**2.INSPECT NAVIGATION ANTENNA**

a. Disconnect the navigation antenna connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - Shield | Always | 50 to 500 Ω |

NG → REPLACE NAVIGATION ANTENNA (Click here)

OK ↓

3.CLEAR AND RECHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble code is output.

**OK:**
**No DTC is output.**

NG → REPLACE NAVIGATION ECU (**Click here**)

OK → END

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 01-D5*1, *3 | When either condition below is met:<br>• The component shown by the sub-code is (was) disconnected from the system when turning the engine switch on (ACC) or on (IG).<br>• The communication condition with the device that the code shows cannot be obtained when the engine starts. | • Power source circuit of component shown by sub-code<br>• AVC-LAN circuit between multi-display and component shown by sub-code<br>• Component shown by sub-code |
| 01-D8*2, *3 | The component shown by the sub-code is (was) disconnected from the system after the engine starts. | |
| 01-D9*1, *3 | The device that had functioned before the engine stopped is (was) disconnected from the system when the engine switch is (was) on (IG) or on (ACC). | |
| 01-DA*3 | When either condition below is met:<br>• No response is identified when changing modes.<br>• Sound and image do not change by switch operation. | |
| 01-DB*1, *3 | Dual alarm is detected. | |
| 01-DE*3 | The slave device has been disconnected after the engine starts. | |

**HINT:**

*1: Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.

*2: If the power connector is disconnected after the engine starts, this code is stored after 180 seconds.

*3: If it is reported that the device does not exist during verification, check the power source circuit and AVC-LAN circuit for the device.

**NOTICE:**

- **Before starting troubleshooting, be sure to clear DTCs to clear codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The multi-display is the master unit.**
- **Be sure to clear and recheck DTCs after the inspection is completed to confirm that no DTCs are output.**

### INSPECTION PROCEDURE

**NOTICE:**

Be sure to read the Description before performing the following procedures.

**1.CHECK "MULTI-DISPLAY COMMUNICATION ERROR" IN FLOWCHART**

a. Refer to the Multi-display Communication Error (Click here).

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 58-40 | A navigation antenna error. | • Harness or connector<br>• Navigation antenna<br>• Navigation ECU |
| 58-41 | An error of the power source to the navigation antenna. | |
| 80-40 | A navigation antenna error. | |
| 80-41 | An error of the power source to the navigation antenna. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

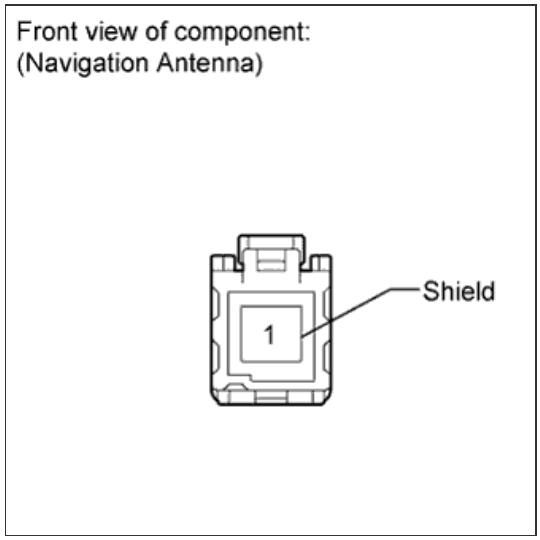
**1.CHECK HARNESS AND CONNECTOR (NAVIGATION ANTENNA - NAVIGATION ECU)**

a. Check that the navigation antenna cord is securely connected to the navigation ECU.

**OK:**
**The cord is securely connected.**

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ↓



**2.INSPECT NAVIGATION ANTENNA**

a. Disconnect the navigation antenna connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|

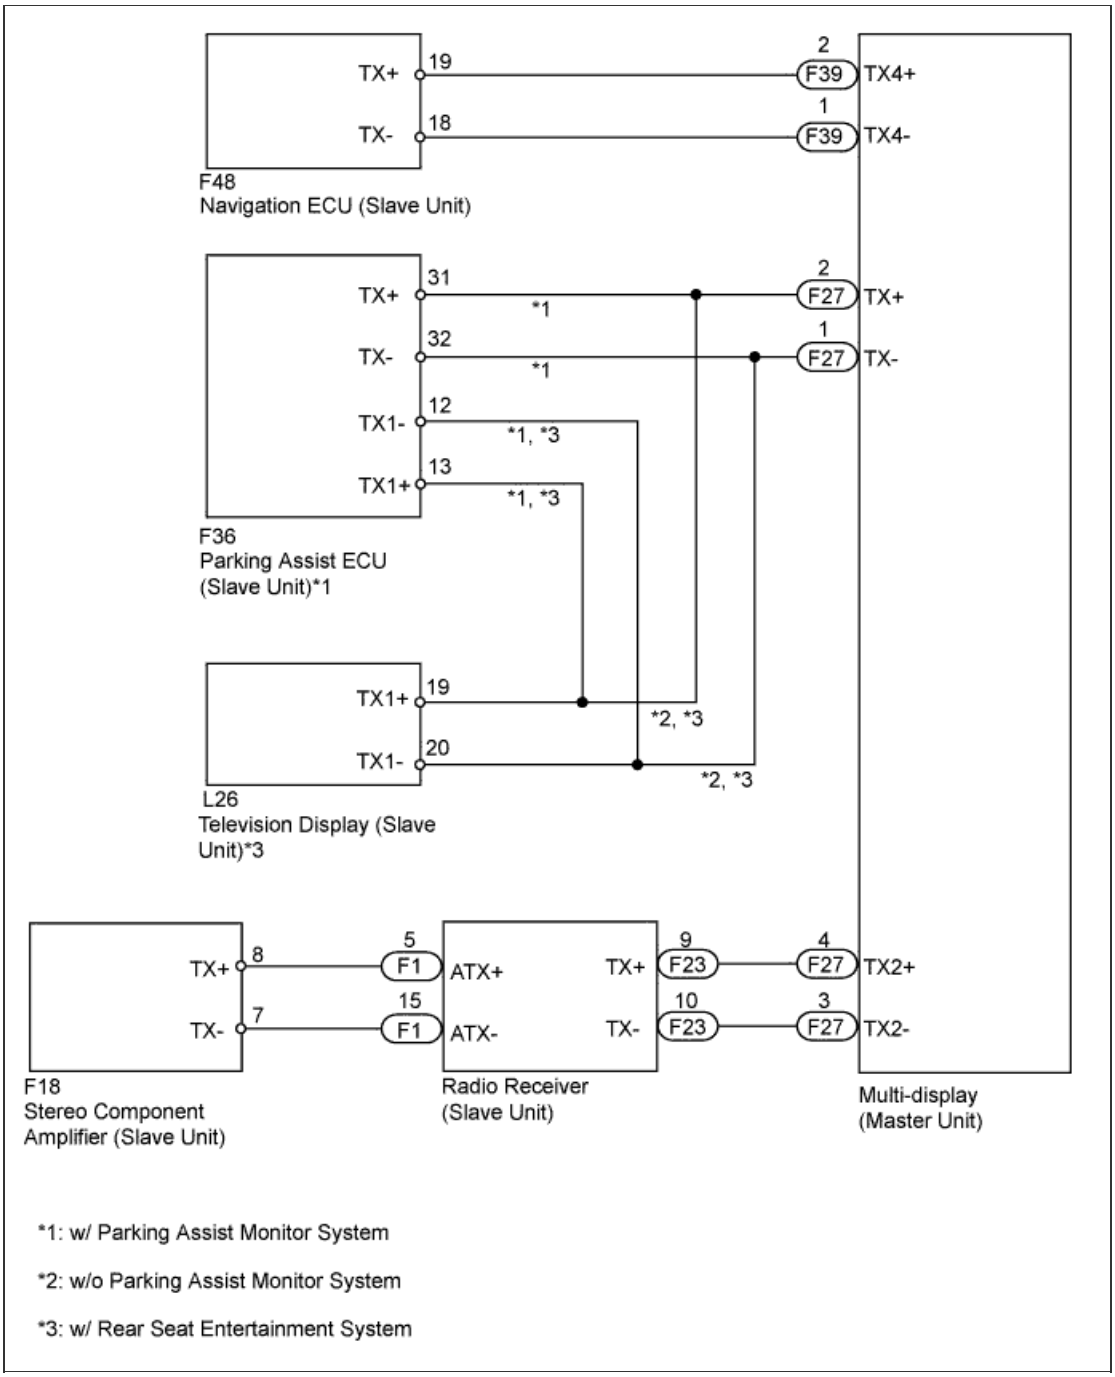
## DTC 01-D7 Connection Check Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 01-D6*1 | When either of the following conditions is met:<br>• The component which has stored the code has (had) been disconnected when the engine switch is on (ACC) or on (IG).<br>• The master device has (had) been disconnected when this code is stored. | • Multi-display power source circuit<br>• Power source circuit of component which has stored this code<br>• AVC-LAN circuit between multi-display and component which has stored this code<br>• Component which has stored this code<br>• Multi-display |
| 01-D7*2 | When either of the following conditions is met:<br>• The component which has stored the code has (had) been disconnected after the engine starts (started).<br>• The master device has (had) been disconnected when this code is (was) stored. | |

**HINT:**



*1: Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.

*2: When 210 seconds have elapsed after disconnecting the power supply connector of the master component with the engine switch on (ACC) or on (IG), this code is stored.

**NOTICE:**

- **Before starting troubleshooting, be sure to clear DTCs to clear codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The multi-display is the master unit.**
- **Be sure to clear and recheck DTCs after the inspection is completed to confirm that no DTCs are output.**

### WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

Be sure to read the Description before performing the following procedures.

### 1.CHECK MULTI-DISPLAY POWER SOURCE CIRCUIT

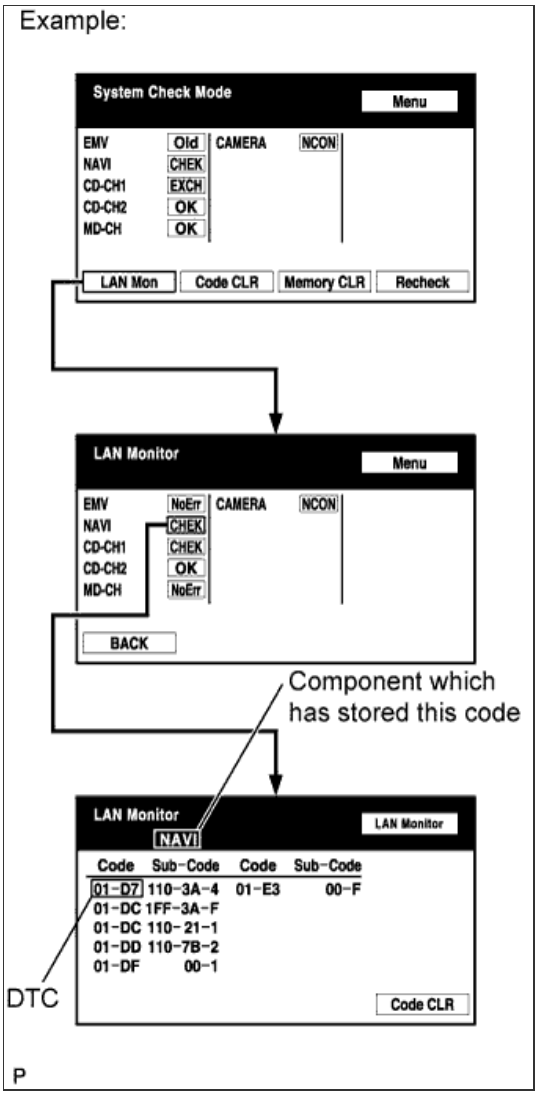
a. Refer to the Multi-display Power Source Circuit ( Click here).
If the power source circuit is operating normally, proceed to the next step.

**NEXT**

### 2.IDENTIFY COMPONENT WHICH HAS STORED THIS CODE

a. Enter the diagnostic mode.

b. Press the "LAN Mon" switch to change to "LAN Monitor" mode.



c. Identify the component which has stored this code.

**Component Table**

| Display | Component |
|---|---|
| AUDIO | Radio receiver |
| DSP-AMP | Stereo component amplifier |
| EMV | Multi-display |
| NAVI | Navigation ECU |
| CAMERA-C | Parking assist ECU |
| RSE | Television display |

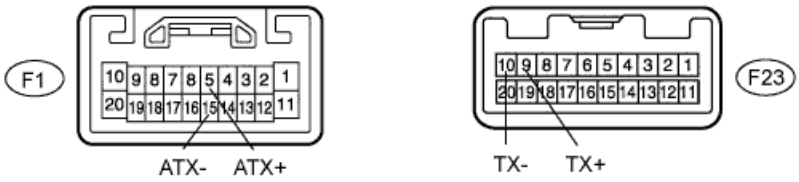
**HINT:**

"NAVI" is the component which has stored this code in the example shown in the illustration.

NEXT

## 3.CHECK POWER SOURCE CIRCUIT OF COMPONENT WHICH HAS STORED THIS CODE

a. Inspect the power source circuit of the component which has stored this code.
If the power source circuit is operating normally, proceed to the next step.



**Component Table**

| Component | Proceed to |
|---|---|
| Radio receiver (AUDIO) | Radio receiver power source circuit (Click here) |
| Stereo component amplifier (DSP-AMP) | Stereo component amplifier power source circuit (Click here) |
| Multi-display (EMV) | Multi-display power source circuit (Click here) |
| Navigation ECU (NAVI) | Navigation ECU power source circuit (Click here) |
| Parking assist ECU (CAMERA-C) | Parking assist ECU power source circuit (Click here) |
| Television display (RSE) | Television display power source circuit (Click here) |

NEXT

## 4.INSPECT RADIO RECEIVER ASSEMBLY

Component without harness connected:
(Radio Receiver)

a. Disconnect the F1 and F23 receiver connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F1-5 (ATX+) - F1-15 (ATX-) | Always | 60 to 80 Ω |
| F23-9 (TX+) - F23-10 (TX-) | Always | 60 to 80 Ω |

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

**5.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - COMPONENT WHICH HAS STORED THIS CODE)**

**HINT:**

For details of the connectors, refer to Terminals of ECU ( Click here).

a. Check the AVC-LAN circuit between the multi-display and the component which has stored this code.

i. Disconnect all connectors between the multi-display and the component which has stored this code.

ii. Check for an open or short in the AVC-LAN circuit between the multi-display and the component which has stored this code.

**OK:**
**There is no open or short circuit.**

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**6.REPLACE COMPONENT WHICH HAS STORED THIS CODE**

a. Replace the component which has stored this code with a normal one and check if the same problem occurs again.

**OK:**
**Same problem does not occur.**

NG → REPLACE MULTI-DISPLAY (Click here)

OK

**END**

## DTC 58-44 Player Error

## DTC 80-44 Player Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 58-44 | A map player error is detected. | Navigation ECU |
| 80-44 | A map player error is detected. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.CHECK NAVIGATION ECU**

a. Check if a disc can be inserted or ejected normally.

**OK:**
**A disc can be inserted or ejected normally.**

NG → **REPLACE NAVIGATION ECU (Click here)**

OK ↓

**2.CLEAR AND RECHECK DTC**

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble code is output.

**OK:**
**No DTC is output.**

NG → **REPLACE NAVIGATION ECU (Click here)**

OK ↓

**END**

## DTC 01-D6 No Master

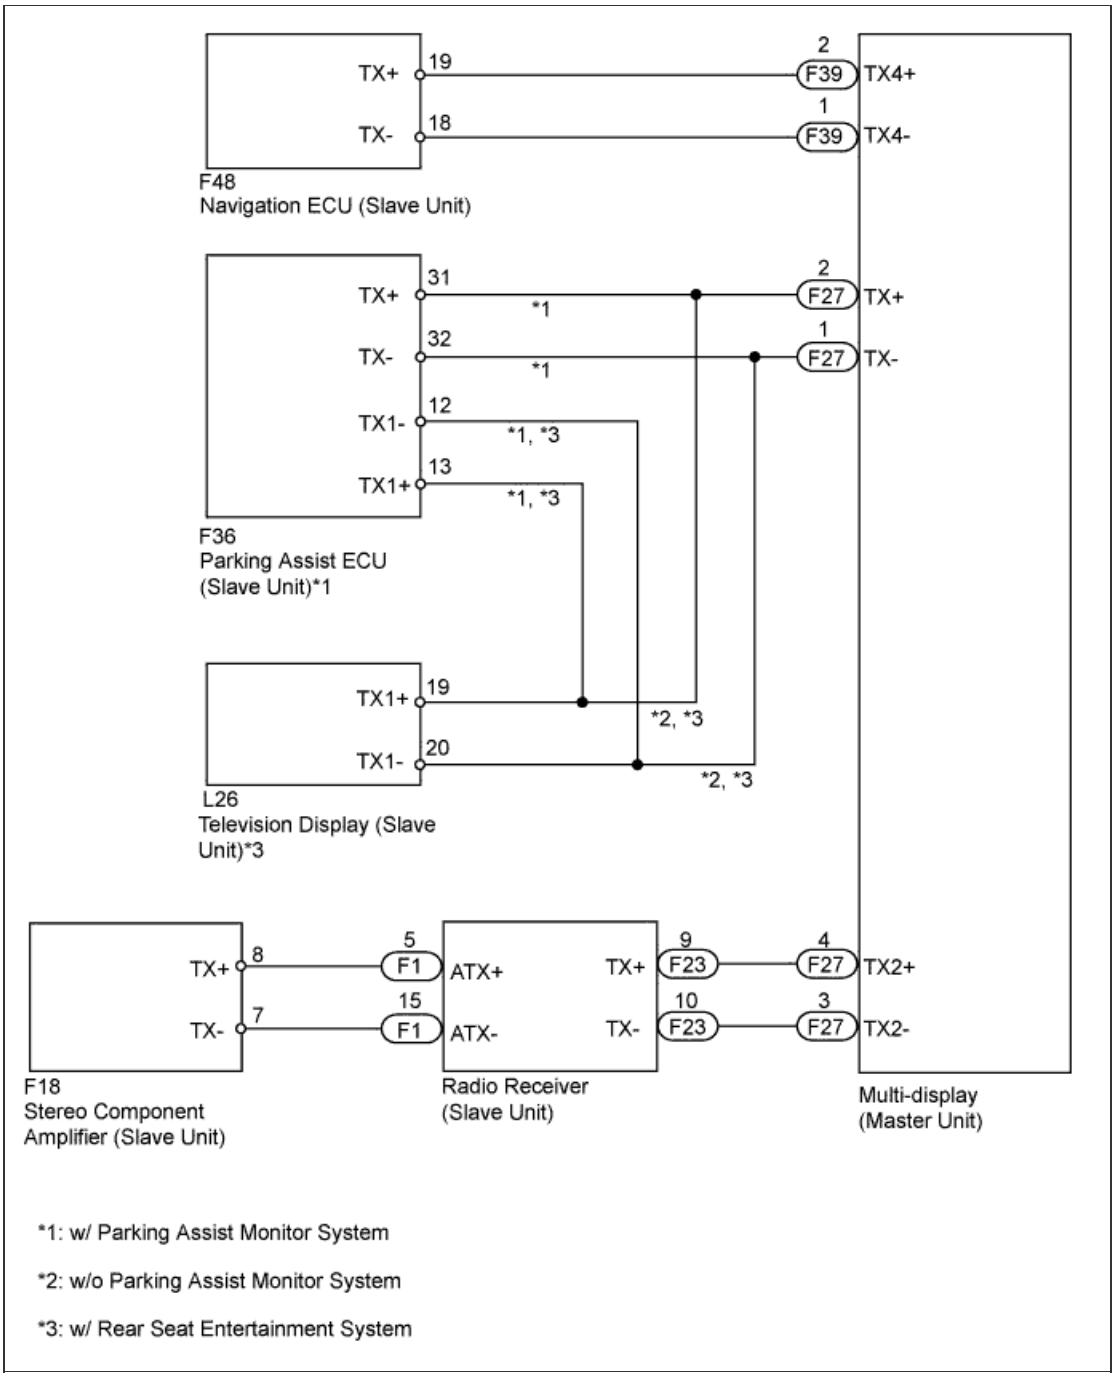
**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 01-D6*1 | When either of the following conditions is met:<br>• The component which has stored the code has (had) been disconnected when the engine switch is on (ACC) or on (IG).<br>• The master device has (had) been disconnected when this code is stored. | • Multi-display power source circuit<br>• Power source circuit of component which has stored this code<br>• AVC-LAN circuit between multi-display and component which has stored this code<br>• Component which has stored this code<br>• Multi-display |
| 01-D7*2 | When either of the following conditions is met:<br>• The component which has stored the code has (had) been disconnected after the engine starts (started).<br>• The master device has (had) been disconnected when this code is (was) stored. | |

**HINT:**



*1: Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.

*2: When 210 seconds have elapsed after disconnecting the power supply connector of the master component with the engine switch on (ACC) or on (IG), this code is stored.

**NOTICE:**

- **Before starting troubleshooting, be sure to clear DTCs to clear codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The multi-display is the master unit.**
- **Be sure to clear and recheck DTCs after the inspection is completed to confirm that no DTCs are output.**

### WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

Be sure to read the Description before performing the following procedures.

### 1.CHECK MULTI-DISPLAY POWER SOURCE CIRCUIT

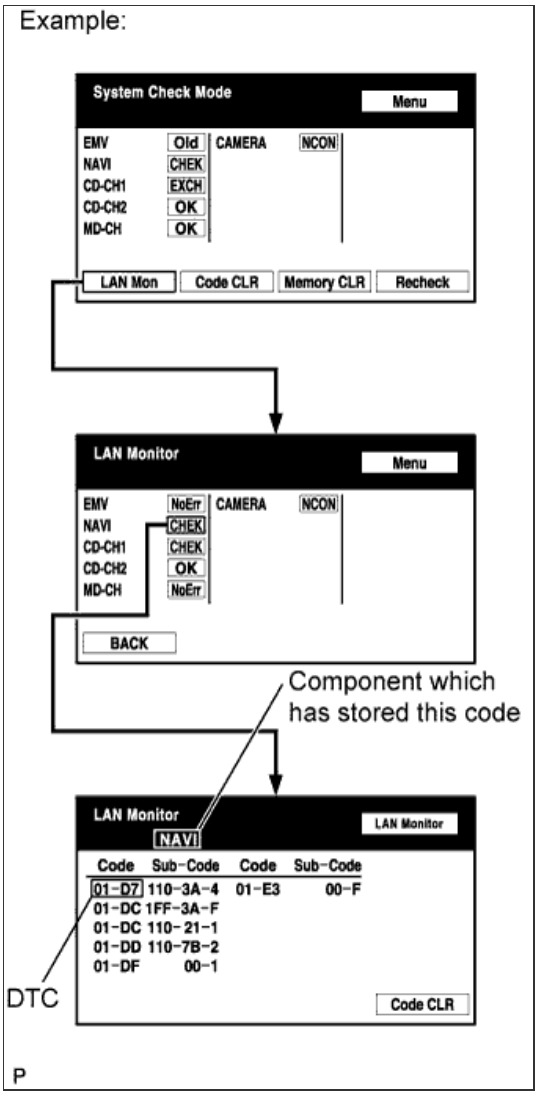
a. Refer to the Multi-display Power Source Circuit ( Click here).
If the power source circuit is operating normally, proceed to the next step.

**NEXT**

### 2.IDENTIFY COMPONENT WHICH HAS STORED THIS CODE

a. Enter the diagnostic mode.

b. Press the "LAN Mon" switch to change to "LAN Monitor" mode.



c. Identify the component which has stored this code.

**Component Table**

| Display | Component |
|---|---|
| AUDIO | Radio receiver |
| DSP-AMP | Stereo component amplifier |
| EMV | Multi-display |
| NAVI | Navigation ECU |
| CAMERA-C | Parking assist ECU |
| RSE | Television display |

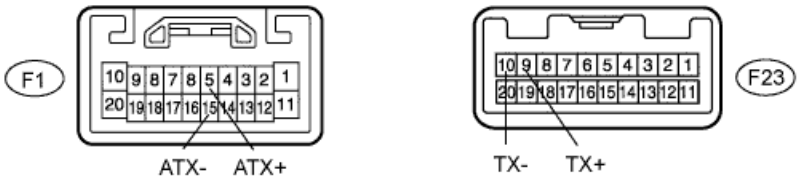
**HINT:**

"NAVI" is the component which has stored this code in the example shown in the illustration.

NEXT

## 3.CHECK POWER SOURCE CIRCUIT OF COMPONENT WHICH HAS STORED THIS CODE

a. Inspect the power source circuit of the component which has stored this code.
If the power source circuit is operating normally, proceed to the next step.



**Component Table**

| Component | Proceed to |
|---|---|
| Radio receiver (AUDIO) | Radio receiver power source circuit (Click here) |
| Stereo component amplifier (DSP-AMP) | Stereo component amplifier power source circuit (Click here) |
| Multi-display (EMV) | Multi-display power source circuit (Click here) |
| Navigation ECU (NAVI) | Navigation ECU power source circuit (Click here) |
| Parking assist ECU (CAMERA-C) | Parking assist ECU power source circuit (Click here) |
| Television display (RSE) | Television display power source circuit (Click here) |

NEXT

## 4.INSPECT RADIO RECEIVER ASSEMBLY

Component without harness connected:
(Radio Receiver)

a. Disconnect the F1 and F23 receiver connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F1-5 (ATX+) - F1-15 (ATX-) | Always | 60 to 80 Ω |
| F23-9 (TX+) - F23-10 (TX-) | Always | 60 to 80 Ω |

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

**5.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - COMPONENT WHICH HAS STORED THIS CODE)**

**HINT:**

For details of the connectors, refer to Terminals of ECU ( Click here).

a. Check the AVC-LAN circuit between the multi-display and the component which has stored this code.

i. Disconnect all connectors between the multi-display and the component which has stored this code.

ii. Check for an open or short in the AVC-LAN circuit between the multi-display and the component which has stored this code.

**OK:**
**There is no open or short circuit.**

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**6.REPLACE COMPONENT WHICH HAS STORED THIS CODE**

a. Replace the component which has stored this code with a normal one and check if the same problem occurs again.

**OK:**
**Same problem does not occur.**

NG → REPLACE MULTI-DISPLAY (Click here)

OK

**END**

## DTC 58-44 Player Error

## DTC 80-44 Player Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 58-44 | A map player error is detected. | Navigation ECU |
| 80-44 | A map player error is detected. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.CHECK NAVIGATION ECU**

a. Check if a disc can be inserted or ejected normally.

**OK:**
**A disc can be inserted or ejected normally.**

NG → **REPLACE NAVIGATION ECU (Click here)**

OK ↓

**2.CLEAR AND RECHECK DTC**

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble code is output.

**OK:**
**No DTC is output.**

NG → **REPLACE NAVIGATION ECU (Click here)**

OK ↓

**END**

# DTC 01-DC Transmission Error

**for Preparation** Click here

## DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 01-DC | Transmission to the component shown by the sub-code failed (the storing of this DTC does not always mean actual failure). | If same sub-code is recorded in other components, check harness for power supply and communication system of all components shown by code |

**NOTICE:**

- **The multi-display is the master unit.**
- **Be sure to clear and recheck DTCs after the inspection is completed to confirm that no DTCs are output.**

## INSPECTION PROCEDURE

**NOTICE:**

Be sure to read the Description before performing the following procedures.

### 1.CHECK FOR DTC OF OTHER COMPONENTS

a. Check if the component shown by the sub-code is displayed in the check result of the other components.

i. Check if "01-DC" is output for the other components.

ii. If "01-DC" is output for any other components, check if the same physical address is displayed.

**HINT:**

For the list of the components shown by sub-codes, refer to the table in the next step.

**Result**

| Result | Proceed to |
|---|---|
| "01-DC" is output and the same physical address is displayed | A |
| "01-DC" is not output or the same physical address is not displayed | B |

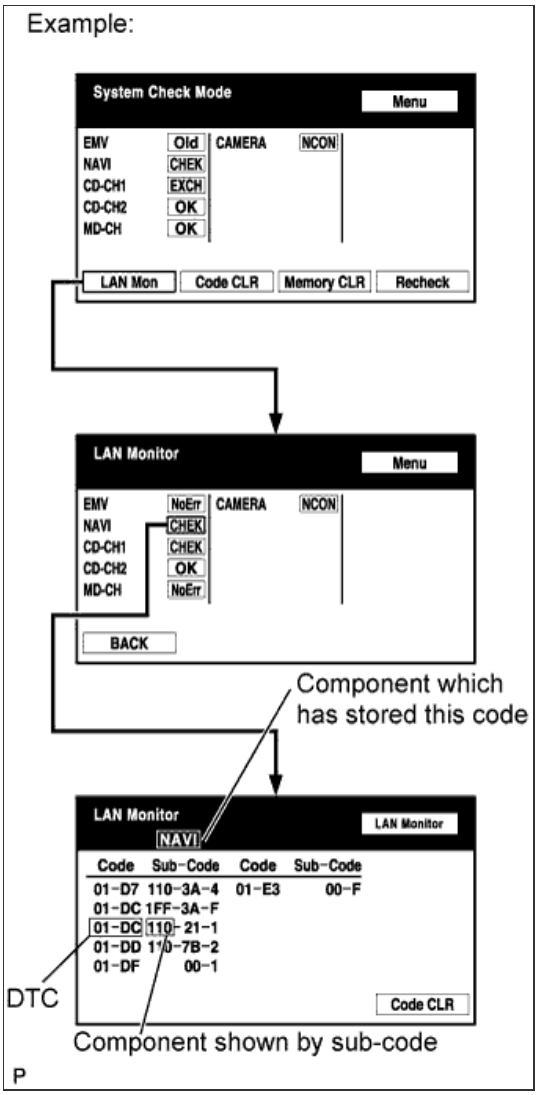
B → Go to step 4

A

### 2.IDENTIFY COMPONENT WHICH HAS STORED THIS CODE

a. Enter the diagnostic mode.

b. Press the "LAN Mon" switch to change to "LAN Monitor" mode.



c. Identify the component which has stored this code.

**Component Table**

| Display | Component |
|---|---|
| AUDIO | Radio receiver |
| DSP-AMP | Stereo component amplifier |
| EMV | Multi-display |
| NAVI | Navigation ECU |
| CAMERA-C | Parking assist ECU |
| RSE | Television display |

**HINT:**

"NAVI" is the component which has stored this code in the example shown in the illustration.

NEXT

## 3.CHECK COMPONENT WHICH HAS STORED THIS CODE

a. Select the component which has stored this code.

**Component Table**

| Component | Proceed to |
|---|---|
| Radio receiver (AUDIO) | Radio receiver communication error (Click here) |
| Stereo component amplifier (DSP-AMP) | Stereo component amplifier communication error (Click here) |
| Multi-display (EMV) | Multi-display communication error (Click here) |
| Navigation ECU (NAVI) | Navigation ECU communication error (Click here) |
| Parking assist ECU (CAMERA-C) | Parking assist ECU communication error (Click here) |
| Television display (RSE) | Television display communication error (Click here) |

NEXT

## END

## 4.CLEAR DTC

a. Clear the DTCs (Click here).

**HINT:**

If "01-DC" is output for only one component, this may not indicate a malfunction.

NEXT

5.RECHECK DTC

a. Recheck for DTCs and check if the same trouble code is output.

**OK:**
**No DTC is output.**

NG → Go to step 6

OK

END

6.CHECK COMPONENT WHICH HAS STORED THIS CODE

a. Select the component which has stored this code.

**Component Table**

| Component | Proceed to |
|---|---|
| Radio receiver (AUDIO) | Radio receiver communication error (Click here) |
| Stereo component amplifier (DSP-AMP) | Stereo component amplifier communication error (Click here) |
| Multi-display (EMV) | Multi-display communication error (Click here) |
| Navigation ECU (NAVI) | Navigation ECU communication error (Click here) |
| Parking assist ECU (CAMERA-C) | Parking assist ECU communication error (Click here) |
| Television display (RSE) | Television display communication error (Click here) |

NEXT

END

## DTC 58-45 High Temperature

## DTC 80-45 High Temperature

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 58-45 | The condition that the temperature of the map disc player is high (higher than 80°C (176°F)) is detected. | Navigation ECU |
| 80-45 | The condition that the temperature of the map disc player is high (higher than 80°C (176°F)) is detected. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.CHECK NAVIGATION ECU**

a. Park the vehicle in a cool place.

b. Check that the temperature of the navigation ECU has become sufficiently low, then start the engine to verify the malfunction symptom.

**OK:**
**Same problem does not occur.**

**NG** → **REPLACE NAVIGATION ECU (Click here)**

**OK**

**END**

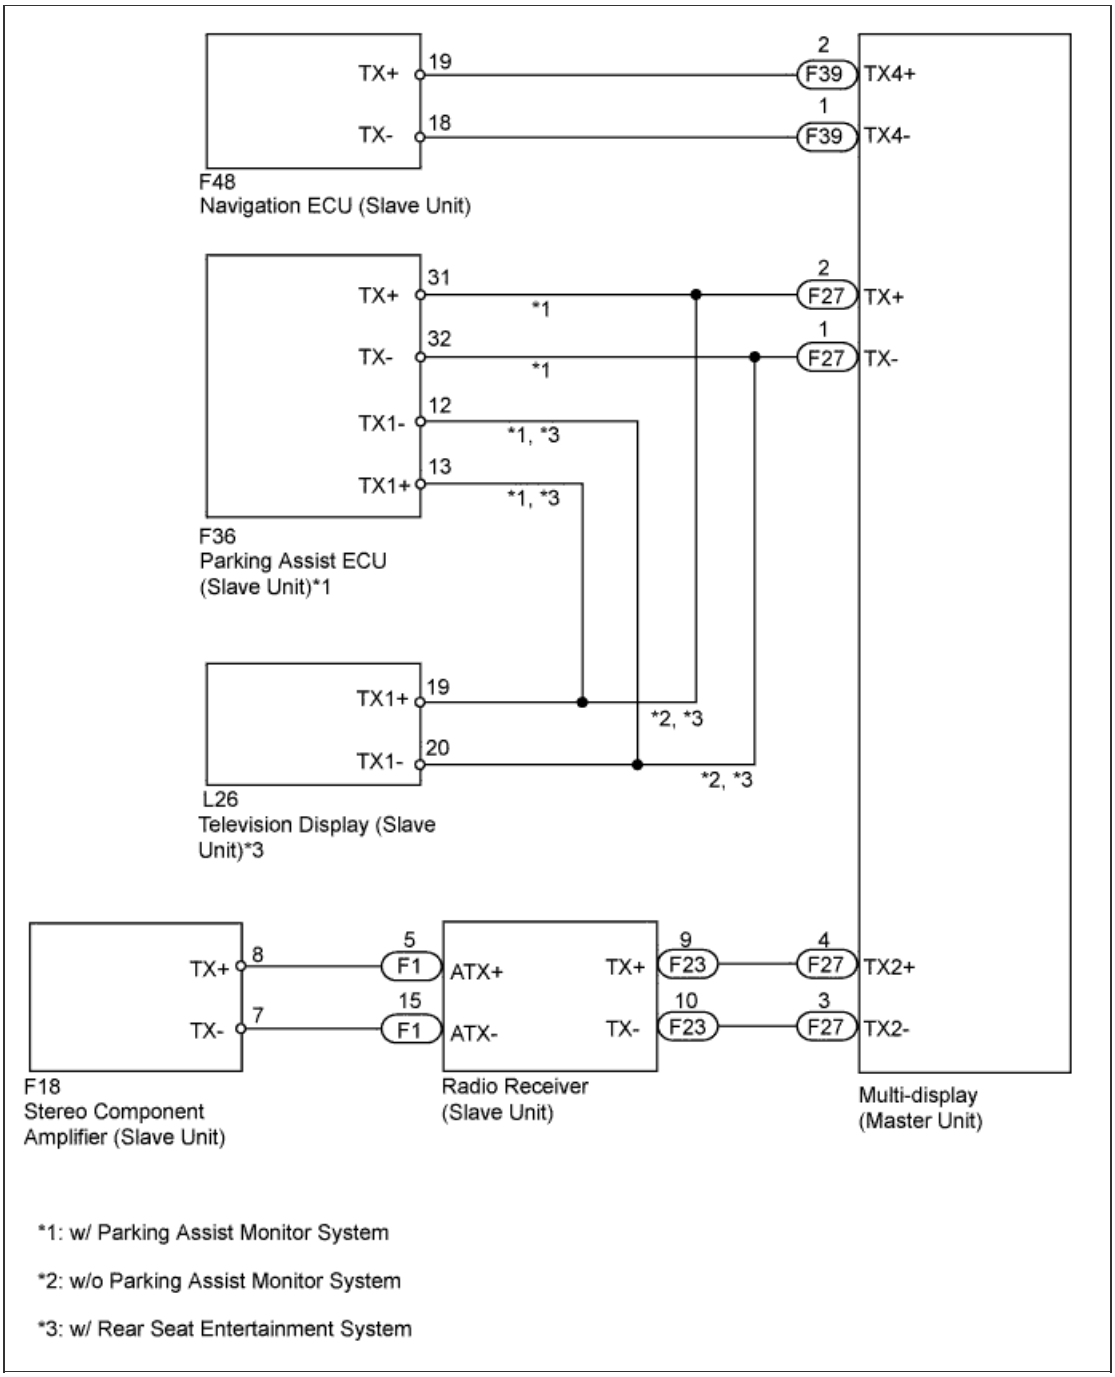
## DTC 01-DD Master Reset

## DTC 01-E1 Voice Processing Device ON Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 01-DD | The device that should be the master has been disconnected after the engine starts. | • Multi-display power source circuit<br>• AVC-LAN circuit between multi-display and component which has stored this code<br>• Multi-display<br>• Component which has stored this code |
| 01-E1* | The amplifier device records that the amplifier output does not function even while the source device is operating. | |



**HINT:**

*: Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.

**NOTICE:**

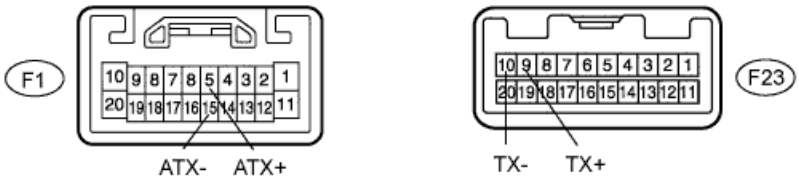
- **Before starting troubleshooting, be sure to clear DTCs to clear codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The multi-display is the master unit.**
- **Be sure to clear and recheck DTCs after the inspection is completed to confirm that no DTCs are output.**

### WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

Be sure to read the Description before performing the following procedures.



### 1.CHECK MULTI-DISPLAY POWER SOURCE CIRCUIT

a. Refer to the Multi-display Power Source Circuit ( Click here).
If the power source circuit is operating normally, proceed to the next step.

**NEXT**

### 2.INSPECT RADIO RECEIVER ASSEMBLY

Component without harness connected:
(Radio Receiver)

a. Disconnect the F1 and F23 receiver connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F1-5 (ATX+) - F1-15 (ATX-) | Always | 60 to 80 Ω |
| F23-9 (TX+) - F23-10 (TX-) | Always | 60 to 80 Ω |

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

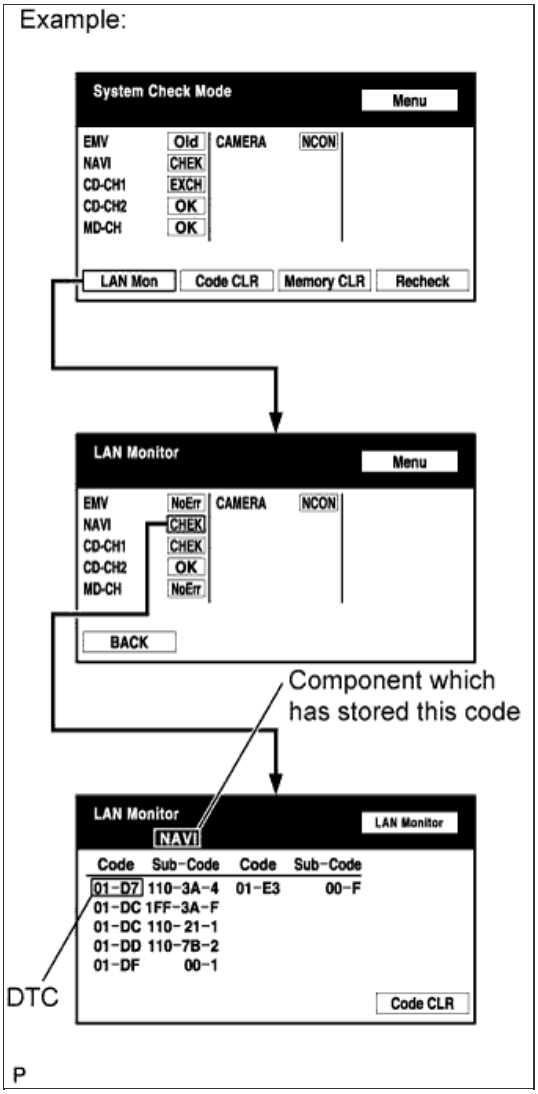
OK

## 3.IDENTIFY COMPONENT WHICH HAS STORED THIS CODE

a. Enter the diagnostic mode.

b. Press the "LAN Mon" switch to change to "LAN Monitor" mode.

c. Identify the component which has stored this code.



**Component Table**

| Display | Component |
|---|---|
| AUDIO | Radio receiver |
| DSP-AMP | Stereo component amplifier |
| EMV | Multi-display |
| NAVI | Navigation ECU |
| CAMERA-C | Parking assist ECU |
| RSE | Television display |

**HINT:**

"NAVI" is the component which has stored this code in the example shown in the illustration.

Example:

P

NEXT

4.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - COMPONENT WHICH HAS STORED THIS CODE)

**HINT:**

For details of the connectors, refer to Terminals of ECU ( Click here).

a. Referring to the AVC-LAN wiring diagram, check the AVC-LAN circuit between the multi-display and the component which has stored this code.

i. Disconnect all connectors between the multi-display and the component which has stored this code.

ii. Check for an open or short in the AVC-LAN circuit between the multi-display and the component which has stored this code.

**OK:**
**There is no open or short circuit.**

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

5.REPLACE MULTI-DISPLAY

a. Replace the multi-display with a normal one ( Click here) and check if the same problem occurs again.

**OK:**
**Same problem does not occur.**

NG → REPLACE COMPONENT WHICH HAS STORED THIS CODE

OK

END

## DTC 58-45 High Temperature

## DTC 80-45 High Temperature

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |

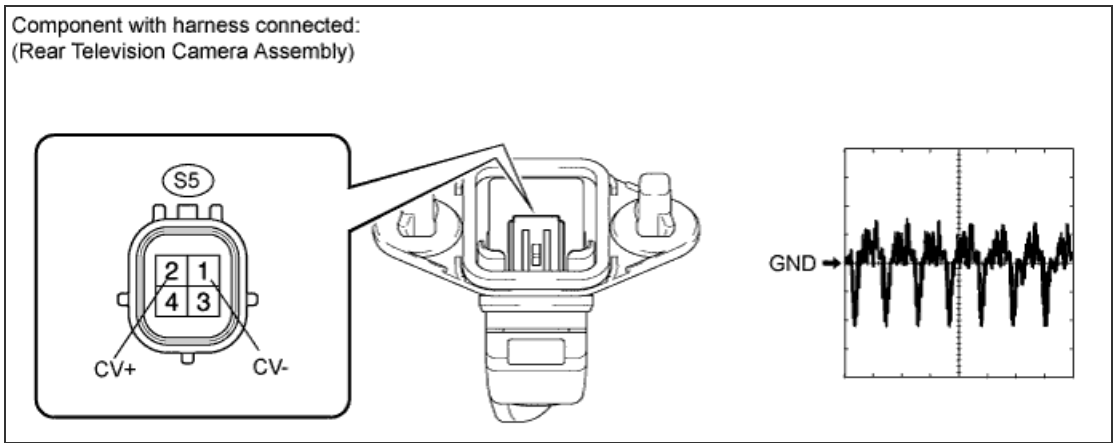
## DTC 5C-40 Camera Picture Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 5C-40 | A synchronous signal from the camera cannot be transmitted. | • Harness or connector<br>• Television camera<br>• Multi-display |

### WIRING DIAGRAM



### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

#### 1.CHECK REAR TELEVISION CAMERA ASSEMBLY

a. Using an oscilloscope, check the waveform.

**Measurement Condition**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | S5-2 (CV+) - S5-1 (CV-) |
| Tool Setting | 0.2 V/DIV., 50 µs/DIV. |
| | |

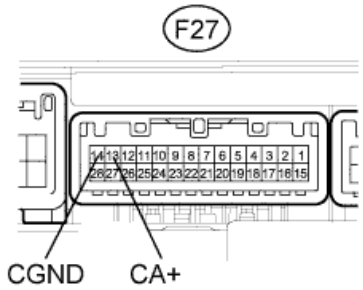
| | |
|---|---|
| Condition | Engine switch on (IG), shift lever moved to R |

**OK:**

**Pulse generation**

NG → REPLACE REAR TELEVISION CAMERA ASSEMBLY (Click here)

OK



## 2.CHECK MULTI-DISPLAY (CA+ VOLTAGE)

a. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F27-13 (CA+) - F27-14 (CGND) | Engine switch on (IG), shift lever moved to R | 5.8 to 6.5 V |

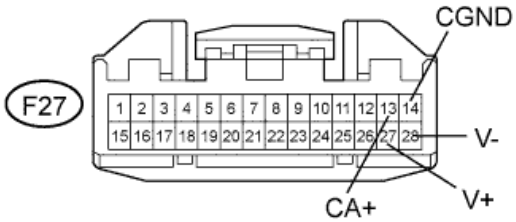
Component with harness connected:
(Multi-display)

NG → REPLACE MULTI-DISPLAY (Click here)

OK

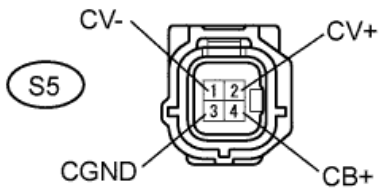
## 3.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - REAR TELEVISION CAMERA)

a. Disconnect the F27 display connector.



b. Disconnect the S5 camera connector.

c. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| S5-4 (CB+) - F27-13 (CA+) | Always | Below 1 Ω |
| S5-3 (CGND) - F27-14 (CGND) | Always | Below 1 Ω |
| S5-2 (CV+) - F27-27 (V+) | Always | Below 1 Ω |
| S5-1 (CV-) - F27-28 (V-) | Always | Below 1 Ω |
| S5-4 (CB+) - Body ground | Always | 10 kΩ or higher |
| S5-3 (CGND) - Body ground | Always | 10 kΩ or higher |
| S5-2 (CV+) - Body ground | Always | 10 kΩ or higher |
| S5-1 (CV-) - Body ground | Always | 10 kΩ or higher |

Front view of wire harness connector:
(to Multi-display)

Front view of wire harness connector:
(to Rear Television Camera Assembly)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

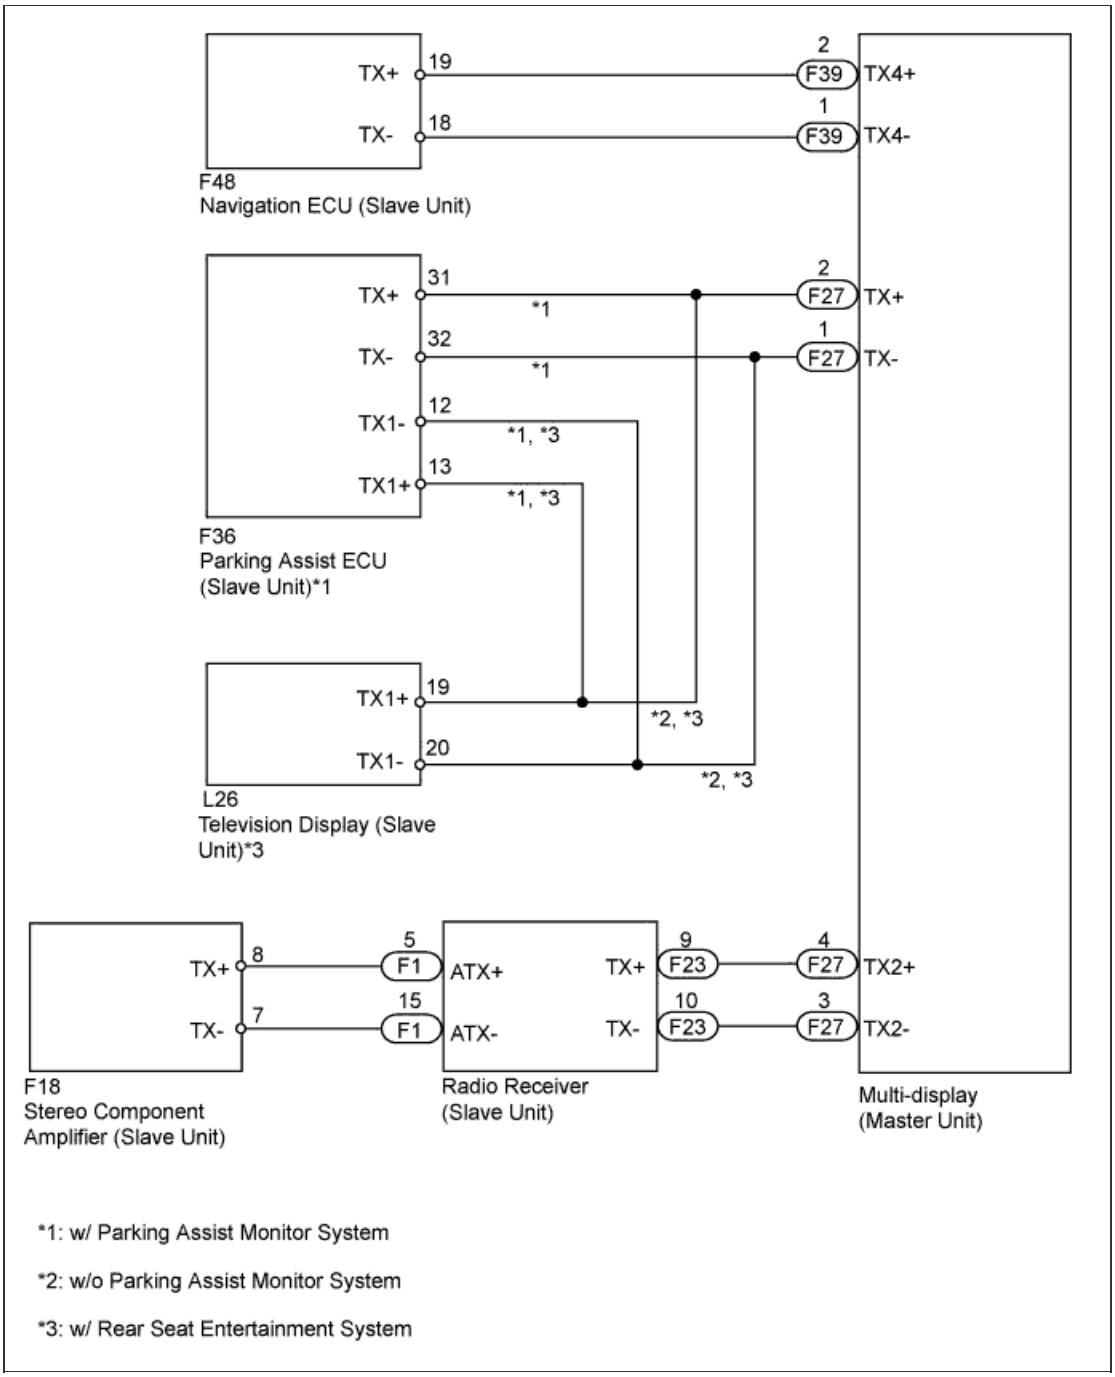
REPLACE MULTI-DISPLAY (Click here)

## DTC 01-DF Master Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 01-DF* | When either condition below is met:<br>• The device with a display fails and the master is switched to the audio device.<br>• A communication error between the sub-master (radio receiver) and master occurs. | • Multi-display power source circuit<br>• AVC-LAN circuit between multi-display and component which has stored this code<br>• AVC-LAN circuit between multi-display and radio receiver<br>• Multi-display<br>• Component which has stored this code |



**HINT:**

*: When 210 seconds have elapsed after disconnecting the power supply connector of the master component with the engine switch on (ACC) or on (IG), this code is stored.

**NOTICE:**

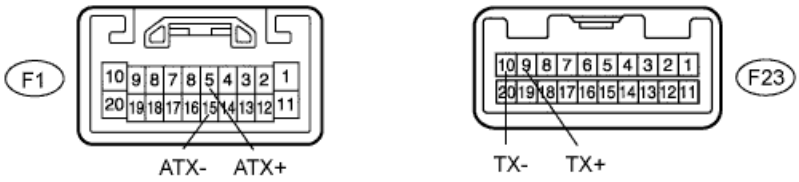
- **Before starting troubleshooting, be sure to clear DTCs to clear codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The multi-display is the master unit.**
- **Be sure to clear and recheck DTCs after the inspection is completed to confirm that no DTCs are output.**

### WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

Be sure to read the Description before performing the following procedures.



### 1.CHECK MULTI-DISPLAY POWER SOURCE CIRCUIT

a. Refer to the Multi-display Power Source Circuit ( Click here).
If the power source circuit is operating normally, proceed to the next step.

**NEXT**

### 2.INSPECT RADIO RECEIVER ASSEMBLY

Component without harness connected:
(Radio Receiver)

a. Disconnect the F1 and F23 receiver connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F1-5 (ATX+) - F1-15 (ATX-) | Always | 60 to 80 Ω |
| F23-9 (TX+) - F23-10 (TX-) | Always | 60 to 80 Ω |

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

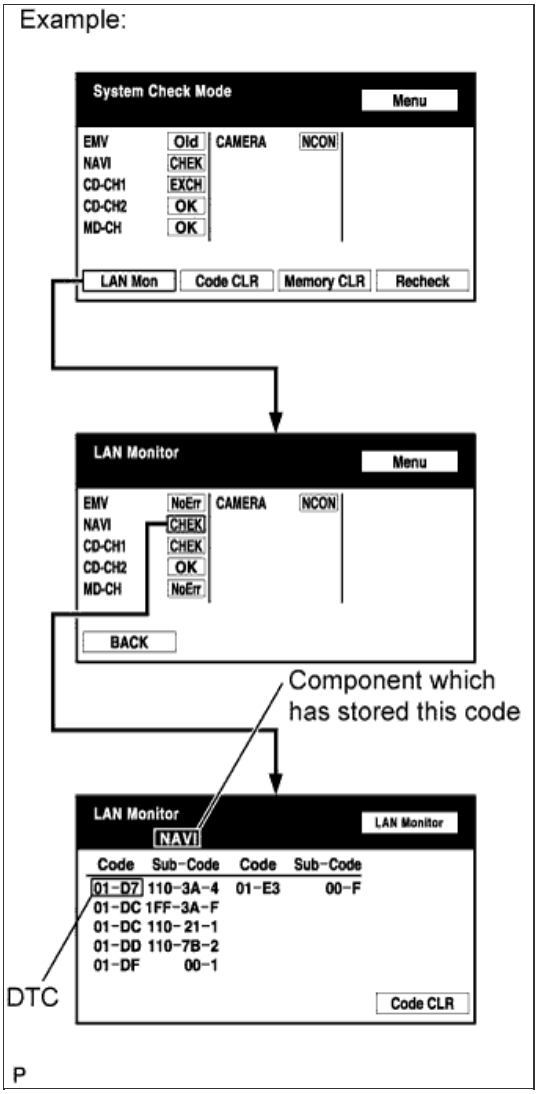
OK

## 3.IDENTIFY COMPONENT WHICH HAS STORED THIS CODE

a. Enter the diagnostic mode.

b. Press the "LAN Mon" switch to change to "LAN Monitor" mode.

c. Identify the component which has stored this code.



**Component Table**

| Display | Component |
|---|---|
| AUDIO | Radio receiver |
| DSP-AMP | Stereo component amplifier |

| CAMERA-C | Parking assist ECU |
| RSE | Television display |

**HINT:**

"NAVI" is the component which has stored this code in the example shown in the illustration.

Example:

P

NEXT

4.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - COMPONENT WHICH HAS STORED THIS CODE)

**HINT:**

For details of the connectors, refer to Terminals of ECU ( Click here).

a. Referring to the AVC-LAN wiring diagram, check the AVC-LAN circuit between the multi-display and the component which has stored this code.

i. Disconnect all connectors between the multi-display and the component which has stored this code.

ii. Check for an open or short in the AVC-LAN circuit between the multi-display and the component which has stored this code.

**OK:**
**There is no open or short circuit.**

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

5.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - RADIO RECEIVER)

**HINT:**

For details of the connectors, refer to Terminals of ECU ( Click here).

a. Referring to the AVC-LAN wiring diagram, check the AVC-LAN circuit between the multi-display and the radio receiver.

i. Disconnect all connectors between the multi-display and the radio receiver.

ii. Check for an open or short in the AVC-LAN circuit between the multi-display and the radio receiver.

**OK:**
**There is no open or short circuit.**

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

6.REPLACE MULTI-DISPLAY

a. Replace the multi-display with a normal one ( Click here) and check if the same problem occurs again.

**OK:**
**Same problem does not occur.**

NG → REPLACE COMPONENT WHICH HAS STORED THIS CODE

OK

END

## DTC 60-10 AM Tuner PLL does not Lock

## DTC 60-11 FM Tuner PLL does not Lock

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 60-10 | AM tuner PLL (phase locked loop) synchronization is impossible. | Radio receiver |
| 60-11 | FM tuner PLL (phase locked loop) synchronization is impossible. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

a. Recheck for DTCs and check if the same trouble code is output.

**HINT:**

If DTCs are output frequently, replace the radio receiver.

**OK:**
**No DTC is output.**

**NG** → **REPLACE RADIO RECEIVER ASSEMBLY (Click here)**

**OK**

**END**

## DTC 01-E2 ON / OFF Indication Parameter Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 01-E2 | A signal for ON/OFF control from the master device has a problem. | Multi-display |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.REPLACE MULTI-DISPLAY**

a. Replace the multi-display (Click here).

**END**

## DTC 60-42 Tuner Power Source Error

## DTC 60-43 AM Tuner Error

## DTC 60-44 FM Tuner Error

## DTC 60-50 Malfunction in Internal IC

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 60-42 | The power source of the tuner is abnormal. | Radio receiver |
| 60-43 | The AM tuner is abnormal. | |
| 60-44 | The FM tuner is abnormal. | |
| 60-50 | A problem occurs in the IC inside the tuner unit and the radio reception is not normal. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.CLEAR DTC**

a. Clear the DTCs (Click here).

**NEXT**

**2.RECHECK DTC**

a. Recheck for DTCs and check if the same trouble code is output.

**HINT:**

If DTCs are output frequently, replace the radio receiver.

**OK:**
**No DTC is output.**

**NG** → **REPLACE RADIO RECEIVER ASSEMBLY (Click here)**

**OK**

**END**

# DTC B1574 GVIF Disconnected (from Park Assist/Monitoring ECU to EMV/MM Integrated Device)

**for Preparation** Click here

## DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1574 | GVIF disconnected (from Parking assist ECU to Multi-display) | • Harness or connector (GVIF cable)<br>• Multi-display assembly |

## INSPECTION PROCEDURE

### 1.CLEAR DTC

a. Clear the DTCs (Click here).

NEXT

### 2.CHECK DTC

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output.**

NG → **Go to step 3**

OK

### USE SIMULATION METHOD TO CHECK (Click here)

### 3.CHECK HARNESS AND CONNECTOR (GVIF CABLE)

a. Check that the digital signal lines between the multi-display assembly and parking assist ECU are not sharply bent or pinched, and that the connectors are properly connected and there are no other installation problems.

**OK:**
**There are no installation problems.**

NG → REPLACE HARNESS AND CONNECTOR (GVIF CABLE)

OK

### 4.REPLACE HARNESS AND CONNECTOR (GVIF CABLE)

a. Replace the harness and connector (GVIF cable) with a new or normally functioning one.

NEXT

### 5.CLEAR DTC

a. Clear the DTCs (Click here).

NEXT

### 6.CHECK DTC

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output.**

**NG** → REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

**OK**

END (GVIF CABLE IS DEFECTIVE)

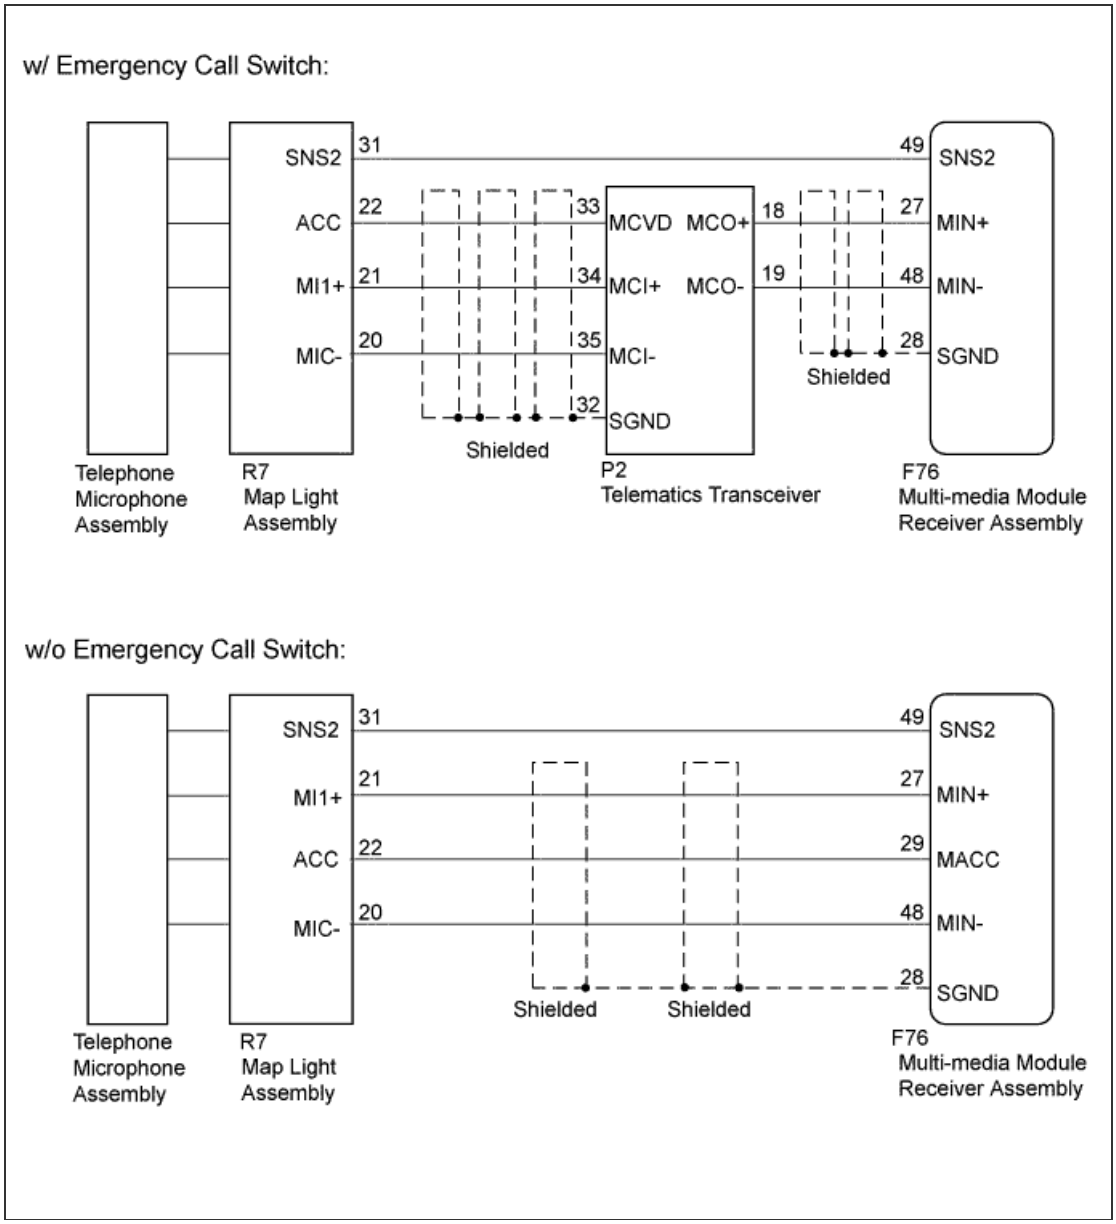
## DTC B1579 Voice Recognition Microphone Disconnected



**for Preparation** Click here

### DESCRIPTION

The multi-media module receiver assembly and map light assembly (telephone microphone assembly) are connected to each other using the microphone connection detection signal lines.
This DTC is stored when a microphone connection detection signal line is disconnected.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1579 | Telephone microphone signal is lost. | • Multi-media module receiver assembly<br>• Map light assembly<br>• Telephone microphone assembly<br>• Telematics Transceiver (w/ Emergency Call Switch)<br>• Harness or connector |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**HINT:**

When replacing the multi-media module receiver assembly or the telematics transceiver, perform the vehicle contract setting ( Click here).

## 1.CONFIRM MODEL

a. Choose the model to be inspected.

**Model**

| Model | Proceed to |
|---|---|
| w/o Emergency Call Switch | A |
| w/ Emergency Call Switch | B |

B → Go to step 7

A →

## 2.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - MAP LIGHT ASSEMBLY)

a. Disconnect the F76 multi-media module receiver assembly connector.

b. Disconnect the R7 map light assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-27 (MIN+) - R7-21 (MI1+) | Always | Below 1 Ω |
| F76-48 (MIN-) - R7-20 (MIC-) | Always | Below 1 Ω |
| F76-29 (MACC) - R7-22 (ACC) | Always | Below 1 Ω |
| F76-49 (SNS2) - R7-31 (SNS2) | Always | Below 1 Ω |
| F76-27 (MIN+) - Body ground | Always | 10 kΩ or higher |
| F76-48 (MIN-) - Body ground | Always | 10 kΩ or higher |
| F76-28 (SGND) - Body ground | Always | 10 kΩ or higher |
| F76-49 (SNS2) - Body ground | Always | 10 kΩ or higher |
| F76-29 (MACC) - Body ground | Always | 10 kΩ or higher |

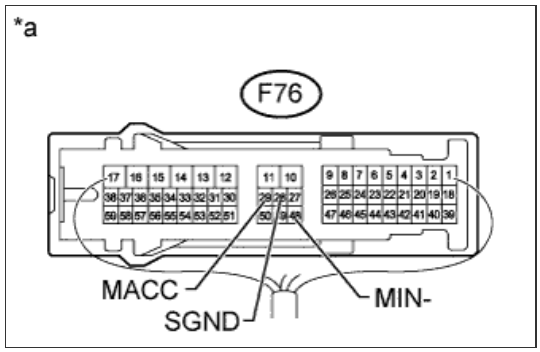
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK →

## 3.CHECK MULTI-MEDIA MODULE RECEIVER ASSEMBLY

a. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**



| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F76-29 (MACC) - Body ground | Engine switch on (ACC) | 4 to 6 V |

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| | | Specified |
|---|---|---|

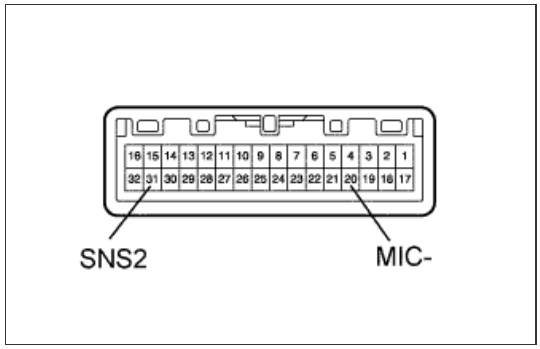
| Tester Connection | Condition | Condition |
|---|---|---|
| F76-28 (SGND) - Body ground | Always | Below 1 Ω |
| F76-48 (MIN-) - Body ground | Always | Below 1 Ω |

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected (Multi-media Module Receiver Assembly) |

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK



## 4.INSPECT MAP LIGHT ASSEMBLY

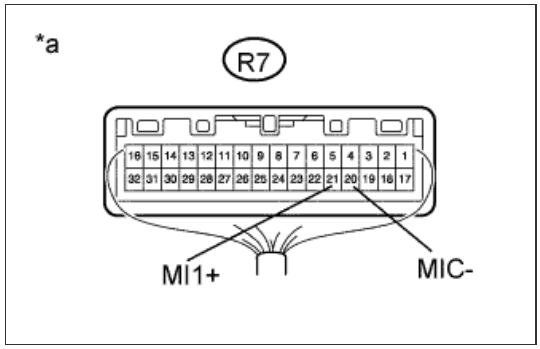
a. Remove the map light assembly (Click here).

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 20 (MIC-) - 31 (SNS2) | Always | Below 1 Ω |

NG → Go to step 6



OK

## 5.CHECK MAP LIGHT ASSEMBLY

a. Turn the engine switch on (ACC).

b. Connect an oscilloscope to terminals R7-21 (MI1+) and R7-20 (MIC-) of the map light assembly connector.

c. Check the waveform of the telephone microphone assembly using the oscilloscope.

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected (Map Light Assembly) |

**Result**

| Result | Proceed to |
|---|---|
| A waveform synchronized with the voice input to the map light assembly is output. | A |
| A waveform synchronized with the voice input to the map light assembly is not output. | B |

B → Go to step 6

A

REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

### 6.CHECK TELEPHONE MICROPHONE ASSEMBLY

a. Replace the telephone microphone assembly with a new or normally functioning one ( Click here).

b. Check if the same DTC is output again.

**Result**

| Result | Proceed to |
|---|---|
| No DTCs are output. | A |
| DTCs are output. | B |

B → REPLACE MAP LIGHT ASSEMBLY (Click here)

A →

### END (TELEPHONE MICROPHONE ASSEMBLY IS DEFECTIVE)

### 7.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - MAP LIGHT ASSEMBLY)

a. Disconnect the F76 multi-media module receiver assembly connector.

b. Disconnect the R7 map light assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-49 (SNS2) - R7-31 (SNS2) | Always | Below 1 Ω |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK →

### 8.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - TELEMATICS TRANSCEIVER)

a. Disconnect the F76 multi-media module receiver assembly connector.

b. Disconnect the P2 telematics transceiver connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-27 (MIN+) - P2-18 (MCO+) | Always | Below 1 Ω |
| F76-48 (MIN-) - P2-19 (MCO-) | Always | Below 1 Ω |
| F76-27 (MIN+) - Body ground | Always | 10 kΩ or higher |
| F76-48 (MIN-) - Body ground | Always | 10 kΩ or higher |
| F76-28 (SGND) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK →

### 9.CHECK HARNESS AND CONNECTOR (TELEMATICS TRANSCEIVER - MAP LIGHT ASSEMBLY)

a. Disconnect the P2 telematics transceiver connector.

b. Disconnect the R7 map light assembly connector.

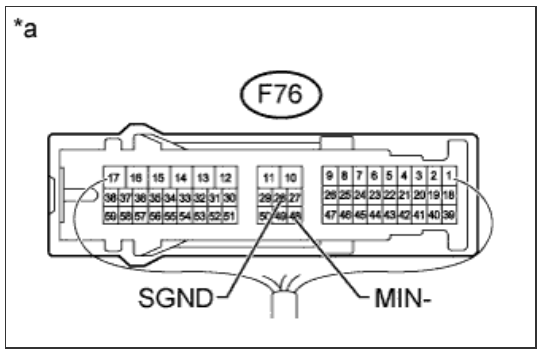
c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| P2-33 (MCVD) - R7-22 (ACC) | Always | Below 1 Ω |
| P2-34 (MCI+) - R7-21 (MI1+) | Always | Below 1 Ω |
| P2-35 (MCI-) - R7-20 (MIC-) | Always | Below 1 Ω |
| P2-33 (MCVD) - Body ground | Always | 10 kΩ or higher |
| P2-34 (MCI+) - Body ground | Always | 10 kΩ or higher |
| P2-35 (MCI-) - Body ground | Always | 10 kΩ or higher |
| P2-32 (SGND) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



## 10.CHECK MULTI-MEDIA MODULE RECEIVER ASSEMBLY

a. Disconnect the P2 telematics transceiver connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-28 (SGND) - Body ground | Always | Below 1 Ω |
| F76-48 (MIN-) - Body ground | Always | Below 1 Ω |

**Text in Illustration**

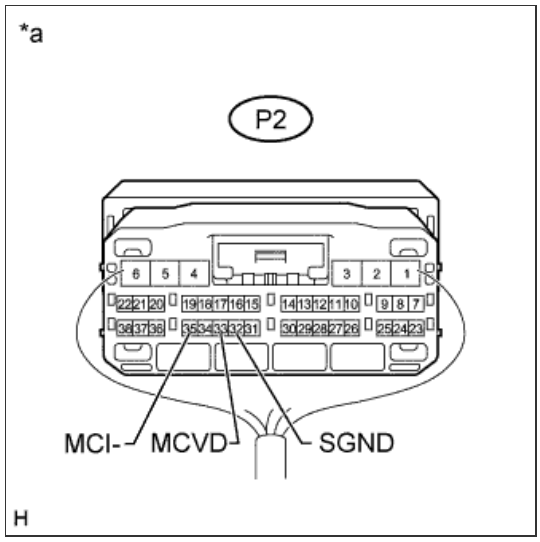
| | |
|---|---|
| *a | Component with harness connected (Multi-media Module Receiver Assembly) |

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK

## 11.CHECK TELEMATICS TRANSCEIVER

a. Measure the voltage according to the value(s) in the table below.



**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| P2-33 (MCVD) - Body ground | Engine switch on (ACC) | 4 to 6 V |

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

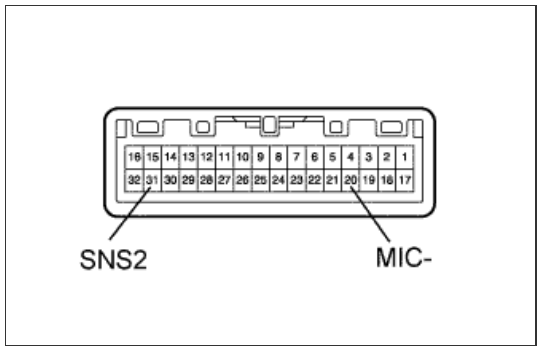
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| P2-32 (SGND) - Body ground | Always | Below 1 Ω |
| P2-35 (MCI-) - Body ground | Always | Below 1 Ω |

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected (Telematics Transceiver) |

NG → REPLACE TELEMATICS TRANSCEIVER (Click here)

OK



## 12.INSPECT MAP LIGHT ASSEMBLY

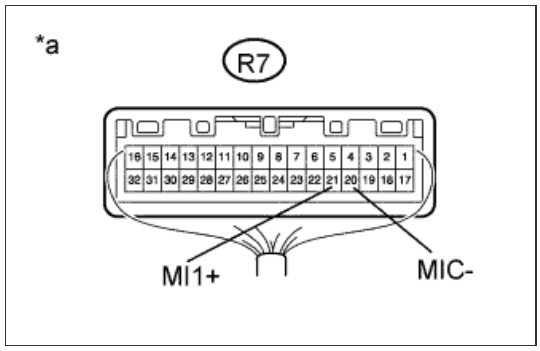
a. Remove the map light assembly (Click here).

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 20 (MIC-) - 31 (SNS2) | Always | Below 1 Ω |

NG → Go to step 14



OK

## 13.CHECK MAP LIGHT ASSEMBLY

a. Turn the engine switch on (ACC).

b. Connect an oscilloscope to terminals R7-21 (MI1+) and R7-20 (MIC-) of the map light assembly connector.

c. Check the waveform of the telephone microphone assembly using the oscilloscope.

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected (Map Light Assembly) |

**Result**

| Result | Proceed to |
|---|---|
| A waveform synchronized with the voice input to the map light assembly is output. | A |
| A waveform synchronized with the voice input to the map light assembly is not output. | B |

B → Go to step 14

A

REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

14.CHECK TELEPHONE MICROPHONE ASSEMBLY

a. Replace the telephone microphone assembly with a new or normally functioning one ( Click here).

b. Check if the same DTC is output again.

**Result**

| Result | Proceed to |
|---|---|
| No DTCs are output. | A |
| DTCs are output. | B |

B → REPLACE MAP LIGHT ASSEMBLY (Click here)

A

END (TELEPHONE MICROPHONE ASSEMBLY IS DEFECTIVE)

## DTC B15A0 LAN Master Malfunction

## DTC B15AD Navigation Processor Malfunction

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored when a malfunction occurs in the multi-media module receiver assembly.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15A0 | When one of the conditions below is met:<br>• Bus malfunction<br>• Sub-microprocessor malfunction<br>• EEPROM error | Multi-media module receiver assembly |
| B15AD | When either of the conditions below is met:<br>• A short to ground, short to +B or open occurs in the gyro signal circuit<br>• Gyro sensor malfunction | |

### INSPECTION PROCEDURE

**NOTICE:**

After replacing the multi-media module receiver assembly of vehicles subscribed to pay-type satellite radio broadcasts, XM radio ID registration is necessary (w/ SDARS System).

**1.CLEAR DTC**

a. Clear the DTCs (Click here).

# DTC B15A6 Display Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when a malfunction occurs in the multi-display assembly.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15A6 | When one of the conditions below is met:<br>• RAM error<br>• Drawing controller malfunction<br>• Internal hard drive malfunction | Multi-display assembly |

## INSPECTION PROCEDURE

### 1.CLEAR DTC

a. Clear the DTCs (Click here).

NEXT

### 2.CHECK DTC

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output.**

NG → REPLACE MULTI-DISPLAY ASSEMBLY (**Click here**)

OK

USE SIMULATION METHOD TO CHECK (**Click here**)

## DTC 34-10 Error in Picture Circuit

## DTC 34-11 No Current in Back-light

## DTC 34-12 Excess Current in Back-light

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 34-10 | An error in the power supply system for the picture circuit. | Multi-display |
| 34-11 | A decline in power output from the inverter circuit for the back-light. | |
| 34-12 | Excess power output from the inverter circuit for the back-light. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.REPLACE MULTI-DISPLAY**

a. Replace the multi-display (Click here).

**NEXT**

**END**

## DTC B15B0 Display Screen Malfunction

**for Preparation** Click here

### DESCRIPTION

This DTC is stored when a malfunction occurs in the multi-display assembly.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15B0 | Picture circuit (TFT unit) malfunction | Multi-display assembly |

### INSPECTION PROCEDURE

**1.CLEAR DTC**

a. Clear the DTC (Click here).

