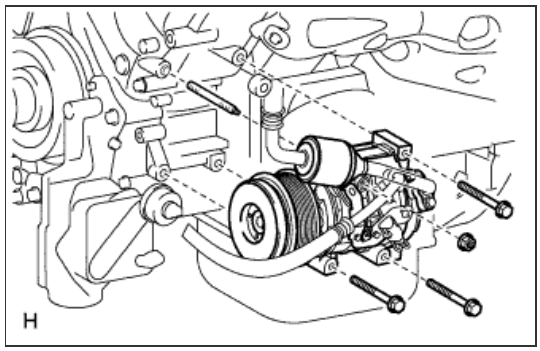
Be sure to remove the cap O-ring by hand, without using any tools, to prevent damage to the cap O-ring groove.



13. REMOVE OIL PRESSURE SENDER GAUGE ASSEMBLY

a. Disconnect the sender gauge connector.

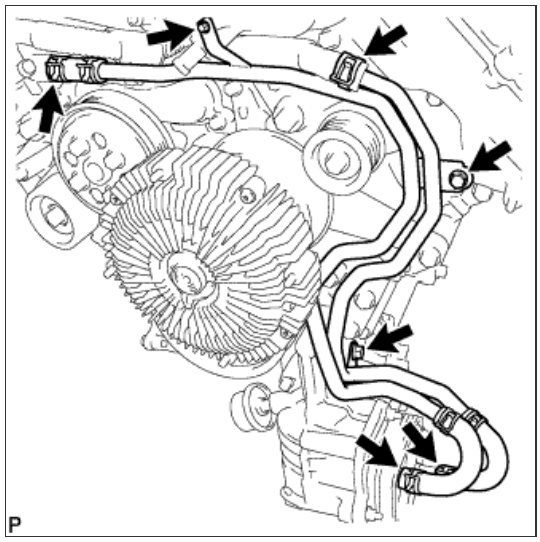
b. Remove the oil pressure sender gauge.



14. DISCONNECT COOLER COMPRESSOR ASSEMBLY

a. Remove the 3 bolts, nut and stud bolt, and disconnect the cooler compressor.

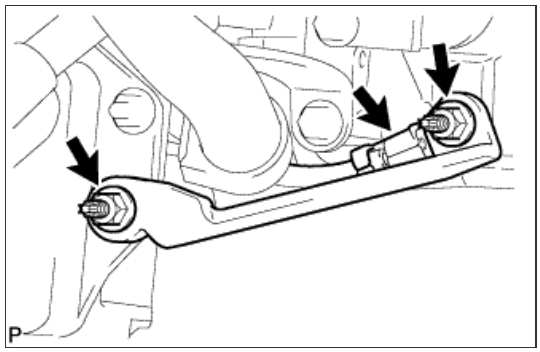
HINT:



It is not necessary to completely remove the compressor. With the hoses connected to the compressor, hang the compressor on the vehicle body with a rope.

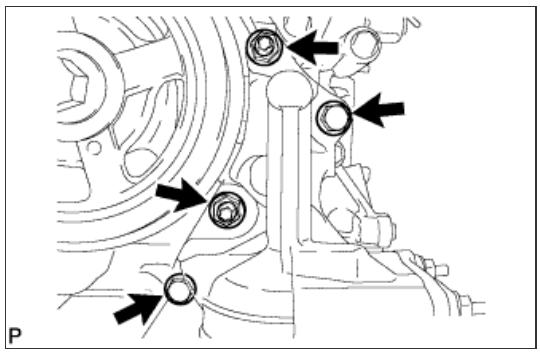
15. REMOVE NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY

a. Remove the 3 bolts.



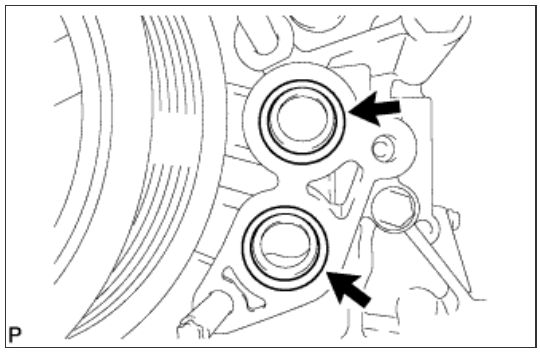
b. Disconnect the 4 hoses and remove the water by-pass pipe.

16. REMOVE NO. 1 OIL COOLER BRACKET



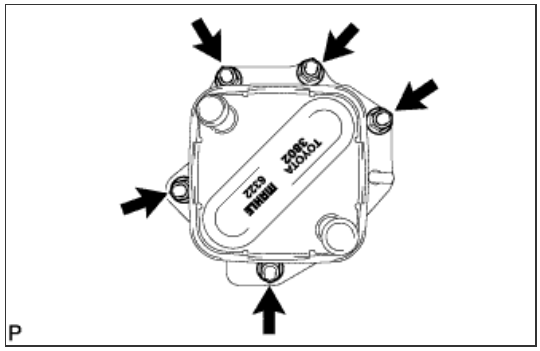
a. Remove the 2 nuts and bracket.

b. Disconnect the ground wire from the cylinder block.

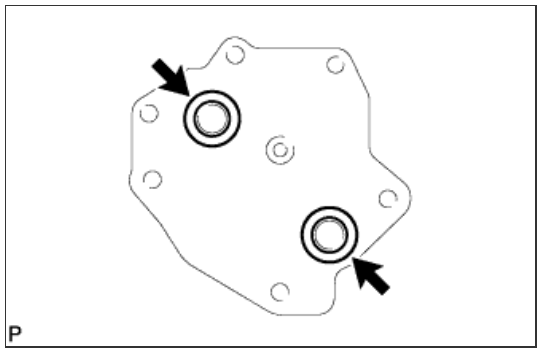


17. REMOVE OIL FILTER BRACKET

a. Remove the 2 bolts, 2 nuts and filter bracket.

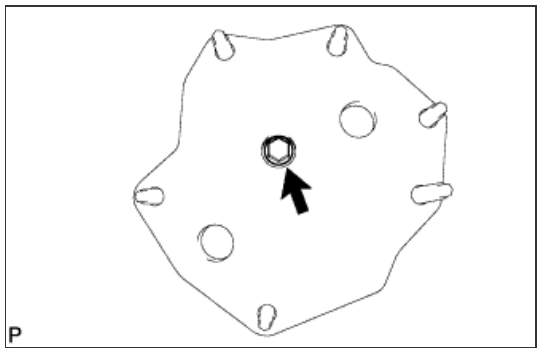


b. Remove the 2 O-rings.

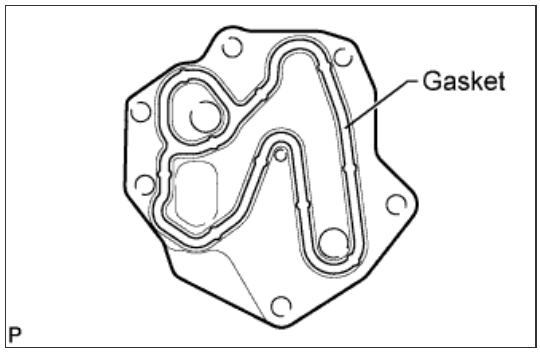


18. REMOVE OIL COOLER ASSEMBLY

a. Remove the 5 nuts and oil cooler from the oil filter bracket.



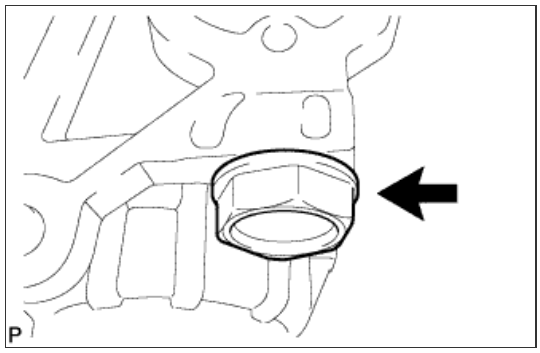
b. Remove the 2 O-rings.



19. REMOVE OIL COOLER SPACER

a. Remove the bolt and oil cooler spacer from the oil filter bracket.

b. Remove the gasket.

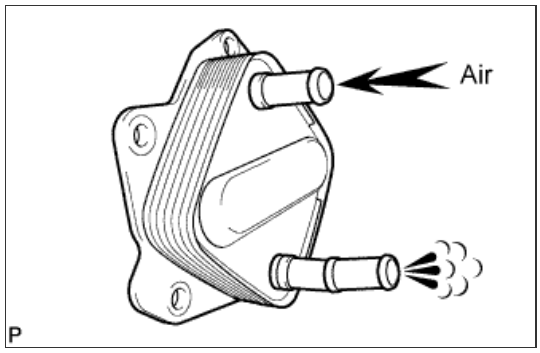


Gasket
P

for Preparation Click here

1. REMOVE OIL PUMP RELIEF VALVE

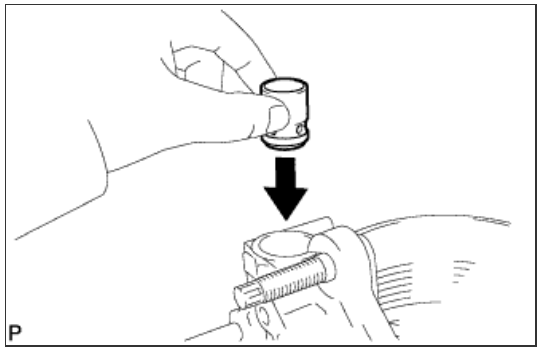
a. Remove the relief valve plug and gasket.



b. Remove the valve spring and oil pump relief valve.

for Preparation Click here

1. INSPECT OIL COOLER ASSEMBLY



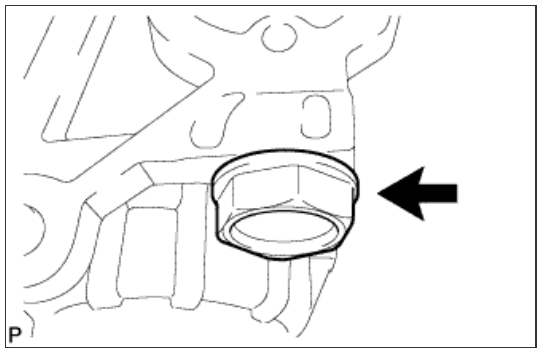
a. Check the oil cooler for damage or clogging.
If necessary, replace the oil cooler assembly.

2. INSPECT OIL PUMP RELIEF VALVE

a. Coat the relief valve with engine oil.

b. Check that the relief valve falls smoothly into the valve hole by its own weight.
If the relief valve does not fall smoothly, replace it. If necessary, replace the oil filter bracket.

for Preparation Click here



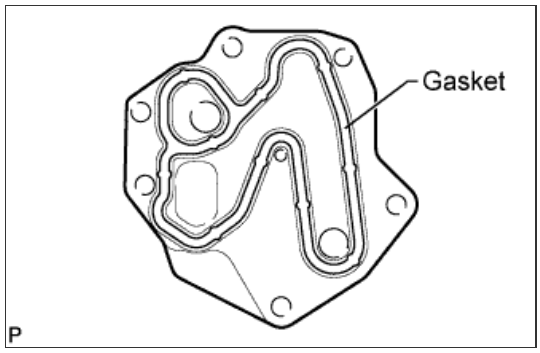
1. INSTALL OIL PUMP RELIEF VALVE

a. Coat the oil pump relief valve with engine oil.

b. Install the relief valve and valve spring into the oil pump cover hole.

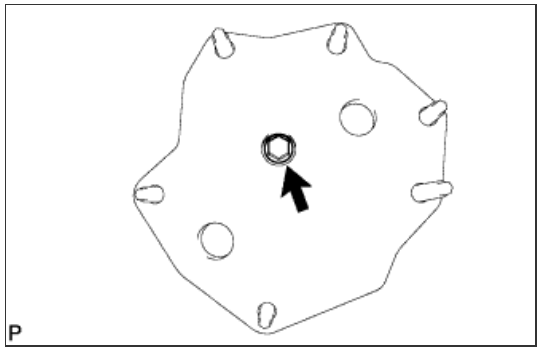
c. Install a new gasket and the plug.

Torque:
37 N*m{ 375 kgf*cm , 27 ft.*lbf }



for Preparation Click here

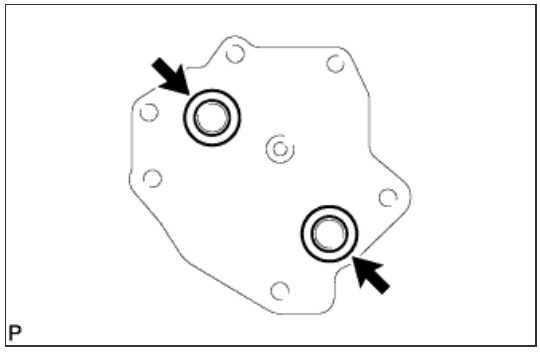
1. INSTALL OIL COOLER SPACER



a. Apply a light coat of engine oil to a new gasket.

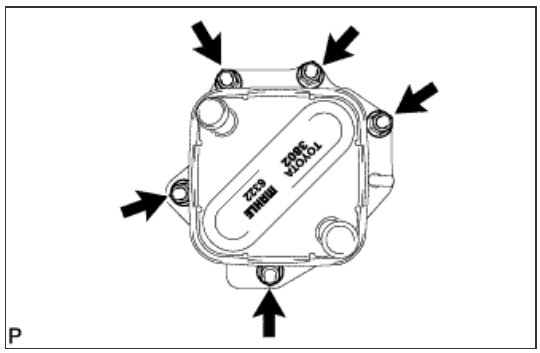
b. Install the gasket to the oil cooler spacer.

c. Install the oil cooler spacer to the oil filter bracket with the bolt.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

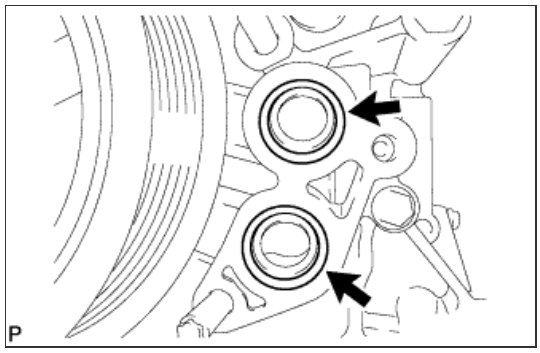
2. INSTALL OIL COOLER ASSEMBLY



a. Apply a light coat of engine oil to 2 new O-rings.

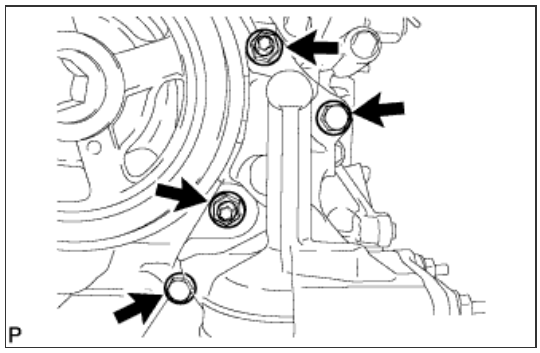
b. Install the 2 O-rings to the oil cooler.

c. Install the oil cooler with the 5 nuts.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

3. INSTALL OIL FILTER BRACKET

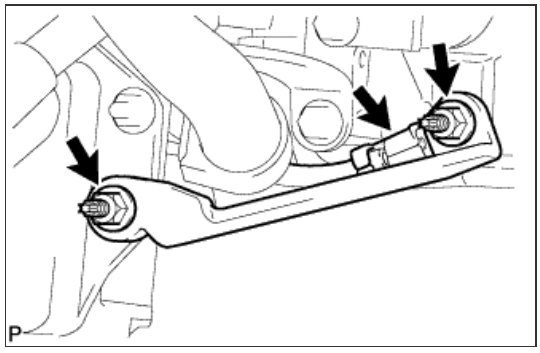


a. Apply a light coat of engine oil to 2 new O-rings.

b. Install the 2 O-rings to the timing chain cover.

c. Install the oil filter bracket with the 2 nuts and 2 bolts.

Torque:
35 N*m{ 357 kgf*cm , 26 ft.*lbf }

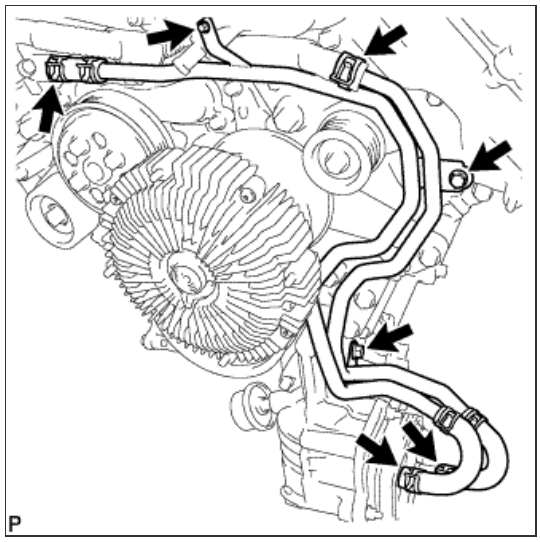


4. INSTALL NO. 1 OIL COOLER BRACKET

a. Connect the ground wire to the cylinder block.

b. Install the oil cooler bracket with the 2 nuts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



5. INSTALL NO. 2 WATER BY-PASS PIPE SUB-ASSEMBLY

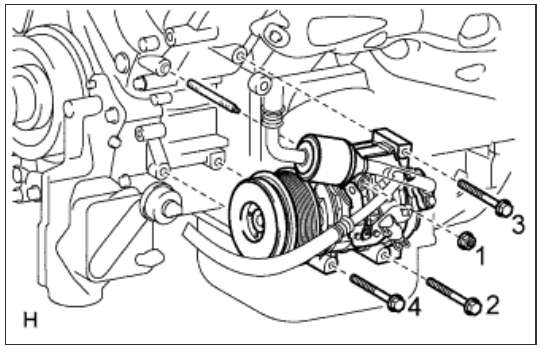
a. Connect the 4 hoses.

b. Install the water by-pass hose with the 3 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

6. CONNECT COOLER COMPRESSOR ASSEMBLY

a. Install the cooler compressor with the stud bolt.

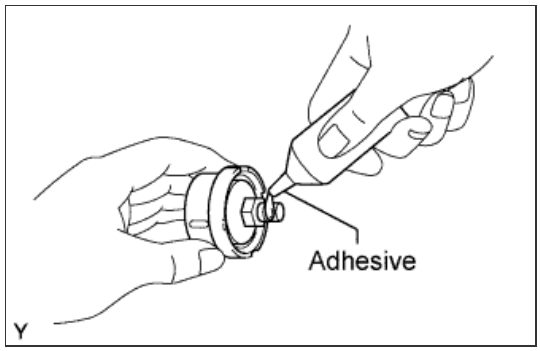


Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. Install the 3 bolts and nut.

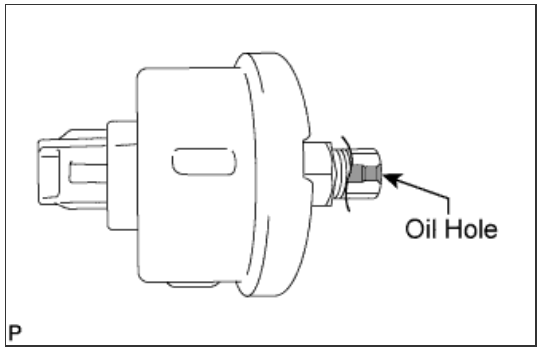
Torque:
25 N*m{ 250 kgf*cm , 18 ft.*lbf }

NOTICE:



Tighten the bolts and nut in the order shown in the illustration to install the cooler compressor.

7. INSTALL OIL PRESSURE SENDER GAUGE ASSEMBLY

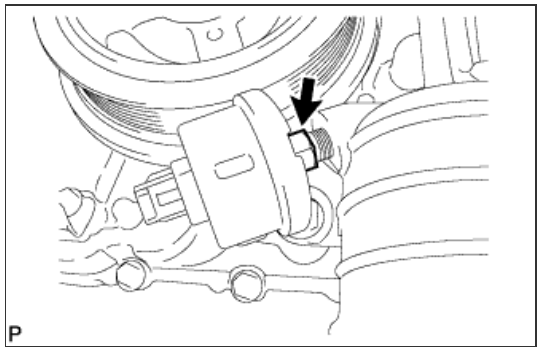


a. Apply adhesive to 2 or 3 threads of the oil pressure sender gauge.

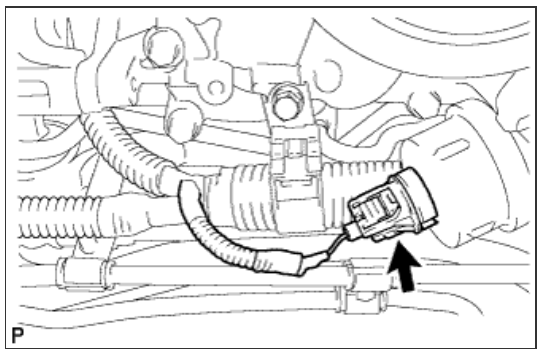
Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

NOTICE:

Do not allow adhesive to contact the oil hole.



b. Install the oil pressure sender gauge.



Torque:
15 N*m{ 153 kgf*cm , 11 ft.*lbf }

NOTICE:

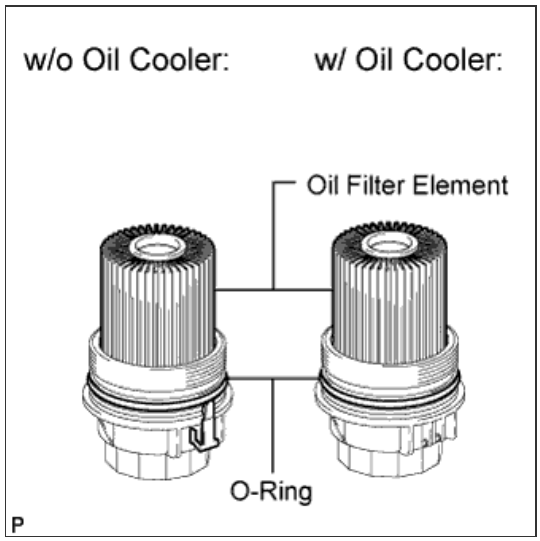
Do not start the engine within 1 hour after installation.

c. Connect the sender gauge connector.

8. INSTALL OIL FILTER ELEMENT

a. Clean the inside of the oil filter cap, its threads and its O-ring groove.

b. Apply a small amount of engine oil to a new O-ring and install it to the oil filter cap.



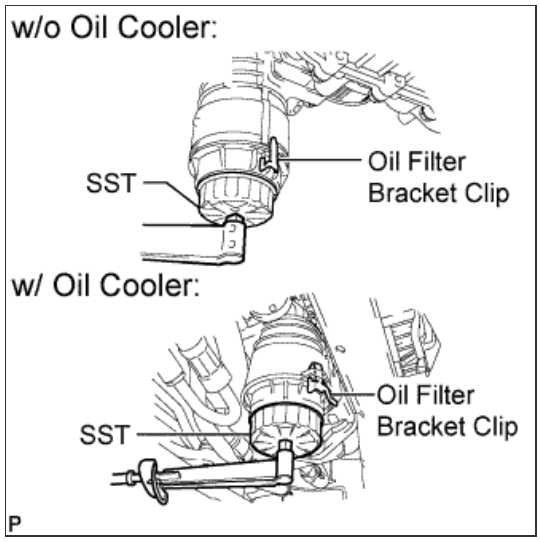
c. Set a new oil filter element to the oil filter cap.

d. Remove any dirt or foreign matter from the installation surface of the engine.

e. Apply a small amount of engine oil to the O-ring again and temporarily install the oil filter cap.

NOTICE:

Do not remove the oil filter bracket clip.



f. Using SST, tighten the oil filter cap.

SST
09228-06501

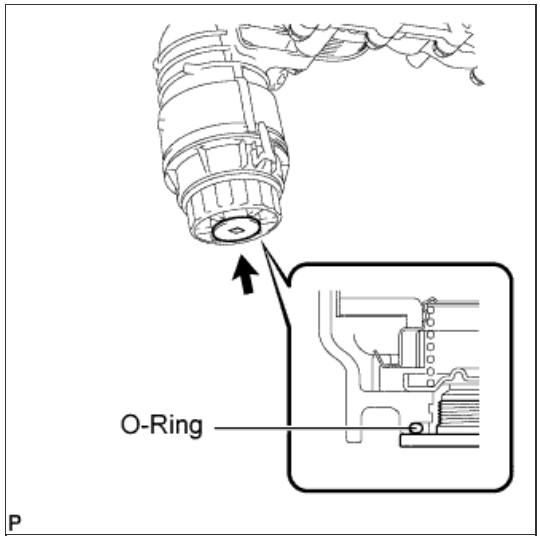
Torque:
25 N*m{ 255 kgf*cm , 18 ft.*lbf }

NOTICE:

- **When tightening the oil filter cap, do not remove the oil filter bracket clip.**
- **Make sure that the oil filter is installed securely as shown in the illustration.**
- **Be careful that the O-ring does not get caught between any surrounding parts.**

g. Apply a small amount of engine oil to a new drain plug O-ring, and install it to the oil filter cap.

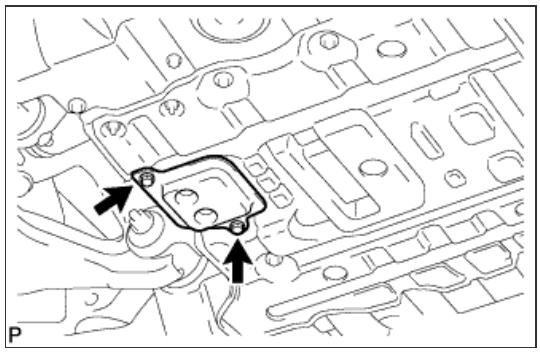
NOTICE:



Before installing the O-ring, remove any dirt or foreign matter from the installation surface of the oil filter cap.

h. Install the oil filter drain plug.

Torque:
13 N*m{ 127 kgf*cm , 9 ft.*lbf }

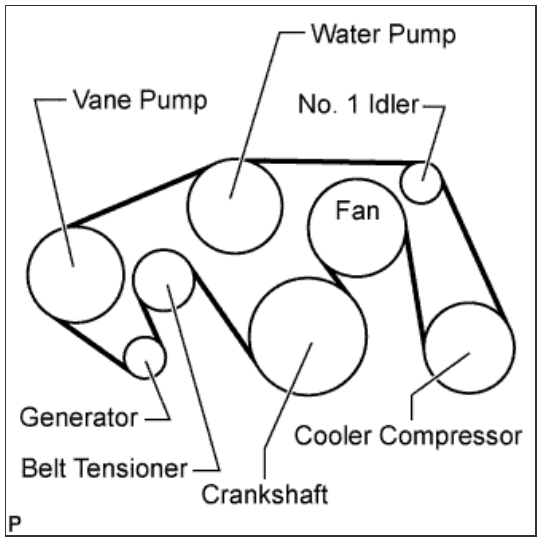


NOTICE:

Be careful that the O-ring does not get caught between any surrounding parts.

i. Install the No. 2 engine under cover seal with the 2 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

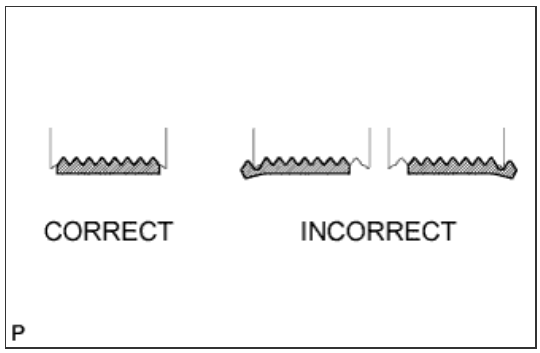


9. INSTALL FAN & GENERATOR V BELT

a. Set the V belt onto every part.

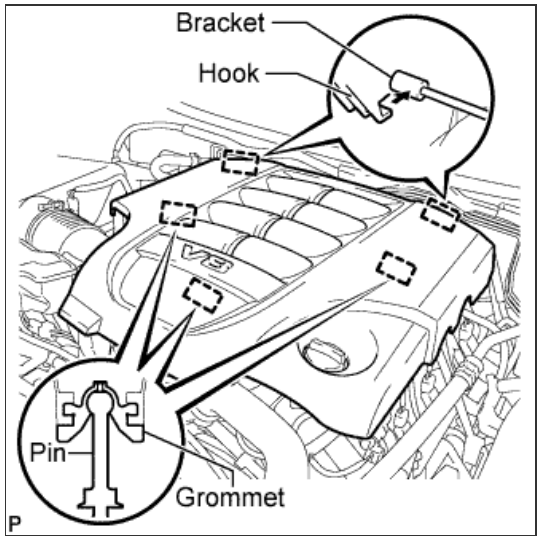
b. While turning the belt tensioner counterclockwise, remove the bar.

NOTICE:



Make sure that the V belt is properly set to each pulley.

c. After installing the belt, check that it fits properly in the ribbed grooves.



HINT:

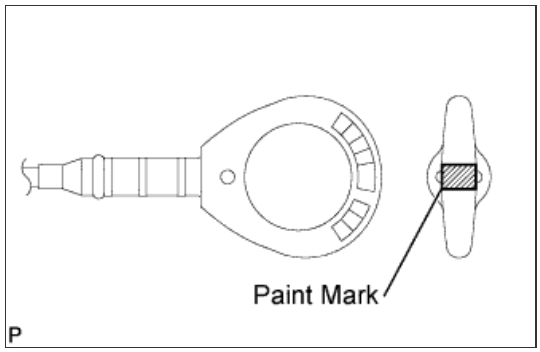
Make sure to check by hand that the belt has not slipped out of the grooves on the bottom of the pulley.

10. INSTALL V-BANK COVER SUB-ASSEMBLY

a. Attach the 2 V-bank cover hooks to the bracket. Then align the 3 V-bank cover grommets with the 3 pins, and press down on the V-bank cover to attach the pins.

11. ADD ENGINE OIL

a. Add fresh oil and install the oil filler cap.



Standard Oil Grade:

Oil Grade	Oil Viscosity (SAE)
API grade SL "Energy-Conserving", SM "Energy-Conserving" or ILSAC multigrade engine oil	0W-20 5W-20 5W-30 10W-30

API grade SL or SM multigrade engine oil	15W-40 20W-50

Standard Oil Capacity:

Paint Mark	Item	Specified Condition
Blue	Drain and refill with oil filter change	7.0 liters (7.4 US qts, 6.2 Imp. qts)
	Drain and refill without oil filter change	6.6 liters (7.0 US qts, 5.8 Imp. qts)
	Dry fill	8.4 liters (8.9 US qts, 7.4 Imp. qts)
Green	Drain and refill with oil filter change	7.5 liters (7.9 US qts, 6.6 Imp. qts)
	Drain and refill without oil filter change	7.1 liters (7.5 US qts, 6.2 Imp. qts)
	Dry fill	9.3 liters (9.8 US qts, 8.2 Imp. qts)

12. ADD ENGINE COOLANT

a. Add engine coolant.

Standard Capacity:

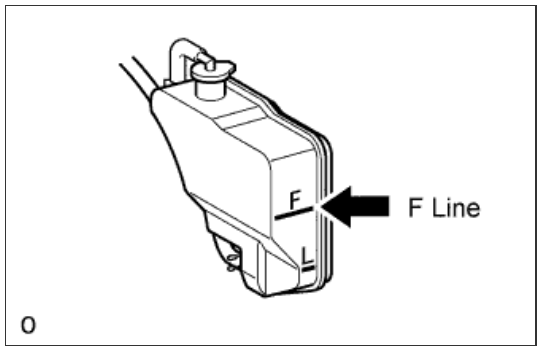
Item	Specified Condition
with transmission oil cooler	16.7 liters (17.6 US qts, 14.7 Imp. qts)
without transmission oil cooler	16.2 liters (17.1 US qts, 14.3 Imp. qts)

NOTICE:

Do not substitute plain water for engine coolant.

HINT:

TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).



b. Slowly pour coolant into the radiator reservoir until it reaches the F line.

c. Install the reservoir cap.

d. Press the No. 1 and No. 2 radiator hoses several times by hand, and then check the coolant level. If the coolant level is low, add coolant.

e. Install the radiator cap.

f. Start the engine and warm it up until the thermostat opens.

NOTICE:

Switch off the A/C.

g. Maintain the engine speed at 2000 to 2500 rpm.

NOTICE:

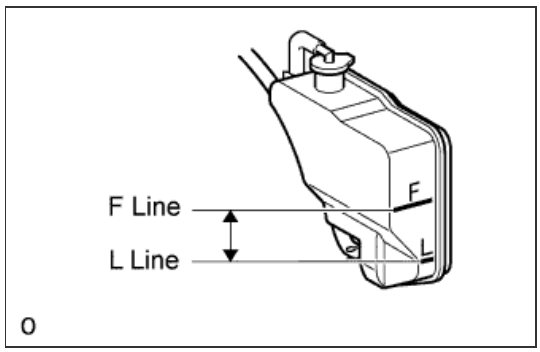
- **Make sure that the radiator reservoir still has some coolant in it.**
- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**
- **Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following: 1) stop**

the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the F line.

- **Run the engine at 2000 rpm until the coolant level has stabilized.**

h. Press the No. 1 and No. 2 radiator hoses several times by hand to bleed air.

CAUTION:



- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the fan.**

i. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

Do not remove the radiator cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

j. Check that the coolant level is between the F and L lines.
If the coolant level is below the L line, repeat all of the procedures above.
If the coolant level is above the F line, drain coolant so that the coolant level is between the F and L lines.

13. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

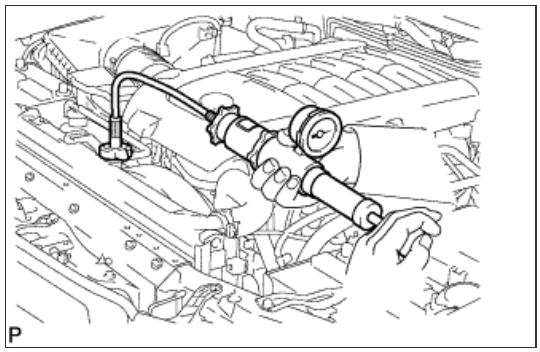
14. INSPECT FOR OIL LEAK

a. Start the engine. Make sure that there are no oil leaks from the area that was worked on.

15. INSPECT ENGINE OIL LEVEL

a. Warm up the engine, stop the engine and wait 5 minutes. The oil level should be between the dipstick low level mark and full level mark.
If low, check for leakage and add oil up to the full level mark.

NOTICE:

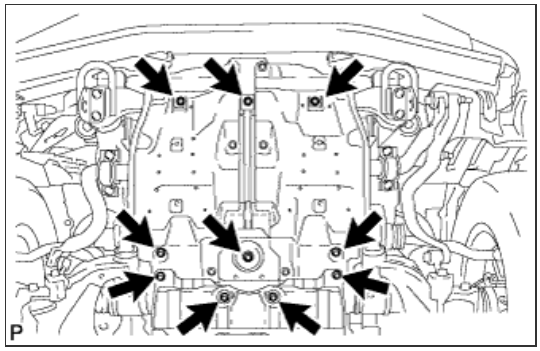


Do not fill engine oil above the full level mark.

16. INSPECT FOR COOLANT LEAK

a. Fill the radiator with coolant and attach a radiator cap tester.

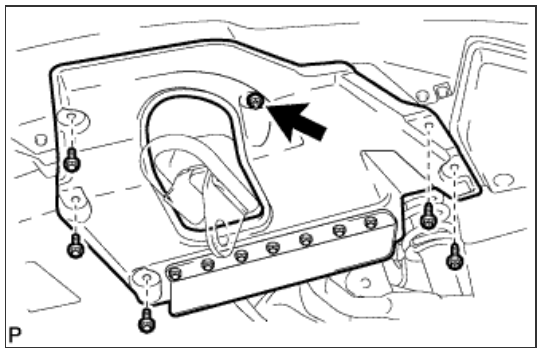
b. Warm up the engine.



c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf/cm^2, 18 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks. If no external leaks are found, check the heater core, cylinder block and head.

17. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.

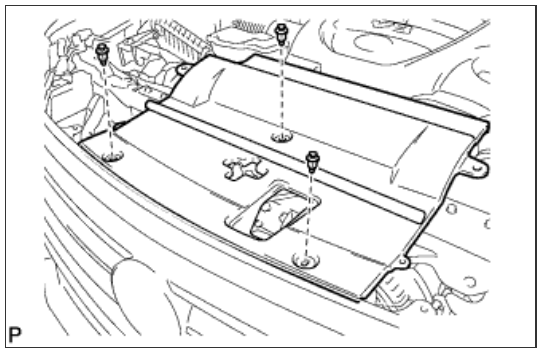


Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

18. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

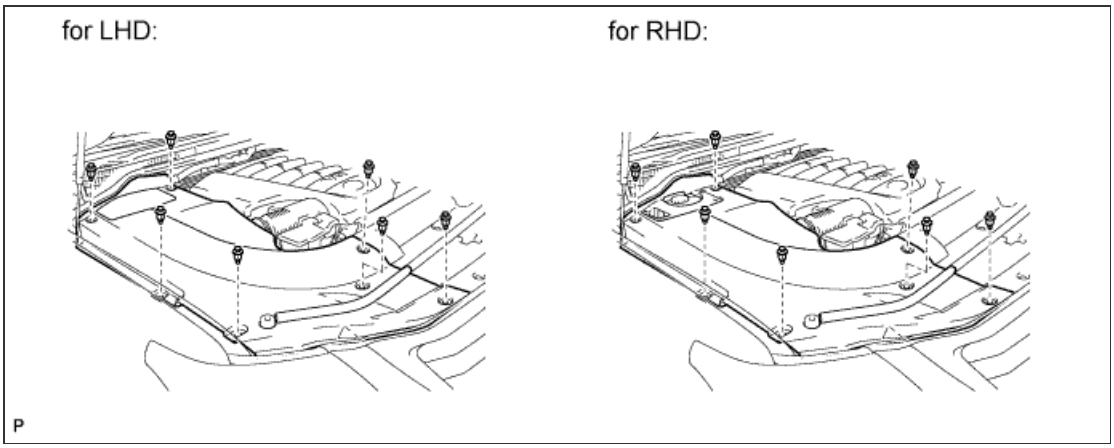
b. Install the 3 bolts and 2 screws.



19. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

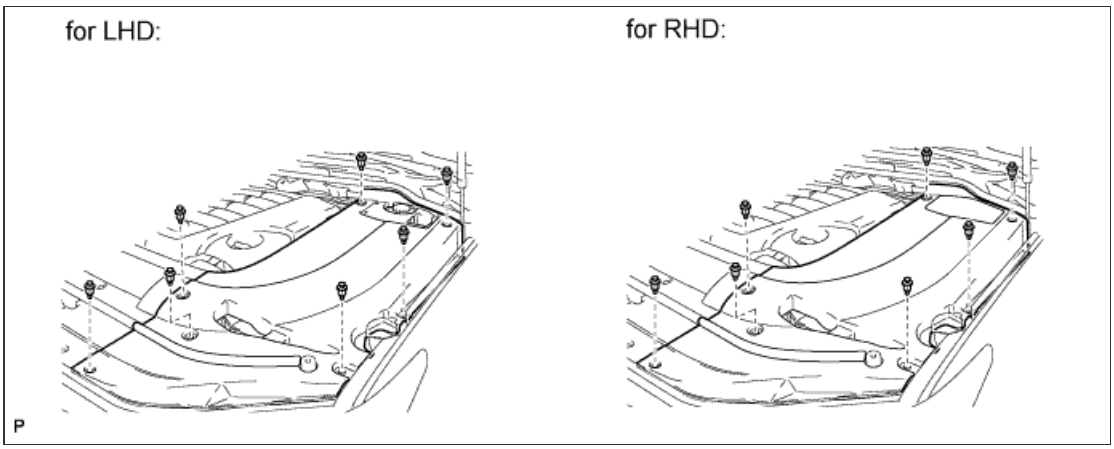
HINT:

Use the same procedures described for the LH side.



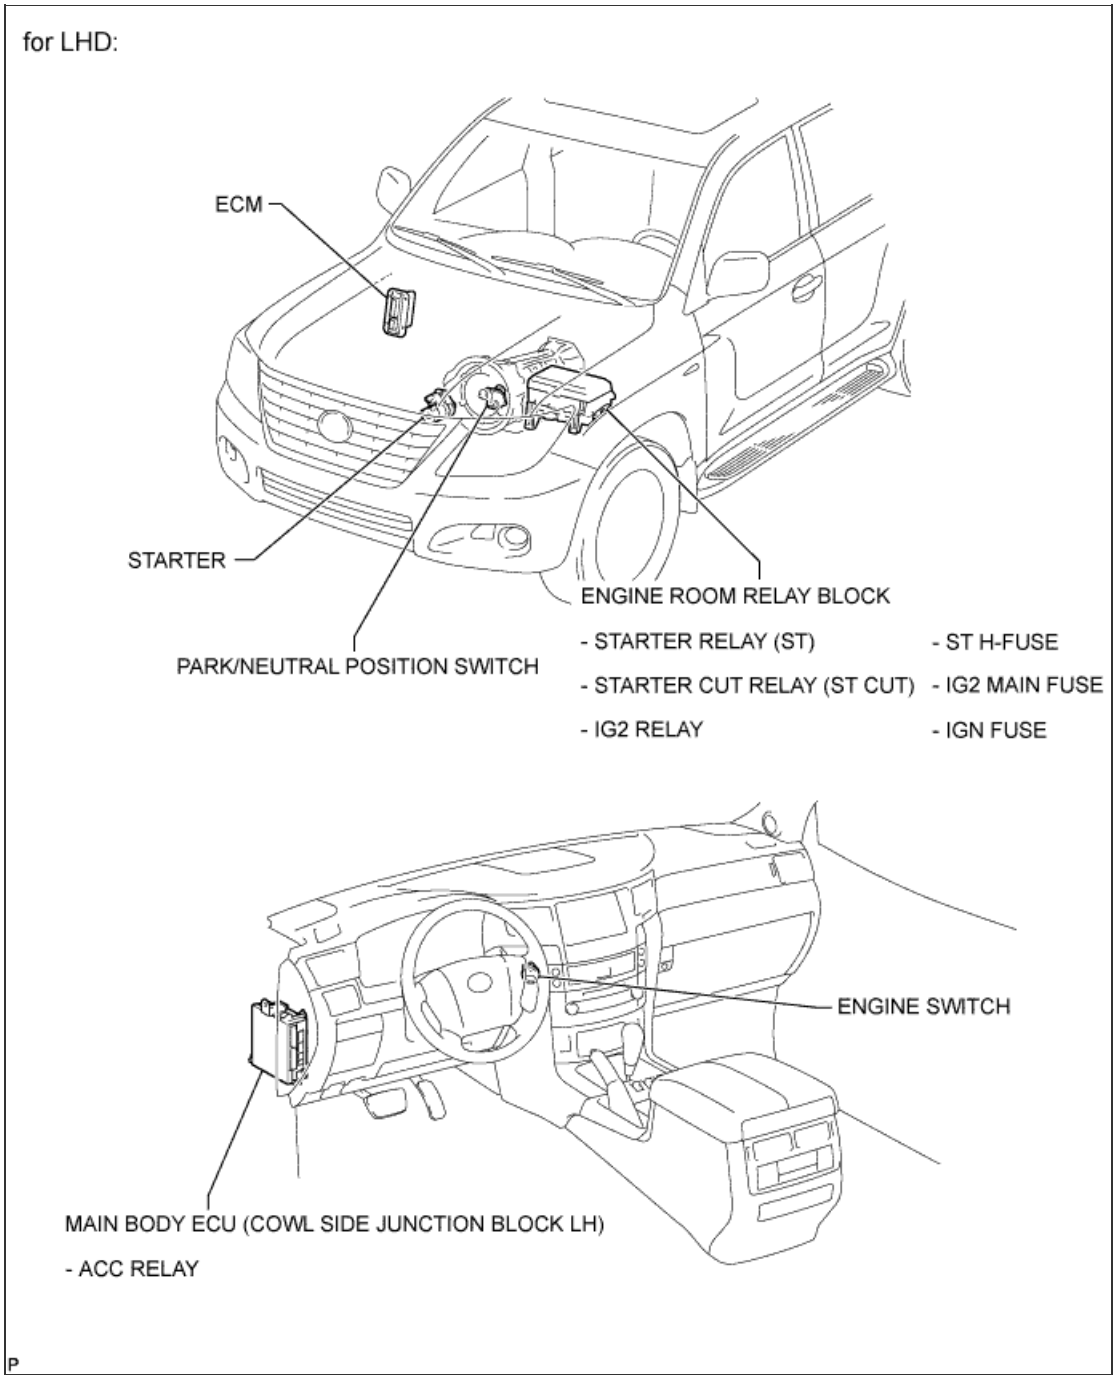
20. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the upper radiator support seal with the 3 clips.

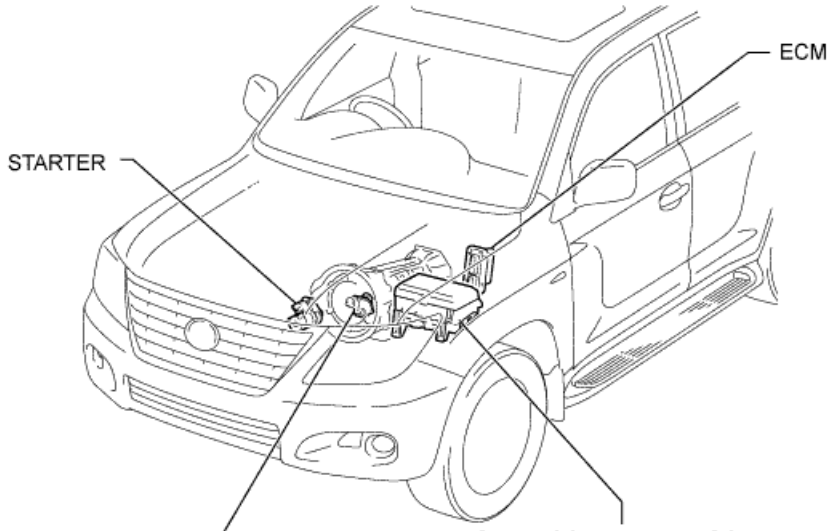


21. INSTALL ENGINE ROOM SIDE COVER RH

a. Install the engine room side cover with the 7 clips.



22. INSTALL ENGINE ROOM SIDE COVER LH



a. Install the engine room side cover with the 7 clips.

for Preparation Click here

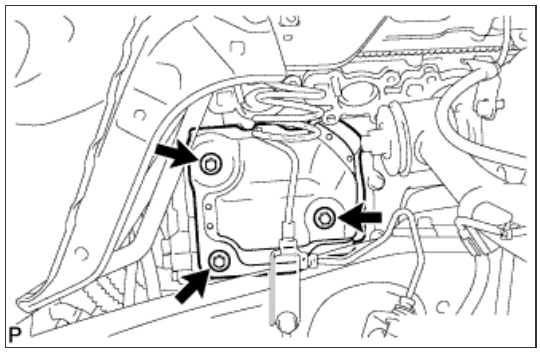
1. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY RH

a. Remove the exhaust manifold RH (Click here).

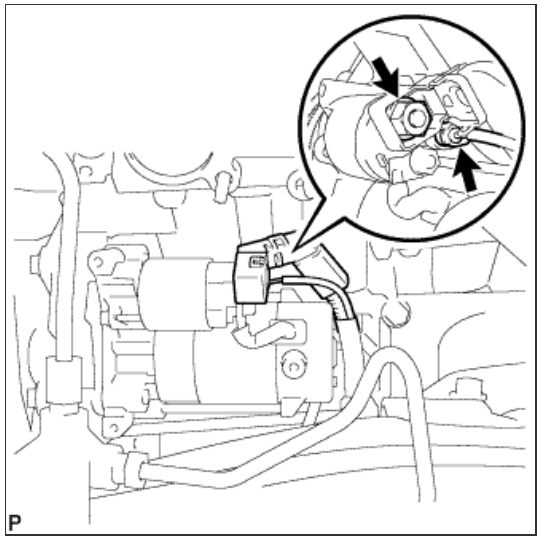


2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

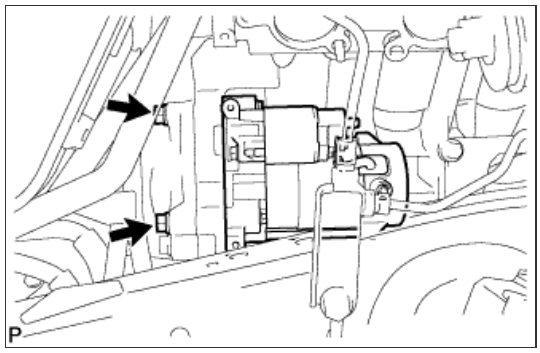
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

3. REMOVE STARTER COVER

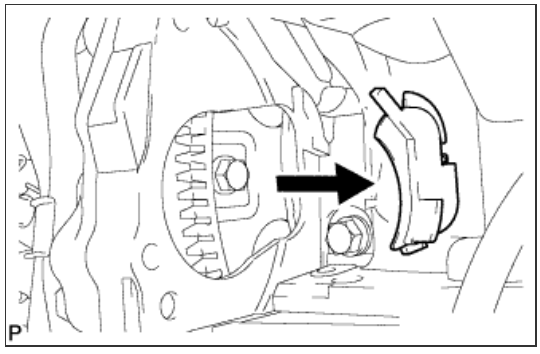


a. Remove the 3 bolts and starter cover.



4. REMOVE STARTER ASSEMBLY

a. Disconnect the starter connector.



b. Remove the nut and disconnect the starter wire.

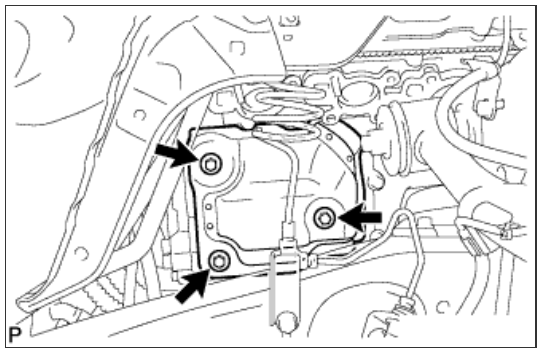
c. Remove the 2 bolts and starter.

d. Remove the flywheel housing side cover.

for Preparation Click here

1. REMOVE EXHAUST MANIFOLD SUB-ASSEMBLY RH

a. Remove the exhaust manifold RH (Click here).

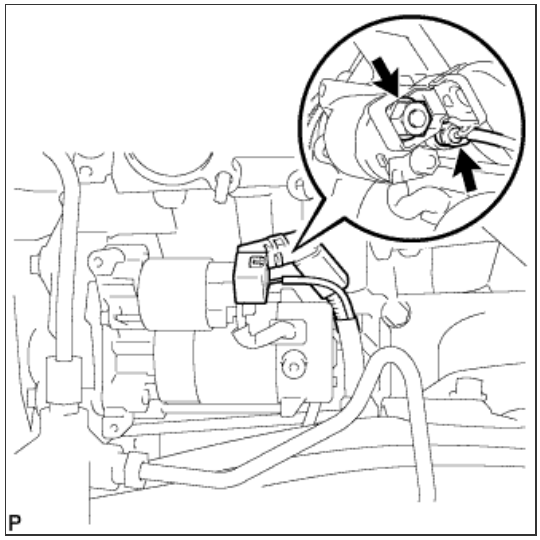


2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

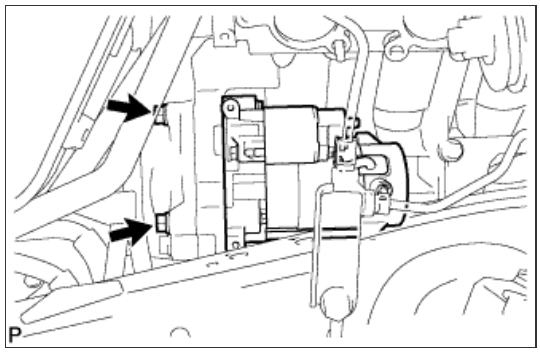
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

3. REMOVE STARTER COVER

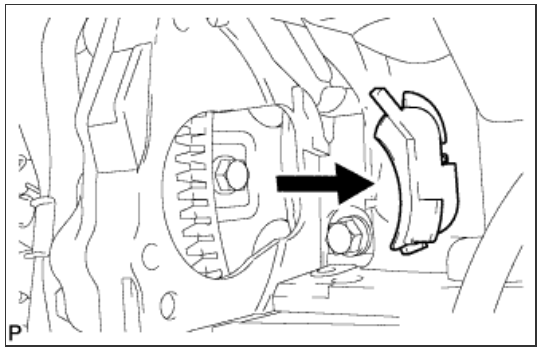


a. Remove the 3 bolts and starter cover.



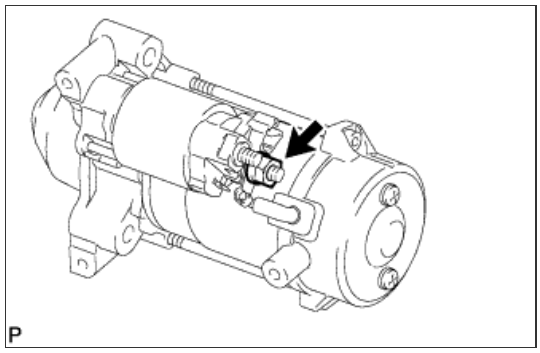
4. REMOVE STARTER ASSEMBLY

a. Disconnect the starter connector.

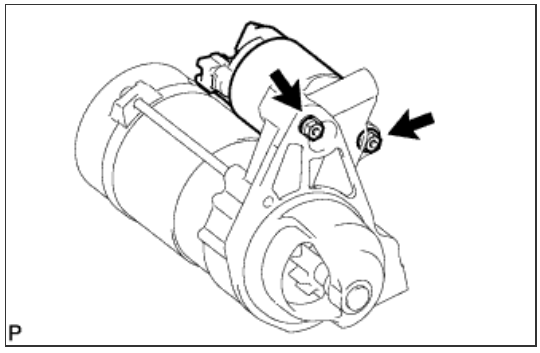


b. Remove the nut and disconnect the starter wire.

c. Remove the 2 bolts and starter.



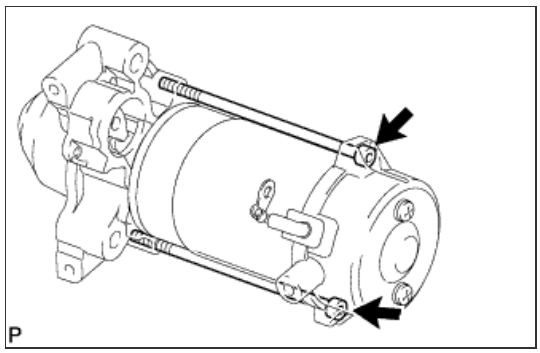
d. Remove the flywheel housing side cover.



for Preparation Click here

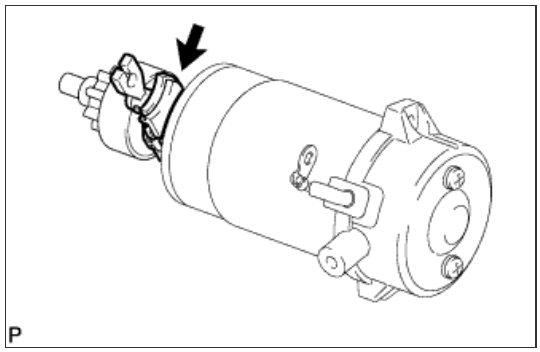
1. REMOVE MAGNET STARTER SWITCH ASSEMBLY

a. Remove the nut, and disconnect the lead wire from the terminal C.



b. Remove the 2 nuts and magnet starter switch.

