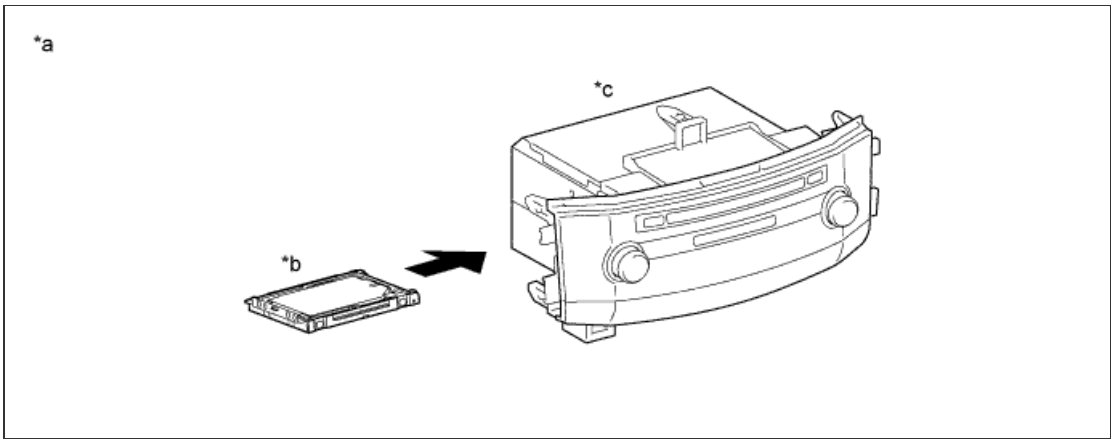
## 1.PRECAUTION FOR DISCONNECTING CABLE FROM NEGATIVE BATTERY TERMINAL

**NOTICE:**



After the engine switch is turned off, the multi-media module receiver assembly records various types of memory and settings. As a result, after turning the engine switch off, be sure to wait for the time specified in the following table before disconnecting the cable from the negative (-) battery terminal.

**Waiting Time before Disconnecting Cable from Negative (-) Battery Terminal**

| Condition | Waiting Time |
|---|---|
| Vehicle enrolled in G-BOOK system | 6 minutes |
| Vehicle not enrolled in G-BOOK system | 1 minute |

## 2.PRECAUTIONS FOR MULTI-MEDIA MODULE RECEIVER ASSEMBLY

a. An HDD is built into the multi-media module receiver assembly to store map and other data, and is used for the audio and visual system. Therefore, care must be taken for the following points when handling:

**Text in Illustration**

| | | | |
|---|---|---|---|
| *a | Example | *b | Hard Disc |
| *c | Multi-media Module Receiver Assembly | - | - |

i. When it is necessary to replace the multi-media module receiver assembly, be sure to replace it with a new one.

**NOTICE:**

If a used multi-media module receiver assembly is installed as a replacement part, the customer's HDD will not be recognized.

ii. Do not apply any vibration or shock to the multi-media module receiver assembly.

**NOTICE:**

- **Do not drop or subject the multi-media module receiver assembly to severe impacts.**
- **Do not use the multi-media module receiver assembly if it has been dropped or subjected to a severe impact.**
- **Do not store the multi-media module receiver assembly without the HDD installed (Only remove the HDD from the multi-media module receiver assembly when the replacement multi-media module receiver assembly or HDD is ready.).**

iii. Do not remove the multi-media module receiver assembly if there is a risk that condensation may occur.

**NOTICE:**

If the temperature of the multi-media module receiver assembly changes rapidly, condensation may occur inside the unit. This may cause a malfunction of the HDD. Therefore, when the multi-media module receiver assembly is removed from the

instrument panel, it needs to be kept inside the vehicle or in an environment with an equivalent temperature and humidity.

iv. Take measures to prevent static electricity.

**NOTICE:**

Touching the terminals of a connector can cause static electricity to be transmitted to the internal circuits. This may cause a malfunction of the HDD.

v. Keep the multi-media module receiver assembly away from magnets or magnetized items.

**NOTICE:**

Keep the multi-media module receiver assembly away from speakers, motors, magnetized tools and other magnetic items.

## 3.PRECAUTIONS FOR HARD DISK DRIVE (HDD)

a. Map and other data for the navigation system is stored on the Hard Disk Drive (HDD). Make sure to follow the following instructions when replacing the HDD:

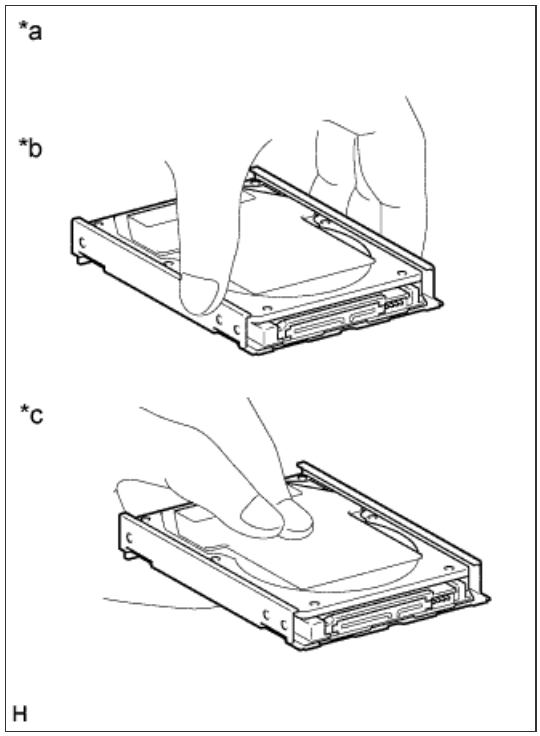
**NOTICE:**

Data downloaded by the customer may be stored on the HDD. This data will be lost when the HDD is replaced. Make sure to warn the customer that their data will be lost and obtain their consent prior to replacing the HDD.

i. The HDD must only be replaced with a new one. Do not attempt to install a used HDD from another vehicle.

**NOTICE:**

The multi-media module receiver assembly can recognize only a new HDD.



ii. Do not touch the HDD cover.

**NOTICE:**

When removing or installing the HDD, only hold it by the areas shown in the illustration.

**Text in Illustration**

| | |
|---|---|
| *a | Example |
| *b | CORRECT |
| *c | INCORRECT |

iii. Do not apply any vibration or shock to the HDD.

**NOTICE:**

- **Do not drop or subject the HDD to severe impacts.**
- **Do not use the HDD if it has been dropped or subjected to a severe impact.**
- **Do not store the HDD by itself if it has been removed from the multi-media module receiver assembly (Only remove the HDD from the multi-media module receiver assembly when the replacement multi-media module receiver assembly or HDD is ready.).**

iv. Do not remove the HDD if there is a risk that condensation may occur.

**NOTICE:**

If the temperature of the HDD changes rapidly, condensation may occur inside the unit. This may cause a malfunction of the HDD. Therefore, when the multi-media module receiver assembly is removed from the instrument panel, it needs to be kept inside the vehicle or in an environment with an equivalent temperature and humidity.

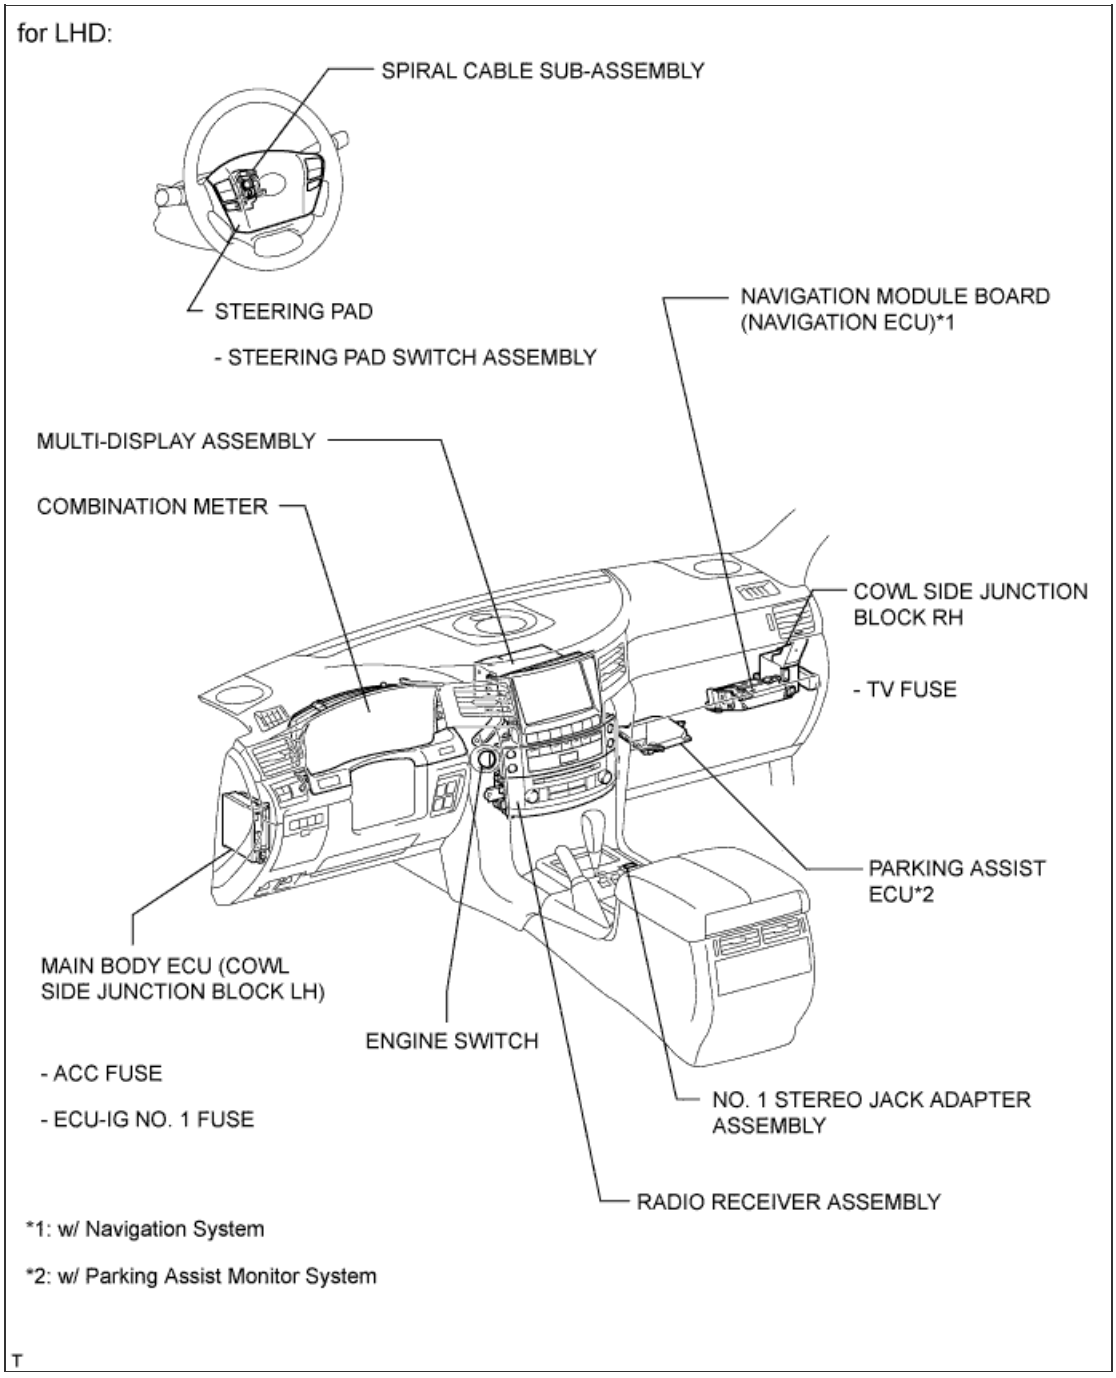
v. Take measures to prevent static electricity.

**NOTICE:**

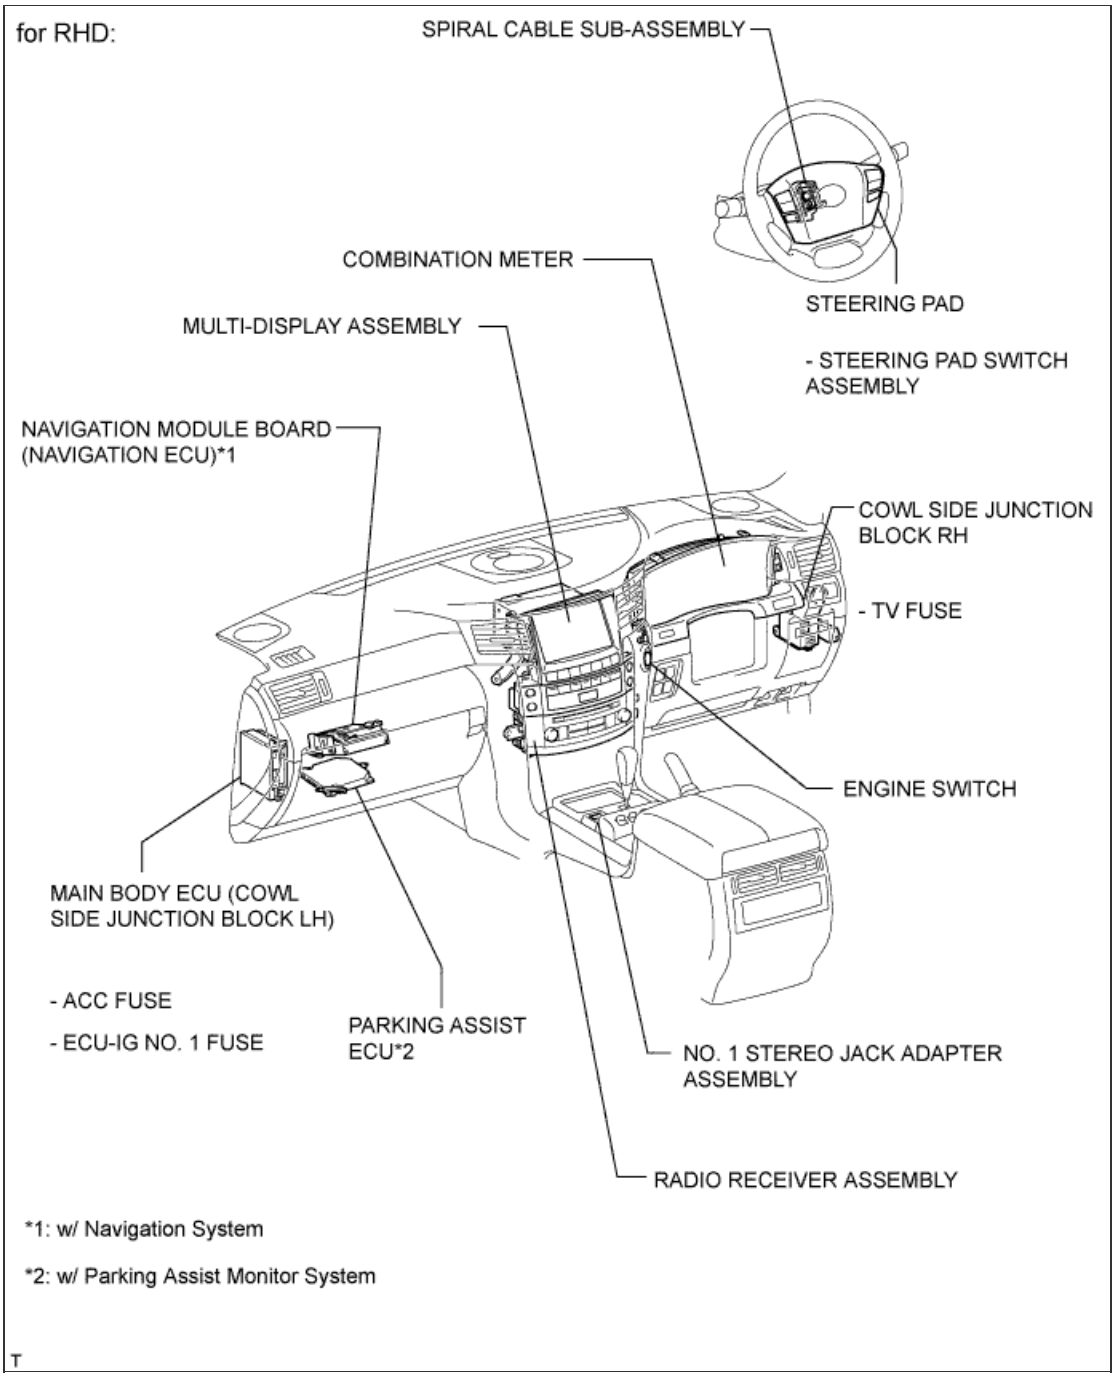
Touching the terminals of a connector can cause static electricity to be transmitted to the internal circuits. This may cause a malfunction of the HDD.

vi. Keep the HDD away from magnets or magnetized items.

**NOTICE:**

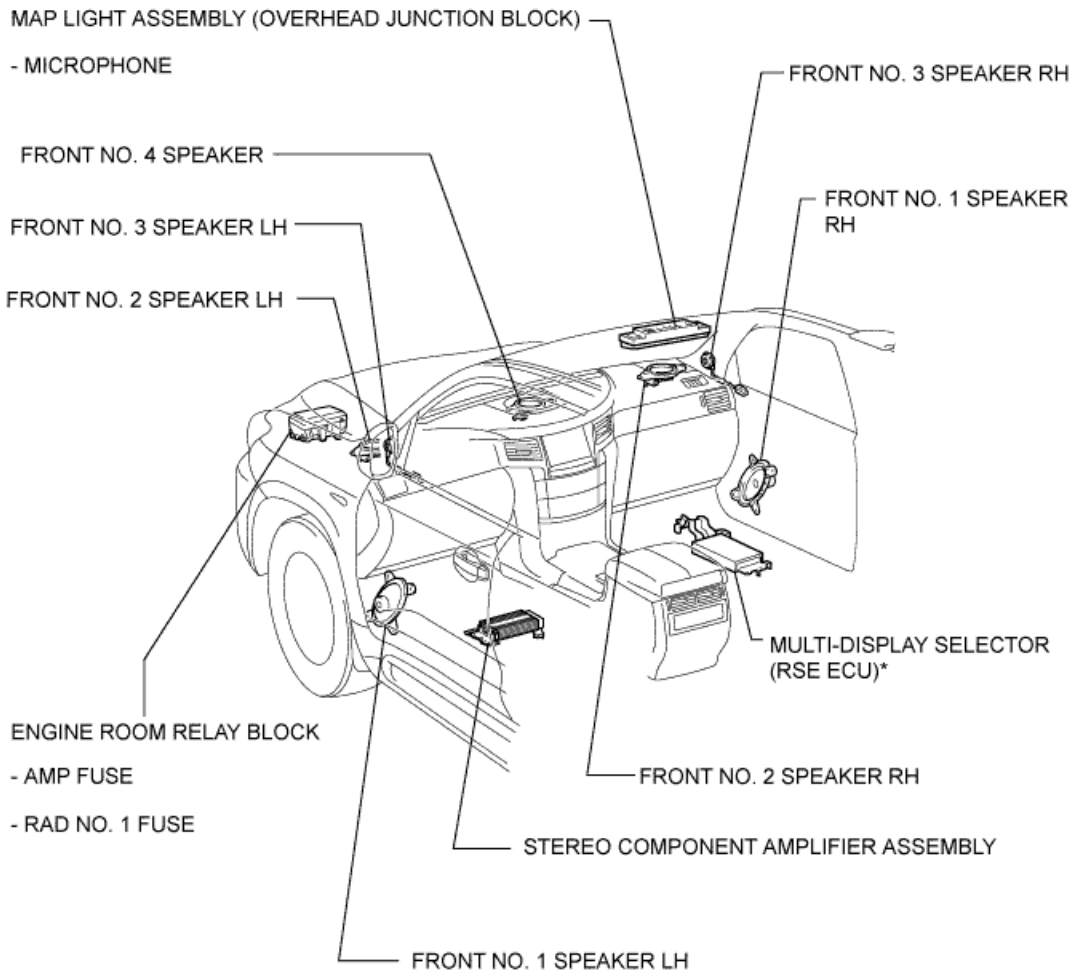


Keep the HDD away from speakers, motors, magnetized tools and other magnetic items.



vii. Inspect after HDD replacement.

**NOTICE:**



Make sure to perform "Check Hard Disk Drive" in Operation Check to confirm that there are no HDD abnormalities after removal or installation (Click here).

## DISC PLAYER OUTLINE

a. A disc player uses a laser pickup to read digital signals recorded on discs. By converting the digital signals to analog, music and other content can be played.

**CAUTION:**

Do not look directly at the laser pickup because the disc player uses an invisible laser beam. Be sure to operate the player only as instructed.

**NOTICE:**

- **Do not disassemble any part of the disc player.**
- **Do not apply oil to the disc player.**
- **Do not insert anything but a disc into the disc player.**

b. Usable discs

i. Disc player
This player can only play audio CDs, CD-Rs (CD-Recordable), CD-RWs (CD-ReWritable), DVD videos, audio DVDs, and video CDs that have any of the following marks:

H

c. Precautions for handling disc

**NOTICE:**

- **Copy-controlled CDs cannot be used.**
- **Some CD-Rs and CD-RWs are not playable as a result of: 1) the type of recording method used, 2) the type of disc, 3) scratches, 4) contamination, or 5) the disc being in the vehicle for an extended amount of time, leading to deterioration.**
- **CD-Rs and CD-RWs that have not been finalized cannot be played.**
- **PAL or SECAM color television standard discs cannot be played. Only NTSC discs can be played.**
- **DualDiscs that mate DVD recorded material on one side with CD digital audio material on the other cannot be played.**
- **When handling a disc, be careful not to put fingerprints, stains or scratches on the disc.**
- **When holding a disc, pinch the center hole and edge of the disc with your fingers. Face the printed side upward.**
- **If a disc is ejected by pressing the eject button and left partially ejected for an extended period of time, the disc may become deformed and unusable.**
- **A disc may not be able to be ejected or the player may become damaged if: 1) cellophane tape, stickers, CD-R labels or rental CD labels are attached; or 2) residue from removed tape, stickers or labels remains.**
- **Avoid direct sunlight when storing discs as they may become deformed and unusable.**
- **Do not use uniquely-shaped discs as they may damage the player.**
- **Do not use discs where part of the recording surface is transparent or translucent. If used, the disc may become unable to be inserted, ejected and played normally.**

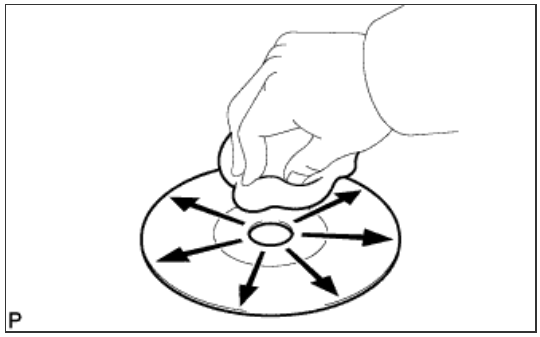
**HINT:**

- **Just as condensation fogs the vehicle windows during wet or cold weather, condensation may also form inside the**

**player. If condensation forms, disc skipping or playback stoppage may occur. Ventilate or dehumidify the vehicle for a while before using the player.**

- **If the player vibrates severely due to driving on a rough road, the disc may skip.**

d. Cleaning



**NOTICE:**

Do not use lens cleaner when cleaning the player, as it may damage the pickup part of the player.

i. To clean dirty discs, use a dry, soft cloth such as those used for glasses with plastic lenses.
Lightly wipe radially from the center of the disc.

**NOTICE:**

- **Pressing the disc roughly with your hand or scrubbing with a hard cloth may scratch the disc surface.**
- **Using record spray, antistatic agents, alcohol, benzene, thinner or other solvents, and chemical cloths on a disc will damage the disc and may make the disc unusable.**

## MP3/WMA OUTLINE

**HINT:**

Audio and visual systems of some vehicles do not support the WMA format.

a. Playable MP3 file standards

| | |
|---|---|
| Compatible standard | MP3 (MPEG1 LAYER3, MPEG2 LSF LAYER3) |
| Compatible sampling frequency | • MPEG1 LAYER3: 32, 44.1, 48 (kHz)<br>• MPEG2 LSF LAYER3: 16, 22.05, 24 (kHz) |
| Compatible bit rate | • MPEG1 LAYER3: 64, 80, 96, 112, 128, 160, 192, 224, 256, 320 (kbps)<br>• MPEG2 LSF LAYER3: 64, 80, 96, 112, 128, 144, 160 (kbps)<br>• Compatible with VBR |
| Compatible channel mode | Stereo, joint stereo, dual channel, monaural |

b. Playable WMA file standards

| | |
|---|---|
| Compatible standard | WMA Ver. 7, 8, and 9 |
| Compatible sampling frequency | 32, 44.1, 48 (kHz) |
| Compatible bit rate | • Ver. 7, 8: CBR48, 64, 80, 96, 128, 160, 192 (kbps)<br>• Ver. 9: CBR48, 64, 80, 96, 128, 160, 192, 256, 320 (kbps)<br>• Compatible with playback of channel 2 only |

c. ID3 tag and WMA tag

i. Additional textual information called ID3 tags can be input to MP3 files. Information such as song titles and artist names can be stored.

**HINT:**

This player is compatible with the ID3 tags of ID3 Ver. 1.0 and 1.1, and ID3 Ver. 2.2 and 2.3. (Number of characters complies with ID3 Ver. 1.0 and 1.1).

ii. Additional textual information called WMA tags can be input to WMA files. Information such as song titles and artist names can be stored.

d. Usable media

i. Only CD-ROMs, CD-Rs (CD-Recordable), and CD-RWs (CD-ReWritable) can be used to play MP3/WMA files.

**NOTICE:**

- **CD-Rs and CD-RWs are more easily affected by a hot and humid environment than discs used for normal audio CDs. For this reason, some CD-Rs and CD-RWs may not be playable.**
- **If there are fingerprints or scratches on the disc, the disc may not be playable or the CD may skip.**
- **Some CD-Rs and CD-RWs deteriorate if they are left in the cabin for a long time.**
- **Keep CD-Rs and CD-RWs in a storage case that is non-transparent.**

e. Usable media format

i. Usable media format

| | |
|---|---|
| Disc format | CD-ROM Mode 1, CD-ROM XA Mode 2 Form1 |
| File format | ISO9660 Level 1 and Level 2 (Joliet, Romeo) |

**HINT:**

- **As for MP3/WMA files written in any format other than those above, the contents of the files may not be playable or the file names or folder names may not be displayed correctly.**
- **This player is compatible with multi-session discs and can play CD-Rs and CD-RWs on which MP3/WMA files are added. However, only the first session can be played.**
- **Discs whose first session includes both music data and MP3 or WMA format data cannot be played.**

ii. Standards and restrictions

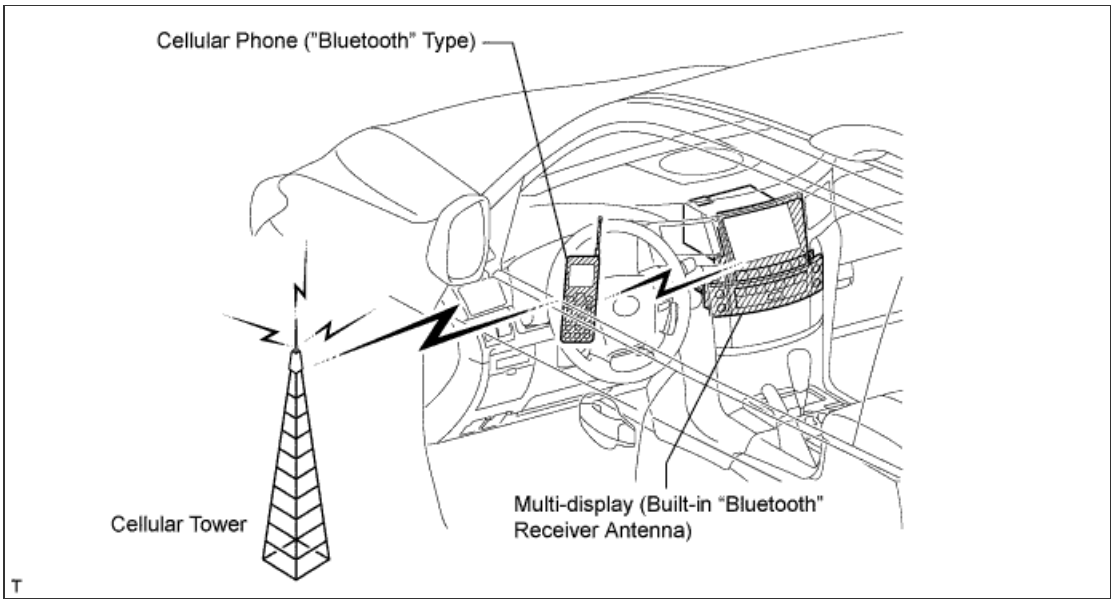
| | |
|---|---|
| Maximum directory levels | 8 levels |
| Maximum number of characters for a folder name/file name | 32 characters |
| Maximum number of folders | 192 (Including empty folders, root folders, and folders that do not contain MP3/WMA files) |
| Maximum number of files in a disc | 255 (Including non-MP3/WMA files) |

f. File names

i. Only files with an extension of ".mp3" or ".wma" can be recognized and played as MP3 or WMA files.

ii. Save MP3 or WMA files with an extension of ".mp3" or ".wma".

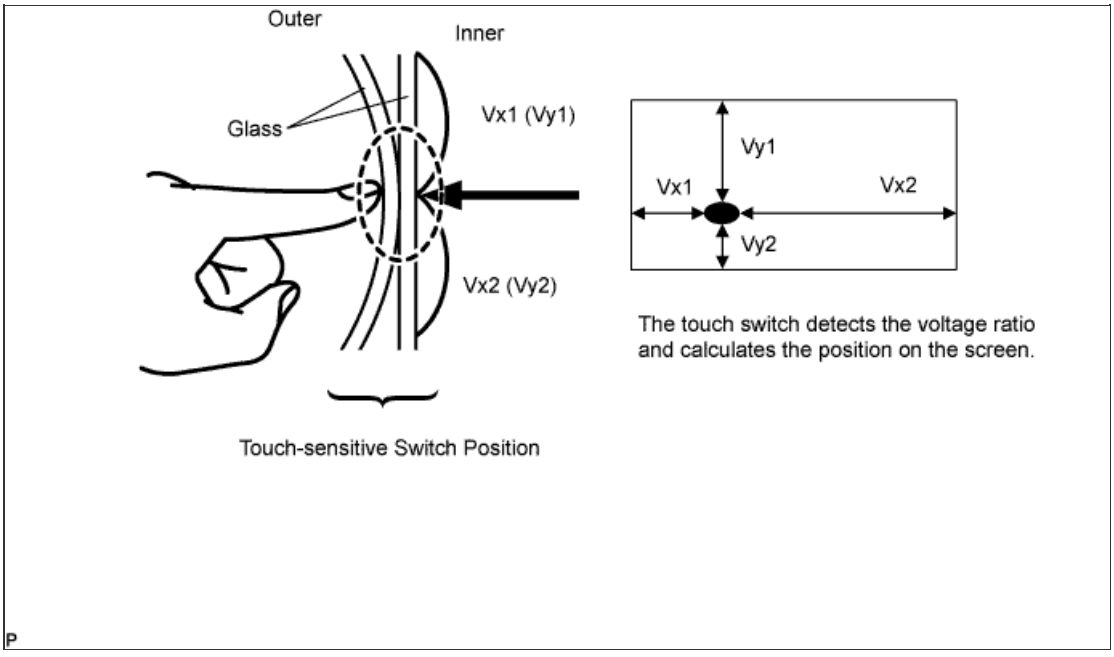
**NOTICE:**



If saving non-MP3 or non-WMA files with an extension of ".mp3" or ".wma", those files are wrongly recognized as MP3 or WMA files and played. A loud noise may occur and damage to the speakers may result.

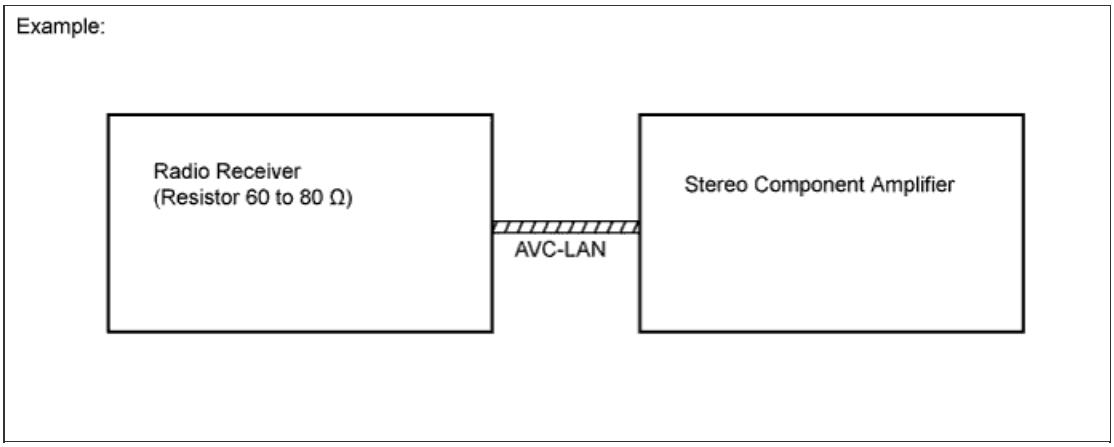
## "BLUETOOTH" OUTLINE

a. "Bluetooth" is a new wireless connection technology that uses the 2.4 GHz frequency band. This makes it possible to connect a cellular phone ("Bluetooth" capable phone*) to the multi-display ("Bluetooth" system is built-in), and use a handsfree function with the cellular phone in a pocket or bag. As a result, it is not necessary to use a connector for the cellular phone.



**HINT:**

*: The communication performance of "Bluetooth" may vary depending on the "Bluetooth" version, obstructions or radio wave conditions between communication devices, electromagnetic radiation, communication device sensitivity, or antenna capacity.



## TOUCH SCREEN OUTLINE

a. Touch switch
Touch switches are touch-sensitive (interactive) switches operated by touching the screen. When a switch is pressed, the outer glass bends into contact the inner glass at the pressed position. By doing this, the voltage ratio is measured and the pressed position is detected.

## AVC-LAN DESCRIPTION

a. What is AVC-LAN?
AVC-LAN, an abbreviation for "Audio Visual Communication Local Area Network", is a united standard developed by the manufacturers in affiliation with Toyota Motor Corporation. This standard pertains to audio and visual signals as well as switch and communication signals.

b. Purpose:
Recently, car audio systems have rapidly developed and the functions have vastly changed. The conventional car audio system is being integrated with multimedia interfaces similar to those in navigation systems. At the same time, customers are demanding higher quality from their audio systems. This is an overview of the standardization background. The specific purposes are as follows:

i. To solve sound problems, etc. caused by using components of different manufacturers through signal standardization.

ii. To allow each manufacturer to concentrate on developing the products they do best. From this, reasonably priced products can be produced.

**HINT:**

- **If a short to +B or short to ground is detected in the AVC-LAN circuit, communication is interrupted and the audio system will stop functioning.**
- **If the audio system (w/ multi-display) is equipped with a navigation system, the multi-display unit acts as the master unit (Click here).**
- **The radio receiver contains a resistor that is necessary to enable communication on the different AVC-LAN circuits.**
- **The car audio system with an AVC-LAN circuit has a diagnostic function.**
- **Each component has a specified number (3-digit) called a physical address. Each function has a number (2-digit) called a logical address.**

## COMMUNICATION SYSTEM OUTLINE

a. Components of the audio system communicate with each other via the AVC-LAN.

b. The master component of the AVC-LAN is a radio receiver with a 60 to 80 Ω resistor. This is essential for communication.

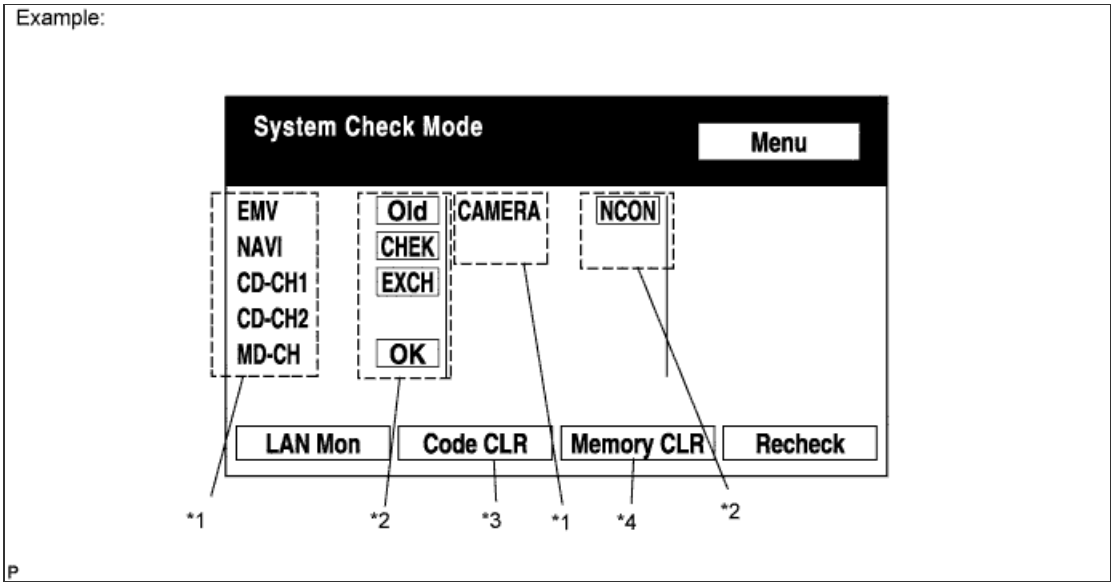
c. If a short circuit or open circuit occurs in the AVC-LAN circuit, communication is interrupted and the audio system will stop functioning.

## DIAGNOSTIC FUNCTION OUTLINE

a. The audio system has a diagnostic function. The result is indicated on the master unit.

b. A 3-digit hexadecimal component code (physical address) is allocated to each component on the AVC-LAN. Using this code, the component can be displayed in the diagnostic function.

## DIAGNOSIS DISPLAY DETAILED DESCRIPTION



**HINT:**

- **This section contains a detailed description of displays within diagnostic mode.**
- **Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be exactly the same as on the actual vehicle.**

a. SYSTEM CHECK

i. System Check Mode Screen

Example:

P

*1: Device Names and Hardware Address

**HINT:**

- **Registered device names are displayed.**
- **If a device name is unknown to the system, its physical address is shown instead.**

| Address No. | Name | Address No. | Name |
|---|---|---|---|
| 110 | EMV | 120 | AVX |
| 128 | 1DIN TV | 140 | AVN |
| 144 | G-BOOK | 178 | NAVI |
| 17C | MONET | 190 | AUDIO H/U |
| 1AC | CAMERA-C | 1B0 | Rr-TV |
| 1C0 | Rr-CONT | 19D | BT-HF |
| 1C4 | PANEL | 1C6 | G/W |
| 1C8 | FM-M-LCD | 1D8 | CONT-SW |
| 1EC | Body | 118 | EMVN |
| 1F1 | XM | 1F2 | SIRIUS |
| 230 | TV-TUNER | 240 | CD-CH2 |
| 250 | DVD-CH | 280 | CAMERA |
| 360 | CD-CH1 | 3A0 | MD-CH |
| 17D | TEL | 440 | DSP-AMP |
| 530 | ETC | 1F6 | RSE |
| 1A0 | DVD-P | 1D6 | CLOCK |
| 238 | DTV | 480 | AMP |

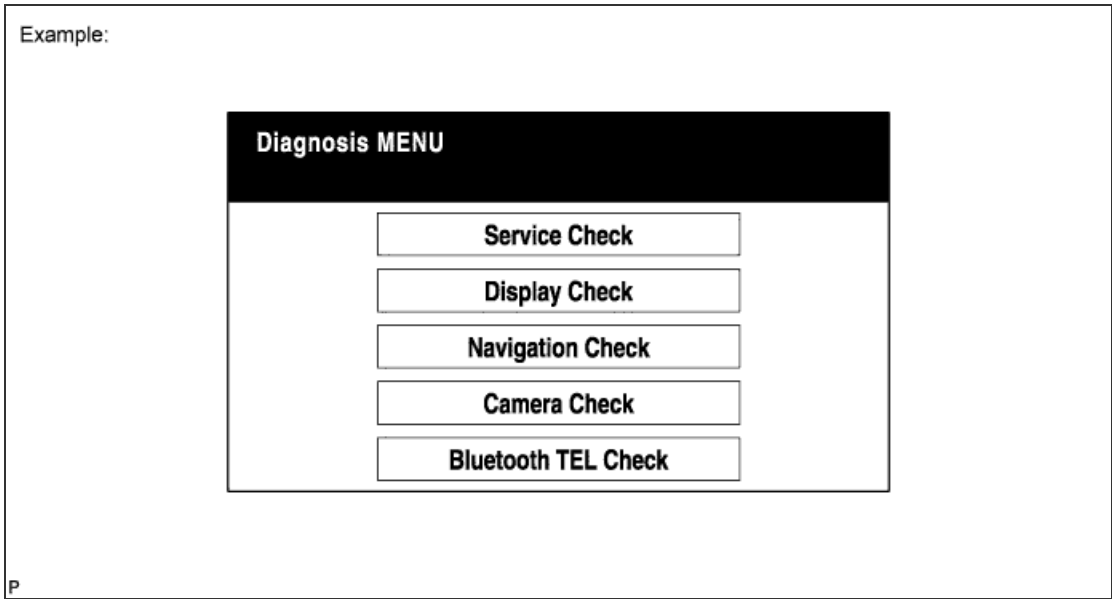
*2: Check Result

**HINT:**

Result codes for all devices are displayed.

| Result | Meaning | Action |
|---|---|---|
| OK | Device did not output DTC (excluding communication DTCs from AVC-LAN). | - |
| EXCH | Device outputs "replace" type DTC. | Look up DTC in "Unit Check Mode" and replace device. |
| CHEK | Device outputs "check" type DTC. | Look up DTC in "Unit Check Mode". |
| NCON | Device was previously present, but does not respond in diagnostic mode. | - Check power supply wire harness of device.<br>- Check AVC-LAN of device. |
| Old | Device outputs "old" type DTC. | Look up DTC in "Unit Check Mode". |

| | | |
|---|---|---|
| NRES | Device responds in diagnostic mode, but outputs no DTC information. | - Check power supply wire harness of device.<br>- Check AVC-LAN of device. |

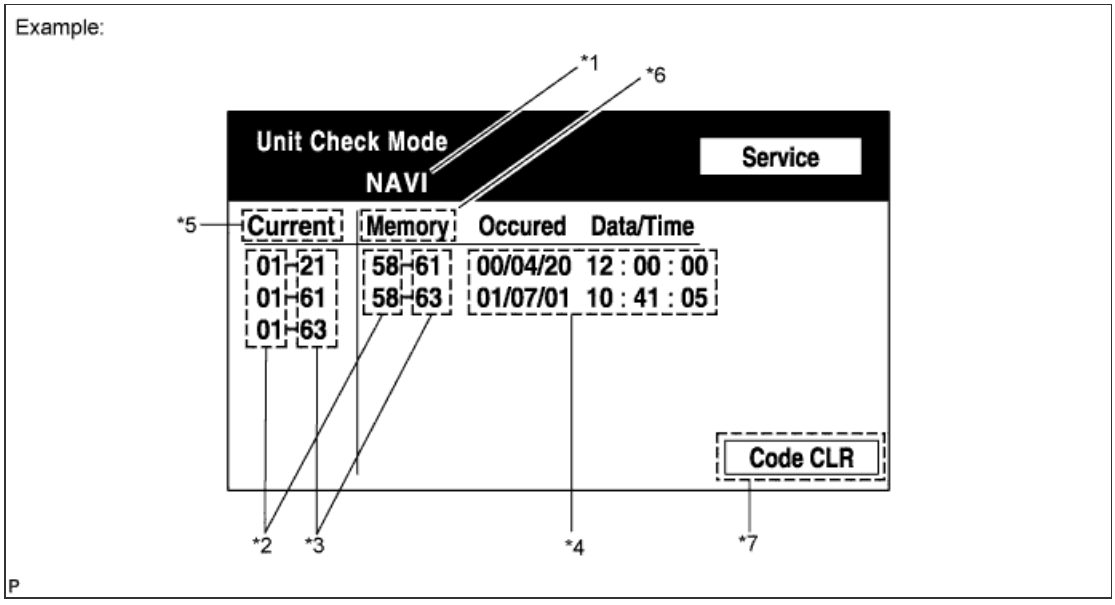


*3: Code Clear

- Present DTCs are cleared.
- Press the "Code CLR" switch for 3 seconds.

*4: Memory Clear

- Present and past DTCs and registered connected device names are cleared.
- Press the "Memory CLR" switch for 3 seconds.

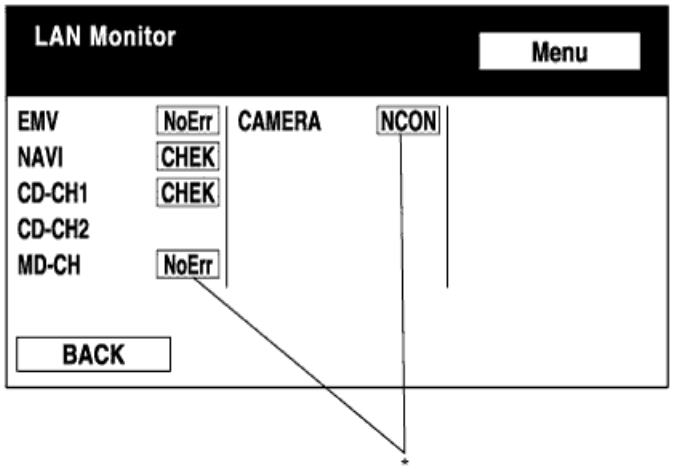


ii. Diagnosis MENU Screen

**HINT:**

Some items may be grayed out or not displayed, as the functions are different depending on the vehicle.

iii. Unit Check Mode Screen



**Screen Description**

| Display | Contents |
|---|---|
| *1: Device name | Target device. |

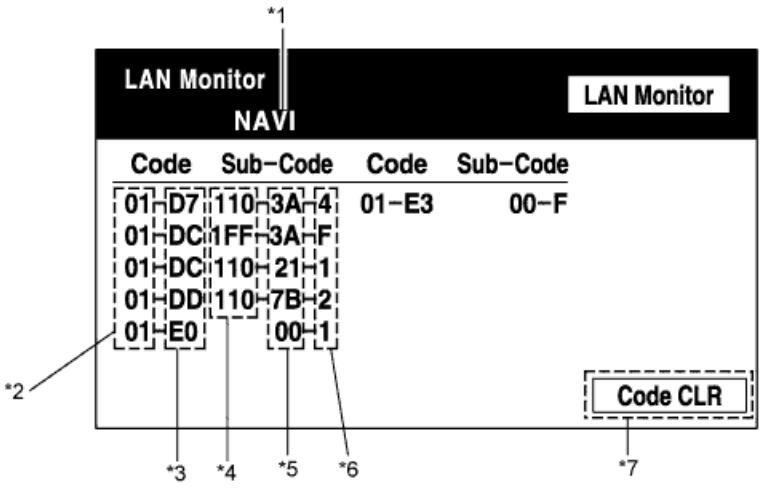
| | |
|---|---|
| *2: Segment | Target device logical address. |
| *3: DTC | DTC (Diagnostic Trouble Code). |
| *4: Timestamp | Time and date of past DTCs are displayed (year is displayed in 2-digit format). |
| *5: Present Code | DTCs output at service check are displayed. |
| *6: Past Code | Diagnostic memory results and stored DTCs are output. |
| *7: Diagnosis Clear Switch | Pushing this switch for 3 seconds clears diagnostic memory data of target device (responses to diagnostic system check result and displayed data are cleared). |

iv. LAN Monitor (Original) Screen

Example:

P

*: Check Result



**HINT:**

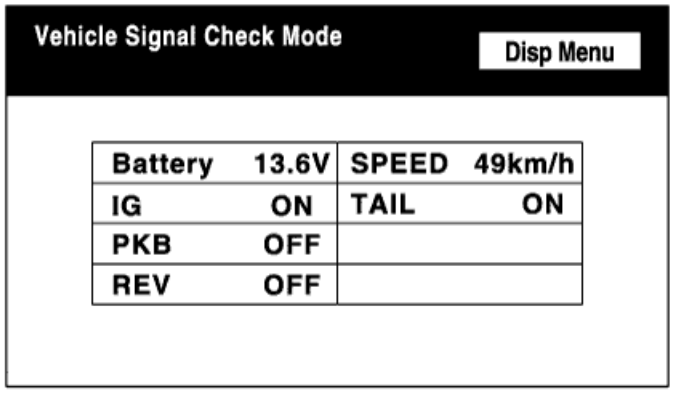
Check results of all the devices are displayed.

| Result | Meaning | Action |
|---|---|---|
| No Err (OK) | There are no communication DTCs. | - |
| CHEK | Device outputs "check" type DTC. | Look up DTC in "Unit Check Mode". |
| NCON | Device was previously present, but does not respond in diagnostic mode. | **1. Check power supply wire harness of device.**<br>**2. Check AVC-LAN of device.** |
| Old | Device outputs "old" type DTC. | Look up DTC in "Unit Check Mode". |
| NRES | Device responds in diagnostic mode, but outputs no DTC information. | **1. Check power supply wire harness of device.**<br>**2. Check AVC-LAN of device.** |

v. LAN Monitor (Individual) Screen

Example:

P



**Screen Description**

| Display | Contents |
|---|---|
| *1: Device name | Target device |
| *2: Segment | Target logical address |
| *3: DTC | DTC (Diagnostic Trouble Code) |
| *4: Sub-code (device address) | Physical address stored with DTC (if there is no address, nothing is displayed) |
| *5: Connection check No. | Connection check number stored with DTC |
| *6: DTC occurrence | Number of times same DTC has been stored |
| *7: Diagnosis Clear Switch | Pushing this switch for 3 seconds clears diagnostic memory data of target device (responses to diagnostic system check result and displayed data are cleared) |

**b.** DISPLAY CHECK

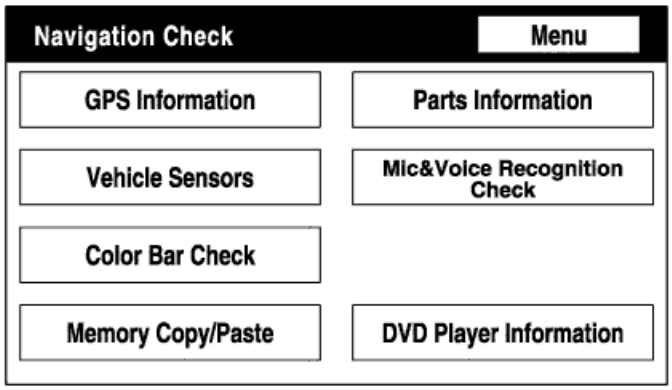
**i.** Vehicle Signal Check Mode Screen

Example:

P

**Screen Description**

| Name | Contents |
|---|---|
| Battery | Battery voltage is displayed. |
| PKB | Parking brake ON/OFF state is displayed. |
| REV | Reverse signal ON/OFF state is displayed. |
| IG | Engine switch ON/OFF state is displayed. |
| TAIL | TAIL signal (Light control switch) ON/OFF state is displayed. |
| SPEED | Vehicle speed is displayed in km/h. |



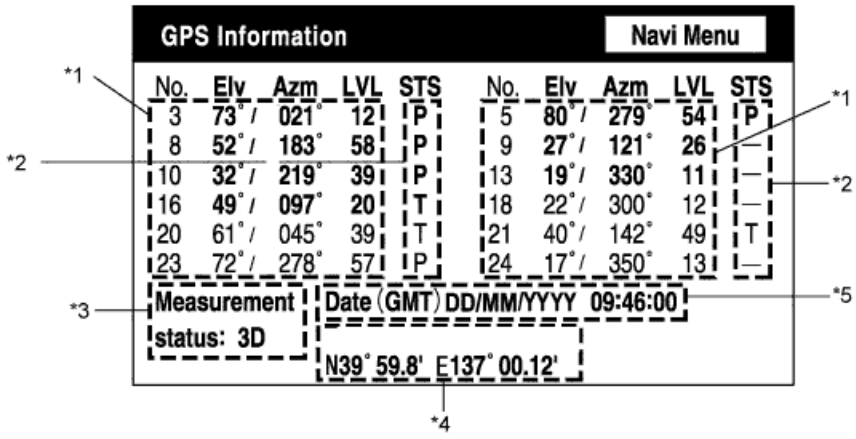
**HINT:**

- **Only items sending a vehicle signal will be displayed.**
- **This screen is updated once per second when input signals to the vehicle are changed.**

c. NAVIGATION CHECK

i. Navigation Check Screen

Example:



P

**HINT:**

Some items may be grayed out or not displayed, as the functions are different depending on the vehicle.

ii. GPS Information Screen

Example:

P

*1: Satellite information
Information from a maximum of 12 satellites is displayed on the screen. This information includes the target GPS satellite number, elevation angle, direction, and signal level.
*2: Receiving condition

**DENSO Model**

| Display | Contents |
|---|---|
| T | System is receiving GPS signal, but is not using it for location. |
| P | System is using GPS signal for location. |
| - | System cannot receive GPS signal. |

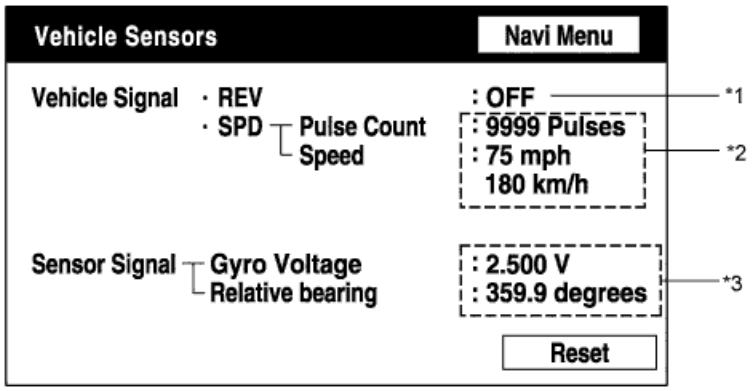
**AISIN AW Model**

| Display | Contents |
|---|---|
| 01H | System cannot receive a GPS signal. |
| 02H | System is tracing a satellite. |
| 03H | System is receiving a GPS signal, but is not using it for location. |
| 04H | System is using the GPS signal for location. |

*3: Measurement information

| Display | Contents |
|---|---|
| 2D | 2-dimensional location method is being used. |
| 3D | 3-dimensional location method is being used. |
| NG | Location data cannot be used. |
| Error | Reception error has occurred. |
| - | Any other state. |

*4: Position information



| Display | Contents |
|---|---|
| Position | Latitude and longitude information on current position is displayed. |

*5: Date information

| Display | Contents |
|---|---|
| Date | Date/time information obtained from GPS signal is displayed in Greenwich Mean Time (GMT). |

iii. Vehicle Sensors Screen

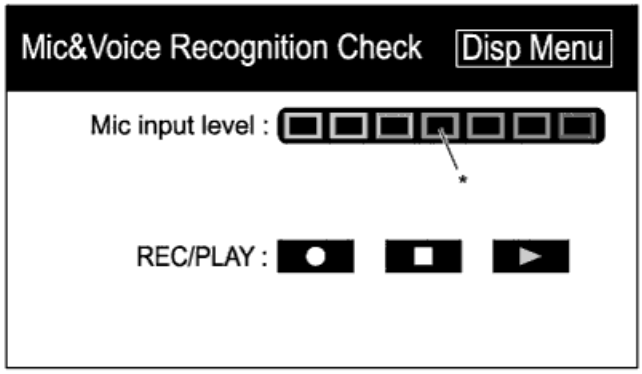
Example:

P

**Vehicle Signal**

| Display | Contents |
|---|---|
| *1: REV | REV signal ON/OFF state is displayed. |
| *2: SPD | SPD signal condition is displayed. |

**Sensor Signal**



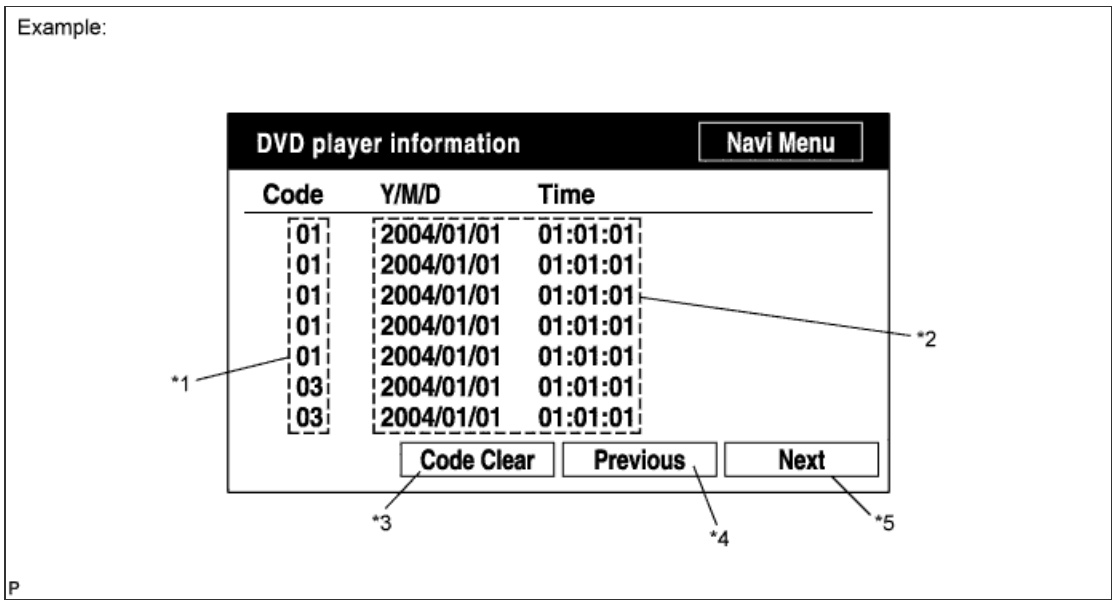
| Display | Contents |
|---|---|
| *3: Gyro sensor | Gyro sensor output condition is displayed (when vehicle is driven straight or is stationary, voltage is approximately 2.5 V). |

**HINT:**

Signals are updated once per second only when vehicle sensor signals are changed.

iv. Mic & Voice Recognition Check Screen

Example:



**Screen Description**

| Display | Contents |
|---|---|
| *: Microphone input level meter | Monitors the microphone input level every 100 ms and displays results in 8 different levels. |

**HINT:**

The microphone input function is on at all times when this screen is displayed.

v. DVD player information Screen

**Screen Description**

| Display | Contents |
|---|---|
| *1: Trouble code | Each code corresponding to malfunctions is displayed. For details, refer to "Trouble Code Description". |
| *2: Occurrence time | • Date (year, month, day) and time (hour, minute, second) when trouble code was stored are displayed as time stamp (Greenwich Mean Time).<br>• Time data to be displayed is received from GPS receiver. |
| *3: Trouble code clear switch | All code data being output is cleared by pushing this switch for 3 seconds. |
| *4: Returning switch | Previous page is displayed. If current displayed page is first page, this switch cannot be operated. |
| *5: Proceeding switch | Next page is displayed. If current displayed page is last page, this switch cannot be operated. |

**Trouble Code Description**

| Code | Malfunction | Countermeasure |
|---|---|---|
| 01 | Cannot be recognized | Replace navigation ECU. |
| 03 | Cannot be read | Follow inspection procedure for DTC 58-42 (Click here). |

**HINT:**

There is a DVD player check function in the navigation ECU.

**for Preparation** Click here

## DVD (Digital Versatile Disc) PLAYER OUTLINE

a. The DVD player can only play DVD videos that have any of the following marks:

b. The following products may not be playable on your player.

- Video CD
- DVD+R
- DVD+RW
- DVD-RAM

c. Precaution for use of discs

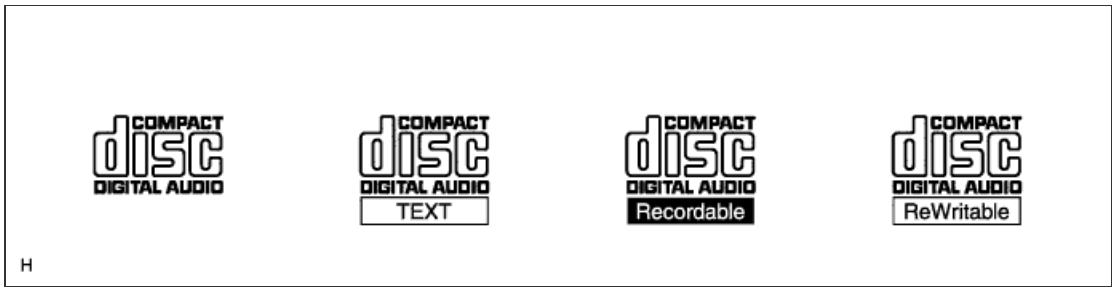
**NOTICE:**

- **SECAM color television standard discs cannot be played.**
- **Keep the discs away from dirt. Be careful not to damage the discs or leave fingerprints on them.**
- **Hold discs by the outer edge and center hole with the label side up.**
- **Leaving the disc exposed halfway out of the slot for a long time after pressing the disc eject button may cause deformation of the disc, Making the disc unusable.**
- **Do not use odd-shaped discs because these may cause player malfunctions.**
- **Do not use discs whose recording portion is transparent or translucent because they may not be inserted, ejected or played normally.**
- **DualDiscs that mate DVD recorded material on one side with CD digital audio material on the other cannot be played.**

## CD (Compact Disc) PLAYER OUTLINE

a. A compact disc player uses a laser pickup to read digital signals recorded on a CD (compact disc). By converting the digital signals to analog, it can play music and audio.

**CAUTION:**



Do not look directly at the laser pickup because the CD player uses an invisible laser beam. Be sure to operate the player only as instructed.

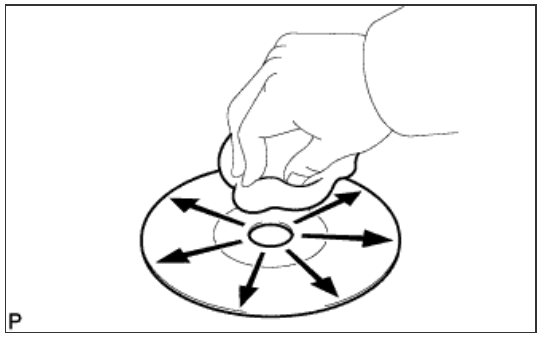
**NOTICE:**

- **Do not disassemble any part of the CD player.**
- **Do not apply oil to the CD player.**
- **Do not insert anything but a CD into the CD player.**

b. Usable discs

i. This player can play only audio CDs, CD-Rs (CD-Recordable) and CD-RWs (CD-ReWritable) that have any of the following marks:

c. Precautions for use of discs



**NOTICE:**

- **Copy-protected CDs cannot be played.**
- **CD-Rs and CD-RWs may not be played depending on the recording conditions or characteristics of the discs, or due to damage, dirt or deterioration caused by leaving the discs in the cabin for a long time.**
- **Unfinalized CD-Rs and CD-RWs cannot be played.**
- **Dual Discs that mate DVD recorded material on one side with CD digital audio material on the other cannot be played.**
- **Keep the discs away from dirt. Be careful not to damage the discs or leave your fingerprints on them.**
- **Hold discs by the outer edge and center hole with the label side up.**
- **Leaving the disc exposed halfway out of the slot for a long time after pressing the disc eject button may cause deformation of the disc, making the disc unusable.**
- **If discs have adhesive tape, stickers, CD labels or any traces of such labels attached, the discs may not be ejected or player malfunctions may result.**
- **Keep the discs away from direct sunlight (Exposure to direct sunlight may cause deformation of the disc, making the disc unusable.).**
- **Do not use odd-shaped CDs because these may cause player malfunctions.**
- **Do not use discs whose recording portion is transparent or translucent because they may not be inserted, ejected or played normally.**
- **Use only 4.7 in. (12 cm) CDs.**
- **Do not use 3 in. (8 cm) CDs, either with or without adapters.**

**HINT:**

- **When it is cold or it is raining, if the windows mist up, mist and condensation may form in the player. In such cases, the CD sound may skip or stop in the middle of play. Ventilate or dehumidify the cabin for a while before using the player.**
- **The CD sound may skip if the player experiences strong vibrations when the vehicle is driven on rough roads or similar uneven surfaces.**

d. Cleaning

**NOTICE:**

Do not use a lens cleaner because it may cause a malfunction in the pickup portion of the player.

i. If dirt is on the disc surface, wipe it clean with a soft dry cloth such as an eyeglass cleaner for plastic lenses from the inside to the outside in a radial direction.

**NOTICE:**

- **Pressing on the disc by hand or rubbing the disc with a hard cloth may scratch the disc surface.**
- **Use of solvents such as record spray, antistatic agents, alcohol, benzine, thinners or a chemical cloth may cause damage to the disc, making the disc unusable.**

## MP3/WMA OUTLINE

a. Playable MP3 file standards

| | |
|---|---|
| Compatible standard | MP3 (MPEG1 LAYER3, MPEG2 LSF LAYER3) |
| Compatible sampling frequency | • MPEG1 LAYER3: 32, 44.1, 48 (kHz)<br>• MPEG2 LSF LAYER3: 16, 22.05, 24 (kHz) |
| Compatible bit rate | • MPEG1 LAYER3: 32 to 320 (kbps)<br>• MPEG2 LSF LAYER3: 8 to 160 (kbps)<br>• Compatible with VBR |
| Compatible channel mode | Stereo, joint stereo, dual channel, monaural |

b. Playable WMA file standards

| | |
|---|---|
| Compatible standard | WMA Ver. 7, 8, 9 |
| Compatible sampling frequency | 32, 44.1, 48 (kHz) |
| Compatible bit rate (Only compatible with 2-channel playback) | • Ver. 7, 8: CBR48 to 192 (kbps)<br>• Ver. 9: CBR48 to 320 (kbps) |

c. ID3 tag and WMA tag

i. Additional text information called an ID3 tag can be input to MP3 files. Information such as song titles and artist names can be stored.

**HINT:**

This player is compatible with ID3 tags of ID3 Ver. 1.0 and 1.1, and ID3 Ver. 2.2 and 2.3 (Number of characters complies with ID3 Ver. 1.0 and 1.1.).

ii. Additional text information called a WMA tag can be input to WMA files. Information such as song titles and artist names can be stored.

d. Usable media

i. Only CD-ROMs, CD-Rs (CD-Recordable) and CD-RWs (CD-ReWritable) can be used to play MP3/WMA files.

**NOTICE:**

- **CD-Rs and CD-RWs are more easily affected by a hot and humid environment than discs used for normal audio CDs. For this reason, some CD-Rs and CD-RWs do not play.**
- **If there are fingerprints or scratches on a disc, the disc may not play or the CD sound may skip.**
- **Some CD-Rs and CD-RWs may deteriorate if they are left in the cabin for a long time.**
- **Keep CD-Rs and CD-RWs in an opaque case.**

e. Usable media format

i. Usable media format

| | |
|---|---|
| Disc format | CD-ROM Mode 1, CD-ROM XA Mode 2 Form1 |
| File format | ISO9660 Level 1 and Level 2 (Joliet, Romeo) |

**HINT:**

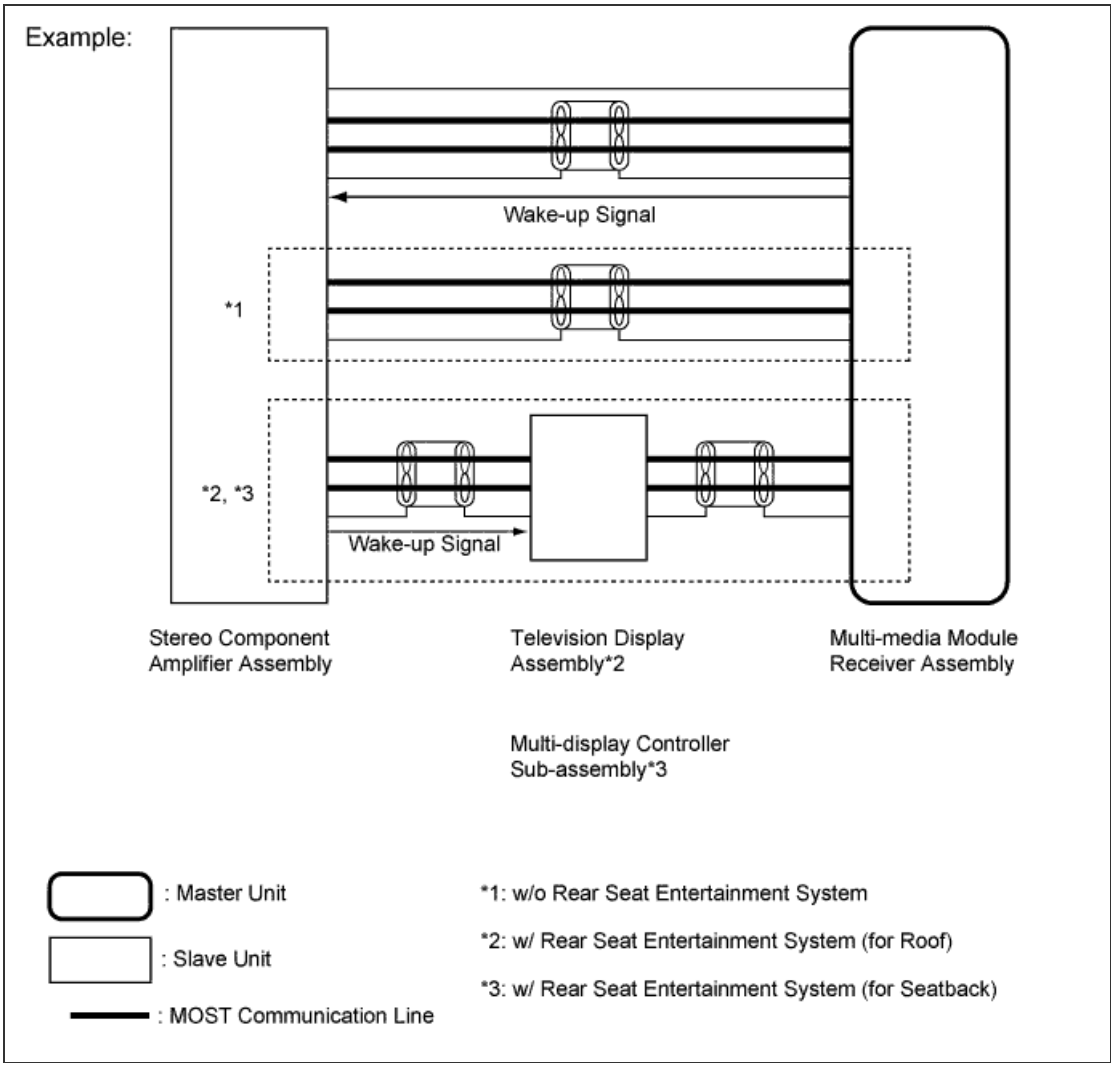
- **As for MP3/WMA files written in any unlisted format, the contents of the files may not be played normally or the file names or folder names may not be displayed correctly.**
- **This player is compatible with multi-session discs and can play CD-Rs and CD-RWs on which MP3/WMA files have been added. However, only the first session can be played.**
- **Discs whose first session includes both music data and MP3 or WMA format data cannot be played.**

ii. Standards and restrictions

| | |
|---|---|
| Maximum directory levels | 8 levels |
| Maximum number of characters for a folder name/file name | 32 characters |
| Maximum number of folders | 192 (Including empty folders, root folders, and folders that do not contain MP3/WMA files) |
| Maximum number of files in a disc | 255 (Including non-MP3/WMA files) |

f. File names

i. Only files with an extension of ".mp3" or ".wma" can be recognized and played as MP3 or WMA files.



ii. Save MP3 or WMA files with an extension of ".mp3" or ".wma".

**NOTICE:**

If non-MP3 or non-WMA files are saved with an extension of ".mp3" or ".wma", those files may be wrongly recognized as MP3 or WMA files and played. A loud noise may occur and damage to the speakers may result.

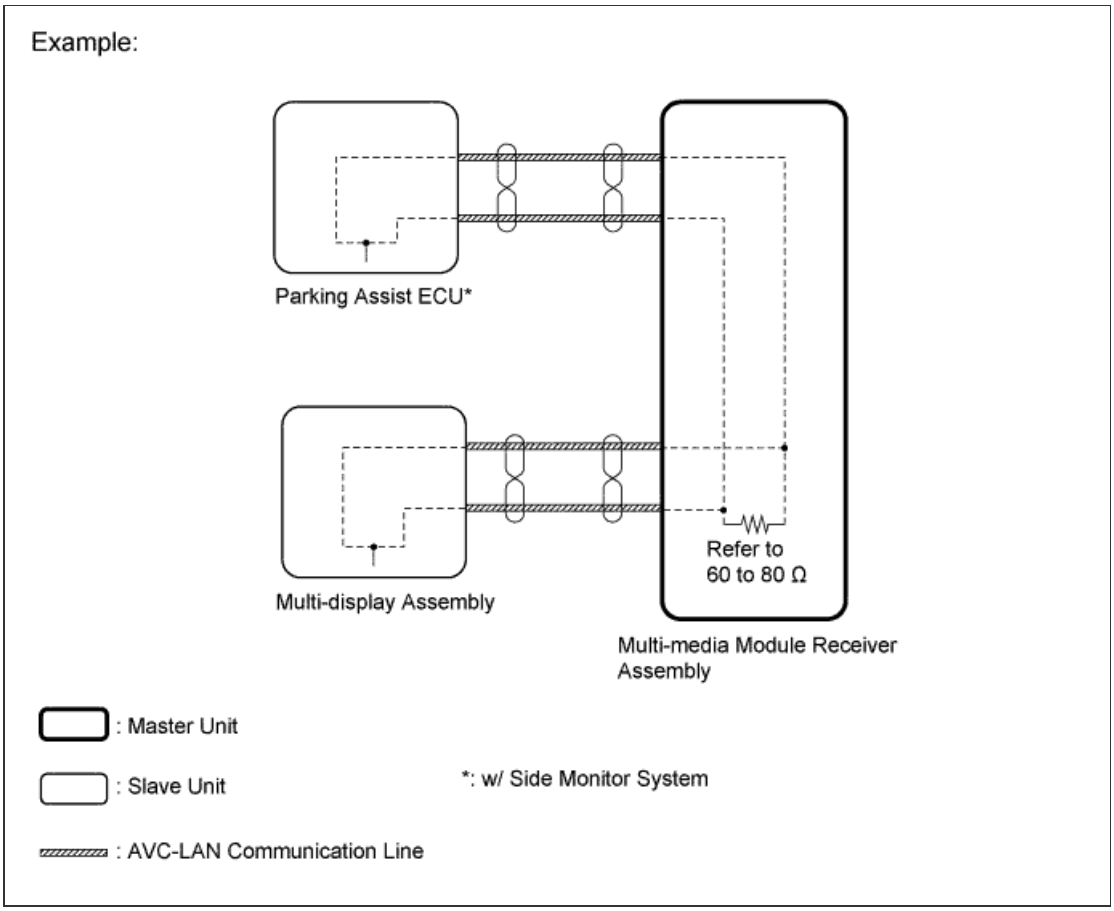
## COMMUNICATION SYSTEM

a. MOST Network Outline

i. Audio and visual system components communicate with each other via the MOST network.

ii. The MOST network uses a shielded twisted pair of wires for its communication lines.

iii. The master unit of the MOST network is the multi-media module receiver assembly.



iv. MOST communication lines connect each slave unit centering around the master unit to form a MOST network ring.

v. The master unit sends a wake-up signal to activate each slave unit connected to the MOST network.

**HINT:**

If a short or open circuit occurs in the MOST circuit, communication will be interrupted and the system will not operate normally.

b. AVC-LAN Outline

i. Components of the audio and visual system communicate with each other via the AVC-LAN.

ii. The AVC-LAN uses a twisted pair of wires for its communication lines.

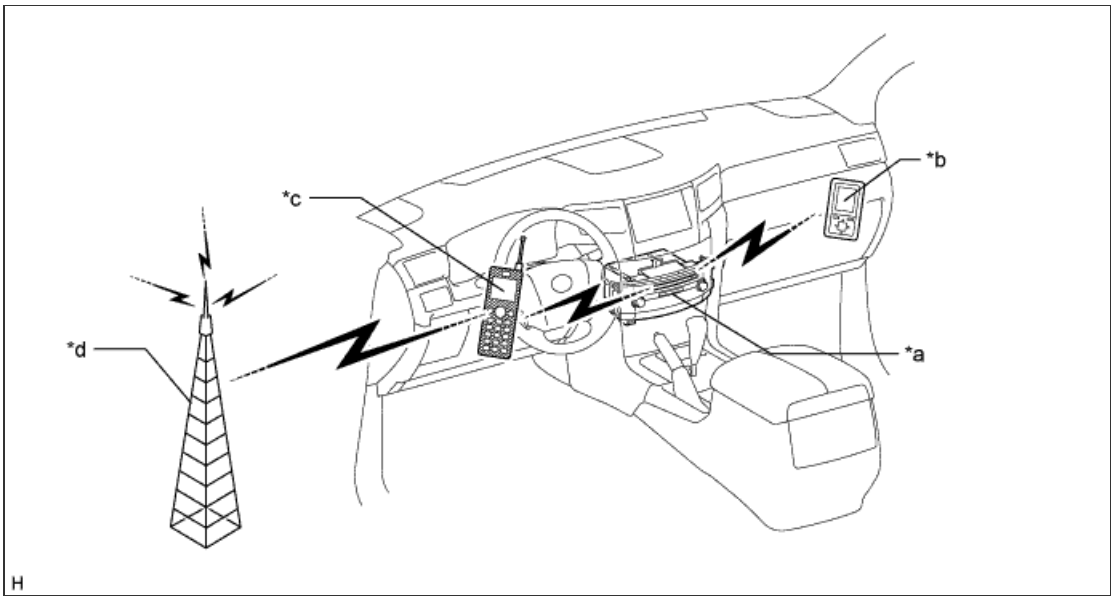
iii. The master unit of the AVC-LAN is the multi-media module receiver assembly.

**HINT:**

- **The multi-media module receiver assembly has the resistance (60 to 80 Ω) necessary for communication.**
- **If a short or open circuit occurs in the AVC-LAN circuit, communication is interrupted and the system will not operate normally.**

## DIAGNOSTIC FUNCTION OUTLINE

a. The navigation system has a diagnostic function (the result is indicated on the master unit or the intelligent tester).



## "Bluetooth" OUTLINE

a. "Bluetooth" is a trademark owned by Bluetooth SIG, Inc.

b. "Bluetooth" is a wireless connection technology that uses the 2.4 GHz frequency band.

**HINT:**

The communication performance of "Bluetooth" may vary depending on obstructions or radio wave conditions between communication devices, electromagnetic radiation, communication device sensitivity or antenna capacity.

**Text in Illustration**

| | | | |
|---|---|---|---|
| *a | Multi-media Module Receiver Assembly<br>(Built-in "Bluetooth" receiver antenna) | *b | Portable Audio Player<br>("Bluetooth" compatible type) |
| *c | Cellular Phone<br>("Bluetooth" compatible type) | *d | Cellular Tower |

c. Hands-free function

i. The "Bluetooth" built-in multi-media module receiver assembly and a "Bluetooth" compatible cellular phone* can be connected using a "Bluetooth" wireless connection. This enables the use of the hands-free function on the cellular phone even if the phone is in a pocket or bag. For this reason, it is not necessary to use a connector or cable to connect the cellular phone.
*: Some versions of "Bluetooth" compatible cellular phones may not function.

ii. Compatible hands-free devices

| | |
|---|---|
| Required "Bluetooth" specifications | Ver. 1.1 or higher (Ver. 2.1+EDR or higher recommended) |
| Compatible profiles | • HFP (Hands Free Profile) Ver.1.0 or higher (Ver.1.5 or higher recommended)*1<br>• OPP (Object Push Profile) Ver.1.1 or higher*1<br>• PBAP (Phone Book Access Profile) Ver.1.0 or higher*1<br>• MAP (Message Access Profile) Ver.1.0 or higher*2 |
| Maximum number of hands-free devices that can be registered (including audio devices) | 5 |

*1: This profile is necessary when using the hands-free function.
*2: This profile is necessary when using the message function.

**HINT:**

The amount of remaining battery charge displayed on the multi-media module receiver assembly may be different from that of the "Bluetooth" device.

d. "Bluetooth" audio function

i. The "Bluetooth" built-in multi-media module receiver assembly and a "Bluetooth" compatible portable audio player* can be connected using a "Bluetooth" wireless connection. This enables files stored in the portable audio player to be heard from the vehicle speakers. In addition, operations such as play/stop can be performed directly from the multi-media module receiver assembly.
*: Some versions of "Bluetooth" compatible audio players may not be able to operate the "Bluetooth" function, or music may play, but functions available using the multi-media module receiver assembly may be limited.

ii. Compatible "Bluetooth" audio devices

| | |
|---|---|
| "Bluetooth" specifications | Ver. 1.1 or higher (Ver. 2.1+EDR or higher recommended) |
| Following profiles | • A2DP (Advanced Audio Distribution Profile) Ver. 1.0 or higher (Ver. 1.2 or higher recommended)<br>• AVRCP (Audio/Video Remote Control Profile) Ver. 1.0 or higher (Ver. 1.4 or higher recommended) |

| | |
|---|---|
| Maximum number of audio devices that can be registered | 5 |

**HINT:**

The amount of remaining battery charge displayed on the multi-media module receiver assembly may be different from that of the portable player.

## USB AUDIO SYSTEM FUNCTION OUTLINE

a. The No. 1 stereo jack adapter assembly is equipped with a USB terminal. Connecting a USB device or "iPod" to the No. 1 stereo jack adapter assembly allows music files to be played. Not only it is possible to play music from a USB device with audio functions, is also possible to play MP3 or WMA music files that are stored on a USB device. In addition, "iPod" control software is installed, allowing file selection from playlists and operation using shuffle mode.

**HINT:**

- **Visual contents of an "iPod" cannot be played.**
- **Operation through the controls of a USB device or "iPod" cannot be performed while it is connected.**

b. USB audio system compatible model

i. USB device
The following device formats can be used:

| | |
|---|---|
| Compatible USB device formats | • USB communication format: USB 2.0 HS (480 Mbps) and FS (12 Mbps)<br>• File format: FAT16/32 (Windows)<br>• Class: Mass storage class |

MP3 and WMA files written in any format other than those listed above may not play correctly, and their file and folder names may not be displayed correctly.
Items related to standards and limitations are as follows:

- Maximum directory hierarchy: 8 levels
- Maximum number of folders in device: 3000 (including the root folder)
- Maximum number of files in device: 9999
- Maximum number of files per folder: 255

ii. "iPod"
"iPhone", "iPod", "iPod classic", "iPod nano" and "iPod touch" are trademarks of Apple Inc., registered in the U.S. and other countries.
The following "iPod", "iPod nano", "iPod classic", "iPod touch" and "iPhone" devices can be used with this system.
Made for

- "iPod touch" (4th generation)
- "iPod touch" (3rd generation)
- "iPod touch" (2nd generation)
- "iPod touch" (1st generation)
- "iPod classic"
- "iPod with video"
- "iPod nano" (6th generation)
- "iPod nano" (5th generation)
- "iPod nano" (4th generation)
- "iPod nano" (3rd generation)
- "iPod nano" (2nd generation)
- "iPod nano" (1st generation)
- "iPhone 4"
- "iPhone 3GS"
- "iPhone 3G"
- "iPhone"

**HINT:**

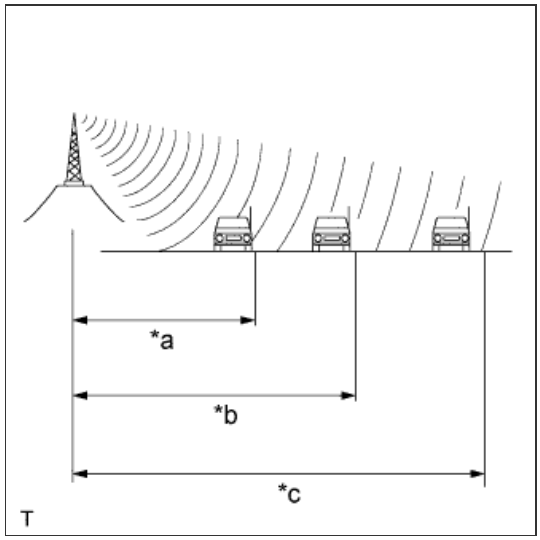
Depending on differences between models or software versions etc., some models might be incompatible with this system.

## RADIO DESCRIPTION

a. Radio frequency band

i. Radio broadcasts use the radio frequency bands shown in the table below.

| Frequency | 30 kHz | 300 kHz | 3 MHz | 30 MHz | 300 MHz |
|---|---|---|---|---|---|
| Designation | LF | MF | HF | VHF | |
| Radio wave | | AM ← → | | FM ← → | |
| Modulation | Amplitude modulation | | | Frequency modulation | |



LF: Low Frequency MF: Medium Frequency HF: High Frequency VHF: Very High Frequency

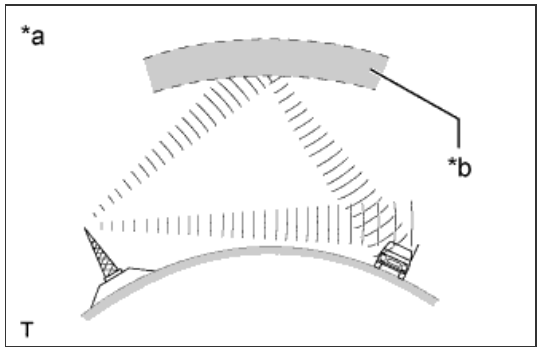
b. Service area

i. The service areas of AM and FM broadcasts are vastly different. Sometimes an AM broadcast can be received very clearly but an FM stereo broadcast cannot. FM stereo has the smallest service area, and is prone to pick up static and other types of interference such as noise.

**Text in Illustration**

| | |
|---|---|
| *a | FM (Stereo) |
| *b | FM (Monaural) |
| *c | AM |

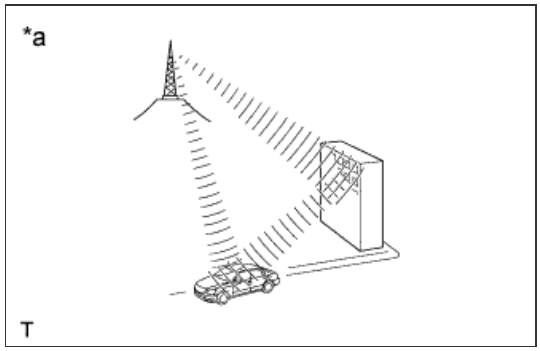
c. Radio reception problems



**HINT:**

In addition to static, other problems such as "phasing", "multipath" and "fade out" exist. These problems are not caused by electrical noise, but by the radio signal propagation method itself.

i. Phasing
AM broadcasts are susceptible to electrical interference and another kind of interference called phasing. Occurring only at night, phasing is the interference created when a vehicle receives 2 radio wave signals from the same transmitter. One signal is reflected off the ionosphere and the other signal is received directly from the transmitter.

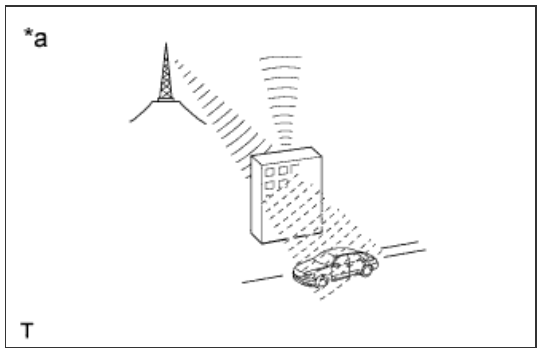


**Text in Illustration**

| | |
|---|---|
| *a | Phasing |
| *b | Ionosphere |

ii. Multipath

Multipath is a type of interference created when a vehicle receives 2 radio wave signals from the same transmitter. One signal is reflected off buildings or mountains and the other signal is received directly from the transmitter.



**Text in Illustration**

| | |
|---|---|
| *a | Multipath |

iii. Fade out

Fade out is caused by objects (buildings, mountains and other such large obstacles) that deflect away part of a signal, resulting in a weaker signal when the object is between the transmitter and vehicle. High frequency radio waves, such as FM broadcasts, are easily deflected by obstructions. Low frequency radio waves, such as AM broadcasts, are less likely to deflect.

**Text in Illustration**

| | |
|---|---|
| *a | Fade Out |

d. Noise problem

Technicians must have a clear understanding about each customer's noise complaint. Use the following table to diagnose noise problems.

| Radio Frequency | Noise Occurrence Condition | Presumable Cause |
|---|---|---|
| AM | Noise occurs in a specific area | Foreign noise |
| | Noise occurs when listening to an intermittent broadcast | An identical program transmitted from multiple towers can cause noise where the signals overlap |
| | Noise occurs only at night | Signal phasing |
| FM | Noise occurs while driving in a specified area | Multipath resulting from a change in FM frequency |

## RDS-TMC FUNCTION OUTLINE (w/ RDS-TMC Function)

a. This system has a function which allows the reception of traffic information from Radio Data System Traffic Message Channel (RDS-TMC) stations based on FM-multiple broadcasting. It assists the driver to avoid areas with traffic congestion. It also helps to improve traffic flow and road safety (Click here).

## VEHICLE CUSTOMIZATION OUTLINE

a. Customization of functions can be performed on the multi-display assembly screen. Refer to the owner's manual for further information on customizable items for the navigation system.

**HINT:**

- **Items available for customization via the navigation system can be performed by using the intelligent tester.**
- **Some customize parameters displayed on the intelligent tester will be displayed on the "Vehicle Customization" screen for the navigation system. Users can customize these items.**

## CUSTOMIZE STARTUP IMAGE OR SCREEN OFF IMAGE FUNCTION OUTLINE

a. An image can be copied from a USB device. The image can be used as the startup image or screen off image of the navigation system.

## ASL (Automatic Sound Levelizer) FUNCTION OUTLINE

a. The Automatic Sound Levelizer (ASL) function automatically adjusts the audio system volume level in order to compensate for increased vehicle noise (vehicle noise tends to increase as vehicle speed increases). The ASL adjusts the volume level based upon vehicle speed signals that it receives from the combination meter assembly.

**for Preparation** Click here

**HINT:**

Use these procedures to troubleshoot the audio and visual system.

## 1.VEHICLE BROUGHT TO WORKSHOP

NEXT

## 2.INSPECT BATTERY VOLTAGE

**Standard voltage:**
**11 to 14 V**

If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

## 3.CHECK IF SAME SYMPTOM APPEARS IN NAVIGATION SYSTEM

a. Refer to the navigation system.

**Result**

| Result | Proceed to |
|---|---|
| Symptom does not appear | A |
| Symptom appears | B |

B. → FOLLOW NAVIGATION SYMPTOM CHART TO PERFORM TROUBLESHOOTING (Click here)

A

## 4.BASIC INSPECTION

a. Turn the engine switch on (ACC).

b. Check whether or not the display appears on the multi-display.

**Result**

| Result | Proceed to |
|---|---|
| Display appears | A |
| Display does not appear | B |

B. → Go to step 6

A

## 5.CHECK FOR DTC

a. Check for DTCs and note any codes that are output.

b. Clear the DTCs.

c. Recheck for DTCs. Based on the DTC output in the first step, try to force output of the audio system DTC by simulating the conditions indicated by the DTC.

**HINT:**

- **If the system cannot enter the diagnosis mode, inspect each AVC-LAN communication signal and repair or replace problem parts.**
- **Even if the malfunction symptom is not confirmed, check for DTCs as the system stores past DTCs.**
- **Refer to the detailed description on the diagnostic screen as necessary ( Click here).**
- **Check and clear past diagnostic trouble codes. Check the diagnostic trouble code and inspect the area the code indicates.**

**Result**

| Result | Proceed to |
|---|---|
| DTC is not output | A |
| DTC is output | B |

**B.** → Go to step 7

**A**

## 6.PROBLEM SYMPTOMS TABLE

**Result**

| Result | Proceed to |
|---|---|
| Fault is not listed in problem symptoms table | A |
| Fault is listed in problem symptoms table | B |

**B.** → Go to step 8

**A**

## 7.OVERALL ANALYSIS AND TROUBLESHOOTING

a. Operation check (Click here).

b. Terminals of ECU (Click here).

c. Inspect the front No. 1 speaker (Click here).

d. Inspect the front No. 2 speaker (Click here).

e. Inspect the front No. 3 speaker (Click here).

f. Inspect the front No. 4 speaker (Click here).

g. Inspect the No. 1 woofer box speaker (Click here).

h. Inspect the rear speaker set (Click here).

i. Inspect the rear No. 2 speaker (Click here).

j. Inspect the rear No. 3 speaker (Click here).

k. Inspect the rear header speaker (Click here).

l. Inspect the steering pad switch (Click here).

**NEXT**

## 8.ADJUST, REPAIR OR REPLACE

**NEXT**

## END

**for Preparation** Click here

**HINT:**

- **Use the following procedure to troubleshoot the audio and visual system.**
- ***: Use the intelligent tester.**

## 1.VEHICLE BROUGHT TO WORKSHOP

**NEXT**

## 2.INSPECT BATTERY VOLTAGE

a. Measure the battery voltage with the engine switch off.

**Standard voltage:**
**11 to 14 V**

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

**NEXT**

## 3.DIAGNOSTIC QUESTIONING AND SYMPTOM CONFIRMATION

a. Ask the customer about symptoms and confirm malfunctions.

**Result**

| Result | Proceed to |
|---|---|
| Other symptoms occurred. | A |
| The screen displays nothing. | B |

**B.** → **Go to step 6**

**A**

## 4.OPERATION CHECK

a. Refer to Check System Normal Condition ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| Symptom is not normal operation. | A |
| Symptom is normal operation. | B |

**B.** → **SYMPTOM IS NORMAL OPERATION**

**A**

## 5.CHECK CAN COMMUNICATION SYSTEM*

a. Check for DTC output ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| CAN DTCs are not output. | A |

| | |
|---|---|
| CAN DTCs are output (for LHD). | B |
| CAN DTCs are output (for RHD). | C |

B. GO TO CAN COMMUNICATION SYSTEM (Click here)

C. GO TO CAN COMMUNICATION SYSTEM (Click here)

A

## 6.CHECK FOR DTC*

a. Refer to DTC Check/Clear (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTCs are output. | A |
| DTCs are not output.<br>(The multi-display assembly displays content.) | B |
| DTCs are not output.<br>(The multi-display assembly does not display anything.) | C |

**HINT:**

If more information is needed, perform a check using the "System Check Mode" screen after checking for DTCs using the intelligent tester.

B. Go to step 10

C. Go to step 11

A

## 7.CLEAR DTC*

a. Refer to DTC Check/Clear (Click here).

**HINT:**

The present DTCs may not indicate actual malfunctions depending on the vehicle operating conditions.

NEXT

## 8.RECHECK FOR DTC*

a. Refer to DTC Check/Clear (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTCs are output. | A |
| DTCs are not output. | B |

**HINT:**

- **Even if the malfunction symptom is not confirmed, check for DTCs. This is because the system stores history DTCs.**
- **If more information is needed, perform a recheck using the "System Check Mode" screen after rechecking for DTCs using the intelligent tester.**
- **Check the DTCs and inspect the area that the code indicates.**

B. Go to step 10

A

## 9.DIAGNOSTIC TROUBLE CODE CHART

a. Find the output code in Diagnostic Trouble Code Chart ( Click here).

**NOTICE:**

- **The audio and visual system outputs DTCs for the following system.**
- **When DTCs other than those in Diagnostic Trouble Code Chart for the audio and visual system are output, refer to Diagnostic Trouble Code Chart for the relevant system.**
- **Refer to Navigation System (Click here).**
- **Refer to Rear Seat Entertainment System (for Roof) (Click here).**
- **Refer to Rear Seat Entertainment System (for Seatback) (Click here).**

**Result**

| Result | Proceed to |
|---|---|
| DTCs for the audio and visual system are output. | A |
| DTCs for the navigation system are output. | B |
| DTCs for the rear seat entertainment system (for Roof) are output. | C |
| DTCs for the rear seat entertainment system (for Seatback) are output. | D |

| | |
|---|---|
| **A.** | **Go to step 13** |
| **B.** | **GO TO NAVIGATION SYSTEM (Click here)** |
| **C.** | **GO TO REAR SEAT ENTERTAINMENT SYSTEM (Click here)** |
| **D.** | **GO TO REAR SEAT ENTERTAINMENT SYSTEM (Click here)** |

## 10.CHECK HARD DISK DRIVE

a. Enter the "Failure Diagnosis" screen. Refer to Check Hard Disk Drive in Operation Check ( Click here).

**OK:**
**"OK" is displayed.**

| | |
|---|---|
| **NG.** | **REPLACE HARD DISC (Click here)** |

**OK**

## 11.PROBLEM SYMPTOMS TABLE

a. Refer to Problem Symptoms Table (Click here).

**Result**

| Result | Proceed to |
|---|---|
| Fault is not listed in Problem Symptoms Table. | A |
| Fault is listed in Problem Symptoms Table. | B |

**HINT:**

If the symptom does not recur and no DTCs are output, attempt to reproduce the symptoms ( Click here).

| | |
|---|---|
| **B.** | **ADJUST, REPAIR OR REPLACE IN ACCORDANCE WITH PROBLEM SYMPTOMS TABLE** |

**A**

## 12.PERFORM TROUBLESHOOTING BASED ON MALFUNCTION SYMPTOM

a. Refer to Terminals of ECU (Click here).

NEXT

13.CHECK CIRCUIT

a. Adjust, repair or replace as necessary.

NEXT

14.RECHECK FOR DIAGNOSTIC TROUBLE CODE

**HINT:**

After clearing DTCs, recheck for DTCs (Click here).

NEXT

15.PERFORM CONFIRMATION TEST

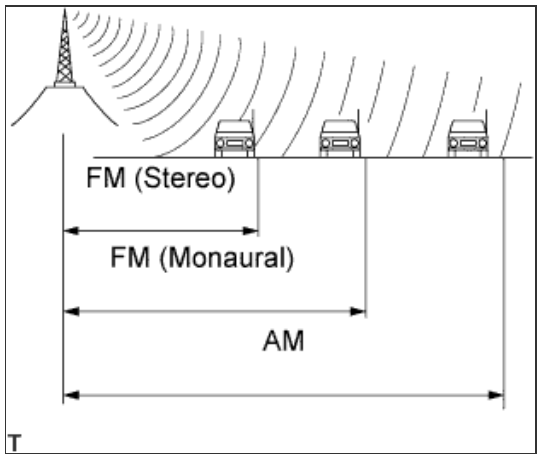
NEXT

END

**for Preparation** Click here

## RADIO WAVE BAND

a. Radio frequency band



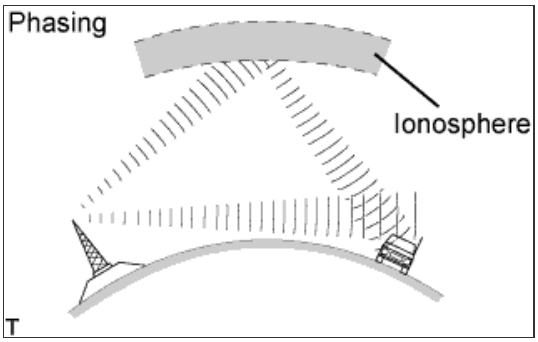
i. Radio broadcasts use the radio frequency bands shown in the table below.

| Frequency | 30 kHz | 300 kHz | 3 MHz | 30 MHz | 300 MHz |
|---|---|---|---|---|---|
| Designation | LF | MF | HF | VHF | |
| Radio Wave | | AM | | FM | |
| Modulation | | Amplitude Modulation | | Frequency Modulation | |

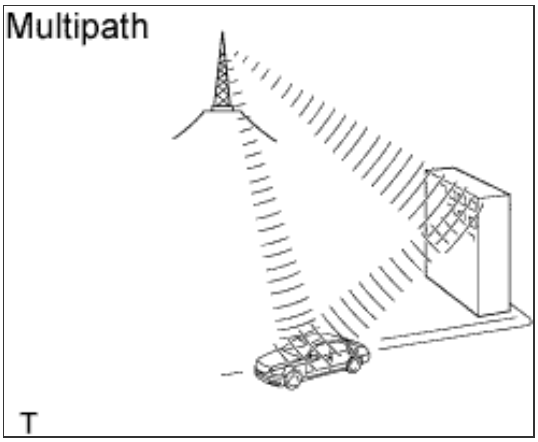
LF: Low Frequency MF: Medium Frequency HF: High Frequency VHF: Very High Frequency

## SERVICE AREA

a. The broadcast range for AM and FM is very different. Sometimes an AM broadcast can be received very clearly but FM stereo cannot.
FM stereo has the smallest service area, and is prone to picking up static and other types of interference (for example, noise).

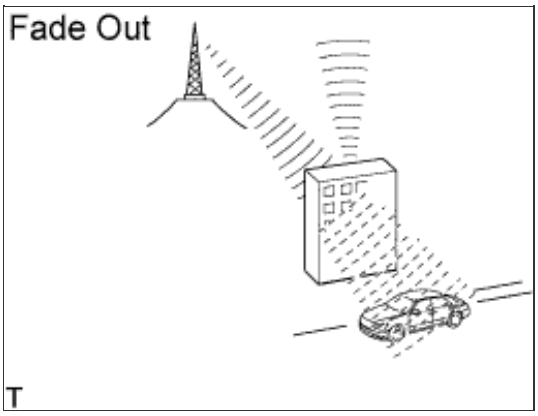


## RECEPTION PROBLEMS



**HINT:**

Besides the problem of static, there are other problems, such as "phasing", "multipath" and "fade out". These problems are caused by the nature of the radio waves themselves, not by electrical noise.



a. AM broadcasts are susceptible to electrical interference called phasing.
Occurring only at night, phasing is the interference created when a vehicle receives 2 radio wave signals from the same transmitter. One signal is reflected off of the ionosphere and the other signal is received directly from the transmitter.

b. Multipath is a type of interference created when a vehicle receives 2 radio wave signals from the same transmitter. One signal is reflected off of buildings or mountains and the other signal is received directly from the transmitter.

c. Fade out is caused by objects (buildings, mountains, etc.) that deflect away part of a signal, resulting in a weaker signal when the object is between the transmitter and vehicle. High frequency radio waves, such as FM broadcasts, are easily deflected by obstructions. Low frequency radio waves, such as AM broadcasts, are much more difficult to deflect.

## NOISE PROBLEMS

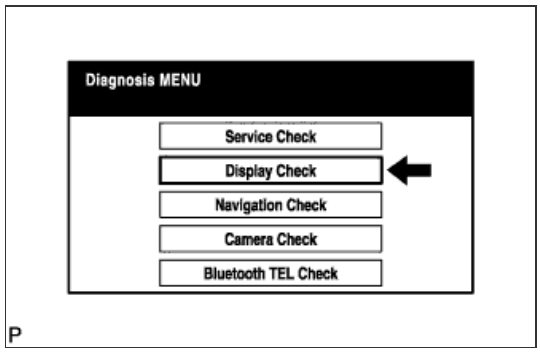
a. Technicians must have a clear understanding about the noise problems of the vehicle of the customer. Use the following table to diagnose the problems.

| Radio Wave | Condition in Which Noise Occurs | Presumable Cause |
|---|---|---|
| AM | Noise occurs in a specific area | Strong possibility of foreign noise |
| AM | Noise occurs when broadcasting is weak | • Same program may be broadcasted from various local stations<br>• If the program is the same, one of those may be tuned in |
| AM | Noise occurs only at night | Strong possibility of beats from distant broadcasting |
| FM | Noise occurs at a specific place during driving | Strong possibility of multipath noise and fading noise caused by changes of FM frequency |

**HINT:**

When the noise does not match the examples above, refer to "Reception Problems". Check the descriptions about phasing and multipath.

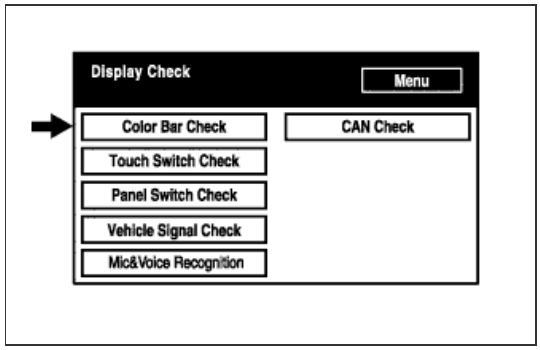
**for Preparation** Click here



## Check Display Check mode

**HINT:**

- **This mode checks the color display on the multi-display.**
- **Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be exactly the same as on the actual vehicle.**

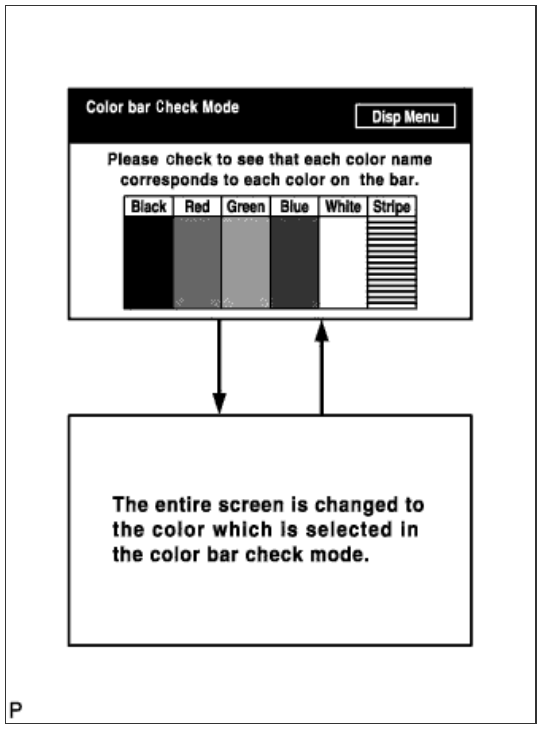


a. Enter diagnostic mode (Click here).

b. Select "Display Check" from the "Diagnosis MENU" screen.

c. Color Bar Check

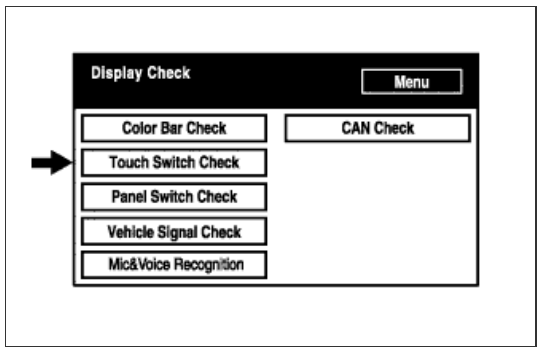
i. Select "Color Bar Check" from the "Display Check" screen.



ii. Select a color bar from the "Color bar Check Mode" screen.

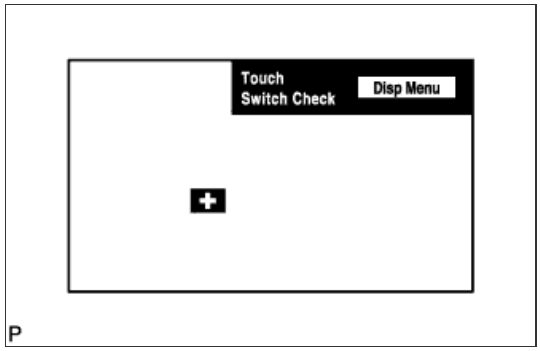
iii. Check the display color.

**HINT:**



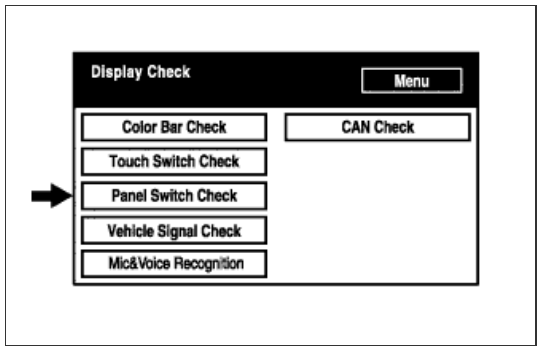
- **The entire screen turns to the color or stripe selected.**
- **Touch the display to return to the "Color Bar Check Mode" screen.**

d. Touch Switch Check



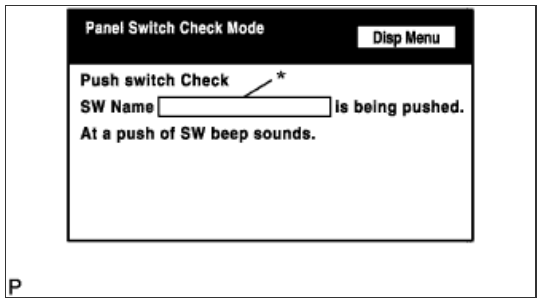
i. Select "Touch Switch Check" from the "Display Check" screen.

ii. Touch the display anywhere in the open area to perform the check when the "Touch Switch Check" screen is displayed.



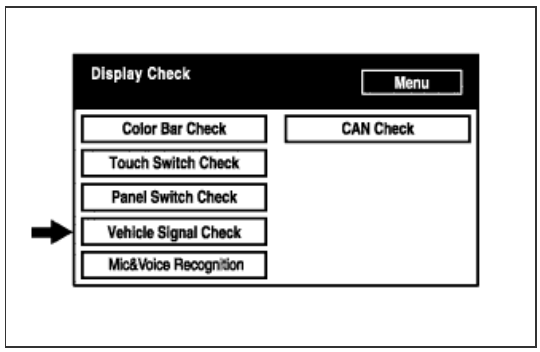
**HINT:**

A "+" mark is displayed where the display is touched.



e. Panel Switch Check

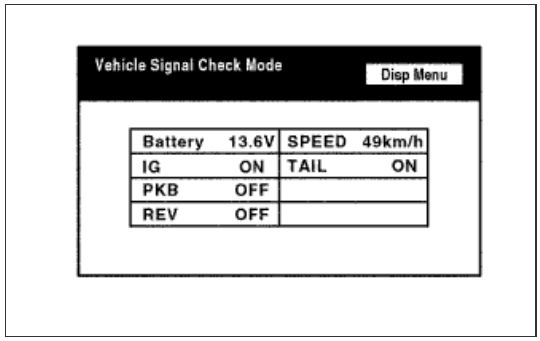
i. Select "Panel Switch Check" from the "Display Check" screen.



ii. Operate each switch and check that the switch name and condition are correctly displayed.

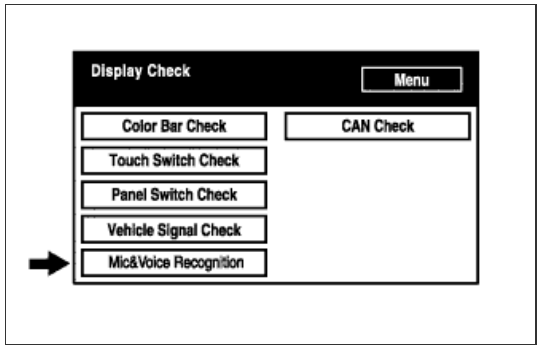
| Display | Contents |
|---|---|
| *: Pushed switch name | • Name of the pressed switch is displayed.<br>• If more than one switch is pressed, "MULTIPLE" is displayed. |

f. Vehicle Signal Check



i. Select "Vehicle Signal Check" from the "Display Check" screen.

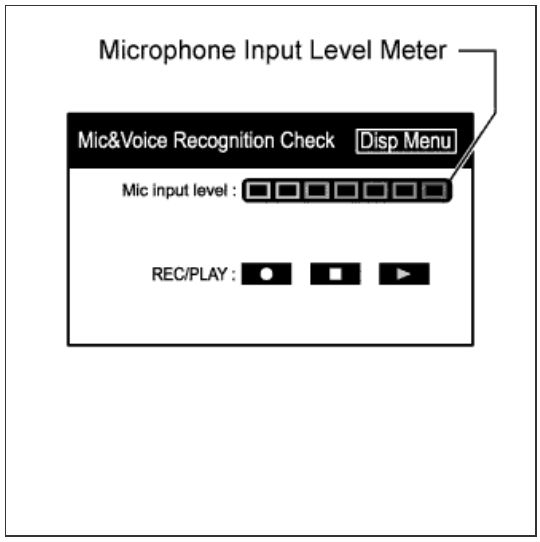
ii. When the "Vehicle Signal Check Mode" screen is displayed, check all the vehicle signal conditions.



**HINT:**

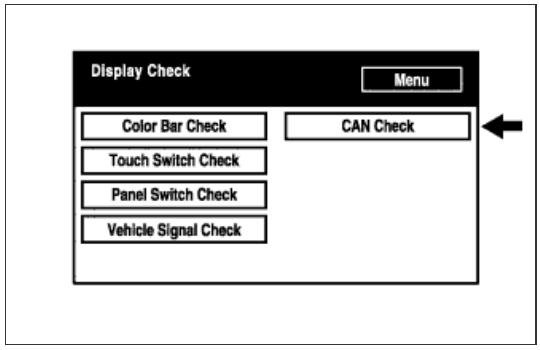
- **Only conditions having inputs are displayed.**
- **This screen is updated once per second when input signals to the vehicle are changed.**
- **For details of this function, refer to Diagnosis Display Detailed Description in the System Description (Click here).**

g. Mic&Voice Recognition Check



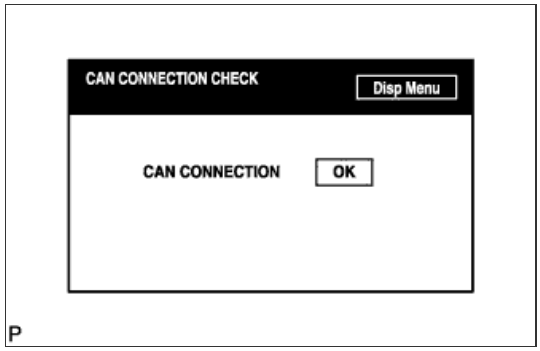
i. Select "Mic&Voice Recognition Check" on the "Display Check" screen to display the "MICROPHONE & VOICE RECOGNITION CHECK" screen.

ii. When a voice is input into the microphone, check that the microphone input level meter changes according to the input voice.



**HINT:**

This function is controlled by the navigation ECU.

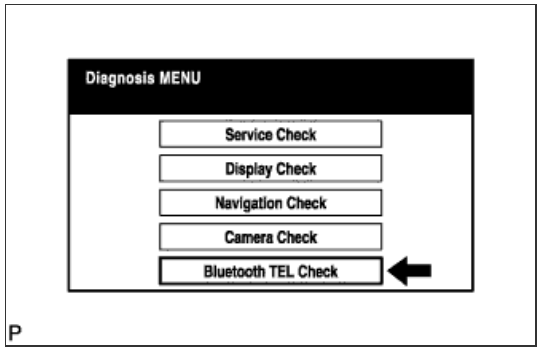


h. CAN Check

i. Select "CAN Check" from the "Display Check" screen.

ii. Check the CAN CONNECTION CHECK result.

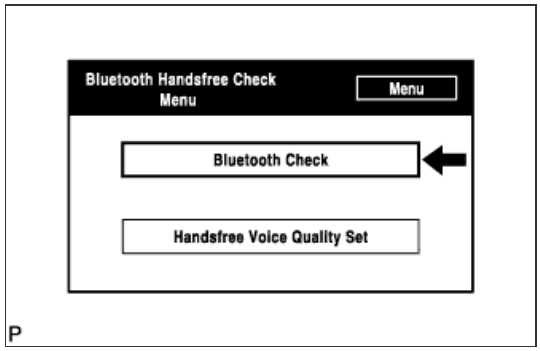
- This function operates only for the systems connected to the CAN system.
- For details of this function, refer to Diagnosis Display Detailed Description in the System Description (Click here).



## Check "Bluetooth" TEL Check

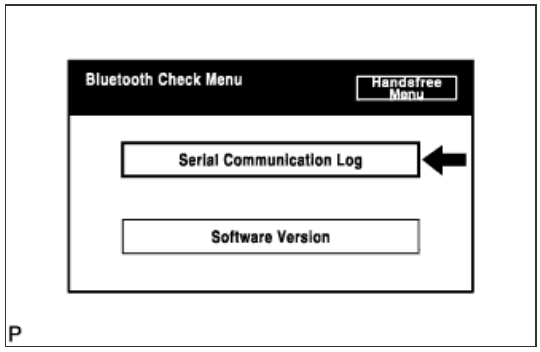
**HINT:**

Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be exactly the same as on the actual vehicle.



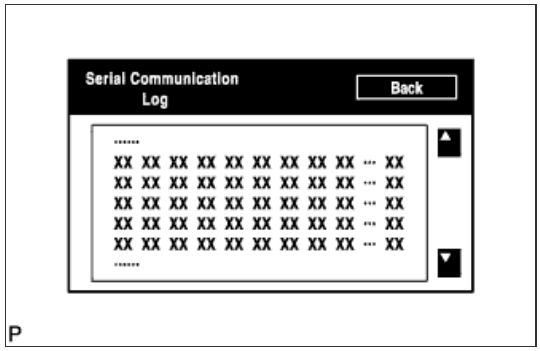
a. Enter diagnostic mode (Click here).

b. Select ""Bluetooth" TEL Check" from the "Diagnosis MENU" screen.

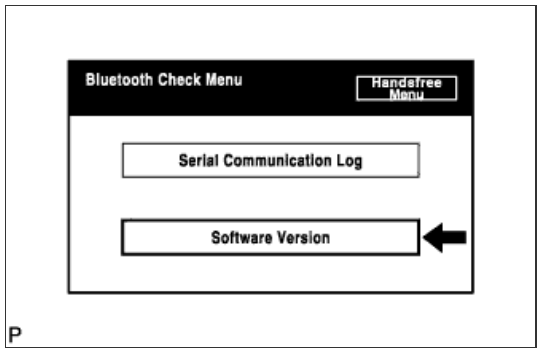


c. "Bluetooth" Check

i. Select ""Bluetooth" Check" from the ""Bluetooth" Handsfree Check Menu" screen.

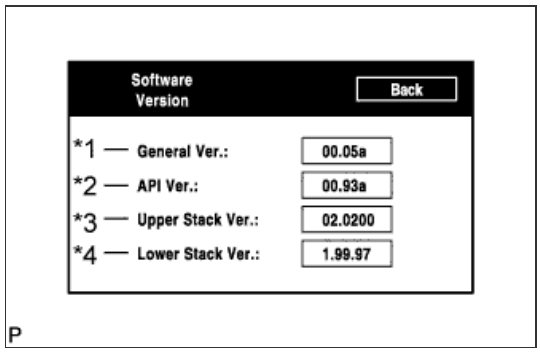


ii. Select "Serial Communication Log" from the ""Bluetooth" Check Menu" screen.



1. The communication log data in the multi-display are displayed on this screen.

**HINT:**

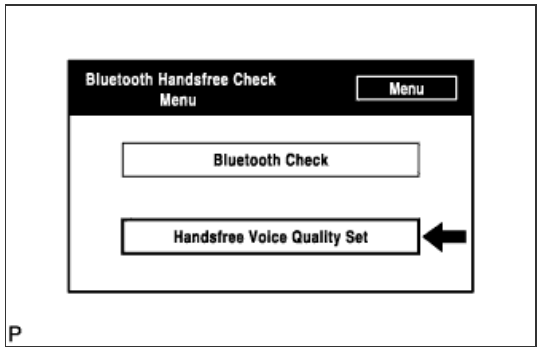


The displayed data can be used as a reference.

iii. Select "Software Version" from the ""Bluetooth" Check Menu" screen.

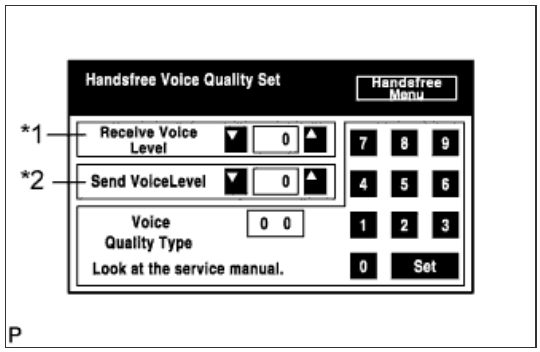
1. Check the software version of the "Bluetooth" module.

**Screen Description**



| Display | Contents |
|---|---|
| *1: General Version | • Overall software version of "Bluetooth" module<br>• If any of the API version, upper stack version, and low stack version is updated, the general version is upgraded. |
| *2: API Version | API software version is displayed. |
| *3: Upper Stack Version | Upper Stack version is displayed. |
| *4: Lower Stack Version | Lower Stack version is displayed. |

**HINT:**



This function is controlled by the multi-display.

**d.** Handsfree Voice Quality Set

**i.** Select "Handsfree Voice Quality Set" from the ""Bluetooth" Handsfree Check Menu" screen.

**ii.** Check the handsfree voice level.

### Screen Description

| Display | Contents |
|---|---|
| *1: Received voice level adjustment | Setting possible for the voice level received from "Bluetooth" compatible phones. |
| *2: Sent voice level adjustment | Setting possible for the voice level sent to "Bluetooth" compatible phones. |

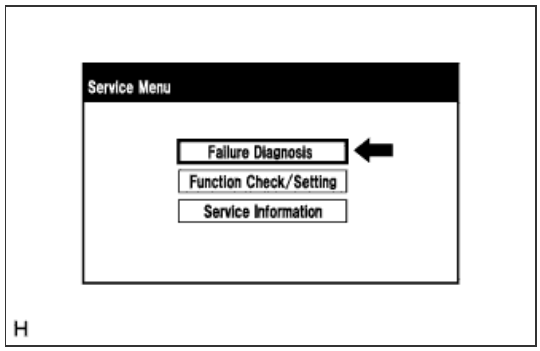
**HINT:**

This function is controlled by the multi-display.

**NOTICE:**

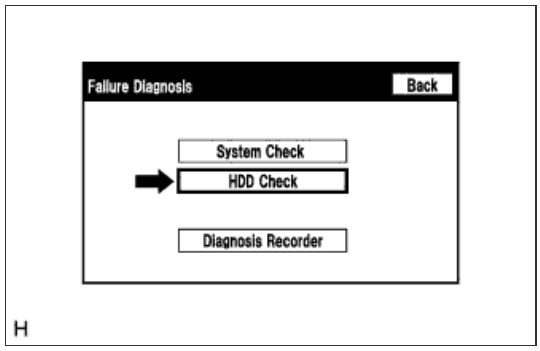
"Voice Quality Type" should not be changed.

**for Preparation** Click here



## CHECK HARD DISK DRIVE

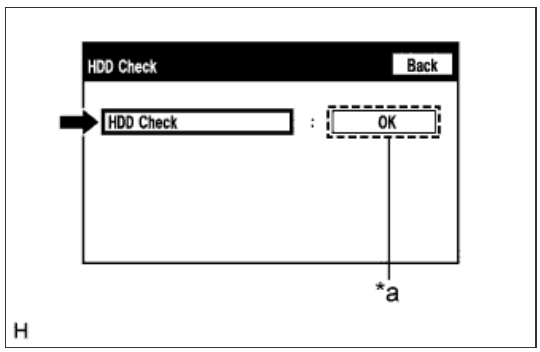
**HINT:**



- **Check the hard disk drive (HDD) built into the multi-media module receiver assembly.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Failure Diagnosis" from the "Service Menu" screen.



c. Select "HDD Check" from the "Failure Diagnosis" screen.

d. HDD Check

i. Select "HDD Check" to start the HDD check.

ii. Check that the result is displayed when the HDD check is completed.

**Screen Description**

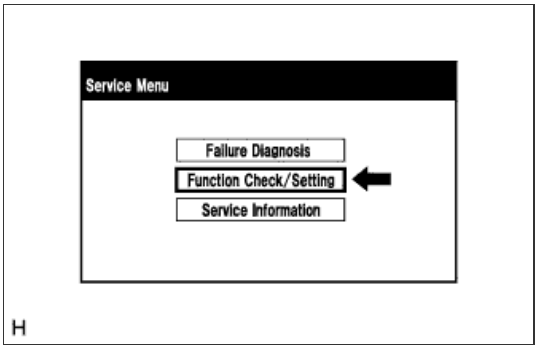
| Display (Result) | Description |
|---|---|
| Checking | Check is in progress |
| OK | Hard disk drive is normal |
| NG | Hard disk drive is malfunctioning |

**Text in Illustration**

| | |
|---|---|
| *a | Result |

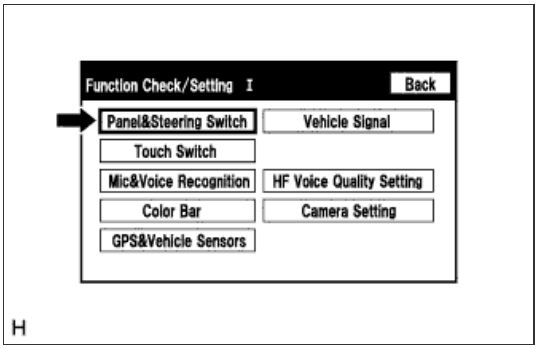
**HINT:**

- **After selecting "HDD Check", it may take a while until the result is displayed.**
- **If the cabin temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher, the HDD may not operate normally, and "NG" may be shown on the display. Make sure to perform the inspection with the cabin at an appropriate temperature.**
- **If "NG" is displayed even when the cabin temperature is appropriate, replace the HDD with a new one.**



## CHECK PANEL & STEERING SWITCH

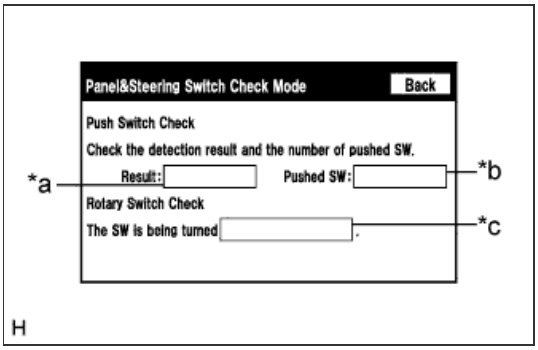
**HINT:**



- **The multi-media module receiver assembly panel switches and steering switches are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.



c. Select "Panel&Steering Switch" from the "Function Check/Setting I" screen.

d. Panel & Steering Switch Check Mode

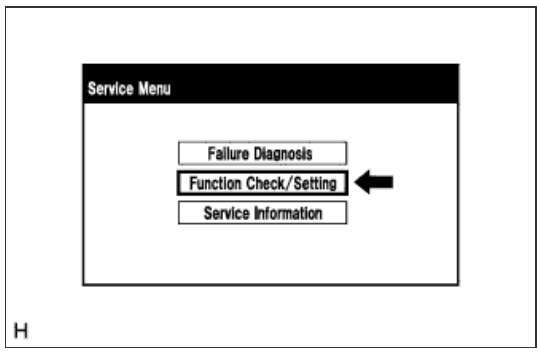
i. Operate each switch and check that the switch conditions are correctly displayed.

**Screen Description**

| Display | Content |
|---|---|
| *a: Switch condition | "Pushed" is displayed when any switch is pushed |
| *b: Number of switches pushed | • Number of switches pushed at once is displayed<br>• If more than 3 switches are pushed at once, "More than 3" is displayed |
| *c: Rotary switch direction | Direction of rotary switch is displayed |

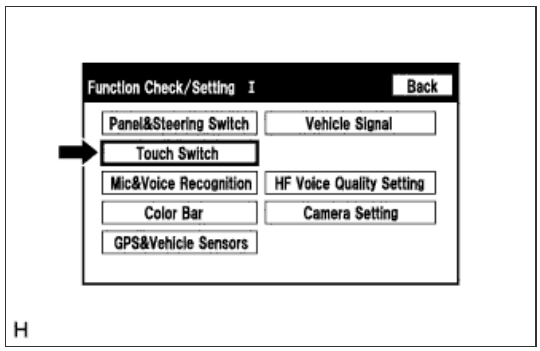
**NOTICE:**

When the "SETUP" switch is pressed and held for 3 seconds or more, diagnostic mode will be canceled.



## CHECK TOUCH SWITCH

**HINT:**

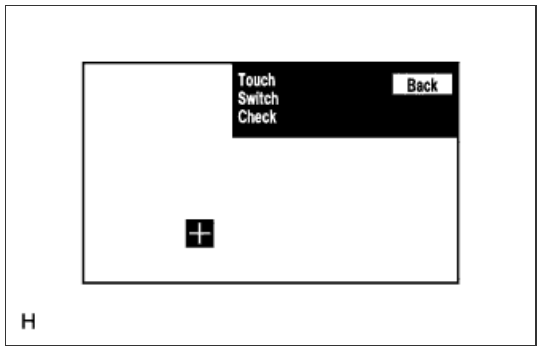


- **The touch switches on the screen are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "Touch Switch" from the "Function Check/Setting I" screen.

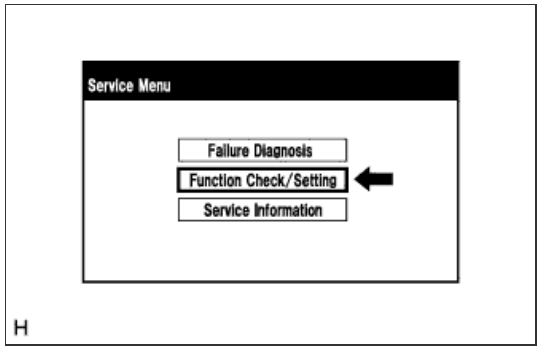


d. Touch Switch Check

i. Touch the display anywhere in the open area to perform the check when the "Touch Switch Check" screen is displayed.

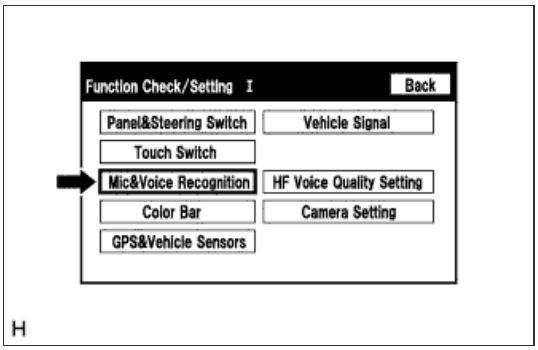
**HINT:**

- **A "+" mark is displayed where the display is touched.**
- **The "+" mark remains on the display even after the finger is removed.**



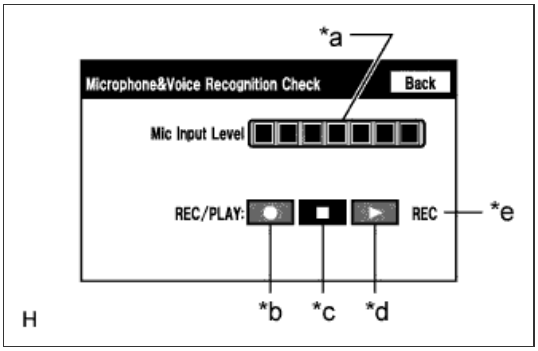
## CHECK MIC & VOICE RECOGNITION

**HINT:**



- **The microphone and microphone input level are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).



b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "Mic&Voice Recognition" from the "Function Check/Setting I" screen.

d. Microphone & Voice Recognition Check

**Screen Description**

| Display | Content |
|---|---|
| *a: Microphone input level meter | Monitors the microphone input level every 0.1 seconds and displays the results in 8 different levels. |
| *b: Recording switch | Starts recording. |
| *c: Stop switch | Stops recording and playing. |
| *d: Play switch | Plays the recorded voice. |
| *e: Recording indicator | Comes on while recording. |

i. When speaking into the microphone, check that the microphone input level meter changes according to the input level.

**HINT:**

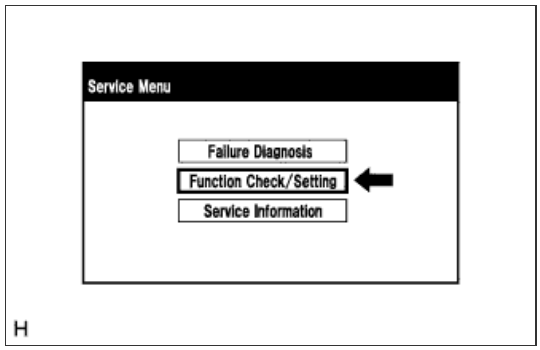
The microphone is active at all times when this screen is displayed.

ii. Push the recording switch and perform voice recording.

**HINT:**

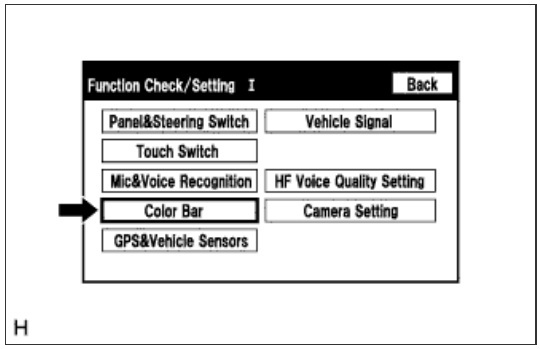
- **Select the recording switch with the blower motor of the air conditioning system stopped. If an outlet of the air conditioning system is facing the microphone, noise may be recorded.**
- **While recording or playing, the switches other than the stop switch cannot be pushed.**
- **When no recording is present, the play switch cannot be pushed.**
- **Recording will stop after 5 seconds or when the stop switch is pushed.**

iii. Check that the recording indicator remains on while recording and that the recording can be played normally.



## CHECK COLOR BAR

**HINT:**

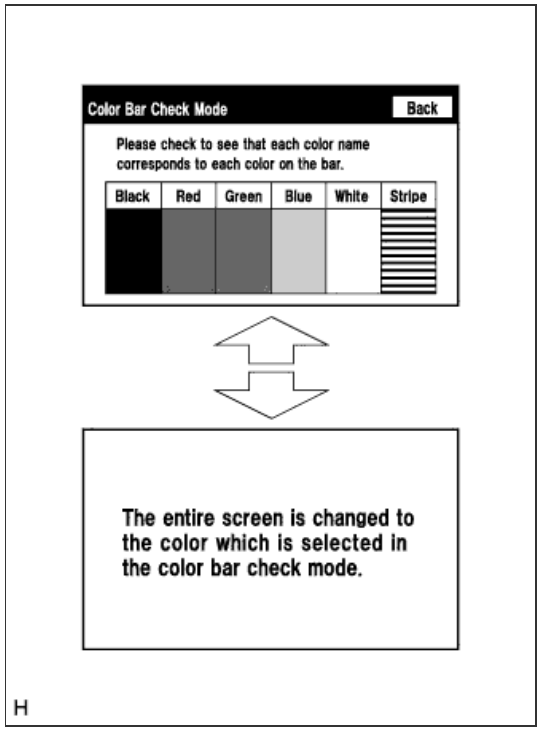


- **The display color on the screen is checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "Color Bar" from the "Function Check/Setting I" screen.



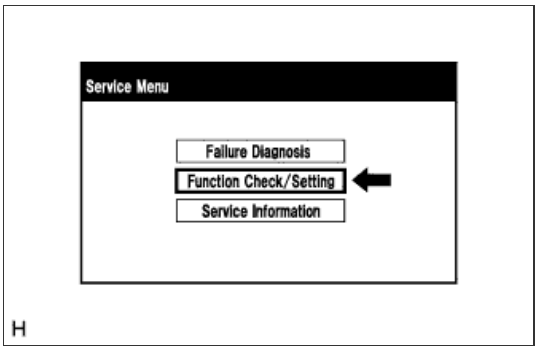
d. Color Bar Check Mode

i. Select a color bar from the "Color Bar Check Mode" screen.

ii. Check the display color.

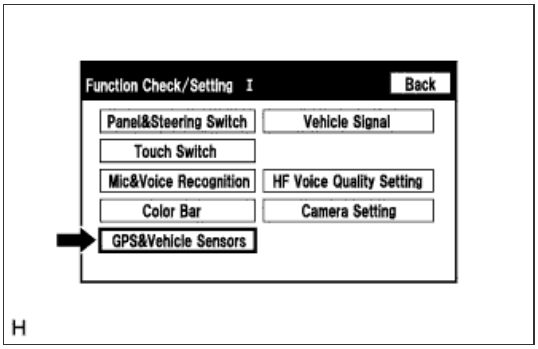
**HINT:**

- **The entire screen turns to the color or stripe selected.**
- **Touching the display will return to the "Color Bar Check Mode" screen.**



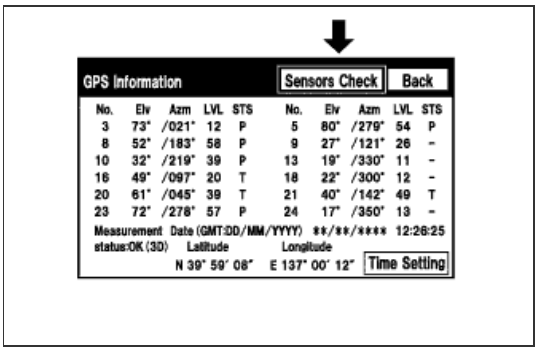
## CHECK GPS & VEHICLE SENSORS

**HINT:**



- **GPS information, vehicle signals and sensor signals are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

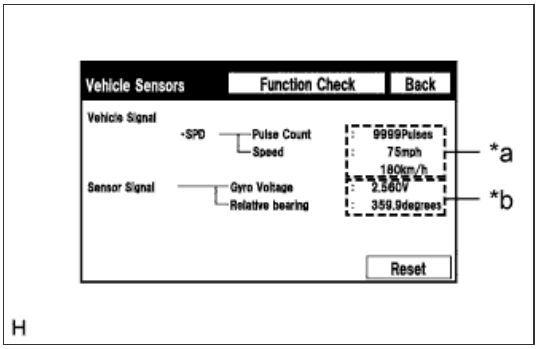
a. Enter diagnostic mode (Click here).



b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "GPS&Vehicle Sensors" from the "Function Check/Setting I" screen.

d. Select "Sensors Check" from the "GPS Information" screen.



e. Vehicle Sensors

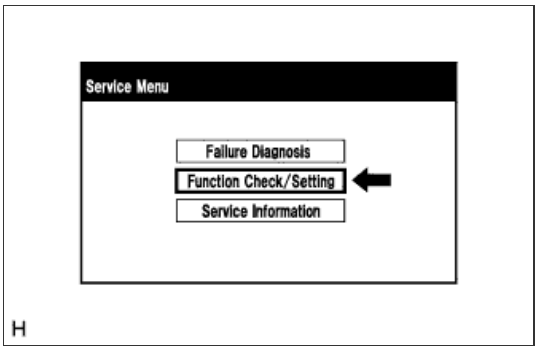
**Screen Description**

| Display | Content |
|---|---|
| *a: Vehicle signal | Vehicle speed signal condition is displayed. |
| *b: Sensor signal | Gyro sensor output condition is displayed. |

**HINT:**

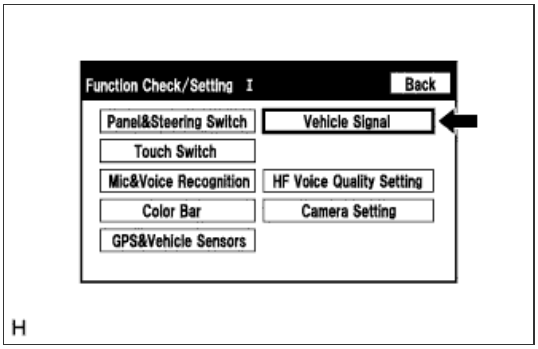
This screen is updated once per second.

i. Check all the signals and sensors when vehicle signal information is displayed.



## CHECK VEHICLE SIGNAL

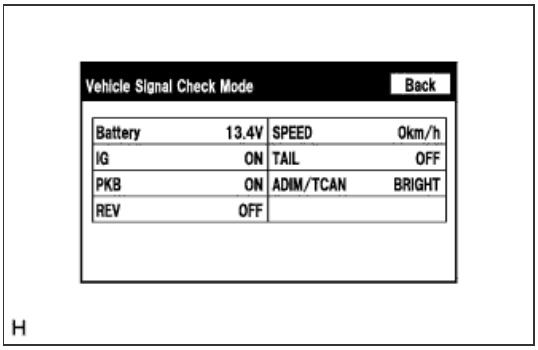
**HINT:**



- **Vehicle signals received by the multi-media module receiver assembly are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.



c. Select "Vehicle Signal" from the "Function Check/Setting I" screen.

d. Vehicle Signal Check Mode

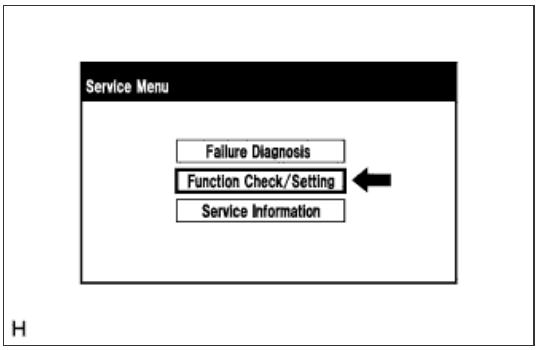
i. When the "Vehicle Signal Check Mode" screen is displayed, check all the vehicle signal conditions.

**Screen Description**

| Display | Content |
|---|---|
| Battery | Battery voltage is displayed. |
| IG | Engine switch ON/OFF state is displayed. |
| PKB | Parking brake ON/OFF state is displayed. |
| REV | Reverse signal ON/OFF state is displayed. |
| SPEED | Vehicle speed is displayed in km/h. |
| TAIL | Tail signal (Light control switch) ON/OFF state is displayed. |
| ADIM/TCAN | Brightness state DIM (with) / BRIGHT (without) is displayed. |

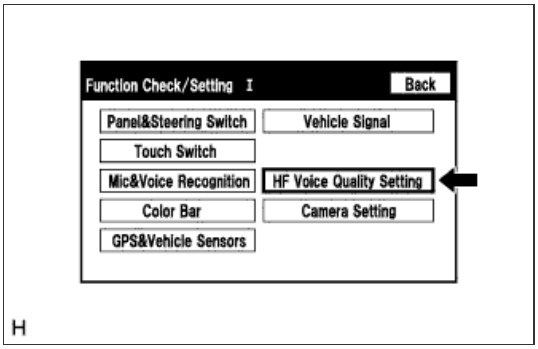
**HINT:**

- **Only items sending vehicle signals will be displayed.**
- **This screen displays vehicle signals input to the multi-media module receiver assembly.**
- **This screen is updated once per second when vehicle input signals change.**



## CHECK HANDS-FREE VOICE QUALITY AND VOLUME SETTING

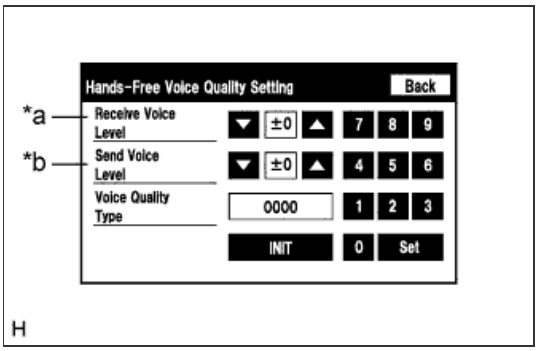
**HINT:**



- **The hands-free volume of a "Bluetooth" compatible phone can be adjusted using the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.



c. Select "HF Voice Quality Setting" from the "Function Check/Setting I" screen.

d. Hands-Free Voice Quality Setting (Receive/Send Voice Level adjustment)

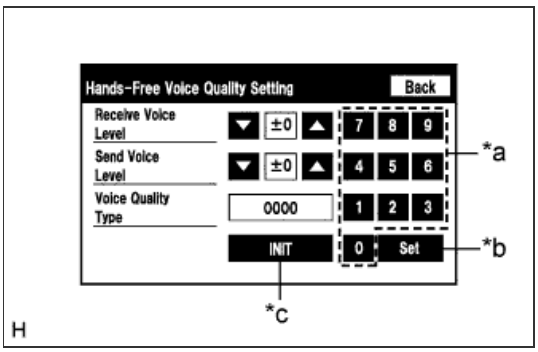
**Screen Description**

| Display | Content |
|---|---|
| *a: Receive voice level adjustment | Setting for the voice level received from "Bluetooth" compatible phones. |
| *b: Send voice level adjustment | Setting for the voice level sent from "Bluetooth" compatible phones. |

**NOTICE:**

Sound quality may deteriorate when the receive voice or send voice level is changed more than necessary. For this reason, check that the received voice or sent voice quality is still acceptable after changing this setting.

i. If the voice level is low, press the up button, and if the voice level is loud, press the down button.



**HINT:**

- **Settings will be applied when the up or down button is selected.**
- **The received voice level adjustment ranges from -5 to +1.**
- **The sent voice level adjustment ranges from -5 to +4.**
- **The initial level is "0".**

e. Hands-Free Voice Quality Setting (Voice Quality Type adjustment)

**Screen Description**

| | |
|---|---|
| *a | Numeric keypad |
| *b | Setting button |
| *c | Reset button |

i. If necessary, refer to the table below to adjust the voice quality type with the numeric keypad.

ii. When adjusting the settings, use the number pad on the screen to input the voice quality type according to the table.

**Settings**

| Parameter | Target Phenomenon | Voice Quality Type | Positive Effect of Changing Voice Quality | Negative Effect of Changing Voice Quality |
|---|---|---|---|---|

| | | | | |
|---|---|---|---|---|
| A (Noise) | The change in background noise the other party hears becomes unpleasant. | 1000 | The change in background noise the other party hears is reduced. | Background noise when not talking becomes large. |
| B (Noise) | The volume of the noise the other party hears temporarily becomes large. | 2000 | The temporary noise is reduced. | The volume of voice may drop temporarily. |
| C (Echo) | The other party hears weak echoes. | 0100 | The amount of echo is reduced (low level). | Sound quality of the other party deteriorates (low level). |
| D (Echo) | The other party hears strong echoes. | 0200 | The amount of echo is reduced (high level). | Sound quality of the other party deteriorates (high level). |
| E (Quality) | The other party hears harsh noises. | 0010 | Sound the other party hears becomes soft. | Sound the other party hears becomes muffled. |
| F (Quality) | You hear harsh noises. | 0020 | Sound you hear becomes soft. | Sound you hear becomes muffled. |

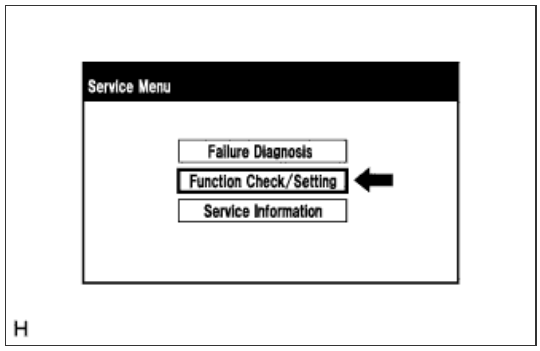
**Settings (When multiple phenomenon occurred)**

| Parameter | Target Phenomenon | Voice Quality Type | Positive Effect of Changing Voice Quality | Negative Effect of Changing Voice Quality |
|---|---|---|---|---|
| A+C | The change in background noise the other party hears becomes unpleasant and the other party hears weak echoes. | 1100 | • The change in background noise the other party hears is reduced.<br>• The amount of echo is reduced (low level). | • Background noise when not talking becomes large.<br>• Sound quality of the other party deteriorates (low level). |
| A+D | The change in background noise the other party hears becomes unpleasant and the other party hears strong echoes. | 1200 | • The change in background noise the other party hears is reduced.<br>• The amount of echo is reduced (high level). | • Background noise when not talking becomes large.<br>• Sound quality of the other party deteriorates (high level). |
| B+C | The volume of the noise the other party hears temporarily becomes large and the other party hears weak echoes. | 2100 | • The temporary noise is reduced.<br>• The amount of echo is reduced (low level). | • The volume of voice may drop temporarily.<br>• Sound quality of the other party deteriorates (low level). |
| B+D | The volume of the noise the other party hears temporarily becomes large and the other party hears strong echoes. | 2200 | • The temporary noise is reduced.<br>• The amount of echo is reduced (high level). | • The volume of voice may drop temporarily.<br>• Sound quality of the other party deteriorates (high level). |
| C+E | The other party hears weak echoes and harsh noises. | 0110 | • The amount of echo is reduced (low level).<br>• Sound the other party hears becomes | • Sound quality of the other party deteriorates (low level).<br>• Sound the other party |

| | | | | |
|---|---|---|---|---|
| | | | soft. | hears becomes muffled. |
| C+F | The other party hears weak echoes and you hear harsh noises. | 0120 | • The amount of echo is reduced (low level).<br>• Sound you hear becomes soft. | • Sound quality of the other party deteriorates (low level).<br>• Sound you hear becomes muffled. |

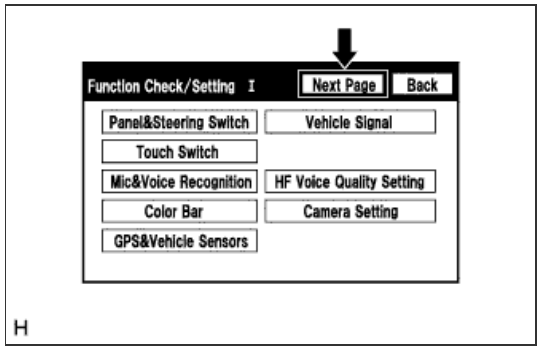
**HINT:**

- **The default value is "0000".**
- **Settings will be applied when the setting button is selected.**
- **If voice quality type values that are not in the table are input, the setting will not be applied and a positive effect may not be gained.**
- **If the quality of phone calls decreases due to the changed settings, return the settings to "0000" by pressing the "INIT" switch.**



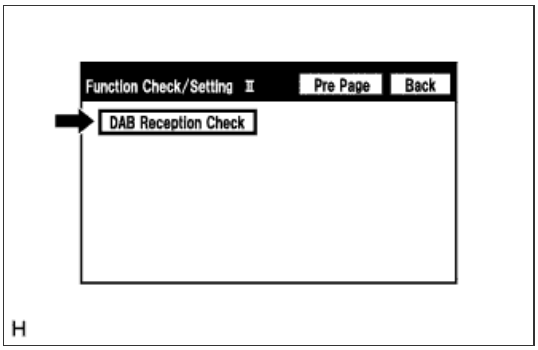
## CHECK DAB RECEPTION (w/ DAB Function)

**HINT:**

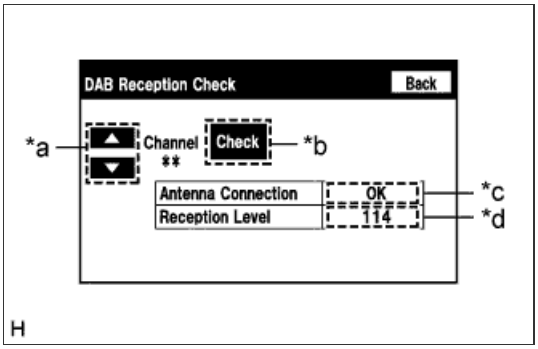


- **The reception condition of DAB (Digital Audio Broadcast) can be checked.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).



b. Select "Function Check/Setting" from the "Service Menu" screen.



c. Select "Next Page" from the "Function Check/Setting I" screen.

d. Select "DAB Reception Check" from the "Function Check/Setting II" screen.

e. Select "DAB Reception Check" from the "Function Check/Setting II" screen.

***a: Channel Change Switch Description**

| Display | Content |
|---|---|
| Up or down button | Enables the channel to be changed to the one to be checked. |

***b: Check Switch Description**

| Display | Condition | Content |
|---|---|---|
| Check | Before/after check | Starts checking |
| STOP | During check | Stops checking |

***c: Antenna Connection Check Result Description**

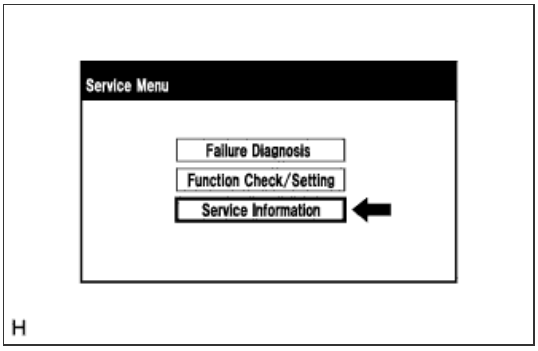
| Display | Content |
|---|---|
| OK | Connected properly |
| NG | Not connected properly |
| - | Not equipped with DAB antenna. |

***d: DAB Tuner Reception Level Check Result Description**

| Display | Content |
|---|---|
| Black | Good reception |
| Red | Poor reception |
| - | Not equipped with DAB antenna. |

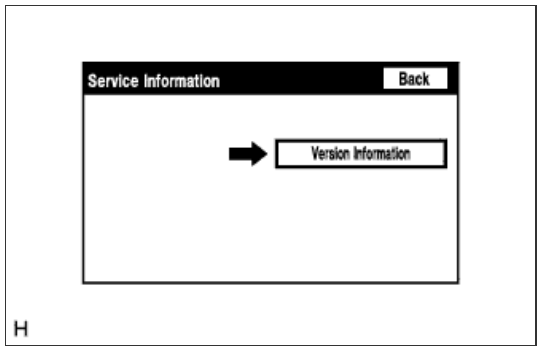
i. Select the "Check" button to start the DAB reception check.

ii. Check that the result is displayed when the DAB reception check is performed.



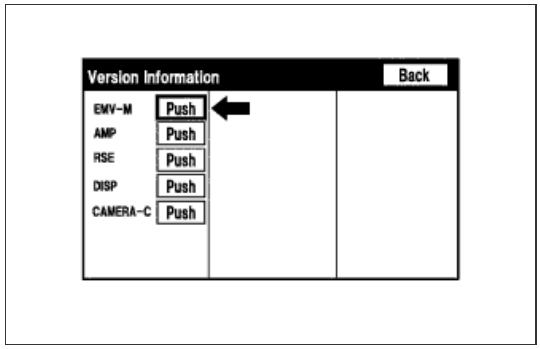
## CHECK UNIT VERSION INFORMATION

**HINT:**



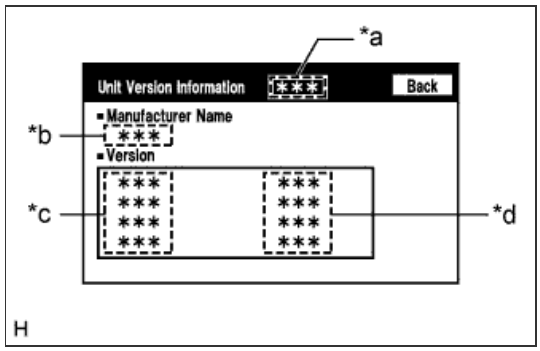
Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.

a. Enter diagnostic mode (Click here).



b. Select "Service Information" from the "Service Menu" screen.

c. Select "Version Information" from the "Service Information" screen.



d. Press the "Push" switch.

e. Unit Version Information

**Screen Description**

| Display | Content |
|---|---|
| *a: Device name | Target device |
| *b: Manufacturer name | Manufacturer of the ECU (target device) |
| *c: Component name | Component name of the ECU (target device) |
| *d: Version | Version of the ECU (target device) |

**HINT:**

Depending on the manufacturer, some component names and versions will be displayed differently.

## CHECK SOFTWARE ERROR HISTORY

**HINT:**

This function is used to check the cause when the multi-media module receiver assembly screen is blacked out.

a. Check software error history.

i. Connect the intelligent tester to the DLC3.

ii. Turn the engine switch on (IG).

iii. Turn the intelligent tester on.

iv. Enter the following menus: Body / Navigation System / Utility / Software Error History.

v. When an item is stored for Software Error History, record it before repairing the multi-media module receiver assembly.

**Software Error History Screen Description**

| Error Description | Trigger | Detail |
|---|---|---|
| Software Reset | Navi Microcomputer | Hexadecimal Number |
| | Audio Microcomputer | |
| | CAN Microcomputer | |
| No Video Signal | Front Monitor | |

| | | |
|---|---|---|
| | Rear Monitor | |
| MOST Cold Restart | Always | |

**HINT:**

- **Software Error History can store up to 5 history data items. If a new software error occurs when 5 data items have already been stored, the oldest data is cleared and the new data is stored.**
- **If an error that is unsupported by the intelligent tester occurs, a "-" is displayed for the display items.**

b. Clear software error history.

i. When DTCs are cleared using any of the following operations, Software Error History will be cleared as well ( Click here).

- Cleared using the intelligent tester.
- Cleared using the system check mode screen.
- Cleared using the unit check mode screen.

## CHECK OPTICAL DISC ERROR HISTORY

**HINT:**

This function is used to check the cause when an optical disc error occurs.

a. Check optical disc error history.

i. Connect the intelligent tester to the DLC3.

ii. Turn the engine switch on (IG).

iii. Turn the intelligent tester on.

iv. Enter the following menus: Body / Navigation System / Utility / Optical Disc Error History.

v. When an item is stored for Optical Disc Error History, record it before proceeding with troubleshooting.

**Optical Disc Error History Screen Description**

| Display | Content |
|---|---|
| Error Type | Displays the type of error. |
| Device | Displays the malfunctioning device. |
| Date | Displays the date and time that the malfunction occurred. |

**"Error Type" Screen Description**

| Error Type | Detection Condition | Action |
|---|---|---|
| Read Error | When a disc read error occurs. | Proceed to next suspected area shown in Problem Symptoms Table (Click here) |
| Disc damaged/up side down/dirty | When it is determined that any of the following is the cause of the disc read error:<br>• The disc cannot be read.<br>• The disc cannot be read because of dirt or scratches.<br>• The disc cannot be read because it is inserted up side down. | |
| Cannot determine disc type | An unsuitable disc is inserted. | |
| DPS error | When an error occurs while decoding MP3/WMA files. | |
| Some files are corrupt | • When MP3/WMA files cannot be played back because they are unsupported.<br>• Even though the file extensions are MP3 or WMA, files cannot be played back because the header information cannot be read. | |
| Some files cannot be found | • When a disc without music data is played back.<br>• When there are no playable MP3/WMA files. | |
| Copy protection violation | When a file with copyright protection that cannot be played back is played back. | |

**"Device" Screen Description**

| | |
|---|---|

| Device | Component |
| --- | --- |
| DVD-P | Multi-media module receiver assembly |
| CD-P | Not available |
| R-Seat DVD-P | Not available |

**HINT:**

- **Optical Disc Error History can store up to 7 history data items. If a new optical disc error occurs when 7 data items have already been stored, the oldest data is cleared and the new data is stored.**
- **If an error that is unsupported by the intelligent tester occurs, a "-" or blank is displayed for the display items.**

**b.** Clear optical disc error history.

**i.** When DTCs are cleared using any of the following operations, Optical Disc Error History will be cleared as well ( Click here).

- Cleared using the intelligent tester.
- Cleared using the system check mode screen.
- Cleared using the unit check mode screen.

**for Preparation** Click here

**HINT:**

Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

### Audio Function

| Symptom | Suspected Area | See page |

### General Audio Function

| Symptom | Suspected Area | See page |
|---|---|---|
| No sound can be heard from speakers. | Proceed to "No Sound can be Heard from Speakers" | Click here |
| | Proceed to "Speaker Circuit" | Click here |
| | Proceed to "Sound Signal Circuit between Radio Receiver and Stereo Component Amplifier" | Click here |
| | Proceed to "AVC-LAN Circuit" | Click here |
| | Proceed to "Stereo Component Amplifier Power Source Circuit" | Click here |
| | Telematics transceiver (w/ Emergency Call Switch) | Click here |
| | Stereo component amplifier assembly | Click here |
| | Multi-media module receiver assembly | Click here |
| Abnormal noise occurs. | Proceed to "Noise Occurs" | Click here |
| | Telematics transceiver (w/ Emergency Call Switch) | Click here |
| | Stereo component amplifier assembly | Click here |
| | Multi-media module receiver assembly | Click here |
| Sound quality is bad in all modes. (Volume is too low.) | Check that the ASL function is off. | - |
| | Proceed to "Poor Sound Quality in All Modes (Low Volume)" | Click here |
| | Proceed to "Speaker Circuit" | Click here |
| | Proceed to "Sound Signal Circuit between Radio Receiver and Stereo Component Amplifier" | Click here |
| | Telematics transceiver (w/ Emergency Call Switch) | Click here |
| | Stereo component amplifier assembly | Click here |
| | | |

| | | |
|---|---|---|
| | Multi-media module receiver assembly | Click here |
| ASL does not function. | Check that the ASL function is on. | - |
| | Proceed to "Vehicle Speed Signal Circuit between Radio Receiver and Combination Meter" | Click here |
| | Proceed to "Vehicle Speed Signal Circuit between Stereo Component Amplifier and Combination Meter" | Click here |
| | Stereo component amplifier assembly | Click here |
| | Multi-media module receiver assembly | Click here |
| Voice guidance does not function. | Proceed to "Voice Guidance does not Function" | Click here |
| | Proceed to "Speaker Circuit" | Click here |
| | Stereo component amplifier assembly | Click here |
| | Multi-media module receiver assembly | Click here |
| Voice menu screen is not displayed. (Voice recognition function does not turn on.) | Check if the voice recognition prompts function is "On". | - |
| | Proceed to "Panel Switches do not Function" | Click here |
| | Proceed to "Steering Pad Switch Circuit" | Click here |
| | Multi-media module receiver assembly | Click here |
| When voice recognition switch is pressed, a short beep is emitted but voice cannot be recognized properly. | Proceed to "Voice is not Recognized" | Click here |
| | Proceed to "Microphone Circuit between Microphone and Radio Receiver" | Click here |
| | Multi-media module receiver assembly | Click here |
| Customizable parameters cannot be changed. (Customizable parameters can be changed by using the intelligent tester.) | Multi-media module receiver assembly | Click here |

### FM or AM Radio Function

| Symptom | Suspected Area | See page |
|---|---|---|
| Radio broadcast cannot be received or poor reception. | Proceed to "Radio Broadcast cannot be Received or Poor Reception" | Click here |
| Radio broadcast can be received but radio station cannot be displayed. (Some radio stations do not provide their name information.) | Multi-media module receiver assembly | Click here |
| "iPod" tagging function cannot be used. | Check if a message indicating that the capacity for tag information is full is displayed. | - |
| | Proceed to "USB Audio System Recognition/Play Error" | Click here |
| | No. 1 stereo jack adapter assembly | Click here |
| | Multi-media module receiver assembly | Click here |

### CD or DVD Player Function

| Symptom | Suspected Area | See page |
|---|---|---|
| Disc cannot be inserted/played or disc is ejected right after insertion. | Proceed to "Check Optical Disc Error History" in Operation Check | Click here |
| | Proceed to "Disc cannot be Inserted or is Ejected Right After Insertion" | Click here |
| Disc cannot be ejected. | Proceed to "Check Optical Disc Error History" in Operation Check | Click here |
| | Proceed to "Disc cannot be Ejected" | Click here |
| Disc sound skips. | Proceed to "Check Optical Disc Error History" in Operation Check | Click here |
| | | Click |

| | | |
|---|---|---|
| | Proceed to "CD/DVD Sound Skips" | here |
| Screen color is poor only when watching DVD. | Change the color settings on the screen adjustment screen. | - |
| | Multi-media module receiver assembly | Click here |
| Sound quality is bad only when disc is played. (Volume is too low.) | Proceed to "Check Optical Disc Error History" in Operation Check | Click here |
| | Proceed to "Sound Quality is Bad Only when Disc is played (Volume is Too Low)" | Click here |

### AUX Function

| Symptom | Suspected Area | See page |
|---|---|---|
| External device sound cannot be heard or sound quality is bad. (Stereo jack is used.) | Proceed to "Sound Signal Circuit between Radio Receiver and Stereo Jack Adapter" (w/o Rear Seat Entertainment System) | Click here |
| | Proceed to "Sound Signal Circuit between Radio Receiver and Video Terminal" (w/ Rear Seat Entertainment System [for Roof]) | Click here |
| | No. 1 stereo jack adapter assembly | Click here |
| | Multi-media module receiver assembly | Click here |
| "AUX" is not displayed on system check mode screen. | Proceed to "Sound Signal Circuit between Radio Receiver and Stereo Jack Adapter" (w/o Rear Seat Entertainment System) | Click here |
| | Proceed to "Sound Signal Circuit between Radio Receiver and Video Terminal" (w/ Rear Seat Entertainment System [for Roof]) | Click here |
| | No. 1 stereo jack adapter assembly | Click here |
| | Multi-media module receiver assembly | Click here |

### Voice Recognition Function

| Symptom | Suspected Area | See page |
|---|---|---|
| Voice menu screen is not displayed. (Voice recognition function does not turn on.) | Check if the voice recognition prompts function is "On". | - |
| | Proceed to "Panel Switches do not Function" | Click here |
| | Proceed to "Steering Pad Switch Circuit" | Click here |
| | Multi-media module receiver assembly | Click here |
| When voice recognition switch is pressed, a short beep is emitted but voice cannot be recognized properly. | Proceed to "Voice is not Recognized" | Click here |
| | Proceed to "Microphone Circuit between Microphone and Radio Receiver" | Click here |
| | Hard disc | Click here |
| | Multi-media module receiver assembly | Click here |

### "Bluetooth" Hands-free Function

| Symptom | Suspected Area | See page |
|---|---|---|
| Bluetooth is inoperative. | Proceed to "Microphone Circuit between Microphone and Radio Receiver" | Click here |
| | Multi-media module receiver assembly | Click here |
| Cellular phone registration failure. | Proceed to "Cellular Phone Registration Failure, Phonebook Transfer Failure" | Click here |
| | Multi-media module receiver assembly | Click here |
| Cellular phone cannot make outgoing/incoming calls or call in a certain place. | Proceed to "Cellular Phone cannot Make Outgoing/Incoming Calls" | Click here |
| | Multi-media module receiver assembly | Click here |
| | Proceed to "Cellular Phone cannot Make Outgoing/Incoming | Click |

| | | |
|---|---|---|
| Message that prompts to check the cellular phone is displayed. | Calls" | here |
| | Multi-media module receiver assembly | Click here |
| Phonebook data cannot be transferred manually or automatically. | Check the automatic download contract setting | - |
| | When transferring phonebook data, OBEX authentication may be required. Enter "1234" into the "Bluetooth" phone. | - |
| | Proceed to "Cellular Phone Registration Failure, Phonebook Transfer Failure" | Click here |
| | Multi-media module receiver assembly | Click here |
| Volume of other caller's voice is not at an appropriate volume level, there is noise, sound quality is poor or other caller's voice cannot be heard. | Proceed to "Check Hands-free Voice Quality and Volume Setting" in Operation Check | Click here |
| | Proceed to "The Other Caller's Voice cannot be Heard, is too Quiet, or Distorted" | Click here |
| | Multi-media module receiver assembly | Click here |
| | Stereo component amplifier assembly | Click here |
| Other caller cannot hear your voice at an appropriate volume level, there is noise or an echo, sound quality is poor or other caller cannot hear your voice. | Proceed to "Check Hands-free Voice Quality and Volume Setting" in Operation Check | Click here |
| | Proceed to "The Other Caller cannot Hear Your Voice, or Your Voice is too Quiet or Distorted" | Click here |
| | Proceed to "Microphone Circuit between Microphone and Radio Receiver" | Click here |
| | Multi-media module receiver assembly | Click here |
| E-mail/SMS cannot be received or sent. | Check whether messages can be received/sent using the cellular phone. | - |
| | Check that the phone is registered as a hands-free device. | - |
| | Check the sending and receiving e-mails via the navigation system setting. | - |
| | Proceed to "Cellular Phone Registration Failure, Phonebook Transfer Failure" | Click here |
| | Multi-media module receiver assembly | Click here |

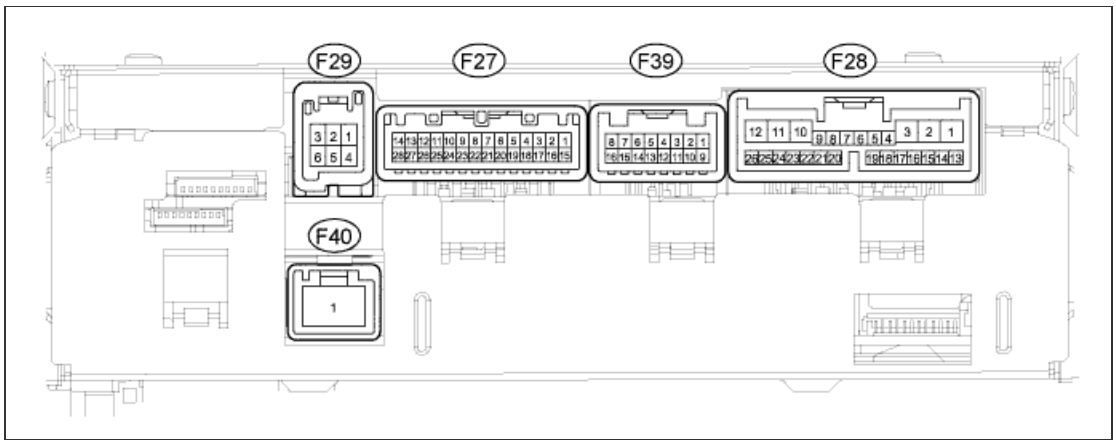
### "Bluetooth" Audio Function

| Symptom | Suspected Area | See page |
|---|---|---|
| Portable player cannot be registered. | Proceed to "Portable Player cannot be Registered" | Click here |
| | Multi-media module receiver assembly | Click here |
| Portable player cannot be connected manually/automatically. | Proceed to "Portable Player cannot be Registered" | Click here |
| | Proceed to "Portable Player cannot be Connected Manually/Automatically" | Click here |
| | Multi-media module receiver assembly | Click here |
| Cellular phone with portable audio function cannot be recognized as "Bluetooth" audio device even when connected using "Bluetooth". | Proceed to "Portable Player cannot be Registered" | Click here |
| | Proceed to "Portable Player cannot be Connected Manually/Automatically" | Click here |
| | Multi-media module receiver assembly | Click here |
| Sound of portable player cannot be heard from speakers, or sound is low. | Proceed to "Sound of Portable Player cannot be Heard from Speakers or Sound is Low" | Click here |
| | Multi-media module receiver assembly | Click here |
| Portable player does not play even after "Bluetooth" audio mode is selected. | Proceed to "Does not Play even after Bluetooth Audio Mode is Selected" | Click here |
| | Multi-media module receiver assembly | Click here |
| | Proceed to "Does not Play even after Bluetooth Audio Mode is | Click |

| | | |
|---|---|---|
| Portable player does not play. | Selected" | here |
| | Multi-media module receiver assembly | Click here |
| Track information such as track number, track name, elapsed play time and playlist is not displayed. | Proceed to "Portable Player cannot be Operated Using In-vehicle Device or Track Information is not Displayed on In-vehicle Device" | Click here |
| | Multi-media module receiver assembly | Click here |
| Operation switches for portable player such as play, pause, repeat, random and scan are not displayed. | Proceed to "Portable Player cannot be Operated Using In-vehicle Device or Track Information is not Displayed on In-vehicle Device" | Click here |
| | Multi-media module receiver assembly | Click here |
| Battery condition of portable player is not displayed. | Proceed to "Portable Player cannot be Operated Using In-vehicle Device or Track Information is not Displayed on In-vehicle Device" | Click here |
| | Multi-media module receiver assembly | Click here |
| "Bluetooth" signal condition is not displayed. | Proceed to "Portable Player cannot be Operated Using In-vehicle Device or Track Information is not Displayed on In-vehicle Device" | Click here |
| | Multi-media module receiver assembly | Click here |
| Portable player cannot pause, select file, fast forward, fast rewind, play at random or scan. | Proceed to "Portable Player cannot be Operated Using In-vehicle Device or Track Information is not Displayed on In-vehicle Device" | Click here |
| | Multi-media module receiver assembly | Click here |
| Noise occurs or sound skips when portable player plays. | Proceed to "Noise Occurs or Sound Skips when Portable Player Plays" | Click here |
| | Multi-media module receiver assembly | Click here |
| Registered device cannot be deleted. | Proceed to "Registered Device cannot be Deleted" | Click here |
| | Multi-media module receiver assembly | Click here |

### USB Audio System Function

| Symptom | Suspected Area | See page |
|---|---|---|
| USB audio system sound cannot be heard or sound quality is bad. (USB connector is used.) | Proceed to "Data Signal Circuit between Radio Receiver and Stereo Jack Adapter" | Click here |
| | No. 1 stereo jack adapter assembly | Click here |
| | Multi-media module receiver assembly | Click here |
| USB device or "iPod" is not recognized. | Proceed to "USB Audio System Recognition/Play Error" | Click here |
| | No. 1 stereo jack adapter assembly | Click here |
| | Multi-media module receiver assembly | Click here |
| Track information such as track, artist and album names are not displayed. | Proceed to "USB Audio System Recognition/Play Error" | Click here |
| | No. 1 stereo jack adapter assembly | Click here |
| | Multi-media module receiver assembly | Click here |
| USB device or "iPod" is recognized but cannot play nor play in a sorted order. | Proceed to "USB Audio System Recognition/Play Error" | Click here |
| | No. 1 stereo jack adapter assembly | Click here |
| | Multi-media module receiver assembly | Click here |
| Album cover art cannot be displayed. | Check that Display Cover Art on the "iPod" Settings screen is set to on. | - |
| | Check that a JPEG file is used for the cover art. | - |
| | Proceed to "USB Audio System Recognition/Play Error" | Click here |
| | | |



| | | |
|---|---|---|
| "iPod" battery cannot be charged. | No. 1 stereo jack adapter assembly | Click here |
| | Multi-media module receiver assembly | Click here |

### Fuel Consumption Function

| Symptom | Suspected Area | See page |
|---|---|---|
| "Fuel Consumption" icon is dimmed. | Check if other icons or items displayed on screen have any problems. | - |
| | Multi-media module receiver assembly | Click here |
| Graph is not displayed on "Trip Information" screen. | Recheck with the engine running. | - |
| | Multi-media module receiver assembly | Click here |
| Cruise range is not displayed on "Trip Information" screen. | Turn engine switch on (IG) and recheck. | - |
| | Multi-media module receiver assembly | Click here |
| Graph is not updated on "Past record" screen even though "Clear" is selected. | Turn engine switch on (IG) and recheck. | - |
| | Multi-media module receiver assembly | Click here |
| Graph is not displayed on "Past record" screen. | Turn engine switch on (IG) and recheck. | - |
| | Multi-media module receiver assembly | Click here |

**for Preparation** Click here

## CHECK MULTI-DISPLAY

a. Disconnect the F28 and F39 display connectors.

b. Measure the resistance and voltage according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F28-1 (+B1) - F28-10 (GND1) | R - W-B | Battery | Always | 10.5 to 16 V |
| F28-2 (ACC) - F28-10 (GND1) | GR - W-B | Accessory (ON) | Engine switch off | Below 1 V |
| | | | Engine switch on (ACC) | 10.5 to 16 V |
| F28-3 (IG) - F28-10 (GND1) | G - W-B | Ignition (ON) | Engine switch off | Below 1 V |
| | | | Engine switch on (IG) | 10.5 to 16 V |
| F28-10 (GND1) - Body ground | W-B - Body ground | Ground | Always | Below 1 Ω |
| F39-6 (GND2) - Body ground | B - Body ground | Ground | Always | Below 1 Ω |

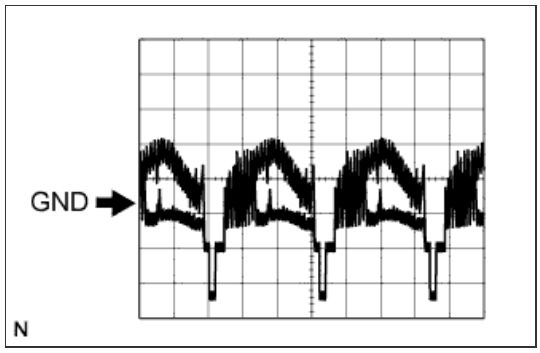
If the result is not as specified, there may be a malfunction on the wire harness side.

c. Reconnect the F28 and F39 display connectors.

d. Measure the voltage and waveform according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F27-1 (TX-) - F28-10 (GND1) | L - W-B | AVC-LAN communication signal | Engine switch on (ACC) | 2.25 to 2.75 V |
| F27-2 (TX+) - F28-10 (GND1) | W - W-B | AVC-LAN communication signal | Engine switch on (ACC) | 2.25 to 2.75 V |
| F27-3 (TX2-) - F28-10 (GND1) | L - W-B | AVC-LAN communication signal | Engine switch on (ACC) | 2.25 to 2.75 V |
| F27-4 (TX2+) - F28-10 (GND1) | W - W-B | AVC-LAN communication signal | Engine switch on (ACC) | 2.25 to 2.75 V |
| F27-5 (TSW-) - F28-10 (GND1) | BR - W-B | Telephone relation switch signal | Always | Below 1 V |
| F27-9 (MACC) - F28-10 (GND1) | Y - W-B | Microphone amplifier power supply | Engine switch off | Below 1 V |
| | | | Engine switch on (IG) | 4.75 to 5.25 V |
| F27-10 (MIN-) - F28-10 (GND1) | R - W-B | Microphone voice signal | See "Mic & Voice Recognition Check" (Click here) | - |
| F27-11 (MIN+) - F28-10 (GND1) | G - W-B | Microphone voice signal | See "Mic & Voice Recognition Check" (Click here) | - |
| F27-12 (SGND) - F28-10 (GND1) | BR - W-B | Signal ground | Always | Below 1 V |

| | | | | |
|---|---|---|---|---|
| F27-13 (CA+) - F28-10 (GND1)*1 | B - W-B | Television camera power supply | Engine switch on (IG), shift lever moved to R | 5.8 to 6.5 V |
| F27-14 (CGND) - Body ground*1 | W - Body ground | Ground | Always | Below 1 V |
| F27-21 (IVO-) - F28-10 (GND1) | B - W-B | Voice guidance signal | Voice guidance provided | Waveform synchronized with sounds is output |
| F27-22 (IVO+) - F28-10 (GND1) | W - W-B | Voice guidance signal | Voice guidance provided | Waveform synchronized with sounds is output |
| F27-23 (SLD) - F28-10 (GND1) | Shielded - W-B | Shielded ground | Always | Below 1 V |
| F27-27 (V+) - F27-28 (V-)*1 | R - W | Television camera image signal | Engine switch on (IG), shift lever moved to R | Pulse generation (refer to waveform 1) |
| F27-28 (V-) - F27-14 (CGND)*1 | Shielded - W | Shielded ground | Always | Below 1 V |
| F28-5 (HILL) - F28-10 (GND1) | W - W-B | Illumination signal | Light control switch off | Below 1 V |
| | | | Light control switch on | 10.5 to 16 V |
| F28-7 (TC) - F28-10 (GND1) | V - W-B | Diagnosis ON signal | Engine switch on (IG) | 9 to 14 V |
| F28-8 (HAZ) - F28-10 (GND1) | O - W-B | Hazard warning signal | Hazard warning switch off | Below 1 V |
| | | | Hazard warning switch on | 11 to 14 V |
| F28-9 (ARON) - F28-10 (GND1) | W - W-B | Front passenger side airbag ON/OFF indicator signal | Passenger airbag ON/OFF indicator off | Below 2 V |
| | | | Passenger airbag ON/OFF indicator on | 11 to 14 V |
| F28-12 (ILL+) - F28-10 (GND1) | G - W-B | Illumination signal | Light control switch off | Below 1 V |
| | | | Light control switch on | 10.5 to 16 V |
| F28-13 (REV) - F28-10 (GND1) | L - W-B | Reverse signal | See "Vehicle Signal Check" Mode (Click here) | - |
| F28-14 (SPD) - F28-10 (GND1) | V - W-B | Speed signal from combination meter | See "Vehicle Signal Check" Mode (Click here) | - |
| F28-20 (AIR) - F28-10 (GND1) | B - W-B | Front passenger side airbag ON/OFF indicator signal | Passenger airbag ON/OFF indicator off | Below 2 V |
| | | | Passenger airbag ON/OFF indicator on | 10.5 to 16 V |
| F28-21 (PBEW) - F28-10 (GND1) | Y - W-B | Passenger seat belt signal | Passenger seat occupied, seat belt fastened | 11 to 14 V |
| | | | Passenger seat occupied, seat belt unfastened | Below 2 V |
| F28-23 (PKB) - F28-10 (GND1) | Y - W-B | Parking brake signal | See "Vehicle Signal Check" Mode (Click here) | - |
| F29-1 (VV+) - F28-10 (GND1) | W - W-B | DVD image signal | DVD played on radio receiver | Pulse generation (refer to waveform 2) |
| F29-4 (VV-) - F28-10 (GND1) | B - W-B | Signal ground | Always | Below 1 V |
| F39-1 (TX4-) - F28-10 (GND1)*3 | L - W-B | AVC-LAN communication signal | Engine switch on (ACC) | 2.25 to 2.75 V |
| F39-2 (TX4+) - F28-10 (GND1)*3 | W - W-B | AVC-LAN communication signal | Engine switch on (ACC) | 2.25 to 2.75 V |
| F39-3 (SGND) - F28-10 (GND1)*3 | Shielded - W-B | Shielded ground | Always | Below 1 V |
| F39-4 (MCO-) - F28-10 (GND1)*3 | W - W-B | Microphone voice signal | See "Mic & Voice Recognition Check" (Click here) | - |
| F39-5 (MCO+) - F28-10 (GND1)*3 | B - W-B | Microphone voice signal | See "Mic & Voice Recognition Check" (Click here) | - |
| F39-7 (ACC2) - F28-10 (GND1)*3 | GR - W-B | Accessory (ON) | Engine switch off | Below 1 V |
| | | | Engine switch on (ACC) | 10.5 to 16 V |

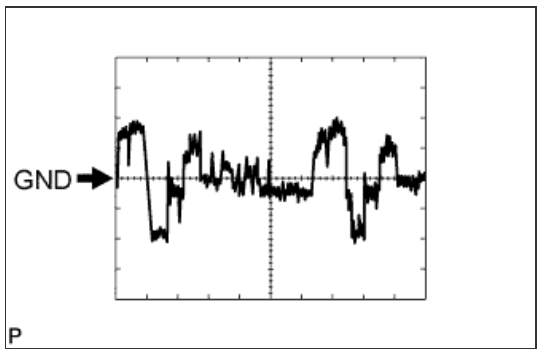


| | | | | |
|---|---|---|---|---|
| F39-10 (SI-) - F28-10 (GND1)*3 | W - W-B | Voice guidance signal | Voice guidance provided | Waveform synchronized with sounds is input |
| F39-11 (SI+) - F28-10 (GND1)*3 | B - W-B | Voice guidance signal | Voice guidance provided | Waveform synchronized with sounds is input |
| F39-15 (REV2) - F28-10 (GND1)*3 | L - W-B | Reverse signal | See "Vehicle Sensors" Mode (Click here) | - |
| F39-16 (SPD2) - F28-10 (GND1)*3 | V - W-B | Speed signal | See "Vehicle Sensors" Mode (Click here) | - |
| F40-1 (GVIF) - F28-10 (GND1)*2 | B - W-B | Digital image signal | Navigation display ON | - |

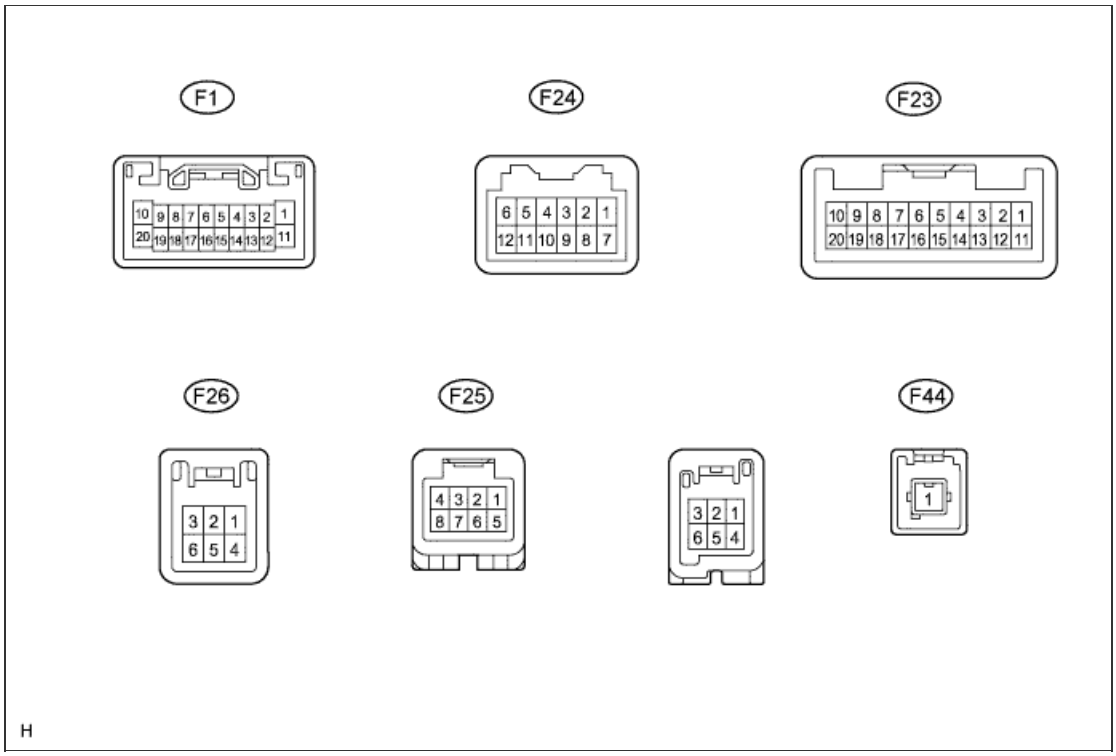
*1: w/o Parking Assist Monitor System
*2: w/ Parking Assist Monitor System
*3: w/ Navigation System
If the result is not as specified, the multi-display may have a malfunction.

e. Using an oscilloscope, check waveform 1.

**Waveform 1 (reference)**



| Item | Content |
|---|---|
| Terminal No. (Symbol) | F27-27 (V+) - F27-28 (V-) |
| Tool Setting | 0.2 V/DIV., 20 µs/DIV. |
| Condition | Engine switch on (IG), shift lever moved to R |



f. Using an oscilloscope, check waveform 2.

**Waveform 2 (reference)**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F29-1 (VV+) - F28-10 (GND1) |
| Tool Setting | 0.2 V/DIV., 0.2 µs/DIV. |
| Condition | Disc played on multi-display |

## CHECK RADIO RECEIVER

a. Disconnect the F1 receiver connector.

b. Measure the resistance and voltage according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F1-1 (B) - F1-20 (GND) | L - BR | Battery | Always | 11 to 14 V |
| F1-20 (GND) - Body ground | BR - Body ground | Ground | Always | Below 1 Ω |
| F1-11 (ACC) - F1-20 (GND) | GR - BR | Accessory (ON) | Engine switch off | Below 1 V |
| F1-11 (ACC) - F1-20 (GND) | GR - BR | Accessory (ON) | Engine switch on (ACC) | 11 to 14 V |

If the result is not as specified, there may be a malfunction on the wire harness side.

c. Reconnect the F1 receiver connector.

d. Measure the resistance, waveform and voltage according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F1-2 (ILL+) - F1-20 (GND) | G - BR | Illumination signal | Engine switch on (IG), light control switch off | Below 1 V |
| F1-2 (ILL+) - F1-20 (GND) | G - BR | Illumination signal | Engine switch on (IG), light control switch tail or on | 11 to 14 V |
| F1-7 (MUTE) - F1-20 (GND) | B - BR | Mute signal | Audio system playing → changing modes | 3.5 V or higher → Below 1 V |
| F1-8 (R+) - F1-20 (GND) | B - BR | Sound signal (right) | Audio system playing | Waveform synchronized with sound is output |
| F1-9 (L+) - F1-20 (GND) | R - BR | Sound signal (left) | Audio system playing | Waveform synchronized with sound is output |
| F1-18 (R-) - F1-20 (GND) | W - BR | Sound signal (right) | Audio system playing | Waveform synchronized with sound is output |
| F1-19 (L-) - F1-20 (GND) | G - BR | Sound signal (left) | Audio system playing | Waveform synchronized with sound is output |
| F1-10 (SLD) - F1-20 (GND) | Shielded - BR | Shielded ground | Always | Below 1 V |
| F24-5 (CDL-) - F1-20 (GND)* | R - BR | Sound signal (left) | RSE system playing | Waveform synchronized with sound is output |
| F24-4 (CDL+) - F1-20 (GND)* | L - BR | Sound signal (left) | RSE system playing | Waveform synchronized with sound is output |
| F24-3 (CDR-) - F1-20 (GND)* | W - BR | Sound signal (right) | RSE system playing | Waveform synchronized with sound is output |

| | | | | |
|---|---|---|---|---|
| F24-2 (CDR+) - F1-20 (GND)* | B - BR | Sound signal (right) | RSE system playing | Waveform synchronized with sound is output |
| F24-6 (MUTE) - F1-20 (GND)* | G - BR | Mute signal | RSE system playing → changing modes | 3.5 V or higher → Below 1 V |
| F23-18 (R-L-) - F1-20 (GND)* | R - BR | Sound signal (left) | RSE system playing | Waveform synchronized with sound is output |
| F23-17 (R-L+) - F1-20 (GND)* | L - BR | Sound signal (left) | RSE system playing | Waveform synchronized with sound is output |
| F23-16 (R-R-) - F1-20 (GND)* | W - BR | Sound signal (right) | RSE system playing | Waveform synchronized with sound is output |
| F23-15 (R-R+) - F1-20 (GND)* | B - BR | Sound signal (right) | RSE system playing | Waveform synchronized with sound is output |
| F23-14 (RSLD) - Body ground* | Shielded - Body ground | Ground | Always | Below 1 V |
| F23-19 (RMUT) - F1-20 (GND)* | G - BR | Mute signal | RSE system playing → changing modes | 3.5 V or higher → Below 1 V |
| F25-7 (SLD2) - Body ground* | Shielded - Body ground | Ground | Always | Below 1 Ω |
| F25-6 (SGD4) - F1-20 (GND)* | W - BR | Ground | Always | Below 1 Ω |
| F25-5 (NTRO) - F1-20 (GND)* | B - BR | Display signal | DVD image playing | Pulse generation |
| F1-12 (ILL-) - F1-20 (GND) | W - BR | Illumination signal | Engine switch off | Below 1 V |
| F1-12 (ILL-) - F1-20 (GND) | W - BR | Illumination signal | Engine switch on (IG) | Pulse generation |
| F23-9 (TX+) - F1-20 (GND) | W - BR | AVC-LAN communication signal | Engine switch on (ACC) | 2 to 3 V |
| F23-10 (TX-) - F1-20 (GND) | L - BR | AVC-LAN communication signal | Engine switch on (ACC) | 2 to 3 V |
| F1-5 (ATX+) - F1-20 (GND) | R - BR | AVC-LAN communication signal | Engine switch on (ACC) | 2 to 3 V |
| F1-15 (ATX-) - F1-20 (GND) | W - BR | AVC-LAN communication signal | Engine switch on (ACC) | 2 to 3 V |
| F1-13 (ANT) - F1-20 (GND) | P - BR | Power source of antenna | Radio switch on and AM or FM | 11 to 14 V |
| F23-6 (SWG) -F1-20 (GND) | W - BR | Steering pad switch ground | Always | Below 1 V |
| F23-7 (SW1) - F1-20 (GND) | L - BR | Steering pad switch signal | Steering pad switch not pushed | 4 V or higher |
| F23-7 (SW1) - F1-20 (GND) | L - BR | Steering pad switch signal | Steering pad switch seek+ switch pushed | Below 0.5 V |
| F23-7 (SW1) - F1-20 (GND) | L - BR | Steering pad switch signal | Steering pad switch seek- switch pushed | 0.8 V |
| F23-7 (SW1) - F1-20 (GND) | L - BR | Steering pad switch signal | Steering pad switch vol+ switch pushed | 1.8 V |

## CHECK STEREO COMPONENT AMPLIFIER (for 19 Speakers)

a. Disconnect the F18 and F2 amplifier connectors.

b. Measure the resistance and voltage according to the value(s) in the table below.

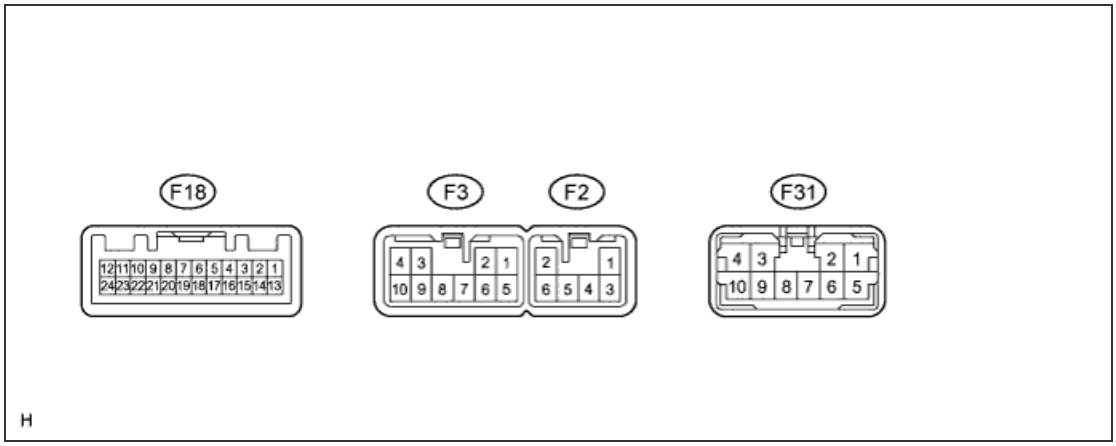
| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F2-2 (GND) - Body ground | W-B - Body ground | Ground | Always | Below 1 Ω |
| F2-6 (GND2) - Body ground | W-B - Body ground | Ground | Always | Below 1 Ω |
| F2-1 (+B) - F2-2 (GND) | L - W-B | Battery | Always | 11 to 14 V |
| F2-3 (+B2) - F2-2 (GND) | L - W-B | Battery | Always | 11 to 14 V |
| F18-12 (ACC) - F2-2 (GND) | GR - W-B | Accessory (ON) | Engine switch off | Below 1 V |

| | | | | |
|---|---|---|---|---|
| F18-12 (ACC) - F2-2 (GND) | GR - W-B | Accessory (ON) | Engine switch on (ACC) | 11 to 14 V |

If the result is not as specified, there may be a malfunction on the wire harness side.

c. Reconnect the F18 and F2 amplifier connectors.

d. Measure the voltage according to the value(s) in the table below.



| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F3-3 (CTR+) - F2-2 (GND) | W - W-B | Sound signal | Audio system playing | Waveform synchronized with sound is output |
| F3-9 (CTR-) - F2-2 (GND) | B - W-B | Sound signal | Audio system playing | Waveform synchronized with sound is output |
| F31-2 (FL+) - F2-2 (GND) | W - W-B | Sound signal | Audio system playing | Waveform synchronized with sound is output |

## MULTI-DISPLAY ASSEMBLY

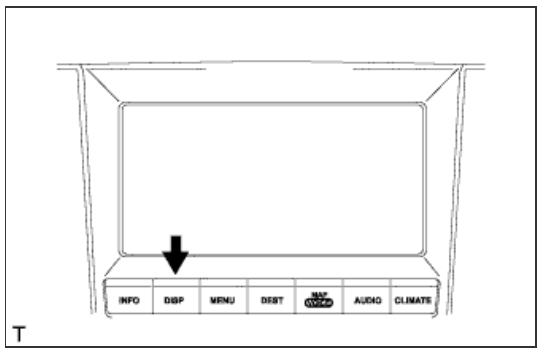
| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F78-2 (ILL) - F78-13 (GND1) | G - BR | Illumination signal | Engine switch on (IG), light control switch off | Below 1 V |
| | | | Tail or head position | 11 to 14 V |
| F78-3 (UPSW) | P | UART communication signal | - | - |
| F78-4 (UIND) | R | UART communication signal | - | - |
| F78-7 (TX+) | B | AVC-LAN communication signal | - | - |
| F78-11 (VMTI) - F78-13 (GND1) | V - BR | Visual mute signal | When image on display switches | 3.5 V or higher → Below 1 V → 3.5 V or higher |
| F78-12 (+B2) - F78-13 (GND1) | R - BR | Power source | Always | 11 to 14 V |
| F78-13 (GND1) - Body ground | BR - Body ground | Ground | Always | Below 1 Ω |
| F78-14 (ILL-) - F78-13 (GND1) | W - BR | Ground | Always | Below 1 Ω |
| F78-19 (TX-) | W | AVC-LAN communication signal | - | - |
| F78-23 (IG) - F78-13 (GND1) | G - BR | Power source (IG) | Engine switch on (IG) | 11 to 14 V |
| | | | Engine switch off | Below 1 V |
| F78-24 (ACC) - F78-13 (GND1) | GR - BR | Power source (ACC) | Engine switch on (ACC) | 11 to 14 V |
| | | | Engine switch off | Below 1 V |

## TELEVISION DISPLAY ASSEMBLY (w/ Rear Seat Entertainment System [for Roof]) (Click here)

## MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY (w/ Rear Seat Entertainment System [for Seatback]) (Click here)

## TELEMATICS TRANSCEIVER (Click here)

**for Preparation** Click here

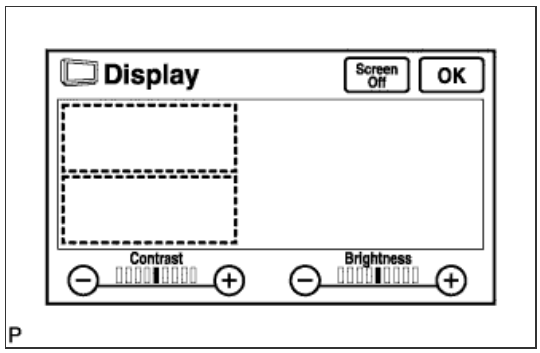


**HINT:**

- **Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be exactly the same as on the actual vehicle.**
- **If the system cannot enter the diagnostic mode, inspect all AVC-LAN communication components and repair or replace problem parts (Click here).**
- **After the engine switch is turned on (IG), check that the map is displayed before starting the diagnostic mode. Otherwise, some items cannot be checked.**

## START DIAGNOSTIC MODE

a. Turn the engine switch on (IG).



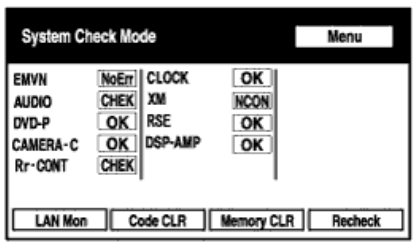
b. Press the "DISP" switch.

T

c. From the display quality adjustment screen, touch the corners of the screen in the following order: upper left → lower left → upper left → lower left → upper left → lower left.

d. The diagnostic mode starts and the "System Check Mode" screen will be displayed. Service inspection starts automatically and the result will be displayed.

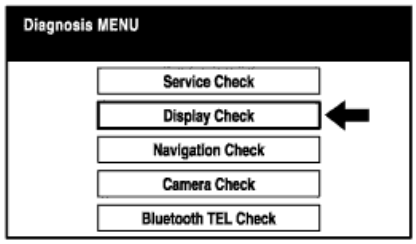
P



## FINISH DIAGNOSTIC MODE

a. Turn the engine switch off.

## DIAGNOSIS MENU

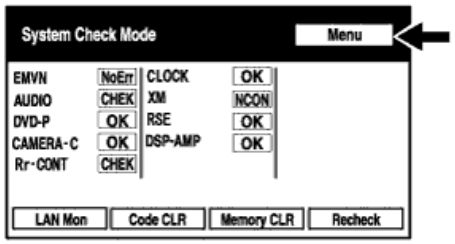


a. Press the "Menu" switch on the "System Check Mode" screen.

Example:

b. The "Diagnosis Menu" screen will be displayed.

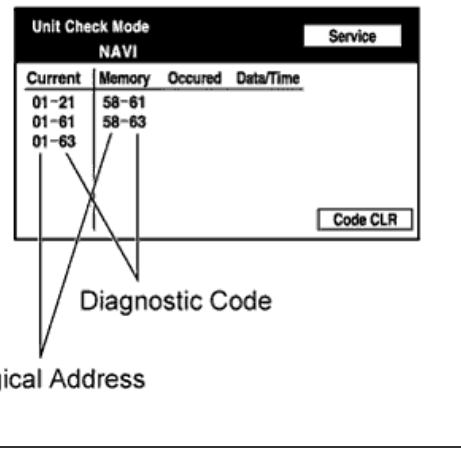
Example:



P

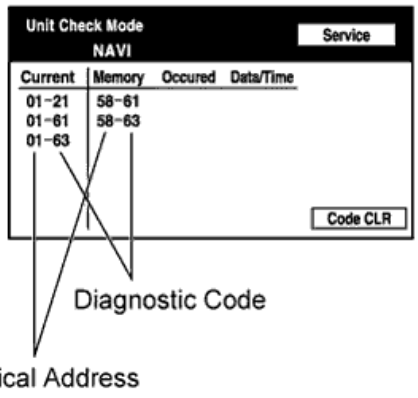
## CHECK DTC

a. Read the system check result.



i. If the check result is "EXCH", "CHEK" or "Old", touch the displayed check result.

Example:

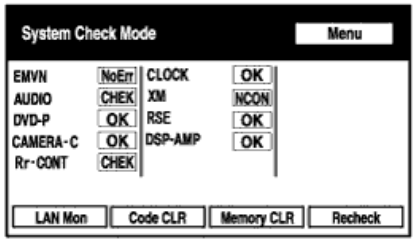


ii. View the results on the "Unit Check Mode" screen and record them.

Example:

iii. When proceeding to view the results of another device, press the "Service" switch.

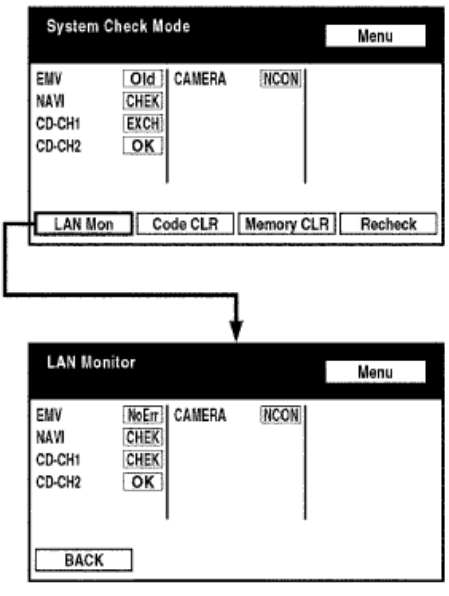
Example:



iv. Return to the "System Check Mode" screen.

**HINT:**

To check other items, repeat from the first step.



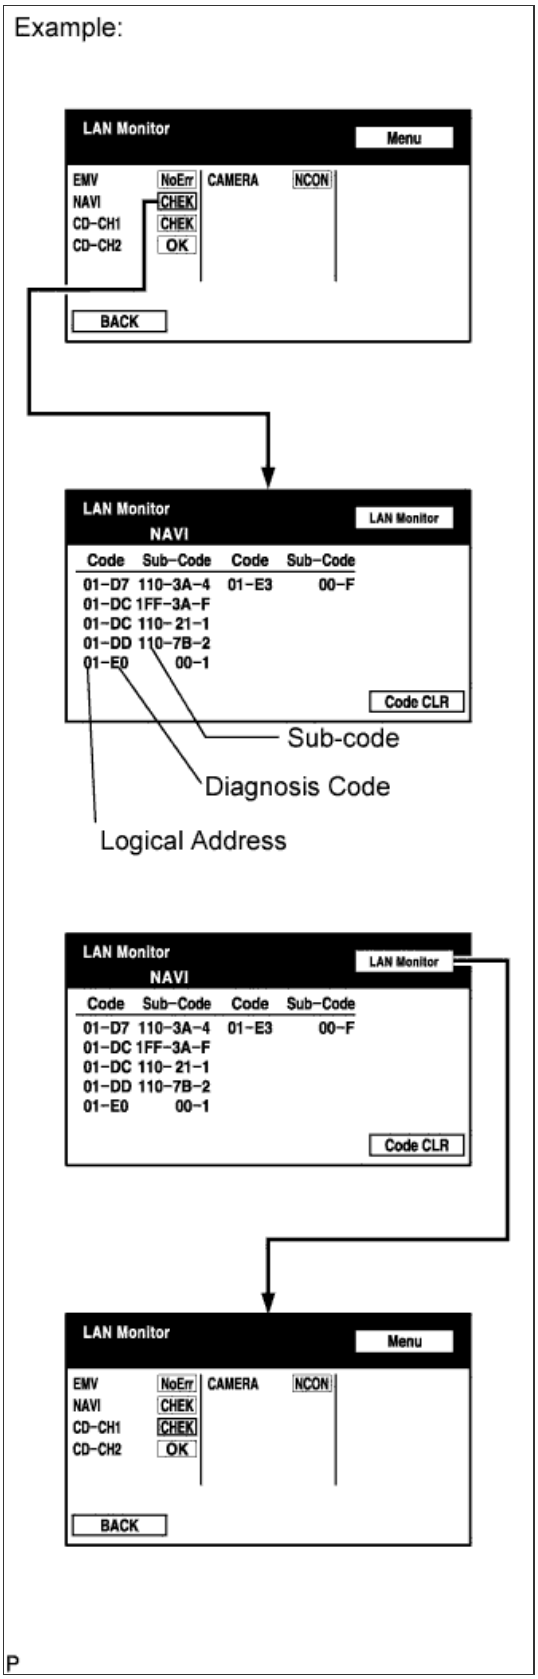
Example:

b. Read the communication diagnostic check result.

i. Return to the "System Check Mode" screen, and press the "LAN Mon" switch to enter the "LAN Monitor" screen.

Example:

P



ii. If the check result is "CHEK" or "Old", touch the displayed check result to view the results on the individual communication diagnostic screen and record them.

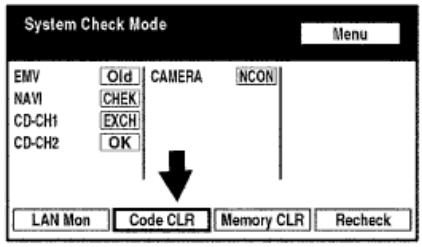
**HINT:**

- **If all check results are "NoErr", the system judges that no DTC is stored.**
- **The sub-code (relevant device) will be indicated by its physical address.**

- **When proceeding to view the results of another device, press the "LAN Monitor" switch to return to the original "LAN Monitor" screen. Repeat this step for each device.**

Example:

P



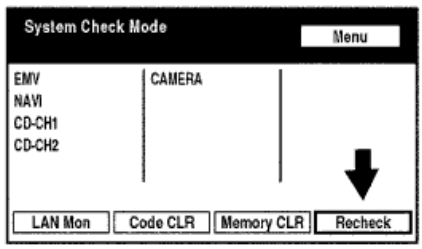
## DTC CLEAR/RECHECK

a. Clear DTC

i. Press the "Code CLR" switch for 3 seconds.

ii. The check results are cleared.

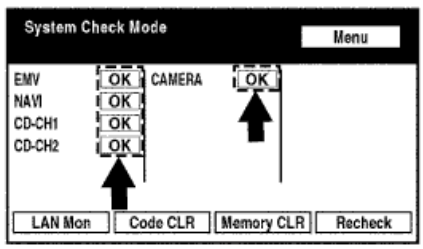
Example:



P

**b.** Recheck

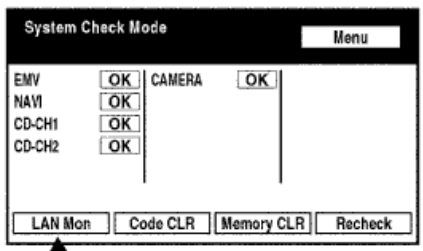
**i.** Press the "Recheck" switch.



Example:

P

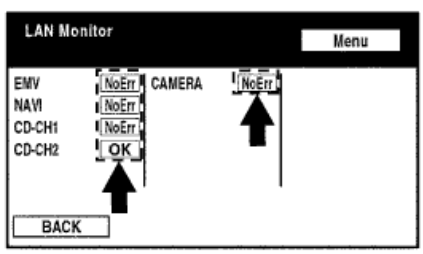
**ii.** Confirm that all diagnostic trouble codes are "OK" when the check results are displayed. If a code other than "OK" is displayed, troubleshoot again.



Example:

P

**iii.** Press the "LAN Mon" switch to change to the "LAN Monitor" screen.



Example:

P

**iv.** Confirm that all diagnostic trouble codes are "NoErr". If a code other than "NoErr" is displayed, troubleshoot again.

Example:

P

**for Preparation** Click here

## CHECK DTC (CHECK USING INTELLIGENT TESTER)

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Navigation System / Trouble Codes.

e. Check for DTCs, and then write them down.

f. Check the details of the DTC(s) ( Click here).

**NOTICE:**

The audio and visual system outputs DTCs for the following system. When DTCs other than those in Diagnostic Trouble Code Chart for the audio and visual system are output, refer to Diagnostic Trouble Code Chart for the relevant system.

| System | Proceed to |
|---|---|
| Navigation System | Click here |
| Rear Seat Entertainment System (for Roof) | Click here |
| Rear Seat Entertainment System (for Seatback) | Click here |

## CLEAR DTC (CHECK USING INTELLIGENT TESTER)

a. Connect the intelligent tester to the DLC3.

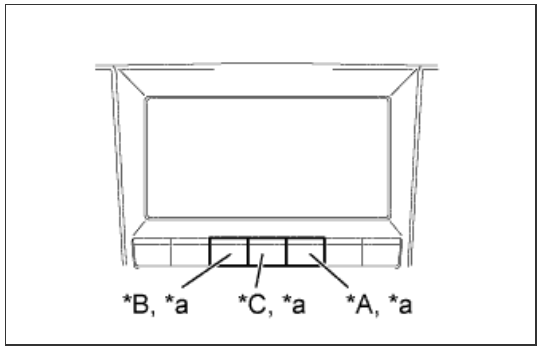
b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Navigation System / Trouble Codes.

e. Clear the DTCs.

## START DIAGNOSTIC MODE



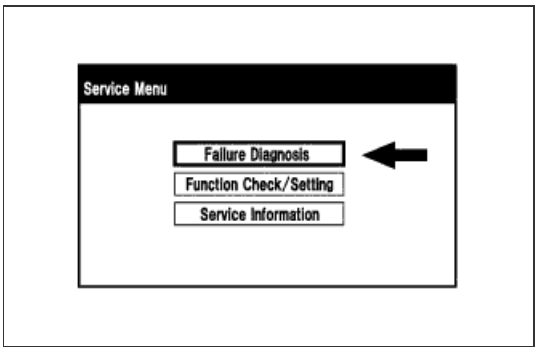
**HINT:**

- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**
- **To help find the malfunction when the system cannot change to diagnostic mode, check for DTCs using the intelligent tester.**
- **After the engine switch is turned on (IG), check that the map is displayed before starting diagnostic mode. Otherwise, some items cannot be checked.**

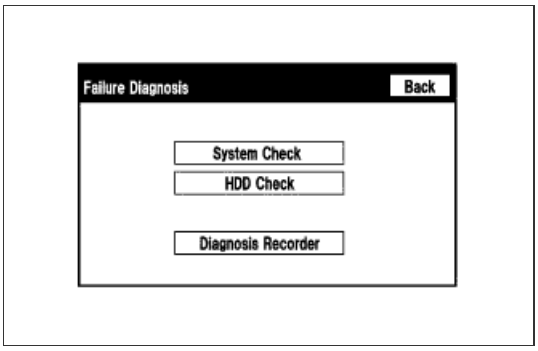
a. Start the engine.

**Text in Illustration**

| | |
|---|---|
| *A | for LHD |
| *B | for RHD |
| *C | w/o Navigation System |
| *a | "INFO" Switch |



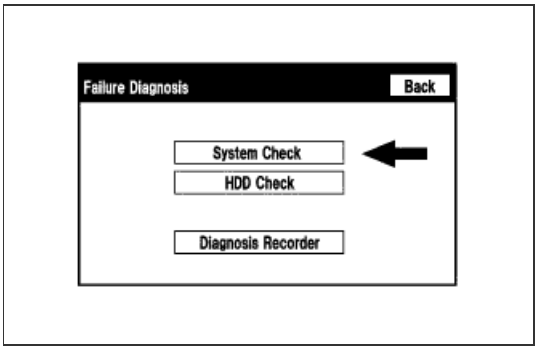
b. While pressing and holding the "INFO" switch, operate the light control switch: Off → Tail → Off → Tail → Off → Tail → Off.



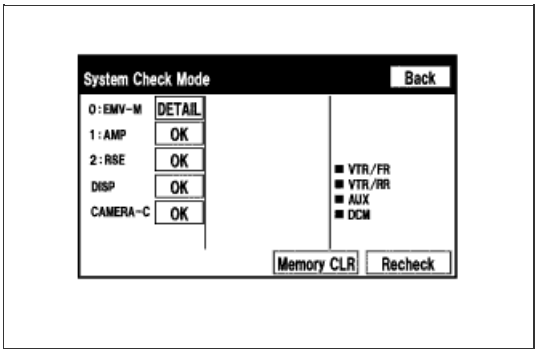
c. Diagnostic mode starts and the "Service Menu" screen will be displayed.

## FAILURE DIAGNOSIS

a. Press the "Failure Diagnosis" switch on the "Service Menu" screen.

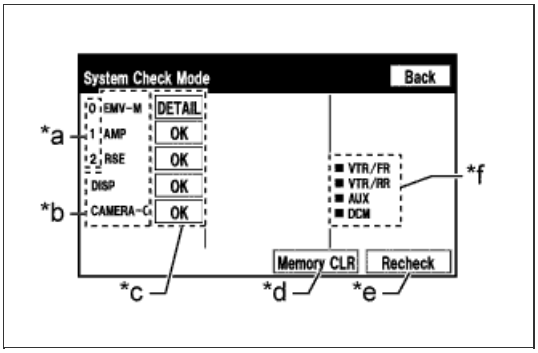


b. The "Failure Diagnosis" will be displayed.



## SYSTEM CHECK

a. Press the "System Check" switch on the "Failure Diagnosis" screen.



b. The "System Check Mode" screen will be displayed.

## CHECK DTC (CHECK USING SYSTEM CHECK MODE SCREEN)

a. System check mode screen description

### Screen Description

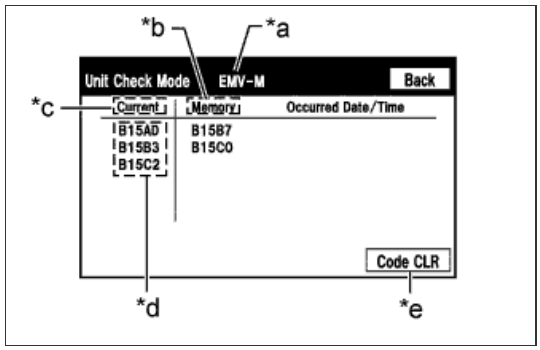
| Display | Content |
|---|---|
| *a: Node position number for devices that use MOST communication | MOST node position numbers are provided for devices connected to the MOST network. |
| *b: Device Name List No. 1 | • Device Name List No. 1 displays some of the devices that make up the audio and visual system.<br>• The names of the components from Device Name List No. 1 are shown in the following table. |
| *c: Check Result | Result codes for all devices are displayed. |
| *d: Memory Clear | • Present and history DTCs and registered connected device names are cleared.<br>• Press the "Memory CLR" switch for 3 seconds. |
| *e: Recheck | • A system check will be performed again after the memory is cleared.<br>• The "Recheck" switch will dim during a system check. |
| *f: Device Name List No. 2 | • Device Name List No. 2 displays some of the devices that make up the audio and visual system.<br>• The names of the components from Device Name List No. 2 are shown in the following table. |

### *b: Device Name List No. 1 Description

| Name | Component | Connection Method |
|---|---|---|
| EMV-M | Multi-media module receiver assembly | - |
| AMP | Stereo component amplifier assembly | Communication line for MOST |
| RSE | • Television display assembly*1<br>• Multi-display controller sub-assembly*2 | Communication line for MOST |
| DISP | Multi-display assembly | Communication line for AVC-LAN |
| CAMERA-C | Parking assist ECU | Communication line for AVC-LAN |

*1: w/ Rear Seat Entertainment System (for Roof)
*2: w/ Rear Seat Entertainment System (for Seatback)

### *c: Check Result Description



| Result | Meaning | Action |
|---|---|---|
| OK | The device does not respond with a DTC. | - |
| MOST | MOST communication error | Perform "MOST Line Check" to check connection of each device on the MOST network. |
| DETAIL | The device responds with a DTC. | Look up the DTC in "Unit Check Mode". |
| NCON | The device was previously present, but does not respond in diagnostic mode. | • Check power supply wire harness of the device.<br>• Check the AVC-LAN of the device. |
| NRES | The device responds in diagnostic mode, but gives no DTC information. | • Check power supply wire harness of the device.<br>• Check the AVC-LAN of the device. |

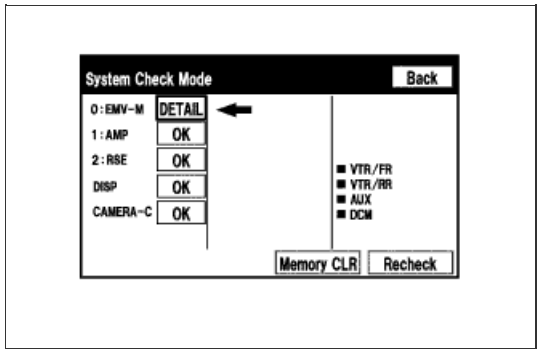
### *f: Device Name List No. 2 Description

| Name | Component | Connection Method |
|---|---|---|
| VTR/FR | Remote Controller Adapter Assembly (Video terminal) | Vehicle wire harness |
| VTR/RR | Remote Controller Adapter Assembly (Video terminal) | Vehicle wire harness |
| AUX | No. 1 stereo jack adapter assembly | Vehicle wire harness |
| DCM | Telematics transceiver | Communication line for USB |

b. Unit check mode screen description

b. Unit check mode screen description

**Screen Description**

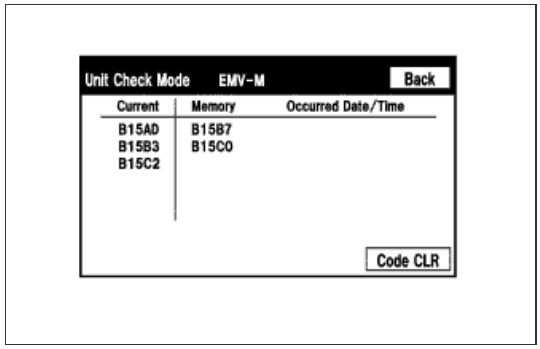


| Display | Content |
|---|---|
| *a: Device name | Target device |
| *b: History DTC | Diagnostic memory results and stored DTCs are displayed. |
| *c: Current DTC | DTCs output in the service check are displayed. |
| *d: DTC | DTC (Diagnostic Trouble Code) |
| *e: Diagnosis clear switch | Pushing this switch for 3 seconds clears the diagnostic memory data of the target device. (Both response to diagnostic system check result and the displayed data are cleared.) |

**HINT:**

- **This screen is updated once per second.**
- **A maximum of 6 DTCs can be displayed for history and present DTCs.**

c. Read the system check result.



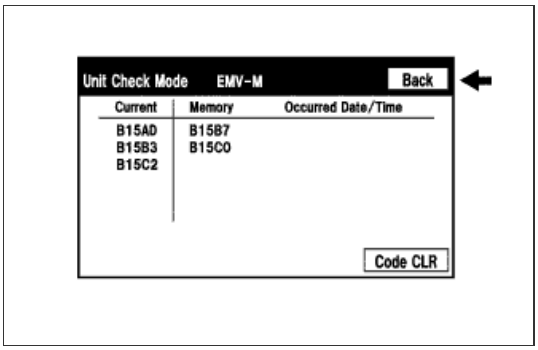
i. If the check result is "DETAIL", touch the displayed check result

**HINT:**

When all results are "OK", this means that no DTCs are stored.

ii. View the results on the "Unit Check Mode" screen and record them.

**NOTICE:**



A maximum of 6 DTCs can be displayed for history and present DTCs on the "Unit check mode" screen. Therefore, when 6 DTCs are displayed, troubleshoot those DTCs first and then check the "Unit check mode" screen again to see if any other DTCs are displayed.

iii. When proceeding to view the results of another device, press the "Back" switch to return to the "System Check Mode" screen. Repeat the step above to view the results of other devices.

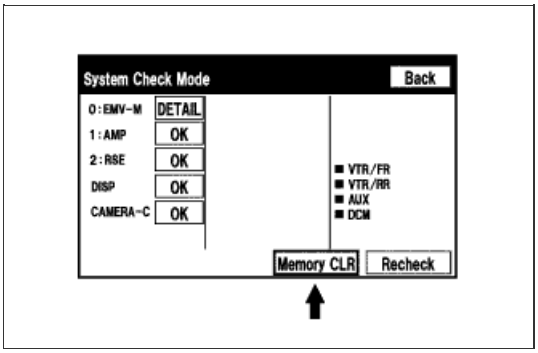
**HINT:**

To check other item, repeat from the first step.

iv. Check the details of the DTC(s) ( Click here).

**NOTICE:**

The audio and visual system outputs DTCs for the following system. When DTCs other than those in Diagnostic Trouble Code Chart for the audio and visual system are output, refer to Diagnostic Trouble Code Chart for the relevant system.



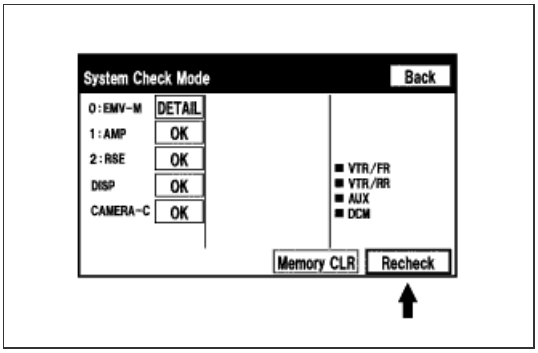
| System | Proceed to |
|---|---|
| Navigation System | Click here |
| Rear Seat Entertainment System (for Roof) | Click here |
| Rear Seat Entertainment System (for Seatback) | Click here |

## DTC CLEAR/RECHECK (CLEAR USING SYSTEM CHECK MODE SCREEN)

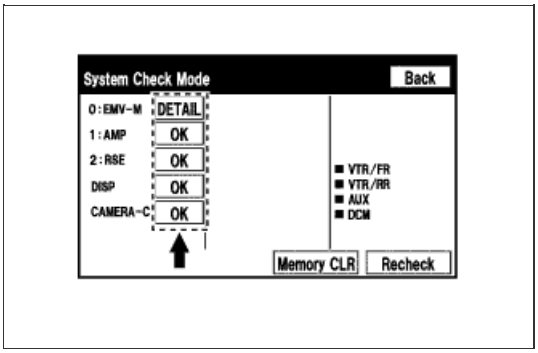
a. Clear DTC

i. Press the "Memory CLR" switch for 3 seconds.

ii. Confirm that the check results are cleared.



**HINT:**



- **To clear the DTC for a specific device, clear the DTC using the "Unit Check Mode" screen.**
- **When clearing a DTC using the "Unit Check Mode" screen, press the "Code CLR" switch for 3 seconds.**

b. Recheck DTC

i. Press the "Recheck" switch.

ii. Confirm that all diagnostic codes are "OK" when the check results are displayed. If a code other than "OK" is displayed, troubleshoot again.

**HINT:**

When a DTC was cleared using the "Unit Check Mode" screen, press the "Back" switch to return to the "System Check Mode" screen and perform this operation.

## FINISH DIAGNOSTIC MODE

a. There are 2 methods to finish diagnostic mode. Start the mode by using one of them.

b. Method 1

    i. Turn the engine switch off.

c. Method 2

    i. Press and hold the "SET UP" switch for 3 seconds or more.

**for Preparation** Click here

## CHECK FREEZE FRAME DATA

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Navigation System / Trouble Codes.

e. Select a Trouble Codes to display its Freeze Frame Data.

## LIST OF FREEZE FRAME DATA

a. Refer to "Data List / Active Test" ( Click here).

**for Preparation** Click here

## DATA LIST

**NOTICE:**

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

**HINT:**

Using the intelligent tester to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Navigation System / Data List.

e. According to the display on the intelligent tester, read the Data List.

**Navigation System**

| Tester Display | Measurement Item/Range | Normal Condition | Diagnostic Note |
|---|---|---|---|
| Battery Voltage | Battery voltage / Min.: 0 V, Max.: 24 V | 11 to 15.5 V | - |
| Active Dimmer | Active dimmer function / ON or OFF | ON: Active dimmer function on<br>OFF: Active dimmer function off | - |
| Tail Light SW | Taillight switch / ON or OFF | ON: Light control switch in tail or head position<br>OFF: Light control switch off | - |
| Reverse Signal | Reverse signal / ON or OFF | ON: Shift lever in R<br>OFF: Shift lever in any position other than R | - |
| Parking Brake | Parking brake switch / ON or OFF | ON: Parking brake applied<br>OFF: Parking brake released | - |
| Ignition | Engine switch / ON or OFF | ON: Engine switch on (IG)<br>OFF: Engine switch off | - |
| Vehicle Speed | Maximum wheel speed sensor reading / Min.: 0 km/h (0 mph), Max.: 255 km/h (158 mph) | Vehicle stopped: 0 km/h (0 mph) | When driving at constant speed: No large fluctuations |

**for Preparation** Click here

**HINT:**

If a trouble code is output during the DTC check, inspect the trouble areas listed for that code. For details of the code, refer to the "See page" below.

**Audio and Visual System**

| DTC Code | Detection Item | Trouble Area | See page |

## DTC 01-21 ROM Error

## DTC 01-22 RAM Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 01-21 | A malfunction exists in the ROM. | Multi-display assembly |
| 01-22 | A malfunction exists in the RAM. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.REPLACE MULTI-DISPLAY ASSEMBLY**

a. w/ Navigation System: Replace the multi-display (Click here).

b. w/o Navigation System: Replace the multi-display (Click here).

**NEXT**

**END**

## DTC 60-42 Tuner Power Source Error

## DTC 60-43 AM Tuner Error

## DTC 60-44 FM Tuner Error

## DTC 60-50 Malfunction in Internal IC

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 60-42 | The power source of the tuner is abnormal. | Radio receiver assembly |
| 60-43 | The AM tuner is abnormal. | |
| 60-44 | The FM tuner is abnormal. | |
| 60-50 | A problem occurs in the internal IC of the tuner unit and the radio reception is not normal. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.CLEAR DTC**

a. Clear the DTCs (Click here).

**NEXT**

**2.RECHECK FOR DTC**

a. Recheck for DTCs and check if the same trouble code is output.

**HINT:**

If DTCs are output frequently, replace the radio receiver.

**OK:**
**No DTC is output.**

**NG** → **REPLACE RADIO RECEIVER ASSEMBLY (Click here)**

**OK**

**USE SIMULATION METHOD TO CHECK (Click here)**

## DTC 01-D5 Absence of Registration Unit

## DTC 01-D8 No Response for Connection Check

## DTC 01-D9 Last Mode Error

## DTC 01-DA No Response Against ON / OFF Command

## DTC 01-DB Mode Status Error

## DTC 01-DE Slave Reset

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 01-D5*1, *3 | When either condition below is met:<br>• The component shown by the sub-code is (was) disconnected from the system when turning the engine switch on (ACC) or on (IG).<br>• The communication condition with the device that the code shows cannot be obtained when the engine starts. | • Power source circuit of component shown by sub-code<br>• AVC-LAN circuit between multi-display and component shown by sub-code<br>• Component shown by sub-code |
| 01-D8*2, *3 | The component shown by the sub-code is (was) disconnected from the system after the engine starts. | |
| 01-D9*1, *3 | The device that had functioned before the engine stopped is (was) disconnected from the system when the engine switch is (was) on (ACC) or on (IG). | |
| 01-DA*3 | When either condition below is met:<br>• No response is identified when changing modes.<br>• Sound and image do not change by switch operation. | |
| 01-DB*1, *3 | Dual alarm is detected. | |
| 01-DE*3 | The slave device has been disconnected after the engine starts. | |

**HINT:**

*1: Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.

*2: If the power connector is disconnected after the engine starts, this code is stored after 180 seconds.

*3: If it is reported that the device does not exist during verification, check the power source circuit and AVC-LAN circuit for the device.

**NOTICE:**

- **Before starting troubleshooting, be sure to clear DTCs to clear codes stored due to the reasons described in the Hint above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The multi-display is the master unit.**
- **Be sure to clear and recheck for DTCs after the inspection is completed to confirm that no DTCs are output.**

### INSPECTION PROCEDURE

**NOTICE:**

Be sure to read the Description before performing the following procedures.

**1.CHECK "MULTI-DISPLAY COMMUNICATION ERROR" IN FLOWCHART**

a. Refer to the Multi-display Communication Error (Click here).

NEXT
END

## DTC 63-10 CD Changer Mechanical Error

## DTC 63-11 CD Insertion and Ejection Error

## DTC 63-12 CD Reading Abnormal

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 63-10 | A mechanical error in the CD changer is detected while a CD is not being inserted or ejected. | Radio receiver assembly |
| 63-11 | CD insertion or ejection fails. | |
| 63-12 | A CD read problem occurs. | |

## DTC 63-41 Wrong Disc

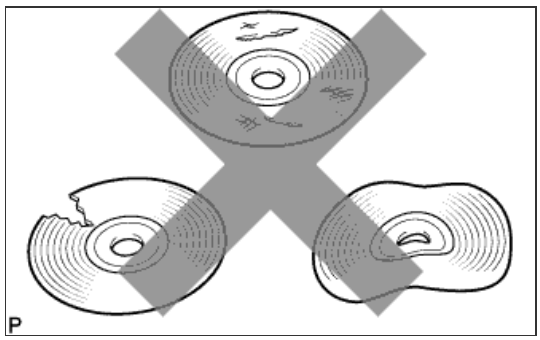
## DTC 63-42 Disc cannot be Read

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 63-41 | An unsuitable disc is inserted. | • Disc<br>• Radio receiver assembly |
| 63-42 | The disc cannot be read. | |

### INSPECTION PROCEDURE



**HINT:**

After the inspection is completed, clear the DTCs (Click here).

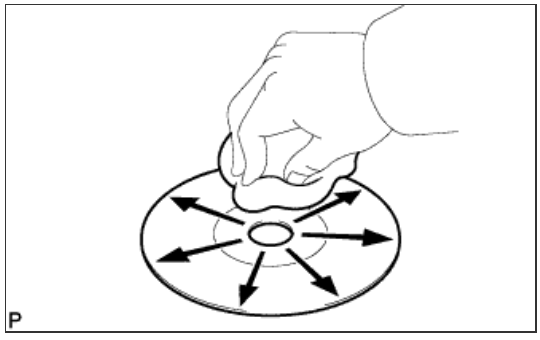
**1.CHECK DISC**

a. Check that the disc is not deformed or cracked.

**OK:**
**No deformations or cracks on the disc.**

NG → CHANGE DISC

OK



**2.DISC CLEANING**

a. Disc cleaning

i. If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.

**NOTICE:**

Do not use a conventional record cleaner or antistatic preservative.

NEXT

**3.CLEAR DTC**

a. Clear the DTCs (Click here).

NEXT

4.RECHECK FOR DTC

a. Recheck for DTCs and check if the same trouble code is output.

**OK:**
**No DTC is output.**

NG → Go to step 5

OK →

END

5.REPLACE DISC WITH ANOTHER AND RECHECK

a. Replace the disc and recheck.

i. Replace the disc with a normal one.

ii. Clear the DTCs (Click here).

iii. Recheck for DTCs and check if the same trouble code is output.

**OK:**
**No DTC is output.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK →

END

## DTC 63-43 CD-ROM Abnormal

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 63-43 | CD operation is abnormal. | • CD<br>• Radio receiver assembly |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.CHECK IF A PROPER CD IS INSERTED**

a. Make sure that the CD is an audio CD or a CD with an MP3 or WMA file, and that it is not deformed, flawed, stained, burred, or otherwise defective.

**OK:**
**Normal CD.**

**HINT:**

- **Translucent or uniquely-shaped CDs cannot be played.**
- **CDs with adhesive paper labels should not be played.**
- **Commercial audio CDs can be played.**
- **CD-DA files on CD-ROMs, CD-Rs, and CD-RWs can be played.**
- **MP3 and WMA files on CD-ROMs, CD-Rs, and CD-RWs can be played.**
- **For details on playable CDs, refer to the Owner's Manual.**

**NG** → **CD IS FAULTY**

**OK**

**2.REPLACE CD WITH ANOTHER AND RECHECK**

a. Replace the CD and recheck.

i. Replace the CD with a normal one.

ii. Clear the DTCs (Click here).

iii. Recheck for DTCs and check if the same trouble code is output.

**OK:**
**No DTC is output.**

**NG** → **REPLACE RADIO RECEIVER ASSEMBLY (Click here)**

**OK**

**END**

## DTC 01-D6 No Master

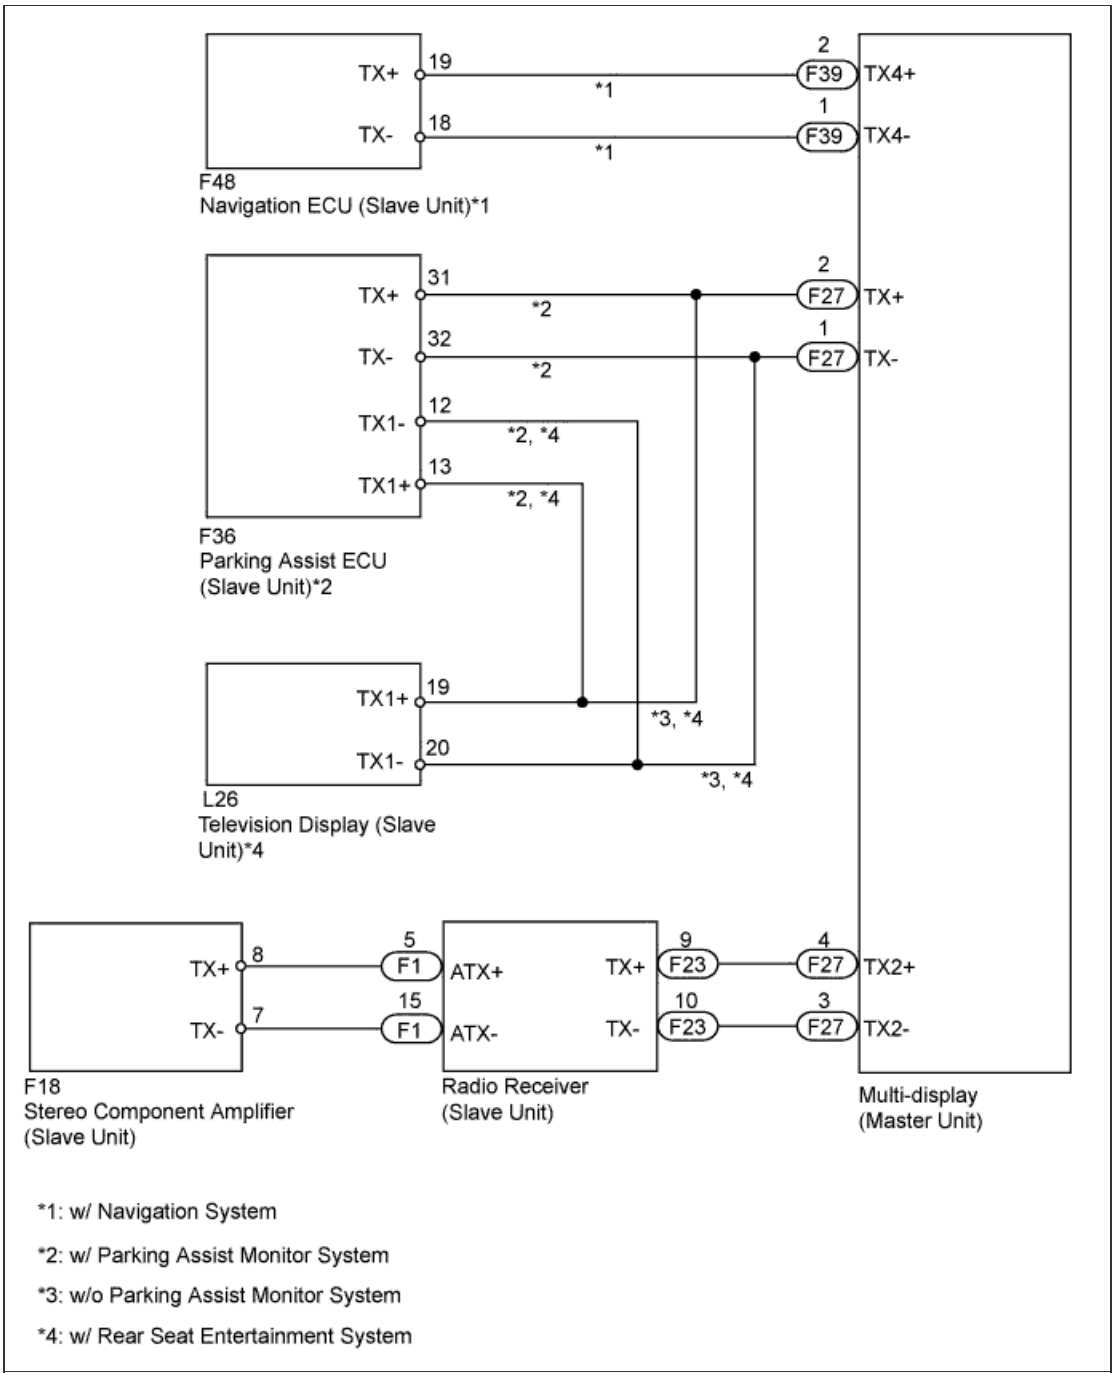
## DTC 01-D7 Connection Check Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 01-D6*1 | When either of the following conditions is met:<br>• The component which has stored the code has (had) been disconnected when the engine switch is on (ACC) or on (IG).<br>• The master device has (had) been disconnected when this code is stored. | • Multi-display power source circuit<br>• Power source circuit of component which has stored this code<br>• AVC-LAN circuit between the multi-display and the component which has stored this code<br>• Component which has stored this code<br>• Multi-display assembly |
| 01-D7*2 | When either of the following conditions is met:<br>• The component which has stored the code has (had) been disconnected after the engine starts (started).<br>• The master device has (had) been disconnected when this code is (was) stored. | |

**HINT:**



*1: Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.

*2: When 210 seconds have elapsed after disconnecting the power supply connector of the master component with the engine switch on (ACC) or on (IG), this code is stored.

**NOTICE:**

- **Before starting troubleshooting, be sure to clear DTCs to clear codes stored due to the reasons described in the Hint above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The multi-display is the master unit.**
- **Be sure to clear and recheck for DTCs after the inspection is completed to confirm that no DTCs are output.**

### WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

Be sure to read the Description before performing the following procedures.

### 1.CHECK MULTI-DISPLAY POWER SOURCE CIRCUIT

a. Refer to the Multi-display Power Source Circuit ( Click here).

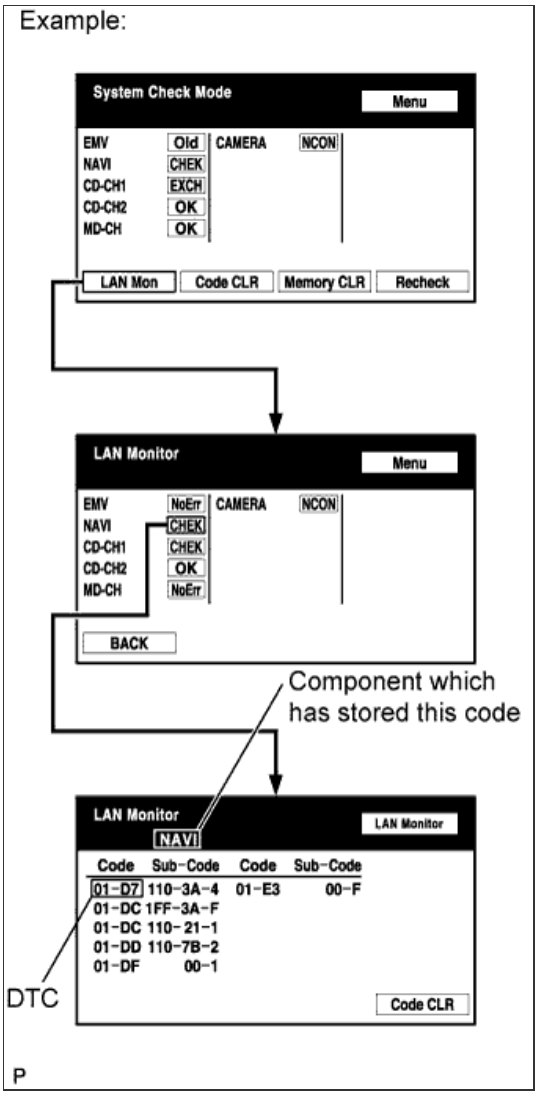
**NEXT**

### 2.IDENTIFY COMPONENT WHICH HAS STORED THIS CODE

a. Enter the diagnostic mode.

b. Press the "LAN Mon" switch to change to "LAN Monitor" mode.

c. Identify the component which has stored this code.



**Component Table**

| Display | Component |
|---|---|
| AUDIO | Radio receiver |
| DSP-AMP | Stereo component amplifier |
| CAMERA-C*1 | Parking assist ECU |
| NAVI*2 | Navigation ECU |
| RSE*3 | Television display |

*1: w/ Parking Assist Monitor System
*2: w/ Navigation System
*3: w/ Rear Seat Entertainment System

**HINT:**

"NAVI" is the component which has stored this code in the example shown in the illustration.

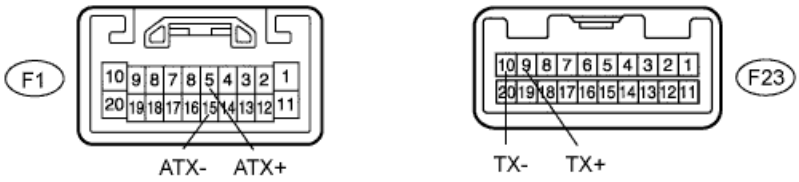
NEXT

## 3.CHECK POWER SOURCE CIRCUIT OF COMPONENT WHICH HAS STORED THIS CODE

a. Inspect the power source circuit of the component which has stored this code.

**Component Table**

| Display | Proceed to |
|---|---|
| Radio receiver (190) | Radio receiver power source circuit (Click here) |
| Stereo component amplifier (440) | Stereo component amplifier power source circuit (Click here) |
| Navigation ECU (178)*1 | Navigation ECU power source circuit (Click here) |
| Parking assist ECU (1AC)*2 | Parking assist ECU power source circuit (Click here) |
| Television display (1F6)*3 | Television display power source circuit (Click here) |



If the power source circuit is operating normally, proceed to the next step.

*1: w/ Navigation System
*2: w/ Parking Assist Monitor System
*3: w/ Rear Seat Entertainment System

NEXT

## 4.INSPECT RADIO RECEIVER ASSEMBLY

Component without harness connected:
(Radio Receiver)

a. Disconnect the F1 and F23 receiver connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F1-5 (ATX+) - F1-15 (ATX-) | Always | 60 to 80 Ω |
| F23-9 (TX+) - F23-10 (TX-) | Always | 60 to 80 Ω |

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

**5.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - COMPONENT WHICH HAS STORED THIS CODE)**

**HINT:**

For details of the connectors, refer to Terminals of ECU ( Click here).

a. Check the AVC-LAN circuit between the multi-display and the component which has stored this code.

i. Disconnect all connectors between the multi-display and the component which has stored this code.

ii. Check for an open or short in the AVC-LAN circuit between the multi-display and the component which has stored this code.

**OK:**
**There is no open or short circuit.**

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**6.REPLACE COMPONENT WHICH HAS STORED THIS CODE**

a. Replace the component which has stored this code with a normal one and check if the same problem occurs again.

**OK:**
**Same problem does not occur.**

**Result**

| Result | Proceed to |
|---|---|
| OK | A |
| NG (w/ Navigation System) | B |
| NG (w/o Navigation System) | C |

B → REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

C → REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

A

END

## DTC 63-44 CD Abnormal

## DTC 63-48 Excess Current

## DTC 63-50 Tray Insertion / Ejection Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 63-44 | An operation error in the CD mechanism. | Radio receiver assembly |
| 63-48 | Excess current is present in the CD changer. | |
| 63-50 | A malfunction in the insertion/ejection system. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.CLEAR DTC**

a. Clear the DTCs (Click here).

**NEXT**

**2.RECHECK FOR DTC**

a. Recheck for DTCs and check if the same trouble code is output.

**HINT:**

If DTCs are output frequently, replace the radio receiver.

**OK:**
**No DTC is output.**

**NG** → **REPLACE RADIO RECEIVER ASSEMBLY (Click here)**

**OK**

**END**

## DTC 01-D6 No Master

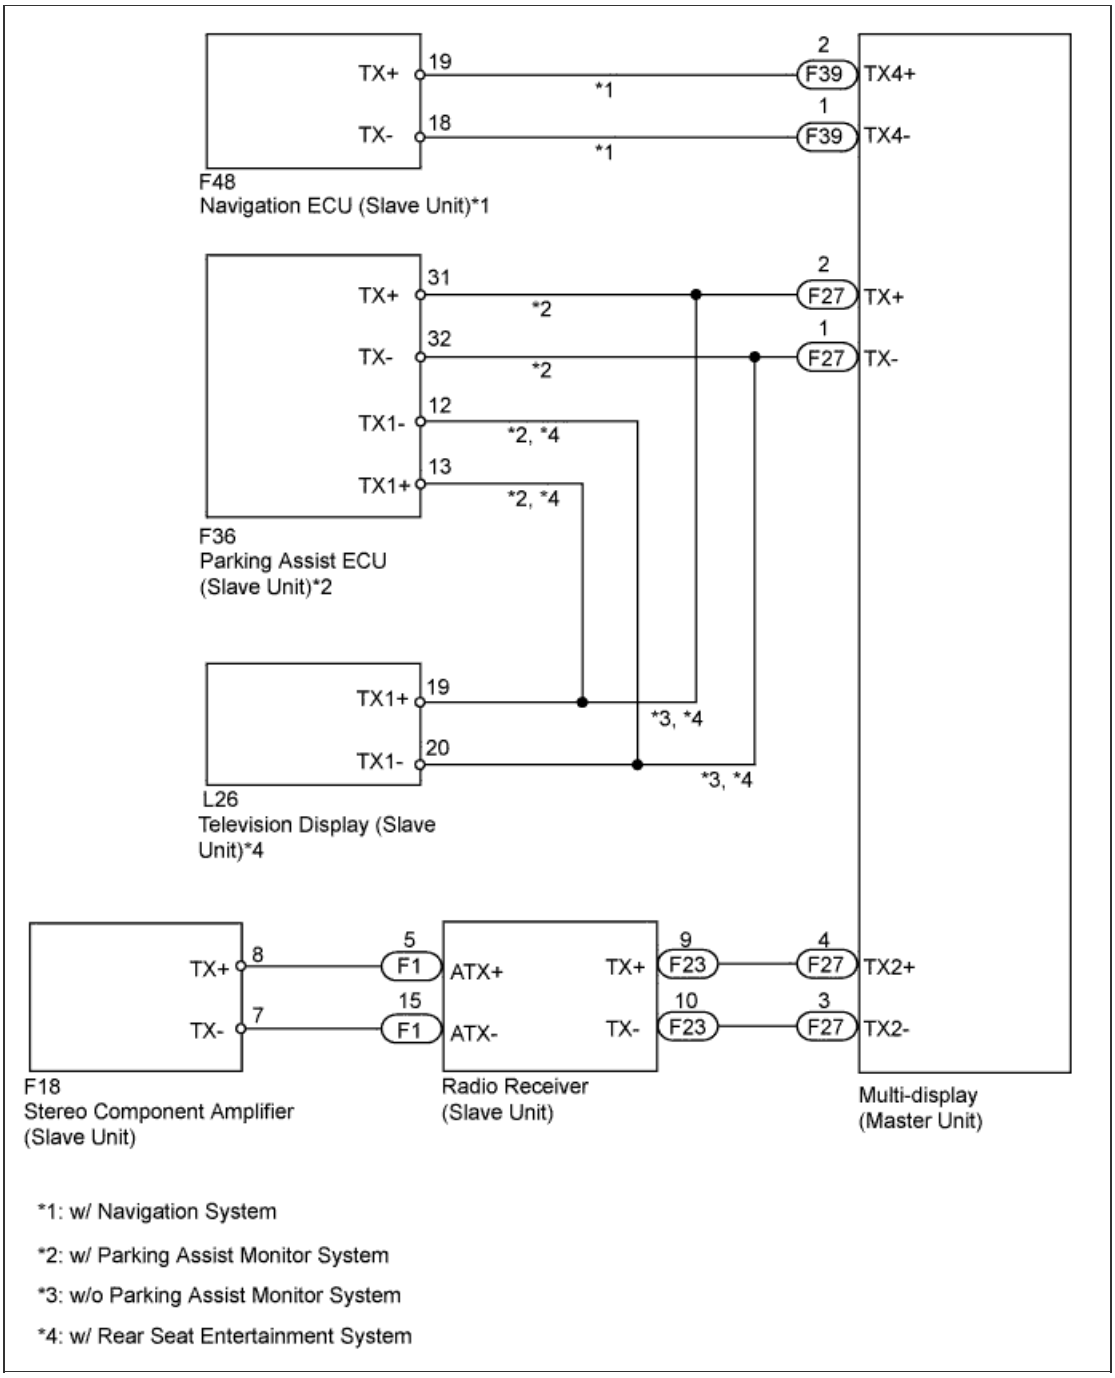
## DTC 01-D7 Connection Check Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 01-D6*1 | When either of the following conditions is met:<br>• The component which has stored the code has (had) been disconnected when the engine switch is on (ACC) or on (IG).<br>• The master device has (had) been disconnected when this code is stored. | • Multi-display power source circuit<br>• Power source circuit of component which has stored this code<br>• AVC-LAN circuit between the multi-display and the component which has stored this code<br>• Component which has stored this code<br>• Multi-display assembly |
| 01-D7*2 | When either of the following conditions is met:<br>• The component which has stored the code has (had) been disconnected after the engine starts (started).<br>• The master device has (had) been disconnected when this code is (was) stored. | |

**HINT:**



*1: Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.

*2: When 210 seconds have elapsed after disconnecting the power supply connector of the master component with the engine switch on (ACC) or on (IG), this code is stored.

**NOTICE:**

- **Before starting troubleshooting, be sure to clear DTCs to clear codes stored due to the reasons described in the Hint above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The multi-display is the master unit.**
- **Be sure to clear and recheck for DTCs after the inspection is completed to confirm that no DTCs are output.**

*1: w/ Navigation System
*2: w/ Parking Assist Monitor System
*3: w/ Rear Seat Entertainment System

NEXT

## 4.INSPECT RADIO RECEIVER ASSEMBLY

Component without harness connected:
(Radio Receiver)

a. Disconnect the F1 and F23 receiver connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F1-5 (ATX+) - F1-15 (ATX-) | Always | 60 to 80 Ω |
| F23-9 (TX+) - F23-10 (TX-) | Always | 60 to 80 Ω |

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

**5.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - COMPONENT WHICH HAS STORED THIS CODE)**

**HINT:**

For details of the connectors, refer to Terminals of ECU ( Click here).

a. Check the AVC-LAN circuit between the multi-display and the component which has stored this code.

i. Disconnect all connectors between the multi-display and the component which has stored this code.

ii. Check for an open or short in the AVC-LAN circuit between the multi-display and the component which has stored this code.

**OK:**
**There is no open or short circuit.**

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**6.REPLACE COMPONENT WHICH HAS STORED THIS CODE**

a. Replace the component which has stored this code with a normal one and check if the same problem occurs again.

**OK:**
**Same problem does not occur.**

**Result**

| Result | Proceed to |
|---|---|
| OK | A |
| NG (w/ Navigation System) | B |
| NG (w/o Navigation System) | C |

B → REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

C → REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

A

END

## DTC 63-44 CD Abnormal

## DTC 63-48 Excess Current

## DTC 63-50 Tray Insertion / Ejection Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 63-44 | An operation error in the CD mechanism. | Radio receiver assembly |
| 63-48 | Excess current is present in the CD changer. | |
| 63-50 | A malfunction in the insertion/ejection system. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.CLEAR DTC**

a. Clear the DTCs (Click here).

**NEXT**

**2.RECHECK FOR DTC**

a. Recheck for DTCs and check if the same trouble code is output.

**HINT:**

If DTCs are output frequently, replace the radio receiver.

**OK:**
**No DTC is output.**

**OK**

**END**

# DTC 01-DC Transmission Error

**for Preparation** Click here

## DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 01-DC | Transmission to the component shown by the sub-code failed (the storing of this DTC does not always mean actual failure). | If same sub-code is stored in other components, check harness of power supply and communication system of all components shown by code |

**NOTICE:**

- **The multi-display is the master unit.**
- **Be sure to clear and recheck for DTCs after the inspection is completed to confirm that no DTCs are output.**

## INSPECTION PROCEDURE

**NOTICE:**

Be sure to read the Description before performing the following procedures.

### 1.CHECK FOR DTC OF OTHER COMPONENTS

a. Check if the component shown by the sub-code is displayed in the check result of the other components.

i. Check if "01-DC" is output for the other components.

ii. If "01-DC" is output for any other components, check if the same physical address is displayed.

**HINT:**

For the list of the components shown by sub-codes, refer to the table in the step below.

**Result**

| Result | Proceed to |
|---|---|
| "01-DC" is not output or the same physical address is not displayed | A |
| "01-DC" is output and the same physical address is displayed | B |

**B** → Go to step 4

**A**

### 2.CLEAR DTC

a. Clear the DTCs (Click here).

**HINT:**

If "01-DC" is output for only one component, this may not indicate a malfunction.

**NEXT**

### 3.RECHECK FOR DTC

a. Recheck for DTCs and check if the same trouble code is output.

**OK:**
**No DTC is output.**

**Result**

| Result | Proceed to |
|---|---|

| | |
|---|---|
| OK | A |
| NG (w/ Navigation System) | B |
| NG (w/o Navigation System) | C |

B → Go to step 6

C → Go to step 7

A

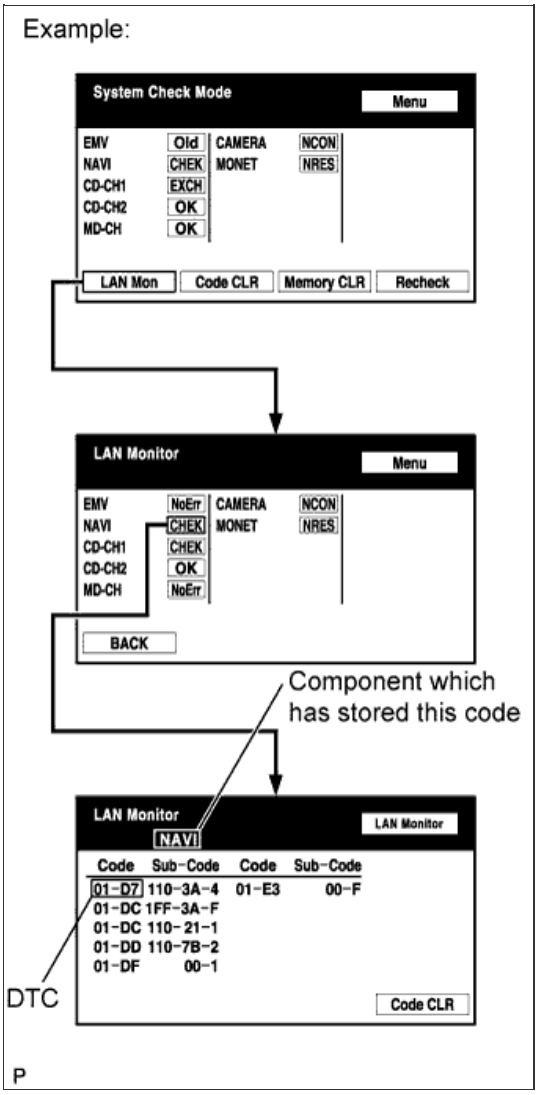
USE SIMULATION METHOD TO CHECK (Click here)

## 4.IDENTIFY COMPONENT WHICH HAS STORED THIS CODE

a. Enter the diagnostic mode.

b. Press the "LAN Mon" switch to change to "LAN Monitor" mode.

c. Identify the component which has stored this code.



**Component Table**

| Display | Component |
|---|---|
| AUDIO | Radio receiver |
| DSP-AMP | Stereo component amplifier |
| EMV | Multi-display |
| NAVI*3 | Navigation ECU |
| RSE*1 | Television display |
| CAMERA-C*2 | Parking assist ECU |

*1: w/ Rear Seat Entertainment System
*2: w/ Parking Assist Monitor System
*3: w/ Navigation System

**HINT:**

"NAVI" is the component which has stored this code in the example shown in the illustration.

NEXT

## 5.CHECK NAVIGATION SYSTEM

a. Check if the navigation system is equipped on the vehicle.

**Result**

| Result | Proceed to |
|---|---|
| w/ Navigation System | A |
| w/o Navigation System | B |

B → Go to step 7

A

## 6.CHECK COMPONENT WHICH HAS STORED THIS CODE

a. Select the component which has stored this code.

**Component Table**

| Display | Proceed to |
|---|---|
| Radio receiver (AUDIO) | Radio receiver communication error (Click here) |
| Stereo component amplifier (DSP-AMP) | Stereo component amplifier communication error (Click here) |
| Multi-display (EMV) | Multi-display communication error (Click here) |

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 63-45 | The magazine cannot be ejected. | Radio receiver assembly |
| 63-51 | A mechanical error occurs during the elevator operation. | |
| 63-52 | An error occurs in the CD changer clamp. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.CHECK RADIO RECEIVER ASSEMBLY**

a. Check if a disc can be changed, inserted, or ejected normally.

**OK:**
**Malfunction disappears.**

**NG** → **REPLACE RADIO RECEIVER ASSEMBLY (Click here)**

**OK**

**END**

## DTC 01-E0 Registration Complete Indication Error

## DTC 01-E3 Registration Demand Transmission

## DTC 01-E4 Multiple Frame Incomplete

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 01-E0 | A "Registration complete" signal from the master device cannot be received. | - |
| 01-E3 | A registration demand signal from the slave device is output, or a registration demand signal is output by receiving a connection confirmation signal from the sub-master device. | - |
| 01-E4 | Multiple frame transmission is incomplete. | - |

**HINT:**

Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.

### INSPECTION PROCEDURE

**HINT:**

- **After the inspection is completed, clear the DTCs (Click here).**
- **These DTCs do not indicate a malfunction.**

# DTC 63-46 Scratched / Reversed Disc

**for Preparation** Click here

## DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 63-46 | Scratches or dirt is found on the CD surface or the CD is inserted upside down. | • CD<br>• Radio receiver assembly |

## INSPECTION PROCEDURE

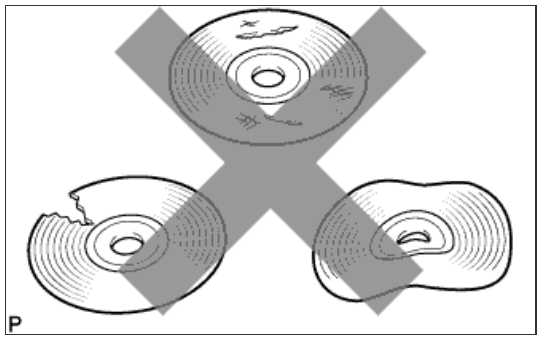
**HINT:**

After the inspection is completed, clear the DTCs (Click here).

### 1.CHECK THAT CD IS INSERTED PROPERLY

a. Check that the CD is not inserted upside down.

**OK:**
**CD is properly inserted.**



NG → INSERT CD PROPERLY

OK ↓

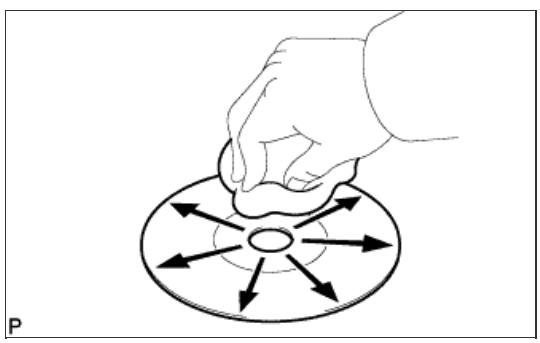
### 2.CHECK DISC

a. Check that the disc is not deformed or cracked.

**OK:**
**No deformations or cracks on the disc.**

NG → CHANGE DISC

OK ↓



### 3.DISC CLEANING

a. Disc cleaning

i. If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.

**NOTICE:**

Do not use a conventional record cleaner or antistatic preservative.

NEXT

4.CLEAR DTC

a. Clear the DTCs (Click here).

NEXT

5.RECHECK FOR DTC

a. Recheck for DTCs and check if the same trouble code is output.

**OK:**
**No DTC is output.**

NG → Go to step 6

OK

END

6.REPLACE DISC WITH ANOTHER AND RECHECK

a. Replace the disc and recheck.

i. Replace the disc with a normal one.

ii. Clear the DTCs (Click here).

iii. Recheck for DTCs and check if the same trouble code is output.

**OK:**
**No DTC is output.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (**Click here**)

OK

END

## DTC 01-E0 Registration Complete Indication Error

## DTC 01-E3 Registration Demand Transmission

## DTC 01-E4 Multiple Frame Incomplete

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 01-E0 | A "Registration complete" signal from the master device cannot be received. | - |
| 01-E3 | A registration demand signal from the slave device is output, or a registration demand signal is output by receiving a connection confirmation signal from the sub-master device. | - |
| 01-E4 | Multiple frame transmission is incomplete. | - |

**HINT:**

Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.

### INSPECTION PROCEDURE

**HINT:**

- **After the inspection is completed, clear the DTCs (Click here).**
- **These DTCs do not indicate a malfunction.**

## DTC 63-47 High Temperature

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 63-47 | The sensor detects that the CD unit temperature is high (higher than 80°C (176°F)). | Radio receiver assembly |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.CHECK RADIO RECEIVER ASSEMBLY**

a. Park the vehicle in a cool place.

b. Check that the temperature of the radio receiver has become sufficiently low, then start the engine. Check that the malfunction disappears.

**OK:**
**Malfunction disappears.**

**NG** → **REPLACE RADIO RECEIVER ASSEMBLY (Click here)**

**OK**

**END**

## DTC 01-E0 Registration Complete Indication Error

## DTC 01-E3 Registration Demand Transmission

## DTC 01-E4 Multiple Frame Incomplete

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 01-E0 | A "Registration complete" signal from the master device cannot be received. | - |
| 01-E3 | A registration demand signal from the slave device is output, or a registration demand signal is output by receiving a connection confirmation signal from the sub-master device. | - |
| 01-E4 | Multiple frame transmission is incomplete. | - |

**HINT:**

Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.

### INSPECTION PROCEDURE

**HINT:**

- **After the inspection is completed, clear the DTCs (Click here).**
- **These DTCs do not indicate a malfunction.**

## DTC 63-78 DSP Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 63-78 | An error occurs during the decode process (MP3/WMA). | Radio receive assembly |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**NOTICE:**

- **This code may be output even if there is no malfunction.**
- **If this code is output frequently, replace the radio receiver.**

**1.CLEAR DTC**

a. Clear the DTCs (Click here).

**NEXT**

**2.RECHECK DTC**

a. Recheck for DTCs and check if the same trouble code is output.

**OK:**
**No DTC is output.**

**NG** → **REPLACE RADIO RECEIVER ASSEMBLY (Click here)**

**OK**

**END**

## DTC 01-E2 ON / OFF Indication Parameter Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 01-E2 | A signal for ON/OFF control from the master device has a problem. | Multi-display assembly |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.REPLACE MULTI-DISPLAY ASSEMBLY**

a. w/ Navigation System: Replace the multi-display (Click here).

b. w/o Navigation System: Replace the multi-display (Click here).

**NEXT**

**END**

## DTC 63-7D Disc cannot be Played

## DTC 63-7E No Playable Files

## DTC 63-7F Copyright Protection Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 63-7D | When either condition below is met:<br>• An incompatible MP3 or WMA file is used.<br>• Although the file has the extension of ".mp3" or ".wma", the header information cannot be read. | • Disc<br>• Radio receiver assembly |
| 63-7E | When either condition below is met:<br>• A disc with no music data is used.<br>• Playable files are not on the disc (MP3 or WMA). | |
| 63-7F | A copy-protected file which cannot be played is used. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.CHANGE DISC**

a. Insert a disc with a playable file and check if the disc can be played correctly.

**HINT:**

For details on playable files and discs, refer to the Owner's Manual.

**OK:**

**The disc can be played correctly.**

**NG** → **REPLACE RADIO RECEIVER ASSEMBLY (Click here)**

**OK**

**DISC IS FAULTY**

## DTC 21-10 Panel Switch Error

## DTC 21-11 Touch Switch Error

## DTC 23-10 Panel Switch Error

## DTC 23-11 Touch Switch Error

## DTC 24-10 Panel Switch Error

## DTC 24-11 Touch Switch Error

## DTC 25-10 Panel Switch Error

## DTC 25-11 Touch Switch Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 21-10 | The panel switch detection circuit has a problem. | Multi-display assembly |
| 21-11 | The touch panel switch has a problem. | |
| 23-10 | The panel switch detection circuit has a problem. | |
| 23-11 | The touch panel switch has a problem. | |
| 24-10 | The panel switch detection circuit has a problem. | |
| 24-11 | The touch panel switch has a problem. | |
| 25-10 | The panel switch detection circuit has a problem. | |
| 25-11 | The touch panel switch has a problem. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.REPLACE MULTI-DISPLAY ASSEMBLY**

a. w/ Navigation System: Replace the multi-display (Click here).

b. w/o Navigation System: Replace the multi-display (Click here).

**NEXT**

**END**

## DTC 63-7D Disc cannot be Played

## DTC 63-7E No Playable Files

## DTC 63-7F Copyright Protection Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 63-7D | When either condition below is met:<br>• An incompatible MP3 or WMA file is used.<br>• Although the file has the extension of ".mp3" or ".wma", the header information cannot be read. | • Disc<br>• Radio receiver assembly |
| 63-7E | When either condition below is met:<br>• A disc with no music data is used.<br>• Playable files are not on the disc (MP3 or WMA). | |
| 63-7F | A copy-protected file which cannot be played is used. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.CHANGE DISC**

a. Insert a disc with a playable file and check if the disc can be played correctly.

**HINT:**

For details on playable files and discs, refer to the Owner's Manual.

**OK:**

**The disc can be played correctly.**

**NG** → **REPLACE RADIO RECEIVER ASSEMBLY (Click here)**

**OK**

**DISC IS FAULTY**

## DTC 21-10 Panel Switch Error

## DTC 21-11 Touch Switch Error

## DTC 23-10 Panel Switch Error

## DTC 23-11 Touch Switch Error

## DTC 24-10 Panel Switch Error

## DTC 24-11 Touch Switch Error

## DTC 25-10 Panel Switch Error

## DTC 25-11 Touch Switch Error

## INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs.

### 1.CHECK AUDIO MODELS

a. Check the audio model.

**Result**

| Result | Proceed to |
|---|---|
| 19 speakers | A |
| 9 speakers | B |

B → Go to step 19

A

### 2.CHECK FOR DTC

a. Disconnect the F31, F4 and F3 amplifier connectors.

b. Clear the DTCs.

c. Check if DTC 74-40 is output.

**OK:**
**DTC 74-40 is not output.**

NG → REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

OK

### 3.CHECK FOR DTC

a. Reconnect the F3 amplifier connector.

b. Check if DTC 74-40 is output.

**OK:**
**DTC 74-40 is not output.**

NG → Go to step 8

OK

### 4.CHECK FOR DTC

a. Reconnect the F31 amplifier connector.

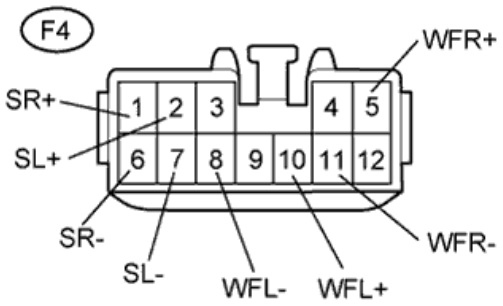
b. Check if DTC 74-40 is output.

**OK:**
**DTC 74-40 is not output.**

NG → Go to step 12

OK

### 5.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - SPEAKER)



a. Disconnect the F4 amplifier connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-1 (SR+) - Body ground | Always | 10 kΩ or higher |
| F4-2 (SL+) - Body ground | | |
| F4-5 (WFR+) - Body ground | | |
| F4-6 (SR-) - Body ground | | |
| F4-7 (SL-) - Body ground | | |
| F4-8 (WFL-) - Body ground | | |
| F4-10 (WFL+) - Body ground | | |

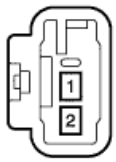
Front view of wire harness connector:
(to Stereo Component Amplifier)

| | | |
|---|---|---|
| F4-11 (WFR-) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 6.INSPECT FRONT NO. 1 SPEAKER ASSEMBLY



a. Disconnect the I10 and I1 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 1.9 +/-0.4 Ω |

Component without harness connected:
(Front No. 1 Speaker)

N

NG → REPLACE FRONT NO. 1 SPEAKER ASSEMBLY (Click here)

OK

## 7.INSPECT REAR HEADER SPEAKER ASSEMBLY

a. Disconnect the S9 and S8 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 6.0 +/-1.0 Ω |

Component without harness connected:
(Rear Header Speaker)

N

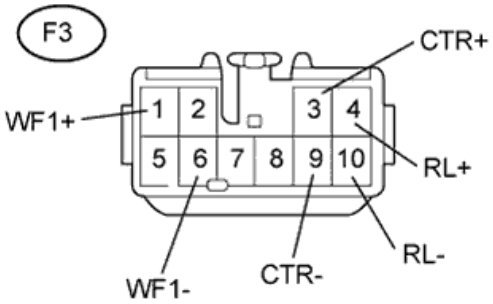
NG → REPLACE REAR HEADER SPEAKER ASSEMBLY (Click here)

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 8.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - SPEAKER)

a. Disconnect the F3 amplifier connector.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-3 (CTR+) - Body ground | | |
| F3-9 (CTR-) - Body ground | | |

| | | |
|---|---|---|
| F3-4 (RL+) - Body ground | Always | 10 kΩ or higher |
| F3-10 (RL-) - Body ground | | |
| F3-1 (WF1+) - Body ground | | |
| F3-6 (WF1-) - Body ground | | |

Front view of wire harness connector:
(to Stereo Component Amplifier)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 9.INSPECT FRONT NO. 4 SPEAKER ASSEMBLY

a. Disconnect the F6 speaker connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 6.0 +/-1.0 Ω |

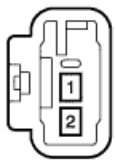
Component without harness connected:
(Front No. 4 Speaker)

N

NG → REPLACE FRONT NO. 4 SPEAKER ASSEMBLY (Click here)

OK

## 10.INSPECT REAR SPEAKER SET LH



a. Disconnect the J17 speaker connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 6.0 +/-1.0 Ω |

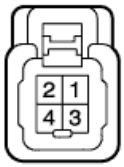
Component without harness connected:
(Rear Speaker Set LH)

N

NG → REPLACE REAR SPEAKER SET LH (Click here)

OK

## 11.INSPECT NO. 1 WOOFER BOX SPEAKER ASSEMBLY



a. Disconnect the L4 speaker connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

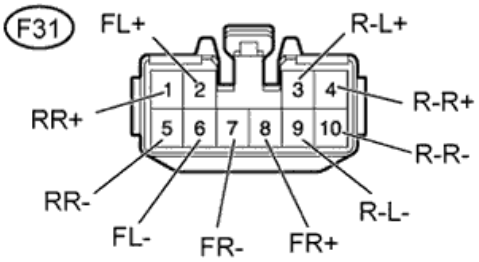
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 8.0 Ω |

Component without harness connected:
(No. 1 Woofer Box Speaker)

NG → REPLACE NO. 1 WOOFER BOX SPEAKER ASSEMBLY (Click here)

OK → REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 12.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - SPEAKER)



a. Disconnect the F31 amplifier connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

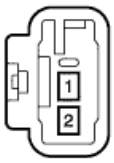
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F31-1 (RR+) - Body ground | Always | 10 kΩ or higher |
| F31-5 (RR-) - Body ground | | |
| F31-3 (R-L+) - Body ground | | |
| F31-9 (R-L-) - Body ground | | |
| F31-4 (R-R+) - Body ground | | |
| F31-10 (R-R-) - Body ground | | |
| F31-2 (FL+) - Body ground | | |
| F31-6 (FL-) - Body ground | | |
| F31-7 (FR-) - Body ground | | |
| F31-8 (FR+) - Body ground | | |

Front view of wire harness connector:
(to Stereo Component Amplifier)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 13.INSPECT REAR SPEAKER SET RH



a. Disconnect the J15 speaker connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 6.0 +/-1.2 Ω |

Component without harness connected:
(Rear Speaker Set RH)

N

NG → REPLACE REAR SPEAKER SET RH (Click here)

OK

**14.INSPECT REAR NO. 2 SPEAKER ASSEMBLY**

a. Disconnect the rear No. 2 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 6.0 +/-1.0 Ω |

Component without harness connected:
(Rear No. 2 Speaker)

NG → REPLACE REAR NO. 2 SPEAKER ASSEMBLY (Click here)

OK

**15.CHECK REAR NO. 3 SPEAKER ASSEMBLY**

a. Disconnect the rear No. 3 speaker connectors.

b. Interchange the rear No. 3 speaker LH with RH.

c. Check that the malfunction disappears.

**OK:**
**Malfunction disappears.**

**HINT:**

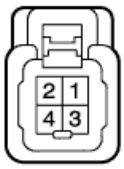
- **Connect all the connectors to the rear No. 3 speakers.**
- **When there is a possibility that either the right or left rear speaker is defective, inspect by interchanging the right one with the left one.**
- **Perform the inspection above on both the LH and RH sides.**

NG → Go to step 16

OK

REPLACE REAR NO. 3 SPEAKER ASSEMBLY (Click here)

**16.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY**



a. Disconnect the F8 and F7 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | Below 1 Ω |
| 3 - 4 | Always | Below 1 Ω |
| 2 - 4 | Always | 6.0 +/-1.0 Ω |

Component without harness connected:
(Front No. 2 Speaker)

NG → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

OK

**17.CHECK FRONT NO. 3 SPEAKER ASSEMBLY**

a. Disconnect the F14 and F13 speaker connectors.

b. Interchange the front No. 3 speaker LH with RH.

c. Check that the malfunction disappears.

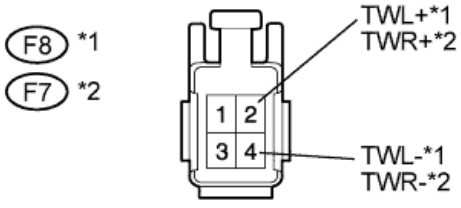
**OK:**
**Malfunction disappears.**

**HINT:**

- **Connect all the connectors to the front No. 3 speakers.**
- **When there is a possibility that either the right or left front speaker is defective, inspect by interchanging the right one with the left one.**
- **Perform the inspection above on both the LH and RH sides.**

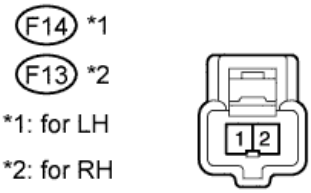
NG → Go to step 18

OK



REPLACE FRONT NO. 3 SPEAKER ASSEMBLY (Click here)

**18.CHECK HARNESS AND CONNECTOR (FRONT NO. 2 SPEAKER - FRONT NO. 3 SPEAKER)**



a. Disconnect the F8, F7, F14 and F13 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

Front view of wire harness connector:
(to Front No. 2 Speaker)

Front view of wire harness connector:
(to Front No. 3 Speaker)

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F8-2 (TWL+) - F14-1 | Always | Below 1 Ω |
| F8-4 (TWL-) - F14-2 | | |
| F8-2 (TWL+) - Body ground | Always | 10 kΩ or higher |
| F8-4 (TWL-) - Body ground | | |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F7-2 (TWR+) - F13-1 | Always | Below 1 Ω |
| F7-4 (TWR-) - F13-2 | | |
| F7-2 (TWR+) - Body ground | Always | 10 kΩ or higher |
| F7-4 (TWR-) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK →

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

**19.CHECK DTC**

a. Disconnect the F3 and F31 amplifier connectors.

b. Clear the DTCs.

c. Check if DTC 74-40 is output.

**OK:**

**DTC 74-40 is not output.**

NG → REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

OK →

**20.CHECK DTC**

a. Reconnect the F31 amplifier connector.

b. Clear the DTCs.

c. Check if DTC 74-40 is output.

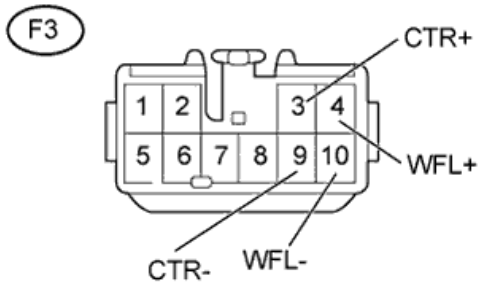
**OK:**

**DTC 74-40 is not output.**

NG → Go to step 24

OK →

**21.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - SPEAKER)**



a. Disconnect the F3 amplifier connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

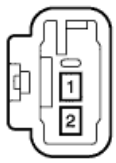
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-3 (CTR+) - Body ground | Always | 10 kΩ or higher |
| F3-9 (CTR-) - Body ground | Always | 10 kΩ or higher |
| F3-4 (WFL+) - Body ground | Always | 10 kΩ or higher |
| F3-10 (WFL-) - Body ground | Always | 10 kΩ or higher |

Front view of wire harness connector:
(to Stereo Component Amplifier)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**22.INSPECT FRONT NO. 1 SPEAKER ASSEMBLY LH**



a. Disconnect the I10 speaker connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 3 Ω |

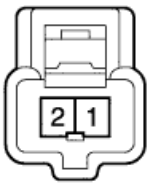
Component without harness connected:
(Front No. 1 Speaker LH)

N

NG → REPLACE FRONT NO. 1 SPEAKER ASSEMBLY LH (Click here)

OK

**23.INSPECT FRONT NO. 4 SPEAKER ASSEMBLY**



a. Disconnect the F6 speaker connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 6 Ω |

Component without harness connected:
(Front No. 4 Speaker)

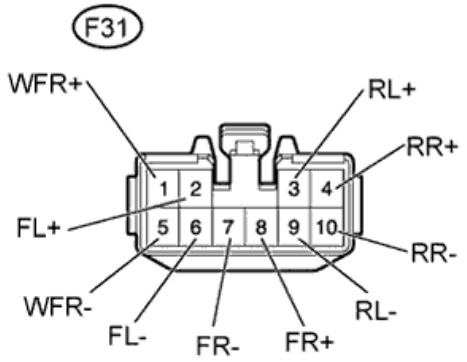
N

NG → REPLACE FRONT NO. 4 SPEAKER ASSEMBLY (Click here)

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 24.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - SPEAKER)



a. Disconnect the F31 amplifier connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

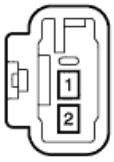
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F31-1 (WFR+) - Body ground | Always | 10 kΩ or higher |
| F31-6 (FL-) - Body ground | Always | 10 kΩ or higher |
| F31-2 (FL+) - Body ground | Always | 10 kΩ or higher |
| F31-7 (FR-) - Body ground | Always | 10 kΩ or higher |
| F31-4 (RR+) - Body ground | Always | 10 kΩ or higher |
| F31-3 (RL+) - Body ground | Always | 10 kΩ or higher |
| F31-8 (FR+) - Body ground | Always | 10 kΩ or higher |
| F31-10 (RR-) - Body ground | Always | 10 kΩ or higher |
| F31-9 (RL-) - Body ground | Always | 10 kΩ or higher |
| F31-5 (WFR-) - Body ground | Always | 10 kΩ or higher |

Front view of wire harness connector:
(to Stereo Component Amplifier)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 25.INSPECT FRONT NO. 1 SPEAKER ASSEMBLY RH



a. Disconnect the I1 speaker connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 3 Ω |

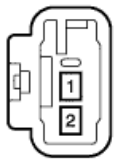
Component without harness connected:
(Front No. 1 Speaker RH)

N

NG → REPLACE FRONT NO. 1 SPEAKER ASSEMBLY RH ( Click here)

OK

## 26.INSPECT REAR SPEAKER SET



a. Disconnect the J17 and J15 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4 Ω |

Component without harness connected:
(Rear Speaker Set)

N

NG → REPLACE REAR SPEAKER SET (Click here)

OK

## 27.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY

a. Disconnect the F8 and F7 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | Below 1 Ω |
| 3 - 4 | Always | Below 1 Ω |
| 2 - 4 | Always | 4 Ω |

Component without harness connected:
(Front No. 2 Speaker)

NG → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

OK

## 28.INSPECT FRONT NO. 3 SPEAKER ASSEMBLY

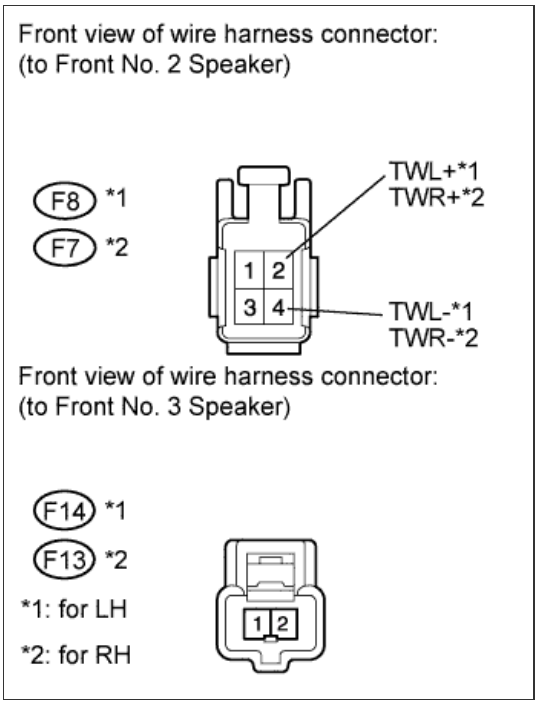
a. Disconnect the F14 and F13 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4 Ω |

Component without harness connected:
(Front No. 3 Speaker)



NG → REPLACE FRONT NO. 3 SPEAKER ASSEMBLY (Click here)

OK

## 29.CHECK HARNESS AND CONNECTOR (FRONT NO. 2 SPEAKER - FRONT NO. 3 SPEAKER)

a. Disconnect the F8, F7, F14 and F13 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F8-2 (TWL+) - F14-1 | Always | Below 1 Ω |
| F8-4 (TWL-) - F14-2 | | |
| F8-2 (TWL+) - Body ground | Always | 10 kΩ or higher |
| F8-4 (TWL-) - Body ground | | |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F7-2 (TWR+) - F13-1 | Always | Below 1 Ω |
| F7-4 (TWR-) - F13-2 | | |
| F7-2 (TWR+) - Body ground | Always | 10 kΩ or higher |
| F7-4 (TWR-) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## DTC B15B7 Bluetooth Module Malfunction

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored when a malfunction occurs in the multi-media module receiver assembly.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1550 | Digital radio tuner has a malfunction. | Multi-media module receiver assembly |
| B157D | DAB Tuner Antenna disconnected. | |
| B15A0 | When either condition below is met:<br>• Bus malfunction<br>• EEPROM error<br>• Sub-microprocessor malfunction | |
| B15B3 | Tuner communication error | |
| B15B5 | When one of the conditions below is met:<br>• Mechanical communication error<br>• Read malfunction<br>• Mechanical malfunction | |
| B15B7 | "Bluetooth" module malfunction | |

# DTC B1575 GVIF Disconnected (from EMV/MM Integrated Device to Multi Display)

**for Preparation** Click here

## DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1575 | GVIF disconnected (from Multi-media module receiver assembly to multi-display assembly). | • Harness and connector (GVIF cable)<br>• Multi-media module receiver assembly |

## INSPECTION PROCEDURE

### 1.CLEAR DTC

a. Clear the DTCs (Click here).

NEXT

### 2.CHECK DTC

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output.**

NG → **Go to step 3**

OK

### USE SIMULATION METHOD TO CHECK (Click here)

### 3.REPLACE HARNESS AND CONNECTOR (GVIF CABLE)

a. Replace the harness and connector (GVIF cable) with a new or normally functioning one.

NEXT

### 4.CLEAR DTC

a. Clear the DTCs (Click here).

NEXT

### 5.CHECK DTC

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output.**

NG → **REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)**

OK

### END (GVIF CABLE IS DEFECTIVE)

## DTC 34-10 Error in Picture Circuit

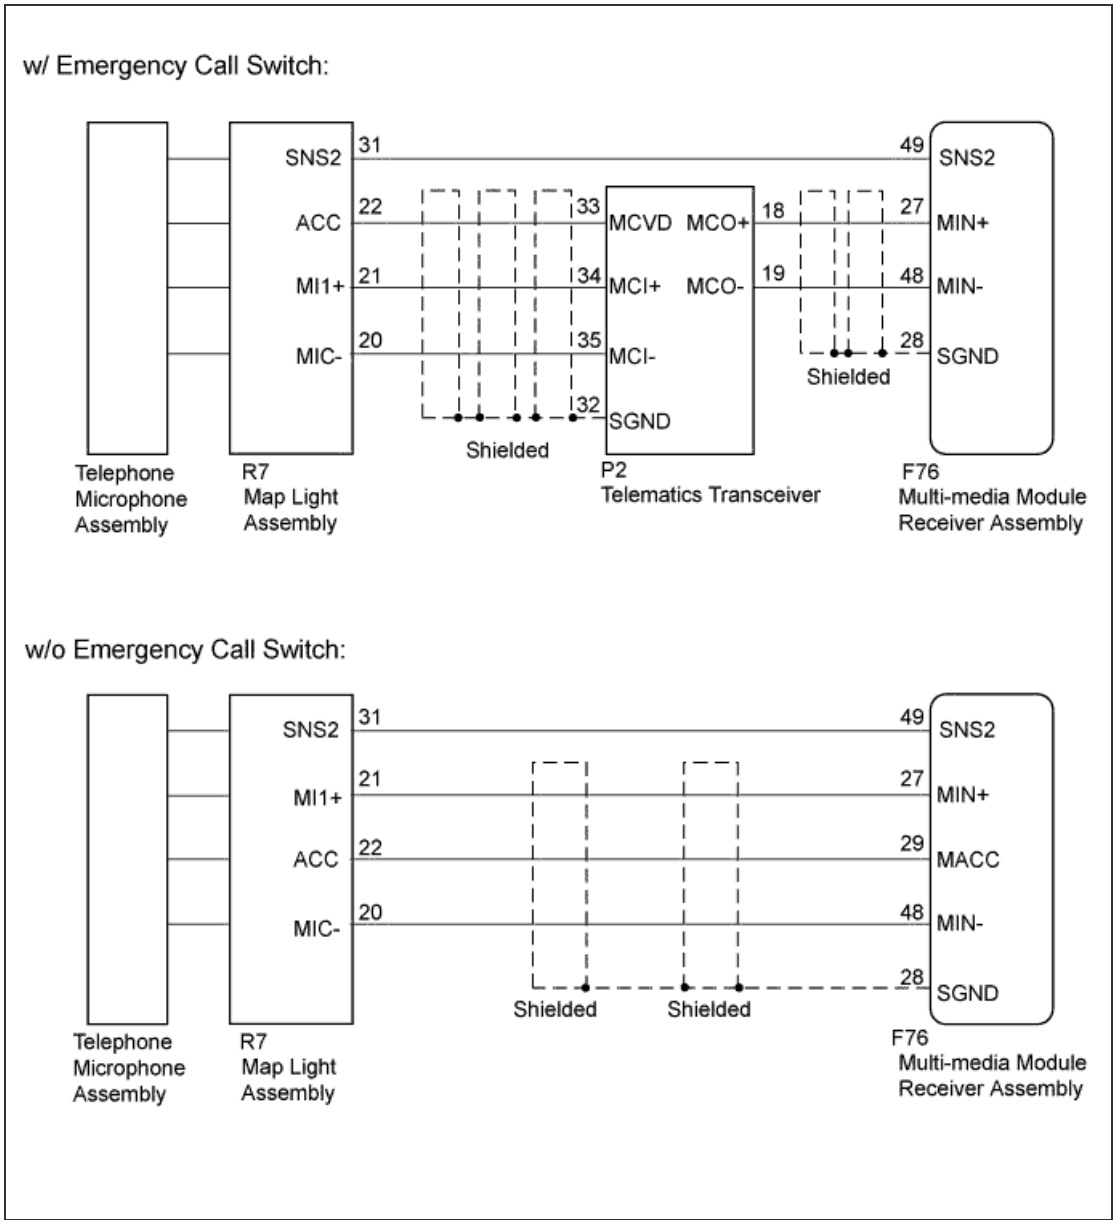
## DTC B1579 Voice Recognition Microphone Disconnected



**for Preparation** Click here

### DESCRIPTION

The multi-media module receiver assembly and map light assembly (telephone microphone assembly) are connected to each other using the microphone connection detection signal lines.
This DTC is stored when a microphone connection detection signal line is disconnected.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1579 | Telephone microphone signal is lost. | • Multi-media module receiver assembly<br>• Map light assembly<br>• Telephone microphone assembly<br>• Telematics Transceiver (w/ Emergency Call Switch)<br>• Harness or connector |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**HINT:**

When replacing the multi-media module receiver assembly or the telematics transceiver, perform the vehicle contract setting ( Click here).

## 1.CONFIRM MODEL

a. Choose the model to be inspected.

**Model**

| Model | Proceed to |
|---|---|
| w/o Emergency Call Switch | A |
| w/ Emergency Call Switch | B |

B → Go to step 7

A

## 2.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - MAP LIGHT ASSEMBLY)

a. Disconnect the F76 multi-media module receiver assembly connector.

b. Disconnect the R7 map light assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-27 (MIN+) - R7-21 (MI1+) | Always | Below 1 Ω |
| F76-29 (MACC) - R7-22 (ACC) | Always | Below 1 Ω |
| F76-48 (MIN-) - R7-20 (MIC-) | Always | Below 1 Ω |
| F76-49 (SNS2) - R7-31 (SNS2) | Always | Below 1 Ω |
| F76-27 (MIN+) - Body ground | Always | 10 kΩ or higher |
| F76-28 (SGND) - Body ground | Always | 10 kΩ or higher |
| F76-29 (MACC) - Body ground | Always | 10 kΩ or higher |
| F76-48 (MIN-) - Body ground | Always | 10 kΩ or higher |
| F76-49 (SNS2) - Body ground | Always | 10 kΩ or higher |

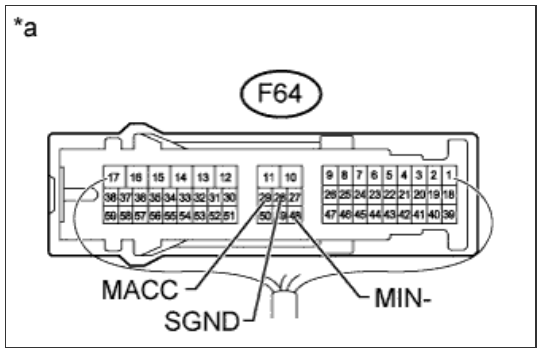
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 3.CHECK MULTI-MEDIA MODULE RECEIVER ASSEMBLY

a. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**



| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F76-29 (MACC) - Body ground | Engine switch on (ACC) | 4 to 6 V |

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| | | Specified |
|---|---|---|

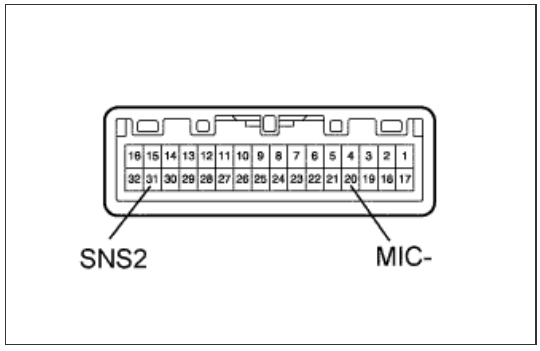
| Tester Connection | Condition | Condition |
|---|---|---|
| F76-28 (SGND) - Body ground | Always | Below 1 Ω |
| F76-48 (MIN-) - Body ground | Always | Below 1 Ω |

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected (Multi-media Module Receiver Assembly) |

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK



## 4.INSPECT MAP LIGHT ASSEMBLY

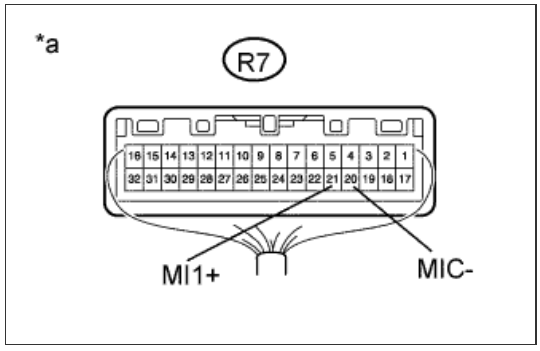
a. Remove the map light assembly (Click here).

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 20 (MIC-) - 31 (SNS2) | Always | Below 1 Ω |

NG → Go to step 6



OK

## 5.CHECK MAP LIGHT ASSEMBLY

a. Turn the engine switch on (ACC).

b. Connect an oscilloscope to terminals R7-21 (MI1+) and R7-20 (MIC-) of the map light assembly connector.

c. Check the waveform of the telephone microphone assembly using the oscilloscope.

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected (Map Light Assembly) |

**Result**

| Result | Proceed to |
|---|---|
| A waveform synchronized with the voice input to the map light assembly is output. | A |
| A waveform synchronized with the voice input to the map light assembly is not output. | B |

B → Go to step 6

A

REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

### 6.CHECK TELEPHONE MICROPHONE ASSEMBLY

a. Replace the telephone microphone assembly with a new or normally functioning one ( Click here).

b. Check if the same DTC is output again.

**Result**

| Result | Proceed to |
|---|---|
| No DTCs are output. | A |
| DTCs are output. | B |

B → REPLACE MAP LIGHT ASSEMBLY (Click here)

A →

END (TELEPHONE MICROPHONE ASSEMBLY IS DEFECTIVE)

### 7.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - MAP LIGHT ASSEMBLY)

a. Disconnect the F76 multi-media module receiver assembly connector.

b. Disconnect the R7 map light assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-49 (SNS2) - R7-31 (SNS2) | Always | Below 1 Ω |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK →

### 8.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - TELEMATICS TRANSCEIVER)

a. Disconnect the F76 multi-media module receiver assembly connector.

b. Disconnect the P2 telematics transceiver connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-27 (MIN+) - P2-18 (MCO+) | Always | Below 1 Ω |
| F76-48 (MIN-) - P2-19 (MCO-) | Always | Below 1 Ω |
| F76-27 (MIN+) - Body ground | Always | 10 kΩ or higher |
| F76-48 (MIN-) - Body ground | Always | 10 kΩ or higher |
| F76-28 (SGND) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK →

### 9.CHECK HARNESS AND CONNECTOR (TELEMATICS TRANSCEIVER - MAP LIGHT ASSEMBLY)

a. Disconnect the P2 telematics transceiver connector.

b. Disconnect the R7 map light assembly connector.

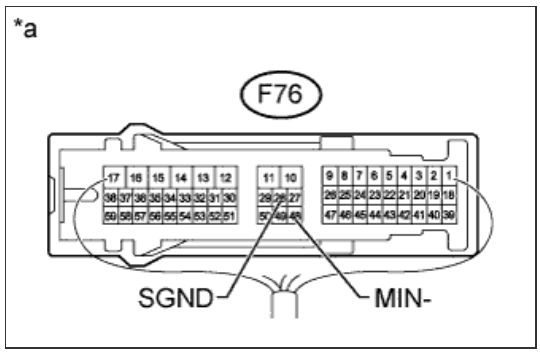
c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| P2-33 (MCVD) - R7-22 (ACC) | Always | Below 1 Ω |
| P2-34 (MCI+) - R7-21 (MI1+) | Always | Below 1 Ω |
| P2-35 (MCI-) - R7-20 (MIC-) | Always | Below 1 Ω |
| P2-33 (MCVD) - Body ground | Always | 10 kΩ or higher |
| P2-34 (MCI+) - Body ground | Always | 10 kΩ or higher |
| P2-35 (MCI-) - Body ground | Always | 10 kΩ or higher |
| P2-32 (SGND) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



## 10.CHECK MULTI-MEDIA MODULE RECEIVER ASSEMBLY

a. Disconnect the P2 telematics transceiver connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-28 (SGND) - Body ground | Always | Below 1 Ω |
| F76-48 (MIN-) - Body ground | Always | Below 1 Ω |

**Text in Illustration**

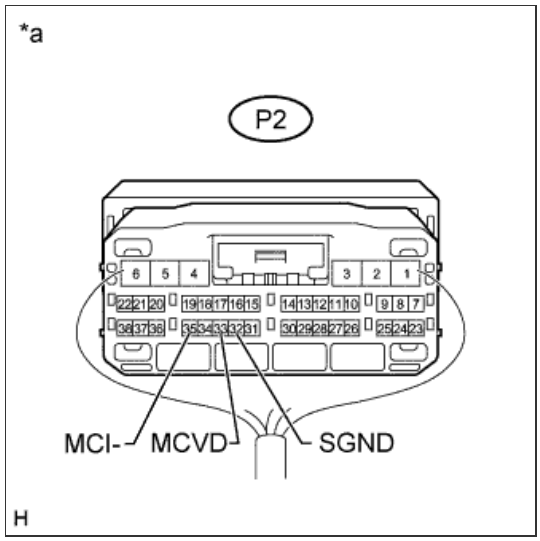
| | |
|---|---|
| *a | Component with harness connected (Multi-media Module Receiver Assembly) |

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK

## 11.CHECK TELEMATICS TRANSCEIVER

a. Measure the voltage according to the value(s) in the table below.