**NEXT**

**2.CHECK DTC**

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output.**

**NG** → **REPLACE MULTI-DISPLAY ASSEMBLY (Click here)**

**OK**

**USE SIMULATION METHOD TO CHECK (Click here)**

## DTC 34-10 Error in Picture Circuit

## DTC 34-11 No Current in Back-light

## DTC 34-12 Excess Current in Back-light

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 34-10 | An error in the power supply system for the picture circuit. | Multi-display |
| 34-11 | A decline in power output from the inverter circuit for the back-light. | |
| 34-12 | Excess power output from the inverter circuit for the back-light. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.REPLACE MULTI-DISPLAY**

a. Replace the multi-display (Click here).

**NEXT**

**END**

# DTC B15B8 Harddisk Malfunction

**for Preparation** Click here

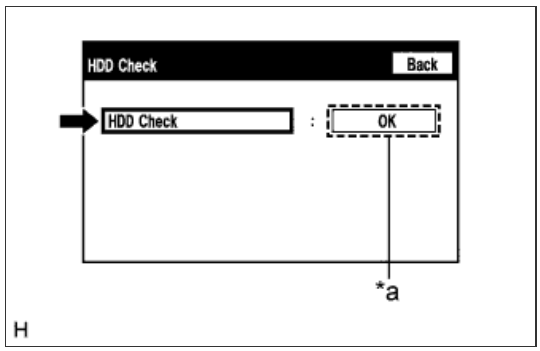
## DESCRIPTION

This DTC is stored when the hard disc which is built into the multi-media module receiver assembly has an initialization malfunction or read/write errors occur more than a specified number of times.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15B8 | Hard disk drive (HDD) malfunction | Hard disc |

## INSPECTION PROCEDURE

### 1.CHECK HARD DISC (OPERATION CHECK)



a. Enter the "Failure Diagnosis" screen. Refer to Check Hard disc in Operation Check (Click here).

b. Select "HDD Check" and check the result.

**OK:**
**"OK" is displayed.**

**HINT:**

- **After selecting "HDD Check", it may take a while until the result is displayed.**
- **If the cabin temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher, the HDD may not operate normally, and "NG" may be shown on the display. Make sure to perform the inspection with the cabin at an appropriate temperature.**

Text in Illustration

| | |
|---|---|
| *a | Result |

NG → Go to step 4

OK ↓

### 2.CLEAR DTC

a. Clear the DTCs (Click here).

NEXT ↓

### 3.CHECK DTC

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output.**

**HINT:**

The hard disc may be malfunctioning even if DTC B15B8 is not output.

NG → REPLACE HARD DISC (**Click here**)

OK ↓

USE SIMULATION METHOD TO CHECK (**Click here**)

### 4.REPLACE HARD DISC

a. Replace the hard disc with a new or normally functioning one ( Click here).

NEXT

5.CLEAR DTC

a. Clear the DTCs (Click here).

NEXT

6.CHECK DTC

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output.**

**HINT:**

The hard disc may be malfunctioning even if DTC B15B8 is not output.

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (**Click here**)

OK

END (HARD DISC IS DEFECTIVE)

## DTC 34-10 Error in Picture Circuit

## DTC 34-11 No Current in Back-light

## DTC 34-12 Excess Current in Back-light

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 34-10 | An error in the power supply system for the picture circuit. | Multi-display |
| 34-11 | A decline in power output from the inverter circuit for the back-light. | |
| 34-12 | Excess power output from the inverter circuit for the back-light. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.REPLACE MULTI-DISPLAY**

a. Replace the multi-display (Click here).

**NEXT**

**END**

## DTC B15C0 Short in GPS Antenna

## DTC B15C1 Open in GPS Antenna

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored when a malfunction occurs in the navigation antenna assembly.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15C0 | Navigation antenna error | • Navigation antenna assembly<br>• Multi-media module receiver assembly |
| B15C1 | Error of the power source to the navigation antenna | |

### INSPECTION PROCEDURE

**NOTICE:**

After replacing the multi-media module receiver assembly of vehicles subscribed to pay-type satellite radio broadcasts, XM radio ID registration is necessary (w/ SDARS System).

**1.CHECK CONNECTION OF NAVIGATION ANTENNA ASSEMBLY**

a. Check if the navigation antenna assembly is securely connected to the multi-media module receiver assembly.

**OK:**
**Navigation antenna assembly is securely connected.**

NG → **SECURELY CONNECT NAVIGATION ANTENNA ASSEMBLY**

OK ↓

**2.REPLACE NAVIGATION ANTENNA ASSEMBLY**

a. Replace the navigation antenna assembly with a known good one ( Click here).

NEXT ↓

**3.CLEAR DTC**

a. Clear the DTCs (Click here).

NEXT ↓

**4.CHECK DTC**

a. Recheck for DTCs and check if the same DTCs are output again ( Click here).

**OK:**
**No DTCs are output.**

NG → **REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)**

OK ↓

**END (NAVIGATION ANTENNA ASSEMBLY IS DEFECTIVE)**

## DTC 45-10 DVD Changer Mechanical Error

## DTC 45-11 DVD Insertion and Ejection Error

## DTC 45-12 DVD Reading Abnormal

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-10 | A mechanical error in the DVD changer is detected while a disc is not being inserted or ejected. | Radio receiver |
| 45-11 | Disc insertion or ejection fails. | |
| 45-12 | A disc read problem occurs. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.REPLACE RADIO RECEIVER ASSEMBLY**

a. Replace the radio receiver (Click here).

**NEXT**

**END**

## DTC B15C0 Short in GPS Antenna

## DTC B15C1 Open in GPS Antenna

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored when a malfunction occurs in the navigation antenna assembly.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15C0 | Navigation antenna error | • Navigation antenna assembly<br>• Multi-media module receiver assembly |
| B15C1 | Error of the power source to the navigation antenna | |

### INSPECTION PROCEDURE

**NOTICE:**

After replacing the multi-media module receiver assembly of vehicles subscribed to pay-type satellite radio broadcasts, XM radio ID registration is necessary (w/ SDARS System).

**1.CHECK CONNECTION OF NAVIGATION ANTENNA ASSEMBLY**

a. Check if the navigation antenna assembly is securely connected to the multi-media module receiver assembly.

**OK:**
**Navigation antenna assembly is securely connected.**

**4.CHECK DTC**

a. Recheck for DTCs and check if the same DTCs are output again ( Click here).

**OK:**
**No DTCs are output.**

NG → **REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)**

OK ↓

**END (NAVIGATION ANTENNA ASSEMBLY IS DEFECTIVE)**

## DTC 45-10 DVD Changer Mechanical Error

## DTC 45-11 DVD Insertion and Ejection Error

## DTC 45-12 DVD Reading Abnormal

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-10 | A mechanical error in the DVD changer is detected while a disc is not being inserted or ejected. | Radio receiver |
| 45-11 | Disc insertion or ejection fails. | |
| 45-12 | A disc read problem occurs. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.REPLACE RADIO RECEIVER ASSEMBLY**

a. Replace the radio receiver (Click here).

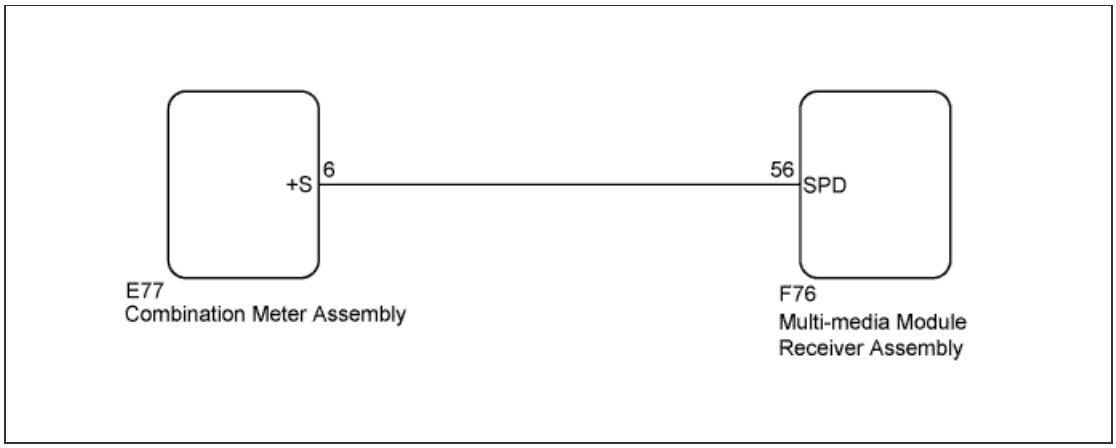
**NEXT**

**END**

# DTC B15C2 Speed Signal Malfunction

**for Preparation** Click here

## DESCRIPTION



The multi-media module receiver assembly receives a vehicle speed signal from the combination meter assembly and information from the navigation antenna, and then adjusts the vehicle position on the map. The multi-media module receiver assembly stores this DTC when the difference between the speed information that the navigation antenna assembly receives and the SPD pulse received from the combination meter assembly becomes large.

**HINT:**

- **A voltage of 12 V or 5 V is output from each ECU and then input to the combination meter assembly. The signal is changed to a pulse signal at the transistor in the combination meter assembly. Each ECU controls the respective systems based on the pulse signal.**
- **If a short occurs in any of the ECUs or in the wire harness connected to an ECU, all systems in the diagram below will not operate normally.**

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15C2 | A difference between the GPS speed and SPD pulse is detected | • Meter / gauge system<br>• Multi-media module receiver assembly |

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CLEAR DTC

a. Clear the DTCs (Click here).

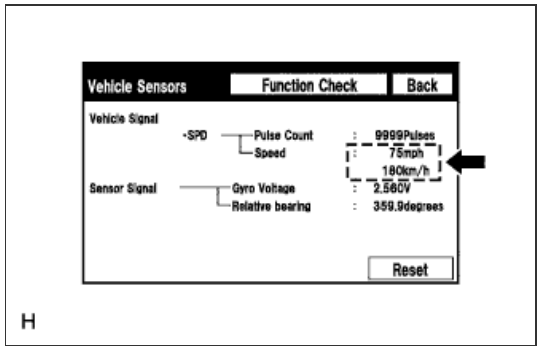
**NEXT**

### 2.CHECK DTC

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output.**

**NG** → **Go to step 3**



**OK**

USE SIMULATION METHOD TO CHECK (**Click here**)

### 3.CHECK VEHICLE SENSOR (OPERATION CHECK)

a. Enter the "Vehicle Sensors" screen. Refer to Check GPS & Vehicle Sensor in Operation Check (Click here).

b. While driving the vehicle, compare the "Speed" indicator to the reading on the speedometer. Check if these readings are almost equal.

**HINT:**

The combination meter assembly receives the vehicle speed signal from the skid control ECU via CAN communication. Therefore, perform the following inspection referring to values on the Data List of the skid control ECU because it is the source of the vehicle speed signal.

**OK:**

**Vehicle speed displayed on the "Vehicle Sensors" screen is almost the same as the actual vehicle speed measured using the intelligent tester (Click here).**

NG → GO TO METER / GAUGE SYSTEM (Click here)

OK → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

## DTC 45-10 DVD Changer Mechanical Error

## DTC 45-11 DVD Insertion and Ejection Error

## DTC 45-12 DVD Reading Abnormal

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-10 | A mechanical error in the DVD changer is detected while a disc is not being inserted or ejected. | Radio receiver |
| 45-11 | Disc insertion or ejection fails. | |
| 45-12 | A disc read problem occurs. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.REPLACE RADIO RECEIVER ASSEMBLY**

a. Replace the radio receiver (Click here).

**NEXT**

**END**

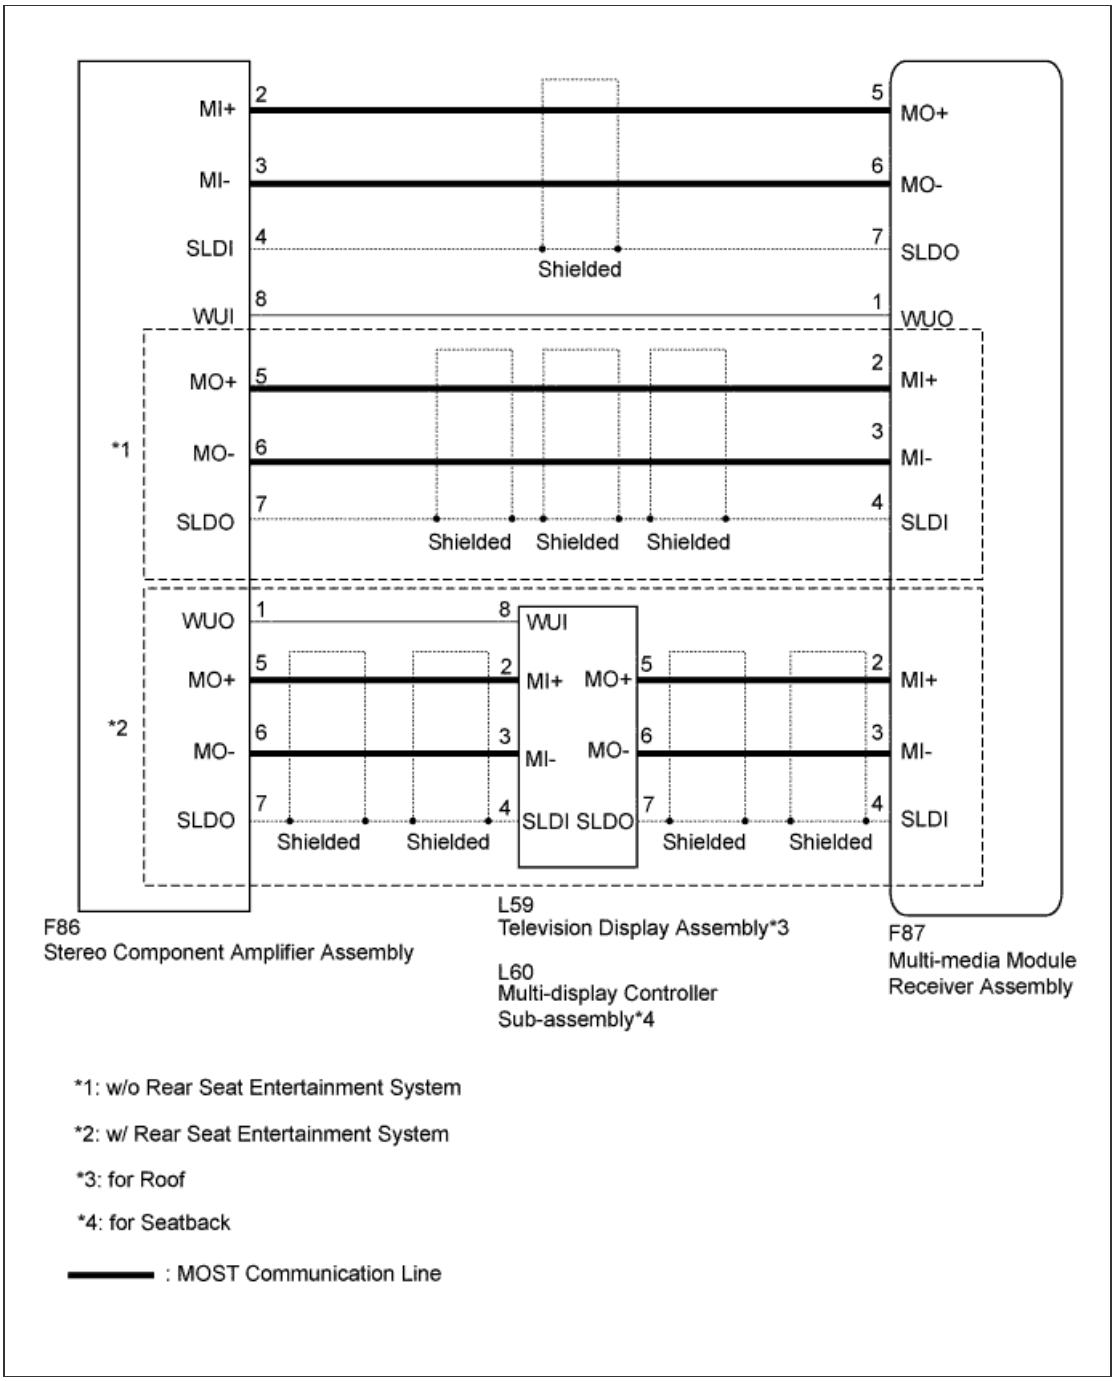
# DTC B15D0 MOST Communication Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when the MOST network cannot be established after the master unit is activated.

**HINT:**



- **If a short occurs in a speaker circuit, the sound from the corresponding speaker will be low or almost impossible to hear. If the volume is turned up in this situation, to prevent excessive current flow due to the short circuit, the stereo component amplifier assembly stops operating when its output exceeds a certain level. When the operation of the stereo component amplifier assembly stops, the navigation system will not function normally. This is because MOST communication will stop due to the shut down of the amplifier causing an error in the MOST network. The stereo component amplifier assembly will start operating again when the engine switch is turned off and back on (ACC) again. However, the amplifier will stop operating again if its output exceeds a certain level.**
- **When the stereo component amplifier assembly stops operating and a malfunction occurs in the navigation system due to a short in a speaker circuit, this DTC will be stored.**

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15D0 | MOST network cannot be established. | • MOST line check<br>• MOST communication line connector<br>• MOST communication line<br>• Television display assembly (w/ Rear Seat Entertainment System [for Roof])<br>• Multi-display controller sub-assembly (w/ Rear Seat Entertainment System [for Seatback])<br>• Stereo component amplifier assembly<br>• Multi-media module receiver assembly |

**HINT:**

- **For the MOST network, the multi-media module receiver assembly is the master unit.**
- **Errors may occur in MOST communication between devices due to problems such as electrical noise.**

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components (including associated wiring) are installed. | A |
| Optional components (including associated wiring) are installed.<br>DTCs are not output. | B |

**HINT:**

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect AVC-LAN communication.**
- **These DTCs may be stored when an AVC-LAN communication error occurs due to electrical noise.**

| | |
|---|---|
| B | Go to step 3 |

A

## 2.CONFIRM SYMPTOMS

a. Turn the engine switch off.

b. Turn the engine switch on (ACC) and check if the audio system activates and if the speakers operate.

**HINT:**

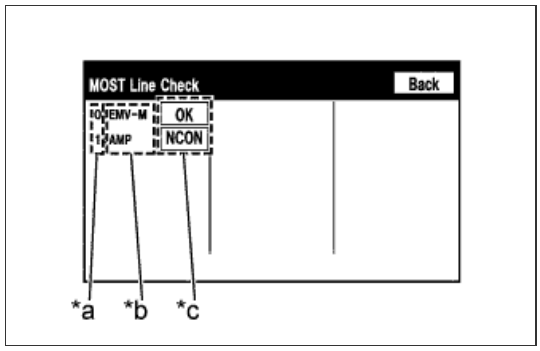
- **Choose a source such as radio so that sound can be output from the speakers.**
- **If sound from the speakers is low, turn up the volume.**

**Result**

| Result | Proceed to |
|---|---|
| Even after the engine switch is turned on (ACC), the navigation system does not activate and sound is not output from the speakers. (w/o Rear Seat Entertainment System) | A |
| Even after the engine switch is turned on (ACC), the navigation system does not activate and sound is not output from the speakers. (w/ Rear Seat Entertainment System) | B |
| The audio system activates when the engine switch is turned on (ACC) but the sound stops being output when the amplifier output exceeds a certain level. | C |

**HINT:**

- **If a short occurs in a speaker circuit, the sound from the corresponding speaker will be low or almost impossible to hear. If the volume is turned up in this situation, to prevent excessive current flow due to the short circuit, the stereo component amplifier assembly stops operating when its output exceeds a certain level. When the operation of the stereo component amplifier assembly stops, the navigation system will not function normally. This is because MOST communication will stop due to the shut down of the amplifier causing an error in the MOST network. The stereo component amplifier assembly will start operating again when the engine switch is turned off and back on (ACC) again. However, the amplifier will stop operating again if its output exceeds a certain level.**
- **When the stereo component amplifier assembly stops operating and a malfunction occurs in the navigation system due to a short in a speaker circuit, this DTC will be stored. In this case, check each speaker circuit and repair or replace malfunctioning parts, and then recheck for DTCs.**



| | |
|---|---|
| B | Go to step 11 |
| C | GO TO AUDIO AND VISUAL SYSTEM (Click here) |

A

## 3.CHECK MOST COMMUNICATION CONNECTORS

a. Display the "MOST Line Check" screen (Click here).

b. Check the result on the "MOST Line Check" screen.

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "AMP". | A |
| "OK" is displayed for all items. | B |

- When "NCON" is displayed for more than 1 item, proceed to the step for the device that has the smallest node position number.
- The "MOST Line Check" screen can be displayed only when DTC B15D0 is stored.

**Text in Illustration**

| | |
|---|---|
| *a | Node position number for devices that use MOST communication |
| *b | Device name |
| | |

| *c | Result |
|---|---|

B → Go to step 7

A

## 4.CONFIRM SYMPTOMS

a. Check the MOST communication line connectors.

i. Check if the MOST communication line connector between the multi-media module receiver assembly and stereo component amplifier assembly has any connection problems (Click here).

b. Display the "MOST Line Check" screen and check the result ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "AMP". | A |
| The screen cannot be changed to the "MOST Line Check" screen. | B |

**HINT:**

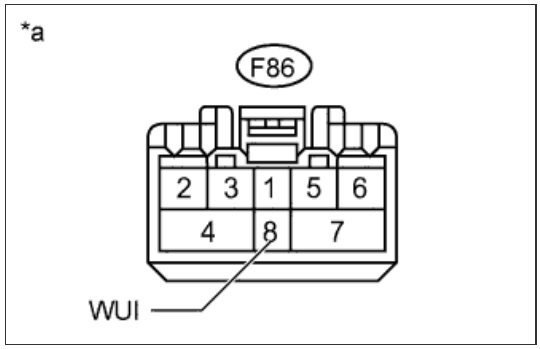
When the malfunction in the MOST network is repaired, the screen cannot be changed to the "MOST Line Check" screen.

B → USE SIMULATION METHOD TO CHECK (Click here)

A

## 5.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY WAKE UP LINE)

a. Disconnect the stereo component amplifier assembly connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F86-8 (WUI) - Body ground | Engine switch on (ACC) | 4.5 V or higher |

**Text in Illustration**

| *a | Front view of wire harness connector (to Stereo Component Amplifier Assembly) |
|---|---|

NG → Go to step 6

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 6.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - STEREO COMPONENT AMPLIFIER ASSEMBLY)

a. Disconnect the F87 multi-media module receiver assembly connector.

b. Disconnect the F86 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F87-1 (WUO) - | Always | Below 1 Ω |

| | | |
|---|---|---|
| F86-8 (WUI) | | |
| F87-1 (WUO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**7.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - STEREO COMPONENT AMPLIFIER ASSEMBLY)**

a. Disconnect the F87 multi-media module receiver assembly connector.

b. Disconnect the F86 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F87-2 (MI+) - F86-5 (MO+) | Always | Below 1 Ω |
| F87-3 (MI-) - F86-6 (MO-) | Always | Below 1 Ω |
| F87-4 (SLDI) - F86-7 (SLDO) | Always | Below 1 Ω |
| F87-5 (MO+) - F86-2 (MI+) | Always | Below 1 Ω |
| F87-6 (MO-)- F86-3 (MI-) | Always | Below 1 Ω |
| F87-7 (SLDO) - F86-4 (SLDI) | Always | Below 1 Ω |
| F87-2 (MI+) - Body ground | Always | 10 kΩ or higher |
| F87-3 (MI-) - Body ground | Always | 10 kΩ or higher |
| F87-4 (SLDI) - Body ground | Always | 10 kΩ or higher |
| F87-5 (MO+) - Body ground | Always | 10 kΩ or higher |
| F87-6 (MO-) - Body ground | Always | 10 kΩ or higher |
| F87-7 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**8.REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY**

a. Replace the stereo component amplifier assembly with a new or normally functioning one ( Click here).

NEXT

**9.CLEAR DTC**

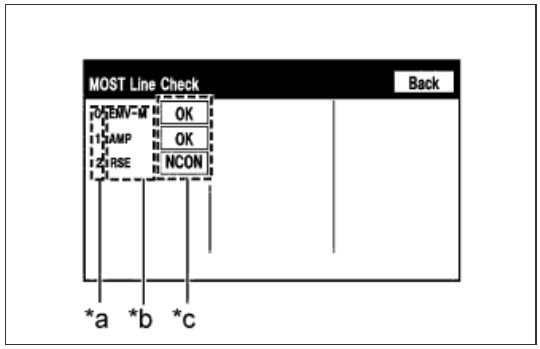
a. Clear the DTCs (Click here).

NEXT

## 10.CHECK DTC

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output**



NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (**Click here**)

OK

END (STEREO COMPONENT AMPLIFIER ASSEMBLY IS DEFECTIVE)

## 11.MOST COMMUNICATION CONNECTORS

a. Display the "MOST Line Check" screen ( Click here).

**Text in Illustration**

| | |
|---|---|
| *a | Node position number for devices that use MOST communication |
| *b | Device name |
| *c | Result |

b. Check the result on the "MOST Line Check" screen.

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "AMP". | A |
| "NCON" is displayed for "RSE". | B |
| "OK" is displayed for all items. | C |

- When "NCON" is displayed for more than 1 item, proceed to the step for the device that has the smallest node position number.
- The "MOST Line Check" screen can be displayed only when DTC B15D0 is stored.

B → **Go to step 15**

C → **Go to step 20**

A

## 12.CONFIRM SYMPTOMS

a. Check the MOST communication line connectors.

i. Check if the MOST communication line connector between the multi-media module receiver assembly and stereo component amplifier assembly has any connection problems (Click here).

b. Display the "MOST Line Check" screen and check the result ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "AMP". | A |
| The screen cannot be changed to the "MOST Line Check" screen. | B |

**HINT:**

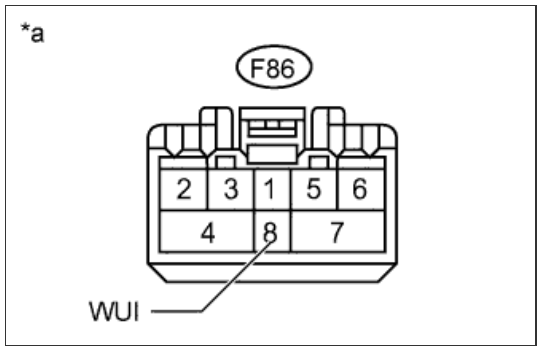
When the malfunction in the MOST network is repaired, the screen cannot be changed to the "MOST Line Check" screen.

B → USE SIMULATION METHOD TO CHECK (**Click here**)

A

## 13.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY WAKE UP LINE)

a. Disconnect the stereo component amplifier assembly connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F86-8 (WUI) - Body ground | Engine switch on (ACC) | 4.5 V or higher |

**Text in Illustration**

| | |
|---|---|
| *a | Front view of wire harness connector (to Stereo Component Amplifier Assembly) |

NG → Go to step 14

OK →

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 14.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - STEREO COMPONENT AMPLIFIER ASSEMBLY)

a. Disconnect the F87 multi-media module receiver assembly connector.

b. Disconnect the F86 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F87-1 (WUO) - F86-8 (WUI) | Always | Below 1 Ω |
| F87-1 (WUO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK →

REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

## 15.CONFIRM SYMPTOMS

a. Check the MOST communication line connectors.

i. Check if the MOST communication line connector between the multi-media module receiver assembly and stereo component amplifier assembly has any connection problems (Click here).

b. Display the "MOST Line Check" screen and check the result ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "RSE" (for Roof). | A |
| "NCON" is displayed for "RSE" (for Seatback). | B |
| The screen cannot be changed to the "MOST Line Check" screen. | C |

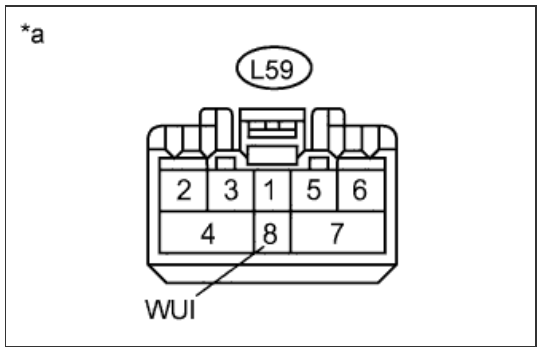
**HINT:**

When the malfunction in the MOST network is repaired, the screen cannot be changed to the "MOST Line Check" screen.

B → Go to step 18

C → USE SIMULATION METHOD TO CHECK (Click here)

A



## 16.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY ASSEMBLY Wake Up LINE)

a. Disconnect the television display assembly connector.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| L59-8 (WUI) - Body ground | Engine switch on (ACC) | 4.5 V or higher |

**Text in Illustration**

| | |
|---|---|
| *a | Front view of wire harness connector (to Television Display Assembly) |

NG → Go to step 17

OK

REPLACE TELEVISION DISPLAY ASSEMBLY (Click here)

## 17.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY - TELEVISION DISPLAY ASSEMBLY)

a. Disconnect the F86 stereo component amplifier assembly connector.

b. Disconnect the L59 television display assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F86-1 (WUO) - L59-8 (WUI) | Always | Below 1 Ω |
| F86-1 (WUO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

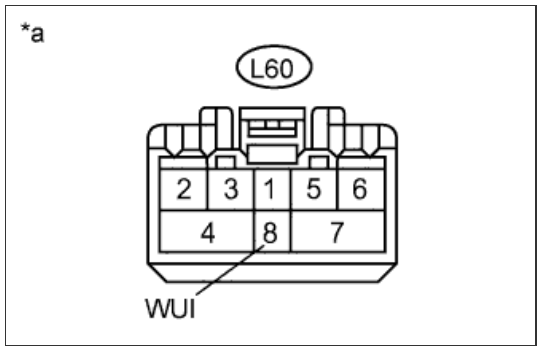
OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 18.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY Wake Up LINE)

a. Disconnect the multi-display controller sub-assembly connector.

b. Measure the voltage according to the value(s) in the table below.



**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| L60-8 (WUI) - | Engine switch on | 4.5 V or higher |

| | | |
|---|---|---|
| Body ground | (ACC) | |

**Text in Illustration**

| | |
|---|---|
| *a | Front view of wire harness connector (to Multi-display Controller Sub-assembly) |

NG → Go to step 19

OK

REPLACE MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY (Click here)

19.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY - MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY)

a. Disconnect the F86 stereo component amplifier assembly connector.

b. Disconnect the L60 multi-display controller sub-assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F86-1 (WUO) - L60-8 (WUI) | Always | Below 1 Ω |
| F86-1 (WUO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

20.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - STEREO COMPONENT AMPLIFIER ASSEMBLY)

a. Disconnect the F87 multi-media module receiver assembly connector.

b. Disconnect the F86 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F87-5 (MO+) - F86-2 (MI+) | Always | Below 1 Ω |
| F87-6 (MO-) - F86-3 (MI-) | Always | Below 1 Ω |
| F87-7 (SLDO) - F86-4 (SLDI) | Always | Below 1 Ω |
| F87-5 (MO+) - Body ground | Always | 10 kΩ or higher |
| F87-6 (MO-) - Body ground | Always | 10 kΩ or higher |
| F87-7 (SLDO) - Body ground | Always | 10 kΩ or higher |

**Result**

| Result | Proceed to |
|---|---|
| OK (for Roof) | A |

| | |
|---|---|
| (OK (for Seatback) | B |
| NG | C |

| | |
|---|---|
| B | Go to step 26 |
| C | REPAIR OR REPLACE HARNESS OR CONNECTOR |

A

21.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY - TELEVISION DISPLAY ASSEMBLY)

a. Disconnect the F86 stereo component amplifier assembly connector.

b. Disconnect the L59 television display assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F86-5 (MO+) - L59-2 (MI+) | Always | Below 1 Ω |
| F86-6 (MO-) - L59-3 (MI-) | Always | Below 1 Ω |
| F86-7 (SLDO) - L59-4 (SLDI) | Always | Below 1 Ω |
| F86-5 (MO+) - Body ground | Always | 10 kΩ or higher |
| F86-6 (MO-) - Body ground | Always | 10 kΩ or higher |
| F86-7 (SLDO) - Body ground | Always | 10 kΩ or higher |

| | |
|---|---|
| NG | REPAIR OR REPLACE HARNESS OR CONNECTOR |

OK

22.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - TELEVISION DISPLAY ASSEMBLY)

a. Disconnect the F87 multi-media module receiver assembly connector.

b. Disconnect the L59 television display assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F87-2 (MI+) - L59-5 (MO+) | Always | Below 1 Ω |
| F87-3 (MI-) - L59-6 (MO-) | Always | Below 1 Ω |
| F87-4 (SLDI) - L59-7 (SLDO) | Always | Below 1 Ω |
| F87-2 (MI+) - Body ground | Always | 10 kΩ or higher |
| F87-3 (MI-) - Body ground | Always | 10 kΩ or higher |
| F87-4 (SLDI) - Body ground | Always | 10 kΩ or higher |

| | |
|---|---|
| NG | REPAIR OR REPLACE HARNESS OR CONNECTOR |

OK

**23.REPLACE TELEVISION DISPLAY ASSEMBLY**

a. Replace the television display assembly with a new or normally functioning one ( Click here).

NEXT

**24.CLEAR DTC**

a. Clear the DTCs (Click here).

NEXT

**25.CHECK DTC**

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output.**

NG → **REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)**

OK

**END (TELEVISION DISPLAY ASSEMBLY IS DEFECTIVE)**

**26.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY - MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY)**

a. Disconnect the F86 stereo component amplifier assembly connector.

b. Disconnect the L60 multi-display controller sub-assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F86-5 (MO+) - L60-2 (MI+) | Always | Below 1 Ω |
| F86-6 (MO-) - L60-3 (MI-) | Always | Below 1 Ω |
| F86-7 (SLDO) - L60-4 (SLDI) | Always | Below 1 Ω |
| F86-5 (MO+) - Body ground | Always | 10 kΩ or higher |
| F86-6 (MO-) - Body ground | Always | 10 kΩ or higher |
| F86-7 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

**27.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY)**

a. Disconnect the F87 multi-media module receiver assembly connector.

b. Disconnect the L60 multi-display controller sub-assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F87-2 (MI+) - L60-5 (MO+) | Always | Below 1 Ω |
| F87-3 (MI-) - L60-6 (MO-) | Always | Below 1 Ω |
| F87-4 (SLDI) - L60-7 (SLDO) | Always | Below 1 Ω |
| F87-2 (MI+) - Body ground | Always | 10 kΩ or higher |
| F87-3 (MI-) - Body ground | Always | 10 kΩ or higher |
| F87-4 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**28.REPLACE MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY**

a. Replace the multi-display controller sub-assembly with a new or normally functioning one ( Click here).

NEXT

**29.CLEAR DTC**

a. Clear the DTCs (Click here).

NEXT

**30.CHECK DTC**

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output.**

NG → USE SIMULATION METHOD TO CHECK (**Click here**)

OK

**END (MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY IS DEFECTIVE)**

## DTC 45-41 Wrong Disc

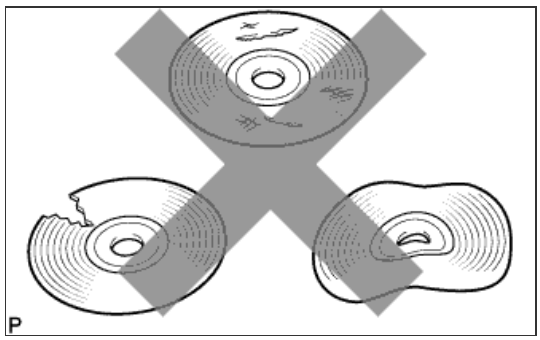
## DTC 45-42 Disc cannot be Read

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-41 | Unsuitable disc is inserted. | • Disc<br>• Radio receiver |
| 45-42 | A disc cannot be read. | |

### INSPECTION PROCEDURE



**HINT:**

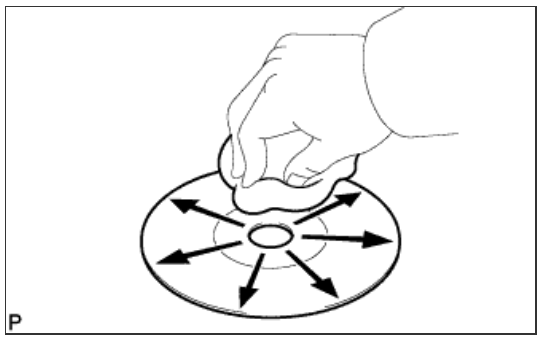
After the inspection is completed, clear the DTCs (Click here).

#### 1.CHECK DISC

a. Check that the disc is not deformed or cracked.

**OK:**
**No deformation or cracks on the disc.**

NG → REPLACE DISC



OK

#### 2.DISC CLEANING

a. If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.

**NOTICE:**

Do not use a conventional record cleaner or antistatic preservative.

NEXT

#### 3.CLEAR DTC

a. Clear the DTC (Click here).

NEXT

4.RECHECK DTC

a. Recheck for DTCs and check if the same trouble code is output.

**OK:**
**No DTC is output.**

NG → Go to step 5

OK →

END

5.REPLACE DISC WITH ANOTHER AND RECHECK

a. Replace the disc with a normal one.

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble code is output.

**OK:**
**No DTC is output.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK →

END

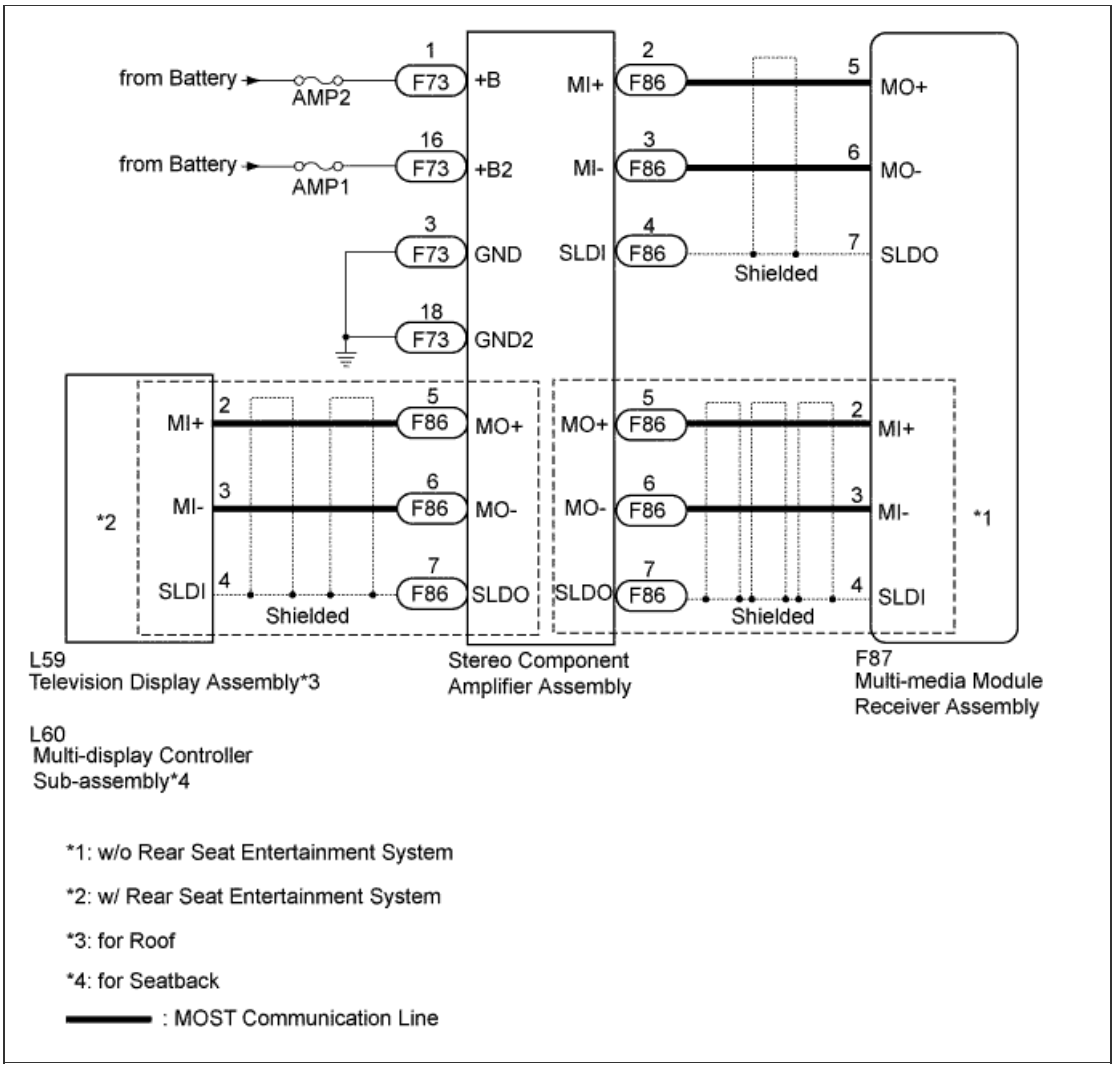
# DTC B15D3 Stereo Component Amplifier Disconnected

**for Preparation** Click here

## DESCRIPTION

The multi-media module receiver assembly, stereo component amplifier assembly, television display assembly*1 and multi-display controller sub-assembly*2 are connected by the MOST communication line.
When a MOST communication error occurs between the multi-media module receiver assembly, stereo component amplifier assembly, television display assembly*1 and multi-display controller sub-assembly*2, these DTCs will be stored.

*1: w/ Rear Seat Entertainment System (for Roof)
*2: w/ Rear Seat Entertainment System (for Seatback)



| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15D3 | A device that is listed in the MOST network connected device record of the master unit is missing. | • Stereo component amplifier assembly power source circuit<br>• MOST circuit between multi-media module receiver assembly and stereo component amplifier assembly<br>• MOST circuit between stereo component amplifier and television display assembly*1<br>• MOST circuit between stereo component amplifier and multi-display controller sub-assembly*2<br>• Stereo component amplifier assembly<br>• Multi-media module receiver assembly<br>• Television display assembly*1<br>• Multi-display controller sub-assembly*2 |

*1: w/ Rear Seat Entertainment System (for Roof)
*2: w/ Rear Seat Entertainment System (for Seatback)

**HINT:**

For the MOST network, the multi-media module receiver assembly is the master unit.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

### 1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Check for optional components.

i. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components (including associated wiring) are installed. | A |
| Optional components (including associated wiring) are not installed. | B |

**HINT:**

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect MOST communication.**
- **This DTC may be stored when a MOST communication error occurs due to electrical noise.**

**B** → Go to step 3

**A**

### 2.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

**NEXT**

### 3.CLEAR DTC

a. Clear the DTCs (Click here).

**NEXT**

### 4.CHECK DTC

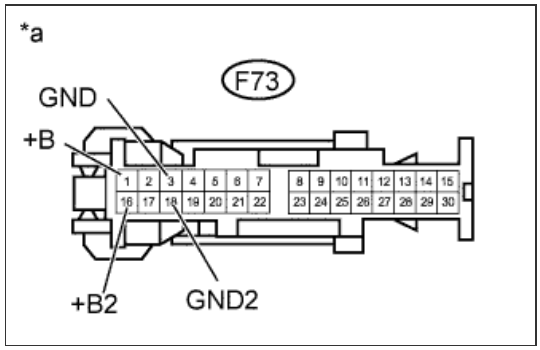
a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output.**

**NG** → **Go to step 5**

**OK**

### END (COMMUNICATION MALFUNCTION DUE TO NOISE)



### 5.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY - BATTERY AND BODY GROUND)

a. Disconnect the stereo component amplifier assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F73-3 (GND) - Body ground | Always | Below 1 Ω |
| F73-18 (GND2) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F73-1 (+B) - F73-3 (GND) | Always | 11 to 14 V |
| F73-16 (+B2) - F73-3 (GND) | Always | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *a | Front view of wire harness connector (to Stereo Component Amplifier Assembly) |

**Result**

| Result | Proceed to |
|---|---|
| OK (w/o Rear Seat Entertainment System) | A |
| OK (w/ Rear Seat Entertainment System [for Roof]) | B |
| OK (w/ Rear Seat Entertainment System [for Seatback]) | C |
| NG | D |

**B** → **Go to step 10**

C → Go to step 14

D → REPAIR OR REPLACE HARNESS OR CONNECTOR

A

**6.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - STEREO COMPONENT AMPLIFIER ASSEMBLY)**

a. Disconnect the F87 multi-media module receiver assembly connector.

b. Disconnect the F86 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F87-2 (MI+) - F86-5 (MO+) | Always | Below 1 Ω |
| F87-3 (MI-) - F86-6 (MO-) | Always | Below 1 Ω |
| F87-4 (SLDI) - F86-7 (SLDO) | Always | Below 1 Ω |
| F87-5 (MO+) - F86-2 (MI+) | Always | Below 1 Ω |
| F87-6 (MO-) - F86-3 (MI-) | Always | Below 1 Ω |
| F87-7 (SLDO) - F86-4 (SLDI) | Always | Below 1 Ω |
| F87-2 (MI+) - Body ground | Always | 10 kΩ or higher |
| F87-3 (MI-) - Body ground | Always | 10 kΩ or higher |
| F87-4 (SLDI) - Body ground | Always | 10 kΩ or higher |
| F87-5 (MO+) - Body ground | Always | 10 kΩ or higher |
| F87-6 (MO-) - Body ground | Always | 10 kΩ or higher |
| F87-7 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**7.REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY**

a. Replace the stereo component amplifier assembly with a new or normally functioning one ( Click here).

NEXT

**8.CLEAR DTC**

a. Clear the DTCs (Click here).

NEXT

Go to step 10

**9.CHECK DTC**

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output.**

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (**Click here**)

OK

END (STEREO COMPONENT AMPLIFIER ASSEMBLY IS DEFECTIVE)

10.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY - MULTI-MEDIA MODULE RECEIVER AND TELEVISION DISPLAY)

a. Disconnect the F87 multi-media module receiver assembly connector.

b. Disconnect the F86 stereo component amplifier assembly connector.

c. Disconnect the L59 television assembly connector.

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F87-5 (MO+) - F86-2 (MI+) | Always | Below 1 Ω |
| F87-6 (MO-) - F86-3 (MI-) | Always | Below 1 Ω |
| F87-7 (SLDO) - F86-4 (SLDI) | Always | Below 1 Ω |
| F86-5 (MO+) - L59-2 (MI+) | Always | Below 1 Ω |
| F86-6 (MO-) - L59-3 (MI-) | Always | Below 1 Ω |
| F86-7 (SLDO) - L59-4 (SLDI) | Always | Below 1 Ω |
| F86-2 (MI+) - Body ground | Always | 10 kΩ or higher |
| F86-3 (MI-) - Body ground | Always | 10 kΩ or higher |
| F86-4 (SLDI) - Body ground | Always | 10 kΩ or higher |
| F86-5 (MO+) - Body ground | Always | 10 kΩ or higher |
| F86-6 (MO-) - Body ground | Always | 10 kΩ or higher |
| F86-7 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

11.REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY

a. Replace the stereo component amplifier assembly with a new or normally functioning one ( Click here).

NEXT

12.CLEAR DTC

a. Clear the DTCs (Click here).

NEXT

13.CHECK DTC

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (**Click here**)

OK

END (STEREO COMPONENT AMPLIFIER ASSEMBLY IS DEFECTIVE)

14.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - MULTI-MEDIA MODULE RECEIVER AND MULTI-DISPLAY CONTROLLER)

a. Disconnect the F87 multi-media module receiver assembly connector.

b. Disconnect the F86 stereo component amplifier assembly connector.

c. Disconnect the L60 multi-display controller sub-assembly connector.

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F87-5 (MO+) - F86-2 (MI+) | Always | Below 1 Ω |
| F87-6 (MO-) - F86-3 (MI-) | Always | Below 1 Ω |
| F87-7 (SLDO) - F86-4 (SLDI) | Always | Below 1 Ω |
| F86-5 (MO+) - L60-2 (MI+) | Always | Below 1 Ω |
| F86-6 (MO-) - L60-3 (MI-) | Always | Below 1 Ω |
| F86-7 (SLDO) - L60-4 (SLDI) | Always | Below 1 Ω |
| F86-2 (MI+) - Body ground | Always | 10 kΩ or higher |
| F86-3 (MI-) - Body ground | Always | 10 kΩ or higher |
| F86-4 (SLDI) - Body ground | Always | 10 kΩ or higher |
| F86-5 (MO+) - Body ground | Always | 10 kΩ or higher |
| F86-6 (MO-) - Body ground | Always | 10 kΩ or higher |
| F86-7 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

15.REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY

a. Replace the stereo component amplifier assembly with a new or normally functioning one ( Click here).

NEXT

**16.CLEAR DTC**

a. Clear the DTCs (Click here).

NEXT

**17.CHECK DTC**

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

NG → **REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)**

OK

**END (STEREO COMPONENT AMPLIFIER ASSEMBLY IS DEFECTIVE)**

## DTC 45-41 Wrong Disc

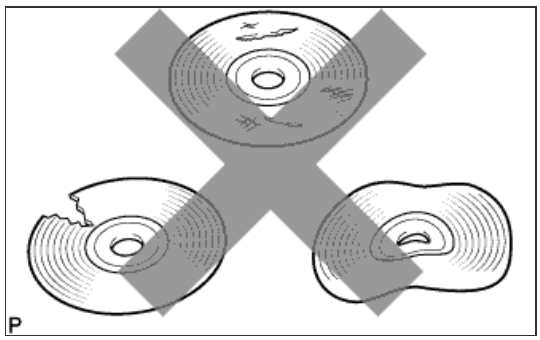
## DTC 45-42 Disc cannot be Read

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-41 | Unsuitable disc is inserted. | • Disc<br>• Radio receiver |
| 45-42 | A disc cannot be read. | |

### INSPECTION PROCEDURE



**HINT:**

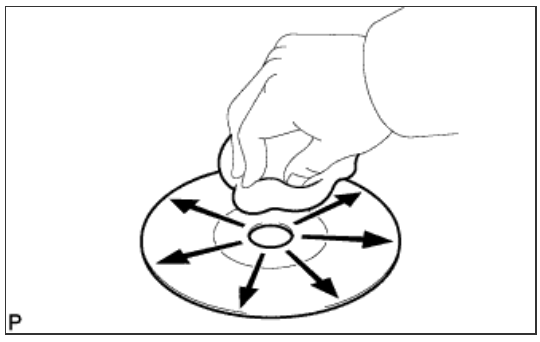
After the inspection is completed, clear the DTCs (Click here).

#### 1.CHECK DISC

a. Check that the disc is not deformed or cracked.

**OK:**
**No deformation or cracks on the disc.**

NG → REPLACE DISC



OK

#### 2.DISC CLEANING

a. If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.

OK →

END

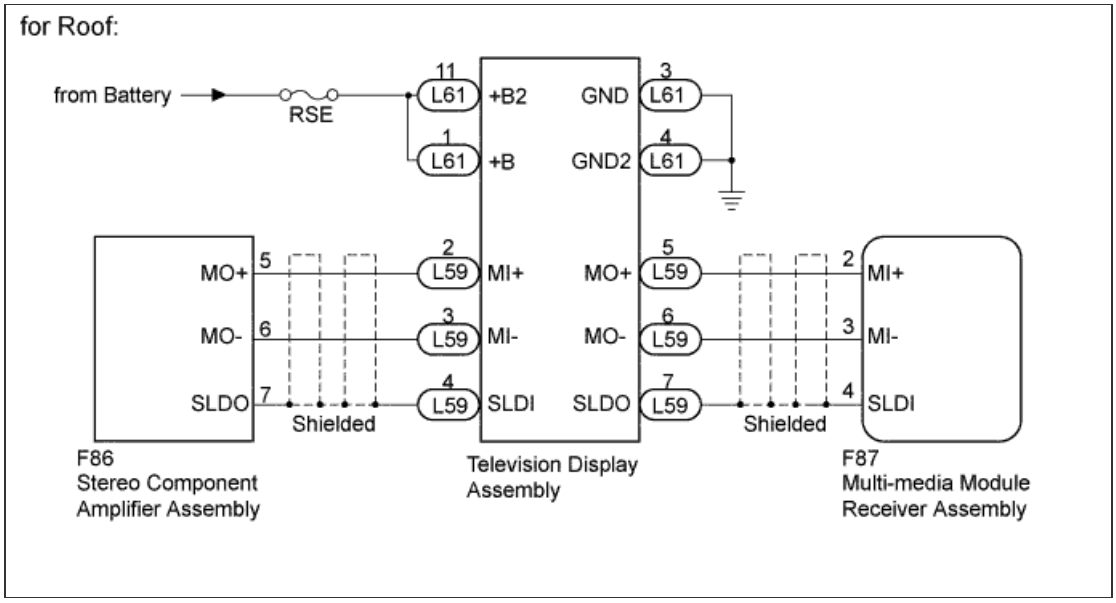
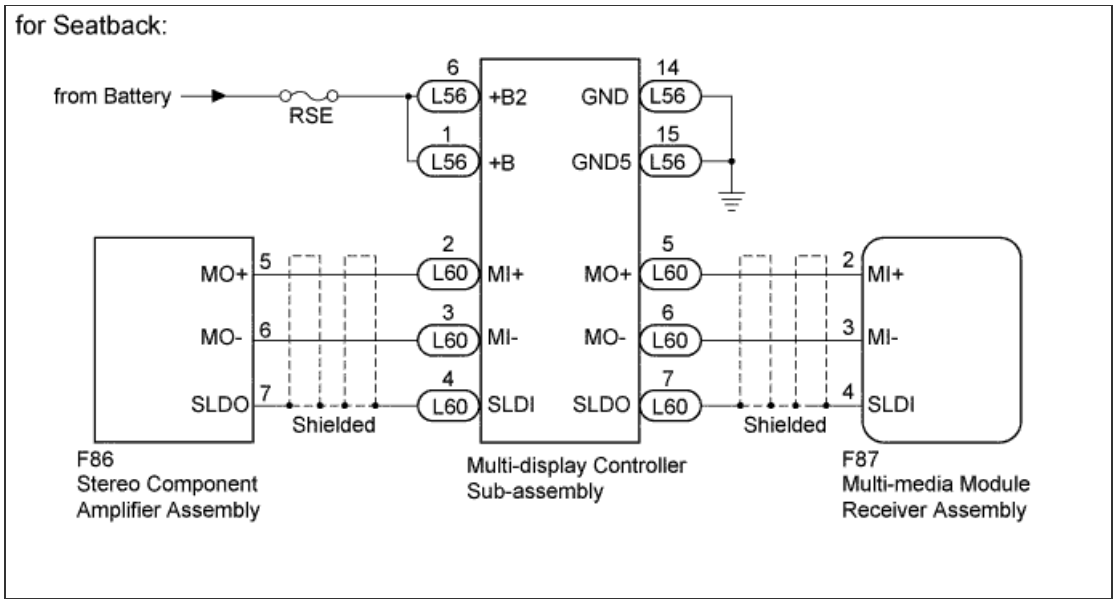
## DTC B15D5 Rear Seat Entertainment System Disconnected

**for Preparation** Click here

### DESCRIPTION



The multi-media module receiver assembly and television display assembly (for Roof) or multi-display controller sub-assembly (for Seatback) are connected by the MOST communication line.
When a MOST communication error occurs between the multi-media module receiver assembly and television display assembly (for Roof) or multi-display controller sub-assembly (for Seatback), these DTCs will be stored.



| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15D5 | A device that is listed in the MOST network connected device record of the master unit is missing. | **for Roof:**<br>• Television display assembly power source circuit<br>• MOST circuit between stereo component amplifier assembly and television display assembly<br>• MOST circuit between television display assembly and multi-media module receiver assembly<br>• Television display assembly<br>• Multi-media module receiver assembly<br>**for Seatback:**<br>• Multi-display controller sub-assembly power source circuit<br>• MOST circuit between stereo component amplifier assembly and multi-display controller sub-assembly<br>• MOST circuit between multi-display controller sub-assembly and multi-media module receiver assembly<br>• Multi-display controller sub-assembly<br>• Multi-media module receiver assembly |

**HINT:**

For the MOST network, the multi-media module receiver assembly is the master unit.

### WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

### 1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Check for optional components.

i. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components (including associated wiring) are installed. | A |
| Optional components (including associated wiring) are not installed. | B |

**HINT:**

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect MOST communication.**
- **This DTC may be stored when a MOST communication error occurs due to electrical noise.**

**B** → **Go to step 3**

**A**

### 2.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

**NEXT**

### 3.CLEAR DTC

a. Clear the DTCs (Click here).

**NEXT**

## 4.CHECK DTC

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**Result**

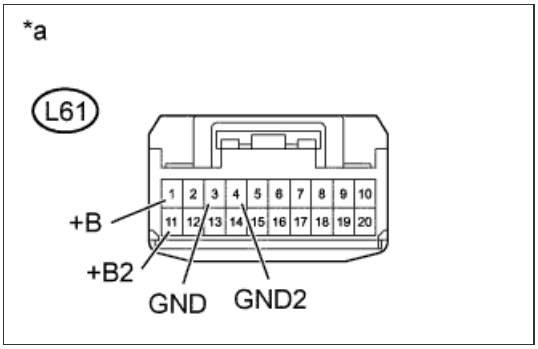
| Result | Proceed to |
|---|---|
| No DTCs are output | A |
| DTCs are output (for Roof) | B |
| DTCs are output (for Seatback) | C |

B → Go to step 5

C → Go to step 11

A

## END (COMMUNICATION MALFUNCTION DUE TO NOISE)



## 5.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY ASSEMBLY - BATTERY AND BODY GROUND)

a. Disconnect the television display assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L61-3 (GND) - Body ground | Always | Below 1 Ω |
| L61-4 (GND2) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L61-11 (+B2) - L61-3 (GND) | Always | 11 to 14 V |
| L61-1 (+B) - L61-3 (GND) | Always | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *a | Front view of wire harness connector (to Television Display Assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 6.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY ASSEMBLY - STEREO COMPONENT AMPLIFIER ASSEMBLY)

a. Disconnect the L59 television display assembly connector.

b. Disconnect the F86 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L59-2 (MI+) - F86-5 (MO+) | Always | Below 1 Ω |
| L59-3 (MI-) - F86-6 | Always | Below 1 Ω |

| | | |
|---|---|---|
| (MO-) | | |
| L59-4 (SLDI) - F86-7 (SLDO) | Always | Below 1 Ω |
| L59-2 (MI+) - Body ground | Always | 10 kΩ or higher |
| L59-3 (MI-) - Body ground | Always | 10 kΩ or higher |
| L59-4 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**7.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY ASSEMBLY - MULTI-MEDIA MODULE RECEIVER ASSEMBLY)**

a. Disconnect the L59 television display assembly connector.

b. Disconnect the F87 multi-media module receiver assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L59-5 (MO+) - F87-2 (MI+) | Always | Below 1 Ω |
| L59-6 (MO-) - F87-3 (MI-) | Always | Below 1 Ω |
| L59-7 (SLDO) - F87-4 (SLDI) | Always | Below 1 Ω |
| L59-5 (MO+) - Body ground | Always | 10 kΩ or higher |
| L59-6 (MO-) - Body ground | Always | 10 kΩ or higher |
| L59-7 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**8.REPLACE TELEVISION DISPLAY ASSEMBLY**

a. Replace the television display assembly (Click here).

NEXT

**9.CLEAR DTC**

a. Clear the DTCs (Click here).

NEXT

**10.CHECK DTC**

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

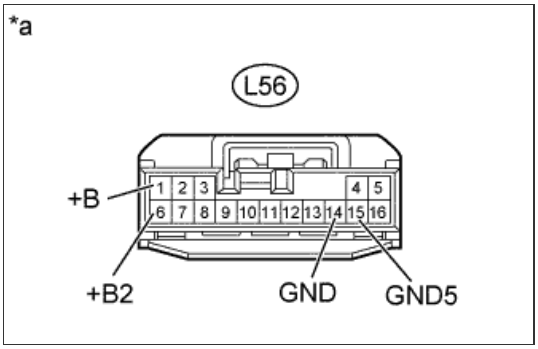
**OK:**

**No DTCs are output.**

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK

END (TELEVISION DISPLAY ASSEMBLY IS DEFECTIVE)



11.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY - POWER SOURCE AND BODY GROUND)

a. Disconnect the multi-display controller sub-assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L56-14 (GND) - Body ground | Always | Below 1 Ω |
| L56-15 (GND5) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L56-6 (+B2) - L56-14 (GND) | Always | 11 to 14 V |
| L56-1 (+B) - L56-14 (GND) | Always | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *a | Front view of wire harness connector (to Multi-display Controller Sub-assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

12.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY - STEREO COMPONENT AMPLIFIER ASSEMBLY)

a. Disconnect the L60 multi-display controller sub-assembly connector.

b. Disconnect the F86 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L60-2 (MI+) - F86-5 (MO+) | Always | Below 1 Ω |
| L60-3 (MI-) - F86-6 (MO-) | Always | Below 1 Ω |
| L60-4 (SLDI) - F86-7 (SLDO) | Always | Below 1 Ω |
| L60-2 (MI+) - Body ground | Always | 10 kΩ or higher |
| L60-3 (MI-) - Body ground | Always | 10 kΩ or higher |
| L60-4 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**13.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY - MULTI-MEDIA MODULE RECEIVER ASSEMBLY)**

a. Disconnect the L60 multi-display controller sub-assembly connector.

b. Disconnect the F87 multi-media module receiver assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L60-5 (MO+) - F87-2 (MI+) | Always | Below 1 Ω |
| L60-6 (MO-) - F87-3 (MI-) | Always | Below 1 Ω |
| L60-7 (SLDO) - F87-4 (SLDI) | Always | Below 1 Ω |
| L60-5 (MO+) - Body ground | Always | 10 kΩ or higher |
| L60-6 (MO-) - Body ground | Always | 10 kΩ or higher |
| L60-7 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**14.REPLACE MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY**

a. Replace the multi-display controller sub-assembly (Click here).

NEXT

**15.CLEAR DTC**

a. Clear the DTCs (Click here).

NEXT

**16.CHECK DTC**

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output.**

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY

OK

**END (MULTI-DISPLAY CONTROLLER SUB-ASSEMBLY IS DEFECTIVE)**

## DTC 45-43 DVD-ROM Abnormal

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-43 | Disc operation is abnormal. | • Disc<br>• Radio receiver |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.CHECK IF PROPER DISC IS INSERTED**

a. Make sure that the DVD is a video DVD or a CD with an MP3 or WMA file, and that it is not deformed, flawed, stained, burred, or otherwise defective.

**OK:**
**Normal disc**

**HINT:**

- **Translucent or uniquely-shaped DVDs or CDs cannot be played.**
- **For details on playable DVDs or CDs, refer to the Owner's Manual.**

**NG** → **DISC IS FAULTY**

**OK**

**2.REPLACE DISC WITH ANOTHER AND RECHECK**

a. Replace the disc with a normal one.

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble code is output.

**OK:**
**No DTC is output.**

**NG** → **REPLACE RADIO RECEIVER ASSEMBLY (Click here)**

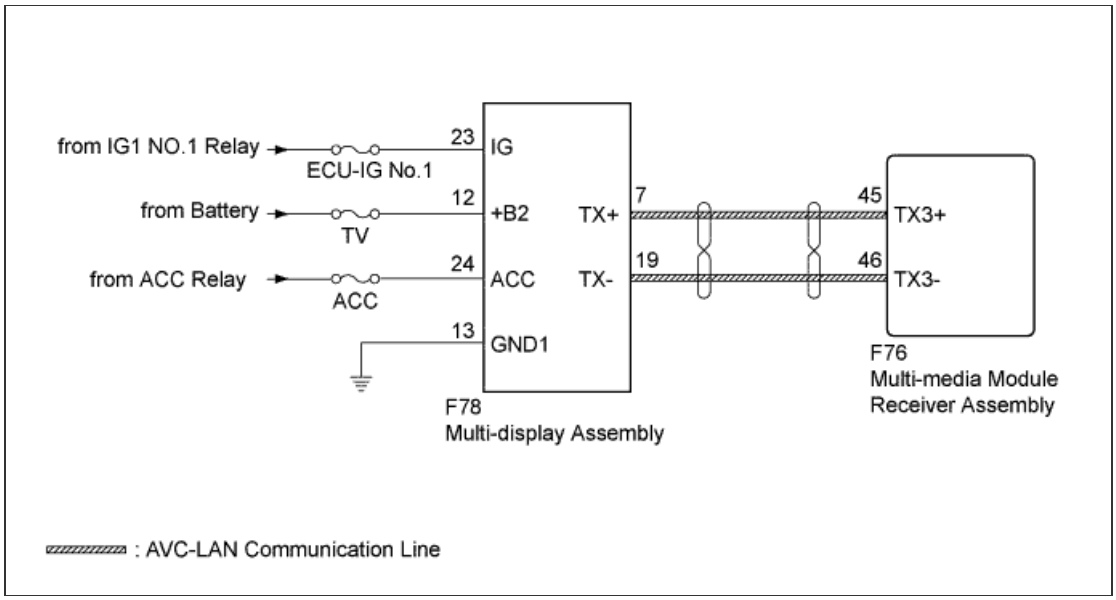
**OK**

**END**

## DTC B15D6 Display Disconnected

**for Preparation** Click here

### DESCRIPTION



The multi-display assembly and multi-media module receiver assembly are connected by an AVC-LAN communication line.
When an AVC-LAN communication error occurs between the multi-media module receiver assembly and multi-display assembly, these DTCs will be stored.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15D6* | A device that is listed in the AVC-LAN connected device record of the master unit is missing. | • Multi-display power source circuit<br>• AVC-LAN circuit<br>• Multi-display assembly<br>• Multi-media module receiver assembly |

**HINT:**

- ***: Even if no fault is present, this DTC may be stored depending on the battery condition or engine start voltage.**
- **The multi-media module receiver assembly is the master unit.**

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

**1.CLEAR DTC**

a. Clear the DTCs (Click here).

**NEXT**

**2.CHECK DTC**

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output**

NG → Go to step 3

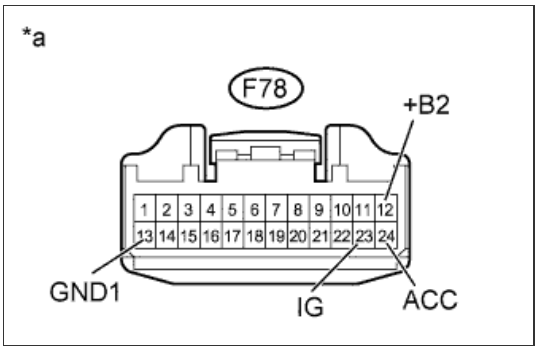
OK

USE SIMULATION METHOD TO CHECK (Click here)

## 3.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY ASSEMBLY - BATTERY AND BODY GROUND)

a. Disconnect the multi-display assembly connector.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F78-13 (GND1) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

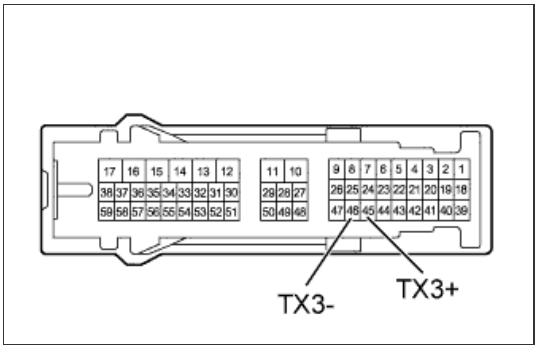
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F78-12 (+B2) - F78-13 (GND1) | Always | 11 to 14 V |
| F78-23 (IG) - F78-13 (GND1) | Engine switch on (IG) | 11 to 14 V |
| F78-24 (ACC) - F78-13 (GND1) | Engine switch on (ACC) | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *a | Front view of wire harness connector (to Multi-display Assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



## 4.INSPECT MULTI-MEDIA MODULE RECEIVER ASSEMBLY

a. Remove the multi-media module receiver assembly (Click here).

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 45 (TX3+) - 46 (TX3-) | Always | 60 to 80 Ω |

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK

## 5.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - MULTI-DISPLAY ASSEMBLY)

a. Disconnect the F76 multi-media module receiver assembly connector.

b. Disconnect the F78 multi-display assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-45 (TX3+) - F78-7 (TX+) | Always | Below 1 Ω |
| F76-46 (TX3-) - F78-19 (TX-) | Always | Below 1 Ω |
| F76-45 (TX3+) - Body ground | Always | 10 kΩ or higher |
| 76-46 (TX3-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**6.REPLACE MULTI-DISPLAY ASSEMBLY**

a. Replace the multi-display assembly with a new or normally functioning one ( Click here).

NEXT

**7.CLEAR DTC**

a. Clear the DTCs (Click here).

NEXT

**8.CHECK DTC**

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output**

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (**Click here**)

OK

**END (MULTI-DISPLAY ASSEMBLY IS DEFECTIVE)**

## DTC 45-44 DVD Malfunction

## DTC 45-48 Excess Current

## DTC 45-50 Tray Insertion / Ejection Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-44 | An operation error in the DVD mechanism. | Radio receiver |
| 45-48 | Excess current is present in the DVD changer. | |
| 45-50 | A malfunction in the insertion/ejection system. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.CLEAR DTC**

a. Clear the DTCs (Click here).

**NEXT**

**2.RECHECK DTC**

a. Recheck for DTCs and check if the same trouble code is output.

**HINT:**

If DTCs are output frequently, replace the radio receiver.

**OK:**
**No DTC is output.**

**NG** → **REPLACE RADIO RECEIVER ASSEMBLY (Click here)**

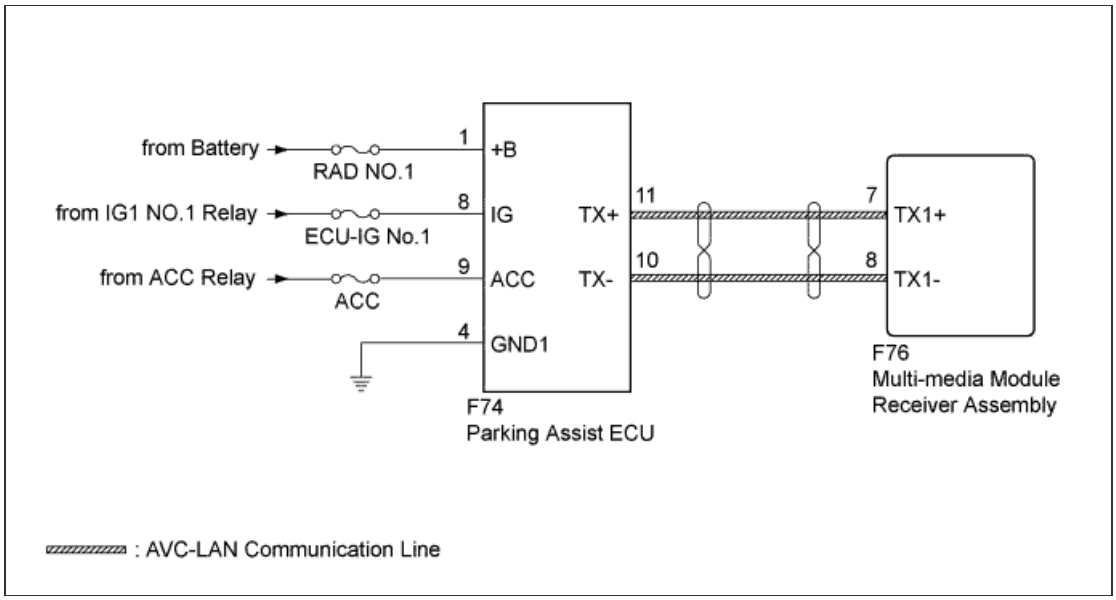
**OK**

**END**

## DTC B15D8 Monitor Disconnected

**for Preparation** Click here

### DESCRIPTION



The parking assist ECU and multi-media module receiver assembly are connected by an AVC-LAN communication line. When an AVC-LAN communication error occurs between the multi-media module receiver assembly and parking assist ECU, these DTCs will be stored.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15D8* | A device that is listed in the AVC-LAN connected device record of the master unit is missing. | • Parking assist ECU power source circuit<br>• AVC-LAN circuit<br>• Parking assist ECU<br>• Multi-media module receiver assembly |

**HINT:**

- ***: Even if no fault is present, this DTC may be stored depending on the battery condition or engine start voltage.**
- **The multi-media module receiver assembly is the master unit.**

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

**1.CLEAR DTC**

a. Clear the DTCs (Click here).

**NEXT**

**2.CHECK DTC**

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**

**No DTCs are output**

NG → Go to step 3

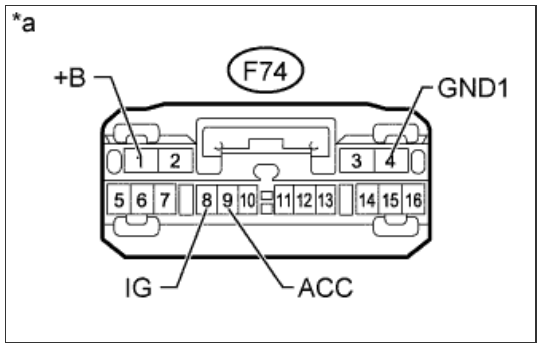
OK

USE SIMULATION METHOD TO CHECK (Click here)

3.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - BATTERY AND BODY GROUND)

a. Disconnect the parking assist ECU connector.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F74-4 (GND1) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

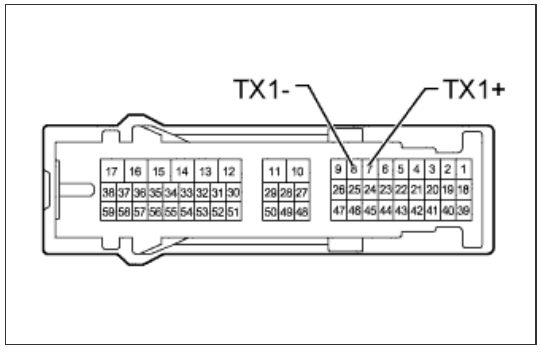
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F74-1 (+B) - F74-4 (GND1) | Always | 11 to 14 V |
| F74-8 (IG) - F74-4 (GND1) | Engine switch on (IG) | 11 to 14 V |
| F74-9 (ACC) - F74-4 (GND1) | Engine switch on (ACC) | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *a | Front view of wire harness connector (to Parking Assist ECU) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



4.INSPECT MULTI-MEDIA MODULE RECEIVER ASSEMBLY

a. Remove the multi-media module receiver assembly (Click here).

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 7 (TX1+) - 8 (TX1-) | Always | 60 to 80 Ω |

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK

5.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - PARKING ASSIST ECU)

a. Disconnect the F76 multi-media module receiver assembly connector.

b. Disconnect the F74 parking assist ECU connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-7 (TX1+) - F74-11 (TX+) | Always | Below 1 Ω |
| F76-8 (TX1-) - F74-10 (TX-) | Always | Below 1 Ω |
| F76-7 (TX1+) - Body ground | Always | 10 kΩ or higher |
| F76-8 (TX1-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**6.REPLACE PARKING ASSIST ECU**

a. Replace the parking assist ECU with a new or normally functioning one ( Click here).

NEXT

**7.CLEAR DTC**

a. Clear the DTCs (Click here).

NEXT

**8.CHECK DTC**

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (**Click here**)

OK

**END (PARKING ASSIST ECU IS DEFECTIVE)**

## DTC 45-44 DVD Malfunction

## DTC 45-48 Excess Current

## DTC 45-50 Tray Insertion / Ejection Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-44 | An operation error in the DVD mechanism. | Radio receiver |
| 45-48 | Excess current is present in the DVD changer. | |
| 45-50 | A malfunction in the insertion/ejection system. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.CLEAR DTC**

a. Clear the DTCs (Click here).

**NEXT**

**2.RECHECK DTC**

a. Recheck for DTCs and check if the same trouble code is output.

**HINT:**

If DTCs are output frequently, replace the radio receiver.

**OK:**
**No DTC is output.**

**NG** → **REPLACE RADIO RECEIVER ASSEMBLY (Click here)**

**OK**

**END**

## DTC B15E5 Electric Throttle Malfunction

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15E5 | Electric throttle malfunction | • CAN communication system<br>• SFI system<br>• Multi-media module receiver assembly |

### INSPECTION PROCEDURE

**1.CHECK DTC (CAN COMMUNICATION SYSTEM)**

a. Check for DTCs and check if the same DTCs are output.

for LHD: Click here
for RHD: Click here

**Result**

| Result | Proceed to |
|---|---|
| No DTCs are output | A |
| DTCs are output (for LHD) | B |
| DTCs are output (for RHD) | C |

B → GO TO CAN COMMUNICATION SYSTEM (Click here)

C → GO TO CAN COMMUNICATION SYSTEM (Click here)

A

**2.CHECK DTC (SFI SYSTEM)**

a. Check for DTCs and check if the same DTCs are output.

**HINT:**

Refer to SFI system or ECD system.

**Result**

| Result | Proceed to |
|---|---|
| No DTCs are output | A |
| DTCs are output (1UR-FE) | B |
| DTCs are output (3UR-FE) | C |

B → GO TO SFI SYSTEM (Click here)

C → GO TO SFI SYSTEM (Click here)

A

**3.CLEAR DTC**

a. Clear the DTCs (Click here).

NEXT

**4.CHECK DTC**

a. Recheck for DTCs and check if the same DTC are output again ( Click here).

**OK:**
**No DTCs are output.**

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (**Click here**)

OK

USE SIMULATION METHOD TO CHECK (**Click here**)

## DTC 45-44 DVD Malfunction

## DTC 45-48 Excess Current

## DTC 45-50 Tray Insertion / Ejection Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-44 | An operation error in the DVD mechanism. | Radio receiver |
| 45-48 | Excess current is present in the DVD changer. | |
| 45-50 | A malfunction in the insertion/ejection system. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.CLEAR DTC**

a. Clear the DTCs (Click here).

**NEXT**

**2.RECHECK DTC**

a. Recheck for DTCs and check if the same trouble code is output.

**HINT:**

If DTCs are output frequently, replace the radio receiver.

**OK:**
**No DTC is output.**

**NG** → **REPLACE RADIO RECEIVER ASSEMBLY (Click here)**

**OK**

**END**

## DTC B15E7 Harddisk Reading/Writing Malfunction(Low Temperature)

## DTC B15E8 Harddisk Reading/Writing Malfunction(High Temperature)

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored when the temperature is higher or lower than the operation range of the hard disc built into the multi-media module receiver assembly, and hard disc read/write errors occur more than a specified number of times.