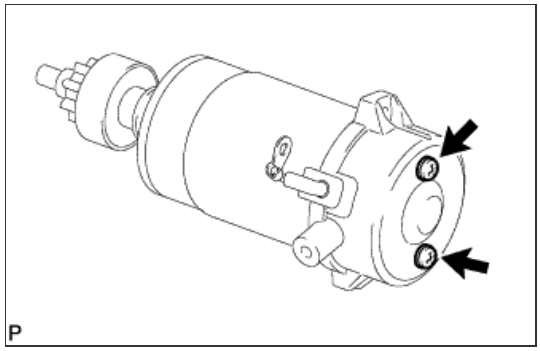
2. REMOVE STARTER DRIVE HOUSING ASSEMBLY



a. Using a T30 "TORX" socket wrench, remove the 2 bolts.

b. Pull out the starter yoke and the starter commutator end frame together with the starter armature.

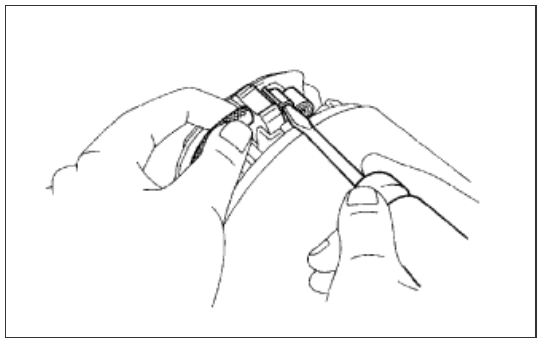
3. REMOVE STARTER COMMUTATOR END FRAME ASSEMBLY



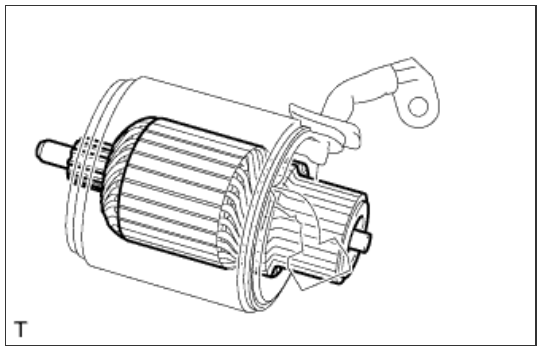
a. Remove the starter pinion drive lever.

b. Remove the 2 screws and end frame.

NOTICE:



While holding down the lead wire, remove the starter commutator end frame.

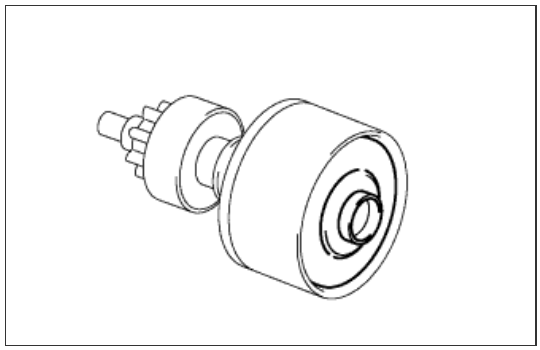


4. REMOVE STARTER ARMATURE ASSEMBLY

a. Using a screwdriver, hold the spring back and disconnect the brush from the starter brush holder.

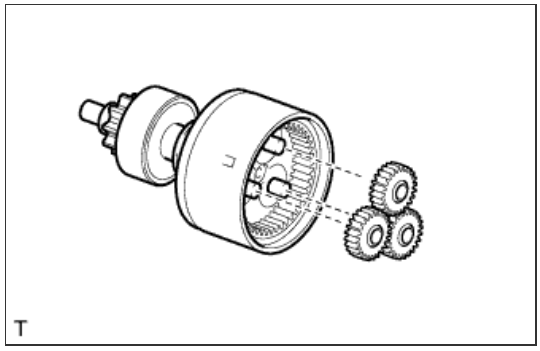
b. Disconnect the 4 brushes and remove the starter brush holder.

c. Remove the starter armature from the starter yoke.



5. REMOVE STARTER YOKE ASSEMBLY

a. Remove the starter yoke from the starter center bearing clutch.

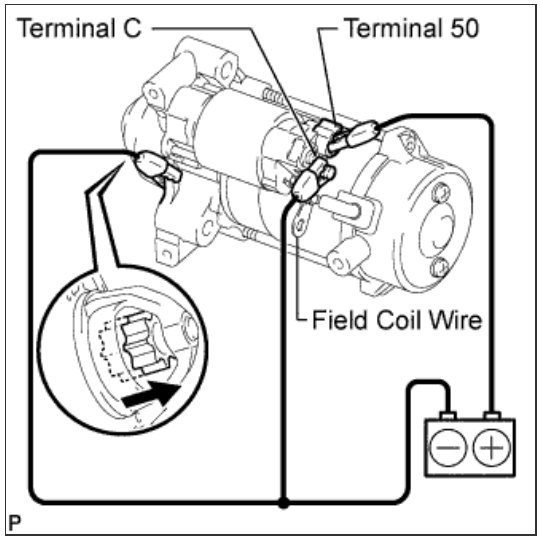


6. REMOVE STARTER ARMATURE PLATE

a. Remove the starter armature plate from the starter center bearing clutch.

7. REMOVE PLANETARY GEAR

a. Remove the 3 planetary gears.

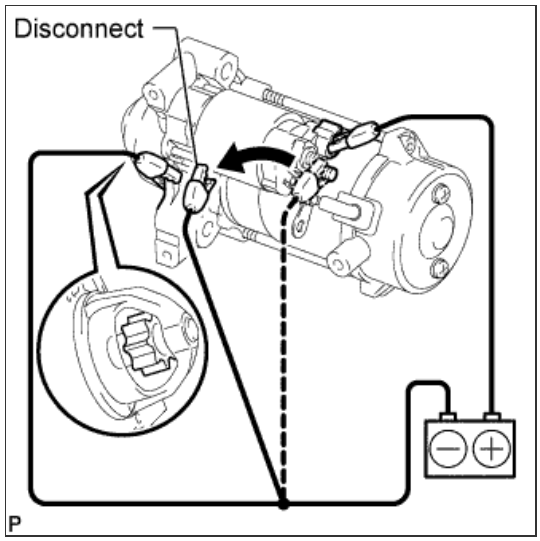


for Preparation Click here

1. INSPECT STARTER ASSEMBLY

NOTICE:

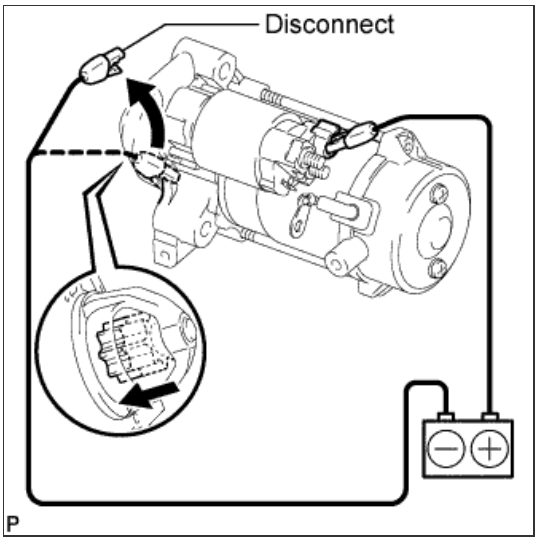
The following tests must be performed for no more than 5 seconds to prevent the coil from burning out.



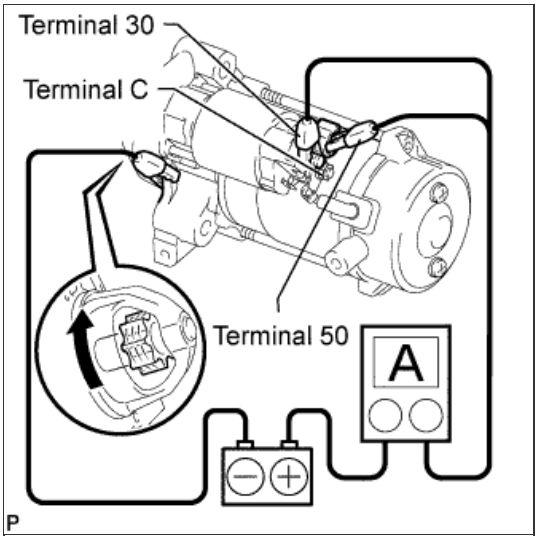
a. Perform pull-in test.

i. Disconnect the lead wire from terminal C.

ii. Connect the battery to the magnet starter switch as shown in the illustration. Check that the clutch pinion gear moves outward.
If the clutch pinion gear does not move outward, replace the magnet starter switch assembly.



b. Perform holding test.



i. Disconnect the negative (-) terminal lead from terminal C with the condition specified in the pull-in test above being maintained. Check that the pinion gear remains out.
If the clutch pinion gear moves inward, replace the magnet starter switch assembly.

c. Inspect clutch pinion gear return.

i. Disconnect the negative (-) lead from the starter body. Check that the clutch pinion gear moves inward.
If the clutch pinion gear does not move inward, replace the magnet starter switch assembly.

d. Perform the operation test without load.

i. Connect the field coil wire to terminal C with the nut. Make sure that the lead is not grounded.

Torque:
6.5 N*m{ 66 kgf*cm , 57 in.*lbf }

ii. Clamp the starter in a vise.

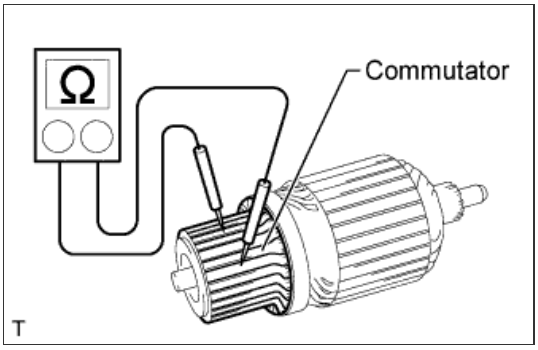
iii. Connect the battery and an ammeter to the starter as shown in the illustration.

iv. Check that the starter rotates smoothly and steadily while the pinion gear is moving out.
Then measure the current.

Standard current:
190 A or less at 11.5 V

If the result is not as specified, replace the starter assembly.

2. INSPECT STARTER ARMATURE ASSEMBLY



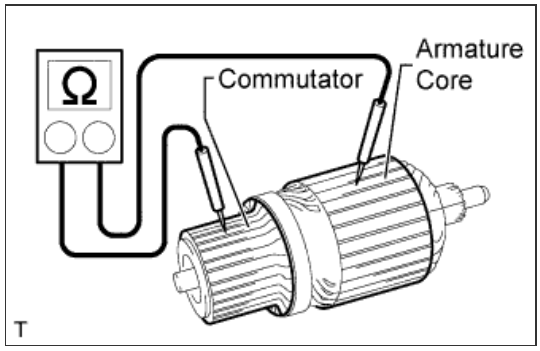
a. Inspect the commutator for an open circuit.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Commutator	Always	Below 1 Ω

If the result is not as specified, replace the starter armature assembly.



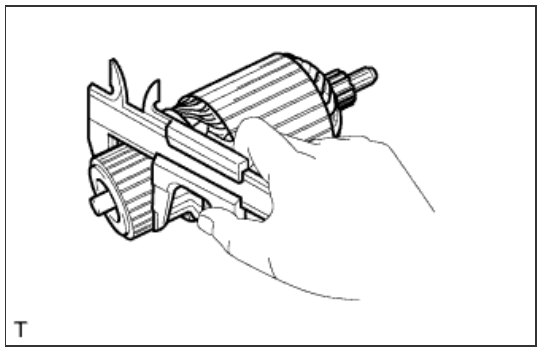
b. Inspect the commutator for a short circuit.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Commutator - Armature coil core	Always	10 kΩ or higher

If the result is not as specified, replace the starter armature assembly.

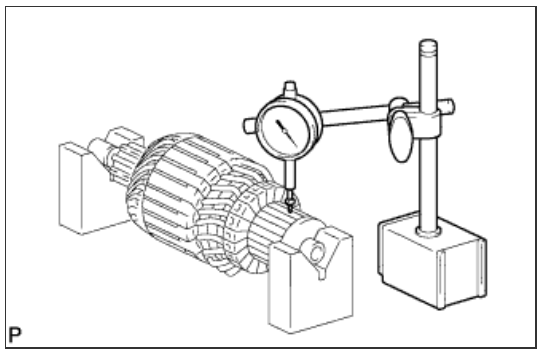


c. Check the surface of the commutator for dirt and burns.
If the surface is dirty or burnt, correct it with sandpaper (No. 400) or a lathe.

d. Using a vernier caliper, measure the commutator diameter.

Standard diameter:
35.0 mm (1.38 in.)

Minimum diameter:
34.0 mm (1.34 in.)

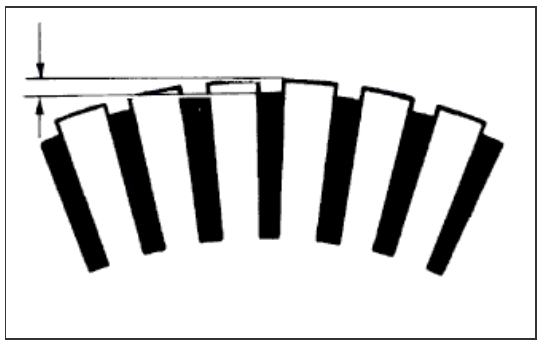


If the diameter is less than the minimum, replace the starter armature assembly.

e. Using a dial indicator, measure the commutator runout.

Maximum commutator runout:
0.05 mm (0.00197 in.)

If the commutator runout is more than the maximum, correct it using a lathe.



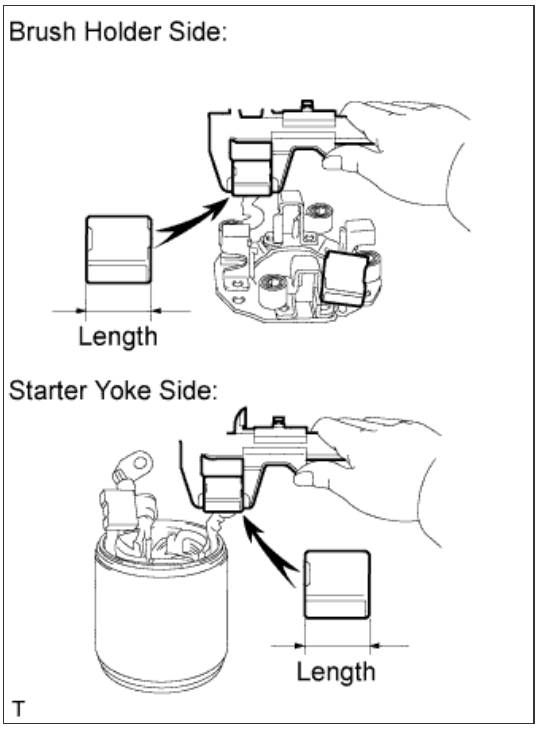
f. Measure the undercut depth of the commutator.

Standard undercut depth:
0.7 mm (0.0276 in.)

Minimum undercut depth:
0.2 mm (0.00787 in.)

If the undercut depth is less than the minimum, increase the depth using a hacksaw blade.

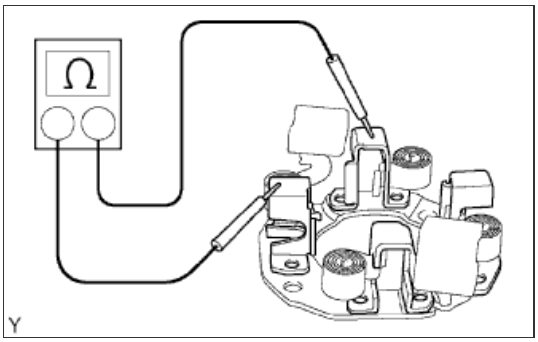
3. INSPECT BRUSH



a. Using a vernier caliper, measure the brush length.

Standard length:
15.0 mm (0.591 in.)

Minimum length:
10.0 mm (0.394 in.)

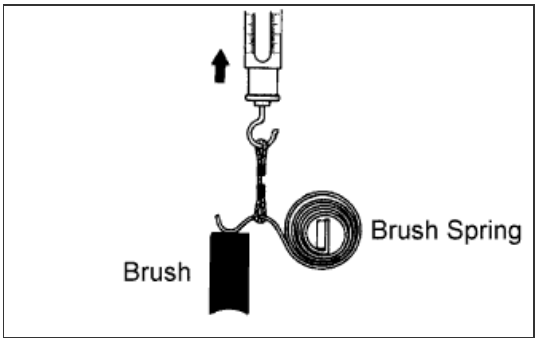


If the brush length is less than the minimum, replace the starter brush holder

assembly and yoke assembly.

4. INSPECT STARTER BRUSH HOLDER ASSEMBLY

a. Inspect the insulation.



i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Positive (+) brush holder - Negative (-) brush holder	Always	10 kΩ or higher

If the result is not as specified, replace the starter brush holder assembly.

b. Inspect the load of the brush spring.

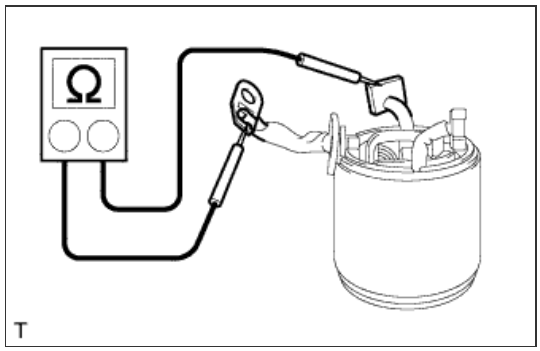
i. Take a pull scale reading immediately after the brush spring separates from the brush.

Standard spring installed load:
21.5 to 27.5 N (2.2 to 2.8 kgf, 4.8 to 6.2 lbf)

Minimum spring installed load:
12.3 N (1.3 kgf, 2.8 lbf)

If the installed load is less than the minimum, replace the starter brush holder assembly.

5. INSPECT STARTER YOKE ASSEMBLY



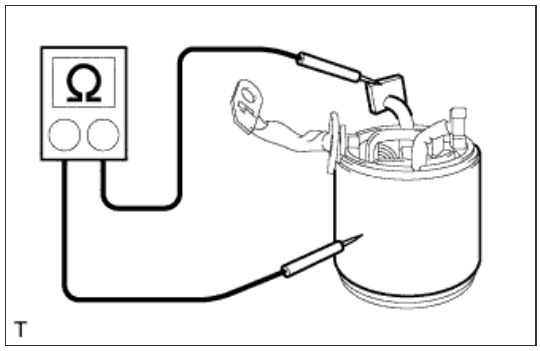
a. Inspect the resistance of the field coil.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Terminal C wire - Brushes	Always	Below 1 Ω

If the result is not as specified, repair or replace the starter yoke assembly.

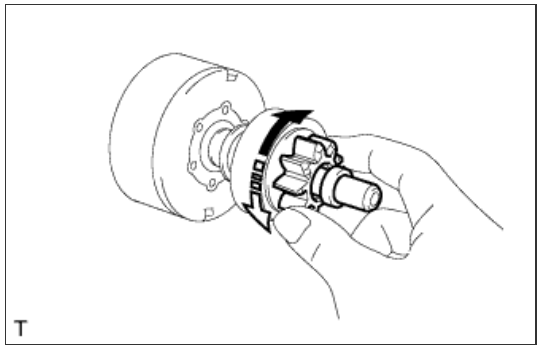


ii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Brushes - Starter yoke body	Always	10 kΩ or higher

If the result is not as specified, repair or replace the starter yoke assembly.



6. INSPECT STARTER CENTER BEARING CLUTCH SUB-ASSEMBLY

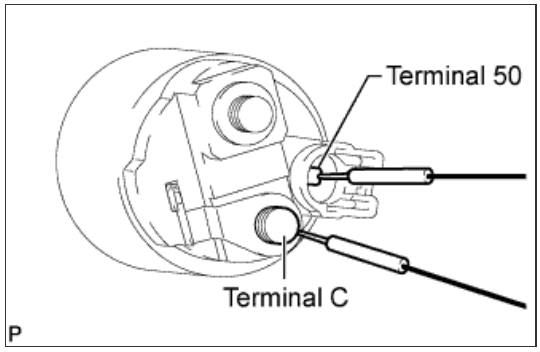
a. Check the gear teeth of the planetary gear and starter center bearing clutch for wear or damage.
If any planetary gear is damaged, replace the planetary gear assembly. If any gear of the starter center bearing clutch is damaged, replace the starter center bearing clutch sub-assembly.

b. Check the movement of the clutch pinion gear.

i. Rotate the clutch pinion gear clockwise, and check that it turns freely.

ii. Try to rotate the clutch pinion gear counterclockwise, and check that it locks.
If the clutch pinion gear cannot be turned clockwise smoothly, or does not lock in the counterclockwise direction, replace the starter center bearing clutch sub-assembly.

7. INSPECT MAGNET STARTER SWITCH ASSEMBLY



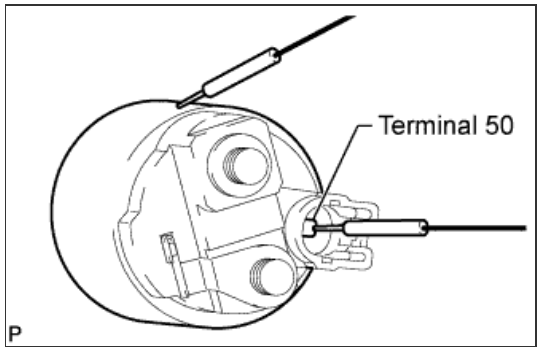
a. Inspect the pull-in coil.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Terminal 50 - Terminal C	Always	Below 1 Ω

If the result is not as specified, replace the magnet starter switch assembly.



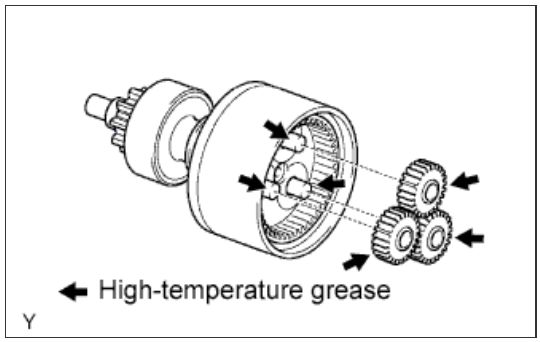
b. Inspect the holding coil.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Terminal 50 - Switch body	Always	Below 2 Ω

If the result is not as specified, replace the magnet starter switch assembly.

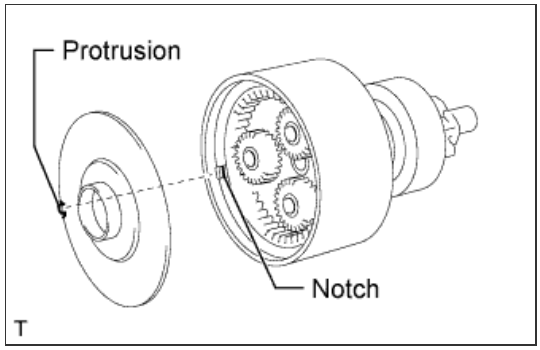


for Preparation Click here

1. INSTALL PLANETARY GEAR

a. Apply high-temperature grease to the planetary gears and pin parts of the planetary shaft, as shown in the illustration.

b. Install the 3 planetary gears.

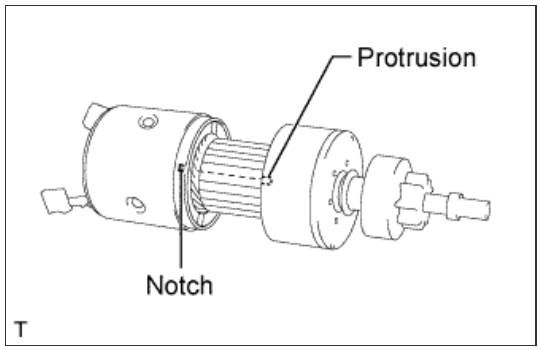


2. INSTALL STARTER ARMATURE PLATE

a. Insert the plate to the starter center bearing clutch.

NOTICE:

Check that the protrusion of the starter armature plate fits over the notch of the starter center bearing clutch.

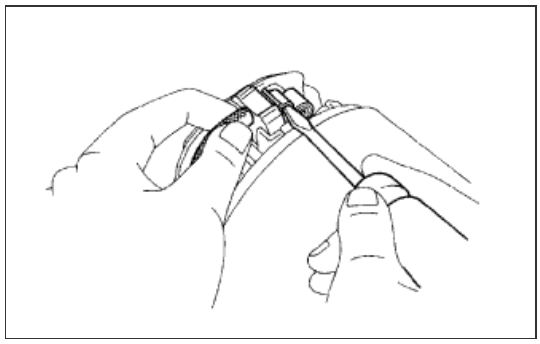


3. INSTALL STARTER ARMATURE ASSEMBLY

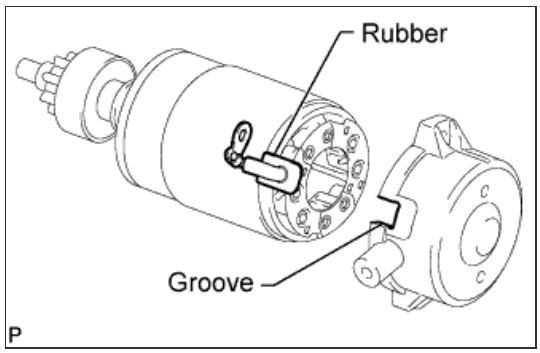
a. Install the starter armature to the starter center bearing clutch.

4. INSTALL STARTER YOKE ASSEMBLY

a. Align the protrusion of the starter center bearing clutch with the notch of the starter yoke, and install the starter yoke.



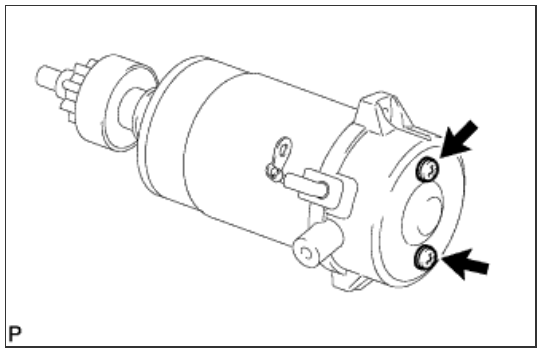
5. INSTALL STARTER COMMUTATOR END FRAME ASSEMBLY



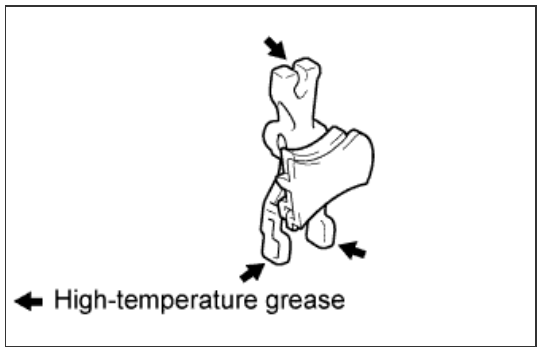
a. Install the starter brush holder.

b. Using a screwdriver, hold the brush spring back and connect the brush into the starter brush holder.

c. Connect the 4 brushes.

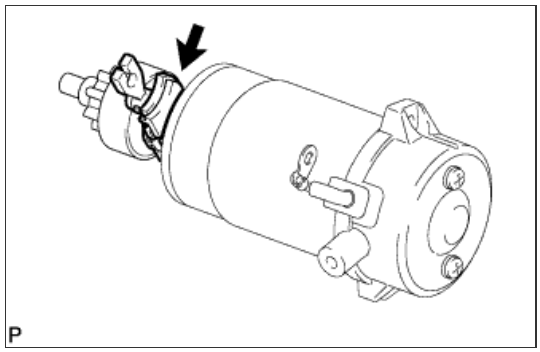


d. Align the starter commutator end frame groove with the rubber of the starter yoke.

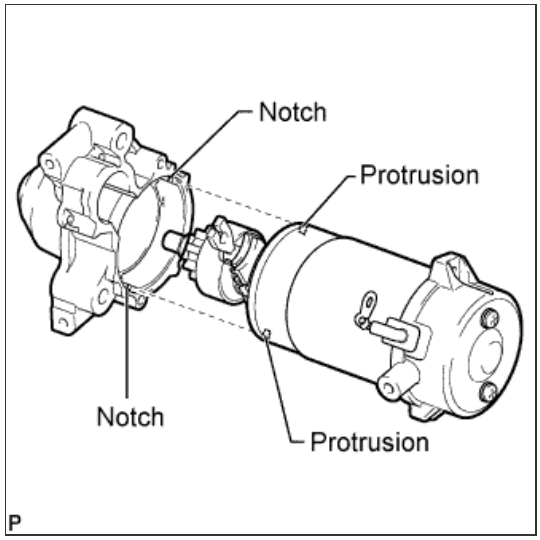


e. Install the starter commutator end frame with the 2 screws.

Torque:
3.8 N*m{ 39 kgf*cm , 33 in.*lbf }

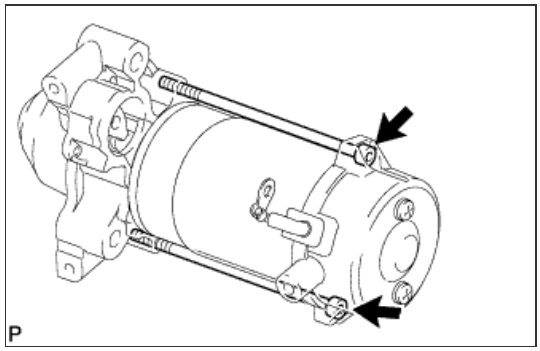


6. INSTALL STARTER DRIVE HOUSING ASSEMBLY



a. Apply high-temperature grease to the starter pinion drive lever, as shown in the illustration.

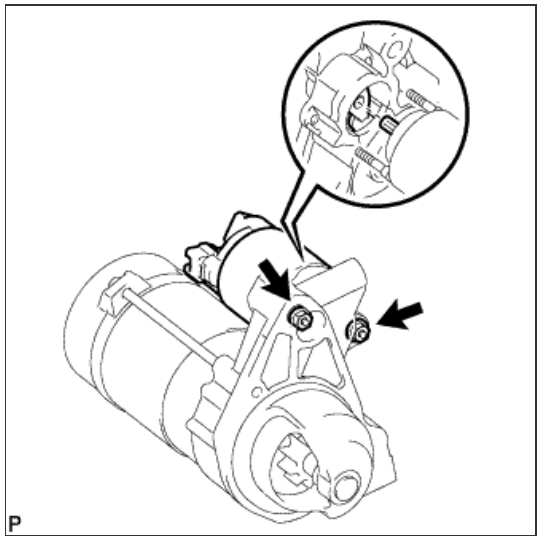
b. Install the starter pinion drive lever to the starter center bearing clutch.



c. Align the protrusion of the starter center bearing clutch with the notch inside the starter drive housing.

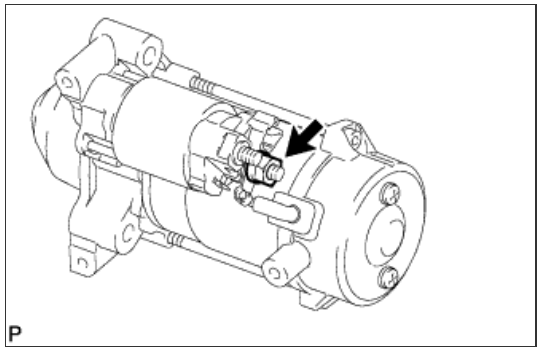
d. Using a T30 "TORX" socket wrench, install the starter drive housing with the 2 bolts.

Torque:
6.0 N*m{ 61 kgf*cm , 53 in.*lbf }



7. INSTALL MAGNET STARTER SWITCH ASSEMBLY

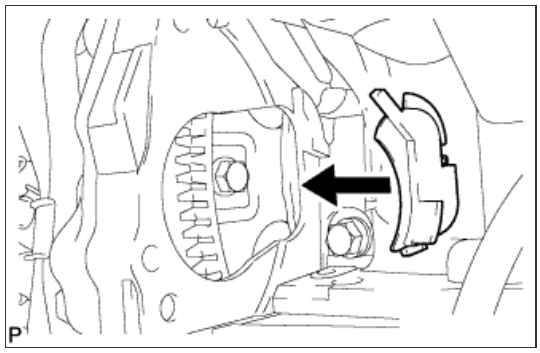
a. Temporarily install the magnet starter switch by hooking its tip to the upper side of the pinion drive lever.



b. Install the 2 nuts.

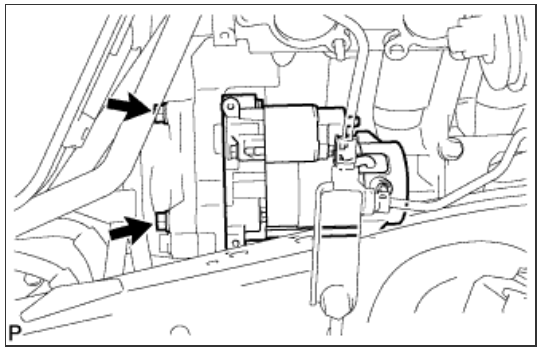
Torque:
7.5 N*m{ 76 kgf*cm , 66 in.*lbf }

c. Connect the lead wire to the terminal with the nut.



Torque:
6.5 N*m{ 66 kgf*cm , 57 in.*lbf }

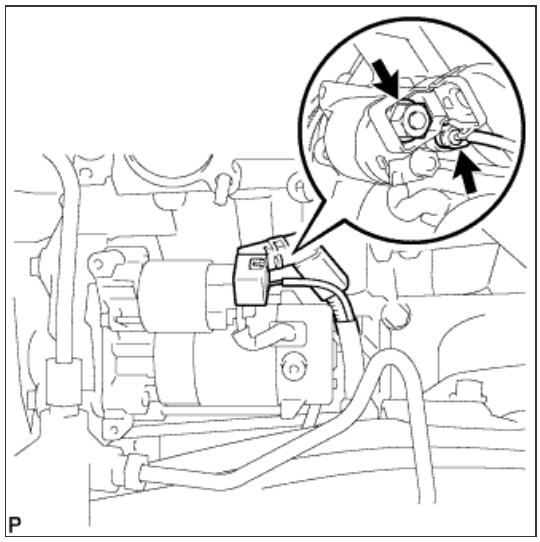
for Preparation Click here



1. INSTALL STARTER ASSEMBLY

a. Install the flywheel housing side cover.

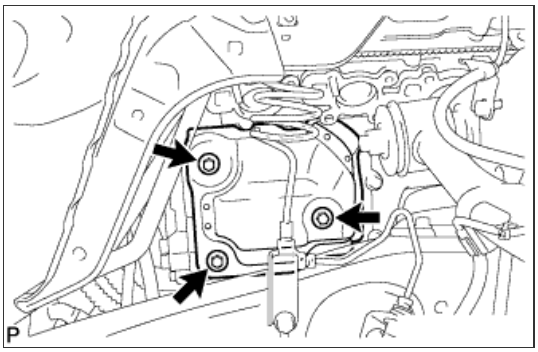
b. Install the starter with the 2 bolts.



Torque:
37 N*m{ 377 kgf*cm , 27 ft.*lbf }

c. Install the starter wire with the nut.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }



d. Connect the starter connector.

2. INSTALL STARTER COVER

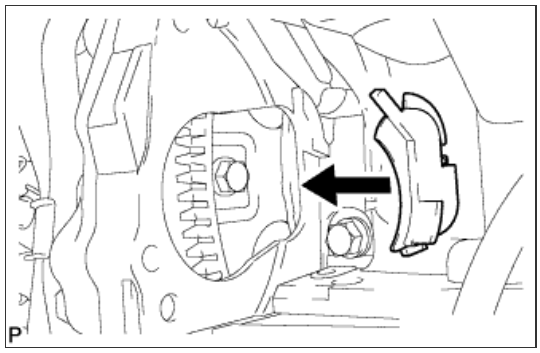
a. Install the starter cover with the 3 bolts.

Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

3. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY RH

a. Install the exhaust manifold RH (Click here).

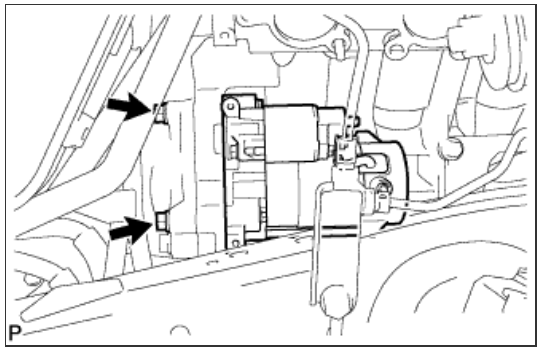
4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

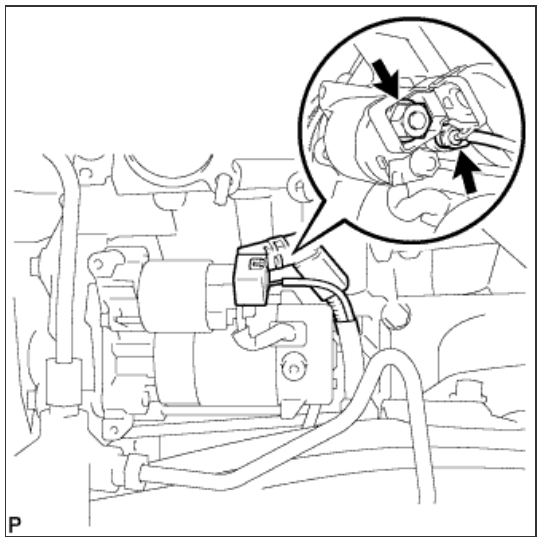
for Preparation Click here



1. INSTALL STARTER ASSEMBLY

a. Install the flywheel housing side cover.

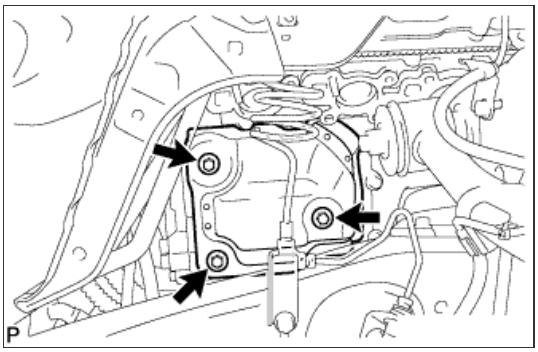
b. Install the starter with the 2 bolts.



Torque:
37 N*m{ 377 kgf*cm , 27 ft.*lbf }

c. Install the starter wire with the nut.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }



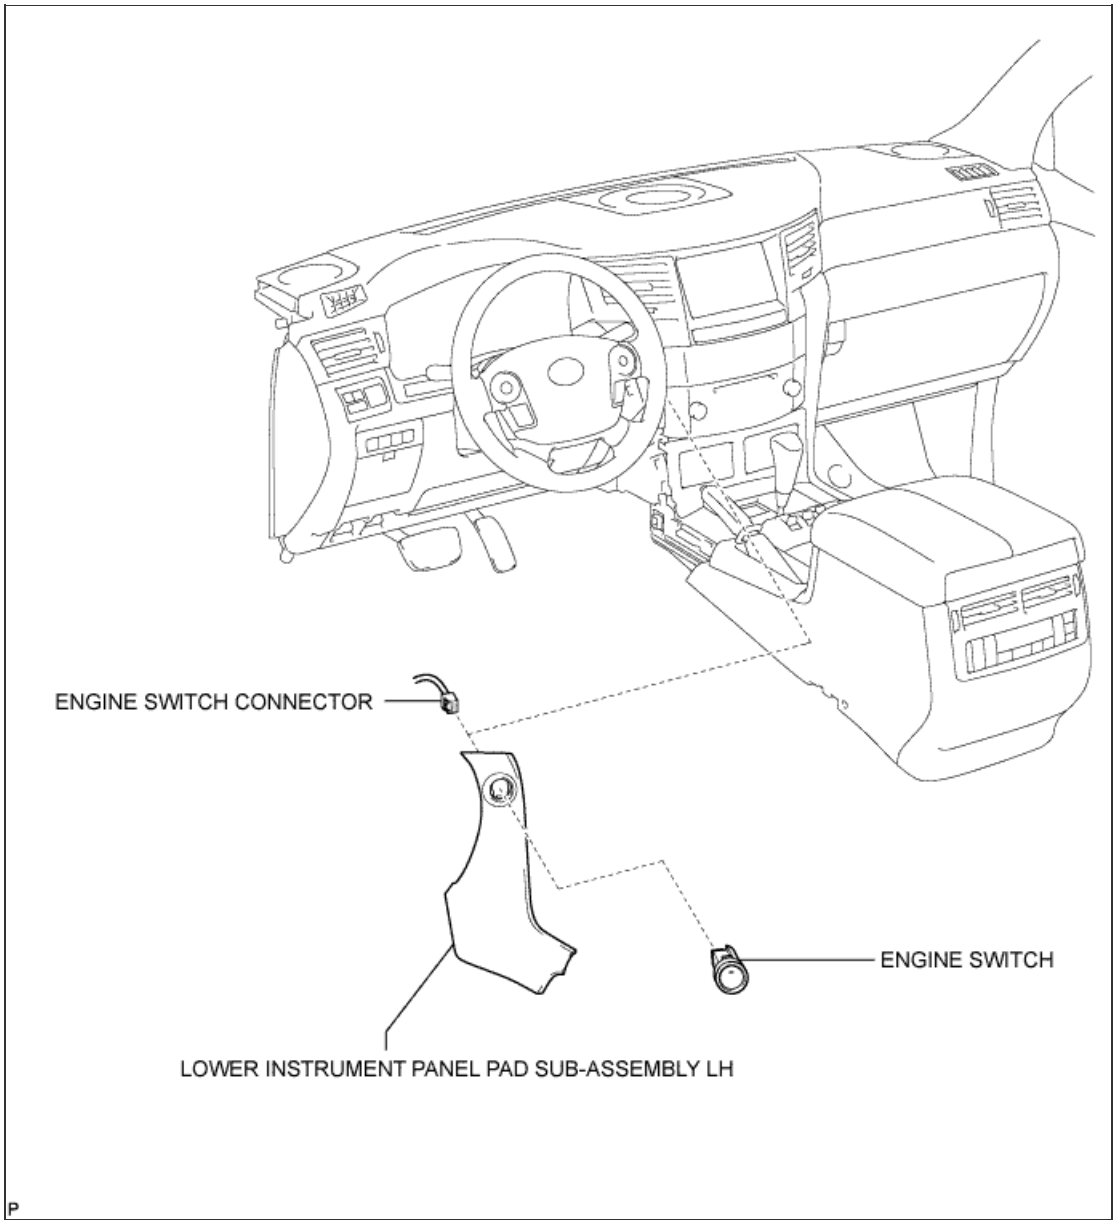
d. Connect the starter connector.

2. INSTALL STARTER COVER

a. Install the starter cover with the 3 bolts.

Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

3. INSTALL EXHAUST MANIFOLD SUB-ASSEMBLY RH



a. Install the exhaust manifold RH (Click here).

4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

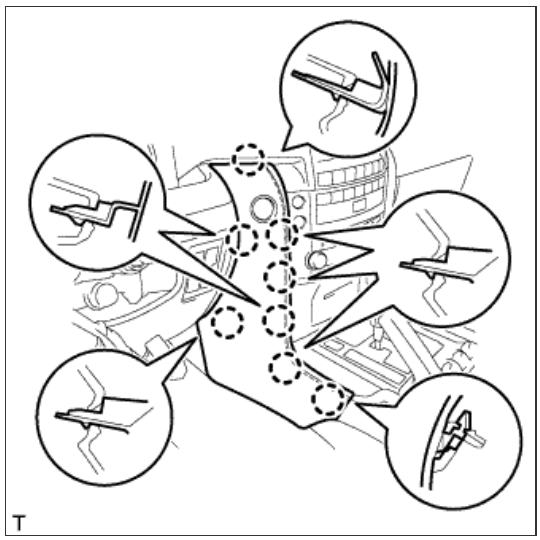
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

for Preparation Click here

for Preparation Click here

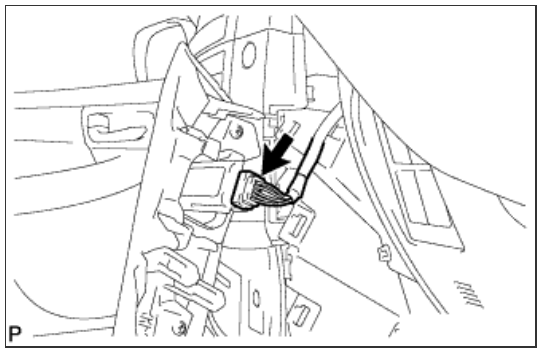
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL



NOTICE:

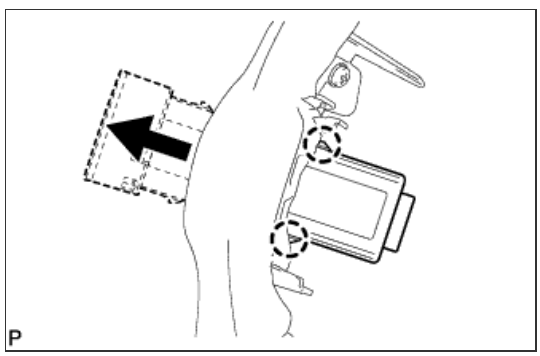
When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH



a. Detach the 8 claws.

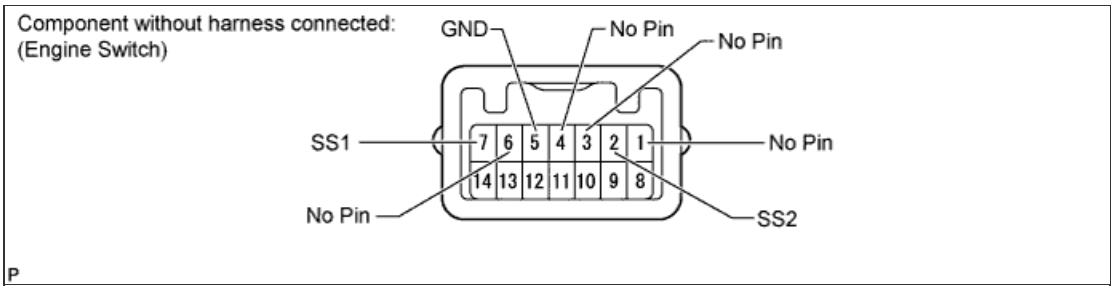
b. Disconnect the connector and remove the panel pad.



3. REMOVE ENGINE SWITCH

a. Disconnect the switch connector.

b. Detach the 2 claws and remove the switch.



for Preparation [Click here]

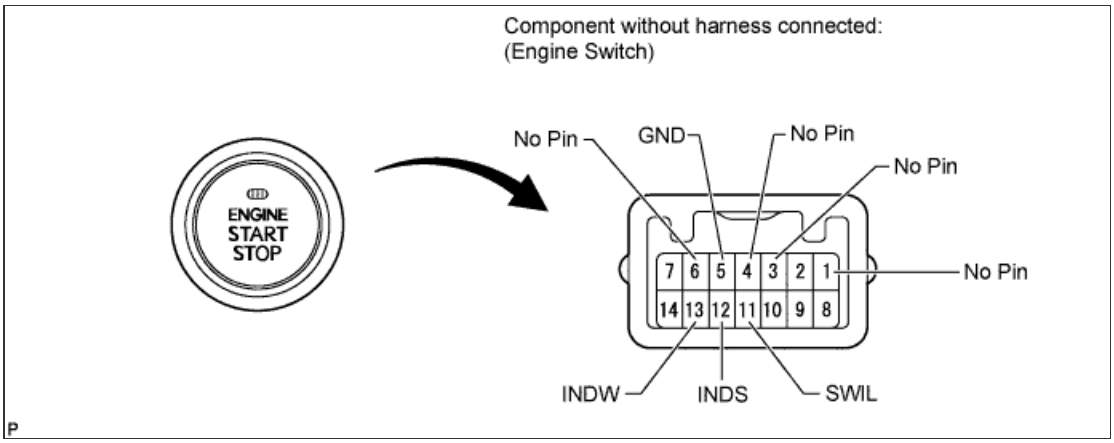
1. INSPECT ENGINE SWITCH

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
7 (SS1) - 5 (GND)	Not pushed	10 kΩ or higher
2 (SS2) - 5 (GND)	Not pushed	10 kΩ or higher
7 (SS1) - 5 (GND)	Pushed	Below 1 Ω
2 (SS2) - 5 (GND)	Pushed	Below 1 Ω

If the result is not as specified, replace the engine switch.



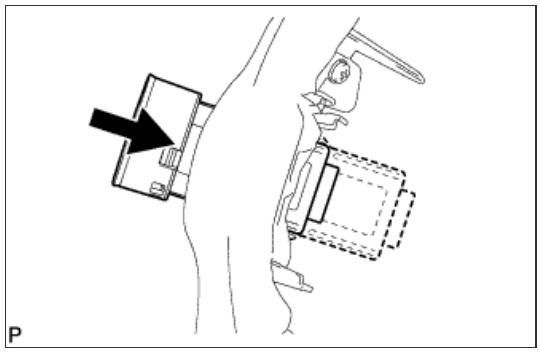
b. Apply battery voltage between the terminals of the switch, and check the illumination condition of the switch.

HINT:

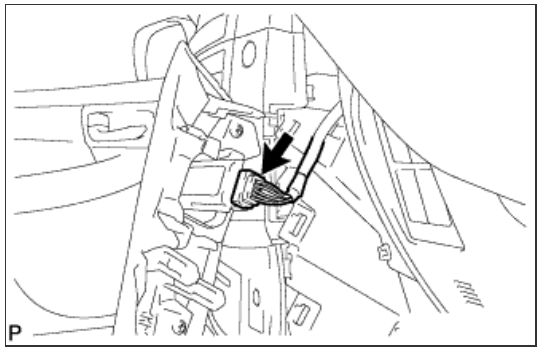
- **If the positive (+) lead and the negative (-) lead are incorrectly connected, the engine switch indicator will not illuminate.**
- **If the voltage is too low, the indicator will not illuminate.**

OK:

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 11 (SWIL) Battery negative (-) → Terminal 5 (GND)	Illuminates (illumination of lettering)
Battery positive (+) → Terminal 12 (INDS) Battery negative (-) → Terminal 5 (GND)	Illuminates (green)
Battery positive (+) → Terminal 13 (INDW) Battery negative (-) → Terminal 5 (GND)	Illuminates (amber)



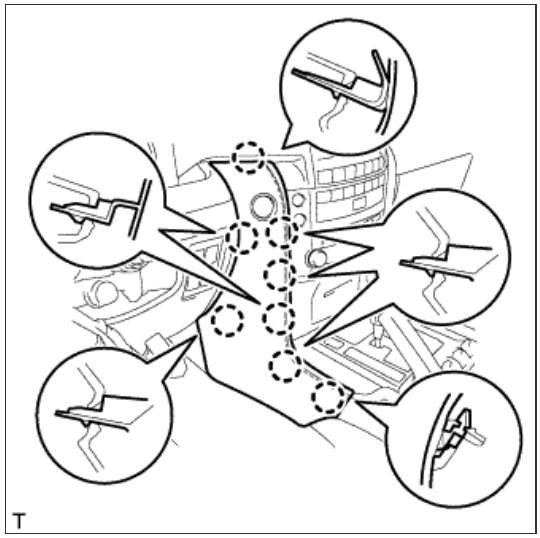
If the result is not as specified, replace the engine switch.



for Preparation Click here

1. INSTALL ENGINE SWITCH

a. Attach the 2 claws to install the switch.



b. Connect the switch connector.

2. INSTALL LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

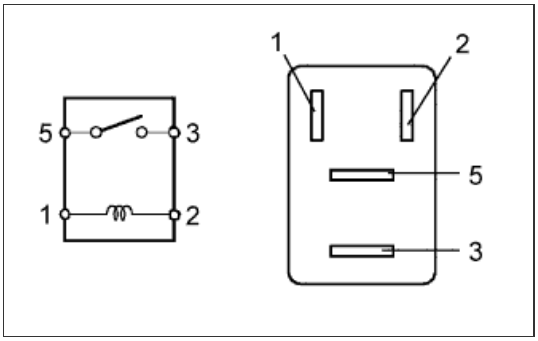
a. Connect the connector.

b. Attach the 8 claws to install the panel pad.

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).



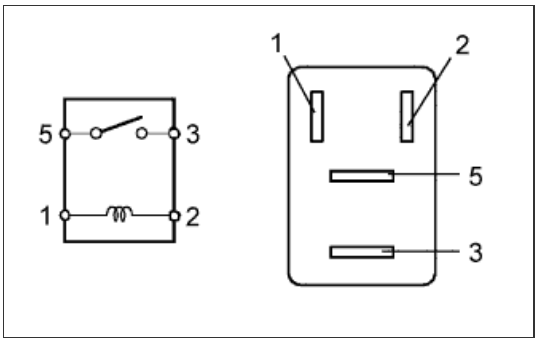
for Preparation Click here

1. INSPECT STARTER RELAY (ST)

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 5	Battery voltage not applied to terminals 1 and 2	10 kΩ or higher
	Battery voltage applied to terminals 1 and 2	Below 1 Ω

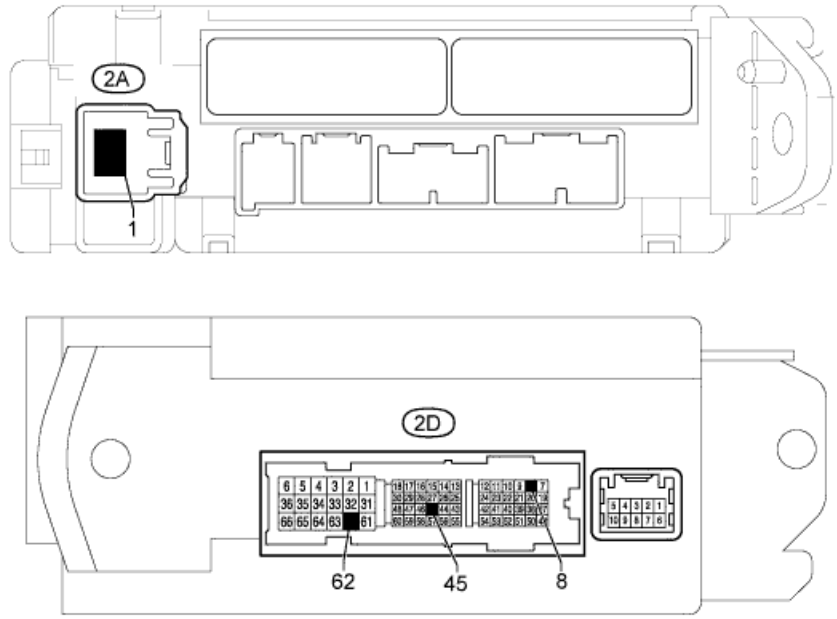


If the result is not as specified, replace the relay.

2. INSPECT STARTER CUT RELAY (ST CUT)

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:



Tester Connection	Condition	Specified Condition
3 - 5	Battery voltage not applied to terminals 1 and 2	10 kΩ or higher
	Battery voltage applied to terminals 1 and 2	Below 1 Ω

If the result is not as specified, replace the relay.