**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| P2-33 (MCVD) - Body ground | Engine switch on (ACC) | 4 to 6 V |

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

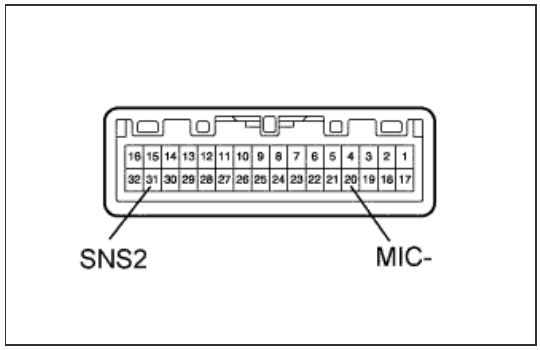
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| P2-32 (SGND) - Body ground | Always | Below 1 Ω |
| P2-35 (MCI-) - Body ground | Always | Below 1 Ω |

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected (Telematics Transceiver) |

NG → REPLACE TELEMATICS TRANSCEIVER (Click here)

OK



## 12.INSPECT MAP LIGHT ASSEMBLY

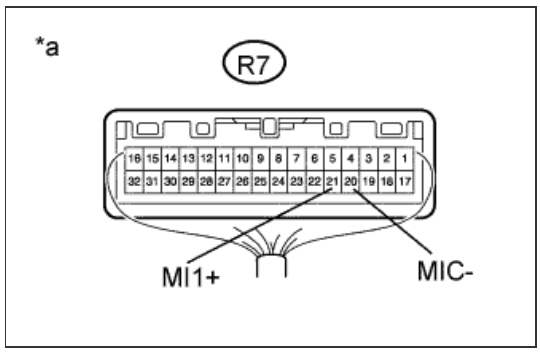
a. Remove the map light assembly (Click here).

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 20 (MIC-) - 31 (SNS2) | Always | Below 1 Ω |

NG → Go to step 14



OK

## 13.CHECK MAP LIGHT ASSEMBLY

a. Turn the engine switch on (ACC).

b. Connect an oscilloscope to terminals R7-21 (MI1+) and R7-20 (MIC-) of the map light assembly connector.

c. Check the waveform of the telephone microphone assembly using the oscilloscope.

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected (Map Light Assembly) |

**Result**

| Result | Proceed to |
|---|---|
| A waveform synchronized with the voice input to the map light assembly is output. | A |
| A waveform synchronized with the voice input to the map light assembly is not output. | B |

B → Go to step 14

A

REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

14.CHECK TELEPHONE MICROPHONE ASSEMBLY

a. Replace the telephone microphone assembly with a new or normally functioning one ( Click here).

b. Check if the same DTC is output again.

**Result**

| Result | Proceed to |
|---|---|
| No DTCs are output. | A |
| DTCs are output. | B |

B → REPLACE MAP LIGHT ASSEMBLY (Click here)

A

END (TELEPHONE MICROPHONE ASSEMBLY IS DEFECTIVE)

## DTC 45-10 DVD Changer Mechanical Error

## DTC 45-11 DVD Insertion and Ejection Error

## DTC 45-12 DVD Reading Abnormal

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-10 | A mechanical error in the DVD changer is detected while a disc is not being inserted or ejected. | Radio receiver assembly |
| 45-11 | Disc insertion or ejection fails. | |
| 45-12 | A disc read problem occurs. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.REPLACE RADIO RECEIVER ASSEMBLY**

a. Replace the radio receiver (Click here).

**NEXT**

**END**

# DTC B1585 USB Device Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when a malfunction occurs in a connected device.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1585 | USB Device Malfunction<br>• Non mass-storage class or incompatible protocol USB device<br>• USB device with an incompatible file system, corrupted or incompatible File Allocation Table (FAT)<br>• "iPod" malfunction<br>• "iPod" with unsupported firmware<br>• Unsupported "iPod" model | • USB device or "iPod"<br>• Multi-media module receiver assembly |

## INSPECTION PROCEDURE

### 1.REPLACE USB DEVICE OR “iPod”

a. Disconnect the USB device or "iPod" from the No. 1 stereo jack adapter assembly.

b. Turn the engine switch off.

**HINT:**

When this DTC has been stored, it is necessary to turn off the engine switch to make it possible for the vehicle to recognize a new device when it is connected.

c. Turn the engine switch on (ACC).

d. Connect a known good USB device or "iPod" to the No. 1 stereo jack adapter assembly.

**HINT:**

- **If the malfunction occurred when a USB device was in use, use another USB device for the inspection. If the malfunction occurred when an "iPod" was in use, use another "iPod" for the inspection.**
- **Refer to System Description for compatible formats and versions (Click here).**

**NEXT**

### 2.CLEAR DTC

a. Clear the DTCs (Click here).

**NEXT**

### 3.CHECK DTC

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output.**

**NG** → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

**OK**

### USB DEVICE FORMAT WAS INCOMPATIBLE, "iPod" VERSION WAS INCOMPATIBLE, OR USB DEVICE OR "iPod" WAS DEFECTIVE

## DTC 45-10 DVD Changer Mechanical Error

## DTC 45-11 DVD Insertion and Ejection Error

## DTC 45-12 DVD Reading Abnormal

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-10 | A mechanical error in the DVD changer is detected while a disc is not being inserted or ejected. | Radio receiver assembly |
| 45-11 | Disc insertion or ejection fails. | |
| 45-12 | A disc read problem occurs. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.REPLACE RADIO RECEIVER ASSEMBLY**

a. Replace the radio receiver (Click here).

**NEXT**

**END**

# DTC B15A3 Stereo Component Amplifier Malfunction

**for Preparation** Click here

## DESCRIPTION

These DTCs are stored when a malfunction occurs in the stereo component amplifier assembly.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15A3 | When one of the conditions below is met:<br>• Internal power supply malfunction<br>• DSP error<br>• EEPROM error | Stereo component amplifier assembly |

## INSPECTION PROCEDURE

### 1.CLEAR DTC

a. Clear the DTCs (Click here).

NEXT

### 2.CHECK DTC

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output.**

NG → REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (**Click here**)

OK

### USE SIMULATION METHOD TO CHECK (**Click here**)

## DTC 45-10 DVD Changer Mechanical Error

## DTC 45-11 DVD Insertion and Ejection Error

## DTC 45-12 DVD Reading Abnormal

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-10 | A mechanical error in the DVD changer is detected while a disc is not being inserted or ejected. | Radio receiver assembly |
| 45-11 | Disc insertion or ejection fails. | |
| 45-12 | A disc read problem occurs. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.REPLACE RADIO RECEIVER ASSEMBLY**

a. Replace the radio receiver (Click here).

**NEXT**

**END**

# DTC B15A6 Display Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when a malfunction occurs in the multi-display assembly.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15A6 | When one of the conditions below is met:<br>• RAM error<br>• Drawing controller malfunction<br>• Internal hard drive malfunction | Multi-display assembly |

## INSPECTION PROCEDURE

### 1.CLEAR DTC

a. Clear the DTCs (Click here).

NEXT

### 2.CHECK DTC

a. Recheck for DTCs and check if the same DTCs are output again ( Click here).

**OK:**
**No DTCs are output.**

NG → REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

OK

USE SIMULATION METHOD TO CHECK (Click here)

## DTC 45-41 Wrong Disc

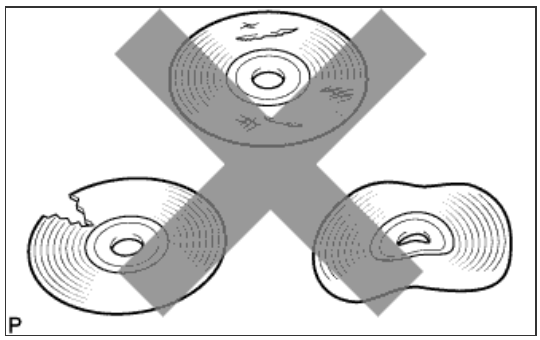
## DTC 45-42 Disc cannot be Read

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-41 | An unsuitable disc is inserted. | • Disc<br>• Radio receiver assembly |
| 45-42 | The disc cannot be read. | |

### INSPECTION PROCEDURE



**HINT:**

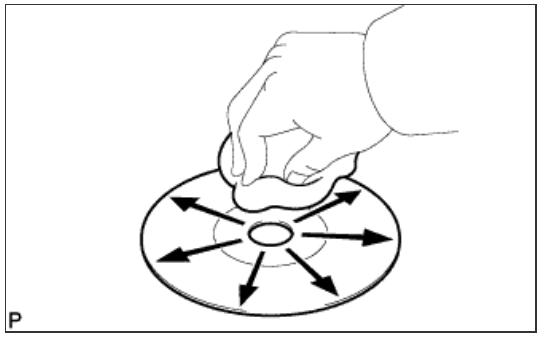
After the inspection is completed, clear the DTCs (Click here).

**1.CHECK DISC**

a. Check that the disc is not deformed or cracked.

**OK:**
**No deformation or cracks on the disc.**

NG → REPLACE DISC



OK

**2.DISC CLEANING**

a. If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.

**NOTICE:**

Do not use a conventional record cleaner or antistatic preservative.

NEXT

**3.CLEAR DTC**

a. Clear the DTCs (Click here).

NEXT

4.RECHECK DTC

a. Recheck for DTCs and check if the same trouble code is output.

**OK:**
**No DTC is output.**

NG → Go to step 5

OK →

END

5.REPLACE DISC WITH ANOTHER AND RECHECK

a. Replace the disc with a normal one.

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble code is output.

**OK:**
**No DTC is output.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK →

END

## DTC B15B0 Display Screen Malfunction

**for Preparation** Click here

### DESCRIPTION

This DTC is stored when a malfunction occurs in the multi-display assembly.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15B0 | Picture circuit (TFT unit) malfunction | Multi-display assembly |

### INSPECTION PROCEDURE

**1.CLEAR DTC**

a. Clear the DTC (Click here).

**NEXT**

**2.CHECK DTC**

a. Recheck for DTCs and check if the same DTCs are output again ( Click here).

**OK:**
**No DTCs are output.**

**NG** → **REPLACE MULTI-DISPLAY ASSEMBLY (Click here)**

**OK**

**USE SIMULATION METHOD TO CHECK (Click here)**

## DTC 45-41 Wrong Disc

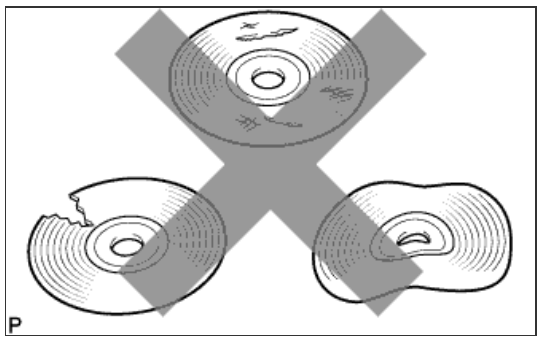
## DTC 45-42 Disc cannot be Read

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-41 | An unsuitable disc is inserted. | • Disc<br>• Radio receiver assembly |
| 45-42 | The disc cannot be read. | |

### INSPECTION PROCEDURE



**HINT:**

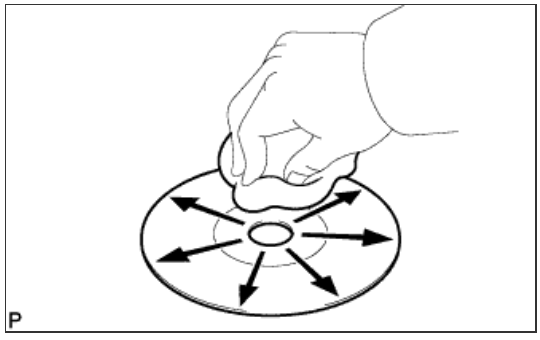
After the inspection is completed, clear the DTCs (Click here).

**1.CHECK DISC**

a. Check that the disc is not deformed or cracked.

**OK:**
**No deformation or cracks on the disc.**

NG → REPLACE DISC



OK

**2.DISC CLEANING**

a. If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.

**NOTICE:**

Do not use a conventional record cleaner or antistatic preservative.

NEXT

**3.CLEAR DTC**

a. Clear the DTCs (Click here).

NEXT

4.RECHECK DTC

a. Recheck for DTCs and check if the same trouble code is output.

**OK:**
**No DTC is output.**

NG → Go to step 5

OK →

END

5.REPLACE DISC WITH ANOTHER AND RECHECK

a. Replace the disc with a normal one.

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble code is output.

**OK:**
**No DTC is output.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK →

END

# DTC B15B8 Harddisk Malfunction

**for Preparation** Click here

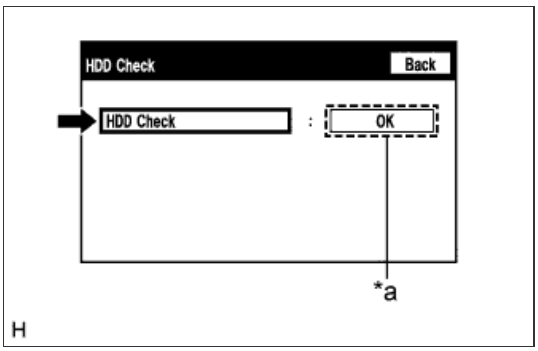
## DESCRIPTION

This DTC is stored when the hard disc which is built into the multi-media module receiver assembly has an initialization malfunction or read/write errors occur more than a specified number of times.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15B8 | Hard Disk Drive (HDD) malfunction | Hard disc |

## INSPECTION PROCEDURE

### 1.CHECK HARD DISC (OPERATION CHECK)



a. Enter the "Failure Diagnosis" screen. Refer to Check Hard Disc in Operation Check (Click here).

b. Select "HDD Check" and check the result.

**OK:**
**"OK" is displayed.**

**HINT:**

- **After selecting "HDD Check", it may take a while until the result is displayed.**
- **If the cabin temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher, the hard disc may not operate normally, and "NG" may be shown on the display. Make sure to perform the inspection with the cabin at an appropriate temperature.**

Text in Illustration

| | |
|---|---|
| *a | Result |

NG → Go to step 4

OK →

### 2.CLEAR DTC

a. Clear the DTCs (Click here).

NEXT →

### 3.CHECK DTC

a. Recheck for DTCs and check if the same DTCs are output again ( Click here).

**OK:**
**No DTCs are output.**

**HINT:**

The hard disc may be malfunctioning even if DTC B15B8 is not output.

NG → REPLACE HARD DISC (**Click here**)

OK →

USE SIMULATION METHOD TO CHECK (**Click here**)

### 4.REPLACE HARD DISC

a. Replace the hard disc with a new one ( Click here).

NEXT

5.CLEAR DTC

a. Clear the DTCs (Click here).

NEXT

6.CHECK DTC

a. Recheck for DTCs and check if the same DTCs are output again ( Click here).

**OK:**
**No DTCs are output.**

**HINT:**

The hard disc may be malfunctioning even if DTC B15B8 is not output.

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (**Click here**)

OK

END (HARD DISC IS DEFECTIVE)

# DTC 45-43 DVD-ROM Abnormal

**for Preparation** Click here

## DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-43 | Disc operation is abnormal. | • Disc<br>• Radio receiver assembly |

## INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.CHECK IF PROPER DISC IS INSERTED**

a. Make sure that the DVD is a video DVD or a CD with an MP3 or WMA file, and that it is not deformed, flawed, stained, burred, or otherwise defective.

**OK:**
**Normal disc.**

**HINT:**

- **Translucent or uniquely-shaped DVDs or CDs cannot be played.**
- **For details on playable DVDs or CDs, refer to the Owner's Manual.**

**NG** → **DISC IS FAULTY**

**OK**

**2.REPLACE DISC WITH ANOTHER AND RECHECK**

a. Replace the disc and recheck.

i. Replace the disc with a normal one.

ii. Clear the DTCs (Click here).

iii. Recheck for DTCs and check if the same trouble code is output.

**OK:**
**No DTC is output.**

**NG** → **REPLACE RADIO RECEIVER ASSEMBLY (Click here)**

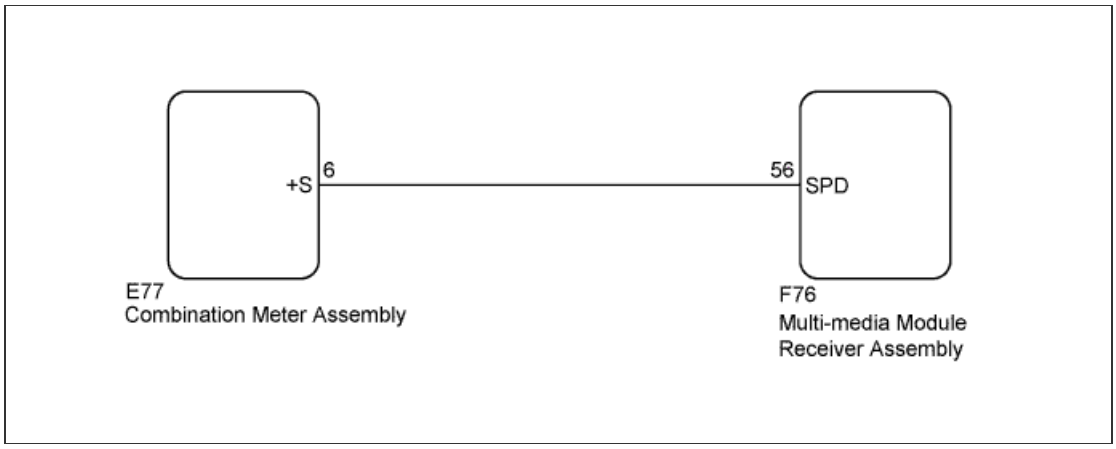
**OK**

**END**

# DTC B15C2 Speed Signal Malfunction

**for Preparation** Click here

## DESCRIPTION



The multi-media module receiver assembly receives a vehicle speed signal from the combination meter assembly and information from the navigation antenna, and then adjusts the vehicle position on the map. The multi-media module receiver assembly stores this DTC when the difference between the speed information that the navigation antenna assembly receives and the SPD pulse received from the combination meter assembly becomes large.

**HINT:**

- **A voltage of 12 V or 5 V is output from each ECU and then input to the combination meter assembly. The signal is changed to a pulse signal at the transistor in the combination meter assembly. Each ECU controls the respective systems based on the pulse signal.**
- **If a short occurs in any of the ECUs or in the wire harness connected to an ECU, all systems in the diagram below will not operate normally.**

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15C2 | A difference between the GPS speed and SPD pulse is detected | • Combination meter assembly<br>• Multi-media module receiver assembly<br>• Harness or connector |

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CLEAR DTC

a. Clear the DTCs (Click here).

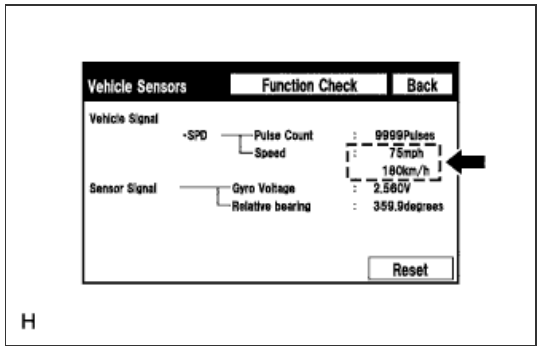
**NEXT**

### 2.CHECK DTC

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output.**

**NG** → **Go to step 3**



**OK**

USE SIMULATION METHOD TO CHECK (**Click here**)

### 3.CHECK VEHICLE SENSOR (OPERATION CHECK)

a. Enter the "Vehicle Sensors" screen. Refer to Check GPS & Vehicle Sensor in Operation Check (Click here).

b. While driving the vehicle, compare the "Speed" indicator to the reading on the speedometer. Check if these readings are almost equal.

**HINT:**

The combination meter assembly receives the vehicle speed signal from the skid control ECU via CAN communication. Therefore, perform the following inspection referring to values on the Data List of the skid control ECU because it is the source of the vehicle speed signal.

**OK:**

**Vehicle speed displayed on the "Vehicle Sensors" screen is almost the same as the actual vehicle speed measured using the intelligent tester (Click here).**

NG → GO TO METER / GAUGE SYSTEM (Click here)

OK → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

## DTC 45-44 DVD Malfunction

## DTC 45-48 Excess Current

## DTC 45-50 Tray Insertion / Ejection Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-44 | An operation error in the DVD mechanism. | Radio receiver assembly |
| 45-48 | Excess current is present in the DVD changer. | |
| 45-50 | A malfunction in the insertion/ejection system. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.CLEAR DTC**

a. Clear the DTCs (Click here).

**NEXT**

**2.RECHECK DTC**

a. Recheck for DTCs and check if the same trouble code is output.

**HINT:**

If DTCs are output frequently, replace the radio receiver.

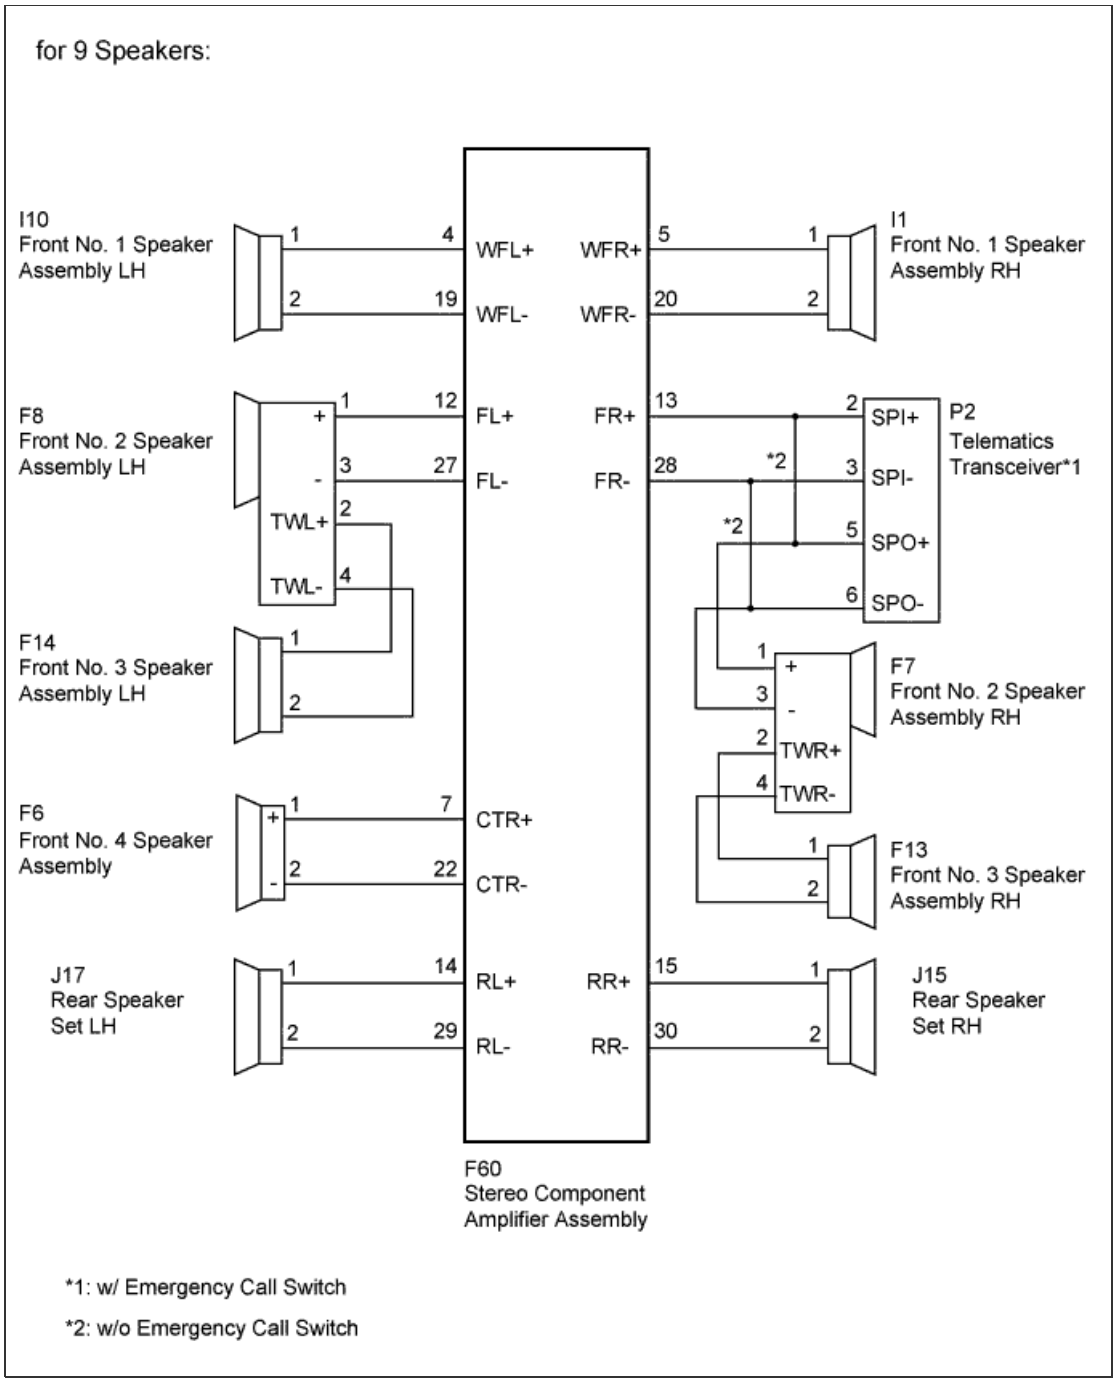
**OK:**
**No DTC is output.**

**NG** → **REPLACE RADIO RECEIVER ASSEMBLY (Click here)**

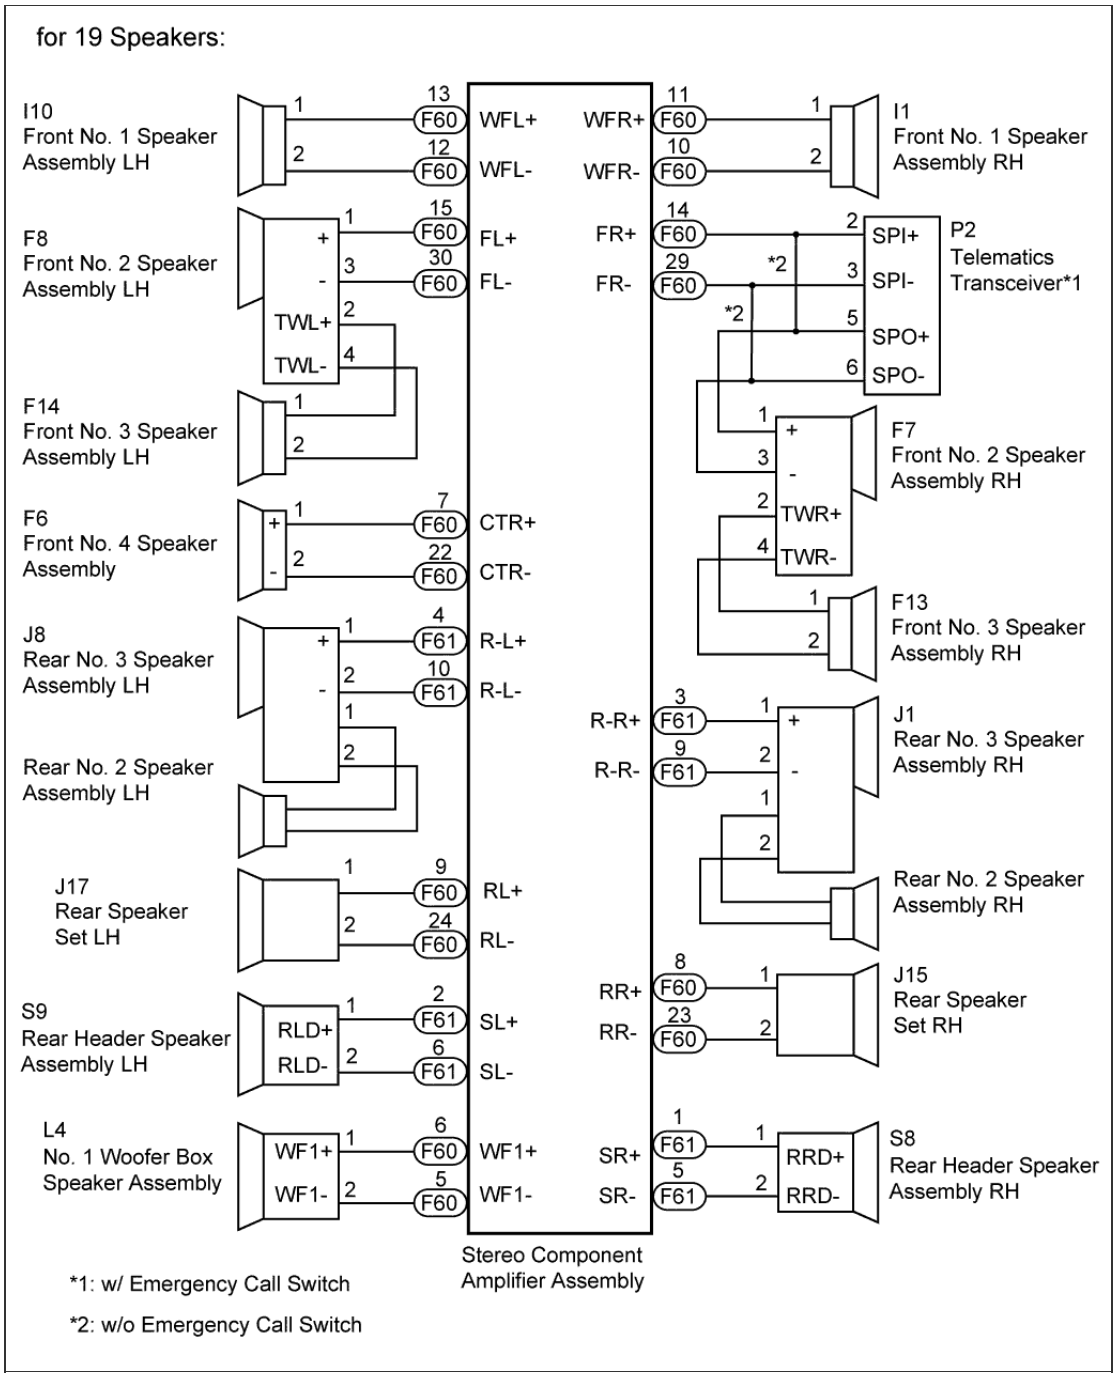
**OK**

**USE SIMULATION METHOD TO CHECK (Click here)**

## DTC B15C3 Speaker Output Short



**for Preparation** Click here



### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15C3 | A short is detected in the speaker output circuit. | • Stereo component amplifier assembly<br>• Ttelematics transceiver*<br>• Speaker<br>• Harness or connector |

*: w/ Emergency Call Switch

### WIRING DIAGRAM

## INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs.

### 1.CHECK DTC

a. Clear the DTC (Click here).

**NEXT**

### 2.CHECK DTC

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**

**DTC B15C3 is not output.**

**NG** → **Go to step 3**

OK

USE SIMULATION METHOD TO CHECK (Click here)

3.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY - SPEAKERS)

*1: for RH Side
*2: for LH Side
*3: w/ Emergency Call Switch
*4: w/o Emergency Call Switch
*5: for 9 speakers
*6: for 19 speakers

a. Disconnect the F60 and/or F61*6 stereo component amplifier assembly connector.

b. Disconnect the I1*1 and/or I10*2 front No. 1 speaker assembly connector.

c. Disconnect the F7*1 and/or F8*2 front No. 2 speaker assembly connector.

d. Disconnect the F6 front No. 4 speaker assembly connector.

e. Disconnect the J15*1 and/or J17*2 rear speaker set connector.

f. Disconnect the J1*1 and/or J8*2 rear No. 3 speaker connector*6.

g. Disconnect the S8*1 and/or S9*2 rear header speaker assembly connector*6.

h. Disconnect the L4 No. 1 woofer box speaker connector*6.

i. Disconnect the P2*3 telematics transceiver connector.

j. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**
**for 9 speakers:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F60-5 (WFR+) - I1-1*1 | Always | Below 1 Ω |
| F60-20 (WFR-) - I1-2*1 | Always | Below 1 Ω |
| F60-4 (WFL+) - I10-1*2 | Always | Below 1 Ω |
| F60-19 (WFL-) - I10-2*2 | Always | Below 1 Ω |
| F60-13 (FR+) - P2-2 (SPI+)*1, *3 | Always | Below 1 Ω |
| F60-28 (FR-) - P2-3 (SPI-)*1, *3 | Always | Below 1 Ω |
| F60-13 (FR+) - F7-1 (+)*1, *4 | Always | Below 1 Ω |
| F60-28 (FR-) - F7-3 (-)*1, *4 | Always | Below 1 Ω |
| F60-12 (FL+) - F8-1 (+)*2 | Always | Below 1 Ω |
| F60-27 (FL-) - F8-3 (-)*2 | Always | Below 1 Ω |
| F60-7 (CTR+) - F6-1 (+) | Always | Below 1 Ω |
| F60-22 (CTR-) - F6-2 (-) | Always | Below 1 Ω |
| F60-15 (RR+) - J15-1*1 | Always | Below 1 Ω |
| F60-30 (RR-) - J15-2*1 | Always | Below 1 Ω |
| F60-14 (RL+) - J17-1*2 | Always | Below 1 Ω |
| F60-29 (RL-) - J17-2*2 | Always | Below 1 Ω |
| F60-5 (WFR+) - | | |

| | | |
|---|---|---|
| Body ground | Always | 10 kΩ or higher |
| F60-20 (WFR-) - Body ground | Always | 10 kΩ or higher |
| F60-4 (WFL+) - Body ground | Always | 10 kΩ or higher |
| F60-19 (WFL-) - Body ground | Always | 10 kΩ or higher |
| F60-13 (FR+) - Body ground | Always | 10 kΩ or higher |
| F60-28 (FR-) - Body ground | Always | 10 kΩ or higher |
| F60-12 (FL+) - Body ground | Always | 10 kΩ or higher |
| F60-27 (FL-) - Body ground | Always | 10 kΩ or higher |
| F60-7 (CTR+) - Body ground | Always | 10 kΩ or higher |
| F60-22 (CTR-) - Body ground | Always | 10 kΩ or higher |
| F60-15 (RR+) - Body ground | Always | 10 kΩ or higher |
| F60-30 (RR-) - Body ground | Always | 10 kΩ or higher |
| F60-14 (RL+) - Body ground | Always | 10 kΩ or higher |
| F60-29 (RL-) - Body ground | Always | 10 kΩ or higher |

**for 19 speakers:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F60-11 (WFR+) - I1-1*1 | Always | Below 1 Ω |
| F60-10 (WFR-) - I1-2*1 | Always | Below 1 Ω |
| F60-13 (WFL+) - I10-1*2 | Always | Below 1 Ω |
| F60-12 (WFL-) - I10-2*2 | Always | Below 1 Ω |
| F60-14 (FR+) - P2-2 (SPI+)*1, *3 | Always | Below 1 Ω |
| F60-29 (FR-) - P2-3 (SPI-)*1, *3 | Always | Below 1 Ω |
| F60-14 (FR+) - F7-1 (+)*1, *4 | Always | Below 1 Ω |
| F60-29 (FR-) - F7-3 (-)*1, *4 | Always | Below 1 Ω |
| F60-15 (FL+) - F8-1 (+)*2 | Always | Below 1 Ω |
| F60-30 (FL-) - F8-3 (-)*2 | Always | Below 1 Ω |
| F60-7 (CTR+) - F6-1 (+) | Always | Below 1 Ω |
| F60-22 (CTR-) - F6-2 (-) | Always | Below 1 Ω |
| F61-3 (R-R+) - J1-1 (+)*1 | Always | Below 1 Ω |
| F61-9 (R-R-) - J1-2 (-)*1 | Always | Below 1 Ω |
| F61-4 (R-L+) - J8-1 (+)*2 | Always | Below 1 Ω |
| F61-10 (R-L-) - J8-2 (-)*2 | Always | Below 1 Ω |
| F60-8 (RR+) - J15-1*1 | Always | Below 1 Ω |
| F60-23 (RR-) - | | |

| | | |
|---|---|---|
| J15-2*1 | Always | Below 1 Ω |
| F60-9 (RL+) - J17-1*2 | Always | Below 1 Ω |
| F60-24 (RL-) - J17-2*2 | Always | Below 1 Ω |
| F61-1 (SR+) - S8-1 (RRD+)*1 | Always | Below 1 Ω |
| F61-5 (SR-) - S8-2 (RRD-)*1 | Always | Below 1 Ω |

| F61-2 (SL+)- Body ground | Always | 10 kΩ or higher |
| F61-6 (SL-) - Body ground | Always | 10 kΩ or higher |
| F60-6 (WF1+) - Body ground | Always | 10 kΩ or higher |
| F60-5 (WF1-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

### 4.INSPECT FRONT NO. 1 SPEAKER ASSEMBLY

a. Disconnect the front No. 1 speaker assembly connector.

b. Inspect the front No. 1 speaker assembly (Click here).

NG → REPLACE FRONT NO. 1 SPEAKER ASSEMBLY (**Click here**)

OK

### 5.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY

a. Disconnect the front No. 2 speaker assembly connector.

b. Inspect the front No. 2 speaker assembly (Click here).

NG → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (**Click here**)

OK

### 6.CHECK FRONT NO. 3 SPEAKER ASSEMBLY

a. Temporarily replace the front No. 3 speaker assembly with a new or normally functioning one ( Click here).

b. Check for DTCs and check if the same DTCs is output ( Click here).

**OK:**
**No DTCs are output.**

**Result**

| Result | Proceed to |
|---|---|
| OK | A |
| NG (w/ Emergency Call Switch) | B |
| NG (w/o Emergency Call Switch) | C |

B → **Go to step 7**

C → **Go to step 9**

A

### END (FRONT NO. 3 SPEAKER ASSEMBLY IS DEFECTIVE)

### 7.CHECK HARNESS AND CONNECTOR (TELEMATICS TRANSCEIVER - FRONT NO. 2 SPEAKER RH)

a. Disconnect the P2 telematics transceiver connector.

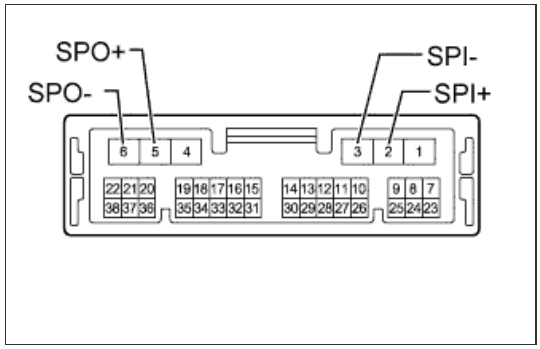
b. Disconnect the F7 front No. 2 speaker assembly RH connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| P2-5 (SPO+) - F7-1 (+) | Always | Below 1 Ω |
| P2-6 (SPO-) - F7-3 (-) | Always | Below 1 Ω |
| P2-5 (SPO+) - | | |

| | | |
|---|---|---|
| Body ground | Always | 10 kΩ or higher |
| P2-6 (SPO-) - Body ground | Always | 10 kΩ or higher |



NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 8.INSPECT TELEMATICS TRANSCEIVER

a. Remove the telematics transceiver (Click here).

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 2 (SPI+) - 5 (SPO+) | Always | Below 1 Ω |
| 3 (SPI-) - 6 (SPO-) | Always | Below 1 Ω |
| 2 (SPI+) - Body ground | Always | 10 kΩ or higher |
| 3 (SPI-) - Body ground | Always | 10 kΩ or higher |

NG → REPLACE TELEMATICS TRANSCEIVER (Click here)

OK

## 9.CHECK HARNESS AND CONNECTOR (FRONT NO. 2 SPEAKER - FRONT NO. 3 SPEAKER)

*1: for RH Side
*2: for LH Side

a. Disconnect the F7*1 and/or F8*2 front No. 2 speaker assembly connector.

b. Disconnect the F13*1 and/or F14*2 front No. 3 speaker assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for RH Side**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F7-2 (TWR+) - F13-1 | Always | Below 1 Ω |
| F7-4 (TWR-) - F13-2 | Always | Below 1 Ω |
| F7-2 (TWR+) - Body ground | Always | 10 kΩ or higher |
| F7-4 (TWR-) - Body ground | Always | 10 kΩ or higher |

**for LH Side**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F8-2 (TWL+) - F14-1 | Always | Below 1 Ω |
| F8-4 (TWL-) - F14-2 | Always | Below 1 Ω |
| F8-2 (TWL+) - Body ground | Always | 10 kΩ or higher |
| F8-4 (TWL-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

10.INSPECT FRONT NO. 4 SPEAKER ASSEMBLY

a. Disconnect the front No. 4 speaker assembly connector.

b. Inspect the front No. 4 speaker assembly (Click here).

NG → REPLACE FRONT NO. 4 SPEAKER ASSEMBLY (Click here)

OK

11.INSPECT REAR SPEAKER SET

a. Disconnect the rear speaker set connector.

b. Inspect the rear speaker set (Click here).

Result

| Result | Proceed to |
|---|---|
| OK (for 19 speakers) | A |
| OK (for 9 speakers) | B |
| NG | C |

B → REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

C → REPLACE REAR SPEAKER SET (Click here)

A

12.CHECK REAR NO. 3 SPEAKER ASSEMBLY

a. Temporarily replace the rear No. 3 speaker assembly with a new or normally functioning one ( Click here).

b. Check for DTCs and check if the same DTCs is output ( Click here).

OK:
No DTCs are output.

NG → Go to step 13

OK

END (REAR NO. 3 SPEAKER ASSEMBLY IS DEFECTIVE)

13.INSPECT REAR NO. 2 SPEAKER ASSEMBLY

a. Disconnect the rear No. 2 speaker assembly connector.

b. Inspect the rear No. 2 speaker assembly (Click here).

NG → REPLACE REAR NO. 2 SPEAKER ASSEMBLY (Click here)

OK

14.INSPECT REAR HEADER SPEAKER ASSEMBLY

a. Disconnect the rear header assembly connector.

b. Inspect the rear header assembly (Click here).

NG → REPLACE REAR HEADER SPEAKER ASSEMBLY (Click here)

OK

15.INSPECT NO. 1 WOOFER BOX SPEAKER ASSEMBLY

a. Disconnect the No. 1 woofer box speaker assembly connector.

b. Inspect the No. 1 woofer box speaker assembly ( Click here).

NG → REPLACE NO. 1 WOOFER BOX SPEAKER ASSEMBLY (Click here)

OK → REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## DTC 45-44 DVD Malfunction

## DTC 45-48 Excess Current

## DTC 45-50 Tray Insertion / Ejection Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-44 | An operation error in the DVD mechanism. | Radio receiver assembly |
| 45-48 | Excess current is present in the DVD changer. | |
| 45-50 | A malfunction in the insertion/ejection system. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.CLEAR DTC**

a. Clear the DTCs (Click here).

**NEXT**

**2.RECHECK DTC**

a. Recheck for DTCs and check if the same trouble code is output.

**HINT:**

If DTCs are output frequently, replace the radio receiver.

**OK:**
**No DTC is output.**

**NG** → **REPLACE RADIO RECEIVER ASSEMBLY (Click here)**

**OK**

**USE SIMULATION METHOD TO CHECK (Click here)**

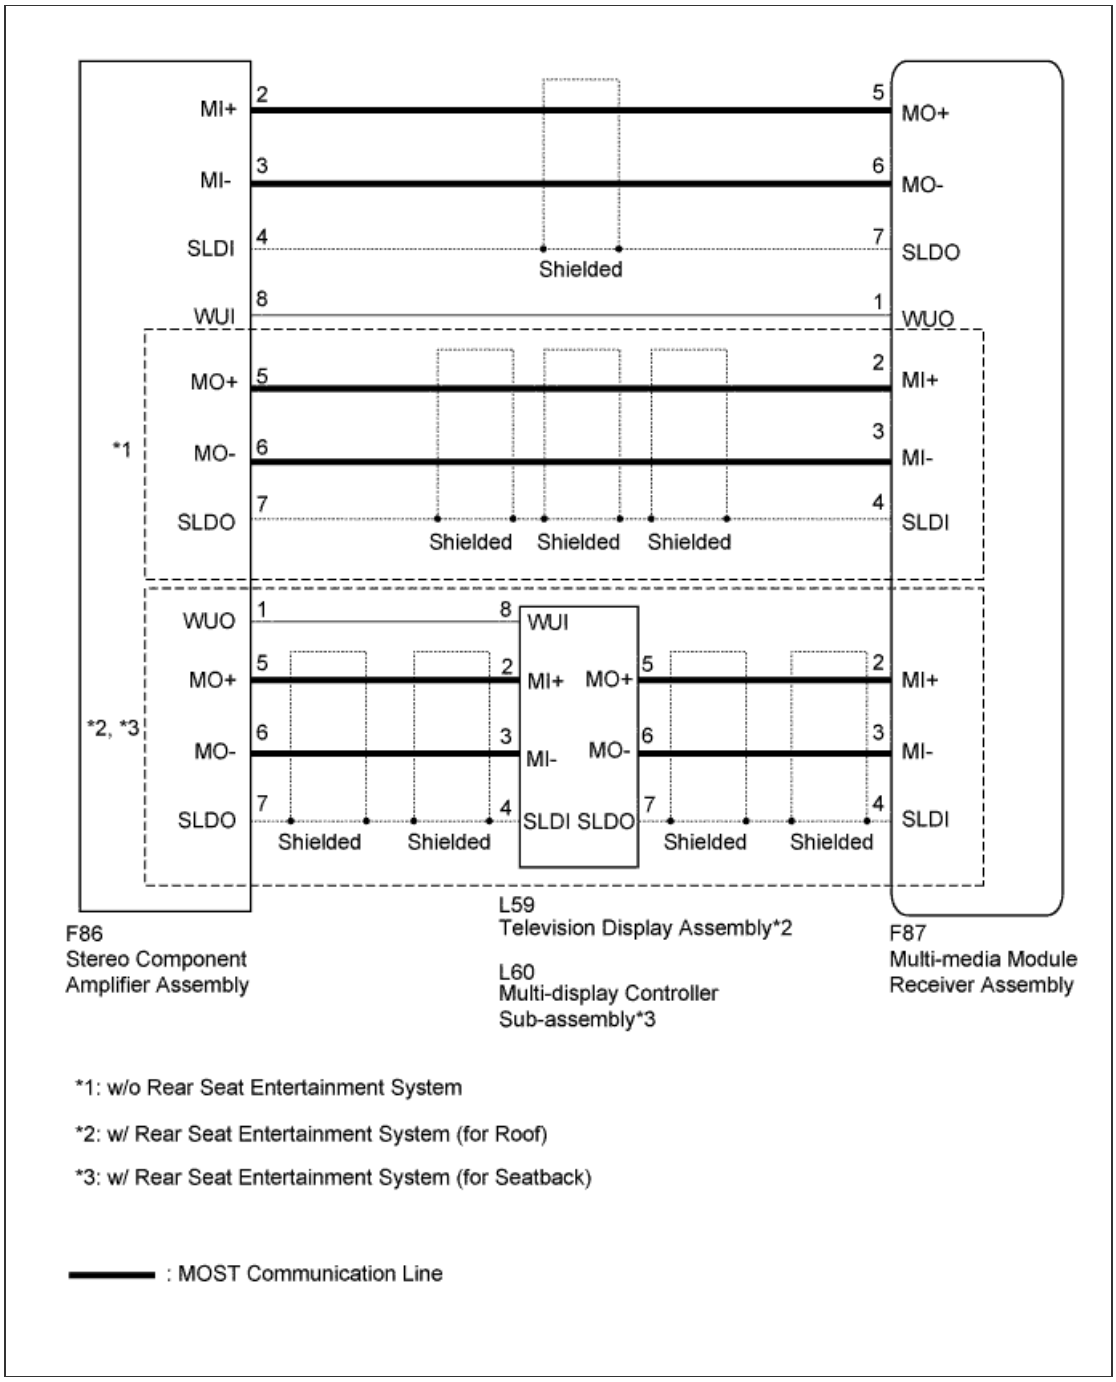
# DTC B15D0 MOST Communication Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when the MOST network cannot be established after the master unit is activated.

**HINT:**



- **If a short occurs in a speaker circuit, the sound from the corresponding speaker will be low or almost impossible to hear. If the volume is turned up in this situation, to prevent excessive current flow due to the short circuit, the stereo component amplifier assembly stops operating when its output exceeds a certain level. When the operation of the stereo component amplifier assembly stops, the navigation system will not function normally. This is because MOST communication will stop due to the shut down of the amplifier causing an error in the MOST network. The stereo component amplifier assembly will start operating again when the engine switch is turned off and back on (ACC) again. However, the amplifier will stop operating again if its output exceeds a certain level.**
- **When the stereo component amplifier assembly stops operating and a malfunction occurs in the navigation system due to a short in a speaker circuit, this DTC will be stored.**

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15D0 | MOST network cannot be established. | • MOST line check<br>• MOST communication line connector<br>• MOST communication line<br>• Television display assembly (w/ Rear Seat Entertainment System [for Roof])<br>• Multi-display controller sub-assembly (w/ Rear Seat Entertainment System [for Seatback])<br>• Stereo component amplifier assembly<br>• Multi-media module receiver assembly |

**HINT:**

- **For the MOST network, the multi-media module receiver assembly is the master unit.**
- **Errors may occur in MOST communication between devices due to problems such as electrical noise.**

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components (including associated wiring) are installed. | A |
| Optional components (including associated wiring) are installed.<br>DTCs are not output. | B |

**HINT:**

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect AVC-LAN communication.**
- **These DTCs may be stored when an AVC-LAN communication error occurs due to electrical noise.**

| | |
|---|---|
| B | Go to step 3 |

A

## 2.CONFIRM SYMPTOMS

a. Turn the engine switch off.

b. Turn the engine switch on (ACC) and check if the audio system activates and if the speakers operate.

**HINT:**

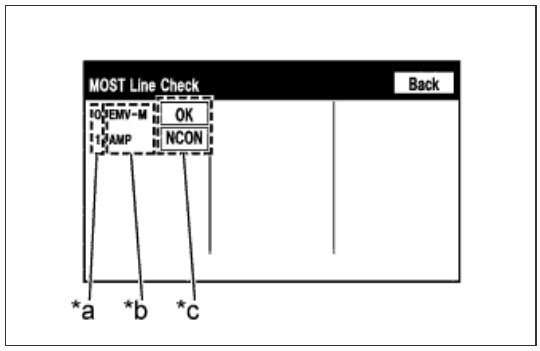
- **Choose a source such as radio so that sound can be output from the speakers.**
- **If sound from the speakers is low, turn up the volume.**

**Result**

| Result | Proceed to |
|---|---|
| Even after the engine switch is turned on (ACC), the navigation system does not activate and sound is not output from the speakers. (w/o Rear Seat Entertainment System) | A |
| Even after the engine switch is turned on (ACC), the navigation system does not activate and sound is not output from the speakers. (w/ Rear Seat Entertainment System) | B |
| The audio system activates when the engine switch is turned on (ACC) but the sound stops being output when the amplifier output exceeds a certain level. | C |

**HINT:**

- **If a short occurs in a speaker circuit, the sound from the corresponding speaker will be low or almost impossible to hear. If the volume is turned up in this situation, to prevent excessive current flow due to the short circuit, the stereo component amplifier assembly stops operating when its output exceeds a certain level. When the operation of the stereo component amplifier assembly stops, the navigation system will not function normally. This is because MOST communication will stop due to the shut down of the amplifier causing an error in the MOST network. The stereo component amplifier assembly will start operating again when the engine switch is turned off and back on (ACC) again. However, the amplifier will stop operating again if its output exceeds a certain level.**
- **When the stereo component amplifier assembly stops operating and a malfunction occurs in the navigation system due to a short in a speaker circuit, this DTC will be stored. In this case, check each speaker circuit and repair or replace malfunctioning parts, and then recheck for DTCs.**



| | |
|---|---|
| B | Go to step 11 |
| C | GO TO PROBLEM SYMPTOMS TABLE (Click here) |

A

## 3.CHECK MOST COMMUNICATION CONNECTORS

a. Display the "MOST Line Check" screen ( Click here).

b. Check the result on the "MOST Line Check" screen.

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "AMP". | A |
| "OK" is displayed for all items. | B |

- When "NCON" is displayed for more than 1 item, proceed to the step for the device that has the smallest node position number.
- The "MOST Line Check" screen can be displayed only when DTC B15D0 is stored.

**Text in Illustration**

| | |
|---|---|
| *a | Node position number for devices that use MOST communication |
| *b | Device name |
| | |

| *c | Result |
|---|---|

B → Go to step 7

A

## 4.CONFIRM SYMPTOMS

a. Check the MOST communication line connectors.

i. Check if the MOST communication line connector between the multi-media module receiver assembly and stereo component amplifier assembly has any connection problems (Click here).

b. Display the "MOST Line Check" screen and check the result ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "AMP". | A |
| The screen cannot be changed to the "MOST Line Check" screen. | B |

**HINT:**

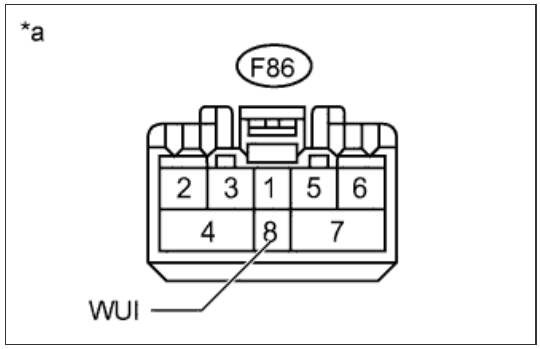
When the malfunction in the MOST network is repaired, the screen cannot be changed to the "MOST Line Check" screen.

B → USE SIMULATION METHOD TO CHECK (Click here)

A

## 5.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY WAKE UP LINE)

a. Disconnect the stereo component amplifier assembly connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F86-8 (WUI) - Body ground | Engine switch on (ACC) | 4.5 V or higher |

**Text in Illustration**

| *a | Front view of wire harness connector (to Stereo Component Amplifier Assembly) |
|---|---|

NG → Go to step 6

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 6.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - STEREO COMPONENT AMPLIFIER ASSEMBLY)

a. Disconnect the F87 multi-media module receiver assembly connector.

b. Disconnect the F86 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F87-1 (WUO) - | Always | Below 1 Ω |

| | | |
|---|---|---|
| F86-8 (WUI) | | |
| F87-1 (WUO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**7.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - STEREO COMPONENT AMPLIFIER ASSEMBLY)**

a. Disconnect the F87 multi-media module receiver assembly connector.

b. Disconnect the F86 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F87-2 (MI+) - F86-5 (MO+) | Always | Below 1 Ω |
| F87-3 (MI-) - F86-6 (MO-) | Always | Below 1 Ω |
| F87-4 (SLDI) - F86-7 (SLDO) | Always | Below 1 Ω |
| F87-5 (MO+) - F86-2 (MI+) | Always | Below 1 Ω |
| F87-6 (MO-)- F86-3 (MI-) | Always | Below 1 Ω |
| F87-7 (SLDO) - F86-4 (SLDI) | Always | Below 1 Ω |
| F87-2 (MI+) - Body ground | Always | 10 kΩ or higher |
| F87-3 (MI-) - Body ground | Always | 10 kΩ or higher |
| F87-4 (SLDI) - Body ground | Always | 10 kΩ or higher |
| F87-5 (MO+) - Body ground | Always | 10 kΩ or higher |
| F87-6 (MO-) - Body ground | Always | 10 kΩ or higher |
| F87-7 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**8.REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY**

a. Replace the stereo component amplifier assembly with a new or normally functioning one ( Click here).

NEXT

**9.CLEAR DTC**

a. Clear the DTCs (Click here).

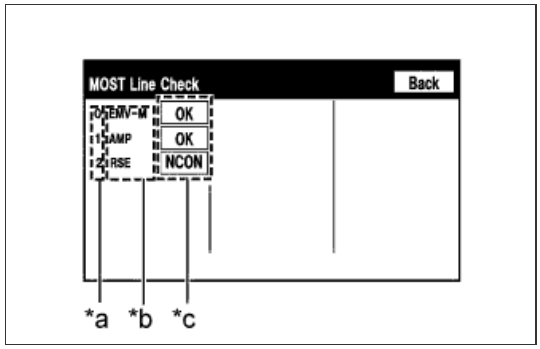
NEXT

10.CHECK DTC

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output**

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (**Click here**)



OK →

END (STEREO COMPONENT AMPLIFIER ASSEMBLY IS DEFECTIVE)

11.MOST COMMUNICATION CONNECTORS

a. Display the "MOST Line Check" screen ( Click here).

b. Check the result on the "MOST Line Check" screen.

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "AMP". | A |
| "NCON" is displayed for "RSE". | B |
| "OK" is displayed for all items. | C |

- When "NCON" is displayed for more than 1 item, proceed to the step for the device that has the smallest node position number.
- The "MOST Line Check" screen can be displayed only when DTC B15D0 is stored.

**Text in Illustration**

| | |
|---|---|
| *a | Node position number for devices that use MOST communication |
| *b | Device name |
| *c | Result |

B → **Go to step 15**

C → **Go to step 20**

A →

12.CONFIRM SYMPTOMS

a. Check the MOST communication line connectors.

i. Check if the MOST communication line connector between the multi-media module receiver assembly and stereo component amplifier assembly has any connection problems (Click here).

b. Display the "MOST Line Check" screen and check the result ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "AMP". | A |
| The screen cannot be changed to the "MOST Line Check" screen. | B |

**HINT:**

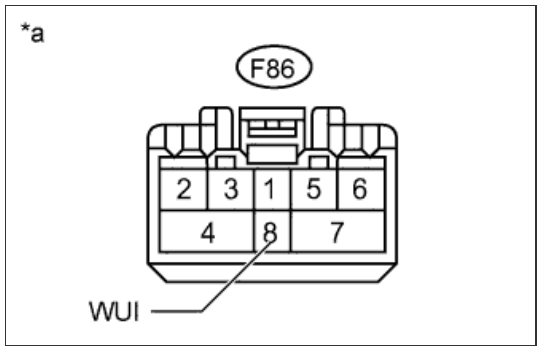
When the malfunction in the MOST network is repaired, the screen cannot be changed to the "MOST Line Check" screen.

B → USE SIMULATION METHOD TO CHECK (**Click here**)

A

13.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY WAKE UP LINE)

a. Disconnect the stereo component amplifier assembly connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F86-8 (WUI) - Body ground | Engine switch on (ACC) | 4.5 V or higher |

**Text in Illustration**

| | |
|---|---|
| *a | Front view of wire harness connector (to Stereo Component Amplifier Assembly) |

NG → Go to step 14

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

14.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - STEREO COMPONENT AMPLIFIER ASSEMBLY)

a. Disconnect the F87 multi-media module receiver assembly connector.

b. Disconnect the F86 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F87-1 (WUO) - F86-8 (WUI) | Always | Below 1 Ω |
| F87-1 (WUO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

15.CONFIRM SYMPTOMS

a. Check the MOST communication line connectors.

i. Check if the MOST communication line connector between the multi-media module receiver assembly and stereo component amplifier assembly has any connection problems (Click here).

b. Display the "MOST Line Check" screen and check the result ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "RSE" (w/ Rear Seat Entertainment System [for Roof]). | A |
| "NCON" is displayed for "RSE" (w/ Rear Seat Entertainment System [for Seatback]). | B |
| The screen cannot be changed to the "MOST Line Check" screen. | C |

**HINT:**

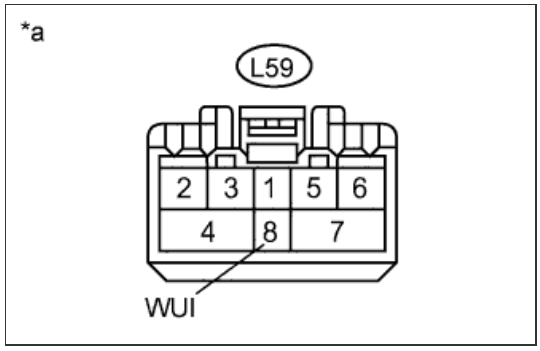
When the malfunction in the MOST network is repaired, the screen cannot be changed to the "MOST Line Check" screen.

| | |
|---|---|
| B | Go to step 18 |
| C | USE SIMULATION METHOD TO CHECK (Click here) |

A

**16.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY ASSEMBLY Wake Up LINE)**

a. Disconnect the television display assembly connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| L59-8 (WUI) - Body ground | Engine switch on (ACC) | 4.5 V or higher |

**Text in Illustration**

| | |
|---|---|
| *a | Front view of wire harness connector (to Television Display Assembly) |

| | |
|---|---|
| NG | Go to step 17 |

OK

REPLACE TELEVISION DISPLAY ASSEMBLY (Click here)

**17.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY - TELEVISION DISPLAY ASSEMBLY)**

a. Disconnect the F86 stereo component amplifier assembly connector.

b. Disconnect the L59 television display assembly connector.

c. Measure the resistance according to the value(s) in the table below.

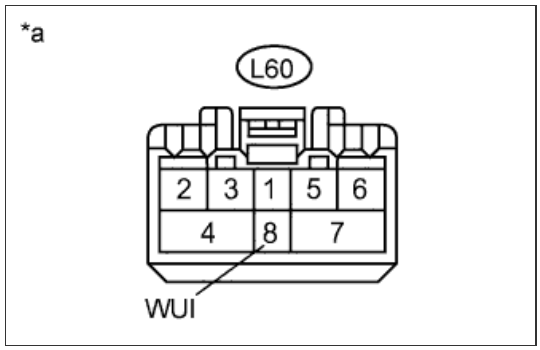
**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F86-1 (WUO) - L59-8 (WUI) | Always | Below 1 Ω |
| F86-1 (WUO) - Body ground | Always | 10 kΩ or higher |

| | |
|---|---|
| NG | REPAIR OR REPLACE HARNESS OR CONNECTOR |

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)



**18.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY Wake Up LINE)**

a. Disconnect the multi-display controller sub-assembly connector.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| L60-8 (WUI) - Body ground | Engine switch on (ACC) | 4.5 V or higher |

**Text in Illustration**

| | |
|---|---|
| *a | Front view of wire harness connector (to Multi-display Controller Sub-assembly) |

NG → Go to step 19

OK

REPLACE MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY (Click here)

**19.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY - MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY)**

a. Disconnect the F86 stereo component amplifier assembly connector.

b. Disconnect the L60 multi-display controller sub-assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F86-1 (WUO) - L60-8 (WUI) | Always | Below 1 Ω |
| F86-1 (WUO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

**20.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - STEREO COMPONENT AMPLIFIER ASSEMBLY)**

a. Disconnect the F87 multi-media module receiver assembly connector.

b. Disconnect the F86 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F87-5 (MO+) - F86-2 (MI+) | Always | Below 1 Ω |
| F87-6 (MO-) - F86-3 (MI-) | Always | Below 1 Ω |
| F87-7 (SLDO) - F86-4 (SLDI) | Always | Below 1 Ω |
| F87-5 (MO+) - Body ground | Always | 10 kΩ or higher |
| F87-6 (MO-) - Body ground | Always | 10 kΩ or higher |
| F87-7 (SLDO) - Body ground | Always | 10 kΩ or higher |

**Result**

| Result | Proceed to |
|---|---|

| | |
|---|---|
| OK (w/ Rear Seat Entertainment System [for Roof]) | A |
| OK (w/ Rear Seat Entertainment System [for Seatback]) | B |
| NG | C |

B → Go to step 26

C → REPAIR OR REPLACE HARNESS OR CONNECTOR

A

### 21.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY - TELEVISION DISPLAY ASSEMBLY)

a. Disconnect the F86 stereo component amplifier assembly connector.

b. Disconnect the L59 television display assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F86-5 (MO+) - L59-2 (MI+) | Always | Below 1 Ω |
| F86-6 (MO-) - L59-3 (MI-) | Always | Below 1 Ω |
| F86-7 (SLDO) - L59-4 (SLDI) | Always | Below 1 Ω |
| F86-5 (MO+) - Body ground | Always | 10 kΩ or higher |
| F86-6 (MO-) - Body ground | Always | 10 kΩ or higher |
| F86-7 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

### 22.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - TELEVISION DISPLAY ASSEMBLY)

a. Disconnect the F87 multi-media module receiver assembly connector.

b. Disconnect the L59 television display assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F87-2 (MI+) - L59-5 (MO+) | Always | Below 1 Ω |
| F87-3 (MI-) - L59-6 (MO-) | Always | Below 1 Ω |
| F87-4 (SLDI) - L59-7 (SLDO) | Always | Below 1 Ω |
| F87-2 (MI+) - Body ground | Always | 10 kΩ or higher |
| F87-3 (MI-) - Body ground | Always | 10 kΩ or higher |
| F87-4 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**23.REPLACE TELEVISION DISPLAY ASSEMBLY**

a. Replace the television display assembly with a new or normally functioning one ( Click here).

NEXT

**24.CLEAR DTC**

a. Clear the DTCs (Click here).

NEXT

**25.CHECK DTC**

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output.**

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (**Click here**)

OK

**END (TELEVISION DISPLAY ASSEMBLY IS DEFECTIVE)**

**26.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY - MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY)**

a. Disconnect the F86 stereo component amplifier assembly connector.

b. Disconnect the L60 multi-display controller sub-assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F86-5 (MO+) - L60-2 (MI+) | Always | Below 1 Ω |
| F86-6 (MO-) - L60-3 (MI-) | Always | Below 1 Ω |
| F86-7 (SLDO) - L60-4 (SLDI) | Always | Below 1 Ω |
| F86-5 (MO+) - Body ground | Always | 10 kΩ or higher |
| F86-6 (MO-) - Body ground | Always | 10 kΩ or higher |
| F86-7 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**27.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY)**

a. Disconnect the F87 multi-media module receiver assembly connector.

b. Disconnect the L60 multi-display controller sub-assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F87-2 (MI+) - L60-5 (MO+) | Always | Below 1 Ω |
| F87-3 (MI-) - L60-6 (MO-) | Always | Below 1 Ω |
| F87-4 (SLDI) - L60-7 (SLDO) | Always | Below 1 Ω |
| F87-2 (MI+) - Body ground | Always | 10 kΩ or higher |
| F87-3 (MI-) - Body ground | Always | 10 kΩ or higher |
| F87-4 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ↓

**28.REPLACE MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY**

a. Replace the multi-display controller sub-assembly with a new or normally functioning one ( Click here).

NEXT ↓

**29.CLEAR DTC**

a. Clear the DTCs (Click here).

NEXT ↓

**30.CHECK DTC**

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output.**

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (**Click here**)

OK ↓

**END (MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY IS DEFECTIVE)**

## DTC 45-44 DVD Malfunction

## DTC 45-48 Excess Current

## DTC 45-50 Tray Insertion / Ejection Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-44 | An operation error in the DVD mechanism. | Radio receiver assembly |
| 45-48 | Excess current is present in the DVD changer. | |
| 45-50 | A malfunction in the insertion/ejection system. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.CLEAR DTC**

a. Clear the DTCs (Click here).

**NEXT**

**2.RECHECK DTC**

a. Recheck for DTCs and check if the same trouble code is output.

**HINT:**

If DTCs are output frequently, replace the radio receiver.

**OK:**
**No DTC is output.**

**NG** → **REPLACE RADIO RECEIVER ASSEMBLY (Click here)**

**USE SIMULATION METHOD TO CHECK (Click here)**

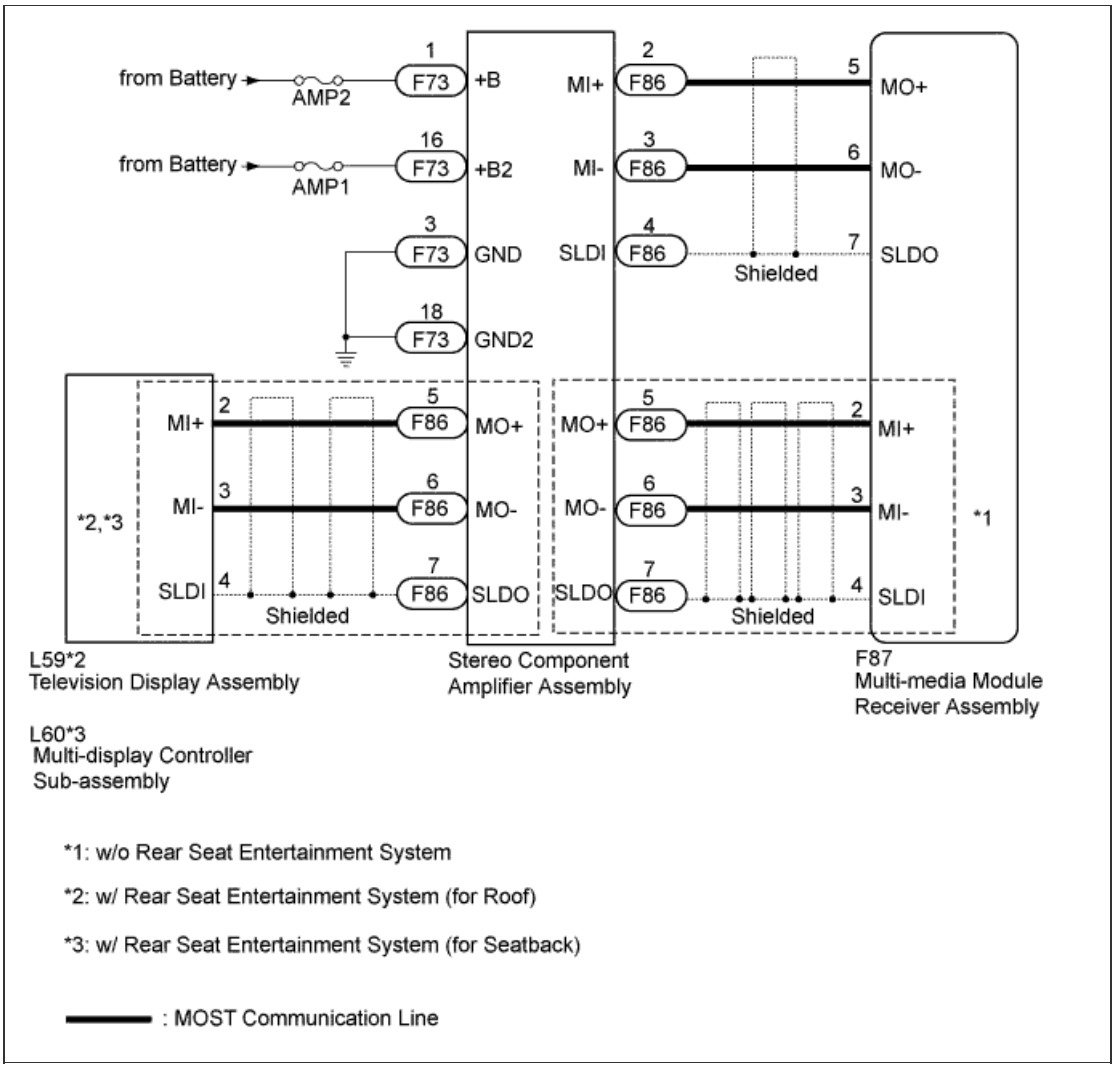
# DTC B15D3 Stereo Component Amplifier Disconnected

**for Preparation** Click here

## DESCRIPTION

The multi-media module receiver assembly, television display assembly*1, multi-display controller sub-assembly*2 and stereo component amplifier assembly are connected by the MOST network.
When a MOST network error occurs between the multi-media module receiver assembly, television display assembly*1, multi-display controller sub-assembly*2 and stereo component amplifier assembly, these DTCs will be stored.

*1: w/ Rear Seat Entertainment System (for Roof)
*2: w/ Rear Seat Entertainment System (for Seatback)



| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15D3 | A device that is listed in the MOST network connected device record of the master unit is missing. | • Stereo component amplifier assembly power source circuit<br>• MOST circuit between multi-media module receiver assembly and stereo component amplifier assembly<br>• MOST circuit between television display assembly and stereo component amplifier assembly*1<br>• MOST circuit between multi-display controller sub-assembly and stereo component amplifier assembly*2<br>• Stereo component amplifier assembly<br>• Multi-media module receiver assembly<br>• Television display assembly*1<br>• Multi-display controller sub-assembly*2 |

*1: w/ Rear Seat Entertainment System (for Roof)
*2: w/ Rear Seat Entertainment System (for Seatback)

**HINT:**

For the MOST network, the multi-media module receiver assembly is the master unit.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

### 1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Check for optional components.

i. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components (including associated wiring) are installed. | A |
| Optional components (including associated wiring) are not installed. | B |

**HINT:**

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect MOST communication.**
- **This DTC may be stored when a MOST communication error occurs due to electrical noise.**

B → Go to step 3

A

### 2.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

NEXT

### 3.CLEAR DTC

a. Clear the DTCs (Click here).

NEXT

### 4.CHECK DTC

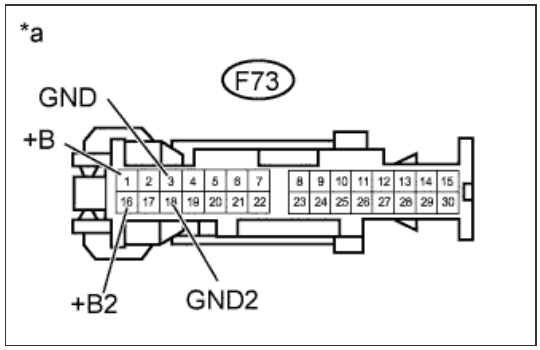
a. Recheck for DTCs and check if the same DTCs are output again ( Click here).

**OK:**
**No DTCs are output.**

NG → Go to step 5

OK

### END (COMMUNICATION MALFUNCTION DUE TO NOISE)



### 5.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY - BATTERY AND BODY GROUND)

a. Disconnect the stereo component amplifier assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F73-3 (GND) - Body ground | Always | Below 1 Ω |
| F73-18 (GND2) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F73-1 (+B) - F73-3 (GND) | Always | 11 to 14 V |
| F73-16 (+B2) - F73-3 (GND) | Always | 11 to 14 V |

**Text in Illustration**

| *a | Front view of wire harness connector (to Stereo Component Amplifier Assembly) |

**Result**

| Result | Proceed to |
|---|---|
| OK (w/o Rear Seat Entertainment System) | A |
| OK (w/ Rear Seat Entertainment System) (for Roof) | B |
| OK (w/ Rear Seat Entertainment System) (for Seatback) | C |
| NG | D |

B → Go to step 10

| | |
|---|---|
| C | Go to step 17 |
| D | REPAIR OR REPLACE HARNESS OR CONNECTOR |

A

### 6.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - STEREO COMPONENT AMPLIFIER ASSEMBLY)

a. Disconnect the F87 multi-media module receiver assembly connector.

b. Disconnect the F86 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F87-2 (MI+) - F86-5 (MO+) | Always | Below 1 Ω |
| F87-3 (MI-) - F86-6 (MO-) | Always | Below 1 Ω |
| F87-4 (SLDI) - F86-7 (SLDO) | Always | Below 1 Ω |
| F87-5 (MO+) - F86-2 (MI+) | Always | Below 1 Ω |
| F87-6 (MO-) - F86-3 (MI-) | Always | Below 1 Ω |
| F87-7 (SLDO) - F86-4 (SLDI) | Always | Below 1 Ω |
| F87-2 (MI+) - Body ground | Always | 10 kΩ or higher |
| F87-3 (MI-) - Body ground | Always | 10 kΩ or higher |
| F87-4 (SLDI) - Body ground | Always | 10 kΩ or higher |
| F87-5 (MO+) - Body ground | Always | 10 kΩ or higher |
| F87-6 (MO-) - Body ground | Always | 10 kΩ or higher |
| F87-7 (SLDO) - Body ground | Always | 10 kΩ or higher |

| | |
|---|---|
| NG | REPAIR OR REPLACE HARNESS OR CONNECTOR |

OK

### 7.REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY

a. Replace the stereo component amplifier assembly with a new or normally functioning one ( Click here).

NEXT

### 8.CLEAR DTC

a. Clear the DTCs (Click here).

NEXT

### 9.CHECK DTC

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output.**

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK

END (STEREO COMPONENT AMPLIFIER ASSEMBLY IS DEFECTIVE)

10.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - MULTI-MEDIA MODULE RECEIVER AND TELEVISION DISPLAY)

a. Disconnect the F87 multi-media module receiver assembly connector.

b. Disconnect the F86 stereo component amplifier assembly connector.

c. Disconnect the L59 television display assembly connector.

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F87-5 (MO+) - F86-2 (MI+) | Always | Below 1 Ω |
| F87-6 (MO-) - F86-3 (MI-) | Always | Below 1 Ω |
| F87-7 (SLDO) - F86-4 (SLDI) | Always | Below 1 Ω |
| F86-5 (MO+) - L59-2 (MI+) | Always | Below 1 Ω |
| F86-6 (MO-) - L59-3 (MI-) | Always | Below 1 Ω |
| F86-7 (SLDO) - L59-4 (SLDI) | Always | Below 1 Ω |
| F86-2 (MI+) - Body ground | Always | 10 kΩ or higher |
| F86-3 (MI-) - Body ground | Always | 10 kΩ or higher |
| F86-4 (SLDI) - Body ground | Always | 10 kΩ or higher |
| F86-5 (MO+) - Body ground | Always | 10 kΩ or higher |
| F86-6 (MO-) - Body ground | Always | 10 kΩ or higher |
| F86-7 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

11.REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY

a. Replace the stereo component amplifier assembly with a new or normally functioning one ( Click here).

NEXT

12.CLEAR DTC

a. Clear the DTCs (Click here).

NEXT

13.CHECK DTC

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

NG → Go to step 14

OK

END (STEREO COMPONENT AMPLIFIER ASSEMBLY IS DEFECTIVE)

14.REPLACE TELEVISION DISPLAY ASSEMBLY

a. Replace the television display assembly with a new or normally functioning one ( Click here).

NEXT

15.CLEAR DTC

a. Clear the DTCs (Click here).

NEXT

16.CHECK DTC

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK

END (TELEVISION DISPLAY ASSEMBLY IS DEFECTIVE)

17.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - MULTIMEDIA MODULE RECEIVER AND MULTI-DISPLAY CONTROLLER)

a. Disconnect the F87 multi-media module receiver assembly connector.

b. Disconnect the F86 stereo component amplifier assembly connector.

c. Disconnect the L60 multi-display controller sub-assembly connector.

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F87-5 (MO+) - F86-2 (MI+) | Always | Below 1 Ω |
| F87-6 (MO-) - F86-3 (MI-) | Always | Below 1 Ω |
| F87-7 (SLDO) - F86-4 (SLDI) | Always | Below 1 Ω |
| F86-5 (MO+) - L60-2 (MI+) | Always | Below 1 Ω |
| F86-6 (MO-) - L60-3 (MI-) | Always | Below 1 Ω |
| F86-7 (SLDO) - L60-4 (SLDI) | Always | Below 1 Ω |
| F86-2 (MI+) - Body ground | Always | 10 kΩ or higher |

| | | |
|---|---|---|
| F86-3 (MI-) - Body ground | Always | 10 kΩ or higher |
| F86-4 (SLDI) - Body ground | Always | 10 kΩ or higher |
| F86-5 (MO+) - Body ground | Always | 10 kΩ or higher |
| F86-6 (MO-) - Body ground | Always | 10 kΩ or higher |
| F86-7 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**18.REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY**

a. Replace the stereo component amplifier assembly with a new or normally functioning one ( Click here).

NEXT

**19.CLEAR DTC**

a. Clear the DTCs (Click here).

NEXT

**20.CHECK DTC**

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

NG → **Go to step 21**

OK

**END (STEREO COMPONENT AMPLIFIER ASSEMBLY IS DEFECTIVE)**

**21.REPLACE MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY**

a. Replace the multi-display controller sub-assembly with a new or normally functioning one ( Click here).

NEXT

**22.CLEAR DTC**

a. Clear the DTCs (Click here).

NEXT

**23.CHECK DTC**

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

NG → **REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)**

OK

END (MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY IS DEFECTIVE)

## DTC 45-45 Eject Error

## DTC 45-51 Elevator Error

## DTC 45-52 Clamp Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-45 | The disc cannot be ejected. | Radio receiver assembly |
| 45-51 | A mechanical error occurs during the elevator operation. | |
| 45-52 | An error occurs in the DVD changer clamp. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.CHECK RADIO RECEIVER ASSEMBLY**

a. Check if a disc can be changed, inserted, or ejected normally.

**OK:**
**Malfunction disappears.**

**NG** → **REPLACE RADIO RECEIVER ASSEMBLY (Click here)**

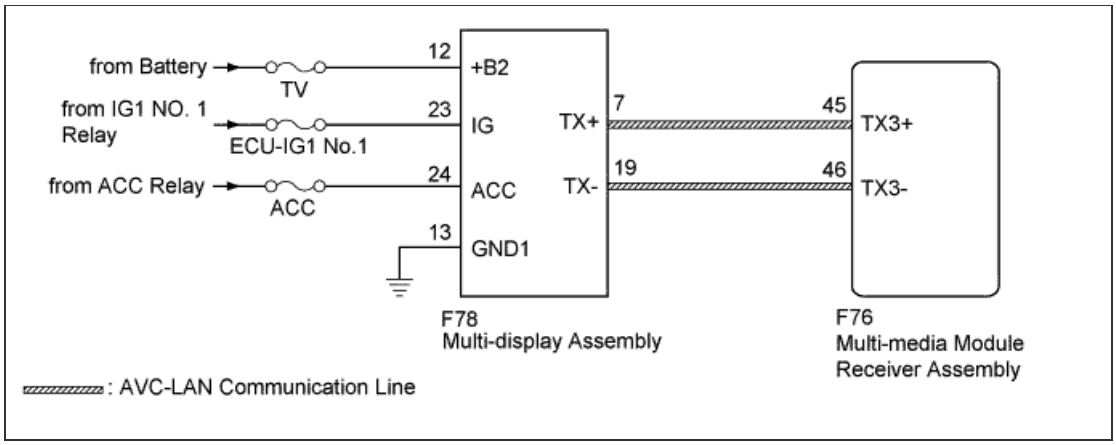
**OK**

**END**

# DTC B15D6 Display Disconnected

**for Preparation** Click here

## DESCRIPTION



The multi-display assembly and multi-media module receiver assembly are connected by an AVC-LAN communication line.
When an AVC-LAN communication error occurs between the display module board and multi-display assembly, these DTCs will be stored.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15D6* | A device that is listed in the AVC-LAN connected device record of the master unit is missing. | • Multi-display assembly power source circuit<br>• AVC-LAN circuit<br>• Multi-display assembly<br>• Multi-media module receiver assembly |

**HINT:**

- ***: Even if no fault is present, this DTC may be stored depending on the battery condition or engine start voltage.**
- **The multi-media module receiver assembly is the master unit.**

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

### 1.CLEAR DTC

a. Clear the DTCs (Click here).

**NEXT**

### 2.CHECK DTC

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output.**

**NG** → **Go to step 3**

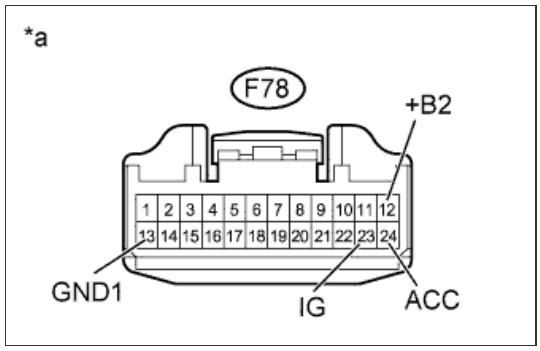
**OK**

### USE SIMULATION METHOD TO CHECK (**Click here**)

## 3.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY ASSEMBLY - BATTERY AND BODY GROUND)

a. Disconnect the multi-display assembly connector.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F78-13 (GND1) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

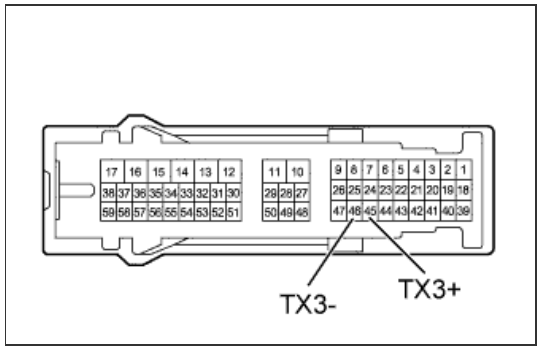
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F78-12 (+B2) - F78-13 (GND1) | Always | 11 to 14 V |
| F78-23 (IG) - F78-13 (GND1) | Engine switch on (IG) | 11 to 14 V |
| F78-24 (ACC) - F78-13 (GND1) | Engine switch on (ACC) | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *a | Front view of wire harness connector (to Multi-display assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



## 4.INSPECT MULTI-MEDIA MODULE RECEIVER ASSEMBLY

a. Remove the multi-media module receiver assembly (Click here).

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 45 (TX3+) - 46 (TX3-) | Always | 60 to 80 Ω |

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK

## 5.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - MULTI-DISPLAY ASSEMBLY)

a. Disconnect the F76 multi-media module receiver assembly connector.

b. Disconnect the F78 multi-display assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|

| | | |
|---|---|---|
| F76-45 (TX3+) - F78-7 (TX+) | Always | Below 1 Ω |
| F76-46 (TX3-) - F78-19 (TX-) | Always | Below 1 Ω |
| F76-45 (TX3+) - Body ground | Always | 10 kΩ or higher |
| F76-46 (TX3-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**6.REPLACE MULTI-DISPLAY ASSEMBLY**

a. Replace the multi-display assembly with a new or normally functioning one ( Click here).

NEXT

**7.CLEAR DTC**

a. Clear the DTCs (Click here).

NEXT

**8.CHECK DTC**

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output.**

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (**Click here**)

OK

**END (MULTI-DISPLAY ASSEMBLY IS DEFECTIVE)**

## DTC 45-45 Eject Error

## DTC 45-51 Elevator Error

## DTC 45-52 Clamp Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-45 | The disc cannot be ejected. | Radio receiver assembly |
| 45-51 | A mechanical error occurs during the elevator operation. | |
| 45-52 | An error occurs in the DVD changer clamp. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.CHECK RADIO RECEIVER ASSEMBLY**

a. Check if a disc can be changed, inserted, or ejected normally.

**OK:**
**Malfunction disappears.**

**NG** → **REPLACE RADIO RECEIVER ASSEMBLY (Click here)**

**OK**

**END**

## DTC B15E7 Harddisk Reading/Writing Malfunction(Low Temperature)

## DTC B15E8 Harddisk Reading/Writing Malfunction(High Temperature)

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored when the temperature is higher or lower than the operation range of the hard disc built into the multi-media module receiver assembly, and hard disk drive read/write errors occur more than a specified number of times.

**HINT:**

The hard disk drive may not operate normally when the temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15E7 | Hard disk drive read/write error at low temperature. | Hard disc |
| B15E8 | Hard disk drive read/write error at high temperature. | |

### INSPECTION PROCEDURE

**1.CHECK CABIN**

Move the vehicle to an area that is at room temperature and allow the cabin temperature to adjust to between -20°C (-4°F) and 65°C (149°F).

**HINT:**

- **The hard disc may not operate normally at very high or low temperatures.**
- **Perform the DTC check at room temperature.**

**NEXT**

**2.CLEAR DTC**

a. Clear the DTCs (Click here).

**NEXT**

**3.CHECK DTC**

a. Recheck for DTCs and check if the same DTCs are output again ( Click here).

**OK:**
**No DTCs are output.**

**NG** → **REPLACE HARD DISC (Click here)**

**OK**

**USE SIMULATION METHOD TO CHECK (Click here)**

# DTC 45-46 Scratched/Reversed Disc

**for Preparation** Click here

## DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-46 | Scratches or dirt is found on the disc surface or the disc is inserted upside down. | • Disc<br>• Radio receiver assembly |

## INSPECTION PROCEDURE

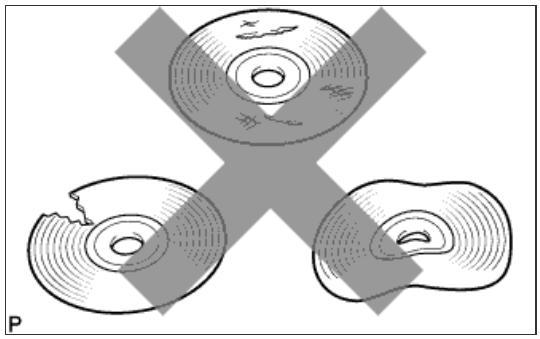
**HINT:**

After the inspection is completed, clear the DTCs (Click here).

### 1.CHECK THAT DISC IS INSERTED PROPERLY

a. Check whether or not the disc is inserted upside down.

**OK:**
**Disc is properly inserted.**



NG → INSERT DISC PROPERLY

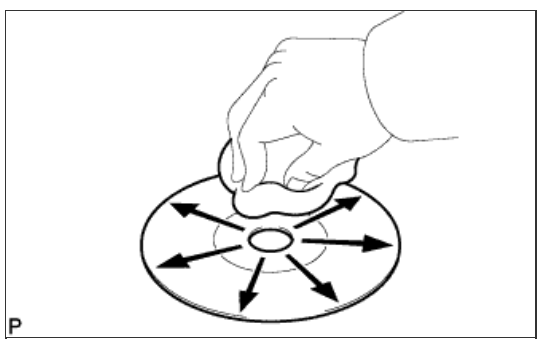
OK

### 2.CHECK DISC

a. Check that the disc is not deformed or cracked.

**OK:**
**No deformation or cracks on the disc.**

NG → CHANGE DISC



OK

### 3.DISC CLEANING

a. If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.

**NOTICE:**

Do not use a conventional record cleaner or antistatic preservative.

NEXT

4.CLEAR DTC

a. Clear the DTCs (Click here).

NEXT

5.RECHECK DTC

a. Recheck for DTCs and check if the same trouble code is output.

**OK:**
**No DTC is output.**

NG → Go to step 6

OK

DISC WAS DIRTY

6.REPLACE DISC WITH ANOTHER AND RECHECK

a. Replace the disc with a normal one.

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble code is output.

**OK:**
**No DTC is output.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

DISC IS FAULTY

# DTC B15F5 Air Conditioner ECU Vehicle Information Reading/Writing Processor Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when items controlled by the air conditioning amplifier assembly cannot be customized via the audio and visual system vehicle customization screen.

**HINT:**

The Air conditioning amplifier assembly controls the air conditioning system related items that are customizable via the multi-display assembly screen.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15F5 | Air conditioning amplifier assembly vehicle setting processing error. | • CAN communication system<br>• Air conditioning system<br>• Air conditioning amplifier assembly<br>• Multi-media module receiver assembly |

## INSPECTION PROCEDURE

### 1.CHECK CAN COMMUNICATION SYSTEM

a. Use the intelligent tester to check if the CAN communication system is functioning normally.

for LHD (Click here)
for RHD (Click here)

**OK:**
**CAN communication DTCs are not output.**

Result

| Result | Proceed to |
|---|---|
| OK | A |
| NG (for LHD) | B |
| NG (for RHD) | C |

**B** → GO TO CAN COMMUNICATION SYSTEM (Click here)

**C** → GO TO CAN COMMUNICATION SYSTEM (Click here)

**A**

### 2.CHECK AIR CONDITIONING SYSTEM

a. Check if the air conditioning system is malfunctioning (Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the air conditioning system.

**OK:**
**No malfunctions are present in the air conditioning system.**

**NG** → GO TO AIR CONDITIONING SYSTEM (Click here)

**OK**

### 3.CHECK CUSTOMIZE ITEMS

a. Display the "Vehicle Customization" screen.

b. Make a note of the customizable items for the air conditioning system.

**HINT:**

These air conditioning system items shown as customizable via the multi-display assembly vehicle customization screen can also be changed using the intelligent tester. In the following steps, the intelligent tester will be used.

i. To match-up the items in the multi-display assembly with the items on the intelligent tester, check the customize parameters list for the air conditioning system related items that can be customized via the multi-display assembly screen (Click here).

c. Using the intelligent tester, confirm that it is possible to change the settings of the air conditioning system related customize parameters that are shown as customizable via the multi-display assembly screen.

**OK:**
**The items available for customization via the multi-display assembly screen can be customized successfully using the intelligent tester.**

NG → REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (**Click here**)

OK → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (**Click here**)

## DTC 45-47 High Temperature

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-47 | The sensor detects that the DVD unit temperature is high (higher than 80°C (176°F)). | Radio receiver assembly |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.CHECK RADIO RECEIVER ASSEMBLY**

a. Park the vehicle in a cool place.

b. Check that the temperature of the radio receiver has become sufficiently low, and start the engine. Check that the malfunction disappears.

**OK:**
**Malfunction disappears.**

**NG** → **REPLACE RADIO RECEIVER ASSEMBLY (Click here)**

**OK**

**END**

# DTC B15F6 Main Body ECU Vehicle Information Reading/Writing Process Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when items controlled by the main body ECU (cowl side junction block LH) cannot be customized via the audio and visual system vehicle customization screen.

**HINT:**

**The main body ECU (cowl side junction block LH) controls the items for the following systems that are customizable via the multi-display assembly screen:**

- **Power door lock control system**
- **Wireless door lock control system**
- **Lighting system**

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15F6 | Main body ECU (cowl side junction block LH) vehicle setting processing error. | • CAN communication system<br>• Power door lock control system<br>• Wireless door lock control system<br>• Lighting system<br>• Main body ECU (cowl side junction block LH)<br>• Multi-media module receiver assembly |

## INSPECTION PROCEDURE

### 1.CHECK CAN COMMUNICATION SYSTEM

a. Use the intelligent tester to check if the CAN communication system is functioning normally.

for LHD (Click here)
for RHD (Click here)

**OK:**
**CAN communication DTCs are not output.**

**Result**

| Result | Proceed to |
|---|---|
| OK | A |
| NG (for LHD) | B |
| NG (for RHD) | C |

**B** → GO TO CAN COMMUNICATION SYSTEM (Click here)

**C** → GO TO CAN COMMUNICATION SYSTEM (Click here)

**A**

### 2.CHECK POWER DOOR LOCK CONTROL SYSTEM

a. Check if the power door lock control system is malfunctioning ( Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the power door lock control system.

**OK:**
**No malfunctions are present in the power door lock control system.**

**NG** → GO TO POWER DOOR LOCK CONTROL SYSTEM (Click here)

**OK**

### 3.CHECK WIRELESS DOOR LOCK CONTROL SYSTEM

a. Check if the wireless door lock control system is malfunctioning ( Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the wireless door lock control system.

**OK:**
**No malfunctions are present in the wireless door lock control system.**

NG → GO TO WIRELESS DOOR LOCK CONTROL SYSTEM (**Click here**)

OK

### 4.CHECK LIGHTING SYSTEM

a. Check if the lighting system is malfunctioning (Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the lighting system.

**OK:**
**No malfunctions are present in the lighting system.**

NG → GO TO LIGHTING SYSTEM (**Click here**)

OK

### 5.CHECK CUSTOMIZE ITEMS

a. Display the "Vehicle Customization" screen.

b. Make a note of the customizable items for each main body ECU (cowl side junction block LH) related system.

**HINT:**

These items shown as customizable via the multi-display assembly vehicle customization screen can also be changed using the intelligent tester. In a following step, the intelligent tester will be used.

i. To match-up the items in the multi-display assembly with the items on the intelligent tester, check the customize parameters list for the power door lock control system related items that can be customized via the multi-display assembly screen (Click here).

ii. To match-up the items in the multi-display assembly with the items on the intelligent tester, check the customize parameters list for the wireless door lock control system related items that can be customized via the multi-display assembly screen (Click here).

iii. To match-up the items in the multi-display assembly with the items on the intelligent tester, check the customize parameters list for the lighting system related items that can be customized via the multi-display assembly screen (Click here).

c. Using the intelligent tester, confirm that it is possible to change the settings of the customize parameters that are available for customization via the multi-display assembly screen.

**OK:**
**The items available for customization via the multi-display assembly screen can be customized successfully using the intelligent tester.**

NG → REPLACE MAIN BODY ECU (COWL SIDE JUNCTION BLOCK LH)

OK

REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (**Click here**)

## DTC 45-78 DSP Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-78 | An error occurs during the decode process (MP3/WMA). | Radio receiver assembly |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**NOTICE:**

- **This code may be output even if there is no malfunction.**
- **If this code is output frequently, replace the radio receiver.**

**1.CLEAR DTC**

a. Clear the DTCs (Click here).

**NEXT**

**2.RECHECK DTC**

a. Recheck for DTCs and check if the same trouble code is output.

**OK:**
**No DTC is output.**

**NG** → **REPLACE RADIO RECEIVER ASSEMBLY (Click here)**

**OK**

**END (THIS CODE MAY BE OUTPUT EVEN IF THERE IS NO MALFUNCTION)**

# DTC B15F7 Certification ECU Vehicle Information Reading/Writing Process Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when items controlled by the certification ECU (smart key ECU assembly) cannot be customized via the audio and visual system vehicle customization screen.

**HINT:**

The certification ECU (smart key ECU assembly) controls the entry and start system (for Entry Function) related items that are customizable via the multi-display assembly screen.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15F7 | Certification ECU (smart key ECU assembly) vehicle setting processing error. | • CAN communication system<br>• Entry and start system (for Entry Function)<br>• Certification ECU (smart key ECU assembly)<br>• Multi-media module receiver assembly |

## INSPECTION PROCEDURE

### 1.CHECK CAN COMMUNICATION SYSTEM

a. Use the intelligent tester to check if the CAN communication system is functioning normally.

for LHD (Click here)
for RHD (Click here)

**OK:**
**CAN communication DTCs are not output.**

**Result**

| Result | Proceed to |
|---|---|
| OK | A |
| NG (for LHD) | B |
| NG (for RHD) | C |

**B** → GO TO CAN COMMUNICATION SYSTEM (Click here)

**C** → GO TO CAN COMMUNICATION SYSTEM (Click here)

**A**

### 2.CHECK ENTRY AND START SYSTEM

a. Check if the entry and start system is malfunctioning ( Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the entry and start system.

**OK:**
**No malfunctions are present in the entry and start system.**

**NG** → GO TO ENTRY AND START SYSTEM (Click here)

**OK**

### 3.CHECK CUSTOMIZE ITEMS

a. Display the "Vehicle Customization" screen.

b. Make a note of the customizable items for each certification ECU related system.

**HINT:**

These items shown as customizable via the multi-display assembly vehicle customization screen can also be changed using the intelligent tester. In a following step, the intelligent tester will be used.

i. Check the customize parameters list for the entry and start system related items that can be customized via the multi-display assembly screen (Click here).

c. Manually change and confirm that it was possible to successfully change the settings of the customize parameters for each system that are available for customization via the multi-display assembly screen.

**OK:**

**The items available for customization via the multi-display assembly screen can be customized successfully using the manual procedure.**

NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

## DTC 45-7D Disc cannot be Played

## DTC 45-7E No Playable Files

## DTC 45-7F Copyright Protection Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-7D | When either condition below is met:<br>• An incompatible MP3 or WMA file is used.<br>• Although the file has an extension of ".mp3" or ".wma", the header information cannot be read. | • Disc<br>• Radio receiver assembly |
| 45-7E | When either condition below is met:<br>• A disc with no music data is used.<br>• Playable files are not on the disc (MP3 or WMA). | |
| 45-7F | A copy-protected file which cannot be played is used. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.CHANGE DISC**

a. Insert a disc with a playable file and check if the disc can be played correctly.

**HINT:**

For details on playable files and discs, refer to the Owner's Manual.

**OK:**

**The disc can be played correctly.**

**NG** → **REPLACE RADIO RECEIVER ASSEMBLY (Click here)**

**OK**

**DISC IS FAULTY**

# DTC B15F8 Driver Seat ECU Vehicle Information Reading/Writing Process Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when items controlled by the position control ECU assembly cannot be customized via the navigation system vehicle customization screen.

**HINT:**

The front power seat switch controls the front power seat control system related items that are customizable via the multi-display screen.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15F8 | Position control ECU assembly vehicle setting processing error. | • CAN communication system<br>• Front power seat control system<br>• Front power seat switch<br>• Multi-media module receiver assembly |

## INSPECTION PROCEDURE

### 1.CHECK CAN COMMUNICATION SYSTEM

a. Use the intelligent tester to check if the CAN communication system is functioning normally.

for LHD (Click here)
for RHD (Click here)

**OK:**
**CAN communication DTCs are not output.**

Result

| Result | Proceed to |
|---|---|
| OK | A |
| NG (for LHD) | B |
| NG (for RHD) | C |

B → GO TO CAN COMMUNICATION SYSTEM (Click here)

C → GO TO CAN COMMUNICATION SYSTEM (Click here)

A

### 2.CHECK FRONT POWER SEAT CONTROL SYSTEM

a. Check if the front power seat control system is malfunctioning ( Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the front power seat control system.

**OK:**
**No malfunctions are present in the front power seat control system.**

NG → GO TO FRONT POWER SEAT CONTROL SYSTEM ( Click here)

OK

### 3.CHECK CUSTOMIZE ITEMS

a. Display the "Vehicle Customization" screen.

b. Make a note of the customizable items for each position control ECU assembly related system.

**HINT:**

These items shown as customizable via the navigation system vehicle customization screen can also be changed manually. In a following step, a manual procedure will be used.

i. Check the customize parameters list for the front power seat control system related items that can be customized via the multi-display screen (Click here).

c. Manually change and confirm that it was possible to successfully change the settings of the customize parameters for each system that are available for customization via the multi-display screen.

**OK:**
**The items available for customization via the multi-display screen can be customized successfully using the manual procedure.**

NG → REPLACE FRONT POWER SEAT SWITCH (Click here)

OK → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

## DTC 45-7D Disc cannot be Played

## DTC 45-7E No Playable Files

## DTC 45-7F Copyright Protection Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-7D | When either condition below is met:<br>• An incompatible MP3 or WMA file is used.<br>• Although the file has an extension of ".mp3" or ".wma", the header information cannot be read. | • Disc<br>• Radio receiver assembly |
| 45-7E | When either condition below is met:<br>• A disc with no music data is used.<br>• Playable files are not on the disc (MP3 or WMA). | |
| 45-7F | A copy-protected file which cannot be played is used. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.CHANGE DISC**

a. Insert a disc with a playable file and check if the disc can be played correctly.

**HINT:**

For details on playable files and discs, refer to the Owner's Manual.

**OK:**

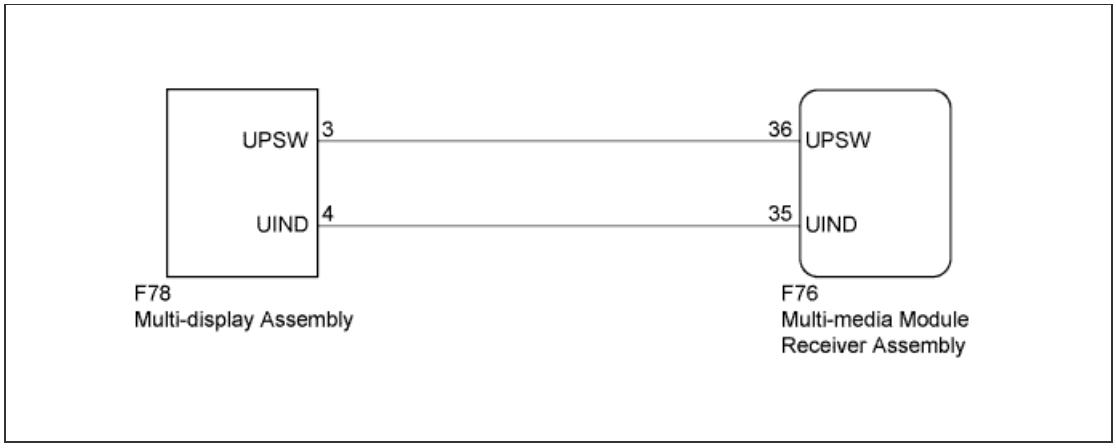
**The disc can be played correctly.**

**NG** → **REPLACE RADIO RECEIVER ASSEMBLY (Click here)**

**OK**

**DISC IS FAULTY**

## DTC B15F9 UART Communication Malfunction(for A/C)



**for Preparation** Click here

### DESCRIPTION

The multi-media module receiver assembly and multi-display assembly are connected by the UART communication line.
When a UART communication error occurs between the multi-media module receiver assembly and multi-display assembly, these DTCs will be stored.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15F9 | Multi-display for air conditioning switch operation signal input malfunction. | • Multi-display assembly<br>• Multi-media module receiver assembly<br>• Harness or connector |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**1.CLEAR DTC**

a. Clear the DTCs (Click here).

NEXT

**2.CHECK DTC**

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output.**

NG → **Go to step 3**

OK

**USE SIMULATION METHOD TO CHECK (Click here)**

**3.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - MULTI-DISPLAY ASSEMBLY)**

a. Disconnect the F76 multi-media module receiver assembly connector.

b. Disconnect the F78 multi-display assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| | | |

| | | |
|---|---|---|
| F76-36 (UPSW) - F78-3 (UPSW) | Always | Below 1 Ω |
| F76-35 (UIND) - F78-4 (UIND) | Always | Below 1 Ω |
| F76-36 (UPSW) - Body ground | Always | 10 kΩ or higher |
| F76-35 (UIND) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**4.REPLACE MULTI-DISPLAY ASSEMBLY**

a. Replace the multi-display assembly with a new or normally functioning one ( Click here).

NEXT

**5.CLEAR DTC**

a. Clear the DTCs (Click here).

NEXT

**6.CHECK DTC**

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output.**

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (**Click here**)

OK

**END (MULTI-DISPLAY ASSEMBLY IS DEFECTIVE)**

## DTC 5C-40 Camera Picture Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 5C-40 | A synchronous signal from the camera cannot be transmitted. | • Harness or connector<br>• Rear television camera<br>• Multi-display assembly |

### WIRING DIAGRAM

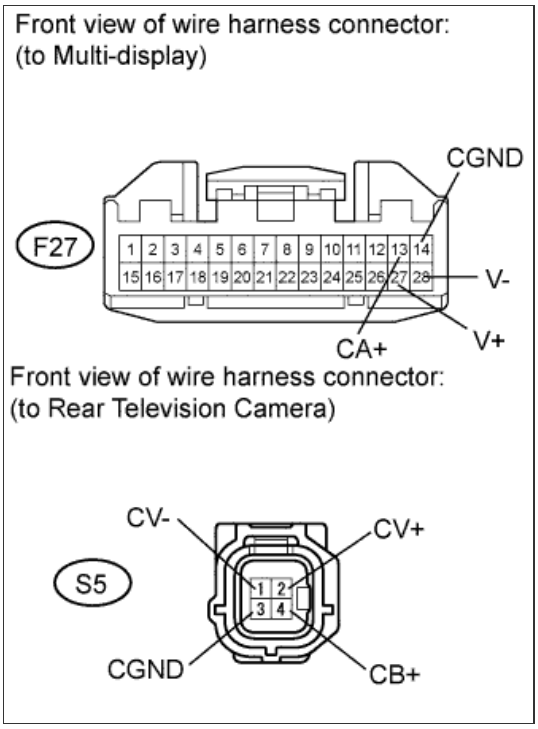
### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

#### 1.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - REAR TELEVISION CAMERA)

a. Disconnect the F27 display connector.



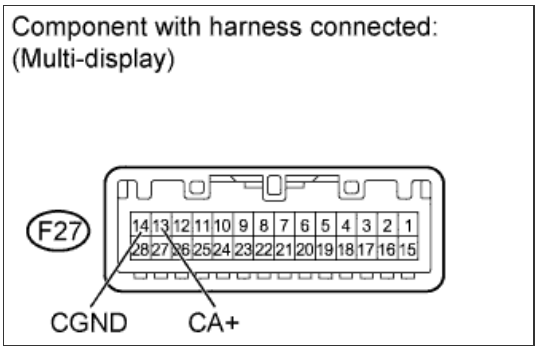
b. Disconnect the S5 camera connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| S5-4 (CB+) - F27-13 (CA+) | Always | Below 1 Ω |
| S5-3 (CGND) - F27-14 (CGND) | Always | Below 1 Ω |
| S5-2 (CV+) - F27-27 (V+) | Always | Below 1 Ω |
| S5-1 (CV-) - F27-28 (V-) | Always | Below 1 Ω |
| S5-4 (CB+) - Body ground | Always | 10 kΩ or higher |
| S5-3 (CGND) - Body ground | Always | 10 kΩ or higher |
| S5-2 (CV+) - Body ground | Always | 10 kΩ or higher |
| S5-1 (CV-) - Body | | |

| | | |
|---|---|---|
| ground | Always | 10 kΩ or higher |



NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 2.CHECK MULTI-DISPLAY (CA+ VOLTAGE)

a. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F27-13 (CA+) - F27-14 (CGND) | Engine switch on (IG), shift lever moved to R | 5.8 to 6.5 V |

**Result**

| Result | Proceed to |
|---|---|
| OK | A |
| NG (w/ Navigation System) | B |
| NG (w/o Navigation System) | C |

**USE SIMULATION METHOD TO CHECK (Click here)**

**for Preparation** Click here

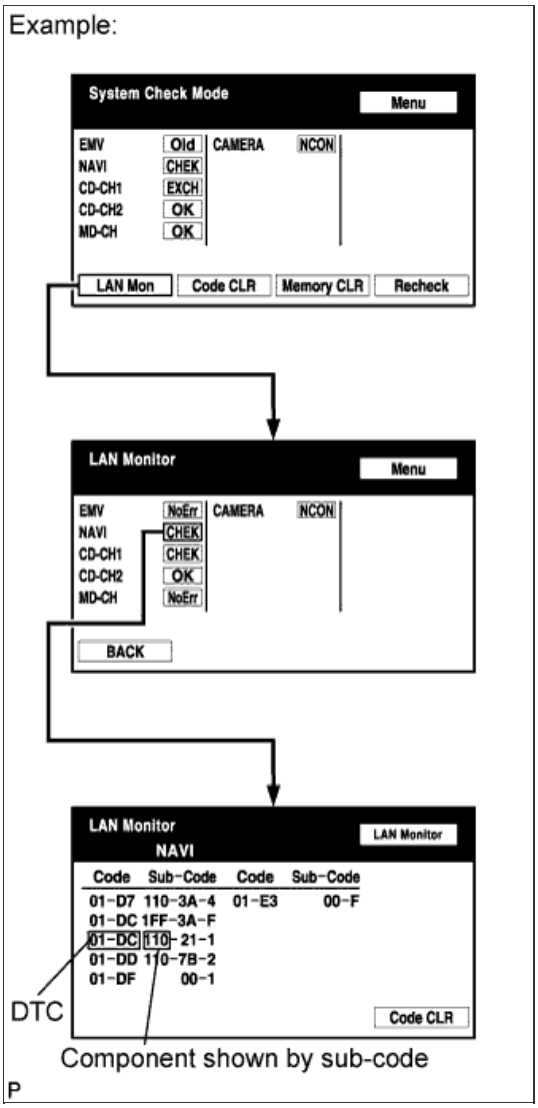
## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.IDENTIFY COMPONENT SHOWN BY SUB-CODE

a. Enter the diagnostic mode.

b. Press the "LAN Mon" switch to change to "LAN Monitor" mode.



c. Identify the component shown by the sub-code.

**HINT:**

- **"110 (multi-display)" is the component shown by the sub-code**

in the example shown in the illustration.

- The sub-code will be indicated by its physical address.
- For the component list, refer to Diagnosis Display Detailed Description in the System Description (Click here).

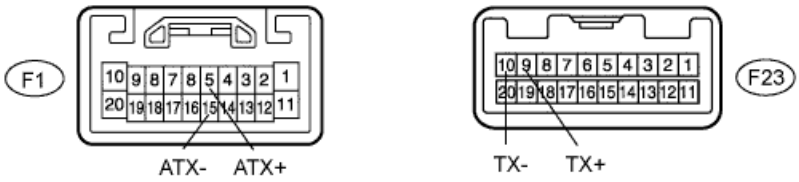
NEXT

## 2.CHECK POWER SOURCE CIRCUIT OF COMPONENT SHOWN BY SUB-CODE

a. Inspect the power source circuit of the component shown by the sub-code.

**Component Table**

| Display | Proceed to |
|---|---|
| Radio receiver (190) | Radio receiver power source circuit (Click here) |
| Stereo component amplifier (440) | Stereo component amplifier power source circuit (Click here) |
| Navigation ECU (178)*1 | Navigation ECU power source circuit (Click here) |
| Multi-display (110) | Multi-display power source circuit (Click here) |
| Television display (1F6)*2 | Television display power source circuit (Click here) |



If the power source circuit is operating normally, proceed to the next step.

*1: w/ Navigation System
*2: w/ Rear Seat Entertainment System

NEXT

## 3.INSPECT RADIO RECEIVER ASSEMBLY

Component without harness connected:
(Radio Receiver)

a. Disconnect the F1 and F23 receiver connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F1-5 (ATX+) - F1-15 (ATX-) | Always | 60 to 80 Ω |
| F23-9 (TX+) - F23-10 (TX-) | | |

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

## 4.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - COMPONENT SHOWN BY SUB-CODE)

**HINT:**

- **Start the check from the circuit that is near the component shown by the sub-code first.**
- **For details of the connectors, refer to Terminals of ECU (Click here).**

a. Referring to the AVC-LAN wiring diagram, check the AVC-LAN circuit between the parking assist ECU and the component shown by the sub-code.

i. Disconnect all connectors between the parking assist ECU and the component shown by the sub-code.

ii. Check for an open or short in the AVC-LAN circuit between the parking assist ECU and the component shown by the sub-code.

**OK:**
**There is no open or short circuit.**

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 5.REPLACE COMPONENT SHOWN BY SUB-CODE

a. Replace the component shown by the sub-code with a normal one and check if the same problem occurs again.

**OK:**
**Same problem does not occur.**

NG → REPLACE PARKING ASSIST ECU (Click here)

OK

END

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK SPEAKER INSTALLATION

a. Check that each speaker is securely installed.

**OK:**
**Each speaker is securely installed.**

NG → INSTALL SPEAKER PROPERLY

OK

### 2.IDENTIFY NOISE SOURCE

a. Check the noise condition.

**HINT:**

The radio has a noise prevention function to reduce noise when listening to the radio. If a loud noise occurs, check whether the ground at the antenna mounting base and the noise prevention unit are installed and wired correctly.

| Condition in Which Noise Occurs | Noise Type |
|---|---|
| Depressing accelerator pedal increases noise, and stopping engine stops noise immediately | Generator noise |
| When A/C or heater is operating | Blower motor noise |
| • When rapidly accelerating on unpaved road<br>• When engine switch is turned on (IG) | Fuel pump noise |
| • When horn switch is pressed and released<br>• When horn switch is pressed and held down | Horn noise |
| Running engine causes soft noise, and stopping engine stops noise immediately | Ignition noise |
| Noise occurs synchronously with turn signal flash | Flasher noise |
| Noise occurs during window washer operation | Washer noise |
| Running engine causes noise, but stopping engine does not stop noise | Water temperature sensor noise |
| When wiper is operating | Wiper noise |
| When brake pedal is depressed | Stop light switch noise |
| Other | Static electricity on vehicle |

**HINT:**

- **In the left column of the chart, find the situation that matches the vehicle of the customer. Then, in the right column, find the part that is causing the noise. Check the noise filter on the part.**
- **To save time and avoid a misdiagnosis, first make sure that the noise is not originating from outside the vehicle.**
- **Troubleshoot noise problems in order of loudness, starting with the loudest noise.**
- **Setting the radio to a frequency that receives no signal may make recognition of the noise problem easier.**

**OK:**
**The noise source can be determined.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

### REPAIR NOISE SOURCE

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.NOISE CONDITION

a. Check from which direction the noise comes (front left or right, rear left or right).

**OK:**
**The location of the noise source can be determined.**

NG → Go to step 3

OK

### 2.CHECK SPEAKERS

a. Check the installation conditions of the speaker units that are located near the noise source and that there are no cracks, scratches, deformation or other malfunctions.

**Result**

| Result | Proceed to |
|---|---|
| No malfunction is found. | A |
| The speaker is installed incorrectly. | B |
| Foreign objects are in the speaker. | C |
| The speaker cone paper is broken. | D |

B → REINSTALL SPEAKER

C → REMOVE FOREIGN OBJECT

D → REPLACE SPEAKER

A

### 3.CHECK NOISE CONDITION

a. Check the noise condition.

**HINT:**

The radio has a noise prevention function to reduce noise when listening to the radio. If a loud noise occurs, check whether the ground at the antenna mounting base and the noise prevention unit are installed and wired correctly.

| Condition under which Noise Occurs | Noise Source |
|---|---|
| Noise increases when the accelerator pedal is depressed, but stops when the engine is stopped. | Generator |
| Noise occurs during A/C or heater operation. | Blower motor |
| Noise occurs when the horn switch is pressed and released or when pressed and held. | Horn |
| Noise occurs synchronously with the blink of the turn signal. | Flasher |
| Noise occurs during window washer operation. | Washer |
| Noise occurs during wiper operation. | Wiper |
| Noise occurs when the brake pedal is depressed. | Stop light switch |
| Noise occurs when the sliding roof moves. | Sliding roof motor |
| Others | Static electricity |

**HINT:**

- **In the left column of the table, find the situation that matches the customer's complaint. Then, in the right column, find the part that is causing the noise. Check the respective noise filter.**
- **To save time and avoid a misdiagnosis, first make sure that the noise is not coming from outside the vehicle.**

- **Troubleshoot noises in descending order of loudness.**
- **Setting the radio to a frequency where no signal is received may make recognition of the noise problem easier.**

**Result**

| Condition | Proceed to |
|---|---|
| The noise source cannot be determined. | A |
| The noise source can be determined. | B |

B → REPAIR OR REPLACE NOISE SOURCE

A → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.CHECK VEHICLE CONDITION**

a. Check that conditions in the cabin are not likely to cause condensation.

**HINT:**

This problem occurs if the cabin is humid and the temperature changes rapidly. This may produce condensation, resulting in a short circuit.

**OK:**

**Condensation is not likely being produced.**

NG → **DRY OUT CABIN AND RECHECK CONDITION**

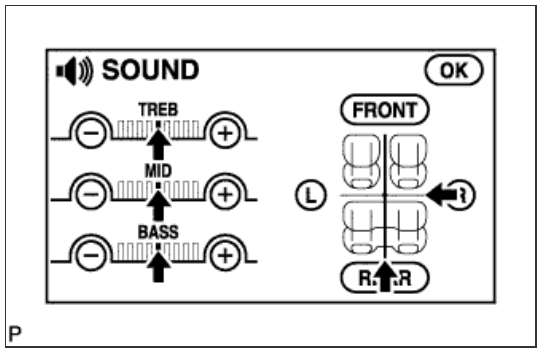
OK

**PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)**

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK SOUND SETTING



a. Enter the sound adjustment screen by pressing the "SOUND" switch on the AUDIO display.

b. Set volume, fader, and balance to the initial values and check that the sound is normal.

**OK:**
**Sound returns to normal.**

**HINT:**

Sound quality adjustment items vary depending on the type of the amplifier.

NG → GO TO "SPEAKER CIRCUIT" (Click here)

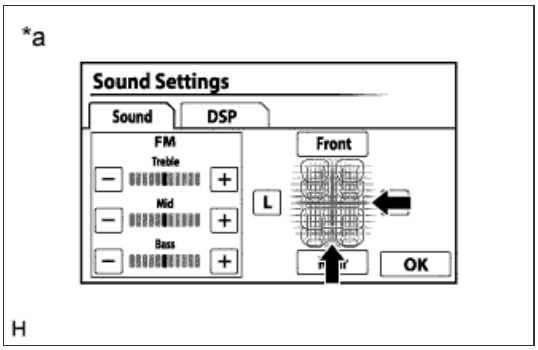
OK → END

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK AUDIO SETTINGS

a. Display the "Sound Settings" screen.



b. Set volume, fader and balance to the initial values and check that sound is normal.

**OK:**

**Audio system returns to normal.**

**HINT:**

Sound quality adjustment measures vary according to the type of amplifier.

**Text in Illustration**

| | |
|---|---|
| *a | Example |

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK → END

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.REPLACE CD WITH ANOTHER AND RECHECK**

a. Replace the CD with a normal one and check if the same problem occurs again.

**OK:**
**Malfunction disappears.**

NG → **REPLACE RADIO RECEIVER ASSEMBLY (Click here)**

OK → **CD IS FAULTY**

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.REPLACE DISC AND RECHECK**

a. Replace the disc with a known good one and recheck.

i. Check if the same trouble occurs again.

**OK:**
**Malfunction disappears.**

NG → **REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)**

OK

**END**

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK IF PROPER DISC IS INSERTED

a. Make sure that the disc is a normal audio disc, and that it is not deformed, flawed, burred or otherwise defective.

**OK:**
**Normal audio disc.**

**HINT:**

For details on playable discs, refer to the Owner's Manual.

NG → DISC IS FAULTY

OK

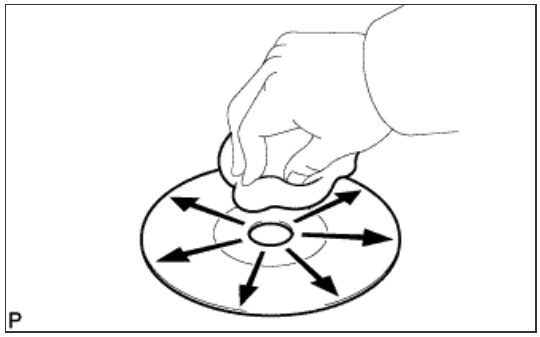
### 2.CHECK THAT DISC IS INSERTED PROPERLY

a. Check whether or not the disc is inserted upside down.

**OK:**
**Disc is properly inserted.**

NG → INSERT DISC PROPERLY

OK



### 3.CLEAN DISC

a. Clean the disc by wiping the disc underside radially with a soft cloth.

**OK:**
**Malfunction disappears.**

**NOTICE:**

Do not use a conventional record cleaner or antistatic preservative.

NG → Go to step 4

OK

DISC WAS DIRTY

### 4.REPLACE DISC WITH ANOTHER AND RECHECK

a. Replace the disc with a normal one and check if the same problem occurs again.

**OK:**
**Malfunction disappears.**

NG → PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

**DISC IS FAULTY**

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK IF A PROPER DISC IS INSERTED

a. Make sure that the disc is an audio disc or a disc with MP3 or WMA files, and that it is not deformed, flawed, stained, deteriorated or otherwise defective.

**OK:**
**Disc is normal.**

**HINT:**

- **Translucent or uniquely-shaped discs cannot be played.**
- **CDs and DVDs with adhesive paper labels should not be played.**
- **Commercial audio CDs and DVDs can be played.**
- **CD-DA files on CD-ROMs, CD-Rs and CD-RWs can be played.**
- **MP3 and WMA files on CD-ROMs, CD-Rs and CD-RWs can be played.**
- **For details on playable CDs and DVDs, refer to the Owner's Manual.**

NG → CHANGE DISC

OK

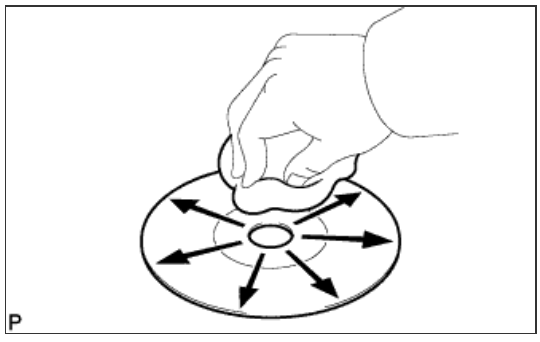
### 2.CHECK THAT DISC IS INSERTED PROPERLY

a. Check whether or not the disc is inserted upside down.

**OK:**
**Disc is properly inserted.**

NG → INSERT DISC PROPERLY

OK



### 3.CLEAN DISC AND RECHECK

a. Clean the disc by wiping it clean with a soft cloth from the inside to the outside in a radial direction.

**OK:**
**Malfunction disappears.**

**NOTICE:**

Do not use a conventional record cleaner or anti-static preservative.

NG → Go to step 4

OK

END

### 4.REPLACE DISC AND RECHECK

a. Replace the disc with a known good one and check if the same trouble occurs again.

**OK:**
**Malfunction disappears.**

NG

REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK

END

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.PRESS "EJECT" AND CHECK OPERATION

a. Press the disc eject switch of the radio receiver for 5 seconds or more, and check that the disc ejects.

**OK:**
**Disc ejects.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

### 2.REPLACE DISC WITH ANOTHER AND RECHECK

a. Replace the disc with a normal one and check that the disc ejects.

**OK:**
**Disc ejects.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

### DISC IS FAULTY

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.PRESS EJECT AND CHECK OPERATION**

a. Press the disc eject switch of the multi-media module receiver assembly for 2 seconds or more and check that the disc is ejected.

**OK:**
**Disc is ejected.**

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK

**2.REPLACE DISC AND RECHECK**

a. Replace the disc with a known good one and recheck.

**OK:**
**Disc is ejected.**

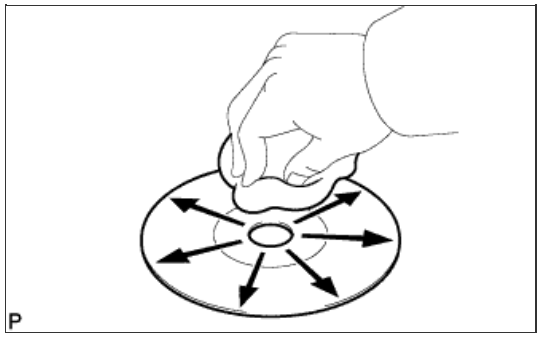
NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK

END

**for Preparation** Click here

## INSPECTION PROCEDURE



### 1.CLEAN DISC

a. Clean the disc by wiping the disc underside radially with a soft cloth.

**OK:**
**Malfunction disappears.**

**NOTICE:**

Do not use a conventional record cleaner or antistatic preservative.

NG → Go to step 2

OK →

### DISC WAS DIRTY

### 2.REPLACE DISC WITH ANOTHER AND RECHECK

a. Replace the disc with a normal one and check if the same problem occurs again.

**OK:**
**Malfunction disappears.**

NG → Go to step 3

OK →

### DISC IS FAULTY

### 3.CHECK WHEN PROBLEM OCCURS

a. Check the location in which disc skipping occurs.

**Result**

| Result | Proceed to |
|---|---|
| Driving surface is bumpy or rough | A |
| Driving surface is normal | B |

B → Go to step 5

A →

### 4.CHECK RADIO RECEIVER INSTALLATION

a. Check the installation condition of the radio receiver.

**OK:**
**Installed properly.**

NG → INSTALL RADIO RECEIVER PROPERLY (Click here)

OK →

5.INSTALL RADIO RECEIVER IN ANOTHER VEHICLE OF SAME MODEL AND COMPARE

a. Remove the radio receiver and install it in another vehicle of the same model. Check if the disc sound skips.

**OK:**
**Disc sound does not skip.**

NG → Go to step 6

OK

MALFUNCTIONS MAY NOT BE PRESENT

6.DID TEMPERATURE IN CABIN CHANGE RAPIDLY?

a. Check whether or not a rapid temperature change occurred in the cabin.

**OK:**
**Rapid temperature change occurred.**

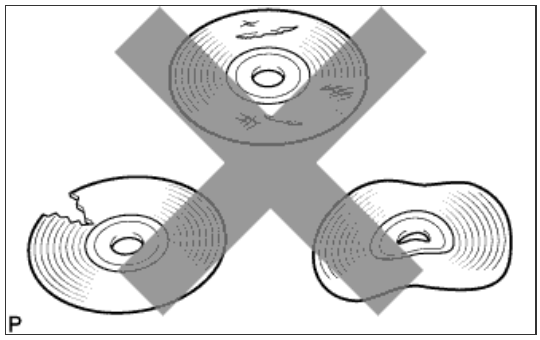
**HINT:**

A rapid temperature change creates condensation inside the disc player, which may disable disc playback.

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

CONDENSATION DUE TO TEMPERATURE CHANGE (LEAVE AS IS FOR A WHILE BEFORE USING)



**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK DISC

a. Check that the disc is not deformed or cracked.

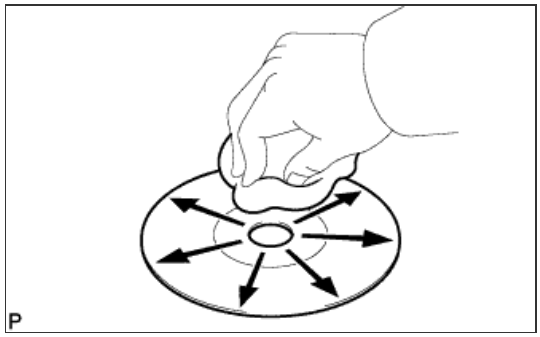
**OK:**
**No deformation or cracks on the disc.**

NG → CHANGE DISC

OK

### 2.CHECK DISC

a. Check the disc.



**OK:**
**The disc is clean.**

**HINT:**

If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.

**NOTICE:**

Do not use a conventional record cleaner or anti-static preservative.

NG → CLEAN DISC

OK

### 3.CHECK OPERATION

a. Check if the same problem occurs again using a known good disc.

**OK:**
**Malfunction disappears.**

NG → Go to step 4

OK

END

### 4.CHECK MULTI-MEDIA MODULE RECEIVER ASSEMBLY

a. Check that the multi-media module receiver assembly is properly installed.

**OK:**

**Multi-media module receiver assembly is properly installed.**

NG → REINSTALL MULTI-MEDIA MODULE RECEIVER ASSEMBLY PROPERLY

OK

REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK IF RADIO AUTO-SEARCH FUNCTIONS PROPERLY

a. Perform the auto-search of the radio and check that it functions normally.

**OK:**
**Radio auto-search functions normally.**

NG → Go to step 2

OK →

### REPLACE RADIO RECEIVER ASSEMBLY (Click here)

### 2.CHECK OPTIONAL COMPONENTS

a. Check if a telephone antenna or other optional components are installed.

**OK:**
**Optional component(s) is installed.**

NG → Go to step 3

OK →

### EFFECT FROM OPTIONAL COMPONENTS

### 3.CHECK ANTENNA FOR NOISE PRODUCTION

a. With the engine switch on (ACC), turn on the radio and choose the AM mode.

b. Place the tip of a screwdriver on the antenna and check that noise is heard from the speakers.

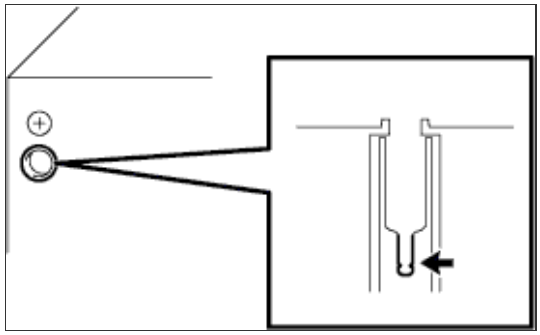
**OK:**
**Noise is heard.**

NG → Go to step 4

OK →

### REPLACE RADIO RECEIVER ASSEMBLY (Click here)

### 4.CHECK RADIO RECEIVER ASSEMBLY (ANTENNA)



a. Remove the antenna plug of the radio receiver.

b. With the radio receiver connector connected, turn the engine switch on (ACC).

c. Turn on the radio and choose the AM mode.

d. Place a flat-head screwdriver or a piece of metal, such as a thin wire, on the antenna jack of the radio receiver. Check that noise is heard from the speakers.

**OK:**
**Noise is heard.**

NG → REPLACE ANTENNA ASSEMBLY AND ANTENNA CORD SUB-ASSEMBLY (Click here)

OK

REPLACE RADIO RECEIVER ASSEMBLY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK MULTI-MEDIA MODULE RECEIVER ASSEMBLY

a. Check the radio automatic station search function.

i. Check the radio automatic station search function by activating it.

**Result**

| Result | Proceed to |
|---|---|
| Automatic station search function stops on a station. | A |
| Automatic station search function does not stop. | B |

B → Go to step 2

A →

REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

### 2.CHECK OPTIONAL COMPONENTS

a. Check optional components (sunshade film, telephone antenna, etc.).

i. Check if any optional components that may decrease reception capacity, such as sunshade film or a telephone antenna, are installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components are installed. | A |
| Optional components are not installed. | B |

**NOTICE:**

Do not remove any optional components installed by the customer without his or her consent.

B → Go to step 3

A →

REMOVE OPTIONAL COMPONENTS AND CHECK AGAIN (SEE NOTICE ABOVE)

### 3.CHECK RADIO ANTENNA

a. Check for noise

i. Turn the engine switch on (ACC) with the multi-media module receiver assembly connector connected.

ii. Turn the radio on and tune into AM mode.

iii. Place a screwdriver, thin wire, or other metal object on the amplifier antenna threaded installation portion for the antenna and check that noise can be heard from the speakers.

**Result**

| Result | Proceed to |
|---|---|
| Noise does not occur. | A |
| Noise occurs. | B |

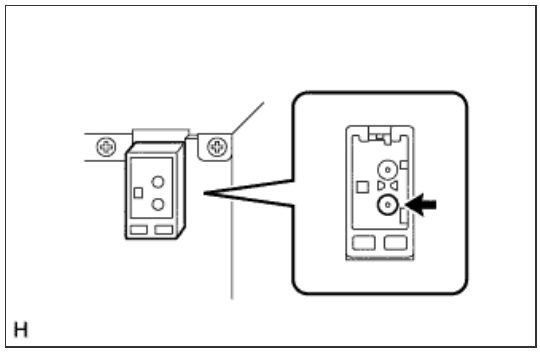
B → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

A →

## 4.CHECK MULTI-MEDIA MODULE RECEIVER ASSEMBLY

a. Preparation for check

i. Remove the antenna connector from the multi-media module receiver assembly.



b. Check for noise

i. Turn the engine switch on (ACC) with the multi-media module receiver assembly connector connected.

ii. Turn the radio on and tune into AM mode.

iii. Place a screwdriver, thin wire or other metal object on the multi-media module receiver assembly antenna jack and check that noise can be heard from the speakers.

**OK:**
**Noise can be heard from the speaker.**

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

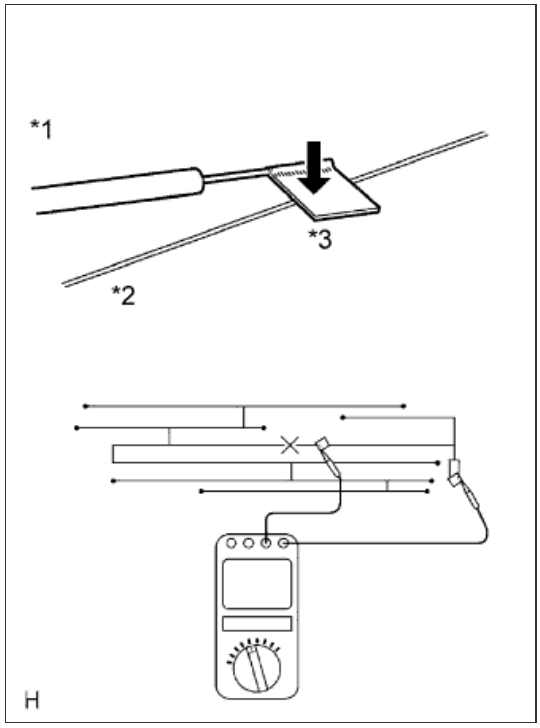
OK

## 5.CHECK WINDOW GLASS ANTENNA WIRE

a. Check for continuity of the antenna.

**HINT:**

Check for continuity at the center of each antenna wire as shown in the illustration.



**NOTICE:**

When cleaning the glass, wipe it in the direction of the wire with a soft dry cloth. Take care not to damage the wire. Do not use detergents or glass cleaners with abrasive ingredients. When measuring resistance, wrap a piece of tin foil around the tip of each probe and press the foil against the wire with your finger, as shown in the illustration.

**OK:**
**There is continuity in the antenna.**

**Text in Illustration**

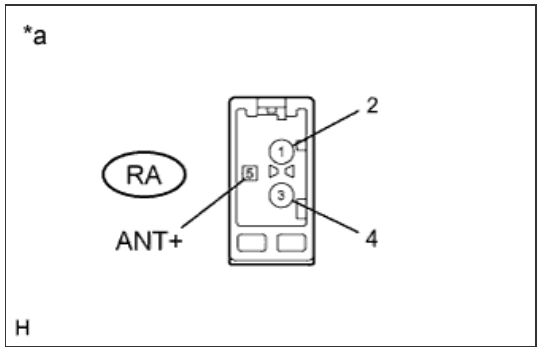
| | |
|---|---|
| *1 | Tester Probe |
| *2 | Antenna Wire |
| *3 | Tin Foil |

NG → REPAIR WINDOW GLASS ANTENNA WIRE (Click here)

OK

## 6.INSPECT MULTI-MEDIA MODULE RECEIVER ASSEMBLY

a. Disconnect the multi-media module receiver assembly connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| RA-5 (ANT+) - Body ground | Engine switch on (ACC)<br>Radio switch on | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *a | Component without harness connected (Multi-media Module Receiver Assembly) |

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK

## 7.CHECK ANTENNA CORD SUB-ASSEMBLY

a. Remove the antenna connector of the multi-media module receiver assembly and antenna.

b. Measure the resistance between the antenna and multi-media module receiver assembly to check for an open circuit in the antenna cord.

**Standard resistance:**
**Below 1 Ω**

c. Measure the resistance between the antenna cord and body ground to check for a short circuit in the antenna cord.

**Standard resistance:**
**10 kΩ or higher**

NG → REPLACE ANTENNA CORD SUB-ASSEMBLY (Click here)

OK

## 8.CHECK AMPLIFIER ANTENNA ASSEMBLY

a. Replace the amplifier antenna assembly and check if radio broadcasts can be received normally ( Click here).

**OK:**
**Radio broadcasts can be received.**

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK

## NORMAL OPERATION

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK DISPLAY SETTING

a. Check that the display is not in "Screen Off" mode.

**OK:**
**The display setting is not in "Screen Off" mode.**

NG → CHANGE SCREEN TO "SCREEN ON" MODE

OK ↓

### 2.CHECK IMAGE QUALITY SETTING

a. Check that the screen color quality can be set.

**OK:**
**Setting is possible.**

NG → Go to step 3

OK ↓

PRESS PANEL SWITCH "DISPLAY" AND SET SCREEN COLOR QUALITY TO NORMAL

### 3.CHECK CABIN

a. Check that condensation is not likely to occur in the cabin, and that the temperature is not high or extremely low in the cabin.

**HINT:**

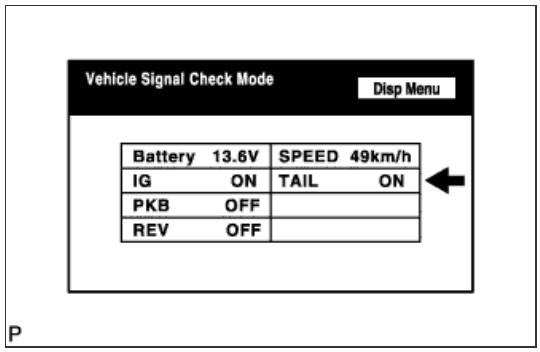
- **A humid cabin and a rapid change in temperature may lead to condensation. Condensation in the cabin may short circuit the screen.**
- **The appropriate cabin temperature is 20 to 30°C (68 to 86°F).**

**OK:**
**Condensation is not likely and temperature is not high or extremely low.**

NG → SET CABIN TO APPROPRIATE TEMPERATURE

OK ↓

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)



**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK VEHICLE SIGNAL (DISPLAY CHECK MODE)

a. Enter the "Display Check" mode and select "Vehicle Signal Check Mode" ( Click here).

b. Check that the display changes between ON and OFF according to the light control switch operation.

**OK:**

| Light Control Switch | Display |
|---|---|
| Tail or head | ON |
| Off | OFF |

**HINT:**

This display is updated once per second. As a result, it is normal for the display to lag behind the actual change in the switch.

**Result**

| Result | Proceed to |
|---|---|
| OK (w/ Navigation System) | A |
| OK (w/o Navigation System) | B |
| NG | C |

B → REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

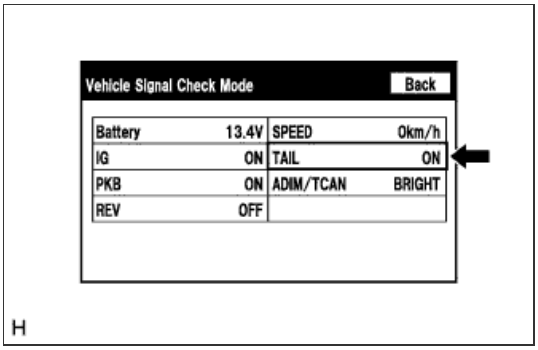
C → PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

A

REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE



### 1.CHECK VEHICLE SIGNAL (OPERATION CHECK)

a. Enter the "Vehicle Signal Check Mode" screen. Refer to Check Vehicle Signal in Operation Check (Click here).

b. Check that the display changes between ON and OFF according to the light control switch operation.

**OK:**

| Light Control Switch | Display |
|---|---|
| Tail or head | ON |
| Off | OFF |

**HINT:**

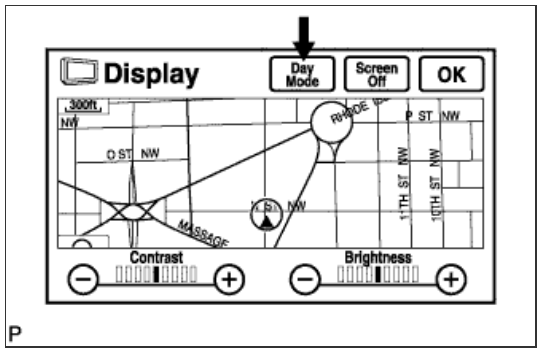
This display is updated once per second. As a result, it is normal for the display to lag behind the actual switch operation.

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE



### 1.CHECK IMAGE QUALITY SETTING

a. Enter the display adjustment screen by pressing the "DISP" switch.

b. Turn the light control switch to the tail position.

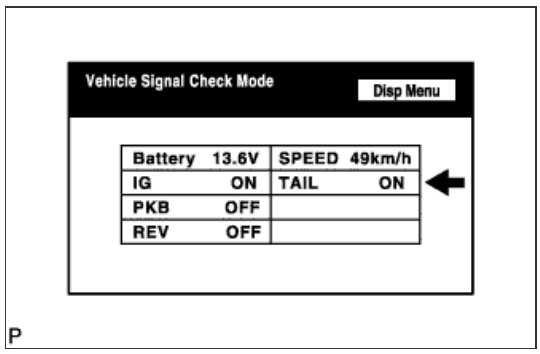
c. Check if "Day Mode" on the display is on.

**OK:**
**"Day Mode" is on.**

NG → Go to step 2

OK →

### TURN "Day Mode" SETTING OFF



### 2.CHECK VEHICLE SIGNAL (DISPLAY VEHICLE SIGNAL)

a. Enter the "Display Check" mode and select "Vehicle Signal Check Mode" ( Click here).

b. Cover the automatic light control sensor on the instrument panel with a cloth.

c. Set the instrument panel light control to less than the maximum (to activate the dimmer function that works when the light control switch is in the tail position).

d. Check that the display changes between DIM and BRIGHT according to the light control switch operation.

**OK:**

| Light Control Switch Condition | Display Condition |
|---|---|
| Tail or head | ON |
| Off | OFF |

**HINT:**

The display is updated once per second. It is normal for the display to lag behind the actual switch operation.

**Result**

| Result | Proceed to |
|---|---|
| OK (w/ Navigation System) | A |
| OK (w/o Navigation System) | B |
| NG | C |

B → REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

C → PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

A →

| REPLACE MULTI-DISPLAY ASSEMBLY (Click here) |
| --- |

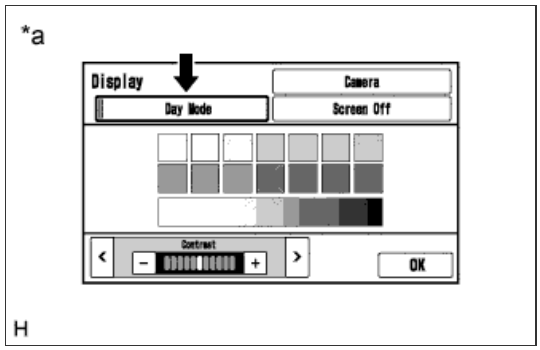
**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK IMAGE QUALITY SETTING

a. Display the "Display" screen.

b. Turn the light control switch to the tail or head position.



c. Check if "Day Mode" on the display adjustment screen is on.

**Text in Illustration**

| | |
|---|---|
| *a | Example |

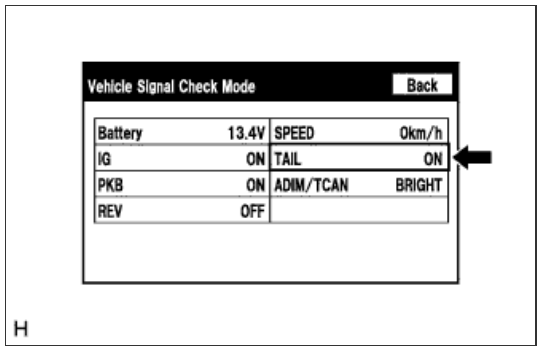
**Result**

| Result | Proceed to |
|---|---|
| "Day Mode" setting is on. | A |
| "Day Mode" setting is off. | B |

B → Go to step 2

A

### TURN "Day Mode" SETTING OFF



### 2.CHECK VEHICLE SIGNAL (OPERATION CHECK)

a. Enter the "Vehicle Signal Check Mode" screen. Refer to Check Vehicle Signal in Operation Check (Click here).

b. Check that the display changes between ON and OFF according to the light control switch operation.

**OK:**

| Light Control Switch | Display |
|---|---|
| Tail or head | ON |
| Off | OFF |

**HINT:**

The display is updated once per second. It is normal for the display to lag behind the actual switch operation.

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

### REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

**for Preparation** Click here

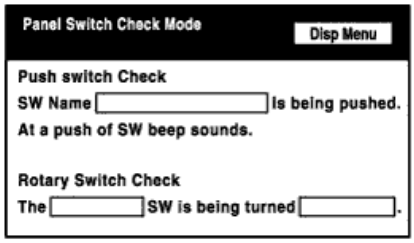
## INSPECTION PROCEDURE

### 1.CHECK PANEL SWITCH

a. Check for foreign matter around the switch that might prevent operation.

**OK:**
**No foreign matter is found.**

NG → REMOVE ANY FOREIGN MATTER



OK

### 2.CHECK PANEL SWITCH (DISPLAY CHECK MODE)

a. Enter the "Display Check" mode and select "Panel Switch Check Mode" ( Click here).

b. Operate the abnormal switch and check if the switch name and status are correctly displayed.

**OK:**
**The switch name and status are correctly displayed as operated.**

**Result**

| Result | Proceed to |
|---|---|
| OK (w/ Navigation System) | A |
| OK (w/o Navigation System) | B |
| NG | C |

B → REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

C → PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

A

REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

**for Preparation** Click here

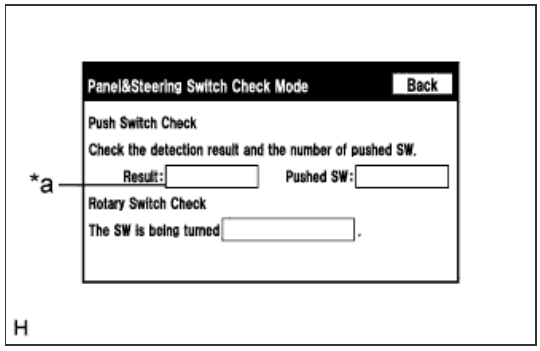
## INSPECTION PROCEDURE

### 1.CHECK PANEL SWITCH

a. Check for foreign matter around the switches that might prevent operation.

**OK:**
**No foreign matter is found.**

NG → REMOVE ANY FOREIGN MATTER FOUND



OK

### 2.CHECK PANEL SWITCH (OPERATION CHECK)

a. Enter the "Panel & Steering Switch Check Mode" screen. Refer to Check Panel & Steering Switch in Operation Check (Click here).

b. Operate the abnormal switch and check if the switch name is correctly displayed.

**OK:**
**The switch name is correctly displayed as operated.**

**Text in Illustration**

| | |
|---|---|
| *a | Name of the pushed switch is displayed |

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

**for Preparation** Click here

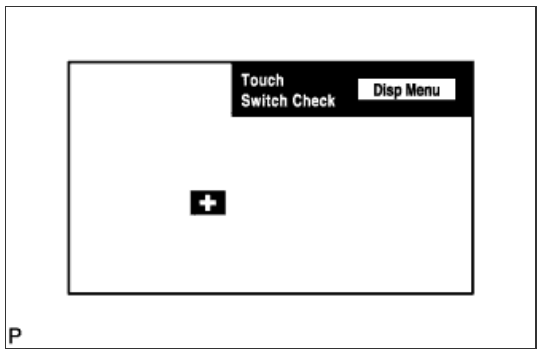
## INSPECTION PROCEDURE

### 1.CHECK TOUCH PANEL

a. Check for foreign matter on the display.

**OK:**
**The display is clean.**

NG → CLEAN DISPLAY AND RECHECK TOUCH PANEL



OK

### 2.CHECK TOUCH SWITCH (DISPLAY CHECK MODE)

a. Enter the "Display Check" mode and select "Touch Switch Check" ( Click here).

b. Touch the display in the area where the switch malfunction occurs.

**OK:**
**A "+" mark appears at the touched position.**

**Result**

| Result | Proceed to |
|---|---|
| OK | A |
| NG (w/ Navigation System) | B |
| NG (w/o Navigation System) | C |

B → REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

C → REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

A

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK MULTI-DISPLAY ASSEMBLY

a. Check if there is any foreign matter caught between the display and exterior frame of the multi-display assembly.

**OK:**
**No foreign matter is caught between the display and exterior frame of the multi-display assembly.**

**HINT:**

If there is foreign matter between the display and exterior frame of the multi-display assembly, the touch panel will remain pressed, preventing touch switch operation.

NG → REMOVE FOREIGN MATTER

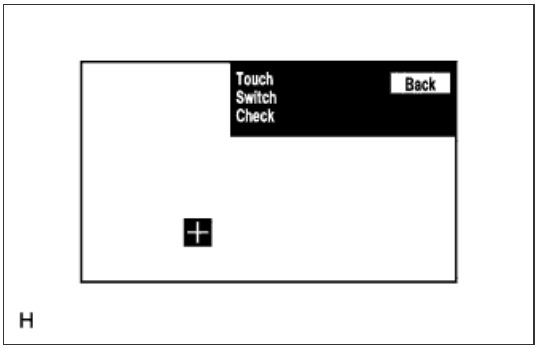
OK

### 2.CHECK TOUCH PANEL

a. Check for foreign matter on the display.

**OK:**
**The display is clean.**

NG → CLEAN DISPLAY AND RECHECK TOUCH PANEL



OK

### 3.CHECK TOUCH SWITCH (OPERATION CHECK)

a. Enter the "Touch Switch Check" screen. Refer to Check Touch Switch in Operation Check (Click here).

b. Touch the display in the area where the switch malfunction occurs.

**OK:**
**A "+" mark appears at the touched position.**

H

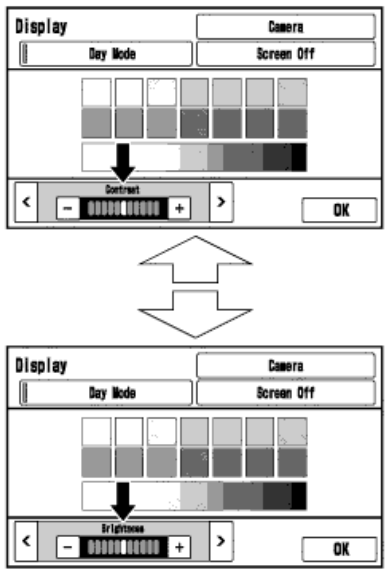
NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE



### 1.CHECK DISPLAY SETTING

a. Display the "Display (General)" screen.

b. Reset display settings (contrast, brightness) and check that the screen appears normal.

**OK:**
**The display returns to normal.**

*a

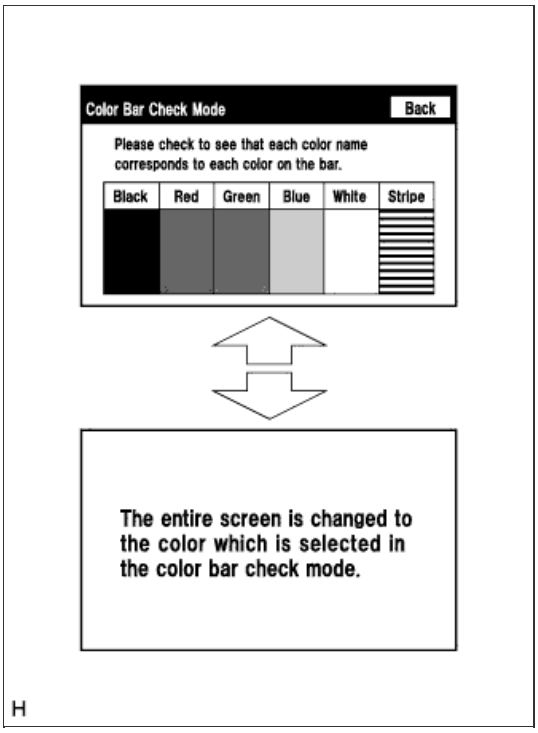
H

Text in Illustration

| | |
|---|---|
| *a | Example |

NG → Go to step 2

OK



### END

### 2.CHECK COLOR BAR (OPERATION CHECK)

a. Enter the "Color Bar Check Mode" screen. Refer to Check Color Bar in Operation Check (Click here).

b. Check that the color bars match the displayed names.

**OK:**
**Color bars match the displayed names.**

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.ADJUST SOUND QUALITY**

a. Operate the radio receiver to adjust the sound quality.

**OK:**
**Sound quality returns to normal.**

NG → Go to step 2

OK

**SYSTEM IS OK (BAD SOUND QUALITY)**

**2.COMPARE VEHICLE WITH ANOTHER VEHICLE OF SAME MODEL**

a. Compare the vehicle with another vehicle that has a normally functioning audio system. Check if there is any difference in the problem.

**OK:**
**No difference is found.**

NG → GO TO "SOUND SIGNAL CIRCUIT BETWEEN RADIO RECEIVER AND STEREO COMPONENT AMPLIFIER" (Click here)

OK

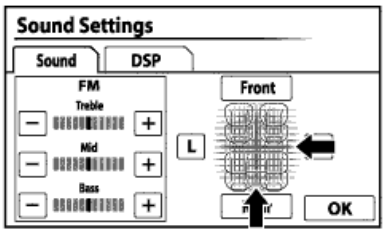
**SYSTEM IS OK (BAD SOUND QUALITY)**

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK AUDIO SETTINGS

a. Display the "Sound Settings" screen.



b. Set "Treble", "Mid" and "Bass" to the initial values and check that sound is normal.

**OK:**
**Malfunction disappears.**

**HINT:**

Sound quality adjustment measures vary according to the type of amplifier.

*a

H

**Text in Illustration**

| | |
|---|---|
| *a | Example |

NG → Go to step 2

OK →

END

### 2.COMPARE WITH ANOTHER VEHICLE OF SAME MODEL

a. Compare with another vehicle of the same model which does not have trouble to see if there is any difference in the sound quality.

**OK:**
**No difference is found.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

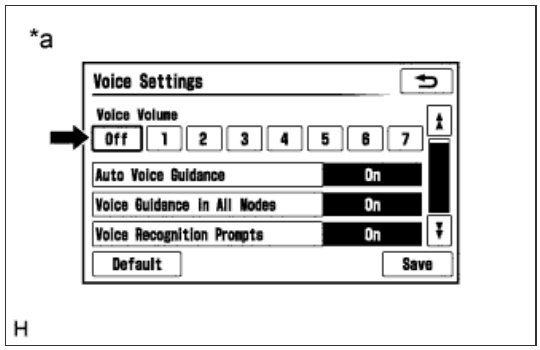
OK →

END

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK NAVIGATION SETTING



a. Display the "Voice Settings" screen.

b. Check that "Off" is not selected.

**OK:**
**"Off" is not selected.**

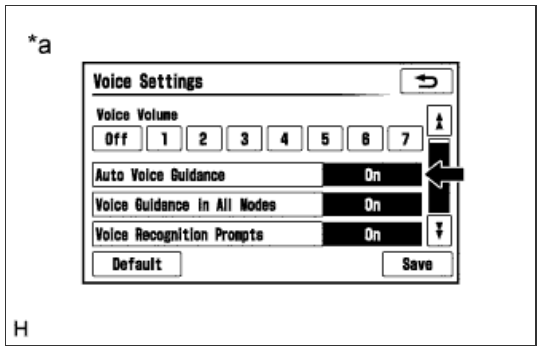
Text in Illustration

| | |
|---|---|
| *a | Example |

NG → SELECT VOICE VOLUME SETTING OTHER THAN "Off"

OK

### 2.CHECK NAVIGATION SETTING



a. Display the "Voice Settings" screen.

b. Check that "Auto Voice Guidance" is not "Off".

**OK:**
**"Auto Voice Guidance" is not "Off".**

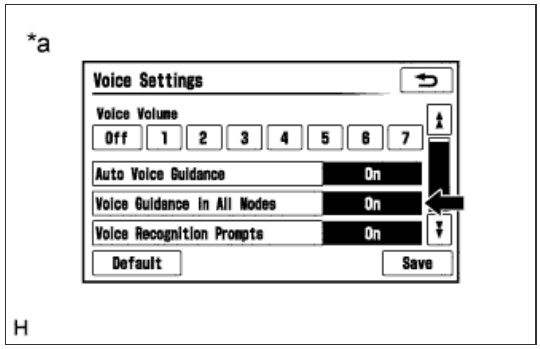
Text in Illustration

| | |
|---|---|
| *a | Example |

NG → TURN AUTO VOICE GUIDANCE "On"

OK

### 3.CHECK NAVIGATION SETTING



a. Display the "Voice Settings" screen.

b. Check that "Voice Guidance in All Modes" is not "Off".

**OK:**
**"Voice Guidance in All Modes" is not "Off".**

Text in Illustration

| | |
|---|---|
| *a | Example |

NG → TURN VOICE GUIDANCE IN ALL MODES "On"

OK

4.CHECK AUDIO FUNCTION

a. Check that sound can be heard from a front speaker.

**OK:**
**Sound can be heard.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK CONDITION

a. Refer to the owner's manual and follow its instructions to check that the voice recognition level of the system is not too low for a particular voice.

**Result**

| Result | Proceed to |
|---|---|
| System voice recognition level is low with any voice. | A |
| System voice recognition level is low only for a particular voice. | B |

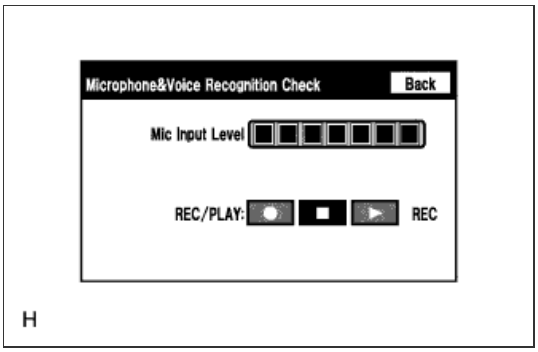
**HINT:**

System voice recognition level varies depending on voice and pronunciation. This is not a malfunction.

B → END

A

### 2.CHECK MICROPHONE (OPERATION CHECK)



a. Enter the "Microphone&Voice Recognition Check" screen. Refer to Check Mic & Voice Recognition in Operation Check (Click here).

b. When voice is input into the microphone, check that the microphone input level meter changes according to the input voice.

c. Select the recording switch and perform voice recording.

- Select the recording switch with the blower motor of the air conditioning system stopped. If an outlet of the air conditioning system is facing the microphone, noise may be recorded.
- Voice can be recorded up to 5 seconds.

d. Check that the recording indicator remains on while recording and that the recorded voice is played normally without noise or distortion.

H

**OK:**
**All check results are normal.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

### 3.REPLACE HARD DISC

a. Replace the hard disc (Click here).

b. Check that voice recognition is normal.

**OK:**
**Voice can be recognized normally.**

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK

END (HARD DISC IS DEFECTIVE)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK CURRENT CONDITION

a. Check for "Bluetooth" capable cellular phones and vehicles in the area.

**Result**

| Result | Proceed to |
|---|---|
| Another "Bluetooth" compatible cellular phone is present | A |
| Another "Bluetooth" compatible vehicle is present | B |
| None of the above | C |

B → Go to step 3

C → Go to step 4

A

### 2.CHECK USING ANOTHER CELLULAR PHONE

a. Check if the system functions using another "Bluetooth" compatible cellular phone.

**HINT:**

- **Confirm that either the same or a different version of another "Bluetooth" compatible cellular phone complies with the system.**
- **Depending on the version, some "Bluetooth" compatible cellular phones cannot be used.**

**OK:**
**System functions.**

**Result**

| Result | Proceed to |
|---|---|
| OK | A |
| NG (w/ Navigation System) | B |
| NG (w/o Navigation System) | C |

B → REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

C → REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

A

### USE "BLUETOOTH" COMPATIBLE CELLULAR PHONE (DEPENDING ON THE VERSION)

### 3.CHECK USING ANOTHER "BLUETOOTH" CAPABLE VEHICLE

a. Register the cellular phone with another vehicle and check if the system functions normally.

**HINT:**

Depending on the version, some "Bluetooth" compatible cellular phones cannot be used.

**OK:**
**System functions.**

**Result**

| Result | Proceed to |
|---|---|
| OK (w/ Navigation System) | A |
| OK (w/o Navigation System) | B |

| | |
|---|---|
| NG | C |

B → REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

C → USE "BLUETOOTH" COMPATIBLE CELLULAR PHONE

A

REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

## 4.CHECK CELLULAR PHONE

a. Check if the cellular phone is "Bluetooth" compatible.

**HINT:**

Some versions of "Bluetooth" compatible cellular phones may not function.

**OK:**

**The phone is "Bluetooth" compatible.**

NG → USE "BLUETOOTH" COMPATIBLE CELLULAR PHONE

OK

## 5.CHECK CELLULAR PHONE

a. Check if a call can be made from the cellular phone.

**HINT:**

When the battery is low, registration or directory transfer cannot be performed.

**OK:**

**A call can be made from the cellular phone.**

Result

| Result | Proceed to |
|---|---|
| OK (w/ Navigation System) | A |
| OK (w/o Navigation System) | B |
| NG | C |

B → REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

C → REPLACE CELLULAR PHONE

A

REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK OPERATION

a. Place the cellular phone close to the multi-media module receiver assembly.

b. Check if the cellular phone can be registered.

**OK:**
**The cellular phone can be registered.**

NG → Go to step 2

OK ↓

### NORMAL OPERATION

### 2.CHECK CURRENT CONDITIONS

a. Proceed to the next step according to the table below.

**Result**

| Result | Proceed to |
|---|---|
| Another "Bluetooth" compatible cellular phone is available. | A |
| Another "Bluetooth" compatible vehicle is available. | B |
| None of the above. | C |

B → Go to step 4

C → Go to step 5

A ↓

### 3.CHECK USING ANOTHER CELLULAR PHONE

a. Check if the system functions using another "Bluetooth" compatible cellular phone.

**HINT:**

- **Confirm that either the same or a different version of another "Bluetooth" compatible cellular phone complies with the system.**
- **Depending on the version, some "Bluetooth" compatible cellular phones cannot be used.**

**OK:**
**The system functions.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK ↓

### USE A "Bluetooth" COMPATIBLE CELLULAR PHONE

### 4.CHECK USING ANOTHER "Bluetooth" COMPATIBLE VEHICLE

a. Register the cellular phone with another vehicle and check if the system functions normally.

**HINT:**

Depending on the version, some "Bluetooth" compatible cellular phones cannot be used.

**OK:**

**The system functions.**

NG → ASK CUSTOMER TO UPDATE CELLULAR PHONE OR CHANGE IT TO A "Bluetooth" COMPATIBLE MODEL

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**5.CHECK CELLULAR PHONE**

a. Check if a call can be made from the cellular phone.

**HINT:**

The cellular phone is unable to call under any of the following conditions:

- **The cellular phone is locked.**
- **The phonebook is being transferred.**
- **The line is crossed.**
- **The cellular phone is outside service range.**
- **The power is off.**
- **The battery is low.**
- **The cellular phone is not connected via "Bluetooth".**

**OK:**

**A call can be made from the cellular phone.**

NG → REPAIR OR REPLACE CELLULAR PHONE

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK "BLUETOOTH" SETTING

a. Check if the "Bluetooth" settings are correct.

**OK:**
**"Bluetooth" settings are correct.**

NG → SET SETTINGS CORRECTLY

OK

### 2.CHECK CELLULAR PHONE

a. Check if the cellular phone is "Bluetooth" compatible.

**HINT:**

Some versions of "Bluetooth" compatible cellular phones may not function.

**OK:**
**Phone is "Bluetooth" compatible.**

NG → END (ONLY A "BLUETOOTH" COMPATIBLE CELLULAR PHONE CAN BE USED)

OK

### 3.CHECK SETTING

a. Check if the cellular phone functions.

**HINT:**

The cellular phone is unable to call under any of the following conditions.

- **The cellular phone is locked.**
- **The directory is being transferred.**
- **The line is crossed.**
- **Transmission is regulated.**
- **The engine is off.**
- **The cellular phone is not connected to "Bluetooth" ("Bluetooth" mark is displayed while connected).**

**OK:**
**Above conditions do not exist.**

NG → SET CORRECTLY

OK

### 4.CHECK CELLULAR PHONE

a. Check if the cellular phone can make calls.

**HINT:**

When the battery is low, calls cannot be made or received.

**OK:**
**Cellular phone can make calls.**

NG → REPLACE CELLULAR PHONE

OK

5.CHECK RECEPTION

a. Set the cellular phone so that it can receive calls.

b. Place the cellular phone close to the multi-display.

c. Check if the cellular phone has reception according to the multi-display.

**OK:**
**Cellular phone has reception.**

**Result**

| Result | Proceed to |
|---|---|
| OK | A |
| NG (w/ Navigation System) | B |
| NG (w/o Navigation System) | C |

B → REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

C → REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

A

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK "Bluetooth" SETTINGS

a. Check if the cellular phone is registered as a connected device and the "Bluetooth" settings are correct.

**OK:**
**The cellular phone is registered as a connected device and "Bluetooth" settings are correct.**

NG → SET SETTINGS CORRECTLY

OK ↓

### 2.CHECK SETTINGS AND CONDITIONS

a. Check the cellular phone functions.

**HINT:**

The cellular phone is unable to call under any of the following conditions:

- **The cellular phone is locked.**
- **The phonebook is being transferred.**
- **The line is crossed.**
- **The cellular phone is outside service range.**
- **The power is off.**
- **The battery is low.**
- **The cellular phone is not connected via "Bluetooth".**

**OK:**
**None of the above conditions exist.**

NG → SET CORRECTLY

OK ↓

### 3.CHECK RECEPTION

a. Place the cellular phone close to the multi-media module receiver assembly.

b. Set the cellular phone so that it can receive calls.

c. Check if the cellular phone has reception according to the multi-media module receiver assembly.

**OK:**
**The cellular phone has reception.**

NG → Go to step 4

OK ↓

END

### 4.CHECK CELLULAR PHONE

a. Check if the cellular phone can make a call.

**HINT:**

The purpose of this step is to inspect the cellular phone when it is not connected to the vehicle.

**OK:**
**Cellular phone can make a call.**

NG → REPAIR OR REPLACE CELLULAR PHONE

OK

**5.RESTART CELLULAR PHONE**

a. Restart the cellular phone.

b. Register the cellular phone as a connected device again and check that the malfunction disappears.

**OK:**
**Malfunction disappears.**

NG → Go to step 6

OK

**END**

**6.CHECK CELLULAR PHONE**

a. Check if the cellular phone is "Bluetooth" compatible.

**HINT:**

Some versions of "Bluetooth" compatible cellular phones may not function.

**OK:**
**The phone is "Bluetooth" compatible.**

NG → END (ONLY A "Bluetooth" COMPATIBLE CELLULAR PHONE CAN BE USED)

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

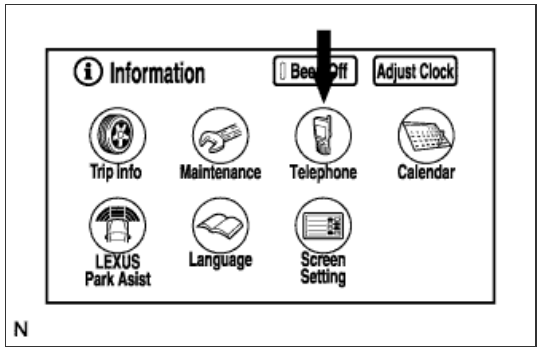
**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK SURROUNDING CONDITION

a. Check if the cellular phone can make calls in a certain location.

**OK:**
**Cellular phone can make calls.**

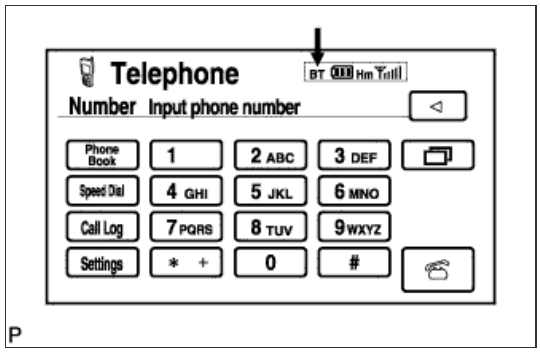


NG → END (CELLULAR PHONES CAN ONLY FUNCTION IN CELLULAR SERVICE AREAS)

OK

### 2.CHECK RECEPTION

a. Enter the "Information" screen by pressing the "INFO" switch.



b. Select "Telephone".

c. Check the "BT" mark.

**Result**

| Result | Proceed to |
|---|---|
| Yellow color | A |
| Blue color (w/ Navigation System) | B |
| Blue color (w/o Navigation System) | C |
| No connection mark is displayed | D |

B → REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

C → REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

D → SELECT REGISTERED CELLULAR PHONE OR REGISTER "BLUETOOTH" COMPATIBLE PHONE

A

BRING CELLULAR PHONE TO LOCATION WHERE BT MARK TURNS BLUE

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK CELLULAR PHONE

a. Check if the voice on the other side can be heard using a cellular phone.

**OK:**
**Voice can be heard.**

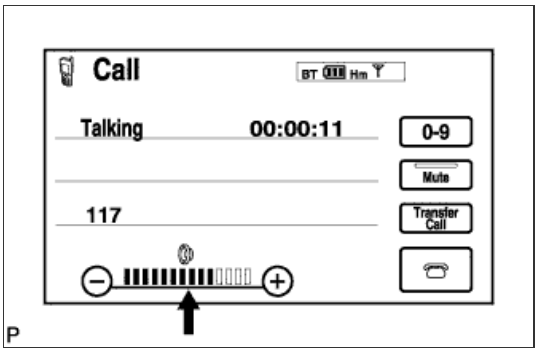
NG → REPLACE CELLULAR PHONE

OK

### 2.CHECK NAVIGATION SYSTEM

a. Check that voice guidance can be heard from the driver side speaker.

**OK:**
**Voice guidance can be heard.**



NG → GO TO "VOICE GUIDANCE DOES NOT FUNCTION" (Click here)

OK

### 3.CHECK SETTINGS

a. Check if the volume level is set to a low level on the Call screen.

**OK:**
**The level is not low.**

NG → SET VOLUME TO HIGH

OK

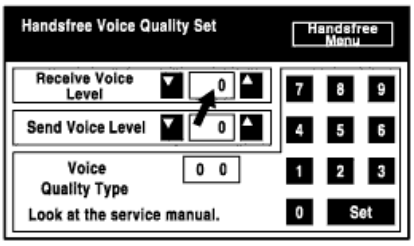
### 4.CHECK SETTINGS

a. Enter the "Handsfree Voice Quality Set" mode (Click here).

b. Check if the Receive Voice Level is set to "0".

**HINT:**

The Receive Voice Level can be set to 11 different levels, -5 to +5, with a 3 dB difference.



c. Check if the Receive Voice Level is set to the minimum or maximum level.

**HINT:**

When the Receive Voice Level is set to the minimum or maximum level, the sound may be distorted.

**OK:**

**The Receive Voice Level is set to "0".**

P

NG → SET RECEIVE VOICE LEVEL TO "0"

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK CELLULAR PHONE

a. Check if the other caller's voice can be heard properly.

**OK:**
**Voice can be heard properly.**

**HINT:**

The purpose of this step is to inspect the cellular phone when it is not connected to the vehicle.

NG → REPAIR OR REPLACE CELLULAR PHONE

OK

### 2.CHECK AUDIO AND VISUAL SYSTEM

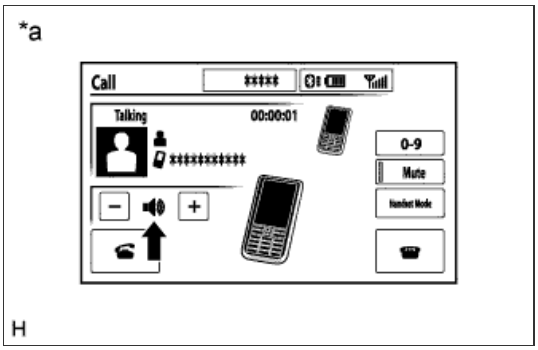
a. Check that audio and visual system sound can be heard from the front speaker.

**OK:**
**Sound from the audio system can be heard.**

NG → GO TO "VOICE GUIDANCE DOES NOT FUNCTION" IN PROBLEM SYMPTOMS TABLE (Click here)

OK

### 3.CHECK SETTINGS



a. Display the "Call" screen.

b. Check that the volume level is not set to low.

**OK:**
**The level is not set to low.**

**Text in Illustration**

| | |
|---|---|
| *a | Example |

NG → SET VOLUME TO HIGH

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

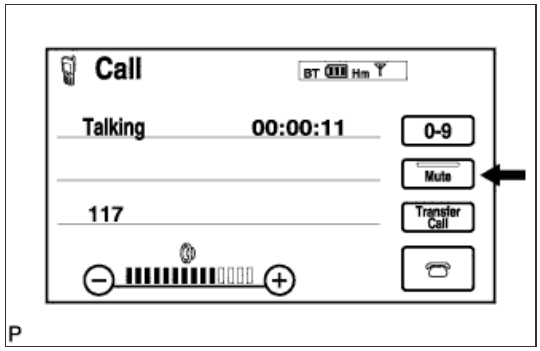
**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK CELLULAR PHONE

a. Check if the other side can hear your voice properly.

**OK:**
**Your voice can be heard correctly.**



NG → REPLACE CELLULAR PHONE

OK

### 2.CHECK SETTINGS

a. Check if the mute switch is on.

**OK:**
**Mute switch is not on.**

P

NG → TURN MUTE SWITCH OFF

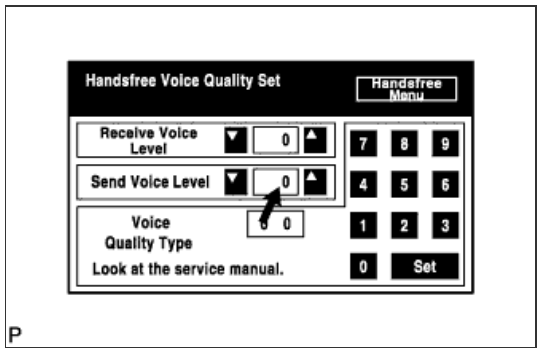
OK

### 3.CHECK SETTINGS

a. Enter the "Handsfree Voice Quality Set" mode (Click here).

b. Check if the Send Voice Level is set to "0".

**HINT:**



The Send Voice Level can be set to 11 different levels, -5 to +5, with a 3 dB difference.

c. Check if the Send Voice Level is set to the minimum or maximum level.

**HINT:**

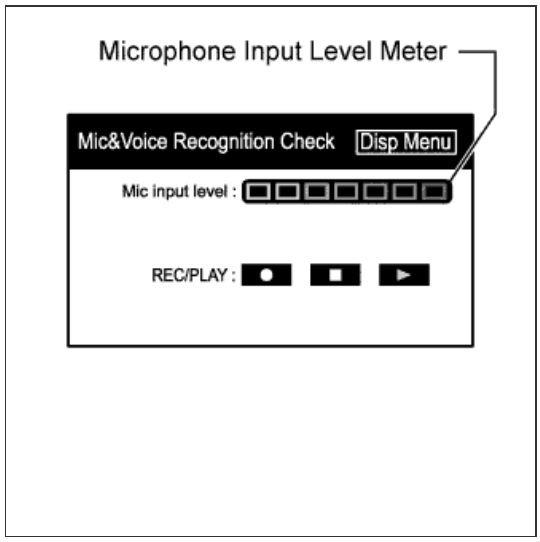
When the Send Voice Level is set to the minimum or maximum level, the sound may be distorted.

**OK:**
**The Send Voice Level is set to "0".**

P

NG → SET SEND VOICE LEVEL TO "0"

OK



### 4.CHECK MICROPHONE (NAVIGATION CHECK MODE)

a. Enter the "Mic & Voice Recognition Check" mode ( Click here).

b. When a voice is input into the microphone, check that the microphone input level meter changes according to the input voice.

**OK:**

**All check results are normal.**

**Result**

| Result | Proceed to |
|---|---|
| OK (w/ Navigation System) | A |
| OK (w/o Navigation System) | B |
| NG | C |

**B** → REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

**C** → GO TO "MICROPHONE CIRCUIT BETWEEN OVERHEAD J/B AND MULTI-DISPLAY" (Click here)

**A**

REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

**HINT:**

If an outlet of the air conditioning system is facing the microphone, noise may be recorded and the other caller may not be able to hear your voice properly.

### 1.CHECK CELLULAR PHONE

a. Check if the other caller can hear your voice properly.

**OK:**
**Your voice can be heard properly.**

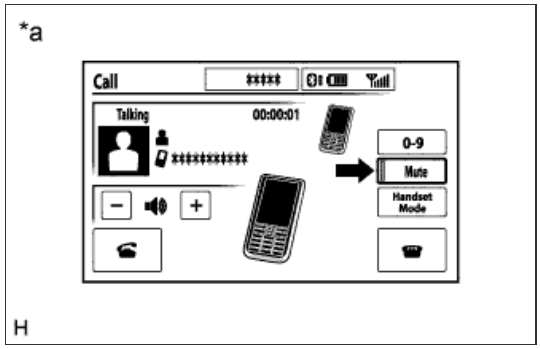
**HINT:**

The purpose of this step is to inspect the cellular phone when it is not connected to the vehicle.

NG → REPLACE CELLULAR PHONE

OK

### 2.CHECK SETTINGS



a. Display the "Call" screen.

b. Check if the "Mute" switch is set to on.

**OK:**
**"Mute" switch is not set to on.**

Text in Illustration

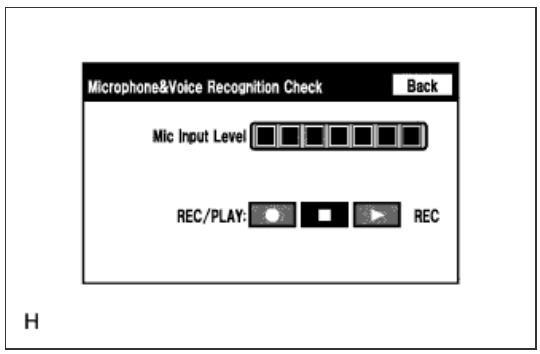
| | |
|---|---|
| *a | Example |

NG → TURN "Mute" SWITCH OFF

OK

### 3.CHECK MICROPHONE (OPERATION CHECK)

a. Enter the "Microphone&Voice Recognition Check" screen. Refer to Check Mic & Voice Recognition in Operation Check (Click here).



b. When voice is input into the microphone, check that the microphone input level meter changes according to the input voice.

c. Select the recording switch and perform voice recording.

- Select the recording switch with the blower motor of the air conditioning system stopped. If an outlet of the air conditioning system is facing the microphone, noise may be recorded.
- Voice can be recorded up to 5 seconds.

d. Check that the recording indicator remains on while recording and that the recorded voice is played normally without noise or distortion.

**OK:**

All check results are normal.

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK PORTABLE PLAYER SETTINGS

a. Check the portable player settings.

i. Check that the volume is not set to "0".

ii. Check that the mute is off.

b. Check that the sound of the portable player can be heard from the speakers.

**OK:**
**Sound of the portable player can be heard from the speakers.**

NG → Go to step 2

OK ↓

END

### 2.CHECK AUDIO SETTINGS

a. Check the audio settings.

i. Check that the volume is not set to "0".

b. Check that the sound of the portable player can be heard from the speakers.

**OK:**
**Sound of the portable player can be heard from the speakers.**

NG → Go to step 3

OK ↓

END

### 3.CHECK USING ANOTHER "Bluetooth" AUDIO COMPATIBLE VEHICLE OF SAME MODEL

a. Check that the sound of the portable player can be heard from the speakers on another "Bluetooth" audio compatible vehicle of the same model.

**OK:**
**Sound of the portable player can be heard from the speakers.**

NG → MALFUNCTION IN PORTABLE PLAYER

OK ↓

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

**HINT:**

Even if the portable player can play audio content, it may not be able to play via the in-vehicle device. This does not necessarily indicate a malfunction of the in-vehicle device.

### 1.CHECK OPERATION

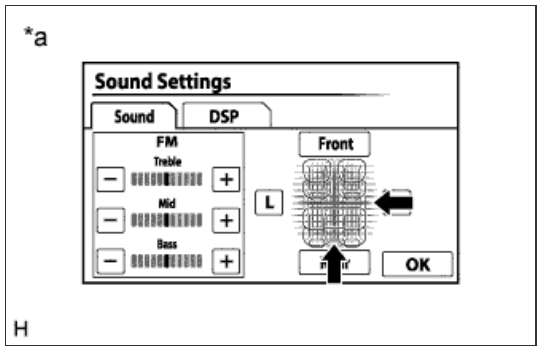
a. Check if the portable player operates normally.

**OK:**
**The portable player operates normally.**

NG → MALFUNCTION IN PORTABLE PLAYER

OK

### 2.CHECK AUDIO SETTINGS



a. Enter the "Sound Settings" screen by pressing the "Sound" switch on the audio display.

b. Set volume, fader and balance to the initial values and check that sound is normal.

**OK:**
**Audio system returns to normal.**

**HINT:**

Sound quality adjustment measures vary according to the type of the amplifier.

**Text in Illustration**

| | |
|---|---|
| *a | Example |

NG → SET VOLUME TO HIGH AND TURN MUTE OFF

OK

### 3.CHECK USING ANOTHER "Bluetooth" AUDIO COMPATIBLE VEHICLE OF SAME MODEL

a. Check if the "Bluetooth" audio player plays normally on another "Bluetooth" audio compatible vehicle of the same model.

**OK:**
**"Bluetooth" audio plays normally.**

NG → MALFUNCTION IN PORTABLE PLAYER

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

# AUDIO AND VISUAL SYSTEM > Portable Player cannot be Operated Using In-vehicle Device or Track Information is not Displayed on In-vehicle Device

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.CHECK USING ANOTHER "Bluetooth" AUDIO COMPATIBLE VEHICLE OF SAME MODEL**

a. Check if track information is displayed normally on another "Bluetooth" audio compatible vehicle of the same model.

**OK:**
**Track information is displayed normally.**

NG → **PORTABLE PLAYER IS NOT COMPATIBLE**

OK ↓

**PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)**

**for Preparation** Click here

## INSPECTION PROCEDURE

**HINT:**

- **Perform this check with the portable player volume set at an appropriate level.**
- **Make sure that there are no obstructions between the portable player and multi-media module receiver assembly that may block signals, and that the portable player and multi-media module receiver assembly are not excessively far apart.**
- **Make sure that devices other than the multi-media module receiver assembly are not connected to the portable player.**
- **Make sure that there is no interference from a wireless LAN, etc.**

**1.CHECK USING ANOTHER "Bluetooth" AUDIO COMPATIBLE VEHICLE OF SAME MODEL**

a. Check that the same problem does not occur in the sound heard from the speakers on another "Bluetooth" audio compatible vehicle of the same model.

**OK:**
**The same problem does not occur in the sound heard from the speakers.**

NG → **MALFUNCTION IN PORTABLE PLAYER**

OK

**2.REMOVE ADDITIONAL DEVICES WHICH USE RADIO WAVES**

a. Remove additional devices which use radio waves.

b. Play the portable player and check that the same problem does not occur in the sound heard from the speakers.

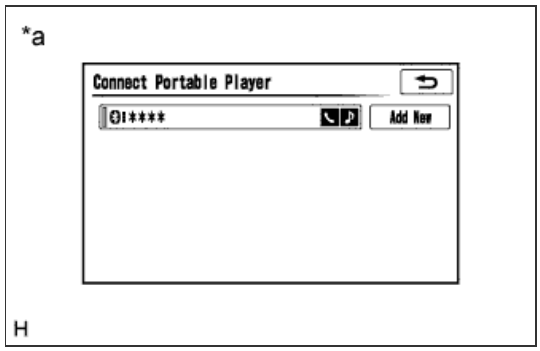
**OK:**
**The same problem does not occur in the sound heard from the speakers.**

NG → **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)**

OK

**END**

**for Preparation** Click here



## INSPECTION PROCEDURE

**HINT:**

Some versions of "Bluetooth" compatible audio players may not function, or the function may be limited using the multi-media module receiver assembly, even if the portable audio player itself can play files (Click here).

### 1.CHECK CONNECTED DEVICE SETTINGS

a. Display the "Select Portable Player" screen and check if the portable player is registered as a connected device.

**NOTICE:**

If a cellular phone is used as a portable player, it must be registered independently from the registration that is performed for the hands-free system.

**HINT:**

Only 2 portable players can be registered.

**Text in Illustration**

| | |
|---|---|
| *a | Example |

**Result**

| Result | Proceed to |
|---|---|
| The portable player is registered as a connected device. | A |
| The portable player is not registered as a connected device. | B |

B → REGISTER PORTABLE PLAYER AS CONNECTED DEVICE

A

### 2.CHECK SYMPTOMS

a. Check the connection condition between the portable player and multi-media module receiver assembly.

**HINT:**
**The portable player cannot be connected when any of the following conditions are met:**

- **The portable player is connected to another device.**
- **The portable player is connected to the multi-media module receiver assembly using the hands-free function.**
- **The multi-media module receiver assembly has cleared the portable player registration.**
- **The portable player is off.**

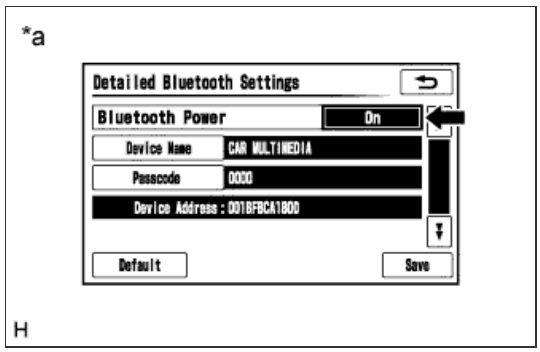
**Result**

| Result | Proceed to |
|---|---|
| The portable player cannot be connected automatically. | A |
| The portable player cannot be connected manually. | B |

B → Go to step 4

A

## 3.CHECK AUTOMATIC CONNECTION SETTINGS



a. Display the "Detailed Bluetooth settings" screen and check automatic connection settings of the "Bluetooth" audio.

i. Check if "On" is displayed for "Bluetooth Power" on the "Detailed Bluetooth settings" screen.

**OK:**
**"On" is displayed for "Bluetooth Power".**

**Text in Illustration**

| | |
|---|---|
| *a | Example |

NG → CHANGE "Bluetooth Power" TO "ON"

OK

## 4.CHECK PORTABLE PLAYER STATUS

a. Check the status of the portable player.

i. Check that the portable player is in standby mode.

ii. Check that the portable player is not connected to another device (headphones etc.).

**OK:**
**The portable player is not in standby mode and not connected to another device (headphones etc.).**

NG → TAKE PORTABLE PLAYER OUT OF STANDBY MODE AND DISCONNECT OTHER DEVICES (HEADPHONES etc.)

OK

## 5.CHECK USING ANOTHER "Bluetooth" AUDIO COMPATIBLE VEHICLE OF SAME MODEL

a. Check if the portable player can be connected manually/automatically on another "Bluetooth" audio compatible vehicle of the same model.

**OK:**
**The portable player can be connected manually/automatically.**

NG → PORTABLE PLAYER IS NOT COMPATIBLE

OK

## 6.REMOVE ADDITIONAL DEVICES WHICH USE RADIO WAVES

a. Remove additional devices which use radio waves.

b. Check if the portable player can be connected manually/automatically.

**OK:**
**The portable player can be connected manually/automatically.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

```
END
```

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.DELETE REGISTERED DEVICE**

a. Check if a registered portable player can be deleted normally.

**OK:**
**Registered portable player can be deleted normally.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

**END**

**for Preparation** Click here

## INSPECTION PROCEDURE

**HINT:**

Some versions of "Bluetooth" compatible audio players may not function, or the function may be limited using the multi-media module receiver assembly, even if the portable audio player itself can play files (Click here).

### 1.CHECK THAT PORTABLE PLAYER IS "Bluetooth" AUDIO COMPATIBLE

a. Check if the portable player is "Bluetooth" audio compatible.

**Result**

| Result | Proceed to |
|---|---|
| The portable player is "Bluetooth" audio compatible. | A |
| The portable player is not "Bluetooth" audio compatible. | B |

B → USE A "Bluetooth" AUDIO COMPATIBLE PORTABLE PLAYER

A

### 2.CHECK CONNECTION PROCEDURE OF CONNECTED DEVICE

a. Referring to the owner's manual, correctly register the portable player.

b. Check that the portable player can be registered as a connected device.

**HINT:**
**The portable player cannot be registered when any of the following conditions are met:**

- **The A2DP (Advanced Audio Distribution Profile) is not used when registering a cellular phone.**
- **A different portable player registration remains in the multi-media module receiver assembly.**
- **A different multi-media module receiver assembly registration remains in the portable player.**
- **The portable player is off.**

**OK:**
**The portable player has been registered as a connected device.**

NG → Go to step 3

OK

END

### 3.CHECK USING ANOTHER "Bluetooth" AUDIO COMPATIBLE VEHICLE OF SAME MODEL

a. Check if the portable player can be registered normally on another "Bluetooth" audio compatible vehicle of the same model.

**OK:**
**The portable player can be registered.**

NG → MALFUNCTION IN PORTABLE PLAYER

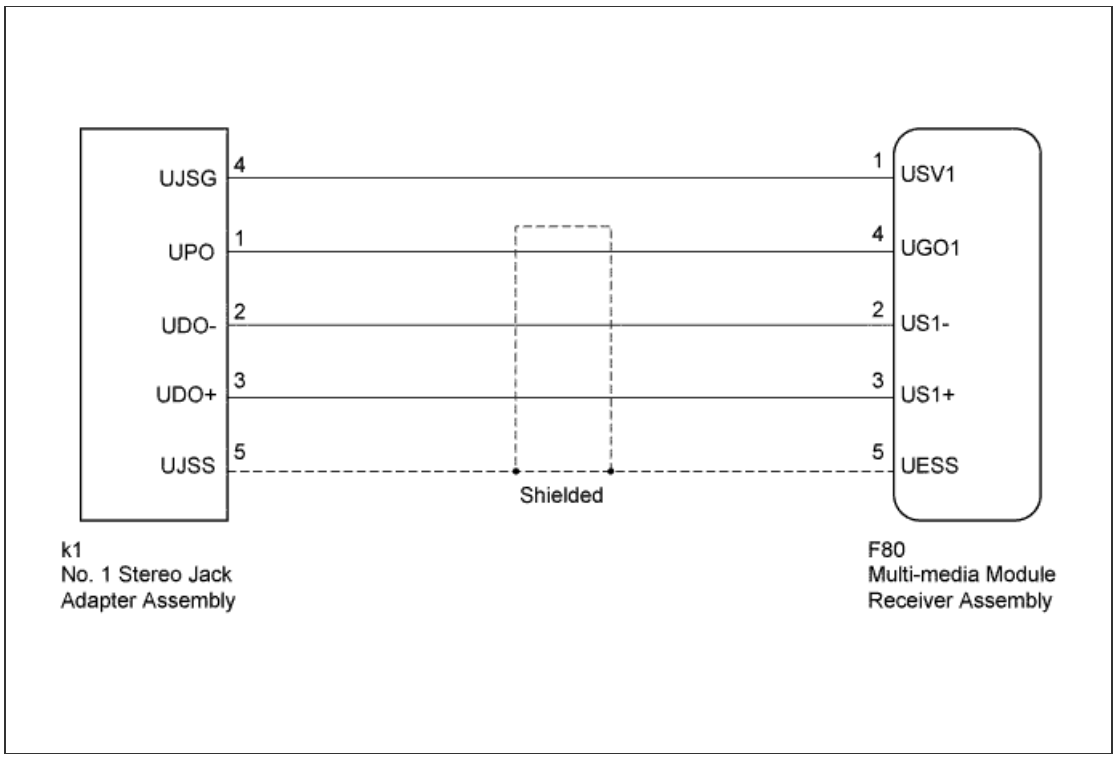
OK

### 4.REMOVE ADDITIONAL DEVICES WHICH USE RADIO WAVES

a. Remove additional devices which use radio waves.

b. Check that the portable player can be registered as a connected device.

**OK:**
**The portable player can be registered.**



NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

END

**for Preparation** Click here

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**HINT:**

- **When a large amount of data is in a USB device, it may take a while before play begins.**
- **When using a USB device, files that are copy protected or encrypted due to copyright reasons cannot be played.**
- **When files are not played in the sorted order, perform the following procedure before inspection.**
  1. **Add numbers in front of the file names.**
  2. **Put the files in a folder and copy the folder data to the USB device.**

### 1.CHECK USB DEVICE OR "iPod"

a. Disconnect the USB device or "iPod" from the No. 1 stereo jack adapter assembly.

b. Check if playable files are present on the USB device or "iPod".

**HINT:**

Refer to System Description for playable files ( Click here).

c. Check if the USB device is a compatible format or "iPod" is a compatible version.

**HINT:**

Refer to System Description for compatible formats and versions ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| No playable files exist, or incompatible device format or version. | A |
| Playable files exist, and compatible device format or version. | B |

B → Go to step 2

A

USB DEVICE FORMAT WAS INCOMPATIBLE, "iPod" VERSION WAS INCOMPATIBLE, OR NO PLAYABLE FILES PRESENT

2.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - NO. 1 STEREO JACK ADAPTER ASSEMBLY)

a. Disconnect the F80 multi-media module receiver assembly connector.

b. Disconnect the k1 No. 1 stereo jack adapter assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

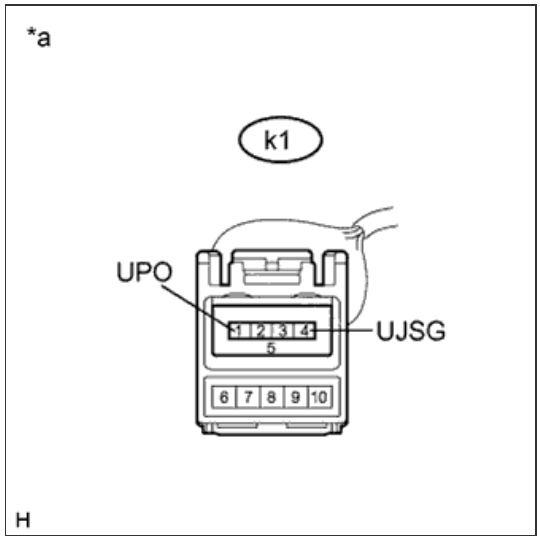
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F80-1 (USV1) - k1-4 (UJSG) | Always | Below 1 Ω |
| F80-2 (US1-) - k1-2 (UDO-) | Always | Below 1 Ω |
| F80-3 (US1+) - k1-3 (UDO+) | Always | Below 1 Ω |
| F80-4 (UGO1) - k1-1 (UPO) | Always | Below 1 Ω |
| F80-5 (UESS) - k1-5 (UJSS) | Always | Below 1 Ω |
| F80-1 (USV1) - Body ground | Always | 10 kΩ or higher |
| F80-2 (US1-) - Body ground | Always | 10 kΩ or higher |
| F80-3 (US1+) - Body ground | Always | 10 kΩ or higher |
| F80-4 (UGO1) - Body ground | Always | 10 kΩ or higher |
| F80-5 (UESS) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3.CHECK MULTI-MEDIA MODULE RECEIVER ASSEMBLY

a. Reconnect the multi-media module receiver assembly connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| k1-1 (UPO) - k1-4 (UJSG) | Engine switch on (ACC) | 4.5 to 5.5 V |

**Text in Illustration**

| | |
|---|---|
| *a | Front view of wire harness connector (to No. 1 Stereo Jack Adapter Assembly) |

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK

4.FORMAT USB DEVICE OR RESTORE "iPod" AND RECHECK

a. Delete all files in the USB device or "iPod" and format/restore it.

b. Save the data again and check if it can be played on the in-vehicle device.

**NOTICE:**

Formatting a USB device or restoring an "iPod" erases all music on the device.

Ensure that backup music data is available before performing this operation.

**OK:**
**Malfunction disappears.**

NG → Go to step 5

OK

END

5.REPLACE USB DEVICE OR "iPod"

a. Turn the engine switch off.

**HINT:**

When this malfunction occurs, it is necessary to turn off the engine switch to make it possible for the vehicle to recognize a new device when it is connected.

b. Turn the engine switch on (ACC).

c. Connect a known good USB device or "iPod" to the No. 1 stereo jack adapter assembly.

**HINT:**

- **If the malfunction occurred when a USB device was in use, use another USB device for the inspection. If the malfunction occurred when an "iPod" was in use, use another "iPod" for the inspection.**
- **Refer to System Description for compatible formats and versions (Click here).**

NEXT

6.CHECK USB DEVICE OR "iPod"

a. Check if the USB device or "iPod" is recognized by the multi-media module receiver assembly, or if information such as track, artist and album names are displayed on the screen.

**OK:**
**USB device or "iPod" is recognized or track information such as track, artist and album names are displayed.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

USB DEVICE OR "iPod" WAS INCOMPATIBLE OR DEFECTIVE

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK DISPLAY SETTING

a. Check that the display is not in "Screen Off" mode.

**OK:**
**The display setting is not in "Screen Off" mode.**

NG → CHANGE SCREEN TO SCREEN ON MODE

OK

### 2.CHECK IMAGE QUALITY SETTING

a. Check that the screen color quality can be set.

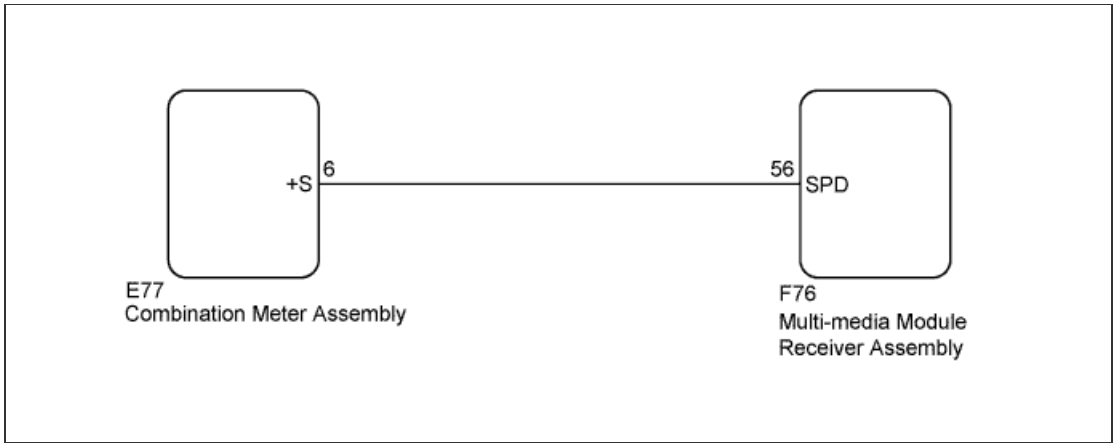
**OK:**
**Setting is possible.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

SET SCREEN COLOR QUALITY TO NORMAL

**for Preparation** Click here



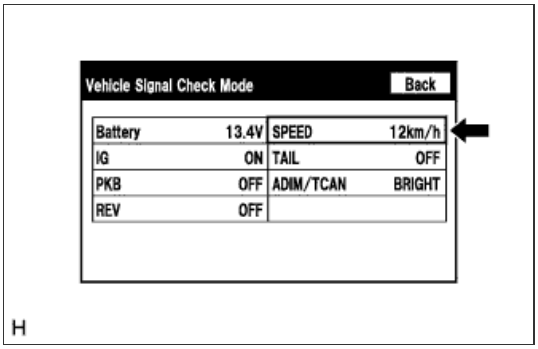
## DESCRIPTION

The multi-media module receiver assembly receives a vehicle speed signal from the combination meter assembly for DVD viewing restriction while driving, parallel parking mode of the parking assist monitor system, etc.

**HINT:**

- **A voltage of 12 V or 5 V is output from each ECU and then input to the combination meter assembly. The signal is changed to a pulse signal at the transistor in the combination meter assembly. Each ECU controls the respective system based on the pulse signal.**
- **If a short occurs in any of the ECUs or in the wire harness connected to an ECU, all systems in the following diagram will not operate normally.**

## WIRING DIAGRAM



## INSPECTION PROCEDURE

### 1.CHECK VEHICLE SIGNAL (OPERATION CHECK)

a. Enter the "Vehicle Signal Check Mode" screen. Refer to Check Vehicle Signal Check Mode in Operation Check (Click here).

b. While driving the vehicle, compare the "SPEED" indicator to the reading on the speedometer. Check if these readings are almost equal.

**HINT:**

The combination meter assembly receives the vehicle speed signal from the skid control ECU via CAN communication. Therefore, perform the following inspection referring to values on the Data List of the skid control ECU because it is the source of the vehicle speed signal.

**OK:**

**Vehicle speed displayed on the "Vehicle Signal Check Mode" screen is almost the same as the actual vehicle speed measured using the intelligent tester (Click here).**

**NG** → **Go to step 2**

**OK**

**REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)**

### 2.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - COMBINATION METER ASSEMBLY)

a. Disconnect the F76 multi-media module receiver assembly connector.

b. Disconnect the E77 combination meter assembly connector.

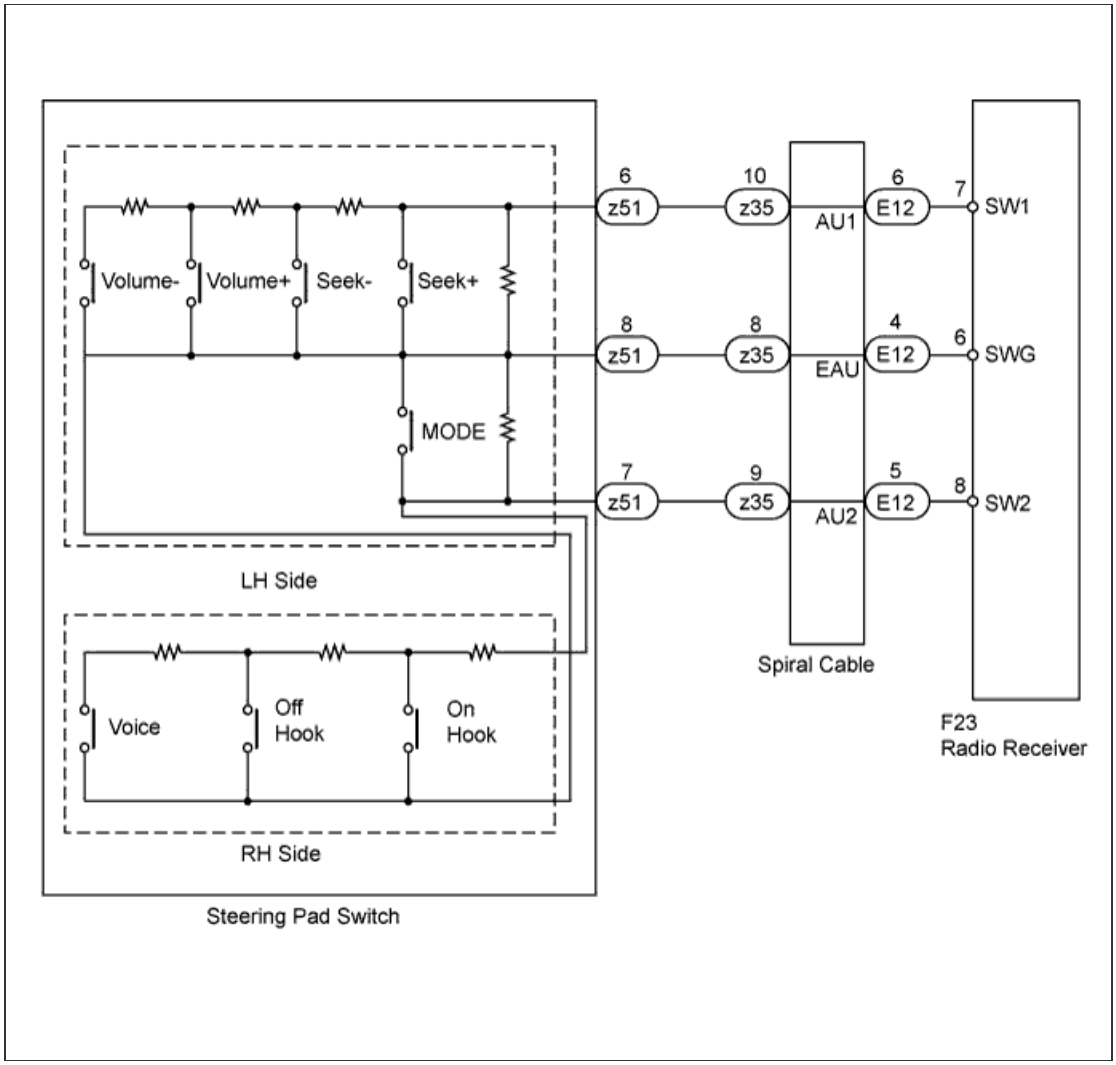
c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-56 (SPD) - E77-6 (+S) | Always | Below 1 Ω |
| F76-56 (SPD) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

**for Preparation** Click here

## DESCRIPTION

This circuit sends an operation signal from the steering pad switch to the radio receiver.
If there is an open in the circuit, the navigation system cannot be operated using the steering pad switch.
If there is a short in the circuit, the resulting condition is the same as if the switch were continuously depressed. Therefore, the navigation system cannot be operated using the steering pad switch, and the navigation system itself cannot function.

## WIRING DIAGRAM

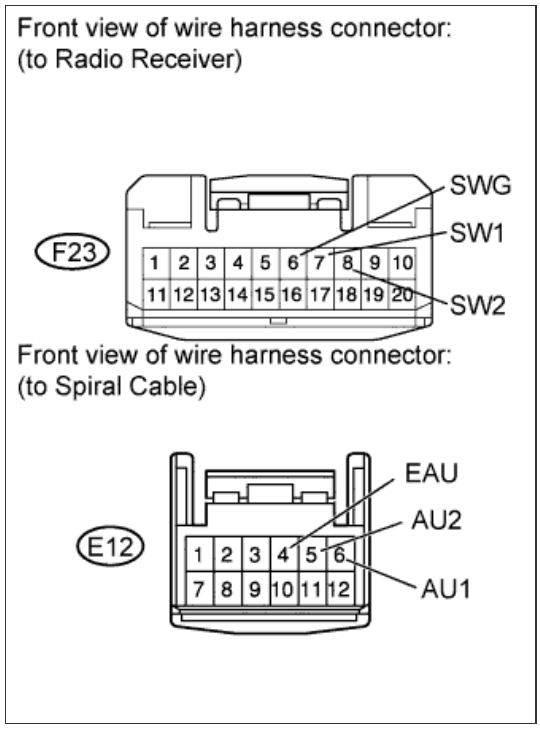
## INSPECTION PROCEDURE

**CAUTION:**

The vehicle is equipped with an SRS (Supplemental Restraint System) which includes components such as airbags. Before servicing (including removal or installation of parts), be sure to read the Precaution for the SRS (Click here).

### 1.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - SPIRAL CABLE)

a. Disconnect the F23 receiver connector.



b. Disconnect the E12 cable connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

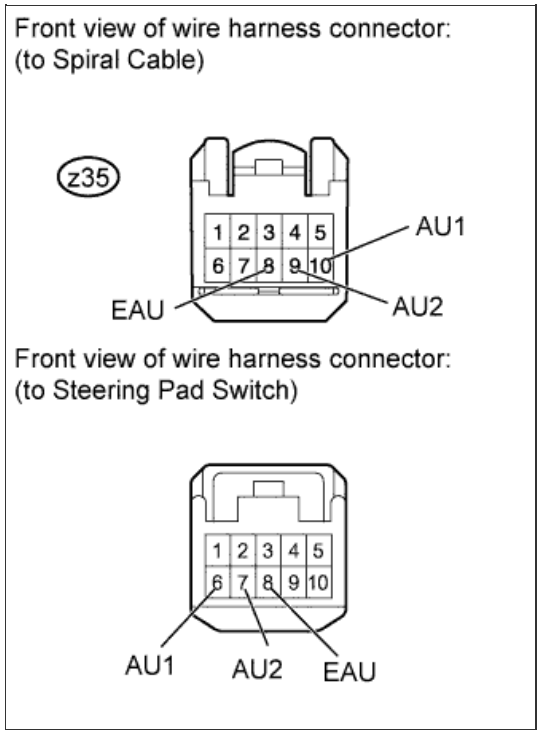
| | | Specified |
|---|---|---|

| Tester Connection | Condition | Condition |
|---|---|---|
| F23-8 (SW2) - E12-5 (AU2) | Always | Below 1 Ω |
| F23-6 (SWG) - E12-4 (EAU) | | |
| F23-7 (SW1) - E12-6 (AU1) | | |
| F23-8 (SW2) - Body ground | Always | 10 kΩ or higher |
| F23-6 (SWG) - Body ground | | |
| F23-7 (SW1) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 2.CHECK NO. 1 SWITCH WIRE

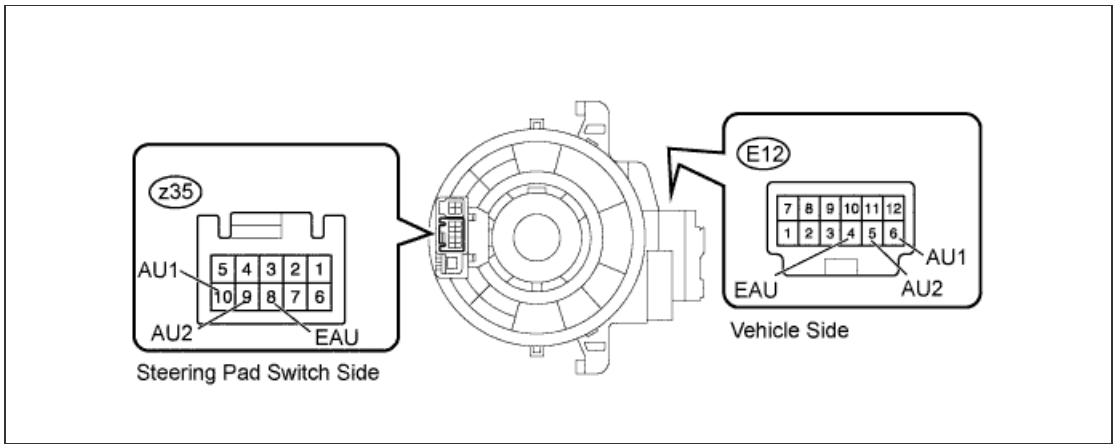


a. Disconnect the z35 cable connector.

b. Disconnect the switch connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**



| Tester Connection | Condition | Specified Condition |
|---|---|---|
| z35-8 (EAU) - 8 (EAU) | Always | Below 1 Ω |
| z35-9 (AU2) - 7 (AU2) | | |
| z35-10 (AU1) - 6 (AU1) | | |

NG → REPLACE NO. 1 SWITCH WIRE

OK

## 3.INSPECT SPIRAL CABLE SUB-ASSEMBLY

a. Disconnect the z35 and E12 cable connectors.

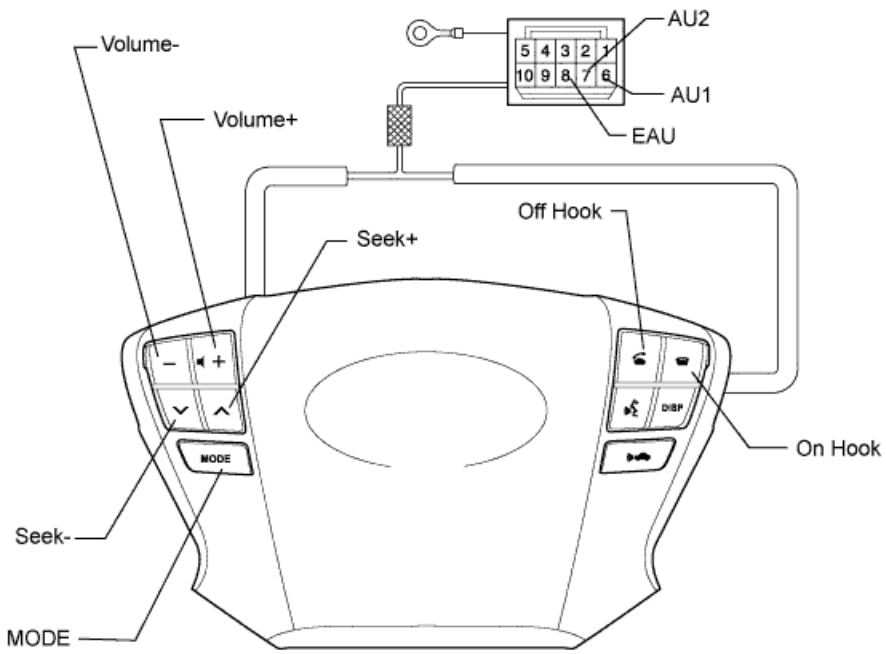
b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| E12-4 (EAU) - z35-8 (EAU) | Spiral cable is turned 2.5 rotations counterclockwise | Below 3 Ω |
| | Spiral cable is centered | |
| | Spiral cable is turned 2.5 rotations clockwise | |
| E12-5 (AU2) - z35-9 (AU2) | Spiral cable is turned 2.5 rotations counterclockwise | Below 3 Ω |
| | Spiral cable is centered | |
| | Spiral cable is turned 2.5 rotations clockwise | |
| E12-6 (AU1) - z35-10 (AU1) | Spiral cable is turned 2.5 rotations counterclockwise | Below 3 Ω |
| | Spiral cable is centered | |
| | Spiral cable is turned 2.5 rotations clockwise | |

**CAUTION:**

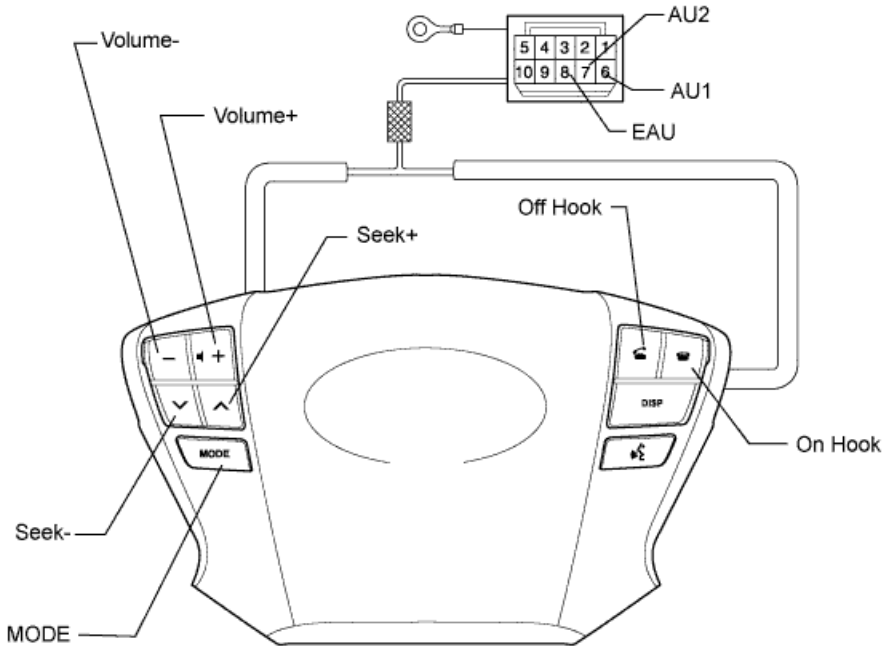
The spiral cable is an important part of the SRS airbag system. Incorrect removal or installation of the spiral cable may prevent the airbag from deploying. Be sure to read the Precaution for the SRS (Click here).



NG → REPLACE SPIRAL CABLE SUB-ASSEMBLY (Click here)

OK

**4.INSPECT STEERING PAD SWITCH**



a. Disconnect the z51 switch connector.

w/ Dynamic Radar Cruise Control System:

T

w/o Dynamic Radar Cruise Control System:

T

b. Measure the resistance according to the value(s) in the table below.

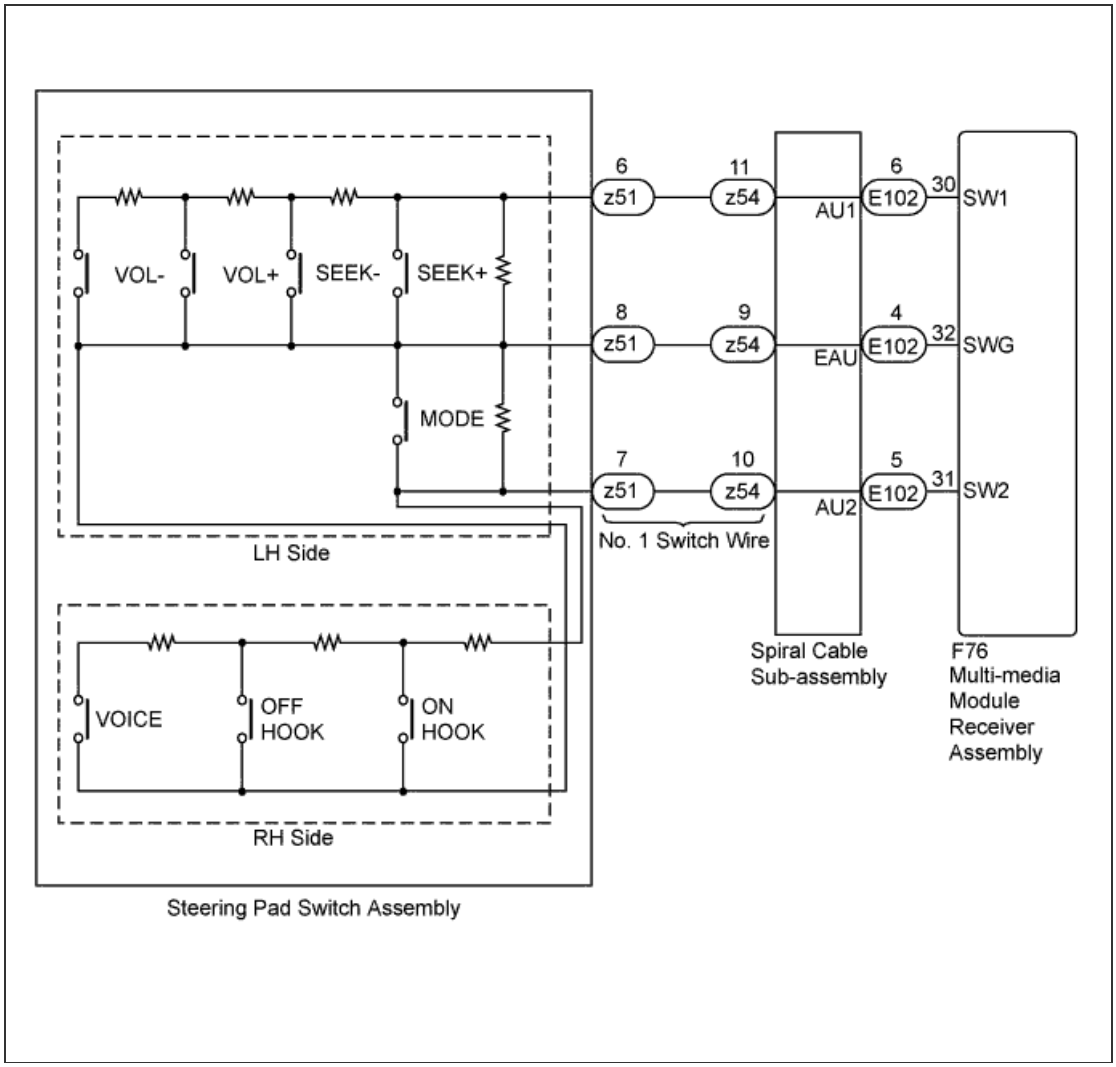
**Standard Resistance:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| 6 (AU1) - 8 (EAU) | No switch is pushed | 100 kΩ |

| | | |
|---|---|---|
| 6 (AU1) - 8 (EAU) | Seek+ switch pushed | Below 2.5 Ω |
| 6 (AU1) - 8 (EAU) | Seek- switch pushed | 329 Ω |
| 6 (AU1) - 8 (EAU) | Volume+ switch pushed | 1000 Ω |
| 7 (AU1) - 8 (EAU) | Volume- switch pushed | 3110 Ω |
| 7 (AU2) - 8 (EAU) | No switch is pushed | 100 kΩ |
| 7 (AU2) - 8 (EAU) | MODE switch pushed | Below 2.5 Ω |
| 7 (AU2) - 8 (EAU) | On hook switch pushed | 329 Ω |
| 7 (AU2) - 8 (EAU) | Off hook switch pushed | 1000 Ω |
| 7 (AU2) - 8 (EAU) | Voice switch pushed | 3110 Ω |

NG → REPLACE STEERING PAD (Click here)

OK



PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## DESCRIPTION

This circuit sends an operation signal from the steering pad switch assembly to the multi-media module receiver assembly.
If there is an open in the circuit, the audio system cannot be operated using the steering pad switch assembly.
If there is a short in the circuit, the same condition as when a switch is continuously depressed occurs.
Therefore, the multi-media module receiver assembly cannot be operated using the steering pad switch assembly, and also the multi-media module receiver assembly itself cannot function.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

The vehicle is equipped with a Supplemental Restraint System (SRS) which includes components such as airbags. Before servicing (including removal or installation of parts), be sure to read the precaution for Supplemental Restraint System (Click here).

### 1.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA NODULE RECEIVER ASSEMBLY - SPIRAL CABLE SUB-ASSEMBLY)

a. Disconnect the F76 multi-media module receiver assembly connector.

b. Disconnect the E102 spiral cable sub-assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F76-30 (SW1) - | | |

| | | |
|---|---|---|
| E102-6 (AU1) | Always | Below 1 Ω |
| F76-31 (SW2) - E102-5 (AU2) | Always | Below 1 Ω |
| F76-32 (SWG) - E102-4 (EAU) | Always | Below 1 Ω |
| F76-30 (SW1) - Body ground | Always | 10 kΩ or higher |
| F76-31 (SW2) - Body ground | Always | 10 kΩ or higher |
| F76-32 (SWG) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**2.CHECK NO. 1 SWITCH WIRE**

a. Disconnect the z54 and z51 No. 1 switch wire connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| z54-11 - z51-6 | Always | Below 1 Ω |
| z54-9 - z51-8 | Always | Below 1 Ω |
| z54-10 - z51-7 | Always | Below 1 Ω |
| z54-11 - Body ground | Always | 10 kΩ or higher |
| z54-9 - Body ground | Always | 10 kΩ or higher |
| z54-10 - Body ground | Always | 10 kΩ or higher |

NG → REPLACE NO. 1 SWITCH WIRE

OK

**3.INSPECT STEERING PAD SWITCH ASSEMBLY**

a. Remove the steering pad switch assembly (Click here).

b. Inspect the steering pad switch assembly (Click here).

NG → REPLACE STEERING PAD SWITCH ASSEMBLY (**Click here**)

OK

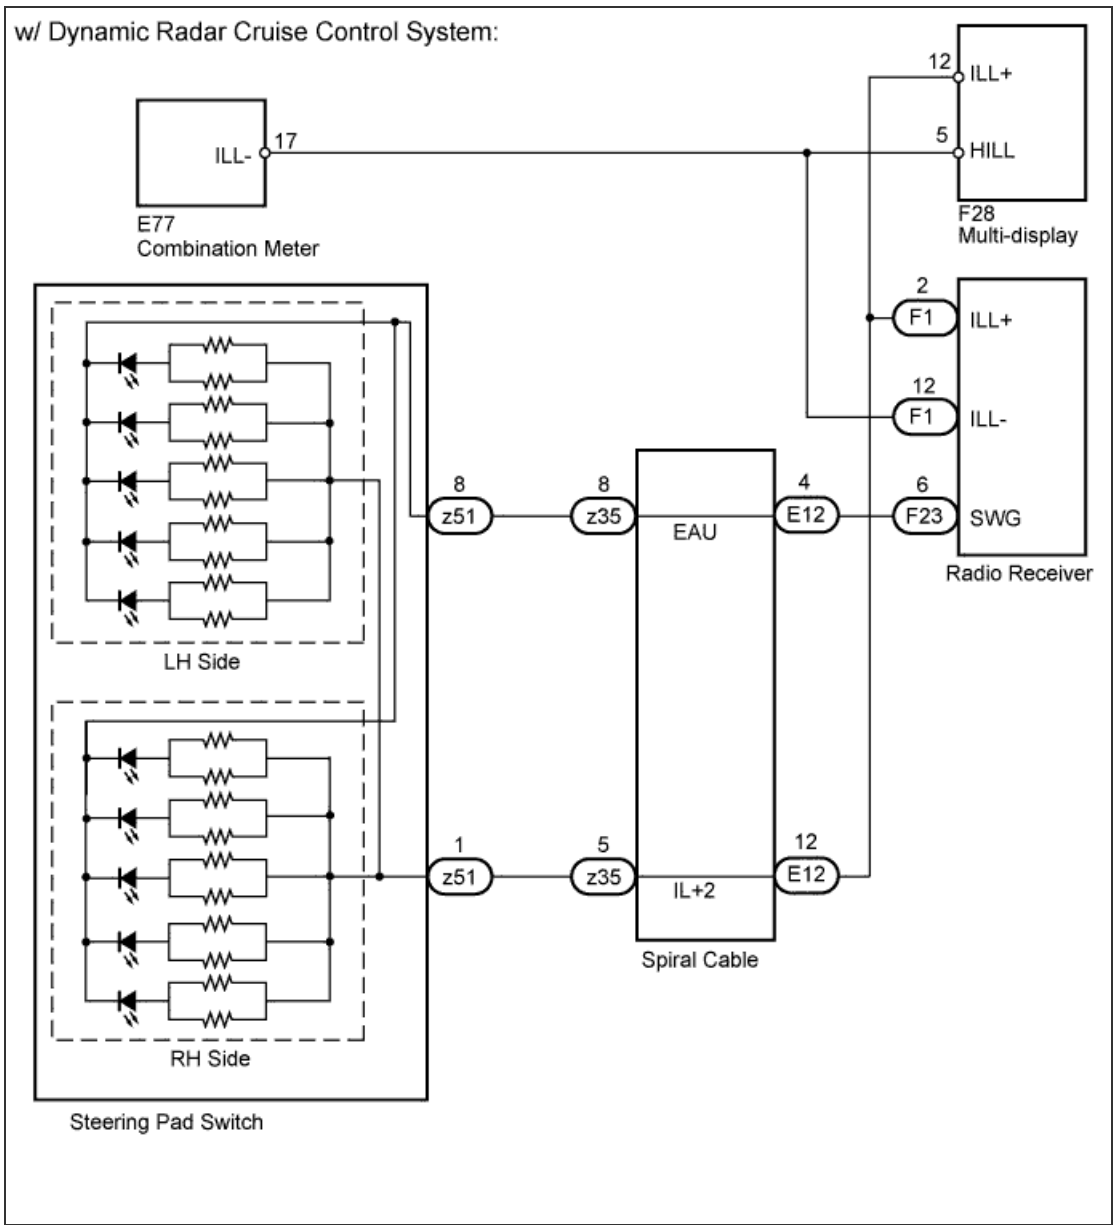
**4.INSPECT SPIRAL CABLE SUB-ASSEMBLY**

a. Remove the spiral cable sub-assembly (Click here).

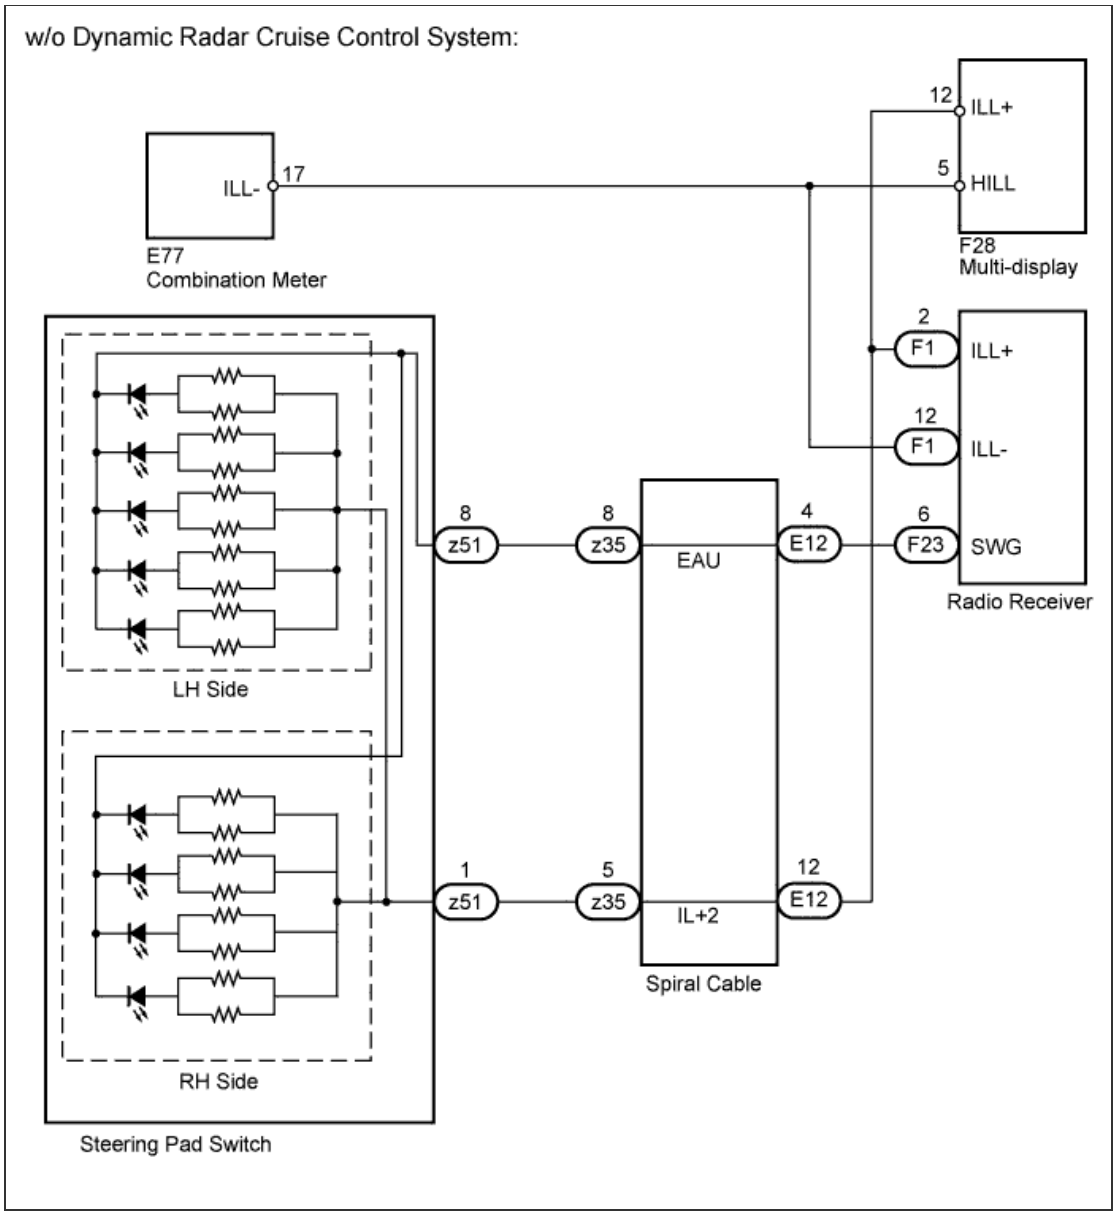
b. Inspect the spiral cable sub-assembly (Click here).

NG → REPLACE SPIRAL CABLE SUB-ASSEMBLY (**Click here**)

OK



PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (**Click here**)



**for Preparation** Click here

## DESCRIPTION

Power is supplied to the multi-display, radio receiver and steering pad switch illumination when the light control switch is in the tail or head position.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**CAUTION:**

The vehicle is equipped with an SRS (Supplemental Restraint System) which includes components such as airbags. Before servicing (including removal or installation of parts), be sure to read the Precaution for the SRS (Click here).

### 1.CHECK ILLUMINATION

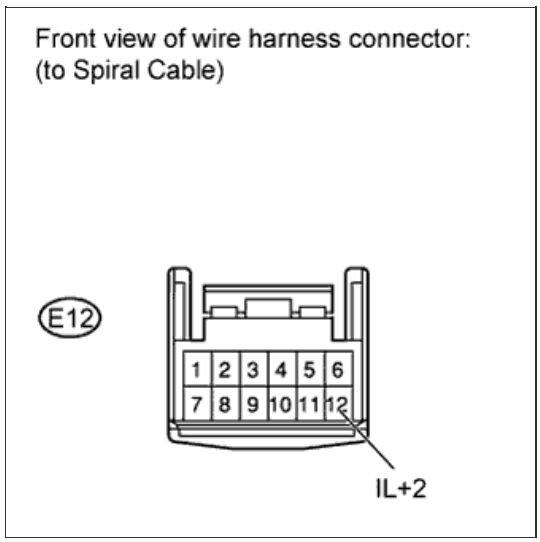
a. Check if the illumination for the multi-display, steering pad switch, glove box light, cigarette lighter, or others (seat heater switch, front seat memory switch, etc.) comes on when the light control switch is turned to the head or tail position.

**Result**

| Result | Proceed to |
|---|---|
| Illumination comes on for all components except steering pad switch. | A |
| Illumination comes on for all components except radio receiver. | B |
| Illumination comes on for all components except multi-display. | C |
| No illumination comes on for radio receiver, multi-display, glove box light, front seat memory switch, cigarette lighter, etc. | D |

| | |
|---|---|
| B | Go to step 7 |
| C | Go to step 8 |
| D | GO TO LIGHTING SYSTEM (Click here) |

A

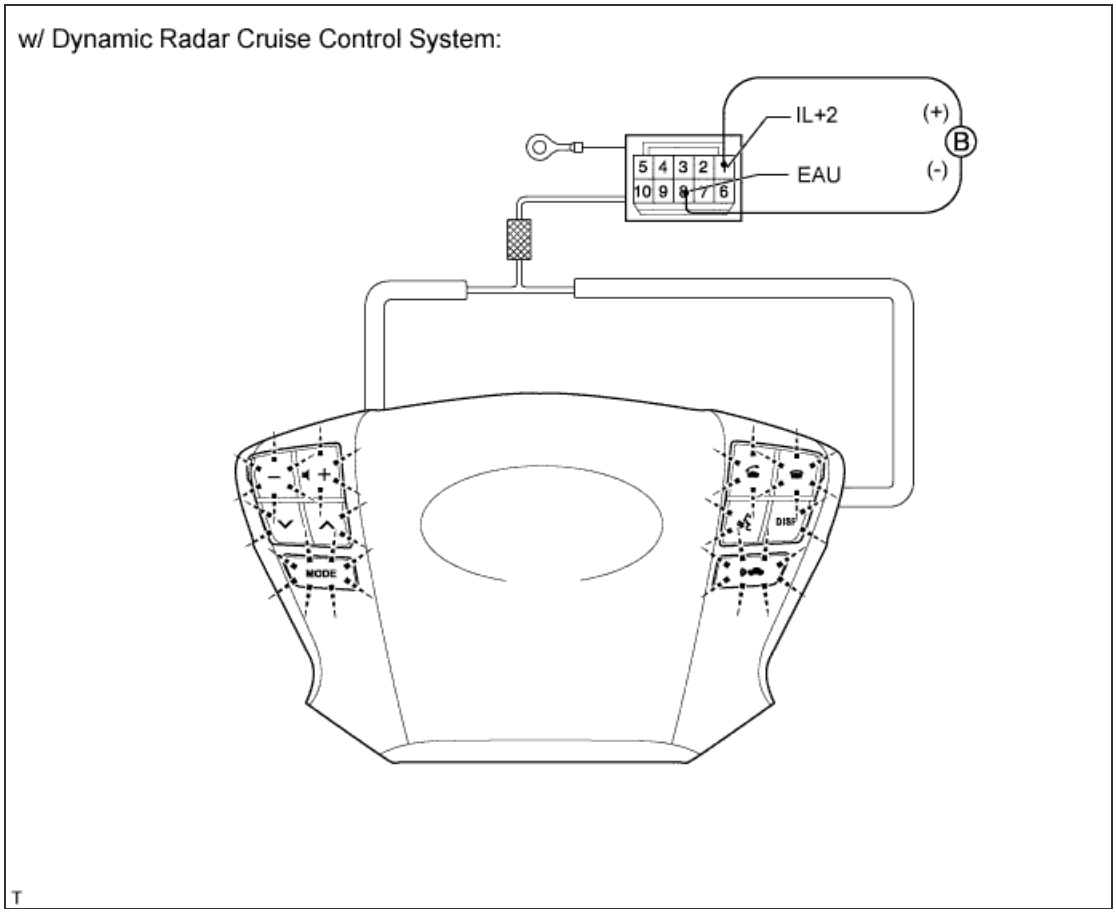


## 2.CHECK HARNESS AND CONNECTOR (BATTERY - SPIRAL CABLE)

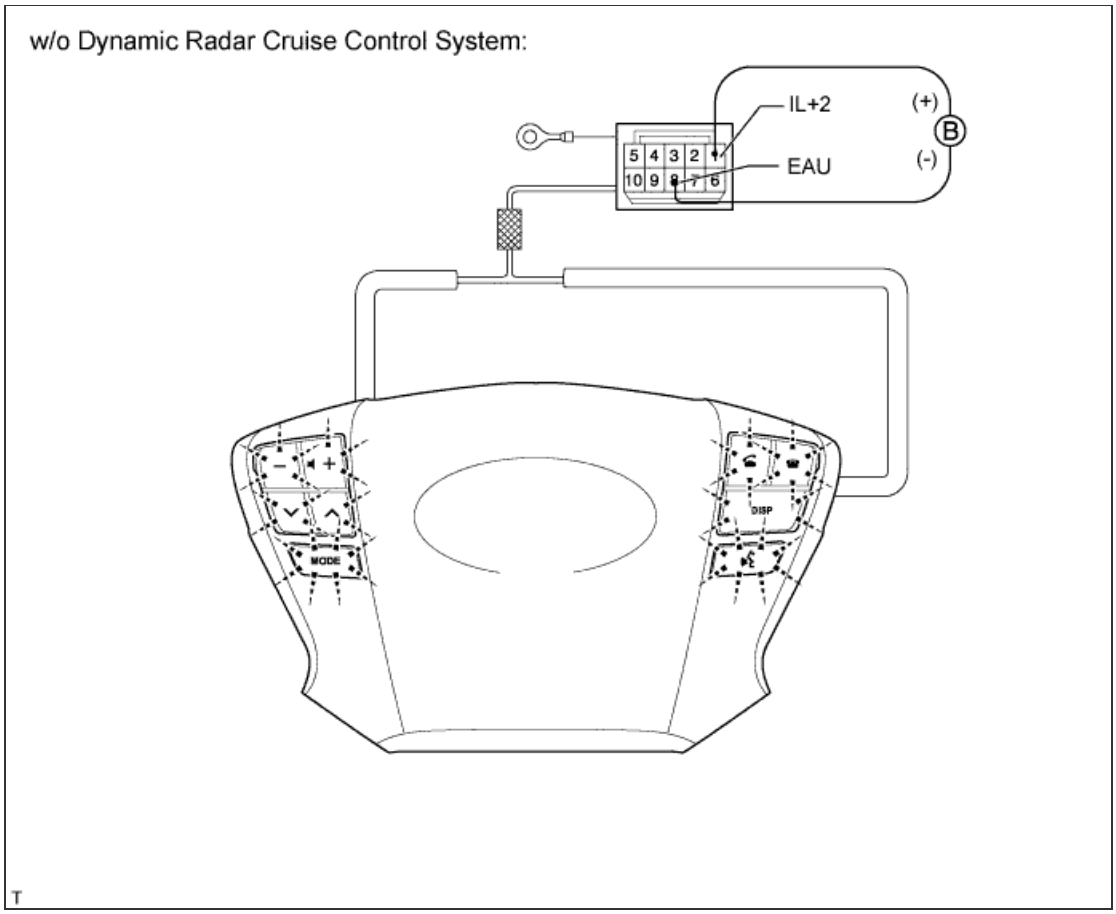
a. Disconnect the E12 cable connector.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**



| Tester Connection | Condition | Specified Condition |
|---|---|---|
| E12-12 (IL+2) - Body ground | Always | 11 to 14 V |



NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 3.CHECK STEERING PAD SWITCH (STEERING PAD SIDE)

T

a. Disconnect the z51 switch connector.

b. Apply battery voltage to the connector, and check the LED illumination condition.

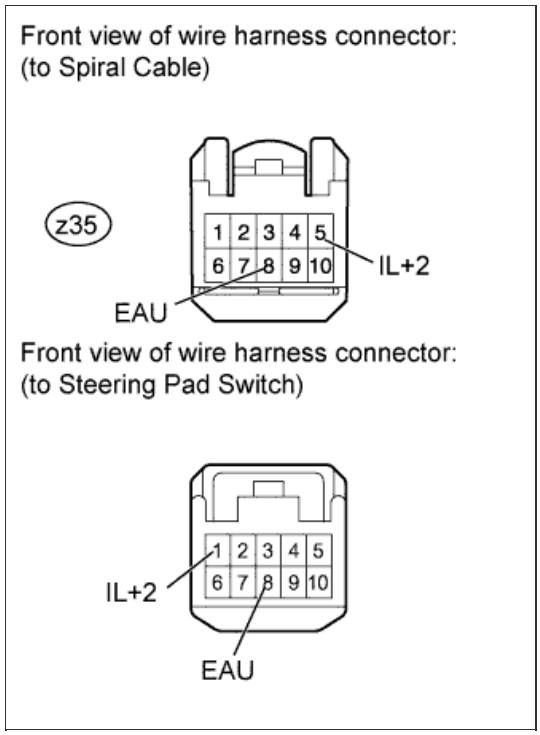
**OK:**

| Measurement Condition | Specified Condition |
|---|---|
| Battery positive (+) → Terminal 1 (IL+2)<br>Battery negative (-) → Terminal 8 (EAU) | LED illuminates |

NG → REPLACE STEERING PAD (Click here)

OK

**4.CHECK NO. 1 SWITCH WIRE**

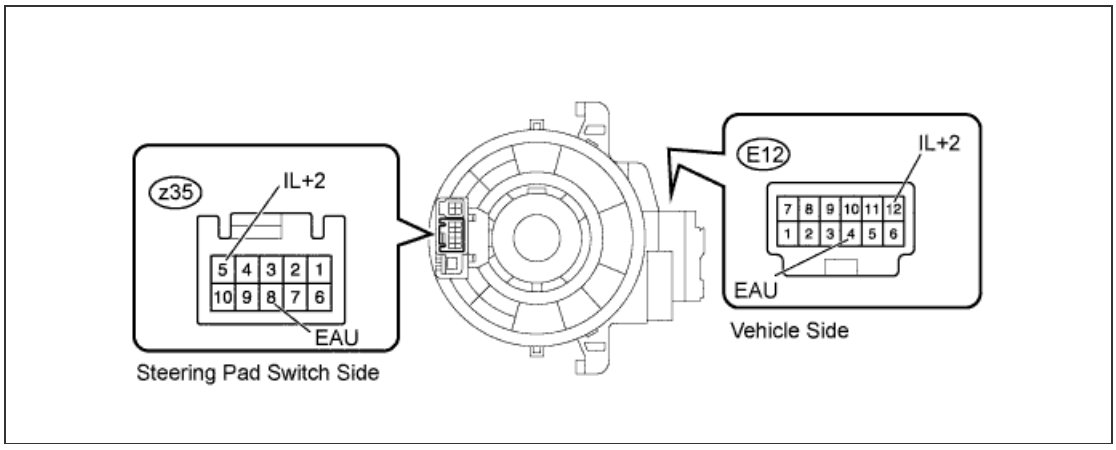


a. Disconnect the z35 cable connector.

b. Disconnect the switch connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**



| Tester Connection | Condition | Specified Condition |
|---|---|---|
| z35-5 (IL+2) - 1 (IL+2) | Always | Below 1 Ω |
| z35-8 (EAU) - 8 (EAU) | | |

NG → REPLACE NO. 1 SWITCH WIRE

OK

## 5.INSPECT SPIRAL CABLE SUB-ASSEMBLY

a. Disconnect the E12 and z35 cable connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| E12-12 (IL+2) - z35-5 (IL+2) | Spiral cable is turned 2.5 rotations counterclockwise | Below 3 Ω |
| | Spiral cable is centered | |
| | Spiral cable is turned 2.5 rotations clockwise | |
| E12-4 (EAU) - z35-8 (EAU) | Spiral cable is turned 2.5 rotations counterclockwise | Below 3 Ω |
| | Spiral cable is | |

| | | |
|---|---|---|
| | centered | |
| | Spiral cable is turned 2.5 rotations clockwise | |

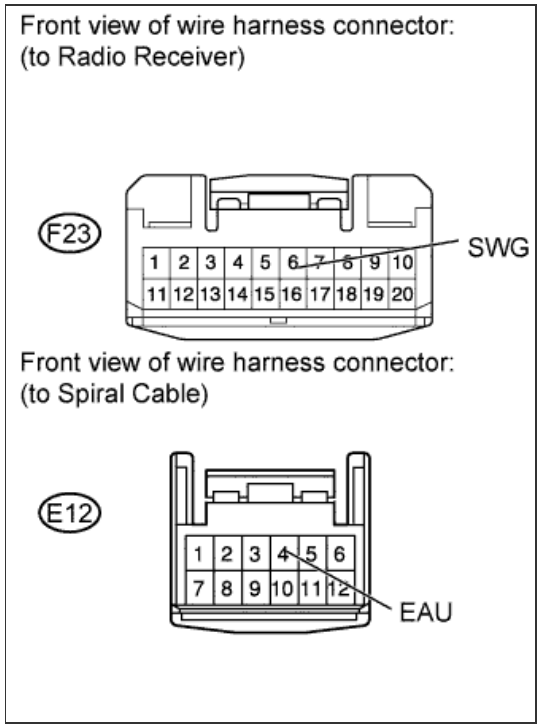
**CAUTION:**

The spiral cable is an important part of the SRS airbag system. Incorrect removal or installation of the spiral cable may prevent the airbag from deploying. Be sure to read the Precaution for the SRS (Click here).

NG → REPLACE SPIRAL CABLE SUB-ASSEMBLY (Click here)

OK

## 6.CHECK HARNESS AND CONNECTOR (SPIRAL CABLE - RADIO RECEIVER)



a. Disconnect the F23 receiver connector.

b. Disconnect the E12 cable connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F23-6 (SWG) - E12-4 (EAU) | Always | Below 1 Ω |
| F23-6 (SWG) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

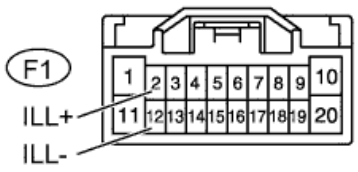
## 7.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - COMBINATION METER AND BATTERY)

a. Disconnect the F1 receiver connector.

b. Disconnect the E77 meter connector.

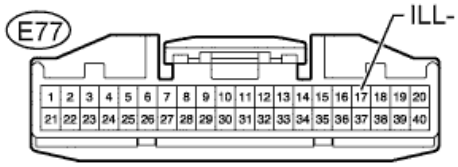
c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**



| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F1-12 (ILL-) - E77-17 (ILL-) | Always | Below 1 Ω |
| F1-12 (ILL-) - Body ground | Always | 10 kΩ or higher |

d. Measure the voltage according to the value(s) in the table below.



**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F1-2 (ILL+) - Body ground | Light control switch tail or head | 11 to 14 V |

(to Combination Meter)

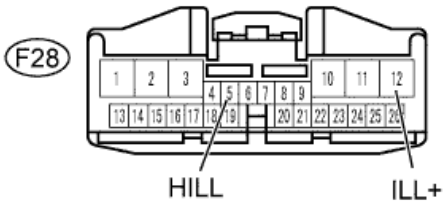
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE RADIO RECEIVER ASSEMBLY (Click here)

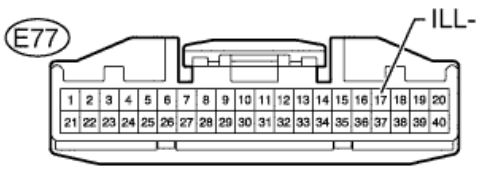
## 8.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - COMBINATION METER AND BATTERY)

a. Disconnect the F28 display connector.



b. Disconnect the E77 meter connector.

c. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F28-5 (HILL) - E77-17 (ILL-) | Always | Below 1 Ω |
| F28-5 (HILL) - Body ground | Always | 10 kΩ or higher |

Front view of wire harness connector:
(to Multi-display)

Front view of wire harness connector:
(to Combination Meter)

d. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F28-12 (ILL+) - Body ground | Light control switch tail or head | 11 to 14 V |

**Result**

| Result | Proceed to |

REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

**for Preparation** Click here

## DESCRIPTION

Power is supplied to the multi-media module receiver assembly, multi-display assembly and steering pad switch assembly illumination when the light control switch is in the tail or head position.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

- **The vehicle is equipped with a Supplemental Restraint System (SRS) which includes components such as airbags. Before servicing (including removal or installation of parts), be sure to read the precaution for Supplemental Restraint System (Click here).**
- **Inspect the fuse for circuits related to this system before performing the following inspection procedure.**

### 1.CHECK ILLUMINATION

a. Check if the illumination for the multi-media module receiver assembly, multi-display assembly, steering pad switch assembly or others (hazard switch etc.) comes on when the light control switch is turned to the head or tail position.

**Result**

| | |
|---|---|
| | Proceed |

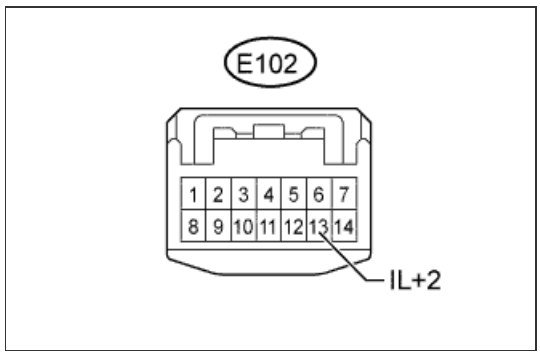
| Result | to |
|---|---|
| Illumination comes on for all components except steering pad switch assembly. | A |
| Illumination comes on for all components except multi-display assembly. | B |
| Illumination comes on for all components except multi-media module receiver assembly. | C |
| No illumination comes on (multi-media module receiver assembly, steering pad switch, hazard switch, heater control switch, etc.). | D |

B → Go to step 7

C → Go to step 8

D → GO TO LIGHTING SYSTEM (Click here)

A



## 2.CHECK HARNESS AND CONNECTOR (ILLUMINATION SIGNAL)

a. Disconnect the spiral cable sub-assembly connector.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| E102-13 (IL+2) - Body ground | Light control switch in the tail or head position | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *a | Front view of wire harness connector (to Spiral Cable Sub-assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 3.CHECK NO. 1 SWITCH WIRE

a. Disconnect the z54 and z51 No. 1 switch wire connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| z54-9 - z51-8 | Always | Below 1 Ω |
| z54-5 - z51-1 | Always | Below 1 Ω |
| z54-9 - Body ground | Always | 10 kΩ or higher |
| z54-5 - Body ground | Always | 10 kΩ or higher |

NG → REPLACE NO. 1 SWITCH WIRE

OK

**4.INSPECT STEERING PAD SWITCH ASSEMBLY**

a. Remove the steering pad switch assembly (Click here).

b. Inspect the steering pad switch assembly (Click here).

NG → REPLACE STEERING PAD SWITCH ASSEMBLY (Click here)

OK

**5.INSPECT SPIRAL CABLE SUB-ASSEMBLY**

a. Remove the spiral cable sub-assembly (Click here).

b. Inspect the spiral cable sub-assembly (Click here).

NG → REPLACE SPIRAL CABLE SUB-ASSEMBLY (Click here)

OK

**6.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY, MULTI-DISPLAY ASSEMBLY - SPIRAL CABLE SUB-ASSEMBLY)**

a. Disconnect the F76 multi-media module receiver assembly connector.

b. Disconnect the F78 multi-display assembly connector.

c. Disconnect the E102 spiral cable sub-assembly connector.

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-14 (ILL+) - E102-13 (IL+2) | Always | Below 1 Ω |
| F76-32 (SWG) - E102-4 (EAU) | Always | Below 1 Ω |
| F78-2 (ILL) - E102-13 (IL+2) | Always | Below 1 Ω |
| F76-14 (ILL+) - Body ground | Always | 10 kΩ or higher |
| F76-32 (SWG) - Body ground | Always | 10 kΩ or higher |
| F78-2 (ILL) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

**7.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY ASSEMBLY - COMBINATION METER ASSEMBLY, BATTERY AND BODY GROUND)**

a. Disconnect the F78 multi-display assembly connector.

b. Disconnect the E77 combination meter assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F78-14 (ILL-) - | | |

| | | |
|---|---|---|
| E77-17 (ILL-) | Always | Below 1 Ω |
| F78-14 (ILL-) - Body ground | Always | 10 kΩ or higher |
| E77-20 (EP) - Body ground | Always | Below 1 Ω |

d. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F78-2 (ILL) - Body ground | Light control switch in the tail or head position | 11 to 14 V |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

**8.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - COMBINATION METER ASSEMBLY, BATTERY AND BODY GROUND)**

a. Disconnect the F76 multi-media module receiver assembly connector.

b. Disconnect the E77 combination meter assembly connector.

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F76-14 (ILL+) - Body ground | Light control switch in the tail or head position | 11 to 14 V |

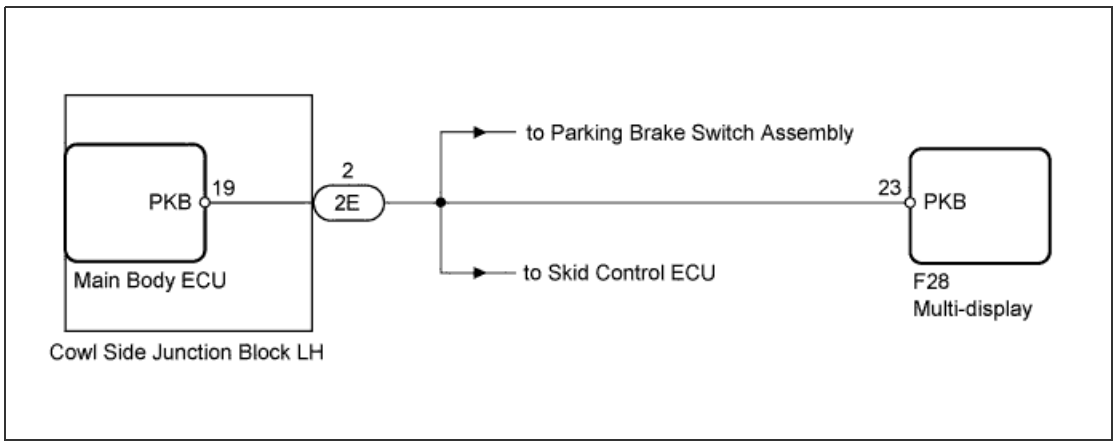
d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-13 (HILL) - E77-17 (ILL-) | Always | Below 1 Ω |
| E77-20 (EP) - Body ground | Always | Below 1 Ω |
| F76-13 (HILL) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

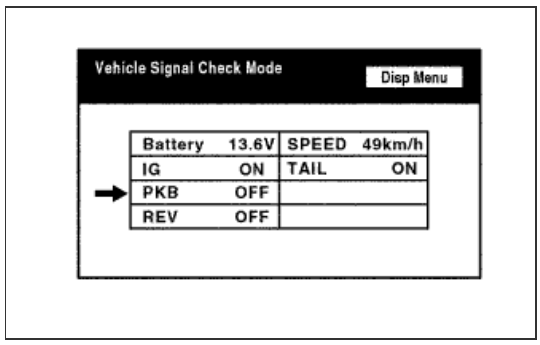
## DESCRIPTION

This circuit is from the parking brake switch to the multi-display.

## WIRING DIAGRAM



## INSPECTION PROCEDURE

### 1.CHECK PARKING BRAKE (DISPLAY CHECK MODE)

a. Enter the "Display Check" mode and select "Vehicle Signal Check Mode" ( Click here).

b. Check that the display changes between ON and OFF according to the parking brake operation.

**OK:**

| Parking Brake Position | Display |
|---|---|
| Applied | ON |
| Released | OFF |

**HINT:**

This display is updated once per second. As a result, it is normal for the display to lag behind the actual change in the switch.

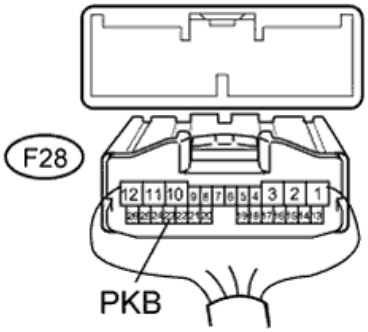
NG → Go to step 2

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

### 2.CHECK MAIN BODY ECU (PARKING BRAKE SIGNAL)

a. Disconnect the F28 display connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F28-23 (PKB) - Body ground | Engine switch on (IG), parking brake applied | 11 to 14 V |

| | | |
|---|---|---|
| F28-23 (PKB) - Body ground | Engine switch on (IG), parking brake released | Below 1 V |

Rear view of wire harness connected:
(to Multi-display)

**Result**

| Result | Proceed to |
|---|---|
| OK (w/ Navigation System) | A |
| OK (w/o Navigation System) | B |
| NG | C |

B → REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

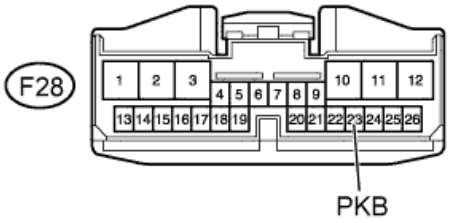
C → Go to step 3

A

REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

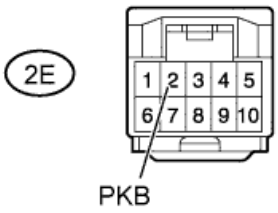
## 3.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - MAIN BODY ECU)

a. Disconnect the F28 display connector.



b. Disconnect the 2E ECU connector.

c. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F28-23 (PKB) - 2E-2 (PKB) | Always | Below 1 Ω |
| F28-23 (PKB) - Body ground | Always | 10 kΩ or higher |

Front view of wire harness connector:
(to Multi-display)

Front view of wire harness connector:
(to Main Body ECU)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 4.REPLACE MAIN BODY ECU

a. Temporarily replace the ECU with a new or normally functioning one.

b. Check that the parking brake signal is displayed on the multi-display.

**OK:**

**Parking brake signal is displayed on the multi-display.**

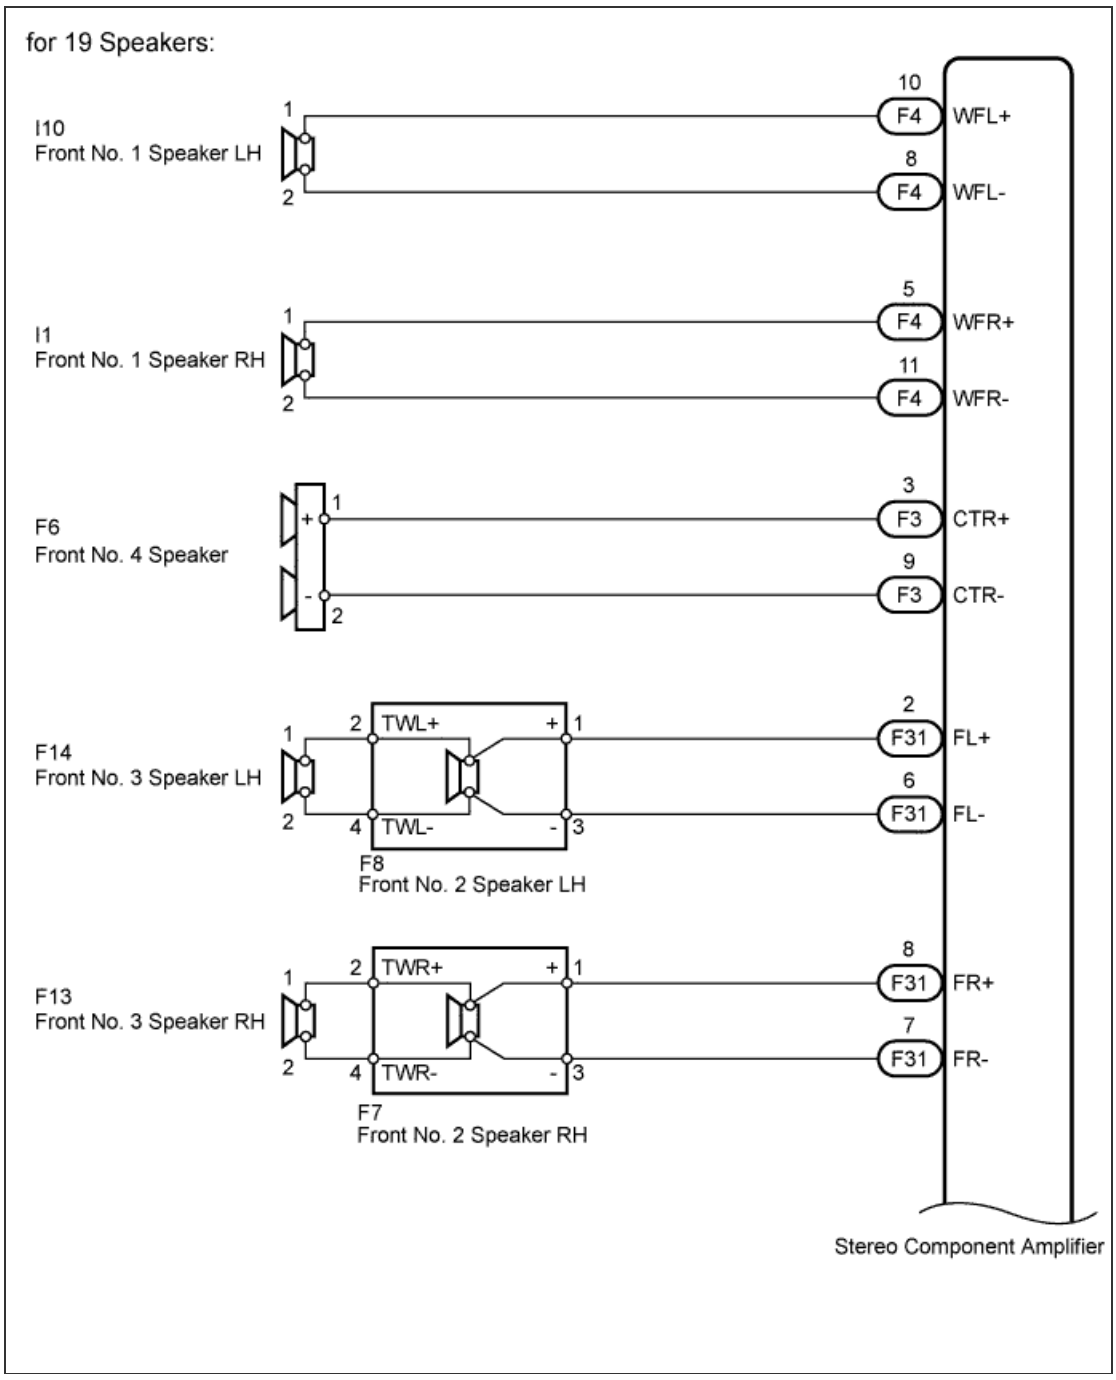
**Result**

| Result | Proceed to |
|---|---|
| OK | A |
| NG (w/ Navigation System) | B |
| NG (w/o Navigation System) | C |

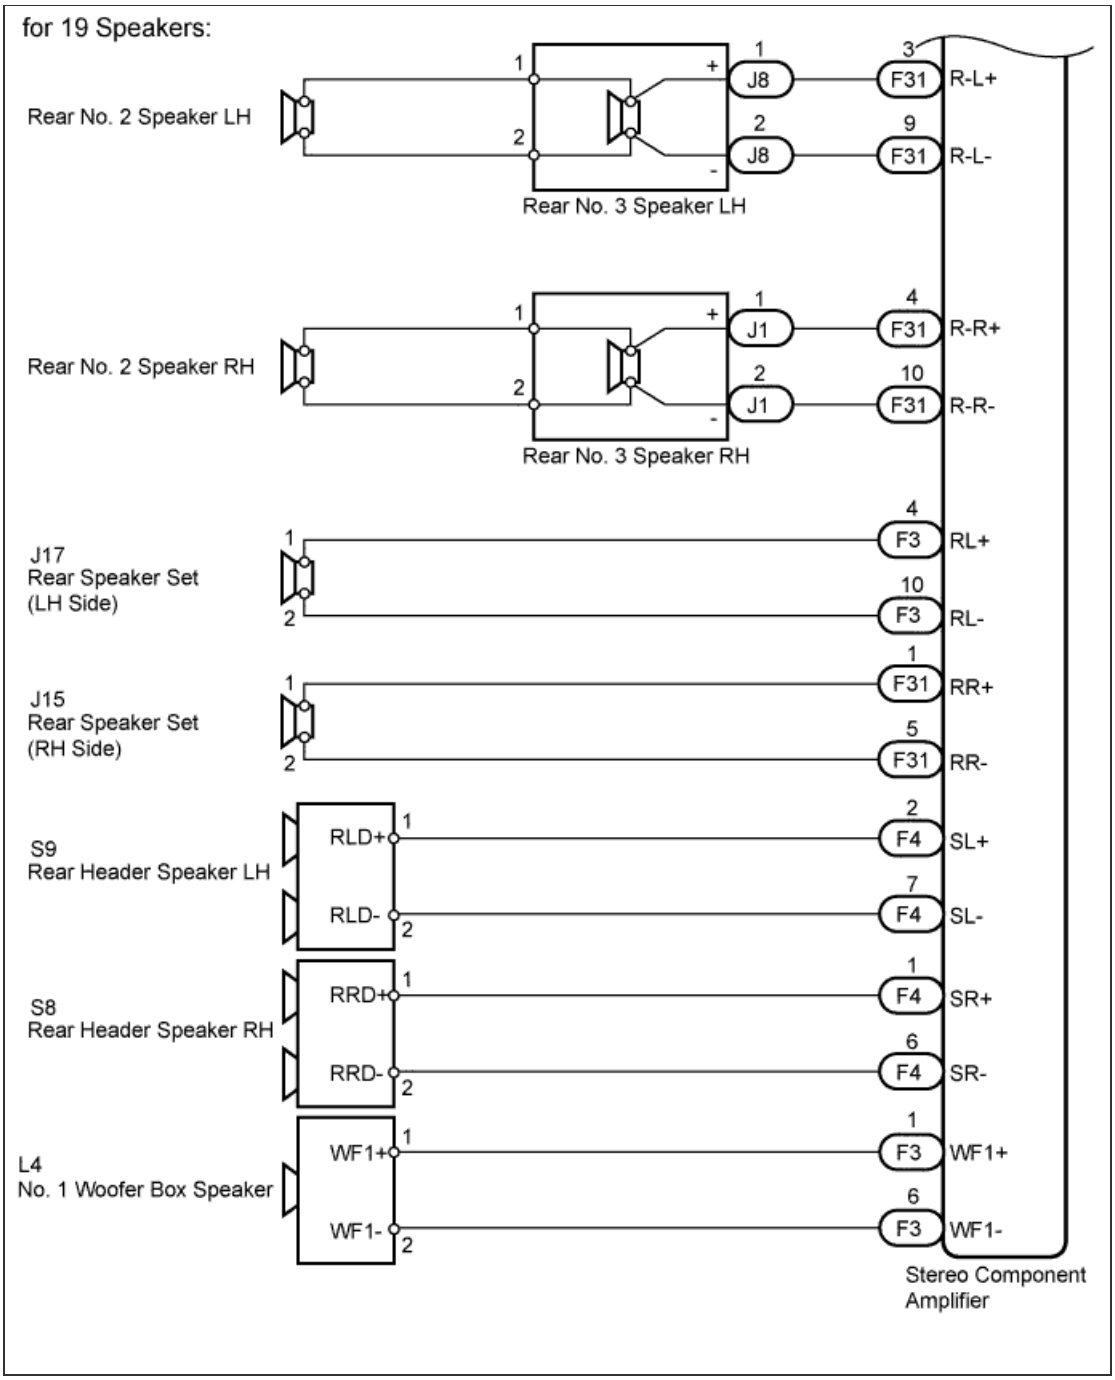
B → REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

C → REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

A



END (MAIN BODY ECU IS DEFECTIVE)



**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK AUDIO MODELS

a. Check the audio model.

**Result**

| Result | Proceed to |
|---|---|
| 19 speakers | A |
| 9 speakers | B |

**B** → Go to step 22

**A**

### 2.CHECK SPEAKER

a. Check the malfunctioning speakers.

**Result**

| Result | Proceed to |
|---|---|
| Malfunction in front speaker area | A |

| | |
|---|---|
| Malfunction in rear speaker area | B |

B → Go to step 12

A

### 3.CHECK SPEAKER

a. Check the malfunctioning speakers.

**Result**

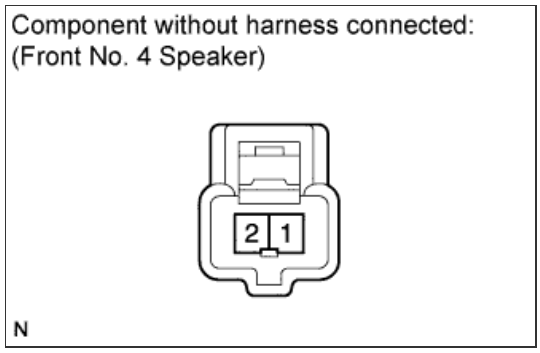
| Result | Proceed to |
|---|---|
| Front No. 4 speaker | A |
| Front No. 2 speaker | B |
| Front No. 1 speaker | C |
| Front No. 3 speaker | D |

B → Go to step 6

C → Go to step 8

D → Go to step 10

A



### 4.INSPECT FRONT NO. 4 SPEAKER ASSEMBLY

a. Disconnect the F6 speaker connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 6.0 +/-1.0 Ω |

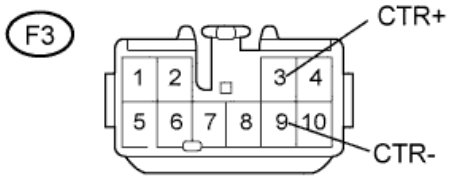
NG → REPLACE FRONT NO. 4 SPEAKER ASSEMBLY (Click here)

OK

### 5.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - FRONT NO. 4 SPEAKER)

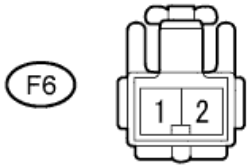
a. Disconnect the F6 speaker connector.

b. Disconnect the F3 amplifier connector.



c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**



| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-3 (CTR+) - F6-1 | Always | Below 1 Ω |
| F3-9 (CTR-) - F6-2 | Always | Below 1 Ω |
| F3-3 (CTR+) - | Always | 10 kΩ or higher |

| | | |
|---|---|---|
| Body ground | | |
| F3-9 (CTR-) - Body ground | Always | 10 kΩ or higher |

Front view of wire harness connector:
(to Stereo Component Amplifier)

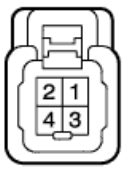
Front view of wire harness connector:
(to Front No. 4 Speaker)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 6.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY



a. Disconnect the F8 and F7 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

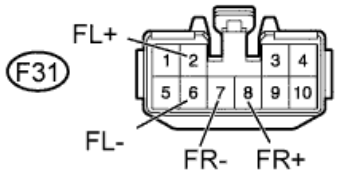
**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | Below 1 Ω |
| 3 - 4 | Always | Below 1 Ω |
| 2 - 4 | Always | 6.0 +/-1.0 Ω |

Component without harness connected:
(Front No. 2 Speaker)

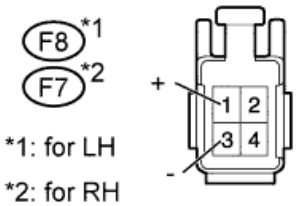
NG → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

OK



## 7.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - FRONT NO. 2 SPEAKER)

a. Disconnect the F31 amplifier connector.



b. Disconnect the F8 and F7 speaker connectors.

c. Measure the resistance according to the value(s) in the table below.

Front view of wire harness connector:
(to Stereo Component Amplifier)

Front view of wire harness connector:
(to Front No. 2 Speaker)

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F31-2 (FL+) - F8-1 (+) | Always | Below 1 Ω |
| F31-6 (FL-) - F8-3 (-) | Always | Below 1 Ω |
| F31-2 (FL+) - Body ground | Always | 10 kΩ or higher |
| F31-6 (FL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F31-8 (FR+) - F7-1 (+) | Always | Below 1 Ω |
| F31-7 (FR-) - F7-3 (-) | Always | Below 1 Ω |
| F31-8 (FR+) - Body ground | Always | 10 kΩ or higher |
| F31-7 (FR-) - Body ground | Always | 10 kΩ or higher |

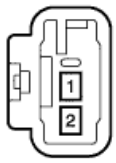
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 8.INSPECT FRONT NO. 1 SPEAKER ASSEMBLY

a. Disconnect the I10 and I1 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|

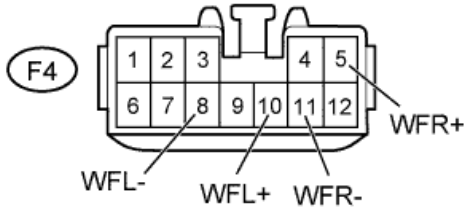
| | | |
|---|---|---|
| 1 - 2 | Always | 1.9 +/-0.4 Ω |

Component without harness connected:
(Front No. 1 Speaker)

N

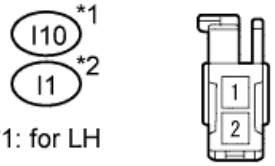
NG → REPLACE FRONT NO. 1 SPEAKER ASSEMBLY (Click here)

OK



## 9.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - FRONT NO. 1 SPEAKER)

a. Disconnect the I10 and I1 speaker connectors.



b. Disconnect the F4 amplifier connector.

c. Measure the resistance according to the value(s) in the table below.

Front view of wire harness connector:
(to Stereo Component Amplifier)

Front view of wire harness connector:
(to Front No. 1 Speaker)

*1: for LH

*2: for RH

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-10 (WFL+) - I10-1 | Always | Below 1 Ω |
| F4-8 (WFL-) - I10-2 | Always | Below 1 Ω |
| F4-10 (WFL+) - Body ground | Always | 10 kΩ or higher |
| F4-8 (WFL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-5 (WFR+) - I1-1 | Always | Below 1 Ω |
| F4-11 (WFR-) - I1-2 | Always | Below 1 Ω |
| F4-5 (WFR+) - Body ground | Always | 10 kΩ or higher |
| F4-11 (WFR-) - | Always | 10 kΩ or higher |

| | | |
|---|---|---|
| Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ↓

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

10.CHECK FRONT NO. 3 SPEAKER ASSEMBLY

a. Disconnect the F14 and F13 speaker connectors.

b. Interchange the front No. 3 speaker LH with RH.

c. Check that the malfunction disappears.

**OK:**
**Malfunction disappears.**

**HINT:**

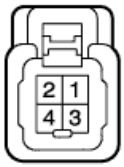
- **Connect all the connectors to the front No. 3 speakers.**
- **When there is a possibility that either the right or left front speaker is defective, inspect by interchanging the right one with the left one.**
- **Perform the inspection above on both the LH and RH sides.**

NG → Go to step 11

OK ↓

REPLACE FRONT NO. 3 SPEAKER ASSEMBLY (Click here)

11.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY



a. Disconnect the F8 and F7 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 2 - 4 | Always | 6.0 +/-1.0 Ω |

Component without harness connected:
(Front No. 2 Speaker)

NG → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

OK ↓

REPAIR OR REPLACE HARNESS OR CONNECTOR (FRONT NO. 2 SPEAKER - FRONT NO. 3 SPEAKER)

12.CHECK SPEAKER

a. Check the malfunctioning speakers.

**Result**

| Result | Proceed to |
|---|---|
| Rear No. 2 speaker | A |
| Rear No. 3 speaker | B |
| Rear speaker set | C |
| No. 1 woofer box speaker | D |
| Rear header speaker | E |

| | |
|---|---|
| B | Go to step 14 |
| C | Go to step 16 |
| D | Go to step 18 |
| E | Go to step 20 |

A

13.INSPECT REAR NO. 2 SPEAKER ASSEMBLY

a. Disconnect the rear No. 2 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 6.0 +/-1.0 Ω |

Component without harness connected:
(Rear No. 2 Speaker)

NG → REPLACE REAR NO. 2 SPEAKER ASSEMBLY (Click here)

OK

REPLACE REAR NO. 3 SPEAKER ASSEMBLY (Click here)

14.CHECK REAR NO. 3 SPEAKER ASSEMBLY

a. Disconnect the rear No. 3 speaker connectors

b. Interchange the rear No. 3 speaker LH with RH.

c. Check that the malfunction disappears.

**OK:**
**Malfunction disappears.**

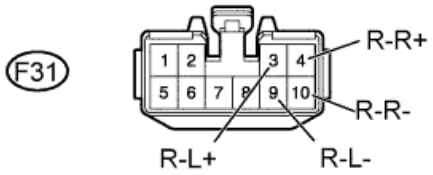
**HINT:**

- **Connect all the connectors to the rear No. 3 speakers.**
- **When there is a possibility that either the right or left rear speaker is defective, inspect by interchanging the right one with the left one.**
- **Perform the inspection above on both the LH and RH sides.**

NG → Go to step 15

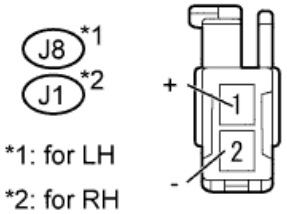
OK

REPLACE REAR NO. 3 SPEAKER ASSEMBLY (Click here)



15.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - REAR NO. 3 SPEAKER)

a. Disconnect the F31 amplifier connector.



b. Disconnect the J8 and J1 speaker connectors.

c. Measure the resistance according to the value(s) in the table below.

Front view of wire harness connector:
(to Stereo Component Amplifier)

Front view of wire harness connector:
(to Rear No. 3 Speaker)

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F31-3 (R-L+) - J8-1 (+) | Always | Below 1 Ω |
| F31-9 (R-L-) - J8-2 (-) | Always | Below 1 Ω |
| F31-3 (R-L+) - Body ground | Always | 10 kΩ or higher |
| F31-9 (R-L-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F31-4 (R-R+) - J1-1 (+) | Always | Below 1 Ω |
| F31-10 (R-R-) - J1-2 (-) | Always | Below 1 Ω |
| F31-4 (R-R+) - Body ground | Always | 10 kΩ or higher |
| F31-10 (R-R-) - Body ground | Always | 10 kΩ or higher |

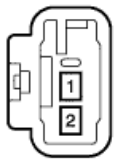
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

16.INSPECT REAR SPEAKER SET

a. Disconnect the J17 and J15 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|

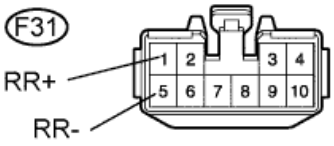
| | | |
|---|---|---|
| 1 - 2 | Always | 6.0 +/-1.2 Ω |

Component without harness connected:
(Rear Speaker Set)

N

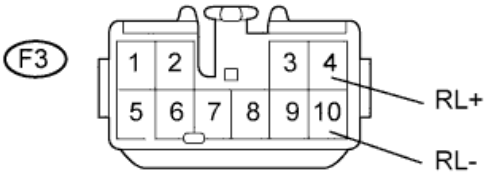
NG → REPLACE REAR SPEAKER SET (Click here)

OK



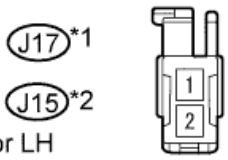
**17.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - REAR SPEAKER SET)**

a. Disconnect the F3 and F31 speaker connectors.



b. Disconnect the J17 and J15 speaker connectors.

c. Measure the resistance according to the value(s) in the table below.



Front view of wire harness connector:
(to Stereo Component Amplifier)

Front view of wire harness connector:
(to Stereo Component Amplifier)

Front view of wire harness connector:
(to Rear No. 2 Speaker)

*1: for LH

*2: for RH

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-4 (RL+) - J17-1 | Always | Below 1 Ω |
| F3-10 (RL-) - J17-2 | | |
| F3-4 (RL+) - Body ground | Always | 10 kΩ or higher |
| F3-10 (RL-) - Body | | |

| | | |
|---|---|---|
| ground | | |

**for RH:**

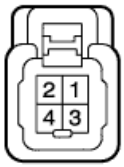
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F31-1 (RR+) - J15-1 | Always | Below 1 Ω |
| F31-5 (RR-) - J15-2 | | |
| F31-1 (RR+) - Body ground | Always | 10 kΩ or higher |
| F31-5 (RR-) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK →

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

**18.INSPECT NO. 1 WOOFER BOX SPEAKER ASSEMBLY**



a. Disconnect the L4 speaker connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 8.0 Ω |

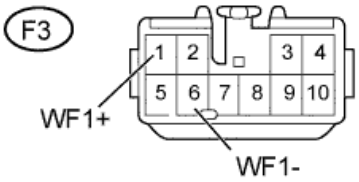
Component without harness connected:
(No. 1 Woofer Box Speaker)

NG → REPLACE NO. 1 WOOFER BOX SPEAKER ASSEMBLY (Click here)

OK →

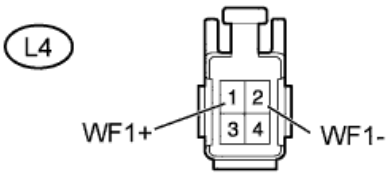
**19.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - NO. 1 WOOFER BOX SPEAKER)**

a. Disconnect the F3 amplifier connector.



b. Disconnect the L4 speaker connector.

c. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-1 (WF1+) - L4-1 (WF1+) | Always | Below 1 Ω |
| F3-6 (WF1-) - L4-2 (WF1-) | Always | Below 1 Ω |
| F3-1 (WF1+) - Body ground | Always | 10 kΩ or higher |
| F3-6 (WF1-) - Body ground | Always | 10 kΩ or higher |

Front view of wire harness connector:
(to Stereo Component Amplifier)

Front view of wire harness connector:
(to No. 1 Woofer Box Speaker)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 20.INSPECT REAR HEADER SPEAKER ASSEMBLY

a. Disconnect the S9 and S8 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

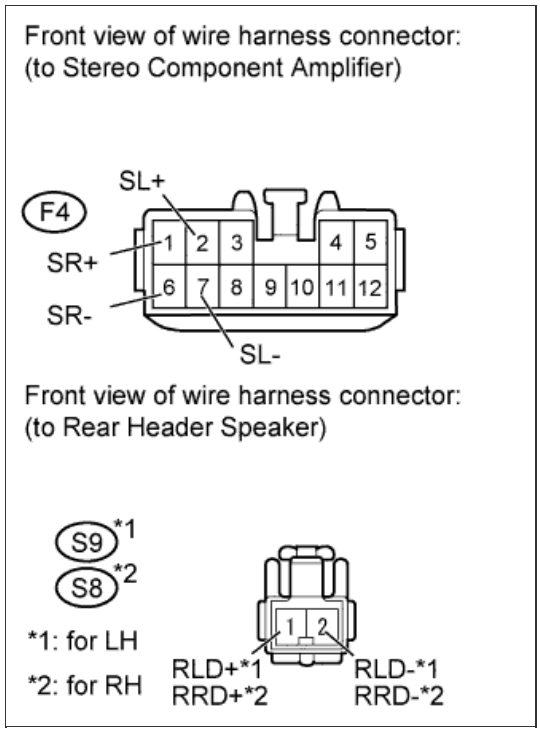
**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 6.0 +/-1.0 Ω |

Component without harness connected:
(Rear Header Speaker)

N

NG → REPLACE REAR HEADER SPEAKER ASSEMBLY (Click here)



OK

## 21.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - REAR HEADER SPEAKER)

a. Disconnect the F4 amplifier connector.

b. Disconnect the S9 and S8 speaker connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-2 (SL+) - S9-1 (RLD+) | Always | Below 1 Ω |
| F4-7 (SL-) - S9-2 (RLD-) | Always | Below 1 Ω |
| F4-2 (SL+) - Body ground | Always | 10 kΩ or higher |
| F4-7 (SL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-1 (SR+) - S8-1 (RRD+) | Always | Below 1 Ω |
| F4-6 (SR-) - S8-2 (RRD-) | Always | Below 1 Ω |
| F4-1 (SR+) - Body ground | Always | 10 kΩ or higher |
| F4-6 (SR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 22.CHECK SPEAKER

a. Check the malfunctioning speakers.

**Result**

| Result | Proceed to |
|---|---|
| Front No. 4 speaker | A |
| Front No. 2 speaker | B |
| Front No. 1 speaker | C |
| Front No. 3 speaker | D |
| Rear speaker set | E |

| | |
|---|---|
| B | Go to step 25 |
| C | Go to step 27 |
| D | Go to step 29 |
| E | Go to step 31 |

A

**23.INSPECT FRONT NO. 4 SPEAKER ASSEMBLY**

a. Disconnect the F6 speaker connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 6 Ω |

Component without harness connected:
(Front No. 4 Speaker)

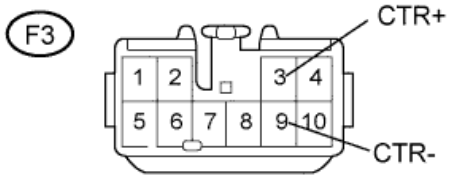
N

| | |
|---|---|
| NG | REPLACE FRONT NO. 4 SPEAKER ASSEMBLY (Click here) |

OK

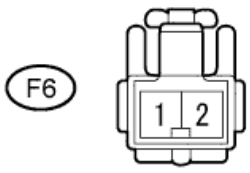
**24.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - FRONT NO. 4 SPEAKER)**

a. Disconnect the F6 speaker connector.



b. Disconnect the F3 amplifier connector.

c. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-3 (CTR+) - F6-1 | Always | Below 1 Ω |
| F3-9 (CTR-) - F6-2 | Always | Below 1 Ω |
| F3-3 (CTR+) - Body ground | Always | 10 kΩ or higher |
| F3-9 (CTR-) - Body ground | Always | 10 kΩ or higher |

Front view of wire harness connector:
(to Stereo Component Amplifier)

Front view of wire harness connector:
(to Front No. 4 Speaker)

| | |
|---|---|
| NG | REPAIR OR REPLACE HARNESS OR CONNECTOR |

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 25.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY

a. Disconnect the F8 and F7 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

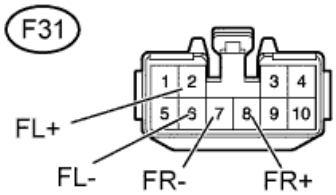
**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | Below 1 Ω |
| 3 - 4 | Always | Below 1 Ω |
| 2 - 4 | Always | 4 Ω |

Component without harness connected:
(Front No. 2 Speaker)

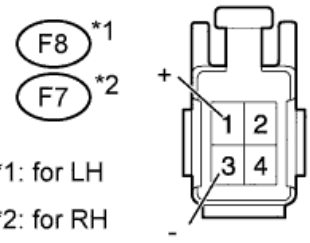
NG → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

OK



## 26.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - FRONT NO. 2 SPEAKER)

a. Disconnect the F31 amplifier connector.



b. Disconnect the F8 and F7 speaker connectors.

c. Measure the resistance according to the value(s) in the table below.

Front view of wire harness connector:
(to Stereo Component Amplifier)

Front view of wire harness connector:
(to Front No. 2 Speaker)

*1: for LH

*2: for RH

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F31-2 (FL+) - F8-1 (+) | Always | Below 1 Ω |
| F31-6 (FL-) - F8-3 (-) | Always | Below 1 Ω |
| F31-2 (FL+) - Body ground | Always | 10 kΩ or higher |
| F31-6 (FL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|

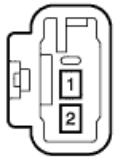
| | | |
|---|---|---|
| F31-8 (FR+) - F7-1 (+) | Always | Below 1 Ω |
| F31-7 (FR-) - F7-3 (-) | Always | Below 1 Ω |
| F31-8 (FR+) - Body ground | Always | 10 kΩ or higher |
| F31-7 (FR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

27.INSPECT FRONT NO. 1 SPEAKER ASSEMBLY



a. Disconnect the I10 and I1 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

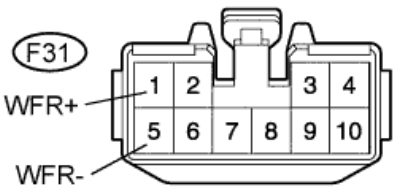
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 3 Ω |

Component without harness connected:
(Front No. 1 Speaker)

N

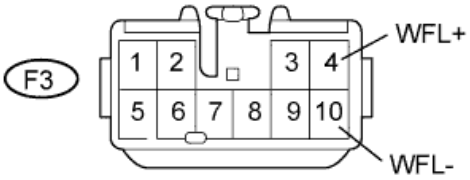
NG → REPLACE FRONT NO. 1 SPEAKER ASSEMBLY (Click here)

OK



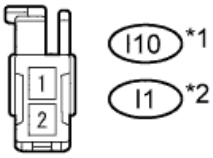
28.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - FRONT NO. 1 SPEAKER)

a. Disconnect the I10 and I1 speaker connectors.



b. Disconnect the F31 and F3 amplifier connectors.

c. Measure the resistance according to the value(s) in the table below.



Front view of wire harness connector:
(to Stereo Component Amplifier)

Front view of wire harness connector:
(to Stereo Component Amplifier)

Front view of wire harness connector:
(to Front No. 1 Speaker)

*1: for LH

*2: for RH

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-4 (WFL+) - I10-1 | Always | Below 1 Ω |
| F3-10 (WFL-) - I10-2 | Always | Below 1 Ω |
| F3-4 (WFL+) - Body ground | Always | 10 kΩ or higher |
| F3-10 (WFL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F31-1 (WFR+) - I1-1 | Always | Below 1 Ω |
| F31-5 (WFR-) - I1-2 | Always | Below 1 Ω |
| F31-1 (WFR+) - Body ground | Always | 10 kΩ or higher |
| F31-5 (WFR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK → REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

### 29.INSPECT FRONT NO. 3 SPEAKER ASSEMBLY

a. Disconnect the F14 and F13 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

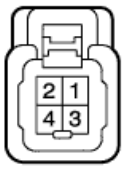
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4 Ω |

Component without harness connected:
(Front No. 3 Speaker)

NG → REPLACE FRONT NO. 3 SPEAKER ASSEMBLY (Click here)

OK

### 30.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY



a. Disconnect the F8 and F7 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | Below 1 Ω |
| 3 - 4 | Always | Below 1 Ω |
| 2 - 4 | Always | 4 Ω |

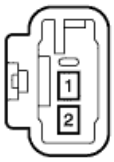
Component without harness connected:
(Front No. 2 Speaker)

NG → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR (FRONT NO. 2 SPEAKER - FRONT NO. 3 SPEAKER)

### 31.INSPECT REAR SPEAKER SET



a. Disconnect the J17 and J15 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

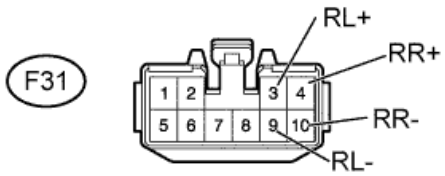
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4 Ω |

Component without harness connected:
(Rear Speaker Set)

N

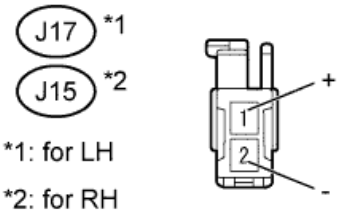
NG → REPLACE REAR SPEAKER SET (Click here)

OK



### 32.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - REAR SPEAKER SET)

a. Disconnect the F31 amplifier connector.



b. Disconnect the J17 and J15 speaker connectors.

c. Measure the resistance according to the value(s) in the table below.