**HINT:**

The hard disk drive may not operate normally when the temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15E7 | Hard disc read/write error at low temperature. | Hard disc |
| B15E8 | Hard disc read/write error at high temperature. | |

### INSPECTION PROCEDURE

**1.CHECK CABIN**

a. Move the vehicle to an area that is at room temperature and allow the cabin temperature to adjust to between -20°C (-4°F) and 65°C (149°F).

**HINT:**

- **The hard disc may not operate normally at very high or low temperatures.**
- **Perform the DTC check at room temperature.**

**NEXT**

**2.CLEAR DTC**

a. Clear the DTCs (Click here).

**NEXT**

**3.CHECK DTC**

a. Recheck for DTCs and check if the same DTCs are output again ( Click here).

**OK:**
**No DTCs are output.**

**NG** → **REPLACE HARD DISC (Click here)**

**OK**

**USE SIMULATION METHOD TO CHECK (Click here)**

## DTC 45-45 Eject Error

## DTC 45-51 Elevator Error

## DTC 45-52 Clamp Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-45 | The disc cannot be ejected. | Radio receiver |
| 45-51 | A mechanical error occurs during elevator operation. | |
| 45-52 | An error occurs in the DVD changer clamp. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.CHECK RADIO RECEIVER ASSEMBLY**

a. Check if a disc can be changed, inserted, or ejected normally.

**OK:**
**Malfunction disappears.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

**END**

## DTC B15E7 Harddisk Reading/Writing Malfunction(Low Temperature)

## DTC B15E8 Harddisk Reading/Writing Malfunction(High Temperature)

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored when the temperature is higher or lower than the operation range of the hard disc built into the multi-media module receiver assembly, and hard disc read/write errors occur more than a specified number of times.

**HINT:**

The hard disk drive may not operate normally when the temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15E7 | Hard disc read/write error at low temperature. | Hard disc |

## DTC 45-45 Eject Error

## DTC 45-51 Elevator Error

## DTC 45-52 Clamp Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-45 | The disc cannot be ejected. | Radio receiver |
| 45-51 | A mechanical error occurs during elevator operation. | |
| 45-52 | An error occurs in the DVD changer clamp. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.CHECK RADIO RECEIVER ASSEMBLY**

a. Check if a disc can be changed, inserted, or ejected normally.

**OK:**
**Malfunction disappears.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

**END**

# DTC B15F5 A/C ECU Vehicle Information Reading/Writing Processor Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when items controlled by the Air conditioning amplifier assembly cannot be customized via the navigation system vehicle customization screen.

**HINT:**

The Air conditioning amplifier assembly controls the air conditioning system related items that are customizable via the multi-display screen.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15F5 | Air conditioning amplifier assembly vehicle setting processing error. | • CAN communication system<br>• Air conditioning system<br>• Air conditioning amplifier assembly<br>• Multi-media module receiver assembly |

## INSPECTION PROCEDURE

### 1.CHECK CAN COMMUNICATION SYSTEM

a. Use the intelligent tester to check if the CAN communication system is functioning normally.

for LHD: Click here
for RHD: Click here

**Result**

| Result | Proceed to |
|---|---|
| No DTCs are output | A |
| DTCs are output (for LHD) | B |
| DTCs are output (for RHD) | C |

B → GO TO CAN COMMUNICATION SYSTEM (Click here)

C → GO TO CAN COMMUNICATION SYSTEM (Click here)

A

### 2.CHECK AIR CONDITIONING SYSTEM

a. Check if the air conditioning system is malfunctioning (Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the air conditioning system.

**OK:**

**No malfunctions are present in the air conditioning system.**

NG → GO TO AIR CONDITIONING SYSTEM (Click here)

OK

### 3.CHECK CUSTOMIZE ITEMS

a. Display the "Vehicle Customization" screen.

b. Make a note of the customizable items for the air conditioning system.

**HINT:**

These air conditioning system items shown as customizable via the multi-display vehicle customization screen can also be changed using the intelligent tester. In the following steps, the intelligent tester will be used.

i. To match-up the items in the multi-display with the items on the intelligent tester, check the customize parameters list for the air conditioning system related items that can be customized via the multi-display screen (Click here).

c. Using the intelligent tester, confirm that it is possible to change the settings of the air conditioning system related customize parameters that are shown as customizable via the multi-display screen.

**OK:**
**The items available for customization via the multi-display screen can be customized successfully using the intelligent tester.**

NG → REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (**Click here**)

OK

REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (**Click here**)

## DTC 45-45 Eject Error

## DTC 45-51 Elevator Error

## DTC 45-52 Clamp Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-45 | The disc cannot be ejected. | Radio receiver |
| 45-51 | A mechanical error occurs during elevator operation. | |
| 45-52 | An error occurs in the DVD changer clamp. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.CHECK RADIO RECEIVER ASSEMBLY**

a. Check if a disc can be changed, inserted, or ejected normally.

**OK:**
**Malfunction disappears.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

**END**

# DTC B15F6 Main Body ECU Vehicle Information Reading/Writing Process Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when items controlled by the main body ECU (cowl side junction block LH) cannot be customized via the navigation system vehicle customization screen.

**HINT:**

**The main body ECU (cowl side junction block LH) controls the items for the following systems that are customizable via the multi-display screen:**

- **Power door lock control system**
- **Wireless door lock control system**
- **Lighting system**

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15F6 | Main body ECU (cowl side junction block LH) vehicle setting processing error. | • CAN communication system<br>• Power door lock control system<br>• Wireless door lock control system<br>• Lighting system<br>• Main body ECU (cowl side junction block LH)<br>• Multi-media module receiver assembly |

## INSPECTION PROCEDURE

### 1.CHECK CAN COMMUNICATION SYSTEM

a. Use the intelligent tester to check if the CAN communication system is functioning normally.

for LHD: Click here
for RHD: Click here

**Result**

| Result | Proceed to |
|---|---|
| No DTCs are output | A |
| DTCs are output (for LHD) | B |
| DTCs are output (for RHD) | C |

**B** → GO TO CAN COMMUNICATION SYSTEM (Click here)

**C** → GO TO CAN COMMUNICATION SYSTEM (Click here)

**A**

### 2.CHECK POWER DOOR LOCK CONTROL SYSTEM

a. Check if the power door lock control system is malfunctioning ( Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the power door lock control system.

**OK:**

**No malfunctions are present in the power door lock control system.**

**NG** → GO TO POWER DOOR LOCK CONTROL SYSTEM (Click here)

**OK**

### 3.CHECK WIRELESS DOOR LOCK CONTROL SYSTEM

a. Check if the wireless door lock control system is malfunctioning ( Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the wireless door lock control system.

**OK:**

**No malfunctions are present in the wireless door lock control system.**

NG → GO TO WIRELESS DOOR LOCK CONTROL SYSTEM (**Click here**)

OK

**4.CHECK LIGHTING SYSTEM**

a. Check if the lighting system is malfunctioning (Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the lighting system.

**OK:**

**No malfunctions are present in the lighting system.**

NG → GO TO LIGHTING SYSTEM (**Click here**)

OK

**5.CHECK CUSTOMIZE ITEMS**

a. Display the "Vehicle Customization" screen.

b. Make a note of the customizable items for each main body ECU (cowl side junction block LH) related system.

**HINT:**

These items shown as customizable via the navigation system vehicle customization screen can also be changed using the intelligent tester. In a following step, the intelligent tester will be used.

i. To match-up the items in the multi-display with the items on the intelligent tester, check the customize parameters list for the power door lock control system related items that can be customized via the multi-display screen (Click here).

ii. To match-up the items in the multi-display with the items on the intelligent tester, check the customize parameters list for the wireless door lock control system related items that can be customized via the multi-display screen (Click here).

iii. To match-up the items in the multi-display with the items on the intelligent tester, check the customize parameters list for the lighting system related items that can be customized via the multi-display screen (Click here).

c. Using the intelligent tester, confirm that it is possible to change the settings of the customize parameters that are available for customization via the multi-display screen.

**OK:**

**The items available for customization via the multi-display screen can be customized successfully using the intelligent tester.**

NG → REPLACE MAIN BODY ECU (COWL SIDE JUNCTION BLOCK LH)

OK

REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (**Click here**)

# DTC 45-46 Scratched/Reversed Disc

**for Preparation** Click here

## DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-46 | Scratches or dirt is found on the disc surface or the disc is inserted upside down. | • Disc<br>• Radio receiver |

## INSPECTION PROCEDURE

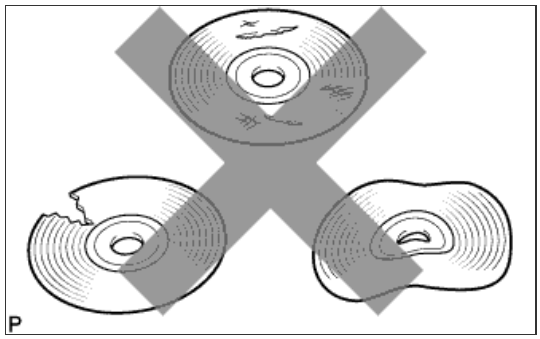
**HINT:**

After the inspection is completed, clear the DTCs (Click here).

### 1.CHECK THAT DISC IS INSERTED PROPERLY

a. Check whether or not the disc is inserted upside down.

**OK:**
**Disc is properly inserted.**



NG → INSERT DISC PROPERLY

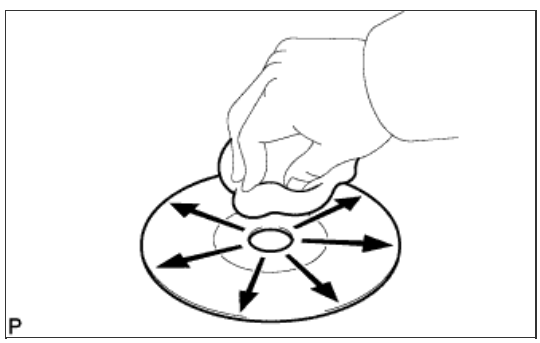
OK

### 2.CHECK DISC

a. Check that the disc is not deformed or cracked.

**OK:**
**No deformation or cracks on the disc.**

NG → CHANGE DISC



OK

### 3.DISC CLEANING

a. If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.

**NOTICE:**

Do not use a conventional record cleaner or antistatic preservative.

NEXT

4.CLEAR DTC

a. Clear the DTC (Click here).

NEXT

5.RECHECK DTC

a. Recheck for DTCs and check if the same trouble code is output.

**OK:**
**No DTC is output.**

NG → Go to step 6

OK

END

6.REPLACE DISC WITH ANOTHER AND RECHECK

a. Replace the disc with a normal one.

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble code is output.

**OK:**
**No DTC is output.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

END

## DTC B15F7 Certification ECU Vehicle Information Reading/Writing Process Malfunction

**for Preparation** Click here

### DESCRIPTION

This DTC is stored when items controlled by the certification ECU cannot be customized via the navigation system vehicle customization screen.

**HINT:**

The certification ECU controls the entry and start system (for entry function) related items that are customizable via the multi-display screen.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15F7 | Certification ECU vehicle setting processing error. | • CAN communication system<br>• Entry and start system (for entry function)<br>• Certification ECU<br>• Multi-media module receiver assembly |

### INSPECTION PROCEDURE

**NOTICE:**

Before replacing the certification ECU, refer to the entry and start system (for entry function) precaution (See page ).

**1.CHECK CAN COMMUNICATION SYSTEM**

a. Use the intelligent tester to check if the CAN communication system is functioning normally.

for LHD: Click here
for RHD: Click here

**Result**

| Result | Proceed to |
|---|---|
| No DTCs are output | A |
| DTCs are output (for LHD) | B |
| DTCs are output (for RHD) | C |

B → GO TO CAN COMMUNICATION SYSTEM (Click here)

C → GO TO CAN COMMUNICATION SYSTEM (Click here)

A

**2.CHECK ENTRY AND START SYSTEM (for Entry Function)**

a. Check if the entry and start system (for entry function) is malfunctioning ( Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the entry and start system (for entry function).

**OK:**

**No malfunctions are present in the entry and start system (for entry function).**

NG → GO TO ENTRY AND START SYSTEM (for Entry Function) ( Click here)

OK

**3.CHECK CUSTOMIZE ITEMS**

a. Display the "Vehicle Customization" screen.

b. Make a note of the customizable items for each certification ECU related system.

**HINT:**

These items shown as customizable via the navigation system vehicle customization screen can also be changed manually. In a following step, a manual procedure will be used.

i. Check the customize parameters list for the entry and start system (for entry function) related items that can be customized via the multi-display screen (Click here).

c. Manually change and confirm that it was possible to successfully change the settings of the customize parameters for each system that are available for customization via the multi-display screen.

**OK:**
**The items available for customization via the multi-display screen can be customized successfully using the manual procedure.**

NG → REPLACE CERTIFICATION ECU

OK → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (**Click here**)

## DTC 45-47 High Temperature

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-47 | The sensor detects that the DVD unit temperature is high (higher than 80°C (176°F)). | Radio receiver |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.CHECK RADIO RECEIVER ASSEMBLY**

a. Park the vehicle in a cool place.

b. Check that the temperature of the radio receiver has become sufficiently low, and start the engine. Check that the malfunction disappears.

**OK:**
**Malfunction disappears.**

**NG** → **REPLACE RADIO RECEIVER ASSEMBLY (Click here)**

**OK**

**END**

# DTC B15F8 Driver Seat ECU Vehicle Information Reading/Writing Process Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when items controlled by the position control ECU assembly cannot be customized via the navigation system vehicle customization screen.

**HINT:**

The front power seat switch controls the front power seat control system related items that are customizable via the multi-display screen.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15F8 | Position control ECU assembly vehicle setting processing error. | • CAN communication system<br>• Front power seat control system<br>• Front power seat switch<br>• Multi-media module receiver assembly |

## INSPECTION PROCEDURE

### 1.CHECK CAN COMMUNICATION SYSTEM

a. Use the Techstream to check if the CAN communication system is functioning normally.

for LHD: Click here
for RHD: Click here

**Result**

| Result | Proceed to |
|---|---|
| No DTCs are output | A |
| DTCs are output (for LHD) | B |
| DTCs are output (for RHD) | C |

B → GO TO CAN COMMUNICATION SYSTEM (Click here)

C → GO TO CAN COMMUNICATION SYSTEM (Click here)

A

### 2.CHECK FRONT POWER SEAT CONTROL SYSTEM

a. Check if the front power seat control system is malfunctioning ( Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the front power seat control system.

**OK:**

**No malfunctions are present in the front power seat control system.**

NG → GO TO FRONT POWER SEAT CONTROL SYSTEM ( Click here)

OK

### 3.CHECK CUSTOMIZE ITEMS

a. Display the "Vehicle Customization" screen.

b. Make a note of the customizable items for each position control ECU assembly related system.

**HINT:**

These items shown as customizable via the navigation system vehicle customization screen can also be changed manually. In a following step, a manual procedure will be used.

i. Check the customize parameters list for the front power seat control system related items that can be customized via the multi-display screen (Click here).

c. Manually change and confirm that it was possible to successfully change the settings of the customize parameters for each system that are available for customization via the multi-display screen.

**OK:**
**The items available for customization via the multi-display screen can be customized successfully using the manual procedure.**

| | | |
|---|---|---|
| | NG | REPLACE FRONT POWER SEAT SWITCH (Click here) |
| OK | | |

## DTC 45-78 DSP Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-78 | An error occurs during the decode process (MP3/WMA). | Radio receiver |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**NOTICE:**

- **This code may be output even if there is no malfunction.**
- **If this code is output frequently, replace the radio receiver.**

**1.CLEAR DTC**

a. Clear the DTCs (Click here).

**NEXT**

**2.RECHECK DTC**

a. Recheck for DTCs and check if the same trouble code is output.

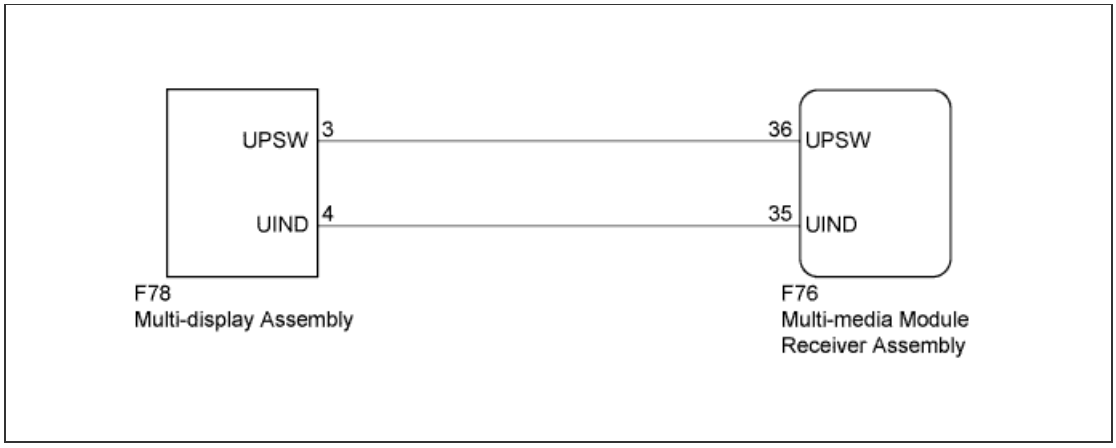
**OK:**
**No DTC is output.**

**NG** → **REPLACE RADIO RECEIVER ASSEMBLY (Click here)**

**OK**

**END**

## DTC B15F9 UART Communication Malfunction(for A/C)



**for Preparation** Click here

### DESCRIPTION

The multi-media module receiver assembly and multi-display assembly are connected by the UART communication line.
When a UART communication error occurs between the multi-media module receiver assembly and multi-display assembly, these DTCs will be stored.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15F9 | Multi-display for air conditioning switch operation signal input malfunction. | • Harness or connector<br>• Multi-display assembly<br>• Multi-media module receiver assembly |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**1.CLEAR DTC**

a. Clear the DTCs (Click here).

**NEXT**

**2.CHECK DTC**

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output.**

**NG** → **Go to step 3**

**OK**

**USE SIMULATION METHOD TO CHECK (Click here)**

**3.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - MULTI-DISPLAY ASSEMBLY)**

a. Disconnect the F76 multi-media module receiver assembly connector.

b. Disconnect the F78 multi-display assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| | | |

| | | |
|---|---|---|
| F76-36 (UPSW) - F78-3 (UPSW) | Always | Below 1 Ω |
| F76-35 (UIND) - F78-4 (UIND) | Always | Below 1 Ω |
| F76-36 (UPSW) - Body ground | Always | 10 kΩ or higher |
| F76-35 (UIND) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**4.REPLACE MULTI-DISPLAY ASSEMBLY**

a. Replace the multi-display assembly with a new or normally functioning one ( Click here).

NEXT

**5.CLEAR DTC**

a. Clear the DTCs (Click here).

NEXT

**6.CHECK DTC**

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**OK:**
**No DTCs are output.**

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (**Click here**)

OK

**END (MULTI-DISPLAY ASSEMBLY IS DEFECTIVE)**

## DTC 45-7D Disc cannot be Played

## DTC 45-7E No Playable Files

## DTC 45-7F Copyright Protection Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 45-7D | When either condition below is met:<br>• An incompatible MP3 - WMA file is used.<br>• Although the file has an extension of ".mp3" or ".wma", the header information cannot be read. | • Disc<br>• Radio receiver |
| 45-7E | When either condition below is met:<br>• A disc with no music data is used.<br>• Playable files are not on the disc (MP3 - WMA). | |
| 45-7F | A copy-protected file which cannot be played is used. | |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs (Click here).

**1.CHANGE DISC**

a. Insert a disc with a playable file and check if the disc can be played correctly.

**HINT:**

For details on playable files and discs, refer to the Owner's Manual.

**OK:**

**The disc can be played correctly.**

**NG** → **REPLACE RADIO RECEIVER ASSEMBLY (Click here)**

**OK**

**DISC IS FAULTY**

# DTC C1610 Camera ECU Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTCs is stored when a malfunction occurs in the park assist/monitoring section.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1610 | Park assist/monitoring error | • Parking assist monitor system (w/ Side monitor system)<br>• Wide view front monitor system<br>• Side monitor system |

## INSPECTION PROCEDURE

### 1.CLEAR DTC

a. Clear the DTCs (Click here).

NEXT

### 2.CHECK DTC

a. Recheck for DTCs and check if the same DTC is output again ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| No DTCs are output. | A |
| DTCs for parking assist monitor system are output. | B |
| DTCs for wide view front monitor system are output. | C |
| DTCs for side monitor system are output. | D |

B → GO TO PARKING ASSIST MONITOR SYSTEM (w/ SIDE MONITOR SYSTEM) (Click here)

C → GO TO WIDE VIEW FRONT MONITOR SYSTEM (Click here)

D → GO TO SIDE MONITOR SYSTEM (Click here)

A

USE SIMULATION METHOD TO CHECK (Click here)

## DTC 58-10 Gyro Error

## DTC 80-10 Gyro Error

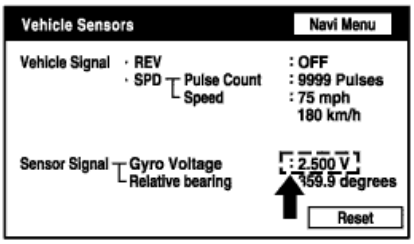
**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 58-10 | A ground short, power supply short, or open circuit in the gyro signal. | • Gyro sensor<br>• Navigation ECU |
| 80-10 | A ground short, power supply short, or open circuit in the gyro signal. | |

### INSPECTION PROCEDURE

**HINT:**



After the inspection is completed, clear the DTCs (Click here).

**1.CHECK VEHICLE SENSOR (NAVIGATION CHECK MODE)**

a. Enter the "Navigation Check" mode and select "Vehicle Sensors" (Click here).

b. Check the gyro voltage.

**Standard voltage:**
**0.5 to 4.5 V**

P

NG → REPLACE NAVIGATION ECU (Click here)

OK ↓

**2.CLEAR DTC**

a. Clear the DTCs (Click here).

NEXT ↓

**3.RECHECK DTC**

a. Recheck for DTCs and check if the same trouble code is output.

**HINT:**

If DTCs are output frequently, replace the navigation ECU.

**OK:**
**No DTC is output.**

NG → REPLACE NAVIGATION ECU (Click here)

OK ↓

END

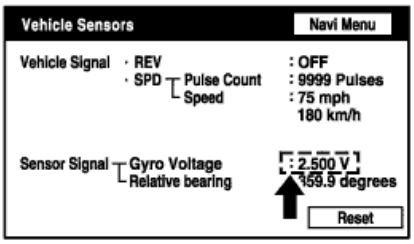
**HINT:**



After the inspection is completed, clear the DTCs (Click here).

**1.REPLACE NAVIGATION ECU**

a. Replace the navigation ECU (Click here).

**NEXT**

**END**

**for Preparation** Click here

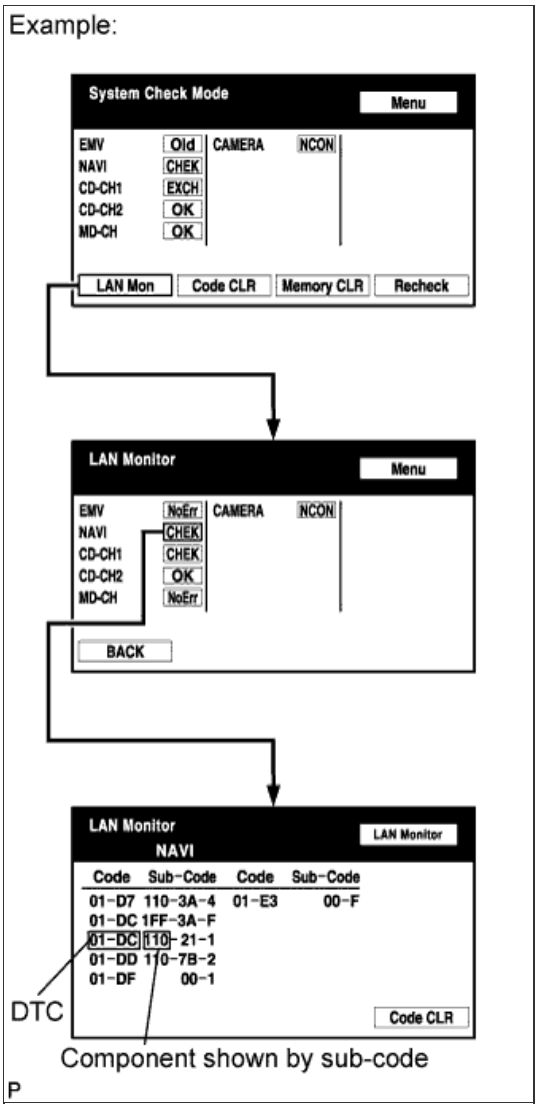
## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.IDENTIFY COMPONENT SHOWN BY SUB-CODE

a. Enter the diagnostic mode.

b. Press the "LAN Mon" switch to change to "LAN Monitor" mode.



c. Identify the component shown by the sub-code.

**HINT:**

- **"110 (multi-display)" is the component shown by the sub-code**

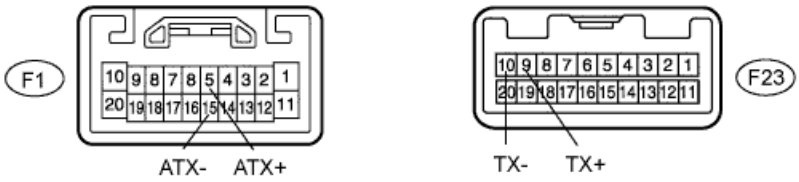
in the example shown in the illustration.

- The sub-code will be indicated by its physical address.
- For the component list, refer to Diagnosis Display Detailed Description on System Description (Click here).

NEXT

## 2.CHECK POWER SOURCE CIRCUIT OF COMPONENT SHOWN BY SUB-CODE

a. Inspect the power source circuit of the component shown by the sub-code.
If the power source circuit is operating normally, proceed to the next step.



**Component Table**

| Component | Proceed to |
|---|---|
| Radio receiver (190) | Radio receiver power source circuit (Click here) |
| Stereo component amplifier (440) | Stereo component amplifier power source circuit (Click here) |
| Multi-display (110) | Multi-display power source circuit (Click here) |
| Navigation ECU (178) | Navigation ECU power source circuit (Click here) |
| Television display (1F6) | Television display power source circuit (Click here) |

NEXT

## 3.INSPECT RADIO RECEIVER ASSEMBLY

Component without harness connected:
(Radio Receiver)

a. Disconnect the F1 and F23 receiver connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F1-5 (ATX+) - F1-15 (ATX-) | Always | 60 to 80 Ω |
| F23-9 (TX+) - F23-10 (TX-) | Always | 60 to 80 Ω |

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

## 4.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - COMPONENT SHOWN BY SUB-CODE)

**HINT:**

- **Start the check from the circuit that is near the component shown by the sub-code first.**
- **For details of the connectors, refer to Terminals of ECU (Click here).**

a. Referring to the AVC-LAN wiring diagram below, check the AVC-LAN circuit between the parking assist ECU and the component shown by the sub-code.

i. Disconnect all the connectors between the parking assist ECU and the component shown by sub-code.

ii. Check for an open or short in the AVC-LAN circuit between the parking assist ECU and the component shown by the sub-code.

**OK:**
**There is no open or short circuit.**

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 5.REPLACE COMPONENT SHOWN BY SUB-CODE

a. Replace the component shown by the sub-code with a normal one and check if the same problem occurs again.

**OK:**
**Same problem does not occur.**

NG → REPLACE PARKING ASSIST ECU (Click here)

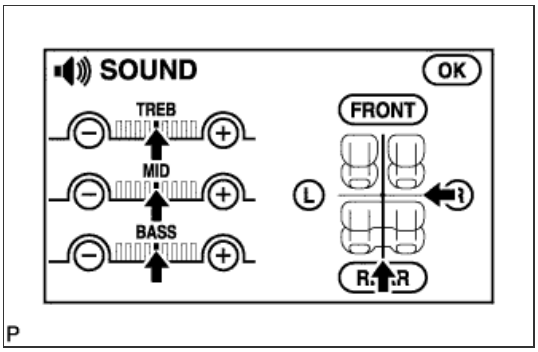
OK

END

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK SOUND SETTING



a. Enter the sound adjustment screen by pressing the "SOUND" switch on the AUDIO display.

b. Set volume, fader, and balance to the initial values and check that the sound is normal.

**OK:**
**Sound returns to normal.**

**HINT:**

Sound quality adjustment items vary depending on the type of the amplifier.

P

NG → GO TO "NAVIGATION VOICE SPEAKER CIRCUIT" ( Click here)

OK

END

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK DISPLAY SETTING

a. Check that the display is not in "Screen Off" mode.

**OK:**
**The display setting is not in "Screen Off" mode.**

NG → CHANGE SCREEN TO "SCREEN ON" MODE

OK ↓

### 2.CHECK IMAGE QUALITY SETTING

a. Check that the screen color quality can be set.

**OK:**
**Setting is possible.**

NG → Go to step 3

OK ↓

PRESS PANEL SWITCH "DISPLAY" AND SET SCREEN COLOR QUALITY TO NORMAL

### 3.CHECK CABIN

a. Check that condensation is not likely to occur in the cabin, and that the temperature is not high or extremely low in the cabin.

**HINT:**

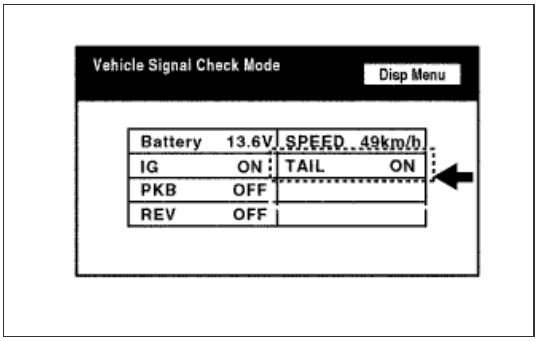
- **A humid cabin and a rapid change in temperature may lead to condensation. Condensation in the cabin may short circuit the screen.**
- **The appropriate cabin temperature is 20 to 30°C (68 to 86°F).**

**OK:**
**Condensation is not likely and temperature is not high or extremely low.**

NG → SET CABIN TO APPROPRIATE TEMPERATURE

OK ↓

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)



**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK VEHICLE SIGNAL (DISPLAY CHECK MODE)

a. Enter the "Display Check" mode and select "Vehicle Signal Check" ( Click here).

b. Check that the display changes between ON and OFF according to the light control switch operation.

**OK:**

| Light Control Switch | Display |
|---|---|
| TAIL or HEAD | ON |
| OFF | OFF |

**HINT:**

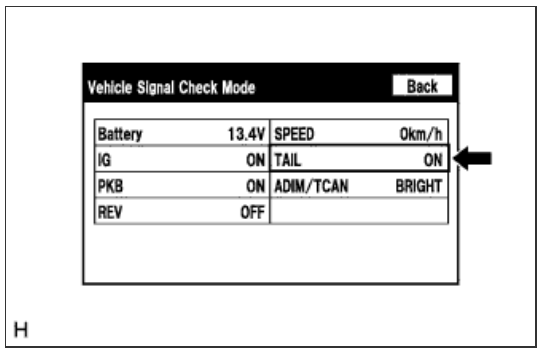
This display is updated once per second. As a result, it is normal for the display to lag behind the actual change in the switch.

NG → GO TO "ILLUMINATION CIRCUIT" (Click here)

OK → REPLACE MULTI-DISPLAY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE



### 1.CHECK VEHICLE SIGNAL (OPERATION CHECK)

a. Enter the "Vehicle Signal Check Mode" screen. Refer to Check Vehicle Signal in Operation Check (Click here).

b. Check that the display changes between ON and OFF according to the light control switch operation.

**OK:**

| Light Control Switch | Display |
|---|---|
| Tail or head | ON |
| Off | OFF |

**HINT:**

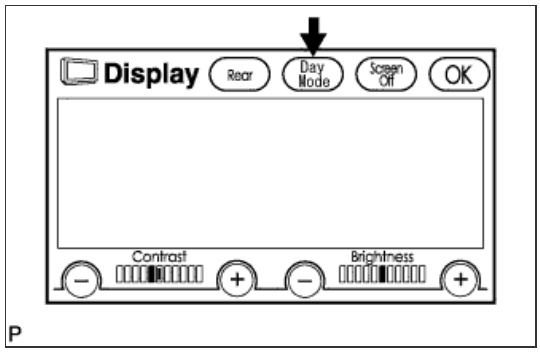
This display is updated once per second. As a result, it is normal for the display to lag behind the actual switch operation.

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE



### 1.CHECK IMAGE QUALITY SETTING

a. Enter the display adjustment screen by pressing the "DISPLAY" switch.

b. Turn the light control switch to the TAIL position.

c. Check if "Day Mode" on the display is ON.

**OK:**
**"Day Mode" is ON.**

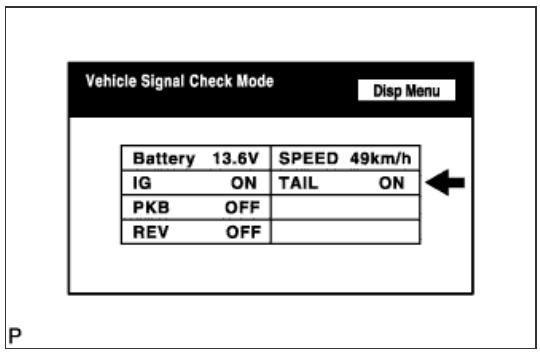
NG → Go to step 2

OK →

### TURN "DAY MODE" SETTING OFF

### 2.CHECK VEHICLE SIGNAL (DISPLAY CHECK MODE)

a. Enter the "Display Check" mode (Vehicle Signal Check) (Click here).



b. Check that the display changes between ON and OFF according to the light control switch operation.

**OK:**

| Light Control Switch | Display |
|---|---|
| TAIL or HEAD | ON |
| OFF | OFF |

**HINT:**

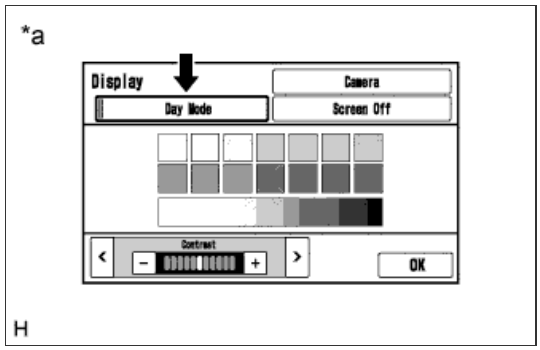
The display is updated once per second. It is normal for the display to lag behind the actual switch operation.

NG → PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK →

### REPLACE MULTI-DISPLAY (Click here)

**for Preparation** Click here



## INSPECTION PROCEDURE

### 1.CHECK IMAGE QUALITY SETTING

a. Display the "Display" screen.

b. Turn the light control switch to the tail or head position.

c. Check if "Day Mode" setting on the display adjustment screen is on.

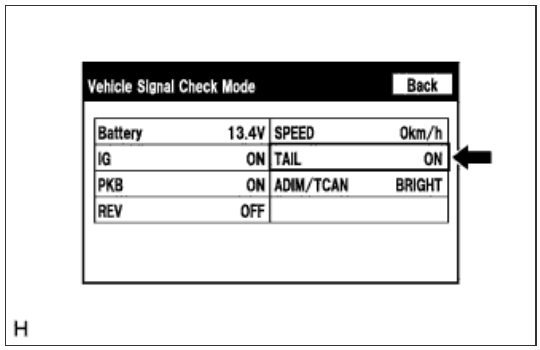
**Text in Illustration**

| | |
|---|---|
| *a | Example |

**Result**

| Result | Proceed to |
|---|---|
| "Day Mode" setting is on | A |
| "Day Mode" setting is off | B |

B → Go to step 2



A

### TURN "Day Mode" SETTING OFF

### 2.CHECK VEHICLE SIGNAL (OPERATION CHECK)

a. Enter the "Vehicle Signal Check Mode" screen. Refer to Check Vehicle Signal in Operation Check (Click here).

b. Check that the display changes between ON and OFF according to the light control switch operation.

**OK:**

| Light Control Switch | Display |
|---|---|
| Tail or head | ON |
| Off | OFF |

**HINT:**

The display is updated once per second. It is normal for the display to lag behind the actual switch operation.

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

### REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

**for Preparation** Click here

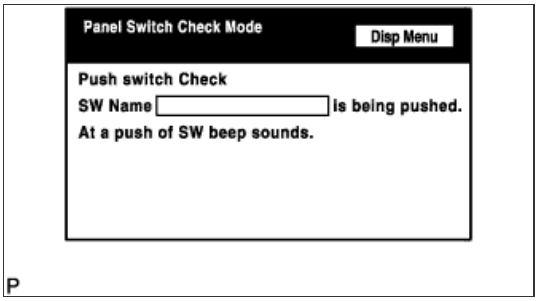
## INSPECTION PROCEDURE

### 1.CHECK PANEL SWITCH

a. Check for foreign matter around the switch that might prevent operation.

**OK:**
**No foreign matter is found.**

NG → REMOVE ANY FOREIGN MATTER



OK

### 2.CHECK PANEL SWITCH (DISPLAY CHECK MODE)

a. Enter the "Display Check" mode and select "Panel Switch Check" ( Click here).

b. Operate the abnormal switch and check if the switch name and status are correctly displayed.

**OK:**
**The switch name and status are correctly displayed as operated.**

NG → GO TO "STEERING PAD SWITCH CIRCUIT" (Click here)

OK

REPLACE MULTI-DISPLAY (Click here)

**for Preparation** Click here

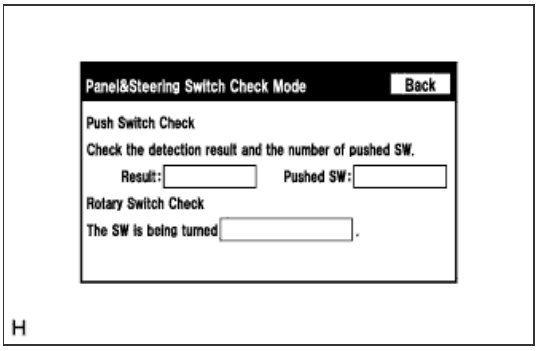
## INSPECTION PROCEDURE

### 1.CHECK PANEL SWITCH

a. Check for foreign matter around the switches that might prevent operation.

**OK:**
**No foreign matter is found.**

NG → REMOVE ANY FOREIGN MATTER FOUND



OK ↓

### 2.CHECK PANEL SWITCH (OPERATION CHECK)

a. Enter the "Panel & Steering Switch Check Mode" screen. Refer to Check Panel & Steering Switch in Operation Check (Click here).

b. Operate the abnormal switch and check if the switch name is correctly displayed.

**OK:**
**The switch status is correctly displayed as operated.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK ↓

REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

**for Preparation** Click here

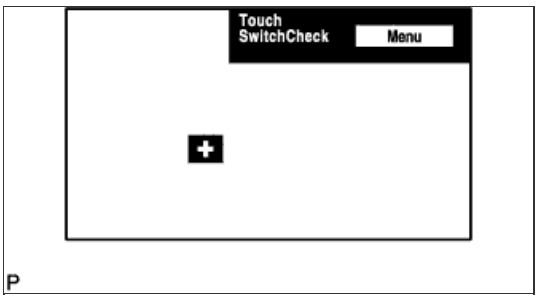
## INSPECTION PROCEDURE

### 1.CHECK TOUCH PANEL

a. Check for foreign matter on the display.

**OK:**
**The display is clean.**

NG → CLEAN DISPLAY AND RECHECK TOUCH PANEL



OK

### 2.CHECK TOUCH SWITCH (DISPLAY CHECK MODE)

a. Enter the "Display Check" mode and select "Touch Switch Check" ( Click here).

b. Touch the display in the area where the switch malfunction occurs.

**OK:**
**A "+" mark appears at the touched position.**

NG → REPLACE MULTI-DISPLAY (Click here)

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK MULTI-DISPLAY

a. Check if there is any foreign matter caught between the display and exterior frame of the multi-display.

**OK:**
**No foreign matter is caught between the display and exterior frame of the multi-display.**

**HINT:**

If there is foreign matter between the display and exterior frame of the multi-display, the touch panel will remain pressed, preventing touch switch operation.

NG → REMOVE FOREIGN MATTER

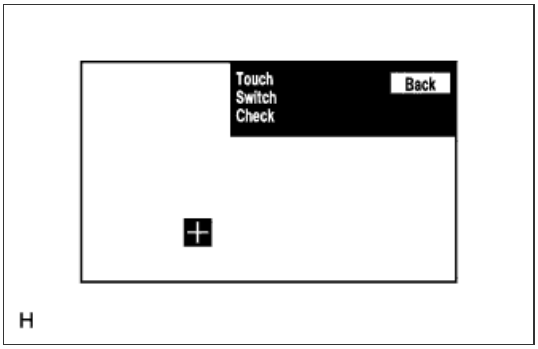
OK ↓

### 2.CHECK TOUCH PANEL

a. Check for foreign matter on the display.

**OK:**
**The display is clean.**

NG → CLEAN DISPLAY AND RECHECK TOUCH PANEL



OK ↓

### 3.CHECK TOUCH SWITCH (OPERATION CHECK)

a. Enter the "Touch Switch Check" screen. Refer to Check Touch Switch in Operation Check (Click here).

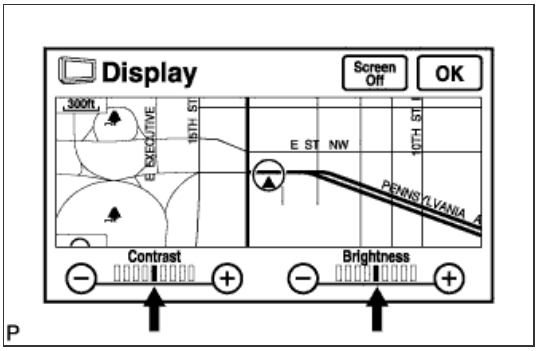
b. Touch the display in the area where the switch malfunction occurs.

**OK:**
**A "+" mark appears at the touched position.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

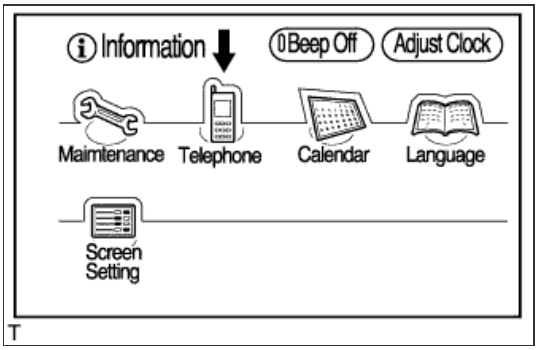
OK ↓

REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)



**for Preparation** Click here

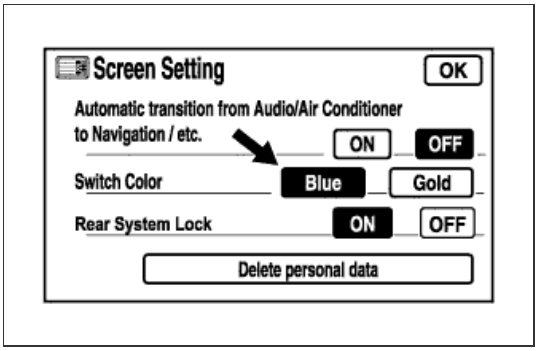
## INSPECTION PROCEDURE



### 1.CHECK DISPLAY SETTING

a. Enter the display adjustment screen by pressing the "DISP" switch.

b. Reset the display settings (contrast, brightness) and check that the screen appears normal.



c. Press the "INFO" switch and then select "Screen Setting".

d. Set the "Switch Color" to "Blue" (initial setting) and check if the display returns to normal.

**OK:**
**Returns to normal.**

NG → Go to step 2

OK →

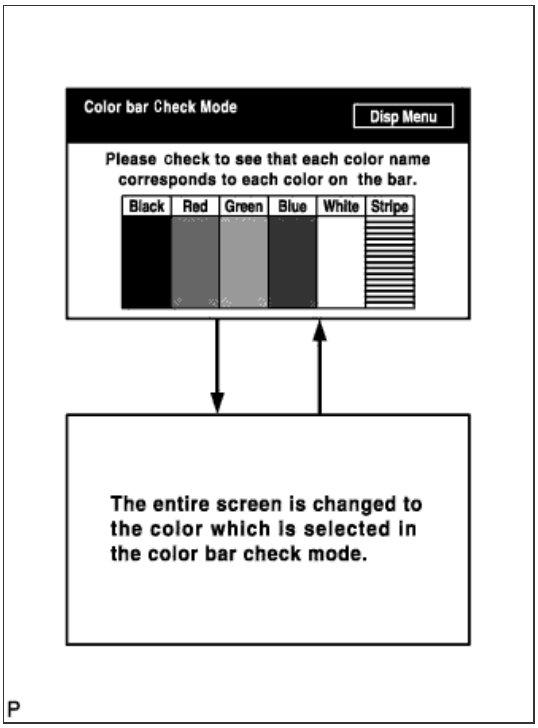
END

### 2.CHECK CABIN

a. Check that the cabin temperature is higher than -20°C (-4.0°F).

**OK:**
**Cabin temperature is higher than -20°C (-4.0°F).**

NG → HEAT CABIN AND RECHECK TEMPERATURE



OK →

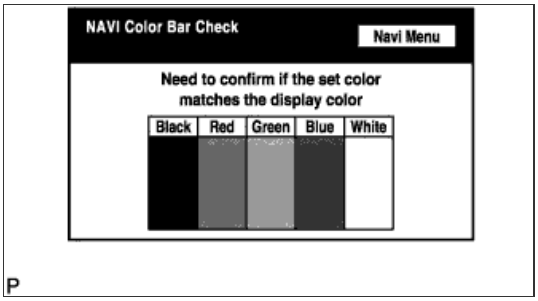
## 3.CHECK COLOR BAR (DISPLAY CHECK MODE)

a. Enter the "Display Check" mode and select "Color Bar Check" ( Click here).

b. Check that the color bars match the displayed names.

**OK:**
**Color bars match the displayed names.**

NG → REPLACE MULTI-DISPLAY (Click here)



OK

## 4.CHECK NAVI COLOR BAR (NAVIGATION CHECK MODE)

a. Enter the "Navigation Check" mode and select "NAVI Color Bar Check" ( Click here).

b. Check that the color bars match the displayed names.

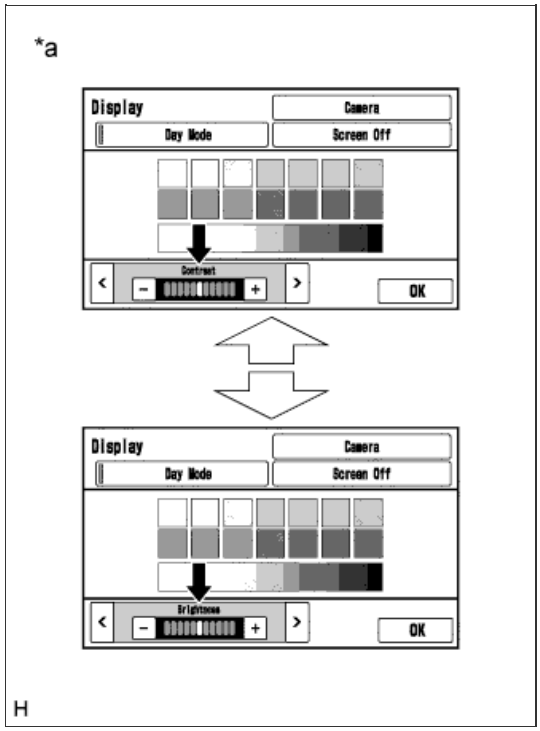
**OK:**
**Color bars match the displayed names.**

NG → REPLACE NAVIGATION ECU (Click here)

OK

REPLACE MULTI-DISPLAY (Click here)

**for Preparation** Click here



## INSPECTION PROCEDURE

### 1.CHECK DISPLAY SETTING

a. Display the "DISP" screen.

b. Reset display settings (contrast, brightness) and check that the screen appears normally.

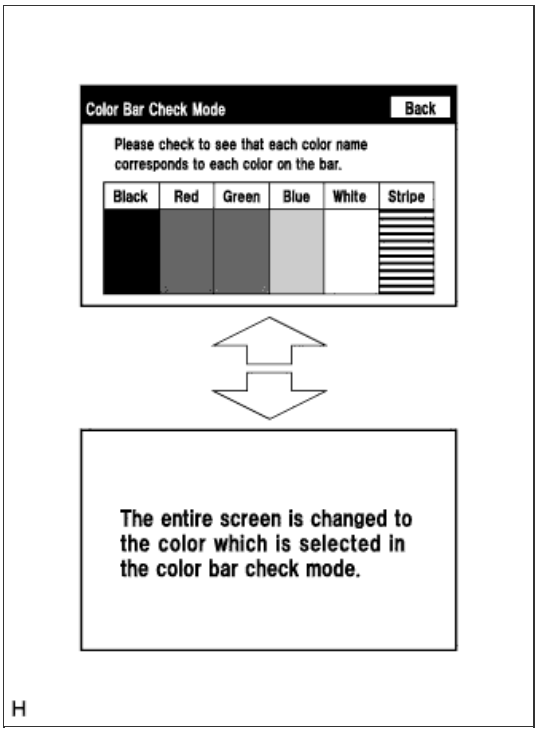
**OK:**
**The display returns to normal.**

Text in Illustration

| | |
|---|---|
| *a | Example |

NG → Go to step 2

OK



### END

### 2.CHECK COLOR BAR (OPERATION CHECK)

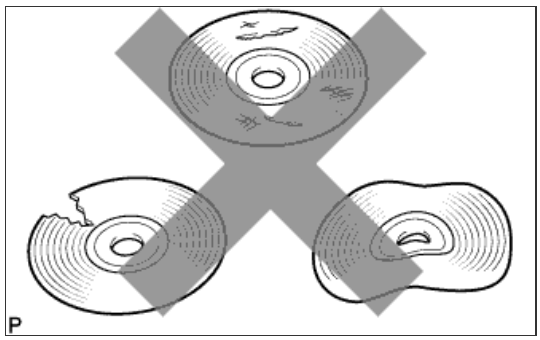
a. Enter the "Color Bar Check Mode" screen. Refer to Check Color Bar in Operation Check (Click here).

b. Check that the color bars match the displayed names.

**OK:**
**Color bars match the displayed names.**

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)



**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK MAP DISC

a. Check that the map disc is not deformed or cracked.

**OK:**
**No deformations or cracks on the map disc.**

NG → REPLACE MAP DISC

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

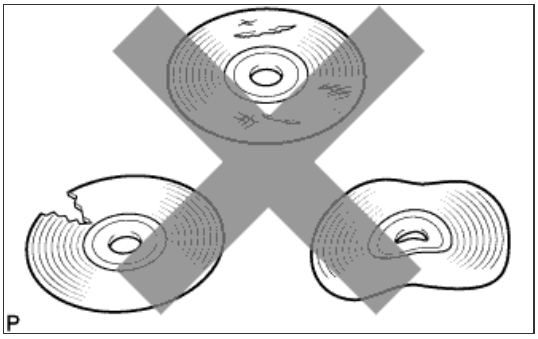
## INSPECTION PROCEDURE

### 1.CHECK MULTI-DISPLAY

a. Turn the engine switch on (ACC).

b. Keep pressing the MAP eject switch for 5 seconds and check if the disc is ejected by forced ejection.

**OK:**
**The disc is ejected.**



NG → GO TO "NAVIGATION ECU POWER SOURCE CIRCUIT" ( Click here)

OK

### 2.CHECK MAP DISC

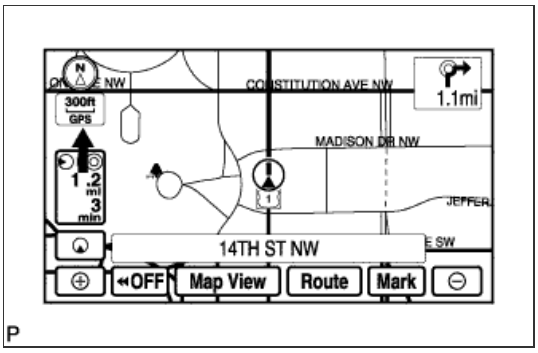
a. Check that the map disc is not deformed or cracked.

**OK:**
**No deformations or cracks on the map disc.**

NG → REPLACE MAP DISC

OK

### END



**for Preparation** Click here

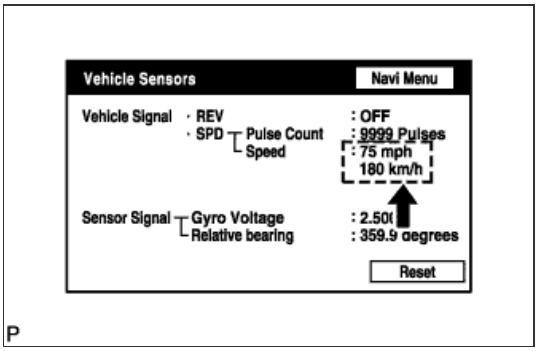
## INSPECTION PROCEDURE

### 1.CHECK GPS MARK

a. Check that the GPS mark is displayed.

**OK:**
**GPS mark is displayed.**

NG → GO TO "GPS MARK IS NOT DISPLAYED" IN PROBLEM SYMPTOMS TABLE (Click here)



OK

### 2.CHECK VEHICLE SENSOR (NAVIGATION CHECK MODE)

a. Enter the "Navigation Check" mode and select "Vehicle Sensors" ( Click here).

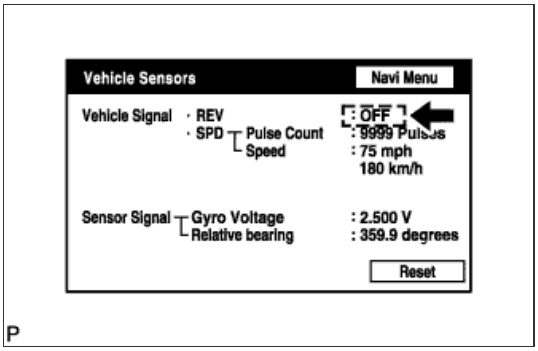
b. While driving the vehicle, compare the "Speed" indicator to the reading on the speedometer. Check that these readings are almost equal.

**OK:**
**The readings are almost equal.**

NG → GO TO "VEHICLE SPEED SIGNAL CIRCUIT" (Click here)

OK

### 3.CHECK VEHICLE SENSOR (NAVIGATION CHECK MODE)



a. Check that the display changes between ON and OFF according to the shift lever operation (P and R).

**OK:**

| Shift Lever Position | Display |
|---|---|
| P | OFF |
| R | ON |

**HINT:**

The display is updated once per second. It is normal for the display to lag behind the actual switch operation.

NG → GO TO "REVERSE SIGNAL CIRCUIT" (Click here)

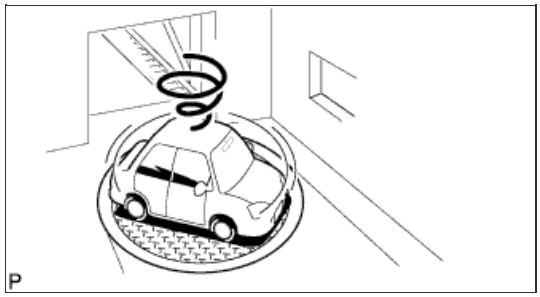
OK

END

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.CHECK CONDITION**



a. Check with the customer if the vehicle has been turned by a turntable at parking.

**OK:**

**Vehicle has not been turned by turntable.**

**HINT:**

If the engine switch is turned on (ACC) or on (IG) while the vehicle is being turned by a turntable, the system may store the angular velocity at this time. For this reason, the vehicle position cursor may deviate.

NG → TURN ENGINE SWITCH ON (IG) WHEN VEHICLE IS COMPLETELY STOPPED

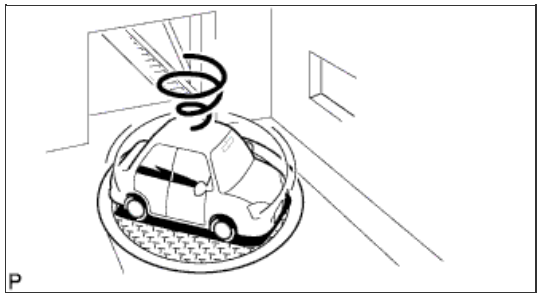
OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.CHECK CONDITION**



a. Check with the customer if the vehicle has been turned by a turntable.

**OK:**

**Vehicle has not been turned by a turntable.**

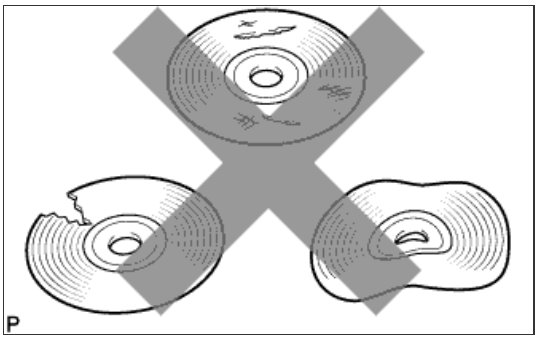
**HINT:**

If the vehicle is turned on a turntable with the engine switch on (IG), the system may store the angular velocity. As a result, the vehicle position cursor may deviate. In this case, the vehicle position cursor will return to normal by turning the engine switch off and back to on (IG) again with the vehicle completely stopped.

NG → TURN ENGINE SWITCH ON (IG) WHEN VEHICLE IS COMPLETELY STOPPED

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)



**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK MAP DISC

a. Check that the map disc is not deformed or cracked.

**OK:**
**No deformations or cracks on map disc.**

NG → REPLACE MAP DISC

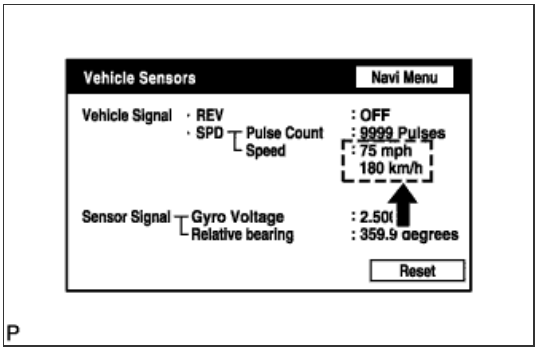
OK

### 2.CHECK MAP DISPLAY

a. Check if a touch scroll can be performed on the map display.

**OK:**
**Touch scroll can be performed.**

NG → REPLACE MULTI-DISPLAY (Click here)



OK

### 3.CHECK VEHICLE SENSOR (NAVIGATION CHECK MODE)

a. Enter the "Navigation Check" mode and select "Vehicle Sensors" ( Click here).

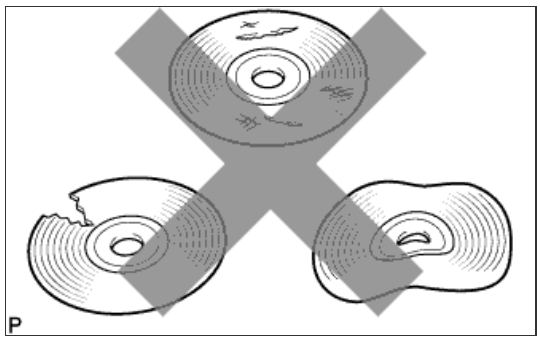
b. While driving the vehicle, compare the "Speed" indicator to the reading on the speedometer. Check if these readings are almost equal.

**OK:**
**The readings are almost equal.**

NG → GO TO "VEHICLE SPEED SIGNAL CIRCUIT" (Click here)

OK

END



**for Preparation** Click here

## INSPECTION PROCEDURE

**1.CHECK MAP DISC**

a. Check that the map disc is not deformed or cracked.

**OK:**
**No deformations or cracks on the map disc.**

NG → REPLACE MAP DISC

OK

**PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)**

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK CABIN

a. Check the cabin for any object that might interrupt radio reception on the instrument panel. If such an object exists, remove it and check if the GPS mark reappears.

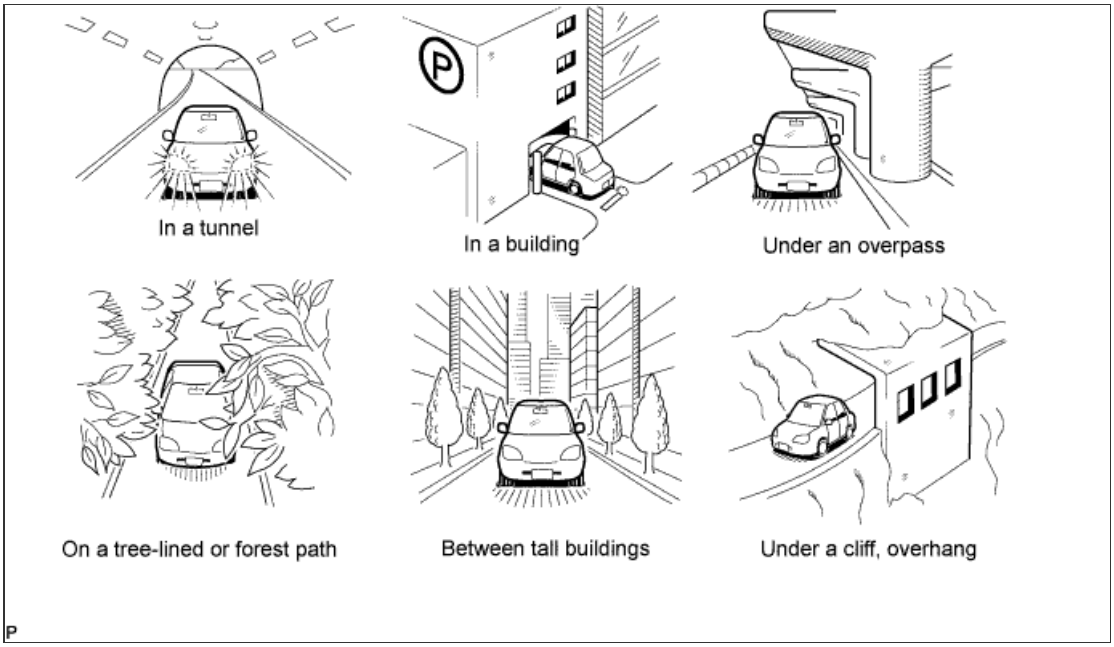
**HINT:**

The GPS uses extremely weak radio waves originating from satellites. If the signal is interrupted by obstructions or other radio waves, the GPS may not be able to properly receive the signal.

**OK:**
**Mark appears.**

NG → Go to step 2

OK



### NORMAL OPERATION

### 2.CHECK SURROUNDINGS

a. Check if the vehicle is in a location where GPS signal reception is poor. If the vehicle is in such a place, relocate the vehicle and check if the GPS mark reappears.

**HINT:**

The GPS uses 24 satellites in 6 orbits. At any point in time, 4 satellites should be able to pinpoint the vehicle. However, GPS signals may not reach the vehicle due to influence from the surroundings, vehicle direction, and time. For examples, see illustration below.

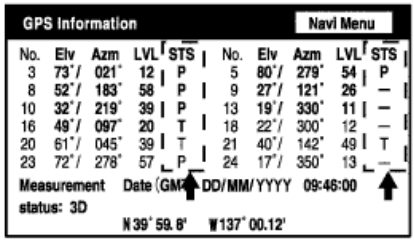
**OK:**
**GPS mark is displayed.**

NG → Go to step 3

OK

SYSTEM RETURN TO NORMAL

## 3.CHECK GPS INFORMATION (NAVIGATION CHECK MODE)



a. Enter the "Navigation Check" mode and select "GPS Information" ( Click here).

b. Check how many of the following codes appear in the "STS" column.

**for DENSO Made:**
**T, P**

**for AISIN AW Made:**
**08H, 04H**

**OK:**
**At least 3 codes appear.**

NG → REPLACE NAVIGATION ANTENNA (Click here)

OK

REPLACE NAVIGATION ECU (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK CABIN

a. Check the cabin for any object that might interrupt radio reception on the instrument panel. If such an object exists, remove it and check if the GPS mark reappears.

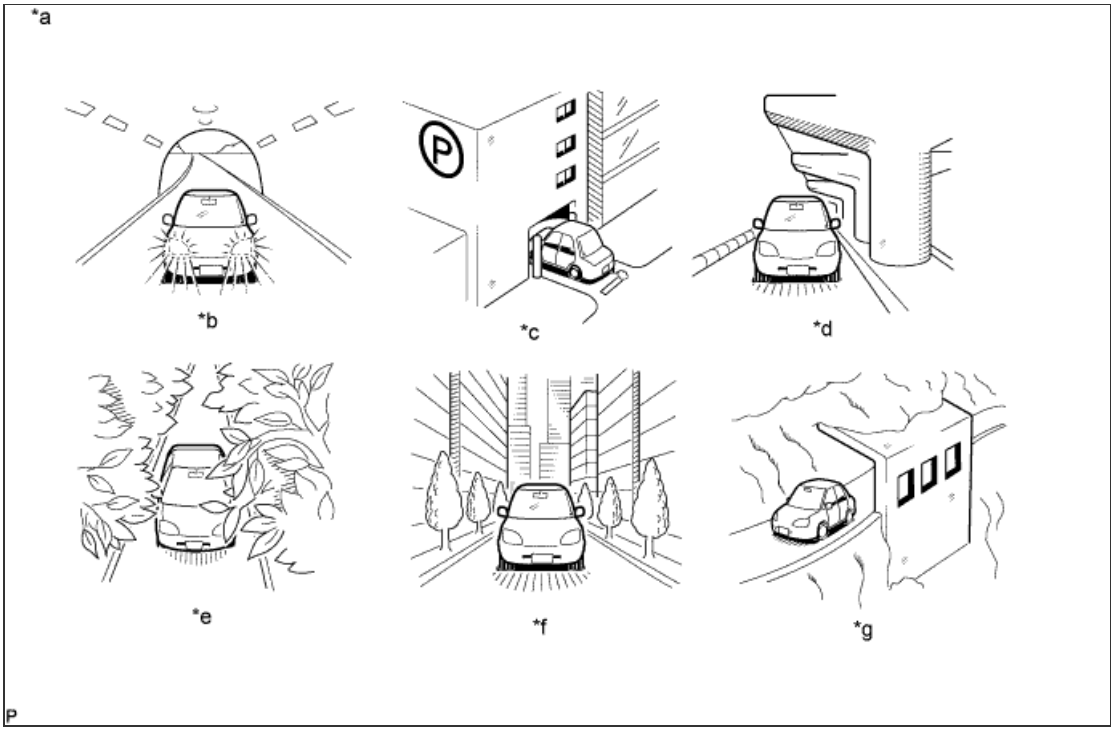
**HINT:**

The GPS uses extremely weak radio waves originating from satellites. If the signal is interrupted by obstructions or other radio waves, the GPS may not be able to properly receive the signal.

**OK:**
**The GPS mark appears.**

**NG** → Go to step 2

**OK**



### NORMAL OPERATION

### 2.CHECK SURROUNDINGS

a. Check if the vehicle is in a location where GPS signal reception is poor. If the vehicle is in such a place, relocate the vehicle and check if the GPS mark reappears.

**HINT:**

The GPS uses 24 satellites in 6 orbits. At any point in time, 4 satellites should be able to pinpoint your vehicle. However, GPS signals may not reach the vehicle due to influence from the surroundings, vehicle direction and time. For examples, see the following illustration.

**Text in Illustration**

| | | | |
|---|---|---|---|
| *a | Example | *b | In a tunnel |
| *c | In a building | *d | Under an overpass |
| *e | On a forest or tree-lined path | *f | Between tall buildings |

| | | | |
|---|---|---|---|
| *g | Under a cliff or overhang | - | - |

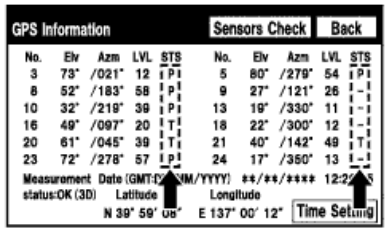
**OK:**
**The GPS mark is displayed.**

NG → Go to step 3

OK

SYSTEM RETURNS TO NORMAL

3.CHECK GPS INFORMATION (OPERATION CHECK)



a. Enter the "GPS Information" screen. Refer to Check GPS & Vehicle Sensors in Operation Check (Click here).

b. Check how many of the following codes appear in the "STS" column.

**HINT:**

T, U or P appears.

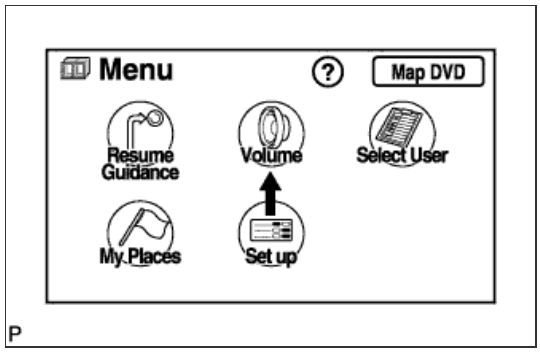
**OK:**
**At least 3 codes appear.**

H

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

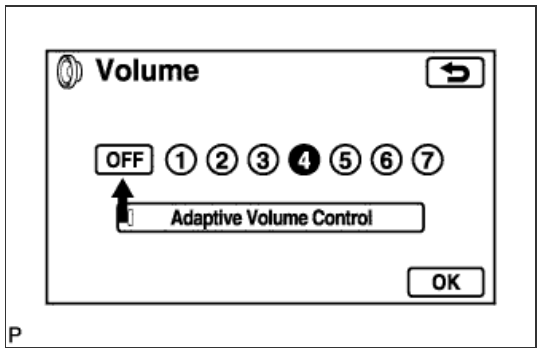
REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)



**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK NAVIGATION SYSTEM SETTING

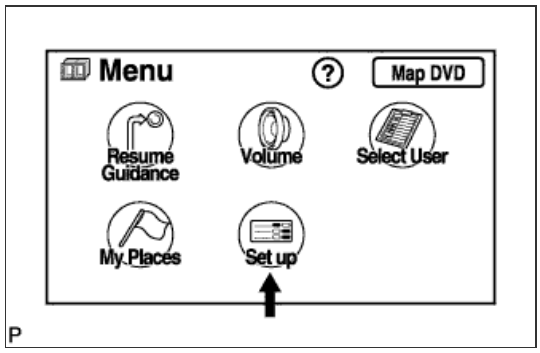


a. Enter the "Menu" screen by pressing the "MENU" switch.

b. Select "Volume".

c. Check that "OFF" is not selected.

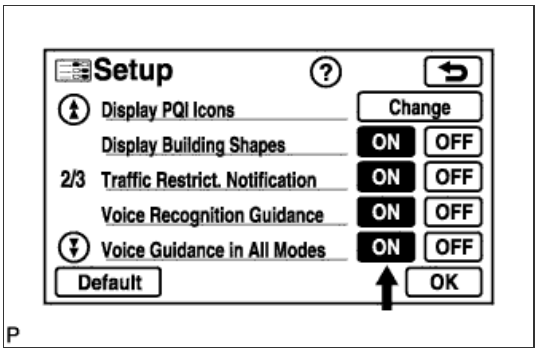
**OK:**
**OFF is not selected.**



NG → TURN VOICE GUIDANCE VOLUME UP TO 4 USING VOICE ADJUSTMENT SWITCHES

OK

### 2.CHECK NAVIGATION SETTING

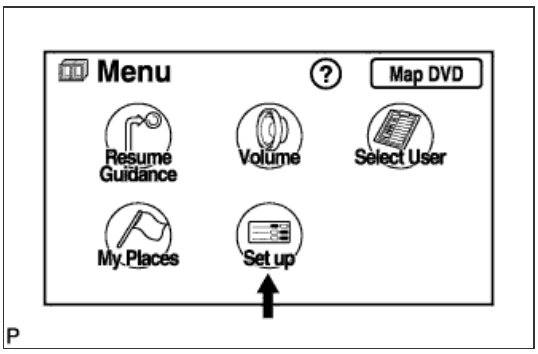


a. Enter the "Menu" screen by pressing the "MENU" switch.

b. Select "Setup".

c. Check that "Voice Guidance in All Modes" is not OFF.

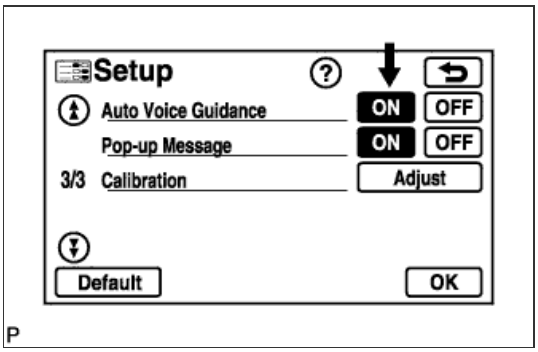
**OK:**
**"Voice Guidance in All Modes" is not OFF.**



NG → TURN VOICE GUIDANCE IN ALL MODES "ON"

OK

## 3.CHECK NAVIGATION SETTING



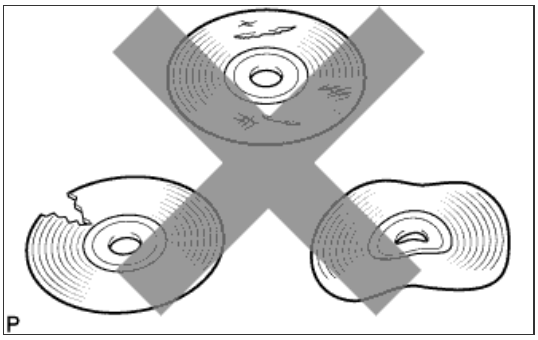
a. Enter the "Menu" screen by pressing the "MENU" switch.

b. Select "Setup".

c. Check that "Auto Voice Guidance" is not OFF.

**OK:**
**"Auto Voice Guidance" is not OFF.**

NG → TURN AUTO VOICE GUIDANCE "ON"



OK

[Go to step 5]

## 4.CHECK MAP DISC

a. Check that the map disc is not deformed or cracked.

**OK:**
**No deformations or cracks on map disc.**

NG → REPLACE MAP DISC

OK

5.CHECK RADIO RECEIVER ASSEMBLY

a. Check that audio can be heard from the speakers.

**OK:**
**Audio can be heard.**

NG → GO TO AUDIO AND VISUAL SYSTEM (Click here)

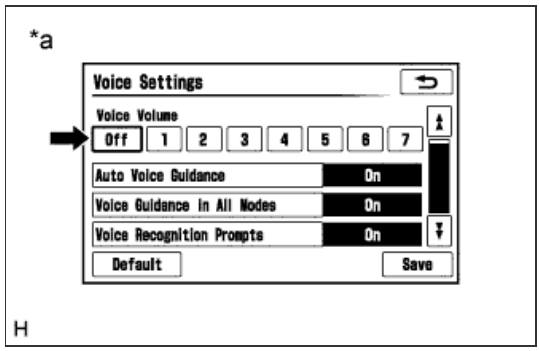
OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK NAVIGATION SETTING



a. Display the "Voice Settings" screen.

b. Check that "Off" is not selected.

**OK:**
**"Off" is not selected.**

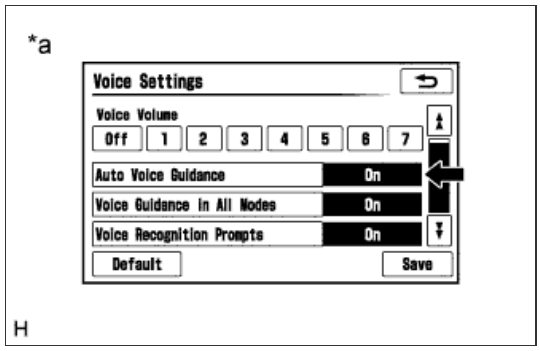
Text in Illustration

| | |
|---|---|
| *a | Example |

NG → SELECT VOICE VOLUME SETTING OTHER THAN "Off"

OK

### 2.CHECK NAVIGATION SETTING



a. Display the "Voice Settings" screen.

b. Check that "Auto Voice Guidance" is not "Off".

**OK:**
**"Auto Voice Guidance" is not "Off".**

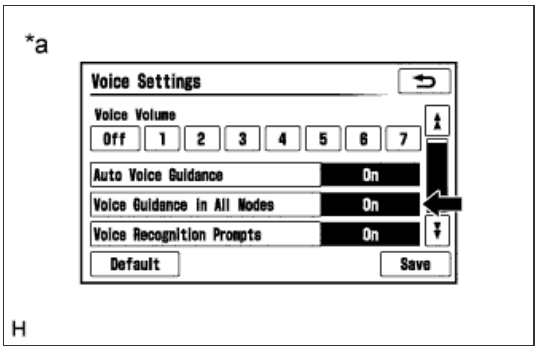
Text in Illustration

| | |
|---|---|
| *a | Example |

NG → TURN AUTO VOICE GUIDANCE "On"

OK

### 3.CHECK NAVIGATION SETTING



a. Display the "Voice Settings" screen.

b. Check that "Voice Guidance in All Modes" is not "Off".

**OK:**
**"Voice Guidance in All Modes" is not "Off".**

Text in Illustration

| | |
|---|---|
| *a | Example |

NG → TURN VOICE GUIDANCE IN ALL MODES "On"

OK

4.CHECK AUDIO FUNCTION

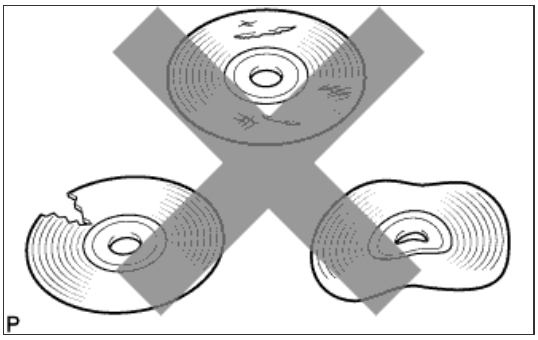
a. Check that sound can be heard from a front speaker.

**OK:**
**Sound can be heard.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)



**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK MAP DISC

a. Check that the map disc is not deformed or cracked.