3. INSPECT MAIN BODY ECU (ACC RELAY)

Component without harness connected: (Main Body ECU)

P

a. Measure the resistance of the ACC relay circuit.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
2A-1 - 2D-8	Battery voltage not applied between 2D-45 and 2D-62	10 kΩ or higher
	Battery voltage applied between 2D-45 and 2D-62	Below 1 Ω

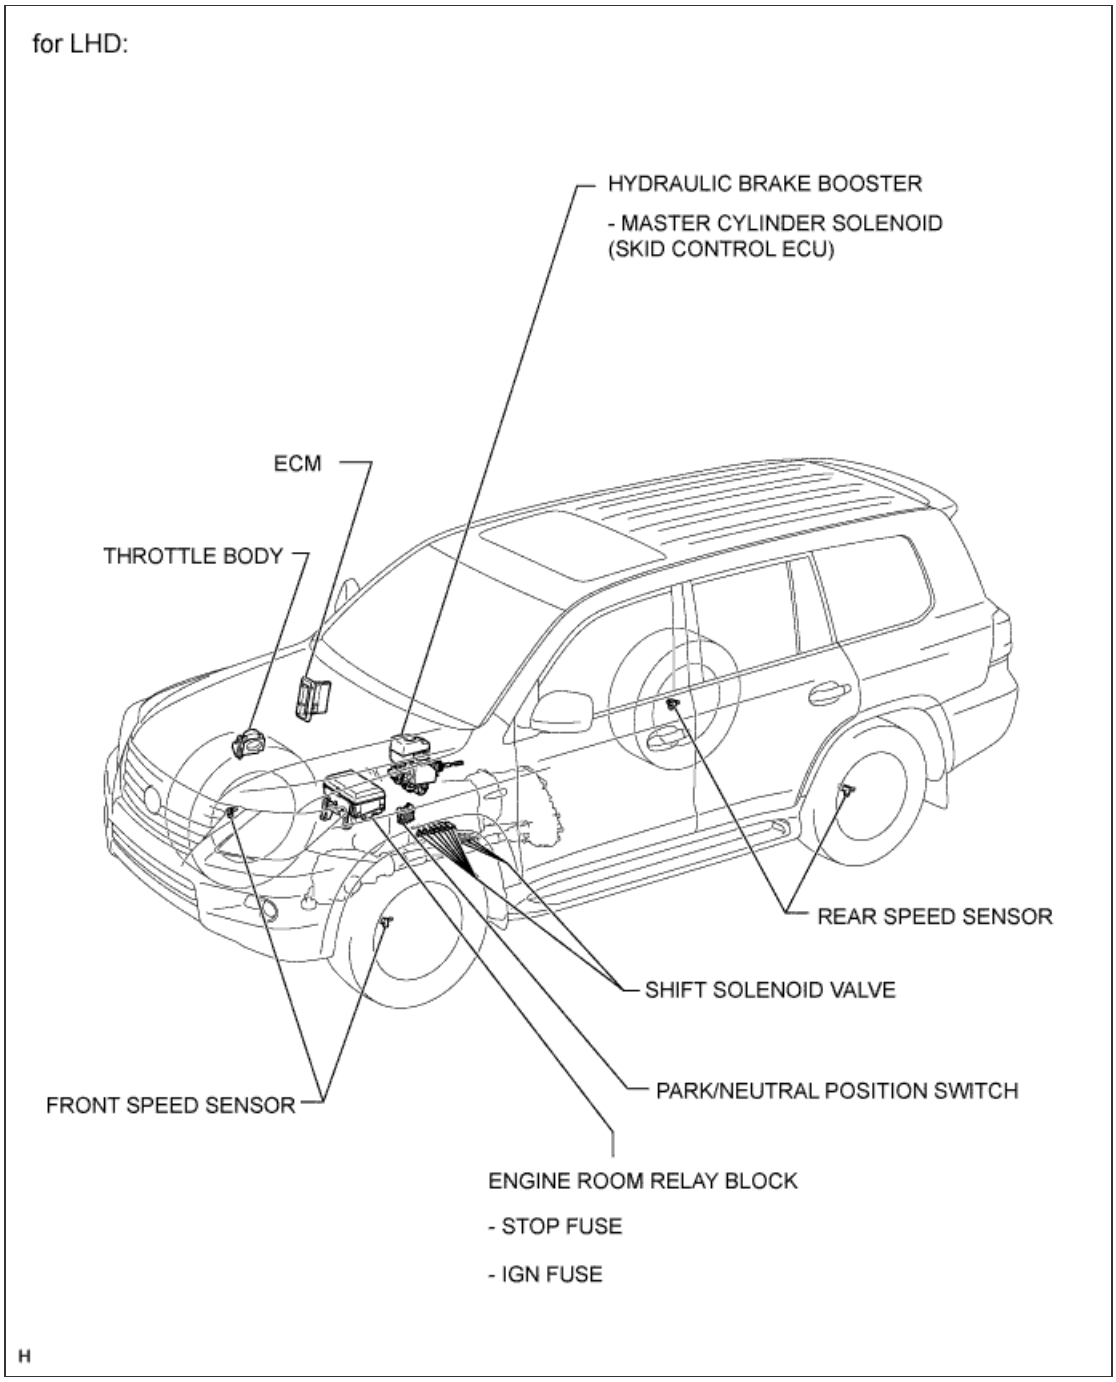
If the result is not as specified, replace the main body ECU.

for Preparation Click here

1.HANDLING PRECAUTION FOR CRUISE CONTROL SYSTEM

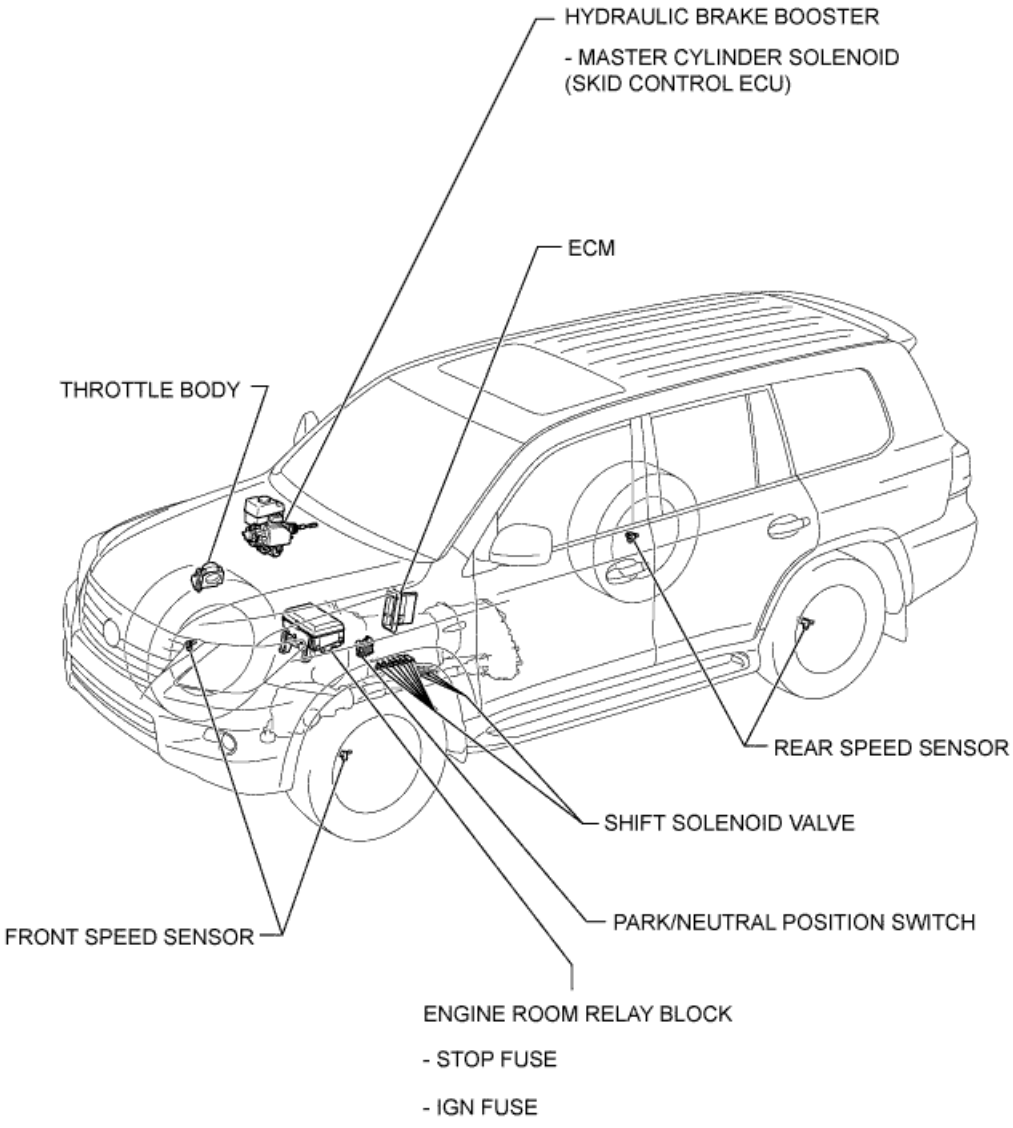
a. Turn the cruise control main switch off when not using the cruise control system.

b. Be careful as the vehicle speed increases when driving downhill with the cruise control system on.



c. The +RES (ACCELERATION/RESUME) operation changes according to the cruise control system status. When the cruise control system is operating, + (ACCELERATION) operates. When the cruise control system is not operating, RES (RESUME) operates.

d. When the cruise control system is operating and the CRUISE main indicator light blinks, turn the cruise control main switch off to reset the cruise control system. After the reset, if the cruise control main switch cannot be turned on, or the cruise control system is canceled immediately after turning the cruise control main switch on, the system may have a malfunction.



e. Do not use the cruise control system where the road conditions are as follows:

- Heavy traffic
- Steep decline
- Roads with sharp turns
- Icy or snowy roads
- Slippery roads

Communication Table

Transmitter	Receiver	Signal	Communication Line
ECM	Combination Meter	CRUISE main indicator operation signal	CAN

for Preparation Click here

CRUISE CONTROL SYSTEM

This system is controlled by the ECM, and is activated by the throttle position sensor and motor. The ECM controls the following functions: ON-OFF, -SET (COAST/SET), +RES (ACCELERATION/RESUME), CANCEL, vehicle speed operation, motor output control, and shift down control.

- The ECM compares the driving vehicle speed from the vehicle speed sensor with the stored vehicle speed set through the cruise control main switch. The ECM controls the throttle valve motor of the throttle position sensor and motor to open the valve when the driving speed is less than the stored speed.
- The ECM receives signals such as ON-OFF, -SET (COAST/SET), +RES (ACCELERATION/RESUME), and CANCEL from the cruise control main switch and executes the corresponding function.
- The ECM illuminates the CRUISE main indicator light on the combination meter when it receives the cruise control main switch on signal.
- The ECM cancels the cruise control system when the brake pedal is depressed and the ECM receives the stop light switch signal.
- The ECM cancels the cruise control system when the S3, S2, or S1 range is selected with the shift lever in S, or when the shift lever is moved from D to N, based on the PNP (Park/Neutral Position) switch signal.

LIMIT CONTROL

a. Low speed limit
The lowest possible limit of the speed setting range is set at approximately 40 km/h (25 mph). The cruise control system cannot be set when the driving vehicle speed is below the low speed limit. The cruise control operation will be automatically canceled but the stored vehicle speed will be retained when the vehicle speed decreases below the low speed limit of 40 km/h (25 mph) while cruise control is in operation.

b. High speed limit
The highest possible limit of the speed setting range is set at approximately 200 km/h (125 mph). The cruise control system cannot be set when the driving vehicle speed is over the high speed limit. Also, +RES (ACCELERATION/RESUME) cannot be used to increase speed beyond the high speed limit.

OPERATION OF CRUISE CONTROL

The cruise control main switch is used to operate 7 functions: SET, - (COAST), TAP-DOWN, RES (RESUME), + (ACCELERATION), TAP-UP, and CANCEL. The SET, TAP-DOWN and - (COAST) functions, and the RES (RESUME), TAP-UP and + (ACCELERATION) functions are operated with the same switch. The cruise control main switch is an automatic return type switch which turns on only while operating it in each arrow direction and turns off after releasing it.

a. SET CONTROL
Vehicle speed is stored and constant speed control is maintained when pushing the switch to -SET while driving with the cruise control main switch on (the CRUISE main indicator light is on), and the vehicle speed is within the set speed range (between the low and high speed limits).

b. - (COAST) CONTROL
When the cruise control main switch is pushed to -SET and held in that position while the cruise control system is operating, the ECM sends a "throttle valve opening angle 0°" demand signal to the throttle body. Then the vehicle speed is stored and maintained when the cruise control main switch is released.

HINT:

An actual throttle valve opening angle of 0° is not possible due to the idle speed control, etc.

c. TAP-DOWN CONTROL
When tapping down the cruise control main switch to -SET (for approximately 0.6 seconds) while the cruise control system is in operation, the stored vehicle speed decreases each time by approximately 1.6 km/h (1.0 mph). However, when the difference between the driving and stored vehicle speeds is more than approximately 5 km/h (3.1 mph), the stored vehicle speed is set to the actual vehicle speed at the moment the cruise control main switch is released from -SET and constant speed control is maintained.

d. + (ACCELERATION) CONTROL
The throttle valve motor of the throttle position sensor and motor is instructed by the ECM to open the throttle valve when +RES on the cruise control main switch is pressed and held while the cruise control system is in operation. When the cruise control main switch is released from +RES, the vehicle speed is stored and the vehicle is controlled at a constant speed.

e. TAP-UP CONTROL
When tapping up the cruise control main switch to +RES (for approximately 0.6 seconds) while the cruise control system is in operation, the stored vehicle speed increases each time by approximately 1.6 km/h (1.0 mph). However, when the difference between the driving and the stored vehicle speed is more than approximately 5 km/h (3.1 mph), the stored vehicle speed will not be changed.

f. RES (RESUME) CONTROL
If cruise control operation was canceled with the stop light switch or the CANCEL switch, and if the driving speed is within the limit range, pushing the cruise control main switch to +RES restores the vehicle speed memorized at the time of cancellation, and maintains constant speed control.

g. MANUAL CANCEL CONTROL

Performing any of the following cancels the cruise control system while in operation (the stored vehicle speed in the ECM is maintained).

- Depressing the brake pedal.
- Moving the shift lever from D to N.
- With the shift lever in S, selecting the S1, S2 or S3 range.
- Pulling the cruise control main switch to CANCEL.
- Turning the cruise control main switch off (the stored vehicle speed in the ECM is not maintained).
- Driving the vehicle while the VSC system is operating.

AUTO CANCEL (FAIL-SAFE)

This system has an automatic cancellation function (fail-safe) (Click here).

for Preparation Click here

HINT:

- **Use these procedures to troubleshoot the cruise control system.**
- ***: Use the intelligent tester.**

1.VEHICLE BROUGHT TO WORKSHOP

NEXT

2.INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

3.CHECK COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*

a. Use the intelligent tester to check if the CAN communication system is functioning normally.

Result

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output (for LHD)	B

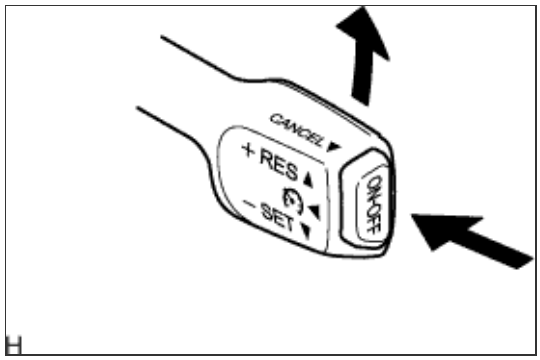
PROBLEM SYMPTOM CONFIRMATION

a. Inspect the SET function.



i. Turn the cruise control main switch on.

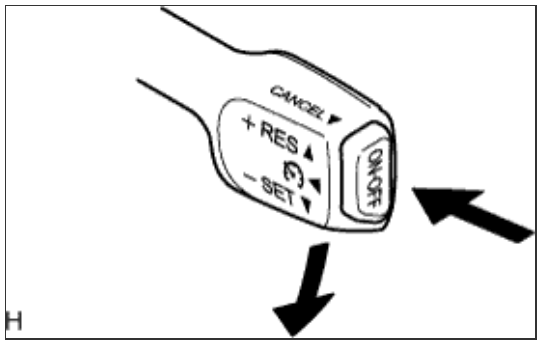
ii. Drive at the required speed (40 km/h (25 mph) or more).

iii. Push the cruise control main switch to -SET.

iv. After releasing the switch, check that the vehicle cruises at the set speed.

b. Inspect the + (ACCELERATION) function.

i. Turn the cruise control main switch on.



ii. Drive at the required speed (40 km/h (25 mph) or more).

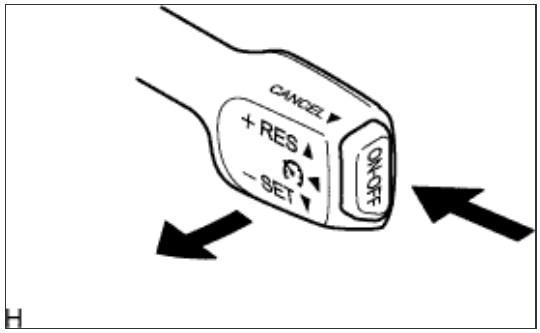
iii. Push the cruise control main switch to -SET.

iv. Check that the vehicle speed increases while the cruise control main switch is pushed to +RES, and that the vehicle cruises at the newly set speed when the switch is released.

v. Momentarily push the cruise control main switch to +RES and then immediately release it. Check that the vehicle speed increases by approximately 1.6 km/h (1.0 mph) (tap-up control).

c. Inspect the - (COAST) function.

i. Turn the cruise control main switch on.



ii. Drive at the required speed (40 km/h (25 mph) or more).

iii. Push the cruise control main switch to -SET.

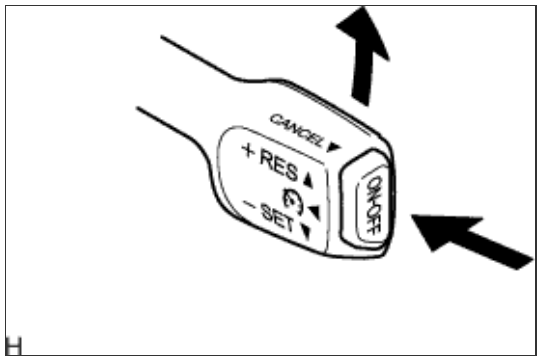
iv. Check that the vehicle speed decreases while the cruise control main switch is pushed to -SET, and that the vehicle cruises at the newly set speed when the switch is released.

v. Momentarily push the cruise control main switch to -SET, and then immediately release it. Check that vehicle speed decreases by approximately 1.6 km/h (1.0 mph) (tap-down control).

d. Inspect the CANCEL function.

i. Turn the cruise control main switch on.

ii. Drive at the required speed (40 km/h (25 mph) or more).



iii. Push the cruise control main switch to -SET.

iv. When performing one of the following, check that the cruise control system is canceled and that the normal driving mode is reset.

- Depressing the brake pedal.
- Moving the shift lever from D to N.

- With the shift lever in S, selecting the S1, S2 or S3 range.
- Turning the main switch off.
- Pulling the cruise control main switch to CANCEL.
- Driving the vehicle while the VSC system is operating.

e. Inspect the RES (RESUME) function.

H

i. Turn the cruise control main switch on.

ii. Drive at the required speed (40 km/h (25 mph) or more).

iii. Push the cruise control main switch to -SET.

iv. Cancel the cruise control system according to any of the above operations (other than turning the cruise control main switch off).

v. After pushing the cruise control main switch to +RES at a driving speed of more than 40 km/h (25 mph), check that the vehicle drives at the set speed.

CHECK ECM

HINT:

As the ECM connector is a waterproof connector, it is not possible to check the voltage of each terminal or check the waveform with an oscilloscope while the ECM is installed in the vehicle.

a. Disconnect the A38*1 and C53*1 or A53*2 and C54*2 ECM connectors.

*1: for LHD
*2: for RHD

b. Measure the voltage and resistance according to the value(s) in the table below.

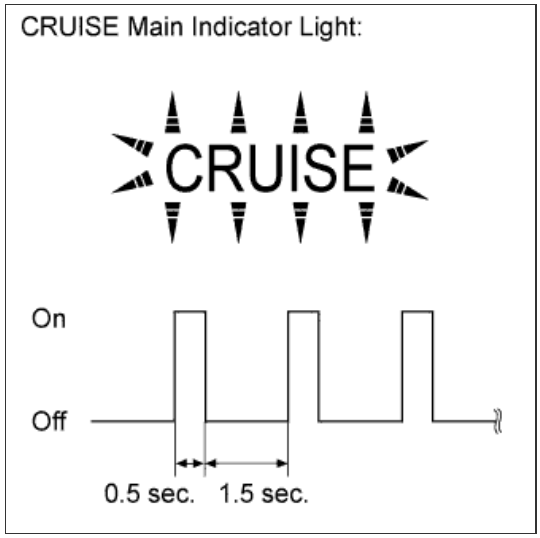
Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
A38*1-16 (TC) - Body ground A53*2-16 (TC) - Body ground	V-W - Body ground	Terminal TC of DLC3	Engine switch on (IG)	11 to 14 V
			Engine switch off	Below 1 V
C53*1-81 (E1) - Body ground C54*2-81 (E1) - Body ground	W-B - Body ground	ECM ground	Always	Below 1 Ω
C53*1-27 (D) - Body ground C54*2-27 (D) - Body ground	G - Body ground	Park/neutral position switch signal	Engine switch on (IG) Shift lever in D	11 to 14 V
			Engine switch on (IG) Shift lever not in D	Below 1 V
A38*1-38 (SFTU) - Body ground A53*2-38 (SFTU) - Body ground	Y - Body ground	Park/neutral position switch signal	Engine switch on (IG) Shift lever in S	Below 1 Ω
			Engine switch on (IG) Shift lever in +	10 kΩ or higher
A38*1-25 (S) - Body ground A53*2-25 (S) - Body ground	W - Body ground	Park/neutral position switch signal	Engine switch on (IG) Shift lever in S	11 to 14 V
			Engine switch on (IG) Shift lever not in S	Below 1 V
A38*1-27 (SFTD) - Body ground A53*2-27 (SFTD) - Body ground	L - Body ground	Park/neutral position switch signal	Engine switch on (IG) Shift lever in S	10 kΩ or higher
			Engine switch on (IG) Shift lever in -	Below 1 Ω
A38*1-36 (STP) - Body ground A53*2-36 (STP) - Body ground	R - Body ground	Stop light signal	Engine switch on (IG) Brake pedal depressed	11 to 14 V
			Engine switch on (IG) Brake pedal released	Below 1 V
A38*1-35 (ST1-) - Body ground A53*2-35 (ST1-) - Body	R-W - Body ground	Stop light signal (opposite to STP	Engine switch on (IG) Brake pedal depressed	Below 1 V
			Engine switch on (IG)	

ground		terminal)	Brake pedal released	11 to 14 V
A38*1-45 (CCS) - Body ground A53*2-45 (CCS) - Body ground	L - Body ground	Cruise control main switch signal	Engine switch on (IG) Main switch off	1 MΩ or higher
			Engine switch on (IG) CANCEL switch held on	1510 to 1570 Ω
			Engine switch on (IG) -SET switch held on	620 to 640 Ω
			Engine switch on (IG) +RES switch held on	235 to 245 Ω
			Engine switch on (IG) Main switch on	Below 2.5 Ω

*1: for LHD
*2: for RHD

If the result is not as specified, there may be a malfunction on the wire harness side.

for Preparation Click here



CHECK INDICATOR

a. Turn the engine switch on (IG).

b. Check that the CRUISE main indicator light illuminates when the cruise control main switch is turned on, and that the indicator light turns off when the main switch is turned off. If the results are not as specified, inspect the CRUISE main indicator light circuit (Click here).

HINT:

While driving with cruise control, the ECM activates AUTO CANCEL of the cruise control system when a malfunction in one of the following occurs: the vehicle speed sensors, stop light switch or other related parts. When AUTO CANCEL is activated, the CRUISE main indicator light outputs the blinking pattern shown in the illustration. At the same time, data of the malfunction is stored as a DTC.

for Preparation Click here

CHECK DTC

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Powertrain / Cruise Control / Trouble Codes.

e. Read the DTCs.

CLEAR DTC

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Powertrain / Cruise Control / Trouble Codes.

e. Clear the DTCs.

for Preparation Click here

HINT:

If the following conditions are detected while the cruise control is in operation, the system clears the stored vehicle speed in the ECM and cancels the cruise control operation.

Vehicle Condition	Auto Cancel Condition	Fail-safe Deactivation Condition
CRUISE main indicator light blinks	• There is an open or short in the stop light switch circuit • There is a problem with the vehicle speed signal	Turn the cruise control main switch on again
CRUISE main indicator light blinks	• There is a problem with the input circuit of the stop light switch circuit • There is a problem with the cancel circuit	• Turn the cruise control main switch on again • Turn the engine switch off then on again
CRUISE main indicator light remains on (Cruise control is canceled)	Under the following conditions, the stored vehicle speed is maintained: • The vehicle speed is less than the low speed limit (approx. 40 km/h (25 mph)) while running with the cruise control on • The VSC system is operated	Push the cruise control main switch to +RES
	• The vehicle speed is less than the stored speed by approx. 16 km/h (10 mph) or more	Push the cruise control main switch to -SET
CRUISE main indicator light goes off	There is a problem with the throttle position sensor and the motor	Turn the cruise control main switch on again

for Preparation Click here

READ DATA LIST

HINT:

Using the intelligent tester to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Powertrain / Cruise Control / Data List.

e. According to the display on the intelligent tester, read the "Data List".

Cruise Control

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
CCS Vehicle Spd	Vehicle speed / min.: 0 km/h (0 mph), max.: 255 km/h (159 mph)	Actual vehicle speed displayed	-
CCS Mem Vehicle Spd	Vehicle speed / min.: 0 km/h (0 mph), max.: 200 km/h (125 mph)	Actual vehicle speed stored in memory	-
Cruise Operation Status	Transmission range sensor signal / ON or OFF	ON: Shift lever in D (6th, 5th or 4th gear) OFF: Shift lever not in D (6th, 5th or 4th gear)	-
Cruise Control	Cruise control / ON or OFF	ON: Cruise control operating OFF: Cruise control not operating	-
CCS Indicator M-CPU	CRUISE main indicator light (Main CPU) / ON or OFF	ON: CRUISE main indicator light on OFF: CRUISE main indicator light off	-
CCS Indicator S-CPU	CRUISE main indicator light (Sub CPU) / ON or OFF	ON: CRUISE main indicator light on OFF: CRUISE main indicator light off	-
CCS Ready S-CPU	Cruise control system standby condition (Sub CPU) / ON or OFF	ON: Cruise control main switch (Sub CPU) on OFF: Cruise control main switch (Sub CPU) off	-
CCS Ready M-CPU	Cruise control system standby condition (Main CPU) / ON or OFF	ON: Cruise control main switch (Main CPU) on OFF: Cruise control main switch (Main CPU) off	-
Main SW M-CPU	Cruise control main switch (Main CPU) / ON or OFF	ON: Cruise control main switch (Main CPU) on OFF: Cruise control main switch (Main CPU) off	-
Main SW S-CPU	Cruise control main switch (Sub CPU) / ON or OFF	ON: Cruise control main switch (Sub CPU) on OFF: Cruise control main switch (Sub CPU) off	-
Cancel Switch	CANCEL switch / ON or OFF	ON: CANCEL switch on OFF: CANCEL switch off	-
SET/COAST Switch	-SET switch / ON or OFF	ON: -SET switch on OFF: -SET switch off	-
RES/ACC Switch	+RES switch / ON or OFF	ON: +RES switch on OFF: +RES switch off	-
Stop Light SW M-CPU	Stop light switch signal (Main CPU) / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-

Stop Light SW S2-CPU	Stop light switch signal (Sub2 CPU) / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-
Stop Light SW S1-CPU	Stop light switch signal (Sub1 CPU) / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-
Throttle Opening Angle	Cruise throttle opening angle / min.: 0 deg, max.: 125 deg	Actual demanded throttle angle	-
# Codes	Number of trouble codes / Min.: 0, Max.: 255	-	-

PERFORM ACTIVE TEST

HINT:

Using the intelligent tester to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Combination Meter / Active Test.

e. According to the display on the intelligent tester, perform the "Active Test".

Combination Meter

Tester Display	Test Part	Control Range	Diagnostic Note
Indicat. Lamp Cruise	CRUISE main indicator light operation	OFF or ON	-

for Preparation Click here

HINT:

If a trouble code is output during the DTC check, inspect the trouble areas listed for that code. For details of the code, refer to the "See page" below.

Cruise Control System

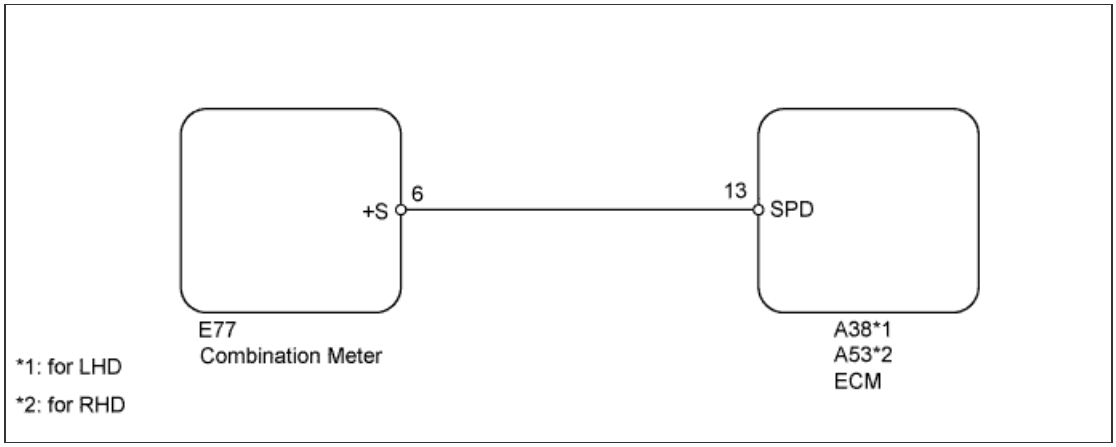
DTC P0500 Vehicle Speed Sensor Malfunction



for Preparation Click here

DESCRIPTION

The speed sensor detects the wheel speed and sends the appropriate signals to the master cylinder solenoid (skid control ECU). The master cylinder solenoid (skid control ECU) converts these wheel speed signals into a 4-pulse signal and outputs it to the ECM via the combination meter. The ECM determines the vehicle speed based on the frequency of these pulse signals.

DTC Code	DTC Detection Condition	Trouble Area
P0500	The vehicle speed signal from the vehicle speed sensor is cut for 0.14 sec. or more while cruise control is in operation.	• Vehicle speed sensor signal circuit • Vehicle speed sensor • Combination meter • ECM

WIRING DIAGRAM

INSPECTION PROCEDURE

This DTC code may be output under the SFI system at the same time. In that case, perform troubleshooting for the SFI system first.

1.CHECK DTC (CRUISE CONTROL SYSTEM)

a. Using the intelligent tester, enter the following menus: Powertrain / Cruise Control / Trouble Code.

b. Clear the DTCs (Click here).

c. Perform the following to make sure the DTC detection conditions are met.

HINT:

If the detection conditions are not met, the system cannot detect the malfunction.

i. With the shift lever in D, drive the vehicle for more than 10 seconds when the engine coolant temperature is more than 20°C (68°F).

d. Check for DTCs (Click here).

OK:

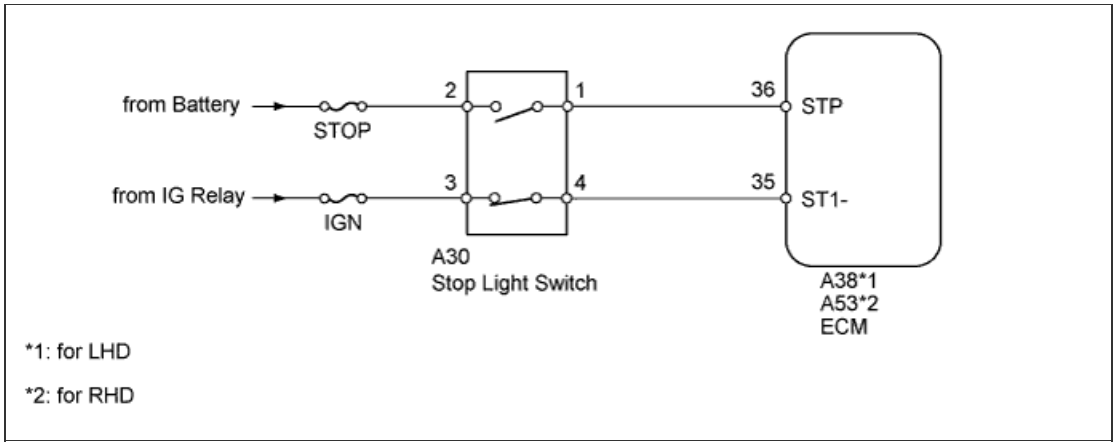
DTC P0500 is not output.

NG → **GO TO SFI SYSTEM (Click here)**

OK

USE SIMULATION METHOD TO CHECK (Click here)

DTC P0571 Brake Switch "A" Circuit



for Preparation Click here

DESCRIPTION

When the brake pedal is depressed, the stop light switch sends a signal to the ECM. When the ECM receives this signal, it cancels the cruise control. The fail-safe function operates to enable normal driving even if there is a malfunction in the stop light signal circuit. The cancellation condition occurs when voltage is applied to terminal STP. When the brake is applied, voltage is applied to terminal STP of the ECM through the STOP fuse and the stop light switch, and the ECM turns the cruise control off.

DTC Code	DTC Detection Condition	Trouble Area
P0571	When the voltage of the STP terminal and the ST1- terminal of the ECM is below 1 V for 0.5 sec. or more.	• Stop light switch • Stop light switch circuit • ECM

WIRING DIAGRAM

INSPECTION PROCEDURE

1.READ VALUE USING INTELLIGENT TESTER (STOP LIGHT SWITCH)

a. Using the intelligent tester, read the Data List.

Cruise Control

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Stop Light SW M-CPU	Stop light switch signal (Main CPU) / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-

OK:

Normal conditions listed above are displayed.

NG → Go to step 2

OK

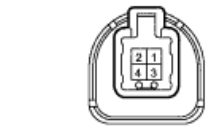
REPLACE ECM (Click here)

2.INSPECT STOP LIGHT SWITCH

a. Remove the stop light switch (Click here for LHD, Click here for RHD).

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:



Tester Connection	Switch Condition	Specified Condition
1 - 2	Pin pushed	10 kΩ or higher
	Pin not pushed	Below 1 Ω
3 - 4	Pin pushed	Below 1 Ω

	Pin not pushed	10 kΩ or higher

Result

Result	Proceed to
OK	A
NG (for LHD)	B
NG (for RHD)	C

Component without harness connected: (Stop Light Switch)

Pin pushed

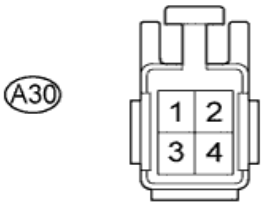
Pin released

B → REPLACE STOP LIGHT SWITCH (Click here)

C → REPLACE STOP LIGHT SWITCH (Click here)

A

3.CHECK HARNESS AND CONNECTOR (BATTERY - STOP LIGHT SWITCH)



a. Disconnect the A30 stop light switch connector.

b. Measure the voltage according to the value(s) in the table below.

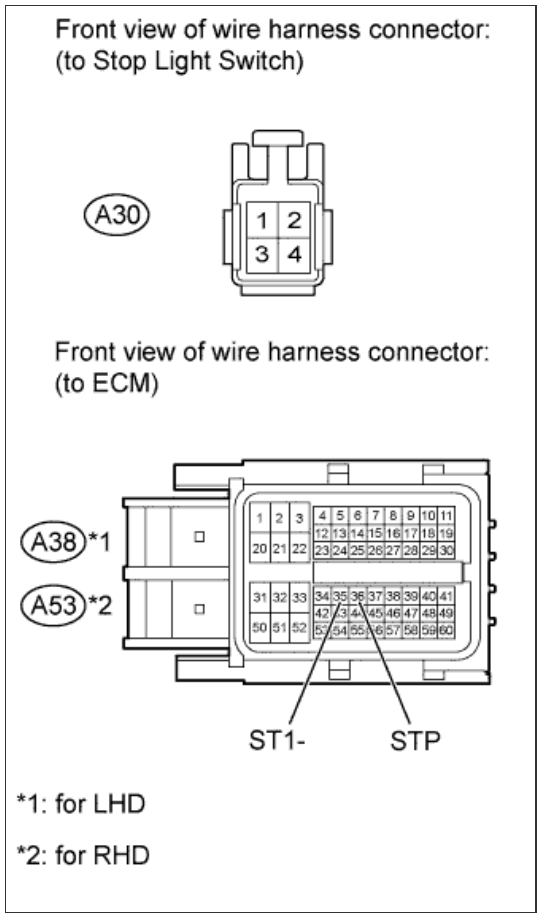
Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
A30-2 - Body ground	Always	11 to 14 V
A30-3 - Body ground	Engine switch on (IG)	

Front view of wire harness connector: (to Stop Light Switch)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



4.CHECK HARNESS AND CONNECTOR (STOP LIGHT SWITCH - ECM)

a. Disconnect the A30 stop light switch connector.

b. Disconnect the A38*1 or A53*2 ECM connector.

*1: for LHD
*2: for RHD

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

for LHD

Tester Connection	Condition	Specified Condition
A30-1 - A38-36 (STP)	Always	Below 1 Ω
A30-1 - Body ground	Always	10 kΩ or higher
A30-4 - A38-35 (ST1-)	Always	Below 1 Ω
A30-4 - Body ground	Always	10 kΩ or higher

for RHD

Tester Connection	Condition	Specified Condition
A30-1 - A53-36 (STP)	Always	Below 1 Ω
A30-1 - Body ground	Always	10 kΩ or higher
A30-4 - A53-35 (ST1-)	Always	Below 1 Ω
A30-4 - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE ECM (Click here)

DTC P0503 Vehicle Speed Sensor "A" Intermittent / Erratic / High

for Preparation Click here

DESCRIPTION

If a malfunction (a rapid change in vehicle speed) in the vehicle speed signal being output from the master cylinder solenoid (skid control ECU) is detected while the cruise control is in operation, the ECM determines there to be a momentary interruption and noise, and outputs a DTC.

DTC Code	DTC Detection Condition	Trouble Area
P0503	A momentary interruption and noise are detected when a rapid change of the vehicle speed occurs while cruise control is in operation.	• Vehicle speed sensor • Vehicle speed sensor signal circuit • ECM • Combination meter

INSPECTION PROCEDURE

This DTC code may be output under the vehicle stability control system at the same time. In that case, perform troubleshooting for the vehicle stability control system first.

1.CHECK DTC (VEHICLE STABILITY CONTROL SYSTEM)

a. Using the intelligent tester, enter the following menus: Chassis / ABS/VSC/TRAC / Trouble Code.

b. Check for DTCs (Click here).

OK:
DTC is not output.

NG → **GO TO VEHICLE STABILITY CONTROL SYSTEM (Click here)**

OK ↓

2.CHECK DTC (CRUISE CONTROL SYSTEM)

a. Using the intelligent tester, enter the following menus: Powertrain / Cruise Control / Trouble Code.

b. Clear the DTCs (Click here).

c. Perform the following to make sure the DTC detection conditions are met.

HINT:

If the detection conditions are not met, the system cannot detect the malfunction.

i. Drive the vehicle at a speed of 40 km/h (25 mph) or more.

ii. Turn the cruise control main switch on.

iii. Push the -SET switch to activate the cruise control.

d. Check for DTCs (Click here).

OK:
DTC P0503 is not output.

NG → **REPLACE ECM (Click here)**

OK ↓

USE SIMULATION METHOD TO CHECK (Click here)

DTC P0575 Cruise Control Input Circuit

for Preparation Click here

DESCRIPTION

This DTC indicates internal abnormalities of the ECM.

DTC Code	DTC Detection Condition	Trouble Area
P0575	When either of the following conditions is met: • STP signals input to the ECM supervisory CPU and control ECU are different for 0.15 seconds or more. • 0.4 seconds have passed after the cruise cancel input signal (STP input) is input to the ECM.	ECM

HINT:

If DTC P0575 is stored while the cruise control is in operation, the master cylinder solenoid (skid control ECU) clears the stored vehicle speed in the ECM and cancels the cruise control operation. At the same time, the CRUISE main indicator light blinks to inform the driver of the malfunction. When this trouble code is stored, fail-safe remains on until the engine switch is turned off.

INSPECTION PROCEDURE

1.CHECK DTC (CRUISE CONTROL SYSTEM)

a. Using the intelligent tester, enter the following menus: Powertrain / Cruise Control / Trouble Code.

b. Clear the DTCs (Click here).

c. Recheck for DTCs (Click here).

OK:
DTC P0575 is not output.

NG → **REPLACE ECM (Click here)**

OK ↓

USE SIMULATION METHOD TO CHECK (Click here)

DTC P0503 Vehicle Speed Sensor "A" Intermittent / Erratic / High

for Preparation Click here

DESCRIPTION

If a malfunction (a rapid change in vehicle speed) in the vehicle speed signal being output from the master cylinder solenoid (skid control ECU) is detected while the cruise control is in operation, the ECM determines there to be a momentary interruption and noise, and outputs a DTC.

DTC Code	DTC Detection Condition	Trouble Area
P0503	A momentary interruption and noise are detected when a rapid change of the vehicle speed occurs while cruise control is in operation.	• Vehicle speed sensor • Vehicle speed sensor signal circuit • ECM • Combination meter

INSPECTION PROCEDURE

This DTC code may be output under the vehicle stability control system at the same time. In that case, perform troubleshooting for the vehicle stability control system first.

1.CHECK DTC (VEHICLE STABILITY CONTROL SYSTEM)

a. Using the intelligent tester, enter the following menus: Chassis / ABS/VSC/TRAC / Trouble Code.

b. Check for DTCs (Click here).

OK:
DTC is not output.

NG → **GO TO VEHICLE STABILITY CONTROL SYSTEM (Click here)**

OK ↓

2.CHECK DTC (CRUISE CONTROL SYSTEM)

a. Using the intelligent tester, enter the following menus: Powertrain / Cruise Control / Trouble Code.

b. Clear the DTCs (Click here).

c. Perform the following to make sure the DTC detection conditions are met.

HINT:

If the detection conditions are not met, the system cannot detect the malfunction.

i. Drive the vehicle at a speed of 40 km/h (25 mph) or more.

ii. Turn the cruise control main switch on.

iii. Push the -SET switch to activate the cruise control.

d. Check for DTCs (Click here).

OK:
DTC P0503 is not output.

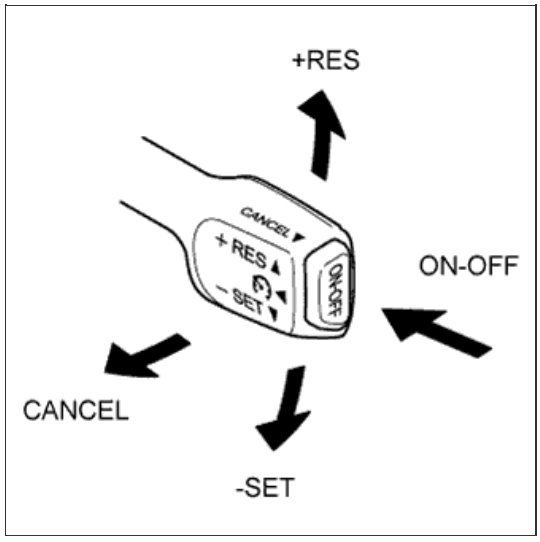
DESCRIPTION

The cruise control main switch is used to operate 7 functions: SET, - (COAST), TAP-DOWN, RES (RESUME), + (ACCELERATION), TAP-UP, and CANCEL. The SET, TAP-DOWN and - (COAST) functions, and the RES (RESUME), TAP-UP and + (ACCELERATION) functions are operated with the same switch. The cruise control main switch is an automatic return type switch which turns on only while operating it in each arrow direction and turns off after releasing it. The internal contact point of the cruise control main switch is turned on with the switch operation. Then the ECM reads the resistance value that has been changed by the switch operation to control SET, - (COAST), RES (RESUME), + (ACCELERATION) and CANCEL.



WIRING DIAGRAM

INSPECTION PROCEDURE

1.READ VALUE USING INTELLIGENT TESTER (CRUISE CONTROL MAIN SWITCH)

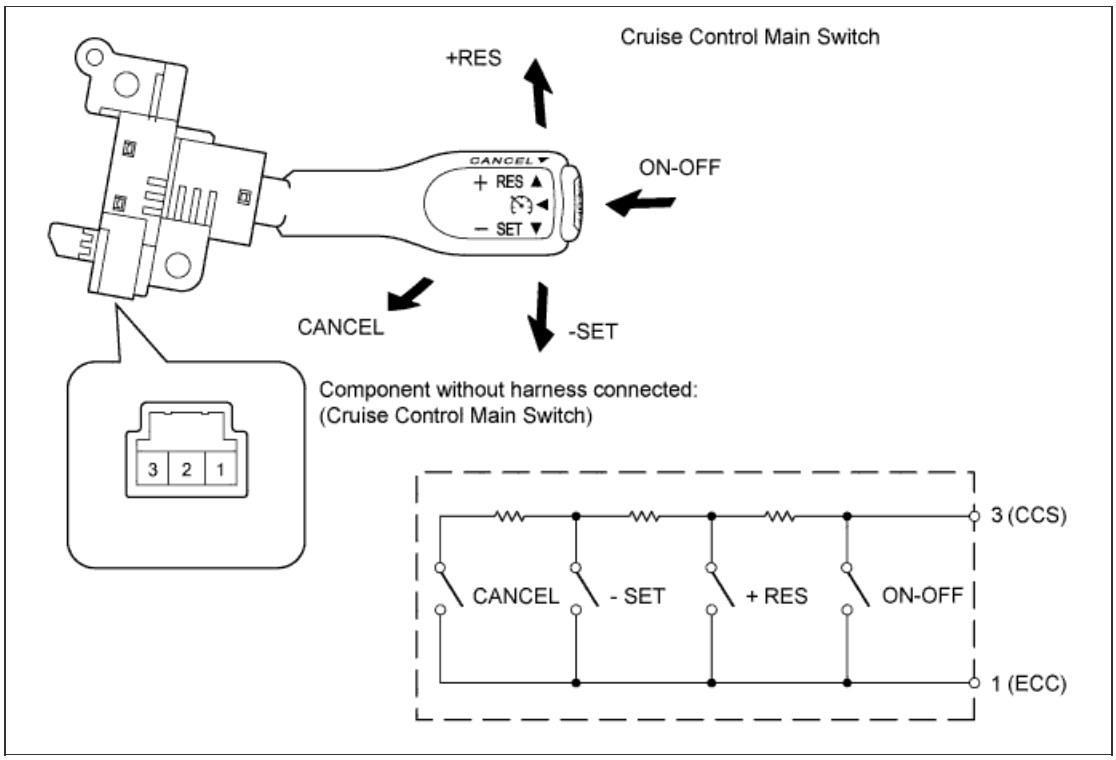
a. Using the intelligent tester, read the Data List.

Cruise Control

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
CCS Main SW M-CPU	Cruise control main switch (Main CPU) / ON or OFF	ON: Cruise control main switch (Main CPU) on OFF: Cruise control main switch (Main CPU) off	-
Cancel Switch	CANCEL switch signal / ON or OFF	ON: CANCEL switch on OFF: CANCEL switch off	-
SET/COAST Switch	-SET switch signal / ON or OFF	ON: -SET switch on OFF: -SET switch off	-

RES/ACC Switch	+RES switch signal / ON or OFF	ON: +RES switch on OFF: +RES switch off	-
CCS Main SW S-CPU	Cruise control main switch (Sub CPU) / ON or OFF	ON: Cruise control main switch (Sub CPU) on OFF: Cruise control main switch (Sub CPU) off	-

OK:



The intelligent tester display changes according to operation of cruise control main switch.

NG → Go to step 2

OK →

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

2.INSPECT CRUISE CONTROL MAIN SWITCH

a. Remove the cruise control main switch (Click here).

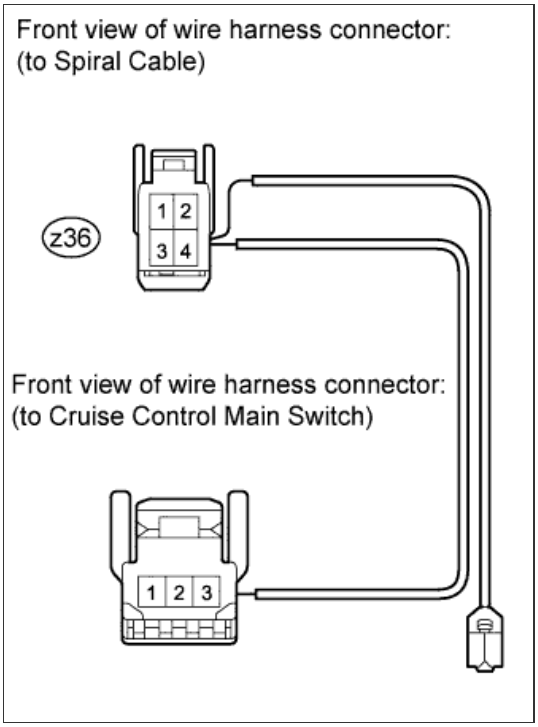
b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
1 - 3	Neutral	1 MΩ or higher
	Pushed to +RES	235 to 245 Ω
	Pushed to -SET	620 to 640 Ω
	Pushed to CANCEL	1510 to 1570 Ω
	Main switch pushed off	1 MΩ or higher
	Main switch pushed on	Below 2.5 Ω

NG → REPLACE CRUISE CONTROL MAIN SWITCH (Click here)

OK →



3.INSPECT CRUISE CONTROL SWITCH WIRE

a. Remove the cruise control switch wire.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z36-3 - 3	Always	Below 1 Ω
z36-4 - 1		

NG → REPLACE CRUISE CONTROL SWITCH WIRE

OK

4.INSPECT SPIRAL CABLE

a. Check the spiral cable and connector for scratches, cracks, dents and chips. If any defects are found, replace the spiral cable with a new one.

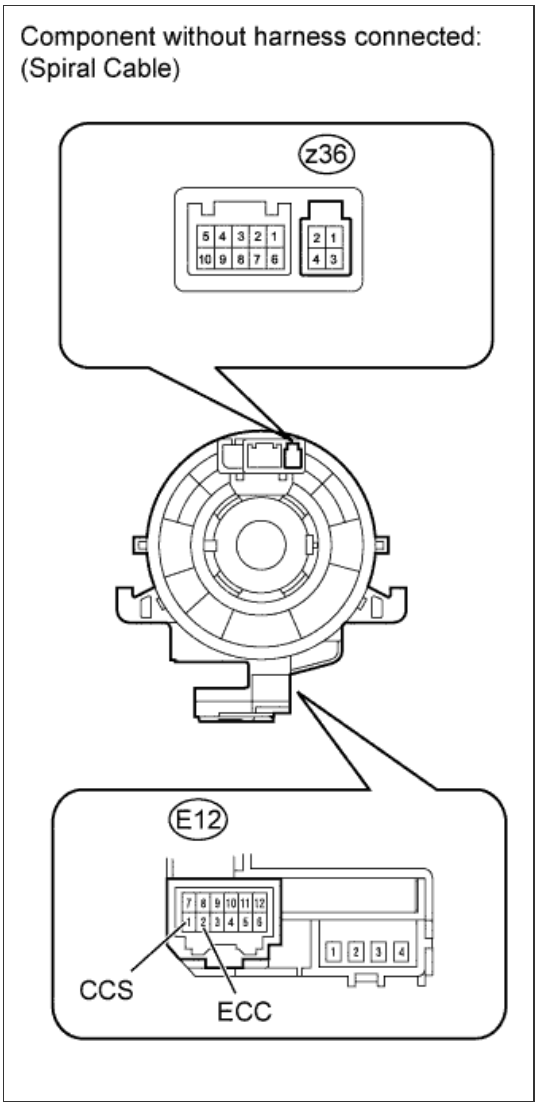
b. Check the spiral cable.

i. Set the spiral cable to the center position (Click here).

ii. After setting the spiral cable to the center position, rotate the spiral cable 2.5 times clockwise, and measure the resistance according to the value(s) in the table below. Then rotate the spiral cable 5 times counterclockwise, and measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z36-3 - E12-1 (CCS)	Always	Below 1 Ω
z36-4 - E12-2 (ECC)		



iii. After setting the spiral cable to the center position, rotate the spiral cable 2.5 times clockwise. Then while rotating the spiral cable 5 times counterclockwise, measure the resistance according to the value(s) in the table below.

NOTICE:

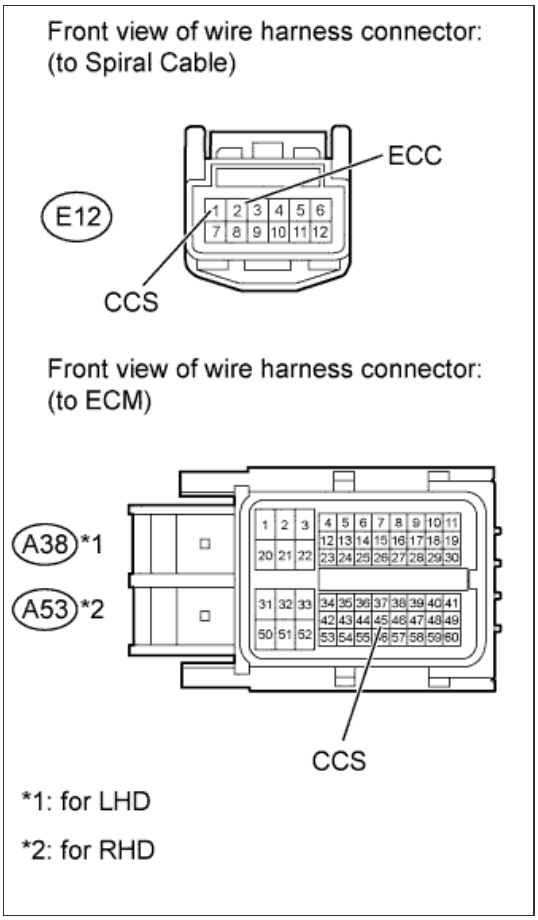
As the spiral cable may break, do not rotate the spiral cable more than the specified amount.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z36-3 - E12-1 (CCS)	Always	Below 1 Ω
z36-4 - E12-2 (ECC)		

NG → REPLACE SPIRAL CABLE (Click here)

OK



5.CHECK HARNESS AND CONNECTOR (SPIRAL CABLE - ECM AND BODY GROUND)

a. Disconnect the E12 spiral cable connector.

b. Disconnect the A38*1 or A53*2 ECM connector.