Front view of wire harness connector:
(to Stereo Component Amplifier)

Front view of wire harness connector:
(to Rear Speaker Set)

**Standard Resistance:**

**for LH:**

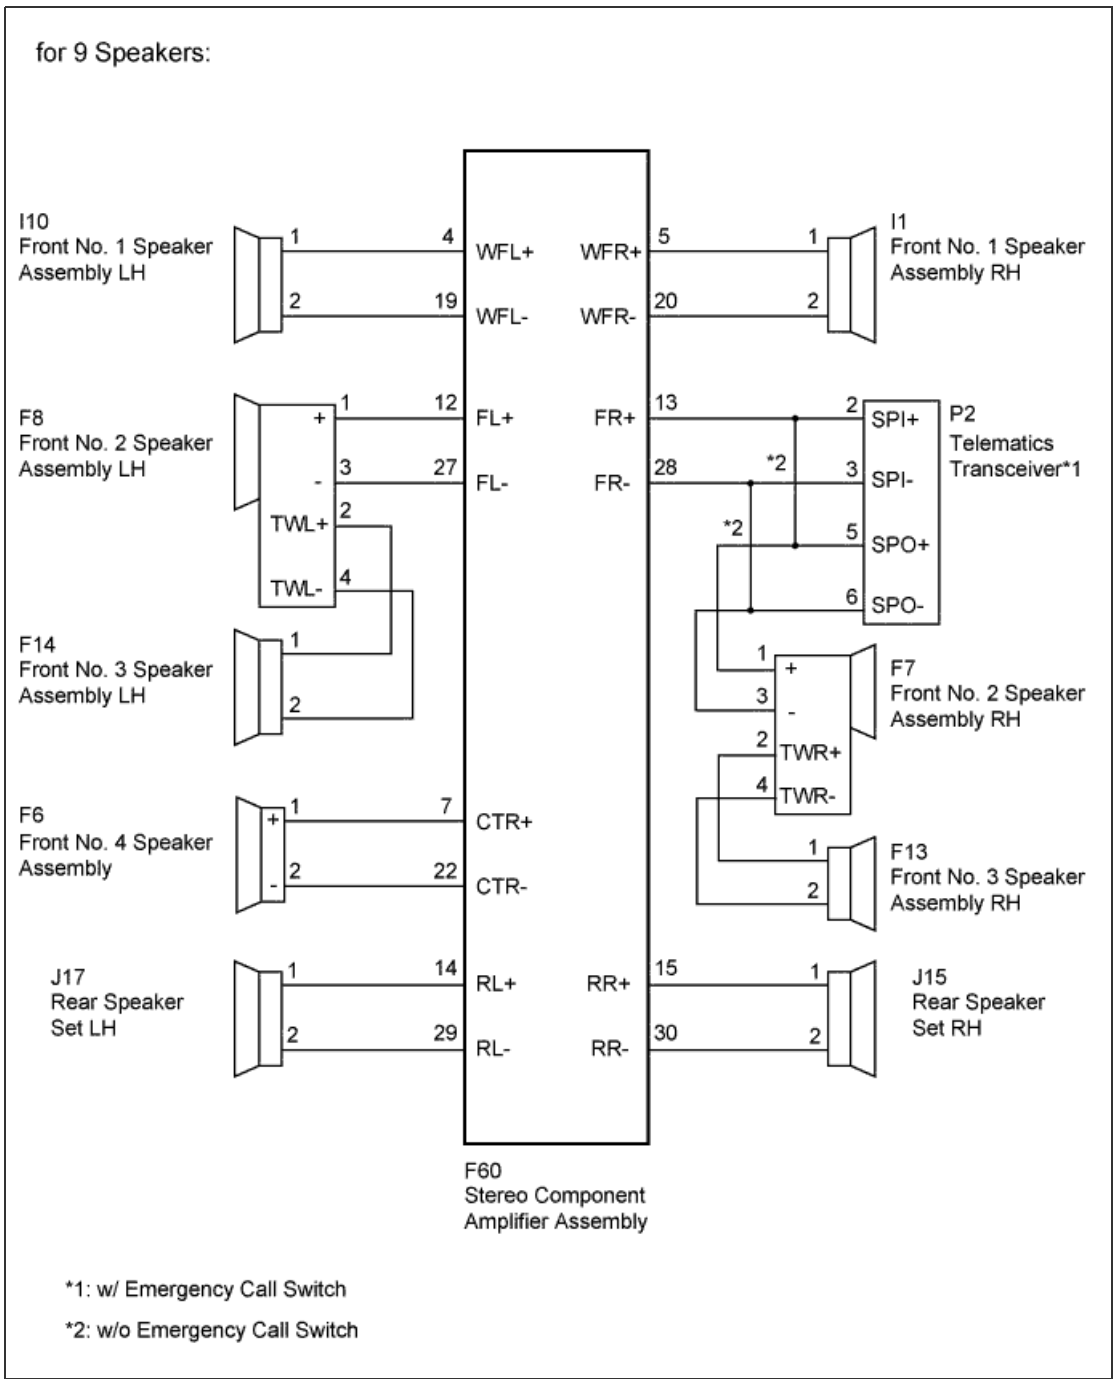
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F31-3 (RL+) - J17-1 (+) | Always | Below 1 Ω |
| F31-9 (RL-) - J17-2 (-) | Always | Below 1 Ω |
| F31-3 (RL+) - Body ground | Always | 10 kΩ or higher |
| F31-9 (RL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

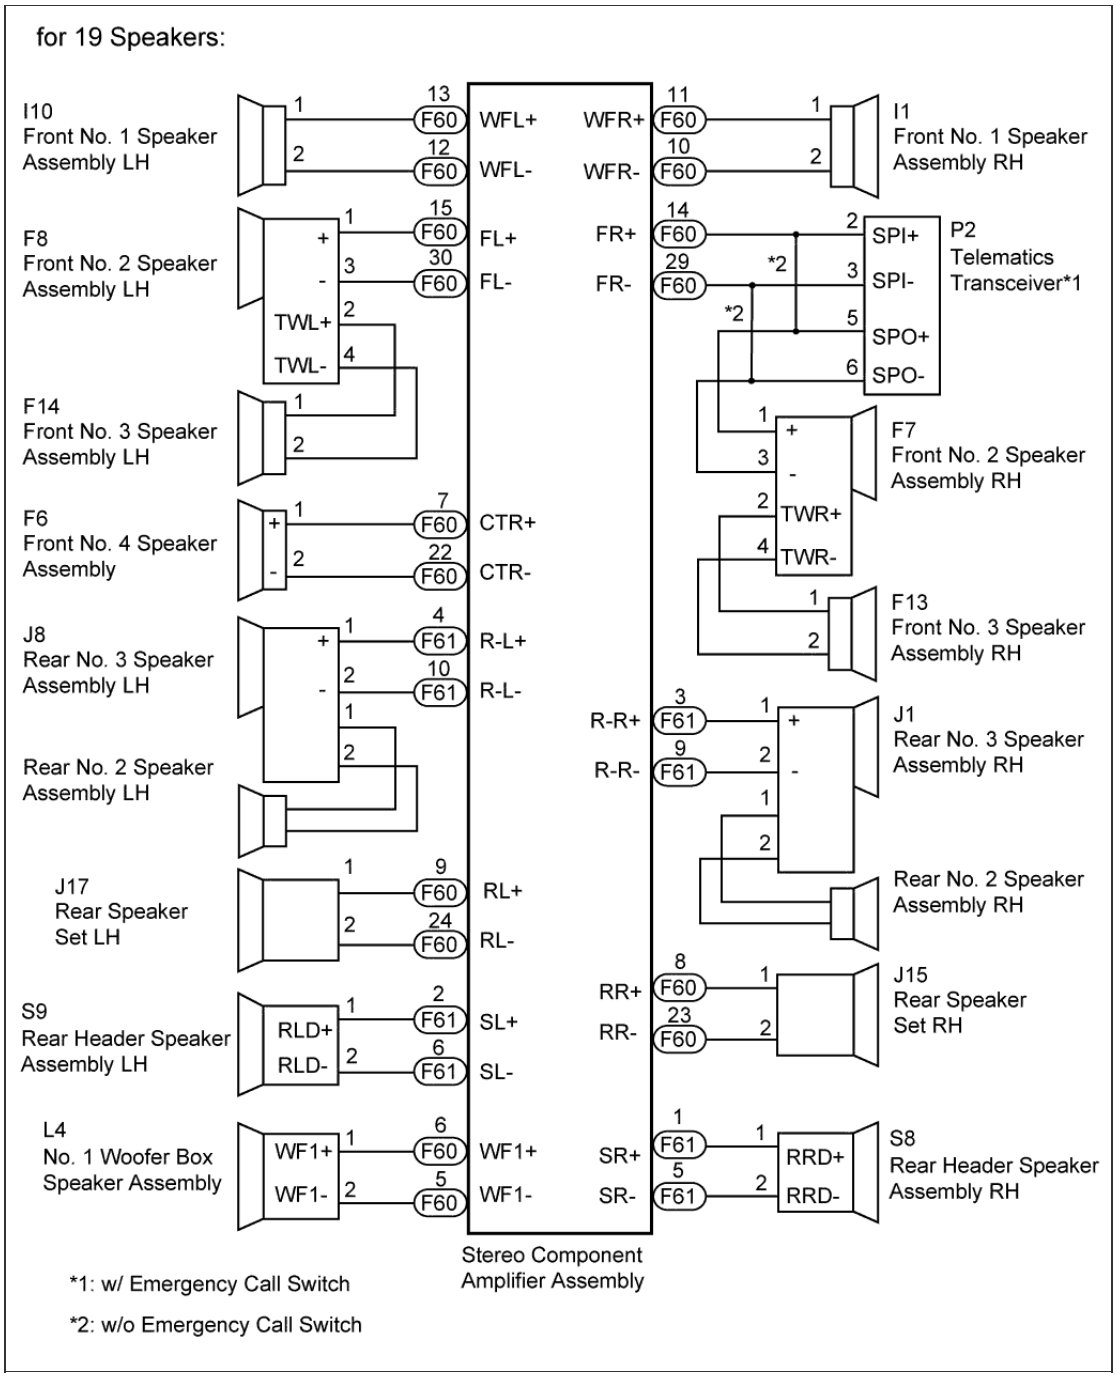
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F31-4 (RR+) - J15-1 (+) | Always | Below 1 Ω |
| F31-10 (RR-) - J15-2 (-) | Always | Below 1 Ω |
| F31-4 (RR+) - Body ground | Always | 10 kΩ or higher |
| F31-10 (RR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)



**for Preparation** Click here

## DESCRIPTION

The stereo component amplifier assembly sends a sound signal to the speakers.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - SPEAKERS)

*1: for RH Side
*2: for LH Side
*3: w/ Emergency Call Switch
*4: w/o Emergency Call Switch
*5: for 9 speakers
*6: for 19 speakers

a. Disconnect the F60 and/or F61*6 stereo component amplifier assembly connector.

b. Disconnect the I1*1 and/or I10*2 front No. 1 speaker assembly connector.

c. Disconnect the F7*1 and/or F8*2 front No. 2 speaker assembly connector.

d. Disconnect the F6 front No. 4 speaker assembly connector.

e. Disconnect the J15*1 and/or J17*2 rear speaker set connector.

f. Disconnect the J1*1 and/or J8*2 rear No. 3 speaker connector*6.

g. Disconnect the S8*1 and/or S9*2 rear header speaker assembly connector*6.

h. Disconnect the L4 No. 1 woofer box speaker connector*6.

i. Disconnect the P2*3 telematics transceiver connector.

j. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**
**for 9 speakers:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F60-5 (WFR+) - I1-1*1 | Always | Below 1 Ω |
| F60-20 (WFR-) - I1-2*1 | Always | Below 1 Ω |
| F60-4 (WFL+) - I10-1*2 | Always | Below 1 Ω |
| F60-19 (WFL-) - I10-2*2 | Always | Below 1 Ω |
| F60-13 (FR+) - P2-2 (SPI+)*1, *3 | Always | Below 1 Ω |
| F60-28 (FR-) - P2-3 (SPI-)*1, *3 | Always | Below 1 Ω |
| F60-13 (FR+) - F7-1 (+)*1, *4 | Always | Below 1 Ω |
| F60-28 (FR-) - F7-3 (-)*1, *4 | Always | Below 1 Ω |
| F60-12 (FL+) - F8-1 (+)*2 | Always | Below 1 Ω |
| F60-27 (FL-) - F8-3 (-)*2 | Always | Below 1 Ω |
| F60-7 (CTR+) - F6-1 (+) | Always | Below 1 Ω |
| F60-22 (CTR-) - F6-2 (-) | Always | Below 1 Ω |
| F60-15 (RR+) - J15-1*1 | Always | Below 1 Ω |
| F60-30 (RR-) - J15-2*1 | Always | Below 1 Ω |
| F60-14 (RL+) - J17-1*2 | Always | Below 1 Ω |
| F60-29 (RL-) - J17-2*2 | Always | Below 1 Ω |
| F60-5 (WFR+) - Body ground | Always | 10 kΩ or higher |
| F60-20 (WFR-) - Body ground | Always | 10 kΩ or higher |
| F60-4 (WFL+) - Body ground | Always | 10 kΩ or higher |
| F60-19 (WFL-) - Body ground | Always | 10 kΩ or higher |
| F60-13 (FR+) - Body ground | Always | 10 kΩ or higher |
| F60-28 (FR-) - Body ground | Always | 10 kΩ or higher |
| F60-12 (FL+) - Body ground | Always | 10 kΩ or higher |
| F60-27 (FL-) - Body ground | Always | 10 kΩ or higher |
| F60-7 (CTR+) - Body ground | Always | 10 kΩ or higher |
| F60-22 (CTR-) - Body ground | Always | 10 kΩ or higher |
| F60-15 (RR+) - Body ground | Always | 10 kΩ or higher |
| F60-30 (RR-) - Body ground | Always | 10 kΩ or higher |
| F60-14 (RL+) - | | |

| | | |
|---|---|---|
| Body ground | Always | 10 kΩ or higher |
| F60-29 (RL-) - Body ground | Always | 10 kΩ or higher |

**for 19 speakers:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F60-11 (WFR+) - I1-1*1 | Always | Below 1 Ω |
| F60-10 (WFR-) - I1-2*1 | Always | Below 1 Ω |
| F60-13 (WFL+) - I10-1*2 | Always | Below 1 Ω |
| F60-12 (WFL-) - I10-2*2 | Always | Below 1 Ω |
| F60-14 (FR+) - P2-2 (SPI+)*1, *3 | Always | Below 1 Ω |
| F60-29 (FR-) - P2-3 (SPI-)*1, *3 | Always | Below 1 Ω |
| F60-14 (FR+) - F7-1 (+)*1, *4 | Always | Below 1 Ω |
| F60-29 (FR-) - F7-3 (-)*1, *4 | Always | Below 1 Ω |
| F60-15 (FL+) - F8-1 (+)*2 | Always | Below 1 Ω |
| F60-30 (FL-) - F8-3 (-)*2 | Always | Below 1 Ω |
| F60-7 (CTR+) - F6-1 (+) | Always | Below 1 Ω |
| F60-22 (CTR-) - F6-2 (-) | Always | Below 1 Ω |
| F61-3 (R-R+) - J1-1 (+)*1 | Always | Below 1 Ω |
| F61-9 (R-R-) - J1-2 (-)*1 | Always | Below 1 Ω |
| F61-4 (R-L+) - J8-1 (+)*2 | Always | Below 1 Ω |
| F61-10 (R-L-) - J8-2 (-)*2 | Always | Below 1 Ω |
| F60-8 (RR+) - J15-1*1 | Always | Below 1 Ω |
| F60-23 (RR-) - J15-2*1 | Always | Below 1 Ω |
| F60-9 (RL+) - J17-1*2 | Always | Below 1 Ω |
| F60-24 (RL-) - J17-2*2 | Always | Below 1 Ω |
| F61-1 (SR+) - S8-1 (RRD+)*1 | Always | Below 1 Ω |
| F61-5 (SR-) - S8-2 (RRD-)*1 | Always | Below 1 Ω |
| F61-2 (SL+) - S9-1 (RLD+)*2 | Always | Below 1 Ω |
| F61-6 (SL-) - S9-2 (RLD-)*2 | Always | Below 1 Ω |
| F60-6 (WF1+) - L4-1 (WF1+) | Always | Below 1 Ω |
| F60-5 (WF1-) - L4-2 (WF1-) | Always | Below 1 Ω |
| F60-11 (WFR+) - Body ground | Always | 10 kΩ or higher |
| F60-10 (WFR-) - Body ground | Always | 10 kΩ or higher |
| F60-13 (WFL+) - Body ground | Always | 10 kΩ or higher |
| F60-12 (WFL-) - | | |

| | | |
|---|---|---|
| Body ground | Always | 10 kΩ or higher |
| F60-14 (FR+) - Body ground | Always | 10 kΩ or higher |
| F60-29 (FR-) - Body ground | Always | 10 kΩ or higher |
| F60-15 (FL+) - Body ground | Always | 10 kΩ or higher |
| F60-30 (FL-) - Body ground | Always | 10 kΩ or higher |
| F60-7 (CTR+) - Body ground | Always | 10 kΩ or higher |
| F60-22 (CTR-) - Body ground | Always | 10 kΩ or higher |
| F61-3 (R-R+) - Body ground | Always | 10 kΩ or higher |
| F61-9 (R-R-) - Body ground | Always | 10 kΩ or higher |
| F61-4 (R-L+) - Body ground | Always | 10 kΩ or higher |
| F61-10 (R-L-) - Body ground | Always | 10 kΩ or higher |
| F60-8 (RR+) - Body ground | Always | 10 kΩ or higher |
| F60-23 (RR-) - Body ground | Always | 10 kΩ or higher |
| F60-9 (RL+) - Body ground | Always | 10 kΩ or higher |
| F60-24 (RL-) - Body ground | Always | 10 kΩ or higher |
| F60-1 (SR+) - Body ground | Always | 10 kΩ or higher |
| F60-5 (SR-) - Body ground | Always | 10 kΩ or higher |
| F61-2 (SL+)- Body ground | Always | 10 kΩ or higher |
| F61-6 (SL-) - Body ground | Always | 10 kΩ or higher |
| F60-6 (WF1+) - Body ground | Always | 10 kΩ or higher |
| F60-5 (WF1-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**2.INSPECT FRONT NO. 1 SPEAKER ASSEMBLY**

a. Disconnect the front No. 1 speaker assembly connector.

b. Inspect the front No. 1 speaker assembly (Click here).

NG → REPLACE FRONT NO. 1 SPEAKER ASSEMBLY (Click here)

OK

**3.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY**

a. Disconnect the front No. 2 speaker assembly connector.

b. Inspect the front No. 2 speaker assembly (Click here).

NG → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

OK

## 4.CHECK FRONT NO. 3 SPEAKER ASSEMBLY

a. Temporarily replace the front No. 3 speaker assembly with a new or normally functioning one ( Click here).

b. Check for DTCs and check if the same DTCs is output ( Click here).

**OK:**
**No DTCs are output.**

**Result**

| Result | Proceed to |
|---|---|
| OK | A |
| NG (w/ Emergency Call Switch) | B |
| NG (w/o Emergency Call Switch) | C |

B → Go to step 5

C → Go to step 7

A

## END (FRONT NO. 3 SPEAKER ASSEMBLY IS DEFECTIVE)

## 5.CHECK HARNESS AND CONNECTOR (TELEMATICS TRANSCEIVER - FRONT NO. 2 SPEAKER RH)

a. Disconnect the P2 telematics transceiver connector.

b. Disconnect the F7 front No. 2 speaker assembly RH connector.

c. Measure the resistance according to the value(s) in the table below.

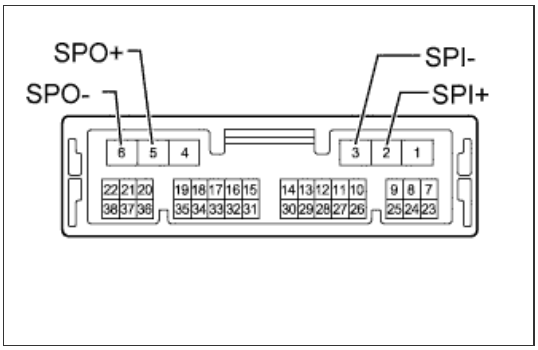
**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| P2-5 (SPO+) - F7-1 (+) | Always | Below 1 Ω |
| P2-6 (SPO-) - F7-3 (-) | Always | Below 1 Ω |
| P2-5 (SPO+) - Body ground | Always | 10 kΩ or higher |
| P2-6 (SPO-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 6.INSPECT TELEMATICS TRANSCEIVER



a. Remove the telematics transceiver (Click here).

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 2 (SPI+) - 5 (SPO+) | Always | Below 1 Ω |
| 3 (SPI-) - 6 (SPO-) | Always | Below 1 Ω |

| | | |
|---|---|---|
| 2 (SPI+) - Body ground | Always | 10 kΩ or higher |
| 3 (SPI-) - Body ground | Always | 10 kΩ or higher |

NG → REPLACE TELEMATICS TRANSCEIVER (Click here)

OK

## 7.CHECK HARNESS AND CONNECTOR (FRONT NO. 2 SPEAKER - FRONT NO. 3 SPEAKER)

*1: for RH Side
*2: for LH Side

a. Disconnect the F7*1 and/or F8*2 front No. 2 speaker assembly connector.

b. Disconnect the F13*1 and/or F14*2 front No. 3 speaker assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for RH Side**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F7-2 (TWR+) - F13-1 | Always | Below 1 Ω |
| F7-4 (TWR-) - F13-2 | Always | Below 1 Ω |
| F7-2 (TWR+) - Body ground | Always | 10 kΩ or higher |
| F7-4 (TWR-) - Body ground | Always | 10 kΩ or higher |

**for LH Side**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F8-2 (TWL+) - F14-1 | Always | Below 1 Ω |
| F8-4 (TWL-) - F14-2 | Always | Below 1 Ω |
| F8-2 (TWL+) - Body ground | Always | 10 kΩ or higher |
| F8-4 (TWL-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 8.INSPECT FRONT NO. 4 SPEAKER ASSEMBLY

a. Disconnect the front No. 4 speaker assembly connector.

b. Inspect the front No. 4 speaker assembly (Click here).

NG → REPLACE FRONT NO. 4 SPEAKER ASSEMBLY (Click here)

OK

## 9.INSPECT REAR SPEAKER SET

a. Disconnect the rear speaker set connector.

b. Inspect the rear speaker set (Click here).

**Result**

| Result | Proceed to |
|---|---|
| | |

| | |
|---|---|
| OK (for 19 speakers) | A |
| OK (for 9 speakers) | B |
| NG | C |

B → REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

C → REPLACE REAR SPEAKER SET (Click here)

A

**10.CHECK REAR NO. 3 SPEAKER ASSEMBLY**

a. Temporarily replace the rear No. 3 speaker assembly with a new or normally functioning one ( Click here).

b. Check for DTCs and check if the same DTCs is output ( Click here).

**OK:**
**No DTCs are output.**

NG → Go to step 11

OK

**END (REAR NO. 3 SPEAKER ASSEMBLY IS DEFECTIVE)**

**11.INSPECT REAR NO. 2 SPEAKER ASSEMBLY**

a. Disconnect the rear No. 2 speaker assembly connector.

b. Inspect the rear No. 2 speaker assembly (Click here).

NG → REPLACE REAR NO. 2 SPEAKER ASSEMBLY (Click here)

OK

**12.INSPECT REAR HEADER SPEAKER ASSEMBLY**

a. Disconnect the rear header assembly connector.

b. Inspect the rear header assembly (Click here).

NG → REPLACE REAR HEADER SPEAKER ASSEMBLY (Click here)

OK

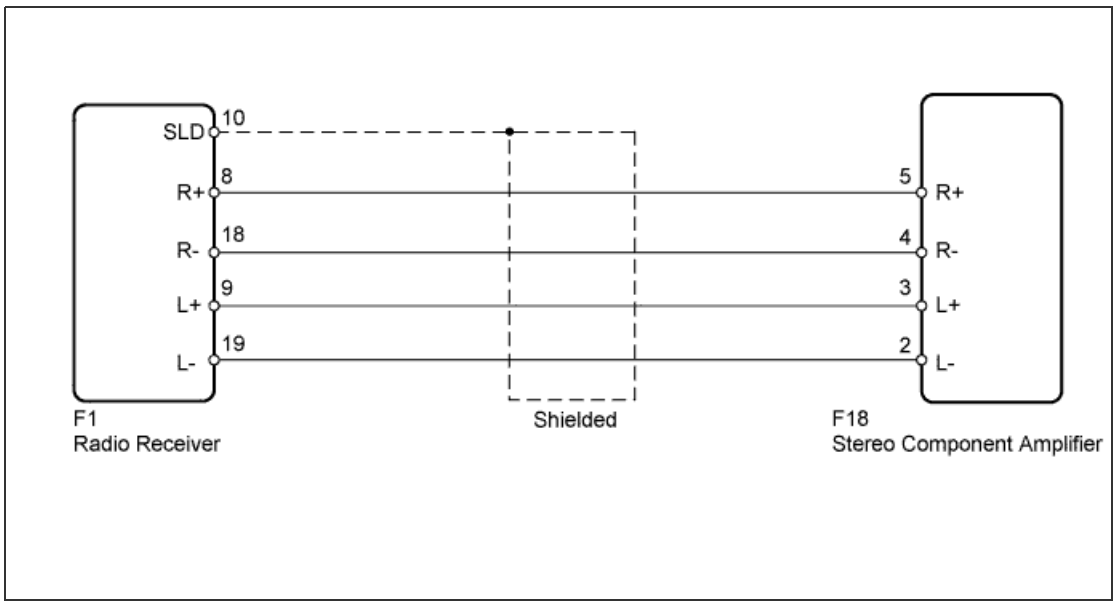
**13.INSPECT NO. 1 WOOFER BOX SPEAKER ASSEMBLY**

a. Disconnect the No. 1 woofer box speaker assembly connector.

b. Inspect the No. 1 woofer box speaker assembly ( Click here).

NG → REPLACE NO. 1 WOOFER BOX SPEAKER (Click here)

OK



**REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)**

**for Preparation** Click here

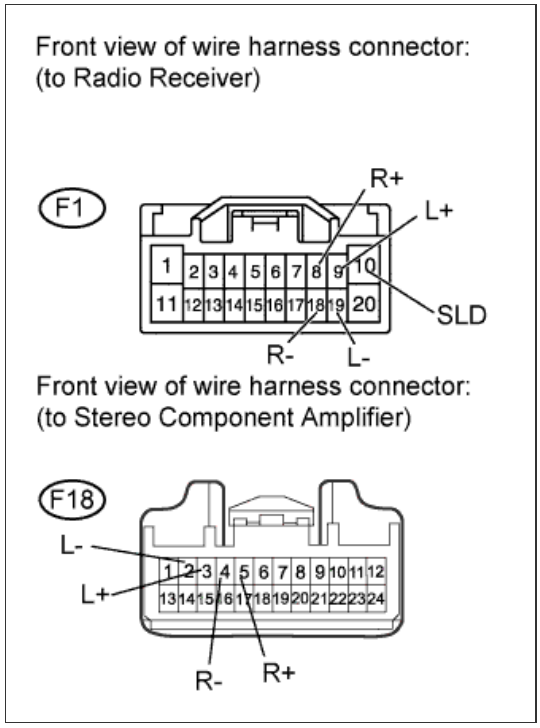
## DESCRIPTION

This circuit sends a sound signal from the radio receiver to the stereo component amplifier.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - STEREO COMPONENT AMPLIFIER)



a. Disconnect the F1 receiver connector.

b. Disconnect the F18 amplifier connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F1-9 (L+) - F18-3 (L+) | Always | Below 1 Ω |
| F1-19 (L-) - F18-2 (L-) | | |
| F1-8 (R+) - F18-5 (R+) | | |
| F1-18 (R-) - F18-4 (R-) | | |
| F1-9 (L+) - Body ground | Always | 10 kΩ or higher |
| F1-19 (L-) - Body ground | | |
| F1-8 (R+) - Body ground | | |
| F1-18 (R-) - Body ground | | |
| F1-10 (SLD) - Body ground | | |

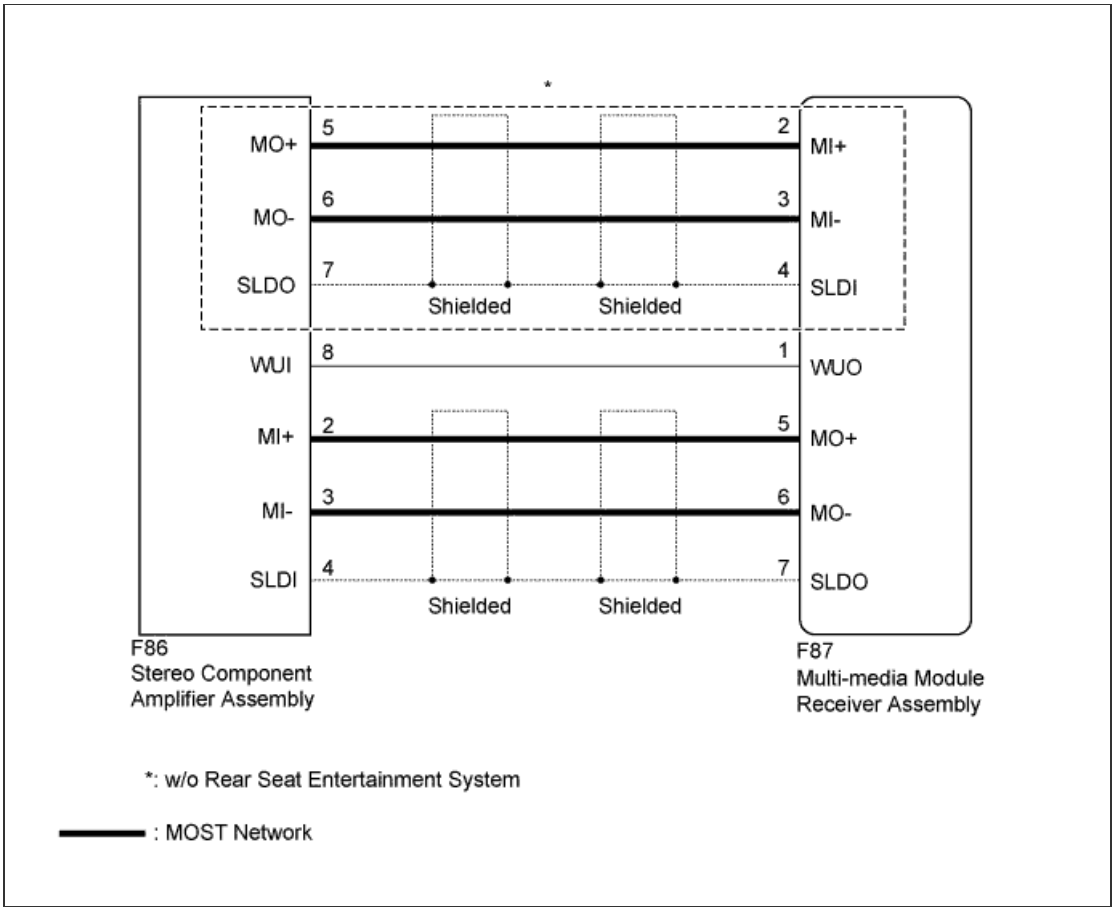
OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here



## DESCRIPTION

The multi-media module receiver assembly sends the sound signal to the stereo component amplifier assembly through this circuit.
The sound signal that has been sent is amplified by the stereo component amplifier assembly, and then is sent to the speakers.
If there is an open or short in the circuit, sound cannot be heard from the speakers even if there is no malfunction in the stereo component amplifier assembly, multi-media module receiver assembly or speakers.

**HINT:**

Refer to w/ Rear Seat Entertainment System ( Click here).

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - STEREO COMPONENT AMPLIFIER ASSEMBLY)

a. Disconnect the F87 multi-media module receiver assembly connector.

b. Disconnect the F86 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F87-1 (WUO) - F86-8 (WUI) | Always | Below 1 Ω |
| F87-2 (MI+) - F86-5 (MO+) | Always | Below 1 Ω |
| F87-3 (MI-) - F86-6 (MO-) | Always | Below 1 Ω |
| F87-4 (SLDI) - | | |

| | | |
|---|---|---|
| F86-7 (SLDO) | Always | Below 1 Ω |
| F87-5 (MO+) - F86-2 (MI+) | Always | Below 1 Ω |
| F87-6 (MO-) - F86-3 (MI-) | Always | Below 1 Ω |
| F87-7 (SLDO) - F86-4 (SLDI) | Always | Below 1 Ω |
| F87-1 (WUO) - Body ground | Always | 10 kΩ or higher |
| F87-2 (MI+) - Body ground | Always | 10 kΩ or higher |
| F87-3 (MI-) - Body ground | Always | 10 kΩ or higher |
| F87-4 (SLDI) - Body ground | Always | 10 kΩ or higher |
| F87-5 (MO+) - Body ground | Always | 10 kΩ or higher |
| F87-6 (MO-) - Body ground | Always | 10 kΩ or higher |
| F87-7 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

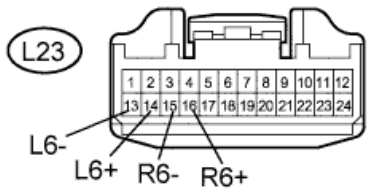
## DESCRIPTION

This is the sound signal circuit from the radio receiver to the multi-display selector.

**HINT:**

"Multi-display Controller" refers to the multi-display selector.

## WIRING DIAGRAM



## INSPECTION PROCEDURE

### 1.INSPECT RADIO RECEIVER

a. Disconnect the L23 selector connector.

b. Using an oscilloscope, check the signal waveform between each terminal and body ground according to the conditions shown in the chart below.

Front view of wire harness connector:
(to Multi-display Selector)

**OK:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L23-13 (L6-) - Body ground | Audio sound is being produced | A waveform synchronized with sound is output |
| L23-14 (L6+) - Body ground | | |
| L23-15 (R6-) - Body ground | | |
| L23-16 (R6+) - Body ground | | |

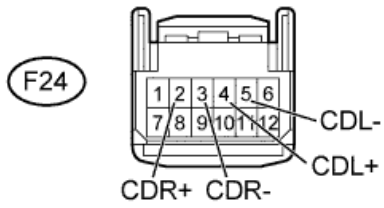
NG → Go to step 2

OK

REPLACE MULTI-DISPLAY SELECTOR (Click here)

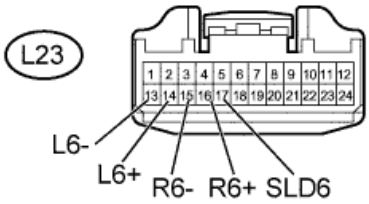
2.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - MULTI-DISPLAY SELECTOR)

a. Disconnect the F24 receiver connector.



b. Disconnect the L23 selector connector.

c. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F24-2 (CDR+) - L23-16 (R6+) | Always | Below 1 Ω |
| F24-3 (CDR-) - L23-15 (R6-) | | |
| F24-4 (CDL+) - L23-14 (L6+) | | |
| F24-5 (CDL-) - L23-13 (L6-) | | |
| L23-13 (L6-) - Body ground | Always | 10 kΩ or higher |
| L23-14 (L6+) - Body ground | | |
| L23-15 (R6-) - Body ground | | |
| L23-16 (R6+) - Body ground | | |
| L23-17 (SLD6) - Body ground | | |

Front view of wire harness connector:
(to Radio Receiver)

Front view of wire harness connector:
(to Multi-display Selector)

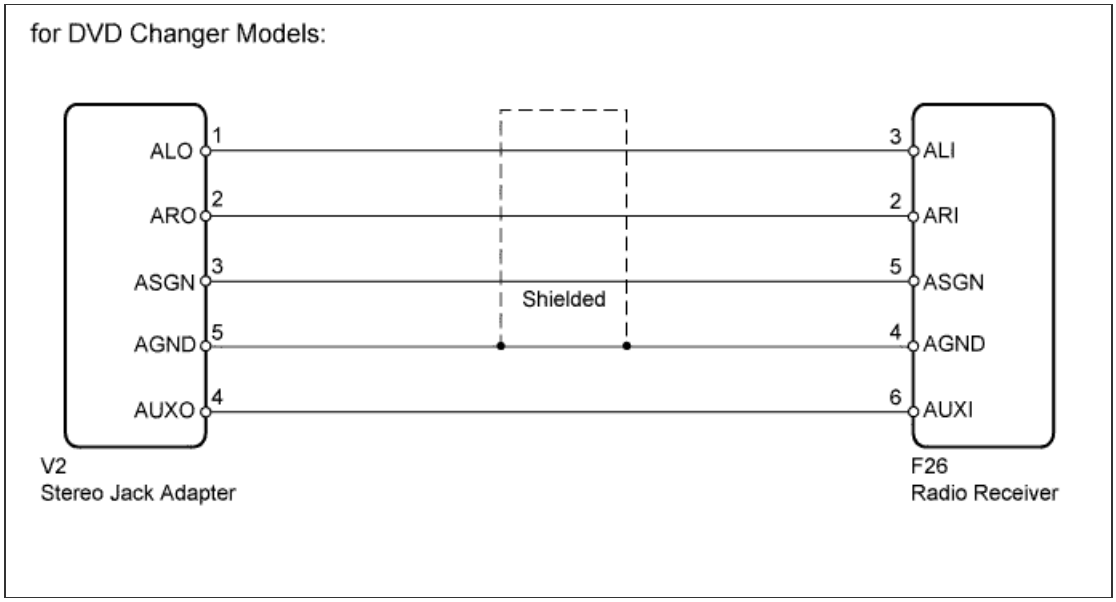
OK



REPLACE RADIO RECEIVER ASSEMBLY (Click here)

**for Preparation** Click here

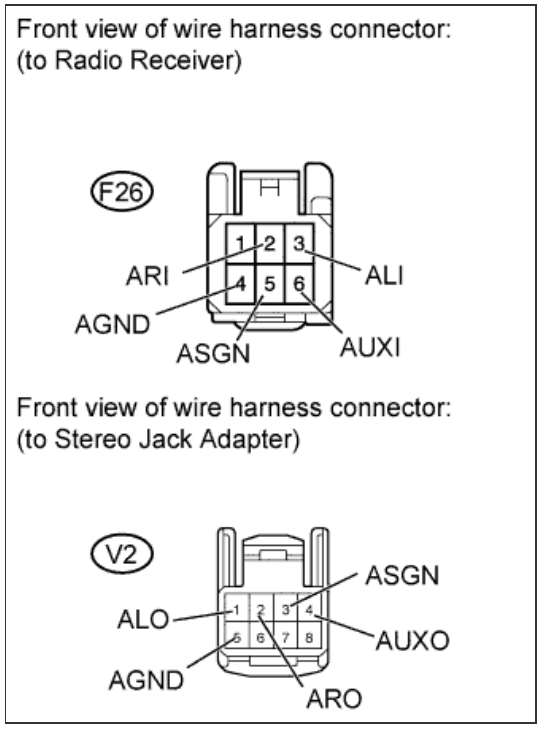
## DESCRIPTION

The stereo jack adapter sends an external device sound signal to the radio receiver through this circuit.
The sound signal that has been sent is amplified by the stereo component amplifier, and then is sent to the speakers.
If there is an open or short in the circuit, sound cannot be heard from the speakers even if there is no malfunction in the stereo component amplifier, radio receiver, or speakers.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - STEREO JACK ADAPTER)



a. Disconnect the F26 receiver connector.

b. Disconnect the V2 adapter connector.

c. Measure the resistance according to the value(s) in the table below.

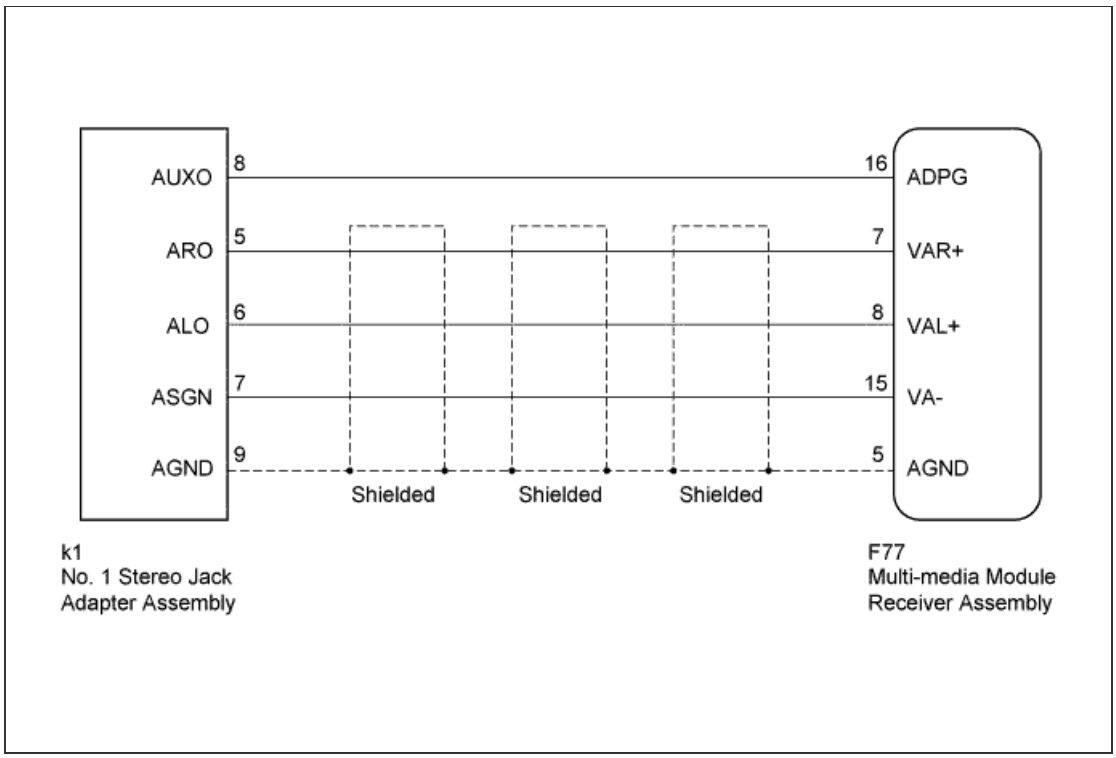
**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| V2-4 (AUXO) - F26-6 (AUXI) | Always | Below 1 Ω |
| V2-3 (ASGN) - F26-5 (ASGN) | | |
| V2-2 (ARO) - F26-2 (ARI) | | |
| V2-1 (ALO) - F26-3 (ALI) | | |
| V2-5 (AGND) - F26-4 (AGND) | | |
| V2-4 (AUXO) - Body ground | Always | 10 kΩ or higher |
| V2-3 (ASGN) - Body ground | | |
| V2-2 (ARO) - Body ground | | |
| V2-1 (ALO) - Body ground | | |

| | | |
|---|---|---|
| V2-5 (AGND) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## DESCRIPTION

The No. 1 stereo jack adapter assembly sends the sound signal from an external device to the multi-media module receiver assembly through this circuit.
The sound signal that has been sent is amplified by the stereo component amplifier assembly or multi-media module receiver assembly, and then is sent to the speakers.
If there is an open or short in the circuit, sound cannot be heard from the speakers even if there is no malfunction in the stereo component amplifier assembly, multi-media module receiver assembly or speakers.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - NO. 1 STEREO JACK ADAPTER ASSEMBLY)

a. Disconnect the F77 multi-media module receiver assembly connector.

b. Disconnect the k1 No. 1 stereo jack adapter assembly connector.

c. Measure the resistance according to the value(s) in the table below.

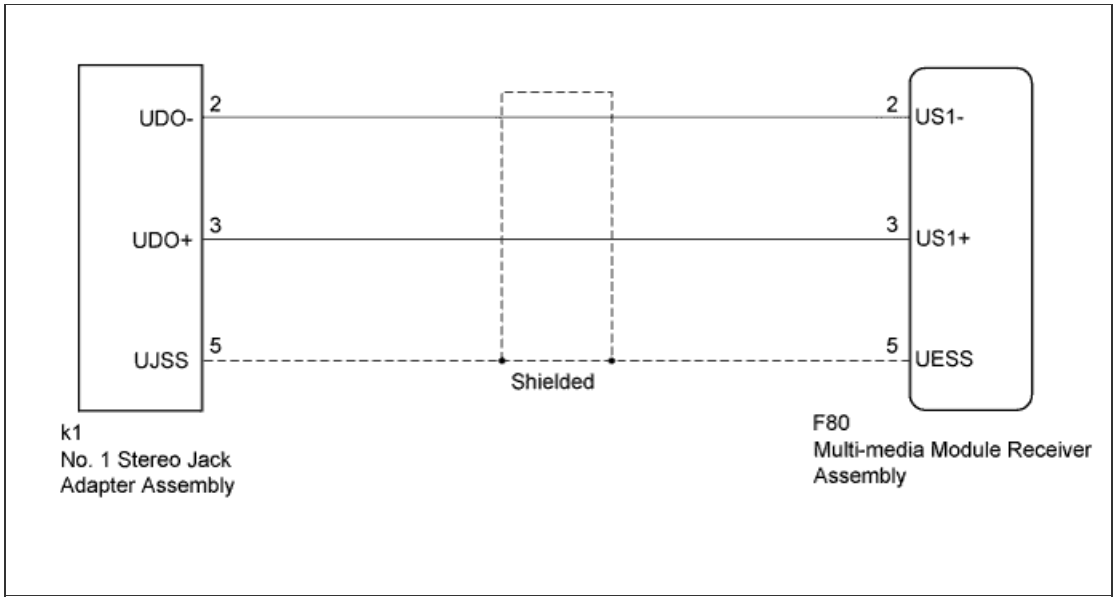
**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F77-16 (ADPG) - k1-8 (AUXO) | Always | Below 1 Ω |
| F77-7 (VAR+) - k1-5 (ARO) | Always | Below 1 Ω |
| F77-8 (VAL+) - k1-6 (ALO) | Always | Below 1 Ω |
| F77-15 (VA-) - k1-7 (ASGN) | Always | Below 1 Ω |
| F77-5 (AGND) - k1-9 (AGND) | Always | Below 1 Ω |
| F77-16 (ADPG) - Body ground | Always | 10 kΩ or higher |
| F77-7 (VAR+) - Body ground | Always | 10 kΩ or higher |

| | | |
|---|---|---|
| F77-8 (VAL+) - Body ground | Always | 10 kΩ or higher |
| F77-15 (VA-) - Body ground | Always | 10 kΩ or higher |
| F77-5 (AGND) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## DESCRIPTION

The No. 1 stereo jack adapter assembly sends the sound data signal or image data signal from a USB device to the multi-media module receiver assembly via this circuit.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**1.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - NO. 1 STEREO JACK ADAPTER ASSEMBLY)**

a. Disconnect the F80 multi-media module receiver assembly connector.

b. Disconnect the k1 No. 1 stereo jack adapter assembly connector.

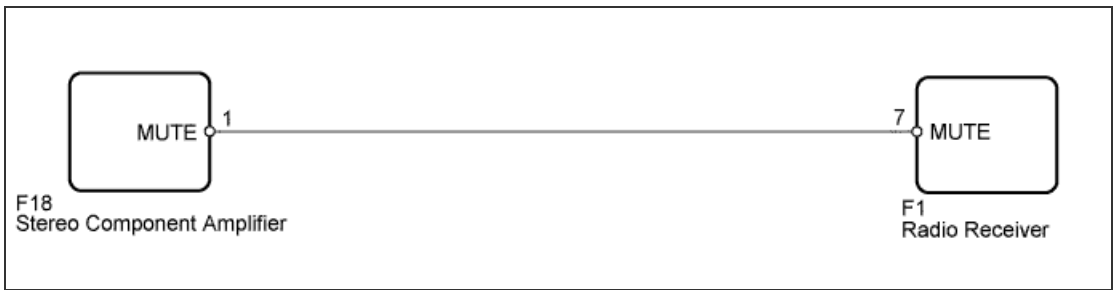
c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F80-2 (US1-) - k1-2 (UDO-) | Always | Below 1 Ω |
| F80-3 (US1+) - k1-3 (UDO+) | Always | Below 1 Ω |
| F80-5 (UESS) - k1-5 (UJSS) | Always | Below 1 Ω |
| F80-2 (US1-) - Body ground | Always | 10 kΩ or higher |
| F80-3 (US1+) - Body ground | Always | 10 kΩ or higher |
| F80-5 (UESS) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

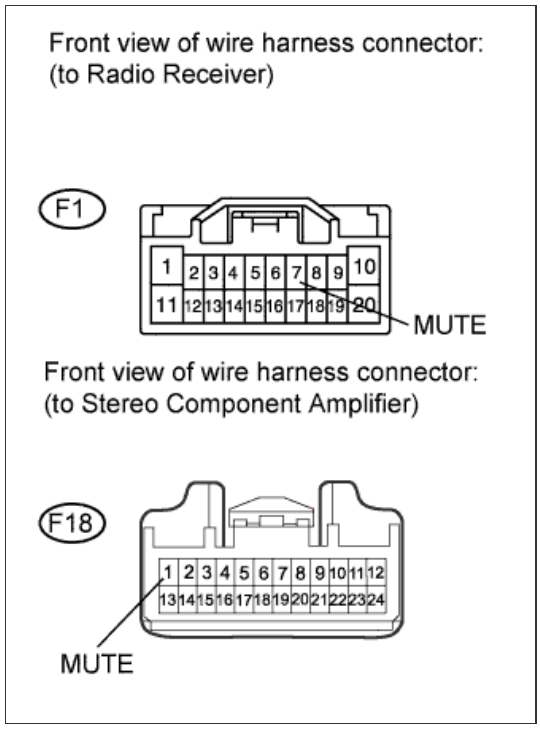
## DESCRIPTION

This circuit sends a signal to the stereo component amplifier to mute noise. Therefore, the noise produced by changing the sound source ceases.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - STEREO COMPONENT AMPLIFIER)



a. Disconnect the F1 receiver connector.

b. Disconnect the F18 amplifier connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F1-7 (MUTE) - F18-1 (MUTE) | Always | Below 1 Ω |
| F1-7 (MUTE) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

### 2.CHECK STEREO COMPONENT AMPLIFIER ASSEMBLY (OPERATION)

a. Replace the stereo component amplifier with a normal one and check if it operates normally ( Click here).

**OK:**

**The audio system operates normally.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

END (STEREO COMPONENT AMPLIFIER ASSEMBLY IS DEFECTIVE)

**for Preparation** Click here

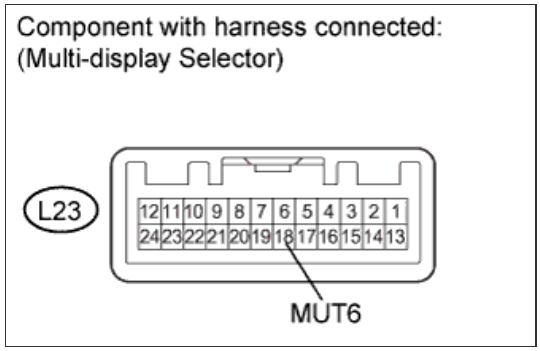
## DESCRIPTION

The multi-display selector controls the volume according to the mute signal from the radio receiver.
The mute signal is sent to reduce noise and a popping sound generated when switching the mode, etc.

**HINT:**

"Multi-display Controller" refers to the multi-display selector.

## WIRING DIAGRAM



## INSPECTION PROCEDURE

### 1.CHECK MULTI-DISPLAY SELECTOR

a. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L23-18 (MUT6) - Body ground | Engine switch on (ACC), audio system is playing → changing modes | 3.5 V or higher → Below 1 V |

NG → Go to step 2

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

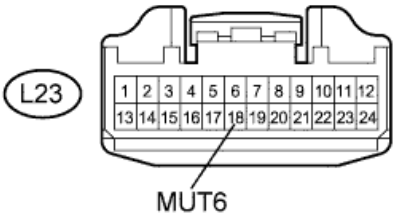
### 2.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - MULTI-DISPLAY SELECTOR)

a. Disconnect the F24 receiver connector.

b. Disconnect the L23 selector connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**



| | | Specified |
|---|---|---|

| Tester Connection | Condition | Condition |
|---|---|---|
| F24-6 (MUTE) - L23-18 (MUT6) | Always | Below 1 Ω |
| F24-6 (MUTE) - Body ground | Always | 10 kΩ or higher |

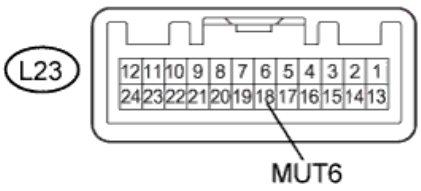
Front view of wire harness connector:
(to Radio Receiver)

Front view of wire harness connector:
(to Multi-display Selector)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**3.CHECK MULTI-DISPLAY SELECTOR**



a. Reconnect the L23 selector connector.

b. Measure the voltage according to the value(s) in the table below.

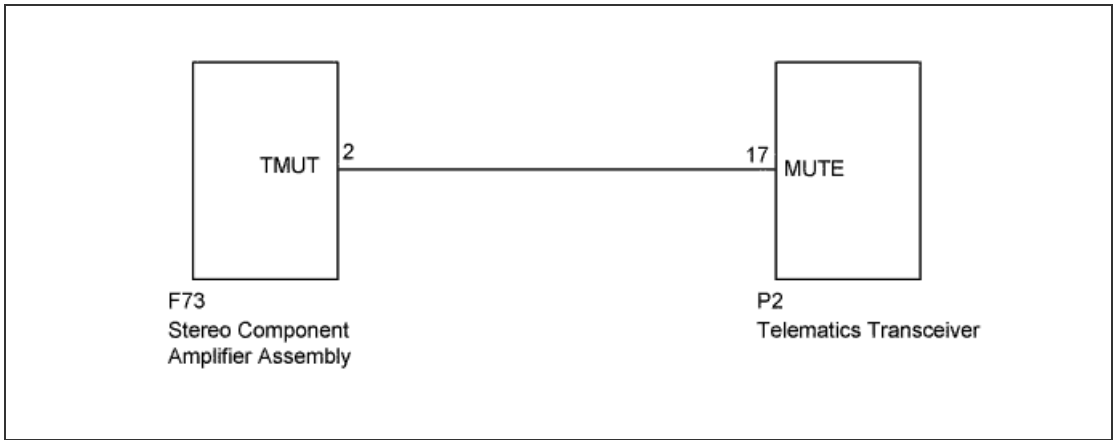
**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L23-18 (MUT6) - Body ground | Engine switch on (ACC), audio system is playing → changing modes | 3.5 V or higher → Below 1 V |

Component with harness connected:
(Multi-display Selector)

NG → REPLACE MULTI-DISPLAY SELECTOR (Click here)

OK



REPLACE RADIO RECEIVER ASSEMBLY (Click here)

**for Preparation** Click here

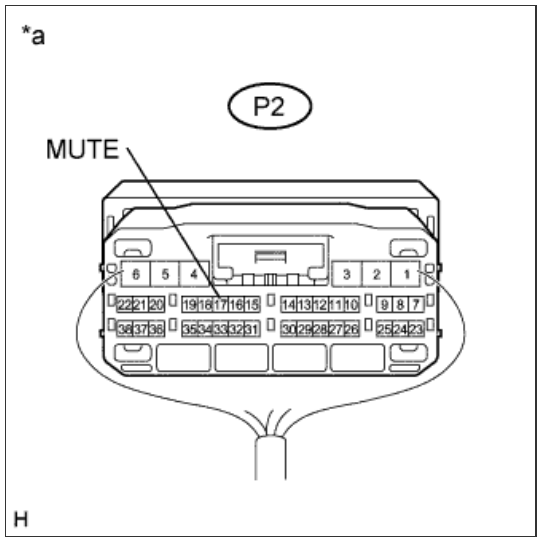
## DESCRIPTION

The telematics transceiver sends a mute signal to the stereo component amplifier assembly.
The stereo component amplifier assembly controls the volume according to the mute signal from the telematics transceiver.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK TELEMATICS TRANSCEIVER



a. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| P2-17 (MUTE) - Body ground | Engine switch on (ACC), audio system is playing → Emergency call mode | 3.5 V or higher → Below 1 V |

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected (Telematics Transceiver) |

NG → Go to step 2

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

### 2.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY - TELEMATICS TRANSCEIVER)

a. Disconnect the F73 stereo component amplifier assembly connector.

b. Disconnect the P2 telematics transceiver connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| | | Specified |
|---|---|---|

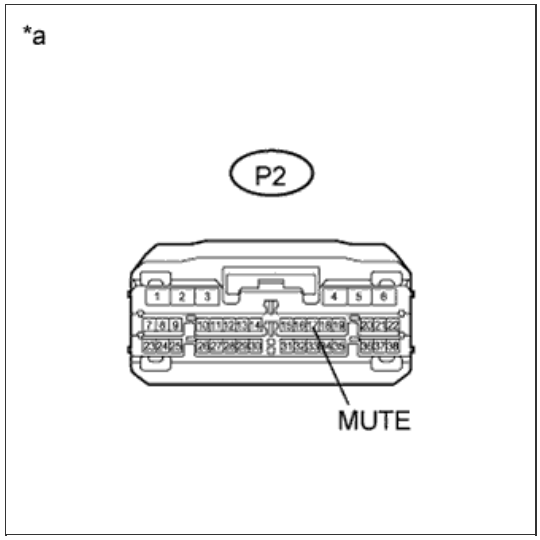
| Tester Connection | Condition | Condition |
|---|---|---|
| F73-2 (TMUT) - P2-17 (MUTE) | Always | Below 1 Ω |
| F73-2 (TMUT) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**3.CHECK STEREO COMPONENT AMPLIFIER ASSEMBLY**

a. Reconnect the stereo component amplifier assembly connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

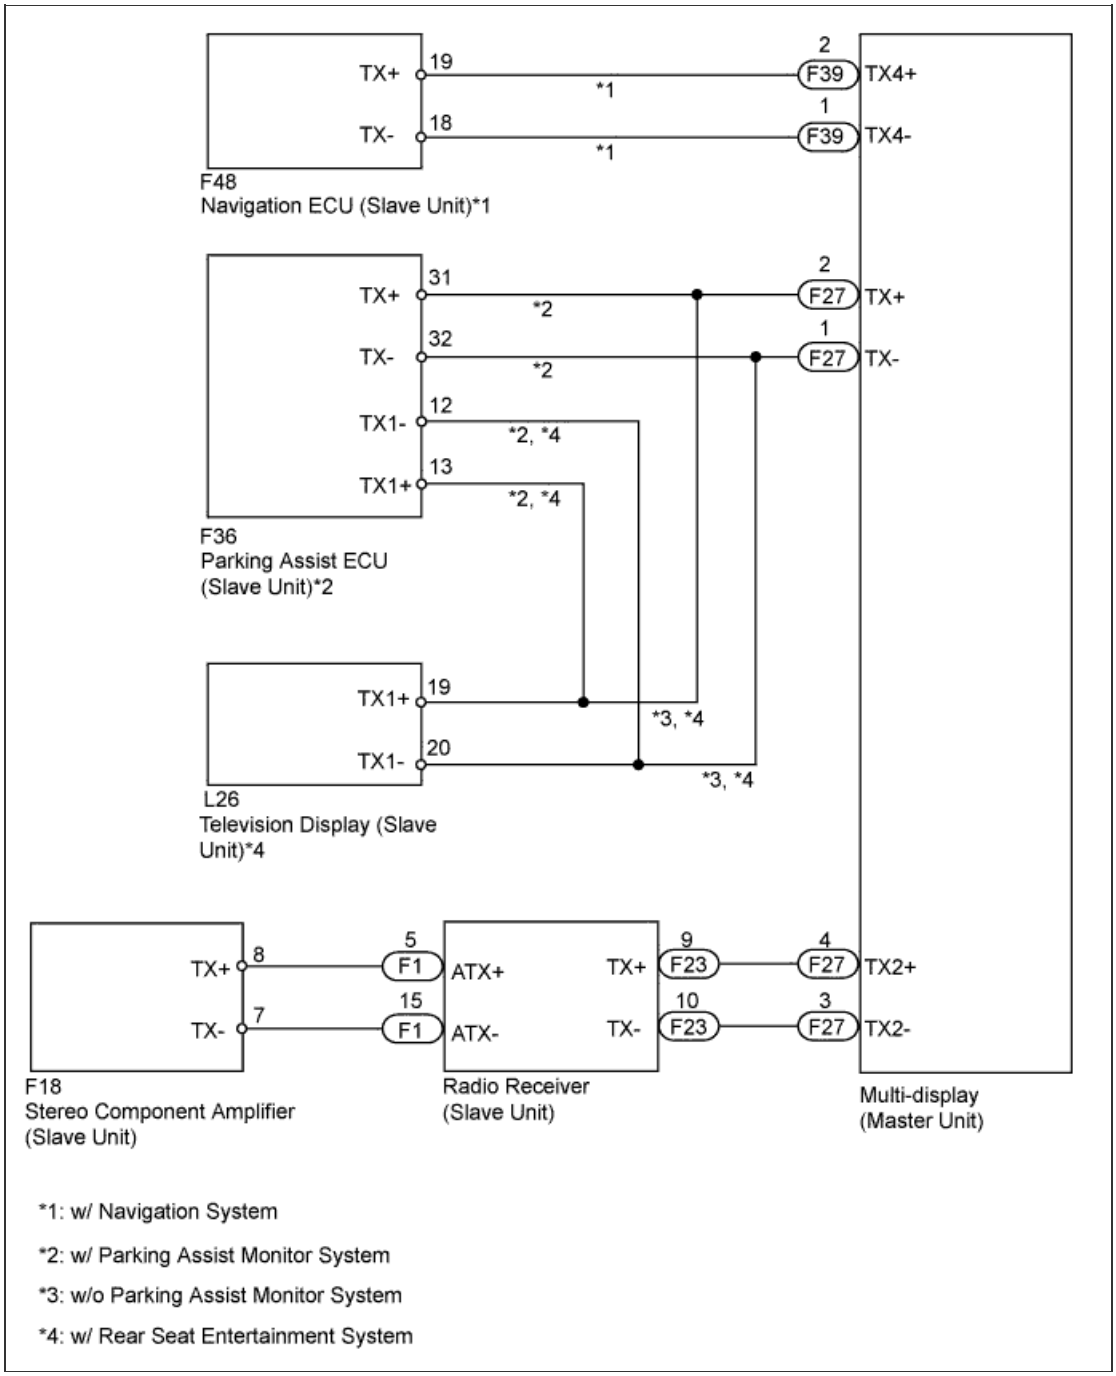
| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| P2-17 (MUTE) - Body ground | Engine switch on (ACC) | 3.5 V or higher |

**Text in Illustration**

| | |
|---|---|
| *a | Front view of wire harness connector (to Telematics Transceiver) |

NG → REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

OK

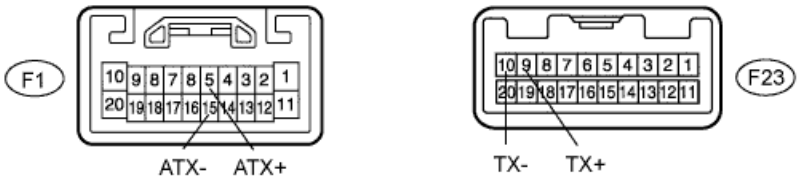


REPLACE TELEMATICS TRANSCEIVER (Click here)

**for Preparation** Click here

## DESCRIPTION

Each unit of the navigation system connected to the AVC-LAN (communication bus) communicates by transferring the signals from each switch. When a short to +B or short to ground occurs in the AVC-LAN, the navigation system will not function normally as communication is discontinued.



## WIRING DIAGRAM

## INSPECTION PROCEDURE

1.CHECK RADIO RECEIVER ASSEMBLY

Component without harness connected:
(Radio Receiver)

a. Disconnect the F1 and F23 receiver connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F1-5 (ATX+) - F1-15 (ATX-) | Always | 60 to 80 Ω |
| F23-9 (TX+) - F23-10 (TX-) | Always | 60 to 80 Ω |

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

**2.CHECK HARNESS AND CONNECTOR**

**HINT:**

For details of the connectors, refer to Terminals of ECU ( Click here).

a. Referring to the AVC-LAN wiring diagram, check all AVC-LAN circuits.

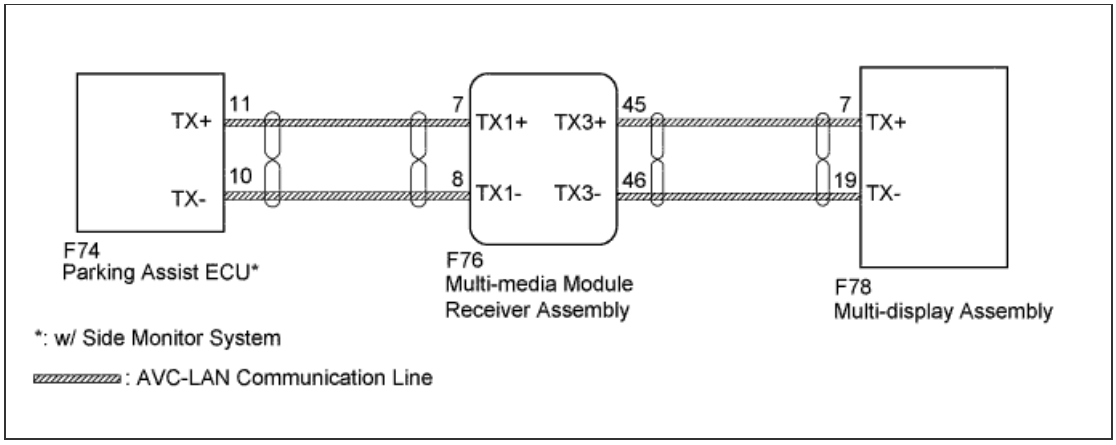
i. Disconnect all connectors in all AVC-LAN circuits.

ii. Check for an open or short in all AVC-LAN circuits.

**OK:**
**There is no open or short circuit.**

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

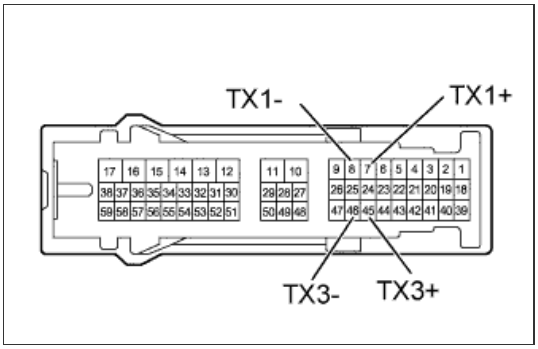
**for Preparation** Click here

## DESCRIPTION

Each audio system component connected to the AVC-LAN (communication bus) transfers switch signals using the audio visual communication local area network.
If a short to +B or short to ground occurs in the AVC-LAN, the audio system will not function normally because communication is not possible.

## WIRING DIAGRAM

## INSPECTION PROCEDURE



### 1.INSPECT MULTI-MEDIA MODULE RECEIVER ASSEMBLY

a. Remove the multi-media module receiver assembly (Click here).

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 7 (TX1+) - 8 (TX1-) | Always | 60 to 80 Ω |
| 45 (TX3+) - 46 (TX3-) | Always | 60 to 80 Ω |

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK

### 2.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - BATTERY AND BODY GROUND)

**HINT:**

For details of the connectors, refer to Terminals of ECU ( Click here).

a. Referring to the following AVC-LAN wiring diagram, check all AVC-LAN circuits.

i. Disconnect all connectors in all AVC-LAN circuits.

ii. Check for an open or short in all AVC-LAN circuits.

**OK:**
**There is no open or short circuit.**

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3.INSPECT MALFUNCTIONING PARTS

a. Disconnect and reconnect each slave unit one by one until the master unit returns to normal operation.

**HINT:**

- **Check all slave units.**
- **When disconnecting a slave unit causes the master unit to return to normal operation, this indicates that the slave unit is malfunctioning. Replace the malfunctioning slave unit.**

**OK:**
**Master unit returns to normal operation.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

REPLACE MALFUNCTIONING PARTS

**for Preparation** Click here

## DESCRIPTION

The stereo component amplifier performs switch operation control during driving by receiving a vehicle speed signal from the combination meter.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK OPERATION OF SPEEDOMETER

a. Drive the vehicle and check if the function of the speedometer in the combination meter is normal.

**OK:**

**Actual vehicle speed and the speed indicated on the speedometer are the same.**

**HINT:**

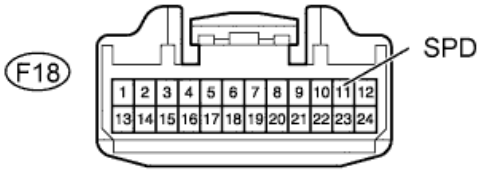
The vehicle speed sensor is functioning normally when the indication on the speedometer is normal.

**NG** → GO TO METER/GAUGE SYSTEM (Click here)

**OK**

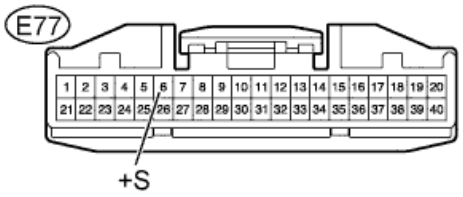
### 2.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - COMBINATION METER)

a. Disconnect the F18 amplifier connector.



b. Disconnect the E77 meter connector.

c. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F18-11 (SPD) - E77-6 (+S) | Always | Below 1 Ω |
| F18-11 (SPD) - Body ground | Always | 10 kΩ or higher |

Front view of wire harness connector:
(to Stereo Component Amplifier)

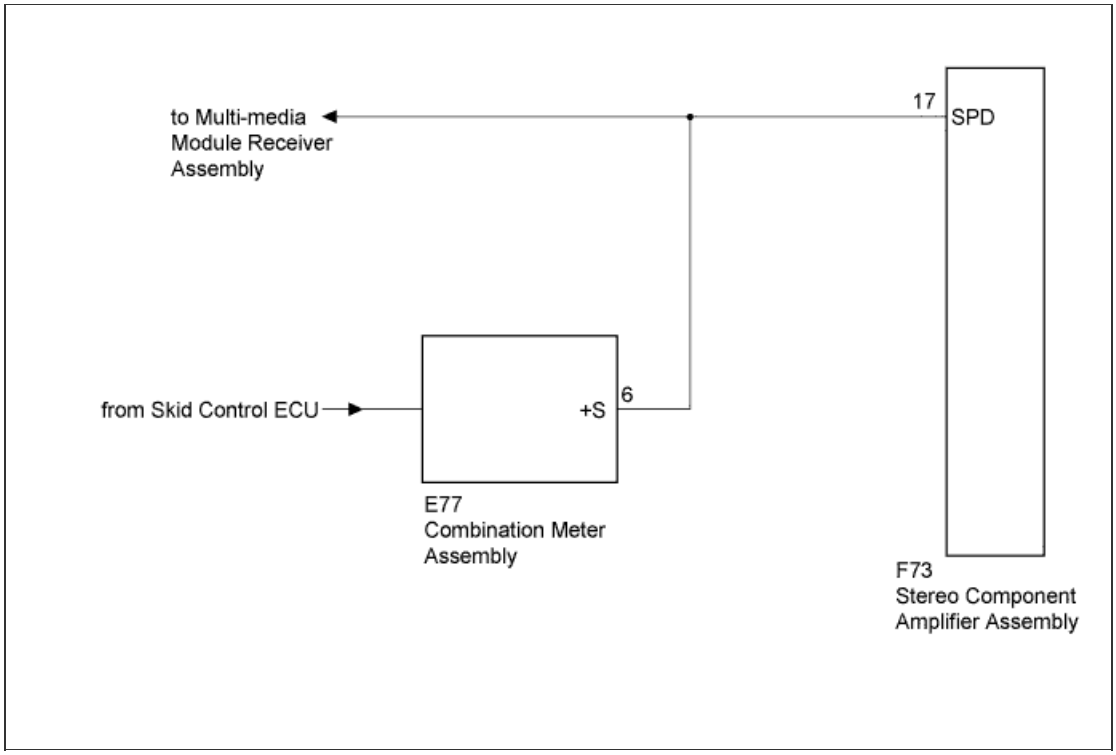
Front view of wire harness connector:
(to Combination Meter)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

PROCEED TO NEXT INSPECTION PROCEDURE SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here



## DESCRIPTION

The circuit is necessary for the Automatic Sound Levelizer (ASL) built into the stereo component amplifier assembly.
Speed signals are received from the combination meter assembly and used for the ASL.
The ASL function automatically adjusts the sound volume in order to clear audio quality even when vehicle noise increases (as vehicle noise increases, the volume is turned up etc.).

**HINT:**

- **A voltage of 12 V or 5 V is output from each ECU and then input to the combination meter assembly. The signal is changed to a pulse signal at the transistor in the combination meter assembly. Each ECU controls the respective system based on the pulse signal.**
- **If a short occurs in any of the ECUs or in the wire harness connected to an ECU, all systems in the diagram below will not operate normally.**

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY - COMBINATION METER ASSEMBLY)

a. Disconnect the F73 stereo component amplifier assembly connector and E77 combination meter assembly connector.

b. Measure the resistance according to the value(s) in the table below.

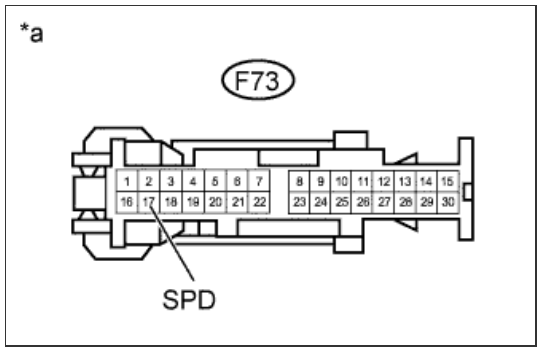
**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F73-17 (SPD) - E77-6 (+S) | Always | Below 1 Ω |
| F73-17 (SPD) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 2.INSPECT COMBINATION METER ASSEMBLY (OUTPUT WAVEFORM)

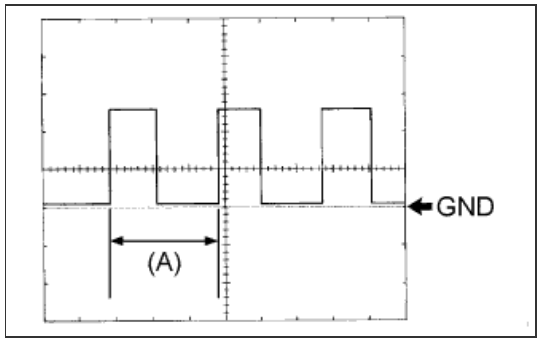


a. Reconnect the E77 combination meter assembly connector.

b. Check the input waveform.

i. Connect an oscilloscope to terminal F73-17 (SPD) and body ground.

ii. Turn the engine switch on (IG).



iii. Turn a wheel slowly.

**Text in Illustration**

| | |
|---|---|
| *a | Front view of wire harness connector (to Stereo Component Amplifier Assembly) |

iv. Check the signal waveform according to the condition(s) in the table below.

| Item | Condition |
|---|---|
| Measurement terminal | F73-17 (SPD) - Body ground |
| Tool setting | 5 V/DIV., 20 ms./DIV. |
| Vehicle condition | Driving at approx. 20 km/h (12 mph) |

**OK:**

**The waveform is displayed as shown in the illustration.**

**HINT:**

When the system is functioning normally, one wheel revolution generates 4 pulses. As the vehicle speed increases, the width indicated by (A) in the illustration narrows.

## DESCRIPTION

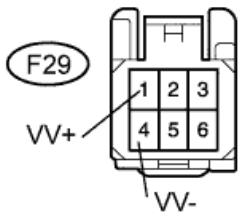
This circuit sends a DVD image signal from the radio receiver to the multi-display.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

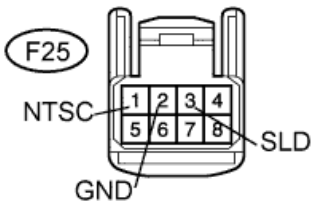
### 1.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - RADIO RECEIVER)

a. Disconnect the F29 display connector.



b. Disconnect the F25 receiver connector.

c. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F29-4 (VV-) - F25-2 (GND) | Always | Below 1 Ω |
| F29-1 (VV+) - F25-1 (NTSC) | Always | Below 1 Ω |
| F29-4 (VV-) - Body ground | Always | 10 kΩ or higher |
| F29-1 (VV+) - Body ground | Always | 10 kΩ or higher |
| F25-3 (SLD) - Body ground | Always | 10 kΩ or higher |

Front view of wire harness connector:
(to Multi-display)

Front view of wire harness connector:
(to Radio Receiver)

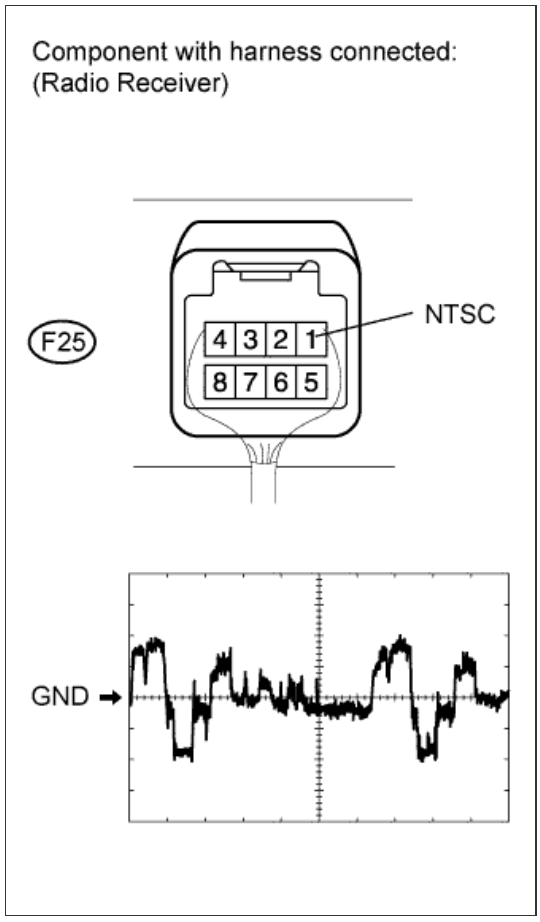
N

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

### 2.INSPECT RADIO RECEIVER (NTSC SIGNAL)

a. Reconnect the F25 receiver connector.



b. Check the waveform of the radio receiver using an oscilloscope.

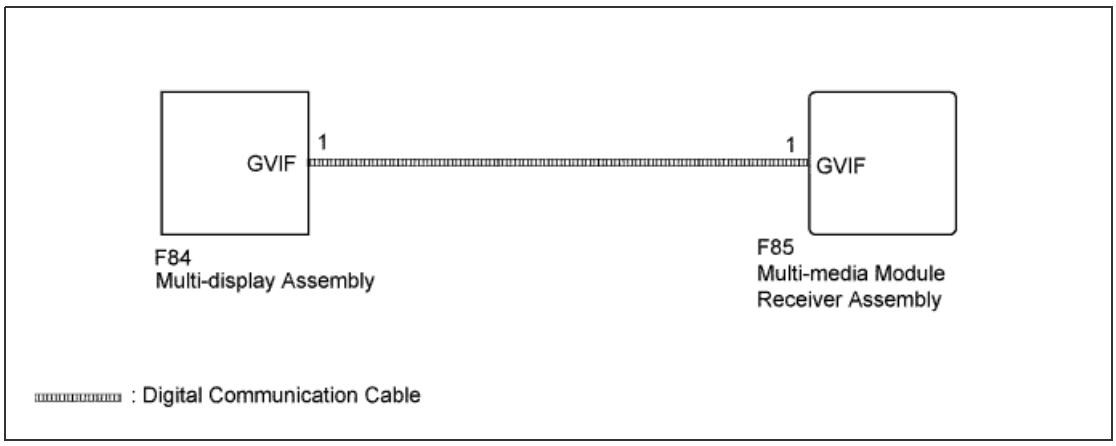
**Measurement Condition**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | NTSC (F25-1) - Body ground |
| Tool Setting | 0.2 V/DIV., 10 µsec./DIV. |
| Condition | DVD played on radio receiver |

**OK:**

**Waveform is as shown in the illustration.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)



OK → PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## DESCRIPTION

The display image signal from the multi-media module receiver assembly is sent to the multi-display assembly using a digital communication cable.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK DIGITAL COMMUNICATION CABLE CONNECTOR

a. Check if the digital communication cable connectors between the multi-media module receiver assembly and the multi-display assembly have any connection problems (Click here).

b. Check that the screen display is normal.

**OK:**
**Screen display is normal.**

NG → **Go to step 2**

OK ↓

USE SIMULATION METHOD TO CHECK (**Click here**)

### 2.REPLACE MULTI-DISPLAY ASSEMBLY

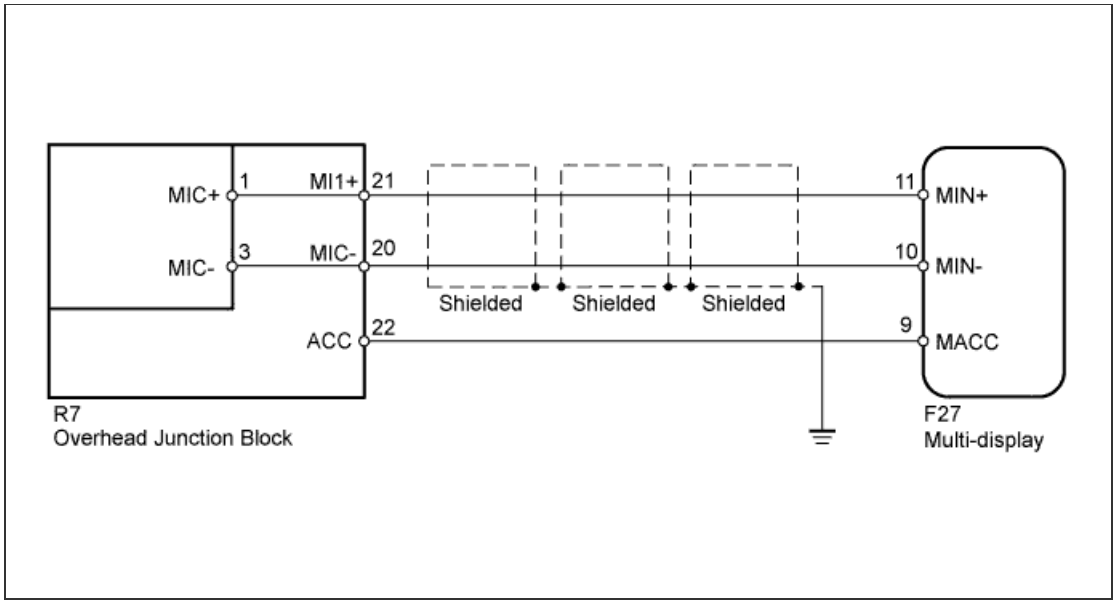
a. Replace the multi-display assembly with a new or normally functioning one ( Click here).

b. Check that the screen display is normal.

**OK:**
**Screen display is normal.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (**Click here**)

OK ↓



END (MULTI-DISPLAY ASSEMBLY IS DEFECTIVE)

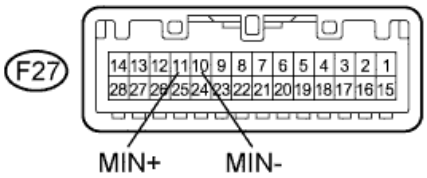
**for Preparation** Click here

## DESCRIPTION

This circuit sends a microphone signal from the microphone to the display and module display. It also supplies power from the multi-display to the microphone.

## WIRING DIAGRAM

## INSPECTION PROCEDURE



### 1.CHECK MULTI-DISPLAY

a. Tester Connection

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F27-11 (MIN+) - F27-10 (MIN-) | Engine switch on (ACC) and "Voice" switch of steering pad switch pressed | Waveform that matches sound spoken into microphone is output |

Component with harness connected: (Multi-display)

**Result**

| Result | Proceed to |
|---|---|
| OK (w/ Navigation System) | A |
| OK (w/o Navigation System) | B |
| NG | C |

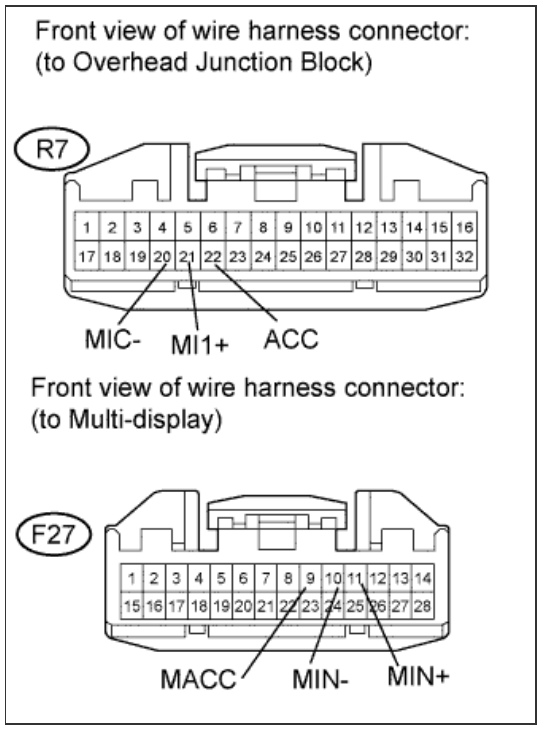
B → REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

C → Go to step 2

A

REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

### 2.CHECK HARNESS AND CONNECTOR (OVERHEAD JUNCTION BLOCK - MULTI-DISPLAY)



a. Disconnect the R7 overhead junction block connector.

b. Disconnect the F27 display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

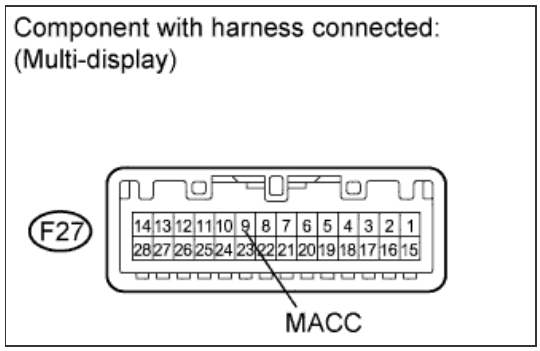
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F27-9 (MACC) - R7-22 (ACC) | Always | Below 1 Ω |
| F27-11 (MIN+) - R7-21 (MI1+) | Always | Below 1 Ω |
| F27-10 (MIN-) - R7-20 (MIC-) | Always | Below 1 Ω |
| F27-9 (MACC) - Body ground | Always | 10 kΩ or higher |
| F27-11 (MIN+) - Body ground | Always | 10 kΩ or higher |
| F27-10 (MIN-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 3.CHECK MULTI-DISPLAY ASSEMBLY (MACC VOLTAGE)

a. Reconnect the F27 display connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F27-9 (MACC) - Body ground | Engine switch on (ACC) | 4 to 6 V |

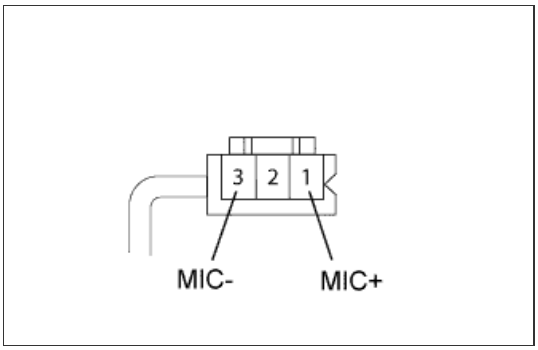
**Result**

| Result | Proceed to |
|---|---|
| OK | A |
| NG (w/ Navigation System) | B |
| NG (w/o Navigation System) | C |

B → REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

C → REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

A



## 4.CHECK MICROPHONE ASSEMBLY

a. Remove the microphone from the overhead junction block ( Click here).

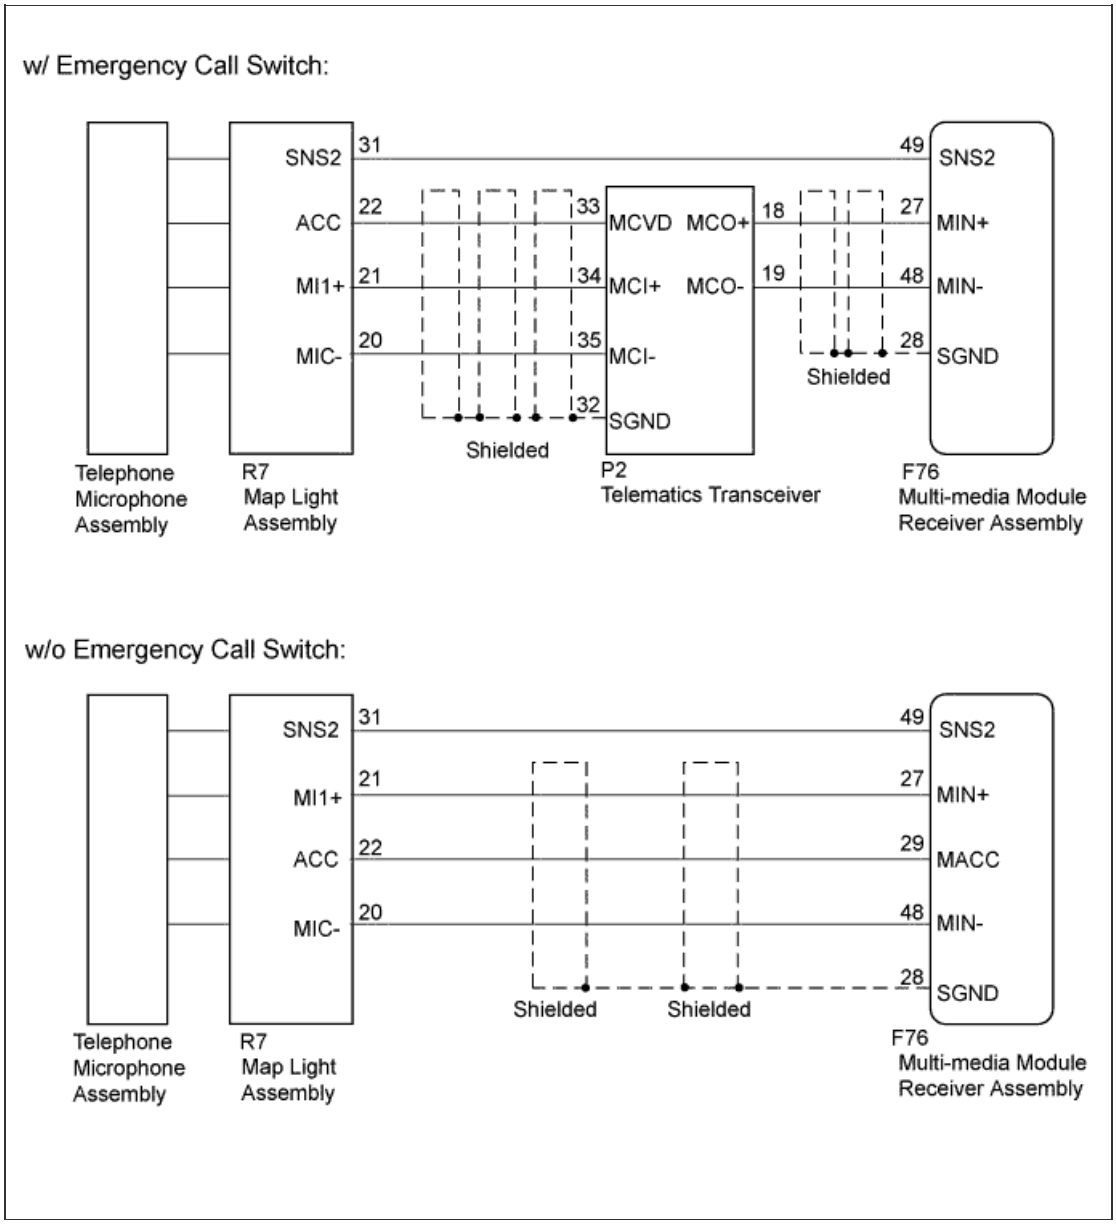
b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 (MIC+) - 3 (MIC-) | Always | 1.9 to 2.2 kΩ |

NG → REPLACE MICROPHONE ASSEMBLY (Click here)

OK



PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## DESCRIPTION

- The multi-media module receiver assembly and map light assembly (telephone microphone assembly) are connected to each other using the microphone connection detection signal lines.
- Using this circuit, the multi-media module receiver assembly sends power to the map light assembly (telephone microphone assembly), and the map light assembly (telephone microphone assembly) sends microphone signals to the multi-media module receiver assembly (w/o Emergency Call Switch).
- Using this circuit, the telematics transceiver sends power to the map light assembly (telephone microphone assembly), and the map light assembly (telephone microphone assembly) sends microphone signals to the multi-media module receiver assembly via the telematics transceiver (w/ Emergency Call Switch).

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**HINT:**

When replacing the multi-media module receiver assembly or the telematics transceiver, perform the vehicle contract setting ( Click here).

### 1.CONFIRM MODEL

a. Choose the model to be inspected.

**Model**

| Model | Proceed to |
|---|---|
| w/o Emergency Call Switch | A |
| w/ Emergency Call Switch | B |

B → Go to step 7

A

## 2.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - MAP LIGHT ASSEMBLY)

a. Disconnect the F76 multi-media module receiver assembly connector.

b. Disconnect the R7 map light assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

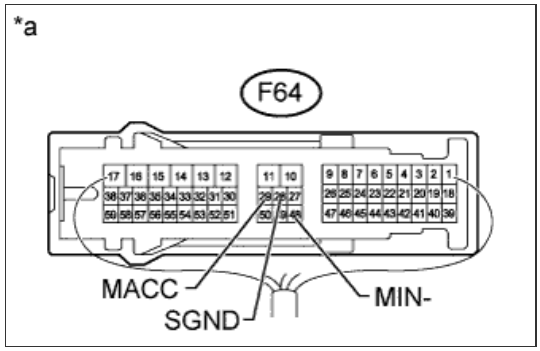
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-27 (MIN+) - R7-21 (MI1+) | Always | Below 1 Ω |
| F76-29 (MACC) - R7-22 (ACC) | Always | Below 1 Ω |
| F76-48 (MIN-) - R7-20 (MIC-) | Always | Below 1 Ω |
| F76-49 (SNS2) - R7-31 (SNS2) | Always | Below 1 Ω |
| F76-27 (MIN+) - Body ground | Always | 10 kΩ or higher |
| F76-28 (SGND) - Body ground | Always | 10 kΩ or higher |
| F76-29 (MACC) - Body ground | Always | 10 kΩ or higher |
| F76-48 (MIN-) - Body ground | Always | 10 kΩ or higher |
| F76-49 (SNS2) - Body ground | Always | 10 kΩ or higher |

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK

## 3.CHECK MULTI-MEDIA MODULE RECEIVER ASSEMBLY

a. Measure the voltage according to the value(s) in the table below.



**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F76-29 (MACC) - Body ground | Engine switch on (ACC) | 4 to 6 V |

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-28 (SGND) - Body ground | Always | Below 1 Ω |

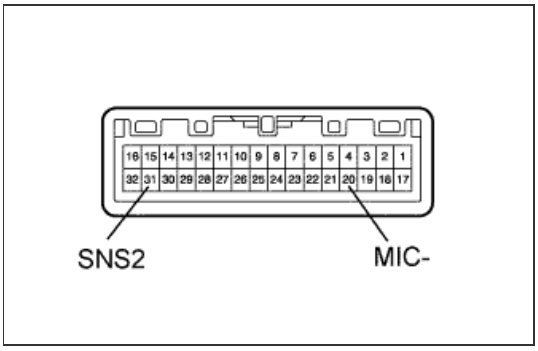
| | | |
|---|---|---|
| F76-48 (MIN-) - Body ground | Always | Below 1 Ω |

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected (Multi-media Module Receiver Assembly) |

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK



## 4.INSPECT MAP LIGHT ASSEMBLY

a. Remove the map light assembly (Click here).

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 20 (MIC-) - 31 (SNS2) | Always | Below 1 Ω |

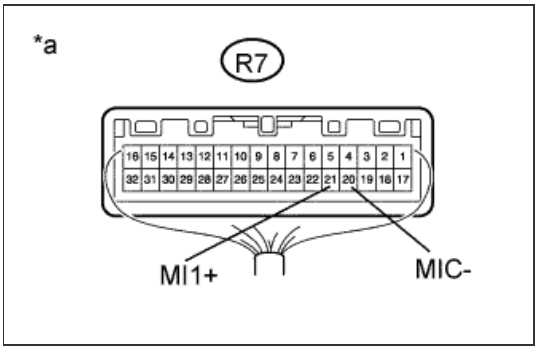
NG → Go to step 6

OK

## 5.CHECK MAP LIGHT ASSEMBLY

a. Turn the engine switch on (ACC).

b. Connect an oscilloscope to terminals R7-21 (MI1+) and R7-20 (MIC-) of the map light assembly connector.



c. Check the waveform of the telephone microphone assembly using the oscilloscope.

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected (Map Light Assembly) |

**Result**

| Result | Proceed to |
|---|---|
| A waveform synchronized with the voice input to the map light assembly is output. | A |
| A waveform synchronized with the voice input to the map light assembly is not output. | B |

B → Go to step 6

A

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

## 6.CHECK TELEPHONE MICROPHONE ASSEMBLY

a. Replace the telephone microphone assembly with a new or normally functioning one ( Click here).

b. Check if the same malfunction recurs.

**Result**

| Result | Proceed to |
|---|---|
| Malfunction does not recur (returns to normal). | A |
| Malfunction recurs. | B |

B → REPLACE MAP LIGHT ASSEMBLY (Click here)

A

END (TELEPHONE MICROPHONE ASSEMBLY IS DEFECTIVE)

## 7.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - MAP LIGHT ASSEMBLY)

a. Disconnect the F76 multi-media module receiver assembly connector.

b. Disconnect the R7 map light assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-49 (SNS2) - R7-31 (SNS2) | Always | Below 1 Ω |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 8.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - TELEMATICS TRANSCEIVER)

a. Disconnect the F76 multi-media module receiver assembly connector.

b. Disconnect the P2 telematics transceiver connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-27 (MIN+) - P2-18 (MCO+) | Always | Below 1 Ω |
| F76-48 (MIN-) - P2-19 (MCO-) | Always | Below 1 Ω |
| F76-27 (MIN+) - Body ground | Always | 10 kΩ or higher |
| F76-48 (MIN-) - Body ground | Always | 10 kΩ or higher |
| F76-28 (SGND) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 9.CHECK HARNESS AND CONNECTOR (TELEMATICS TRANSCEIVER - MAP LIGHT ASSEMBLY)

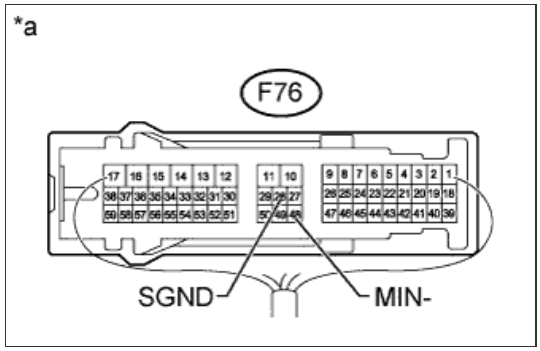
a. Disconnect the P2 telematics transceiver connector.

b. Disconnect the R7 map light assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| P2-33 (MCVD) - R7-22 (ACC) | Always | Below 1 Ω |
| P2-34 (MCI+) - R7-21 (MI1+) | Always | Below 1 Ω |
| P2-35 (MCI-) - R7-20 (MIC-) | Always | Below 1 Ω |
| P2-33 (MCVD) - Body ground | Always | 10 kΩ or higher |
| P2-34 (MCI+) - Body ground | Always | 10 kΩ or higher |
| P2-35 (MCI-) - Body ground | Always | 10 kΩ or higher |
| P2-32 (SGND) - Body ground | Always | 10 kΩ or higher |



NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 10.CHECK MULTI-MEDIA MODULE RECEIVER ASSEMBLY

a. Disconnect the P2 telematics transceiver connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-28 (SGND) - Body ground | Always | Below 1 Ω |
| F76-48 (MIN-) - Body ground | Always | Below 1 Ω |

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected (Multi-media Module Receiver Assembly) |

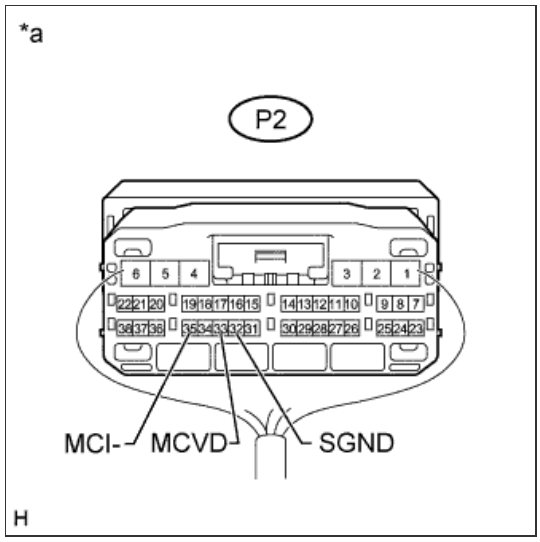
NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK

## 11.CHECK TELEMATICS TRANSCEIVER

a. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**



| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| P2-33 (MCVD) - Body ground | Engine switch on (ACC) | 4 to 6 V |

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| | | Specified |
|---|---|---|

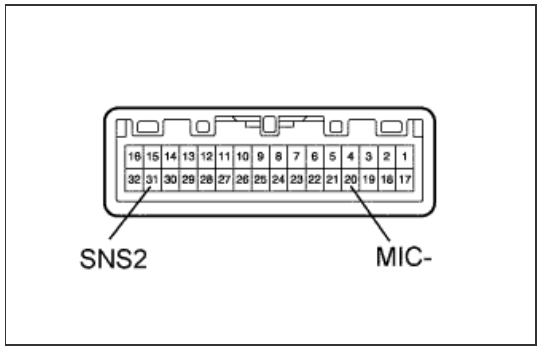
| Tester Connection | Condition | Condition |
|---|---|---|
| P2-32 (SGND) - Body ground | Always | Below 1 Ω |
| P2-35 (MCI-) - Body ground | Always | Below 1 Ω |

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected (Telematics Transceiver) |

NG → REPLACE TELEMATICS TRANSCEIVER (Click here)

OK



## 12.INSPECT MAP LIGHT ASSEMBLY

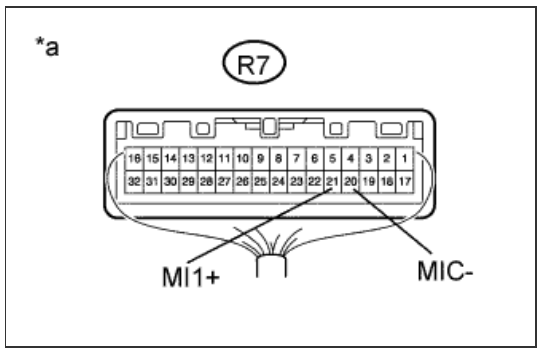
a. Remove the map light assembly (Click here).

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 20 (MIC-) - 31 (SNS2) | Always | Below 1 Ω |

NG → Go to step 14



OK

## 13.CHECK MAP LIGHT ASSEMBLY

a. Turn the engine switch on (ACC).

b. Connect an oscilloscope to terminals R7-21 (MI1+) and R7-20 (MIC-) of the map light assembly connector.

c. Check the waveform of the telephone microphone assembly using the oscilloscope.

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected (Map Light Assembly) |

**Result**

| Result | Proceed to |
|---|---|
| A waveform synchronized with the voice input to the map light assembly is output. | A |
| A waveform synchronized with the voice input to the map light assembly is not output. | B |

B → Go to step 14

A

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

14.CHECK TELEPHONE MICROPHONE ASSEMBLY

a. Replace the telephone microphone assembly with a new or normally functioning one ( Click here).

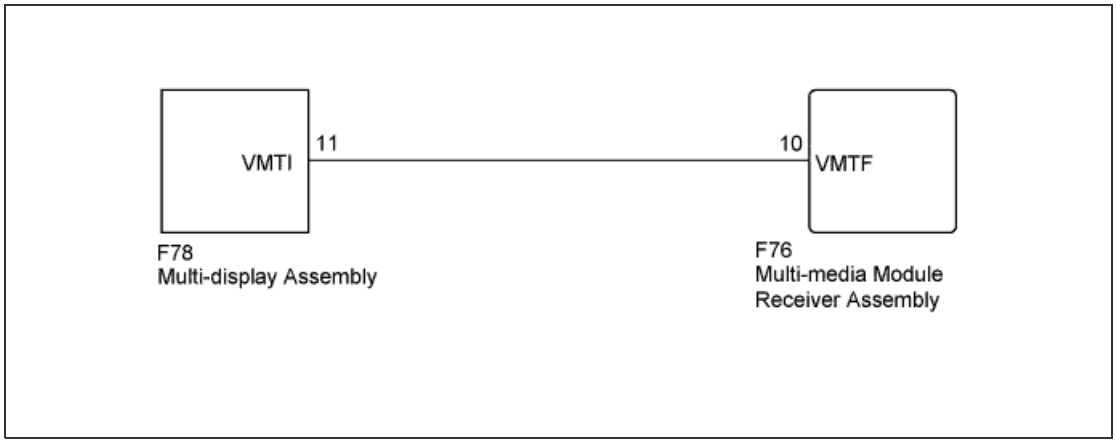
b. Check if the same malfunction recurs.

**Result**

| Result | Proceed to |
|---|---|
| Malfunction does not recur (returns to normal). | A |
| Malfunction recurs. | B |

B → REPLACE MAP LIGHT ASSEMBLY (Click here)

A



END (TELEPHONE MICROPHONE ASSEMBLY IS DEFECTIVE)

**for Preparation** Click here

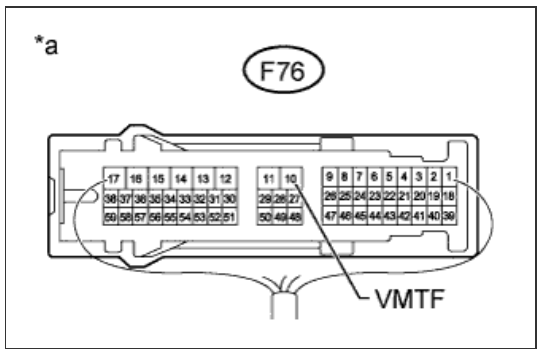
## DESCRIPTION

The multi-media module receiver assembly sends a visual mute signal to the multi-display assembly. As a result, a black screen is inserted when the screen changes so that noise and distorted images are not displayed.
When an open exists in the circuit, noise and distorted images will be displayed instead of a black screen.
When a short exists in the circuit, even though the multi-display assembly is operating normally, noise and distorted images will be displayed (black screen will not be displayed) during screen changes or the black screen will always be displayed.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK MULTI-MEDIA MODULE RECEIVER ASSEMBLY



a. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-10 (VMTF) - Body ground | Engine switch on (ACC), screen display changes. | 3.5 V or higher → Below 1 V → 3.5 V or higher |

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected (Multi-media Module Receiver Assembly) |

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK

### 2.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - MULTI-DISPLAY ASSEMBLY)

a. Disconnect the F76 multi-media module receiver assembly connector.

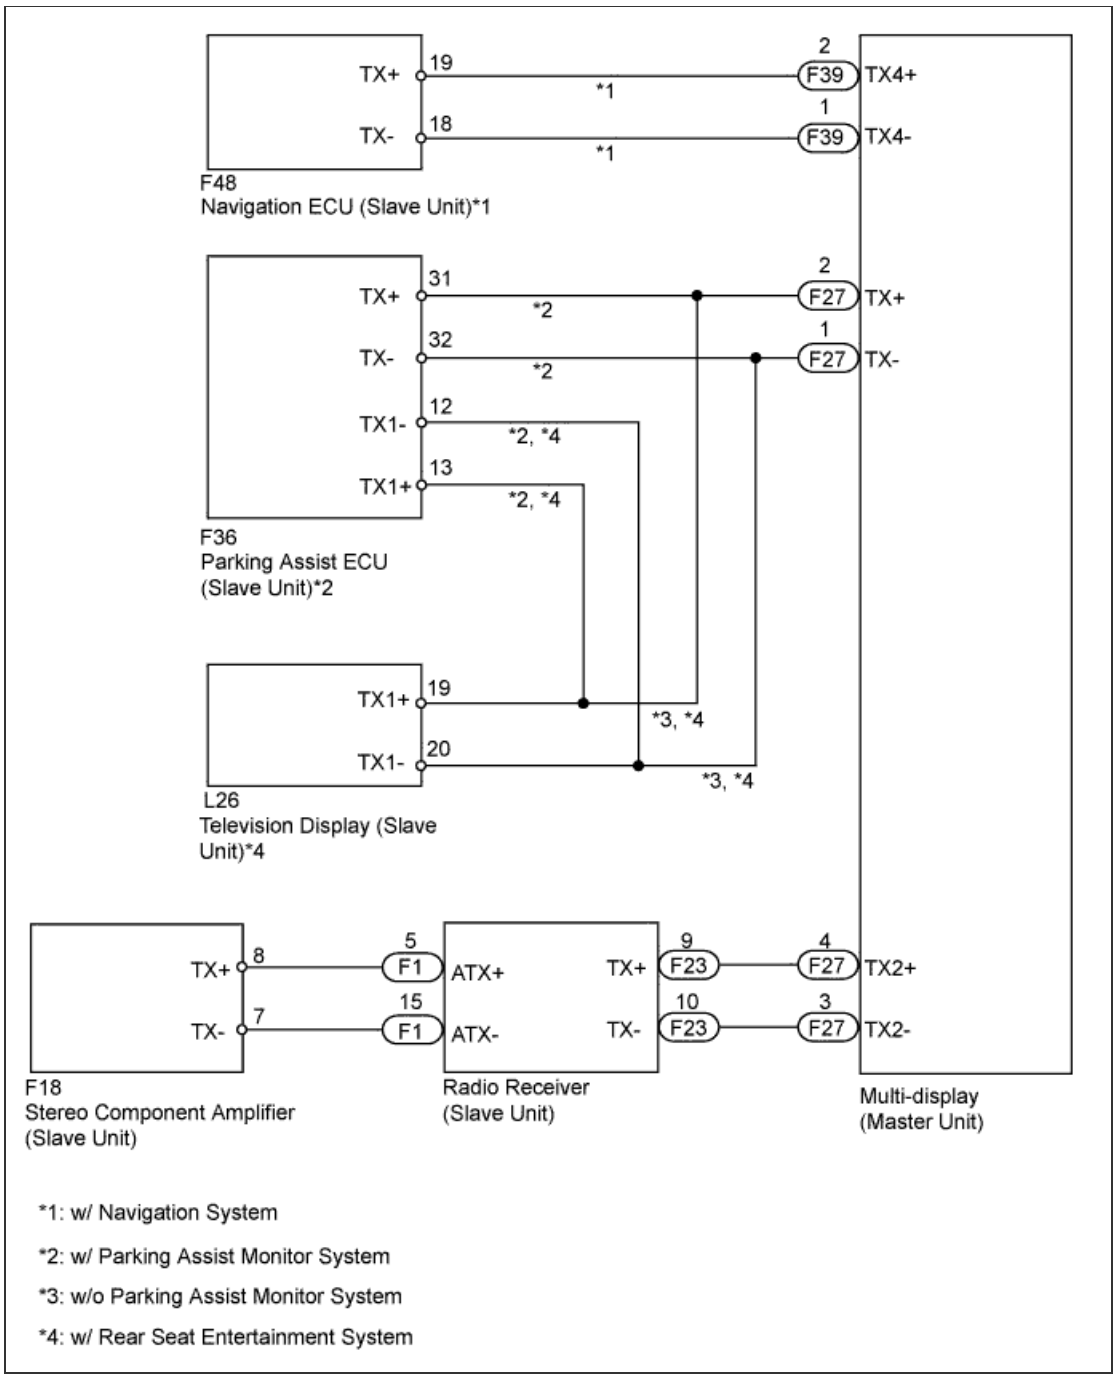
b. Disconnect the F78 multi-display assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-10 (VMTF) - F78-11 (VMTI) | Always | Below 1 Ω |

| | | |
|---|---|---|
| F76-10 (VMTF) - Body ground | Always | 10 kΩ or higher |



NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

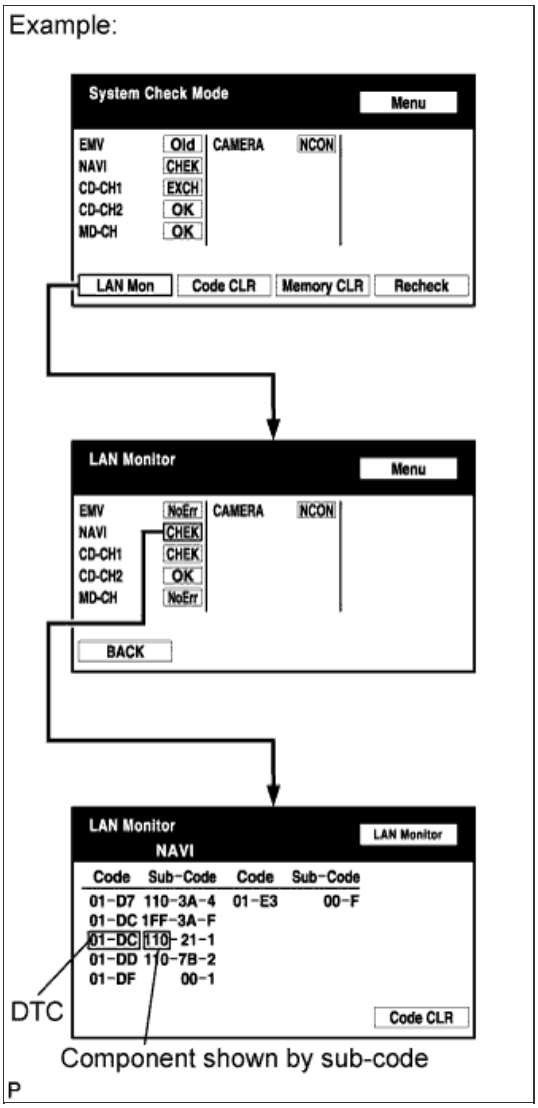
## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.IDENTIFY COMPONENT SHOWN BY SUB-CODE

a. Enter the diagnostic mode.

b. Press the "LAN Mon" switch to change to "LAN Monitor" mode.



c. Identify the component shown by the sub-code.

**HINT:**

- **"110 (multi-display)" is the component shown by the sub-code**

in the example shown in the illustration.

- The sub-code will be indicated by its physical address.
- For the component list, refer to Diagnosis Display Detailed Description in the System Description (Click here).

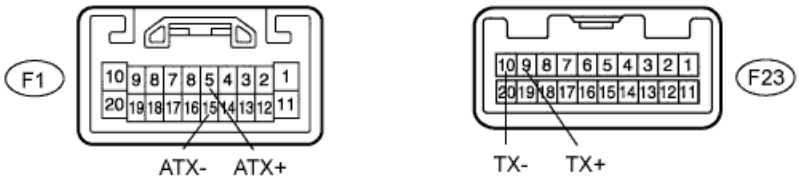
NEXT

## 2.CHECK POWER SOURCE CIRCUIT OF COMPONENT SHOWN BY SUB-CODE

a. Inspect the power source circuit of the component shown by the sub-code.

**Component Table**

| Display | Proceed to |
|---|---|
| Stereo component amplifier (440) | Stereo component amplifier power source circuit (Click here) |
| Multi-display (110) | Multi-display power source circuit (Click here) |
| Navigation ECU (178)*1 | Navigation ECU power source circuit (Click here) |
| Parking assist ECU (1AC)*2 | Parking assist ECU power source circuit (Click here) |
| Television display (1F6)*3 | Television display power source circuit (Click here) |



If the power source circuit is operating normally, proceed to the next step.

*1: w/ Navigation System
*2: w/ Parking Assist Monitor System
*3: w/ Rear Seat Entertainment System

NEXT

## 3.INSPECT RADIO RECEIVER ASSEMBLY

Component without harness connected:
(Radio Receiver)

a. Disconnect the F1 and F23 receiver connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F1-5 (ATX+) - F1-15 (ATX-) | Always | 60 to 80 Ω |
| F23-9 (TX+) - F23-10 (TX-) | Always | 60 to 80 Ω |

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

## 4.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - COMPONENT SHOWN BY SUB-CODE)

**HINT:**

- **Start the check from the circuit that is near the component shown by the sub-code first.**
- **For details of the connectors, refer to Terminals of ECU (Click here).**

a. Referring to the AVC-LAN wiring diagram, check the AVC-LAN circuit between the radio receiver and the component shown by the sub-code.

i. Disconnect all connectors between the radio receiver and the component shown by the sub-code.

ii. Check for an open or short in the AVC-LAN circuit between the radio receiver and the component shown by the sub-code.

**OK:**
**There is no open or short circuit.**

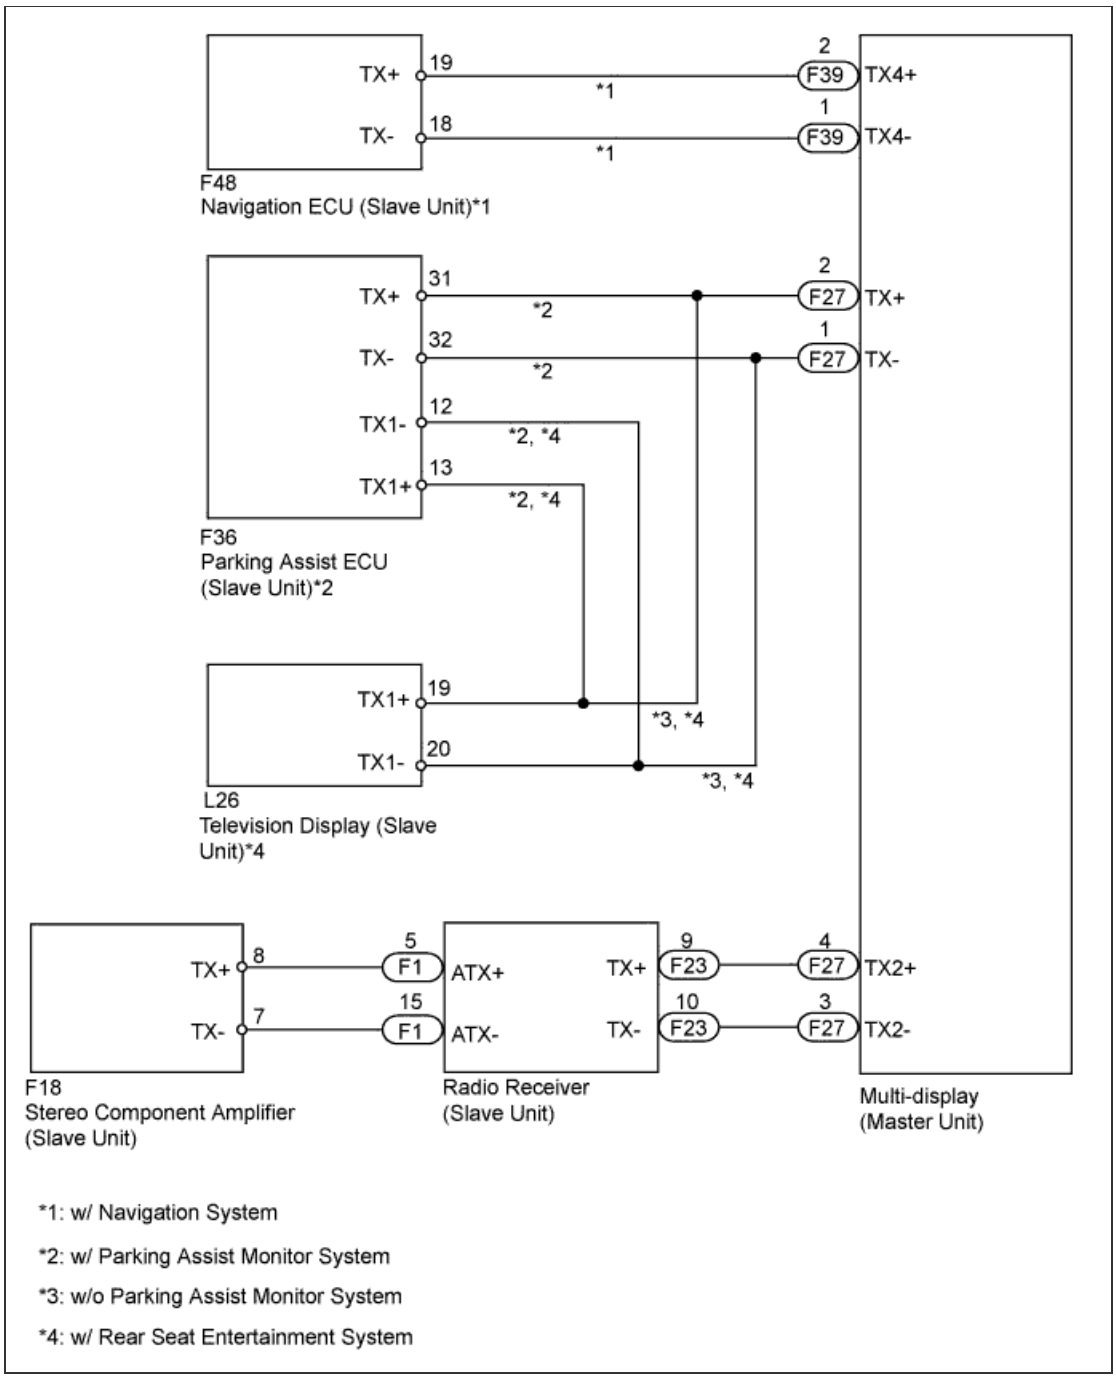
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 5.REPLACE COMPONENT SHOWN BY SUB-CODE

a. Replace the component shown by the sub-code with a normal one and check if the same problem occurs again.

**OK:**
**Same problem does not occur.**



NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

END

**for Preparation** Click here

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.IDENTIFY COMPONENT SHOWN BY SUB-CODE

a. Replace the component shown by the sub-code with a normal one and check if the same problem occurs again.

**OK:**
**Same problem does not occur.**

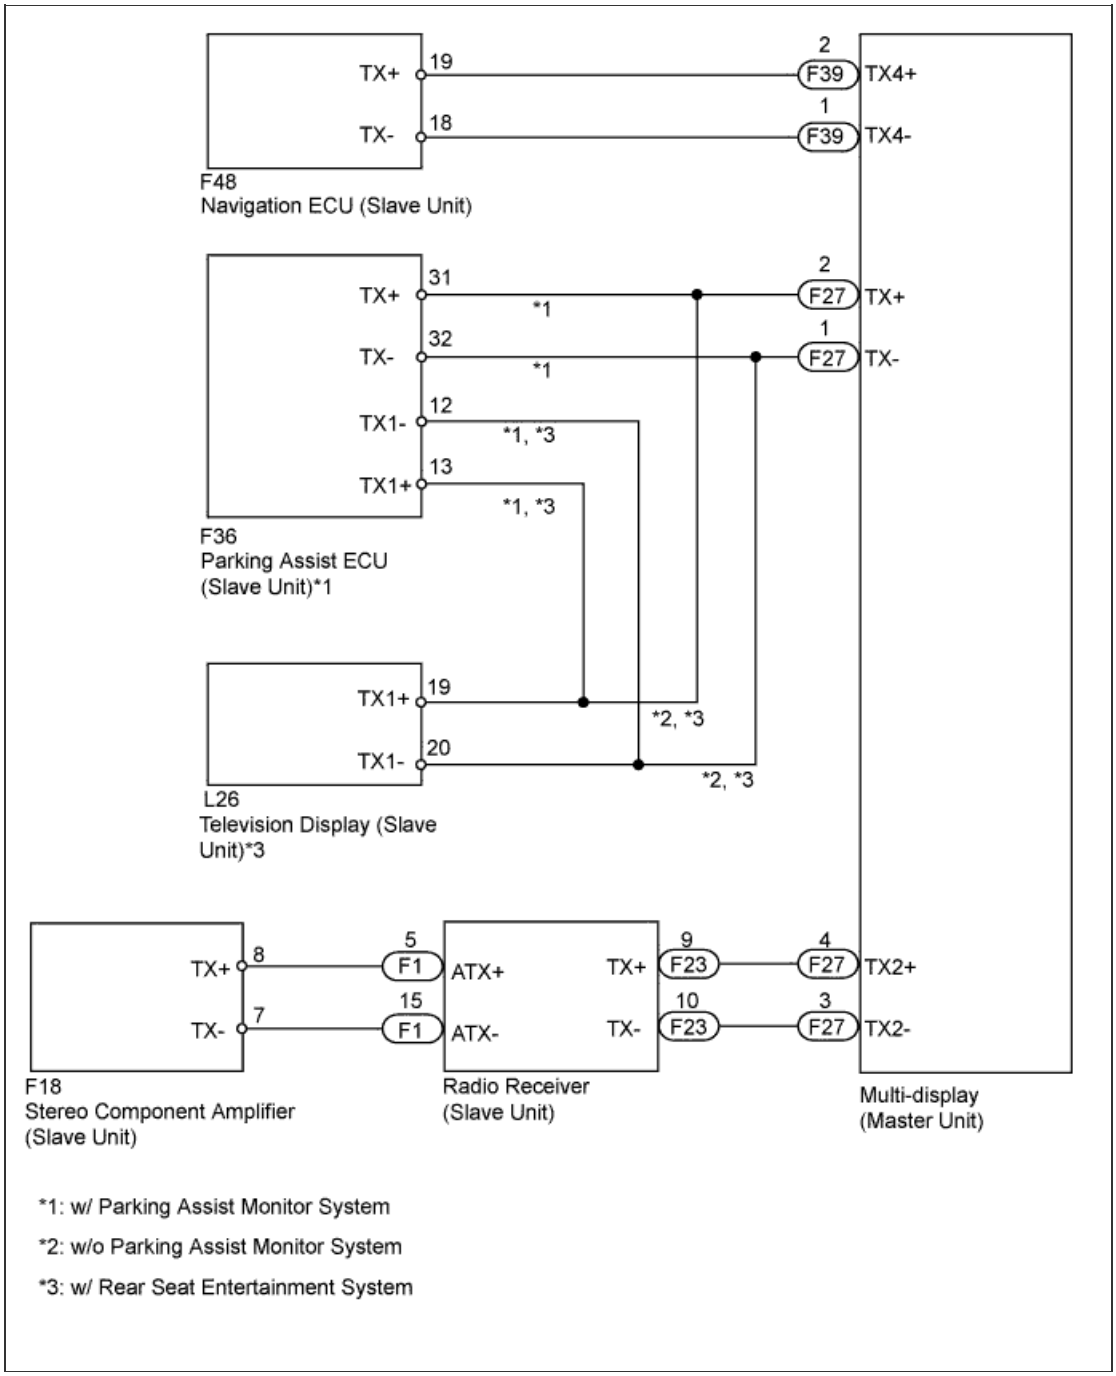
NG → REPLACE TELEVISION DISPLAY ASSEMBLY (Click here)

OK

END



**for Preparation** Click here

## DESCRIPTION

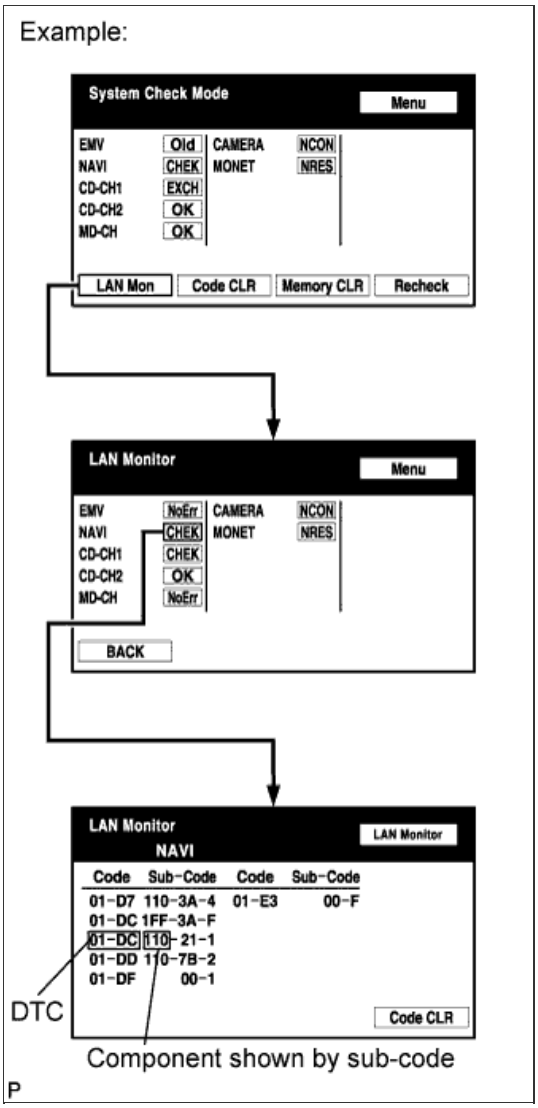
**HINT:**

"Navigation ECU" refers to the navigation module board.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.IDENTIFY COMPONENT SHOWN BY SUB-CODE



a. Enter the diagnostic mode.

b. Press the "LAN Mon" switch to change to "LAN Monitor" mode.

c. Identify the component shown by the sub-code.

**HINT:**

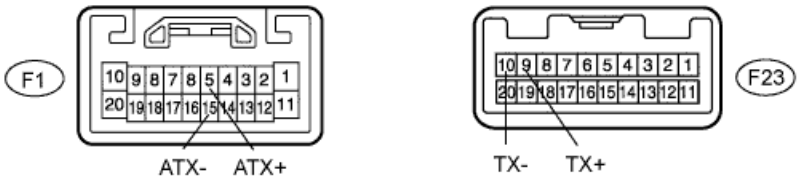
- **"110 (multi-display)" is the component shown by the sub-code in the example shown in the illustration.**
- **The sub-code will be indicated by its physical address.**
- **For the component list, refer to Diagnosis Display Detailed Description in the System Description (Click here).**

NEXT

## 2.CHECK POWER SOURCE CIRCUIT OF COMPONENT SHOWN BY SUB-CODE

a. Inspect the power source circuit of the component shown by the sub-code.

| Display | Proceed to |
|---|---|
| Radio receiver (190) | Radio receiver power source circuit (Click here) |
| Stereo component amplifier (440) | Stereo component amplifier power source circuit (Click here) |
| Multi-display (110) | Multi-display power source circuit (Click here) |
| Television display (1F6)*1 | Television display power source circuit (Click here) |
| Parking assist ECU (1AC)*2 | Parking assist ECU power source circuit (Click here) |



If the power source circuit is operating normally, proceed to the next step.

*1: w/ Rear Seat Entertainment System
*2: w/ Parking Assist Monitor System

NEXT

## 3.INSPECT RADIO RECEIVER ASSEMBLY

Component without harness connected:
(Radio Receiver)

a. Disconnect the F1 and F23 receiver connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F1-5 (ATX+) - F1-15 (ATX-) | Always | 60 to 80 Ω |
| F23-9 (TX+) -F23-10 (TX-) | | |

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

## 4.CHECK HARNESS AND CONNECTOR (NAVIGATION MODULE BOARD - COMPONENT SHOWN BY SUB-CODE)

**HINT:**

- **Start the check from the circuit that is near the component shown by the sub-code first.**
- **For details of the connectors, refer to Terminal of ECU (Click here).**

a. Referring to the AVC-LAN wiring diagram, check the AVC-LAN circuit between the navigation ECU and the component shown by the sub-code.

i. Disconnect all connectors between the navigation ECU and the component shown by the sub-code.

ii. Check for an open or short in the AVC-LAN circuit between the navigation ECU and the component shown by the sub-code.

**OK:**
**There is no open or short circuit.**

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

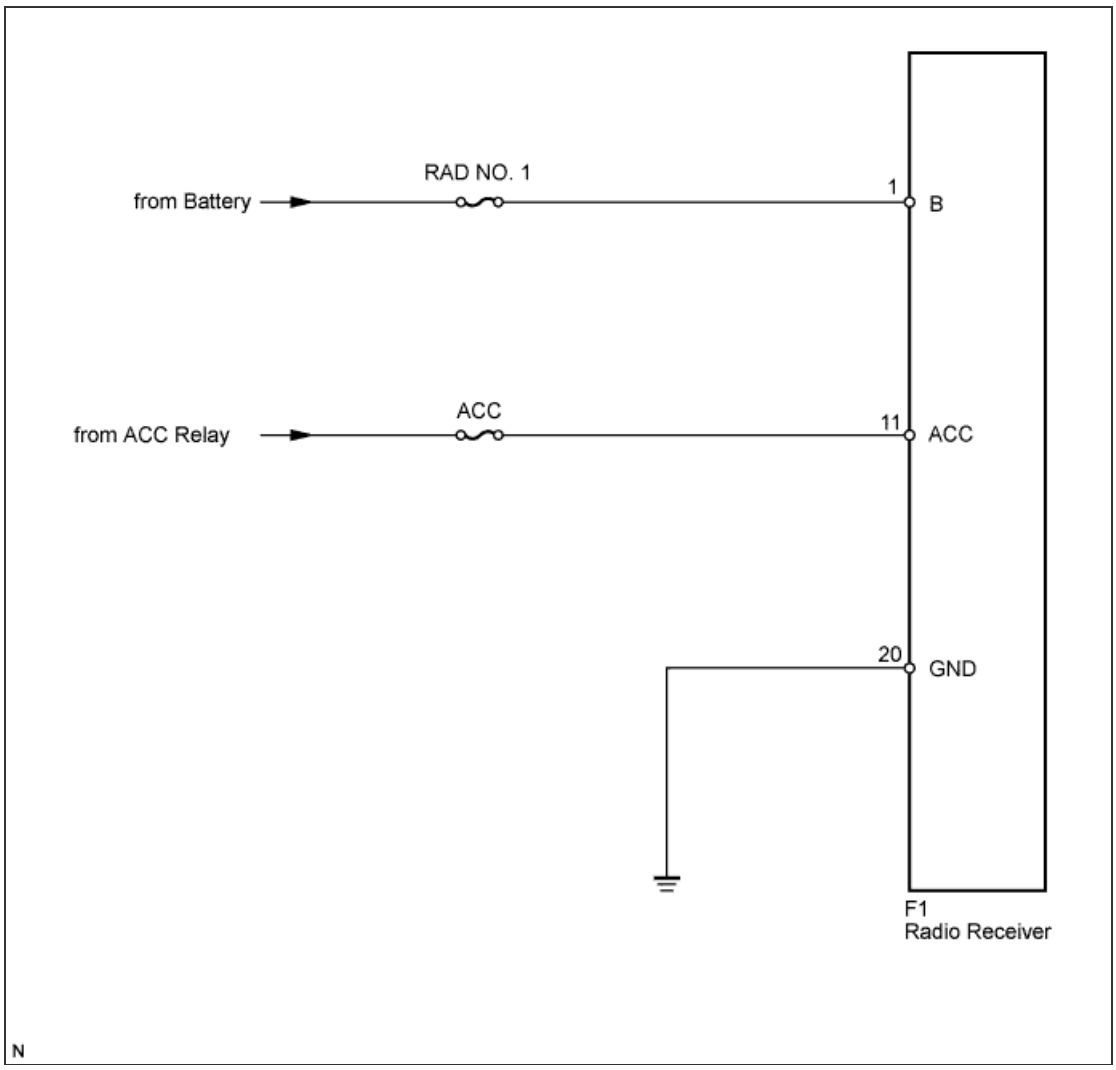
## 5.REPLACE COMPONENT SHOWN BY SUB-CODE

a. Replace the component shown by the sub-code with a normal one and check if the same problem occurs again.

**OK:**
**Same problem does not occur.**

NG → REPLACE NAVIGATION MODULE BOARD (Click here)

OK



END

**for Preparation** Click here

## DESCRIPTION

This circuit provides power to the radio receiver.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**1.INSPECT FUSE (RAD NO. 1, ACC)**

a. Disconnect the RAD NO. 1 fuse from the engine room relay block.

b. Disconnect the ACC fuse from the main body ECU.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| RAD NO. 1 fuse | Always | Below 1 Ω |
| ACC fuse | | |

NG → REPLACE FUSE

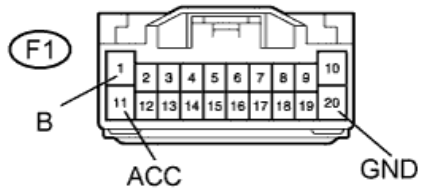
OK

## 2.CHECK HARNESS AND CONNECTOR (RECEIVER - BATTERY AND BODY GROUND)

a. Disconnect the F1 receiver connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**



| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F1-20 (GND) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F1-1 (B) - Body ground | Always | 11 to 14 V |
| F1-11 (ACC) - Body ground | Engine switch on (ACC) | 11 to 14 V |

## DESCRIPTION

This circuit provides power to the multi-media module receiver assembly.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

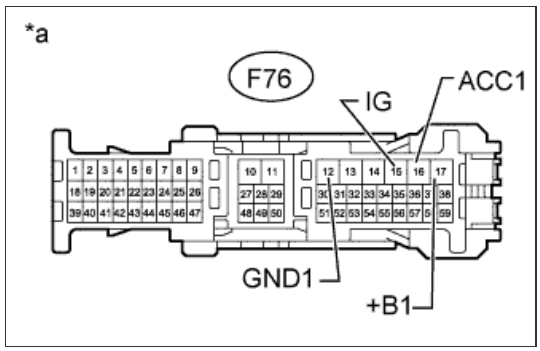
**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

### 1.CHECK CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - BATTERY AND BODY GROUND)

a. Disconnect the multi-media module receiver assembly connector.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-12 (GND1) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-15 (IG) - Body ground | Engine switch on (IG) | 11 to 14 V |
| F76-16 (ACC1) - Body ground | Engine switch on (ACC) | 11 to 14 V |
| F76-17 (+B1) - Body ground | Always | 11 to 14 V |

## DESCRIPTION

This circuit provides power to the stereo component amplifier.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.INSPECT FUSE (ACC, AMP)

a. Disconnect the ACC fuse from the main body ECU.

b. Disconnect the AMP fuse from the engine room relay block.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| ACC fuse | Always | Below 1 Ω |
| AMP fuse | Always | Below 1 Ω |

NG → REPLACE FUSE

OK

### 2.CHECK HARNESS AND CONNECTOR (AMPLIFIER - BATTERY AND BODY GROUND)

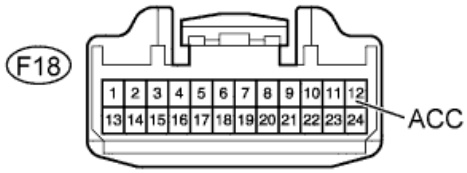
a. Disconnect the F18 and F2 amplifier connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

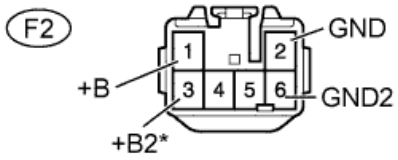
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F2-2 (GND) - Body | | |

| | | |
|---|---|---|
| ground | Always | Below 1 Ω |
| F2-6 (GND2) - Body ground | | |



c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**



| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F2-1 (+B) - Body ground | Always | 11 to 14 V |
| F2-3 (+B2)* - Body ground | | |
| F18-12 (ACC) - Body ground | Engine switch on (ACC) | 11 to 14 V |

## DESCRIPTION

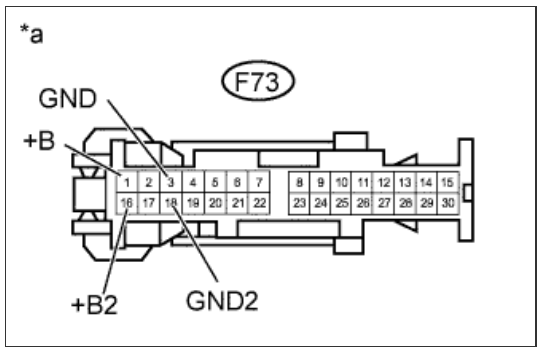
This circuit provides power to the stereo component amplifier assembly.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.



### 1.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY - BATTERY AND BODY GROUND)

a. Disconnect the stereo component amplifier assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F73-3 (GND) - Body ground | Always | Below 1 Ω |
| F73-18 (GND2) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F73-1 (+B) - Body ground | Always | 11 to 14 V |
| F73-16 (+B2) - Body ground | Always | 11 to 14 V |

## DESCRIPTION

This circuit provides power to the multi-display.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.INSPECT FUSE (TV, ACC, ECU-IG No. 1)

a. Disconnect the ACC and ECU-IG No. 1 fuses from the main body ECU.

b. Disconnect the TV fuse from the cowl side junction block RH.

c. Measure the resistance according to the values in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| TV fuse | Always | Below 1 Ω |
| ACC fuse | | |
| ECU-IG No. 1 fuse | | |

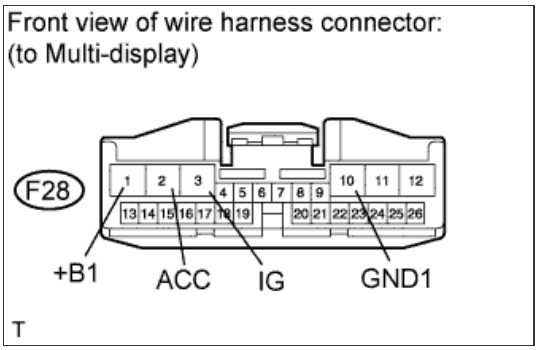
NG → REPLACE FUSE

OK

### 2.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - BATTERY AND BODY GROUND)

a. Disconnect the F28 display connector.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F28-10 (GND1) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F28-1 (+B1) - Body ground | Always | 11 to 14 V |
| F28-2 (ACC) - Body ground | Engine switch on (ACC) | 11 to 14 V |
| F28-3 (IG) - Body ground | Engine switch on (IG) | 11 to 14 V |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

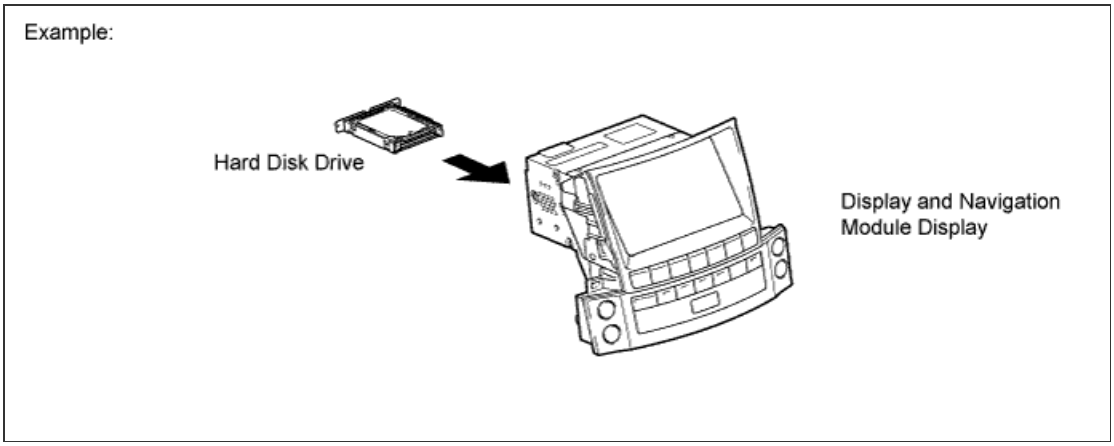
## 1.PRECAUTION FOR DISCONNECTING CABLE FROM NEGATIVE BATTERY TERMINAL

**NOTICE:**



After the engine switch is turned off, the display and navigation module display (HDD navigation system) records various types of memory and settings. As a result, after turning the engine switch off, make sure to wait for the time specified in the following table before disconnecting the cable from the negative (-) battery terminal.

**Waiting Time before Disconnecting Cable from Negative (-) Battery Terminal**

| Specification | Waiting Time |
|---|---|
| w/o Telematics transceiver | 60 sec. |
| w/ Telematics transceiver | 120 sec. |

## 2.PRECAUTION FOR DISPLAY AND NAVIGATION MODULE DISPLAY

a. An HDD is built into the display and navigation module display to store map data etc. which will be used for the navigation system. Therefore, care must be taken for the following points when handling:

i. When it is necessary to replace the display and navigation module display, be sure to replace it with a new one.

**NOTICE:**

If a used display and navigation module display is installed as a replacement part, the customer's HDD will not be recognized.

ii. Do not apply any vibration or shock to the display and navigation module display.

**NOTICE:**

- **Do not drop or subject the display and navigation module display to severe impacts.**
- **Do not use the display and navigation module display if it has been dropped or subjected to a severe impact.**
- **module display without the HDD installed. (Only remove the HDD from the display and navigation module display when the replacement display and navigation module display or HDD is ready.)**

iii. Do not remove the display and navigation module display if there is a risk that condensation may occur.

**NOTICE:**

If the temperature of the display and navigation module display changes rapidly, condensation may occur inside the unit. This may cause a malfunction of the HDD.

Therefore, when the display and navigation module display is removed from the instrument panel, it needs to be kept inside the vehicle or in an environment with an equivalent temperature and humidity.

iv. Take measures to prevent static electricity.

**NOTICE:**

Touching the terminals of a connector can cause static electricity to be transmitted to the internal circuits. This may cause a malfunction of the HDD.

v. Keep the display and navigation module display away from magnets or magnetized items.

**NOTICE:**

Keep the display and navigation module display away from speakers, motors, magnetized tools and other magnetic items.

vi. The display and navigation module display functions as the G-BOOK device, it also holds the G-BOOK ID.

**NOTICE:**

When replacing the display and navigation module display, perform vehicle contract setting ( Click here).

## 3.PRECAUTIONS FOR HARD DISK DRIVE (HDD)

a. The map data for the navigation system is stored on the Hard Disk Drive (HDD). Make sure to follow the following instructions when replacing the HDD:

**NOTICE:**

Data recorded by the customer may be stored on the HDD (w/ Sound Library Function). This data will be lost when the HDD is replaced. Make sure to warn the customer that their data will be lost obtain their consent prior to replacing the HDD.

i. The HDD must only be replaced with a new one. Do not attempt to install a used HDD from another vehicle.

**NOTICE:**

The display and navigation module display can recognize only a new HDD.

ii. Do not touch the HDD cover.

**NOTICE:**

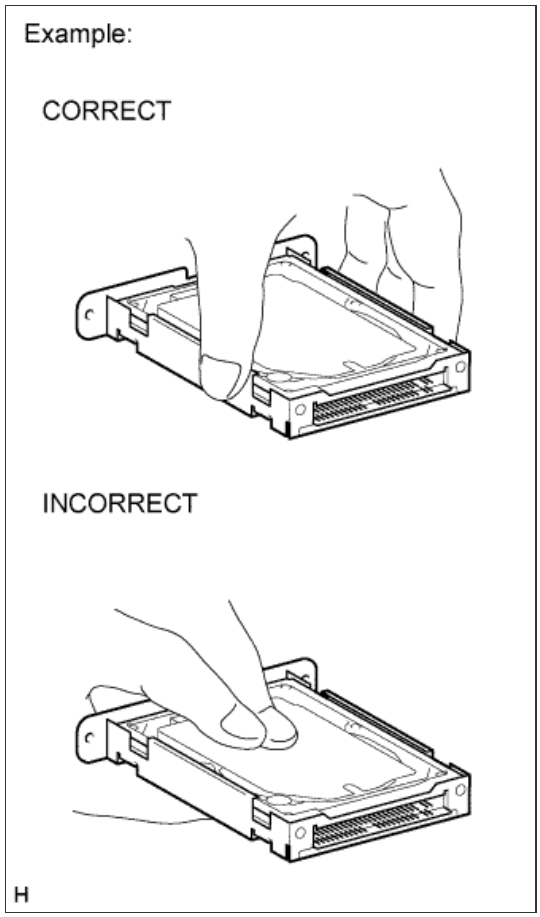
When removing or installing the HDD, only hold it by the areas shown in the illustration.

iii. Do not apply any vibration or shock to the HDD.

**NOTICE:**

- **Do not drop or allow anything to strike the HDD.**
- **Never use an HDD that has been dropped or struck.**
- **Do not store a HDD by itself if it has been removed from the display and navigation module display. (Only remove the HDD from the display and navigation module display when the replacement display and navigation module display or HDD is ready.)**

iv. Do not remove the HDD if there is a risk that condensation may occur.



**NOTICE:**

If the temperature of the HDD changes rapidly, condensation may occur inside the unit. This may cause a malfunction of the HDD. Therefore, when the display and navigation module display is removed from the instrument panel, it needs to be kept inside the vehicle or in an environment with an equivalent temperature and humidity.

v. Take measures to prevent static electricity.

**NOTICE:**

Touching the terminals of a connector can cause static electricity to be transmitted to the internal circuits. This may cause a malfunction of the HDD.

vi. Keep the HDD away from magnets or magnetized items.

**NOTICE:**

Keep the HDD away from speakers, motors, magnetized tools and other magnetic items.

vii. Inspection after HDD replacement.

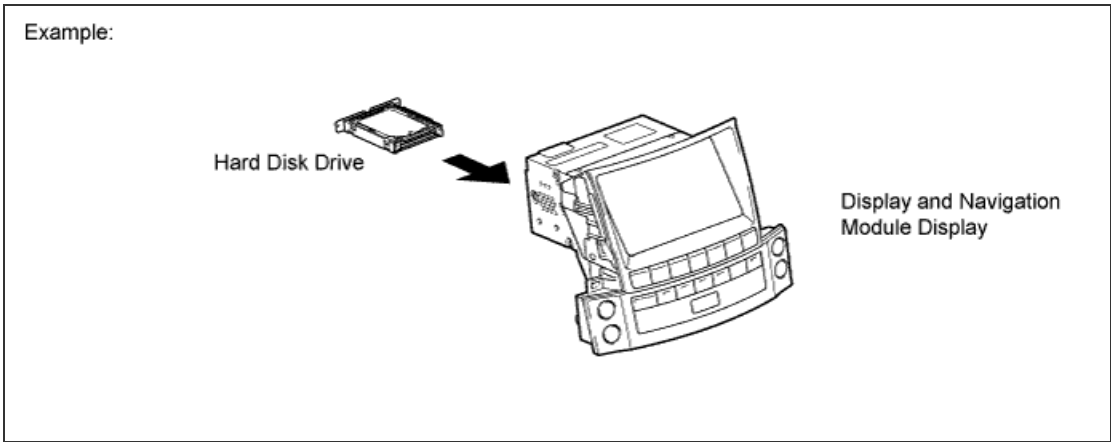
**NOTICE:**

Make sure to perform Check Hard Disk Drive in Operation Check to confirm that there are no HDD abnormalities after removal or installation (Click here).

**for Preparation** Click here

## 1.PRECAUTION FOR DISCONNECTING CABLE FROM NEGATIVE BATTERY TERMINAL

**NOTICE:**



After the engine switch is turned off, the display and navigation module display (HDD navigation system) records various types of memory and settings. As a result, after turning the engine switch off, make sure to wait for the time specified in the following table before disconnecting the cable from the negative (-) battery terminal.

**Waiting Time before Disconnecting Cable from Negative (-) Battery Terminal**

| Specification | Waiting Time |
|---|---|
| w/o Telematics transceiver | 60 sec. |
| w/ Telematics transceiver | 120 sec. |

## 2.PRECAUTION FOR DISPLAY AND NAVIGATION MODULE DISPLAY

a. An HDD is built into the display and navigation module display to store map data etc. which will be used for the navigation system. Therefore, care must be taken for the following points when handling:

i. When it is necessary to replace the display and navigation module display, be sure to replace it with a new one.

**NOTICE:**

If a used display and navigation module display is installed as a replacement part, the customer's HDD will not be recognized.

ii. Do not apply any vibration or shock to the display and navigation module display.

**NOTICE:**

- **Do not drop or subject the display and navigation module display to severe impacts.**
- **Do not use the display and navigation module display if it has been dropped or subjected to a severe impact.**
- **module display without the HDD installed. (Only remove the HDD from the display and navigation module display when the replacement display and navigation module display or HDD is ready.)**

iii. Do not remove the display and navigation module display if there is a risk that condensation may occur.

**NOTICE:**

If the temperature of the display and navigation module display changes rapidly, condensation may occur inside the unit. This may cause a malfunction of the HDD.

Therefore, when the display and navigation module display is removed from the instrument panel, it needs to be kept inside the vehicle or in an environment with an equivalent temperature and humidity.

iv. Take measures to prevent static electricity.

**NOTICE:**

Touching the terminals of a connector can cause static electricity to be transmitted to the internal circuits. This may cause a malfunction of the HDD.

v. Keep the display and navigation module display away from magnets or magnetized items.

**NOTICE:**

Keep the display and navigation module display away from speakers, motors, magnetized tools and other magnetic items.

vi. The display and navigation module display functions as the G-BOOK device, it also holds the G-BOOK ID.

**NOTICE:**

When replacing the display and navigation module display, perform vehicle contract setting ( Click here).

## 3.PRECAUTIONS FOR HARD DISK DRIVE (HDD)

a. The map data for the navigation system is stored on the Hard Disk Drive (HDD). Make sure to follow the following instructions when replacing the HDD:

**NOTICE:**

Data recorded by the customer may be stored on the HDD (w/ Sound Library Function). This data will be lost when the HDD is replaced. Make sure to warn the customer that their data will be lost obtain their consent prior to replacing the HDD.

i. The HDD must only be replaced with a new one. Do not attempt to install a used HDD from another vehicle.

**NOTICE:**

The display and navigation module display can recognize only a new HDD.

ii. Do not touch the HDD cover.

**NOTICE:**

When removing or installing the HDD, only hold it by the areas shown in the illustration.

iii. Do not apply any vibration or shock to the HDD.

**NOTICE:**

- **Do not drop or allow anything to strike the HDD.**
- **Never use an HDD that has been dropped or struck.**
- **Do not store a HDD by itself if it has been removed from the display and navigation module display. (Only remove the HDD from the display and navigation module display when the replacement display and navigation module display or HDD is ready.)**

iv. Do not remove the HDD if there is a risk that condensation may occur.

**NOTICE:**

If the temperature of the HDD changes rapidly, condensation may occur inside the unit. This may cause a malfunction of the HDD. Therefore, when the display and navigation module display is removed from the instrument panel, it needs to be kept inside the vehicle or in an environment with an equivalent temperature and humidity.

v. Take measures to prevent static electricity.

**NOTICE:**

Touching the terminals of a connector can cause static electricity to be transmitted to the internal circuits. This may cause a malfunction of the HDD.

vi. Keep the HDD away from magnets or magnetized items.

**NOTICE:**

Keep the HDD away from speakers, motors, magnetized tools and other magnetic items.

vii. Inspection after HDD replacement.

**NOTICE:**

Make sure to perform Check Hard Disk Drive in Operation Check to confirm that there are no HDD abnormalities after removal or installation (Click here).

## DVD (Digital Versatile Disc) PLAYER OUTLINE

a. The DVD player can only play DVD videos, DVD audios and video CDs that have any of the following marks:

i. Precaution for use of discs

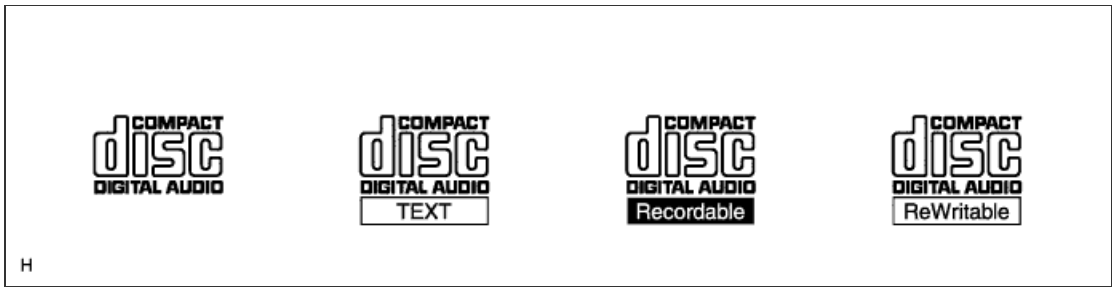
**NOTICE:**

- **SECAM color television standard discs cannot be played (PAL and NTSC discs can be played).**
- **Keep the discs away from dirt. Be careful not to damage the discs or leave fingerprints on them.**
- **Hold discs by the outer edge and center hole with the label side up.**
- **Leaving the disc exposed halfway out of the slot for a long time after pressing the disc eject button may cause deformation of the disc, making the disc unusable.**
- **Do not use odd-shaped discs because these may cause player malfunctions.**
- **Do not use discs whose recording portion is transparent or translucent because they may not be inserted, ejected or played normally.**
- **DualDiscs that combine DVD recorded material on one side with CD digital audio material on the other cannot be played.**

## CD (Compact Disc) PLAYER OUTLINE

a. A compact disc player uses a laser pickup to read digital signals recorded on a compact disc (CD). By converting the digital signals to analog, it can play music and audio.

**CAUTION:**



Do not look directly at the laser pickup because the CD player uses an invisible laser beam. Be sure to operate the player only as instructed.

**NOTICE:**

- **Do not disassemble any part of the CD player.**
- **Do not apply oil to the CD player.**
- **Do not insert anything but a CD into the CD player.**

b. Usable discs

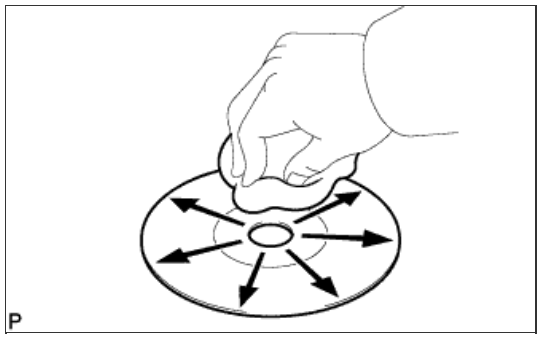
i. This player can play only audio CDs, CD-Rs (CD-Recordable) and CD-RWs (CD-ReWritable) that have any of the following marks:

H

c. Precautions for use of discs

**NOTICE:**

- **Copy-protected CDs cannot be played.**
- **CD-Rs and CD-RWs may not be played depending on the recording conditions or characteristics of the discs, or due to damage, dirt or deterioration caused by leaving the discs in the cabin for a long time.**
- **Unfinalized CD-Rs and CD-RWs cannot be played.**
- **DualDiscs that combine DVD recorded material on one side with CD digital audio material on the other cannot be played.**
- **Keep the discs away from dirt. Be careful not to damage the discs or leave your fingerprints on them.**
- **Hold discs by the outer edge and center hole with the label side up.**
- **Leaving the disc exposed halfway out of the slot for a long time after pressing the disc eject button may cause deformation of the disc, making the disc unusable.**
- **If discs have adhesive tape, stickers, CD labels or any traces of such labels attached, the discs may not be ejected or player malfunctions may result.**
- **Keep the discs away from direct sunlight. (Exposure to direct sunlight may cause deformation of the disc, making the disc unusable.)**
- **Do not use odd-shaped CDs because they may cause player malfunctions.**
- **Do not use discs whose recording portion is transparent or translucent because they may not be inserted, ejected or played normally.**
- **Use only 4.7 in. (12 cm) CDs.**
- **Do not use 3 in. (8 cm) CDs, either with or without adopters.**



**HINT:**

- **When it is cold or it is raining, if the windows mist up, mist and condensation may form in the player. In such cases, the CD sound may skip or stop in the middle of play. Ventilate or dehumidify the cabin for a while before using the player.**
- **The CD sound may skip if the player experiences strong vibrations when the vehicle is driven on rough roads or similar uneven surface(s).**

d. Cleaning

**NOTICE:**

Do not use a lens cleaner because it may cause a malfunction in the pickup portion of the player.

P

i. If dirt is on the disc surface, wipe it clean with a soft dry cloth such as an eyeglass cleaner for plastic lenses from the inside to the outside in a radial direction.

**NOTICE:**

- **Pressing on the disc by hand or rubbing the disc with a hard cloth may scratch the disc surface.**
- **Use of solvent such as a record spray, antistatic agent, alcohol, benzine and thinner or a chemical cloth may cause damage to the disc, making the disc unusable.**

## MP3/WMA OUTLINE

a. Playable MP3 file standards

| | |
|---|---|
| Compatible standard | MP3 (MPEG1 LAYER3, MPEG2 LSF LAYER3) |
| Compatible sampling frequency | • MPEG1 LAYER3: 32, 44.1, 48 (kHz)<br>• MPEG2 LSF LAYER3: 16, 22.05, 24 (kHz) |
| Compatible bit rate | • MPEG1 LAYER3: 64, 80, 96, 112, 128, 160, 192, 224, 256, 320 (kbps)<br>• MPEG2 LSF LAYER3: 64, 80, 96, 112, 128, 144, 160 (kbps)<br>• Compatible with VBR |

| | |
|---|---|
| Compatible channel mode | Stereo, joint stereo, dual channel, monaural |

b. Playable WMA file standards

| | |
|---|---|
| Compatible standard | WMA Ver. 7, 8 and 9 |
| Compatible sampling frequency | 32, 44.1, 48 (kHz) |
| Compatible bit rate (Only compatible with 2-channel playback) | • Ver. 7, 8: CBR48, 64, 80, 96, 128, 160, 192 (kbps)<br>• Ver. 9: CBR48, 64, 80, 96, 128, 160, 192, 256, 320 (kbps) |

c. ID3 tag and WMA tag

i. Additional textual information called ID3 tag can be input to MP3 files. Information such as song titles and artist names can be stored.

**HINT:**

This player is compatible with the ID3 tags of ID3 Ver. 1.0 and 1.1, and ID3 Ver. 2.2 and 2.3. (Number of characters complies with ID3 Ver. 1.0 and 1.1.)

ii. Additional textual information called WMA tag can be input to WMA files. Information such as song titles and artist names can be stored.

d. Usable media

i. Only CD-ROMs, CD-Rs (CD-Recordable) and CD-RWs (CD-ReWritable) can be used to play MP3/WMA files.

**NOTICE:**

- **CD-Rs and CD-RWs are more easily affected by a hot and humid environment than discs used for normal audio CDs. For this reason, some CD-Rs and CD-RWs do not play.**
- **If there are fingerprints or scratches on a disc, the disc may not play or the CD sound may skip.**
- **Some CD-Rs and CD-RWs may deteriorate if they are left in the cabin for a long time.**
- **Keep CD-Rs and CD-RWs in an opaque case.**

e. Usable media format

i. Usable media format

| | |
|---|---|
| Disc format | CD-ROM Mode 1, CD-ROM XA Mode 2 Form1 |
| File format | ISO9660 Level 1 and Level 2 (Joliet, Romeo) |

**HINT:**

- **As for MP3/WMA files written in any unlisted format, the contents of the files may not be played normally or the file names or folder names may not be displayed correctly.**
- **This player is compatible with multi-session discs and can play CD-Rs and CD-RWs on which MP3/WMA files are added. However, only the first session can be played.**
- **Discs whose first session includes both music data and MP3 or WMA format data cannot be played.**

ii. Standard and restrictions

| | |
|---|---|
| Maximum directory levels | 8 levels |
| Maximum number of characters for a folder name/file name | 32 characters |
| Maximum number of folders | 192 (Including empty folders, root folders, and folders that do not contain MP3/WMA files) |
| Maximum number of files in a disc | 255 (Including non-MP3/WMA files) |

f. File names

i. Only files with an extension of ".mp3" or ".wma" can be recognized and played as MP3 or WMA files.

ii. Save MP3 or WMA files with an extension of ".mp3" or ".wma".

**NOTICE:**

If non-MP3 or non-WMA files are saved with an extension of ".mp3" or ".wma", those files may be wrongly recognized as MP3 or WMA files and played. A loud noise may occur and damage to the speakers may result.

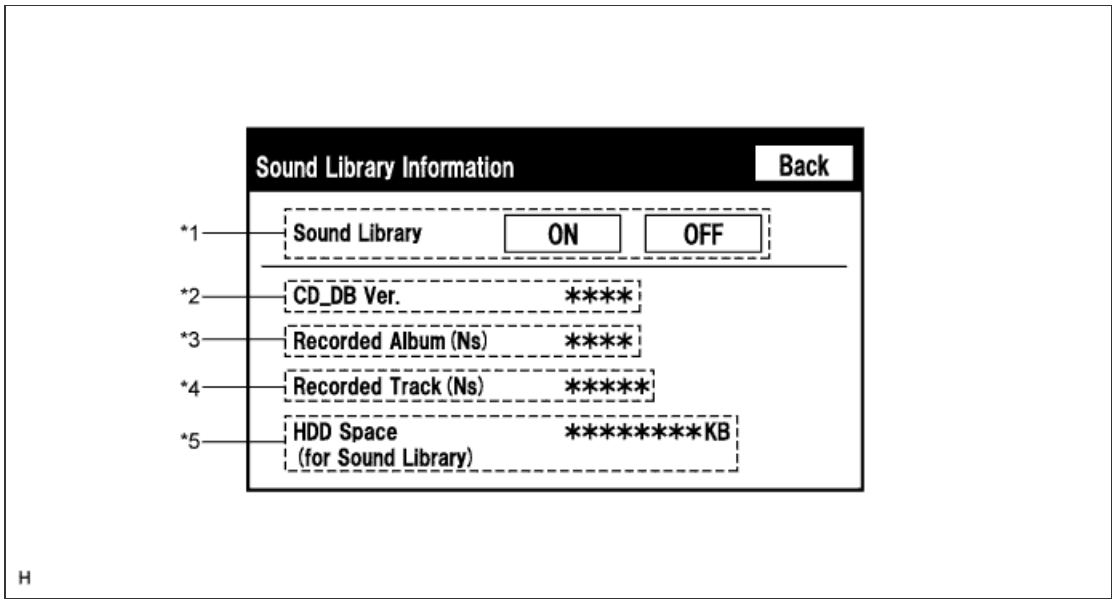
## COMMUNICATION SYSTEM

**HINT:**

- **Refer to Navigation System (for HDD) (Click here).**
- **Refer to Navigation System (for DVD) (Click here).**

## DIAGNOSTIC FUNCTION OUTLINE

a. The navigation system has a diagnostic function (the result is indicated on the master unit or the intelligent tester).



## DIAGNOSIS DISPLAY DETAILED DESCRIPTION

**HINT:**

- **This section contains a detailed description of displays in diagnostic mode.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

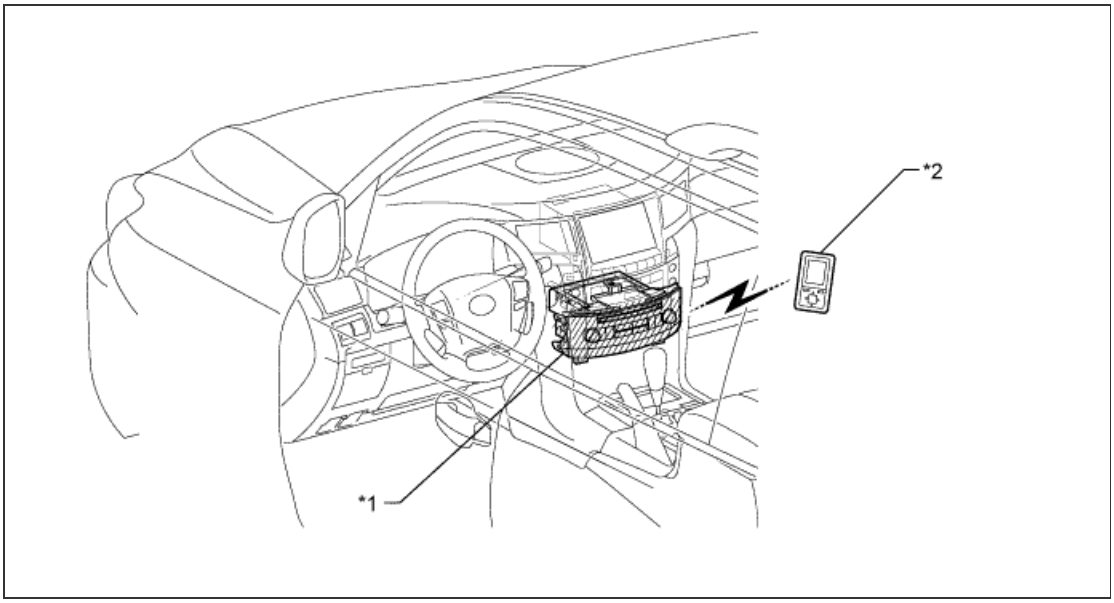
a. Function Check/Setting Screen

i. Sound Library Information Screen

**Screen Description**

| Display | Content |
|---|---|
| *1: Recording function setting for HDD | Recording to HDD permitted (ON)/not permitted (OFF) |
| *2: Media database version | Media database version currently installed on HDD |
| *3: Number of albums | Number of albums recorded in HDD |
| *4: Number of tracks | Number of tracks recorded in HDD |
| *5: Free space in HDD | Free space in HDD partition for sound library |

b. Refer to the following for detailed descriptions of the diagnosis display for items other than the sound library function:



**HINT:**

Refer to Navigation System (for HDD) (Click here).

## "BLUETOOTH" OUTLINE

a. "Bluetooth" is a trademark owned by Bluetooth SIG. Inc.

b. "Bluetooth" is a wireless connection technology that uses the 2.4 GHz frequency band. This makes it possible to connect a cellular phone ("Bluetooth" compatible phone*1) to the radio receiver assembly (the "Bluetooth" system is built in), and use the hands-free function of the cellular phone, even if it is in a pocket or bag. As a result, it is not necessary to use a connector attached directly to the cellular phone.
*1: Some versions of "Bluetooth" compatible cellular phones may not function.

**Text in Illustration**

| | | | |
|---|---|---|---|
| *1 | Radio Receiver Assembly<br>(Built-in "Bluetooth" receiver antenna) | *2 | Portable Player<br>("Bluetooth" compatible) |

**HINT:**

The communication performance of "Bluetooth" may vary depending on obstructions or radio wave conditions between communication devices, electromagnetic radiation, communication device sensitivity or antenna capacity.

c. "Bluetooth" audio function

i. The "Bluetooth" built-in radio receiver assembly and a "Bluetooth" compatible portable audio player*2 can be connected using a "Bluetooth" wireless connection. This enables files stored in the portable audio player to be heard from the vehicle speakers. In addition, operations such as play/stop can be performed directly from the radio receiver assembly.
*2: Some versions of "Bluetooth" compatible audio players may not be able to operate the "Bluetooth" function, or music may play, but functions available using the radio receiver assembly may be limited.

ii. Available "Bluetooth" audio devices

| | |
|---|---|
| "Bluetooth" specifications | Ver. 1.1 or higher (Recommended: Ver. 2.0+EDR or higher) |
| Following profiles | • A2DP (Advanced Audio Distribution Profile) Ver. 1.0 or higher<br>• AVRCP (Audio/Video Remote Control Profile) Ver. 1.0 or higher (Recommended: Ver. 1.3 or higher) |
| Maximum number of audio devices that can be registered | 2 |

**HINT:**

The amount of remaining battery charge displayed on the radio receiver assembly may be different from that of the portable player.

## USB AUDIO SYSTEM FUNCTION OUTLINE

a. The No. 1 stereo jack adapter assembly is equipped with a USB terminal. Connecting a USB device or "iPod" to the No. 1 stereo jack adapter assembly allows music files to be played. Not only is it possible to play music from a USB device with audio functions, is also possible to play MP3 or WMA music files that are stored on a USB device. In addition, "iPod" control software is installed, allowing file selection from playlists and operation using shuffle mode.

**HINT:**

- **Visual contents of an "iPod" cannot be played.**
- **Operation through the controls of a USB device or "iPod" cannot be performed while it is connected.**

b. USB audio system compatible model

i. USB Device
The following device formats can be used:

| | |
|---|---|
| Compatible USB device formats | • USB communication format: USB 2.0 FS (12MBPS)<br>• File format: FAT16/32 (Windows)<br>• Class: Mass storage class |

MP3 and WMA files written in any format other than those listed above may not play correctly, and their names and folder names may not be displayed correctly.
Items related to standards and limitations are as follows:

- Maximum directory hierarchy: 8 levels
- Maximum number of folders in device: 999 (including the root folder)
- Maximum number of files in device: 65025
- Maximum number of files per folder: 255

ii. "iPod"
"iPod" is a trademark of Apple Inc., registered in the U.S. and other countries.

**Supported "iPod" Models and Firmware Versions**

| Supported "iPod" Model | Supported Firmware Version |
|---|---|
| "iPod" 5G | Ver. 1.2 or more |
| "iPod Nano" 1G | Ver. 1.2 or more |
| "iPod Nano" 2G | Ver. 1.1.2 or more |
| "iPod Nano" 3G | Ver. 1.0 or more |
| "iPod touch" | Ver. 1.1 or more |
| "iPod classic" | Ver. 1.0 or more |

**Unsupported "iPod" Models**

| | |
|---|---|
| Unsupported Models | "iPod shuffle" |
| | "iPhone" |
| | "iPod" 1G, 2G, 3G, 4G |
| | "iPod mini" |

**HINT:**

Depending on the generation of "iPod" used, response to commands from the vehicle may be delayed.

Items related to standards and limitations are as follows:

- Maximum number of lists in device: 9999
- Maximum number of songs in device: 65535
- Maximum number of songs per list: 65535

## ASL (Automatic Sound Levelizer) FUNCTION OUTLINE

a. The Automatic Sound Levelizer (ASL) function automatically adjusts the sound data in order to enable to hear the clear sound from the audio system even when vehicle noise increases (as vehicle noise increases, the volume is turned up etc.). Vehicle speed signals are received from the combination meter assembly and used for the ASL.

## SOUND LIBRARY FUNCTION OUTLINE

a. Up to 2000 tracks can be recorded to the HDD from audio discs (based on 5-minute tracks recorded at 128kbps).

b. The recorded tracks will be provided with album, artist, genre and title names using the "Gracenote" Media Database ("CDDB") and stored in the sound library on the HDD.

c. Album, artist, genre and title names for recorded tracks can be input or edited freely.

**HINT:**

- **Recording equipment should be used only for lawful copying. It is necessary to carefully confirm what is lawful copying in the country in which you are making a copy.**
- **Copying of copyright material such as films or music is unlawful unless permitted by a legal exception or consent granted by the owners of the rights to the content.**
- **Music recognition technology and related data are provided by "Gracenote".**
- **"Gracenote" is the industry standard in music recognition technology and related content delivery. For more information, visit www.gracenote.com.**
- **CD and music-related data from "Gracenote", Inc. is copyright 2000 - 2008 "Gracenote".**
- **"Gracenote" software is copyright 2000 - 2008 "Gracenote".**

- **This product and service may covered by one or more U.S. patents.**
- **"Gracenote" and "CDDB" are registered trademarks of "Gracenote".**

**for Preparation** Click here

**HINT:**

- **Use the following procedure to troubleshoot the audio and visual system.**
- ***: Use the intelligent tester.**

## 1.VEHICLE BROUGHT TO WORKSHOP

NEXT

## 2.INSPECT BATTERY VOLTAGE

**Standard Voltage:**
**11 to 14 V**

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

## 3.BASIC INSPECTION

a. Turn the engine switch on (IG).

b. Check whether or not the radio receiver assembly turns on.

**Result**

| Result | Proceed to |
|---|---|
| Radio receiver assembly turns on. | A |
| Radio receiver assembly does not turn on. | B |

B. → Go to step 8

A

## 4.CHECK FOR DTC*

a. Refer to DTC Check/Clear of the navigation system.

- Refer to Navigation System (for HDD) (Click here).
- Refer to Navigation System (for DVD) (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC is output. | A |
| DTC is not output. | B |

**HINT:**

After the check using the intelligent tester, check the "System Check Mode" screen as necessary.

B. → Go to step 8

A

## 5.DTC CLEAR*

a. Refer to DTC Check/Clear of the navigation system.

- Refer to Navigation System (for HDD) (Click here).
- Refer to Navigation System (for DVD) (Click here).

**HINT:**

The present DTCs may not indicate actual malfunctions depending on the vehicle operating conditions.

**NEXT**

## 6.RECHECK FOR DTC*

a. Refer to DTC Check/Clear of the navigation system.

- Refer to Navigation System (for HDD) (Click here).
- Refer to Navigation System (for DVD) (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC is output. | A |
| DTC is not output. | B |

**HINT:**

- **Even if the malfunction symptom is not confirmed, check for diagnostic trouble codes. This is because the system stores history DTCs.**
- **After the check using the intelligent tester, check the "System Check Mode" screen as necessary.**
- **Check the DTC and inspect the area code indicates.**

**B.** → **Go to step 9**

**A**

## 7.DIAGNOSTIC TROUBLE CODE CHART

a. Find the output code in Diagnostic Trouble Code Chart ( Click here).

**NOTICE:**

- **The navigation system outputs DTCs for the following systems.**
- **When DTCs other than the codes in Diagnostic Trouble Code Chart for the audio and visual system are output, refer to Diagnostic Trouble Code Chart for the following systems.**
- **Refer to Navigation System (for HDD) (Click here).**
- **Refer to Navigation System (for DVD) (Click here).**
- **G-BOOK system (w/ G-BOOK system) (Click here).**
- **Rear Seat Entertainment System (w/ Rear Seat Entertainment System) ( Click here).**
- **Parking Assist Monitor System (w/ Parking Assist Monitor System) ( Click here).**
- **Wide View Front Monitor System (w/ Wide View Front Monitor System) ( Click here).**
- **Side Monitor System (w/ Side Monitor System) ( Click here).**

**Result**

| Result | Proceed to |
|---|---|
| Audio and Visual System (w/ Navigation System) are output. | A |
| Navigation System (for HDD) are output. | B |
| Navigation System (for DVD) are output. | C |
| G-BOOK System are output. | D |
| Rear Seat Entertainment System (w/ Rear Seat Entertainment System). | E |
| Parking Assist Monitor System (w/ Parking Assist Monitor System) | F |
| Wide View Front Monitor System (w/ Wide View Front Monitor System) | G |
| Side Monitor System (w/ Side Monitor System) | H |

| | |
|---|---|
| A. | Go to step 10 |
| B. | GO TO NAVIGATION SYSTEM (for HDD) |
| C. | GO TO NAVIGATION SYSTEM (for DVD) |
| D. | GO TO G-BOOK SYSTEM |
| E. | GO TO REAR SEAT ENTERTAINMENT SYSTEM |
| F. | GO TO PARKING ASSIST MONITOR SYSTEM |
| G. | GO TO WIDE VIEW FRONT MONITOR SYSTEM |
| H. | GO TO SIDE MONITOR SYSTEM |

## 8.PROBLEM SYMPTOMS TABLE

a. Refer to Problem Symptoms Table (Click here).

**Result**

| Result | Proceed to |
|---|---|
| Fault is not listed in Problem Symptoms Table. | A |
| Fault is listed in Problem Symptoms Table. | B |

**HINT:**

If the symptom does not recur and no DTC is output, perform the symptom reproduction method ( Click here).

| | |
|---|---|
| B. | Go to step 10 |

A

## 9.CHECK ECU TERMINAL ARRANGEMENT BASED ON MALFUNCTION SYMPTOM

a. Refer to Terminals of ECU (Click here).

NEXT

## 10.CHECK CIRCUIT

a. Adjust, repair or replace as necessary.

**NOTICE:**

When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK System) (Click here).

NEXT

## 11.RECHECK FOR DIAGNOSTIC TROUBLE CODE

**HINT:**

After clearing DTCs, recheck for DTCs.

NEXT

## 12.PERFORM CONFIRMATION TEST

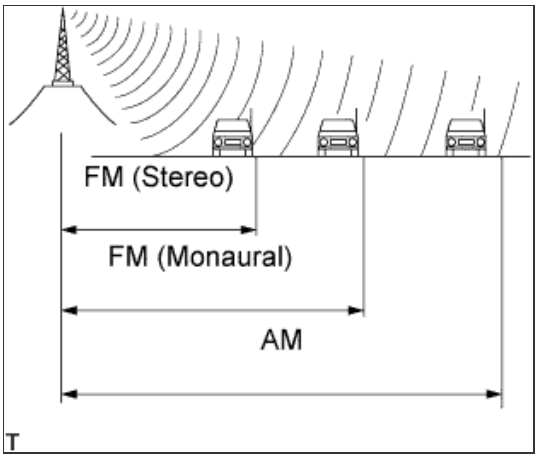
## RADIO DESCRIPTION

a. Radio frequency band



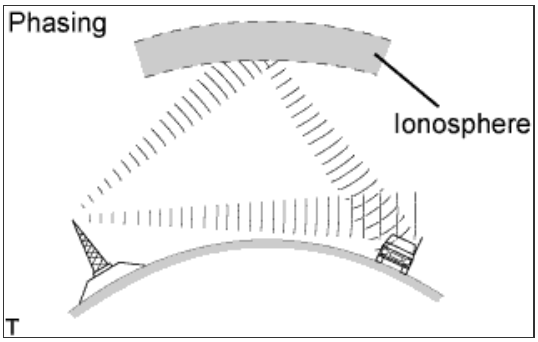
i. Radio broadcasts use the radio frequency bands shown in the table below.

| Frequency | 30 kHz | 300 kHz | 3 MHz | 30 MHz | 300 MHz |
|---|---|---|---|---|---|
| Designation | LF | MF | HF | VHF | |
| Radio Wave | | AM | | FM | |
| Modulation | | Amplitude Modulation | | Frequency Modulation | |

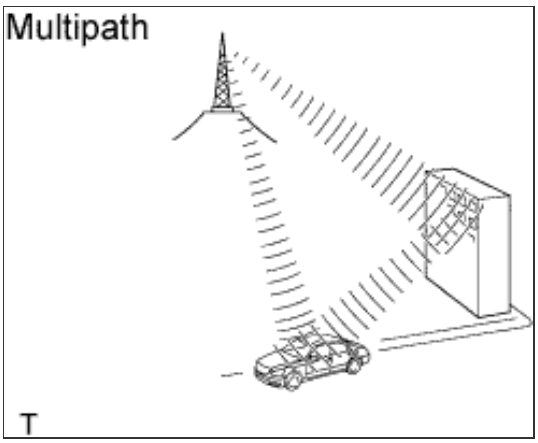
LF: Low Frequency MF: Medium Frequency HF: High Frequency VHF: Very High Frequency

b. Service area

i. The service areas of AM and FM broadcasts are vastly different. Sometimes an AM broadcast can be received very clearly but an FM stereo cannot. FM stereo has the smallest service area, and is prone to pick up static and other types of interference such as noise.

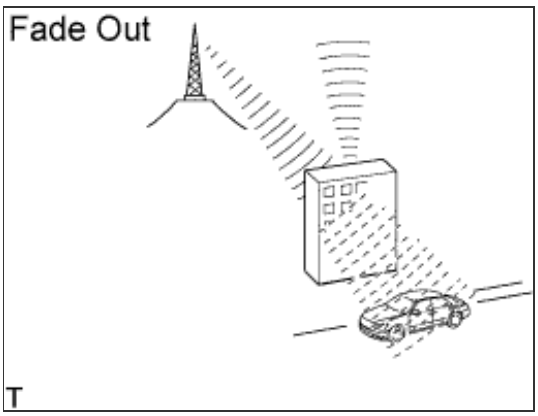


c. Radio reception problems



**HINT:**

In addition to static, other problems such as "phasing", "multipath" and "fade out" exist. These problems are not caused by electrical noise, but by the radio signal propagation method itself.



i. Phasing
AM broadcasts are susceptible to electrical interference and another kind of interference called phasing. Occurring only at night, phasing is the interference created when a vehicle receives 2 radio wave signals from the same transmitter. One signal is reflected off the ionosphere and the other signal is received directly from the transmitter.

ii. Multipath
Multipath is a type of interference created when a vehicle receives 2 radio wave signals from the same transmitter. One signal is reflected off buildings or mountains and the other signal is received directly from the transmitter.

iii. Fade out
Fade out is caused by objects (buildings, mountains and other such large obstacles) that deflect away part of a signal, resulting in a weaker signal when the object is between the transmitter and vehicle. High frequency radio waves, such as FM broadcasts, are easily deflected by obstructions. Low frequency radio waves, such as AM broadcasts, are less likely to deflect.

d. Noise problem
Technicians must have a clear understanding about each customer's noise complaint. Use the following table to diagnose noise problems.

| Radio Frequency | Noise Occurrence Condition | Presumable Cause |
|---|---|---|
| AM | Noise occurs in a specified area | Foreign noise |
| AM | Noise occurs when listening to an intermittent broadcast | An identical program transmitted from multiple towers can cause noise where the signals overlap |
| AM | Noise occurs only at night | Signal phasing |
| FM | Noise occurs while driving in a specified area | Multipath resulting from a change in FM frequency |

**for Preparation** Click here

**HINT:**

- **Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.**
- **Inspect the fuses and relays related to this system before inspecting the suspected areas below.**

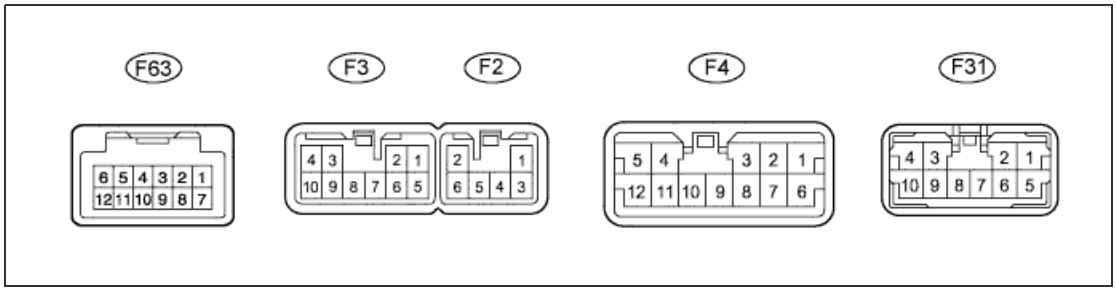
## RADIO RECEIVER ASSEMBLY

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specification |
|---|---|---|---|---|
| F54-3 (ILL+) - F54-15 (GND) | G - BR | Illumination signal | Light control switch off | Below 1 V |
| | | | Light control switch tail | 11 to 14 V |
| F54-5 (AUXI) - F54-15 (GND) | V - BR | External device connection detection signal | External device connected | Below 1 V |
| F54-6 (AGND) - Body ground | Shield - Body ground | Shield ground | Always | Below 1 V |
| F54-7 (SLD) - Body ground | Shield - Body ground | Shield ground | Always | Below 1 V |
| F54-8 (NTSC) - F54-15 (GND) | W - BR | DVD image signal | DVD playing | A waveform synchronized with display signals is output |
| F54-9 (MI+) | B | MOST communication signal | - | - |
| F54-10 (SLDI) - Body ground | BR - Body ground | Shield ground | Always | Below 1 V |
| F54-11 (MO+) | B | MOST communication signal | - | - |
| F54-12 (WUI) - F54-15 (GND) | R - BR | MOST communication wake up signal | Engine switch on (ACC) | 4.5 V or higher |
| F54-14 (B) - F54-15 (GND) | L - BR | Battery | Always | 11 to 14 V |
| F54-15 (GND) - Body ground | BR - Body ground | Ground | Always | Below 1 V |
| F54-17 (ILL-) - F54-15 (GND) | W - BR | Illumination (rheostat) signal | Light control switch off | Below 1 V |
| | | | Light control switch tail | Pulse generation |
| F54-19 (ARI) - F54-15 (GND) | W - BR | Sound signal (Right) | External device playing (When stereo jack used) | A waveform synchronized with sounds is output |
| F54-20 (ALI ) - F54-15 (GND) | B - BR | Sound signal (Left) | External device playing (When stereo jack used) | A waveform synchronized with sounds is output |
| F54-21 (ASGN) - F54-15 (GND) | R - BR | Shield ground | Always | Below 1 V |
| F54-22 (GND) - F54-15 (GND) | B - BR | Shield ground | Always | Below 1 V |
| F54-23 (MI-) | W | MOST communication signal | - | - |
| F54-24 (SLDI) - Body ground | BR - Body ground | Shield ground | Always | Below 1 V |
| F54-25 (MO-) | W | MOST communication signal | - | - |
| F54-26 (WUO) - F54-15 (GND) | R - BR | MOST communication wake up signal | Engine switch on (ACC) | 4.5 V or higher |
| RA1-5 (ANT+) - F54-15 (GND) | BR- BR | Power source of antenna | Engine switch on (ACC) Radio switch on and AM or FM | 11 to 14 V |



## MULTI-MEDIA INTERFACE ECU

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specification |
|---|---|---|---|---|
| L51-1 (USD1) - Body ground | Shield - Body ground | Shield ground | Always | Below 1 V |
| L51-2 (URO+) - L51-7 (GND) | W - B | USB audio system sound signal | USB audio system playing | A waveform synchronized with sounds is output |
| L51-3 (ULO+) - L51-7 (GND) | B - B | USB audio system sound signal | USB audio system playing | A waveform synchronized with sounds is output |
| L51-4 (UGD1) - L51-7 (GND) | R - B | USB audio system sound signal | USB audio system playing | A waveform synchronized with sounds is output |
| L51-7 (GND) - Body ground | B - Body ground | Ground | Always | Below 1 V |
| L51-9 (TX1+) | W | AVC-LAN communication signal | - | - |
| L51-10 (TX1-) | L | AVC-LAN communication signal | - | - |
| L51-11 (ACC) - L51-7 (GND) | GR - B | Accessory (ON) | Engine switch off | Below 1 V |
| | | | Engine switch on (ACC) | 11 to 14 V |
| L51-12 (+B) - L51-7 (GND) | R - B | Battery | Always | 11 to 14 V |
| L53-1 (UPO) - L53-4 (UESG) | - | Battery | Always | 5 V |
| L53-2 (UDI-) | - | Data signal | USB device or "iPod" connected | - |
| L53-3 (UDI+) | - | Data signal | USB device or "iPod" connected | - |
| L53-4 (UESG) - Body ground | - | Ground | Always | Below 1 V |
| L52-1 (VRI) - L52-10 (VGN)*1 | W - R | Aux sound signal (right) | External device is playing (When stereo jack is used) | A waveform synchronized with sounds is output |
| L52-2 (SGND) - Body ground*1 | Shield - Body ground | Shield ground | Always | Below 1 V |
| L52-9 (VLI) - L52-10 (VGN)*1 | B - R | Aux sound signal (left) | External device is playing (When stereo jack is used) | A waveform synchronized with sounds is output |
| L52-10 (VGN) - Body ground*1 | R - Body ground | Ground | Always | Below 1 V |

# DTC B1585 USB Media Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when a malfunction occurs in a connected device.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1585 | When one of the conditions below is met:<br>• Non mass-storage class or incompatible protocol USB device<br>• USB device with an incompatible file system, corrupted or incompatible File Allocation Table (FAT)<br>• "iPod" malfunction<br>• "iPod" with unsupported firmware<br>• Unsupported "iPod" model | • Multi-media interface ECU<br>• USB device or "iPod" |

## INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs.

### 1.REPLACE USB DEVICE OR "iPod"

a. Disconnect the USB device or "iPod" from the No. 1 stereo jack adapter assembly.

b. Turn the engine switch off.

**HINT:**

When this DTC has been stored, it is necessary to turn off the engine switch to make it possible for the vehicle to recognize a new device when it is connected.

c. Turn the engine switch on (ACC).

d. Connect a known good USB device or "iPod" to the No. 1 stereo jack adapter assembly.

**HINT:**

- **If the malfunction occurred when a USB device was in use, use another USB device for the inspection. If the malfunction occurred when an "iPod" was in use, use another "iPod" for the inspection.**
- **Refer to System Description for compatible formats and versions (Click here).**

**NEXT**

### 2.CLEAR DTC

a. Clear the DTCs (Click here).

**NEXT**

### 3.CHECK DTC

a. Recheck for DTCs.

**HINT:**

If DTCs are detected frequently, replace the multi-media interface ECU.

**OK:**
**No DTC is output.**

**NG** → REPLACE MULTI-MEDIA INTERFACE ECU (Click here)

OK

USB DEVICE FORMAT WAS INCOMPATIBLE, "iPod" VERSION WAS INCOMPATIBLE, OR USB DEVICE OR "iPod" WAS DEFECTIVE

# DTC B15A3 Stereo Component Amplifier Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when a malfunction occurs in the stereo component amplifier assembly.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15A3 | When one of the conditions below is met:<br>• Internal power supply malfunction<br>• DSP error<br>• EEPROM error | Stereo component amplifier assembly |

## INSPECTION PROCEDURE

**1.CHECK DTC**

a. Clear the DTC (Click here).

b. Recheck for DTC and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

**NG** → **REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)**

**OK**

**USE SIMULATION METHOD TO CHECK (Click here)**

# DTC B1585 USB Media Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when a malfunction occurs in a connected device.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1585 | When one of the conditions below is met:<br>• Non mass-storage class or incompatible protocol USB device<br>• USB device with an incompatible file system, corrupted or incompatible File Allocation Table (FAT)<br>• "iPod" malfunction<br>• "iPod" with unsupported firmware<br>• Unsupported "iPod" model | • Multi-media interface ECU<br>• USB device or "iPod" |

## INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs.

### 1.REPLACE USB DEVICE OR "iPod"

a. Disconnect the USB device or "iPod" from the No. 1 stereo jack adapter assembly.

b. Turn the engine switch off.

**HINT:**

When this DTC has been stored, it is necessary to turn off the engine switch to make it possible for the vehicle to recognize a new device when it is connected.

c. Turn the engine switch on (ACC).

d. Connect a known good USB device or "iPod" to the No. 1 stereo jack adapter assembly.

**HINT:**

- **If the malfunction occurred when a USB device was in use, use another USB device for the inspection. If the malfunction occurred when an "iPod" was in use, use another "iPod" for the inspection.**
- **Refer to System Description for compatible formats and versions (Click here).**

**NEXT**

### 2.CLEAR DTC

a. Clear the DTCs (Click here).

**NEXT**

### 3.CHECK DTC

a. Recheck for DTCs.

**HINT:**

If DTCs are detected frequently, replace the multi-media interface ECU.

**OK:**
**No DTC is output.**

**NG** → REPLACE MULTI-MEDIA INTERFACE ECU (Click here)

OK

USB DEVICE FORMAT WAS INCOMPATIBLE, "iPod" VERSION WAS INCOMPATIBLE, OR USB DEVICE OR "iPod" WAS DEFECTIVE

# DTC B15A3 Stereo Component Amplifier Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when a malfunction occurs in the stereo component amplifier assembly.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15A3 | When one of the conditions below is met:<br>• Internal power supply malfunction<br>• DSP error<br>• EEPROM error | Stereo component amplifier assembly |

## INSPECTION PROCEDURE

**1.CHECK DTC**

a. Clear the DTC (Click here).

b. Recheck for DTC and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

**NG** → **REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)**

**OK**

**USE SIMULATION METHOD TO CHECK (Click here)**

## DTC B15A1 Audio HU Malfunction

## DTC B15B3 Radio Tuner Malfunction

## DTC B15B5 DVD Changer Malfunction

## DTC B15B7 Bluetooth Module Malfunction

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored when a malfunction occurs in the radio receiver assembly.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15A1 | Bus malfunction, sub-micro processor malfunction | Radio receiver assembly |
| B15B3 | Tuner communication error | |
| B15B5 | When one of the conditions below is met:<br>• Mechanical communication error<br>• Read malfunction<br>• Mechanical malfunction | |
| B15B7 | "Bluetooth" module malfunction | |

### INSPECTION PROCEDURE

**1.CHECK DTC**

a. Clear the DTC (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

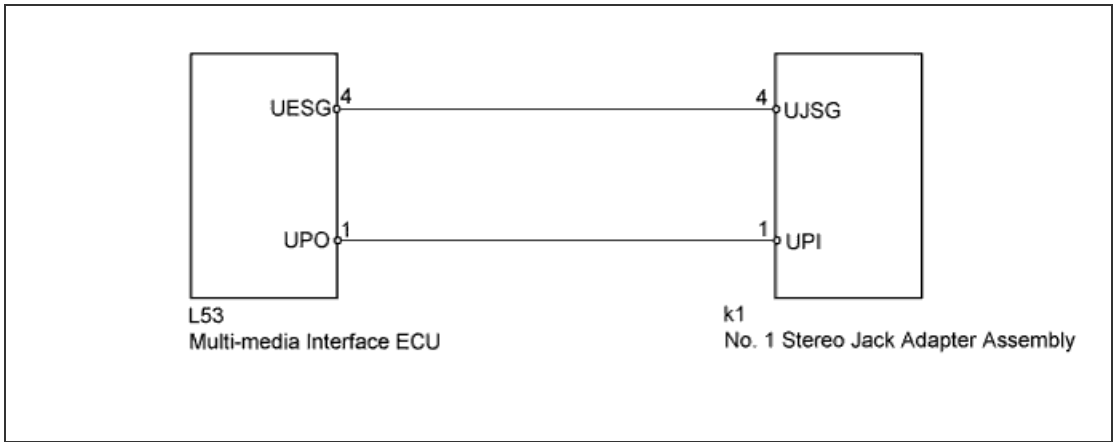
**OK:**
**No DTC is output.**

**NG** → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

**OK**

USE SIMULATION METHOD TO CHECK (Click here)

## DTC B15BB Multi-media Interface ECU Malfunction



**for Preparation** Click here

### DESCRIPTION

This DTC is stored when a malfunction occurs in the multi-media interface ECU.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15BB | When one of the conditions below is met:<br>• System microprocessor malfunction<br>• Media interface microprocessor malfunction<br>• CD-LSI (Large Scale Integration) malfunction<br>• Internal power supply malfunction | • USB device or "iPod"<br>• Wire harness or connector<br>• No. 1 stereo jack adapter assembly<br>• Multi-media interface ECU |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTC.

#### 1.REPLACE USB DEVICE OR "iPod"

a. Disconnect the USB device or "iPod" from the No. 1 stereo jack adapter assembly.

b. Turn the engine switch off.

**HINT:**

When this DTC has been stored, it is necessary to turn off the engine switch to make it possible for the vehicle to recognize a new device when it is connected.

c. Turn the engine switch on (ACC).

d. Connect a known good USB device or "iPod" to the No. 1 stereo jack adapter assembly.

**HINT:**

- **If the malfunction occurred when a USB device was in use, use another USB device for the inspection. If the malfunction occurred when an "iPod" was in use, use another "iPod" for the inspection.**

**NEXT**

#### 2.CLEAR DTC

a. Clear the DTCs (Click here).

**NEXT**

3.RECHECK FOR DTC

a. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

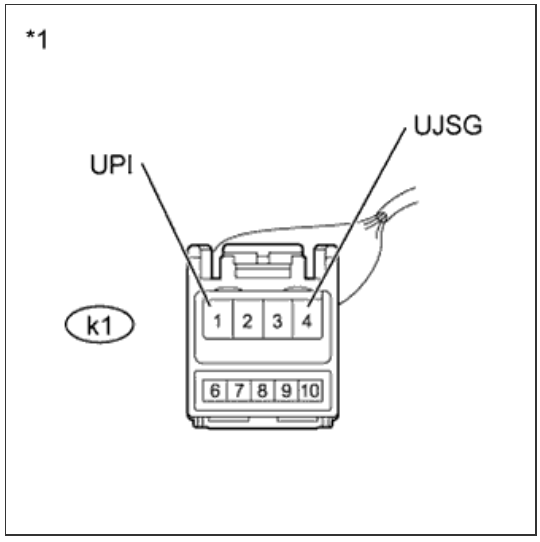
NG → Go to step 4

OK

USB DEVICE OR "iPod" WAS DEFECTIVE

4.INSPECT MULTI-MEDIA INTERFACE ECU

a. Disconnect the k1 No. 1 stereo jack adapter assembly connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| k1-1 (UPI) - k1-4 (UJSG) | Always | 5 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to No. 1 Stereo Jack Adapter Assembly) |

NG → Go to step 5

OK

REPLACE NO. 1 STEREO JACK ADAPTER ASSEMBLY (Click here)

5.CHECK HARNESS AND CONNECTOR (INTERFACE ECU - STEREO JACK ADAPTER)

a. Disconnect the L53 multi-media interface ECU connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L53-1 (UPO) - k1-1 (UPI) | Always | Below 1 Ω |
| L53-4 (UESG) - k1-4 (UJSG) | Always | Below 1 Ω |
| k1-1 (UPI) - Body ground | Always | 10 kΩ or higher |
| k1-4 (UJSG) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE MULTI-MEDIA INTERFACE ECU (Click here)

## DTC B15A1 Audio HU Malfunction

## DTC B15B3 Radio Tuner Malfunction

## DTC B15B5 DVD Changer Malfunction

## DTC B15B7 Bluetooth Module Malfunction

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored when a malfunction occurs in the radio receiver assembly.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15A1 | Bus malfunction, sub-micro processor malfunction | Radio receiver assembly |
| B15B3 | Tuner communication error | |
| B15B5 | When one of the conditions below is met:<br>• Mechanical communication error<br>• Read malfunction<br>• Mechanical malfunction | |
| B15B7 | "Bluetooth" module malfunction | |

### INSPECTION PROCEDURE

**1.CHECK DTC**

a. Clear the DTC (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

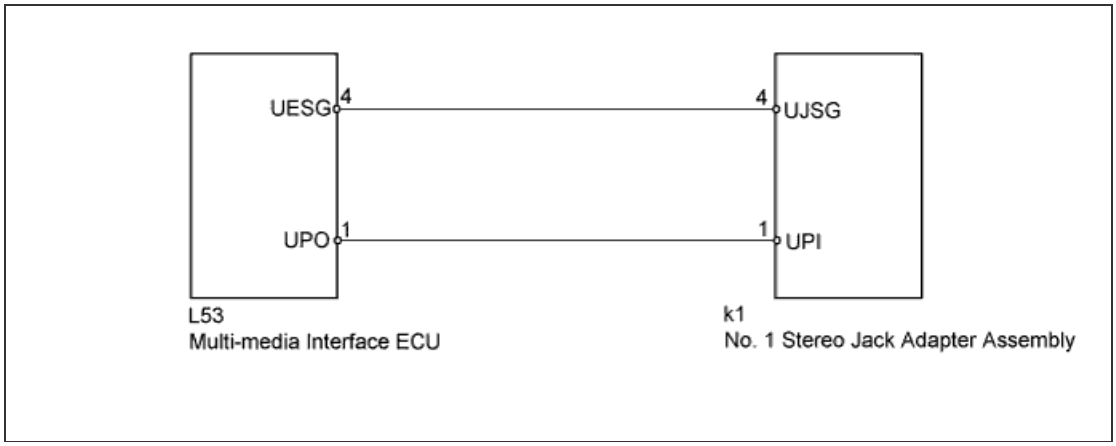
**OK:**
**No DTC is output.**

**NG** → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

**OK**

USE SIMULATION METHOD TO CHECK (Click here)

## DTC B15BB Multi-media Interface ECU Malfunction



**for Preparation** Click here

### DESCRIPTION

This DTC is stored when a malfunction occurs in the multi-media interface ECU.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15BB | When one of the conditions below is met:<br>• System microprocessor malfunction<br>• Media interface microprocessor malfunction<br>• CD-LSI (Large Scale Integration) malfunction<br>• Internal power supply malfunction | • USB device or "iPod"<br>• Wire harness or connector<br>• No. 1 stereo jack adapter assembly<br>• Multi-media interface ECU |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTC.

#### 1.REPLACE USB DEVICE OR "iPod"

a. Disconnect the USB device or "iPod" from the No. 1 stereo jack adapter assembly.

b. Turn the engine switch off.

**HINT:**

When this DTC has been stored, it is necessary to turn off the engine switch to make it possible for the vehicle to recognize a new device when it is connected.

c. Turn the engine switch on (ACC).

d. Connect a known good USB device or "iPod" to the No. 1 stereo jack adapter assembly.

**HINT:**

- **If the malfunction occurred when a USB device was in use, use another USB device for the inspection. If the malfunction occurred when an "iPod" was in use, use another "iPod" for the inspection.**

**NEXT**

#### 2.CLEAR DTC

a. Clear the DTCs (Click here).

**NEXT**

3.RECHECK FOR DTC

a. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

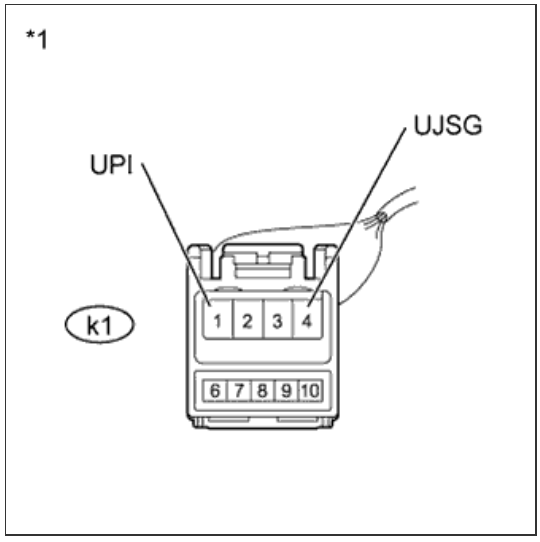
NG → Go to step 4

OK

USB DEVICE OR "iPod" WAS DEFECTIVE

4.INSPECT MULTI-MEDIA INTERFACE ECU

a. Disconnect the k1 No. 1 stereo jack adapter assembly connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| k1-1 (UPI) - k1-4 (UJSG) | Always | 5 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to No. 1 Stereo Jack Adapter Assembly) |

NG → Go to step 5

OK

REPLACE NO. 1 STEREO JACK ADAPTER ASSEMBLY (Click here)

5.CHECK HARNESS AND CONNECTOR (INTERFACE ECU - STEREO JACK ADAPTER)

a. Disconnect the L53 multi-media interface ECU connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L53-1 (UPO) - k1-1 (UPI) | Always | Below 1 Ω |
| L53-4 (UESG) - k1-4 (UJSG) | Always | Below 1 Ω |
| k1-1 (UPI) - Body ground | Always | 10 kΩ or higher |
| k1-4 (UJSG) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE MULTI-MEDIA INTERFACE ECU (Click here)

## DTC B15A1 Audio HU Malfunction

## DTC B15B3 Radio Tuner Malfunction

## DTC B15B5 DVD Changer Malfunction

## DTC B15B7 Bluetooth Module Malfunction

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored when a malfunction occurs in the radio receiver assembly.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15A1 | Bus malfunction, sub-micro processor malfunction | Radio receiver assembly |
| B15B3 | Tuner communication error | |
| B15B5 | When one of the conditions below is met:<br>• Mechanical communication error<br>• Read malfunction<br>• Mechanical malfunction | |
| B15B7 | "Bluetooth" module malfunction | |

### INSPECTION PROCEDURE

**1.CHECK DTC**

a. Clear the DTC (Click here).

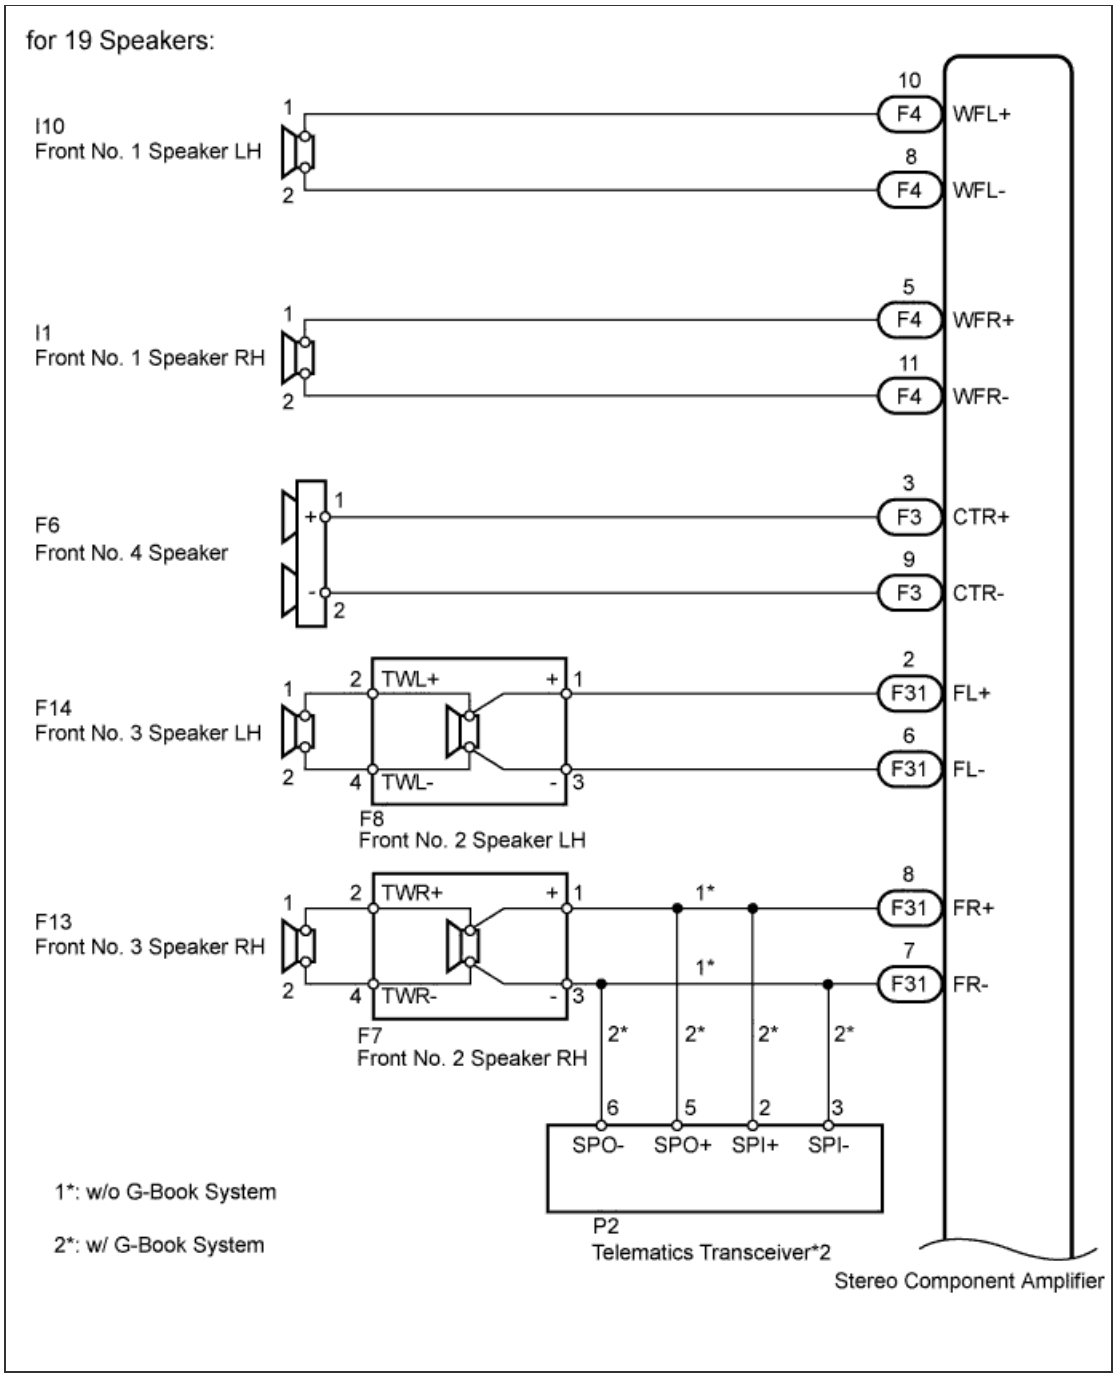
b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

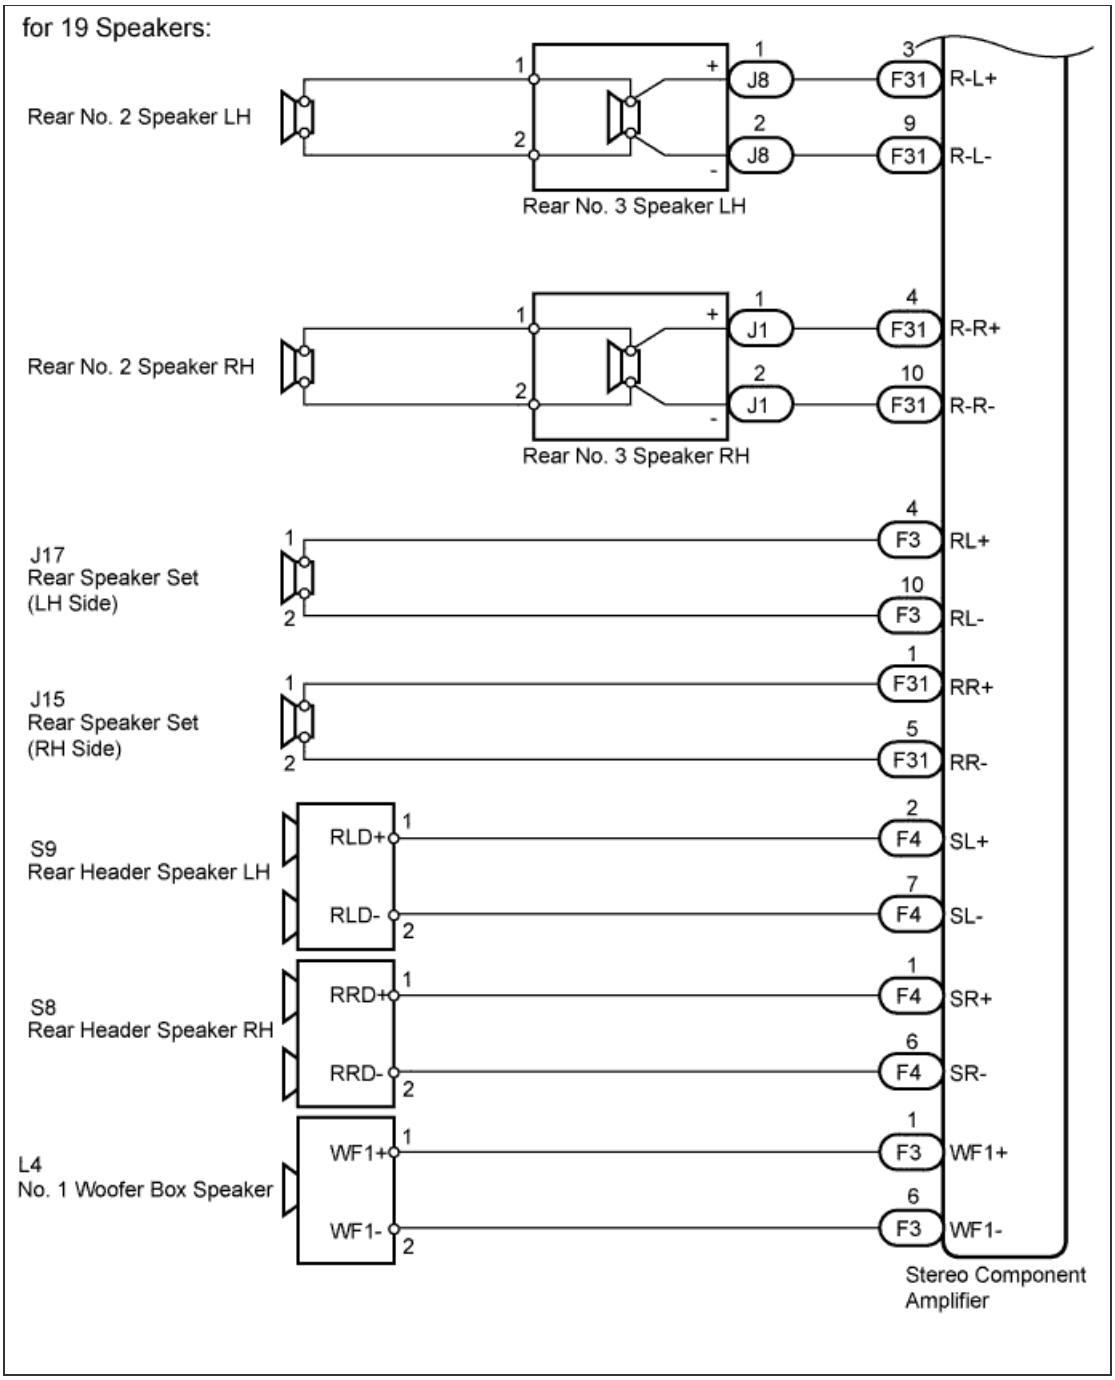
**NG** → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

**OK**

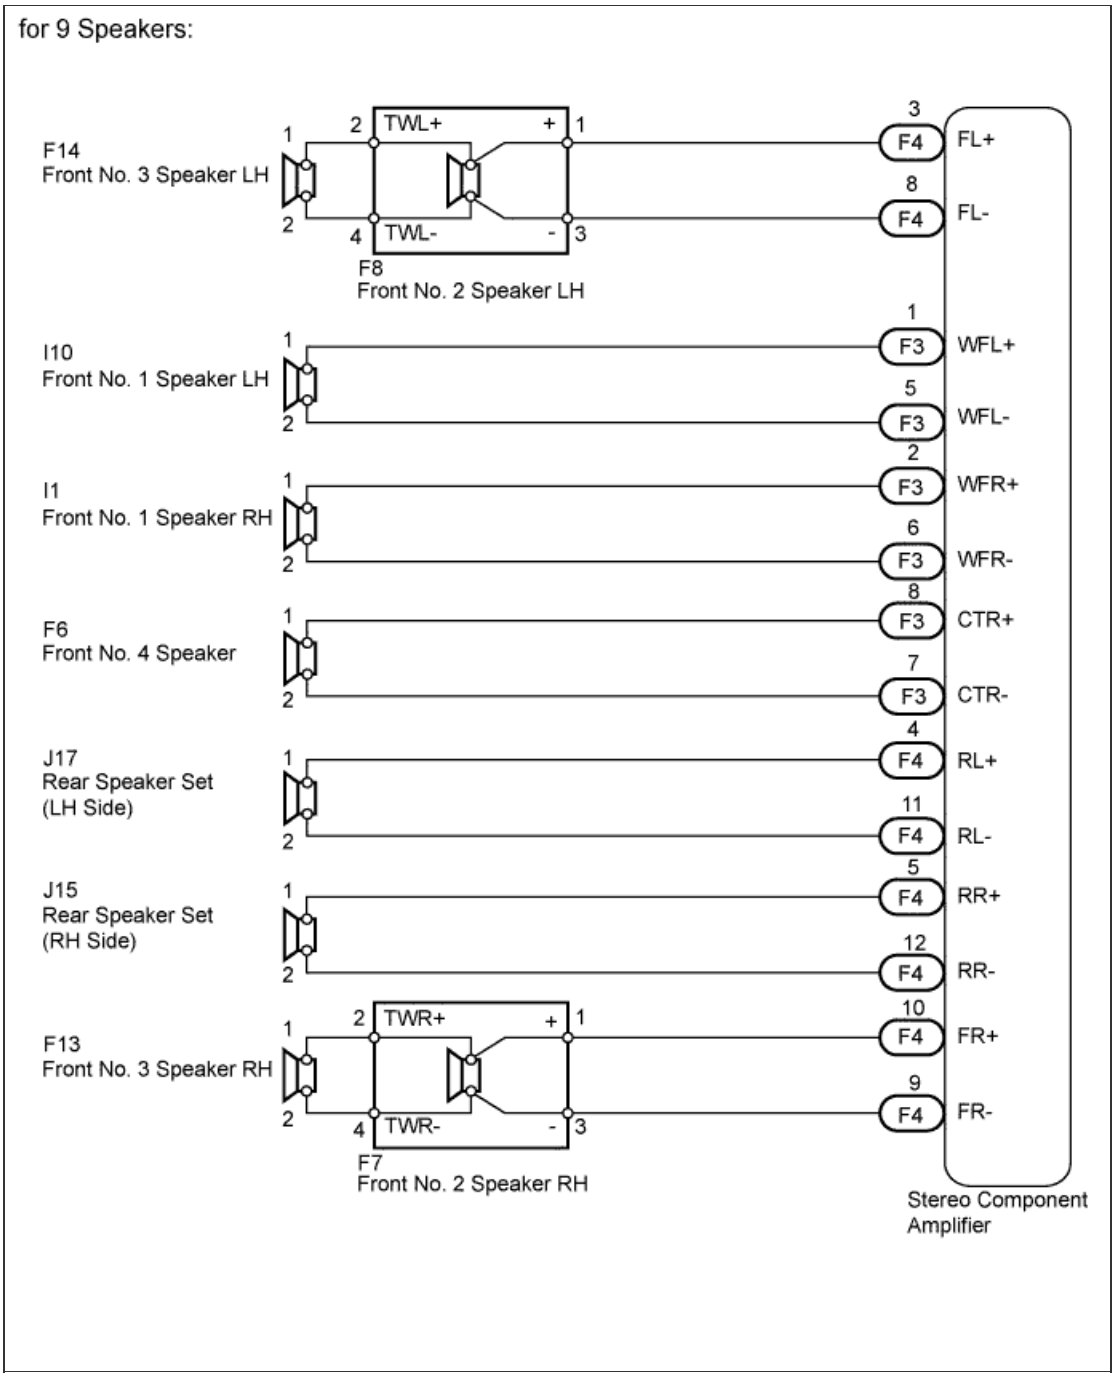
USE SIMULATION METHOD TO CHECK (Click here)



## DTC B15C3 Speaker Output Short



**for Preparation** Click here



### DESCRIPTION

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15C3 | A short is detected in the speaker output circuit. | • Harness or connector<br>• Speaker<br>• Teiematics transceiver<br>• Stereo component amplifier assembly |

## INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs.

### 1.CHECK AUDIO MODELS

a. Check the audio model.

**Result**

| Result | Proceed to |
|---|---|
| 19 speakers | A |
| 9 speakers | B |

B → Go to step 22

A

### 2.CHECK FOR DTC

a. Disconnect the F31, F4 and F3 amplifier connectors.

b. Clear the DTCs.

c. Check if DTC B15C3 is output.

**OK:**
**DTC B15C3 is not output.**

NG → REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

OK

### 3.CHECK FOR DTC

a. Reconnect the F3 amplifier connector.

b. Check if DTC B15C3 is output.

**OK:**
**DTC B15C3 is not output.**

NG → Go to step 8

OK

### 4.CHECK FOR DTC

a. Reconnect the F31 amplifier connector.

b. Check if DTC B15C3 is output.

**OK:**
**DTC B15C3 is not output.**

NG → Go to step 12

OK

### 5.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - SPEAKER)

a. Disconnect the F4 amplifier connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

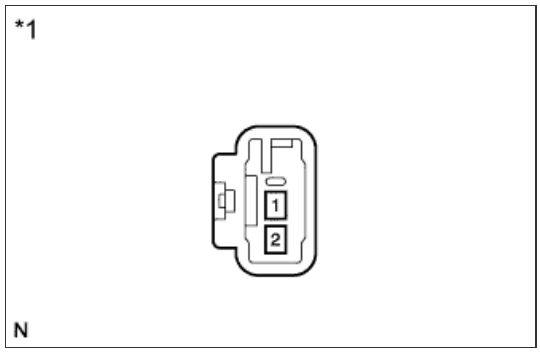
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-1 (SR+) - Body ground | Always | 10 kΩ or higher |
| F4-2 (SL+) - Body ground | | |
| F4-5 (WFR+) - Body ground | | |
| F4-6 (SR-) - Body ground | | |
| F4-7 (SL-) - Body ground | | |
| F4-8 (WFL-) - Body ground | | |
| F4-10 (WFL+) - Body ground | | |
| F4-11 (WFR-) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 6.INSPECT FRONT NO. 1 SPEAKER ASSEMBLY

a. Disconnect the I10 and I1 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 11 to 13 Ω |

**Text in Illustration**

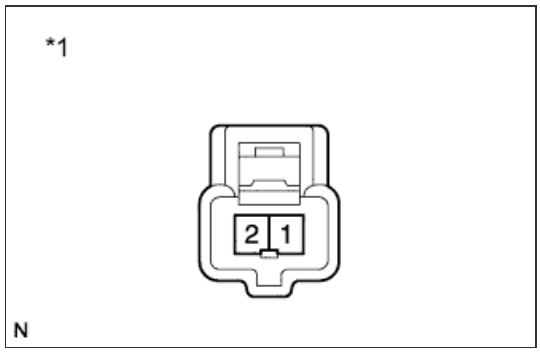
| | |
|---|---|
| *1 | Component without harness connected: (Front No. 1 Speaker Assembly) |

NG → REPLACE FRONT NO. 1 SPEAKER ASSEMBLY (Click here)

OK

## 7.INSPECT REAR HEADER SPEAKER ASSEMBLY

a. Disconnect the S9 and S8 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected: (Rear Header Speaker Assembly) |

NG → REPLACE REAR HEADER SPEAKER ASSEMBLY (Click here)

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 8.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - SPEAKER)

a. Disconnect the F3 amplifier connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-3 (CTR+) - Body ground | | |
| F3-9 (CTR-) - Body ground | | |
| F3-4 (RL+) - Body ground | | |

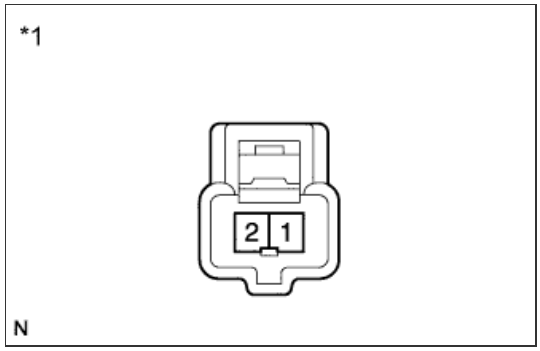
| | | |
|---|---|---|
| F3-10 (RL-) - Body ground | Always | 10 kΩ or higher |
| F3-1 (WF1+) - Body ground | | |
| F3-6 (WF1-) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 9.INSPECT FRONT NO. 4 SPEAKER ASSEMBLY

a. Disconnect the F6 speaker connector.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

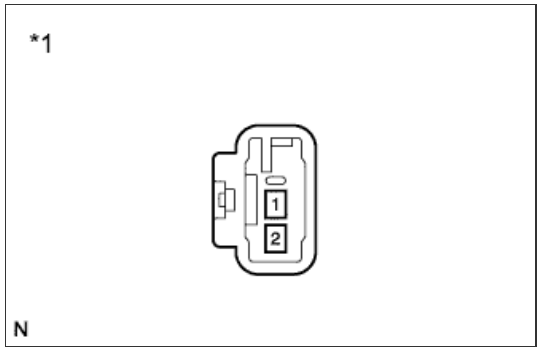
| | |
|---|---|
| *1 | Component without harness connected: (Front No. 4 Speaker Assembly) |

NG → REPLACE FRONT NO. 4 SPEAKER ASSEMBLY (Click here)

OK

## 10.INSPECT REAR SPEAKER SET LH

a. Disconnect the J17 speaker connector.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4.8 to 7.2 Ω |

**Text in Illustration**

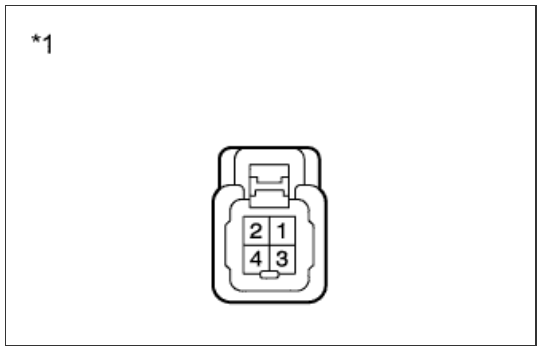
| | |
|---|---|
| *1 | Component without harness connected: (Rear Speaker Set LH) |

NG → REPLACE REAR SPEAKER SET LH (Click here)

OK

## 11.INSPECT NO. 1 WOOFER BOX SPEAKER ASSEMBLY

a. Disconnect the L4 speaker connector.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 8.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected:<br>(No. 1 Woofer Box Speaker Assembly) |

NG → REPLACE NO. 1 WOOFER BOX SPEAKER ASSEMBLY (Click here)

OK → REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

**12.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - SPEAKER)**

a. Disconnect the F31 amplifier connector.

b. Disconnect the P2 telematics transceiver connector.*

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F31-1 (RR+) - Body ground | Always | 10 kΩ or higher |
| F31-5 (RR-) - Body ground | | |
| F31-3 (R-L+) - Body ground | | |
| F31-9 (R-L-) - Body ground | | |
| F31-4 (R-R+) - Body ground | | |
| F31-10 (R-R-) - Body ground | | |
| F31-2 (FL+) - Body ground | | |
| F31-6 (FL-) - Body ground | | |
| F31-7 (FR-) - Body ground | | |
| F31-8 (FR+) - Body ground | | |
| P2-5 (SPO+)* - Body ground | | |
| P2-6 (SPO-)* - Body ground | | |

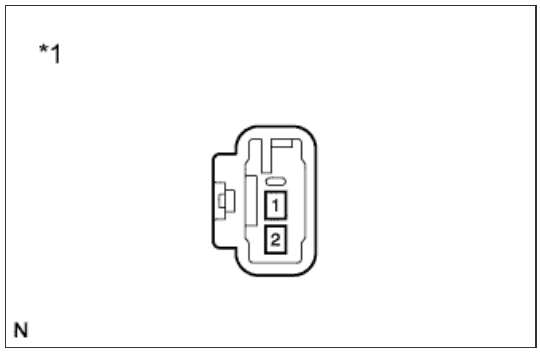
*: w/ G-BOOK System

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**13.INSPECT REAR SPEAKER SET RH**

a. Disconnect the J15 speaker connector.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4.8 to 7.2 Ω |

**Text in Illustration**

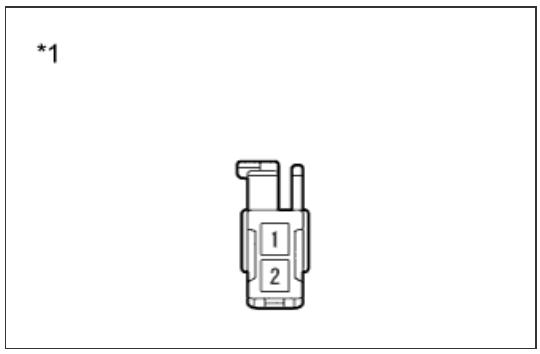
| | |
|---|---|
| *1 | Component without harness connected: (Rear Speaker Set RH) |

NG → REPLACE REAR SPEAKER SET RH (Click here)

OK

## 14.INSPECT REAR NO. 2 SPEAKER ASSEMBLY

a. Disconnect the rear No. 2 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected: (Rear No. 2 Speaker Assembly) |

NG → REPLACE REAR NO. 2 SPEAKER ASSEMBLY (Click here)

OK

## 15.CHECK REAR NO. 3 SPEAKER ASSEMBLY

a. Disconnect the rear No. 3 speaker connectors.

b. Interchange the rear No. 3 speaker LH with RH.

c. Check that the malfunction disappears.

**OK:**
**Malfunction disappears.**

**HINT:**

- **Connect all the connectors to the rear No. 3 speakers.**
- **When there is a possibility that either the right or left rear speaker is defective, inspect by interchanging the right one with the left one.**
- **Perform the inspection above on both the LH and RH sides.**

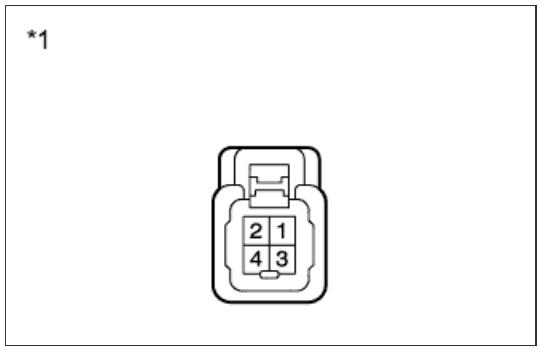
NG → Go to step 16

OK

REPLACE REAR NO. 3 SPEAKER ASSEMBLY (Click here)

## 16.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY

a. Disconnect the F8 and F7 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | Below 1 Ω |
| 3 - 4 | Always | Below 1 Ω |
| 2 - 4 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected:<br>(Front No. 2 Speaker Assembly) |

NG → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

OK

**17.CHECK FRONT NO. 3 SPEAKER ASSEMBLY**

a. Disconnect the F14 and F13 speaker connectors.

b. Interchange the front No. 3 speaker LH with RH.

c. Check that the malfunction disappears.

**OK:**
**Malfunction disappears.**

**HINT:**

- **Connect all the connectors to the front No. 3 speakers.**
- **When there is a possibility that either the right or left front speaker is defective, inspect by interchanging the right one with the left one.**
- **Perform the inspection above on both the LH and RH sides.**

NG → Go to step 18

OK

REPLACE FRONT NO. 3 SPEAKER ASSEMBLY (Click here)

**18.CHECK HARNESS AND CONNECTOR (FRONT NO. 2 SPEAKER - FRONT NO. 3 SPEAKER)**

a. Disconnect the F8, F7, F14 and F13 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F8-2 (TWL+) - F14-1 | Always | Below 1 Ω |
| F8-4 (TWL-) - F14-2 | | |
| F8-2 (TWL+) - Body ground | Always | 10 kΩ or higher |
| F8-4 (TWL-) - Body ground | | |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F7-2 (TWR+) - F13-1 | Always | Below 1 Ω |
| F7-4 (TWR-) - F13-2 | | |

| | | |
|---|---|---|
| F7-2 (TWR+) - Body ground | Always | 10 kΩ or higher |
| F7-4 (TWR-) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

### 19.CHECK VEHICLE EQUIPMENT

a. Check if the vehicle is equipped with the G-BOOK System.

**Result**

| Result | Proceed to |
|---|---|
| w/ G-BOOK System | A |
| w/o G-BOOK System | B |

B → REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

A

### 20.CHECK HARNESS AND CONNECTOR (TELEMATICS TRANSCEIVER - STEREO COMPONENT AMPLIFIER AND FRONT NO. 2 SPEAKER RH)

a. Disconnect the F31 amplifier connector.

b. Disconnect the F7 speaker connector.

c. Disconnect the P2 telematics transceiver connector.

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F7-1 (+) - P2-5 (SPO+) | Always | Below 1 Ω |
| F7-3 (-) - P2-6 (SPO-) | | |
| F31-8 (FR+) - P2-2 (SPI+) | | |
| F31-7 (FR-) - P2-3 (SPI-) | | |
| F7-1 (+) - Body ground | Always | 10 kΩ or higher |
| F7-3 (-) - Body ground | | |
| F31-8 (FR+) - Body ground | | |
| F31-7 (FR-) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

### 21.REPLACE STEREO COMPONENT AMPLIFIER WITH NORMAL ONE AND CHECK

a. Replace the stereo component amplifier with a normal one and check if the same problem occurs again ( Click here).

**OK:**

**Same problem does not occur.**

NG → REPLACE TELEMATICS TRANSCEIVER (Click here)

OK

END (STEREO COMPONENT AMPLIFIER IS DEFECTIVE)

22.CHECK DTC

a. Disconnect the F3 and F4 amplifier connectors.

b. Clear the DTCs.

c. Check if DTC B15C3 is output.

**OK:**
**DTC B15C3 is not output.**

NG → REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

OK

23.CHECK DTC

a. Reconnect the F3 amplifier connector.

b. Clear the DTCs.

c. Check if DTC B15C3 is output.

**OK:**
**DTC B15C3 is not output.**

NG → Go to step 27

OK

24.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - SPEAKER)

a. Disconnect the F3 amplifier connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-8 (CTR+) - Body ground | Always | 10 kΩ or higher |
| F3-7 (CTR-) - Body ground | | |
| F3-1 (WFL+) - Body ground | | |
| F3-5 (WFL-) - Body ground | | |
| F3-6 (WFR-) - Body ground | | |
| F3-2 (WFR+) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

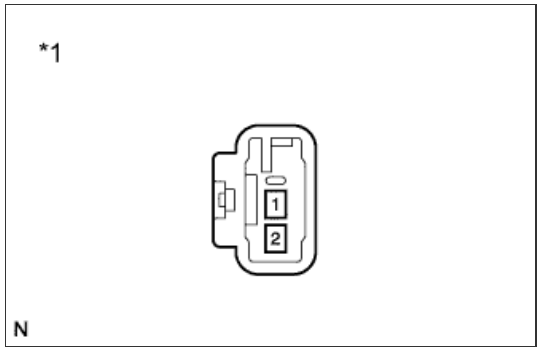
25.INSPECT FRONT NO. 1 SPEAKER ASSEMBLY

a. Disconnect the I1 and I10 speaker connector.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 3 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected: (Front No. 1 Speaker Assembly) |

NG → REPLACE FRONT NO. 1 SPEAKER ASSEMBLY (Click here)

OK

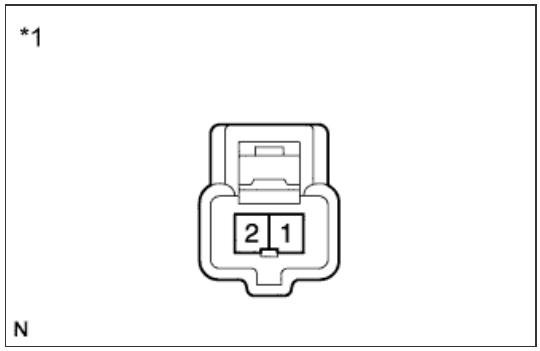
**26.INSPECT FRONT NO. 4 SPEAKER ASSEMBLY**

a. Disconnect the F6 speaker connector.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 6 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected: (Front No. 4 Speaker Assembly) |

NG → REPLACE FRONT NO. 4 SPEAKER ASSEMBLY (Click here)

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

**27.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - SPEAKER)**

a. Disconnect the F4 amplifier connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-8 (FL-) - Body ground | Always | 10 kΩ or higher |
| F4-3 (FL+) - Body ground | Always | 10 kΩ or higher |
| F4-9 (FR-) - Body ground | Always | 10 kΩ or higher |
| F4-5 (RR+) - Body ground | Always | 10 kΩ or higher |
| F4-4 (RL+) - Body ground | Always | 10 kΩ or higher |
| F4-10 (FR+) - Body ground | Always | 10 kΩ or higher |

| | | |
|---|---|---|
| F4-12 (RR-) - Body ground | Always | 10 kΩ or higher |
| F4-11 (RL-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

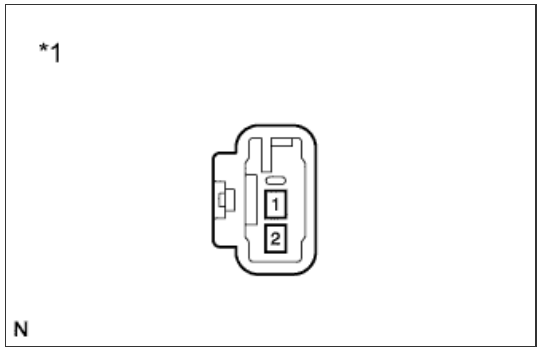
**28.INSPECT REAR SPEAKER SET**

a. Disconnect the J17 and J15 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected: (Rear Speaker Set) |

NG → REPLACE REAR SPEAKER SET (Click here)

OK

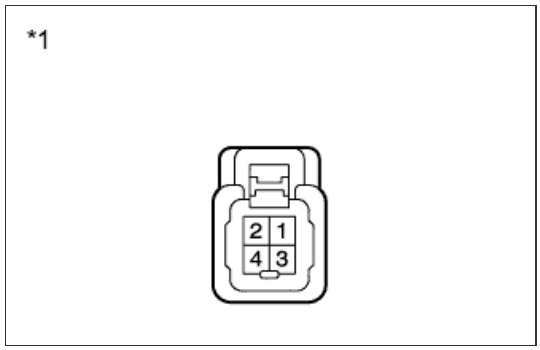
**29.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY**

a. Disconnect the F8 and F7 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | Below 1 Ω |
| 3 - 4 | Always | Below 1 Ω |
| 2 - 4 | Always | 4 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected: (Front No. 2 Speaker Assembly) |

NG → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

OK

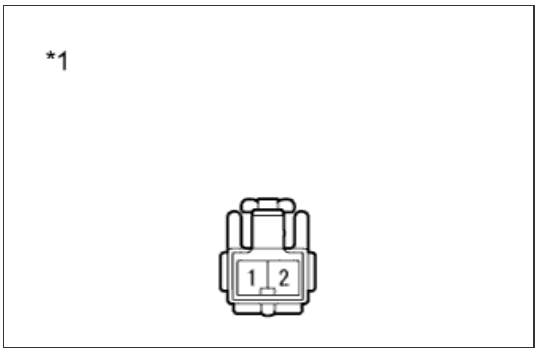
**30.INSPECT FRONT NO. 3 SPEAKER ASSEMBLY**

a. Disconnect the F14 and F13 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected:<br>(Front No. 3 Speaker Assembly) |

NG → REPLACE FRONT NO. 3 SPEAKER ASSEMBLY (Click here)

OK

**31.CHECK HARNESS AND CONNECTOR (FRONT NO. 2 SPEAKER - FRONT NO. 3 SPEAKER)**

a. Disconnect the F8, F7, F14 and F13 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F8-2 (TWL+) - F14-1 | Always | Below 1 Ω |
| F8-4 (TWL-) - F14-2 | | |
| F8-2 (TWL+) - Body ground | Always | 10 kΩ or higher |
| F8-4 (TWL-) - Body ground | | |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F7-2 (TWR+) - F13-1 | Always | Below 1 Ω |
| F7-4 (TWR-) - F13-2 | | |
| F7-2 (TWR+) - Body ground | Always | 10 kΩ or higher |
| F7-4 (TWR-) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## DTC B15A1 Audio HU Malfunction

## DTC B15B3 Radio Tuner Malfunction

## DTC B15B5 DVD Changer Malfunction

## DTC B15B7 Bluetooth Module Malfunction

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored when a malfunction occurs in the radio receiver assembly.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15A1 | Bus malfunction, sub-micro processor malfunction | Radio receiver assembly |
| B15B3 | Tuner communication error | |
| B15B5 | When one of the conditions below is met:<br>• Mechanical communication error<br>• Read malfunction<br>• Mechanical malfunction | |
| B15B7 | "Bluetooth" module malfunction | |

### INSPECTION PROCEDURE

**1.CHECK DTC**

a. Clear the DTC (Click here).

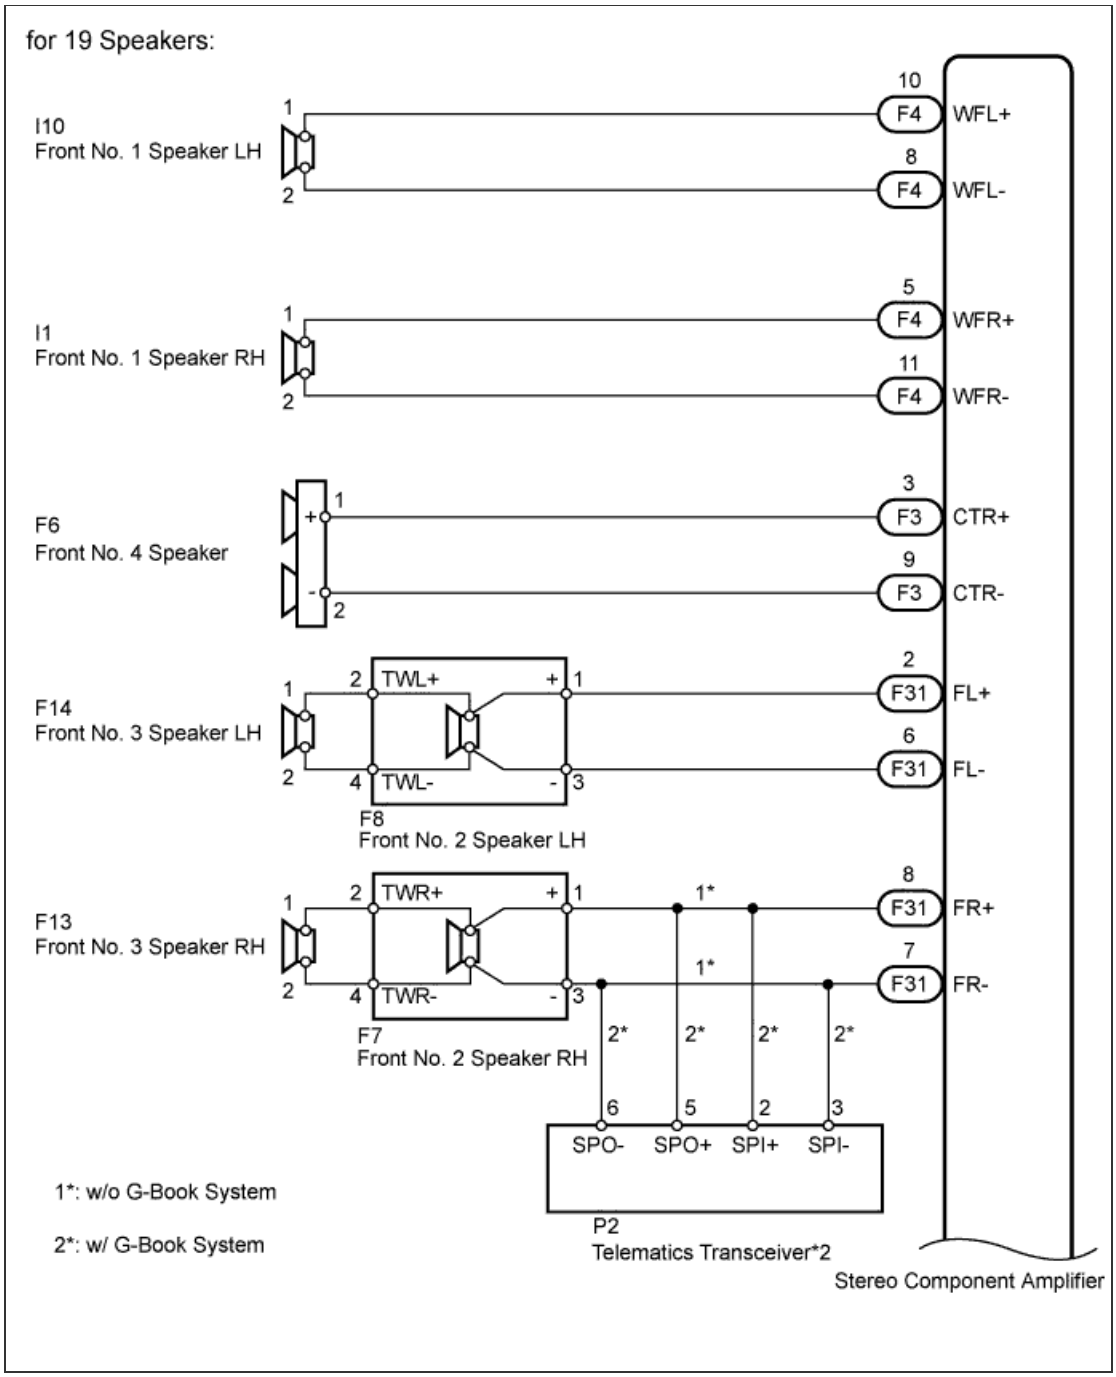
b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

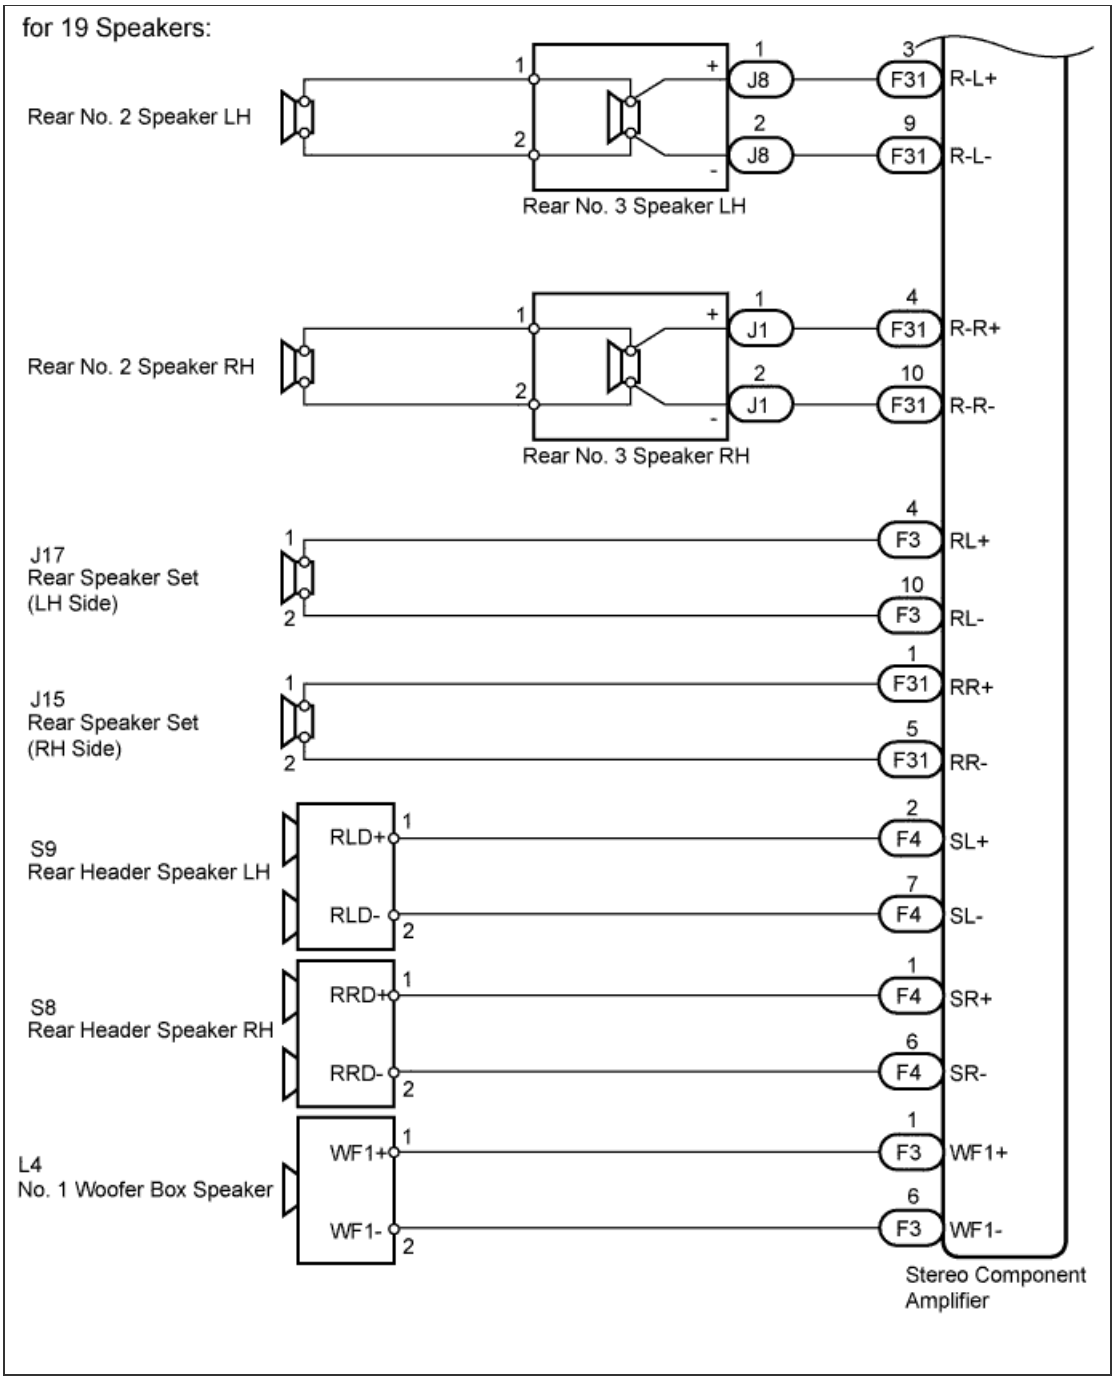
**NG** → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

**OK**

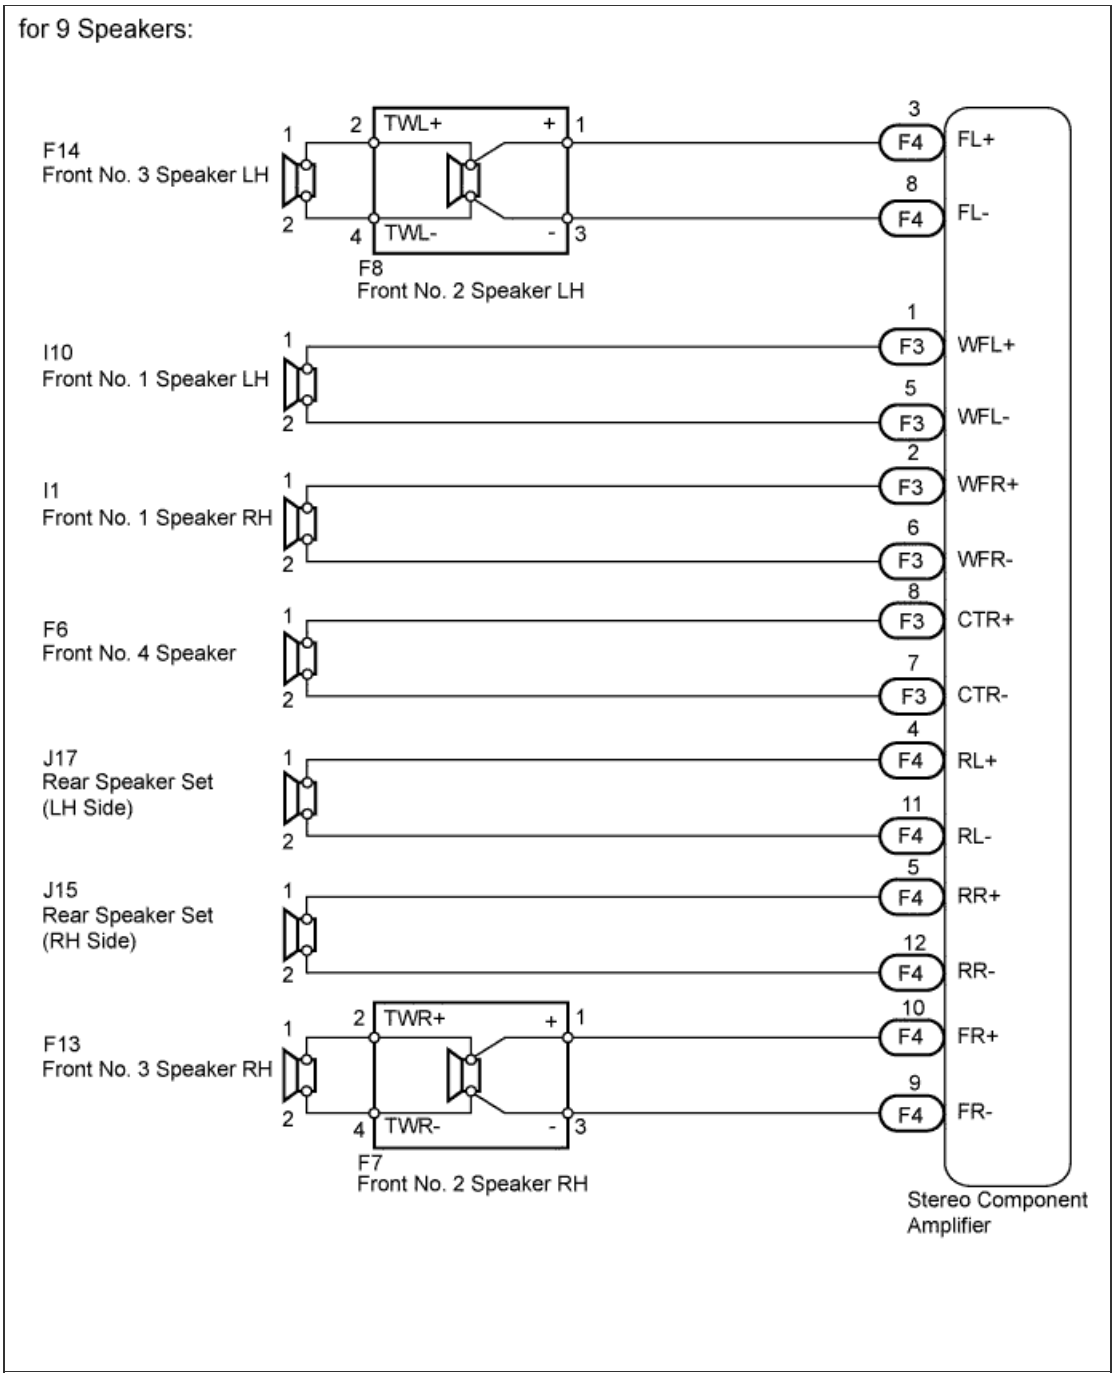
USE SIMULATION METHOD TO CHECK (Click here)



## DTC B15C3 Speaker Output Short



**for Preparation** Click here



### DESCRIPTION

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15C3 | A short is detected in the speaker output circuit. | • Harness or connector<br>• Speaker<br>• Teiematics transceiver<br>• Stereo component amplifier assembly |

## INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs.

### 1.CHECK AUDIO MODELS

a. Check the audio model.

**Result**

| Result | Proceed to |
|---|---|
| 19 speakers | A |
| 9 speakers | B |

B → Go to step 22

A

### 2.CHECK FOR DTC

a. Disconnect the F31, F4 and F3 amplifier connectors.

b. Clear the DTCs.

c. Check if DTC B15C3 is output.

**OK:**
**DTC B15C3 is not output.**

NG → REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

OK

### 3.CHECK FOR DTC

a. Reconnect the F3 amplifier connector.

b. Check if DTC B15C3 is output.

**OK:**
**DTC B15C3 is not output.**

NG → Go to step 8

OK

### 4.CHECK FOR DTC

a. Reconnect the F31 amplifier connector.

b. Check if DTC B15C3 is output.

**OK:**
**DTC B15C3 is not output.**

NG → Go to step 12

OK

### 5.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - SPEAKER)

a. Disconnect the F4 amplifier connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-1 (SR+) - Body ground | Always | 10 kΩ or higher |
| F4-2 (SL+) - Body ground | | |
| F4-5 (WFR+) - Body ground | | |
| F4-6 (SR-) - Body ground | | |
| F4-7 (SL-) - Body ground | | |
| F4-8 (WFL-) - Body ground | | |
| F4-10 (WFL+) - Body ground | | |
| F4-11 (WFR-) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

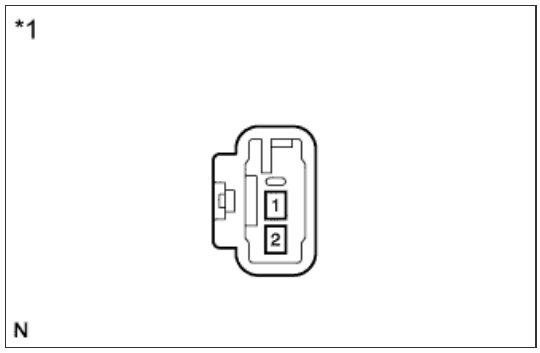
## 6.INSPECT FRONT NO. 1 SPEAKER ASSEMBLY

a. Disconnect the I10 and I1 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 11 to 13 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected: (Front No. 1 Speaker Assembly) |

NG → REPLACE FRONT NO. 1 SPEAKER ASSEMBLY (Click here)

OK

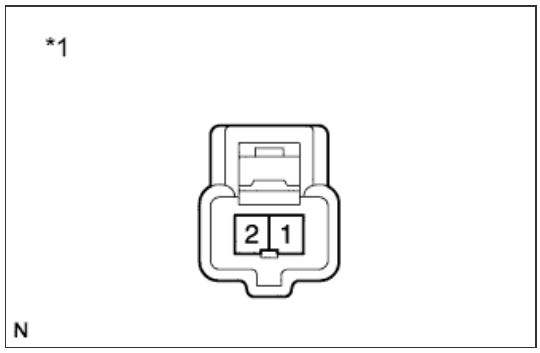
## 7.INSPECT REAR HEADER SPEAKER ASSEMBLY

a. Disconnect the S9 and S8 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected: (Rear Header Speaker Assembly) |

NG → REPLACE REAR HEADER SPEAKER ASSEMBLY (Click here)

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 8.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - SPEAKER)

a. Disconnect the F3 amplifier connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-3 (CTR+) - Body ground | | |
| F3-9 (CTR-) - Body ground | | |
| F3-4 (RL+) - Body ground | | |

| | | |
|---|---|---|
| F3-10 (RL-) - Body ground | Always | 10 kΩ or higher |
| F3-1 (WF1+) - Body ground | | |
| F3-6 (WF1-) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 9.INSPECT FRONT NO. 4 SPEAKER ASSEMBLY

a. Disconnect the F6 speaker connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected: (Front No. 4 Speaker Assembly) |

NG → REPLACE FRONT NO. 4 SPEAKER ASSEMBLY (Click here)

OK

## 10.INSPECT REAR SPEAKER SET LH

a. Disconnect the J17 speaker connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4.8 to 7.2 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected: (Rear Speaker Set LH) |

NG → REPLACE REAR SPEAKER SET LH (Click here)

OK

## 11.INSPECT NO. 1 WOOFER BOX SPEAKER ASSEMBLY

a. Disconnect the L4 speaker connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 8.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected:<br>(No. 1 Woofer Box Speaker Assembly) |

NG → REPLACE NO. 1 WOOFER BOX SPEAKER ASSEMBLY (Click here)

OK → REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

**12.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - SPEAKER)**

a. Disconnect the F31 amplifier connector.

b. Disconnect the P2 telematics transceiver connector.*

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F31-1 (RR+) - Body ground | Always | 10 kΩ or higher |
| F31-5 (RR-) - Body ground | | |
| F31-3 (R-L+) - Body ground | | |
| F31-9 (R-L-) - Body ground | | |
| F31-4 (R-R+) - Body ground | | |
| F31-10 (R-R-) - Body ground | | |
| F31-2 (FL+) - Body ground | | |
| F31-6 (FL-) - Body ground | | |
| F31-7 (FR-) - Body ground | | |
| F31-8 (FR+) - Body ground | | |
| P2-5 (SPO+)* - Body ground | | |
| P2-6 (SPO-)* - Body ground | | |

*: w/ G-BOOK System

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**13.INSPECT REAR SPEAKER SET RH**

a. Disconnect the J15 speaker connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4.8 to 7.2 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected: (Rear Speaker Set RH) |

NG → REPLACE REAR SPEAKER SET RH (Click here)

OK

## 14.INSPECT REAR NO. 2 SPEAKER ASSEMBLY

a. Disconnect the rear No. 2 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected: (Rear No. 2 Speaker Assembly) |

NG → REPLACE REAR NO. 2 SPEAKER ASSEMBLY (Click here)

OK

## 15.CHECK REAR NO. 3 SPEAKER ASSEMBLY

a. Disconnect the rear No. 3 speaker connectors.

b. Interchange the rear No. 3 speaker LH with RH.

c. Check that the malfunction disappears.

**OK:**
**Malfunction disappears.**

**HINT:**

- **Connect all the connectors to the rear No. 3 speakers.**
- **When there is a possibility that either the right or left rear speaker is defective, inspect by interchanging the right one with the left one.**
- **Perform the inspection above on both the LH and RH sides.**

NG → Go to step 16

OK

REPLACE REAR NO. 3 SPEAKER ASSEMBLY (Click here)

## 16.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY

a. Disconnect the F8 and F7 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | Below 1 Ω |
| 3 - 4 | Always | Below 1 Ω |
| 2 - 4 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected:<br>(Front No. 2 Speaker Assembly) |

NG → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

OK

**17.CHECK FRONT NO. 3 SPEAKER ASSEMBLY**

a. Disconnect the F14 and F13 speaker connectors.

b. Interchange the front No. 3 speaker LH with RH.

c. Check that the malfunction disappears.

**OK:**
**Malfunction disappears.**

**HINT:**

- **Connect all the connectors to the front No. 3 speakers.**
- **When there is a possibility that either the right or left front speaker is defective, inspect by interchanging the right one with the left one.**
- **Perform the inspection above on both the LH and RH sides.**

NG → Go to step 18

OK

REPLACE FRONT NO. 3 SPEAKER ASSEMBLY (Click here)

**18.CHECK HARNESS AND CONNECTOR (FRONT NO. 2 SPEAKER - FRONT NO. 3 SPEAKER)**

a. Disconnect the F8, F7, F14 and F13 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F8-2 (TWL+) - F14-1 | Always | Below 1 Ω |
| F8-4 (TWL-) - F14-2 | | |
| F8-2 (TWL+) - Body ground | Always | 10 kΩ or higher |
| F8-4 (TWL-) - Body ground | | |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F7-2 (TWR+) - F13-1 | Always | Below 1 Ω |
| F7-4 (TWR-) - F13-2 | | |

| | | |
|---|---|---|
| F7-2 (TWR+) - Body ground | Always | 10 kΩ or higher |
| F7-4 (TWR-) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

### 19.CHECK VEHICLE EQUIPMENT

a. Check if the vehicle is equipped with the G-BOOK System.

**Result**

| Result | Proceed to |
|---|---|
| w/ G-BOOK System | A |
| w/o G-BOOK System | B |

B → REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

A

### 20.CHECK HARNESS AND CONNECTOR (TELEMATICS TRANSCEIVER - STEREO COMPONENT AMPLIFIER AND FRONT NO. 2 SPEAKER RH)

a. Disconnect the F31 amplifier connector.

b. Disconnect the F7 speaker connector.

c. Disconnect the P2 telematics transceiver connector.

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F7-1 (+) - P2-5 (SPO+) | Always | Below 1 Ω |
| F7-3 (-) - P2-6 (SPO-) | | |
| F31-8 (FR+) - P2-2 (SPI+) | | |
| F31-7 (FR-) - P2-3 (SPI-) | | |
| F7-1 (+) - Body ground | Always | 10 kΩ or higher |
| F7-3 (-) - Body ground | | |
| F31-8 (FR+) - Body ground | | |
| F31-7 (FR-) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

### 21.REPLACE STEREO COMPONENT AMPLIFIER WITH NORMAL ONE AND CHECK

a. Replace the stereo component amplifier with a normal one and check if the same problem occurs again ( Click here).

**OK:**

**Same problem does not occur.**

NG → REPLACE TELEMATICS TRANSCEIVER (Click here)

OK

END (STEREO COMPONENT AMPLIFIER IS DEFECTIVE)

22.CHECK DTC

a. Disconnect the F3 and F4 amplifier connectors.

b. Clear the DTCs.

c. Check if DTC B15C3 is output.

**OK:**
**DTC B15C3 is not output.**

NG → REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

OK

23.CHECK DTC

a. Reconnect the F3 amplifier connector.

b. Clear the DTCs.

c. Check if DTC B15C3 is output.

**OK:**
**DTC B15C3 is not output.**

NG → Go to step 27

OK

24.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - SPEAKER)

a. Disconnect the F3 amplifier connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-8 (CTR+) - Body ground | Always | 10 kΩ or higher |
| F3-7 (CTR-) - Body ground | | |
| F3-1 (WFL+) - Body ground | | |
| F3-5 (WFL-) - Body ground | | |
| F3-6 (WFR-) - Body ground | | |
| F3-2 (WFR+) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

25.INSPECT FRONT NO. 1 SPEAKER ASSEMBLY

a. Disconnect the I1 and I10 speaker connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 3 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected: (Front No. 1 Speaker Assembly) |

NG → REPLACE FRONT NO. 1 SPEAKER ASSEMBLY (Click here)

OK

**26.INSPECT FRONT NO. 4 SPEAKER ASSEMBLY**

a. Disconnect the F6 speaker connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 6 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected: (Front No. 4 Speaker Assembly) |

NG → REPLACE FRONT NO. 4 SPEAKER ASSEMBLY (Click here)

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

**27.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - SPEAKER)**

a. Disconnect the F4 amplifier connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-8 (FL-) - Body ground | Always | 10 kΩ or higher |
| F4-3 (FL+) - Body ground | Always | 10 kΩ or higher |
| F4-9 (FR-) - Body ground | Always | 10 kΩ or higher |
| F4-5 (RR+) - Body ground | Always | 10 kΩ or higher |
| F4-4 (RL+) - Body ground | Always | 10 kΩ or higher |
| F4-10 (FR+) - Body ground | Always | 10 kΩ or higher |

| | | |
|---|---|---|
| F4-12 (RR-) - Body ground | Always | 10 kΩ or higher |
| F4-11 (RL-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**28.INSPECT REAR SPEAKER SET**

a. Disconnect the J17 and J15 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected: (Rear Speaker Set) |

NG → REPLACE REAR SPEAKER SET (Click here)

OK

**29.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY**

a. Disconnect the F8 and F7 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | Below 1 Ω |
| 3 - 4 | Always | Below 1 Ω |
| 2 - 4 | Always | 4 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected: (Front No. 2 Speaker Assembly) |

NG → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

OK

**30.INSPECT FRONT NO. 3 SPEAKER ASSEMBLY**

a. Disconnect the F14 and F13 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected:<br>(Front No. 3 Speaker Assembly) |

NG → REPLACE FRONT NO. 3 SPEAKER ASSEMBLY (Click here)

OK

**31.CHECK HARNESS AND CONNECTOR (FRONT NO. 2 SPEAKER - FRONT NO. 3 SPEAKER)**

a. Disconnect the F8, F7, F14 and F13 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F8-2 (TWL+) - F14-1 | Always | Below 1 Ω |
| F8-4 (TWL-) - F14-2 | | |
| F8-2 (TWL+) - Body ground | Always | 10 kΩ or higher |
| F8-4 (TWL-) - Body ground | | |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F7-2 (TWR+) - F13-1 | Always | Below 1 Ω |
| F7-4 (TWR-) - F13-2 | | |
| F7-2 (TWR+) - Body ground | Always | 10 kΩ or higher |
| F7-4 (TWR-) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## DTC B15A1 Audio HU Malfunction

## DTC B15B3 Radio Tuner Malfunction

## DTC B15B5 DVD Changer Malfunction

## DTC B15B7 Bluetooth Module Malfunction

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored when a malfunction occurs in the radio receiver assembly.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15A1 | Bus malfunction, sub-micro processor malfunction | Radio receiver assembly |
| B15B3 | Tuner communication error | |
| B15B5 | When one of the conditions below is met:<br>• Mechanical communication error<br>• Read malfunction<br>• Mechanical malfunction | |
| B15B7 | "Bluetooth" module malfunction | |

### INSPECTION PROCEDURE

**1.CHECK DTC**

a. Clear the DTC (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

**NG** → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

**OK**

USE SIMULATION METHOD TO CHECK (Click here)

# DTC B15DF USB Communication Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when a malfunction occurs in communication error with a USB device or "iPod".

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15DF | When one of the conditions below is met:<br>• Communication error with USB device<br>• "iPod" control software of system microprocessor malfunction<br>• Communication error with "iPod" | • Multi-media interface ECU<br>• USB device or "iPod" |

## INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs.

### 1.REPLACE USB DEVICE OR "iPod"

a. Disconnect the USB device or "iPod" from the No. 1 stereo jack adapter assembly.

b. Turn the engine switch off.

**HINT:**

When this DTC has been stored, it is necessary to turn off the engine switch to make it possible for the vehicle to recognize a new device when it is connected.

c. Turn the engine switch on (ACC).

d. Connect a known good USB device or "iPod" to the No. 1 stereo jack adapter assembly.

**HINT:**

- **If the malfunction occurred when a USB device was in use, use another USB device for the inspection. If the malfunction occurred when an "iPod" was in use, use another "iPod" for the inspection.**

**NEXT**

### 2.CLEAR DTC

a. Clear the DTCs (Click here).

**NEXT**

### 3.RECHECK FOR DTC

a. Recheck for DTCs.

**HINT:**

If DTCs are detected frequently, replace the multi-media interface ECU.

**OK:**
**No DTC is output.**

**NG** → REPLACE MULTI-MEDIA INTERFACE ECU (Click here)

**OK**

### USB DEVICE OR "iPod" WAS DEFECTIVE

## DTC B15A1 Audio HU Malfunction

## DTC B15B3 Radio Tuner Malfunction

## DTC B15B5 DVD Changer Malfunction

## DTC B15B7 Bluetooth Module Malfunction

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored when a malfunction occurs in the radio receiver assembly.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15A1 | Bus malfunction, sub-micro processor malfunction | Radio receiver assembly |
| B15B3 | Tuner communication error | |
| B15B5 | When one of the conditions below is met:<br>• Mechanical communication error<br>• Read malfunction<br>• Mechanical malfunction | |
| B15B7 | "Bluetooth" module malfunction | |

### INSPECTION PROCEDURE

**1.CHECK DTC**

a. Clear the DTC (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

**NG** → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

**OK**

USE SIMULATION METHOD TO CHECK (Click here)

# DTC B15DF USB Communication Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when a malfunction occurs in communication error with a USB device or "iPod".

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15DF | When one of the conditions below is met:<br>• Communication error with USB device<br>• "iPod" control software of system microprocessor malfunction<br>• Communication error with "iPod" | • Multi-media interface ECU<br>• USB device or "iPod" |

## INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs.

### 1.REPLACE USB DEVICE OR "iPod"

a. Disconnect the USB device or "iPod" from the No. 1 stereo jack adapter assembly.

b. Turn the engine switch off.

**HINT:**

When this DTC has been stored, it is necessary to turn off the engine switch to make it possible for the vehicle to recognize a new device when it is connected.

c. Turn the engine switch on (ACC).

d. Connect a known good USB device or "iPod" to the No. 1 stereo jack adapter assembly.

**HINT:**

- **If the malfunction occurred when a USB device was in use, use another USB device for the inspection. If the malfunction occurred when an "iPod" was in use, use another "iPod" for the inspection.**

**NEXT**

### 2.CLEAR DTC

a. Clear the DTCs (Click here).

**NEXT**

### 3.RECHECK FOR DTC

a. Recheck for DTCs.

**HINT:**

If DTCs are detected frequently, replace the multi-media interface ECU.

**OK:**
**No DTC is output.**

**NG** → REPLACE MULTI-MEDIA INTERFACE ECU (Click here)

**OK**

### USB DEVICE OR "iPod" WAS DEFECTIVE

## DTC B15A1 Audio HU Malfunction

## DTC B15B3 Radio Tuner Malfunction

## DTC B15B5 DVD Changer Malfunction

## DTC B15B7 Bluetooth Module Malfunction

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored when a malfunction occurs in the radio receiver assembly.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15A1 | Bus malfunction, sub-micro processor malfunction | Radio receiver assembly |
| B15B3 | Tuner communication error | |
| B15B5 | When one of the conditions below is met:<br>• Mechanical communication error<br>• Read malfunction<br>• Mechanical malfunction | |
| B15B7 | "Bluetooth" module malfunction | |

### INSPECTION PROCEDURE

**1.CHECK DTC**

a. Clear the DTC (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

**NG** → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

**OK**

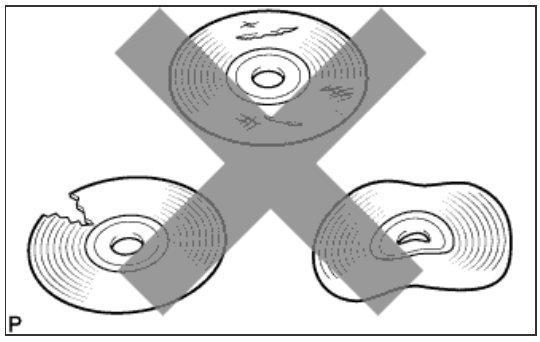
USE SIMULATION METHOD TO CHECK (Click here)

# DTC B15E1 Media Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when signals from disc in the radio receiver assembly cannot be read.



| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15E1 | When one of the conditions below is met:<br>• An unsuitable disc is inserted.<br>• The disc cannot be read.<br>• The disc cannot be read because of dirt or scratches.<br>• The disc cannot be read because it is inserted upside down. | • CD or DVD<br>• Radio receiver assembly |

## INSPECTION PROCEDURE

### 1.CHECK DISC

a. Check that the disc is not deformed or cracked.

**OK:**
**No deformation or cracks on the disc**

NG → CHANGE DISC

OK

### 2.DISC CLEANING

a. Disc cleaning

i. If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.

**NOTICE:**

Do not use a conventional record cleaner or anti-static preservative.

NEXT

### 3.REPLACE DISC WITH ANOTHER AND RECHECK

a. Replace the disc with another and recheck.

b. Clear the DTC (Click here).

c. Recheck for DTC and check if the same trouble occurs again.

**OK:**

No DTC is output.

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

END

## DTC B15A1 Audio HU Malfunction

## DTC B15B3 Radio Tuner Malfunction

## DTC B15B5 DVD Changer Malfunction

## DTC B15B7 Bluetooth Module Malfunction

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored when a malfunction occurs in the radio receiver assembly.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15A1 | Bus malfunction, sub-micro processor malfunction | Radio receiver assembly |
| B15B3 | Tuner communication error | |
| B15B5 | When one of the conditions below is met:<br>• Mechanical communication error<br>• Read malfunction<br>• Mechanical malfunction | |
| B15B7 | "Bluetooth" module malfunction | |

### INSPECTION PROCEDURE

**1.CHECK DTC**

a. Clear the DTC (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

**NG** → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

**OK**

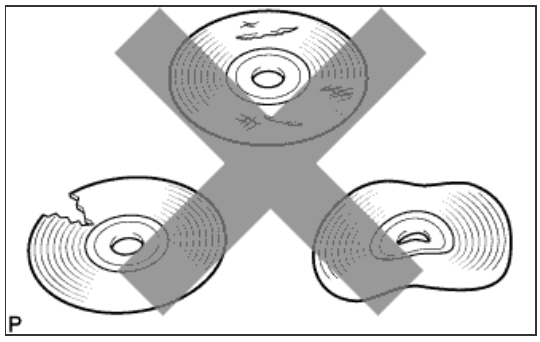
# DTC B15E1 Media Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when signals from disc in the radio receiver assembly cannot be read.



| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15E1 | When one of the conditions below is met:<br>• An unsuitable disc is inserted.<br>• The disc cannot be read.<br>• The disc cannot be read because of dirt or scratches.<br>• The disc cannot be read because it is inserted upside down. | • CD or DVD<br>• Radio receiver assembly |

## INSPECTION PROCEDURE

### 1.CHECK DISC

a. Check that the disc is not deformed or cracked.

**OK:**
**No deformation or cracks on the disc**

NG → CHANGE DISC

OK

### 2.DISC CLEANING

a. Disc cleaning

i. If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.

**NOTICE:**

Do not use a conventional record cleaner or anti-static preservative.

NEXT

### 3.REPLACE DISC WITH ANOTHER AND RECHECK

a. Replace the disc with another and recheck.

b. Clear the DTC (Click here).

c. Recheck for DTC and check if the same trouble occurs again.

**OK:**

No DTC is output.

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

END

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.NOISE CONDITION

a. Check from which direction the noise comes (front left or right, rear left or right).

i. Check from which direction the noise comes.

**OK:**
**The location of the noise source can be determined.**

NG → Go to step 3

OK

### 2.CHECK SPEAKERS

a. Check the installation conditions of the speaker units that are located near the noise source and that there are no cracks, scratches, deformation or other malfunctions.

**Result**

| Result | Proceed to |
|---|---|
| A speaker is installed incorrectly | A |
| Foreign objects are in the speaker | B |
| A speaker cone paper is broken | C |
| No malfunction is found | D |

A → REINSTALL SPEAKER

B → REMOVE FOREIGN OBJECT

C → REPLACE SPEAKER

D

### 3.CHECK NOISE CONDITION

a. Check the noise condition.

**HINT:**

The radio has a noise prevention function to reduce noise when listening to the radio. If a loud noise occurs, check whether the ground at the antenna mounting base and the noise prevention unit are installed and wired correctly.

| Condition under which Noise Occurs | Noise Source |
|---|---|
| Noise increases when the accelerator pedal is depressed, but stops when the engine is stopped. | Generator |
| Noise occurs during A/C or heater operation. | Blower motor |
| Noise occurs when the horn switch is pressed and released or when pressed and held. | Horn |
| Noise occurs synchronously with the blink of the turn signal. | Flasher |
| Noise occurs during window washer operation. | Washer |
| Noise occurs during wiper operation. | Wiper |
| Noise occurs when the brake pedal is depressed. | Stop light switch |
| Noise occurs when the sliding roof moves. | Sliding roof motor |
| Others | Static electricity |

**HINT:**

- **In the chart left column, find the situation that matches the customer's complaint. Then, in the right column, find the part**

that is causing the noise. Check the respective noise filter.

- To save time and avoid a misdiagnosis, first make sure that the noise is not coming from outside the vehicle.
- Troubleshoot noises in descending order of loudness.
- Setting the radio to a frequency where no signal is received may make recognition of the noise problem easier.

**OK:**

The noise source cannot be determined.

| | | |
|---|---|---|
| | NG | REPAIR OR REPLACE NOISE SOURCE |
| OK | | |
| PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here) | | |

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.CHECK VEHICLE CONDITION**

a. Check that conditions in the cabin are not likely to cause condensation.

**HINT:**

This problem occurs if the cabin is humid and the temperature changes rapidly. This may produce condensation, resulting in a short circuit.

**OK:**

**Condensation is not likely being produced.**

NG → DRY OUT CABIN AND RECHECK CONDITION

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

## INSPECTION PROCEDURE

**1.CHECK RADIO RECEIVER ASSEMBLY**

a. Check the radio receiver assembly settings.

i. Check that the volume is not set to "0".

ii. Check that mute is off.

**OK:**
**The volume is not set to "0" and mute is off.**

NG → **SET VOLUME TO HIGH AND TURN MUTE OFF**

OK

**PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)**

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.CHECK RADIO RECEIVER ASSEMBLY**

a. Check the radio receiver assembly settings.

i. Check that the volume is not set to "0".

ii. Check that mute is off.

**OK:**
**The volume is not set to "0" and mute is off.**

NG → **SET VOLUME TO HIGH AND TURN MUTE OFF**

OK

**PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)**

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.REPLACE DISC AND RECHECK**

a. Replace the disc with a known good one and recheck.

i. Check if the same trouble occurs again.

**OK:**
**Malfunction disappears.**

**NG** → **REPLACE RADIO RECEIVER ASSEMBLY (Click here)**

**OK**

**END**

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK IF A PROPER DISC IS INSERTED

a. Make sure that the disc is an audio disc or a disc with MP3 or WMA files, and that it is not deformed, flawed, stained, deteriorated or otherwise defective.

**OK:**
**Normal disc**

**HINT:**

- **Translucent or uniquely-shaped discs cannot be played.**
- **CDs and DVDs with adhesive paper labels should not be played.**
- **Commercial audio CDs and DVDs can be played.**
- **CD-DA files on CD-ROMs, CD-Rs and CD-RWs can be played.**
- **MP3 and WMA files on CD-ROMs, CD-Rs and CD-RWs can be played.**
- **For details on playable CDs and DVDs, refer to the Owner's Manual.**

NG → CHANGE DISC

OK

### 2.CHECK THAT DISC IS INSERTED PROPERLY

a. Check whether or not the disc is inserted upside down.

**OK:**
**Disc is properly inserted.**

NG → INSERT DISC PROPERLY

OK

### 3.CLEAN DISC AND RECHECK

a. Clean the disc by wiping it clean with a soft cloth from the inside to the outside in a radial direction.

**OK:**
**Malfunction disappears.**

**NOTICE:**

Do not use a conventional record cleaner or anti-static preservative.

NG → Go to step 4

OK

END

### 4.REPLACE DISC AND RECHECK

a. Replace the disc with a known good one and check if the same trouble occurs again.

**OK:**

Malfunction disappears.

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

END

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.PRESS EJECT AND CHECK OPERATION**

a. Press the disc eject switch of the radio receiver assembly for 2 seconds or more and check that the disc is ejected.

**OK:**
**Disc is ejected.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

**2.REPLACE DISC AND RECHECK**

a. Replace the disc with a known good one and recheck.

**OK:**
**Disc is ejected.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

**END**

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK DISC

a. Check that the disc is not deformed or cracked.

**OK:**
**No deformation or cracks on the disc**

NG → CHANGE DISC

OK

### 2.CHECK DISC

a. Check the disc.

**OK:**
**The disc is clean.**

**HINT:**

If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.

**NOTICE:**

Do not use a conventional record cleaner or anti-static preservative.

NG → CLEAN DISC

OK

### 3.CHECK OPERATION

a. Check if the same problem occurs again using a known good disc.

**OK:**
**Malfunction disappears.**

NG → Go to step 4

OK

### END

### 4.CHECK RADIO RECEIVER ASSEMBLY

a. Check that the radio receiver assembly is properly installed.

**OK:**

**Radio receiver assembly is properly installed.**

**NG** → REINSTALL RADIO RECEIVER ASSEMBLY PROPERLY

**OK**

REPLACE RADIO RECEIVER ASSEMBLY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK RADIO RECEIVER ASSEMBLY

a. Check the radio automatic station search function.

i. Check the radio automatic station search function by activating it.

**Result**

| Result | Proceed to |
|---|---|
| Automatic station function stops on a station | A |
| Automatic station search function does not stop | B |

B → Go to step 2

A →

REPLACE RADIO RECEIVER ASSEMBLY (Click here)

### 2.CHECK OPTIONAL COMPONENTS

a. Check for optional components (sunshade film, telephone antenna, etc.).

i. Check if any optional components that may decrease reception capacity, such as sunshade film or a telephone antenna, are installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components are installed | A |
| Optional components are not installed | B |

**NOTICE:**

Do not remove any optional components installed by the customer without his or her consent.

B → Go to step 3

A →

REMOVE OPTIONAL COMPONENTS AND CHECK AGAIN (SEE NOTICE ABOVE)

### 3.CHECK RADIO ANTENNA

a. Preparation for check

i. Remove the roof antenna pole sub-assembly from the amplifier antenna assembly.

b. Check for noise

i. Turn the engine switch on (ACC) with the radio receiver assembly connector connected.

ii. Turn the radio on and tune into AM mode.

iii. Place a screwdriver, thin wire, or other metal object on the amplifier antenna threaded installation portion for the roof antenna pole sub-assembly and check that noise can be heard from the speakers.

**Result**

| Result | Proceed to |
|---|---|
| Noise does not occur | A |
| Noise occurs | B |

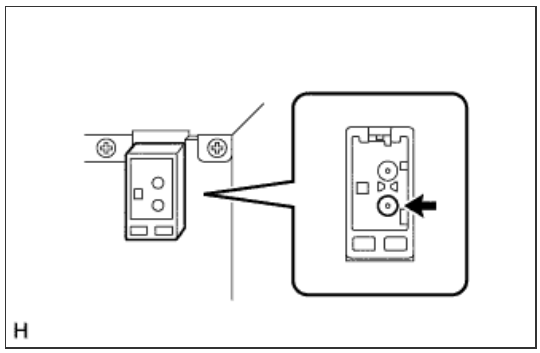
B → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

A

## 4.CHECK RADIO RECEIVER ASSEMBLY

a. Preparation for check

i. Remove the antenna connector from the radio receiver assembly.



b. Check for noise

i. Turn the engine switch on (ACC) with the radio receiver assembly connector connected.

ii. Turn the radio on and tune into AM mode.

iii. Place a screwdriver, thin wire or other metal object on the radio receiver assembly antenna jack and check that noise can be heard from the speakers.

**OK:**
**Noise can be heard from the speakers.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

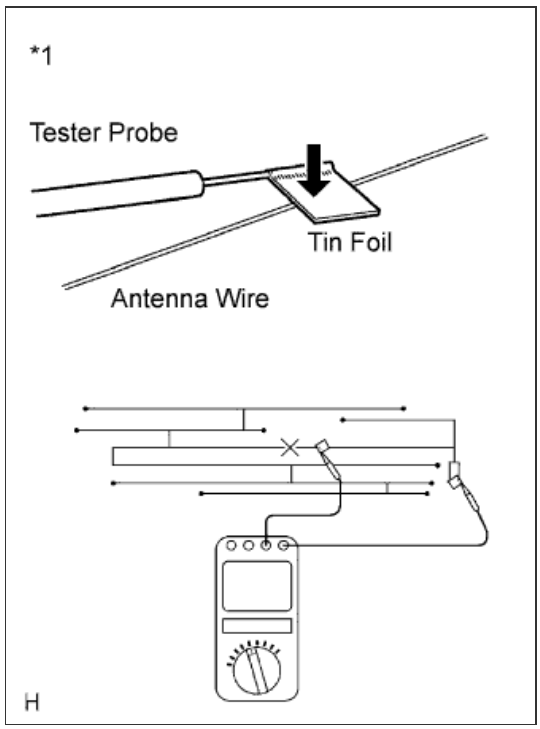
OK

## 5.CHECK GLASS ANTENNA

a. Check for continuity of the antenna.

**HINT:**

Check for continuity at the center of each antenna wire as shown in the illustration.



**NOTICE:**

When cleaning the glass, wipe it in the direction of the wire with a soft dry cloth. Take care not to damage the wire. Do not use detergents or glass cleaners with abrasive ingredients. When measuring resistance, wrap a piece of tin foil around the tip of each probe and press the foil against the wire with your finger, as shown in the illustration.

**OK:**
**There is continuity in the antenna.**

**Text in Illustration**

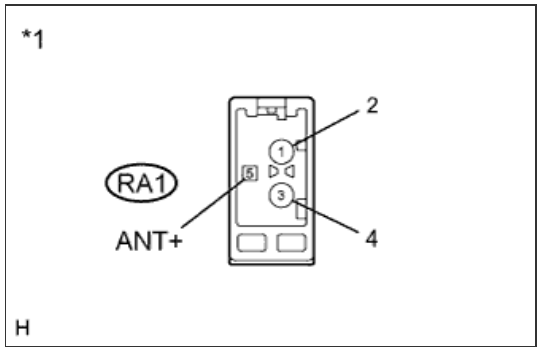
| | |
|---|---|
| *1 | Example |

NG → REPAIR GLASS ANTENNA

OK

## 6.INSPECT RADIO RECEIVER ASSEMBLY

a. Disconnect the radio receiver assembly connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| RA1-5 (ANT+) - Body ground | Engine switch on (ACC)<br>Radio switch on | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Radio Receiver Assembly) |

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

## 7.CHECK ANTENNA CORD

a. Remove the antenna connector of the radio receiver assembly and antenna.

b. Measure the resistance between the antenna and radio receiver assembly to check for an open circuit in the antenna cord.

**Standard Resistance:**
**Below 1 Ω**

c. Measure the resistance between the antenna cord and body ground to check for a short circuit in the antenna cord.

**Standard Resistance:**
**10 kΩ or higher**

NG → REPLACE ANTENNA CORD (Click here)

OK

## 8.REPLACE AMPLIFIER ANTENNA ASSEMBLY

a. Replace the amplifier antenna assembly and check if radio broadcasts can be received normally ( Click here).

**OK:**
**Radio broadcasts can be received.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

## NORMAL OPERATION

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.CHECK AUDIO SETTINGS**

a. Set "BASS", "MID" and "TREB" to the initial values and check that sound is normal.

**OK:**
**Malfunction disappears.**

NG → Go to step 2

OK → END

**2.COMPARE WITH ANOTHER VEHICLE OF SAME MODEL**

a. Compare with another vehicle of the same model.

i. Compare with another vehicle of the same model which does not have trouble to see if there is any difference in the sound quality.

**OK:**
**No difference is found.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK → END

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.CHECK AUDIO SETTINGS**

a. Set "BASS", "MID" and "TREB" to the initial values and check that sound is normal.

**OK:**
**Malfunction disappears.**

NG → Go to step 2

OK → END

**2.COMPARE WITH ANOTHER VEHICLE OF SAME MODEL**

a. Compare with another vehicle of the same model.

i. Compare with another vehicle of the same model which does not have trouble to see if there is any difference in the sound quality.

**OK:**
**No difference is found.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK → END

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK PORTABLE PLAYER SETTINGS

a. Check the portable player settings.

i. Check that the volume is not set to "0".

ii. Check that the mute is off.

b. Check that the sound of the portable player can be heard from the speakers.

**OK:**
**Sound of the portable player can be heard from the speakers.**

NG → Go to step 2

OK

END

### 2.CHECK AUDIO SETTINGS

a. Check the audio settings.

i. Check that the volume is not set to "0".

b. Check that the sound of the portable player can be heard from the speakers.

**OK:**
**Sound of the portable player can be heard from the speakers.**

NG → Go to step 3

OK

END

### 3.CHECK USING ANOTHER "BLUETOOTH" AUDIO COMPATIBLE VEHICLE OF SAME MODEL

a. Check that the sound of the portable player can be heard from the speakers on another "Bluetooth" audio compatible vehicle of the same model.

**OK:**
**Sound of the portable player can be heard from the speakers.**

NG → MALFUNCTION IN PORTABLE PLAYER

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK PORTABLE PLAYER SETTINGS

a. Check the portable player settings.

i. Check that the volume is not set to "0".

ii. Check that the mute is off.

b. Check that the sound of the portable player can be heard from the speakers.

**OK:**
**Sound of the portable player can be heard from the speakers.**

NG → Go to step 2

OK

END

### 2.CHECK AUDIO SETTINGS

a. Check the audio settings.

i. Check that the volume is not set to "0".

b. Check that the sound of the portable player can be heard from the speakers.

**OK:**
**Sound of the portable player can be heard from the speakers.**

NG → Go to step 3

OK

END

### 3.CHECK USING ANOTHER "BLUETOOTH" AUDIO COMPATIBLE VEHICLE OF SAME MODEL

a. Check that the sound of the portable player can be heard from the speakers on another "Bluetooth" audio compatible vehicle of the same model.

**OK:**
**Sound of the portable player can be heard from the speakers.**

NG → MALFUNCTION IN PORTABLE PLAYER

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

**HINT:**

Even if the portable player can play audio content, it may not be able to play via the in-vehicle device. This does not necessarily indicate a malfunction of the in-vehicle device.

### 1.CHECK OPERATION

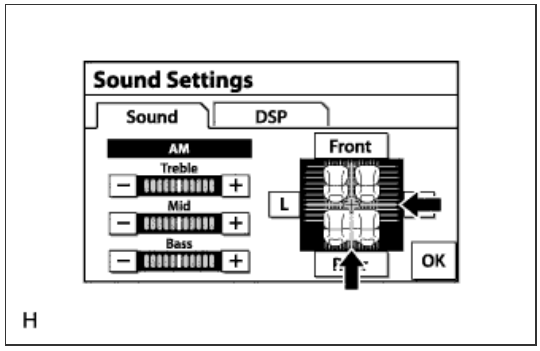
a. Check if the portable player operates normally.

**OK:**
**The portable player operates normally.**

NG → MALFUNCTION IN PORTABLE PLAYER

OK ↓

### 2.CHECK AUDIO SETTINGS



a. Enter the "Sound Settings" screen by pressing the "Sound" switch on the audio display.

b. Set volume, fader and balance to the initial values and check that sound is normal.

**OK:**
**Audio system returns to normal.**

**HINT:**

Sound quality adjustment measures vary according to the type of the amplifier.

H

NG → SET VOLUME TO HIGH AND TURN MUTE OFF

OK ↓

### 3.CHECK USING ANOTHER "BLUETOOTH" AUDIO COMPATIBLE VEHICLE OF SAME MODEL

a. Check if the "Bluetooth" audio player plays normally on another "Bluetooth" audio compatible vehicle of the same model.

**OK:**
**"Bluetooth" audio plays normally.**

NG → MALFUNCTION IN PORTABLE PLAYER

OK ↓

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

**HINT:**

Even if the portable player can play audio content, it may not be able to play via the in-vehicle device. This does not necessarily indicate a malfunction of the in-vehicle device.

### 1.CHECK OPERATION

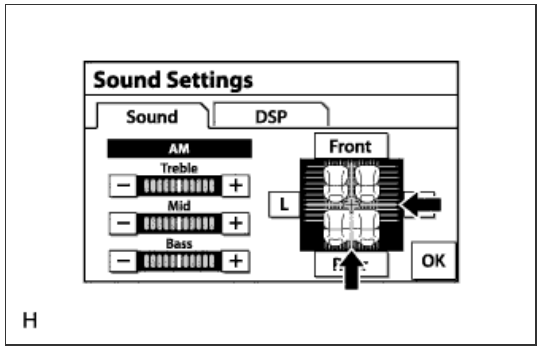
a. Check if the portable player operates normally.

**OK:**
**The portable player operates normally.**

NG → MALFUNCTION IN PORTABLE PLAYER

OK ↓

### 2.CHECK AUDIO SETTINGS



a. Enter the "Sound Settings" screen by pressing the "Sound" switch on the audio display.

b. Set volume, fader and balance to the initial values and check that sound is normal.

**OK:**
**Audio system returns to normal.**

**HINT:**

Sound quality adjustment measures vary according to the type of the amplifier.

H

NG → SET VOLUME TO HIGH AND TURN MUTE OFF

OK ↓

### 3.CHECK USING ANOTHER "BLUETOOTH" AUDIO COMPATIBLE VEHICLE OF SAME MODEL

a. Check if the "Bluetooth" audio player plays normally on another "Bluetooth" audio compatible vehicle of the same model.

**OK:**
**"Bluetooth" audio plays normally.**

a. Check if track information is displayed normally on another "Bluetooth" audio compatible vehicle of the same model.

**OK:**
**Track information is displayed normally.**

NG → **PORTABLE PLAYER IS NOT COMPATIBLE**

OK ↓

**PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)**

**for Preparation** Click here

## INSPECTION PROCEDURE

**HINT:**

- **Perform this check with the portable player volume set at an appropriate level.**
- **Make sure there are no obstructions between the portable player and radio receiver assembly that may block signals, and that the portable player and radio receiver assembly are not excessively far apart.**
- **Make sure devices other than the radio receiver assembly are not connected to the portable player.**
- **Make sure there is no interference from a wireless LAN, etc.**

### 1.CHECK USING ANOTHER "BLUETOOTH" AUDIO COMPATIBLE VEHICLE OF SAME MODEL

a. Check that the same problem does not occur in the sound heard from the speakers on another "Bluetooth" audio compatible vehicle of the same model.

**OK:**
**The same problem does not occur in the sound heard from the speakers.**

NG → MALFUNCTION IN PORTABLE PLAYER

OK

### 2.REMOVE ADDITIONAL DEVICES WHICH USE RADIO WAVES

a. Remove additional devices which use radio waves.

b. Play the portable player and check that the same problem does not occur in the sound heard from the speakers.

**OK:**
**The same problem does not occur in the sound heard from the speakers.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

### END

**for Preparation** Click here

OK

### END

**for Preparation** Click here

## INSPECTION PROCEDURE

**HINT:**

Some versions of "Bluetooth" compatible audio players may not function, or the function may be limited using the radio receiver assembly, even if the portable audio player itself can play files (Click here).

### 1.CHECK CONNECTED DEVICE SETTINGS

a. Display the "Select Portable Player" screen and check if the portable player is registered as a connected device.

**NOTICE:**

If a cellular phone is used as a portable player, it must be registered independently from the registration that is performed for the hands-free system.

**HINT:**

Only 2 portable players can be registered.

**Result**

| Result | Proceed to |
|---|---|
| The portable player is registered as a connected device. | A |
| The portable player is not registered as a connected device. | B |

B → REGISTER PORTABLE PLAYER AS CONNECTED DEVICE

A

### 2.CHECK SYMPTOMS

a. Check the connection condition between the portable player and radio receiver assembly.

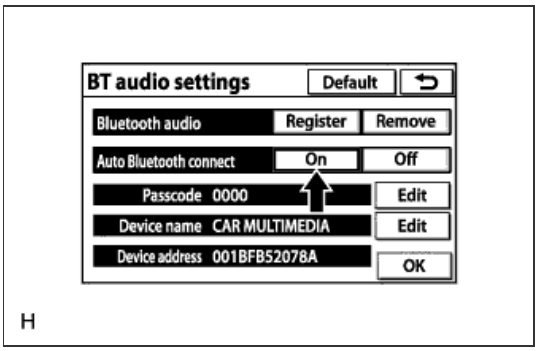
**HINT:**
**The portable player cannot be connected under any of the following conditions:**

- **The portable player is connected to another device.**
- **The portable player is connected to the radio receiver assembly using the hands-free function.**
- **The radio receiver assembly has cleared the portable player registration.**
- **The portable player is off.**

**Result**

| Result | Proceed to |
|---|---|
| The portable player cannot be connected manually. | A |
| The portable player cannot be connected automatically. | B |

B → Go to step 4



A

### 3.CHECK AUTOMATIC CONNECTION SETTINGS

a. Display the "BT audio settings" screen and check automatic connection settings of the "Bluetooth" audio.

i. Check if On is displayed for "Auto Bluetooth connect" on the "BT audio settings" screen.

**OK:**
**On is displayed for "Auto Bluetooth connect".**

NG → CHANGE "AUTO BLUETOOTH CONNECT" TO ON

OK ↓

**4.CHECK PORTABLE PLAYER STATUS**

a. Check the status of the portable player.

i. Check that the portable player is not in standby mode.

ii. Check that the portable player is not connected to another device (headphones etc.).

**OK:**
**The portable player is in standby mode and not connected to another device (headphones etc.).**

NG → CHANGE PORTABLE PLAYER TO STANDBY MODE AND DISCONNECT OTHER DEVICES (HEADPHONES etc.)

OK ↓

**5.CHECK USING ANOTHER "BLUETOOTH" AUDIO COMPATIBLE VEHICLE OF SAME MODEL**

a. Check if the portable player can be connected manually/automatically on another "Bluetooth" audio compatible vehicle of the same model.

**OK:**
**The portable player can be connected manually/automatically.**

NG → PORTABLE PLAYER IS NOT COMPATIBLE

OK ↓

**6.REMOVE ADDITIONAL DEVICES WHICH USE RADIO WAVES**

a. Remove additional devices which use radio waves.

b. Check if the portable player can be connected manually/automatically.

**OK:**
**The portable player can be connected manually/automatically.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK ↓

**END**

**for Preparation** Click here

## INSPECTION PROCEDURE

**HINT:**

Some versions of "Bluetooth" compatible audio players may not function, or the function may be limited using the radio receiver assembly, even if the portable audio player itself can play files (Click here).

### 1.CHECK CONNECTED DEVICE SETTINGS

a. Display the "Select Portable Player" screen and check if the portable player is registered as a connected device.

**NOTICE:**

If a cellular phone is used as a portable player, it must be registered independently from the registration that is performed for the hands-free system.

**HINT:**

Only 2 portable players can be registered.

**Result**

| Result | Proceed to |
|---|---|
| The portable player is registered as a connected device. | A |
| The portable player is not registered as a connected device. | B |

B → REGISTER PORTABLE PLAYER AS CONNECTED DEVICE

A

### 2.CHECK SYMPTOMS

a. Check the connection condition between the portable player and radio receiver assembly.

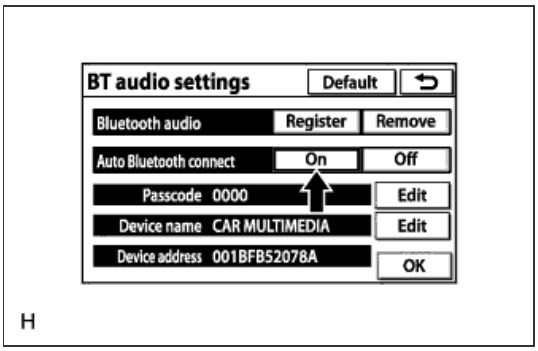
**HINT:**
**The portable player cannot be connected under any of the following conditions:**

- **The portable player is connected to another device.**
- **The portable player is connected to the radio receiver assembly using the hands-free function.**
- **The radio receiver assembly has cleared the portable player registration.**
- **The portable player is off.**

**Result**

| Result | Proceed to |
|---|---|
| The portable player cannot be connected manually. | A |
| The portable player cannot be connected automatically. | B |

B → Go to step 4



A

### 3.CHECK AUTOMATIC CONNECTION SETTINGS

a. Display the "BT audio settings" screen and check automatic connection settings of the "Bluetooth" audio.

i. Check if On is displayed for "Auto Bluetooth connect" on the "BT audio settings" screen.