**OK:**
**No deformations or cracks on map disc.**

NG → REPLACE MAP DISC

OK

### 2.CHECK NAVIGATION DISPLAY

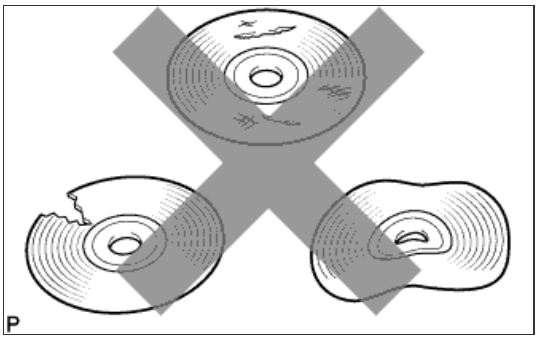
a. Check that displays other than the navigation display are complete.

**OK:**
**No other incomplete displays are found.**

NG → REPLACE NAVIGATION ECU (Click here)

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)



**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK MAP DISC

a. Check that the map disc is not deformed or cracked.

**OK:**
**No deformations or cracks on map disc.**

NG → REPLACE MAP DISC

OK

### 2.SET DESTINATION

a. Set another destination and check if the system can calculate the route correctly.

**OK:**
**Route can be correctly calculated.**

NG → REPLACE NAVIGATION ECU (Click here)

OK

### END

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CONFIRM SYMPTOMS

a. Confirm the information about the situation when the route calculation did not complete.

**Result**

| Result | Proceed to |
|---|---|
| Route cannot be calculated for any destination. | A |
| A road in the route is closed or has not been officially opened yet. | B |
| A ferry crossing is included in the route. | B |
| The destination is too close. | B |
| The route cannot be calculated only when driving on a bumpy road. | B |

**HINT:**

A route cannot be calculated if the route is unavailable, a ferry crossing is included in the route, the destination is too close or when driving on bumpy roads.

B → NORMAL OPERATION

A

### 2.REPLACE HARD DISC

a. Replace the hard disc (Click here).

b. Set another destination and check if the system can calculate the route correctly.

**OK:**
**Route can be correctly calculated.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

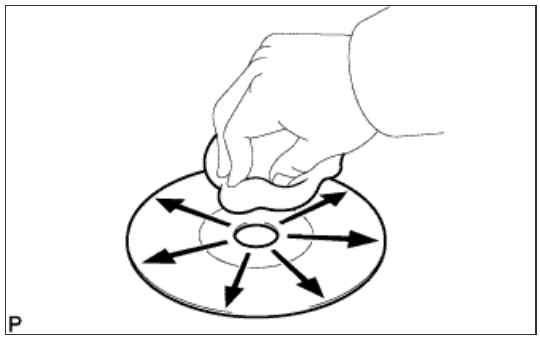
END

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK MAP DISC

a. Check for dirt on the map disc surface.



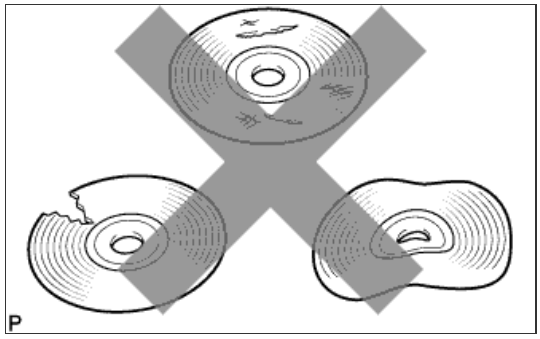
**OK:**
**No dirt is on the map disc surface.**

**HINT:**

If the disc is dirty, clean the disc by wiping the disc surface radially with a soft cloth.

**NOTICE:**

Do not use a conventional record cleaner or antistatic preservative.



NG → CLEAN MAP DISC

OK

### 2.CHECK MAP DISC

a. Check that the map disc is not deformed or cracked.

**OK:**
**No deformations or cracks appear on the map disc.**

NG → REPLACE MAP DISC

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

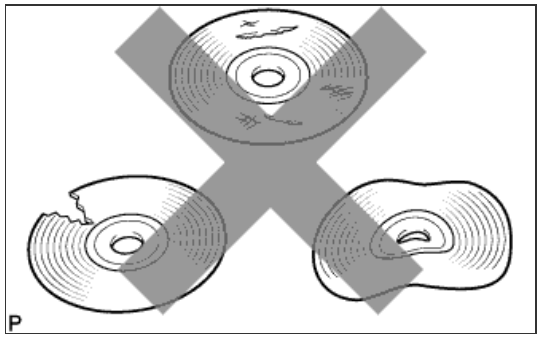
**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK CONDITION

a. Check if the voice recognition level of the system is low by using only one particular voice.

**OK:**
**Voice recognition level of the system is low with any voice.**



NG → VOICE RECOGNITION LEVEL OF THE SYSTEM VARIES DEPENDING ON VOICE AND PRONUNCIATION. THIS IS NOT A MALFUNCTION.

OK

### 2.CHECK MAP DISC

a. Check that the map disc is not deformed or cracked.

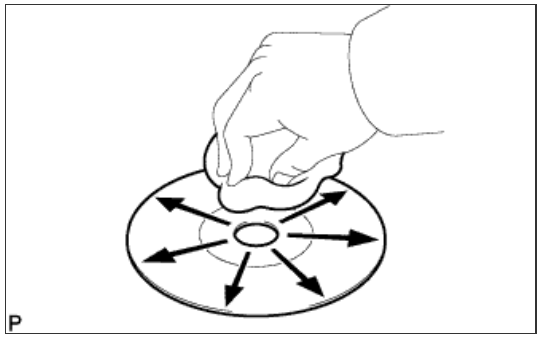
**OK:**
**No deformations or cracks on map disc.**

NG → REPLACE MAP DISC

OK

### 3.CHECK MAP DISC

a. Check for dirt on the map disc surface.



**OK:**
**No dirt is on map disc surface.**

**HINT:**

If the disc is dirty, clean the disc by wiping the disc surface radially with a soft cloth.

**NOTICE:**

Do not use a conventional record cleaner or antistatic preservative.

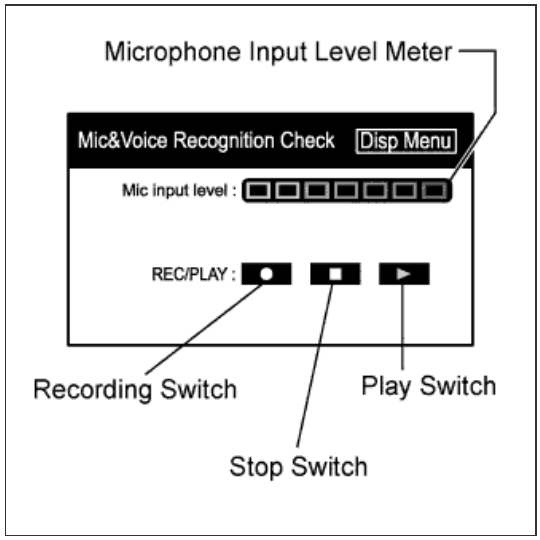
NG → CLEAN MAP DISC

OK

### 4.CHECK MICROPHONE (NAVIGATION CHECK MODE)

a. Enter the "Mic & Voice Recognition Check" mode ( Click here).

b. When a voice is input into the microphone, check that the microphone input level meter changes according to the input voice.



c. Push the recording switch and perform voice recording.

**HINT:**

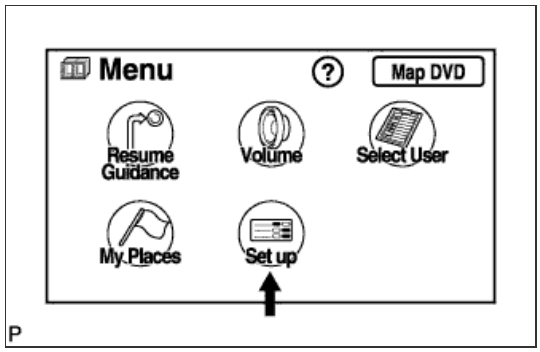
The recording limit is 5 seconds.

d. Check that the recording indicator remains on while recording and that the recorded voice is played normally without noise or distortion.

**OK:**
**All check results are normal.**

NG → REPLACE NAVIGATION ECU (Click here)

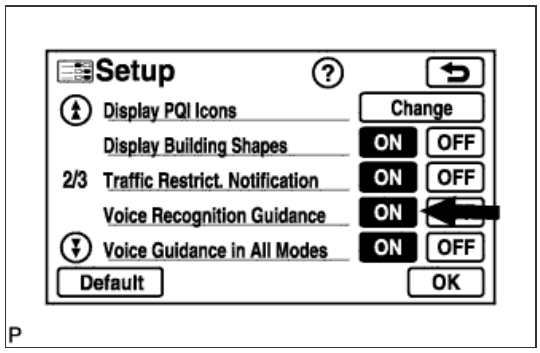
OK → END



**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK NAVIGATION SETTINGS

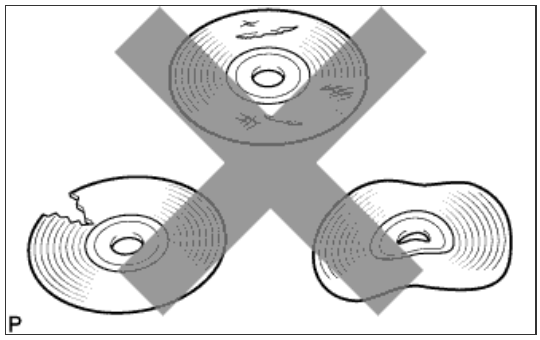


a. Enter the "Menu" screen by pressing the "MENU" switch.

b. Select "Set up".

c. Check that "Voice Recognition Guidance" is not OFF.

**OK:**
**Voice Recognition Guidance is not OFF.**



NG → TURN VOICE RECOGNITION GUIDANCE "ON"

OK

### 2.CHECK MAP DISC

a. Check that the map disc is not deformed or cracked.

**OK:**
**No deformations or cracks on map disc.**

NG → REPLACE MAP DISC

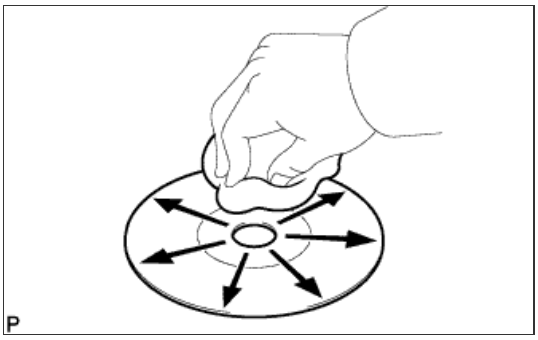
OK

### 3.CHECK MAP DISC

a. Check for dirt on the map disc surface.

a. Check for dirt on the map disc surface.

**OK:**



**No dirt is on the map disc surface.**

**HINT:**

If the disc is dirty, clean the disc by wiping the disc surface radially with a soft cloth.

**NOTICE:**

Do not use a conventional record cleaner or antistatic preservative.

NG → CLEAN MAP DISC

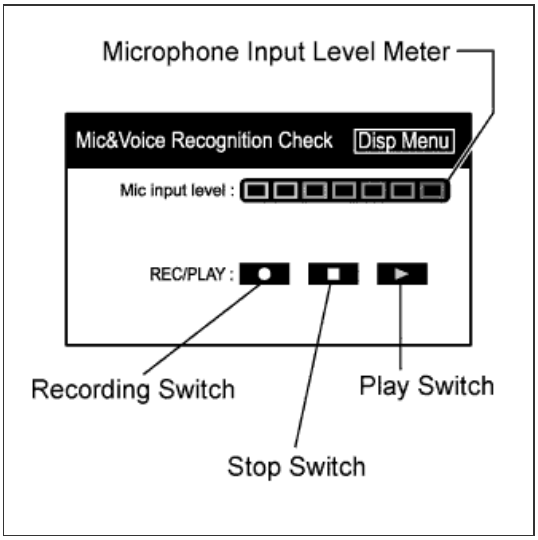
OK

**4.CHECK MICROPHONE (NAVIGATION CHECK MODE)**

a. Enter the "Mic & Voice Recognition Check" mode ( Click here).

b. When a voice is input into the microphone, check that the microphone input level meter changes according to the input voice.

c. Push the recording switch and perform voice recording.



**HINT:**

The recording limit is 5 seconds.

d. Check that the recording indicator remains on while recording and that the recorded voice is played normally without noise or distortion.

**OK:**

**All check results are normal.**

NG → GO TO "MICROPHONE CIRCUIT BETWEEN OVERHEAD J/B AND MULTI-DISPLAY" (Click here)

OK

END

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK CONDITION

a. Check if the system voice recognition level is low when recognizing a particular voice.

**Result**

| Result | Proceed to |
|---|---|
| System voice recognition level is low with any voice. | A |
| System voice recognition level is low only for a particular voice. | B |

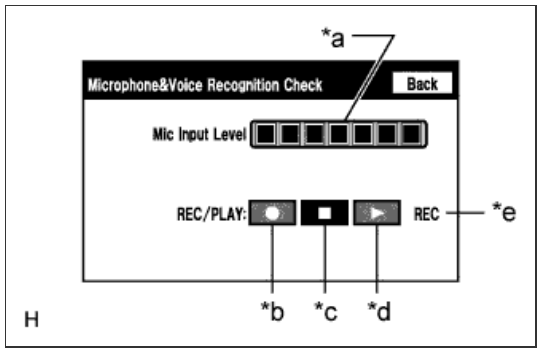
**HINT:**

System voice recognition level varies depending on voice and pronunciation. This is not a malfunction.

B → END

A

### 2.CHECK MICROPHONE AND VOICE RECOGNITION (OPERATION CHECK)



a. Enter the "Microphone & Voice Recognition Check" screen. Refer to Check Mic & Voice Recognition in Operation Check (Click here).

b. When voice is input into the microphone, check that the microphone input level meter changes according to the input voice.

c. Select the recording switch and perform voice recording.

**HINT:**

- **Select the recording switch with the blower motor of the air conditioning system stopped. If an outlet of the air conditioning system is facing the microphone, noise may be recorded.**
- **Voice can be recorded up to 5 seconds.**

d. Check that the recording indicator remains on while recording and that the recorded voice is played normally without noise or distortion.

**OK:**
**All check results are normal.**

**Text in Illustration**

| | |
|---|---|
| *a | Microphone Input Level Meter |
| *b | Recording Switch |
| *c | Stop Switch |
| *d | Play Switch |
| *e | Recording Indicator |

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

### 3.REPLACE HARD DISC

a. Replace the hard disc (Click here).

b. Check that voice recognition is normal.

**OK:**

**Voice can be recognized normally.**

**NG** → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

**OK**

END (HARD DISC IS DEFECTIVE)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK CURRENT CONDITION

a. Check for "Bluetooth" capable cellular phones and vehicles in the area.

**Result**

| Conditions | Proceed to |
|---|---|
| Another "Bluetooth" compatible cellular phone is present | A |
| Another "Bluetooth" compatible vehicle is present | B |
| None of the above | C |

B → Go to step 3

C → Go to step 4

A

### 2.CHECK USING ANOTHER CELLULAR PHONE

a. Check if the system functions using another "Bluetooth" compatible cellular phone.

**HINT:**

- **Confirm that either the same or a different version of another "Bluetooth" compatible cellular phone complies with the system.**
- **Depending on the version, some "Bluetooth" compatible cellular phones cannot be used.**

**OK:**
**System functions.**

NG → REPLACE MULTI-DISPLAY (Click here)

OK

### USE "BLUETOOTH" COMPATIBLE CELLULAR PHONE (DEPENDING ON THE VERSION)

### 3.CHECK USING ANOTHER "BLUETOOTH" CAPABLE VEHICLE

a. Register the cellular phone with another vehicle and check if the system functions normally.

**HINT:**

Depending on the version, some "Bluetooth" compatible cellular phones cannot be used.

**OK:**
**System functions.**

NG → USE "BLUETOOTH" COMPATIBLE CELLULAR PHONE

OK

### REPLACE MULTI-DISPLAY (Click here)

### 4.CHECK CELLULAR PHONE

a. Check if the cellular phone is "Bluetooth" compatible.

**HINT:**

Some versions of "Bluetooth" compatible cellular phones may not function.

**OK:**

**The phone is "Bluetooth" compatible.**

NG → USE "BLUETOOTH" COMPATIBLE CELLULAR PHONE

OK ↓

5.CHECK CELLULAR PHONE

a. Check if a call can be made from the cellular phone.

**HINT:**

When the battery is low, registration or directory transfer cannot be done.

**OK:**

**A call can be made from the cellular phone.**

NG → REPLACE CELLULAR PHONE

OK ↓

REPLACE MULTI-DISPLAY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK OPERATION

a. Place the cellular phone close to the multi-media module receiver assembly.

b. Check if the cellular phone can be registered.

**OK:**
**The cellular phone can be registered.**

**NG** → Go to step 2

**OK** ↓

### NORMAL OPERATION

### 2.CHECK CURRENT CONDITIONS

a. Proceed to the next step according to the table below.

**Result**

| Result | Proceed to |
|---|---|
| Another "Bluetooth" compatible cellular phone is available. | A |
| Another "Bluetooth" compatible vehicle is available. | B |
| None of the above | C |

**B** → Go to step 4

**C** → Go to step 5

**A** ↓

### 3.CHECK USING ANOTHER CELLULAR PHONE

a. Check if the system functions using another "Bluetooth" compatible cellular phone.

**HINT:**

- **Confirm that either the same or a different version of another "Bluetooth" compatible cellular phone complies with the system.**
- **Depending on the version, some "Bluetooth" compatible cellular phones cannot be used.**

**OK:**
**The system functions.**

**NG** → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

**OK** ↓

### USE A "Bluetooth" COMPATIBLE CELLULAR PHONE

### 4.CHECK USING ANOTHER "Bluetooth" COMPATIBLE VEHICLE

a. Register the cellular phone with another vehicle and check if the system functions normally.

**HINT:**

Depending on the version, some "Bluetooth" compatible cellular phones cannot be used.

**OK:**
**The system functions.**

NG → REPLACE CELLULAR PHONE

OK ↓

REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

5.CHECK CELLULAR PHONE

a. Check if the cellular phone is "Bluetooth" compatible.

**HINT:**

Some versions of "Bluetooth" compatible cellular phones may not function.

**OK:**
**The phone is "Bluetooth" compatible.**

NG → USE A "Bluetooth" COMPATIBLE CELLULAR PHONE

OK ↓

6.CHECK CELLULAR PHONE

a. Check if a call can be made from the cellular phone.

**HINT:**

When the battery is low, registration or directory transfer cannot be done.

**OK:**
**A call can be made from the cellular phone.**

NG → REPLACE CELLULAR PHONE

OK ↓

REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK "BLUETOOTH" SETTING

a. Check if the "Bluetooth" settings are correct.

**OK:**
**"Bluetooth" settings are correct.**

NG → SET SETTINGS CORRECTLY

OK

### 2.CHECK CELLULAR PHONE

a. Check if the cellular phone is "Bluetooth" compatible.

**HINT:**

Some versions of "Bluetooth" compatible cellular phones may not function.

**OK:**
**Phone is "Bluetooth" compatible.**

NG → END (ONLY A "BLUETOOTH" COMPATIBLE CELLULAR PHONE CAN BE USED)

OK

### 3.CHECK SETTING

a. Check if the cellular phone functions.

**HINT:**

The cellular phone is unable to call under any of the following conditions.

- **The cellular phone is locked.**
- **The directory is being transferred.**
- **The line is crossed.**
- **Transmission is regulated.**
- **The power is OFF.**
- **The cellular phone is not connected to "Bluetooth" ("Bluetooth" mark is displayed while connected).**

**OK:**
**Above conditions do not exist.**

NG → SET CORRECTLY

OK

### 4.CHECK CELLULAR PHONE

a. Check if the cellular phone can make calls.

**HINT:**

When the battery is low, calls cannot be made or received.

**OK:**
**Cellular phone can make calls.**

NG →

NG → REPLACE CELLULAR PHONE

OK

5.CHECK RECEPTION

a. Set the cellular phone so that it can receive calls.

b. Place the cellular phone close to the multi-display.

c. Check if the cellular phone has reception according to the multi-display.

**OK:**
**Cellular phone has reception.**

NG → REPLACE MULTI-DISPLAY (Click here)

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK "Bluetooth" SETTINGS

a. Check if the cellular phone is registered as a connected device and the "Bluetooth" settings are correct.

**OK:**
**The cellular phone is registered as a connected device and "Bluetooth" settings are correct.**

NG → SET SETTINGS CORRECTLY

OK ↓

### 2.CHECK SETTINGS AND CONDITIONS

a. Check the cellular phone functions.

**HINT:**

The cellular phone is unable to call under any of the following conditions:

- **The cellular phone is locked.**
- **The directory is being transferred.**
- **The line is crossed.**
- **The cellular phone is outside service range.**
- **The power is off.**
- **The battery is low.**
- **The cellular phone is not connected via "Bluetooth".**

**OK:**
**None of the above conditions exist.**

NG → SET CORRECTLY

OK ↓

### 3.CHECK RECEPTION

a. Place the cellular phone close to the multi-media module receiver assembly.

b. Set the cellular phone so that it can receive calls.

c. Check if the cellular phone has reception according to the multi-media module receiver assembly.

**OK:**
**The cellular phone has reception.**

NG → Go to step 4

OK ↓

END

### 4.CHECK CELLULAR PHONE

a. Check if the cellular phone can make a call.

**HINT:**

The purpose of this step is to inspect the cellular phone when it is not connected to the vehicle.

**OK:**
**Cellular phone can make a call.**

NG → REPLACE CELLULAR PHONE

OK

**5.RESTART CELLULAR PHONE**

a. Restart the cellular phone.

b. Register the cellular phone as a connected device again and check that the malfunction disappears.

**OK:**
**Malfunction disappears.**

NG → Go to step 6

OK

**END**

**6.CHECK CELLULAR PHONE**

a. Check if the cellular phone is "Bluetooth" compatible.

**HINT:**

Some versions of "Bluetooth" compatible cellular phones may not function.

**OK:**
**The phone is "Bluetooth" compatible.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

**END (ONLY A "Bluetooth" COMPATIBLE CELLULAR PHONE CAN BE USED)**

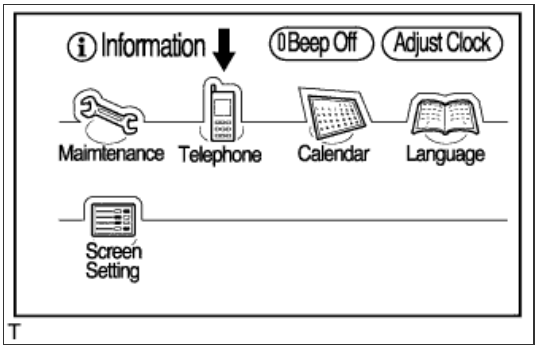
**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK SURROUNDING CONDITION

a. Check if the cellular phone can make calls in a certain location.

**OK:**
**It can make calls.**



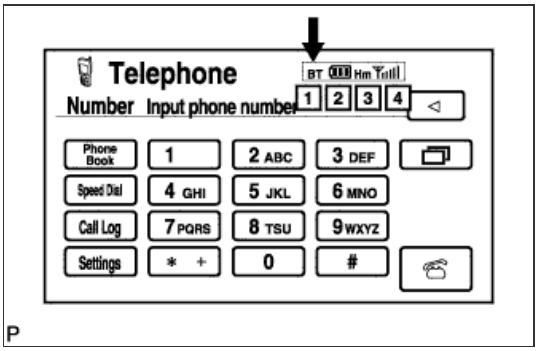
NG → END (CELLULAR PHONES CAN ONLY FUNCTION IN CELLULAR SERVICE AREAS)

OK

### 2.CHECK RECEPTION

a. Enter the "Information" screen by pressing the "INFO" switch.

b. Select "Telephone".



T

c. Check the "BT" mark.

**Result**

| Result | Proceed to |
|---|---|
| Yellow color | A |
| Blue color | B |
| No connection mark is displayed | C |

P

B → REPLACE MULTI-DISPLAY (Click here)

C → SELECT REGISTERED CELLULAR PHONE OR REGISTER BLUETOOTH COMPATIBLE PHONE

A

BRING CELLULAR PHONE TO LOCATION WHERE BT MARK TURNS BLUE

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK CELLULAR PHONE

a. Check if the voice on the other side can be heard using a cellular phone.

**OK:**
**Voice can be heard.**

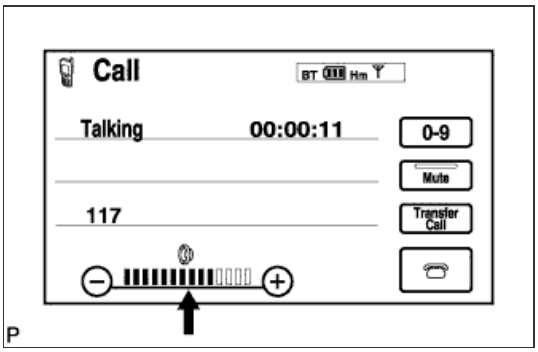
NG → REPAIR OR REPLACE CELLULAR PHONE

OK

### 2.CHECK NAVIGATION SYSTEM

a. Check that voice guidance can be heard from the driver side speaker.

**OK:**
**Voice guidance can be heard.**



NG → GO TO "VOICE GUIDANCE DOES NOT FUNCTION" IN PROBLEM SYMPTOMS TABLE (Click here)

OK

### 3.CHECK SETTINGS

a. Check if the volume level is set to a low level on the CALL screen.

**OK:**
**The level is not low.**

NG → SET VOLUME TO HIGH

OK

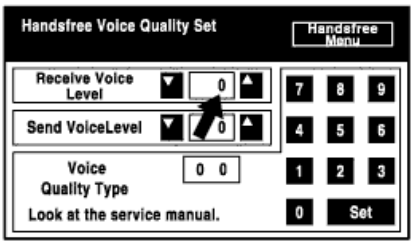
### 4.CHECK SETTINGS

a. Enter the "Handsfree Voice Quality Set" mode (Click here).

b. Check if the Receive Voice Level is set to "0".

**HINT:**

The Receive Voice Level can be set to 11 different levels, -5 to +5, with a 3 dB difference.



c. Check if the Receive Voice Level is set to the minimum or maximum level.

**HINT:**

When the Receive Voice Level is set to the minimum or maximum level, the sound may be distorted.

**OK:**

**The Receive Voice Level is set to "0".**

P

NG → SET RECEIVE VOICE LEVEL TO "0"

OK → PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK CELLULAR PHONE

a. Check if the other caller's voice can be heard properly.

**OK:**
**Voice can be heard properly.**

**HINT:**

The purpose of this step is to inspect the cellular phone when it is not connected to the vehicle.

NG → REPAIR OR REPLACE CELLULAR PHONE

OK

### 2.CHECK NAVIGATION SYSTEM

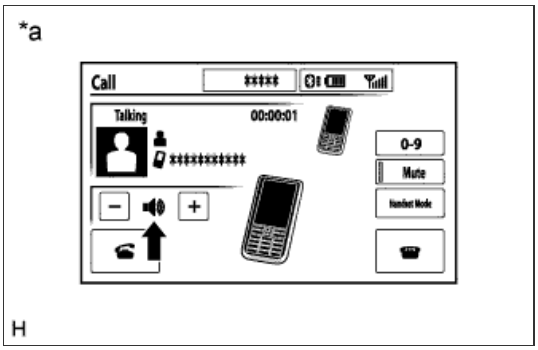
a. Check that navigation system sound can be heard from the front speaker.

**OK:**
**Sound from the audio system can be heard.**

NG → GO TO "VOICE GUIDANCE DOES NOT FUNCTION" IN PROBLEM SYMPTOMS TABLE (Click here)

OK

### 3.CHECK SETTINGS



a. Display the "Call" screen.

b. Check that the volume level is not set to low.

**OK:**
**The level is not set to low.**

**Text in Illustration**

| | |
|---|---|
| *a | Example |

NG → SET VOLUME TO HIGH

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

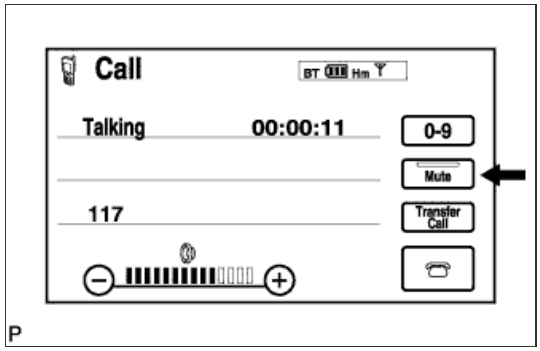
**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK CELLULAR PHONE

a. Check if the other side can hear your voice properly.

**OK:**
**Your voice can be heard correctly.**



NG → REPLACE CELLULAR PHONE

OK

### 2.CHECK SETTINGS

a. Check if the mute switch is on.

**OK:**
**Mute switch is not on.**

NG → TURN MUTE SWITCH OFF

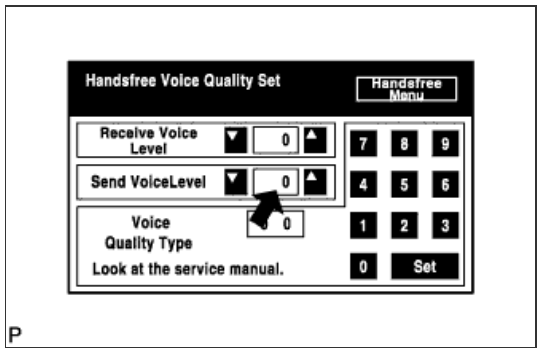
OK

### 3.CHECK SETTINGS

a. Enter the "Handsfree Voice Quality Set" mode (Click here).

b. Check if the Send Voice Level is set to "0".

**HINT:**



The Send Voice Level can be set to 11 different levels, -5 to +5, with a 3 dB difference.

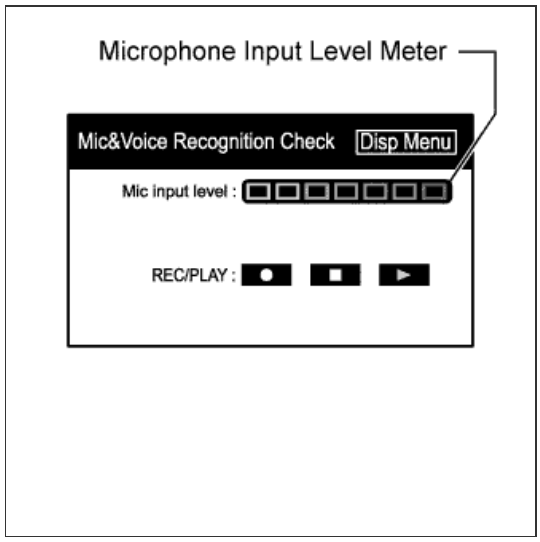
c. Check if the Send Voice Level is set to the minimum or maximum level.

**HINT:**

When the Send Voice Level is set to the minimum or maximum level, the sound may be distorted.

**OK:**
**The Send Voice Level is set to "0".**

NG → SET SEND VOICE LEVEL TO "0"



OK

### 4.CHECK MICROPHONE (DISPLAY CHECK MODE)

a. Enter the "Mic & Voice Recognition Check" mode ( Click here).

b. When a voice is input into the microphone, check that the microphone input level meter changes according to the input voice.

**OK:**
**All check results are normal.**

**NG** → GO TO "MICROPHONE CIRCUIT BETWEEN OVERHEAD J/B AND MULTI-DISPLAY" (Click here)

**OK**

REPLACE MULTI-DISPLAY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

**HINT:**

If an outlet of the air conditioning system is facing the microphone, noise may be recorded and the other caller may not be able to hear your voice properly.

### 1.CHECK CELLULAR PHONE

a. Check if the other caller can hear your voice properly.

**OK:**
**Your voice can be heard properly.**

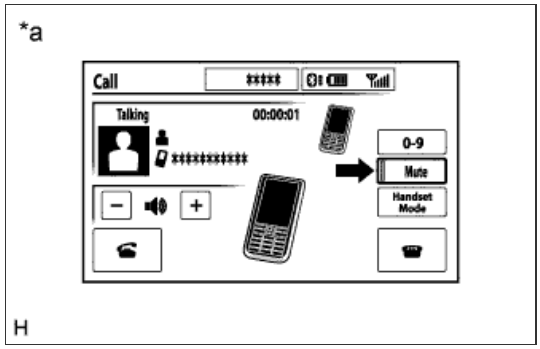
**HINT:**

The purpose of this step is to inspect the cellular phone when it is not connected to the vehicle.

NG → REPLACE CELLULAR PHONE

OK

### 2.CHECK SETTINGS



a. Display the "Call" screen.

b. Check if the "Mute" switch is set to on.

**OK:**
**"Mute" switch is not set to on.**

Text in Illustration

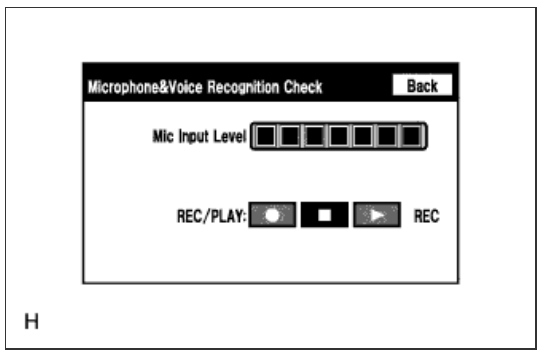
| | |
|---|---|
| *a | Example |

NG → TURN "Mute" SWITCH OFF

OK

### 3.CHECK MICROPHONE (OPERATION CHECK)

a. Enter the "Microphone & Voice Recognition Check" screen. Refer to Check Mic & Voice Recognition in Operation Check (Click here).



b. When voice is input into the microphone, check that the microphone input level meter changes according to the input voice.

c. Select the recording switch and perform voice recording.

- Select the recording switch with the blower motor of the air conditioning system stopped. If an outlet of the air conditioning system is facing the microphone, noise may be recorded.
- Voice can be recorded up to 5 seconds.

d. Check that the recording indicator remains on while recording and that the recorded voice is played normally without noise or distortion.

**OK:**

All check results are normal.

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK DISPLAY SETTING

a. Check that the display is not in "Screen Off" mode.

**OK:**
**The display setting is not in "Screen Off" mode.**

NG → CHANGE SCREEN TO "Screen On" MODE

OK

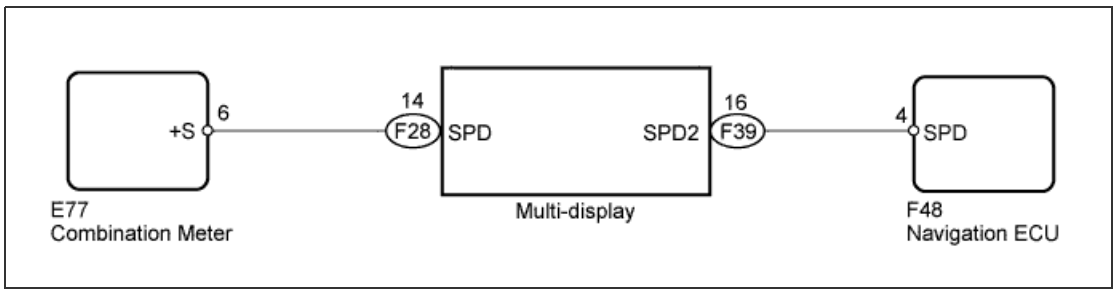
### 2.CHECK IMAGE QUALITY SETTING

a. Check that the screen color quality can be set.

**OK:**
**Setting is possible.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK



SET SCREEN COLOR QUALITY TO NORMAL

**for Preparation** Click here

## DESCRIPTION

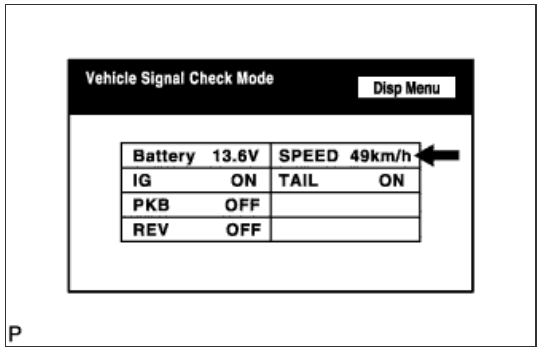
This circuit sends a speed signal from the combination meter to the navigation ECU through the multi-display.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK VEHICLE SPEED SIGNAL (DISPLAY CHECK MODE)

a. Enter the "Display Check" mode and select "Vehicle Signal Check" ( Click here).



b. Check that the vehicle speed on the display changes according to the actual vehicle speed.

**OK:**

**The display changes according to the actual vehicle speed.**

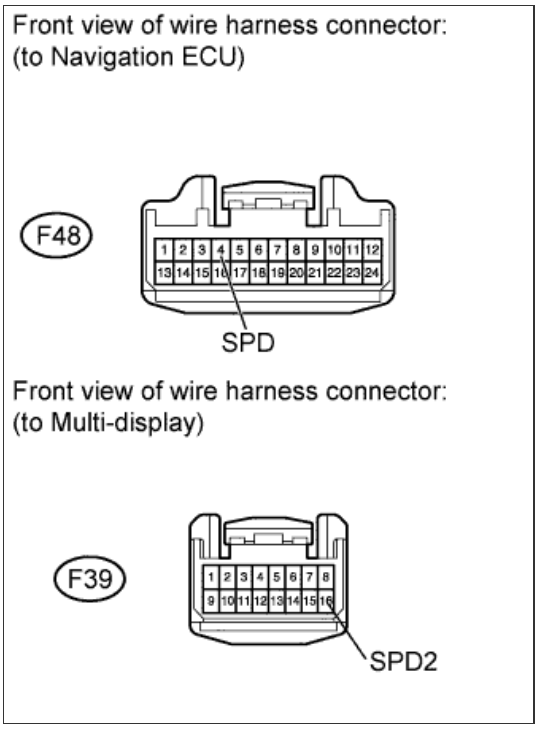
**HINT:**

This display is updated once per second. As a result, it is normal for the display to lag behind the actual change in the vehicle speed.

NG → Go to step 4

OK

### 2.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - NAVIGATION ECU)



a. Disconnect the F39 display connector.

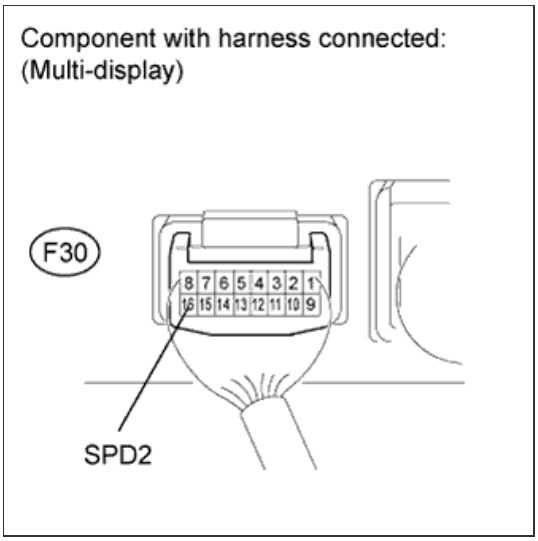
b. Disconnect the F48 ECU connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F39-16 (SPD2) - F48-4 (SPD) | Always | Below 1 Ω |
| F39-16 (SPD2) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR



OK

## 3.CHECK MULTI-DISPLAY

a. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F39-16 (SPD2) - Body ground | Engine switch on (IG), shift lever moved to R | 11 to 14 V |
| F39-16 (SPD2) - Body ground | Engine switch on (IG), shift lever moved to P | Below 1 V |

NG → REPLACE MULTI-DISPLAY (Click here)

OK

REPLACE NAVIGATION ECU (Click here)

## 4.CHECK COMBINATION METER (SPEEDOMETER OPERATION)

a. Drive the vehicle and check if the function of the speedometer in the combination meter is normal.

**OK:**

**Actual vehicle speed and the speed indicated on the speedometer are the same.**

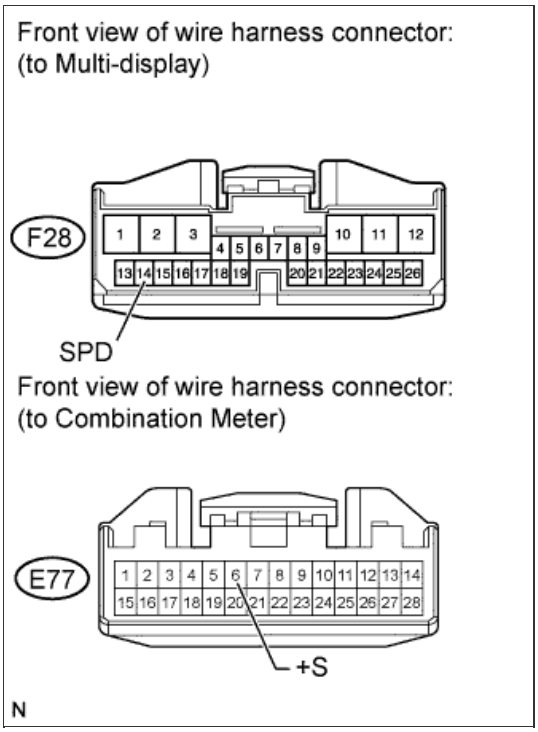
**HINT:**

The vehicle speed sensor is functioning normally when the indication on the speedometer is normal.

NG → GO TO METER / GAUGE SYSTEM (Click here)

OK

## 5.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - COMBINATION METER)



a. Disconnect the F28 display connector.

b. Disconnect the E77 meter connector.

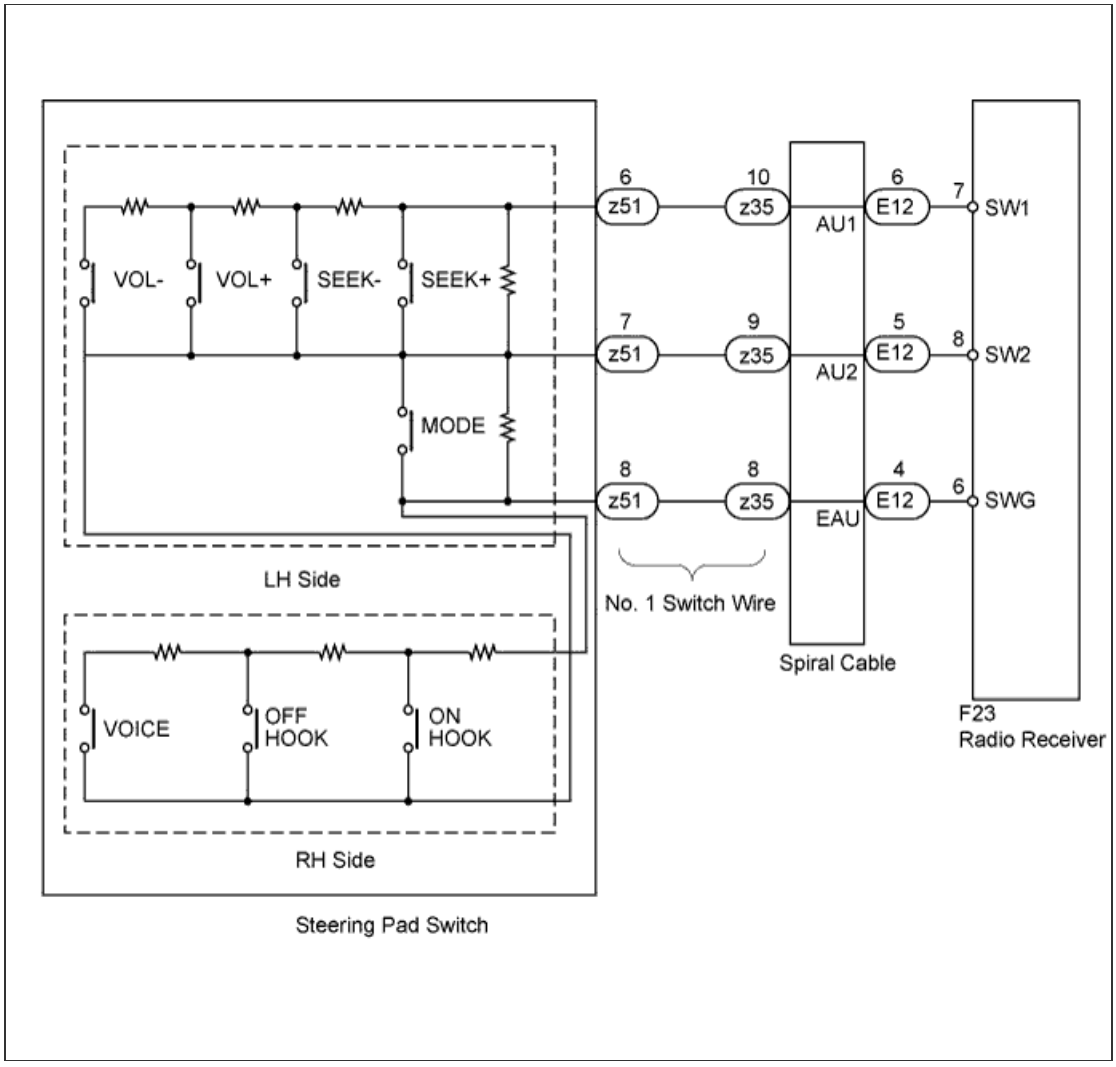
c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F28-14 (SPD) - E77-6 (+S) | Always | Below 1 Ω |
| F28-14 (SPD) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



REPLACE MULTI-DISPLAY (Click here)

**for Preparation** Click here

## DESCRIPTION

This circuit sends an operation signal from the steering pad switch to the radio receiver.
If there is an open in the circuit, the navigation system cannot be operated using the steering pad switch.
If there is a short in the circuit, the resulting condition is the same as if the switch were continuously depressed. Therefore, the navigation system cannot be operated using the steering pad switch, and the navigation system itself cannot function.

## WIRING DIAGRAM

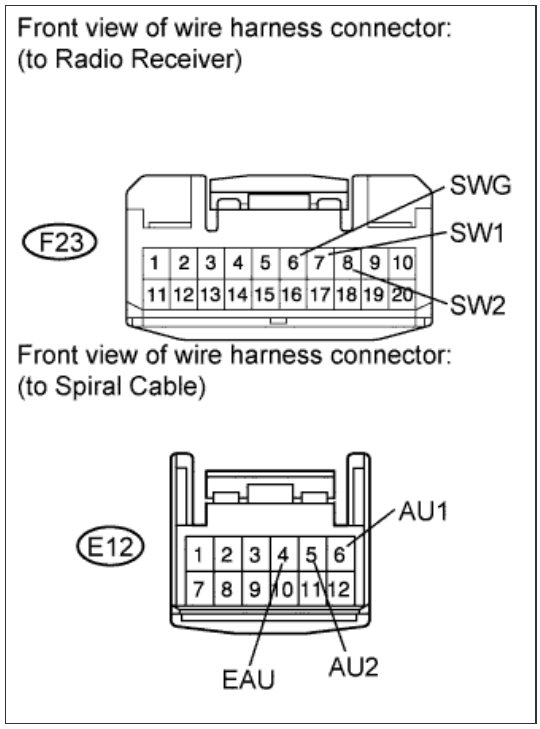
## INSPECTION PROCEDURE

**NOTICE:**

The vehicle is equipped with an SRS (Supplemental Restraint System) which includes components such as airbags. Before servicing (including removal or installation of parts), be sure to read the Precaution in the Supplemental Restraint System (Click here).

### 1.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - SPIRAL CABLE)

a. Disconnect the F23 receiver connector.



b. Disconnect the E12 cable connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

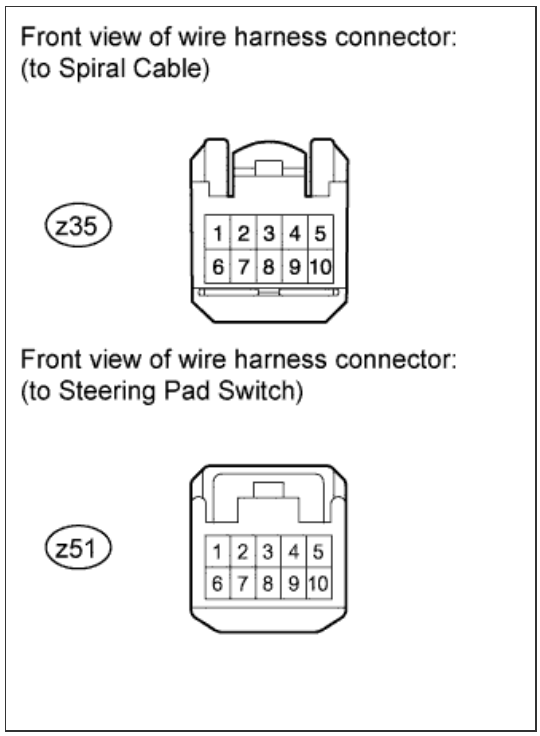
| | | Specified |
|---|---|---|

| Tester Connection | Condition | Condition |
|---|---|---|
| F23-8 (SW2) - E12-5 (AU2) | Always | Below 1 Ω |
| F23-6 (SWG) - E12-4 (EAU) | Always | Below 1 Ω |
| F23-7 (SW1) - E12-6 (AU1) | Always | Below 1 Ω |
| F23-8 (SW2) - Body ground | Always | 10 kΩ or higher |
| F23-6 (SWG) - Body ground | Always | 10 kΩ or higher |
| F23-7 (SW1) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 2.CHECK NO. 1 SWITCH WIRE

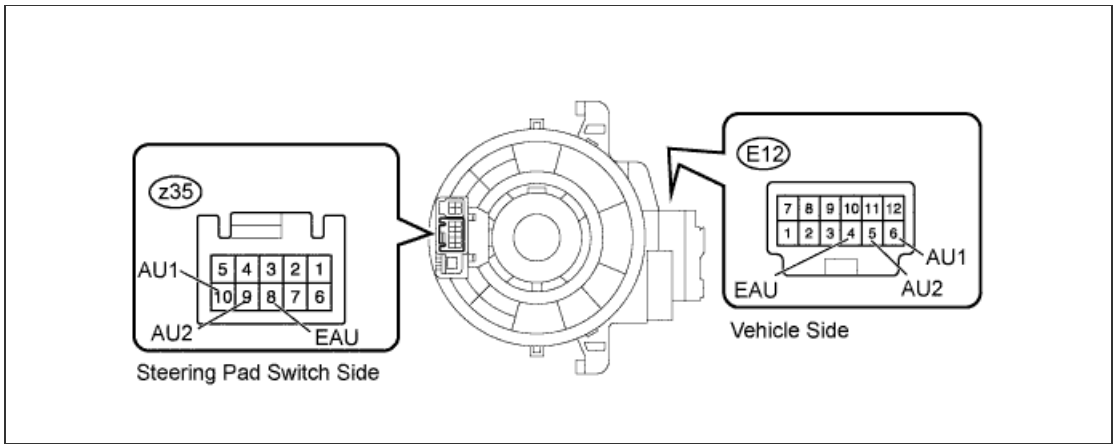


a. Disconnect the z35 cable connector.

b. Disconnect the z51 steering pad switch connector.

c. Measure the resistance according to the valve(s) in the table below.

**Standard Resistance:**



| Tester Connection | Condition | Specified Condition |
|---|---|---|
| z35-10 - z51-6 | Always | Below 1 Ω |
| z35-9 - z51-7 | Always | Below 1 Ω |
| z35-8 - z51-8 | Always | Below 1 Ω |
| z35-10 - Body ground | Always | 10 kΩ or higher |
| z35-9 - Body ground | Always | 10 kΩ or higher |
| z35-8 - Body ground | Always | 10 kΩ or higher |

NG → REPLACE NO. 1 SWITCH WIRE

OK

## 3.INSPECT SPIRAL CABLE

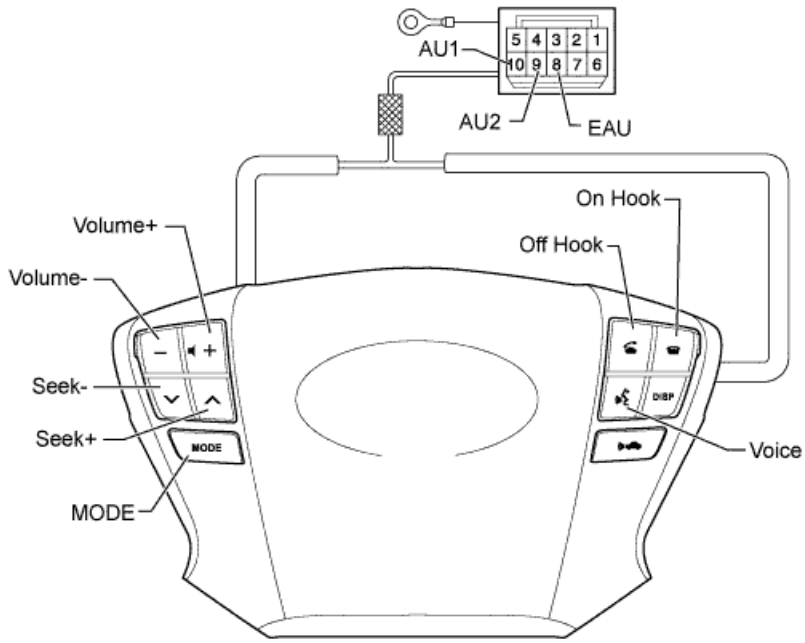
a. Disconnect the z35 and E12 cable connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| E12-4 (EAU) - z35-8 (EAU) | Spiral cable is turned 2.5 rotations counterclockwise | Below 3 Ω |
| | Spiral cable is centered | |
| | Spiral cable is turned 2.5 rotations clockwise | |
| E12-5 (AU2) - z35-9 (AU2) | Spiral cable is turned 2.5 rotations counterclockwise | Below 3 Ω |
| | Spiral cable is centered | |
| | Spiral cable is turned 2.5 rotations clockwise | |
| E12-6 (AU1) - z35-10 (AU1) | Spiral cable is turned 2.5 rotations counterclockwise | Below 3 Ω |
| | Spiral cable is centered | |
| | Spiral cable is turned 2.5 rotations clockwise | |

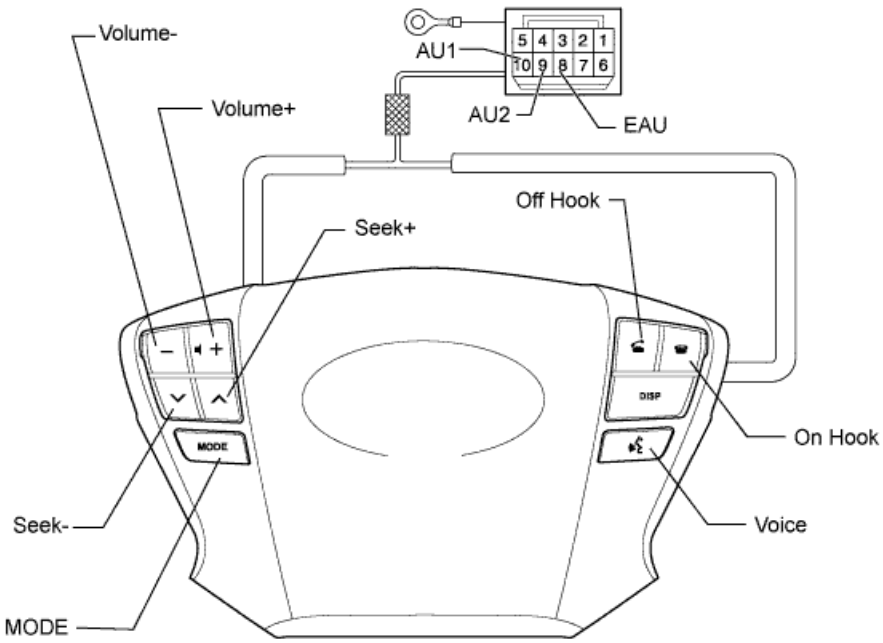
**NOTICE:**



The spiral cable is an important part of the SRS airbag system. Incorrect removal or installation of the spiral cable may prevent the airbag from deploying. Be sure to read the Precaution for the supplemental restraint system (Click here).

NG → REPLACE SPIRAL CABLE SUB-ASSEMBLY (Click here)

OK



**4.INSPECT STEERING PAD (STEERING PAD SWITCH)**

w/ Dynamic Radar Cruise Control System:

T

w/o Dynamic Radar Cruise Control System:

T

a. Disconnect the z51 steering pad switch connector.

b. Measure the resistance according to the value(s) in the table below.

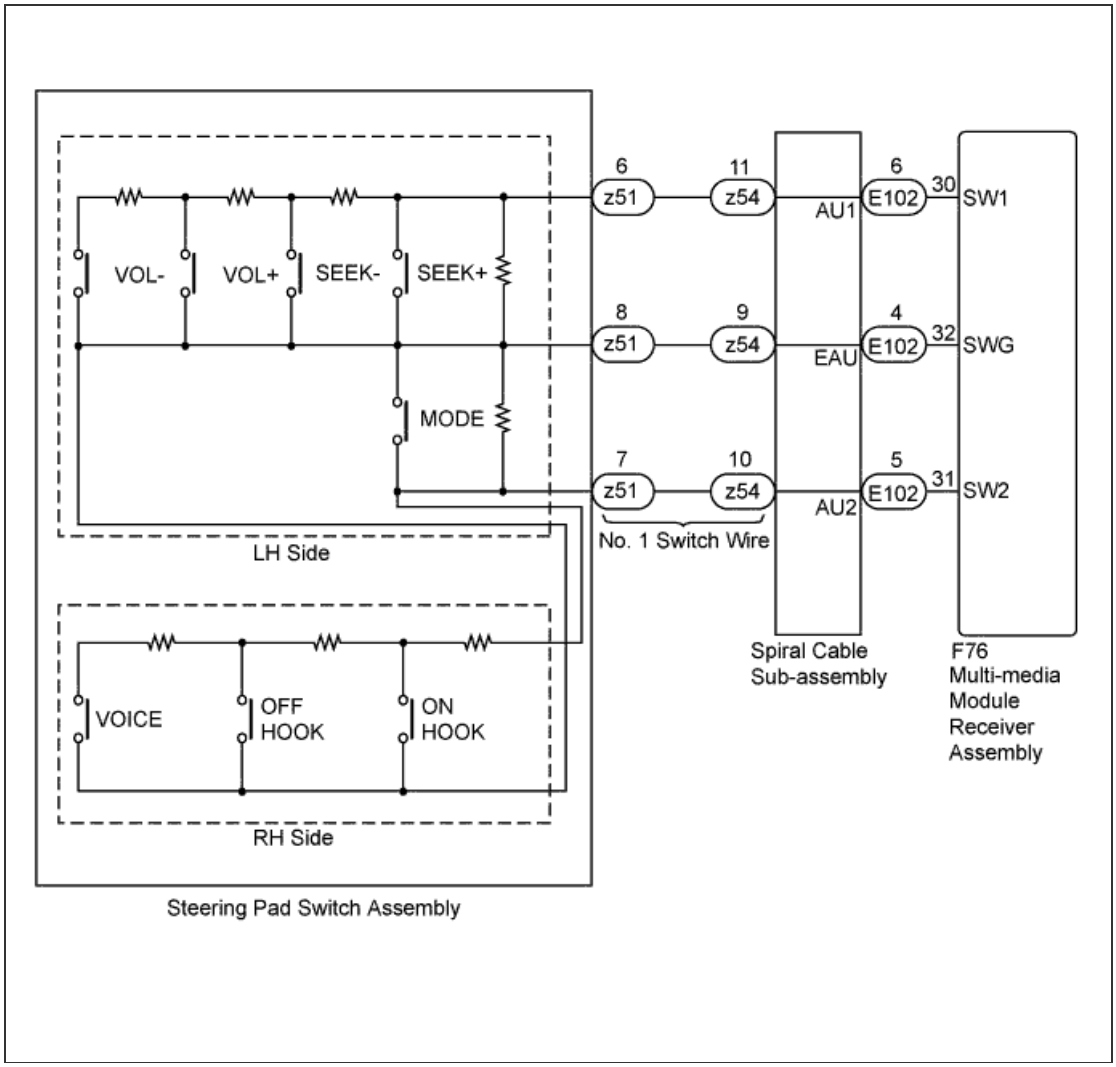
**Standard Resistance:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|

| | | |
|---|---|---|
| 10 (AU1) - 8 (EAU) | No switch is pushed | 100 kΩ |
| 10 (AU1) - 8 (EAU) | Seek+ switch pushed | Below 2.5 Ω |
| 10 (AU1) - 8 (EAU) | Seek- switch pushed | 329 Ω |
| 10 (AU1) - 8 (EAU) | Volume+ switch pushed | 1000 Ω |
| 10 (AU1) - 8 (EAU) | Volume- switch pushed | 3110 Ω |
| 9 (AU2) - 8 (EAU) | No switch is pushed | 100 kΩ |
| 9 (AU2) - 8 (EAU) | MODE switch pushed | Below 2.5 Ω |
| 9 (AU2) - 8 (EAU) | On hook switch pushed | 329 Ω |
| 9 (AU2) - 8 (EAU) | Off hook switch pushed | 1000 Ω |
| 9 (AU2) - 8 (EAU) | Voice switch pushed | 3110 Ω |

NG → REPLACE STEERING PAD (Click here)

OK



PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## DESCRIPTION

This circuit sends an operation signal from the steering pad switch assembly to the multi-media module receiver assembly.
If there is an open in the circuit, the audio system cannot be operated using the steering pad switch assembly.
If there is a short in the circuit, the same condition as when a switch is continuously depressed occurs.
Therefore, the multi-media module receiver assembly cannot be operated using the steering pad switch assembly, and also the multi-media module receiver assembly itself cannot function.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

The vehicle is equipped with a Supplemental Restraint System (SRS) which includes components such as airbags. Before servicing (including removal or installation of parts), be sure to read the precaution for Supplemental Restraint System (Click here).

### 1.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA NODULE RECEIVER ASSEMBLY - SPIRAL CABLE SUB-ASSEMBLY)

a. Disconnect the F76 multi-media module receiver assembly connector.

b. Disconnect the E102 spiral cable sub-assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F76-30 (SW1) - | | |

| | | |
|---|---|---|
| E102-6 (AU1) | Always | Below 1 Ω |
| F76-31 (SW2) - E102-5 (AU2) | Always | Below 1 Ω |
| F76-32 (SWG) - E102-4 (EAU) | Always | Below 1 Ω |
| F76-30 (SW1) - Body ground | Always | 10 kΩ or higher |
| F76-31 (SW2) - Body ground | Always | 10 kΩ or higher |
| F76-32 (SWG) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**2.CHECK NO. 1 SWITCH WIRE**

a. Disconnect the z54 and z51 No. 1 switch wire connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| z54-11 - z51-6 | Always | Below 1 Ω |
| z54-9 - z51-8 | Always | Below 1 Ω |
| z54-10 - z51-7 | Always | Below 1 Ω |
| z54-11 - Body ground | Always | 10 kΩ or higher |
| z54-9 - Body ground | Always | 10 kΩ or higher |
| z54-10 - Body ground | Always | 10 kΩ or higher |

NG → REPLACE NO. 1 SWITCH WIRE

OK

**3.INSPECT STEERING PAD SWITCH ASSEMBLY**

a. Remove the steering pad switch assembly (Click here).

b. Inspect the steering pad switch assembly (Click here).

NG → REPLACE STEERING PAD SWITCH ASSEMBLY (**Click here**)

OK

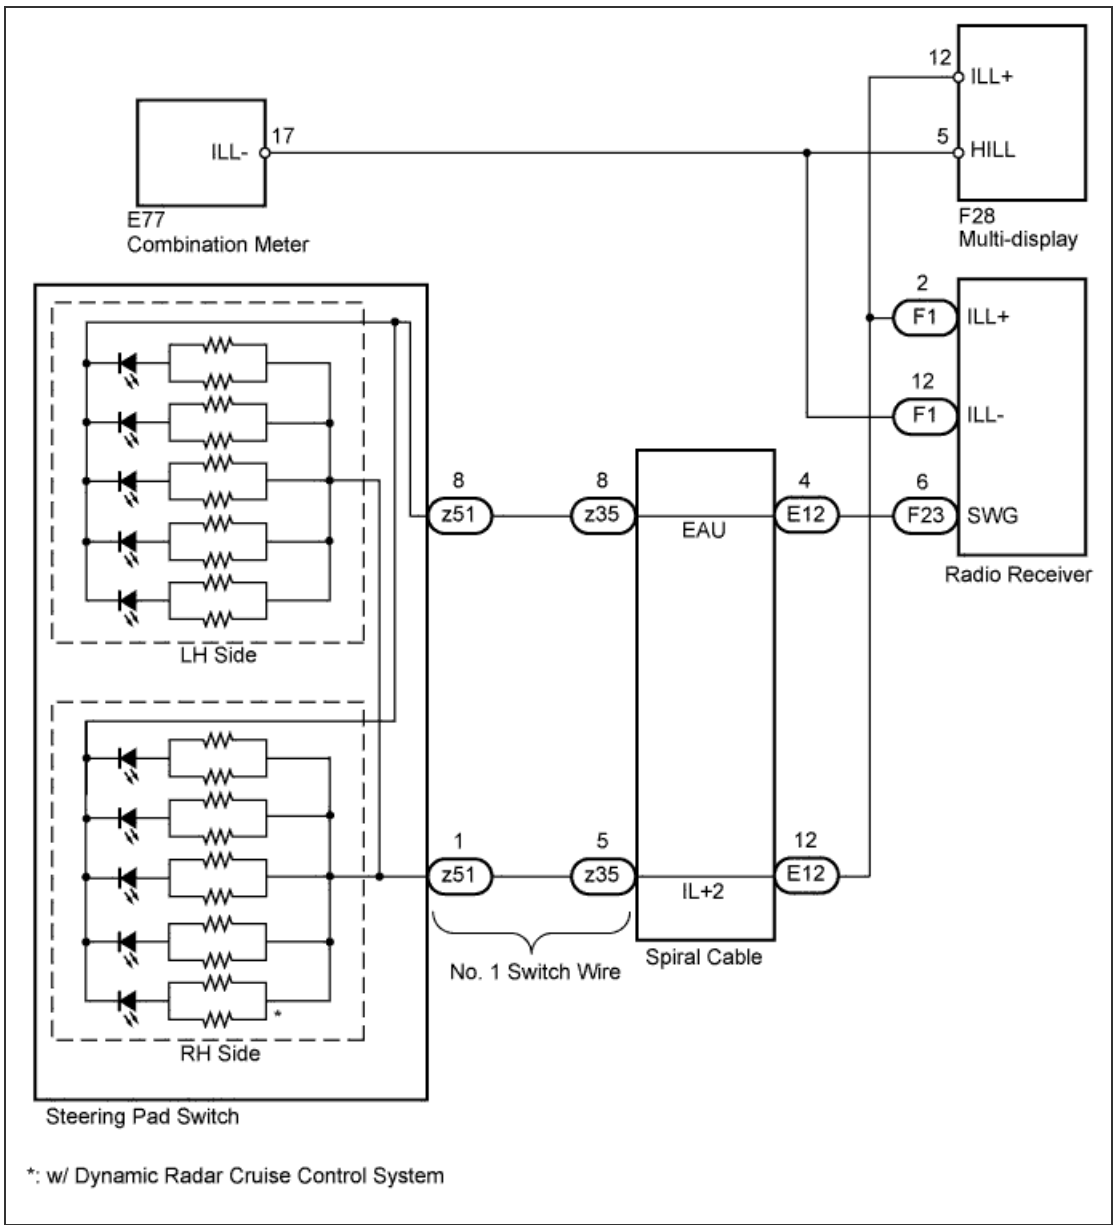
**4.INSPECT SPIRAL CABLE SUB-ASSEMBLY**

a. Remove the spiral cable sub-assembly (Click here).

b. Inspect the spiral cable sub-assembly (Click here).

NG → REPLACE SPIRAL CABLE SUB-ASSEMBLY (**Click here**)

OK



PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (**Click here**)

**for Preparation** Click here

## DESCRIPTION

Power is supplied to the multi-display, radio receiver and steering pad switch illumination when the light control switch is in the TAIL or HEAD position.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

The vehicle is equipped with an SRS (Supplemental Restraint System) which includes components such as airbags. Before servicing (including removal or installation of parts), be sure to read the Precaution in the Supplemental Restraint System (Click here).

### 1.CHECK ILLUMINATION

a. Check if the illumination for the multi-display, steering pad switch, glove box light, cigarette lighter, or other parts (seat heater switch, front seat memory switch, etc.) comes on when the light control switch is turned to the HEAD or TAIL position.

**Result**

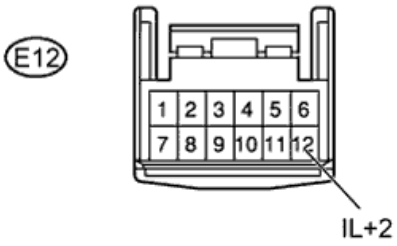
| Result | Proceed to |
|---|---|
| Illumination comes on for all components except steering pad switch. | A |
| Illumination comes on for all components except radio receiver. | B |

| | |
|---|---|
| Illumination comes on for all components except multi-display. | C |
| No illumination comes on all components. | D |

| | |
|---|---|
| B | Go to step 7 |
| C | Go to step 8 |
| D | GO TO LIGHTING SYSTEM (Click here) |

A

## 2.CHECK HARNESS AND CONNECTOR (BATTERY - SPIRAL CABLE)



a. Disconnect the E12 cable connector.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| E12-12 (IL+2) - Body ground | Light control switch TAIL or HEAD | 11 to 14 V |

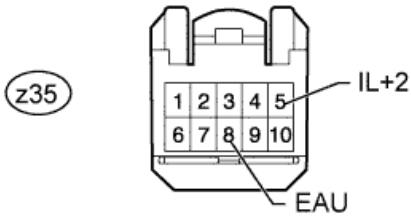
Front view of wire harness connector:
(to Spiral Cable)

NG — REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

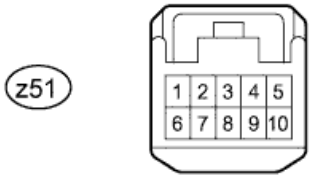
## 3.CHECK NO. 1 SWITCH WIRE

a. Disconnect the z35 cable connector.



b. Disconnect the z51 steering pad switch connector.

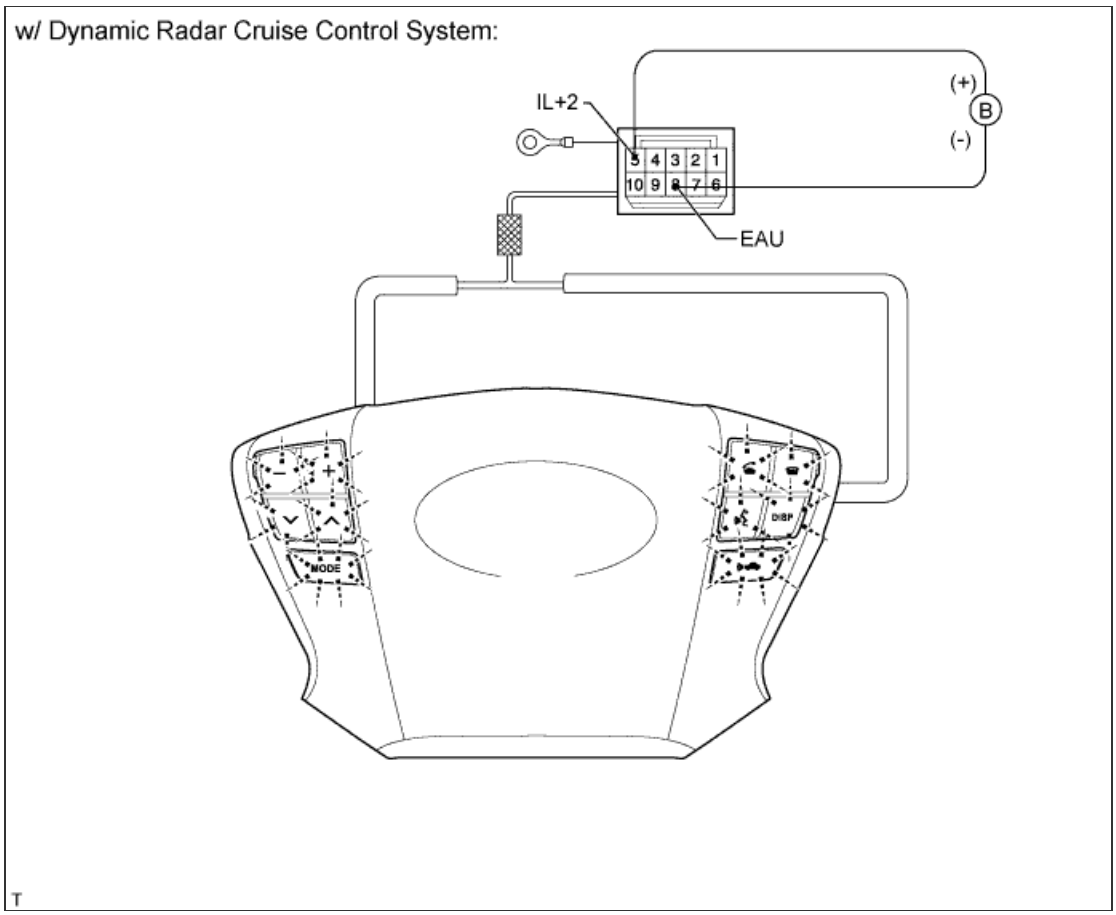
c. Measure the resistance according to the valve(s) in the table below.



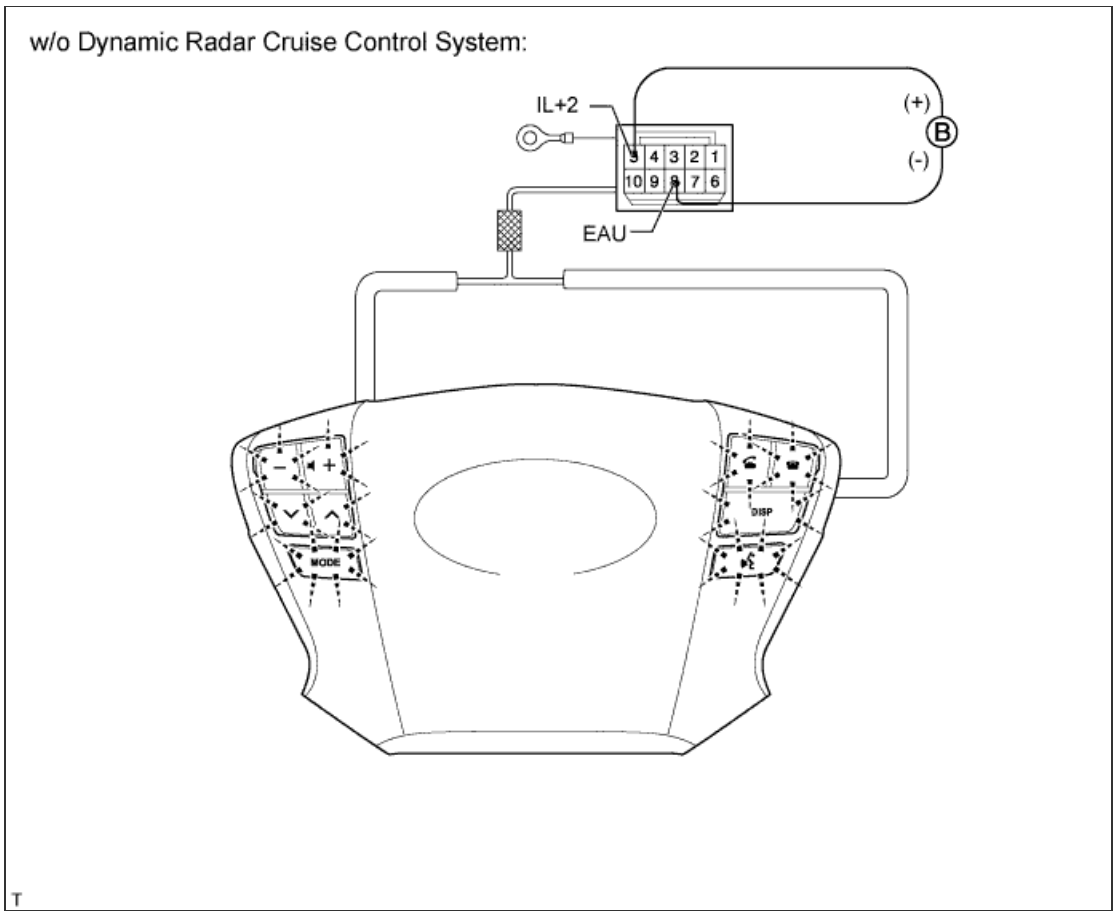
**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| z35-8 (EAU) - z51-8 | Always | Below 1 Ω |
| z35-5 (IL+2) - z51-1 | Always | Below 1 Ω |

Front view of wire harness connector:
(to Spiral Cable)



Front view of wire harness connector:
(to Steering Pad Switch)



NG — REPLACE NO. 1 SWITCH WIRE

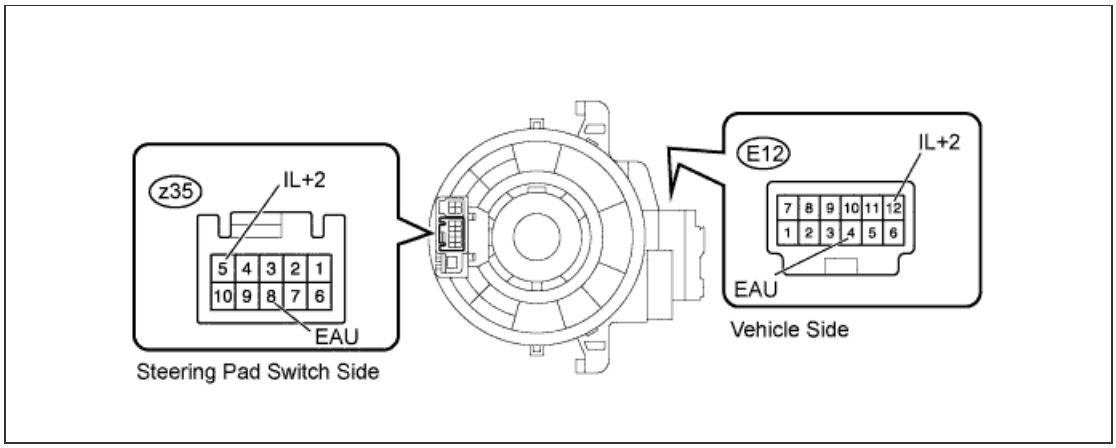
OK

## 4.CHECK STEERING PAD (STEERING PAD SWITCH)

a. Disconnect the z35 steering pad switch connector.

b. Connect the positive (+) lead to terminal 5 (IL+2) and the negative (-) lead to terminal 8 (EAU) of the steering pad switch connector.

c. Check if the illumination for the steering pad switch comes on.