*1: for LHD
*2: for RHD

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

for LHD

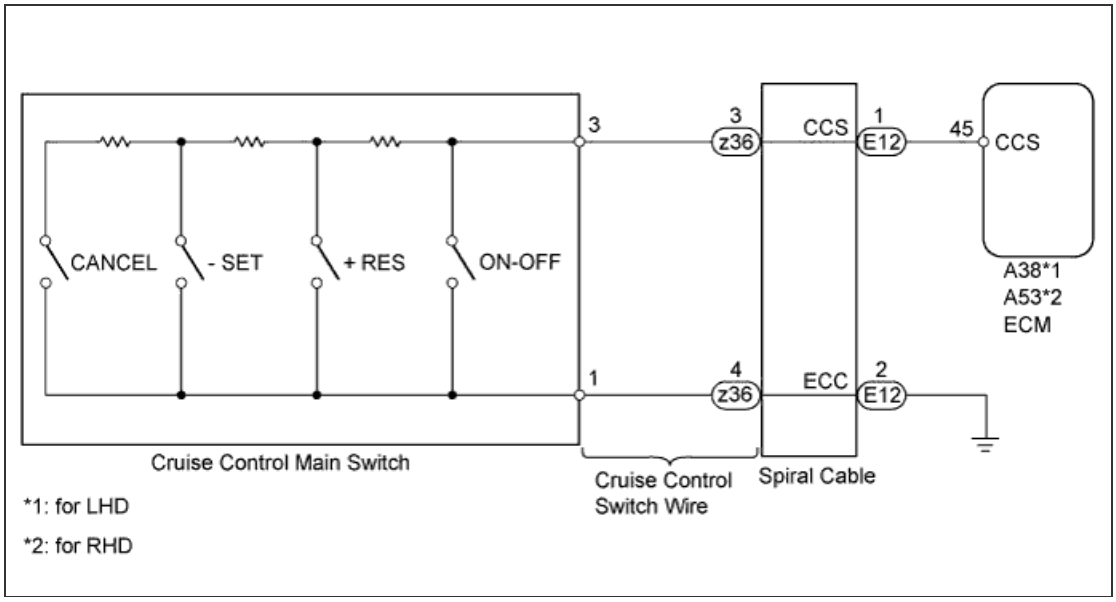
Tester Connection	Condition	Specified Condition
E12-1 (CCS) - A38-45 (CCS)	Always	Below 1 Ω
E12-1 (CCS) - Body ground	Always	10 kΩ or higher
E12-2 (ECC) - Body ground	Always	Below 1 Ω

for RHD

Tester Connection	Condition	Specified Condition
E12-1 (CCS) - A53-45 (CCS)	Always	Below 1 Ω
E12-1 (CCS) - Body ground	Always	10 kΩ or higher
E12-2 (ECC) - Body ground	Always	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



REPLACE ECM (Click here)

for Preparation Click here

DESCRIPTION

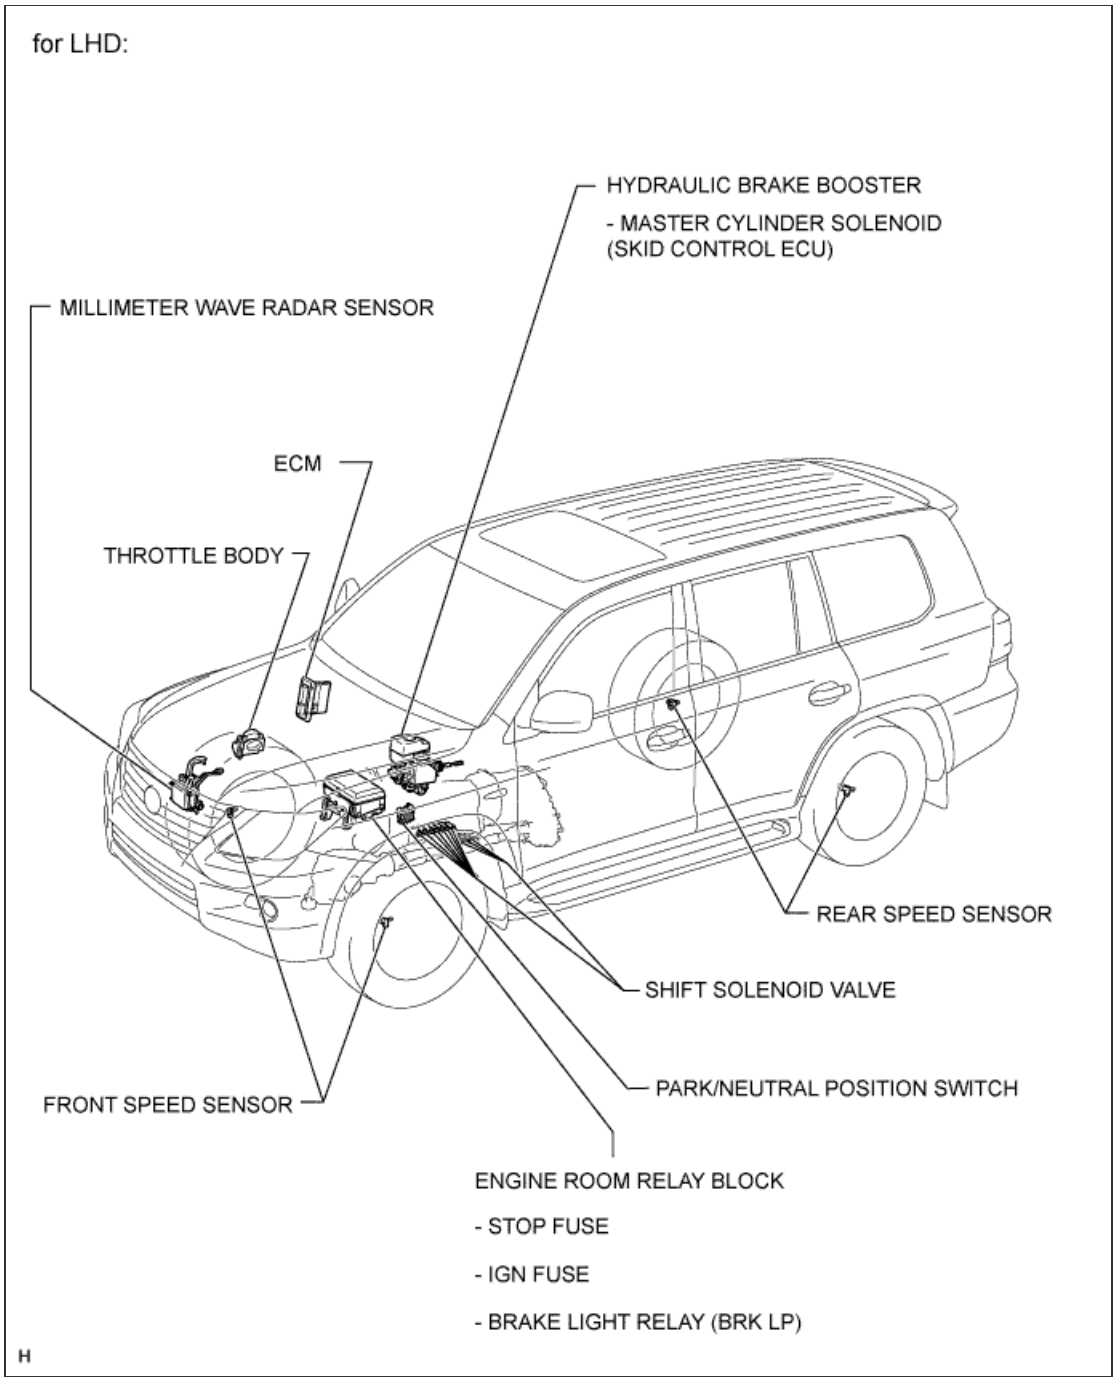
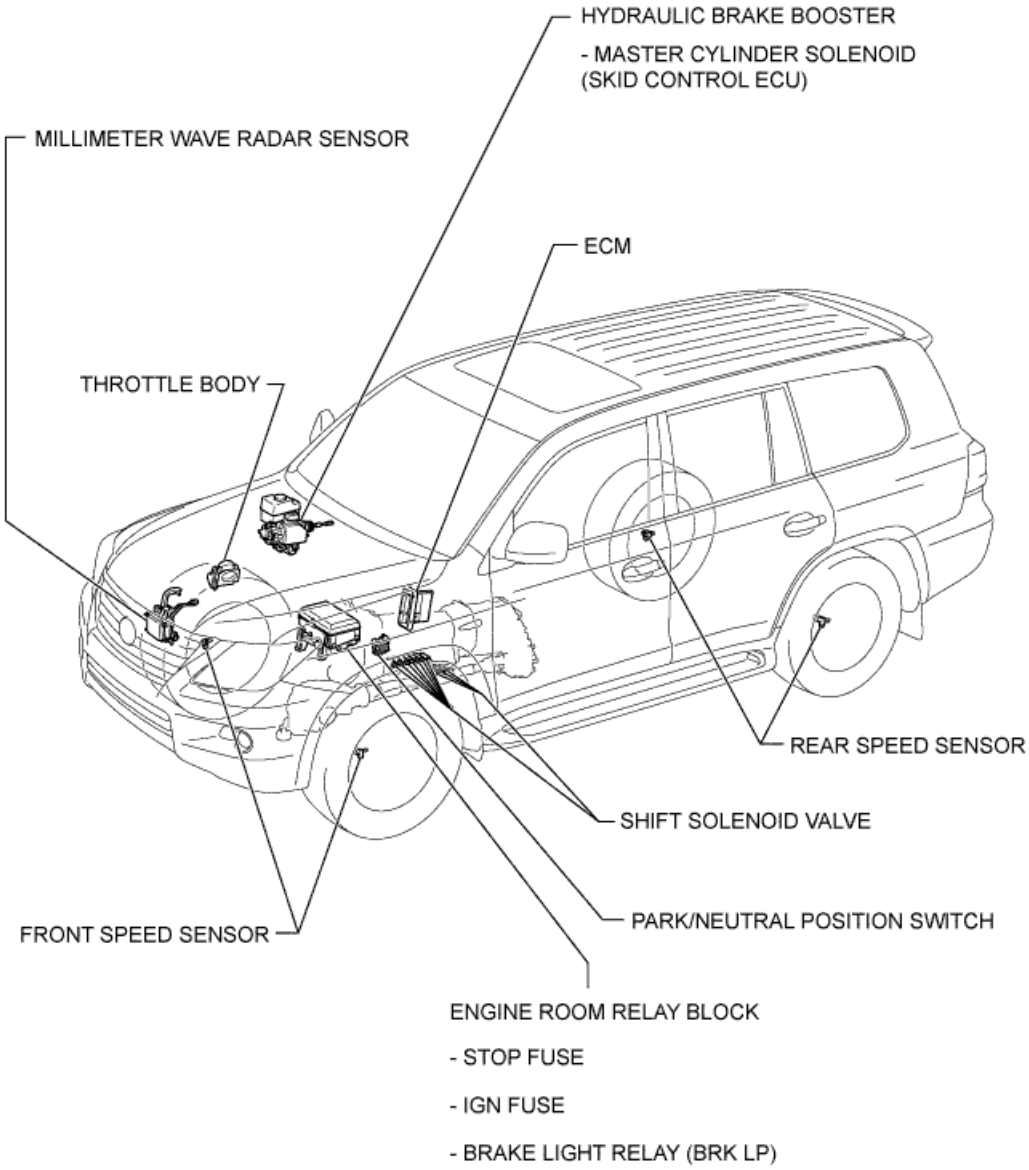
1.HANDLING PRECAUTION FOR DYNAMIC RADAR CRUISE CONTROL SYSTEM



Keep in mind the following points when inspecting the dynamic radar cruise control system.

- As there is a limitation on the vehicle-to-vehicle distance controlling capability, do not overly rely on the dynamic radar cruise control system.
- Pay constant attention to the vehicle-to-vehicle distance and the traffic conditions when using the dynamic radar cruise control system. Decelerate with the brake pedal and accelerate with the accelerator pedal to keep an appropriate distance with the vehicle in front.
- When the vehicle in front decelerates rapidly or another vehicle moves in front of your vehicle, decelerating in time to avoid a collision may not be possible without additional braking.
- The dynamic radar cruise control system is designed to assist in maintaining an appropriate distance with the vehicle in front. However, the system alone is not sufficient. It is imperative that the driver pay attention at all times.
- The millimeter wave radar sensor has functions that automatically detect dirt on the sensor face and inform the driver. However, these functions are not perfect. Keep the sensor face clean.
- The dynamic radar cruise control system does not work, or give a vehicle-approaching warning, for vehicles which are stopped or driving at significantly slower speeds. Always pay attention to these vehicles.
- The millimeter wave radar sensor detection area is narrow at close range, so detection of a vehicle moving just in front may be delayed, or a motorcycle running on the side of the same lane may not be detected. The distance to the vehicle in front may not be maintained properly due to these reasons.
- Even if + (ACCELERATION) control is operated to increase the stored vehicle speed, the vehicle does not accelerate because the speed is controlled in accordance with the speed of the vehicle in front while driving with the vehicle-to-vehicle distance control mode on (follow-up cruising). However, as the stored vehicle speed has been increased by + (ACCELERATION) operation, the vehicle accelerates to the stored vehicle speed when there is no vehicle in front. Check the set speed with the stored vehicle speed indication on the display.
- The controlled vehicle distance may be shorter than the set vehicle distance when cruising on a long, downhill road.
- The cruise control switch must be turned off and then on if all of the following occur: 1) the CRUISE main indicator light blinks, 2) the master warning light illuminates at the same time a "pong" sound is heard, and 3) the fail message is shown on the display.
- The warning buzzer does not sound during constant speed control mode because the presence of the vehicle in front and the distance to it are not judged as during vehicle-to-vehicle distance control mode. Pay attention to the distance to the vehicle in front.
- The dynamic radar cruise control system has 2 cruise control modes: the constant speed control mode and vehicle-to-vehicle distance control mode. Confirm which mode is selected when using the dynamic radar cruise control system.



2.PRECAUTIONS WHEN REPLACING DISTANCE CONTROL ECU

a. When the distance control ECU is replaced with a new one, initialization must be performed (Click here). If initialization is not performed, the system will not operate normally.

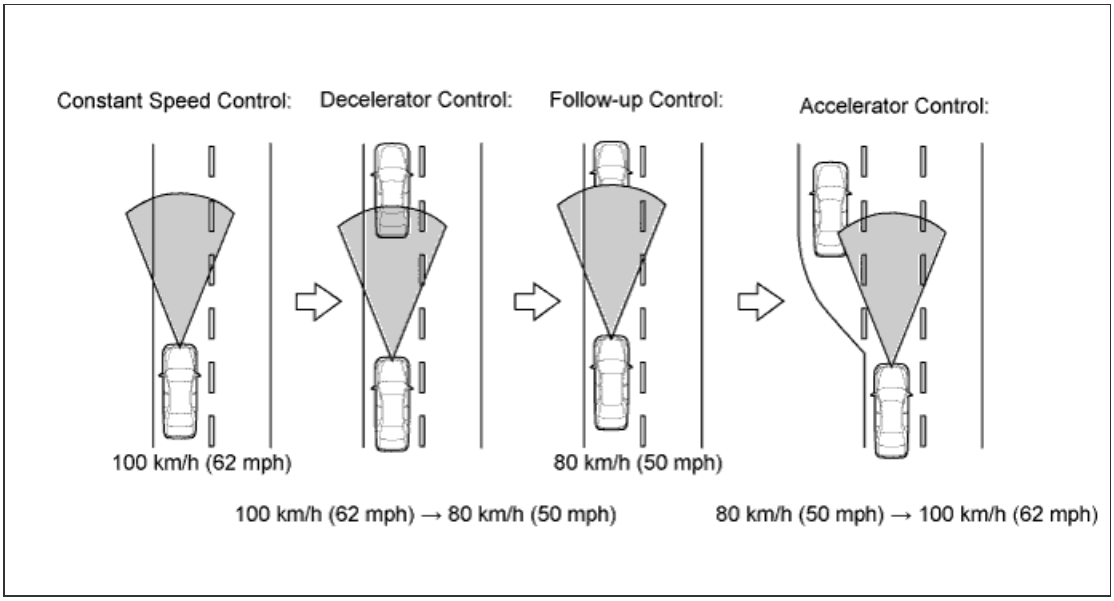
GENERAL

a. The dynamic radar cruise control system has 2 cruise control modes: the constant speed control mode and vehicle-to-vehicle distance control mode.

- The vehicle-to-vehicle distance control mode is always selected when starting the dynamic radar cruise control system.
- Operation of the constant speed control mode is the same as the cruise control system.

b. This system maintains the vehicle speed that the driver has set, as long as there are no vehicles ahead in the same lane. Then, the system maintains the vehicle distance that has been set by the driver. If the system detects a vehicle driving at a slower speed ahead while the driver is driving at a constant speed, it closes the throttle valve to decelerate. If further deceleration is required, the system controls the brake actuator in order to apply the brakes. Thereafter, if there are no vehicles ahead within the set vehicle-to-vehicle distance because either the vehicle ahead or the driver has changed lanes, the system accelerates slowly to reach the stored vehicle speed and resumes driving at the constant speed.



c. The constant speed control mode is designed to maintain a constant cruising speed. The vehicle-to-vehicle distance control mode is designed to control cruising using a constant speed function, deceleration cruising function, follow-up cruising function and acceleration cruising function.

d. The millimeter wave radar sensor and the distance control ECU control the system while the vehicle-to-vehicle distance control mode is in operation, and send signals to each actuator and ECU.

e. In vehicle-to-vehicle distance control mode, the dynamic radar cruise control system receives signals from the yaw rate (deceleration) sensor and the steering angle sensor. Based on these signals, it then estimates curve radius and corrects the information on the preceding vehicle while turning. It can also adjust the brake control when approaching another vehicle.

f. This system judges the presence of a vehicle in front and the distance to it based on the signals from the radar sensor while the vehicle-to-vehicle distance control mode is in operation. Using this information, the system informs the driver of any danger with the warning buzzer, performs brake control, and turns on the stop light when approaching the vehicle in front.

g. The following illustration shows an example under the following conditions: your vehicle speed is 100 km/h (62 mph) and the speed of the vehicle in front is 80 km/h (50 mph). Setting of the vehicle distance can be changed to 3 distances by operating the steering pad switch (distance control switch): long (approximately 50 m (164 ft.)), middle (approximately 40 m (131 ft.)), and short (approximately 30 m (98 ft.)) when the vehicle speed is approximately 80 km/h (50 mph).

HINT:

- **Vehicle distance increases and decreases in accordance with vehicle speed.**
- **Controlling condition is indicated on the multi-information display in the combination meter.**

FUNCTION OF MAIN COMPONENTS

Item	Outline
Combination meter (CRUISE main indicator light)	• Turns on when the cruise control main switch is on. • If the distance control ECU detects a malfunction, this light flashes to warn the driver.
Combination meter (Master warning light)	If the ECM or the distance control ECU detects an automatic cancel signal while the vehicle is operating under cruise control, this light turns on to inform the driver.
Combination meter (Buzzer)	If the ECM or the distance control ECU detects an automatic cancel signal while the vehicle is operating under cruise control, this buzzer sounds only once to inform the driver.
Combination meter (Multi-information display)	• While the system is in vehicle-to-vehicle distance control mode, the multi-information display receives signals from the distance control ECU in order to display system conditions in the graphic area. • If the ECM or the distance control ECU detects a malfunction signal while the vehicle is operating under cruise control, a warning message will be displayed in the warning area to inform the driver. • While the system is in radar sensor adjustment mode, the adjustment angle detected by the distance control ECU will be displayed in the warning area to inform the driver.
Cruise control main switch	Turns the cruise control system on/off.
Cruise control main switch (Control switch)	• Vehicle speed setting, deceleration setting, preset speed resumption, acceleration setting, and canceling signals are output to the ECM through operation of this switch. • Switch control modes: constant speed control mode and vehicle-to-vehicle distance control mode.
Steering pad switch (Distance control switch)	While the system is in vehicle-to-vehicle distance control mode, the driver can operate the steering pad switch (distance control switch) to select the vehicle-to-vehicle distance in three stages: long, middle, and short.
Stop light switch	Detects depressing of the brake pedal and transmits its signal to the ECM.
Combination switch (Windshield wiper switch)	Transmits windshield wiper switch information to the distance control ECU.
Millimeter wave radar sensor	Emits radar waves forward, uses reflected waves for detecting the presence of the vehicle in front, vehicle-to-vehicle distance, and relative speed, and transmits this information to the distance control ECU.
Vehicle speed sensor	The vehicle speed signal which is output from the master cylinder solenoid (skid control ECU) is sent to the ECM.
Steering angle sensor	Detects the angle and direction of the steering wheel and transmits a signal to the distance control ECU.
Yaw rate sensor	Detects the yaw rate of the vehicle and transmits its signal to the distance control ECU.
Master cylinder solenoid (Skid control ECU)	• Actuates the brakes in accordance with signals from the master cylinder solenoid (skid control ECU). • While the system is in vehicle-to-vehicle distance control mode, the master cylinder solenoid (skid control ECU) actuates the brake actuator in accordance with the brake request signal received from the distance control ECU. • Upon receiving the signal from the distance control ECU, the master cylinder solenoid (skid control ECU) sounds the skid control buzzer.
Skid control buzzer	This buzzer sounds upon receiving the signal from the master cylinder solenoid (skid control ECU).
ECM	• Controls the dynamic radar cruise control system in accordance with signals from switches, sensors, and the distance control ECU. • If the ECM detects a malfunction in the dynamic radar cruise control system, it will store DTCs (Diagnostic Trouble Codes).
Throttle position sensor and motor	Upon receiving a signal from the ECM, the throttle control motor actuates the throttle valve.
Distance control ECU	While the system is in vehicle-to-vehicle distance control mode, the distance control ECU detects the vehicle in front based on a signal from the millimeter wave radar sensor. Then, the distance control ECU calculates the acceleration or deceleration rate in order to attain target

	vehicle-to-vehicle distance, and outputs a request signal to the ECM and the master cylinder solenoid (skid control ECU).

LIMIT CONTROL

a. Low speed limit
The lowest possible limit of the speed setting range is set at approximately 40 km/h (25 mph). The cruise control system cannot be set when the driving vehicle speed is below the low speed limit. Cruise control operation will be automatically canceled when the vehicle speed decreases below the low speed limit (40 km/h (25 mph)) while cruise control is in operation. When the vehicle speed is increased above the low speed limit after the cruise control operation is canceled, pressing the RES (RESUME) switch increases the vehicle speed to the stored speed.

b. High speed limit (Constant speed control mode)
The highest possible limit of the speed setting range is approximately 100 km/h (62.5 mph). The cruise control system cannot be set when the driving vehicle speed is over the high speed limit. Also, +RES (ACCELERATION/RESUME) cannot be used to increase speed beyond the high speed limit.

CRUISE CONTROL OPERATION

The cruise control main switch operates 8 functions: SET, - (COAST), TAP-DOWN, RES (RESUME), + (ACCELERATION), TAP-UP, CANCEL and MODE. The SET, TAP-DOWN and - (COAST) functions, and the RES (RESUME), TAP-UP and + (ACCELERATION) functions are operated with the same switch. The cruise control main switch is an automatic return type switch which turns on only while operating it in each arrow direction and turns off after releasing it. The dynamic radar cruise control system has two cruise control modes: the constant speed control mode and vehicle-to-vehicle distance control mode.

- The vehicle-to-vehicle distance control mode is always selected when starting up the dynamic radar cruise control system.
- Operation of the constant speed control mode is the same as the cruise control system.

a. MODE CONTROL
Pushing the switch to MODE for more than 1 second while driving with the cruise control main switch ON-OFF button on (RADAR READY is on) switches the mode to the constant speed control mode.

b. SET CONTROL (Constant speed control mode)
Vehicle speed is stored and constant speed control is maintained when pushing the switch to -SET while driving with the vehicle speed within the set speed range (between the low and high speed limits) after pushing the cruise control main switch on (RADAR READY is on), and entering the constant speed control mode.

c. SET CONTROL (Vehicle-to-vehicle distance control mode)
Vehicle speed is stored and vehicle-to-vehicle distance control is maintained when pushing the switch to -SET while driving with the cruise control main switch on (RADAR READY is on), and vehicle speed is within the set speed range (between the low and high speed limits).

d. - (COAST) CONTROL (Constant speed control mode)
When the cruise control main switch is pushed to -SET and held in that position while the cruise control system is operating, the ECM sends a "throttle valve opening angle 0°" demand signal to the cruise control system. Then the vehicle speed, when the cruise control main switch is released, is stored and maintained.

HINT:

An actual throttle valve opening angle of 0° is not possible due to the idle speed control, etc.

e. - (COAST) CONTROL (Vehicle-to-vehicle distance control mode)
When the cruise control main switch is pushed to -SET and held in that position while the vehicle-to-vehicle distance control mode is in operation, the stored vehicle speed decreases by approximately 5 km/h or 5 mph.

f. TAP-DOWN CONTROL (Vehicle-to-vehicle distance control mode)
When tapping down the cruise control main switch to -SET (for approximately 0.6 seconds) while the vehicle-to-vehicle distance control mode is in operation, the stored vehicle speed decreases each time by approximately 5 km/h or 5 mph.

g. TAP-DOWN CONTROL (Constant speed control mode)
When tapping down the cruise control main switch to -SET (for approximately 0.6 seconds) while the constant speed control mode is in operation, the stored vehicle speed decreases each time by approximately 1.6 km/h (1 mph). When the cruise control main switch is released from -SET and the difference between the driving and stored vehicle speed is more than 5 km/h (3 mph), the vehicle speed is stored and constant speed control is maintained.

h. + (ACCELERATION) CONTROL (Constant speed control mode)
The throttle valve motor of the throttle position sensor and motor is instructed by the ECM to open the throttle valve when the cruise control main switch is pushed to +RES and held in that position while the constant speed control mode is in operation. When the cruise control main switch is released from +RES, the vehicle speed is stored and constant speed control is maintained.

i. + (ACCELERATION) CONTROL (Vehicle-to-vehicle distance control mode)
When the cruise control main switch is pushed to +RES and held in that position while the vehicle-to-vehicle distance control mode is in operation, the stored vehicle speed increases by approximately 5 km/h or 5 mph per second. Pushing the cruise control main switch to +RES while following a vehicle in front with the vehicle-to-vehicle distance control mode on does not increase the actual vehicle speed, but changes only the stored vehicle speed.

j. TAP-UP CONTROL (Vehicle-to-vehicle distance control mode)
When tapping up the cruise control main switch to +RES (approximately 0.6 seconds) while the vehicle-to-vehicle distance control mode is in operation, the stored vehicle speed increases each time by approximately 5 km/h or 5 mph.

k. TAP-UP CONTROL (Constant speed control mode)
When tapping up the cruise control main switch to +RES (approximately 0.6 seconds) while the constant speed control mode is in operation, the stored vehicle speed increases each time by approximately 1.6 km/h (1 mph). However, when the difference between the driving and the stored vehicle speeds is more than 5 km/h (3 mph), the stored vehicle speed will not be changed.

l. MANUAL CANCEL CONTROL
Performing any of the following cancels the cruise control system while it is in operation (the stored vehicle speed in the ECM is maintained).

- Depressing the brake pedal.
- Moving the shift lever from D to N.
- With the shift lever in S, selecting the S1, S2 or S3 range.
- Pulling the cruise control main switch to CANCEL.
- Turning the cruise control main switch off (the stored vehicle speed in the ECM is not maintained).
- Driving the vehicle while the VSC system is operating.

m. RES (RESUME) CONTROL
If the cruise control operation was canceled with the stop light switch or the CANCEL switch, and if the driving speed is within the set speed range, pushing the cruise control main switch to +RES restores the vehicle speed memorized at the time of cancellation, and maintains constant speed control.

BRAKE CONTROL

The distance control ECU determines the distance to the vehicle in front, relative speed, target decreasing speed and deceleration rate. Based on the data, the ECU may transmit a brake demand signal to the master cylinder solenoid (skid control ECU) via the ECM.

DOWN SHIFT CONTROL

When the dynamic radar cruise control system is in operation, the gear may down-shift on an uphill road. After the gear is shifted down, if the system determines that the uphill inclination has become smaller based on the throttle valve opening angle, the gear automatically returns.

AUTO CANCEL (FAIL-SAFE)

This system has an automatic cancellation function (fail-safe) (Click here).

HINT:

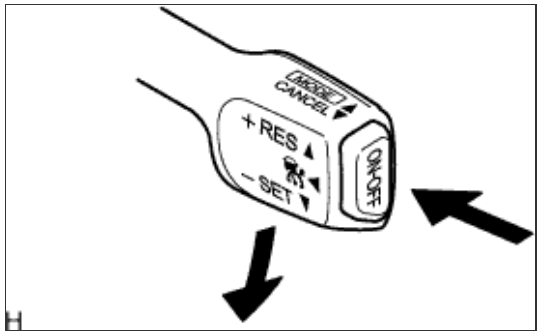
The dynamic radar cruise control system has 2 cruise control modes: the constant speed control mode and vehicle-to-vehicle distance control mode.

- **The vehicle-to-vehicle distance control mode is always selected when starting up the dynamic radar cruise control system.**
- **Operation of the constant speed control mode is the same as the cruise control system.**



INSPECT SET SWITCH

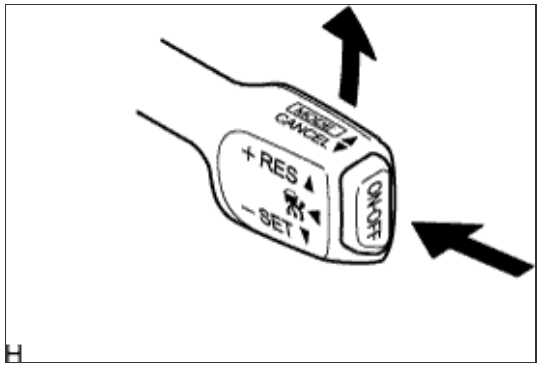
a. Turn the cruise control main switch on.

b. Drive at the desired speed (40 km/h (25 mph) or higher).

c. Push the cruise control main switch to -SET (COAST/SET).

d. Check that the vehicle cruises at the desired speed.

INSPECT "+" SWITCH



a. Turn the cruise control main switch on.

b. Drive at the desired speed (40 km/h (25 mph) or higher).

c. Push the cruise control main switch to -SET (COAST/SET).

d. Check that vehicle speed increases while the cruise control main switch is pushed to +RES (ACCELERATION/RESUME), and that the vehicle cruises at the set speed when released.

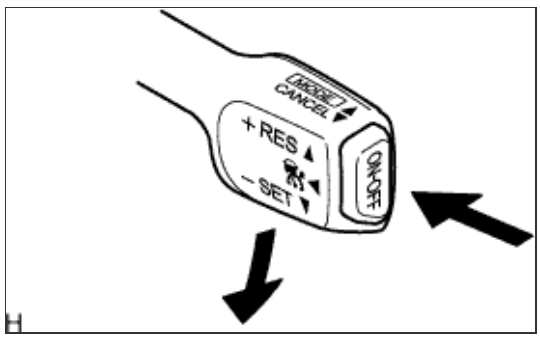
e. Vehicle-to-vehicle distance control mode:
Momentarily push the cruise control main switch to +RES (ACCELERATION/RESUME), and then immediately release it. Check that the driving and the stored vehicle speed increase by 5 km/h or 5 mph (Tap-up function).

HINT:

Pushing the cruise control main switch to +RES while following a vehicle in front with the vehicle-to-vehicle distance control mode on does not increase the actual vehicle speed, but changes only the stored vehicle speed.

f. Constant speed control mode:
Momentarily push the control main switch to +RES (ACCELERATION/RESUME), and then immediately release it. Check that the vehicle speed increases by approximately 1.6 km/h (1.0 mph) (Tap-up function).

INSPECT "-" SWITCH



a. Turn the cruise control main switch on.

b. Drive at the desired speed (40 km/h (25 mph) or higher).

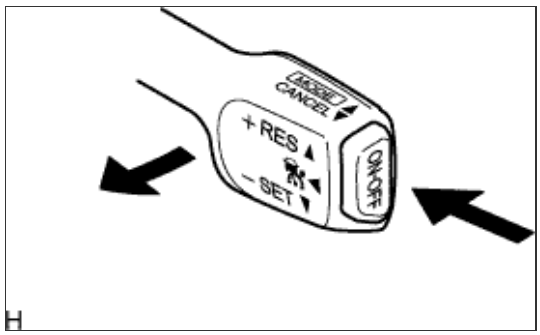
c. Push the cruise control main switch to -SET (COAST/SET).

d. Check that vehicle speed decreases while the cruise control main switch is pushed to -SET (COAST/SET), and the vehicle cruises at the set speed when released.

e. Vehicle-to-vehicle distance control mode:
Momentarily push the cruise control main switch to -SET (COAST/SET), and then immediately release it. Check that the driving and the stored vehicle speed decrease by 5 km/h or 5 mph (Tap-down function).

f. Constant speed control mode:
Momentarily push the cruise control main switch to -SET (COAST/SET), and then immediately release it. Check that the vehicle speed decreases by approximately 1.6 km/h (1.0 mph) (Tap-down function).

INSPECT CANCEL SWITCH



a. Turn the cruise control main switch on.

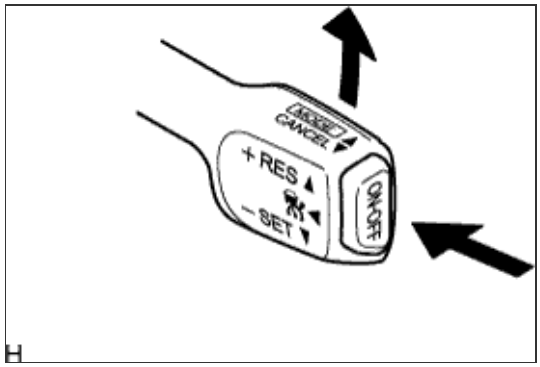
b. Drive at the desired speed (40 km/h (25 mph) or higher).

c. Push the cruise control main switch to -SET (COAST/SET).

d. When performing one of the following, check that the cruise control system is canceled.

- Depressing the brake pedal.
- Moving the shift lever from D to N.
- With the shift lever in S, selecting the S1, S2 or S3 range.
- Turning the cruise control main switch off (the stored vehicle speed in the ECM is not maintained).
- Pulling the cruise control main switch to CANCEL.
- Driving the vehicle while the VSC system is operating.

INSPECT RES (RESUME) SWITCH



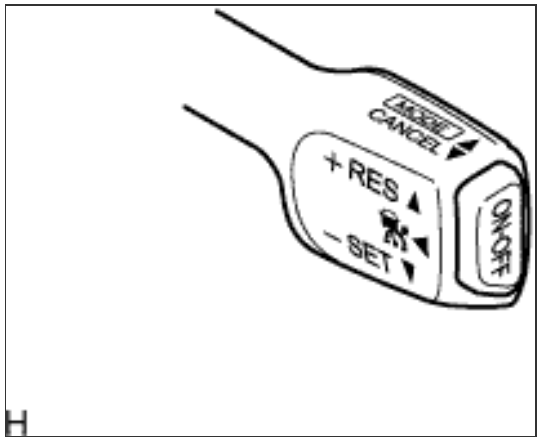
a. Turn the cruise control main switch on.

b. Drive at the desired speed (40 km/h (25 mph) or higher).

c. Push the cruise control main switch to -SET (COAST/SET).

d. Cancel the cruise control system by performing any of the operations below.

- Depressing the brake pedal.
- Moving the shift lever from D to N.
- With the shift lever in S, selecting the S1, S2 or S3 range.
- Pulling the cruise control switch to CANCEL.
- Driving the vehicle while the VSC system is operating.



e. After the cruise control main switch is pushed to +RES (ACCELERATION/RESUME) at a driving speed of more than 40 km/h (25 mph), check that the vehicle restores the speed before the cancellation.

for Preparation Click here

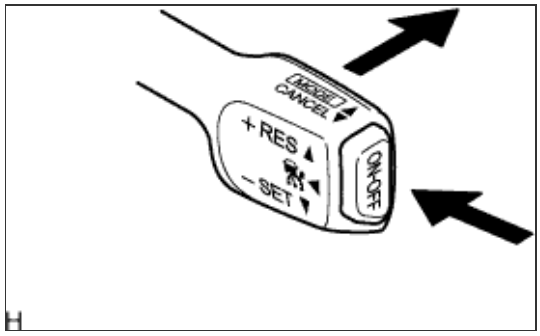
INPUT SIGNAL CHECK

a. Connect the intelligent tester to the DLC3.

b. Check the cruise control main switch (ON-OFF, CANCEL, -SET, +RES, and MODE) using the Data List function in the intelligent tester.

INSPECT MODE SWITCH

a. Turn the engine switch on (IG).



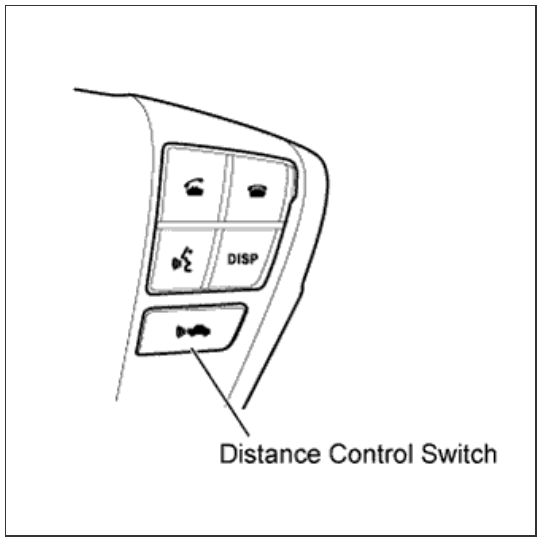
b. Turn the cruise control main switch on. Then push the cruise control main switch to MODE for 1 second or more to change to constant speed control mode. Check that "NORMAL" is indicated on the multi-information display.

NOTICE:

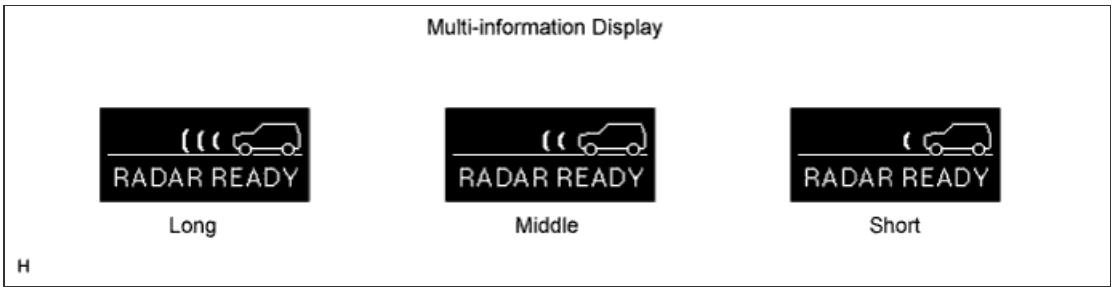
Do not push any other switches before pushing the cruise control main switch to MODE. If another switch is pushed, turn the control switch off and repeat the procedure above.

HINT:

If a malfunction is detected, turn the engine switch off and repeat the procedure above.



INSPECT STEERING PAD SWITCH



a. Turn the engine switch on (IG).

b. Turn the cruise control main switch on. Then push the cruise control main switch to MODE for 1 second or more to change to vehicle-to-vehicle distance control mode. Check that "RADAR READY" is indicated on the multi-information display.

c. Turn on the distance control switch of the steering pad switch.

d. Check that the indication of the vehicle-to-vehicle distance, which is shown in the multi-information display on the combination meter, changes from long to middle to short in that order.

HINT:

The indication is automatically set to long each time the engine is started.

for Preparation Click here

HINT:

- **Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.**

CHECK ECM

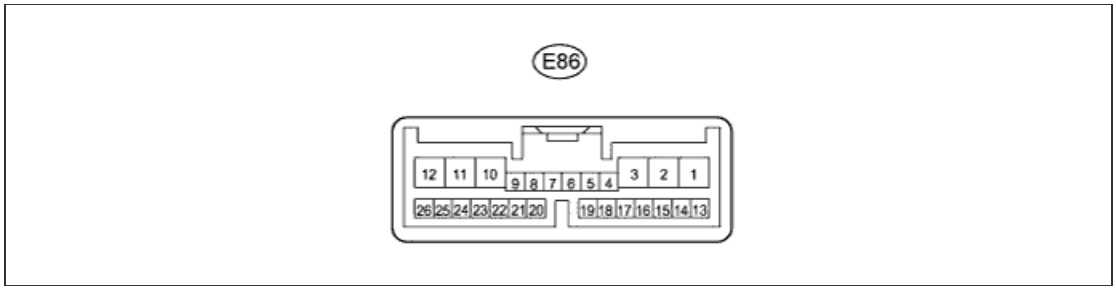
HINT:

As the ECM connector is a waterproof connector, it is not possible to check the voltage of each terminal or check the waveform with an oscilloscope while the ECM is installed in the vehicle.

a. Disconnect the A38*1 and C53*1 or A53*2 and C54*2 ECM connectors.

*1: for LHD
*2: for RHD

b. Measure the voltage and resistance according to the value(s) in the table below.



Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
A38*1-16 (TC) - Body ground A53*2-16 (TC) - Body ground	V-W - Body ground	Terminal TC of DLC3	Engine switch on (IG)	11 to 14 V
			Engine switch off	Below 1 V
C53*1-81 (E1) - Body ground C54*2-81 (E1) - Body ground	W-B - Body ground	ECM ground	Always	Below 1 Ω
C53*1-27 (D) - Body ground C54*2-27 (D) - Body ground	G - Body ground	Park/neutral position switch signal	Engine switch on (IG) Shift lever in D	11 to 14 V
			Engine switch on (IG) Shift lever not in D	Below 1 V
A38*1-38 (SFTU) - Body ground A53*2-38 (SFTU) - Body ground	Y - Body ground	Park/neutral position switch signal	Engine switch on (IG) Shift lever in S	Below 1 Ω
			Engine switch on (IG) Shift lever in +	10 kΩ or higher
A38*1-25 (S) - Body ground A53*2-25 (S) - Body ground	W - Body ground	Park/neutral position switch signal	Engine switch on (IG) Shift lever in S	11 to 14 V
			Engine switch on (IG) Shift lever not in S	Below 1 V
A38*1-27 (SFTD) - Body ground A53*2-27 (SFTD) - Body ground	L - Body ground	Park/neutral position switch signal	Engine switch on (IG) Shift lever in S	10 kΩ or higher
			Engine switch on (IG) Shift lever in -	Below 1 Ω
A38*1-36 (STP) - Body ground A53*2-36 (STP) - Body ground	R - Body ground	Stop light signal	Engine switch on (IG) Brake pedal depressed	11 to 14 V
			Engine switch on (IG) Brake pedal released	Below 1 V
A38*1-35 (ST1-) - Body ground A53*2-35 (ST1-) - Body	R-W - Body ground	Stop light signal (opposite to STP	Engine switch on (IG) Brake pedal depressed	Below 1 V
			Engine switch on (IG)	

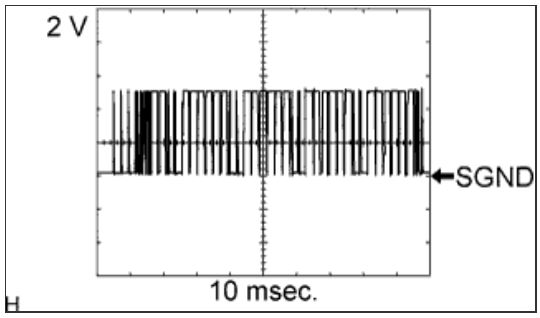
ground		terminal)	Brake pedal released	11 to 14 V
A38*1-45 (CCS) - Body ground A53*2-45 (CCS) - Body ground	L - Body ground	Cruise control main switch signal	Engine switch on (IG) Main switch off	1 MΩ or higher
			Engine switch on (IG) CANCEL switch held on	1510 to 1570 Ω
			Engine switch on (IG) -SET switch held on	620 to 640 Ω
			Engine switch on (IG) +RES switch held on	235 to 245 Ω
			Engine switch on (IG) Main switch on	Below 2.5 Ω
A38*1-37 (CCHG) - Body ground A53*2-37 (CCHG) - Body ground	P-B - Body ground	Distance control switch signal	Engine switch on (IG) Main switch on MODE switch held on	Below 1 V
			Engine switch on (IG) Main switch on MODE switch off	11 to 14 V

*1: for LHD
*2: for RHD

If the result is not as specified, there may be a malfunction on the wire harness side.

CHECK DISTANCE CONTROL ECU

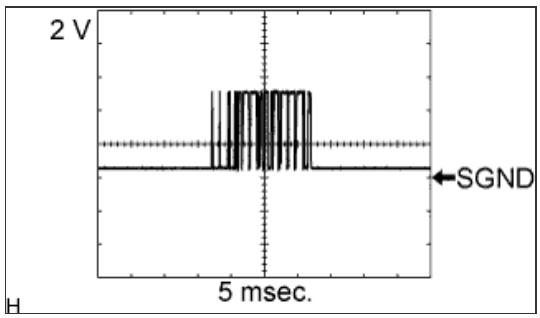
a. Disconnect the E86 distance control ECU connector.



b. Measure the voltage and resistance according to the value(s) in the table below.

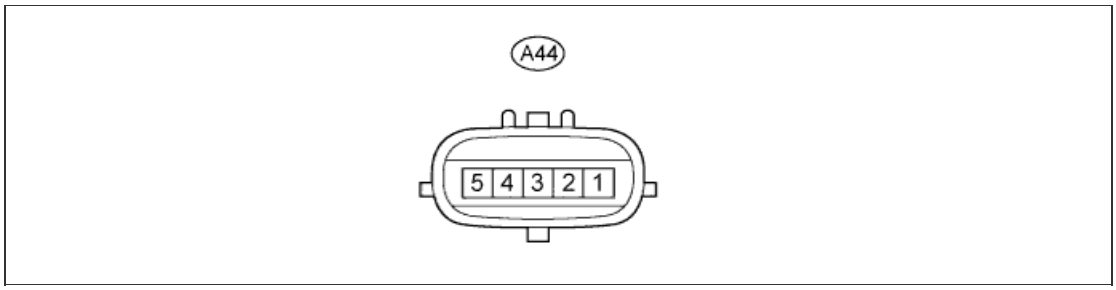
Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E86-1 (B) - Body ground	R - Body ground	Distance control ECU power source line	Engine switch on (IG)	11 to 14 V
E86-3 (WASH) - Body ground	L - Body ground	Windshield wiper switch signal	Engine switch on (IG) Windshield wiper switch on	11 to 14 V
			Engine switch on (IG) Windshield wiper switch off	Below 1 V
E86-12 (GND) - Body ground	BR - Body ground	Ground	Always	Below 1 Ω
E86-13 (IGB) - Body ground	R - Body ground	Engine switch on signal	Engine switch on (IG)	11 to 14 V
			Engine switch off	Below 1 V
E86-16 (MODE) - Body ground	W - Body ground	Distance control switch signal	Engine switch on (IG) Distance control switch on	Below 1 V
			Engine switch on (IG) Distance control switch off	11 to 14 V
E86-22 (LRDD) - E86-10 (SGND)	B - R	Millimeter wave radar sensor input signal	Engine switch on (IG)	Pulse generation (See waveform 1)
E86-23 (LRRD) - E86-10 (SGND)	W - R	Millimeter wave radar sensor output signal	Engine switch on (IG)	Pulse generation (See waveform 2)

If the result is not as specified, there may be a malfunction on the wire harness side.



c. Using an oscilloscope, check waveform 1.

Item	Content
Terminal No. (Symbol)	E86-22 (LRDD) - E86-10 (SGND)
Tool Setting	2 V/DIV., 10 msec./DIV.
Condition	Engine switch on (IG)

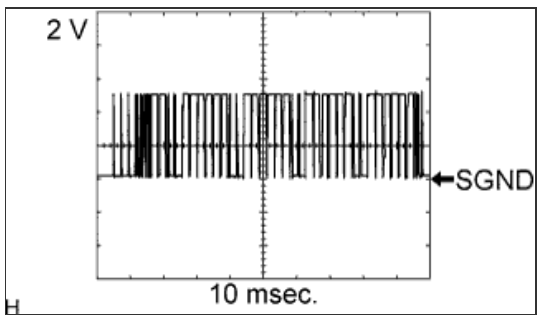


d. Using an oscilloscope, check waveform 2.

Item	Content
Terminal No. (Symbol)	E86-23 (LRRD) - E86-10 (SGND)
Tool Setting	2 V/DIV., 5 msec./DIV.
Condition	Engine switch on (IG)

CHECK MILLIMETER WAVE RADAR SENSOR

a. Disconnect the A44 millimeter wave radar sensor connector.

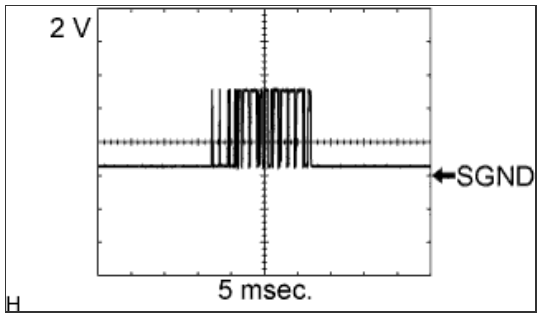


b. Measure the voltage according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
A44-3 (LRDD) - A44-2 (SGND)	B - R-W	Millimeter wave radar sensor output signal	Engine switch on (IG)	Pulse generation (See waveform 3)
A44-4 (LRRD) - A44-2 (SGND)	W - R-W	Millimeter wave radar sensor input signal	Engine switch on (IG)	Pulse generation (See waveform 4)
A44-5 (IGB) - A44-2 (SGND)	R-B - R-W	Engine switch on signal	Engine switch on (IG)	11 to 14 V
			Engine switch off	Below 1 V

If the result is not as specified, there may be a malfunction on the wire harness side.

c. Using an oscilloscope, check waveform 3.

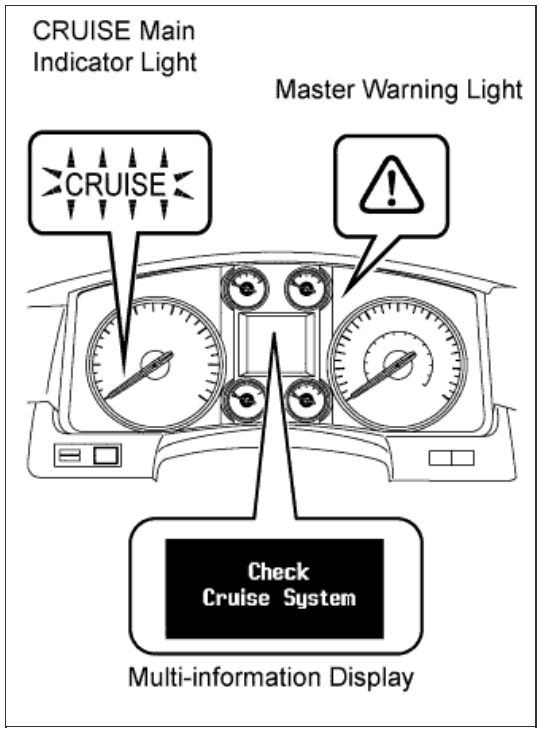


Item	Content
Terminal No. (Symbol)	A44-3 (LRDD) - A44-2 (SGND)
Tool Setting	2 V/DIV., 10 msec./DIV.
Condition	Engine switch on (IG)

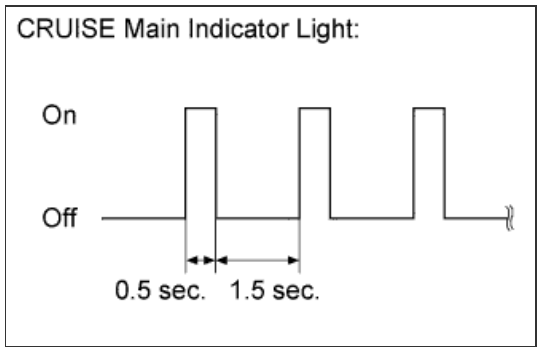
d. Using an oscilloscope, check waveform 4.

Item	Content
Terminal No. (Symbol)	A44-4 (LRRD) - A44-2 (SGND)

Tool Setting	2 V/DIV., 5 msec./DIV.
Condition	Engine switch on (IG)



for Preparation Click here



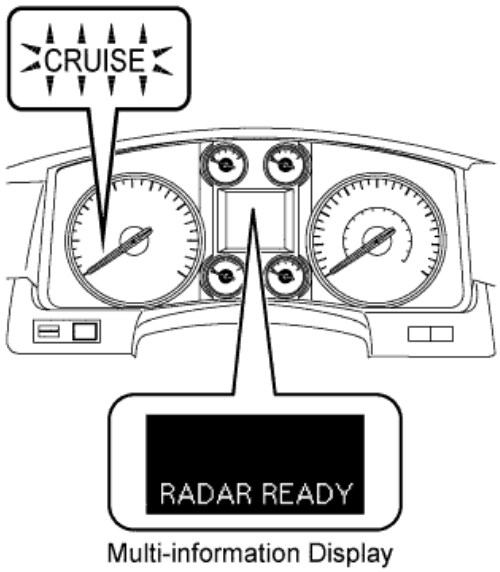
DIAGNOSIS FUNCTION

a. The diagnosis function makes the master warning light and the multi-information display come on, and the CRUISE main indicator light blinks as shown in the illustration. When a malfunction occurs in the dynamic radar cruise control system, DTCs are stored in the ECM.

NOTICE:

- **The master warning light goes off if the system returns to normal.**
- **Since the stored data in the ECM is cleared by disconnecting the EFI and ETCS fuses or the cable from the negative (-) battery terminal, do not disconnect them until the inspection has been completed.**

CHECK INDICATOR

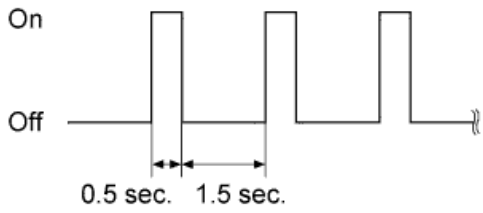


a. Turn the engine switch on (IG).

b. Check that the CRUISE main indicator light and RADAR READY indicator come on when the cruise control main switch ON-OFF button is pushed on, and that the indicator light goes off when the ON-OFF button is pushed off.

HINT:

- **If the indicator check result shows a problem, proceed to troubleshooting for the combination meter section.**



CRUISE Main Indicator Light

Multi-information Display

- **If a malfunction occurs in the vehicle speed sensors, the stop light switch, or other related parts during cruise control driving, the ECU activates AUTO CANCEL of cruise control and blinks the CRUISE main indicator light. This indicator light informs the driver of the malfunction. At the same time, the malfunction is stored as a diagnostic trouble code.**

CRUISE Main Indicator Light:

for Preparation Click here

CHECK DTC

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Powertrain / Radar Cruise / Trouble Codes.

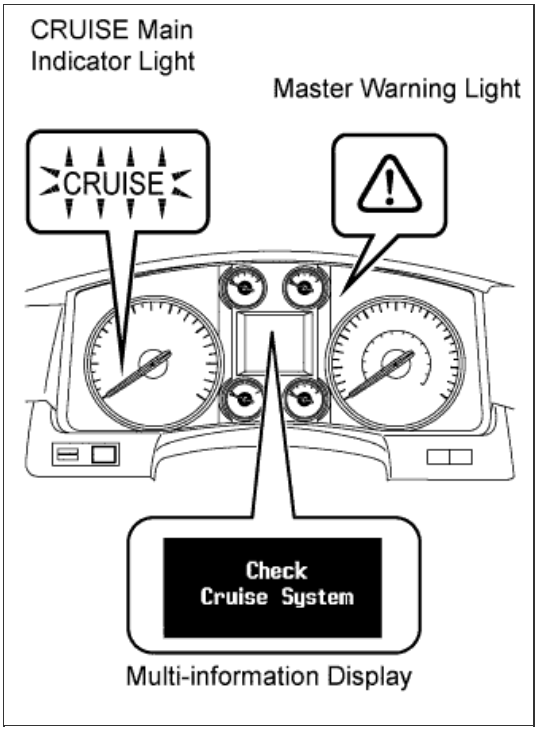
e. Read the DTCs.