**OK:**
**On is displayed for "Auto Bluetooth connect".**

NG → CHANGE "AUTO BLUETOOTH CONNECT" TO ON

OK ↓

**4.CHECK PORTABLE PLAYER STATUS**

a. Check the status of the portable player.

i. Check that the portable player is not in standby mode.

ii. Check that the portable player is not connected to another device (headphones etc.).

**OK:**
**The portable player is in standby mode and not connected to another device (headphones etc.).**

NG → CHANGE PORTABLE PLAYER TO STANDBY MODE AND DISCONNECT OTHER DEVICES (HEADPHONES etc.)

OK ↓

**5.CHECK USING ANOTHER "BLUETOOTH" AUDIO COMPATIBLE VEHICLE OF SAME MODEL**

a. Check if the portable player can be connected manually/automatically on another "Bluetooth" audio compatible vehicle of the same model.

**OK:**
**The portable player can be connected manually/automatically.**

NG → PORTABLE PLAYER IS NOT COMPATIBLE

OK ↓

**6.REMOVE ADDITIONAL DEVICES WHICH USE RADIO WAVES**

a. Remove additional devices which use radio waves.

b. Check if the portable player can be connected manually/automatically.

**OK:**
**The portable player can be connected manually/automatically.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK ↓

**END**

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.DELETE OPERATION**

a. Check if a registered portable player can be deleted normally.

**OK:**
**Registered portable player can be deleted normally.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

**END**

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.DELETE OPERATION**

a. Check if a registered portable player can be deleted normally.

**OK:**
**Registered portable player can be deleted normally.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

**END**

**for Preparation** Click here

## INSPECTION PROCEDURE

**HINT:**

Some versions of "Bluetooth" compatible audio players may not function, or the function may be limited using the radio receiver assembly, even if the portable audio player itself can play files (Click here).

### 1.CHECK THAT PORTABLE PLAYER IS "BLUETOOTH" AUDIO COMPATIBLE

a. Check if the portable player is "Bluetooth" audio compatible.

**Result**

| Result | Proceed to |
|---|---|
| The portable player is "Bluetooth" audio compatible. | A |
| The portable player is not "Bluetooth" audio compatible. | B |

B → USE A "BLUETOOTH" AUDIO COMPATIBLE PORTABLE PLAYER

A

### 2.CHECK CONNECTION PROCEDURE OF CONNECTED DEVICE

a. Referring to the owner's manual, correctly register the portable player.

b. Check that the portable player can be registered as a connected device.

**HINT:**
**The portable player cannot be registered under any of the following conditions:**

- **The A2DP (Advanced Audio Distribution Profile) is not used when registering a cellular phone.**
- **A different portable player registration remains in the radio receiver assembly.**
- **A different radio receiver assembly registration remains in the portable player.**
- **The portable player is off.**

**OK:**
**The portable player has been registered as a connected device.**

NG → Go to step 3

OK

END

### 3.CHECK USING ANOTHER "BLUETOOTH" AUDIO COMPATIBLE VEHICLE OF SAME MODEL

a. Check if the portable player can be registered normally on another "Bluetooth" audio compatible vehicle of the same model.

**OK:**
**The portable player can be registered.**

NG → MALFUNCTION IN PORTABLE PLAYER

OK

### 4.REMOVE ADDITIONAL DEVICES WHICH USE RADIO WAVES

a. Remove additional devices which use radio waves.

b. Check that the portable player can be registered as a connected device.

**OK:**
**The portable player can be registered.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK → END

**for Preparation** Click here

## INSPECTION PROCEDURE

**HINT:**

Some versions of "Bluetooth" compatible audio players may not function, or the function may be limited using the radio receiver assembly, even if the portable audio player itself can play files (Click here).

### 1.CHECK THAT PORTABLE PLAYER IS "BLUETOOTH" AUDIO COMPATIBLE

a. Check if the portable player is "Bluetooth" audio compatible.

**Result**

| Result | Proceed to |
|---|---|
| The portable player is "Bluetooth" audio compatible. | A |
| The portable player is not "Bluetooth" audio compatible. | B |

B → USE A "BLUETOOTH" AUDIO COMPATIBLE PORTABLE PLAYER

A

### 2.CHECK CONNECTION PROCEDURE OF CONNECTED DEVICE

a. Referring to the owner's manual, correctly register the portable player.

b. Check that the portable player can be registered as a connected device.

**HINT:**
**The portable player cannot be registered under any of the following conditions:**

- **The A2DP (Advanced Audio Distribution Profile) is not used when registering a cellular phone.**
- **A different portable player registration remains in the radio receiver assembly.**
- **A different radio receiver assembly registration remains in the portable player.**
- **The portable player is off.**

**OK:**
**The portable player has been registered as a connected device.**

NG → Go to step 3

OK

END

### 3.CHECK USING ANOTHER "BLUETOOTH" AUDIO COMPATIBLE VEHICLE OF SAME MODEL

a. Check if the portable player can be registered normally on another "Bluetooth" audio compatible vehicle of the same model.

**OK:**
**The portable player can be registered.**

NG → MALFUNCTION IN PORTABLE PLAYER

OK

### 4.REMOVE ADDITIONAL DEVICES WHICH USE RADIO WAVES

a. Remove additional devices which use radio waves.

b. Check that the portable player can be registered as a connected device.

**OK:**
**The portable player can be registered.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK → END

**for Preparation** Click here

## INSPECTION PROCEDURE

**HINT:**

- **When a large amount of data is in a USB device, it may take a while before play begins.**
- **When using a USB device, files that are copy protected or encrypted cannot be played.**
- **When files are not played in the sorted order, perform the following procedure before inspection.**
  1. **Add numbers in front of the file names.**
  2. **Put the files in a folder and copy the folder data to the USB device.**

### 1.CHECK USB DEVICE OR "iPod"

a. Disconnect the USB device or "iPod" from the No. 1 stereo jack adapter assembly.

b. Check if playable files are present on the USB device or "iPod".

**HINT:**

Refer to System Description for playable files ( Click here).

c. Check if the USB device is a compatible format or "iPod" is a compatible version.

**HINT:**

Refer to System Description for compatible formats and versions ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| No playable files exist, or incompatible device format or version | A |
| Playable files exist, and compatible device format or version | B |

**B** → Go to step 2

**A**

### USB DEVICE FORMAT WAS INCOMPATIBLE, "iPod" VERSION WAS INCOMPATIBLE, OR NO PLAYABLE FILES PRESENT

### 2.FORMAT USB DEVICE OR RESTORE "iPod" AND RECHECK

a. Delete all files in the USB device or "iPod" and format/restore it.

b. Save the data again and check if it can be played on the in-vehicle device.

**NOTICE:**

Formatting a USB device or restoring an "iPod" erases all music on the device. Ensure that backup music data is available before performing this operation.

**OK:**
**Malfunction disappears.**

**NG** → Go to step 3

**OK**

### END

### 3.REPLACE USB DEVICE OR "iPod"

a. Turn the engine switch off.

**HINT:**

When this malfunction occurs, it is necessary to turn off the engine switch to make it possible for the vehicle to recognize a new device when it is connected.

b. Turn the engine switch on (ACC).

c. Connect a known good USB device or "iPod" to the No. 1 stereo jack adapter assembly.

**HINT:**

- **If the malfunction occurred when a USB device was in use, use another USB device for the inspection. If the malfunction occurred when an "iPod" was in use, use another "iPod" for the inspection.**
- **Refer to System Description for compatible formats and versions (Click here).**

**NEXT**

**4.CHECK USB Device or "iPod"**

a. Check if USB device or "iPod" is recognized by the display and navigation module display, if information such as track, artist and album names are displayed on screen or if can play.

**OK:**
**Malfunction disappears.**

**NG** → **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)**

**OK**

**USB DEVICE OR "iPod" WAS INCOMPATIBLE OR DEFECTIVE**

**for Preparation** Click here

**for Preparation** Click here

## DESCRIPTION

**HINT:**

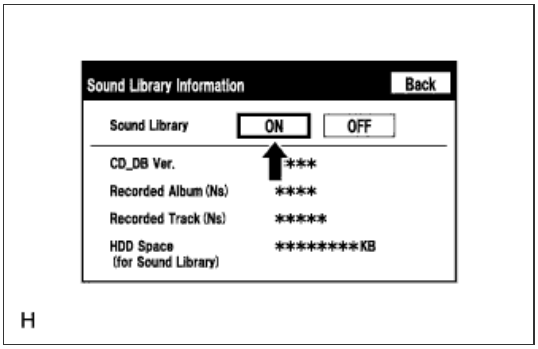
The HDD is compliant with the Serial Copy Management System (SCMS). Therefore, recording from a CD-R that is a copy of a commercially published music CD is not possible.

## INSPECTION PROCEDURE

**NOTICE:**

When replacing the display and navigation module display, perform vehicle contract setting (w/ G-BOOK System) ( Click here).



### 1.CHECK SOUND LIBRARY SETTING OF HDD ON SOUND LIBRARY INFORMATION SCREEN

a. Enter the "Sound Library Information" (Check Sound Library Setting) ( Click here).

b. Select "ON" for the "Sound Library" setting.

c. Check if recording is possible.

**OK:**
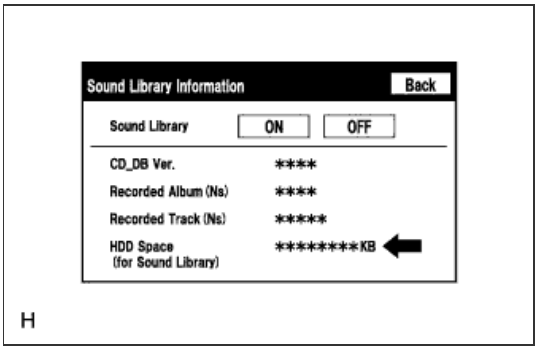
**Malfunction disappears.**

NG → Go to step 2

OK

### END



### 2.CHECK FREE SPACE IN HDD

a. Enter the "Sound Library Information" (Check Sound Library Setting) ( Click here).

b. Check free space in HDD from the sound library setting screen.

**Result**

| Result | Proceed to |
|---|---|
| Insufficient space in HDD | A |
| Sufficient space in HDD | B |

B → Go to step 3

A

### DELETE UNNECESSARY DATA FROM HDD

### 3.CHECK IF AUDIO POWER IS ON

a. Check if the audio power is on.

**HINT:**

When the audio is off, audio recording is not possible.

**OK:**
**Audio power is on.**

NG → TURN AUDIO ON

OK ↓

## 4.CHECK IF RECORDING SETTING IS SET TO AUTO

a. Check if the recording setting is set to AUTO.

**HINT:**

When the recording setting is set to manual, recording does not start automatically after a CD is inserted.

**OK:**
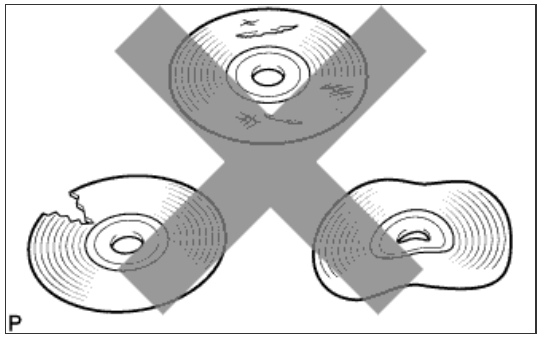
**Recording setting is set to AUTO.**



NG → CHANGE RECORDING SETTING TO AUTO

OK ↓

## 5.CHECK CD

a. Check that the disc is not deformed or cracked.

**OK:**
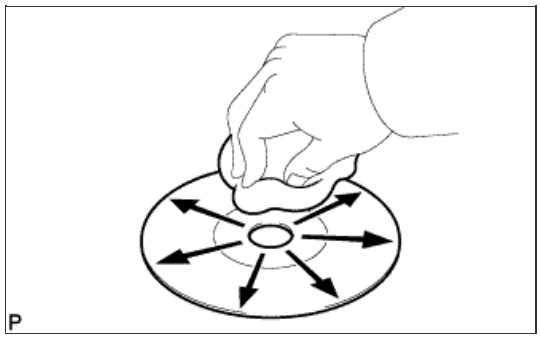
**No deformation or cracks on the CD**

NG → CHANGE CD

OK ↓



## 6.CLEAN CD AND RECHECK CD

a. Check the disc by wiping it clean with a soft cloth from the inside to the outside in a radial direction.

**OK:**
**Malfunction disappears.**

**NOTICE:**

Do not use a conventional record cleaner or anti-static preservative.

NG → Go to step 7

OK

END

7.CHECK USING ANOTHER VEHICLE WITH HDD NAVIGATION SYSTEM

a. Check if the CD plays normally using another vehicle with the HDD navigation system.

**OK:**
**Malfunction disappears.**

NG → CD WAS FAULTY

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## DESCRIPTION

## DESCRIPTION

Power is supplied to the radio receiver assembly illumination when the light control switch is in the tail or head position.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

Inspect the fuse for circuits related to this system before performing the following inspection procedure.

### 1.CHECK ILLUMINATION

a. Check if the illumination for the radio receiver assembly, heater control switch or others (hazard switch, transmission control switch, etc.) comes on when the light control switch is turned to the head or tail position.

**Result**

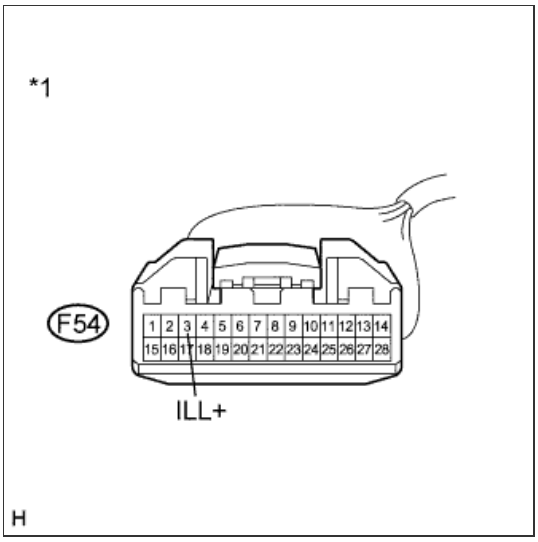
| Result | Proceed to |
|---|---|
| Illumination comes on for all components except radio receiver assembly. | A |
| No illumination comes on (radio receiver assembly, hazard switch, heater control switch, etc.). | B |

B → GO TO LIGHTING SYSTEM (Click here)

A

### 2.CHECK HARNESS AND CONNECTOR (BATTERY - RADIO RECEIVER ASSEMBLY)

a. Disconnect the F54 radio receiver assembly connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F54-3 (ILL+) - Body ground | Light control switch tail or head | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Radio Receiver Assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**3.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER ASSEMBLY - COMBINATION METER ASSEMBLY)**

a. Disconnect the F54 radio receiver assembly connector and E77 combination meter assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-17 (ILL-) - E77-17 (ILL-) | Always | Below 1 Ω |
| E77-17 (ILL-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK AUDIO MODELS

a. Check the audio model.

**Result**

| Result | Proceed to |
|---|---|
| 19 speakers | A |
| 9 speakers | B |

B → Go to step 25

A

### 2.CHECK SPEAKER

a. Check the malfunctioning speakers.

**Result**

| Result | Proceed to |
|---|---|
| Malfunction in front speaker area | A |

| | |
|---|---|
| Malfunction in rear speaker area | B |

B → Go to step 15

A

## 3.CHECK SPEAKER

a. Check the malfunctioning speakers.

**Result**

| Result | Proceed to |
|---|---|
| Front No. 4 speaker | A |
| Front No. 2 speaker | B |
| Front No. 1 speaker | C |
| Front No. 3 speaker | D |

B → Go to step 6

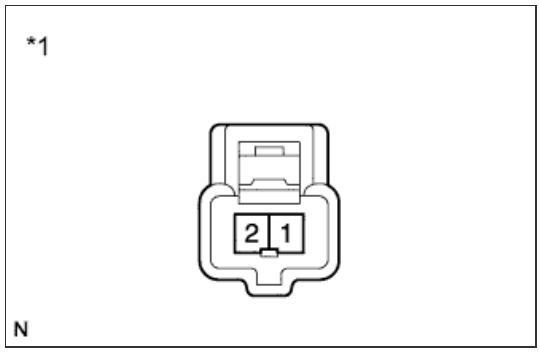
C → Go to step 11

D → Go to step 13

A

## 4.INSPECT FRONT NO. 4 SPEAKER ASSEMBLY

a. Disconnect the F6 speaker connector.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness or connected: (Front No. 4 Speaker Assembly) |

NG → REPLACE FRONT NO. 4 SPEAKER ASSEMBLY (Click here)

OK

## 5.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - FRONT NO. 4 SPEAKER)

a. Disconnect the F6 speaker connector.

b. Disconnect the F3 amplifier connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-3 (CTR+) - F6-1 | Always | Below 1 Ω |
| F3-9 (CTR-) - F6-2 | Always | Below 1 Ω |
| F3-3 (CTR+) - Body ground | Always | 10 kΩ or higher |

| | | |
|---|---|---|
| F3-9 (CTR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 6.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY

a. Disconnect the F8 and F7 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | Below 1 Ω |
| 3 - 4 | Always | Below 1 Ω |
| 2 - 4 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness or connected: (Front No. 2 Speaker Assembly) |

NG → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

OK

## 7.CHECK DEFECTIVE SPEAKER AND VEHICLE EQUIPMENT

a. Check which side of the vehicle the defective speaker is on. Also, check if the vehicle is equipped with the G-BOOK System.

**Result**

| Result | Proceed to |
|---|---|
| Defective speaker is on right side (w/ G-BOOK System) | A |
| Defective speaker is on right side (w/o G-BOOK System) | B |
| Defective speaker is on left side | B |

B → Go to step 10

A

## 8.CHECK HARNESS AND CONNECTOR (TELEMATICS TRANSCEIVER - STEREO COMPONENT AMPLIFIER AND FRONT NO. 2 SPEAKER)

a. Disconnect the F31 amplifier connector.

b. Disconnect the F7 speaker connector.

c. Disconnect the P2 telematics transceiver connector.

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F7-1 (+) - P2-5 (SPO+) | | |

| | | |
|---|---|---|
| F7-3 (-) - P2-6 (SPO-) | Always | Below 1 Ω |
| F31-8 (FR+) - P2-2 (SPI+) | | |
| F31-7 (FR-) - P2-3 (SPI-) | | |
| F7-1 (+) - Body ground | Always | 10 kΩ or higher |
| F7-3 (-) - Body ground | | |
| F31-8 (FR+) - Body ground | | |
| F31-7 (FR-) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**9.CHECK STEREO COMPONENT AMPLIFIER ASSEMBLY (OPERATION)**

a. Replace the stereo component amplifier with a normal one and check that audio can be heard from the front RH side speaker ( Click here).

**OK:**
**Audio can be heard.**

NG → REPLACE TELEMATICS TRANSCEIVER (**Click here**)

OK

**END (STEREO COMPONENT AMPLIFIER IS DEFECTIVE)**

**10.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - FRONT NO. 2 SPEAKER)**

a. Disconnect the F31 amplifier connector.

b. Disconnect the F8 and F7 speaker connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**
**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F31-2 (FL+) - F8-1 (+) | Always | Below 1 Ω |
| F31-6 (FL-) - F8-3 (-) | Always | Below 1 Ω |
| F31-2 (FL+) - Body ground | Always | 10 kΩ or higher |
| F31-6 (FL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F31-8 (FR+) - F7-1 (+) | Always | Below 1 Ω |
| F31-7 (FR-) - F7-3 (-) | Always | Below 1 Ω |
| F31-8 (FR+) - Body ground | Always | 10 kΩ or higher |
| F31-7 (FR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

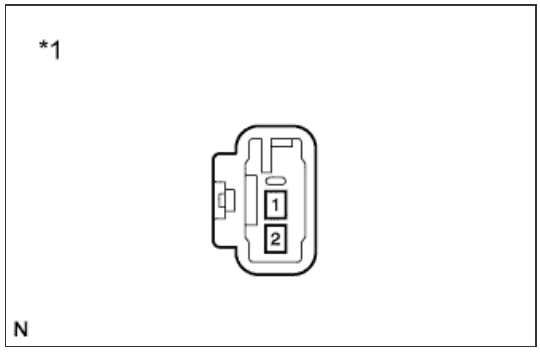
REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

11.INSPECT FRONT NO. 1 SPEAKER ASSEMBLY

a. Disconnect the I10 and I1 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 11 to 13 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness or connected: (Front No. 1 Speaker Assembly) |

NG → REPLACE FRONT NO. 1 SPEAKER ASSEMBLY (Click here)

OK

12.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - FRONT NO. 1 SPEAKER)

a. Disconnect the I10 and I1 speaker connectors.

b. Disconnect the F4 amplifier connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-10 (WFL+) - I10-1 | Always | Below 1 Ω |
| F4-8 (WFL-) - I10-2 | Always | Below 1 Ω |
| F4-10 (WFL+) - Body ground | Always | 10 kΩ or higher |
| F4-8 (WFL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-5 (WFR+) - I1-1 | Always | Below 1 Ω |
| F4-11 (WFR-) - I1-2 | Always | Below 1 Ω |
| F4-5 (WFR+) - Body ground | Always | 10 kΩ or higher |
| F4-11 (WFR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 13.CHECK FRONT NO. 3 SPEAKER ASSEMBLY

a. Disconnect the F14 and F13 speaker connectors.

b. Interchange the front No. 3 speaker LH with RH.

c. Check that the malfunction disappears.

**OK:**
**Malfunction disappears.**

**HINT:**

- **Connect all the connectors to the front No. 3 speakers.**
- **When there is a possibility that either the right or left front speaker is defective, inspect by interchanging the right one with the left one.**
- **Perform the inspection above on both the LH and RH sides.**

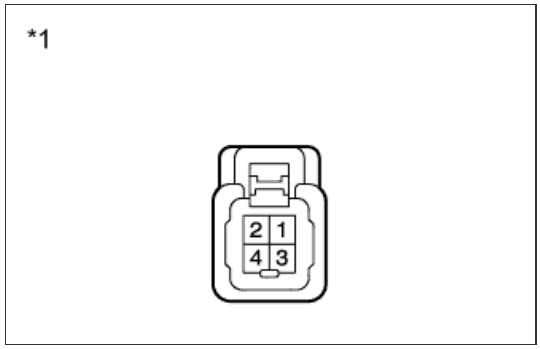
**NG** → Go to step 14

**OK**

REPLACE FRONT NO. 3 SPEAKER ASSEMBLY (Click here)

## 14.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY

a. Disconnect the F8 and F7 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 2 - 4 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness or connected: (Front No. 2 Speaker Assembly) |

**NG** → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

**OK**

REPAIR OR REPLACE HARNESS OR CONNECTOR (FRONT NO. 2 SPEAKER - FRONT NO. 3 SPEAKER)

## 15.CHECK SPEAKER

a. Check the malfunctioning speakers.

**Result**

| Result | Proceed to |
|---|---|
| Rear No. 2 speaker | A |
| Rear No. 3 speaker | B |
| Rear speaker set | C |
| No. 1 woofer box speaker | D |
| Rear header speaker | E |

**B** → Go to step 17

**C** → Go to step 19

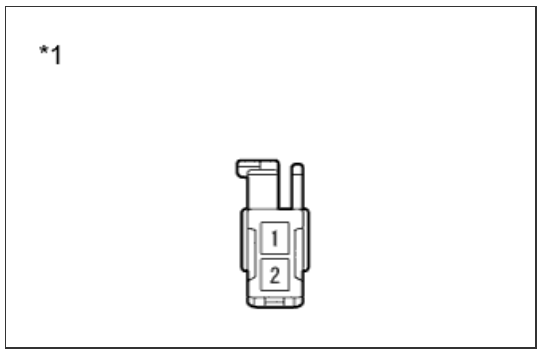
**D** → Go to step 21

E → Go to step 23

A

## 16.INSPECT REAR NO. 2 SPEAKER ASSEMBLY

a. Disconnect the rear No. 2 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness or connected: (Rear No. 2 Speaker Assembly) |

NG → REPLACE REAR NO. 2 SPEAKER ASSEMBLY (Click here)

OK

REPLACE REAR NO. 3 SPEAKER ASSEMBLY (Click here)

## 17.CHECK REAR NO. 3 SPEAKER ASSEMBLY

a. Disconnect the rear No. 3 speaker connectors.

b. Interchange the rear No. 3 speaker LH with RH.

c. Check that the malfunction disappears.

**OK:**
**Malfunction disappears.**

**HINT:**

- **Connect all the connectors to the rear No. 3 speakers.**
- **When there is a possibility that either the right or left rear speaker is defective, inspect by interchanging the right one with the left one.**
- **Perform the inspection above on both the LH and RH sides.**

NG → Go to step 18

OK

REPLACE REAR NO. 3 SPEAKER ASSEMBLY (Click here)

## 18.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - REAR NO. 3 SPEAKER)

a. Disconnect the F31 amplifier connector.

b. Disconnect the J8 and J1 speaker connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**
**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F31-3 (R-L+) - J8-1 (+) | Always | Below 1 Ω |
| F31-9 (R-L-) - J8-2 (-) | Always | Below 1 Ω |

| | | |
|---|---|---|
| F31-3 (R-L+) - Body ground | Always | 10 kΩ or higher |
| F31-9 (R-L-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F31-4 (R-R+) - J1-1 (+) | Always | Below 1 Ω |
| F31-10 (R-R-) - J1-2 (-) | Always | Below 1 Ω |
| F31-4 (R-R+) - Body ground | Always | 10 kΩ or higher |
| F31-10 (R-R-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

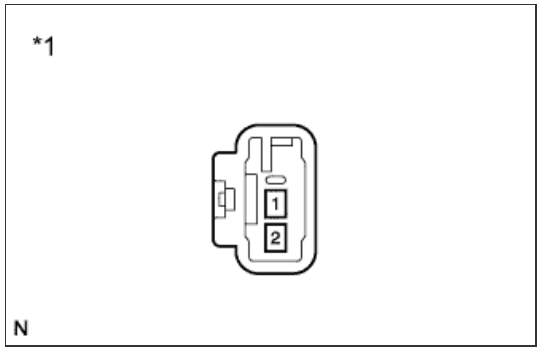
REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 19.INSPECT REAR SPEAKER SET

a. Disconnect the J17 and J15 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4.8 to 7.2 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness or connected: (Rear Speaker Set) |

NG → REPLACE REAR SPEAKER SET (Click here)

OK

## 20.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - REAR SPEAKER SET)

a. Disconnect the F3 and F31 amplifier connectors.

b. Disconnect the J17 and J15 speaker connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-4 (RL+) - J17-1 | Always | Below 1 Ω |
| F3-10 (RL-) - J17-2 | | |
| F3-4 (RL+) - Body ground | Always | 10 kΩ or higher |
| F3-10 (RL-) - Body ground | | |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|

| | | |
|---|---|---|
| F31-1 (RR+) - J15-1 | Always | Below 1 Ω |
| F31-5 (RR-) - J15-2 | | |
| F31-1 (RR+) - Body ground | Always | 10 kΩ or higher |
| F31-5 (RR-) - Body ground | | |

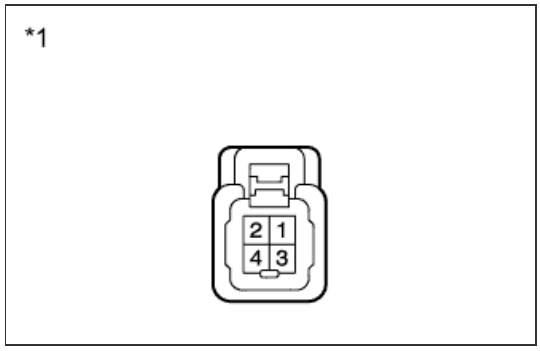
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK →

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

21.INSPECT NO. 1 WOOFER BOX SPEAKER ASSEMBLY

a. Disconnect the L4 speaker connector.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 8.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness or connected: (No. 1 Woofer Box Speaker Assembly) |

NG → REPLACE NO. 1 WOOFER BOX SPEAKER ASSEMBLY (Click here)

OK →

22.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - NO. 1 WOOFER BOX SPEAKER)

a. Disconnect the F3 amplifier connector.

b. Disconnect the L4 speaker connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-1 (WF1+) - L4-1 (WF1+) | Always | Below 1 Ω |
| F3-6 (WF1-) - L4-2 (WF1-) | Always | Below 1 Ω |
| F3-1 (WF1+) - Body ground | Always | 10 kΩ or higher |
| F3-6 (WF1-) - Body ground | Always | 10 kΩ or higher |

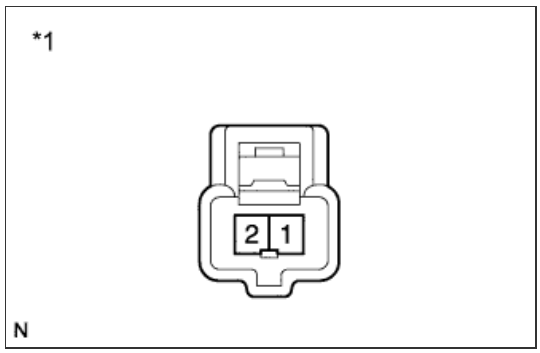
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK →

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

23.INSPECT REAR HEADER SPEAKER ASSEMBLY

a. Disconnect the S9 and S8 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness or connected:<br>(Rear Header Speaker Assembly) |

NG → REPLACE REAR HEADER SPEAKER ASSEMBLY (Click here)

OK

## 24.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - REAR HEADER SPEAKER)

a. Disconnect the F4 amplifier connector.

b. Disconnect the S9 and S8 speaker connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-2 (SL+) - S9-1 (RLD+) | Always | Below 1 Ω |
| F4-7 (SL-) - S9-2 (RLD-) | Always | Below 1 Ω |
| F4-2 (SL+) - Body ground | Always | 10 kΩ or higher |
| F4-7 (SL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-1 (SR+) - S8-1 (RRD+) | Always | Below 1 Ω |
| F4-6 (SR-) - S8-2 (RRD-) | Always | Below 1 Ω |
| F4-1 (SR+) - Body ground | Always | 10 kΩ or higher |
| F4-6 (SR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 25.CHECK SPEAKER

a. Check the malfunctioning speakers.

**Result**

| Result | Proceed to |
|---|---|
| Front No. 4 speaker | A |

| | |
|---|---|
| Front No. 2 speaker | B |
| Front No. 1 speaker | C |
| Front No. 3 speaker | D |
| Rear speaker set | E |

B → Go to step 28

C → Go to step 30

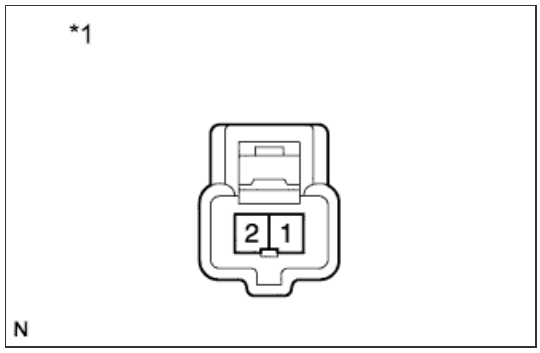
D → Go to step 32

E → Go to step 34

A

**26.INSPECT FRONT NO. 4 SPEAKER ASSEMBLY**

a. Disconnect the F6 speaker connector.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 6 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness or connected: (Front No. 4 Speaker Assembly) |

NG → REPLACE FRONT NO. 4 SPEAKER ASSEMBLY (Click here)

OK

**27.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - FRONT NO. 4 SPEAKER)**

a. Disconnect the F6 speaker connector.

b. Disconnect the F3 amplifier connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-8 (CTR+) - F6-1 | Always | Below 1 Ω |
| F3-7 (CTR-) - F6-2 | Always | Below 1 Ω |
| F3-8 (CTR+) - Body ground | Always | 10 kΩ or higher |
| F3-7 (CTR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

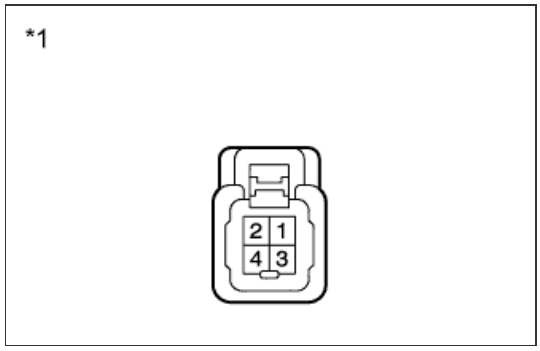
REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)



**28.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY**

a. Disconnect the F8 and F7 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | Below 1 Ω |
| 3 - 4 | Always | Below 1 Ω |
| 2 - 4 | Always | 4 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness or connected:<br>(Front No. 2 Speaker Assembly) |

NG → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

OK

Go to step 26

**29.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - FRONT NO. 2 SPEAKER)**

a. Disconnect the F4 amplifier connector.

b. Disconnect the F8 and F7 speaker connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-3 (FL+) - F8-1 (+) | Always | Below 1 Ω |
| F4-8 (FL-) - F8-3 (-) | Always | Below 1 Ω |
| F4-3 (FL+) - Body ground | Always | 10 kΩ or higher |
| F4-8 (FL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-10 (FR+) - F7-1 (+) | Always | Below 1 Ω |
| F4-9 (FR-) - F7-3 (-) | Always | Below 1 Ω |
| F4-10 (FR+) - Body ground | Always | 10 kΩ or higher |
| F4-9 (FR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

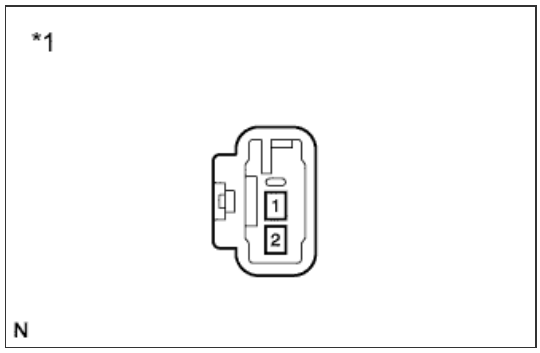
REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

**30.INSPECT FRONT NO. 1 SPEAKER ASSEMBLY**

a. Disconnect the I10 and I1 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 3 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness or connected:<br>(Front No. 1 Speaker Assembly) |

NG → REPLACE FRONT NO. 1 SPEAKER ASSEMBLY (Click here)

OK

**31.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - FRONT NO. 1 SPEAKER)**

a. Disconnect the I10 and I1 speaker connectors.

b. Disconnect the F3 amplifier connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-1 (WFL+) - I10-1 | Always | Below 1 Ω |
| F3-5 (WFL-) - I10-2 | Always | Below 1 Ω |
| F3-1 (WFL+) - Body ground | Always | 10 kΩ or higher |
| F3-5 (WFL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-2 (WFR+) - I1-1 | Always | Below 1 Ω |
| F3-6 (WFR-) - I1-2 | Always | Below 1 Ω |
| F3-2 (WFR+) - Body ground | Always | 10 kΩ or higher |
| F3-6 (WFR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

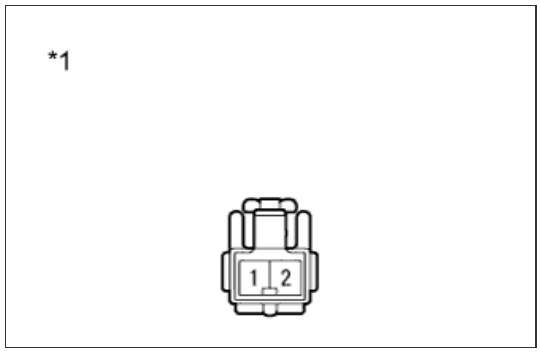
REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

**32.INSPECT FRONT NO. 3 SPEAKER ASSEMBLY**

a. Disconnect the F14 and F13 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness or connected: (Front No. 3 Speaker Assembly) |

NG → REPLACE FRONT NO. 3 SPEAKER ASSEMBLY (Click here)

OK

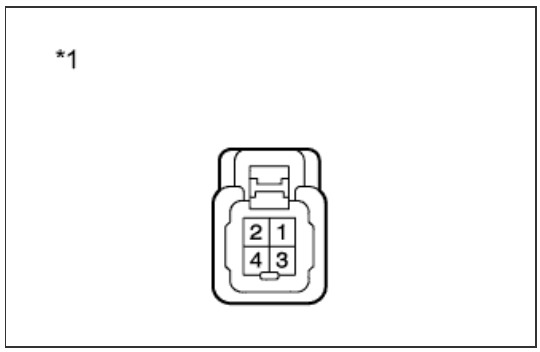
**33.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY**

a. Disconnect the F8 and F7 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | Below 1 Ω |
| 3 - 4 | Always | Below 1 Ω |
| 2 - 4 | Always | 4 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness or connected: (Front No. 2 Speaker Assembly) |

NG → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

OK

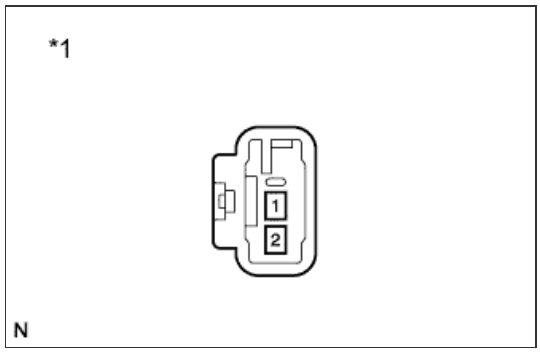
REPAIR OR REPLACE HARNESS OR CONNECTOR (FRONT NO. 2 SPEAKER - FRONT NO. 3 SPEAKER)

**34.INSPECT REAR SPEAKER SET**

a. Disconnect the J17 and J15 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness or connected: (Rear Speaker Set) |

NG → REPLACE REAR SPEAKER SET (Click here)

OK

**35.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - REAR SPEAKER SET)**

a. Disconnect the F4 amplifier connector.

b. Disconnect the J17 and J15 speaker connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-4 (RL+) - J17-1 | Always | Below 1 Ω |
| F4-11 (RL-) - J17-2 | Always | Below 1 Ω |
| F4-4 (RL+) - Body ground | Always | 10 kΩ or higher |
| F4-11 (RL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
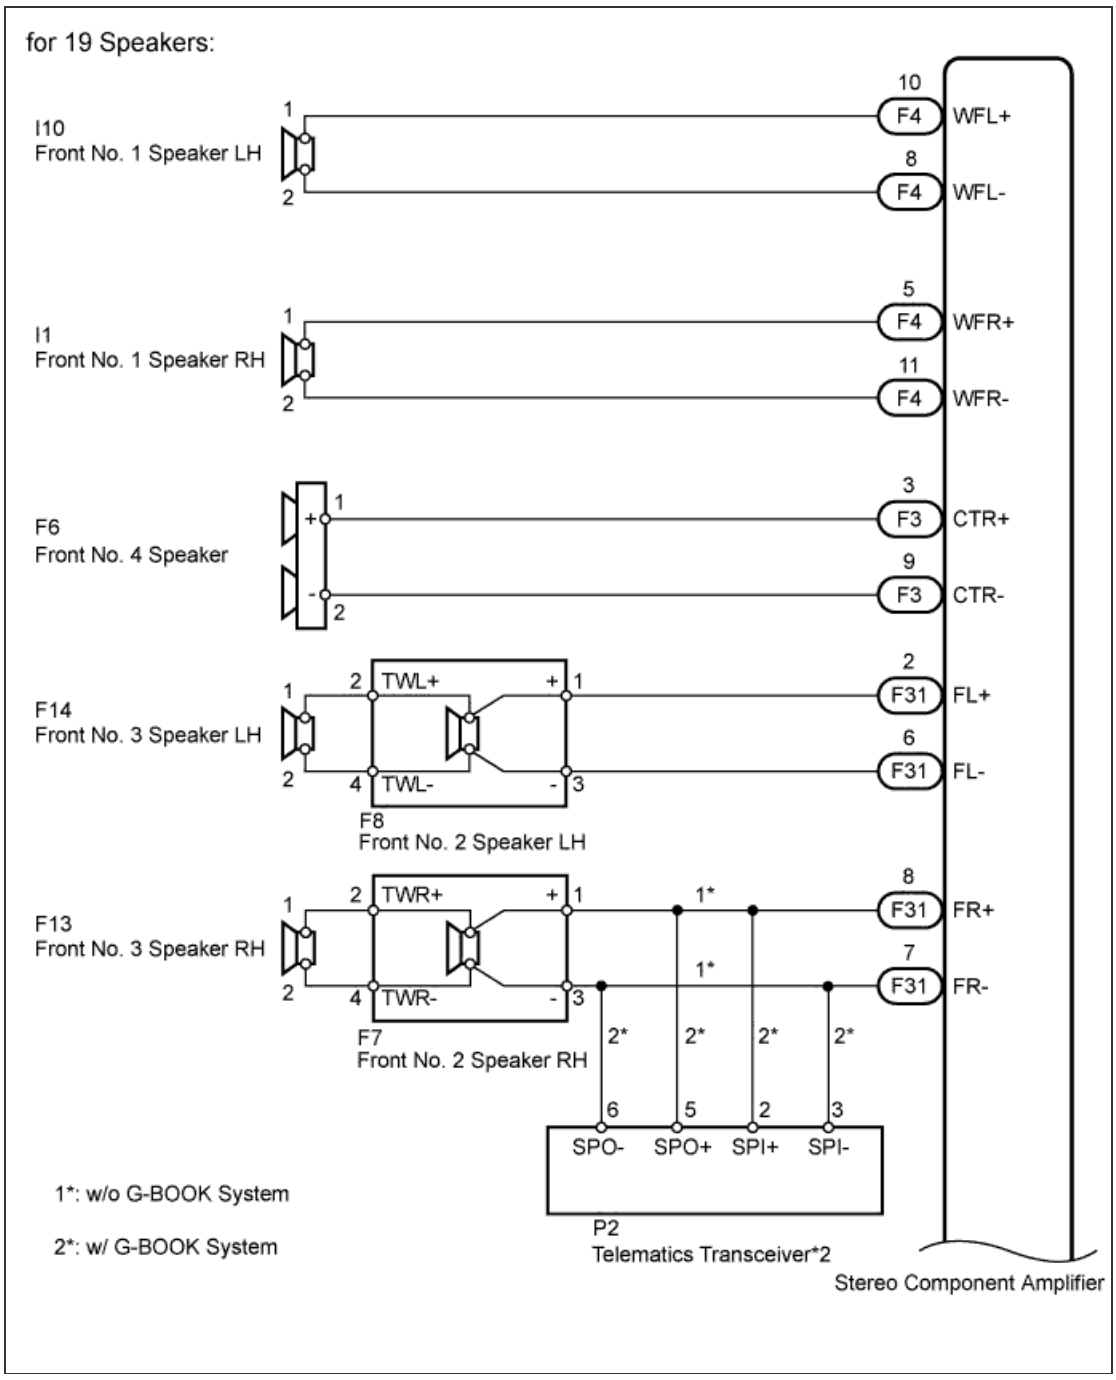
| F4-5 (RR+) - J15-1 | Always | Below 1 Ω |
| F4-12 (RR-) - J15-2 | Always | Below 1 Ω |
| F4-5 (RR+) - Body ground | Always | 10 kΩ or higher |
| F4-12 (RR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR



OK → REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

**for Preparation** Click here

## DESCRIPTION

The stereo component amplifier sends sound signals to the speakers.

## INSPECTION PROCEDURE

### 1.CHECK AUDIO MODELS

a. Check the audio model.

**Result**

| Result | Proceed to |
|---|---|
| 19 speakers | A |
| 9 speakers | B |

B → Go to step 25

A

### 2.CHECK SPEAKER

a. Check the malfunctioning speakers.

**Result**

| Result | Proceed to |
|---|---|
| Malfunction in front speaker area | A |

| | |
|---|---|
| Malfunction in rear speaker area | B |

B → Go to step 15

A

## 3.CHECK SPEAKER

a. Check the malfunctioning speakers.

**Result**

| Result | Proceed to |
|---|---|
| Front No. 4 speaker | A |
| Front No. 2 speaker | B |
| Front No. 1 speaker | C |
| Front No. 3 speaker | D |

B → Go to step 6

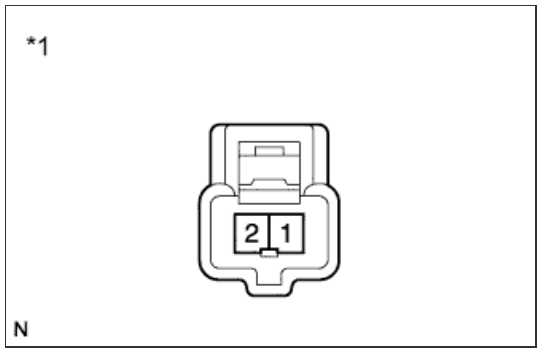
C → Go to step 11

D → Go to step 13

A

## 4.INSPECT FRONT NO. 4 SPEAKER ASSEMBLY

a. Disconnect the F6 speaker connector.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness or connected: (Front No. 4 Speaker Assembly) |

NG → REPLACE FRONT NO. 4 SPEAKER ASSEMBLY (Click here)

OK

## 5.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - FRONT NO. 4 SPEAKER)

a. Disconnect the F6 speaker connector.

b. Disconnect the F3 amplifier connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-3 (CTR+) - F6-1 | Always | Below 1 Ω |
| F3-9 (CTR-) - F6-2 | Always | Below 1 Ω |
| F3-3 (CTR+) - Body ground | Always | 10 kΩ or higher |

| | | |
|---|---|---|
| F3-9 (CTR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 6.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY

a. Disconnect the F8 and F7 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | Below 1 Ω |
| 3 - 4 | Always | Below 1 Ω |
| 2 - 4 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness or connected: (Front No. 2 Speaker Assembly) |

NG → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

OK

## 7.CHECK DEFECTIVE SPEAKER AND VEHICLE EQUIPMENT

a. Check which side of the vehicle the defective speaker is on. Also, check if the vehicle is equipped with the G-BOOK System.

**Result**

| Result | Proceed to |
|---|---|
| Defective speaker is on right side (w/ G-BOOK System) | A |
| Defective speaker is on right side (w/o G-BOOK System) | B |
| Defective speaker is on left side | B |

B → Go to step 10

A

## 8.CHECK HARNESS AND CONNECTOR (TELEMATICS TRANSCEIVER - STEREO COMPONENT AMPLIFIER AND FRONT NO. 2 SPEAKER)

a. Disconnect the F31 amplifier connector.

b. Disconnect the F7 speaker connector.

c. Disconnect the P2 telematics transceiver connector.

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F7-1 (+) - P2-5 (SPO+) | | |

| | | |
|---|---|---|
| F7-3 (-) - P2-6 (SPO-) | Always | Below 1 Ω |
| F31-8 (FR+) - P2-2 (SPI+) | | |
| F31-7 (FR-) - P2-3 (SPI-) | | |
| F7-1 (+) - Body ground | Always | 10 kΩ or higher |
| F7-3 (-) - Body ground | | |
| F31-8 (FR+) - Body ground | | |
| F31-7 (FR-) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**9.CHECK STEREO COMPONENT AMPLIFIER ASSEMBLY (OPERATION)**

a. Replace the stereo component amplifier with a normal one and check that audio can be heard from the front RH side speaker ( Click here).

**OK:**
**Audio can be heard.**

NG → REPLACE TELEMATICS TRANSCEIVER (**Click here**)

OK

**END (STEREO COMPONENT AMPLIFIER IS DEFECTIVE)**

**10.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - FRONT NO. 2 SPEAKER)**

a. Disconnect the F31 amplifier connector.

b. Disconnect the F8 and F7 speaker connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**
**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F31-2 (FL+) - F8-1 (+) | Always | Below 1 Ω |
| F31-6 (FL-) - F8-3 (-) | Always | Below 1 Ω |
| F31-2 (FL+) - Body ground | Always | 10 kΩ or higher |
| F31-6 (FL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F31-8 (FR+) - F7-1 (+) | Always | Below 1 Ω |
| F31-7 (FR-) - F7-3 (-) | Always | Below 1 Ω |
| F31-8 (FR+) - Body ground | Always | 10 kΩ or higher |
| F31-7 (FR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

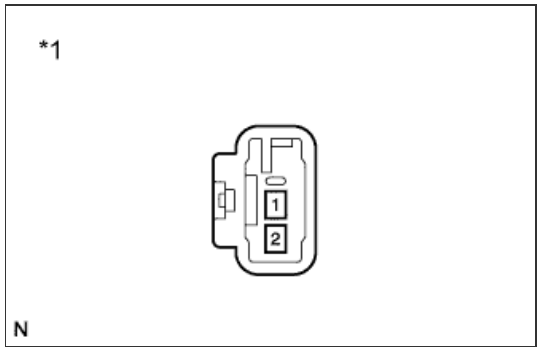
REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

11.INSPECT FRONT NO. 1 SPEAKER ASSEMBLY

a. Disconnect the I10 and I1 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 11 to 13 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness or connected: (Front No. 1 Speaker Assembly) |

NG → REPLACE FRONT NO. 1 SPEAKER ASSEMBLY (Click here)

OK

12.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - FRONT NO. 1 SPEAKER)

a. Disconnect the I10 and I1 speaker connectors.

b. Disconnect the F4 amplifier connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-10 (WFL+) - I10-1 | Always | Below 1 Ω |
| F4-8 (WFL-) - I10-2 | Always | Below 1 Ω |
| F4-10 (WFL+) - Body ground | Always | 10 kΩ or higher |
| F4-8 (WFL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-5 (WFR+) - I1-1 | Always | Below 1 Ω |
| F4-11 (WFR-) - I1-2 | Always | Below 1 Ω |
| F4-5 (WFR+) - Body ground | Always | 10 kΩ or higher |
| F4-11 (WFR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 13.CHECK FRONT NO. 3 SPEAKER ASSEMBLY

a. Disconnect the F14 and F13 speaker connectors.

b. Interchange the front No. 3 speaker LH with RH.

c. Check that the malfunction disappears.

**OK:**
**Malfunction disappears.**

**HINT:**

- **Connect all the connectors to the front No. 3 speakers.**
- **When there is a possibility that either the right or left front speaker is defective, inspect by interchanging the right one with the left one.**
- **Perform the inspection above on both the LH and RH sides.**

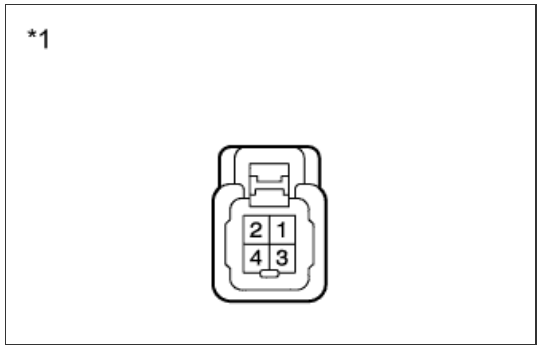
**NG** → Go to step 14

**OK**

REPLACE FRONT NO. 3 SPEAKER ASSEMBLY (Click here)

## 14.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY

a. Disconnect the F8 and F7 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 2 - 4 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness or connected: (Front No. 2 Speaker Assembly) |

**NG** → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

**OK**

REPAIR OR REPLACE HARNESS OR CONNECTOR (FRONT NO. 2 SPEAKER - FRONT NO. 3 SPEAKER)

## 15.CHECK SPEAKER

a. Check the malfunctioning speakers.

**Result**

| Result | Proceed to |
|---|---|
| Rear No. 2 speaker | A |
| Rear No. 3 speaker | B |
| Rear speaker set | C |
| No. 1 woofer box speaker | D |
| Rear header speaker | E |

**B** → Go to step 17

**C** → Go to step 19

**D** → Go to step 21

E → Go to step 23

A

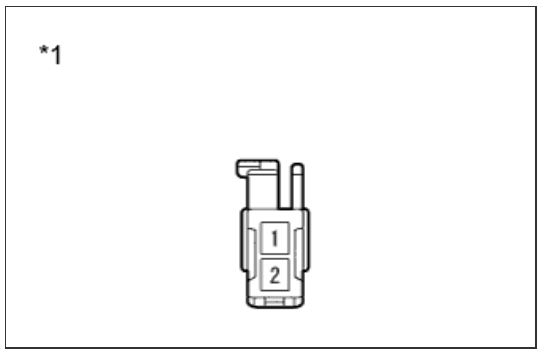
## 16.INSPECT REAR NO. 2 SPEAKER ASSEMBLY

a. Disconnect the rear No. 2 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness or connected: (Rear No. 2 Speaker Assembly) |

NG → REPLACE REAR NO. 2 SPEAKER ASSEMBLY (Click here)

OK

REPLACE REAR NO. 3 SPEAKER ASSEMBLY (Click here)

## 17.CHECK REAR NO. 3 SPEAKER ASSEMBLY

a. Disconnect the rear No. 3 speaker connectors.

b. Interchange the rear No. 3 speaker LH with RH.

c. Check that the malfunction disappears.

**OK:**
**Malfunction disappears.**

**HINT:**

- **Connect all the connectors to the rear No. 3 speakers.**
- **When there is a possibility that either the right or left rear speaker is defective, inspect by interchanging the right one with the left one.**
- **Perform the inspection above on both the LH and RH sides.**

NG → Go to step 18

OK

REPLACE REAR NO. 3 SPEAKER ASSEMBLY (Click here)

## 18.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - REAR NO. 3 SPEAKER)

a. Disconnect the F31 amplifier connector.

b. Disconnect the J8 and J1 speaker connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**
**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F31-3 (R-L+) - J8-1 (+) | Always | Below 1 Ω |
| F31-9 (R-L-) - J8-2 (-) | Always | Below 1 Ω |

| | | |
|---|---|---|
| F31-3 (R-L+) - Body ground | Always | 10 kΩ or higher |
| F31-9 (R-L-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F31-4 (R-R+) - J1-1 (+) | Always | Below 1 Ω |
| F31-10 (R-R-) - J1-2 (-) | Always | Below 1 Ω |
| F31-4 (R-R+) - Body ground | Always | 10 kΩ or higher |
| F31-10 (R-R-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

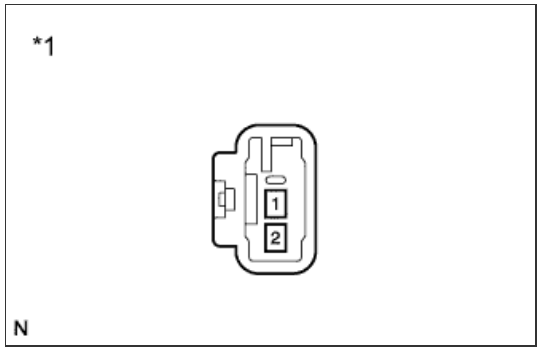
REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 19.INSPECT REAR SPEAKER SET

a. Disconnect the J17 and J15 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4.8 to 7.2 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness or connected: (Rear Speaker Set) |

NG → REPLACE REAR SPEAKER SET (Click here)

OK

## 20.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - REAR SPEAKER SET)

a. Disconnect the F3 and F31 amplifier connectors.

b. Disconnect the J17 and J15 speaker connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-4 (RL+) - J17-1 | Always | Below 1 Ω |
| F3-10 (RL-) - J17-2 | | |
| F3-4 (RL+) - Body ground | Always | 10 kΩ or higher |
| F3-10 (RL-) - Body ground | | |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|

| | | |
|---|---|---|
| F31-1 (RR+) - J15-1 | Always | Below 1 Ω |
| F31-5 (RR-) - J15-2 | | |
| F31-1 (RR+) - Body ground | Always | 10 kΩ or higher |
| F31-5 (RR-) - Body ground | | |

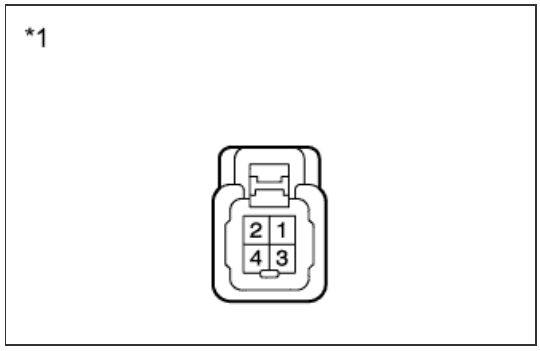
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK →

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

21.INSPECT NO. 1 WOOFER BOX SPEAKER ASSEMBLY

a. Disconnect the L4 speaker connector.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 8.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness or connected: (No. 1 Woofer Box Speaker Assembly) |

NG → REPLACE NO. 1 WOOFER BOX SPEAKER ASSEMBLY (Click here)

OK →

22.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - NO. 1 WOOFER BOX SPEAKER)

a. Disconnect the F3 amplifier connector.

b. Disconnect the L4 speaker connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-1 (WF1+) - L4-1 (WF1+) | Always | Below 1 Ω |
| F3-6 (WF1-) - L4-2 (WF1-) | Always | Below 1 Ω |
| F3-1 (WF1+) - Body ground | Always | 10 kΩ or higher |
| F3-6 (WF1-) - Body ground | Always | 10 kΩ or higher |

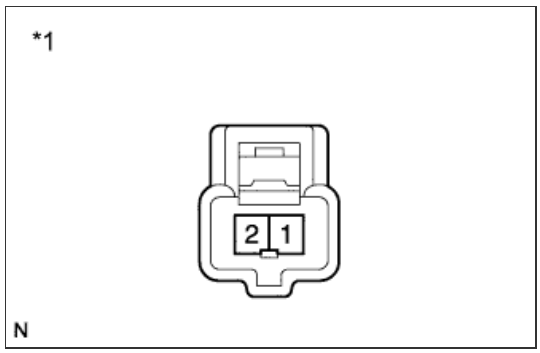
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK →

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

23.INSPECT REAR HEADER SPEAKER ASSEMBLY

a. Disconnect the S9 and S8 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness or connected:<br>(Rear Header Speaker Assembly) |

NG → REPLACE REAR HEADER SPEAKER ASSEMBLY (Click here)

OK

## 24.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - REAR HEADER SPEAKER)

a. Disconnect the F4 amplifier connector.

b. Disconnect the S9 and S8 speaker connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-2 (SL+) - S9-1 (RLD+) | Always | Below 1 Ω |
| F4-7 (SL-) - S9-2 (RLD-) | Always | Below 1 Ω |
| F4-2 (SL+) - Body ground | Always | 10 kΩ or higher |
| F4-7 (SL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-1 (SR+) - S8-1 (RRD+) | Always | Below 1 Ω |
| F4-6 (SR-) - S8-2 (RRD-) | Always | Below 1 Ω |
| F4-1 (SR+) - Body ground | Always | 10 kΩ or higher |
| F4-6 (SR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 25.CHECK SPEAKER

a. Check the malfunctioning speakers.

**Result**

| Result | Proceed to |
|---|---|
| Front No. 4 speaker | A |

| | |
|---|---|
| Front No. 2 speaker | B |
| Front No. 1 speaker | C |
| Front No. 3 speaker | D |
| Rear speaker set | E |

B → Go to step 28

C → Go to step 30

D → Go to step 32

E → Go to step 34

A

**26.INSPECT FRONT NO. 4 SPEAKER ASSEMBLY**

a. Disconnect the F6 speaker connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 6 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness or connected: (Front No. 4 Speaker Assembly) |

NG → REPLACE FRONT NO. 4 SPEAKER ASSEMBLY (Click here)

OK

**27.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - FRONT NO. 4 SPEAKER)**

a. Disconnect the F6 speaker connector.

b. Disconnect the F3 amplifier connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-8 (CTR+) - F6-1 | Always | Below 1 Ω |
| F3-7 (CTR-) - F6-2 | Always | Below 1 Ω |
| F3-8 (CTR+) - Body ground | Always | 10 kΩ or higher |
| F3-7 (CTR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

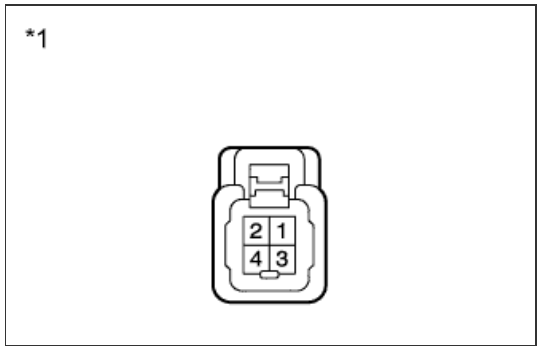
REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)



**28.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY**

a. Disconnect the F8 and F7 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | Below 1 Ω |
| 3 - 4 | Always | Below 1 Ω |
| 2 - 4 | Always | 4 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness or connected:<br>(Front No. 2 Speaker Assembly) |

NG → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

OK

Go to step 26

**29.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - FRONT NO. 2 SPEAKER)**

a. Disconnect the F4 amplifier connector.

b. Disconnect the F8 and F7 speaker connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-3 (FL+) - F8-1 (+) | Always | Below 1 Ω |
| F4-8 (FL-) - F8-3 (-) | Always | Below 1 Ω |
| F4-3 (FL+) - Body ground | Always | 10 kΩ or higher |
| F4-8 (FL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-10 (FR+) - F7-1 (+) | Always | Below 1 Ω |
| F4-9 (FR-) - F7-3 (-) | Always | Below 1 Ω |
| F4-10 (FR+) - Body ground | Always | 10 kΩ or higher |
| F4-9 (FR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

**30.INSPECT FRONT NO. 1 SPEAKER ASSEMBLY**

a. Disconnect the I10 and I1 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 3 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness or connected:<br>(Front No. 1 Speaker Assembly) |

NG → REPLACE FRONT NO. 1 SPEAKER ASSEMBLY (Click here)

OK

**31.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - FRONT NO. 1 SPEAKER)**

a. Disconnect the I10 and I1 speaker connectors.

b. Disconnect the F3 amplifier connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-1 (WFL+) - I10-1 | Always | Below 1 Ω |
| F3-5 (WFL-) - I10-2 | Always | Below 1 Ω |
| F3-1 (WFL+) - Body ground | Always | 10 kΩ or higher |
| F3-5 (WFL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-2 (WFR+) - I1-1 | Always | Below 1 Ω |
| F3-6 (WFR-) - I1-2 | Always | Below 1 Ω |
| F3-2 (WFR+) - Body ground | Always | 10 kΩ or higher |
| F3-6 (WFR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

**32.INSPECT FRONT NO. 3 SPEAKER ASSEMBLY**

a. Disconnect the F14 and F13 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness or connected: (Front No. 3 Speaker Assembly) |

NG → REPLACE FRONT NO. 3 SPEAKER ASSEMBLY (Click here)

OK

**33.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY**

a. Disconnect the F8 and F7 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | Below 1 Ω |
| 3 - 4 | Always | Below 1 Ω |
| 2 - 4 | Always | 4 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness or connected: (Front No. 2 Speaker Assembly) |

NG → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR (FRONT NO. 2 SPEAKER - FRONT NO. 3 SPEAKER)

**34.INSPECT REAR SPEAKER SET**

a. Disconnect the J17 and J15 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness or connected: (Rear Speaker Set) |

NG → REPLACE REAR SPEAKER SET (Click here)

OK

**35.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - REAR SPEAKER SET)**

a. Disconnect the F4 amplifier connector.

b. Disconnect the J17 and J15 speaker connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-4 (RL+) - J17-1 | Always | Below 1 Ω |
| F4-11 (RL-) - J17-2 | Always | Below 1 Ω |
| F4-4 (RL+) - Body ground | Always | 10 kΩ or higher |
| F4-11 (RL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-5 (RR+) - J15-1 | Always | Below 1 Ω |
| F4-12 (RR-) - J15-2 | Always | Below 1 Ω |
| F4-5 (RR+) - Body ground | Always | 10 kΩ or higher |
| F4-12 (RR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK → REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

**for Preparation** Click here

## DESCRIPTION

The multi-media interface ECU sends a sound signal to the display and navigation module display through this circuit.
w/ G-BOOK System
If there is an open or short in the circuit, sound cannot be heard from the speakers even if there is no malfunction in the stereo component amplifier assembly, radio receiver assembly, display and navigation module display, telematics transceiver or speakers.
w/o G-BOOK System
If there is an open or short in the circuit, sound cannot be heard from the speakers even if there is no malfunction in the stereo component amplifier assembly, radio receiver assembly, display and navigation module display or speakers.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

When replacing the display and navigation module display, perform vehicle contract setting (w/ G-BOOK System) ( Click here).

### 1.CHECK HARNESS AND CONNECTOR (INTERFACE ECU - NAVIGATION MODULE)

a. Disconnect the display and navigation module display connector and multi-media interface ECU connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F56-1 (AGND) - L51-1 (USD1) | Always | Below 1 Ω |
| F56-3 (VAR+) - L51-2 (URO+) | Always | Below 1 Ω |
| F56-4 (VAL+) - L51-3 (ULO+) | Always | Below 1 Ω |
| F56-7 (VA-) - L51-4 (UGD1) | Always | Below 1 Ω |
| F56-1 (AGND) - Body ground | Always | 10 kΩ or higher |
| F56-3 (VAR+) - Body ground | Always | 10 kΩ or higher |
| F56-4 (VAL+) - Body ground | Always | 10 kΩ or higher |
| F56-7 (VA-) - Body | Always | 10 kΩ or higher |

| | | |
|---|---|---|
| ground | | |

## DESCRIPTION

The No. 1 stereo jack adapter assembly sends an external device sound signal to the radio receiver assembly through this circuit.
w/ G-BOOK System
The sound signal that has been sent is amplified by the stereo component amplifier assembly, and then is sent to the speakers.
If there is an open or short in the circuit, sound cannot be heard from the speakers even if there is no malfunction in the stereo component amplifier assembly, radio receiver assembly, telematics transceiver or speakers.
w/o G-BOOK System
The sound signal that has been sent is amplified by the stereo component amplifier assembly, and then is sent to the speakers.
If there is an open or short in the circuit, sound cannot be heard from the speakers even if there is no malfunction in the stereo component amplifier assembly, radio receiver assembly or speakers.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER ASSEMBLY - NO. 1 STEREO JACK ADAPTER ASSEMBLY)

a. Disconnect the k1 No. 1 stereo jack adapter assembly connector and F54 radio receiver assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| k1-8 (AUXO) - F54-5 (AUXI) | Always | Below 1 Ω |
| k1-7 (ASGN) - F54-21 (ASGN) | Always | Below 1 Ω |
| k1-5 (ARO) - F54-19 (ARI) | Always | Below 1 Ω |
| k1-6 (ALO) - F54-20 (ALI) | Always | Below 1 Ω |
| k1-9 (AGND) - F54-6 (AGND) | Always | Below 1 Ω |
| k1-8 (AUXO) - Body ground | Always | 10 kΩ or higher |
| k1-7 (ASGN) - Body ground | Always | 10 kΩ or higher |
| k1-5 (ARO) - Body ground | Always | 10 kΩ or higher |
| k1-6 (ALO) - Body ground | Always | 10 kΩ or higher |

| | | |
|---|---|---|

**1.CHECK HARNESS AND CONNECTOR (INTERFACE ECU - STEREO JACK ADAPTER)**

a. Disconnect the L53 multi-media interface ECU connector.

b. Disconnect the k1 No. 1 stereo jack adapter assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| k1-3 (UDO+) - L53-3 (UDI+) | Always | Below 1 Ω |
| k1-2 (UDO-) - L53-2 (UDI-) | Always | Below 1 Ω |
| k1-3 (UDO+) - Body ground | Always | 10 kΩ or higher |
| k1-2 (UDO-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**for Preparation** Click here

## DESCRIPTION

The telematics transceiver sends a mute signal to the stereo component amplifier assembly.
The stereo component amplifier assembly controls the volume according to the mute signal from the telematics transceiver.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

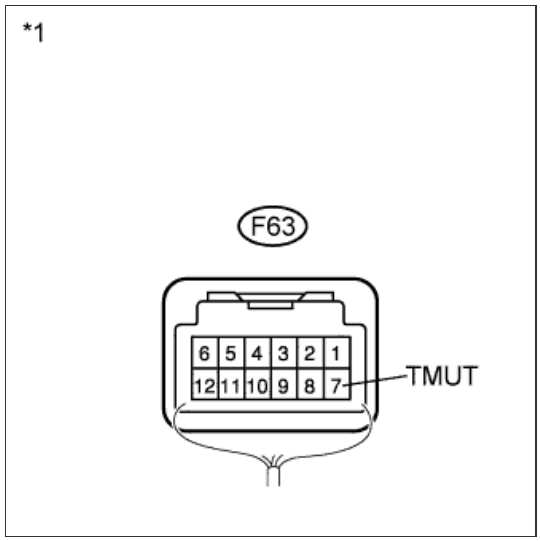
**NOTICE:**

When replacing the telematics transceiver, perform vehicle contract setting (w/ G-BOOK System) ( Click here).

### 1.INSPECT STEREO COMPONENT AMPLIFIER ASSEMBLY



a. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F63-7 (TMUT) - Body ground | Engine switch on (ACC), audio system is playing → Emergency call mode | Above 2.5 V → Below 0.5 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Component with harness connected (Stereo Component Amplifier Assembly) |

NG → Go to step 2

OK → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

### 2.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY - TELEMATICS TRANSCEIVER)

a. Disconnect the F63 stereo component amplifier assembly connector and P2 telematics transceiver connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-7 (TMUT) - P2-17 (MUTE) | Always | Below 1 Ω |
| F63-7 (TMUT) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

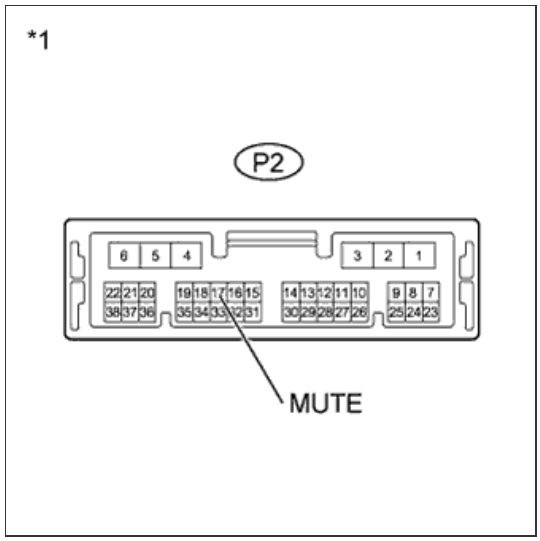
**3.INSPECT TELEMATICS TRANSCEIVER**

a. Reconnect the P2 telematics transceiver connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| P2-17 (MUTE) - Body ground | Engine switch on (ACC) | Above 2.5 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Component with harness connected (Telematics Transceiver) |

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

# AUDIO AND VISUAL SYSTEM (w/ Navigation System) > Vehicle Speed Signal Circuit between Stereo Component Amplifier and Combination Meter

**for Preparation** Click here

## DESCRIPTION

The circuit is necessary for the Automatic Sound Levelizer (ASL) built into the stereo component amplifier assembly.
Speed signals are received from the combination meter assembly and used for the ASL.
The ASL function automatically adjusts the sound volume in order to clear audio quality even when vehicle noise increases (as vehicle noise increases, the volume is turned up etc.).

**HINT:**

- **A voltage of 12 V or 5 V is output from each ECU and then input to the combination meter assembly. The signal is changed to a pulse signal at the transistor in the combination meter assembly. Each ECU controls the respective system based on the pulse signal.**
- **If a short occurs in any of the ECUs or in the wire harness connected to an ECU, all systems in the diagram below will not operate normally.**

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - COMBINATION METER)

a. Disconnect the F63 stereo component amplifier assembly connector and E77 combination meter assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-2 (SPD) - E77-6 (+S) | Always | Below 1 Ω |
| F63-2 (SPD) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

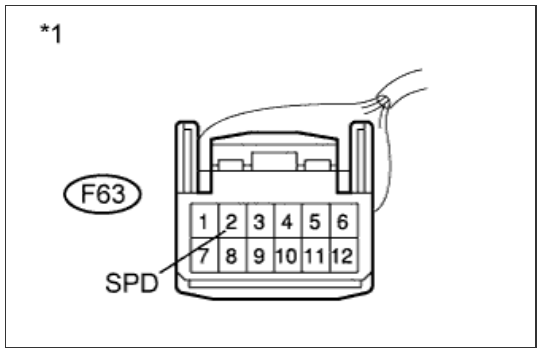
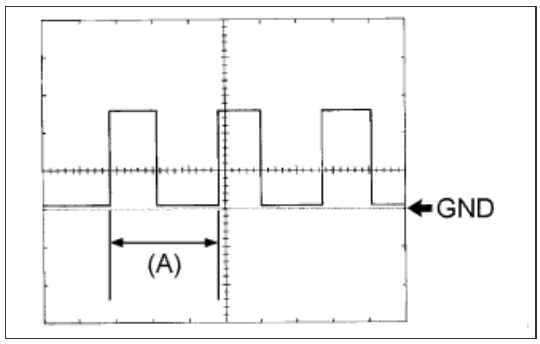
## 2.INSPECT COMBINATION METER ASSEMBLY (OUTPUT WAVEFORM)



a. Reconnect the E77 combination meter assembly connector.

b. Check the input waveform.

i. Connect an oscilloscope to terminal F63-2 (SPD) and body ground.



ii. Turn the engine switch on (IG).

iii. Turn a wheel slowly.

iv. Check the signal waveform according to the condition(s) in the table below.

| Item | Condition |
|---|---|
| Measurement terminal | F63-2 (SPD) - Body ground |
| Tool setting | 5 V/DIV., 20 ms./DIV. |
| Vehicle condition | Driving at approx. 20 km/h (12 mph) |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Stereo Component Amplifier Assembly) |

**OK:**

**The waveform is displayed as shown in the illustration.**

**HINT:**

When the system is functioning normally, one wheel revolution generates 4 pulses. As the vehicle speed increases, the width indicated by (A) in the illustration narrows.

**NG** → REPLACE COMBINATION METER ASSEMBLY (Click here)

**OK** →

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## DVD (Digital Versatile Disc) PLAYER OUTLINE

a. The DVD player can only play DVD videos, DVD audio and video CDs that have any of the following marks:

i. Precaution for use of discs

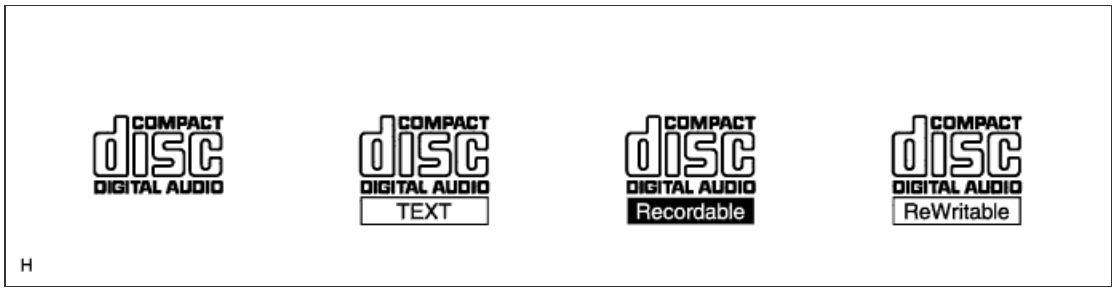
**NOTICE:**

- **PAL or SECAM color television standard discs cannot be played (only NTSC discs can be played).**
- **Keep the discs away from dirt. Be careful not to damage the discs or leave fingerprints on them.**
- **Hold discs by the outer edge and center hole with the label side up.**
- **Leaving the disc exposed halfway out of the slot for a long time after pressing the disc eject button may cause deformation of the disc, making the disc unusable.**
- **Do not use odd-shaped discs because these may cause player malfunctions.**
- **Do not use discs whose recording portion is transparent or translucent because they may not be inserted, ejected or played normally.**
- **DualDiscs that combine DVD recorded material on one side with CD digital audio material on the other cannot be played.**

## CD (Compact Disc) PLAYER OUTLINE

a. A compact disc player uses a laser pickup to read digital signals recorded on a compact disc (CD). By converting the digital signals to analog, it can play music and audio.

**CAUTION:**



Do not look directly at the laser pickup because the CD player uses an invisible laser beam. Be sure to operate the player only as instructed.

**NOTICE:**

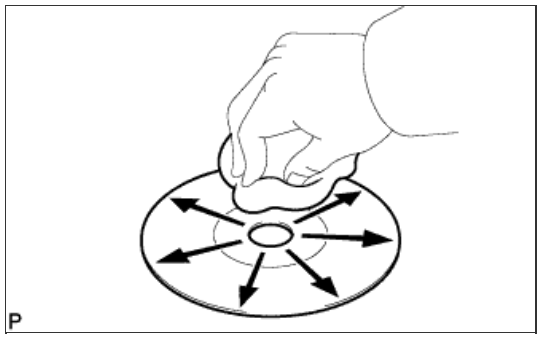
- **Do not disassemble any part of the CD player.**
- **Do not apply oil to the CD player.**
- **Do not insert anything but a CD into the CD player.**

b. Usable discs

i. This player can play only audio CDs, CD-Rs (CD-Recordable) and CD-RWs (CD-ReWritable) that have any of the following marks:

H

c. Precautions for use of discs



**NOTICE:**

- **Copy-protected CDs cannot be played.**
- **CD-Rs and CD-RWs may not be played depending on the recording conditions or characteristics of the discs, or due to damage, dirt or deterioration caused by leaving the discs in the cabin for a long time.**
- **Unfinalized CD-Rs and CD-RWs cannot be played.**
- **DualDiscs that combine DVD recorded material on one side with CD digital audio material on the other cannot be played.**
- **Keep the discs away from dirt. Be careful not to damage the discs or leave your fingerprints on them.**
- **Hold discs by the outer edge and center hole with the label side up.**
- **Leaving the disc exposed halfway out of the slot for a long time after pressing the disc eject button may cause deformation of the disc, making the disc unusable.**
- **If discs have adhesive tape, stickers, CD labels or any traces of such labels attached, the discs may not be ejected or player malfunctions may result.**
- **Keep the discs away from direct sunlight. (Exposure to direct sunlight may cause deformation of the disc, making the disc unusable.)**
- **Do not use odd-shaped CDs because these may cause player malfunctions.**
- **Do not use discs whose recording portion is transparent or translucent because they may not be inserted, ejected or played normally.**
- **Use only 4.7 in. (12 cm) CDs.**
- **Do not use 3 in. (8 cm) CDs, either with or without adapters.**

**HINT:**

- **When it is cold or it is raining, if the windows mist up, mist and condensation may form in the player. In such cases, the CD sound may skip or stop in the middle of play. Ventilate or dehumidify the cabin for a while before using the player.**
- **The CD sound may skip if the player experiences strong vibrations when the vehicle is driven on rough roads or similar uneven surface(s).**

d. Cleaning

P

**NOTICE:**

Do not use a lens cleaner because it may cause a malfunction in the pickup portion of the player.

i. If dirt is on the disc surface, wipe it clean with a soft dry cloth such as an eyeglass cleaner for plastic lenses from the inside to the outside in a radial direction.

**NOTICE:**

- **Pressing on the disc by hand or rubbing the disc with a hard cloth may scratch the disc surface.**
- **Use of solvent such as a record spray, antistatic agent, alcohol, benzine and thinner or a chemical cloth may cause damage to the disc, making the disc unusable.**

## MP3/WMA OUTLINE

a. Playable MP3 file standards

| | |
|---|---|
| Compatible standard | MP3 (MPEG1 LAYER 3, MPEG2 LSF LAYER 3) |
| Compatible sampling frequency | • MPEG1 LAYER 3: 32, 44.1, 48 (kHz)<br>• MPEG2 LSF LAYER 3: 16, 22.05, 24 (kHz) |
| Compatible bit rate | • MPEG1 LAYER 3: 64, 80, 96, 112, 128, 160, 192, 224, 256, 320 (kbps)<br>• MPEG2 LSF LAYER 3: 64, 80, 96, 112, 128, 144, 160 (kbps)<br>• Compatible with VBR |

| | |
|---|---|
| Compatible channel mode | Stereo, joint stereo, dual channel, monaural |

b. Playable WMA file standards

| | |
|---|---|
| Compatible standard | WMA Ver. 7, 8, and 9 |
| Compatible sampling frequency | 32, 44.1, 48 (kHz) |
| Compatible bit rate (Only compatible with 2-channel playback) | • Ver. 7, 8: CBR48, 64, 80, 96, 128, 160, 192 (kbps)<br>• Ver. 9: CBR48, 64, 80, 96, 128, 160, 192, 256, 320 (kbps) |

c. ID3 tag and WMA tag

i. Additional textual information called ID3 tag can be input to MP3 files. Information such as song titles and artist names can be stored.

**HINT:**

This player is compatible with the ID3 tags of ID3 Ver. 1.0 and 1.1, and ID3 Ver. 2.2 and 2.3. (Number of characters complies with ID3 Ver. 1.0 and 1.1.)

ii. Additional textual information called WMA tag can be input to WMA files. Information such as song titles and artist names can be stored.

d. Usable media

i. Only CD-ROMs, CD-Rs (CD-Recordable) and CD-RWs (CD-ReWritable) can be used to play MP3/WMA files.

**NOTICE:**

- **CD-Rs and CD-RWs are more easily affected by a hot and humid environment than discs used for normal audio CDs. For this reason, some CD-Rs and CD-RWs do not play.**
- **If there are fingerprints or scratches on a disc, the disc may not play or the CD sound may skip.**
- **Some CD-Rs and CD-RWs may deteriorate if they are left in the cabin for a long time.**
- **Keep CD-Rs and CD-RWs in an opaque case.**

e. Usable media format

i. Usable media format

| | |
|---|---|
| Disc format | CD-ROM Mode 1, CD-ROM XA Mode 2 Form1 |
| File format | ISO9660 Level 1 and Level 2 (Joliet, Romeo) |

**HINT:**

- **As for MP3/WMA files written in any unlisted format, the contents of the files may not be played normally or the file names or folder names may not be displayed correctly.**
- **This player is compatible with multi-session discs and can play CD-Rs and CD-RWs on which MP3/WMA files are added. However, only the first session can be played.**
- **Discs whose first session includes both music data and MP3 or WMA format data cannot be played.**

ii. Standard and restrictions

| | |
|---|---|
| Maximum directory levels | 8 levels |
| Maximum number of characters for a folder name/file name | 32 characters |
| Maximum number of folders | 192 (Including the empty folders, roof folders, and folders that do not contain MP3/WMA files) |
| Maximum number of files in a disc | 255 (Including non-MP3/WMA files) |

f. File names

i. Only files with an extension of ".mp3" or ".wma" can be recognized and played as MP3 or WMA files.

ii. Save MP3 or WMA files with an extension of ".mp3" or ".wma".

**NOTICE:**

If non-MP3 or non-WMA files are saved with an extension of ".mp3" or ".wma", those files may be wrongly recognized as MP3 or WMA files and played. A loud noise may occur and damage to the speakers may result.

## COMMUNICATION SYSTEM

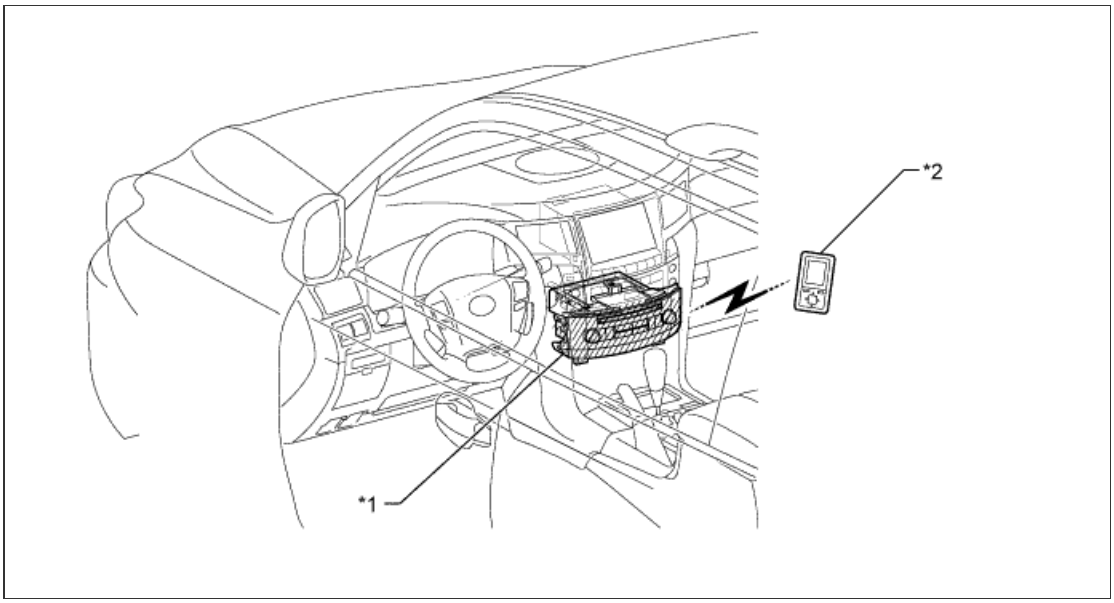
**HINT:**

Refer to Electro Multi Vision System (Click here).

## DIAGNOSTIC FUNCTION OUTLINE

a. The electro multi vision system has a diagnostic function (the result is indicated on the master unit or the intelligent tester).

## DIAGNOSIS DISPLAY DETAILED DESCRIPTION



**HINT:**

Refer to Electro Multi Vision System (Click here).

## "BLUETOOTH" OUTLINE

a. "Bluetooth" is a trademark owned by Bluetooth SIG.

b. "Bluetooth" is a wireless connection technology that uses the 2.4 GHz frequency band. This makes it possible to connect a cellular phone ("Bluetooth" compatible phone*1) to the radio receiver assembly (the "Bluetooth" system is built in), and use the hands-free function of the cellular phone, even if it is in a pocket or bag. As a result, it is not necessary to use a connector attached directly to the cellular phone.
*1: Some versions of "Bluetooth" compatible cellular phones may not function.

**Text in Illustration**

| | | | |
|---|---|---|---|
| *1 | Radio Receiver Assembly<br>(Built-in "Bluetooth" receiver antenna) | *2 | Portable Player<br>("Bluetooth" compatible) |

**HINT:**

The communication performance of "Bluetooth" may vary depending on obstructions or radio wave conditions between communication devices, electromagnetic radiation, communication device sensitivity or antenna capacity.

c. "Bluetooth" audio function

i. The "Bluetooth" built-in radio receiver assembly and a "Bluetooth" compatible portable audio player*2 can be connected using a "Bluetooth" wireless connection. This enables files stored in the portable audio player to be heard from the vehicle speakers. In addition, operations such as play/stop can be performed directly from the radio receiver assembly.
*2: Some versions of "Bluetooth" compatible audio players may not be able to operate the "Bluetooth" function, or music may play, but functions available using the radio receiver assembly may be limited.

ii. Available "Bluetooth" audio devices

| | |
|---|---|
| "Bluetooth" specifications | Ver. 1.1 or higher (Recommended: Ver. 2.0+EDR or higher) |
| | • A2DP (Advanced Audio Distribution Profile) Ver. 1.0 or higher |

| | |
|---|---|
| Following profiles | • AVRCP (Audio/Video Remote Control Profile) Ver. 1.0 or higher (Conformed: Ver. 1.3 or higher) |
| Maximum number of audio devices that can be registered | 2 |

**HINT:**

The amount of remaining battery charge displayed on the radio receiver assembly may be different from that of the portable player.

## USB AUDIO SYSTEM FUNCTION OUTLINE

a. The No. 1 stereo jack adapter assembly is equipped with a USB terminal. Connecting a USB device or "iPod" to the No. 1 stereo jack adapter assembly allows music files to be played. Not only is it possible to play music from a USB device with audio functions, is also possible to play MP3 or WMA music files that are stored on a USB device. In addition, "iPod" control software is installed, allowing file selection from playlists and operation using shuffle mode.

**HINT:**

- **Visual contents of an "iPod" cannot be played.**
- **Operation through the controls of a USB device or "iPod" cannot be performed while it is connected.**

b. USB audio system compatible model

i. USB Device
The following device formats can be used:

| | |
|---|---|
| Compatible USB device formats | • USB communication format: USB 2.0 FS (12MBPS)<br>• File format: FAT16/32 (Windows)<br>• Class: Mass storage class |

MP3 and WMA files written in any format other than those listed above may not play correctly, and their names and folder names may not be displayed correctly.
Items related to standards and limitations are as follows:

- Maximum directory hierarchy: 8 levels
- Maximum number of folders in device: 999 (including the root folder)
- Maximum number of files in device: 65025
- Maximum number of files per folder: 255

ii. "iPod"
"iPod" is a trademark of Apple Inc., registered in the U.S. and other countries.

### Supported "iPod" Models and Firmware Versions

| Supported "iPod" Model | Supported Firmware Version |
|---|---|
| "iPod" 5G | Ver. 1.2 or more |
| "iPod Nano" 1G | Ver. 1.2 or more |
| "iPod Nano" 2G | Ver. 1.1.2 or more |
| "iPod Nano" 3G | Ver. 1.0 or more |
| "iPod touch" | Ver. 1.1 or more |
| "iPod classic" | Ver. 1.0 or more |

### Unsupported "iPod" Models

| | |
|---|---|
| Unsupported Models | "iPod shuffle" |
| | "iPhone" |
| | "iPod" 1G, 2G, 3G, 4G |
| | "iPod mini" |

**HINT:**

Depending on the generation of "iPod" used, response to commands from the vehicle may be delayed.

Items related to standards and limitations are as follows:

- Maximum number of lists in device: 9999
- Maximum number of songs in device: 65025
- Maximum number of songs per list: No limitation

## ASL (Automatic Sound Levelizer) FUNCTION OUTLINE

a. The Automatic Sound Levelizer (ASL) function automatically adjusts the sound data in order to provide the clear sound from the audio

system even when vehicle noise increases (as vehicle noise increases, the volume is turned up etc.). Vehicle speed signals are received from the combination meter assembly and used for the ASL.

**for Preparation** Click here

**HINT:**

- **Use the following procedure to troubleshoot the audio and visual system.**
- ***: Use the intelligent tester.**

## 1.VEHICLE BROUGHT TO WORKSHOP

NEXT

## 2.INSPECT BATTERY VOLTAGE

**Standard Voltage:**
**11 to 14 V**

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

## 3.BASIC INSPECTION

a. Turn the engine switch on (IG).

b. Check whether or not the radio receiver assembly turns on.

**Result**

| Result | Proceed to |
|---|---|
| Radio receiver assembly turns on. | A |
| Radio receiver assembly does not turn on. | B |

B. → Go to step 8

A

## 4.CHECK FOR DTC*

a. Refer to DTC Check/Clear of the electro multi vision system.
Refer to Electro Multi Vision System (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC is output. | A |
| DTC is not output. | B |

**HINT:**

After the check using the intelligent tester, check the "System Check Mode" screen as necessary.

B. → Go to step 8

A

## 5.DTC CLEAR*

a. Refer to DTC Check/Clear of the electro multi vision system.

Refer to Electro Multi Vision System (Click here).

**HINT:**

The current DTCs may not indicate actual malfunctions depending on the vehicle operating conditions.

**NEXT**

## 6.RECHECK FOR DTC*

a. Refer to DTC Check/Clear of the electro multi vision system.
Refer to Electro Multi Vision System (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC is output. | A |
| DTC is not output. | B |

**HINT:**

- **Even if the malfunction symptom is not confirmed, check for diagnostic trouble codes. This is because the system stores past diagnostic trouble codes.**
- **After the check using the intelligent tester, check the "System Check Mode" screen as necessary.**
- **Check the diagnostic trouble code and inspect the area code indicates.**

**B.** → Go to step 9

**A**

## 7.DIAGNOSTIC TROUBLE CODE CHART

a. Find the output code in Diagnostic Trouble Code Chart ( Click here).

**NOTICE:**

- **The electro multi vision system outputs DTCs for the following systems.**
- **When DTCs other than the codes in Diagnostic Trouble Code Chart for the audio and visual system are output, refer to Diagnostic Trouble Code Chart for the following systems.**
- **Refer to Electro Multi Vision System (Click here)**
- **Refer to Rear Seat Entertainment system (w/ Rear Seat Entertainment System) ( Click here).**

**Result**

| Result | Proceed to |
|---|---|
| Audio and Visual System (w/o Navigation System) are output. | A |
| Electro Multi Vision System are output. | B |
| Rear Seat Entertainment system are output. | C |

**A.** → Go to step 10

**B.** → GO TO ELECTRO MULTI VISION SYSTEM

**C.** → GO TO REAR SEAT ENTERTAINMENT SYSTEM

## 8.PROBLEM SYMPTOMS TABLE

a. Refer to Problem Symptoms Table (Click here).

**Result**

| Result | Proceed to |
|---|---|
| Fault is not listed in Problem Symptoms Table. | A |
| Fault is listed in Problem Symptoms Table. | B |

**HINT:**

If the symptom does not recur and no DTC is output, perform the symptom reproduction method ( Click here).

B. Go to step 10

A

9.CHECK ECU TERMINAL ARRANGEMENT BASED ON MALFUNCTION SYMPTOM

a. Refer to Terminals of ECU (Click here).

NEXT

10.CHECK CIRCUIT

a. Adjust, repair or replace as necessary.

NEXT

11.RECHECK FOR DIAGNOSTIC TROUBLE CODE

**HINT:**

After clearing DTCs, recheck for DTCs.

NEXT

12.PERFORM CONFIRMATION TEST

NEXT

END

**for Preparation** Click here

**HINT:**

- **Use the following procedure to troubleshoot the audio and visual system.**
- ***: Use the intelligent tester.**

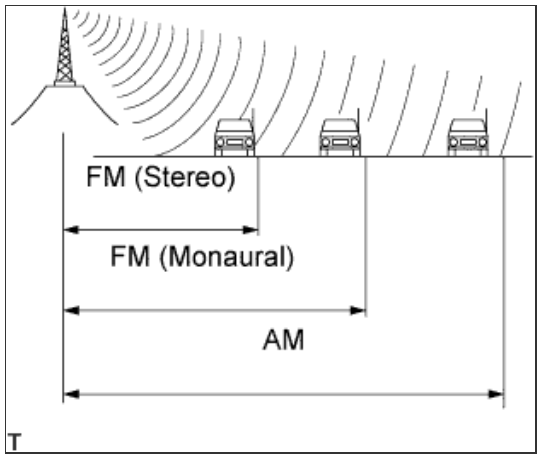
## RADIO DESCRIPTION

a. Radio frequency band



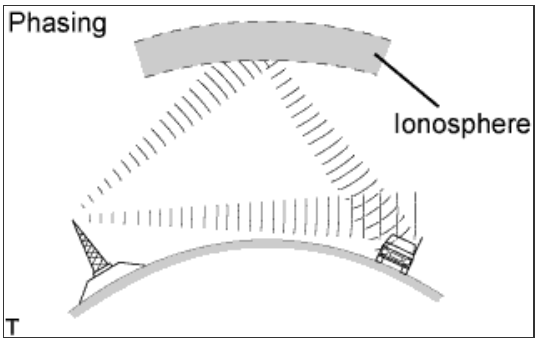
i. Radio broadcasts use the radio frequency bands shown in the table below.

| Frequency | 30 kHz | 300 kHz | 3 MHz | 30 MHz | 300 MHz |
|---|---|---|---|---|---|
| Designation | LF | MF | HF | VHF | |
| Radio Wave | | AM | | FM | |
| Modulation | | Amplitude Modulation | | Frequency Modulation | |

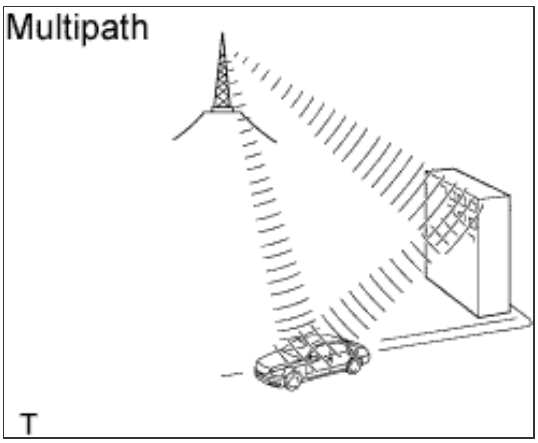
LF: Low Frequency MF: Medium Frequency HF: High Frequency VHF: Very High Frequency

b. Service area

i. The service areas of AM and FM broadcasts are vastly different. Sometimes an AM broadcast can be received very clearly but an FM stereo cannot. FM stereo has the smallest service area, and is prone to pick up static and other types of interference such as noise.

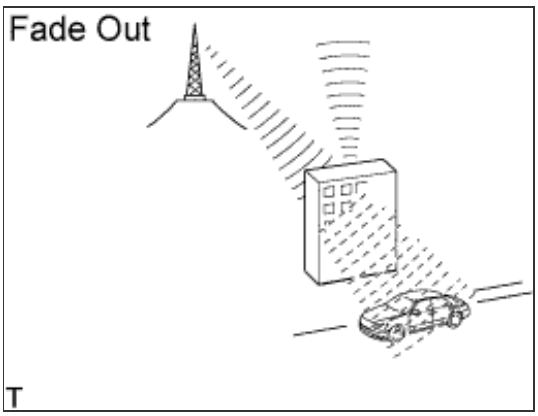


c. Radio reception problems



**HINT:**

In addition to static, other problems such as "phasing", "multipath" and "fade out" exist. These problems are not caused by electrical noise, but by the radio signal propagation method itself.



i. Phasing
AM broadcasts are susceptible to electrical interference and another kind of interference called phasing. Occurring only at night, phasing is the interference created when a vehicle receives 2 radio wave signals from the same transmitter. One signal is reflected off the ionosphere and the other signal is received directly from the transmitter.

ii. Multipath
Multipath is a type of interference created when a vehicle receives 2 radio wave signals from the same transmitter. One signal is reflected off buildings or mountains and the other signal is received directly from the transmitter.

iii. Fade out
Fade out is caused by objects (buildings, mountains and other such large obstacles) that deflect away part of a signal, resulting in a weaker signal when the object is between the transmitter and vehicle. High frequency radio waves, such as FM broadcasts, are easily deflected by obstructions. Low frequency radio waves, such as AM broadcasts, are less likely to deflect.

d. Noise problem
Technicians must have a clear understanding about each customer's noise complaint. Use the following table to diagnose noise problems.

| Radio Frequency | Noise Occurrence Condition | Presumable Cause |
|---|---|---|
| AM | Noise occurs in a specified area | Foreign noise |
| AM | Noise occurs when listening to an intermittent broadcast | An identical program transmitted from multiple towers can cause noise where the signals overlap |
| AM | Noise occurs only at night | Signal phasing |
| FM | Noise occurs while driving in a specified area | Multipath resulting from a change in FM frequency |

**for Preparation** Click here

**HINT:**

- **Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.**
- **Inspect the fuses and relays related to this system before inspecting the suspected areas below.**

**Audio Function**

| Symptom | Suspected Area | See page |

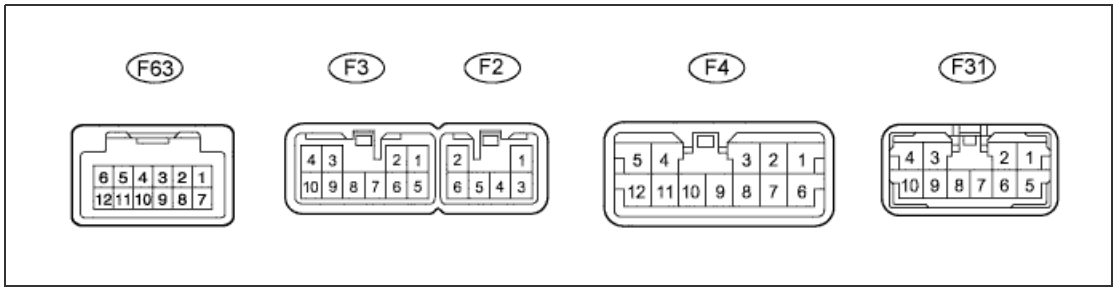
## RADIO RECEIVER ASSEMBLY

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specification |
|---|---|---|---|---|
| F54-3 (ILL+) - F54-15 (GND) | G - BR | Illumination signal | Light control switch off | Below 1 V |
| | | | Light control switch tail | 11 to 14 V |
| F54-5 (AUXI) - F54-15 (GND) | V - BR | External device connection detection signal | External device connected | Below 1 V |
| F54-6 (AGND) - Body ground | Shield - Body ground | Shield ground | Always | Below 1 V |
| F54-7 (SLD) - Body ground | Shield - Body ground | Shield ground | Always | Below 1 V |
| F54-8 (NTSC) - F54-15 (GND) | W - BR | DVD image signal | DVD playing | A waveform synchronized with display signals is output |
| F54-9 (MI+) | B | MOST communication signal | - | - |
| F54-10 (SLDI) - Body ground | BR - Body ground | Shield ground | Always | Below 1 V |
| F54-11 (MO+) | B | MOST communication signal | - | - |
| F54-12 (WUI) - F54-15 (GND) | R - BR | MOST communication wake up signal | Engine switch on (ACC) | 4.5 V or higher |
| F54-14 (B) - F54-15 (GND) | L - BR | Battery | Always | 11 to 14 V |
| F54-15 (GND) - Body ground | BR - Body ground | Ground | Always | Below 1 V |
| F54-17 (ILL-) - F54-15 (GND) | W - BR | Illumination (rheostat) signal | Light control switch off | Below 1 V |
| | | | Light control switch tail | Pulse generation |
| F54-19 (ARI) - F54-15 (GND) | W - BR | Sound signal (Right) | External device playing (When stereo jack used) | A waveform synchronized with sounds is output |
| F54-20 (ALI ) - F54-15 (GND) | B - BR | Sound signal (Left) | External device playing (When stereo jack used) | A waveform synchronized with sounds is output |
| F54-21 (ASGN) - F54-15 (GND) | R - BR | Shield ground | Always | Below 1 V |
| F54-22 (GND) - F54-15 (GND) | B - BR | Shield ground | Always | Below 1 V |
| F54-23 (MI-) | W | MOST communication signal | - | - |
| F54-24 (SLDI) - Body ground | BR - Body ground | Shield ground | Always | Below 1 V |
| F54-25 (MO-) | W | MOST communication signal | - | - |
| F54-26 (WUO) - F54-15 (GND) | R - RB | MOST communication wake up signal | Engine switch on (ACC) | 4.5 V or higher |
| RA1-5 (ANT+) - F54-15 (GND) | BR- RB | Power source of antenna | Engine switch on (ACC) Radio switch on and AM or FM | 11 to 14 V |



## MULTI-MEDIA INTERFACE ECU

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specification |
|---|---|---|---|---|
| L51-1 (USD1) - Body ground | Shield - Body ground | Shield ground | Always | Below 1 V |
| L51-2 (URO+) - L51-7 (GND) | W - B | USB audio system sound signal | USB audio system playing | A waveform synchronized with sounds is output |
| L51-3 (ULO+) - L51-7 (GND) | B - B | USB audio system sound signal | USB audio system playing | A waveform synchronized with sounds is output |

# DTC B1585 USB Media Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when a malfunction occurs in a connected device.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1585 | When one of the conditions below is met:<br>• Non mass-storage class or incompatible protocol USB device<br>• USB device with an incompatible file system, corrupted or incompatible File Allocation Table (FAT)<br>• "iPod" malfunction<br>• "iPod" with unsupported firmware<br>• Unsupported "iPod" model | • Multi-media interface ECU<br>• USB device or "iPod" |

## INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs.

### 1.REPLACE USB DEVICE OR "iPod"

a. Disconnect the USB device or "iPod" from the No. 1 stereo jack adapter assembly.

b. Turn the engine switch off.

**HINT:**

When this DTC has been stored, it is necessary to turn off the engine switch to make it possible for the vehicle to recognize a new device when it is connected.

c. Turn the engine switch on (ACC).

d. Connect a known good USB device or "iPod" to the No. 1 stereo jack adapter assembly.

**HINT:**

- **If the malfunction occurred when a USB device was in use, use another USB device for the inspection. If the malfunction occurred when an "iPod" was in use, use another "iPod" for the inspection.**
- **Refer to System Description for compatible formats and versions (Click here).**

**NEXT**

### 2.CLEAR DTC

a. Clear the DTCs (Click here).

**NEXT**

### 3.CHECK DTC

a. Recheck for DTCs.

**HINT:**

If DTCs are detected frequently, replace the multi-media interface ECU.

**OK:**
**No DTC is output.**

**NG** → REPLACE MULTI-MEDIA INTERFACE ECU (Click here)

OK

USB DEVICE FORMAT WAS INCOMPATIBLE, "iPod" VERSION WAS INCOMPATIBLE, OR USB DEVICE OR "iPod" WAS DEFECTIVE

# DTC B15A3 Stereo Component Amplifier Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when a malfunction occurs in the stereo component amplifier assembly.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15A3 | When one of the conditions below is met:<br>• Internal power supply malfunction<br>• DSP error<br>• EEPROM error | Stereo component amplifier assembly |

## INSPECTION PROCEDURE

**1.CHECK DTC**

a. Clear the DTC (Click here).

b. Recheck for DTC and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

**NG** → **REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)**

**OK**

**USE SIMULATION METHOD TO CHECK (Click here)**

# DTC B1585 USB Media Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when a malfunction occurs in a connected device.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1585 | When one of the conditions below is met:<br>• Non mass-storage class or incompatible protocol USB device<br>• USB device with an incompatible file system, corrupted or incompatible File Allocation Table (FAT)<br>• "iPod" malfunction<br>• "iPod" with unsupported firmware<br>• Unsupported "iPod" model | • Multi-media interface ECU<br>• USB device or "iPod" |

## INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs.

### 1.REPLACE USB DEVICE OR "iPod"

a. Disconnect the USB device or "iPod" from the No. 1 stereo jack adapter assembly.

b. Turn the engine switch off.

**HINT:**

When this DTC has been stored, it is necessary to turn off the engine switch to make it possible for the vehicle to recognize a new device when it is connected.

c. Turn the engine switch on (ACC).

d. Connect a known good USB device or "iPod" to the No. 1 stereo jack adapter assembly.

**HINT:**

- **If the malfunction occurred when a USB device was in use, use another USB device for the inspection. If the malfunction occurred when an "iPod" was in use, use another "iPod" for the inspection.**
- **Refer to System Description for compatible formats and versions (Click here).**

**NEXT**

### 2.CLEAR DTC

a. Clear the DTCs (Click here).

**NEXT**

### 3.CHECK DTC

a. Recheck for DTCs.

**HINT:**

If DTCs are detected frequently, replace the multi-media interface ECU.

**OK:**
**No DTC is output.**

**NG** → REPLACE MULTI-MEDIA INTERFACE ECU (Click here)

OK

USB DEVICE FORMAT WAS INCOMPATIBLE, "iPod" VERSION WAS INCOMPATIBLE, OR USB DEVICE OR "iPod" WAS DEFECTIVE

# DTC B15A3 Stereo Component Amplifier Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when a malfunction occurs in the stereo component amplifier assembly.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15A3 | When one of the conditions below is met:<br>• Internal power supply malfunction<br>• DSP error<br>• EEPROM error | Stereo component amplifier assembly |

## INSPECTION PROCEDURE

**1.CHECK DTC**

a. Clear the DTC (Click here).

b. Recheck for DTC and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

**NG** → **REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)**

**OK**

**USE SIMULATION METHOD TO CHECK (Click here)**

## DTC B15A1 Audio HU Malfunction

## DTC B15B3 Radio Tuner Malfunction

## DTC B15B5 DVD Changer Malfunction

## DTC B15B7 Bluetooth Module Malfunction

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored when a malfunction occurs in the radio receiver assembly.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15A1 | Bus malfunction, sub-micro processor malfunction | Radio receiver assembly |
| B15B3 | Tuner communication error | |
| B15B5 | When one of the conditions below is met:<br>• Mechanical communication error<br>• Read malfunction<br>• Mechanical malfunction | |
| B15B7 | "Bluetooth" module malfunction | |

### INSPECTION PROCEDURE

**1.CHECK DTC**

a. Clear the DTC (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

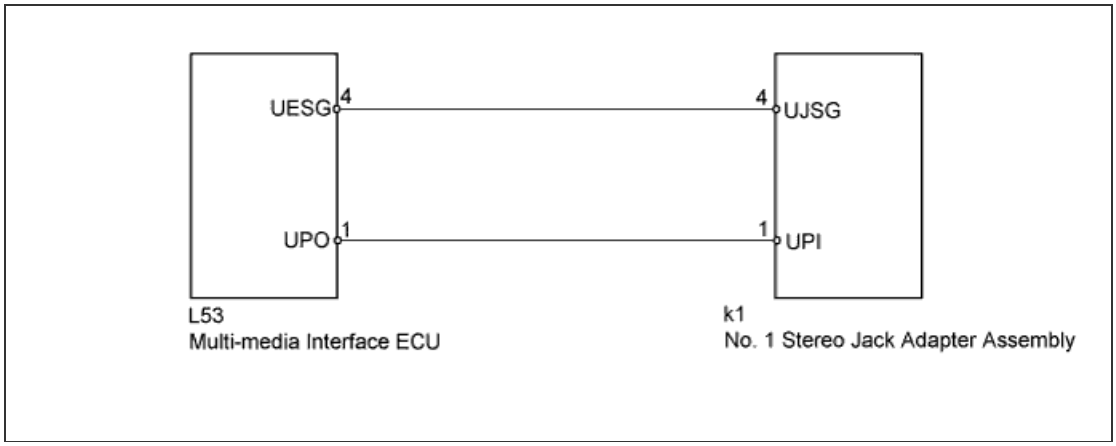
**OK:**
**No DTC is output.**

**NG** → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

**OK**

USE SIMULATION METHOD TO CHECK (Click here)

## DTC B15BB Multi-media Interface ECU Malfunction



**for Preparation** Click here

### DESCRIPTION

This DTC is stored when a malfunction occurs in the multi-media interface ECU.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15BB | When one of the conditions below is met:<br>• System microprocessor malfunction<br>• Media interface microprocessor malfunction<br>• CD-LSI (Large Scale Integration) malfunction<br>• Internal power supply malfunction | • USB device or "iPod"<br>• Wire harness or connector<br>• No. 1 stereo jack adapter assembly<br>• Multi-media interface ECU |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTC.

#### 1.REPLACE USB DEVICE OR "iPod"

a. Disconnect the USB device or "iPod" from the No. 1 stereo jack adapter assembly.

b. Turn the engine switch off.

**HINT:**

When this DTC has been stored, it is necessary to turn off the engine switch to make it possible for the vehicle to recognize a new device when it is connected.

c. Turn the engine switch on (ACC).

d. Connect a known good USB device or "iPod" to the No. 1 stereo jack adapter assembly.

**HINT:**

- **If the malfunction occurred when a USB device was in use, use another USB device for the inspection. If the malfunction occurred when an "iPod" was in use, use another "iPod" for the inspection.**

**NEXT**

#### 2.CLEAR DTC

a. Clear the DTCs (Click here).

**NEXT**

3.RECHECK FOR DTC

a. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

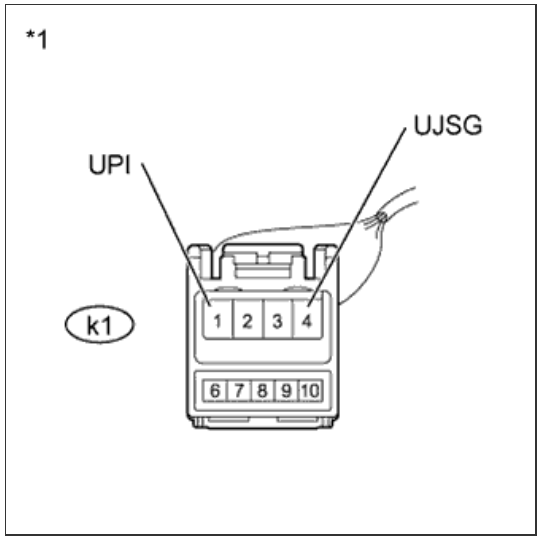
NG → Go to step 4

OK

USB DEVICE OR "iPod" WAS DEFECTIVE

4.INSPECT MULTI-MEDIA INTERFACE ECU

a. Disconnect the k1 No. 1 stereo jack adapter assembly connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| k1-1 (UPI) - k1-4 (UJSG) | Always | 5 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to No. 1 Stereo Jack Adapter Assembly) |

NG → Go to step 5

OK

REPLACE NO. 1 STEREO JACK ADAPTER ASSEMBLY (Click here)

5.CHECK HARNESS AND CONNECTOR (INTERFACE ECU - STEREO JACK ADAPTER)

a. Disconnect the L53 multi-media interface ECU connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L53-1 (UPO) - k1-1 (UPI) | Always | Below 1 Ω |
| L53-4 (UESG) - k1-4 (UJSG) | Always | Below 1 Ω |
| k1-1 (UPI) - Body ground | Always | 10 kΩ or higher |
| k1-4 (UJSG) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE MULTI-MEDIA INTERFACE ECU (Click here)

## DTC B15A1 Audio HU Malfunction

## DTC B15B3 Radio Tuner Malfunction

## DTC B15B5 DVD Changer Malfunction

## DTC B15B7 Bluetooth Module Malfunction

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored when a malfunction occurs in the radio receiver assembly.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15A1 | Bus malfunction, sub-micro processor malfunction | Radio receiver assembly |
| B15B3 | Tuner communication error | |
| B15B5 | When one of the conditions below is met:<br>• Mechanical communication error<br>• Read malfunction<br>• Mechanical malfunction | |
| B15B7 | "Bluetooth" module malfunction | |

### INSPECTION PROCEDURE

**1.CHECK DTC**

a. Clear the DTC (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

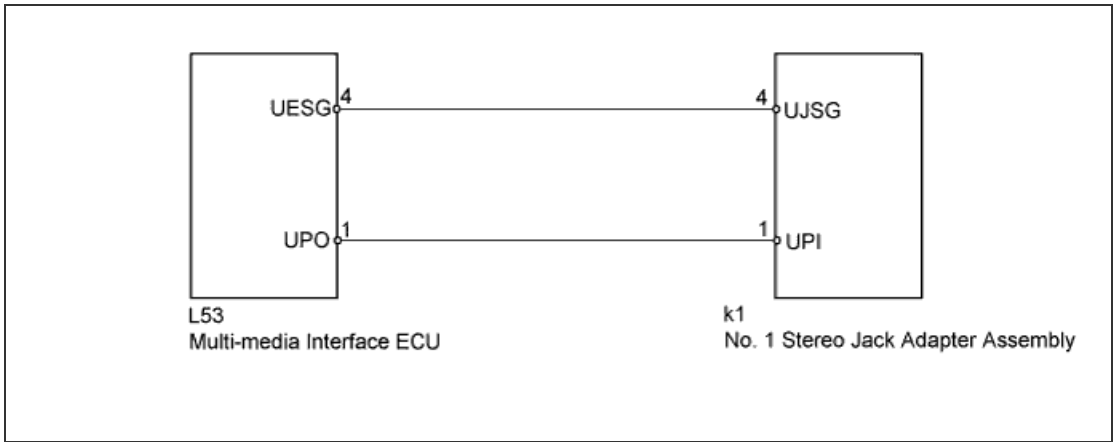
**OK:**
**No DTC is output.**

**NG** → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

**OK**

USE SIMULATION METHOD TO CHECK (Click here)

## DTC B15BB Multi-media Interface ECU Malfunction



**for Preparation** Click here

### DESCRIPTION

This DTC is stored when a malfunction occurs in the multi-media interface ECU.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15BB | When one of the conditions below is met:<br>• System microprocessor malfunction<br>• Media interface microprocessor malfunction<br>• CD-LSI (Large Scale Integration) malfunction<br>• Internal power supply malfunction | • USB device or "iPod"<br>• Wire harness or connector<br>• No. 1 stereo jack adapter assembly<br>• Multi-media interface ECU |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTC.

#### 1.REPLACE USB DEVICE OR "iPod"

a. Disconnect the USB device or "iPod" from the No. 1 stereo jack adapter assembly.

b. Turn the engine switch off.

**HINT:**

When this DTC has been stored, it is necessary to turn off the engine switch to make it possible for the vehicle to recognize a new device when it is connected.

c. Turn the engine switch on (ACC).

d. Connect a known good USB device or "iPod" to the No. 1 stereo jack adapter assembly.

**HINT:**

- **If the malfunction occurred when a USB device was in use, use another USB device for the inspection. If the malfunction occurred when an "iPod" was in use, use another "iPod" for the inspection.**

**NEXT**

#### 2.CLEAR DTC

a. Clear the DTCs (Click here).

**NEXT**

3.RECHECK FOR DTC

a. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

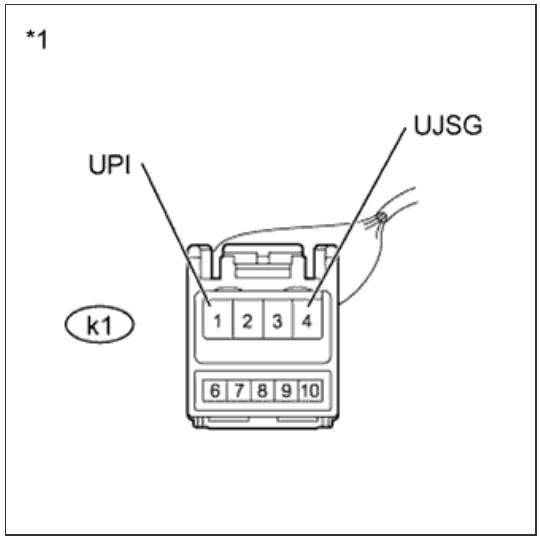
NG → Go to step 4

OK

USB DEVICE OR "iPod" WAS DEFECTIVE

4.INSPECT MULTI-MEDIA INTERFACE ECU

a. Disconnect the k1 No. 1 stereo jack adapter assembly connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| k1-1 (UPI) - k1-4 (UJSG) | Always | 5 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to No. 1 Stereo Jack Adapter Assembly) |

NG → Go to step 5

OK

REPLACE NO. 1 STEREO JACK ADAPTER ASSEMBLY (Click here)

5.CHECK HARNESS AND CONNECTOR (INTERFACE ECU - STEREO JACK ADAPTER)

a. Disconnect the L53 multi-media interface ECU connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L53-1 (UPO) - k1-1 (UPI) | Always | Below 1 Ω |
| L53-4 (UESG) - k1-4 (UJSG) | Always | Below 1 Ω |
| k1-1 (UPI) - Body ground | Always | 10 kΩ or higher |
| k1-4 (UJSG) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE MULTI-MEDIA INTERFACE ECU (Click here)

## DTC B15A1 Audio HU Malfunction

## DTC B15B3 Radio Tuner Malfunction

## DTC B15B5 DVD Changer Malfunction

## DTC B15B7 Bluetooth Module Malfunction

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored when a malfunction occurs in the radio receiver assembly.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15A1 | Bus malfunction, sub-micro processor malfunction | Radio receiver assembly |
| B15B3 | Tuner communication error | |
| B15B5 | When one of the conditions below is met:<br>• Mechanical communication error<br>• Read malfunction<br>• Mechanical malfunction | |
| B15B7 | "Bluetooth" module malfunction | |

### INSPECTION PROCEDURE

**1.CHECK DTC**

a. Clear the DTC (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

**NG** → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

**OK**

USE SIMULATION METHOD TO CHECK (Click here)

## INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs.

### 1.CHECK AUDIO MODELS

a. Check the audio model.

**Result**

| Result | Proceed to |
|---|---|
| 19 speakers | A |
| 9 speakers | B |

B → Go to step 19

A

### 2.CHECK DTC

a. Disconnect the F31, F4 and F3 amplifier connectors.

b. Clear the DTCs.

c. Check if DTC B15C3 is output.

**OK:**
**DTC B15C3 is not output.**

NG → REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

OK

### 3.CHECK DTC

a. Reconnect the F3 amplifier connector.

b. Check if DTC B15C3 is output.

**OK:**
**DTC B15C3 is not output.**

NG → Go to step 8

OK

### 4.CHECK DTC

a. Reconnect the F31 amplifier connector.

b. Check if DTC B15C3 is output.

**OK:**
**DTC B15C3 is not output.**

NG → Go to step 12

OK

### 5.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - SPEAKER)

a. Disconnect the F4 amplifier connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
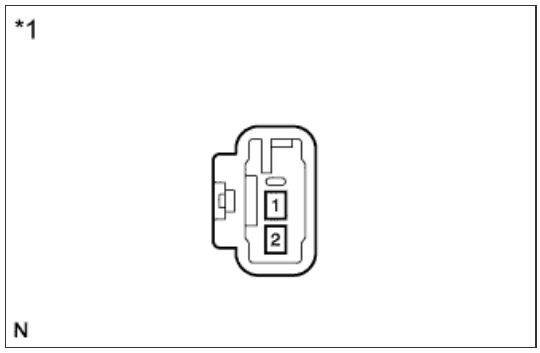
| F4-1 (SR+) - Body ground | Always | 10 kΩ or higher |
| F4-2 (SL+) - Body ground | | |
| F4-5 (WFR+) - Body ground | | |
| F4-6 (SR-) - Body ground | | |
| F4-7 (SL-) - Body ground | | |
| F4-8 (WFL-) - Body ground | | |
| F4-10 (WFL+) - Body ground | | |
| F4-11 (WFR-) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 6.INSPECT FRONT NO. 1 SPEAKER ASSEMBLY

a. Disconnect the I10 and I1 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 11 to 13 Ω |

**Text in Illustration**

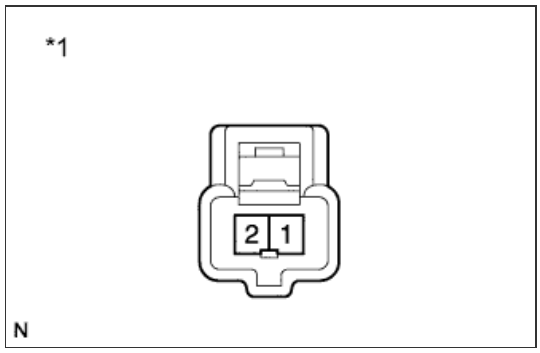
| | |
|---|---|
| *1 | Component without harness connected (Front No. 1 Speaker Assembly) |

NG → REPLACE FRONT NO. 1 SPEAKER ASSEMBLY (Click here)

OK

## 7.INSPECT REAR HEADER SPEAKER ASSEMBLY

a. Disconnect the S9 and S8 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Rear Header Speaker Assembly) |

NG → REPLACE REAR HEADER SPEAKER ASSEMBLY (Click here)

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 8.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - SPEAKER)

a. Disconnect the F3 amplifier connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-3 (CTR+) - Body ground | | |
| F3-9 (CTR-) - Body ground | | |
| F3-4 (RL+) - Body ground | | |

| | | |
|---|---|---|
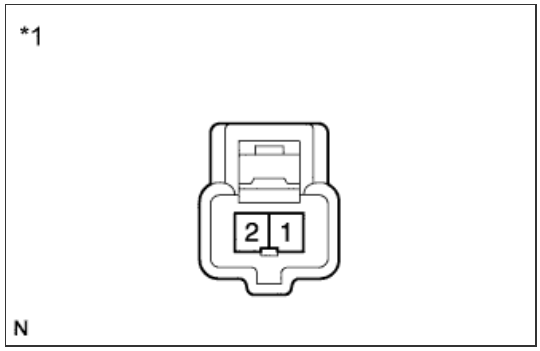
| F3-10 (RL-) - Body ground | Always | 10 kΩ or higher |
| F3-1 (WF1+) - Body ground | | |
| F3-6 (WF1-) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 9.INSPECT FRONT NO. 4 SPEAKER ASSEMBLY

a. Disconnect the F6 speaker connector.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

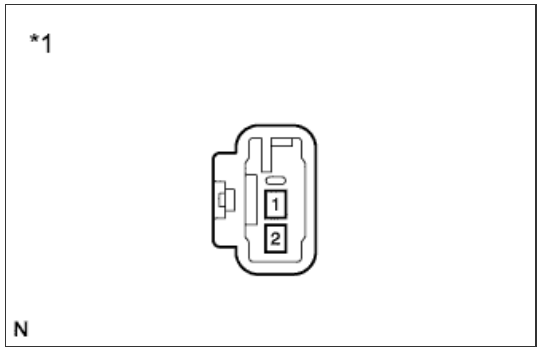
| | |
|---|---|
| *1 | Component without harness connected (Front No. 4 Speaker Assembly) |

NG → REPLACE FRONT NO. 4 SPEAKER ASSEMBLY (Click here)

OK

## 10.INSPECT REAR SPEAKER SET LH

a. Disconnect the J17 speaker connector.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4.8 to 7.2 Ω |

**Text in Illustration**

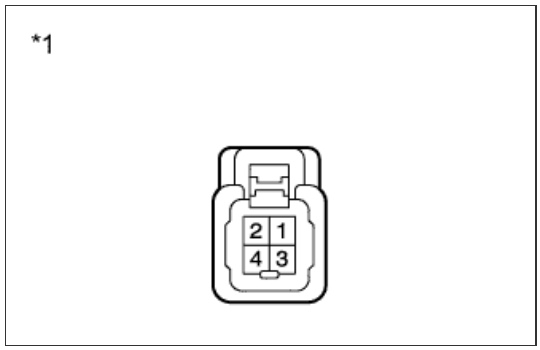
| | |
|---|---|
| *1 | Component without harness connected (Rear Speaker Set LH) |

NG → REPLACE REAR SPEAKER SET LH (Click here)

OK

## 11.INSPECT NO. 1 WOOFER BOX SPEAKER ASSEMBLY

a. Disconnect the L4 speaker connector.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 8.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (No. 1 Woofer Box Speaker Assembly) |

NG → REPLACE NO. 1 WOOFER BOX SPEAKER ASSEMBLY (Click here)

OK → REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 12.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - SPEAKER)

a. Disconnect the F31 amplifier connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
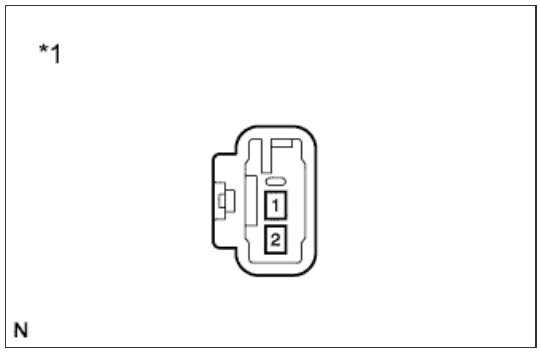
| F31-1 (RR+) - Body ground | Always | 10 kΩ or higher |
| F31-5 (RR-) - Body ground | | |
| F31-3 (R-L+) - Body ground | | |
| F31-9 (R-L-) - Body ground | | |
| F31-4 (R-R+) - Body ground | | |
| F31-10 (R-R-) - Body ground | | |
| F31-2 (FL+) - Body ground | | |
| F31-6 (FL-) - Body ground | | |
| F31-7 (FR-) - Body ground | | |
| F31-8 (FR+) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 13.INSPECT REAR SPEAKER SET RH

a. Disconnect the J15 speaker connector.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4.8 to 7.2 Ω |

**Text in Illustration**

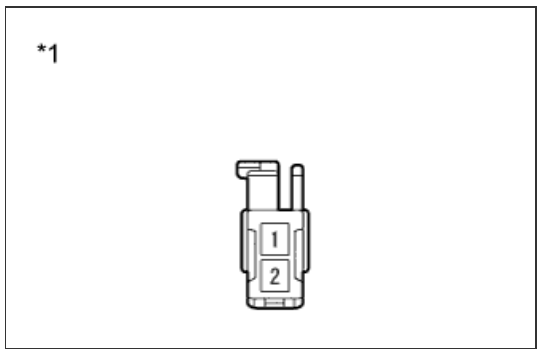
| | |
|---|---|
| *1 | Component without harness connected (Rear Speaker set RH) |

NG → REPLACE REAR SPEAKER SET RH ( Click here )

OK →

**14.INSPECT REAR NO. 2 SPEAKER ASSEMBLY**

a. Disconnect the rear No. 2 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Rear No. 2 Speaker Assembly) |

NG → REPLACE REAR NO. 2 SPEAKER ASSEMBLY ( Click here )

OK →

**15.CHECK REAR NO. 3 SPEAKER ASSEMBLY**

a. Disconnect the rear No. 3 speaker connectors.

b. Interchange the rear No. 3 speaker LH with RH.

c. Check that the malfunction disappears.

**OK:**
**Malfunction disappears.**

**HINT:**

- **Connect all the connectors to the rear No. 3 speakers.**
- **When there is a possibility that either the right or left rear speaker is defective, inspect by interchanging the right one with the left one.**
- **Perform the inspection above on both the LH and RH sides.**

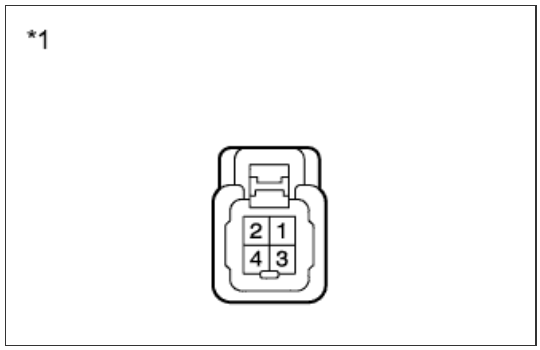
NG → Go to step 16

OK →

REPLACE REAR NO. 3 SPEAKER ASSEMBLY ( Click here )

**16.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY**

a. Disconnect the F8 and F7 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | Below 1 Ω |
| 3 - 4 | Always | Below 1 Ω |
| 2 - 4 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Front No. 2 Speaker Assembly) |

NG → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

OK

**17.CHECK FRONT NO. 3 SPEAKER ASSEMBLY**

a. Disconnect the F14 and F13 speaker connectors.

b. Interchange the front No. 3 speaker LH with RH.

c. Check that the malfunction disappears.

**OK:**
**Malfunction disappears.**

**HINT:**

- **Connect all the connectors to the front No. 3 speakers.**
- **When there is a possibility that either the right or left front speaker is defective, inspect by interchanging the right one with the left one.**
- **Perform the inspection above on both the LH and RH sides.**

NG → Go to step 18

OK

REPLACE FRONT NO. 3 SPEAKER ASSEMBLY (Click here)

**18.CHECK HARNESS AND CONNECTOR (FRONT NO. 2 SPEAKER - FRONT NO. 3 SPEAKER)**

a. Disconnect the F8, F7, F14 and F13 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F8-2 (TWL+) - F14-1 | Always | Below 1 Ω |
| F8-4 (TWL-) - F14-2 | | |
| F8-2 (TWL+) - Body ground | Always | 10 kΩ or higher |
| F8-4 (TWL-) - Body ground | | |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F7-2 (TWR+) - F13-1 | Always | Below 1 Ω |
| F7-4 (TWR-) - F13-2 | | |

| | | |
|---|---|---|
| F7-2 (TWR+) - Body ground | Always | 10 kΩ or higher |
| F7-4 (TWR-) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

END (STEREO COMPONENT AMPLIFIER IS DEFECTIVE)

19.CHECK DTC

a. Disconnect the F3 and F4 amplifier connectors.

b. Clear the DTCs.

c. Check if DTC B15C3 is output.

**OK:**
**DTC B15C3 is not output.**

NG → REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

OK

20.CHECK DTC

a. Reconnect the F31 amplifier connector.

b. Clear the DTCs.

c. Check if DTC B15C3 is output.

**OK:**
**DTC B15C3 is not output.**

NG → Go to step 24

OK

21.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - SPEAKER)

a. Disconnect the F3 amplifier connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
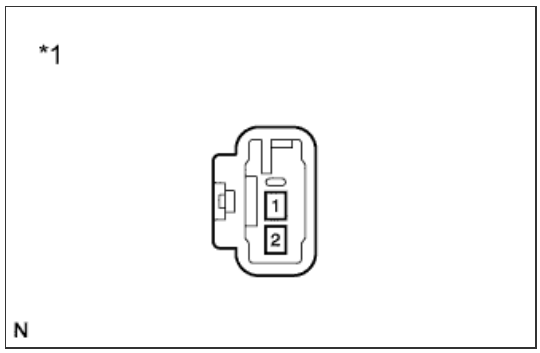
| F3-8 (CTR+) - Body ground | Always | 10 kΩ or higher |
| F3-7 (CTR-) - Body ground | | |
| F3-1 (WFL+) - Body ground | | |
| F3-5 (WFL-) - Body ground | | |
| F3-6 (WFR-) - Body ground | | |
| F3-2 (WFR+) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 22.INSPECT FRONT NO. 1 SPEAKER ASSEMBLY

a. Disconnect the I1 and J10 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 3 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Front No. 1 Speaker Assembly) |

NG → REPLACE FRONT NO. 1 SPEAKER ASSEMBLY (Click here)

OK

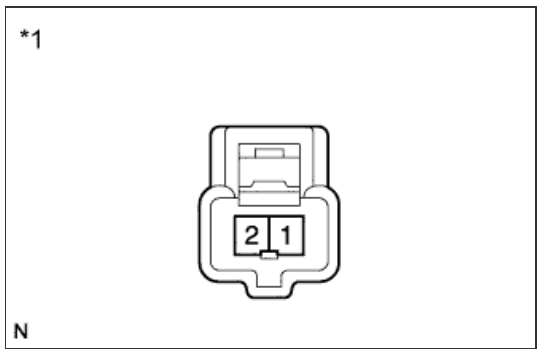
## 23.INSPECT FRONT NO. 4 SPEAKER ASSEMBLY

a. Disconnect the F6 speaker connector.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 6 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Front No. 4 Speaker Assembly) |

NG → REPLACE FRONT NO. 4 SPEAKER ASSEMBLY (Click here)

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 24.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - SPEAKER)

a. Disconnect the F4 amplifier connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-8 (FL-) - Body ground | | |
| F4-3 (FL+) - Body ground | | |
| F4-9 (FR-) - Body ground | | |
| F4-5 (RR+) - Body | | |

| | | |
|---|---|---|
| ground | Always | 10 kΩ or higher |
| F4-4 (RL+) - Body ground | | |
| F4-10 (FR+) - Body ground | | |
| F4-12 (RR-) - Body ground | | |
| F4-11 (RL-) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

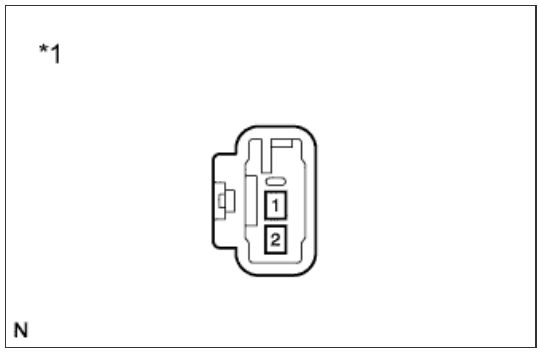
**25.INSPECT REAR SPEAKER SET**

a. Disconnect the J17 and J15 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Rear Speaker Set) |

NG → REPLACE REAR SPEAKER SET (Click here)

OK

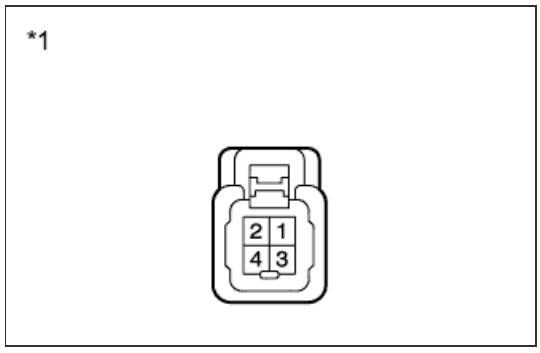
**26.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY**

a. Disconnect the F8 and F7 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | Below 1 Ω |
| 3 - 4 | Always | Below 1 Ω |
| 2 - 4 | Always | 4 Ω |

**Text in Illustration**

| | |
|---|---|
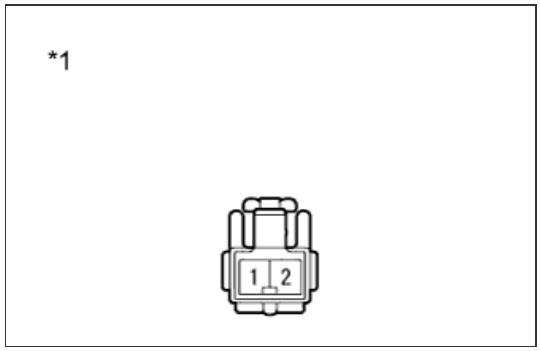
| *1 | Component without harness connected (Front No. 2 Speaker Assembly) |



NG → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

OK

**27.INSPECT FRONT NO. 3 SPEAKER ASSEMBLY**

a. Disconnect the F14 and F13 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Front No. 3 Speaker Assembly) |

NG → REPLACE FRONT NO. 3 SPEAKER ASSEMBLY (Click here)

OK

**28.CHECK HARNESS AND CONNECTOR (FRONT NO. 2 SPEAKER - FRONT NO. 3 SPEAKER)**

a. Disconnect the F8, F7, F14 and F13 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F8-2 (TWL+) - F14-1 | Always | Below 1 Ω |
| F8-4 (TWL-) - F14-2 | | |
| F8-2 (TWL+) - Body ground | Always | 10 kΩ or higher |
| F8-4 (TWL-) - Body ground | | |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F7-2 (TWR+) - F13-1 | Always | Below 1 Ω |
| F7-4 (TWR-) - F13-2 | | |
| F7-2 (TWR+) - Body ground | Always | 10 kΩ or higher |
| F7-4 (TWR-) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

END (STEREO COMPONENT AMPLIFIER IS DEFECTIVE)

## DTC B15A1 Audio HU Malfunction

## DTC B15B3 Radio Tuner Malfunction

## DTC B15B5 DVD Changer Malfunction

## DTC B15B7 Bluetooth Module Malfunction

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored when a malfunction occurs in the radio receiver assembly.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15A1 | Bus malfunction, sub-micro processor malfunction | Radio receiver assembly |
| B15B3 | Tuner communication error | |
| B15B5 | When one of the conditions below is met:<br>• Mechanical communication error<br>• Read malfunction<br>• Mechanical malfunction | |
| B15B7 | "Bluetooth" module malfunction | |

### INSPECTION PROCEDURE

**1.CHECK DTC**

a. Clear the DTC (Click here).

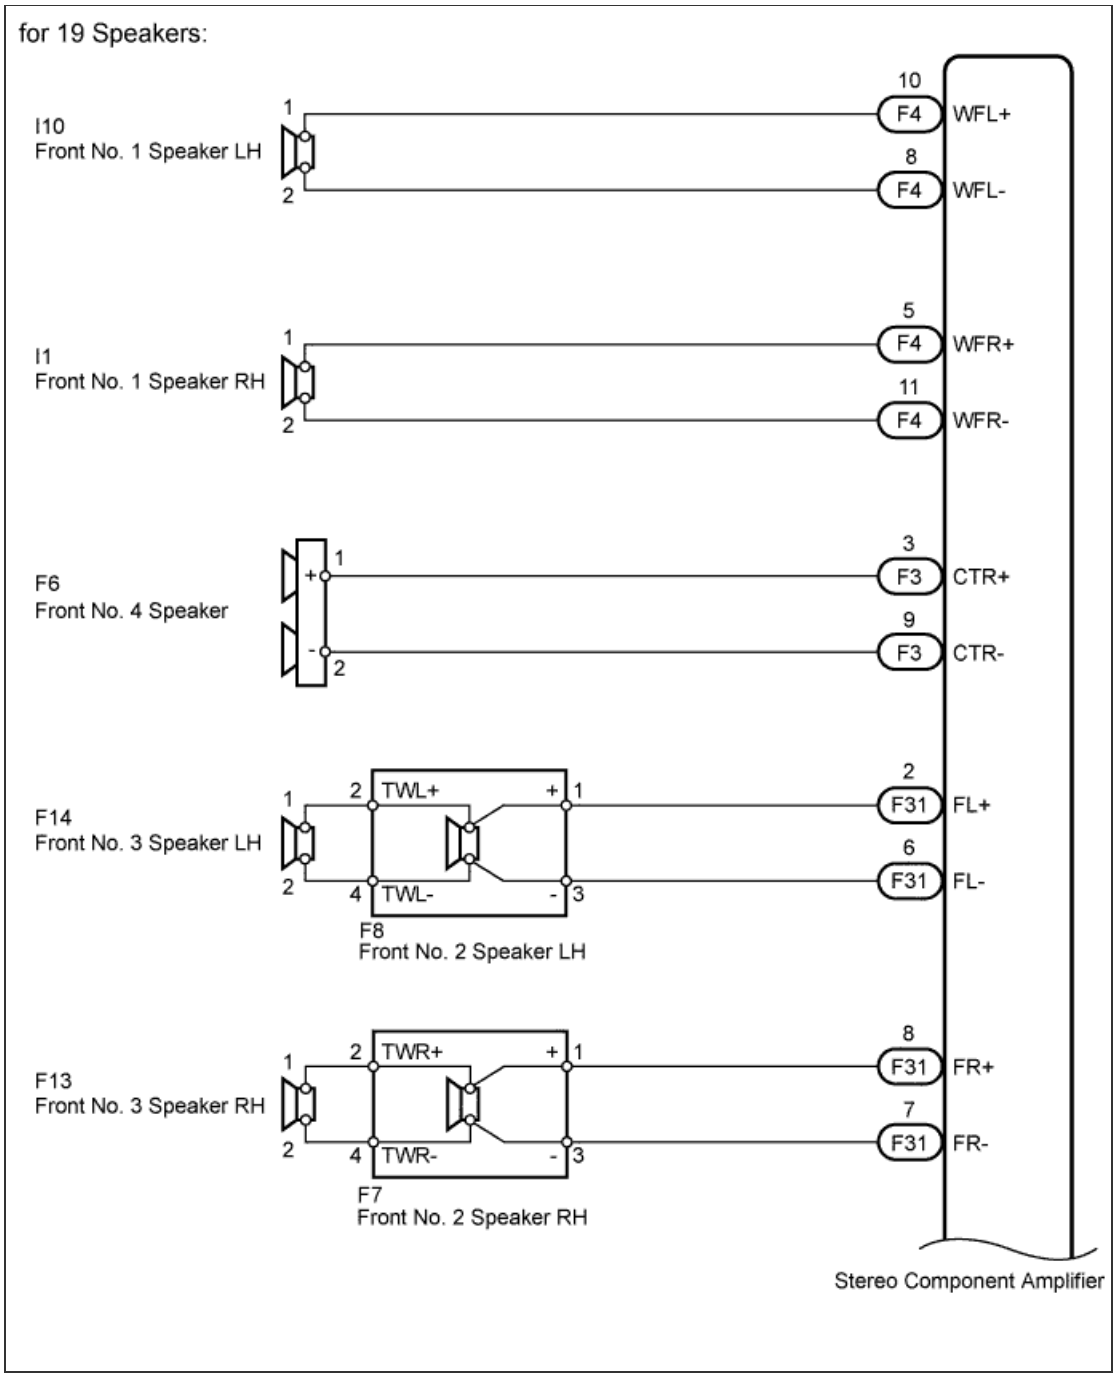
b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

**NG** → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

**OK**

USE SIMULATION METHOD TO CHECK (Click here)



## DTC B15C3 Speaker Output Short

## INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs.

### 1.CHECK AUDIO MODELS

a. Check the audio model.

**Result**

| Result | Proceed to |
|---|---|
| 19 speakers | A |
| 9 speakers | B |

B → Go to step 19

A

### 2.CHECK DTC

a. Disconnect the F31, F4 and F3 amplifier connectors.

b. Clear the DTCs.

c. Check if DTC B15C3 is output.

**OK:**
**DTC B15C3 is not output.**

NG → REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

OK

### 3.CHECK DTC

a. Reconnect the F3 amplifier connector.

b. Check if DTC B15C3 is output.

**OK:**
**DTC B15C3 is not output.**

NG → Go to step 8

OK

### 4.CHECK DTC

a. Reconnect the F31 amplifier connector.

b. Check if DTC B15C3 is output.

**OK:**
**DTC B15C3 is not output.**

NG → Go to step 12

OK

### 5.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - SPEAKER)

a. Disconnect the F4 amplifier connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-1 (SR+) - Body ground | Always | 10 kΩ or higher |
| F4-2 (SL+) - Body ground | | |
| F4-5 (WFR+) - Body ground | | |
| F4-6 (SR-) - Body ground | | |
| F4-7 (SL-) - Body ground | | |
| F4-8 (WFL-) - Body ground | | |
| F4-10 (WFL+) - Body ground | | |
| F4-11 (WFR-) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

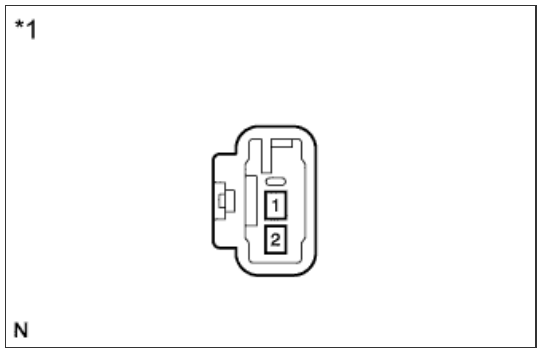
## 6.INSPECT FRONT NO. 1 SPEAKER ASSEMBLY

a. Disconnect the I10 and I1 speaker connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 11 to 13 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Front No. 1 Speaker Assembly) |

NG → REPLACE FRONT NO. 1 SPEAKER ASSEMBLY (Click here)

OK

## 7.INSPECT REAR HEADER SPEAKER ASSEMBLY

a. Disconnect the S9 and S8 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Rear Header Speaker Assembly) |

NG → REPLACE REAR HEADER SPEAKER ASSEMBLY (Click here)

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 8.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - SPEAKER)

a. Disconnect the F3 amplifier connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-3 (CTR+) - Body ground | | |
| F3-9 (CTR-) - Body ground | | |
| F3-4 (RL+) - Body ground | | |

| | | |
|---|---|---|
| F3-10 (RL-) - Body ground | Always | 10 kΩ or higher |
| F3-1 (WF1+) - Body ground | | |
| F3-6 (WF1-) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 9.INSPECT FRONT NO. 4 SPEAKER ASSEMBLY

a. Disconnect the F6 speaker connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Front No. 4 Speaker Assembly) |

NG → REPLACE FRONT NO. 4 SPEAKER ASSEMBLY (Click here)

OK

## 10.INSPECT REAR SPEAKER SET LH

a. Disconnect the J17 speaker connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4.8 to 7.2 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Rear Speaker Set LH) |

NG → REPLACE REAR SPEAKER SET LH (Click here)

OK

## 11.INSPECT NO. 1 WOOFER BOX SPEAKER ASSEMBLY

a. Disconnect the L4 speaker connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 8.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (No. 1 Woofer Box Speaker Assembly) |

NG → REPLACE NO. 1 WOOFER BOX SPEAKER ASSEMBLY (Click here)

OK → REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 12.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - SPEAKER)

a. Disconnect the F31 amplifier connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F31-1 (RR+) - Body ground | Always | 10 kΩ or higher |
| F31-5 (RR-) - Body ground | | |
| F31-3 (R-L+) - Body ground | | |
| F31-9 (R-L-) - Body ground | | |
| F31-4 (R-R+) - Body ground | | |
| F31-10 (R-R-) - Body ground | | |
| F31-2 (FL+) - Body ground | | |
| F31-6 (FL-) - Body ground | | |
| F31-7 (FR-) - Body ground | | |
| F31-8 (FR+) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 13.INSPECT REAR SPEAKER SET RH

a. Disconnect the J15 speaker connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4.8 to 7.2 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Rear Speaker set RH) |

NG → REPLACE REAR SPEAKER SET RH ( Click here )

OK →

**14.INSPECT REAR NO. 2 SPEAKER ASSEMBLY**

a. Disconnect the rear No. 2 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Rear No. 2 Speaker Assembly) |

NG → REPLACE REAR NO. 2 SPEAKER ASSEMBLY ( Click here )

OK →

**15.CHECK REAR NO. 3 SPEAKER ASSEMBLY**

a. Disconnect the rear No. 3 speaker connectors.

b. Interchange the rear No. 3 speaker LH with RH.

c. Check that the malfunction disappears.

**OK:**
**Malfunction disappears.**

**HINT:**

- **Connect all the connectors to the rear No. 3 speakers.**
- **When there is a possibility that either the right or left rear speaker is defective, inspect by interchanging the right one with the left one.**
- **Perform the inspection above on both the LH and RH sides.**

NG → Go to step 16

OK →

REPLACE REAR NO. 3 SPEAKER ASSEMBLY ( Click here )

**16.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY**

a. Disconnect the F8 and F7 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | Below 1 Ω |
| 3 - 4 | Always | Below 1 Ω |
| 2 - 4 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Front No. 2 Speaker Assembly) |

NG → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

OK

**17.CHECK FRONT NO. 3 SPEAKER ASSEMBLY**

a. Disconnect the F14 and F13 speaker connectors.

b. Interchange the front No. 3 speaker LH with RH.

c. Check that the malfunction disappears.

**OK:**
**Malfunction disappears.**

**HINT:**

- **Connect all the connectors to the front No. 3 speakers.**
- **When there is a possibility that either the right or left front speaker is defective, inspect by interchanging the right one with the left one.**
- **Perform the inspection above on both the LH and RH sides.**

NG → Go to step 18

OK

REPLACE FRONT NO. 3 SPEAKER ASSEMBLY (Click here)

**18.CHECK HARNESS AND CONNECTOR (FRONT NO. 2 SPEAKER - FRONT NO. 3 SPEAKER)**

a. Disconnect the F8, F7, F14 and F13 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F8-2 (TWL+) - F14-1 | Always | Below 1 Ω |
| F8-4 (TWL-) - F14-2 | | |
| F8-2 (TWL+) - Body ground | Always | 10 kΩ or higher |
| F8-4 (TWL-) - Body ground | | |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F7-2 (TWR+) - F13-1 | Always | Below 1 Ω |
| F7-4 (TWR-) - F13-2 | | |

| | | |
|---|---|---|
| F7-2 (TWR+) - Body ground | Always | 10 kΩ or higher |
| F7-4 (TWR-) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

END (STEREO COMPONENT AMPLIFIER IS DEFECTIVE)

19.CHECK DTC

a. Disconnect the F3 and F4 amplifier connectors.

b. Clear the DTCs.

c. Check if DTC B15C3 is output.

**OK:**
**DTC B15C3 is not output.**

NG → REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

OK

20.CHECK DTC

a. Reconnect the F31 amplifier connector.

b. Clear the DTCs.

c. Check if DTC B15C3 is output.

**OK:**
**DTC B15C3 is not output.**

NG → Go to step 24

OK

21.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - SPEAKER)

a. Disconnect the F3 amplifier connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-8 (CTR+) - Body ground | Always | 10 kΩ or higher |
| F3-7 (CTR-) - Body ground | | |
| F3-1 (WFL+) - Body ground | | |
| F3-5 (WFL-) - Body ground | | |
| F3-6 (WFR-) - Body ground | | |
| F3-2 (WFR+) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 22.INSPECT FRONT NO. 1 SPEAKER ASSEMBLY

a. Disconnect the I1 and J10 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 3 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Front No. 1 Speaker Assembly) |

NG → REPLACE FRONT NO. 1 SPEAKER ASSEMBLY (Click here)

OK

## 23.INSPECT FRONT NO. 4 SPEAKER ASSEMBLY

a. Disconnect the F6 speaker connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 6 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Front No. 4 Speaker Assembly) |

NG → REPLACE FRONT NO. 4 SPEAKER ASSEMBLY (Click here)

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 24.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - SPEAKER)

a. Disconnect the F4 amplifier connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-8 (FL-) - Body ground | | |
| F4-3 (FL+) - Body ground | | |
| F4-9 (FR-) - Body ground | | |
| F4-5 (RR+) - Body | | |

| | | |
|---|---|---|
| ground | Always | 10 kΩ or higher |
| F4-4 (RL+) - Body ground | | |
| F4-10 (FR+) - Body ground | | |
| F4-12 (RR-) - Body ground | | |
| F4-11 (RL-) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**25.INSPECT REAR SPEAKER SET**

a. Disconnect the J17 and J15 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Rear Speaker Set) |

NG → REPLACE REAR SPEAKER SET (Click here)

OK

**26.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY**

a. Disconnect the F8 and F7 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | Below 1 Ω |
| 3 - 4 | Always | Below 1 Ω |
| 2 - 4 | Always | 4 Ω |

**Text in Illustration**

| | |
|---|---|
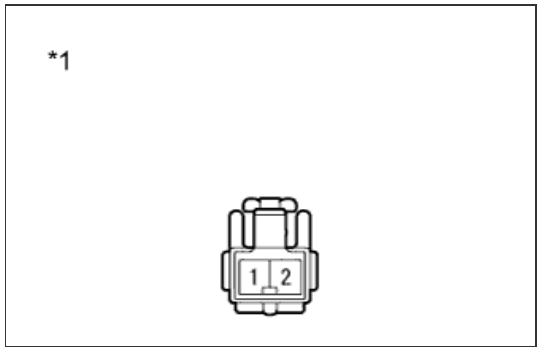
| *1 | Component without harness connected (Front No. 2 Speaker Assembly) |



NG → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

OK

**27.INSPECT FRONT NO. 3 SPEAKER ASSEMBLY**

a. Disconnect the F14 and F13 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Front No. 3 Speaker Assembly) |

NG → REPLACE FRONT NO. 3 SPEAKER ASSEMBLY (Click here)

OK

**28.CHECK HARNESS AND CONNECTOR (FRONT NO. 2 SPEAKER - FRONT NO. 3 SPEAKER)**

a. Disconnect the F8, F7, F14 and F13 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F8-2 (TWL+) - F14-1 | Always | Below 1 Ω |
| F8-4 (TWL-) - F14-2 | | |
| F8-2 (TWL+) - Body ground | Always | 10 kΩ or higher |
| F8-4 (TWL-) - Body ground | | |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F7-2 (TWR+) - F13-1 | Always | Below 1 Ω |
| F7-4 (TWR-) - F13-2 | | |
| F7-2 (TWR+) - Body ground | Always | 10 kΩ or higher |
| F7-4 (TWR-) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

END (STEREO COMPONENT AMPLIFIER IS DEFECTIVE)

## DTC B15A1 Audio HU Malfunction

## DTC B15B3 Radio Tuner Malfunction

## DTC B15B5 DVD Changer Malfunction

## DTC B15B7 Bluetooth Module Malfunction

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored when a malfunction occurs in the radio receiver assembly.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15A1 | Bus malfunction, sub-micro processor malfunction | Radio receiver assembly |
| B15B3 | Tuner communication error | |
| B15B5 | When one of the conditions below is met:<br>• Mechanical communication error<br>• Read malfunction<br>• Mechanical malfunction | |
| B15B7 | "Bluetooth" module malfunction | |

### INSPECTION PROCEDURE

**1.CHECK DTC**

a. Clear the DTC (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

**NG** → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

**OK**

USE SIMULATION METHOD TO CHECK (Click here)

# DTC B15DF USB Communication Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when a malfunction occurs in communication with a USB device or "iPod".

| DTC NO. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15DF | When one of the conditions below is met:<br>• Communication error with USB device<br>• "iPod" control software of system microprocessor malfunction<br>• Communication error with "iPod" | • Multi-media interface ECU<br>• USB device or "iPod" |

## INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs.

### 1.REPLACE USB DEVICE OR "iPod"

a. Disconnect the USB device or "iPod" from the No. 1 stereo jack adapter assembly.

b. Turn the engine switch off.

**HINT:**

When this DTC has been stored, it is necessary to turn off the engine switch to make it possible for the vehicle to recognize a new device when it is connected.

c. Turn the engine switch on (ACC).

d. Connect a known good USB device or "iPod" to the No. 1 stereo jack adapter assembly.

**HINT:**

- **If the malfunction occurred when a USB device was in use, use another USB device for the inspection. If the malfunction occurred when an "iPod" was in use, use another "iPod" for the inspection.**

**NEXT**

### 2.CLEAR DTC

a. Clear the DTCs (Click here).

**NEXT**

### 3.RECHECK FOR DTC

a. Recheck for DTCs.

**HINT:**

If DTCs are detected frequently, replace the multi-media interface ECU.

**OK:**
**No DTC is output.**

**NG** → REPLACE MULTI-MEDIA INTERFACE ECU (Click here)

**OK**

### USB DEVICE OR "iPod" WAS DEFECTIVE

## DTC B15A1 Audio HU Malfunction

## DTC B15B3 Radio Tuner Malfunction

## DTC B15B5 DVD Changer Malfunction

## DTC B15B7 Bluetooth Module Malfunction

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored when a malfunction occurs in the radio receiver assembly.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15A1 | Bus malfunction, sub-micro processor malfunction | Radio receiver assembly |
| B15B3 | Tuner communication error | |

# DTC B15DF USB Communication Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when a malfunction occurs in communication with a USB device or "iPod".

| DTC NO. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15DF | When one of the conditions below is met:<br>• Communication error with USB device<br>• "iPod" control software of system microprocessor malfunction<br>• Communication error with "iPod" | • Multi-media interface ECU<br>• USB device or "iPod" |

## INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs.

### 1.REPLACE USB DEVICE OR "iPod"

a. Disconnect the USB device or "iPod" from the No. 1 stereo jack adapter assembly.

b. Turn the engine switch off.

**HINT:**

When this DTC has been stored, it is necessary to turn off the engine switch to make it possible for the vehicle to recognize a new device when it is connected.

c. Turn the engine switch on (ACC).

d. Connect a known good USB device or "iPod" to the No. 1 stereo jack adapter assembly.

**HINT:**

- **If the malfunction occurred when a USB device was in use, use another USB device for the inspection. If the malfunction occurred when an "iPod" was in use, use another "iPod" for the inspection.**

**NEXT**

### 2.CLEAR DTC

a. Clear the DTCs (Click here).

**NEXT**

### 3.RECHECK FOR DTC

a. Recheck for DTCs.

**HINT:**

If DTCs are detected frequently, replace the multi-media interface ECU.

**OK:**
**No DTC is output.**

**NG** → REPLACE MULTI-MEDIA INTERFACE ECU (Click here)

**OK**

### USB DEVICE OR "iPod" WAS DEFECTIVE

# DTC B15E1 Media Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when signals from the disc in the radio receiver assembly cannot be read.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
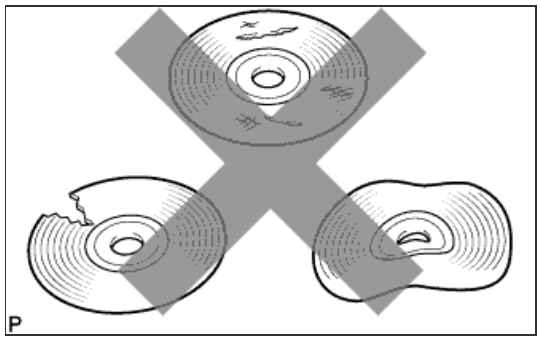
| B15E1 | When one of the conditions below is met:<br>• An unsuitable disc is inserted.<br>• The disc cannot be read.<br>• The disc cannot be read because of dirt or scratches.<br>• The disc cannot be read because it is inserted upside down. | • CD or DVD<br>• Radio receiver assembly |



## INSPECTION PROCEDURE

### 1.CHECK DISC

a. Check that the disc is not deformed or cracked.

**OK:**

**No deformation or cracks on the disc**

NG → CHANGE DISC

OK

### 2.DISC CLEANING

a. Disc cleaning

i. If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.

**NOTICE:**

Do not use a conventional record cleaner or anti-static preservative.

NEXT

### 3.REPLACE DISC WITH ANOTHER AND RECHECK

a. Replace the disc with another and recheck.

b. Clear the DTC (Click here).

c. Recheck for DTC and check if the same trouble occurs again.

**OK:**

No DTC is output.

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

END

| B15B3 | Tuner communication error | |
| B15B5 | When one of the conditions below is met:<br>• Mechanical communication error<br>• Read malfunction<br>• Mechanical malfunction | |
| B15B7 | "Bluetooth" module malfunction | |

### INSPECTION PROCEDURE

**1.CHECK DTC**

a. Clear the DTC (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

**NG** → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

**OK**

USE SIMULATION METHOD TO CHECK (Click here)

# DTC B15E1 Media Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when signals from the disc in the radio receiver assembly cannot be read.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
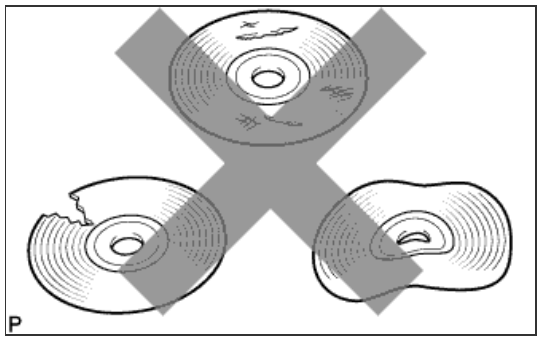
| B15E1 | When one of the conditions below is met:<br>• An unsuitable disc is inserted.<br>• The disc cannot be read.<br>• The disc cannot be read because of dirt or scratches.<br>• The disc cannot be read because it is inserted upside down. | • CD or DVD<br>• Radio receiver assembly |



## INSPECTION PROCEDURE

### 1.CHECK DISC

a. Check that the disc is not deformed or cracked.

**OK:**

**No deformation or cracks on the disc**

NG → CHANGE DISC

OK

### 2.DISC CLEANING

a. Disc cleaning

i. If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.

**NOTICE:**

Do not use a conventional record cleaner or anti-static preservative.

NEXT

### 3.REPLACE DISC WITH ANOTHER AND RECHECK

a. Replace the disc with another and recheck.

b. Clear the DTC (Click here).

c. Recheck for DTC and check if the same trouble occurs again.

**OK:**

No DTC is output.

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

END

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.NOISE CONDITION

a. Check from which direction the noise comes (front left or right, rear left or right).

i. Check from which direction the noise comes.

**OK:**
**The location of the noise source can be determined.**

NG → Go to step 3

OK

### 2.CHECK SPEAKERS

a. Check the installation conditions of the speaker units that are located near the noise source and that there are no cracks, scratches, deformation or other malfunctions.

**Result**

| Condition | Proceed to |
|---|---|
| A speaker is installed incorrectly | A |
| Foreign objects are in the speaker | B |
| A speaker cone paper is broken | C |
| No malfunction is found | D |

A → REINSTALL SPEAKER

B → REMOVE FOREIGN OBJECT

C → REPLACE SPEAKER

D

### 3.CHECK NOISE CONDITION

a. Check the noise condition.

**HINT:**

The radio has a noise prevention function to reduce noise when listening to the radio. If a loud noise occurs, check whether the ground at the antenna mounting base and the noise prevention unit are installed and wired correctly.

| Condition under which Noise Occurs | Noise Source |
|---|---|
| Noise increases when the accelerator pedal is depressed, but stops when the engine is stopped. | Generator |
| Noise occurs during A/C or heater operation. | Blower motor |
| Noise occurs when the horn switch is pressed and released or when pressed and held. | Horn |
| Noise occurs synchronously with the blink of the turn signal. | Flasher |
| Noise occurs during window washer operation. | Washer |
| Noise occurs during wiper operation. | Wiper |
| Noise occurs when the brake pedal is depressed. | Stop light switch |
| Noise occurs when the sliding roof moves. | Sliding roof motor |
| Others | Static electricity |

**HINT:**

- **In the chart left column, find the situation that matches the customer's complaint. Then, in the right column, find the part**

that is causing the noise. Check the respective noise filter.

- To save time and avoid a misdiagnosis, first make sure that the noise is not coming from outside the vehicle.
- Troubleshoot noises in descending order of loudness.
- Setting the radio to a frequency where no signal is received may make recognition of the noise problem easier.

**OK:**

The noise source cannot be determined.

| | | |
|---|---|---|
| | NG | REPAIR OR REPLACE NOISE SOURCE |
| OK | | |
| PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here) | | |

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.CHECK VEHICLE CONDITION**

a. Check that conditions in the cabin are not likely to cause condensation.

**HINT:**

This problem occurs if the cabin is humid and the temperature changes rapidly. This may produce condensation, resulting in a short circuit.

**OK:**

**Condensation is not likely being produced.**

NG → **DRY OUT CABIN AND RECHECK CONDITION**

OK

**PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)**

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.CHECK VEHICLE CONDITION**

a. Check that conditions in the cabin are not likely to cause condensation.

**HINT:**

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.CHECK RADIO RECEIVER ASSEMBLY**

a. Check the radio receiver assembly settings.

i. Check that the volume is not set to "0".

ii. Check that mute is off.

**OK:**
**The volume is not set to "0" and mute is off.**

NG → SET VOLUME TO HIGH AND TURN MUTE OFF

OK

**PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)**

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.CHECK RADIO RECEIVER ASSEMBLY**

a. Check the radio receiver assembly settings.

i. Check that the volume is not set to "0".

ii. Check that mute is off.

**OK:**
**The volume is not set to "0" and mute is off.**

NG → SET VOLUME TO HIGH AND TURN MUTE OFF

OK

**PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)**

## INSPECTION PROCEDURE

**1.REPLACE DISC AND RECHECK**

a. Replace the disc with a known good one and recheck.

i. Check if the same trouble occurs again.

**OK:**
**Malfunction disappears.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK → END

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK IF A PROPER DISC IS INSERTED

a. Make sure that the disc is an audio disc or a disc with MP3 or WMA files, and that it is not deformed, flawed, stained, deteriorated or otherwise defective.

**OK:**
**Normal disc**

**HINT:**

- **Translucent or uniquely-shaped discs cannot be played.**
- **CDs and DVDs with adhesive paper labels should not be played.**
- **Commercial audio CDs and DVDs can be played.**
- **CD-DA files on CD-ROMs, CD-Rs and CD-RWs can be played.**
- **MP3 and WMA files on CD-ROMs, CD-Rs and CD-RWs can be played.**
- **For details on playable CDs and DVDs, refer to the Owner's Manual.**

NG → CHANGE DISC

OK

### 2.CHECK THAT DISC IS INSERTED PROPERLY

a. Check whether or not the disc is inserted upside down.

**OK:**
**Disc is properly inserted.**

NG → INSERT DISC PROPERLY

OK

### 3.CLEAN DISC AND RECHECK

a. Clean the disc by wiping it clean with a soft cloth from the inside to the outside in a radial direction.

**OK:**
**Malfunction disappears.**

**NOTICE:**

Do not use a conventional record cleaner or anti-static preservative.

NG → Go to step 4

OK

END

### 4.REPLACE DISC AND RECHECK

a. Replace the disc with a known good one and check if the same trouble occurs again.

**OK:**

Malfunction disappears.

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

END

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.PRESS EJECT AND CHECK OPERATION**

a. Press the disc eject switch of the radio receiver assembly for 2 seconds or more and check that the disc is ejected.

**OK:**
**Disc is ejected.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK ↓

**2.REPLACE DISC AND RECHECK**

a. Replace the disc with a known good one and recheck.

**OK:**
**Disc is ejected.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK ↓

**END**

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK DISC

a. Check that the disc is not deformed or cracked.

**OK:**
**No deformation or cracks on the disc**

NG → CHANGE DISC

OK

### 2.CHECK DISC

a. Check the disc.

**OK:**
**The disc is clean.**

**HINT:**

If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.

**NOTICE:**

Do not use a conventional record cleaner or anti-static preservative.

NG → CLEAN DISC

OK

### 3.CHECK OPERATION

a. Check if the same problem occurs again using a known good disc.

**OK:**
**Malfunction disappears.**

NG → Go to step 4

OK

END

### 4.CHECK RADIO RECEIVER ASSEMBLY

a. Check that the radio receiver assembly is properly installed.

**OK:**

**Radio receiver assembly is properly installed.**

**NG** → REINSTALL RADIO RECEIVER ASSEMBLY PROPERLY

**OK**

REPLACE RADIO RECEIVER ASSEMBLY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK RADIO RECEIVER ASSEMBLY

a. Check the radio automatic station search function.

i. Check the radio automatic station search function by activating it.

**Result**

| Result | Proceed to |
|---|---|
| Automatic station search function stops on a station | A |
| Automatic station search function does not stop | B |

B → Go to step 2

A →

REPLACE RADIO RECEIVER ASSEMBLY (Click here)

### 2.CHECK OPTIONAL COMPONENTS

a. Check optional components (sunshade film, telephone antenna, etc.).

i. Check if any optional components that may decrease reception capacity, such as sunshade film or a telephone antenna, are installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components are installed | A |
| Optional components are not installed | B |

**NOTICE:**

Do not remove any optional components installed by the customer without his or her consent.

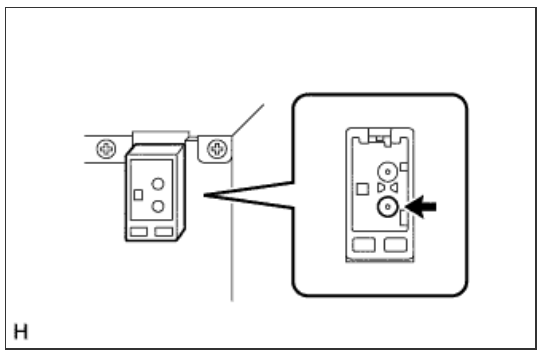
B → Go to step 3

A →

REMOVE OPTIONAL COMPONENTS AND CHECK AGAIN (SEE NOTICE ABOVE)

### 3.CHECK RADIO RECEIVER ASSEMBLY

a. Preparation for check



i. Remove the antenna plug from the radio receiver assembly.

b. Check for noise

i. Turn the engine switch on (ACC) with the radio receiver assembly connector connected.

ii. Turn the radio on and tune into AM mode.

iii. Place a screwdriver, thin wire or other metal object on the radio receiver assembly antenna jack and check that noise can be heard from the speakers.

**OK:**

**Noise can be heard from the speaker.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

## 4.CHECK GLASS ANTENNA

a. Check for continuity of the antenna.

**HINT:**

Check for continuity at the center of each antenna wire as shown in the illustration.

**NOTICE:**

When cleaning the glass, wipe it in the direction of the wire with a soft dry cloth. Take care not to damage the wire. Do not use detergents or glass cleaners with abrasive ingredients. When measuring resistance, wrap a piece of tin foil around the tip of each probe and press the foil against the wire with your finger, as shown in the illustration.

**OK:**

**There is continuity in the antenna.**

**Text in Illustration**

| | |
|---|---|
| *1 | Tester Probe |
| *2 | Tin Foil |
| *3 | Antenna Wire |

NG → REPAIR GLASS ANTENNA (Click here)

OK

## 5.INSPECT RADIO RECEIVER ASSEMBLY

a. Disconnect the radio receiver assembly connector.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| RA1-5 (ANT+) - Body ground | Engine switch on (ACC)<br>Radio switch on | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Radio Receiver Assembly) |

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

## 6.CHECK ANTENNA CORD

a. Remove the antenna plug of the radio receiver assembly and antenna.

b. Measure the resistance between the antenna and radio receiver assembly to check for an open circuit in the antenna cord.

**Standard Resistance:**
**Below 1 Ω**

c. Measure the resistance between the antenna cord and body ground to check for a short circuit in the antenna cord.

**Standard Resistance:**
**10 kΩ or higher**

NG → REPLACE ANTENNA CORD (Click here)

OK

**7.REPLACE AMPLIFIER ANTENNA ASSEMBLY**

a. Replace the amplifier antenna assembly and check if radio broadcasts can be received normally ( Click here).

**OK:**
**Radio broadcasts can be received.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

**NORMAL OPERATION**

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK RADIO RECEIVER ASSEMBLY

a. Check the radio automatic station search function.

i. Check the radio automatic station search function by activating it.

**Result**

| Result | Proceed to |
|---|---|
| Automatic station search function stops on a station | A |
| Automatic station search function does not stop | B |

B → Go to step 2

A →

REPLACE RADIO RECEIVER ASSEMBLY (Click here)

### 2.CHECK OPTIONAL COMPONENTS

a. Check optional components (sunshade film, telephone antenna, etc.).

i. Check if any optional components that may decrease reception capacity, such as sunshade film or a telephone antenna, are installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components are installed | A |
| Optional components are not installed | B |

**NOTICE:**

Do not remove any optional components installed by the customer without his or her consent.

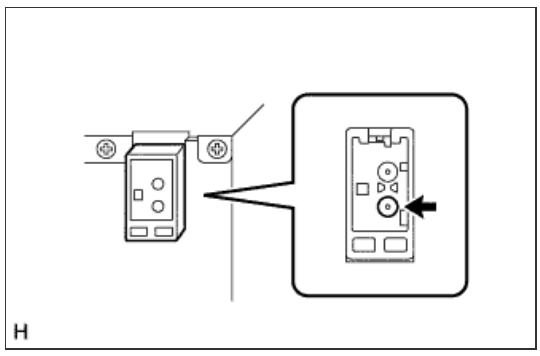
B → Go to step 3

A →

REMOVE OPTIONAL COMPONENTS AND CHECK AGAIN (SEE NOTICE ABOVE)

### 3.CHECK RADIO RECEIVER ASSEMBLY

a. Preparation for check



i. Remove the antenna plug from the radio receiver assembly.

b. Check for noise

i. Turn the engine switch on (ACC) with the radio receiver assembly connector connected.

ii. Turn the radio on and tune into AM mode.

iii. Place a screwdriver, thin wire or other metal object on the radio receiver assembly antenna jack and check that noise can be heard from the speakers.

**OK:**

**Noise can be heard from the speaker.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

## 4.CHECK GLASS ANTENNA

a. Check for continuity of the antenna.

**HINT:**

Check for continuity at the center of each antenna wire as shown in the illustration.

**NOTICE:**

When cleaning the glass, wipe it in the direction of the wire with a soft dry cloth. Take care not to damage the wire. Do not use detergents or glass cleaners with abrasive ingredients. When measuring resistance, wrap a piece of tin foil around the tip of each probe and press the foil against the wire with your finger, as shown in the illustration.

**OK:**

**There is continuity in the antenna.**

## 6.CHECK ANTENNA CORD

a. Remove the antenna plug of the radio receiver assembly and antenna.

b. Measure the resistance between the antenna and radio receiver assembly to check for an open circuit in the antenna cord.

**Standard Resistance:**
**Below 1 Ω**

c. Measure the resistance between the antenna cord and body ground to check for a short circuit in the antenna cord.

**Standard Resistance:**
**10 kΩ or higher**

NG → REPLACE ANTENNA CORD (Click here)

OK

**7.REPLACE AMPLIFIER ANTENNA ASSEMBLY**

a. Replace the amplifier antenna assembly and check if radio broadcasts can be received normally ( Click here).

**OK:**
**Radio broadcasts can be received.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

**NORMAL OPERATION**

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.CHECK AUDIO SETTINGS**

a. Set "BASS", "MID" and "TREB" to the initial values and check that sound is normal.

**OK:**
**Malfunction disappears.**

NG → Go to step 2

OK → END

**2.COMPARE WITH ANOTHER VEHICLE OF SAME MODEL**

a. Compare with another vehicle of the same model.

i. Compare with another vehicle of the same model which does not have trouble to see if there is any difference in the sound quality.

**OK:**
**No difference is found.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK → END

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.CHECK AUDIO SETTINGS**

a. Set "BASS", "MID" and "TREB" to the initial values and check that sound is normal.

**OK:**
**Malfunction disappears.**

NG → Go to step 2

OK → END

**2.COMPARE WITH ANOTHER VEHICLE OF SAME MODEL**

## INSPECTION PROCEDURE

### 1.CHECK PORTABLE PLAYER SETTINGS

a. Check the portable player settings.

i. Check that the volume is not set to "0".

ii. Check that the mute is off.

b. Check that the sound of the portable player can be heard from the speakers.

**OK:**
**Sound of the portable player can be heard from the speakers.**

NG → Go to step 2

OK →

END

### 2.CHECK AUDIO SETTINGS

a. Check the audio settings.

i. Check that the volume is not set to "0".

b. Check that the sound of the portable player can be heard from the speakers.

**OK:**
**Sound of the portable player can be heard from the speakers.**

NG → Go to step 3

OK →

END

### 3.CHECK USING ANOTHER "BLUETOOTH" AUDIO COMPATIBLE VEHICLE OF SAME MODEL

a. Check that the sound of the portable player can be heard from the speakers on another "Bluetooth" audio compatible vehicle of the same model.

**OK:**
**Sound of the portable player can be heard from the speakers.**

NG → MALFUNCTION IN PORTABLE PLAYER

OK →

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK PORTABLE PLAYER SETTINGS

a. Check the portable player settings.

i. Check that the volume is not set to "0".

ii. Check that the mute is off.

b. Check that the sound of the portable player can be heard from the speakers.

**OK:**
**Sound of the portable player can be heard from the speakers.**

NG → Go to step 2

OK →

END

### 2.CHECK AUDIO SETTINGS

a. Check the audio settings.

i. Check that the volume is not set to "0".

b. Check that the sound of the portable player can be heard from the speakers.

**OK:**
**Sound of the portable player can be heard from the speakers.**

NG → Go to step 3

OK →

END

### 3.CHECK USING ANOTHER "BLUETOOTH" AUDIO COMPATIBLE VEHICLE OF SAME MODEL

a. Check that the sound of the portable player can be heard from the speakers on another "Bluetooth" audio compatible vehicle of the same model.

**OK:**
**Sound of the portable player can be heard from the speakers.**

NG → MALFUNCTION IN PORTABLE PLAYER

OK →

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

**HINT:**

Even if the portable player can play audio content, it may not be able to play via the in-vehicle device. This does not necessarily indicate a malfunction of the in-vehicle device.

### 1.CHECK OPERATION

a. Check if the portable player operates normally.

**OK:**
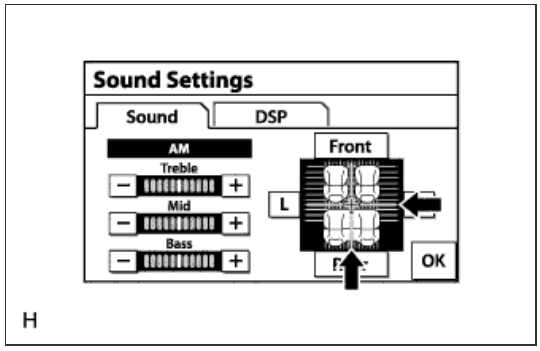
**The portable player operates normally.**

NG → MALFUNCTION IN PORTABLE PLAYER

OK ↓

### 2.CHECK AUDIO SETTINGS



a. Enter the "Sound Settings" screen by pressing the "Sound" switch on the audio display.

b. Set volume, fader and balance to the initial values and check that sound is normal.

**OK:**
**Audio system returns to normal.**

**HINT:**

Sound quality adjustment measures vary according to the type of the amplifier.

H

NG → SET VOLUME TO HIGH AND TURN MUTE OFF

OK ↓

### 3.CHECK USING ANOTHER "BLUETOOTH" AUDIO COMPATIBLE VEHICLE OF SAME MODEL

a. Check if the "Bluetooth" audio player plays normally on another "Bluetooth" audio compatible vehicle of the same model.

**OK:**
**"Bluetooth" audio plays normally.**

NG → MALFUNCTION IN PORTABLE PLAYER

OK ↓

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

**HINT:**

## INSPECTION PROCEDURE

**HINT:**

- **Perform this check with the portable player volume set at an appropriate level.**
- **Make sure there are no obstructions between the portable player and radio receiver assembly that may block signals, and that the portable player and radio receiver assembly are not excessively far apart.**
- **Make sure devices other than the radio receiver assembly are not connected to the portable player.**
- **Make sure there is no interference from a wireless LAN, etc.**

### 1.CHECK USING ANOTHER "BLUETOOTH" AUDIO COMPATIBLE VEHICLE OF SAME MODEL

a. Check that the same problem does not occur in the sound heard from the speakers on another "Bluetooth" audio compatible vehicle of the same model.

**OK:**
**The same problem does not occur in the sound heard from the speakers.**

NG → MALFUNCTION IN PORTABLE PLAYER

OK

### 2.REMOVE ADDITIONAL DEVICES WHICH USE RADIO WAVES

a. Remove additional devices which use radio waves.

b. Play the portable player and check that the same problem does not occur in the sound heard from the speakers.

**OK:**
**The same problem does not occur in the sound heard from the speakers.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

### END

OK

### END

**for Preparation** Click here

## INSPECTION PROCEDURE

**HINT:**

Some versions of "Bluetooth" compatible audio players may not function, or the function may be limited using the radio receiver assembly, even if the portable audio player itself can play files (Click here).

### 1.CHECK CONNECTED DEVICE SETTINGS

a. Display the "Select Portable Player" screen and check if the portable player is registered as a connected device.

**NOTICE:**

If a cellular phone is used as a portable player, it must be registered independently from the registration that is performed for the hands-free system.

**HINT:**

Only 2 portable players can be registered.

**Result**

| Result | Proceed to |
|---|---|
| The portable player is registered as a connected device. | A |
| The portable player is not registered as a connected device. | B |

B → REGISTER PORTABLE PLAYER AS CONNECTED DEVICE

A

### 2.CHECK SYMPTOMS

a. Check the connection condition between the portable player and radio receiver assembly.

**HINT:**
**The portable player cannot be connected under any of the following conditions:**

- **The portable player is connected to another device.**
- **The portable player is connected to the radio receiver assembly using the hands-free function.**
- **The radio receiver assembly has cleared the portable player registration.**
- **The portable player is off.**

**Result**

| Result | Proceed to |
|---|---|
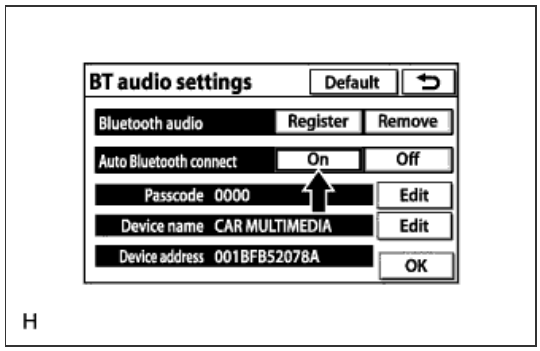
| The portable player cannot be connected manually. | A |
| The portable player cannot be connected automatically. | B |

B → Go to step 4



A

### 3.CHECK AUTOMATIC CONNECTION SETTINGS

a. Display the "BT Audio settings" screen and check automatic connection settings of the "Bluetooth" audio.

i. Check if On is displayed for "Auto Bluetooth connect" on the "BT audio settings" screen.

**OK:**
**On is displayed for "Auto Bluetooth connect".**

NG → CHANGE "AUTO BLUETOOTH CONNECT" TO ON

OK ↓

**4.CHECK PORTABLE PLAYER STATUS**

a. Check the status of the portable player.

i. Check that the portable player is in standby mode.

ii. Check that the portable player is not connected to another device (headphones etc.).

**OK:**
**The portable player is in standby mode and not connected to another device (headphones etc.).**

NG → CHANGE PORTABLE PLAYER TO STANDBY MODE AND DISCONNECT OTHER DEVICES (HEADPHONES etc.)

OK ↓

**5.CHECK USING ANOTHER "BLUETOOTH" AUDIO COMPATIBLE VEHICLE OF SAME MODEL**

a. Check if the portable player can be connected manually/automatically on another "Bluetooth" audio compatible vehicle of the same model.

**OK:**
**The portable player can be connected manually/automatically.**

NG → PORTABLE PLAYER IS NOT COMPATIBLE

OK ↓

**6.REMOVE ADDITIONAL DEVICES WHICH USE RADIO WAVES**

a. Remove additional devices which use radio waves.

b. Check if the portable player can be connected manually/automatically.

**OK:**
**The portable player can be connected manually/automatically.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK ↓

**END**

**for Preparation** Click here

## INSPECTION PROCEDURE

**HINT:**

Some versions of "Bluetooth" compatible audio players may not function, or the function may be limited using the radio receiver assembly, even if the portable audio player itself can play files (Click here).

### 1.CHECK CONNECTED DEVICE SETTINGS

a. Display the "Select Portable Player" screen and check if the portable player is registered as a connected device.

**NOTICE:**

If a cellular phone is used as a portable player, it must be registered independently from the registration that is performed for the hands-free system.

**HINT:**

Only 2 portable players can be registered.

**Result**

| Result | Proceed to |
|---|---|
| The portable player is registered as a connected device. | A |
| The portable player is not registered as a connected device. | B |

B → REGISTER PORTABLE PLAYER AS CONNECTED DEVICE

A

### 2.CHECK SYMPTOMS

a. Check the connection condition between the portable player and radio receiver assembly.

**HINT:**
**The portable player cannot be connected under any of the following conditions:**

- **The portable player is connected to another device.**
- **The portable player is connected to the radio receiver assembly using the hands-free function.**
- **The radio receiver assembly has cleared the portable player registration.**
- **The portable player is off.**

**Result**

| Result | Proceed to |
|---|---|
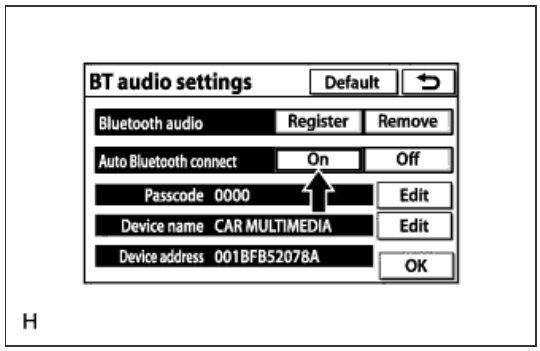
| The portable player cannot be connected manually. | A |
| The portable player cannot be connected automatically. | B |

B → Go to step 4



A

### 3.CHECK AUTOMATIC CONNECTION SETTINGS

a. Display the "BT Audio settings" screen and check automatic connection settings of the "Bluetooth" audio.

i. Check if On is displayed for "Auto Bluetooth connect" on the "BT audio settings" screen.

**OK:**
**On is displayed for "Auto Bluetooth connect".**

NG → CHANGE "AUTO BLUETOOTH CONNECT" TO ON

OK ↓

**4.CHECK PORTABLE PLAYER STATUS**

a. Check the status of the portable player.

i. Check that the portable player is in standby mode.

ii. Check that the portable player is not connected to another device (headphones etc.).

**OK:**
**The portable player is in standby mode and not connected to another device (headphones etc.).**

NG → CHANGE PORTABLE PLAYER TO STANDBY MODE AND DISCONNECT OTHER DEVICES (HEADPHONES etc.)

OK ↓

**5.CHECK USING ANOTHER "BLUETOOTH" AUDIO COMPATIBLE VEHICLE OF SAME MODEL**

a. Check if the portable player can be connected manually/automatically on another "Bluetooth" audio compatible vehicle of the same model.

**OK:**
**The portable player can be connected manually/automatically.**

NG → PORTABLE PLAYER IS NOT COMPATIBLE

OK ↓

**6.REMOVE ADDITIONAL DEVICES WHICH USE RADIO WAVES**

a. Remove additional devices which use radio waves.

b. Check if the portable player can be connected manually/automatically.

**OK:**
**The portable player can be connected manually/automatically.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK ↓

**END**

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.DELETE OPERATION**

a. Check if a registered portable player can be deleted normally.

**OK:**
**Registered portable player can be deleted normally.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

**END**

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.DELETE OPERATION**

a. Check if a registered portable player can be deleted normally.

**OK:**
**Registered portable player can be deleted normally.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

**END**

**for Preparation** Click here

## INSPECTION PROCEDURE

**HINT:**

Some versions of "Bluetooth" compatible audio players may not function, or the function may be limited using the radio receiver assembly, even if the portable audio player itself can play files (Click here).

### 1.CHECK THAT PORTABLE PLAYER IS "BLUETOOTH" AUDIO COMPATIBLE

a. Check if the portable player is "Bluetooth" audio compatible.

**Result**

| Result | Proceed to |
|---|---|
| The portable player is "Bluetooth" audio compatible. | A |
| The portable player is not "Bluetooth" audio compatible. | B |

B → USE A "BLUETOOTH" AUDIO COMPATIBLE PORTABLE PLAYER

A

### 2.CHECK CONNECTION PROCEDURE OF CONNECTED DEVICE

a. Referring to the owner's manual, correctly register the portable player.

b. Check that the portable player can be registered as a connected device.

**HINT:**
**The portable player cannot be registered under any of the following conditions:**

- **The A2DP (Advanced Audio Distribution Profile) is not used when registering a cellular phone.**
- **A different portable player registration remains in the radio receiver assembly.**
- **A different radio receiver assembly registration remains in the portable player.**
- **The portable player is off.**

**OK:**
**The portable player has been registered as a connected device.**

NG → Go to step 3

OK

END

### 3.CHECK USING ANOTHER "BLUETOOTH" AUDIO COMPATIBLE VEHICLE OF SAME MODEL

a. Check if the portable player can be registered normally on another "Bluetooth" audio compatible vehicle of the same model.

**OK:**
**The portable player can be registered.**

NG → MALFUNCTION IN PORTABLE PLAYER

OK

### 4.REMOVE ADDITIONAL DEVICES WHICH USE RADIO WAVES

a. Remove additional devices which use radio waves.

b. Check that the portable player can be registered as a connected device.

**OK:**
**The portable player can be registered.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK → END

**for Preparation** Click here

## INSPECTION PROCEDURE

**HINT:**

Some versions of "Bluetooth" compatible audio players may not function, or the function may be limited using the radio receiver assembly, even if the portable audio player itself can play files (Click here).

### 1.CHECK THAT PORTABLE PLAYER IS "BLUETOOTH" AUDIO COMPATIBLE

a. Check if the portable player is "Bluetooth" audio compatible.

**Result**

| Result | Proceed to |
|---|---|
| The portable player is "Bluetooth" audio compatible. | A |
| The portable player is not "Bluetooth" audio compatible. | B |

B → USE A "BLUETOOTH" AUDIO COMPATIBLE PORTABLE PLAYER

A

### 2.CHECK CONNECTION PROCEDURE OF CONNECTED DEVICE

a. Referring to the owner's manual, correctly register the portable player.

b. Check that the portable player can be registered as a connected device.

**HINT:**
**The portable player cannot be registered under any of the following conditions:**

- **The A2DP (Advanced Audio Distribution Profile) is not used when registering a cellular phone.**
- **A different portable player registration remains in the radio receiver assembly.**
- **A different radio receiver assembly registration remains in the portable player.**
- **The portable player is off.**

**OK:**
**The portable player has been registered as a connected device.**

NG → Go to step 3

OK

END

### 3.CHECK USING ANOTHER "BLUETOOTH" AUDIO COMPATIBLE VEHICLE OF SAME MODEL

a. Check if the portable player can be registered normally on another "Bluetooth" audio compatible vehicle of the same model.

**OK:**
**The portable player can be registered.**

NG → MALFUNCTION IN PORTABLE PLAYER

OK

### 4.REMOVE ADDITIONAL DEVICES WHICH USE RADIO WAVES

a. Remove additional devices which use radio waves.

b. Check that the portable player can be registered as a connected device.

**OK:**
**The portable player can be registered.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK → END

**for Preparation** Click here

## INSPECTION PROCEDURE

**HINT:**

- **When a large amount of data is in a USB device, it may take a while to before play begins.**
- **When using a USB device, files that are copy protected or encrypted by copyright cannot be played.**
- **When files are not played in the sorted order, perform the following procedure before inspection.**
  1. **Add numbers in front of the file names.**
  2. **Put the files in a folder and copy the folder data to the USB device.**

### 1.CHECK USB DEVICE OR "iPod"

a. Disconnect the USB device or "iPod" from the No. 1 stereo jack adapter assembly.

b. Check if playable files are present on the USB device or "iPod".

**HINT:**

Refer to System Description for playable files ( Click here).

c. Check if the USB device is a compatible format or "iPod" is a compatible version.

**HINT:**

Refer to System Description for compatible formats and versions ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| No playable files exist, or incompatible device format or version | A |
| Playable files exist, and compatible device format or version | B |

**B** → Go to step 2

**A**

### USB DEVICE FORMAT WAS INCOMPATIBLE, "iPod" VERSION WAS INCOMPATIBLE, OR NO PLAYABLE FILES PRESENT

### 2.FORMAT USB DEVICE OR RESTORE "iPod" AND RECHECK

a. Delete all files in the USB device or "iPod" and format/restore it.

b. Save the data again and check if it can be played on the in-vehicle device.

**NOTICE:**

Formatting a USB device or restoring an "iPod" erases all music on the device. Ensure that backup music data is available before performing this operation.

**OK:**
**Malfunction disappears.**

**NG** → Go to step 3

**OK**

### END

### 3.REPLACE USB DEVICE OR "iPod"

a. Turn the engine switch off.

**HINT:**

When this malfunction occurs, it is necessary to turn off the engine switch to make it possible for the vehicle to recognize a new device when it is connected.

b. Turn the engine switch on (ACC).

c. Connect a known good USB device or "iPod" to the No. 1 stereo jack adapter assembly.

**HINT:**

- **If the malfunction occurred when a USB device was in use, use another USB device for the inspection. If the malfunction occurred when an "iPod" was in use, use another "iPod" for the inspection.**
- **Refer to System Description for compatible formats and versions (Click here).**

**NEXT**

**4.CHECK USB Device or "iPod"**

a. Check if USB device or "iPod" is recognized by the display and navigation module display, if information such as track, artist and album names are displayed on screen or if can play.

**OK:**
**Malfunction disappears.**

**NG** → **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)**

**OK**

**USB DEVICE OR "iPod" WAS INCOMPATIBLE OR DEFECTIVE**

**for Preparation** Click here

## DESCRIPTION

Power is supplied to the radio receiver assembly illumination when the light control switch is in the tail or head position.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

Inspect the fuse for circuits related to this system before performing the following inspection procedure.

### 1.CHECK ILLUMINATION

a. Check if the illumination for the radio receiver assembly, heater control switch or others (hazard switch, transmission control switch, etc.) comes on when the light control switch is turned to the head or tail position.

**Result**

| Result | Proceed to |
|---|---|
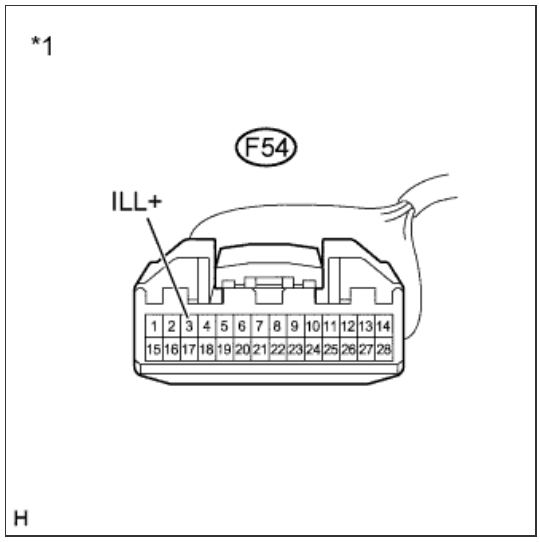
| Illumination comes on for all components except radio receiver assembly. | A |
| No illumination comes on (radio receiver assembly, hazard switch, heater control switch, etc.). | B |

B → GO TO LIGHTING SYSTEM (Click here)

A

### 2.CHECK HARNESS AND CONNECTOR (BATTERY - RADIO RECEIVER ASSEMBLY)

a. Disconnect the F54 radio receiver assembly connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F54-3 (ILL+) - Body ground | Light control switch tail or head | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Radio Receiver Assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**3.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER ASSEMBLY - COMBINATION METER ASSEMBLY)**

a. Disconnect the F54 radio receiver assembly connector and E77 combination meter assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-17 (ILL-) - E77-17 (ILL-) | Always | Below 1 Ω |
| E77-17 (ILL-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## DESCRIPTION

Power is supplied to the radio receiver assembly illumination when the light control switch is in the tail or head position.

## INSPECTION PROCEDURE

### 1.CHECK AUDIO MODELS

a. Check the audio model.

**Result**

| Result | Proceed to |
|---|---|
| 19 speakers | A |
| 9 speakers | B |

**B** → Go to step 22

**A**

### 2.CHECK SPEAKER

a. Check the malfunctioning speakers.

**Result**

| Result | Proceed to |
|---|---|
| Malfunction in front speaker area | A |

| | |
|---|---|
| Malfunction in rear speaker area | B |

B → Go to step 12

A

### 3.CHECK SPEAKER

a. Check the malfunctioning speakers.

**Result**

| Result | Proceed to |
|---|---|
| Front No. 4 speaker | A |
| Front No. 2 speaker | B |
| Front No. 1 speaker | C |
| Front No. 3 speaker | D |

B → Go to step 6

C → Go to step 8

D → Go to step 10

A

### 4.INSPECT FRONT NO. 4 SPEAKER ASSEMBLY

a. Disconnect the F6 speaker connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Front No. 4 Speaker Assembly) |

NG → REPLACE FRONT NO. 4 SPEAKER ASSEMBLY (Click here)

OK

### 5.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - FRONT NO. 4 SPEAKER)

a. Disconnect the F6 speaker connector.

b. Disconnect the F3 amplifier connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-3 (CTR+) - F6-1 | Always | Below 1 Ω |
| F3-9 (CTR-) - F6-2 | Always | Below 1 Ω |
| F3-3 (CTR+) - Body ground | Always | 10 kΩ or higher |

| | | |
|---|---|---|
| F3-9 (CTR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 6.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY

a. Disconnect the F8 and F7 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | Below 1 Ω |
| 3 - 4 | Always | Below 1 Ω |
| 2 - 4 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Front No. 2 Speaker Assembly) |

NG → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

OK

## 7.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - FRONT NO. 2 SPEAKER)

a. Disconnect the F31 amplifier connector.

b. Disconnect the F8 and F7 speaker connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F31-2 (FL+) - F8-1 (+) | Always | Below 1 Ω |
| F31-6 (FL-) - F8-3 (-) | Always | Below 1 Ω |
| F31-2 (FL+) - Body ground | Always | 10 kΩ or higher |
| F31-6 (FL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F31-8 (FR+) - F7-1 (+) | Always | Below 1 Ω |
| F31-7 (FR-) - F7-3 (-) | Always | Below 1 Ω |
| F31-8 (FR+) - Body ground | Always | 10 kΩ or higher |
| F31-7 (FR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

8.INSPECT FRONT NO. 1 SPEAKER ASSEMBLY

a. Disconnect the I10 and I1 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 11 to 13 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Front No. 1 Speaker Assembly) |

NG → REPLACE FRONT NO. 1 SPEAKER ASSEMBLY (Click here)

OK

9.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - FRONT NO. 1 SPEAKER)

a. Disconnect the I10 and I1 speaker connectors.

b. Disconnect the F4 amplifier connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-10 (WFL+) - I10-1 | Always | Below 1 Ω |
| F4-8 (WFL-) - I10-2 | Always | Below 1 Ω |
| F4-10 (WFL+) - Body ground | Always | 10 kΩ or higher |
| F4-8 (WFL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-5 (WFR+) - I1-1 | Always | Below 1 Ω |
| F4-11 (WFR-) - I1-2 | Always | Below 1 Ω |
| F4-5 (WFR+) - Body ground | Always | 10 kΩ or higher |
| F4-11 (WFR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 10.CHECK FRONT NO. 3 SPEAKER ASSEMBLY

a. Disconnect the F14 and F13 speaker connectors.

b. Interchange the front No. 3 speaker LH with RH.

c. Check that the malfunction disappears.

**OK:**
**Malfunction disappears.**

**HINT:**

- **Connect all the connectors to the front No. 3 speakers.**
- **When there is a possibility that either the right or left front speaker is defective, inspect by interchanging the right one with the left one.**
- **Perform the inspection above on both the LH and RH sides.**

**NG** → Go to step 11

**OK**

REPLACE FRONT NO. 3 SPEAKER ASSEMBLY (Click here)

## 11.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY

a. Disconnect the F8 and F7 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 2 - 4 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Front No. 2 Speaker Assembly) |

**NG** → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

**OK**

REPAIR OR REPLACE HARNESS OR CONNECTOR (FRONT NO. 2 SPEAKER - FRONT NO. 3 SPEAKER)

## 12.CHECK SPEAKER

a. Check the malfunctioning speakers.

**Result**

| Result | Proceed to |
|---|---|
| Rear No. 2 speaker | A |
| Rear No. 3 speaker | B |
| Rear speaker set | C |
| No. 1 woofer box speaker | D |
| Rear header speaker | E |

**B** → Go to step 14

**C** → Go to step 16

**D** → Go to step 18

E → Go to step 20

A

## 13.INSPECT REAR NO. 2 SPEAKER ASSEMBLY

a. Disconnect the rear No. 2 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Front No. 2 Speaker Assembly) |

NG → REPLACE REAR NO. 2 SPEAKER ASSEMBLY (Click here)

OK

REPLACE REAR NO. 3 SPEAKER ASSEMBLY (Click here)

## 14.CHECK REAR NO. 3 SPEAKER ASSEMBLY

a. Disconnect the rear No. 3 speaker connectors.

b. Interchange the rear No. 3 speaker LH with RH.

c. Check that the malfunction disappears.

**OK:**
**Malfunction disappears.**

**HINT:**

- **Connect all the connectors to the rear No. 3 speakers.**
- **When there is a possibility that either the right or left rear speaker is defective, inspect by interchanging the right one with the left one.**
- **Perform the inspection above on both the LH and RH sides.**

NG → Go to step 15

OK

REPLACE REAR NO. 3 SPEAKER ASSEMBLY (Click here)

## 15.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - REAR NO. 3 SPEAKER)

a. Disconnect the F31 amplifier connector.

b. Disconnect the J8 and J1 speaker connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**
**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F31-3 (R-L+) - J8-1 (+) | Always | Below 1 Ω |
| F31-9 (R-L-) - J8-2 (-) | Always | Below 1 Ω |

| | | |
|---|---|---|
| F31-3 (R-L+) - Body ground | Always | 10 kΩ or higher |
| F31-9 (R-L-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F31-4 (R-R+) - J1-1 (+) | Always | Below 1 Ω |
| F31-10 (R-R-) - J1-2 (-) | Always | Below 1 Ω |
| F31-4 (R-R+) - Body ground | Always | 10 kΩ or higher |
| F31-10 (R-R-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 16.INSPECT REAR SPEAKER SET

a. Disconnect the J17 and J15 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4.8 to 7.2 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Rear Speaker set) |

NG → REPLACE REAR SPEAKER SET (Click here)

OK

## 17.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - REAR SPEAKER SET)

a. Disconnect the F3 and F31 amplifier connectors.

b. Disconnect the J17 and J15 speaker connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-4 (RL+) - J17-1 | Always | Below 1 Ω |
| F3-10 (RL-) - J17-2 | Always | Below 1 Ω |
| F3-4 (RL+) - Body ground | Always | 10 kΩ or higher |
| F3-10 (RL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|

| | | |
|---|---|---|
| F31-1 (RR+) - J15-1 | Always | Below 1 Ω |
| F31-5 (RR-) - J15-2 | Always | Below 1 Ω |
| F31-1 (RR+) - Body ground | Always | 10 kΩ or higher |
| F31-5 (RR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK →

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

**18.INSPECT NO. 1 WOOFER BOX SPEAKER ASSEMBLY**

a. Disconnect the L4 speaker connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 8.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (No. 1 Woofer Box Speaker Assembly) |

NG → REPLACE NO. 1 WOOFER BOX SPEAKER ASSEMBLY (Click here)

OK →

**19.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - NO. 1 WOOFER BOX SPEAKER)**

a. Disconnect the F3 amplifier connector.

b. Disconnect the L4 speaker connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-1 (WF1+) - L4-1 (WF1+) | Always | Below 1 Ω |
| F3-6 (WF1-) - L4-2 (WF1-) | Always | Below 1 Ω |
| F3-1 (WF1+) - Body ground | Always | 10 kΩ or higher |
| F3-6 (WF1-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK →

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

**20.INSPECT REAR HEADER SPEAKER ASSEMBLY**

a. Disconnect the S9 and S8 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Rear Header Speaker Assembly) |

NG → REPLACE REAR HEADER SPEAKER ASSEMBLY (Click here)

OK

## 21.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - REAR HEADER SPEAKER)

a. Disconnect the F4 amplifier connector.

b. Disconnect the S9 and S8 speaker connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-2 (SL+) - S9-1 (RLD+) | Always | Below 1 Ω |
| F4-7 (SL-) - S9-2 (RLD-) | Always | Below 1 Ω |
| F4-2 (SL+) - Body ground | Always | 10 kΩ or higher |
| F4-7 (SL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-1 (SR+) - S8-1 (RRD+) | Always | Below 1 Ω |
| F4-6 (SR-) - S8-2 (RRD-) | Always | Below 1 Ω |
| F4-1 (SR+) - Body ground | Always | 10 kΩ or higher |
| F4-6 (SR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 22.CHECK SPEAKER

a. Check the malfunctioning speakers.

**Result**

| Result | Proceed to |
|---|---|
| Front No. 4 speaker | A |

| | |
|---|---|
| Front No. 2 speaker | B |
| Front No. 1 speaker | C |
| Front No. 3 speaker | D |
| Rear speaker set | E |

B → Go to step 25

C → Go to step 27

D → Go to step 29

E → Go to step 31

A

**23.INSPECT FRONT NO. 4 SPEAKER ASSEMBLY**

a. Disconnect the F6 speaker connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 6 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Front No. 4 Speaker Assembly) |

NG → REPLACE FRONT NO. 4 SPEAKER ASSEMBLY (Click here)

OK

**24.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - FRONT NO. 4 SPEAKER)**

a. Disconnect the F6 speaker connector.

b. Disconnect the F3 amplifier connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-8 (CTR+) - F6-1 | Always | Below 1 Ω |
| F3-7 (CTR-) - F6-2 | Always | Below 1 Ω |
| F3-8 (CTR+) - Body ground | Always | 10 kΩ or higher |
| F3-7 (CTR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

**25.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY**

a. Disconnect the F8 and F7 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | Below 1 Ω |
| 3 - 4 | Always | Below 1 Ω |
| 2 - 4 | Always | 4 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Front No. 2 Speaker Assembly) |

NG → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

OK

**26.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - FRONT NO. 2 SPEAKER)**

a. Disconnect the F4 amplifier connector.

b. Disconnect the F8 and F7 speaker connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-3 (FL+) - F8-1 (+) | Always | Below 1 Ω |
| F4-8 (FL-) - F8-3 (-) | Always | Below 1 Ω |
| F4-3 (FL+) - Body ground | Always | 10 kΩ or higher |
| F4-8 (FL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-10 (FR+) - F7-1 (+) | Always | Below 1 Ω |
| F4-9 (FR-) - F7-3 (-) | Always | Below 1 Ω |
| F4-10 (FR+) - Body ground | Always | 10 kΩ or higher |
| F4-9 (FR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

**27.INSPECT FRONT NO. 1 SPEAKER ASSEMBLY**

a. Disconnect the I10 and I1 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 3 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Front No. 1 Speaker Assembly) |

NG → REPLACE FRONT NO. 1 SPEAKER ASSEMBLY (Click here)

OK

**28.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - FRONT NO. 1 SPEAKER)**

a. Disconnect the I10 and I1 speaker connectors.

b. Disconnect the F3 amplifier connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-1 (WFL+) - I10-1 | Always | Below 1 Ω |
| F3-5 (WFL-) - I10-2 | Always | Below 1 Ω |
| F3-1 (WFL+) - Body ground | Always | 10 kΩ or higher |
| F3-5 (WFL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-2 (WFR+) - I1-1 | Always | Below 1 Ω |
| F3-6 (WFR-) - I1-2 | Always | Below 1 Ω |
| F3-2 (WFR+) - Body ground | Always | 10 kΩ or higher |
| F3-6 (WFR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

**29.INSPECT FRONT NO. 3 SPEAKER ASSEMBLY**

a. Disconnect the F14 and F13 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|

| | | |
|---|---|---|
| 1 - 2 | Always | 4 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Front No. 3 Speaker Assembly) |

NG → REPLACE FRONT NO. 3 SPEAKER ASSEMBLY (Click here)

OK

**30.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY**

a. Disconnect the F8 and F7 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | Below 1 Ω |
| 3 - 4 | Always | Below 1 Ω |
| 2 - 4 | Always | 4 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Front No. 2 Speaker Assembly) |

NG → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR (FRONT NO. 2 SPEAKER - FRONT NO. 3 SPEAKER)

**31.INSPECT REAR SPEAKER SET**

a. Disconnect the J17 and J15 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Rear Speaker set) |

NG → REPLACE REAR SPEAKER SET (Click here)

OK

**32.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - REAR SPEAKER SET)**

a. Disconnect the F4 amplifier connector.

b. Disconnect the J17 and J15 speaker connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-4 (RL+) - J17-1 (+) | Always | Below 1 Ω |
| F4-11 (RL-) - J17-2 (-) | Always | Below 1 Ω |
| F4-4 (RL+) - Body ground | Always | 10 kΩ or higher |
| F4-11 (RL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-5 (RR+) - J15-1 (+) | Always | Below 1 Ω |
| F4-12 (RR-) - J15-2 (-) | Always | Below 1 Ω |
| F4-5 (RR+) - Body ground | Always | 10 kΩ or higher |
| F4-12 (RR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

**for Preparation** Click here

## DESCRIPTION

The stereo component amplifier sends sound signals to the speakers.

## INSPECTION PROCEDURE

### 1.CHECK AUDIO MODELS

a. Check the audio model.

**Result**

| Result | Proceed to |
|---|---|
| 19 speakers | A |
| 9 speakers | B |

**B** → Go to step 22

**A**

### 2.CHECK SPEAKER

a. Check the malfunctioning speakers.

**Result**

| Result | Proceed to |
|---|---|
| Malfunction in front speaker area | A |

| | |
|---|---|
| Malfunction in rear speaker area | B |

B → Go to step 12

A

### 3.CHECK SPEAKER

a. Check the malfunctioning speakers.

**Result**

| Result | Proceed to |
|---|---|
| Front No. 4 speaker | A |
| Front No. 2 speaker | B |
| Front No. 1 speaker | C |
| Front No. 3 speaker | D |

B → Go to step 6

C → Go to step 8

D → Go to step 10

A

### 4.INSPECT FRONT NO. 4 SPEAKER ASSEMBLY

a. Disconnect the F6 speaker connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Front No. 4 Speaker Assembly) |

NG → REPLACE FRONT NO. 4 SPEAKER ASSEMBLY (Click here)

OK

### 5.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - FRONT NO. 4 SPEAKER)

a. Disconnect the F6 speaker connector.

b. Disconnect the F3 amplifier connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-3 (CTR+) - F6-1 | Always | Below 1 Ω |
| F3-9 (CTR-) - F6-2 | Always | Below 1 Ω |
| F3-3 (CTR+) - Body ground | Always | 10 kΩ or higher |

| | | |
|---|---|---|
| F3-9 (CTR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 6.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY

a. Disconnect the F8 and F7 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | Below 1 Ω |
| 3 - 4 | Always | Below 1 Ω |
| 2 - 4 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Front No. 2 Speaker Assembly) |

NG → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

OK

## 7.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - FRONT NO. 2 SPEAKER)

a. Disconnect the F31 amplifier connector.

b. Disconnect the F8 and F7 speaker connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F31-2 (FL+) - F8-1 (+) | Always | Below 1 Ω |
| F31-6 (FL-) - F8-3 (-) | Always | Below 1 Ω |
| F31-2 (FL+) - Body ground | Always | 10 kΩ or higher |
| F31-6 (FL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F31-8 (FR+) - F7-1 (+) | Always | Below 1 Ω |
| F31-7 (FR-) - F7-3 (-) | Always | Below 1 Ω |
| F31-8 (FR+) - Body ground | Always | 10 kΩ or higher |
| F31-7 (FR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

8.INSPECT FRONT NO. 1 SPEAKER ASSEMBLY

a. Disconnect the I10 and I1 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 11 to 13 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Front No. 1 Speaker Assembly) |

NG → REPLACE FRONT NO. 1 SPEAKER ASSEMBLY (Click here)

OK

9.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - FRONT NO. 1 SPEAKER)

a. Disconnect the I10 and I1 speaker connectors.

b. Disconnect the F4 amplifier connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-10 (WFL+) - I10-1 | Always | Below 1 Ω |
| F4-8 (WFL-) - I10-2 | Always | Below 1 Ω |
| F4-10 (WFL+) - Body ground | Always | 10 kΩ or higher |
| F4-8 (WFL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-5 (WFR+) - I1-1 | Always | Below 1 Ω |
| F4-11 (WFR-) - I1-2 | Always | Below 1 Ω |
| F4-5 (WFR+) - Body ground | Always | 10 kΩ or higher |
| F4-11 (WFR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 10.CHECK FRONT NO. 3 SPEAKER ASSEMBLY

a. Disconnect the F14 and F13 speaker connectors.

b. Interchange the front No. 3 speaker LH with RH.

c. Check that the malfunction disappears.

**OK:**
**Malfunction disappears.**

**HINT:**

- **Connect all the connectors to the front No. 3 speakers.**
- **When there is a possibility that either the right or left front speaker is defective, inspect by interchanging the right one with the left one.**
- **Perform the inspection above on both the LH and RH sides.**

**NG** → Go to step 11

**OK**

REPLACE FRONT NO. 3 SPEAKER ASSEMBLY (Click here)

## 11.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY

a. Disconnect the F8 and F7 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 2 - 4 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Front No. 2 Speaker Assembly) |

**NG** → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

**OK**

REPAIR OR REPLACE HARNESS OR CONNECTOR (FRONT NO. 2 SPEAKER - FRONT NO. 3 SPEAKER)

## 12.CHECK SPEAKER

a. Check the malfunctioning speakers.

**Result**

| Result | Proceed to |
|---|---|
| Rear No. 2 speaker | A |
| Rear No. 3 speaker | B |
| Rear speaker set | C |
| No. 1 woofer box speaker | D |
| Rear header speaker | E |

**B** → Go to step 14

**C** → Go to step 16

**D** → Go to step 18

E → Go to step 20

A

## 13.INSPECT REAR NO. 2 SPEAKER ASSEMBLY

a. Disconnect the rear No. 2 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Front No. 2 Speaker Assembly) |

NG → REPLACE REAR NO. 2 SPEAKER ASSEMBLY (Click here)

OK

REPLACE REAR NO. 3 SPEAKER ASSEMBLY (Click here)

## 14.CHECK REAR NO. 3 SPEAKER ASSEMBLY

a. Disconnect the rear No. 3 speaker connectors.

b. Interchange the rear No. 3 speaker LH with RH.

c. Check that the malfunction disappears.

**OK:**
**Malfunction disappears.**

**HINT:**

- **Connect all the connectors to the rear No. 3 speakers.**
- **When there is a possibility that either the right or left rear speaker is defective, inspect by interchanging the right one with the left one.**
- **Perform the inspection above on both the LH and RH sides.**

NG → Go to step 15

OK

REPLACE REAR NO. 3 SPEAKER ASSEMBLY (Click here)

## 15.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - REAR NO. 3 SPEAKER)

a. Disconnect the F31 amplifier connector.

b. Disconnect the J8 and J1 speaker connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**
**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F31-3 (R-L+) - J8-1 (+) | Always | Below 1 Ω |
| F31-9 (R-L-) - J8-2 (-) | Always | Below 1 Ω |

| | | |
|---|---|---|
| F31-3 (R-L+) - Body ground | Always | 10 kΩ or higher |
| F31-9 (R-L-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F31-4 (R-R+) - J1-1 (+) | Always | Below 1 Ω |
| F31-10 (R-R-) - J1-2 (-) | Always | Below 1 Ω |
| F31-4 (R-R+) - Body ground | Always | 10 kΩ or higher |
| F31-10 (R-R-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 16.INSPECT REAR SPEAKER SET

a. Disconnect the J17 and J15 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4.8 to 7.2 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Rear Speaker set) |

NG → REPLACE REAR SPEAKER SET (Click here)

OK

## 17.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - REAR SPEAKER SET)

a. Disconnect the F3 and F31 amplifier connectors.

b. Disconnect the J17 and J15 speaker connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-4 (RL+) - J17-1 | Always | Below 1 Ω |
| F3-10 (RL-) - J17-2 | Always | Below 1 Ω |
| F3-4 (RL+) - Body ground | Always | 10 kΩ or higher |
| F3-10 (RL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|

| | | |
|---|---|---|
| F31-1 (RR+) - J15-1 | Always | Below 1 Ω |
| F31-5 (RR-) - J15-2 | Always | Below 1 Ω |
| F31-1 (RR+) - Body ground | Always | 10 kΩ or higher |
| F31-5 (RR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK →

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

**18.INSPECT NO. 1 WOOFER BOX SPEAKER ASSEMBLY**

a. Disconnect the L4 speaker connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 8.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (No. 1 Woofer Box Speaker Assembly) |

NG → REPLACE NO. 1 WOOFER BOX SPEAKER ASSEMBLY (Click here)

OK →

**19.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - NO. 1 WOOFER BOX SPEAKER)**

a. Disconnect the F3 amplifier connector.

b. Disconnect the L4 speaker connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-1 (WF1+) - L4-1 (WF1+) | Always | Below 1 Ω |
| F3-6 (WF1-) - L4-2 (WF1-) | Always | Below 1 Ω |
| F3-1 (WF1+) - Body ground | Always | 10 kΩ or higher |
| F3-6 (WF1-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK →

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

**20.INSPECT REAR HEADER SPEAKER ASSEMBLY**

a. Disconnect the S9 and S8 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 5.0 to 7.0 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Rear Header Speaker Assembly) |

NG → REPLACE REAR HEADER SPEAKER ASSEMBLY (Click here)

OK

## 21.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - REAR HEADER SPEAKER)

a. Disconnect the F4 amplifier connector.

b. Disconnect the S9 and S8 speaker connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-2 (SL+) - S9-1 (RLD+) | Always | Below 1 Ω |
| F4-7 (SL-) - S9-2 (RLD-) | Always | Below 1 Ω |
| F4-2 (SL+) - Body ground | Always | 10 kΩ or higher |
| F4-7 (SL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-1 (SR+) - S8-1 (RRD+) | Always | Below 1 Ω |
| F4-6 (SR-) - S8-2 (RRD-) | Always | Below 1 Ω |
| F4-1 (SR+) - Body ground | Always | 10 kΩ or higher |
| F4-6 (SR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 22.CHECK SPEAKER

a. Check the malfunctioning speakers.

**Result**

| Result | Proceed to |
|---|---|
| Front No. 4 speaker | A |

| | |
|---|---|
| Front No. 2 speaker | B |

| Front No. 3 speaker | D |
| Rear speaker set | E |

B → Go to step 25

C → Go to step 27

D → Go to step 29

E → Go to step 31

A

**23.INSPECT FRONT NO. 4 SPEAKER ASSEMBLY**

a. Disconnect the F6 speaker connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 6 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Front No. 4 Speaker Assembly) |

NG → REPLACE FRONT NO. 4 SPEAKER ASSEMBLY (Click here)

OK

**24.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - FRONT NO. 4 SPEAKER)**

a. Disconnect the F6 speaker connector.

b. Disconnect the F3 amplifier connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-8 (CTR+) - F6-1 | Always | Below 1 Ω |
| F3-7 (CTR-) - F6-2 | Always | Below 1 Ω |
| F3-8 (CTR+) - Body ground | Always | 10 kΩ or higher |
| F3-7 (CTR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

**25.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY**

a. Disconnect the F8 and F7 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | Below 1 Ω |
| 3 - 4 | Always | Below 1 Ω |
| 2 - 4 | Always | 4 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Front No. 2 Speaker Assembly) |

NG → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

OK

**26.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - FRONT NO. 2 SPEAKER)**

a. Disconnect the F4 amplifier connector.

b. Disconnect the F8 and F7 speaker connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-3 (FL+) - F8-1 (+) | Always | Below 1 Ω |
| F4-8 (FL-) - F8-3 (-) | Always | Below 1 Ω |
| F4-3 (FL+) - Body ground | Always | 10 kΩ or higher |
| F4-8 (FL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-10 (FR+) - F7-1 (+) | Always | Below 1 Ω |
| F4-9 (FR-) - F7-3 (-) | Always | Below 1 Ω |
| F4-10 (FR+) - Body ground | Always | 10 kΩ or higher |
| F4-9 (FR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

**27.INSPECT FRONT NO. 1 SPEAKER ASSEMBLY**

a. Disconnect the I10 and I1 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 3 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Front No. 1 Speaker Assembly) |

NG → REPLACE FRONT NO. 1 SPEAKER ASSEMBLY (Click here)

OK

**28.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - FRONT NO. 1 SPEAKER)**

a. Disconnect the I10 and I1 speaker connectors.

b. Disconnect the F3 amplifier connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-1 (WFL+) - I10-1 | Always | Below 1 Ω |
| F3-5 (WFL-) - I10-2 | Always | Below 1 Ω |
| F3-1 (WFL+) - Body ground | Always | 10 kΩ or higher |
| F3-5 (WFL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F3-2 (WFR+) - I1-1 | Always | Below 1 Ω |
| F3-6 (WFR-) - I1-2 | Always | Below 1 Ω |
| F3-2 (WFR+) - Body ground | Always | 10 kΩ or higher |
| F3-6 (WFR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

**29.INSPECT FRONT NO. 3 SPEAKER ASSEMBLY**

a. Disconnect the F14 and F13 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|

| | | |
|---|---|---|
| 1 - 2 | Always | 4 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Front No. 3 Speaker Assembly) |

NG → REPLACE FRONT NO. 3 SPEAKER ASSEMBLY (Click here)

OK

**30.INSPECT FRONT NO. 2 SPEAKER ASSEMBLY**

a. Disconnect the F8 and F7 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | Below 1 Ω |
| 3 - 4 | Always | Below 1 Ω |
| 2 - 4 | Always | 4 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Front No. 2 Speaker Assembly) |

NG → REPLACE FRONT NO. 2 SPEAKER ASSEMBLY (Click here)

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR (FRONT NO. 2 SPEAKER - FRONT NO. 3 SPEAKER)

**31.INSPECT REAR SPEAKER SET**

a. Disconnect the J17 and J15 speaker connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Rear Speaker set) |

NG → REPLACE REAR SPEAKER SET (Click here)

OK

**32.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - REAR SPEAKER SET)**

a. Disconnect the F4 amplifier connector.

b. Disconnect the J17 and J15 speaker connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-4 (RL+) - J17-1 (+) | Always | Below 1 Ω |
| F4-11 (RL-) - J17-2 (-) | Always | Below 1 Ω |
| F4-4 (RL+) - Body ground | Always | 10 kΩ or higher |
| F4-11 (RL-) - Body ground | Always | 10 kΩ or higher |

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F4-5 (RR+) - J15-1 (+) | Always | Below 1 Ω |
| F4-12 (RR-) - J15-2 (-) | Always | Below 1 Ω |
| F4-5 (RR+) - Body ground | Always | 10 kΩ or higher |
| F4-12 (RR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## DESCRIPTION

The multi-media interface ECU sends a sound signal to the display and navigation module display through this circuit.
If there is an open or short in the circuit, sound cannot be heard from the speakers even if there is no malfunction in the stereo component amplifier assembly, radio receiver assembly, display and navigation module display or speakers.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - MULTI-MEDIA INTERFACE ECU)

a. Disconnect the F56 display and navigation module display connector.

b. Disconnect the L51 multi-media interface ECU connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F56-1 (AGND) - L51-1 (USD1) | Always | Below 1 Ω |
| F56-3 (VAR+) - L51-2 (URO+) | Always | Below 1 Ω |
| F56-4 (VAL+) - L51-3 (ULO+) | Always | Below 1 Ω |
| F56-7 (VA-) - L51-4 (UGD1) | Always | Below 1 Ω |
| F56-1 (AGND) - Body ground | Always | 10 kΩ or higher |
| F56-3 (VAR+) - Body ground | Always | 10 kΩ or higher |
| F56-4 (VAL+) - Body ground | Always | 10 kΩ or higher |
| F56-7 (VA-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## DESCRIPTION

The No. 1 stereo jack adapter assembly sends an external device sound signal to the radio receiver assembly through this circuit.
The sound signal that has been sent is amplified by the stereo component amplifier assembly or radio receiver assembly, and then is sent to the speakers.
If there is an open or short in the circuit, sound cannot be heard from the speakers even if there is no malfunction in the stereo component amplifier assembly, radio receiver assembly or speakers.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER ASSEMBLY - NO. 1 STEREO JACK ADAPTER ASSEMBLY)

a. Disconnect the k1 No. 1 stereo jack adapter assembly connector.

b. Disconnect the F54 radio receiver assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| k1-8 (AUXO) - F54-5 (AUXI) | Always | Below 1 Ω |
| k1-7 (ASGN) - F54-21 (ASGN) | Always | Below 1 Ω |
| k1-5 (ARO) - F54-19 (ARI) | Always | Below 1 Ω |
| k1-6 (ALO) - F54-20 (ALI) | Always | Below 1 Ω |
| k1-9 (AGND) - F54-6 (AGND) | Always | Below 1 Ω |
| k1-8 (AUXO) - Body ground | Always | 10 kΩ or higher |
| k1-7 (ASGN) - Body ground | Always | 10 kΩ or higher |
| k1-5 (ARO) - Body ground | Always | 10 kΩ or higher |
| k1-6 (ALO) - Body ground | Always | 10 kΩ or higher |
| k1-9 (AGND) - | | |

| | | |

## DESCRIPTION

The circuit is necessary for the Automatic Sound Levelizer (ASL) built into the stereo component amplifier assembly.
Speed signals are received from the combination meter assembly and used for the ASL.
The ASL function automatically adjusts the sound volume in order to clear audio quality even when vehicle noise increases (as vehicle noise increases, the volume is turned up etc.).

**HINT:**

- **A voltage of 12 V or 5 V is output from each ECU and then input to the combination meter assembly. The signal is changed to a pulse signal at the transistor in the combination meter assembly. Each ECU controls the respective system based on the pulse signal.**
- **If a short occurs in any of the ECUs or in the wire harness connected to an ECU, all systems in the diagram below will not operate normally.**

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY - COMBINATION METER ASSEMBLY)

a. Disconnect the F63 stereo component amplifier assembly connector and E77 combination meter assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-2 (SPD) - E77-6 (+S) | Always | Below 1 Ω |
| F63-2 (SPD) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

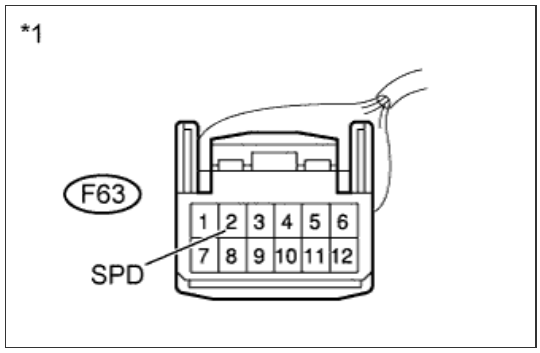
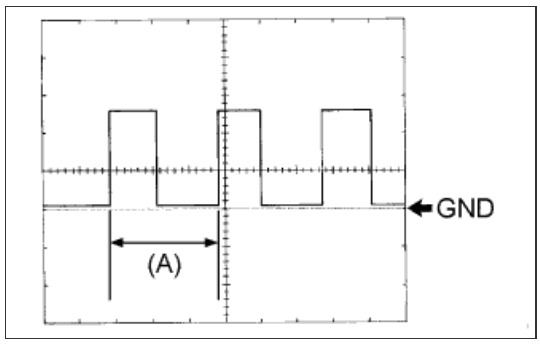
## 2.INSPECT COMBINATION METER ASSEMBLY (OUTPUT WAVEFORM)



a. Reconnect the E77 combination meter assembly connector.

b. Check the input waveform.

i. Connect an oscilloscope to terminal F63-2 (SPD) and body ground.



ii. Turn the engine switch on (IG).

iii. Turn a wheel slowly.

iv. Check the signal waveform according to the condition(s) in the table below.

| Item | Condition |
|---|---|
| Measurement terminal | F63-2 (SPD) - Body ground |
| Measurement setting | 5 V/DIV., 20 ms./DIV. |
| Condition | Driving at approx. 20 km/h (12 mph) |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Stereo Component Amplifier Assembly) |

**OK:**

**The waveform is displayed as shown in the illustration.**

**HINT:**

When the system is functioning normally, one wheel revolution generates 4 pulses. As the vehicle speed increases, the width indicated by (A) in the illustration narrows.

NG → REPLACE COMBINATION METER ASSEMBLY (Click here)

OK → REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

**for Preparation** Click here

## DESCRIPTION

The circuit is necessary for the Automatic Sound Levelizer (ASL) built into the stereo component amplifier assembly.
Speed signals are received from the combination meter assembly and used for the ASL.

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

### 2.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - MULTI-MEDIA INTERFACE ECU)

a. Disconnect the F55 display and navigation module display connector.

b. Disconnect the L51 multi-media interface ECU connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L51-11 (ACC) - F55-11 (ACC) | Always | Below 1 Ω |

| | | |
|---|---|---|
| L51-12 (+B) - F55-12 (+B) | Always | Below 1 Ω |
| L51-7 (GND) - F55-7 (GND) | Always | Below 1 Ω |
| L51-11 (ACC) - Body ground | Always | 10 kΩ or higher |
| L51-12 (+B) - Body ground | Always | 10 kΩ or higher |
| L51-7 (GND) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

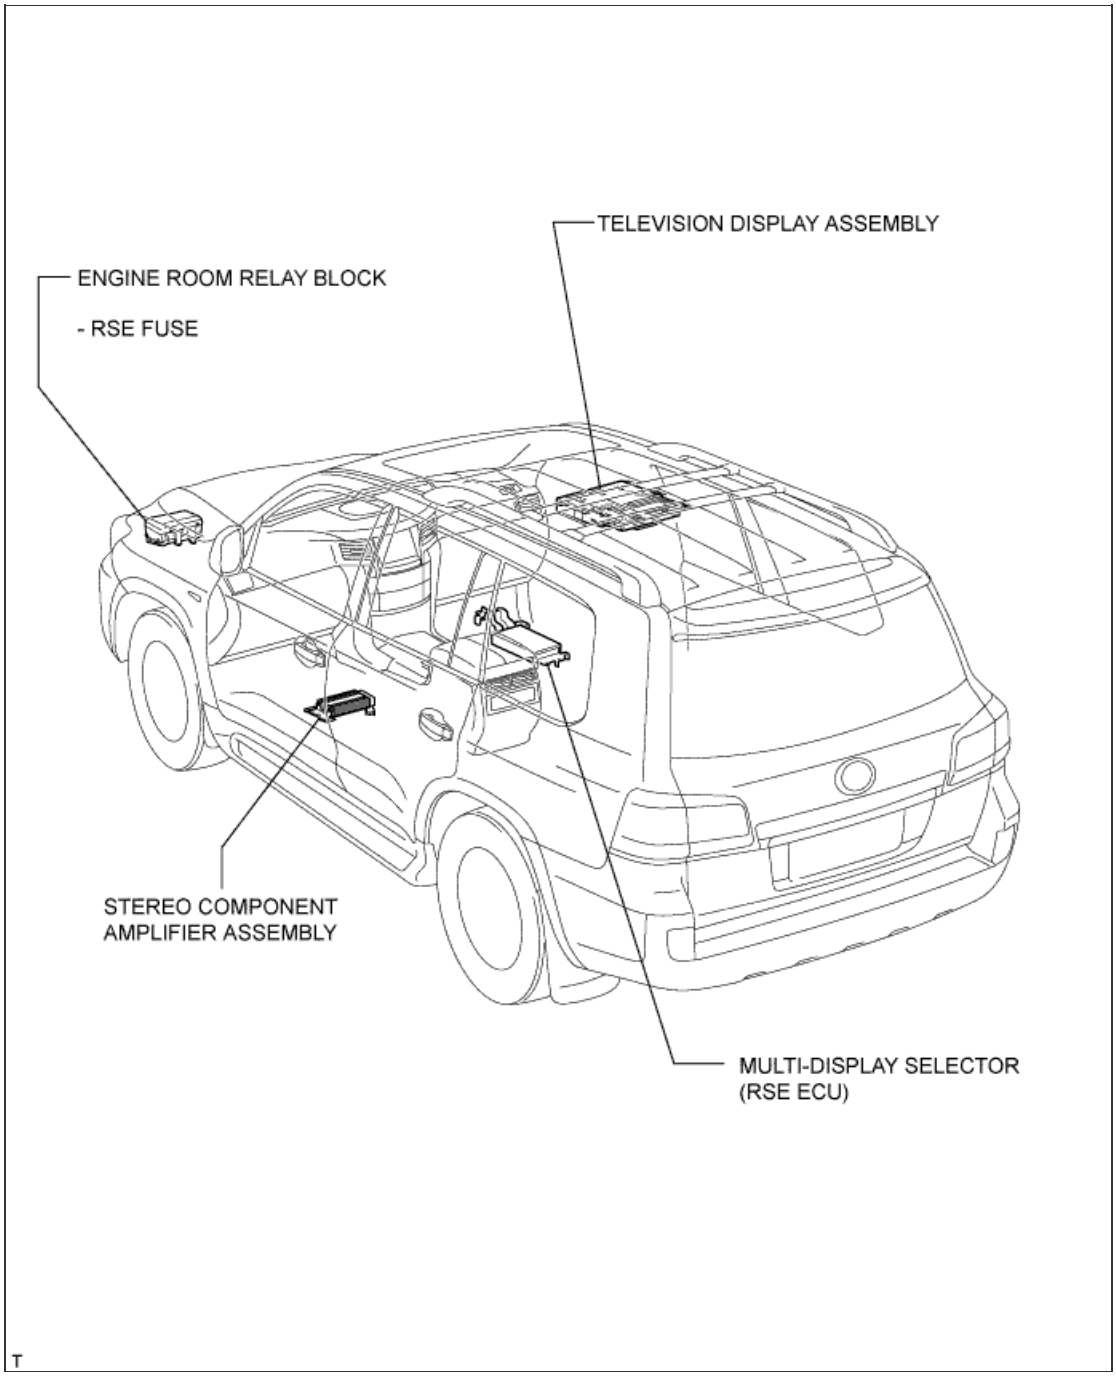
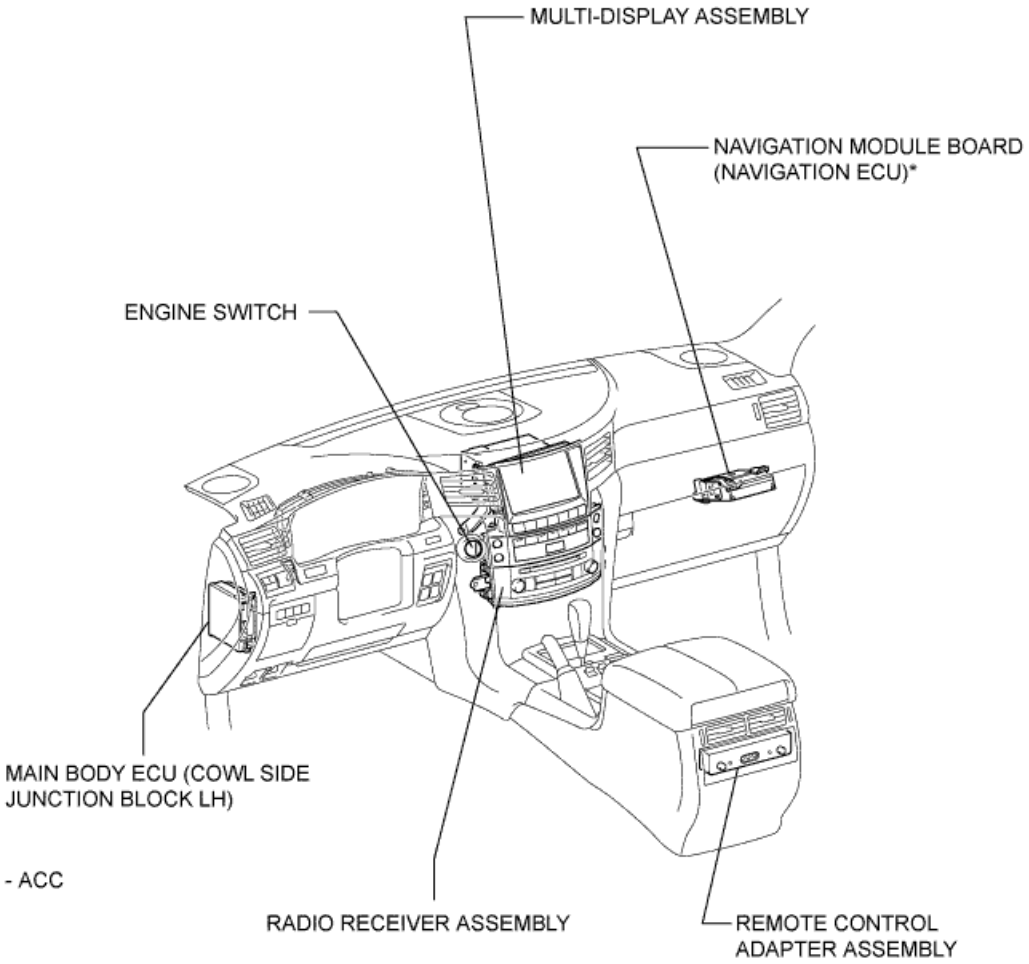
## 1.PRECAUTION FOR DISCONNECTING CABLE FROM NEGATIVE BATTERY TERMINAL



**NOTICE:**

- **After the engine switch is turned off, the display and navigation module display records various types of memory and settings. As a result, after turning the engine switch off, make sure to wait for the time specified in the following table before disconnecting the cable from the negative (-) battery terminal.**



**Waiting Time before Disconnecting Cable from Negative (-) Battery Terminal**

| Specification | Waiting Time |
|---|---|
| w/o Telematics transceiver | 60 seconds |
| w/ Telematics transceiver | 120 seconds |

## OUTLINE

- As a unique feature of the Rear Seat Entertainment (RSE) system, the rear seat occupants can enjoy different audio-visual modes at the same time.
- The rear seat occupants can control the audio-visual modes with the remote controller, and listen to audio by using wired or wireless headphones.

## FUNCTION OF MAIN COMPONENT

| Component | Function |
|---|---|
| Television Display | • Displays DVD and video images in accordance with video signals from the multi-display selector.<br>• Receives signals from the remote controller and outputs them to the multi-display selector.<br>• Outputs audio signals to the wireless headphones in the form of infrared signals.<br>• Displays the audio-visual control screen.<br>• Displays the adjustment screen.<br>• Displays the diagnosis screen. The diagnosis screen appears when the diagnosis mode is started on the multi-display.<br>• Displays when open, but does not display when closed.<br>• Even if the engine switch is turned from on (ACC) to off to on (ACC), the display condition continues. |
| Audio Head Unit:<br>Radio Receiver | • Outputs audio signals to the multi-display selector and the stereo component amplifier.<br>• Outputs a request to the multi-display to start the diagnosis mode.<br>• Receives RSE sound signals from the multi-display selector and outputs them to the stereo component amplifier. |
| Multi-display Selector (RSE ECU) | • Processes video and audio signals from the disc player and video player and audio signals from the audio head unit, and outputs them to the television display and headphone terminals.<br>• Controls the distribution of the audio-visual mode to the front (audio head unit) and the rear (RSE). |
| Remote Controller | Outputs various control signals of the RSE system to the television display in the form of infrared signals. |
| Wireless Headphone | • Receives the audio signals from the television display in the form of infrared signals.<br>• Volume adjustment of the wireless headphone can be performed by using the volume adjuster on the wireless headphone. |
| Headphone Terminal | • Outputs audio signals to the wired headphones that are connected.<br>• Adjusts the volume of the wired headphones in accordance with the volume control. |
| VTR Terminal | This terminal is for connecting the video player video and audio output terminals. |

## DIAGNOSIS FUNCTION

a. When the radio receiver or navigation system changes to the diagnosis screen, the television display shows an RSE diagnosis screen.

## DVD (Digital Versatile Disc) PLAYER OUTLINE (for TELEVISION DISPLAY)

a. The DVD player can only play DVD videos that have one of the following marks:

H

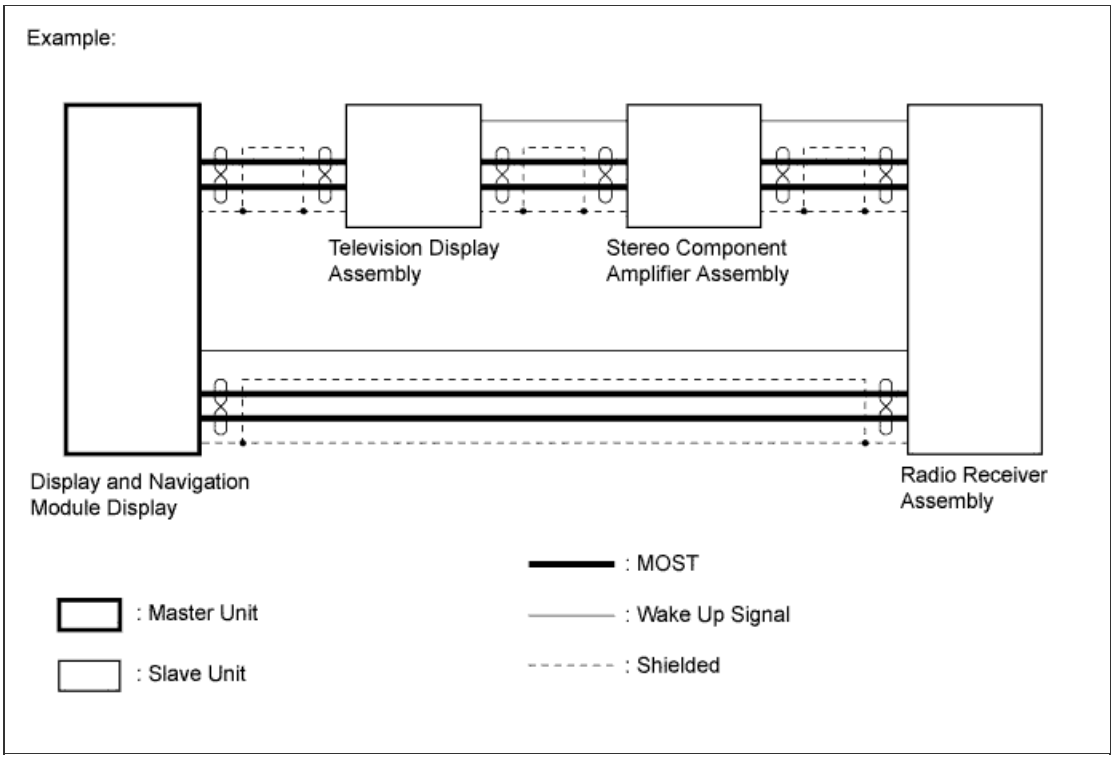
i. Precaution for use of discs

**NOTICE:**

- **Keep the discs away from dirt. Be careful not to damage the discs or leave your fingerprints on them.**
- **Hold discs by the outer edge and center hole with the label side up.**
- **Leaving the disc exposed halfway out of the slot for a long time after pressing the disc eject button may cause deformation of the disc, making the disc unusable.**
- **Do not use uniquely-shaped CDs because these may cause player malfunctions.**
- **Do not use discs whose recording portion is transparent or translucent because they may not be able to be inserted, ejected, or played normally.**

**for Preparation** Click here

## OUTLINE



- As a unique feature of the Rear Seat Entertainment (RSE) system, the rear seat occupants can enjoy different audio-visual modes at the same time.
- The rear seat occupants can control the audio-visual modes with the remote control, and listen to audio by using wired or wireless headphones.
- The television display assembly receives image and sound signals from the display and navigation module display.
- The rear seat occupants can enjoy watching video by connecting an external device.
- MOST communication is used between the display and navigation module display and the television display assembly.
- Occupants in the front seats and rear seats can enjoy different content at the same time.

## FUNCTION OF MAIN COMPONENTS

| Component | Function |
|---|---|
| Television Display Assembly | • Displays DVD and video images in accordance with video signals from the display and navigation module display.<br>• Receives signals from the remote control and outputs them to the display and navigation module display.<br>• Outputs audio signals to the wireless headphones in the form of infrared signals.<br>• Displays the audio-visual control screen.<br>• Displays the adjustment screen.<br>• Displays the diagnosis screen. The diagnosis screen appears when diagnosis mode is started on the display and navigation module display.<br>• Even if the engine switch is turned from on (ACC) to off to on (ACC), display condition continues (image adjustments maintained, sources continue playing on the left and right sides).<br>• Processes video and audio signals from the video terminal and DVD image and audio signals from the radio receiver, and outputs them to the television display and headphone terminals. |
| Radio Receiver Assembly | Outputs DVD image signals to the display and navigation module display. |
| Remote Control | Outputs various control signals of the RSE system to the television display assembly in the form of infrared signals. |
| Wireless Headphone | • Receives audio signals from the television display assembly in the form of infrared signals.<br>• Volume adjustment of the wireless headphone can be done by using the volume adjuster on the wireless headphone. |
| Headphone Terminal | • Outputs audio signals to the wired headphones that are connected.<br>• Adjusts the volume of the wired headphones in accordance with volume control. |
| Video Terminal | This terminal is for connecting the video player's video and audio output terminals. |
| Display and Navigation Module Display | Receives DVD image signals from the radio receiver assembly and sends the signals to the television display assembly. |

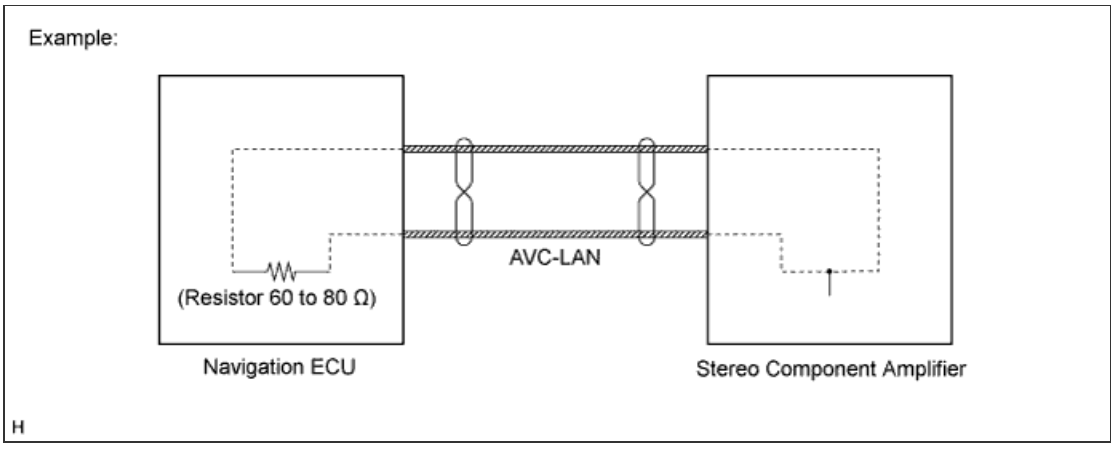
## COMMUNICATION SYSTEM

a. MOST NETWORK OUTLINE

i. Navigation system components communicate with each other via the MOST network.

ii. The MOST network uses a shielded twisted pair of wires for its communication lines.

iii. The master unit of the MOST network is the display and navigation module display.



iv. MOST communication lines connect each slave unit centering around the master unit to form a MOST network ring.

v. The master unit sends a wake-up signal to activate each slave unit connected to the MOST network.

**HINT:**

If a short or open circuit occurs in the MOST circuit, communication will be interrupted and the system will not operate normally.

b. AVC-LAN OUTLINE

i. Components of the navigation system communicate with each other via the AVC-LAN.

ii. The AVC-LAN uses a twisted pair of wires for its communication lines.

iii. The master unit of the AVC-LAN is the display and navigation module display.

**HINT:**

- **The display and navigation module display has enough resistance (60 to 80 Ω) necessary for communication.**
- **If a short or open circuit occurs in the AVC-LAN circuit, communication is interrupted and system will not operate normally.**

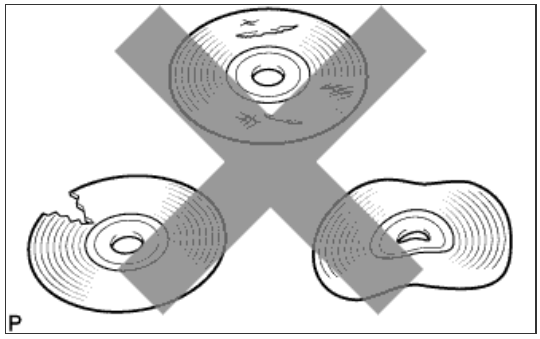
## DIAGNOSIS FUNCTION

a. When the navigation system changes to the diagnosis screen, the television display assembly shows the "RSE Check" screen.

## Digital Versatile Disc (DVD) PLAYER OUTLINE

a. The DVD player can only play DVD videos that have one of the following marks:

H



i. Precaution for use of discs

**NOTICE:**

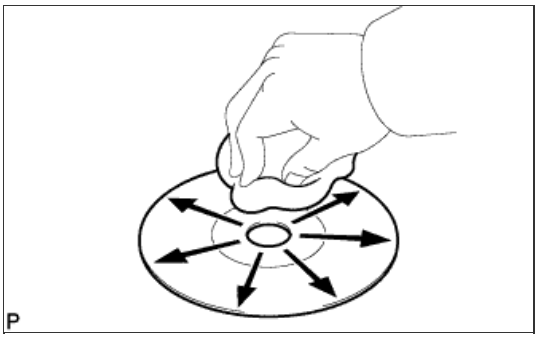
- **Keep the discs away from dirt. Be careful not to damage the discs or leave your fingerprints on them.**
- **Hold discs by the outer edge and center hole with the label side up.**
- **Leaving the disc exposed halfway out of the slot for a long time after pressing the disc eject button may cause deformation of the disc, making the disc unusable.**
- **Do not use uniquely-shaped CDs because these may cause player malfunctions.**
- **Do not use discs whose recording portion is transparent or translucent because they may not be able to be inserted, ejected or played normally.**

b. Check disc

i. Check that the disc is not deformed or cracked.

P

c. Disc cleaning



**NOTICE:**

Do not use a lens cleaner because it may cause a malfunction in the pickup portion of the player.

i. If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.

**NOTICE:**

- **Pressing on the disc by hand or rubbing the disc with a hard cloth may scratch the disc surface.**
- **Use of solvent such as a record spray, antistatic agent, alcohol, benzine, and thinner or a chemical cloth may cause damage to the disc, making the disc unusable.**

**for Preparation** Click here

**HINT:**

Use these procedures to troubleshoot the rear seat entertainment system.

## 1.VEHICLE BROUGHT TO WORKSHOP

**NEXT**

## 2.INSPECT BATTERY VOLTAGE

**Standard voltage:**
**11 to 14 V**

If the voltage is below 11 V, recharge or replace the battery before proceeding.

**NEXT**

## 3.BASIC INSPECTION

a. Turn the engine switch on (ACC).

b. Check whether or not the display appears on the multi-display.

**Result**

| Result | Proceed to |
|---|---|
| Display appears | A |
| Display does not appear | B |

**B.** → **Go to step 6**

**A**

## 4.CHECK FOR DTC

a. Check for DTCs and note any codes that are output.

b. Clear the DTCs.

c. Recheck for DTCs. Based on the DTC output in the first step, try to force output of the audio system DTC by simulating the conditions indicated by the DTC.

**HINT:**

- **If the system cannot enter the diagnosis mode, inspect each AVC-LAN communication signal and repair or replace problem parts.**
- **Even if the malfunction symptom is not confirmed, check for DTCs, as the system stores past DTCs.**
- **Refer to the detailed description on the diagnostic screen as necessary ( Click here).**
- **Check and clear past diagnostic trouble codes. Check the diagnostic trouble code and inspect the area the code indicates.**

**Result**

| Result | Proceed to |
|---|---|
| DTC is not output | A |
| DTC is output | B |

B. Go to step 7

A

## 5.PROBLEM SYMPTOMS TABLE

**Result**

| Result | Proceed to |
|---|---|
| Fault is not listed in problem symptoms table | A |
| Fault is listed in problem symptoms table | B |

B. Go to step 7

A

## 6.OVERALL ANALYSIS AND TROUBLESHOOTING

a. Terminals of ECU (Click here).

b. Inspect the front No. 1 speaker (Click here).

c. Inspect the front No. 2 speaker (Click here).

d. Inspect the front No. 3 speaker (Click here).

e. Inspect the front No. 4 speaker (Click here).

f. Inspect the No. 1 woofer box speaker (Click here).

g. Inspect the rear speaker set (Click here).

h. Inspect the rear No. 2 speaker (Click here).

i. Inspect the rear No. 3 speaker (Click here).

j. Inspect the rear header speaker (Click here).

## 7.ADJUST, REPAIR OR REPLACE

NEXT

END

**for Preparation** Click here

**HINT:**

- **Use the following procedure to troubleshoot the rear seat entertainment system.**
- ***: Use the intelligent tester.**

## 1.VEHICLE BROUGHT TO WORKSHOP

**NEXT**

## 2.INSPECT BATTERY VOLTAGE

a. Inspect the battery voltage.

**Standard Voltage:**
**11 to 14 V**

If the voltage is below 11 V, recharge or replace the battery before proceeding to next step.

**NEXT**

## 3.CHECK FOR DTC*

a. Refer to DTC Check / Clear ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC is output. | A |
| DTC is not output. | B |

**HINT:**

If more information is needed, perform a recheck using the "System Check Mode" screen after rechecking for DTCs using the intelligent tester (Click here).

**B.** → **Go to step 7**

**A**

## 4.DTC CLEAR*

a. Clear the DTCs and finish diagnostic mode.

**HINT:**

The current DTCs may not indicate actual malfunctions depending on the vehicle operating conditions.

**NEXT**

## 5.RECHECK FOR DTC*

a. Recheck for DTCs.

**Result**

| Result | Proceed to |
|---|---|
| DTC is output. | A |

| | |
|---|---|
| DTC is not output. | B |

**HINT:**

- **Even if the malfunction symptom cannot be confirmed, check for DTCs. This is because the system stores history DTCs.**
- **If more information is needed, perform a recheck using the "System Check Mode" screen after rechecking for DTCs using the intelligent tester (Click here).**
- **Check the DTC and inspect the area the code indicates.**

**B.** → Go to step 7

**A**

## 6.DIAGNOSTIC TROUBLE CODE CHART

a. Find the output code in the diagnostic trouble code chart ( Click here).

**NEXT.** → Go to step 9

## 7.PROBLEM SYMPTOMS TABLE

a. Refer to Problem Symptoms Table (Click here).

**Result**

| Result | Proceed to |
|---|---|
| Fault is not listed in Problem Symptoms Table. | A |
| Fault is listed in Problem Symptoms Table. | B |

**HINT:**

If the symptom does not recur and no DTC is output, perform the symptom simulation method ( Click here).

**B.** → Go to step 9

**A**

## 8.CHECK ECU TERMINAL ARRANGEMENT BASED ON MALFUNCTION SYMPTOM

a. Refer to Terminals of ECU ( Click here).

**NEXT**

## 9.CHECK CIRCUIT

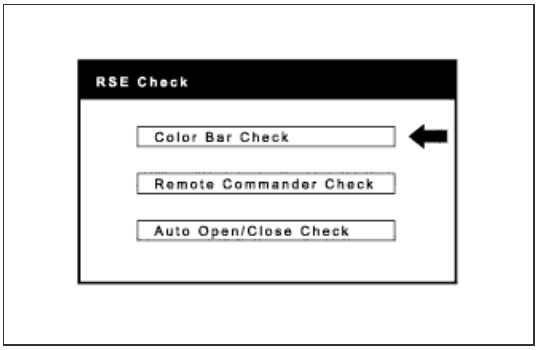
b. Enter diagnostic mode (NAVIGATION SYSTEM for DVD) (Click here).

c. Enter diagnostic mode (ELECTRO MULTI VISION SYSTEM) ( Click here).



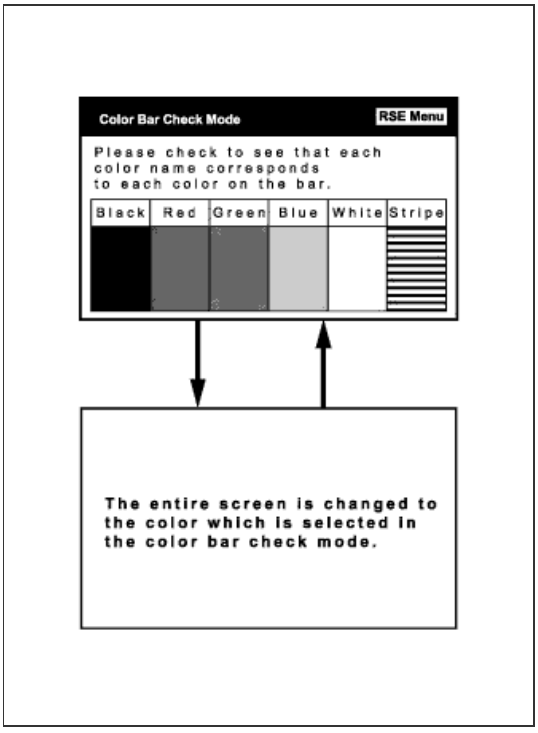
## RSE CHECK

**HINT:**

- **Use the remote control for each inspection.**
- **This mode checks the color display on the television display assembly.**
- **The television display assembly is not a touch panel type. Do not touch the screen.**

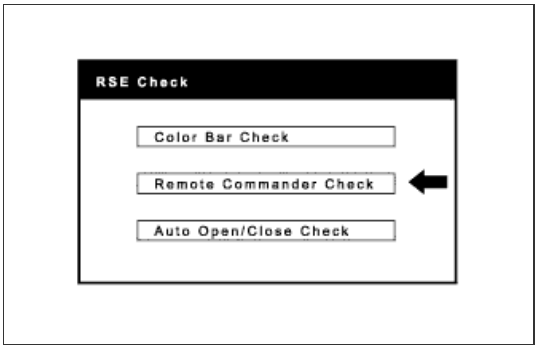
a. Color Bar Check

i. Select "Color Bar Check" from the "RSE Check" screen.



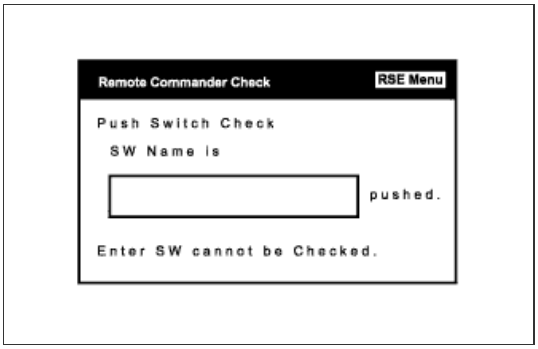
ii. Select a color bar from the "Color Bar Check Mode" screen.

iii. Check the display color.



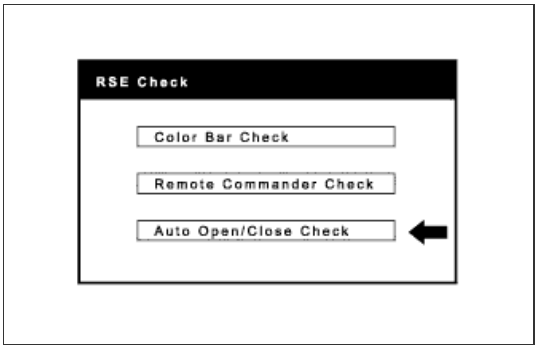
**HINT:**

- **The entire screen turns to the color or stripe which is selected.**
- **The screen returns to the "Color Bar Check" screen if the remote controller is operated again.**



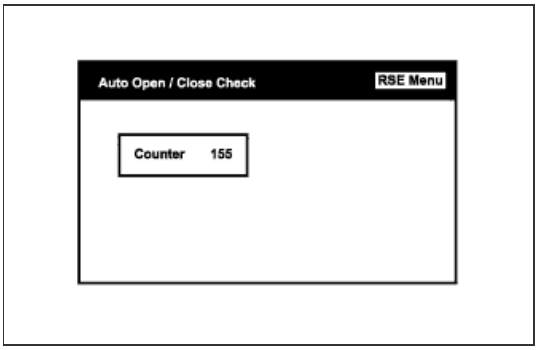
b. Remote Commander Check

i. Select "Remote Commander Check" from the "RSE Check" screen.



ii. Operate each switch and check that the switch name and condition are correctly displayed.

c. Auto Open/Close Check



i. Select "Auto Open/Close Check" from the "RSE Check" screen.

ii. Confirm the number of open/close cycles of the television display assembly.

**HINT:**

The counter indicates the number of times the television display assembly has been opened to an angle of 90° or greater.

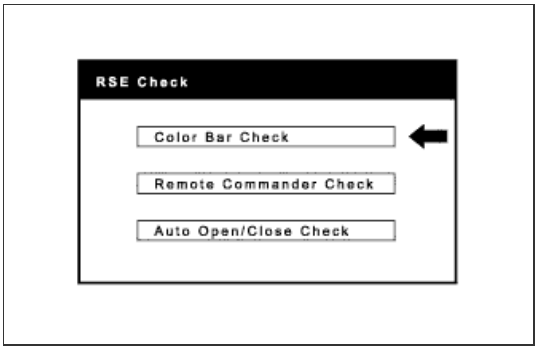
**for Preparation** Click here

## ENTER DIAGNOSTIC MODE

a. Enter diagnostic mode (NAVIGATION SYSTEM for HDD) (Click here).

b. Enter diagnostic mode (NAVIGATION SYSTEM for DVD) (Click here).

c. Enter diagnostic mode (ELECTRO MULTI VISION SYSTEM) ( Click here).



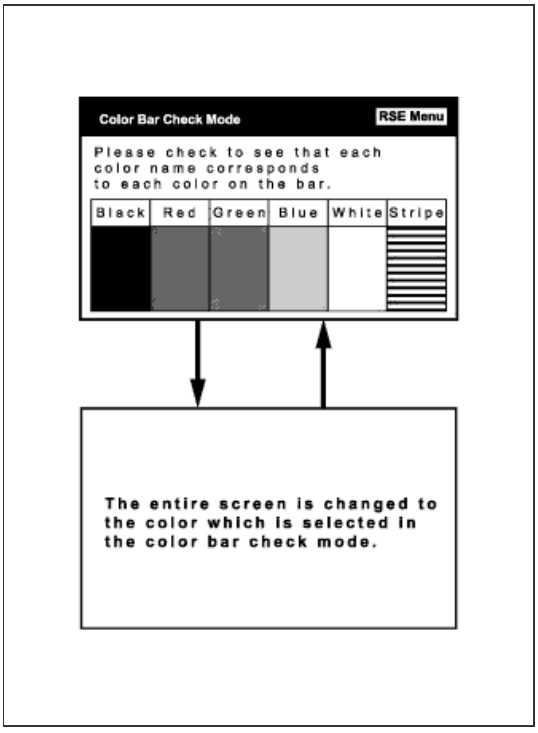
## RSE CHECK

**HINT:**

- **Use the remote control for each inspection.**
- **This mode checks the color display on the television display assembly.**
- **The television display assembly is not a touch panel type. Do not touch the screen.**

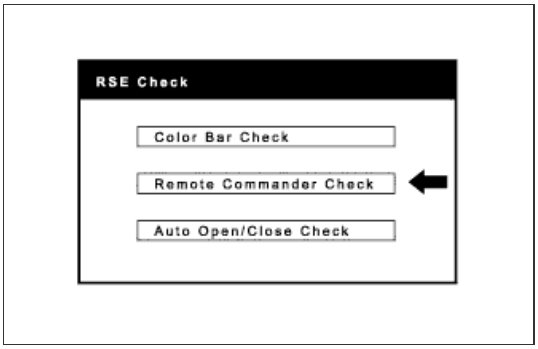
a. Color Bar Check

i. Select "Color Bar Check" from the "RSE Check" screen.



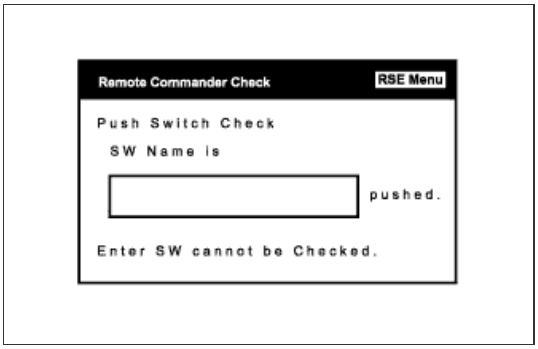
ii. Select a color bar from the "Color Bar Check Mode" screen.

iii. Check the display color.



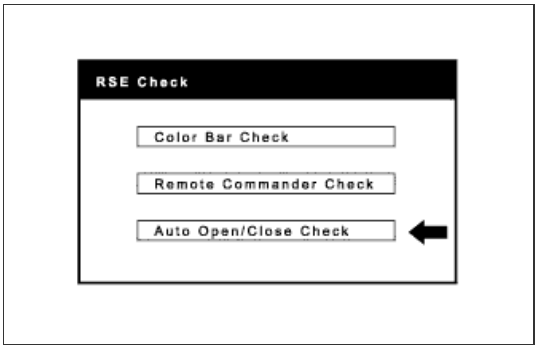
**HINT:**

- **The entire screen turns to the color or stripe which is selected.**
- **The screen returns to the "Color Bar Check" screen if the remote controller is operated again.**



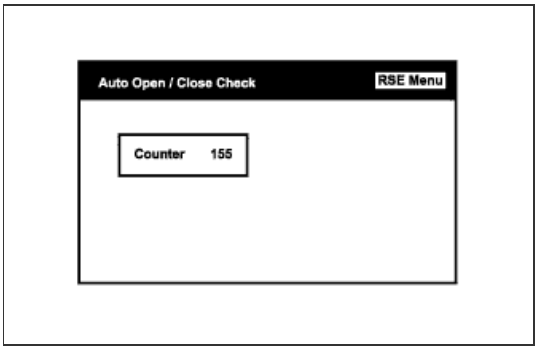
b. Remote Commander Check

i. Select "Remote Commander Check" from the "RSE Check" screen.



ii. Operate each switch and check that the switch name and condition are correctly displayed.

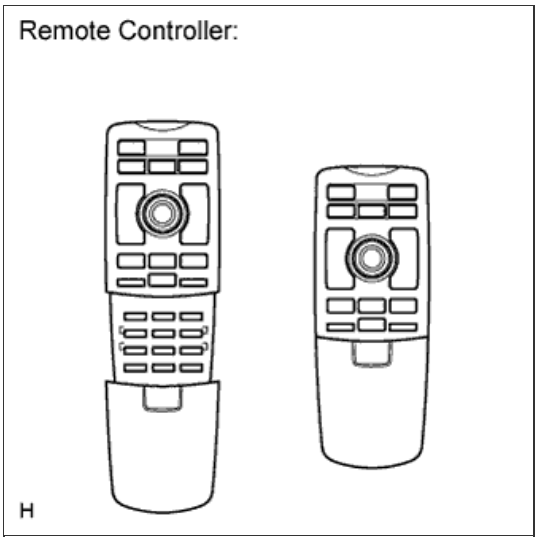
c. Auto Open/Close Check



i. Select "Auto Open/Close Check" from the "RSE Check" screen.

ii. Confirm the number of open/close cycles of the television display assembly.

**HINT:**

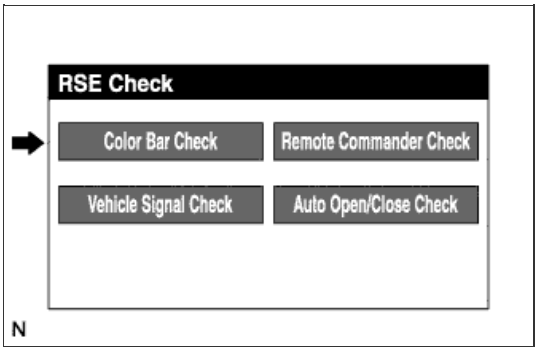


The counter indicates the number of times the television display assembly has been opened to an angle of 90° or greater.

**for Preparation** Click here

**HINT:**

- **This mode checks the color display on the television display.**
- **Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be exactly the same as on the actual vehicle.**
- **Use the remote controller for each inspection.**
- **The television display is not a touch panel type. Do not touch the screen.**



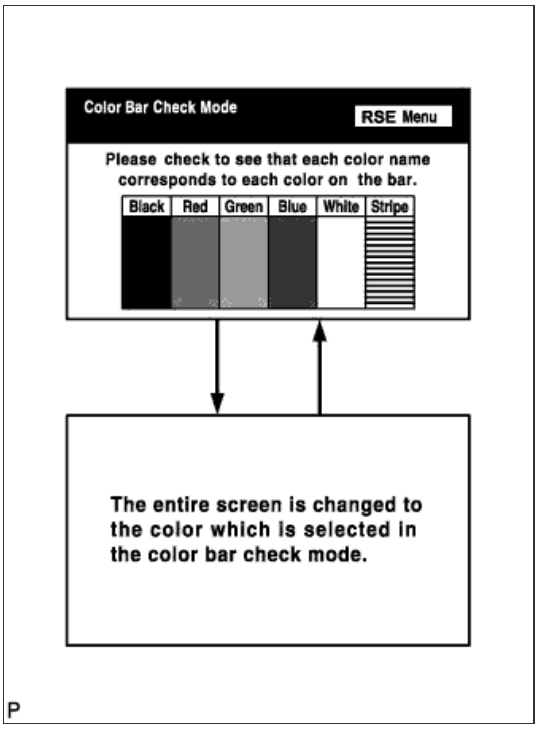
## ENTER DIAGNOSTIC MODE

a. w/ Navigation System: Enter the diagnostic mode (Click here).

b. w/o Navigation System: Enter the diagnostic mode (Click here).

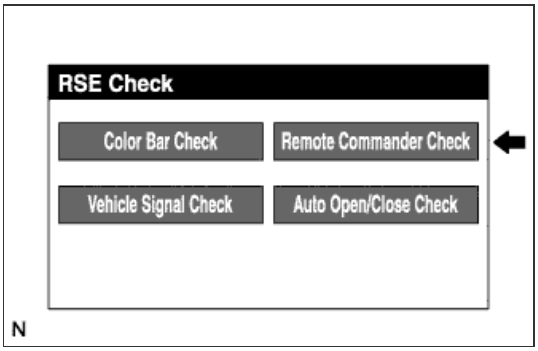
## COLOR BAR CHECK

a. Select "Color Bar Check" from the "RSE Check" screen.



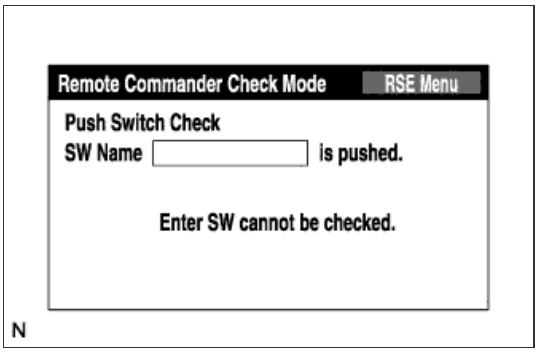
b. Select a color bar from the "Color Bar Check Mode" screen.

c. Check the display color.



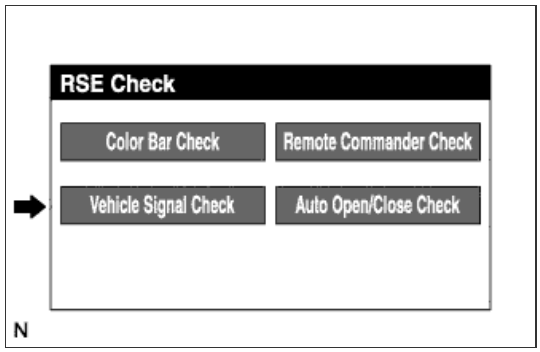
**HINT:**

- **The entire screen turns to the color or stripe selected.**
- **The screen returns to the "Color Bar Check" screen if the remote controller is operated again.**



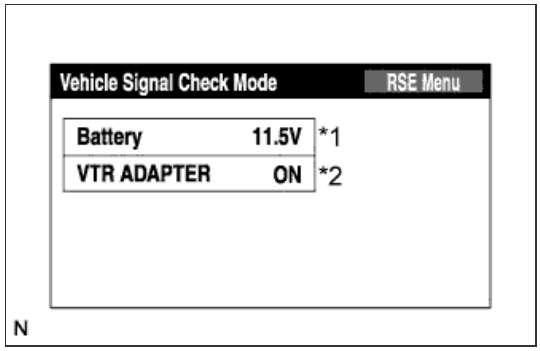
## REMOTE COMMANDER CHECK

a. Select "Remote Commander Check" from the "RSE Check" screen.



b. Operate each switch and check that the switch name and condition are correctly displayed.

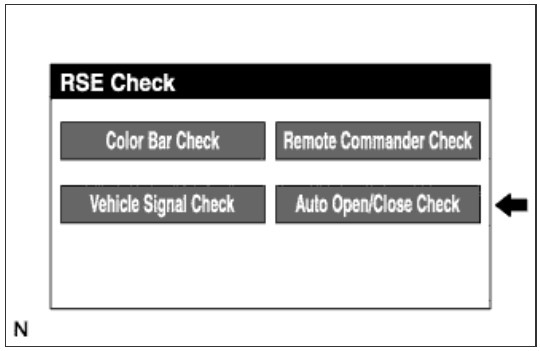
## VEHICLE SIGNAL CHECK



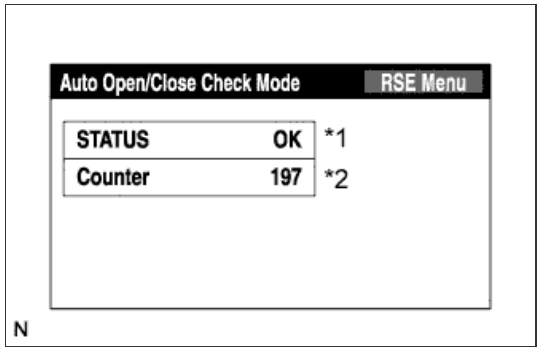
a. Select "Vehicle Signal Check" from the "RSE Check" screen.

b. When the "Vehicle Signal Check Mode" screen is displayed, check all the vehicle signal conditions.

**HINT:**



- **Only conditions having inputs are displayed.**
- **This screen is updated once per second when input signals to the vehicle are changed.**



| Display | Contents |
|---|---|
| *1: Battery | Battery voltage is displayed. |
| *2: VTR ADAPTER | Displays if exterior input through VTR adapter is possible or not.<br>ON: Exterior input possible<br>OFF: Exterior input not possible<br><br>**HINT:**<br><br>Display only shows if there is a VTR adapter. Display does not show if exterior input device is connected. |

## AUTO OPEN/CLOSE CHECK

a. Select "Auto Open/Close Check" screen.

b. This is the screen for inspecting the electronic open and close function of the RSE.

| Display | Contents |
|---|---|

| | |
|---|---|
| *1: STATUS | Electronic open and close function status. |
| *2: Counter | Counts number of electronic open and close operations. 1 count occurs if display opens 90° or more.<br>Open and close counter can display up to 5 digits (limit: 99999). |

**for Preparation** Click here

Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

### Remote Control

| Symptom | Suspected Area | See page |
|---|---|---|
| A remote control system does not operate. | Proceed to "A Remote Control System does not Operate" | Click here |
| | Television display assembly | Click here |

**for Preparation** Click here

**HINT:**

- **Use the table below to help determine the cause of the problem symptom. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.**
- **Inspect the fuses and relays related to this system before inspecting the suspected areas below.**

**Display**

| Symptom | Suspected Area | See page |

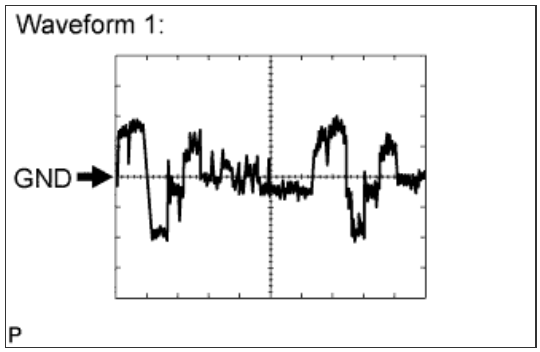
## CHECK MULTI-DISPLAY SELECTOR (RSE ECU)

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| L22-1 (+B) - L22-12 (GND) | L - W-B | Battery | Always | 11 to 14 V |
| L22-6 (ACC) - L22-12 (GND) | GR - W-B | Ignition (ACC) | Engine switch on (ACC) | 11 to 14 V |
| L25-6 (ADPI) - L22-12 (GND) | R - W-B | Ground | Always | Below 1 Ω |
| L22-11 (GND1) - Body ground | W - Body ground | Ground | Always | Below 1 Ω |
| L22-15 (SG1) - Body ground | Shielded - Body ground | Ground | Always | Below 1 Ω |
| L22-14 (HP1L) - L22-12 (GND) | W - W-B | Sound signal (Output) | RSE system playing (Headphone) | A waveform synchronized with sound is output |
| L22-13 (HP1R) - L22-12 (GND) | B - W-B | Sound signal (Output) | RSE system playing (Headphone) | A waveform synchronized with sound is output |
| L25-11 (SLDE) - Body ground | Shielded - Body ground | Ground | Always | Below 1 Ω |
| L25-9 (TVL+) - L22-12 (GND) | W - W-B | Sound signal | External device system playing (At time of VTR jack use) | A waveform synchronized with sound is output |
| L25-7 (TVR+) - L22-12 (GND) | B - W-B | Sound signal | External device system playing (At time of VTR jack use) | A waveform synchronized with sound is output |
| L22-5 (NTS3) - L22-12 (GND) | B - W-B | Display signal | Display on (Television display assembly) | Pulse generation (see waveform 1) |
| L22-4 (SGN3) - Body ground | W - Body ground | Ground | Always | Below 1 Ω |
| L22-19 (SLDC) - Body ground | Shielded - Body ground | Ground | Always | Below 1 Ω |
| L22-18 (SG2) - Body ground | Shielded - Body ground | Ground | Always | Below 1 Ω |
| L22-17 (HP2L) - L22-12 (GND) | W - W-B | Sound signal (Output) | RSE system playing (Headphone) | A waveform synchronized with sound is output |
| L22-16 (HP2R) - L22-12 (GND) | B - W-B | Sound signal (Output) | RSE system playing (Headphone) | A waveform synchronized with sound is output |
| L25-4 (SGN4) - Body ground | W - Body ground | Ground | Always | Below 1 Ω |
| L25-3 (NTS4) - L22-12 (GND) | B - W-B | Display signal | External device system displayed (At time of VTR jack use) | Pulse generation (see waveform 1) |
| L25-5 (SLDD) - Body ground | Shielded - Body ground | Ground | Always | Below 1 Ω |



| | | | | |
|---|---|---|---|---|
| L23-13 (L6-) - L22-12 (GND) | R - W-B | Sound signal (Output) | DVD system playing | A waveform synchronized with sound is output |
| L23-14 (L6+) - L22-12 (GND) | G - W-B | Sound signal (Output) | DVD system playing | A waveform synchronized with sound is output |
| L23-15 (R6-) - L22-12 (GND) | W - W-B | Sound signal (Output) | DVD system playing | A waveform synchronized with sound is output |
| L23-16 (R6+) - L22-12 (GND) | B - W-B | Sound signal (Output) | DVD system playing | A waveform synchronized with sound is output |
| L23-17 (SLD6) - Body ground | Shielded - Body ground | Ground | Always | Below 1 Ω |
| L23-18 (MUT6) - L22-12 (GND) | G - W-B | Mute signal | RSE system playing → changing modes | 3.5 V or higher → Below 1 V |
| L22-2 (+B1) - L22-12 (GND) | L - W-B | Battery | Always | 11 to 14 V |
| L22-12 (GND) - Body ground | W-B - Body ground | Ground | Always | Below 1 Ω |
| L22-7 (ACC1) - L22-12 (GND) | GR - W-B | Ignition (ACC) | Engine switch on (ACC) | 11 to 14 V |
| L23-19 (MUT4) - L22-12 (GND) | G - W-B | Mute signal | Disc player playing → changing modes | 3.5 V or higher → Below 1 V |
| L23-20 (L4-) - L22-12 (GND) | R - W-B | Sound signal (Input) | Disc player playing | A waveform synchronized with sound is output |
| L23-21 (L4+) - L22-12 (GND) | L - W-B | Sound signal (Input) | Disc player playing | A waveform synchronized with sound is output |
| L23-22 (R4-) - L22-12 (GND) | W - W-B | Sound signal (Input) | Disc player playing | A waveform synchronized with sound is output |
| L23-23 (R4+) - L22-12 (GND) | B - W-B | Sound signal (Input) | Disc player playing | A waveform synchronized with sound is output |
| L22-24 (NTS2) - L22-12 (GND) | B - W-B | DVD display signal | Disc player playing<br>DVD system displayed | Pulse generation<br>(see waveform 1) |
| L22-25 (SGN2) - Body ground | W - Body ground | Ground | Always | Below 1 Ω |
| L22-26 (SLDB) - L22 - 12 (GND) | Shielded - Body ground | Ground | Always | Below 1 Ω |
| L24-11 (CNT2) - L22-12 (GND) | V - W-B | Multi-display selector signal input 2 control signal | RSE system playing | 3.5 V or higher → Below 1 V |
| L24-12 (CNT3) - L22-12 (GND) | W - W-B | Multi-display selector signal input 3 control signal | RSE system playing | 3.5 V or higher → Below 1 V |
| L24-13 (CNT4) - L22-12 (GND) | R - W-B | Multi-display selector signal input 4 control signal | RSE system playing | 3.5 V or higher → Below 1 V |
| L24-14 (CNT5) - L22-12 (GND) | L - W-B | Multi-display selector signal input 5 control signal | RSE system playing | 3.5 V or higher → Below 1 V |
| L24-9 (ADPO) - L22-12 (GND) | B - W-B | Ground | Always | Below 1 Ω |
| L24-2 (L1-) - L22-12 (GND) | G - W-B | Sound signal (Output) | RSE system playing | A waveform synchronized with sound is output |
| L24-3 (L1+) - L22-12 (GND) | R - W-B | Sound signal (Output) | RSE system playing | A waveform synchronized with sound is output |
| L24-4 (R1-) - L22-12 (GND) | W - W-B | Sound signal (Output) | RSE system playing | A waveform synchronized with sound is output |
| L24-5 (R1+) - L22-12 (GND) | B - W-B | Sound signal (Output) | RSE system playing | A waveform synchronized with sound is output |
| L24-1 (SLD1) - Body ground | Shielded - Body ground | Ground | Always | Below 1 Ω |
| L24-6 (MUT1) - L22-12 (GND) | G - W-B | Mute signal | RSE system playing → changing modes | 3.5 V or higher → Below 1 V |

a. Using an oscilloscope, check the waveform.

## DTC B15A5 Rear Seat Entertainment System Malfunction

**for Preparation** Click here

### DESCRIPTION

This DTC is stored when a malfunction occurs in the television display assembly.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15A5 | • Bus or sub-microprocessor malfunction<br>• RAM malfunction<br>• Internal hardware malfunction | Television display assembly |

### INSPECTION PROCEDURE

**1.CLEAR DTC**

a. Clear the DTCs (Click here).

NEXT

**2.RECHECK DTC**

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC B15A5 is not output. | A |
| DTC B15A5 is output. | B |

B → REPLACE TELEVISION DISPLAY ASSEMBLY (Click here)

A

**USE SIMULATION METHOD TO CHECK (Click here)**

## DTC B15B0 Display Screen Malfunction

**for Preparation** Click here

### DESCRIPTION

This DTC is stored when a malfunction occurs in the television display assembly.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15B0 | When either condition below is met:<br>• Picture circuit (TFT unit) malfunction<br>• Back light malfunction (excess current) | • Television display assembly<br>• Display and Navigation Module Display |

### INSPECTION PROCEDURE

**1.CLEAR DTC**

a. Clear the DTCs (Click here).

**NEXT**

**2.RECHECK DTC**

a. Recheck for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC B15B0 is not output. | A |
| DTC B15B0 is output. | B |

**HINT:**

- **This DTC is output from the display and navigation module display or television display assembly.**
- **When the DTC is checked using the intelligent tester, whether the DTC is output from the display and navigation module display, or whether it is output from the television display assembly, cannot be distinguished. For this reason, recheck the DTC using the "System Check Mode" screen.**

i. Enter diagnostic mode and display the "Service Menu" screen ( Click here).

ii. Select "Failure Diagnosis Service Check" on the "Service Menu" screen to display the "Failure Diagnosis Service Check" screen.

iii. Select "Service Check Mode" on the "Failure Diagnosis Service Check" screen and perform the service check.

iv. Recheck for DTCs and proceed to the next step according to the table below ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC is not output | A |
| DTC is output from the display and navigation module display. | B |
| DTC is output from a television display assembly. | C |

**B** → **REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)**

**C** → **REPLACE TELEVISION DISPLAY ASSEMBLY (Click here)**

## DTC B15A5 Rear Seat Entertainment System Malfunction

**for Preparation** Click here

### DESCRIPTION

This DTC is stored when a malfunction occurs in the television display assembly.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15A5 | • Bus or sub-microprocessor malfunction<br>• RAM malfunction<br>• Internal hardware malfunction | Television display assembly |

### INSPECTION PROCEDURE

**1.CLEAR DTC**

a. Clear the DTCs (Click here).

NEXT

**2.RECHECK DTC**

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC B15A5 is not output. | A |
| DTC B15A5 is output. | B |

B → REPLACE TELEVISION DISPLAY ASSEMBLY (Click here)

A

**USE SIMULATION METHOD TO CHECK (Click here)**

## DTC B15B0 Display Screen Malfunction

**for Preparation** Click here

### DESCRIPTION

This DTC is stored when a malfunction occurs in the television display assembly.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15B0 | When either condition below is met:<br>• Picture circuit (TFT unit) malfunction<br>• Back light malfunction (excess current) | • Television display assembly<br>• Display and Navigation Module Display |

### INSPECTION PROCEDURE

**1.CLEAR DTC**

a. Clear the DTCs (Click here).

**NEXT**

**2.RECHECK DTC**

a. Recheck for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC B15B0 is not output. | A |
| DTC B15B0 is output. | B |

**HINT:**

- **This DTC is output from the display and navigation module display or television display assembly.**
- **When the DTC is checked using the intelligent tester, whether the DTC is output from the display and navigation module display, or whether it is output from the television display assembly, cannot be distinguished. For this reason, recheck the DTC using the "System Check Mode" screen.**

i. Enter diagnostic mode and display the "Service Menu" screen ( Click here).

ii. Select "Failure Diagnosis Service Check" on the "Service Menu" screen to display the "Failure Diagnosis Service Check" screen.

iii. Select "Service Check Mode" on the "Failure Diagnosis Service Check" screen and perform the service check.

iv. Recheck for DTCs and proceed to the next step according to the table below ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC is not output | A |
| DTC is output from the display and navigation module display. | B |
| DTC is output from a television display assembly. | C |

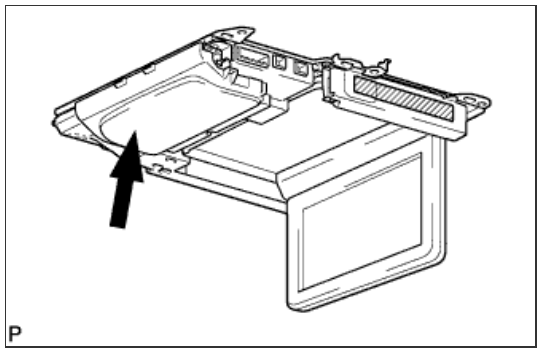
**B** → **REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)**

**C** → **REPLACE TELEVISION DISPLAY ASSEMBLY (Click here)**

**A**

**USE SIMULATION METHOD TO CHECK (Click here)**

**for Preparation** Click here



## INSPECTION PROCEDURE

### 1.CLEAN INFRARED RAY RECEIVING PORTION

a. Clean the infrared ray receiving portion on the television display.

b. Check whether the same malfunction occurs.

**OK:**
**The function returns to normal.**

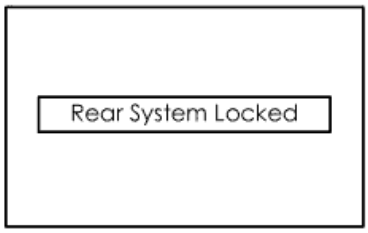
NG → Go to step 2

OK →

### END

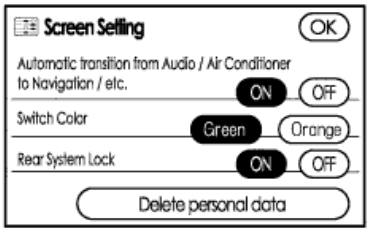
### 2.CHECK SYSTEM

a. Check that the remote control operation of the rear system is not locked by the radio receiver or the multi-display.



i. Check if "Rear System Locked" appears on the television display.

**OK:**
**The message does not appear.**



**HINT:**

If the rear system is locked and the remote controller is used in the rear seat area, an operation not possible message (for example, "Rear System Locked") is displayed. If the message is displayed, enter the multi-display screen setting, and change "Rear System Lock" to OFF.

for Television Display:

for Multi-display:

NG → RELEASE LOCK

OK →

### 3.CHECK REMOTE CONTROLLER (for BATTERY)

a. Check that the dry-cell battery of the remote controller is not depleted.

**OK:**

**Battery is not depleted.**

NG → REPLACE REMOTE CONTROLLER BATTERY

OK

## 4.CHECK TELEVISION DISPLAY ASSEMBLY

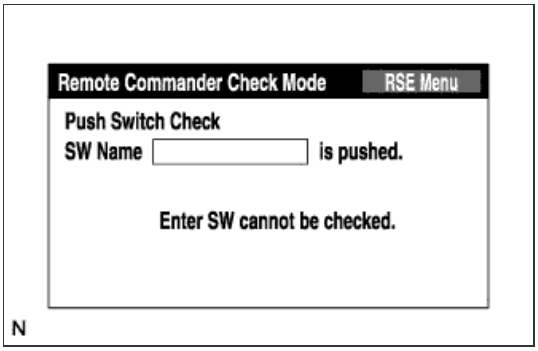
a. Check if the television display is open.

**OK:**
**Open.**

**HINT:**

When the television display is closed, some switches on the remote controller cannot be used.

NG → OPEN TELEVISION DISPLAY ASSEMBLY



OK

## 5.CHECK REMOTE COMMANDER (DISPLAY CHECK MODE)

a. Enter the "Display Check" mode (Remote Commander Check Mode) (Click here).

b. Operate the abnormal switch and check if the switch name and status are correctly displayed.

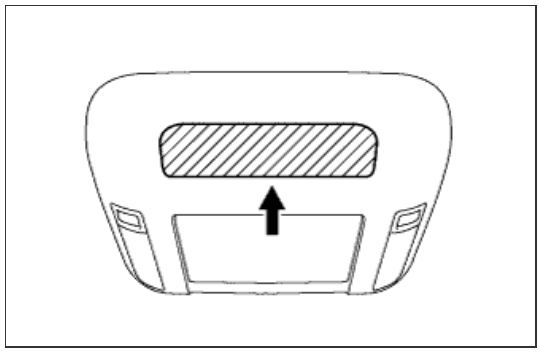
**OK:**
**The switch name and status are correctly displayed as operated.**

NG → PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

REPLACE MULTI-DISPLAY SELECTOR (Click here)

**for Preparation** Click here



## INSPECTION PROCEDURE

### 1.CLEAN INFRARED RAY RECEIVING PORTION

a. Clean the infrared ray receiving portion on the television display assembly.

b. Check whether the same malfunction occurs.

**OK:**
**The function returns to normal.**

NG → Go to step 2

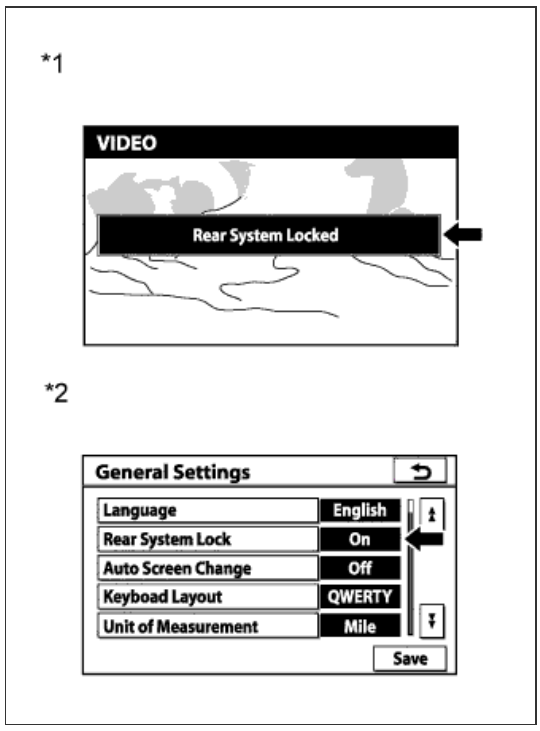
OK →

### END

### 2.CHECK SYSTEM

a. Check that the remote control operation of the rear system is not locked by the display and navigation module display.

i. Check if "Rear System Locked" appears on the television display.



**OK:**
**The message does not appear.**

**HINT:**

If the rear system is locked and the remote control is used in the rear seat area, an operation not possible message (for example, "Rear System Locked") is displayed. If the message is displayed, enter the display and navigation module display screen setting, and change "Rear System Lock" to Off.

**Text in Illustration**

| | |
|---|---|
| *1 | Television Display Assembly |
| *2 | Display and Navigation Module Display |

NG → RELEASE LOCK

OK →

### 3.CHECK REMOTE CONTROL (BATTERY)

a. Check that the dry-cell battery of the remote control is not depleted.

**OK:**

**Battery is not depleted.**

NG → REPLACE REMOTE CONTROL BATTERY

OK

**4.REPLACE REMOTE CONTROL**

a. Replace the remote control with a new or known good one.

b. Check that the remote control system operates normally.

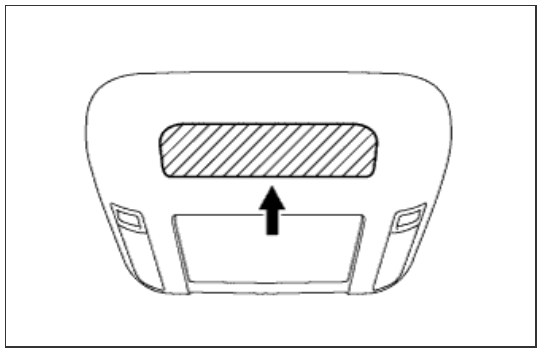
**OK:**
**The remote control system operates normally.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

**END (REMOTE CONTROL WAS DEFECTIVE)**

**for Preparation** Click here



## INSPECTION PROCEDURE

### 1.CLEAN INFRARED RAY RECEIVING PORTION

a. Clean the infrared ray receiving portion on the television display assembly.

b. Check whether the same malfunction occurs.

**OK:**
**The function returns to normal.**

NG → Go to step 2

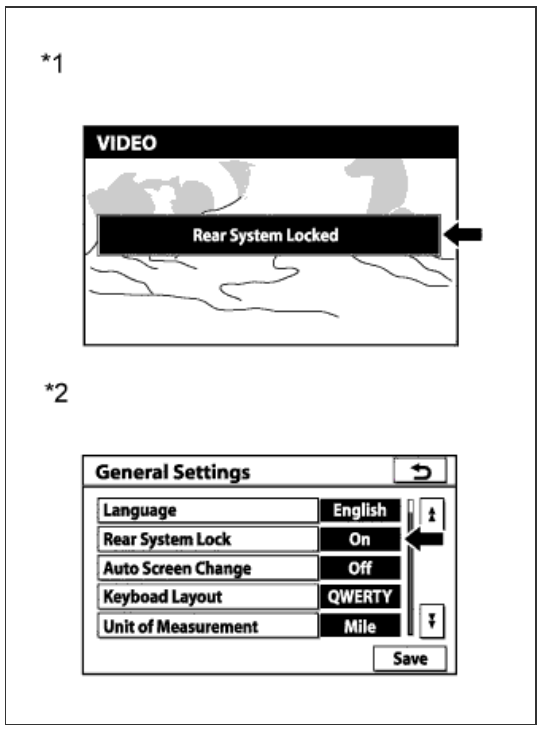
OK →

### END

### 2.CHECK SYSTEM

a. Check that the remote control operation of the rear system is not locked by the display and navigation module display.

i. Check if "Rear System Locked" appears on the television display.



**OK:**
**The message does not appear.**

**HINT:**

If the rear system is locked and the remote control is used in the rear seat area, an operation not possible message (for example, "Rear System Locked") is displayed. If the message is displayed, enter the display and navigation module display screen setting, and change "Rear System Lock" to Off.

**Text in Illustration**

| | |
|---|---|
| *1 | Television Display Assembly |
| *2 | Display and Navigation Module Display |

NG → RELEASE LOCK

OK →

### 3.CHECK REMOTE CONTROL (BATTERY)

a. Check that the dry-cell battery of the remote control is not depleted.

**OK:**

**Battery is not depleted.**

NG → REPLACE REMOTE CONTROL BATTERY

OK

**4.REPLACE REMOTE CONTROL**

a. Replace the remote control with a new or known good one.

b. Check that the remote control system operates normally.

**OK:**
**The remote control system operates normally.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

**END (REMOTE CONTROL WAS DEFECTIVE)**

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK MODE IN WHICH COLOR BECAME UNUSUAL

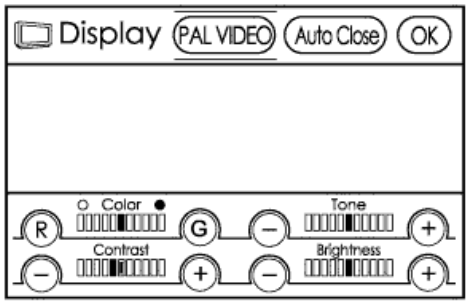
a. Check the mode in which the color became unusual.

**Result**

| Result | Proceed to |
|---|---|
| Unusual in all modes | A |
| Only during DVD and DVD-P (rear seat only) image | B |
| During VTR, DVD and DVD-P (rear seat only) image | C |
| Only during VTR image | D |

B → Go to step 5

C → Go to step 7



D → Go to step 8

A

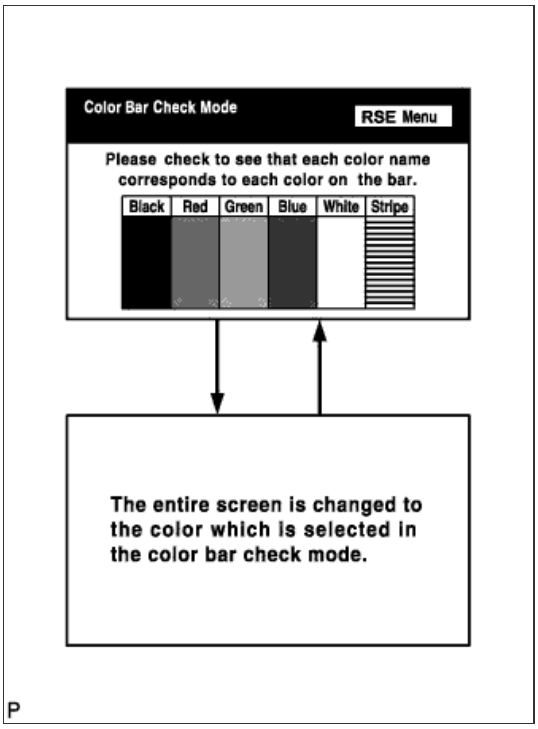
### 2.CHECK DISPLAY (RSE IMAGE QUALITY ADJUSTMENT SCREEN)

a. Press the remote controller DISPLAY switch, and adjust the settings for contrast, tint, color and brightness.