**OK:**

**Illumination for the steering pad switch comes on.**

NG → REPLACE STEERING PAD (Click here)

OK

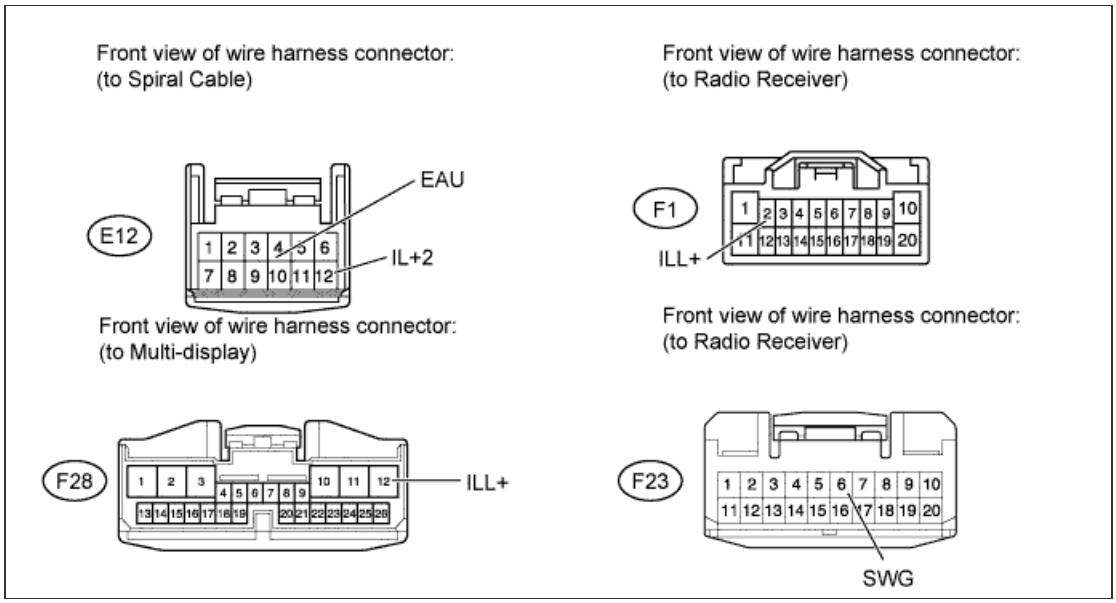
## 5.INSPECT SPIRAL CABLE

a. Disconnect the cable connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Spiral Cable Position | Specified Condition |
|---|---|---|
| E12-12 (IL+2) - z35-5 (IL+2) | 2.5 rotations to left | Below 3 Ω |
| | Center | |
| | 2.5 rotations to right | |
| E12-4 (EAU) - z35-8 (EAU) | 2.5 rotations to left | Below 3 Ω |
| | Center | |
| | 2.5 rotations to right | |



**NOTICE:**

The spiral cable is an important part of the SRS airbag system. Incorrect removal or installation of the spiral cable may prevent the airbag from deploying. Be sure to read the Precaution for the supplemental restraint system (Click here).

NG → REPLACE SPIRAL CABLE SUB-ASSEMBLY (Click here)

OK

## 6.CHECK HARNESS AND CONNECTOR (SPIRAL CABLE - MULTI-DISPLAY AND RADIO RECEIVER)

a. Disconnect the E12 spiral cable connector.

b. Disconnect the F1 and F23 receiver connectors.

c. Disconnect the F28 display connector.

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| E12-12 (IL+2) - F1-2 (ILL+) | Always | Below 1 Ω |
| E12-12 (IL+2) - F28-12 (ILL+) | Always | Below 1 Ω |
| E12-4 (EAU) - F23-6 (SWG) | Always | Below 1 Ω |
| E12-12 (IL+2) - Body ground | Always | 10 kΩ or higher |
| E12-4 (EAU) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

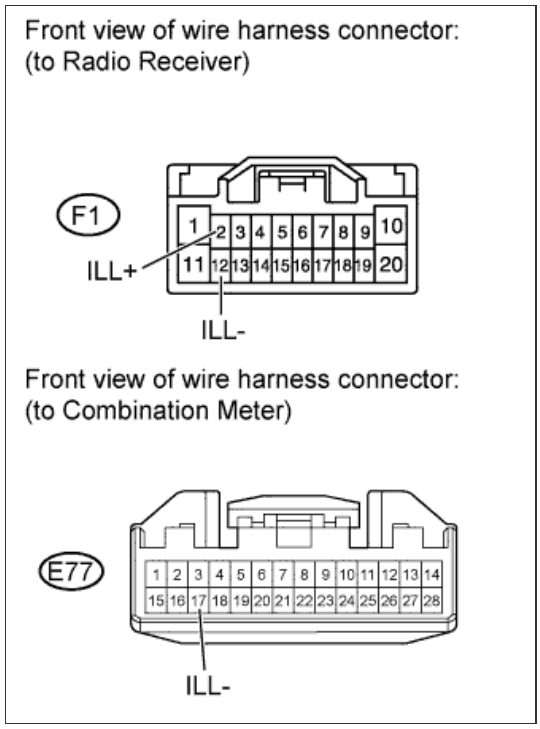
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

## 7.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - COMBINATION METER)

a. Disconnect the F1 receiver connector.

b. Disconnect the E77 meter connector.

c. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F1-12 (ILL-) - E77-17 (ILL-) | Always | Below 1 Ω |
| F1-12 (ILL-) - Body ground | Always | 10 kΩ or higher |

d. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F1-2 (ILL+) - Body ground | Light control Switch TAIL or HEAD | 11 to 14 V |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

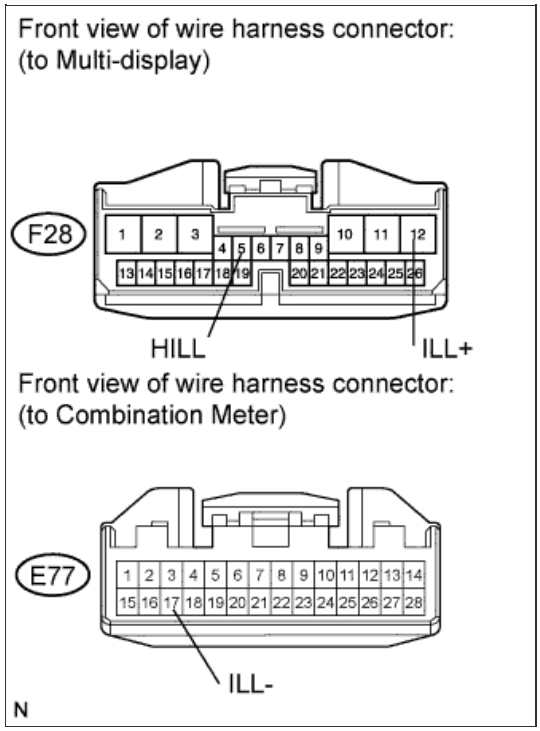
REPLACE RADIO RECEIVER ASSEMBLY (Click here)

## 8.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - BATTERY AND COMBINATION METER)

a. Disconnect the F28 display connector.

b. Disconnect the E77 meter connector.

c. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F28-5 (HILL) - E77-17 (ILL-) | Always | Below 1 Ω |
| F28-5 (HILL) - Body ground | Always | 10 kΩ or higher |

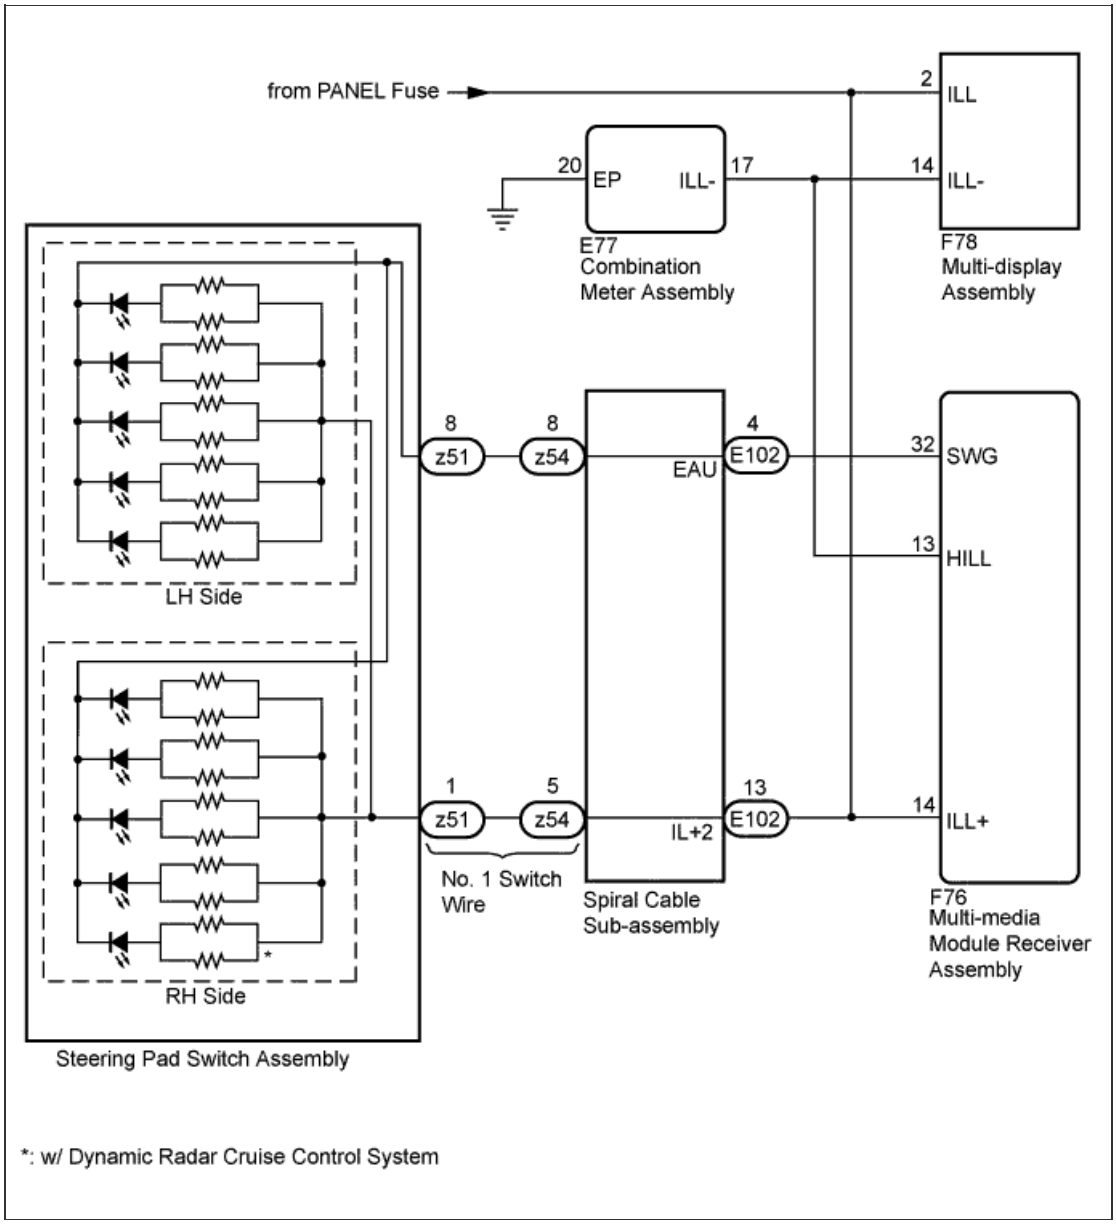
d. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F28-12 (ILL+) - Body ground | Light control switch TAIL or HEAD | 11 to 14 V |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



REPLACE MULTI-DISPLAY (Click here)

**for Preparation** Click here

## DESCRIPTION

Power is supplied to the multi-media module receiver assembly, multi-display assembly and steering pad switch assembly illumination when the light control switch is in the tail or head position.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

- **The vehicle is equipped with a Supplemental Restraint System (SRS) which includes components such as airbags. Before servicing (including removal or installation of parts), be sure to read the precaution for Supplemental Restraint System (Click here).**
- **Inspect the fuse for circuits related to this system before performing the following inspection procedure.**
- **After replacing the multi-media module receiver assembly of vehicles subscribed to pay-type satellite radio broadcasts, XM radio ID registration is necessary (w/ SDARS System).**

### 1.CHECK ILLUMINATION

a. Check if the illumination for the multi-media module receiver assembly, multi-display assembly, steering pad switch assembly or others (hazard switch etc.) comes on when the light control switch is turned to the head or tail position.

**Result**

| Result | Proceed to |
|---|---|
| Illumination comes on for all components except steering pad switch assembly. | A |
| Illumination comes on for all components except multi-display assembly. | B |
| Illumination comes on for all components except multi-media module receiver assembly. | C |
| No illumination comes on (multi-media module receiver assembly, steering pad switch, hazard switch, heater control switch, etc.). | D |

B → Go to step 7

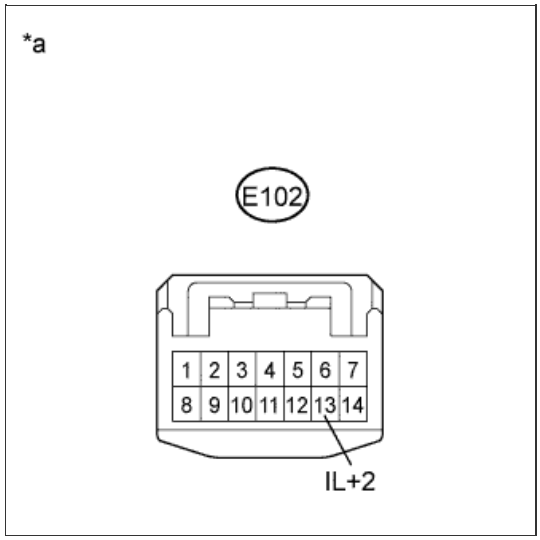
C → Go to step 8

D → GO TO LIGHTING SYSTEM (Click here)

A

## 2.CHECK HARNESS AND CONNECTOR (ILLUMINATION SIGNAL)

a. Disconnect the spiral cable sub-assembly connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| E102-13 (IL+2) - Body ground | Light control switch in the tail or head position | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *a | Front view of wire harness connector (to Spiral Cable Sub-assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 3.CHECK NO. 1 SWITCH WIRE

a. Disconnect the z51 and z54 No. 1 switch wire connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| z54-8 - z51-8 | Always | Below 1 Ω |
| z54-5 - z51-1 | Always | Below 1 Ω |
| z54-8 - Body ground | Always | 10 kΩ or higher |
| z54-5 - Body ground | Always | 10 kΩ or higher |

NG → REPLACE NO. 1 SWITCH WIRE

OK

**4.INSPECT STEERING PAD SWITCH ASSEMBLY**

a. Remove the steering pad switch assembly (Click here).

b. Inspect the steering pad switch assembly (Click here).

NG → REPLACE STEERING PAD SWITCH ASSEMBLY (**Click here**)

OK

**5.INSPECT SPIRAL CABLE SUB-ASSEMBLY**

a. Remove the spiral cable sub-assembly (Click here).

b. Inspect the spiral cable sub-assembly (Click here).

NG → REPLACE SPIRAL CABLE SUB-ASSEMBLY (**Click here**)

OK

**6.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY, MULTI-DISPLAY ASSEMBLY - SPIRAL CABLE SUB-ASSEMBLY)**

a. Disconnect the F76 multi-media module receiver assembly connector.

b. Disconnect the F78 multi-display assembly connector.

c. Disconnect the E102 spiral cable sub-assembly connector.

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-14 (ILL+) - E102-13 (IL+2) | Always | Below 1 Ω |
| F76-32 (SWG) - E102-4 (EAU) | Always | Below 1 Ω |
| F78-2 (ILL) - E102-13 (IL+2) | Always | Below 1 Ω |
| F76-14 (ILL+) - Body ground | Always | 10 kΩ or higher |
| F76-32 (SWG) - Body ground | Always | 10 kΩ or higher |
| F78-2 (ILL) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (**Click here**)

**7.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY ASSEMBLY - COMBINATION METER ASSEMBLY, BATTERY AND BODY GROUND)**

a. Disconnect the F78 multi-display assembly connector.

b. Disconnect the E77 combination meter assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F78-14 (ILL-) - E77-17 (ILL-) | Always | Below 1 Ω |
| F78-14 (ILL-) - Body ground | Always | 10 kΩ or higher |
| E77-20 (EP) - Body ground | Always | Below 1 Ω |

d. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F78-2 (ILL) - Body ground | Light control switch in the tail or head position | 11 to 14 V |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE MULTI-DISPLAY ASSEMBLY (Click here)

**8.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - COMBINATION METER ASSEMBLY, BATTERY AND BODY GROUND)**

a. Disconnect the F76 multi-media module receiver assembly connector.

b. Disconnect the E77 combination meter assembly connector.

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F76-14 (ILL+) - Body ground | Light control switch in the tail or head position | 11 to 14 V |

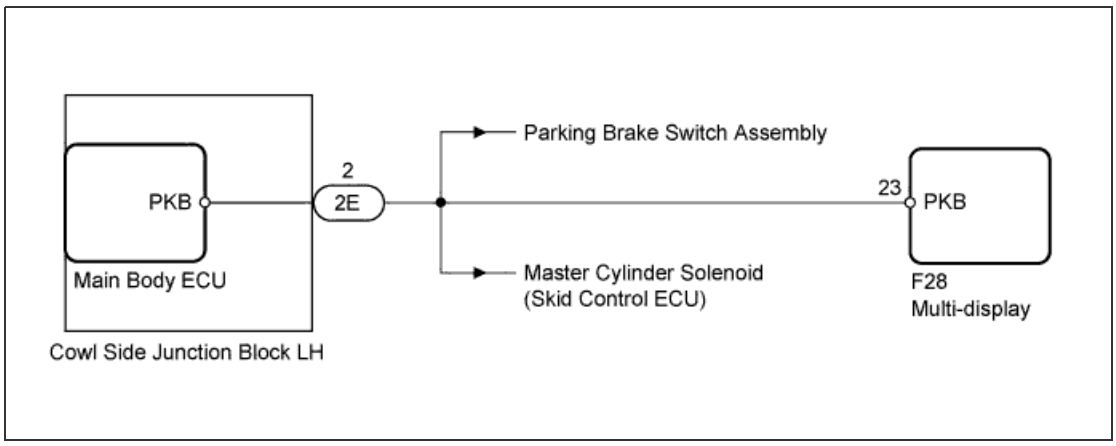
d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-13 (HILL) - E77-17 (ILL-) | Always | Below 1 Ω |
| E77-20 (EP) - Body ground | Always | Below 1 Ω |
| F76-13 (HILL) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



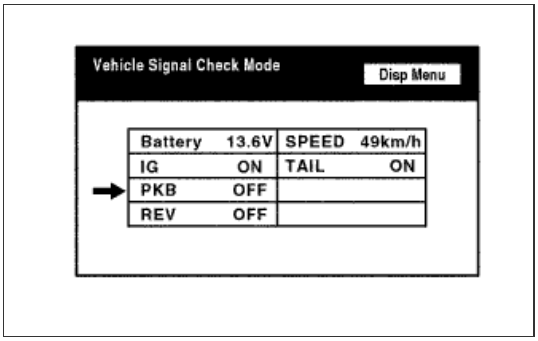
REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

**for Preparation** Click here

## DESCRIPTION

This circuit is from the parking brake switch to the multi-display.

## WIRING DIAGRAM



## INSPECTION PROCEDURE

### 1.CHECK PARKING BRAKE (DISPLAY CHECK MODE)

a. Enter the "Display Check" mode and select "Vehicle Signal Check" ( Click here).

b. Check that the display changes between ON and OFF according to the parking brake operation.

**OK:**

| Parking Brake Position | Display |
|---|---|
| Applied | ON |
| Released | OFF |

**HINT:**

This display is updated once per second. As a result, it is normal for the display to lag behind the actual change in the switch.

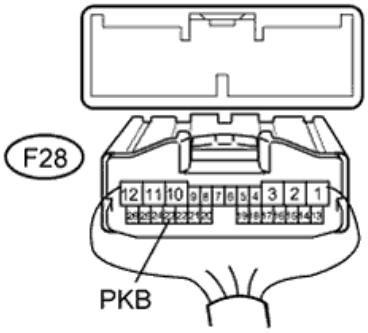
NG → Go to step 2

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

### 2.CHECK MAIN BODY ECU (PARKING BRAKE SIGNAL)

a. Disconnect the F28 display connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F28-23 (PKB) - Body ground | Engine switch on (IG), parking brake applied | 11 to 14 V |

| | | |
|---|---|---|
| F28-23 (PKB) - Body ground | Engine switch on (IG), parking brake released | Below 1 V |

Rear view of wire harness connector:
(to Multi-display)

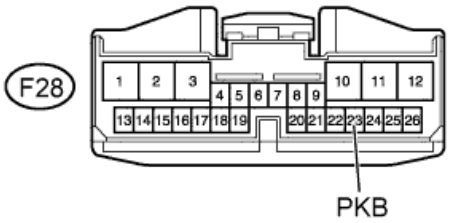
NG → Go to step 3

OK

REPLACE MULTI-DISPLAY (Click here)

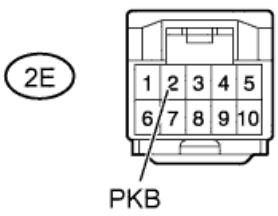
3.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - MAIN BODY ECU)

a. Disconnect the F28 display connector.



b. Disconnect the 2E ECU connector.

c. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F28-23 (PKB) - 2E-2 (PKB) | Always | Below 1 Ω |
| F28-23 (PKB) - Body ground | Always | 10 kΩ or higher |

Front view of wire harness connector:
(to Multi-display)

Front view of wire harness connector:
(to Main Body ECU)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

4.REPLACE MAIN BODY ECU

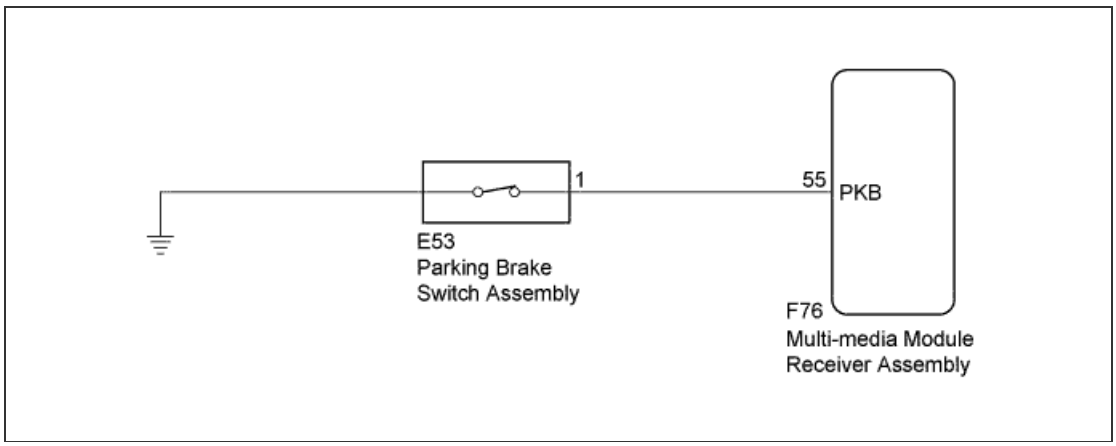
a. Temporarily replace the ECU with a new or normally functioning one.

b. Check that the parking brake signal is displayed on the multi-display.

**OK:**

Parking brake signal is displayed on the multi-display.

NG → REPLACE MULTI-DISPLAY (Click here)



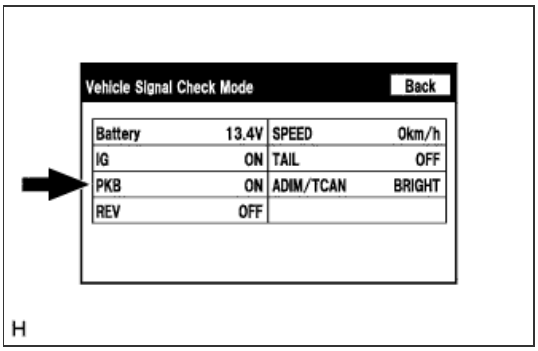
OK → END (MAIN BODY ECU IS DEFECTIVE)

**for Preparation** Click here

## DESCRIPTION

This circuit is from the parking brake switch assembly to the multi-media module receiver assembly.

## WIRING DIAGRAM



## INSPECTION PROCEDURE

### 1.CHECK VEHICLE SIGNAL (OPERATION CHECK)

a. Enter the "Function Check/Setting I" mode and select "Vehicle Signal" ( Click here).

b. Check that the display changes between ON and OFF according to the parking brake operation.

**OK:**

| Parking Brake Position | Display |
|---|---|
| Applied | ON |
| Released | OFF |

**HINT:**

This display is updated once per second. As a result, it is normal for the display to lag behind the actual change in the switch.

NG → Go to step 2

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

### 2.CHECK HARNESS AND CONNECTOR (PARKING BRAKE SWITCH ASSEMBLY - MULTI-MEDIA MODULE RECEIVER ASSEMBLY)

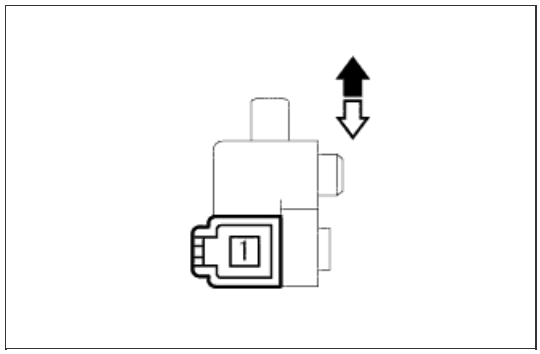
a. Disconnect the E53 parking brake switch assembly connector.

b. Disconnect the F76 multi-media module receiver assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-55 (PKB) - E53-1 | Always | Below 1 Ω |
| F76-55 (PKB) - Body ground | Always | 10 kΩ or higher |



NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 3.INSPECT PARKING BRAKE SWITCH ASSEMBLY

a. Remove the parking brake switch assembly connector (Click here).

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

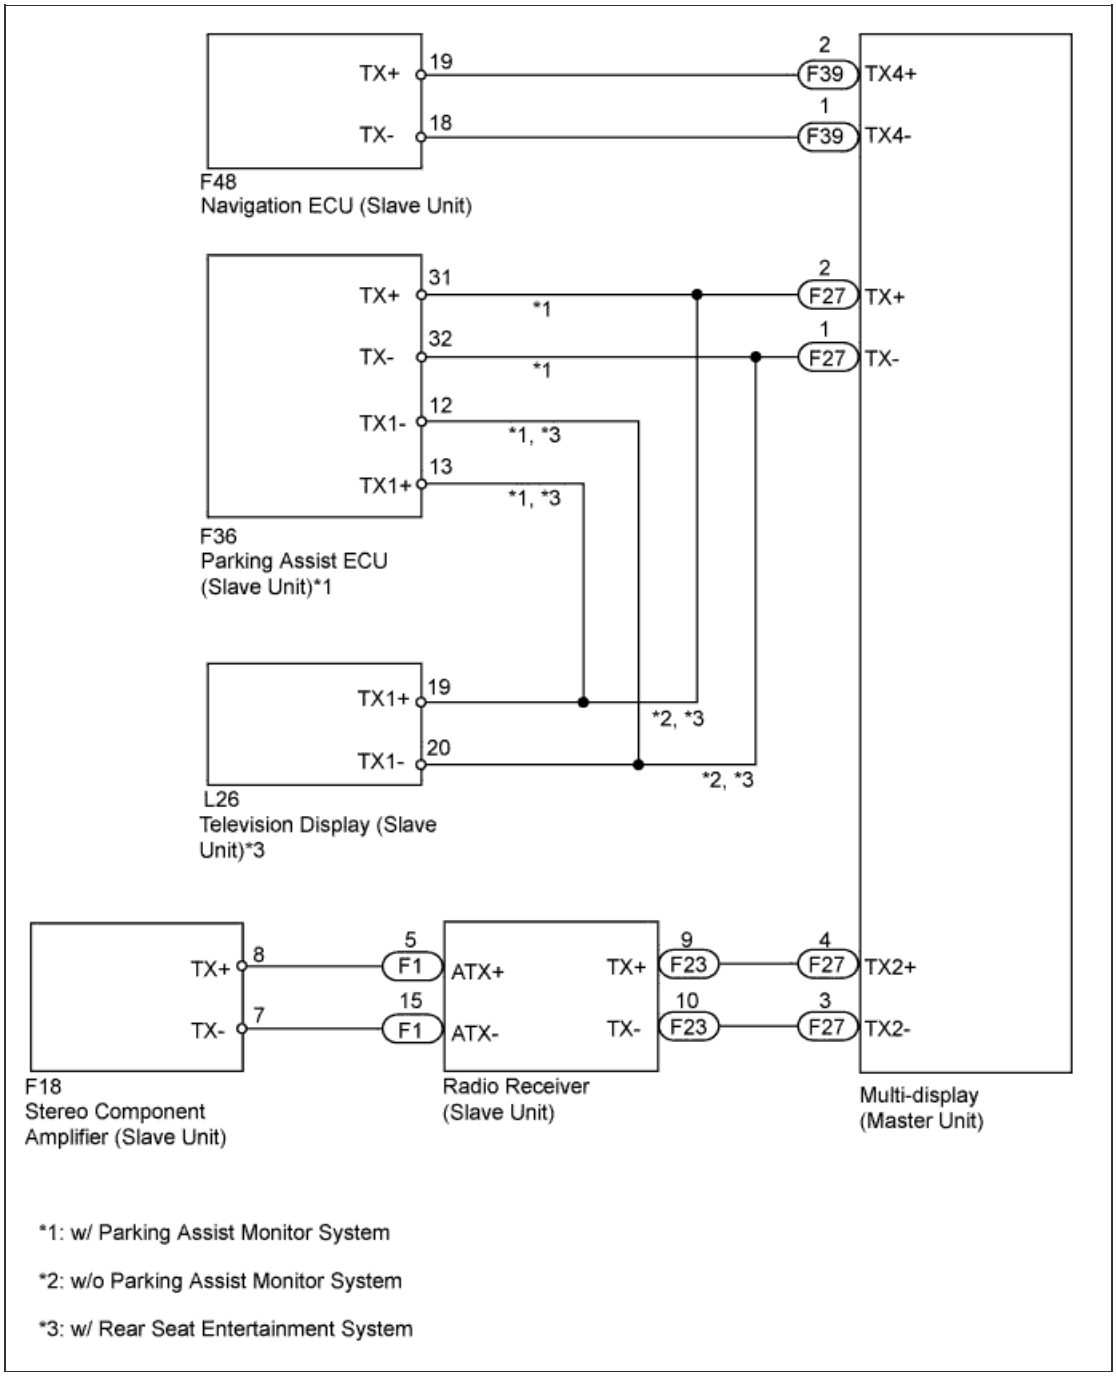
| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| 1 - Switch body | ON (Shaft not pressed) | Below 1 Ω |
| | OFF (Shaft pressed) | 10 kΩ or higher |

**Text in Illustration**

| | |
|---|---|
| ➡ | ON |
| ⇨ | OFF |

NG → REPLACE PARKING BRAKE SWITCH ASSEMBLY (Click here)

OK

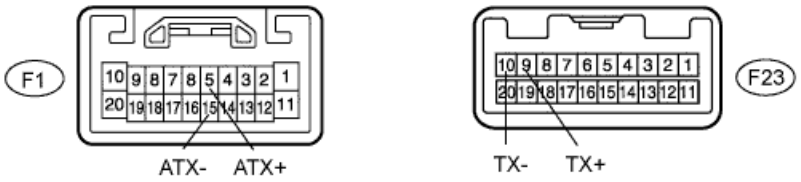


REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

**for Preparation** Click here

## DESCRIPTION

Each unit of the navigation system connected to the AVC-LAN (communication bus) transfers the signal of each switch by communication.
When a short to +B or short to ground occurs in the AVC-LAN, the navigation system will not function normally as the communication is discontinued.



## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK RADIO RECEIVER ASSEMBLY

Component without harness connected:
(Radio Receiver)

a. Disconnect the F1 and F23 receiver connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F1-5 (ATX+) - F1-15 (ATX-) | Always | 60 to 80 Ω |
| F23-9 (TX+) - F23-10 (TX-) | Always | 60 to 80 Ω |

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

**2.CHECK HARNESS AND CONNECTOR**

**HINT:**

For details of the connectors, refer to Terminals of ECU ( Click here).

a. Referring to the AVC-LAN wiring diagram, check all AVC-LAN circuits.

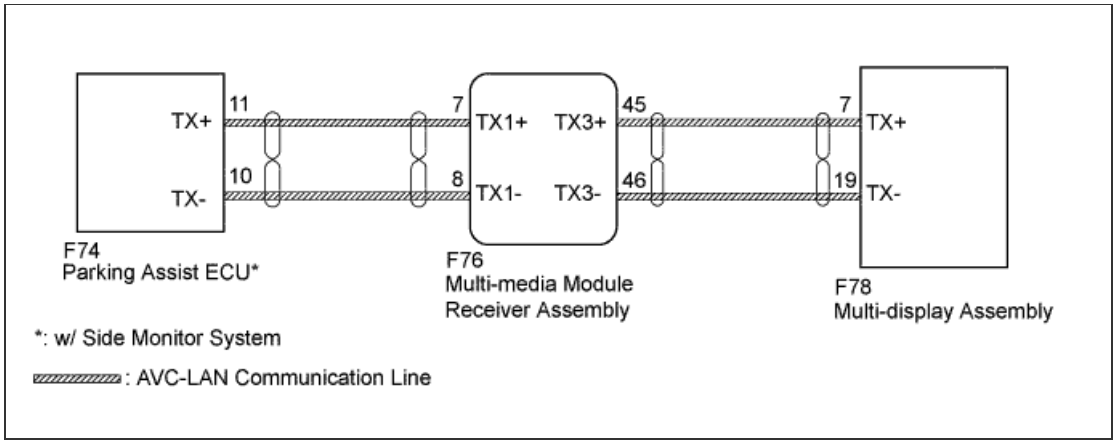
i. Disconnect all connectors in all AVC-LAN circuits.

ii. Check for an open or short in all AVC-LAN circuits.

**OK:**
**There is no open or short circuit.**

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

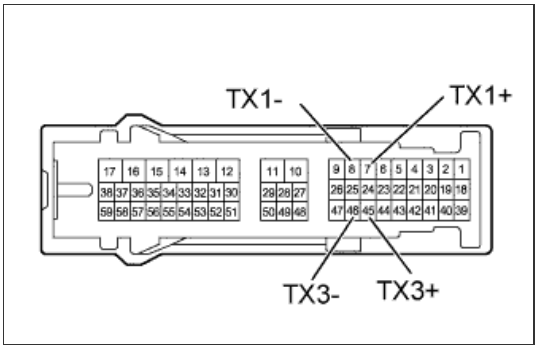
**for Preparation** Click here

## DESCRIPTION

Each audio system component connected to the AVC-LAN (communication bus) transfers switch signals using the audio visual communication local area network.
If a short to +B or short to ground occurs in the AVC-LAN, the audio system will not function normally because communication is not possible.

## WIRING DIAGRAM

## INSPECTION PROCEDURE



### 1.INSPECT MULTI-MEDIA MODULE RECEIVER ASSEMBLY

a. Remove the multi-media module receiver assembly (Click here).

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 7 (TX1+) - 8 (TX1-) | Always | 60 to 80 Ω |
| 45 (TX3+) - 46 (TX3-) | Always | 60 to 80 Ω |

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK

### 2.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - BATTERY AND BODY GROUND)

**HINT:**

For details of the connectors, refer to Terminals of ECU ( Click here).

a. Referring to the following AVC-LAN wiring diagram, check all AVC-LAN circuits.

i. Disconnect all connectors in all AVC-LAN circuits.

ii. Check for an open or short in all AVC-LAN circuits.

**OK:**
**There is no open or short circuit.**

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3.INSPECT MALFUNCTIONING PARTS

a. Disconnect and reconnect each slave unit one by one until the master unit returns to normal operation.

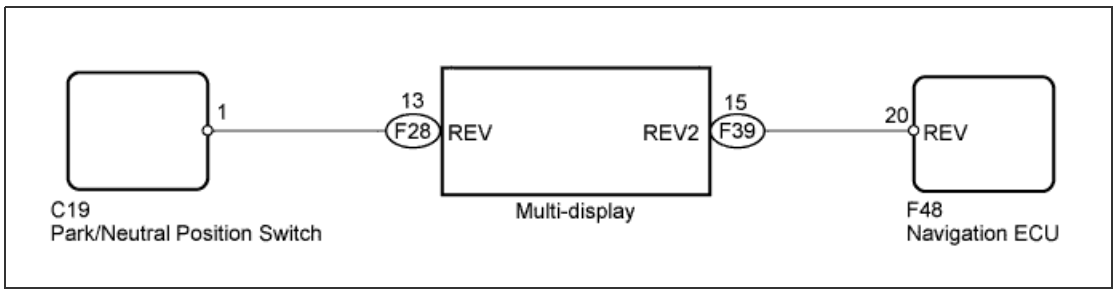
**HINT:**

- **Check all slave units.**
- **When disconnecting a slave unit causes the master unit to return to normal operation, this indicates that the slave unit is malfunctioning. Replace the malfunctioning slave unit.**

**OK:**
**Master unit returns to normal operation.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK



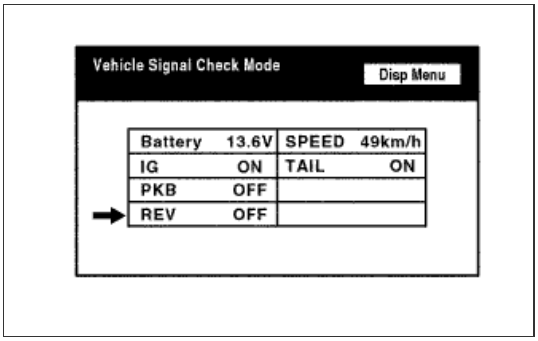
REPLACE MALFUNCTIONING PARTS

**for Preparation** Click here

## DESCRIPTION

This circuit sends a reverse signal from the park/neutral position switch to the navigation ECU through the multi-display.

## WIRING DIAGRAM



## INSPECTION PROCEDURE

### 1.CHECK REVERSE SIGNAL (DISPLAY CHECK MODE)

a. Enter the "Display Check" mode and select "Vehicle Signal Check" ( Click here).

b. Check that the display changes between ON and OFF according to the shift lever operation.

**OK:**

| Shift Lever Position | Display |
|---|---|
| R | ON |
| Except R | OFF |

**HINT:**

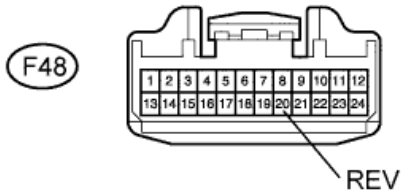
This display is updated once per second. As a result, it is normal for the display to lag behind the actual change in the switch.

NG → Go to step 4

OK

### 2.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - NAVIGATION ECU)

a. Disconnect the F39 display connector.



b. Disconnect the F48 ECU connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

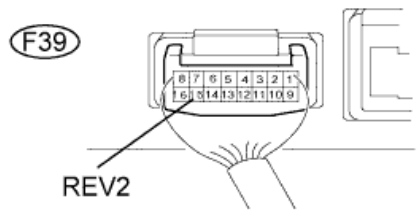
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F39-15 (REV2) - F48-20 (REV) | Always | Below 1 Ω |
| F39-15 (REV2) - Body ground | Always | 10 kΩ or higher |

Front view of wire harness connector:
(to Navigation ECU)

Front view of wire harness connector:
(to Multi-display)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



## 3.CHECK MULTI-DISPLAY

a. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F39-15 (REV2) - Body ground | Engine switch on (IG), shift lever moved to R | 11 to 14 V |
| F39-15 (REV2) - Body ground | Engine switch on (IG), shift lever moved to other than R | Below 1 V |

Component with harness connected:
(Multi-display)

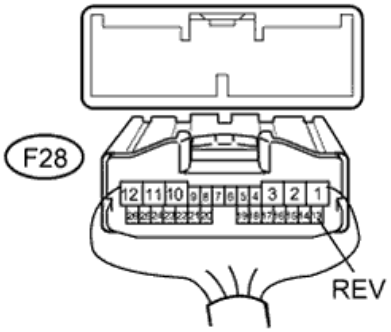
NG → REPLACE MULTI-DISPLAY (Click here)

OK

REPLACE NAVIGATION ECU (Click here)

## 4.CHECK PARK/NEUTRAL POSITION SWITCH

a. Disconnect the F28 display connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F28-13 (REV) - Body ground | Engine switch on (IG), shift lever moved to R | 11 to 14 V |

| | | |
|---|---|---|
| F28-13 (REV) - Body ground | Engine switch on (IG), shift lever moved to other than R | Below 1 V |

Rear view of wire harness connector:
(to Multi-display)

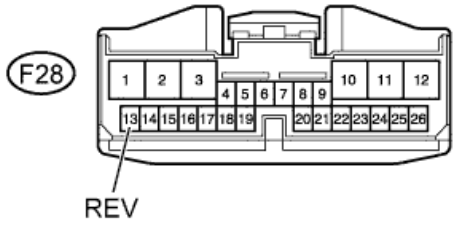
NG → Go to step 5

OK

REPLACE MULTI-DISPLAY (Click here)

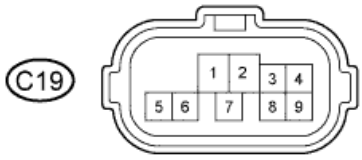
## 5.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - PARK/NEUTRAL POSITION SWITCH)

a. Disconnect the F28 display connector.



b. Disconnect the C19 position switch connector.

c. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

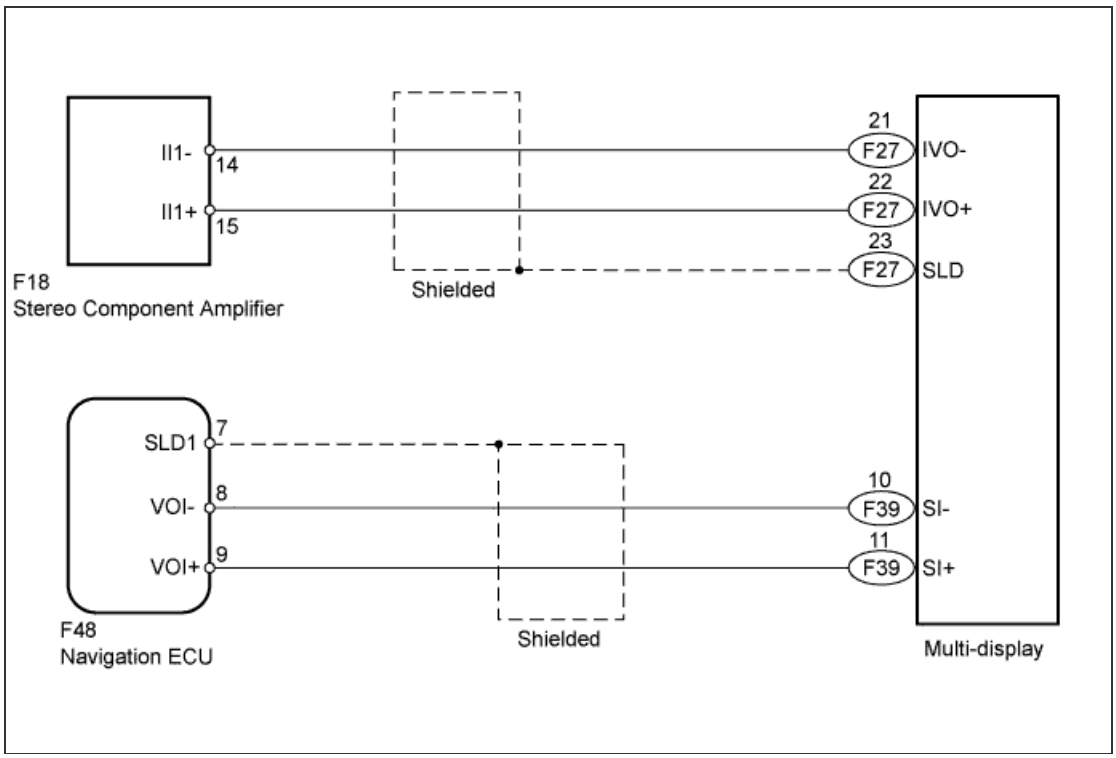
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F28-13 (REV) - C19-1 | Always | Below 1 Ω |
| F28-13 (REV) - Body ground | Always | 10 kΩ or higher |

Front view of wire harness connector:
(to Multi-display)

Front view of wire harness connector:
(to Park/Neutral Position Switch)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

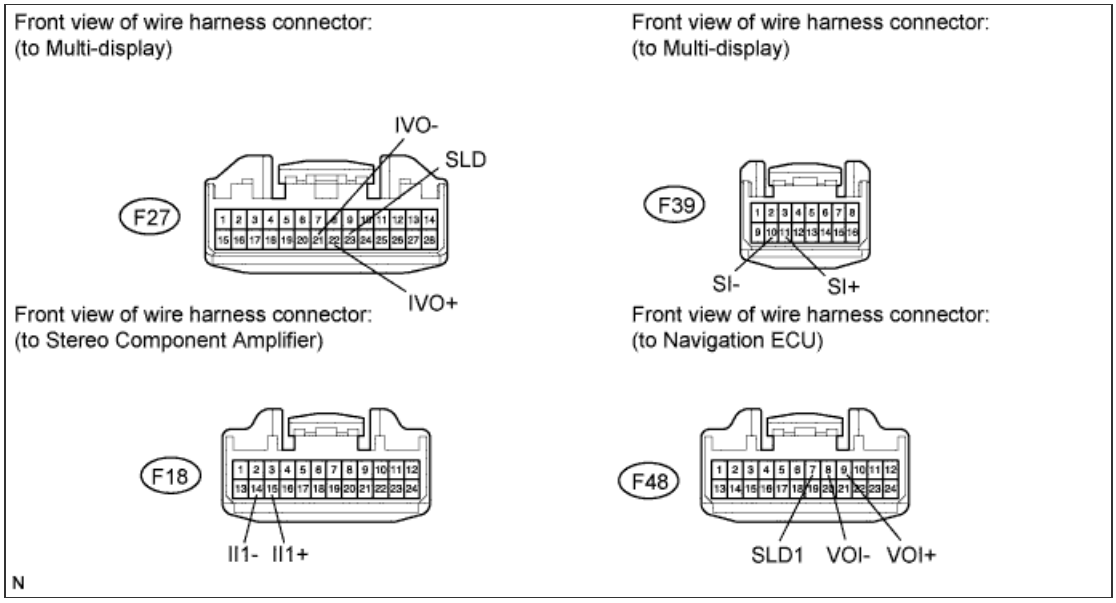
OK



REPLACE PARK/NEUTRAL POSITION SWITCH (Click here)

**for Preparation** Click here

## DESCRIPTION



This circuit is used when the voice guidance in the navigation system is on.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - STEREO COMPONENT AMPLIFIER AND NAVIGATION ECU)

a. Disconnect the F27 and F39 display connectors.

b. Disconnect the F18 amplifier connector.

c. Disconnect the F48 ECU connector.

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F27-21 (IVO-) - F18-14 (II1-) | Always | Below 1 Ω |
| F27-22 (IVO+) - F18-15 (II1+) | Always | Below 1 Ω |
| F39-10 (SI-) - F48-8 (VOI-) | Always | Below 1 Ω |
| F39-11 (SI+) - F48-9 (VOI+) | Always | Below 1 Ω |
| F27-21 (IVO-) - Body ground | Always | 10 kΩ or higher |
| F27-22 (IVO+) - Body ground | Always | 10 kΩ or higher |
| F39-10 (SI-) - Body ground | Always | 10 kΩ or higher |
| F39-11 (SI+) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK → PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

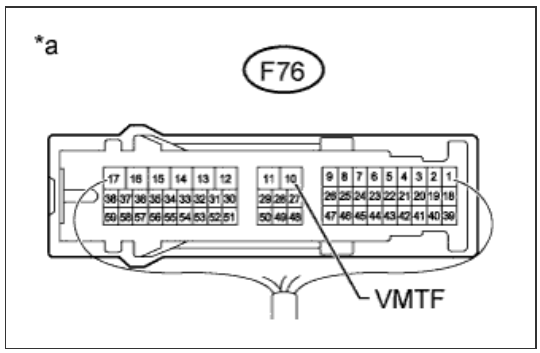
## DESCRIPTION

The multi-media module receiver assembly sends a visual mute signal to the multi-display assembly. As a result, a black screen is inserted when the screen changes so that noise and distorted images are not displayed.
When an open exists in the circuit, noise and distorted images will be displayed instead of a black screen.
When a short exists in the circuit, even though the multi-display assembly is operating normally, noise and distorted images will be displayed (black screen will not be displayed) during screen changes or the black screen will always be displayed.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK MULTI-MEDIA MODULE RECEIVER ASSEMBLY



a. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-10 (VMTF) - Body ground | Engine switch on (ACC), screen display changes. | 3.5 V or higher → Below 1 V → 3.5 V or higher |

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected (Multi-media Module Receiver Assembly) |

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK

### 2.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - MULTI-DISPLAY ASSEMBLY)

a. Disconnect the F78 multi-display assembly connector.

b. Disconnect the F76 multi-media module receiver assembly connector.

c. Measure the resistance according to the value(s) in the table below.

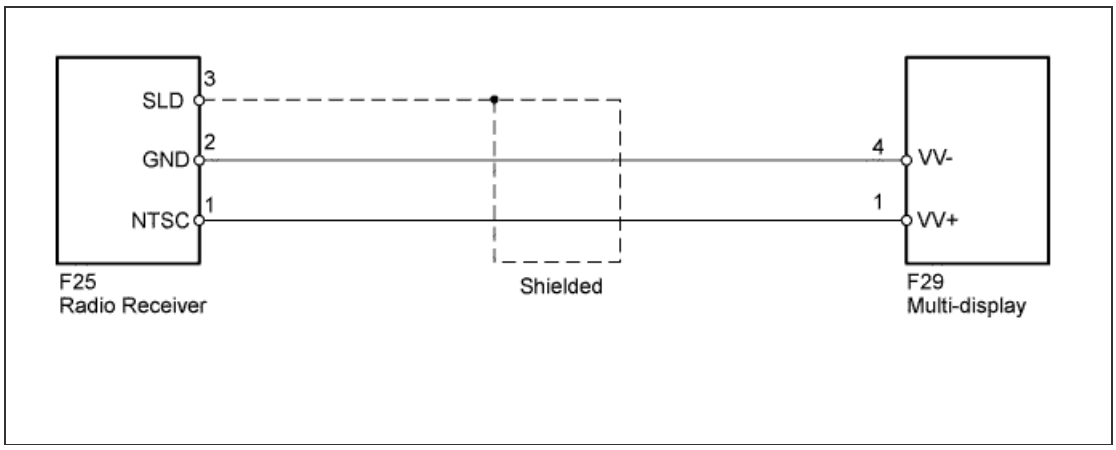
**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F78-11 (VMTI) - F76-10 (VMTF) | Always | Below 1 Ω |

| | | |
|---|---|---|
| F78-11 (VMTI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## DESCRIPTION

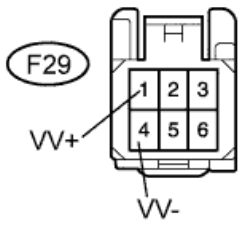
This circuit sends a DVD image signal from the radio receiver to the multi-display.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

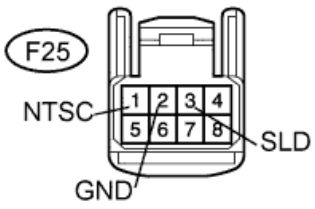
### 1.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - RADIO RECEIVER)

a. Disconnect the F29 display connector.



b. Disconnect the F25 receiver connector.

c. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F29-4 (VV-) - F25-2 (GND) | Always | Below 1 Ω |
| F29-1 (VV+) - F25-1 (NTSC) | Always | Below 1 Ω |
| F29-4 (VV-) - Body ground | Always | 10 kΩ or higher |
| F29-1 (VV+) - Body ground | Always | 10 kΩ or higher |
| F25-3 (SLD) - Body ground | Always | 10 kΩ or higher |

Front view of wire harness connector:
(to Multi-display)

Front view of wire harness connector:
(to Radio Receiver)

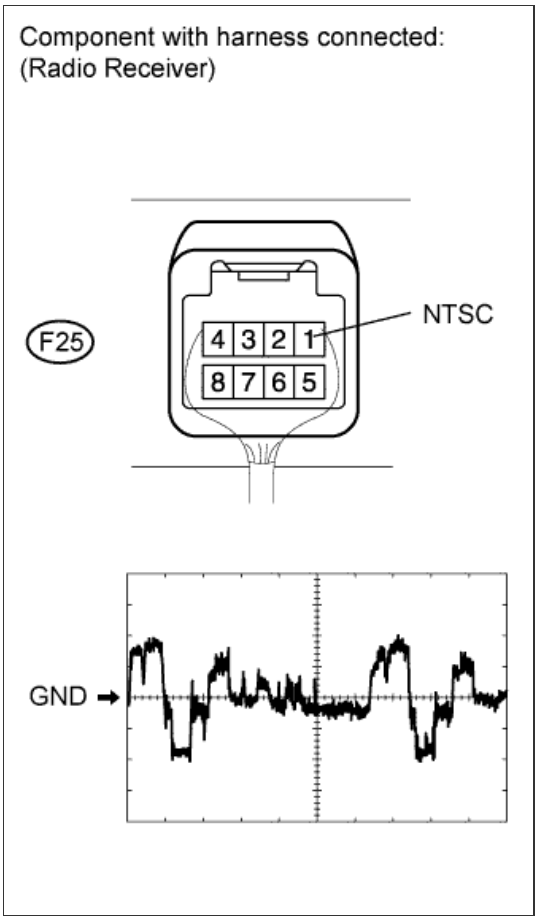
N

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

### 2.CHECK RADIO RECEIVER ASSEMBLY (NTSC SIGNAL)

a. Reconnect the F25 receiver connector.



b. Check the waveform of the radio receiver using an oscilloscope.

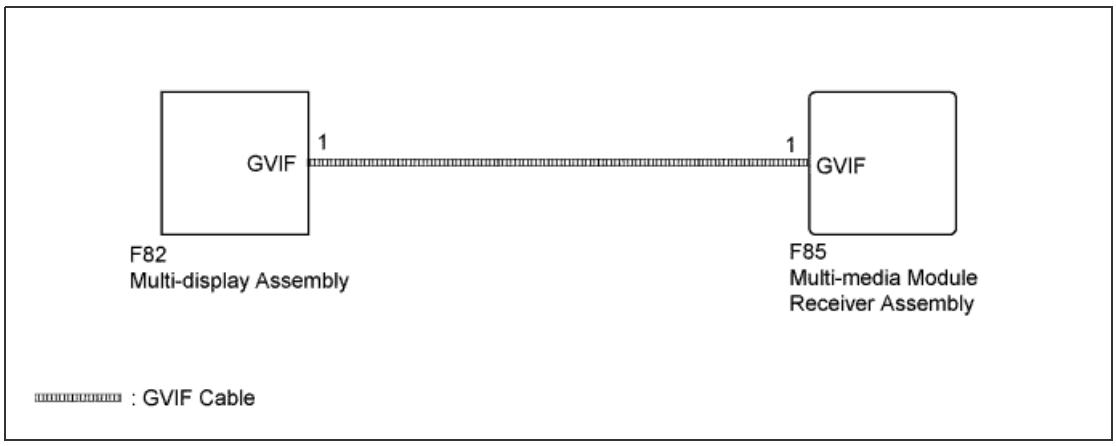
**Waveform (Reference)**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F25-1 (NTSC) - Body ground |
| Tool setting | 0.2 V/DIV., 10 µsec./DIV. |
| Condition | DVD played on radio receiver |

**OK:**

**Waveform is as shown in the illustration.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)



OK → PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## DESCRIPTION

The display image signal from the multi-media module receiver assembly is sent to the multi-display assembly using a GVIF cable.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**1.CHECK GVIF CABLE CONNECTOR**

a. Check if the GVIF cable connector between the multi-media module receiver assembly and the multi-display assembly have any connection problems (Click here).

b. Check that the screen display is normal.

**OK:**
**Screen display is normal.**

**NG** → **Go to step 2**

**OK** →

**USE SIMULATION METHOD TO CHECK (Click here)**

**2.CHECK MULTI-DISPLAY ASSEMBLY**

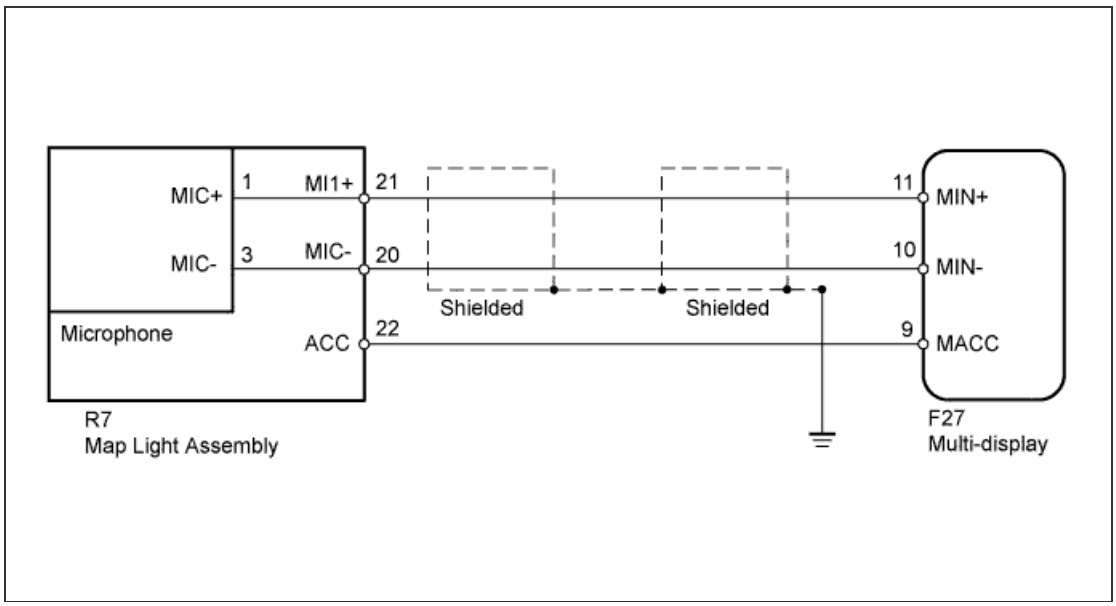
a. Replace the multi-display assembly (Click here).

b. Check that the screen display is normal.

**OK:**
**Screen display is normal.**

**NG** → **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)**

**OK** →



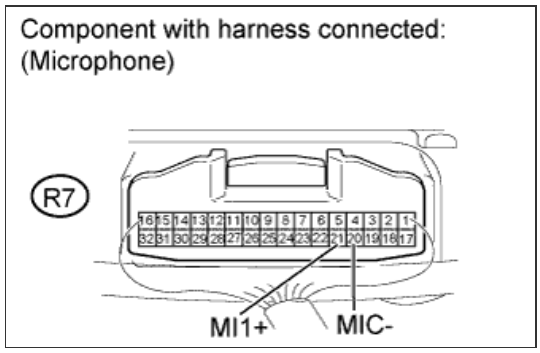
**END (MULTI-DISPLAY ASSEMBLY IS DEFECTIVE)**

**for Preparation** Click here

## DESCRIPTION

This circuit sends a microphone signal from the microphone in the map light to the multi-display.

## WIRING DIAGRAM



## INSPECTION PROCEDURE

### 1.CHECK MICROPHONE

a. Check the waveform of the microphone using an oscilloscope.

**Standard**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| R7-21 (MI1+) - R7-20 (MIC-) | Engine switch on (ACC), and "Voice" switch of steering pad switch pressed | Waveform that matches sound spoken into microphone is output. |

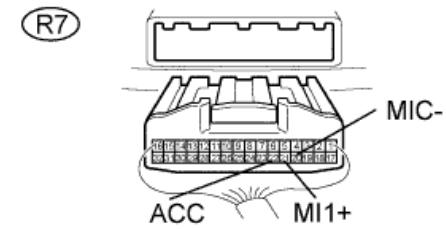
NG → Go to step 4

OK

### 2.CHECK HARNESS AND CONNECTOR (MAP LIGHT - MULTI-DISPLAY)

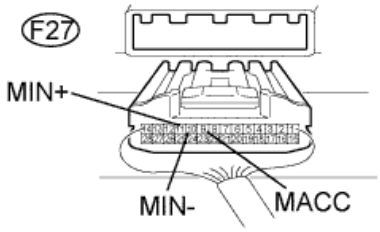
a. Disconnect the R7 map light connector.

b. Disconnect the F27 display connector.



c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**



| Tester Connection | Condition | Specified Condition |
|---|---|---|

| | | |
|---|---|---|
| F27-9 (MACC) - R7-22 (ACC) | Always | Below 1 Ω |
| F27-11 (MIN+) - R7-21 (MI1+) | Always | Below 1 Ω |
| F27-10 (MIN-) - R7-20 (MIC-) | Always | Below 1 Ω |
| F27-9 (MACC) - Body ground | Always | 10 kΩ or higher |
| F27-11 (MIN+) - Body ground | Always | 10 kΩ or higher |
| F27-10 (MIN-) - Body ground | Always | 10 kΩ or higher |

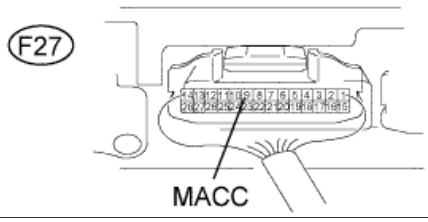
Rear View of wire harness connected:
(to Map Light Assembly)

Rear View of wire harness connected:
(to Multi-display)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**3.CHECK MULTI-DISPLAY (MACC VOLTAGE)**



a. Reconnect the F27 display connector.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F27-9 (MACC) - Body ground | Engine switch on (ACC) | 4 to 6 V |

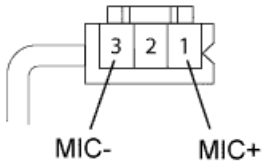
Component with harness connected:
(Multi-display)

NG → REPLACE MULTI-DISPLAY (Click here)

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**4.CHECK MICROPHONE ASSEMBLY**



a. Remove the microphone from the map light.

b. Measure the resistance according to the value(s) in the table below.

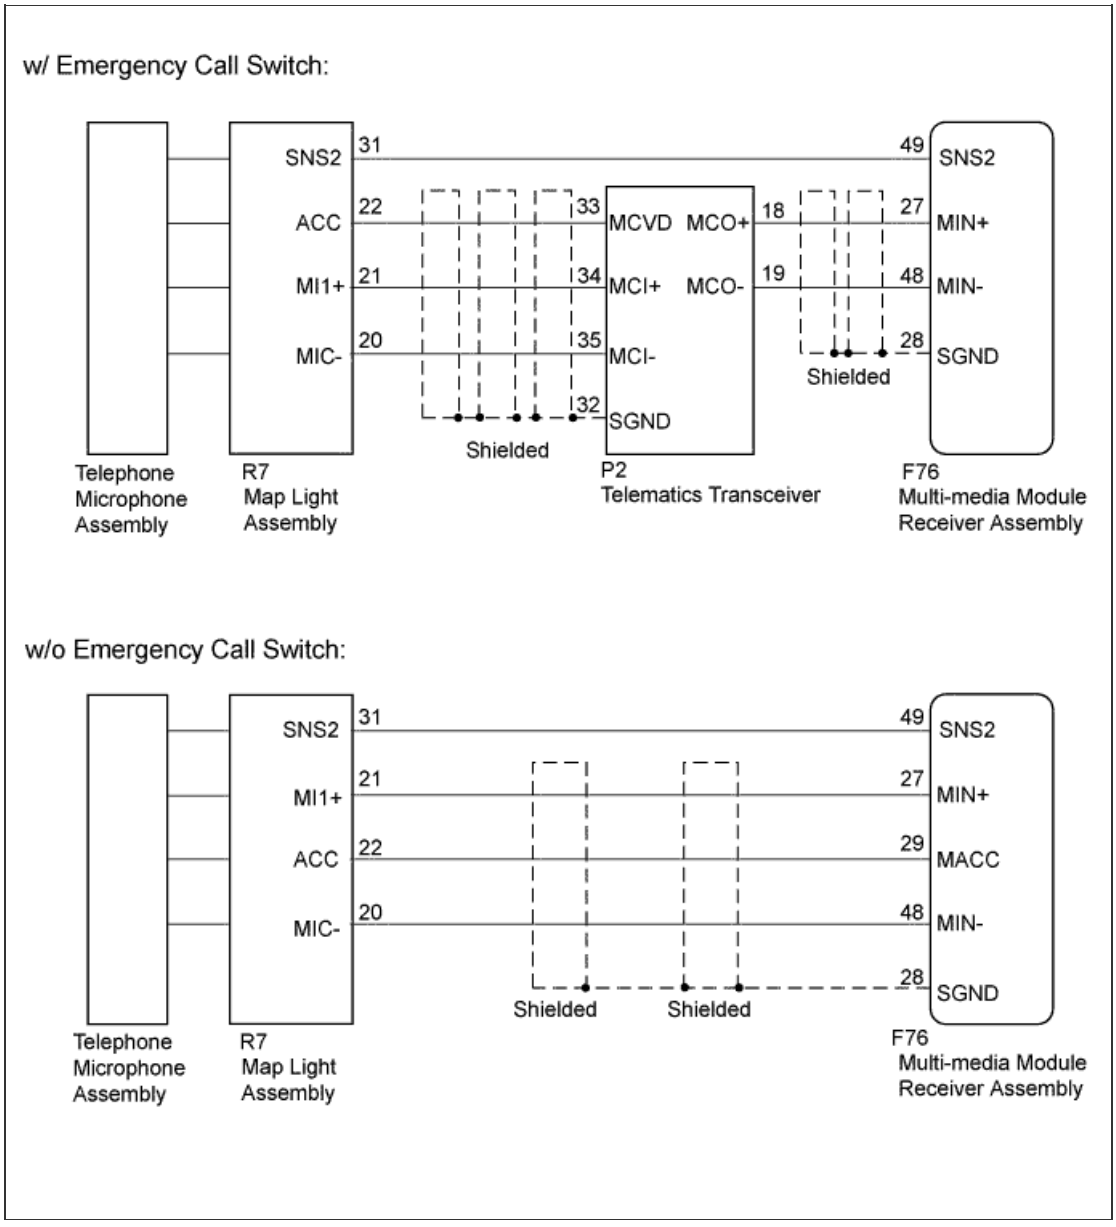
**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 (MIC+) - 3 (MIC-) | Always | 1.9 to 2.2 kΩ |

Component without harness connected:
(Microphone)

NG → REPLACE MICROPHONE ASSEMBLY (Click here)

OK



REPLACE MAP LIGHT ASSEMBLY (Click here)

**for Preparation** Click here

## DESCRIPTION

- The multi-media module receiver assembly and map light assembly (telephone microphone assembly) are connected to each other using the microphone connection detection signal lines.
- Using this circuit, the multi-media module receiver assembly sends power to the map light assembly (telephone microphone assembly), and the map light assembly (telephone microphone assembly) sends microphone signals to the multi-media module receiver assembly (w/o Emergency Call Switch).
- Using this circuit, the telematics transceiver sends power to the map light assembly (telephone microphone assembly), and the map light assembly (telephone microphone assembly) sends microphone signals to the multi-media module receiver assembly via the telematics transceiver (w/ Emergency Call Switch).

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**HINT:**

When replacing the multi-media module receiver assembly or the telematics transceiver, perform the vehicle contract setting ( Click here).

### 1.CONFIRM MODEL

a. Check the model to be inspected.

**Result**

| Model | Proceed to |
|---|---|
| w/o Emergency Call Switch | A |
| w/ Emergency Call Switch | B |

B → Go to step 7

A

**2.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - MAP LIGHT ASSEMBLY)**

a. Disconnect the F76 multi-media module receiver assembly connector.

b. Disconnect the R7 map light assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

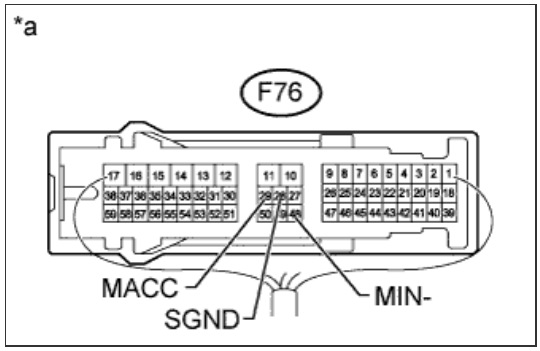
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-27 (MIN+) - R7-21 (MI1+) | Always | Below 1 Ω |
| F76-48 (MIN-) - R7-20 (MIC-) | Always | Below 1 Ω |
| F76-29 (MACC) - R7-22 (ACC) | Always | Below 1 Ω |
| F76-49 (SNS2) - R7-31 (SNS2) | Always | Below 1 Ω |
| F76-27 (MIN+) - Body ground | Always | 10 kΩ or higher |
| F76-48 (MIN-) - Body ground | Always | 10 kΩ or higher |
| F76-28 (SGND) - Body ground | Always | 10 kΩ or higher |
| F76-49 (SNS2) - Body ground | Always | 10 kΩ or higher |
| F76-29 (MACC) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**3.CHECK MULTI-MEDIA MODULE RECEIVER ASSEMBLY**

a. Measure the voltage according to the value(s) in the table below.



**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F76-29 (MACC) - Body ground | Engine switch on (ACC) | 4 to 6 V |

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-28 (SGND) - Body ground | Always | Below 1 Ω |
| F76-48 (MIN-) - | | |

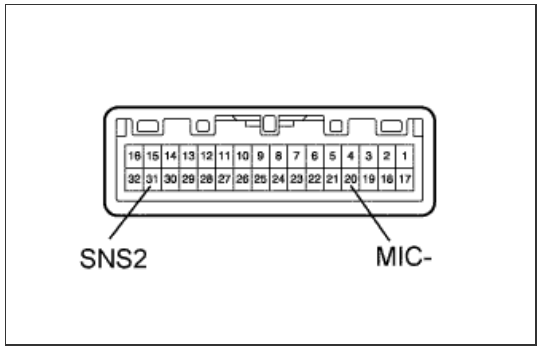
| | | |
|---|---|---|
| Body ground | Always | Below 1 Ω |

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected<br>(Multi-media Module Receiver Assembly) |

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK



## 4.INSPECT MAP LIGHT ASSEMBLY

a. Remove the map light assembly (Click here).

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 20 (MIC-) - 31 (SNS2) | Always | Below 1 Ω |

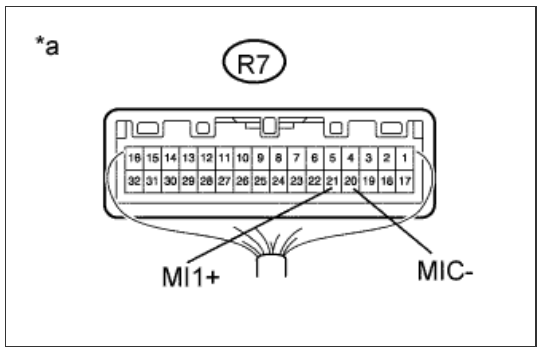
NG → Go to step 6

OK

## 5.CHECK MAP LIGHT ASSEMBLY

a. Turn the engine switch on (ACC).

b. Connect an oscilloscope to terminals R7-21 (MI1+) and R7-20 (MIC-) of the map light assembly connector.



c. Check the waveform of the telephone microphone assembly using the oscilloscope.

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected<br>(Map Light Assembly) |

**Result**

| Result | Proceed to |
|---|---|
| A waveform synchronized with the voice input to the map light assembly is output. | A |
| A waveform synchronized with the voice input to the map light assembly is not output. | B |

B → Go to step 6

A

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

## 6.CHECK TELEPHONE MICROPHONE ASSEMBLY

a. Replace the telephone microphone assembly with a new or normally functioning one ( Click here).

b. Check if the same malfunction recurs.

**Result**

| Result | Proceed to |
|---|---|
| Malfunction does not recur (returns to normal). | A |
| Malfunction recurs. | B |

B → REPLACE MAP LIGHT ASSEMBLY (Click here)

A

END (TELEPHONE MICROPHONE ASSEMBLY IS DEFECTIVE)

7.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - MAP LIGHT ASSEMBLY)

a. Disconnect the F76 multi-media module receiver assembly connector.

b. Disconnect the R7 map light assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-49 (SNS2) - R7-31 (SNS2) | Always | Below 1 Ω |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

8.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - TELEMATICS TRANSCEIVER)

a. Disconnect the F76 multi-media module receiver assembly connector.

b. Disconnect the P2 telematics transceiver connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-27 (MIN+) - P2-18 (MCO+) | Always | Below 1 Ω |
| F76-48 (MIN-) - P2-19 (MCO-) | Always | Below 1 Ω |
| F76-27 (MIN+) - Body ground | Always | 10 kΩ or higher |
| F76-48 (MIN-) - Body ground | Always | 10 kΩ or higher |
| F76-28 (SGND) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

9.CHECK HARNESS AND CONNECTOR (TELEMATICS TRANSCEIVER - MAP LIGHT ASSEMBLY)

a. Disconnect the P2 telematics transceiver connector.

b. Disconnect the R7 map light assembly connector.

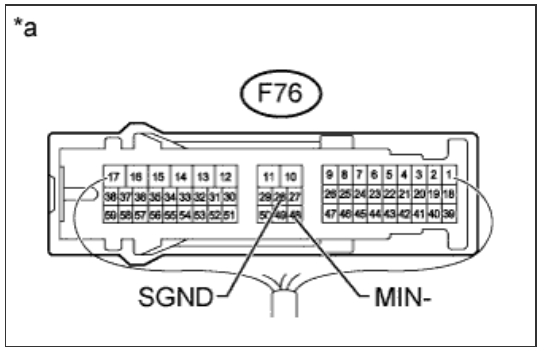
c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| P2-33 (MCVD) - R7-22 (ACC) | Always | Below 1 Ω |
| P2-34 (MCI+) - R7-21 (MI1+) | Always | Below 1 Ω |
| P2-35 (MCI-) - R7-20 (MIC-) | Always | Below 1 Ω |
| P2-33 (MCVD) - Body ground | Always | 10 kΩ or higher |
| P2-34 (MCI+) - Body ground | Always | 10 kΩ or higher |
| P2-35 (MCI-) - Body ground | Always | 10 kΩ or higher |
| P2-32 (SGND) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



## 10.CHECK MULTI-MEDIA MODULE RECEIVER ASSEMBLY

a. Disconnect the P2 telematics transceiver connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-28 (SGND) - Body ground | Always | Below 1 Ω |
| F76-48 (MIN-) - Body ground | Always | Below 1 Ω |

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected (Multi-media Module Receiver Assembly) |

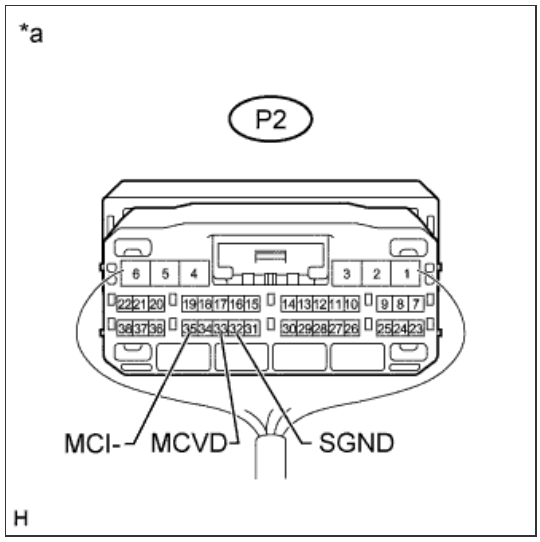
NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

## 11.CHECK TELEMATICS TRANSCEIVER

a. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**



| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| P2-33 (MCVD) - Body ground | Engine switch on (ACC) | 4 to 6 V |

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| | | |

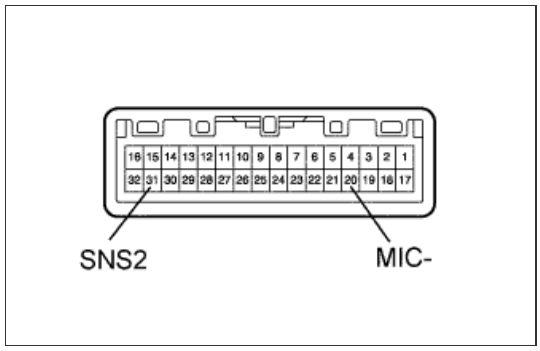
| | | |
|---|---|---|
| P2-32 (SGND) - Body ground | Always | Below 1 Ω |
| P2-35 (MCI-) - Body ground | Always | Below 1 Ω |

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected (Telematics Transceiver) |

NG → REPLACE TELEMATICS TRANSCEIVER (Click here)

OK



## 12.INSPECT MAP LIGHT ASSEMBLY

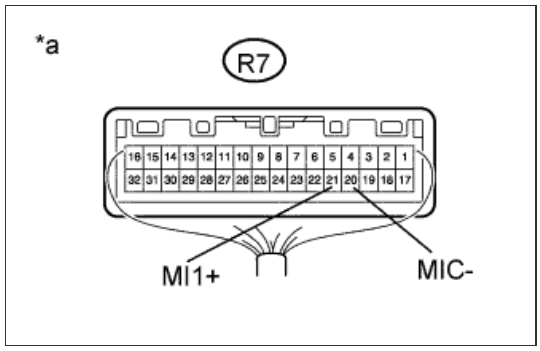
a. Remove the map light assembly (Click here).

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 20 (MIC-) - 31 (SNS2) | Always | Below 1 Ω |

NG → Go to step 14



OK

## 13.CHECK MAP LIGHT ASSEMBLY

a. Turn the engine switch on (ACC).

b. Connect an oscilloscope to terminals R7-21 (MI1+) and R7-20 (MIC-) of the map light assembly connector.

c. Check the waveform of the telephone microphone assembly using the oscilloscope.