CLEAR DTC

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

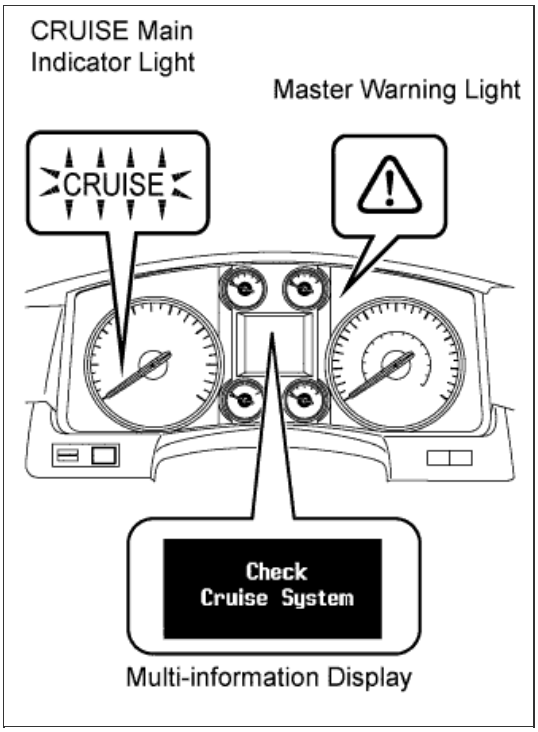


d. Enter the following menus: Powertrain / Radar Cruise / Trouble Codes.

e. Clear the DTCs.

for Preparation Click here

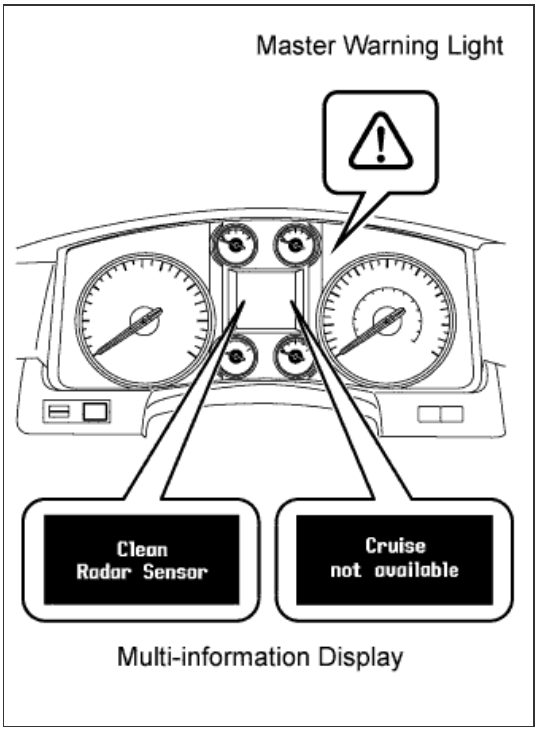
Constant speed control mode and vehicle-to-vehicle distance control mode:



If the following conditions are detected while the dynamic radar cruise control system is in operation, the system clears the stored vehicle speed in the ECM and cancels the dynamic radar cruise control operation.

Vehicle Condition	Auto Cancel Condition	Fail-safe Deactivation Condition
• CRUISE main indicator light blinks • Master warning light comes on • "Check Cruise System" is displayed • "Pong" warning sound is heard	• There is an open or short in the stop light switch circuit • There is a problem with the vehicle speed signal • There is a problem with the throttle position sensor and the motor	Turn the cruise control main switch on again

Vehicle-to-vehicle distance control mode:



If the following conditions are detected while the dynamic radar cruise control system is in operation, the system clears the stored vehicle speed in the ECM and cancels the dynamic radar cruise control operation.

Vehicle Condition	Auto Cancel Condition	Fail-safe Deactivation Condition
• CRUISE main indicator light blinks • Master warning light comes on • "Check Cruise System" is displayed • "Pong" warning sound is heard	• There is a problem with the millimeter wave radar sensor • The beam axis of the millimeter wave radar sensor deviates	Turn the cruise control main switch on again

Vehicle-to-vehicle distance control mode:

If the following conditions are detected while the dynamic radar cruise control system is in operation, the system maintains the stored vehicle speed in the ECM and cancels the dynamic radar cruise control operation.

Vehicle Condition	Auto Cancel Condition	Fail-safe Deactivation Condition
• Master warning light comes on • "Clean Radar Sensor" is displayed • "Pong" warning sound is heard	There is dirt on the millimeter wave radar sensor.	Recover from the condition on left (RESUME operation is possible after recovery)
• Master warning light comes on • "Cruise not available" is displayed • "Pong" warning sound is heard	• The wiper switch is in HI position • The ECT-SNOW switch is on • The millimeter wave radar sensor is least sensitive because of bad	• Recover from the condition on left (RESUME operation is possible after recovery) • Turn the cruise control main switch

	weather such as rain, fog, snow and sandstorms	on again

Constant speed control mode and vehicle-to-vehicle distance control mode:

If the following conditions are detected while the dynamic radar cruise control system is in operation, the system clears the stored vehicle speed and cancels the dynamic radar cruise control operation.

HINT:

In the vehicle-to-vehicle distance control mode, the stored vehicle speed in the ECM is maintained.

Vehicle Condition	Auto Cancel Condition	Fail-safe Deactivation Condition
CRUISE main indicator light goes off	• The vehicle speed is less than the low speed limit (approx. 40 km/h (25 mph)) while the vehicle is running with the cruise control system in operation • The vehicle speed is less than the stored vehicle speed by 16 km/h (9.9 mph) or more while the vehicle is running with the cruise control system in operation	• Turn the cruise control main switch on again*1 • Push the cruise control main switch to +RES*2

HINT:

- ***1: During constant speed control mode**
- ***2: During vehicle-to-vehicle distance control mode**

for Preparation Click here

READ DATA LIST

HINT:

Using the intelligent tester to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Powertrain / Radar Cruise / Data List.

e. According to the display on the intelligent tester, read the "Data List".

Radar Cruise

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Accel Request	Accelerator request signal / min.: -2621.44 km/h/s, max.: 2621.36 km/h/s	Actual demanded acceleration request	-
Vehicle Distance	Millimeter wave radar sensor / min.: 0 m (0 ft.), max.: 255 m (836.65 ft.)	Distance to the vehicle in front	-

Stop Light SW S1-CPU	Stop light switch signal (Sub1 CPU) / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-
Throttle Opening Angle	Cruise throttle opening angle / min.: 0 deg, max.: 125 deg	Actual demanded throttle angle	-
# Codes	Number of trouble codes / Min.: 0, Max.: 255	-	-

PERFORM ACTIVE TEST

HINT:

Using the intelligent tester to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: All ECUs / (desired system) / Active Test.

e. According to the display on the intelligent tester, perform the "Active Test".

Combination Meter

Tester Display	Test Part	Control Range	Diagnostic Note
Indicat. Lamp Cruise	CRUISE main indicator light operation	OFF or ON	-

ABS/VSC/TRAC

Tester Display	Test Part	Control Range	Diagnostic Note
Buzzer	Skid control buzzer sounds	OFF or ON	-

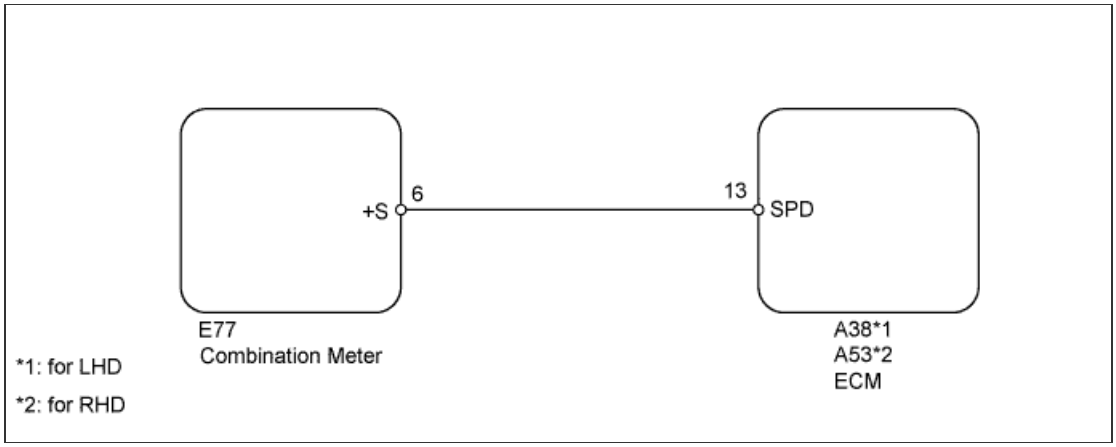
DTC P0500 Vehicle Speed Sensor Malfunction



for Preparation Click here

DESCRIPTION

The speed sensor detects the wheel speed and sends the appropriate signals to the master cylinder solenoid (skid control ECU). The master cylinder solenoid (skid control ECU) converts these wheel speed signals into a 4-pulse signal and outputs it to the ECM via the combination meter. The ECM determines the vehicle speed based on the frequency of these pulse signals.

DTC Code	DTC Detection Condition	Trouble Area
P0500	The vehicle speed signal from the vehicle speed sensor is cut for 0.14 sec. or more while cruise control is in operation.	• Vehicle speed sensor signal circuit • Vehicle speed sensor • Combination meter • ECM

WIRING DIAGRAM

INSPECTION PROCEDURE

This DTC code may be output under the SFI system at the same time. In that case, perform troubleshooting for the SFI system first.

1.CHECK DTC (CRUISE CONTROL SYSTEM)

a. Using the intelligent tester, enter the following menus: Powertrain / Radar Cruise / Trouble Code.

b. Clear the DTCs (Click here).

c. Perform the following to make sure the DTC detection conditions are met.

HINT:

If the detection conditions are not met, the system cannot detect the malfunction.

i. With the shift lever in D, drive the vehicle for more than 10 seconds when the engine coolant temperature is more than 20°C (68°F).

d. Check for DTCs (Click here).

OK:

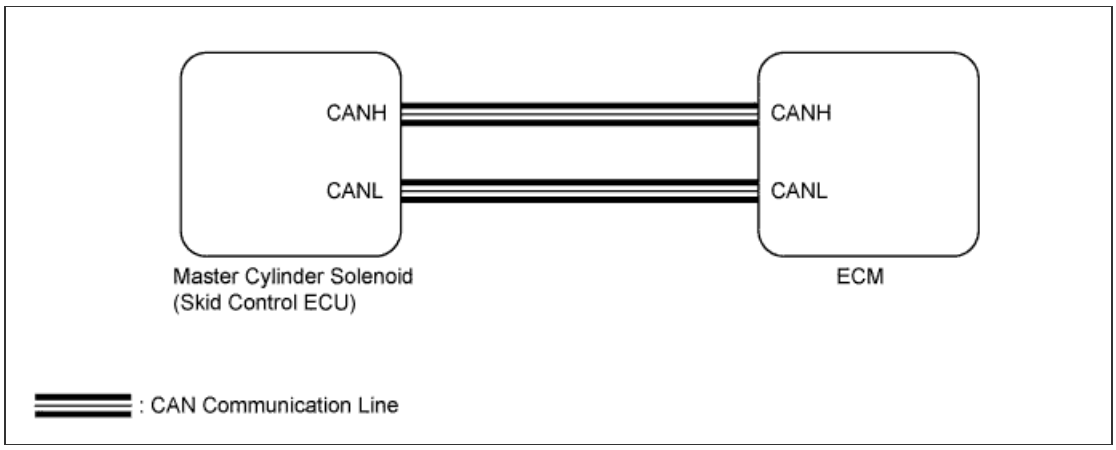
DTC P0500 is not output.

NG → **GO TO SFI SYSTEM (Click here)**

OK

USE SIMULATION METHOD TO CHECK (Click here)

DTC P1631 Communication Error from ECM to VSC



for Preparation Click here

DESCRIPTION

The distance control ECU sends brake control request signals, warning request signals, etc. to the master cylinder solenoid (skid control ECU) through the ECM. Based on these signals, the brake actuator operates and the warning buzzer sounds. The master cylinder solenoid (skid control ECU) sends brake system malfunction signals, etc. to the ECM.

DTC Code	DTC Detection Condition	Trouble Area
P1631	The vehicle speed is 40 km/h (25 mph) or more with the cruise control main switch on (vehicle-to-vehicle distance control mode) and the data sent from the ECM to the master cylinder solenoid (skid control ECU) is abnormal.	• Master cylinder solenoid (skid control ECU) • CAN communication system • ECM

WIRING DIAGRAM

INSPECTION PROCEDURE

1.REPLACE ECM

a. Replace the ECM with a new one (Click here).

NEXT

2.CHECK DTC (DYNAMIC RADAR CRUISE CONTROL SYSTEM)

a. Using the intelligent tester, enter the following menus: Powertrain / Radar Cruise / Trouble Code.

b. Clear the DTCs (Click here).

c. Perform the following to make sure the DTC detection conditions are met.

HINT:

If the detection conditions are not met, the system cannot detect the malfunction.

i. Drive the vehicle at a speed of 40 km/h (25 mph) or more.

ii. Turn the cruise control main switch on to set the vehicle-to-vehicle distance control mode to the standby state.

d. Check for DTCs (Click here).

DTC P0503 Vehicle Speed Sensor "A" Intermittent / Erratic / High

for Preparation Click here

DESCRIPTION

If a malfunction (a rapid change in vehicle speed) in the vehicle speed signal being output from the master cylinder solenoid (skid control ECU) is detected while the dynamic radar cruise control is in operation, the ECM determines there to be a momentary interruption and noise, and outputs a DTC.

DTC Code	DTC Detection Condition	Trouble Area
P0503	A momentary interruption and noise are detected when a rapid change of the vehicle speed occurs while the dynamic radar cruise control is in operation.	• Vehicle speed sensor • Vehicle speed sensor signal circuit • ECM • Combination meter

INSPECTION PROCEDURE

This DTC code may be output under the vehicle stability control system at the same time. In that case, perform troubleshooting for the vehicle stability control system first.

1.CHECK DTC (VEHICLE STABILITY CONTROL SYSTEM)

a. Using the intelligent tester, enter the following menus: Chassis / ABS/VSC/TRAC / Trouble Code.

b. Check for DTCs (Click here).

OK:
DTC is not output.

NG → **GO TO VEHICLE STABILITY CONTROL SYSTEM (Click here)**

OK ↓

2.CHECK DTC (DYNAMIC RADAR CRUISE CONTROL SYSTEM)

a. Using the intelligent tester, enter the following menus: Powertrain / Radar Cruise / Trouble Code.

b. Clear the DTCs (Click here).

c. Perform the following to make sure the DTC detection conditions are met.

HINT:

If the detection conditions are not met, the system cannot detect the malfunction.

i. Drive the vehicle at a speed of 40 km/h (25 mph) or more.

ii. Turn the cruise control main switch on.

iii. Push the -SET switch to activate the dynamic radar cruise control.

d. Check for DTCs (Click here).

OK:
DTC P0503 is not output.

NG → **REPLACE ECM (Click here)**

OK ↓

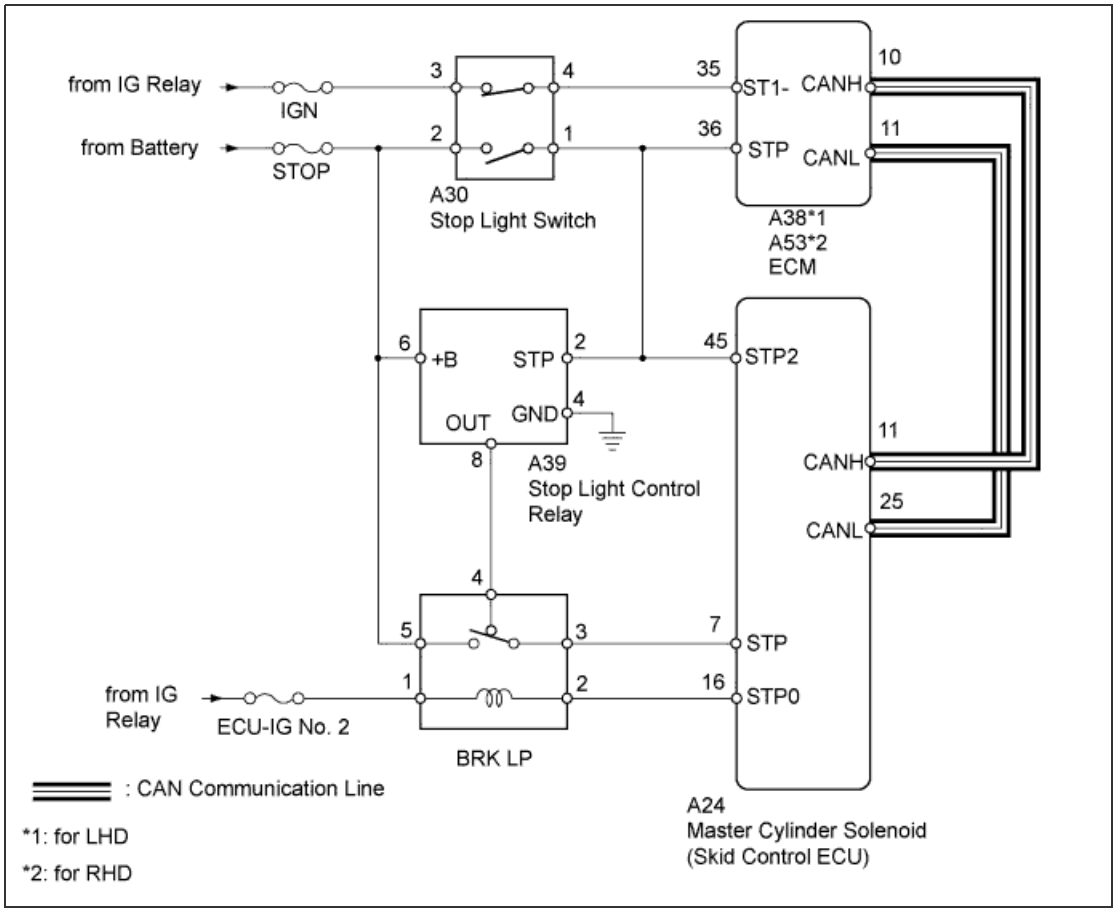
DTC P0571 Stop Light Switch Circuit Malfunction



for Preparation Click here

DESCRIPTION

The ECM receives the brake demand signal from the stop light switch and transmits it to the master cylinder solenoid (skid control ECU). The master cylinder solenoid (skid control ECU) receives the signal from the ECM and operates the brake actuator.

DTC Code	DTC Detection Condition	Trouble Area
P0571	This trouble code is output when the ECM detects the brake light relay error signal from the master cylinder solenoid (skid control ECU) for 0.2 sec. or more while the dynamic radar cruise control is in operation.	• Fuse (STOP, IGN, ECU-IG No. 2) • Stop light switch • Brake light relay • Stop light control relay • Master cylinder solenoid (skid control ECU) • Harness or connector • ECM

WIRING DIAGRAM

INSPECTION PROCEDURE

1.INSPECT FUSE (STOP, IGN, ECU-IG No. 2)

a. Remove the STOP and IGN fuses from the engine room relay block.

b. Remove the ECU-IG No. 2 fuse from the cowl side junction block LH.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
STOP fuse	Always	Below 1 Ω
IGN fuse		
ECU-IG No. 2 fuse		

NG → REPLACE FUSE

OK

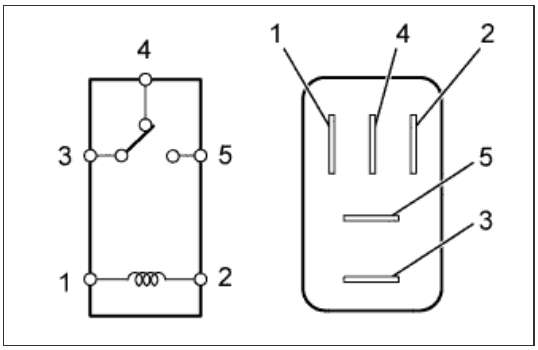
2.READ VALUE USING INTELLIGENT TESTER (STOP LIGHT SWITCH)

a. Using the intelligent tester, read the Data List.

Radar Cruise

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Stop Light SW M-CPU	Stop light switch signal (Main CPU) / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-
Stop Light SW-1 S-CPU	Stop light switch signal (Sub CPU) / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-
Stp Light SW S2-CPU	Stop light switch signal (Sub CPU) / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-

OK:
Normal conditions listed above are displayed.



NG → Go to step 10

OK

3.INSPECT BRAKE LIGHT RELAY (BRK LP)

a. Remove the brake light relay from the engine room relay block.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 4	Battery voltage is applied to terminals 1 and 2	10 kΩ higher
	Battery voltage is not applied to terminals 1 and 2	Below 1 Ω
3 - 5	Battery voltage is not applied to terminals 1 and 2	10 kΩ higher
	Battery voltage is applied to terminals 1 and 2	Below 1 Ω

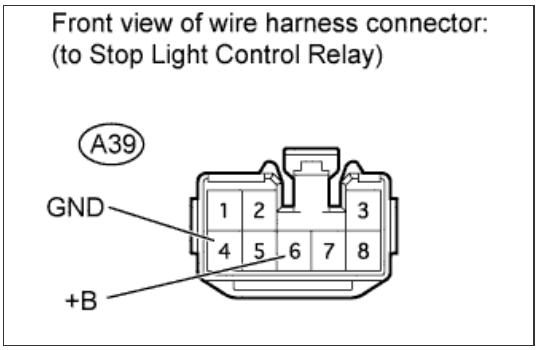
NG → REPLACE BRAKE LIGHT RELAY

OK

4.CHECK HARNESS AND CONNECTOR (STOP LIGHT CONTROL RELAY - BATTERY AND BODY GROUND)

a. Disconnect the A39 stop light control relay connector.

b. Measure the voltage according to the value(s) in the table below.



Standard Voltage:

Tester Connection	Condition	Specified Condition
A39-6 (+B) - Body ground	Always	11 to 14 V

c. Measure the resistance according to the value(s) in the table below.

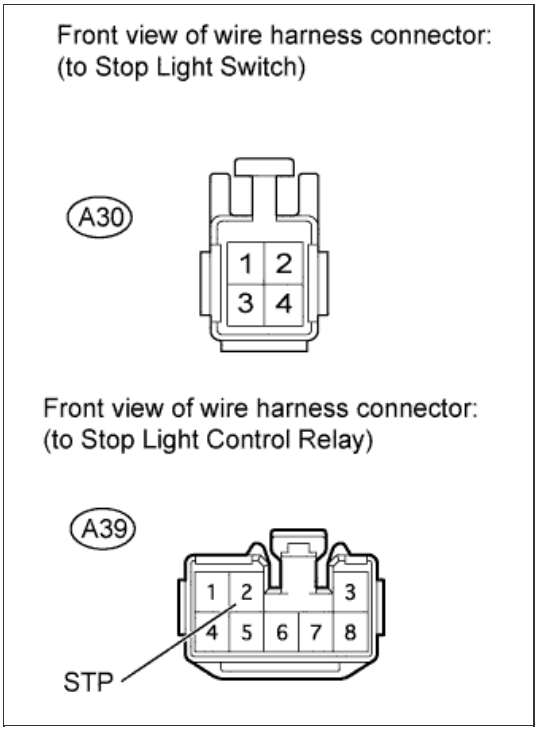
Standard Resistance:

Tester Connection	Condition	Specified Condition
A39-4 (GND) - Body ground	Always	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

5.CHECK HARNESS AND CONNECTOR (STOP LIGHT CONTROL RELAY - STOP LIGHT SWITCH)



a. Disconnect the A39 stop light control relay connector.

b. Disconnect the A30 stop light switch connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

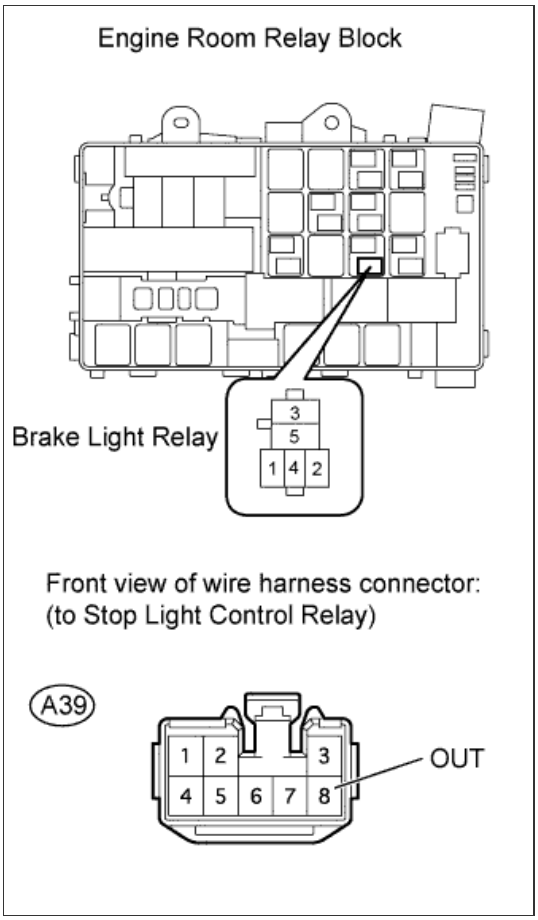
Tester Connection	Condition	Specified Condition
A30-1 - A39-2 (STP)	Always	Below 1 Ω
A30-1 - Body ground	Always	10 kΩ higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

6.CHECK HARNESS AND CONNECTOR (STOP LIGHT CONTROL RELAY - BRAKE LIGHT RELAY)

a. Disconnect the A39 stop light control relay connector.



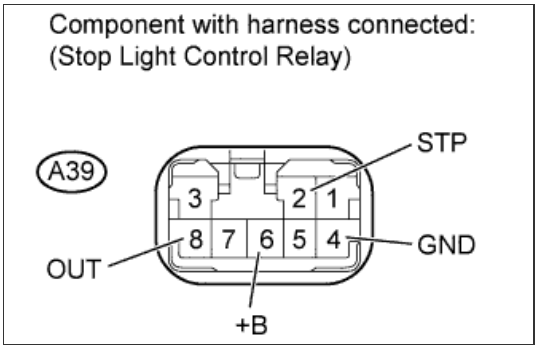
b. Remove the brake light relay from the engine room relay block.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A39-8 (OUT) - Brake light relay terminal 4	Always	Below 1 Ω

A39-8 (OUT) - Body ground	Always	10 kΩ higher



NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

7.CHECK STOP LIGHT CONTROL RELAY

a. Remove the stop light control relay with its connector still connected (Click here for LHD, Click here for RHD).

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
A39-6 (+B) - A39-4 (GND)	Always	11 to 14 V
A39-2 (STP) - Body ground	Stop light switch on (Brake pedal depressed)	11 to 14 V
	Stop light switch off (Brake pedal released)	Below 1 V
A39-8 (OUT) - Body ground	Stop light switch on (Brake pedal depressed)	11 to 14 V
	Stop light switch off (Brake pedal released)	Below 1 V

Result

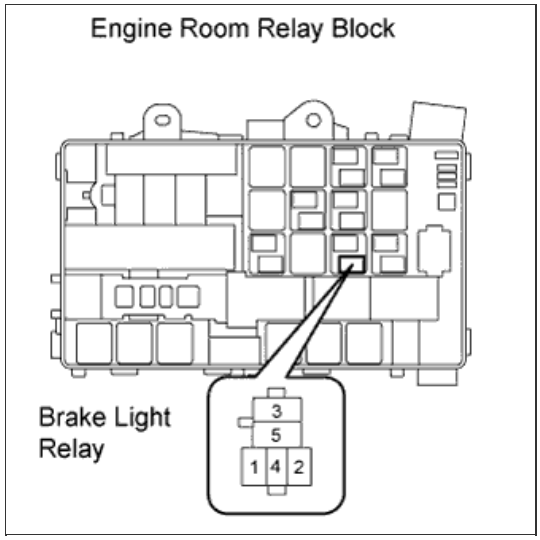
Result	Proceed to

OK	A
NG (for LHD)	B
NG (for RHD)	C

B → REPLACE STOP LIGHT CONTROL RELAY (Click here)

C → REPLACE STOP LIGHT CONTROL RELAY (Click here)

A



8.CHECK HARNESS AND CONNECTOR (BRAKE LIGHT RELAY - BATTERY)

a. Remove the brake light relay from the engine room relay block.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
Brake light relay terminal 1 - Body ground	Engine switch on (IG)	11 to 14 V
Brake light relay terminal 5 - Body ground		

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

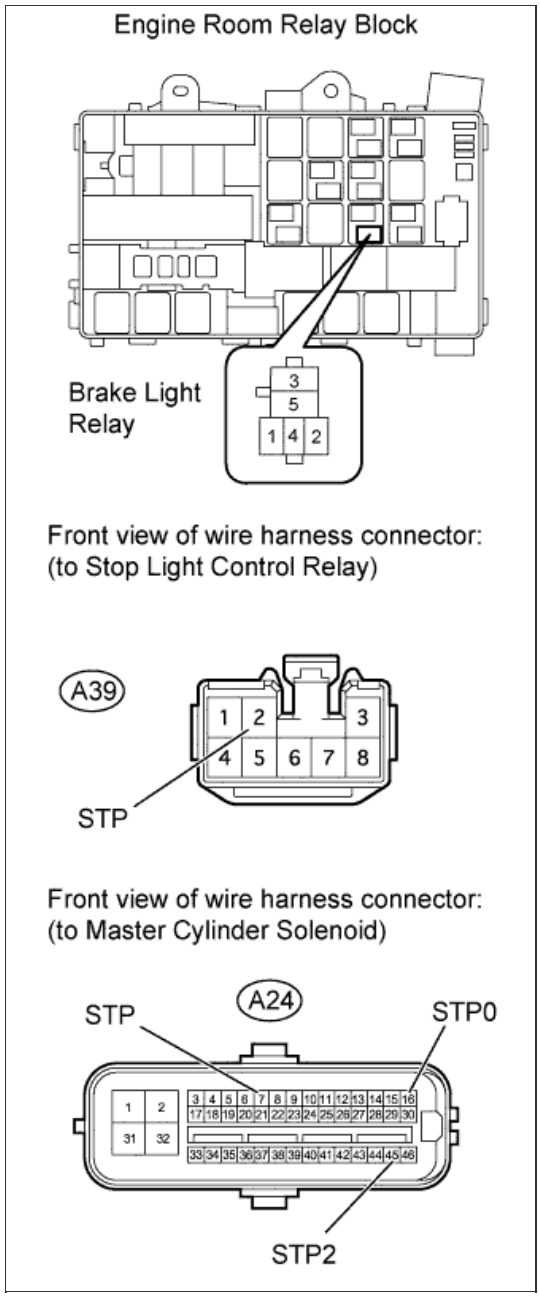
9.CHECK HARNESS AND CONNECTOR (BRK LP, STOP LIGHT CONTROL RELAY - MASTER CYLINDER SOLENOID)

a. Disconnect the A24 master cylinder solenoid (skid control ECU) connector.

b. Remove the brake light relay from the engine room relay block.

c. Disconnect the A39 stop light control relay connector.

d. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
Brake light relay terminal 2 - A24-16 (STP0)	Always	Below 1 Ω
A39-2 (STP) - A24-45 (STP2)		
Brake light relay terminal 3 - A24-7 (STP)		
Brake light relay terminal 2 - Body ground		
A39-2 (STP) -		

Body ground	Always	10 kΩ higher
Brake light relay terminal 3 - Body ground		

Result

Result	Proceed to
OK (for LHD)	A
OK (for RHD)	B
NG	C

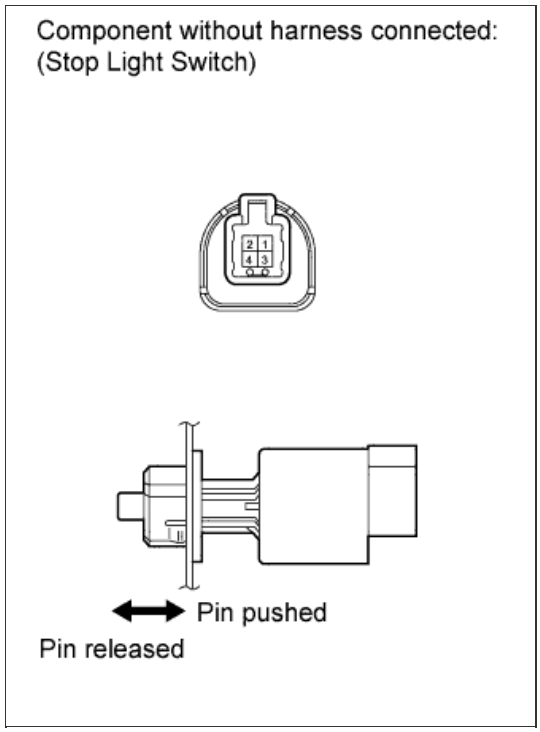
B → REPLACE MASTER CYLINDER SOLENOID (SKID CONTROL ECU) (Click here)

C → REPAIR OR REPLACE HARNESS OR CONNECTOR

A → REPLACE MASTER CYLINDER SOLENOID (SKID CONTROL ECU) (Click here)

10.INSPECT STOP LIGHT SWITCH

a. Disconnect the A30 stop light switch connector.



b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
1 - 2	Pin not pushed	Below 1 Ω
	Pin pushed	10 kΩ higher
3 - 4	Pin not pushed	10 kΩ higher
	Pin pushed	Below 1 Ω

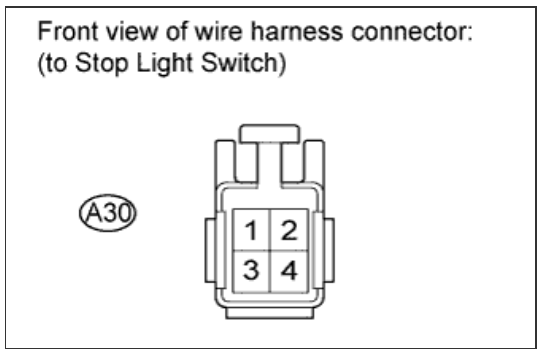
Result

Result	Proceed to
OK	A
NG (for LHD)	B
NG (for RHD)	C

B → REPLACE STOP LIGHT SWITCH (Click here)

C → REPLACE STOP LIGHT SWITCH (Click here)

A



11.CHECK HARNESS AND CONNECTOR (STOP LIGHT SWITCH - BATTERY)

a. Disconnect the A30 stop light switch connector.

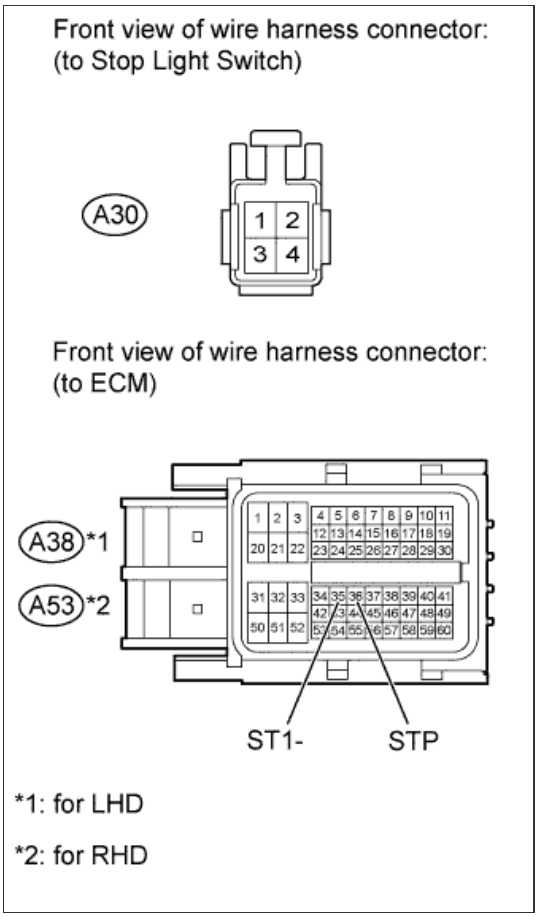
b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
A30-2 - Body ground	Engine switch on (IG)	11 to 14 V
A30-3 - Body ground		

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



12.CHECK HARNESS AND CONNECTOR (STOP LIGHT SWITCH - ECM)

a. Disconnect the A38*1 or A53*2 ECM connector.

*1: for LHD
*2: for RHD

b. Disconnect the A30 stop light switch connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

for LHD

Tester Connection	Condition	Specified Condition
A30-4 - A38-35 (ST1-)	Always	Below 1 Ω
A30-1 - A38-36 (STP)		
A30-1 - Body ground	Always	10 kΩ higher
A30-4 - Body ground		

for RHD

Tester Connection	Condition	Specified Condition
A30-4 - A53-35 (ST1-)	Always	Below 1 Ω
A30-1 - A53-36 (STP)		
A30-1 - Body ground	Always	10 kΩ higher
A30-4 - Body ground		

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE ECM (Click here)

USE SIMULATION METHOD TO CHECK (Click here)

DTC P0575 Cruise Control Input Circuit

for Preparation Click here

DESCRIPTION

This DTC indicates internal abnormalities of the ECM.

DTC Code	DTC Detection Condition	Trouble Area
P0575	When either of the following conditions is met: • STP signals input to the ECM supervisory CPU and control ECU are different for 0.15 seconds or more. • 0.4 seconds have passed after the cruise cancel input signal (STP input) is input to the ECM.	ECM

HINT:

If DTC P0575 is stored while the dynamic radar cruise control is in operation, the master cylinder solenoid (skid control ECU) clears the stored vehicle speed in the ECM and cancels the dynamic radar cruise control operation. At the same time, the CRUISE main indicator light blinks to inform the driver of the malfunction. When this trouble code is stored, fail-safe remains on until the engine switch is turned off.

INSPECTION PROCEDURE

1.CHECK DTC (DYNAMIC RADAR CRUISE CONTROL SYSTEM)

a. Using the intelligent tester, enter the following menus: Powertrain / Radar Cruise / Trouble Code.

b. Clear the DTCs (Click here).

c. Recheck for DTCs (Click here).

OK:
DTC P0575 is not output.

NG → **REPLACE ECM (Click here)**

USE SIMULATION METHOD TO CHECK (Click here)

DTC P1570 Radar Sensor Malfunction

for Preparation Click here

DESCRIPTION

The millimeter wave radar sensor emits radar waves towards an object in front and measures the distance and direction of the object by receiving the wave reflections. Based on the reflections, the sensor calculates the difference in speed between your own vehicle and an object in front. This data is transmitted to the distance control ECU.

DTC Code	DTC Detection Condition	Trouble Area
P1570	The ECM detects a radar sensor malfunction signal for 0.15 sec. or more while the dynamic radar cruise control is in operation.	Millimeter wave radar sensor

HINT:

The millimeter wave radar sensor monitors the millimeter wave circuit activation by itself. This DTC is output when one of the following occurs: 1) the monitor is malfunctioning, 2) an EEPROM error is detected, 3) a voltage error is detected, or 4) the radar sensor is not adjusted. When raindrops or snowflakes strike the millimeter wave radar sensor face, the distance between the vehicle in front and your own vehicle cannot be measured correctly. The dynamic radar cruise control system functions by detecting the wave reflections from the vehicle directly in front. In the following cases, the system may not be able to detect the vehicle in front and may not properly maintain the correct vehicle-to-vehicle distance.

- **The vehicle in front is a tall trailer.**
- **Emissions from the vehicle in front or from other lanes are heavy.**

INSPECTION PROCEDURE

NOTICE:

When the millimeter wave radar sensor is replaced with a new one, adjustment of the radar sensor beam axis must be performed (Click here).

1.ADJUST MILLIMETER WAVE RADAR SENSOR

a. Refer to the adjustment (Click here).

HINT:

It is necessary to make the ECM recognize specification information (whether the vehicle is equipped with the dynamic radar or not). When this procedure has not been carried out, this DTC may be output.

NEXT

2.CHECK DTC (DYNAMIC RADAR CRUISE CONTROL SYSTEM)

a. Using the intelligent tester, enter the following menus: Powertrain / Radar Cruise / Trouble Code.

b. Clear the DTCs (Click here).

c. Perform the following to make sure the DTC detection conditions are met.

HINT:

If the detection conditions are not met, the system cannot detect the malfunction.

i. Drive the vehicle at a speed of 40 km/h (25 mph) or more.

ii. Turn the cruise control main switch on to set the vehicle-to-vehicle distance control mode to the standby state.

d. Check for DTCs (Click here).

OK:
DTC P1570 is not output.

NG → **REPLACE MILLIMETER WAVE RADAR SENSOR (Click here)**

OK

END

DTC P1572 Improper Aiming of Radar Sensor Beam Axis

for Preparation Click here

DESCRIPTION

This DTC is stored when there is a problem with the millimeter wave radar sensor beam axis adjustment.

DTC Code	DTC Detection Condition	Trouble Area
P1572	The vehicle speed is 40 km/h (25 mph) or more with the cruise control main switch on (vehicle-to-vehicle distance control mode) and the millimeter wave radar sensor beam axis is misaligned (0.15 sec. or more).	Millimeter wave radar sensor

HINT:

If the beam axis deviates vertically by +/-2° or more and/or horizontally by +/-4° or more at a distance of 4.0 to 6.0 m (13 to 20 ft), this DTC is stored.

INSPECTION PROCEDURE

NOTICE:

When the millimeter wave radar sensor is replaced with a new one, adjustment of the radar sensor beam axis must be performed (Click here).

1.ADJUST MILLIMETER WAVE RADAR SENSOR

a. Refer to the adjustment (Click here).

HINT:

It is necessary to make the ECM recognize specification information (whether the vehicle is equipped with the dynamic radar or not). If this procedure has not been carried out, this DTC may be output.

DTC P1575 Warning Buzzer Malfunction

for Preparation Click here

DESCRIPTION

DTC Code	DTC Detection Condition	Trouble Area
P1575	The vehicle speed is 40 km/h (25 mph) or more with the cruise control main switch on (vehicle-to-vehicle distance control mode) and the approach warning buzzer malfunctions.	• Vehicle stability control system • ECM

INSPECTION PROCEDURE

NOTICE:

This DTC code may be output under the vehicle stability control system at the same time. In that case, perform troubleshooting for the vehicle stability control system first.

1.PERFORM ACTIVE TEST USING INTELLIGENT TESTER (BUZZER)

a. Using the intelligent tester, perform the Active Test.

ABS/VSC/TRAC

Tester Display	Test Part	Control Range	Diagnostic Note
Buzzer	Skid control buzzer sounds	OFF or ON	-

OK:
Skid control buzzer sounds.

NG → GO TO VEHICLE STABILITY CONTROL SYSTEM (Skid Control Buzzer Circuit) (Click here)

OK ↓

2.CHECK DTC (DYNAMIC RADAR CRUISE CONTROL SYSTEM)

a. Using the intelligent tester, enter the following menus: Powertrain / Radar Cruise / Trouble Code.

b. Clear the DTCs (Click here).

c. Perform the following to make sure the DTC detection conditions are met.

HINT:

If the detection conditions are not met, the system cannot detect the malfunction.

i. Drive the vehicle at a speed of 40 km/h (25 mph) or more.

ii. Turn the cruise control main switch on to set the vehicle-to-vehicle distance control mode to the standby state.

d. Check for DTCs (Click here).

OK:
DTC P1575 is not output.

NG → REPLACE ECM (Click here)

OK ↓

USE SIMULATION METHOD TO CHECK (Click here)

ii. Turn the cruise control main switch on to set the vehicle-to-vehicle distance control mode to the standby state.

d. Check for DTCs (Click here).

OK:
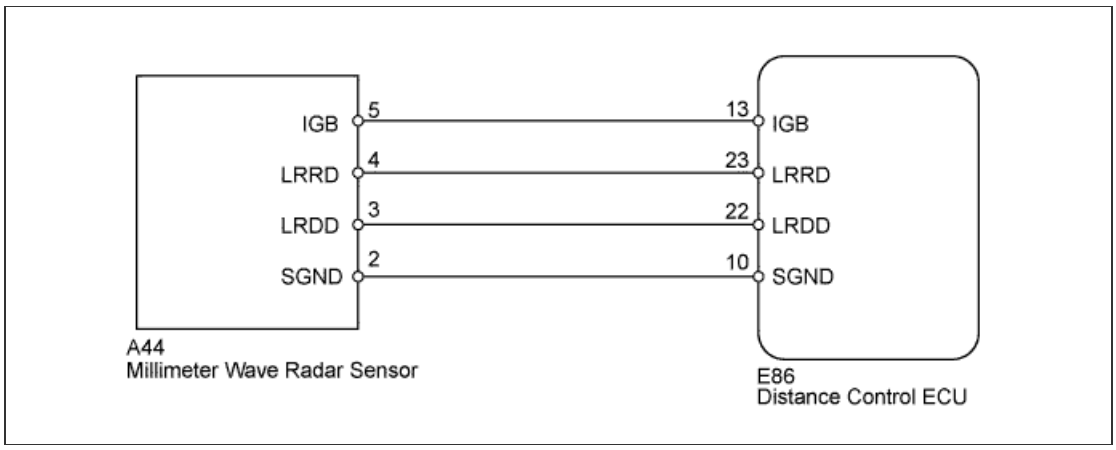
DTC P1616 is not output.

NG → REPLACE DISTANCE CONTROL ECU (**Click here**)

OK
END

DTC U0235 Lost Communication with Cruise Control Front Distance Range Sensor



for Preparation Click here

DESCRIPTION

The distance control ECU sends general vehicle control information, such as vehicle speed, steering angle, etc., to the millimeter wave radar sensor. The millimeter wave radar sensor sends information about whether another vehicle is present in front of the vehicle, the distance between the vehicles, relative speed, etc. to the distance control ECU. The distance control ECU sends this information to the ECM and performs control of cruise control.

DTC Code	DTC Detection Condition	Trouble Area
U0235	The vehicle speed is 40 km/h (25 mph) or more with the cruise control main switch on (vehicle-to-vehicle distance control mode) and the data sent from the millimeter wave radar sensor to the distance control ECU is abnormal.	• Millimeter wave radar sensor • Distance control ECU • Harness or connector • CAN communication system

WIRING DIAGRAM

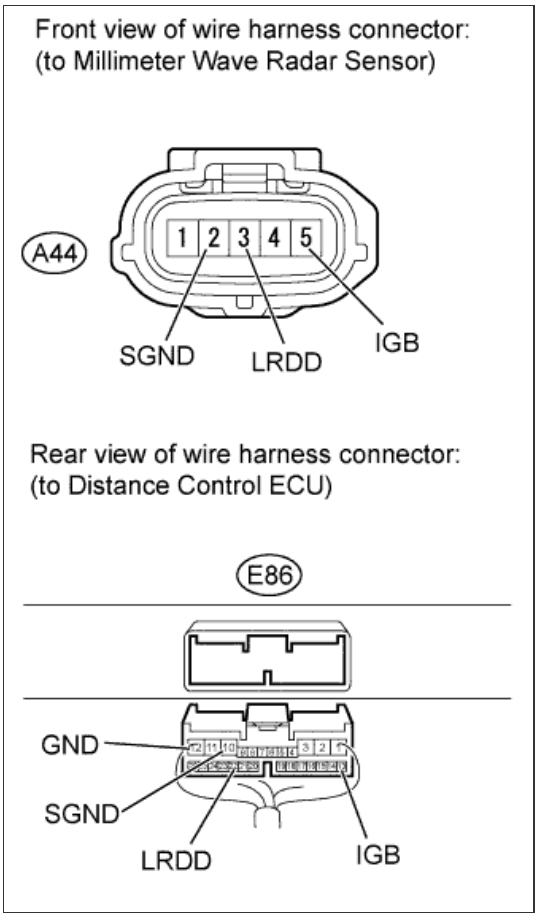
INSPECTION PROCEDURE

NOTICE:

- **When the distance control ECU is replaced with a new one, initialization must be performed (Click here).**
- **When the millimeter wave radar sensor is replaced with a new one, adjustment of the radar sensor beam axis must be performed (Click here).**
- **As it is possible that this DTC was stored due to a bad connection of a connector, make sure to check that each connector is connected securely.**

1.CHECK HARNESS AND CONNECTOR (MILLIMETER WAVE RADAR SENSOR - DISTANCE CONTROL ECU)

a. Disconnect the A44 millimeter wave radar sensor connector.



b. Disconnect the E86 distance control ECU connector.

c. Measure the resistance according to the value(s) in the table below.

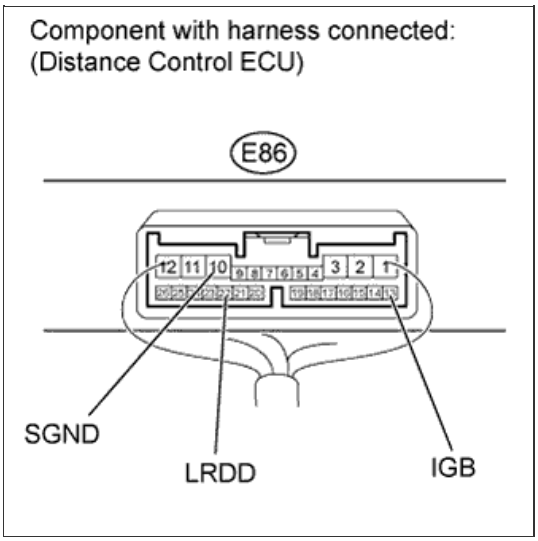
Standard Resistance:

Tester Connection	Condition	Specified Condition
A44-3 (LRDD) - E86-22 (LRDD)	Always	Below 1 Ω
A44-5 (IGB) - E86-13 (IGB)		
E86-12 (GND) - Body ground		
E86-22 (LRDD) - Body ground	Always	10 kΩ or higher
E86-13 (IGB) - Body ground		

A44-2 (SGND) - Body ground	Always	10 kΩ or higher
E86-10 (SGND) - Body ground		

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



2.CHECK DISTANCE CONTROL ECU

a. Disconnect the A44 millimeter wave radar sensor connector.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E86-13 (IGB) - E86-10 (SGND)	Engine switch on (IG)	11 to 14 V
E86-22 (LRDD) - E86-10 (SGND)		4.5 to 5.5 V

NG → REPLACE DISTANCE CONTROL ECU (Click here)

OK

3.REPLACE MILLIMETER WAVE RADAR SENSOR

a. Replace the millimeter wave radar sensor with a new one (Click here).

b. Adjust the millimeter wave radar sensor (Click here).

NEXT

4.CHECK DTC (DYNAMIC RADAR CRUISE CONTROL SYSTEM)

a. Using the intelligent tester, enter the following menus: Powertrain / Radar Cruise / Trouble Code.

b. Clear the DTCs (Click here).

c. Perform the following to make sure the DTC detection conditions are met.

HINT:

If the detection conditions are not met, the system cannot detect the malfunction.

i. Drive the vehicle at a speed of 40 km/h (25 mph) or more.

ii. Turn the cruise control main switch on.

iii. Push the -SET switch to activate the dynamic radar cruise control.

d. Check for DTCs (Click here).

OK:
DTC U0235 is not output.

NG → REPLACE DISTANCE CONTROL ECU (**Click here**)

OK

END

DTC P1617 Distance Control ECU Malfunction

for Preparation Click here

DESCRIPTION

In the dynamic radar cruise control system, the ECM and the distance control ECU communicate with one another to control the system based on designation information. If the designation information of the ECM and the distance control ECU is different or the distance control ECU is malfunctioning, this DTC is recorded.

DTC Code	DTC Detection Condition	Trouble Area
P1617	While the dynamic radar cruise control is either preparing for operation or operating, if designation signal from the ECM and designation return signal from the distance control ECU do not match, or the distance control ECU is malfunctioning for a certain amount of time or more.	Distance control ECU

INSPECTION PROCEDURE

NOTICE:

When the distance control ECU is replaced with a new one, initialization must be performed (Click here).

1.CONFIRM DESIGNATION INFORMATION (DISTANCE CONTROL ECU)

a. Confirm the designation information.

i. Turn the engine switch on (IG).

ii. Turn the cruise control main switch on.

iii. Depress the brake pedal (brake switch on).

iv. With the brake pedal depressed, push the cruise control main switch to +RES 3 times within 3 seconds, and check that the buzzer sounds.

NOTICE:

At this time, do not turn the headlight dimmer switch on. Due to the activation of the beam axis automatic adjustment mode, turning the headlight dimmer switch on may result in an incorrect setting. If the headlight dimmer switch is turned on by mistake, perform the beam axis adjustment again (Click here).

NEXT

2.CHECK DTC (DYNAMIC RADAR CRUISE CONTROL SYSTEM)

a. Using the intelligent tester, enter the following menus: Powertrain / Radar Cruise / Trouble Code.

b. Clear the DTCs (Click here).

c. Perform the following to make sure the DTC detection conditions are met.

HINT:

If the detection conditions are not met, the system cannot detect the malfunction.

i. Drive the vehicle at a speed of 40 km/h (25 mph) or more.

ii. Turn the cruise control main switch on to set the vehicle-to-vehicle distance control mode to the standby state.

d. Check for DTCs (Click here).

OK:
DTC P1617 is not output.

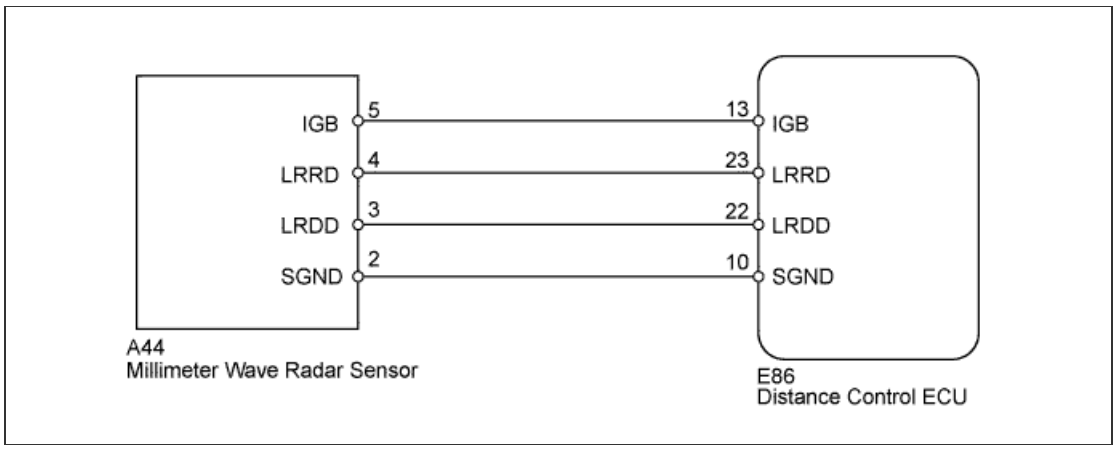
HINT:

If DTC P1617 is still output after replacing the distance control ECU, replace the ECM.

NG → REPLACE DISTANCE CONTROL ECU (Click here)

OK
END

DTC U1102 Lost Communication with Radar Sensor



for Preparation Click here

DESCRIPTION

The distance control ECU sends the vehicle speed and estimated curve information to the millimeter wave radar sensor. The millimeter wave radar sensor sends information about whether another vehicle is present in front of the vehicle, the distance between the vehicles, relative speed, etc. to the distance control ECU. The distance control ECU sends this information to the ECM and performs control of cruise control.