**OK:**
**Returned to normal through image quality adjustment.**

NG → Go to step 3

OK



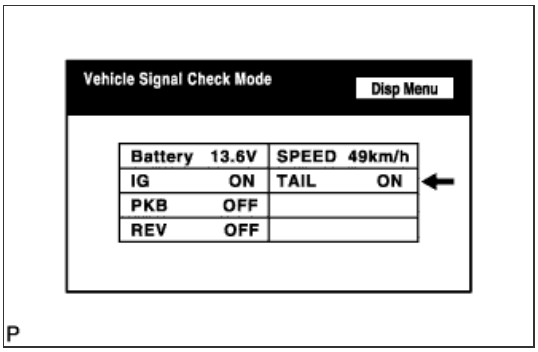
END

### 3.CHECK COLOR BAR (DISPLAY CHECK MODE)

a. Enter the "Display Check" mode (Color Bar Check) (Click here).

b. Check that the color bars match the displayed names.

**OK:**
**Color bars match the displayed names.**



NG → REPLACE TELEVISION DISPLAY ASSEMBLY (Click here)

OK

## 4.CHECK VEHICLE SIGNAL (DISPLAY CHECK MODE)

a. Enter the "Display Check" mode (Vehicle Signal Check Mode) ( Click here).

b. Check that the display changes between ON and OFF according to the light control switch operation.

**OK:**

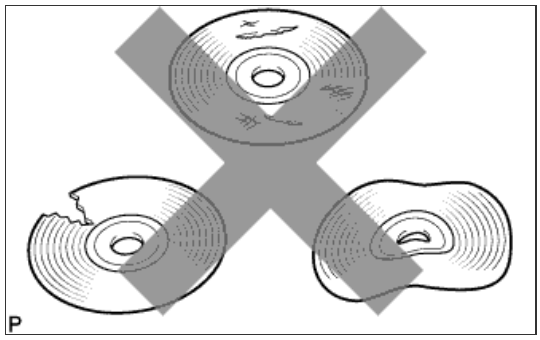
| Light Control Switch | Display |
|---|---|
| Tail or on | ON |
| Off | OFF |

**HINT:**

The display is updated once per second. As a result, it is normal for the display to lag behind the actual change in the switch.

NG → GO TO DISPLAY DOES NOT DIM WHEN LIGHT CONTROL SWITCH IS TURNED ON (Click here)

OK



PROCEED TO NEXT INSPECTION PROCEDURE SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

## 5.CHECK DISC

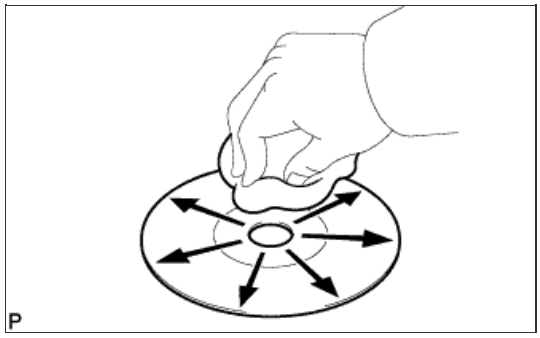
a. Check that the disc is not deformed or cracked.

**OK:**

**No deformation or cracks on the disc.**

NG → CHANGE DISC

OK



## 6.DISC CLEANING

a. Disc cleaning

i. If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.

**NOTICE:**

Do not use a conventional record cleaner or antistatic preservative.

NEXT

GO TO DISPLAY SIGNAL CIRCUIT BETWEEN RADIO RECEIVER AND TELEVISION DISPLAY ASSEMBLY ( **Click here**)

## 7.CHECK DISPLAY SIGNAL CIRCUIT

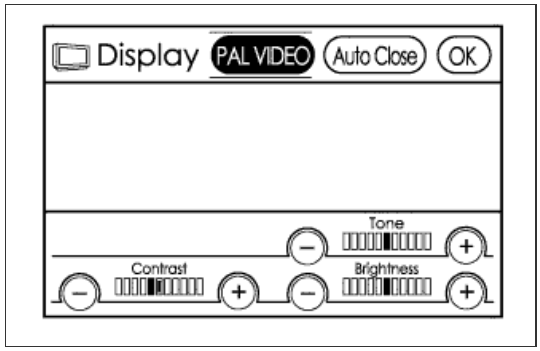
a. Inspect the display signal circuits below.

i. Inspect the display signal circuit between the radio receiver and television display ( Click here).

ii. Inspect the display signal circuit between the video terminal and television display ( Click here).

b. If the display signal circuit is operating normally, proceed to the next step.

NEXT



REPLACE TELEVISION DISPLAY ASSEMBLY (**Click here**)

## 8.CHECK NTSC/PAL SIGNAL (RSE IMAGE QUALITY ADJUSTMENT SCREEN)

a. During the VTR image, check if changing the NTSC/PAL signal by pressing the remote controller DISPLAY switch, entering the RSE image adjustment screen, and pressing the PAL VIDEO button returns the image to normal.

**OK:**

**Returned to normal after pressing image quality adjustment screen PAL VIDEO button.**

NG → Go to step 9

OK

END

9.REPLACE EXTERNAL DEVICE WITH NORMAL ONE AND CHECK

a. Replace the external device with a normal one and check if the same problem occurs again.

**OK:**
**Same problem does not occur.**

NG → GO TO DISPLAY SIGNAL CIRCUIT BETWEEN VIDEO TERMINAL AND TELEVISION DISPLAY (Click here)

OK

END (EXTERNAL DEVICE IS DEFECTIVE)

**for Preparation** Click here

## INSPECTION PROCEDURE

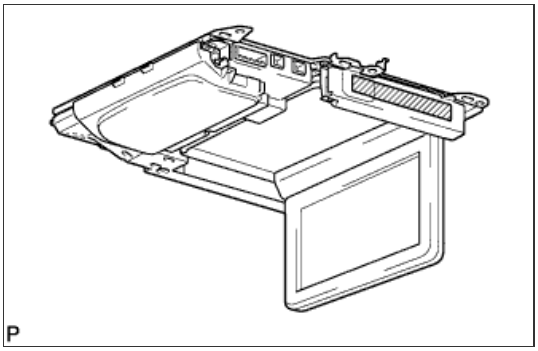
### 1.CHECK TELEVISION DISPLAY ASSEMBLY (POWER)

a. Check if the power of the television display is on.

**OK:**
**Power is on.**

NG → TURN TELEVISION DISPLAY ASSEMBLY POWER ON

OK



### 2.CHECK TELEVISION DISPLAY ASSEMBLY (OPENING ANGLE)

a. Check if the television display is open 90° or more.

**OK:**
**Open 90° or more.**

**HINT:**

The television display tilt can be adjusted to 4 positions: 90°, 100°, 110° and 120°.

NG → OPEN 90° OR MORE

OK

### 3.CHECK MODE IN WHICH BLACK SCREEN OCCURRED

a. Check the mode in which the black screen occurred.

**Result**

| Result | Proceed to |
|---|---|
| During navigation image, screen turned black | A |
| During DVD image, screen turned black | B |
| During VTR image, screen turned black | C |

B → Go to step 6

C → Go to step 9

A

### 4.CHECK DISPLAY SIGNAL CIRCUIT BETWEEN MULTI-DISPLAY AND TELEVISION DISPLAY ASSEMBLY

a. Refer to the Display Signal Circuit between Multi-display and Television Display ( Click here). If the display signal circuit is operating normally, proceed to the next step.

NEXT

5.CHECK AVC-LAN CIRCUIT

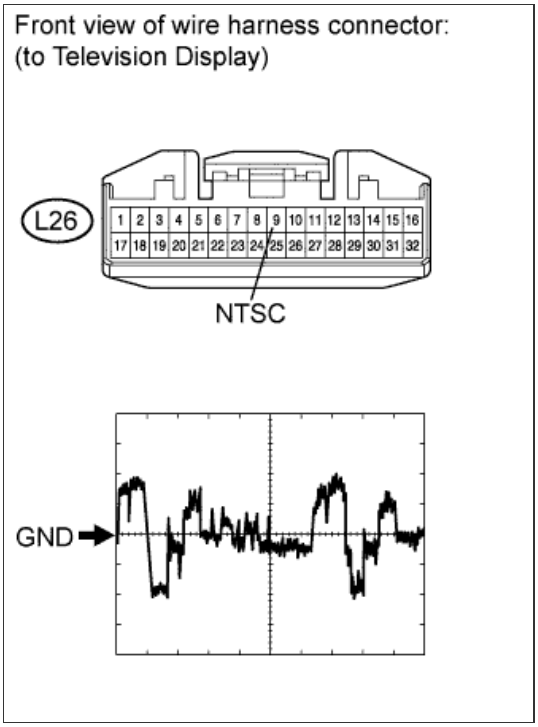
a. Refer to the AVC-LAN Circuit (Click here). If the AVC-LAN circuit is operating normally, proceed to the next step.

NEXT

REPLACE TELEVISION DISPLAY ASSEMBLY (**Click here**)

6.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY ASSEMBLY - BODY GROUND)

a. Disconnect the L26 display connector.



b. Check the waveform of the television display using an oscilloscope.

**Measurement Condition**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | L26-9 (NTSC) - Body ground |
| Tool Setting | 200 mV/DIV., 10 µsec./DIV. |
| Condition | DVD displayed on television display |

**OK:**

**Waveform is as shown in the illustration.**

NG → Go to step 7

OK

REPLACE TELEVISION DISPLAY ASSEMBLY (**Click here**)

7.DISPLAY SIGNAL CIRCUIT BETWEEN RADIO RECEIVER AND TELEVISION DISPLAY ASSEMBLY

a. Refer to the Display Signal Circuit between Radio Receiver and Television Display ( Click here). If the display signal circuit is operating normally, proceed to the next step.

NEXT

8.CHECK AVC-LAN CIRCUIT

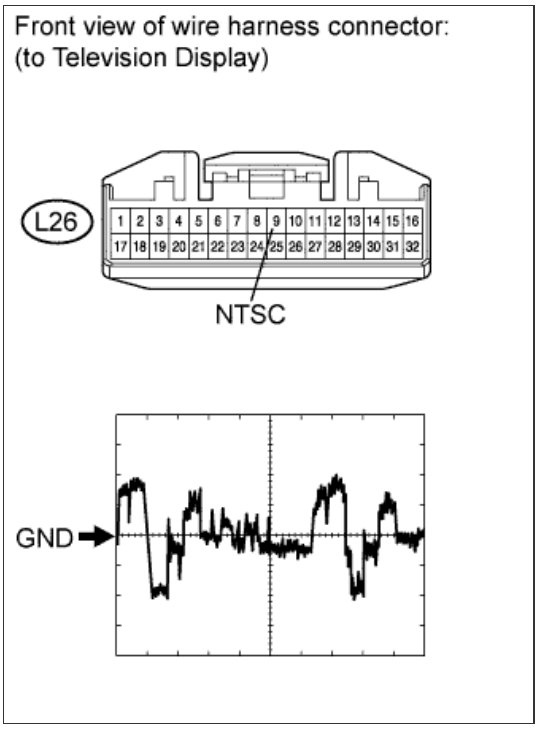
a. Refer to the AVC-LAN Circuit (Click here). If the AVC-LAN circuit is operating normally, proceed to the next step.

NEXT

REPLACE TELEVISION DISPLAY ASSEMBLY (**Click here**)

9.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY ASSEMBLY - BODY GROUND)

a. Disconnect the L26 display connector.



b. Check the waveform of the television display using an oscilloscope.

**Measurement Condition**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | L26-9 (NTSC) - Body ground |
| Tool Setting | 200 mV/DIV., 10 µsec./DIV. |
| Condition | DVD displayed on television display |

**OK:**

**Waveform is as shown in the illustration.**

NG → Go to step 10

OK

REPLACE TELEVISION DISPLAY ASSEMBLY (Click here)

## 10.CHECK DISPLAY SIGNAL CIRCUIT BETWEEN VIDEO TERMINAL AND TELEVISION DISPLAY

a. Refer to the Display Signal Circuit between Video Terminal and Television Display ( Click here). If the display signal circuit is operating normally, proceed to the next step.

NEXT

## 11.CHECK AVC-LAN CIRCUIT

a. Refer to the AVC-LAN Circuit (Click here). If the AVC-LAN circuit is operating normally, proceed to the next step.

NEXT

REPLACE TELEVISION DISPLAY ASSEMBLY (Click here)

**for Preparation** Click here

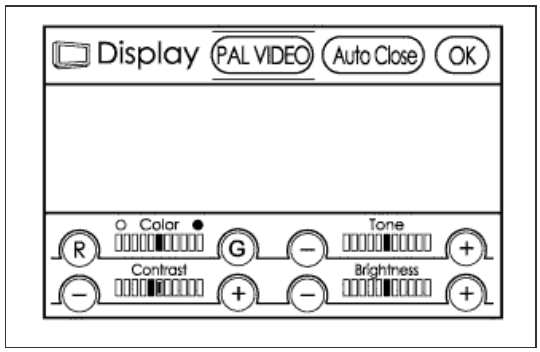
## INSPECTION PROCEDURE

### 1.CHECK MODE IN WHICH WHITE SCREEN OCCURRED

a. Check the mode in which the white screen occurred.

**Result**

| Result | Proceed to |
|---|---|
| Occurs in all modes | A |
| Only during DVD and DVD-P (rear seat only) image | B |



B → Go to step 3

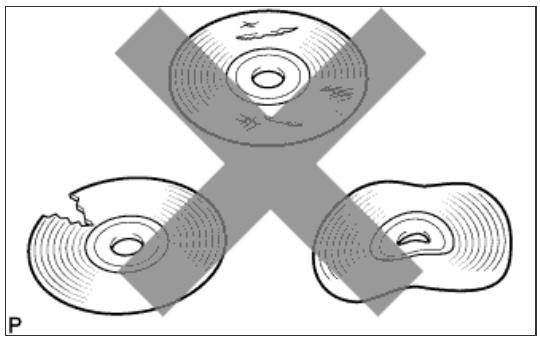
A

### 2.CHECK DISPLAY (RSE IMAGE QUALITY ADJUSTMENT SCREEN)

a. Press the remote controller DISPLAY switch, and adjust the settings for contrast, tint and color.

**OK:**
**Returned to normal through image quality adjustment.**

NG → REPLACE TELEVISION DISPLAY ASSEMBLY (Click here)



OK

### END

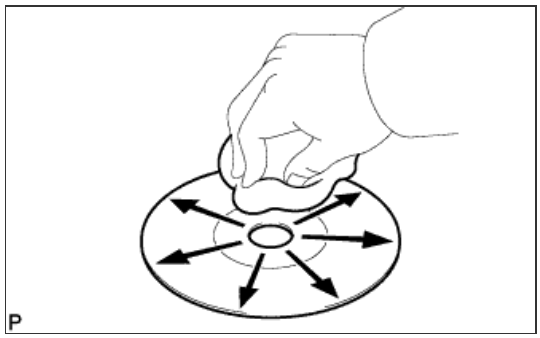
### 3.CHECK DISC

a. Check that the disc is not deformed or cracked.

**OK:**
**No deformation or cracks on the disc.**

NG → CHANGE DISC

OK



### 4.DISC CLEANING

a. Disc cleaning

i. If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.

**NOTICE:**

Do not use a conventional record cleaner or antistatic preservative.

NEXT

## 5.CHECK DISPLAY SIGNAL CIRCUIT

a. Inspect the display signal circuits below.

i. Inspect the display signal circuit between the radio receiver and television display ( Click here).

ii. Inspect the display signal circuit between the video terminal and television display ( Click here).

b. If the display signal circuit is operating normally, proceed to the next step.

NEXT

## REPLACE TELEVISION DISPLAY ASSEMBLY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK MODE IN WHICH IMAGE HAS LINES

a. Check the mode in which the image has lines.

**Result**

| Result | Proceed to |
|---|---|
| During VTR, DVD and DVD-P (rear seat only) image | A |
| During DVD and DVD-P (rear seat only) image | B |
| Only during VTR image | C |

B → Go to step 3

C → Go to step 5

A

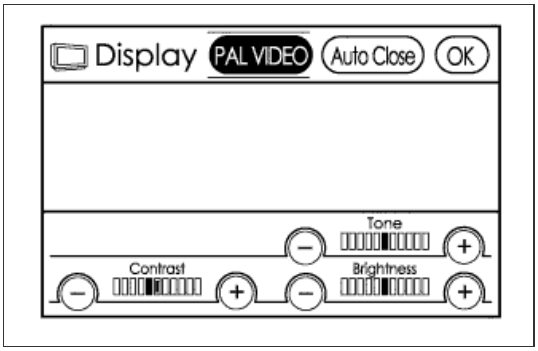
### 2.CHECK DISPLAY SIGNAL CIRCUIT

a. Inspect the display signal circuits below.

i. Inspect the display signal circuit between the radio receiver and television display ( Click here).

ii. Inspect the display signal circuit between the video terminal and television display ( Click here).

b. If the display signal circuit is operating normally, proceed to the next step.



NEXT

### REPLACE TELEVISION DISPLAY ASSEMBLY (Click here)

### 3.CHECK NTSC/PAL SIGNAL (RSE IMAGE QUALITY ADJUSTMENT SCREEN)

a. During the VTR image, check if changing the NTSC/PAL signal by pressing the remote controller DISPLAY switch, entering the RSE image adjustment screen, and pressing the PAL VIDEO button returns the image to normal.

**OK:**
**Returned to normal after pressing image quality adjustment screen PAL VIDEO button.**

NG → Go to step 4

OK

### END

### 4.REPLACE EXTERNAL DEVICE WITH NORMAL ONE AND CHECK

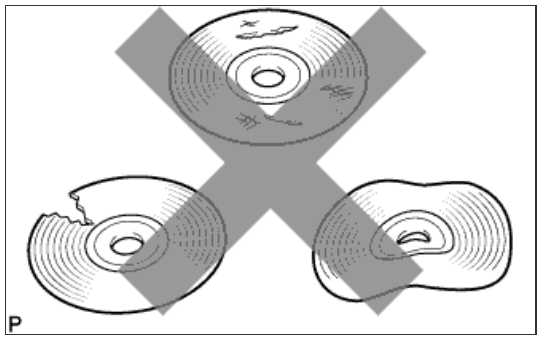
a. Replace the external device with a normal one and check if the same problem occurs again.

**OK:**
**Same problem does not occur.**

NG

GO TO DISPLAY SIGNAL CIRCUIT BETWEEN VIDEO TERMINAL AND TELEVISION DISPLAY (Click here)

OK



END (EXTERNAL DEVICE IS DEFECTIVE)

## 5.CHECK DISC

a. Check that the disc is not deformed or cracked.

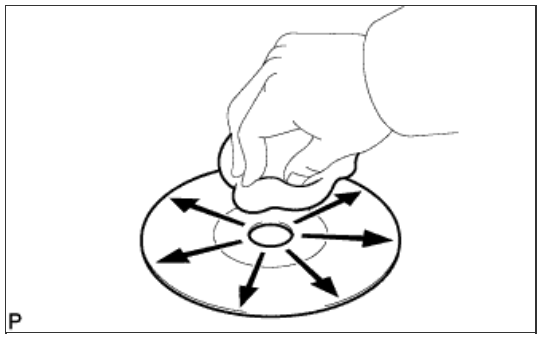
**OK:**

**No deformation or cracks on the disc.**

NG

CHANGE DISC

OK



## 6.DISC CLEANING

a. Disc cleaning

i. If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.

**NOTICE:**

Do not use a conventional record cleaner or antistatic preservative.

NEXT

GO TO DISPLAY SIGNAL CIRCUIT BETWEEN RADIO RECEIVER AND TELEVISION DISPLAY ASSEMBLY ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK MODE IN WHICH SCREEN IS NOT STABILIZED

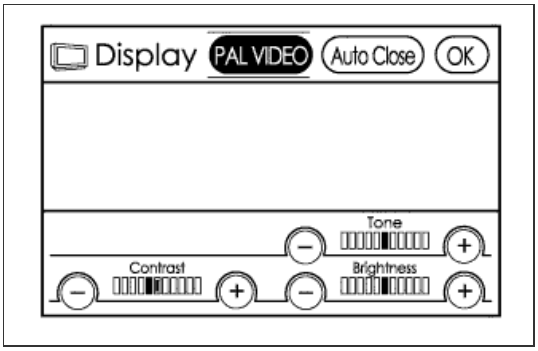
a. Check the mode in which the screen is not stabilized.

**Result**

| Result | Proceed to |
|---|---|
| Only during VTR image | A |
| Not stabilized in all modes | B |
| Multi-display also is not stabilized during DVD image only | C |
| Navigation image is displayed on multi-display, but television display has no image or image is not stabilized | D |

B → Go to step 3

C → REPLACE RADIO RECEIVER ASSEMBLY (Click here)



D → GO TO NAVIGATION DISPLAY APPEARS ON THE MULTI-DISPLAY, BUT DOES NOT APPEAR ON THE TELEVISION DISPLAY ASSEMBLY (Click here)

A

### 2.CHECK NTSC/PAL SIGNAL (RSE IMAGE QUALITY ADJUSTMENT SCREEN)

a. During the VTR image, check if changing the NTSC/PAL signal by pressing the remote controller DISPLAY switch, entering the RSE image adjustment screen, and pressing the PAL VIDEO button returns the image to normal.

**OK:**
**Returned to normal after pressing PAL VIDEO button.**

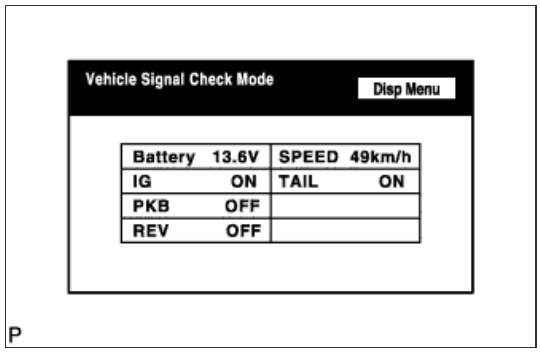
NG → Go to step 3

OK

END

### 3.CHECK VEHICLE SIGNAL (DISPLAY CHECK MODE)

a. Enter the "Display Check" mode (Vehicle Signal Check Mode) ( Click here).



b. Check that the display changes between ON and OFF according to the light control switch operation.

**OK:**

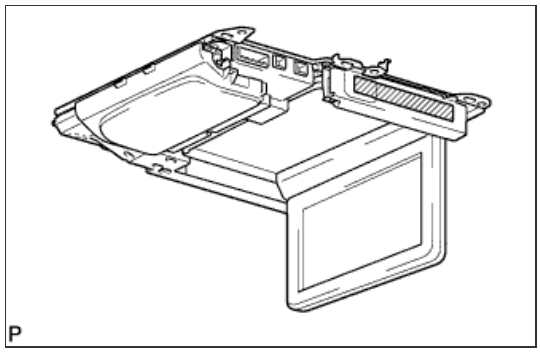
| Light Control Switch | Display |
|---|---|
| Tail or on | ON |
| Off | OFF |

**HINT:**

The display is updated once per second. As a result, it is normal for the display to lag behind the actual change in the switch.

NG → GO TO DISPLAY DOES NOT DIM WHEN LIGHT CONTROL SWITCH IS TURNED ON (Click here)

OK → PROCEED TO NEXT INSPECTION PROCEDURE SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)



**for Preparation** Click here

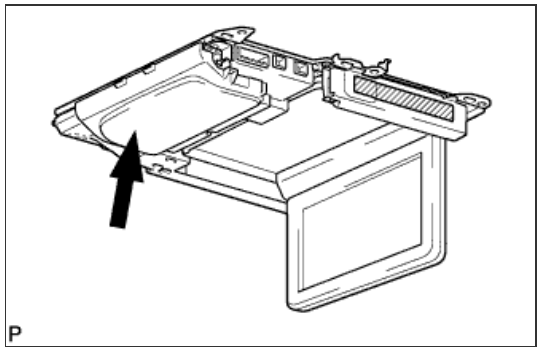
## INSPECTION PROCEDURE

### 1.CHECK TELEVISION DISPLAY ASSEMBLY

a. Check for foreign matter or obstructions caught in the moving parts of the panel.

**OK:**
**No obstruction or foreign matter found.**

NG → REMOVE ANY OBSTRUCTION OR FOREIGN MATTER FOUND



OK

### 2.CLEAN INFRARED RAY RECEIVING PORTION

a. Clean the infrared ray receiving portion on the rear display.

b. Check whether the same malfunction occurs.

**OK:**
**The function returns to normal.**

NG → Go to step 3

OK

END

### 3.CHECK REMOTE CONTROLLER (for BATTERY)

a. Check that the dry-cell battery of the remote controller is not depleted.

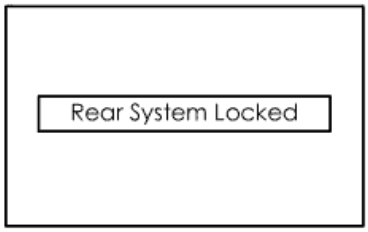
**OK:**
**Battery is not depleted.**

NG → REPLACE REMOTE CONTROLLER BATTERY

OK

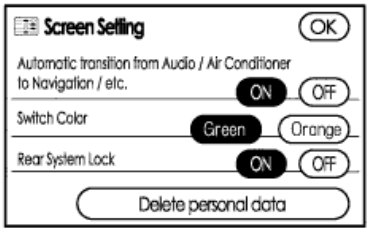
### 4.CHECK SYSTEM

a. Check that the remote control operation of the rear system is not locked by the radio receiver or the multi-display.



i. Check if "Rear System Locked" appears on the television display.

**OK:**
**The message does not appear.**



**HINT:**

If the rear system is locked and the remote controller is used in the rear seat area, an operation not possible message (for example, "Rear System Locked") is displayed. If the message is displayed, enter the multi-display screen setting, and change "Rear System Lock" to OFF.

for Television Display:

for Multi-display:

NG → RELEASE LOCK

OK ↓

## 5.CHECK TELEVISION DISPLAY ASSEMBLY

a. Check if the television display is open.

**OK:**
**Open.**

**HINT:**

When the television display is closed, some switches on the remote controller cannot be used.

NG → OPEN TELEVISION DISPLAY ASSEMBLY

OK ↓

## 6.CHECK TELEVISION DISPLAY ASSEMBLY (POWER)

a. Check if the power of the television display is on.

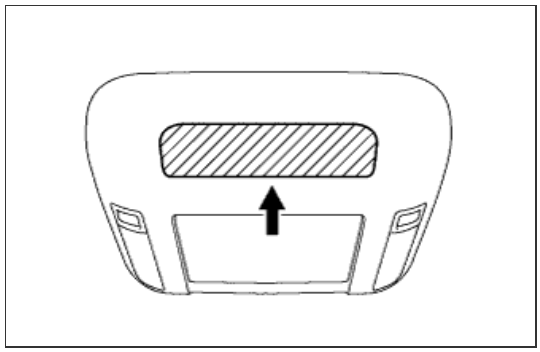
**OK:**
**Power is on.**

NG → TURN TELEVISION DISPLAY ASSEMBLY POWER ON

OK ↓

REPLACE TELEVISION DISPLAY ASSEMBLY (Click here)

**for Preparation** Click here



## INSPECTION PROCEDURE

### 1.CLEAN INFRARED RAY RECEIVING PORTION

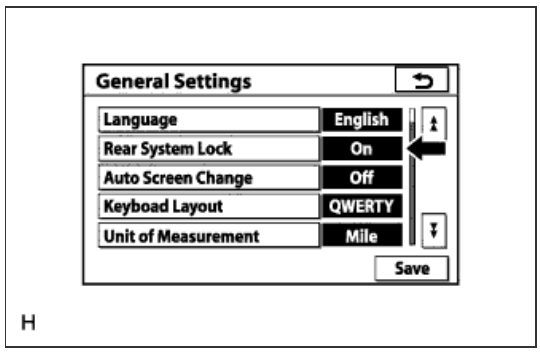
a. Clean the infrared ray receiving portion on the television display assembly.

b. Check whether the same malfunction occurs.

**OK:**
**The function returns to normal.**

NG → Go to step 2

OK →



### END

### 2.CHECK SYSTEM

a. Check that the remote control operation of the rear system is not locked by the display and navigation module display.

i. Check that "Rear System Lock" is Off on the "General Settings" screen.

**OK:**
**"Rear System Lock" is Off.**

NG → RELEASE LOCK

OK →

### 3.CHECK REMOTE CONTROL (BATTERY)

a. Check that the dry-cell battery of the remote control is not depleted.

**OK:**
**Battery is not depleted.**

NG → REPLACE REMOTE CONTROL BATTERY

OK →

### 4.REPLACE REMOTE CONTROL

a. Replace the remote control with a new or known good one.

b. Check that the television display assembly turns on.

**OK:**

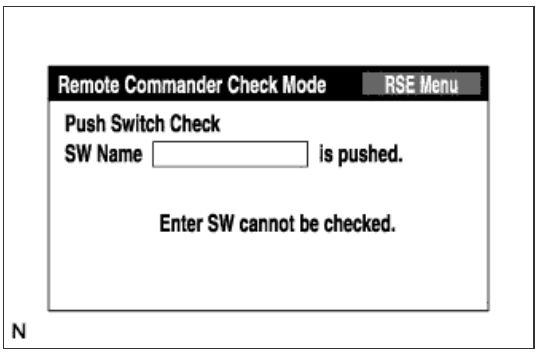
**The television display assembly turns on.**

| | | |
|---|---|---|
| | NG | REPLACE TELEVISION DISPLAY ASSEMBLY (Click here) |
| OK | | |
| END (REMOTE CONTROL WAS DEFECTIVE) | | |

**for Preparation** Click here

## INSPECTION PROCEDURE

**HINT:**



When the navigation image is displayed on the television display, if the image of the multi-display changes to the camera image or parking assist image, the television display will change to the image displayed before changing to the navigation image.

**1.CHECK REMOTE COMMANDER (DISPLAY CHECK MODE)**

a. Enter the "Display Check" mode (Remote Commander Check Mode) ( Click here).

b. Operate the abnormal switch and check if the switch name and status are correctly displayed.

**OK:**
**The switch name and status are correctly displayed as operated.**

NG → Go to step 2

OK →

REPLACE MULTI-DISPLAY SELECTOR (Click here)

**2.CHECK REMOTE CONTROLLER (for BATTERY)**

a. Check that the dry-cell battery of the remote controller is not depleted.

**OK:**
**Battery is not depleted.**

NG → REPLACE REMOTE CONTROLLER BATTERY

OK →

GO TO DISPLAY SIGNAL CIRCUIT BETWEEN MULTI-DISPLAY AND TELEVISION DISPLAY ASSEMBLY ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

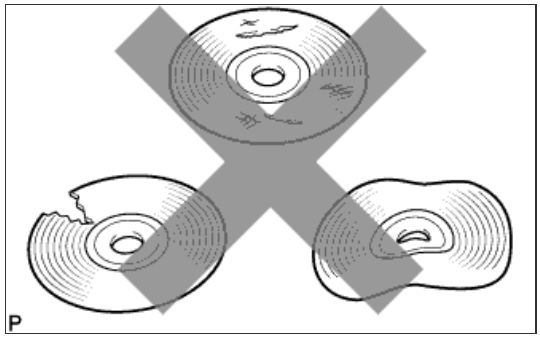
### 1.CHECK MODE IN WHICH SCREEN DOES NOT APPEAR OR IS NOT STABILIZED

a. Check the mode in which the screen does not appear or is not stabilized.

**Result**

| Result | Proceed to |
|---|---|
| Only during DVD and DVD-P (rear seat only) image, or multi-display also is not stabilized during DVD image only | A |
| Only during VTR image | B |
| During VTR, DVD and DVD-P (rear seat only) image | C |

B → Go to step 4



C → Go to step 6

A

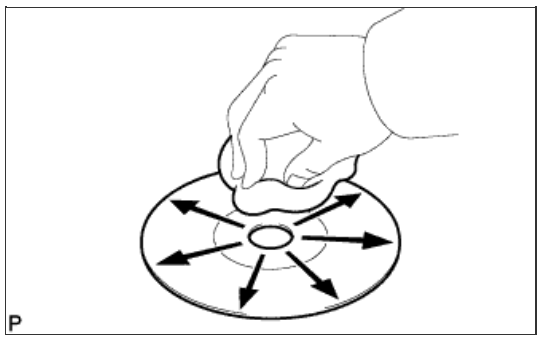
### 2.CHECK DISC

a. Check that the disc is not deformed or cracked.

**OK:**
**No deformation or cracks on the disc.**

NG → CHANGE DISC

OK



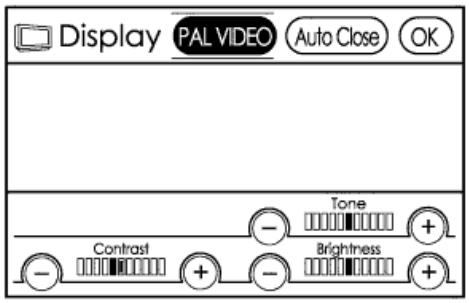
### 3.DISC CLEANING

a. Disc cleaning

i. If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.

**NOTICE:**

Do not use a conventional record cleaner or antistatic preservative.



NEXT

GO TO DISPLAY SIGNAL CIRCUIT BETWEEN RADIO RECEIVER AND TELEVISION DISPLAY ASSEMBLY ( Click here)

## 4.CHECK NTSC/PAL SIGNAL (RSE IMAGE QUALITY ADJUSTMENT SCREEN)

a. During the VTR image, check if changing the NTSC/PAL signal by pressing the remote controller DISPLAY switch, entering the RSE image adjustment screen, and pressing the PAL VIDEO button returns the image to normal.

**OK:**
**Returned to normal after pressing image quality adjustment screen PAL VIDEO button.**

NG → Go to step 5

OK →

END

## 5.REPLACE EXTERNAL DEVICE WITH NORMAL ONE AND CHECK

a. Replace the external device with a normal one and check if the same problem occurs again.

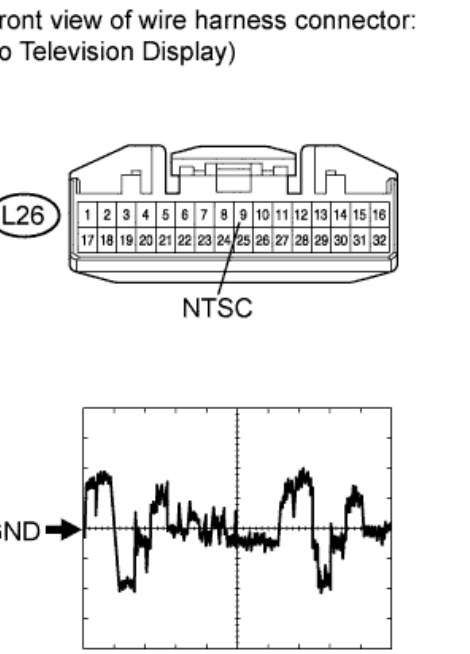
**OK:**
**Same problem does not occur.**

NG → GO TO DISPLAY SIGNAL CIRCUIT BETWEEN VIDEO TERMINAL AND TELEVISION DISPLAY ASSEMBLY (Click here)

OK →

END (EXTERNAL DEVICE IS DEFECTIVE)

## 6.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY ASSEMBLY - BODY GROUND)



a. Disconnect the L26 display connector.

b. Check the waveform of the television display using an oscilloscope.

**Measurement Condition**

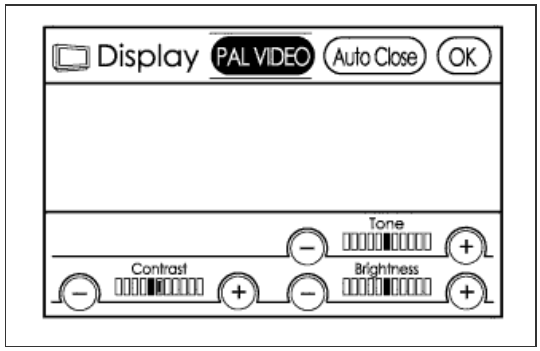
| Item | Content |
|---|---|
| Terminal No. (Symbol) | L26-9 (NTSC) - Body ground |
| Tool Setting | 200 mV/DIV., 10 µsec./DIV. |
| Condition | DVD displayed on television display |

**OK:**
**Waveform is as shown in the illustration.**

NG → GO TO DISPLAY SIGNAL CIRCUIT BETWEEN RADIO RECEIVER AND TELEVISION DISPLAY ASSEMBLY (Click here)

OK

REPLACE TELEVISION DISPLAY ASSEMBLY (Click here)



**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK NTSC/PAL SIGNAL (RSE IMAGE QUALITY ADJUSTMENT SCREEN)

a. During the VTR image, check if changing the NTSC/PAL signal by pressing the remote controller DISPLAY switch, entering the RSE image adjustment screen, and pressing the PAL VIDEO button returns the image to normal.

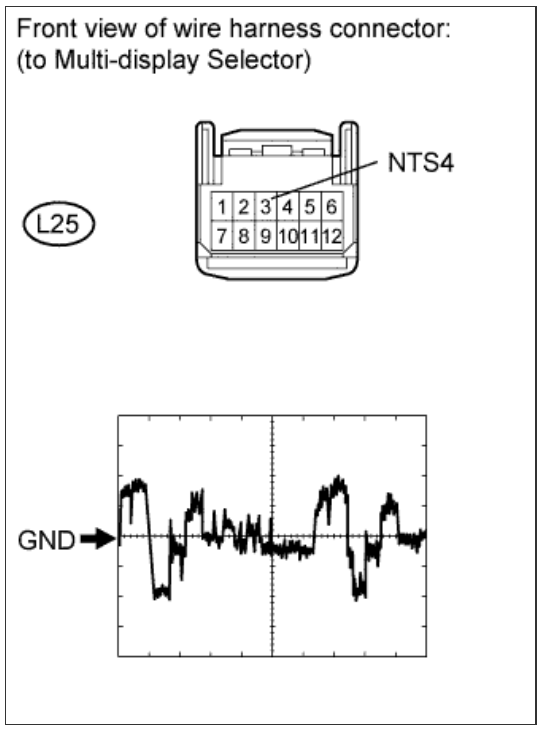
**OK:**
**Returned to normal after pressing image quality adjustment screen PAL VIDEO button.**

NG → Go to step 2

OK →

END

### 2.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY SELECTOR - BODY GROUND)



a. Disconnect the L25 selector connector.

b. Check the waveform of the television display using an oscilloscope.

**Measurement Condition**

| Item | Content |
|---|---|
| Tester Connection | L25-3 (NTS4) - Body ground |
| Tool Setting | 200 mV/DIV., 10 µsec./DIV. |
| Condition | DVD displayed on television display |

**OK:**
**Waveform is as shown in the illustration.**

NG → GO TO DISPLAY SIGNAL CIRCUIT BETWEEN VIDEO TERMINAL AND TELEVISION DISPLAY (Click here)

OK →

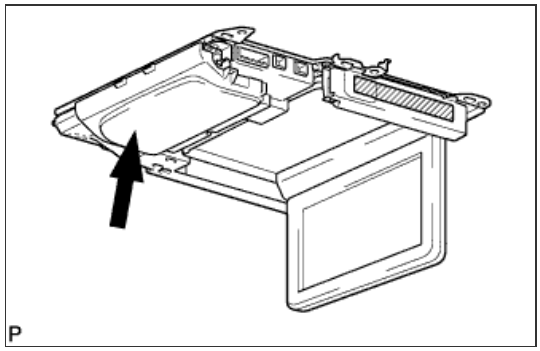
REPLACE TELEVISION DISPLAY ASSEMBLY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CLEAN INFRARED RAY RECEIVING PORTION

a. Check if the infrared ray receiving portion or the wireless headphone light emitting area is covered.



**HINT:**

If necessary, perform the following step. Otherwise, proceed to the "Check Wireless Headphone" procedure.

b. Clean the infrared ray receiving portion on the television display.

c. Check whether the same malfunction occurs.

**OK:**
**The function returns to normal.**

NG → Go to step 2

OK →

### END

### 2.CHECK WIRELESS HEADPHONE

a. Check the wireless headphone setting.

i. Check that the volume is not set to "0".

ii. Check that "MUTE" is off.

**OK:**
**The volume is not set to "0" and "MUTE" is off.**

NG → SYSTEM NORMAL (SET VOLUME TO HIGH OR SET MUTE OFF)

OK →

### 3.CHECK WIRELESS HEADPHONE

a. Change the location of the wireless headphone and check the sound condition.

**OK:**
**Sound is heard.**

**HINT:**

The distance between the infrared ray receiving portion and wireless headphone light emitting area, or the angle of the two parts may be the cause.

NG → Go to step 4

OK →

### END

### 4.CHECK WIRELESS HEADPHONE (for BATTERY)

a. Check that the dry-cell battery of the wireless headphone is not depleted.

**OK:**
**Battery is not depleted.**

NG → REPLACE WIRELESS HEADPHONE BATTERY

OK ↓

**5.REPLACE WIRELESS HEADPHONE WITH NORMAL ONE AND CHECK**

a. Replace the wireless headphone with a normal one and check if the same problem occurs again.

**OK:**
**Same problem does not occur.**

NG → REPLACE TELEVISION DISPLAY ASSEMBLY (Click here)

OK ↓

**END (WIRELESS HEADPHONE IS DEFECTIVE)**

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK WIRELESS HEADPHONE (BATTERY)

a. Check that the dry-cell battery of the wireless headphone is not depleted.

**OK:**
**Battery is not depleted.**

NG → REPLACE WIRELESS HEADPHONE BATTERY

OK

### 2.CHECK WIRELESS HEADPHONE SETTING

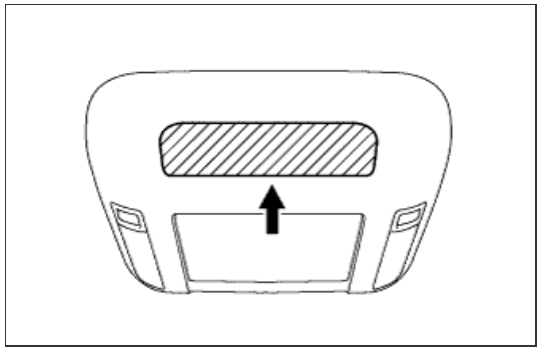
a. Check the wireless headphone settings.

i. Check that the volume is not set to "0".

ii. Check that "MUTE" is off.

**OK:**
**The volume is not set to "0" and "MUTE" is off.**

NG → SET VOLUME TO HIGH AND TURN MUTE OFF



OK

### 3.CLEAN INFRARED RAY RECEIVING PORTION

a. Clean the infrared ray receiving portion on the television display assembly.

b. Check whether the same malfunction occurs.

**OK:**
**The function returns to normal.**

NG → Go to step 4

OK

END

### 4.REPLACE WIRELESS HEADPHONE

a. Replace the wireless headphone with a known good or new one and check if the same problem occurs again.

**OK:**
**Same problem does not occur.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

END (WIRELESS HEADPHONE WAS DEFECTIVE)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK WIRELESS HEADPHONE (BATTERY)

a. Check that the dry-cell battery of the wireless headphone is not depleted.

**OK:**
**Battery is not depleted.**

NG → REPLACE WIRELESS HEADPHONE BATTERY

OK

### 2.CHECK WIRELESS HEADPHONE SETTING

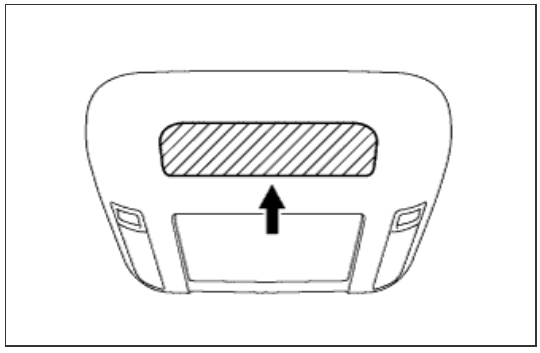
a. Check the wireless headphone settings.

i. Check that the volume is not set to "0".

ii. Check that "MUTE" is off.

**OK:**
**The volume is not set to "0" and "MUTE" is off.**

NG → SET VOLUME TO HIGH AND TURN MUTE OFF



OK

### 3.CLEAN INFRARED RAY RECEIVING PORTION

a. Clean the infrared ray receiving portion on the television display assembly.

b. Check whether the same malfunction occurs.

**OK:**
**The function returns to normal.**

NG → Go to step 4

OK

END

### 4.REPLACE WIRELESS HEADPHONE

a. Replace the wireless headphone with a known good or new one and check if the same problem occurs again.

**OK:**
**Same problem does not occur.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

END (WIRELESS HEADPHONE WAS DEFECTIVE)

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.CHECK HEADPHONE**

a. Check if the jack of the wired headphone is securely connected.

**OK:**
**Jack of wired headphone is securely connected.**

NG → SECURELY CONNECT JACK OF WIRED HEADPHONES

OK

**2.REPLACE HEADPHONE WITH NORMAL ONE AND CHECK**

a. Replace the headphone with a normal one and check if the same problem occurs again.

**OK:**
**Same problem does not occur.**

NG → REPLACE REMOTE CONTROL ADAPTER ASSEMBLY (Click here)

OK

END (HEADPHONE IS DEFECTIVE)

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.CHECK HEADPHONE**

a. Check if the wired headphone jack is securely connected.

**OK:**
**Wired headphone jack is securely connected.**

NG → SECURELY CONNECT JACK OF WIRED HEADPHONES

OK

**2.REPLACE HEADPHONE**

a. Replace the headphone with a known good or new one and check if the same problem occurs again.

**OK:**
**Same problem does not occur.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

END (HEADPHONE WAS DEFECTIVE)

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.CHECK HEADPHONE**

a. Check if the wired headphone jack is securely connected.

**OK:**
**Wired headphone jack is securely connected.**

NG → SECURELY CONNECT JACK OF WIRED HEADPHONES

OK

**2.REPLACE HEADPHONE**

a. Replace the headphone with a known good or new one and check if the same problem occurs again.

**OK:**
**Same problem does not occur.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

END (HEADPHONE WAS DEFECTIVE)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK IF SOUND MALFUNCTION OCCURS ONLY WITH EXTERNAL DEVICE

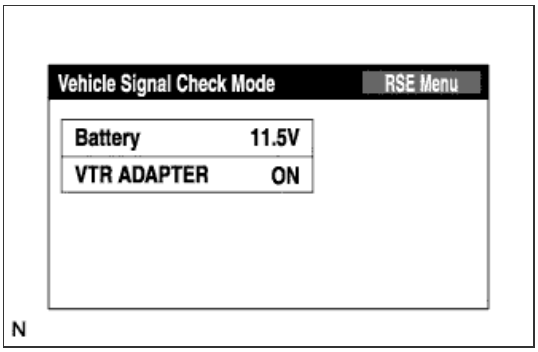
a. Check if the sound malfunction occurs only with the external device.

**Result**

| Result | Proceed to |
|---|---|
| Only during VTR | A |
| All modes | B |

B → GO TO SOUND SIGNAL CIRCUIT BETWEEN RADIO RECEIVER AND MULTI-DISPLAY SELECTOR (Click here)

A



### 2.CHECK VEHICLE SIGNAL (DISPLAY CHECK MODE)

a. Enter the "Display Check" mode (Vehicle Signal Check Mode) ( Click here).

b. Check if the VTR adapter is set to ON.

**OK:**

| Vehicle Signal Check Mode | Display |
|---|---|
| VTR ADAPTER | ON |

NG → GO TO SOUND SIGNAL CIRCUIT BETWEEN VIDEO TERMINAL AND MULTI-DISPLAY SELECTOR (Click here)

OK

### 3.CHECK EXTERNAL DEVICE

a. Check if the external device is normal by installing it in another vehicle, etc.

**OK:**

**Same problem does not occur.**

NG → END (EXTERNAL DEVICE IS DEFECTIVE)

OK

REPLACE REMOTE CONTROL ADAPTER ASSEMBLY ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK TELEVISION DISPLAY ASSEMBLY

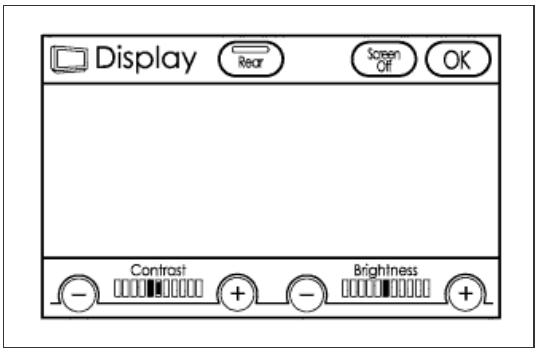
a. Using the remote controller, check if the television display can be opened and closed.

**OK:**
**Can be opened and closed.**

**HINT:**

When the television display is closed, some switches on the remote controller cannot be used.

NG → Go to step 2



OK →

### END

### 2.CHECK DISPLAY

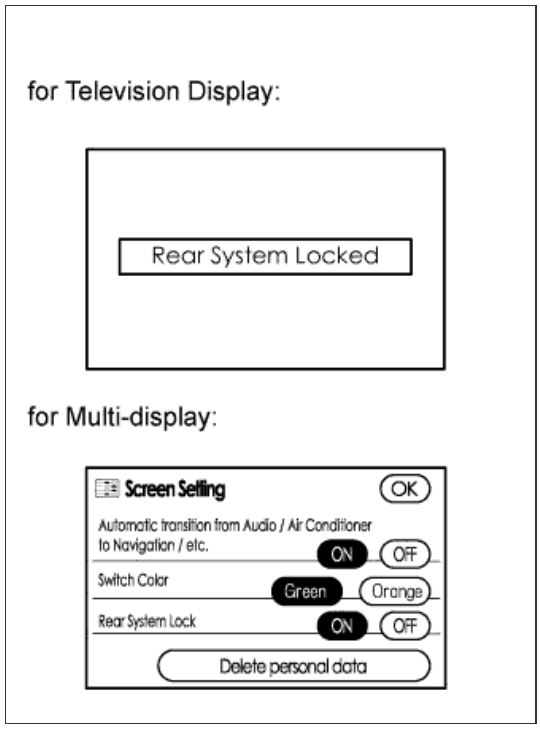
a. When the "Rear" button of the multi-display "Display" screen is pressed, check if the television display can be opened and closed.

**OK:**
**Can be opened and closed.**

NG → Go to step 4

OK →

### 3.CHECK SYSTEM



a. Check that the remote control operation of the rear system is not locked by the radio receiver or the multi-display.

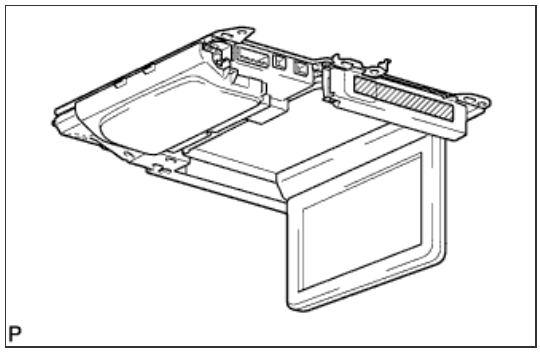
i. Check if "Rear System Locked" appears on the television display.

**OK:**
**The message does not appear.**

**HINT:**

If the rear system is locked and the remote controller is used in the rear seat area, an operation not possible message (for example, "Rear System Locked") is displayed. If the message is displayed, enter the multi-display screen setting, and change "Rear System Lock" to OFF.

NG → RELEASE LOCK



OK

GO TO A REMOTE CONTROL SYSTEM DOES NOT OPERATE ( Click here)

4.CHECK TELEVISION DISPLAY ASSEMBLY

a. Check for foreign matter or obstructions caught in the moving parts of the panel.

**OK:**
**No obstruction or foreign matter found.**

NG → REMOVE ANY OBSTRUCTION OR FOREIGN MATTER FOUND

OK

5.VISUALLY CHECK FOR CRACKS AND DEFORMATION

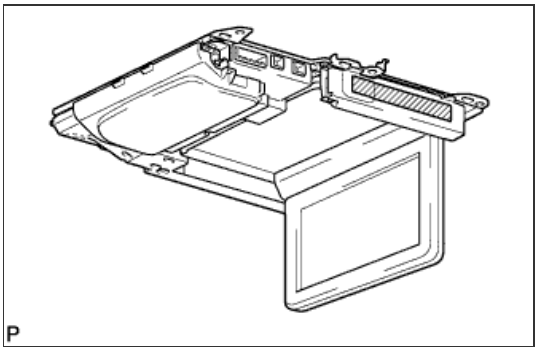
a. Visually check if the television display has cracks or deformation.

**OK:**
**There are cracks and deformation.**

NG → REPLACE MULTI-DISPLAY SELECTOR (Click here)

OK

END (CAUSE IS CRACKS AND DEFORMATION)



**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK TELEVISION DISPLAY ASSEMBLY

a. Check for foreign matter or obstructions caught in the moving parts of the panel.

**OK:**
**No obstruction or foreign matter found.**

NG → REMOVE ANY OBSTRUCTION OR FOREIGN MATTER FOUND

OK

### 2.VISUALLY CHECK FOR CRACKS AND DEFORMATION

a. Visually check if the television display has cracks or deformation.

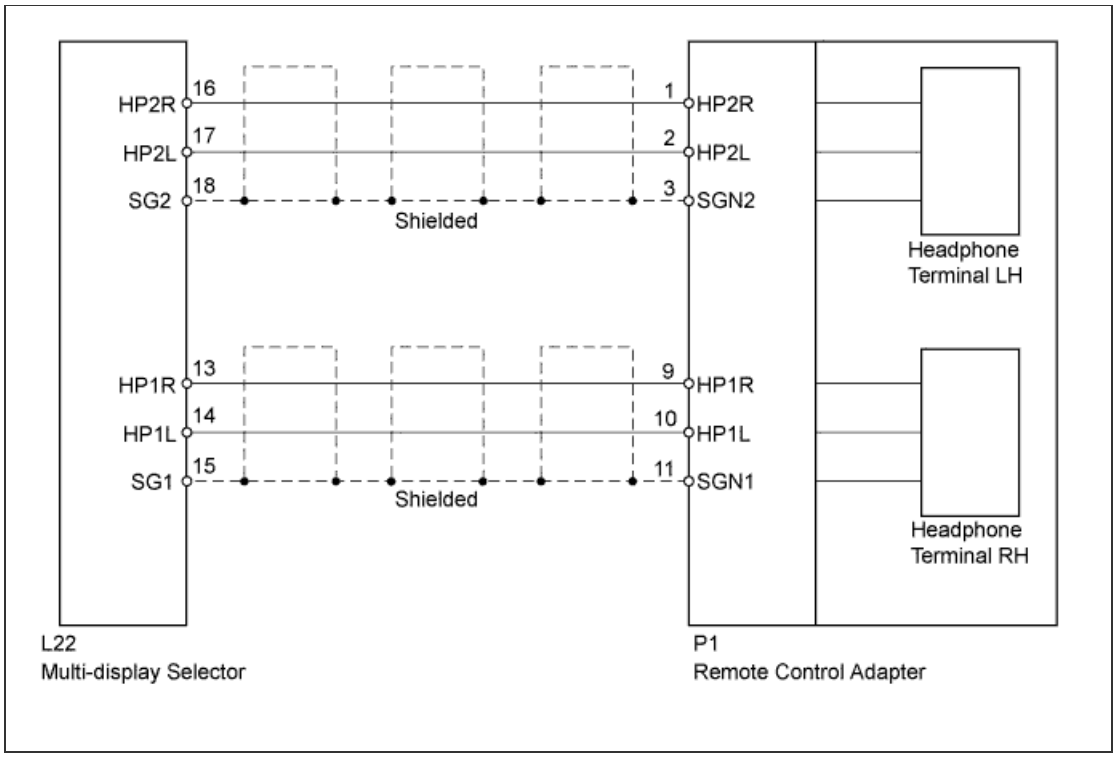
**OK:**
**There are cracks and deformation.**

NG → REPLACE TELEVISION DISPLAY ASSEMBLY (Click here)

OK

END (CAUSE IS CRACKS AND DEFORMATION)

**for Preparation** Click here



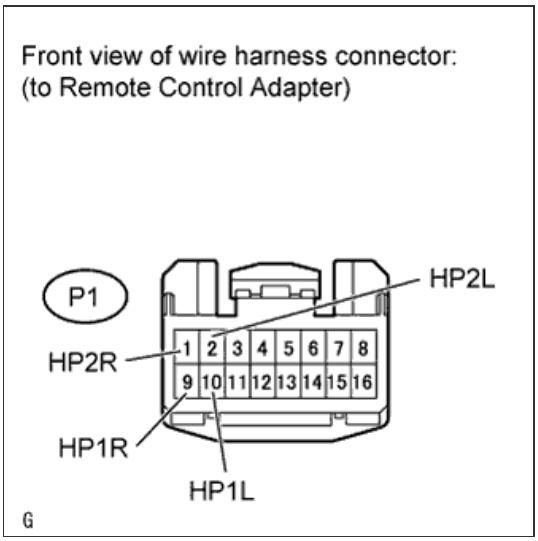
## DESCRIPTION

This is the sound signal circuit from the multi-display selector to the headphone terminal.

**HINT:**

"Multi-display Controller" refers to the multi-display selector.

## WIRING DIAGRAM



## INSPECTION PROCEDURE

### 1.CHECK REMOTE CONTROL ADAPTER ASSEMBLY (HEADPHONE TERMINAL)

a. Disconnect the P1 adapter connector.

b. Using an oscilloscope, check the signal waveform between each terminal and the body ground according to the conditions shown in the chart below.

**OK:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| P1-1 (HP2R) - Body ground | Audio sound is being produced | A waveform synchronized with sound is output |
| P1-2 (HP2L) - Body ground | | |
| P1-9 (HP1R) - Body ground | | |
| P1-10 (HP1L) - Body ground | | |

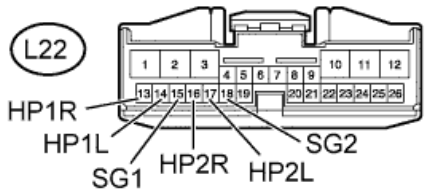
NG → Go to step 2

OK

REPLACE REMOTE CONTROL ADAPTER ASSEMBLY (Click here)

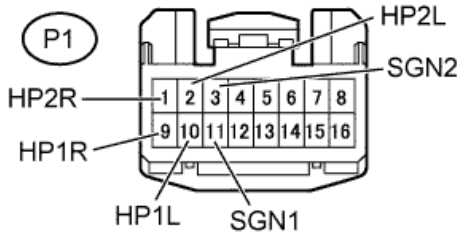
2.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY SELECTOR - REMOTE CONTROL ADAPTER)

a. Disconnect the L22 selector connector.



b. Disconnect the P1 adapter connector.

c. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L22-16 (HP2R) - P1-1 (HP2R) | Always | Below 1 Ω |
| L22-17 (HP2L) - P1-2 (HP2L) | | |
| L22-18 (SG2) - P1-3 (SGN2) | | |
| L22-13 (HP1R) - P1-9 (HP1R) | | |
| L22-14 (HP1L) - P1-10 (HP1L) | | |
| L22-15 (SG1) - P1-11 (SGN1) | | |
| P1-1 (HP2R) - Body ground | Always | 10 kΩ or higher |
| P1-2 (HP2L) - Body ground | | |
| P1-9 (HP1R) - Body ground | | |
| P1-10 (HP1L) - Body ground | | |

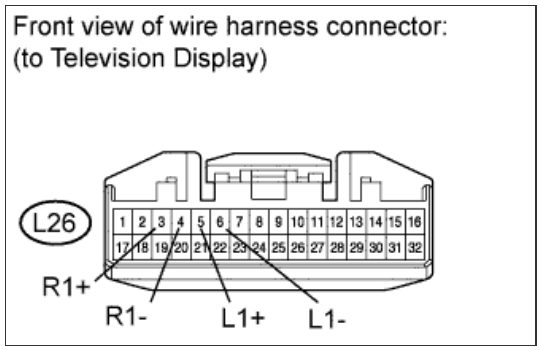
## DESCRIPTION

This is the sound signal circuit from the multi-display selector to the television display.

**HINT:**

"Multi-display Controller" refers to the multi-display selector.

## WIRING DIAGRAM



## INSPECTION PROCEDURE

### 1.CHECK TELEVISION DISPLAY ASSEMBLY

a. Disconnect the L26 display connector.

b. Using an oscilloscope, check the signal waveform between each terminal and the body ground according to the conditions shown in the chart below.

**OK:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L26-5 (L1+) - Body ground | Audio sound is being produced | A waveform synchronized with sound is output |
| L26-6 (L1-) - Body ground | Audio sound is being produced | A waveform synchronized with sound is output |
| L26-3 (R1+) - Body ground | Audio sound is being produced | A waveform synchronized with sound is output |
| L26-4 (R1-) - Body ground | Audio sound is being produced | A waveform synchronized with sound is output |

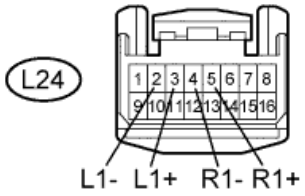
NG → Go to step 2

OK

REPLACE TELEVISION DISPLAY ASSEMBLY (Click here)

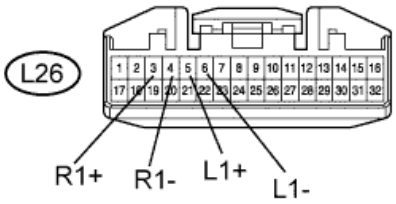
2.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY SELECTOR - TELEVISION DISPLAY ASSEMBLY)

a. Disconnect the L24 selector connector.



b. Disconnect the L26 display connector.

c. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L24-3 (L1+) - L26-5 (L1+) | Always | Below 1 Ω |
| L24-2 (L1-) - L26-6 (L1-) | | |
| L24-5 (R1+) - L26-3 (R1+) | | |
| L24-4 (R1-) - L26-4 (R1-) | | |
| L24-3 (L1+) - Body ground | Always | 10 kΩ or higher |
| L24-2 (L1-) - Body ground | | |
| L24-5 (R1+) - Body ground | | |
| L24-4 (R1-) - Body ground | | |

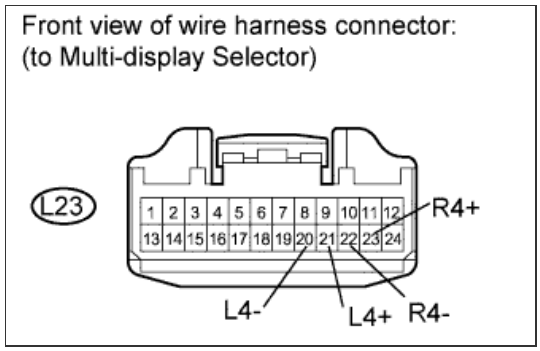
## DESCRIPTION

This is the sound signal circuit from the radio receiver to the multi-display selector.

**HINT:**

"Multi-display Controller" refers to the multi-display selector.

## WIRING DIAGRAM



## INSPECTION PROCEDURE

### 1.CHECK MULTI-DISPLAY SELECTOR

a. Disconnect the L23 selector connector.

b. Using an oscilloscope, check the signal waveform between each terminal and the body ground according to the conditions shown in the chart below.

**OK:**

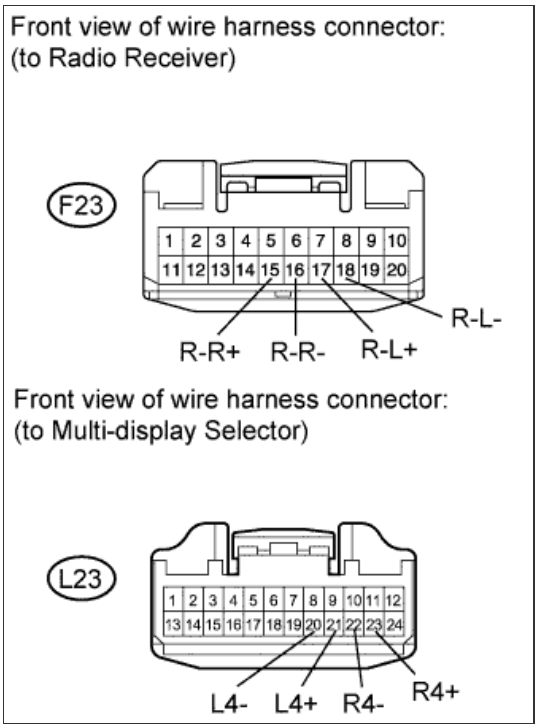
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L23-20 (L4-) - Body ground | Audio sound is being produced | A waveform synchronized with sound is output |
| L23-21 (L4+) - Body ground | Audio sound is being produced | A waveform synchronized with sound is output |
| L23-22 (R4-) - Body ground | Audio sound is being produced | A waveform synchronized with sound is output |
| L23-23 (R4+) - Body ground | Audio sound is being produced | A waveform synchronized with sound is output |

NG → Go to step 2

OK

REPLACE MULTI-DISPLAY SELECTOR (Click here)

2.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - MULTI-DISPLAY SELECTOR)



a. Disconnect the F23 receiver connector.

b. Disconnect the L23 selector connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F23-15 (R-R+) - L23-23 (R4+) | Always | Below 1 Ω |
| F23-16 (R-R-) - L23-22 (R4-) | | |
| F23-17 (R-L+) - L23-21 (L4+) | | |
| F23-18 (R-L-) - L23-20 (L4-) | | |
| L23-23 (R4+) - Body ground | Always | 10 kΩ or higher |
| L23-22 (R4-) - Body ground | | |
| L23-21 (L4+) - Body ground | | |
| L23-20 (L4-) - Body ground | | |

## DESCRIPTION

This is the sound signal circuit from the multi-media interface ECU to the display and navigation module display.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA INTERFACE ECU - NAVIGATION ECU)

a. Disconnect the L51 multi-media interface ECU connector.

b. Disconnect the F56 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L51-2 (URO+) - F56-3 (VAR+) | Always | Below 1 Ω |
| L51-3 (ULO+) - F56-4 (VAL+) | | |
| L51-4 (UGD1) - F56-7 (VA-) | | |
| L51-1 (USD1) - F56-1 (AGND) | | |
| L51-2 (URO+) - Body ground | Always | 10 kΩ or higher |
| L51-3 (ULO+) - Body ground | | |
| L51-4 (UGD1) - Body ground | | |
| L51-1 (USD1) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## DESCRIPTION

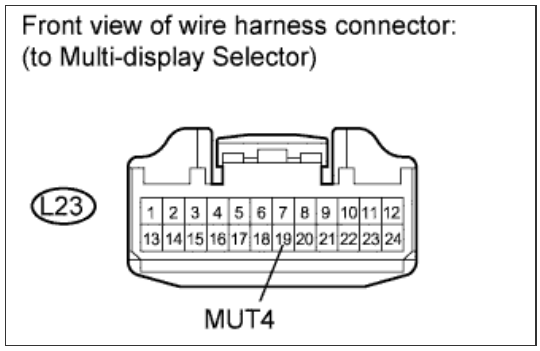
The multi-display selector controls the volume according to the mute signal from the radio receiver.
The mute signal is sent to reduce noise and a popping sound generated when switching the mode, etc.

**HINT:**

"Multi-display Controller" refers to the multi-display selector.

## WIRING DIAGRAM

## INSPECTION PROCEDURE



### 1.CHECK MULTI-DISPLAY SELECTOR

a. Disconnect the L23 selector connector.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L23-19 (MUT4) - Body ground | Engine switch on (ACC), RSE system playing → changing modes | 3.5 V or higher → Below 1 V |

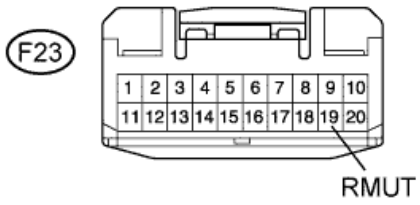
NG → Go to step 2

OK →

REPLACE MULTI-DISPLAY SELECTOR (Click here)

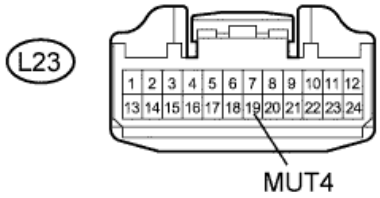
### 2.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - MULTI-DISPLAY SELECTOR)

a. Disconnect the F23 receiver connector.



b. Disconnect the L23 selector connector.

c. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F23-19 (RMUT) - L23-19 (MUT4) | Always | Below 1 Ω |
| L23-19 (MUT4) - Body ground | Always | 10 kΩ or higher |

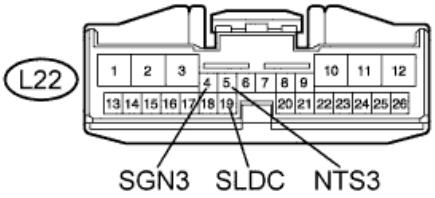
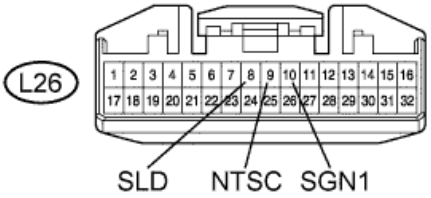
3.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY SELECTOR - TELEVISION DISPLAY ASSEMBLY)

a. Disconnect the L22 selector connector.



b. Disconnect the L26 display connector.

c. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L22-5 (NTS3) - L26-9 (NTSC) | Always | Below 1 Ω |
| L22-4 (SGN3) - L26-10 (SGN1) | | |
| L22-19 (SLDC) - L26-8 (SLD) | | |
| L22-5 (NTS3) - Body ground | Always | 10 kΩ or higher |
| L22-4 (SGN3) - Body ground | | |

Front view of wire harness connector:
(to Multi-display Selector)

Front view of wire harness connector:
(to Television Display)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

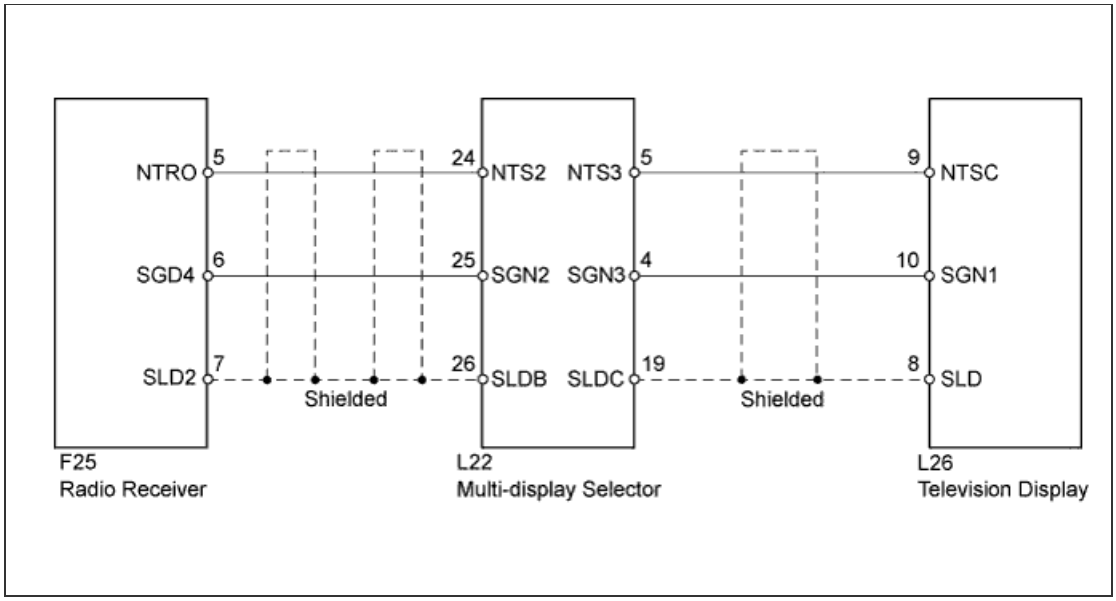
**4.REPLACE REMOTE CONTROL ADAPTER WITH NORMAL ONE AND CHECK**

a. Replace the remote control adapter (Click here) with a normal one and check if the same problem occurs again.

**OK:**
**Same problem does not occur.**

NG → REPLACE MULTI-DISPLAY SELECTOR (**Click here**)

OK



**END (HEADPHONE TERMINAL IS DEFECTIVE)**

**for Preparation** Click here

## DESCRIPTION

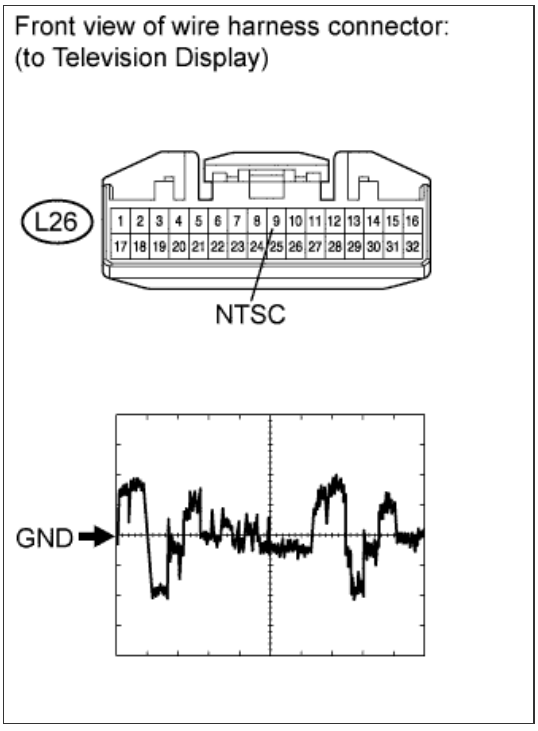
This is the display signal circuit from the radio receiver to the television display.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK TELEVISION DISPLAY ASSEMBLY

a. Disconnect the L26 display connector.



b. Using an oscilloscope, check the signal waveform between each terminal and the body ground according to the conditions shown in the chart below.

**Measurement Condition**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | L26-9 (NTSC) - Body ground |
| Tool Setting | 200 mV/DIV., 10 µsec./DIV. |
| Condition | DVD displayed on television display |

**OK:**

**Waveform is as shown in the illustration.**

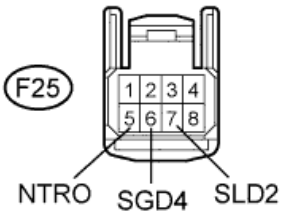
NG → Go to step 2

OK

REPLACE TELEVISION DISPLAY ASSEMBLY (Click here)

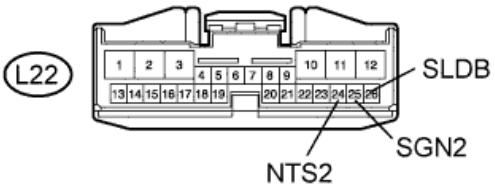
2.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - MULTI-DISPLAY SELECTOR)

a. Disconnect the F25 receiver connector.



b. Disconnect the L22 selector connector.

c. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F25-5 (NTRO) - L22-24 (NTS2) | Always | Below 1 Ω |
| F25-6 (SGD4) - L22-25 (SGN2) | | |
| F25-7 (SLD2) - L22-26 (SLDB) | | |
| L22-24 (NTS2) - Body ground | Always | 10 kΩ or higher |
| L22-25 (SGN2) - Body ground | | |
| L22-26 (SLDB) - Body ground | | |

Front view of wire harness connector:
(to Radio Receiver)

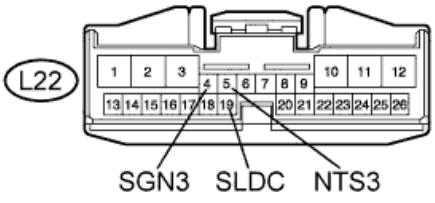
Front view of wire harness connector:
(to Multi-display Selector)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

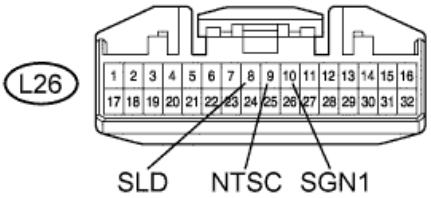
3.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY SELECTOR - TELEVISION DISPLAY ASSEMBLY)

a. Disconnect the L22 selector connector.



b. Disconnect the L26 display connector.

c. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L22-5 (NTS3) - L26-9 (NTSC) | Always | Below 1 Ω |
| L22-4 (SGN3) - L26-10 (SGN1) | | |
| L22-19 (SLDC) - L26-8 (SLD) | | |
| L22-5 (NTS3) - Body ground | Always | 10 kΩ or higher |
| L22-4 (SGN3) - Body ground | | |
| L22-19 (SLDC) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

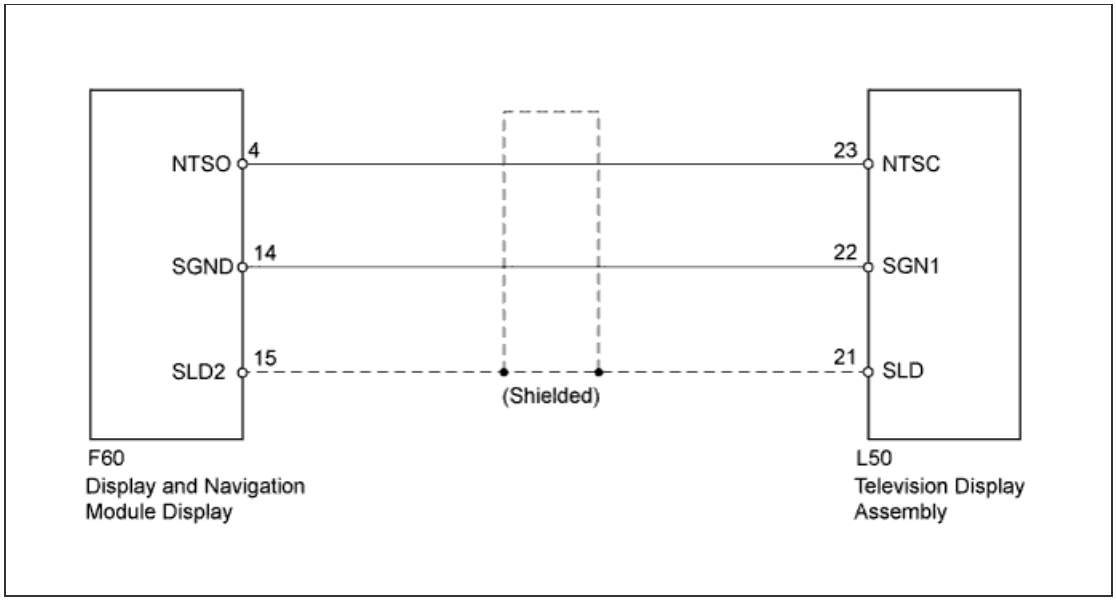
4.REPLACE MULTI-DISPLAY SELECTOR WITH NORMAL ONE AND CHECK

a. Replace the multi-display selector with a normal one and check if the same problem occurs again ( Click here).

**OK:**
**Same problem does not occur.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (**Click here**)

OK



END (MULTI-DISPLAY SELECTOR IS DEFECTIVE)

**for Preparation** Click here

## DESCRIPTION

This is the display signal circuit from the display and navigation module display to the television display assembly.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**1.CHECK HARNESS AND CONNECTOR (NAVIGATION ECU - TELEVISION DISPLAY)**

a. Disconnect the F60 display and navigation module display connector.

b. Disconnect the L50 television display assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F60-4 (NTSO) - L50-23 (NTSC) | Always | Below 1 Ω |
| F60-14 (SGND) - L50-22 (SGN1) | Always | Below 1 Ω |
| F60-15 (SLD2) - L50-21 (SLD) | Always | Below 1 Ω |
| F60-4 (NTSO) - Body ground | Always | 10 kΩ or higher |
| F60-14 (SGND) - Body ground | Always | 10 kΩ or higher |
| F60-15 (SLD2) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## DESCRIPTION

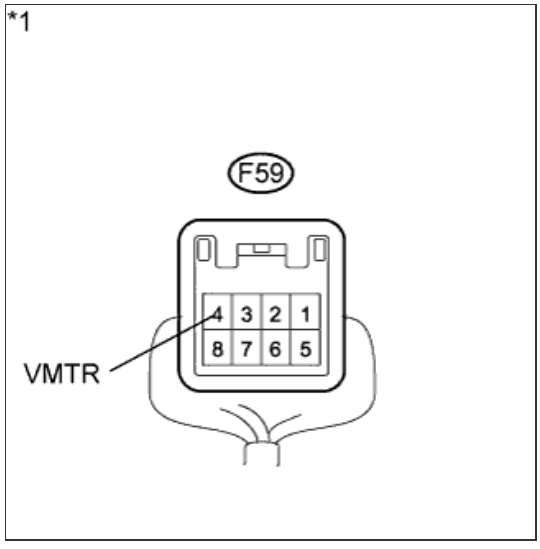
This is the visual mute signal circuit from the display and navigation module display to the television display assembly.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.INSPECT DISPLAY AND NAVIGATION MODULE DISPLAY



a. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F59-4 (VMTR) - Body ground | RSE is playing → Source is changed | 4 V or higher → Below 0.7 V → 4 V or higher |

**Text in Illustration**

| | |
|---|---|
| *1 | Component with harness connected (Display and Navigation Module Display) |

NG → Go to step 2

OK →

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

### 2.CHECK HARNESS AND CONNECTOR (NAVIGATION ECU - TELEVISION DISPLAY)

a. Disconnect the F59 display and navigation module display connector.

b. Disconnect the L50 television display assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| | | Specified |
|---|---|---|

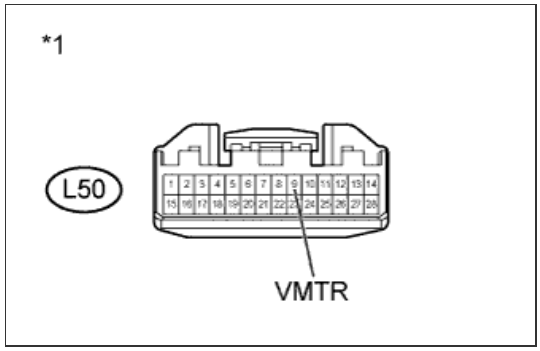
| Tester Connection | Condition | Condition |
|---|---|---|
| F59-4 (VMTR) - L50-9 (VMTR) | Always | Below 1 Ω |
| F59-4 (VMTR) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**3.INSPECT DISPLAY AND NAVIGATION MODULE DISPLAY**

a. Reconnect the F59 display and navigation module display connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

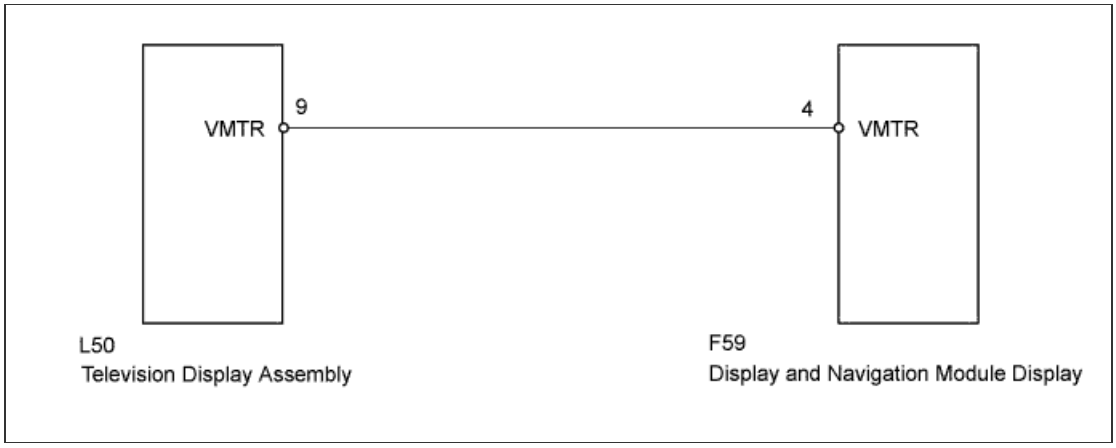
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-9 (VMTR) - Body ground | Display is operating | 4 V or higher |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Television Display Assembly)) |

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK



REPLACE TELEVISION DISPLAY ASSEMBLY (Click here)

**for Preparation** Click here

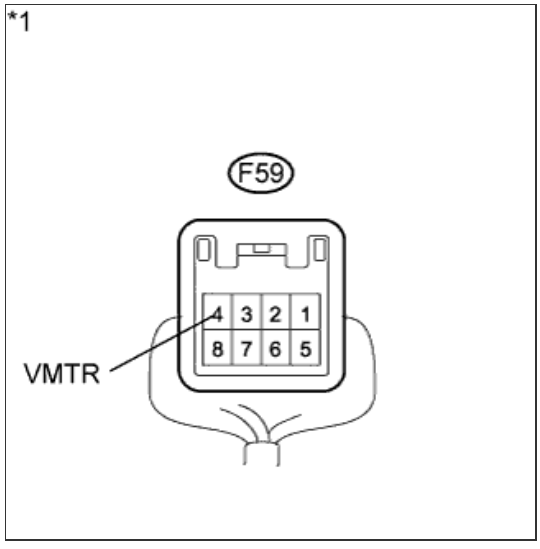
## DESCRIPTION

This is the visual mute signal circuit from the display and navigation module display to the television display assembly.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.INSPECT DISPLAY AND NAVIGATION MODULE DISPLAY



a. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F59-4 (VMTR) - Body ground | RSE is playing → Source is changed | 4 V or higher → Below 0.7 V → 4 V or higher |

OK →

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

### 2.CHECK HARNESS AND CONNECTOR (NAVIGATION ECU - TELEVISION DISPLAY)

a. Disconnect the F59 display and navigation module display connector.

b. Disconnect the L50 television display assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| | | Specified |
|---|---|---|

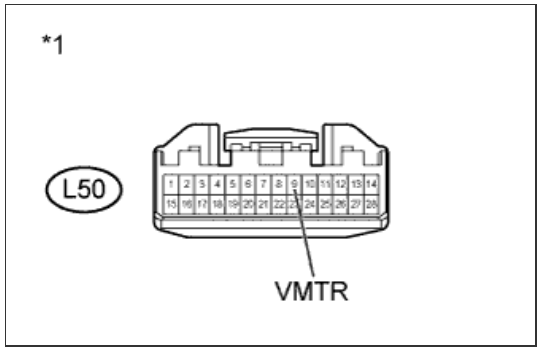
| Tester Connection | Condition | Condition |
|---|---|---|
| F59-4 (VMTR) - L50-9 (VMTR) | Always | Below 1 Ω |
| F59-4 (VMTR) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**3.INSPECT DISPLAY AND NAVIGATION MODULE DISPLAY**

a. Reconnect the F59 display and navigation module display connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-9 (VMTR) - Body ground | Display is operating | 4 V or higher |

**Text in Illustration**

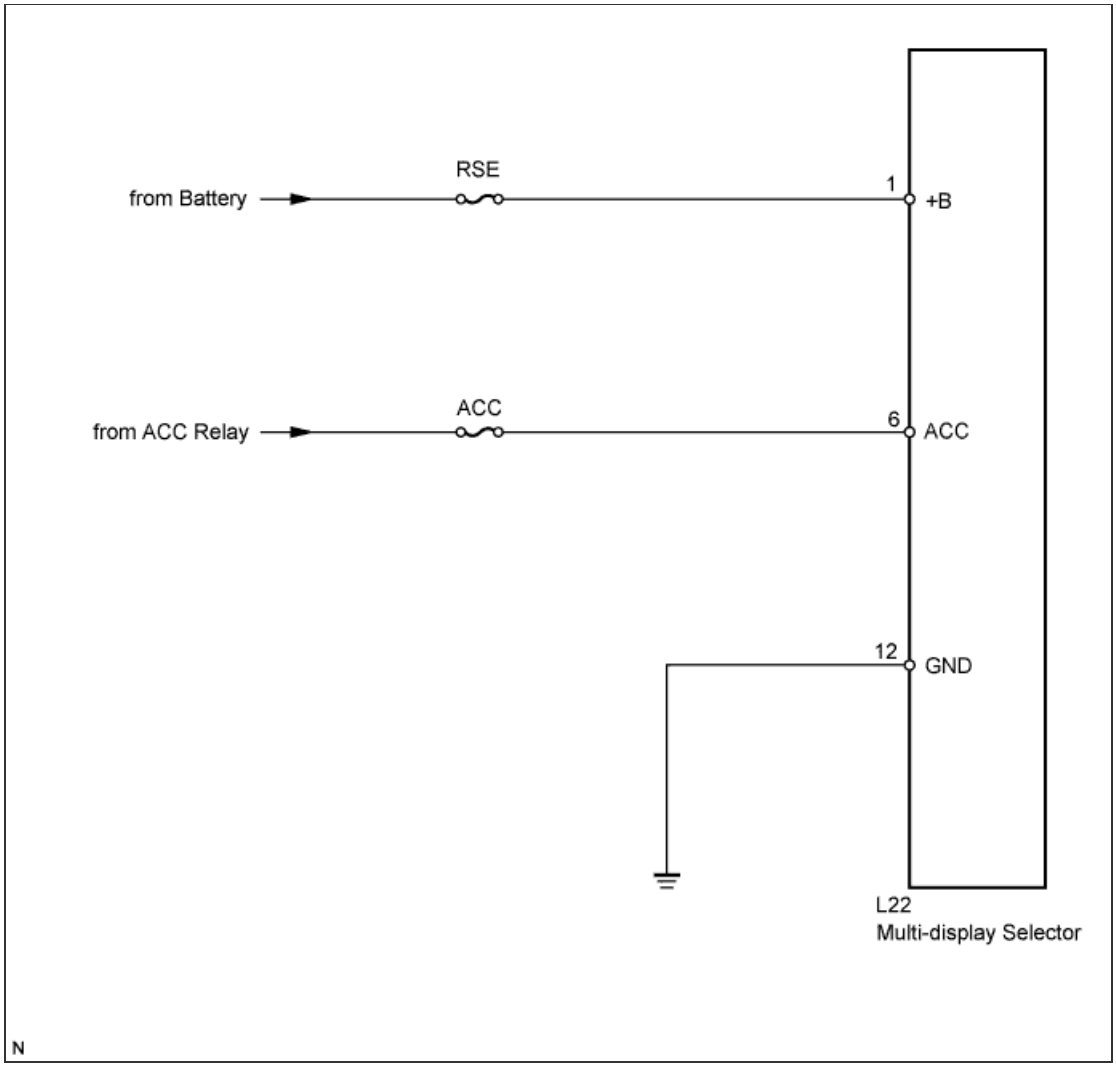
|---|---|
| *1 | Front view of wire harness connector (to Television Display Assembly)) |

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

REPLACE TELEVISION DISPLAY ASSEMBLY (Click here)

**for Preparation** Click here



## DESCRIPTION

This circuit provides power to the multi-display selector.

**HINT:**

"Multi-display Controller" refers to the multi-display selector.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.INSPECT FUSE (RSE, ACC)

a. Disconnect the RSE fuse from the engine room relay block.

b. Disconnect the ACC fuse from the main body ECU.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| RSE fuse | Always | Below 1 Ω |
| ACC fuse | | |

NG → REPLACE FUSE

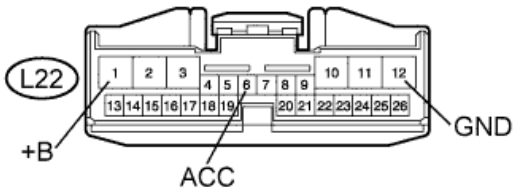
OK

2.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY SELECTOR - BATTERY AND BODY GROUND)

a. Disconnect the L22 selector connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**



| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L22-12 (GND) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

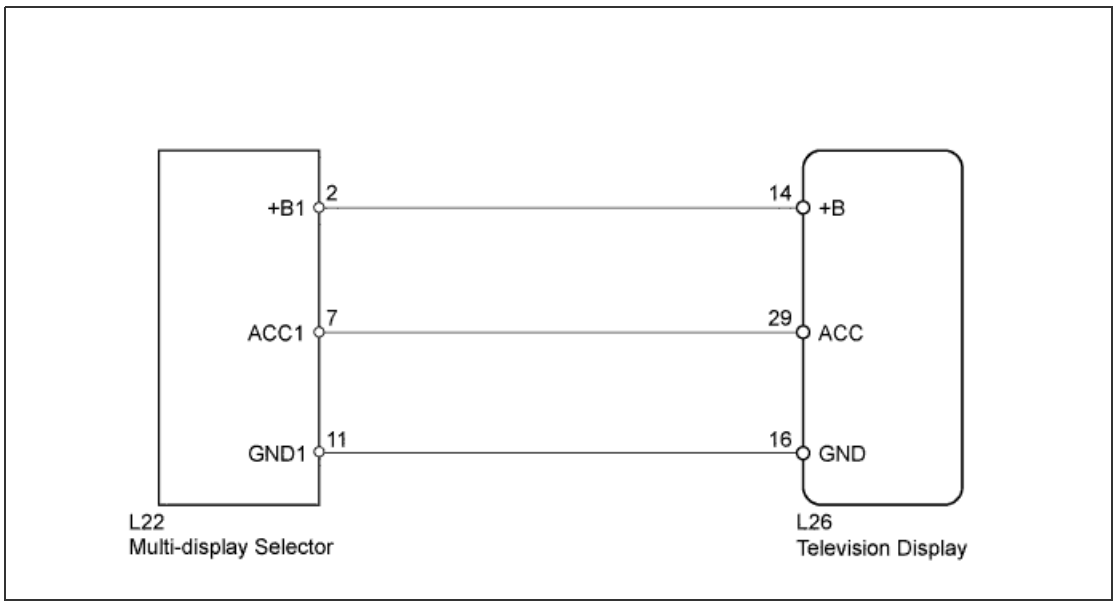
**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| L22-1 (+B) - Body ground | Always | 11 to 14 V |
| L22-6 (ACC) - Body ground | Engine switch on (ACC) | 11 to 14 V |

Front view of wire harness connector:
(to Multi-display Selector)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## DESCRIPTION

This circuit provides power to the television display. The power is sent from the battery to the television display through the multi-display selector.

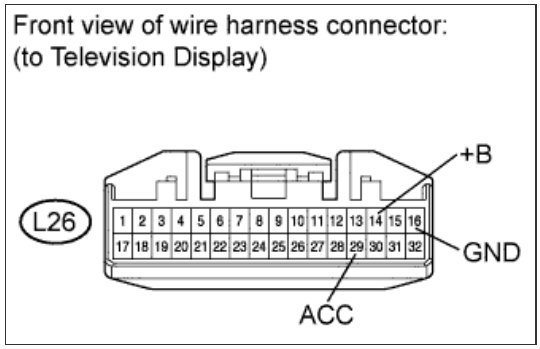
## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK TELEVISION DISPLAY ASSEMBLY

a. Disconnect the L26 display connector.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L26-16 (GND) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

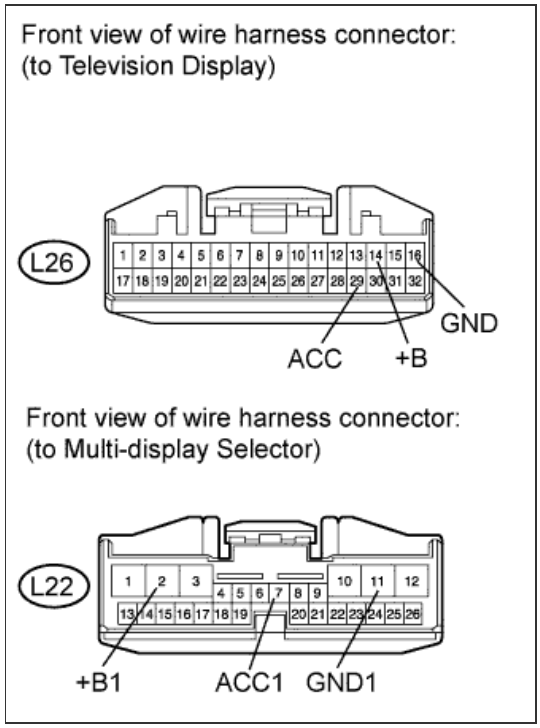
**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| L26-14 (+B) - Body ground | Always | 11 to 14 V |
| L26-29 (ACC) - Body ground | Engine switch on (ACC) | 11 to 14 V |

NG → Go to step 2

OK → PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

### 2.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY ASSEMBLY - MULTI-DISPLAY SELECTOR)



a. Disconnect the L26 display connector.

b. Disconnect the L22 selector connector.

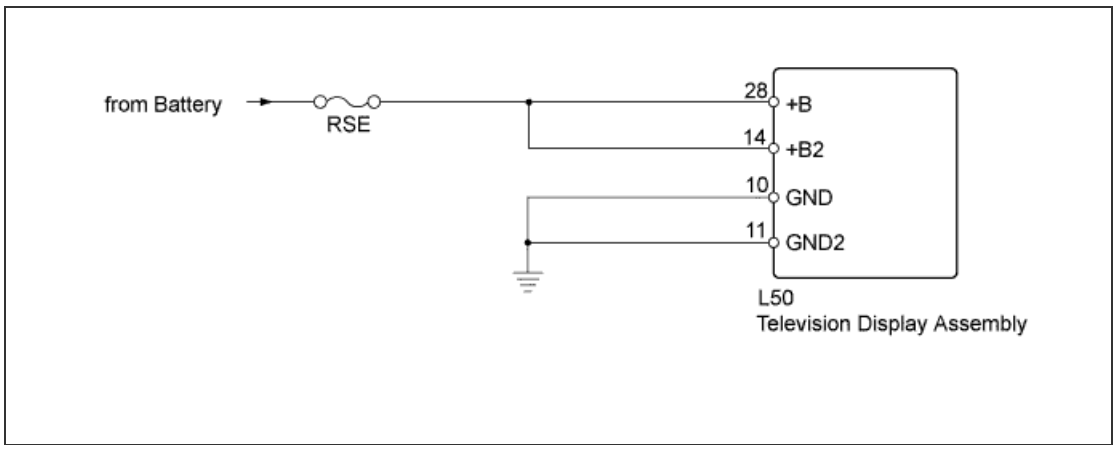
c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L26-14 (+B) - L22-2 (+B1) | Always | Below 1 Ω |
| L26-29 (ACC) - L22-7 (ACC1) | | |
| L26-16 (GND) - L22-11 (GND1) | | |
| L26-14 (+B) - Body ground | Always | 10 kΩ or higher |
| L26-29 (ACC) - Body ground | | |
| L26-16 (GND) - Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



REPLACE MULTI-DISPLAY SELECTOR (Click here)

**for Preparation** Click here

## DESCRIPTION

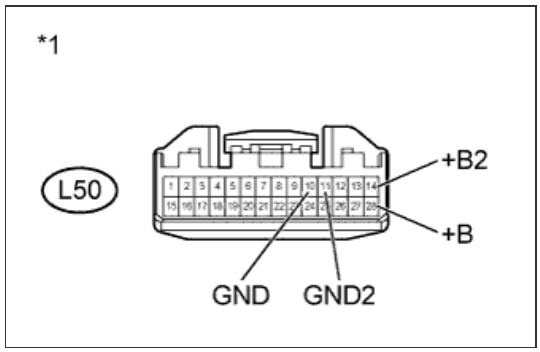
This is the power source circuit of the television display assembly.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.



**1.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY - BATTERY AND BODY GROUND)**

a. Disconnect the L50 television display assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-10 (GND) - Body ground | Always | Below 1 Ω |
| L50-11 (GND2) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-14 (+B2) - L50-10 (GND) | Always | 11 to 14 V |
| L50-28 (+B) - L50-10 (GND) | Always | 11 to 14 V |

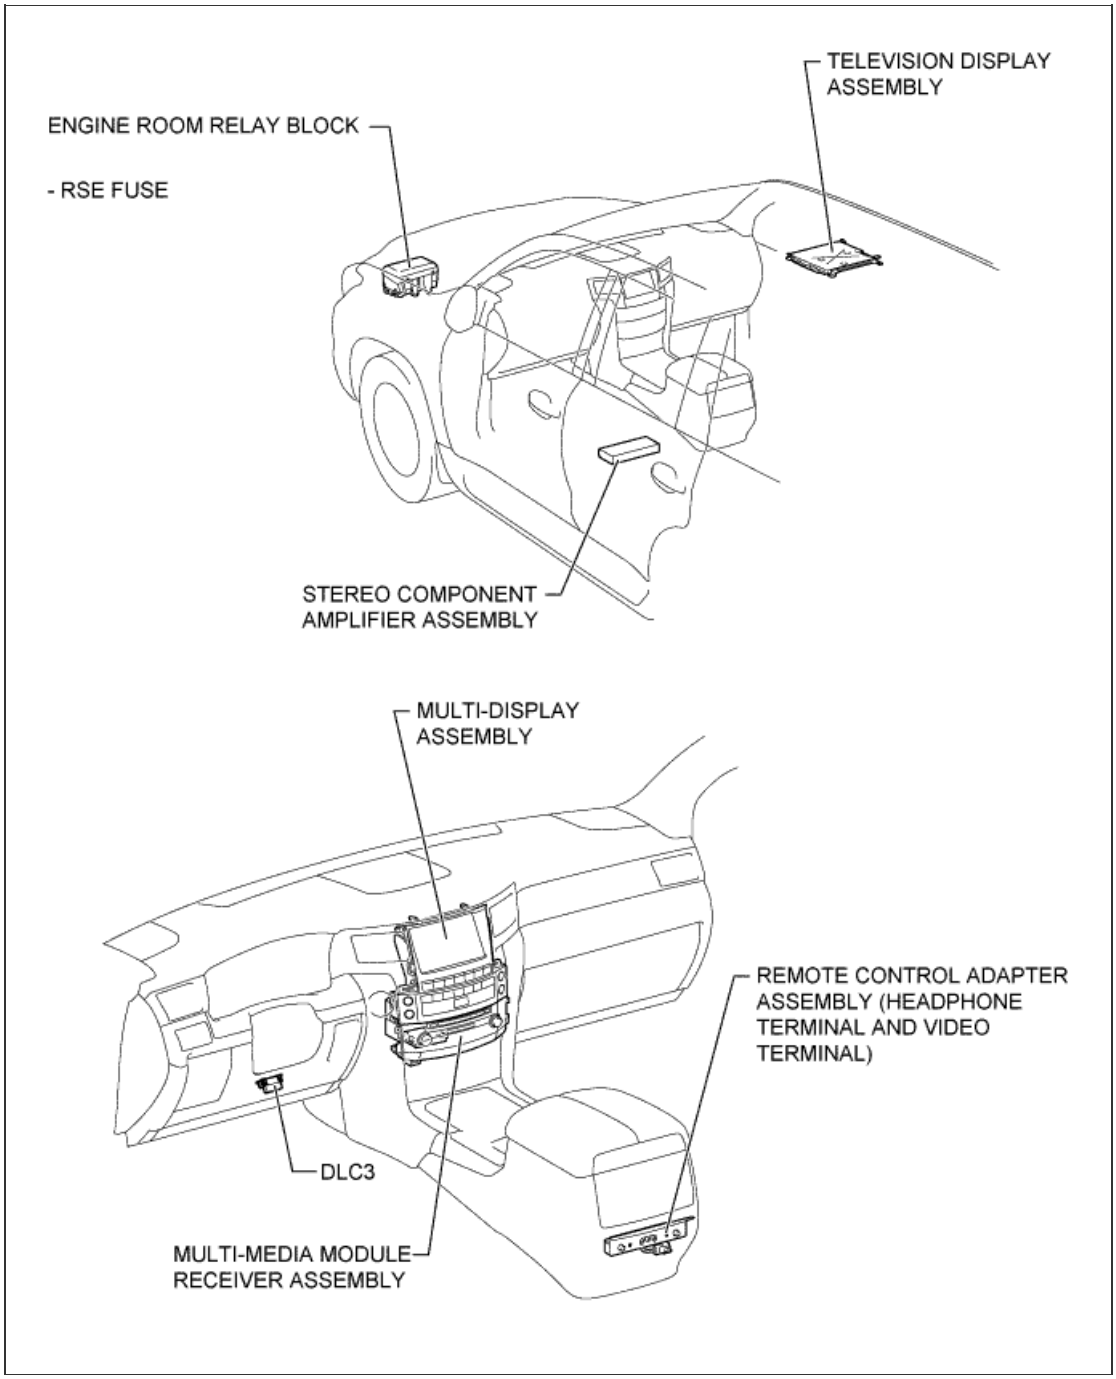
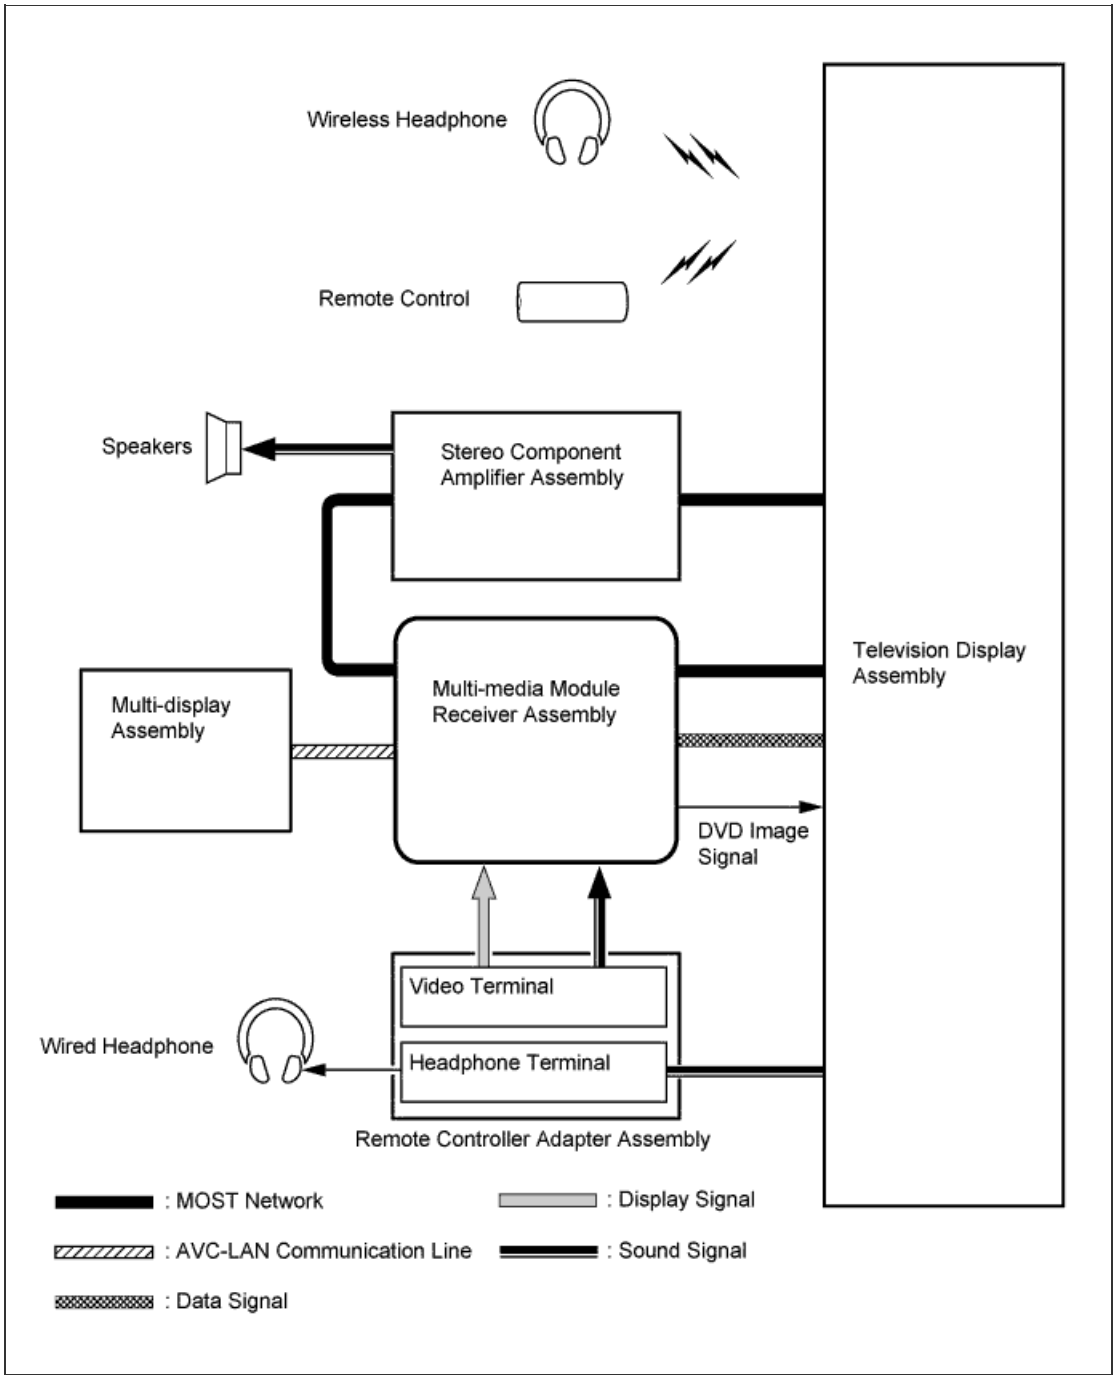
## 1.PRECAUTION FOR DISCONNECTING CABLE FROM NEGATIVE BATTERY TERMINAL



**NOTICE:**

After the engine switch is turned off, the multi-media module receiver assembly records various types of memory and settings. As a result, after turning the engine switch off, be sure to wait for the time specified in the following table before disconnecting the cable from the negative (-) battery terminal.



**Waiting Time before Disconnecting Cable from Negative (-) Battery Terminal**

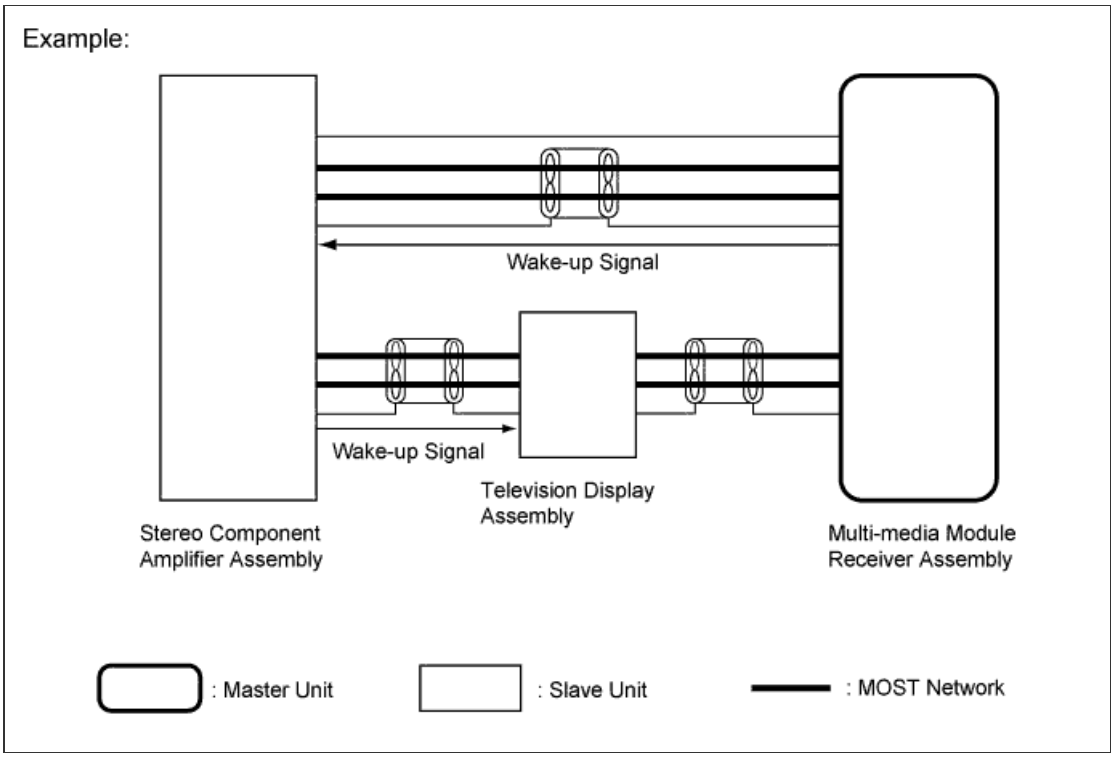
| Condition | Waiting Time |
|---|---|
| Vehicle enrolled in G-BOOK system | 6 minutes |
| Vehicle not enrolled in G-BOOK system | 1 minute |

**for Preparation** Click here

**for Preparation** Click here

**for Preparation** Click here

## OUTLINE



- As a unique feature of the Rear Seat Entertainment (RSE) system, the rear seat occupants can enjoy different audio-visual modes at the same time.
- The rear seat occupants can control the audio-visual modes with the remote control, and listen to audio by using wired or wireless headphones.
- The television display assembly receives image and sound signals from the multi-media module receiver assembly.
- The rear seat occupants can enjoy watching video by connecting an external device.
- MOST communication is used between the multi-media module receiver assembly and the television display assembly.
- Occupants in the front seats and rear seats can enjoy different content at the same time.

## FUNCTION OF MAIN COMPONENTS

| Component | Function |
|---|---|
| Television Display Assembly | • Displays DVD and video images in accordance with video signals from the multi-media module receiver assembly.<br>• Receives signals from the remote control and outputs them to the multi-media module receiver assembly.<br>• Outputs audio signals to the wireless headphones in the form of infrared signals.<br>• Displays the audio-visual control screen.<br>• Displays the adjustment screen.<br>• Displays the diagnosis screen. The diagnosis screen appears when diagnosis mode is started on the multi-display assembly.<br>• Even if the engine switch is turned from on (ACC) to off to on (ACC), display condition continues (image adjustments maintained, sources continue playing on the left and right sides).<br>• Processes video and audio signals from the video terminal and DVD image and audio signals from the multi-media module receiver assembly, and outputs them to the television display and headphone terminals. |
| Remote Control | Outputs various control signals of the RSE system to the television display assembly in the form of infrared signals. |
| Wireless Headphone | • Receives audio signals from the television display assembly in the form of infrared signals.<br>• Volume adjustment of the wireless headphone can be done by using the volume adjuster on the wireless headphone. |
| Headphone Terminal | • Outputs audio signals to the wired headphones that are connected.<br>• Adjusts the volume of the wired headphones in accordance with volume control. |
| Video Terminal | This terminal is for connecting the video player's video and audio output terminals. |
| Multi-media Module Receiver Assembly | Receives DVD image signals and sends the signals to the television display assembly and the multi-display assembly. |

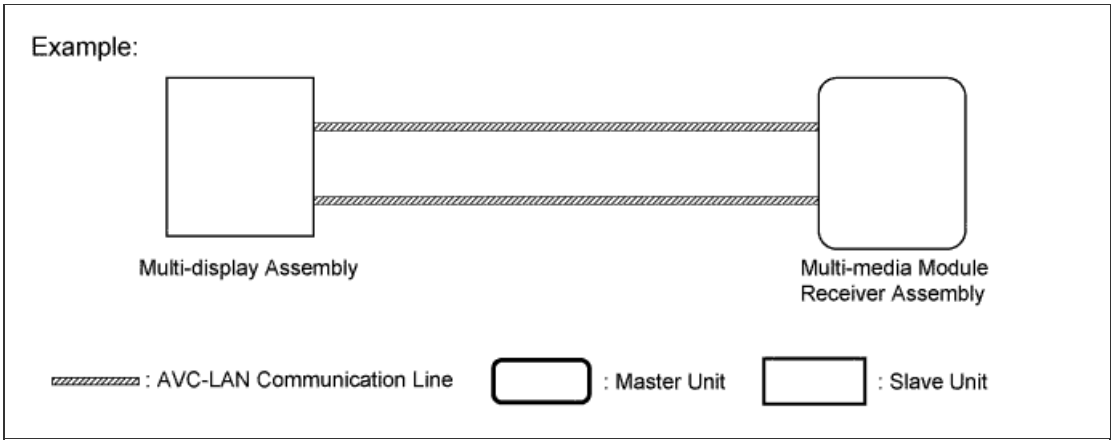
## COMMUNICATION SYSTEM

a. MOST NETWORK OUTLINE

i. Audio and visual system components communicate with each other via the MOST network.

ii. The MOST network uses a shielded twisted pair of wires for its communication lines.

iii. The master unit of the MOST network is the multi-media module receiver assembly.



iv. MOST communication lines connect each slave unit centering around the master unit to form a MOST network ring.

v. The master unit sends a wake-up signal to activate each slave unit connected to the MOST network.

**HINT:**

If a short or open circuit occurs in the MOST circuit, communication will be interrupted and the system will not operate normally.

b. AVC-LAN OUTLINE

i. Components of the audio and visual system communicate with each other via the AVC-LAN.

ii. The AVC-LAN uses a twisted pair of wires for its communication lines.

iii. The master unit of the AVC-LAN is the multi-media module receiver assembly.

**HINT:**

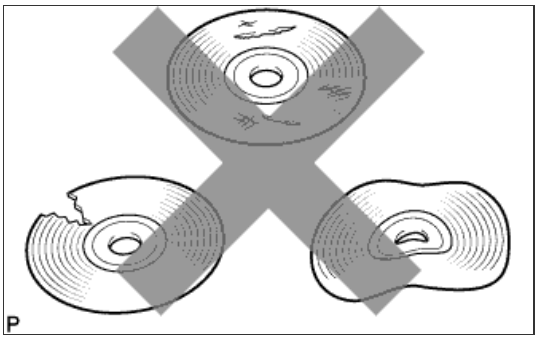
- **The multi-media module receiver assembly has enough resistance (60 to 80 Ω) necessary for communication.**
- **If a short or open circuit occurs in the AVC-LAN circuit, communication is interrupted and system will not operate normally.**

## DIAGNOSIS FUNCTION

a. When the navigation system changes to the diagnosis screen, the television display assembly shows the "REAR Check" screen.

## Digital Versatile Disc (DVD) PLAYER OUTLINE

a. The DVD player can only play DVD videos that have one of the following marks:



i. Precaution for use of discs

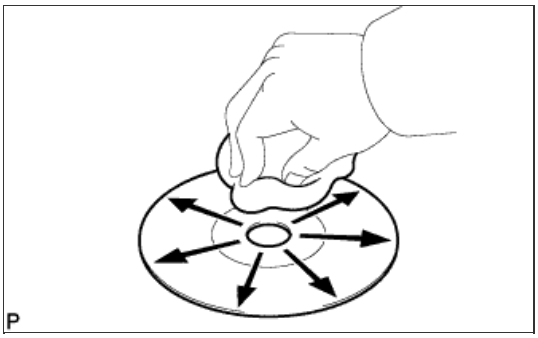
**NOTICE:**

- **Keep the discs away from dirt. Be careful not to damage the discs or leave your fingerprints on them.**
- **Hold discs by the outer edge and center hole with the label side up.**
- **Leaving the disc exposed halfway out of the slot for a long time after pressing the disc eject button may cause deformation of the disc, making the disc unusable.**
- **Do not use uniquely-shaped CDs because these may cause player malfunctions.**
- **Do not use discs whose recording portion is transparent or translucent because they may not be able to be inserted, ejected or played normally.**

b. Check disc

i. Check that the disc is not deformed or cracked.

c. Disc cleaning



**NOTICE:**

Do not use a lens cleaner because it may cause a malfunction in the pickup portion of the player.

i. If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.

**NOTICE:**

- **Pressing on the disc by hand or rubbing the disc with a hard cloth may scratch the disc surface.**
- **Use of solvent such as a record spray, antistatic agent, alcohol, benzine, and thinner or a chemical cloth may cause damage to the disc, making the disc unusable.**

**for Preparation** Click here

**HINT:**

- **Use the following procedure to troubleshoot the rear seat entertainment system.**
- ***: Use the intelligent tester.**

## 1.VEHICLE BROUGHT TO WORKSHOP

NEXT

## 2.INSPECT BATTERY VOLTAGE

a. Inspect the battery voltage.

**Standard voltage:**
**11 to 14 V**

If the voltage is below 11 V, recharge or replace the battery before proceeding to next step.

NEXT

## 3.CHECK FOR DTC*

a. Refer to DTC Check / Clear ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC is output. | A |
| DTC is not output. | B |

**HINT:**

If more information is needed, perform a recheck using the "System Check Mode" screen after rechecking for DTCs using the intelligent tester (Click here).

B. → Go to step 7

A

## 4.CLEAR DTC*

a. Clear the DTCs and finish diagnostic mode.

**HINT:**

The current DTCs may not indicate actual malfunctions depending on the vehicle operating conditions.

NEXT

## 5.RECHECK FOR DTC*

a. Recheck for DTCs.

**Result**

| Result | Proceed to |
|---|---|
| DTC is output. | A |

| | |
|---|---|
| DTC is not output. | B |

**HINT:**

- **Even if the malfunction symptom cannot be confirmed, check for DTCs. This is because the system stores history DTCs.**
- **If more information is needed, perform a recheck using the "System Check Mode" screen after rechecking for DTCs using the intelligent tester (Click here).**
- **Check the DTC and inspect the area the code indicates.**

| | |
|---|---|
| B. | Go to step 7 |

A

## 6.DIAGNOSTIC TROUBLE CODE CHART

a. Find the output code in the diagnostic trouble code chart ( Click here).

**NOTICE:**

- **The rear seat entertainment system outputs DTCs for the following system.**
- **When DTCs other than those in Diagnostic Trouble Code Chart for the rear seat entertainment system are output, refer to Diagnostic Trouble Code Chart for the relevant system.**
- **Refer to Navigation System (Click here)**
- **Refer to Audio and Visual System (Click here)**

**Result**

| Result | Proceed to |
|---|---|
| DTCs for the rear seat entertainment system are output. | A |
| DTCs for the navigation system are output. | B |
| DTCs for the audio and visual system are output. | C |

| | |
|---|---|
| A. | Go to step 9 |
| B. | GO TO NAVIGATION SYSTEM (Click here) |
| C. | GO TO AUDIO AND VISUAL SYSTEM (Click here) |

## 7.PROBLEM SYMPTOMS TABLE

a. Refer to Problem Symptoms Table (Click here).

**Result**

| Result | Proceed to |
|---|---|
| Fault is not listed in Problem Symptoms Table. | A |
| Fault is listed in Problem Symptoms Table. | B |

**HINT:**

If the symptom does not recur and no DTC is output, perform the symptom simulation method ( Click here).

| | |
|---|---|
| B. | ADJUST, REPAIR OR REPLACE IN ACCORDANCE WITH PROBLEM SYMPTOMS TABLE |

A

## 8.CHECK ECU TERMINAL ARRANGEMENT BASED ON MALFUNCTION SYMPTOM

a. Refer to Terminals of ECU (Click here).

NEXT

**9.CHECK CIRCUIT**

a. Adjust, repair or replace as necessary.

NEXT

**10.RECHECK FOR DIAGNOSTIC TROUBLE CODE***

**HINT:**

After clearing the DTCs, recheck for DTCs.

NEXT

**11.PERFORM CONFIRMATION TEST**

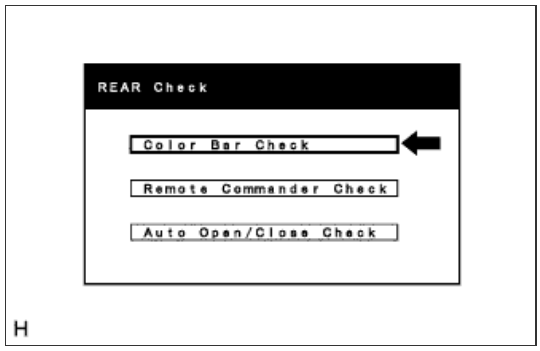
NEXT

END

**for Preparation** Click here

## ENTER DIAGNOSTIC MODE

a. Enter diagnostic mode (Click here).



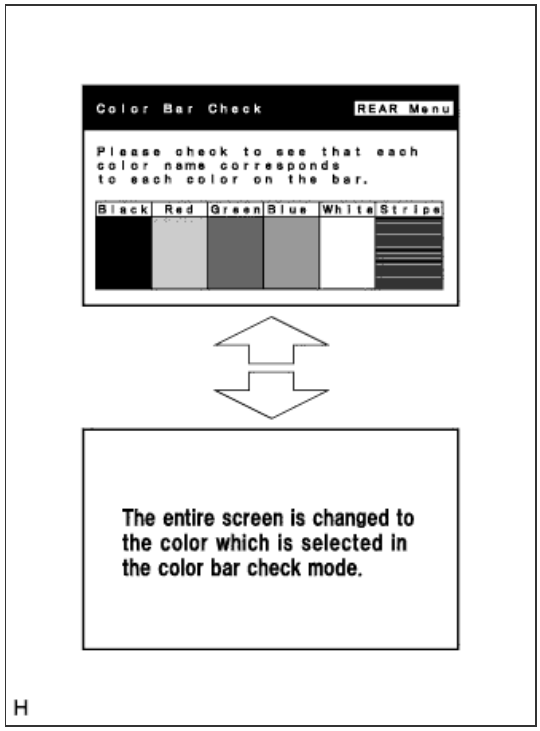
## REAR CHECK

**HINT:**

- **Use the remote control for each inspection.**
- **This mode checks the color display on the television display assembly.**
- **The television display assembly is not a touch panel type. Do not touch the screen.**

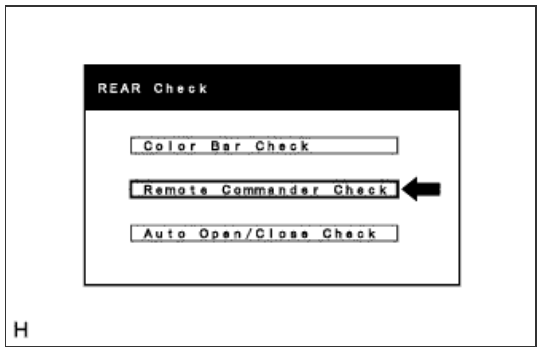
a. Color Bar Check

i. Select "Color Bar Check" from the "REAR Check" screen.



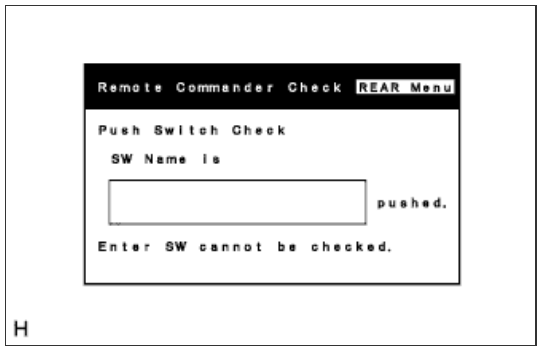
ii. Select a color bar from the "Color Bar Check" screen.

iii. Check the display color.



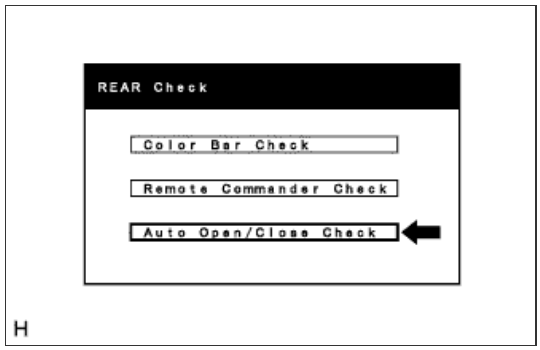
**HINT:**

- **The entire screen turns to the color or stripe which is selected.**
- **The screen returns to the "Color Bar Check" screen if the remote controller is operated again.**



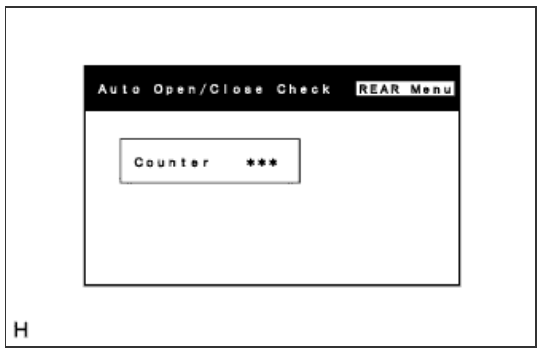
b. Remote Commander Check

i. Select "Remote Commander Check" from the "REAR Check" screen.



ii. Operate each switch and check that the switch name and condition are correctly displayed.

c. Auto Open/Close Check



i. Select "Auto Open/Close Check" from the "REAR Check" screen.

ii. Confirm the number of open/close cycles of the television display assembly.

**HINT:**

The counter indicates the number of times the television display assembly has been opened to an angle of 90° or greater.

**for Preparation** Click here

**HINT:**

- **Use the table below to help determine the cause of the problem symptom. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.**
- **Inspect the fuses and relays related to this system before inspecting the suspected areas below.**

| B15A5 | Rear Seat Entertainment System Malfunction | Click here |
| B15B0 | Display Screen Malfunction | Click here |
| B15D5 | Rear Seat Entertainment System Disconnected | Click here |

## DTC B15A5 Rear Seat Entertainment System Malfunction

**for Preparation** Click here

### DESCRIPTION

This DTC is stored when a malfunction occurs in the television display assembly.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15A5 | • Bus or sub-microprocessor malfunction<br>• RAM malfunction<br>• Internal hardware malfunction | Television display assembly |

### INSPECTION PROCEDURE

**1.CLEAR DTC**

a. Clear the DTCs (Click here).

NEXT

**2.RECHECK DTC**

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC B15A5 is not output. | A |
| DTC B15A5 is output. | B |

B → REPLACE TELEVISION DISPLAY ASSEMBLY (Click here)

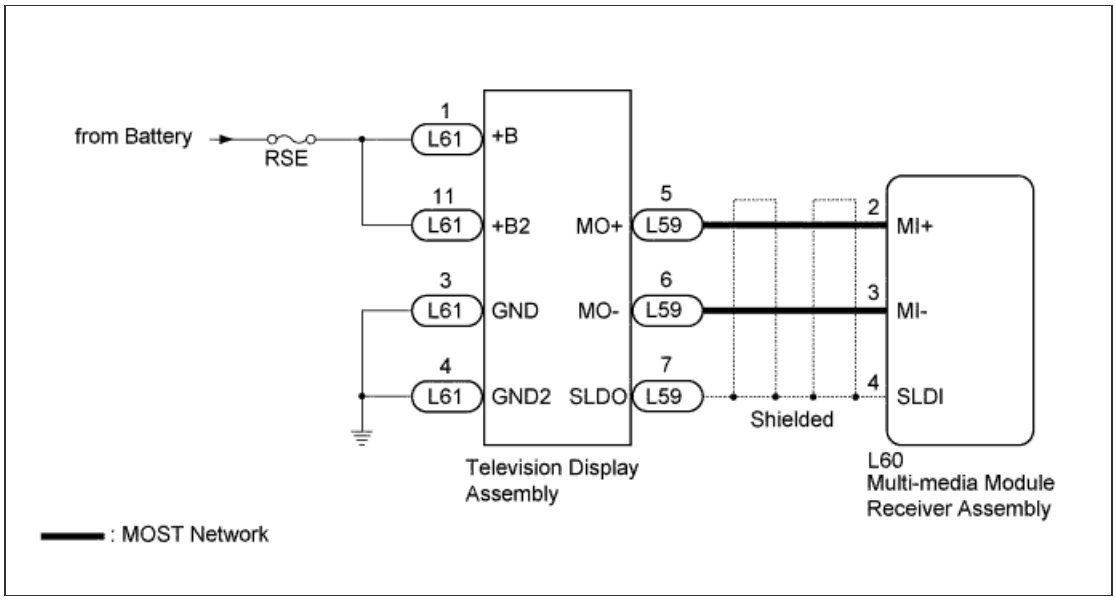
A

**USE SIMULATION METHOD TO CHECK (Click here)**

## DTC B15D5 Rear Seat Entertainment System Disconnected

**for Preparation** Click here

### DESCRIPTION



The television display assembly and multi-media module receiver assembly are connected by a MOST network.
When a MOST network error occurs between the display module board and multi-display assembly, these DTCs will be stored.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15D5* | A device that is listed in the MOST network connected device record of the master unit is missing. | • Television display assembly power source circuit<br>• MOST network<br>• Multi-display assembly<br>• Multi-media module receiver assembly |

**HINT:**

- ***: Even if no fault is present, this DTC may be stored depending on the battery condition or engine start voltage.**
- **The multi-media module receiver assembly is the master unit.**

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

**1.CLEAR DTC**

a. Clear the DTCs (Click here).

**NEXT**

**2.CHECK DTC**

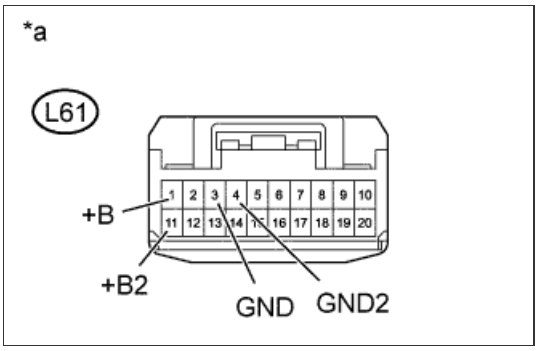
a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output.**

NG → Go to step 3

OK

USE SIMULATION METHOD TO CHECK (Click here)



### 3.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY ASSEMBLY - BATTERY AND BODY GROUND)

a. Disconnect the television display assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L61-3 (GND) - Body ground | Always | Below 1 Ω |
| L61-4 (GND2) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L61-1 (+B) - Body ground | Always | 11 to 14 V |
| L61-11 (+B2) - Body ground | Always | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *a | Front view of wire harness connector (to Television Display Assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

### 4.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - TELEVISION DISPLAY ASSEMBLY)

a. Disconnect the F87 multi-media module receiver assembly connector.

b. Disconnect the L59 television display assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F87-2 (MI+) - L59-5 (MO+) | Always | Below 1 Ω |
| F87-3 (MI-) - L59-6 (MO-) | Always | Below 1 Ω |
| F87-4 (SLDI) - L59-7 (SLDO) | Always | Below 1 Ω |
| F87-2 (MI+) - Body ground | Always | 10 kΩ or higher |
| F87-3 (MI-) - Body ground | Always | 10 kΩ or higher |
| F87-4 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

5.REPLACE TELEVISION DISPLAY ASSEMBLY

a. Replace the television display assembly with a new or normally functioning one ( Click here).

NEXT

6.CLEAR DTC

a. Clear the DTCs (Click here).

NEXT

7.CHECK DTC

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output.**

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (**Click here**)

OK

END (TELEVISION DISPLAY ASSEMBLY IS DEFECTIVE)

# DTC B15B0 Display Screen Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when a malfunction occurs in the television display assembly.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15B0 | When either condition below is met:<br>• Picture circuit (TFT unit) malfunction<br>• Back light malfunction (excess current) | • Television display assembly<br>• Multi-display assembly |

## INSPECTION PROCEDURE

### 1.CLEAR DTC

a. Clear the DTCs (Click here).

**NEXT**

### 2.RECHECK DTC

a. Recheck for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC B15B0 is not output. | A |
| DTC B15B0 is output. | B |

**HINT:**

- **This DTC is output from the multi-media module receiver assembly or television display assembly.**
- **When the DTC is checked using the intelligent tester, whether the DTC is output from the multi-media module receiver assembly, or whether it is output from the television display assembly, cannot be distinguished. For this reason, recheck the DTC using the "System Check Mode" screen.**

i. Enter diagnostic mode and display the "Service Menu" screen ( Click here).

ii. Select "Failure Diagnosis Service Check" on the "Service Menu" screen to display the "Failure Diagnosis Service Check" screen.

iii. Select "Service Check Mode" on the "Failure Diagnosis Service Check" screen and perform the service check.

iv. Recheck for DTCs and proceed to the next step according to the table below ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC is not output | A |
| DTC is output from the multi-media module receiver assembly. | B |
| DTC is output from a television display assembly. | C |

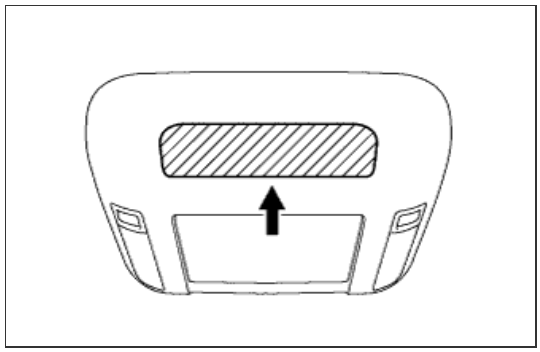
**B** → REPLACE MULTI-DISPLAY ASSEMBLY (**Click here**)

**C** → REPLACE TELEVISION DISPLAY ASSEMBLY (**Click here**)

**A**

USE SIMULATION METHOD TO CHECK (**Click here**)

**for Preparation** Click here



## INSPECTION PROCEDURE

### 1.CLEAN INFRARED RAY RECEIVING PORTION

a. Clean the infrared ray receiving portion on the television display assembly.

b. Check whether the same malfunction occurs.

**OK:**
**The function returns to normal.**

NG → Go to step 2

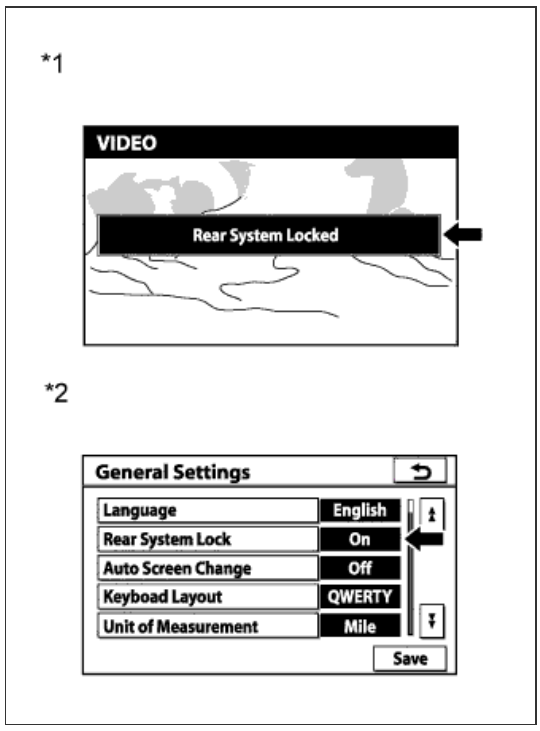
OK →

### END

### 2.CHECK SYSTEM

a. Check that the remote control operation of the rear system is not locked by the multi-media module receiver assembly.

i. Check if "Rear System Locked" appears on the television display.



**OK:**
**The message does not appear.**

**HINT:**

If the rear system is locked and the remote control is used in the rear seat area, an operation not possible message (for example, "Rear System Locked") is displayed. If the message is displayed, enter the multi-display assembly screen setting, and change "Rear System Lock" to Off.

**Text in Illustration**

| | |
|---|---|
| *1 | Television Display Assembly |
| *2 | Multi-display Assembly |

NG → RELEASE LOCK

OK →

### 3.CHECK REMOTE CONTROL (BATTERY)

a. Check that the dry-cell battery of the remote control is not depleted.

**OK:**

**Battery is not depleted.**

NG → REPLACE REMOTE CONTROL BATTERY

OK

**4.CHECK REMOTE CONTROL**

a. Replace the remote control with a new or known good one.

b. Check that the remote control system operates normally.

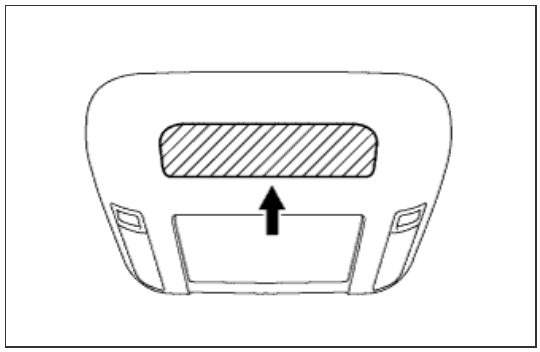
**OK:**
**The remote control system operates normally.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

**END (REMOTE CONTROL WAS DEFECTIVE)**

**for Preparation** Click here



## INSPECTION PROCEDURE

### 1.CLEAN INFRARED RAY RECEIVING PORTION

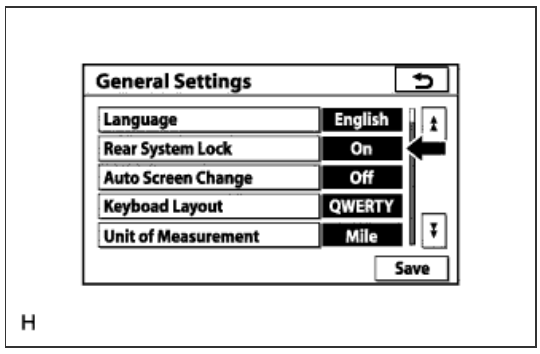
a. Clean the infrared ray receiving portion on the television display assembly.

b. Check whether the same malfunction occurs.

**OK:**
**The function returns to normal.**

NG → Go to step 2

OK →



### END

### 2.CHECK SYSTEM

a. Check that the remote control operation of the rear system is not locked by the multi-display assembly.

i. Check that "Rear System Lock" is Off on the "General Settings" screen.

**OK:**
**"Rear System Lock" is Off.**

NG → RELEASE LOCK

OK →

### 3.CHECK REMOTE CONTROL (BATTERY)

a. Check that the dry-cell battery of the remote control is not depleted.

**OK:**
**Battery is not depleted.**

NG → REPLACE REMOTE CONTROL BATTERY

OK →

### 4.REPLACE REMOTE CONTROL

a. Replace the remote control with a new or known good one.

b. Check that the television display assembly turns on.

**OK:**

**The television display assembly turns on.**

| | | |
|---|---|---|
| | NG | REPLACE TELEVISION DISPLAY ASSEMBLY (Click here) |
| OK | | |
| END (REMOTE CONTROL WAS DEFECTIVE) | | |

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK WIRELESS HEADPHONE (BATTERY)

a. Check that the dry-cell battery of the wireless headphone is not depleted.

**OK:**
**Battery is not depleted.**

NG → REPLACE WIRELESS HEADPHONE BATTERY

OK ↓

### 2.CHECK WIRELESS HEADPHONE SETTING

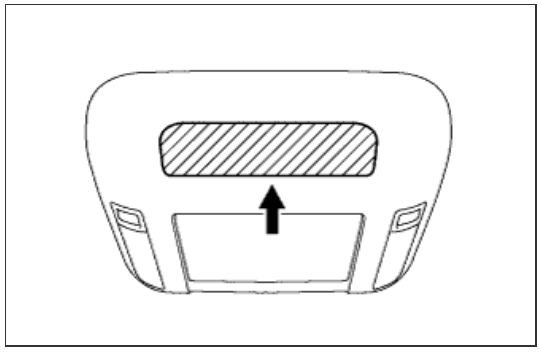
a. Check the wireless headphone settings.

i. Check that the volume is not set to "0".

ii. Check that "MUTE" is off.

**OK:**
**The volume is not set to "0" and "MUTE" is off.**

NG → SET VOLUME TO HIGH AND TURN MUTE OFF



OK ↓

### 3.CLEAN INFRARED RAY RECEIVING PORTION

a. Clean the infrared ray receiving portion on the television display assembly.

b. Check whether the same malfunction occurs.

**OK:**
**The function returns to normal.**

NG → Go to step 4

OK ↓

END

### 4.CHECK WIRELESS HEADPHONE

a. Replace the wireless headphone with a known good or new one and check if the same problem occurs again.

**OK:**
**Same problem does not occur.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

END (WIRELESS HEADPHONE WAS DEFECTIVE)

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.CHECK HEADPHONE**

a. Check if the wired headphone jack is securely connected.

**OK:**
**Wired headphone jack is securely connected.**

NG → SECURELY CONNECT JACK OF WIRED HEADPHONES

OK

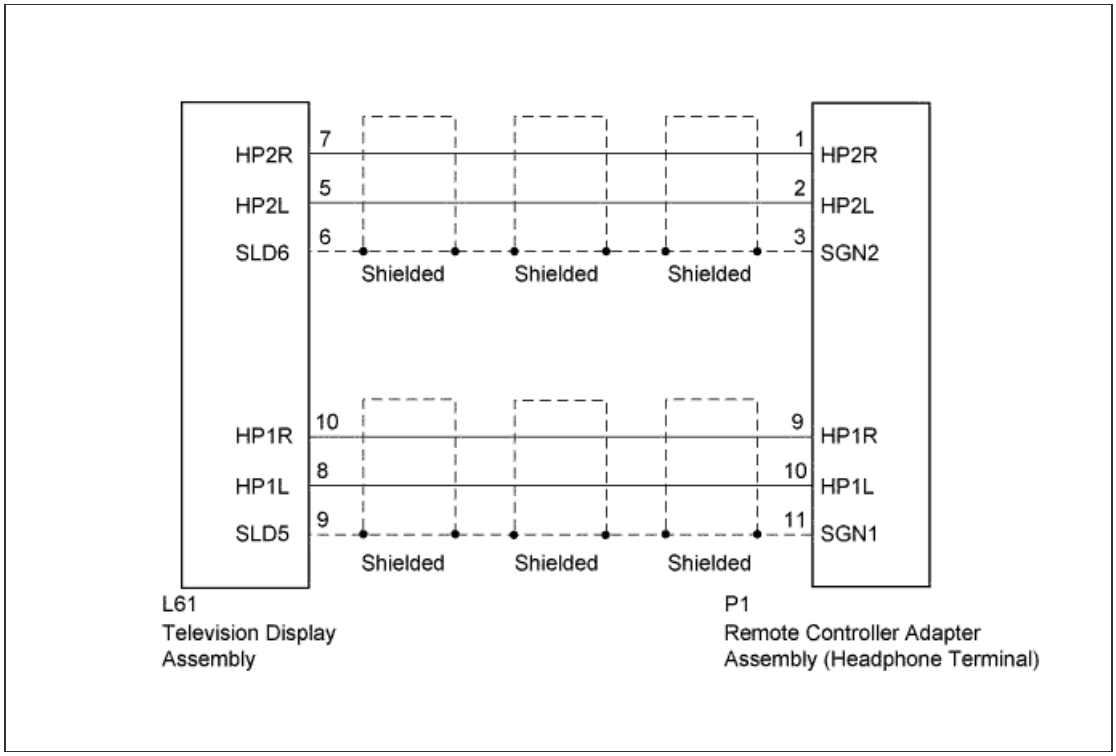
**2.CHECK HEADPHONE**

a. Replace the headphone with a known good or new one and check if the same problem occurs again.

**OK:**
**Same problem does not occur.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK



END (HEADPHONE WAS DEFECTIVE)

**for Preparation** Click here

## DESCRIPTION

This is the sound signal circuit from the television display assembly to the headphone terminal.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY ASSEMBLY - HEADPHONE TERMINAL)

a. Disconnect the L61 television display assembly connector.

b. Disconnect the P1 remote control adapter assembly (headphone terminal) connector.

c. Measure the resistance according to the value(s) in the table below.

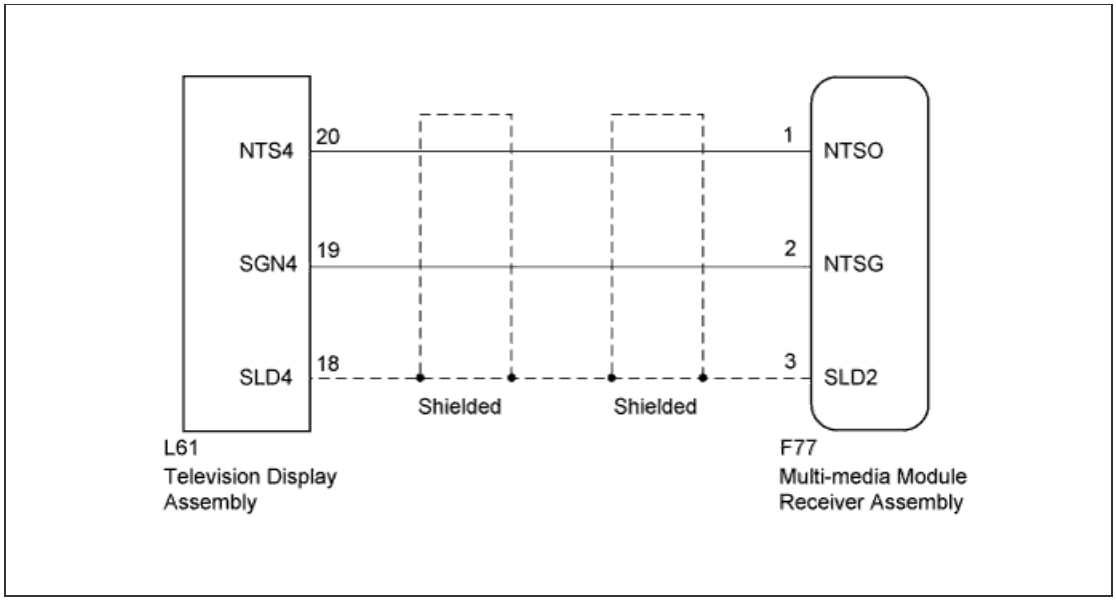
**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L61-7 (HP2R) - P1-1 (HP2R) | Always | Below 1 Ω |
| L61-5 (HP2L) - P1-2 (HP2L) | Always | Below 1 Ω |
| L61-6 (SLD6) - P1-3 (SGN2) | Always | Below 1 Ω |
| L61-10 (HP1R) - P1-9 (HP1R) | Always | Below 1 Ω |
| L61-8 (HP1L) - P1-10 (HP1L) | Always | Below 1 Ω |
| L61-9 (SLD5) - P1-11 (SGN1) | Always | Below 1 Ω |
| L61-7 (HP2R) - Body ground | Always | 10 kΩ or higher |
| L61-5 (HP2L) - Body ground | Always | 10 kΩ or higher |
| L61-6 (SLD6) - Body ground | Always | 10 kΩ or higher |

| | | |
|---|---|---|
| L61-10 (HP1R) - Body ground | Always | 10 kΩ or higher |
| L61-8 (HP1L) - Body ground | Always | 10 kΩ or higher |
| L61-9 (SLD5) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## DESCRIPTION

This is the display signal circuit from the multi-media module receiver assembly to the television display assembly.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

1.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - TELEVISION DISPLAY ASSEMBLY)

a. Disconnect the F77 multi-media module receiver assembly connector.

b. Disconnect the L61 television display assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F77-1 (NTSO) - L61-20 (NTS4) | Always | Below 1 Ω |
| F77-2 (NTSG) - L61-19 (SGN4) | Always | Below 1 Ω |
| F77-3 (SLD2) - L61-18 (SLD4) | Always | Below 1 Ω |
| F77-1 (NTSO) - Body ground | Always | 10 kΩ or higher |
| F77-2 (NTSG) - Body ground | Always | 10 kΩ or higher |
| F77-3 (SLD2) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

## DESCRIPTION

This is the sound signal circuit from the video terminal to the multi-media module receiver assembly.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - VIDEO TERMINAL)

a. Disconnect the F77 multi-media module receiver assembly connector.

b. Disconnect the P1 remote control adapter assembly (video terminal) connector.

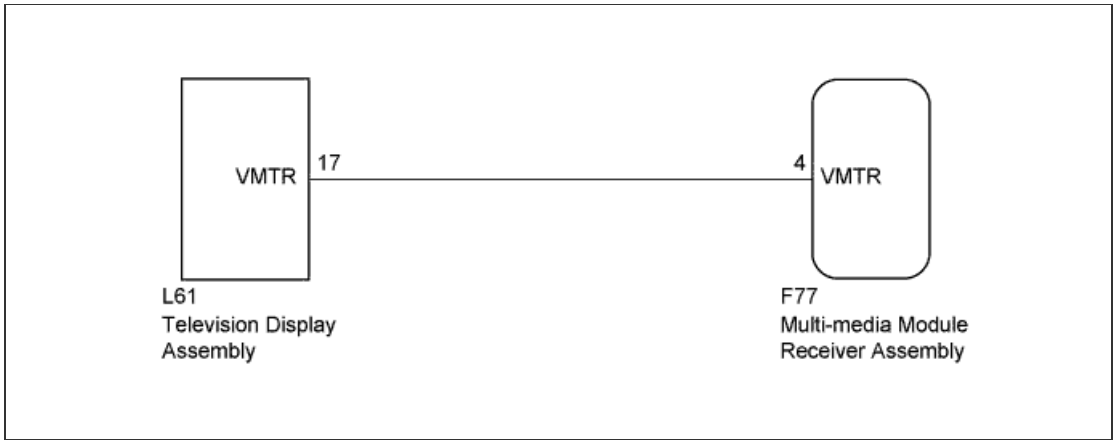
c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F77-7 (VAR+) - P1-5 (VAR+) | Always | Below 1 Ω |
| F77-8 (VAL+) - P1-6 (VAL+) | Always | Below 1 Ω |
| F77-15 (VA-) - P1-7 (VA-) | Always | Below 1 Ω |
| F77-5 (AGND) - P1-15 (SG) | Always | Below 1 Ω |
| F77-7 (VAR+) - Body ground | Always | 10 kΩ or higher |
| F77-8 (VAL+) - Body ground | Always | 10 kΩ or higher |
| F77-15 (VA-) - Body ground | Always | 10 kΩ or higher |
| F77-5 (AGND) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

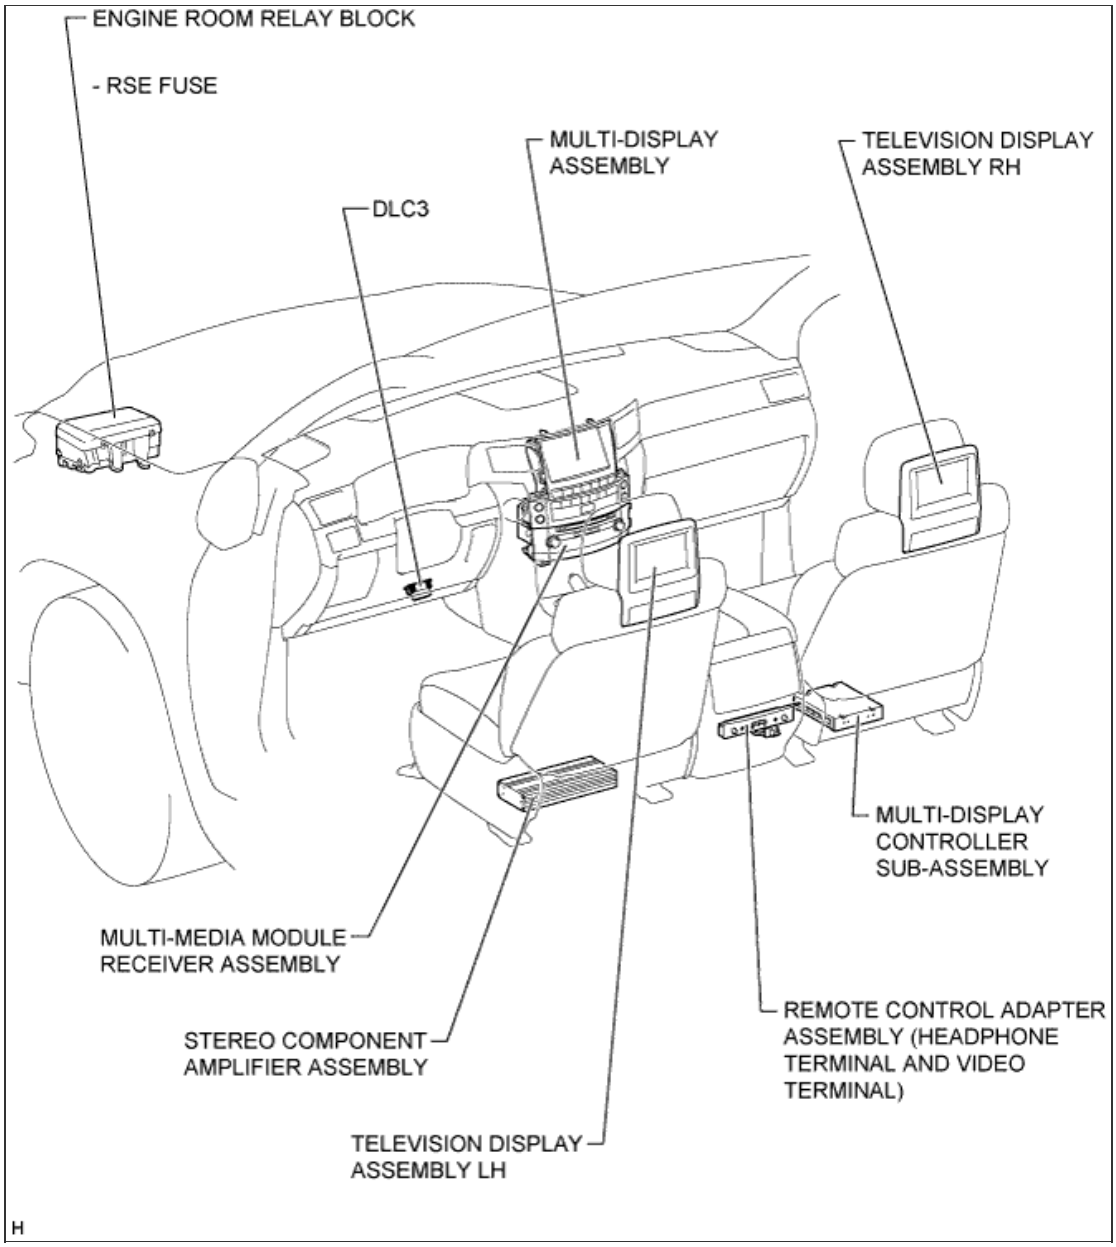
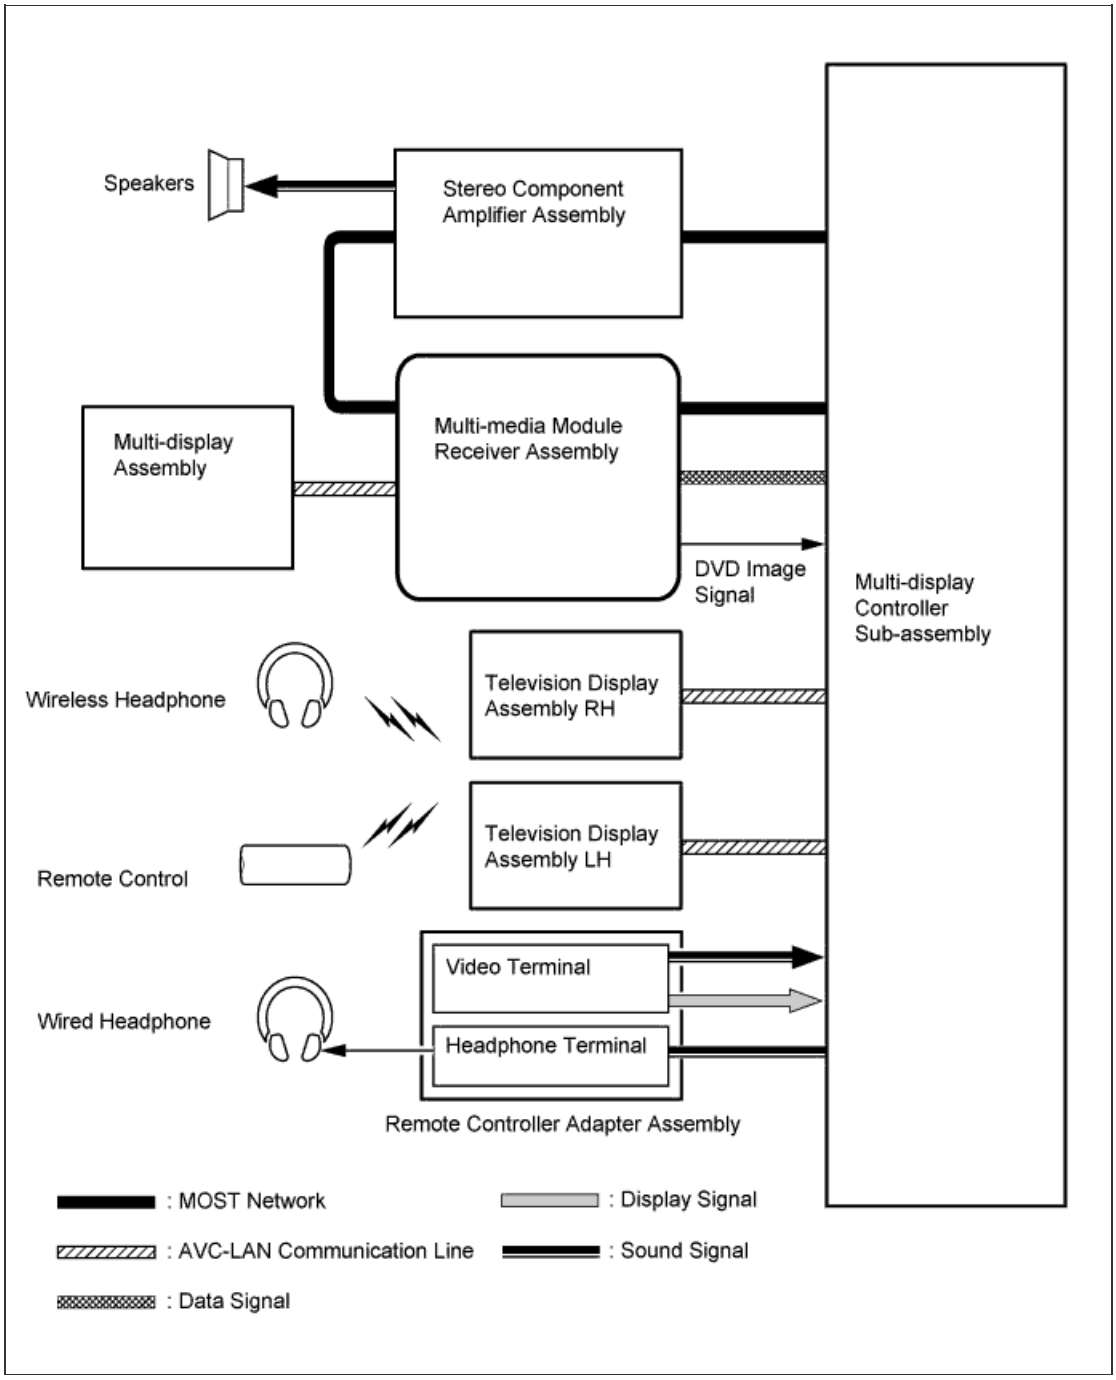
## 1.PRECAUTION FOR DISCONNECTING CABLE FROM NEGATIVE BATTERY TERMINAL



**NOTICE:**

After the engine switch is turned off, the multi-media module receiver assembly records various types of memory and settings. As a result, after turning the engine switch off, be sure to wait for the time specified in the following table before disconnecting the cable from the negative (-) battery terminal.



**Waiting Time before Disconnecting Cable from Negative (-) Battery Terminal**

| Condition | Waiting Time |
|---|---|
| Vehicle enrolled in G-BOOK system | 6 minutes |
| Vehicle not enrolled in G-BOOK system | 1 minute |

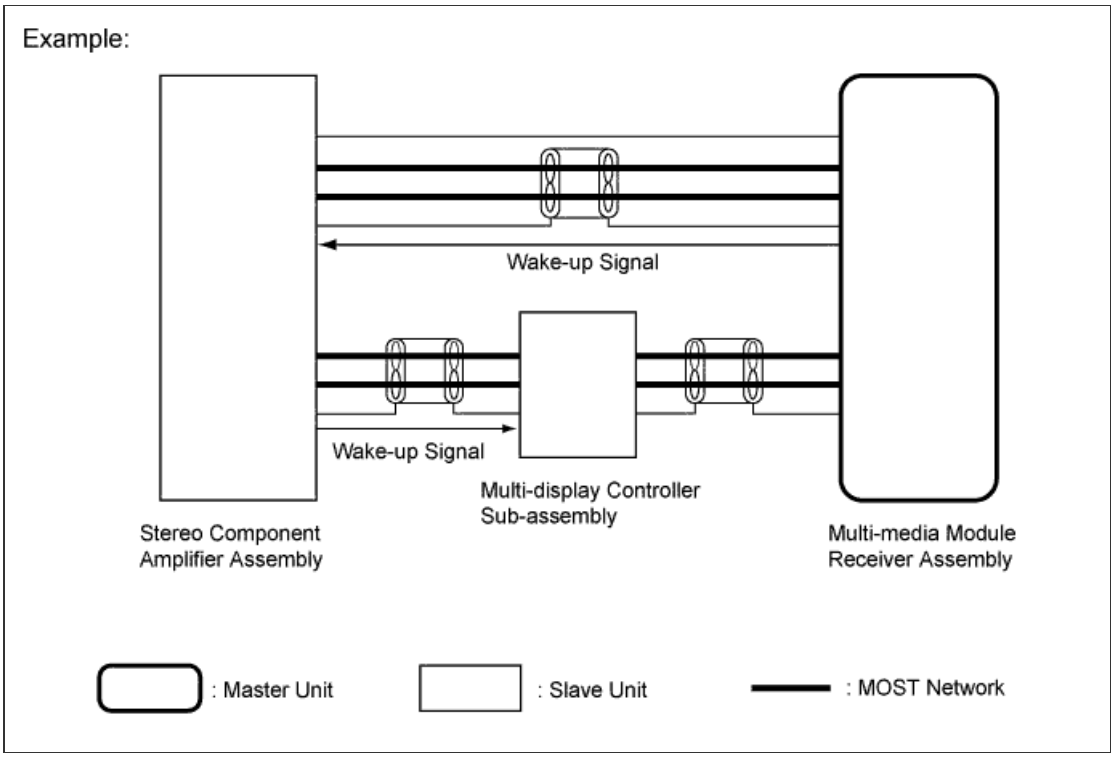
## OUTLINE



- As a unique feature of the Rear Seat Entertainment (RSE) system, the rear seat occupants can enjoy different audio-visual modes at the same time.
- The rear seat occupants can control the audio-visual modes with the remote control, and listen to audio by using wired or wireless headphones.
- The multi-display controller sub-assembly receives image and sound signals from the multi-media module receiver assembly and distributes the signals to each television display assembly.
- A television display assembly is installed on the back of each front seat.
- The rear seat occupants can enjoy watching video by connecting an external device.
- MOST communication is used between the multi-media module receiver assembly and the multi-display controller sub-assembly. AVC-LAN communication is used between the multi-display controller sub-assembly and each television display assembly.
- Occupants in the front seats, rear left seat and rear right seat can enjoy different content at the same time. However, this is possible for the rear left and rear right seats only when VIDEO is selected for either the left or right seat and another source is selected for the other seat.

## FUNCTION OF MAIN COMPONENT

| Component | Function |
|---|---|
| Television Display Assembly | • Displays DVD and video images in accordance with video signals from the multi-display controller sub-assembly.<br>• Receives signals from the remote control and outputs them to the multi-display controller sub-assembly.<br>• Outputs audio signals to the wireless headphones in the form of infrared signals.<br>• Displays the audio-visual control screen.<br>• Displays the adjustment screen.<br>• Displays the diagnosis screen. The diagnosis screen appears when diagnosis mode is started on the multi-display assembly.<br>• Even if the engine switch is turned from on (ACC) to off to on (ACC), display condition continues (image adjustments maintained, sources continue playing on the left and right sides). |
| Multi-display Controller Sub-assembly | • Processes video and audio signals from the video terminal and DVD image and audio signals from the radio receiver, and outputs them to the television display and headphone terminals.<br>• Controls the distribution of the audio-visual content to the rear left and rear right seats.<br>• Outputs audio signals for the video to the front seats. |
| Remote Controller | Outputs various control signals of the RSE system to the television display assembly in the form of infrared signals. |
| Wireless Headphones | • Receive audio signals from the television display assembly in the form of infrared signals.<br>• Volume adjustment of the wireless headphones can be performed using the volume adjuster on the wireless headphones. |
| Headphone Terminal | • Outputs audio signals to the wired headphones that are connected.<br>• Adjusts the volume of the wired headphones in accordance with volume control. |
| Video Terminal | This terminal is for connecting the video player's video and audio output terminals. |
| Multi-media Module Receiver Assembly | Receives DVD image signals and sends the signals to the multi-display controller sub-assembly and the multi-display assembly. |

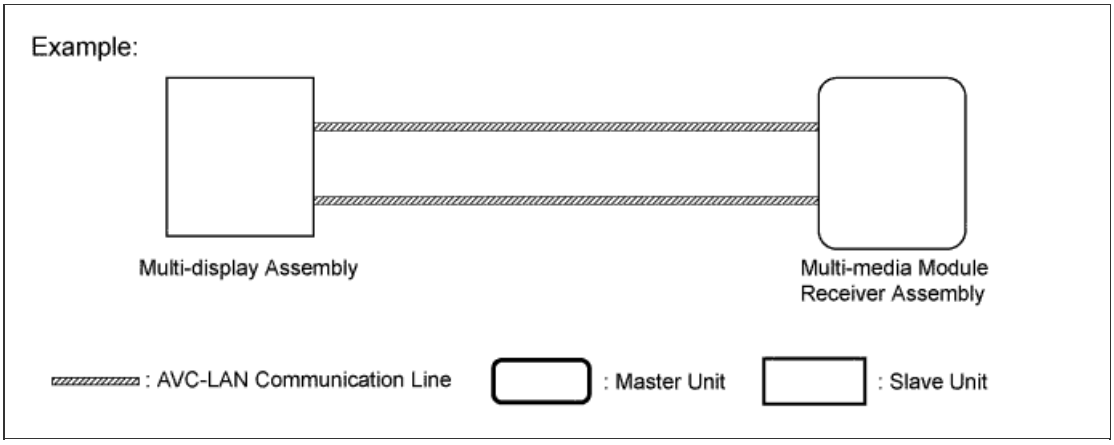
## COMMUNICATION SYSTEM

a. MOST NETWORK OUTLINE

i. Audio and visual system components communicate with each other via the MOST network.

ii. The MOST network uses a shielded twisted pair of wires for its communication lines.

iii. The master unit of the MOST network is the multi-media module receiver assembly.



iv. MOST communication lines connect each slave unit centering around the master unit to form a MOST network ring.

v. The master unit sends a wake-up signal to activate each slave unit connected to the MOST network.

**HINT:**

If a short or open circuit occurs in the MOST circuit, communication will be interrupted and the system will not operate normally.

b. AVC-LAN OUTLINE

i. Components of the audio and visual system communicate with each other via the AVC-LAN.

ii. The AVC-LAN uses a twisted pair of wires for its communication lines.

iii. The master unit of the AVC-LAN is the multi-media module receiver assembly.

**HINT:**

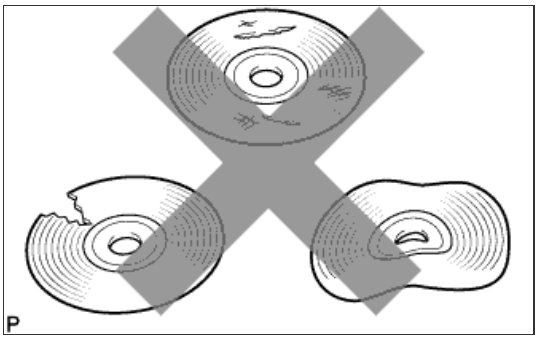
- **The multi-media module receiver assembly has enough resistance (60 to 80 Ω) necessary for communication.**
- **If a short or open circuit occurs in the AVC-LAN circuit, communication is interrupted and system will not operate normally.**

## DIAGNOSIS FUNCTION

a. When the navigation system changes to the diagnosis screen, the television display assembly shows the "REAR Check" screen.

## DIGITAL VERSATILE DISC (DVD) PLAYER OUTLINE

a. The DVD player can only play DVD videos that have one of the following marks:



i. Precaution for use of discs

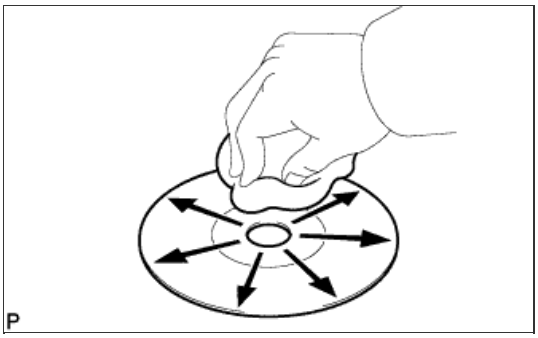
**NOTICE:**

- **Keep the discs away from dirt. Be careful not to damage the discs or leave your fingerprints on them.**
- **Hold discs by the outer edge and center hole with the label side up.**
- **Leaving the disc exposed halfway out of the slot for a long time after pressing the disc eject button may cause deformation of the disc, making the disc unusable.**
- **Do not use uniquely-shaped CDs because these may cause player malfunctions.**
- **Do not use discs whose recording portion is transparent or translucent because they may not be able to be inserted, ejected or played normally.**

b. Check disc

i. Check that the disc is not deformed or cracked.

c. Disc cleaning



**NOTICE:**

Do not use a lens cleaner because it may cause a malfunction in the pickup portion of the player.

i. If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.

**NOTICE:**

- **Pressing on the disc by hand or rubbing the disc with a hard cloth may scratch the disc surface.**
- **Use of solvent such as a record spray, antistatic agent, alcohol, benzine, and thinner or a chemical cloth may cause damage to the disc, making the disc unusable.**

**for Preparation** Click here

**HINT:**

- **Use the following procedure to troubleshoot the rear seat entertainment system.**
- ***: Use the intelligent tester.**

## 1.VEHICLE BROUGHT TO WORKSHOP

**NEXT**

## 2.INSPECT BATTERY VOLTAGE

a. Measure the battery voltage with the engine switch off.

**Standard voltage:**
**11 to 14 V**

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

**NEXT**

## 3.CHECK FOR DTC*

a. Refer to DTC Check / Clear ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC is output | A |
| DTC is not output | B |

**HINT:**

If more information is needed, perform a recheck using the "System Check Mode" screen after checking for DTCs using the intelligent tester (Click here).

**B.** → Go to step 7

**A**

## 4.CLEAR DTC*

a. Clear the DTCs and finish diagnostic mode.

**HINT:**

The current DTCs may not indicate actual malfunctions depending on the vehicle operating conditions.

**NEXT**

## 5.RECHECK FOR DTC*

a. Recheck for DTCs.

**Result**

| Result | Proceed to |
|---|---|
| DTC is output | A |

| | |
|---|---|
| DTC is not output | B |

**HINT:**

- **Even if the malfunction symptom cannot be confirmed, check for DTCs. This is because the system stores past DTCs.**
- **If more information is needed, perform a recheck using the "System Check Mode" screen after rechecking for DTCs using the intelligent tester (Click here).**
- **Note the DTC and inspect the area the code indicates.**

| | |
|---|---|
| B. | Go to step 7 |

A

## 6.DIAGNOSTIC TROUBLE CODE CHART

a. Find the output code in the diagnostic trouble code chart ( Click here).

**NOTICE:**

- **The rear seat entertainment system outputs DTCs for the following system.**
- **When DTCs other than those in Diagnostic Trouble Code Chart for the rear seat entertainment system are output, refer to Diagnostic Trouble Code Chart for the relevant system.**
- **Refer to Navigation System (Click here)**
- **Refer to Audio and Visual System (Click here)**

**Result**

| Result | Proceed to |
|---|---|
| DTCs for the rear seat entertainment system are output. | A |
| DTCs for the navigation system are output. | B |
| DTCs for the audio and visual system are output. | C |

| | |
|---|---|
| A. | Go to step 9 |
| B. | GO TO NAVIGATION SYSTEM (Click here) |
| C. | GO TO AUDIO AND VISUAL SYSTEM (Click here) |

## 7.PROBLEM SYMPTOMS TABLE

a. Refer to Problem Symptoms Table (Click here).

**Result**

| Result | Proceed to |
|---|---|
| Fault is not listed in problem symptoms table | A |
| Fault is listed in problem symptoms table | B |

**HINT:**

If the symptom does not recur and no DTC is output, perform the symptom simulation method ( Click here).

| | |
|---|---|
| B. | ADJUST, REPAIR OR REPLACE IN ACCORDANCE WITH PROBLEM SYMPTOMS TABLE |

A

## 8.CHECK ECU TERMINAL BASED ON MALFUNCTION SYMPTOM

a. Refer to Terminals of ECU (Click here).

NEXT

**9.CHECK CIRCUIT**

a. Adjust, repair or replace parts as necessary.

**NEXT**

**10.RECHECK FOR DIAGNOSTIC TROUBLE CODE***

**HINT:**

After clearing the DTCs, recheck for DTCs.

**NEXT**

**11.PERFORM CONFIRMATION TEST**

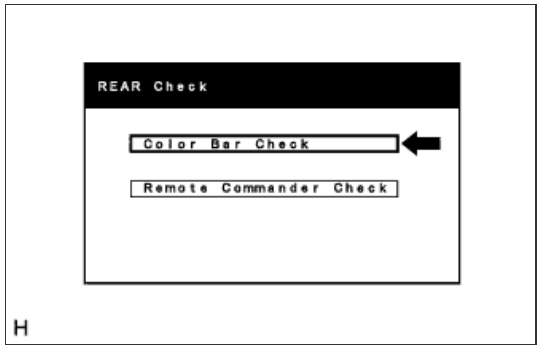
**NEXT**

**END**

**for Preparation** Click here

## ENTER DIAGNOSTIC MODE

a. Enter diagnostic mode (Click here).



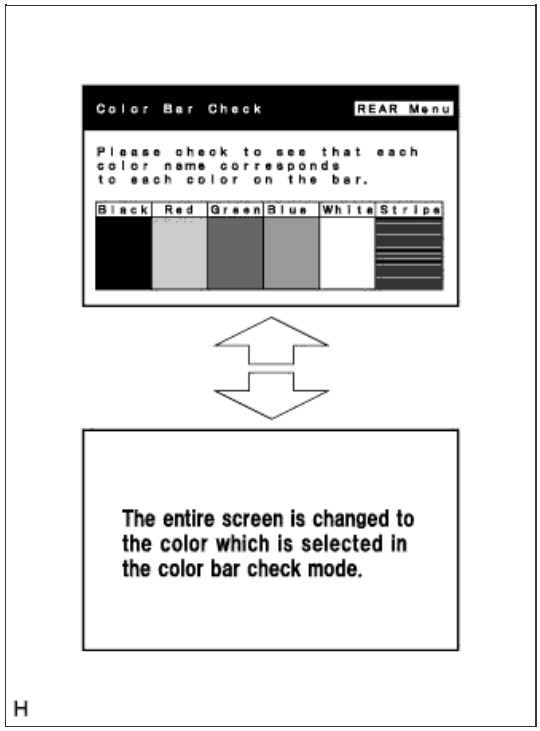
## REAR CHECK

**HINT:**

- **Use the remote control for each inspection.**
- **This mode checks the color display on the television display assembly.**
- **Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be exactly the same as on the actual vehicle.**
- **The television display assembly is not a touch panel type. Do not touch the screen.**

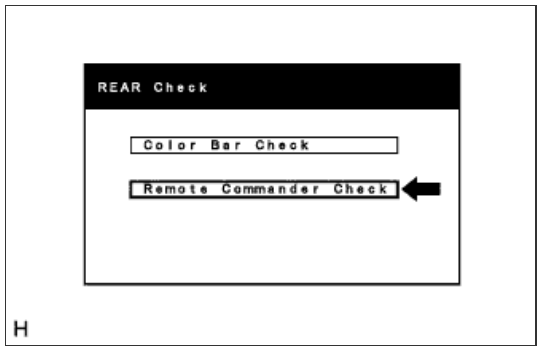
a. Color Bar Check

i. Select "Color Bar Check" from the "REAR Check" screen.



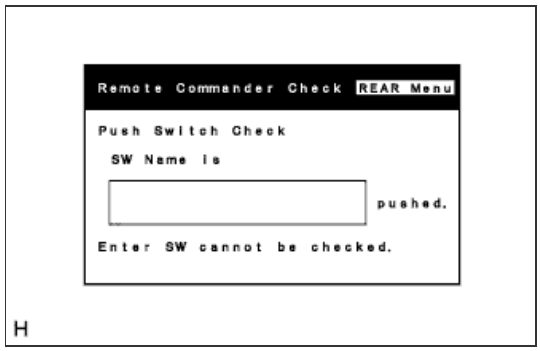
ii. Select a color bar from the "Color Bar Check" screen.

iii. Check the display color.



**HINT:**

- **The entire screen turns to the color or stripe which is selected.**
- **The screen returns to the "Color Bar Check" screen if the remote controller is operated again.**



b. Remote Commander Check

i. Select "Remote Commander Check" from the "REAR Check" screen.

ii. Operate each switch and check that the switch name and condition are correctly displayed.

**for Preparation** Click here

**HINT:**

- **Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.**
- **Inspect the fuses and relays related to this system before inspecting the suspected areas below.**

**General**

| Symptom | Suspected Area | See page |
|---|---|---|
| Different contents cannot be selected independently for each television display assembly* | Proceed to "Display Mode Signal Circuit between Multi-display Controller and Television Display Assembly" | Click here |
| | Replace television display assembly RH | Click here |
| | Replace television display assembly LH | Click here |
| | Replace multi-display controller sub-assembly | Click here |

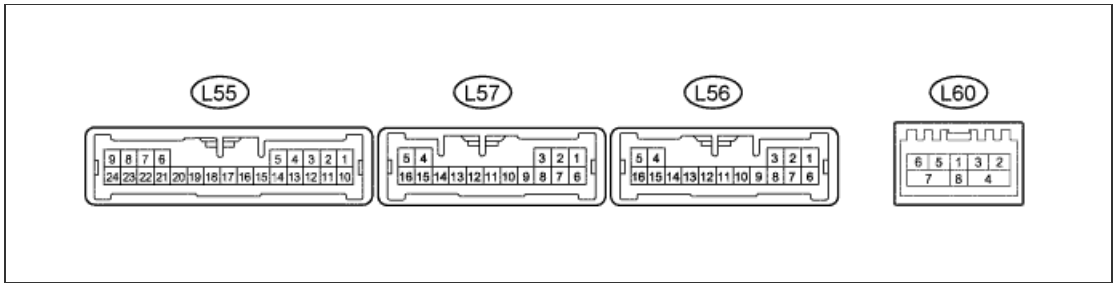
**Display**

| Symptom | Suspected Area | See page |
|---|---|---|
| Black screen | Proceed to "Visual Mute Signal Circuit between Multi-display Controller and Television Display Assembly" | Click here |
| | Proceed to "Display Signal Circuit between Multi-display Controller and Television Display Assembly" | Click here |
| | Replace television display assembly RH | Click here |
| | Replace television display assembly LH | Click here |
| | Replace multi-display controller sub-assembly | Click here |
| Color on display screen is not usual | Adjust the settings for contrast, tint, color and brightness | - |
| | Proceed to "Operation Check (Color Bar Check)" | Click here |
| | Replace television display assembly RH | Click here |
| | Replace television display assembly LH | Click here |
| | Replace multi-display controller sub-assembly | Click here |
| Only DVD screen is not displayed or not stabilized | Check and clean disc | Click here |
| | Proceed to "Visual Mute Signal Circuit between Radio Receiver and Multi-display Controller" | Click here |
| | Proceed to "Visual Mute Signal Circuit between Multi-display Controller and Television Display Assembly" | Click here |
| | Proceed to "Display Signal Circuit between Radio Receiver and Multi-display Controller" | Click here |
| | Proceed to "Display Signal Circuit between Multi-display Controller and Television Display Assembly" | Click here |
| | Replace television display assembly RH | Click here |
| | Replace television display assembly LH | Click here |
| | Replace multi-display controller sub-assembly | Click here |
| | Replace multi-media module receiver assembly | Click here |

| | | |
|---|---|---|
| Only display screen of external device does not appear or is not stabilized | Check if the external device is normal | - |
| | Proceed to "Display Signal Circuit between Video Terminal and Multi-display Controller" | Click here |
| | Replace remote control adapter assembly (video terminal) | Click here |
| | Replace multi-display controller sub-assembly | Click here |
| Television display does not turn on | Proceed to "Multi-display controller power source circuit" | Click here |
| | Proceed to "Television Display does not Turn ON" | Click here |

### Sound

| Symptom | Suspected Area | See page |
|---|---|---|
| Quality of sound from wireless headphones is poor or no sound can be heard | Proceed to "Sound from Wireless Headphones is Difficult to Hear, cannot be Heard, or Quality is Poor" | Click here |
| | Proceed to "Sound Signal Circuit between Multi-display Controller and Television Display Assembly" | Click here |
| | Proceed to "Mute Signal Circuit between Multi-display Controller and Television Display Assembly" | Click here |
| | Replace television display assembly RH | Click here |
| | Replace television display assembly LH | Click here |
| | Replace multi-display controller sub-assembly | Click here |
| Quality of sound from headphones connected to headphone terminal is poor or no sound can be heard | Proceed to "Sound from Wired Headphones is Difficult to Hear, cannot be Heard, or Quality is Poor" | Click here |
| | Proceed to "Sound Signal Circuit between Multi-display controller and Head-phone Terminal" | Click here |
| | Replace remote control adapter assembly (headphone terminal) | Click here |
| | Replace multi-display controller sub-assembly | Click here |
| Only sound quality input from external device is poor or no sound can be heard | Proceed to "Sound Signal Circuit between Video Terminal and Multi-display Controller" | Click here |
| | Replace remote control adapter assembly (video terminal) | Click here |
| | Replace multi-display controller sub-assembly | Click here |



### Remote Control

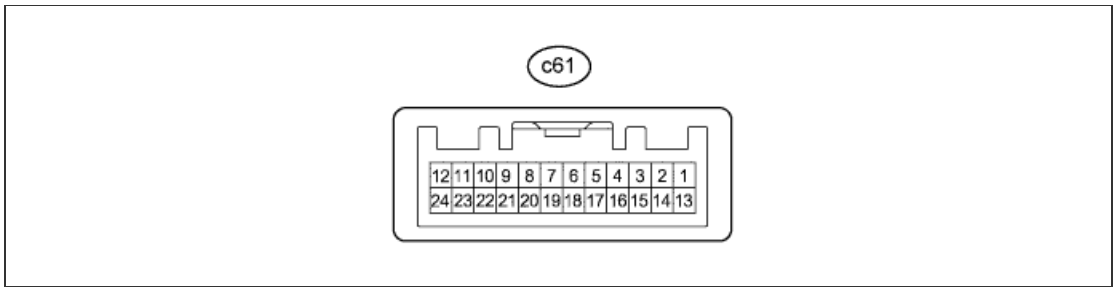
| Symptom | Suspected Area | See page |
|---|---|---|
| Remote control system does not operate | Proceed to "A Remote Control System does not Operate" | Click here |
| | Replace television display assembly RH | Click here |
| | Replace television display assembly LH | Click here |
| | Replace multi-display controller sub-assembly | Click here |

*: However, this is possible for the rear left and rear right seats only when VIDEO is selected for either the left or right seat and another source is selected for the other seat.

**for Preparation** Click here

## CHECK MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY

**HINT:**



Perform the check from the rear of the connector while it is connected to the multi-display controller sub-assembly.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| L55-2 (MUT1) - L56-14 (GND) | B - W-B | Mute signal | RSE playing → Source changed | 3.5 V or higher → Below 1 V |
| L55-3 (HP1R) - L56-14 (GND) | B - W-B | RSE sound signal | RSE playing | Waveform synchronized with sound is output |
| L55-4 (SLD5) - L56-14 (GND) | Shielded - W-B | Shield ground | Always | Below 1 V |
| L55-5 (HP1L) - L56-14 (GND) | W - W-B | RSE sound signal | RSE playing | Waveform synchronized with sound is output |
| L55-6 (MUT2) - L56-14 (GND) | W - W-B | Mute signal | RSE playing → Source changed | 3.5 V or higher → Below 1 V |
| L55-7 (HP2R) - L56-14 (GND) | B - W-B | RSE sound signal | RSE playing | Waveform synchronized with sound is output |
| L55-8 (SLD6) - L56-14 (GND) | Shielded - W-B | Shield ground | Always | Below 1 V |
| L55-9 (HP2L) - L56-14 (GND) | W - W-B | RSE sound signal | RSE playing | Waveform synchronized with sound is output |

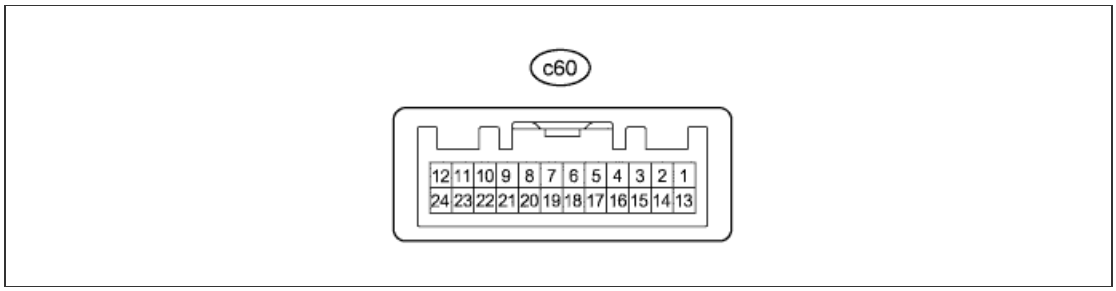
| L56-9 (MD0) - L56-14 (GND) | V - W-B | LH/RH display recognition signal | Always | Below 1 V |
| L56-10 (GND2) - L56-14 (GND) | GR - W-B | Ground | Always | Below 1 V |
| L56-11 (GND4) - Body ground | SB - Body ground | Ground | Always | Below 1 V |
| L56-12 (GND1) - L56-14 (GND) | R - W-B | Ground | Always | Below 1 V |
| L56-13 (GND3) - Body ground | L - Body ground | Ground | Always | Below 1 V |
| L56-14 (GND) - Body ground | W-B - Body ground | Ground | Always | Below 1 V |
| L56-15 (GND5) - Body ground | BR - Body ground | Ground | Always | Below 1 V |
| L56-16 (SLD4) - Body ground | Shielded - Body ground | Shield ground | Always | Below 1 V |
| L57-1 (SGN5) - Body ground | Shielded - Body ground | Shield ground | Always | Below 1 V |
| L57-2 (VD) - L56-14 (GND) | B - W-B | Video signal | External device playing (when video terminal used) | Waveform synchronized with sound signal is output |
| L57-3 (VG) - Body ground | W - Body ground | Video signal ground | Always | Below 1 V |
| L57-4 (VMT1) - L56-14 (GND) | LG -W-B | Visual mute signal | Display operating → Source changed | 3.5 V or higher → Below 1 V |
| L57-5 (VMT2) - L56-14 (GND) | G - W-B | Visual mute signal | Display operating → Source changed | 3.5 V or higher → Below 1 V |
| L57-6 (R+) - L56-14 (GND) | W - W-B | Sound signal | External device playing (when video terminal used) | Waveform synchronized with sound signal is output |
| L57-7 (L+) - L56-14 (GND) | B - W-B | Sound signal | External device playing (when video terminal used) | Waveform synchronized with sound signal is output |
| L57-8 (SGN3) - L56-14 (GND) | R - W-B | Sound signal ground | Always | Below 1 V |
| L57-9 (SGN6) - Body ground | Shielded - Body ground | Video terminal detection ground | Always | Below 1 V |
| L57-10 (ADPI) - L56-14 (GND) | R - W-B | Video terminal connection detection signal | External device connected | Below 1 V |
| L57-11 (NTS1) - L56-14 (GND) | B - W-B | Display signal | RSE playing | Waveform synchronized with display signal is output |
| L57-12 (SGN1) - L56-14 (GND) | W - W-B | Display signal ground | Always | Below 1 V |
| L57-13 (SLDA) - Body ground | Shielded - Body ground | Shield ground | Always | Below 1 V |
| L57-14 (NTS2) - L56-14 (GND) | B - W-B | Display signal | RSE playing | Waveform synchronized with display signal is output |
| L57-15 (SGN2) - Body ground | W - Body ground | Display signal ground | Always | Below 1 V |
| L57-16 (SLDB) - Body ground | Shielded - Body ground | Shield ground | Always | Below 1 V |
| L60-2 (MI+) | B | MOST communication signal | - | - |
| L60-3 (MI-) | B | MOST communication signal | - | - |
| L60-4 (SLDI) - Body ground | Shielded - Body ground | Shield ground | Always | Below 1 V |

| | | | | |
|---|---|---|---|---|
| L60-5 (MO+) | B | MOST communication signal | - | - |
| L60-6 (MO-) | B | MOST communication signal | - | - |
| L60-7 (SLDO) - Body ground | Shielded - Body ground | Shield ground | Always | Below 1 V |
| L60-8 (WUI) - L56-14 (GND) | W - W-B | MOST communication wake up signal | Engine switch on (ACC) | 4.5 V or higher |
| | | | Engine switch off | Below 1 V |

## CHECK TELEVISION DISPLAY ASSEMBLY LH



**HINT:**

Perform the check from the rear of the connector while it is connected to the television display assembly LH.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| c61-1 (R2+) - c61-20 (GND2) | B - SB | Sound signal | RSE playing | Waveform synchronized with sound signal is output |
| c61-2 (R2-) - c61-20 (GND2) | W - SB | Sound signal | RSE playing | Waveform synchronized with sound signal is output |
| c61-3 (L2+) - c61-20 (GND2) | G - SB | Sound signal | RSE playing | Waveform synchronized with sound signal is output |
| c61-4 (L2-) - c61-20 (GND2) | R - SB | Sound signal | RSE playing | Waveform synchronized with sound signal is output |
| c61-5 (MUT2) - c61-20 (GND2) | W - SB | Mute signal | RSE playing → Source changed | 3.5 V or higher → Below 1 V |
| c61-7 (MUT1) - c61-20 (GND2) | G - SB | Visual mute signal | RSE playing → Source changed | 3.5 V or higher → Below 1 V |
| c61-8 (TX2+) | G | AVC-LAN communication signal | - | - |
| c61-9 (TX2-) | L | AVC-LAN communication signal | - | - |
| c61-10 (NTSC) - c61-20 (GND2) | B - SB | Display signal | RSE playing | Waveform synchronized with display signal is output |
| c61-12 (PWR2) - c61-20 (GND2) | P - SB | Power supply for television display assembly LH | Display operating | 11 to 14 V |
| c61-13 (SLD2) - Body ground | Shielded - Body ground | Shield ground | Always | Below 1 V |
| c61-19 (GND) - Body ground | GR - Body ground | Ground | Always | Below 1 V |
| c61-20 (GND2) - Body ground | SB - Body ground | Ground | Always | Below 1 V |
| c61-21 (SLD) - Body ground | Shielded - Body ground | Shield ground | Always | Below 1 V |
| c61-22 (SGN2) - Body ground | W - Body ground | Display signal ground | Always | Below 1 V |

## CHECK TELEVISION DISPLAY ASSEMBLY RH

**HINT:**

Perform the check from the rear of the connector while it is connected to the television display assembly RH.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| c60-1 (R1+) - c60-20 (GND4) | B - L | Sound signal | RSE playing | Waveform synchronized with sound signal is output |
| c60-2 (R1-) - c60-20 (GND4) | W - L | Sound signal | RSE playing | Waveform synchronized with sound signal is output |
| c60-3 (L1+) - c60-20 (GND4) | G - L | Sound signal | RSE playing | Waveform synchronized with sound signal is output |
| c60-4 (L1-) - c60-20 (GND4) | R - L | Sound signal | RSE playing | Waveform synchronized with sound signal is output |
| c60-5 (MUTE) - c60-20 (GND4) | LG - L | Mute signal | RSE playing → Source changed | 3.5 V or higher → Below 1 V |
| c60-6 (MD0) - c60-20 (GND4) | GR - L | LH/RH display recognition signal | Always | Below 1 V |
| c60-7 (VMTR) - c60-20 (GND4) | SB - L | Visual mute signal | RSE playing → Source changed | 3.5 V or higher → Below 1 V |
| c60-8 (TX1+) | L | AVC-LAN communication signal | - | - |
| c60-9 (TX1-) | LG | AVC-LAN communication signal | - | - |
| c60-10 (VV1+) - c60-20 (GND4) | W - L | Display signal | RSE playing | Waveform synchronized with display signal is output |
| c60-12 (PWR1) - c60-20 (GND4) | V - L | Power supply for television display assembly RH | Display operating | 11 to 14 V |
| c60-13 (SLD1) - Body ground | Shielded - Body ground | Shield ground | Always | Below 1 V |
| c60-19 (GND6) - Body ground | P - Body ground | Ground | Always | Below 1 V |
| c60-20 (GND4) - Body ground | L - Body ground | Ground | Always | Below 1 V |
| c60-21 (VVG1) - Body ground | Shielded - Body ground | Shield ground | Always | Below 1 V |
| c60-22 (VV1-) - Body ground | B - Body ground | Display signal ground | Always | Below 1 V |

**CHECK MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)**

**CHECK STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)**

**for Preparation** Click here

**HINT:**

Refer to Audio and Visual System (Click here).

**for Preparation** Click here

**HINT:**

If a trouble code is output during the DTC check, inspect the trouble areas listed for that code. For details of the code, refer to the "See page" below. Inspect fuses and relays before investigating the trouble areas shown in the table below.

**Rear Seat Entertainment System**

| DTC Code | Detection Item | See page |
|---|---|---|
| B15A5 | Rear Seat Entertainment System Malfunction | Click here |
| B15CE | Seatback Display Disconnected | Click here |
| B15D5 | Rear Seat Entertainment System Disconnected | Click here |

# DTC B15A5 Rear Seat Entertainment System Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when a malfunction occurs in the multi-display controller sub-assembly.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15A5 | • Bus or sub-microprocessor malfunction.<br>• RAM malfunction.<br>• Internal hardware malfunction. | Multi-display controller sub-assembly |

## INSPECTION PROCEDURE

### 1.CLEAR DTC

a. Clear the DTCs (Click here).

NEXT

### 2.CHECK DTC

a. Check for DTCs and check if the same DTC is output again ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC B15A5 is not output | A |
| DTC B15A5 is output | B |

B → REPLACE MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY (Click here)

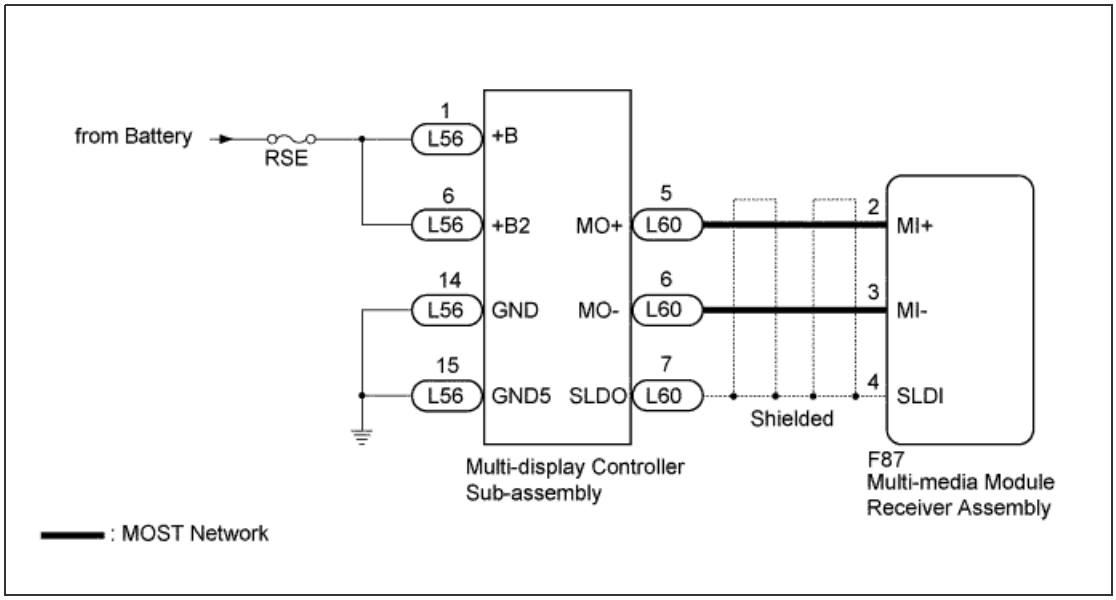
A

### USE SIMULATION METHOD TO CHECK (Click here)

## DTC B15D5 Rear Seat Entertainment System Disconnected

**for Preparation** Click here

### DESCRIPTION



The multi-media module receiver assembly and multi-media module receiver assembly are connected by a MOST network.
When a MOST network error occurs between the display module board and multi-display assembly, these DTCs will be stored.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15D5* | A device that is listed in the MOST network connected device record of the master unit is missing. | • Multi-display controller sub-assembly power source circuit<br>• MOST network<br>• Multi-media module receiver assembly |

**HINT:**

- ***: Even if no fault is present, this DTC may be stored depending on the battery condition or engine start voltage.**
- **The multi-media module receiver assembly is the master unit.**

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

**1.CLEAR DTC**

a. Clear the DTCs (Click here).

**NEXT**

**2.CHECK DTC**

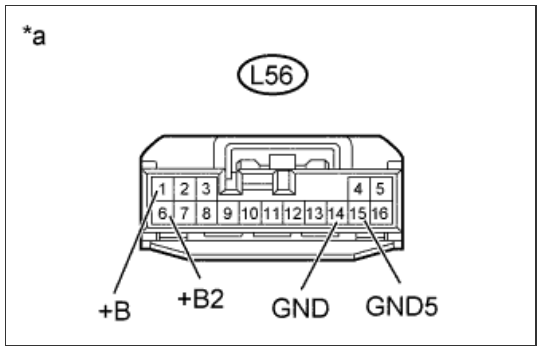
a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output.**

**NG** → **Go to step 3**

OK

USE SIMULATION METHOD TO CHECK (Click here)



3.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - BATTERY AND BODY GROUND)

a. Disconnect the multi-media module receiver assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L56-14 (GND) - Body ground | Always | Below 1 Ω |
| L56-15 (GND5) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L56-1 (+B) - Body ground | Always | 11 to 14 V |
| L56-6 (+B2) - Body ground | Always | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *a | Front view of wire harness connector (to Multi-media Module Receiver Assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

4.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY)

a. Disconnect the F87 multi-media module receiver assembly connector.

b. Disconnect the L56 multi-display controller sub-assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F87-2 (MI+) - L56-5 (MO+) | Always | Below 1 Ω |
| F87-3 (MI-) - L56-6 (MO-) | Always | Below 1 Ω |
| F87-4 (SLDI) - L56-7 (SLDO) | Always | Below 1 Ω |
| F87-2 (MI+) - Body ground | Always | 10 kΩ or higher |
| F87-3 (MI-) - Body ground | Always | 10 kΩ or higher |
| F87-4 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**5.REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY**

a. Replace the multi-media module receiver assembly with a new or normally functioning one ( Click here).

NEXT

**6.CLEAR DTC**

a. Clear the DTCs (Click here).

NEXT

**7.CHECK DTC**

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output.**

NG → **REPLACE MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY (Click here)**

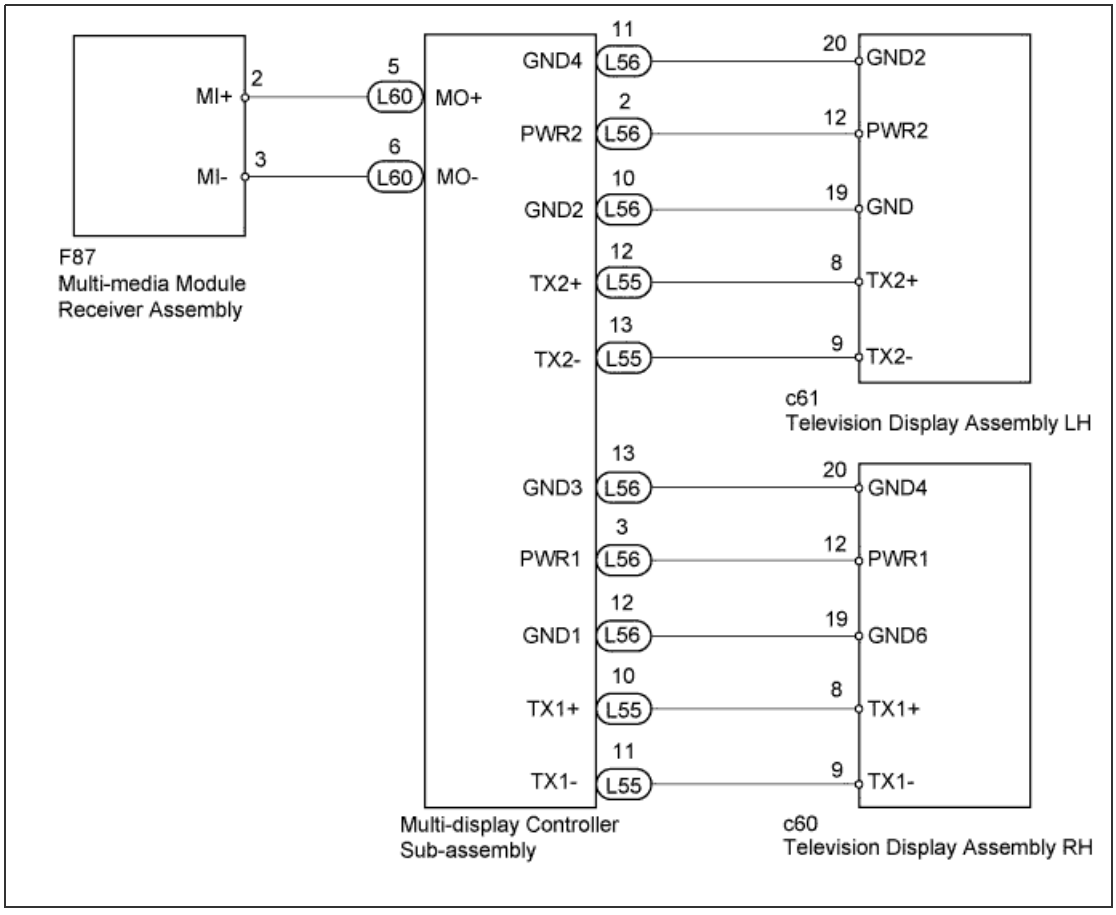
OK

**END (MULTI-MEDIA MODULE RECEIVER ASSEMBLY IS DEFECTIVE)**

## DTC B15CE Seatback Display Disconnected

**for Preparation** Click here

### DESCRIPTION



The television display assembly and multi-display controller sub-assembly are connected by an AVC-LAN communication line.
The multi-media module receiver assembly is connected to the multi-display controller sub-assembly by a MOST communication line.
This DTC will be stored when an AVC-LAN communication error occurs between the multi-display controller sub-assembly and television display assembly.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15CE | Either condition is met:<br>• The television display assembly is not connected while the engine switch is on (IG) or (ACC).<br>• Communication between the master unit and television display assembly is not possible when the engine is started. | • Television display assembly power source circuit<br>• AVC-LAN circuit between multi-display controller sub-assembly and television display assembly<br>• Multi-display controller sub-assembly<br>• Television display assembly LH<br>• Television display assembly RH |

**HINT:**

- **Even if no fault is present, this DTC may be stored depending on the battery condition or engine start voltage.**
- **The multi-media module receiver assembly is the master unit.**

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**1.CLEAR DTC**

a. Clear the DTCs (Click here).

**NEXT**

## 2.CHECK DTC

a. Check for DTCs and check if the same trouble occurs again ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC B15CE is output | A |
| No DTCs are output | B |

**B** → **USE SIMULATION METHOD TO CHECK (Click here)**

**A**

## 3.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components (including associated wiring) are installed | A |
| Optional components (including associated wiring) are not installed | B |

**B** → **Go to step 5**

**A**

## 4.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

**NEXT**

## 5.CLEAR DTC

a. Clear the DTCs (Click here).

**NEXT**

## 6.CHECK DTC

a. Check for DTCs and check if the same trouble occurs again ( Click here).

**OK:**
**No DTCs are output.**

**NG** → **Go to step 7**

**OK**

## END

## 7.CHECK OPERATION

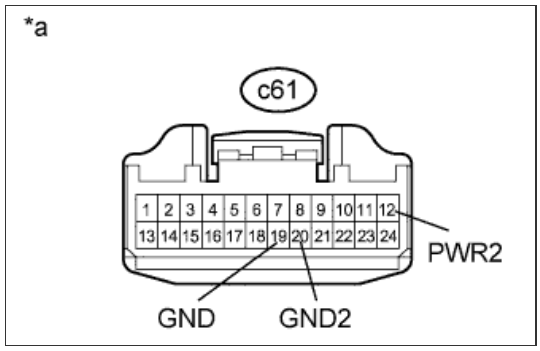
a. Check which television display assembly does not operate.

**Result**

| Result | Proceed to |
|---|---|
| Television display assembly LH does not operate | A |
| Television display assembly RH does not operate | B |

B → Go to step 12

A



## 8.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY ASSEMBLY LH POWER SOURCE)

a. Disconnect the television display assembly LH connector.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| c61-12 (PWR2) - c61-19 (GND) | Engine switch on (IG) | 11 to 14 V |
| c61-12 (PWR2) - c61-20 (GND2) | Engine switch on (IG) | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *a | Front view of wire harness connector (to Television Display Assembly LH) |

NG → Go to step 11

OK

## 9.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY - TELEVISION DISPLAY ASSEMBLY LH)

a. Disconnect the L55 multi-display controller sub-assembly connector.

b. Disconnect the c61 television display assembly LH connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L55-12 (TX2+) - c61-8 (TX2+) | Always | Below 1 Ω |
| L55-13 (TX2-) - c61-9 (TX2-) | Always | Below 1 Ω |
| L55-12 (TX2+) - Body ground | Always | 10 kΩ or higher |
| L55-13 (TX2-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 10.CHECK TELEVISION DISPLAY ASSEMBLY LH

a. Replace the television display assembly LH ( Click here).

b. Clear the DTCs (Click here).

c. Check for DTCs and check if the same trouble occurs again.

**OK:**

**No DTCs are output.**

NG → REPLACE MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY (Click here)

OK →

END (TELEVISION DISPLAY ASSEMBLY LH IS DEFECTIVE)

## 11.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY - TELEVISION DISPLAY ASSEMBLY LH)

a. Disconnect the L56 multi-display controller sub-assembly connector.

b. Disconnect the c61 television display assembly LH connector.

c. Measure the resistance according to the value(s) in the table below.

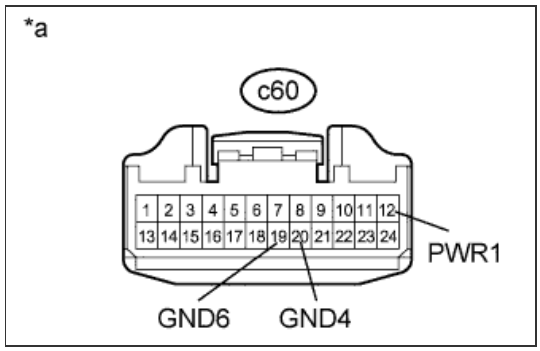
**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L56-2 (PWR2) - c61-12 (PWR2) | Always | Below 1 Ω |
| L56-10 (GND2) - c61-19 (GND) | Always | Below 1 Ω |
| L56-11 (GND4) - c61-20 (GND2) | Always | Below 1 Ω |
| L56-2 (PWR2) - Body ground | Always | 10 kΩ or higher |
| L56-10 (GND2) - Body ground | Always | 10 kΩ or higher |
| L56-11 (GND4) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK →

REPLACE MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY (Click here)



## 12.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY ASSEMBLY RH POWER SOURCE)

a. Disconnect the television display assembly RH connector.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| c60-12 (PWR1) - c60-19 (GND6) | Engine switch on (IG) | 11 to 14 V |
| c60-12 (PWR1) - c60-20 (GND4) | Engine switch on (IG) | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *a | Front view of wire harness connector (to Television Display Assembly RH) |

NG → Go to step 15

OK →

13.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY - TELEVISION DISPLAY ASSEMBLY RH)

a. Disconnect the L55 multi-display controller sub-assembly connector.

b. Disconnect the c60 television display assembly RH connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L55-10 (TX1+) - c60-8 (TX1+) | Always | Below 1 Ω |
| L55-11 (TX1-) - c60-9 (TX1-) | Always | Below 1 Ω |
| L55-10 (TX1+) - Body ground | Always | 10 kΩ or higher |
| L55-11 (TX1-) - Body ground | Always | 10 kΩ or higher |

NG → CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY - TELEVISION DISPLAY ASSEMBLY LH)

OK

14.CHECK TELEVISION DISPLAY ASSEMBLY RH

a. Replace the television display assembly RH (Click here).

b. Clear the DTCs (Click here).

c. Check for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY (Click here)

OK

END (TELEVISION DISPLAY ASSEMBLY RH IS DEFECTIVE)

15.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY - TELEVISION DISPLAY ASSEMBLY RH)

a. Disconnect the L56 multi-display controller sub-assembly connector.

b. Disconnect the c60 television display assembly RH connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L56-3 (PWR1) - c60-12 (PWR1) | Always | Below 1 Ω |
| L56-12 (GND1) - c60-19 (GND6) | Always | Below 1 Ω |
| L56-13 (GND3) - c60-20 (GND4) | Always | Below 1 Ω |
| L56-3 (PWR1) - Body ground | Always | 10 kΩ or higher |
| L56-12 (GND1) - Body ground | Always | 10 kΩ or higher |
| L56-13 (GND3) - | Always | 10 kΩ or higher |

| | | |
|---|---|---|
| Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

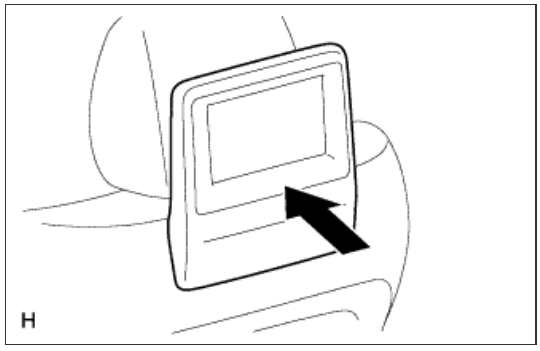
### 1.CHECK REMOTE CONTROL SYSTEM

a. Check whether the remote control does not work for one of the television display assemblies, or does not work for both television display assemblies.

**Result**

| Result | Proceed to |
|---|---|
| The remote control does not work for one of the television display assemblies | A |
| The remote control does not work for both of the television display assemblies | B |

B → Go to step 3



A

### 2.CLEAN INFRARED RAY RECEIVING PORTION

a. Clean the infrared ray receiving portion on the television display assembly.

b. Check whether the same malfunction occurs.

**OK:**
**The function returns to normal.**

NG → Go to step 5

OK

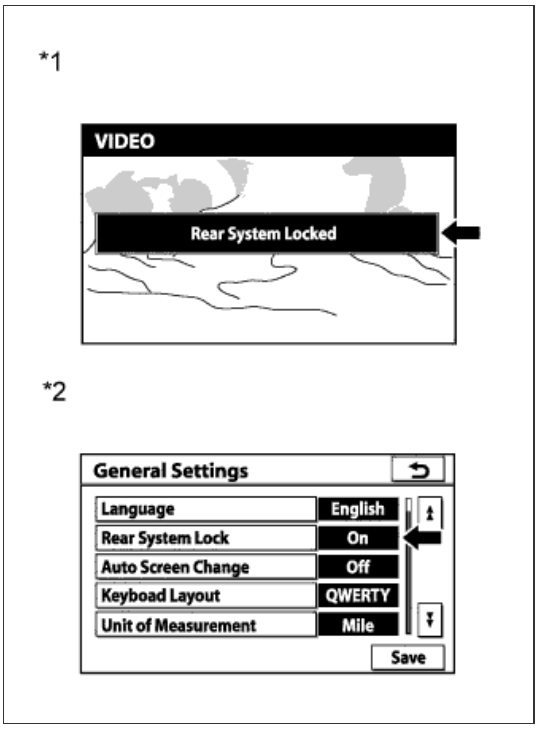
END

### 3.CHECK SYSTEM

a. Check that the remote control operation of the rear system is not locked by the multi-media module receiver assembly.

i. Check if "Rear System Locked" appears on the television display.

**OK:**
**The message does not appear.**



**HINT:**

If the rear system is locked and the remote control is used in the rear seat area, an operation not possible message (for example, "Rear System Locked") is displayed. If the message is displayed, enter the multi-display assembly settings screen and change "Rear System Lock" to Off.

**Text in Illustration**

| | |
|---|---|

| | |
|---|---|
| *1 | Television Display Assembly |
| *2 | Multi-display Assembly |

NG → RELEASE LOCK

OK

## 4.CHECK REMOTE CONTROLLER (BATTERY)

a. Check that the dry-cell battery of the remote controller is not depleted.

**OK:**
**Battery is not depleted.**

NG → REPLACE REMOTE CONTROLLER BATTERY

OK

## 5.REPLACE REMOTE CONTROLLER

a. Replace the remote controller with a new or normally functioning one.

b. Check that the remote controller operates normally.

**OK:**
**The remote controller operates normally.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

END (REMOTE CONTROLLER IS DEFECTIVE)

**for Preparation** Click here

## INSPECTION PROCEDURE

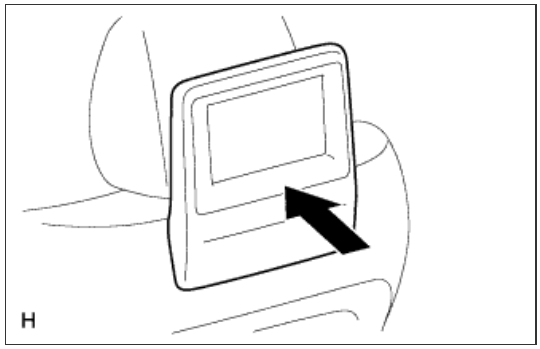
### 1.CHECK TELEVISION DISPLAY ASSEMBLY

a. Check whether only one of the television display assemblies does not turn on, or whether both television display assemblies do not turn on.

**Result**

| Result | Proceed to |
|---|---|
| One of the television display assemblies does not turn on | A |
| Both television display assemblies do not turn on | B |

B → Go to step 3



A

### 2.CLEAN INFRARED RAY RECEIVING PORTION

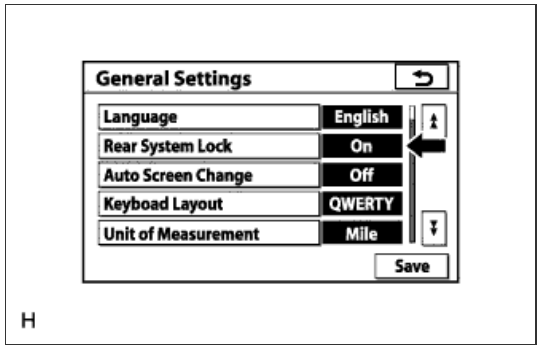
a. Clean the infrared ray receiving portion on the television display assembly.

b. Check whether the same malfunction occurs.

**OK:**
**The function returns to normal.**

NG → Go to step 5

OK



END

### 3.CHECK SYSTEM

a. Check that the remote control operation of the rear system is not locked by the multi-media module receiver assembly.

i. Check that "Rear System Lock" is Off on the "General Settings" screen.

**OK:**
**"Rear System Lock" is Off.**

NG → RELEASE LOCK

OK

### 4.CHECK REMOTE CONTROLLER (BATTERY)

a. Check that the dry-cell battery of the remote controller is not depleted.

**OK:**
**Battery is not depleted.**

NG → REPLACE REMOTE CONTROLLER BATTERY

OK

### 5.CHECK REMOTE CONTROLLER

a. Replace the remote controller with a new or normally functioning one.

b. Check that the television display assembly turns on.

**OK:**
**The television display assembly turns on.**

**Result**

| Result | Proceed to |
|---|---|
| OK | A |
| NG (for RH) | B |
| NG (for LH) | C |

B → REPLACE TELEVISION DISPLAY ASSEMBLY RH (Click here)

C → REPLACE TELEVISION DISPLAY ASSEMBLY LH (Click here)

A

### END (REMOTE CONTROLLER IS DEFECTIVE)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK WIRELESS HEADPHONE OPERATION

a. Check whether only one of the wireless headphones does not operate, or whether both wireless headphones do not operate.

**HINT:**

Check the frequency of the wireless headphones.

**Result**

| Result | Proceed to |
|---|---|
| Sound is abnormal from the wireless headphones of either the television display assembly RH or LH | A |
| Sound is abnormal from the wireless headphones of both the television display assembly RH and LH | B |

B → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

A

### 2.CHECK WIRELESS HEADPHONES (BATTERY)

a. Check that the dry-cell battery of the wireless headphones is not depleted.

**OK:**
**Battery is not depleted.**

NG → REPLACE WIRELESS HEADPHONE BATTERY

OK

### 3.CHECK WIRELESS HEADPHONE SETTING

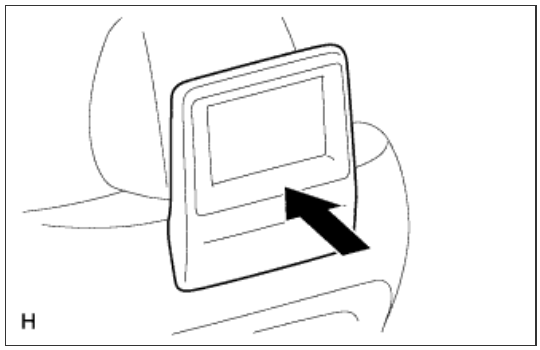
a. Check the wireless headphone settings.

i. Check that the volume is not set to "0".

ii. Check that "MUTE" is off.

**OK:**
**The volume is not set to "0" and "MUTE" is off.**

NG → SET VOLUME TO HIGH AND TURN MUTE OFF



OK

### 4.CLEAN INFRARED RAY RECEIVING PORTION

a. Clean the infrared ray receiving portion on the television display assembly.

b. Check whether the same malfunction occurs.

**OK:**
**The function returns to normal.**

NG → Go to step 5

OK

END

5.CHECK WIRELESS HEADPHONES

a. Replace the wireless headphones with a new or normally functioning pair of headphones and check if the same problem occurs again.

**OK:**
**Same problem does not occur.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

END (WIRELESS HEADPHONES ARE DEFECTIVE)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK HEADPHONES

a. Check if the wired headphones are securely connected to the jack.

**OK:**
**The wired headphones are securely connected to the jack.**

NG → SECURELY CONNECT WIRED HEADPHONES TO JACK

OK ↓

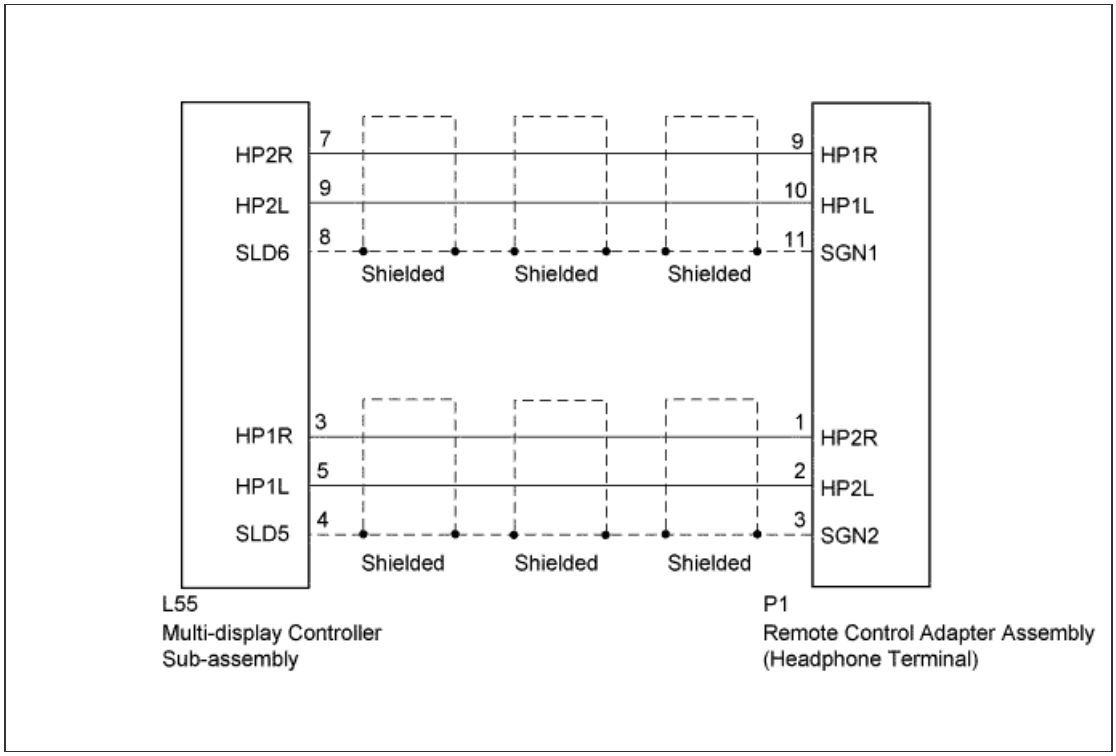
### 2.CHECK HEADPHONES

a. Replace the headphones with a new or normally functioning pair of headphones and check if the same problem occurs again.

**OK:**
**Same problem does not occur.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK ↓



### END (HEADPHONES ARE DEFECTIVE)

**for Preparation** Click here

## DESCRIPTION

This is the sound signal circuit between the multi-display controller sub-assembly and headphone terminal.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY - HEADPHONE TERMINAL)

a. Disconnect the L55 multi-display controller sub-assembly connector.

b. Disconnect the P1 remote control adapter assembly (headphone terminal) connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L55-7 (HP2R) - P1-9 (HP1R) | Always | Below 1 Ω |
| L55-9 (HP2L) - P1-10 (HP1L) | Always | Below 1 Ω |
| L55-8 (SLD6) - P1-11 (SGN1) | Always | Below 1 Ω |
| L55-3 (HP1R) - P1-1 (HP2R) | Always | Below 1 Ω |
| L55-5 (HP1L) - P1-2 (HP2L) | Always | Below 1 Ω |
| L55-4 (SLD5) - P1-3 (SGN2) | Always | Below 1 Ω |
| L55-7 (HP2R) - Body ground | Always | 10 kΩ or higher |
| L55-9 (HP2L) - Body ground | Always | 10 kΩ or higher |
| L55-8 (SLD6) - Body ground | Always | 10 kΩ or higher |

| | | |
|---|---|---|
| L55-3 (HP1R) - Body ground | Always | 10 kΩ or higher |
| L55-5 (HP1L) - Body ground | Always | 10 kΩ or higher |
| L55-4 (SLD5) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## DESCRIPTION

This is the sound signal circuit between the multi-display controller sub-assembly and the television display assembly RH and LH.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY - TELEVISION DISPLAY ASSEMBLY RH AND LH)

a. Disconnect the L55 multi-display controller sub-assembly connector.

b. Disconnect the c60 television display assembly RH connector.

c. Disconnect the c61 television display assembly LH connector.

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**
**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L55-18 (L1+) - c60-3 (L1+) | Always | Below 1 Ω |
| L55-19 (L1-) - c60-4 (L1-) | Always | Below 1 Ω |
| L55-16 (R1+) - | | |

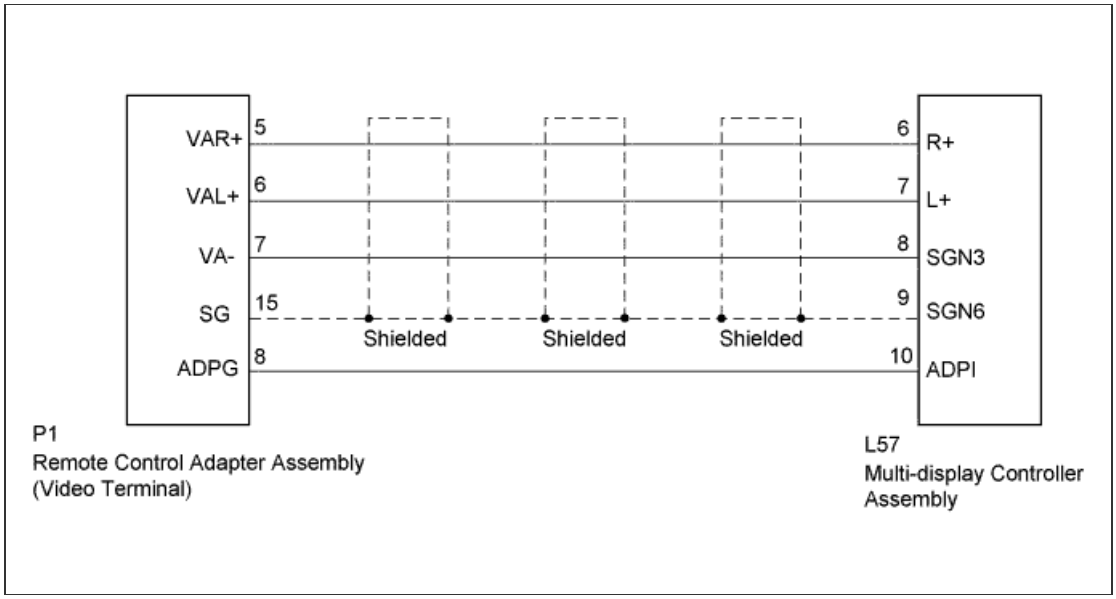
| | | |
|---|---|---|
| c60-1 (R1+) | Always | Below 1 Ω |
| L55-17 (R1-) - c60-2 (R1-) | Always | Below 1 Ω |
| L55-15 (SLD1) - c60-13 (SLD1) | Always | Below 1 Ω |
| L55-18 (L1+) - Body ground | Always | 10 kΩ or higher |
| L55-19 (L1-) - Body ground | Always | 10 kΩ or higher |
| L55-16 (R1+) - Body ground | Always | 10 kΩ or higher |
| L55-17 (R1-) - Body ground | Always | 10 kΩ or higher |
| L55-15 (SLD1) - Body ground | Always | 10 kΩ or higher |

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L55-23 (L2+) - c61-3 (L2+) | Always | Below 1 Ω |
| L55-24 (L2-) - c61-4 (L2-) | Always | Below 1 Ω |
| L55-21 (R2+) - c61-1 (R2+) | Always | Below 1 Ω |
| L55-22 (R2-) - c61-2 (R2-) | Always | Below 1 Ω |
| L55-20 (SLD2) - c61-13 (SLD2) | Always | Below 1 Ω |
| L55-23 (L2+) - Body ground | Always | 10 kΩ or higher |
| L55-24 (L2-) - Body ground | Always | 10 kΩ or higher |
| L55-21 (R2+) - Body ground | Always | 10 kΩ or higher |
| L55-22 (R2-) - Body ground | Always | 10 kΩ or higher |
| L55-20 (SLD2) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

## DESCRIPTION

This is the sound signal circuit between the video terminal and multi-display controller sub-assembly.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY - VIDEO TERMINAL)

a. Disconnect the L57 multi-display controller sub-assembly connector.

b. Disconnect the P1 remote control adapter assembly (video terminal) connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L57-6 (R+) - P1-5 (VAR+) | Always | Below 1 Ω |
| L57-7 (L+) - P1-6 (VAL+) | Always | Below 1 Ω |
| L57-8 (SGN3) - P1-7 (VA-) | Always | Below 1 Ω |
| L57-9 (SGN6) - P1-15 (SG) | Always | Below 1 Ω |
| L57-10 (ADPI) - P1-8 (ADPG) | Always | Below 1 Ω |
| L57-6 (R+) - Body ground | Always | 10 kΩ or higher |
| L57-7 (L+) - Body ground | Always | 10 kΩ or higher |
| L57-8 (SGN3) - Body ground | Always | 10 kΩ or higher |
| L57-9 (SGN6) - Body ground | Always | 10 kΩ or higher |

### 2.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY - TELEVISION DISPLAY ASSEMBLY RH AND LH)

a. Disconnect the L57 multi-display controller sub-assembly connector.

b. Disconnect the c60 television display assembly RH connector.

c. Disconnect the c61 television display assembly LH connector.

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

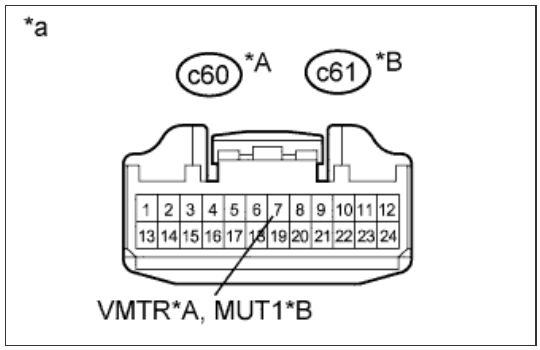
**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L57-4 (VMT1) - c60-7 (VMTR) | Always | Below 1 Ω |
| L57-4 (VMT1) - Body ground | Always | 10 kΩ or higher |

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L57-5 (VMT2) - c61-7 (MUT1) | Always | Below 1 Ω |
| L57-5 (VMT2) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR



OK

## 3.CHECK MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY

a. Disconnect the c60 television display assembly RH connector.

b. Disconnect the c61 television display assembly LH connector.

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| c60-7 (VMTR) - Body ground | Display operating → Source changed | 3.5 V or higher → Below 1 V |

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| c61-7 (MUT1) - Body ground | Display operating → Source changed | 3.5 V or higher → Below 1 V |

NG → Go to step 2

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

### 2.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY - TELEVISION DISPLAY ASSEMBLY RH AND LH)

a. Disconnect the L55 multi-display controller sub-assembly connector.

b. Disconnect the c60 television display assembly RH connector.

c. Disconnect the c61 television display assembly LH connector.

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

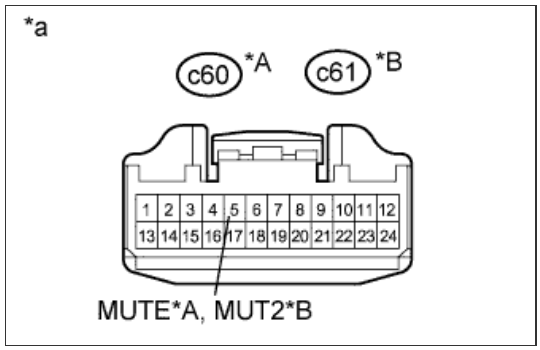
**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L55-2 (MUT1) - c60-5 (MUTE) | Always | Below 1 Ω |
| L55-2 (MUT1) - Body ground | Always | 10 kΩ or higher |

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L55-6 (MUT2) - c61-5 (MUT2) | Always | Below 1 Ω |
| L55-6 (MUT2) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR



OK

## 3.CHECK MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY

a. Disconnect the c60 television display assembly RH connector.

b. Disconnect the c61 television display assembly LH connector.

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| c60-5 (MUTE) - Body ground | RSE playing → Source changed | 3.5 V or higher → Below 1 V |

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|

## DESCRIPTION

This is the display mode signal circuit between the multi-display controller sub-assembly and television display assembly RH.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**1.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY - TELEVISION DISPLAY ASSEMBLY RH)**

a. Disconnect the L56 multi-display controller sub-assembly connector.

b. Disconnect the c60 television display assembly RH connector.

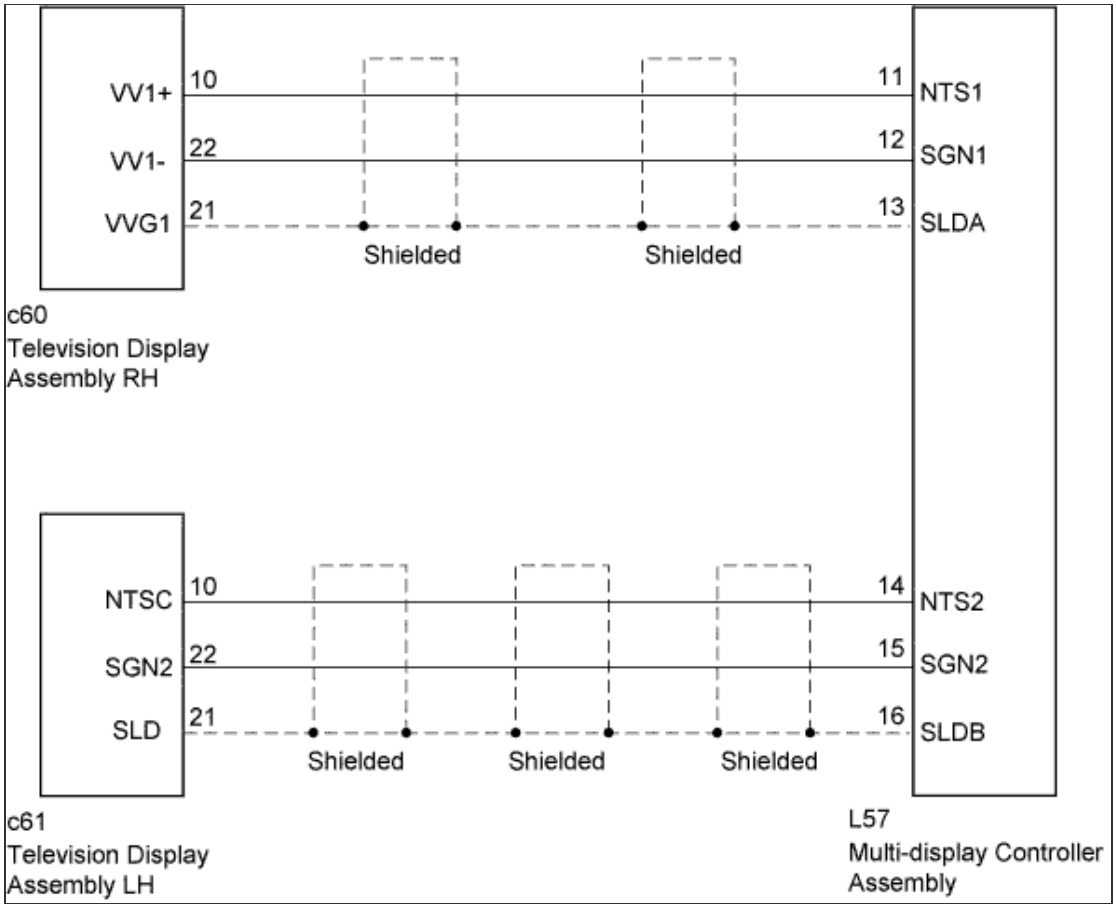
c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L56-9 (MD0) - c60-6 (MD0) | Always | Below 1 Ω |
| L56-9 (MD0) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

## DESCRIPTION

This is the display signal circuit between the multi-display controller sub-assembly and television display assembly.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY - TELEVISION DISPLAY ASSEMBLY RH AND LH)

a. Disconnect the L57 multi-display controller sub-assembly connector.

b. Disconnect the c60 television display assembly RH connector.

c. Disconnect the c61 television display assembly LH connector.

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for RH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L57-11 (NTS1) - c60-10 (VV1+) | Always | Below 1 Ω |
| L57-12 (SGN1) - c60-22 (VV1-) | Always | Below 1 Ω |
| L57-13 (SLDA) - c60-21 (VVG1) | Always | Below 1 Ω |
| L57-11 (NTS1) - Body ground | Always | 10 kΩ or higher |
| L57-12 (SGN1) - Body ground | Always | 10 kΩ or higher |

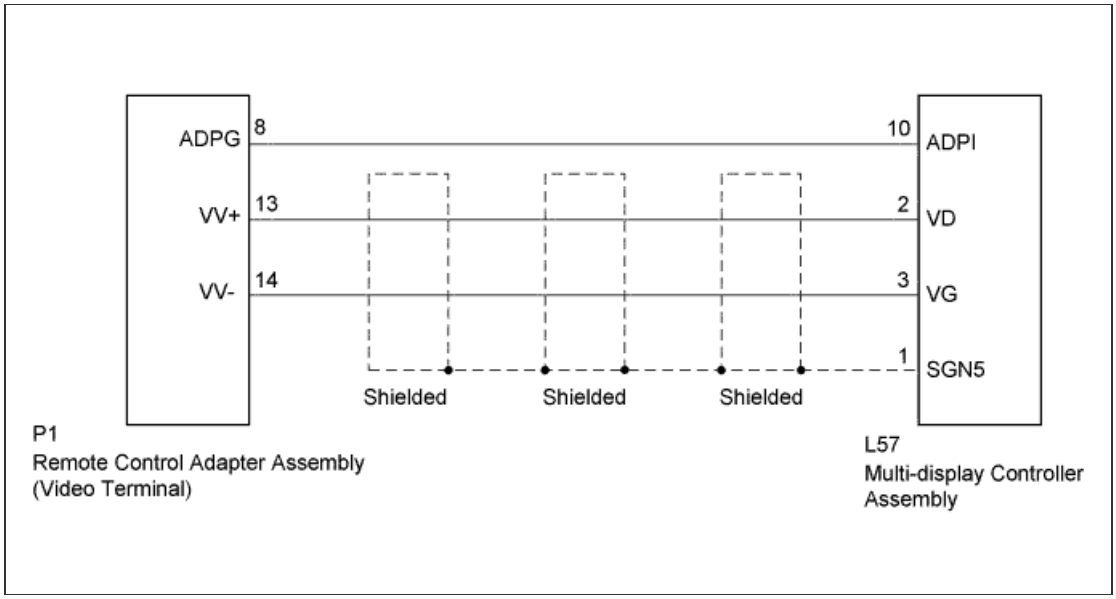
| | | |
|---|---|---|
| L57-13 (SLDA) - Body ground | Always | 10 kΩ or higher |

**for LH:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L57-14 (NTS2) - c61-10 (NTSC) | Always | Below 1 Ω |
| L57-15 (SGN2) - c61-22 (SGN2) | Always | Below 1 Ω |
| L57-16 (SLDB) - c61-21 (SLD) | Always | Below 1 Ω |
| L57-14 (NTS2) - Body ground | Always | 10 kΩ or higher |
| L57-15 (SGN2) - Body ground | Always | 10 kΩ or higher |
| L57-16 (SLDB) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

## DESCRIPTION

This is the display signal circuit between the video terminal and multi-display controller sub-assembly.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**1.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY - VIDEO TERMINAL)**

a. Disconnect the L57 multi-display controller sub-assembly connector.

b. Disconnect the P1 remote control adapter assembly (video terminal) connector.

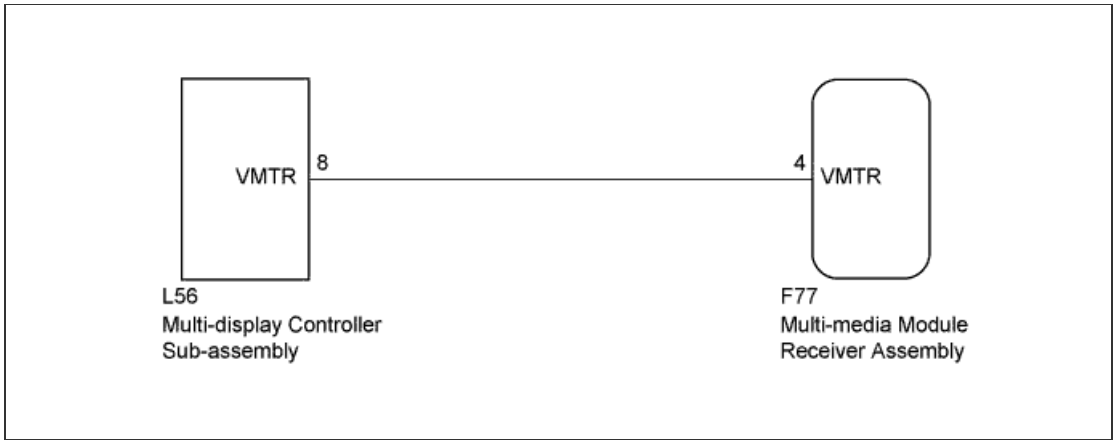
c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L57-2 (VD) - P1-13 (VV+) | Always | Below 1 Ω |
| L57-3 (VG) - P1-14 (VV-) | Always | Below 1 Ω |
| L57-10 (ADPI) - P1-8 (ADPG) | Always | Below 1 Ω |
| L57-2 (VD) - Body ground | Always | 10 kΩ or higher |
| L57-3 (VG) - Body ground | Always | 10 kΩ or higher |
| L57-10 (ADPI) - Body ground | Always | 10 kΩ or higher |
| L57-1 (SGN5) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

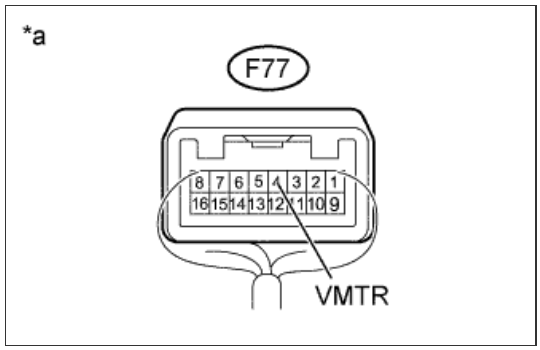
## DESCRIPTION

This is the visual mute signal circuit between the multi-media module receiver assembly and the multi-display controller sub-assembly.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK MULTI-MEDIA MODULE RECEIVER ASSEMBLY



a. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F77-4 (VMTR) - Body ground | RSE playing → Source changed | 3.5 V or higher → Below 1 V |

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected (Multi-media Module Receiver Assembly) |

NG → Go to step 2

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

### 2.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY)

a. Disconnect the F77 multi-media module receiver assembly connector.

b. Disconnect the L56 multi-display controller sub-assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

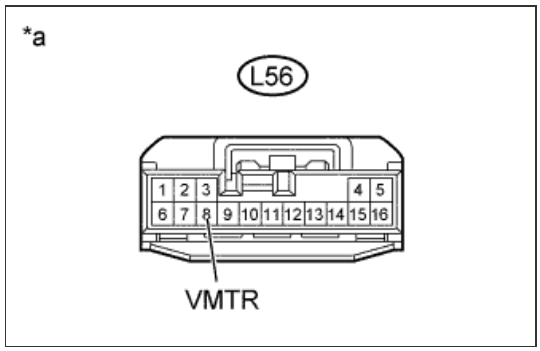
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F77-4 (VMTR) - L56-8 (VMTR) | Always | Below 1 Ω |
| F77-4 (VMTR) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

### 3.CHECK MULTI-MEDIA MODULE RECEIVER ASSEMBLY

a. Disconnect the multi-display controller sub-assembly connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L56-8 (VMTR) - Body ground | RSE playing → Source changed | 3.5 V or higher → Below 1 V |

**Text in Illustration**

| | |

## DESCRIPTION

This is the power source circuit of the multi-display controller sub-assembly.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

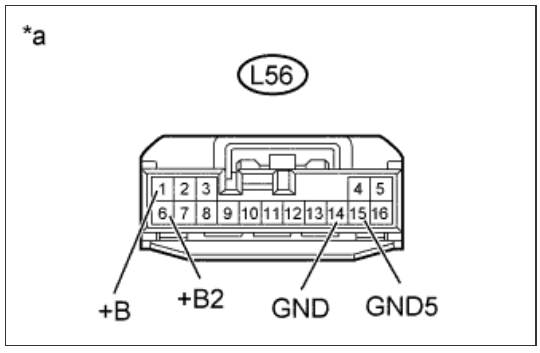
**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

### 1.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY - BATTERY AND BODY GROUND)

a. Disconnect the multi-display controller sub-assembly connector.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L56-14 (GND) - Body ground | Always | Below 1 Ω |
| L56-15 (GND5) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L56-1 (+B) - L56-14 (GND) | Always | 11 to 14 V |
| L56-6 (+B2) - L56-14 (GND) | Always | 11 to 14 V |

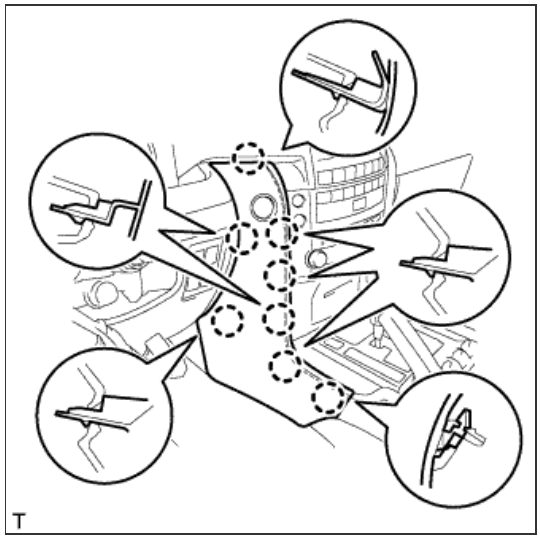
## 1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.

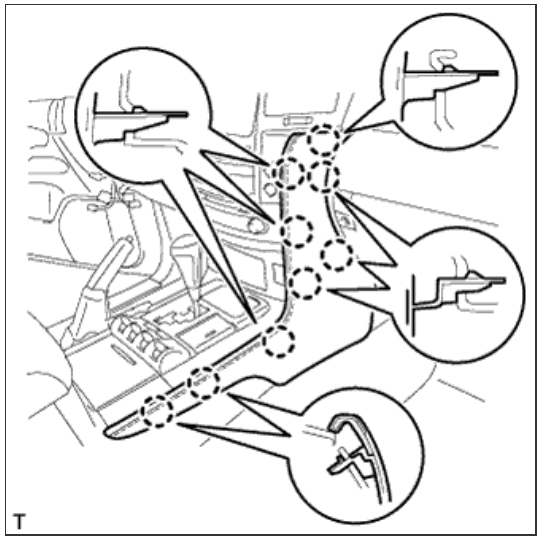
## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL



**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

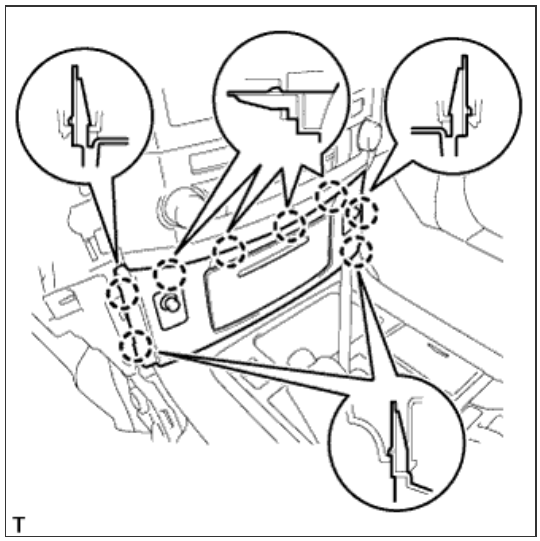
## 3. REMOVE LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH



a. Detach the 8 claws.

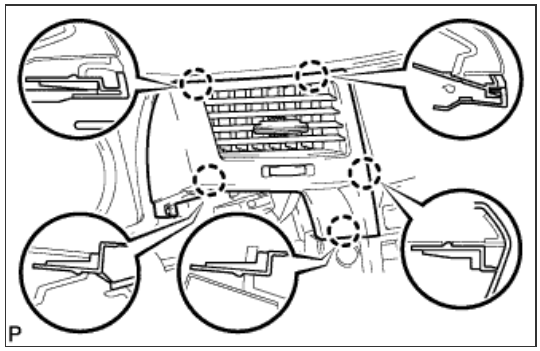
b. Disconnect the connector and remove the panel pad.

## 4. REMOVE LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY RH



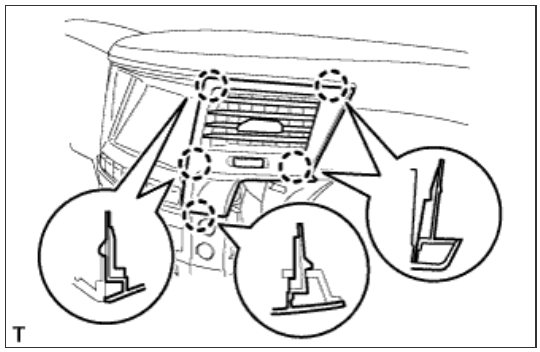
a. Detach the 9 claws and remove the panel pad.

## 5. REMOVE LOWER CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY



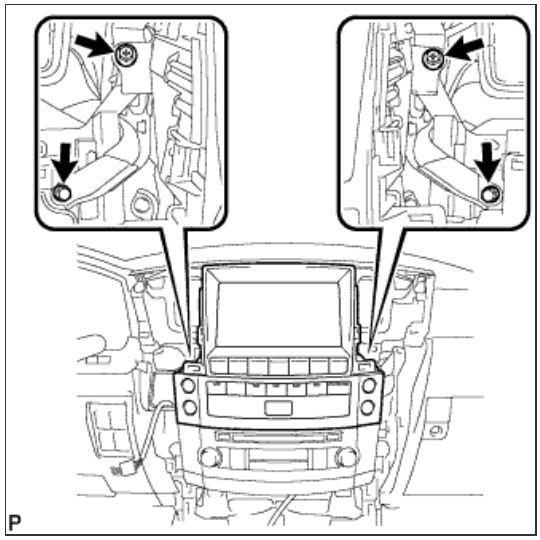
a. Detach the 8 claws.

b. Disconnect the connectors and remove the panel.



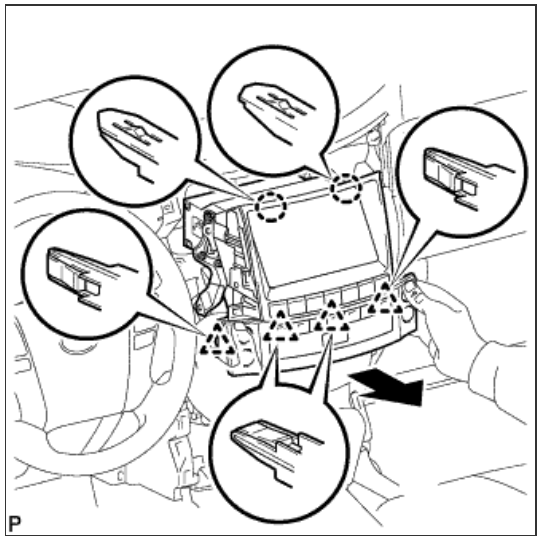
## 6. REMOVE NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY

a. Detach the 5 claws and remove the register.



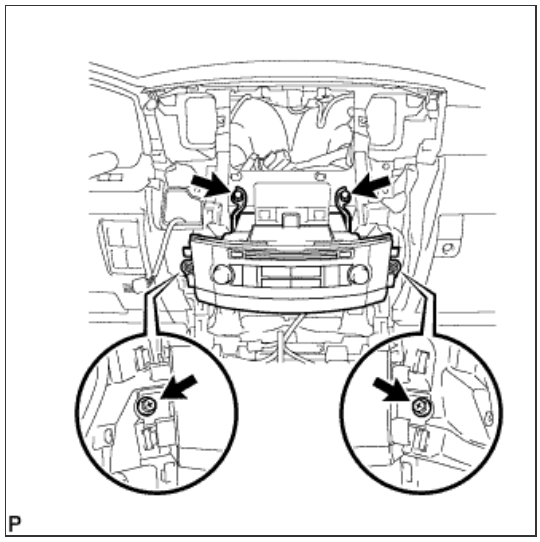
## 7. REMOVE NO. 4 INSTRUMENT PANEL REGISTER ASSEMBLY

a. Detach the 5 claws and remove the register.



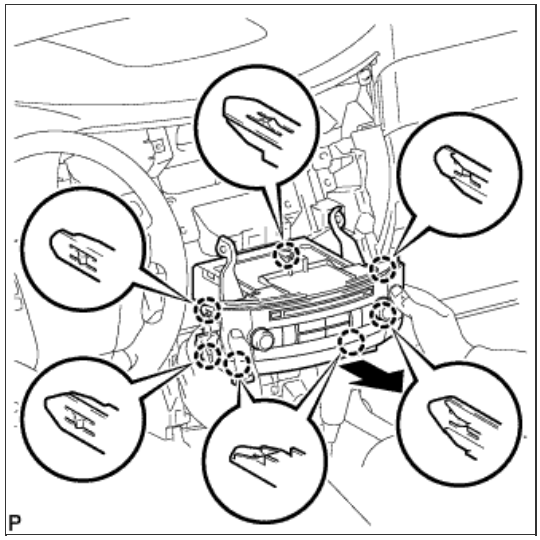
## 8. REMOVE MULTI-DISPLAY ASSEMBLY WITH BRACKET (w/o Navigation System)

a. Remove the 2 screws and 2 bolts.



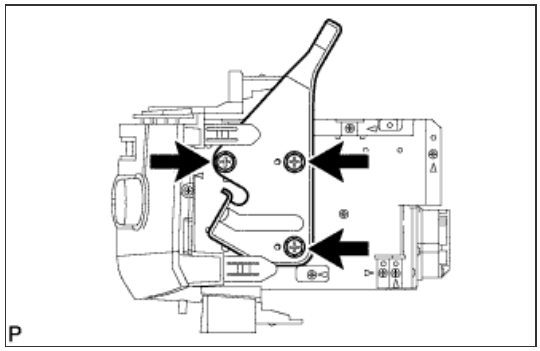
b. Pull the display to detach the 2 claws and 4 clips on the backside of the display.

c. Disconnect the connectors and remove the display.



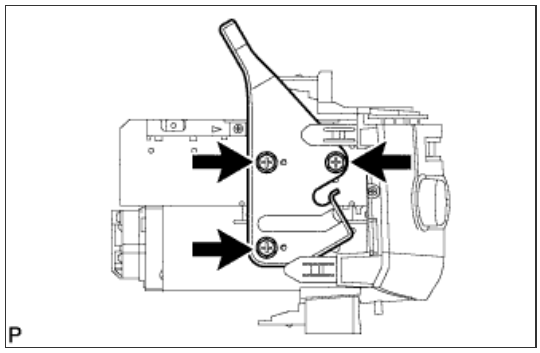
## 9. REMOVE RADIO RECEIVER ASSEMBLY WITH BRACKET

a. Remove the 2 screws and 2 bolts.



b. Pull the radio receiver to detach the 7 claws on the backside of the radio receiver.

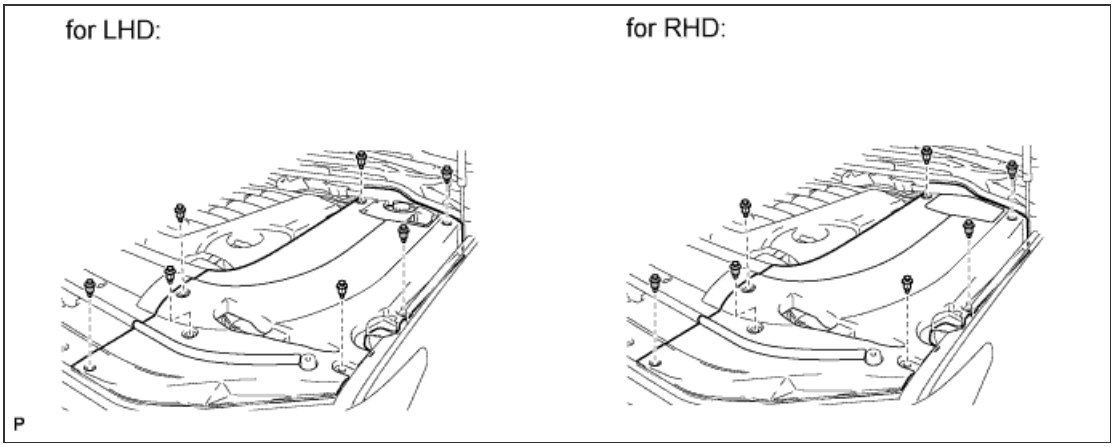
c. Disconnect the connectors and remove the radio receiver.



## 10. REMOVE NO. 1 RADIO BRACKET

a. Remove the 3 bolts and bracket.

## 11. REMOVE NO. 2 RADIO BRACKET



a. Remove the 3 bolts and bracket.

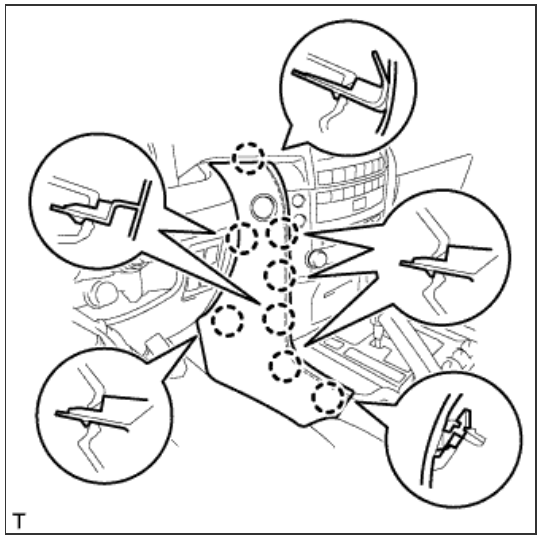
P

**for Preparation** Click here

## 1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover LH.

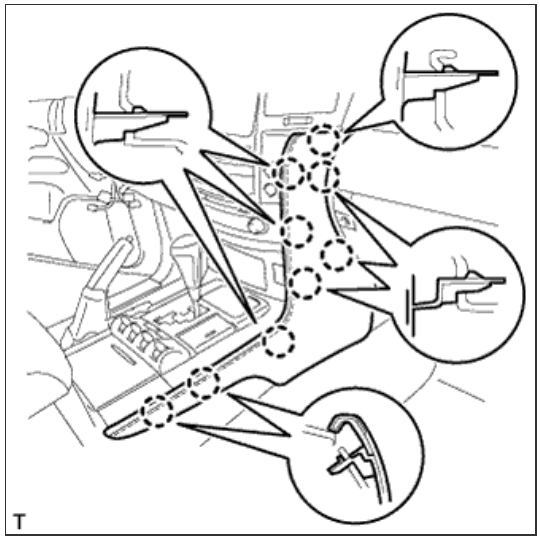
## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL



**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

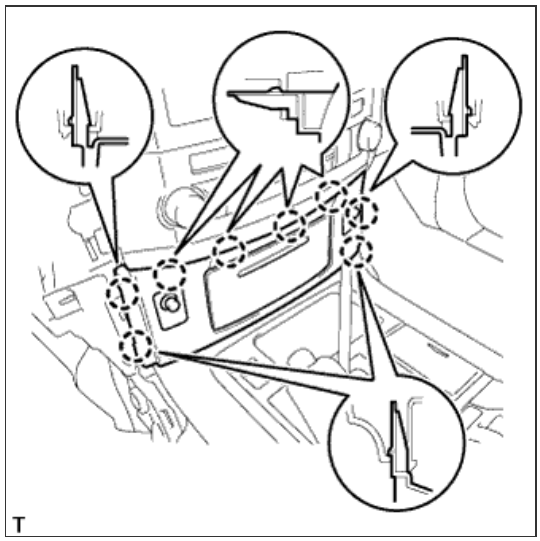
## 3. REMOVE LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH



a. Detach the 8 claws.

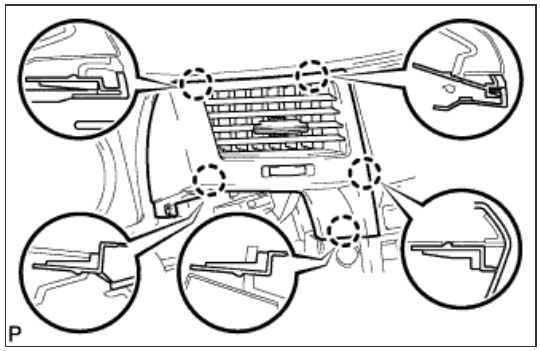
b. Disconnect the connector and remove the panel pad.

## 4. REMOVE LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY RH



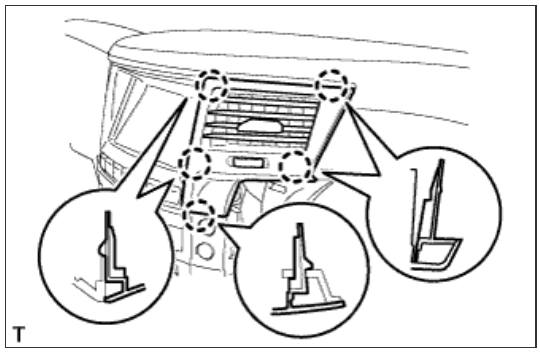
a. Detach the 9 claws and remove the panel pad.

## 5. REMOVE LOWER CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY



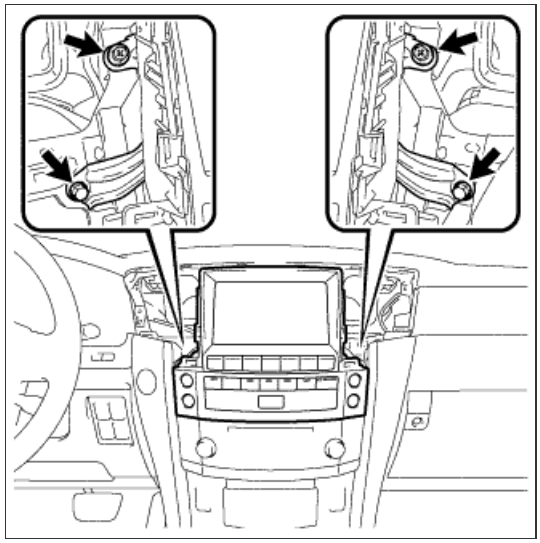
a. Detach the 8 claws.

b. Disconnect the connectors and remove the panel.



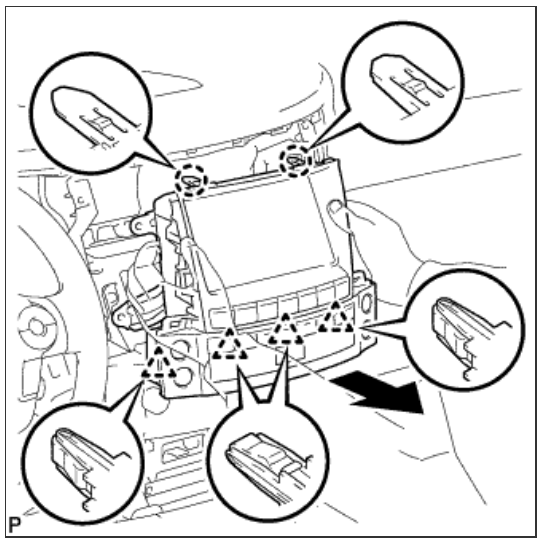
## 6. REMOVE NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY

a. Detach the 5 claws and remove the register.



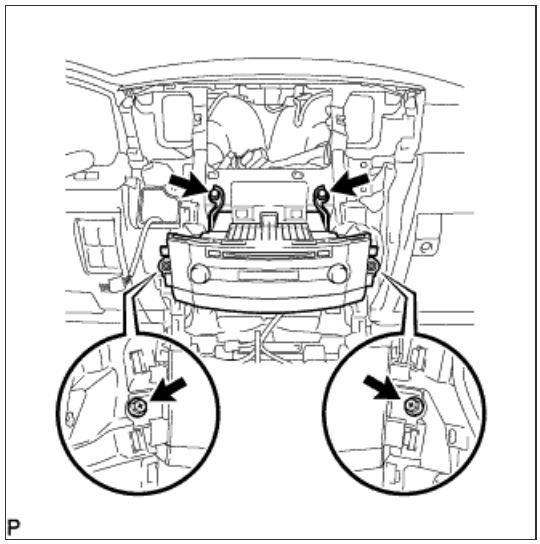
## 7. REMOVE NO. 4 INSTRUMENT PANEL REGISTER ASSEMBLY

a. Detach the 5 claws and remove the register.



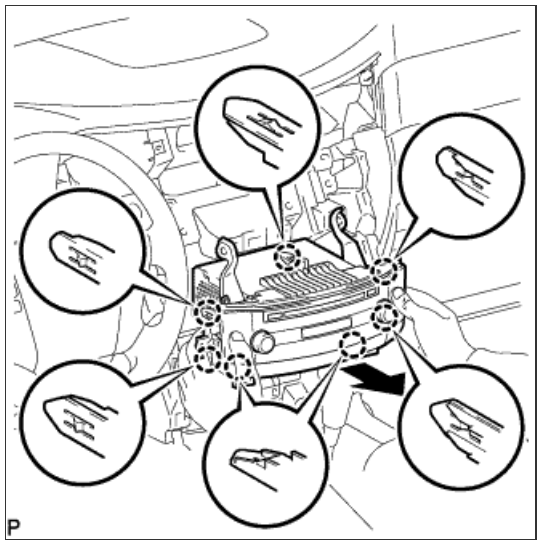
## 8. REMOVE MULTI-DISPLAY ASSEMBLY WITH BRACKET

a. Remove the 2 screws and 2 bolts.



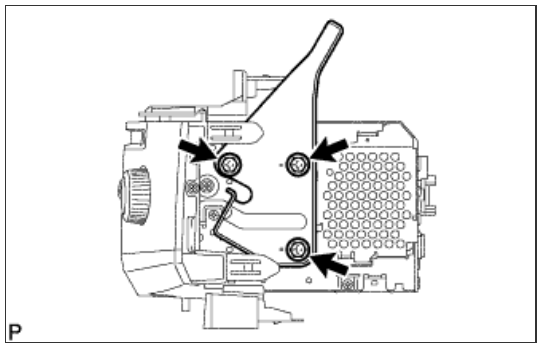
b. Pull the multi-display assembly with bracket to detach the 2 claws and 4 clips on the backside of the multi-display assembly.

c. Disconnect the connectors and remove the multi-display assembly.



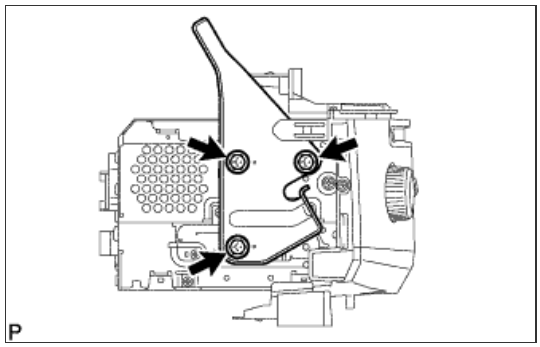
## 9. REMOVE MULTI-MEDIA MODULE RECEIVER ASSEMBLY WITH BRACKET

a. Remove the 2 screws and 2 bolts.



b. Pull the multi-media module receiver assembly to detach the 7 claws on the backside of the multi-media module receiver assembly with bracket.

c. Disconnect the connectors and remove the multi-media module receiver assembly.

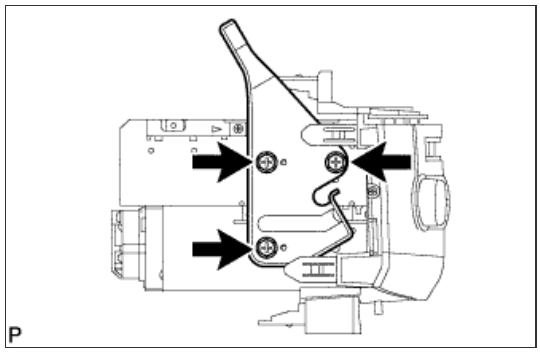


**10. REMOVE NO. 1 RADIO BRACKET**

a. Remove the 3 bolts and No. 1 radio bracket.

**11. REMOVE NO. 2 RADIO BRACKET**

a. Remove the 3 bolts and No. 2 radio bracket.

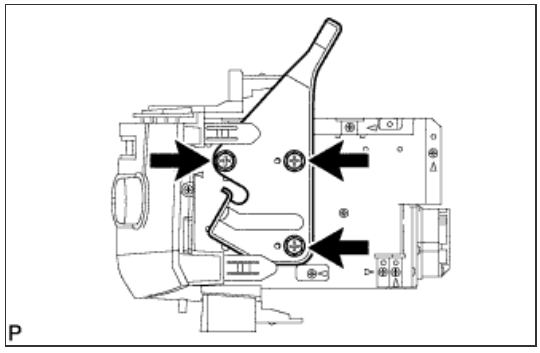


P

**for Preparation** Click here

## 1. INSTALL NO. 2 RADIO BRACKET

a. Install the bracket with the 3 bolts.

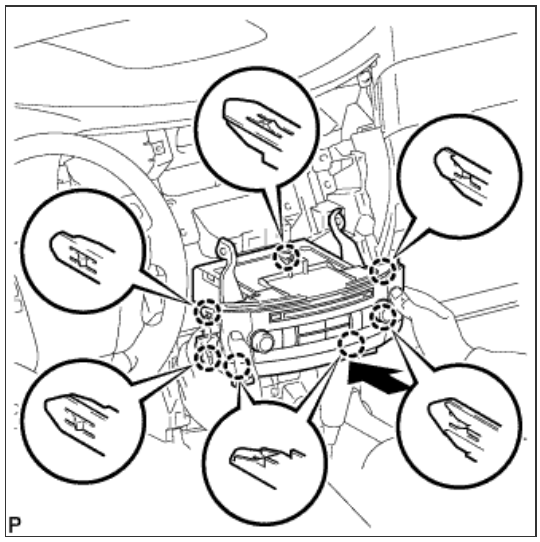


**Torque:**
**3.0 N*m{ 30 kgf*cm , 26 in.*lbf }**

## 2. INSTALL NO. 1 RADIO BRACKET

a. Install the bracket with the 3 bolts.

**Torque:**
**3.0 N*m{ 30 kgf*cm , 26 in.*lbf }**

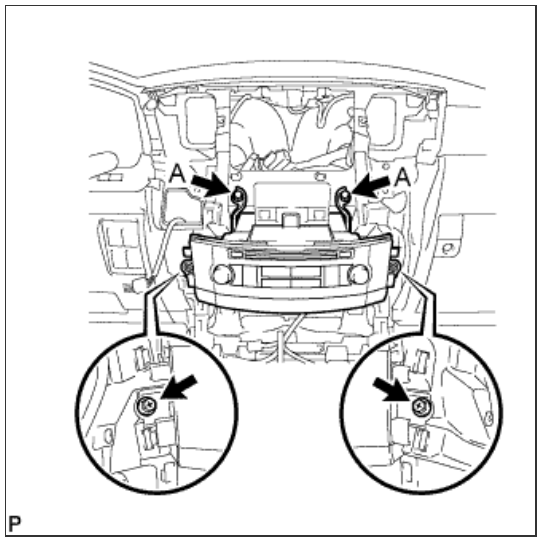


## 3. INSTALL RADIO RECEIVER ASSEMBLY WITH BRACKET

a. Connect the connectors.

b. Insert the radio receiver to attach the 7 claws on its backside.

**NOTICE:**

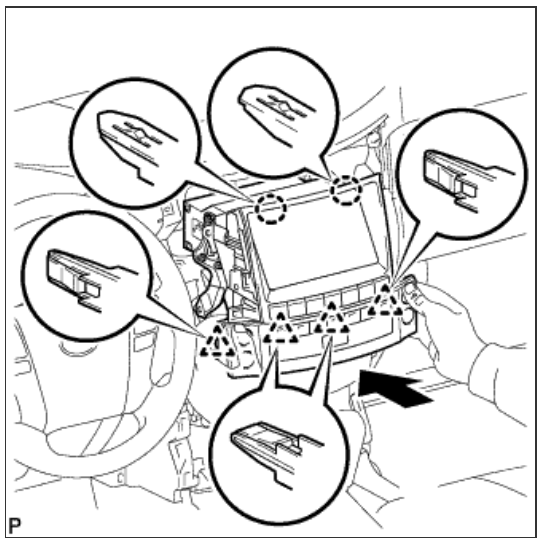


When inserting the radio receiver, do not press the knobs on it.

c. Install the radio receiver with the 2 screws and 2 bolts.

c. Install the radio receiver with the 2 screws and 2 bolts.

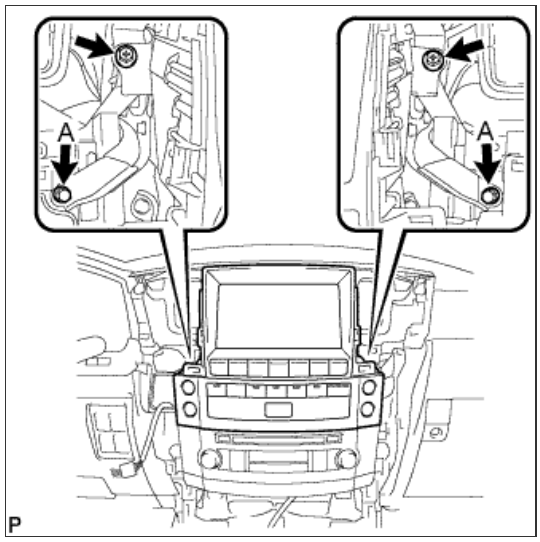
**Torque:**
**for bolts labeled A:**
**12 N*m{ 122 kgf*cm , 8 ft.*lbf }**



## 4. INSTALL MULTI-DISPLAY ASSEMBLY WITH BRACKET (w/o Navigation System)

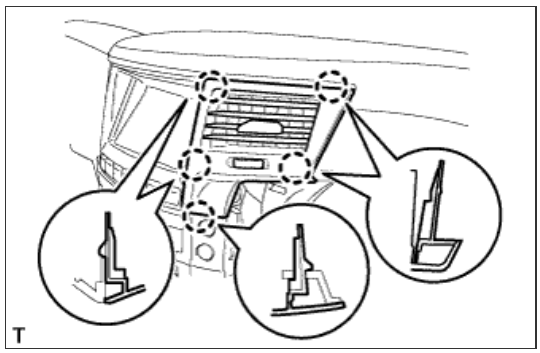
a. Connect the connectors.

b. Insert the display to attach the 2 claws and 4 clips on its backside.



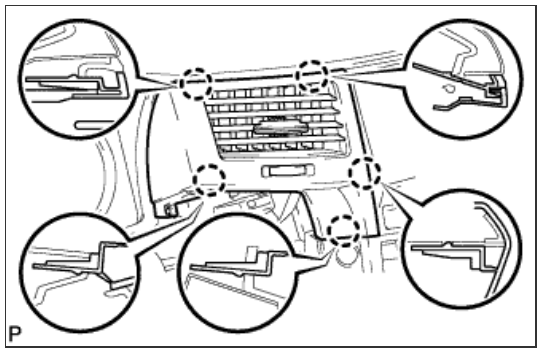
**NOTICE:**

When inserting the display, do not press the knobs on it.



c. Install the display with the 2 screws and 2 bolts.

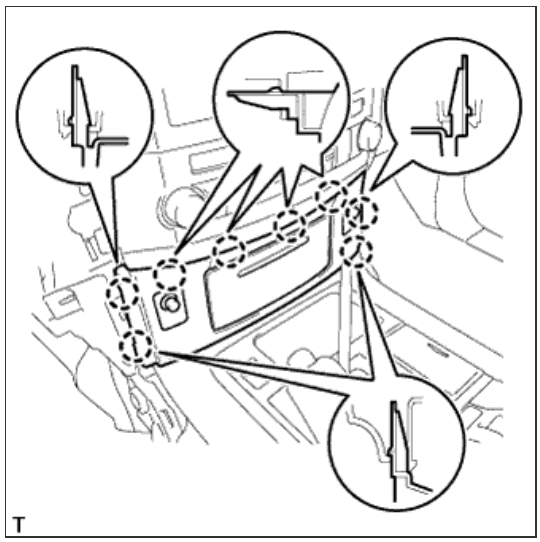
**Torque:**
**for bolts labeled A:**
**12 N*m{ 122 kgf*cm , 8 ft.*lbf }**



## 5. INSTALL NO. 4 INSTRUMENT PANEL REGISTER ASSEMBLY

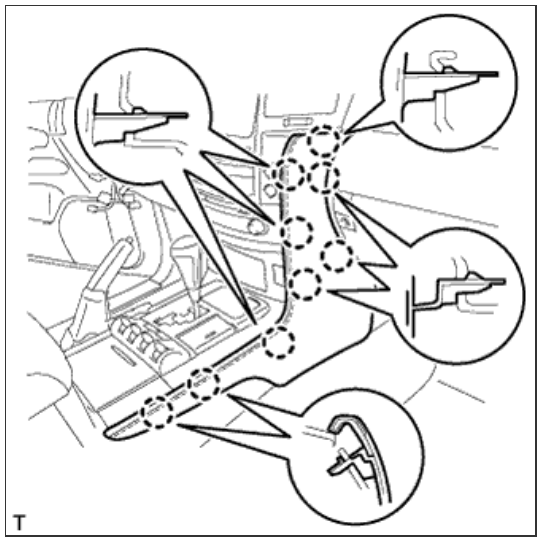
a. Attach the 5 claws to install the register.

## 6. INSTALL NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY



a. Attach the 5 claws to install the register.

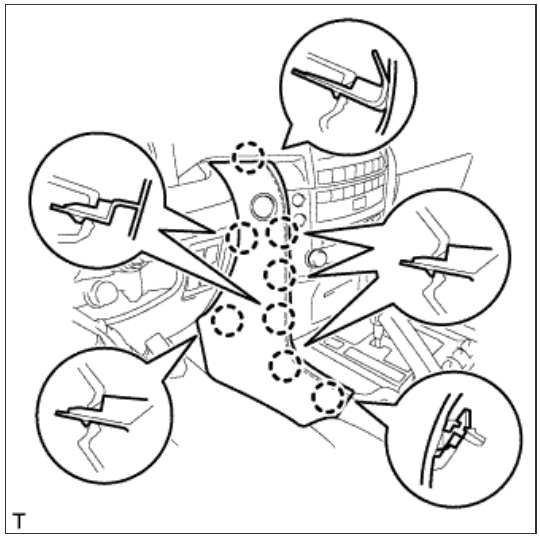
## 7. INSTALL LOWER CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY



a. Connect the connectors.

b. Attach the 8 claws to install the panel.

## 8. INSTALL LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY RH



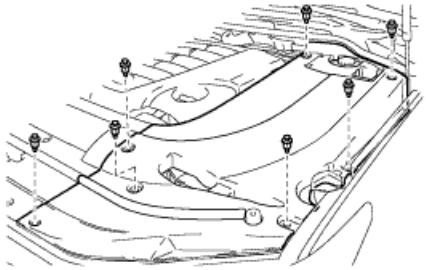
a. Attach the 9 claws to install the panel pad.

## 9. INSTALL LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

a. Connect the connector.

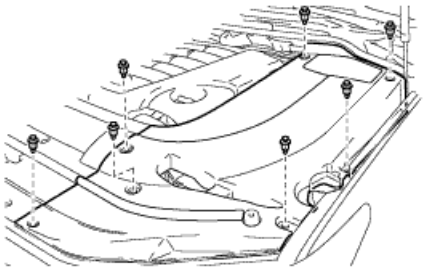
b. Attach the 8 claws to install the panel pad.

## 10. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).



## 11. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.

for LHD:

for RHD:

P

## 1. INSTALL NO. 2 RADIO BRACKET

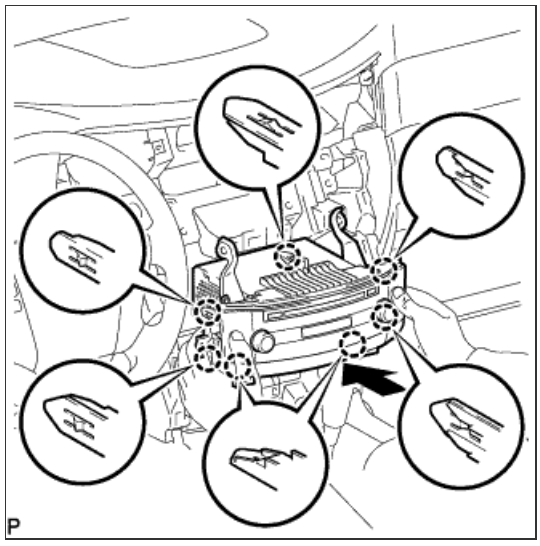
a. Install the No. 2 radio bracket with the 3 bolts.

**Torque:**
**3.0 N*m{ 30 kgf*cm , 26 in.*lbf }**

## 2. INSTALL NO. 1 RADIO BRACKET

a. Install the No. 1 radio bracket with the 3 bolts.

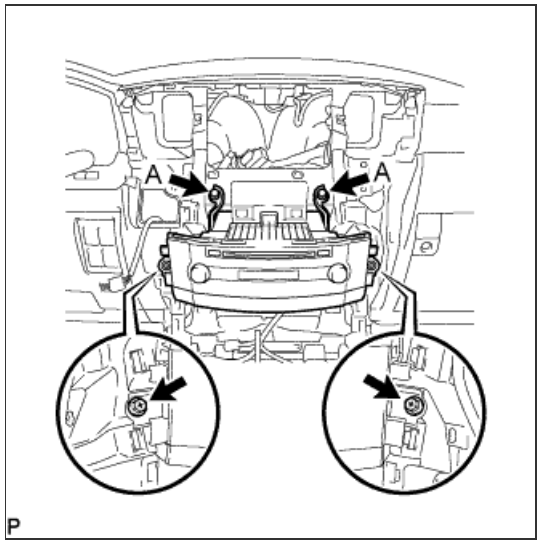
**Torque:**
**3.0 N*m{ 30 kgf*cm , 26 in.*lbf }**



## 3. INSTALL MULTI-MEDIA MODULE RECEIVER ASSEMBLY WITH BRACKET

a. Connect the connectors.

b. Insert the multi-media module receiver assembly with bracket to attach the 7 claws on its backside.

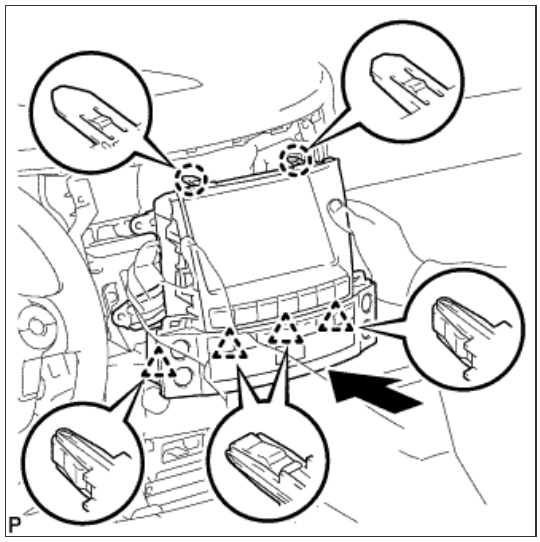


**NOTICE:**

When inserting the multi-media module receiver assembly, do not press the knobs on it.

c. Install the multi-media module receiver assembly with the 2 screws and 2 bolts.

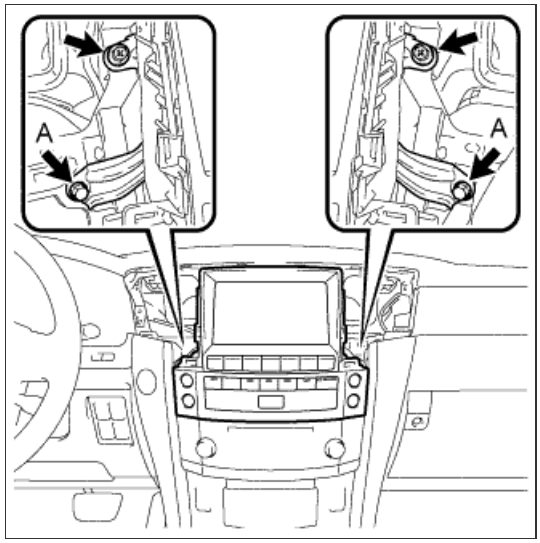
**Torque:**
**for bolts labeled A:**
**12 N*m{ 122 kgf*cm , 8 ft.*lbf }**



## 4. INSTALL MULTI-DISPLAY ASSEMBLY WITH BRACKET

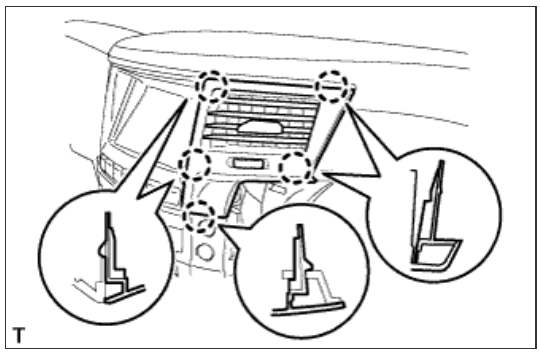
a. Connect the connectors.

b. Insert the multi-display assembly with bracket to attach the 2 claws and 4 clips on its backside.



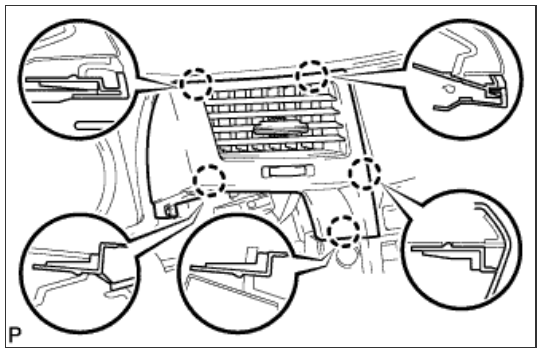
**NOTICE:**

When inserting the multi-display assembly, do not press the knobs on it.



c. Install the multi-display assembly with the 2 screws and 2 bolts.

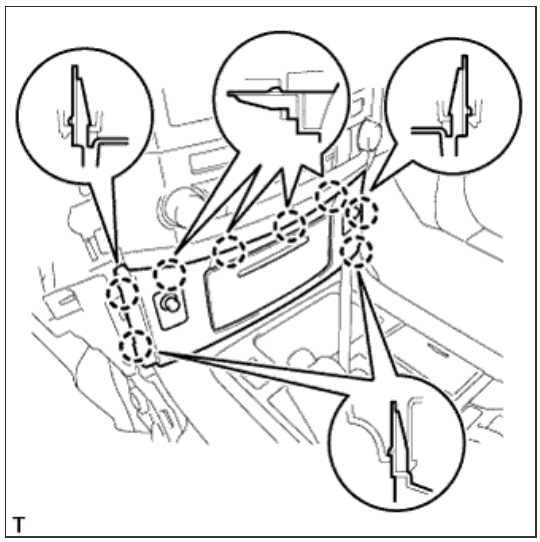
**Torque:**
**for bolts labeled A:**
**12 N*m{ 122 kgf*cm , 8 ft.*lbf }**



## 5. INSTALL NO. 4 INSTRUMENT PANEL REGISTER ASSEMBLY

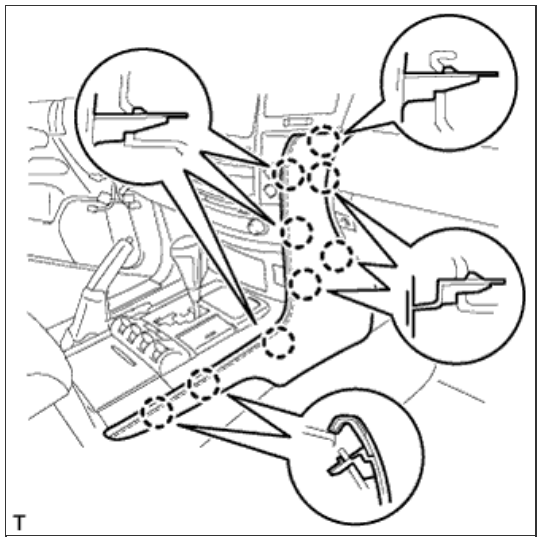
a. Attach the 5 claws to install the register.

## 6. INSTALL NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY



a. Attach the 5 claws to install the register.

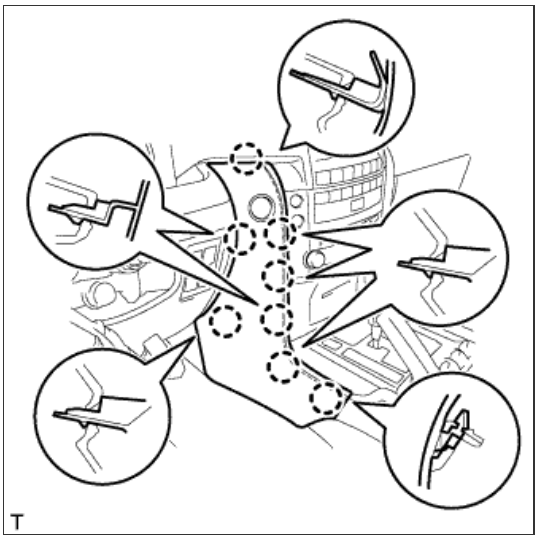
## 7. INSTALL LOWER CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY



a. Connect the connectors.

b. Attach the 8 claws to install the panel.

## 8. INSTALL LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY RH



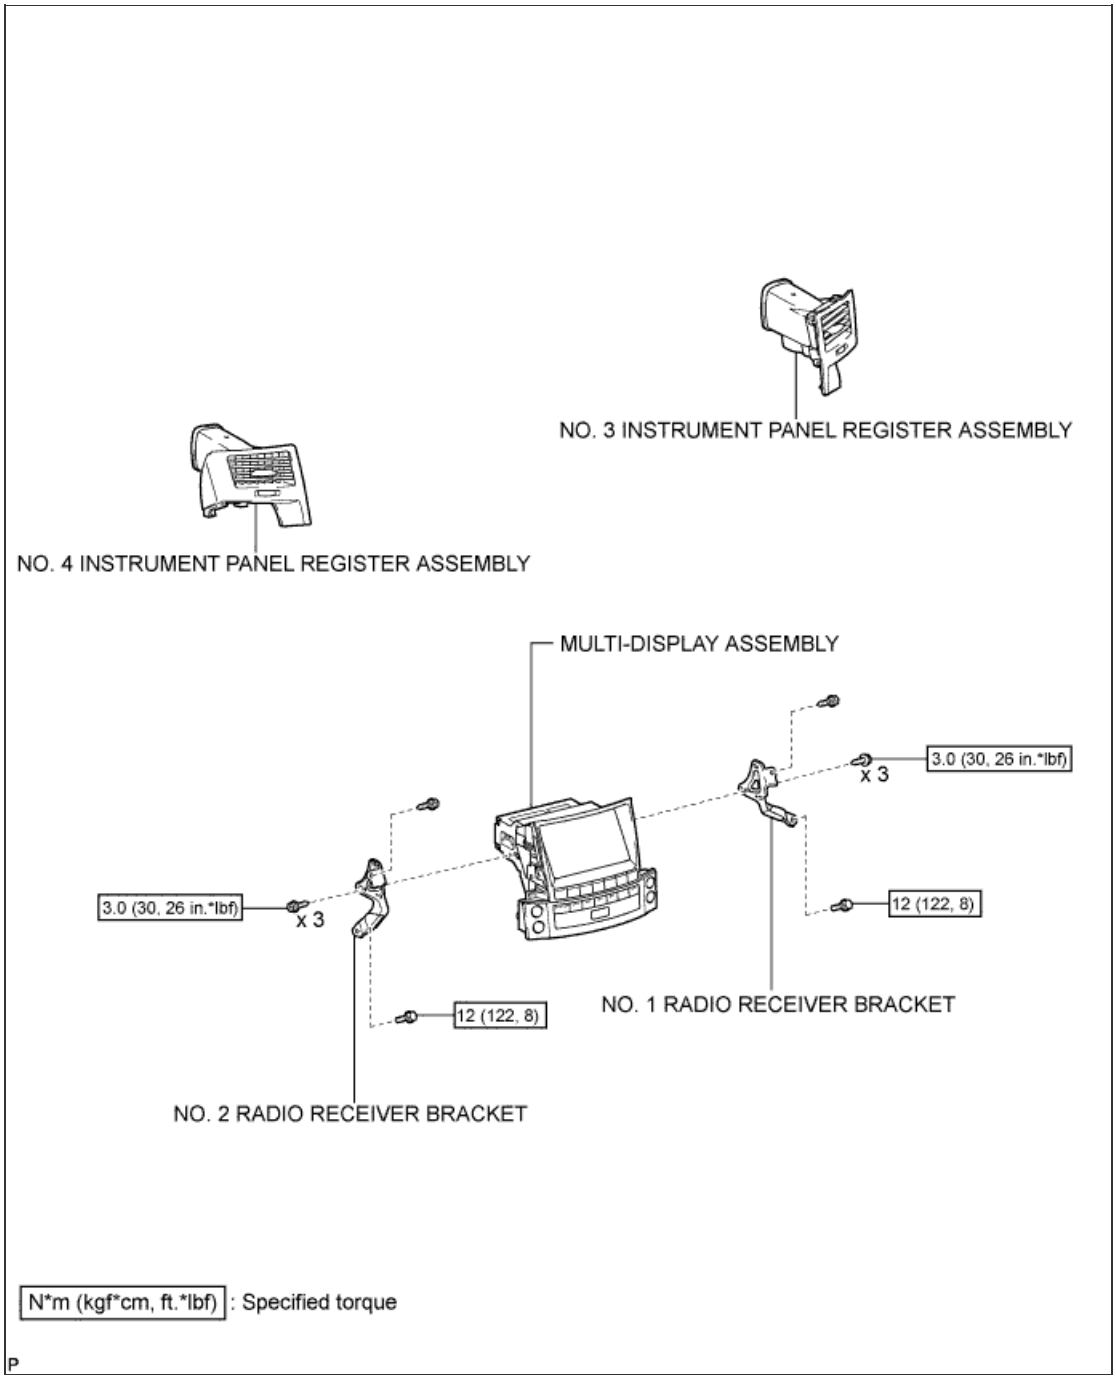
a. Attach the 9 claws to install the panel pad.

## 9. INSTALL LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

a. Connect the connector.