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected (Map Light Assembly) |

**Result**

| Result | Proceed to |
|---|---|
| A waveform synchronized with the voice input to the map light assembly is output. | A |
| A waveform synchronized with the voice input to the map light assembly is not output. | B |

B → Go to step 14

A

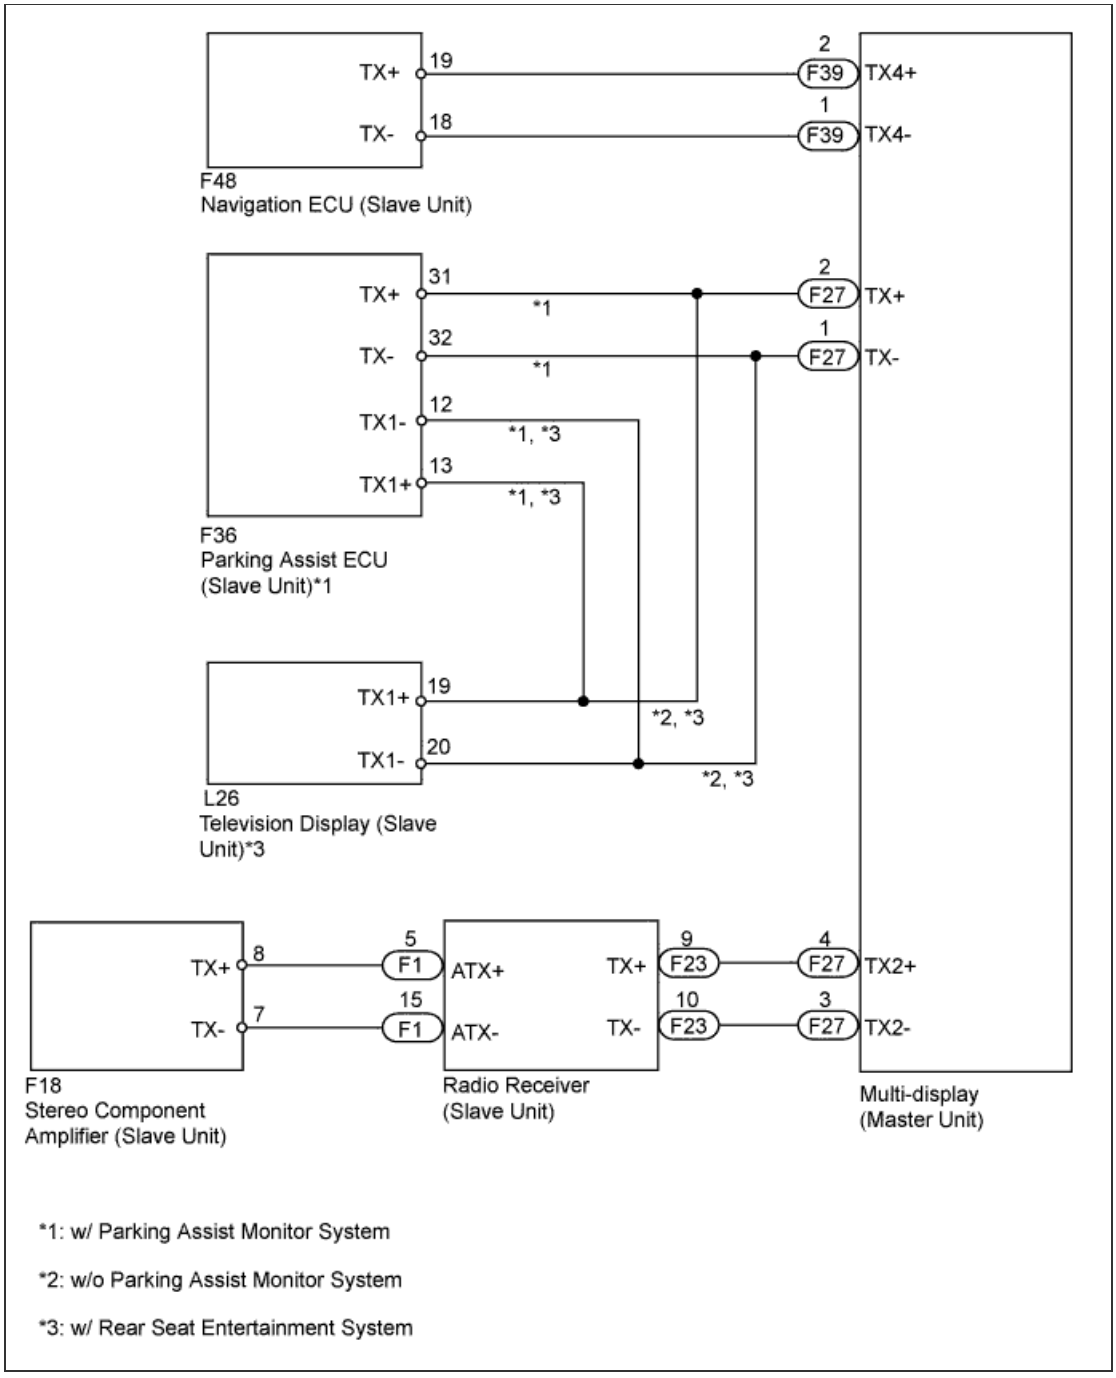
PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( **Click here**)

## 14.CHECK TELEPHONE MICROPHONE ASSEMBLY

a. Replace the telephone microphone assembly with a new or normally functioning one ( Click here).

b. Check if the same malfunction recurs.

**Result**



| Result | Proceed to |
|---|---|
| Malfunction does not recur (returns to normal). | A |
| Malfunction recurs. | B |

B → REPLACE MAP LIGHT ASSEMBLY (**Click here**)

A → END (TELEPHONE MICROPHONE ASSEMBLY IS DEFECTIVE)

**for Preparation** Click here

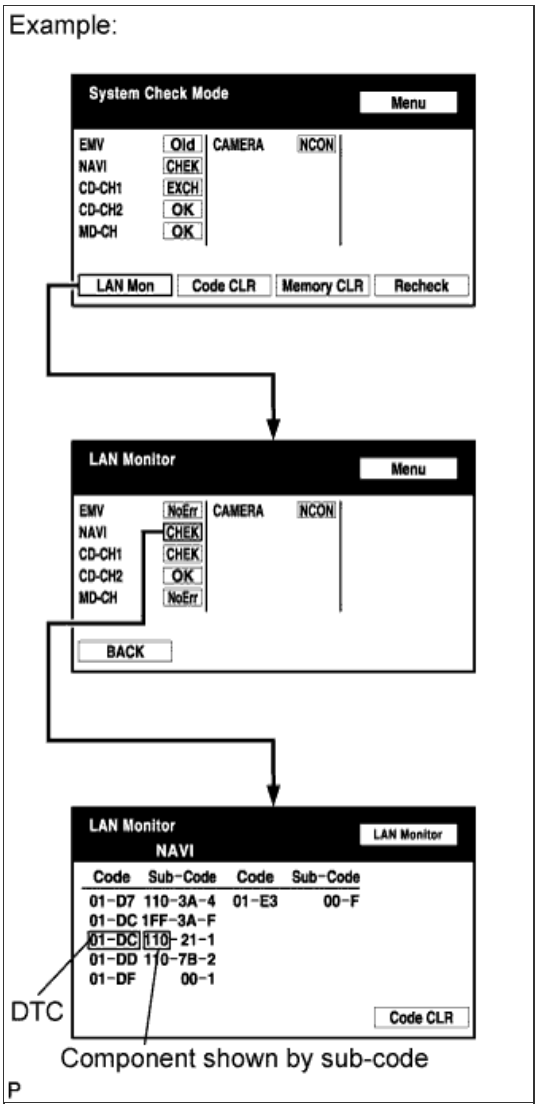
## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.IDENTIFY COMPONENT SHOWN BY SUB-CODE

a. Enter the diagnostic mode.

b. Press the "LAN Mon" switch to change to "LAN Monitor" mode.



c. Identify the component shown by the sub-code.

**HINT:**

- **"110 (multi-display)" is the component shown by the sub-code**

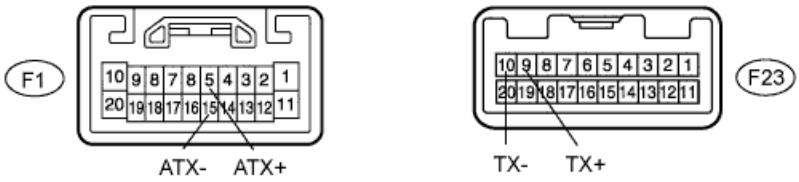
in the example shown in the illustration.

- The sub-code will be indicated by its physical address.
- For the component list, refer to Diagnosis Display Detailed Description in the System Description (Click here).

NEXT

## 2.CHECK POWER SOURCE CIRCUIT OF COMPONENT SHOWN BY SUB-CODE

a. Inspect the power source circuit of the component shown by the sub-code.
If the power source circuit is operating normally, proceed to the next step.



**Component Table**

| Component | Proceed to |
|---|---|
| Stereo component amplifier (440) | Stereo component amplifier power source circuit (Click here) |
| Multi-display (110) | Multi-display power source circuit (Click here) |
| Navigation ECU (178) | Navigation ECU power source circuit (Click here) |
| Parking assist ECU (1AC) | Parking assist ECU power source circuit (Click here) |
| Television display (1F6) | Television display power source circuit (Click here) |

NEXT

## 3.INSPECT RADIO RECEIVER ASSEMBLY

Component without harness connected:
(Radio Receiver)

a. Disconnect the F1 and F23 receiver connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F1-5 (ATX+) - F1-15 (ATX-) | Always | 60 to 80 Ω |
| F23-9 (TX+) - F23-10 (TX-) | Always | 60 to 80 Ω |

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

## 4.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - COMPONENT SHOWN BY SUB-CODE)

**HINT:**

- **Start the check from the circuit that is near the component shown by the sub-code first.**
- **For details of the connectors, refer to Terminals of ECU (Click here).**

a. Referring to the AVC-LAN wiring diagram, check the AVC-LAN circuit between the radio receiver and the component shown by the sub-code.

i. Disconnect all connectors between the radio receiver and the component shown by sub-code.

ii. Check for an open or short in the AVC-LAN circuit between the radio receiver and the component shown by the sub-code.

**OK:**
**There is no open or short circuit.**

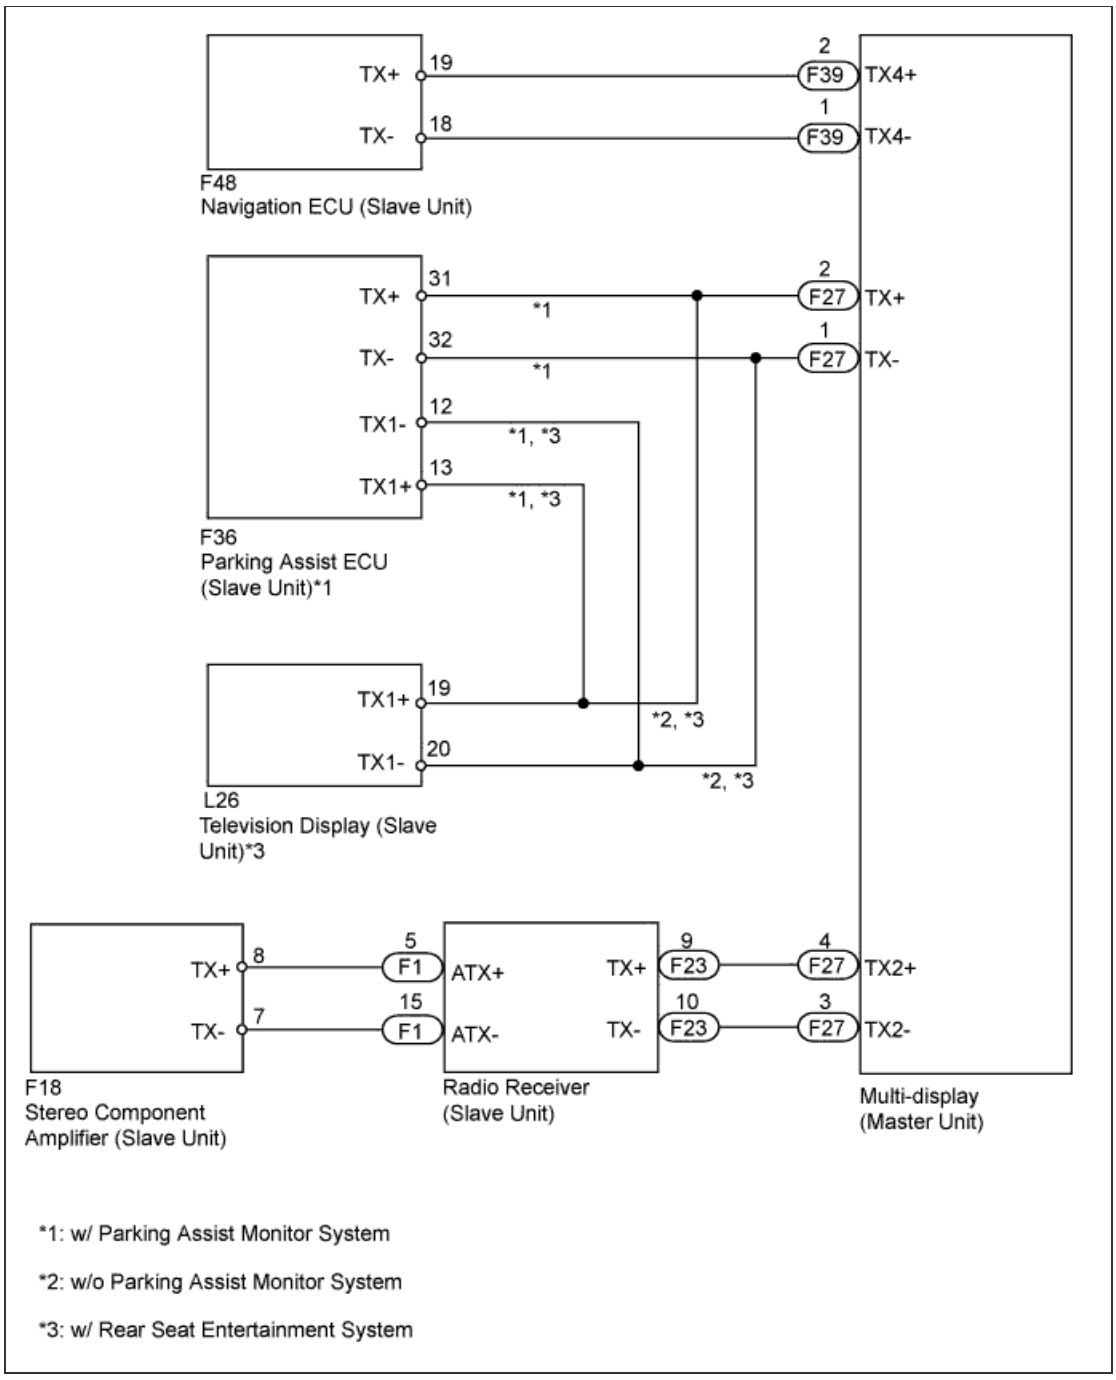
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 5.REPLACE COMPONENT SHOWN BY SUB-CODE

a. Replace the component shown by the sub-code with a normal one and check if the same problem occurs again.

**OK:**
**Same problem does not occur.**



NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

END

**for Preparation** Click here

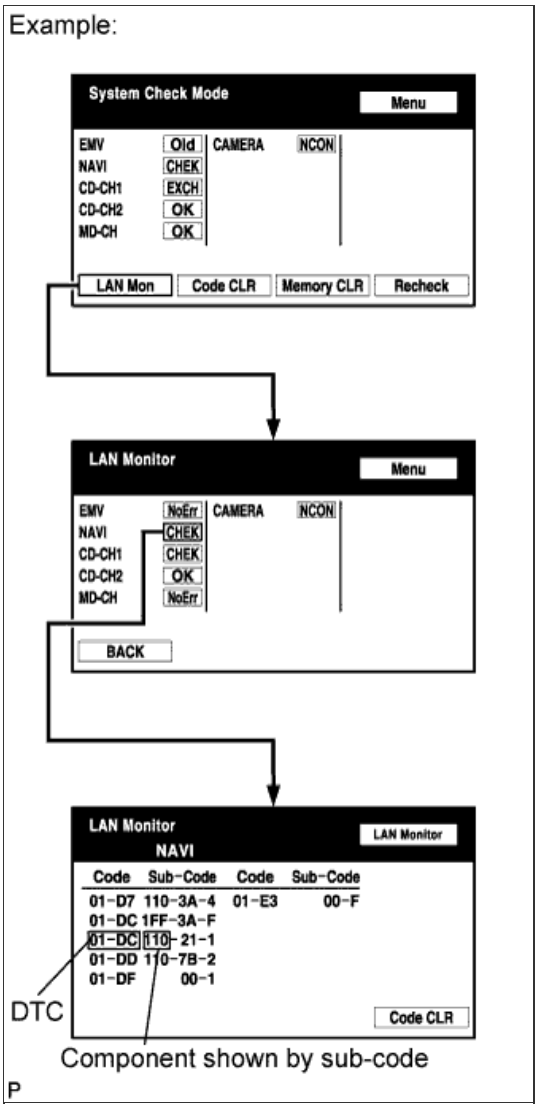
## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.IDENTIFY COMPONENT SHOWN BY SUB-CODE

a. Enter the diagnostic mode.

b. Press the "LAN Mon" switch to change to "LAN Monitor" mode.



c. Identify the component shown by the sub-code.

**HINT:**

- **"110 (multi-display)" is the component shown by the sub-code**

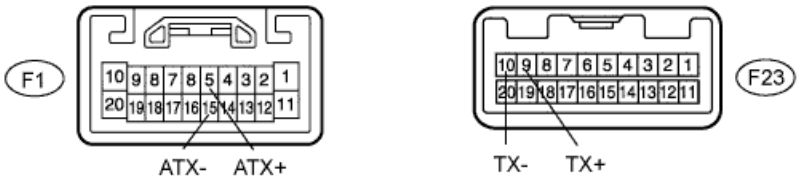
in the example shown in the illustration.

- The sub-code will be indicated by its physical address.
- For the component list, refer to Diagnosis Display Detailed Description in the System Description (Click here).

NEXT

## 2.CHECK POWER SOURCE CIRCUIT OF COMPONENT SHOWN BY SUB-CODE

a. Inspect the power source circuit of the component shown by the sub-code.
If the power source circuit is operating normally, proceed to the next step.



**Component Table**

| Component | Proceed to |
|---|---|
| Radio receiver (190) | Radio receiver power source circuit (Click here) |
| Multi-display (110) | Multi-display power source circuit (Click here) |
| Navigation ECU (178) | Navigation ECU power source circuit (Click here) |

## 3.INSPECT RADIO RECEIVER ASSEMBLY

Component without harness connected:
(Radio Receiver)

a. Disconnect the F1 and F23 receiver connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F1-5 (ATX+) - F1-15 (ATX-) | Always | 60 to 80 Ω |
| F23-9 (TX+) - F23-10 (TX-) | Always | 60 to 80 Ω |

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

**4.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - COMPONENT SHOWN BY SUB-CODE)**

**HINT:**

- **Start the check from the circuit that is near the component shown by the sub-code first.**
- **For details of the connectors, refer to Terminals of ECU (Click here).**

a. Referring to the AVC-LAN wiring diagram, check the AVC-LAN circuit between the stereo component amplifier and the component shown by the sub-code.

i. Disconnect all connectors between the stereo component amplifier and the component shown by sub-code.

ii. Check for an open or short in the AVC-LAN circuit between the stereo component amplifier and the component shown by the sub-code.

**OK:**
**There is no open or short circuit.**

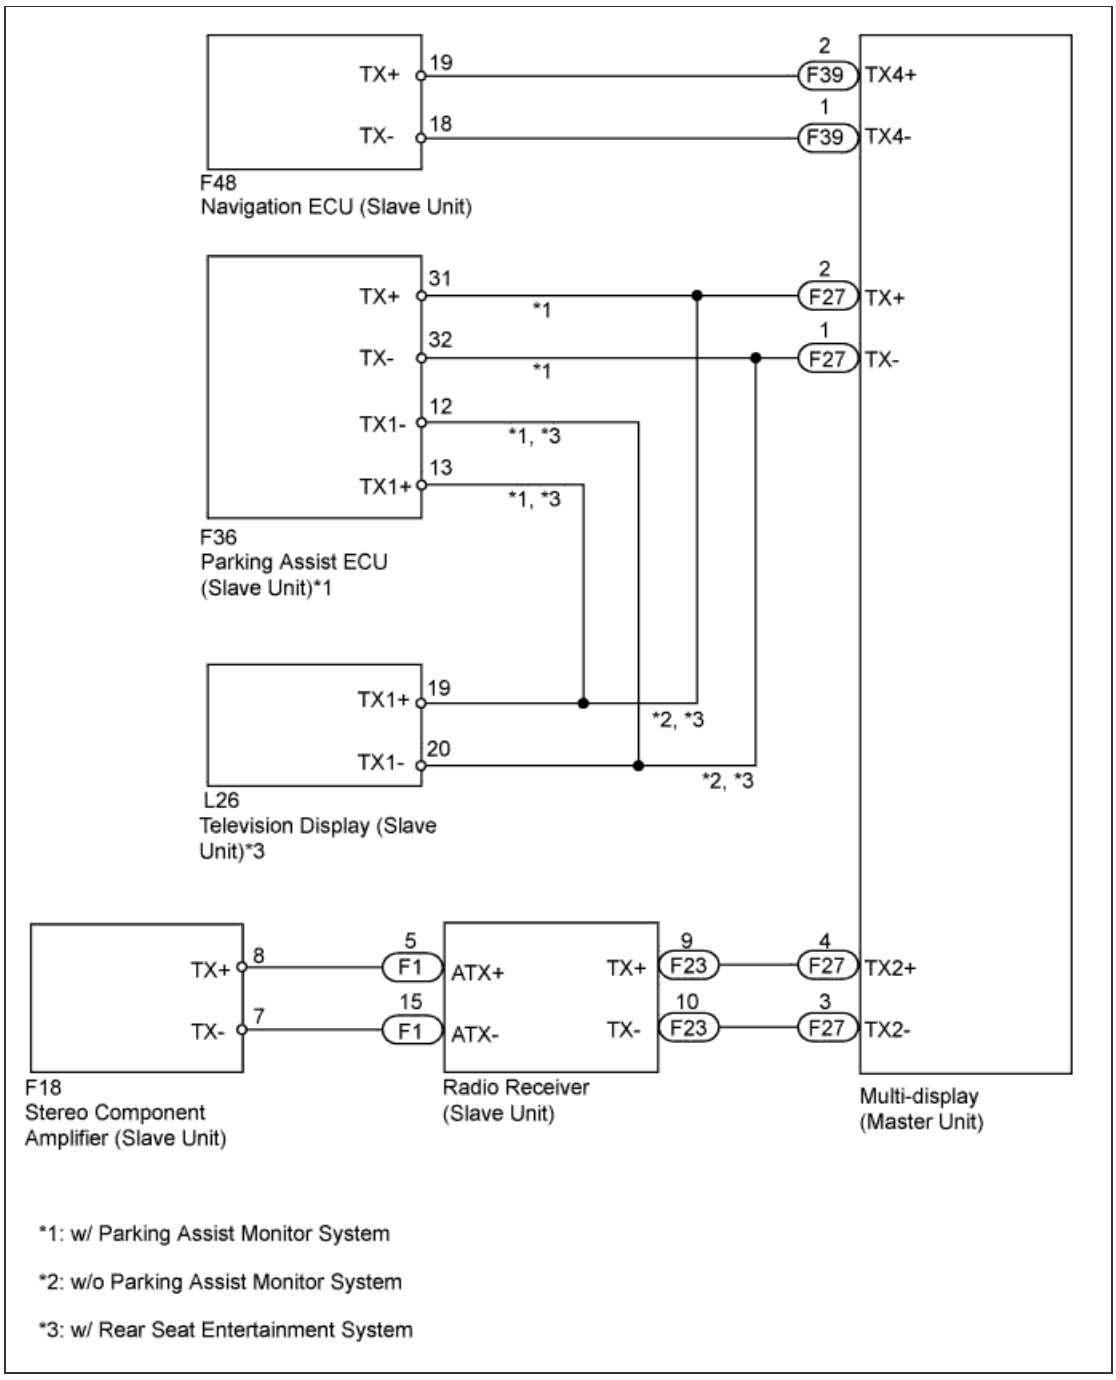
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**5.REPLACE COMPONENT SHOWN BY SUB-CODE**

a. Replace the component shown by the sub-code with a normal one and check if the same problem occurs again.

**OK:**
**Same problem does not occur.**



NG → REPLACE STEREO COMPONENT AMPLIFIER (Click here)

OK

**END**

**for Preparation** Click here

OK

## 5.REPLACE COMPONENT SHOWN BY SUB-CODE

a. Replace the component shown by the sub-code with a normal one and check if the same problem occurs again.

**OK:**
**Same problem does not occur.**

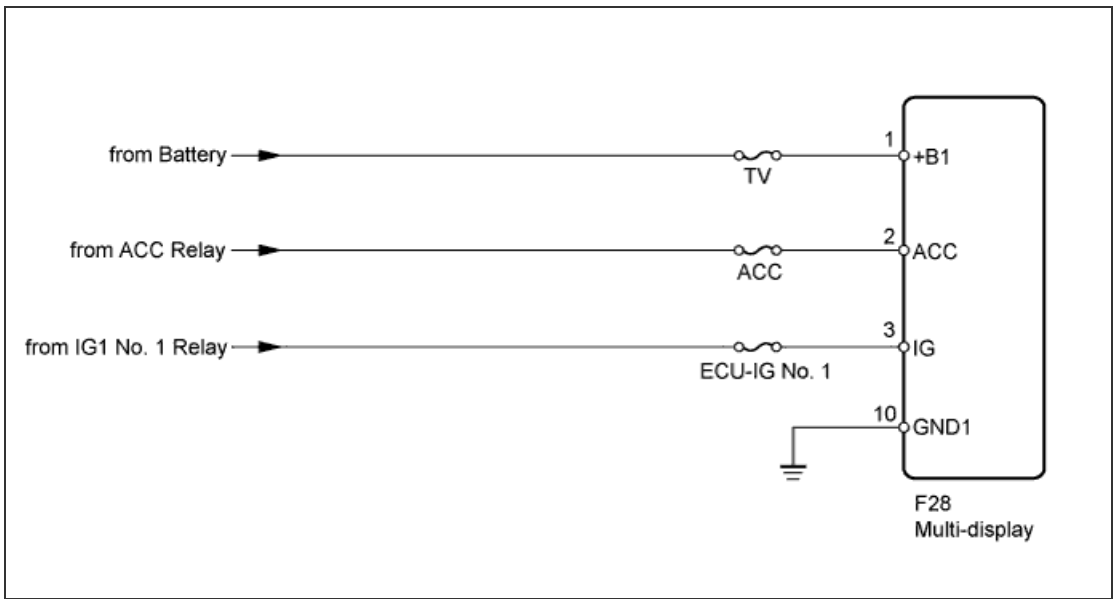
NG → REPLACE NAVIGATION ECU (Click here)

OK



END

**for Preparation** Click here

## DESCRIPTION

The circuit provides power to the multi-display.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.INSPECT FUSE (ACC, ECU-IG No. 1, TV)

a. Disconnect the ACC and ECU-IG No. 1 fuses from the cowl side junction block LH.

b. Disconnect the TV fuse from the cowl side junction block RH.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| TV fuse | Always | Below 1 Ω |
| ACC fuse | Always | Below 1 Ω |
| ECU-IG No. 1 fuse | Always | Below 1 Ω |

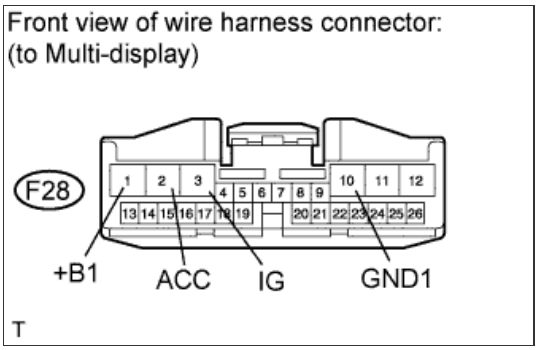
NG → REPLACE FUSE

OK

### 2.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - BATTERY AND BODY GROUND)

a. Disconnect the F28 display connector.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F28-10 (GND1) - Body ground | Always | Below 1 Ω |

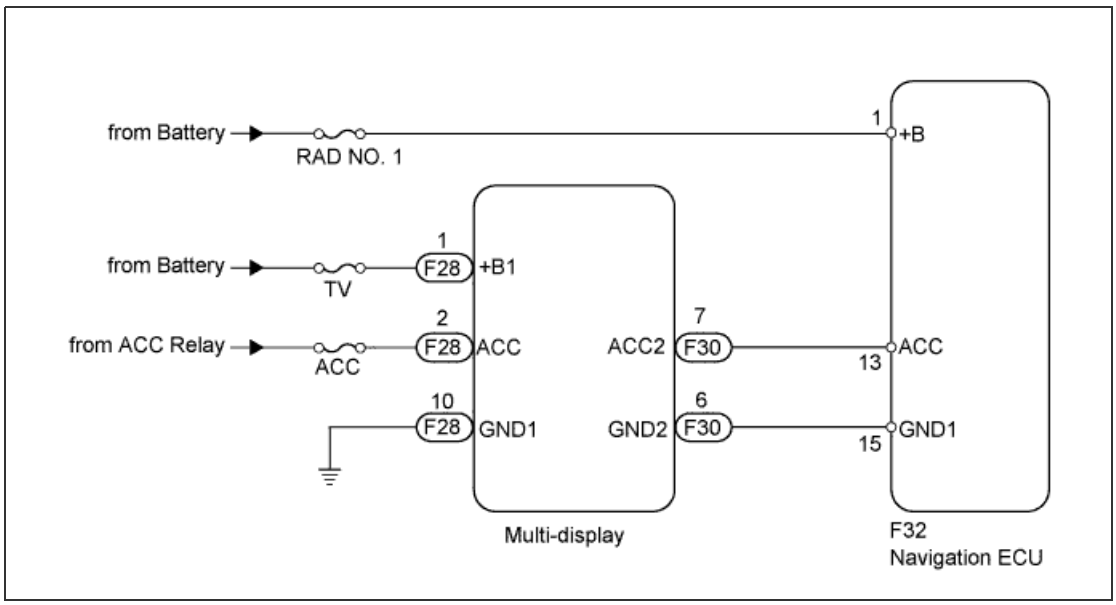
c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F28-1 (+B1) - Body ground | Always | 11 to 14 V |
| F28-2 (ACC) - Body ground | Engine switch on (ACC) | 11 to 14 V |
| F28-3 (IG) - Body ground | Engine switch on (IG) | 11 to 14 V |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## DESCRIPTION

This is the power source circuit to operate the navigation ECU.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK MULTI-DISPLAY POWER SOURCE CIRCUIT

a. Refer to the Multi-display Power Source Circuit ( Click here). If the power source circuit is operating normally, proceed to the next step.

**NEXT**

### 2.INSPECT FUSE (RAD NO. 1)

a. Disconnect the RAD NO. 1 fuse from the engine room junction block.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

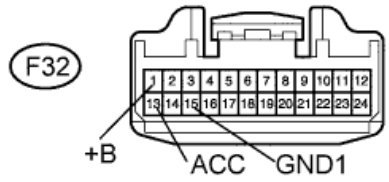
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| RAD NO. 1 fuse | Always | Below 1 Ω |

**NG** → **REPLACE FUSE**

**OK**

### 3.CHECK HARNESS AND CONNECTOR (NAVIGATION ECU - MULTI-DISPLAY AND BATTERY)

a. Disconnect the F32 ECU connector.



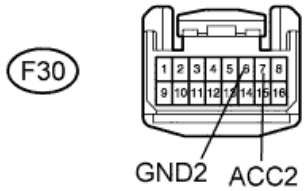
b. Disconnect the F39 display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F32-13 (ACC) - F39-7 (ACC2) | Always | Below 1 Ω |
| F32-15 (GND1) - F39-6 (GND2) | Always | Below 1 Ω |
| F32-13 (ACC) - Body ground | Always | 10 kΩ or higher |
| F32-15 (GND1) - Body ground | Always | 10 kΩ or higher |

Front view of wire harness connector:
(to Navigation ECU)



d. Measure the voltage according to the valve(s) in the table below.

**Standard Voltage:**

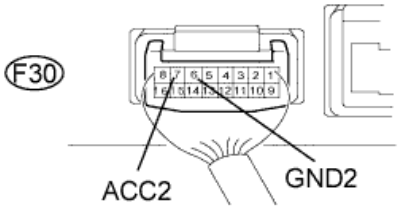
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F32-1 (+B) - Body ground | Always | 11 to 14 V |

Front view of wire harness connector:
(to Multi-display)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 4.INSPECT MULTI-DISPLAY



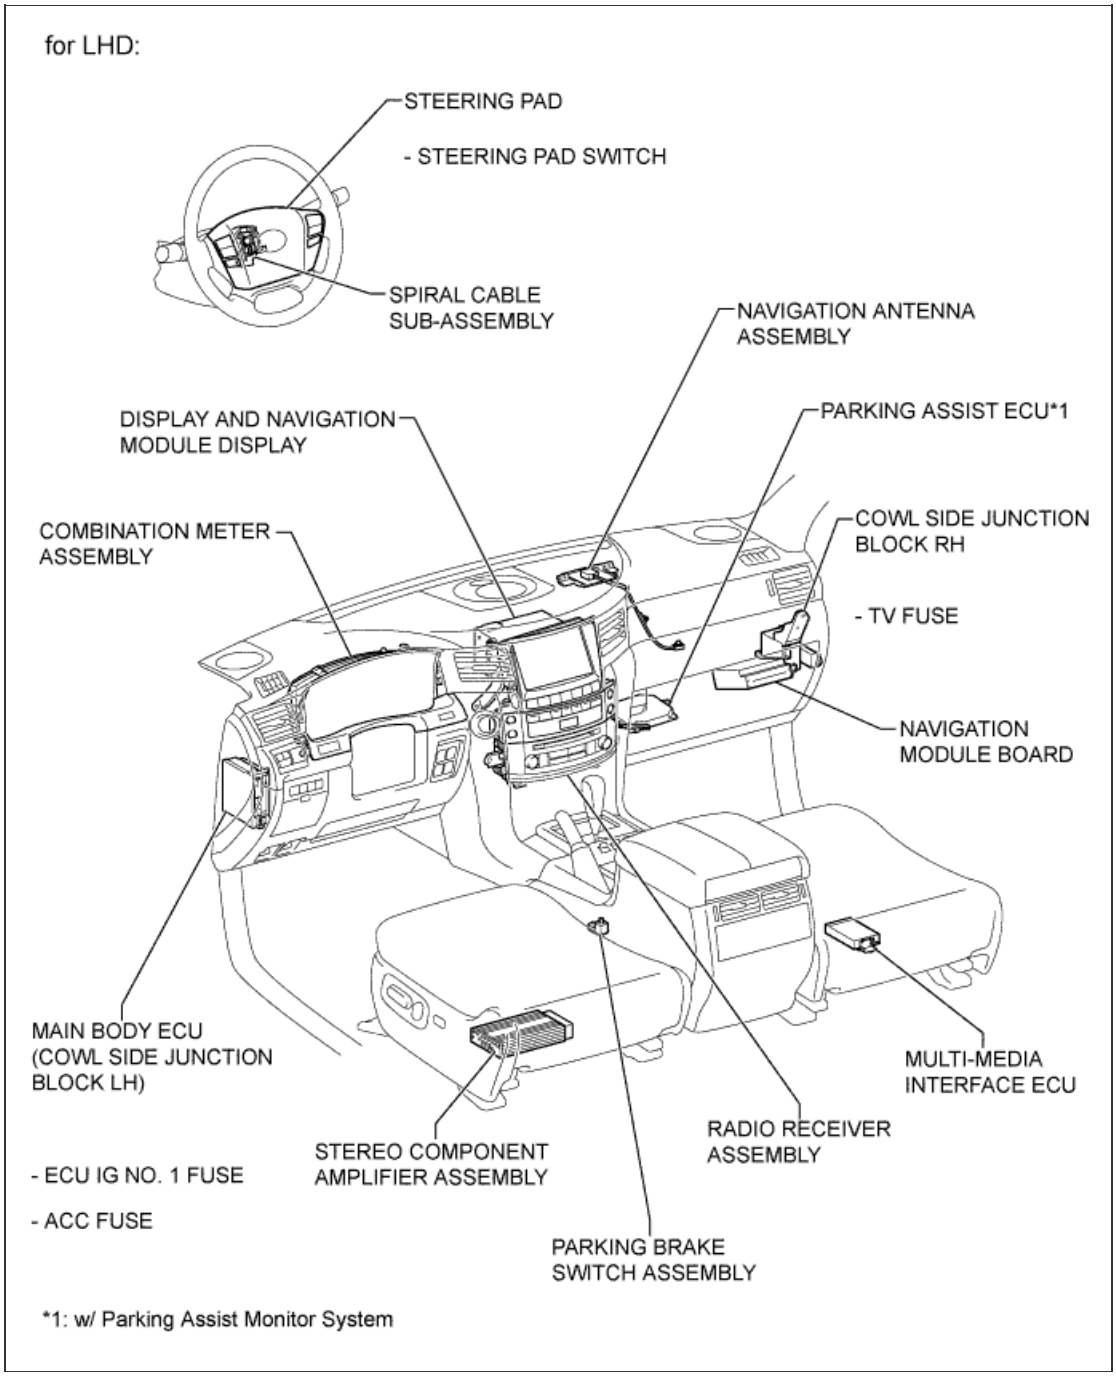
a. Reconnect the F39 display connector.

b. Measure the voltage according to the value(s) in the table below.

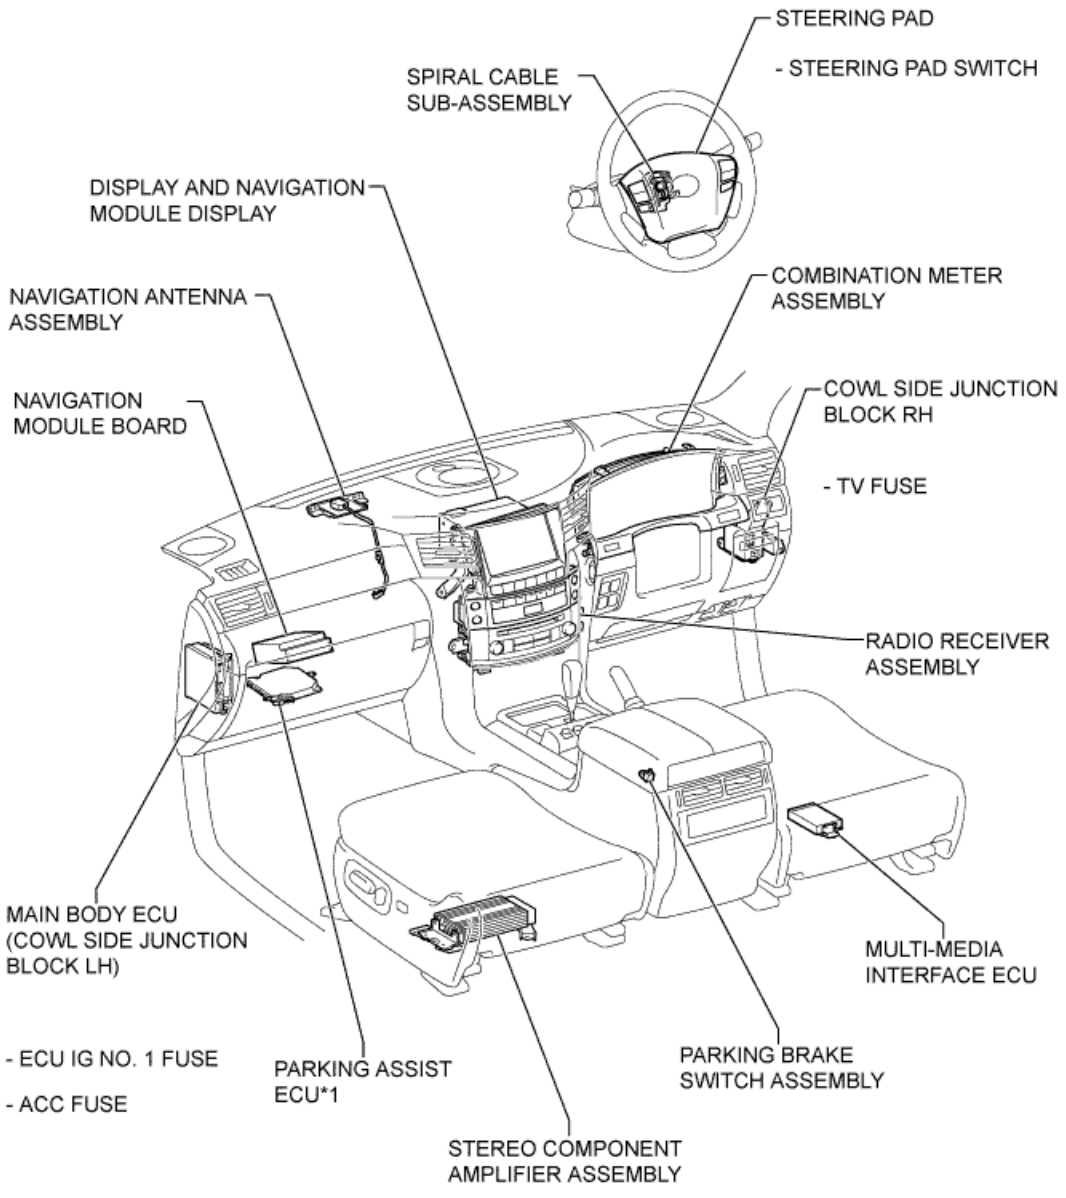
**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F39-6 (GND2) - Body ground | Always | Below 1 V |
| F39-7 (ACC2) - Body ground | Engine switch on (ACC) | 11 to 14 V |

Component with harness connected:
(Multi-display)



NG → REPLACE MULTI-DISPLAY (Click here)



OK

## NAVIGATION SYSTEM OUTLINE

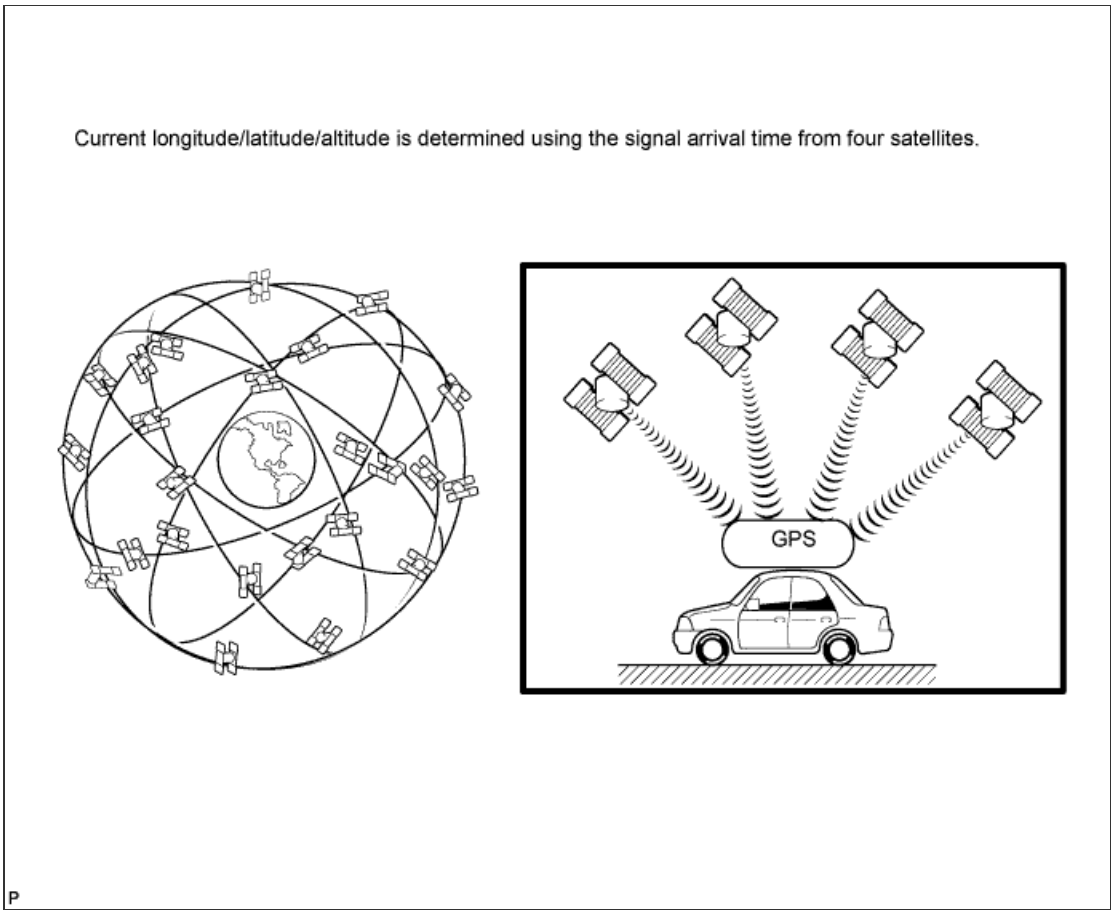
a. Vehicle position tracking methods
It is essential that the navigation system correctly tracks the current vehicle position and displays it on the map. There are 2 methods to track the current vehicle position; autonomous (dead reckoning) and GPS* (satellite) navigation. Both navigation methods are used in conjunction with each other.
*GPS (Global Positioning System)

| Operation | Description |
|---|---|
| Vehicle Position Calculation | The display and navigation module display calculates the current vehicle position (direction and current position) using the direction deviation signal from the gyro sensor and the running distance signal from the vehicle speed sensor and creates the driving route. |
| Map Display Processing | The display and navigation module display displays the vehicle track on the map by processing the vehicle position data, vehicle running track and map data from the map disc. |
| Map Matching | The map data from the map disc is compared to the vehicle position and running track data. Then, the vehicle position is matched with the nearest road. |
| GPS Correction | The vehicle position is matched to the position measured by GPS. Then, the GPS measurement position data is compared with the vehicle position and running track data. If the position is widely different, the GPS measurement position is used. |
| Distance Correction | The vehicle speed signal includes the error caused by tire wear and slippage between the tires and road surface. Distance correction is performed to account for this. The display and navigation module display automatically offsets the signal to make up for the difference between it and the distance data of the map. The offset is automatically updated. |

**HINT:**

The combination of autonomous and GPS navigation makes it possible to display the vehicle position even when the vehicle is in places where the GPS cannot receive a signal. When only autonomous navigation is used, however, the mapping accuracy may slightly decrease.

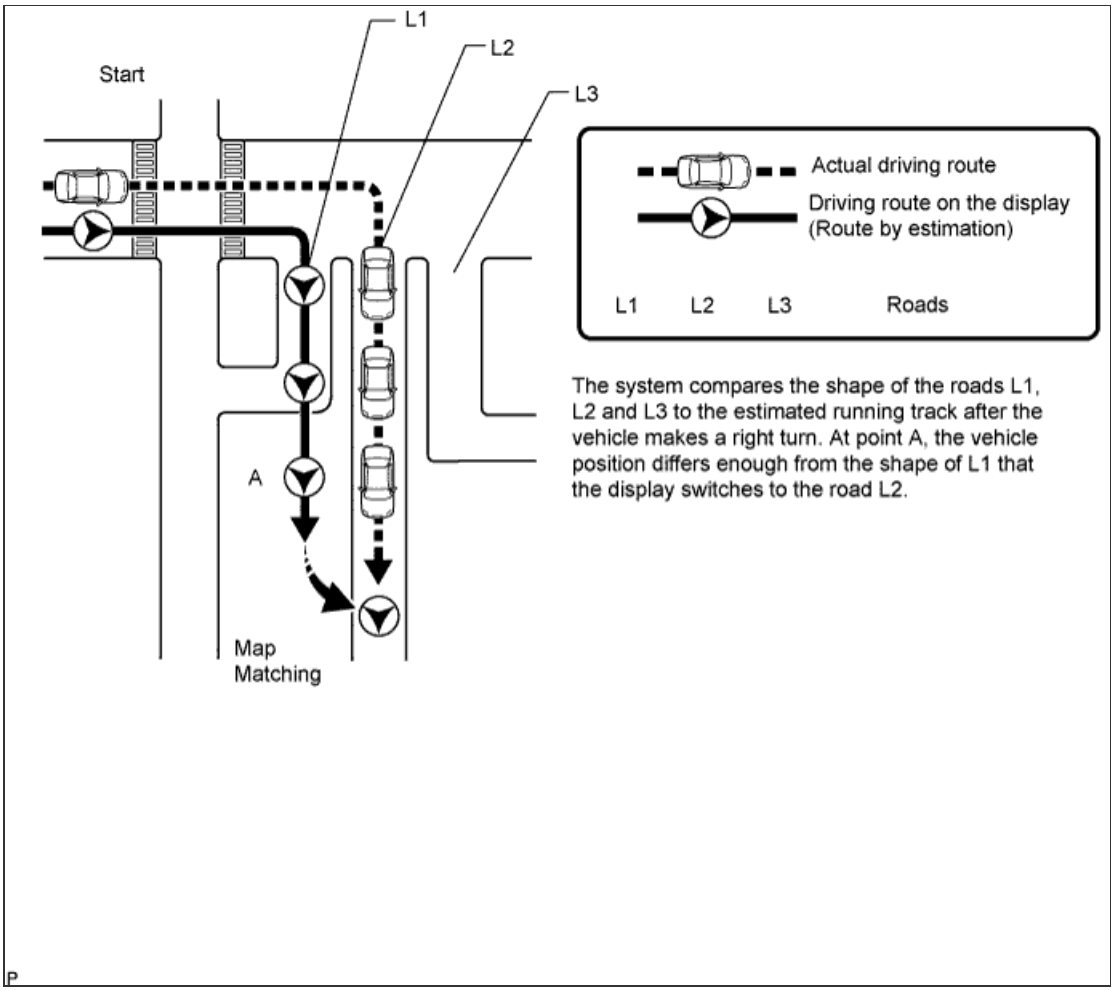
b. Autonomous navigation



This method determines the relative vehicle position based on the running track determined by the gyro located in the display and navigation module display and the vehicle speed sensor's signal.

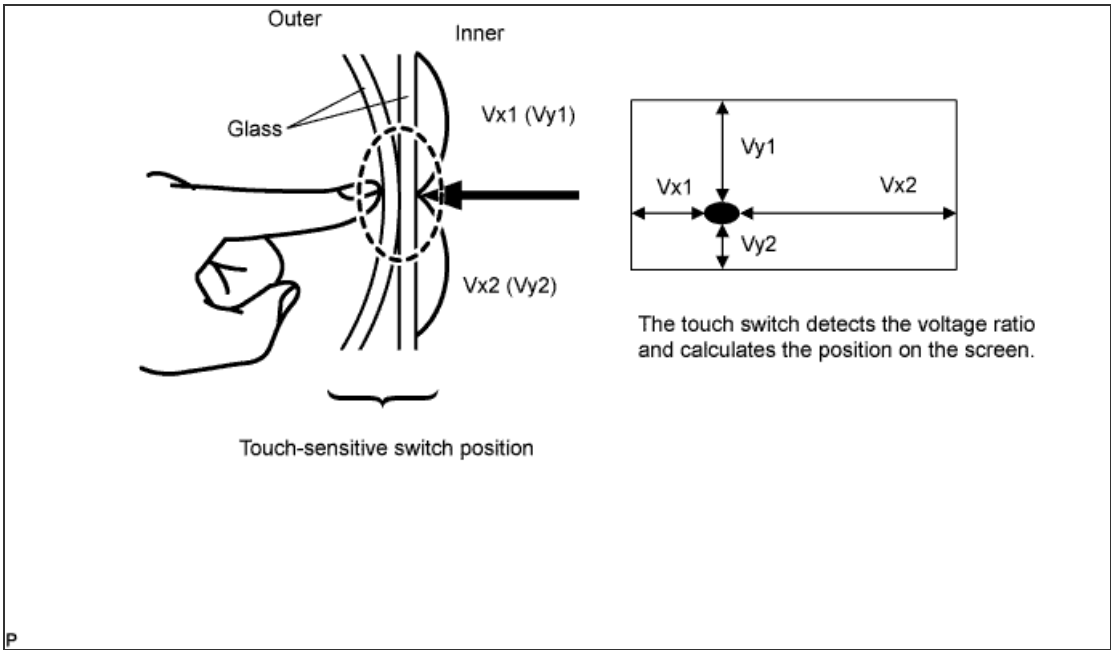
i. Gyro sensor
Used to calculate the direction by detecting angular velocity. It is located in the display and navigation module display.

ii. Vehicle speed sensor signal
Used to calculate the vehicle running distance.



c. GPS* navigation (Satellite navigation)

This method detects the absolute vehicle position using radio waves from GPS satellites.
*GPS satellites were launched by the U.S. Department of Defense for military purposes.



| Number of Satellites | Measurement | Description |
|---|---|---|
| 2 or less | Measurement impossible | Vehicle position cannot be obtained because the number of satellites is not enough. |
| 3 | 2-dimensional measurement is possible | Vehicle position is obtained based on the current longitude and latitude. (This is less precise than 3-dimensional measurement.) |
| 4 | 3-dimensional measurement is possible | Vehicle position is obtained based on the current longitude, latitude and altitude. |

**d.** Map matching
The current driving route is calculated by autonomous navigation (according to the gyro sensor and vehicle speed sensor) and GPS navigation. This information is then compared with possible road shapes from the map data in the map disc and the vehicle position is set onto the most appropriate road.

e. Touch switch
Touch switches are touch-sensitive (interactive) switches operated by touching the screen. When a switch is pressed, the outer glass bends to contact the inner glass at the pressed position. By doing this, the voltage ratio is measured and the pressed position is detected.

## DVD (Digital Versatile Disc) PLAYER OUTLINE (Navigation Map)

a. The navigation module board uses a laser pickup to read the digital signals recorded on a DVD.

**CAUTION:**

Because the navigation system uses an invisible laser beam, do not look directly at the laser pickup. Be sure to only operate the navigation system as instructed.

**NOTICE:**

- **Do not disassemble any part of the navigation module board.**
- **Do not apply oil to the navigation module board.**
- **Do not insert anything but a DVD into the navigation module board.**

## DVD (Digital Versatile Disc) PLAYER OUTLINE (DVD Changer)

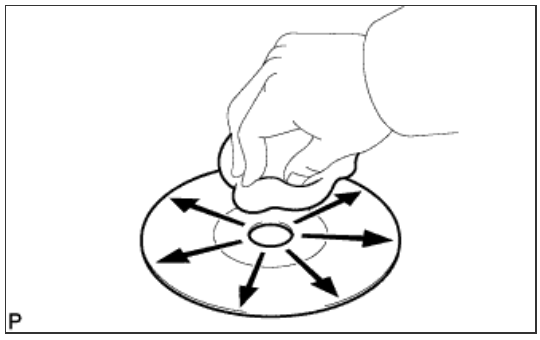
a. The DVD player can only play DVD videos, DVD audio and video CDs that have any of the following marks:

i. Precaution for use of discs

**NOTICE:**

- **PAL or SECAM color television standard discs cannot be played (only NTSC discs can be played).**
- **Keep the discs away from dirt. Be careful not to damage the discs or leave fingerprints on them.**
- **Hold discs by the outer edge and center hole with the label side up.**
- **Leaving the disc exposed halfway out of the slot for a long time after pressing the disc eject button may cause deformation of the disc, making the disc unusable.**
- **Do not use odd-shaped CDs because these may cause player malfunctions.**
- **Do not use discs whose recording portion is transparent or translucent because they may not be inserted, ejected or played normally.**
- **DualDiscs that combine DVD recorded material on one side with CD digital audio material on the other cannot be played.**

b. Cleaning



**NOTICE:**

Do not use a lens cleaner because it may cause a malfunction in the pickup portion of the player.

i. If dirt is on the disc surface, wipe it clean with a soft dry cloth such as an eyeglass cleaner for plastic lenses from the inside to the outside in a radial direction.

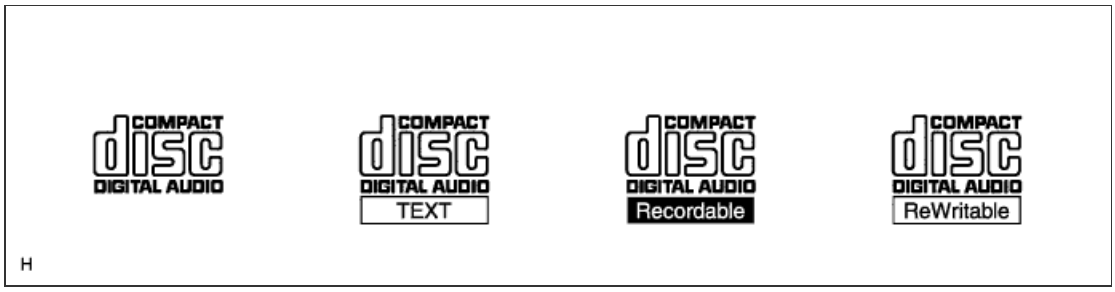
**NOTICE:**

- **Pressing on the disc by hand or rubbing the disc with a hard cloth may scratch the disc surface.**
- **Use of solvent such as a record spray, antistatic agent, alcohol, benzine and thinner or a chemical cloth may cause damage to the disc, making the disc unusable.**

## CD (Compact Disc) PLAYER OUTLINE

a. A compact disc player uses a laser pickup to read digital signals recorded on a compact disc (CD). By converting the digital signals to analog, it can play music and audio.

**CAUTION:**



Do not look directly at the laser pickup because the CD player uses an invisible laser beam. Be sure to operate the player only as instructed.

**NOTICE:**

- **Do not disassemble any part of the CD player.**
- **Do not apply oil to the CD player.**
- **Do not insert anything but a CD into the CD player.**

b. Usable discs

i. This player can play only audio CDs, CD-Rs (CD-Recordable) and CD-RWs (CD-ReWritable) that have any of the following marks:

H

c. Precautions for use of discs

**NOTICE:**

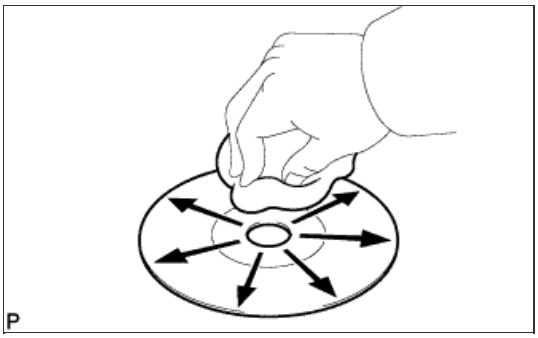
- **Copy-protected CDs cannot be played.**
- **CD-Rs and CD-RWs may not be played depending on the recording conditions or characteristics of the discs, or due to damage, dirt or deterioration caused by leaving the discs in the cabin for a long time.**
- **Unfinalized CD-Rs and CD-RWs cannot be played.**
- **DualDiscs that combine DVD recorded material on one side with CD digital audio material on the other cannot be played.**
- **Keep the discs away from dirt. Be careful not to damage the discs or leave your fingerprints on them.**
- **Hold discs by the outer edge and center hole with the label side up.**
- **Leaving the disc exposed halfway out of the slot for a long time after pressing the disc eject button may cause deformation of the disc, making the disc unusable.**
- **If discs have adhesive tape, stickers, CD labels or any traces of such attached, the discs may not be ejected or player malfunctions may result.**
- **Keep the discs away from direct sunlight. (Exposure to direct sunlight may cause deformation of the disc, making the disc unusable.)**
- **Do not use odd-shaped CDs because these may cause player malfunctions.**
- **Do not use discs whose recording portion is transparent or translucent because they may not be inserted, ejected or played normally.**

**HINT:**

- **When it is cold or it is raining, if the windows mist up, mist and condensation may form in the player. In such cases, the CD sound may skip or stop in the middle of play. Ventilate or dehumidify the cabin for a while before using the player.**
- **The CD sound may skip if the player experiences strong vibrations when the vehicle is driven on rough roads or similar uneven surface(s).**

d. Cleaning

**NOTICE:**



Do not use a lens cleaner because it may cause a malfunction in the pickup portion of the player.

i. If dirt is on the disc surface, wipe it clean with a soft dry cloth such as an eyeglass cleaner for plastic lenses from the inside to the outside in

a radial direction.

**NOTICE:**

- **Pressing on the disc by hand or rubbing the disc with a hard cloth may scratch the disc surface.**
- **Use of solvent such as a record spray, antistatic agent, alcohol, benzine and thinner or a chemical cloth may cause damage to the disc, making the disc unusable.**

## MP3/WMA OUTLINE

a. Playable MP3 file standards

| | |
|---|---|
| Compatible standard | MP3 (MPEG1 LAYER 3, MPEG2 LSF LAYER 3) |
| Compatible sampling frequency | • MPEG1 LAYER 3: 32, 44.1, 48 (kHz)<br>• MPEG2 LSF LAYER 3: 16, 22.05, 24 (kHz) |
| Compatible bit rate | • MPEG1 LAYER 3: 64, 80, 96, 112, 128, 160, 192, 224, 256, 320 (kbps)<br>• MPEG2 LSF LAYER 3: 64, 80, 96, 112, 128, 144, 160 (kbps)<br>• Compatible with VBR |
| Compatible channel mode | Stereo, joint stereo, dual channel, monaural |

b. Playable WMA file standards

| | |
|---|---|
| Compatible standard | WMA Ver. 7, 8, and 9 |
| Compatible sampling frequency | 32, 44.1, 48 (kHz) |
| Compatible bit rate (Only compatible with 2-channel playback) | • Ver. 7, 8: CBR48, 64, 80, 96, 128, 160, 192 (kbps)<br>• Ver. 9: CBR48, 64, 80, 96, 128, 160, 192, 256, 320 (kbps) |

c. ID3 tag and WMA tag

i. Additional textual information called ID3 tag can be input to MP3 files. Information such as song titles and artist names can be stored.

**HINT:**

This player is compatible with the ID3 tags of ID3 Ver. 1.0 and 1.1, and ID3 Ver. 2.2 and 2.3. (Number of characters complies with ID3 Ver. 1.0 and 1.1.)

ii. Additional textual information called WMA tag can be input to WMA files. Information such as song titles and artist names can be stored.

d. Usable media

i. Only CD-ROMs, CD-Rs (CD-Recordable) and CD-RWs (CD-ReWritable) can be used to play MP3/WMA files.

**NOTICE:**

- **CD-Rs and CD-RWs are more easily affected by a hot and humid environment than discs used for normal audio CDs. For this reason, some CD-Rs and CD-RWs will not play.**
- **If there are fingerprints or scratches on a disc, the disc may not play or the CD sound may skip.**
- **Some CD-Rs and CD-RWs may deteriorate if they are left in the cabin for a long time.**
- **Keep CD-Rs and CD-RWs in an opaque case.**

e. Usable media format

i. Usable media format

| | |
|---|---|
| Disc format | CD-ROM Mode 1, CD-ROM XA Mode 2 Form 1 |
| File format | ISO9660 Level 1 and Level 2 (Joliet, Romeo) |

**HINT:**

- **As for MP3/WMA files written in any unlisted format, the contents of the files may not be played normally or the file names or folder names may not be displayed correctly.**
- **This player is compatible with multi-session discs and can play CD-Rs and CD-RWs on which MP3/WMA files**

**are added. However, only the first session can be played.**

- **Discs whose first session includes both music data and MP3 or WMA format data cannot be played.**

ii. Standard and restrictions

| | |
|---|---|
| Maximum directory levels | 8 levels |
| Maximum number of characters for a folder name/file name | 32 characters |
| Maximum number of folders | 192 (Including empty folders, root folders, and folders that do not contain MP3/WMA files) |
| Maximum number of files in a disc | 255 (Including non-MP3/WMA files) |

f. File names

i. Only files with an extension of ".mp3" or ".wma" can be recognized and played as MP3 or WMA files.

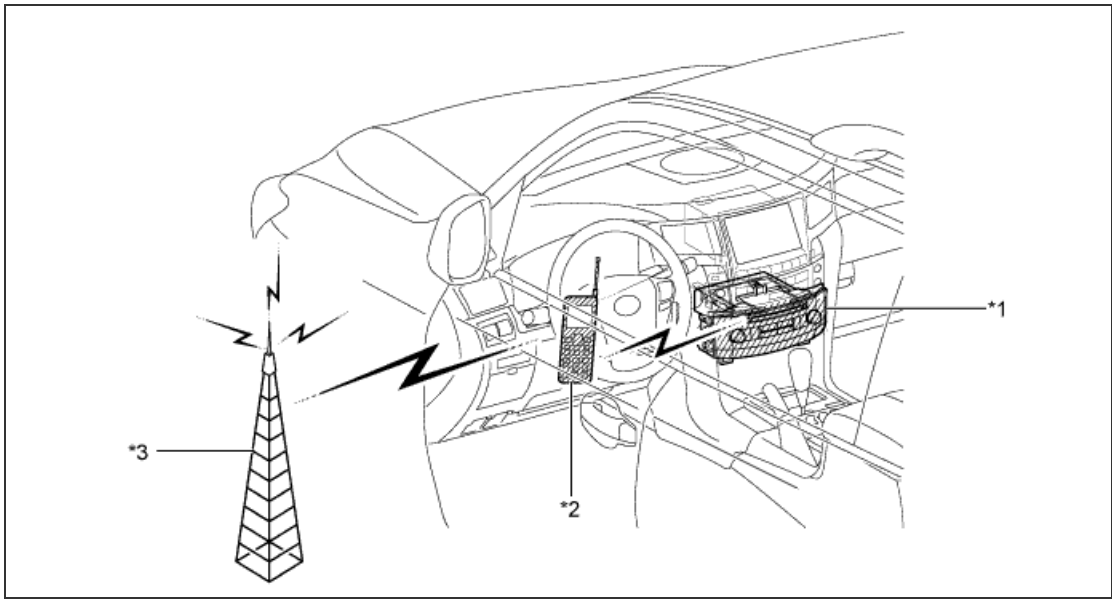
ii. Save MP3 or WMA files with an extension of ".mp3" or ".wma".

**NOTICE:**

If non-MP3 or non-WMA files are saved with an extension of ".mp3" or ".wma", those files may be wrongly recognized as MP3 or WMA files and played. A loud noise may occur and damage to the speakers may result.

## "Bluetooth" OUTLINE

a. "Bluetooth" is a trademark owned by Bluetooth SIG. Inc.



b. "Bluetooth" is a new wireless connection technology that uses the 2.4 GHz frequency band.

**HINT:**

The communication performance of "Bluetooth" may vary depending on obstructions or radio wave conditions between communication devices, electromagnetic radiation, communication device sensitivity or antenna capacity.

c. Hands-free function

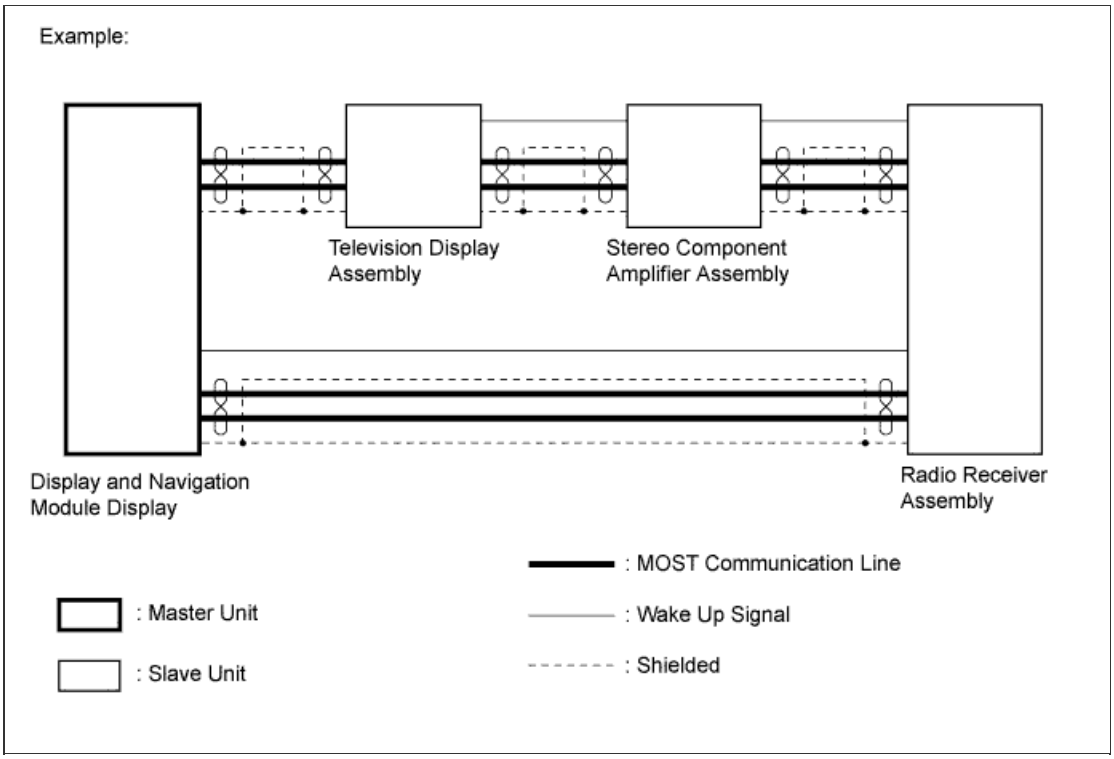
i. The "Bluetooth" built-in radio receiver and a "Bluetooth" compatible cellular phone*1 can be connected using a "Bluetooth" wireless connection. This enables use of the hands-free function on the cellular phone even though the phone may be in a pocket or bag. For this reason, it is not necessary to use a connector or cable to connect the cellular phone.
*1: Some versions of "Bluetooth" compatible cellular phones may not function.

**Text in Illustration**

| | | | |
|---|---|---|---|
| *1 | Radio Receiver Assembly | *2 | Cellular Phone |

| | | | |
|---|---|---|---|
| | (Built-in "Bluetooth" Receiver Antenna) | | ("Bluetooth" Type) |
| *3 | Cellular Tower | - | - |

## VEHICLE CUSTOMIZATION OUTLINE



a. Customization of functions can be performed on the multi display screen. Refer to the owner's manual for further information on customizable items for the navigation system.

**HINT:**

- **Items available for customization via the navigation system can be performed by using the intelligent tester.**
- **Some customize parameters displayed on the intelligent tester will be displayed on the "Vehicle Customization" screen for the navigation system. Users can customize these items.**

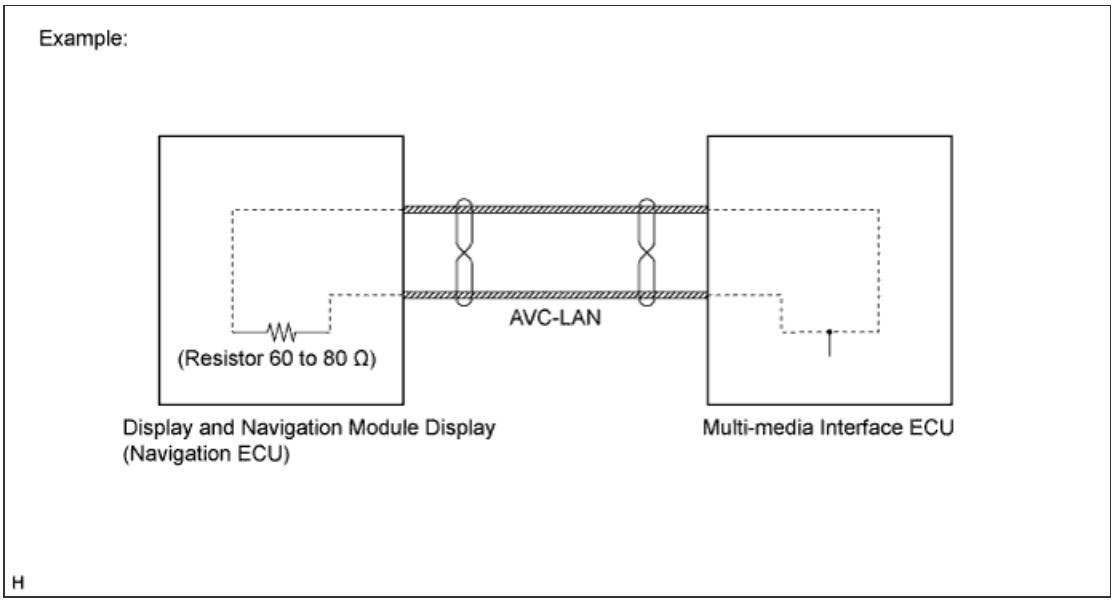
## COMMUNICATION SYSTEM

a. MOST Network Outline

i. Navigation system components communicate with each other via the MOST network.

ii. The MOST network uses a shielded twisted pair of wires for its communication lines.

iii. The master unit of the MOST network is the display and navigation module display (navigation ECU).



iv. MOST communication lines connect each slave unit centering around the master unit to form a MOST network ring.

v. The master unit sends a wake-up signal to activate each slave unit connected to the MOST network.

**HINT:**

If a short or open circuit occurs in the MOST circuit, communication will be interrupted and the system will not operate normally.

b. AVC-LAN Outline

i. Components of the navigation system communicate with each other via the AVC-LAN.

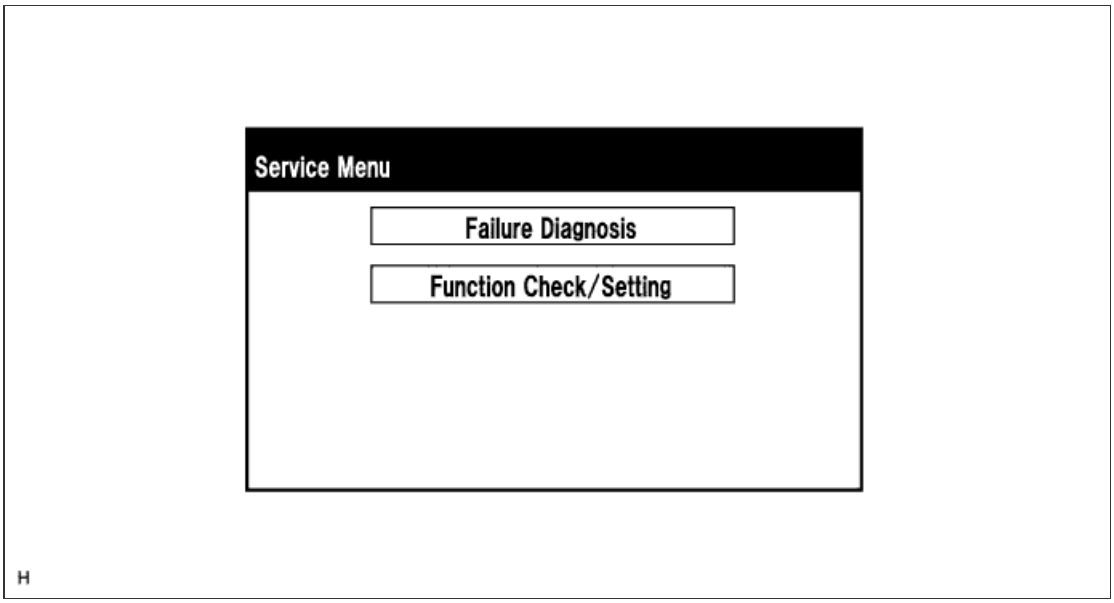
ii. The AVC-LAN uses a twisted pair of wires for its communication lines.

iii. The master unit of the AVC-LAN is the display and navigation module display (navigation ECU).

**HINT:**

- **The display and navigation module display (navigation ECU) has enough resistance (60 to 80 Ω) necessary for communication.**
- **If a short or open circuit occurs in the AVC-LAN circuit, communication is interrupted and the system will not operate normally.**

## DIAGNOSTIC FUNCTION OUTLINE

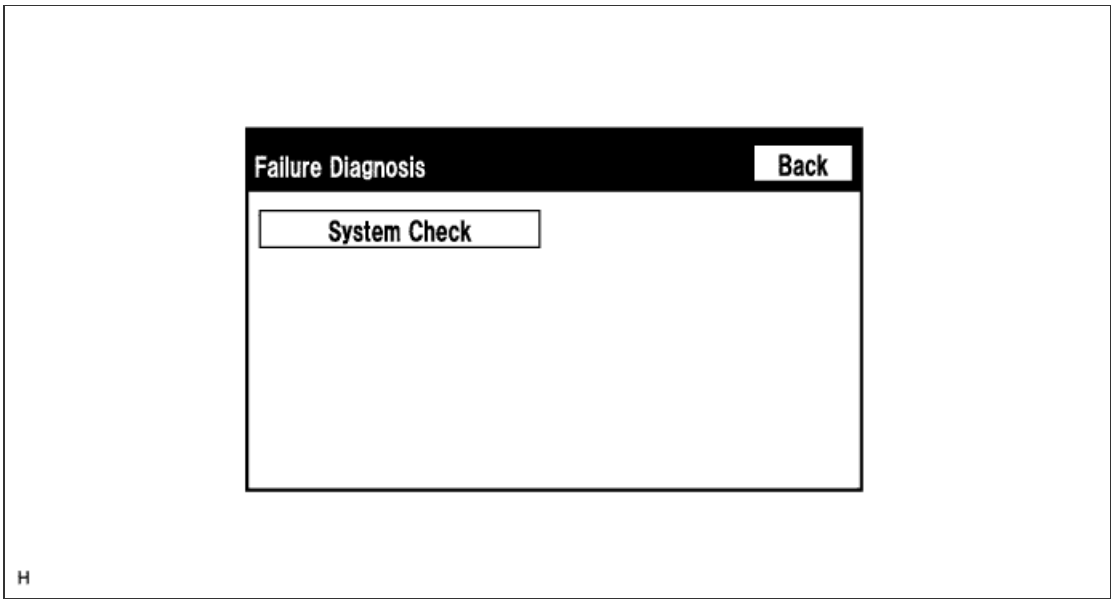


a. The navigation system has a diagnostic function (the result will be displayed on the master unit or the intelligent tester).