DTC Code	DTC Detection Condition	Trouble Area
U1102	The vehicle speed is 40 km/h (25 mph) or more with the cruise control main switch on (vehicle-to-vehicle distance control mode) and the data sent from the distance control ECU to the millimeter wave radar sensor is abnormal.	• Distance control ECU • Harness or connector • Millimeter wave radar sensor

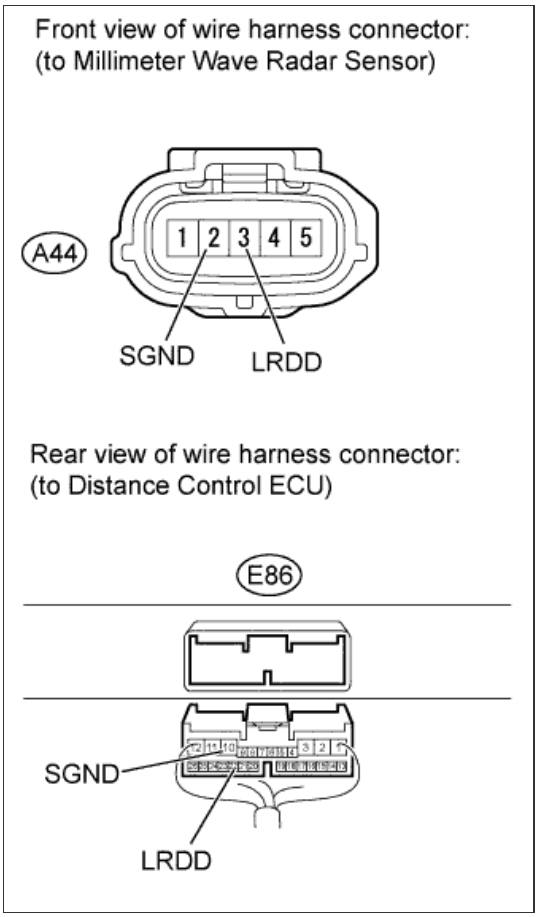
WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- **When the distance control ECU is replaced with a new one, initialization must be performed (Click here).**
- **When the millimeter wave radar sensor is replaced with a new one, adjustment of the radar sensor beam axis must be performed (Click here).**
- **As it is possible that this DTC was stored due to a bad connection of a connector, make sure to check that each connector is connected securely.**

1.CHECK HARNESS AND CONNECTOR (DISTANCE CONTROL ECU - MILLIMETER WAVE RADAR SENSOR)



a. Disconnect the A44 millimeter wave radar sensor connector.

b. Disconnect the E86 distance control ECU connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A44-3 (LRDD) - E86-22 (LRDD)	Always	Below 1 Ω
E86-22 (LRDD) - Body ground	Always	10 kΩ or higher
A44-2 (SGND) - Body ground	Always	10 kΩ or higher
E86-10 (SGND) - Body ground		

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

2.REPLACE DISTANCE CONTROL ECU

a. Replace the distance control ECU with a new one (Click here).

b. Perform initialization (Click here).

NEXT

3.CHECK DTC (DYNAMIC RADAR CRUISE CONTROL SYSTEM)

a. Using the intelligent tester, enter the following menus: Powertrain / Radar Cruise / Trouble Code.

b. Clear the DTCs (Click here).

c. Perform the following to make sure the DTC detection conditions are met.

HINT:

If the detection conditions are not met, the system cannot detect the malfunction.

i. Drive the vehicle at a speed of 40 km/h (25 mph) or more.

ii. Turn the cruise control main switch on.

iii. Push the -SET switch to activate the dynamic radar cruise control.

d. Check for DTCs (Click here).

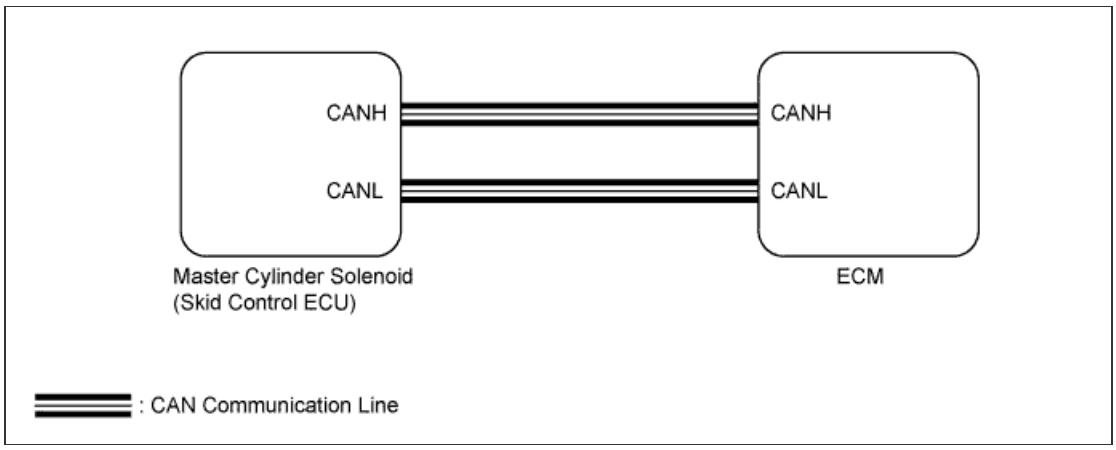
OK:
DTC U1102 is not output.

NG → REPLACE MILLIMETER WAVE RADAR SENSOR (Click here)

OK

```
END
```

DTC P1630 Communication Error from VSC to ECM



for Preparation Click here

DESCRIPTION

The distance control ECU sends brake control request signals, warning request signals, etc. to the master cylinder solenoid (skid control ECU) through the ECM. Based on these signals, the brake actuator operates and the warning buzzer sounds. The master cylinder solenoid (skid control ECU) sends brake system malfunction signals, etc. to the ECM.

DTC Code	DTC Detection Condition	Trouble Area
P1630	The vehicle speed is 40 km/h (25 mph) or more with the cruise control main switch on (vehicle-to-vehicle distance control mode) and the data sent from the master cylinder solenoid (skid control ECU) to the ECM is abnormal.	• Master cylinder solenoid (skid control ECU) • CAN communication system • ECM

WIRING DIAGRAM

INSPECTION PROCEDURE

1.REPLACE MASTER CYLINDER SOLENOID (SKID CONTROL ECU)

a. Replace the master cylinder solenoid (skid control ECU) with a new one (Click here for LHD, Click here for RHD).

NEXT

2.CHECK DTC (DYNAMIC RADAR CRUISE CONTROL SYSTEM)

a. Using the intelligent tester, enter the following menus: Powertrain / Radar Cruise / Trouble Code.

b. Clear the DTCs (Click here).

c. Perform the following to make sure the DTC detection conditions are met.

HINT:

If the detection conditions are not met, the system cannot detect the malfunction.

i. Drive the vehicle at a speed of 40 km/h (25 mph) or more.

ii. Turn the cruise control main switch on to set the vehicle-to-vehicle distance control mode to the standby state.

d. Check for DTCs (Click here).

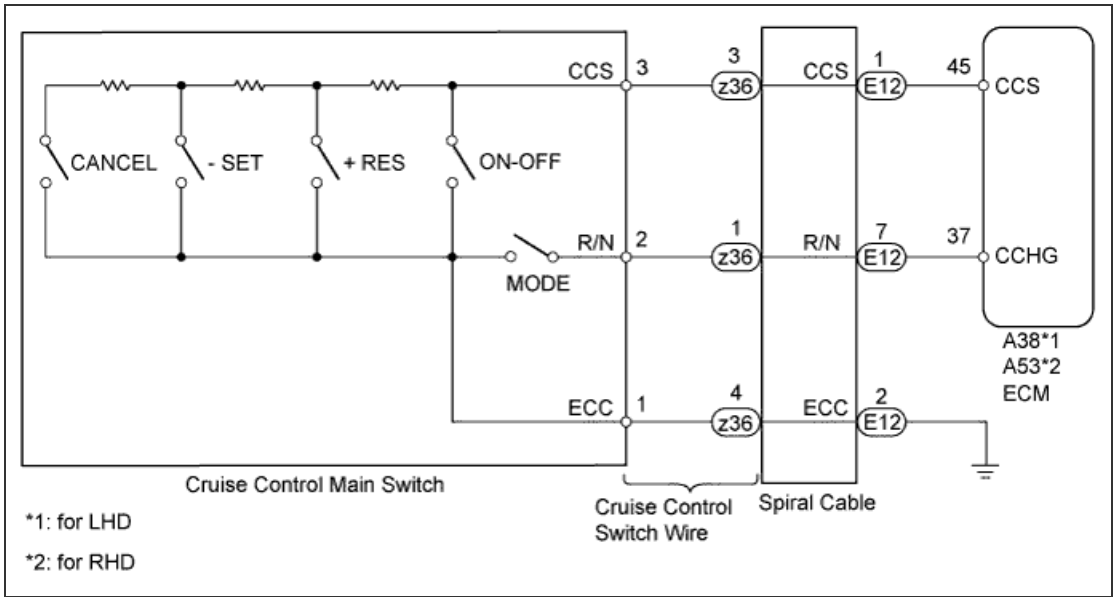
OK:
DTC P1630 is not output.

NG → REPLACE ECM (Click here)

OK

```
END
```

for Preparation Click here

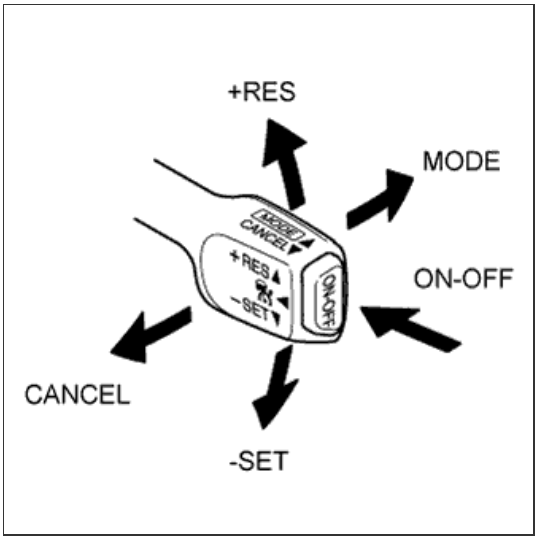


DESCRIPTION

The cruise control main switch is used to operate 8 functions: SET, - (COAST), TAP-DOWN, RES (RESUME), + (ACCELERATION), TAP-UP, CANCEL and MODE. The SET, TAP-DOWN and - (COAST) functions, and the RES (RESUME), TAP-UP and + (ACCELERATION) functions are operated with the same switch. The cruise control main switch is an automatic return type switch which turns on only while operating it in each arrow direction and turns off after releasing it. The internal contact point of the cruise control main switch is turned on with the switch operation. Then the ECM reads the resistance value that has been changed by the switch operation to control MODE, SET, - (COAST), RES (RESUME), + (ACCELERATION) and CANCEL. The dynamic radar cruise control system has two cruise control modes: the constant speed control mode and vehicle-to-vehicle distance control mode.

HINT:

- **The vehicle-to-vehicle distance control mode is always selected when starting up the dynamic radar cruise control system.**
- **The operation of the constant speed control mode is the same as the cruise control system.**



WIRING DIAGRAM

INSPECTION PROCEDURE

1.READ VALUE USING INTELLIGENT TESTER (CRUISE CONTROL MAIN SWITCH)

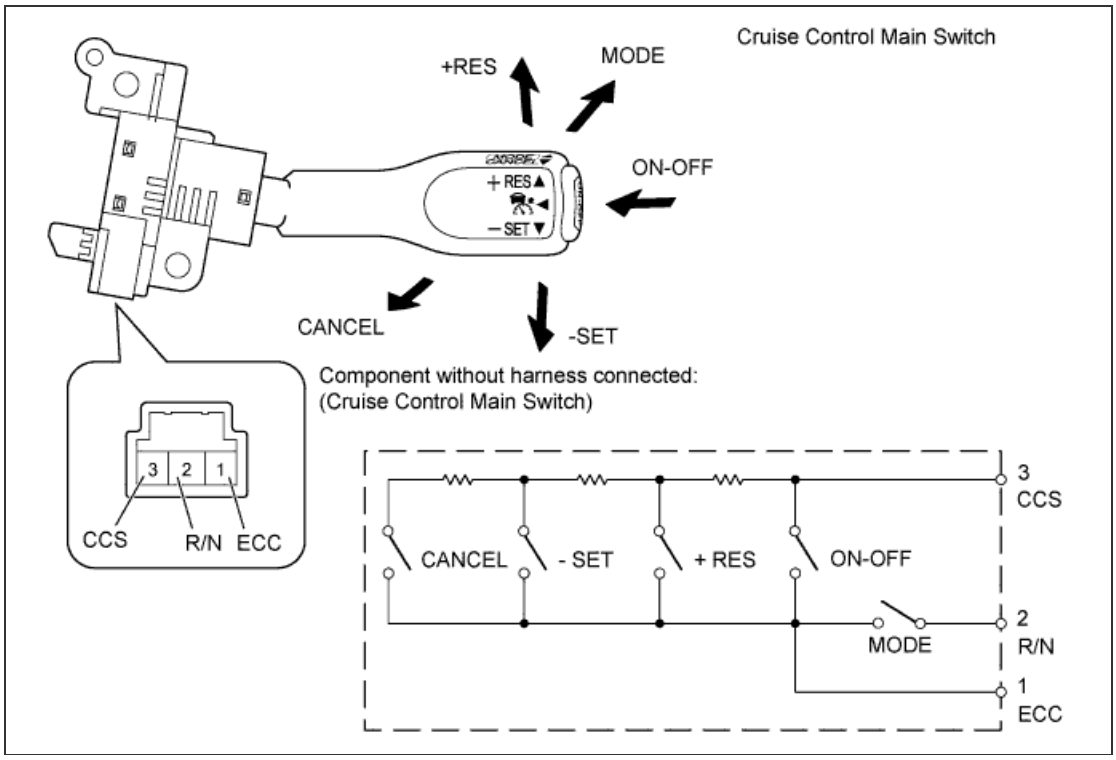
a. Using the intelligent tester, read the Data List.

Radar Cruise

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
		ON: Cruise control main switch (Main CPU)	

CCS Main SW M-CPU	Cruise control main switch (Main CPU) / ON or OFF	on OFF: Cruise control main switch (Main CPU) off	-
Cancel Switch	CANCEL switch signal / ON or OFF	ON: CANCEL switch on OFF: CANCEL switch off	-
SET/COAST Switch	-SET switch signal / ON or OFF	ON: -SET switch on OFF: -SET switch off	-
RES/ACC Switch	+RES switch signal / ON or OFF	ON: +RES switch on OFF: +RES switch off	-
CCS Main SW S-CPU	Cruise control main switch (Sub CPU) / ON or OFF	ON: Cruise control main switch (Sub CPU) on OFF: Cruise control main switch (Sub CPU) off	-

OK:



The intelligent tester display changes according to operation of cruise control main switch.

NG → Go to step 2

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

2.INSPECT CRUISE CONTROL MAIN SWITCH

a. Remove the cruise control main switch (Click here).

b. Measure the resistance according to the value(s) in the table below.

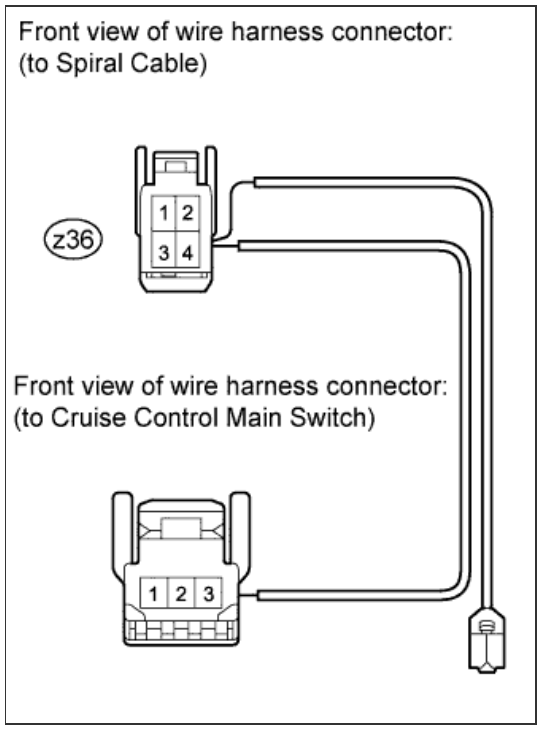
Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
1 (ECC) - 3 (CCS)	Neutral	1 MΩ or higher
	Pushed to +RES	235 to 245 Ω
	Pushed to -SET	620 to 640 Ω
	Pushed to CANCEL	1510 to 1570 Ω
	Main switch pushed off	1 MΩ or higher
	Main switch pushed on	Below 2.5 Ω

1 (ECC) - 2 (R/N)	MODE switch pushed on	Below 2.5 Ω
	MODE switch off	1 MΩ or higher

NG → REPLACE CRUISE CONTROL MAIN SWITCH (Click here)

OK



3.INSPECT CRUISE CONTROL SWITCH WIRE

a. Remove the cruise control switch wire.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z36-3 - 3	Always	Below 1 Ω
z36-1 - 2		
z36-4 - 1		
z36-3 - Body ground	Always	10 kΩ or higher
z36-1 - Body ground		
z36-4 - Body ground		

NG → REPLACE CRUISE CONTROL SWITCH WIRE

OK

4.INSPECT SPIRAL CABLE

a. Check the spiral cable and connector for scratches, cracks, dents and chips. If any defects are found, replace the spiral cable with a new one.

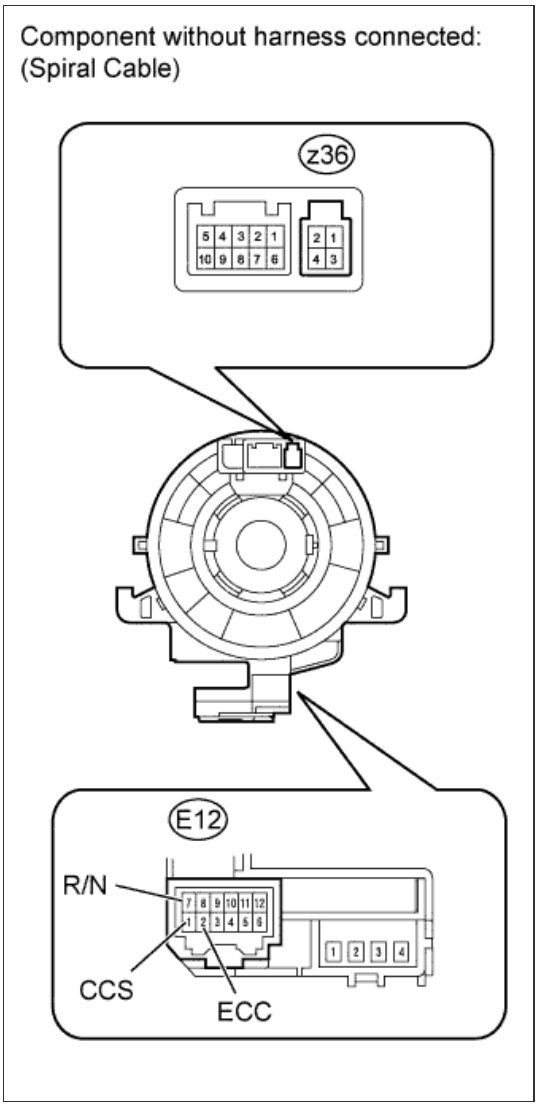
b. Check the spiral cable.

i. Set the spiral cable to the center position (Click here).

ii. After setting the spiral cable to the center position, rotate the spiral cable 2.5 times clockwise, and measure the resistance according to the value(s) in the table below. Then rotate the spiral cable 5 times counterclockwise, and measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z36-3 - E12-1 (CCS)	Always	Below 1 Ω
z36-1 - E12-7 (R/N)		
z36-4 - E12-2 (ECC)		



iii. After setting the spiral cable to the center position, rotate the spiral cable 2.5 times clockwise. Then while rotating the spiral cable 5 times counterclockwise, measure the resistance according to the value(s) in the table below.

NOTICE:

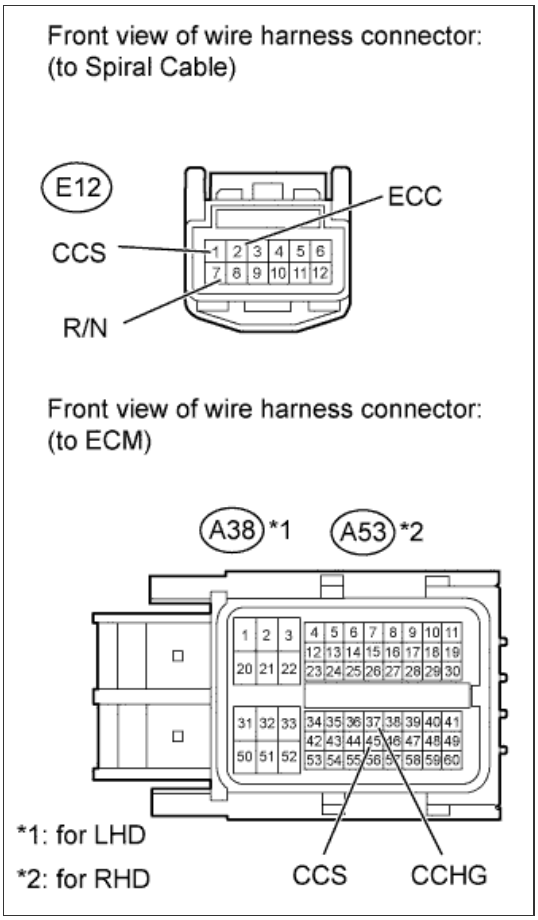
As the spiral cable may break, do not rotate the spiral cable more than the specified amount.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z36-3 - E12-1 (CCS)	Always	Below 1 Ω
z36-1 - E12-7 (R/N)		
z36-4 - E12-2 (ECC)		

NG → REPLACE SPIRAL CABLE (Click here)

OK



5.CHECK HARNESS AND CONNECTOR (SPIRAL CABLE - ECM AND BODY GROUND)

a. Disconnect the E12 spiral cable connector.

b. Disconnect the A38*1 or A53*2 ECM connector.

*1: for LHD
*2: for RHD

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

for LHD

Tester Connection	Condition	Specified Condition
E12-1 (CCS) - A38-45 (CCS)	Always	Below 1 Ω
E12-7 (R/N) - A38-37 (CCHG)		
E12-1 (CCS) - Body ground	Always	10 kΩ or higher
E12-7 (R/N) - Body ground		
E12-2 (ECC) - Body ground	Always	Below 1 Ω

for RHD

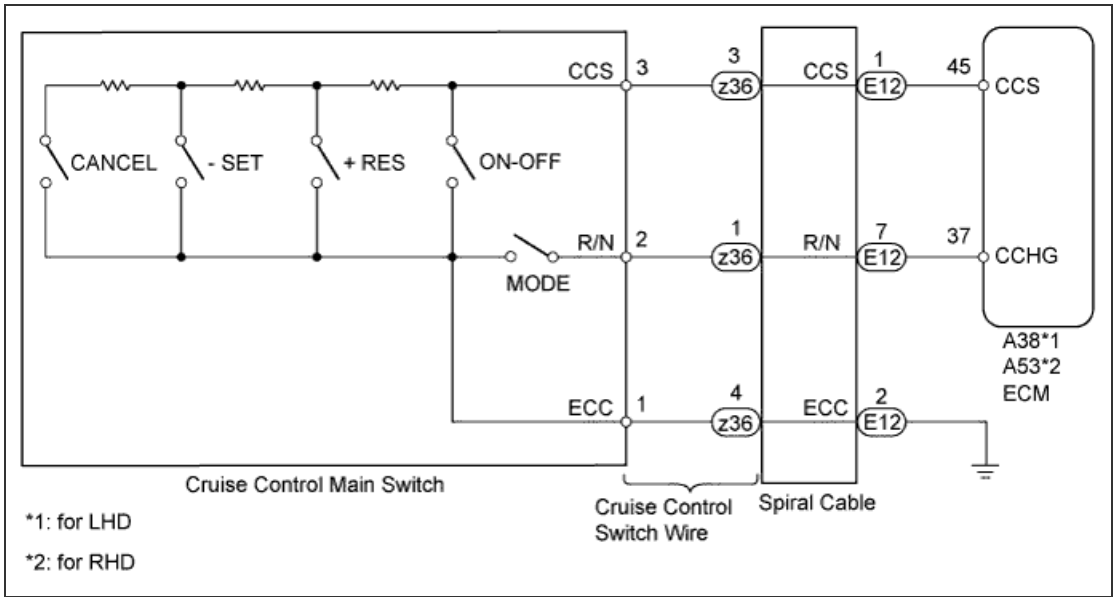
Tester Connection	Condition	Specified Condition
E12-1 (CCS) - A53-45 (CCS)	Always	Below 1 Ω
E12-7 (R/N) - A53-37 (CCHG)		
E12-1 (CCS) - Body ground	Always	10 kΩ or higher
E12-7 (R/N) - Body ground		
E12-2 (ECC) - Body ground	Always	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE ECM (Click here)

for Preparation Click here

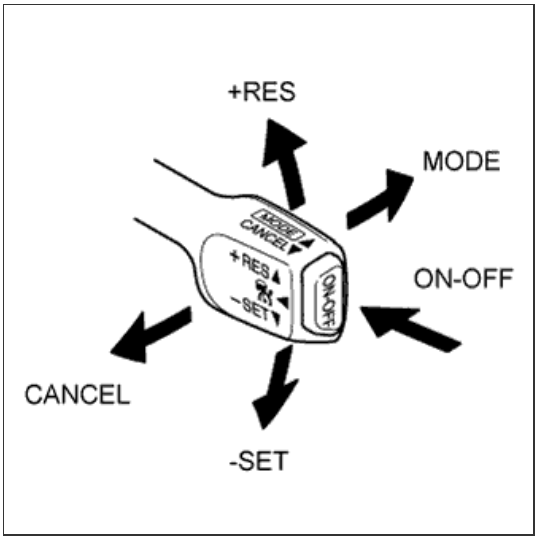


DESCRIPTION

The cruise control main switch is used to operate 8 functions: SET, - (COAST), TAP-DOWN, RES (RESUME), + (ACCELERATION), TAP-UP, CANCEL and MODE. The SET, TAP-DOWN and - (COAST) functions, and the RES (RESUME), TAP-UP and + (ACCELERATION) functions are operated with the same switch. The cruise control main switch is an automatic return type switch which turns on only while operating it in each arrow direction and turns off after releasing it. The internal contact point of the cruise control main switch is turned on with the switch operation. Then the ECM reads the resistance value that has been changed by the switch operation to control MODE, SET, - (COAST), RES (RESUME), + (ACCELERATION) and CANCEL. The dynamic radar cruise control system has two cruise control modes: the constant speed control mode and vehicle-to-vehicle distance control mode.

HINT:

- **The vehicle-to-vehicle distance control mode is always selected when starting up the dynamic radar cruise control system.**
- **The operation of the constant speed control mode is the same as the cruise control system.**



WIRING DIAGRAM

INSPECTION PROCEDURE

1.READ VALUE USING INTELLIGENT TESTER (CRUISE CONTROL MAIN SWITCH)

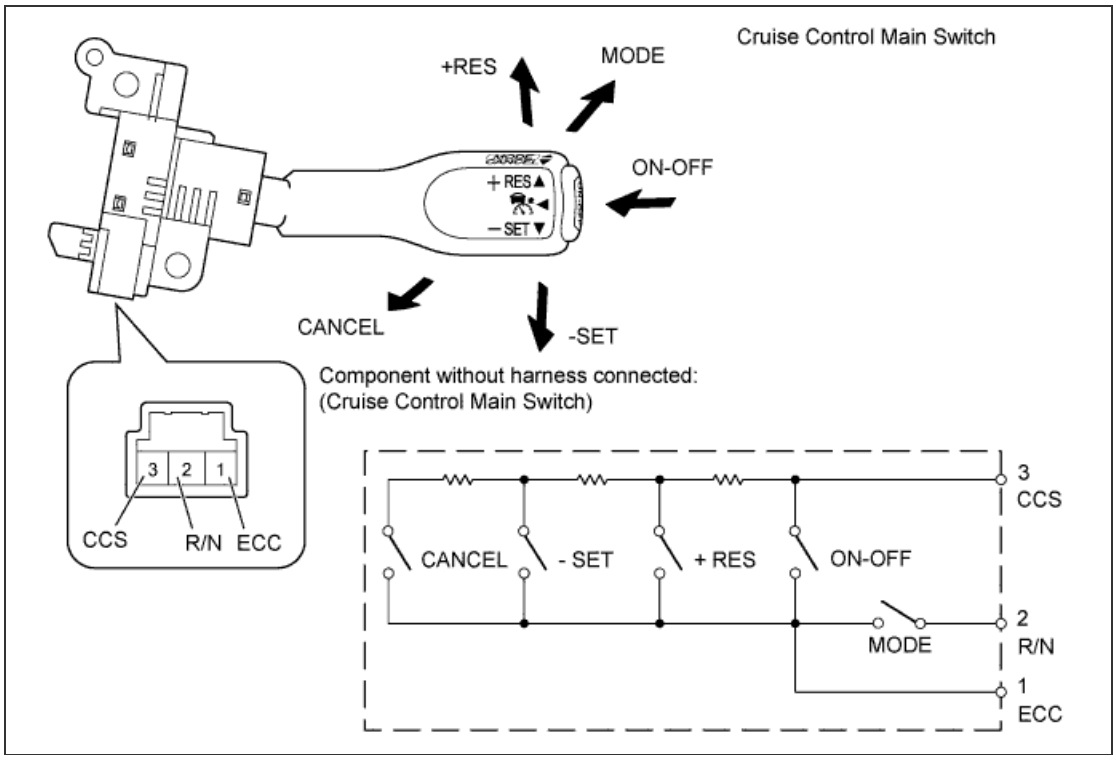
a. Using the intelligent tester, read the Data List.

Radar Cruise

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
		ON: Cruise control main switch (Main CPU)	

CCS Main SW M-CPU	Cruise control main switch (Main CPU) / ON or OFF	on OFF: Cruise control main switch (Main CPU) off	-
Cancel Switch	CANCEL switch signal / ON or OFF	ON: CANCEL switch on OFF: CANCEL switch off	-
SET/COAST Switch	-SET switch signal / ON or OFF	ON: -SET switch on OFF: -SET switch off	-
RES/ACC Switch	+RES switch signal / ON or OFF	ON: +RES switch on OFF: +RES switch off	-
CCS Main SW S-CPU	Cruise control main switch (Sub CPU) / ON or OFF	ON: Cruise control main switch (Sub CPU) on OFF: Cruise control main switch (Sub CPU) off	-

OK:



The intelligent tester display changes according to operation of cruise control main switch.

NG → Go to step 2

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

2.INSPECT CRUISE CONTROL MAIN SWITCH

a. Remove the cruise control main switch (Click here).

b. Measure the resistance according to the value(s) in the table below.

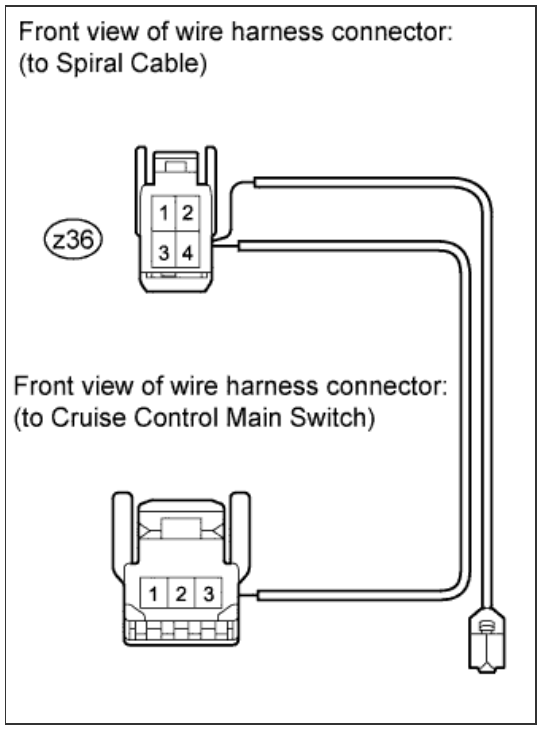
Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
1 (ECC) - 3 (CCS)	Neutral	1 MΩ or higher
	Pushed to +RES	235 to 245 Ω
	Pushed to -SET	620 to 640 Ω
	Pushed to CANCEL	1510 to 1570 Ω
	Main switch pushed off	1 MΩ or higher
	Main switch pushed on	Below 2.5 Ω

1 (ECC) - 2 (R/N)	MODE switch pushed on	Below 2.5 Ω
	MODE switch off	1 MΩ or higher

NG → REPLACE CRUISE CONTROL MAIN SWITCH (Click here)

OK



3.INSPECT CRUISE CONTROL SWITCH WIRE

a. Remove the cruise control switch wire.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z36-3 - 3	Always	Below 1 Ω
z36-1 - 2		
z36-4 - 1		
z36-3 - Body ground	Always	10 kΩ or higher
z36-1 - Body ground		
z36-4 - Body ground		

NG → REPLACE CRUISE CONTROL SWITCH WIRE

OK

4.INSPECT SPIRAL CABLE

a. Check the spiral cable and connector for scratches, cracks, dents and chips. If any defects are found, replace the spiral cable with a new one.

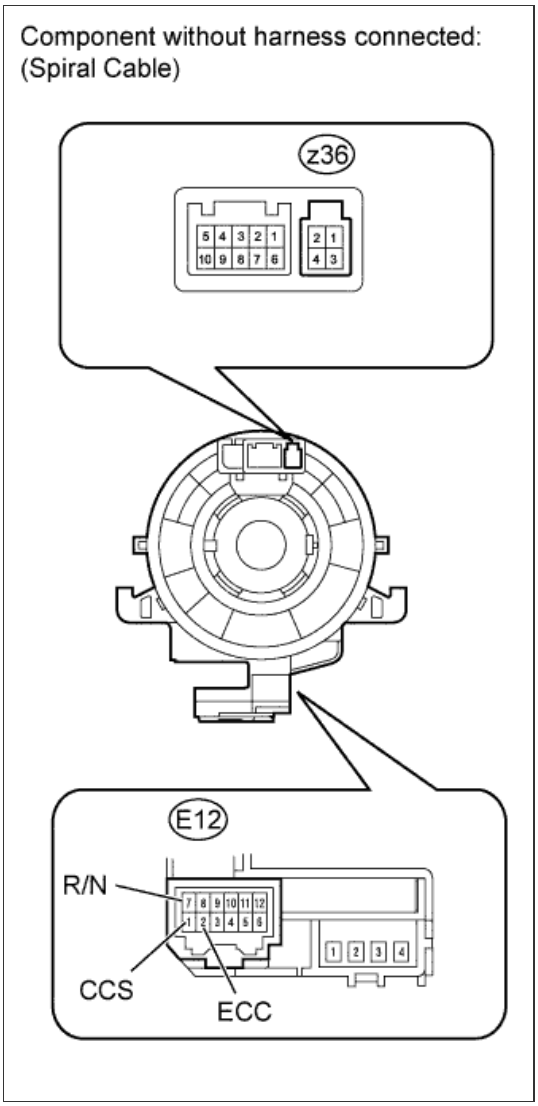
b. Check the spiral cable.

i. Set the spiral cable to the center position (Click here).

ii. After setting the spiral cable to the center position, rotate the spiral cable 2.5 times clockwise, and measure the resistance according to the value(s) in the table below. Then rotate the spiral cable 5 times counterclockwise, and measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z36-3 - E12-1 (CCS)	Always	Below 1 Ω
z36-1 - E12-7 (R/N)		
z36-4 - E12-2 (ECC)		



iii. After setting the spiral cable to the center position, rotate the spiral cable 2.5 times clockwise. Then while rotating the spiral cable 5 times counterclockwise, measure the resistance according to the value(s) in the table below.

NOTICE:

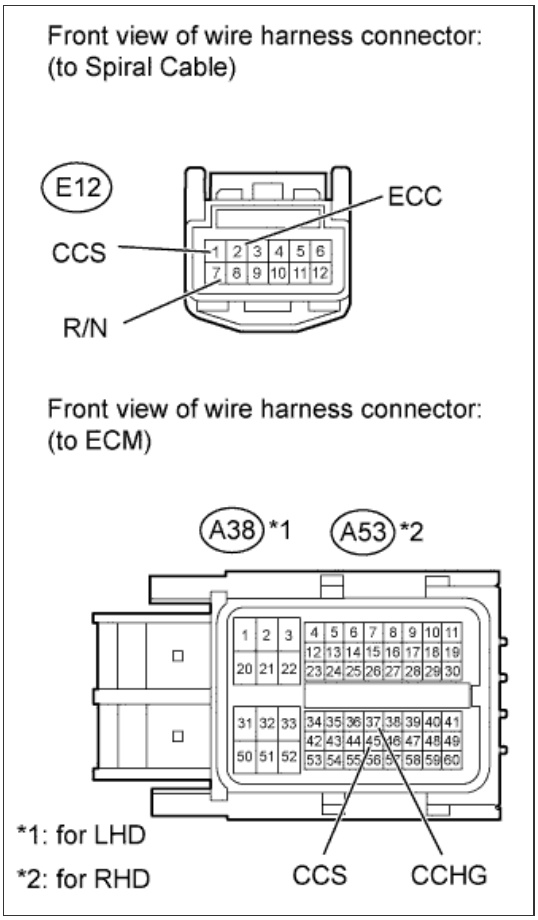
As the spiral cable may break, do not rotate the spiral cable more than the specified amount.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z36-3 - E12-1 (CCS)	Always	Below 1 Ω
z36-1 - E12-7 (R/N)		
z36-4 - E12-2 (ECC)		

NG → REPLACE SPIRAL CABLE (Click here)

OK



5.CHECK HARNESS AND CONNECTOR (SPIRAL CABLE - ECM AND BODY GROUND)

a. Disconnect the E12 spiral cable connector.

b. Disconnect the A38*1 or A53*2 ECM connector.

*1: for LHD
*2: for RHD

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

for LHD

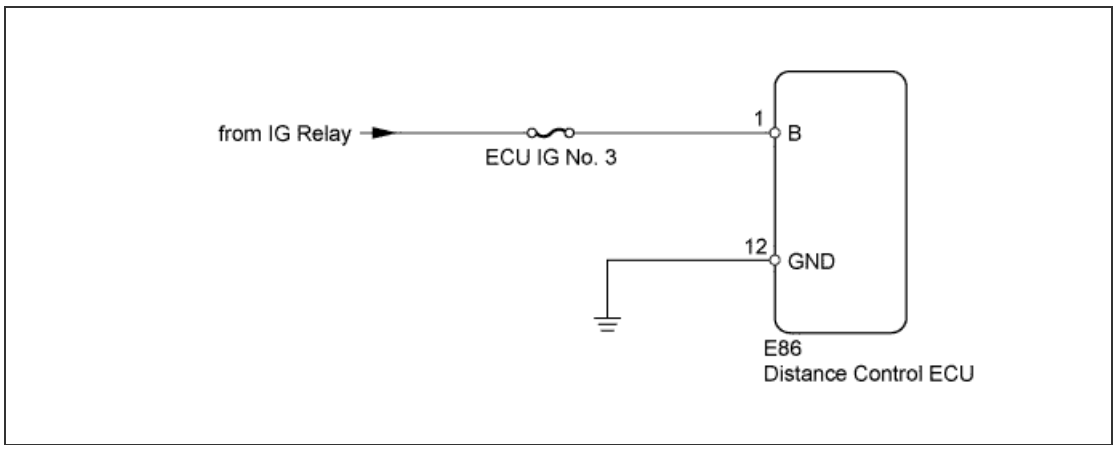
Tester Connection	Condition	Specified Condition
E12-1 (CCS) - A38-45 (CCS)	Always	Below 1 Ω
E12-7 (R/N) - A38-37 (CCHG)		
E12-1 (CCS) - Body ground	Always	10 kΩ or higher
E12-7 (R/N) - Body ground		
E12-2 (ECC) - Body ground	Always	Below 1 Ω

for RHD

Tester Connection	Condition	Specified Condition
E12-1 (CCS) - A53-45 (CCS)	Always	Below 1 Ω
E12-7 (R/N) - A53-37 (CCHG)		
E12-1 (CCS) - Body ground	Always	10 kΩ or higher
E12-7 (R/N) - Body ground		
E12-2 (ECC) - Body ground	Always	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



REPLACE ECM (Click here)

for Preparation Click here

DESCRIPTION

This circuit provides power to operate the distance control ECU.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.INSPECT FUSE (ECU-IG No. 3)

a. Remove the ECU-IG No. 3 fuse from the cowl side junction block RH.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
ECU-IG No. 3 fuse	Always	Below 1 Ω

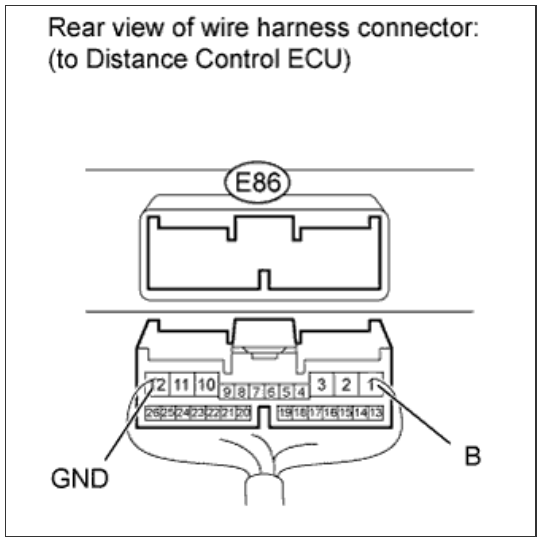
NG → REPLACE FUSE

OK

2.CHECK HARNESS AND CONNECTOR (DISTANCE CONTROL ECU - BATTERY AND BODY GROUND)

a. Disconnect the E86 distance control ECU connector.

b. Measure the voltage according to the value(s) in the table below.



Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E86-1 (B) - Body ground	Engine switch on (IG)	11 to 14 V
	Engine switch off	Below 1 V

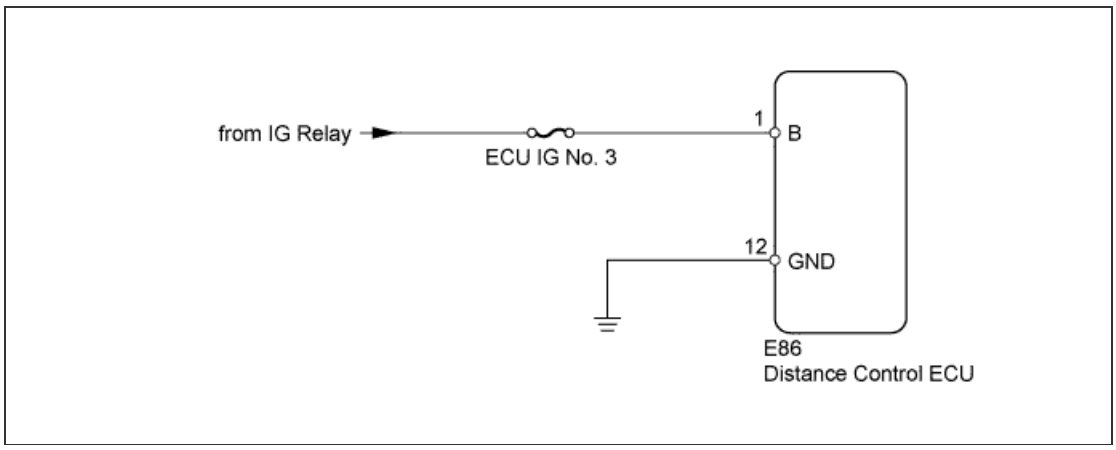
c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E86-12 (GND) - Body ground	Always	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

for Preparation Click here

DESCRIPTION

This circuit provides power to operate the distance control ECU.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.INSPECT FUSE (ECU-IG No. 3)

a. Remove the ECU-IG No. 3 fuse from the cowl side junction block RH.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
ECU-IG No. 3 fuse	Always	Below 1 Ω

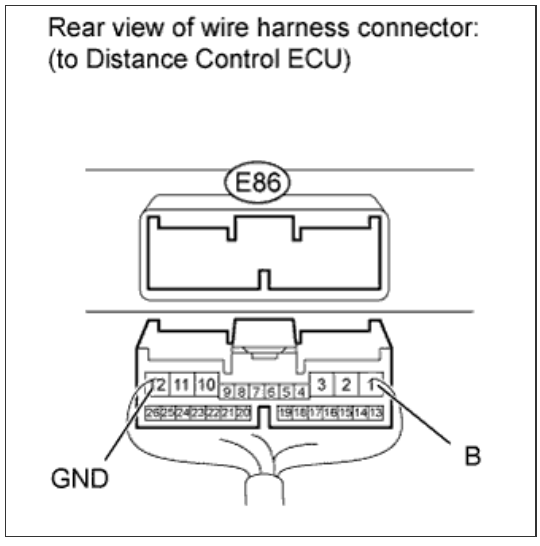
NG → REPLACE FUSE

OK

2.CHECK HARNESS AND CONNECTOR (DISTANCE CONTROL ECU - BATTERY AND BODY GROUND)

a. Disconnect the E86 distance control ECU connector.

b. Measure the voltage according to the value(s) in the table below.



Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E86-1 (B) - Body ground	Engine switch on (IG)	11 to 14 V
	Engine switch off	Below 1 V

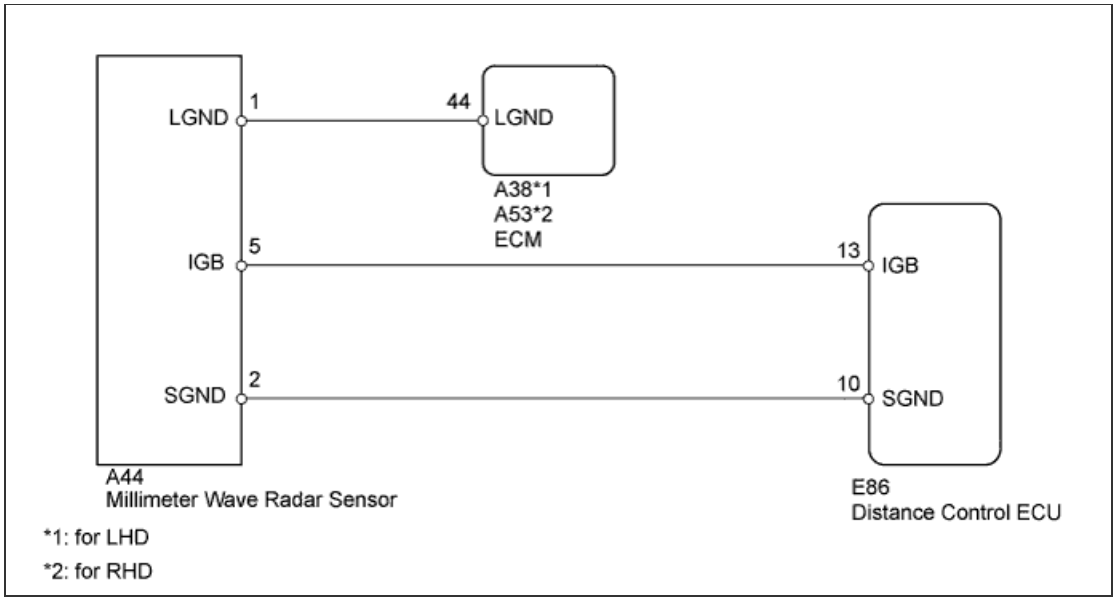
c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E86-12 (GND) - Body ground	Always	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

for Preparation Click here

DESCRIPTION

This circuit provides power to the millimeter wave radar sensor. The millimeter wave radar sensor emits radio waves towards an object in front and measures the distance and direction of the object by receiving the wave reflections. Based on the reflections, the sensor calculates the difference in speed between the vehicle and the object in front. This data is transmitted to the distance control ECU.

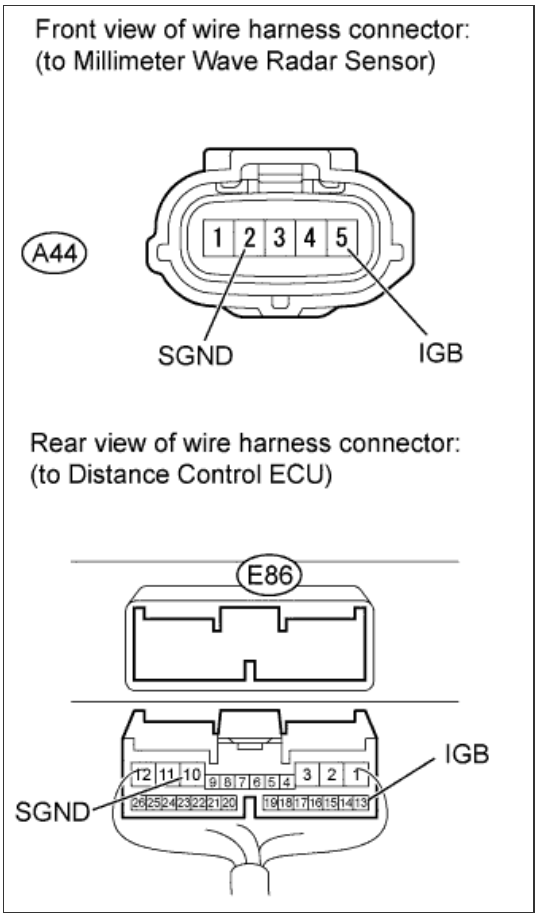
WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When the distance control ECU is replaced with a new one, initialization must be performed (Click here).

1.CHECK HARNESS AND CONNECTOR (MILLIMETER WAVE RADAR SENSOR - DISTANCE CONTROL ECU)



a. Disconnect the A44 millimeter wave radar sensor connector.

b. Disconnect the E86 distance control ECU connector.

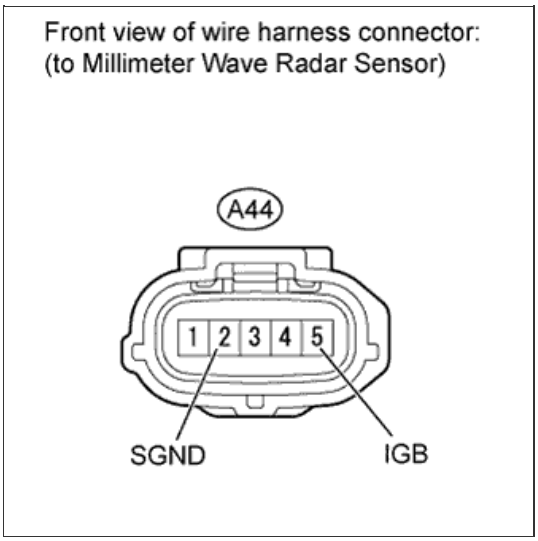
c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A44-2 (SGND) - E86-10 (SGND)	Always	Below 1 Ω
A44-5 (IGB) - E86-13 (IGB)		
E86-13 (IGB) - Body ground	Always	10 kΩ or higher
A44-5 (IGB) - Body ground		

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



2.CHECK DISTANCE CONTROL ECU (IGB VOLTAGE)

a. Disconnect the A44 millimeter wave radar sensor connector.

b. Measure the voltage according to the value(s) in the table below.

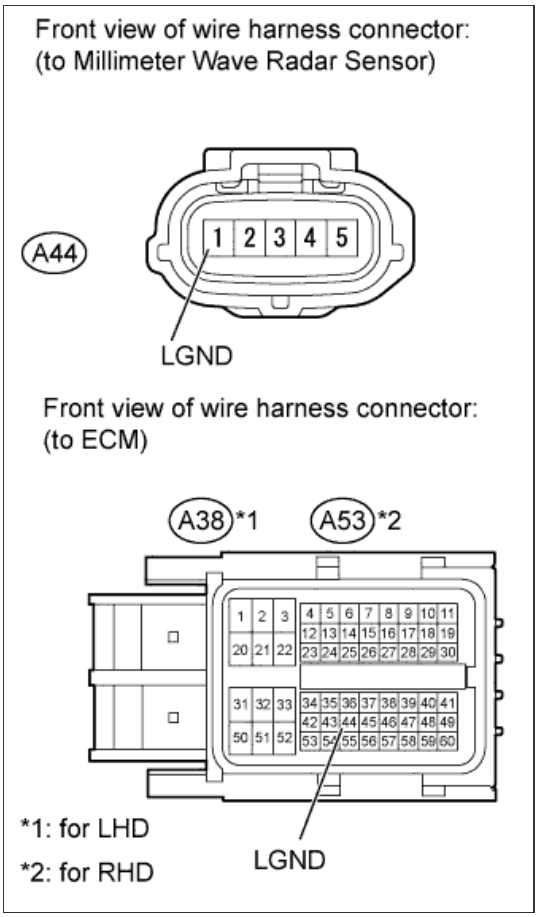
Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
A44-5 (IGB) - A44-2 (SGND)	Engine switch on (IG)	11 to 14 V

NG → REPLACE DISTANCE CONTROL ECU (Click here)

OK

3.CHECK HARNESS AND CONNECTOR (MILLIMETER WAVE RADAR SENSOR - ECM AND BODY GROUND)



a. Disconnect the A44 millimeter wave radar sensor connector.

a. Disconnect the A44 millimeter wave radar sensor connector.

b. Disconnect the A38*1 or A53*2 ECM connector.

*1: for LHD
*2: for RHD

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

for LHD

Tester Connection	Condition	Specified Condition
A44-1 (LGND) - A38-44 (LGND)	Always	Below 1 Ω
A44-1 (LGND) - Body ground	Always	10 kΩ or higher

for RHD

Tester Connection	Condition	Specified Condition
A44-1 (LGND) - A53-44 (LGND)	Always	Below 1 Ω
A44-1 (LGND) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

DESCRIPTION

This circuit provides power to the millimeter wave radar sensor. The millimeter wave radar sensor emits radio waves towards an object in front and measures the distance and direction of the object by receiving the wave reflections. Based on the reflections, the sensor calculates the difference in speed between the vehicle and the object in front. This data is transmitted to the distance control ECU.

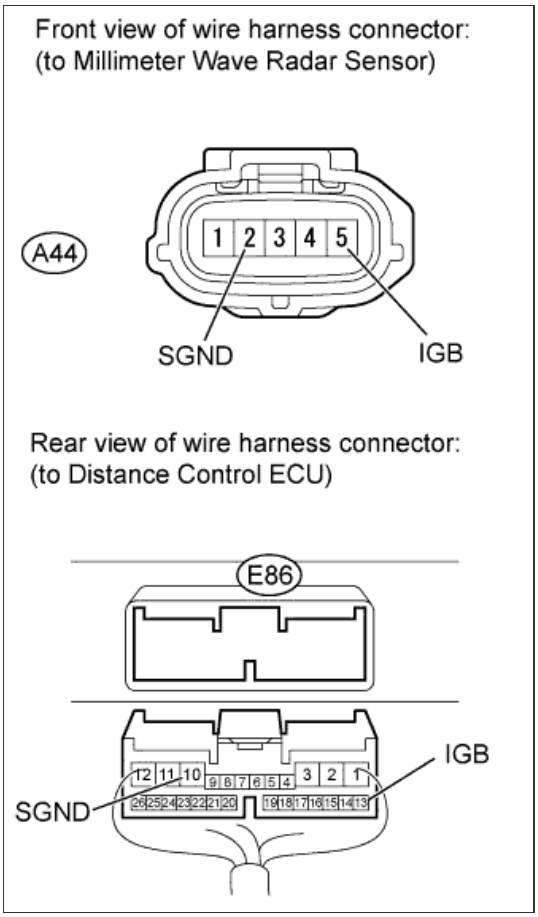
WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When the distance control ECU is replaced with a new one, initialization must be performed (Click here).

1.CHECK HARNESS AND CONNECTOR (MILLIMETER WAVE RADAR SENSOR - DISTANCE CONTROL ECU)



a. Disconnect the A44 millimeter wave radar sensor connector.

b. Disconnect the E86 distance control ECU connector.