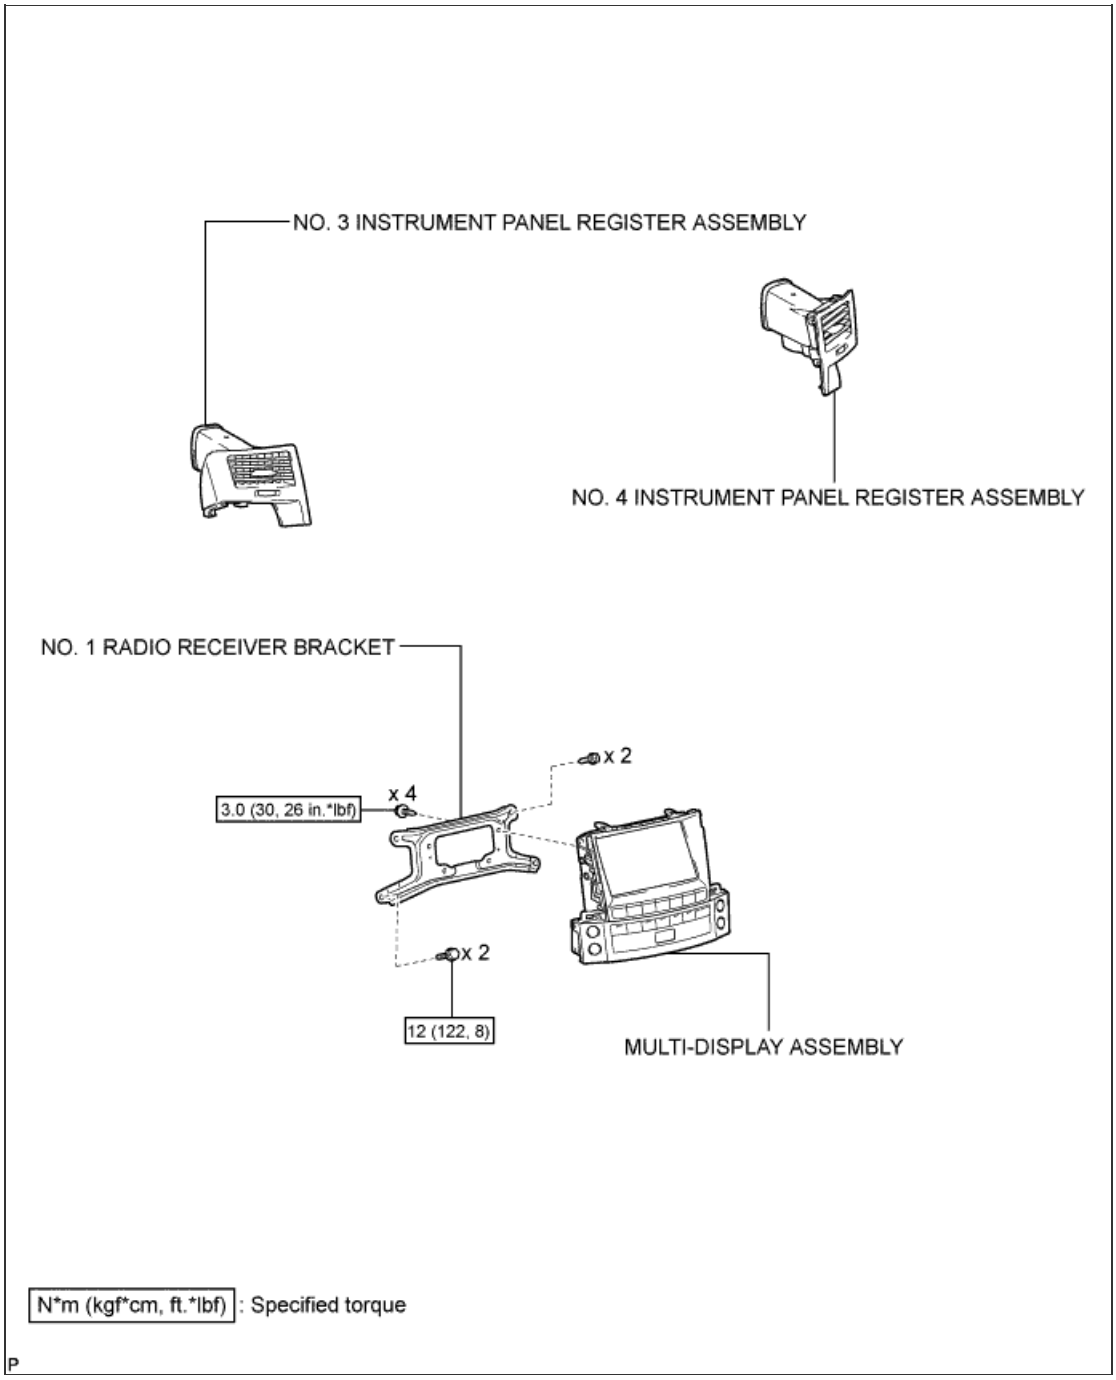
b. Attach the 8 claws to install the panel pad.

### 10. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).



### 11. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover LH with the 7 clips.

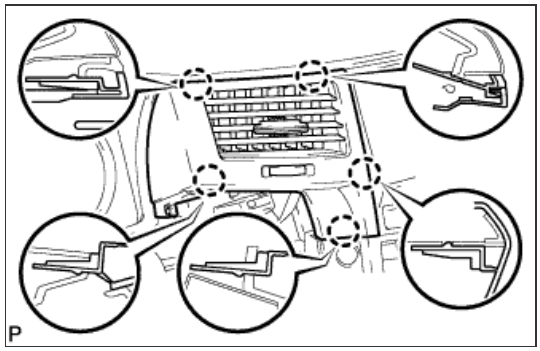
## 1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.



## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

**CAUTION:**

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

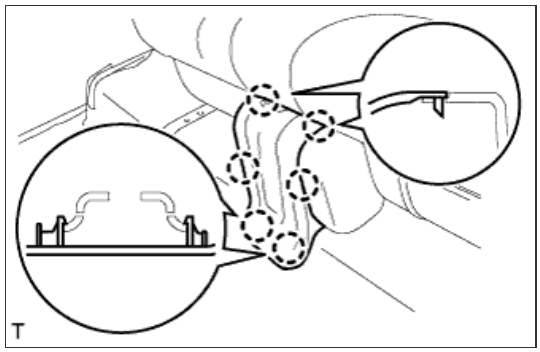
**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

## 3. REMOVE FRONT SEAT ASSEMBLY LH

a. Remove the front seat assembly LH ( Click here).

## 4. REMOVE FRONT SEAT ASSEMBLY RH



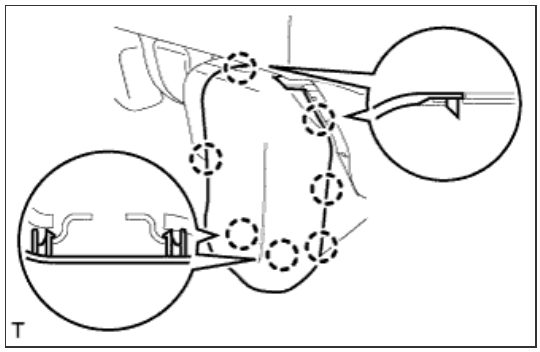
a. Remove the front seat assembly RH ( Click here).

## 5. REMOVE REAR NO. 3 SEAT CUSHION HINGE COVER

a. Using a screwdriver, detach the 6 claws and remove the cover.

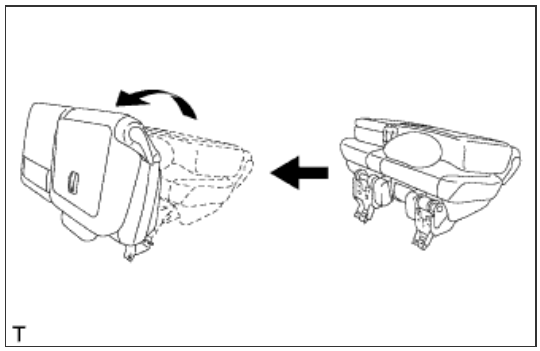
**HINT:**

Tape the screwdriver tip before use.



## 6. REMOVE REAR NO. 5 SEAT CUSHION HINGE COVER

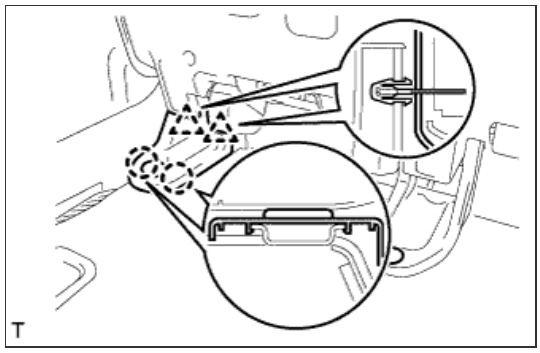
a. Using a screwdriver, detach the 7 claws and remove the cover.



**HINT:**

Tape the screwdriver tip before use.

## 7. REMOVE REAR NO. 2 SEAT CUSHION HINGE COVER

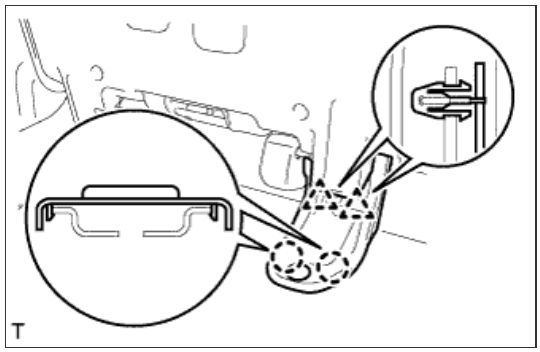


a. Operate the reclining adjuster release handle to move the seat into the position shown in the illustration.

b. Using a screwdriver, detach the 2 claws and 2 clips, and remove the cover.

**HINT:**

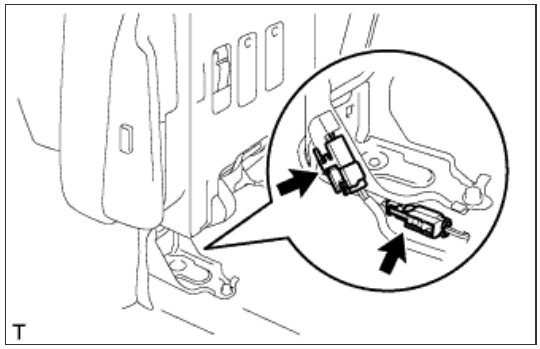
Tape the screwdriver tip before use.



## 8. REMOVE REAR NO. 4 SEAT CUSHION HINGE COVER

a. Using a screwdriver, detach the 2 claws and 2 clips, and remove the cover.

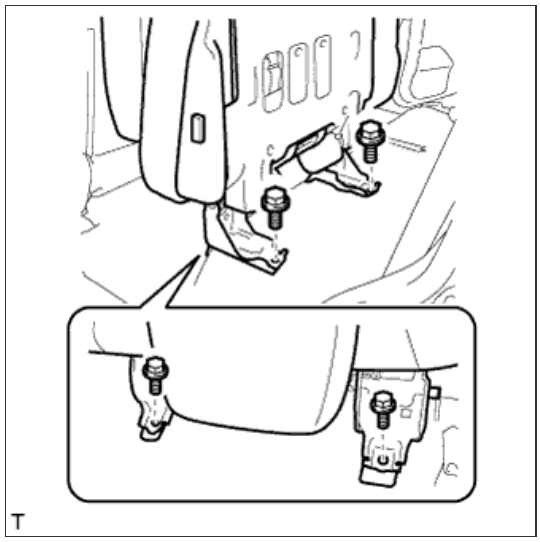
**HINT:**



Tape the screwdriver tip before use.

## 9. REMOVE REAR NO. 1 SEAT ASSEMBLY LH

a. Disconnect the connector.

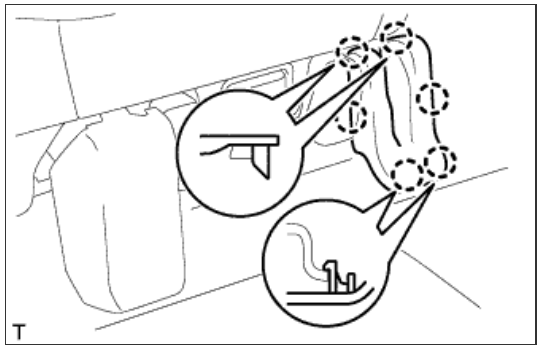


b. w/ Seat Heater System:
Disconnect the connector.

c. Remove the 4 bolts and seat assembly.

**NOTICE:**

Be careful not to damage the vehicle body.

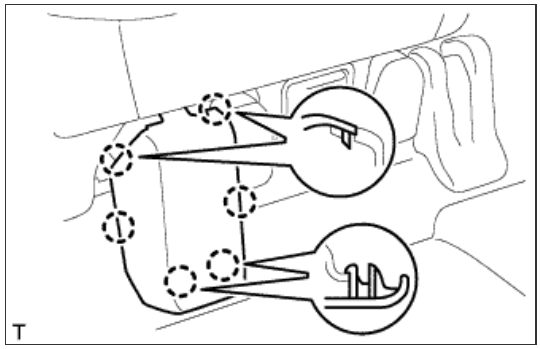


## 10. REMOVE REAR NO. 2 SEAT CUSHION HINGE COVER

a. Using a screwdriver, detach the 6 claws and remove the cover.

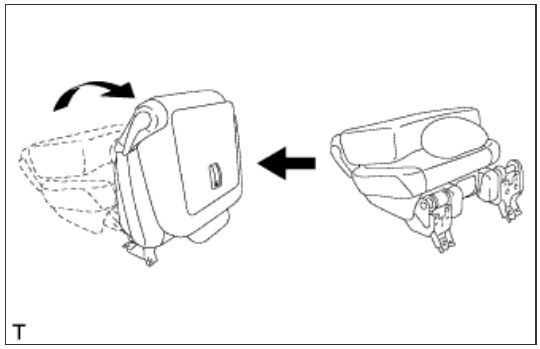
**HINT:**

Tape the screwdriver tip before use.



## 11. REMOVE REAR NO. 4 SEAT CUSHION HINGE COVER

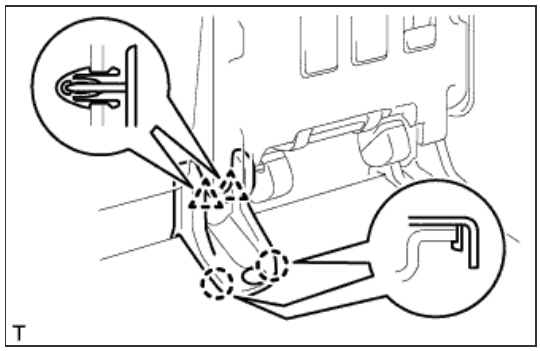
a. Using a screwdriver, detach the 6 claws and remove the cover.



**HINT:**

Tape the screwdriver tip before use.

## 12. REMOVE REAR NO. 1 SEAT CUSHION HINGE COVER

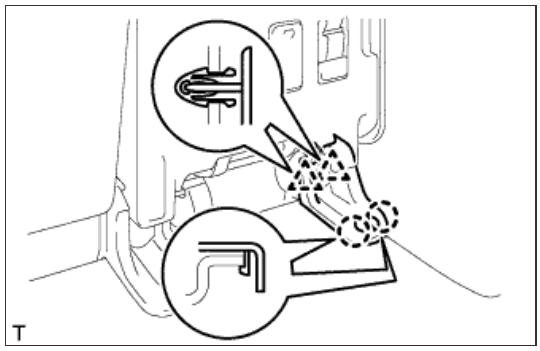


a. Operate the reclining adjuster release handle to move the seat into the position shown in the illustration.

b. Using a screwdriver, detach the 2 claws and 2 clips, and remove the cover.

**HINT:**

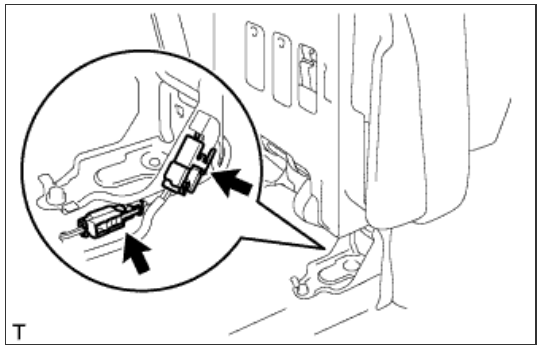
Tape the screwdriver tip before use.



## 13. REMOVE REAR NO. 3 SEAT CUSHION HINGE COVER

a. Using a screwdriver, detach the 2 claws and 2 clips, and remove the cover.

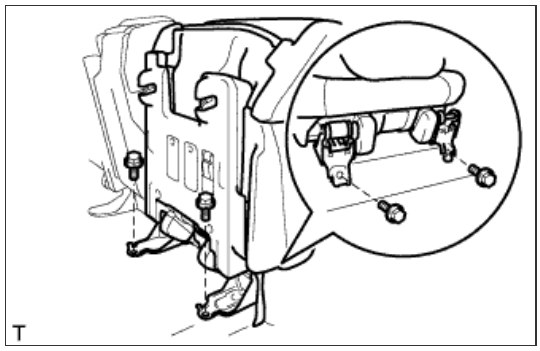
**HINT:**



Tape the screwdriver tip before use.

## 14. REMOVE REAR NO. 1 SEAT ASSEMBLY RH

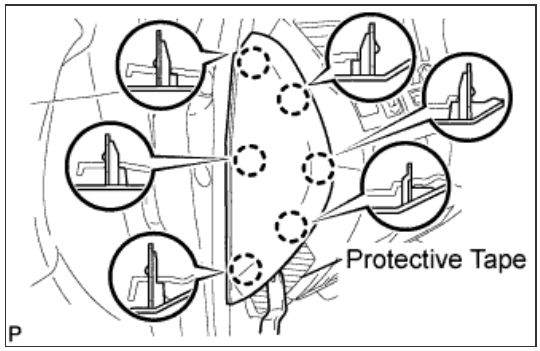
a. Disconnect the connector.



b. w/ Seat Heater System:
Disconnect the connector.

c. Remove the 4 bolts and seat assembly.

**NOTICE:**



Be careful not to damage the vehicle body.

## 15. REMOVE INSTRUMENT SIDE PANEL LH

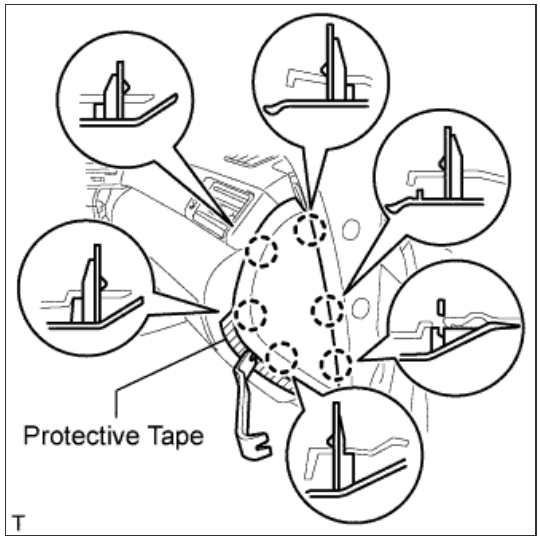
a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 6 claws and remove the side panel.

## 16. REMOVE INSTRUMENT SIDE PANEL RH

a. w/o Airbag Cut Off Switch:

i. Place protective tape as shown in the illustration.

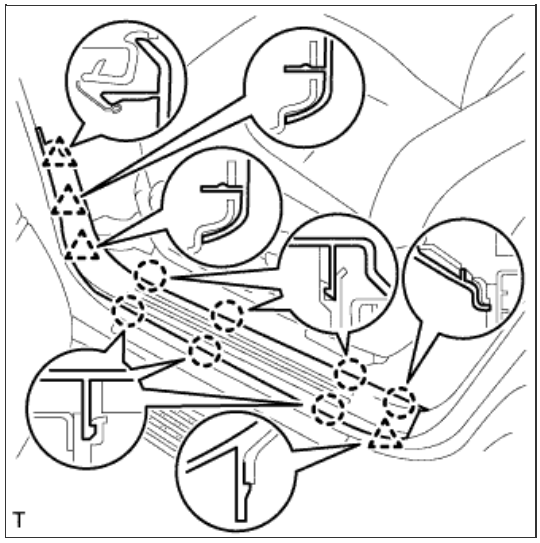


ii. Using a moulding remover, detach the 6 claws and remove the side panel.

b. w/ Airbag Cut Off Switch:

i. Place protective tape as shown in the illustration.

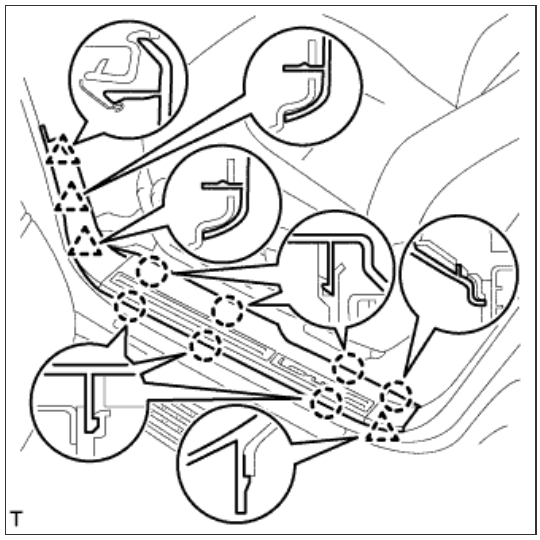
ii. Using a moulding remover, detach the 6 claws.



iii. Remove the side panel and disconnect the connector.

## 17. REMOVE FRONT DOOR SCUFF PLATE LH

a. w/o Illumination:



i. Detach the 7 claws and 4 clips, and remove the scuff plate.

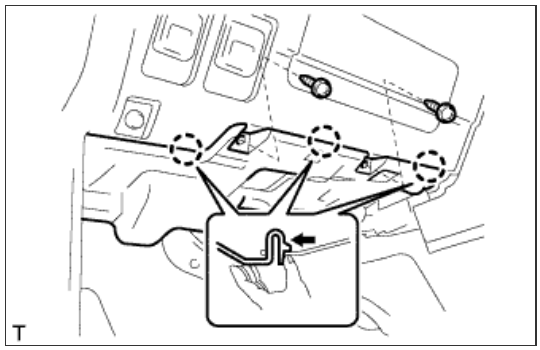
b. w/ Illumination:

i. Detach the 7 claws and 4 clips.

ii. Disconnect the connector and remove the scuff plate.

## 18. REMOVE FRONT DOOR SCUFF PLATE RH

**HINT:**

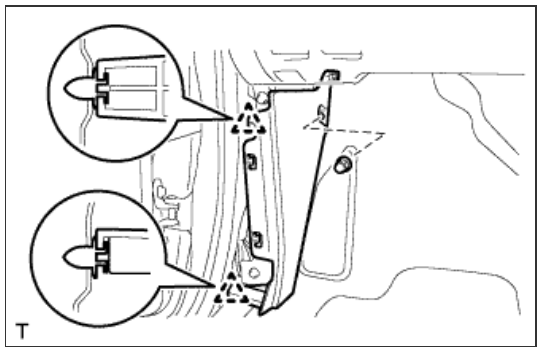


Use the same procedures described for the LH side.

## 19. REMOVE NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

a. Remove the 2 screws.

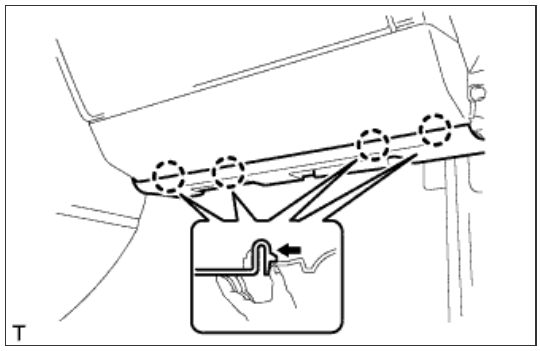
b. Detach the 3 claws.



c. Remove the under cover and disconnect the connectors.

## 20. REMOVE COWL SIDE TRIM BOARD LH

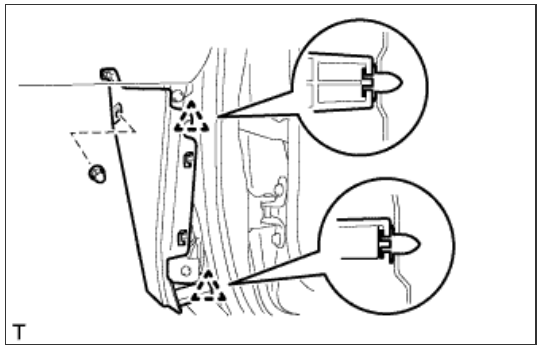
a. Remove the cap nut.



b. Detach the 2 clips and remove the trim board.

## 21. REMOVE NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

a. Detach the 4 claws.

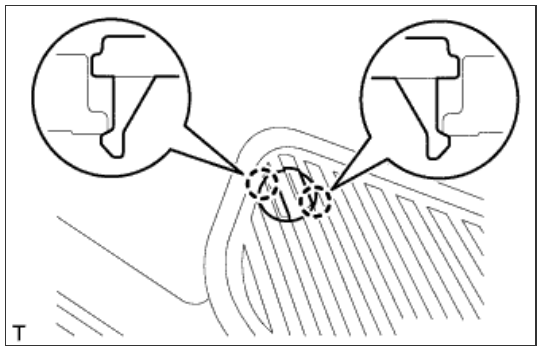


b. Remove the under cover and disconnect the connector.

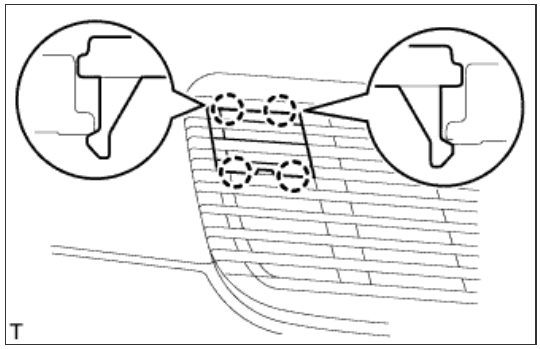
## 22. REMOVE COWL SIDE TRIM BOARD RH

a. Remove the cap nut.

b. Detach the 2 clips and remove the trim board.



## 23. REMOVE REAR STEP COVER

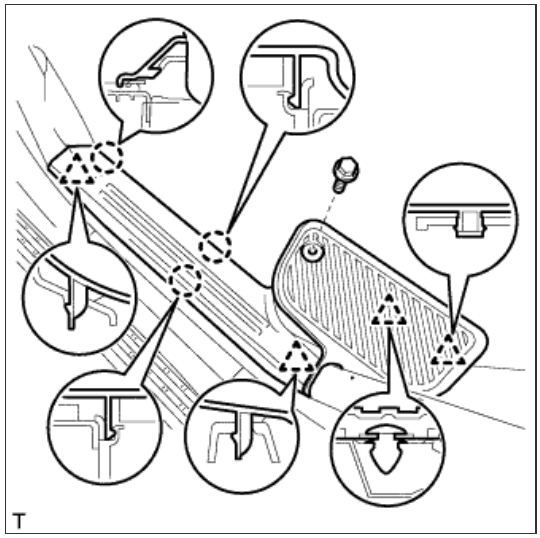


**HINT:**

Use the same procedure to remove the step cover on the other side.

a. w/o Illumination Type Front Door Scuff Plate:
Detach the 2 claws and remove the step cover.

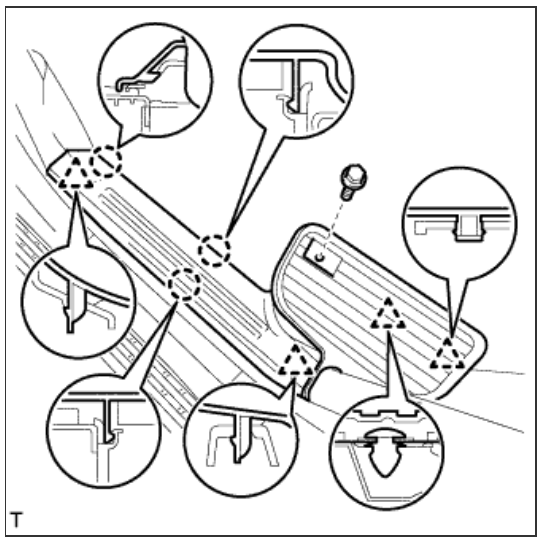
b. w/ Illumination Type Front Door Scuff Plate:
Detach the 4 claws and remove the step cover.



## 24. REMOVE REAR DOOR SCUFF PLATE LH

a. w/o Illumination Type Front Door Scuff Plate:
Remove the rear door scuff plate.

i. Remove the screw.



ii. Detach the 3 claws and 4 clips, and remove the scuff plate.

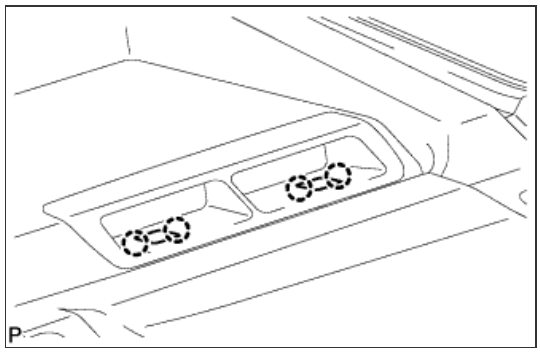
b. w/ Illumination Type Front Door Scuff Plate:
Remove the rear door scuff plate.

i. Remove the screw.

ii. Detach the 3 claws and 4 clips, and remove the scuff plate.

## 25. REMOVE REAR DOOR SCUFF PLATE RH

**HINT:**



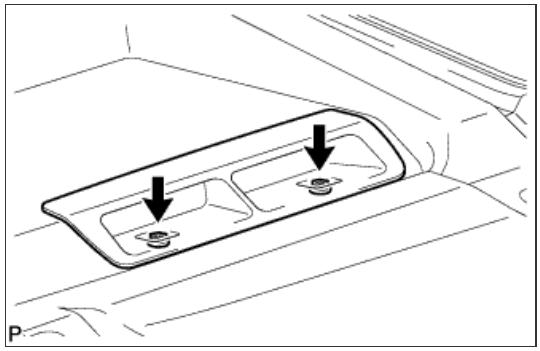
Use the same procedures described for the LH side.

## 26. REMOVE NO. 2 AIR DUCT PLUG

a. Detach the 4 claws and remove the 2 plugs.

**HINT:**

Use the same procedures for both sides.

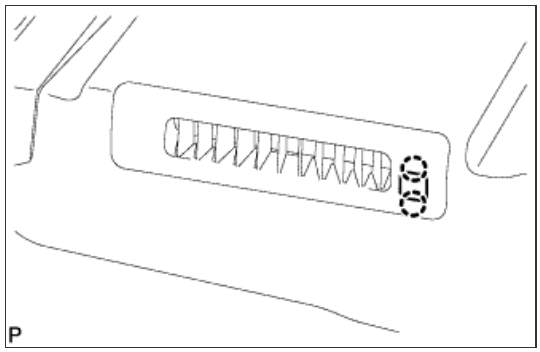


## 27. REMOVE AIR HEATER GUIDE

a. Remove the 2 screws and guide.

**HINT:**

Use the same procedures for both sides.

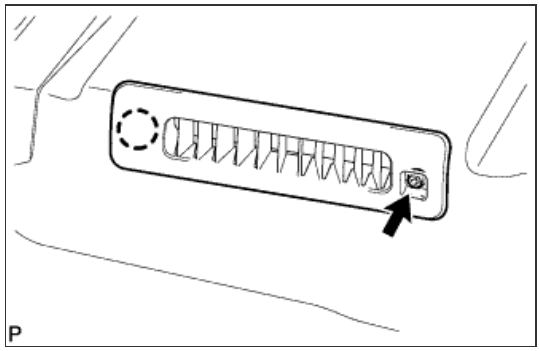


## 28. REMOVE AIR DUCT PLUG

a. Detach the 2 claws and remove the plug.

**HINT:**

Use the same procedures for both sides.



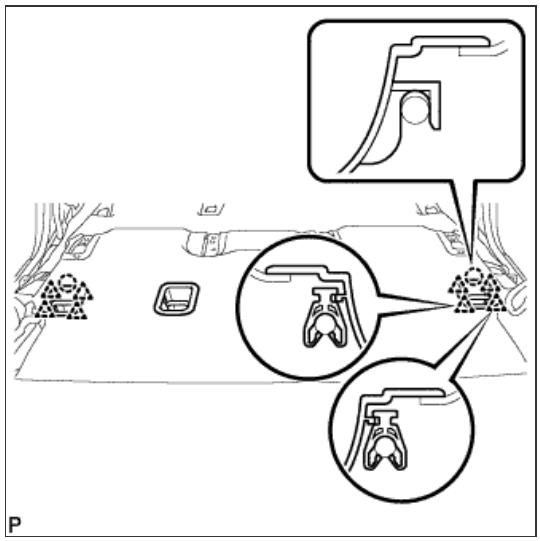
## 29. REMOVE REAR AIR DUCT GUIDE

**HINT:**

Use the same procedures for both sides.

a. Remove the screw.

b. Detach the claw and remove the guide.

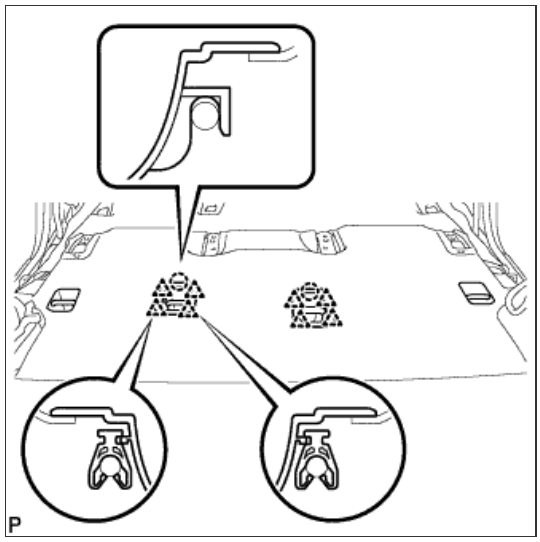


## 30. REMOVE REAR NO. 1 SEAT PROTECTOR

a. Detach the 4 clips and claw, and remove the protector.

**HINT:**

Use the same procedures to remove the protector on the other side.



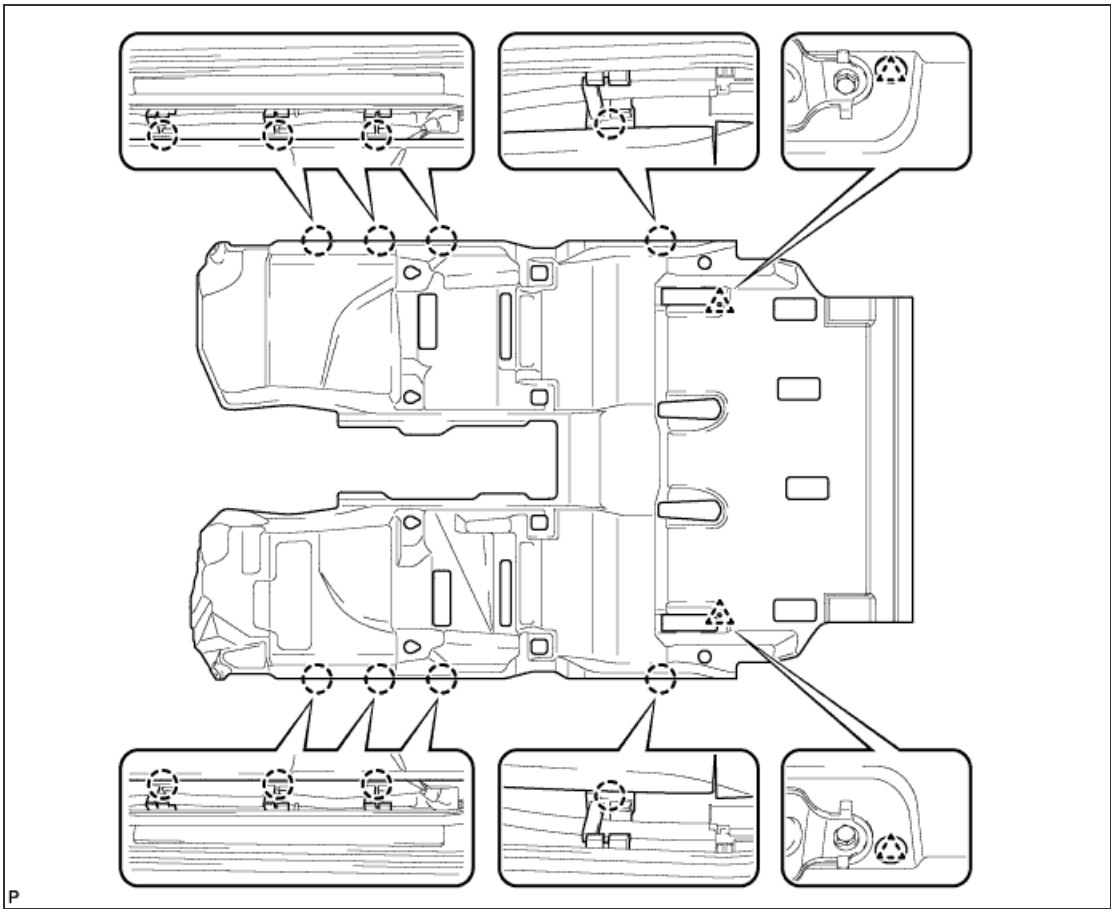
## 31. REMOVE REAR NO. 2 SEAT PROTECTOR

a. Detach the 4 clips and claw, and remove the protector.

**HINT:**

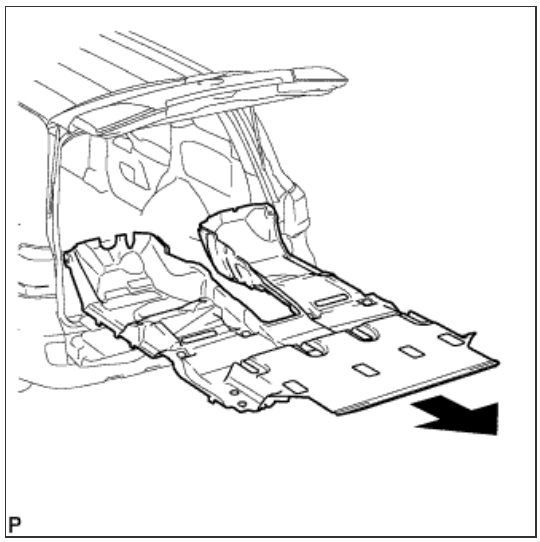
Use the same procedures to remove the protector on the other side.

## 32. REMOVE COOLING BOX ASSEMBLY (w/ Cool Box)



a. Remove the cooling box assembly (Click here).

### 33. REMOVE REAR CONSOLE BOX SUB-ASSEMBLY (w/o Cool Box)

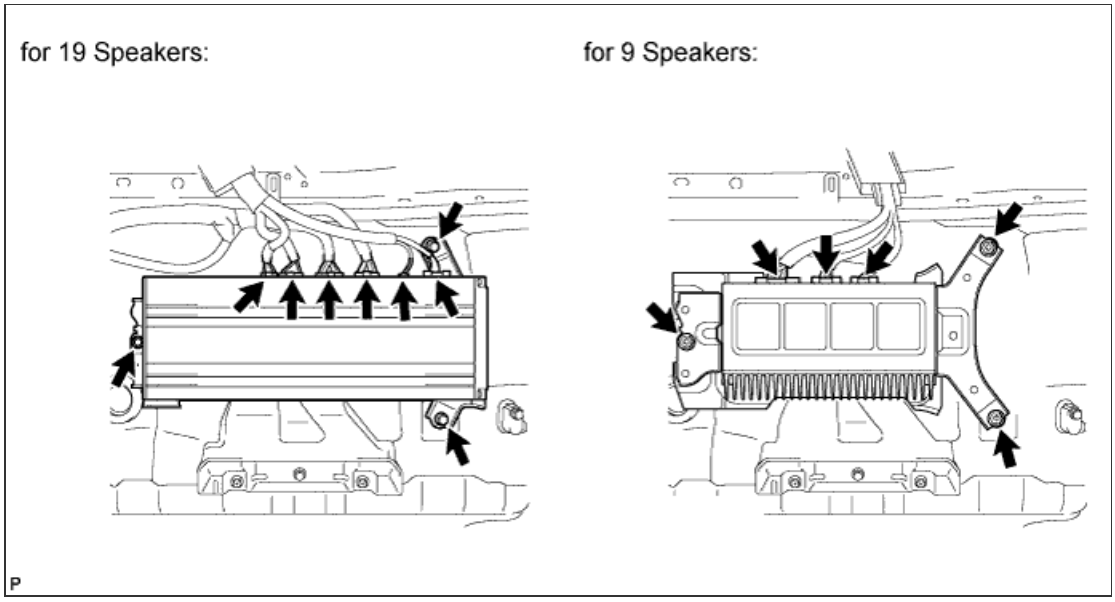


a. Remove the rear console box sub-assembly (Click here).

### 34. REMOVE FRONT FLOOR CARPET ASSEMBLY

a. Detach the 2 clips and 8 claws.

b. Remove the carpet from the floor, open the back door and tail gate, and remove the carpet from the rear of the vehicle.

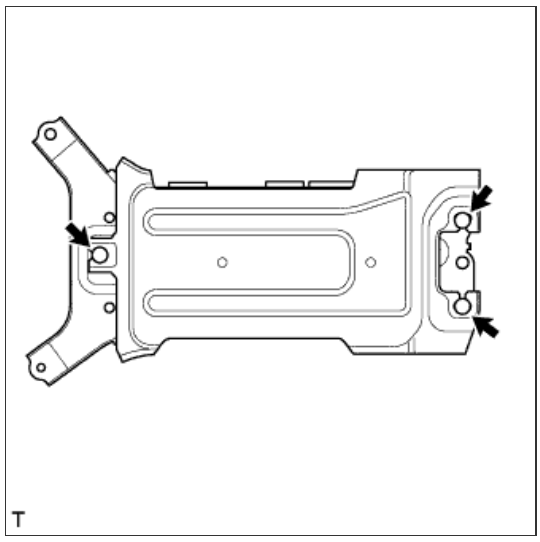


### 35. REMOVE STEREO COMPONENT AMPLIFIER ASSEMBLY WITH BRACKET

a. for 19 Speakers:

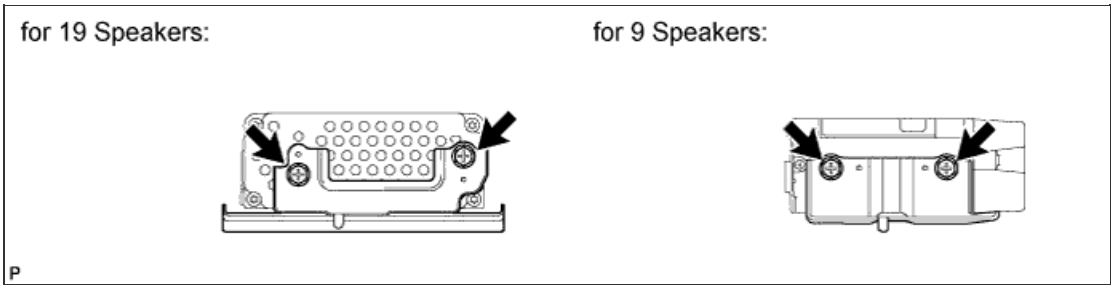
i. Disconnect the 6 connectors.

b. for 9 Speakers:



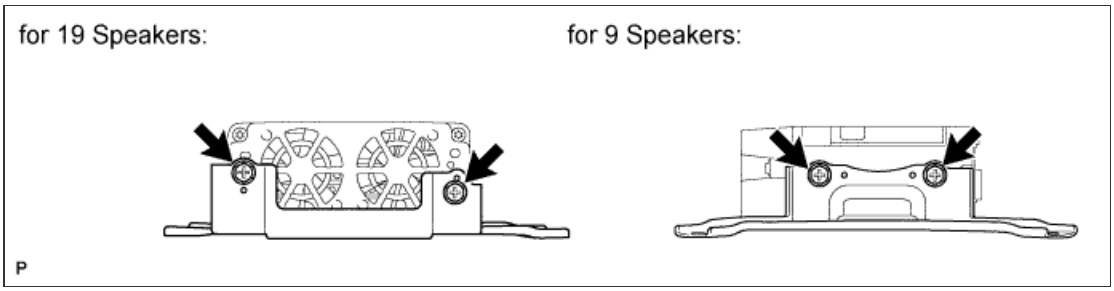
i. Disconnect the 3 connectors.

c. Remove the 3 bolts and remove the amplifier with bracket.



**36. REMOVE AMPLIFIER COVER (for 9 Speakers)**

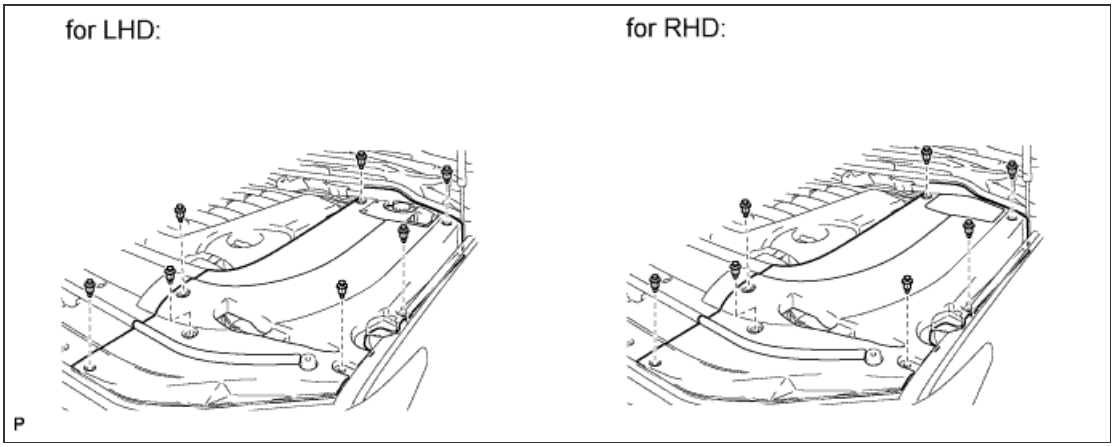
a. Detach the 3 clips and remove the cover.



**37. REMOVE NO. 1 AMPLIFIER BRACKET**

a. Remove the 2 screws and bracket.

**38. REMOVE NO. 2 AMPLIFIER BRACKET**



a. Remove the 2 screws and bracket.

**for Preparation** Click here

## 1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.

## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

**CAUTION:**

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

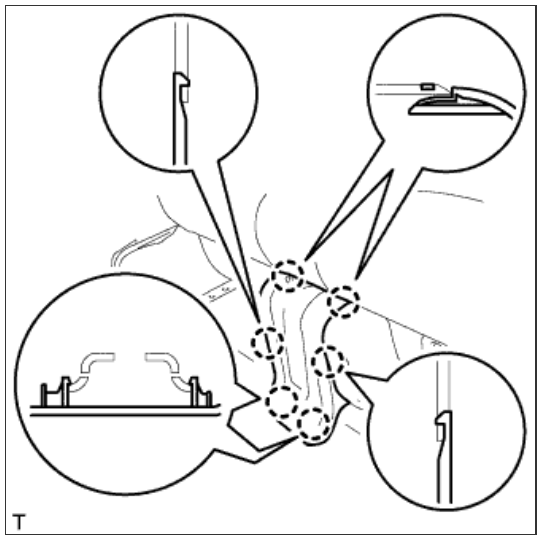
**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

## 3. REMOVE FRONT SEAT ASSEMBLY LH

a. Remove the front seat assembly LH ( Click here).

## 4. REMOVE FRONT SEAT ASSEMBLY RH



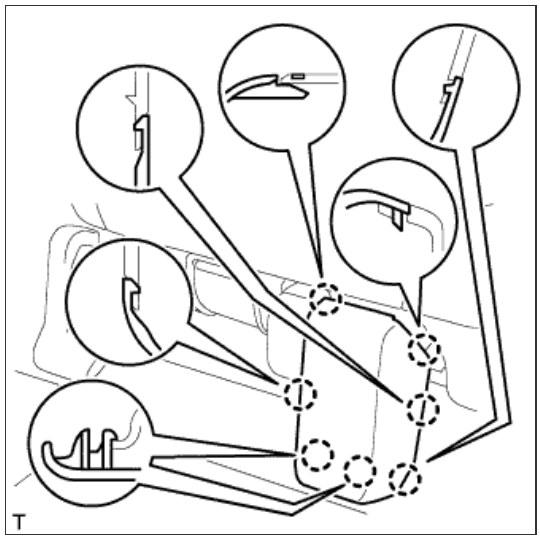
a. Remove the front seat assembly RH ( Click here).

## 5. REMOVE REAR NO. 3 SEAT CUSHION HINGE COVER

a. Using a screwdriver, detach the 6 claws and remove the cover.

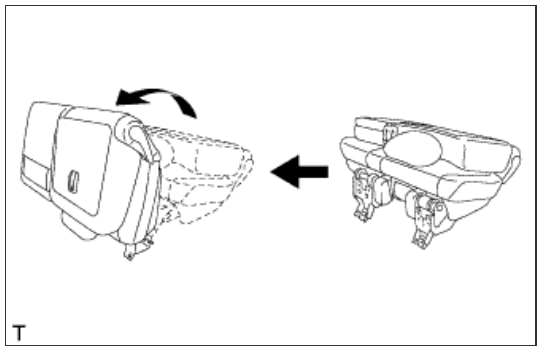
**HINT:**

Tape the screwdriver tip before use.



## 6. REMOVE REAR NO. 5 SEAT CUSHION HINGE COVER

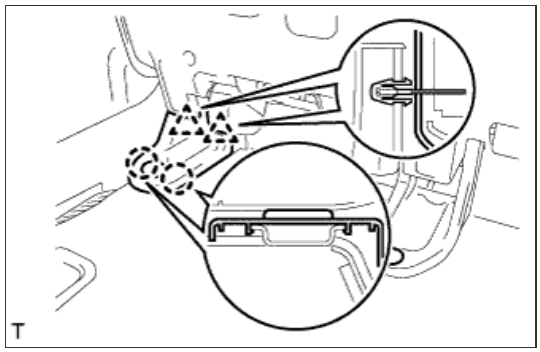
a. Using a screwdriver, detach the 7 claws and remove the cover.



**HINT:**

Tape the screwdriver tip before use.

## 7. REMOVE REAR NO. 2 SEAT CUSHION HINGE COVER

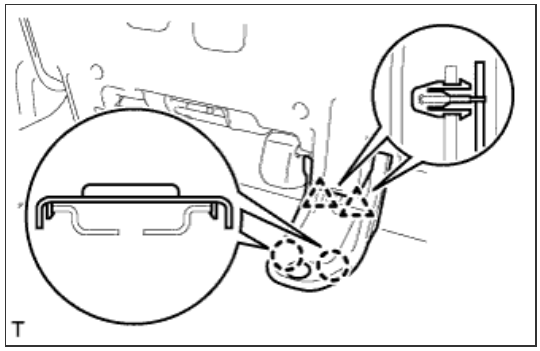


a. Operate the reclining adjuster release handle to move the seat into the position shown in the illustration.

b. Using a screwdriver, detach the 2 claws and 2 clips, and remove the cover.

**HINT:**

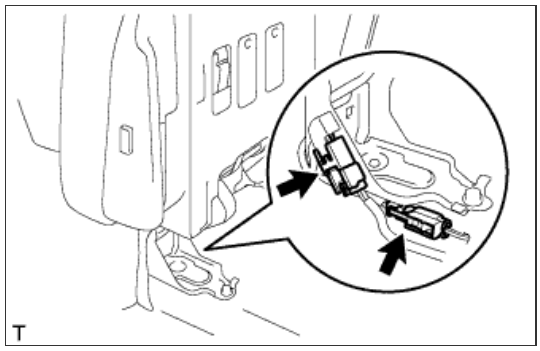
Tape the screwdriver tip before use.



## 8. REMOVE REAR NO. 4 SEAT CUSHION HINGE COVER

a. Using a screwdriver, detach the 2 claws and 2 clips, and remove the cover.

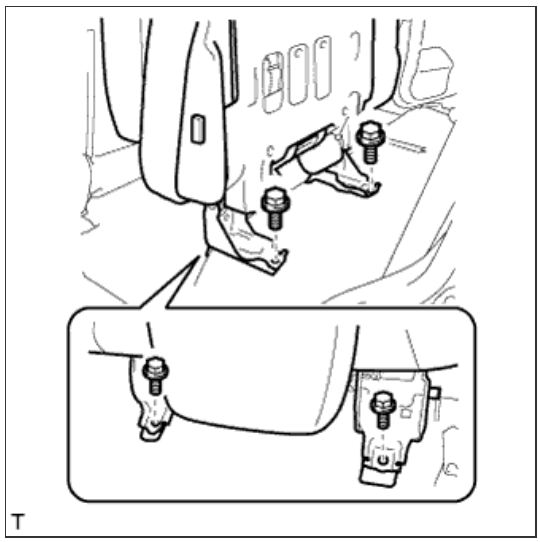
**HINT:**



Tape the screwdriver tip before use.

## 9. REMOVE REAR NO. 1 SEAT ASSEMBLY LH

a. Disconnect the connector.

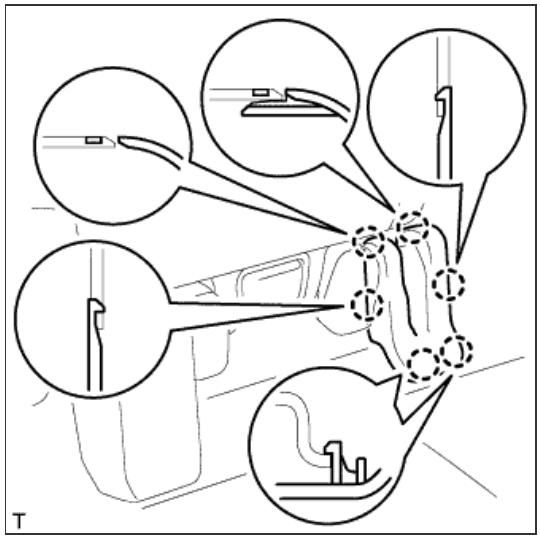


b. w/ Seat Heater System:
Disconnect the connector.

c. Remove the 4 bolts and seat assembly.

**NOTICE:**

Be careful not to damage the vehicle body.

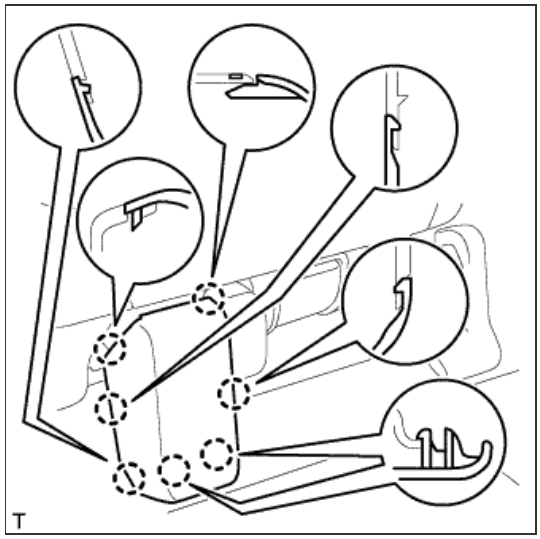


## 10. REMOVE REAR NO. 2 SEAT CUSHION HINGE COVER

a. Using a screwdriver, detach the 6 claws and remove the cover.

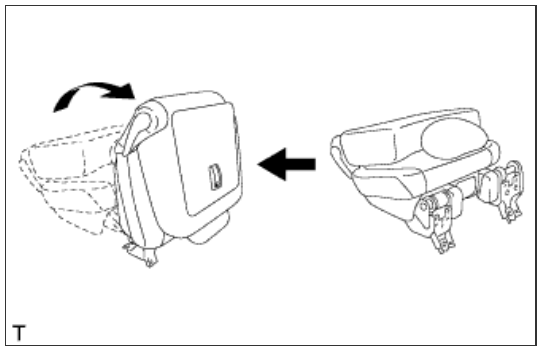
**HINT:**

Tape the screwdriver tip before use.



## 11. REMOVE REAR NO. 4 SEAT CUSHION HINGE COVER

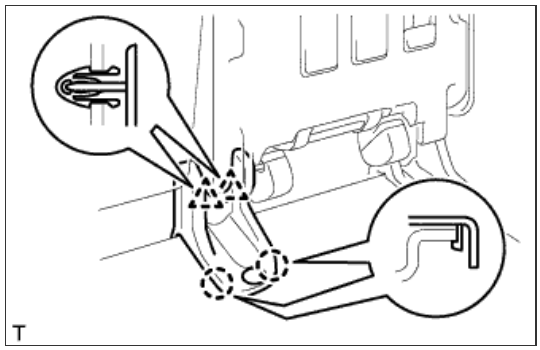
a. Using a screwdriver, detach the 7 claws and remove the cover.



**HINT:**

Tape the screwdriver tip before use.

## 12. REMOVE REAR NO. 1 SEAT CUSHION HINGE COVER

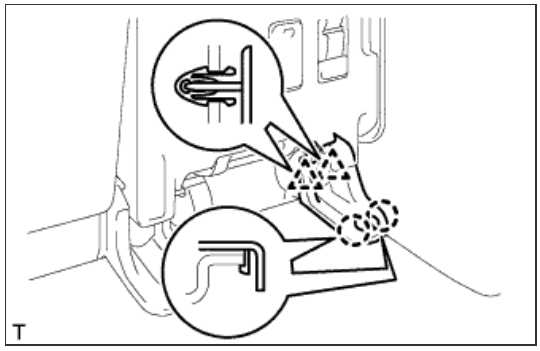


a. Operate the reclining adjuster release handle to move the seat into the position shown in the illustration.

b. Using a screwdriver, detach the 2 claws and 2 clips, and remove the cover.

**HINT:**

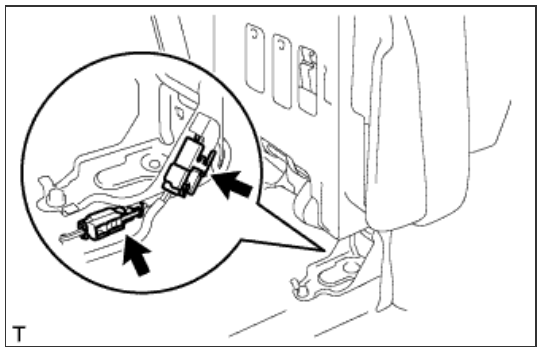
Tape the screwdriver tip before use.



## 13. REMOVE REAR NO. 3 SEAT CUSHION HINGE COVER

a. Using a screwdriver, detach the 2 claws and 2 clips, and remove the cover.

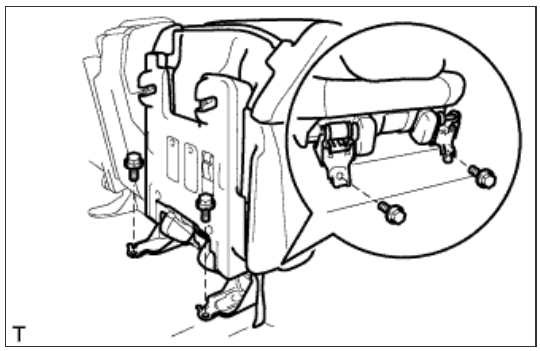
**HINT:**



Tape the screwdriver tip before use.

## 14. REMOVE REAR NO. 1 SEAT ASSEMBLY RH

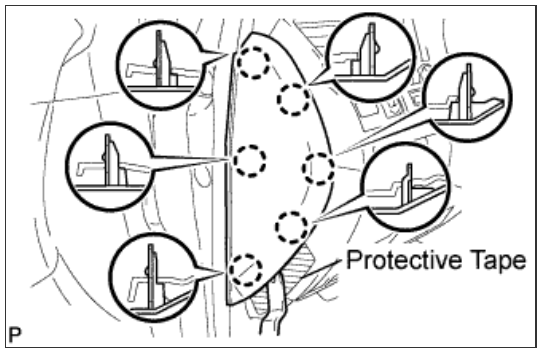
a. Disconnect the connector.



b. w/ Seat Heater System:
Disconnect the connector.

c. Remove the 4 bolts and seat assembly.

**NOTICE:**



Be careful not to damage the vehicle body.

## 15. REMOVE INSTRUMENT SIDE PANEL LH

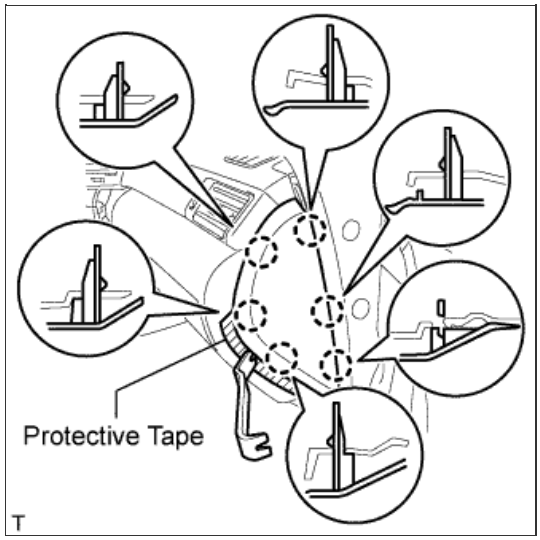
a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 6 claws and remove the side panel.

## 16. REMOVE INSTRUMENT SIDE PANEL RH

a. w/o Airbag Cut Off Switch:

i. Place protective tape as shown in the illustration.

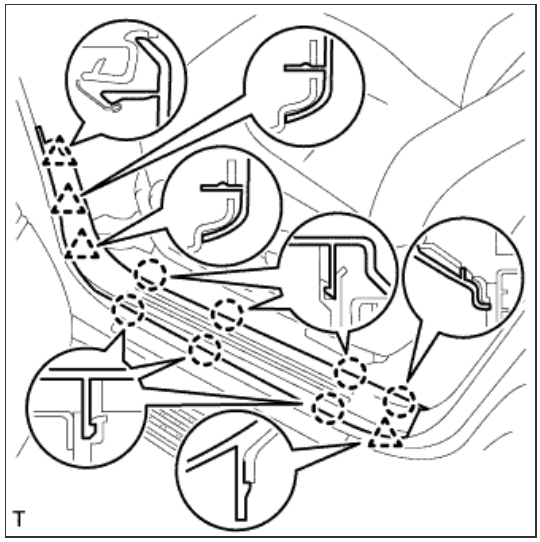


ii. Using a moulding remover, detach the 6 claws and remove the side panel.

b. w/ Airbag Cut Off Switch:

i. Place protective tape as shown in the illustration.

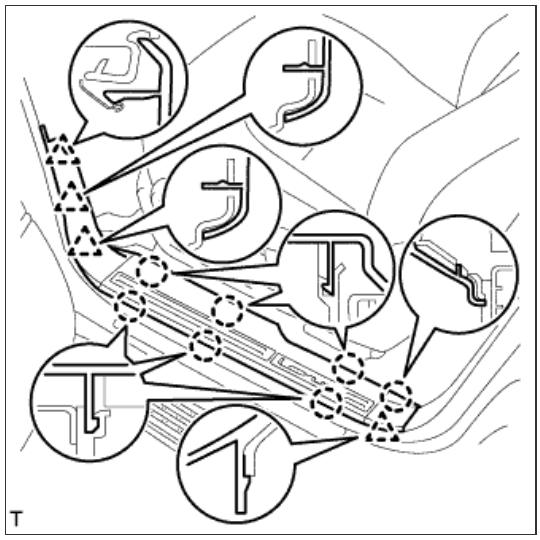
ii. Using a moulding remover, detach the 6 claws.



iii. Remove the side panel and disconnect the connector.

## 17. REMOVE FRONT DOOR SCUFF PLATE LH

a. w/o Illumination:



i. Detach the 7 claws and 4 clips, and remove the scuff plate.

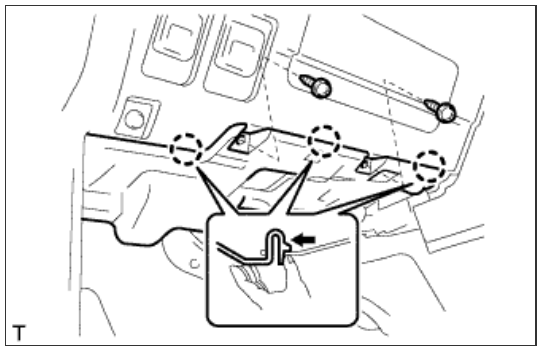
b. w/ Illumination:

i. Detach the 7 claws and 4 clips.

ii. Disconnect the connector and remove the scuff plate.

### 18. REMOVE FRONT DOOR SCUFF PLATE RH

**HINT:**

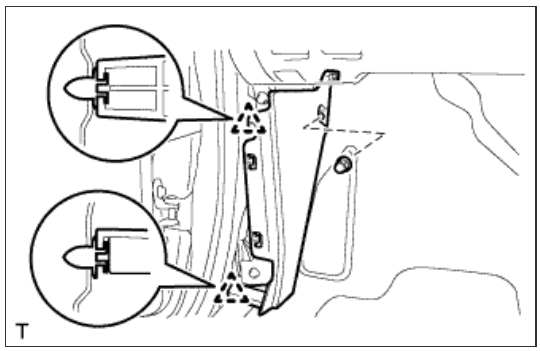


Use the same procedures described for the LH side.

### 19. REMOVE NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

a. Remove the 2 screws.

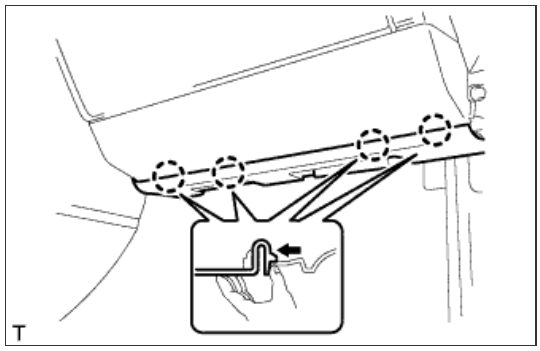
b. Detach the 3 claws.



c. Remove the under cover and disconnect the connectors.

### 20. REMOVE COWL SIDE TRIM BOARD LH

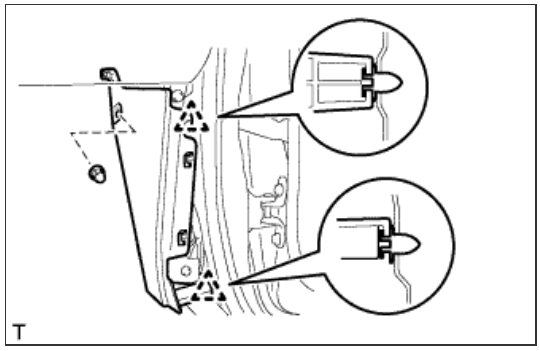
a. Remove the cap nut.



b. Detach the 2 clips and remove the trim board.

### 21. REMOVE NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

a. Detach the 4 claws.

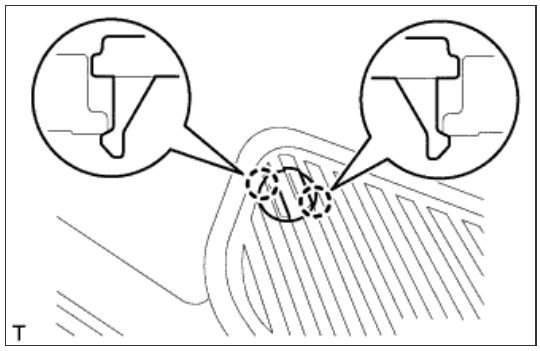


b. Remove the under cover and disconnect the connector.

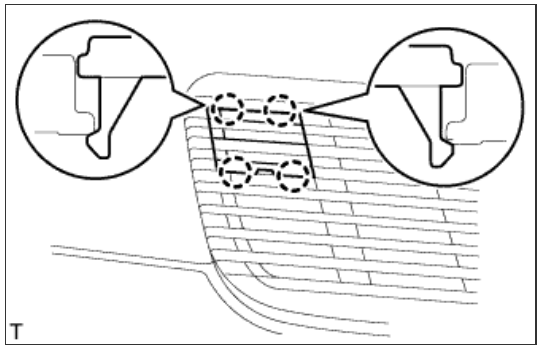
## 22. REMOVE COWL SIDE TRIM BOARD RH

a. Remove the cap nut.

b. Detach the 2 clips and remove the trim board.



## 23. REMOVE REAR STEP COVER

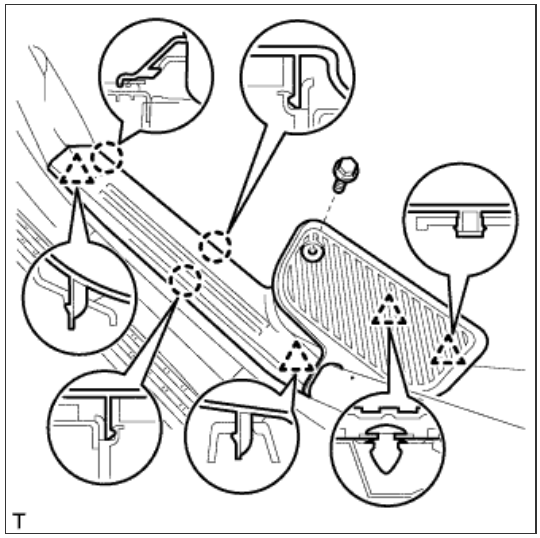


**HINT:**

Use the same procedure to remove the step cover on the other side.

a. w/o Illumination Type Front Door Scuff Plate:
Detach the 2 claws and remove the step cover.

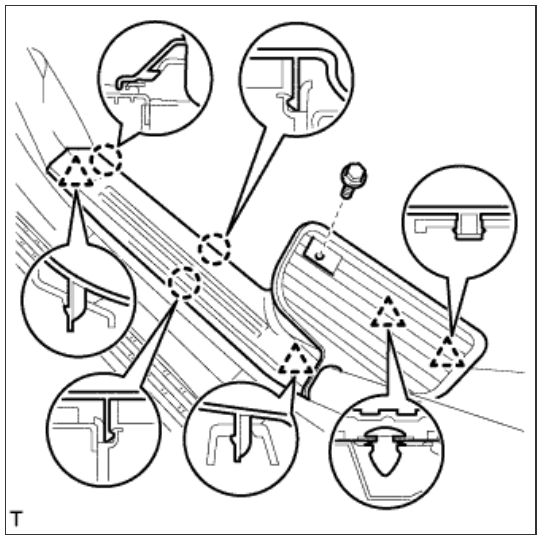
b. w/ Illumination Type Front Door Scuff Plate:
Detach the 4 claws and remove the step cover.



## 24. REMOVE REAR DOOR SCUFF PLATE LH

a. w/o Illumination Type Front Door Scuff Plate:
Remove the rear door scuff plate.

i. Remove the screw.



ii. Detach the 3 claws and 4 clips, and remove the scuff plate.

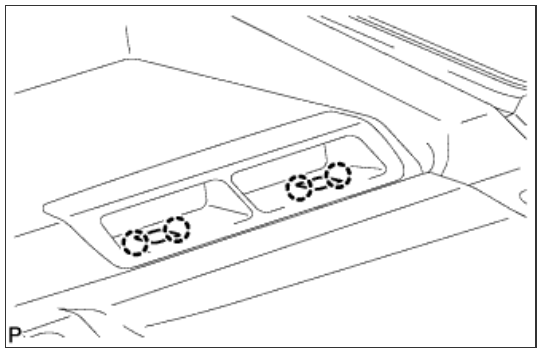
b. w/ Illumination Type Front Door Scuff Plate:
Remove the rear door scuff plate.

i. Remove the screw.

ii. Detach the 3 claws and 4 clips, and remove the scuff plate.

## 25. REMOVE REAR DOOR SCUFF PLATE RH

**HINT:**



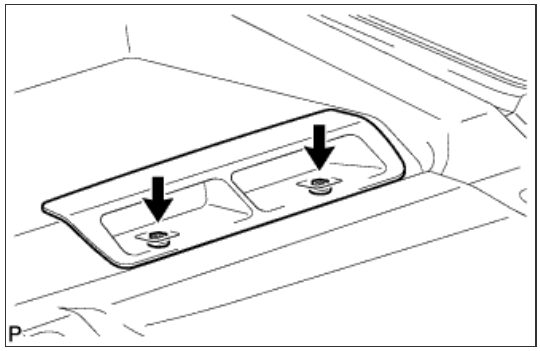
Use the same procedures described for the LH side.

## 26. REMOVE NO. 2 AIR DUCT PLUG

a. Detach the 4 claws and remove the 2 plugs.

**HINT:**

Use the same procedures for both sides.

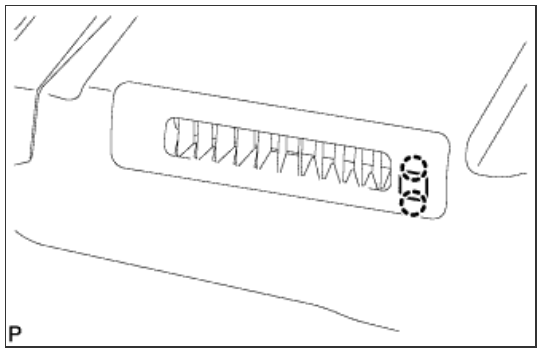


## 27. REMOVE AIR HEATER GUIDE

a. Remove the 2 screws and guide.

**HINT:**

Use the same procedures for both sides.

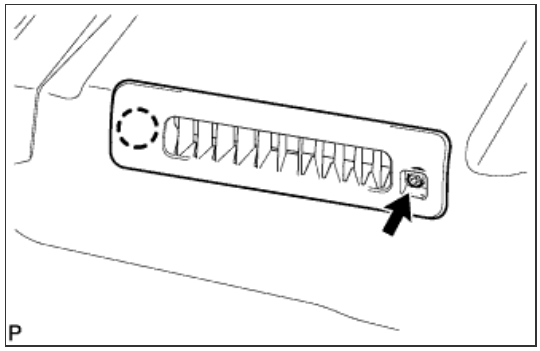


## 28. REMOVE AIR DUCT PLUG

a. Detach the 2 claws and remove the plug.

**HINT:**

Use the same procedures for both sides.



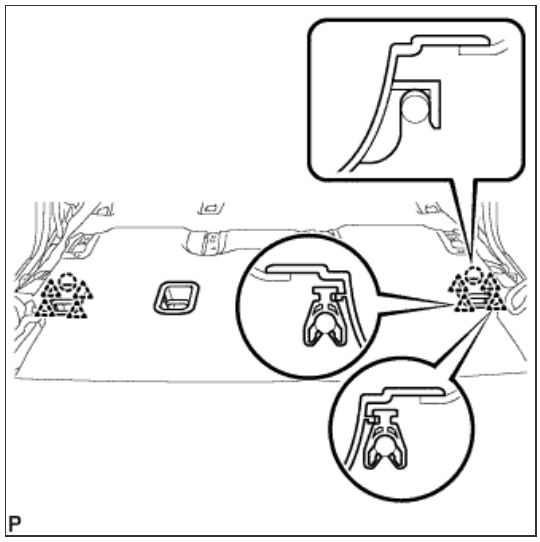
## 29. REMOVE REAR AIR DUCT GUIDE

**HINT:**

Use the same procedures for both sides.

a. Remove the screw.

b. Detach the claw and remove the guide.

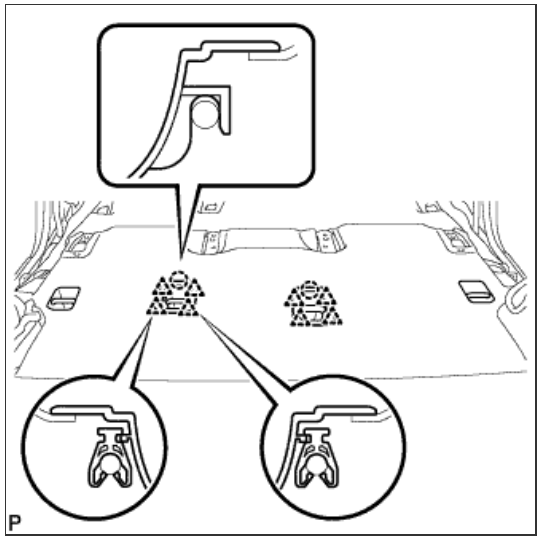


## 30. REMOVE REAR NO. 1 SEAT PROTECTOR

a. Detach the 4 clips and claw, and remove the protector.

**HINT:**

Use the same procedures to remove the protector on the other side.



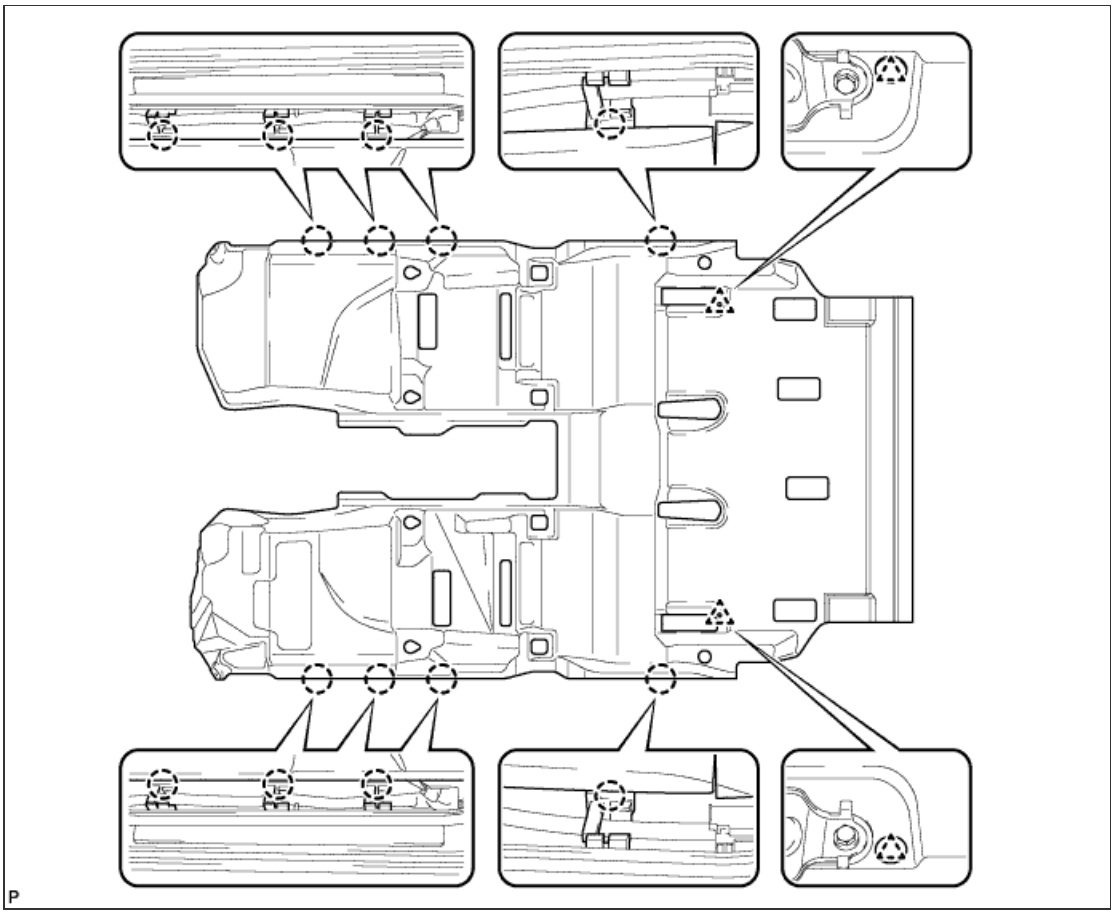
### 31. REMOVE REAR NO. 2 SEAT PROTECTOR

a. Detach the 4 clips and claw, and remove the protector.

**HINT:**

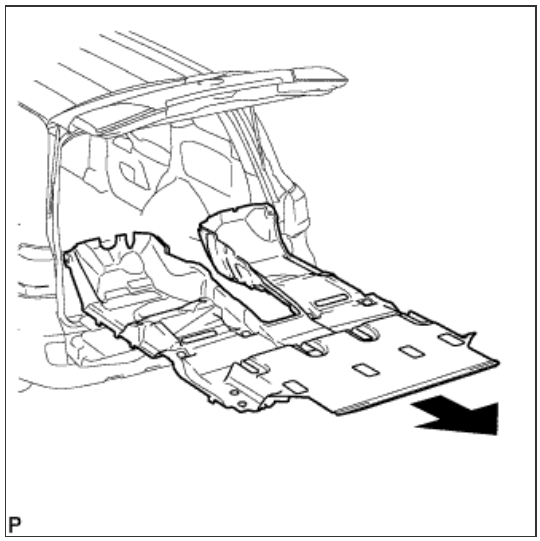
Use the same procedures to remove the protector on the other side.

### 32. REMOVE COOLING BOX ASSEMBLY (w/ Cool Box)



a. Remove the cooling box assembly (Click here).

### 33. REMOVE REAR CONSOLE BOX SUB-ASSEMBLY (w/o Cool Box)

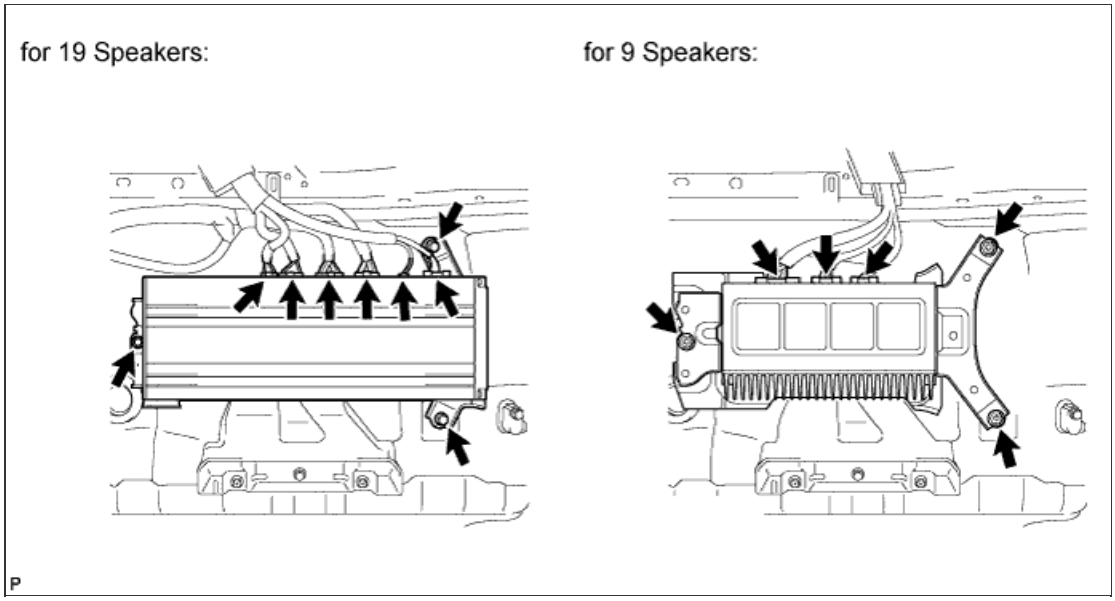


a. Remove the rear console box sub-assembly (Click here).

### 34. REMOVE FRONT FLOOR CARPET ASSEMBLY

a. Detach the 2 clips and 8 claws.

b. Remove the carpet from the floor, open the back door and tail gate, and remove the carpet from the rear of the vehicle.

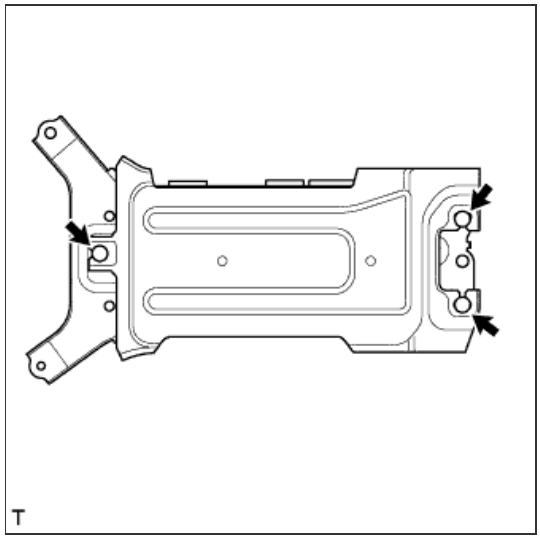


### 35. REMOVE STEREO COMPONENT AMPLIFIER ASSEMBLY WITH BRACKET

a. for 19 Speakers:

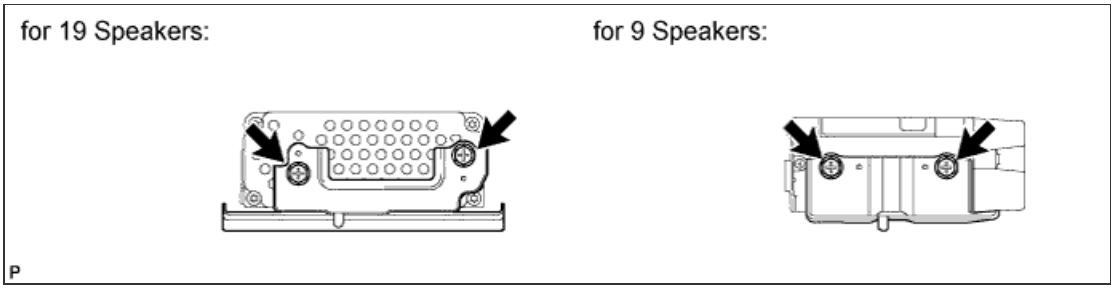
i. Disconnect the 6 connectors.

b. for 9 Speakers:



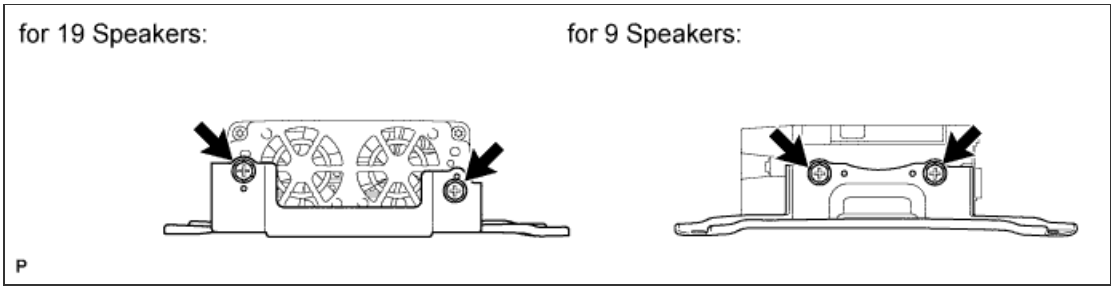
i. Disconnect the 3 connectors.

c. Remove the 3 bolts and remove the amplifier with bracket.



## 36. REMOVE AMPLIFIER COVER (for 9 Speakers)

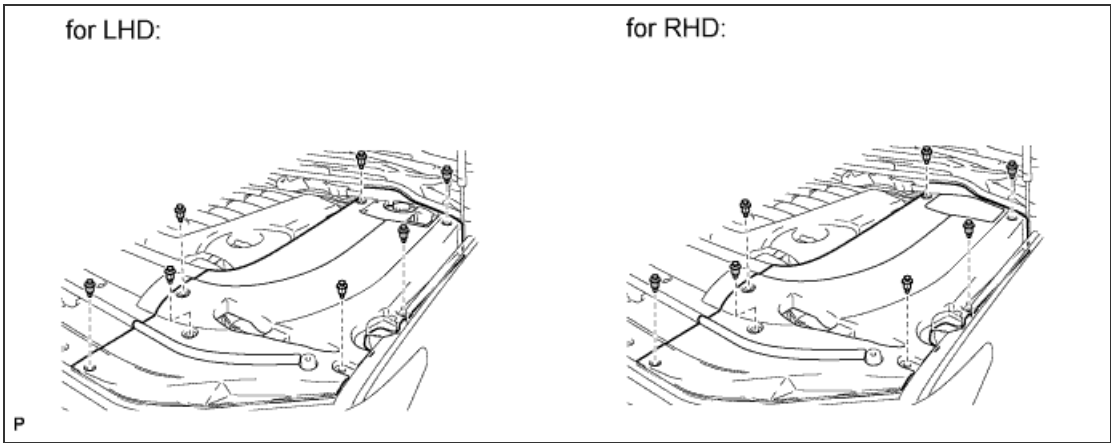
a. Detach the 3 clips and remove the cover.



## 37. REMOVE NO. 1 AMPLIFIER BRACKET

a. Remove the 2 screws and bracket.

## 38. REMOVE NO. 2 AMPLIFIER BRACKET



a. Remove the 2 screws and bracket.

**for Preparation** Click here

## 1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover LH.

## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

**CAUTION:**

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

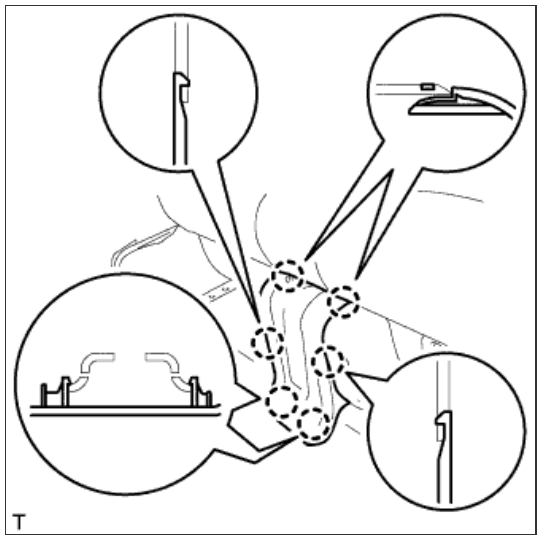
**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

## 3. REMOVE FRONT SEAT ASSEMBLY LH

a. Remove the front seat assembly LH ( Click here).

## 4. REMOVE FRONT SEAT ASSEMBLY RH



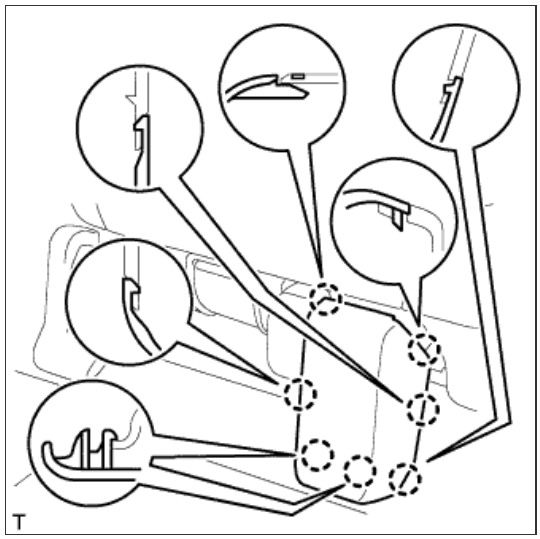
a. Remove the front seat assembly RH ( Click here).

## 5. REMOVE REAR NO. 3 SEAT CUSHION HINGE COVER

a. Using a screwdriver, detach the 6 claws and remove the cover.

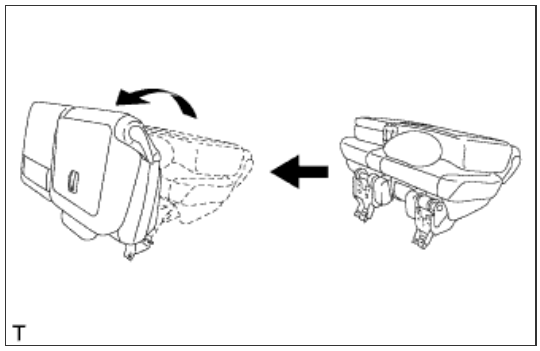
**HINT:**

Tape the screwdriver tip before use.



## 6. REMOVE REAR NO. 5 SEAT CUSHION HINGE COVER

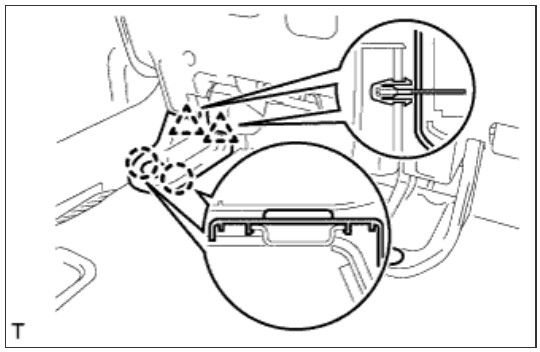
a. Using a screwdriver, detach the 7 claws and remove the cover.



**HINT:**

Tape the screwdriver tip before use.

## 7. REMOVE REAR NO. 2 SEAT CUSHION HINGE COVER

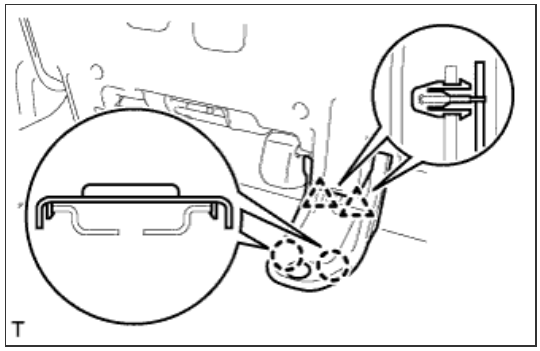


a. Operate the reclining adjuster release handle to move the seat into the position shown in the illustration.

b. Using a screwdriver, detach the 2 claws and 2 clips, and remove the cover.

**HINT:**

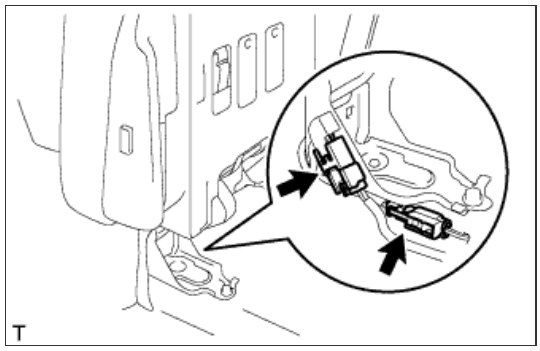
Tape the screwdriver tip before use.



## 8. REMOVE REAR NO. 4 SEAT CUSHION HINGE COVER

a. Using a screwdriver, detach the 2 claws and 2 clips, and remove the cover.

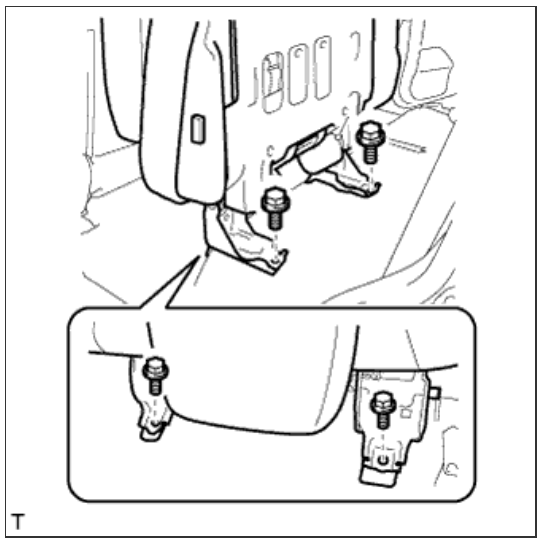
**HINT:**



Tape the screwdriver tip before use.

## 9. REMOVE REAR NO. 1 SEAT ASSEMBLY LH

a. Disconnect the connector.

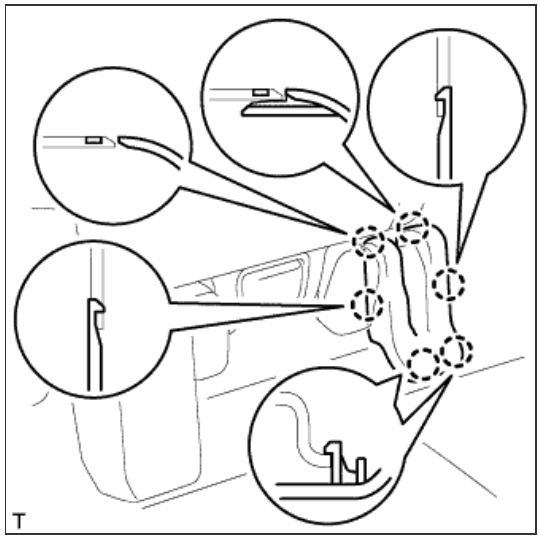


b. w/ Seat Heater System:
Disconnect the connector.

c. Remove the 4 bolts and seat assembly.

**NOTICE:**

Be careful not to damage the vehicle body.

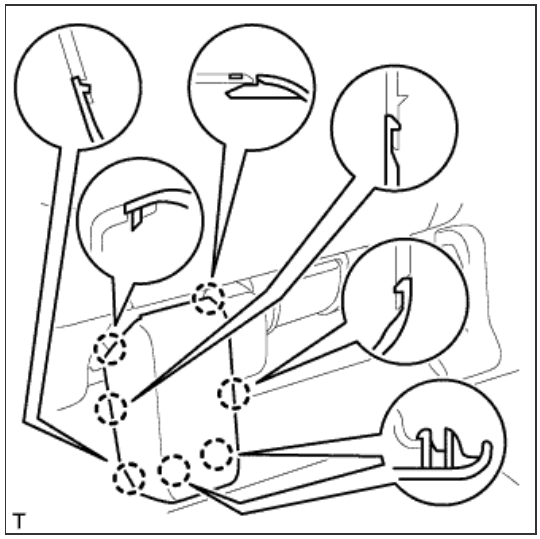


## 10. REMOVE REAR NO. 2 SEAT CUSHION HINGE COVER

a. Using a screwdriver, detach the 6 claws and remove the cover.

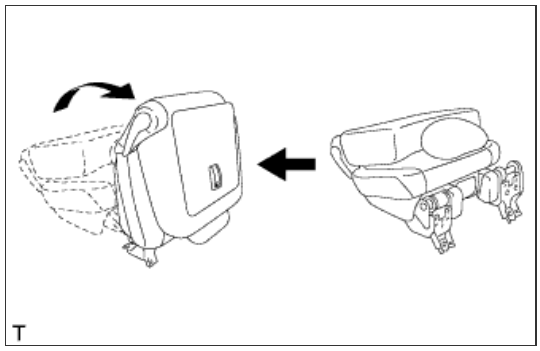
**HINT:**

Tape the screwdriver tip before use.



## 11. REMOVE REAR NO. 4 SEAT CUSHION HINGE COVER

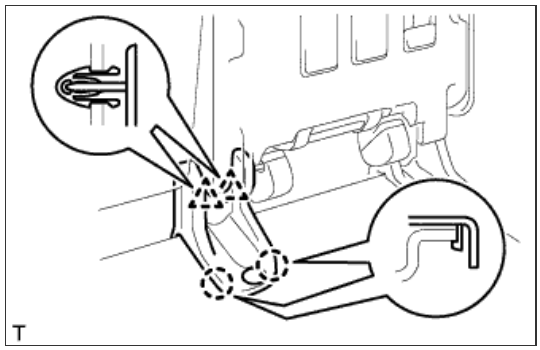
a. Using a screwdriver, detach the 7 claws and remove the cover.



**HINT:**

Tape the screwdriver tip before use.

## 12. REMOVE REAR NO. 1 SEAT CUSHION HINGE COVER

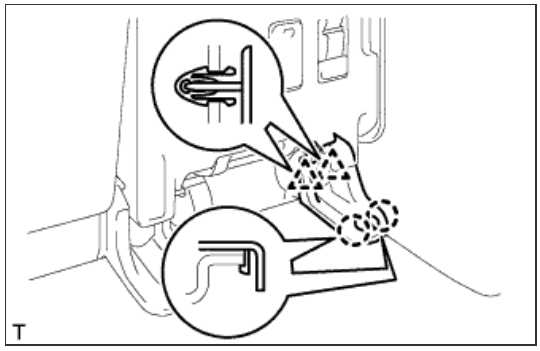


a. Operate the reclining adjuster release handle to move the seat into the position shown in the illustration.

b. Using a screwdriver, detach the 2 claws and 2 clips, and remove the cover.

**HINT:**

Tape the screwdriver tip before use.



## 13. REMOVE REAR NO. 3 SEAT CUSHION HINGE COVER

a. Using a screwdriver, detach the 2 claws and 2 clips, and remove the cover.

**HINT:**

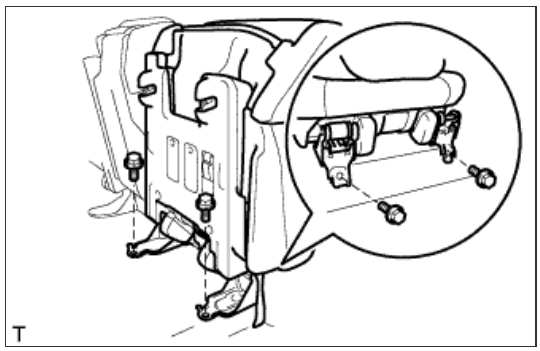
Tape the screwdriver tip before use.

## 14. REMOVE REAR NO. 1 SEAT ASSEMBLY RH

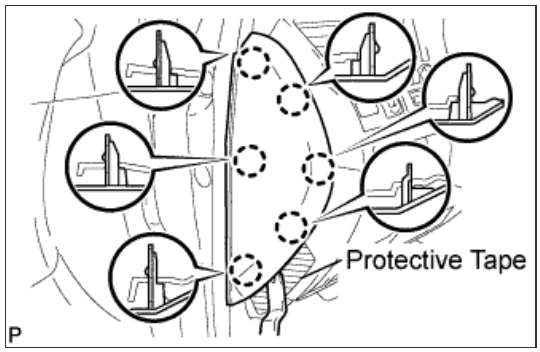
a. Disconnect the connector.



b. w/ Seat Heater System:
Disconnect the connector.

c. Remove the 4 bolts and seat assembly.

**NOTICE:**



Be careful not to damage the vehicle body.

## 15. REMOVE INSTRUMENT SIDE PANEL LH

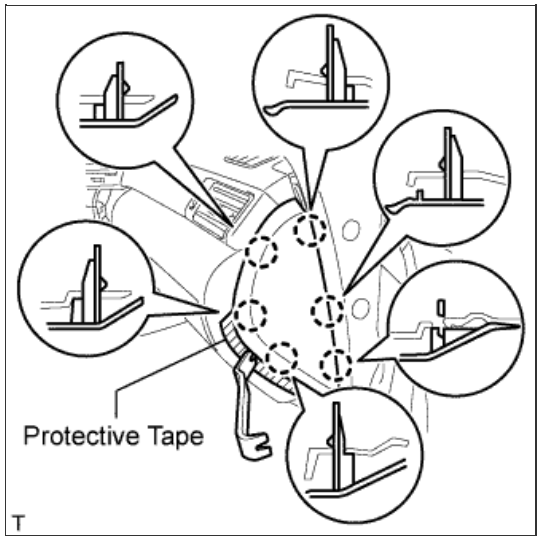
a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 6 claws and remove the side panel.

## 16. REMOVE INSTRUMENT SIDE PANEL RH

a. w/o Airbag Cut Off Switch:

i. Place protective tape as shown in the illustration.

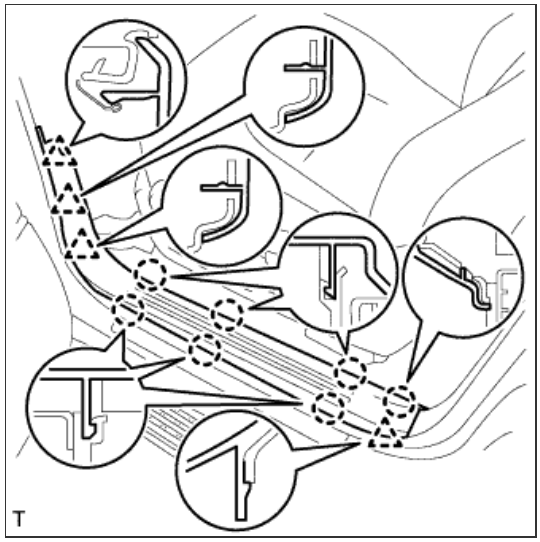


ii. Using a moulding remover, detach the 6 claws and remove the side panel.

b. w/ Airbag Cut Off Switch:

i. Place protective tape as shown in the illustration.

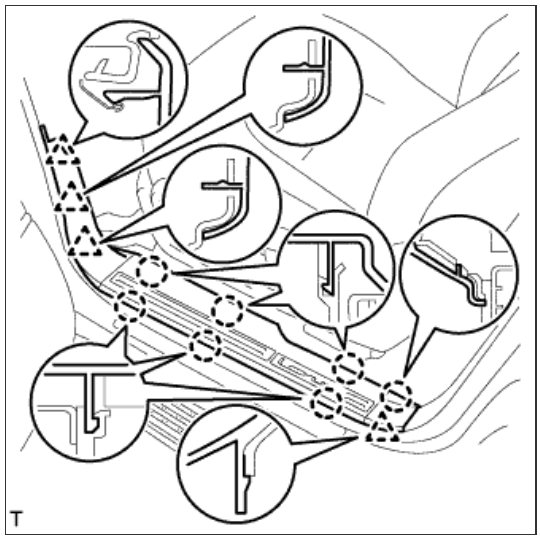
ii. Using a moulding remover, detach the 6 claws.



iii. Remove the side panel and disconnect the connector.

## 17. REMOVE FRONT DOOR SCUFF PLATE LH

a. w/o Illumination:



i. Detach the 7 claws and 4 clips, and remove the scuff plate.

b. w/ Illumination:

i. Detach the 7 claws and 4 clips.

ii. Disconnect the connector and remove the scuff plate.

### 18. REMOVE FRONT DOOR SCUFF PLATE RH

**HINT:**

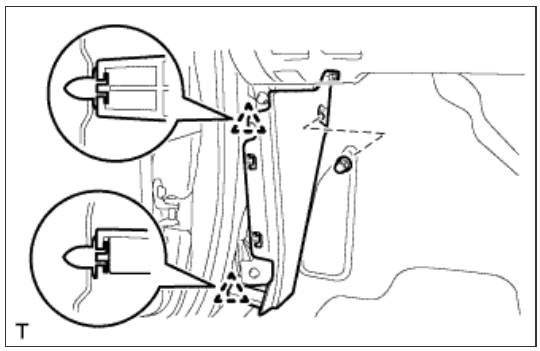
Use the same procedures described for the LH side.

### 19. REMOVE NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

a. Remove the 2 screws.

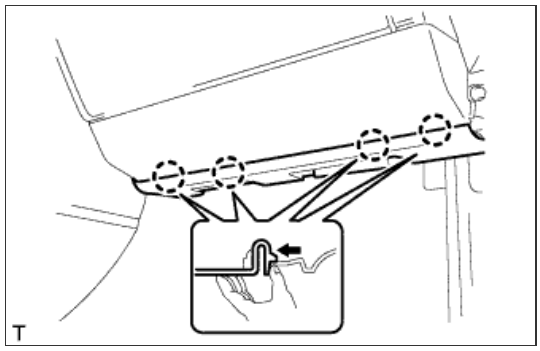
b. Detach the 3 claws.



c. Remove the under cover and disconnect the connectors.

### 20. REMOVE COWL SIDE TRIM BOARD LH

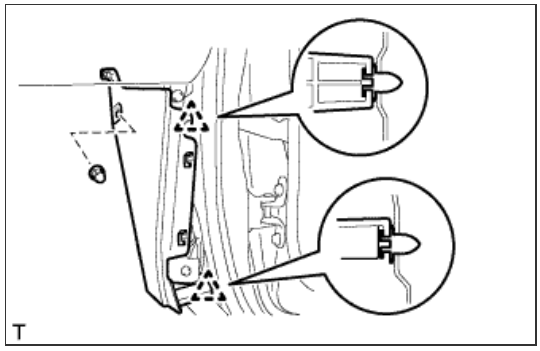
a. Remove the cap nut.



b. Detach the 2 clips and remove the trim board.

### 21. REMOVE NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

a. Detach the 4 claws.

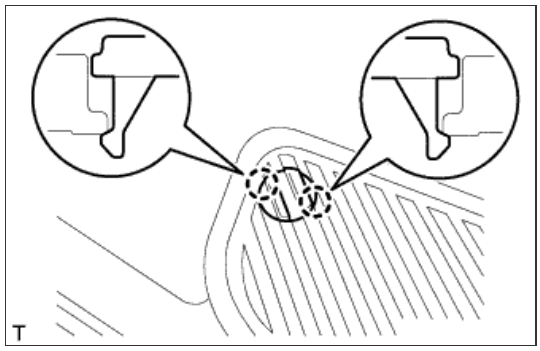


b. Remove the under cover and disconnect the connector.

## 22. REMOVE COWL SIDE TRIM BOARD RH

a. Remove the cap nut.

b. Detach the 2 clips and remove the trim board.



## 23. REMOVE REAR STEP COVER

**HINT:**

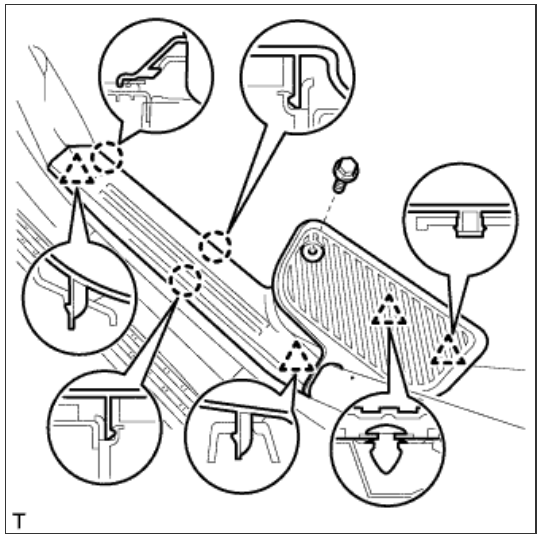
Use the same procedure to remove the step cover on the other side.

a. w/o Illumination Type Front Door Scuff Plate:
Detach the 2 claws and remove the step cover.

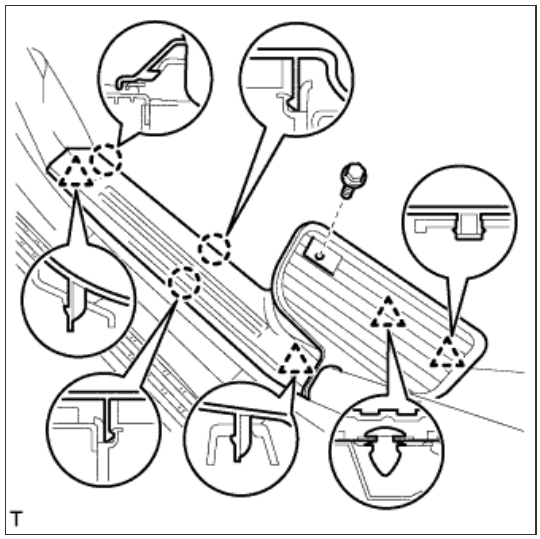
b. w/ Illumination Type Front Door Scuff Plate:
Detach the 4 claws and remove the step cover.



## 24. REMOVE REAR DOOR SCUFF PLATE LH

a. w/o Illumination Type Front Door Scuff Plate:
Remove the rear door scuff plate.

i. Remove the screw.



ii. Detach the 3 claws and 4 clips, and remove the scuff plate.

b. w/ Illumination Type Front Door Scuff Plate:
Remove the rear door scuff plate.

i. Remove the screw.

ii. Detach the 3 claws and 4 clips, and remove the scuff plate.

## 25. REMOVE REAR DOOR SCUFF PLATE RH

**HINT:**

Use the same procedures described for the LH side.

## 26. REMOVE NO. 2 AIR DUCT PLUG

a. Detach the 4 claws and remove the 2 plugs.

**HINT:**

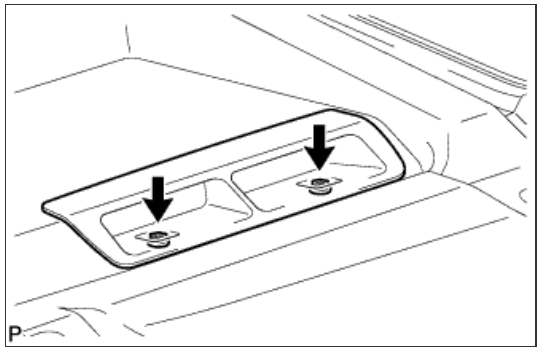
Use the same procedures for both sides.



## 27. REMOVE AIR HEATER GUIDE

a. Remove the 2 screws and guide.

**HINT:**

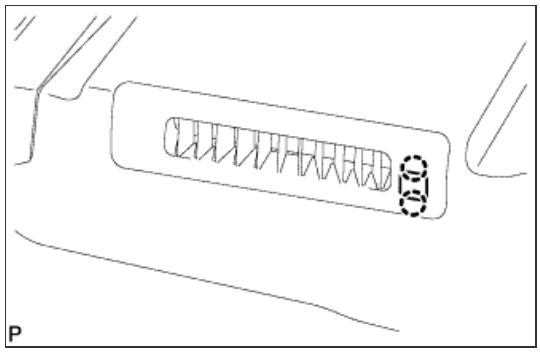
Use the same procedures for both sides.



## 28. REMOVE AIR DUCT PLUG

a. Detach the 2 claws and remove the plug.

**HINT:**

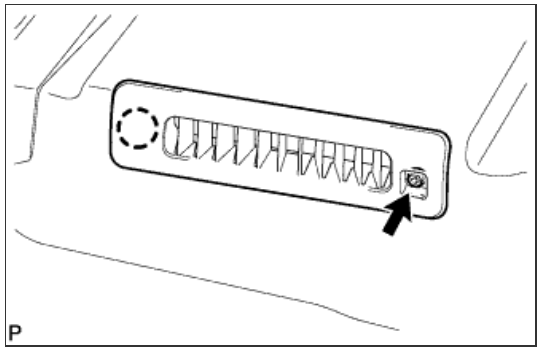
Use the same procedures for both sides.



## 29. REMOVE REAR AIR DUCT GUIDE

**HINT:**

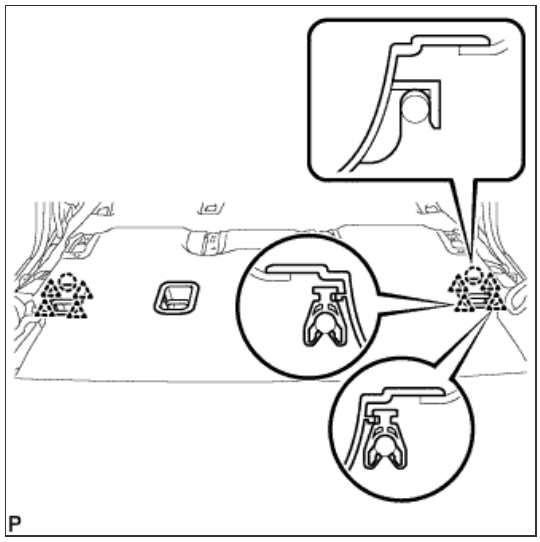
Use the same procedures for both sides.

a. Remove the screw.

b. Detach the claw and remove the guide.



## 30. REMOVE REAR NO. 1 SEAT PROTECTOR

a. Detach the 4 clips and claw, and remove the protector.

**HINT:**

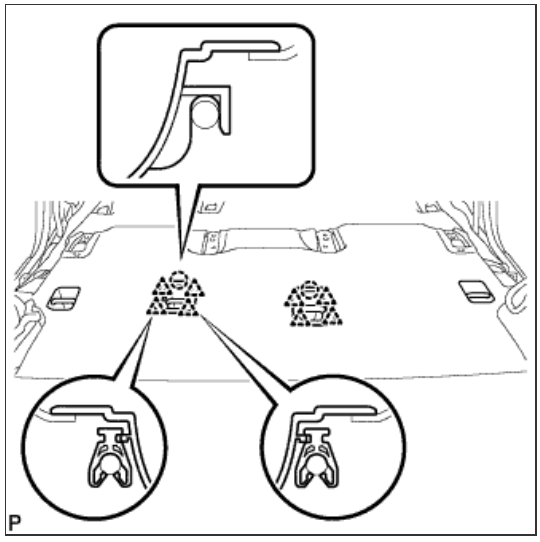
Use the same procedures to remove the protector on the other side.



### 31. REMOVE REAR NO. 2 SEAT PROTECTOR

a. Detach the 4 clips and claw, and remove the protector.

**HINT:**

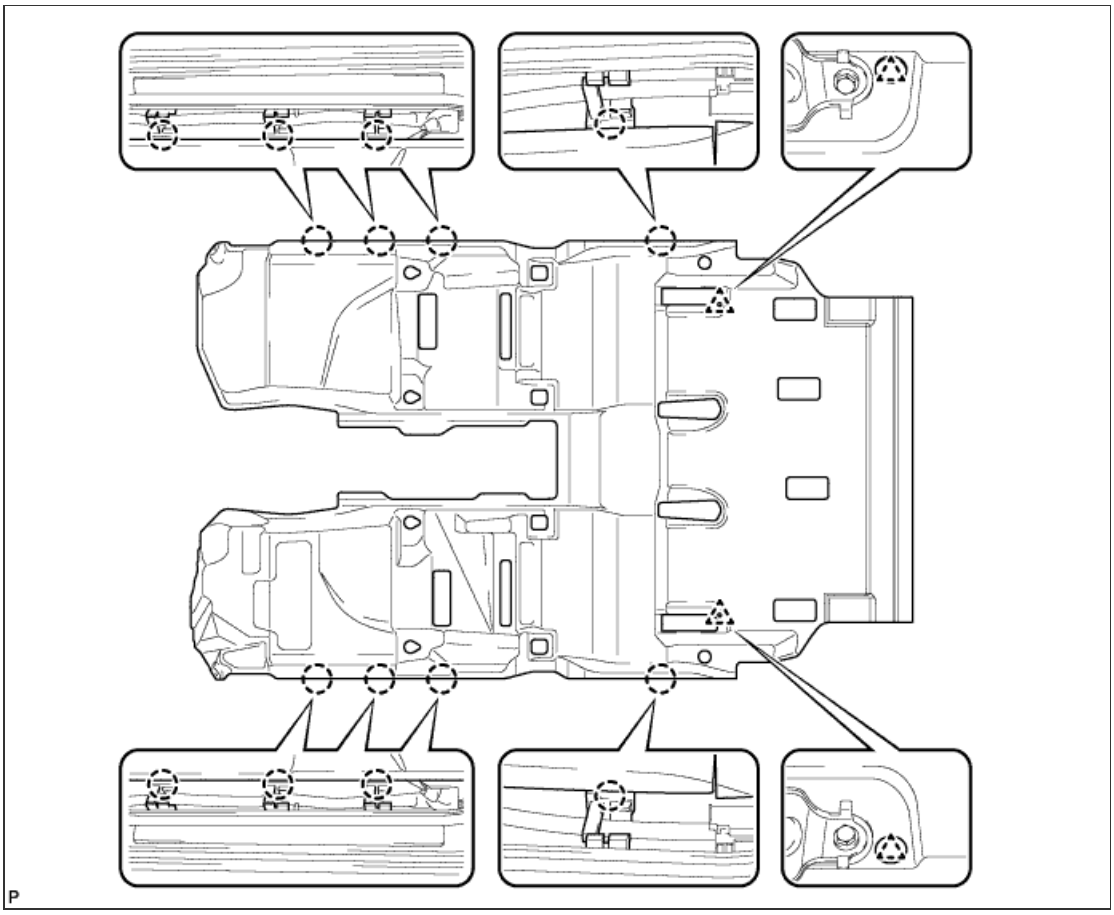
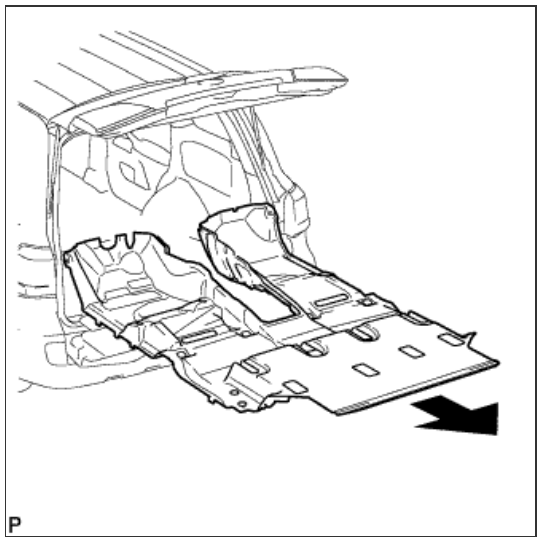
Use the same procedures to remove the protector on the other side.

### 32. REMOVE COOLING BOX ASSEMBLY (w/ Cool Box)



a. Remove the cooling box assembly (Click here).

### 33. REMOVE REAR CONSOLE BOX SUB-ASSEMBLY (w/o Cool Box)

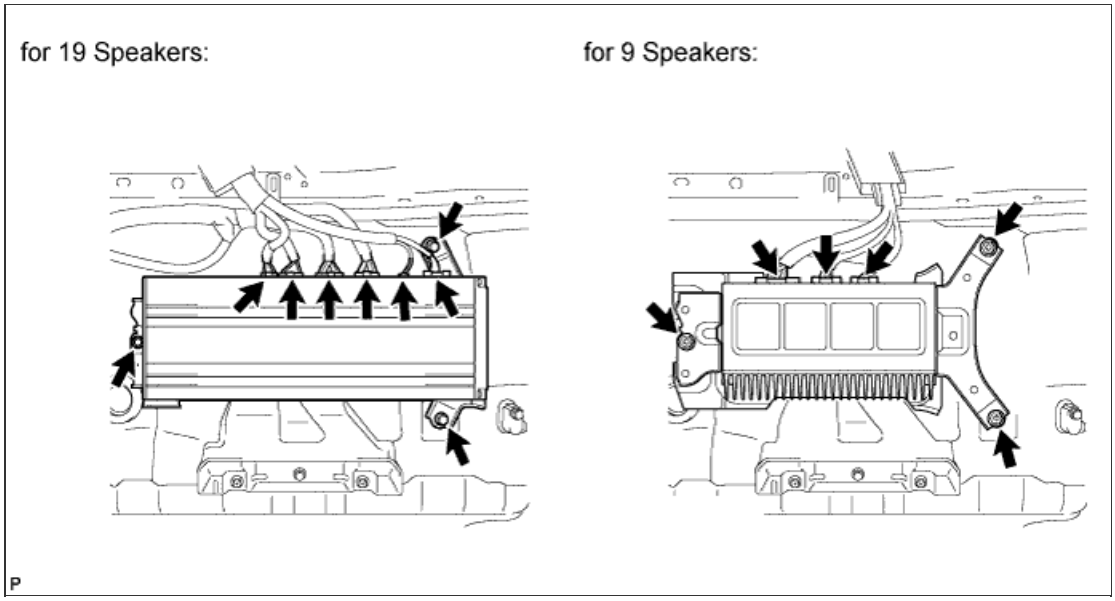


a. Remove the rear console box sub-assembly (Click here).

### 34. REMOVE FRONT FLOOR CARPET ASSEMBLY

a. Detach the 2 clips and 8 claws.

b. Remove the carpet from the floor, open the back door and tail gate, and remove the carpet from the rear of the vehicle.

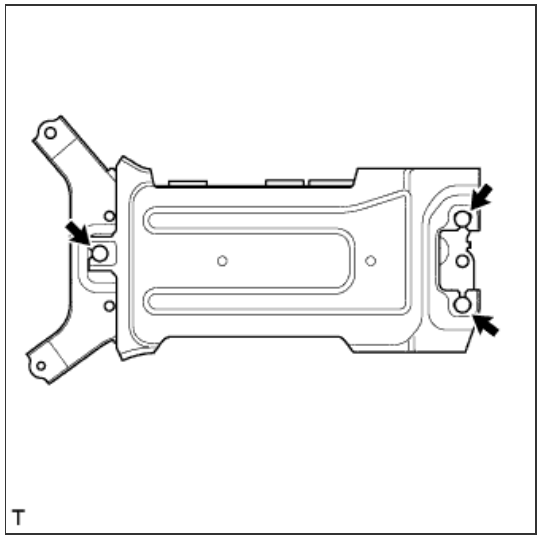


### 35. REMOVE STEREO COMPONENT AMPLIFIER ASSEMBLY WITH BRACKET

a. for 19 Speakers:

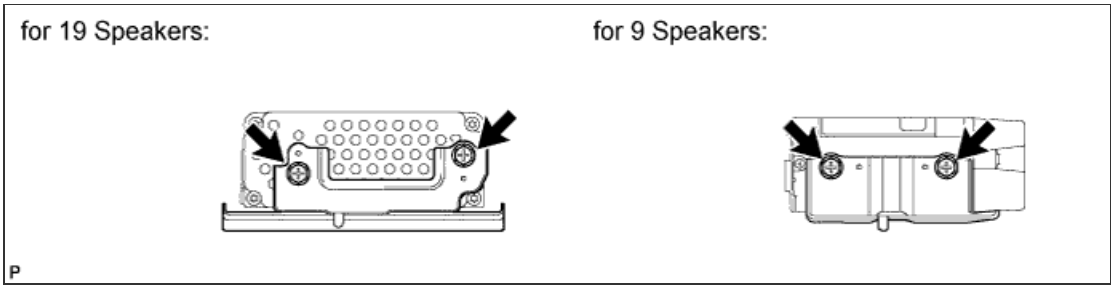
i. Disconnect the 6 connectors.

b. for 9 Speakers:



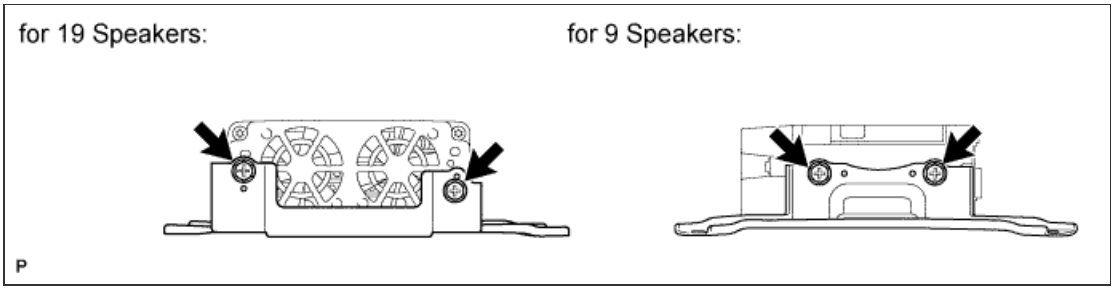
i. Disconnect the 3 connectors.

c. Remove the 3 bolts and remove the amplifier with bracket.



## 36. REMOVE AMPLIFIER COVER (for 9 Speakers)

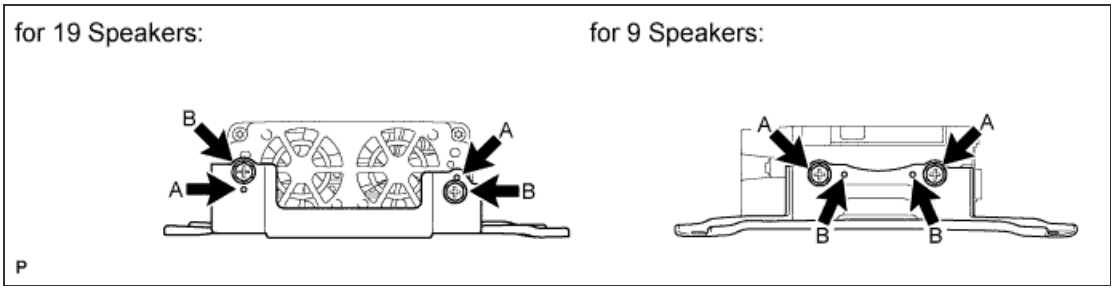
a. Detach the 3 clips and remove the cover.



## 37. REMOVE NO. 1 AMPLIFIER BRACKET

a. Remove the 2 screws and bracket.

## 38. REMOVE NO. 2 AMPLIFIER BRACKET

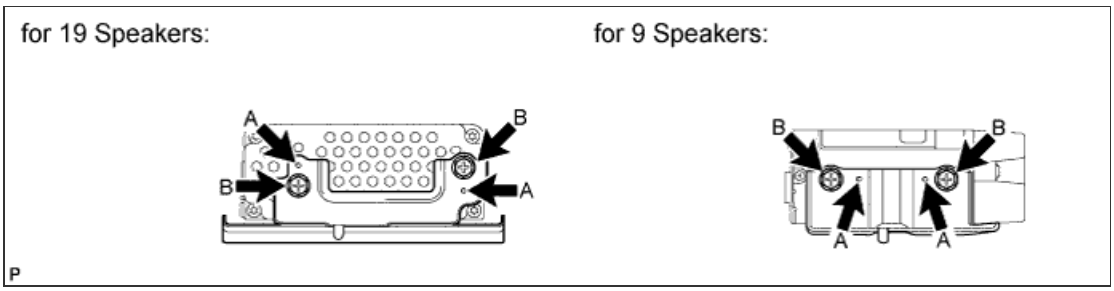


a. Remove the 2 screws and bracket.

**for Preparation** Click here

## 1. INSTALL NO. 2 AMPLIFIER BRACKET

a. Set the aligning protrusions of the bracket, labeled A, into the holes of the amplifier.

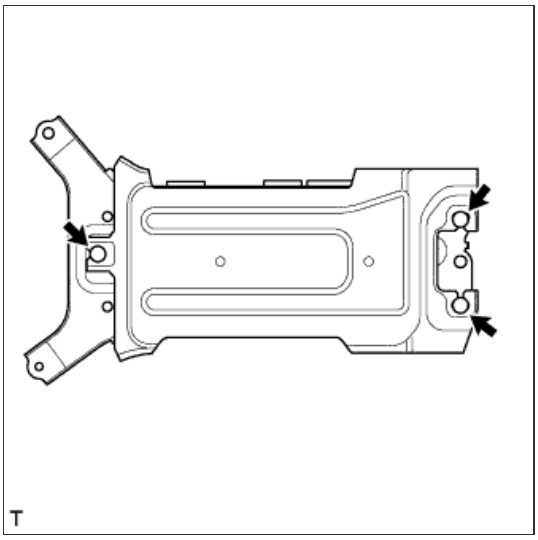


b. Install the bracket with the 2 screws labeled B.

**Torque:**
**3.0 N*m{ 30 kgf*cm , 26 in.*lbf }**

## 2. INSTALL NO. 1 AMPLIFIER BRACKET

a. Set the aligning protrusions of the bracket, labeled A, into the holes of the amplifier.

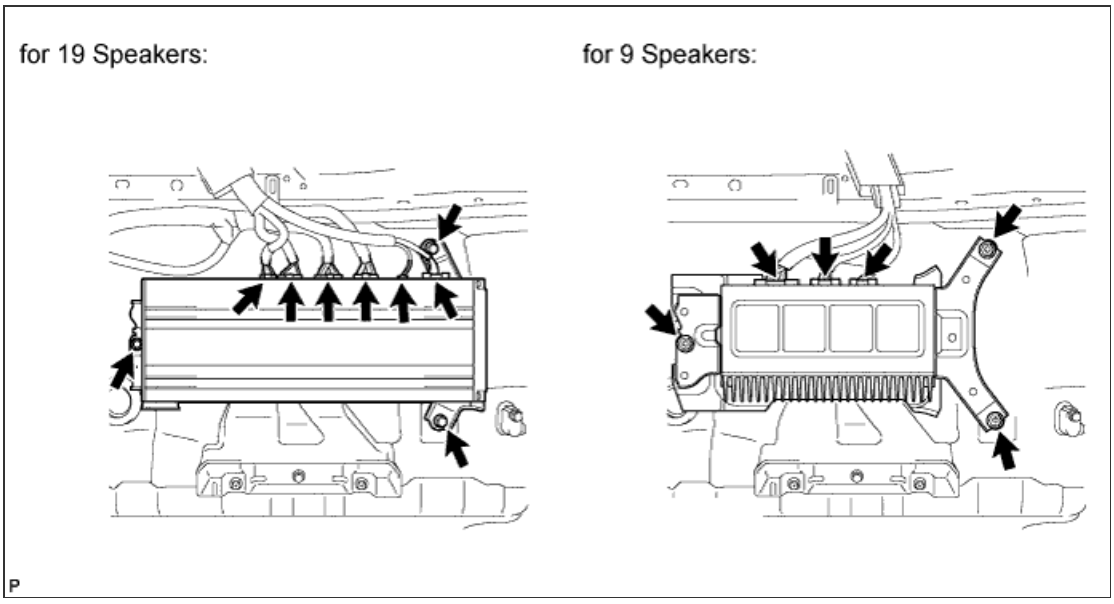


b. Install the bracket with the 2 screws labeled B.

**Torque:**
**3.0 N*m{ 30 kgf*cm , 26 in.*lbf }**

## 3. INSTALL AMPLIFIER COVER (for 9 Speakers)

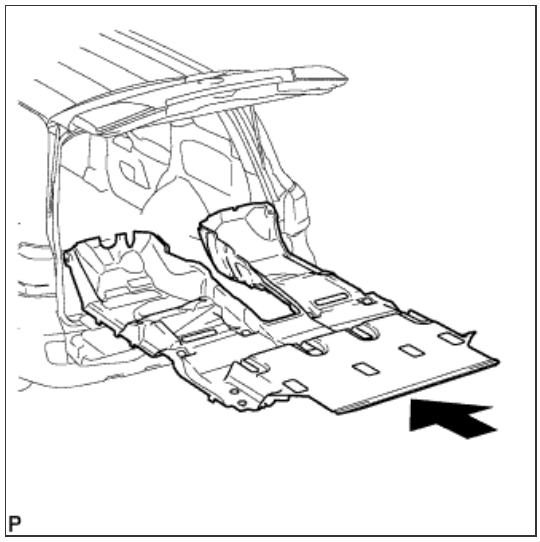
a. Attach the 3 clips to install the cover.



## 4. INSTALL STEREO COMPONENT AMPLIFIER ASSEMBLY WITH BRACKET

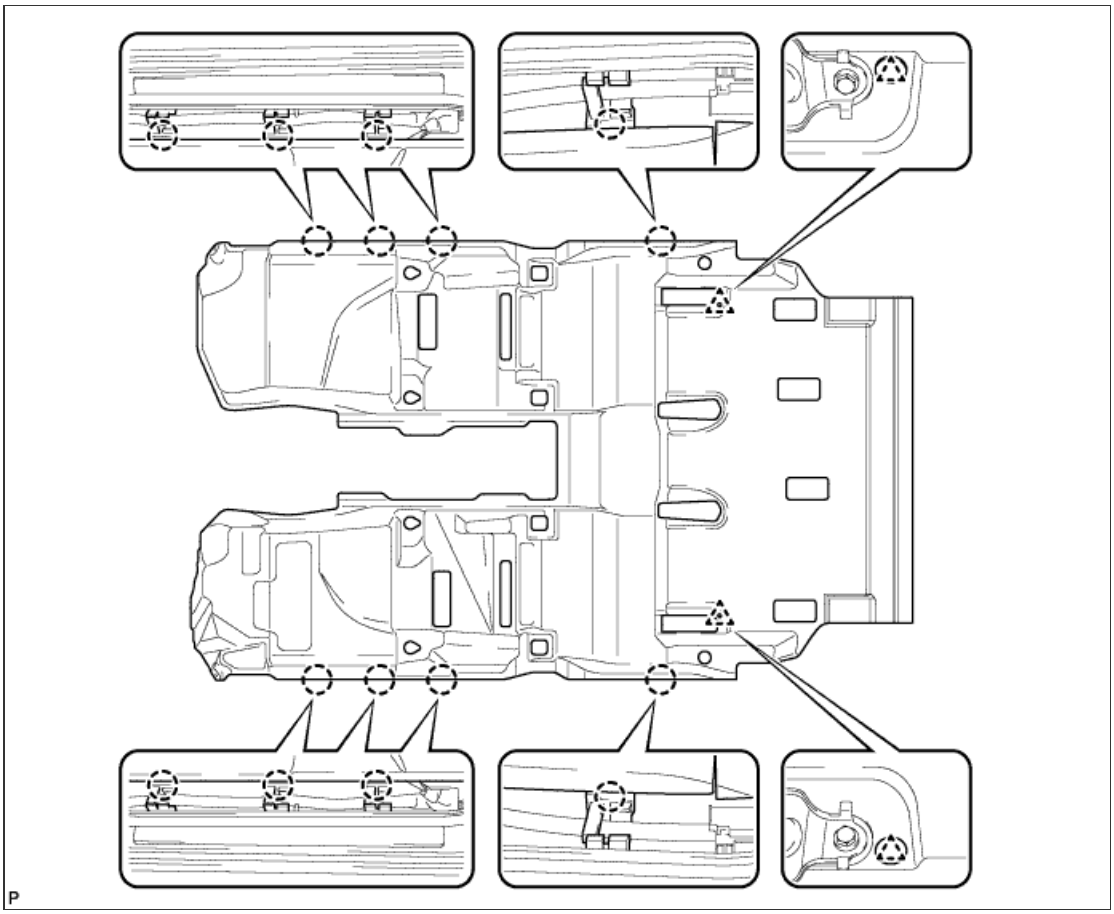
a. Install the amplifier with the 3 bolts.

**Torque:**
**7.5 N*m{ 76 kgf*cm , 66 in.*lbf }**



b. for 19 Speakers:
Connect the 6 connectors.

c. for 9 Speakers:
Connect the 3 connectors.



## 5. INSTALL FRONT FLOOR CARPET ASSEMBLY

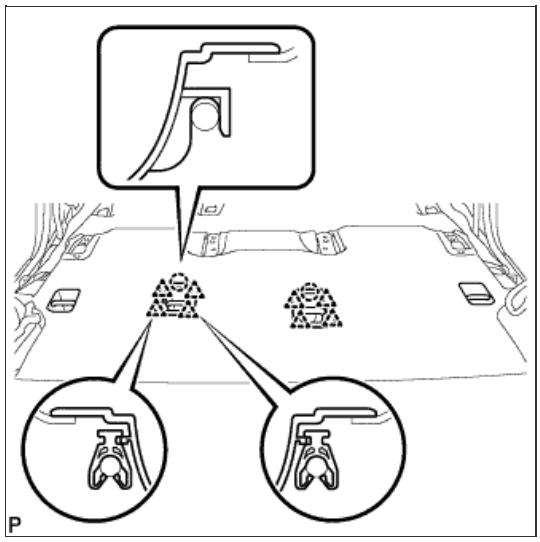
a. Open the tail gate and back door, insert the carpet into the cabin from the rear, and install it to the floor.

b. Attach the 2 clips and 8 claws.

## 6. INSTALL REAR CONSOLE BOX SUB-ASSEMBLY (w/o Cool Box)

a. Install the rear console box (Click here).

## 7. INSTALL COOLING BOX ASSEMBLY (w/ Cool Box)



a. Install the cooling box (Click here).

### 8. INSTALL REAR NO. 2 SEAT PROTECTOR

a. Attach the 4 clips and claw to install the protector.

**HINT:**

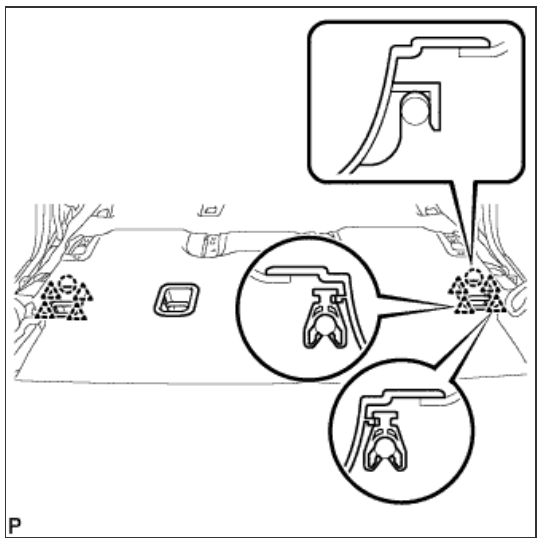
Use the same procedures to install the protector on the other side.



### 9. INSTALL REAR NO. 1 SEAT PROTECTOR

a. Attach the 4 clips and claw to install the protector.

**HINT:**

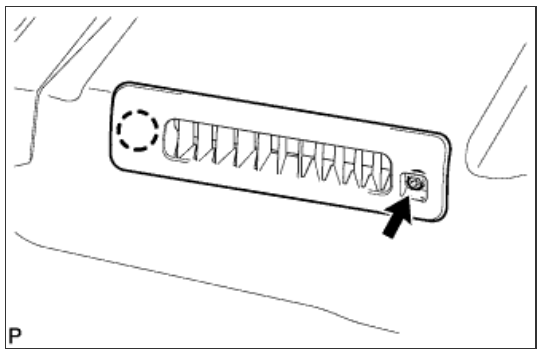
Use the same procedures to install the protector on the other side.



### 10. INSTALL REAR AIR DUCT GUIDE

**HINT:**

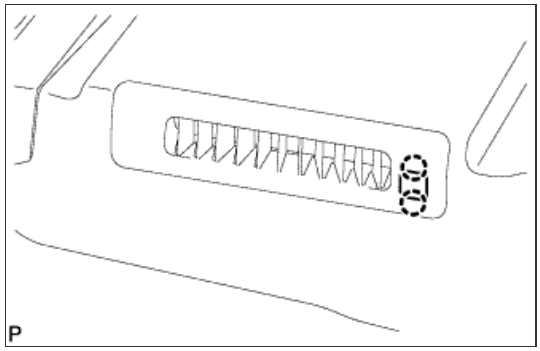
Use the same procedures for both sides.

a. Attach the claw to install the guide.

b. Install the screw.



## 11. INSTALL AIR DUCT PLUG

a. Attach the 2 claws to install the plug.

**HINT:**

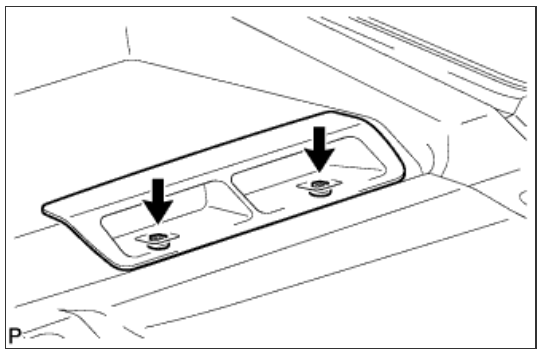
Use the same procedures for both sides.



## 12. INSTALL AIR HEATER GUIDE

a. Install the guide with the 2 screws.

**HINT:**

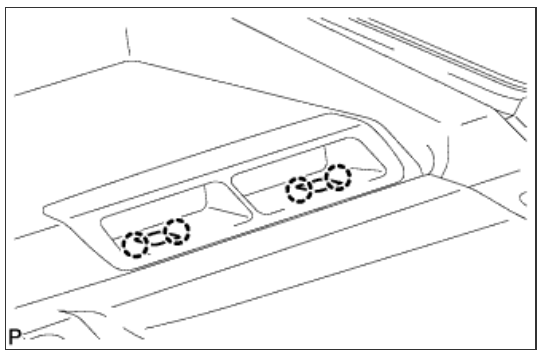
Use the same procedures for both sides.



## 13. INSTALL NO. 2 AIR DUCT PLUG

a. Attach the 4 claws to install the 2 plugs.

**HINT:**

Use the same procedures for both sides.

## 14. INSTALL REAR DOOR SCUFF PLATE RH

**HINT:**

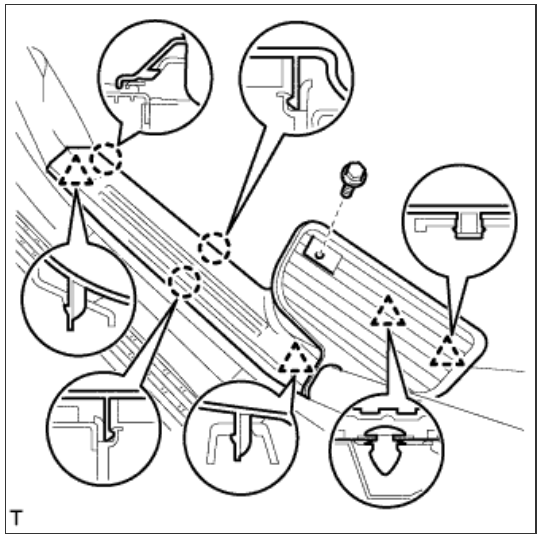
Use the same procedures described for the LH side.

## 15. INSTALL REAR DOOR SCUFF PLATE LH

a. w/o Illumination Type Front Door Scuff Plate:

i. Attach the 3 claws and 4 clips to install the scuff plate.

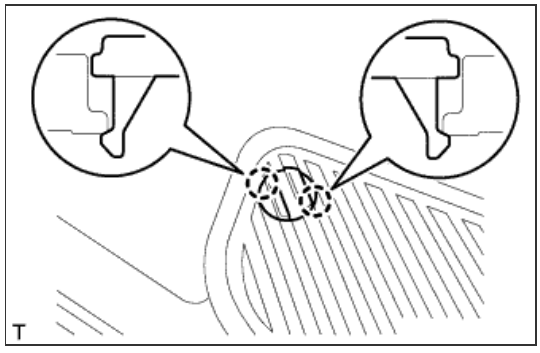


ii. Install the screw.

b. w/ Illumination Type Front Door Scuff Plate:

i. Attach the 3 claws and 4 clips to install the scuff plate.

ii. Install the screw.



## 16. INSTALL REAR STEP COVER

**HINT:**

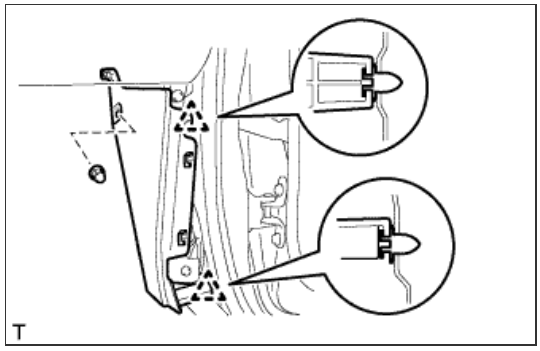
Use the same procedure to install the step cover on the other side.

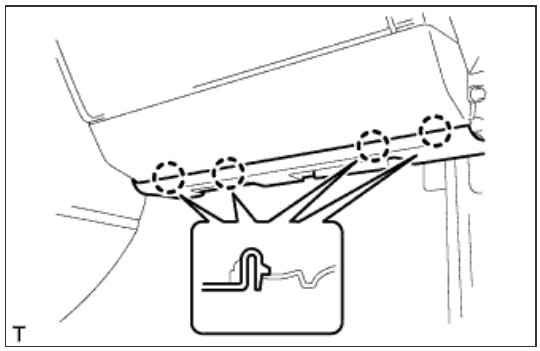
a. w/o Illumination Type Front Door Scuff Plate:
Attach the 2 claws to install the step cover.



b. w/ Illumination Type Front Door Scuff Plate:
Attach the 4 claws to install the step cover.

## 17. INSTALL COWL SIDE TRIM BOARD RH

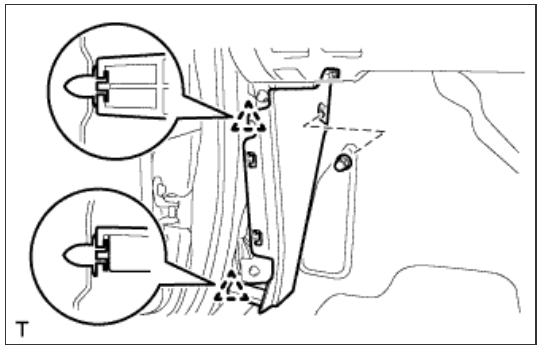
a. Attach the 2 clips to install the trim board.



b. Install the cap nut.

## 18. INSTALL NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

a. Connect the connector.

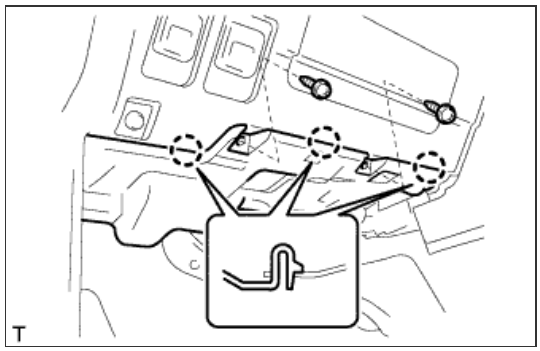


b. Attach the 4 claws to install the under cover.

## 19. INSTALL COWL SIDE TRIM BOARD LH

a. Attach the 2 clips to install the trim board.

b. Install the cap nut.



## 20. INSTALL NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

a. Connect the connectors.

b. Attach the 3 claws to install the under cover.

c. Install the 2 screws.

## 21. INSTALL FRONT DOOR SCUFF PLATE RH

**HINT:**

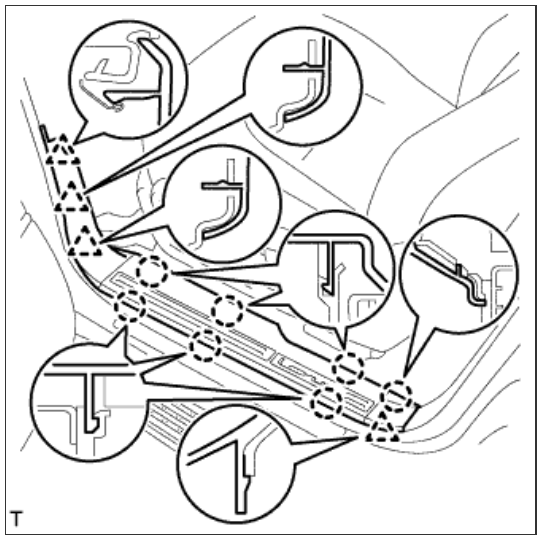
Use the same procedures described for the LH side.

## 22. INSTALL FRONT DOOR SCUFF PLATE LH

a. w/o Illumination:



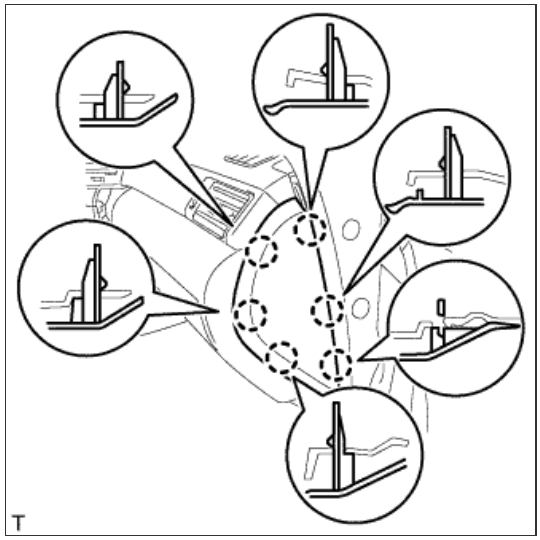
i. Attach the 7 claws and 4 clips to install the scuff plate.

b. w/ Illumination:

i. Connect the connector.

ii. Attach the 7 claws and 4 clips to install the scuff plate.

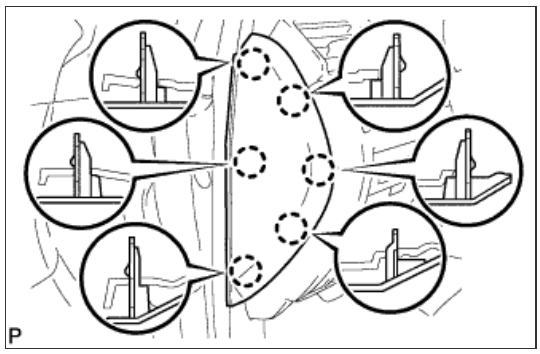
## 23. INSTALL INSTRUMENT SIDE PANEL RH



a. w/o Airbag Cut Off Switch:

i. Attach the 6 claws to install the side panel.

b. w/ Airbag Cut Off Switch:



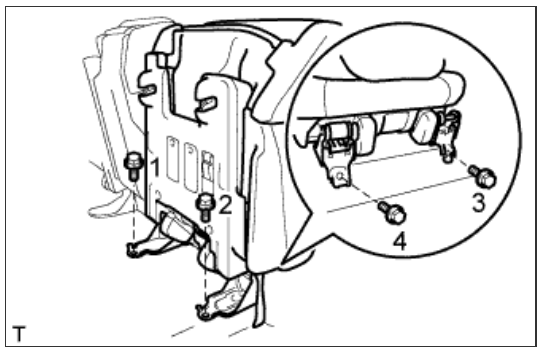
i. Connect the connector.

ii. Attach the 6 claws to install the side panel.

## 24. INSTALL INSTRUMENT SIDE PANEL LH

a. Attach the 6 claws to install the side panel.

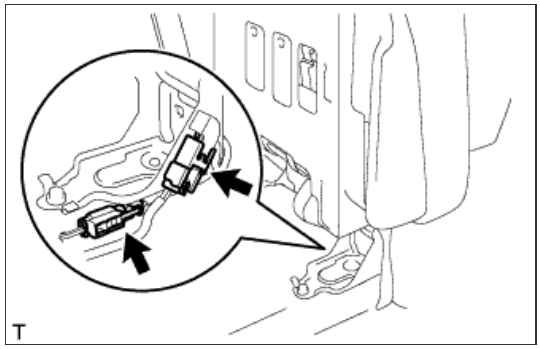
## 25. INSTALL REAR NO. 1 SEAT ASSEMBLY RH



a. Temporarily install the seat assembly with the 4 bolts.

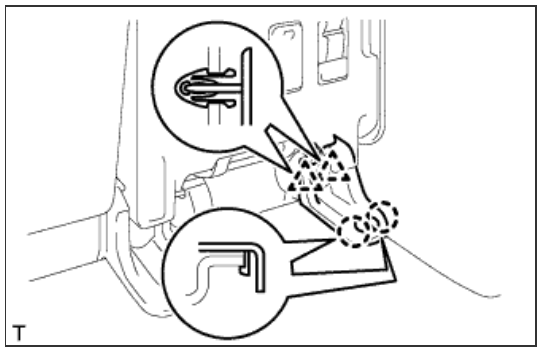
**NOTICE:**

Be careful not to damage the vehicle body.



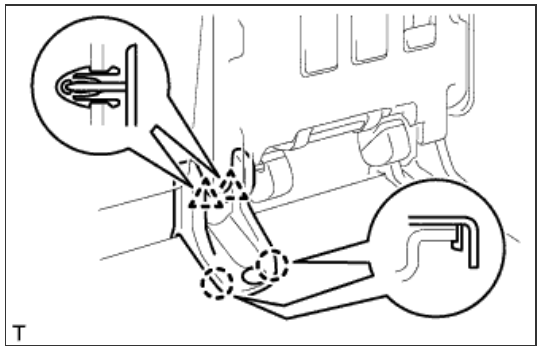
b. Tighten the bolts in the order shown in the illustration.

**Torque:**
**37 N*m{ 377 kgf*cm , 27 ft.*lbf }**



c. Connect the connector.

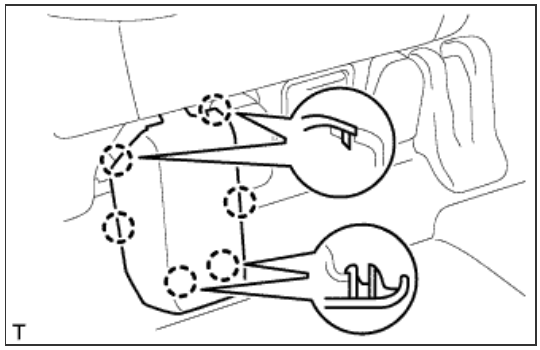
d. w/ Seat Heater System:
Connect the connector.



## 26. INSTALL REAR NO. 3 SEAT CUSHION HINGE COVER

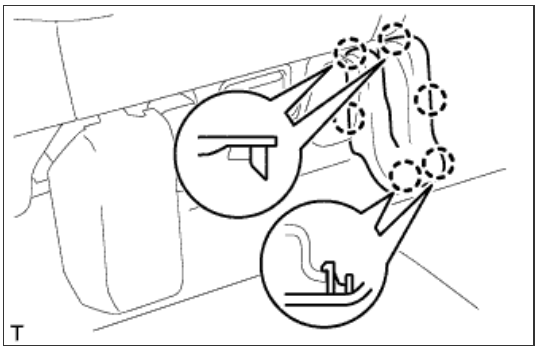
a. Attach the 2 clips and 2 claws to install the cover.

## 27. INSTALL REAR NO. 1 SEAT CUSHION HINGE COVER



a. Attach the 2 clips and 2 claws to install the cover.

## 28. INSTALL REAR NO. 4 SEAT CUSHION HINGE COVER



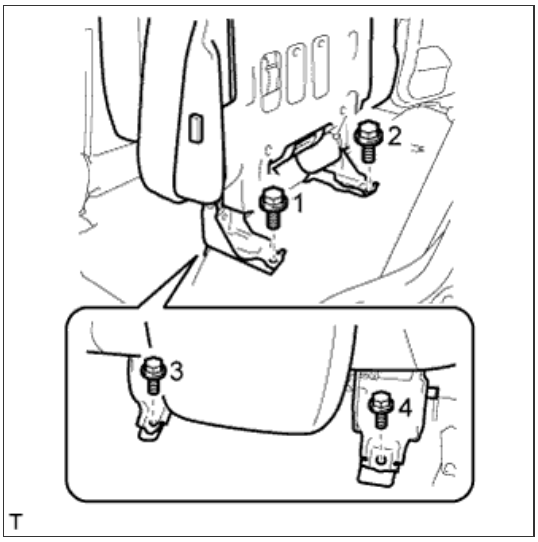
a. Return the seat to the upright position.

b. Attach the 6 claws to install the cover.

## 29. INSTALL REAR NO. 2 SEAT CUSHION HINGE COVER

a. Attach the 6 claws to install the cover.

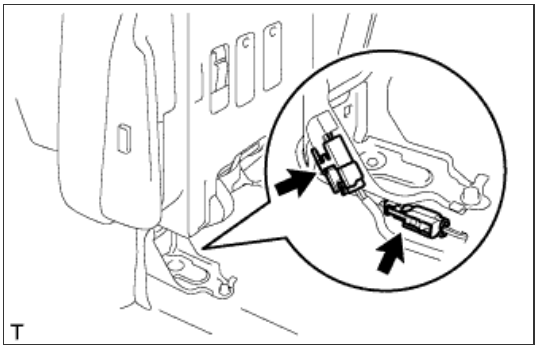
## 30. INSTALL REAR NO. 1 SEAT ASSEMBLY LH



a. Temporarily install the seat assembly with the 4 bolts.

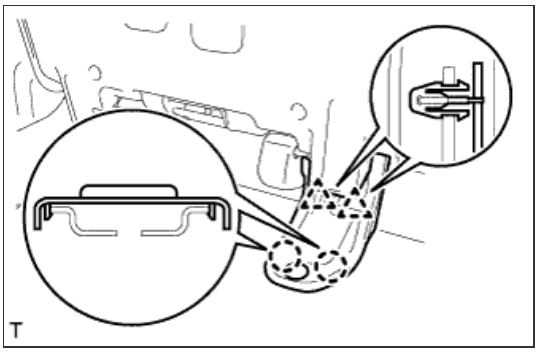
**NOTICE:**

Be careful not to damage the vehicle body.



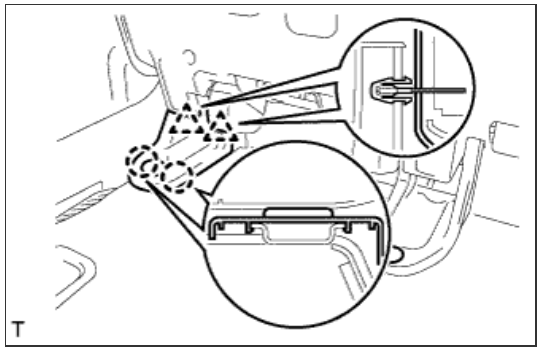
b. Tighten the bolts in the order shown in the illustration.

**Torque:**
**37 N*m{ 377 kgf*cm , 27 ft.*lbf }**



c. Connect the connector.

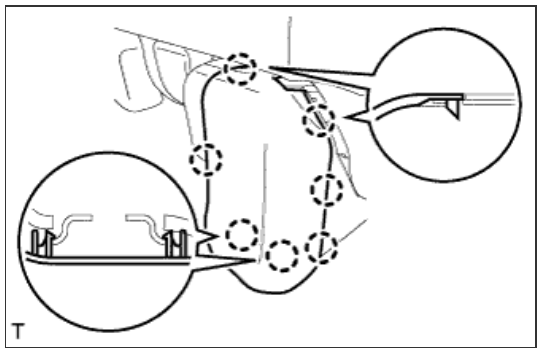
d. w/ Seat Heater System:
Connect the connector.



## 31. INSTALL REAR NO. 4 SEAT CUSHION HINGE COVER

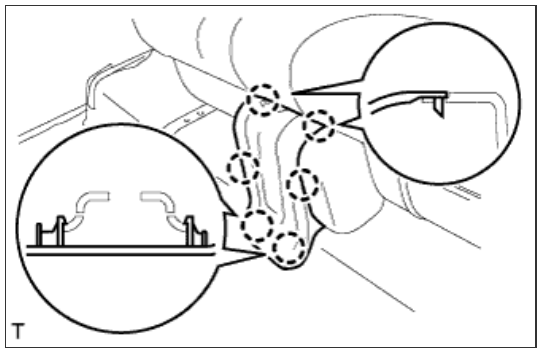
a. Attach the 2 clips and 2 claws to install the cover.

## 32. INSTALL REAR NO. 2 SEAT CUSHION HINGE COVER



a. Attach the 2 clips and 2 claws to install the cover.

### 33. INSTALL REAR NO. 5 SEAT CUSHION HINGE COVER



a. Return the seat to the upright position.

b. Attach the 7 claws to install the cover.

### 34. INSTALL REAR NO. 3 SEAT CUSHION HINGE COVER

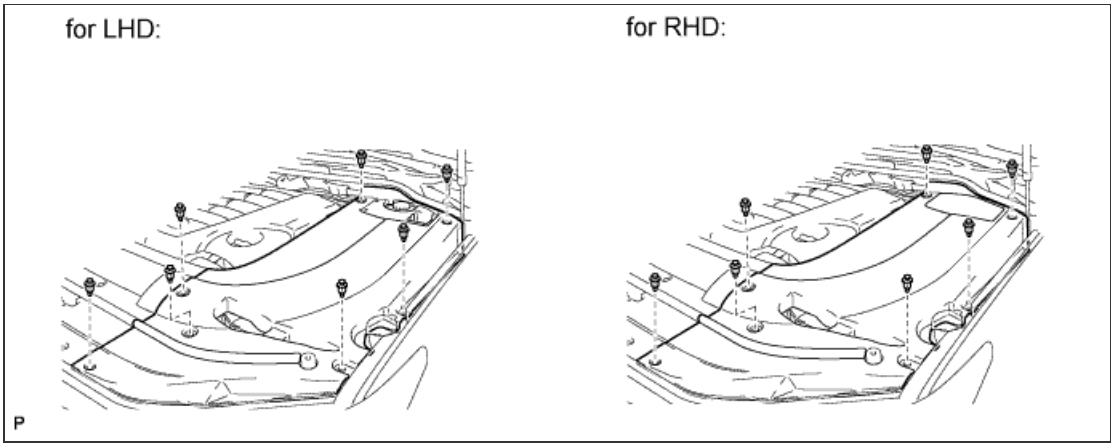
a. Attach the 6 claws to install the cover.

### 35. INSTALL FRONT SEAT ASSEMBLY RH

a. Install the front seat assembly RH ( Click here).

### 36. INSTALL FRONT SEAT ASSEMBLY LH

a. Install the front seat assembly LH ( Click here).



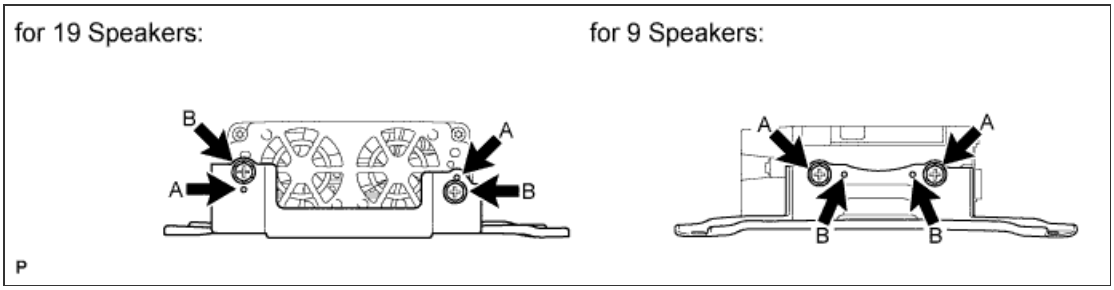
### 37. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

## 38. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.



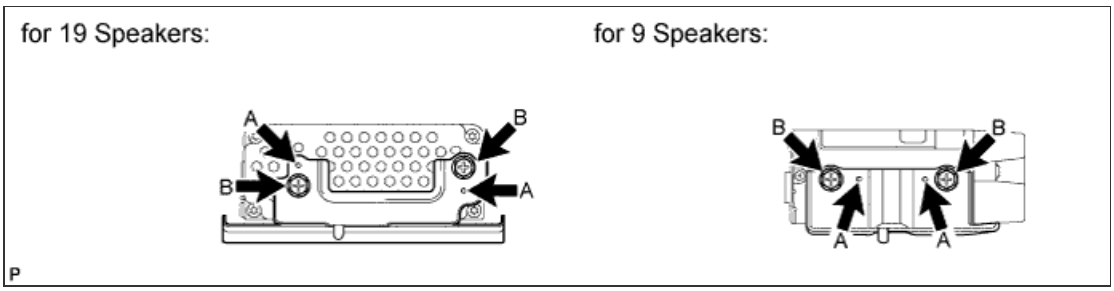
## 39. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).

**for Preparation** Click here

## 1. INSTALL NO. 2 AMPLIFIER BRACKET

a. Set the aligning protrusions of the bracket, labeled A, into the holes of the amplifier.

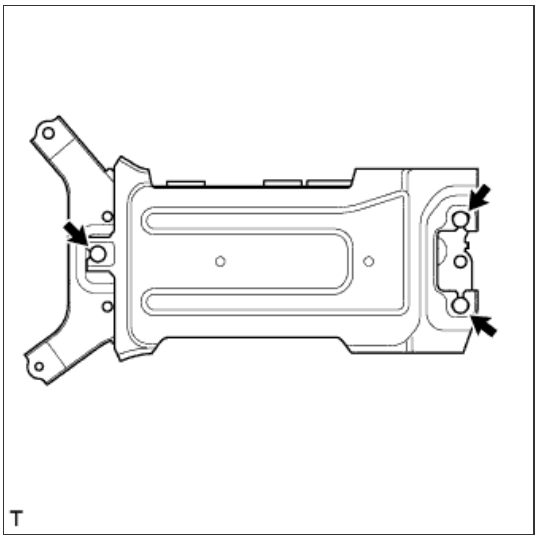


b. Install the bracket with the 2 screws labeled B.

**Torque:**
**3.0 N*m{ 30 kgf*cm , 26 in.*lbf }**

## 2. INSTALL NO. 1 AMPLIFIER BRACKET

a. Set the aligning protrusions of the bracket, labeled A, into the holes of the amplifier.

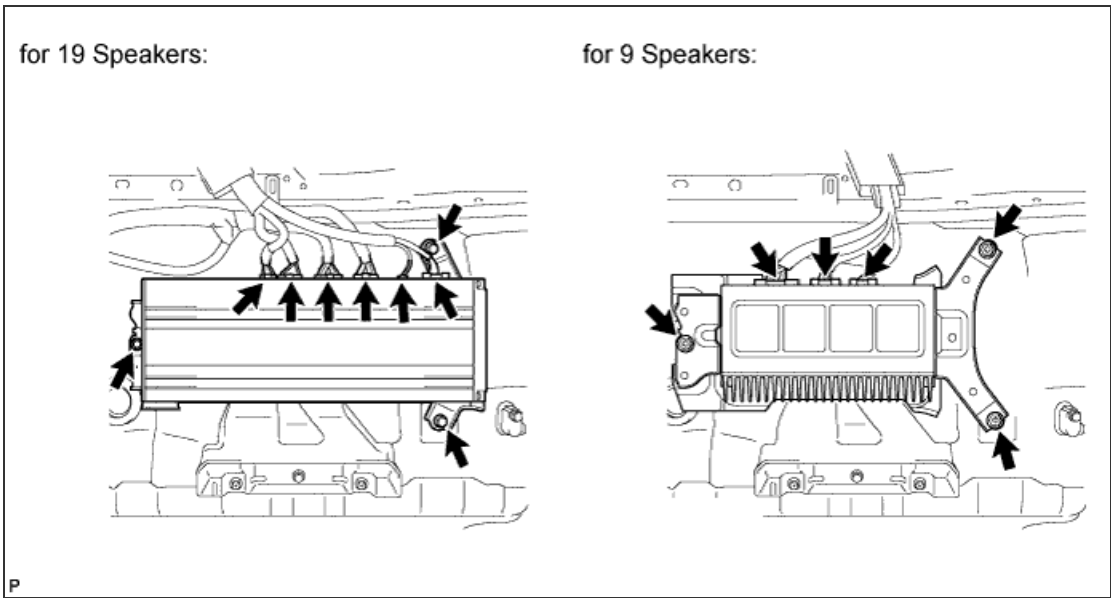


b. Install the bracket with the 2 screws labeled B.

**Torque:**
**3.0 N*m{ 30 kgf*cm , 26 in.*lbf }**

## 3. INSTALL AMPLIFIER COVER (for 9 Speakers)

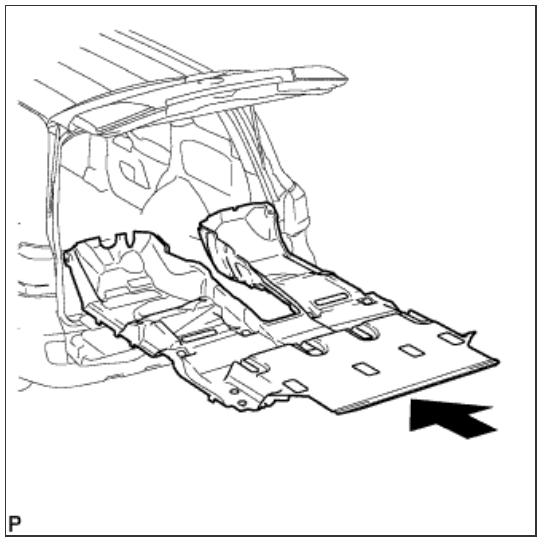
a. Attach the 3 clips to install the cover.



## 4. INSTALL STEREO COMPONENT AMPLIFIER ASSEMBLY WITH BRACKET

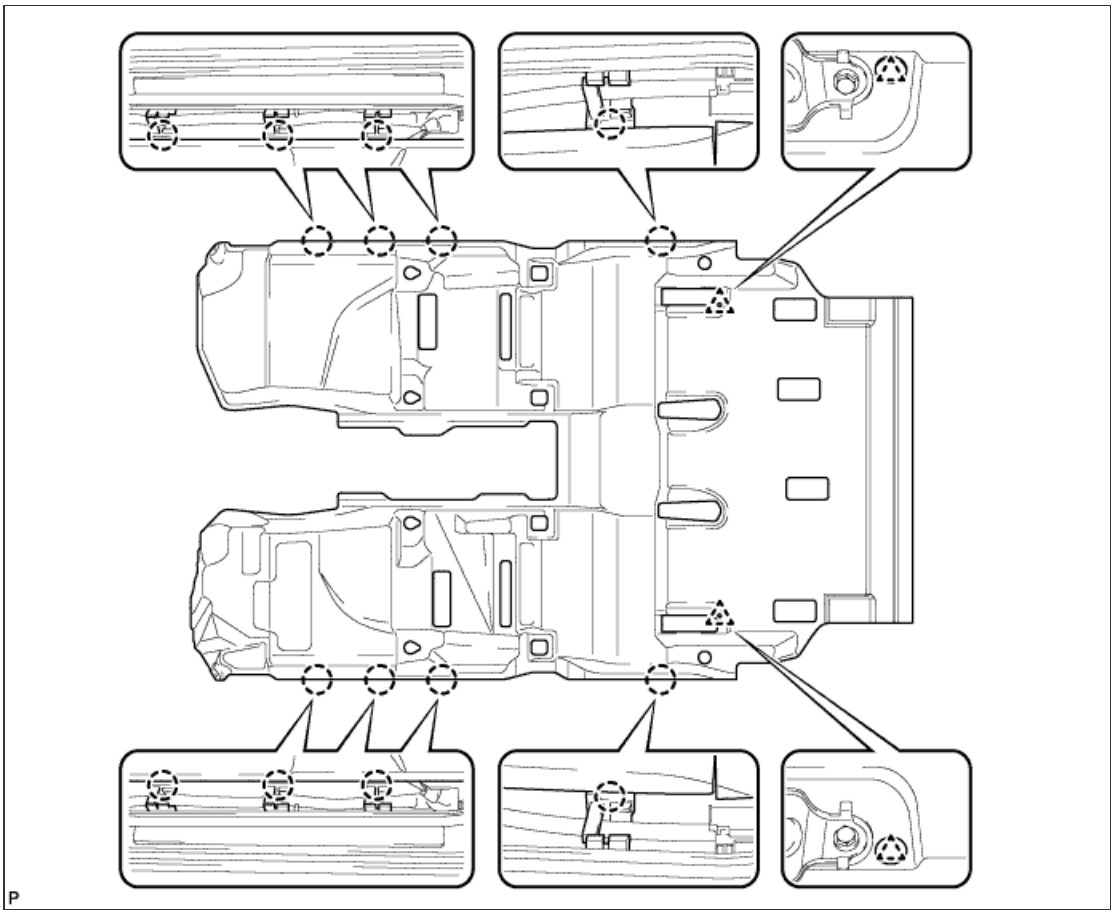
a. Install the amplifier with the 3 bolts.

**Torque:**
**7.5 N*m{ 76 kgf*cm , 66 in.*lbf }**



b. for 19 Speakers:
Connect the 6 connectors.

c. for 9 Speakers:
Connect the 3 connectors.



## 5. INSTALL FRONT FLOOR CARPET ASSEMBLY

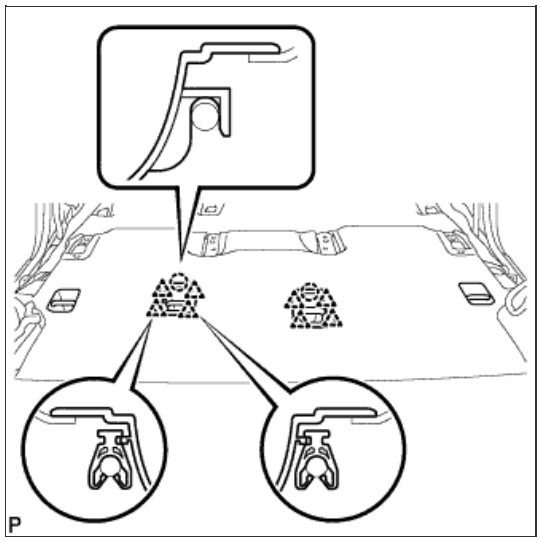
a. Open the tail gate and back door, insert the carpet into the cabin from the rear, and install it to the floor.

b. Attach the 2 clips and 8 claws.

## 6. INSTALL REAR CONSOLE BOX SUB-ASSEMBLY (w/o Cool Box)

a. Install the rear console box (Click here).

## 7. INSTALL COOLING BOX ASSEMBLY (w/ Cool Box)



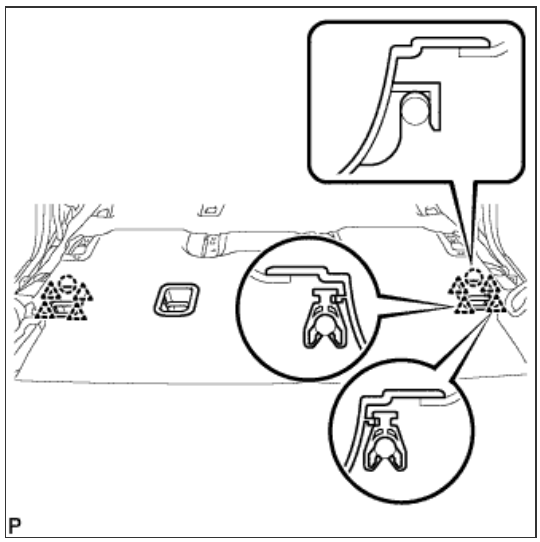
a. Install the cooling box (Click here).

### 8. INSTALL REAR NO. 2 SEAT PROTECTOR

a. Attach the 4 clips and claw to install the protector.

**HINT:**

Use the same procedures to install the protector on the other side.

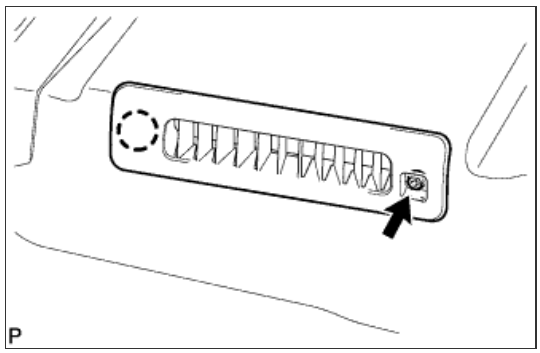


### 9. INSTALL REAR NO. 1 SEAT PROTECTOR

a. Attach the 4 clips and claw to install the protector.

**HINT:**

Use the same procedures to install the protector on the other side.



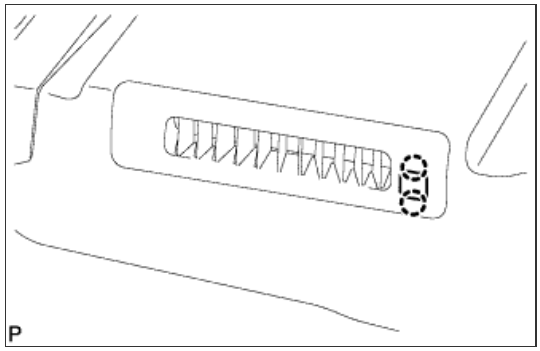
### 10. INSTALL REAR AIR DUCT GUIDE

**HINT:**

Use the same procedures for both sides.

a. Attach the claw to install the guide.

b. Install the screw.

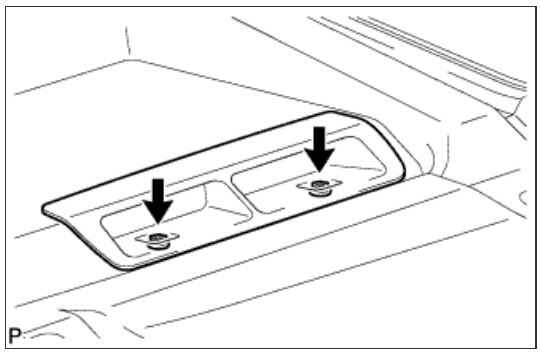


## 11. INSTALL AIR DUCT PLUG

a. Attach the 2 claws to install the plug.

**HINT:**

Use the same procedures for both sides.

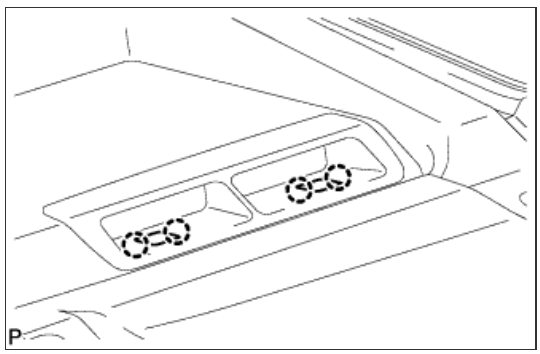


## 12. INSTALL AIR HEATER GUIDE

a. Install the guide with the 2 screws.

**HINT:**

Use the same procedures for both sides.



## 13. INSTALL NO. 2 AIR DUCT PLUG

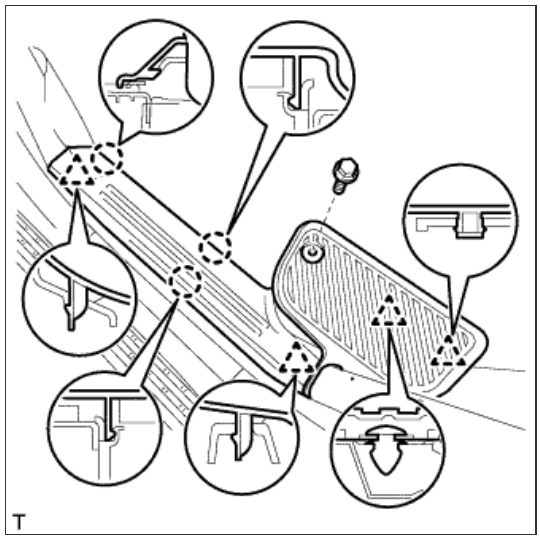
a. Attach the 4 claws to install the 2 plugs.

**HINT:**

Use the same procedures for both sides.

## 14. INSTALL REAR DOOR SCUFF PLATE RH

**HINT:**

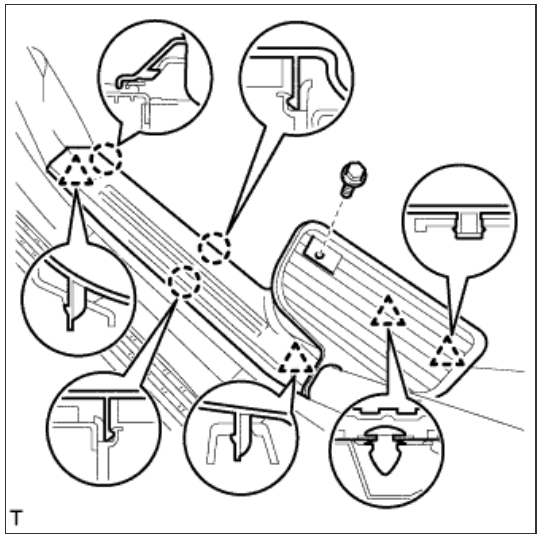


Use the same procedures described for the LH side.

## 15. INSTALL REAR DOOR SCUFF PLATE LH

a. w/o Illumination Type Front Door Scuff Plate:

i. Attach the 3 claws and 4 clips to install the scuff plate.

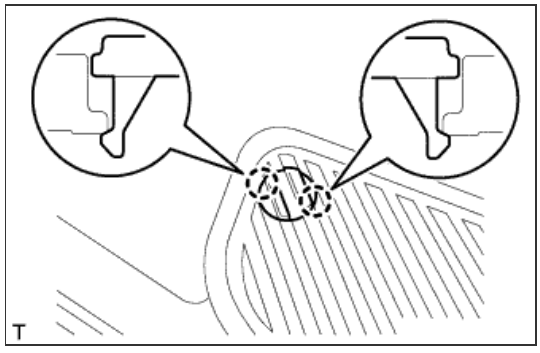


ii. Install the screw.

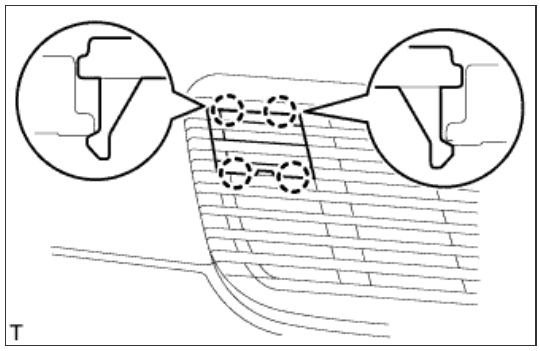
b. w/ Illumination Type Front Door Scuff Plate:

i. Attach the 3 claws and 4 clips to install the scuff plate.

ii. Install the screw.



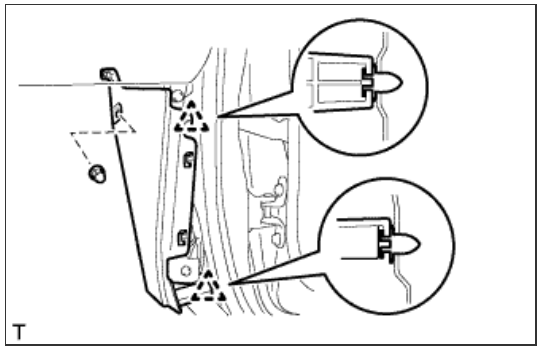
## 16. INSTALL REAR STEP COVER



**HINT:**

Use the same procedure to install the step cover on the other side.

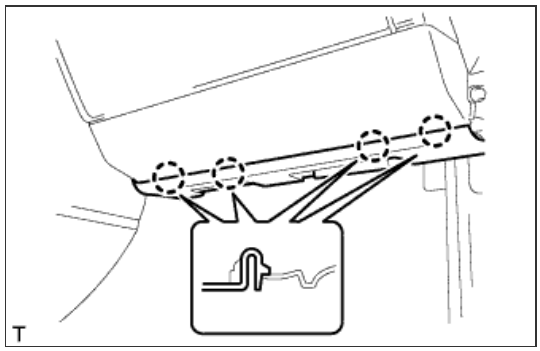
a. w/o Illumination Type Front Door Scuff Plate:
Attach the 2 claws to install the step cover.



b. w/ Illumination Type Front Door Scuff Plate:
Attach the 4 claws to install the step cover.

## 17. INSTALL COWL SIDE TRIM BOARD RH

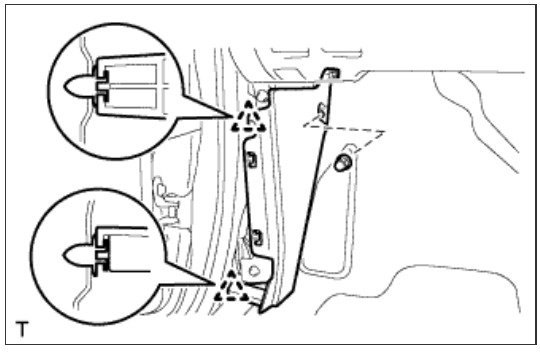
a. Attach the 2 clips to install the trim board.



b. Install the cap nut.

## 18. INSTALL NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

a. Connect the connector.

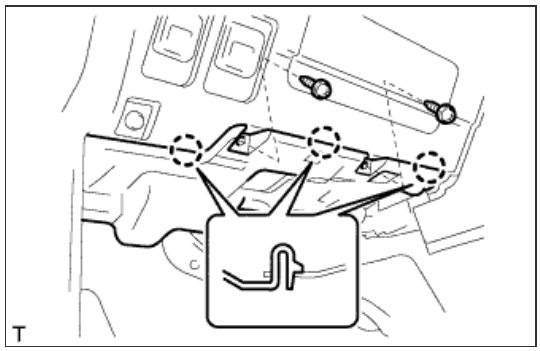


b. Attach the 4 claws to install the under cover.

## 19. INSTALL COWL SIDE TRIM BOARD LH

a. Attach the 2 clips to install the trim board.

b. Install the cap nut.



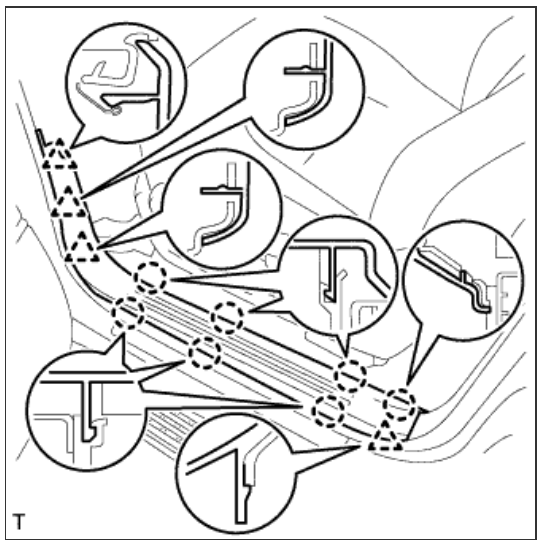
## 20. INSTALL NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

a. Connect the connectors.

b. Attach the 3 claws to install the under cover.

c. Install the 2 screws.

## 21. INSTALL FRONT DOOR SCUFF PLATE RH

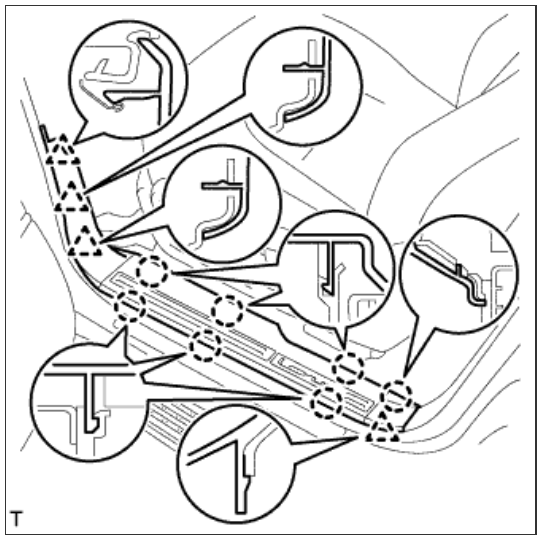


**HINT:**

Use the same procedures described for the LH side.

## 22. INSTALL FRONT DOOR SCUFF PLATE LH

a. w/o Illumination:



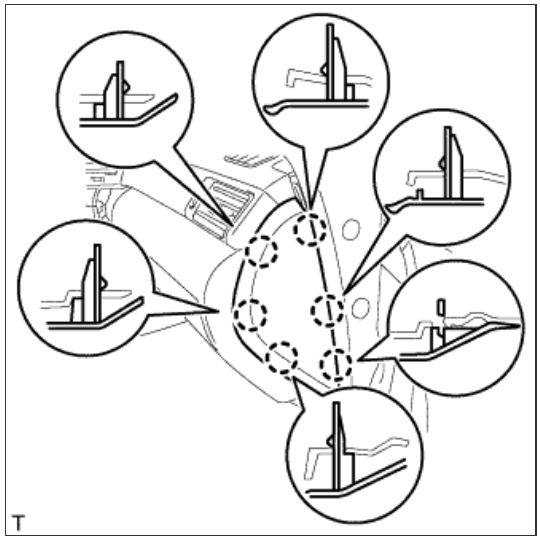
i. Attach the 7 claws and 4 clips to install the scuff plate.

b. w/ Illumination:

i. Connect the connector.

ii. Attach the 7 claws and 4 clips to install the scuff plate.

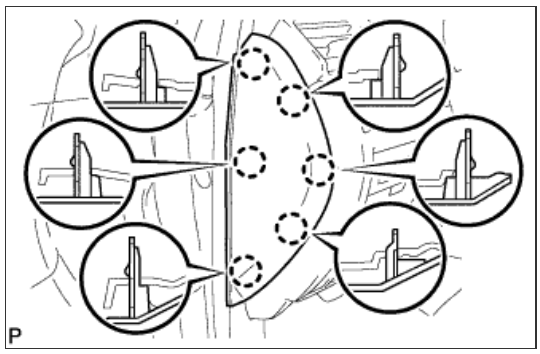
## 23. INSTALL INSTRUMENT SIDE PANEL RH



a. w/o Airbag Cut Off Switch:

i. Attach the 6 claws to install the side panel.

b. w/ Airbag Cut Off Switch:



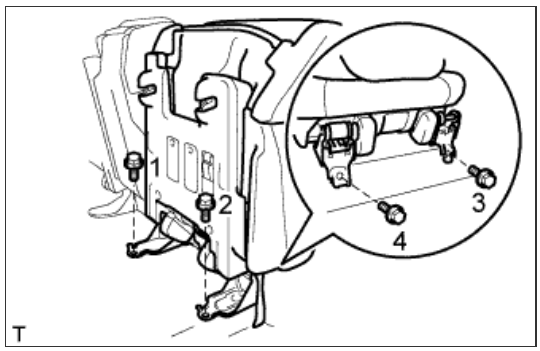
i. Connect the connector.

ii. Attach the 6 claws to install the side panel.

## 24. INSTALL INSTRUMENT SIDE PANEL LH

a. Attach the 6 claws to install the side panel.

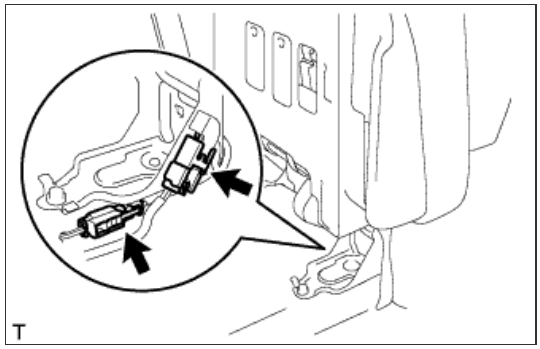
## 25. INSTALL REAR NO. 1 SEAT ASSEMBLY RH



a. Temporarily install the seat assembly with the 4 bolts.

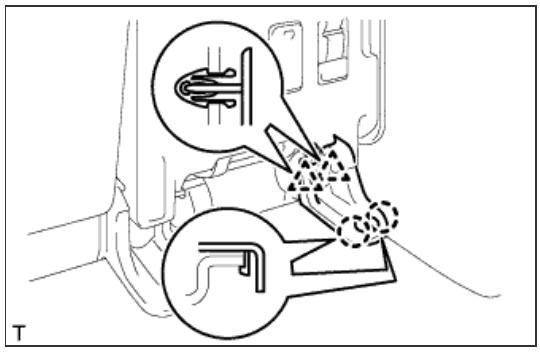
**NOTICE:**

Be careful not to damage the vehicle body.



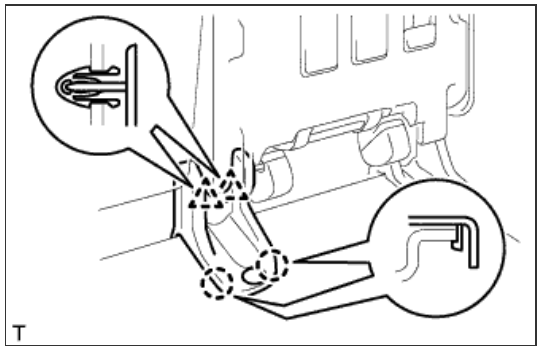
b. Tighten the bolts in the order shown in the illustration.

**Torque:**
**37 N*m{ 377 kgf*cm , 27 ft.*lbf }**



c. Connect the connector.

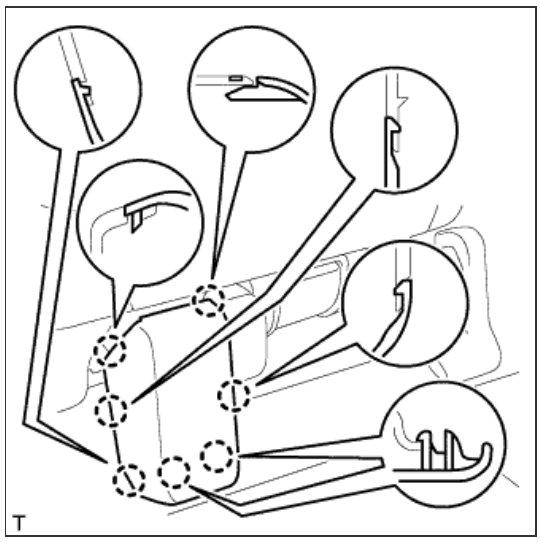
d. w/ Seat Heater System:
Connect the connector.



## 26. INSTALL REAR NO. 3 SEAT CUSHION HINGE COVER

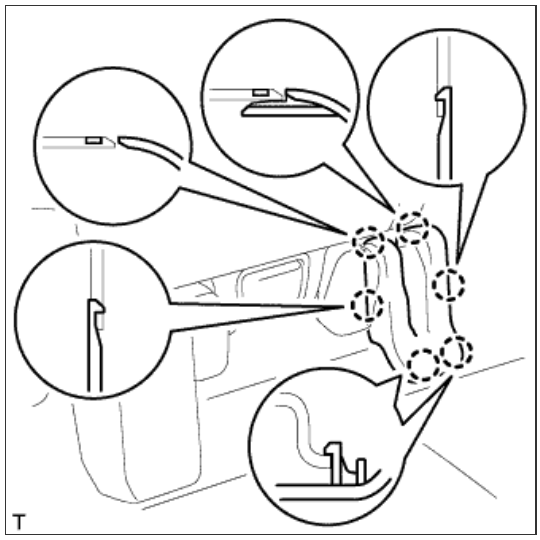
a. Attach the 2 clips and 2 claws to install the cover.

## 27. INSTALL REAR NO. 1 SEAT CUSHION HINGE COVER



a. Attach the 2 clips and 2 claws to install the cover.

## 28. INSTALL REAR NO. 4 SEAT CUSHION HINGE COVER



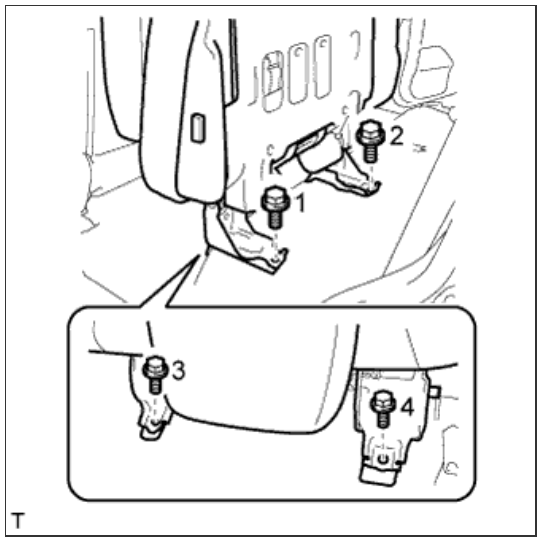
a. Return the seat to the upright position.

b. Attach the 7 claws to install the cover.

## 29. INSTALL REAR NO. 2 SEAT CUSHION HINGE COVER

a. Attach the 6 claws to install the cover.

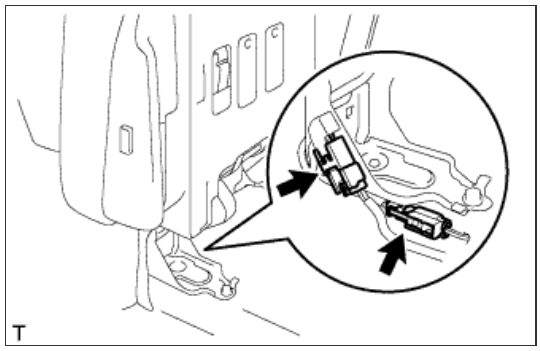
## 30. INSTALL REAR NO. 1 SEAT ASSEMBLY LH



a. Temporarily install the seat assembly with the 4 bolts.

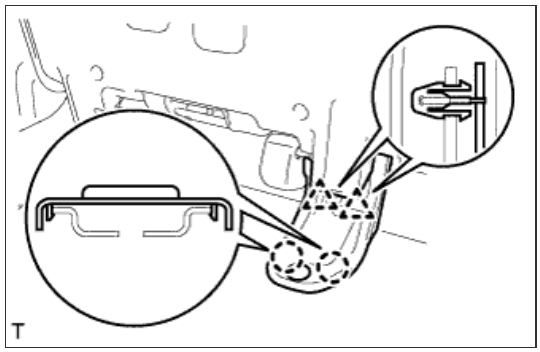
**NOTICE:**

Be careful not to damage the vehicle body.



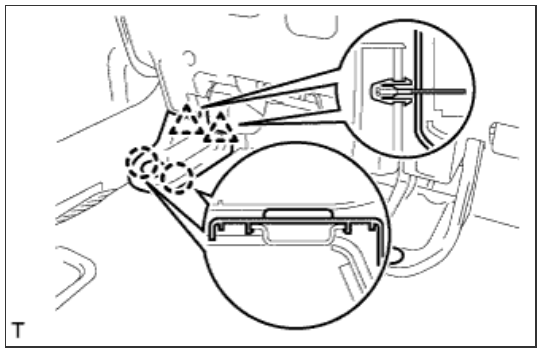
b. Tighten the bolts in the order shown in the illustration.

**Torque:**
**37 N*m{ 377 kgf*cm , 27 ft.*lbf }**



c. Connect the connector.

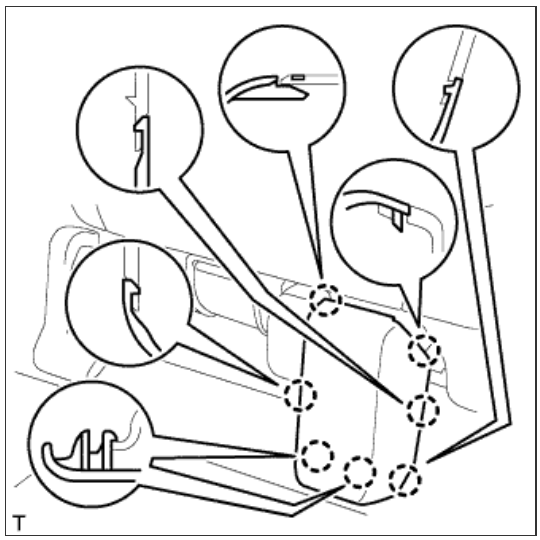
d. w/ Seat Heater System:
Connect the connector.



## 31. INSTALL REAR NO. 4 SEAT CUSHION HINGE COVER

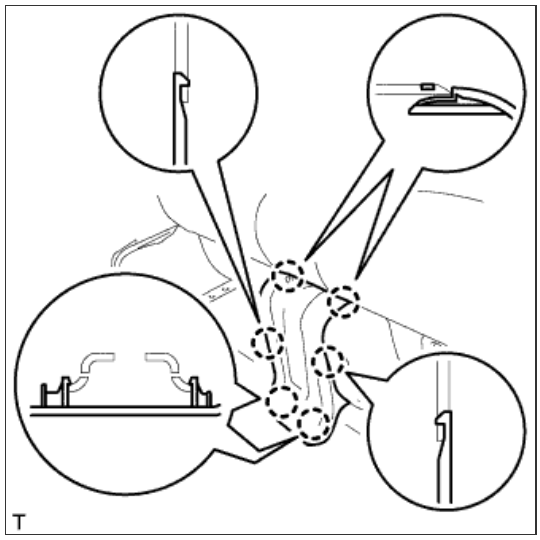
a. Attach the 2 clips and 2 claws to install the cover.

### 32. INSTALL REAR NO. 2 SEAT CUSHION HINGE COVER



a. Attach the 2 clips and 2 claws to install the cover.

### 33. INSTALL REAR NO. 5 SEAT CUSHION HINGE COVER



a. Return the seat to the upright position.

b. Attach the 7 claws to install the cover.

### 34. INSTALL REAR NO. 3 SEAT CUSHION HINGE COVER

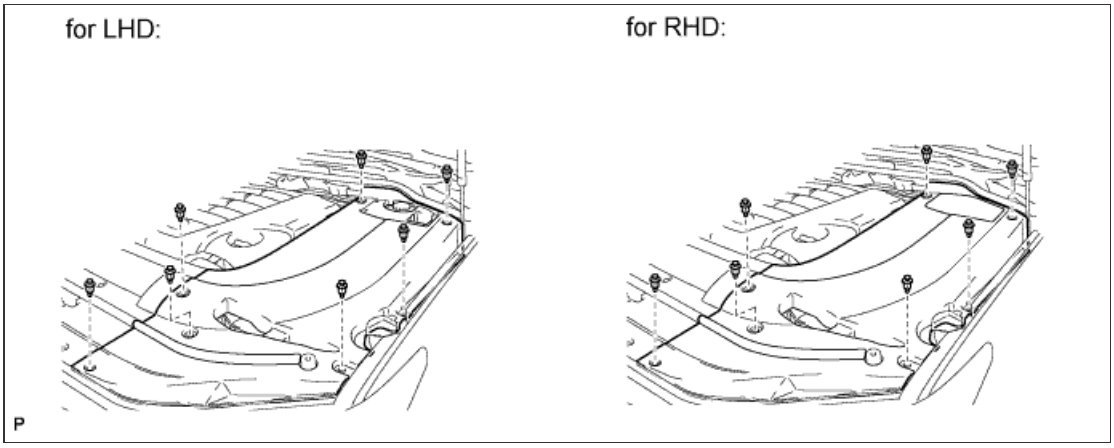
a. Attach the 6 claws to install the cover.

### 35. INSTALL FRONT SEAT ASSEMBLY RH

a. Install the front seat assembly RH ( Click here).

### 36. INSTALL FRONT SEAT ASSEMBLY LH

a. Install the front seat assembly LH ( Click here).



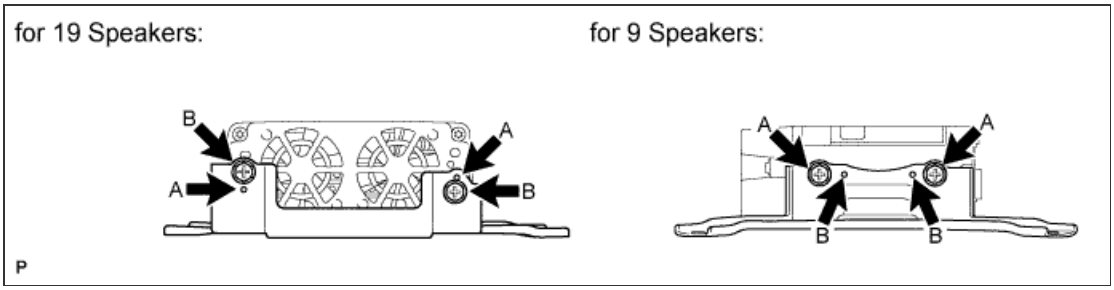
### 37. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

### 38. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.



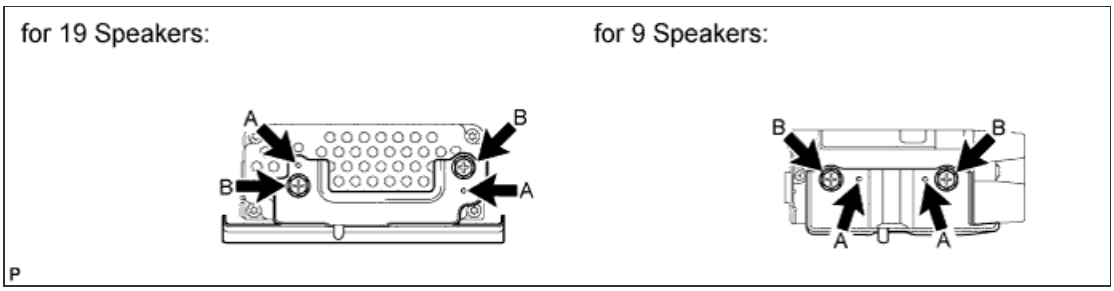
### 39. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).

**for Preparation** Click here

## 1. INSTALL NO. 2 AMPLIFIER BRACKET

a. Set the aligning protrusions of the bracket, labeled A, into the holes of the amplifier.

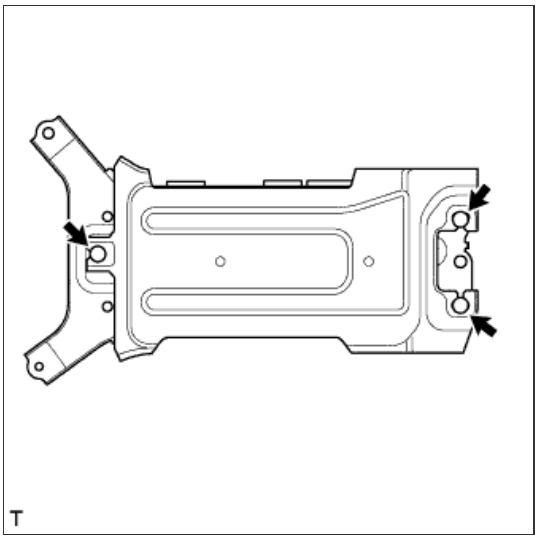


b. Install the bracket with the 2 screws labeled B.

**Torque:**
**3.0 N*m{ 30 kgf*cm , 26 in.*lbf }**

## 2. INSTALL NO. 1 AMPLIFIER BRACKET

a. Set the aligning protrusions of the bracket, labeled A, into the holes of the amplifier.

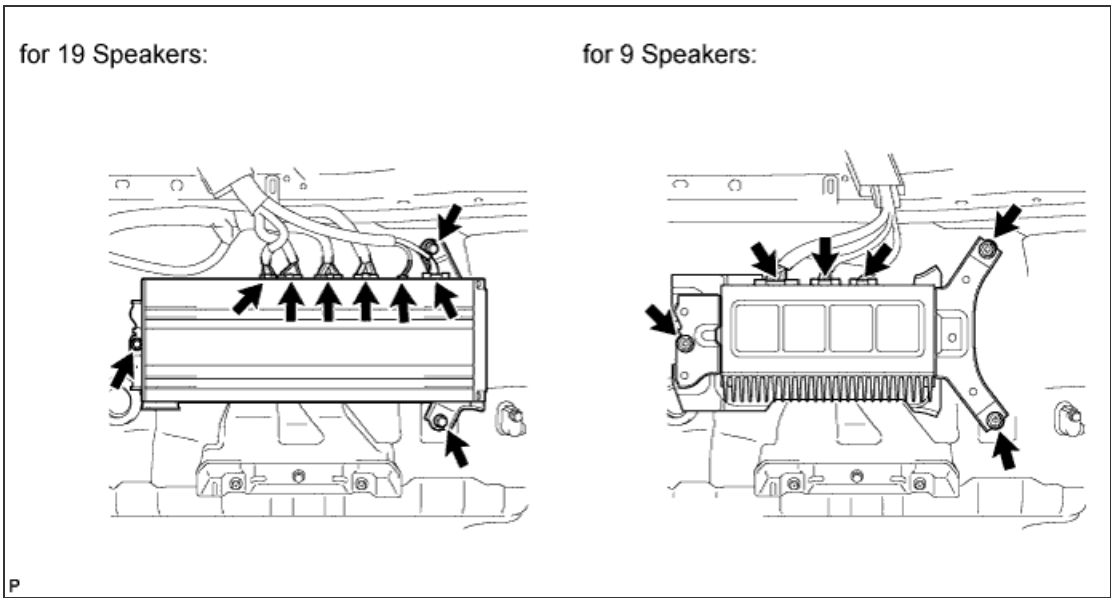


b. Install the bracket with the 2 screws labeled B.

**Torque:**
**3.0 N*m{ 30 kgf*cm , 26 in.*lbf }**

## 3. INSTALL AMPLIFIER COVER (for 9 Speakers)

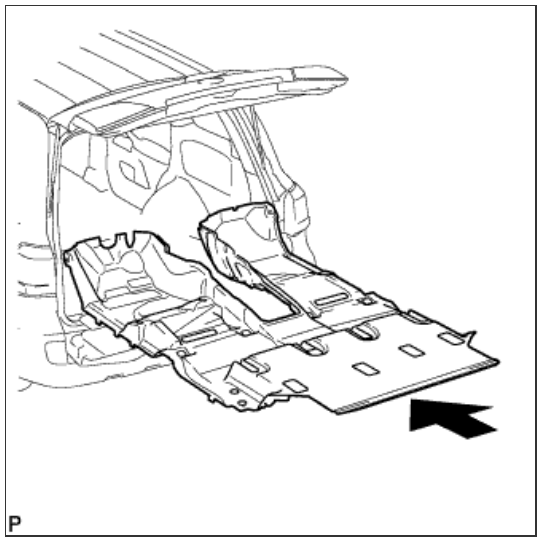
a. Attach the 3 clips to install the cover.



## 4. INSTALL STEREO COMPONENT AMPLIFIER ASSEMBLY WITH BRACKET

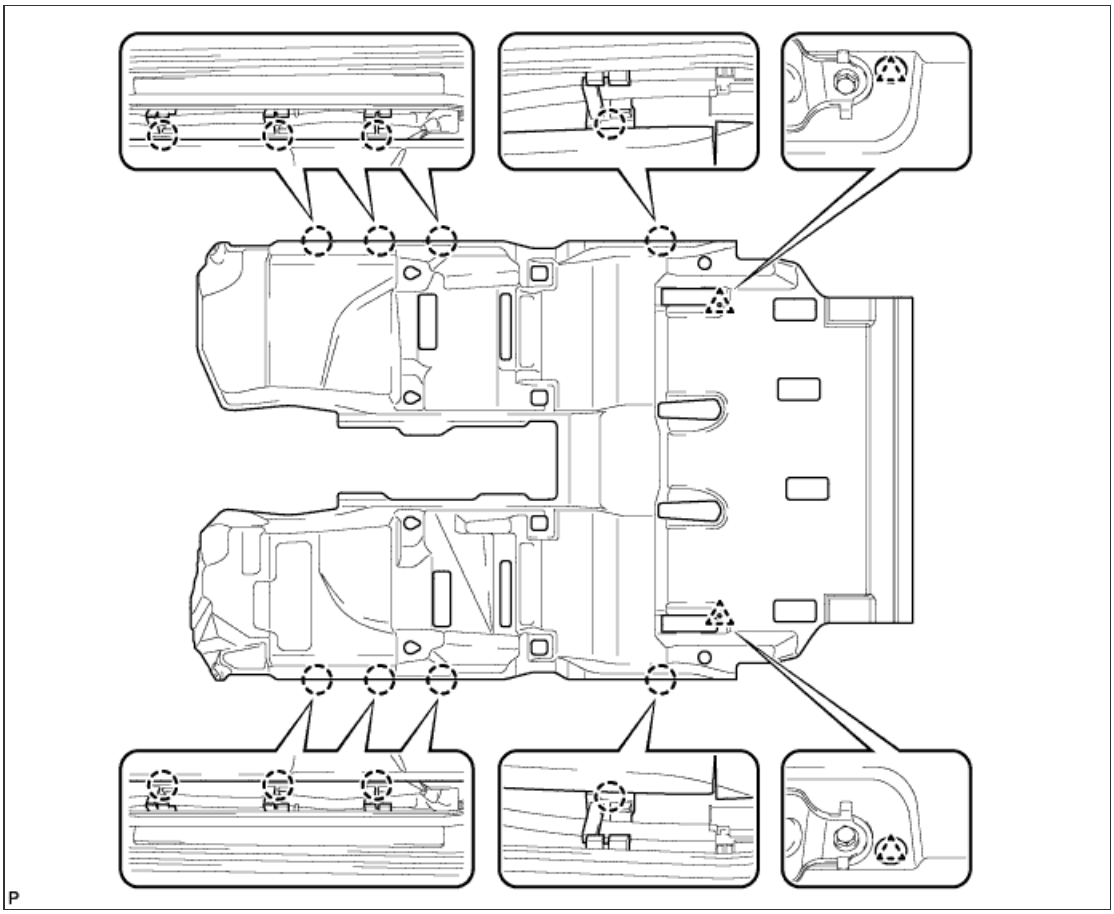
a. Install the amplifier with the 3 bolts.

**Torque:**
**7.5 N*m{ 76 kgf*cm , 66 in.*lbf }**



b. for 19 Speakers:
Connect the 6 connectors.

c. for 9 Speakers:
Connect the 3 connectors.



## 5. INSTALL FRONT FLOOR CARPET ASSEMBLY

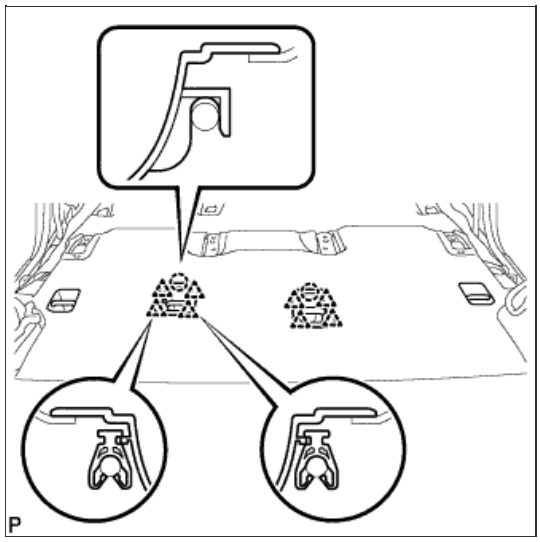
a. Open the tail gate and back door, insert the carpet into the cabin from the rear, and install it to the floor.

b. Attach the 2 clips and 8 claws.

## 6. INSTALL REAR CONSOLE BOX SUB-ASSEMBLY (w/o Cool Box)

a. Install the rear console box (Click here).

## 7. INSTALL COOLING BOX ASSEMBLY (w/ Cool Box)



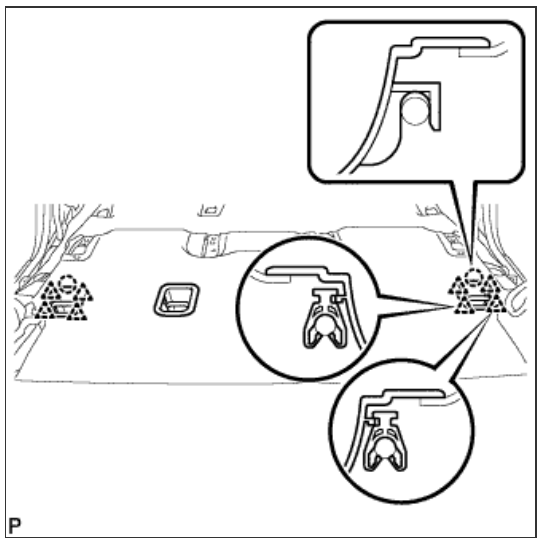
a. Install the cooling box (Click here).

### 8. INSTALL REAR NO. 2 SEAT PROTECTOR

a. Attach the 4 clips and claw to install the protector.

**HINT:**

Use the same procedures to install the protector on the other side.

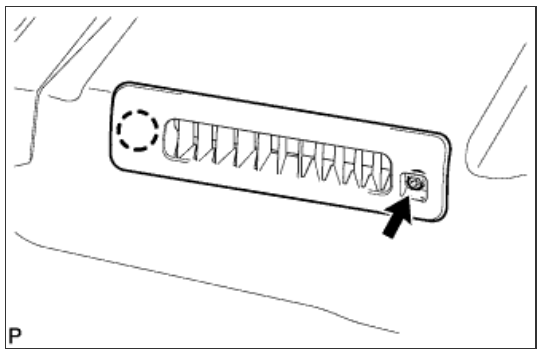


### 9. INSTALL REAR NO. 1 SEAT PROTECTOR

a. Attach the 4 clips and claw to install the protector.

**HINT:**

Use the same procedures to install the protector on the other side.



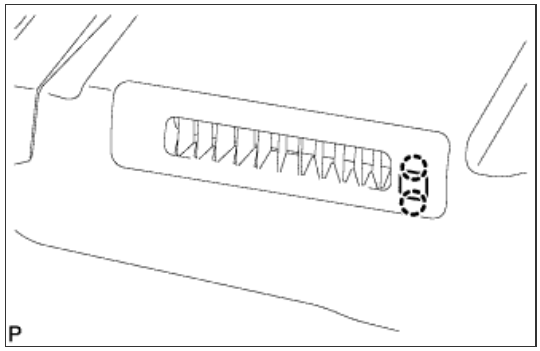
### 10. INSTALL REAR AIR DUCT GUIDE

**HINT:**

Use the same procedures for both sides.

a. Attach the claw to install the guide.

b. Install the screw.

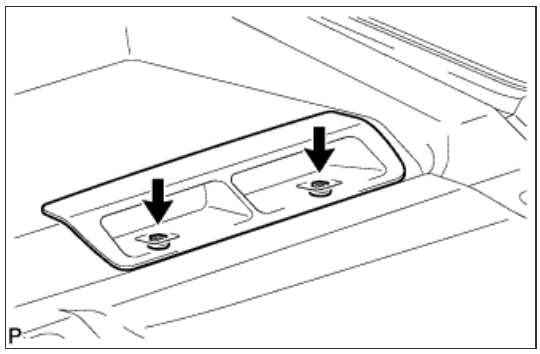


## 11. INSTALL AIR DUCT PLUG

a. Attach the 2 claws to install the plug.

**HINT:**

Use the same procedures for both sides.

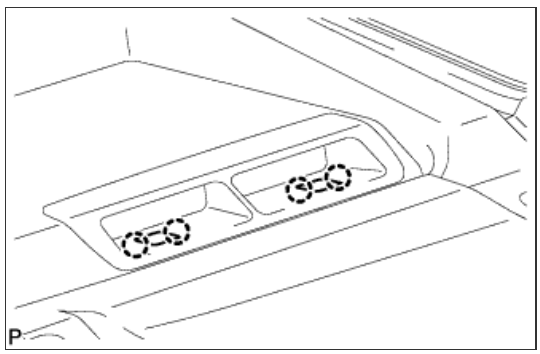


## 12. INSTALL AIR HEATER GUIDE

a. Install the guide with the 2 screws.

**HINT:**

Use the same procedures for both sides.



## 13. INSTALL NO. 2 AIR DUCT PLUG

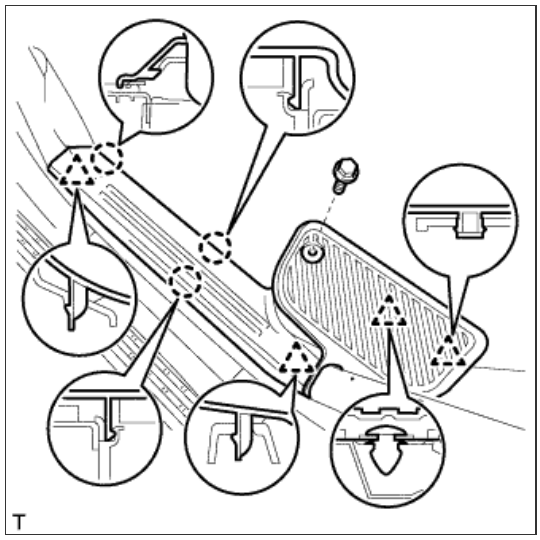
a. Attach the 4 claws to install the 2 plugs.

**HINT:**

Use the same procedures for both sides.

## 14. INSTALL REAR DOOR SCUFF PLATE RH

**HINT:**

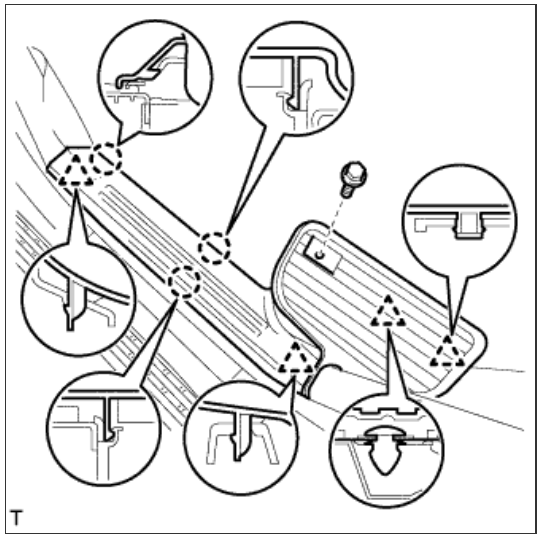


Use the same procedures described for the LH side.

## 15. INSTALL REAR DOOR SCUFF PLATE LH

a. w/o Illumination Type Front Door Scuff Plate:

i. Attach the 3 claws and 4 clips to install the scuff plate.

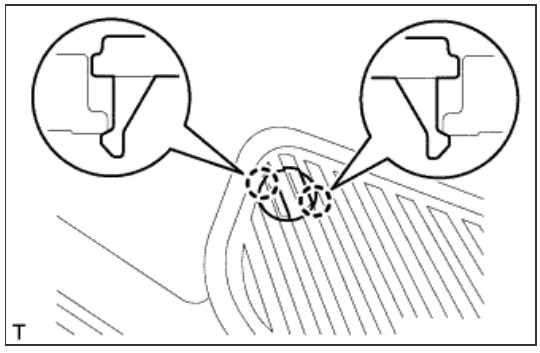


ii. Install the screw.

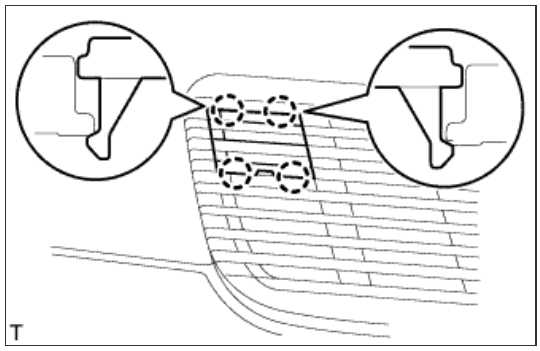
b. w/ Illumination Type Front Door Scuff Plate:

i. Attach the 3 claws and 4 clips to install the scuff plate.

ii. Install the screw.



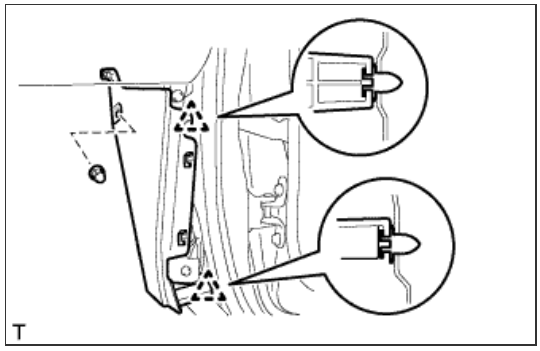
## 16. INSTALL REAR STEP COVER



**HINT:**

Use the same procedure to install the step cover on the other side.

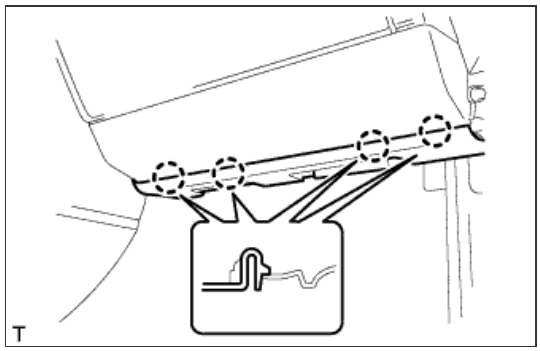
a. w/o Illumination Type Front Door Scuff Plate:
Attach the 2 claws to install the step cover.



b. w/ Illumination Type Front Door Scuff Plate:
Attach the 4 claws to install the step cover.

## 17. INSTALL COWL SIDE TRIM BOARD RH

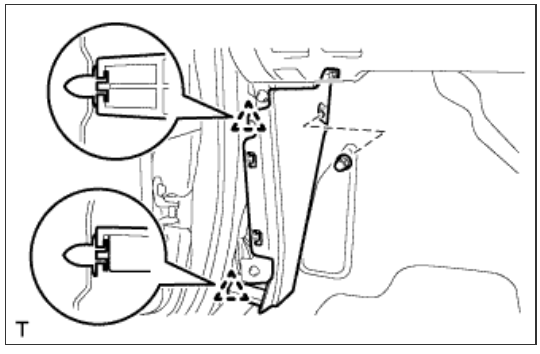
a. Attach the 2 clips to install the trim board.



b. Install the cap nut.

## 18. INSTALL NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

a. Connect the connector.

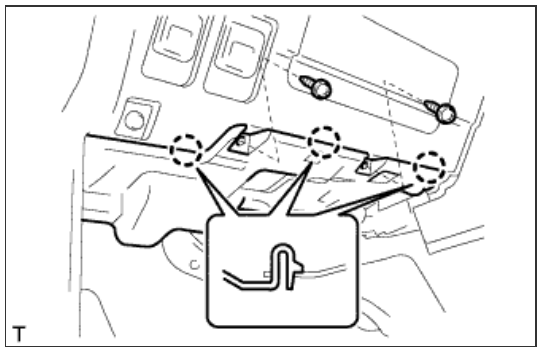


b. Attach the 4 claws to install the under cover.

## 19. INSTALL COWL SIDE TRIM BOARD LH

a. Attach the 2 clips to install the trim board.

b. Install the cap nut.



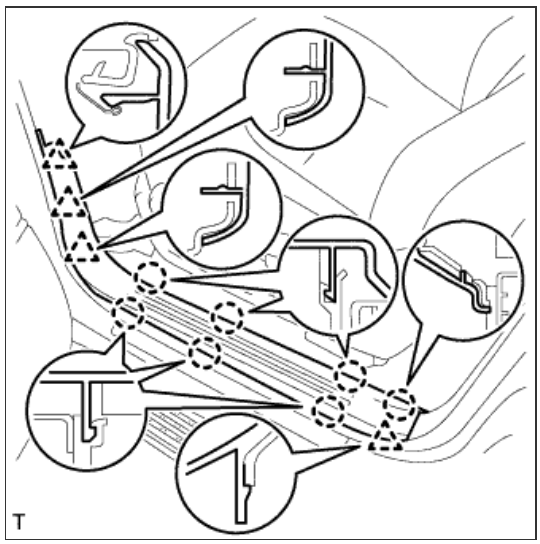
## 20. INSTALL NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

a. Connect the connectors.

b. Attach the 3 claws to install the under cover.

c. Install the 2 screws.

## 21. INSTALL FRONT DOOR SCUFF PLATE RH

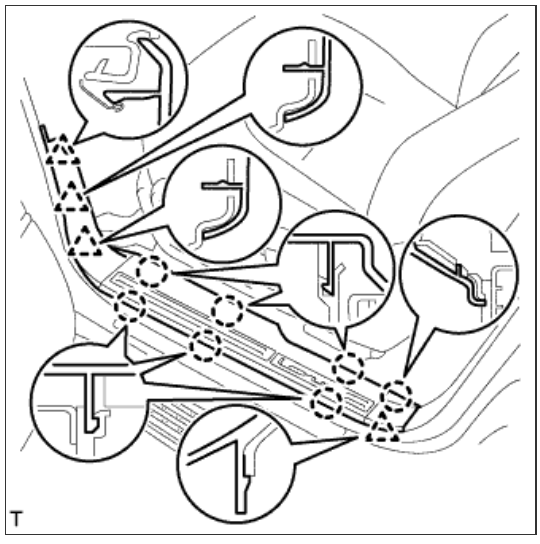


**HINT:**

Use the same procedures described for the LH side.

## 22. INSTALL FRONT DOOR SCUFF PLATE LH

a. w/o Illumination:



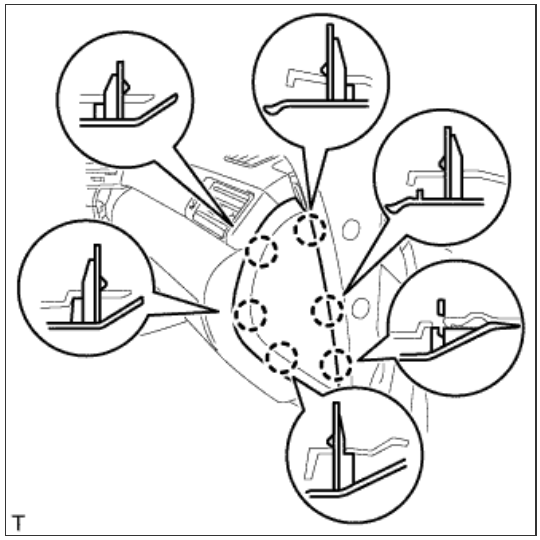
i. Attach the 7 claws and 4 clips to install the scuff plate.

b. w/ Illumination:

i. Connect the connector.

ii. Attach the 7 claws and 4 clips to install the scuff plate.

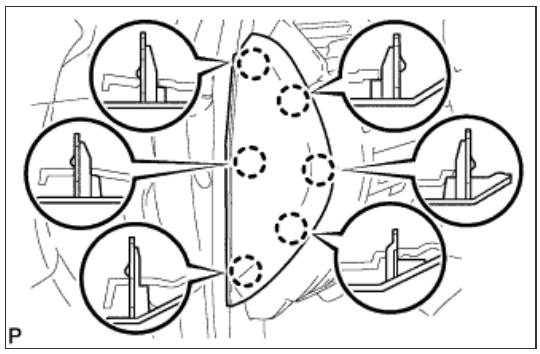
## 23. INSTALL INSTRUMENT SIDE PANEL RH



a. w/o Airbag Cut Off Switch:

i. Attach the 6 claws to install the side panel.

b. w/ Airbag Cut Off Switch:



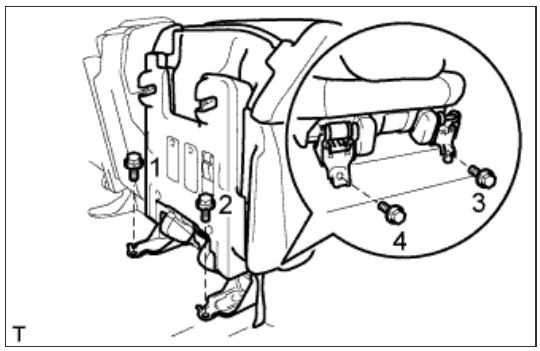
i. Connect the connector.

ii. Attach the 6 claws to install the side panel.

## 24. INSTALL INSTRUMENT SIDE PANEL LH

a. Attach the 6 claws to install the side panel.

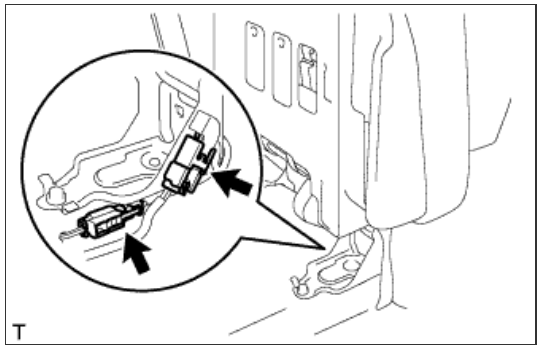
## 25. INSTALL REAR NO. 1 SEAT ASSEMBLY RH



a. Temporarily install the seat assembly with the 4 bolts.

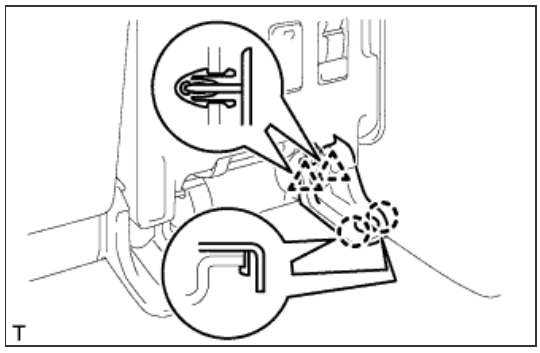
**NOTICE:**

Be careful not to damage the vehicle body.



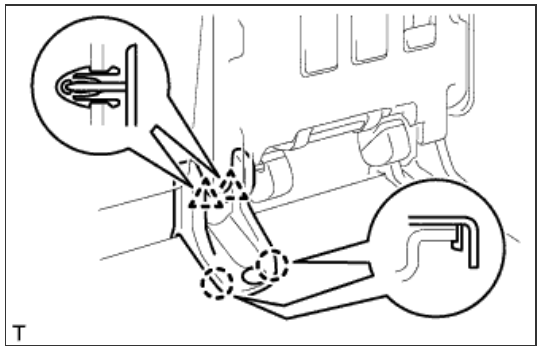
b. Tighten the bolts in the order shown in the illustration.

**Torque:**
**37 N*m{ 377 kgf*cm , 27 ft.*lbf }**



c. Connect the connector.

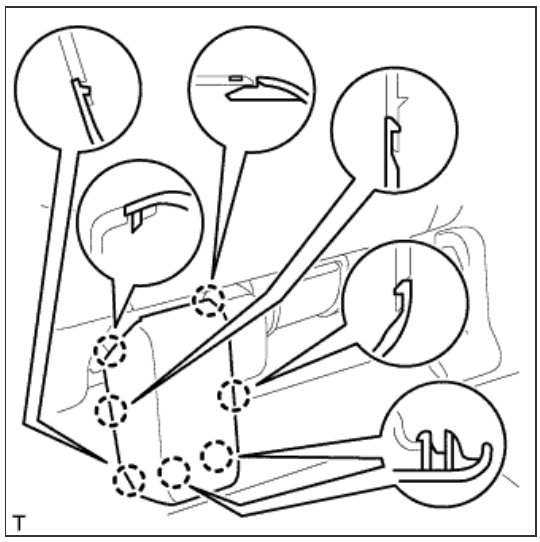
d. w/ Seat Heater System:
Connect the connector.



## 26. INSTALL REAR NO. 3 SEAT CUSHION HINGE COVER

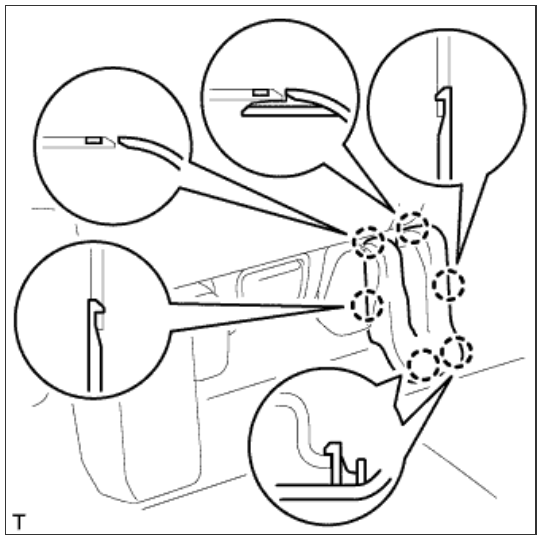
a. Attach the 2 clips and 2 claws to install the cover.

## 27. INSTALL REAR NO. 1 SEAT CUSHION HINGE COVER



a. Attach the 2 clips and 2 claws to install the cover.

## 28. INSTALL REAR NO. 4 SEAT CUSHION HINGE COVER



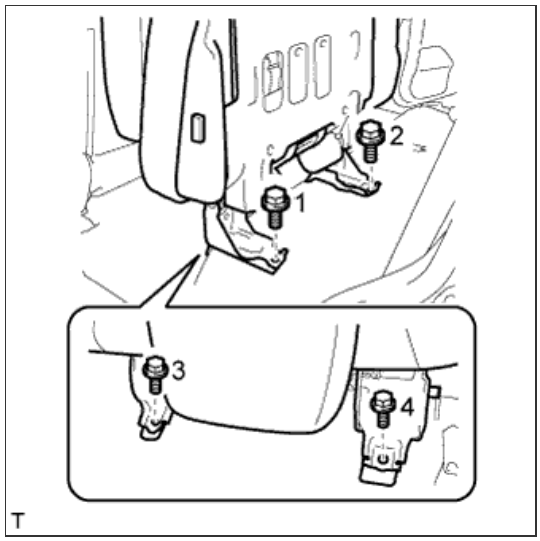
a. Return the seat to the upright position.

b. Attach the 7 claws to install the cover.

## 29. INSTALL REAR NO. 2 SEAT CUSHION HINGE COVER

a. Attach the 6 claws to install the cover.

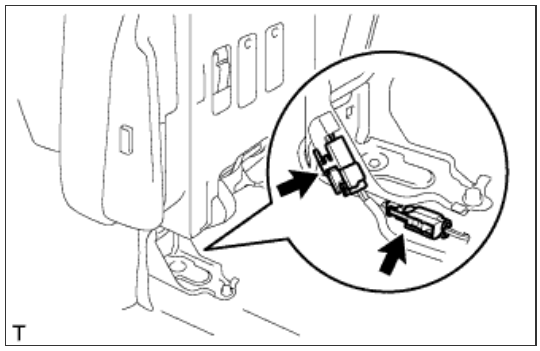
## 30. INSTALL REAR NO. 1 SEAT ASSEMBLY LH



a. Temporarily install the seat assembly with the 4 bolts.

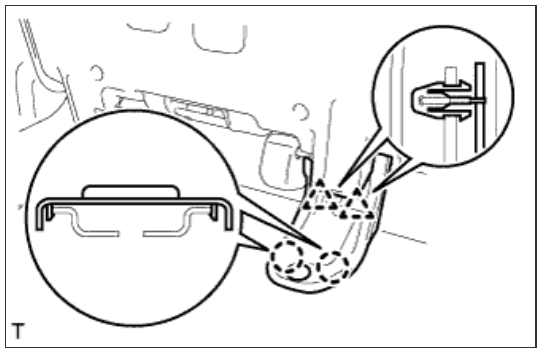
**NOTICE:**

Be careful not to damage the vehicle body.



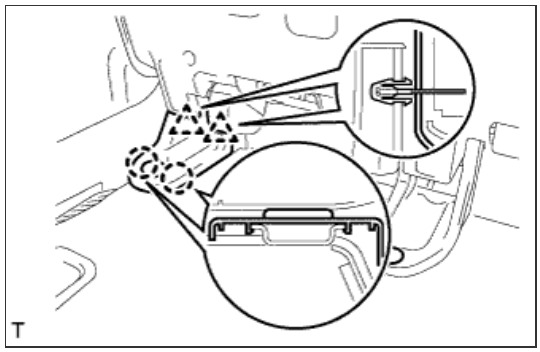
b. Tighten the bolts in the order shown in the illustration.

**Torque:**
**37 N*m{ 377 kgf*cm , 27 ft.*lbf }**



c. Connect the connector.

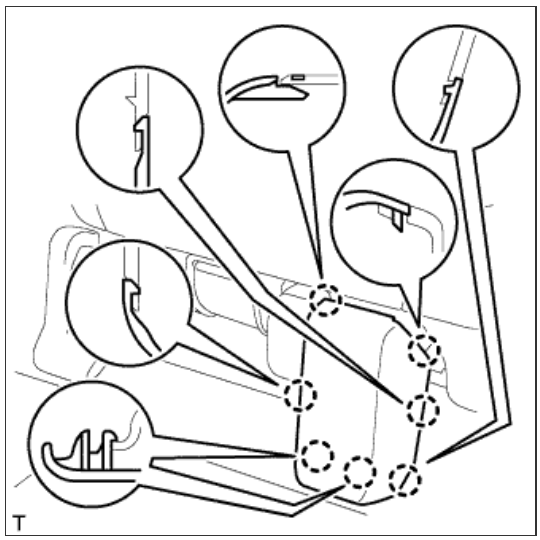
d. w/ Seat Heater System:
Connect the connector.



## 31. INSTALL REAR NO. 4 SEAT CUSHION HINGE COVER

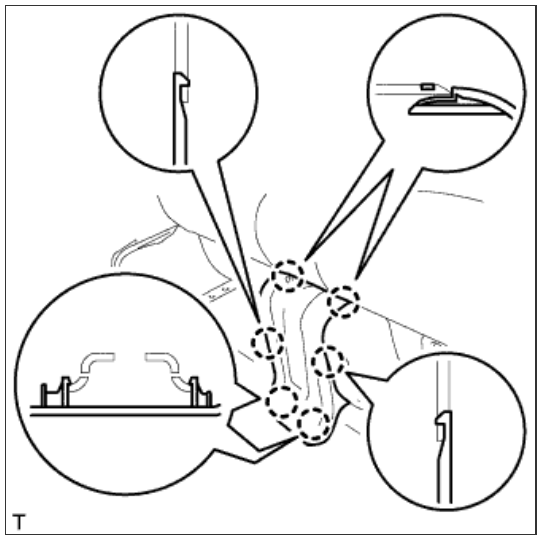
a. Attach the 2 clips and 2 claws to install the cover.

### 32. INSTALL REAR NO. 2 SEAT CUSHION HINGE COVER



a. Attach the 2 clips and 2 claws to install the cover.

### 33. INSTALL REAR NO. 5 SEAT CUSHION HINGE COVER



a. Return the seat to the upright position.

b. Attach the 7 claws to install the cover.

### 34. INSTALL REAR NO. 3 SEAT CUSHION HINGE COVER

a. Attach the 6 claws to install the cover.

### 35. INSTALL FRONT SEAT ASSEMBLY RH

a. Install the front seat assembly RH ( Click here).

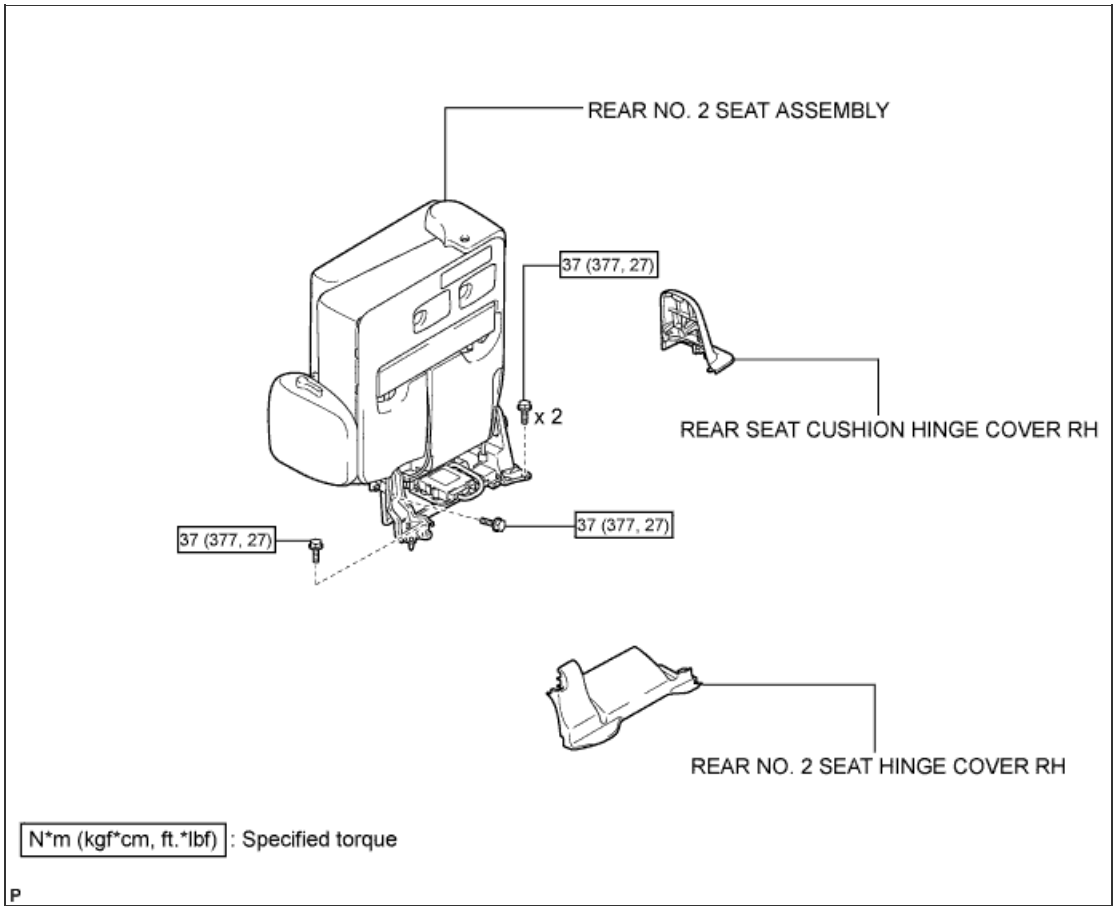
### 36. INSTALL FRONT SEAT ASSEMBLY LH

a. Install the front seat assembly LH ( Click here).

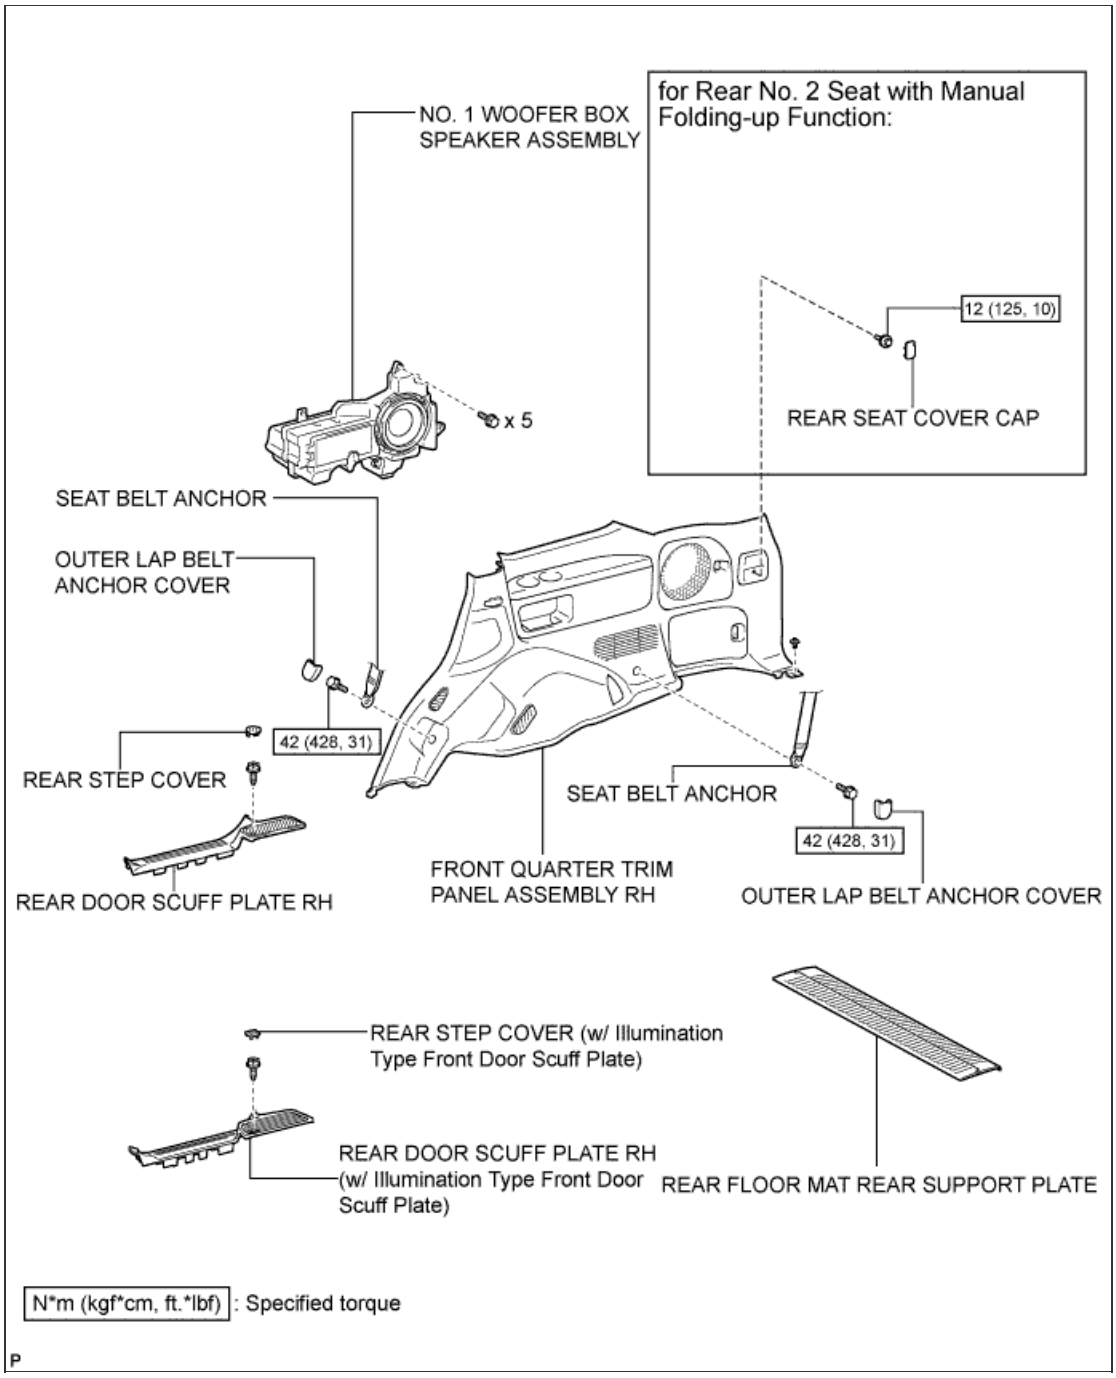
### 37. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

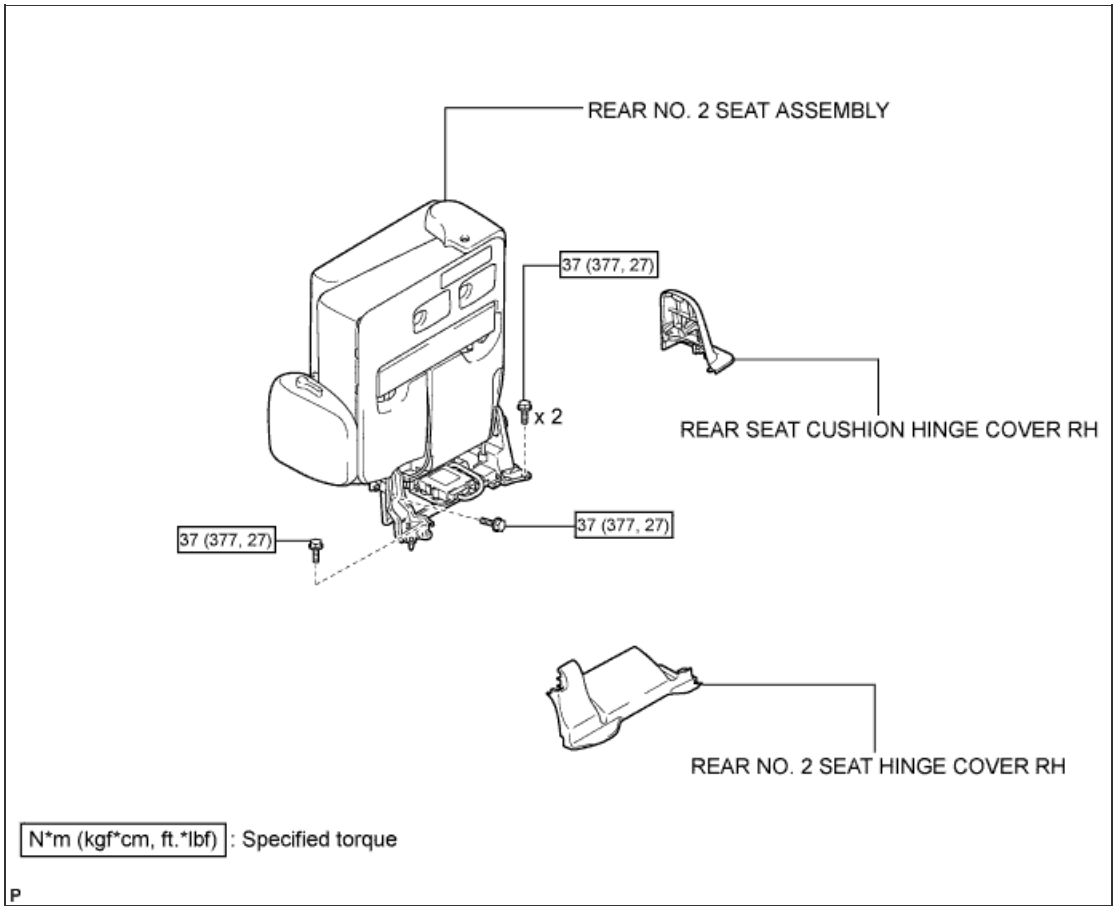


### 38. INSTALL ENGINE ROOM SIDE COVER LH

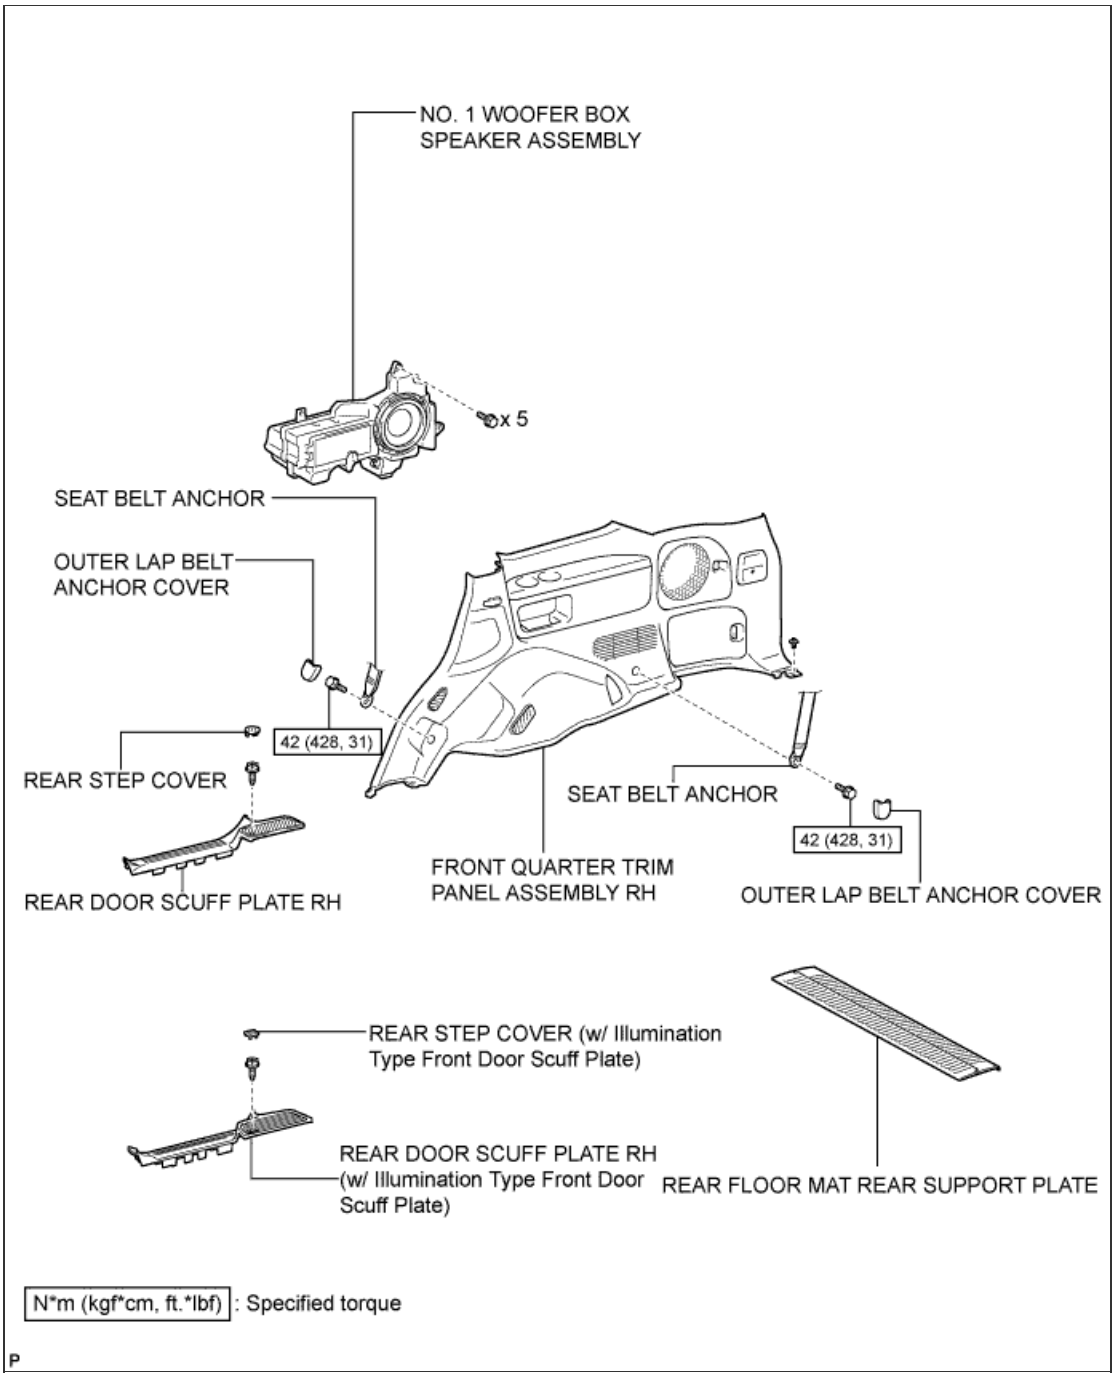


a. Install the engine room side cover LH with the 7 clips.

### 39. CHECK SRS WARNING LIGHT



a. Check the SRS warning light (Click here).



**for Preparation** Click here

**for Preparation** Click here

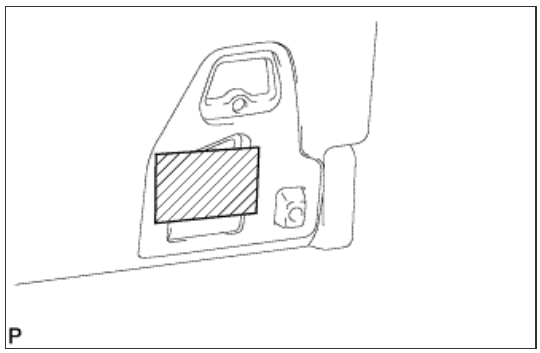
## 1. REMOVE ENGINE ROOM SIDE COVER LH

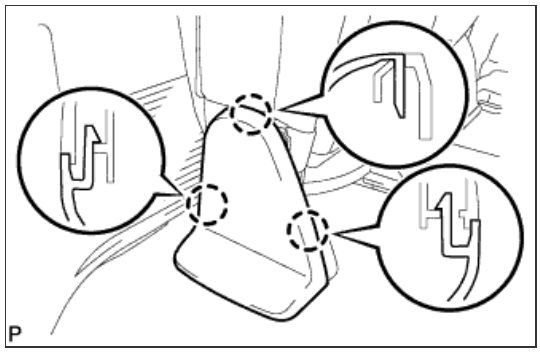


## 2. REMOVE REAR SEAT CUSHION HINGE COVER RH

a. Apply protective tape to the rear seatback lock striker as shown in the illustration to prevent the seat from locking.

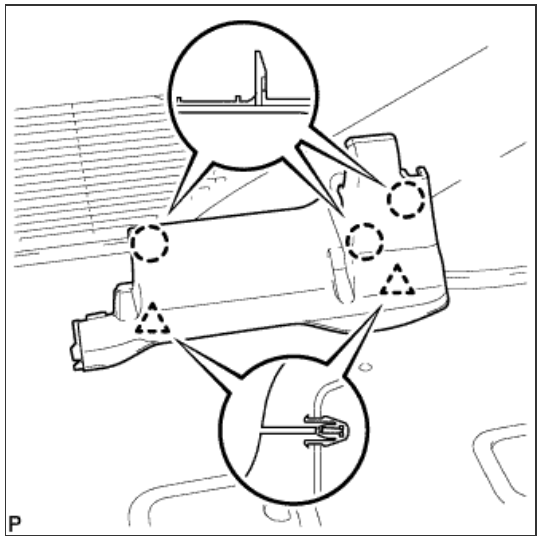
b. Operate the power seat switch and move the seat to the storage position.

**HINT:**



Make sure that the lock and striker are not engaged.

c. Using a screwdriver, detach the 3 claws and remove the cover.



**HINT:**

Tape the screwdriver tip before use.

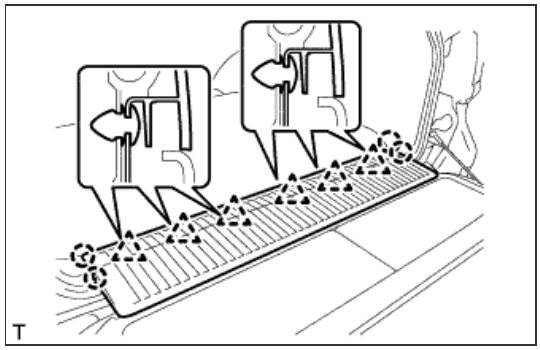
## 3. REMOVE REAR NO. 2 SEAT HINGE COVER RH

a. Detach the 3 claws and 2 clips, and then remove the cover.

## 4. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).



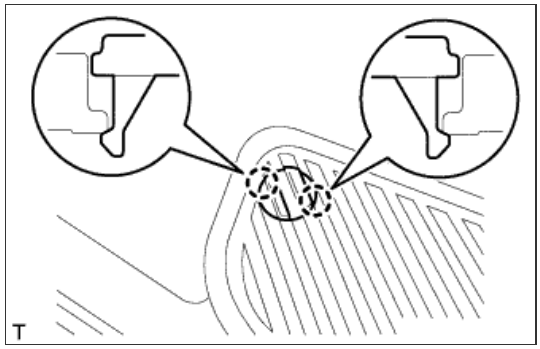
## 5. REMOVE REAR NO. 2 SEAT ASSEMBLY

a. w/ Automatic Folding-up Function:
Remove rear no. 2 seat assembly (Click here).

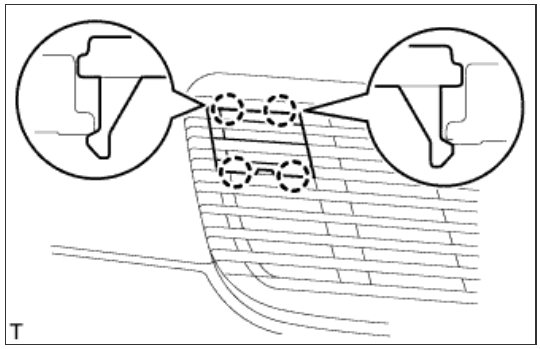
b. w/ Manual Folding-up Function:
Remove rear no. 2 seat assembly (Click here).

## 6. REMOVE REAR FLOOR MAT REAR SUPPORT PLATE

a. Detach the 6 clips and 4 claws, and remove the support plate.



## 7. REMOVE REAR STEP COVER



**HINT:**

Use the same procedure to remove the step cover on the other side.

a. w/o Illumination Type Front Door Scuff Plate:
Detach the 2 claws and remove the step cover.

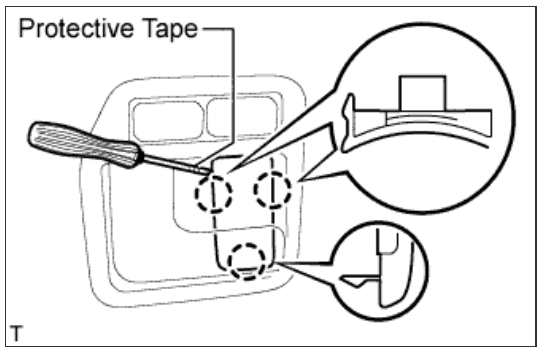
b. w/ Illumination Type Front Door Scuff Plate:
Detach the 4 claws and remove the step cover.

## 8. REMOVE REAR DOOR SCUFF PLATE RH

**HINT:**

Use the same procedures described for the LH side.

## 9. REMOVE REAR SEAT COVER CAP (for Rear No. 2 Seat with Manual Folding-up Function)

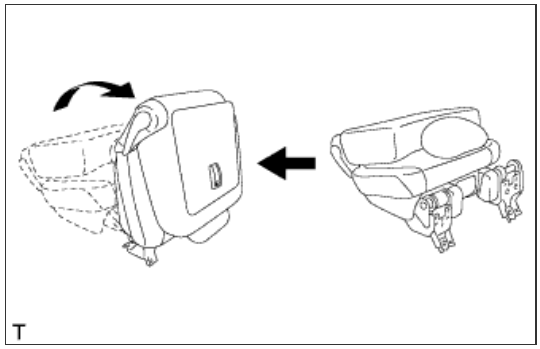


**HINT:**

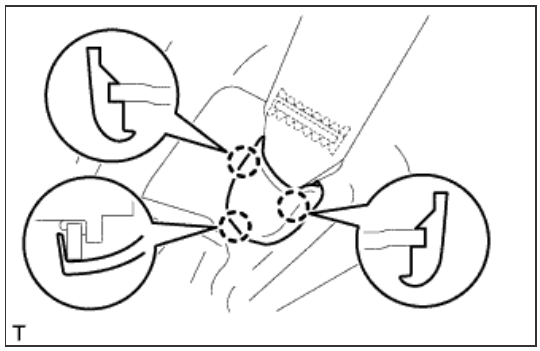
Use the same procedure to remove the rear seat cover cap on the other side.

a. Using a screwdriver, detach the 3 claws and remove the rear seat cover cap.

**HINT:**

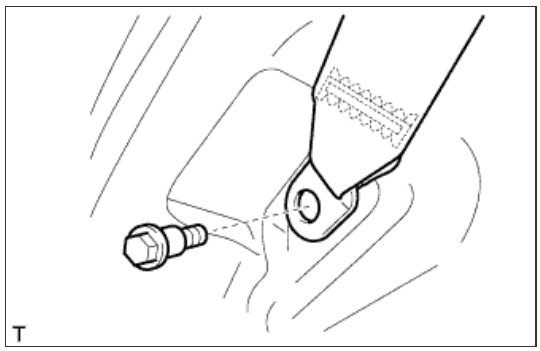


Tape the screwdriver tip before use.

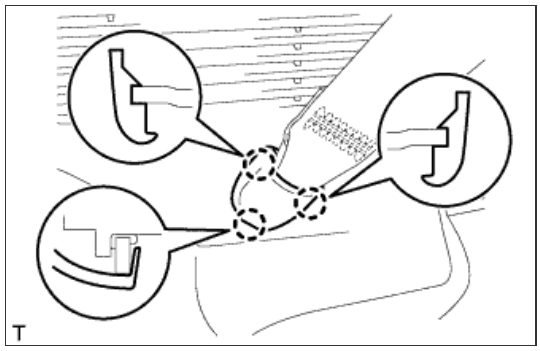


## 10. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY RH

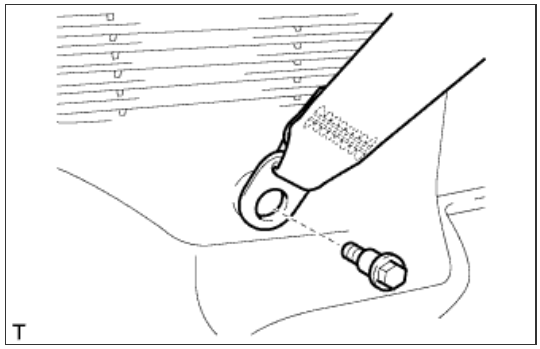
**HINT:**



When removing the front quarter trim panel, operate the reclining adjuster release handle and move the No. 1 rear seat to the position shown in the illustration.



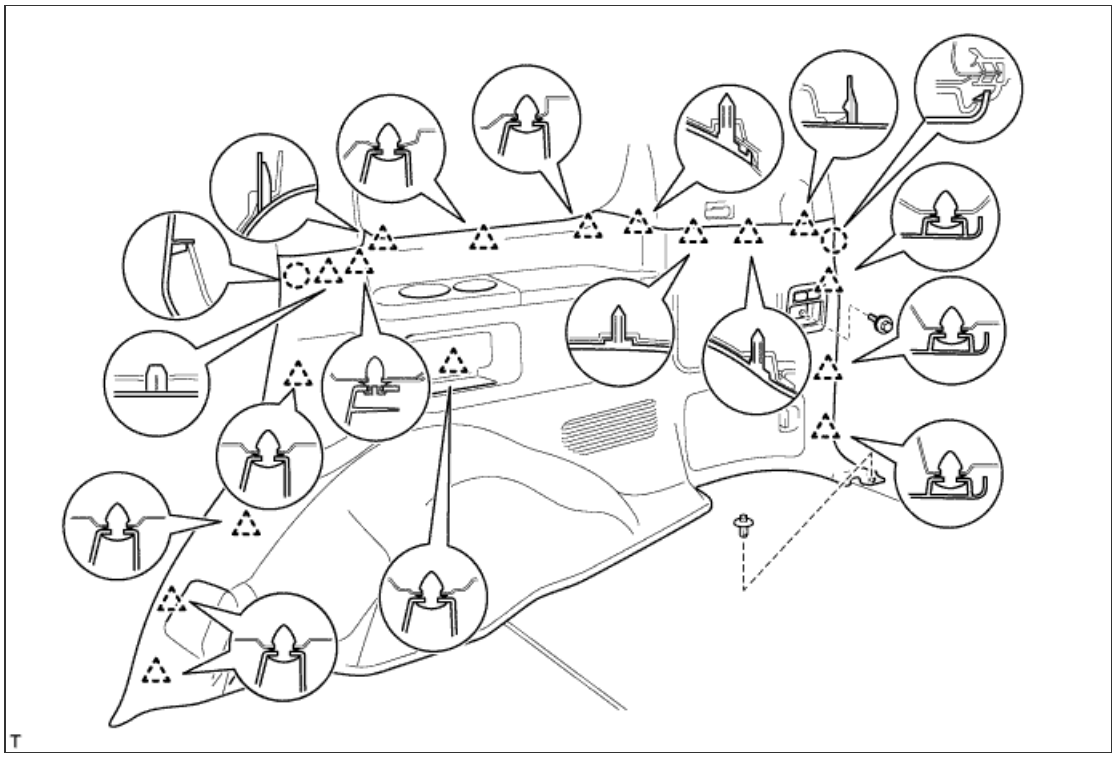
a. Detach the 3 claws and remove the cover.



b. Remove the bolt and rear No. 1 seat belt anchor.

c. Detach the 3 claws and remove the cover.

d. Remove the bolt and rear No. 2 seat belt anchor.

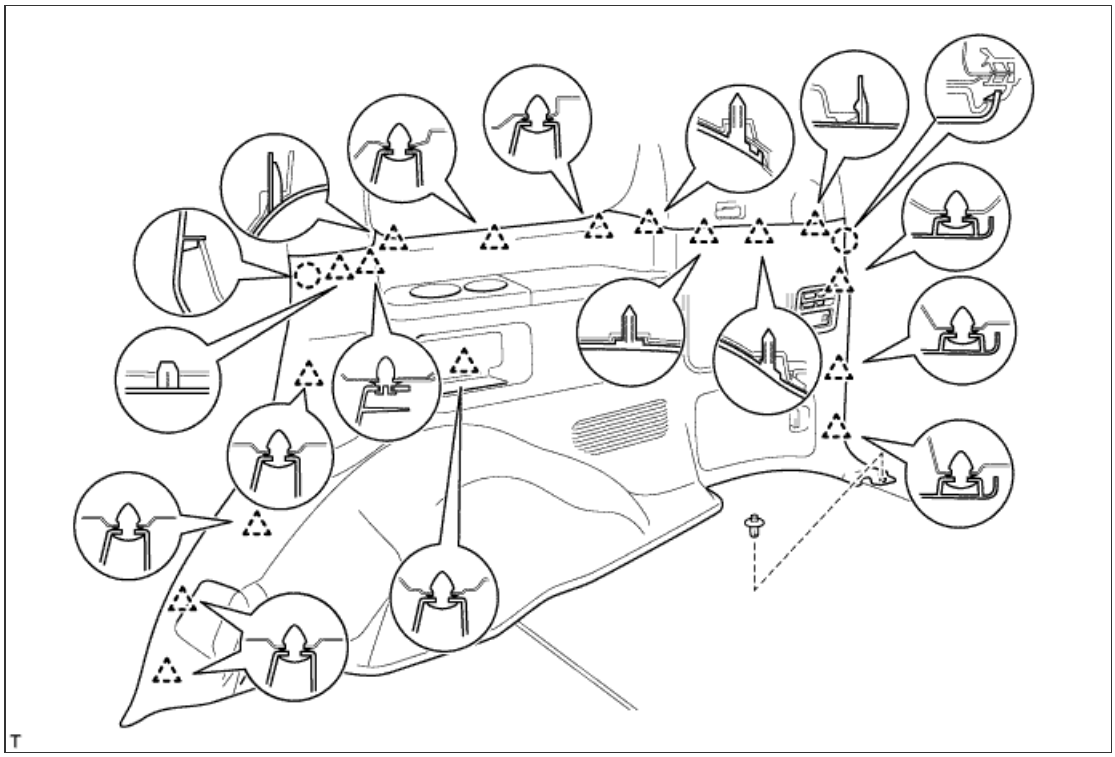


e. for Rear No. 2 Seat with Manual Folding-up Function:

i. Remove the clip and bolt.

ii. Detach the 17 clips and 2 claws.

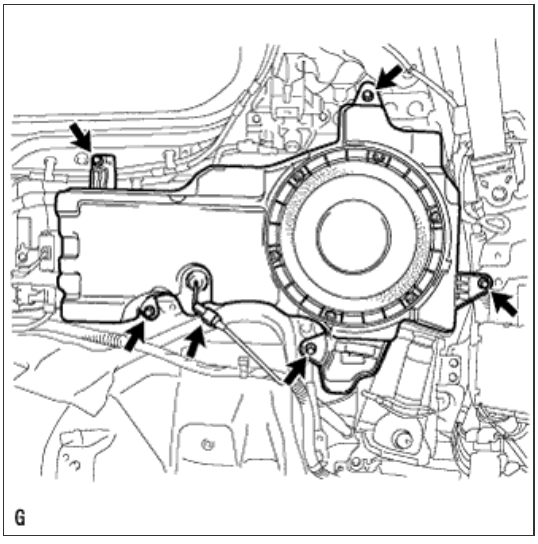
iii. Disconnect the thermistor connector and rear seat lock control lever cable, and then remove the quarter trim panel.



f. for Rear No. 2 Seat with Automatic Folding-up Function:

i. Remove the clip.

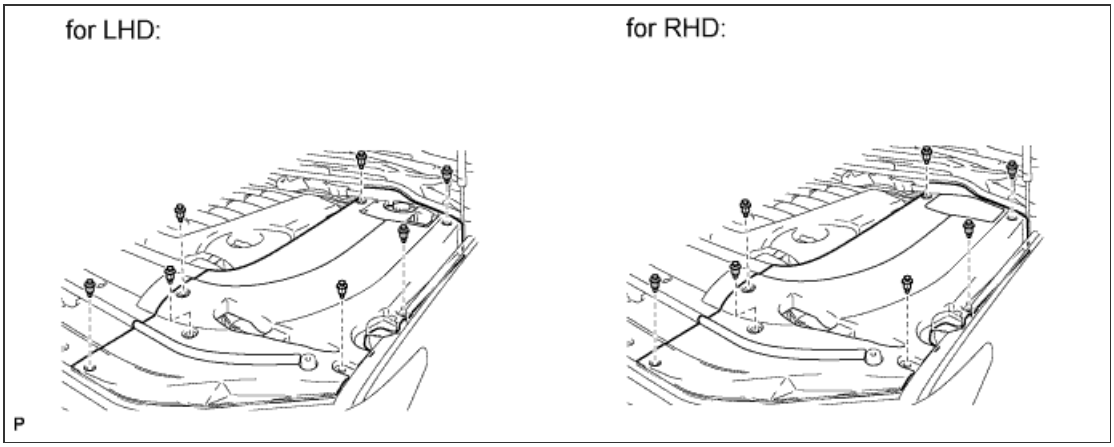
ii. Detach the 17 clips and 2 claws.



iii. Disconnect the thermistor connector and then remove the quarter trim panel.

**11. REMOVE NO. 1 WOOFER BOX SPEAKER ASSEMBLY**

a. Disconnect the connector.

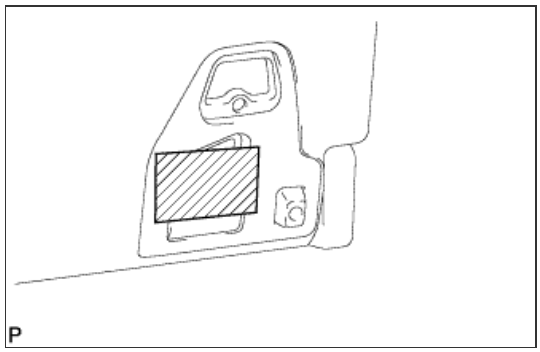


b. Remove the 5 bolts and box speaker.

**for Preparation** Click here

## 1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover LH.

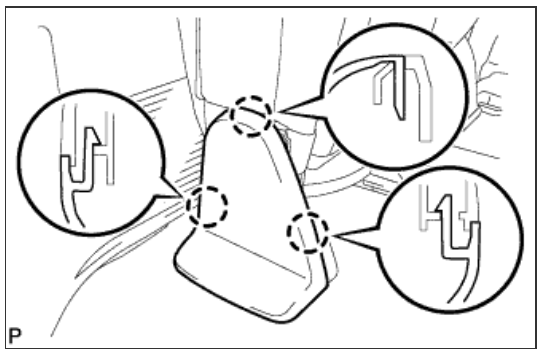


## 2. REMOVE REAR SEAT CUSHION HINGE COVER RH

a. Apply protective tape to the rear seatback lock striker as shown in the illustration to prevent the seat from locking.

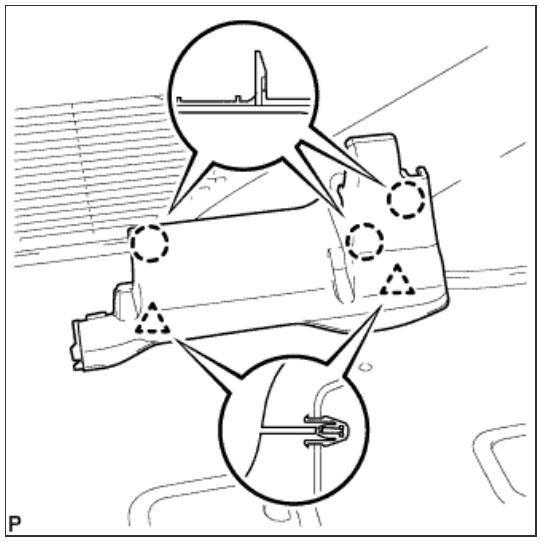
b. Operate the power seat switch and move the seat to the storage position.

**HINT:**



Make sure that the lock and striker are not engaged.

c. Using a screwdriver, detach the 3 claws and remove the cover.



**HINT:**

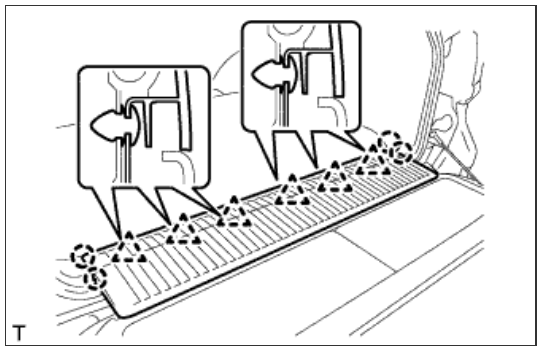
Tape the screwdriver tip before use.

## 3. REMOVE REAR NO. 2 SEAT HINGE COVER RH

a. Detach the 3 claws and 2 clips, and then remove the cover.

### 4. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

**NOTICE:**



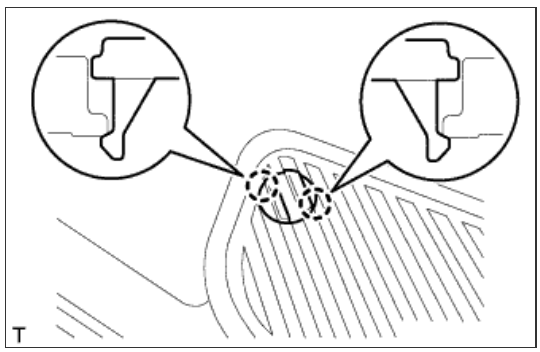
When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

### 5. REMOVE REAR NO. 2 SEAT ASSEMBLY

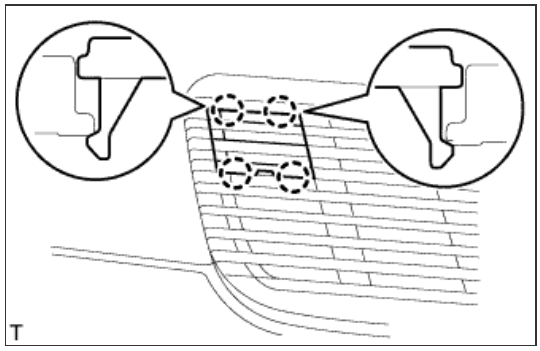
Remove rear no. 2 seat assembly (Click here).

### 6. REMOVE REAR FLOOR MAT REAR SUPPORT PLATE

a. Detach the 6 clips and 4 claws, and remove the support plate.



### 7. REMOVE REAR STEP COVER



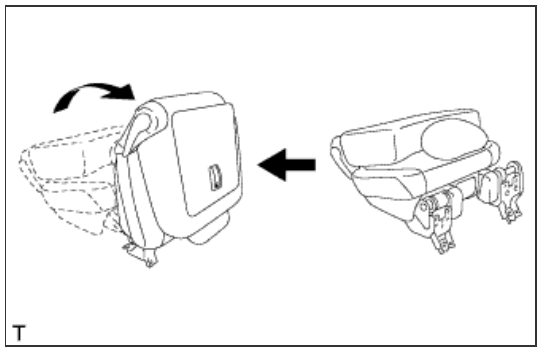
**HINT:**

Use the same procedure to remove the step cover on the other side.

a. w/o Illumination Type Front Door Scuff Plate:
Detach the 2 claws and remove the step cover.

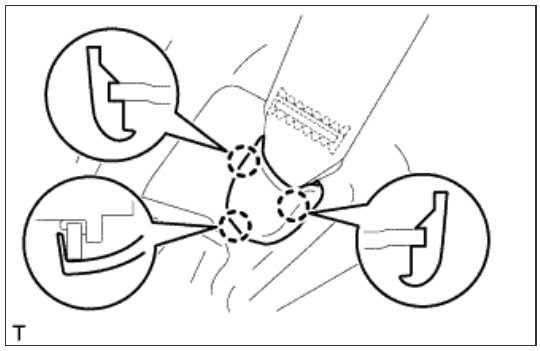
b. w/ Illumination Type Front Door Scuff Plate:
Detach the 4 claws and remove the step cover.

## 8. REMOVE REAR DOOR SCUFF PLATE RH



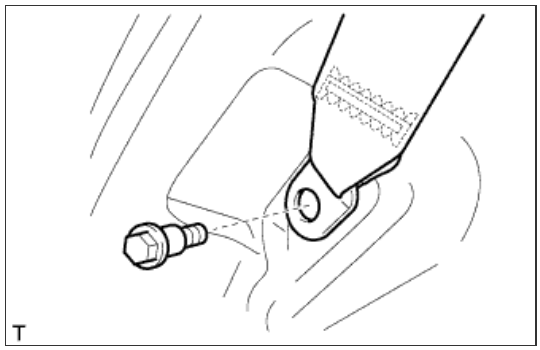
**HINT:**

Use the same procedures described for the LH side.

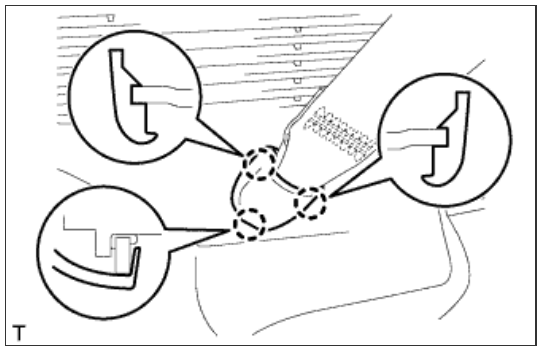


## 9. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY RH

**HINT:**

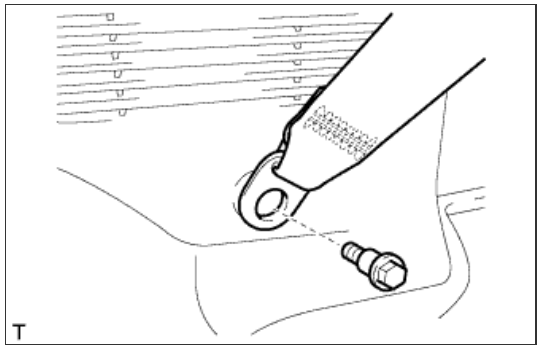


When removing the front quarter trim panel, operate the reclining adjuster release handle and move the No. 1 rear seat to the position shown in the illustration.

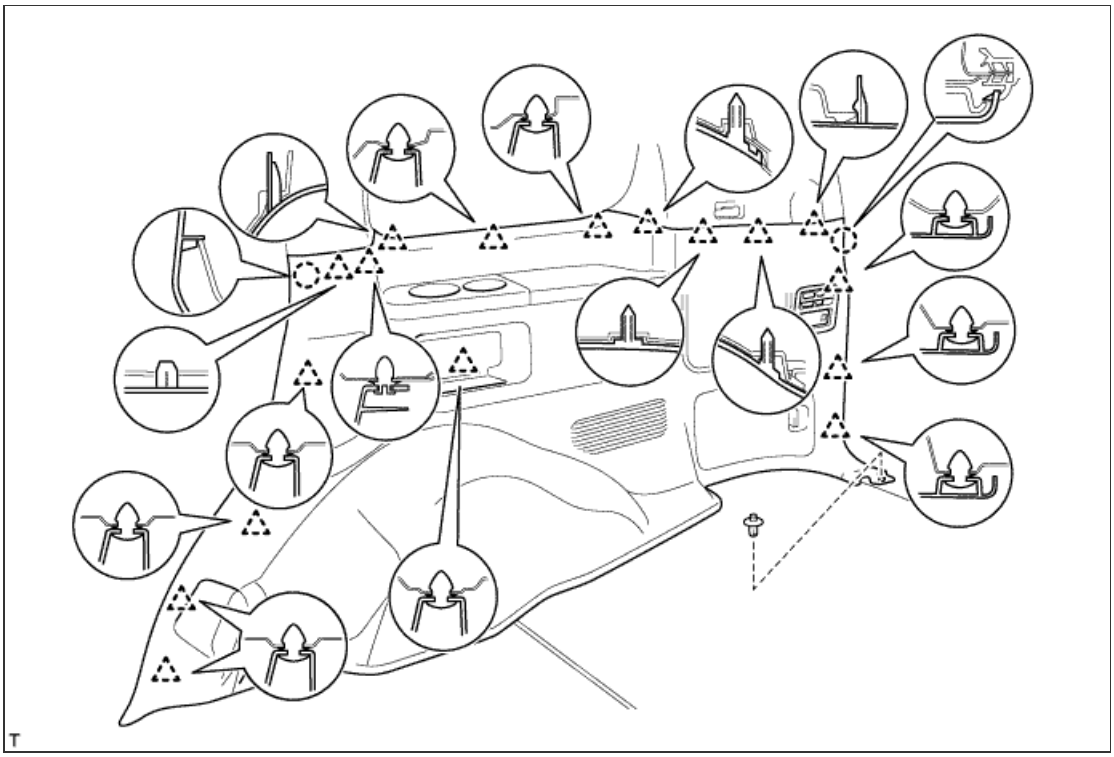


a. Detach the 3 claws and remove the cover.

b. Remove the bolt and rear No. 1 seat belt anchor.



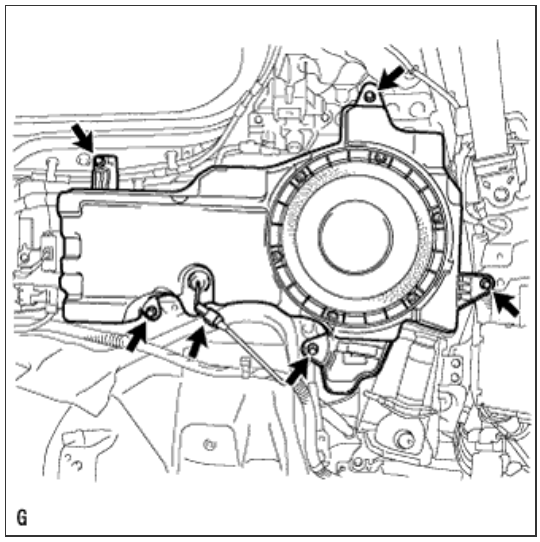
c. Detach the 3 claws and remove the cover.



d. Remove the bolt and rear No. 2 seat belt anchor.

e. Remove the clip.

f. Detach the 17 clips and 2 claws.



g. Disconnect the thermistor connector and then remove the quarter trim panel.

## 10. REMOVE NO. 1 WOOFER BOX SPEAKER ASSEMBLY

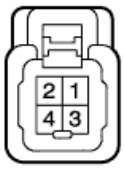
a. Disconnect the connector.

b. Remove the 5 bolts and box speaker.

G

**for Preparation** Click here

## 1. INSPECT NO. 1 WOOFER BOX SPEAKER ASSEMBLY



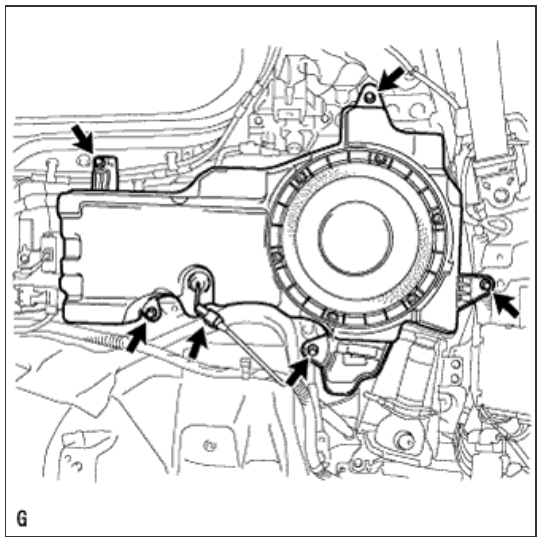
a. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 8.0 Ω |

If the result is not as specified, replace the No. 1 woofer box speaker assembly.

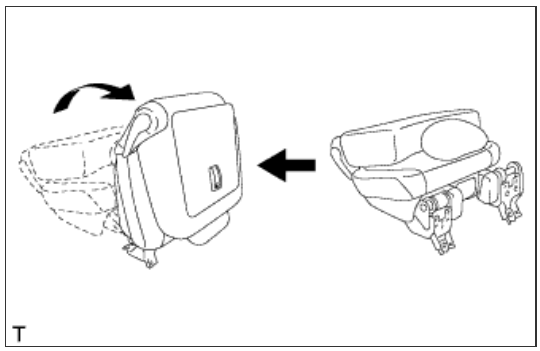
Component without harness connected:
(No. 1 Woofer Box Speaker)



**for Preparation** Click here

## 1. INSTALL NO. 1 WOOFER BOX SPEAKER ASSEMBLY

a. Install the box speaker with the 5 bolts.

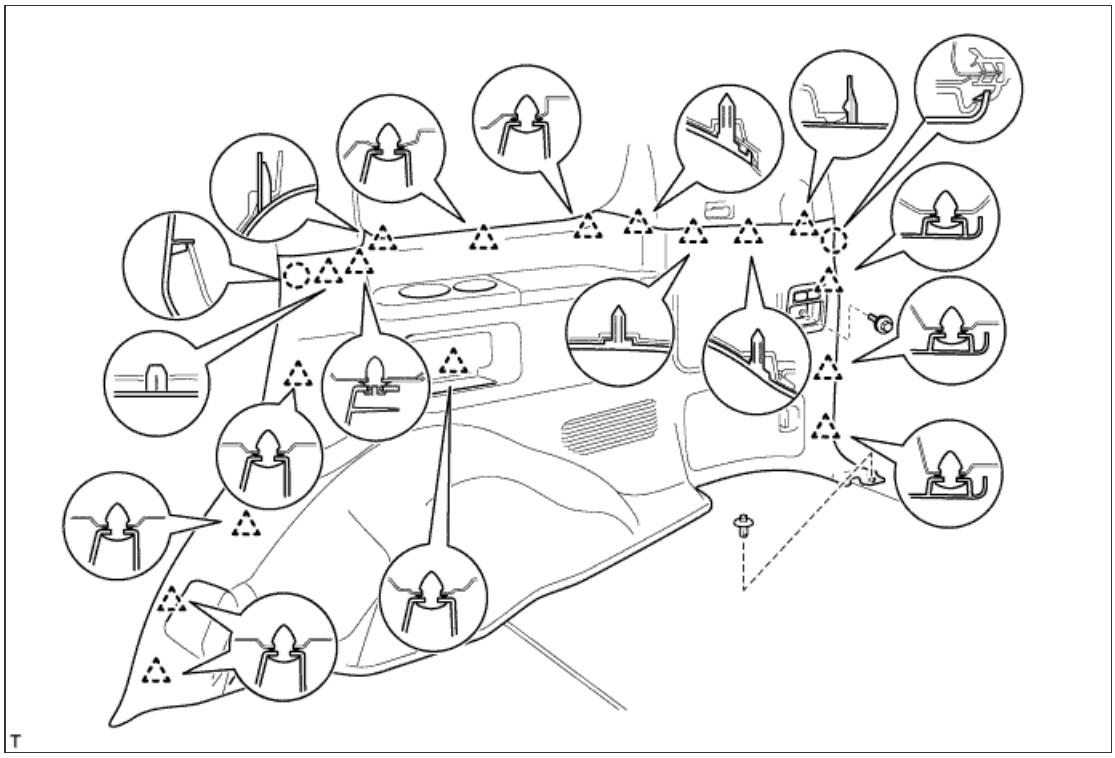


b. Connect the connector.

## 2. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY RH

**HINT:**

When installing the front quarter trim panel, operate the reclining adjuster release handle and move the No. 1 rear seat to the position shown in the illustration.



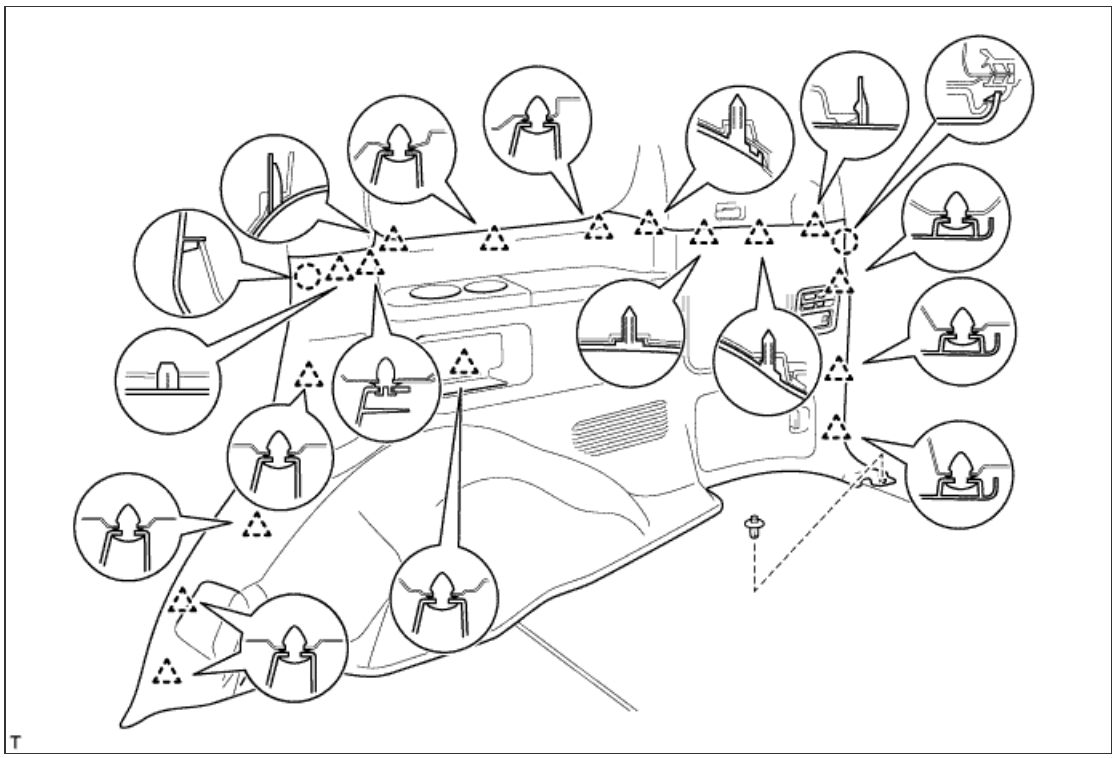
a. for Rear No. 2 Seat with Manual Folding-up Function:

i. Connect the thermistor connector and rear seat lock control lever cable.

ii. Attach the 17 clips and 2 claws to install the quarter trim panel.

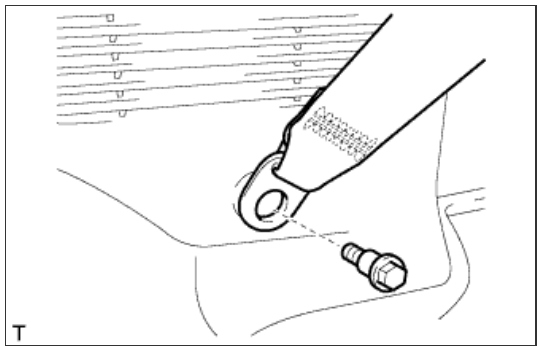
iii. Install the clip and bolt.