## DIAGNOSIS DISPLAY DETAILED DESCRIPTION

**HINT:**

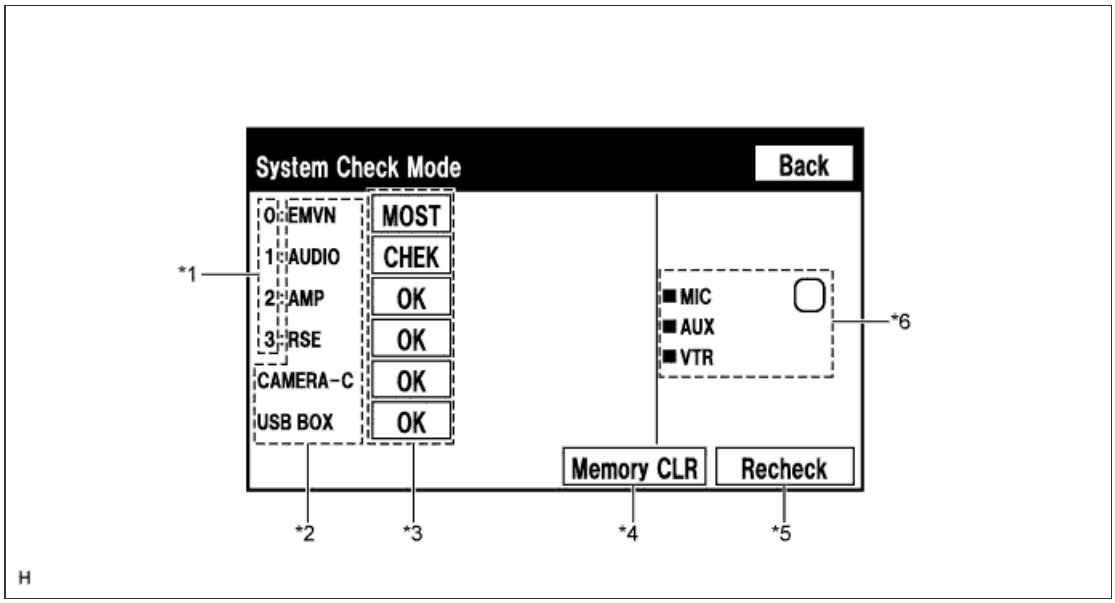
- **This section contains a detailed description of displays in diagnostic mode.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**



a. Service Menu Screen

**HINT:**

Each item is grayed out or not displayed based on the device settings.



b. Failure Diagnosis Screen

**HINT:**

Each item is grayed out or not displayed based on the device settings.

i. System Check Mode Screen

*1: Node position number for devices connected to the MOST network.

**HINT:**

MOST node position numbers are provided for devices connected to the MOST network.

*2: Device Name List No. 1

**HINT:**

- **Device Name List No. 1 displays some of the devices that make up the navigation system.**
- **The names of the components from Device Name List No. 1 are shown in the following table.**

| Name | Component | Connection Method |
|---|---|---|
| EMVN | Display and navigation module display | - |
| AUDIO | Radio receiver assembly | Communication line for MOST network |
| AMP | Stereo component amplifier assembly | Communication line for MOST network |
| RSE | Television display assembly | Communication line for MOST network |
| CAMERA-C | Parking assist ECU | Communication line for AVC-LAN |
| USB BOX | Multi-media interface ECU | Communication line for AVC-LAN |

*3: Check Result

**HINT:**

- **Result codes for all devices are displayed.**
- **When "MOST" is displayed for the result, press "MODE" on the steering pad switch assembly to display the "MOST Line Check" screen.**

| Result | Meaning | Action |
|---|---|---|
| OK | The device does not respond with a DTC. | - |
| MOST | MOST communication error | Perform "MOST Line Check" to check the connection of each device on the MOST network. |
| EXCH | The device responds with a "replace"-type DTC. | Look up the DTC in "Unit Check Mode" and replace the device. |
| CHEK | The device responds with a "check"-type DTC. | Look up the DTC in "Unit Check Mode". |
| NCON | The device was previously present, but does not respond in diagnostic mode. | - Check power supply wire harness of the device.<br>- Check the AVC-LAN or MOST network for the |

| | | |
|---|---|---|
| | | device. |
| NRES | The device responds in diagnostic mode, but gives no DTC information. | - Check power supply wire harness of the device.<br>- Check the AVC-LAN or MOST network for the device. |

*4: Memory Clear

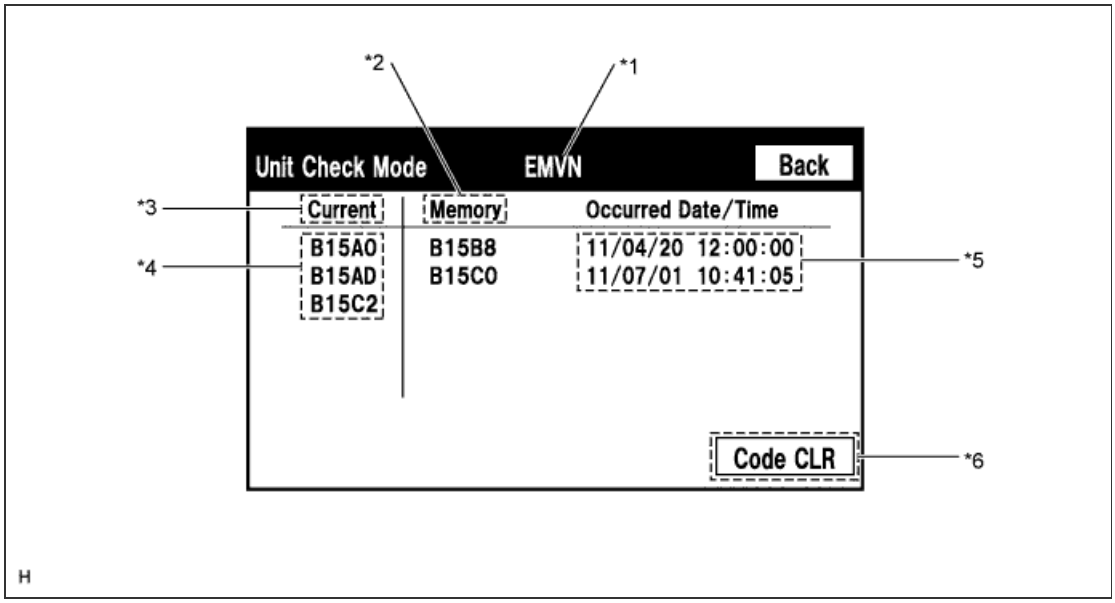
**HINT:**

- **Present and history DTCs and registered connected device names are cleared.**
- **Press the "Memory CLR" switch for 3 seconds.**

*5: Recheck

**HINT:**

- **A system check will be performed again after the memory is cleared.**
- **The "Recheck" switch will dim during a system check.**



*6: Device Name List No. 2

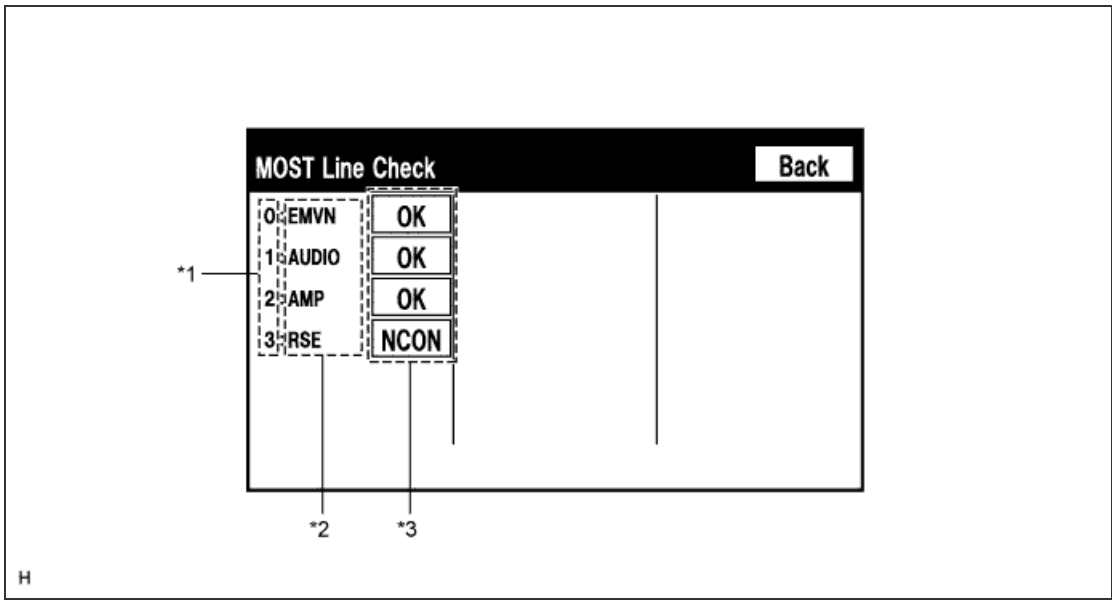
**HINT:**

- **Device Name List No. 2 displays some of the devices that make up the navigation system.**
- **The names of the components from Device Name List No. 2 are shown in the following table.**

| Name | Component | Connection Method |
|---|---|---|
| MIC | Telephone microphone assembly | Vehicle wire harness |
| AUX | Stereo jack adapter assembly | Vehicle wire harness |
| VTR | Video (video adapter) terminal | Vehicle wire harness |

ii. Unit Check Mode Screen

**Screen Description**



| Display | Content |
|---|---|
| *1: Device name | Target device |
| *2: History DTC | Diagnostic memory results and stored DTCs are displayed. |
| *3: Present DTC | DTCs output in the service check are displayed. |
| *4: DTC | DTC (Diagnostic Trouble Code) |
| *5: Timestamp | The time and date of history DTCs are displayed. (The year is displayed in 2-digit format.) |
| *6: Diagnosis | Pushing this switch for 3 seconds clears the diagnostic memory data of the target device. (Both |

| | |
|---|---|
| clear switch | response to diagnostic system check result and the displayed data are cleared.) |

iii. MOST Line Check Screen

**HINT:**

- **The inspection will be performed at the time the screen changes from "System Check Mode" to "MOST Line Check".**
- **The master unit checks the connection of each device on the MOST network.**

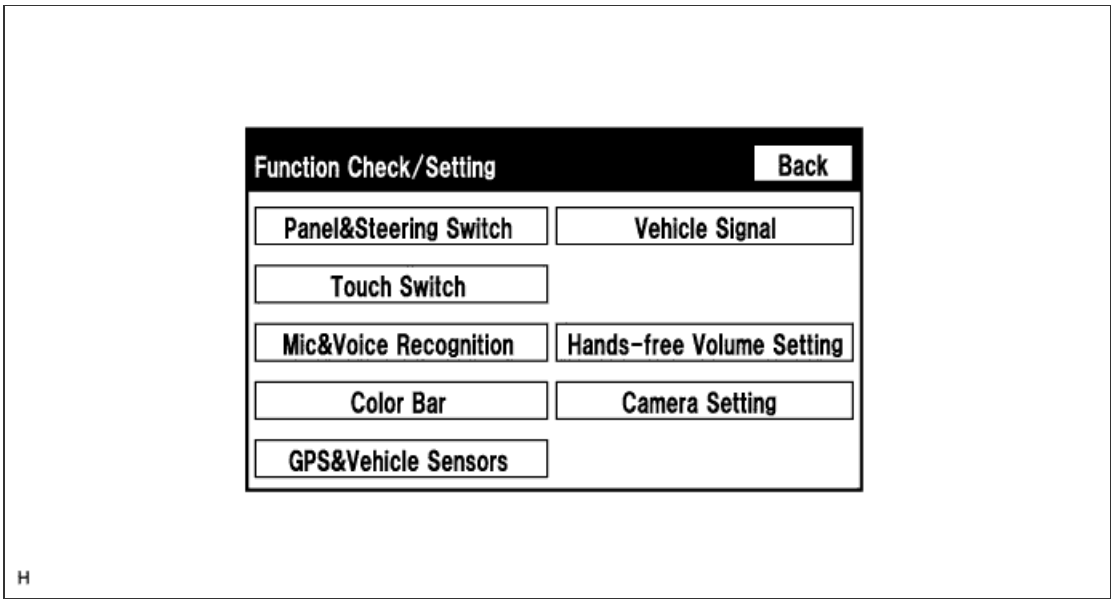
*1: Node position number for devices connected to the MOST network.
*2: Device Name List

**HINT:**

- **Device Name List displays some of the devices that make up the navigation system.**
- **The names of the components from Device Name List are shown in the following table.**

| Name | Component |
|---|---|
| EMVN | Display and navigation module display |
| AUDIO | Radio receiver assembly |
| AMP | Stereo component amplifier assembly |
| RSE | Television display assembly |

*3: Check Result

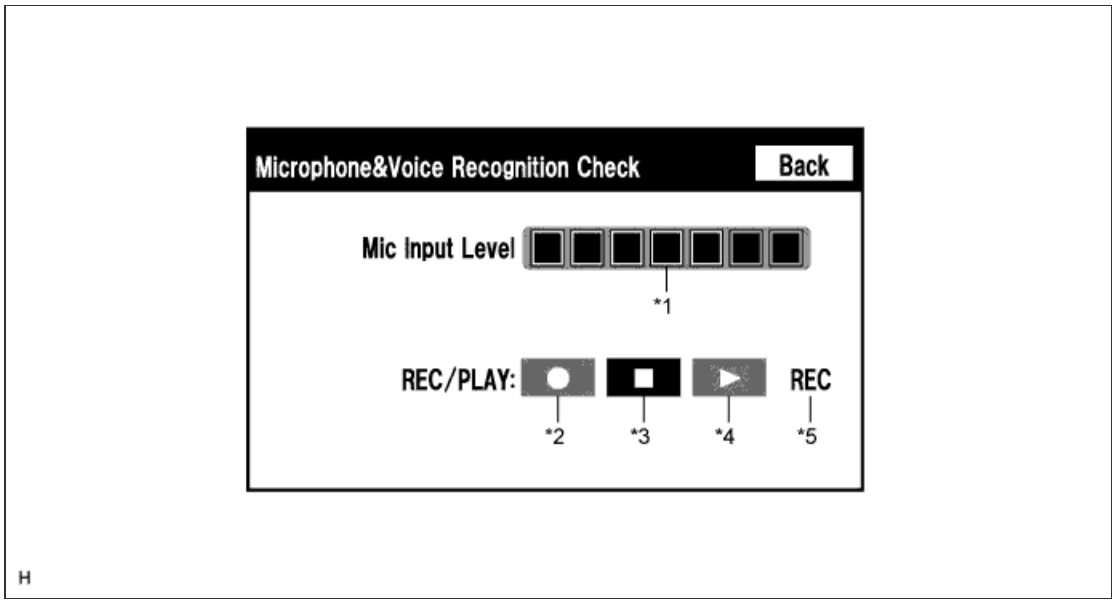


**HINT:**

- **The master unit displays the check result on the screen based on the response information from each slave unit.**
- **Result codes for all devices are displayed.**

| Result | Meaning |
|---|---|
| OK | There was a response for the connection check during the MOST line check. |
| NCON | There was no response for the connection check during the MOST line check. |

- **The device name and result will not be displayed if there is no system registration record and no response for the connection check during the MOST line check even if the device is connected to the MOST network.**

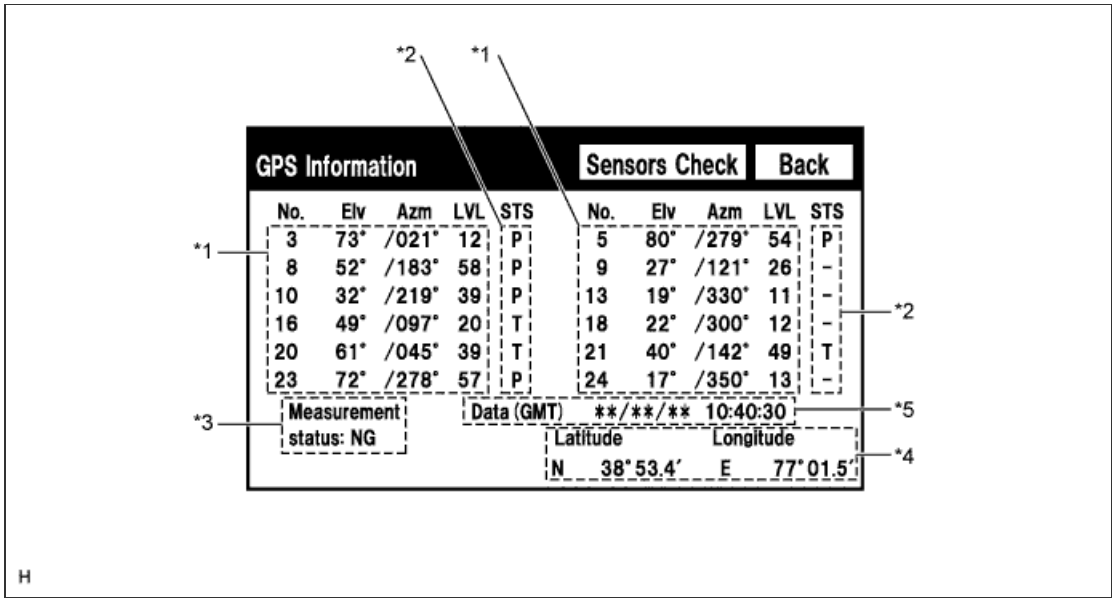


c. Function Check/Setting Screen

**HINT:**

Each item is grayed out or not displayed based on the device settings.

i. Microphone & Voice Recognition Check Screen



**Screen Description**

| Display | Content |
|---|---|
| *1: Microphone input level meter | Monitors the microphone input level every 0.1 sec. and displays the results in 8 different levels. |
| *2: Recording switch | Starts recording. |
| *3: Stop switch | Stops recording and playing. |
| *4: Play switch | Plays the recorded voice. |
| *5: Recording indicator | Comes on while recording. |

**HINT:**

- **The microphone is active at all times when this screen is displayed.**
- **While recording or playing, the switches other than the stop switch cannot be pushed.**
- **When no recording is present, the play switch cannot be pushed.**
- **Recording will stop after 5 seconds or when the stop switch is pushed.**

ii. GPS Information Screen

*1: Satellite information

**HINT:**

Information from a maximum of 12 satellites is displayed on the screen. This information includes the target GPS satellite number, elevation angle, direction and signal level.

*2: Receiving condition

**Screen Description**

| Display | Content |
|---|---|
| T | The system is receiving a GPS signal, but is not using it for location. |
| P | The system is using the GPS signal for location. |
| - | The system cannot receive a GPS signal. |

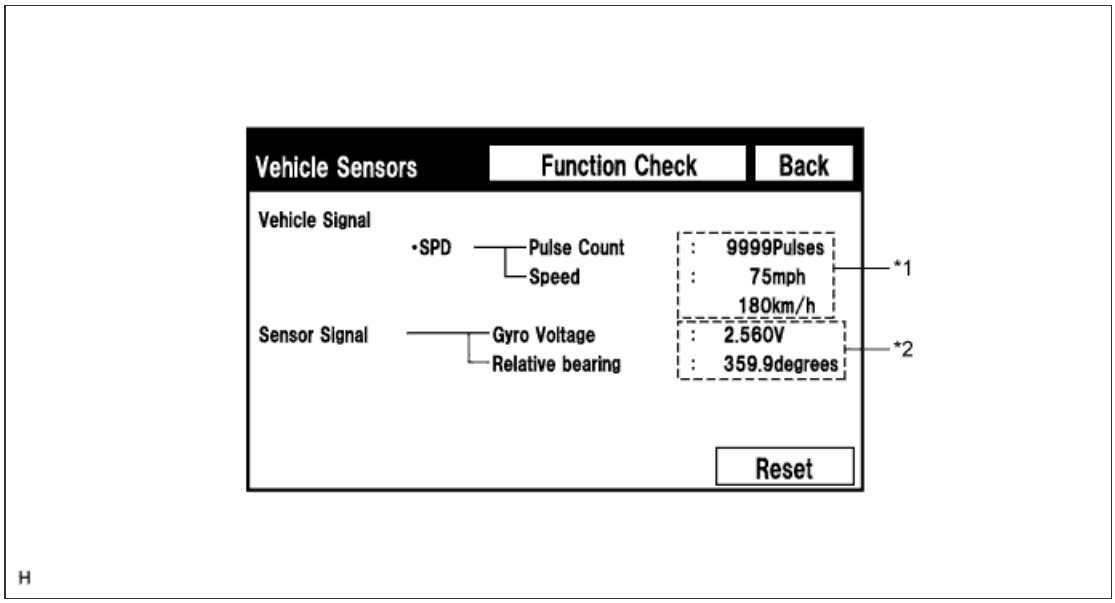
*3: Measurement information

**Screen Description**

| Display | Content |
|---|---|
| 2D | 2-dimensional location method is being used. |
| 3D | 3-dimensional location method is being used. |
| NG | Location data cannot be used. |
| Error | Reception error has occurred. |
| - | Any other state. |

*4: Position information

**Screen Description**



| Display | Content |
|---|---|
| Position | Latitude and longitude information on the current position is displayed. |

*5: Date information

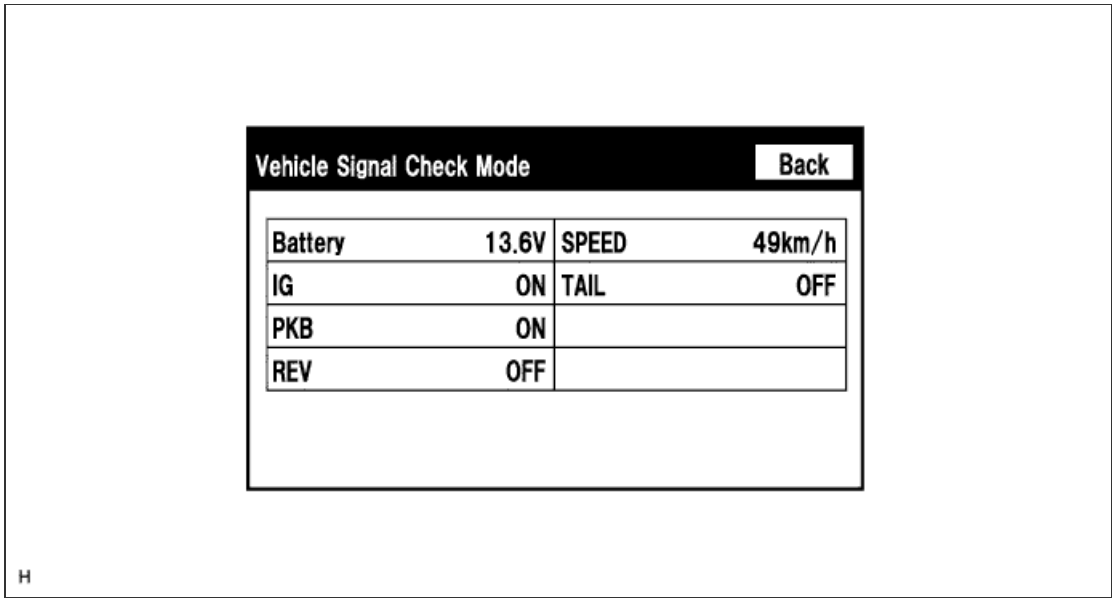
**Screen Description**

| Display | Content |
|---|---|
| Date | The date/time information obtained from GPS signal is displayed in Greenwich Mean Time (GMT). The last 4 digits are displayed. |

iii. Vehicle Sensors Screen

**Vehicle Signal**

| Display | Content |
|---|---|
| *1: SPD | SPD signal condition is displayed. |



**Sensor Signal**

| Display | Content |
|---|---|
| *2: Gyro sensor | Gyro sensor output condition is displayed.<br>2.1 to 2.9 V |

**HINT:**

Signals are updated once per second only when vehicle sensor signals are changed.

iv. Vehicle Signal Check Mode Screen

**Screen Description**

| Display | Content |
|---|---|
| Battery | Battery voltage is displayed. |
| IG | Engine switch ON/OFF state is displayed. |
| PKB | Parking brake ON/OFF state is displayed. |
| REV | Reverse signal ON/OFF state is displayed. |
| SPEED | Vehicle speed is displayed in km/h. |

| | |
|---|---|
| TAIL | TAIL signal (Light control switch) ON/OFF state is displayed. |

**HINT:**

- **Only items sending vehicle signals will be displayed.**
- **This screen is updated once per second when input signals to the vehicle are changed.**

**for Preparation** Click here

**HINT:**

- **Use the following procedure to troubleshoot the navigation system (for DVD).**
- ***: Use the intelligent tester.**

## 1.VEHICLE BROUGHT TO WORKSHOP

**NEXT**

## 2.INSPECT BATTERY VOLTAGE

a. Inspect the battery voltage.

**Standard Voltage:**
**11 to 14 V**

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

**NEXT**

## 3.DIAGNOSTIC QUESTIONING AND SYMPTOM CONFIRMATION

a. Ask the customer about symptoms and confirm malfunctions.

**Result**

| Result | Proceed to |
|---|---|
| Other symptoms. | A |
| The screen displays nothing. | B |

**B.** → **Go to step 10, AND PROCEED TO "BLACK SCREEN"**

**A**

## 4.OPERATION CHECK

a. Refer to Check System Normal Condition ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| Symptom is not normal operation. | A |
| Symptom is normal operation. | B |

**B.** → **SYMPTOM IS NORMAL OPERATION**

**A**

## 5.CHECK CAN COMMUNICATION SYSTEM*

a. Check for DTC output.

**HINT:**

- **for LHD (Click here)**
- **for RHD (Click here)**

Result

| Result | Proceed to |
|---|---|
| DTC is not output. | A |
| DTC is output. (for LHD) | B |
| DTC is output. (for RHD) | C |

B. GO TO CAN COMMUNICATION SYSTEM (Click here)

C. GO TO CAN COMMUNICATION SYSTEM (Click here)

A

## 6.CHECK FOR DTC*

a. Refer to DTC Check/Clear (Click here).

Result

| Result | Proceed to |
|---|---|
| DTC is output. | A |
| DTC is not output. | B |

**HINT:**

If more information is needed, perform a recheck using the "System Check Mode" screen after rechecking for DTCs using the intelligent tester (Click here).

B. Go to step 10

A

## 7.DTC CLEAR*

a. Refer to the DTC Check/Clear (Click here).

**HINT:**

The current DTCs may not indicate actual malfunctions depending on the vehicle operating conditions.

NEXT

## 8.RECHECK FOR DTC*

Result

| Result | Proceed to |
|---|---|
| DTC is output. | A |
| DTC is not output. | B |

**HINT:**

- **Even if the malfunction symptom is not confirmed, check for DTCs. This is because the system stores history DTCs.**
- **If more information is needed, perform a recheck using the "System Check Mode" screen after rechecking for DTCs using the intelligent tester (Click here).**
- **Check the DTC and inspect the area code indicates.**

B. Go to step 10

A

## 9.DIAGNOSTIC TROUBLE CODE CHART

a. Find the output code in Diagnostic Trouble Code Chart (Click here).

**NOTICE:**

- **The navigation system outputs DTCs for the following system.**
- **When DTCs other than those in Diagnostic Trouble Code Chart for the navigation system are output, refer to Diagnostic Trouble Code Chart for the system.**
- **Audio and visual system (w/ navigation system) ( Click here)**
- **Rear seat entertainment system (w/ rear seat entertainment system) ( Click here)**
- **Parking assist monitor system (w/ parking assist monitor system) ( Click here).**
- **Wide view front monitor system (w/ wide view front monitor system) ( Click here)**
- **Side monitor system (w/ side monitor system) ( Click here)**

**Result**

| Result | Proceed to |
|---|---|
| DTCs for the navigation system are output. | A |
| DTCs for the audio and visual system (w/ navigation system) are output. | B |
| DTCs for the rear seat entertainment system (w/ rear seat entertainment system) are output. | C |
| DTCs for the parking assist monitor system (w/ parking assist monitor system) are output. | D |
| DTCs for the wide view front monitor system (w/ wide view front monitor system) are output. | E |
| DTCs for the side monitor system (w/ side monitor system) are output. | F |

| | |
|---|---|
| **A.** | **Go to step 12** |
| **B.** | **GO TO AUDIO AND VISUAL SYSTEM (w/ Navigation System) ( Click here)** |
| **C.** | **GO TO REAR SEAT ENTERTAINMENT SYSTEM ( Click here)** |
| **D.** | **GO TO PARKING ASSIST MONITOR SYSTEM ( Click here)** |
| **E.** | **GO TO WIDE VIEW FRONT MONITOR SYSTEM (w/ Parking Assist Monitor System) ( Click here)** |
| **F.** | **GO TO SIDE MONITOR SYSTEM (w/ Parking Assist Monitor System) ( Click here)** |

## 10.PROBLEM SYMPTOMS TABLE

a. Refer to Problem Symptoms Table ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| Fault is not listed in Problem Symptoms Table. | A |
| Fault is listed in Problem Symptoms Table. | B |

**HINT:**

If the symptom does not recur and no DTC is output, perform the symptom reproduction method ( Click here).

| | |
|---|---|
| **B.** | **Go to step 12** |

**A**

## 11.CHECK ECU TERMINAL ARRANGEMENT BASED ON MALFUNCTION SYMPTOM

a. Refer to Terminals of ECU ( Click here).

**NEXT**

## 12.CHECK CIRCUIT

a. Adjust, repair or replace as necessary.

NEXT

13.RECHECK FOR DIAGNOSTIC TROUBLE CODE

**HINT:**

After clearing the DTCs, recheck for DTCs.

NEXT

14.PERFORM CONFIRMATION TEST

NEXT

END

**for Preparation** Click here

**HINT:**

- **Use the following procedure to troubleshoot the navigation system (for DVD).**
- ***: Use the intelligent tester.**

## 1.VEHICLE BROUGHT TO WORKSHOP

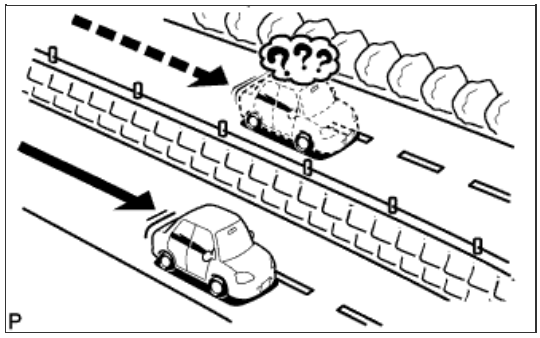
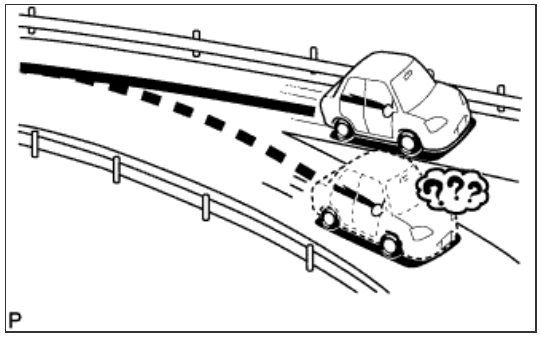
**for Preparation** Click here



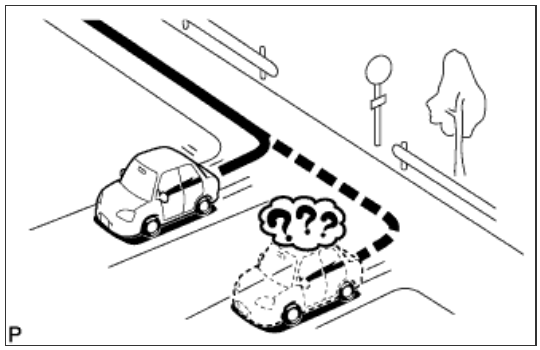
## CHECK SYSTEM NORMAL CONDITION

a. If the symptom is applicable to any of the following, it is intended behavior, and not a malfunction.

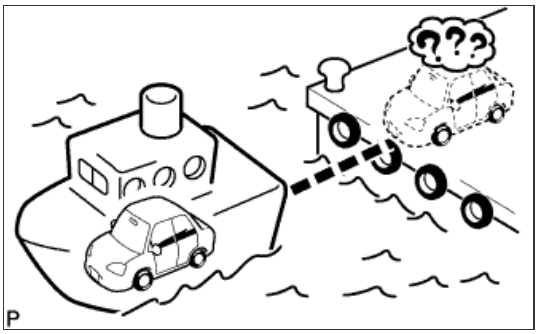


| Symptom | Answer |
|---|---|
| A longer route than expected is chosen. | Depending on the road conditions, the display and navigation module display may determine that a longer route is quicker. |
| Even when distance priority is high, the shortest route is not shown. | Some routes may not be advised due to safety concerns. |
| When the vehicle is put into motion immediately after the engine starts, the navigation system deviates from the actual position. | If the vehicle starts before the navigation system activates, the system may not react. |
| When running on certain types of roads, especially new roads, the vehicle position deviates from the actual position. | When the vehicle is driving on new roads not available on the map disc, the system attempts to match it to another nearby road, causing the position mark to deviate. |

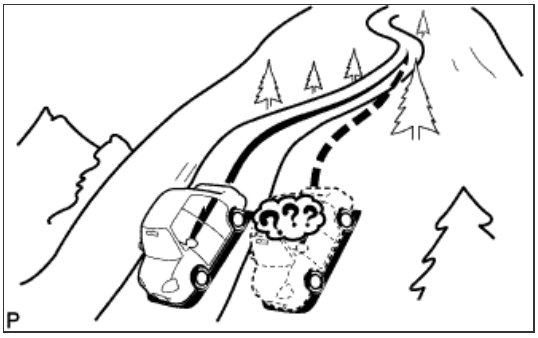
b. The following symptoms are not malfunctions, but are caused by errors inherent in the GPS, gyro sensor, speed sensor or display and navigation module display.



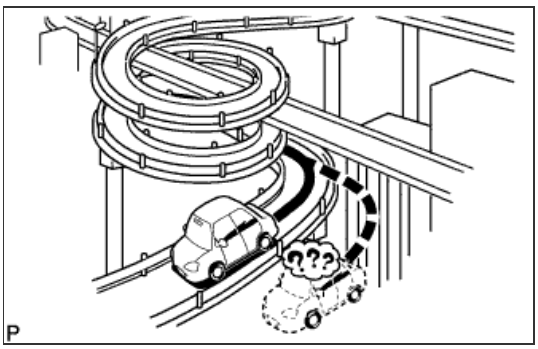
i. The current position mark may be displayed on a nearby parallel road.



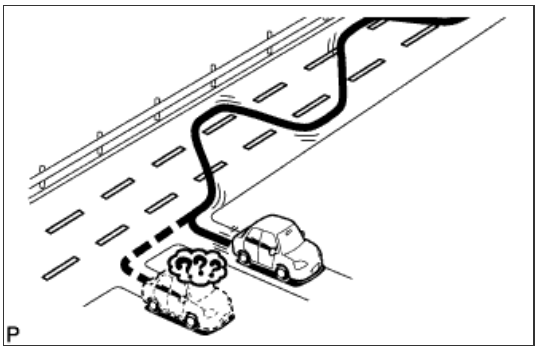
ii. Immediately after a fork in the road, the current vehicle position mark may be displayed on the wrong road.



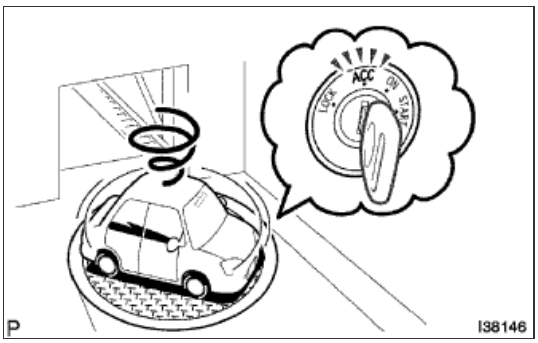
iii. When the vehicle turns right or left at an intersection, the current vehicle position mark may be displayed on a nearby parallel road.



iv. When the vehicle is carried, such as on a ferry, and the vehicle itself is not running, the current vehicle position mark may be displayed in the position where the vehicle was until a measurement can be performed by GPS.



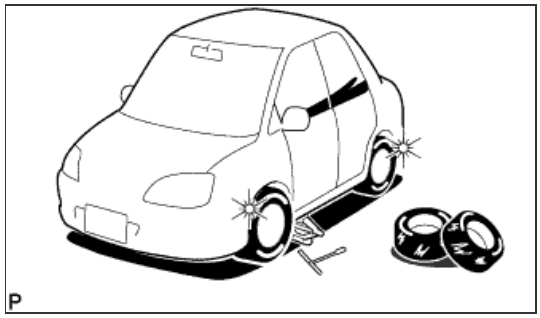
v. When the vehicle travels on a steep hill, the current vehicle position mark may deviate from the correct position.



vi. When the vehicle makes a continuous turn (e.g. 360, 720, 1080 degrees) the current vehicle position mark may deviate from the correct position.

vii. When the vehicle moves erratically, such as constant lane changes, the current vehicle position mark may deviate from the correct position.

viii. When the engine switch is turned on (ACC or IG) on a turntable before parking, the current vehicle position mark may not indicate the correct direction. The same will occur when the vehicle comes out of the parking garage.

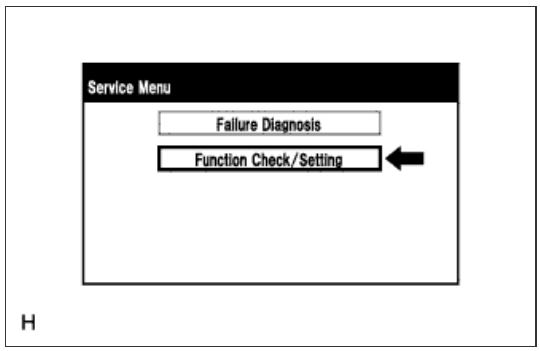


ix. When the vehicle travels on a snowy road or a mountain path with the chains installed or using a spare tire, the current vehicle position mark may deviate from the correct position.

x. When the tires are changed, the current vehicle position mark may deviate from the correct position.

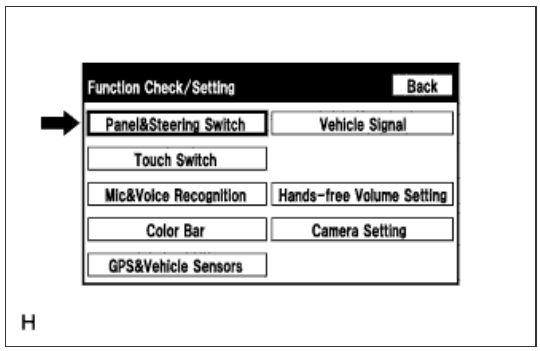
**HINT:**

- **A change in tire diameter may cause a speed sensor error.**
- **Performing "tire change" in calibration mode will allow the system to correct the current vehicle position faster.**



## CHECK PANEL & STEERING SWITCH

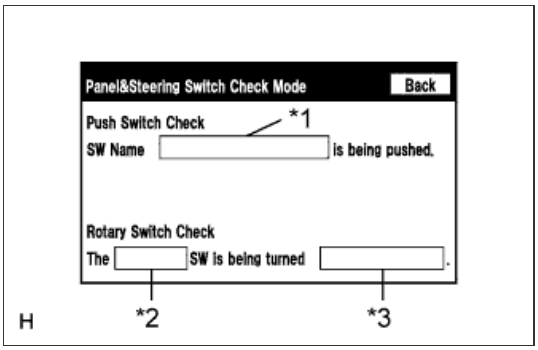
**HINT:**



- **The display and navigation module display panel switches, radio receiver assembly panel switches and steering switches are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.



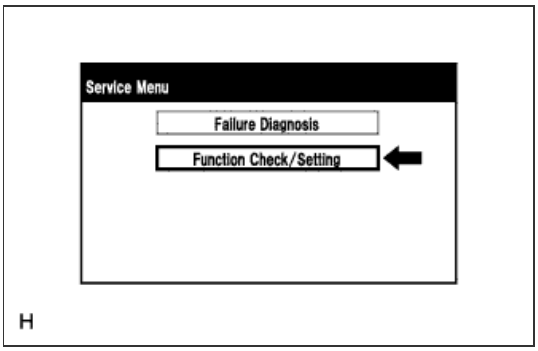
c. Select "Panel & Steering Switch" from the "Function Check/Setting" screen.

d. Panel & Steering Switch Check Mode

i. Operate each switch and check that the switch names and condition are correctly displayed.

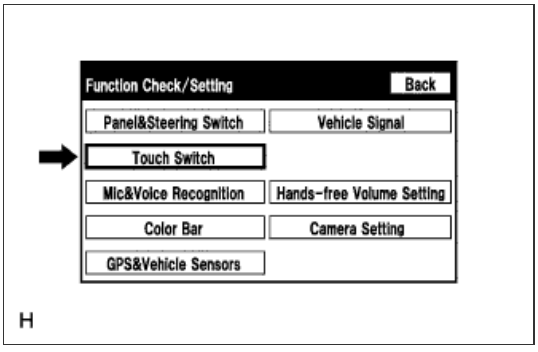
**Screen Description**

| Display | Content |
|---|---|
| *1: Push switch name | • Name of the pressed switch is displayed.<br>• If more than one switch is pressed, "MULTIPLE" will be displayed. |
| *2: Rotary switch name | Name of the rotary switch is displayed. |
| *3: Rotary switch direction | Direction of the rotary switch is displayed. |



## CHECK TOUCH SWITCH

**HINT:**

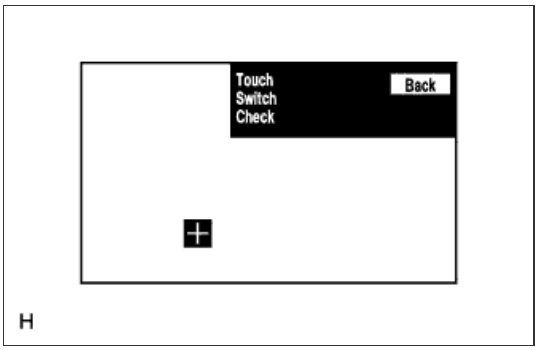


- **The touch switches on the screen are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "Touch Switch" from the "Function Check/Setting" screen.



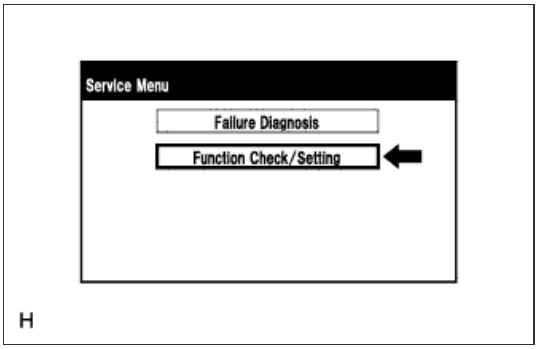
d. Touch Switch Check

i. Touch the display anywhere in the open area to perform the check when the "Touch Switch Check" screen is displayed.

**HINT:**

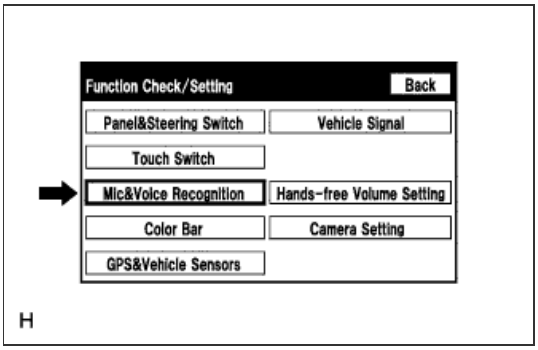
- **A "+" mark is displayed where the display is touched.**
- **The "+" mark remains on the display even after the**

finger is removed.



## CHECK MIC & VOICE RECOGNITION

**HINT:**



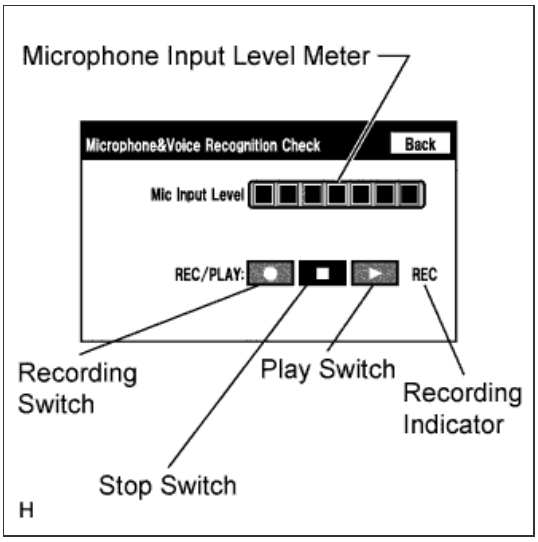
- **The microphone and microphone input level are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "Mic & Voice Recognition" from the "Function Check/Setting" screen.

d. Microphone & Voice Recognition Check



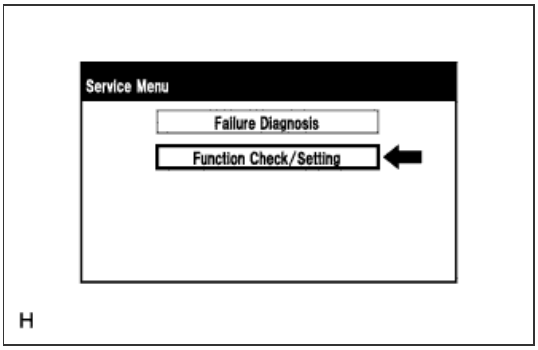
i. When speaking into the microphone, check that the microphone input level meter changes according to the input level.

ii. Push the recording switch and perform voice recording.

iii. Check that the recording indicator remains on while recording and that the recording can be played normally.

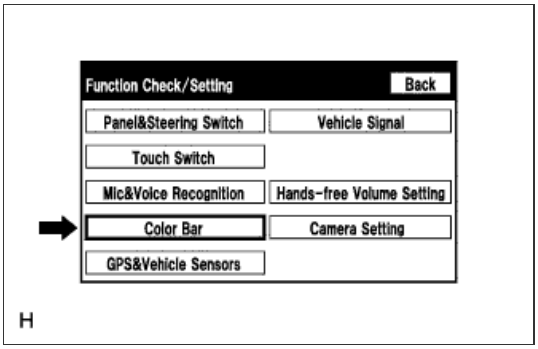
**HINT:**

- **For details of this function, refer to Diagnosis Display Detailed Description (Click here).**
- **This function is controlled by the display and navigation module display (built-in navigation ECU).**



## CHECK COLOR BAR

**HINT:**



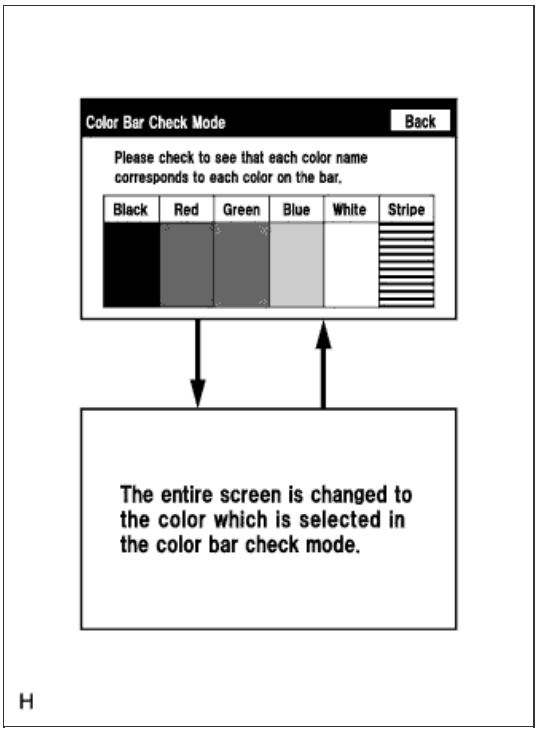
- **The display color on the screen is checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "Color Bar" from the "Function Check/Setting" screen.

d. Color Bar Check Mode



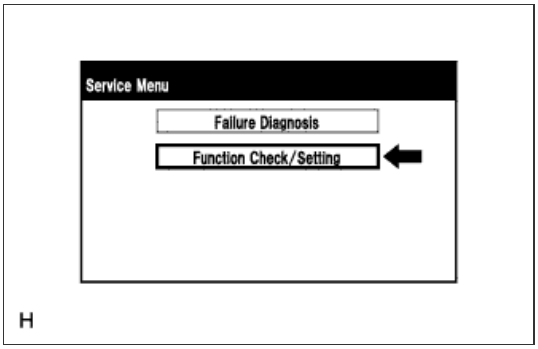
i. Select a color bar from the "Color Bar Check Mode" screen.

ii. Check the display color.

**HINT:**

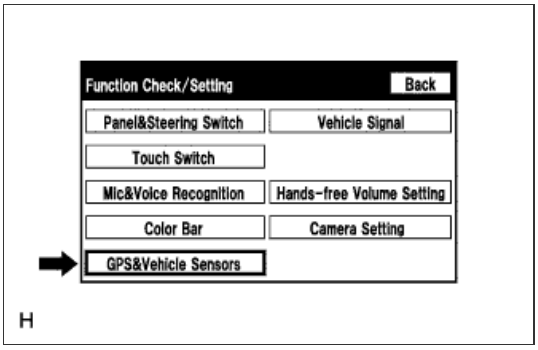
- **The entire screen turns to the color or stripe selected.**

- **Touching the display will return to the "Color Bar Check" screen.**



## CHECK GPS & VEHICLE SENSORS

**HINT:**

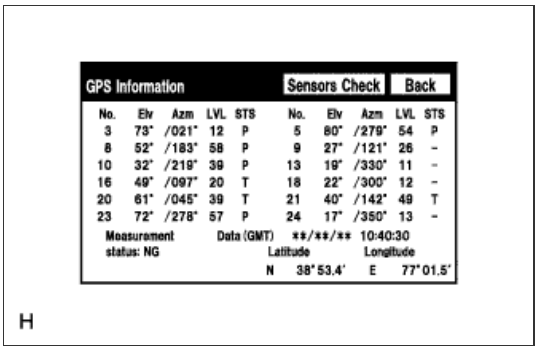


- **GPS information, vehicle signals and sensor signals are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "GPS & Vehicle Sensors" from the "Function Check/Setting" screen.



d. GPS information

i. When GPS information is displayed, check the GPS conditions.

**HINT:**

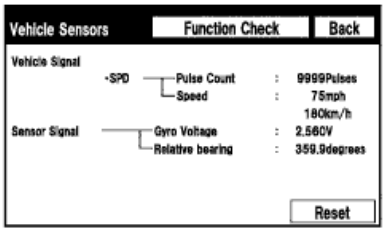
- **This screen is updated once per second when input signals to the vehicle are changed.**
- **For details of this function, refer to Diagnosis Display Detailed Description in System Description (Click here).**

H



e. Select "Sensors Check" from the "GPS Information" screen.

f. Vehicle Sensors

i. Check all the signals and sensors when vehicle signal information is displayed.

**HINT:**

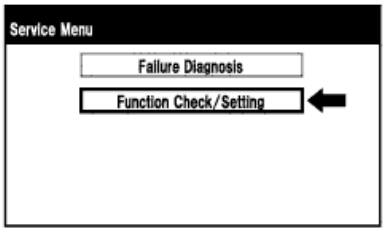
- **This screen is updated once per second when input signals to the vehicle are changed.**
- **This screen displays vehicle signals input to the display and navigation module display (built-in navigation ECU).**
- **For details of this function, refer to Diagnosis Display Detailed Description in System Description (Click here).**

H



## CHECK VEHICLE SIGNAL

**HINT:**

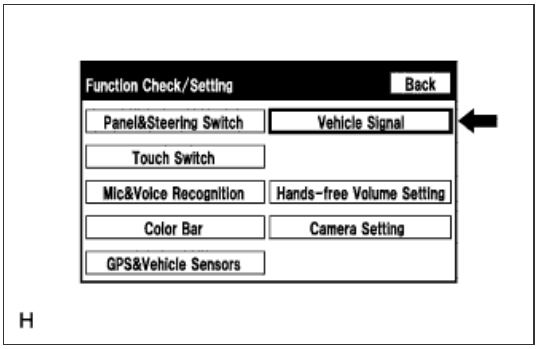
- **Vehicle signals received by the display and navigation module display are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

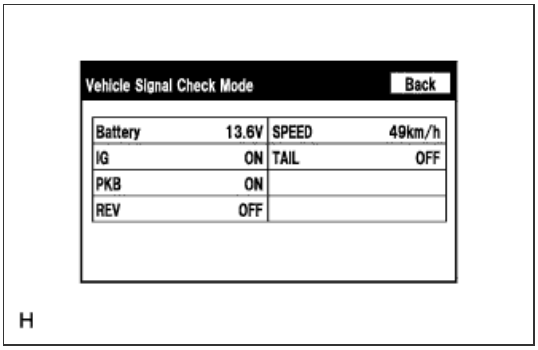


a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

H

c. Select "Vehicle Signal" from the "Function Check/Setting" screen.



d. Vehicle Signal Check Mode

i. When the "Vehicle Signal Check Mode" screen is displayed, check all the vehicle signal conditions.

**HINT:**

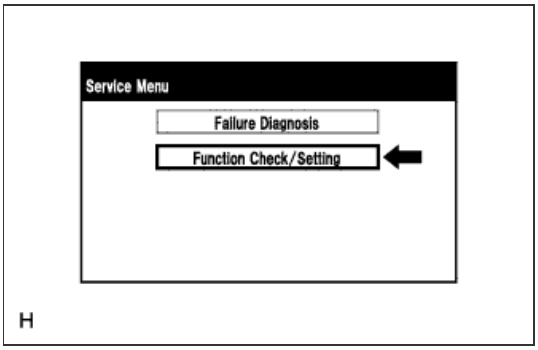
- **Only conditions having inputs are displayed.**
- **This screen displays vehicle signals input to the display and navigation module display.**
- **For details of this function, refer to Diagnosis Display Detailed Description in System Description (Click here).**



## CHECK HANDS-FREE VOLUME SETTING

**HINT:**

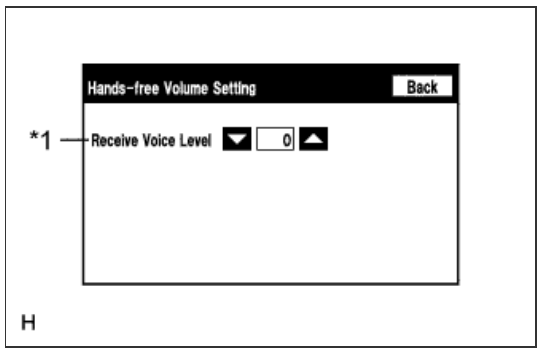
- **The hands-free volume of a "Bluetooth" compatible phone can be adjusted using the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.



c. Select "Hands-free Volume Setting" from the "Function Check/Setting" screen.

d. Hands-free Volume Setting

i. Check the hands-free volume level.

**Screen Description**

| Display | Content |
|---|---|
| *1: Receive voice level adjustment | Setting possible for the voice level received from "Bluetooth" compatible phones. |

**NOTICE:**

Sound quality may deteriorate when the receive voice level is changed more than necessary. For this reason, check that the receive voice quality is still acceptable after changing this setting.

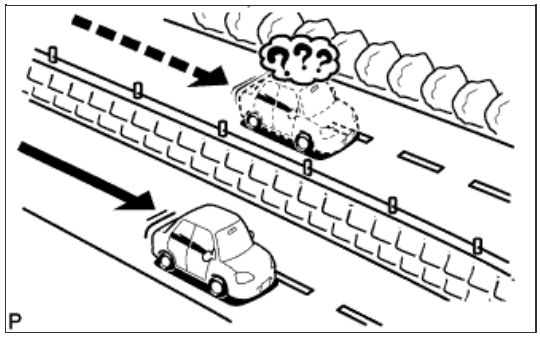
## CHECK CAMERA SETTING (w/ Parking Assist Monitor System)

a. Refer to the parking assist monitor system for further information ( Click here).

## CHECK CAMERA SETTING (w/ Side Monitor System)

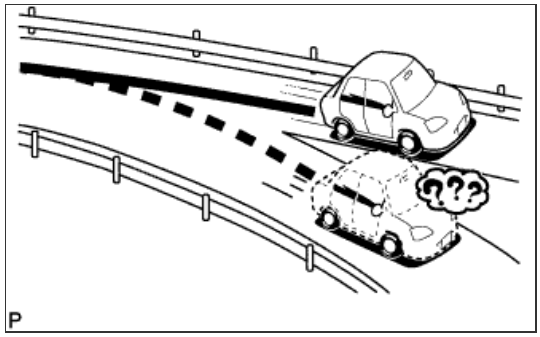
a. Refer to the side monitor system for further information ( Click here).

**for Preparation** Click here



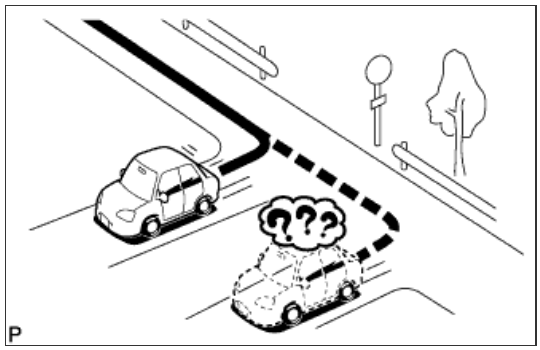
## CHECK SYSTEM NORMAL CONDITION

a. If the symptom is applicable to any of the following, it is intended behavior, and not a malfunction.

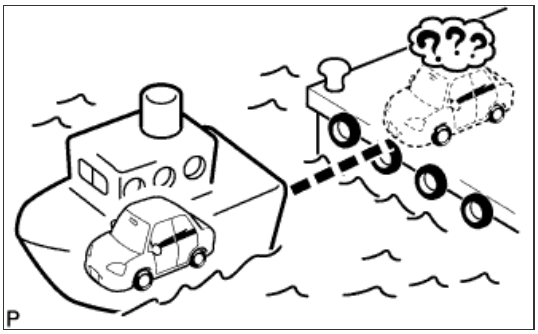


| Symptom | Answer |
|---|---|
| A longer route than expected is chosen. | Depending on the road conditions, the display and navigation module display may determine that a longer route is quicker. |
| Even when distance priority is high, the shortest route is not shown. | Some routes may not be advised due to safety concerns. |
| When the vehicle is put into motion immediately after the engine starts, the navigation system deviates from the actual position. | If the vehicle starts before the navigation system activates, the system may not react. |
| When running on certain types of roads, especially new roads, the vehicle position deviates from the actual position. | When the vehicle is driving on new roads not available on the map disc, the system attempts to match it to another nearby road, causing the position mark to deviate. |

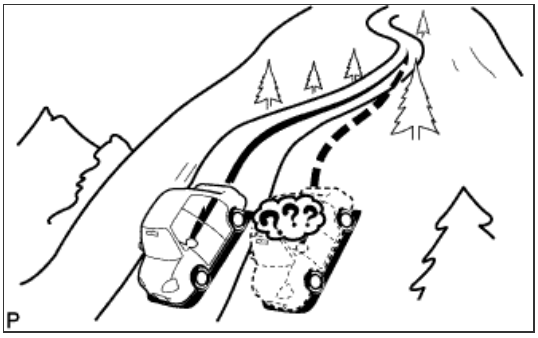
b. The following symptoms are not malfunctions, but are caused by errors inherent in the GPS, gyro sensor, speed sensor or display and navigation module display.



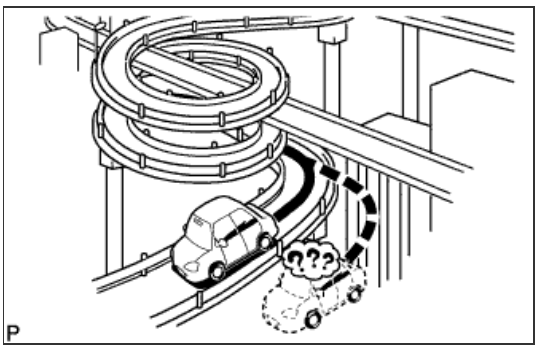
i. The current position mark may be displayed on a nearby parallel road.



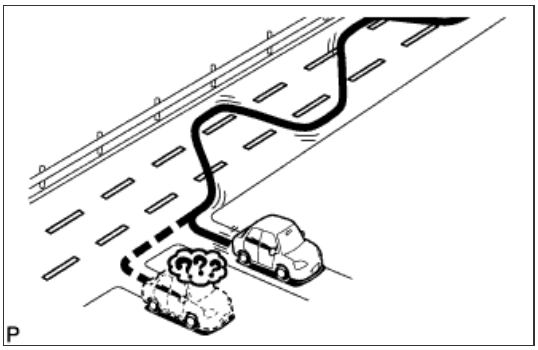
ii. Immediately after a fork in the road, the current vehicle position mark may be displayed on the wrong road.



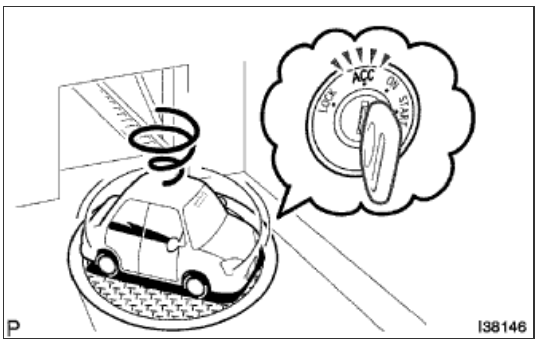
iii. When the vehicle turns right or left at an intersection, the current vehicle position mark may be displayed on a nearby parallel road.



iv. When the vehicle is carried, such as on a ferry, and the vehicle itself is not running, the current vehicle position mark may be displayed in the position where the vehicle was until a measurement can be performed by GPS.



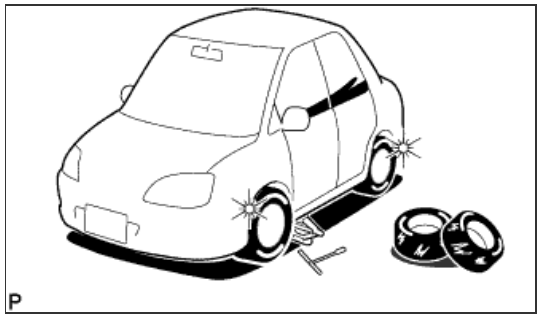
v. When the vehicle travels on a steep hill, the current vehicle position mark may deviate from the correct position.



vi. When the vehicle makes a continuous turn (e.g. 360, 720, 1080 degrees) the current vehicle position mark may deviate from the correct position.

vii. When the vehicle moves erratically, such as constant lane changes, the current vehicle position mark may deviate from the correct position.

viii. When the engine switch is turned on (ACC or IG) on a turntable before parking, the current vehicle position mark may not indicate the correct direction. The same will occur when the vehicle comes out of the parking garage.



ix. When the vehicle travels on a snowy road or a mountain path with the chains installed or using a spare tire, the current vehicle position mark may deviate from the correct position.

x. When the tires are changed, the current vehicle position mark may deviate from the correct position.

**HINT:**

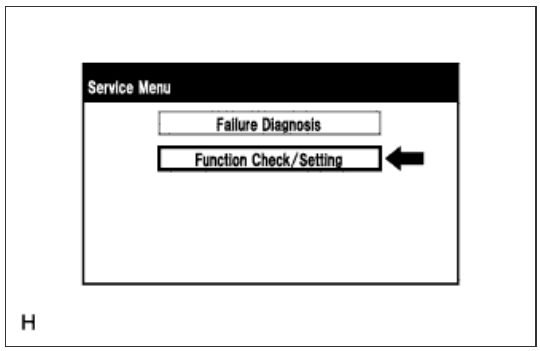
- **A change in tire diameter may cause a speed sensor error.**
- **Performing "tire change" in calibration mode will allow the system to correct the current vehicle position faster.**



## CHECK PANEL & STEERING SWITCH

**HINT:**

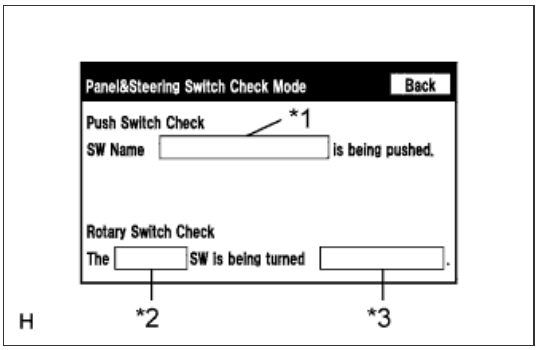
- **The display and navigation module display panel switches, radio receiver assembly panel switches and steering switches are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.



c. Select "Panel & Steering Switch" from the "Function Check/Setting" screen.

d. Panel & Steering Switch Check Mode

i. Operate each switch and check that the switch names and condition are correctly displayed.

**Screen Description**

| Display | Content |
|---|---|
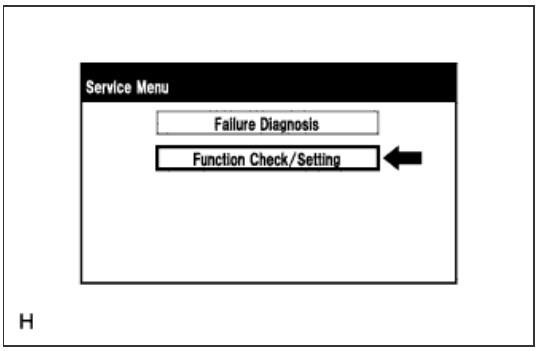
| *1: Push switch name | • Name of the pressed switch is displayed.<br>• If more than one switch is pressed, "MULTIPLE" will be displayed. |
| *2: Rotary switch name | Name of the rotary switch is displayed. |
| *3: Rotary switch direction | Direction of the rotary switch is displayed. |



## CHECK TOUCH SWITCH

**HINT:**

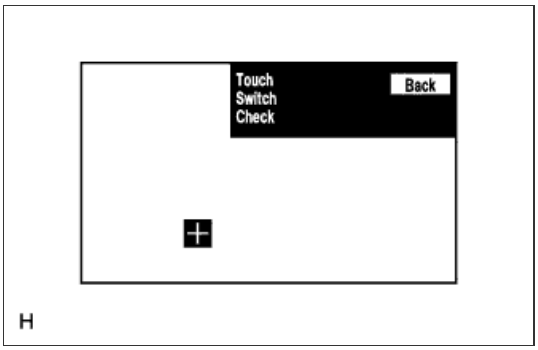
- **The touch switches on the screen are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "Touch Switch" from the "Function Check/Setting" screen.



d. Touch Switch Check

i. Touch the display anywhere in the open area to perform the check when the "Touch Switch Check" screen is displayed.

**HINT:**

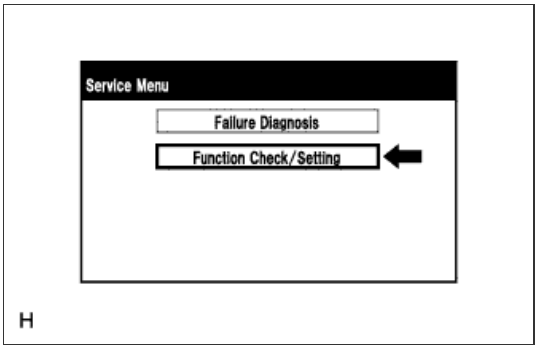
- **A "+" mark is displayed where the display is touched.**
- **The "+" mark remains on the display even after the**

finger is removed.



## CHECK MIC & VOICE RECOGNITION

**HINT:**

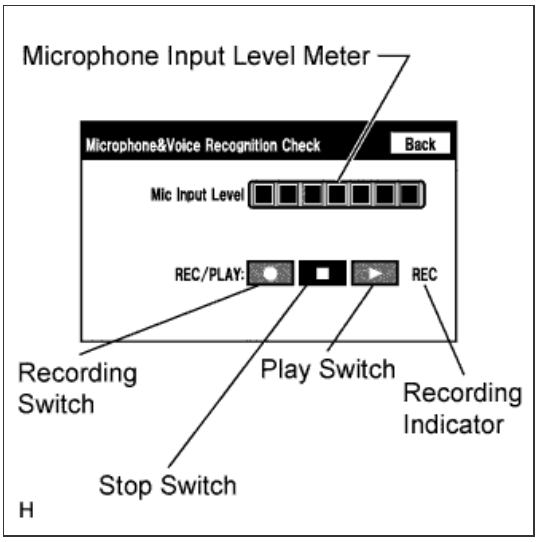
- **The microphone and microphone input level are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "Mic & Voice Recognition" from the "Function Check/Setting" screen.

d. Microphone & Voice Recognition Check



i. When speaking into the microphone, check that the microphone input level meter changes according to the input level.

ii. Push the recording switch and perform voice recording.

iii. Check that the recording indicator remains on while recording and that the recording can be played normally.

**HINT:**

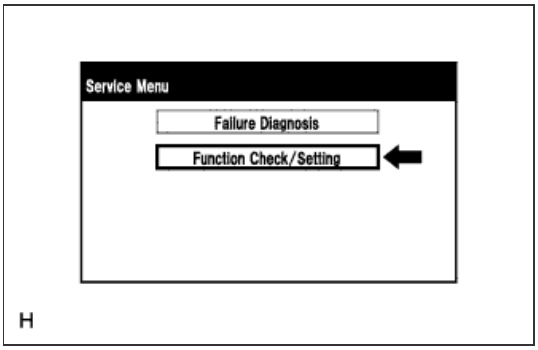
- **For details of this function, refer to Diagnosis Display Detailed Description (Click here).**
- **This function is controlled by the display and navigation module display (built-in navigation ECU).**



## CHECK COLOR BAR

**HINT:**

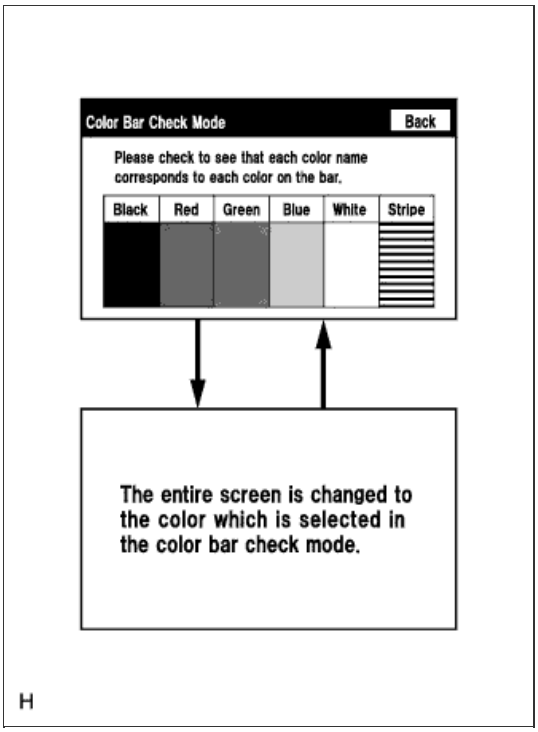
- **The display color on the screen is checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "Color Bar" from the "Function Check/Setting" screen.

d. Color Bar Check Mode



i. Select a color bar from the "Color Bar Check Mode" screen.

ii. Check the display color.

**HINT:**

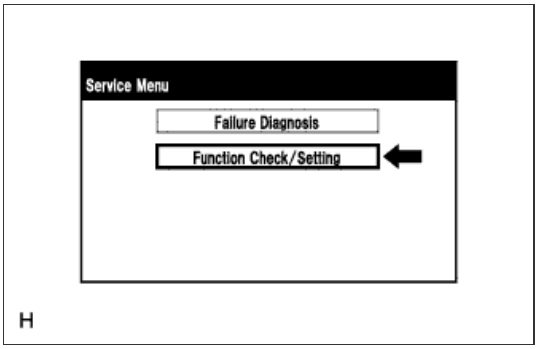
- **The entire screen turns to the color or stripe selected.**

- **Touching the display will return to the "Color Bar Check" screen.**



## CHECK GPS & VEHICLE SENSORS

**HINT:**

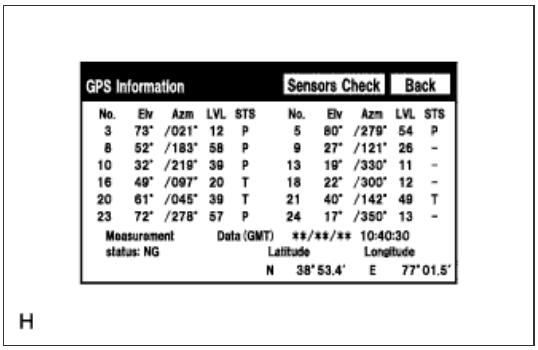
- **GPS information, vehicle signals and sensor signals are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "GPS & Vehicle Sensors" from the "Function Check/Setting" screen.



d. GPS information

i. When GPS information is displayed, check the GPS conditions.

**HINT:**

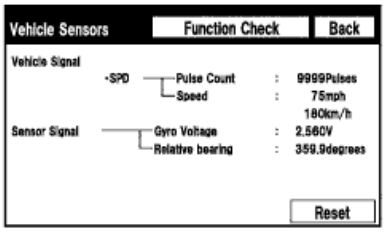
- **This screen is updated once per second when input signals to the vehicle are changed.**
- **For details of this function, refer to Diagnosis Display Detailed Description in System Description (Click here).**

H



e. Select "Sensors Check" from the "GPS Information" screen.

f. Vehicle Sensors

i. Check all the signals and sensors when vehicle signal information is displayed.

**HINT:**

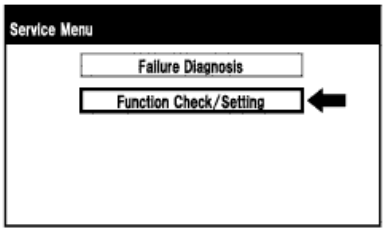
- **This screen is updated once per second when input signals to the vehicle are changed.**
- **This screen displays vehicle signals input to the display and navigation module display (built-in navigation ECU).**
- **For details of this function, refer to Diagnosis Display Detailed Description in System Description (Click here).**

H



## CHECK VEHICLE SIGNAL

**HINT:**

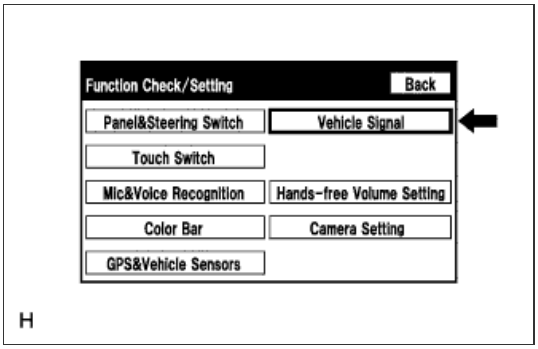
- **Vehicle signals received by the display and navigation module display are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

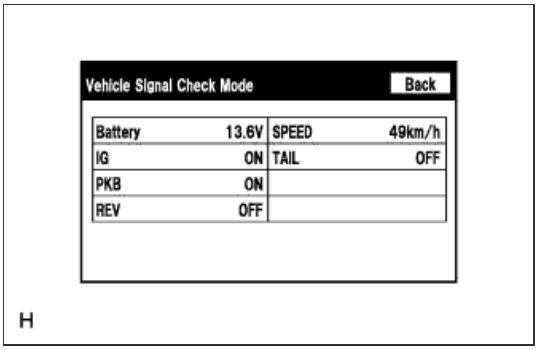


a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

H

c. Select "Vehicle Signal" from the "Function Check/Setting" screen.



d. Vehicle Signal Check Mode

i. When the "Vehicle Signal Check Mode" screen is displayed, check all the vehicle signal conditions.

**HINT:**

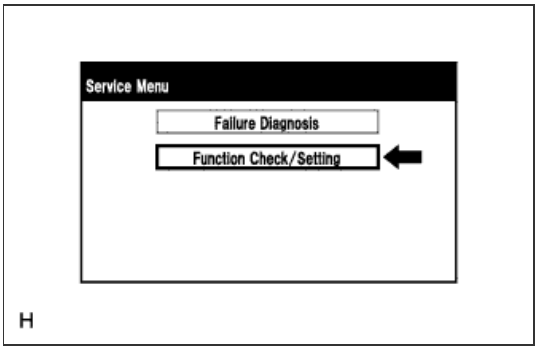
- **Only conditions having inputs are displayed.**
- **This screen displays vehicle signals input to the display and navigation module display.**
- **For details of this function, refer to Diagnosis Display Detailed Description in System Description (Click here).**



## CHECK HANDS-FREE VOLUME SETTING

**HINT:**

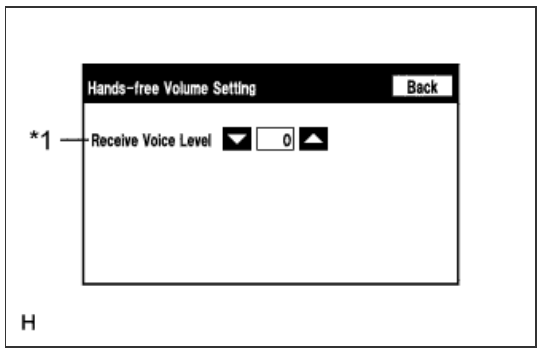
- **The hands-free volume of a "Bluetooth" compatible phone can be adjusted using the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.



c. Select "Hands-free Volume Setting" from the "Function Check/Setting" screen.

d. Hands-free Volume Setting

i. Check the hands-free volume level.

**Screen Description**

| Display | Content |
|---|---|
| *1: Receive voice level adjustment | Setting possible for the voice level received from "Bluetooth" compatible phones. |

**NOTICE:**

Sound quality may deteriorate when the receive voice level is changed more than necessary. For this reason, check that the receive voice quality is still acceptable after changing this setting.

## CHECK CAMERA SETTING (w/ Parking Assist Monitor System)

a. Refer to the parking assist monitor system for further information ( Click here).

## CHECK CAMERA SETTING (w/ Side Monitor System)

a. Refer to the side monitor system for further information ( Click here).