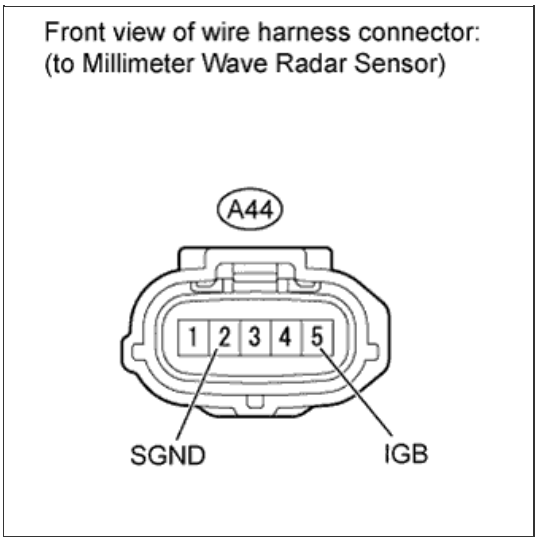
c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A44-2 (SGND) - E86-10 (SGND)	Always	Below 1 Ω
A44-5 (IGB) - E86-13 (IGB)		
E86-13 (IGB) - Body ground	Always	10 kΩ or higher
A44-5 (IGB) - Body ground		

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



2.CHECK DISTANCE CONTROL ECU (IGB VOLTAGE)

a. Disconnect the A44 millimeter wave radar sensor connector.

b. Measure the voltage according to the value(s) in the table below.

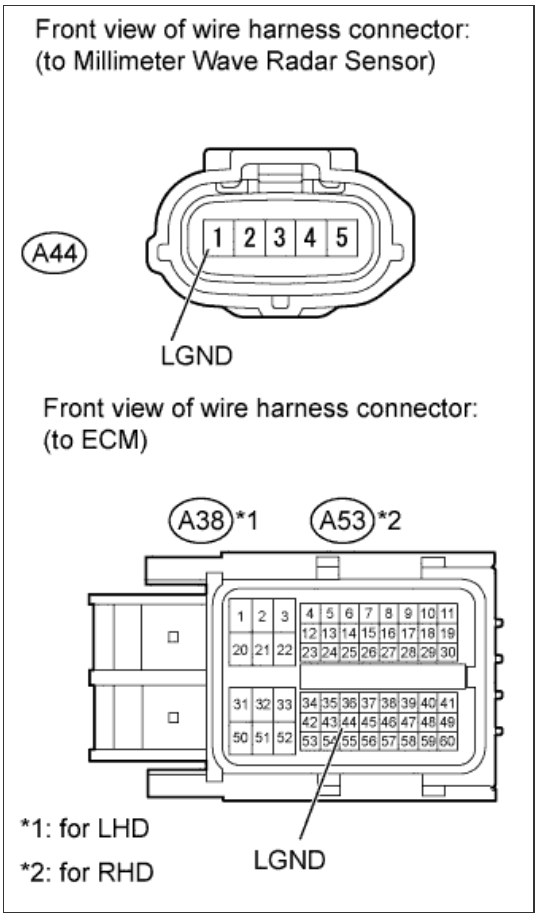
Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
A44-5 (IGB) - A44-2 (SGND)	Engine switch on (IG)	11 to 14 V

NG → REPLACE DISTANCE CONTROL ECU (Click here)

OK

3.CHECK HARNESS AND CONNECTOR (MILLIMETER WAVE RADAR SENSOR - ECM AND BODY GROUND)



a. Disconnect the A44 millimeter wave radar sensor connector.

a. Disconnect the A44 millimeter wave radar sensor connector.

b. Disconnect the A38*1 or A53*2 ECM connector.

*1: for LHD
*2: for RHD

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

for LHD

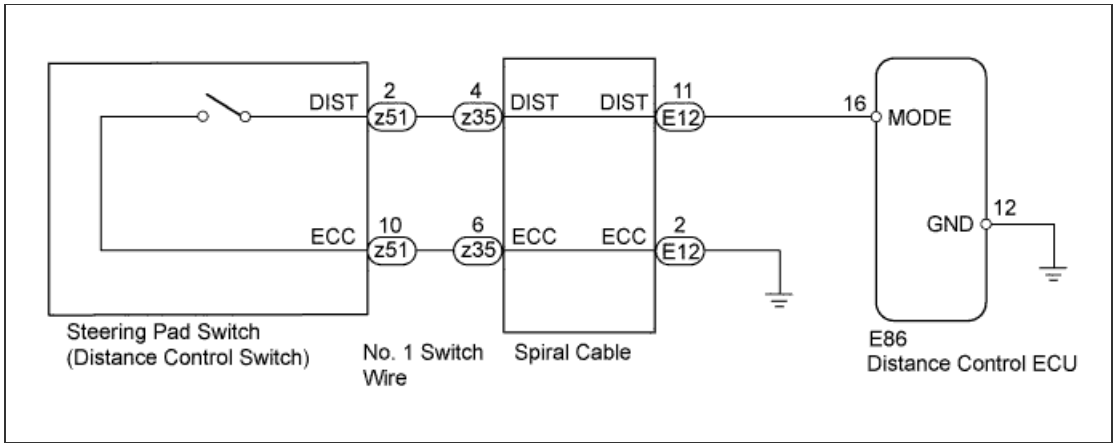
Tester Connection	Condition	Specified Condition
A44-1 (LGND) - A38-44 (LGND)	Always	Below 1 Ω
A44-1 (LGND) - Body ground	Always	10 kΩ or higher

for RHD

Tester Connection	Condition	Specified Condition
A44-1 (LGND) - A53-44 (LGND)	Always	Below 1 Ω
A44-1 (LGND) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

for Preparation Click here

DESCRIPTION

The distance control switch sets the vehicle-to-vehicle distance control mode. The distance control switch is installed in the steering pad switch. The vehicle-to-vehicle distance set value can be changed by operating the steering pad switch (distance control switch) while the dynamic radar cruise control system is in operation. The steering pad switch uses the CAN communication line to communicate with each ECU.

WIRING DIAGRAM

INSPECTION PROCEDURE

CAUTION:

The vehicle is equipped with an SRS (Supplemental Restraint System) which includes components such as airbags. Before servicing (including removal or installation of parts), be sure to read the Precaution for the SRS (Click here).

NOTICE:

When the distance control ECU is replaced with a new one, initialization must be performed (Click here).

1.READ VALUE USING INTELLIGENT TESTER (VEHICLE DISTANCE)

a. Using the intelligent tester, read the Data List.

Radar Cruise

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Car Dist Time Setting	Vehicle distance time setting condition / SHORT, LONG, MID or NO	Vehicle distance selected by steering pad switch (distance control switch)	-

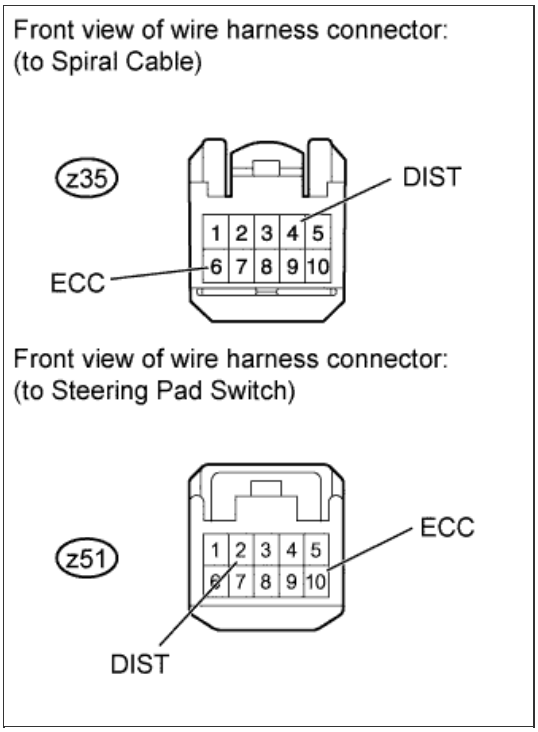
OK:

Normal conditions listed above are displayed.

NG → Go to step 2

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)



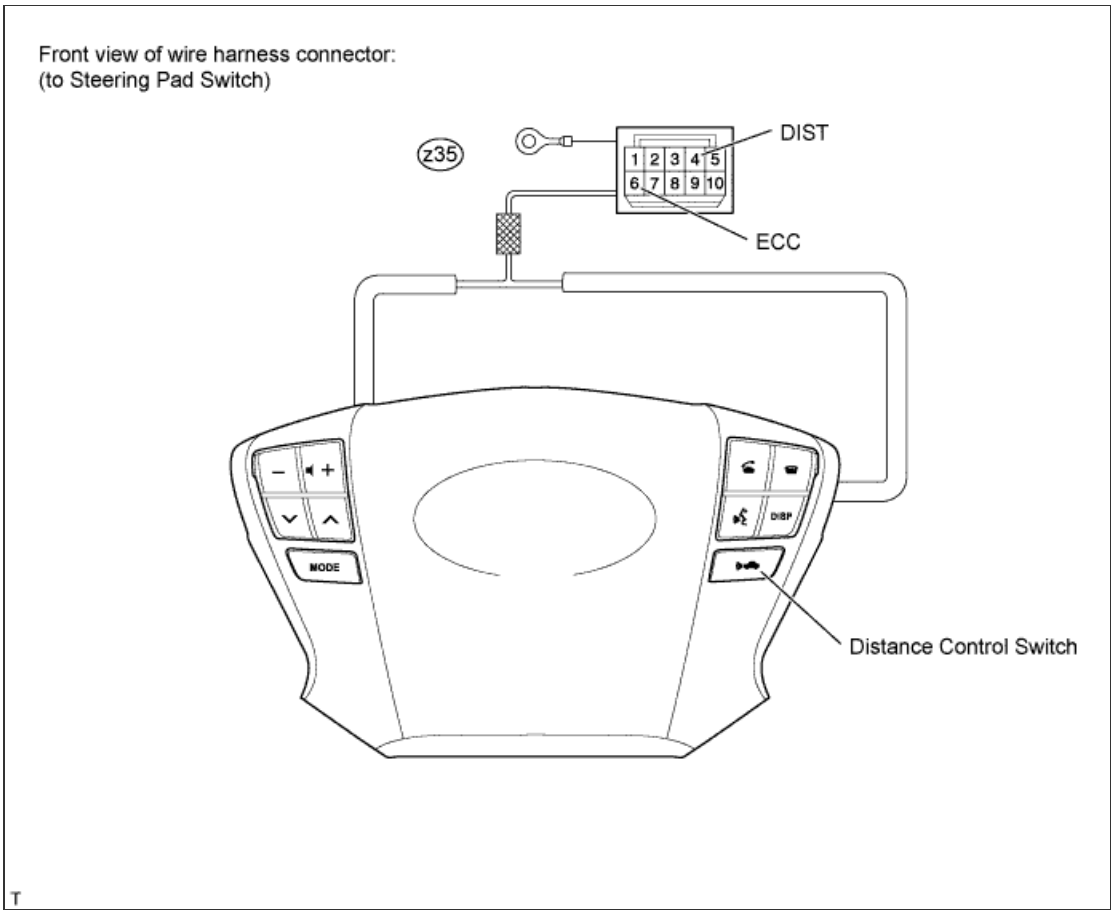
2.CHECK NO. 1 SWITCH WIRE

a. Disconnect the z35 and z51 No. 1 switch wire connectors.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z35-4 (DIST) - z51-2 (DIST)	Always	Below 1 Ω
z35-6 (ECC) - z51-10 (ECC)	Always	Below 1 Ω



NG → REPLACE NO. 1 SWITCH WIRE

OK

3.INSPECT STEERING PAD SWITCH

a. Disconnect the z35 steering pad switch connector from the spiral cable.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
z35-4 (DIST) - z35-6 (ECC)	Distance control switch on (pushed)	Below 1 Ω
	Distance control switch off (pushed again)	1 MΩ or higher

NG → REPLACE STEERING PAD ASSEMBLY (Click here)

OK

4.INSPECT SPIRAL CABLE

a. Check the spiral cable and connector for scratches, cracks, dents and chips. If any defects are found, replace the spiral cable with a new one.

b. Check the spiral cable.

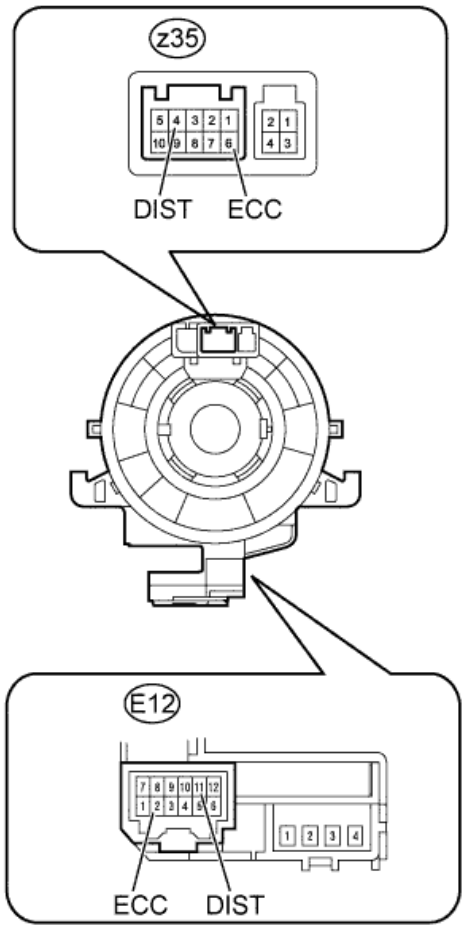
i. Set the spiral cable to the center position (Click here).

ii. After setting the spiral cable to the center position, rotate the spiral cable 2.5 times clockwise, and measure the resistance according to the value(s) in the table below. Then rotate the spiral cable 5 times counterclockwise, and measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z35-4 (DIST) - E12-11 (DIST)	Always	Below 1 Ω
z35-6 (ECC) - E12-2 (ECC)		

iii. After setting the spiral cable to the center position, rotate the spiral cable 2.5 times clockwise. Then while rotating the spiral cable 5 times counterclockwise, measure the resistance according to the value(s) in the table below.



NOTICE:

As the spiral cable may break, do not rotate the spiral cable more than the specified amount.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z35-4 (DIST) - E12-11 (DIST)	Always	Below 1 Ω
z35-6 (ECC) - E12-2 (ECC)		

Component without harness connected: (Spiral Cable)

NG → REPLACE SPIRAL CABLE (Click here)

OK

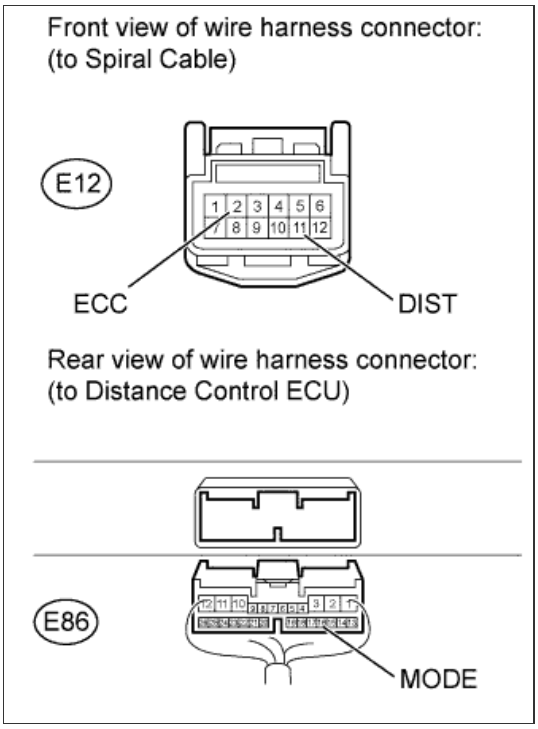
5.CHECK HARNESS AND CONNECTOR (SPIRAL CABLE - DISTANCE CONTROL ECU AND BODY GROUND)



a. Disconnect the E86 distance control ECU connector.

b. Disconnect the E12 spiral cable connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E12-2 (ECC) - Body ground	Always	Below 1 Ω
E12-11 (DIST) - E86-16 (MODE)	Always	Below 1 Ω
E12-11 (DIST) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE DISTANCE CONTROL ECU (Click here)

for Preparation Click here

DESCRIPTION

The distance control switch sets the vehicle-to-vehicle distance control mode. The distance control switch is installed in the steering pad switch. The vehicle-to-vehicle distance set value can be changed by operating the steering pad switch (distance control switch) while the dynamic radar cruise control system is in operation. The steering pad switch uses the CAN communication line to communicate with each ECU.

2.CHECK NO. 1 SWITCH WIRE

a. Disconnect the z35 and z51 No. 1 switch wire connectors.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
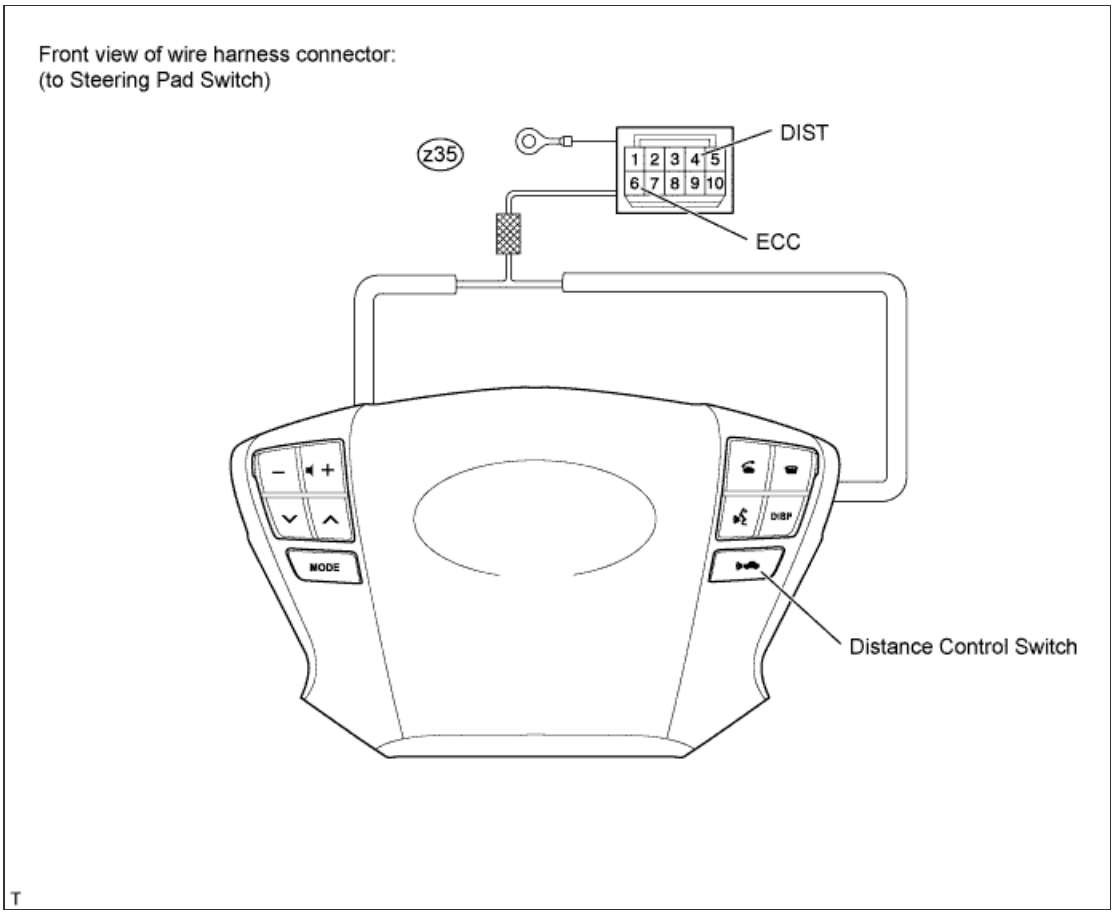
z35-4 (DIST) - z51-2 (DIST)	Always	Below 1 Ω
z35-6 (ECC) - z51-10 (ECC)	Always	Below 1 Ω



NG → REPLACE NO. 1 SWITCH WIRE

OK

3.INSPECT STEERING PAD SWITCH

a. Disconnect the z35 steering pad switch connector from the spiral cable.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
z35-4 (DIST) - z35-6 (ECC)	Distance control switch on (pushed)	Below 1 Ω
	Distance control switch off (pushed again)	1 MΩ or higher

NG → REPLACE STEERING PAD ASSEMBLY (Click here)

OK

4.INSPECT SPIRAL CABLE

a. Check the spiral cable and connector for scratches, cracks, dents and chips. If any defects are found, replace the spiral cable with a new one.

b. Check the spiral cable.

i. Set the spiral cable to the center position (Click here).

ii. After setting the spiral cable to the center position, rotate the spiral cable 2.5 times clockwise, and measure the resistance according to the value(s) in the table below. Then rotate the spiral cable 5 times counterclockwise, and measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
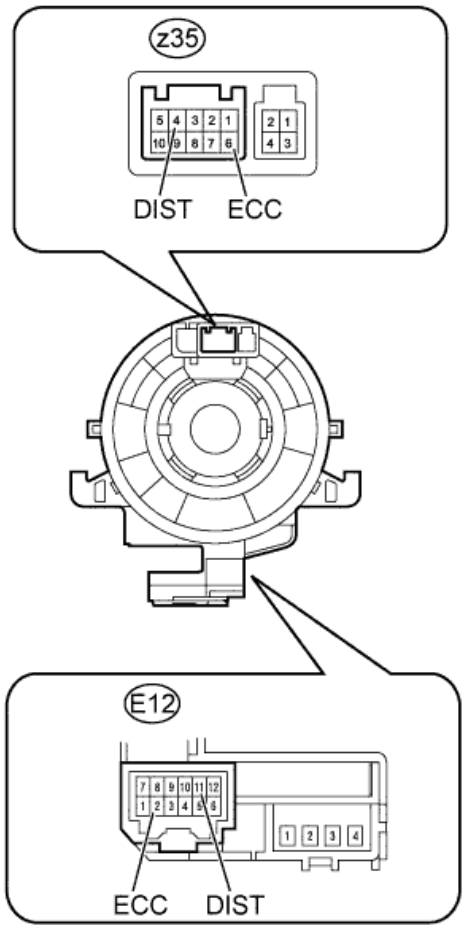
z35-4 (DIST) - E12-11 (DIST)	Always	Below 1 Ω
z35-6 (ECC) - E12-2 (ECC)		

iii. After setting the spiral cable to the center position, rotate the spiral cable 2.5 times clockwise. Then while rotating the spiral cable 5 times counterclockwise, measure the resistance according to the value(s) in the table below.



NOTICE:

As the spiral cable may break, do not rotate the spiral cable more than the specified amount.

Standard Resistance:

Tester Connection	Condition	Specified Condition

z35-6 (ECC) - E12-2 (ECC)		

Component without harness connected: (Spiral Cable)

NG → REPLACE SPIRAL CABLE (Click here)

OK

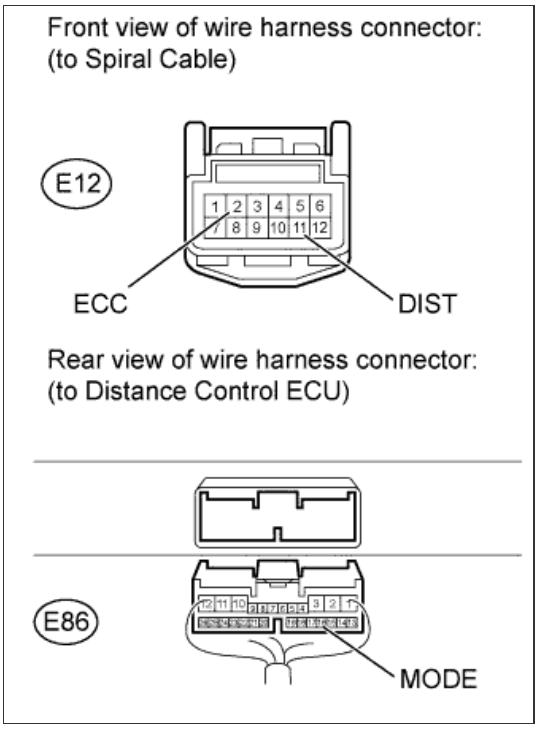
5.CHECK HARNESS AND CONNECTOR (SPIRAL CABLE - DISTANCE CONTROL ECU AND BODY GROUND)



a. Disconnect the E86 distance control ECU connector.

b. Disconnect the E12 spiral cable connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E12-2 (ECC) - Body ground	Always	Below 1 Ω
E12-11 (DIST) - E86-16 (MODE)	Always	Below 1 Ω
E12-11 (DIST) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE DISTANCE CONTROL ECU (Click here)

for Preparation Click here

DESCRIPTION

The distance control ECU detects washer operation. Cruise control will be canceled by the distance control ECU if the windshield wipers operate in HI or LO mode.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.CHECK WASHER MOTOR (OPERATION)

a. Check that the front washer operates (Click here).

OK:
Washer function is normal.

NG → GO TO WIPER AND WASHER SYSTEM (**Click here**)

OK

2.CHECK HARNESS AND CONNECTOR (DISTANCE CONTROL ECU - WINDSHIELD WIPER SWITCH)

a. Disconnect the E86 distance control ECU connector.

b. Disconnect the E15 windshield wiper switch connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

for LHD

Tester Connection	Condition	Specified Condition
E86-3 (WASH) - E15-3 (WF)	Always	Below 1 Ω
E15-3 (WF) - Body ground	Always	10 kΩ or higher

for RHD

Tester Connection	Condition	Specified Condition
E86-3 (WASH) - E15-1 (WF)	Always	Below 1 Ω
E15-1 (WF) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

a. Using the intelligent tester, read the Data List.

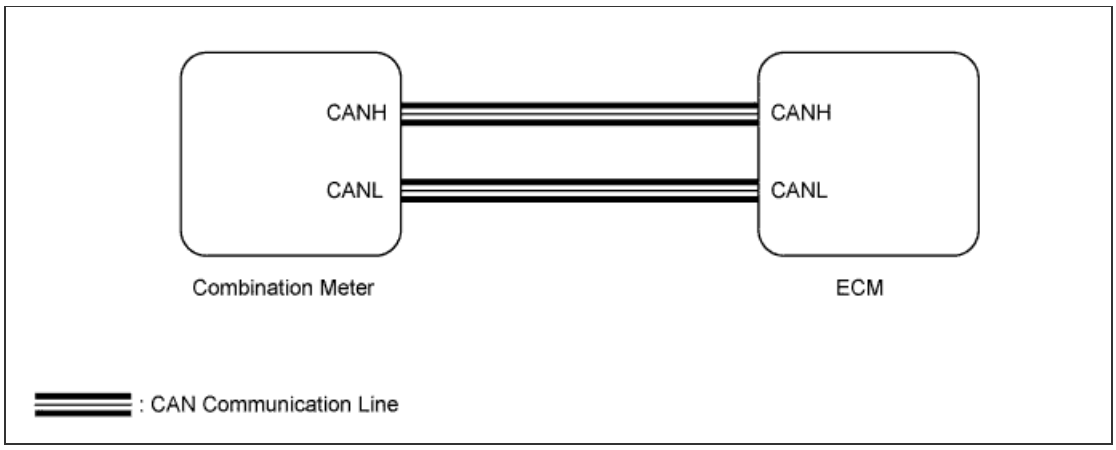
Radar Cruise

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
CCS Indicator M-CPU	CRUISE main indicator light (Main CPU) / ON or OFF	ON: CRUISE main indicator light on OFF: CRUISE main indicator light off	-

OK:
The intelligent tester display changes according to condition of CRUISE main indicator light.

NG → REPLACE ECM (Click here)

OK ↓



PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

for Preparation Click here

DESCRIPTION

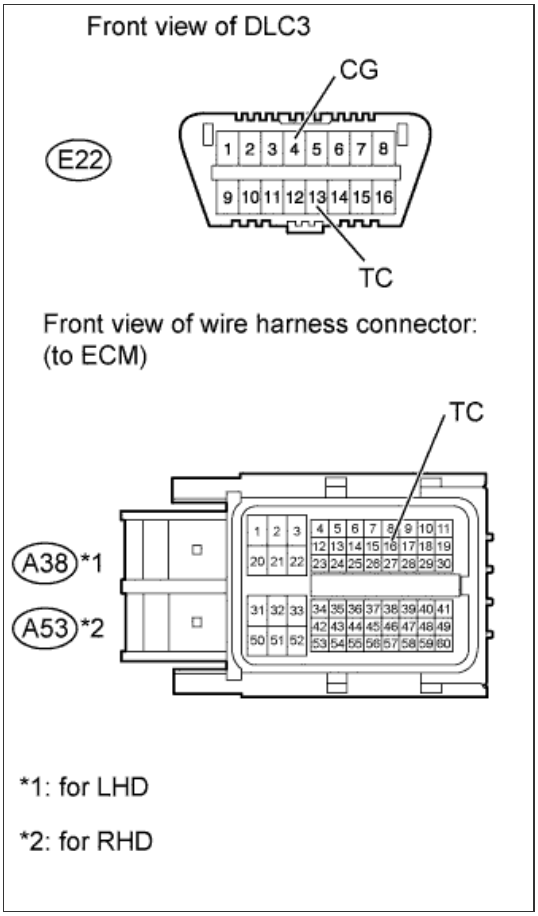
Connecting terminals TC and CG of the DLC3 causes the system to enter self-diagnostic mode. If a malfunction is present, DTCs will be output.

HINT:

When a particular warning light remains blinking, a ground short in the wiring of terminal TC of the DLC3 or an internal ground short in the relevant ECU is suspected.

WIRING DIAGRAM



INSPECTION PROCEDURE

1.CHECK HARNESS AND CONNECTOR (DLC3 - ECM AND BODY GROUND)

a. Disconnect the A38*1 or A53*2 ECM connector.

*1: for LHD
*2: for RHD

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

for LHD

Tester Connection	Condition	Specified Condition
E22-13 (TC) - A38-16 (TC)	Always	Below 1 Ω
E22-4 (CG) - Body ground		
E22-13 (TC) - Body ground	Always	10 kΩ or higher

for RHD

Tester Connection	Condition	Specified Condition
E22-13 (TC) - A53-16 (TC)	Always	Below 1 Ω
E22-4 (CG) - Body ground		
E22-13 (TC) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

for Preparation Click here

for Preparation Click here

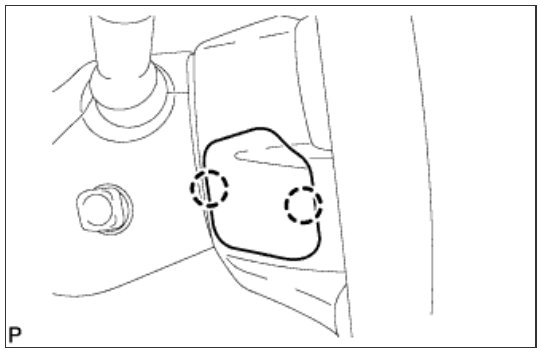
1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

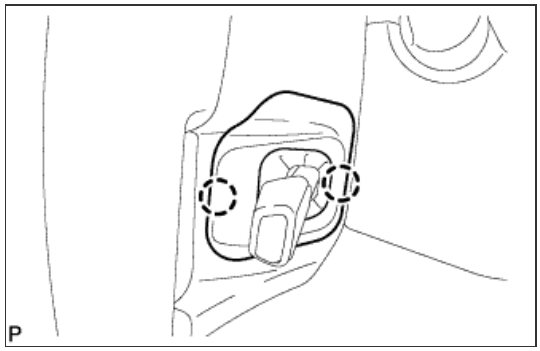
CAUTION:



Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

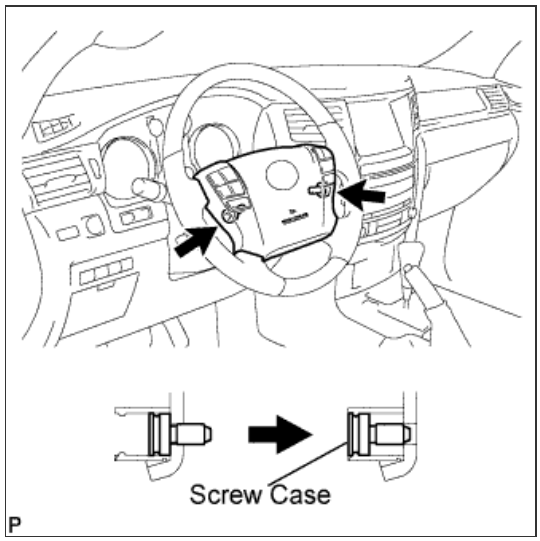
NOTICE:

- **When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).**
- **w/ Navigation system:**
  After the engine switch is turned off, the HDD navigation system requires approximately 6 minutes to record various types of memory and settings. As a result, after turning the engine switch off, wait 6 minutes or more before disconnecting the cable from the negative (-) battery terminal.



3. REMOVE LOWER NO. 3 STEERING WHEEL COVER

a. Detach the 2 claws and remove the steering wheel cover.



4. REMOVE LOWER NO. 2 STEERING WHEEL COVER

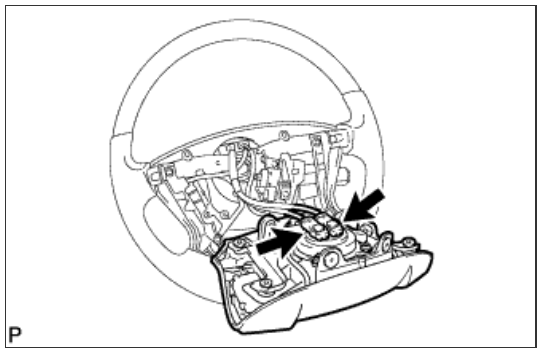
a. Detach the 2 claws and remove the steering wheel cover.

5. REMOVE STEERING PAD

a. Using a T30 "TORX" socket wrench, loosen the 2 screws until the groove along the screw circumference catches on the screw case.

b. Pull out the steering pad from the steering wheel, as shown in the illustration. Then support the steering pad with one hand.

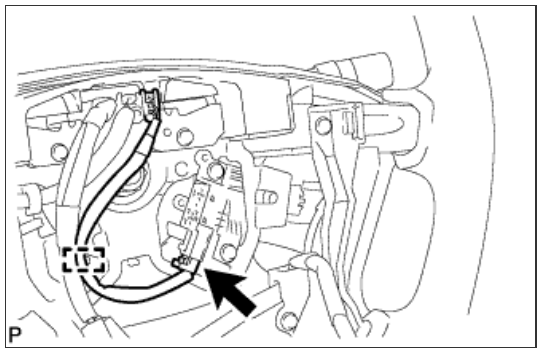
NOTICE:



When removing the steering pad, do not pull the airbag wire harness.

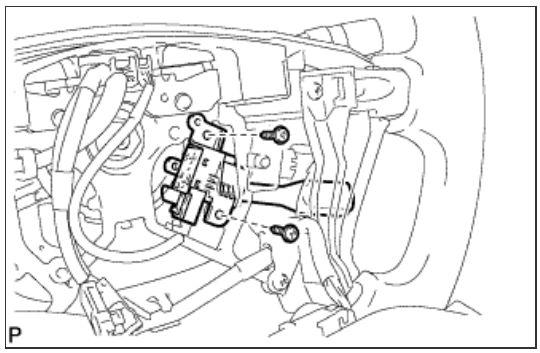
c. Disconnect the horn connector.

d. Disconnect the 2 connectors and remove the steering pad.



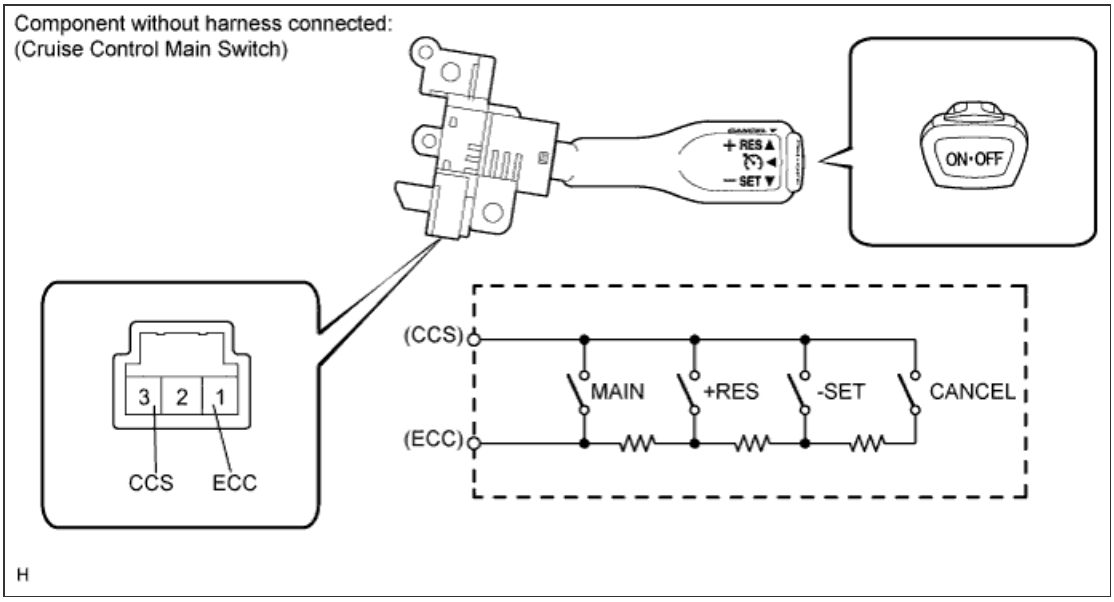
NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.



6. REMOVE CRUISE CONTROL MAIN SWITCH

a. Disconnect the connector and clamp.

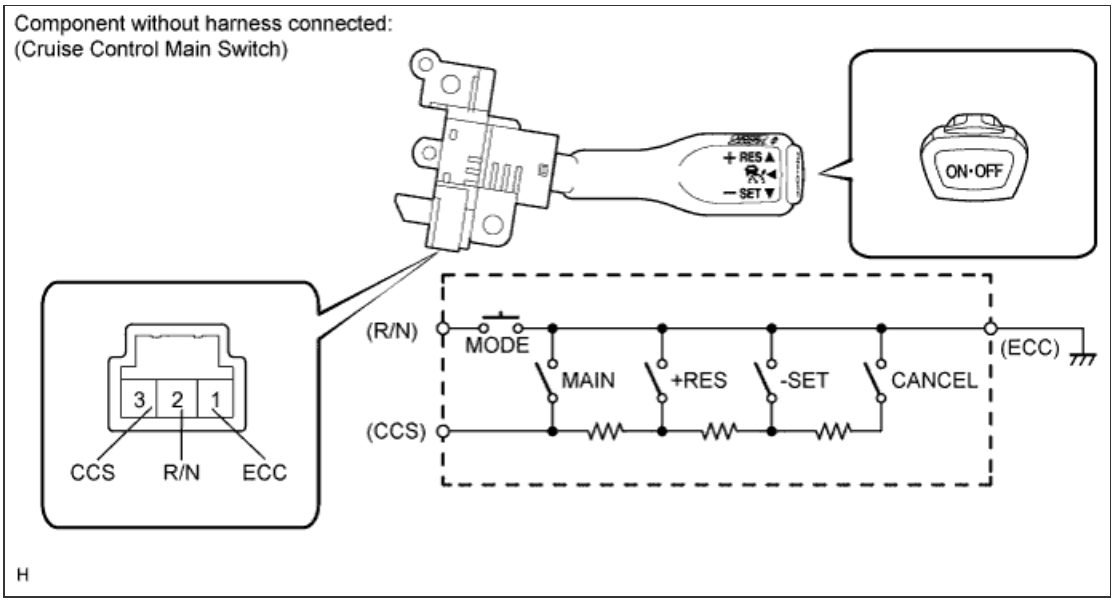


b. Remove the 2 screws and switch.

for Preparation Click here

1. INSPECT CRUISE CONTROL MAIN SWITCH ASSEMBLY

a. Measure the resistance (for vehicles without vehicle-to-vehicle distance control mode).



i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

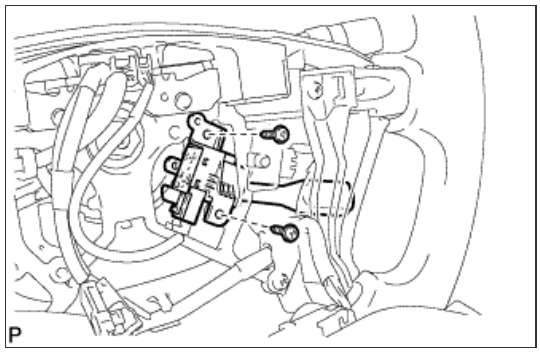
Tester Connection	Switch Condition	Specified Condition
1 (ECC) - 3 (CCS)	Neutral	1 MΩ or higher
1 (ECC) - 3 (CCS)	+RES	235 to 245 Ω
1 (ECC) - 3 (CCS)	-SET	620 to 640 Ω
1 (ECC) - 3 (CCS)	CANCEL	1510 to 1570 Ω
1 (ECC) - 3 (CCS)	Main switch off	1 MΩ or higher
1 (ECC) - 3 (CCS)	Main switch on	Below 2.5 Ω

If the result is not as specified, replace the cruise control main switch assembly.

b. Measure the resistance (for vehicles with vehicle-to-vehicle distance control mode).

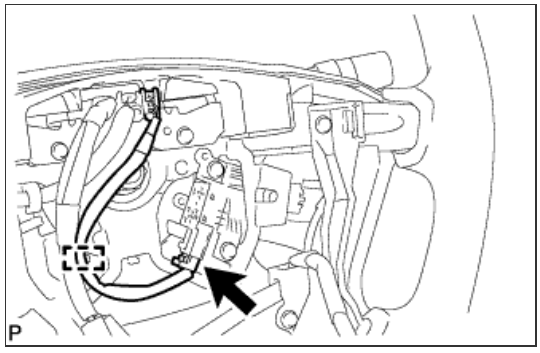
i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:



Tester Connection	Switch Condition	Specified Condition
1 (ECC) - 2 (R/N) 1 (ECC) - 3 (CCS)	Neutral	1 MΩ or higher
1 (ECC) - 3 (CCS)	+RES	235 to 245 Ω
1 (ECC) - 3 (CCS)	-SET	620 to 640 Ω
1 (ECC) - 3 (CCS)	CANCEL	1510 to 1570 Ω
1 (ECC) - 3 (CCS)	Main switch off	1 MΩ or higher
1 (ECC) - 3 (CCS)	Main switch on	Below 2.5 Ω
3 (CCS) - 2 (R/N)	Main switch on and mode switch on	Below 2.5 Ω

If the result is not as specified, replace the cruise control main switch assembly.



for Preparation Click here

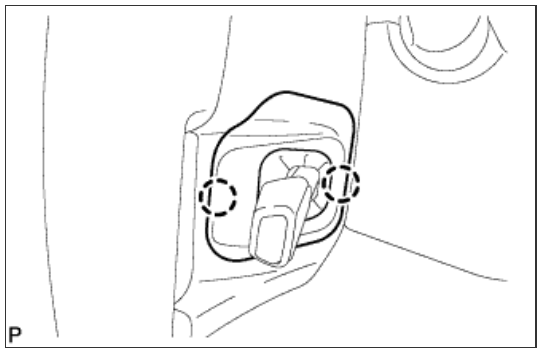
1. INSTALL CRUISE CONTROL MAIN SWITCH

a. Install the switch with the 2 screws.

b. Connect the connector and clamp.

2. INSTALL STEERING PAD

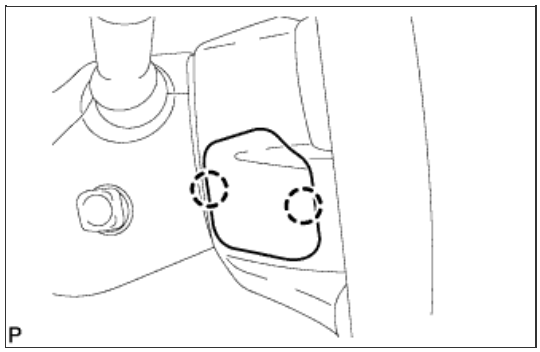
a. With the steering pad installed on the vehicle, perform a visual check. If there are any defects as mentioned below, replace the steering pad with a new one:
Cuts, minute cracks or marked discoloration on the steering pad top surface or in the grooved portion.



b. Make sure that the horn sounds.

HINT:

If the horn does not sound, inspect the horn system.



3. INSTALL LOWER NO. 2 STEERING WHEEL COVER

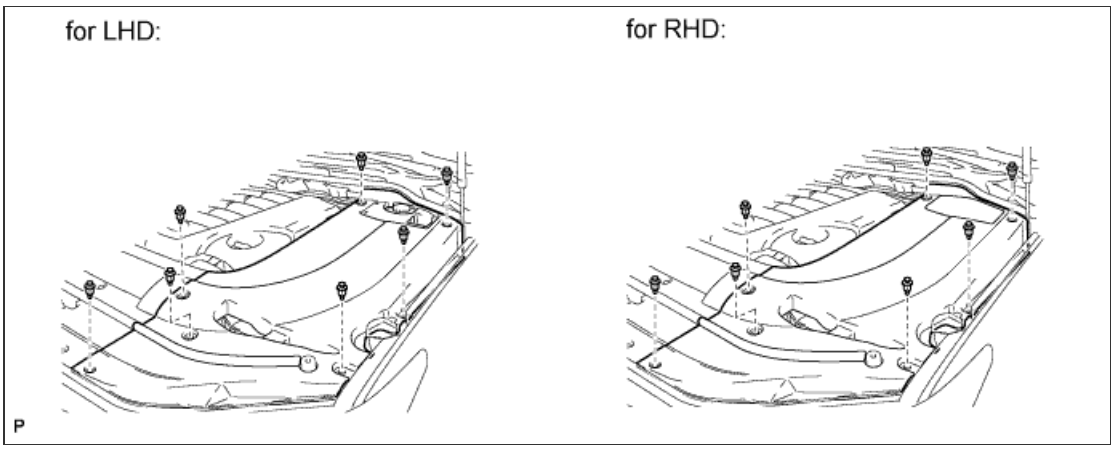
a. Attach the 2 claws to install the cover.

4. INSTALL LOWER NO. 3 STEERING WHEEL COVER

a. Attach the 2 claws to install the cover.

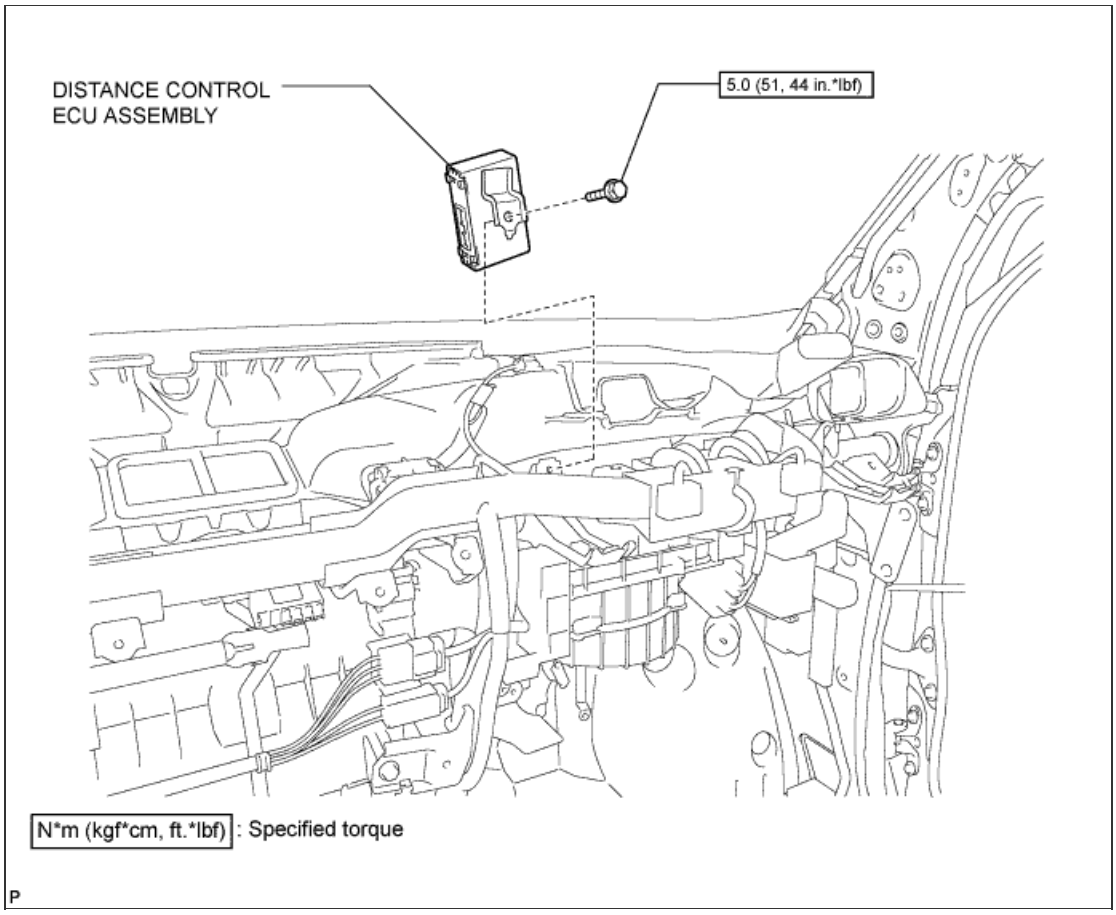
5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:



When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

6. CHECK SRS WARNING LIGHT



a. Check the SRS warning light (Click here).

7. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.

for Preparation Click here

for Preparation Click here

NOTICE:

After removing and installing or replacing the distance control ECU assembly, be sure to perform the following procedures.

INITIALIZE DISTANCE CONTROL ECU

a. Turn the engine switch on (IG).

b. Turn the cruise control main switch on.

c. Depress the brake pedal (brake switch on).

d. With the brake pedal depressed, push the cruise control main switch to +RES 3 times within 3 seconds, and check that the buzzer sounds.

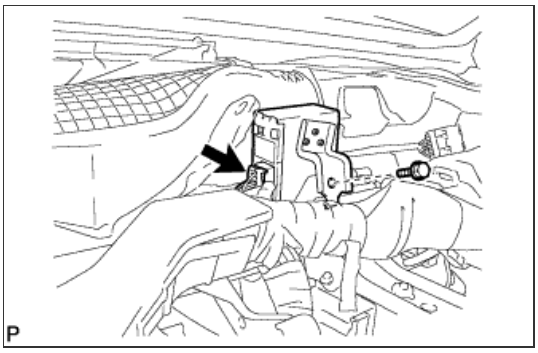
NOTICE:

At this time, do not turn the headlight dimmer switch on. Due to the activation of the beam axis automatic adjustment mode, turning the headlight dimmer switch on may result in an incorrect setting. If the headlight dimmer switch is turned on by mistake, perform the beam axis adjustment again.

for Preparation Click here

1. REMOVE INSTRUMENT PANEL SAFETY PAD

a. Remove the instrument panel safety pad (Click here).



2. REMOVE DISTANCE CONTROL ECU ASSEMBLY

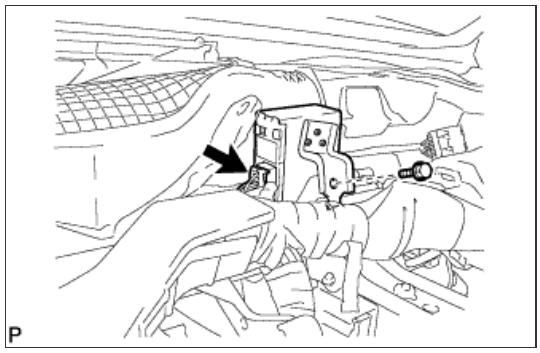
a. Disconnect the ECU connector.

b. Remove the bolt and ECU.

NOTICE:

Do not drop the ECU or subject it to strong shocks.

for Preparation Click here



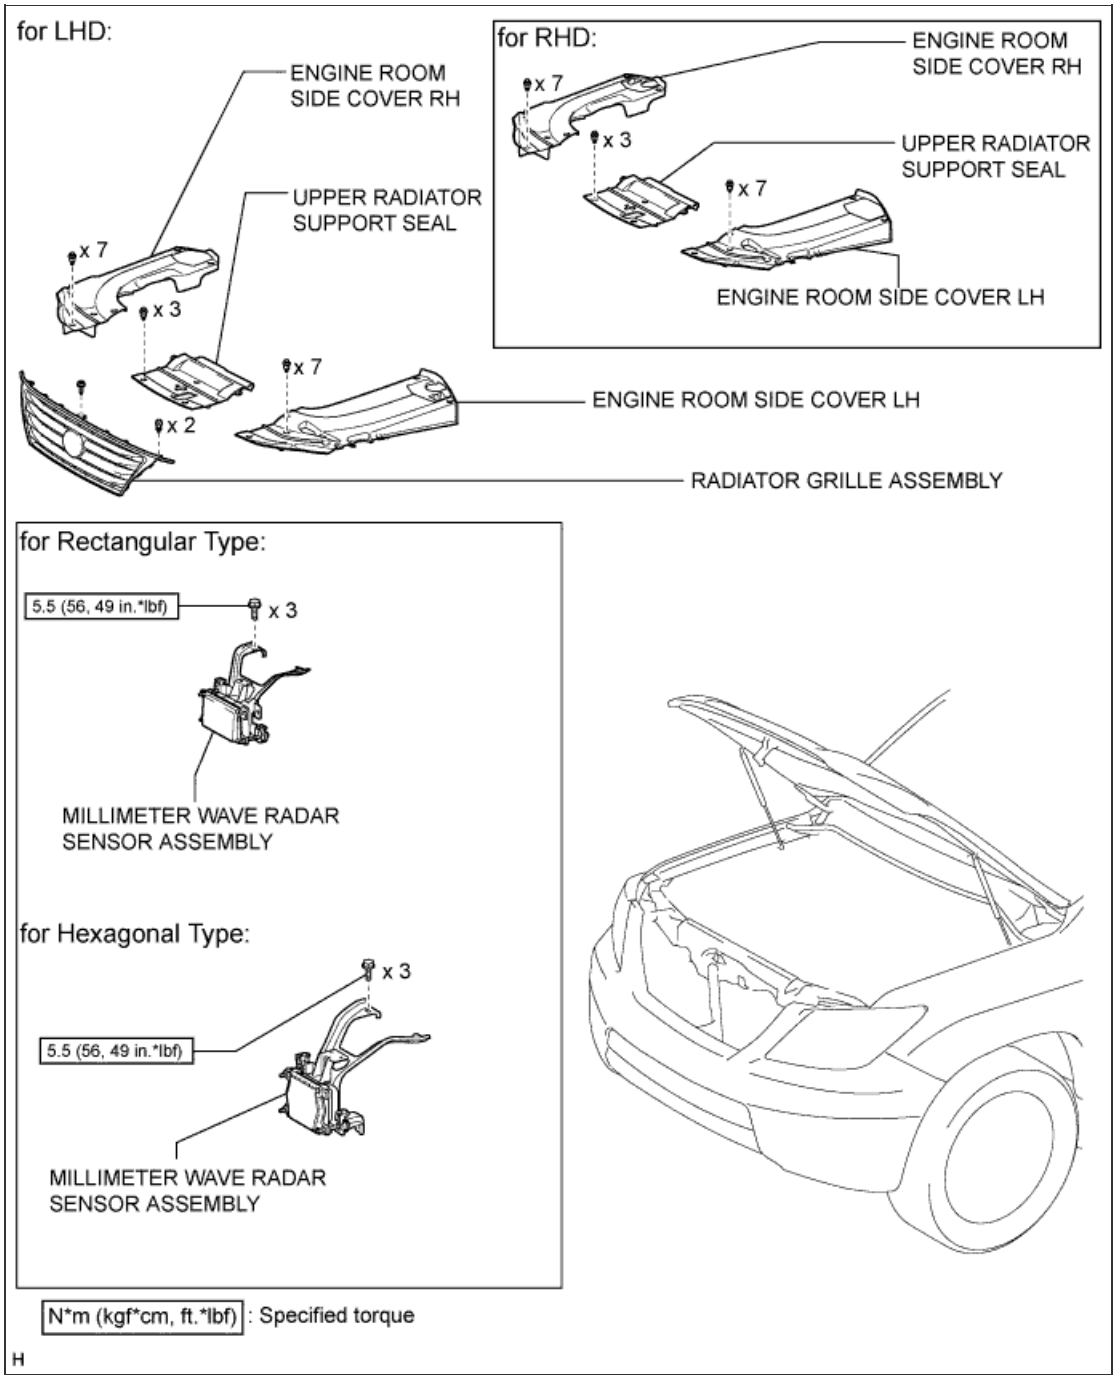
1. INSTALL DISTANCE CONTROL ECU ASSEMBLY

a. Install the ECU with the bolt.