**Torque:**
**for bolt:**
**12 N*m{ 122 kgf*cm , 9 ft.*lbf }**



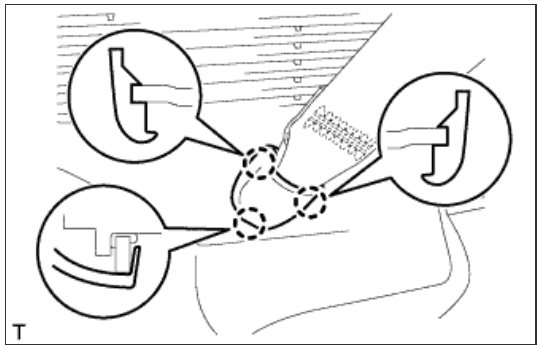
b. for Rear No. 2 Seat with Automatic Folding-up Function:

i. Connect the thermistor connector.



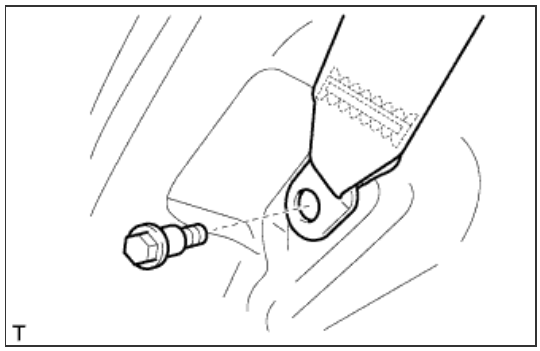
ii. Attach the 17 clips and 2 claws to install the quarter trim panel.

iii. Install the clip.

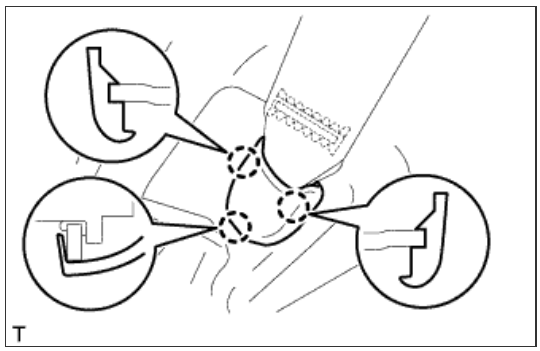


c. Install the rear No. 2 seat belt anchor with the bolt.

**Torque:**
**42 N*m{ 428 kgf*cm , 31 ft.*lbf }**



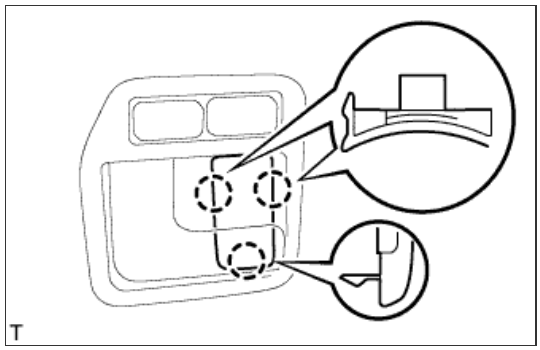
d. Attach the 3 claws to install the cover.



e. Install the rear No. 1 seat belt anchor with the bolt.

**Torque:**
**42 N*m{ 428 kgf*cm , 31 ft.*lbf }**

f. Attach the 3 claws to install the cover.



## 3. INSTALL REAR SEAT COVER CAP (for Rear No. 2 Seat with Manual Folding-up Function)

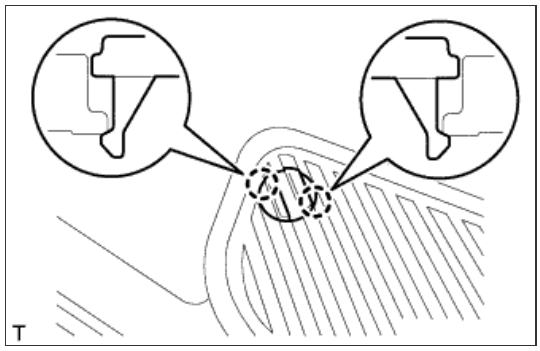
**HINT:**

Use the same procedures to install the rear seat cover cap on the other side.

a. Attach the 3 claws to install the rear seat cover cap.

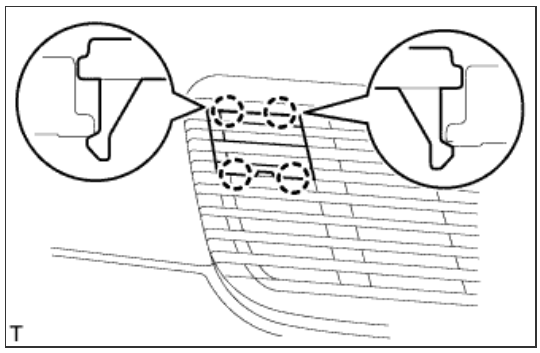
## 4. INSTALL REAR DOOR SCUFF PLATE RH

**HINT:**



Use the same procedures described for the LH side.

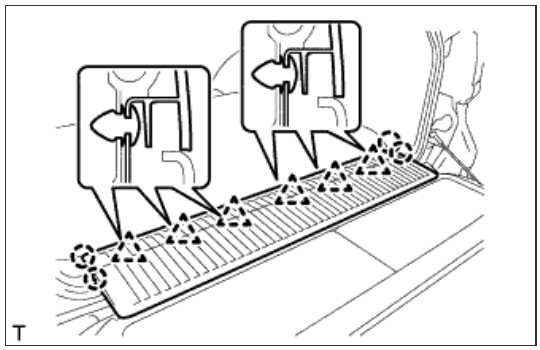
## 5. INSTALL REAR STEP COVER



**HINT:**

Use the same procedure to install the step cover on the other side.

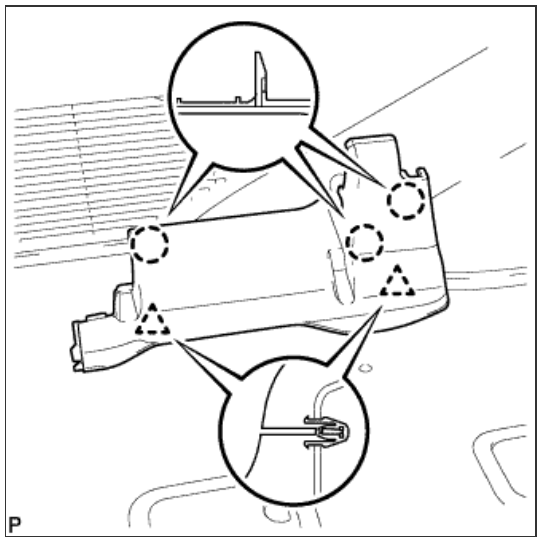
a. w/o Illumination Type Front Door Scuff Plate:
Attach the 2 claws to install the step cover.



b. w/ Illumination Type Front Door Scuff Plate:
Attach the 4 claws to install the step cover.

## 6. INSTALL REAR FLOOR MAT REAR SUPPORT PLATE

a. Attach the 6 clips and 4 claws to install the support plate.

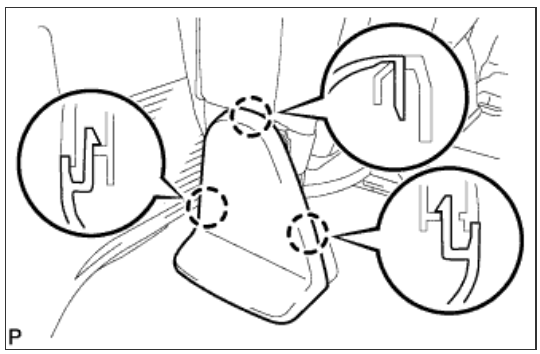


## 7. INSTALL REAR NO. 2 SEAT ASSEMBLY

a. w/ Automatic Folding-up Function:
Install the rear No. 2 seat assembly ( Click here).

b. w/ Manual Folding-up Function:
Install the rear No. 2 seat assembly ( Click here).

## 8. INSTALL REAR SEAT CUSHION HINGE COVER RH

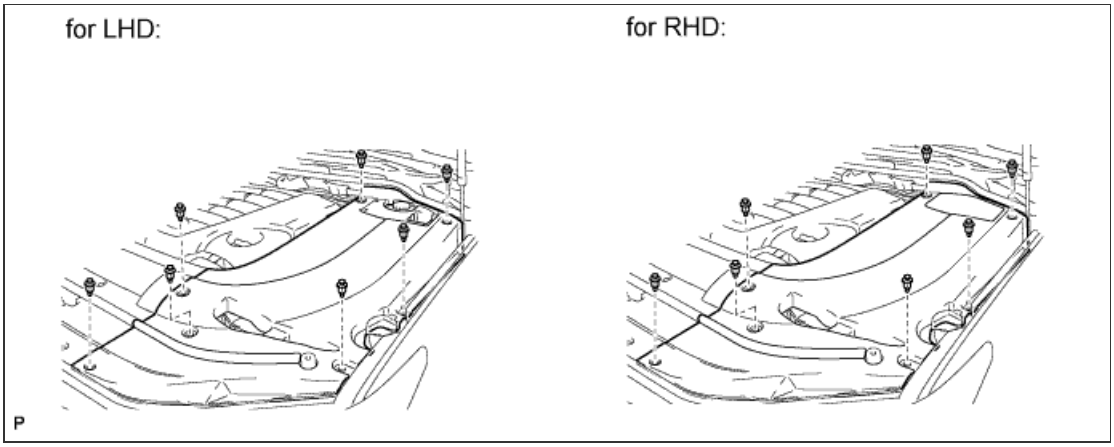


a. Attach the 3 claws and 2 clips to install the cover.

## 9. INSTALL REAR NO. 2 SEAT HINGE COVER RH

a. Attach the 3 claws to install the cover.

b. Return the seat to the upright position.



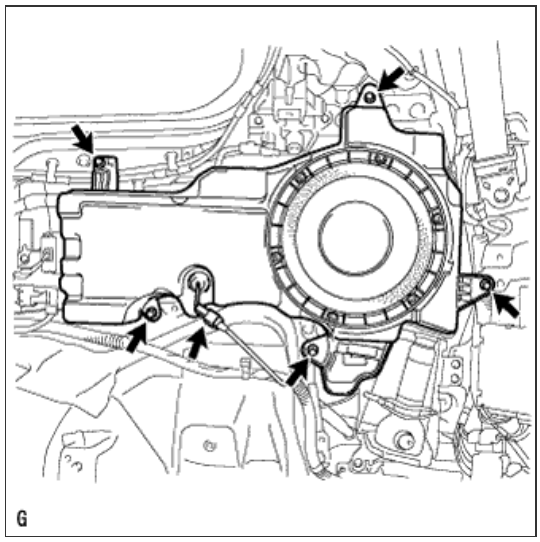
## 10. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

## 11. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.

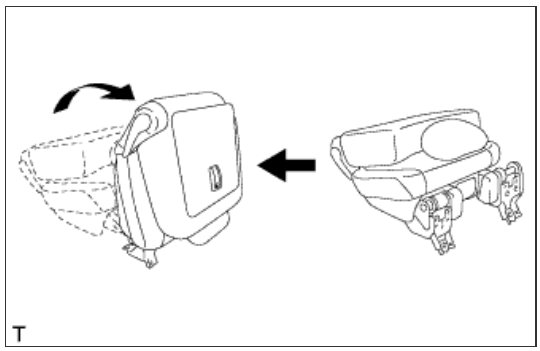


**for Preparation** Click here

## 1. INSTALL NO. 1 WOOFER BOX SPEAKER ASSEMBLY

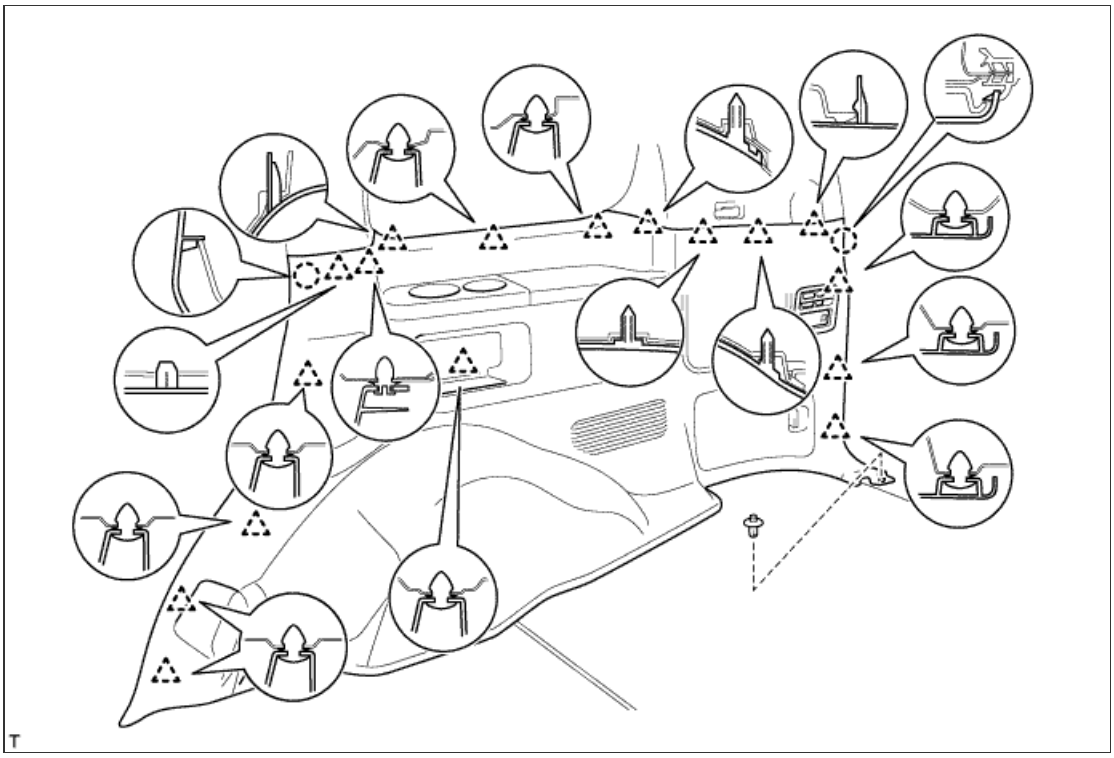
a. Install the box speaker with the 5 bolts.

b. Connect the connector.



## 2. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY RH

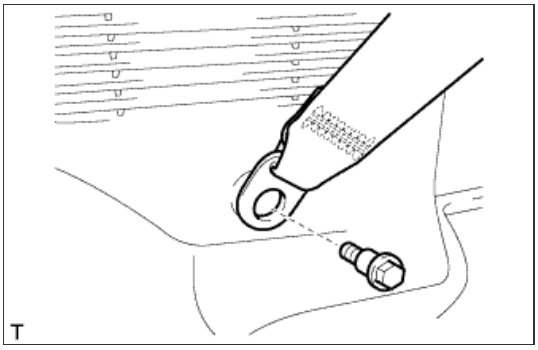
**HINT:**



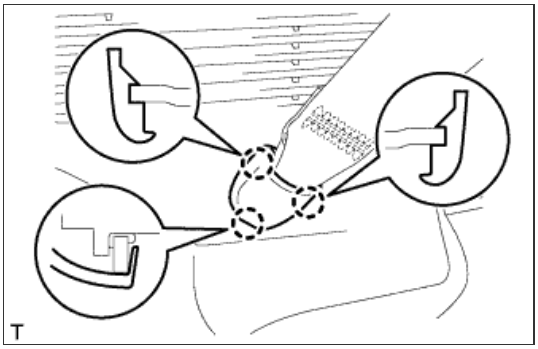
When installing the front quarter trim panel, operate the reclining adjuster release handle and move the No. 1 rear seat to the position shown in the illustration.

a. Connect the thermistor connector.

b. Attach the 17 clips and 2 claws to install the quarter trim panel.

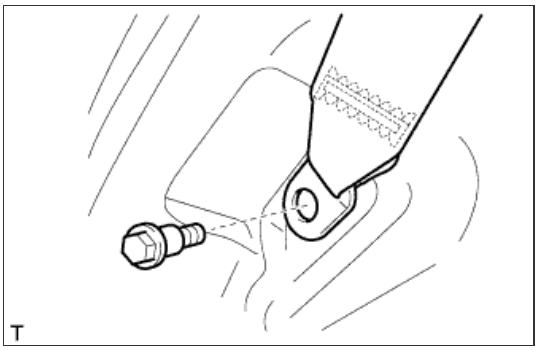


c. Install the clip.

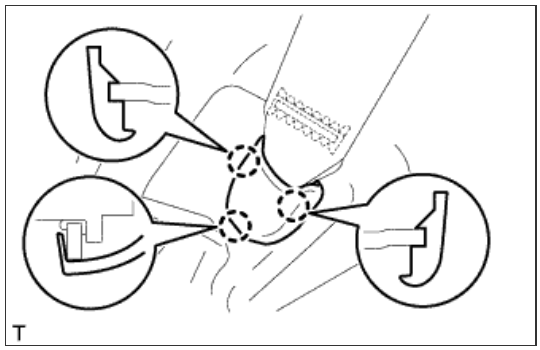


d. Install the rear No. 2 seat belt anchor with the bolt.

**Torque:**
**42 N*m{ 428 kgf*cm , 31 ft.*lbf }**



e. Attach the 3 claws to install the cover.



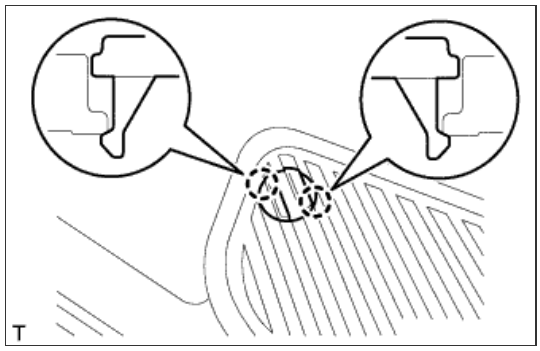
f. Install the rear No. 1 seat belt anchor with the bolt.

**Torque:**
**42 N*m{ 428 kgf*cm , 31 ft.*lbf }**

g. Attach the 3 claws to install the cover.

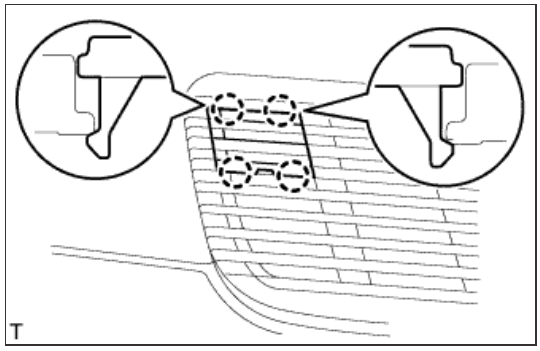
## 3. INSTALL REAR DOOR SCUFF PLATE RH

**HINT:**



Use the same procedures described for the LH side.

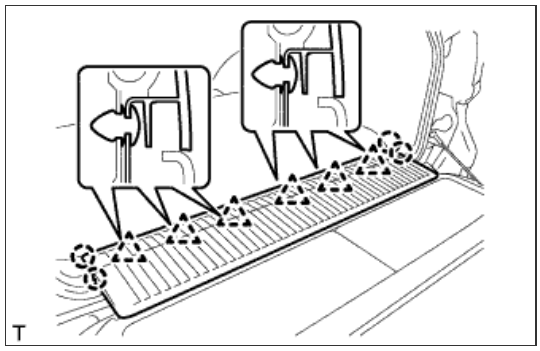
## 4. INSTALL REAR STEP COVER



**HINT:**

Use the same procedure to install the step cover on the other side.

a. w/o Illumination Type Front Door Scuff Plate:
Attach the 2 claws to install the step cover.



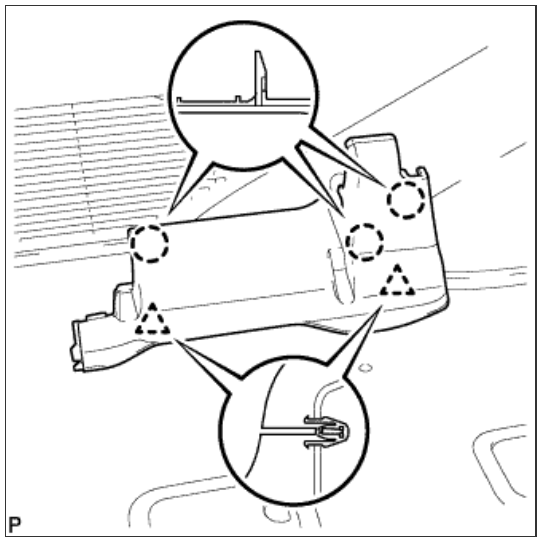
b. w/ Illumination Type Front Door Scuff Plate:
Attach the 4 claws to install the step cover.

## 5. INSTALL REAR FLOOR MAT REAR SUPPORT PLATE

a. Attach the 6 clips and 4 claws to install the support plate.

### 6. INSTALL REAR NO. 2 SEAT ASSEMBLY

Install the rear No. 2 seat assembly ( Click here).

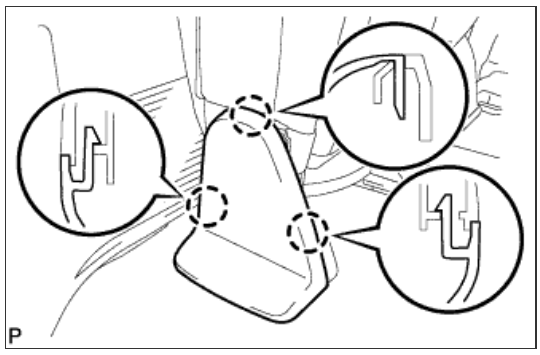


### 7. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

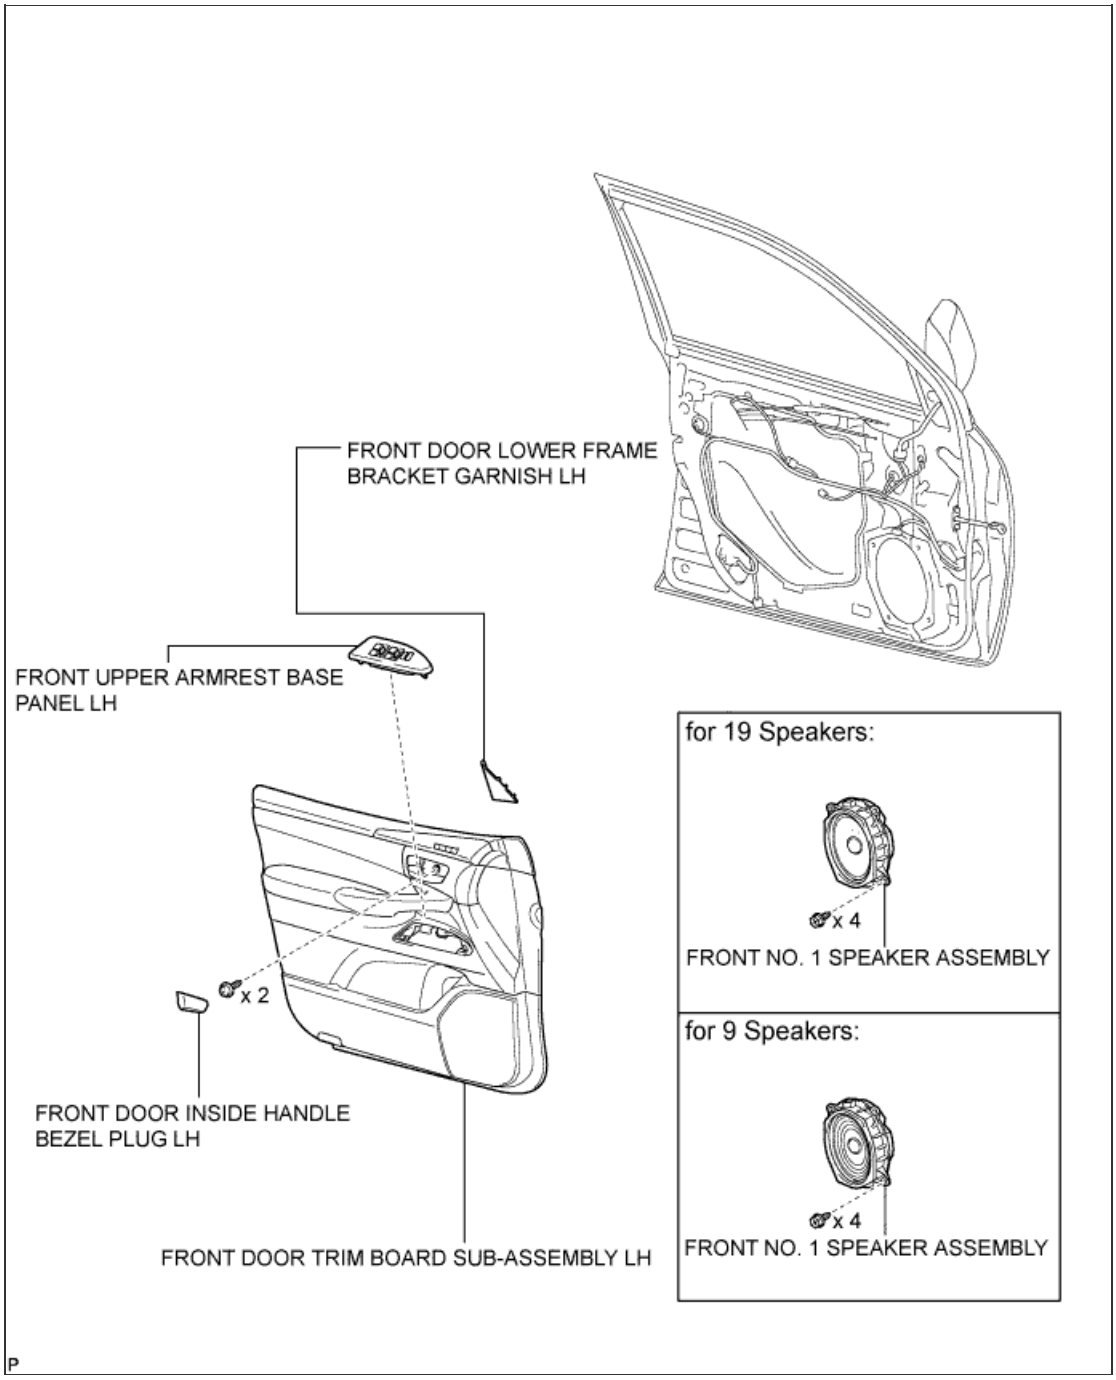
### 8. INSTALL REAR NO. 2 SEAT HINGE COVER RH



a. Attach the 3 claws and 2 clips to install the cover.

### 9. INSTALL REAR SEAT CUSHION HINGE COVER RH

a. Attach the 3 claws to install the cover.

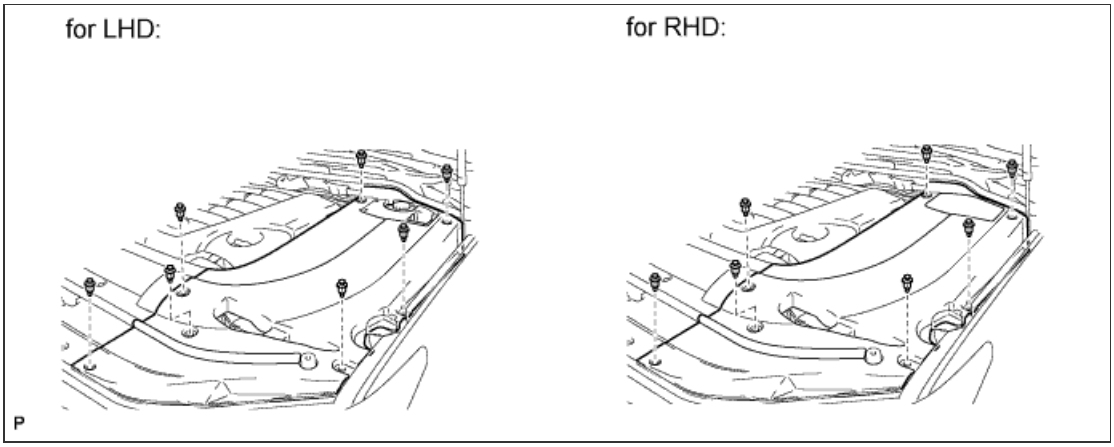


b. Return the seat to the upright position.

### 10. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover LH with the 7 clips.

**for Preparation** Click here



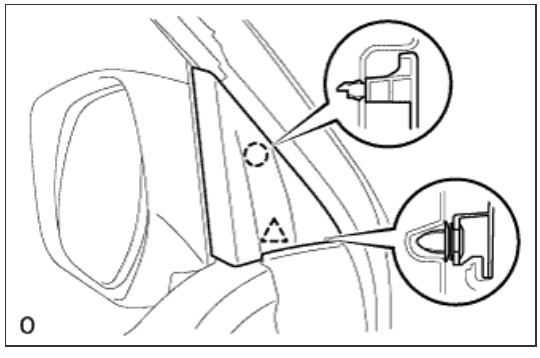
**for Preparation** Click here

**HINT:**

- **Use the same procedures for the LH side and RH side.**
- **The procedures listed below are for the LH side.**

## 1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.



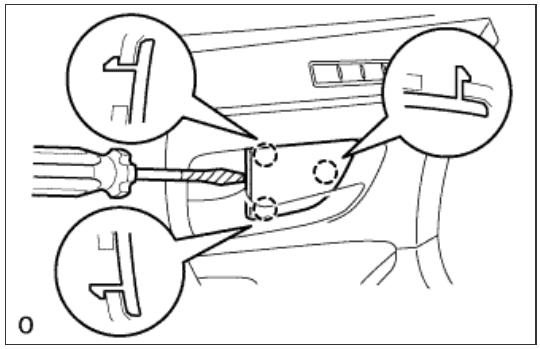
## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

## 3. REMOVE FRONT LOWER DOOR FRAME BRACKET GARNISH LH

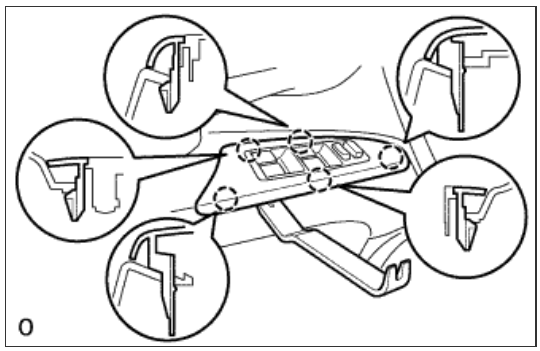
a. Detach the clip and claw, and remove the front lower door frame bracket garnish.



## 4. REMOVE FRONT DOOR INSIDE HANDLE BEZEL PLUG LH

a. Using a screwdriver, detach the 3 claws and remove the inside handle bezel plug.

**HINT:**

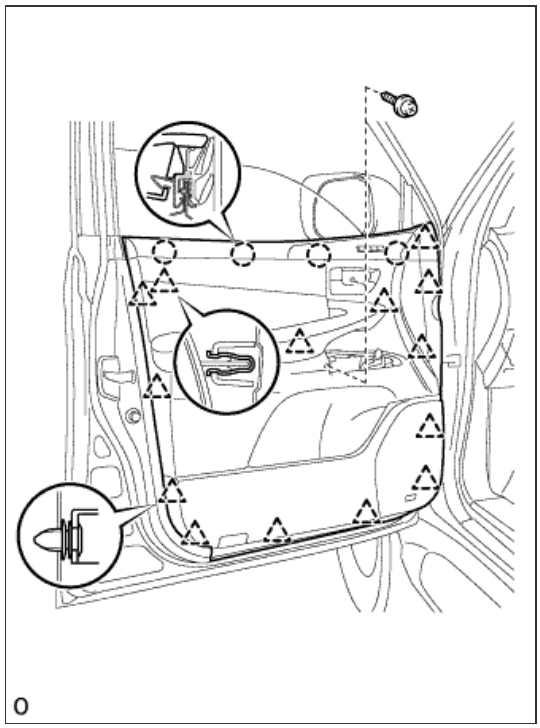


Tape the screwdriver tip before use.

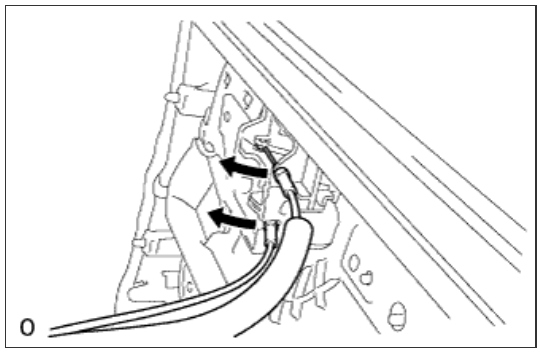
## 5. REMOVE FRONT UPPER ARMREST BASE PANEL LH

a. Using a moulding remover, detach the 5 claws.

b. Disconnect the connector and remove the front upper armrest base panel and multiplex network master switch.



## 6. REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY LH

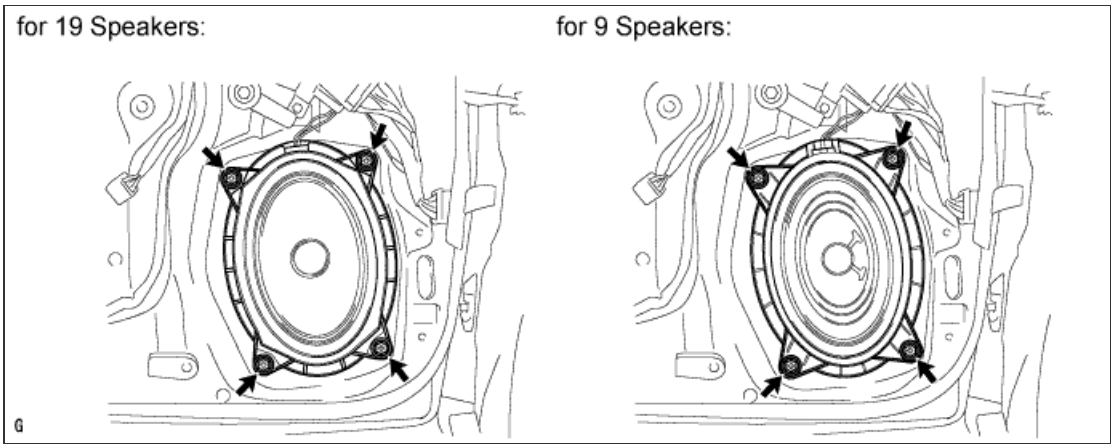


a. Remove the 2 screws.

b. Detach the 14 clips and 4 claws.

c. Disconnect the connector and remove the trim board.

d. Disconnect the 2 cables from the inside handle.



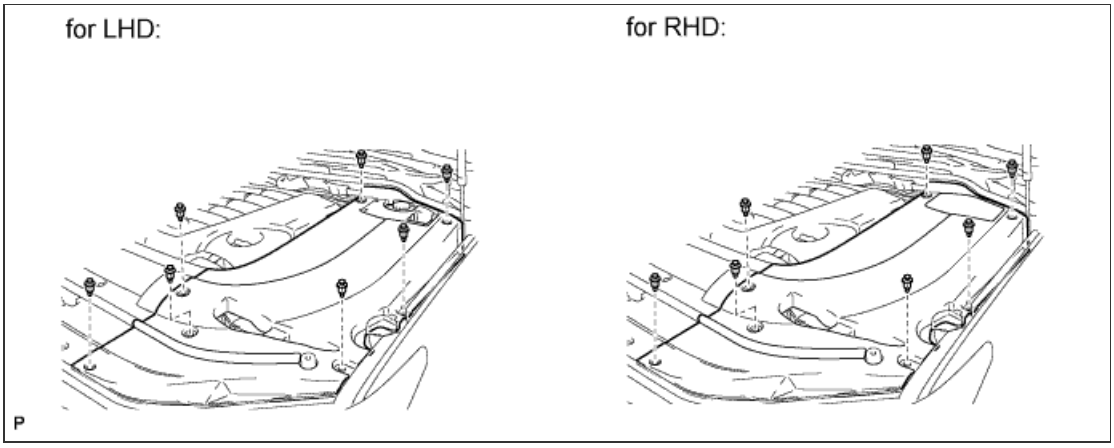
## 7. REMOVE FRONT NO. 1 SPEAKER ASSEMBLY

a. Disconnect the speaker connector.

b. Remove the 4 screws and speaker.

**NOTICE:**

Do not touch the cone part of the speaker.



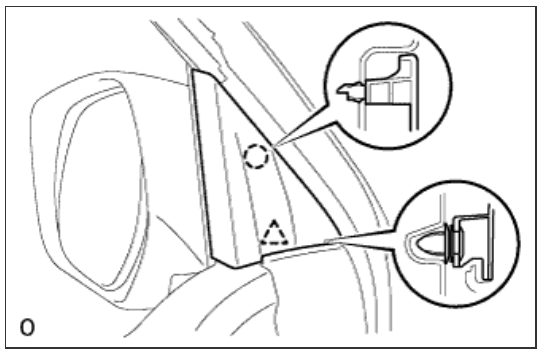
**for Preparation** Click here

**HINT:**

- **Use the same procedures for the LH side and RH side.**
- **The procedures listed below are for the LH side.**

## 1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover LH.



## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

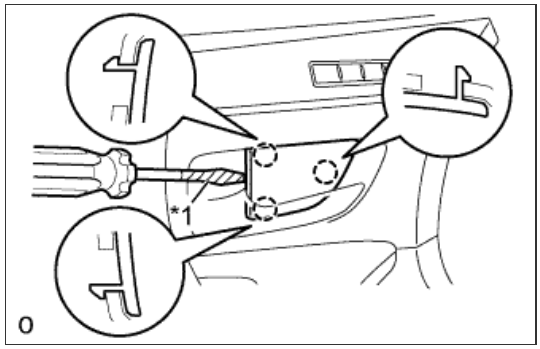
**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

## 3. REMOVE FRONT LOWER DOOR FRAME BRACKET GARNISH LH

a. Detach the clip and claw, and remove the front lower door frame bracket garnish LH.

## 4. REMOVE FRONT DOOR INSIDE HANDLE BEZEL PLUG LH

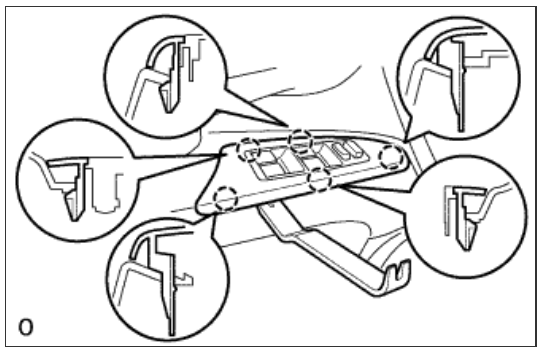


a. Using a screwdriver, detach the 3 claws and remove the front door inside handle bezel plug LH.

**HINT:**

Tape the screwdriver tip before use.

**Text in Illustration**



| | |
|---|---|
| *1 | Protective Tape |

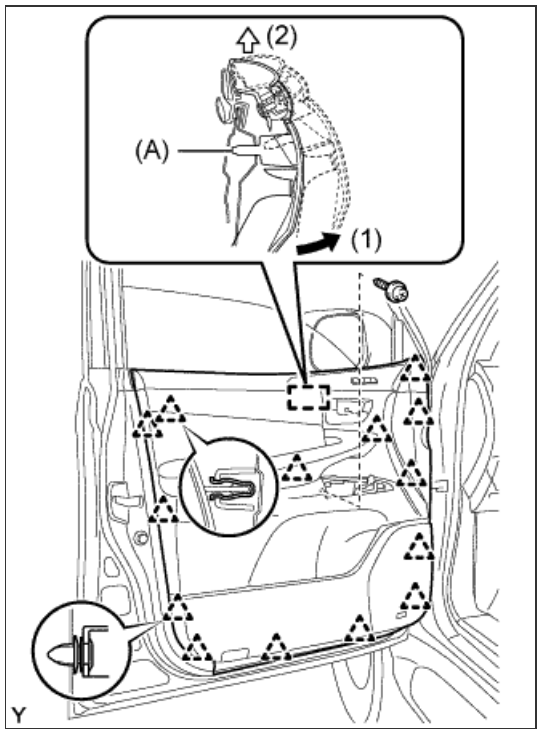
## 5. REMOVE FRONT UPPER ARMREST BASE PANEL LH

a. Using a moulding remover, detach the 5 claws.

b. Disconnect the connector and remove the front upper armrest base panel LH and multiplex network master switch assembly.

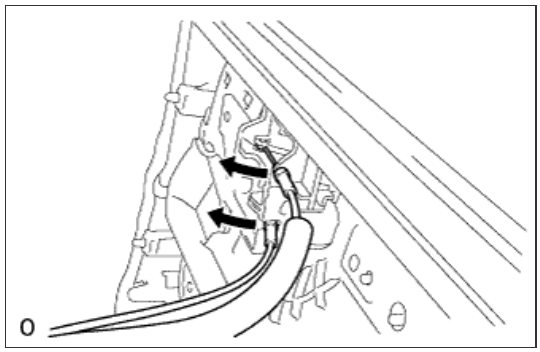
## 6. REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY LH

a. Remove the 2 screws.



b. Detach the 14 clips.

c. Remove the front inner door glass weatherstrip LH together with the front door trim board sub-assembly LH by pulling them upward in the order shown in the illustration.

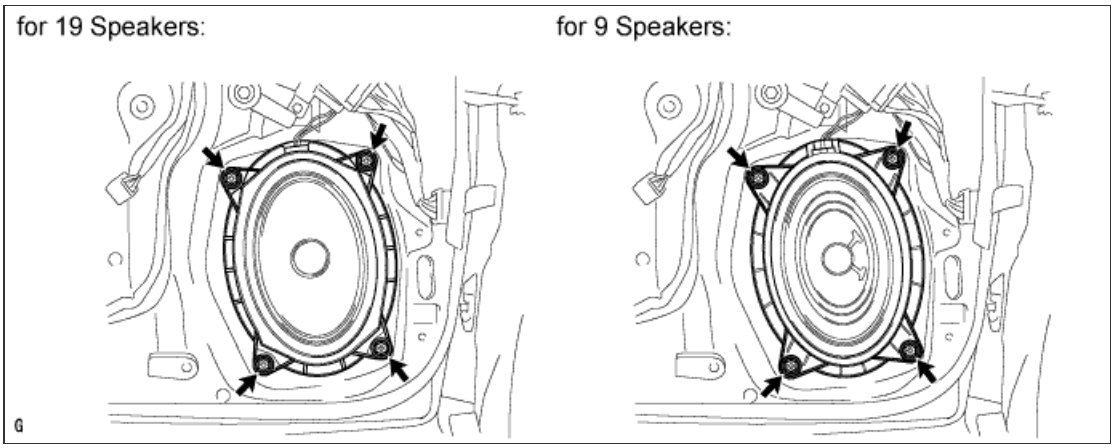


**HINT:**

Make sure that the pin labeled A in the illustration is detached from the door panel.

d. Disconnect the connector.

e. Disconnect the 2 cables from the front door inside handle sub-assembly LH.



## 7. REMOVE FRONT NO. 1 SPEAKER ASSEMBLY

a. Disconnect the speaker connector.

b. Remove the 4 screws and speaker.

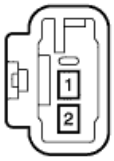
**NOTICE:**

Do not touch the cone part of the speaker.

**for Preparation** Click here

## 1. INSPECT FRONT NO. 1 SPEAKER ASSEMBLY

a. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 1.9 +/-0.4 Ω*1 |
| 1 - 2 | Always | 3 Ω*2 |

*1: for 19 Speakers
*2: for 9 Speakers

If the result is not as specified, replace the front No. 1 speaker assembly.

Component without harness connected:
(Front No. 1 Speaker)

N

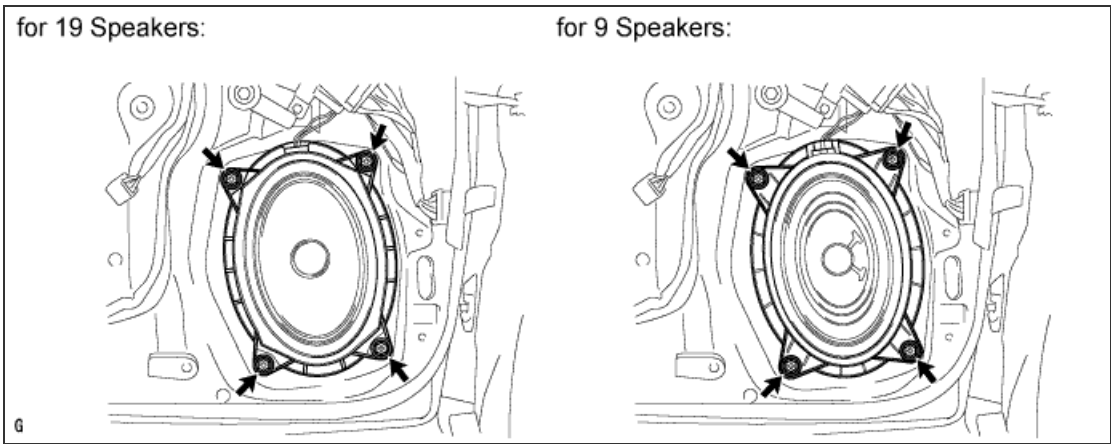
**HINT:**

- **Use the same procedures for the LH side and RH side.**
- **The procedures listed below are for the LH side.**

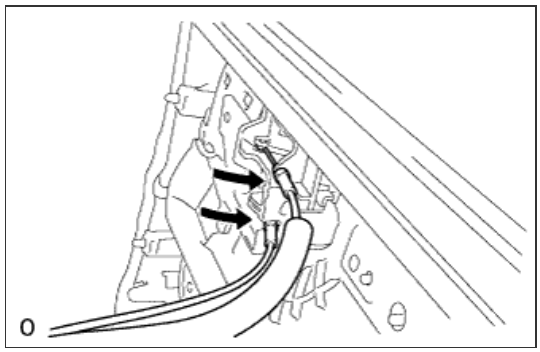


## 1. INSTALL FRONT NO. 1 SPEAKER ASSEMBLY

a. Connect the speaker connector.

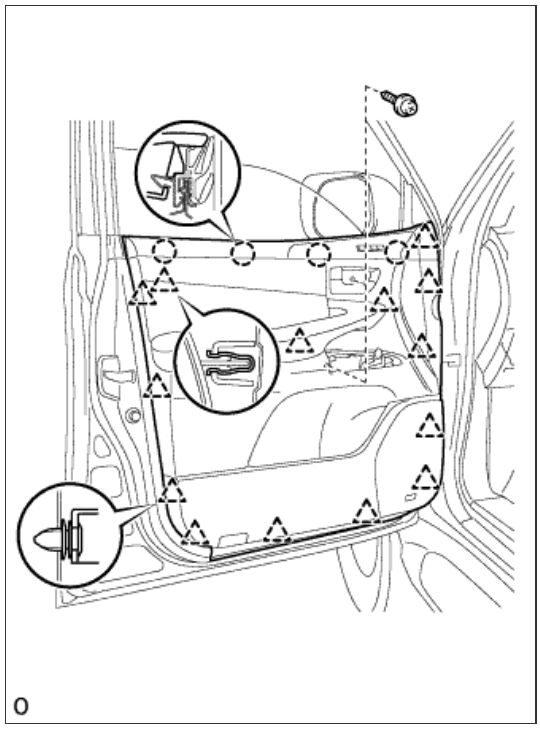
b. Install the speaker with the 4 screws.

**NOTICE:**



Do not touch the cone part of the speaker.

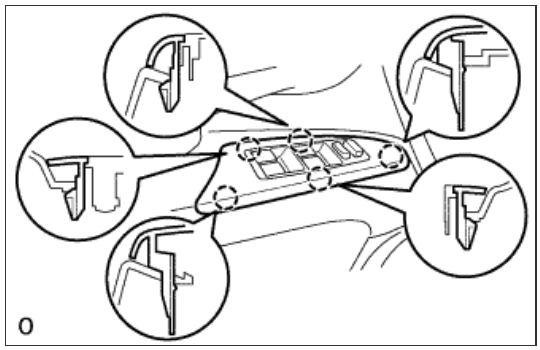
## 2. INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY LH



a. Connect the connector.

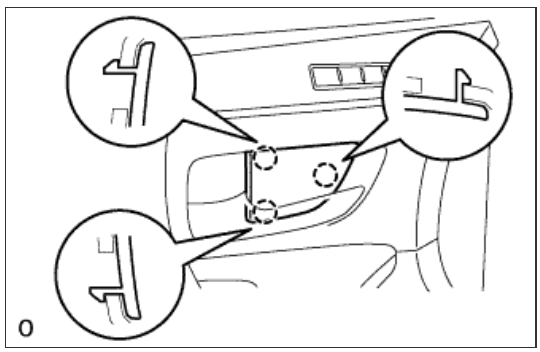
b. Connect the front door lock remote control cable and front door inside locking cable to the front door inside handle sub-assembly.

c. Attach the 4 claws and 14 clips to install the trim board.



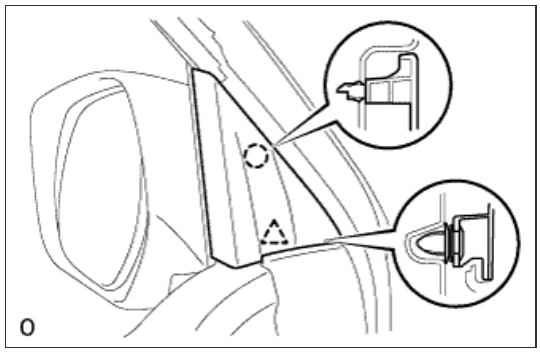
d. Install the 2 screws.

### 3. INSTALL FRONT UPPER ARMREST BASE PANEL LH



a. Connect the connector.

b. Attach the 5 claws to install the front upper armrest base panel.

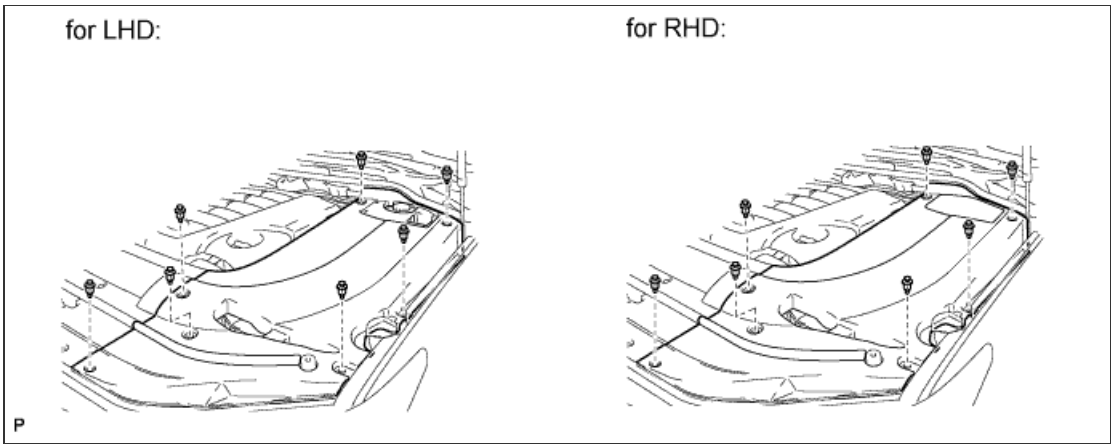


### 4. INSTALL FRONT DOOR INSIDE HANDLE BEZEL PLUG LH

a. Attach the 3 claws to install the inside handle bezel plug.

### 5. INSTALL FRONT LOWER DOOR FRAME BRACKET GARNISH LH

a. Attach the clip and claw to install the front door lower frame bracket garnish.



## 6. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

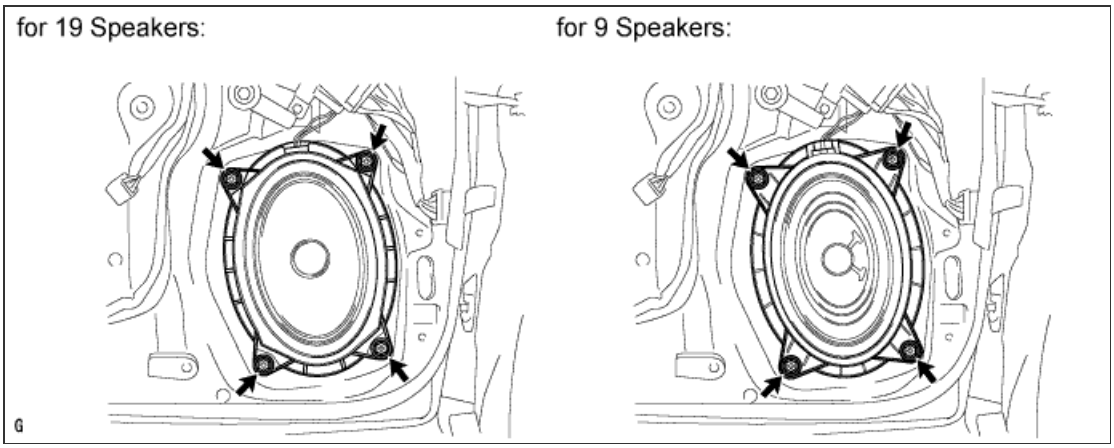
## 7. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.

**for Preparation** Click here

**HINT:**

- **Use the same procedures for the LH side and RH side.**
- **The procedures listed below are for the LH side.**

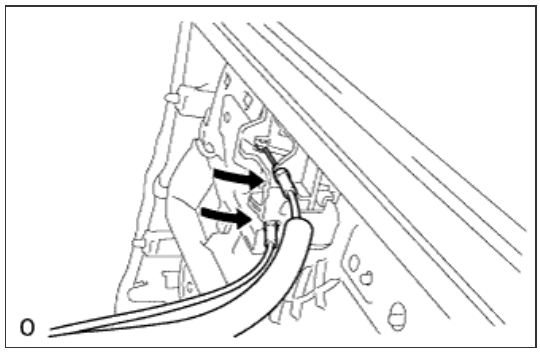


## 1. INSTALL FRONT NO. 1 SPEAKER ASSEMBLY

a. Connect the speaker connector.

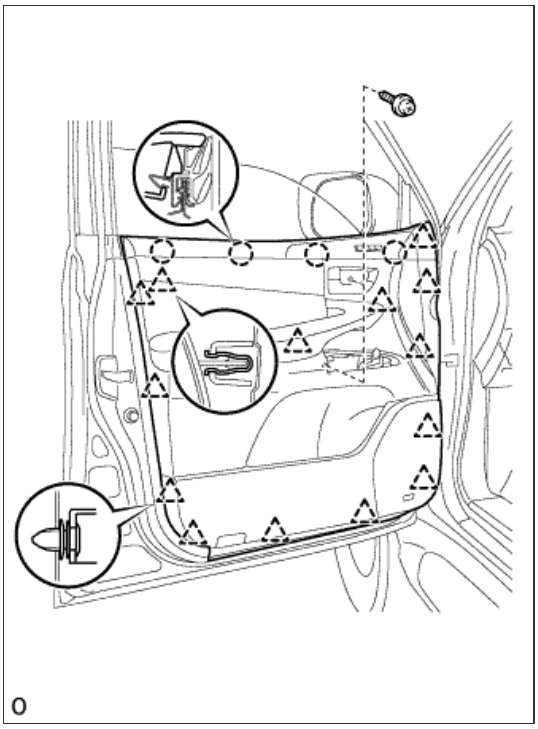
b. Install the speaker with the 4 screws.

**NOTICE:**



Do not touch the cone part of the speaker.

## 2. INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY LH



a. Connect the connector.

b. Connect the front door lock remote control cable assembly LH and front door inside locking cable assembly LH to the front door inside handle sub-assembly LH.

c. Attach the 4 claws and 14 clips to install the front door trim board sub-assembly LH.

d. Install the 2 screws.

### 3. INSTALL FRONT UPPER ARMREST BASE PANEL LH

a. Connect the connector.

b. Attach the 5 claws to install the front upper armrest base panel LH.

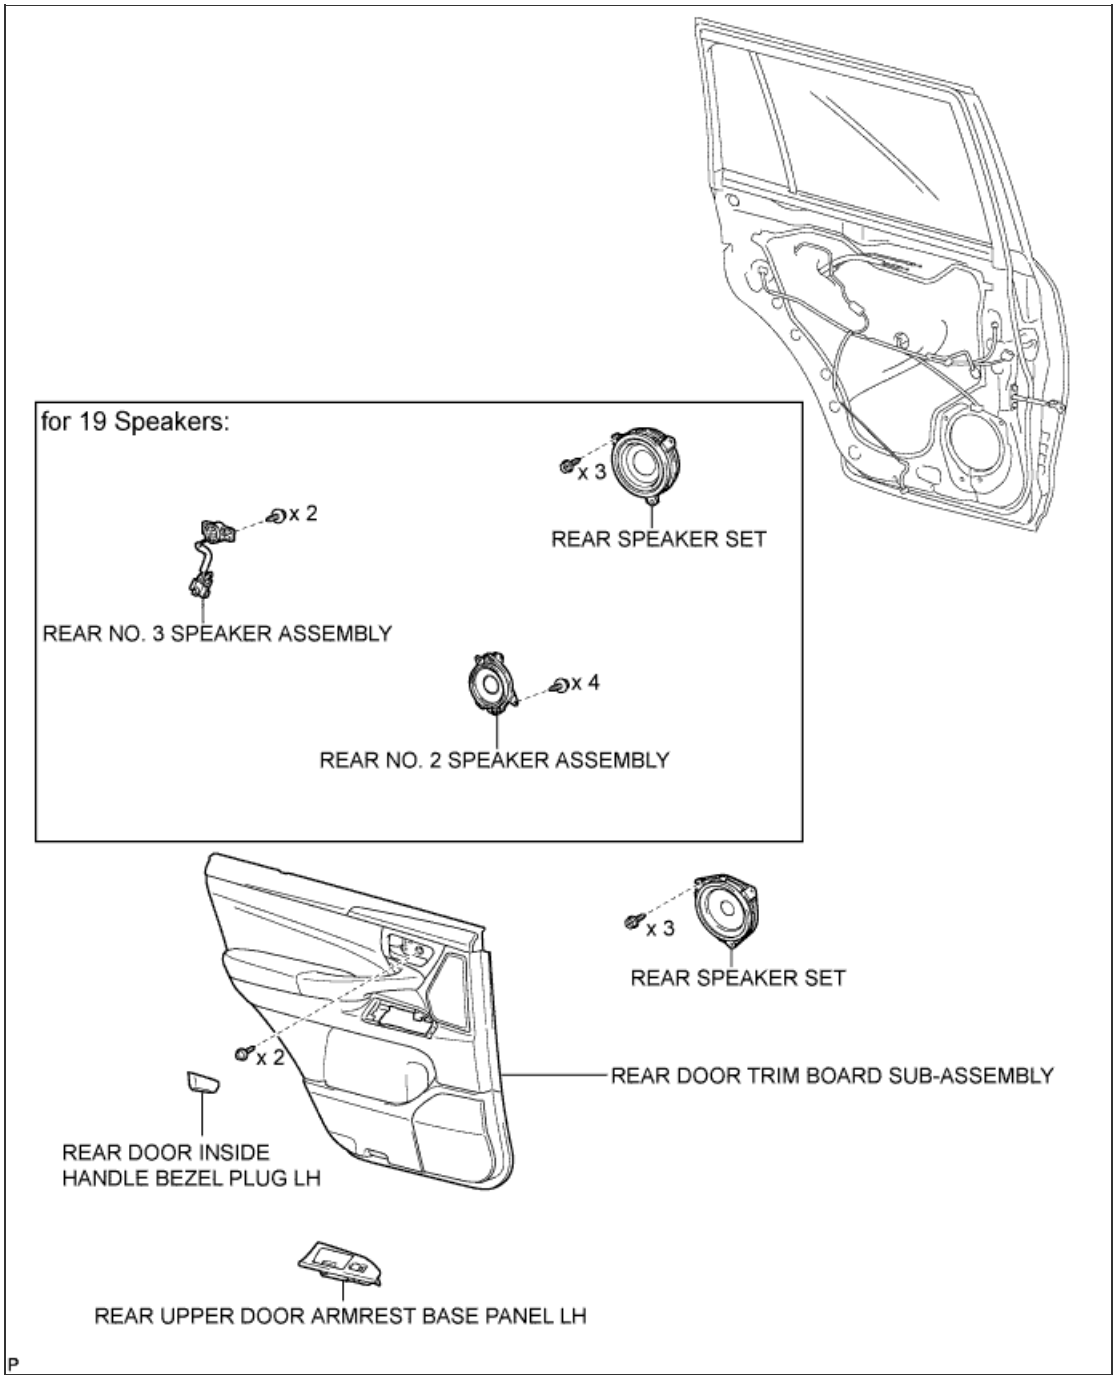
### 4. INSTALL FRONT DOOR INSIDE HANDLE BEZEL PLUG LH

a. Attach the 3 claws to install the front door inside handle bezel plug LH.

### 5. INSTALL FRONT LOWER DOOR FRAME BRACKET GARNISH LH

a. Attach the clip and claw to install the front lower door frame bracket garnish LH.

### 6. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

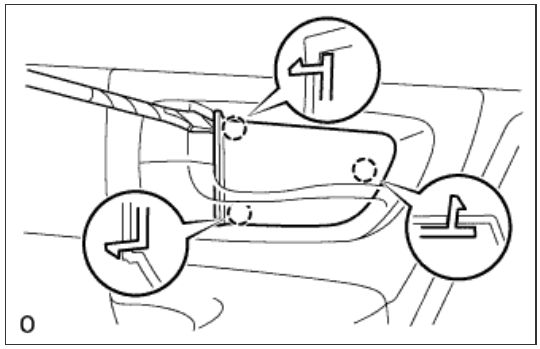
## 1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.

## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

**NOTICE:**

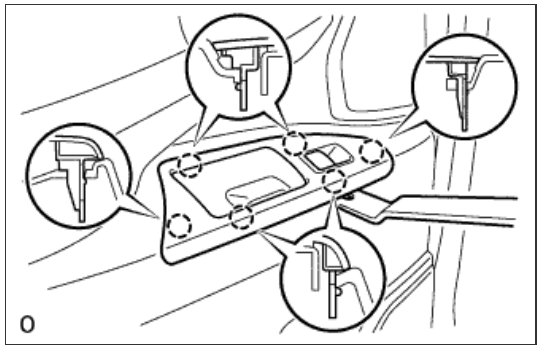


When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

## 3. REMOVE REAR DOOR INSIDE HANDLE BEZEL PLUG LH

a. Using a screwdriver, detach the 3 claws and remove the inside handle bezel plug.

**HINT:**

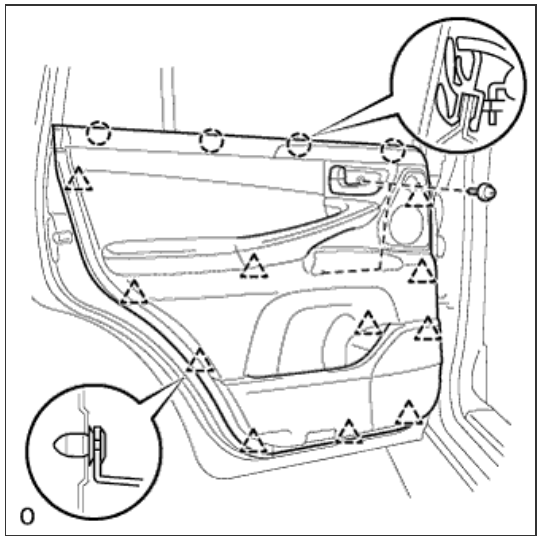


Tape the screwdriver tip before use.

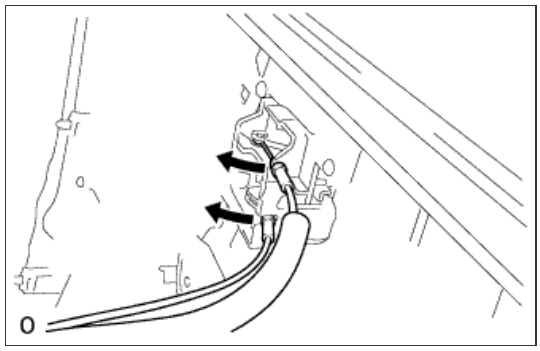
## 4. REMOVE REAR UPPER DOOR ARMREST BASE PANEL LH

a. Using a moulding remover, detach the 6 claws.

b. Disconnect the connector and remove the rear upper door armrest base panel and rear power window regulator switch assembly.



## 5. REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY



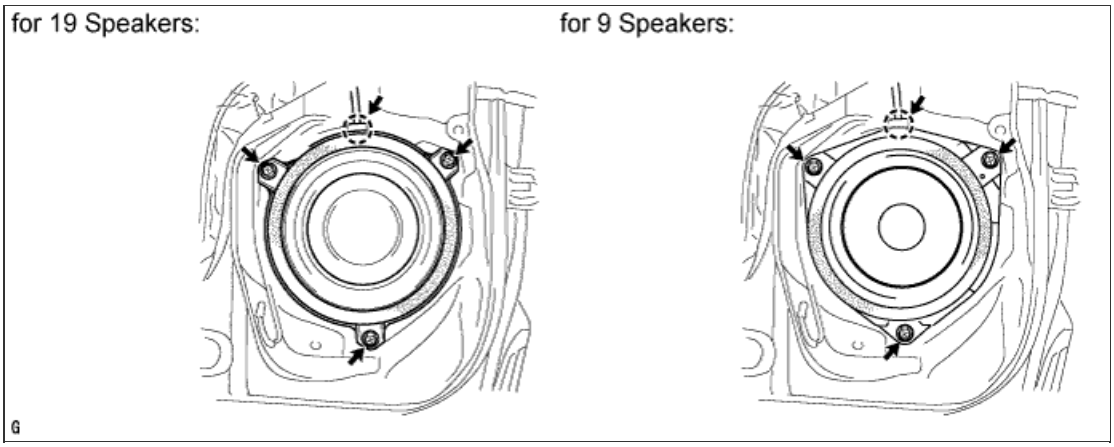
a. Remove the 2 screws.

b. Detach the 11 clips and 4 claws.

c. Disconnect the connector and remove the trim board.

d. Disconnect the 2 cables from the inside handle.

## 6. REMOVE REAR SPEAKER SET



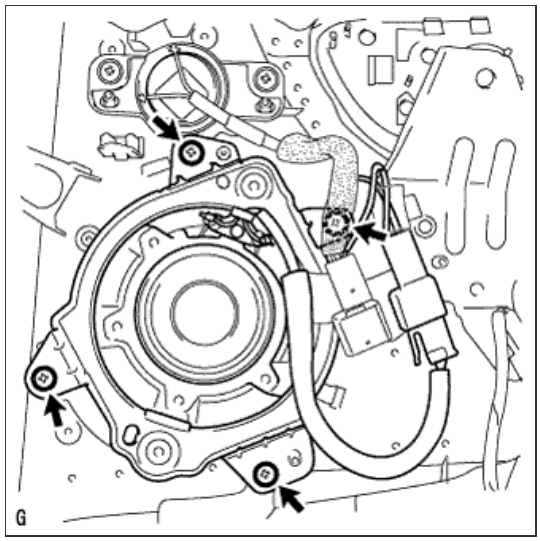
a. Disconnect the speaker connector.

b. Remove the 3 screws.

c. Detach the claw and remove the speaker.

**NOTICE:**

Do not touch the cone part of the speaker.



## 7. REMOVE REAR NO. 2 SPEAKER ASSEMBLY (for 19 Speakers)

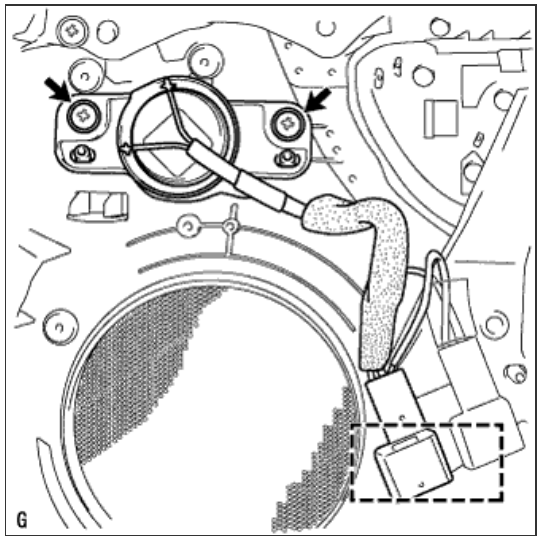
a. Disconnect the connector.

b. Remove the 4 screws and speaker.

**NOTICE:**

Do not touch the cone part of the speaker.

## 8. REMOVE REAR NO. 3 SPEAKER ASSEMBLY (for 19 Speakers)



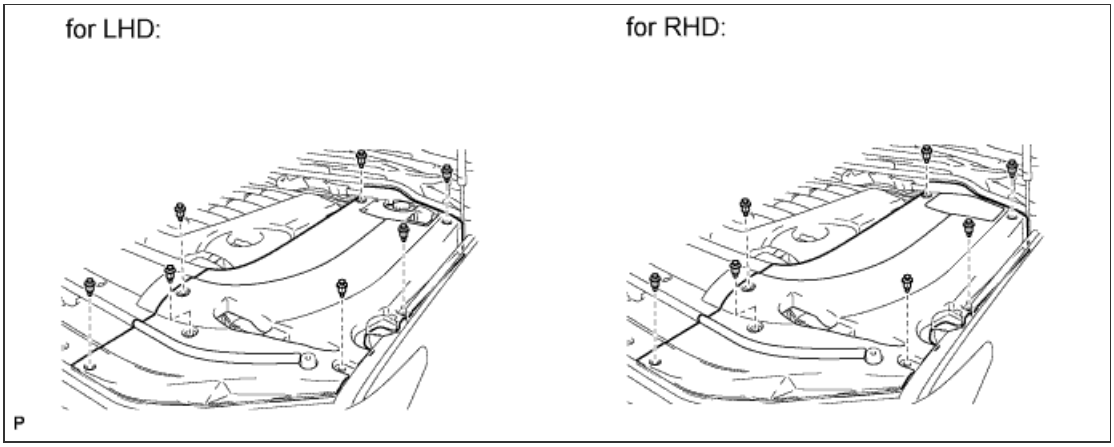
a. Disconnect the connector.

b. Detach the clamp.

c. Remove the 2 screws and speaker.

**NOTICE:**

Do not touch the cone part of the speaker.



**for Preparation** Click here

**HINT:**

- **Use the same procedures for the LH side and RH side.**
- **The procedures listed below are for the LH side.**

## 1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover LH.

## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

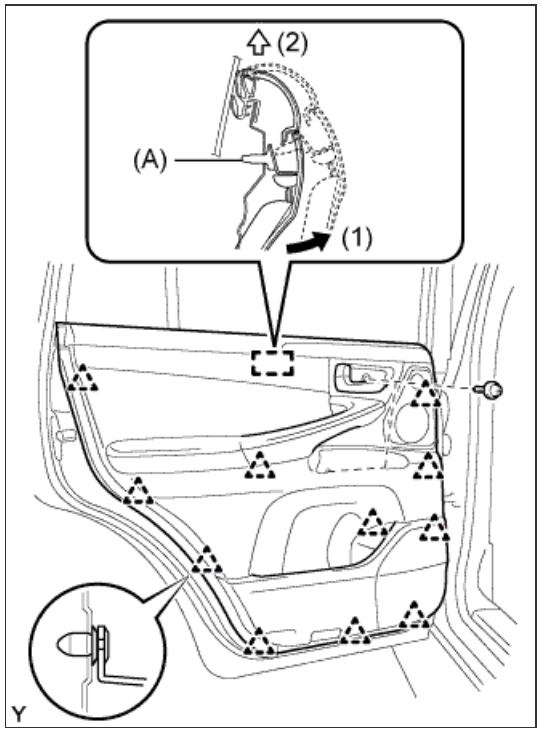
a. Using a moulding remover, detach the 6 claws.

b. Disconnect the connector and remove the rear upper door armrest base panel LH and rear power window regulator switch assembly.

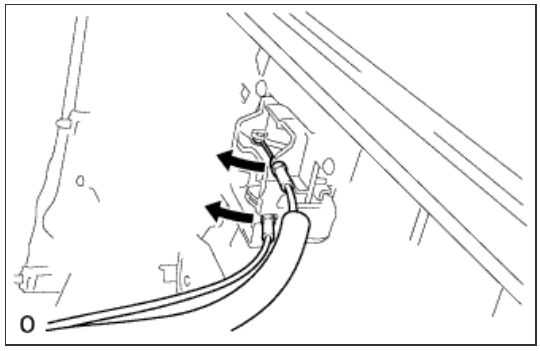
## 5. REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY

a. Remove the 2 screws.



b. Detach the 11 clips.

c. Remove the rear inner door glass weatherstrip LH together with the rear door trim board sub-assembly LH by pulling them upward in the order shown in the illustration.



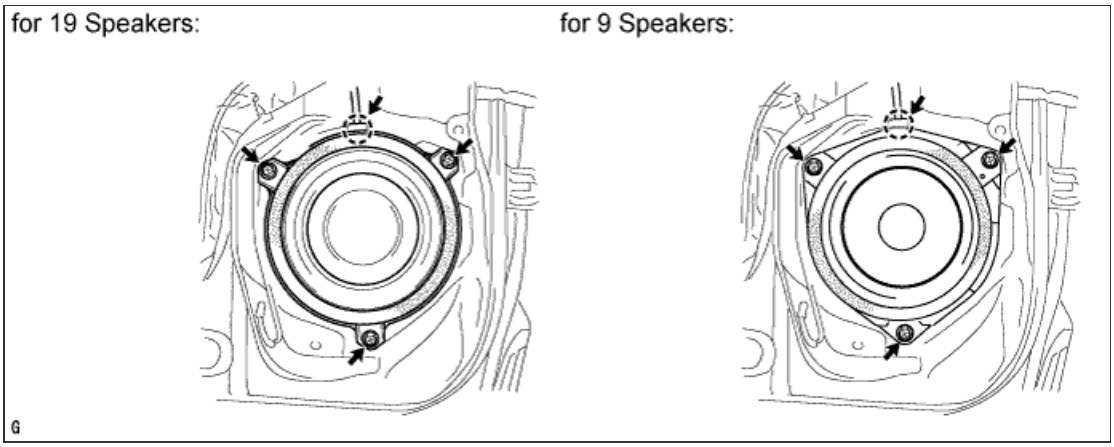
**HINT:**

Make sure that the pin labeled A in the illustration is detached from the door panel.

d. Disconnect the connector.

e. Disconnect the 2 cables from the rear door inside handle sub-assembly LH.

## 6. REMOVE REAR SPEAKER SET



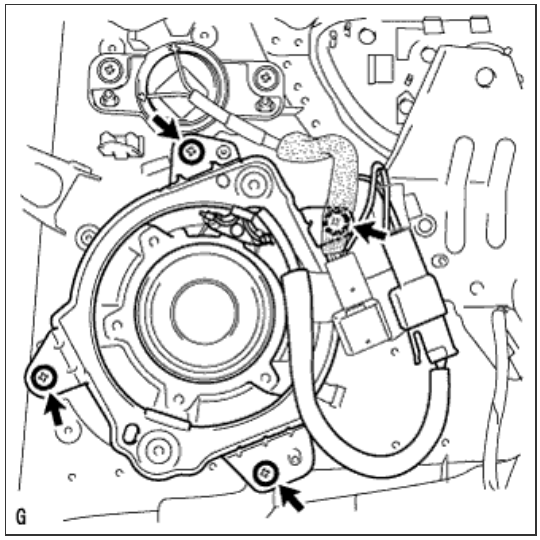
a. Disconnect the speaker connector.

b. Remove the 3 screws.

c. Detach the claw and remove the speaker.

**NOTICE:**

Do not touch the cone part of the speaker.



## 7. REMOVE REAR NO. 2 SPEAKER ASSEMBLY (for 19 Speakers)

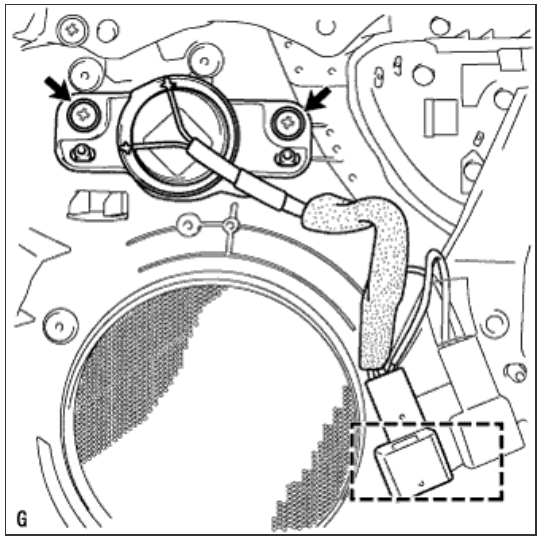
a. Disconnect the connector.

b. Remove the 4 screws and speaker.

**NOTICE:**

Do not touch the cone part of the speaker.

## 8. REMOVE REAR NO. 3 SPEAKER ASSEMBLY (for 19 Speakers)



a. Disconnect the connector.

b. Detach the clamp.

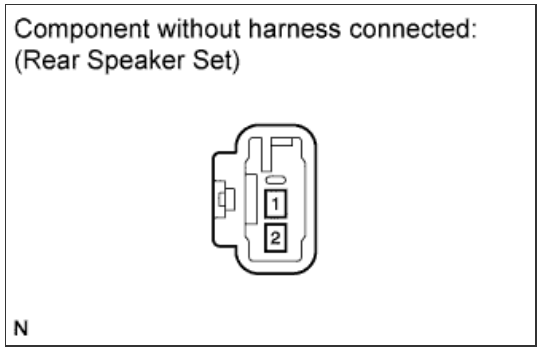
c. Remove the 2 screws and speaker.

**NOTICE:**

Do not touch the cone part of the speaker.

**for Preparation** Click here

## 1. INSPECT REAR SPEAKER SET



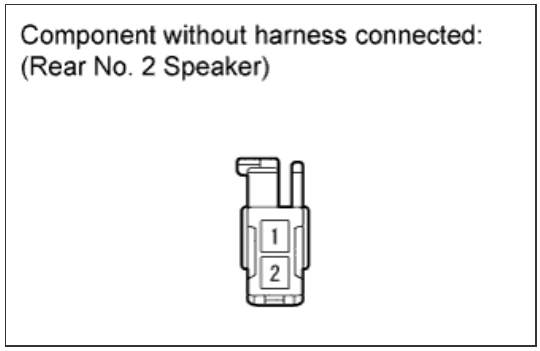
a. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 6.0 +/-1.2 Ω*1 |
| 1 - 2 | Always | 4 Ω*2 |

*1: for 19 Speakers
*2: for 9 Speakers

If the result is not as specified, replace the rear speaker set.



## 2. INSPECT REAR NO. 2 SPEAKER ASSEMBLY (for 19 Speakers)

a. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 6.0 +/-1.0 Ω |

If the result is not as specified, replace the rear No. 2 speaker assembly.

## 3. INSPECT REAR NO. 3 SPEAKER ASSEMBLY (for 19 Speakers)

a. When there is a malfunction such as noise from a speaker or no sound at all, replace the speaker with a new one and check that the malfunction disappears.

**OK:**
**Malfunction disappears.**

**HINT:**

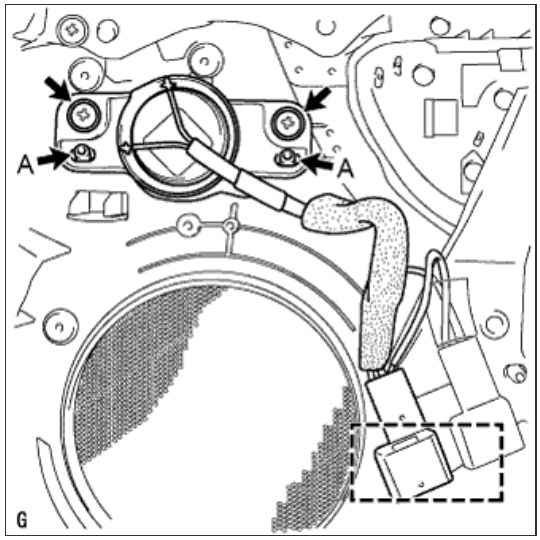
- **Connect all the connectors to the rear No. 3 speakers.**
- **When there is a possibility that either the right or left rear speaker is defective, inspect by interchanging the right one with the left one.**
- **Perform the inspection above on both LH and RH sides.**

**for Preparation** Click here

**HINT:**

- **Use the same procedures for the LH side and RH side.**
- **The procedures listed below are for the LH side.**

## 1. INSTALL REAR NO. 3 SPEAKER ASSEMBLY (for 19 Speakers)



a. Align the speaker to the door position pins labeled A.

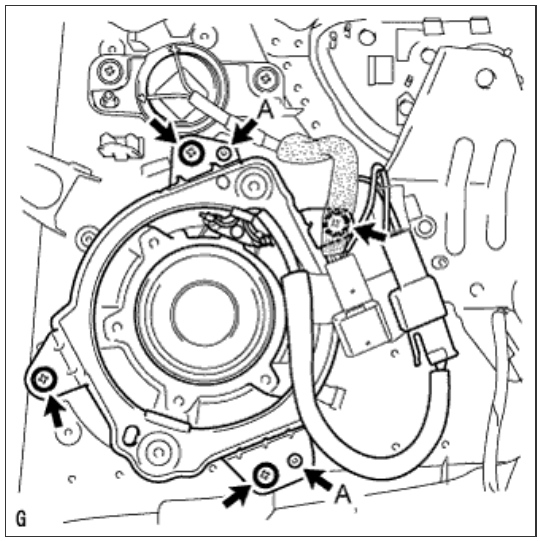
b. Install the speaker with the 2 screws.

**NOTICE:**

Do not touch the cone part of the speaker.

c. Attach the clamp and connect the connector.

## 2. INSTALL REAR NO. 2 SPEAKER ASSEMBLY (for 19 Speakers)



a. Align the speaker to the door position pins labeled A.

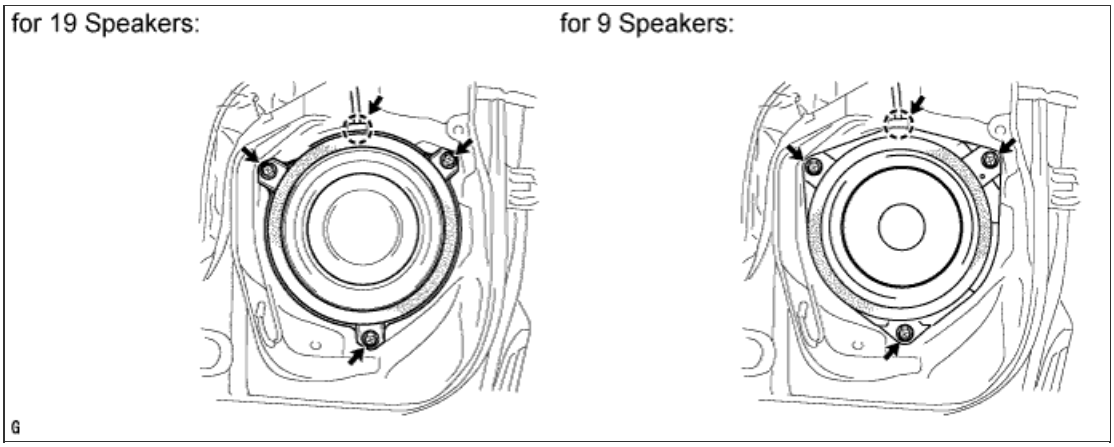
b. Install the speaker with the 4 screws.

**NOTICE:**

Do not touch the cone part of the speaker.

c. Connect the connector.

## 3. INSTALL REAR SPEAKER SET

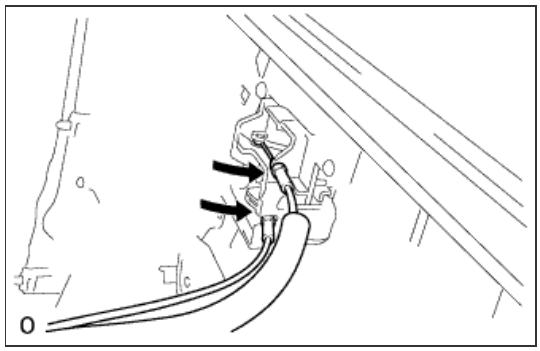


a. Temporarily install the speaker by attaching the claw of the speaker to the door panel.

b. Install the speaker with the 3 screws.

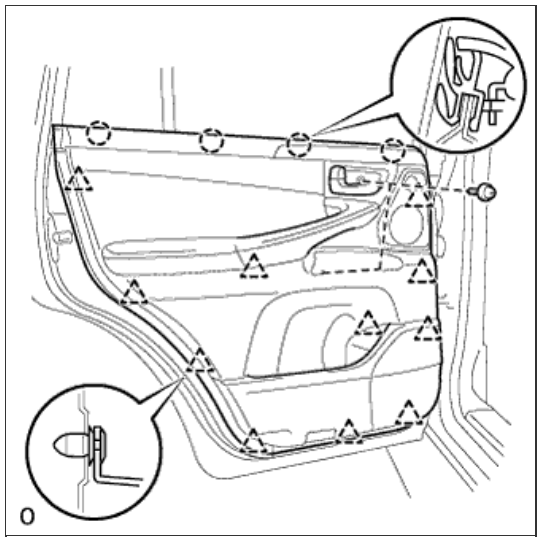
**NOTICE:**

Do not touch the cone part of the speaker.



c. Connect the connector.

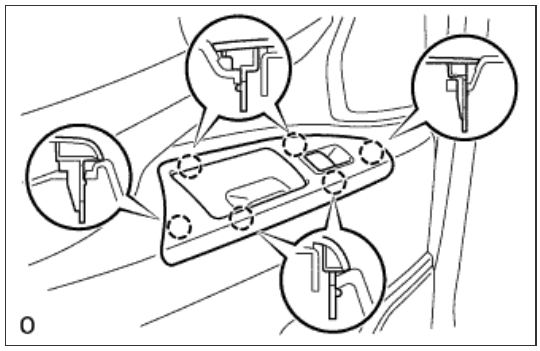
## 4. INSTALL REAR DOOR TRIM BOARD SUB-ASSEMBLY



a. Connect the connector.

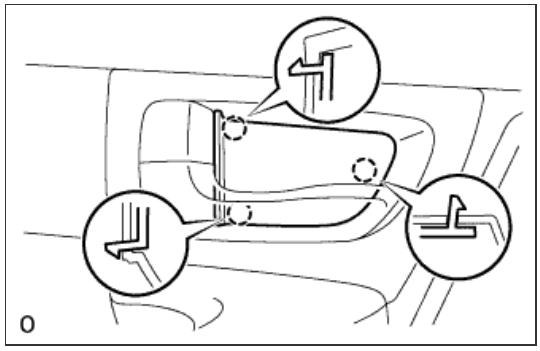
b. Connect the rear door lock remote control cable and rear door inside locking cable to the rear door inside handle sub-assembly.

c. Attach the 4 claws and 11 clips to install the rear door trim board sub-assembly.



d. Install the 2 screws.

## 5. INSTALL REAR UPPER DOOR ARMREST BASE PANEL LH

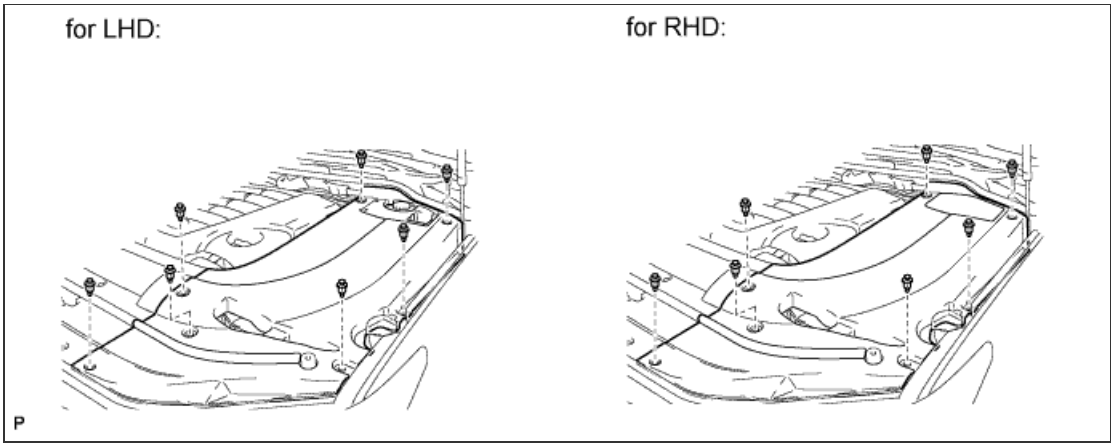


a. Connect the connector.

b. Attach the 6 claws to install the rear upper door armrest base panel.

## 6. INSTALL REAR DOOR INSIDE HANDLE BEZEL PLUG LH

a. Attach the 3 claws to install the bezel plug.



## 7. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

## 8. INSTALL ENGINE ROOM SIDE COVER LH

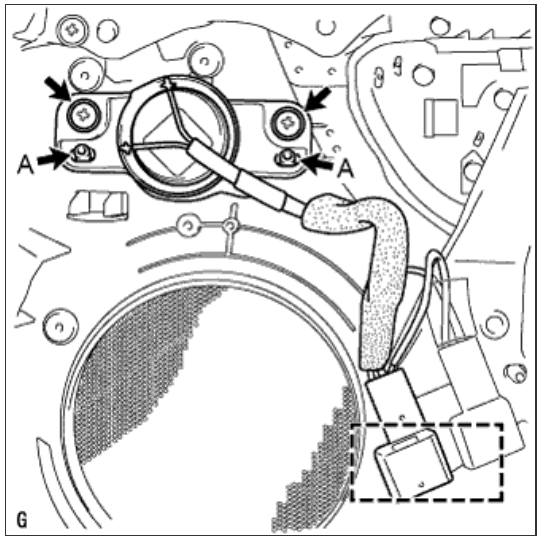
a. Install the engine room side cover with the 7 clips.

**for Preparation** Click here

**HINT:**

- **Use the same procedures for the LH side and RH side.**
- **The procedures listed below are for the LH side.**

## 1. INSTALL REAR NO. 3 SPEAKER ASSEMBLY (for 19 Speakers)



a. Align the speaker to the door position pins labeled A.

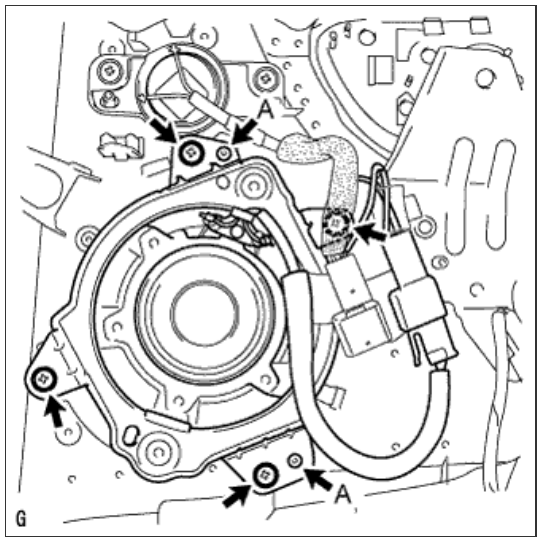
b. Install the speaker with the 2 screws.

**NOTICE:**

Do not touch the cone part of the speaker.

c. Attach the clamp and connect the connector.

## 2. INSTALL REAR NO. 2 SPEAKER ASSEMBLY (for 19 Speakers)



a. Align the speaker to the door position pins labeled A.

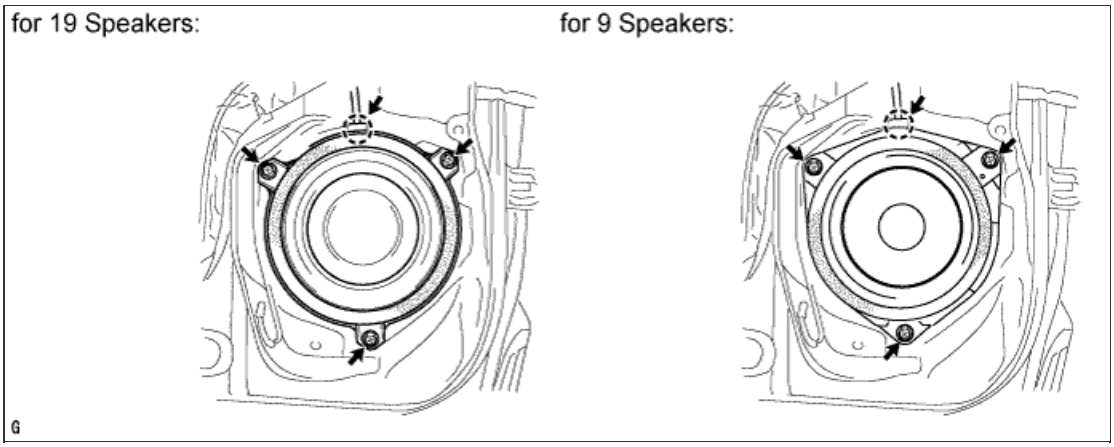
b. Install the speaker with the 4 screws.

**NOTICE:**

Do not touch the cone part of the speaker.

c. Connect the connector.

## 3. INSTALL REAR SPEAKER SET

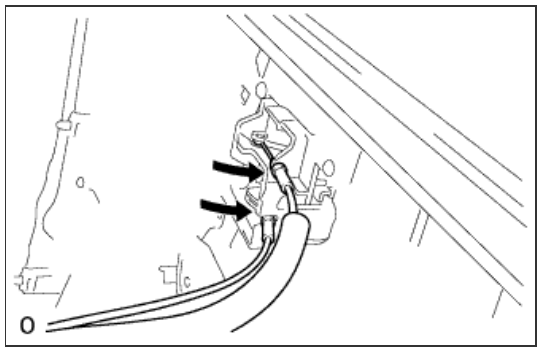


a. Temporarily install the speaker by attaching the claw of the speaker to the door panel.

b. Install the speaker with the 3 screws.

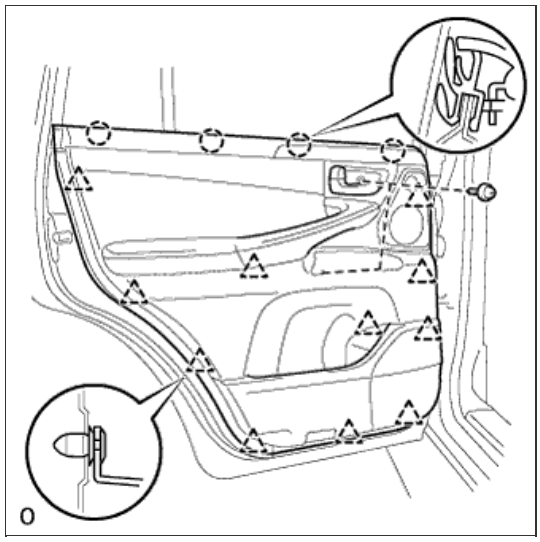
**NOTICE:**

Do not touch the cone part of the speaker.



c. Connect the connector.

## 4. INSTALL REAR DOOR TRIM BOARD SUB-ASSEMBLY



a. Connect the connector.

b. Connect the rear door lock remote control cable assembly LH and rear door inside locking cable assembly LH to the rear door inside handle sub-assembly LH.

c. Attach the 4 claws and 11 clips to install the rear door trim board sub-assembly LH.

d. Install the 2 screws.

## 5. INSTALL REAR UPPER DOOR ARMREST BASE PANEL LH

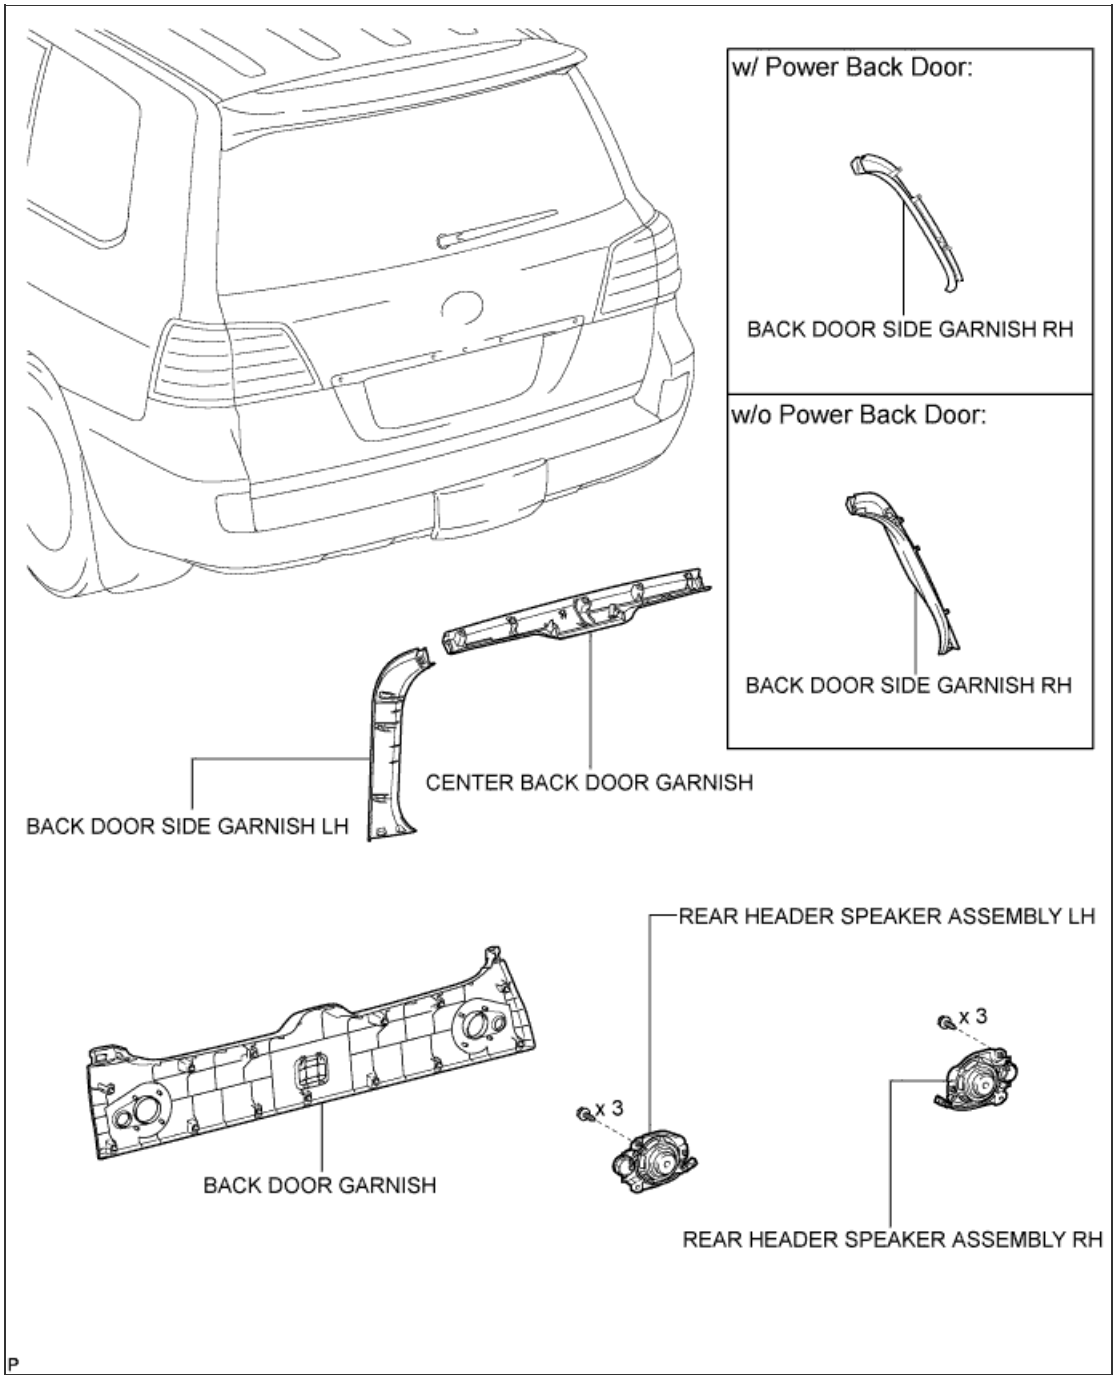
a. Connect the connector.

b. Attach the 6 claws to install the rear upper door armrest base panel LH.

## 6. INSTALL REAR DOOR INSIDE HANDLE BEZEL PLUG LH

a. Attach the 3 claws to install the rear door inside handle bezel plug LH.

## 7. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



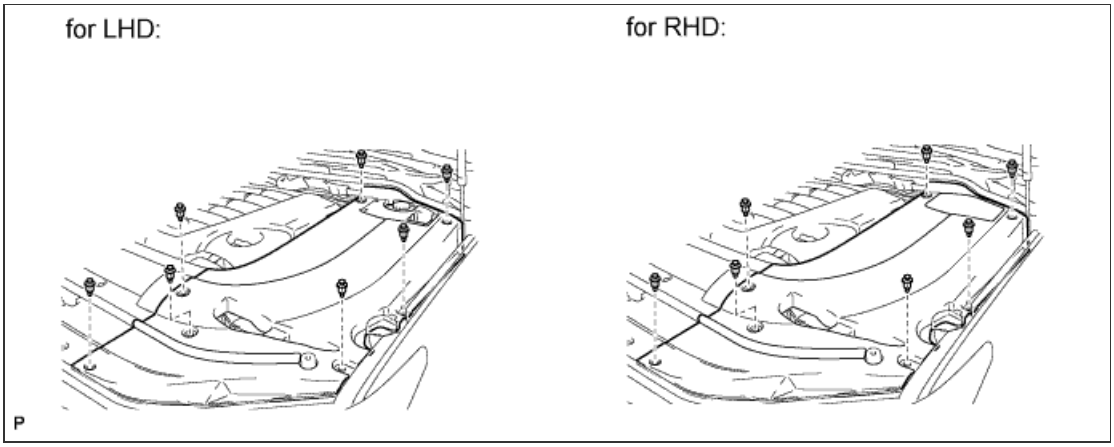
**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

## 8. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover LH with the 7 clips.

**for Preparation** Click here



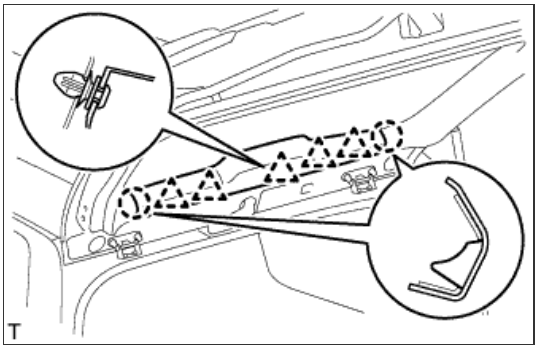
**for Preparation** Click here

**HINT:**

- **Use the same procedures for the LH side and RH side.**
- **The procedures listed below are for the LH side.**

## 1. REMOVE ENGINE ROOM SIDE COVER LH

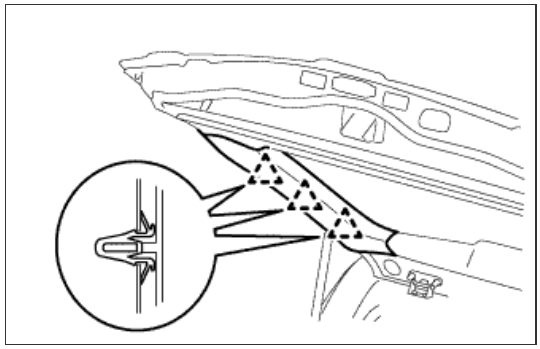
a. Remove the 7 clips and engine room side cover.



## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).



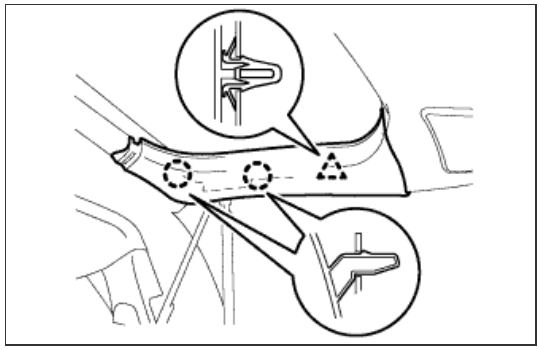
## 3. REMOVE CENTER BACK DOOR GARNISH

a. Detach the 5 clips and 2 claws, and remove the back door garnish.

## 4. REMOVE BACK DOOR SIDE GARNISH LH

a. Detach the 3 clips and remove the back door side garnish.

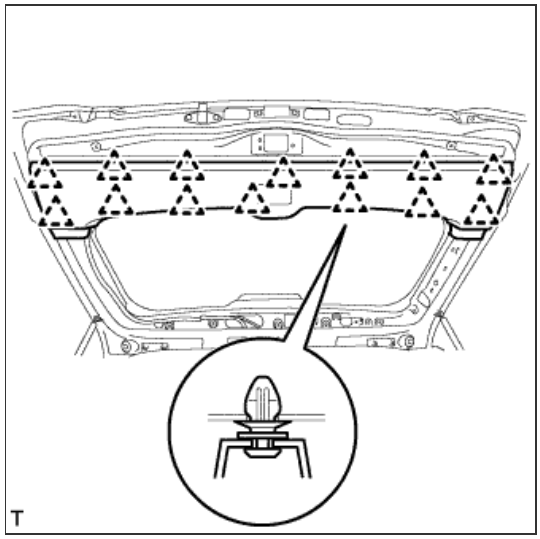
## 5. REMOVE BACK DOOR SIDE GARNISH RH



a. w/o Power Back Door:

**HINT:**

Use the same procedures described for the LH side.

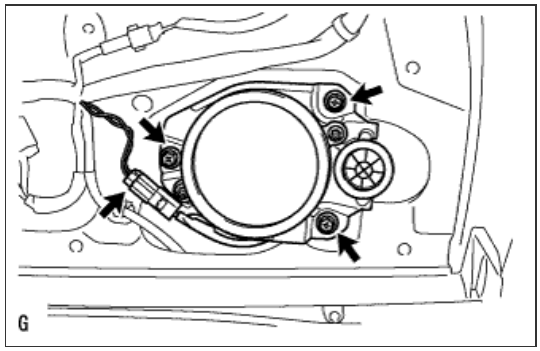


b. w/ Power Back Door:

i. Detach the clip and 2 claws and remove the back door side garnish.

## 6. REMOVE BACK DOOR GARNISH

a. Using a screwdriver, detach the 14 clips and remove the back door garnish.



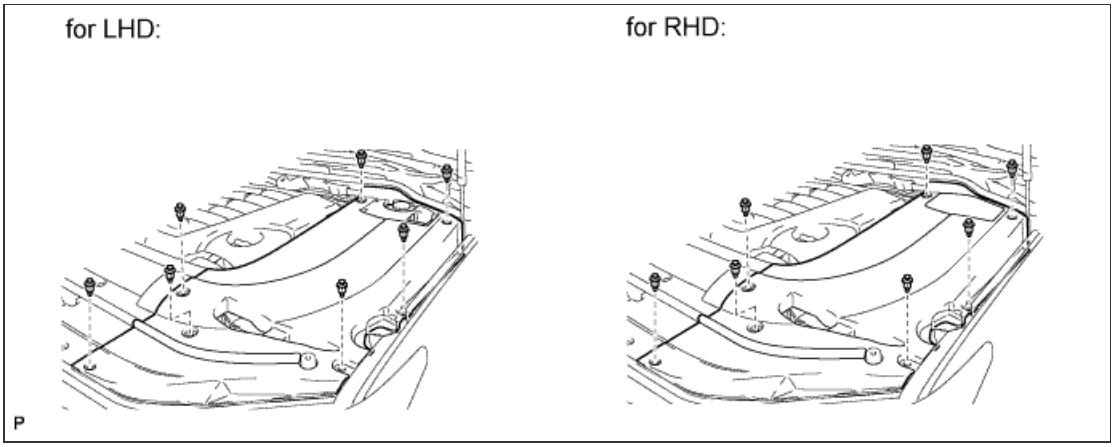
## 7. REMOVE REAR HEADER SPEAKER ASSEMBLY

a. Remove the 3 screws.

b. Disconnect the connector and remove the speaker.

**NOTICE:**

Do not touch the cone part of the speaker.



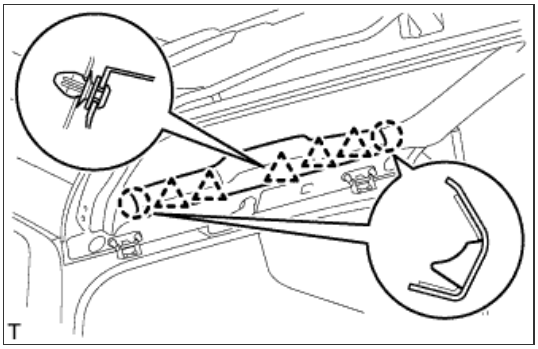
**for Preparation** Click here

**HINT:**

- **Use the same procedures for the LH side and RH side.**
- **The procedures listed below are for the LH side.**

## 1. REMOVE ENGINE ROOM SIDE COVER LH

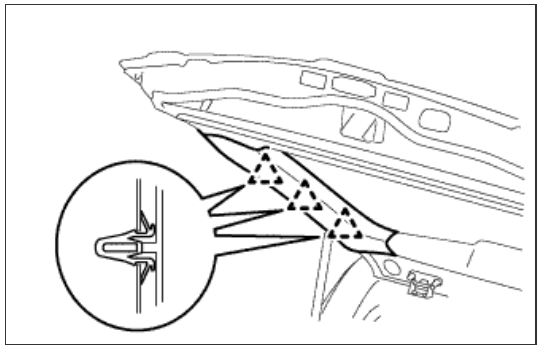
a. Remove the 7 clips and engine room side cover LH.



## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).



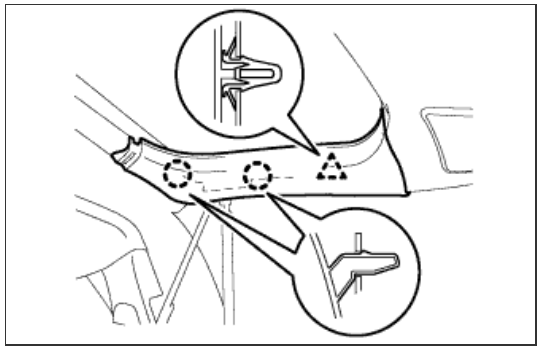
## 3. REMOVE CENTER BACK DOOR GARNISH

a. Detach the 5 clips and 2 claws, and remove the back door garnish.

## 4. REMOVE BACK DOOR SIDE GARNISH LH

a. Detach the 3 clips and remove the back door side garnish.

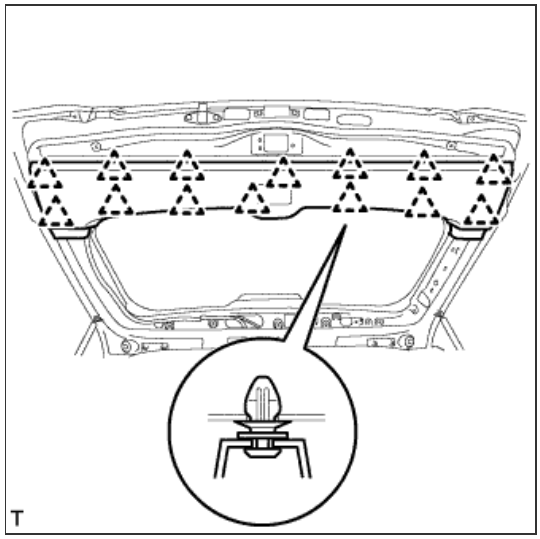
## 5. REMOVE BACK DOOR SIDE GARNISH RH



a. w/o Power Back Door:

**HINT:**

Use the same procedures described for the LH side.

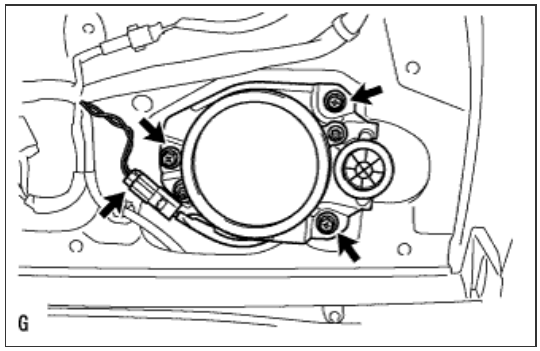


b. w/ Power Back Door:

i. Detach the clip and 2 claws and remove the back door side garnish.

## 6. REMOVE BACK DOOR GARNISH

a. Using a screwdriver, detach the 14 clips and remove the back door garnish.



## 7. REMOVE REAR HEADER SPEAKER ASSEMBLY

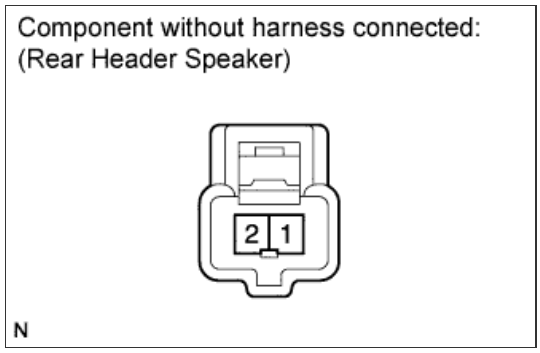
a. Remove the 3 screws.

b. Disconnect the connector and remove the speaker.

**NOTICE:**

Do not touch the cone part of the speaker.

**for Preparation** Click here



## 1. INSPECT REAR HEADER SPEAKER ASSEMBLY

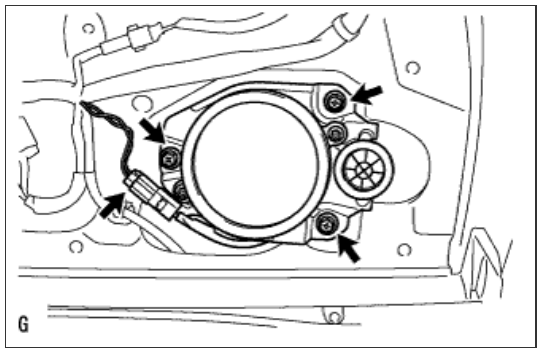
a. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 6.0 +/-1.0 Ω |

If the result is not as specified, replace the rear header speaker assembly.

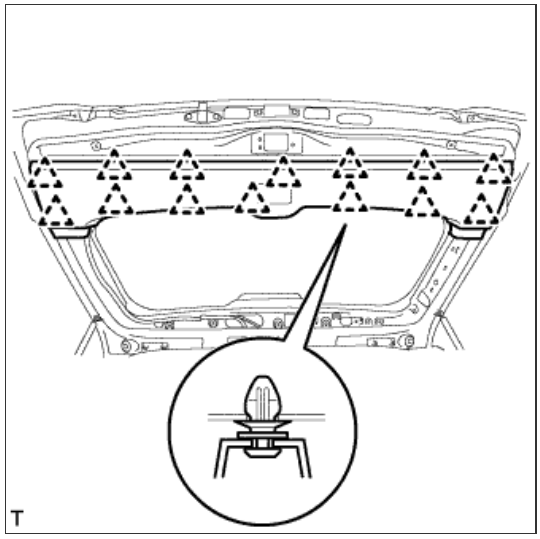
**for Preparation** Click here



## 1. INSTALL REAR HEADER SPEAKER ASSEMBLY

a. Connect the connector.

b. Install the speaker with the 3 screws.



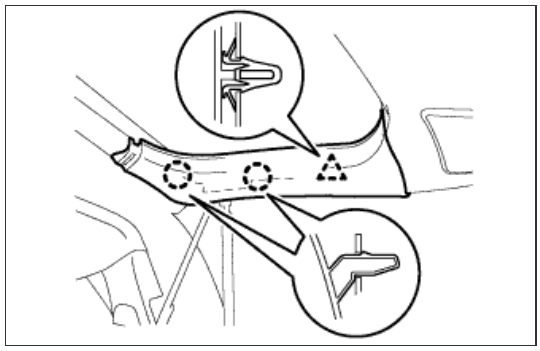
**NOTICE:**

Do not touch the cone part of the speaker.

## 2. INSTALL BACK DOOR GARNISH

a. Attach the 14 clips to install the back door garnish.

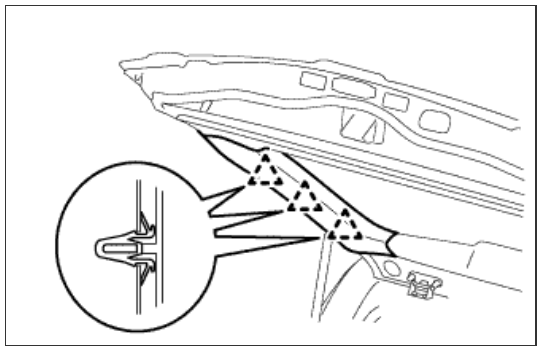
## 3. INSTALL BACK DOOR SIDE GARNISH RH



a. w/o Power Back Door:

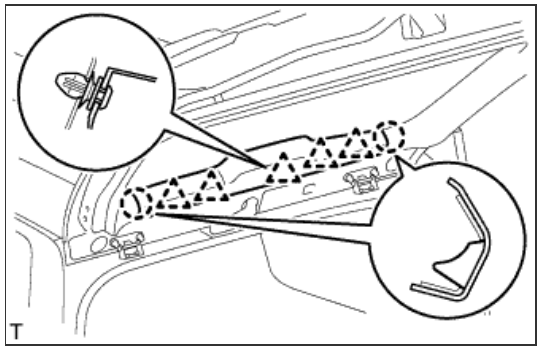
**HINT:**

Use the same procedures described for the LH side.



b. w/ Power Back Door:

i. Attach the clip and 2 claws to install the back door side garnish.



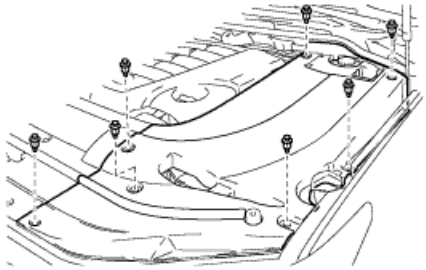
## 4. INSTALL BACK DOOR SIDE GARNISH LH

a. Attach the 3 clips to install the back door side garnish.

## 5. INSTALL CENTER BACK DOOR GARNISH

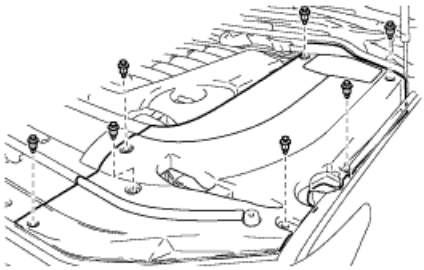
a. Attach the 5 clips and 2 claws to install the back door garnish.

## 6. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).



## 7. INSTALL ENGINE ROOM SIDE COVER LH

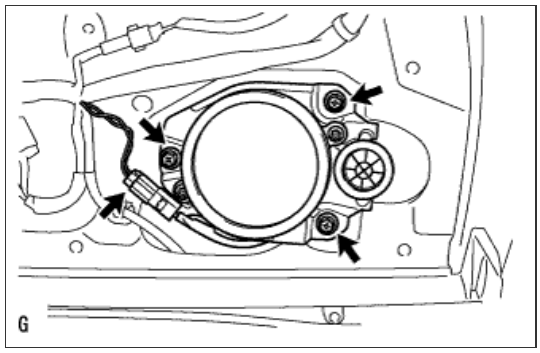
a. Install the engine room side cover with the 7 clips.

for LHD:

for RHD:

P

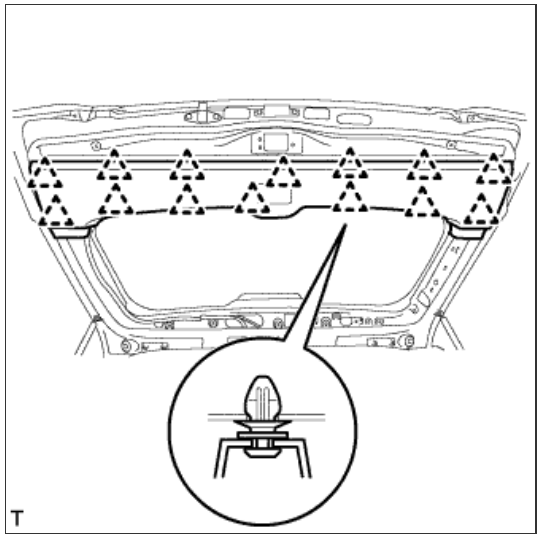
**for Preparation** Click here



## 1. INSTALL REAR HEADER SPEAKER ASSEMBLY

a. Connect the connector.

b. Install the speaker with the 3 screws.



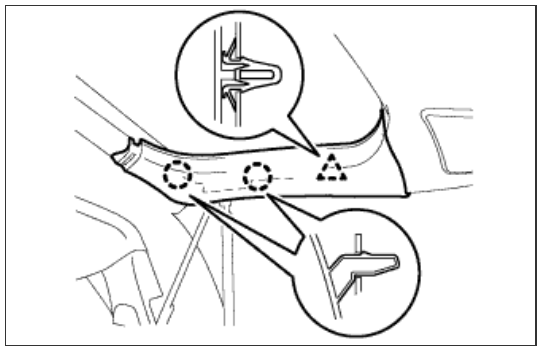
**NOTICE:**

Do not touch the cone part of the speaker.

## 2. INSTALL BACK DOOR GARNISH

a. Attach the 14 clips to install the back door garnish.

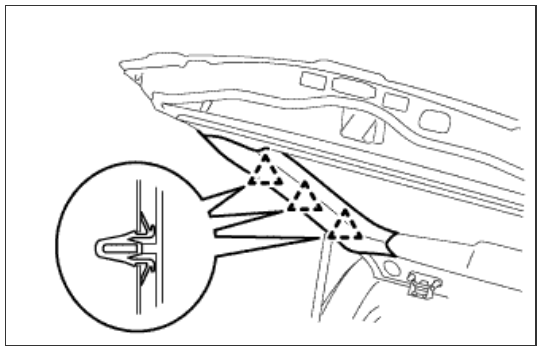
## 3. INSTALL BACK DOOR SIDE GARNISH RH



a. w/o Power Back Door:

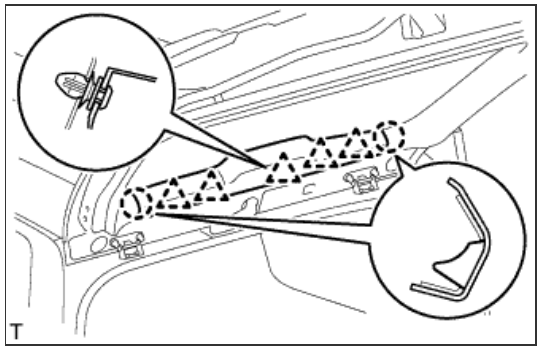
**HINT:**

Use the same procedures described for the LH side.



b. w/ Power Back Door:

i. Attach the clip and 2 claws to install the back door side garnish.



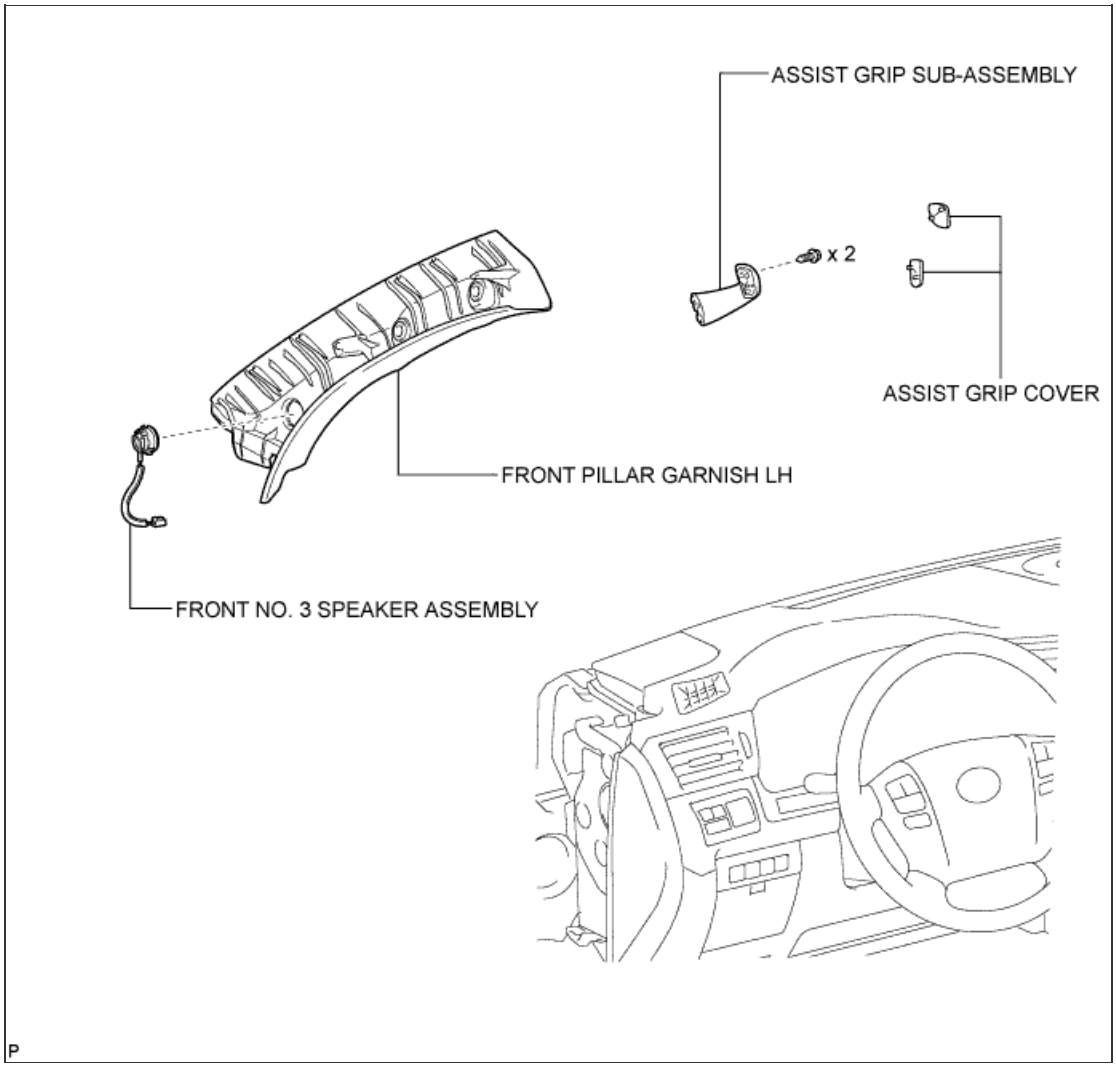
## 4. INSTALL BACK DOOR SIDE GARNISH LH

a. Attach the 3 clips to install the back door side garnish.

## 5. INSTALL CENTER BACK DOOR GARNISH

a. Attach the 5 clips and 2 claws to install the back door garnish.

## 6. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

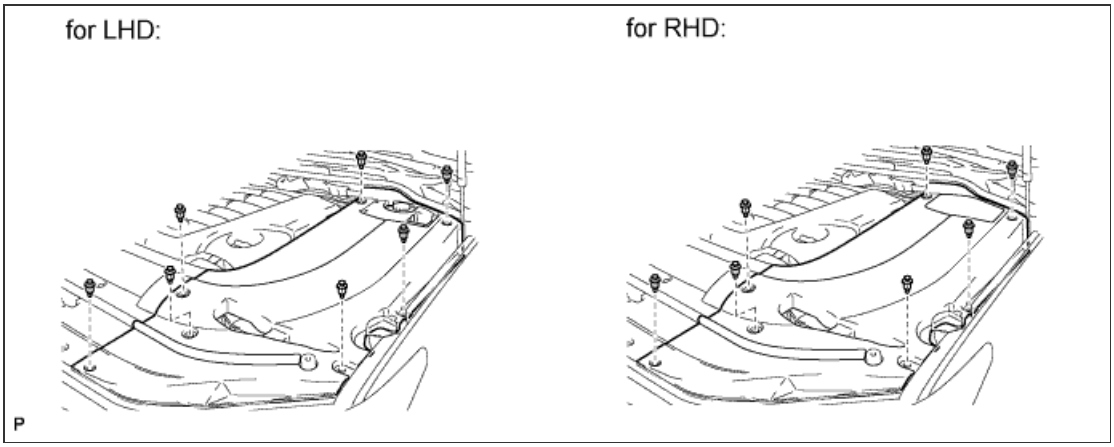


**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

## 7. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover LH with the 7 clips.



**for Preparation** Click here

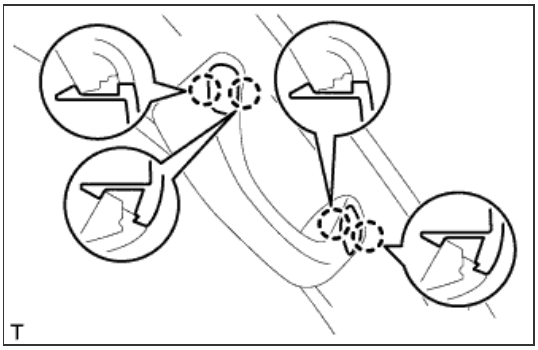
**for Preparation** Click here

## 1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.

## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

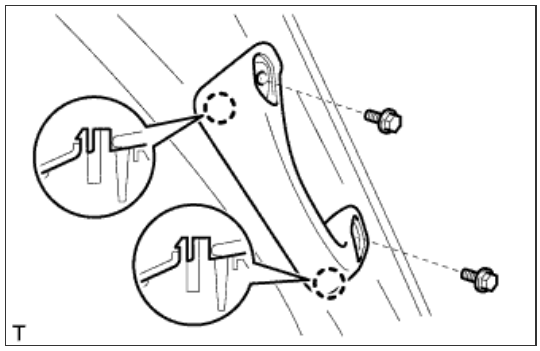
**NOTICE:**



When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

## 3. REMOVE FRONT ASSIST GRIP SUB-ASSEMBLY

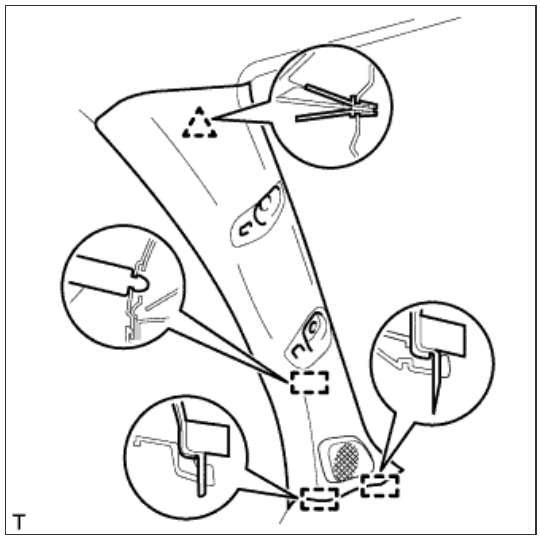
**HINT:**



Use the same procedure to remove the front assist grip on the other side.

a. Detach the 4 claws and remove the 2 assist grip plugs.

b. Remove the 2 bolts.

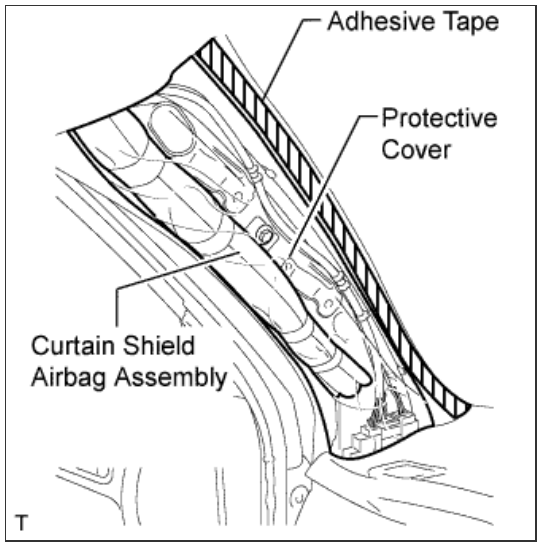


c. Detach the 2 claws and remove the front assist grip.

## 4. REMOVE FRONT PILLAR GARNISH LH

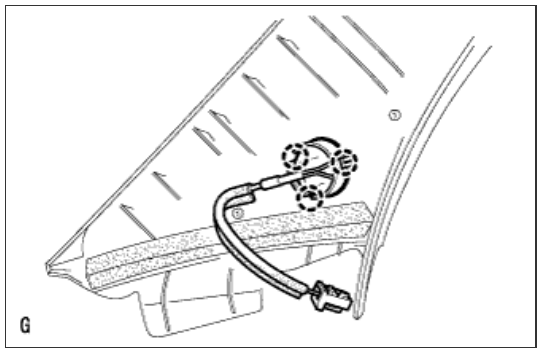
a. Detach the clip and 3 guides.

b. Disconnect the speaker connector and then remove the front pillar garnish.



c. Protect the curtain shield airbag.

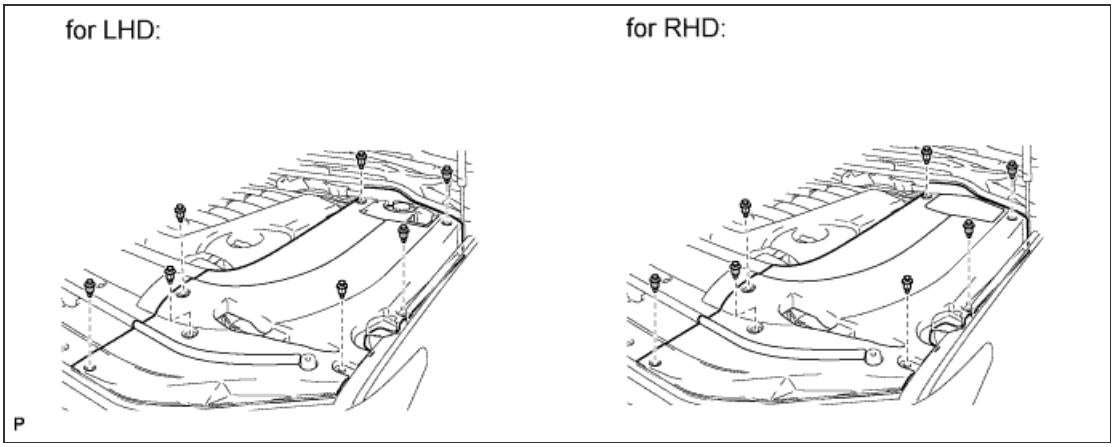
i. Thoroughly cover the airbag with a cloth or nylon sheet and fix the ends of the cover with adhesive tape, as shown in the illustration.



**NOTICE:**

Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish is removed.

## 5. REMOVE FRONT NO. 3 SPEAKER ASSEMBLY



a. Detach the 3 claws and remove the speaker.

G

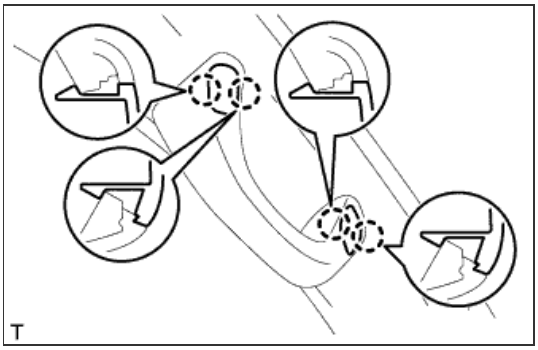
**for Preparation** Click here

## 1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover LH.

## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

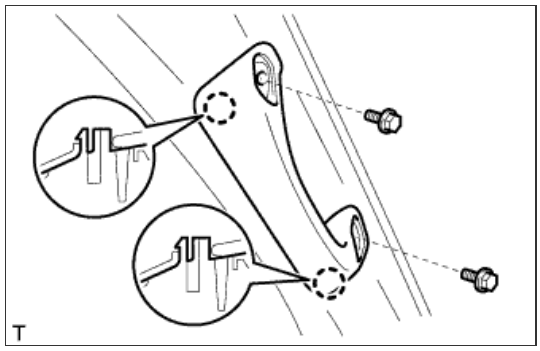
**NOTICE:**



When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

## 3. REMOVE FRONT ASSIST GRIP SUB-ASSEMBLY

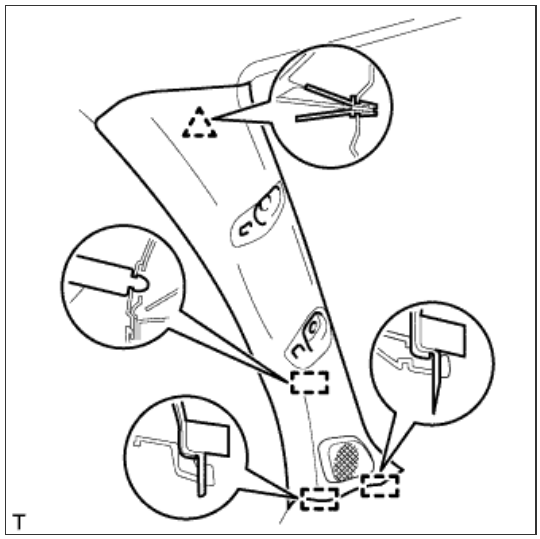
**HINT:**



Use the same procedure to remove the front assist grip on the other side.

a. Detach the 4 claws and remove the 2 assist grip plugs.

b. Remove the 2 bolts.

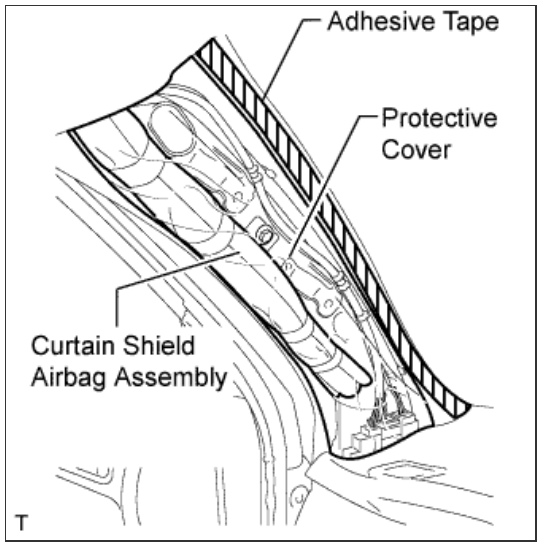


c. Detach the 2 claws and remove the front assist grip.

## 4. REMOVE FRONT PILLAR GARNISH LH

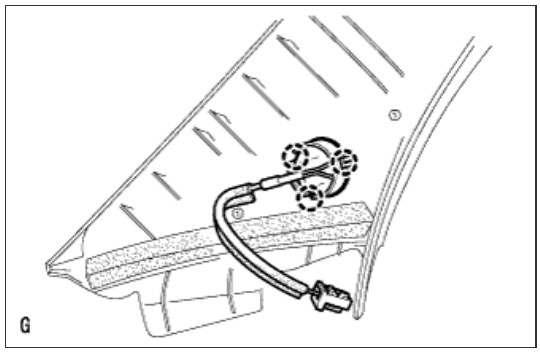
a. Detach the clip and 3 guides.

b. Disconnect the speaker connector and then remove the front pillar garnish.



c. Protect the curtain shield airbag.

i. Thoroughly cover the airbag with a cloth or nylon sheet and fix the ends of the cover with adhesive tape, as shown in the illustration.



**NOTICE:**

Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish is removed.

## 5. REMOVE FRONT NO. 3 SPEAKER ASSEMBLY

a. Detach the 3 claws and remove the speaker.

G

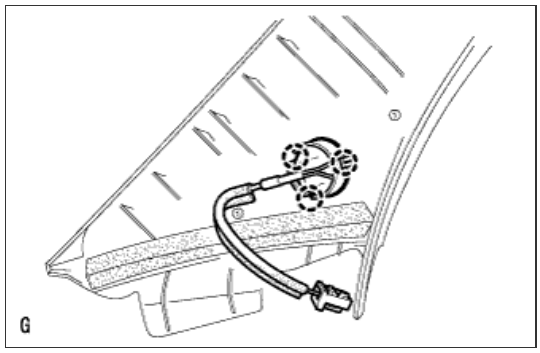
**for Preparation** Click here

## 1. INSPECT FRONT NO. 3 SPEAKER ASSEMBLY

a. When there is a malfunction such as noise from a speaker or no sound at all, replace the speaker with a new one and check that the malfunction disappears.

**OK:**

**Malfunction disappears.**

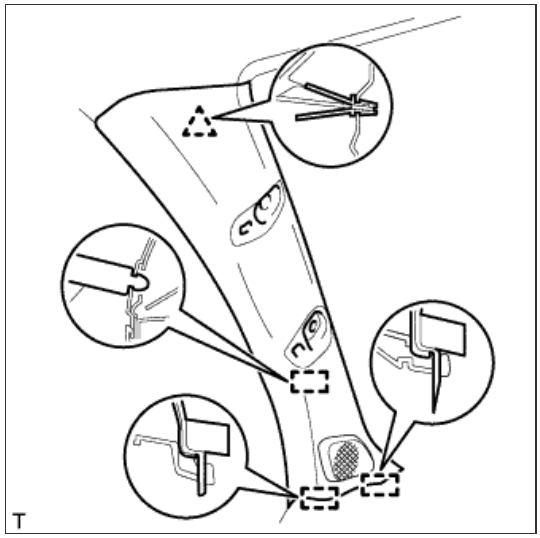


**HINT:**

- **Connect all the connectors to the front No. 3 speakers.**
- **When there is a possibility that either the right or left pillar speaker is defective, inspect by interchanging the right one with the left one.**
- **Perform the inspection above on both LH and RH sides.**

**for Preparation** Click here

## 1. INSTALL FRONT NO. 3 SPEAKER ASSEMBLY

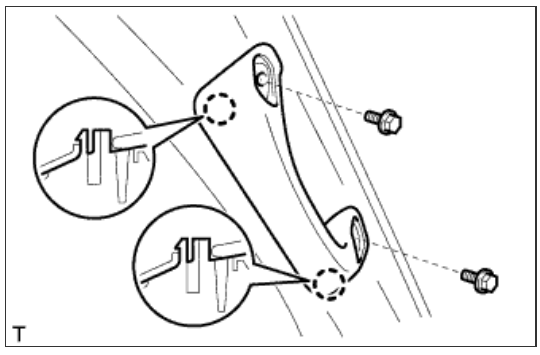


a. Attach the 3 claws to install the speaker to the pillar garnish.

## 2. INSTALL FRONT PILLAR GARNISH LH

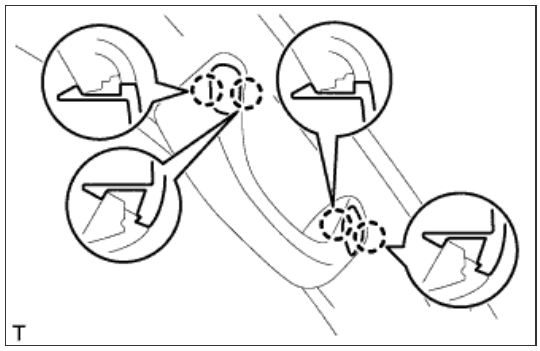
a. Connect the speaker connector.

b. Attach the clip and 3 guides to install the front pillar garnish.



## 3. INSTALL FRONT ASSIST GRIP SUB-ASSEMBLY

**HINT:**

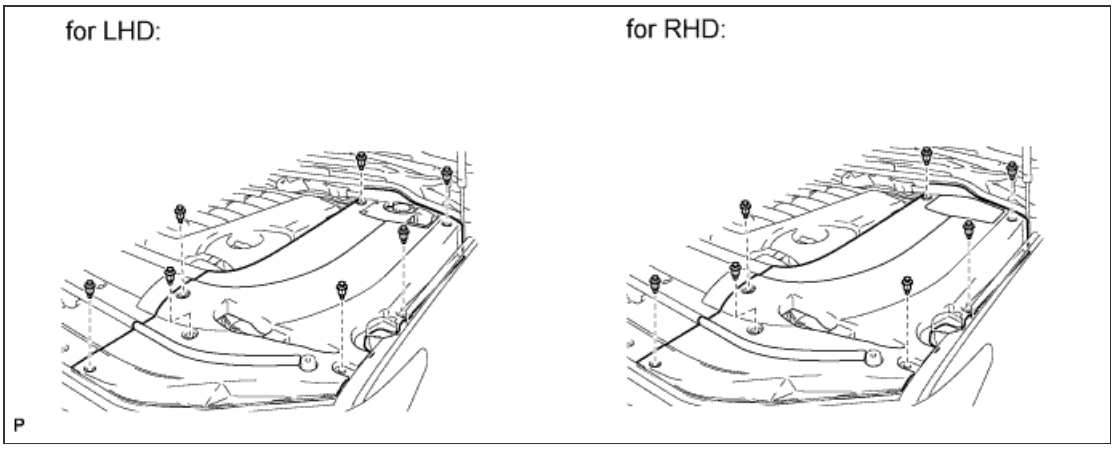


Use the same procedure to install the front assist grip on the other side.

a. Attach the 2 claws to install the front assist grip.

b. Install the 2 bolts.

c. Attach the 4 claws to install the 2 assist grip plugs.



## 4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

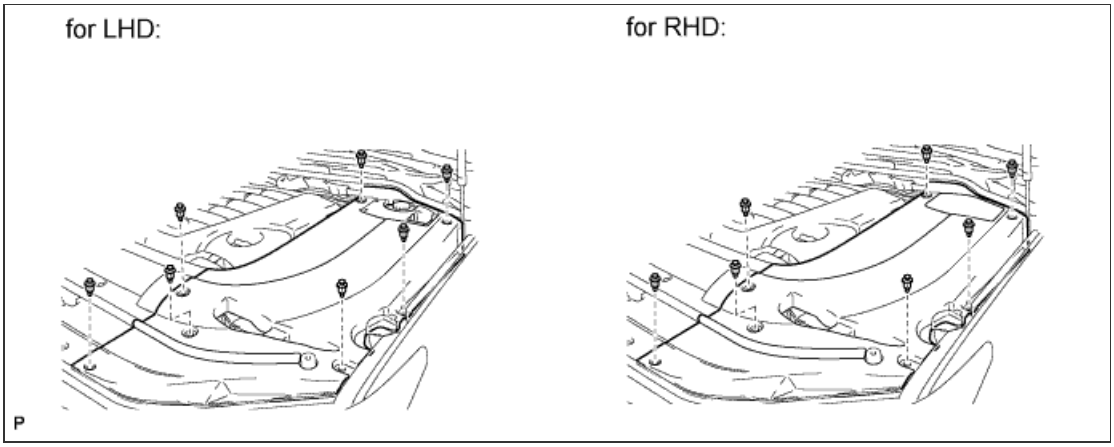
# INSTRUMENT PANEL SPEAKER > REMOVAL



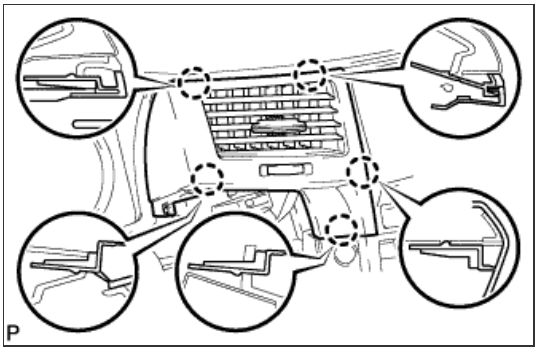
**for Preparation** Click here

**HINT:**

- **Use the same procedures for the LH side and RH side.**
- **The procedures listed below are for the LH side.**

## 1. REMOVE ENGINE ROOM SIDE COVER LH

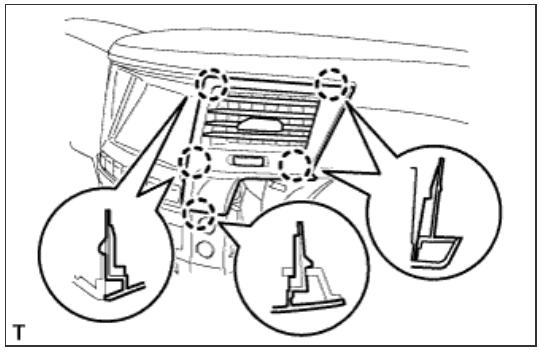
a. Remove the 7 clips and engine room side cover.



## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

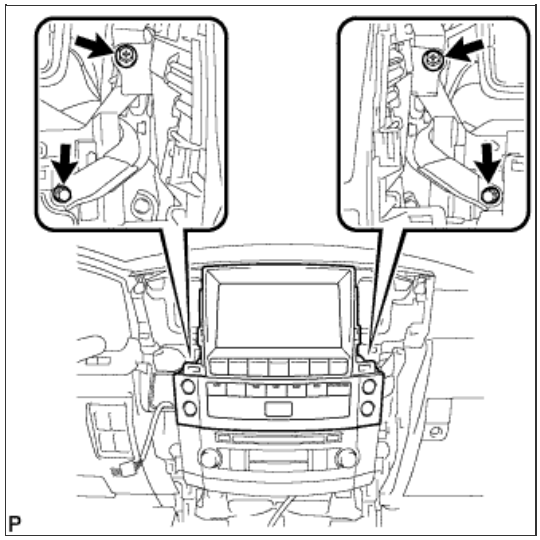
**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).



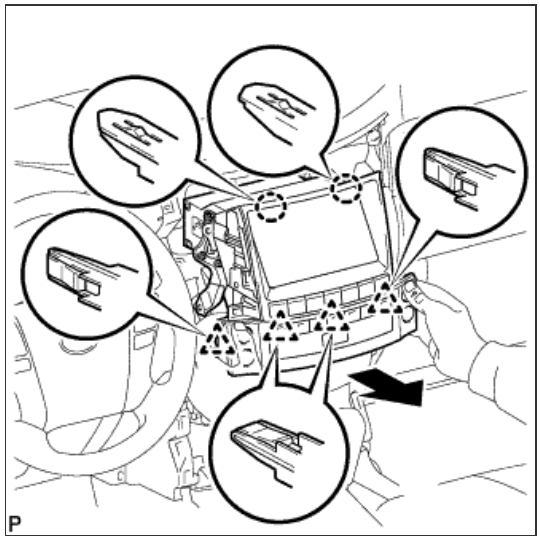
## 3. REMOVE NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY

a. Detach the 5 claws and remove the register.



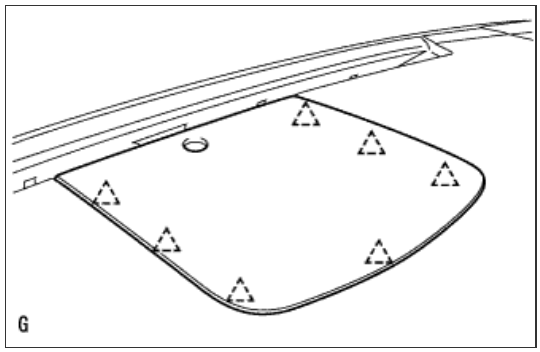
## 4. REMOVE NO. 4 INSTRUMENT PANEL REGISTER ASSEMBLY

a. Detach the 5 claws and remove the register.



## 5. REMOVE MULTI-DISPLAY ASSEMBLY WITH BRACKET

a. Remove the 2 screws and 2 bolts.

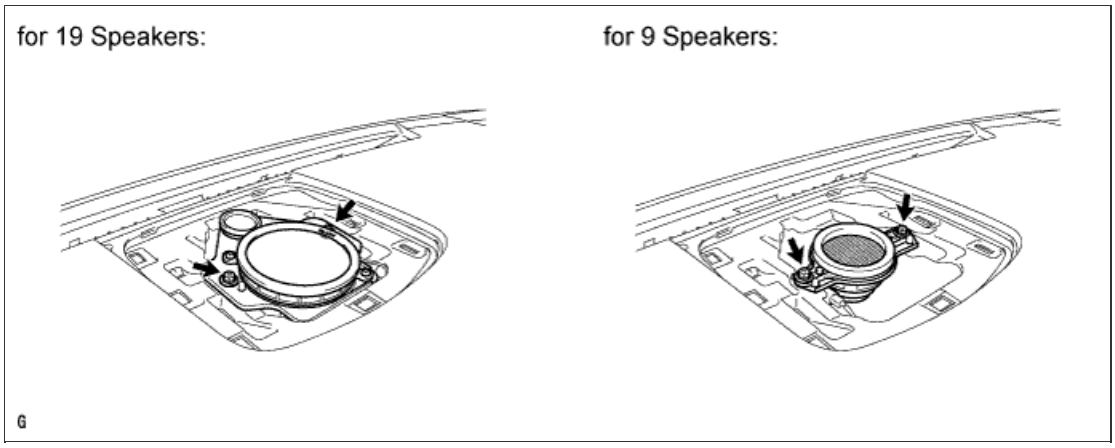


b. Pull the display to detach the 2 claws and 4 clips on the backside of the display.

c. Disconnect the connectors and remove the display.

## 6. REMOVE NO. 1 SPEAKER OPENING COVER ASSEMBLY

a. Detach the 7 clips and remove the opening cover.



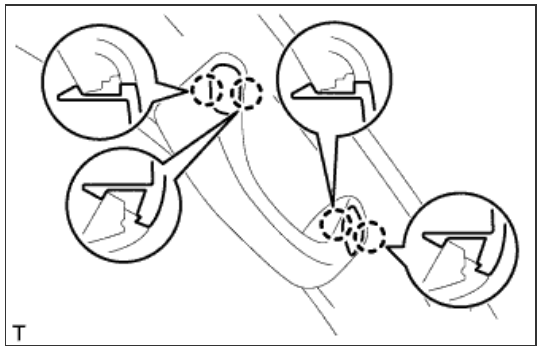
## 7. REMOVE FRONT NO. 4 SPEAKER ASSEMBLY

a. Remove the 2 bolts.

b. Remove the speaker and disconnect the speaker connector.

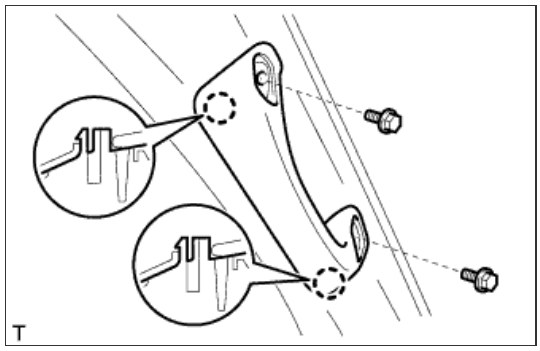
**NOTICE:**

Do not touch the cone part of the speaker.



## 8. REMOVE FRONT ASSIST GRIP SUB-ASSEMBLY

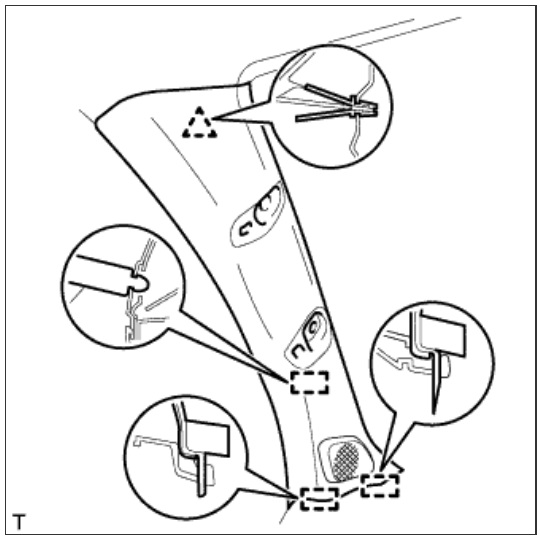
**HINT:**



Use the same procedure to remove the front assist grip on the other side.

a. Detach the 4 claws and remove the 2 assist grip plugs.

b. Remove the 2 bolts.

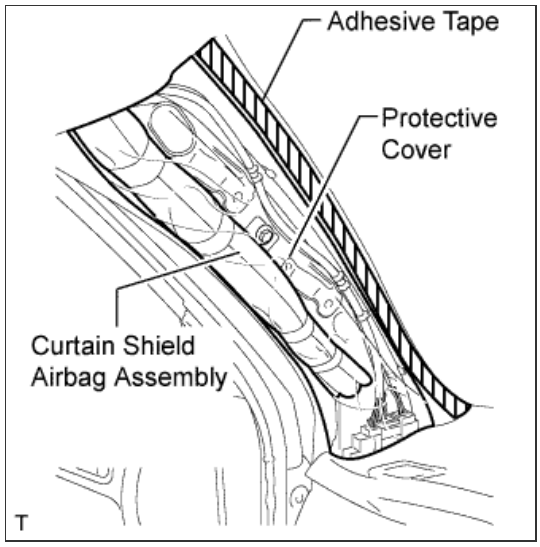


c. Detach the 2 claws and remove the front assist grip.

## 9. REMOVE FRONT PILLAR GARNISH LH

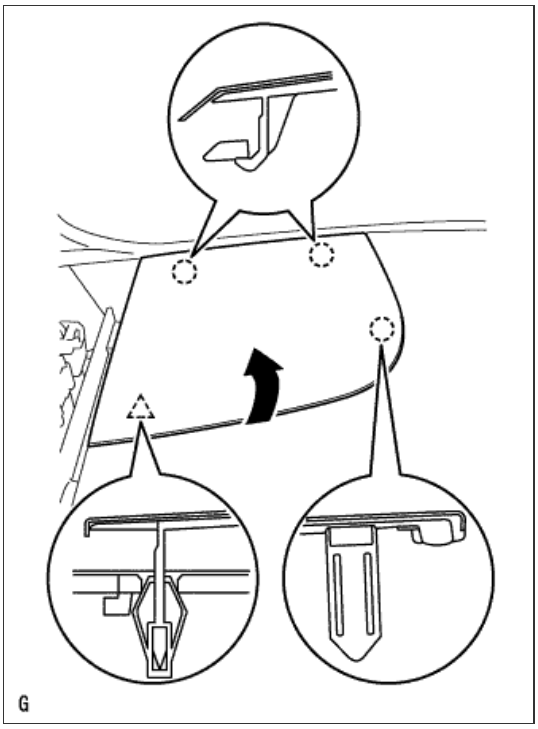
a. Detach the clip and 3 guides.

b. Disconnect the speaker connector and then remove the front pillar garnish.



c. Protect the curtain shield airbag.

i. Thoroughly cover the airbag with a cloth or nylon sheet and fix the ends of the cover with adhesive tape, as shown in the illustration.

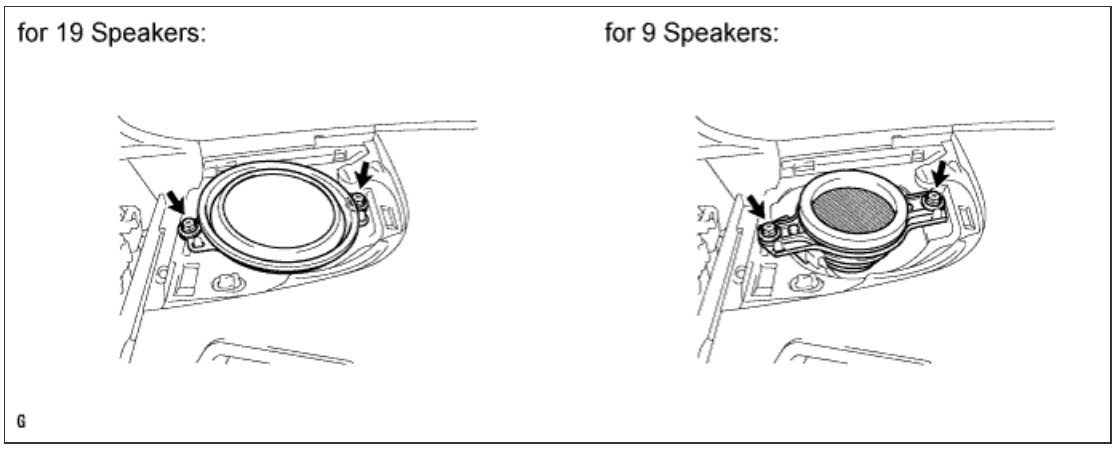


**NOTICE:**

Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish is removed.

## 10. REMOVE NO. 1 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY

a. Detach the claw and clip on the near side. Then, raise the panel towards the front of the vehicle in the direction of the arrow and detach the 2 claws to remove the panel.



### 11. REMOVE FRONT NO. 2 SPEAKER ASSEMBLY

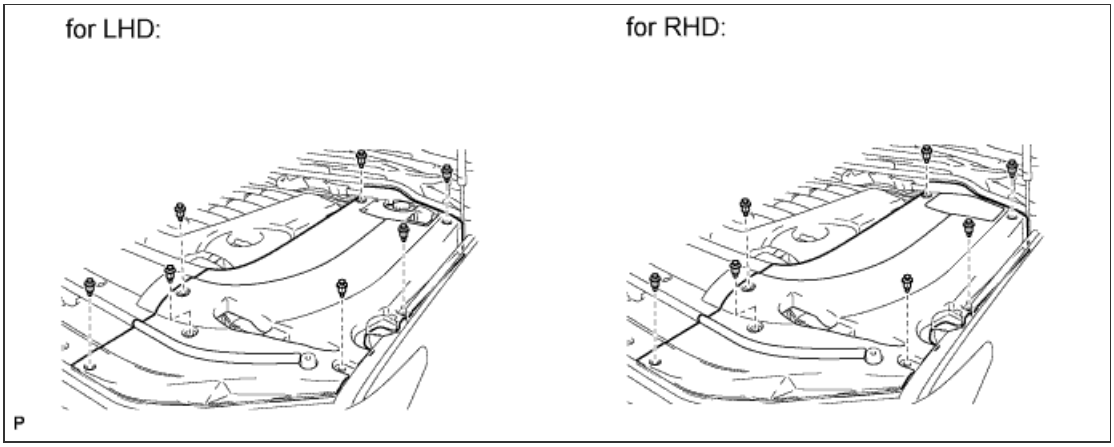
a. Remove the 2 bolts.

b. Remove the speaker and disconnect the speaker connector.

**NOTICE:**

Do not touch the cone part of the speaker.

# INSTRUMENT PANEL SPEAKER > REMOVAL



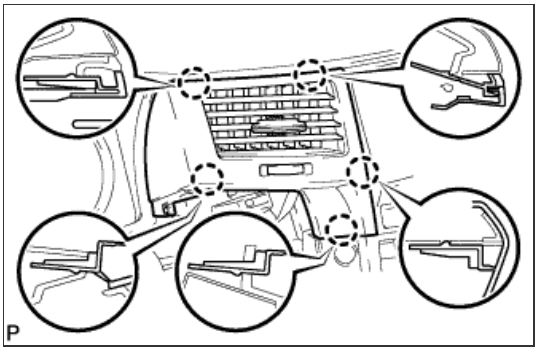
**for Preparation** Click here

**HINT:**

- **Use the same procedures for the LH side and RH side.**
- **The procedures listed below are for the LH side.**

## 1. REMOVE ENGINE ROOM SIDE COVER LH

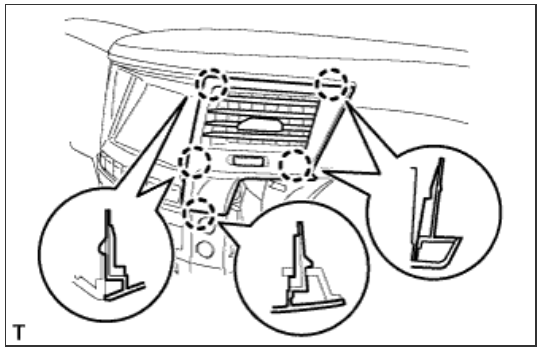
a. Remove the 7 clips and engine room side cover LH.



## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

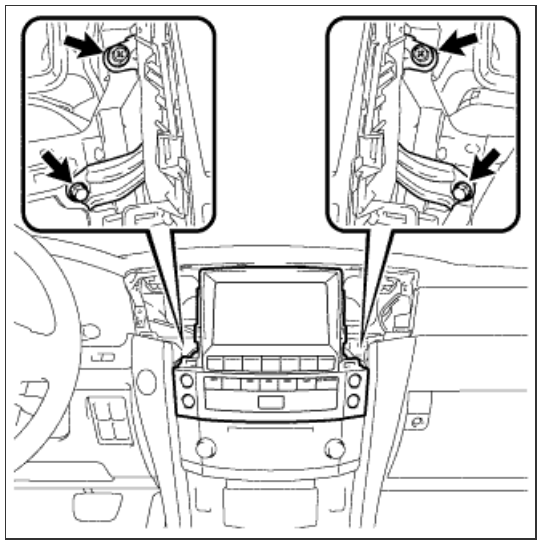
**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).



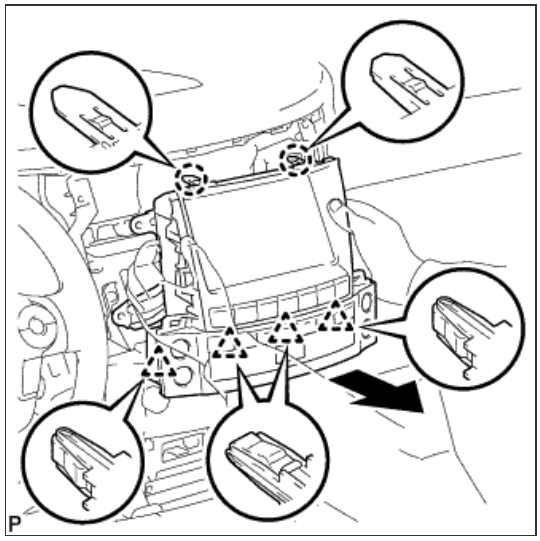
## 3. REMOVE NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY

a. Detach the 5 claws and remove the register.



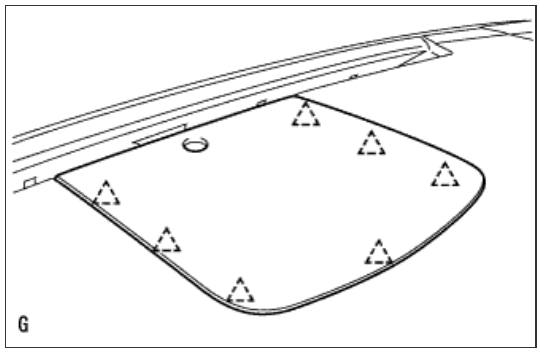
## 4. REMOVE NO. 4 INSTRUMENT PANEL REGISTER ASSEMBLY

a. Detach the 5 claws and remove the register.



## 5. REMOVE MULTI-DISPLAY ASSEMBLY WITH BRACKET

a. Remove the 2 screws and 2 bolts.

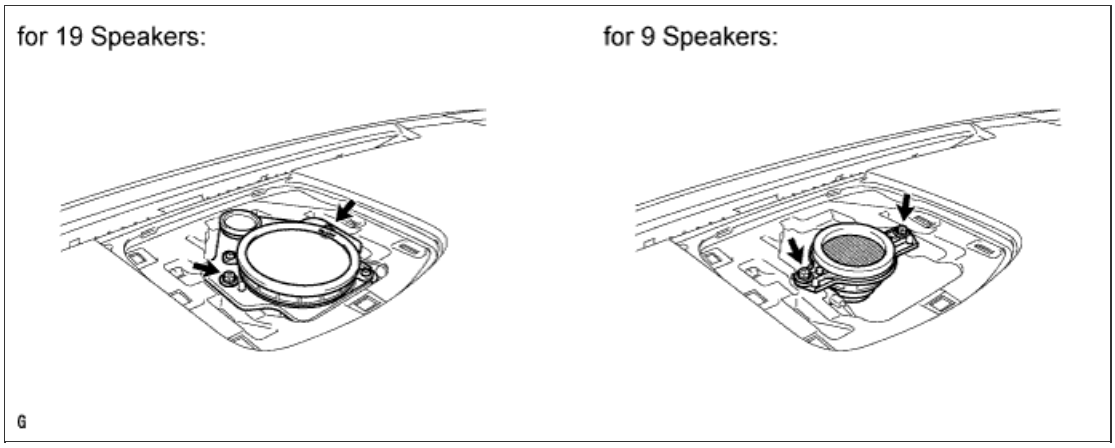


b. Pull the multi-display assembly with bracket to detach the 2 claws and 4 clips on the backside of the multi-display assembly.

c. Disconnect the connectors and remove the multi-display assembly.

## 6. REMOVE NO. 1 SPEAKER OPENING COVER ASSEMBLY

a. Detach the 7 clips and remove the opening cover.



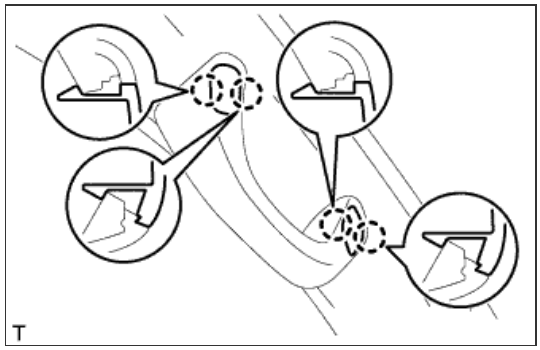
## 7. REMOVE FRONT NO. 4 SPEAKER ASSEMBLY

a. Remove the 2 bolts.

b. Remove the speaker and disconnect the speaker connector.

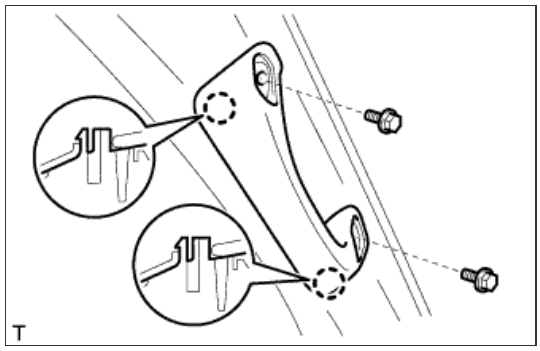
**NOTICE:**

Do not touch the cone part of the speaker.



## 8. REMOVE FRONT ASSIST GRIP SUB-ASSEMBLY

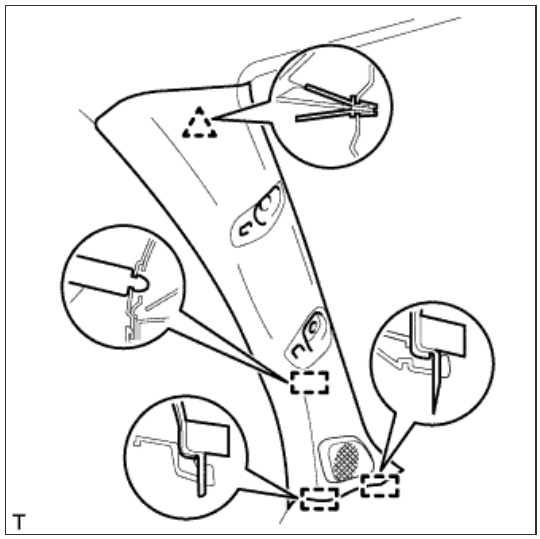
**HINT:**



Use the same procedure to remove the front assist grip on the other side.

a. Detach the 4 claws and remove the 2 assist grip plugs.

b. Remove the 2 bolts.

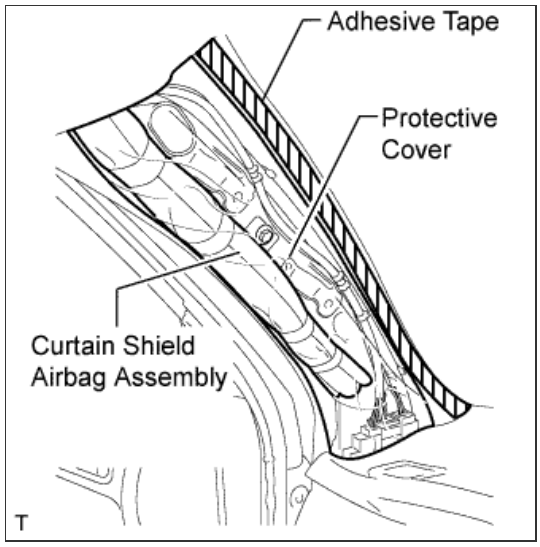


c. Detach the 2 claws and remove the front assist grip.

## 9. REMOVE FRONT PILLAR GARNISH LH

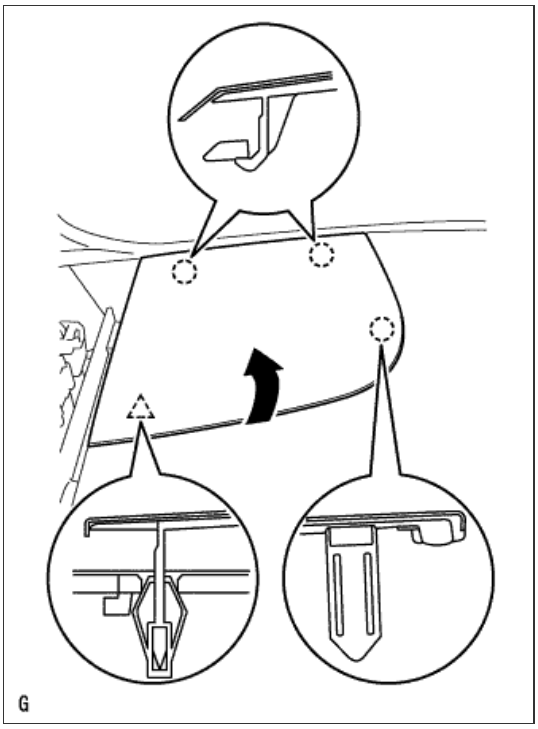
a. Detach the clip and 3 guides.

b. Disconnect the speaker connector and then remove the front pillar garnish.



c. Protect the curtain shield airbag.

i. Thoroughly cover the airbag with a cloth or nylon sheet and fix the ends of the cover with adhesive tape, as shown in the illustration.

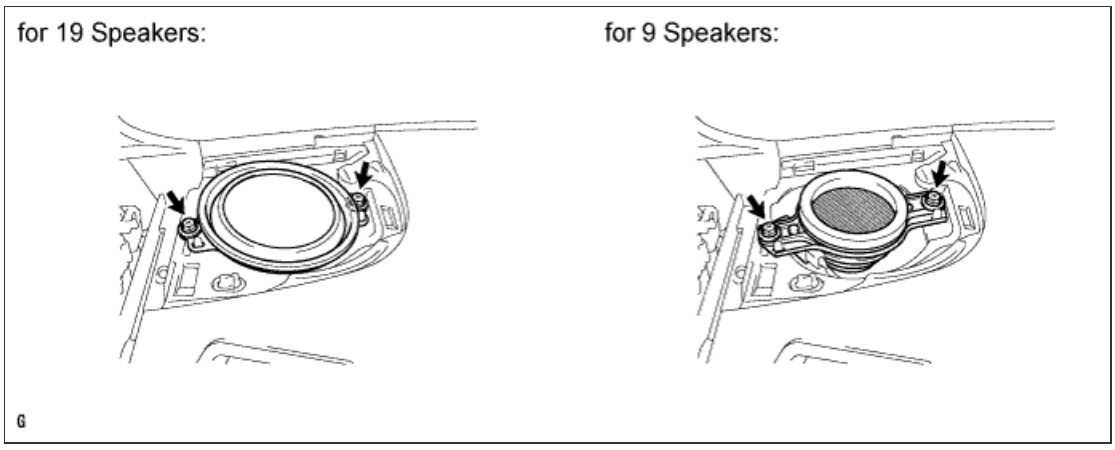


**NOTICE:**

Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish is removed.

## 10. REMOVE NO. 1 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY

a. Detach the claw and clip on the near side. Then, raise the panel towards the front of the vehicle in the direction of the arrow and detach the 2 claws to remove the panel.



### 11. REMOVE FRONT NO. 2 SPEAKER ASSEMBLY

a. Remove the 2 bolts.

b. Remove the speaker and disconnect the speaker connector.

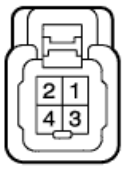
**NOTICE:**

Do not touch the cone part of the speaker.

**for Preparation** Click here

## 1. INSPECT FRONT NO. 2 SPEAKER ASSEMBLY

a. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | Below 1 Ω*1 |
| 3 - 4 | Always | Below 1 Ω*1 |
| 2 - 4 | Always | 6.0 +/-1.0 Ω*1 |
| 1 - 2 | Always | Below 1 Ω*2 |
| 3 - 4 | Always | Below 1 Ω*2 |
| 2 - 4 | Always | 4 Ω*2 |

*1: for 19 Speakers
*2: for 9 Speakers

If the result is not as specified, replace the front No. 2 speaker assembly.

Component without harness connected:
(Front No. 2 Speaker)

## 2. INSPECT FRONT NO. 4 SPEAKER ASSEMBLY

a. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 6.0 +/-1.0 Ω*1 |
| 1 - 2 | Always | 6 Ω*2 |

*1: for 19 Speakers
*2: for 9 Speakers

If the result is not as specified, replace the front No. 4 speaker assembly.

Component without harness connected:
(Front No. 4 Speaker)

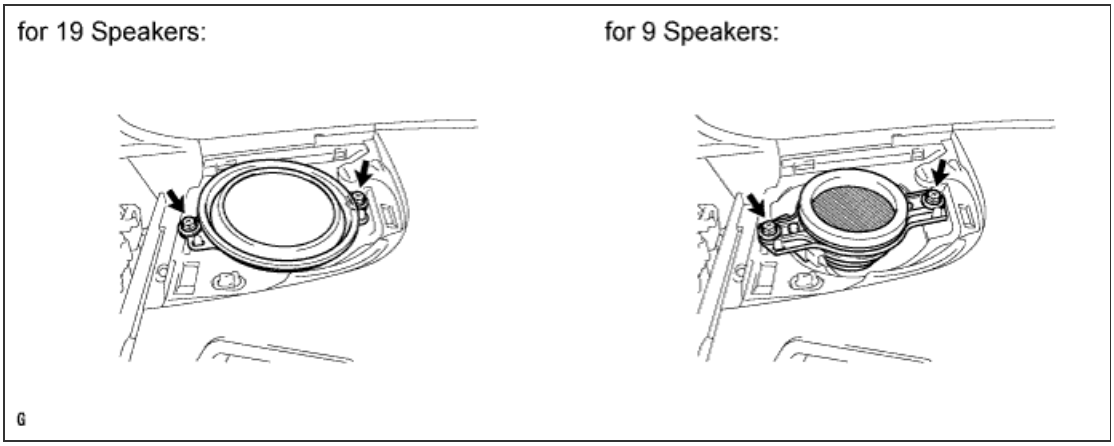
N

**for Preparation** Click here

**HINT:**

- **Use the same procedures for the LH side and RH side.**
- **The procedures listed below are for the LH side.**
- **A bolt without a torque specification is shown in the standard bolt chart ( Click here).**

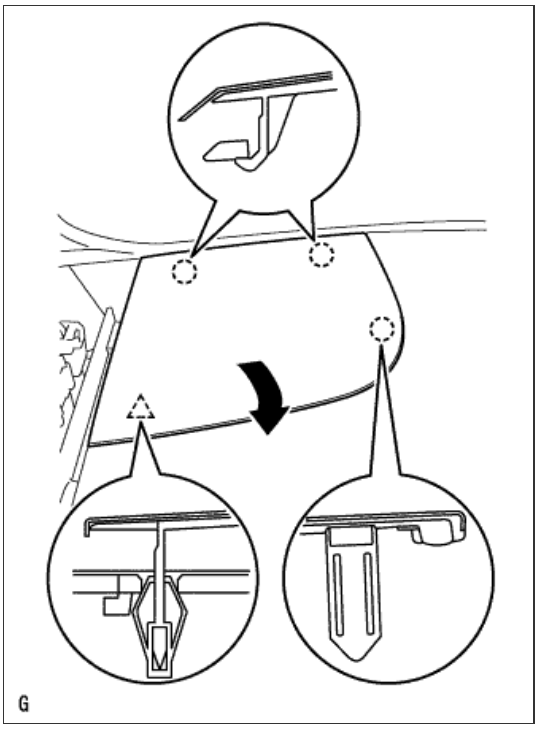
## 1. INSTALL FRONT NO. 2 SPEAKER ASSEMBLY



a. Connect the connector.

b. Temporarily install the speaker by aligning speaker with the positioning pins of the instrument panel.

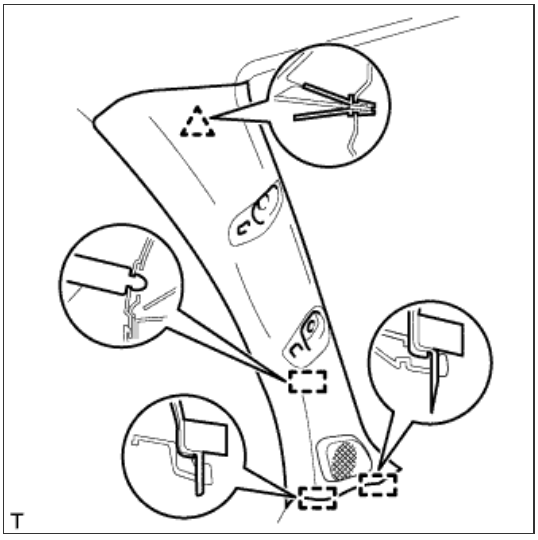
c. Install the speaker with the 2 bolts.



**NOTICE:**

- **Do not touch the cone part of the speaker.**
- **When installing the speaker to the instrument panel, be careful that the wires do not get caught between parts.**

## 2. INSTALL NO. 1 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY

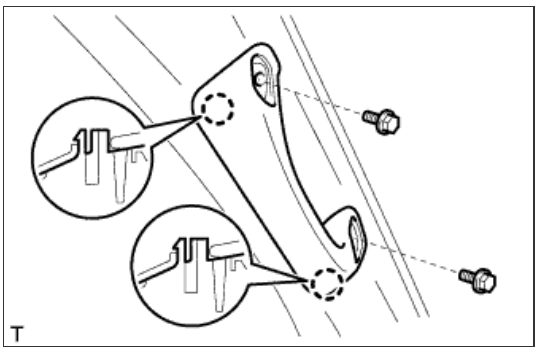


a. Hook the 2 claws on the far side to the instrument panel to attach them. Then, lower the panel towards the rear of the vehicle in the direction of the arrow, and attach the claw and clip on the front side to install the panel.

### 3. INSTALL FRONT PILLAR GARNISH LH

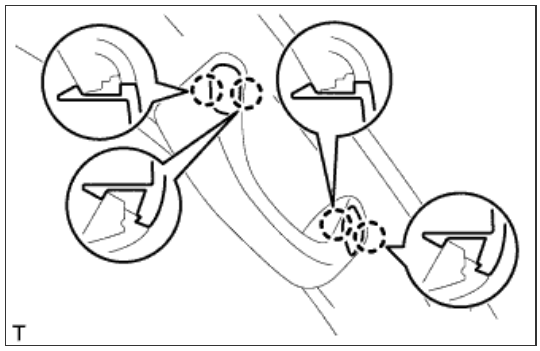
a. Connect the speaker connector.

b. Attach the clip and 3 guides to install the front pillar garnish.



### 4. INSTALL FRONT ASSIST GRIP SUB-ASSEMBLY

**HINT:**



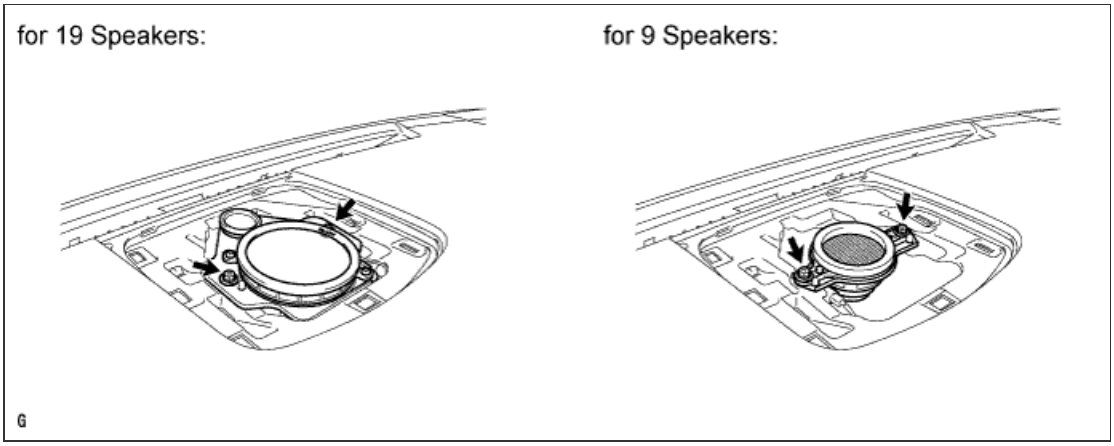
Use the same procedure to install the front assist grip on the other side.

a. Attach the 2 claws to install the front assist grip.

b. Install the 2 bolts.

c. Attach the 4 claws to install the 2 assist grip plugs.

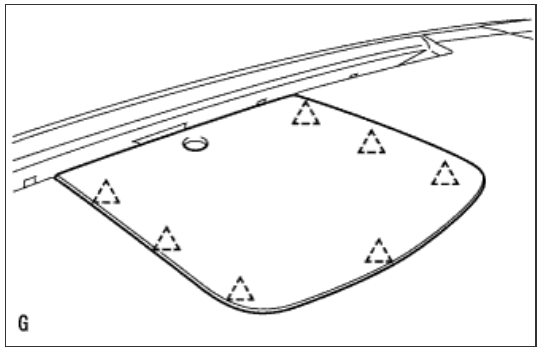
## 5. INSTALL FRONT NO. 4 SPEAKER ASSEMBLY



a. Connect the speaker connector.

b. Temporarily install the speaker by aligning speaker with the positioning pins of the instrument panel.

c. Install the speaker with the 2 bolts.

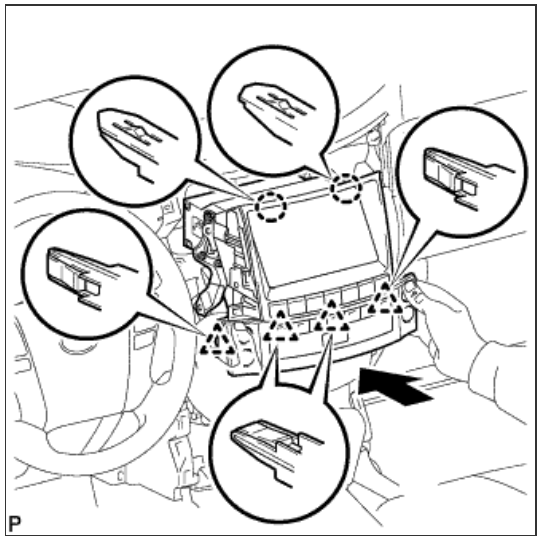


**NOTICE:**

- **Do not touch the cone part of the speaker.**
- **When installing the speaker to the instrument panel, be careful that the wires do not get caught between parts.**

## 6. INSTALL NO. 1 SPEAKER OPENING COVER ASSEMBLY

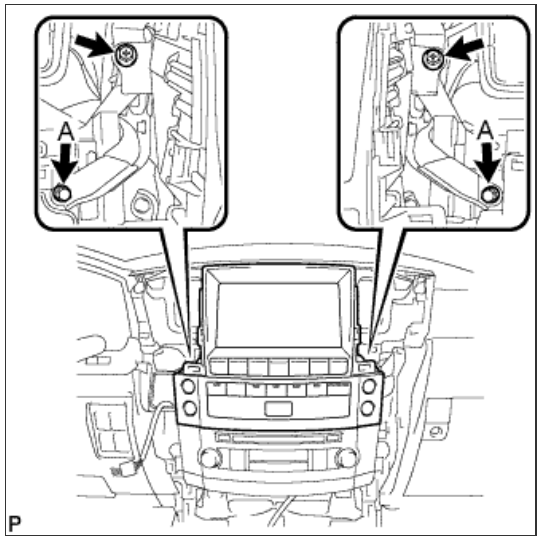
a. Attach the 7 clips to install the opening cover.



## 7. INSTALL MULTI-DISPLAY ASSEMBLY WITH BRACKET

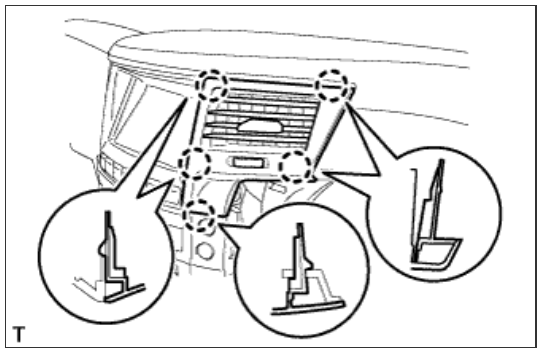
a. Connect the connectors.

b. Insert the display to attach the 2 claws and 4 clips on its backside.



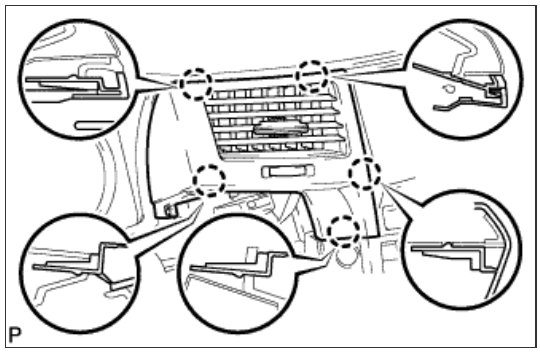
**NOTICE:**

When inserting the display, do not press the knobs on it.



c. Install the display with the 2 screws and 2 bolts.

**Torque:**
**for bolts labeled A:**
**12 N*m{ 122 kgf*cm , 8 ft.*lbf }**

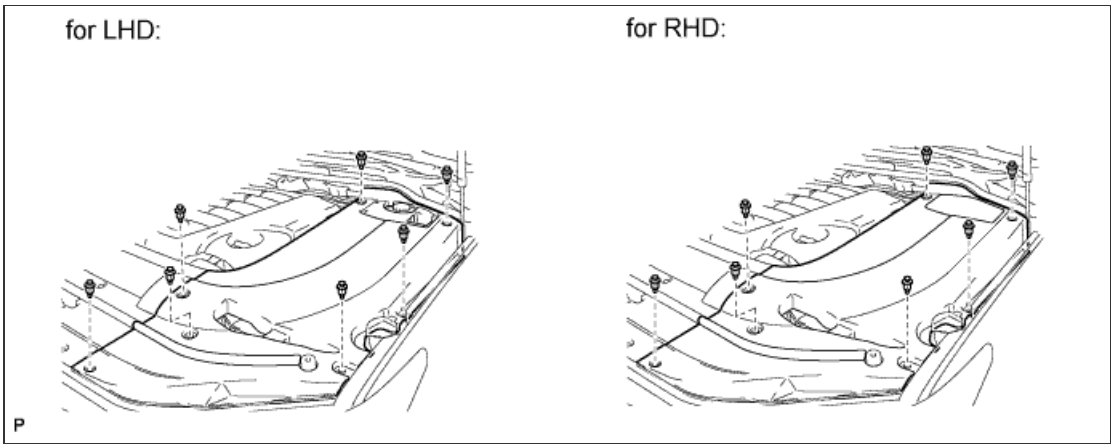


## 8. INSTALL NO. 4 INSTRUMENT PANEL REGISTER ASSEMBLY

a. Attach the 5 claws to install the register.

## 9. INSTALL NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY

a. Attach the 5 claws to install the register.



## 10. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

## 11. INSTALL ENGINE ROOM SIDE COVER LH

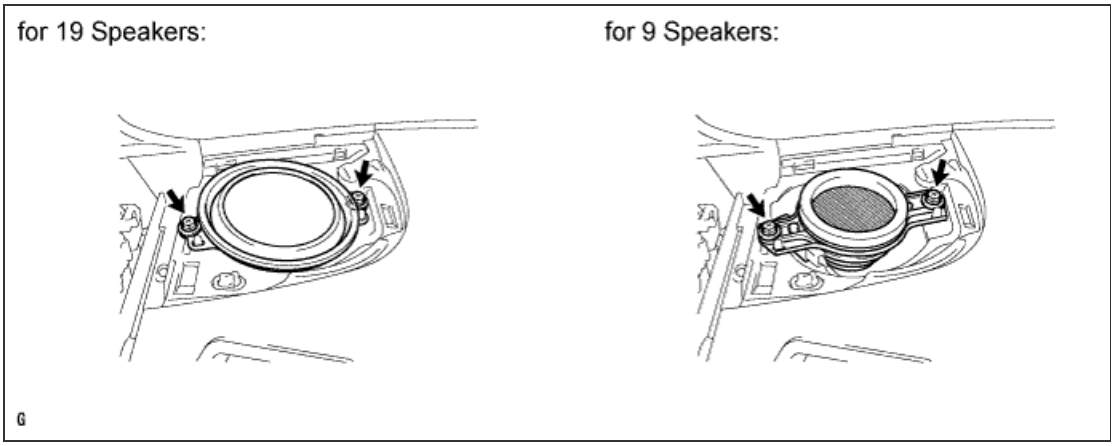
a. Install the engine room side cover with the 7 clips.

**for Preparation** Click here

**HINT:**

- **Use the same procedures for the LH side and RH side.**
- **The procedures listed below are for the LH side.**
- **A bolt without a torque specification is shown in the standard bolt chart ( Click here).**

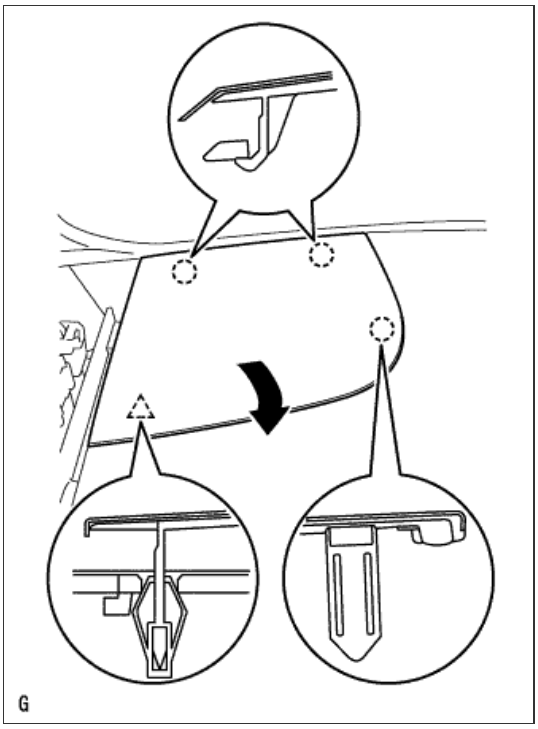
## 1. INSTALL FRONT NO. 2 SPEAKER ASSEMBLY



a. Connect the connector.

b. Temporarily install the speaker by aligning speaker with the positioning pins of the instrument panel.

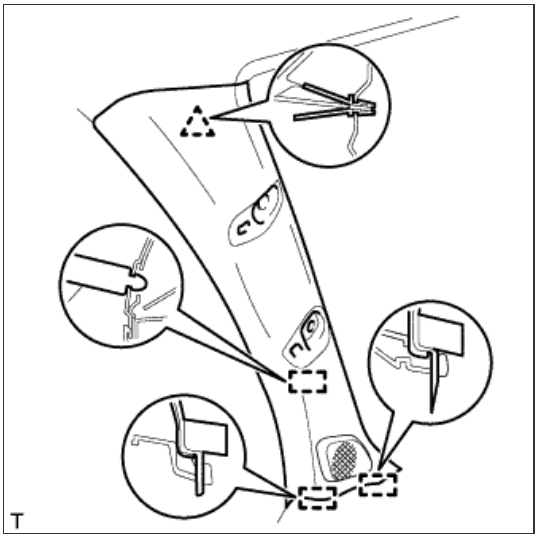
c. Install the speaker with the 2 bolts.



**NOTICE:**

- **Do not touch the cone part of the speaker.**
- **When installing the speaker to the instrument panel, be careful that the wires do not get caught between parts.**

## 2. INSTALL NO. 1 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY

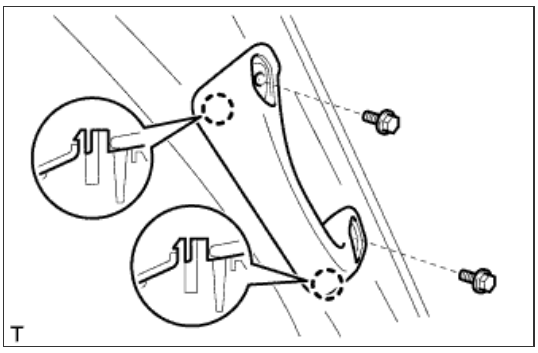


a. Hook the 2 claws on the far side to the instrument panel to attach them. Then, lower the panel towards the rear of the vehicle in the direction of the arrow, and attach the claw and clip on the front side to install the panel.

### 3. INSTALL FRONT PILLAR GARNISH LH

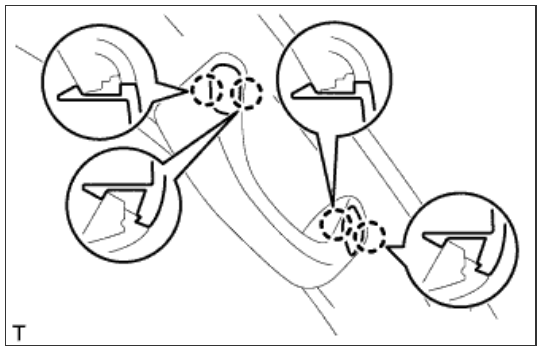
a. Connect the speaker connector.

b. Attach the clip and 3 guides to install the front pillar garnish.



### 4. INSTALL FRONT ASSIST GRIP SUB-ASSEMBLY

**HINT:**



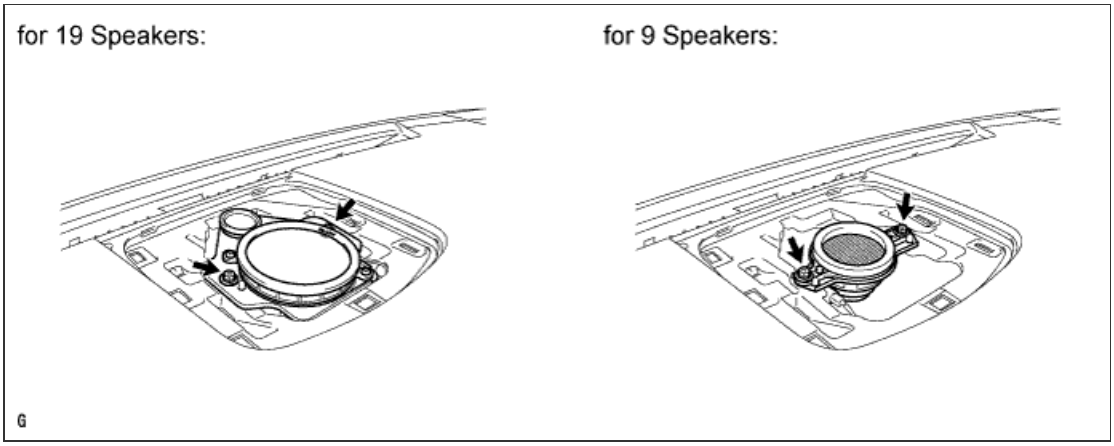
Use the same procedure to install the front assist grip on the other side.

a. Attach the 2 claws to install the front assist grip.

b. Install the 2 bolts.

c. Attach the 4 claws to install the 2 assist grip plugs.

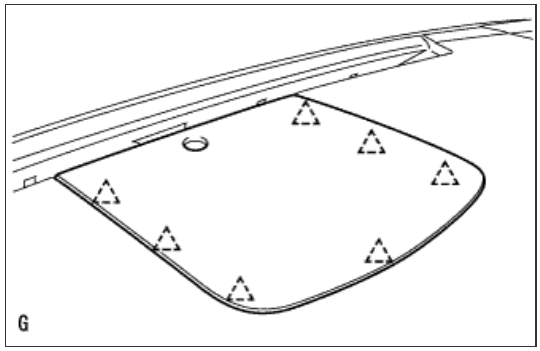
## 5. INSTALL FRONT NO. 4 SPEAKER ASSEMBLY



a. Connect the speaker connector.

b. Temporarily install the speaker by aligning speaker with the positioning pins of the instrument panel.

c. Install the speaker with the 2 bolts.

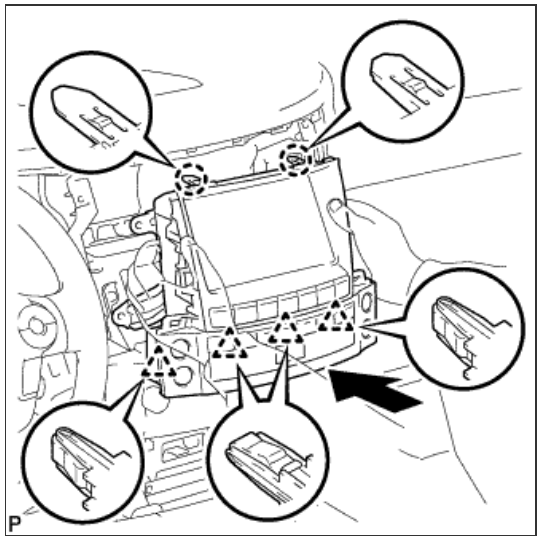


**NOTICE:**

- **Do not touch the cone part of the speaker.**
- **When installing the speaker to the instrument panel, be careful that the wires do not get caught between parts.**

## 6. INSTALL NO. 1 SPEAKER OPENING COVER ASSEMBLY

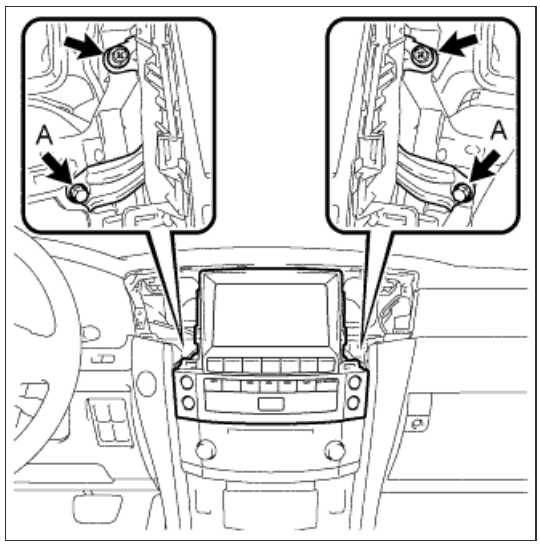
a. Attach the 7 clips to install the opening cover.



## 7. INSTALL MULTI-DISPLAY ASSEMBLY WITH BRACKET

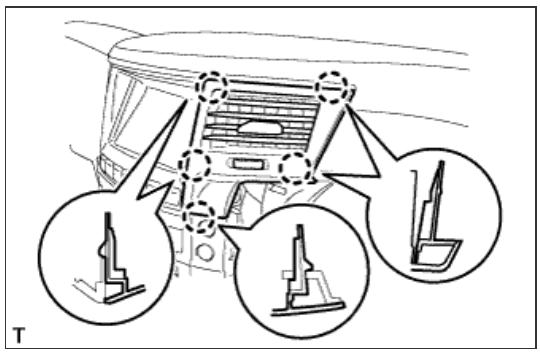
a. Connect the connectors.

b. Insert the multi-display assembly with bracket to attach the 2 claws and 4 clips on its backside.



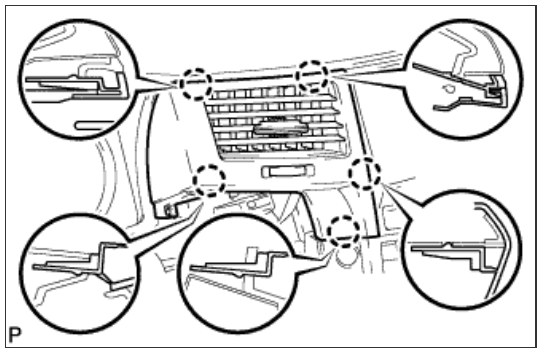
**NOTICE:**

When inserting the multi-display assembly, do not press the knobs on it.



c. Install the multi-display assembly with the 2 screws and 2 bolts.

**Torque:**
**for bolts labeled A:**
**12 N*m{ 122 kgf*cm , 8 ft.*lbf }**



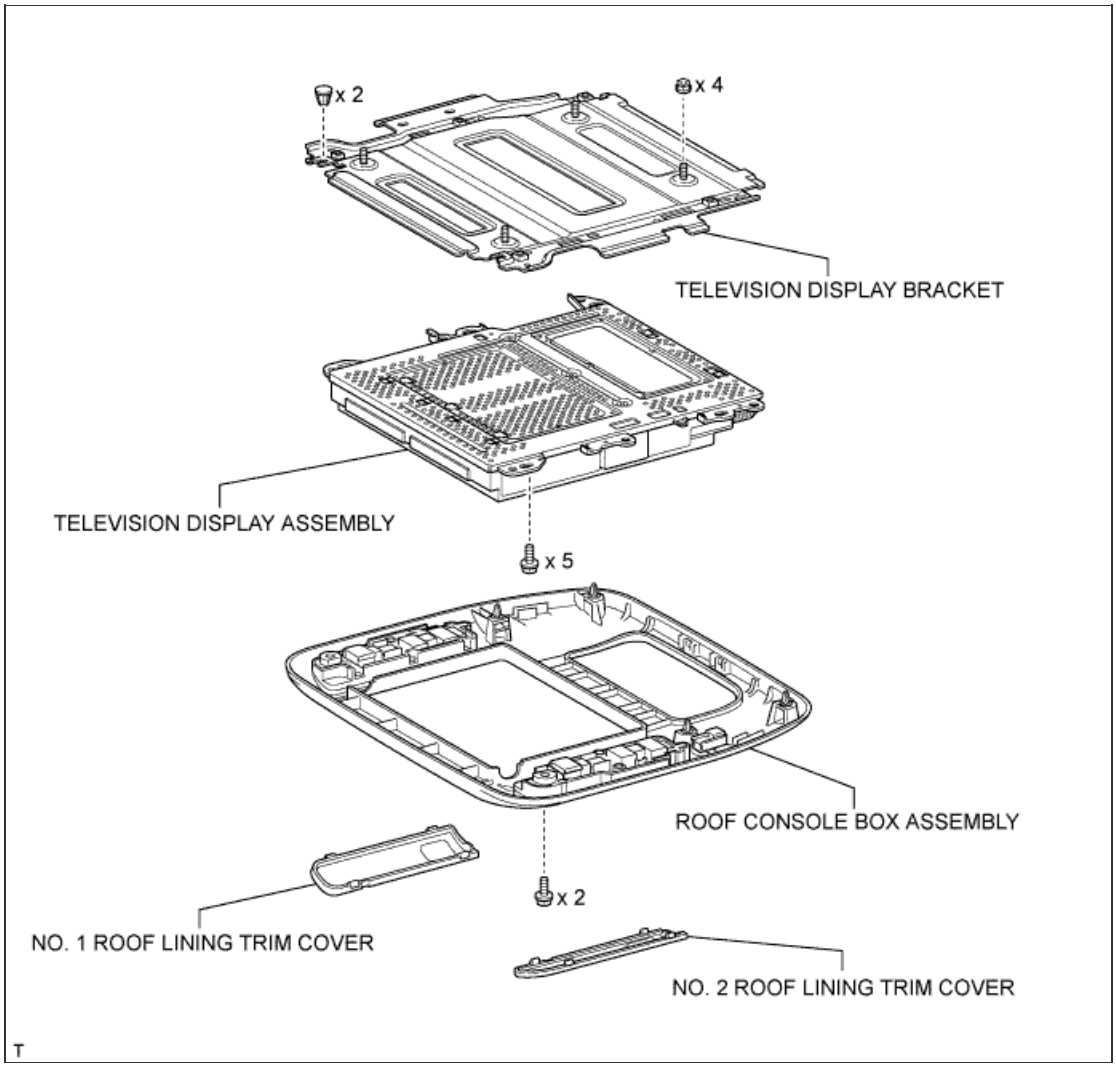
## 8. INSTALL NO. 4 INSTRUMENT PANEL REGISTER ASSEMBLY

a. Attach the 5 claws to install the register.

## 9. INSTALL NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY

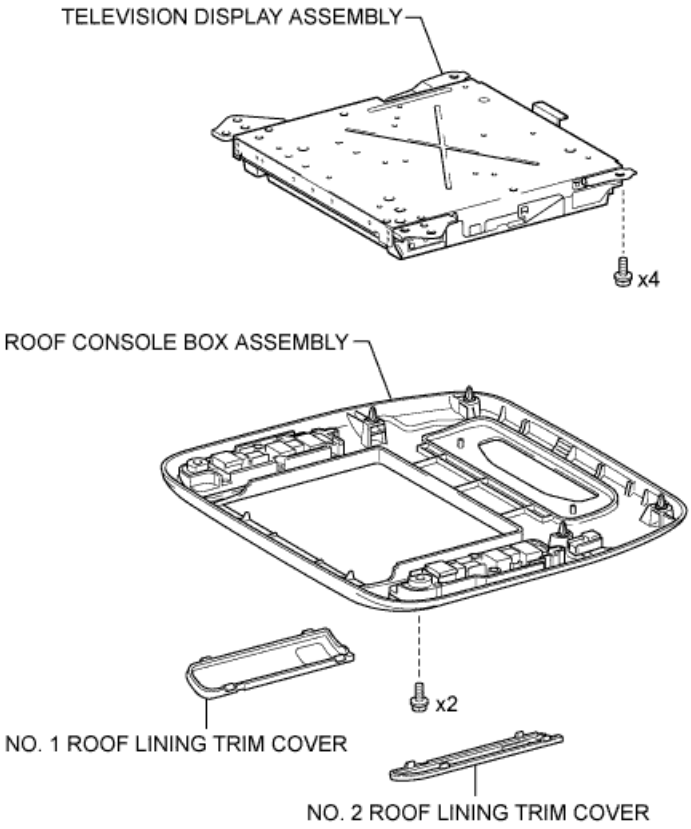
a. Attach the 5 claws to install the register.

### 10. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



**NOTICE:**

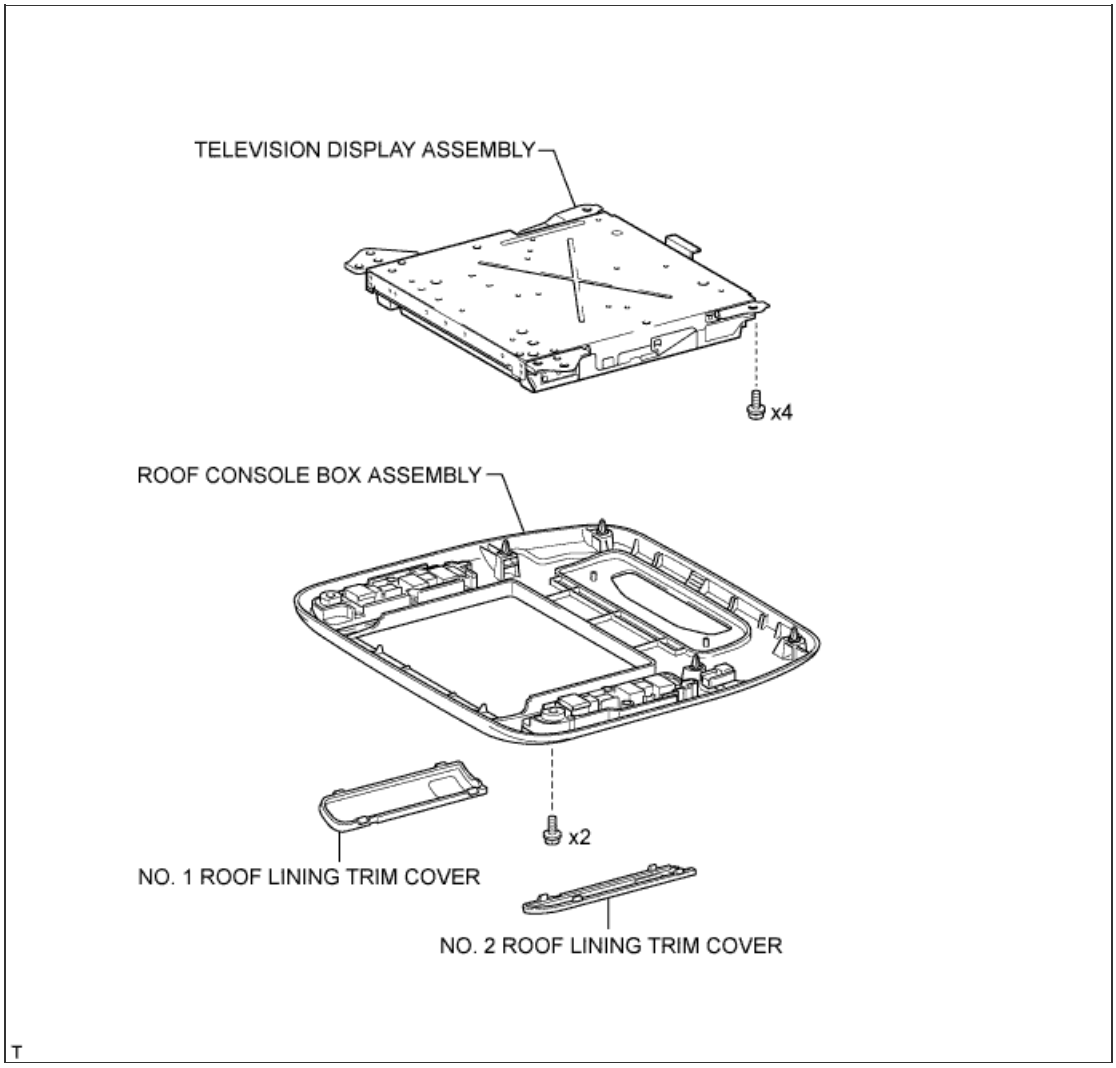
When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).



### 11. INSTALL ENGINE ROOM SIDE COVER LH

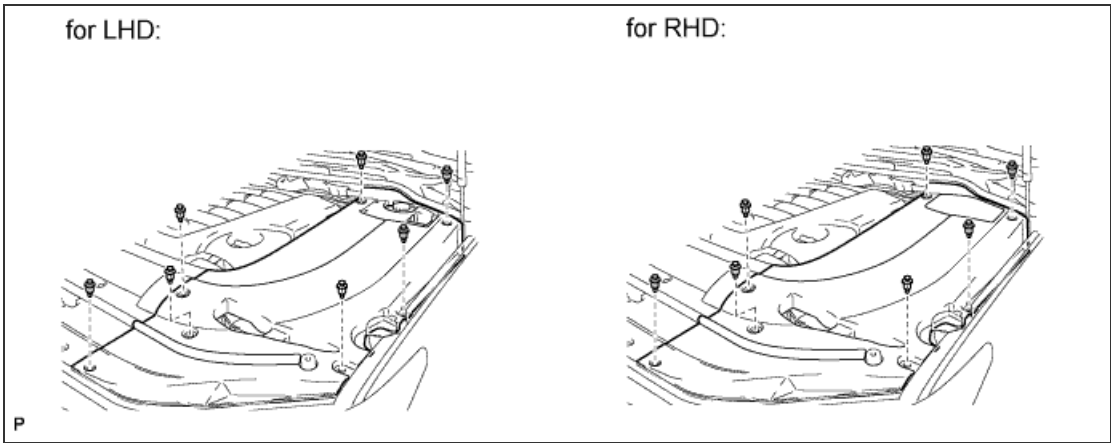
a. Install the engine room side cover LH with the 7 clips.

**for Preparation** Click here



w/ Multi-Media Interface ECU:

T

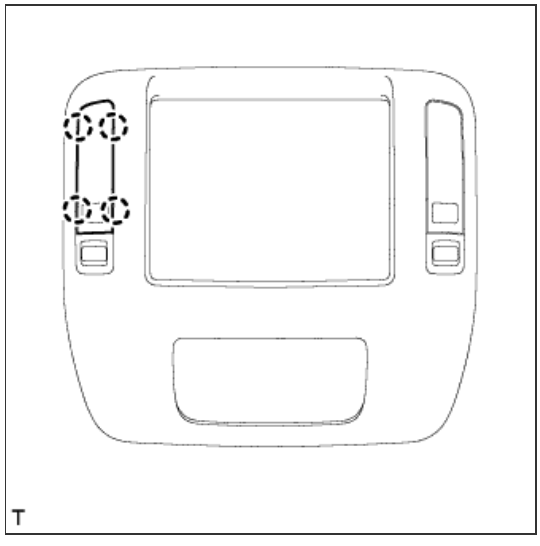


**for Preparation** Click here

**for Preparation** Click here

## 1. REMOVE ENGINE ROOM SIDE COVER LH

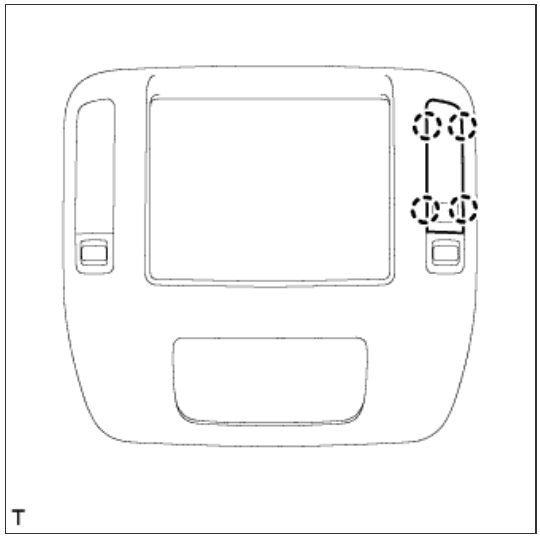
a. Remove the 7 clips and engine room side cover.



## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

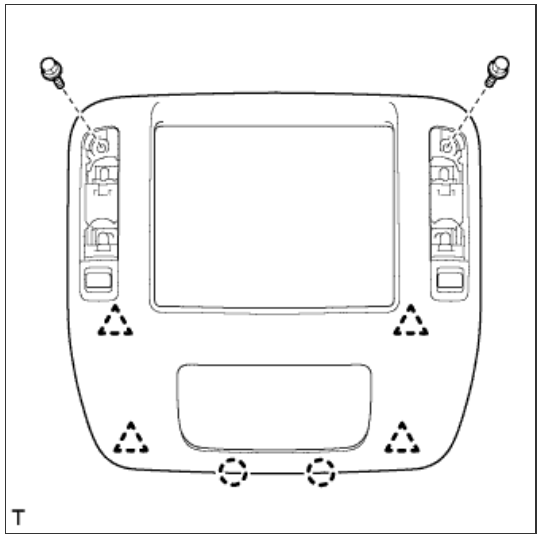


## 3. REMOVE NO. 1 ROOF LINING TRIM COVER

a. Detach the 4 claws and remove the cover.

## 4. REMOVE NO. 2 ROOF LINING TRIM COVER

a. Detach the 4 claws and remove the cover.

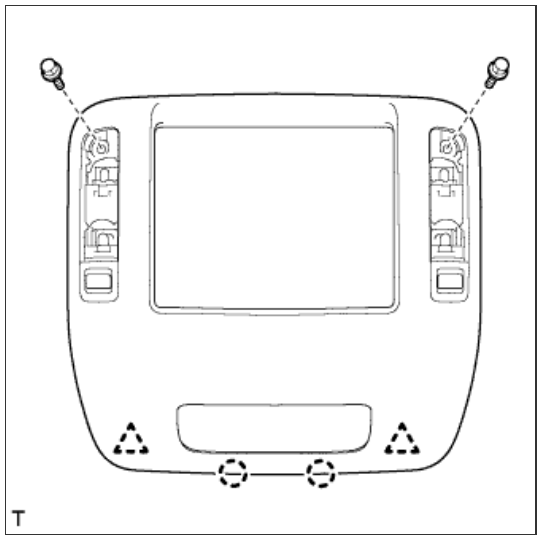


## 5. REMOVE ROOF CONSOLE BOX ASSEMBLY

a. Remove the 2 bolts.

b. Detach the 4 clips and 2 claws.

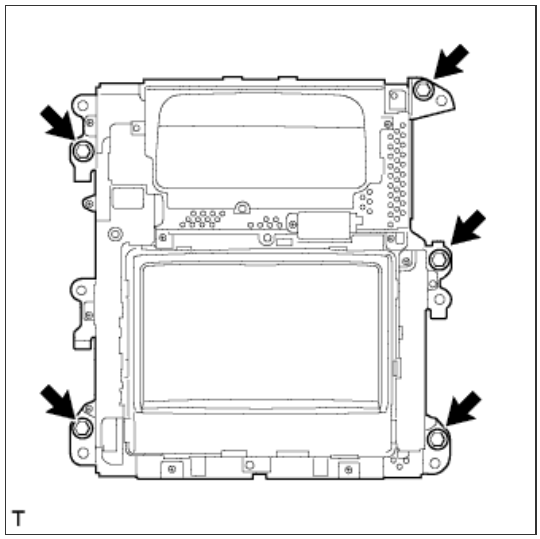
c. Disconnect the connector and remove the roof console box.



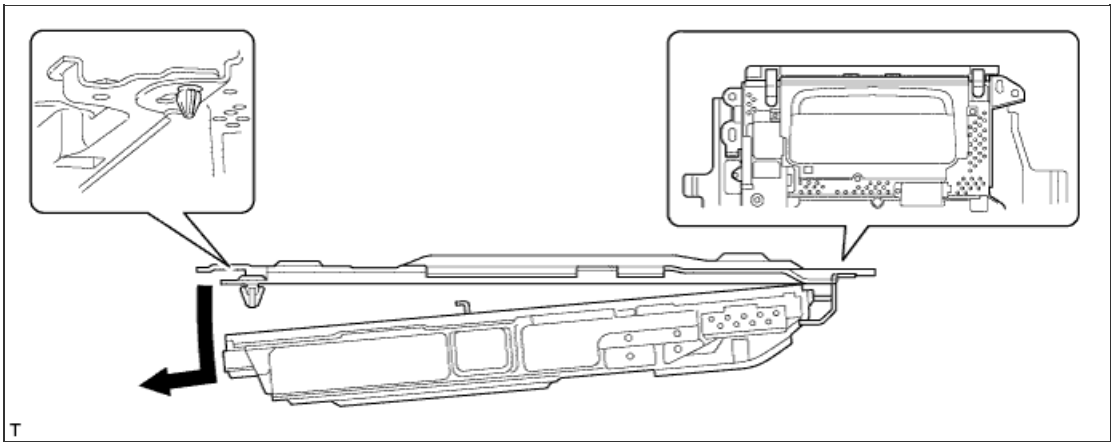
## 6. REMOVE ROOF CONSOLE BOX ASSEMBLY (w/ Multi-Media Interface ECU)

a. Remove the 2 bolts.

b. Detach the 2 clips and 2 claws.



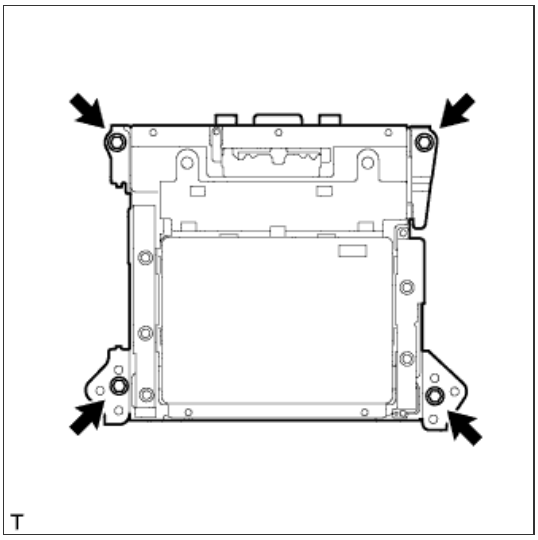
c. Disconnect the connector and remove the roof console box.



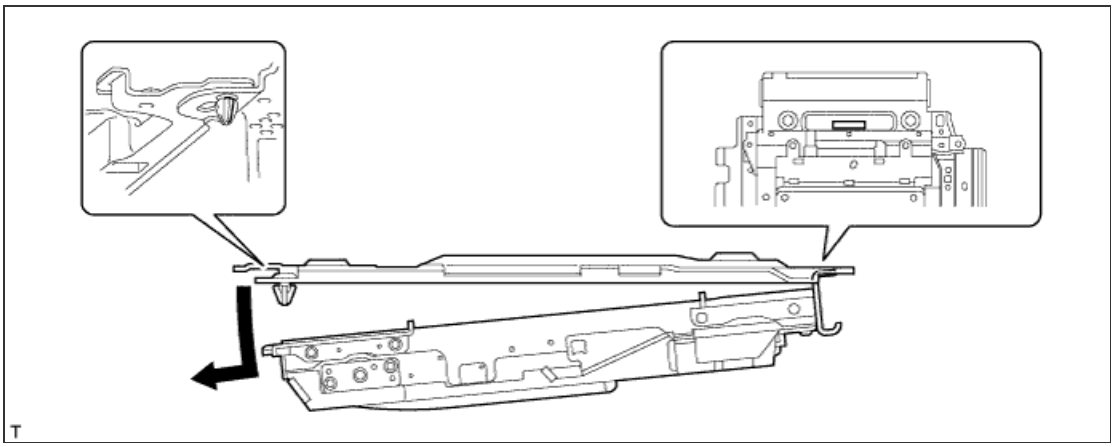
## 7. REMOVE TELEVISION DISPLAY ASSEMBLY

a. Disconnect the connectors.

b. Remove the 5 bolts.



c. Detach the clips and move the television display as shown in the illustration to detach the claws and remove it.

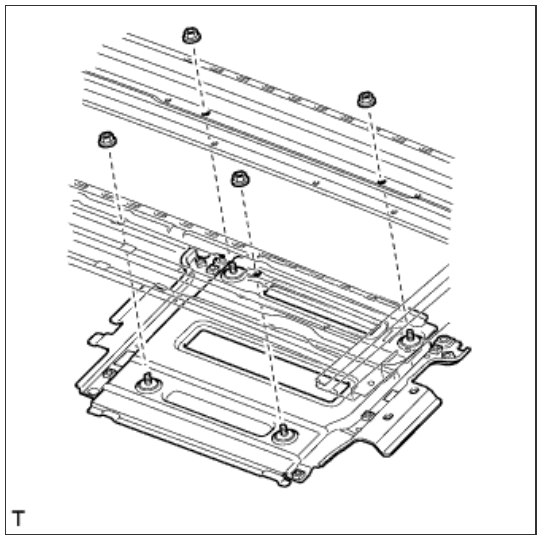


**8. REMOVE TELEVISION DISPLAY ASSEMBLY (w/ Multi-Media Interface ECU)**

a. Disconnect the connectors.

b. Remove the 4 bolts.

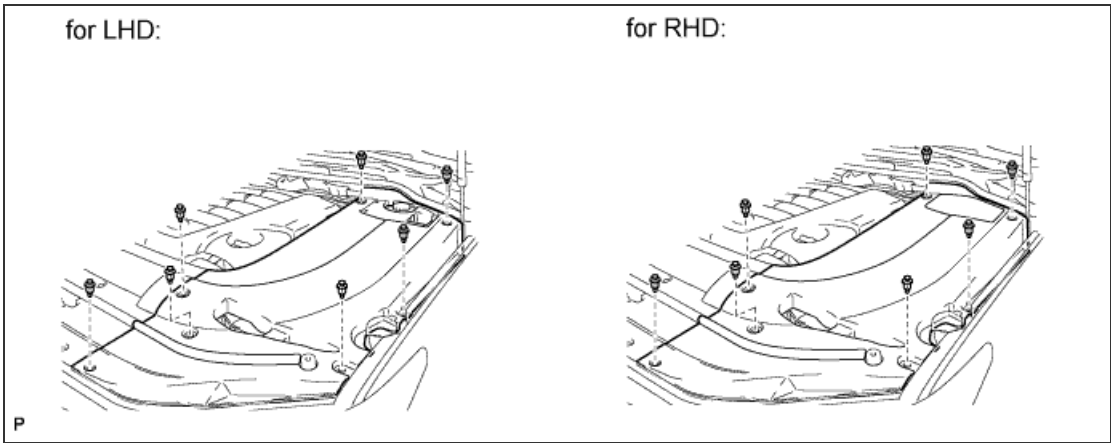
c. Detach the clips and move the television display as shown in the illustration to detach the claws and remove it.



## 9. REMOVE SLIDING ROOF HOUSING SUB-ASSEMBLY

a. Remove the sliding roof housing (Click here).

## 10. REMOVE TELEVISION DISPLAY BRACKET



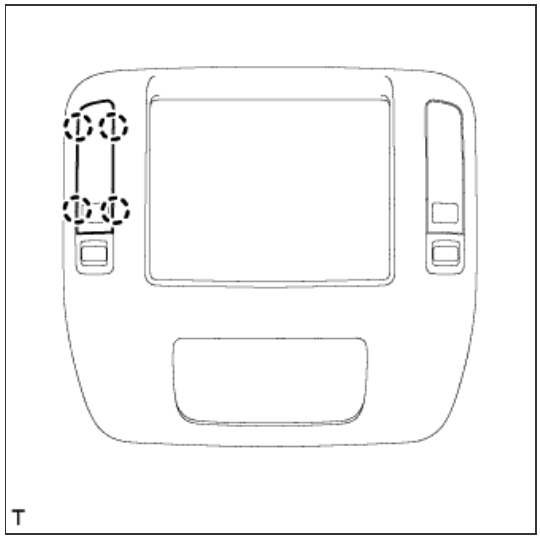
a. Remove the 4 nuts and bracket.

T

**for Preparation** Click here

## 1. REMOVE ENGINE ROOM SIDE COVER LH

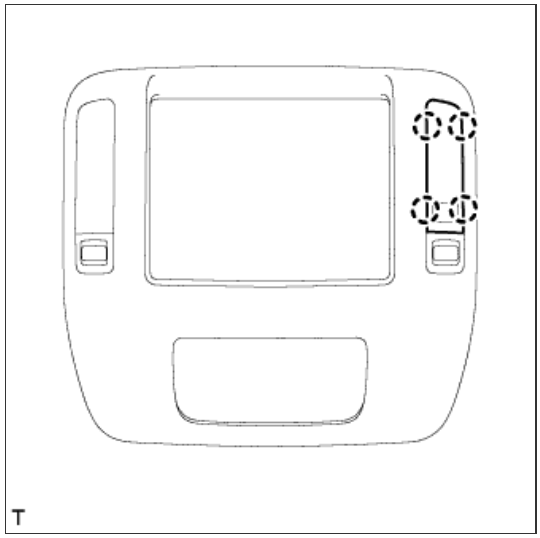
a. Remove the 7 clips and engine room side cover LH.



## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

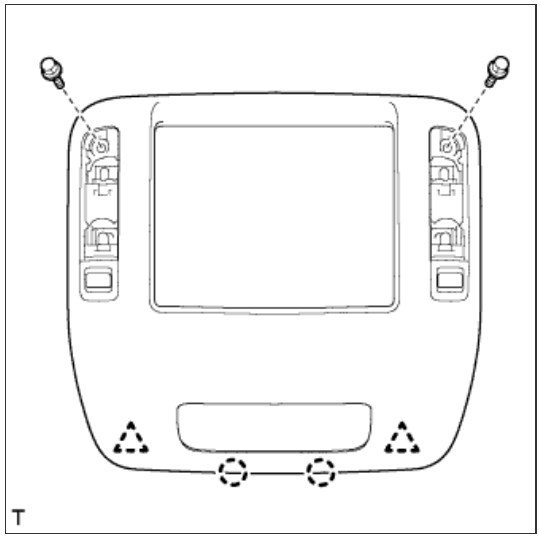


## 3. REMOVE NO. 1 ROOF LINING TRIM COVER

a. Detach the 4 claws and remove the cover.

## 4. REMOVE NO. 2 ROOF LINING TRIM COVER

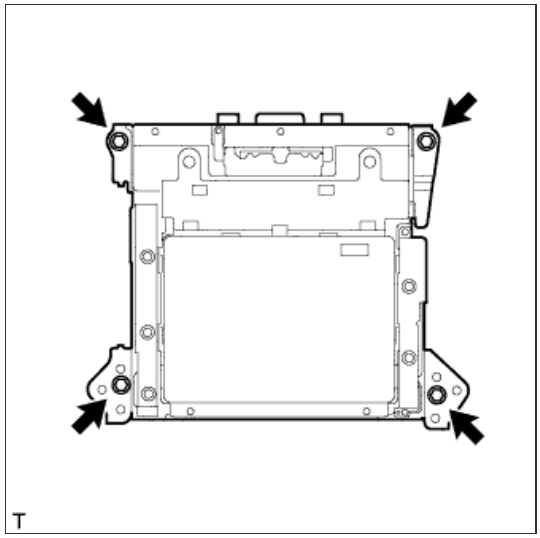
a. Detach the 4 claws and remove the cover.



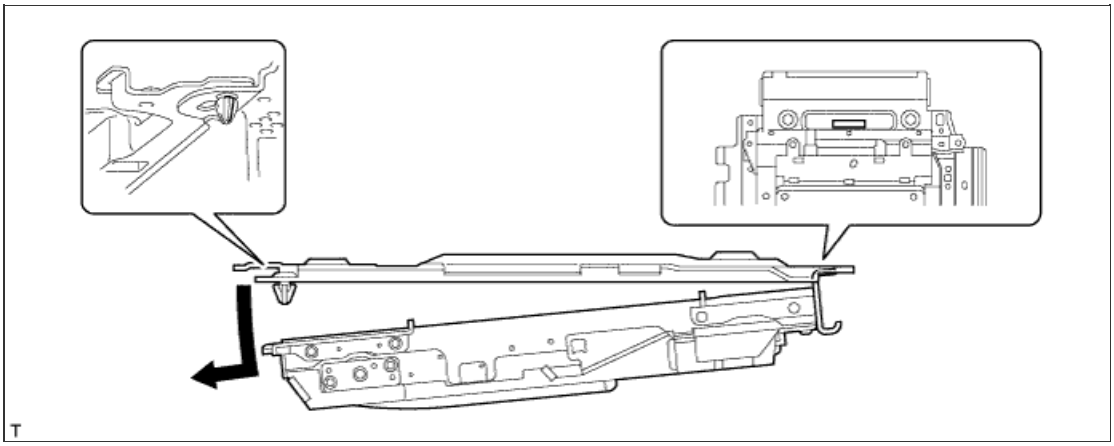
## 5. REMOVE ROOF CONSOLE BOX ASSEMBLY

a. Remove the 2 bolts.

b. Detach the 2 clips and 2 claws.



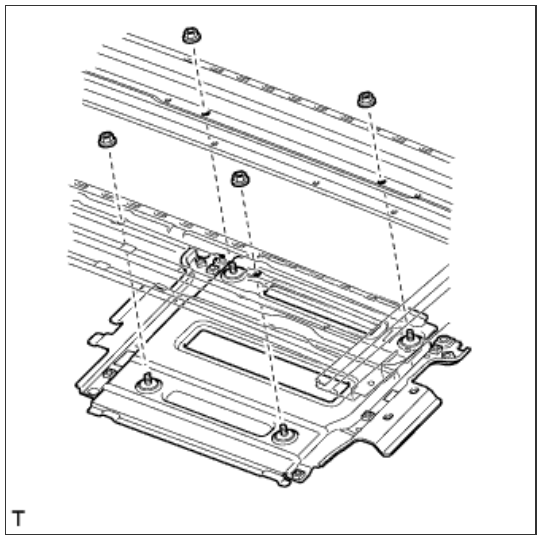
c. Disconnect the connector and remove the roof console box.



## 6. REMOVE TELEVISION DISPLAY ASSEMBLY

a. Disconnect the connectors.

b. Remove the 4 bolts.

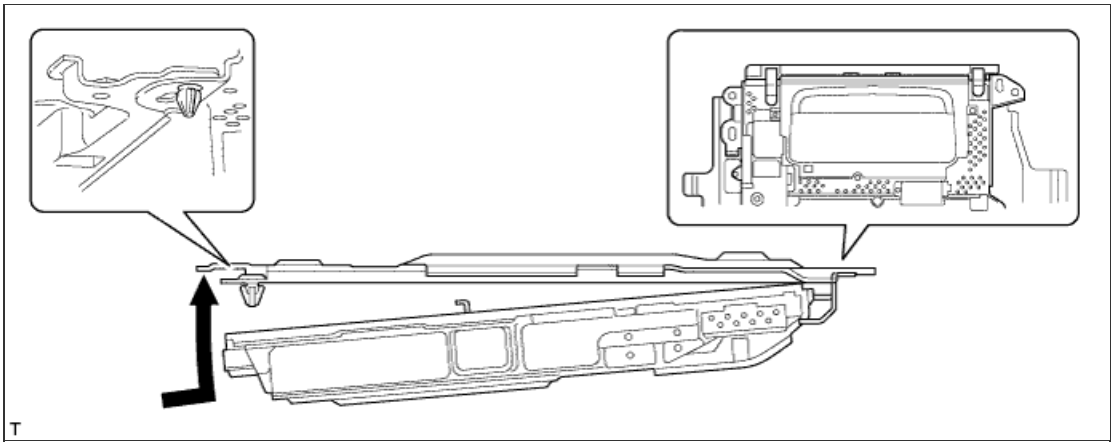


c. Detach the clips and move the television display as shown in the illustration to detach the claws and remove it.

**for Preparation** Click here

## 1. INSTALL TELEVISION DISPLAY BRACKET

a. Install the bracket with the 4 nuts.

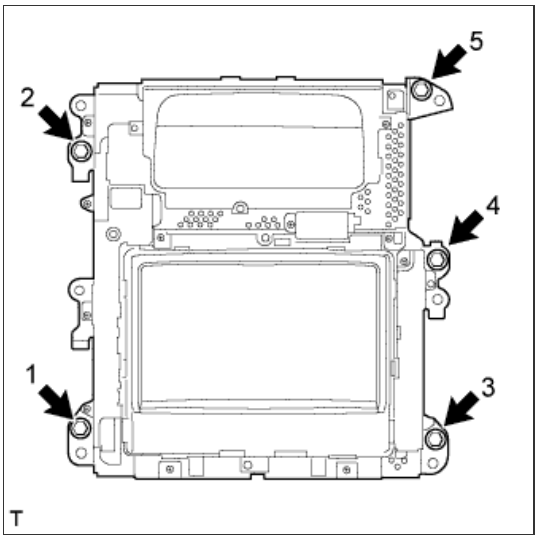


## 2. INSTALL SLIDING ROOF HOUSING SUB-ASSEMBLY

a. Install the sliding roof housing (Click here).

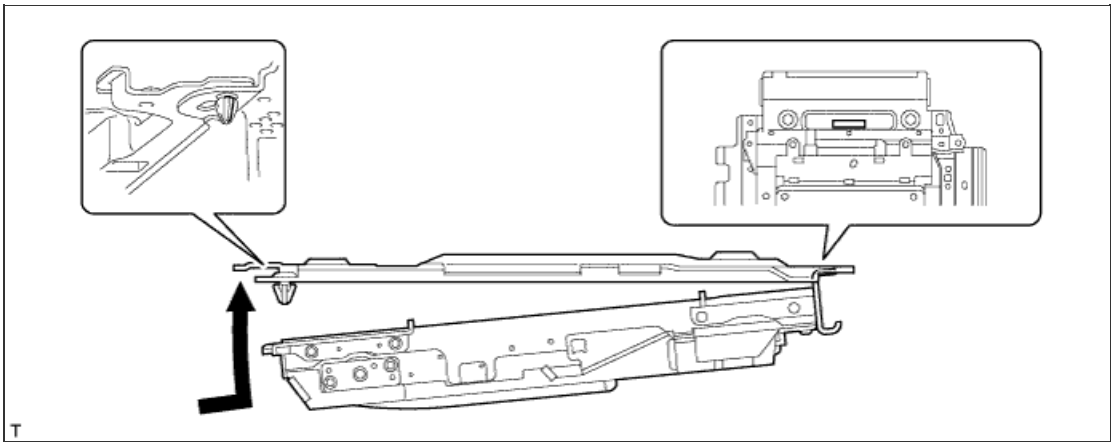
## 3. INSTALL TELEVISION DISPLAY ASSEMBLY

a. Attach the display to the claws on the front side of the bracket by moving it in the direction of the arrow in the illustration, and then attach the clips to temporarily install the display.



b. Install the television display with the 5 bolts.

**HINT:**

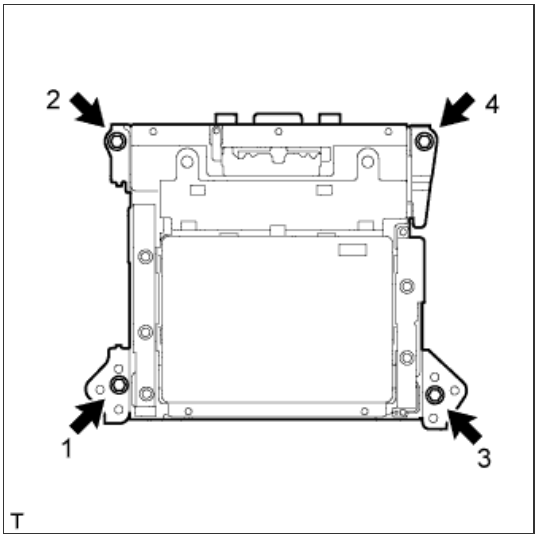


Install the bolts in the order shown in the illustration.

c. Connect the connectors.

## 4. INSTALL TELEVISION DISPLAY ASSEMBLY (w/ Multi-Media Interface ECU)

a. Attach the display to the claws on the front side of the bracket by moving it in the direction of the arrow in the illustration, and then attach the clips to temporarily install the display.

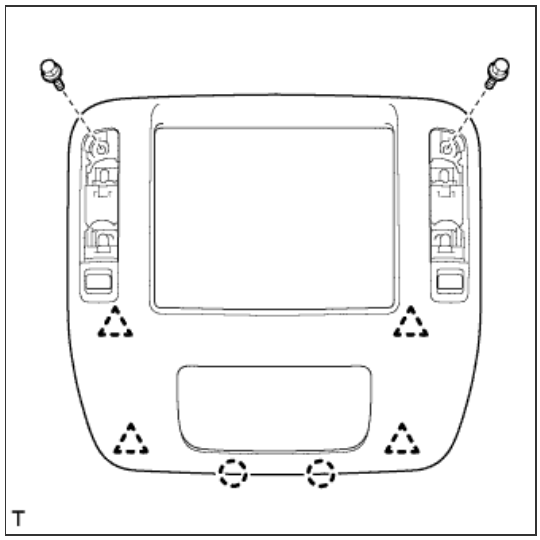


b. Install the television display with the 4 bolts.

**HINT:**

Install the bolts in the order shown in the illustration.

c. Connect the connectors.

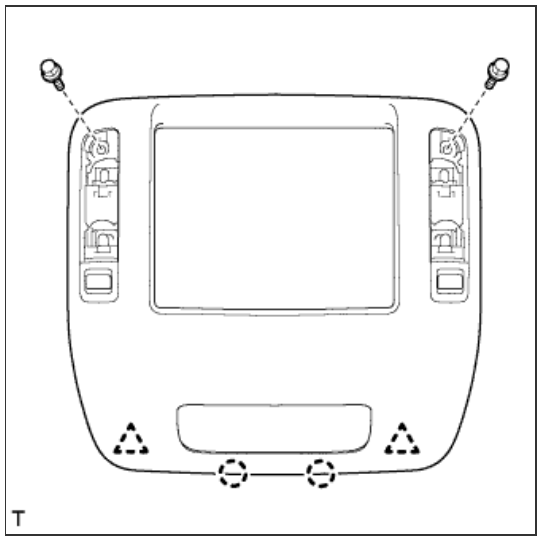


## 5. INSTALL ROOF CONSOLE BOX ASSEMBLY

a. Connect the connector.

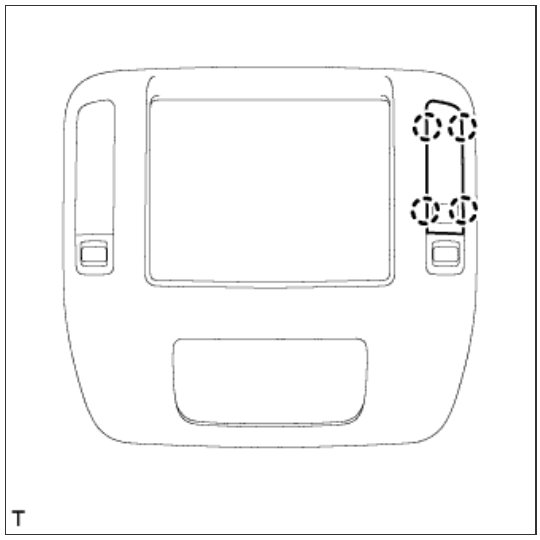
b. Attach the 4 clips and 2 claws to install the roof console box.

c. Install the 2 bolts.



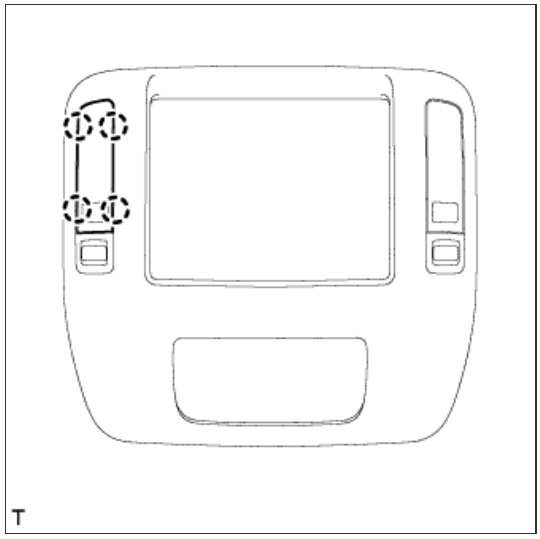
### 6. INSTALL ROOF CONSOLE BOX ASSEMBLY (w/ Multi-Media Interface ECU)

a. Connect the connector.



b. Attach the 2 clips and 2 claws to install the roof console box.

c. Install the 2 bolts.



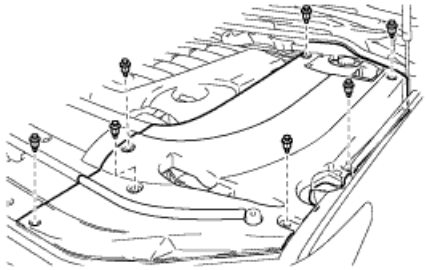
### 7. INSTALL NO. 2 ROOF LINING TRIM COVER

a. Attach the 4 claws to install the cover.

## 8. INSTALL NO. 1 ROOF LINING TRIM COVER

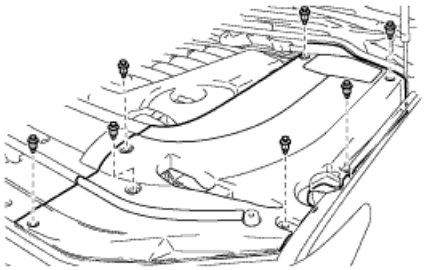
a. Attach the 4 claws to install the cover.

## 9. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).



## 10. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.

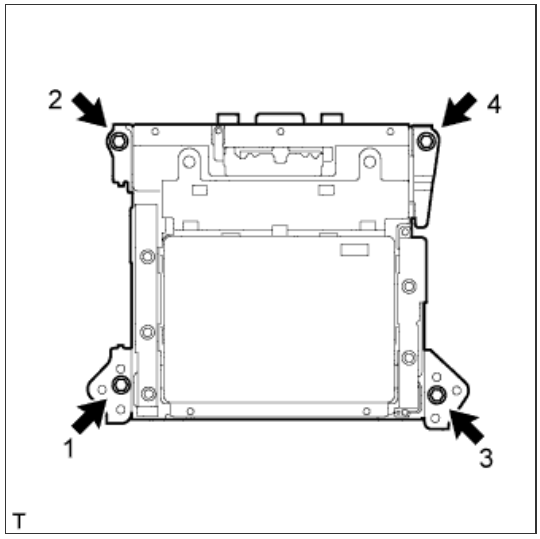
## 1. INSTALL TELEVISION DISPLAY ASSEMBLY

a. Attach the display to the claws on the front side of the bracket by moving it in the direction of the arrow in the illustration, and then attach the clips to temporarily install the display.

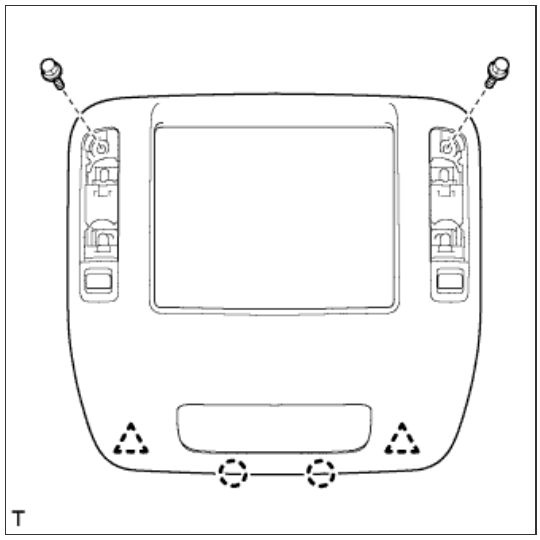


b. Install the television display with the 4 bolts.

**HINT:**

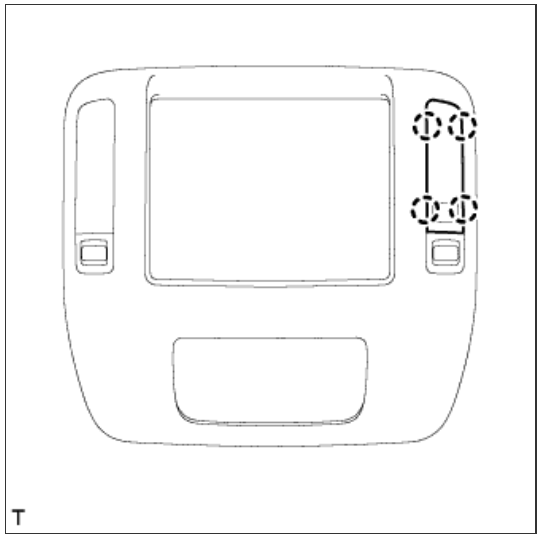
Install the bolts in the order shown in the illustration.

c. Connect the connectors.



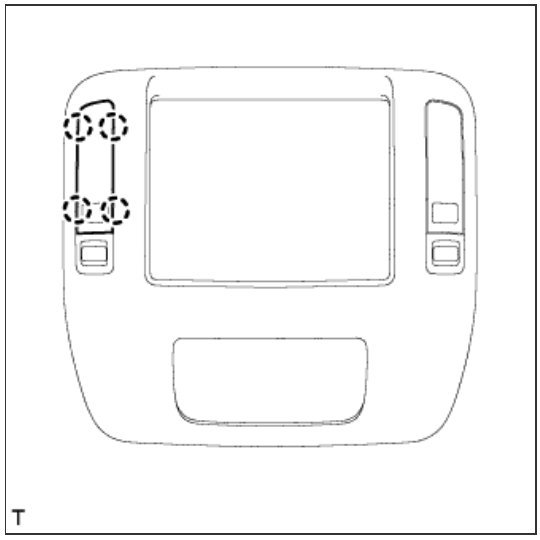
## 2. INSTALL ROOF CONSOLE BOX ASSEMBLY

a. Connect the connector.



b. Attach the 2 clips and 2 claws to install the roof console box.

c. Install the 2 bolts.



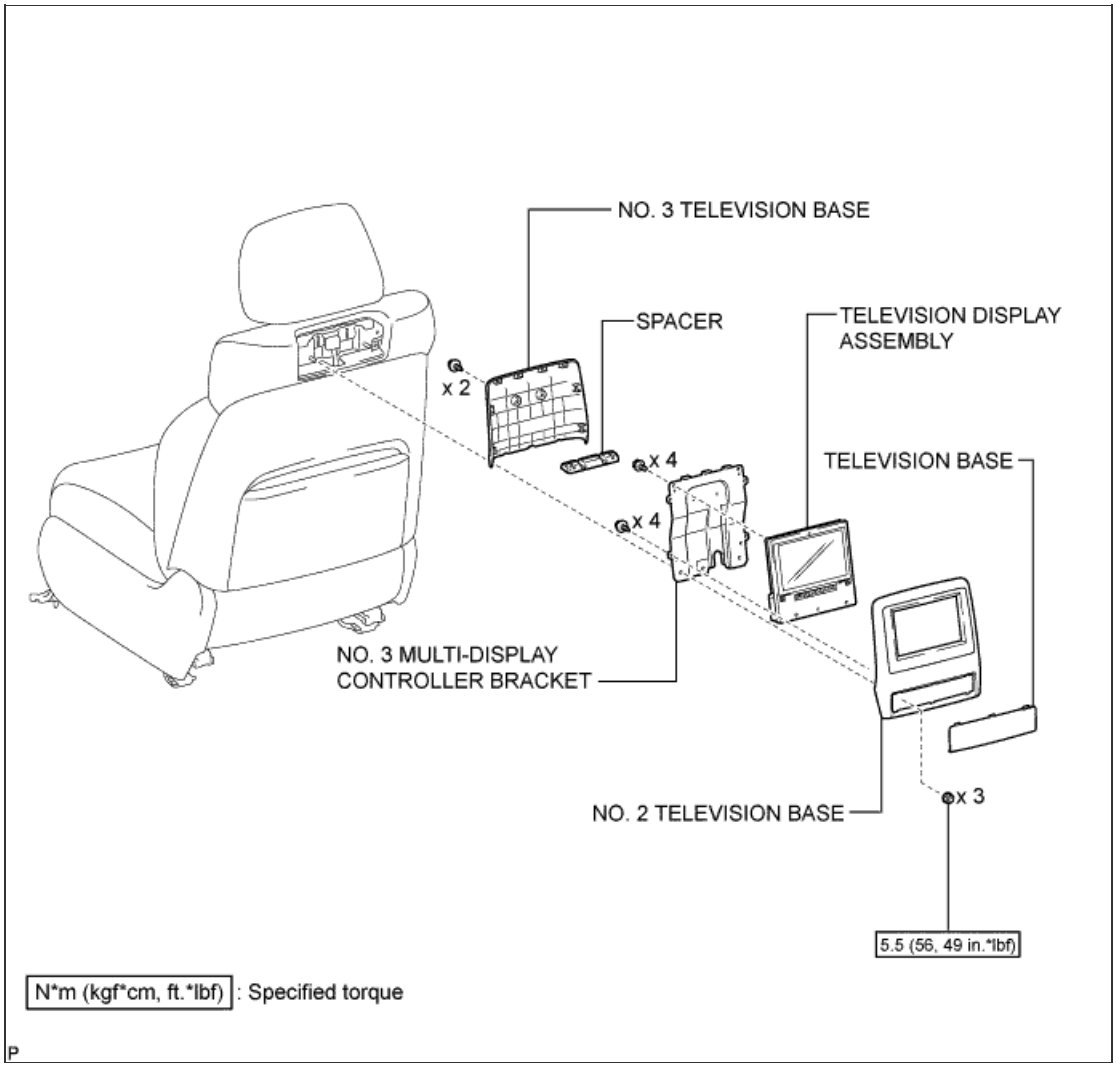
### 3. INSTALL NO. 2 ROOF LINING TRIM COVER

a. Attach the 4 claws to install the cover.

### 4. INSTALL NO. 1 ROOF LINING TRIM COVER

a. Attach the 4 claws to install the cover.

### 5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

### 6. INSTALL ENGINE ROOM SIDE COVER LH

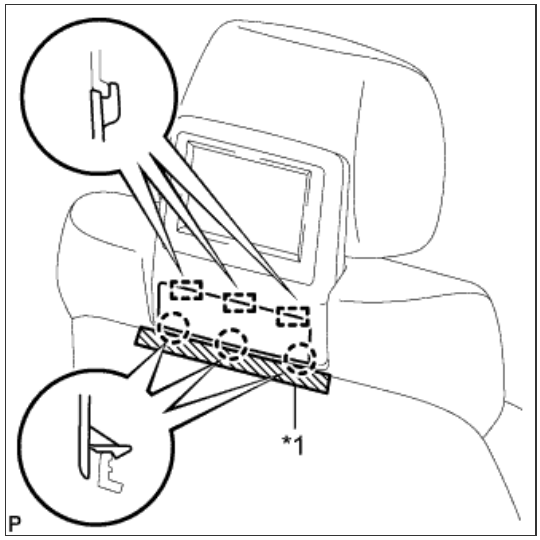
a. Install the engine room side cover LH with the 7 clips.

**for Preparation** Click here

**for Preparation** Click here

**HINT:**

- **Use the same procedure for the RH and LH sides.**
- **The procedure listed below is for the LH side.**

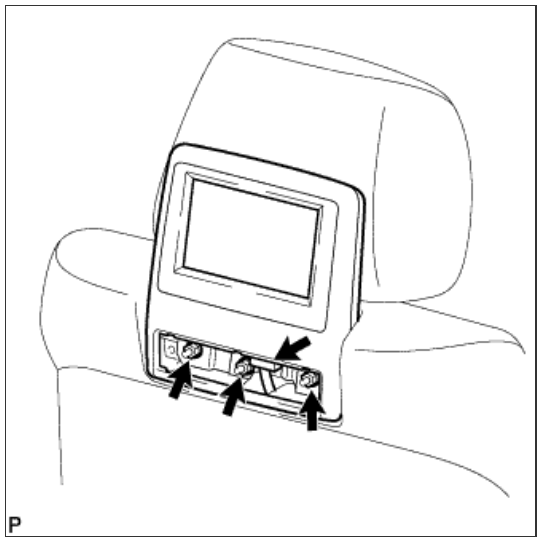


## 1. REMOVE TELEVISION BASE

a. Put protective tape around the No. 1 instrument panel garnish sub-assembly.

**Text in Illustration**

| | |
|---|---|
| *1 | Protective tape |

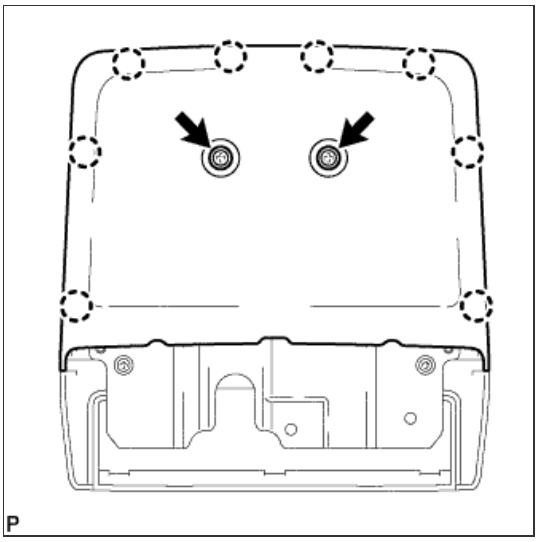


b. Using a moulding remover A, detach the 3 claws and 3 guides and remove the television base.

## 2. REMOVE TELEVISION DISPLAY ASSEMBLY

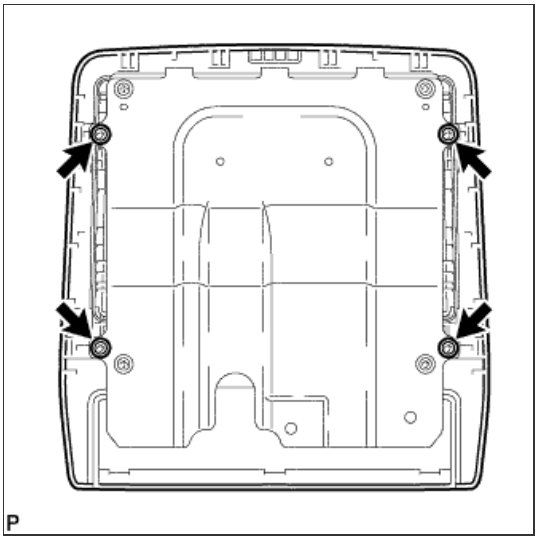
a. Disconnect the connector.

b. Remove the 3 nuts and television display assembly.



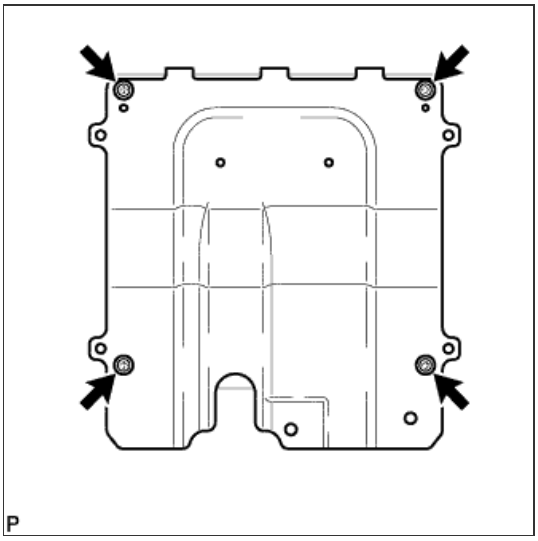
## 3. REMOVE NO. 3 TELEVISION BASE

a. Remove the 2 screws.



b. Using a moulding remover A, detach the 8 claws and remove the No. 3

television base.



### 4. REMOVE NO. 2 TELEVISION BASE

a. Remove 4 screws and No. 2 television base.

### 5. REMOVE NO. 3 MULTI-DISPLAY CONTROLLER BRACKET

a. Remove the 4 screws and No. 3 multi-display controller bracket from the television display assembly.

**for Preparation** Click here

**HINT:**

- **Use the same procedure for the RH and LH sides.**
- **The procedure listed below is for the LH side.**

## 1. INSTALL NO. 3 MULTI-DISPLAY CONTROLLER BRACKET

a. Install the No. 3 multi-display controller bracket with the 4 screws.

## 2. INSTALL NO. 2 TELEVISION BASE

a. Install the No. 2 television base with the 4 screws.

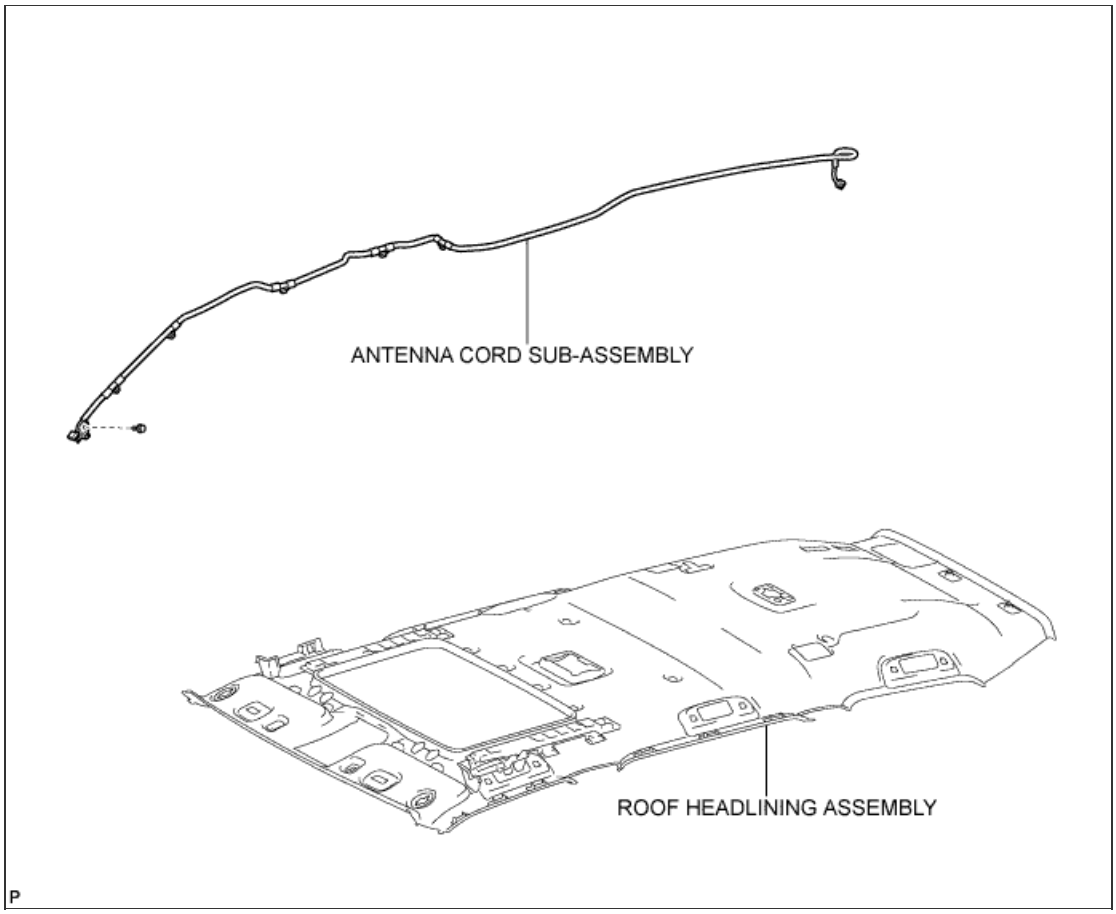
## 3. INSTALL NO. 3 TELEVISION BASE

a. Attach the 8 claws to install the No. 3 television base.

b. Install the 2 screws.

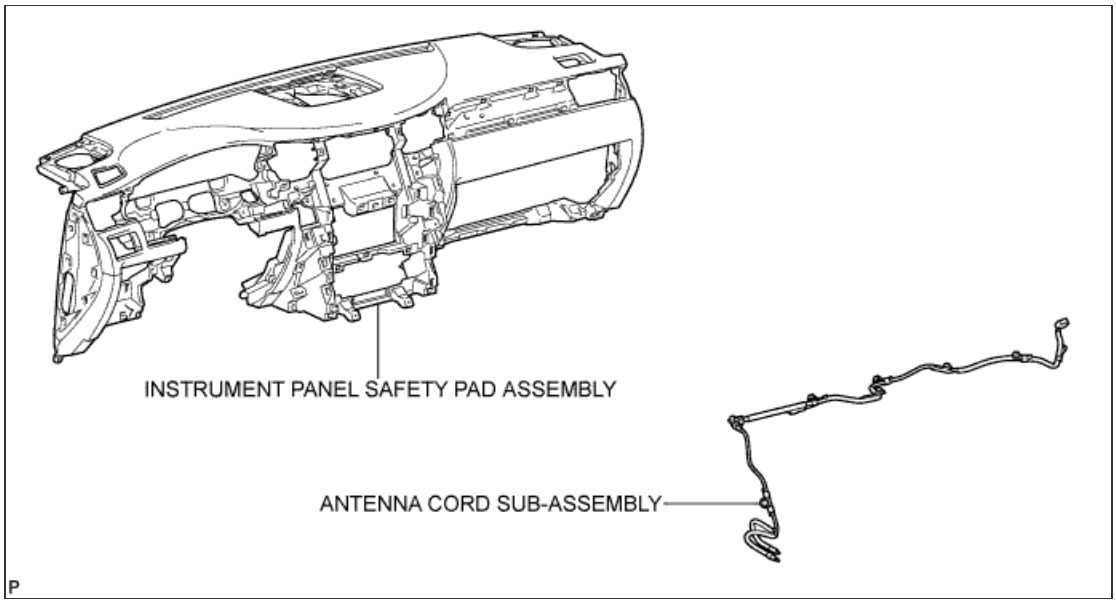
## 4. INSTALL TELEVISION DISPLAY ASSEMBLY

a. Install the television display assembly with the 3 nuts.



**Torque:**
**5.5 N*m{ 56 kgf*cm , 49 in.*lbf }**

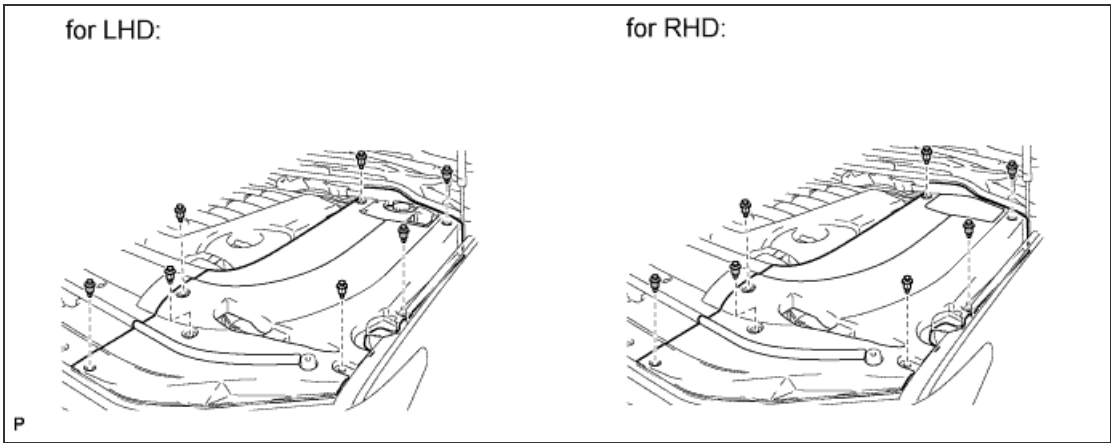
b. Connect the connector.



## 5. INSTALL TELEVISION BASE

a. Attach the 3 guides and 3 claws to install the television base.

**for Preparation** Click here



**for Preparation** Click here

## 1. REMOVE ENGINE ROOM SIDE COVER LH

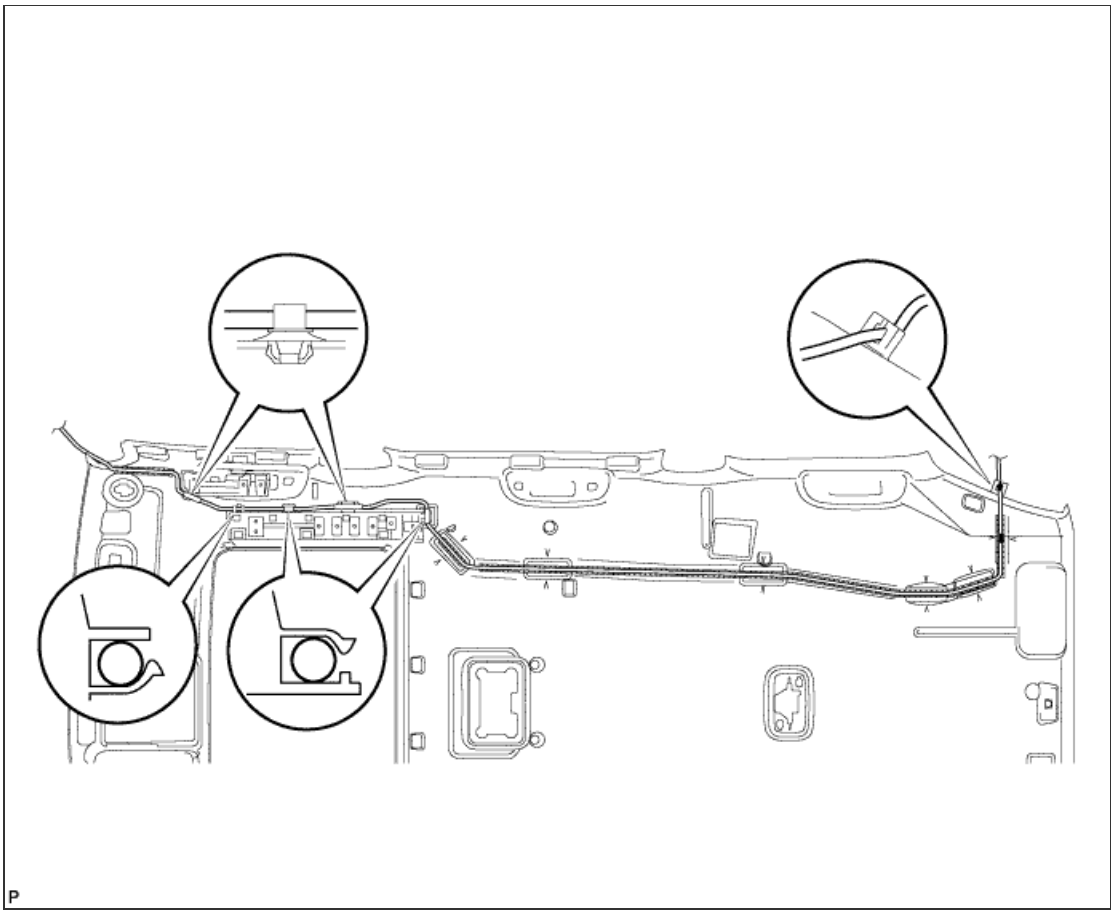
a. Remove the 7 clips and engine room side cover.

## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

**CAUTION:**

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

**NOTICE:**



When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

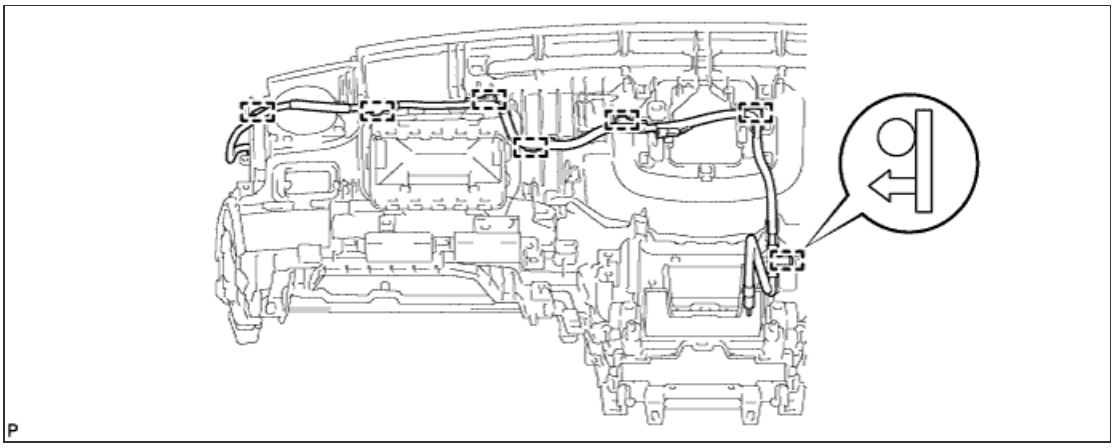
## 3. REMOVE ROOF HEADLINING ASSEMBLY

a. Remove the roof headlining assembly (Click here).

## 4. REMOVE ANTENNA CORD SUB-ASSEMBLY

a. Detach the 2 clamps and remove the antenna from the 3 ribs and notch on the rear of the roof headlining.

b. Remove the antenna cord from the roof headlining.

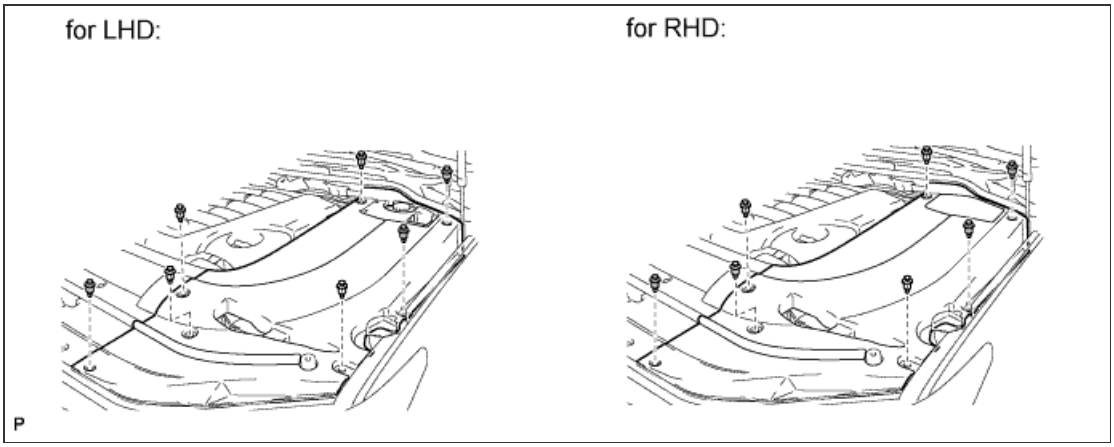


c. Remove the double-sided tape from the roof headlining.

### 5. REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY

a. Remove the instrument panel safety pad ( Click here).

### 6. REMOVE ANTENNA CORD SUB-ASSEMBLY



a. Detach the 7 clamps and remove the antenna cord.

**for Preparation** Click here

## 1. REMOVE ENGINE ROOM SIDE COVER LH

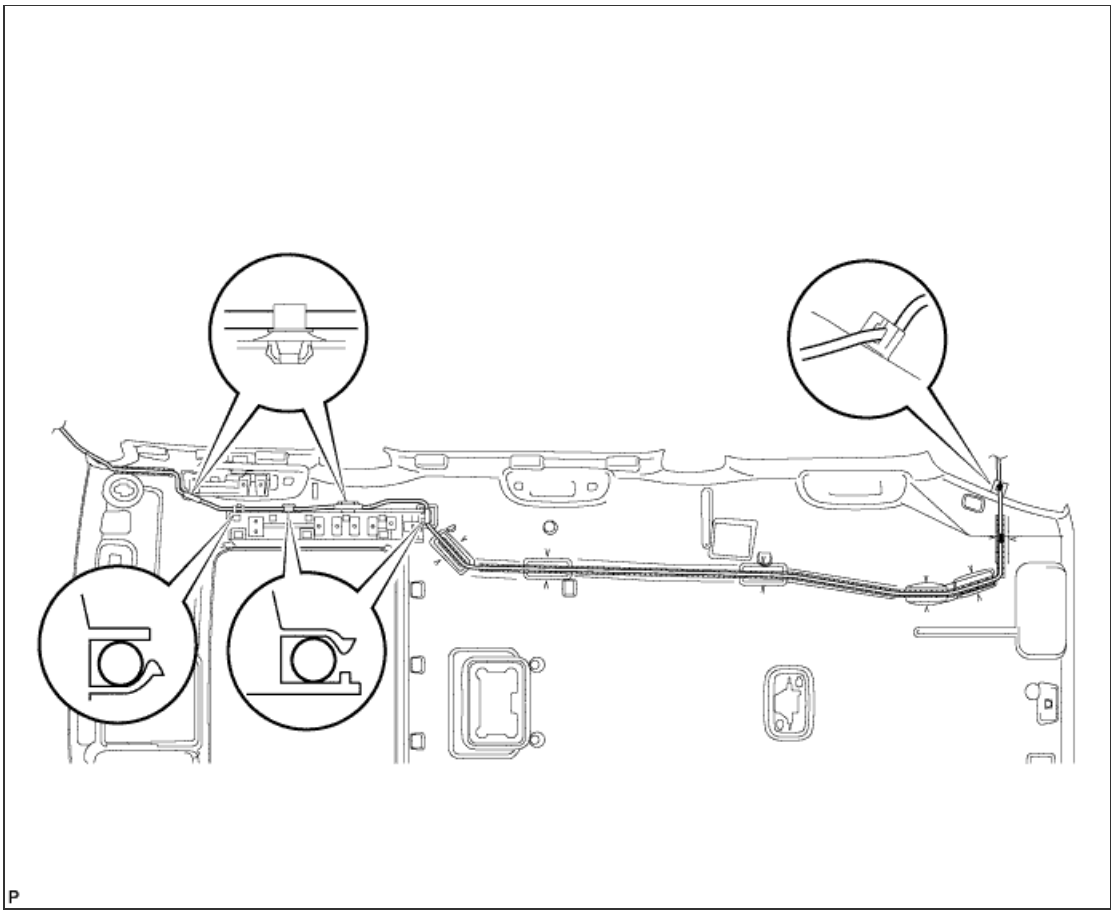
a. Remove the 7 clips and engine room side cover LH.

## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

**CAUTION:**

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

**NOTICE:**



When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

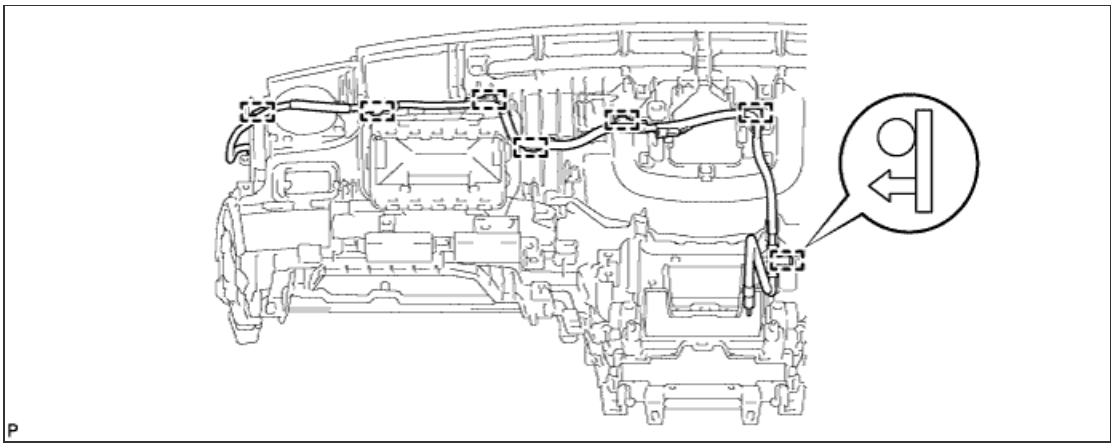
## 3. REMOVE ROOF HEADLINING ASSEMBLY

a. Remove the roof headlining assembly (Click here).

## 4. REMOVE ANTENNA CORD SUB-ASSEMBLY

a. Detach the 2 clamps and remove the antenna from the 3 ribs and notch on the rear of the roof headlining.

b. Remove the antenna cord from the roof headlining.

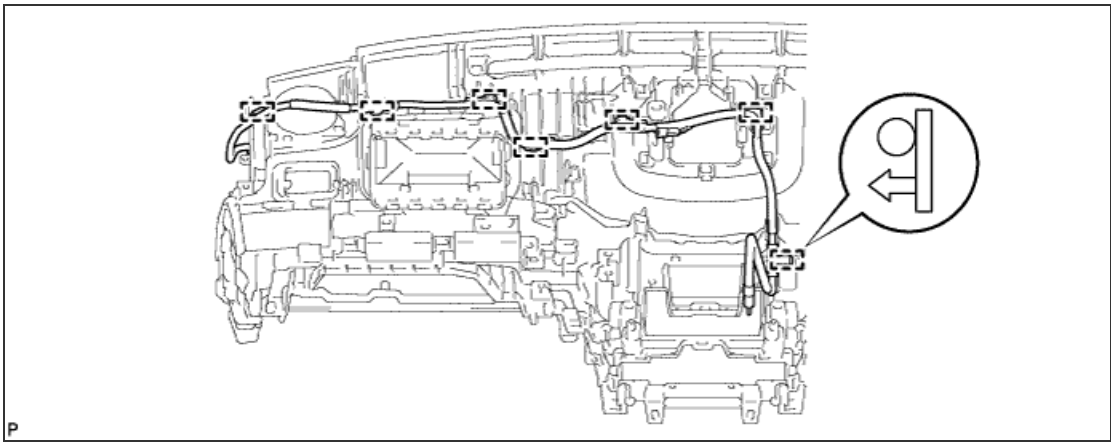


c. Remove the double-sided tape from the roof headlining.

### 5. REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY

a. Remove the instrument panel safety pad ( Click here).

### 6. REMOVE ANTENNA CORD SUB-ASSEMBLY



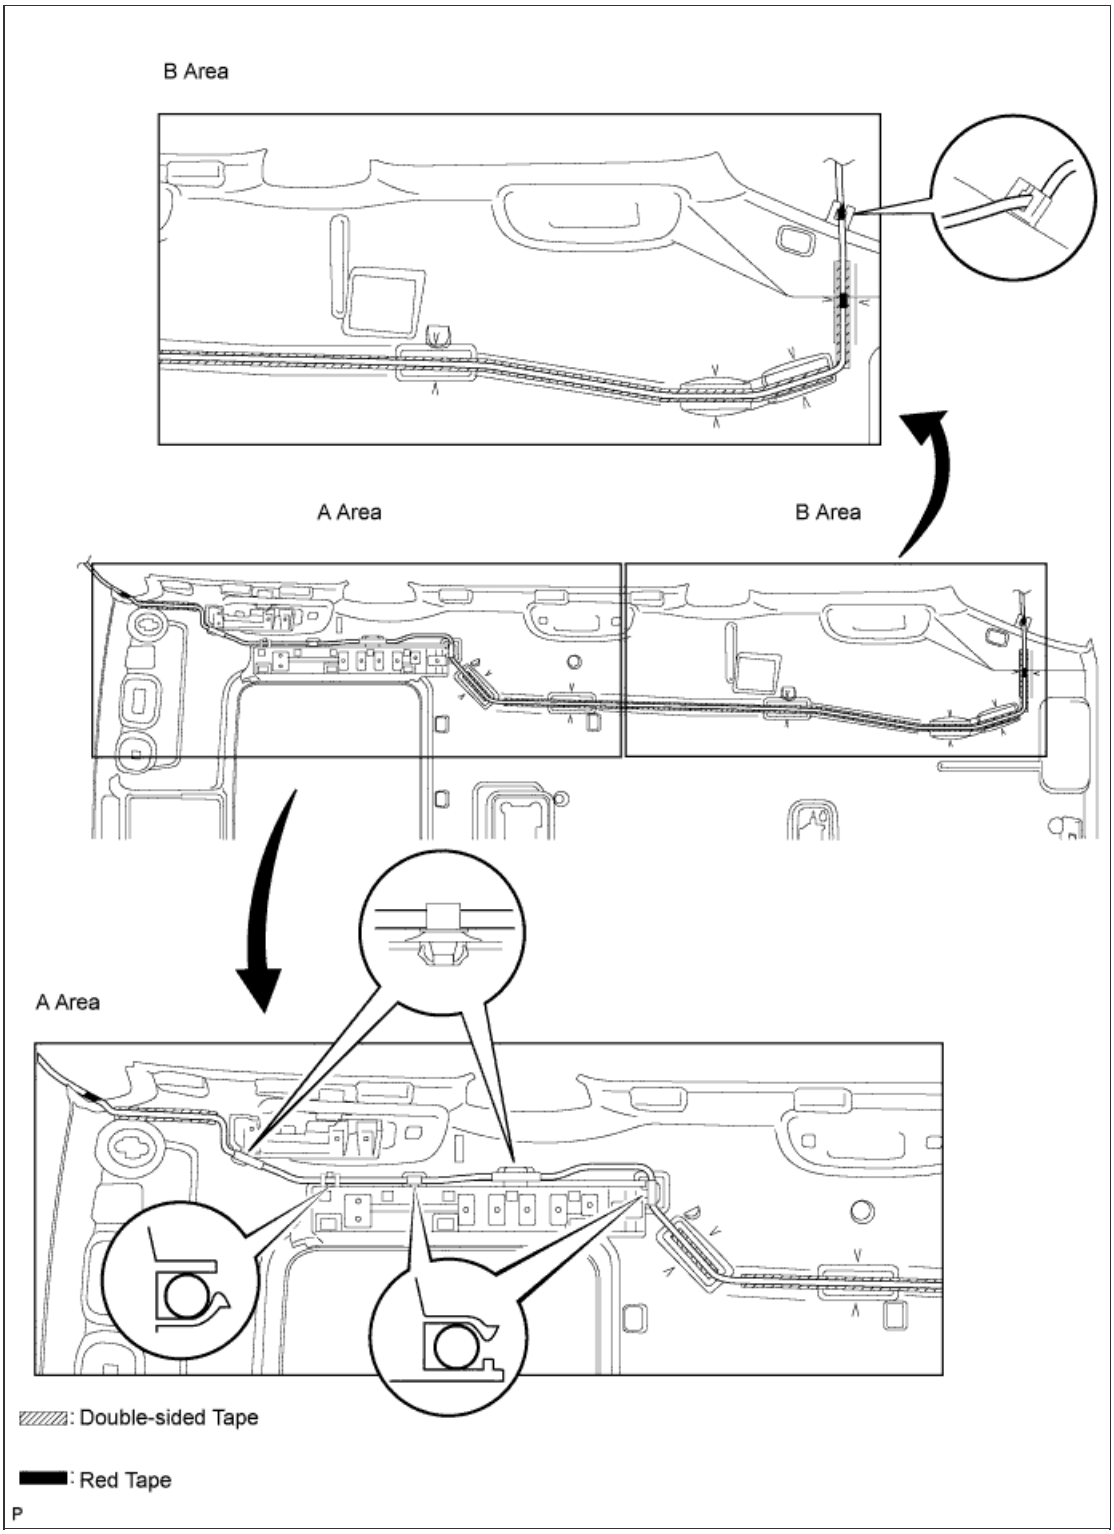
a. Detach the 7 clamps and remove the antenna cord.

**for Preparation** Click here

## 1. INSTALL ANTENNA CORD SUB-ASSEMBLY

a. Attach the 7 clamps to install the antenna cord.

## 2. INSTALL INSTRUMENT PANEL SAFETY PAD ASSEMBLY



a. Install the instrument panel safety pad ( Click here).

## 3. INSTALL ANTENNA CORD SUB-ASSEMBLY

a. Apply new double-sided tape as shown in the illustration.

**HINT:**

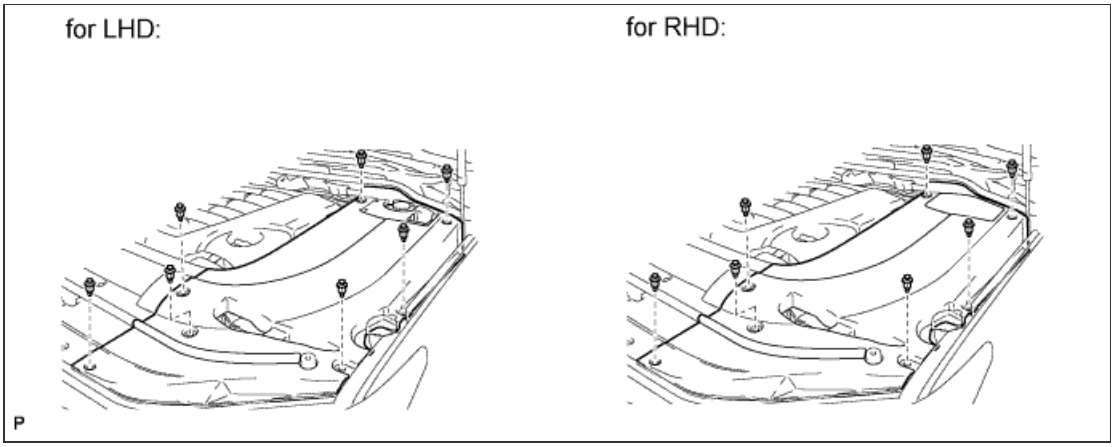
Attach double-sided tape to the hatched areas shown in the illustration below.

b. Align the red tape wound around the antenna cord with the V markings on the roof headlining and the notch at the rear of the headlining, and attach the antenna cord to the double-sided tape.

c. Attach the 2 clamps and fit the antenna into the 3 ribs and the notch.

## 4. INSTALL ROOF HEADLINING ASSEMBLY

a. Install the roof headlining (Click here).



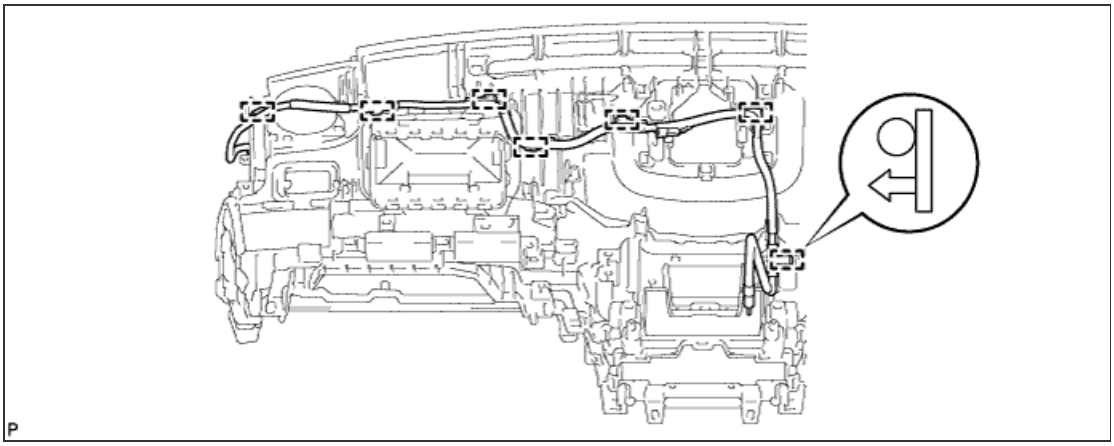
## 5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

## 6. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.



## 7. CHECK SRS WARNING LIGHT

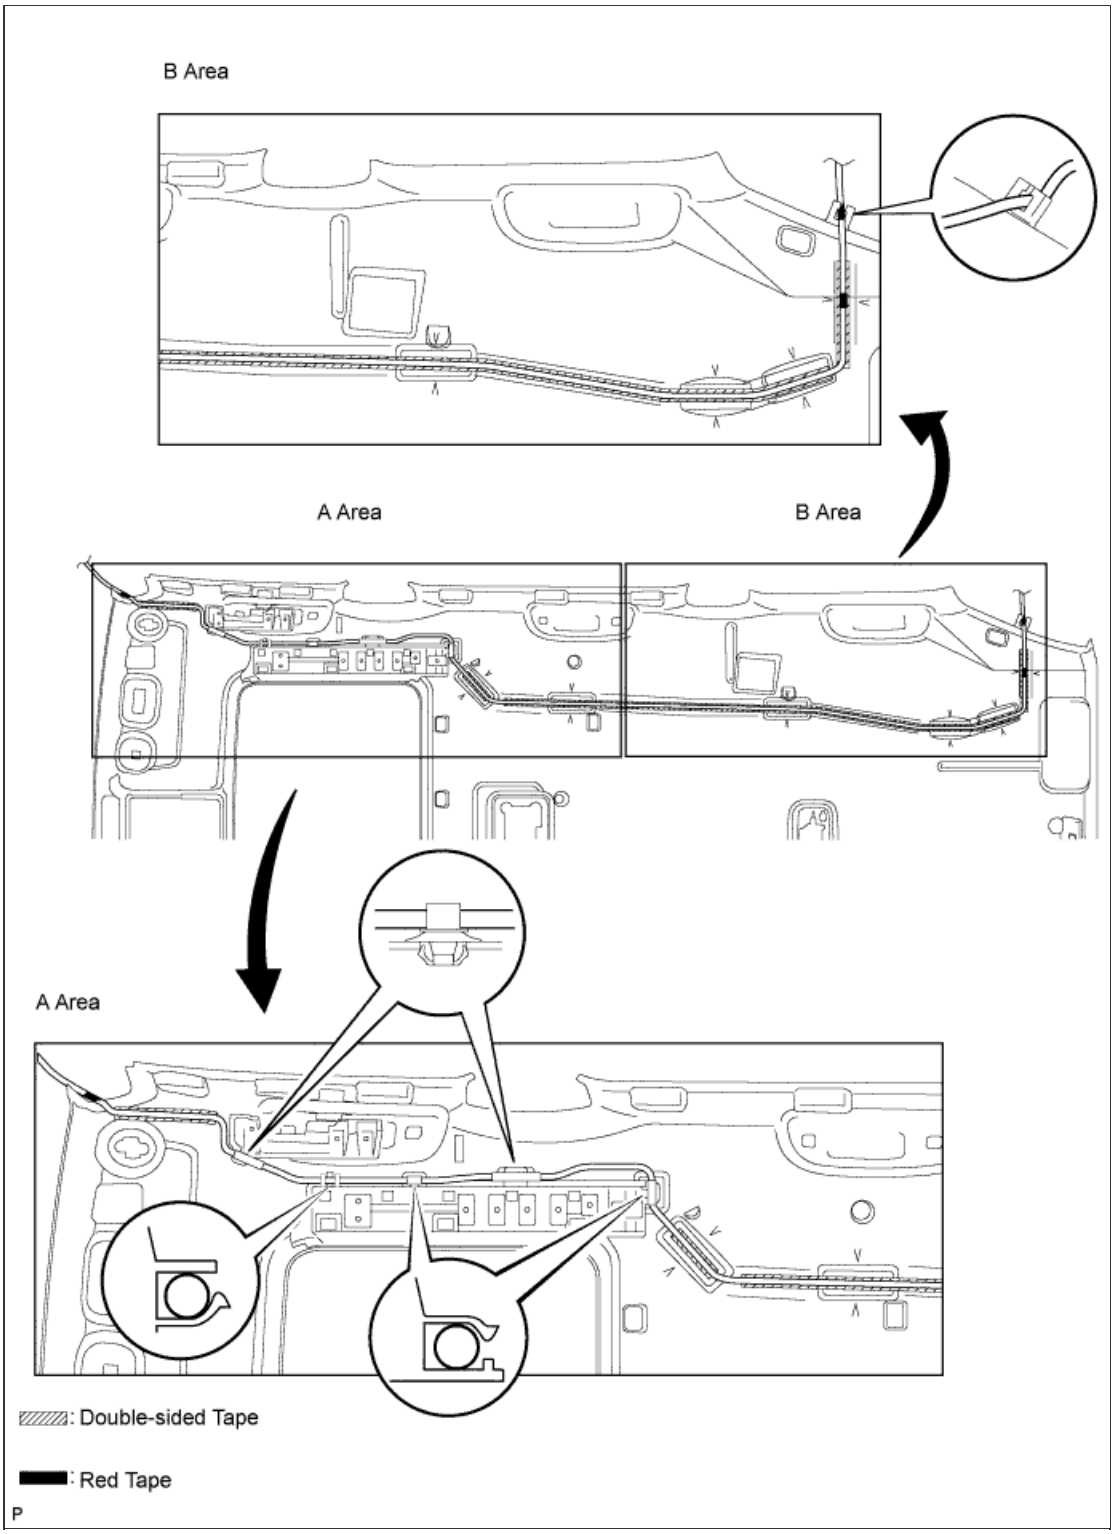
a. Check the SRS warning light (Click here).

**for Preparation** Click here

## 1. INSTALL ANTENNA CORD SUB-ASSEMBLY

a. Attach the 7 clamps to install the antenna cord.