NOTICE:

Do not use an ECU which has been dropped or subjected to any strong shocks.

b. Connect the ECU connector.



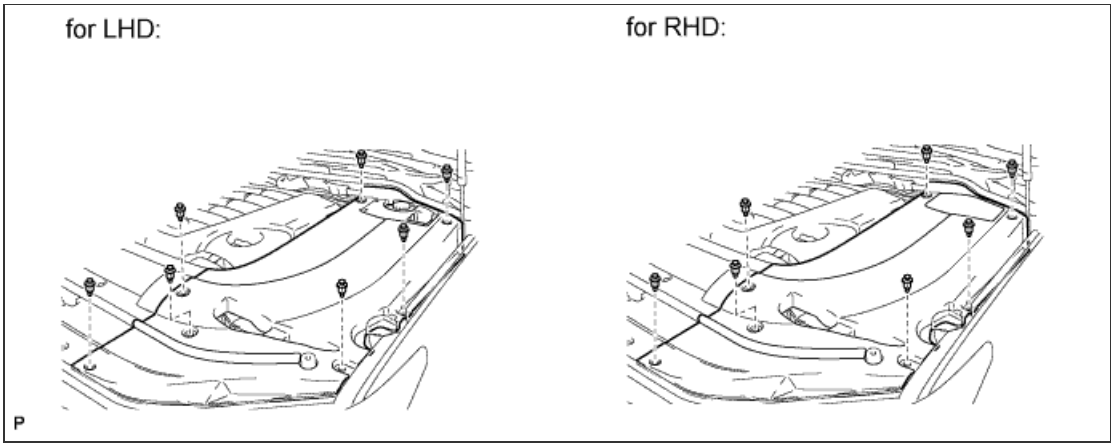
2. INSTALL INSTRUMENT PANEL SAFETY PAD

a. Install the instrument panel safety pad (Click here).

3. INITIALIZATION DISTANCE CONTROL ECU ASSEMBLY

a. Initialize the distance control ECU assembly (Click here).

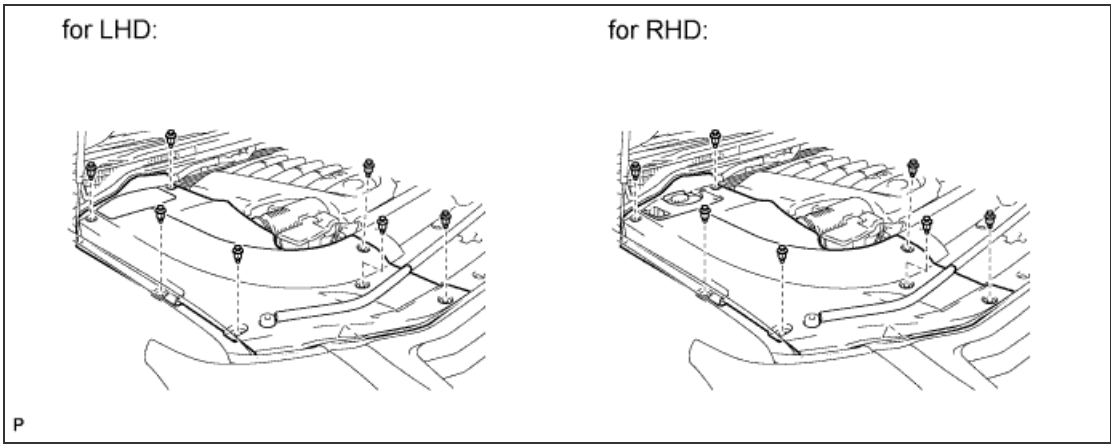
for Preparation Click here



for Preparation Click here

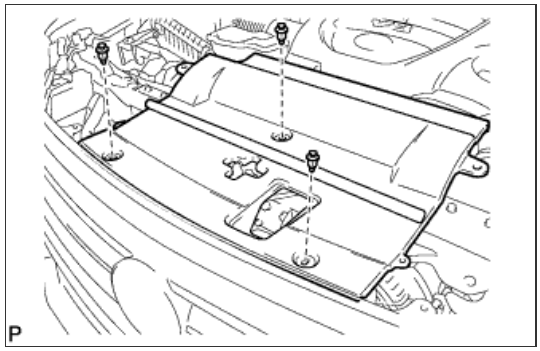
HINT:

- **Use the same procedures for LHD and RHD vehicles.**
- **The procedures listed below are for LHD vehicles.**



1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.



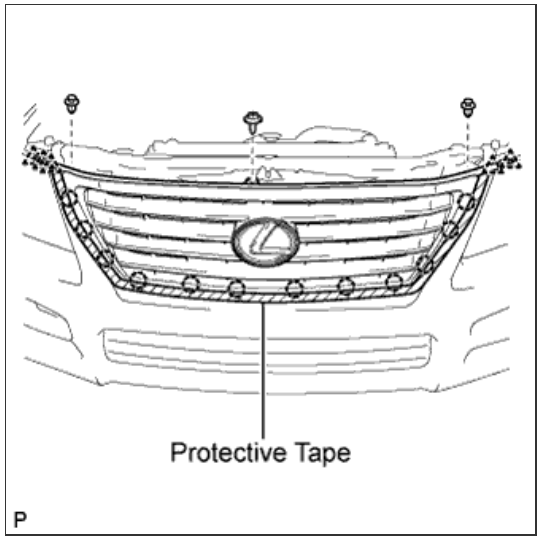
2. REMOVE ENGINE ROOM SIDE COVER RH

a. Remove the 7 clips and engine room side cover.

3. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 3 clips and upper radiator support seal.

4. REMOVE RADIATOR GRILLE ASSEMBLY

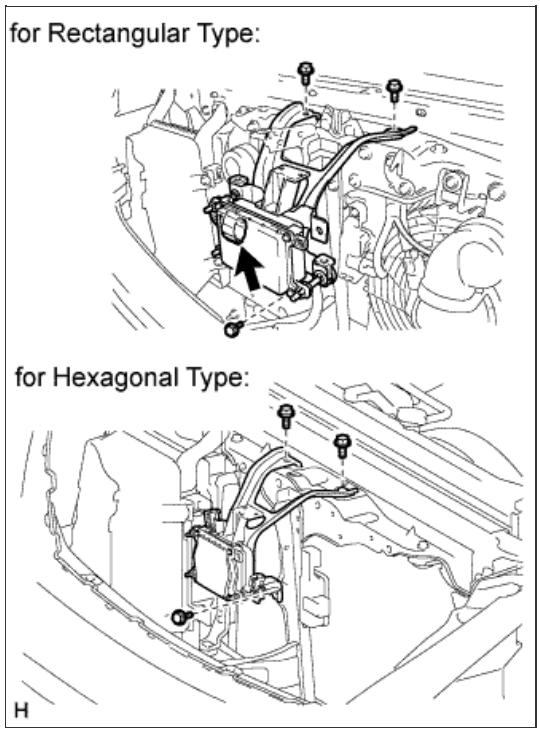


a. Put protective tape around the radiator grille.

b. Remove the screw and 2 clips.

c. Detach the 5 clips and partially remove the upper radiator seal.

d. w/o Wide View Front Monitor System:
Detach the 12 claws and remove the radiator grille.

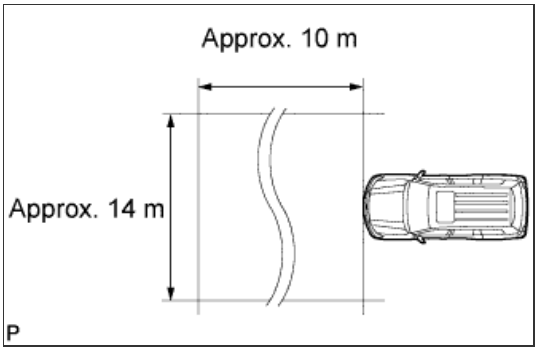


e. w/ Wide View Front Monitor System:
Detach the 12 claws, disconnect the connector and remove the radiator grille.

5. REMOVE MILLIMETER WAVE RADAR SENSOR ASSEMBLY

a. Disconnect the sensor connector.

b. Remove the 3 bolts and sensor.



for Preparation Click here

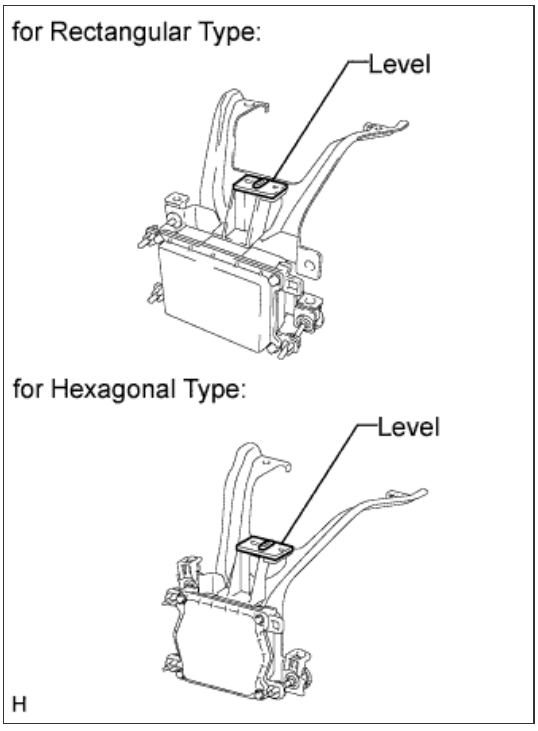
1. ADJUST MILLIMETER WAVE RADAR SENSOR ASSEMBLY

NOTICE:

- **Perform measurements on a level surface.**
- **Make sure that there are no metal objects on the ground or within a 10 m (32.8 ft.) x 14 m (45.9 ft.) area in front of the vehicle. If possible, the surrounding area should also be free of large metal objects.**

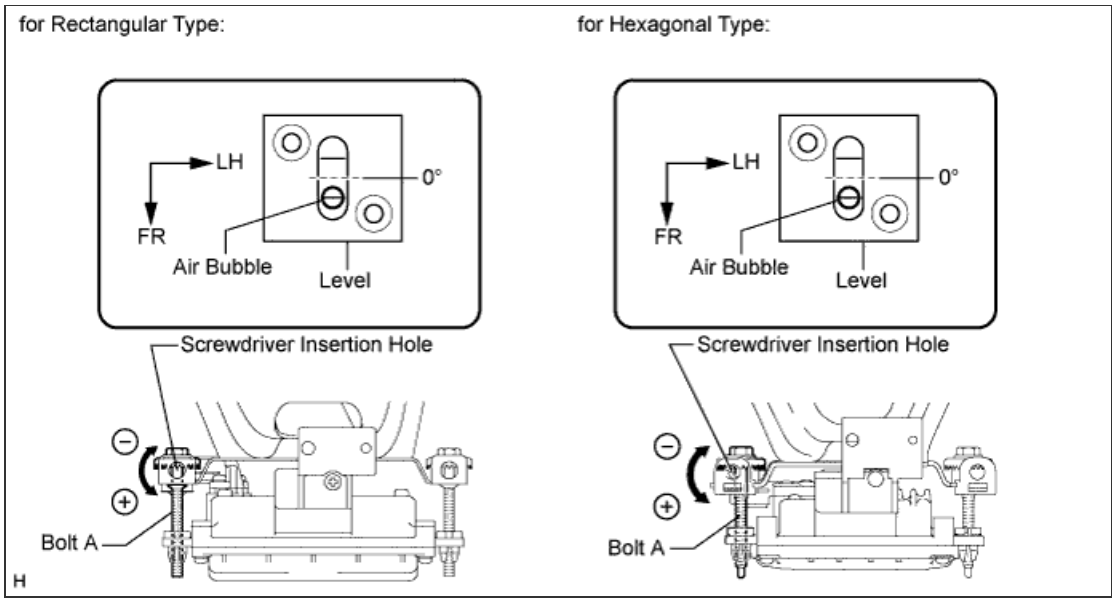
a. Before adjusting, perform the following:

i. Remove all cargo from the inside of the vehicle.



ii. Adjust the tire pressure to the specified value(s).

b. w/ Air suspension:
Adjust the vehicle's height to the standard height.

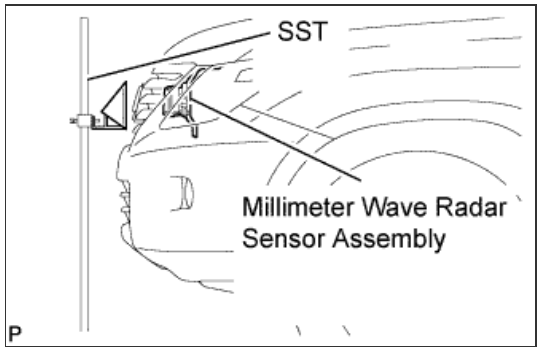


c. Adjust the vertical direction.

i. Remove any dust and oil from the level rack of the millimeter wave radar sensor assembly.

ii. Set a level for use with the sensor in the center of the level rack of the millimeter wave radar sensor assembly.

iii. Using a screwdriver, adjust the sensor by turning the vertical adjusting bolt of the millimeter wave radar sensor assembly (bolt A) until the air bubble is centered on the red line of the level as shown in the illustration.



Standard:
0.2° upward

HINT:

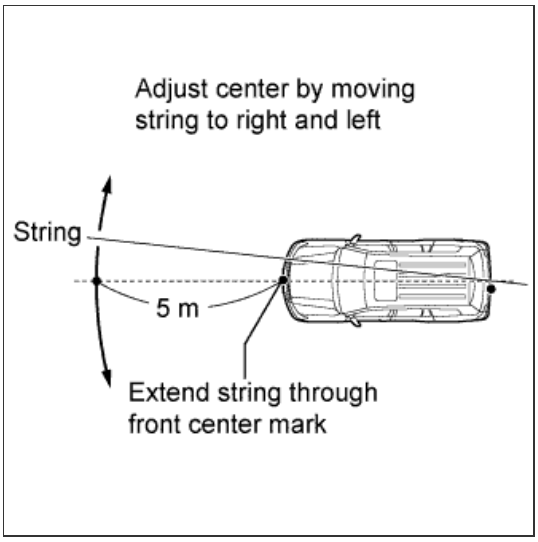
The adjustable range within the red frame of the level is +/-0.2°.

Vertical adjustment	• Upward direction: Turn bolt A in minus direction • Downward direction: Turn bolt A in plus direction	For 1 complete turn of screwdriver, sensor moves about 0.12°

d. Adjust SST (reflector) height.

i. Adjust SST (reflector) so that the center of SST (reflector) is the same height as the millimeter wave radar sensor assembly.

SST
09870-60000 (09870-60010)
09870-60040

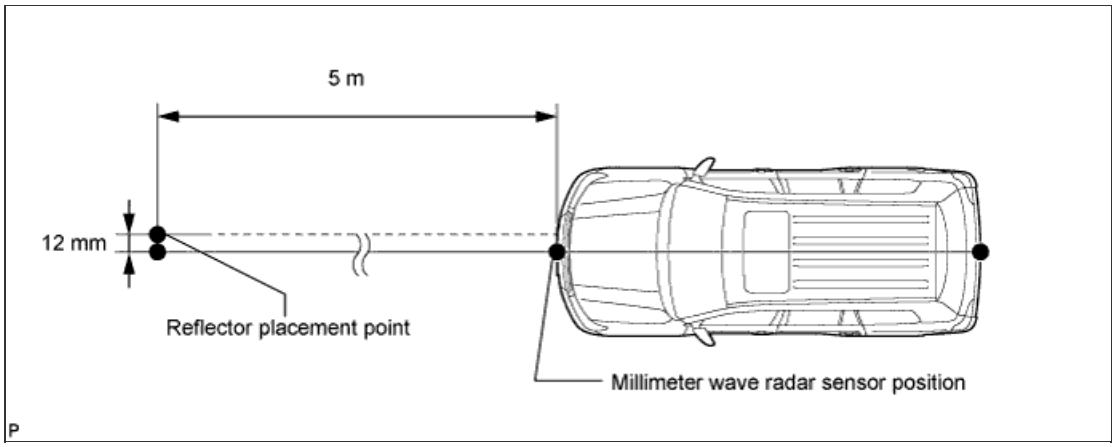


e. Place SST (reflector).

i. Hang a pointed weight from the center of the front and rear bumpers of the vehicle (center of the emblem) and accurately mark the center points on the ground.

ii. Mark a point 5 m (16.4 ft.) in front of the vehicle on the line that connects the front and rear center point marks.

HINT:



Affix one end of a string to the rear center point mark and extend the string 5 m (16.4 ft.) from the front of the vehicle. Move the other end of the string left and right to align the string with the front center point mark and make a straight line.

iii. Place SST at a position 12 mm (0.472 in.) from the marked position, to the right of the vehicle.

NOTICE:

Perform the operation as precisely as possible.

f. Adjust the beam axis.

i. Connect the intelligent tester to the DLC3.

ii. Turn the engine switch on (IG).

iii. Turn the intelligent tester main switch ON, and turn the cruise control main switch ON.

iv. Select "Radar Cruise" from the display screen.

HINT:

A buzzer will sound for 1 second.

v. Select "Utility" from the display screen.

vi. Select "Beam Axis Adjustment" from the display screen.

vii. Follow the tester display, and continue with the adjustment.

viii. Intelligent tester

NOTICE:

- **Turn the cruise control main switch ON before pressing Next.**
- **Make sure there is at least 20 cm (7.9 inches) between the radar sensor and any nearby individuals.**

CAUTION:

Do not come within 20 cm (7.9 inches) of the radar sensor.

ix. Check the following items on the laser cruise divergence data screen.

CAUTION:

While using the intelligent tester's beam axis adjustment mode, the actual direction and angle of the radar sensor may be different from the intelligent tester's data. In such a case, the deviation is displayed on the combination meter's multi-information display.

1. Confirm that the distance value is approximately 5 m (16.41 ft.).

   HINT:

   - **A value between 0.0 and 6.3 m (20.67 ft.) is indicated.**
   - **If the distance is 0 m (0 ft.), the sensor cannot detect the target. Reconfirm that there is no metal in the specified area in front of the vehicle (refer to the NOTICE at the beginning of this adjustment procedure).**

2. Confirm that the left/right side value is between 0.0 and 6.3.

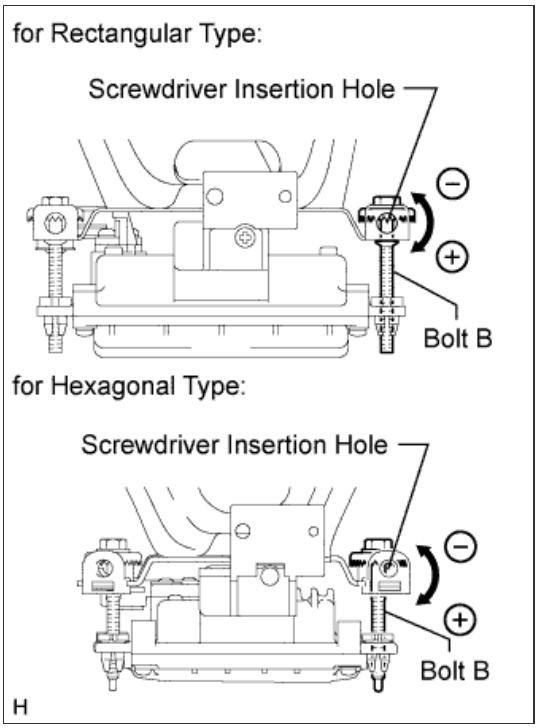
   HINT:

   If the distance is 0 m (0 ft.), the sensor cannot detect the target. Reconfirm that there is no metal in the specified area in front of the vehicle (refer to the NOTICE at the beginning of this adjustment procedure).

g. Adjust the horizontal direction.

i. Read the current amount of angle deviation.

Standard:
0° (Both left and right)



ii. Based on the results of the beam axis deviation measurement, using a screwdriver, adjust the sensor by turning the horizontal adjusting bolt of the millimeter wave radar sensor assembly (bolt B).

for Rectangular Type:

Horizontal adjustment	• Right direction: Turn bolt B in plus direction • Left direction: Turn bolt B in minus direction	For 1 complete turn of screwdriver, sensor moves about 0.05°

for Hexagonal Type:

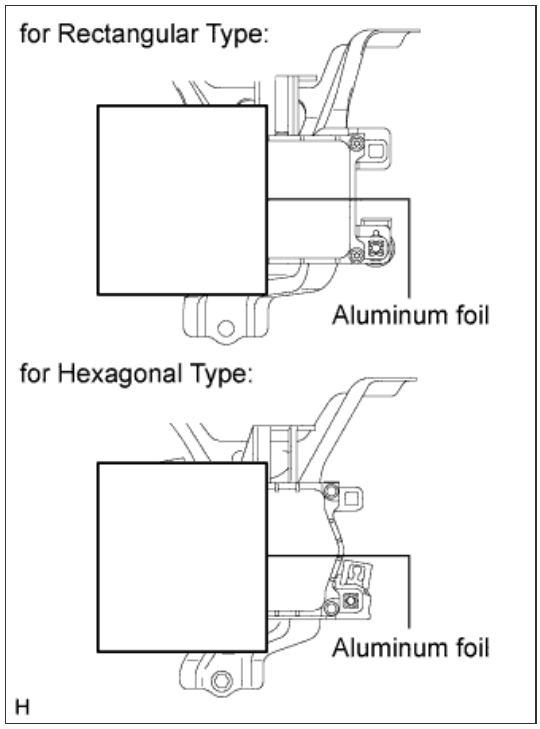
Horizontal adjustment	• Right direction: Turn bolt B in plus direction • Left direction: Turn bolt B in minus direction	For 1 complete turn of screwdriver, sensor moves about 0.07°

NOTICE:

If it is difficult to reach a value of 0°, it is possible that the sensor is targeting an object other than SST. Reconfirm that there are no reflective objects in the surrounding area.

iii. Because the driving learned value will be reset, cover the left half of the sensor with aluminum foil or equivalent (a metal material that blocks electric waves) for a period of approximately 10 seconds.

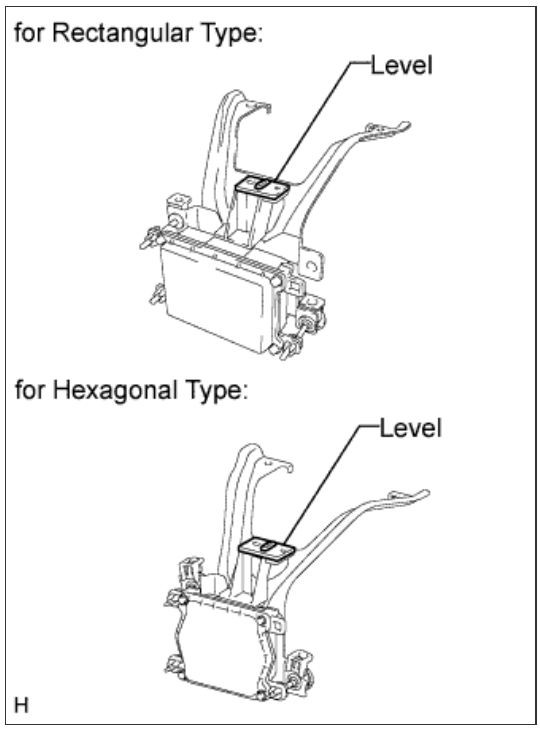
NOTICE:



At this time, leave SST in place and make sure there are no objects between the right half of the sensor and the reflector.

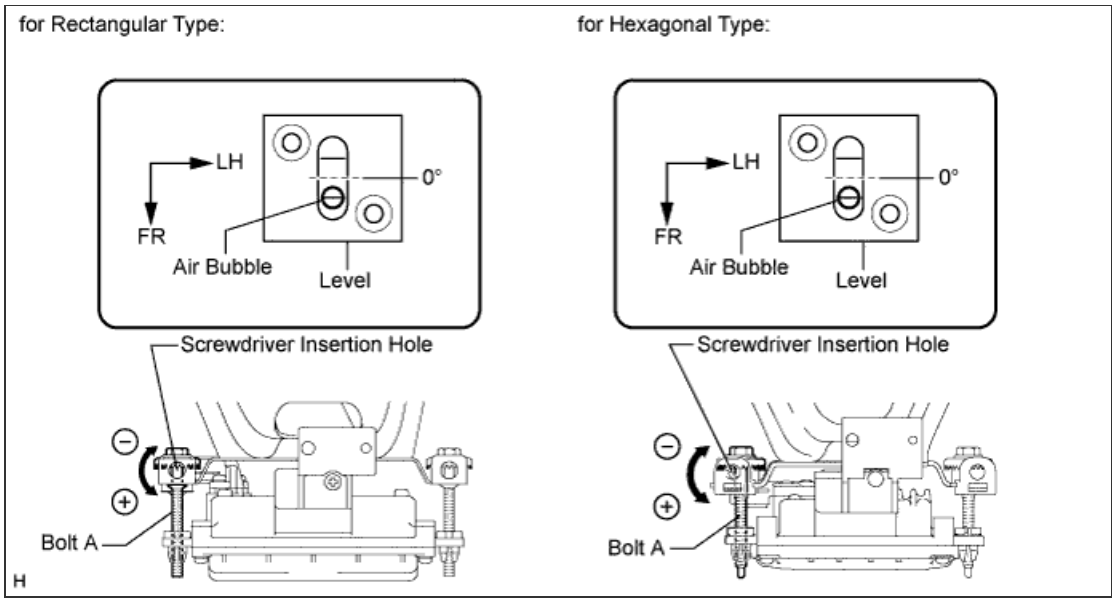
HINT:

When the value is reset, the buzzer will sound for 10 seconds, a distance value between 0 and 6.3° and a right side value between 0 and 6.3 m (20.7 ft.) will be displayed on the screen.



iv. Continue the procedure according to the display to complete the beam axis adjustment.

v. Disconnect the intelligent tester from the vehicle.



h. Reconfirm the vertical direction.

i. Set a level for use with the sensor in the center of the level rack of the millimeter wave radar sensor assembly.

ii. Using a screwdriver, adjust the sensor by turning the vertical adjusting bolt of the millimeter wave radar sensor assembly (bolt A) until the air bubble is centered on the red line of the level as shown in the illustration.

Standard:
0.2° upward

HINT:

The adjustable range within the red frame of the level is +/-0.2°.

Vertical adjustment	• Upward direction: Turn bolt A in minus direction • Downward direction: Turn bolt A in plus direction	For 1 complete turn of screwdriver, sensor moves about 0.12°

2. DRIVE TEST

a. Perform the drive test.

NOTICE:

- **Be sure to perform the driving test after adjusting the millimeter wave radar sensor assembly.**
- **Be careful when driving.**

i. Drive at 30 km/h (19 mph) on a straight road with good visibility while staying in the center of the lane.

NOTICE:

Because the pre-crash safety system may activate under the following conditions, avoid conditions like these when performing the test.

- **There are objects on the side of the road at the beginning of a curve.**
- **Passing an oncoming vehicle on a curve.**
- **Crossing a narrow metal bridge.**
- **There are metal objects on the road surface.**
- **There is an oncoming vehicle when turning right.**
- **Rapidly approaching a vehicle driving in front.**

ii. On a straight road, when passing an oncoming vehicle with no danger of collision, check that the master warning does not illuminate and that the buzzer does not sound. At the same time, check that "BRAKE!" is not displayed on the display in the combination meter.

iii. If "BRAKE!" is displayed, perform the millimeter wave radar sensor assembly adjustment again.

HINT:

- **Check the installation condition of the millimeter wave radar sensor assembly.**
- **Check that the pre-crash safety brake switch is not pushed in.**

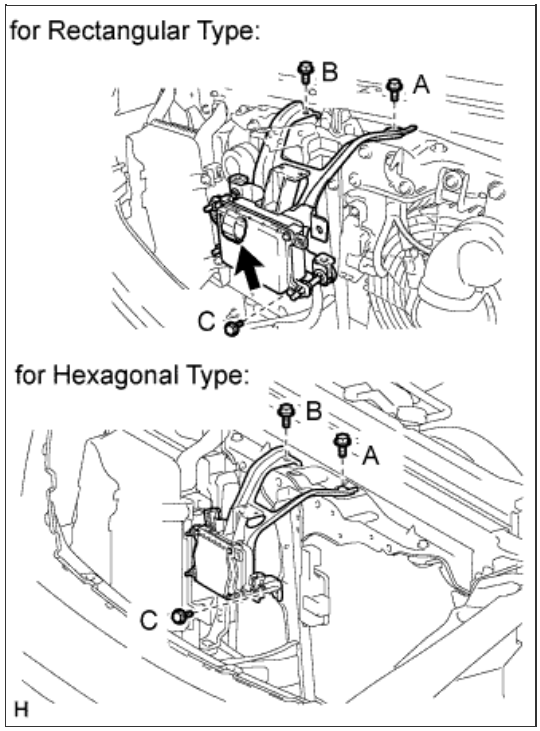
for Preparation Click here

HINT:

- **Use the same procedures for LHD and RHD vehicles.**
- **The procedures listed below are for LHD vehicles.**

1. INSTALL MILLIMETER WAVE RADAR SENSOR ASSEMBLY

a. Temporarily install the millimeter wave radar sensor assembly with the 3 bolts.



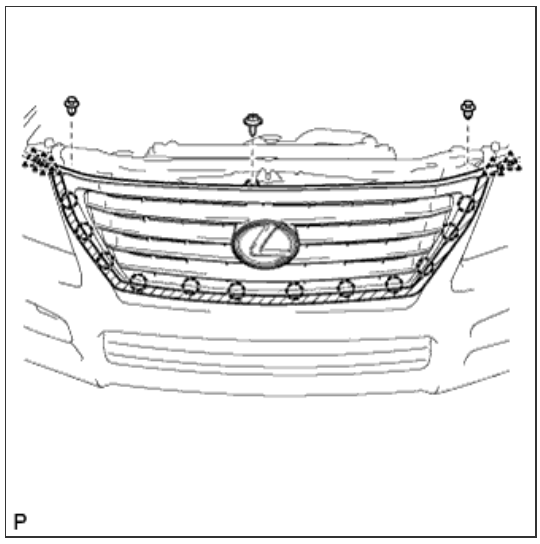
b. Tighten the 3 bolts in alphabetical order.

Torque:
5.5 N*m{ 56 kgf*cm , 49 in.*lbf }

c. Connect the sensor connector.

NOTICE:

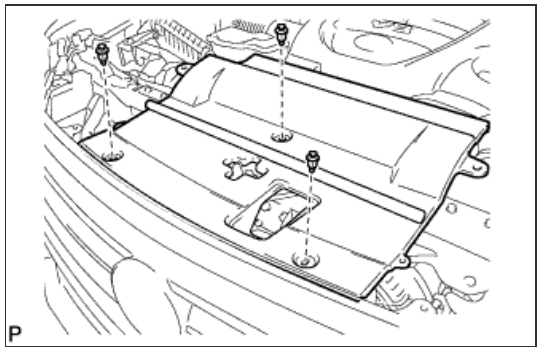
Do not use a sensor which has been dropped or subjected to any strong shocks.



2. INSTALL RADIATOR GRILLE ASSEMBLY

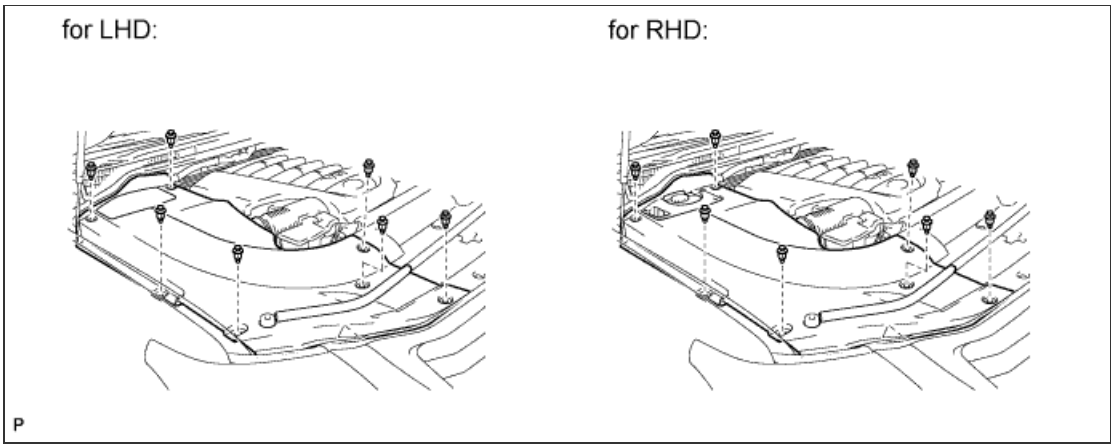
a. w/ Wide View Front Monitor System:
Connect the connector.

b. Attach the 12 claws to install the radiator grille.



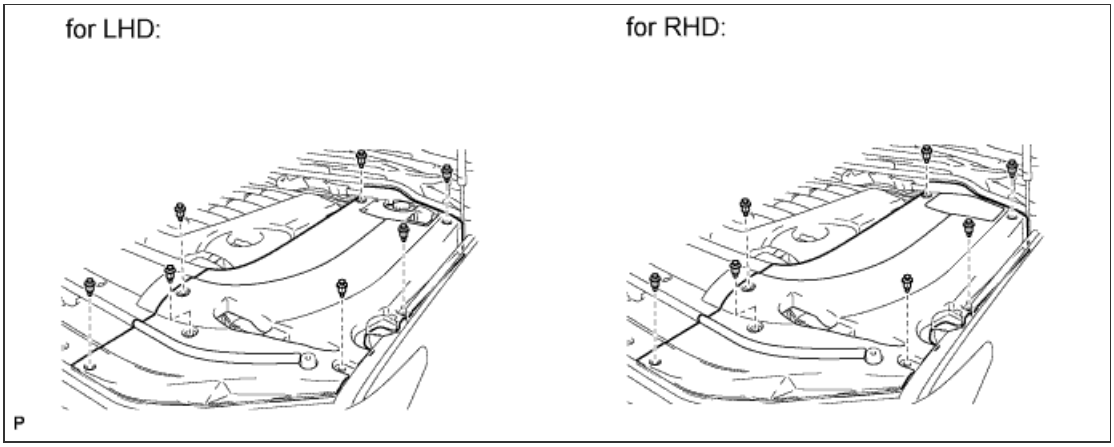
c. Attach the 5 clips to install the detached part of the upper radiator seal.

d. Install the screw and 2 clips.



3. INSTALL UPPER RADIATOR SUPPORT SEAL

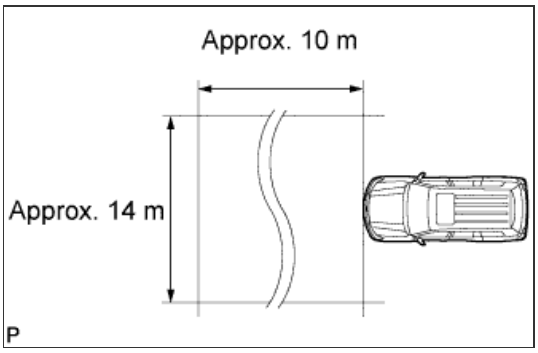
a. Install the upper radiator support seal with the 3 clips.



4. INSTALL ENGINE ROOM SIDE COVER RH

a. Install the engine room side cover with the 7 clips.

5. INSTALL ENGINE ROOM SIDE COVER LH



a. Install the engine room side cover with the 7 clips.

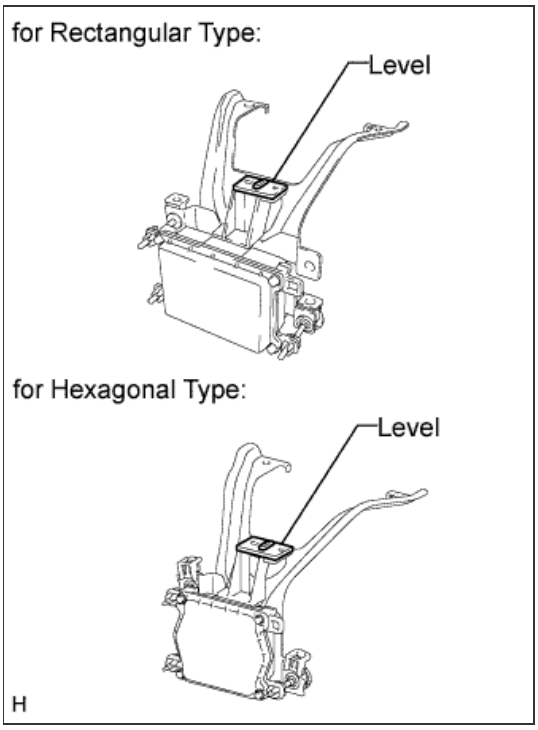
6. ADJUST MILLIMETER WAVE RADAR SENSOR ASSEMBLY

NOTICE:

- **Perform measurements on a level surface.**
- **Make sure that there are no metal objects on the ground or within a 10 m (32.8 ft.) x 14 m (45.9 ft.) area in front of the vehicle. If possible, the surrounding area should also be free of large metal objects.**

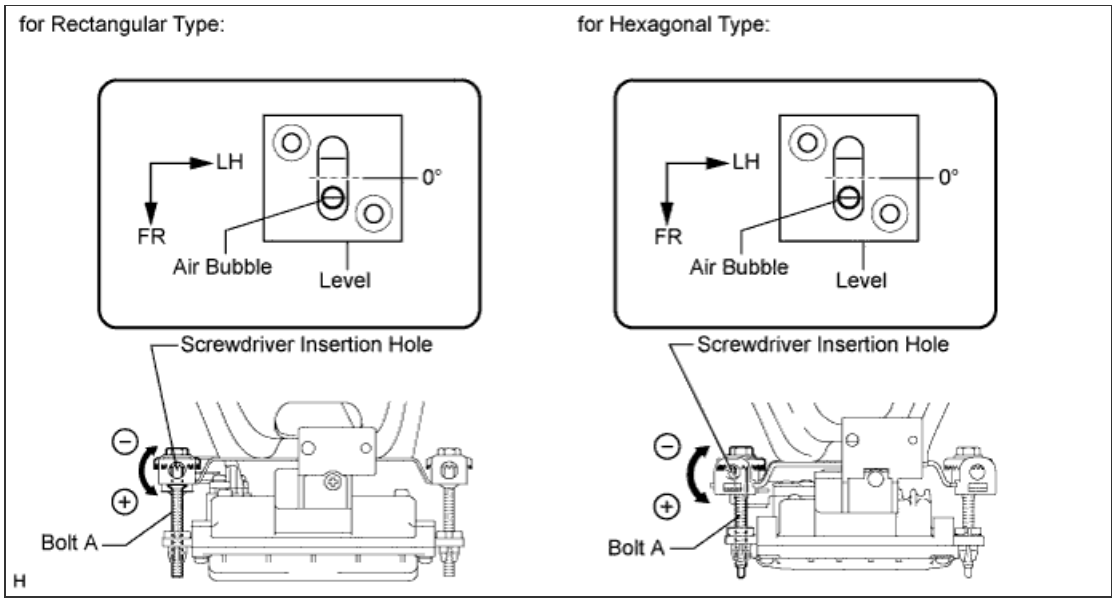
a. Before adjusting, perform the following:

i. Remove all cargo from the inside of the vehicle.



ii. Adjust the tire pressure to the specified value(s).

b. w/ Air suspension:
Adjust the vehicle's height to the standard height.

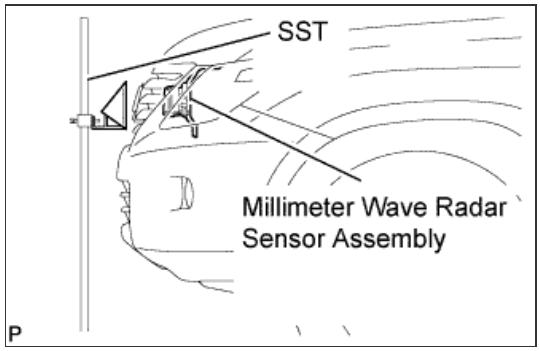


c. Adjust the vertical direction.

i. Remove any dust and oil from the level rack of the millimeter wave radar sensor assembly.

ii. Set a level for use with the sensor in the center of the level rack of the millimeter wave radar sensor assembly.

iii. Using a screwdriver, adjust the sensor by turning the vertical adjusting bolt of the millimeter wave radar sensor assembly (bolt A) until the air bubble is centered on the red line of the level as shown in the illustration.



Standard:
0.2° upward

HINT:

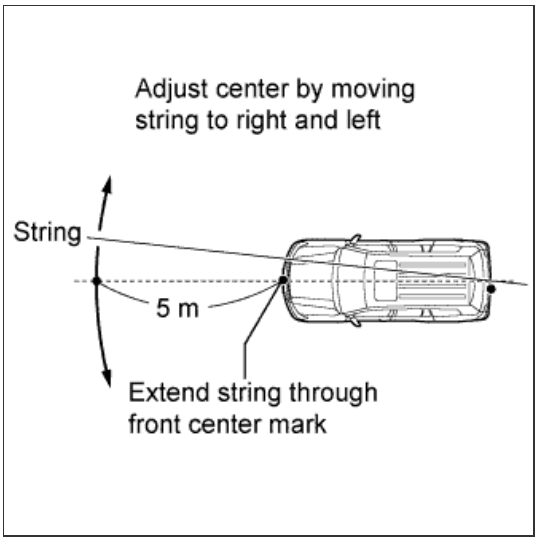
The adjustable range within the red frame of the level is +/-0.2°.

Vertical adjustment	• Upward direction: Turn bolt A in minus direction • Downward direction: Turn bolt A in plus direction	For 1 complete turn of screwdriver, sensor moves about 0.12°

d. Adjust SST (reflector) height.

i. Adjust SST (reflector) so that the center of SST (reflector) is the same height as the millimeter wave radar sensor assembly.

SST
09870-60000 (09870-60010)
09870-60040

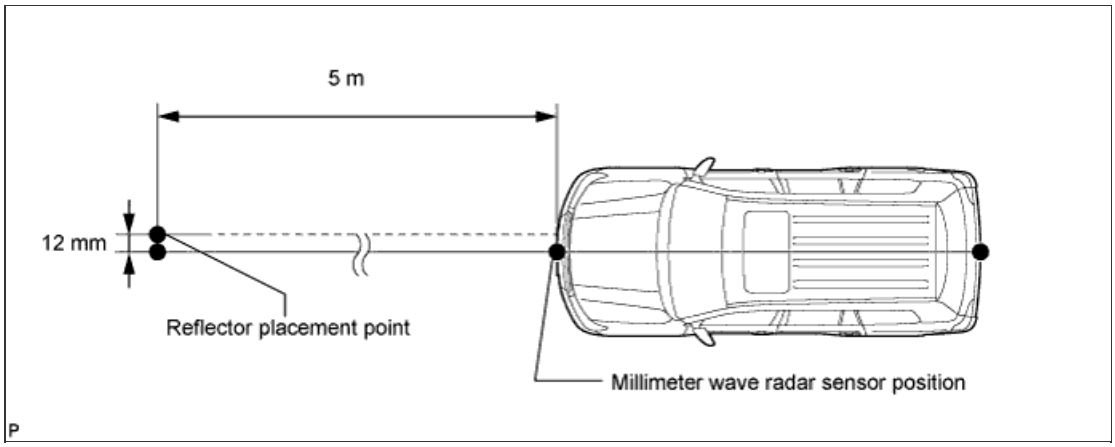


e. Place SST (reflector).

i. Hang a pointed weight from the center of the front and rear bumpers of the vehicle (center of the emblem) and accurately mark the center points on the ground.

ii. Mark a point 5 m (16.4 ft.) in front of the vehicle on the line that connects the front and rear center point marks.

HINT:



Affix one end of a string to the rear center point mark and extend the string 5 m (16.4 ft.) from the front of the vehicle. Move the other end of the string left and right to align the string with the front center point mark and make a straight line.

iii. Place SST at a position 12 mm (0.472 in.) from the marked position, to the right of the vehicle.

NOTICE:

Perform the operation as precisely as possible.

f. Adjust the beam axis.

i. Connect the intelligent tester to the DLC3.

ii. Turn the engine switch on (IG).

iii. Turn the intelligent tester main switch ON, and turn the cruise control main switch ON.

iv. Select "Radar Cruise" from the display screen.

HINT:

A buzzer will sound for 1 second.

v. Select "Utility" from the display screen.

vi. Select "Beam Axis Adjustment" from the display screen.

vii. Follow the tester display, and continue with the adjustment.

viii. Intelligent tester

NOTICE:

- **Turn the cruise control main switch ON before pressing Next.**
- **Make sure there is at least 20 cm (7.9 inches) between the radar sensor and any nearby individuals.**

CAUTION:

Do not come within 20 cm (7.9 inches) of the radar sensor.

ix. Check the following items on the laser cruise divergence data screen.

CAUTION:

While using the intelligent tester's beam axis adjustment mode, the actual direction and angle of the radar sensor may be different from the intelligent tester's data. In such a case, the deviation is displayed on the combination meter's multi-information display.

1. Confirm that the distance value is approximately 5 m (16.41 ft.).

   HINT:

   - **A value between 0.0 and 6.3 m (20.67 ft.) is indicated.**
   - **If the distance is 0 m (0 ft.), the sensor cannot detect the target. Reconfirm that there is no metal in the specified area in front of the vehicle (refer to the NOTICE at the beginning of this adjustment procedure).**

2. Confirm that the left/right side value is between 0.0 and 6.3.

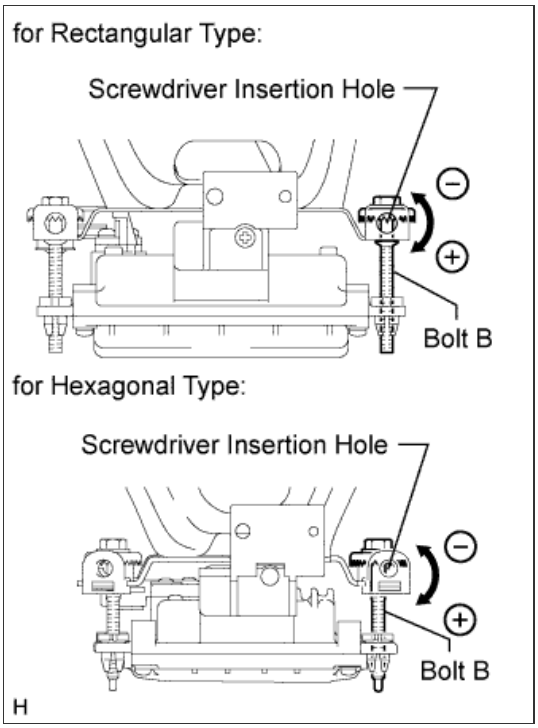
   HINT:

   If the distance is 0 m (0 ft.), the sensor cannot detect the target. Reconfirm that there is no metal in the specified area in front of the vehicle (refer to the NOTICE at the beginning of this adjustment procedure).

g. Adjust the horizontal direction.

i. Read the current amount of angle deviation.

Standard:
0° (Both left and right)



ii. Based on the results of the beam axis deviation measurement, using a screwdriver, adjust the sensor by turning the horizontal adjusting bolt of the millimeter wave radar sensor assembly (bolt B).

for Rectangular Type:

Horizontal adjustment	• Right direction: Turn bolt B in plus direction • Left direction: Turn bolt B in minus direction	For 1 complete turn of screwdriver, sensor moves about 0.05°

for Hexagonal Type:

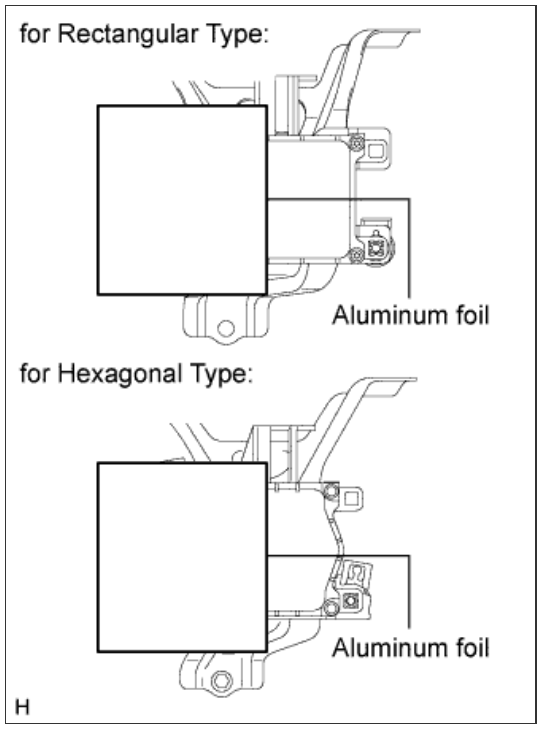
Horizontal adjustment	• Right direction: Turn bolt B in plus direction • Left direction: Turn bolt B in minus direction	For 1 complete turn of screwdriver, sensor moves about 0.07°

NOTICE:

If it is difficult to reach a value of 0°, it is possible that the sensor is targeting an object other than SST. Reconfirm that there are no reflective objects in the surrounding area.

iii. Because the driving learned value will be reset, cover the left half of the sensor with aluminum foil or equivalent (a metal material that blocks electric waves) for a period of approximately 10 seconds.

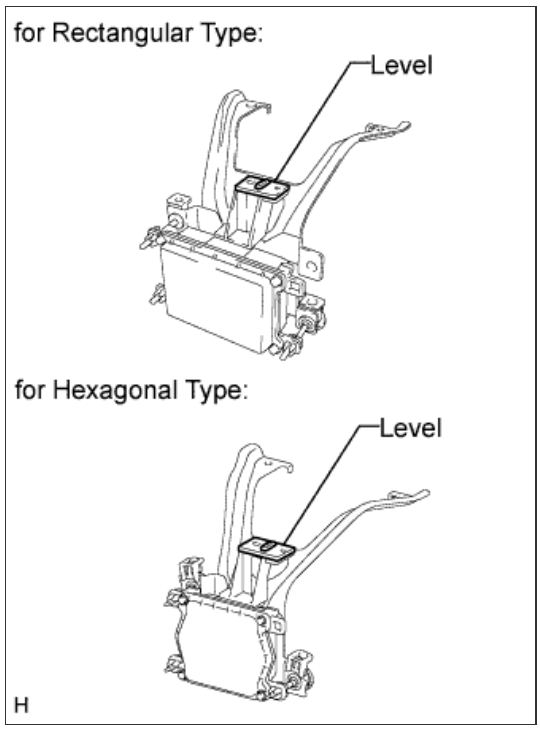
NOTICE:



At this time, leave SST in place and make sure there are no objects between the right half of the sensor and the reflector.

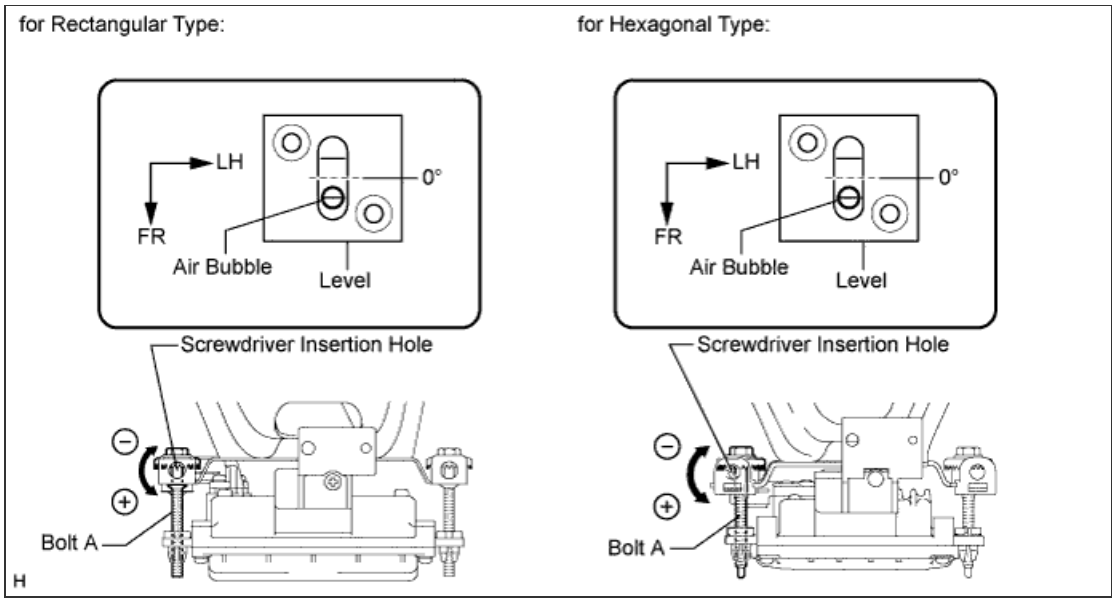
HINT:

When the value is reset, the buzzer will sound for 10 seconds, a distance value between 0 and 6.3° and a right side value between 0 and 6.3 m (20.7 ft.) will be displayed on the screen.



iv. Continue the procedure according to the display to complete the beam axis adjustment.

v. Disconnect the intelligent tester from the vehicle.



h. Reconfirm the vertical direction.

i. Set a level for use with the sensor in the center of the level rack of the millimeter wave radar sensor assembly.

ii. Using a screwdriver, adjust the sensor by turning the vertical adjusting bolt of the millimeter wave radar sensor assembly (bolt A) until the air bubble is centered on the red line of the level as shown in the illustration.

Standard:
0.2° upward

HINT:

The adjustable range within the red frame of the level is +/-0.2°.

Vertical adjustment	• Upward direction: Turn bolt A in minus direction • Downward direction: Turn bolt A in plus direction	For 1 complete turn of screwdriver, sensor moves about 0.12°

7. PERFORM DRIVE TEST

a. Perform the drive test.

NOTICE:

- **Be sure to perform the driving test after adjusting the millimeter wave radar sensor assembly.**
- **Be careful when driving.**

i. Drive at 30 km/h (19 mph) on a straight road with good visibility while staying in the center of the lane.

NOTICE:

Because the pre-crash safety system may activate under the following conditions, avoid conditions like these when performing the test.

- **There are objects on the side of the road at the beginning of a curve.**
- **Passing an oncoming vehicle on a curve.**
- **Crossing a narrow metal bridge.**
- **There are metal objects on the road surface.**
- **There is an oncoming vehicle when turning right.**
- **Rapidly approaching a vehicle driving in front.**

ii. On a straight road, when passing an oncoming vehicle with no danger of collision, check that the master warning does not illuminate and that the buzzer does not sound. At the same time, check that "BRAKE!" is not displayed on the display in the combination meter.

iii. If "BRAKE!" is displayed, perform the millimeter wave radar sensor assembly adjustment again.

HINT:

- **Check the installation condition of the millimeter wave radar sensor assembly.**
- **Check that the pre-crash safety brake switch is not pushed in.**