## 2. INSTALL INSTRUMENT PANEL SAFETY PAD ASSEMBLY



a. Install the instrument panel safety pad ( Click here).

## 3. INSTALL ANTENNA CORD SUB-ASSEMBLY

a. Apply new double-sided tape as shown in the illustration.

**HINT:**

Attach double-sided tape to the hatched areas shown in the illustration below.

b. Align the red tape wound around the antenna cord with the V markings on the roof headlining and the notch at the rear of the headlining, and attach the antenna cord to the double-sided tape.

c. Attach the 2 clamps and fit the antenna into the 3 ribs and the notch.

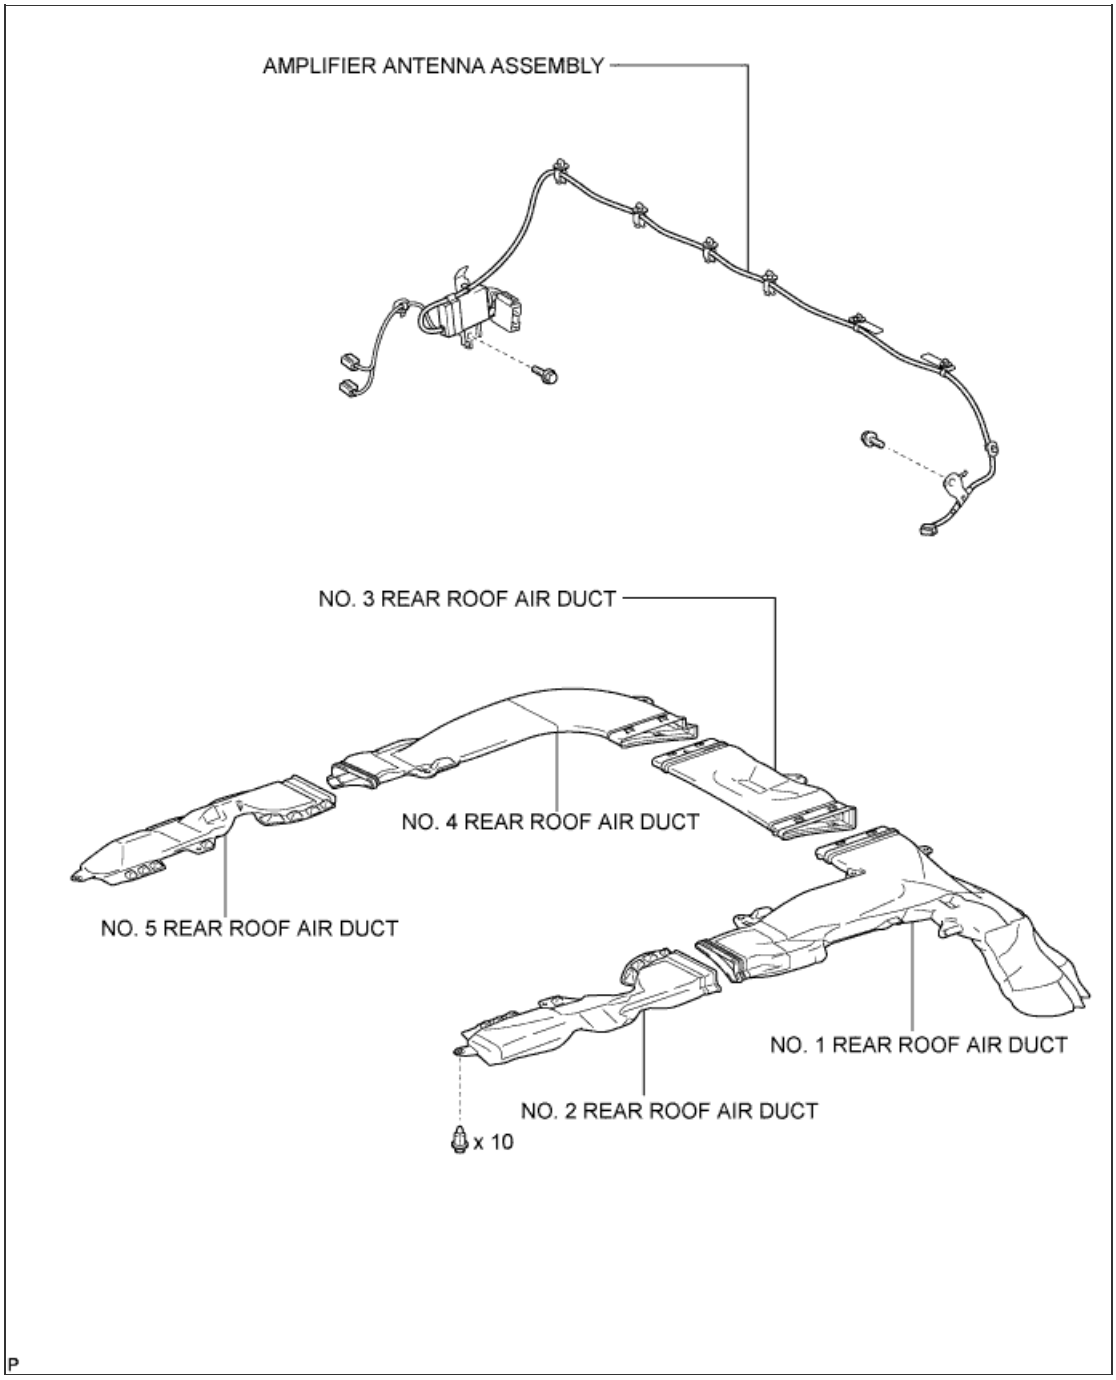
## 4. INSTALL ROOF HEADLINING ASSEMBLY

a. Install the roof headlining (Click here).

## 5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).



### 6. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover LH with the 7 clips.

### 7. CHECK SRS WARNING LIGHT

a. Remove the 2 bolts and bracket.

**for Preparation** Click here

**HINT:**

A bolt without a torque specification is shown in the standard bolt chart ( Click here).

## 1. INSTALL NO. 1 MULTI-MEDIA INTERFACE BRACKET

a. Install the bracket with the 2 bolts.

## 2. INSTALL NO. 2 MULTI-MEDIA INTERFACE BRACKET

a. Install the bracket with the 2 bolts.

## 3. INSTALL MULTI-MEDIA INTERFACE ECU

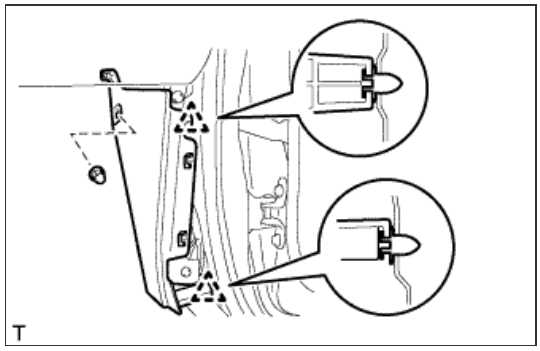
a. Install the multi-media interface ECU with the 2 bolts.

b. Connect the connectors.

## 4. INSTALL FRONT FLOOR CARPET ASSEMBLY

a. Install the carpet that was pulled back to remove the selector. For further details, refer to the installation procedure ( Click here).

## 5. INSTALL FRONT DOOR SCUFF PLATE RH



**HINT:**

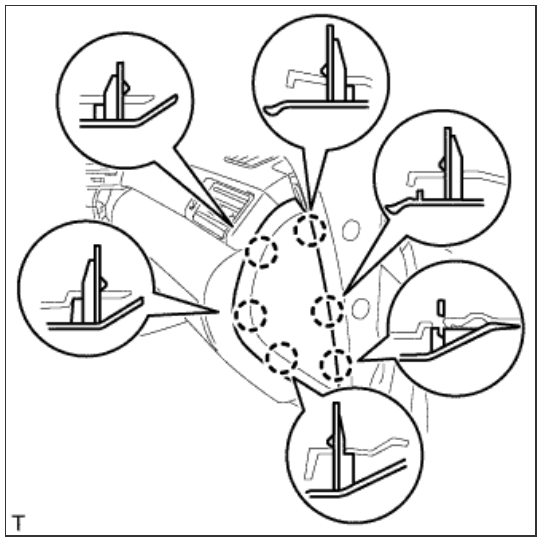
Use the same procedures described for the LH side.

## 6. INSTALL COWL SIDE TRIM BOARD RH

a. Attach the 2 clips to install the trim board.

b. Install the cap nut.

## 7. INSTALL INSTRUMENT SIDE PANEL RH



a. w/o Airbag Cut Off Switch:

i. Attach the 6 claws to install the side panel.

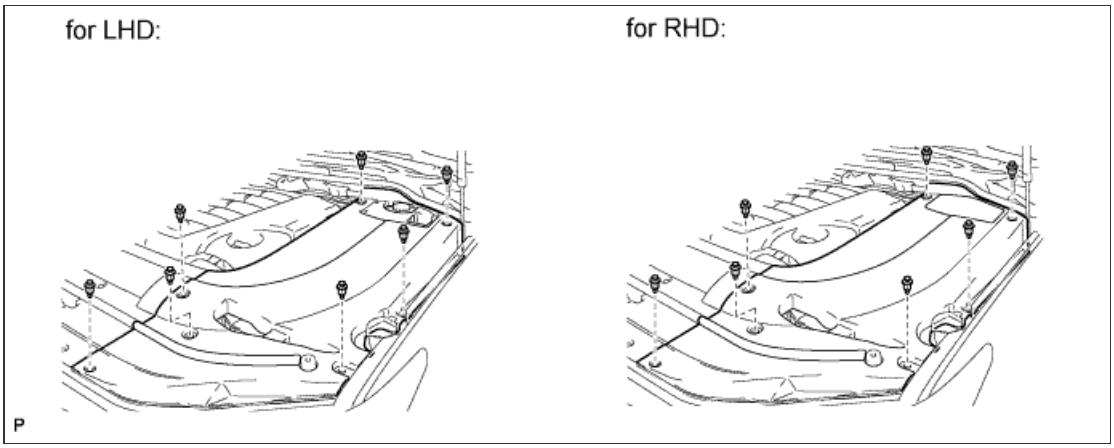
b. w/ Airbag Cut Off Switch:

i. Connect the connector.

ii. Attach the 6 claws to install the side panel.

## 8. INSTALL FRONT SEAT ASSEMBLY RH

a. Install the front seat assembly RH ( Click here).



## 9. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

## 10. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.

## 11. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).

**for Preparation** Click here

**HINT:**

A bolt without a torque specification is shown in the standard bolt chart ( Click here).

## 1. INSTALL NO. 1 MULTI-MEDIA INTERFACE BRACKET

a. Install the bracket with the 2 bolts.

## 2. INSTALL NO. 2 MULTI-MEDIA INTERFACE BRACKET

a. Install the bracket with the 2 bolts.

## 3. INSTALL MULTI-MEDIA INTERFACE ECU

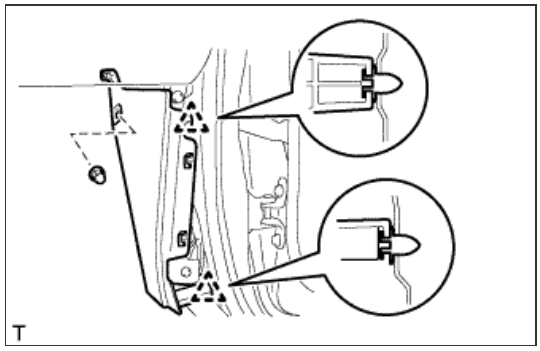
a. Install the multi-media interface ECU with the 2 bolts.

b. Connect the connectors.

## 4. INSTALL FRONT FLOOR CARPET ASSEMBLY

a. Install the carpet that was pulled back to remove the selector. For further details, refer to the installation procedure ( Click here).

## 5. INSTALL FRONT DOOR SCUFF PLATE RH



**HINT:**

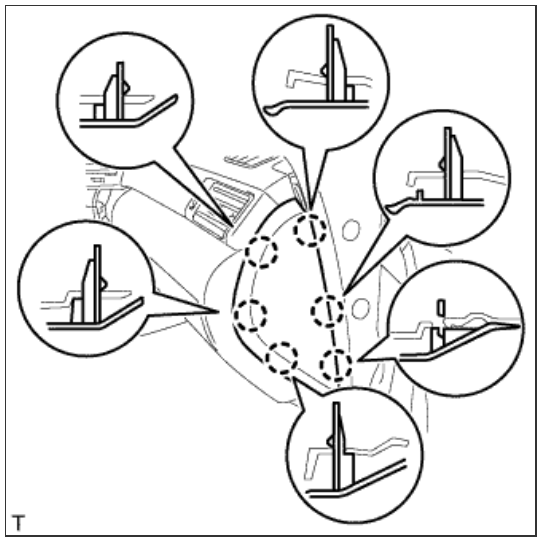
Use the same procedures described for the LH side.

## 6. INSTALL COWL SIDE TRIM BOARD RH

a. Attach the 2 clips to install the trim board.

b. Install the cap nut.

## 7. INSTALL INSTRUMENT SIDE PANEL RH



a. w/o Airbag Cut Off Switch:

i. Attach the 6 claws to install the side panel.

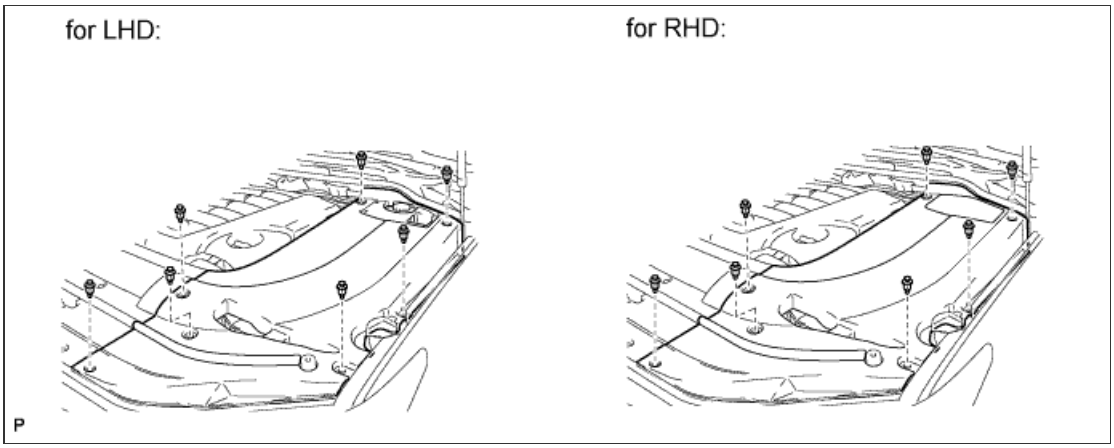
b. w/ Airbag Cut Off Switch:

i. Connect the connector.

ii. Attach the 6 claws to install the side panel.

## 8. INSTALL FRONT SEAT ASSEMBLY RH

a. Install the front seat assembly RH ( Click here).

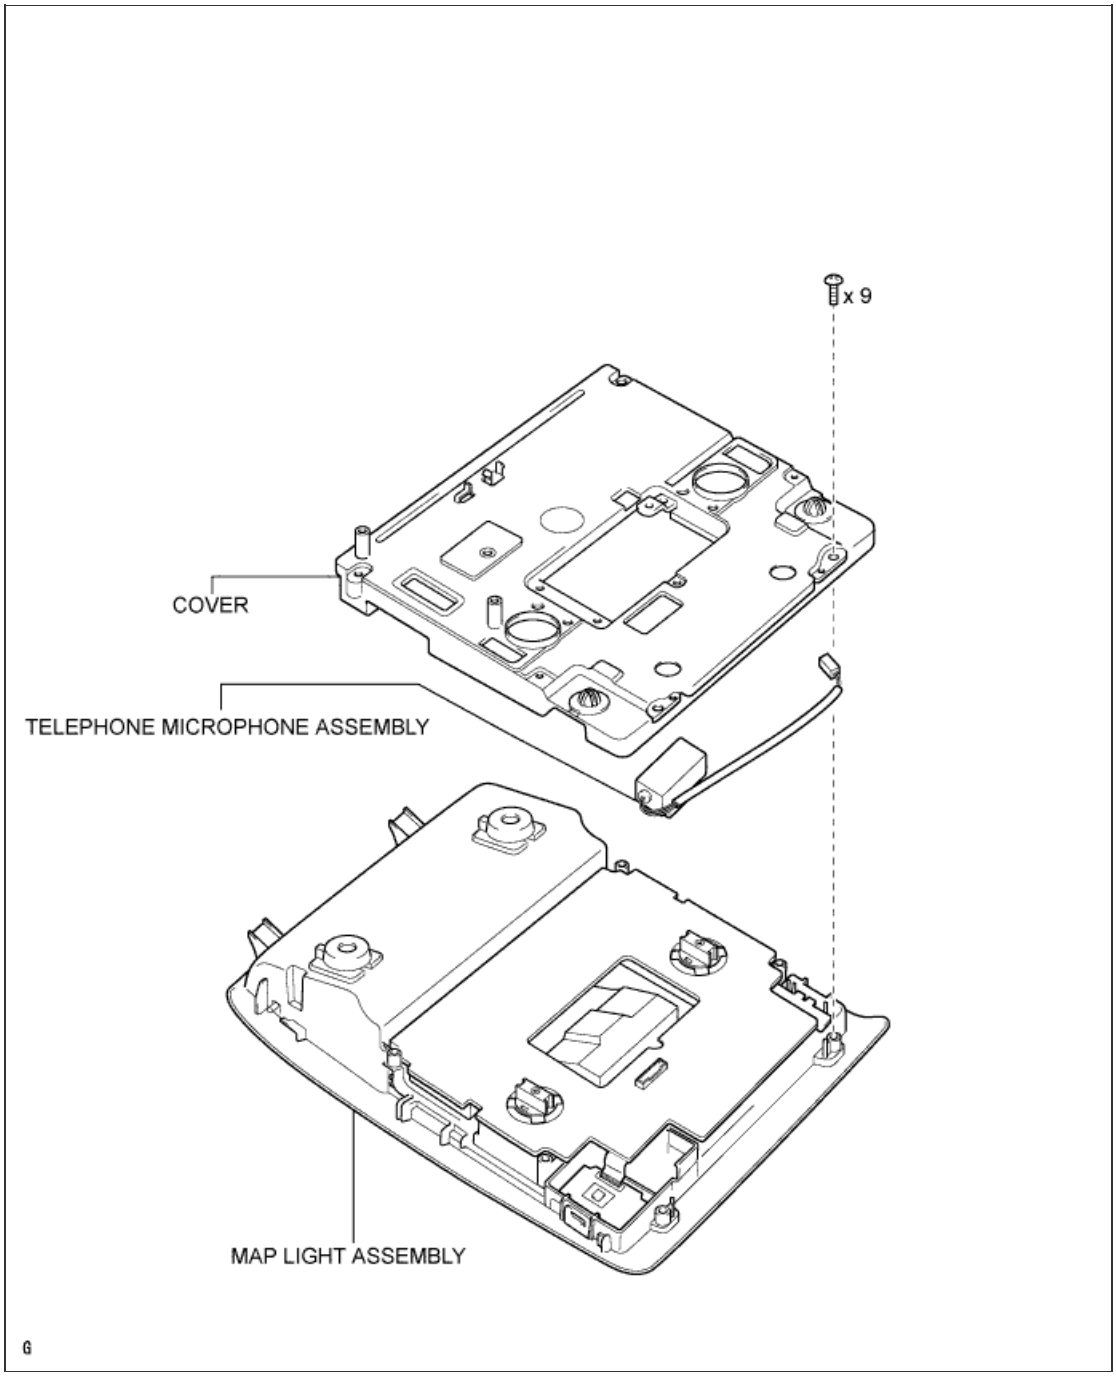


## 9. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

## 10. INSTALL ENGINE ROOM SIDE COVER LH

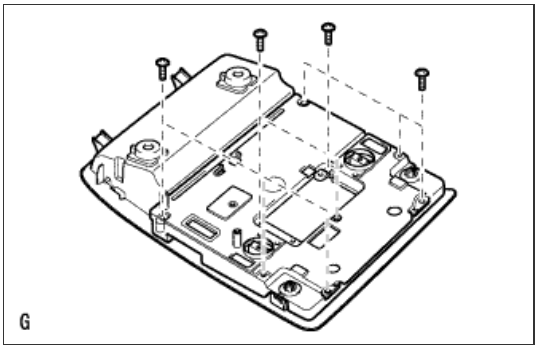


a. Install the engine room side cover with the 7 clips.

## 11. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).

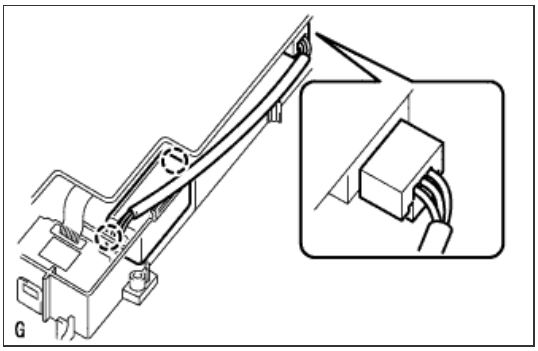
**for Preparation** Click here



**for Preparation** Click here

## 1. REMOVE MAP LIGHT ASSEMBLY

a. Remove the map light (Click here).

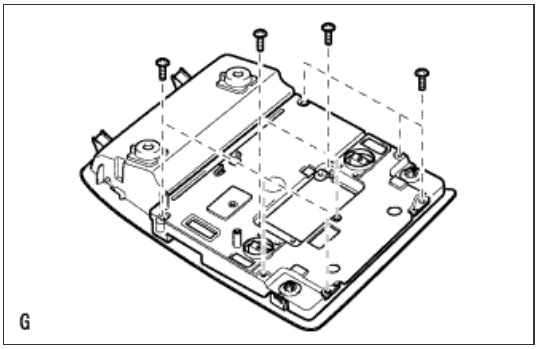


## 2. REMOVE TELEPHONE MICROPHONE ASSEMBLY

a. Remove the 9 screws and cover.

b. Disconnect the connector.

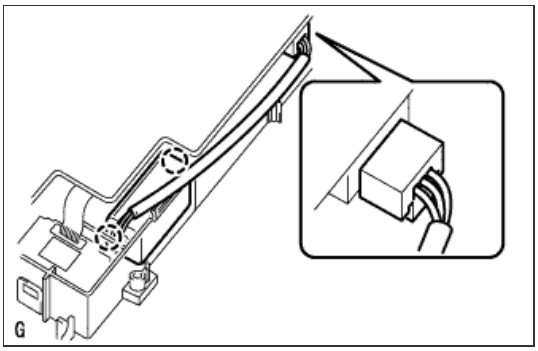
c. Detach the 2 claws and remove the microphone.



**for Preparation** Click here

## 1. REMOVE MAP LIGHT ASSEMBLY

a. Remove the map light (Click here).



## 2. REMOVE TELEPHONE MICROPHONE ASSEMBLY

a. Remove the 9 screws and cover.

b. Disconnect the connector.

c. Detach the 2 claws and remove the microphone.

**for Preparation** Click here

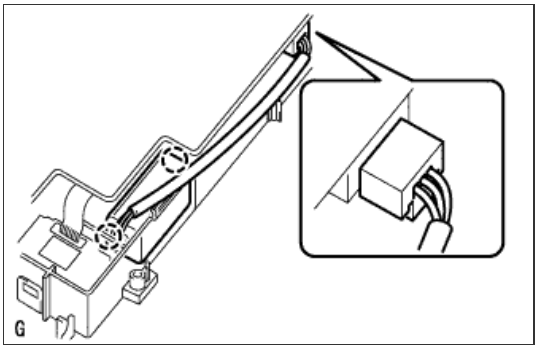
## 1. INSTALL TELEPHONE MICROPHONE ASSEMBLY

a. Attach the 2 claws to install the microphone.

b. Connect the connector.

c. Install the cover with the 9 screws.

## 2. INSTALL MAP LIGHT ASSEMBLY



a. Install the map light (Click here).

**for Preparation** Click here

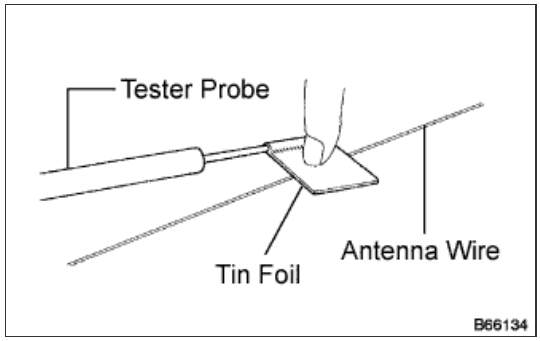
## 1. INSTALL TELEPHONE MICROPHONE ASSEMBLY

a. Attach the 2 claws to install the microphone.

b. Connect the connector.

c. Install the cover with the 9 screws.

## 2. INSTALL MAP LIGHT ASSEMBLY



a. Install the map light (Click here).

**for Preparation** Click here

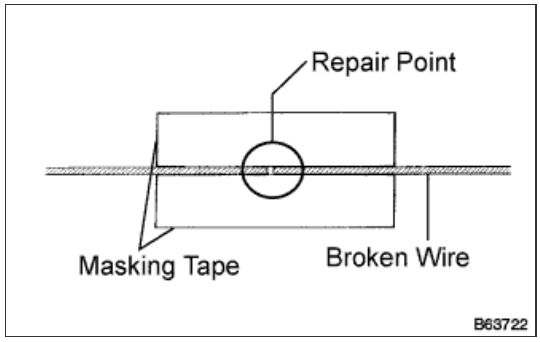
## 1. INSPECT WINDOW GLASS ANTENNA WIRE

**NOTICE:**

When cleaning the glass, use a soft, dry cloth, and wipe the glass in the direction of the wire. Take care not to damage the wires. Do not use detergents or glass cleaners with abrasive ingredients. When measuring voltage, wind a piece of tin foil around the top of the probe and press the foil against the wire with your finger, as shown in the illustration.

a. Check the voltage at the center of each wire, as shown in the illustration.

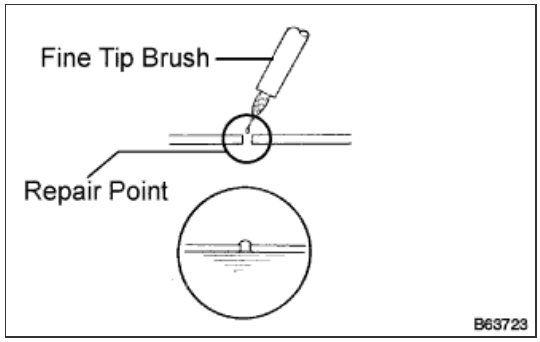


## 2. REPAIR WINDOW GLASS ANTENNA WIRE

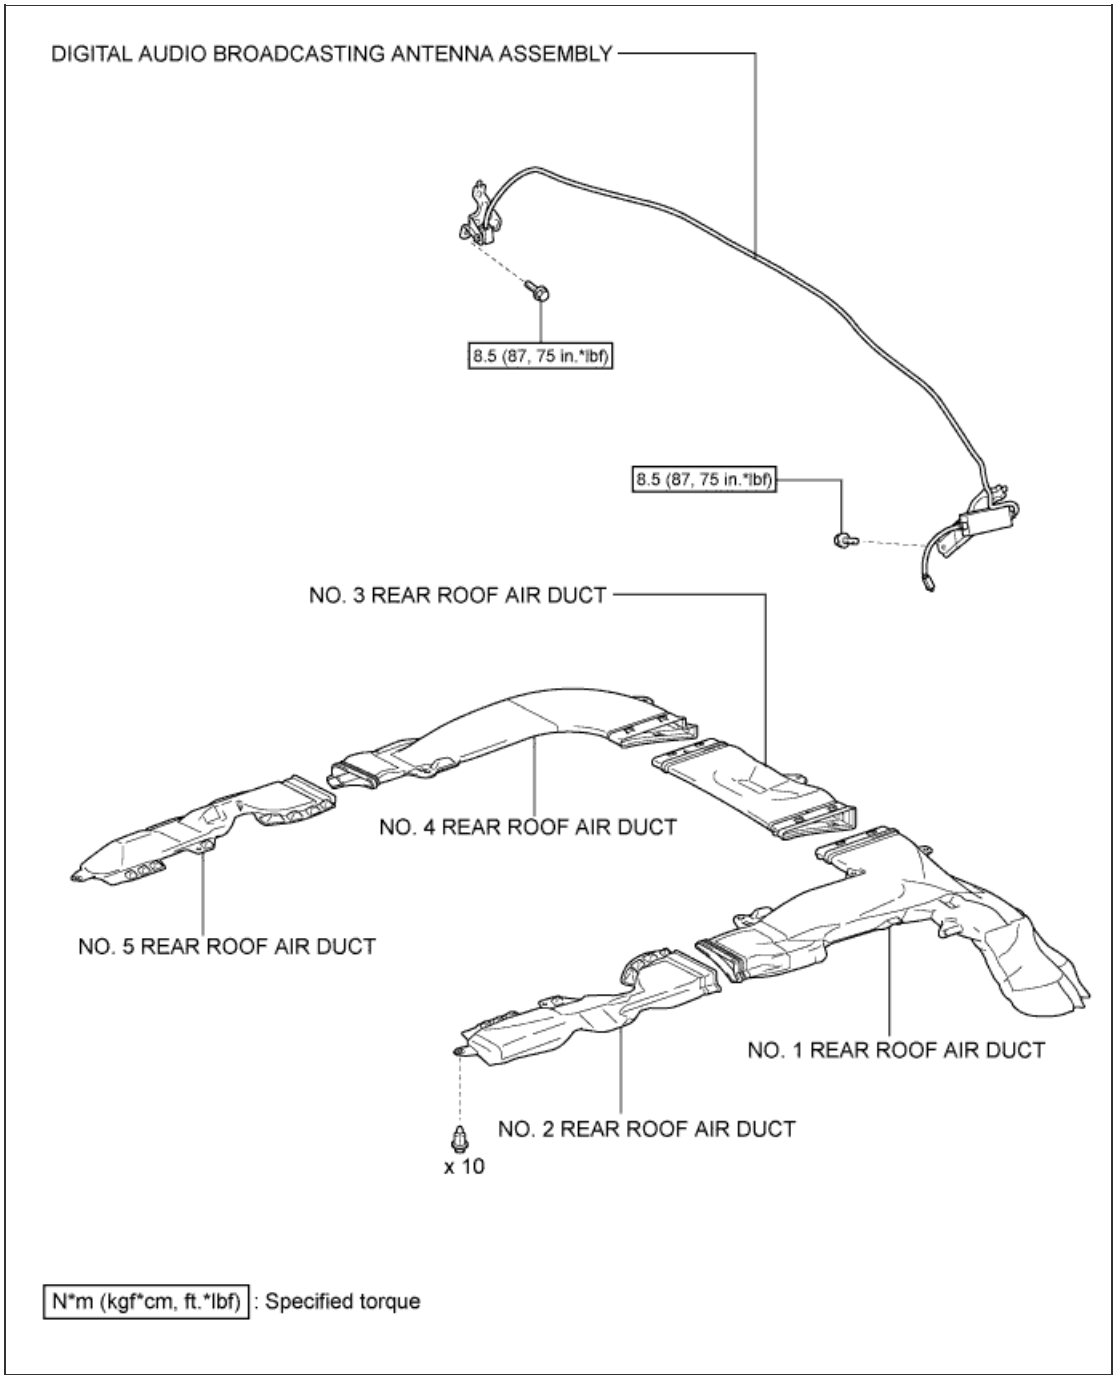
a. Clean the broken wire tips with grease, wax and silicone remover.

b. Place masking tape along both sides of the wire to be repaired.

c. Thoroughly mix the repair agent (DuPont paste No. 4817).



d. Using a fine tip brush, apply a small amount of the repair agent to the wire.



e. After a few minutes, remove the masking tape.

**NOTICE:**

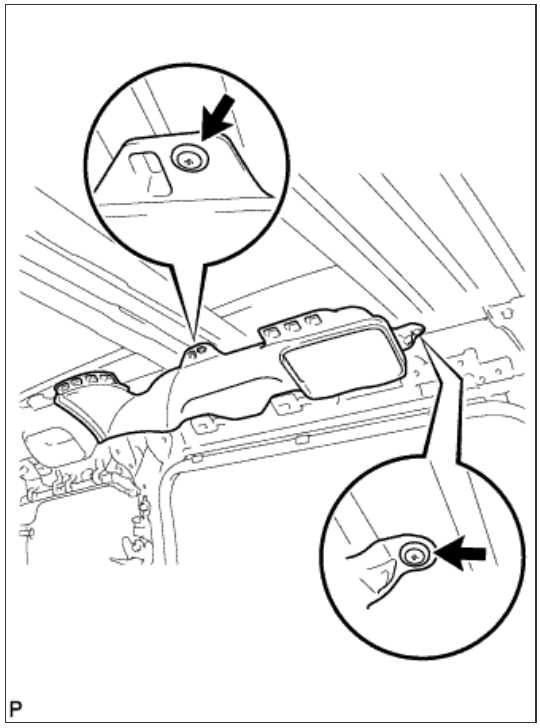
Do not allow electricity to flow in the antenna wire for at least 24 hours.

**for Preparation** Click here

**for Preparation** Click here

## 1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

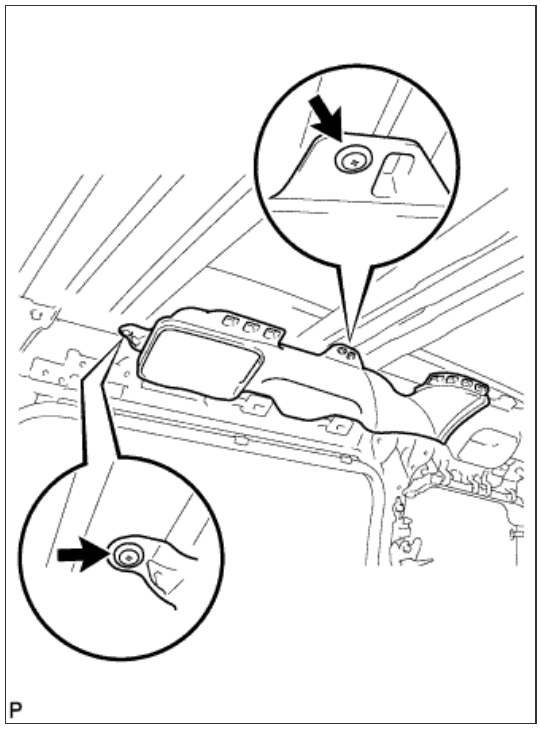
**NOTICE:**



- **w/ Navigation System:**
  **After the engine switch is turned off, the HDD navigation system requires approximately 6 minutes to record various types of memory and settings. As a result, after turning the engine switch off, wait 6 minutes or more before disconnecting the cable from the negative (-) battery terminal.**
- **When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).**

## 2. REMOVE ROOF HEADLINING ASSEMBLY

a. Remove the roof headlining (Click here).

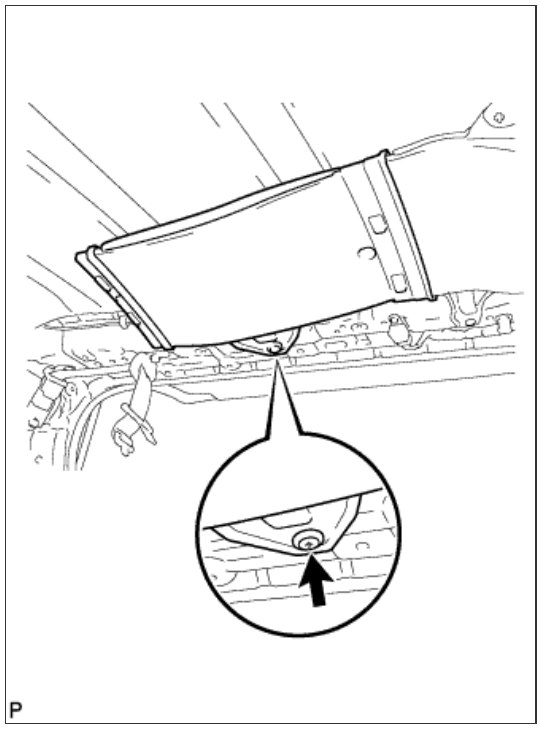


## 3. REMOVE NO. 2 REAR ROOF AIR DUCT

a. Remove the 2 clips and remove the duct.

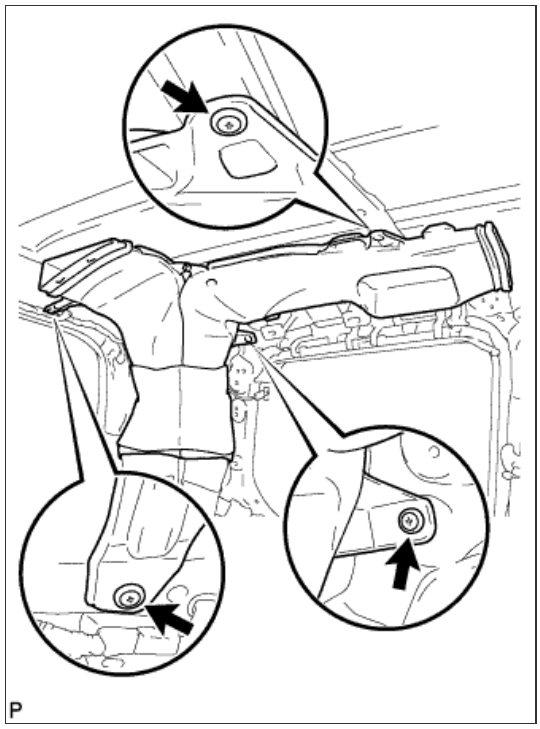
## 4. REMOVE NO. 5 REAR ROOF AIR DUCT

a. Remove the 2 clips and remove the duct.



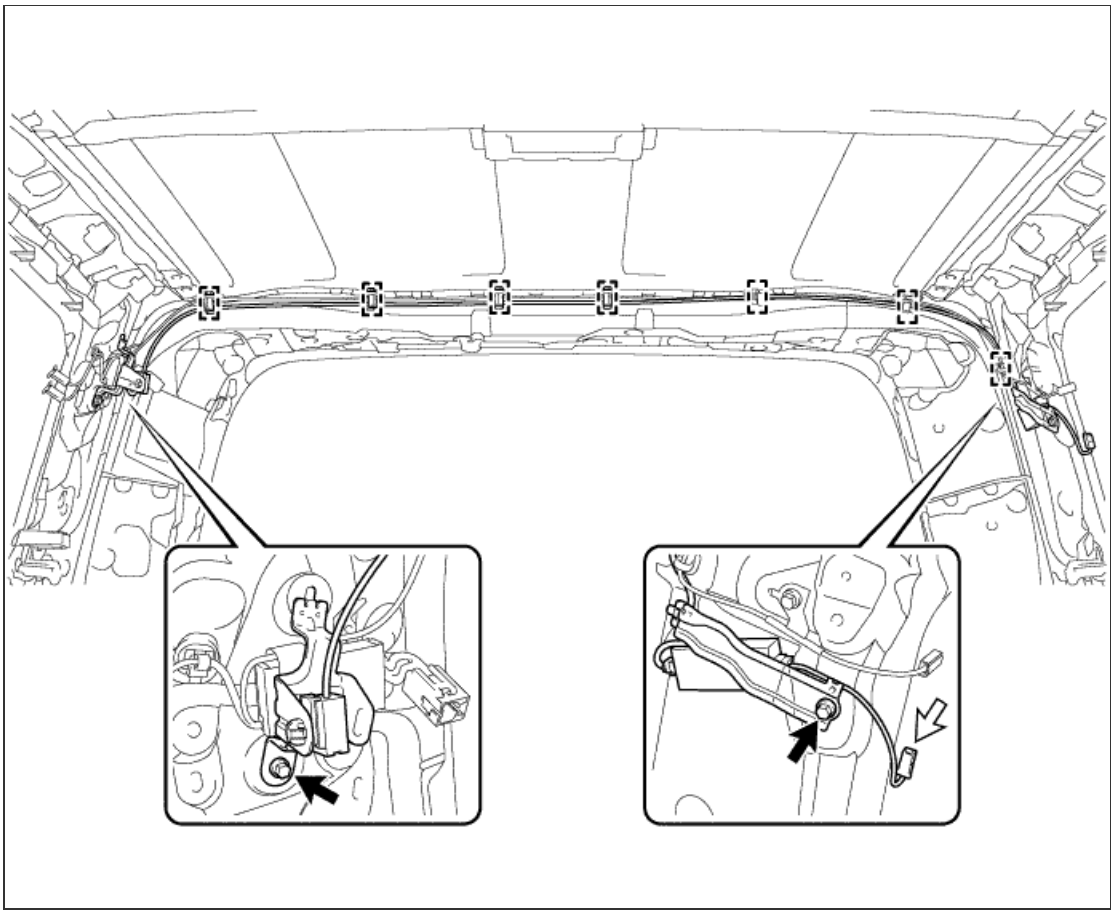
### 5. REMOVE NO. 4 REAR ROOF AIR DUCT

a. Remove the 2 clips and remove the duct.



### 6. REMOVE NO. 3 REAR ROOF AIR DUCT

a. Remove the clip and remove the duct.

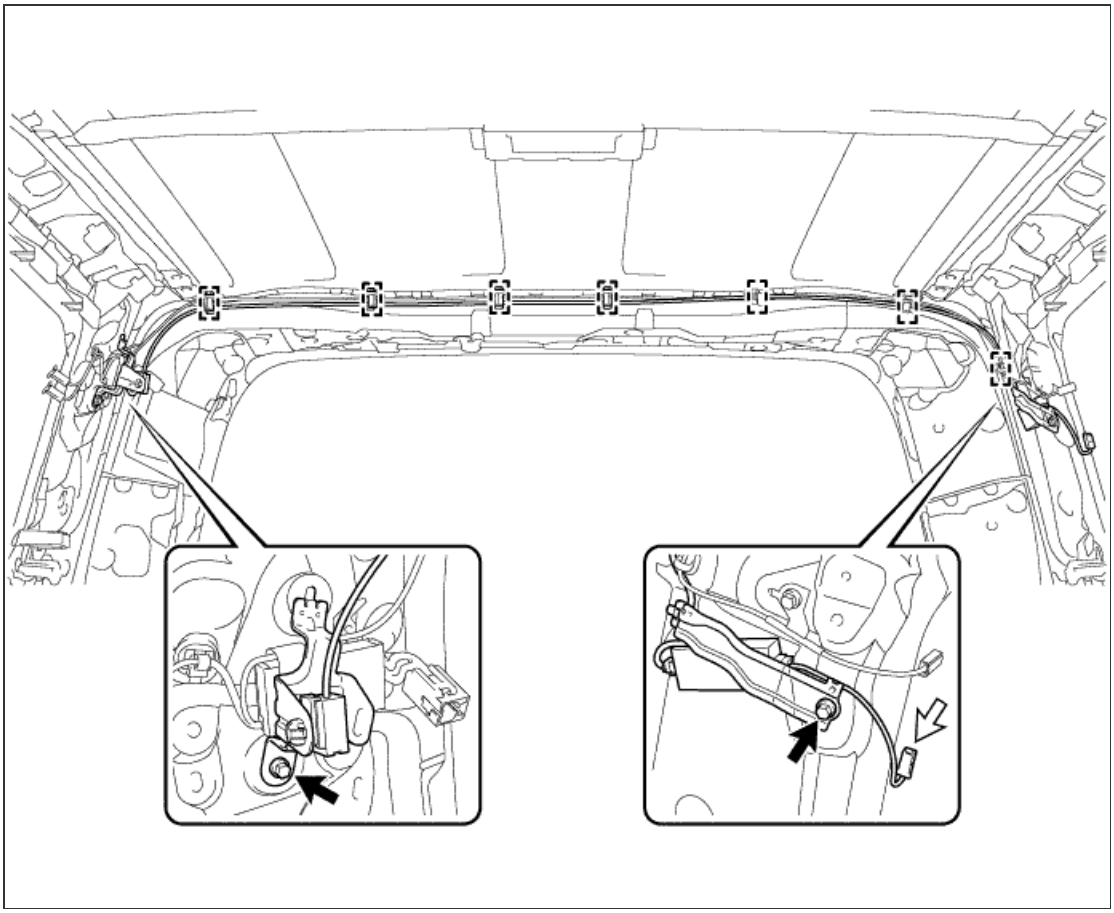


### 7. REMOVE NO. 1 REAR ROOF AIR DUCT

a. Remove the 3 clips and remove the duct.

### 8. REMOVE DIGITAL AUDIO BROADCASTING ANTENNA ASSEMBLY

a. Disconnect the connector and remove the 2 bolts.

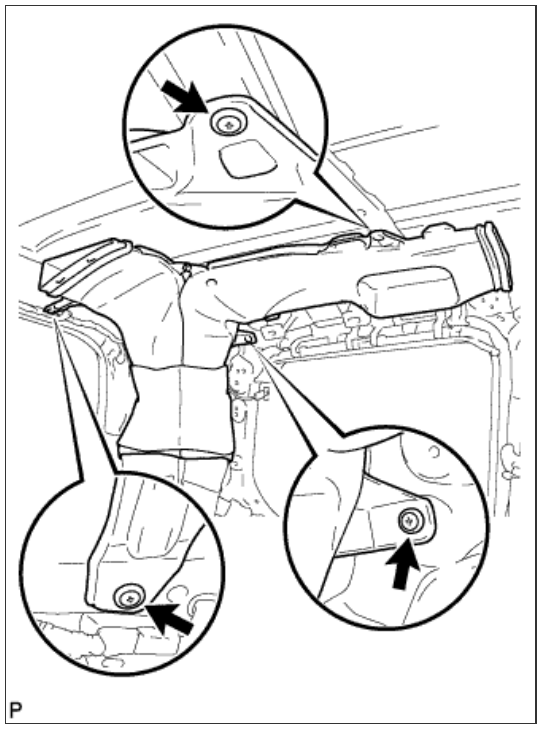


b. Detach the 7 clamps and remove the digital audio broadcasting antenna.

**for Preparation** Click here

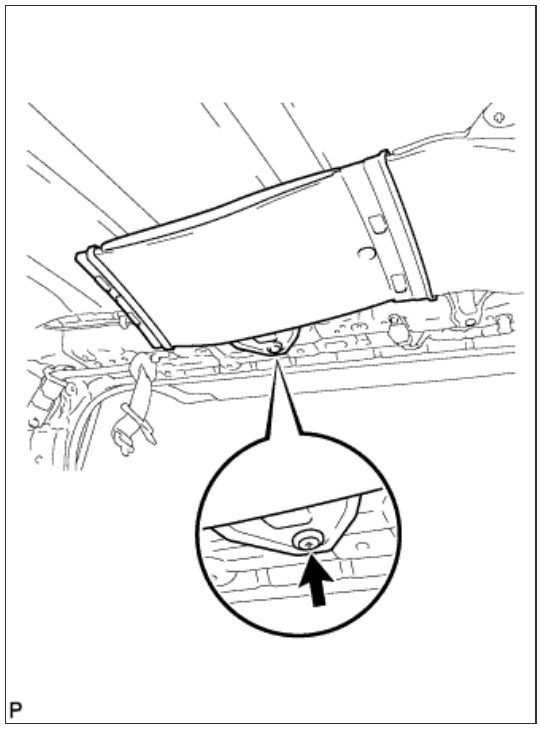
## 1. INSTALL DIGITAL AUDIO BROADCASTING ANTENNA ASSEMBLY

a. Attach the 7clamps.



b. Install the digital audio broadcasting antenna with the 2 bolts and connect the connector.

**Torque:**
**8.5 N*m{ 87 kgf*cm , 75 in.*lbf }**

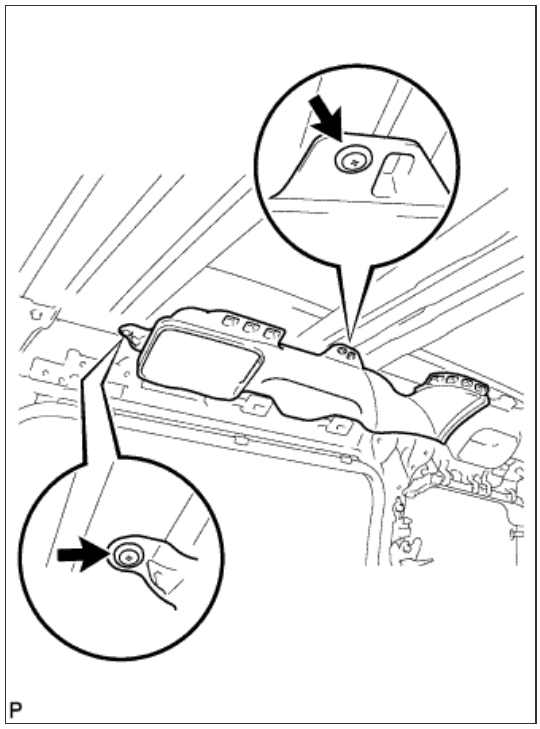


## 2. INSTALL NO. 1 REAR ROOF AIR DUCT

a. Install the duct with the 3 clips.

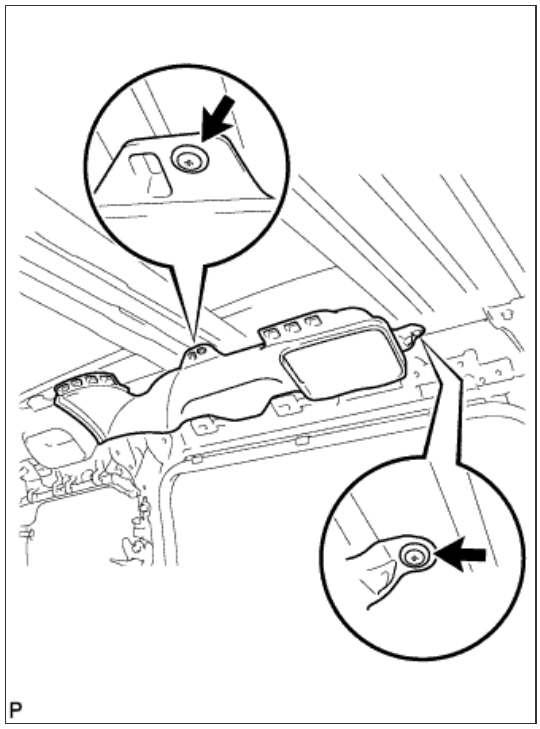
### 3. INSTALL NO. 3 REAR ROOF AIR DUCT

a. Install the duct with the clip.



### 4. INSTALL NO. 4 REAR ROOF AIR DUCT

a. Install the duct with the 2 clips.



### 5. INSTALL NO. 5 REAR ROOF AIR DUCT

a. Install the duct with the 2 clips.

### 6. INSTALL NO. 2 REAR ROOF AIR DUCT

a. Install the duct with the 2 clips.

### 7. INSTALL ROOF HEADLINING ASSEMBLY

a. Install the roof headlining (Click here).

### 8. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

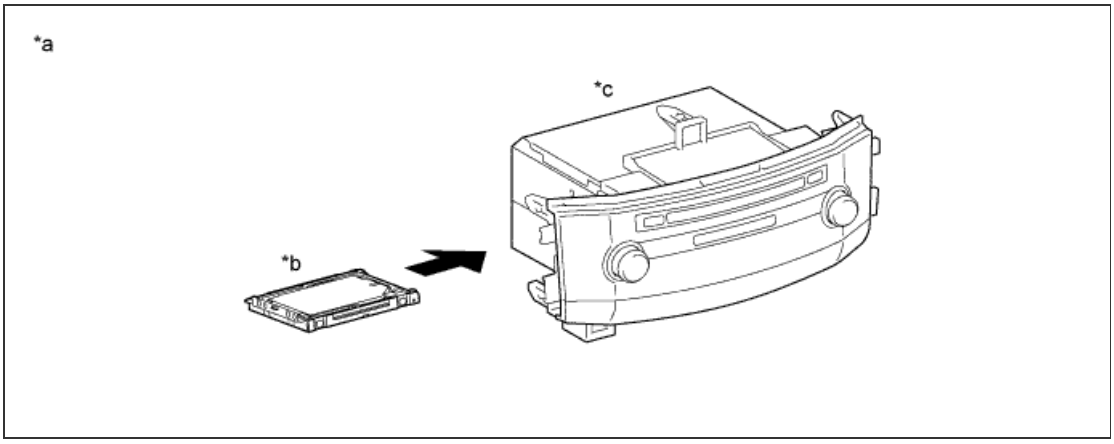
**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

**for Preparation** Click here

## 1.PRECAUTION FOR DISCONNECTING CABLE FROM NEGATIVE BATTERY TERMINAL

**NOTICE:**



After the engine switch is turned off, the multi-media module receiver assembly records various types of memory and settings. As a result, after turning the engine switch off, be sure to wait for the time specified in the following table before disconnecting the cable from the negative (-) battery terminal.

**Waiting Time before Disconnecting Cable from Negative (-) Battery Terminal**

| Condition | Waiting Time |
|---|---|
| Vehicle enrolled in G-BOOK system | 6 minutes |
| Vehicle not enrolled in G-BOOK system | 1 minute |

## 2.PRECAUTIONS FOR MULTI-MEDIA MODULE RECEIVER ASSEMBLY

a. An HDD is built into the multi-media module receiver assembly to store map and other data, and is used for the navigation system. Therefore, care must be taken for the following points when handling:

**Text in Illustration**

| | | | |
|---|---|---|---|
| *a | Example | *b | Hard Disc |
| *c | Multi-media Module Receiver Assembly | - | - |

i. When it is necessary to replace the multi-media module receiver assembly, be sure to replace it with a new one.

**NOTICE:**

If a used multi-media module receiver assembly is installed as a replacement part, the customer's HDD will not be recognized.

ii. Do not apply any vibration or shock to the multi-media module receiver assembly.

**NOTICE:**

- **Do not drop or subject the multi-media module receiver assembly to severe impacts.**
- **Do not use the multi-media module receiver assembly if it has been dropped or subjected to a severe impact.**
- **Do not store the multi-media module receiver assembly without the HDD installed. (Only remove the HDD from the multi-media module receiver assembly when the replacement multi-media module receiver assembly or HDD is ready.)**

iii. Do not remove the multi-media module receiver assembly if there is a risk that condensation may occur.

**NOTICE:**

If the temperature of the multi-media module receiver assembly changes rapidly, condensation may occur inside the unit. This may cause a malfunction of the HDD. Therefore, when the multi-media module receiver assembly is removed from the instrument panel, it needs to be kept inside the vehicle or in an environment with an equivalent temperature and humidity.

iv. Take measures to prevent static electricity.

**NOTICE:**

Touching the terminals of a connector can cause static electricity to be transmitted to the internal circuits. This may cause a malfunction of the HDD.

v. Keep the multi-media module receiver assembly away from magnets or magnetized items.

**NOTICE:**

Keep the multi-media module receiver assembly away from speakers, motors, magnetized tools and other magnetic items.

## 3.PRECAUTIONS FOR HARD DISK DRIVE (HDD)

a. Map and other data for the navigation system is stored on the Hard Disk Drive (HDD). Make sure to follow the following instructions when replacing the HDD:

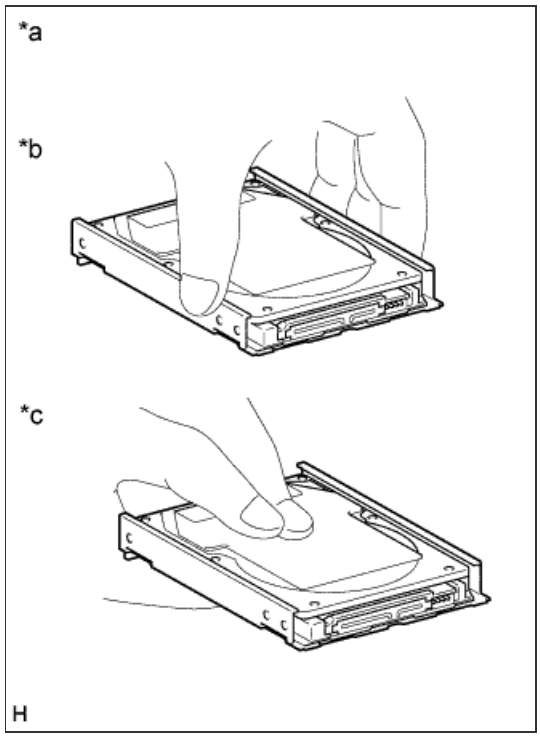
**NOTICE:**

Data downloaded by the customer may be stored on the HDD. This data will be lost when the HDD is replaced. Make sure to warn the customer that their data will be lost and obtain their consent prior to replacing the HDD.

i. The HDD must only be replaced with a new one. Do not attempt to install a used HDD from another vehicle.

**NOTICE:**

The multi-media module receiver assembly can recognize only a new HDD.



ii. Do not touch the HDD cover.

**NOTICE:**

When removing or installing the HDD, only hold it by the areas shown in the illustration.

**Text in Illustration**

| | |
|---|---|
| *a | Example |
| *b | CORRECT |
| *c | INCORRECT |

iii. Do not apply any vibration or shock to the HDD.

**NOTICE:**

- **Do not drop or subject the HDD to sever impacts.**
- **Do not use the HDD if it has been dropped or subjected to a severe impact.**
- **Do not store the HDD by itself if it has been removed from the multi-media module receiver assembly. (Only remove the HDD from the multi-media module receiver assembly when the replacement multi-media module receiver assembly or HDD is ready.)**

iv. Do not remove the HDD if there is a risk that condensation may occur.

**NOTICE:**

If the temperature of the HDD changes rapidly, condensation may occur inside the unit. This may cause a malfunction of the HDD. Therefore, when the multi-media module receiver assembly is removed from the instrument panel, it needs to be kept inside the vehicle or in an environment with an equivalent temperature and humidity.

v. Take measures to prevent static electricity.

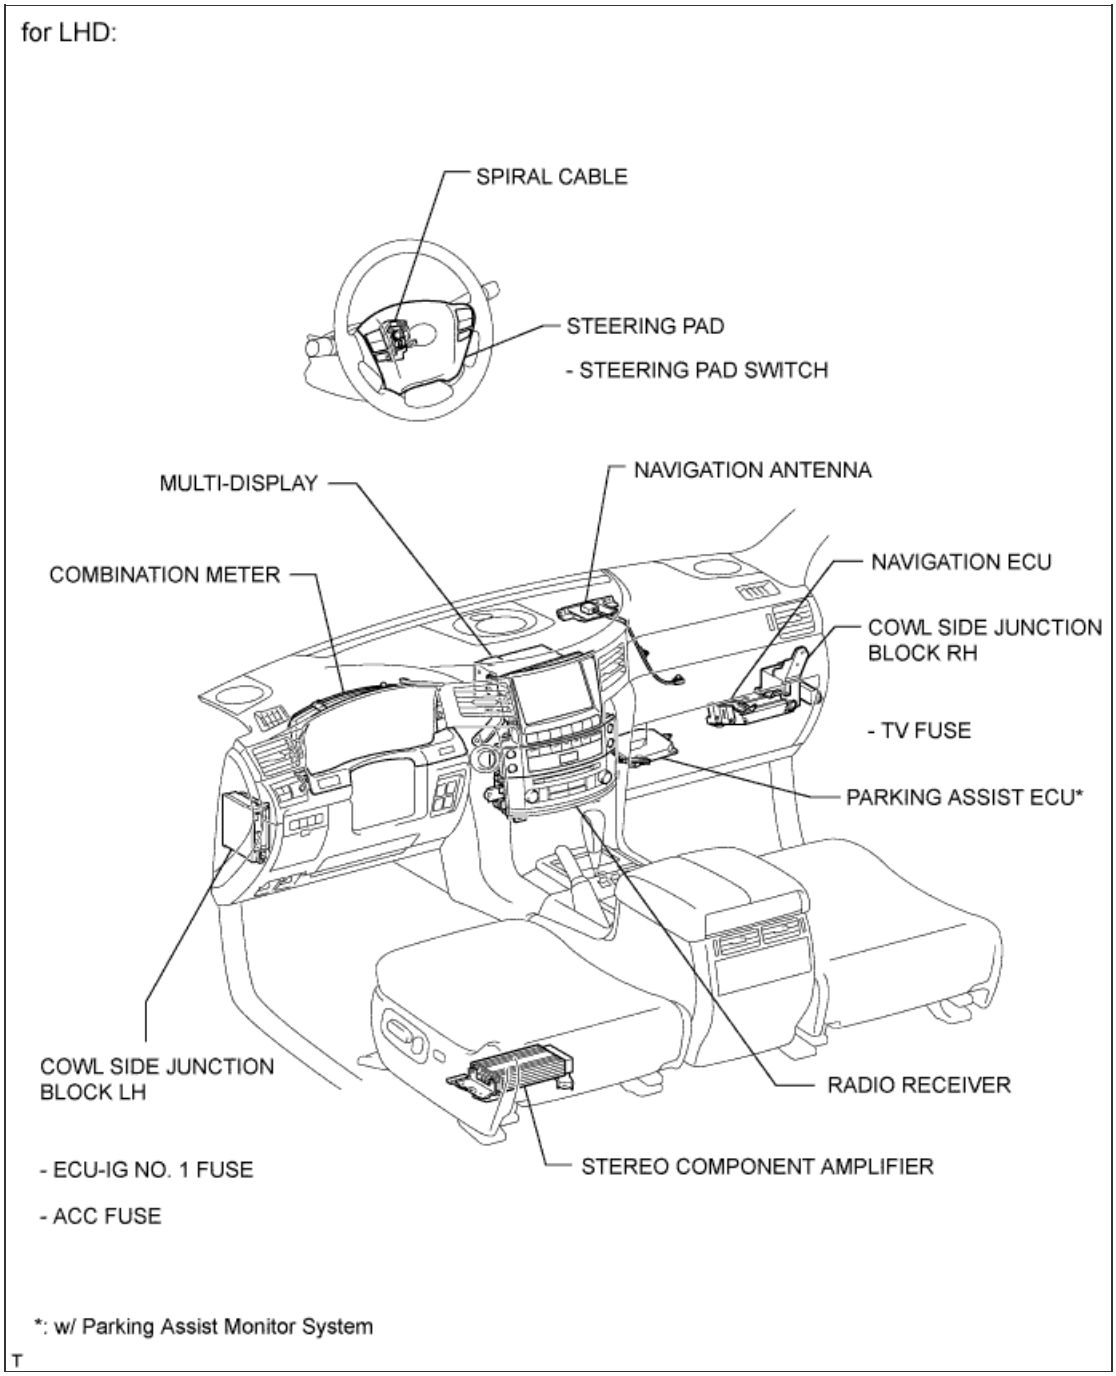
**NOTICE:**

Touching the terminals of a connector can cause static electricity to be transmitted to the internal circuits. This may cause a

malfunction of the HDD.

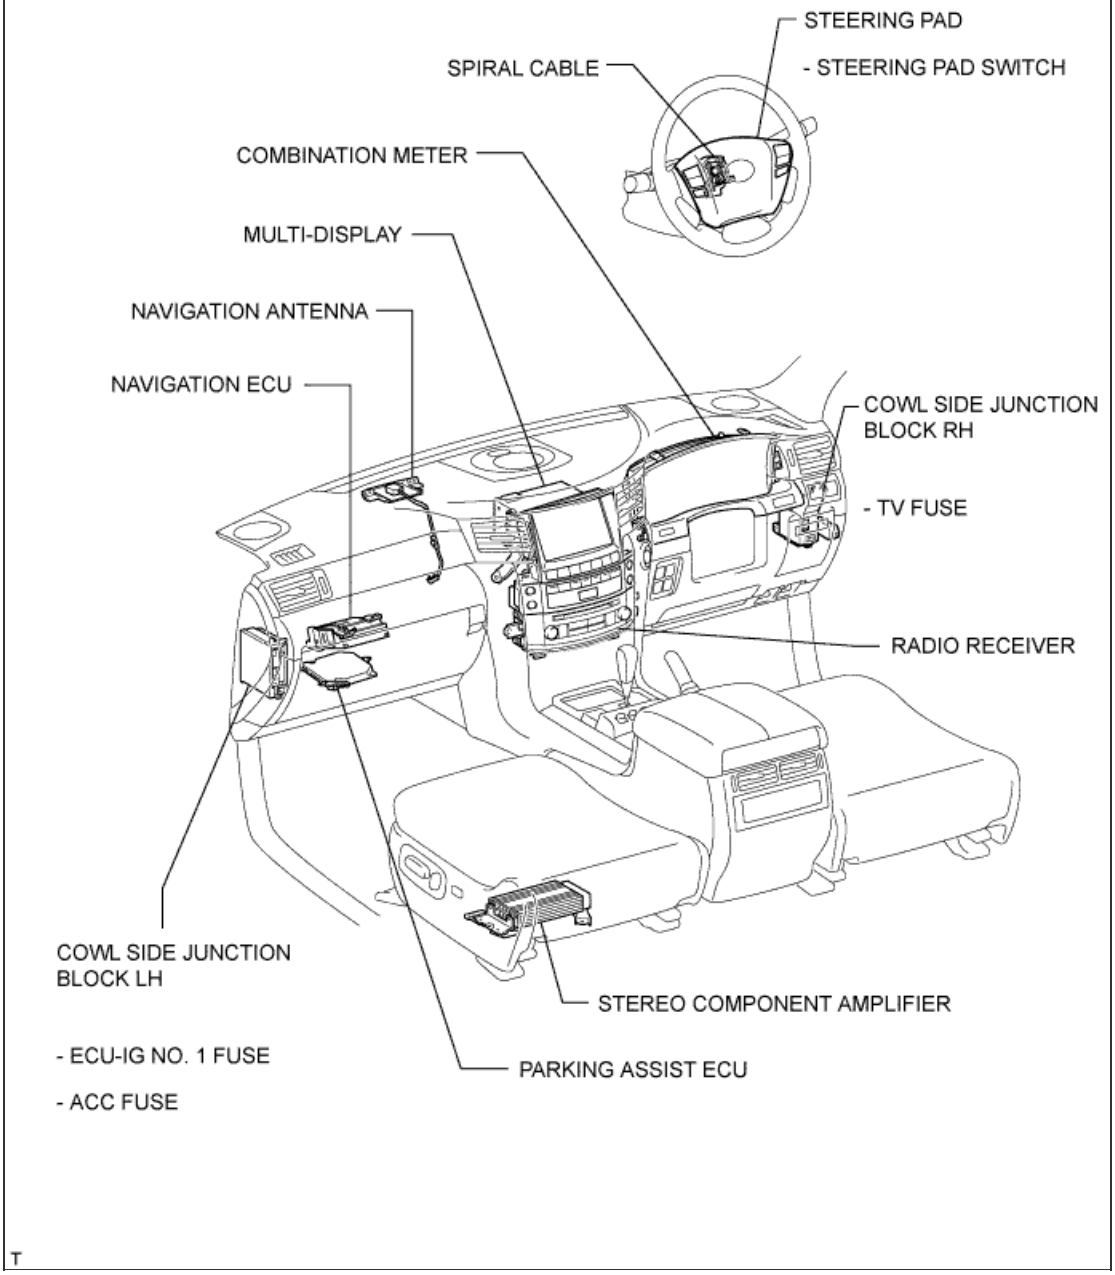
vi. Keep the HDD away from magnets or magnetized items.

**NOTICE:**



Keep the HDD away from speakers, motors, magnetized tools and other magnetic items.

vii. Inspect after HDD replacement.



**NOTICE:**

Make sure to perform Check Hard Disk Drive in Operation Check to confirm that there are no HDD abnormalities after removal or installation (Click here).

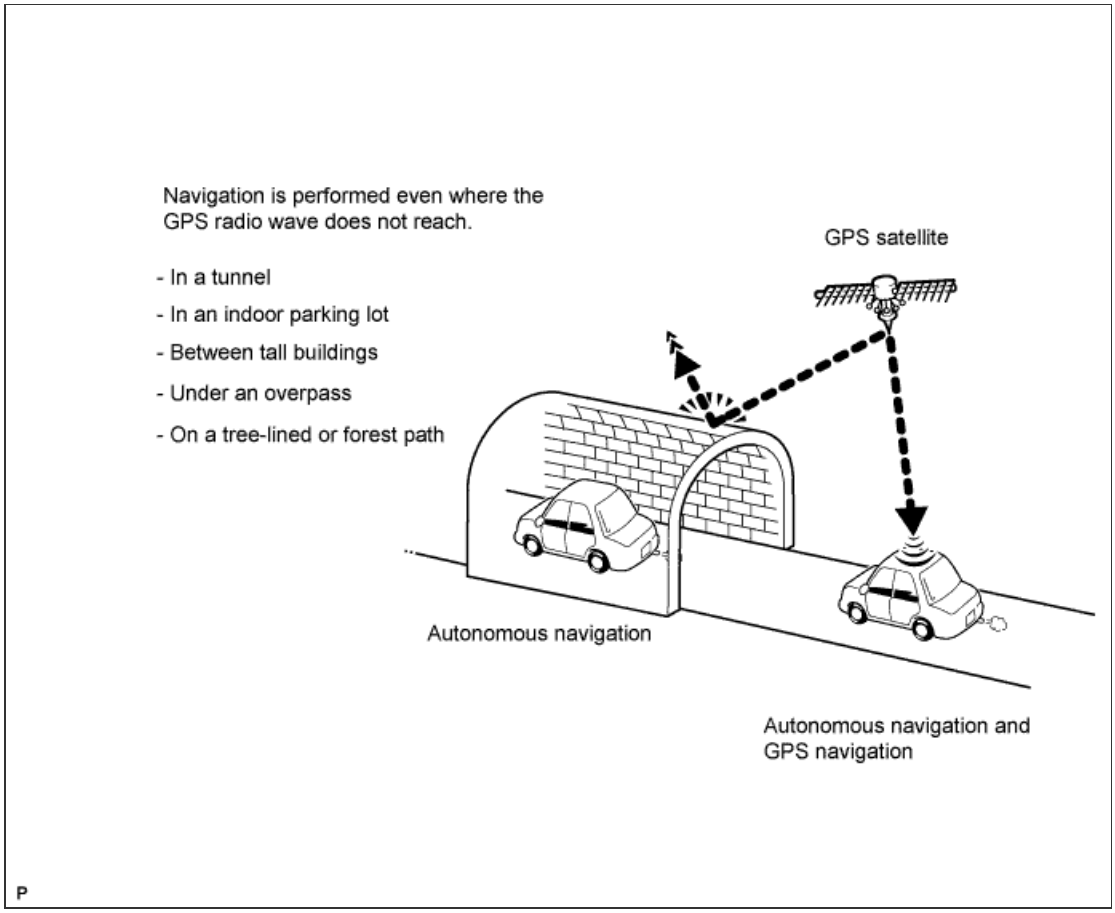
## NAVIGATION SYSTEM OUTLINE

a. Vehicle position tracking methods

i. It is essential that the navigation system correctly tracks the current vehicle position and displays it on the map. There are 2 methods to track the current vehicle position: autonomous (dead reckoning) and GPS* (satellite) navigation. Both navigation methods are used in conjunction with each other.

**HINT:**

*: GPS (Global Positioning System)



| Operation | Description |
|---|---|
| Vehicle Position Calculation | The navigation ECU calculates the current vehicle position (direction and current position) using the direction deviation signal from the gyro sensor and running distance signal from the vehicle speed sensor, and creates the driving route. |
| Map Display Processing | The navigation ECU processes the vehicle position data, vehicle running track, and map data from the map disc. |
| Map Matching | The map data from the map disc is compared to the vehicle position and running track data. Then, the vehicle position is matched with the nearest road. |
| GPS Correction | The vehicle position is matched to the position measured by the GPS. Then, the measurement position data from the GPS unit is compared with the vehicle position and running track data. If the position is very different, the GPS measurement position is used. |
| | The running distance signal from the vehicle speed |

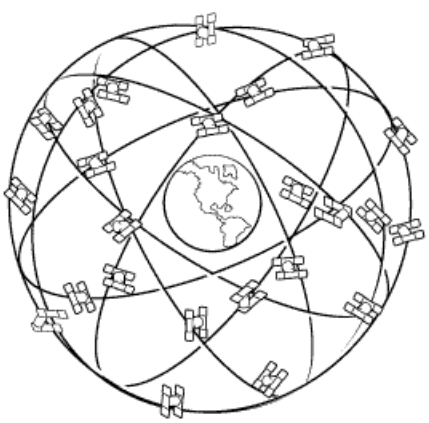
| | |
|---|---|
| Distance Correction | sensor includes error caused by tire wear and slippage between the tires and road surface. Distance correction is performed to account for this. The navigation ECU automatically offsets the running distance signal to make up for the difference between it and the distance data of the map. The offset is automatically updated. |

**HINT:**

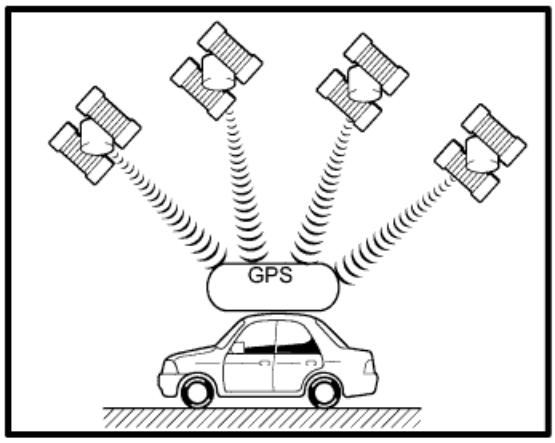
The combination of autonomous and GPS navigation makes it possible to display the vehicle position even when the vehicle is in places where the GPS radio wave cannot be received. When only autonomous navigation is used, the mapping accuracy may slightly decline.

b. Autonomous navigation
This method determines the relative vehicle position based on the running track determined by the gyro and vehicle speed sensors located in the navigation ECU.

i. Gyro sensor
Calculates the direction by detecting angular velocity. It is located in the navigation ECU.



ii. Vehicle speed sensor
Used to calculate the vehicle running distance.

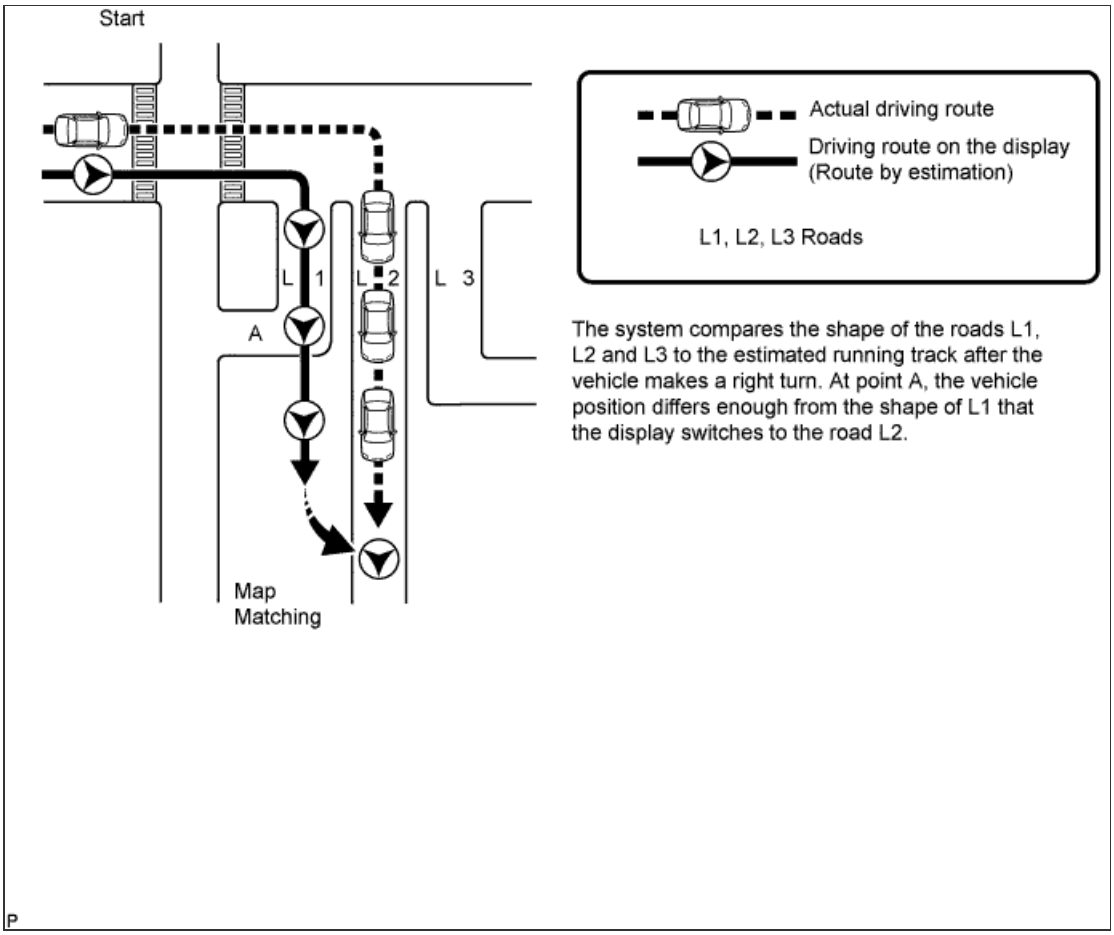


c. GPS navigation (satellite navigation)
This method detects the absolute vehicle position using radio waves from a GPS satellite*.

**HINT:**

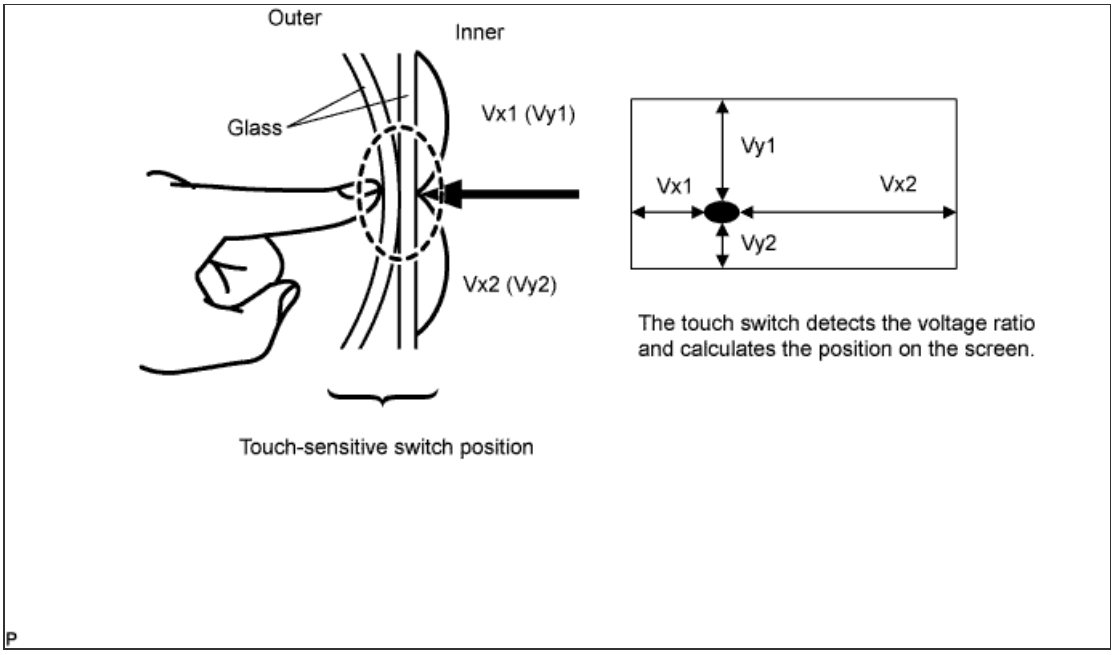
*: GPS satellites were launched by the U.S. Department of Defense for military purposes.

Current longitude/latitude/altitude is determined using the radio wave arrival time from 4 satellites.



P

| Number of satellites | Measurement | Description |
|---|---|---|
| 2 or less | Measurement impossible | The vehicle position cannot be obtained because the number of satellites is not enough. |
| 3 | 2-dimensional measurement is possible | The vehicle position is obtained based on current longitude and latitude (this is less precise than 3-dimensional measurement). |
| 4 | 3-dimensional measurement is possible | The vehicle position is obtained based on current longitude, latitude and altitude. |



**d.** Map matching

The current driving route is calculated by autonomous navigation (according to the gyro sensor and vehicle speed sensor) and GPS navigation. This information is then compared with possible road shapes from the map data in the map disc and the vehicle position is set onto the most appropriate road.

## MULTI-DISPLAY OUTLINE

a. Touch switch
Touch switches are touch-sensitive (interactive) switches operated by touching the screen. When a switch is pressed, the outer glass bends to contact the inner glass at the pressed position. By doing this, the voltage ratio is measured and the pressed position is detected.

## DVD (Digital Versatile Disc) PLAYER OUTLINE (for Navigation Map)

a. The navigation ECU uses a laser pickup to read the digital signals recorded on a DVD.

**CAUTION:**

Because the navigation system uses an invisible laser beam, do not look directly at the laser pickup. Be sure to only operate the navigation as instructed.

**NOTICE:**

- **Do not disassemble any part of the navigation ECU.**
- **Do not apply oil to the navigation ECU.**
- **Do not insert anything but a DVD into the navigation ECU.**

## DVD (Digital Versatile Disc) PLAYER OUTLINE (for DVD Changer Models)

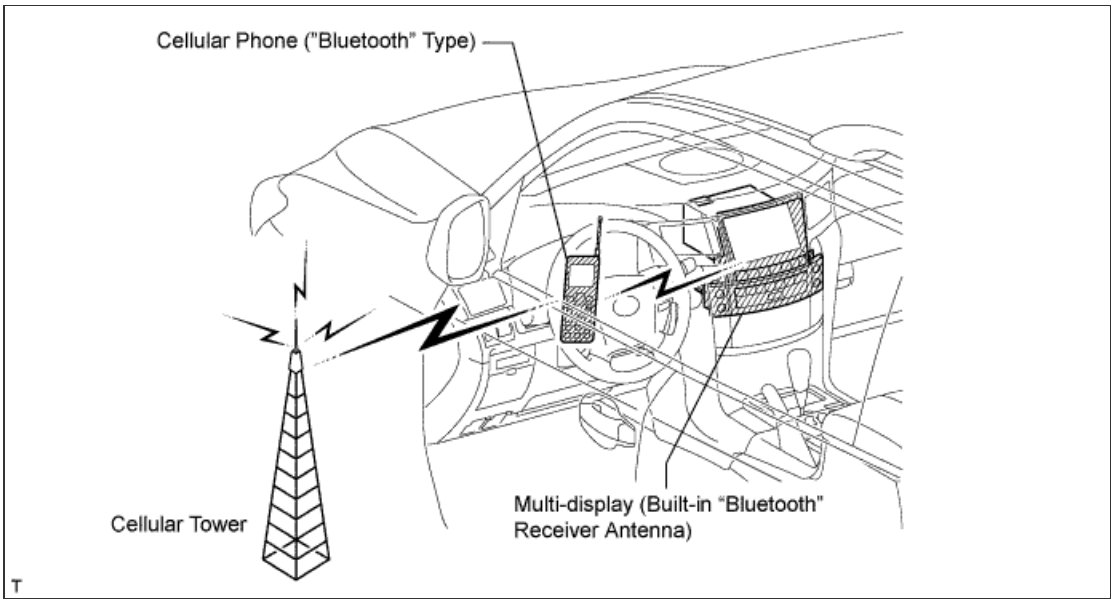
a. The DVD player can only play DVD videos that have any of the following marks:

H

i. Precaution for use of discs

**NOTICE:**

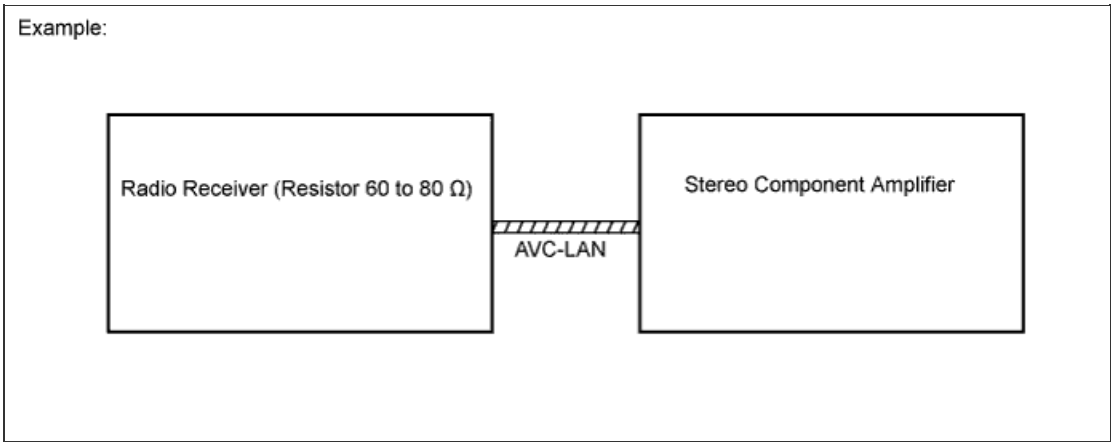
- **PAL or SECAM color television standard discs cannot be played (only NTSC discs can be played).**
- **Keep the discs away from dirt. Be careful not to damage the discs or leave fingerprints on them.**
- **Hold discs by the outer edge and center hole with the label side up.**
- **Leaving the disc exposed halfway out of the slot for a long time after pressing the disc eject button may cause deformation of the disc, making the disc unusable.**
- **Do not use odd-shaped CDs because these may cause player malfunctions.**
- **Do not use discs whose recording portion is transparent or translucent because they may not be inserted, ejected, or played normally.**
- **DualDiscs that mate DVD recorded material on one side with CD digital audio material on the other cannot be played.**



## "BLUETOOTH" OUTLINE

a. "Bluetooth" is a trademark owned by Bluetooth SIG, Inc.

b. "Bluetooth" is a new wireless connection technology that uses the 2.4 GHz frequency band. This makes it possible to connect a cellular phone ("Bluetooth" capable phone*) to the multi-display ("Bluetooth" system is built-in) through the handsfree function of the cellular phone, even if it is in a pocket or bag. As a result, it is not necessary to use a connector for the cellular phone.



**HINT:**

*: The communication performance of "Bluetooth" may vary depending on the "Bluetooth" version, obstructions or radio wave conditions between communication devices, electromagnetic radiation, communication device sensitivity, or antenna capacity.

## AVC-LAN DESCRIPTION

a. What is AVC-LAN?
AVC-LAN, an abbreviation for "Audio Visual Communication Local Area Network", is a united standard developed by manufacturers in affiliation with Toyota Motor Corporation. This standard pertains to audio and visual signals as well as switch and communication signals.

b. Purpose:
Recently, car audio systems have rapidly developed and the functions have vastly changed. The conventional car audio system is being integrated with multimedia interfaces similar to those in navigation systems. At the same time, customers are demanding higher quality from their audio systems. This is merely an overview of the standardization background. The specific purposes are as follows:

i. To solve sound problems, etc. caused by using components of different manufacturers through signal standardization.

ii. To allow each manufacturer to concentrate on developing products they do best. From this, reasonably priced products can be produced.

**HINT:**

- **If a short +B or short to ground is detected in the AVC-LAN circuit, communication is interrupted and the navigation system will stop functioning.**
- **The multi-display unit acts as the master unit.**

## COMMUNICATION SYSTEM OUTLINE

a. Components of the navigation system communicate with each other via the AVC-LAN.

b. The radio receiver assembly has enough resistance (60 to 80 Ω) necessary for transmitting communication signals.

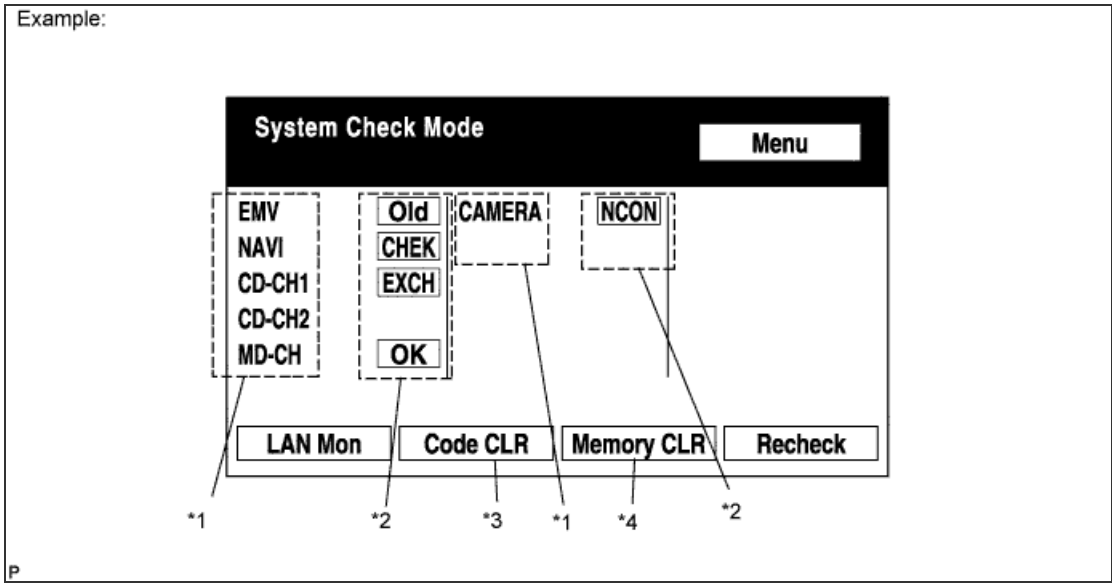
c. If a short circuit or open circuit occurs in the AVC-LAN circuit, communication is interrupted and the navigation system will stop functioning.

## DIAGNOSTIC FUNCTION OUTLINE

a. The navigation system has a diagnostic function (the result is indicated on the master unit).

b. A 3-digit hexadecimal component code (physical address) is allocated to each component on the AVC-LAN. Using this code, the component in the diagnostic function can be displayed.

## DIAGNOSIS DISPLAY DETAILED DESCRIPTION



**HINT:**

- **This section contains a detailed description of displays within diagnostic mode.**
- **Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be exactly the same as on the actual vehicle.**

a. SYSTEM CHECK

i. System Check Mode Screen

Example:

*1: Device Names and Hardware Address

**HINT:**

- **Registered device names are displayed.**
- **If a device name is unknown to the system, its physical address is shown instead.**

| Address No. | Name | Address No. | Name |
|---|---|---|---|
| 110 | EMV | 120 | AVX |
| 128 | 1DIN TV | 140 | AVN |
| 144 | G-BOOK | 178 | NAVI |
| 17C | MONET | 190 | AUDIO H/U |
| 1AC | CAMERA-C | 1B0 | Rr-TV |
| 1C0 | Rr-CONT | 19D | BT-HF |
| 1C4 | PANEL | 1C6 | G/W |
| 1C8 | FM-M-LCD | 1D8 | CONT-SW |
| 1EC | Body | 118 | EMVN |
| 1F1 | XM | 1F2 | SIRIUS |
| 230 | TV-TUNER | 240 | CD-CH2 |
| 250 | DVD-CH | 280 | CAMERA |
| 360 | CD-CH1 | 3A0 | MD-CH |

| | | | |
|---|---|---|---|
| 17D | TEL | 440 | DSP-AMP |
| 530 | ETC | 1F6 | RSE |
| 1A0 | DVD-P | 1D6 | CLOCK |
| 238 | DTV | 480 | AMP |

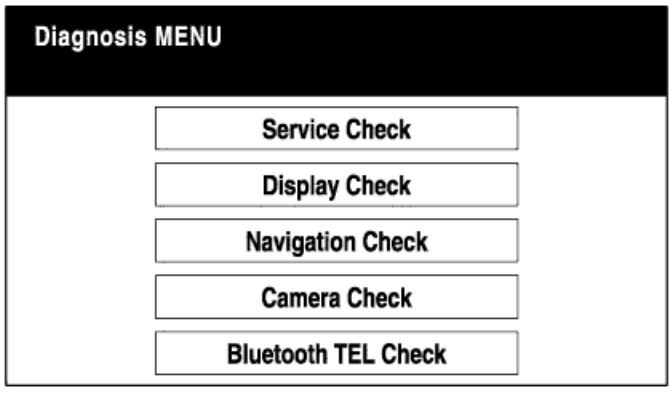
*2: Check Result

**HINT:**

Result codes for all devices are displayed.

| Result | Meaning | Action |
|---|---|---|
| OK | Device did not respond with DTC (excluding communication DTCs from AVC-LAN). | - |
| EXCH | Device responds with "replace" type DTC. | Look up DTC in "Unit Check Mode" and replace device. |
| CHEK | Device responds with "check" type DTC. | Look up DTC in "Unit Check Mode". |
| NCON | Device was previously present, but does not respond in diagnostic mode. | - Check power supply wire harness of device<br>- Check AVC-LAN of device. |
| Old | Device responds with "old" type DTC. | Look up DTC in "Unit Check Mode". |
| NRES | Device responds in diagnostic mode, but gives no DTC information. | - Check power supply wire harness of device.<br>- Check AVC-LAN of device. |

*3: Code Clear



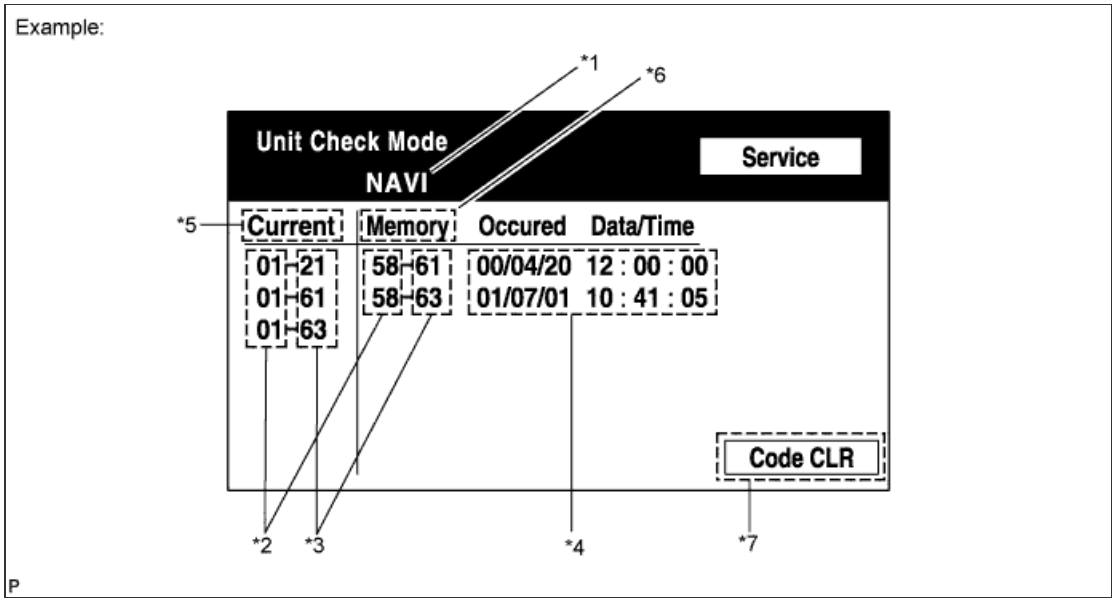
- Present DTCs are cleared.
- Press the "Code CLR" switch for 3 seconds.

*4: Memory Clear

- Present and past DTCs and registered connected device names are cleared.
- Press the "Memory CLR" switch for 3 seconds.

ii. Diagnosis MENU Screen

Example:



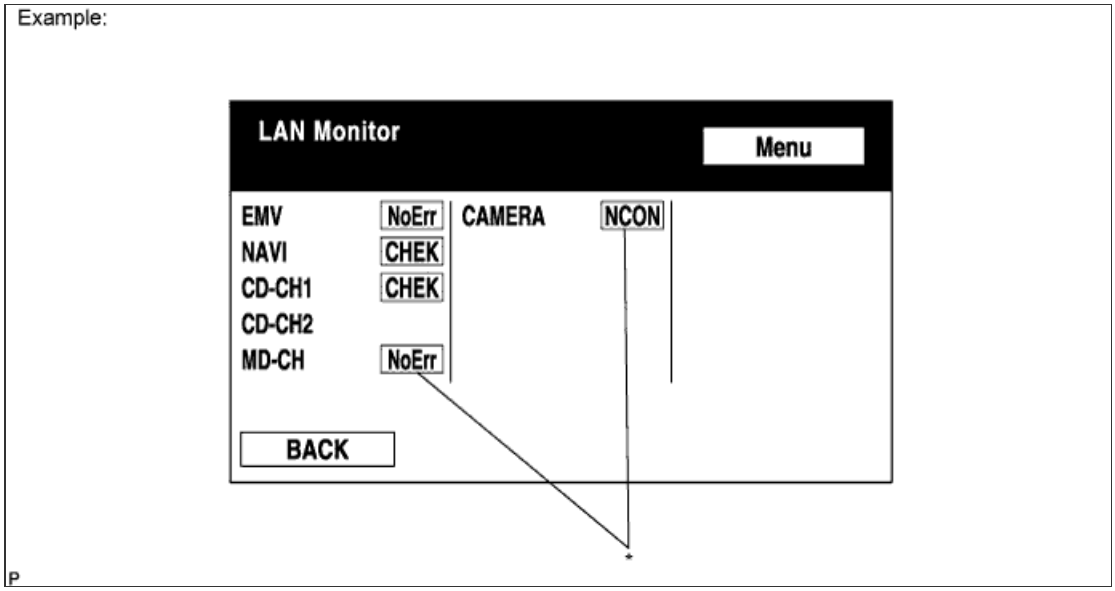
P

**HINT:**

Some items may be grayed out or not displayed, as the functions are different depending on the vehicle.

iii. Unit Check Mode Screen

Example:

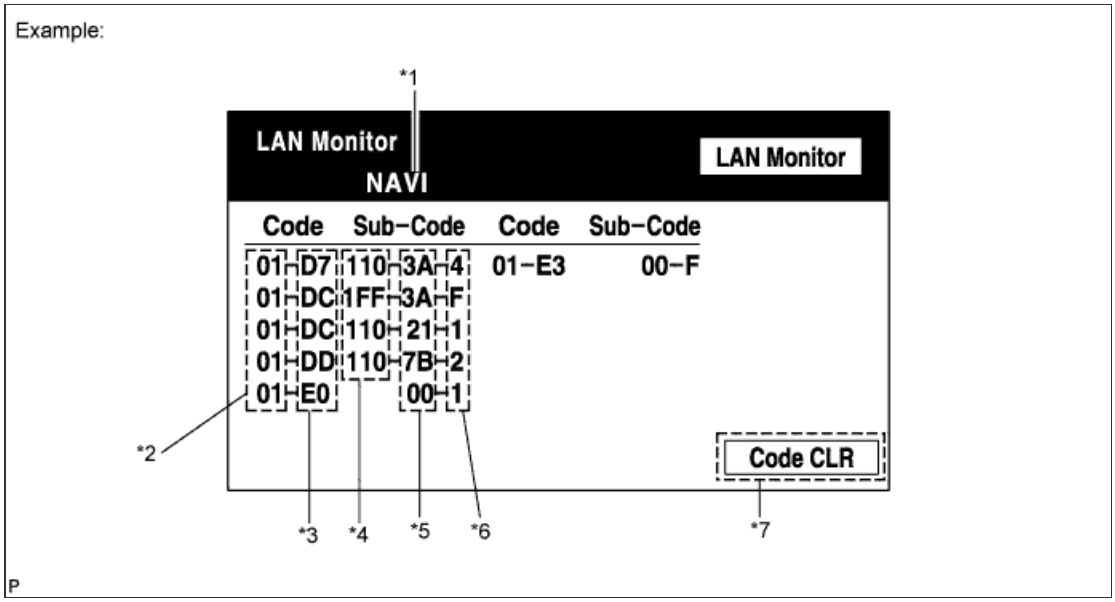


**Screen Description**

| Display | Contents |
|---|---|
| *1: Device name | Target device |
| *2: Segment | Target device logical address |
| *3: DTC | DTC (Diagnostic Trouble Code) |
| *4: Timestamp | Time and date of past DTCs are displayed (year is displayed in 2-digit format). |
| *5: Present Code | DTCs output at service check are displayed. |
| *6: Past Code | Diagnostic memory results and stored DTCs are displayed. |
| *7: Diagnosis Clear Switch | Pushing this switch for 3 seconds clears diagnostic memory data of target device (responses to diagnostic system check result and displayed data are cleared). |

iv. LAN Monitor (Original) Screen

Example:



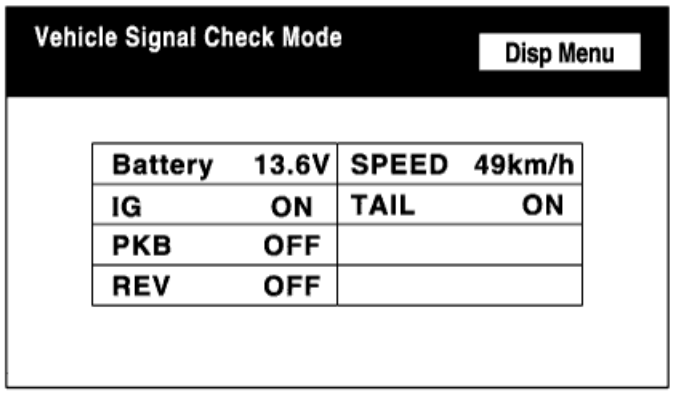
*: Check Result

**HINT:**

Check results of all the devices are displayed.

| Result | Meaning | Action |
|---|---|---|
| No Err (OK) | There are no communication DTCs. | - |
| CHEK | Device responds with "check" type DTC. | Look up DTC in "Unit Check Mode". |
| NCON | Device was previously present, but does not respond in diagnostic mode. | 1. **Check power supply wire harness of device.**<br>2. **Check AVC-LAN of device.** |
| Old | Device responds with "old" type DTC. | Look up DTC in "Unit Check Mode". |
| NRES | Device responds in diagnostic mode, but gives no DTC information. | 1. **Check power supply wire harness of device.**<br>2. **Check AVC-LAN of device.** |

v. LAN Monitor (Individual) Screen



**Screen Description**

| Display | Contents |
|---|---|
| *1: Device name | Target device |
| *2: Segment | Target logical address |
| *3: DTC | DTC (Diagnostic Trouble Code) |
| *4: Sub-code (device address) | Physical address stored with DTC (if there is no address, nothing is displayed). |
| *5: Connection check No. | Connection check number stored with DTC |
| *6: DTC occurrence | Number of times same DTC has been stored |
| *7: Diagnosis Clear Switch | Pushing this switch for 3 seconds clears diagnostic memory data of target device (responses to diagnostic system check result and displayed data are cleared). |

b. DISPLAY CHECK

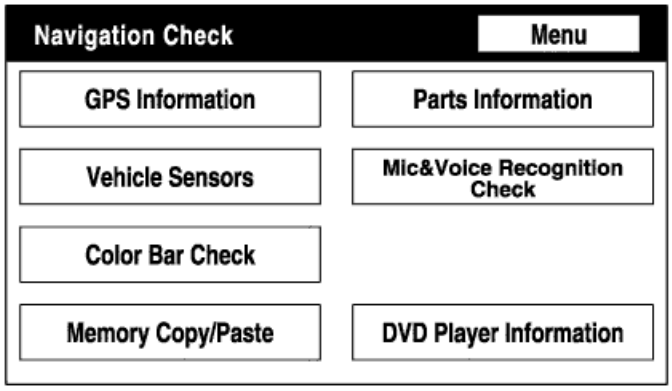
i. Vehicle Signal Check Mode Screen

Example:

P

**Screen Description**

| Name | Contents |
|---|---|
| Battery | Battery voltage is displayed. |
| PKB | Parking brake ON/OFF state is displayed. |
| REV | Reverse signal ON/OFF state is displayed. |
| IG | Engine switch ON/OFF state is displayed. |
| TAIL | TAIL signal (Light control switch) ON/OFF state is displayed. |
| SPEED | Vehicle speed is displayed in km/h. |



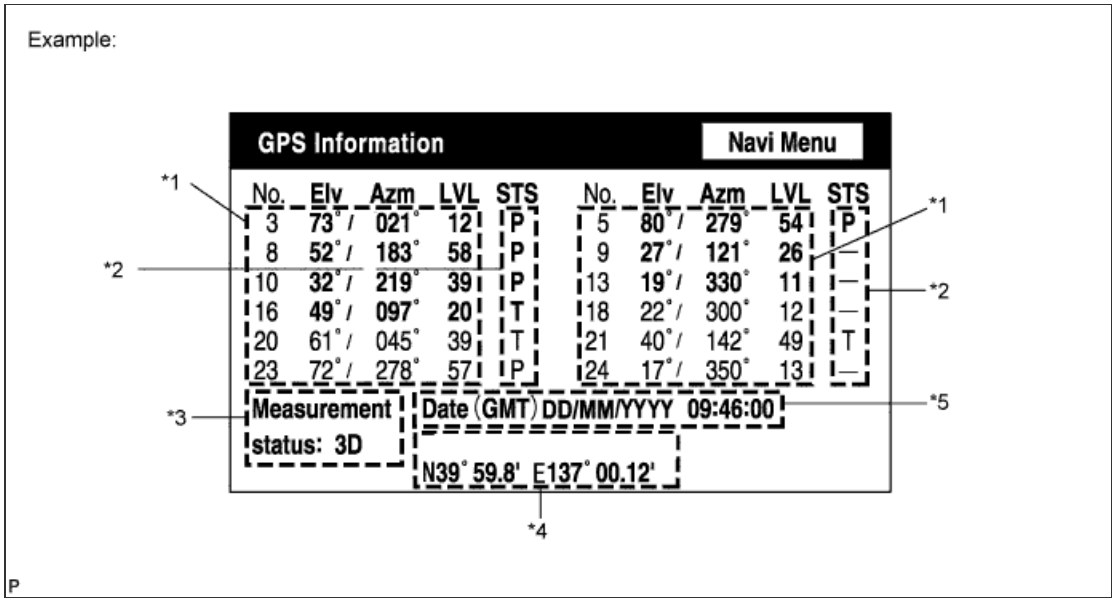
**HINT:**

- **Only items sending a vehicle signal will be displayed.**
- **This screen is updated once per second when input signals to the vehicle are changed.**

c. NAVIGATION CHECK

i. Navigation Check Screen

Example:



P

**HINT:**

Some items may be grayed out or not displayed, as the functions are different depending on the vehicle.

ii. GPS Information Screen

*1: Satellite information
Information from a maximum of 12 satellites is displayed on the screen. This information includes the target GPS satellite number, elevation angle, direction, and signal level.
*2: Receiving condition

**DENSO Model**

| Display | Contents |
|---|---|
| T | System is receiving GPS signal, but is not using it for location. |
| P | System is using GPS signal for location. |
| - | System cannot receive GPS signal. |

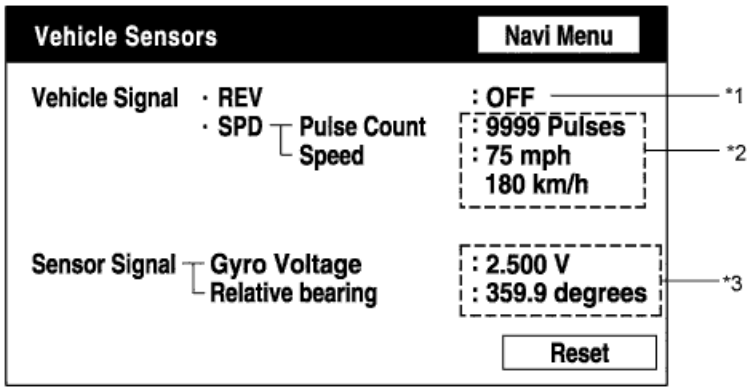
**AISIN AW Model**

| Display | Contents |
|---|---|
| 01H | System cannot receive a GPS signal. |
| 02H | System is tracing a satellite. |
| 03H | System is receiving a GPS signal, but is not using it for location. |
| 04H | System is using the GPS signal for location. |

*3: Measurement information

| Display | Contents |
|---|---|
| 2D | 2-dimensional location method is being used. |
| 3D | 3-dimensional location method is being used. |
| NG | Location data cannot be used. |
| Error | Reception error has occurred. |
| - | Any other state. |

*4: Position information



| Display | Contents |
|---|---|
| Position | Latitude and longitude information on current position is displayed. |

*5: Date information

| Display | Contents |
|---|---|
| Date | Date/time information obtained from GPS signal is displayed in Greenwich mean time (GMT). Last 4 digits are displayed. |

iii. Vehicle Sensors Screen

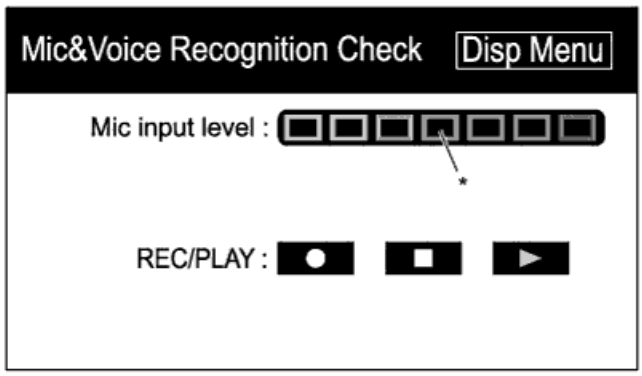
Example:

P

**Vehicle Signal**

| Display | Contents |
|---|---|
| *1: REV | REV signal ON/OFF state is displayed. |
| *2: SPD | SPD signal condition is displayed. |

**Sensor Signal**



| Display | Contents |
|---|---|
| *3: Gyro sensor | Gyro sensor output condition is displayed (when vehicle is driven straight or is stationary, voltage is approximately 2.5 V). |

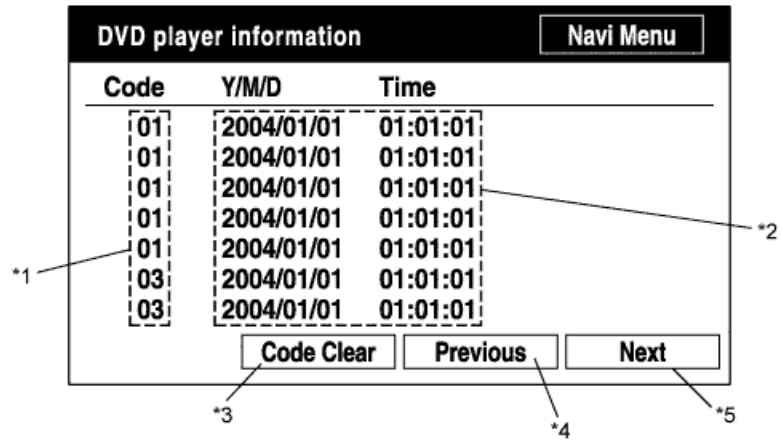
**HINT:**

Signals are updated once per second only when vehicle sensor signals are changed.

iv. MICROPHONE & VOICE RECOGNITION CHECK Screen

Example:

**Screen Description**



| Display | Contents |
|---|---|
| *: Microphone input level meter | Monitors the microphone input level every 100 ms and displays results in 8 different levels. |

**HINT:**

The microphone input function is on at all times when this screen is displayed.

v. DVD player information Screen

Example:

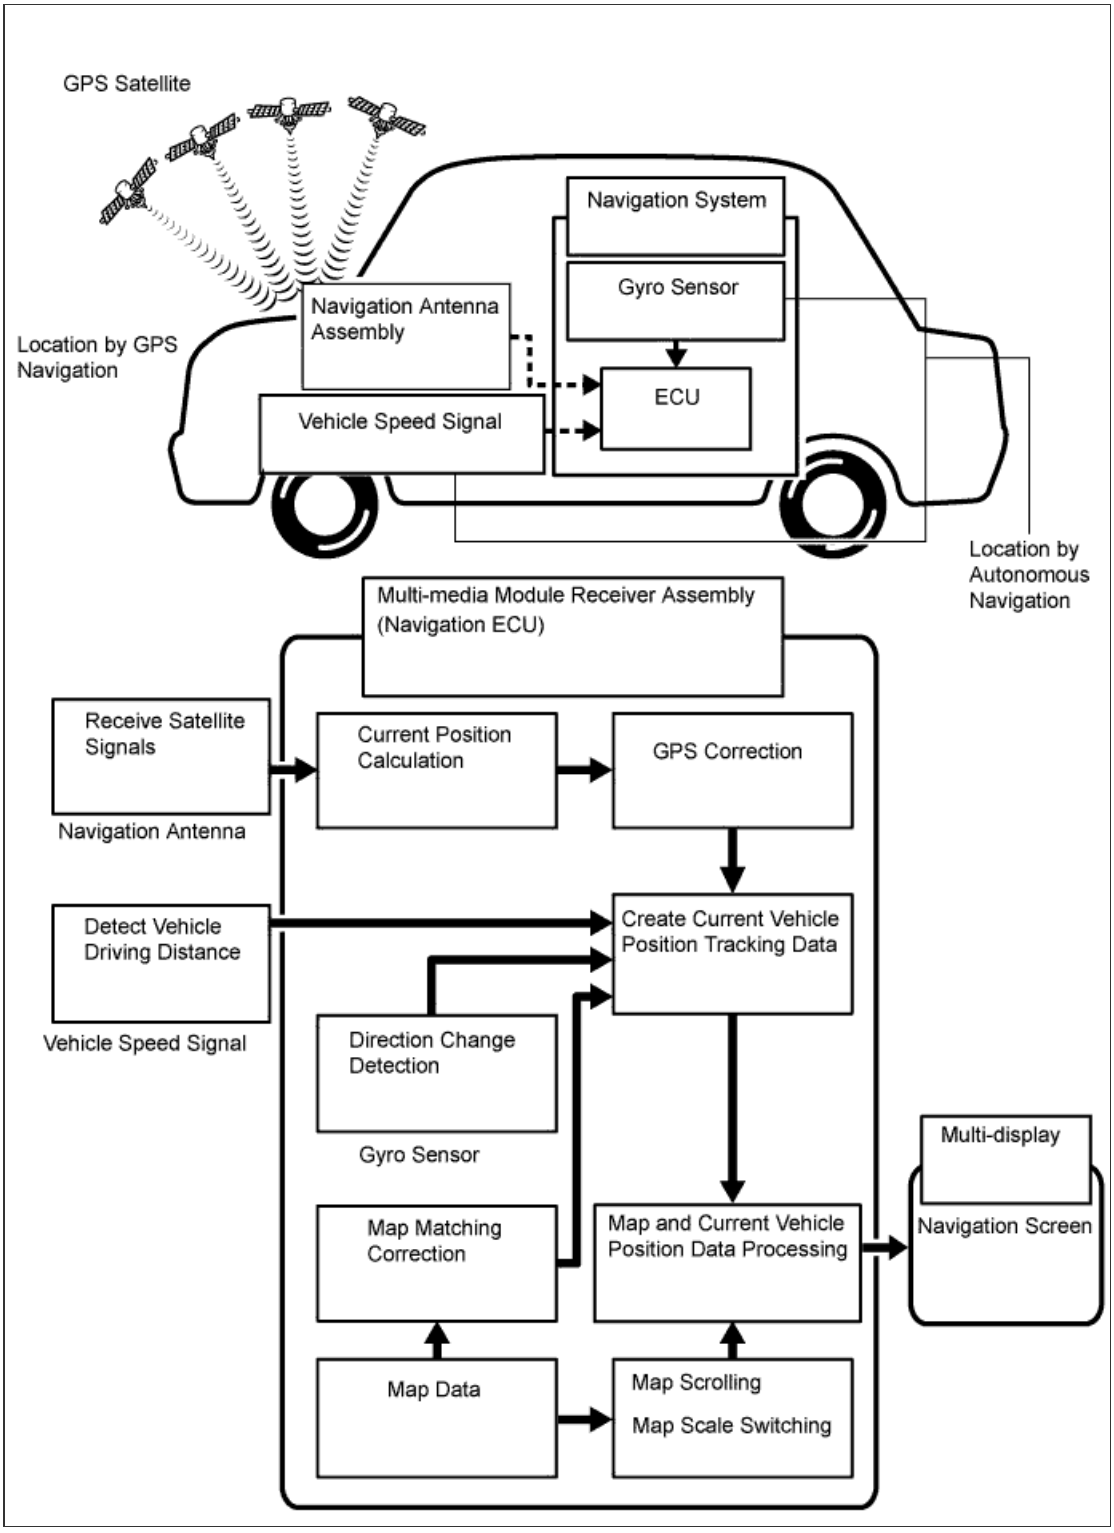
P

**Screen Description**

| Display | Contents |
|---|---|
| *1: Trouble code | Each code corresponding to malfunctions is displayed. For details, refer to "Trouble Code Description". |
| *2: Occurrence time | • Date (year, month, day) and time (hour, minute, second) when trouble code was stored are displayed as time stamp (Greenwich mean time).<br>• Time data to be displayed is received from GPS receiver. |
| *3: Trouble code clear switch | All code data being displayed is cleared by pushing this switch for 3 seconds. |
| *4: Returning switch | Previous page is displayed. If current displayed page is first page, this switch cannot be operated. |
| *5: Proceeding switch | Next page is displayed. If current displayed page is last page, this switch cannot be operated. |

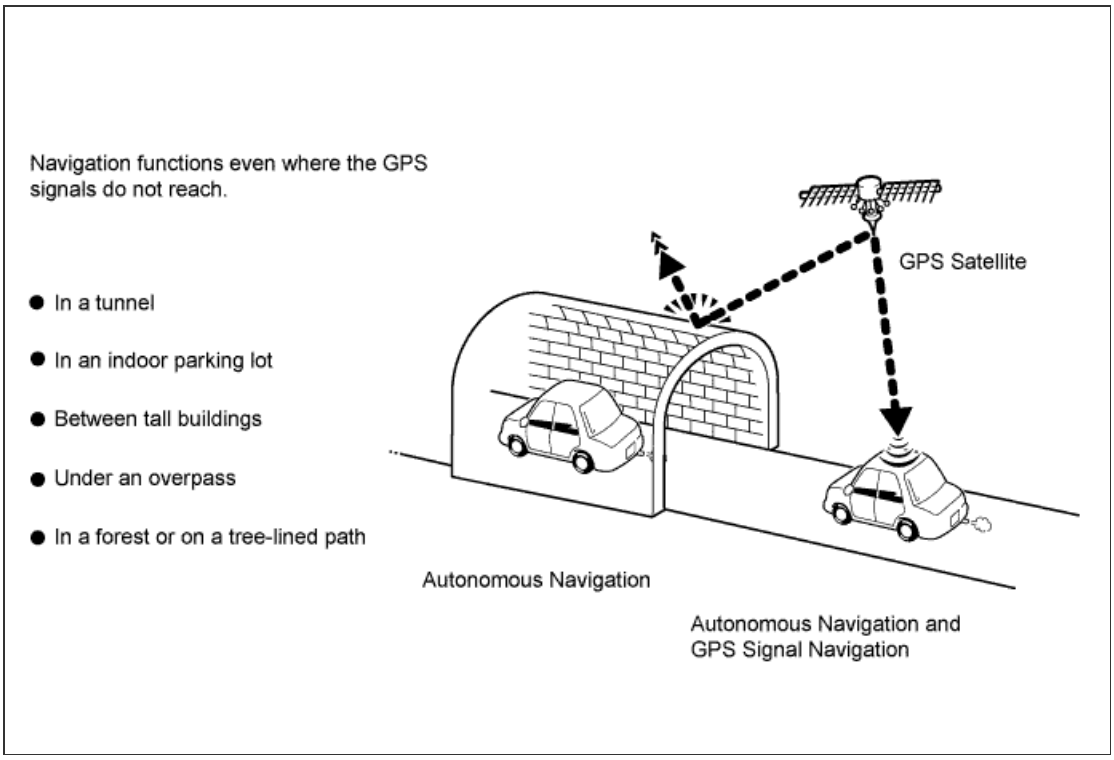
**Trouble Code Description**

| Code | Malfunction | Countermeasure |
|---|---|---|
| 01 | Cannot be recognized | Replace navigation ECU. |
| 03 | Cannot be read | Follow inspection procedure for DTC 58-42 (Click here). |



**HINT:**

There is a DVD player check function in the navigation ECU.



**for Preparation** Click here

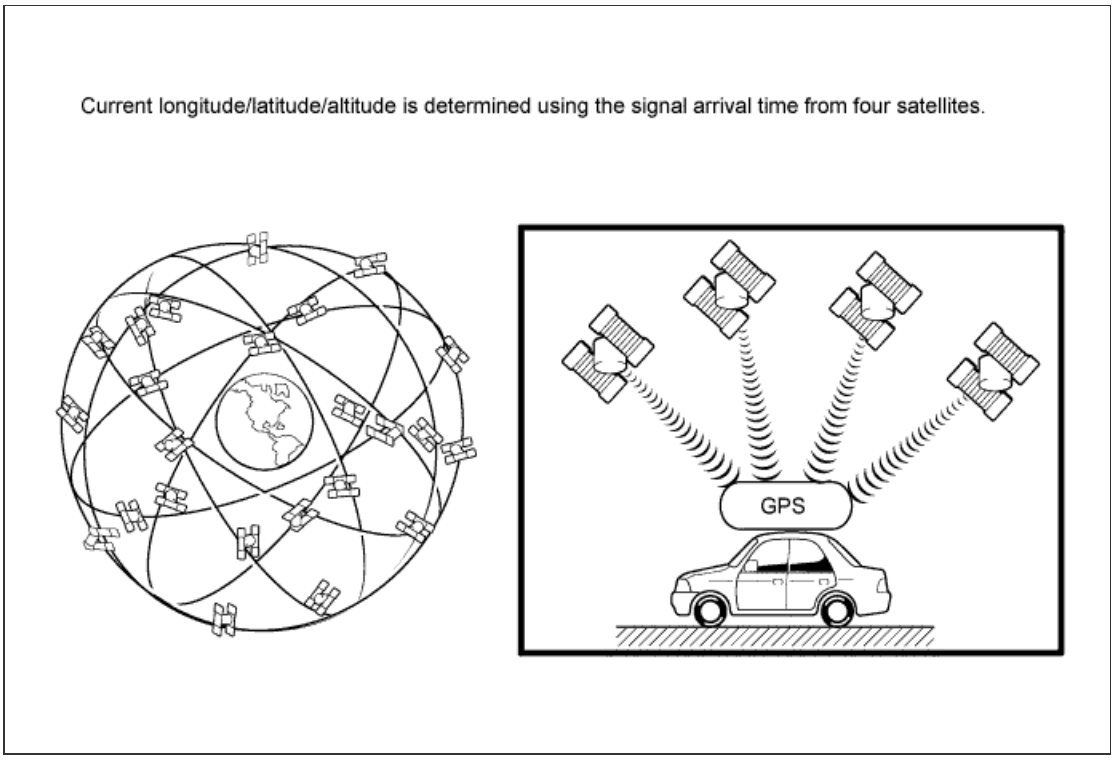
## NAVIGATION SYSTEM OUTLINE

a. Vehicle position tracking methods
It is essential that the navigation system correctly tracks the current vehicle position and displays it on the map. There are 2 methods to track the current vehicle position: autonomous (dead reckoning) and GPS* (satellite) navigation. Both navigation methods are used in conjunction with each other.
*: GPS (Global Positioning System)

| Operation | Description |
|---|---|
| Vehicle Position Calculation | The multi-media module receiver assembly calculates the current vehicle position (direction and current position) using the direction deviation signal from the gyro sensor and driving distance signal from the vehicle speed sensor and creates the driving route. |
| Map Display Processing | The multi-media module receiver assembly processes the vehicle position data, vehicle driving track and map data from the hard disk drive. |
| Map Matching | The map data from the hard disk drive is compared to the vehicle position and driving track data. Then, the vehicle position is matched with the nearest road. |
| GPS Correction | The vehicle position is matched to the position measured by the GPS. Then, the GPS measurement position data is compared with the vehicle position and driving track data. If the position is very different, the GPS measurement position is used. |
| Distance Correction | The vehicle speed signal includes error caused by tire wear and slippage between the tires and road surface. Distance correction is performed to account for this. The multi-media module receiver assembly automatically offsets the signal to make up for the difference between the distance signal and distance data of the map. The offset is automatically updated. |

**HINT:**

The combination of autonomous and GPS navigation makes it possible to display the vehicle position even when the vehicle is in places where GPS signals cannot be received. When only autonomous navigation is used, however, the mapping accuracy may slightly decrease.

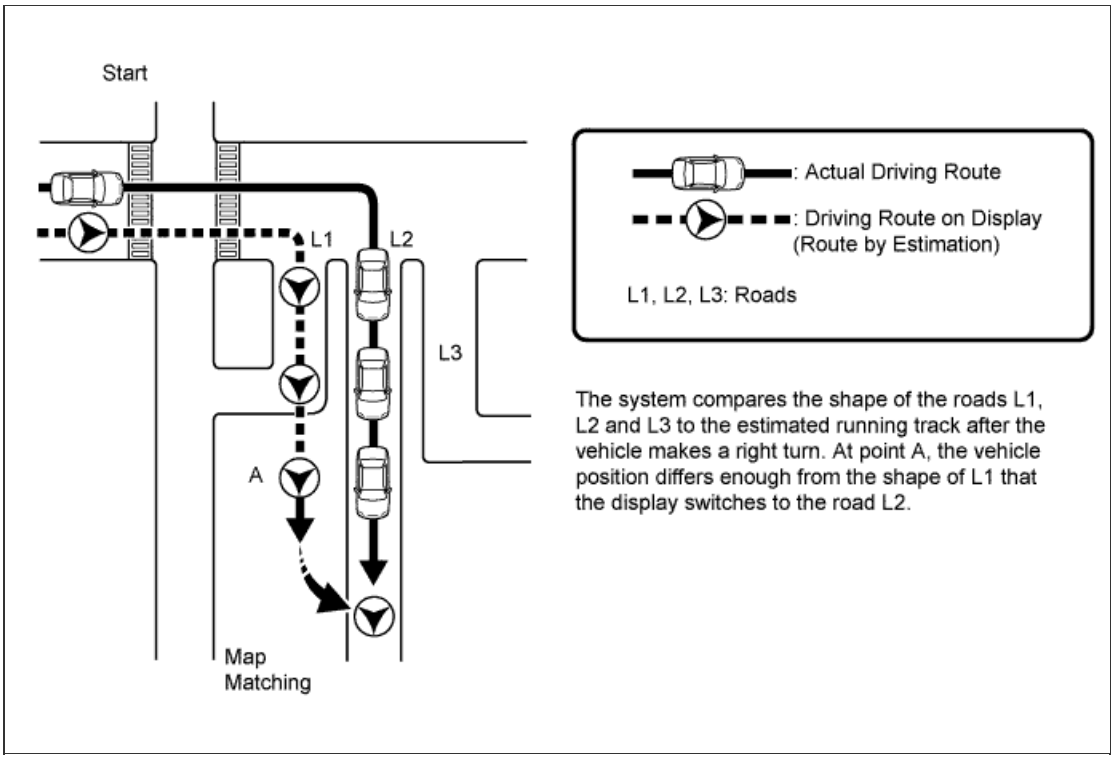


b. Autonomous navigation
This method determines the relative vehicle position based on the driving track determined by the gyro located in the multi-media module receiver assembly and the vehicle speed signal.

i. Gyro sensor
Used to calculate the direction by detecting angular velocity. It is located in the multi-media module receiver assembly.

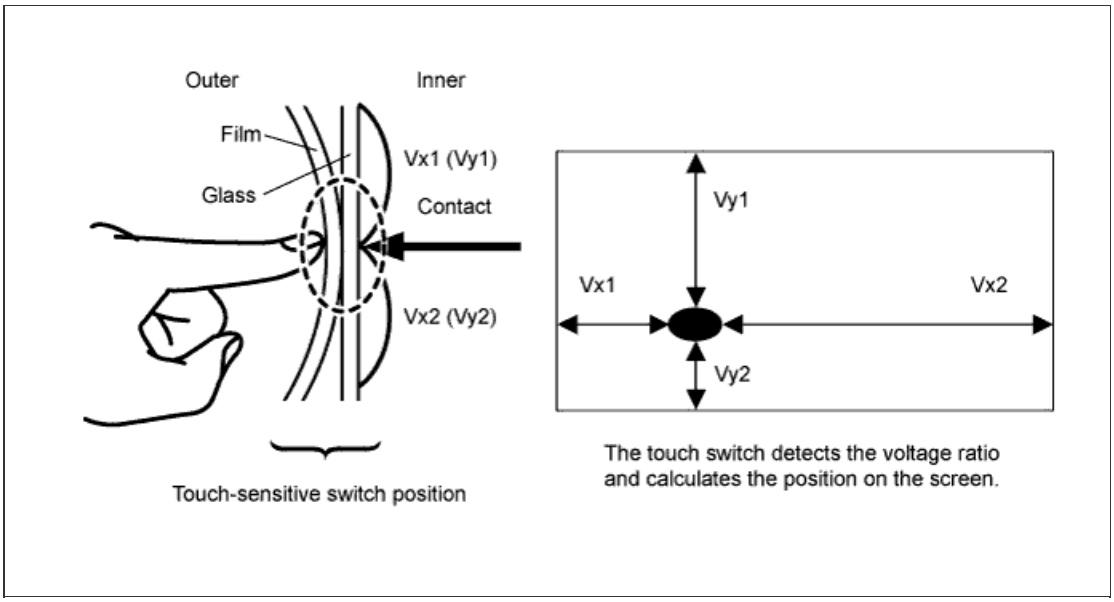
ii. Vehicle speed signal
Used to calculate the vehicle driving distance.

c. GPS* navigation (Satellite navigation)
This method detects the absolute vehicle position using radio waves from GPS satellites.



*: GPS satellites were launched by the U.S. Department of Defense for military purposes.

| Number of Satellites | Measurement | Description |
|---|---|---|
| 2 or less | Measurement is impossible | Vehicle position cannot be obtained because the number of satellites is not enough. |
| 3 | 2-dimensional measurement is possible | Vehicle position is obtained based on the current longitude and latitude. (This is less precise than 3-dimensional measurement.) |
| 4 | 3-dimensional measurement is possible | Vehicle position is obtained based on the current longitude, latitude and altitude. |



**d.** Map matching

The current driving route is calculated by autonomous navigation (according to the gyro sensor and vehicle speed signal) and GPS navigation. This information is then compared with possible road shapes from the map data in the hard disk drive and the vehicle position is set onto the most appropriate road.

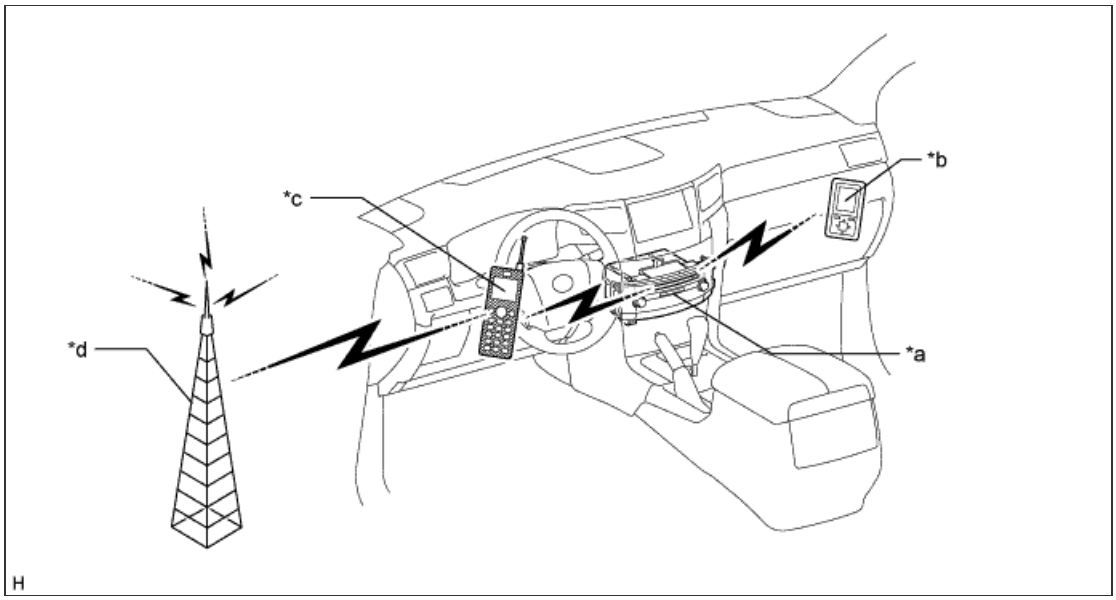
## TOUCH SWITCH

a. Touch switches are touch-sensitive (interactive) switches operated by touching the screen. When a switch is pressed, the outer film bends in to contact the inner glass at the pressed position. By doing this, the voltage ratio is measured and the pressed position is detected.

## DVD (Digital Versatile Disc) PLAYER OUTLINE

a. The DVD player can only play DVD videos that have any of the following marks:

b. The following products may not be playable on your player.



- Video CD
- DVD+R
- DVD+RW
- DVD-RAM

c. Precaution for use of discs

**NOTICE:**

- **SECAM color television standard discs cannot be played.**
- **Keep the discs away from dirt. Be careful not to damage the discs or leave fingerprints on them.**
- **Hold discs by the outer edge and center hole with the label side up.**
- **Leaving the disc exposed halfway out of the slot for a long time after pressing the disc eject button may cause deformation of the disc, making the disc unusable.**
- **Do not use odd-shaped discs because these may cause player malfunctions.**
- **Do not use discs whose recording portion is transparent or translucent because they may not be inserted, ejected or played normally.**
- **DualDiscs that mate DVD recorded material on one side with CD digital audio material on the other cannot be played.**

## "Bluetooth" OUTLINE

### Text in Illustration

| | | | |
|---|---|---|---|
| *a | Multi-media Module Receiver Assembly<br>(Built-in "Bluetooth" receiver antenna) | *b | Portable Audio Player<br>("Bluetooth" compatible type) |
| *c | Cellular Phone<br>("Bluetooth" compatible type) | *d | Cellular Tower |

a. "Bluetooth" is a trademark owned by Bluetooth SIG, Inc.

b. "Bluetooth" is a wireless connection technology that uses the 2.4 GHz frequency band.

**HINT:**

The communication performance of "Bluetooth" may vary depending on obstructions or radio wave conditions between communication devices, electromagnetic radiation, communication device sensitivity or antenna capacity.

c. Hands-free function

i. The "Bluetooth" built-in multi-media module receiver assembly and a "Bluetooth" compatible cellular phone* can be connected using a "Bluetooth" wireless connection. This enables the use of the hands-free function on the cellular phone even if the phone is in a pocket or bag. For this reason, it is not necessary to use a connector or cable to connect the cellular phone.
*: Some versions of "Bluetooth" compatible cellular phones may not function.

ii. Compatible hands-free devices

| | |
|---|---|
| Required "Bluetooth" specifications | Ver. 1.1 or higher (Ver. 2.1+EDR or higher recommended) |
| Compatible profiles | • HFP (Hands Free Profile) Ver.1.0 or higher (Ver.1.5 or higher recommended)*1<br>• OPP (Object Push Profile) Ver.1.1 or higher*1<br>• PBAP (Phone Book Access Profile) Ver.1.0 or higher*1<br>• MAP (Message Access Profile) Ver.1.0 or higher*2<br>• DUN (Dial-Up Networking Profile) Ver.1.1 or higher*3 |
| Maximum number of hands-free devices that can be registered (including audio devices) | 5 |

*1: This profile is necessary when using the handsfree function.
*2: This profile is necessary when using the message function. (w/ Connected Services)
*3: This profile is necessary when using the connected services. (w/ Connected Services)

**HINT:**

The amount of remaining battery charge displayed on the multi-media module receiver assembly may be different from that of the "Bluetooth" device.

## CONNECTED SERVICES OUTLINE (w/ Connected Services)

a. The following services are available by connecting the navigation system to Lexus's portal site via the internet using a cellular phone.

- Online search: New establishments, such as restaurants, bars etc., that are not registered in the navigation system can be set as a destination.
- Importing memory points: Establishments that were searched using a personal computer can be set as a destination and can be registered as memory points.

**HINT:**

- **For known compatible phones refer to www.my.lexus.eu.**
- **It is necessary to agree to the terms of service for the search engine on www.my.lexus.eu.**
  **Failure to do so may cause problems such as the search engine cannot be selected and the screen does not transfer to the next screen even when "Online search" is selected.**
- **If the cellular phone has not been registered as a registered device, the "Communication settings" screen button cannot be selected.**
- **Connected services are available only on the multi-media module receiver assembly that has had the identification code registered when the account was created.**
- **Search results may not be displayed if the target establishment is not in the data supplied by the provider or in the map data of the navigation system.**
- **As the information for a destination set using the connected services is supplied by the provider, the navigation system may guide to a location that deviates from the actual destination.**

## EXPORT / IMPORT MEMORY POINT FUNCTION OUTLINE

a. This function allows memory points stored in the multi-media module receiver assembly to be registered to another multi-media module receiver assembly.
Memory points stored in the multi-media module receiver assembly can be exported to a USB device.
Data exported to a USB device can be imported to another multi-media module receiver assembly using a USB device.

## RDS-TMC FUNCTION OUTLINE (w/ RDS-TMC Function)

a. This system has a function which allows the reception of traffic information from Radio Data System Traffic Message Channel (RDS-TMC) stations based on FM-multiple broadcasting.
It assists the driver to avoid areas with traffic congestion. It also helps to improve traffic flow and road safety.

i. RDS-TMC Function List

- Traffic information
  Using RDS-TMC station based on FM-multiple broadcasting or TPEG information*1 that is received, traffic events near the current position or the cursor position can be viewed as a list.
- Traffic prediction*1

Using TPEG information that is received, traffic prediction information relevant to the area around the current position or the cursor position can be viewed.

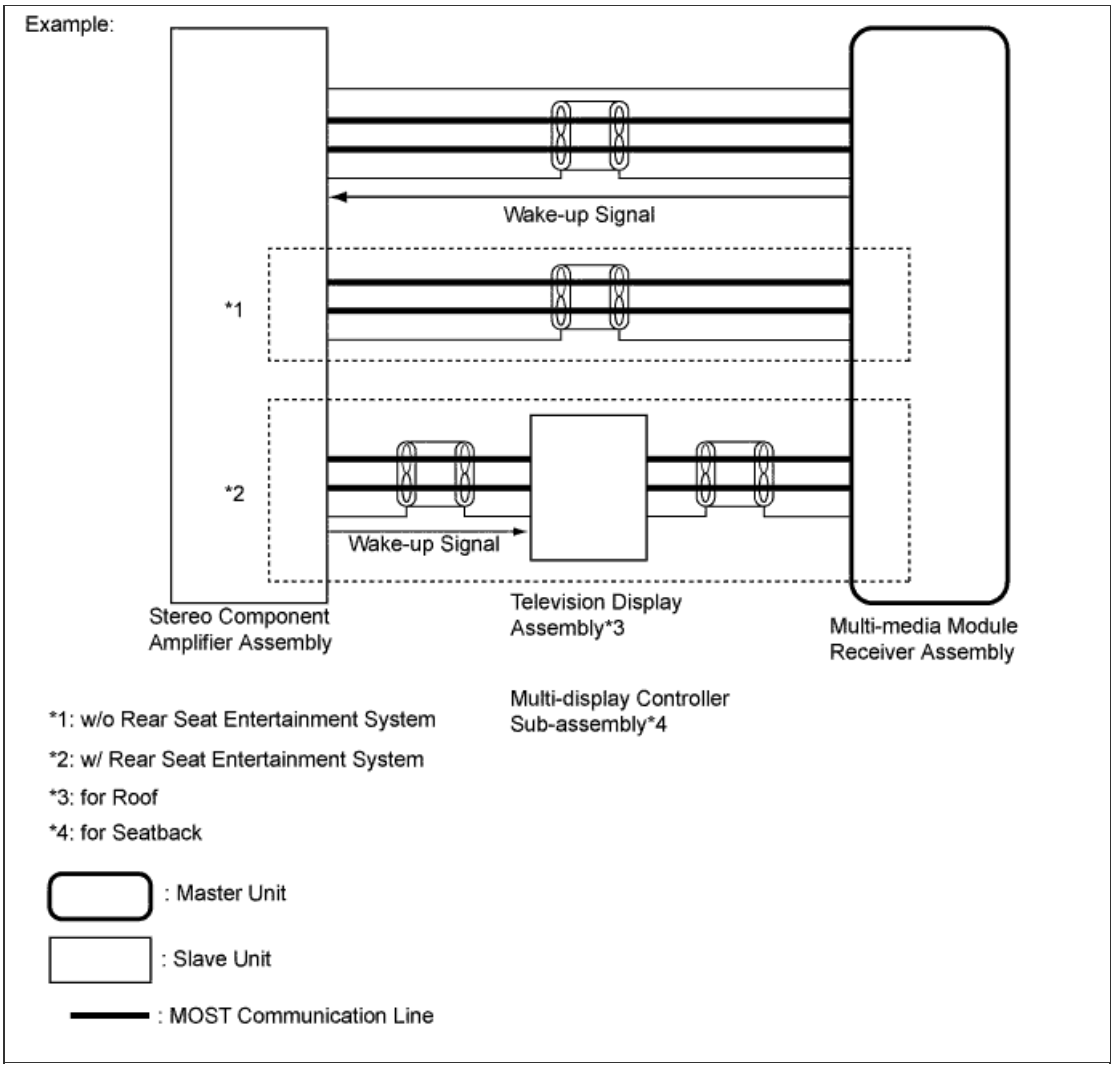
- Parking information*1
  Using TPEG information that is received, the location available spaces of a parking lot can be checked. The parking lot can also be set as a destination.
  *1: Can only be used when receiving TPEG (Transport Protocol Experts Group) information. Depending on the country or area, receiving TPEG information may not be possible.

**HINT:**

The following is information regarding the RDS-TMC function that utilizes TPEG information:

- **When the vehicle enters an area where TPEG information can be received, TPEG information can be received only after the vehicle has been driven for 1 km (0.6 miles) or more in the coverage area.**
- **Detoured route search activates only when traffic information within 200 km (124 miles) exists.**
- **If there is traffic information only for traffic congestion, the route may not be changed depending on the distance of the congestion.**
- **If there is no available avoidance route, the route may not be changed.**
- **Provided data may differ from actual condition.**
- **TPEG information uses the same signal reception path as the DAB function.**

## VEHICLE CUSTOMIZATION OUTLINE



Customization of functions can be performed on the multi-display screen. Refer to the owner's manual for further information on customizable items for the navigation system.

**HINT:**

- **Items available for customization via the navigation system can be performed by using the intelligent tester.**
- **Some customize parameters displayed on the intelligent tester will be displayed on the "Vehicle Customization" screen for the navigation system. Users can customize these items.**

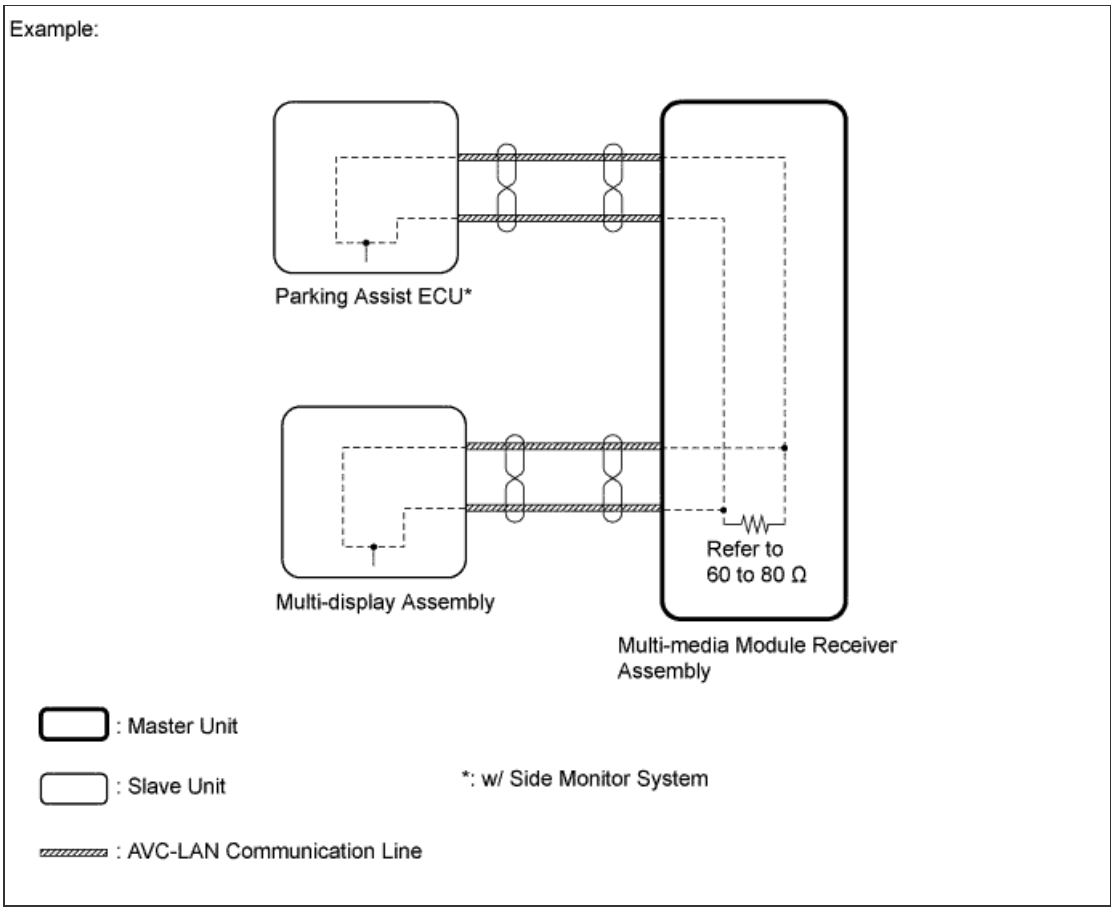
## COMMUNICATION SYSTEM

a. MOST Network Outline

i. Navigation system components communicate with each other via the MOST network.

ii. The MOST network uses a shielded twisted pair of wires for its communication lines.

iii. The master unit of the MOST network is the multi-media module receiver assembly.



iv. MOST communication lines connect each slave unit centering around the master unit to form a MOST network ring.

v. The master unit sends a wake-up signal to activate each slave unit connected to the MOST network.

**HINT:**

If a short or open circuit occurs in the MOST circuit, communication will be interrupted and the system will not operate normally.

b. AVC-LAN Outline

i. Components of the navigation system communicate with each other via the AVC-LAN.

ii. The AVC-LAN uses a twisted pair of wires for its communication lines.

iii. The master unit of the AVC-LAN is the multi-media module receiver assembly.

**HINT:**

- **The multi-media module receiver assembly has the resistance (60 to 80 Ω) necessary for communication.**
- **If a short or open circuit occurs in the AVC-LAN circuit, communication is interrupted and the system will not operate normally.**

## DIAGNOSTIC FUNCTION OUTLINE

a. The navigation system has a diagnostic function (the result will be displayed on the master unit or the intelligent tester).

**for Preparation** Click here

**HINT:**

Use these procedures to troubleshoot the navigation system.

## 1.VEHICLE BROUGHT TO WORKSHOP

NEXT

## 2.INSPECT BATTERY VOLTAGE

**Standard voltage:**
**11 to 14 V**

If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

## 3.BASIC INSPECTION

a. Turn the engine switch on (ACC).

b. Check whether or not the display appears on the multi-display.

**Result**

| Result | Proceed to |
|---|---|
| Display appears | A |
| Display does not appear | B |

B. → Go to step 6

## 4.CHECK FOR DTC

a. Check for DTCs and note any codes that are output.

b. Clear the DTCs.

c. Recheck for DTCs. Based on the DTC output in the first step, try to force output of the navigation system DTC by simulating the conditions indicated by the DTC.

**HINT:**

- **If the system cannot enter the diagnosis mode, inspect each AVC-LAN communication signal and repair or replace problem parts.**
- **Even if the malfunction symptom is not confirmed, check for DTCs. This is because the system stores past DTCs.**
- **Refer to the detailed description on the diagnostic screen, as necessary (Click here).**
- **Check and clear past diagnostic trouble codes. Check the diagnostic trouble code and inspect the area the code indicates.**

**Result**

| Result | Proceed to |
|---|---|
| DTC is not output | A |
| DTC is output | B |

B. → Go to step 7

A

## 5.PROBLEM SYMPTOMS TABLE

**Result**

| Result | Proceed to |
|---|---|
| Fault is not listed in problem symptoms table | A |
| Fault is listed in problem symptoms table | B |

**B.** → **Go to step 7**

**A**

## 6.OVERALL ANALYSIS AND TROUBLESHOOTING

a. Terminals of ECU (Click here)

b. Inspect the front No. 1 speaker (Click here)

c. Inspect the steering pad switch (Click here)

**NEXT**

## 7.ADJUST, REPAIR OR REPLACE

**NEXT**

## END

**for Preparation** Click here

**HINT:**

- **Use the following procedure to troubleshoot the navigation system.**
- ***: Use the intelligent tester.**

## 1.VEHICLE BROUGHT TO WORKSHOP

**NEXT**

## 2.CUSTOMER PROBLEM ANALYSIS

- When troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference.
  Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points in problem analysis:

| | |
|---|---|
| What | Vehicle model, system name |
| When | Date, time, occurrence frequency |
| Where | Road conditions |
| Under what conditions? | Driving conditions, weather conditions |
| How did it happen? | Problem symptoms |

**NEXT**

## 3.INSPECT BATTERY VOLTAGE

a. Measure the battery voltage with the engine switch off.

**Standard voltage:**
**11 to 14 V**

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

**NEXT**

## 4.CHECK CABIN

a. Check that condensation is not likely to occur in the cabin, and that the temperature is not high or extremely low in the cabin.

**OK:**
**Condensation is not likely being produced and the temperature is not high or extremely low.**

**HINT:**

- **A humid cabin and a rapid change in temperature may lead to condensation. Condensation in the cabin may cause a short circuit.**
- **The navigation system may not operate normally when the temperature is -20°C (-4°F) or less, or 65°C (149°F) or higher.**

**NG.** → **SET CABIN TO APPROPRIATE TEMPERATURE**

**OK**

## 5.CHECK NAVIGATION SYSTEM NORMAL CONDITION

a. Refer to Check System Normal Condition ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| Symptom is not normal operation. | A |
| Symptom is normal operation. | B |

B. → SYMPTOM IS NORMAL OPERATION

A

## 6.CHECK CAN COMMUNICATION SYSTEM*

a. Check for DTC output.

for LHD: Click here
for RHD: Click here

**Result**

| Result | Proceed to |
|---|---|
| CAN DTCs are not output. | A |
| CAN DTCs are output (for LHD). | B |
| CAN DTCs are output (for RHD). | C |

B. → GO TO CAN COMMUNICATION SYSTEM (**Click here**)

C. → GO TO CAN COMMUNICATION SYSTEM (**Click here**)

A

## 7.CHECK FOR DTC*

a. Refer to DTC Check/Clear (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTCs are output. | A |
| DTCs are not output.<br>(The multi-display displays content.) | B |
| DTCs are not output.<br>(The multi-display does not display anything.) | C |

**HINT:**

If more information is needed, perform a check using the "System Check Mode" screen after checking for DTCs using the intelligent tester.

B. → Go to step 11

C. → Go to step 12

A

## 8.CLEAR DTC*

a. Refer to DTC Check/Clear (Click here).

**HINT:**

The present DTCs may not indicate actual malfunctions depending on the vehicle operating conditions.

NEXT

## 9.RECHECK FOR DTC*

a. Refer to DTC Check/Clear (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTCs are output. | A |
| DTCs are not output. | B |

**HINT:**

- **Even if the malfunction symptom is not confirmed, check for DTCs. This is because the system stores history DTCs.**
- **If more information is needed, perform a recheck using the "System Check Mode" screen after rechecking for DTCs using the intelligent tester.**
- **Check the DTCs and inspect the area that the code indicates.**

| | |
|---|---|
| B. | Go to step 11 |

A

## 10.DIAGNOSTIC TROUBLE CODE CHART

a. Find the output code in Diagnostic Trouble Code Chart ( Click here).

**NOTICE:**

- **The navigation system outputs DTCs for the following system.**
- **When DTCs other than those in Diagnostic Trouble Code Chart for the navigation system are output, refer to Diagnostic Trouble Code Chart for the relevant system.**
- **Refer to Audio and Visual System (Click here)**
- **Refer to Rear Seat Entertainment System (Click here)**

**Result**

| Result | Proceed to |
|---|---|
| DTCs for the navigation system are output. | A |
| DTCs for the audio and visual system are output. | B |
| DTCs for the rear seat entertainment system.. | C |

| | |
|---|---|
| A. | Go to step 14 |
| B. | GO TO AUDIO AND VISUAL SYSTEM (Click here) |
| C. | GO TO REAR SEAT ENTERTAINMENT SYSTEM (Click here) |

## 11.CHECK HARD DISC

a. Enter the "Failure Diagnosis" screen. Refer to Check Hard Disk Drive in Operation Check ( Click here).

**OK:**
**"OK" is displayed.**

| | |
|---|---|
| NG. | REPLACE HARD DISC (Click here) |

OK

## 12.PROBLEM SYMPTOMS TABLE

a. Refer to Problem Symptoms Table (Click here).

**Result**

| Result | Proceed to |
|---|---|

| | |
|---|---|
| Fault is not listed in Problem Symptoms Table. | A |
| Fault is listed in Problem Symptoms Table. | B |

**HINT:**

If the symptom does not recur and no DTCs are output, attempt to reproduce the symptoms ( Click here).

**B.** → **ADJUST, REPAIR OR REPLACE IN ACCORDANCE WITH PROBLEM SYMPTOMS TABLE**

**A**

## 13.PERFORM TROUBLESHOOTING BASED ON MALFUNCTION SYMPTOM

a. Refer to Terminals of ECU (Click here).

**NEXT**

## 14.CHECK CIRCUIT

a. Adjust, repair or replace as necessary.

**NEXT**

## 15.RECHECK FOR DIAGNOSTIC TROUBLE CODE*

**HINT:**

After clearing DTCs, recheck for DTCs (Click here).

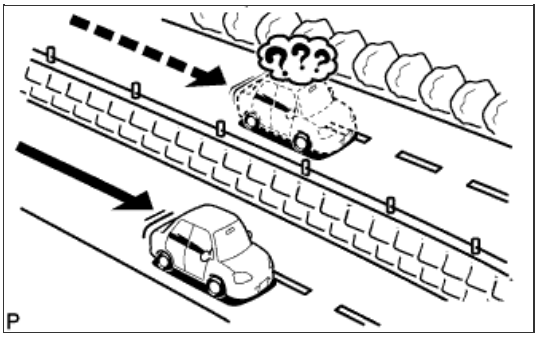
**NEXT**

## 16.PERFORM CONFIRMATION TEST

**NEXT**

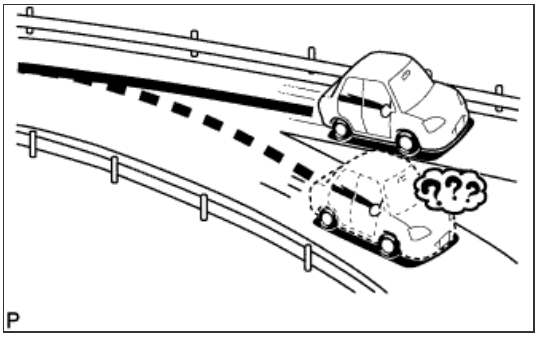
**END**

**for Preparation** Click here



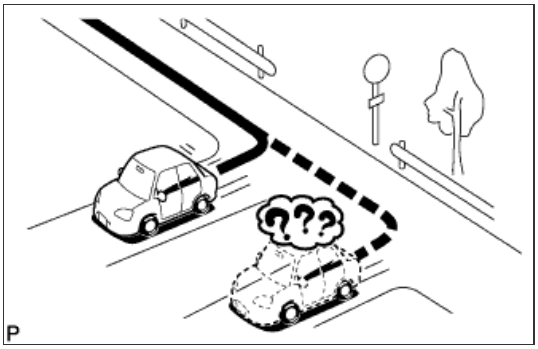
## Check system normal condition

a. If the cause of a symptom is any of the following, the corresponding symptom is normal, it is not a malfunction.

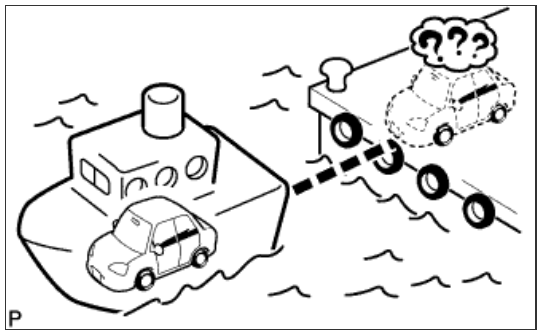


| Symptom | Answer |
|---|---|
| A longer route than expected is chosen. | Depending on the road conditions, the navigation ECU may determine that a longer route is quicker. |
| Even when distance priority is high, the shortest route is not shown. | Some paths may not be advised due to safety concerns. |
| When the vehicle is put into motion immediately after the engine starts, the navigation system deviates from the actual position. | If the vehicle starts before the navigation system activates, the system may not react. |
| When running on certain types of roads, especially new roads, the vehicle position deviates from the actual position. | When the vehicle is driving on new roads not available on the map disc, the system attempts to match it to another nearby road, causing the position mark to deviate. |

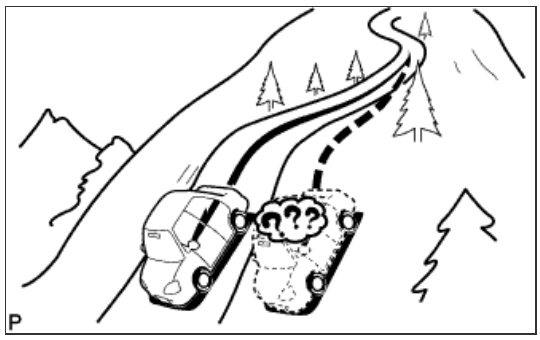
b. The following symptoms are not a malfunction, but are caused by errors inherent in the GPS, gyro sensor, speed sensor, and navigation ECU.



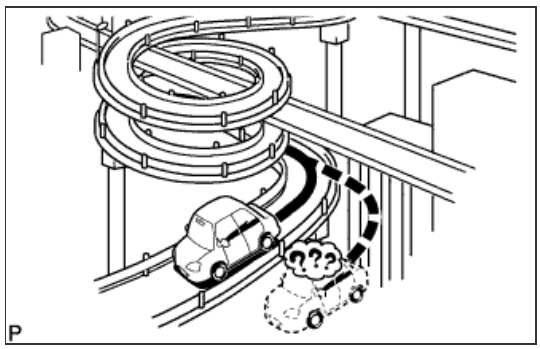
i. The current position mark may be displayed on a nearby parallel road.



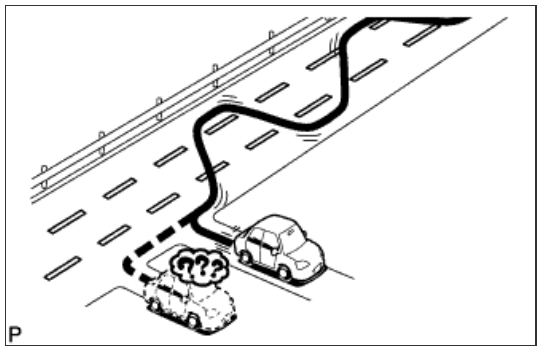
ii. Immediately after a fork in the road, the current vehicle position mark may be displayed on the wrong road.



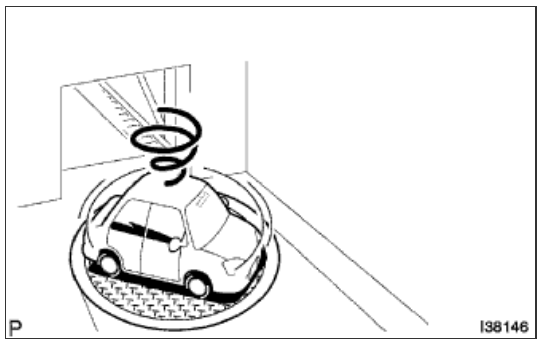
iii. When the vehicle turns right or left at an intersection, the current vehicle position mark may be displayed on a nearby parallel road.



iv. When the vehicle is carried, such as on a ferry, and the vehicle itself is not running, the current vehicle position mark may be displayed in the position where the vehicle was until a measurement can be performed by GPS.



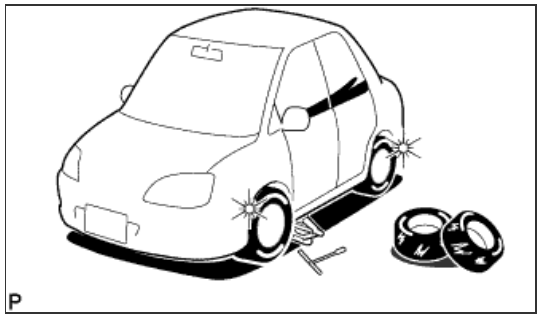
v. When the vehicle is driven on a steep hill, the current vehicle position mark may deviate from the correct position.



vi. When the vehicle makes a continuous turn of 360°, 720°, 1080°, etc., the current vehicle position mark may deviate from the correct position.

vii. When the vehicle moves erratically, such as constant lane changes, the current vehicle position mark may deviate from the correct position.

viii. When the engine switch is turned on (ACC) or on (IG) on a turntable while parking, the current vehicle position mark may not point in the correct direction. The same will occur when the vehicle starts to move.

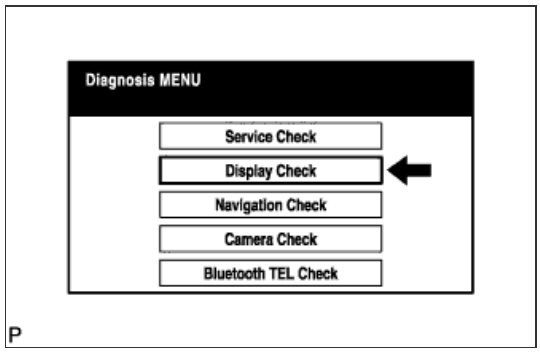


ix. When the vehicle is driven on a snowy road or a mountain path with tire chains installed or using a spare tire, the current vehicle position mark may deviate from the correct position.

x. When a tire is changed, the current vehicle position mark may deviate from the correct position.

**HINT:**

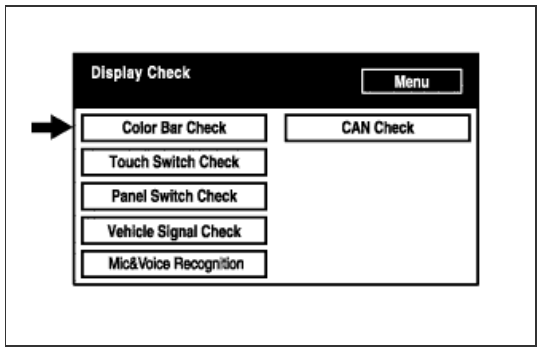
- **The diameter of the tire may change, causing a speed sensor error.**
- **Performing the "tire change" in calibration mode will allow the system to correct the current vehicle position faster.**



## Check Display Check mode

**HINT:**

- **This mode checks the color display on the multi-display.**
- **Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be exactly the same as on the actual vehicle.**

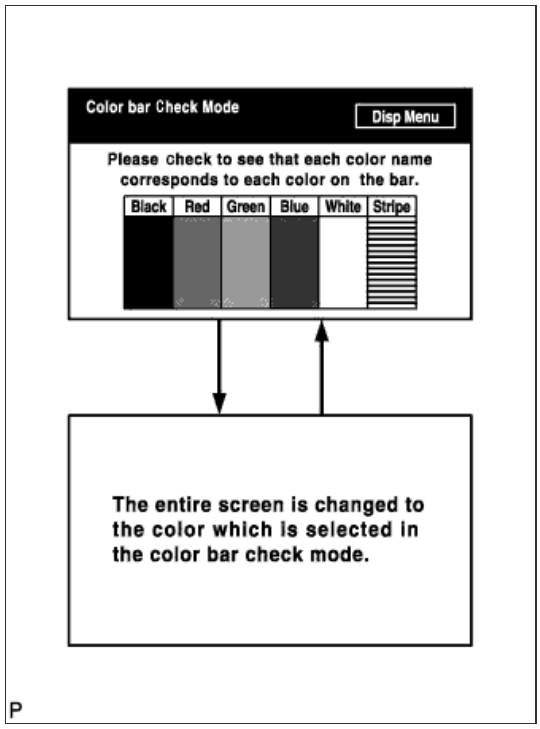


a. Enter diagnostic mode (Click here).

b. Select "Display Check" from the "Diagnosis MENU" screen.

c. Color Bar Check

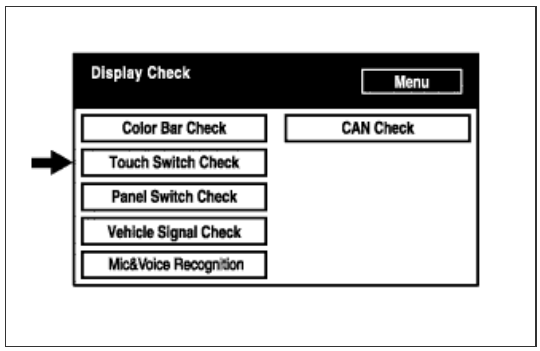
i. Select "Color Bar Check" from the "Display Check" screen.



ii. Select a color bar from the "Color Bar Check Mode" screen.

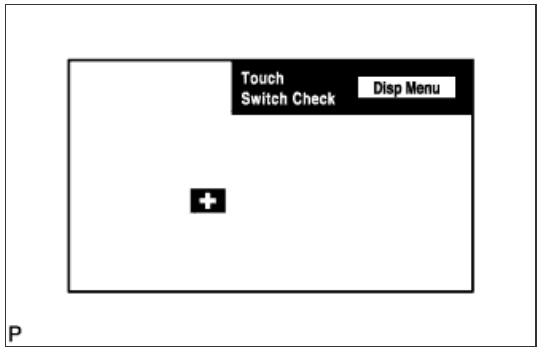
iii. Check the display color.

**HINT:**



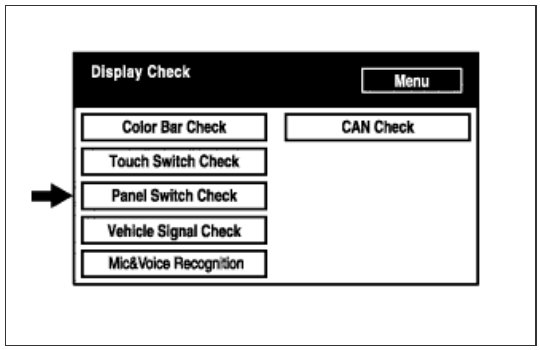
- **The entire screen turns to the color or stripe selected.**
- **Touch the display to return to the "Color Bar Check Mode" screen.**

d. Touch Switch Check



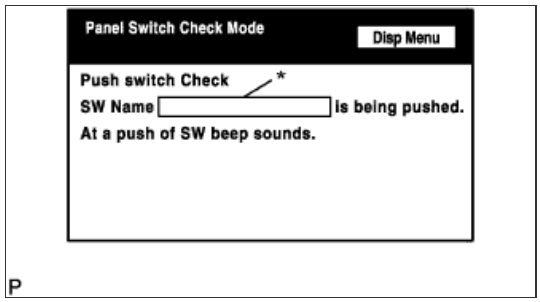
i. Select "Touch Switch Check" from the "Display Check" screen.

ii. Touch the display anywhere in the open area to perform the check when the "Touch Switch Check" screen is displayed.



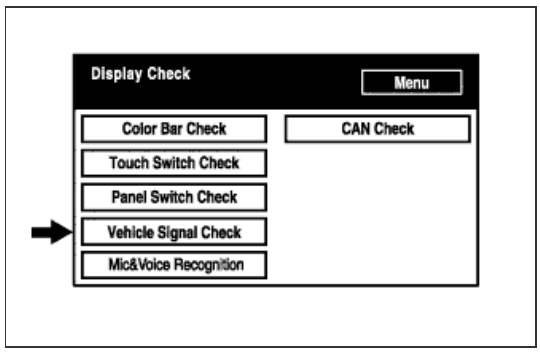
**HINT:**

A "+" mark is displayed where the display is touched.



e. Panel Switch Check

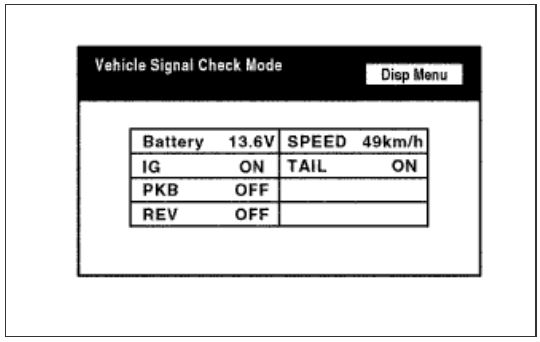
i. Select "Panel Switch Check" from the "Display Check" screen.



ii. Operate each switch and check that the switch name and condition are correctly displayed.

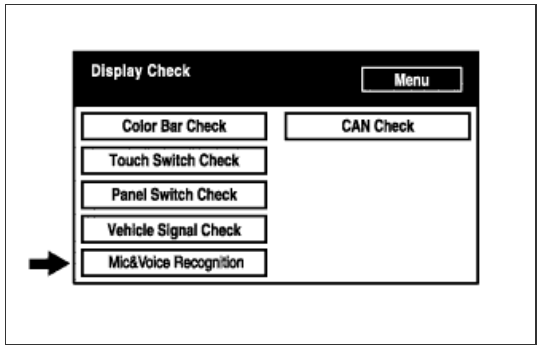
| Display | Contents |
|---|---|
| *: Pushed switch name | • Name of the pressed switch is displayed.<br>• If more than one switch is pressed, "MULTIPLE" is displayed. |

f. Vehicle Signal Check



i. Select "Vehicle Signal Check" from the "Display Check" screen.

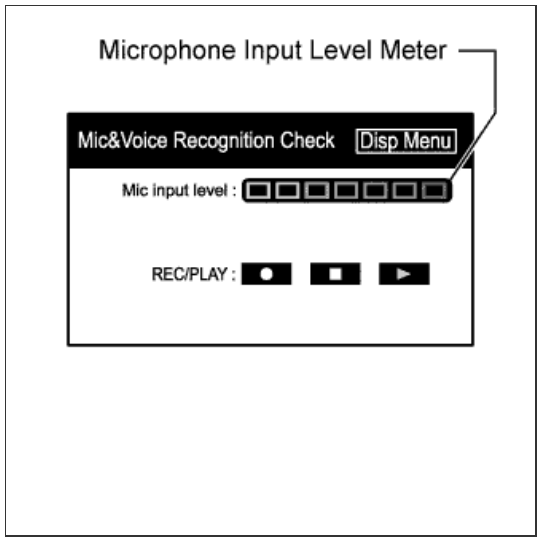
ii. When the "Vehicle Signal Check Mode" screen is displayed, check all the vehicle signal conditions.



**HINT:**

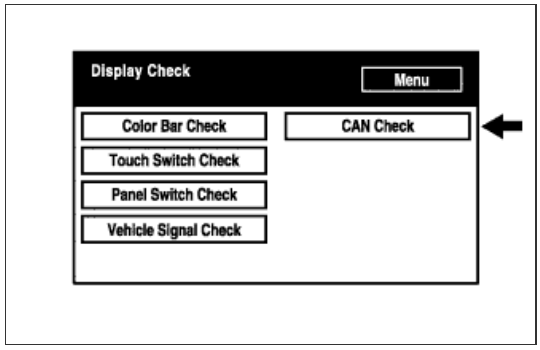
- **Only conditions having inputs are displayed.**
- **This screen is updated once per second when input signals to the vehicle are changed.**
- **For details of this function, refer to Diagnosis Display Detailed Description in the System Description (Click here).**

g. Mic&Voice Recognition Check



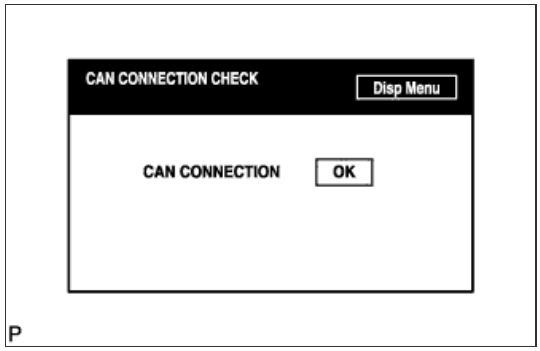
i. Select "Mic&Voice Recognition Check" on the "Display Check" screen to display the "MICROPHONE & VOICE RECOGNITION CHECK" screen.

ii. When a voice is input into the microphone, check that the microphone input level meter changes according to the input voice.



**HINT:**

This function is controlled by the navigation ECU.



h. CAN Check

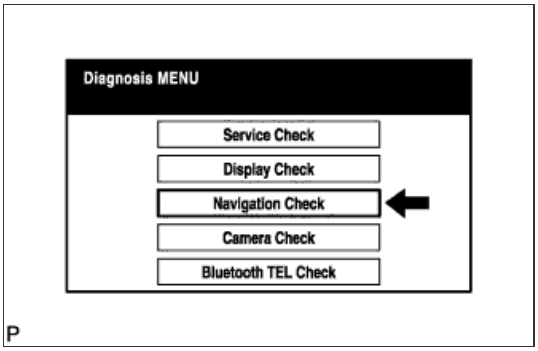
i. Select "CAN Check" from the "Display Check" screen.

ii. Check the CAN CONNECTION CHECK result.

- This function operates only for the systems connected to the CAN system.
- For details of this function, refer to Diagnosis Display Detailed Description in the System Description (Click here).

P

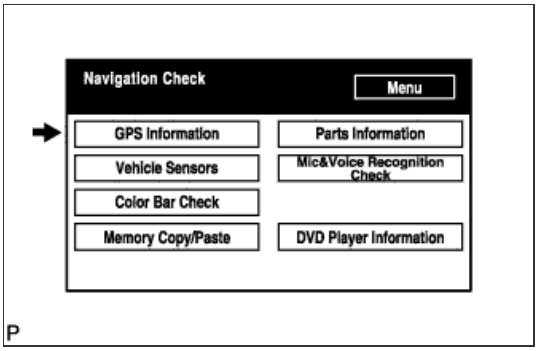
## Check Navigation Check



**HINT:**

- **This mode displays GPS satellite information.**
- **Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be exactly the same as on the actual vehicle.**

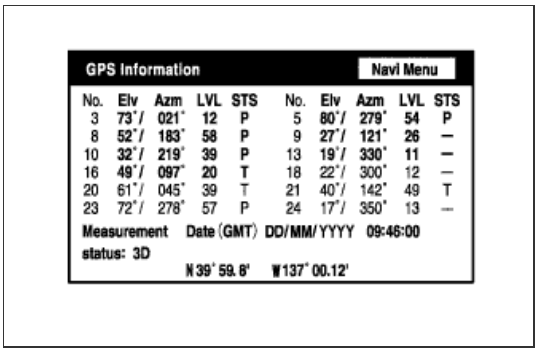
a. Enter Diagnostic Mode (Click here).



b. Navigation Check

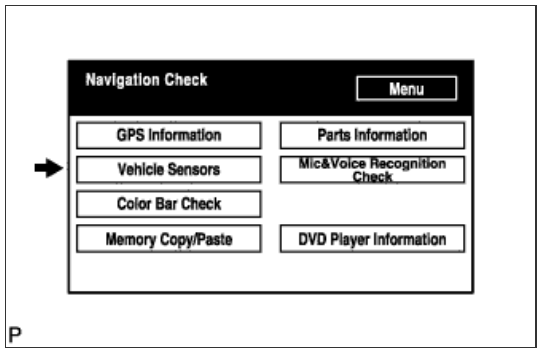
i. Select "Navigation Check" from the "Diagnosis MENU" screen.

c. GPS Information



i. Select "GPS Information" from the "Navigation Check" screen.

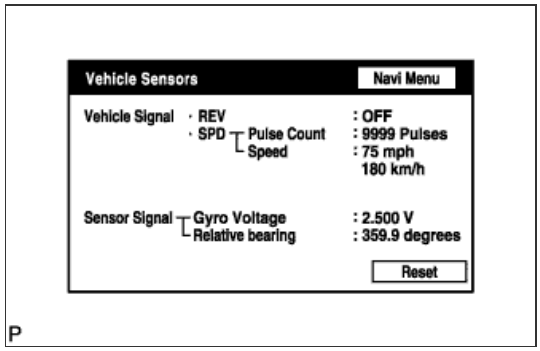
ii. When GPS information is displayed, check the GPS conditions.



**HINT:**

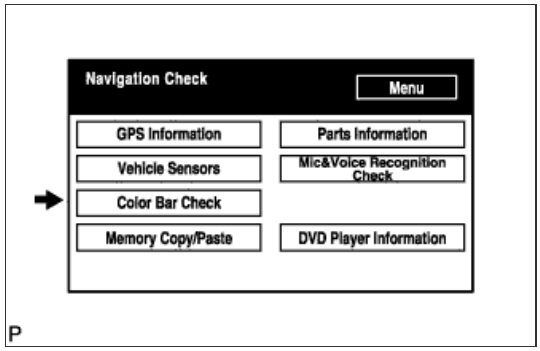
- **This screen is updated once per second when input signals to the vehicle are changed.**
- **For details of this function, refer to Diagnosis Display Detailed Description in the System Description (Click here).**

d. Vehicle Sensors



i. Select "Vehicle Sensors" from the "Navigation Check" screen.

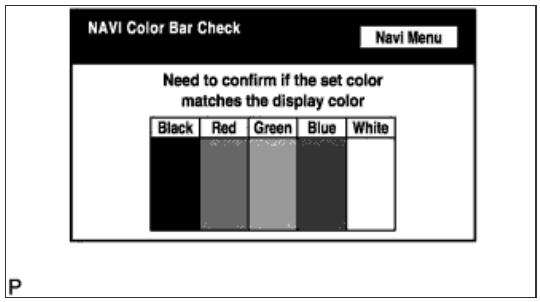
ii. Check all the signals and sensors when vehicle signal information is displayed.



**HINT:**

- **This screen is updated once per second when input signals to the vehicle are changed.**
- **This screen displays vehicle signals input to the navigation ECU.**
- **For details of this function, refer to Diagnosis Display Detailed Description in the System Description (Click here).**

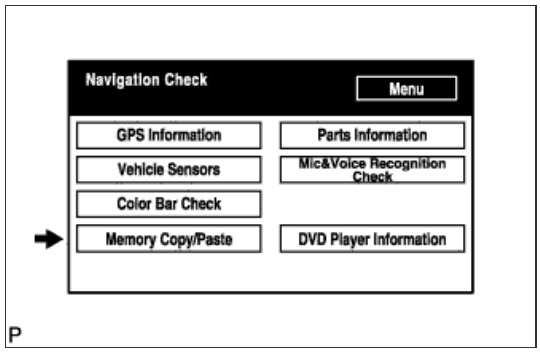
e. Color Bar Check



i. Select "Color Bar Check" from the "Navigation Check" screen.

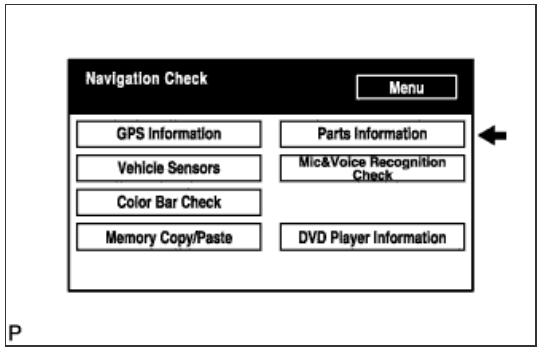
ii. Check each color of the color bar when the "NAVI Color Bar Check" screen is displayed.

**HINT:**



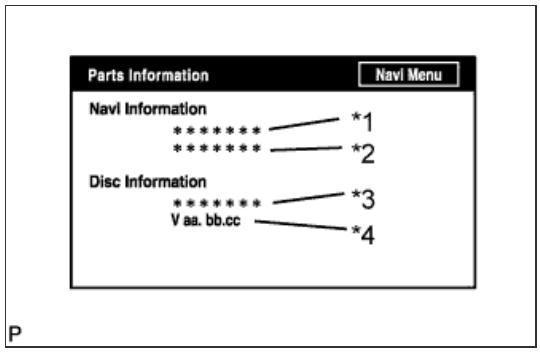
- **Colors will not be displayed full-screen as in "Display Check Mode".**
- **This screen displays the navigation ECU display color.**

f. Memory Copy/Paste



**HINT:**

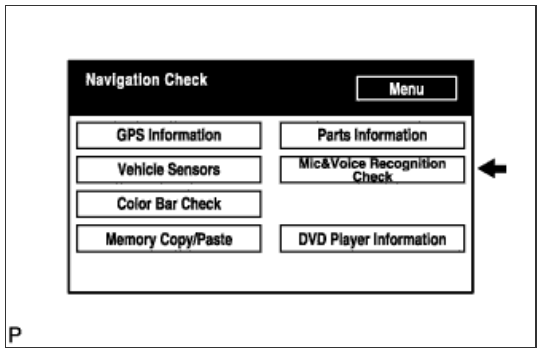
This function cannot be used.



g. Parts Information

i. Select "Parts Information" from the "Navigation Check" screen.

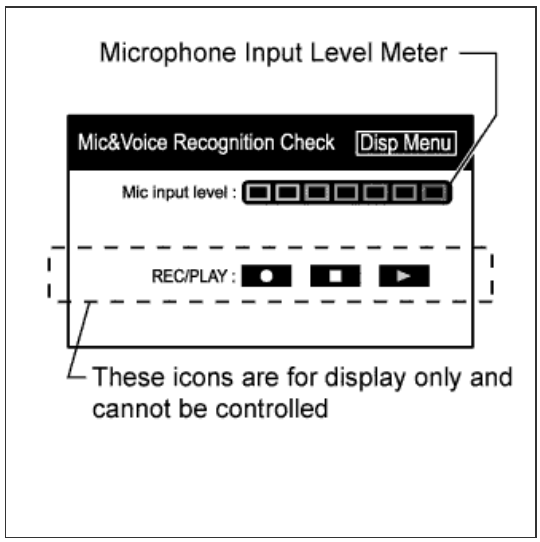
ii. Check the navigation and disc information when the "Parts Information" screen is displayed.



**Screen Description**

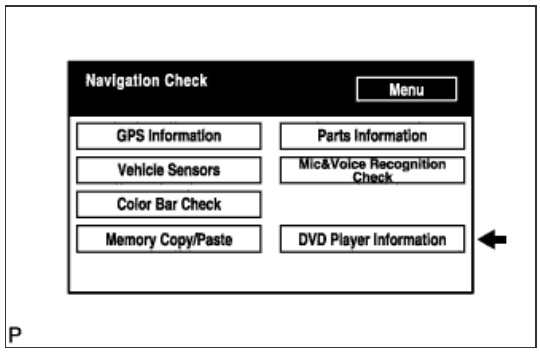
| Display | Contents |
|---|---|
| *1: Navigation Manufacturer | Navigation ECU manufacturer is displayed. |
| *2: Navigation Version | Navigation ECU version is displayed. |
| *3: Disc Manufacturer | Map disc manufacturer is displayed. |
| *4: Disc Version | Map disc version is displayed. |

h. Mic&Voice Recognition Check



i. Select "Mic&Voice Recognition Check" on the "Navigation Check" screen to display the "MICROPHONE & VOICE RECOGNITION CHECK" screen.

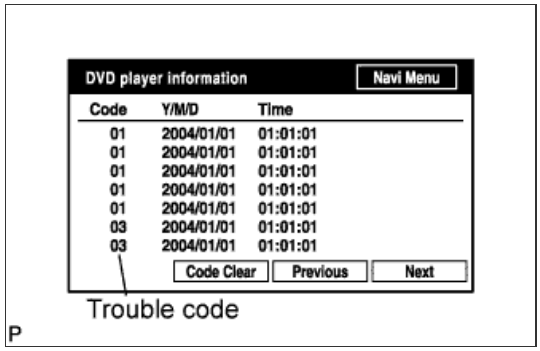
ii. When a voice is input into the microphone, check that the microphone input level meter changes according to the input voice.



**HINT:**

This function is controlled by the navigation ECU.

i. DVD Player Information

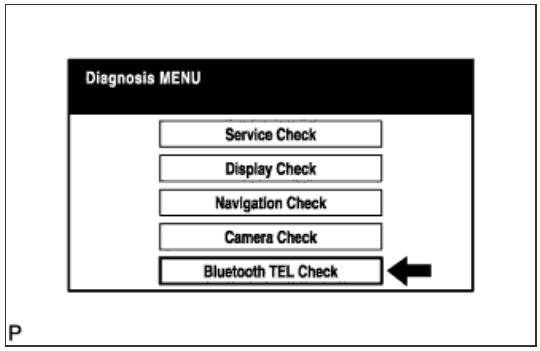


i. Select "DVD Player Information" from the "Navigation Check" screen.

ii. Check for DTCs.

**HINT:**

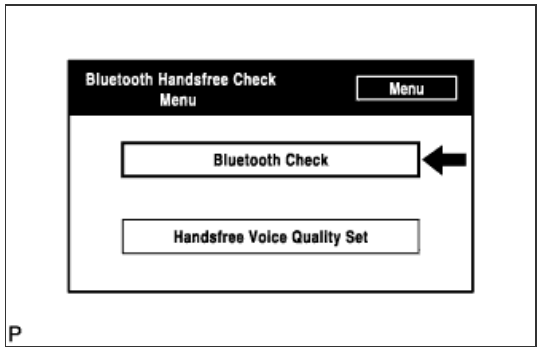
- **This is the DVD player check function in the navigation ECU.**
- **For details of this function, refer to Diagnosis Display Detailed Description in the System Description.**



## Check "Bluetooth" TEL Check

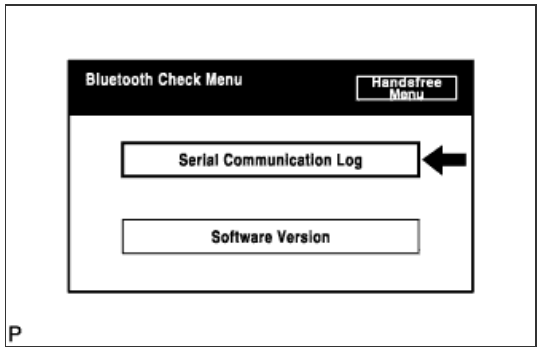
**HINT:**

Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be exactly the same as on the actual vehicle.



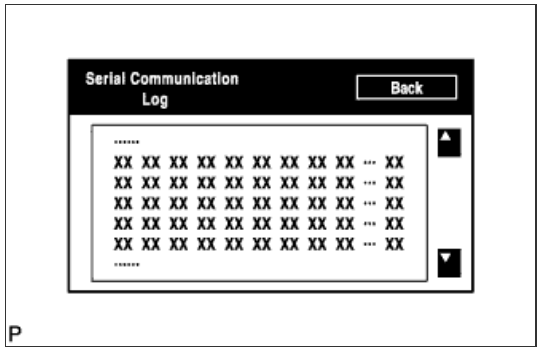
a. Enter diagnostic mode (Click here).

b. Select ""Bluetooth" TEL Check" from the "Diagnosis MENU" screen.

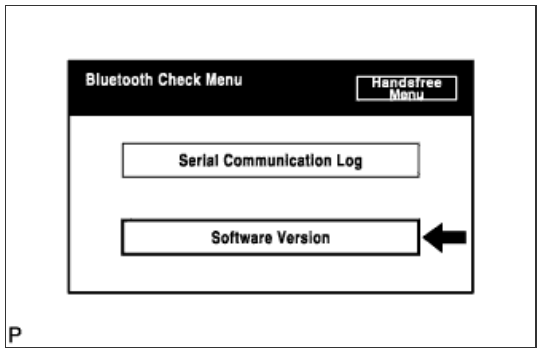


c. "Bluetooth" Check

i. Select ""Bluetooth" Check" from the ""Bluetooth" Handsfree Check Menu" screen.

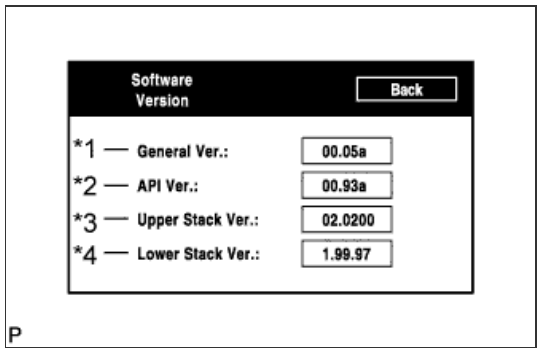


ii. Select "Serial Communication Log" from the ""Bluetooth" Check Menu" screen.



1. The communication log data in the multi-display are displayed on this screen.

**HINT:**

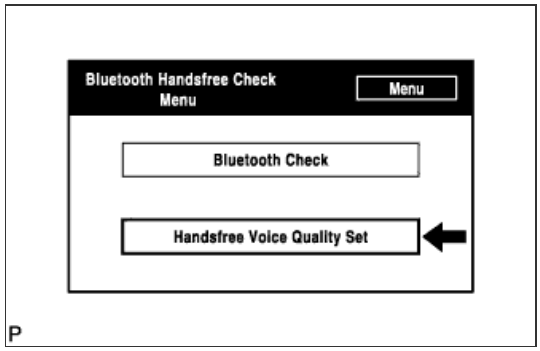


The displayed data can be used as a reference.

iii. Select "Software Version" from the ""Bluetooth" Check Menu" screen.

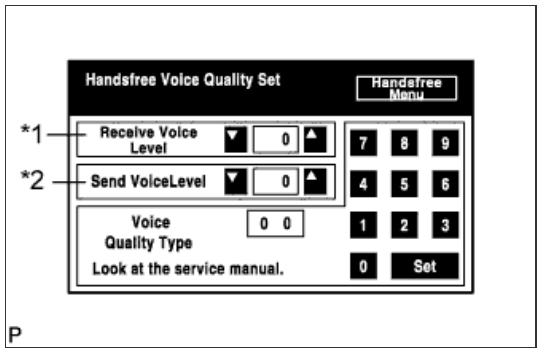
1. Check the software version of the "Bluetooth" module.

**Screen Description**



| Display | Contents |
|---|---|
| *1: General Version | • Overall software version of "Bluetooth" module<br>• If any of the API version, upper stack version, and low stack version is updated, the general version is upgraded. |
| *2: API Version | API software version is displayed. |
| *3: Upper Stack Version | Upper Stack version is displayed. |
| *4: Lower Stack Version | Lower Stack version is displayed. |

**HINT:**



This function is controlled by the multi-display.

**d.** Handsfree Voice Quality Set

**i.** Select "Handsfree Voice Quality Set" from the ""Bluetooth" Handsfree Check Menu" screen.

**ii.** Check the handsfree voice level.

### Screen Description

| Display | Contents |
|---|---|
| *1: Received voice level adjustment | Setting possible for the voice level received from "Bluetooth" compatible phones. |
| *2: Sent voice level adjustment | Setting possible for the voice level sent to "Bluetooth" compatible phones. |

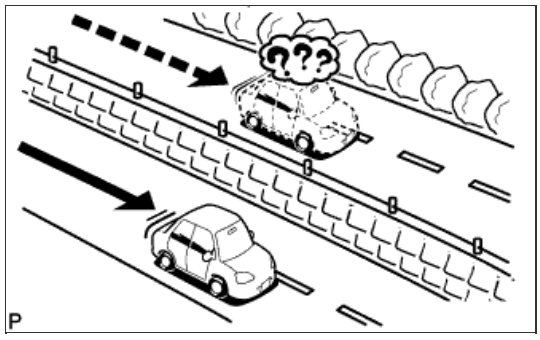
**HINT:**

This function is controlled by the multi-display.

**NOTICE:**

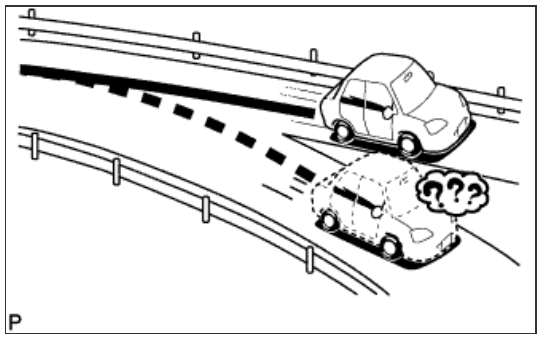
"Voice Quality Type" should not be changed.

**for Preparation** Click here



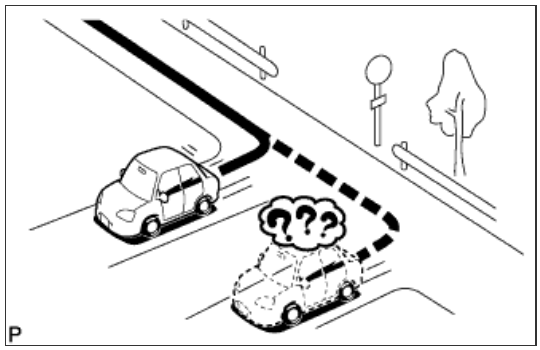
## CHECK SYSTEM NORMAL CONDITION

a. If the symptom is applicable to any of the following, it is intended behavior, and not a malfunction.



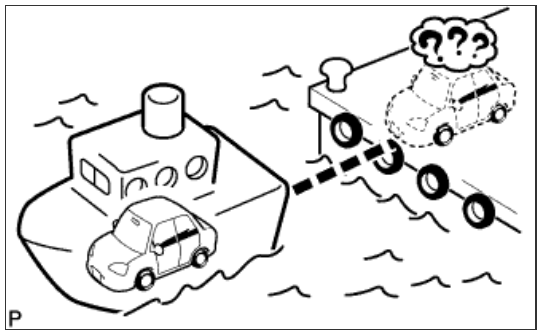
| Symptom | Answer |
|---|---|
| A longer route than expected is chosen. | Depending on the road conditions, the multi-media module receiver assembly may determine that a longer route is quicker. |
| Even when distance priority is high, the shortest route is not shown. | Some routes may not be advised due to safety concerns. |
| When the vehicle is put into motion immediately after the hybrid system starts, the navigation system deviates from the correct position. | If the vehicle starts before the navigation system activates, the system may not react. |
| When driving on certain types of roads, especially new roads, the vehicle position deviates from the correct position. | When the vehicle is driving on new roads not available on the map data from the hard disk drive, the system attempts to match it to another nearby road, causing the position mark to deviate. |

b. The following symptoms are not malfunctions, but are caused by errors inherent in the GPS, gyro sensor, speed sensor or multi-media module receiver assembly.

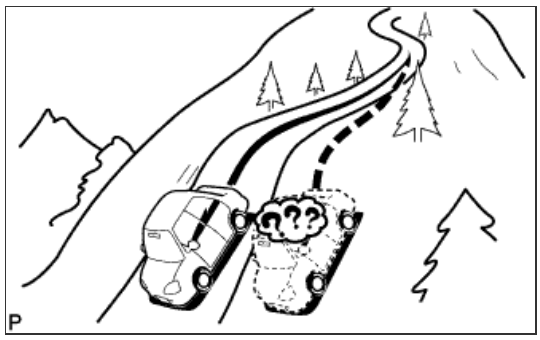


i. The current position mark may be displayed on a nearby parallel road.

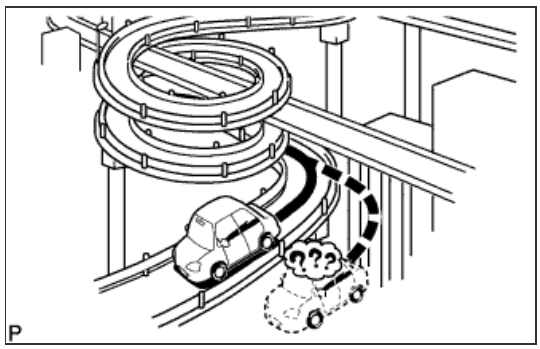
ii. Immediately after a fork in the road, the current vehicle position mark may be displayed on the wrong road.



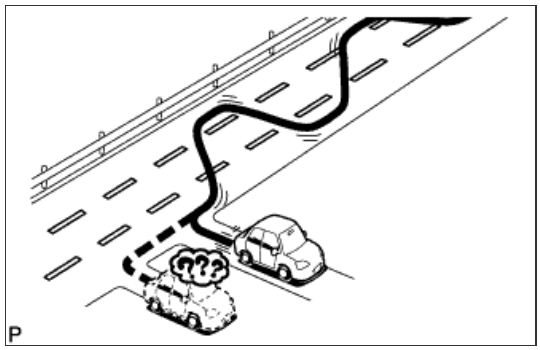
iii. When the vehicle turns right or left at an intersection, the current vehicle position mark may be displayed on a nearby parallel road.



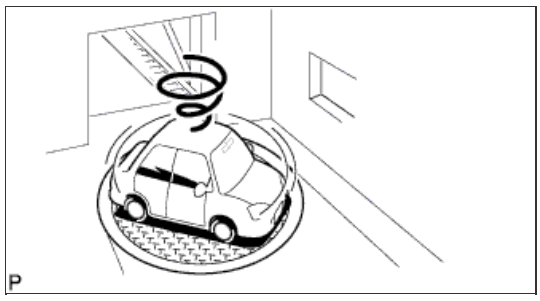
iv. When the vehicle is carried, such as on a ferry, and the vehicle itself is not being driven, the current vehicle position mark may be displayed in the position where the vehicle was until a measurement can be



performed by the GPS.



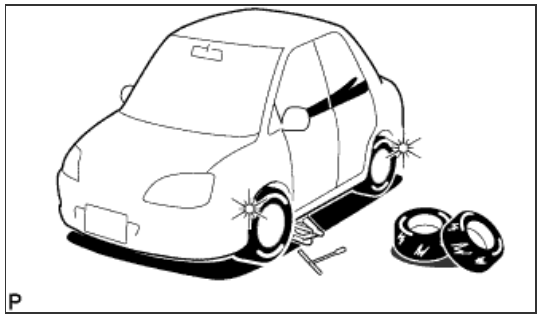
v. When the vehicle travels on a steep hill, the current vehicle position mark may deviate from the correct position.



vi. When the vehicle makes a continuous turn (e.g. 360, 720, 1080 degrees), the current vehicle position mark may deviate from the correct position.

vii. When the vehicle moves erratically, such as constant lane changes, the current vehicle position mark may deviate from the correct position.

viii. When the engine switch is turned on (ACC or IG) on a turntable before parking, the current vehicle position mark may not indicate the correct direction. The same will occur when the vehicle comes out of the parking garage.

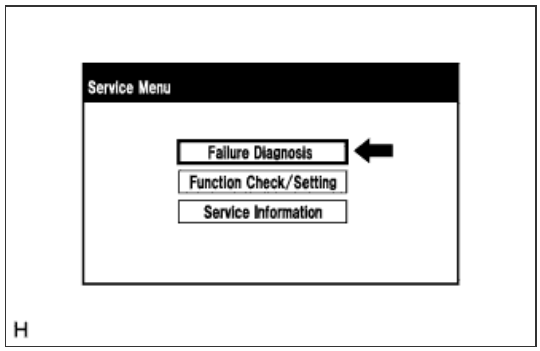


ix. When the vehicle travels on a snowy road or a mountain path with tire chains installed or using a spare tire, the current vehicle position mark may deviate from the correct position.

x. When the tires are changed, the current vehicle position mark may deviate from the correct position.

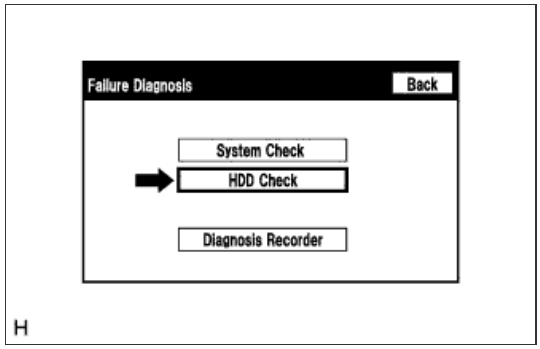
**HINT:**

- **A change in tire diameter may cause a speed sensor error.**
- **Performing "tire change" in calibration mode will allow the system to correct the current vehicle position faster.**



## CHECK HARD DISK DRIVE

**HINT:**



- **Check the hard disk drive (HDD) built into the multi-media module receiver assembly.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

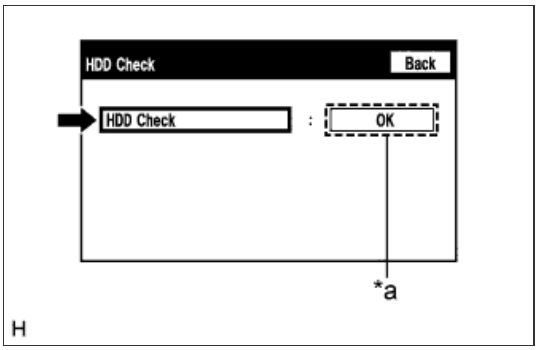
a. Enter diagnostic mode (Click here).

b. Select "Failure Diagnosis" from the "Service Menu" screen.

c. Select "HDD Check" from the "Failure Diagnosis" screen.

d. HDD check

i. Select "HDD Check" to start the HDD check.



ii. Check that the result is displayed when the HDD check is completed.

**Screen Description**

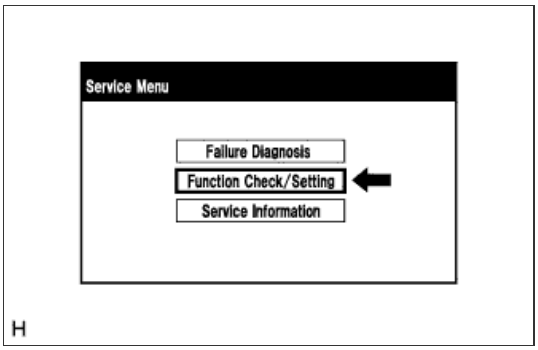
| Result | Description |
|---|---|
| Checking | While the check is in progress |
| OK | Hard disk drive is normal |
| NG | Hard disk drive is malfunctioning |

**Text in Illustration**

| | |
|---|---|
| *a | Result |

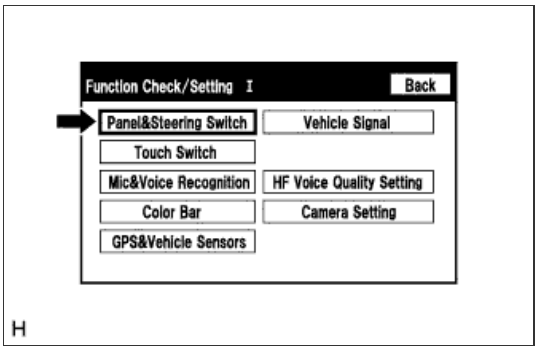
**HINT:**

- **After selecting "HDD Check", it may take a while until the result is displayed.**
- **If the cabin temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher, the HDD may not operate normally, and "NG" may be shown on the display. Make sure to perform the inspection with the cabin at an appropriate temperature.**
- **If "NG" is displayed even when the cabin temperature is appropriate, replace the HDD with a new one.**



## CHECK PANEL&STEERING SWITCH

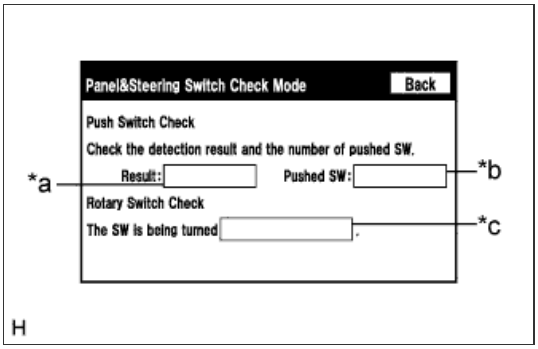
**HINT:**



- **The multi-media module receiver assembly panel switches and steering switch are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.



c. Select "Panel&Steering Switch" from the "Function Check/Setting I" screen.

d. Panel&Steering Switch Check Mode

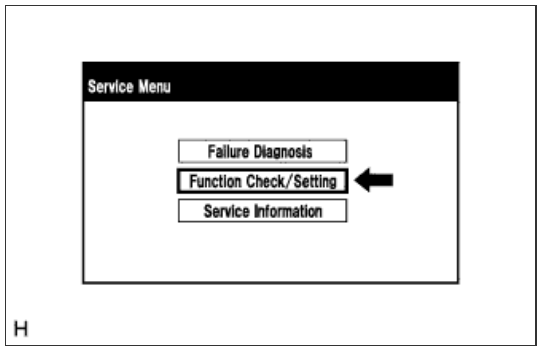
**Screen Description**

| Display | Content |
|---|---|
| *a: Switch condition | "Pushed" is displayed when any switch is pushed |
| *b: Number of switches pushed | • Number of switches pushed at once is displayed<br>• If more than 3 switches are pushed at once, "More than 3" is displayed |
| *c: Rotary switch direction | Direction of rotary switch is displayed |

i. Operate each switch and check that the switch conditions are correctly displayed.

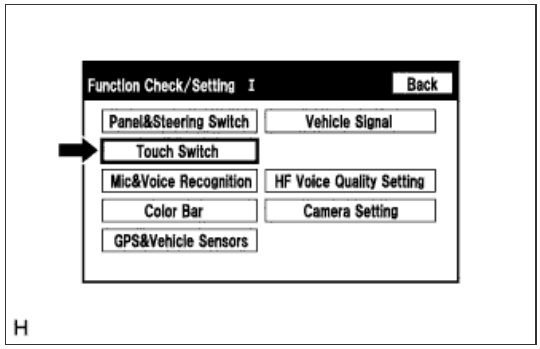
**NOTICE:**

When the "SETUP" switch is pressed and held for 3 seconds or more, diagnostic mode will be canceled.



## CHECK TOUCH SWITCH

**HINT:**

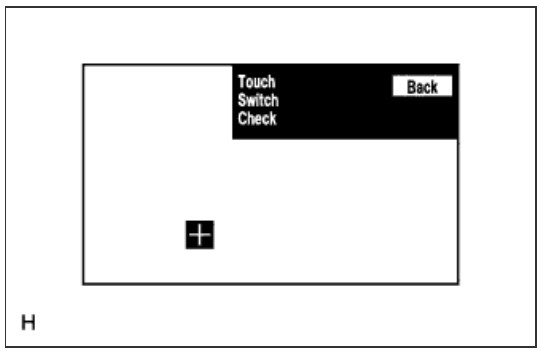


- **The touch switches on the screen are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "Touch Switch" from the "Function Check/Setting I" screen.

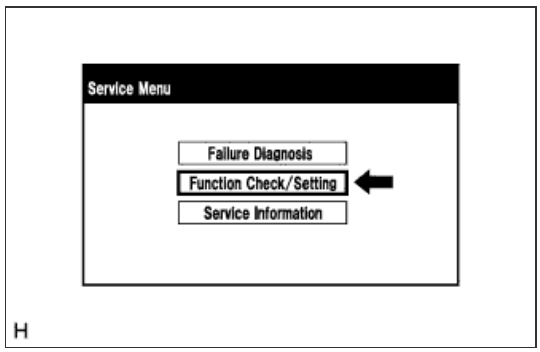


d. Touch Switch Check

i. Touch the display anywhere in the open area to perform the check when the "Touch Switch Check" screen is displayed.

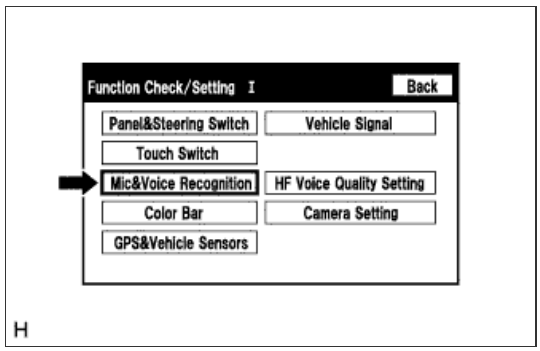
**HINT:**

- **A "+" mark is displayed where the display is touched.**
- **The "+" mark remains on the display even after the finger is removed.**



## CHECK MIC&VOICE RECOGNITION

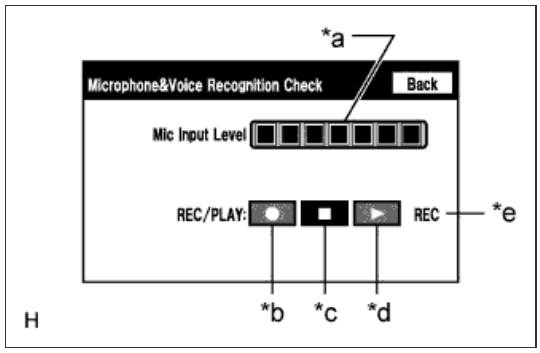
**HINT:**



- **The microphone and microphone input level are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.



c. Select "Mic&Voice Recognition" from the "Function Check/Setting I" screen.

d. Microphone&Voice Recognition Check

**Screen Description**

| Display | Content |
|---|---|
| *a: Microphone input level meter | Monitors the microphone input level every 0.1 seconds and displays the results in 8 different levels. |
| *b: Recording switch | Starts recording. |
| *c: Stop switch | Stops recording and playing. |
| *d: Play switch | Plays the recorded voice. |
| *e: Recording indicator | Comes on while recording. |

i. When speaking into the microphone, check that the microphone input level meter changes according to the input level.

ii. Select the recording switch and perform voice recording.

**HINT:**

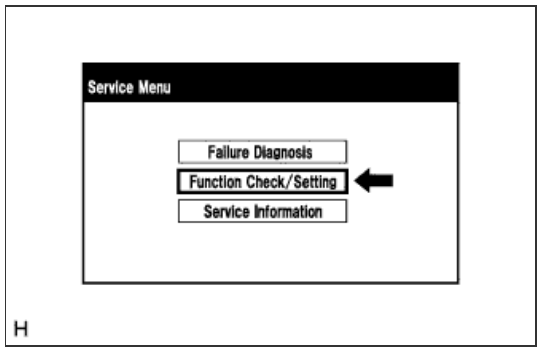
Select the recording switch with the blower motor of the air conditioning system stopped. If an outlet of the air conditioning system is facing the microphone, noise may be recorded.

iii. Check that the recording indicator remains on while recording and that the recording can be played normally.

**HINT:**

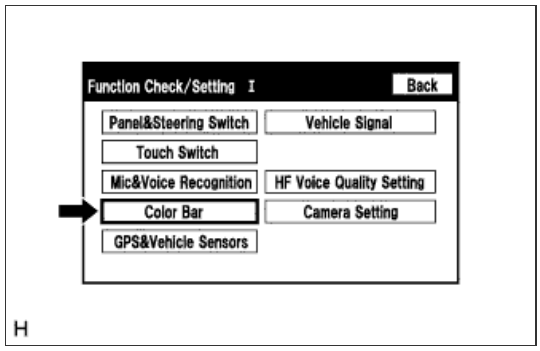
- **For details of this function, refer to Diagnosis Display Detailed Description in System Description ( Click here).**
- **This function is controlled by the multi-media module receiver assembly (built-in navigation ECU).**

## CHECK COLOR BAR



**HINT:**

- **The display color on the screen is checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed**

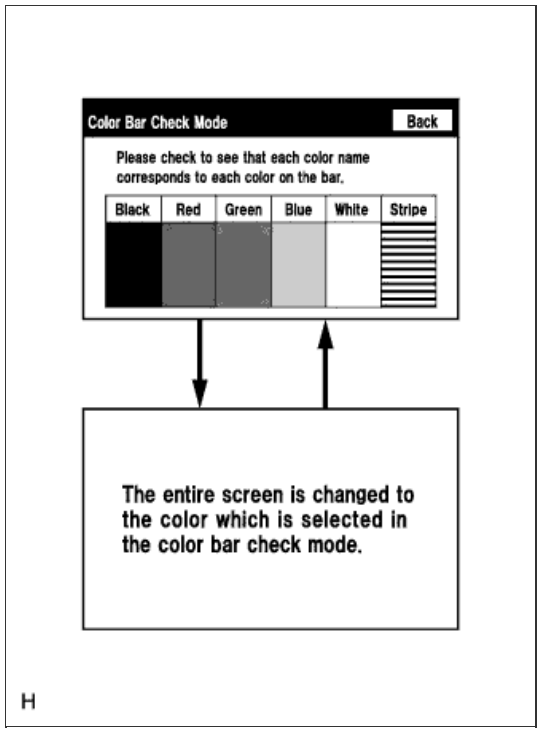


**areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "Color Bar" from the "Function Check/Setting I" screen.



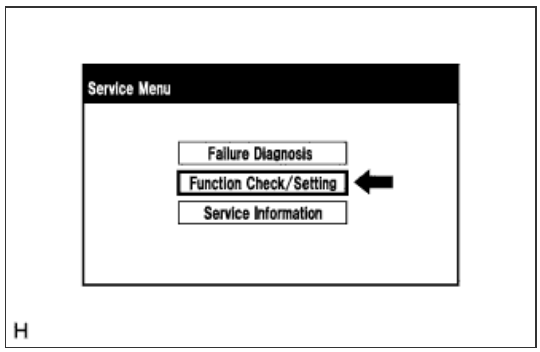
d. Color Bar Check Mode

i. Select a color bar from the "Color Bar Check Mode" screen.

ii. Check the display color.

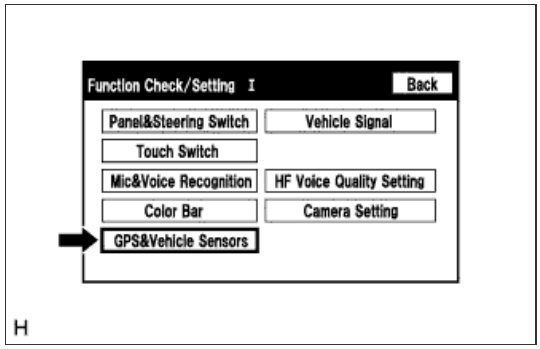
**HINT:**

- **The entire screen turns to the color or stripe selected.**
- **Touching the display will return to the "Color Bar Check Mode" screen.**



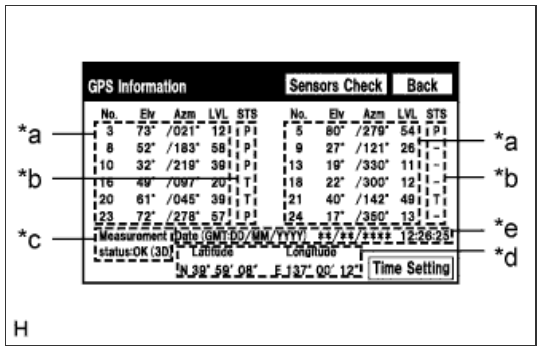
## CHECK GPS&VEHICLE SENSORS

**HINT:**



- **GPS information, vehicle signals and sensor signals are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).



b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "GPS&Vehicle Sensors" from the "Function Check/Setting I" screen.

d. GPS Information

***a: Satellite Information Description**

| Display | Content |
|---|---|
| No. | Number of the target GPS satellite. |
| Elv | Elevation angle of the target GPS satellite. |
| Azm | Direction of the target GPS satellite. |
| LVL | The GPS signal level |

***b: Receiving Condition Description**

| Display | Content |
|---|---|
| P | The system is using the GPS signal for location. |
| T | The system is tracking the GPS signal for location. |
| U | The system is receiving a GPS signal, but is not using it for location. |
| - | The system cannot receiver a GPS signal (Searching a GPS Signal). |

***c: Measurement Status Description**

| Display | Content |
|---|---|
| OK (H3D) | High accuracy 3-dimensional location method is being used. |
| OK (H2D) | High accuracy 2-dimensional location method is being used. |
| OK (3D) | 3-Dimensional location method is being used. |
| OK (2D) | 2-Dimensional location method is being used. |
| NG | Location data cannot be used. |
| error | Reception error has occurred. |
| - | Any other state. |

***d: Position Information Description**

| Display | Content |
|---|---|
| Position | Latitude and longitude information on the current position is displayed. |

***e: Date Information Description**

| Display | Content |
|---|---|

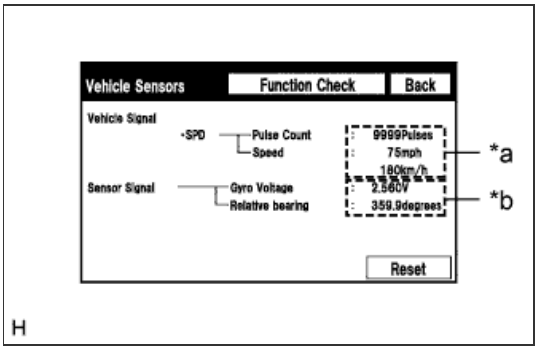
| | |
|---|---|
| Date | The date/time information obtained from GPS signals is displayed in Greenwich Mean Time (GMT). |

**HINT:**

- **This screen is updated once per second.**
- **Information from a maximum of 12 satellites is displayed on the screen.**

i. When the "GPS Information" screen is displayed, check the GPS conditions.

e. Select "Sensors Check" from the "GPS Information" screen.



f. Vehicle Sensors

**Screen Description**

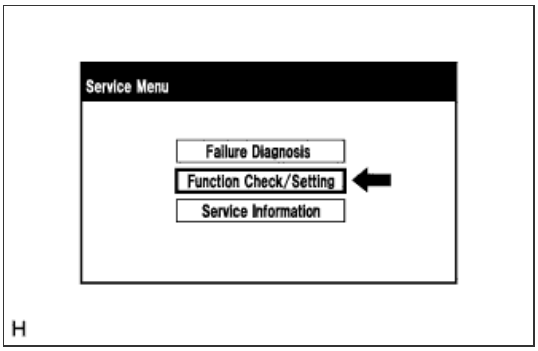
| Display | Content |
|---|---|
| *a: Vehicle signal | Vehicle speed signal condition is displayed. |
| *b: Sensor signal | Gyro sensor output condition is displayed. |

**HINT:**

This screen is updated once per second.

H

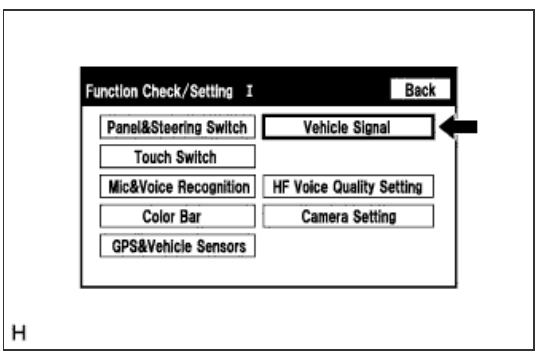
i. Check all the signals and sensors when vehicle signal information is displayed.



## CHECK VEHICLE SIGNALS

**HINT:**

- **Vehicle signals received by the multi-media module receiver assembly are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

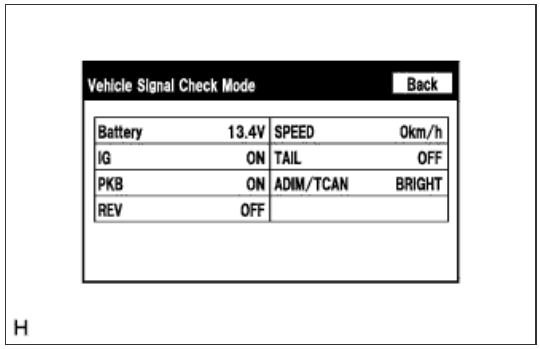


a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

H

c. Select "Vehicle Signal" from the "Function Check/Setting I" screen.



H

d. Vehicle Signal Check Mode

d. Vehicle Signal Check Mode

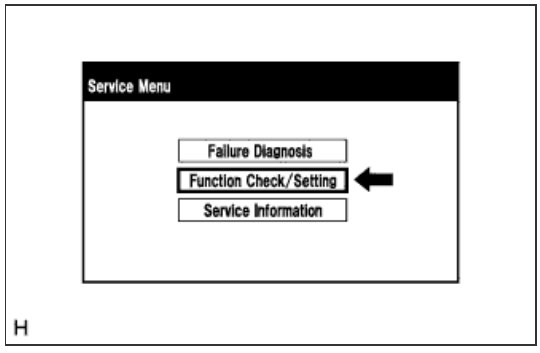
i. When the "Vehicle Signal Check Mode" screen is displayed, check all the vehicle signal conditions.

**Screen Description**

| Display | Content |
|---|---|
| Battery | Battery voltage is displayed. |
| IG | Engine switch ON/OFF state is displayed. |
| PKB | Parking brake ON/OFF state is displayed. |
| REV | Reverse signal ON/OFF state is displayed. |
| SPEED | Vehicle speed is displayed in km/h. |
| TAIL | Tail signal (Light control switch) ON/OFF state is displayed. |
| ADIM/TCAN | Brightness state DIM (with) / BRIGHT (without) is displayed. |

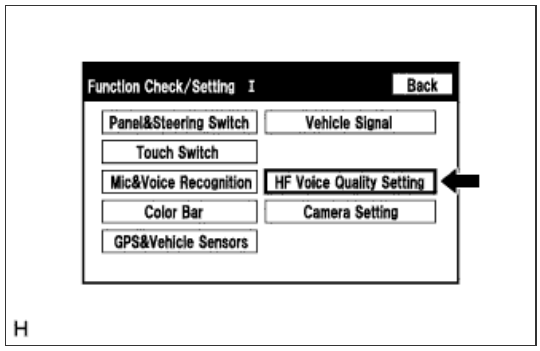
**HINT:**

- **Only conditions having inputs are displayed.**
- **This screen displays vehicle signals input to the multi-media module receiver assembly (built-in navigation ECU).**
- **For details of this function, refer to Diagnosis Display Detailed Description in System Description ( Click here).**



## CHECK HANDS-FREE VOICE QUALITY AND VOLUME SETTING

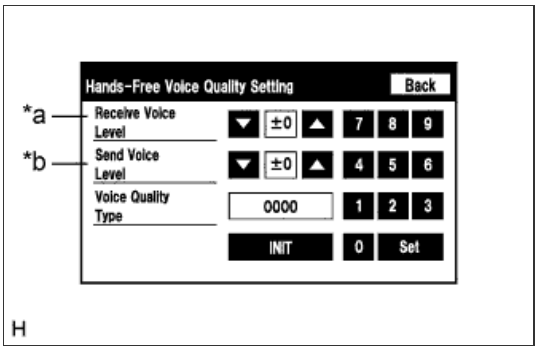
**HINT:**



- **The hands-free volume of a "Bluetooth" compatible phone can be adjusted using the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.



c. Select "HF Voice Quality Setting" from the "Function Check/Setting I" screen.

d. Hands-Free Voice Quality Setting (Receive/Send Voice Level adjustment)

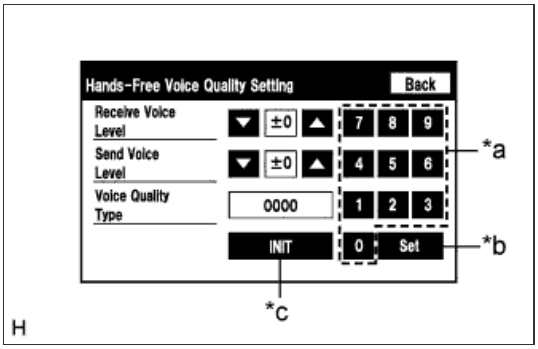
**Screen Description**

| Display | Content |
|---|---|
| *a: Receive voice level adjustment | Setting for the voice level received from "Bluetooth" compatible phones. |
| *b: Send voice level adjustment | Setting for the voice level sent from "Bluetooth" compatible phones. |

**NOTICE:**

Sound quality may deteriorate when the receive voice or send voice level is changed more than necessary. For this reason, check that the received voice or sent voice quality is still acceptable after changing this setting.

i. If the voice level is low, press the up button, and if the voice level is loud, press the down button.



**HINT:**

- **Settings will be applied when the up or down button is selected.**
- **The received voice level adjustment ranges from -5 to +1.**
- **The sent voice level adjustment ranges from -5 to +4.**
- **The initial level is "0".**

e. Hands-Free Voice Quality Setting (Voice Quality Type adjustment)

**Screen Description**

| | |
|---|---|
| *a | Numeric keypad |
| *b | Setting button |
| *c | Reset button |

i. If necessary, refer to the table below to adjust the voice quality type with the numeric keypad.

ii. When adjusting the settings, use the number pad on the screen to input the voice quality type according to the table.

**Settings**

| Parameter | Target Phenomenon | Voice Quality Type | Positive Effect of Changing Voice Quality | Negative Effect of Changing Voice Quality |
|---|---|---|---|---|
| A (Noise) | The change in background noise the other party hears becomes unpleasant. | 1000 | The change in background noise the other party hears is reduced. | Background noise when not talking becomes large. |
| B (Noise) | The volume of the noise the other party hears temporarily becomes large. | 2000 | The temporary noise is reduced. | The volume of voice may drop temporarily. |
| C (Echo) | The other party hears weak echoes. | 0100 | The amount of echo is reduced (low level). | Sound quality of the other party deteriorates (low level). |
| D (Echo) | The other party hears strong echoes. | 0200 | The amount of echo is reduced (high level). | Sound quality of the other party deteriorates (high level). |
| E (Quality) | The other party hears harsh noises. | 0010 | Sound the other party hears becomes soft. | Sound the other party hears becomes muffled. |
| F (Quality) | You hear harsh noises. | 0020 | Sound you hear becomes soft. | Sound you hear becomes muffled. |

**Settings (When multiple phenomenon occurred)**

| Parameter | Target Phenomenon | Voice Quality Type | Positive Effect of Changing Voice Quality | Negative Effect of Changing Voice Quality |
|---|---|---|---|---|
| A+C | The change in background noise the other party hears becomes unpleasant | 1100 | • The change in background noise the other party hears is reduced. | • Background noise when not talking becomes large.<br>• Sound |

| | | | | |
|---|---|---|---|---|
| | and the other party hears weak echoes. | | • The amount of echo is reduced (low level). | quality of the other party deteriorates (low level). |
| A+D | The change in background noise the other party hears becomes unpleasant and the other party hears strong echoes. | 1200 | • The change in background noise the other party hears is reduced.<br>• The amount of echo is reduced (high level). | • Background noise when not talking becomes large.<br>• Sound quality of the other party deteriorates (high level). |
| B+C | The volume of the noise the other party hears temporarily becomes large and the other party hears weak echoes. | 2100 | • The temporary noise is reduced.<br>• The amount of echo is reduced (low level). | • The volume of voice may drop temporarily.<br>• Sound quality of the other party deteriorates (low level). |
| B+D | The volume of the noise the other party hears temporarily becomes large and the other party hears strong echoes. | 2200 | • The temporary noise is reduced.<br>• The amount of echo is reduced (high level). | • The volume of voice may drop temporarily.<br>• Sound quality of the other party deteriorates (high level). |
| C+E | The other party hears weak echoes and harsh noises. | 0110 | • The amount of echo is reduced (low level).<br>• Sound the other party hears becomes soft. | • Sound quality of the other party deteriorates (low level).<br>• Sound the other party hears becomes muffled. |
| C+F | The other party hears weak echoes and you hear harsh noises. | 0120 | • The amount of echo is reduced (low level).<br>• Sound you hear becomes soft. | • Sound quality of the other party deteriorates (low level).<br>• Sound you hear becomes muffled. |

**HINT:**

- **The default value is "0000".**
- **Settings will be applied when the setting button is selected.**
- **If voice quality type values that are not in the table are input, the setting will not be applied and a positive effect may not be gained.**
- **If the quality of phone calls decreases due to the changed settings, return the settings to "0000" by pressing the "INIT" switch.**

## CHECK SOFTWARE ERROR HISTORY

**HINT:**

This function is used to check the cause when the multi-media module receiver assembly screen is blacked out.

a. Check software error history.

i. Connect the intelligent tester to the DLC3.

ii. Turn the engine switch on (IG).

iii. Turn the intelligent tester on.

iv. Enter the following menus: Body Electrical / Navigation System / Utility / Software Error History.

v. When an item is stored for Software Error History, record it before repairing the multi-media module receiver assembly.

**Software Error History Screen Description**

| Error Description | Trigger | Detail |
|---|---|---|
| Software Reset | Navi Microcomputer | Hexadecimal Number |
| | Audio Microcomputer | |
| | CAN Microcomputer | |
| No Video Signal | Front Monitor | |
| | Rear Monitor | |
| MOST Cold Restart | Always | |

**HINT:**

- **Software Error History can store up to 5 history data items. If a new software error occurs when 5 data items have already been stored, the oldest data is cleared and the new data is stored.**
- **If an error that is unsupported by the intelligent tester occurs, a "-" is displayed for the display items.**

b. Clear software error history.

i. When DTCs are cleared using any of the following operations, Software Error History will be cleared as well ( Click here).

- Cleared using the intelligent tester.
- Cleared using the system check mode screen.
- Cleared using the unit check mode screen.

## CHECK OPTICAL DISC ERROR HISTORY

**HINT:**

This function is used to check the cause of an optical disc error.

a. Check optical disc error history.

i. Connect the intelligent tester to the DLC3.

ii. Turn the engine switch on (IG).

iii. Turn the intelligent tester on.

iv. Enter the following menus: Body Electrical / Navigation System / Utility / Optical Disc Error History.

v. When an item is stored for Optical Disc Error History, record it before proceeding with troubleshooting.

**Optical Disc Error History Screen Description**

| Display | Content |
|---|---|
| Error Type | Displays the type of error. |
| Device | Displays the malfunctioning device. |
| Date | Displays the date and time that the malfunction occurred. |

**"Error Type" Screen Description**

| Error Type | Detection Condition | Action |
|---|---|---|
| Read Error | When a disc read error occurs. | |
| Disc damaged/up | When it is determined that any of the following is the cause of the disc read error:<br>• The disc cannot be read.<br>• The disc cannot be read because of dirt or | |

| | | |
|---|---|---|
| side down/dirty | scratches.<br>• The disc cannot be read because it is inserted up side down. | Proceed to next suspected area shown in Problem Symptoms Table (Click here) |
| Cannot determine disc type | An unsuitable disc is inserted. | |
| DPS error | When an error occurs while decoding MP3/WMA files. | |
| Some files are corrupt | • When MP3/WMA files cannot be played back because they are unsupported.<br>• Even though the file extensions are MP3 or WMA, files cannot be played back because the header information cannot be read. | |
| Some files cannot be found | • When a disc without music data is played back.<br>• When there are no playable MP3/WMA files. | |
| Copy protection violation | When a file with copyright protection that cannot be played back is played back. | |

**"Device" Screen Description**

| Device | Component |
|---|---|
| DVD-P | Multi-media module receiver assembly |
| CD-P | Not available |
| R-Seat DVD-P | Not available |

**HINT:**

- **Optical Disc Error History can store up to 7 history data items. If a new optical disc error occurs when 7 data items have already been stored, the oldest data is cleared and the new data is stored.**
- **If an error that is unsupported by the intelligent tester occurs, a "-" or blank is displayed for the display items.**

b. Clear optical disc error history.

i. When DTCs are cleared using any of the following operations, Optical Disc Error History will be cleared as well ( Click here).

- Cleared using the intelligent tester.
- Cleared using the system check mode screen.
- Cleared using the unit check mode screen.

## MAP INFORMATION

**HINT:**

This function is used to check the map version of the navigation system and the end date of the map update service.

a. Check map information.

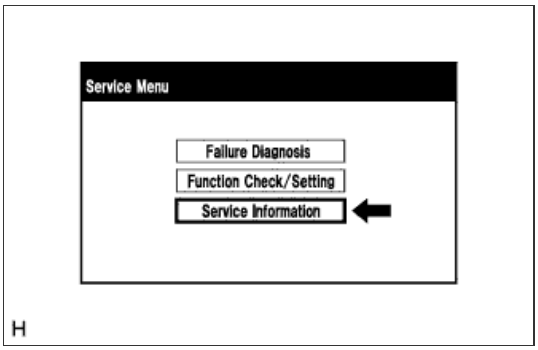
i. Connect the intelligent tester to the DLC3.

ii. Turn the engine switch on (IG).

iii. Turn the intelligent tester on.

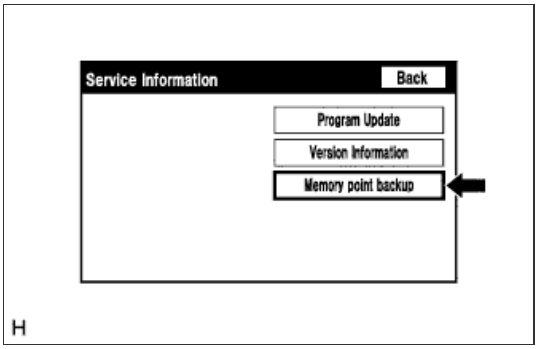
iv. Enter the following menus: Body Electrical / Navigation System / Utility / Map Information.

v. Check the map version and the end date of the map update service.



## CLEAR PASSWORD OF EXPORT/IMPORT MEMORY POINT FUNCTION

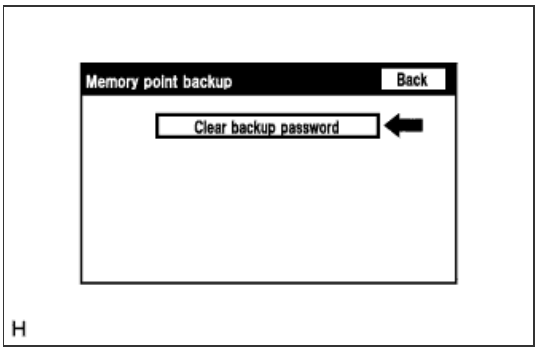
**HINT:**



- **This function allows the initialization of a password which was set on the multi-media module receiver assembly when exporting/importing memory points.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (See page ).

b. Select "Service Information" from the "Service Menu" screen.



c. Select "Memory point backup" from the "Service Information" screen.

d. Clear backup password

**HINT:**

Depending on the manufacturer, some component names and versions will be displayed differently.

i. Select "Clear backup password".

**for Preparation** Click here

**HINT:**

Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

### Display Function

| Symptom | Suspected Area | See page |
|---|---|---|
| Pressing multi-display main switch does not turn on system. | Multi-display Power Source Circuit | Click here |
| | AVC-LAN Circuit | Click here |
| | Replace multi-display | Click here |
| Black screen (no image appears on navigation/audio screen). | Proceed to "No Image Appears on Multi-display" | Click here |
| | Multi-display Power Source Circuit | Click here |
| | Illumination Circuit | Click here |
| | AVC-LAN Circuit | Click here |
| | Replace multi-display | Click here |
| Illumination for panel switch does not come on with TAIL switch on. | Proceed to "Illumination for Panel Switch does not Come on with Tail Switch ON" | Click here |
| | Illumination Circuit | Click here |
| | Replace multi-display | Click here |
| Display does not dim (night screen) with light control switch turned on. | Proceed to "Display does not DIM when Light Control Switch is turned ON" | Click here |
| | Replace multi-display | Click here |
| Power does not turn off (the screen remains on). | Proceed to "Multi-display Power Source Circuit" | Click here |
| | Replace multi-display | Click here |
| Panel switches do not function. | Proceed to "Panel Switches do not Function" | Click here |
| | Proceed to "Steering Pad Switch Circuit" | Click here |
| | Proceed to "Multi-display Power Source Circuit" | Click here |
| | Replace multi-display | Click here |
| Touch panel switch does not function. | Proceed to "Touch Panel Switch does not Function" | Click here |
| | Proceed to "Steering Pad Switch Circuit" | Click here |
| | Replace multi-display | Click here |
| Navigation screen is not displayed. | Replace Map disc | - |
| | Replace navigation ECU | Click here |

| Voice guidance does not function. | Proceed to "Voice Guidance does not Function" | Click here |
| | Proceed to "Speaker Circuit" | Click here |
| | Multi-media module receiver assembly | Click here |
| | Stereo component amplifier assembly | Click here |
| Map display is incomplete. | Hard disc | Click here |
| | Multi-media module receiver assembly | Click here |
| Route cannot be calculated. | Proceed to "Route cannot be Calculated" | Click here |
| | Multi-media module receiver assembly | Click here |
| Screen does not change to night screen even when tail switch is turned on. | Proceed to "Display does not Dim when Light Control Switch is Turned ON" | Click here |
| | Proceed to "Illumination Circuit" Multi-display | Click here |
| | Multi-media module receiver assembly | Click here |
| Navigation ECU cannot record memory point registration or each item setting. | Hard disc | Click here |
| | Multi-media module receiver assembly | Click here |
| A message indicating to wait for a while because of low temperature is displayed. | Start the engine and increase cabin temperature (near multi-media module receiver assembly) | - |
| | Proceed to "Check Hard Disk Drive" in Operation Check | Click here |
| | Multi-media module receiver assembly | Click here |
| A message is displayed because map data cannot be read, and current position screen is not displayed. | If message appears only when driving on rough roads, check if message disappears when vehicle is stopped. | - |
| | Hard disc | Click here |
| | Multi-media module receiver assembly | Click here |
| Map screen turns white or blue. (GPS receiving status is displayed normally, and switches and own vehicle position mark are also displayed normally.) | Change map scale to smallest (a scale that shows a large area) | - |
| | Hard disc | Click here |
| | Multi-media module receiver assembly | Click here |
| Voice menu screen is not displayed. | Proceed to "Panel Switches do not Function" | Click here |
| | Proceed to "Steering Pad Switch Circuit" | Click here |
| | Multi-media module receiver assembly | Click here |
| | Proceed to "Panel Switches do not Function" | Click here |
| | Proceed to "Steering Pad Switch Circuit" | Click here |

| | | |
|---|---|---|
| Voice is not recognized. | Proceed to "Voice is not Recognized" | Click here |
| | Proceed to "Microphone Circuit between Microphone and Radio Receiver" | Click here |
| | Multi-media module receiver assembly | Click here |
| Customizable parameters cannot be changed. (Customizable parameters can be changed by using the intelligent tester.) | Multi-media module receiver assembly | Click here |
| Reverse signal does not change in vehicle signal check mode. | Check shift indicator display on combination meter. | - |
| | Multi-media module receiver assembly | Click here |
| Parking brake signal does not change in vehicle signal check mode. | Proceed to "Parking Brake Switch Circuit" | Click here |
| | Multi-media module receiver assembly | Click here |
| "MIC" is not displayed on system check mode screen. | Proceed to "Microphone Circuit between Microphone and Radio Receiver" | Click here |
| | Multi-media module receiver assembly | Click here |
| "AUX" is not displayed on system check mode screen. | Proceed to "Sound Signal Circuit between Radio Receiver and Stereo Jack Adapter" | Click here |
| | Multi-media module receiver assembly | Click here |

### Steering Pad Switch Function

| Symptom | Suspected Area | See page |
|---|---|---|
| System cannot be operated by steering pad switch. | Proceed to "Panel Switches do not Function" | Click here |
| | Proceed to "Steering Pad Switch Circuit" | Click here |
| | Multi-media module receiver assembly | Click here |
| The steering pad switch does not illuminate even when the light control switch is turned to the tail or head position. | Proceed to "Illumination Circuit" | Click here |
| | Multi-media module receiver assembly | Click here |

### "Bluetooth" Hands-free Function

| Symptom | Suspected Area | See page |
|---|---|---|
| Bluetooth is inoperative. | Proceed to "Microphone Circuit between Microphone and Radio Receiver" | Click here |
| | Multi-media module receiver assembly | Click here |
| Cellular phone registration failure. | Proceed to "Cellular Phone Registration Failure, Phonebook Transfer Failure" | Click here |
| | Multi-media module receiver assembly | Click here |
| Cellular phone cannot make outgoing/incoming calls or call in a certain place. | Proceed to "Cellular Phone cannot Make Outgoing/Incoming Calls" | Click here |
| | Multi-media module receiver assembly | Click here |
| Message that prompts to check the cellular phone is displayed. | Proceed to "Cellular Phone cannot Make Outgoing/Incoming Calls" | Click here |
| | Multi-media module receiver assembly | Click here |
| Phonebook data cannot be transferred manually or automatically. | Check the automatic download contract setting | - |
| | When transferring phonebook data, OBEX authentication may be required. Enter "1234" into the "Bluetooth" phone. | - |
| | Proceed to "Cellular Phone Registration Failure, Phonebook Transfer Failure" | Click here |
| | Multi-media module receiver assembly | Click here |

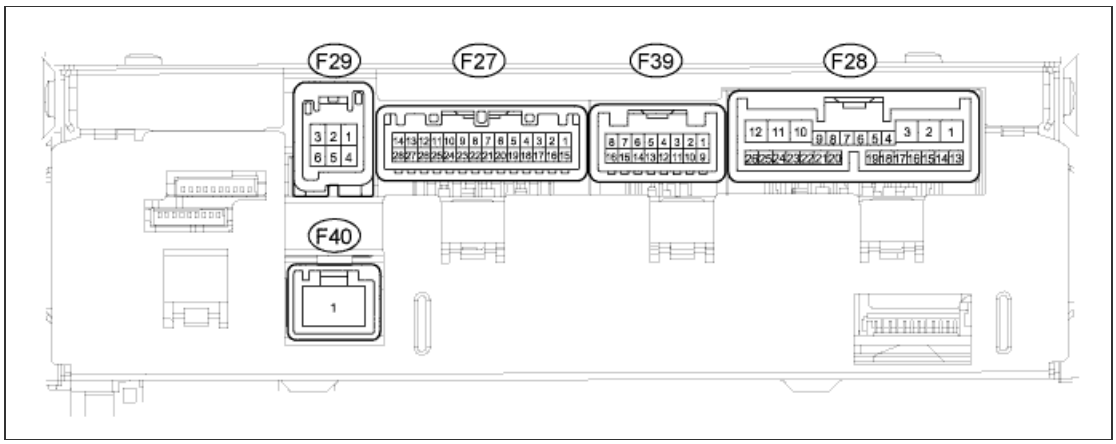
| | | |
|---|---|---|
| Volume of other caller's voice is not at an appropriate volume level, there is noise, sound quality is poor or other caller's voice cannot be heard. | Proceed to "Check Hands-free Voice Quality and Volume Setting" in Operation Check | Click here |
| | Proceed to "The Other Caller's Voice cannot be Heard, is too Quiet, or Distorted" | Click here |
| | Multi-media module receiver assembly | Click here |
| | Stereo component amplifier assembly | Click here |
| Other caller cannot hear your voice at an appropriate volume level, there is noise or an echo, sound quality is poor or other caller cannot hear your voice. | Proceed to "Check Hands-free Voice Quality and Volume Setting" in Operation Check | Click here |
| | Proceed to "The Other Caller cannot Hear Your Voice, or Your Voice is too Quiet or Distorted" | Click here |
| | Proceed to "Microphone Circuit between Microphone and Radio Receiver" | Click here |
| | Multi-media module receiver assembly | Click here |
| E-mail/SMS cannot be received or sent. (w/ Connected Service) | Check whether messages can be received/sent using the cellular phone. | - |
| | Check that the phone is registered as a hands-free device. | - |
| | Check the sending and receiving e-mails via the navigation system setting. | - |
| | Proceed to "Cellular Phone Registration Failure, Phonebook Transfer Failure" | Click here |
| | Multi-media module receiver assembly | Click here |

### Fuel Consumption Function

| Symptom | Suspected Area | See page |
|---|---|---|
| "Fuel Consumption" icon is dimmed. | Check if other icons or items displayed on screen have any problems. | - |
| | Multi-media module receiver assembly | Click here |
| Graph is not displayed on "Trip Information" screen. | Recheck with the engine running. | - |
| | Multi-media module receiver assembly | Click here |
| Cruise range is not displayed on "Trip Information" screen. | Turn engine switch on (IG) and recheck. | - |
| | Multi-media module receiver assembly | Click here |
| Graph is not updated on "Past record" screen even though "Clear" is selected. | Turn engine switch on (IG) and recheck. | - |
| | Multi-media module receiver assembly | Click here |
| Graph is not displayed on "Past record" screen. | Turn engine switch on (IG) and recheck. | - |
| | Multi-media module receiver assembly | Click here |

### Connected Services (w/ Connected Services)

| Symptom | Suspected Area | See page |
|---|---|---|
| Connection to the search engine fails. | Check "Connected Services" in System Description | Click here |
| | Contact the mobile network provider and check if the items in "Detail Setting" are set correctly. | - |
| | Check if the cellular phone is in standby mode. | - |
| | Check if the cellular phone is compatible with the connected service. | - |
| | Multi-media module receiver assembly | Click here |
| POIs are not displayed on the list. (When using a USB device) | Check if POIs are stored in USB device root folders. | - |
| | Check that POIs with extension .csi are stored in the USB device. | - |
| | Check that 8.3 filename is used for POIs. | - |
| | Check that the file size of POIs is not 400 kb or more. | - |
| | Check that nothing has been changed for downloaded POIs other than renaming them. | - |
| | | Click |



| | | |
|---|---|---|
| | Multi-media module receiver assembly | here |
| POIs cannot be registered to the navigation system. | Check if the maximum number of memory points has been registered. | - |
| | Check that nothing has been changed for downloaded POIs other than renaming them. | - |
| | Multi-media module receiver assembly | Click here |

### TPEG Information (w/ Connected Services)

| Symptom | Suspected Area | See page |
|---|---|---|
| TPEG information is not displayed on the navigation screen. | Check that "Show traffic info" is set to on. | - |
| | Check whether the area is where TPEG information can be received. | - |
| | Multi-media module receiver assembly | Click here |
| TPEG provider logo mark is not displayed on the information screen. | Check if the DAB function for audio is being used. | - |
| | Check if the select traffic info service is set to AUTO. | - |
| | Check whether DAB could be received. | - |
| | Proceed to "Check DAB Reception" in Operation Check | Click here |
| | Multi-media module receiver assembly | Click here |
| Detoured search using TPEG information does not operate. | Check that "Show traffic info" is set to on. | - |
| | Check that "Realtime traffic events" or "Predictive traffic events" are set to on. | - |
| | Multi-media module receiver assembly | Click here |

**for Preparation** Click here

## CHECK MULTI-DISPLAY

a. Disconnect the F28 and F39 display connectors.

b. Measure the resistance and voltage according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F28-1 (+B1) - F28-10 (GND1) | R - W-B | Battery | Always | 10.5 to 16 V |
| F28-2 (ACC) - F28-10 (GND1) | GR - W-B | Accessory (ON) | Engine switch off | Below 1 V |
| | | | Engine switch on (ACC) | 10.5 to 16 V |
| F28-3 (IG) - F28-10 (GND1) | G - W-B | Ignition (ON) | Engine switch off | Below 1 V |
| | | | Engine switch on (IG) | 10.5 to 16 V |
| F28-10 (GND1) - Body ground | W-B - Body ground | Ground | Always | Below 1 Ω |
| F39-6 (GND2) - Body ground | B - Body ground | Ground | Always | Below 1 Ω |

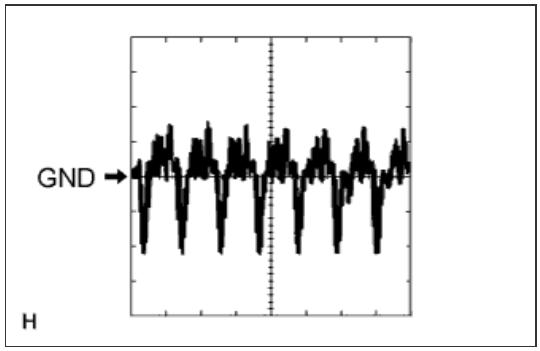
If the result is not as specified, there may be a malfunction on the wire harness side.

c. Reconnect the F28 and F39 display connectors.

d. Measure the voltage and waveform according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F27-1 (TX-) - F28-10 (GND1) | L - W-B | AVC-LAN communication signal | Engine switch on (ACC) | 2.25 to 2.75 V |
| F27-2 (TX+) - F28-10 (GND1) | W - W-B | AVC-LAN communication signal | Engine switch on (ACC) | 2.25 to 2.75 V |
| F27-3 (TX2-) - F28-10 (GND1) | L - W-B | AVC-LAN communication signal | Engine switch on (ACC) | 2.25 to 2.75 V |
| F27-4 (TX2+) - F28-10 (GND1) | W - W-B | AVC-LAN communication signal | Engine switch on (ACC) | 2.25 to 2.75 V |
| F27-5 (TSW-) - F28-10 (GND1) | BR - W-B | Telephone relation switch signal | Always | Below 1 V |
| F27-9 (MACC) - F28-10 (GND1) | Y - W-B | Microphone amplifier power supply | Engine switch off | Below 1 V |
| | | | Engine switch on (IG) | 4.75 to 5.25 V |
| F27-10 (MIN-) - F28-10 (GND1) | R - W-B | Microphone voice signal | See "Microphone & Voice Recognition Check" (Click here) | - |
| F27-11 (MIN+) - F28-10 (GND1) | G - W-B | Microphone voice signal | See "Microphone & Voice Recognition Check" (Click here) | - |
| F27-12 (SGND) - F28-10 (GND1) | BR - W-B | Signal ground | Always | Below 1 V |

| | | | | |
|---|---|---|---|---|
| F27-13 (CA+) - F28-10 (GND1)*1 | B - W-B | Television camera power supply | Engine switch on (IG), shift lever moved to R | 5.8 to 6.5 V |
| F27-14 (CGND) - Body ground*1 | W - Body ground | Ground | Always | Below 1 V |
| F27-21 (IVO-) - F28-10 (GND1) | B - W-B | Voice guidance signal | Voice guidance provided | Waveform synchronized with sounds is output |
| F27-22 (IVO+) - F28-10 (GND1) | W - W-B | Voice guidance signal | Voice guidance provided | Waveform synchronized with sounds is output |
| F27-23 (SLD) - F28-10 (GND1) | Shielded - W-B | Shielded ground | Always | Below 1 V |
| F27-27 (V+) - F27-28 (V-)*1 | R - W | Television camera image signal | Engine switch on (IG), shift lever moved to R | Pulse generation (refer to waveform 1) |
| F27-28 (V-) - F27-14 (CGND)*1 | Shielded - W | Shielded ground | Always | Below 1 V |
| F28-5 (HILL) - F28-10 (GND1) | W - W-B | Illumination signal | Light control switch off | Below 1 V |
| | | | Light control switch on | 10.5 to 16 V |
| F28-7 (TC) - F28-10 (GND1) | V - W-B | Diagnosis ON signal | Engine switch on (IG) | 9 to 14 V |
| F28-8 (HAZ) - F28-10 (GND1) | O - W-B | Hazard warning signal | Hazard warning switch off | Below 1 V |
| | | | Hazard warning switch on | 111 to 14 V |
| F28-9 (ARON) - F28-10 (GND1) | W - W-B | Front passenger side airbag ON/OFF indicator signal | Passenger airbag ON/OFF indicator off | Below 2 V |
| | | | Passenger airbag ON/OFF indicator on | 11 to 14 V |
| F28-12 (ILL+) - F28-10 (GND1) | G - W-B | Illumination signal | Light control switch off | Below 1 V |
| | | | Light control switch on | 10.5 to 16 V |
| F28-13 (REV) - F28-10 (GND1) | L - W-B | Reverse signal | See "Vehicle Signal Check" Mode (Click here) | - |
| F28-14 (SPD) - F28-10 (GND1) | V - W-B | Speed signal from combination meter | See "Vehicle Signal Check" Mode (Click here) | - |
| F28-20 (AIR) - F28-10 (GND1) | B - W-B | Front passenger side airbag ON/OFF indicator signal | Passenger airbag ON/OFF indicator off | Below 2 V |
| | | | Passenger airbag ON/OFF indicator on | 10.5 to 16 V |
| F28-21 (PBEW) - F28-10 (GND1) | Y - W-B | Passenger seat belt signal | Passenger seat occupied, seat belt fastened | 11 to 14 V |
| | | | Passenger seat occupied, seat belt unfastened | Below 2 V |
| F28-23 (PKB) - F28-10 (GND1) | Y - W-B | Parking brake signal | See "Vehicle Signal Check" Mode (Click here) | - |
| F29-1 (VV+) - F28-10 (GND1) | W - W-B | DVD image signal | DVD played on radio receiver | Pulse generation (refer to waveform 2) |
| F29-4 (VV-) - F28-10 (GND1) | B - W-B | Signal ground | Always | Below 1 V |
| F39-1 (TX4-) - F28-10 (GND1) | L - W-B | AVC-LAN communication signal | Engine switch on (ACC) | 2.25 to 2.75 V |
| F39-2 (TX4+) - F28-10 (GND1) | W - W-B | AVC-LAN communication signal | Engine switch on (ACC) | 2.25 to 2.75 V |
| F39-3 (SGND) - F28-10 (GND1) | Shielded - W-B | Shielded ground | Always | Below 1 V |
| F39-4 (MCO-) - F28-10 (GND1) | W - W-B | Microphone voice signal | See "Microphone & Voice Recognition Check" (Click here) | - |
| F39-5 (MCO+) - F28-10 (GND1) | B - W-B | Microphone voice signal | See "Microphone & Voice Recognition Check" (Click here) | - |
| F39-7 (ACC2) - F28-10 (GND1) | GR - W-B | Accessory (ON) | Engine switch off | Below 1 V |
| | | | Engine switch on (ACC) | 10.5 to 16 V |

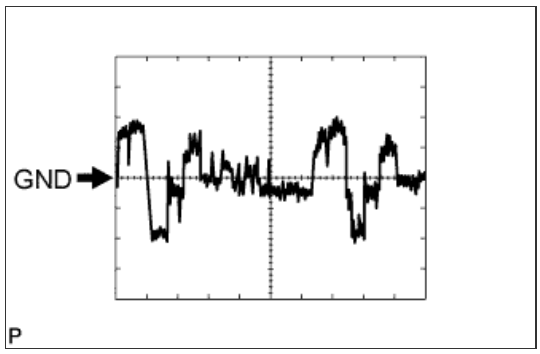


| | | | | |
|---|---|---|---|---|
| F39-10 (SI-) - F28-10 (GND1) | W - W-B | Voice guidance signal | Voice guidance provided | Waveform synchronized with sounds is input |
| F39-11 (SI+) - F28-10 (GND1) | B - W-B | Voice guidance signal | Voice guidance provided | Waveform synchronized with sounds is input |
| F39-15 (REV2) - F28-10 (GND1) | L - W-B | Reverse signal | See "Vehicle Sensors" Mode (Click here) | - |
| F39-16 (SPD2) - F28-10 (GND1) | V - W-B | Speed signal | See "Vehicle Sensors" Mode (Click here) | - |
| F40-1 (GVIF) - F28-10 (GND1)*2 | B - W-B | Digital image signal | Navigation display ON | - |

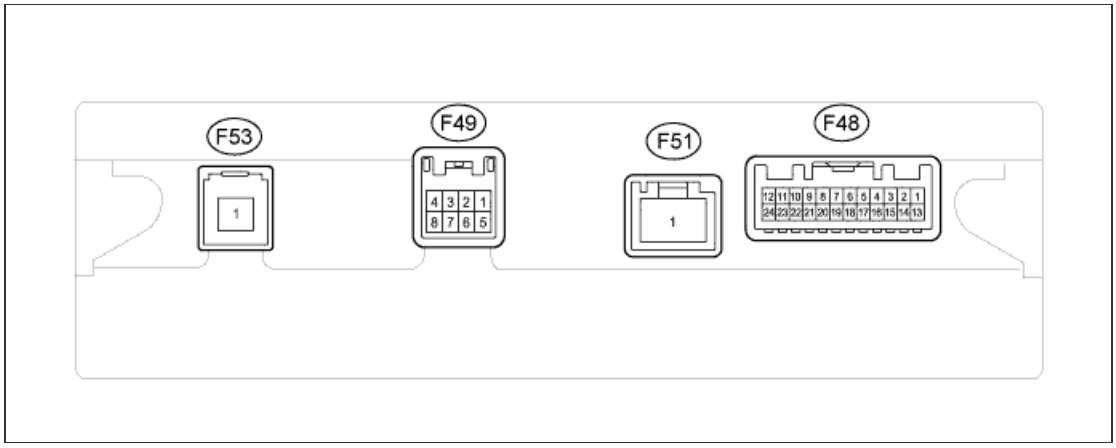
*1: w/ Rear View Monitor System
*2: w/ Parking Assist Monitor System
If the result is not as specified, the multi-display may have a malfunction.

e. Using an oscilloscope, check waveform 1.

**Waveform 1 (reference)**



| Item | Content |
|---|---|
| Terminal No. (Symbol) | F27-27 (V+) - F27-28 (V-) |
| Tool Setting | 0.2 V/DIV., 50 µs/DIV. |
| Condition | Engine switch on (IG), shift lever moved to R |



f. Using an oscilloscope, check waveform 2.

**Waveform 2 (reference)**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F29-1 (VV+) - F28-10 (GND1) |
| Tool Setting | 0.2 V/DIV., 0.2 µs/DIV. |
| Condition | Disc played on multi-display |

## CHECK NAVIGATION ECU

a. Disconnect the F48 ECU connector.

b. Measure the resistance and voltage according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F48-1 (+B) - F48-15 (GND1) | L - B | Battery | Always | 11 to 14 V |
| F48-13 (ACC) - F48-15 | | | Engine switch off | Below 1 V |

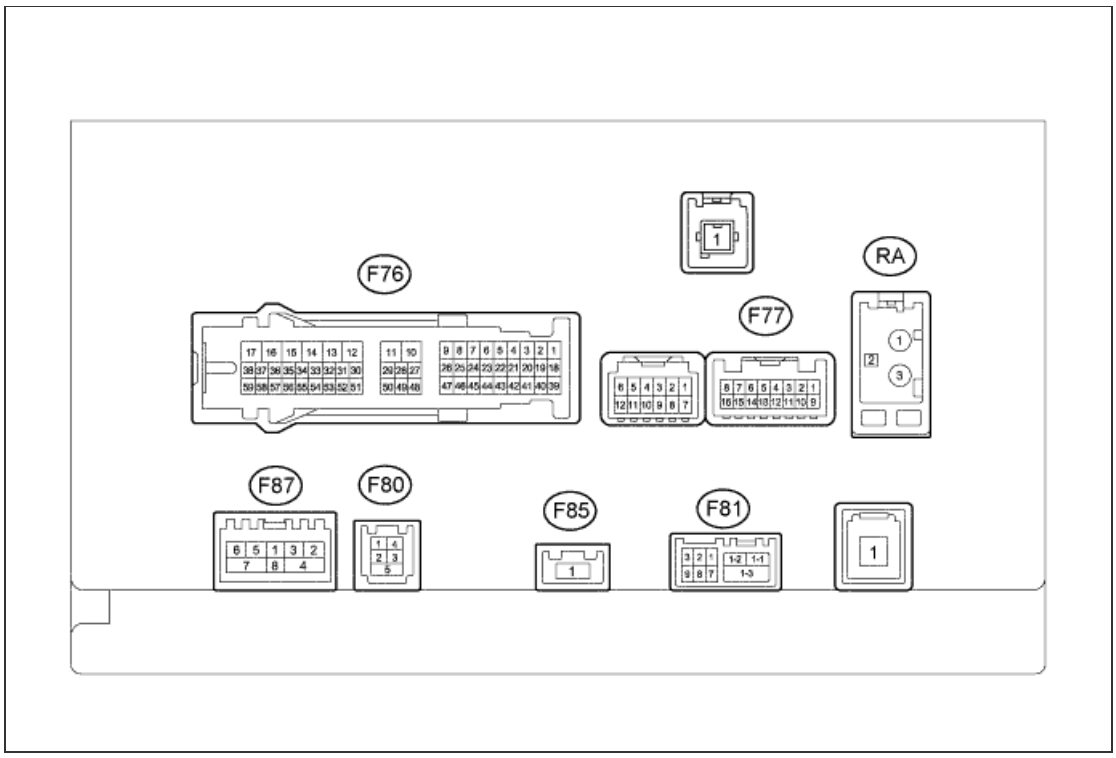
| | | | | |
|---|---|---|---|---|
| (GND1) | GR - B | Accessory (ON) | Engine switch on (ACC) | 11 to 14 V |
| F48-15 (GND1) - Body ground | B - Body ground | Ground | Always | Below 1 Ω |

If the result is not as specified, there may be a malfunction on the wire harness side.

c. Reconnect the F48 ECU connector.

d. Measure the voltage according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F48-4 (SPD) - F48-15 (GND1) | V - B | Speed signal | See "Vehicle Sensors" Mode (Click here) | - |
| F48-7 (SLD1) - F48-15 (GND1) | Shielded - B | Shielded ground | Always | Below 1 V |
| F48-8 (VOI-) - F48-15 (GND1) | W - B | Voice guidance signal | Voice guidance provided | A waveform synchronized with sounds is output |
| F48-9 (VOI+) - F48-15 (GND1) | B - B | Voice guidance signal | Voice guidance provided | A waveform synchronized with sounds is output |
| F48-18 (TX-) - F48-15 (GND1) | L - B | AVC-LAN communication signal | Engine switch on (ACC) | 2 to 3 V |
| F48-19 (TX+) - F48-15 (GND1) | W - B | AVC-LAN communication signal | Engine switch on (ACC) | 2 to 3 V |
| F48-20 (REV) - F48-15 (GND1) | L - B | Reverse signal | See "Vehicle Sensors" Mode (Click here) | - |
| F49-3 (MIC+) - F48-15 (GND1) | B - B | Microphone voice signal | See "Microphone & Voice Recognition Check" (Click here) | - |
| F49-5 (MIC-) - F48-15 (GND1) | W - B | Microphone voice signal | See "Microphone & Voice Recognition Check" (Click here) | - |
| F51-1 (GVIF) - F48-15 (GND1) | B - B | Digital image signal | Navigation display ON | Pulse generation |



If the result is not as specified, the ECU may have a malfunction.

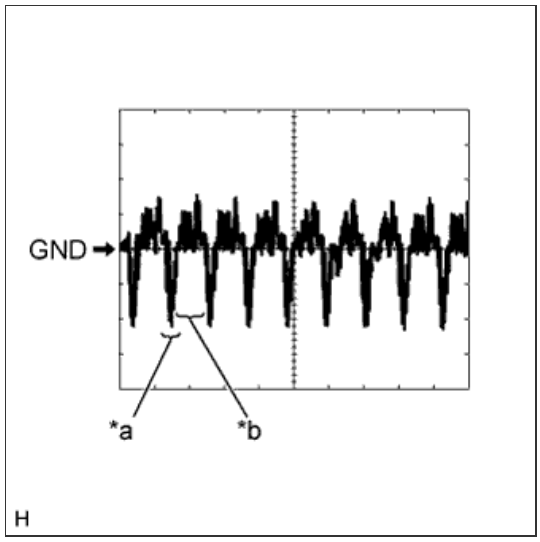
| F81-2 (USBG) - Body ground | W - Body ground | Shield ground | Always | Below 1 V |
| F81-3 (VOT+) - F76-12 (GND1) | W - W-B | Sent voice signal | Destination assist service in use and vehicle occupant speaking to operator | A waveform synchronized with the sent voice is output. |
| F81-4 (USBV) - F76-12 (GND1) | W - W-B | Telematics transceiver power supply | Engine switch on (ACC) | 4.75 to 5.25 V |
| | | | Engine switch off | Below 1 V |
| F81-5 (VOT-) - F76-12 (GND1) | R - W-B | Sent voice signal | Destination assist service in use and vehicle occupant speaking to operator | A waveform synchronized with the sent voice is output. |
| F81-6 (VOR-) - F76-12 (GND1) | B - W-B | Receive voice signal | Destination assist service in use and operator speaking to vehicle occupant | A waveform synchronized with the received voice is output. |
| F81-7 (VOR+) - F76-12 (GND1) | G - W-B | Receive voice signal | Destination assist service in use and operator speaking to vehicle occupant | A waveform synchronized with the received voice is output. |

*1: w/o Rear Seat Entertainment System
*2: w/ Rear Seat Entertainment System (for Roof)

a. Reference (Oscilloscope waveform):

i. Waveform 1

| Item | Content |
|---|---|
| Measurement Terminal | F77-6 (VV+) - F76-12 (GND1) |



| | |
|---|---|
| Measurement Setting | 200 mV/DIV., 10 µs/DIV. |
| Condition | DVD is playing |

**HINT:**

The video waveform changes according to the image input from the multi-media module receiver assembly to the multi-display assembly, but the synchronization signal does not change.

**Text in Illustration**

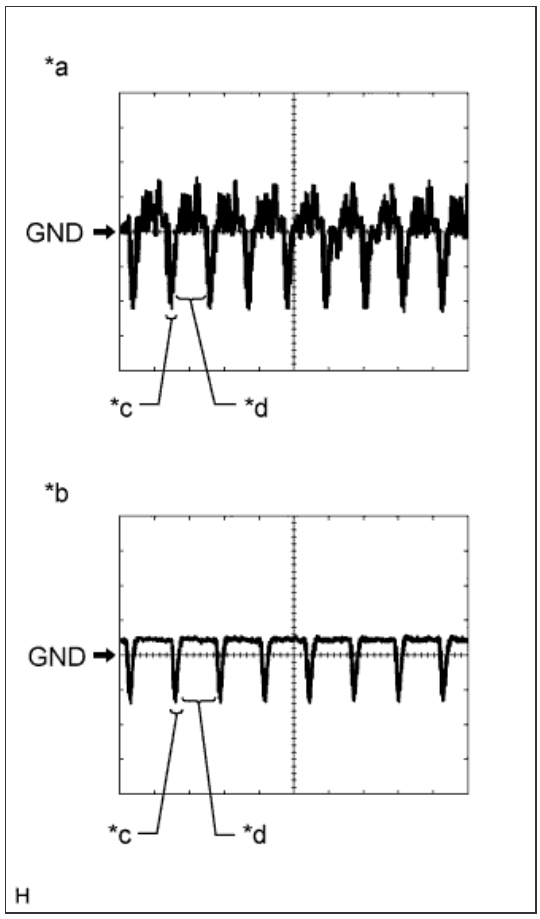
| | |
|---|---|
| *a | Synchronization Signal |
| *b | Video Waveform |

b. Reference (Oscilloscope waveform):

i. Waveform 2 (camera lens is not covered, displaying an image)

| Item | Content |
|---|---|
| Measurement terminal | F76-18 (V+) - F76-19 (V-) |
| Measurement setting | 200 mV/DIV., 50 µs/DIV. |
| Condition | Engine switch on (IG), reverse (R) selected, camera lens is not covered, displaying an image |

**HINT:**

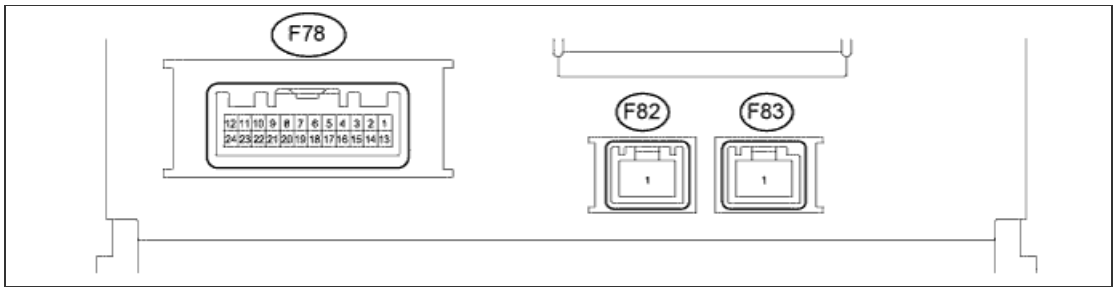


The video waveform changes according to the image from the rear television camera assembly.

ii. Waveform 3 (camera lens is covered, blacking out the screen)

| Item | Content |
|---|---|
| Measurement terminal | F76-18 (V+) - F76-19 (V-) |
| Measurement setting | 200 mV/DIV., 50 µs/DIV. |
| Condition | Engine switch on (IG), reverse (R) selected, camera lens is covered, blacking out screen |

**HINT:**



The video waveform changes according to the image from the rear television camera assembly.

**Text in Illustration**

| | |
|---|---|
| *a | Waveform 1 (camera lens is not covered, displaying an image) |
| *b | Waveform 2 (camera lens is covered, blacking out the screen) |
| *c | Synchronization Signal |
| *d | Video Waveform |

## MULTI-DISPLAY ASSEMBLY

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F78-2 (ILL) - F78-13 (GND1) | G - BR | Illumination signal | Engine switch on (IG), light control switch off → tail or head position | Below 1 V → 11 to 14 V |
| F78-3 (UPSW) | P | UART communication signal | - | - |
| F78-4 (UIND) | R | UART communication signal | - | - |
| F78-7 (TX+) | B | AVC-LAN communication signal | - | - |
| F78-11 (VMTI) - F78-13 (GND1) | V - BR | Visual mute signal | When image on display switches | 3.5 V or higher → Below 1 V → 3.5 V or higher |
| F78-12 (+B2) - F78-13 (GND1) | R - BR | Power source | Always | 11 to 14 V |
| F78-13 (GND1) - Body ground | BR - Body ground | Ground | Always | Below 1 Ω |
| F78-14 (ILL-) - F78-13 (GND1) | W - BR | Illumination signal | Engine switch on (IG), light control switch off → tail or head position | Below 1 V → Pulse generation |
| F78-19 (TX-) | W | AVC-LAN communication signal | - | - |
| F78-23 (IG) - F78-13 (GND1) | G - BR | Power source (IG) | Engine switch on (IG) | 11 to 14 V |
| | | | Engine switch off | Below 1 V |
| F78-24 (ACC) - F78-13 (GND1) | GR - BR | Power source (ACC) | Engine switch on (ACC) | 11 to 14 V |
| | | | Engine switch off | Below 1 V |

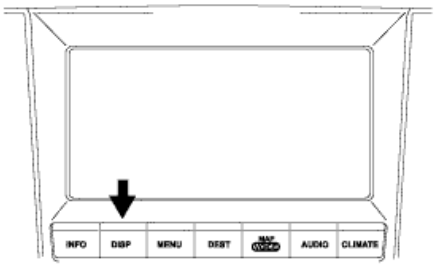
**STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)**

**TELEVISION DISPLAY ASSEMBLY (for Roof) (Click here)**

**MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY (for Seatback) (Click here)**

**for Preparation** Click here

**HINT:**

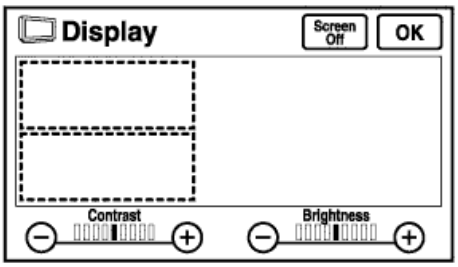


- **Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be exactly the same as on the actual vehicle.**
- **If the system cannot enter the diagnostic mode, inspect all AVC-LAN communication components and repair or replace problem parts (Click here).**
- **After the engine switch is turned on (IG), check that the map is displayed before starting the diagnostic mode. Otherwise, some items cannot be checked.**

## START DIAGNOSTIC MODE

a. Turn the engine switch on (IG).

b. Press the "DISP" switch.



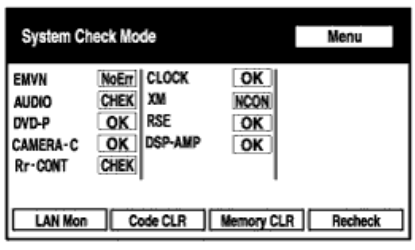
Example (for LHD):

T

c. From the display quality adjustment screen, touch the corners of the screen in the following order: upper left → lower left → upper left → lower left → upper left → lower left.

d. The diagnostic mode starts and the "System Check Mode" screen will be displayed. Service inspection starts automatically and the result will be displayed.

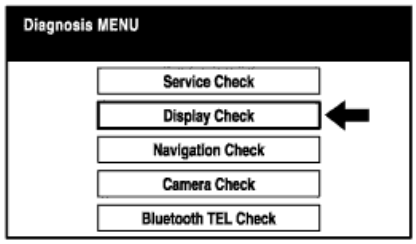
P



## FINISH DIAGNOSTIC MODE

a. Turn the engine switch off.

## DIAGNOSIS MENU

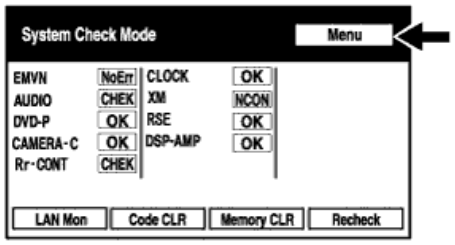


a. Press the "MENU" switch on the "System Check Mode" screen.

Example:

b. The "Diagnosis MENU" screen will be displayed.

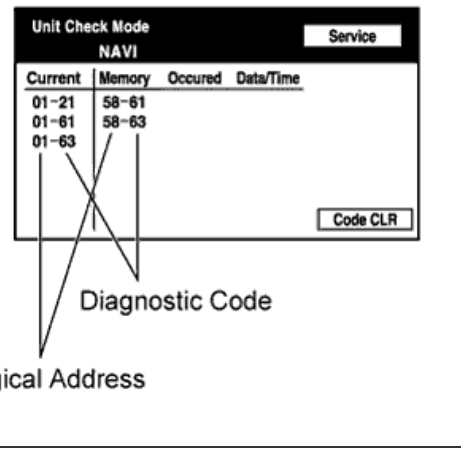
Example:



P

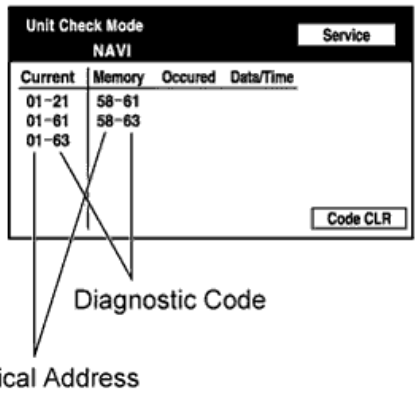
## CHECK DTC (WITH DIAGNOSTIC MODE)

a. Read the system check result.



i. If the check result is "EXCH", "CHEK" or "Old", touch the displayed check result.

Example:

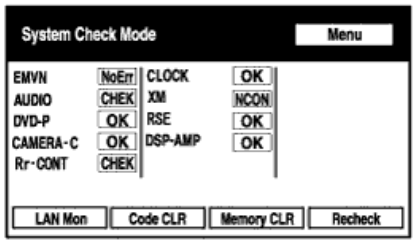


ii. View the results on the "Unit Check Mode" screen and record them.

Example:

iii. When proceeding to view the results of another device, press the "Service" switch.

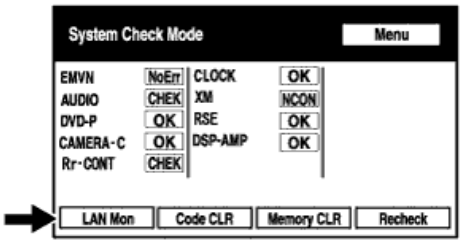
Example:



iv. Return to the "System Check Mode" screen.

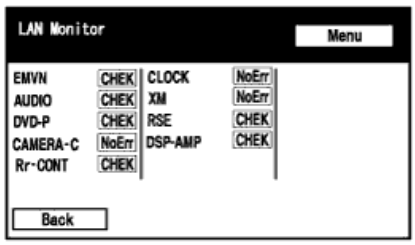
**HINT:**

To check other items, repeat from the first step.



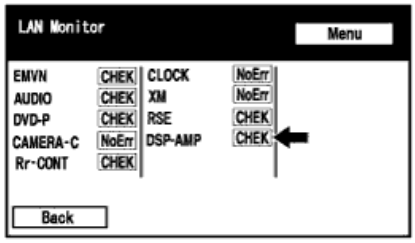
Example:

b. Read the communication diagnostic check result.



i. Return to the "System Check Mode" screen, and press the "LAN Mon" switch.

Example:

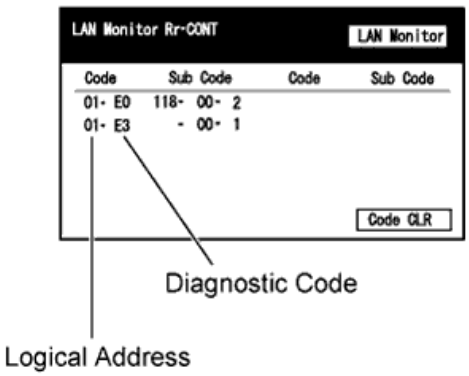


ii. The "LAN Monitor" screen is displayed.

Example:

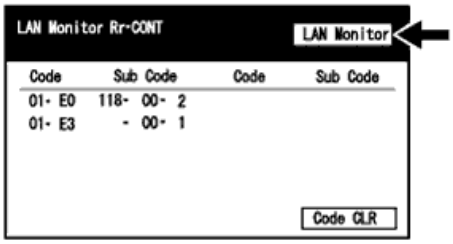
iii. If the check result is "CHEK" or "Old", touch the displayed check result.

Example:



iv. View the results on the individual communication diagnostic screen and record them.

**HINT:**

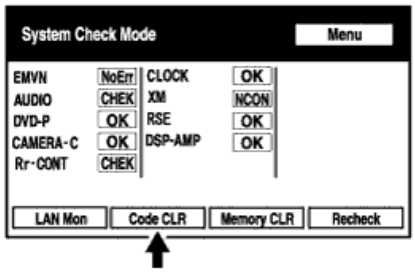


- **If all check results are "No Err", the system judges that no DTC is stored.**

Example:

- **The sub-code (relevant device) will be indicated by its physical address.**

Example:

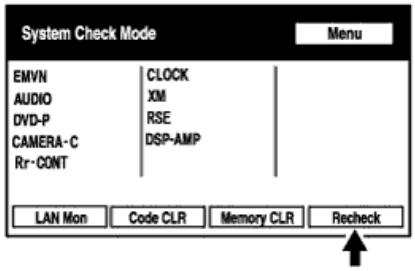


## DTC CLEAR/RECHECK (WITH DIAGNOSTIC MENU)

a. Clear DTC

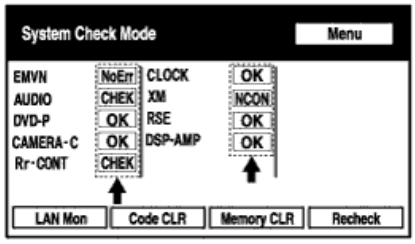
i. Press the "Code CLR" switch for 3 seconds.

ii. The check results are cleared.



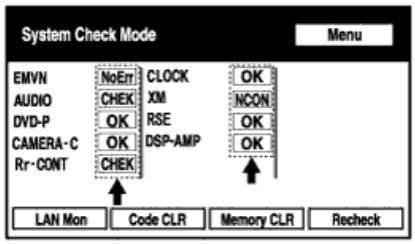
Example:

**b.** Recheck



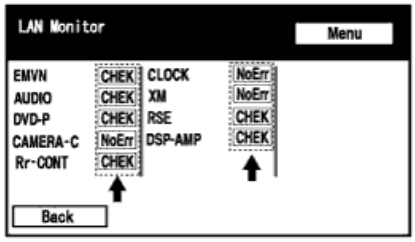
**i.** Press the "Recheck" switch.

Example:



**ii.** Confirm that all diagnostic codes are "OK" when the check results are displayed.
If a code other than "OK" is displayed, troubleshoot again.

Example:



**iii.** Press the "LAN Mon" switch to change to "LAN Monitor" mode.

Example:

**iv.** Confirm that all diagnostic codes are "No Err".
If a code other than "No Err" is displayed, troubleshoot again.

Example:

**for Preparation** Click here

## CHECK DTC (CHECK USING INTELLIGENT TESTER)

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Navigation System / DTCs.

e. Check for DTCs, and then write them down.

f. Check the details of the DTC(s) ( Click here).

**NOTICE:**

The navigation system outputs DTCs for the following system. When DTCs other than those in Diagnostic Trouble Code Chart for the navigation system are output, refer to Diagnostic Trouble Code Chart for the relevant system.

| System | Proceed to |
|---|---|
| Audio and Visual System | Click here |
| Rear Seat Entertainment System (for Roof) | Click here |
| Rear Seat Entertainment System (for Seatback) | Click here |

## CLEAR DTC (CHECK USING INTELLIGENT TESTER)

a. Connect the intelligent tester to the DLC3.

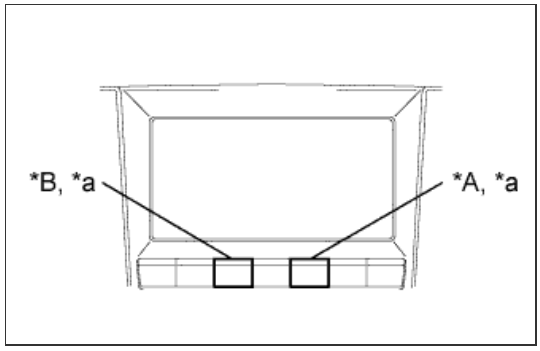
b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Navigation System / DTCs.

e. Clear the DTCs.

## START DIAGNOSTIC MODE



**HINT:**

- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**
- **To help find the malfunction when the system cannot change to diagnostic mode, check for DTCs using the intelligent tester.**
- **After the engine switch is turned on (IG), check that the map is displayed before starting diagnostic mode. Otherwise, some items cannot be checked.**

a. Start the engine.

**Text in Illustration**

| | |
|---|---|
| *A | for LHD |
| *B | for RHD |
| *a | "INFO" Switch |

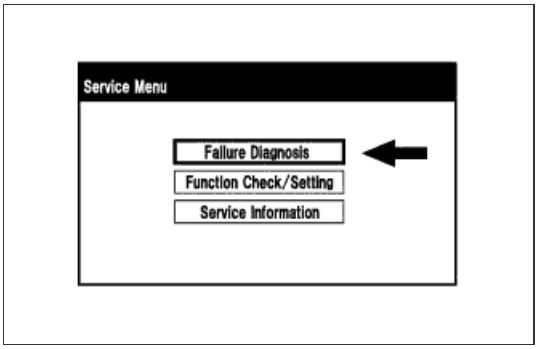
b. While pressing and holding the "INFO" switch, operate the light control switch: Off → Tail → Off → Tail → Off → Tail → Off.

c. Diagnostic mode starts and the "Service Menu" screen will be displayed.

## FINISH DIAGNOSTIC MODE

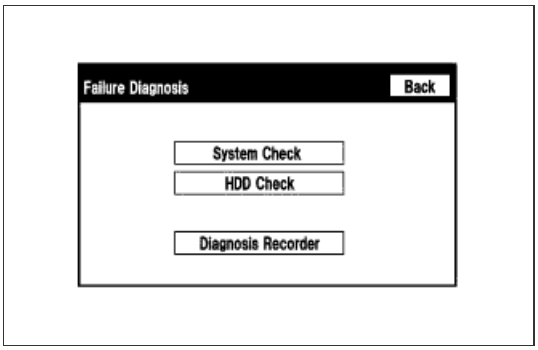
a. There are 2 methods to finish diagnostic mode. Start the mode by using one of them.

b. Method 1



i. Turn the engine switch off.

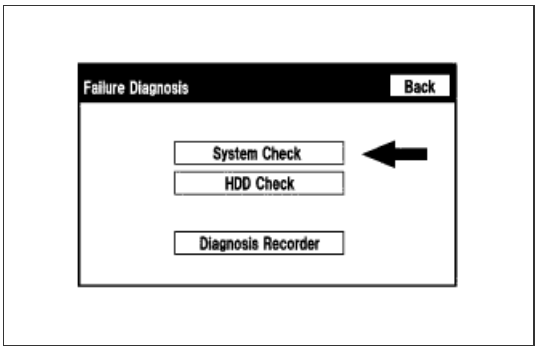
c. Method 2



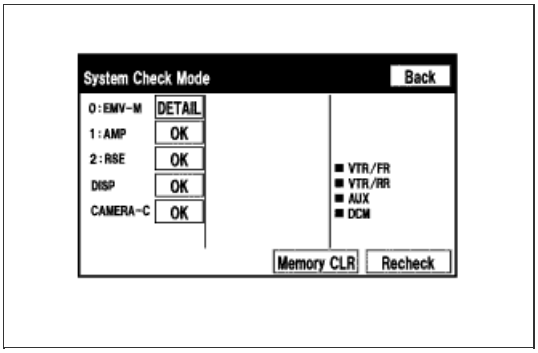
i. Press and hold the "SETUP" switch for 3 seconds or more.

## FAILURE DIAGNOSIS

a. Press the "Failure Diagnosis" switch on the "Service Menu" screen.

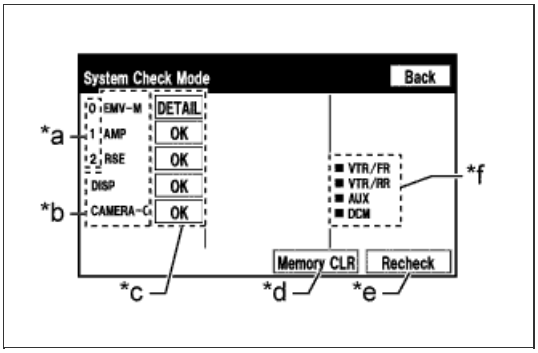


b. The "Failure Diagnosis" will be displayed.



## SYSTEM CHECK

a. Press the "System Check" switch on the "Failure Diagnosis" screen.



b. The "System Check Mode" screen will be displayed.

## CHECK DTC (CHECK USING SYSTEM CHECK MODE SCREEN)

a. System check mode screen description

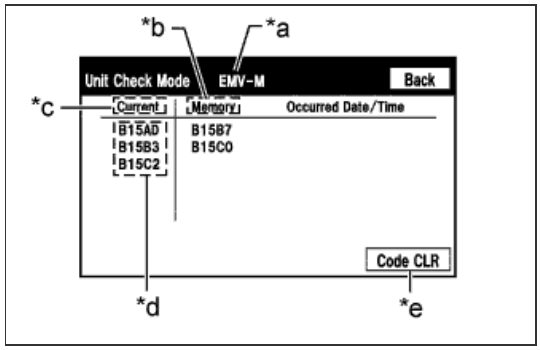
### Screen Description

| Display | Content |
|---|---|
| *a: Node position number for devices that use MOST communication | MOST node position numbers are provided for devices connected to the MOST network. |
| *b: Device Name List No. 1 | • Device Name List No. 1 displays some of the devices that make up the audio and visual system.<br>• The names of the components from Device Name List No. 1 are shown in the following table. |
| *c: Check Result | Result codes for all devices are displayed. |
| *d: Memory Clear | • Present and history DTCs and registered connected device names are cleared.<br>• Press the "Memory CLR" switch for 3 seconds. |
| *e: Recheck | • A system check will be performed again after the memory is cleared.<br>• The "Recheck" switch will dim during a system check. |
| *f: Device Name List No. 2 | • Device Name List No. 2 displays some of the devices that make up the audio and visual system.<br>• The names of the components from Device Name List No. 2 are shown in the following table. |

### *b: Device Name List No. 1 Description

| Name | Component | Connection Method |
|---|---|---|
| EMV-M | Multi-media module receiver assembly | - |
| AMP | Stereo component amplifier assembly | Communication line for MOST |
| RSE | Television display assembly | Communication line for MOST |
| DISP | Multi-display assembly | Communication line for AVC-LAN |
| CAMERA-C | Parking assist ECU | Communication line for AVC-LAN |

### *c: Check Result Description



| Result | Meaning | Action |
|---|---|---|
| OK | The device does not respond with a DTC. | - |
| MOST | MOST communication error | Perform "MOST Line Check" to check connection of each device on the MOST network. |
| DETAIL | The device responds with a DTC. | Look up the DTC in "Unit Check Mode". |
| NCON | The device was previously present, but does not respond in diagnostic mode. | • Check power supply wire harness of the device.<br>• Check the AVC-LAN of the device. |
| | The device responds in diagnostic mode, but gives no | • Check power supply wire harness of the device. |

| | | |
|---|---|---|
| NRES | DTC information. | • Check the AVC-LAN of the device. |

***f: Device Name List No. 2 Description**

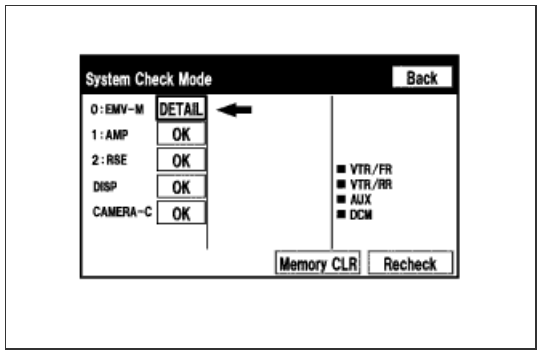
| Name | Component | Connection Method |
|---|---|---|
| VTR/FR | Remote controller adapter assembly (video terminal) | Vehicle wire harness |
| VTR/RR | Remote controller adapter assembly (video terminal) | Vehicle wire harness |
| AUX | No. 1 stereo jack adapter assembly | Vehicle wire harness |
| DCM | Telematics transceiver | Communication line for USB |

**b.** Unit check mode screen description

**Screen Description**

| Display | Content |
|---|---|
| *a: Device name | Target device |
| *b: History DTC | Diagnostic memory results and stored DTCs are displayed. |
| *c: Current DTC | DTCs output in the service check are displayed. |
| *d: DTC | DTC (Diagnostic Trouble Code) |
| *e: Diagnosis clear switch | Pushing this switch for 3 seconds clears the diagnostic memory data of the target device. (Both response to diagnostic system check result and the displayed data are cleared.) |

**HINT:**

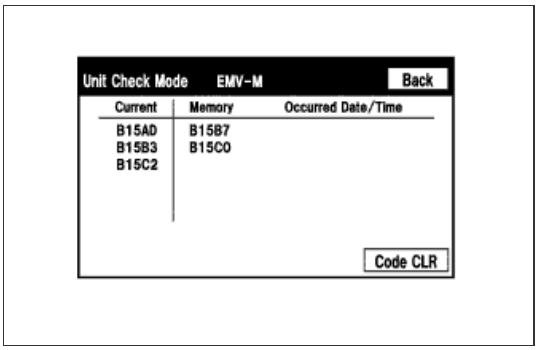


- **This screen is updated once per second.**
- **A maximum of 6 DTCs can be displayed for history and present DTCs.**

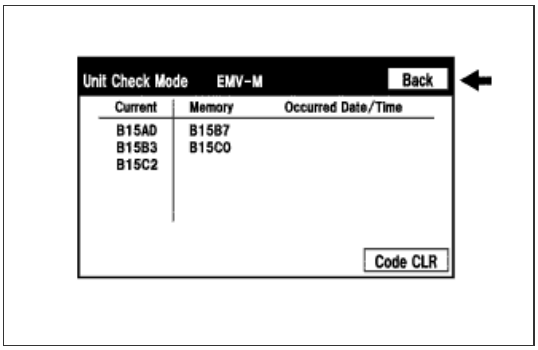
**c.** Read the system check result.

**i.** If the check result is "DETAIL", touch the displayed check result

**HINT:**



When all results are "OK", this means that no DTCs are stored.



**ii.** View the results on the "Unit Check Mode" screen and record them.

**NOTICE:**

A maximum of 6 DTCs can be displayed for history and present DTCs on the "Unit check mode" screen. Therefore, when 6 DTCs are displayed, troubleshoot those DTCs first and then check the "Unit check mode" screen again to see if any other DTCs are displayed.

iii. When proceeding to view the results of another device, press the "Back" switch to return to the "System Check Mode" screen. Repeat the step above to view the results of other devices.

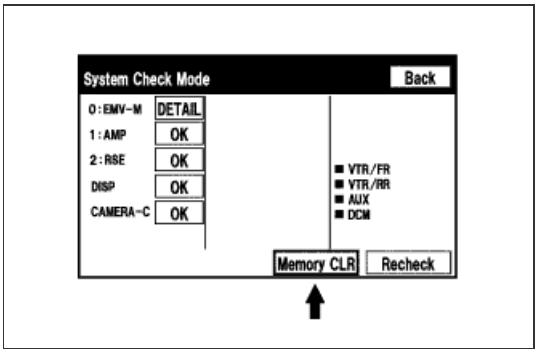
**HINT:**

To check other item, repeat from the first step.

iv. Check the details of the DTC(s) ( Click here).

**NOTICE:**

The navigation system outputs DTCs for the following system. When DTCs other than the codes in Diagnostic Trouble Code Chart for the navigation system are output, refer to Diagnostic Trouble Code Chart for the relevant system.



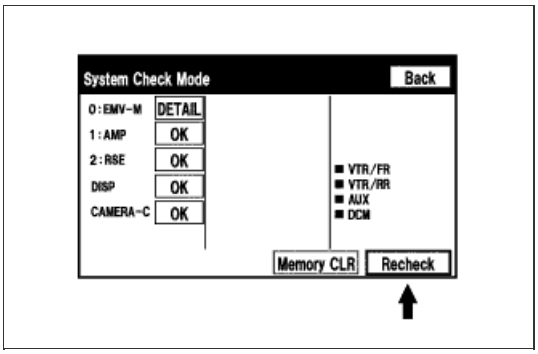
| System | Proceed to |
|---|---|
| Audio and Visual System | Click here |
| Rear Seat Entertainment System (for Roof) | Click here |
| Rear Seat Entertainment System (for Seatback) | Click here |

## DTC CLEAR/RECHECK (CLEAR USING SYSTEM CHECK MODE SCREEN)

a. Clear DTC

i. Press the "Memory CLR" switch for 3 seconds.

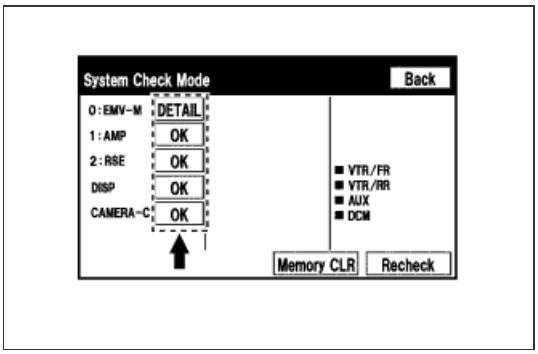
ii. Confirm that the check results are cleared.



**HINT:**

- **To clear the DTC for a specific device, clear the DTC using the "Unit Check Mode" screen.**
- **When clearing a DTC using the "Unit Check Mode" screen, press the "Code CLR" switch for 3 seconds.**

b. Recheck DTC



i. Press the "Recheck" switch.

ii. Confirm that all diagnostic codes are "OK" when the check results are displayed. If a code other than "OK" is displayed, troubleshoot again.

**HINT:**

When a DTC was cleared using the "Unit Check Mode" screen, press the "Back" switch to return to the "System Check Mode" screen and perform this operation.

**for Preparation** Click here

## CHECK FREEZE FRAME DATA

a. Connect the intelligent tester to the DLC3.

b. Start the engine.

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Navigation System / DTCs.

e. Select a Trouble Code to display its Freeze Frame Data.

## LIST OF FREEZE FRAME DATA

a. Refer to "Data List / Active Test" ( Click here).

**for Preparation** Click here

## DATA LIST

**NOTICE:**

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

**HINT:**

Using the intelligent tester to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

a. Connect the intelligent tester to the DLC3.

b. Start the engine.

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Navigation System / Data List.

e. According to the display on the intelligent tester, read the Data List.

**Navigation System**

| Tester Display | Measurement Item/Range | Normal Condition | Diagnostic Note |
|---|---|---|---|
| Battery Voltage | Battery voltage / Min.: 0 V, Max.: 24 V | 11 to 15.5 V | - |
| Active Dimmer | Active dimmer function / ON or OFF | ON: Active dimmer function on<br>OFF: Active dimmer function off | - |
| Tail Light SW | Taillight switch / ON or OFF | ON: Light control switch in tail or head position<br>OFF: Light control switch off | - |
| Reverse Signal | Reverse signal / ON or OFF | ON: Shift lever in R<br>OFF: Shift lever in any position other than R | - |
| Parking Brake | Parking brake switch / ON or OFF | ON: Parking brake applied<br>OFF: Parking brake released | - |
| Ignition | Engine switch / ON or OFF | ON: Engine switch on (IG)<br>OFF: Engine switch off | - |
| Vehicle Speed | Maximum wheel speed sensor reading / Min.: 0 km/h (0 mph), Max.: 255 km/h (158 mph) | Vehicle stopped: 0 km/h (0 mph) | When driving at constant speed: No large fluctuations |

**for Preparation** Click here

**HINT:**

If a trouble code is output during the DTC check, inspect the trouble areas listed for that code. For details of the code, refer to the "See page" below.

**Navigation System**

| DTC Code | Detection Item | Trouble Area | See page |
|---|---|---|---|
| 01-21 | ROM Error | Multi-display | Click here |

## DTC 01-21 ROM Error

## DTC 01-22 RAM Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 01-21 | A malfunction exists in the ROM. | Multi-display |
| 01-22 | A malfunction exists in the RAM. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.REPLACE MULTI-DISPLAY**

a. Replace the multi-display (Click here).

**NEXT**

**END**

## DTC 58-40 GPS Antenna Error

## DTC 58-41 GPS Antenna Power Source Error

## DTC 80-40 GPS Antenna Error

## DTC 80-41 GPS Antenna Power Source Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 58-40 | A navigation antenna error. | • Harness or connector<br>• Navigation antenna<br>• Navigation ECU |
| 58-41 | An error of the power source to the navigation antenna. | |
| 80-40 | A navigation antenna error. | |
| 80-41 | An error of the power source to the navigation antenna. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

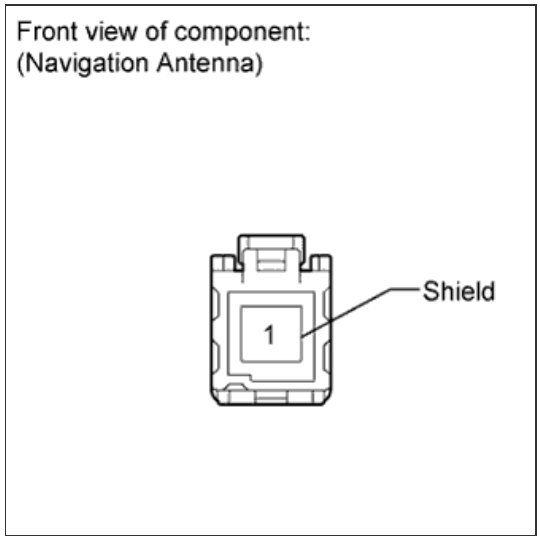
**1.CHECK HARNESS AND CONNECTOR (NAVIGATION ANTENNA - NAVIGATION ECU)**

a. Check that the navigation antenna cord is securely connected to the navigation ECU.

**OK:**
**The cord is securely connected.**

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ↓



**2.INSPECT NAVIGATION ANTENNA**

a. Disconnect the navigation antenna connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - Shield | Always | 50 to 500 Ω |

NG → REPLACE NAVIGATION ANTENNA (Click here)

OK ↓

3.CLEAR AND RECHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble code is output.

**OK:**
**No DTC is output.**

NG → REPLACE NAVIGATION ECU (**Click here**)

OK → END

## DTC 01-21 ROM Error

## DTC 01-22 RAM Error