**for Preparation** Click here

**HINT:**

- **Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.**
- **Inspect the fuses and relays related to this system before inspecting the suspected areas below.**

### Display Function

| Symptom | Suspected Area | See page |
|---|---|---|
| Black screen (No image appears on navigation/audio screen). | Proceed to "Black Screen" | Click here |
| | Display and navigation module display | Click here |
| Illumination for panel switch does not come on with tail switch on. | Proceed to "Illumination for Panel Switch does not Come on with Tail Switch ON" | Click here |
| | Proceed to "Illumination Circuit" | Click here |
| | Display and navigation module display | Click here |
| Display does not dim with tail switch on. | Proceed to "Display does not Dim when Light Control Switch is Turned ON" | Click here |
| | Display and navigation module display | Click here |
| Panel switches do not function. | Proceed to "Panel Switches do not Function" | Click here |
| | Proceed to "Steering Pad Switch Circuit" | Click here |
| | Display and navigation module display | Click here |
| Touch panel switch does not function. | Proceed to "Touch Panel Switch does not Function" | Click here |
| | Display and navigation module display | Click here |
| Screen is distorted. | Proceed to "Navigation ECU Power Source Circuit" | Click here |
| | Display and navigation module display | Click here |
| Screen flicker or color distortion. | Proceed to "Screen Flicker or Color Distortion" | Click here |
| | Display and navigation module display | Click here |
| DVD image cannot be displayed on front screen (Parking brake is on). | Proceed to "DVD Image Signal Circuit between Radio receiver and Navigation ECU" | Click here |
| | Proceed to "Parking Brake Switch Circuit" | Click here |
| | Radio receiver assembly | Click here |
| | Display and navigation module display | Click here |
| Navigation function switches can be operated while vehicle is running. | Display and navigation module display | Click here |

### Navigation Function

| Symptom | Suspected Area | See page |
|---|---|---|
| Map disc cannot be inserted. | Proceed to "Map Disc cannot be Inserted" | Click here |
| | Navigation module board | - |

a. Reference (Oscilloscope waveform):

i. Waveform 1

| Item | Content |
|---|---|
| Measurement terminal | F60-4 (NTSO) - F58-10 (GND1) |
| Measurement setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | DVD is played on the display and navigation module display |

**Text in Illustration**

| | |
|---|---|
| *1 | Synchronization Signal |
| *2 | Video Waveform |

**HINT:**

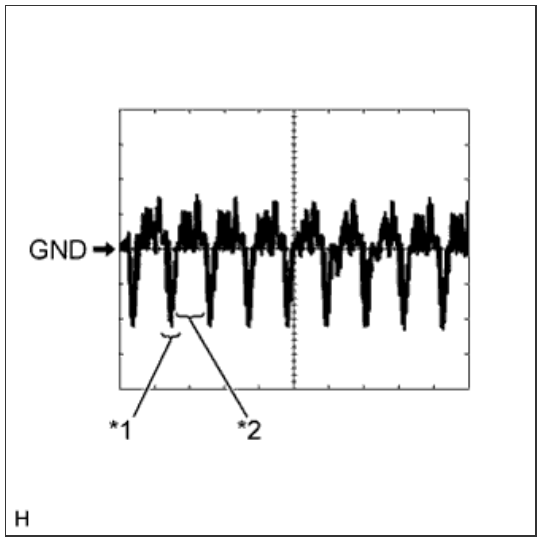
The video waveform changes according to the image output from the display and navigation module display to the television display assembly, but the synchronization signal does not change.

b. Reference (Oscilloscope waveform):

i. Waveform 2 (under normal conditions)



| Item | Content |
|---|---|
| Measurement terminal | F60-5 (V+) - F58-10 (GND1) |
| Measurement setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | Engine switch on (IG), shift lever in R |

**Text in Illustration**

| | |
|---|---|
| *1 | Synchronization Signal |
| *2 | Video Waveform |

**HINT:**

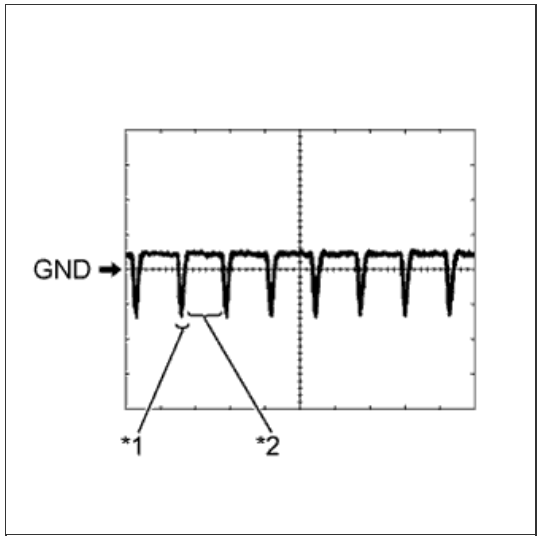
The video waveform changes according to the image from the television camera assembly.



c. Reference (Oscilloscope waveform):

i. Waveform 3 (camera lens is covered, blacking out the screen)

| Item | Content |
|---|---|
| Measurement terminal | F60-5 (V+) - F58-10 (GND1) |
| Measurement setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | Engine switch on (IG), shift lever in R |

**Text in Illustration**

| | |
|---|---|
| *1 | Synchronization Signal |
| *2 | Video Waveform |

**HINT:**

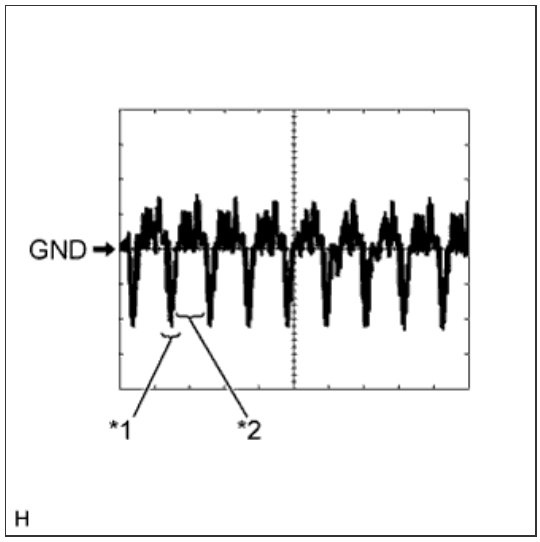
The video waveform changes according to the image that the television camera assembly projects.

d. Reference (Oscilloscope waveform):

i. Waveform 4



| Item | Content |
|---|---|
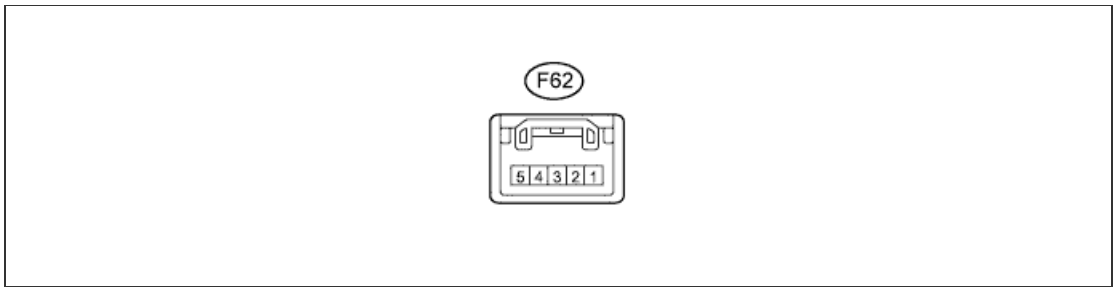
| Measurement Terminal | F60-9 (VV+) - F58-10 (GND1) |
| Measurement Setting | 200 mV/DIV., 10 µs/DIV. |
| Condition | DVD is playing |

**Text in Illustration**



| | |
|---|---|
| *1 | Synchronization Signal |
| *2 | Video Waveform |

**HINT:**

The video waveform changes according to the image input from the radio receiver assembly to the display and navigation module display, but the synchronization signal does not change.

## NAVIGATION MODULE BOARD

## CHECK DTC (CHECK USING INTELLIGENT TESTER)

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body Electrical / Navigation System / Trouble Codes.

e. Check for DTC(s) and freeze frame data, and then write them down.

f. Check the details of the DTC(s) ( Click here).

**NOTICE:**

The navigation system outputs DTCs for the following system. When DTCs other than those in Diagnostic Trouble Code Chart for the navigation system are output, refer to Diagnostic Trouble Code Chart for the system.

| System | Proceed to |
|---|---|
| Audio and visual system (w/ Navigation System) | Click here |
| Rear seat entertainment system (w/ Rear Seat Entertainment) | Click here |
| Parking assist monitor system (w/ Parking Assist Monitor System) | Click here |
| Wide view front monitor system (w/ Wide View Front Monitor System) | Click here |
| Side monitor system (w/ Side Monitor System) | Click here |

## CLEAR DTC (CLEAR USING INTELLIGENT TESTER)

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body Electrical / Navigation System / Trouble Codes.

e. Clear DTCs.

## START DIAGNOSTIC MODE

**HINT:**

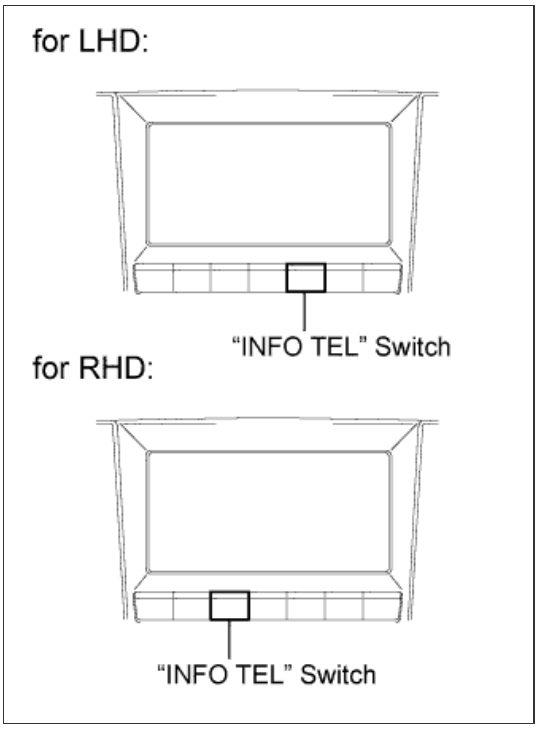
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**
- **To help find the malfunction when the system cannot change to diagnostic mode, check for DTCs using the intelligent tester.**
- **After the engine switch is turned on (IG), check that the map is displayed before starting diagnostic mode. Otherwise, some items cannot be checked.**

a. There are 2 methods to start diagnostic mode. Start the mode by using one of them.

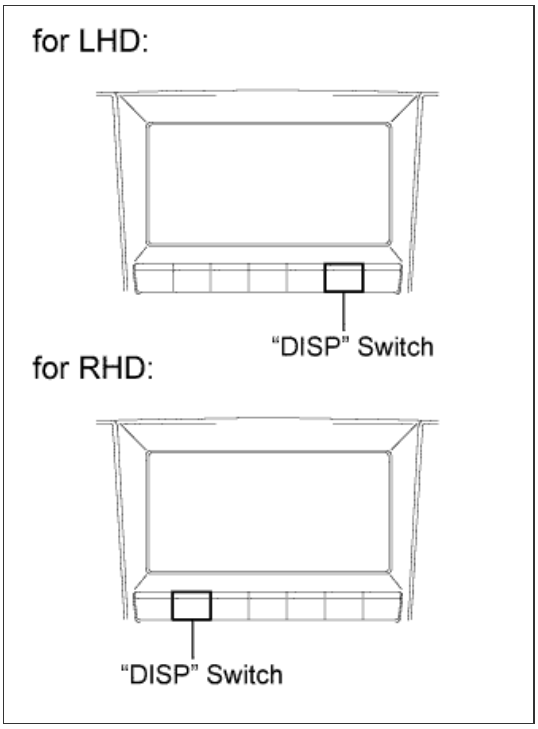


b. Method 1

i. Start the engine.

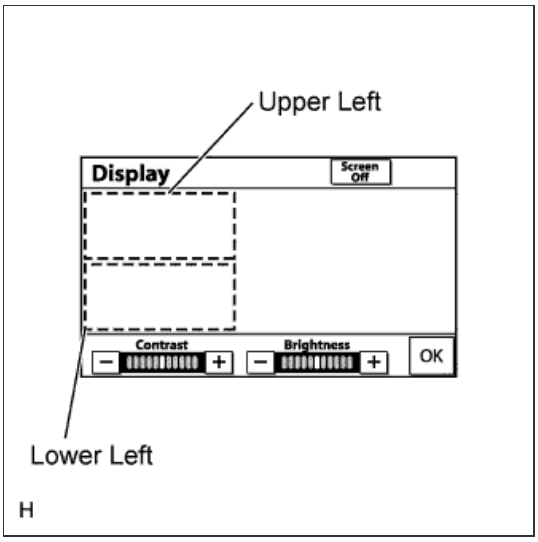
ii. While pressing and holding the "INFO TEL" switch, operate the light control switch: off → Turn on → Turn off → Turn on → Turn off → Turn on → Turn off.

iii. The diagnostic mode starts and the "System Check Mode" screen will



be displayed.

c. Method 2

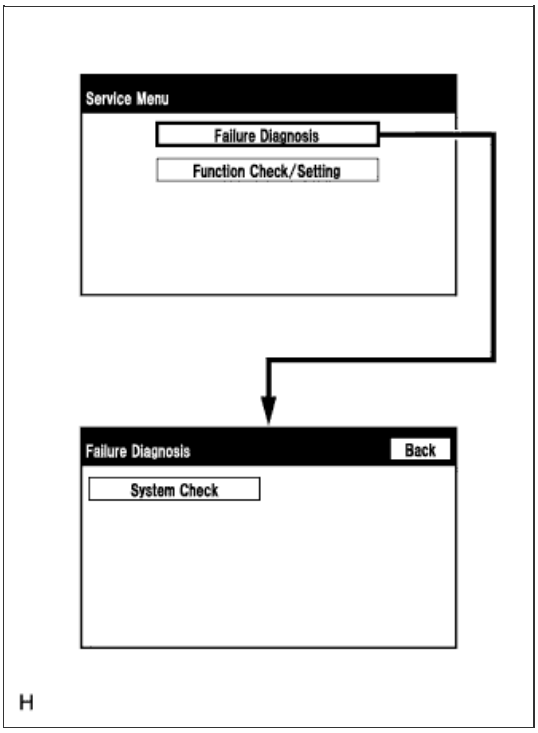


i. Start the engine.

ii. Press the "DISP" switch.

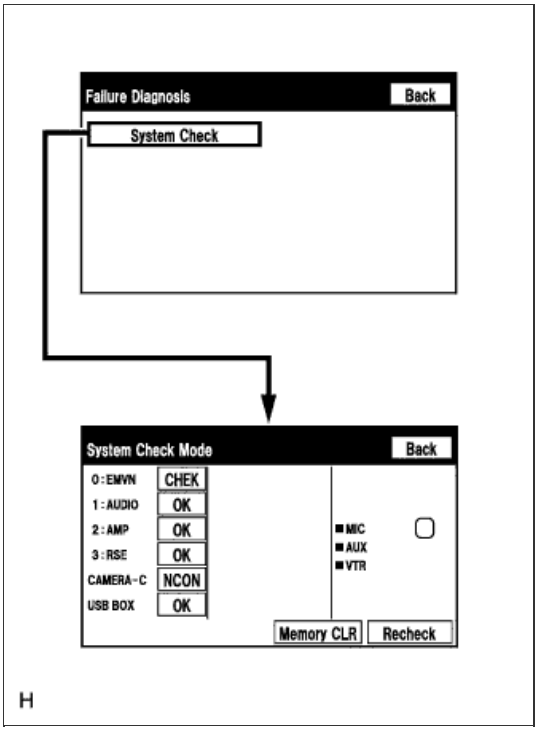
iii. From the display quality adjustment screen, touch the upper and lower left corners of the screen in the following: Upper left → Lower left → Upper left → Lower left → Upper left → Lower left.

iv. Diagnostic mode starts and the "System Check Mode" screen will be displayed. Service inspection starts automatically and the result will be displayed.



## FINISH DIAGNOSTIC MODE

a. Turn the engine switch off.



## FAILURE DIAGNOSIS

a. The "Failure Diagnosis" screen is displayed when the "Failure Diagnosis" switch on the "Service Menu" screen is selected.

## SYSTEM CHECK

a. The "System Check Mode" screen is displayed when the "System Check" switch on the "Failure Diagnosis" screen is selected.

H

## CHECK DTC (CHECK USING SYSTEM CHECK MODE SCREEN)

**HINT:**

Refer to Diagnosis Display Detailed Description for further details on the "System Check Mode" screen ( Click here).

a. Read the system check result.

i. When the result is "EXCH" or "CHEK", select the icon which displays the result, and check and record each DTC displayed on the "Unit Check Mode" screen.

**NOTICE:**

A maximum of 6 DTCs can be displayed by the display and navigation module display. When more than 6 DTCs are expected, check DTCs using the intelligent tester.

**HINT:**

- **Refer to Diagnosis Display Detailed Description for further details on the "System Check Mode" screen (Click here).**
- **When all results are "OK", this means that no DTCs are present.**
- **When "MOST" is displayed for the result, selecting "MOST" displays the "MOST Line Check" screen and performs the MOST line check.**
- **Changing to the "MOST Line Check" screen is possible only when the MOST network is malfunctioning and "MOST" is displayed for the result.**
- **If the MOST network had a malfunction in the past, the DTCs will be displayed in the Memory column.**
- **Refer to Diagnosis Display Detailed Description for further details on the "MOST Line Check" screen (Click here).**
- **When "NCON" is displayed for all devices connected using the AVC-LAN, or when all device names are not displayed, check if there is a short circuit in the AVC-LAN or devices connected to the AVC-LAN. Repair or replace parts as necessary (Click here).**
- **When proceeding to view the results of another device, press the "Back" switch to return to the "System Check Mode" screen. Repeat the step above to view the results of other devices.**

ii. Check the details of the DTC(s) ( Click here).

**NOTICE:**

The navigation system outputs DTCs for the following system. When DTCs other than the codes in Diagnostic Trouble Code Chart for the navigation system are output, refer to Diagnostic Trouble Code Chart for the system.

| System | Proceed to |
|---|---|
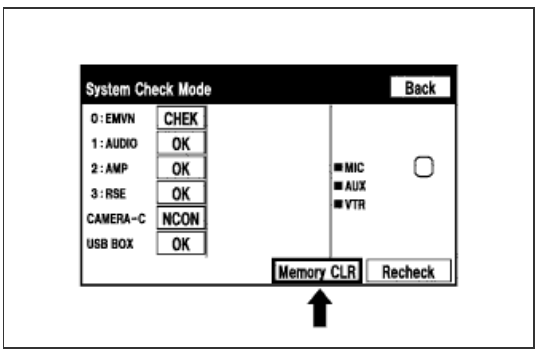
| Audio and visual system (w/ Navigation System) | Click here |
| Rear seat entertainment system (w/ Rear Seat Entertainment System) | Click here |
| Parking assist monitor system (w/ Parking Assist Monitor System) | Click here |
| Wide view front monitor system (w/ Wide View Front Monitor System) | Click here |
| Side monitor system (w/ Side Monitor System) | Click here |

H

## DTC CLEAR/RECHECK (CLEAR USING SYSTEM CHECK MODE SCREEN)



a. Clear DTC

i. Press the "Memory CLR" switch for 3 seconds.

ii. The check results are cleared.

**HINT:**

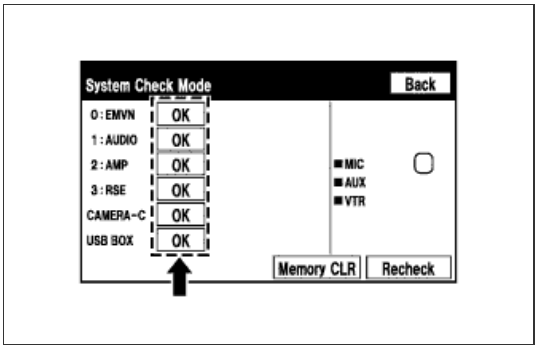
- **To clear the DTC for a specific device, clear the DTC using the "Unit Check Mode" screen.**
- **When clearing a DTC using the "Unit Check Mode" screen, press the "Code CLR" switch for 3 seconds.**

b. Recheck

b. Recheck



i. Press the "Recheck" switch.

ii. Confirm that all diagnostic codes are "OK" when the check results are displayed. If a code other than "OK" is displayed, troubleshoot again.

**HINT:**

When a DTC was cleared using the "Unit Check Mode" screen, press the "Back" switch to return to the "System Check Mode" screen and perform this operation.

**for Preparation** Click here

## CHECK DTC (CHECK USING INTELLIGENT TESTER)

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body Electrical / Navigation System / Trouble Codes.

e. Check for DTC(s) and freeze frame data, and then write them down.

f. Check the details of the DTC(s) ( Click here).

**NOTICE:**

The navigation system outputs DTCs for the following system. When DTCs other than those in Diagnostic Trouble Code Chart for the navigation system are output, refer to Diagnostic Trouble Code Chart for the system.

| System | Proceed to |
|---|---|
| Audio and visual system (w/ Navigation System) | Click here |
| Rear seat entertainment system (w/ Rear Seat Entertainment) | Click here |
| Parking assist monitor system (w/ Parking Assist Monitor System) | Click here |
| Wide view front monitor system (w/ Wide View Front Monitor System) | Click here |
| Side monitor system (w/ Side Monitor System) | Click here |

## CLEAR DTC (CLEAR USING INTELLIGENT TESTER)

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body Electrical / Navigation System / Trouble Codes.

e. Clear DTCs.

## START DIAGNOSTIC MODE

**HINT:**

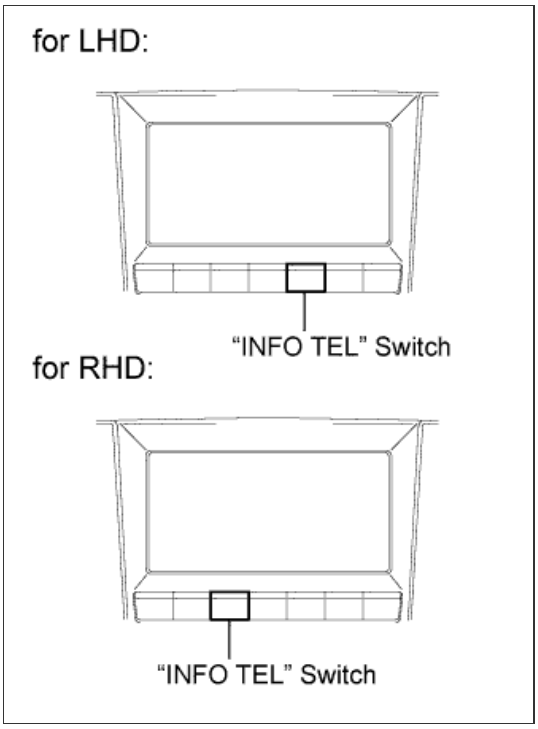
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**
- **To help find the malfunction when the system cannot change to diagnostic mode, check for DTCs using the intelligent tester.**
- **After the engine switch is turned on (IG), check that the map is displayed before starting diagnostic mode. Otherwise, some items cannot be checked.**

a. There are 2 methods to start diagnostic mode. Start the mode by using one of them.

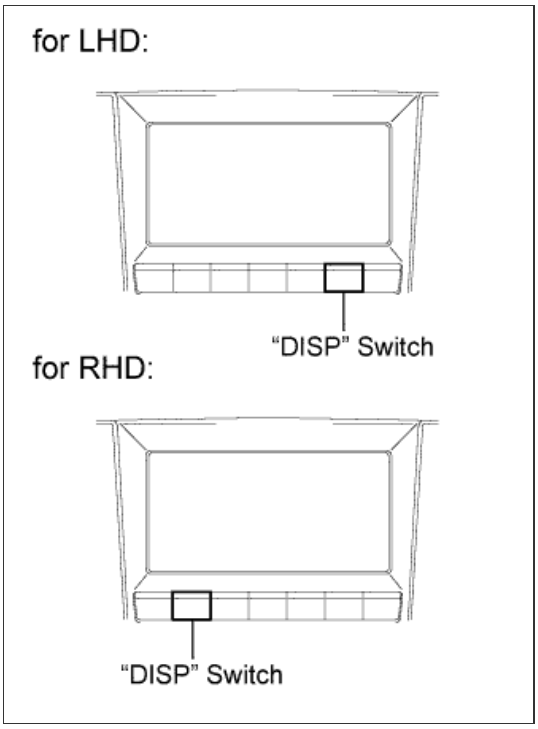


b. Method 1

i. Start the engine.

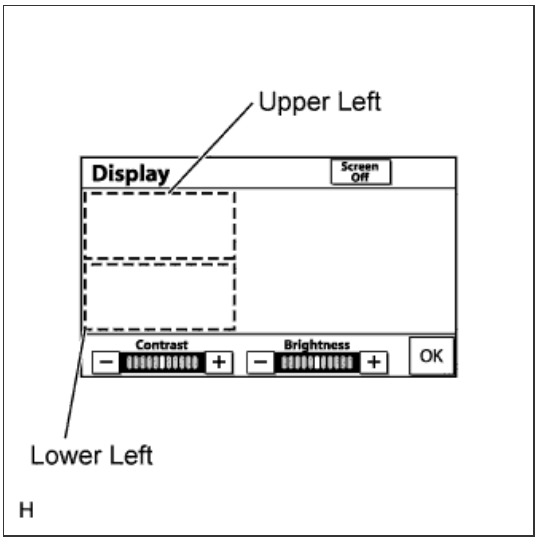
ii. While pressing and holding the "INFO TEL" switch, operate the light control switch: off → Turn on → Turn off → Turn on → Turn off → Turn on → Turn off.

iii. The diagnostic mode starts and the "System Check Mode" screen will



be displayed.

c. Method 2

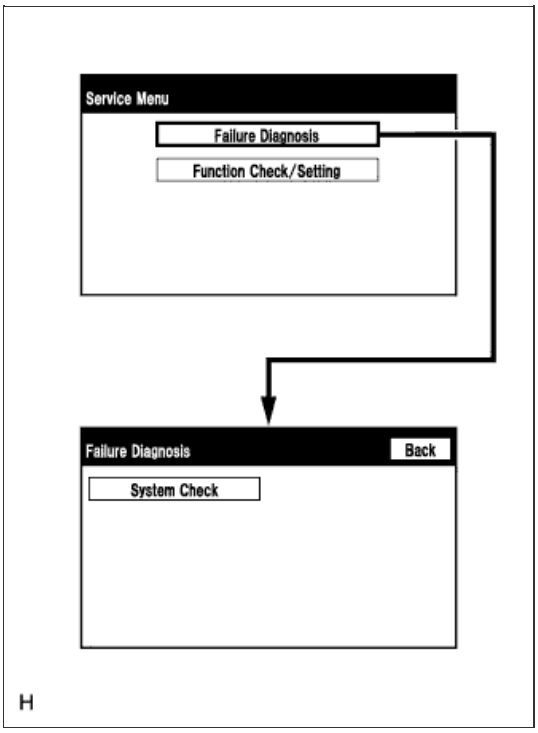


i. Start the engine.

ii. Press the "DISP" switch.

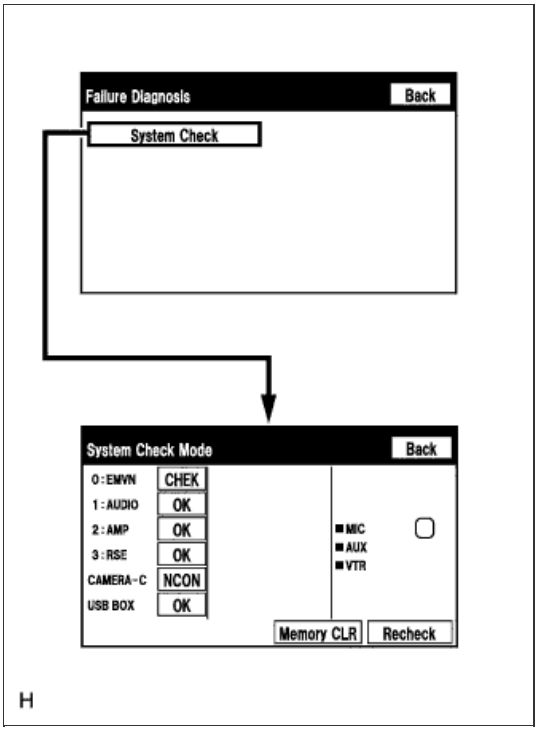
iii. From the display quality adjustment screen, touch the upper and lower left corners of the screen in the following: Upper left → Lower left → Upper left → Lower left → Upper left → Lower left.

iv. Diagnostic mode starts and the "System Check Mode" screen will be displayed. Service inspection starts automatically and the result will be displayed.



## FINISH DIAGNOSTIC MODE

a. Turn the engine switch off.



## FAILURE DIAGNOSIS

a. The "Failure Diagnosis" screen is displayed when the "Failure Diagnosis" switch on the "Service Menu" screen is selected.

## SYSTEM CHECK

a. The "System Check Mode" screen is displayed when the "System Check" switch on the "Failure Diagnosis" screen is selected.

H

## CHECK DTC (CHECK USING SYSTEM CHECK MODE SCREEN)

**HINT:**

Refer to Diagnosis Display Detailed Description for further details on the "System Check Mode" screen ( Click here).

a. Read the system check result.

i. When the result is "EXCH" or "CHEK", select the icon which displays the result, and check and record each DTC displayed on the "Unit Check Mode" screen.

**NOTICE:**

A maximum of 6 DTCs can be displayed by the display and navigation module display. When more than 6 DTCs are expected, check DTCs using the intelligent tester.

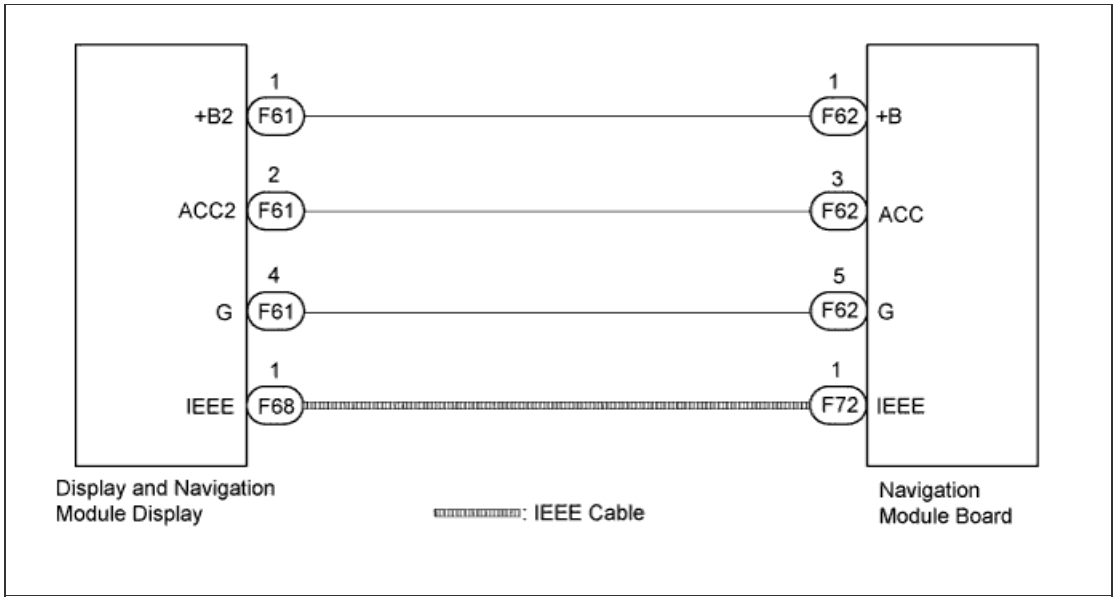
## DTC B1569 DVD-ROM Deck Disconnected

**for Preparation** Click here

### DESCRIPTION



The display and navigation module display and navigation module board are connected by the IEEE cable.
When an IEEE communication error occurs between the display and navigation module display and navigation module board, this DTC will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1569 | When either of the conditions below is met:<br>• Navigation module board is/was not connected while the engine switch is on (IG or ACC).<br>• Communication between the master unit and navigation module board is not possible when the engine is started. | • Navigation module board power source circuit<br>• IEEE cable<br>• Display and navigation module display<br>• Navigation module board |

**HINT:**

- **Even if no fault is present, this DTC may be stored depending on the battery condition or engine start voltage.**
- **The display and navigation module display is the master unit.**

### WIRING DIAGRAM

### INSPECTION PROCEDURE

#### 1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Check for optional components.

i. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components (including associated wiring) are installed. | A |
| Optional components (including associated wiring) are not installed. | B |

**HINT:**

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect IEEE communication.**
- **This DTC may be stored when an IEEE communication error occurs due to electrical noise.**

B → Go to step 3

A

## 2.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

NEXT

## 3.CHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → Go to step 4

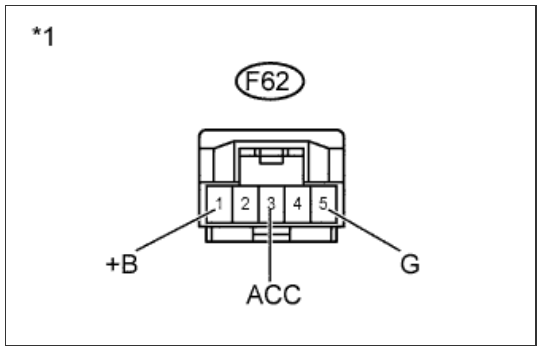
OK

END

## 4.CHECK HARNESS AND CONNECTOR (NAVIGATION MODULE BOARD POWER SOURCE)

a. Disconnect the F62 navigation module board connector.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F62-5 (G) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F62-1 (+B) - F62-5 (G) | Always | 11 to 14 V |
| F62-3 (ACC) - F62-5 (G) | Engine switch on (ACC) | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Navigation Module Board) |

NG → Go to step 8

OK

## 5.CHECK IEEE CABLE CONNECTOR

a. Check for the IEEE cable connector.

i. Check if the IEEE cable connectors between the navigation module board and the display and navigation module display have any connection problems (Click here).

b. Check that the screen display is normal.

**OK:**
**Screen display is normal.**

NG → Go to step 6

OK

END

## 6.REPLACE IEEE CABLE

a. Replace the IEEE cable between the navigation module board and the display and navigation module display.

b. Check that the screen display is normal.

**OK:**
**Screen display is normal.**

NG → Go to step 7

OK

END

## 7.REPLACE NAVIGATION MODULE BOARD

a. Replace the navigation module board.

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

END

## 8.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - NAVIGATION MODULE BOARD)

a. Disconnect the F61 display and navigation module display connector.

b. Disconnect the F62 navigation module board connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F61-1 (+B2) - F62-1 (+B) | Always | Below 1 Ω |
| F61-2 (ACC2) - F62-3 (ACC) | Always | Below 1 Ω |
| F61-4 (G) - F62-5 (G) | Always | Below 1 Ω |
| F61-1 (+B2) - Body ground | Always | 10 kΩ or higher |
| F61-2 (ACC2) - | | |

| | | |
|---|---|---|
| Body ground | Always | 10 kΩ or higher |
| F61-4 (G) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

# DTC B15B0 Display Screen Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when a malfunction occurs in the display and navigation module display.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15B0 | Picture circuit (TFT unit) malfunction | Display and navigation module display |

## INSPECTION PROCEDURE

**1.CHECK DTC**

a. Clear the DTC (Click here).

b. Recheck for DTC and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

**NG** → **REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)**

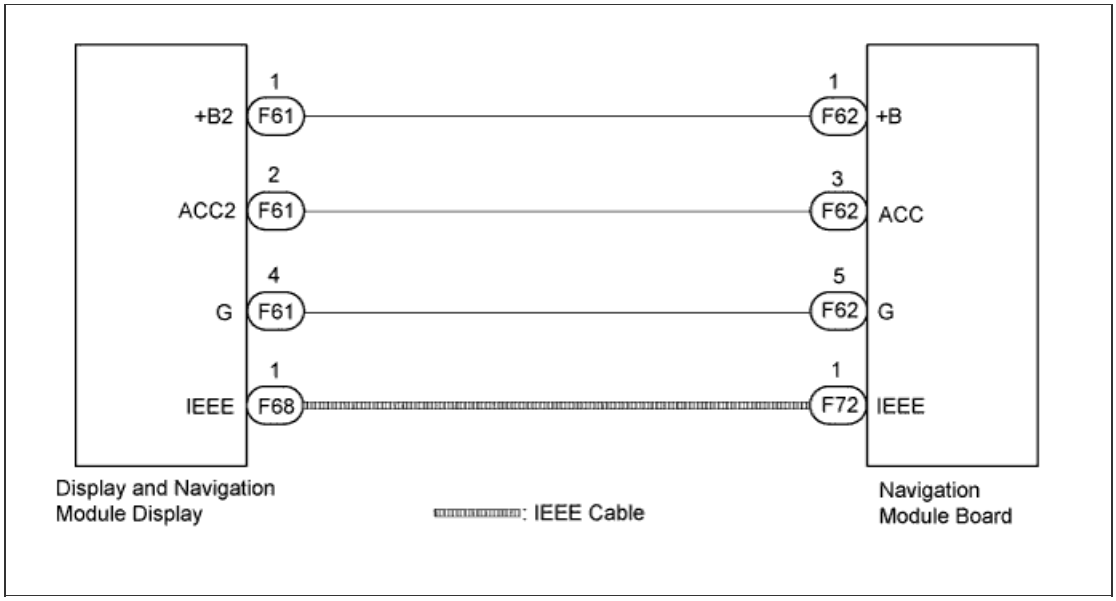
**OK**

**USE SIMULATION METHOD TO CHECK (Click here)**

## DTC B1569 DVD-ROM Deck Disconnected

**for Preparation** Click here

### DESCRIPTION



The display and navigation module display and navigation module board are connected by the IEEE cable.
When an IEEE communication error occurs between the display and navigation module display and navigation module board, this DTC will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1569 | When either of the conditions below is met:<br>• Navigation module board is/was not connected while the engine switch is on (IG or ACC).<br>• Communication between the master unit and navigation module board is not possible when the engine is started. | • Navigation module board power source circuit<br>• IEEE cable<br>• Display and navigation module display<br>• Navigation module board |

**HINT:**

- **Even if no fault is present, this DTC may be stored depending on the battery condition or engine start voltage.**
- **The display and navigation module display is the master unit.**

## 5.CHECK IEEE CABLE CONNECTOR

a. Check for the IEEE cable connector.

i. Check if the IEEE cable connectors between the navigation module board and the display and navigation module display have any connection problems (Click here).

b. Check that the screen display is normal.

**OK:**
**Screen display is normal.**

NG → Go to step 6

OK

END

## 6.REPLACE IEEE CABLE

a. Replace the IEEE cable between the navigation module board and the display and navigation module display.

b. Check that the screen display is normal.

**OK:**
**Screen display is normal.**

NG → Go to step 7

OK

END

## 7.REPLACE NAVIGATION MODULE BOARD

a. Replace the navigation module board.

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

END

## 8.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - NAVIGATION MODULE BOARD)

a. Disconnect the F61 display and navigation module display connector.

b. Disconnect the F62 navigation module board connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F61-1 (+B2) - F62-1 (+B) | Always | Below 1 Ω |
| F61-2 (ACC2) - F62-3 (ACC) | Always | Below 1 Ω |

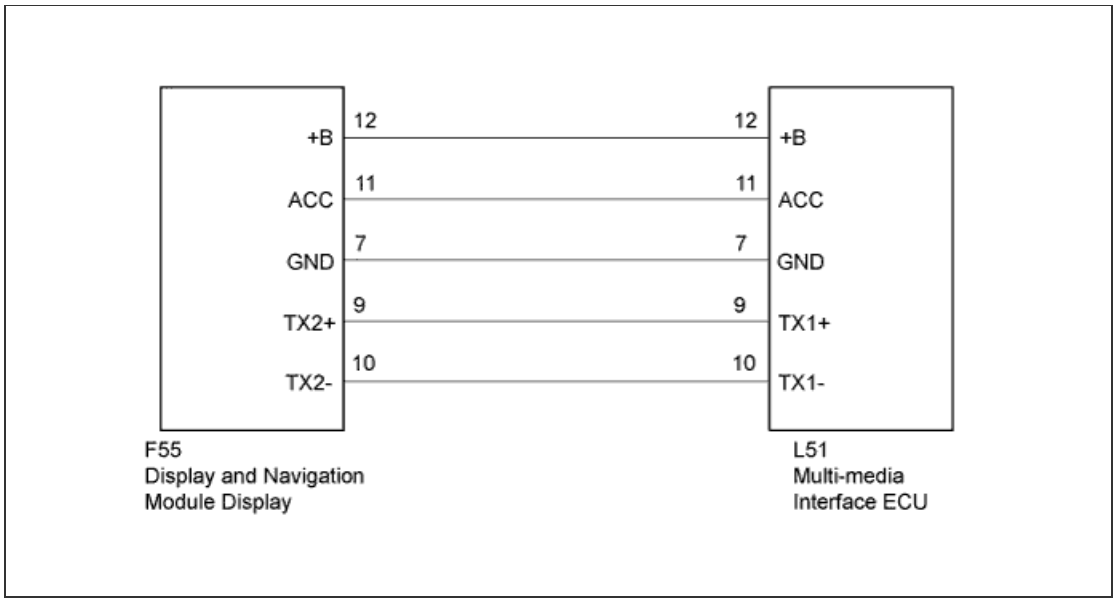
## DTC B156B Multi-media Interface ECU Disconnected

## DTC B156E No Response from Multi-media Interface ECU

**for Preparation** Click here

### DESCRIPTION



The display and navigation module display and multi-media interface ECU are connected by the AVC-LAN communication line.
When an AVC-LAN communication error occurs between the display and navigation module display and the multi-media interface ECU, these DTCs will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B156B*1 | When either condition below is met:<br>• Multi-media interface ECU is/was not connected while the engine switch is on (ON or ACC).<br>• Communication between the master unit and multi-media interface ECU is not possible when the engine is started. | • Multi-media interface ECU power source circuit<br>• AVC-LAN circuit between display and navigation module display and multi-media interface ECU<br>• Multi-media interface ECU<br>• Display and navigation module display |
| B156E | Within the time-out period, there was no response from the display and navigation module display to the following requests from the master unit:<br>• System inspection request<br>• System inspection result request<br>• Diagnostic memory request | |

**HINT:**

- ***1: Even if no fault is present, this DTC may be stored depending on the battery condition or engine start voltage.**
- **The display and navigation module display is the master unit.**

### WIRING DIAGRAM

## DTC B15C0 Short in GPS Antenna

## DTC B15C1 Open in GPS Antenna

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored when a malfunction occurs in the navigation antenna assembly.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15C0 | Navigation antenna assembly error | • Wire harness<br>• Navigation antenna assembly<br>• Display and navigation module display |
| B15C1 | Error of the power source to the navigation antenna assembly | |

### INSPECTION PROCEDURE

**1.CHECK CONNECTION OF ANTENNA CABLE**

a. Check if the navigation antenna cable is securely connected to the display and navigation module display.

**OK:**
**Navigation antenna cable is securely connected.**

NG → **SECURELY CONNECT NAVIGATION ANTENNA CABLE**

OK ↓

**2.REPLACE NAVIGATION ANTENNA ASSEMBLY**

a. Replace the navigation antenna assembly with a known good one and recheck for DTCs ( Click here).

i. Clear the DTCs (Click here).

ii. Recheck for DTCs.

**OK:**
**No DTCs are output.**

NG → **REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)**

OK ↓

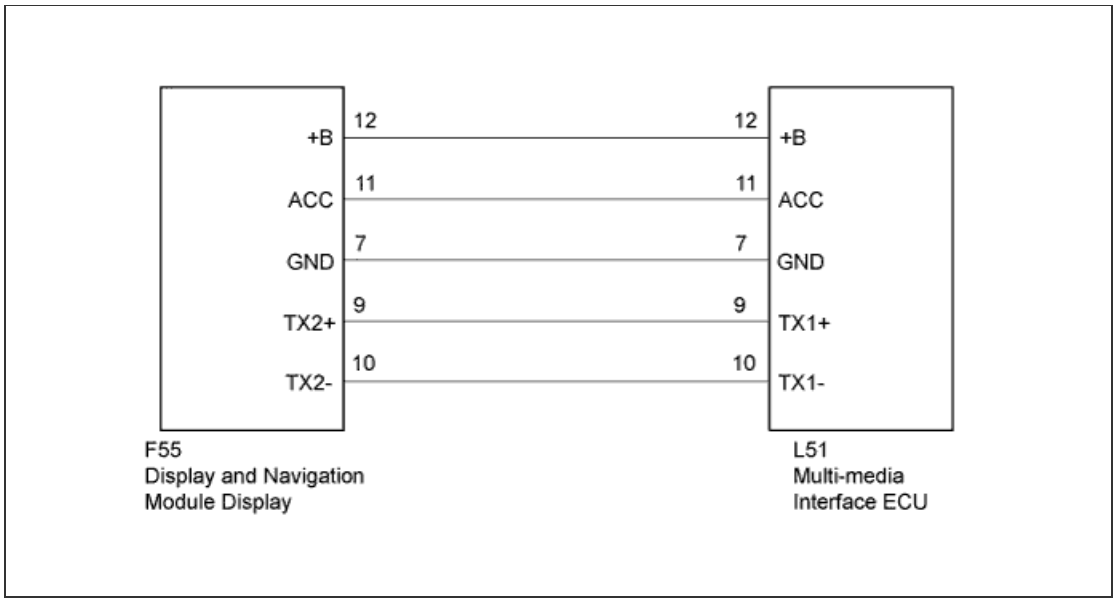
**END**

## DTC B156B Multi-media Interface ECU Disconnected

## DTC B156E No Response from Multi-media Interface ECU

**for Preparation** Click here

### DESCRIPTION



The display and navigation module display and multi-media interface ECU are connected by the AVC-LAN communication line.
When an AVC-LAN communication error occurs between the display and navigation module display and the multi-media interface ECU, these DTCs will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B156B*1 | When either condition below is met:<br>• Multi-media interface ECU is/was not connected while the engine switch is on (ON or ACC).<br>• Communication between the master unit and multi-media interface ECU is not possible when the engine is started. | • Multi-media interface ECU power source circuit<br>• AVC-LAN circuit between display and navigation module display and multi-media interface ECU<br>• Multi-media interface ECU<br>• Display and navigation module display |
| B156E | Within the time-out period, there was no response from the display and navigation module display to the following requests from the master unit:<br>• System inspection request<br>• System inspection result request<br>• Diagnostic memory request | |

**HINT:**

- ***1: Even if no fault is present, this DTC may be stored depending on the battery condition or engine start voltage.**
- **The display and navigation module display is the master unit.**

### WIRING DIAGRAM

### INSPECTION PROCEDURE

#### 1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Check for optional components.

i. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| | |

| | |
|---|---|
| Optional components (including associated wiring) are installed. | A |
| Optional components (including associated wiring) are not installed. | B |

**HINT:**

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect AVC-LAN communication.**
- **This DTC may be stored when an AVC-LAN communication error occurs due to electrical noise.**

**B** → **Go to step 3**

**A**

## 2.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

**NEXT**

## 3.CHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

**NG** → **Go to step 4**

**OK**

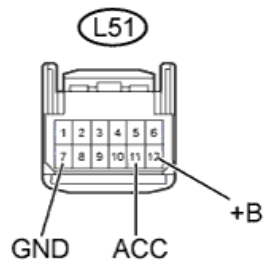
**END**

## 4.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA INTERFACE ECU POWER SOURCE)

a. Disconnect the L51 multi-media interface ECU connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**



| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L51-7 (GND) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L51-12 (+B) - L51-7 (GND) | Always | 11 to 14 V |
| L51-11 (ACC) - L51-7 (GND) | Engine switch on (ACC) | 11 to 14 V |

OK ↓

**5.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA INTERFACE ECU - DISPLAY AND NAVIGATION MODULE)**

a. Disconnect the L51 multi-media interface ECU connector.

b. Disconnect the F55 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L51-9 (TX1+) - F55-9 (TX2+) | Always | Below 1 Ω |
| L51-10 (TX1-) - F55-10 (TX2-) | Always | Below 1 Ω |
| L51-9 (TX1+) - Body ground | Always | 10 kΩ or higher |
| L51-10 (TX1-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ↓

**6.REPLACE MULTI-MEDIA INTERFACE ECU**

a. Replace the multi-media interface ECU (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK ↓

**END**

## DTC B15C0 Short in GPS Antenna

## DTC B15C1 Open in GPS Antenna

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored when a malfunction occurs in the navigation antenna assembly.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15C0 | Navigation antenna assembly error | • Wire harness<br>• Navigation antenna assembly<br>• Display and navigation module display |
| B15C1 | Error of the power source to the navigation antenna assembly | |

### INSPECTION PROCEDURE

**1.CHECK CONNECTION OF ANTENNA CABLE**

a. Check if the navigation antenna cable is securely connected to the display and navigation module display.

**OK:**
**Navigation antenna cable is securely connected.**

NG → **SECURELY CONNECT NAVIGATION ANTENNA CABLE**

# DTC B1582 Map Disk Reading Malfunction

**for Preparation** Click here

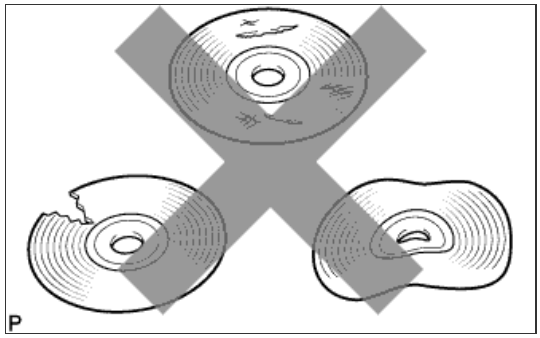
## DESCRIPTION

This DTC is stored when the navigation module board cannot read the map disc.



| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1582 | • Player error<br>• Scratches or dirt on the disc<br>• Access to an invalid address due to software error | • Map disc<br>• Navigation module board |

## INSPECTION PROCEDURE

### 1.CHECK MAP DISC

a. Check that the map disc is not deformed or cracked.

**OK:**
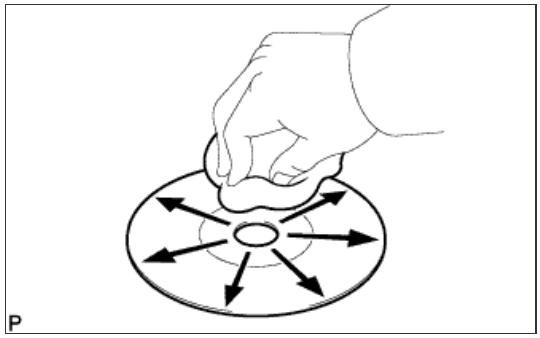
**No deformations or cracks on the map disc**

NG → REPLACE MAP DISC

OK



### 2.DISC CLEANING

a. Disc cleaning

i. If dirt is on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.

**NOTICE:**

Do not use a conventional record cleaner or anti-static preservative.

NEXT

### 3.CHECK DTC

a. Clear the DTC (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

NG → REPLACE NAVIGATION MODULE BOARD

OK

USE SIMULATION METHOD TO CHECK (Click here)

OK

USE SIMULATION METHOD TO CHECK (Click here)

## DTC B15C2 Speed Signal Malfunction

**for Preparation** Click here

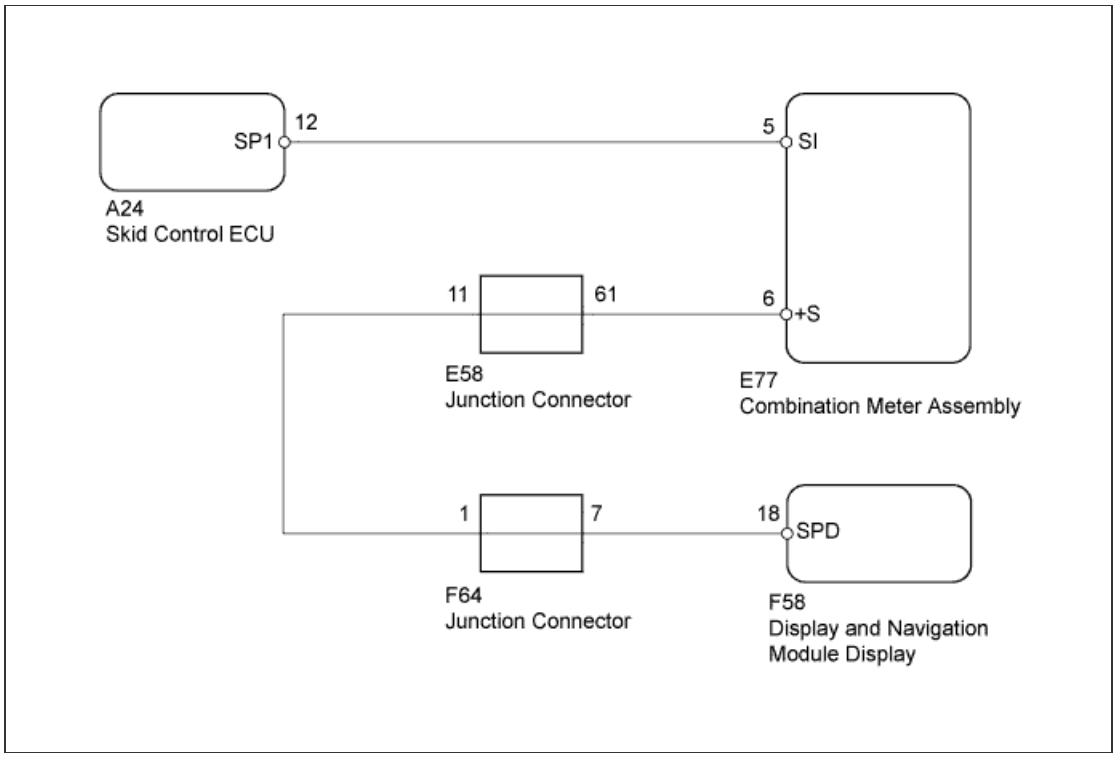
### DESCRIPTION



The display and navigation module display receives a vehicle speed signal from the combination meter assembly and information about the GPS antenna, and then adjusts vehicle position.
The display and navigation module display stores this DTC when the difference between the speed information that the GPS antenna receives and the SPD pulse received from the combination meter assembly becomes large.

**HINT:**

- **A voltage of 12 V or 5 V is output from each ECU and then input to the combination meter assembly. The signal is changed to a pulse signal at the transistor in the combination meter assembly. Each ECU controls the respective systems based on the pulse signal.**
- **If a short occurs in any of the ECUs or in the wire harness connected to an ECU, all systems in the diagram below will not operate normally.**

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
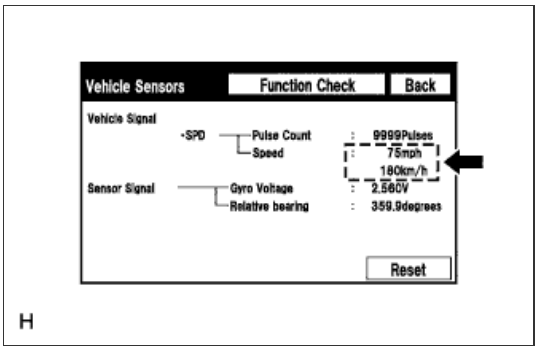
| B15C2 | A difference between the GPS speed and SPD pulse is detected. | • Combination meter assembly<br>• Wire harness or connector<br>• Display and navigation module display |

### WIRING DIAGRAM



### INSPECTION PROCEDURE

**1.CHECK VEHICLE SENSOR (OPERATION CHECK)**

a. Enter the "Vehicle Sensors" screen. Refer to check GPS & Vehicle Sensors in Operation Check (Click here).

b. While driving the vehicle, compare the "SPD" indicator to the reading on the speedometer. Check if these readings are almost equal.

**OK:**
**The readings are almost equal.**

NG → Go to step 2

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

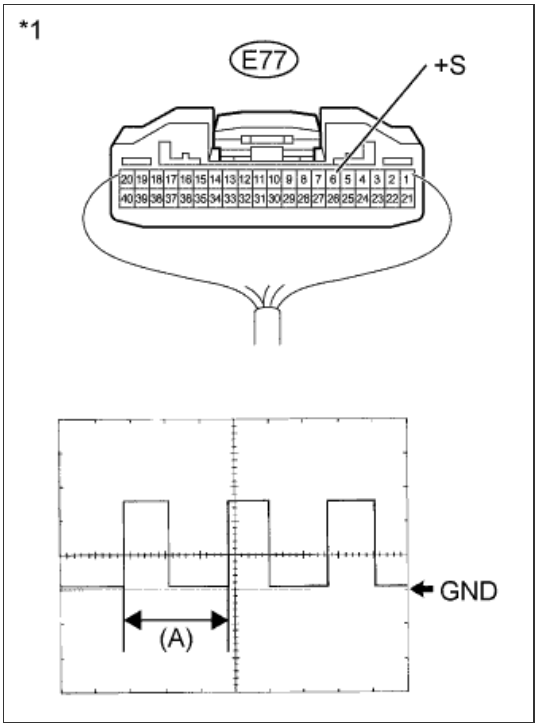
2.INSPECT COMBINATION METER ASSEMBLY (OUTPUT WAVEFORM)

a. Check the input waveform.

i. Remove the combination meter assembly with the connector(s) still connected.

ii. Connect an oscilloscope to terminal E77-6 (+S) and body ground.

iii. Turn the engine switch on (IG).



iv. Turn the wheel slowly.

v. Check the signal waveform according to the condition(s) in the table below.

| Item | Condition |
|---|---|
| Measurement terminal | E77-6 (+S) - Body ground |
| Tool setting | 5 V/DIV., 20 ms./DIV. |
| Vehicle condition | Driving at approx. 20 km/h (12 mph) |

**Text in Illustration**

| | |
|---|---|
| *1 | Component with harness connected (Combination Meter Assembly) |

**OK:**

**The waveform is displayed as shown in the illustration.**

**HINT:**

When the system is functioning normally, one wheel revolution generates 4 pulses. As the vehicle speed increases, the width indicated by (A) in the illustration narrows.

NG → GO TO METER / GAUGE SYSTEM (Click here)

OK

3.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - COMBINATION METER)

a. Disconnect the F58 display and navigation module display connector.

b. Disconnect the E77 combination meter assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-18 (SPD) - E77-6 (+S) | Always | Below 1 Ω |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

## DTC B1591 No Response from Audio HU

## DTC B15D1 Audio HU Disconnected

**for Preparation** Click here

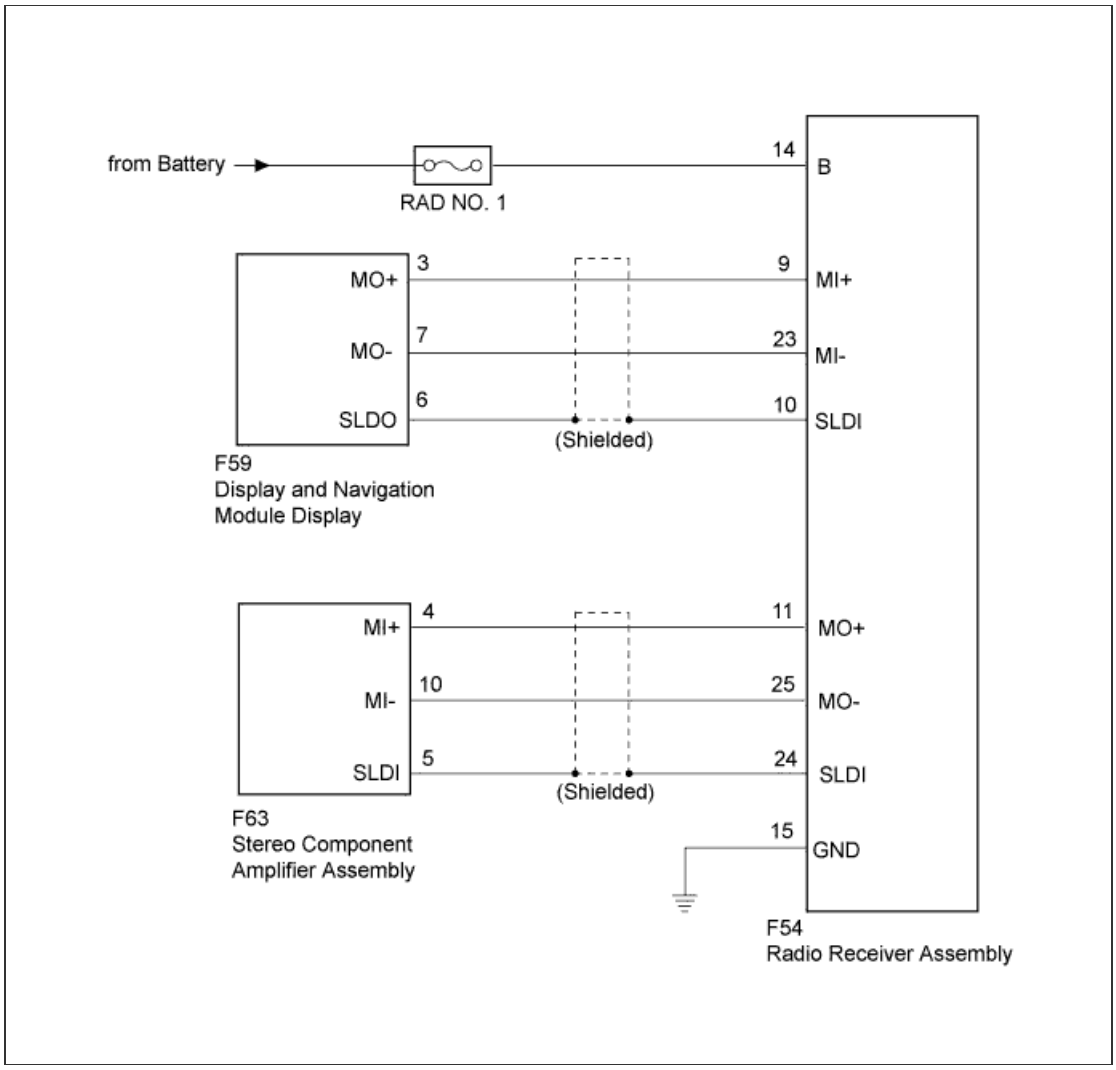
### DESCRIPTION



The display and navigation module display and radio receiver assembly are connected by the MOST communication line.
When an MOST communication error occurs between the display and navigation module display and the radio receiver assembly, these DTCs will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1591 | Within the time-out period, there was no response from the radio receiver assembly to the following requests from the master unit:<br>• System inspection request<br>• System inspection result request<br>• Diagnostic memory request | • Radio receiver assembly power source circuit<br>• MOST circuit between display and navigation module display and radio receiver assembly<br>• MOST circuit between radio receiver assembly and stereo component amplifier assembly<br>• Radio receiver assembly<br>• Display and navigation module display |
| B15D1*1 | When either of the conditions below is met:<br>• Radio receiver assembly is/was not connected while the engine switch is on (IG or ACC).<br>• Communication between the master unit and the radio receiver assembly is not possible when the engine is started. | |

**HINT:**

- ***1: Even if no fault is present, this DTC may be stored depending on the battery condition or engine start voltage.**
- **The display and navigation module display is the master unit.**

### WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

### 1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Check for optional components.

i. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components (including associated wiring) are installed. | A |
| Optional components (including associated wiring) are not installed. | B |

**HINT:**

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect MOST communication.**
- **This DTC may be stored when an MOST communication error occurs due to electrical noise.**

**B** → Go to step 3

**A**

### 2.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

NEXT

### 3.CHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
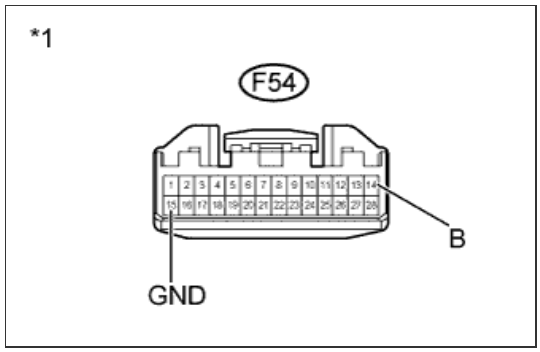
**No DTCs are output.**

NG → Go to step 4

OK

END



### 4.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER ASSEMBLY POWER SOURCE)

a. Disconnect the F54 radio receiver assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-15 (GND) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-14 (B) - F54-15 (GND) | Always | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Radio Receiver Assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

### 5.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - RADIO RECEIVER)

a. Disconnect the F59 display and navigation module display connector.

b. Disconnect the F54 radio receiver assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F59-3 (MO+) - F54-9 (MI+) | Always | Below 1 Ω |
| F59-7 (MO-) - F54-23 (MI-) | Always | Below 1 Ω |

| | | |
|---|---|---|
| F59-6 (SLDO) - F54-10 (SLDI) | Always | Below 1 Ω |
| F59-3 (MO+) - Body ground | Always | 10 kΩ or higher |
| F59-7 (MO-) - Body ground | Always | 10 kΩ or higher |
| F59-6 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**6.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - STEREO COMPONENT AMPLIFIER)**

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F63 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-11 (MO+) - F63-4 (MI+) | Always | Below 1 Ω |
| F54-25 (MO-) - F63-10 (MI-) | Always | Below 1 Ω |
| F54-24 (SLDI) - F63-5 (SLDI) | Always | Below 1 Ω |
| F54-11 (MO+) - Body ground | Always | 10 kΩ or higher |
| F54-25 (MO-) - Body ground | Always | 10 kΩ or higher |
| F54-24 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**7.REPLACE RADIO RECEIVER ASSEMBLY**

a. Replace the radio receiver assembly (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK

**END**

## DTC B15C2 Speed Signal Malfunction

**for Preparation** Click here

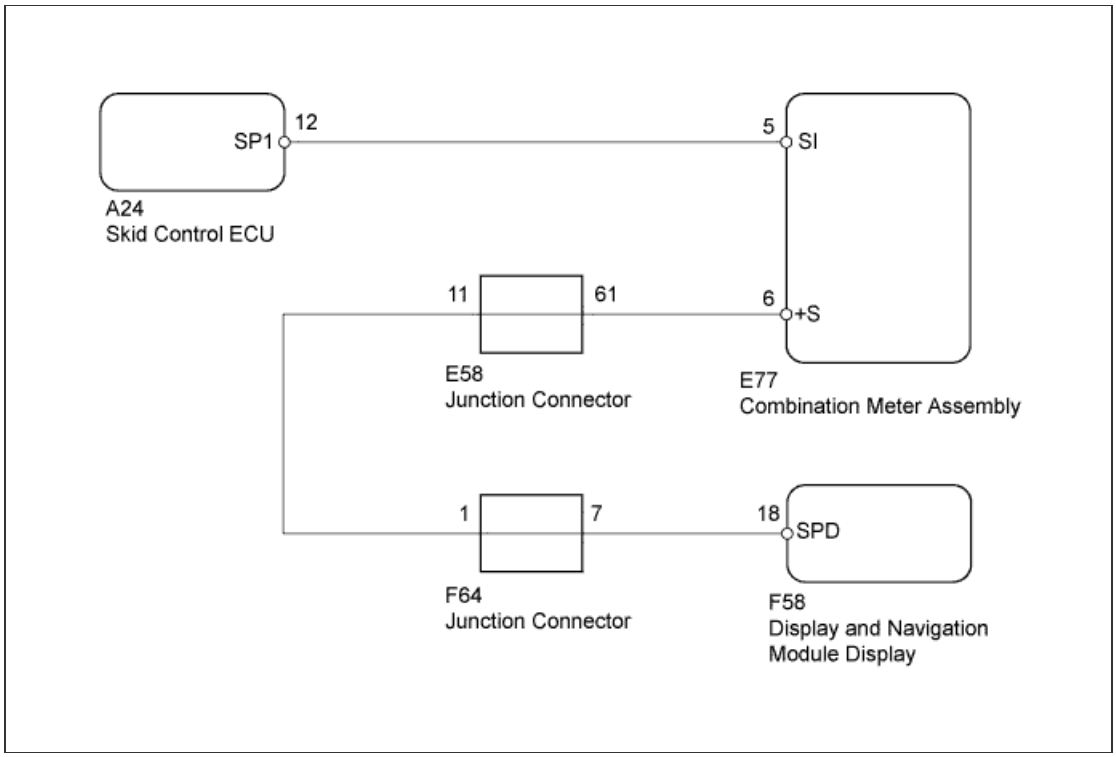
### DESCRIPTION



The display and navigation module display receives a vehicle speed signal from the combination meter assembly and information about the GPS antenna, and then adjusts vehicle position.
The display and navigation module display stores this DTC when the difference between the speed information that the GPS antenna receives and the SPD pulse received from the combination meter assembly becomes large.

**HINT:**

- **A voltage of 12 V or 5 V is output from each ECU and then input to the combination meter assembly. The signal is changed to a pulse signal at the transistor in the combination meter assembly. Each ECU controls the respective systems based on the pulse signal.**
- **If a short occurs in any of the ECUs or in the wire harness connected to an ECU, all systems in the diagram below will not operate normally.**

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
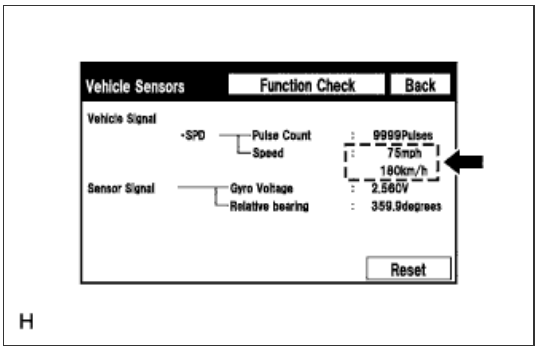
| B15C2 | A difference between the GPS speed and SPD pulse is detected. | • Combination meter assembly<br>• Wire harness or connector<br>• Display and navigation module display |

### WIRING DIAGRAM



### INSPECTION PROCEDURE

**1.CHECK VEHICLE SENSOR (OPERATION CHECK)**

a. Enter the "Vehicle Sensors" screen. Refer to check GPS & Vehicle Sensors in Operation Check (Click here).

b. While driving the vehicle, compare the "SPD" indicator to the reading on the speedometer. Check if these readings are almost equal.

**OK:**
**The readings are almost equal.**

NG → Go to step 2

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

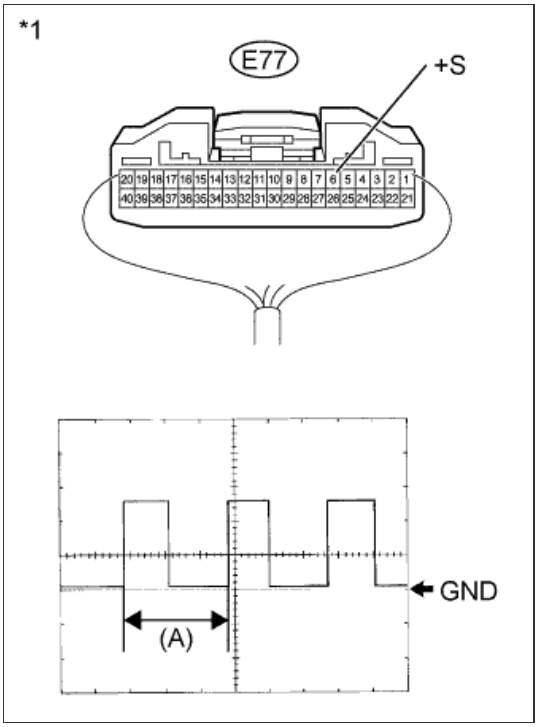
2.INSPECT COMBINATION METER ASSEMBLY (OUTPUT WAVEFORM)

a. Check the input waveform.

i. Remove the combination meter assembly with the connector(s) still connected.

ii. Connect an oscilloscope to terminal E77-6 (+S) and body ground.

iii. Turn the engine switch on (IG).



iv. Turn the wheel slowly.

v. Check the signal waveform according to the condition(s) in the table below.

| Item | Condition |
|---|---|
| Measurement terminal | E77-6 (+S) - Body ground |
| Tool setting | 5 V/DIV., 20 ms./DIV. |
| Vehicle condition | Driving at approx. 20 km/h (12 mph) |

**Text in Illustration**

| | |
|---|---|
| *1 | Component with harness connected (Combination Meter Assembly) |

**OK:**

**The waveform is displayed as shown in the illustration.**

**HINT:**

When the system is functioning normally, one wheel revolution generates 4 pulses. As the vehicle speed increases, the width indicated by (A) in the illustration narrows.

NG → GO TO METER / GAUGE SYSTEM (Click here)

OK

3.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - COMBINATION METER)

a. Disconnect the F58 display and navigation module display connector.

b. Disconnect the E77 combination meter assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-18 (SPD) - E77-6 (+S) | Always | Below 1 Ω |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

## DTC B1591 No Response from Audio HU

## DTC B15D1 Audio HU Disconnected

**for Preparation** Click here

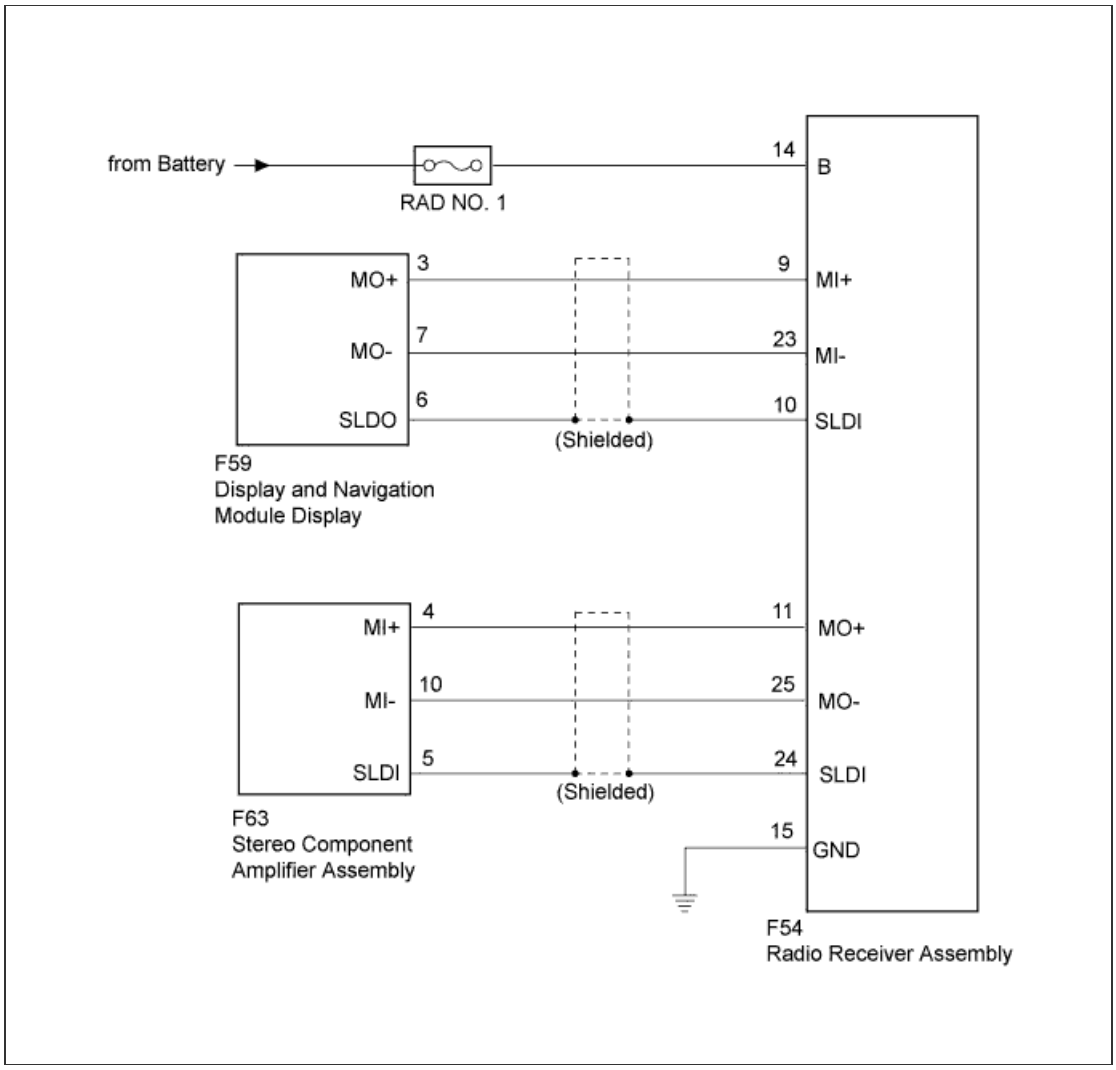
### DESCRIPTION



The display and navigation module display and radio receiver assembly are connected by the MOST communication line.
When an MOST communication error occurs between the display and navigation module display and the radio receiver assembly, these DTCs will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1591 | Within the time-out period, there was no response from the radio receiver assembly to the following requests from the master unit:<br>• System inspection request<br>• System inspection result request<br>• Diagnostic memory request | • Radio receiver assembly power source circuit<br>• MOST circuit between display and navigation module display and radio receiver assembly<br>• MOST circuit between radio receiver assembly and stereo component amplifier assembly<br>• Radio receiver assembly<br>• Display and navigation module display |
| B15D1*1 | When either of the conditions below is met:<br>• Radio receiver assembly is/was not connected while the engine switch is on (IG or ACC).<br>• Communication between the master unit and the radio receiver assembly is not possible when the engine is started. | |

**HINT:**

- ***1: Even if no fault is present, this DTC may be stored depending on the battery condition or engine start voltage.**
- **The display and navigation module display is the master unit.**

### WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

### 1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Check for optional components.

i. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components (including associated wiring) are installed. | A |
| Optional components (including associated wiring) are not installed. | B |

**HINT:**

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect MOST communication.**
- **This DTC may be stored when an MOST communication error occurs due to electrical noise.**

**B** → Go to step 3

**A**

### 2.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

NEXT

### 3.CHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → Go to step 4

OK

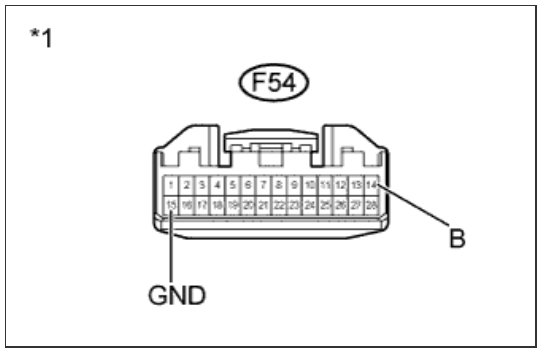
END



### 4.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER ASSEMBLY POWER SOURCE)

a. Disconnect the F54 radio receiver assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-15 (GND) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-14 (B) - F54-15 (GND) | Always | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Radio Receiver Assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

### 5.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - RADIO RECEIVER)

a. Disconnect the F59 display and navigation module display connector.

b. Disconnect the F54 radio receiver assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F59-3 (MO+) - F54-9 (MI+) | Always | Below 1 Ω |
| F59-7 (MO-) - F54-23 (MI-) | Always | Below 1 Ω |

| | | |
|---|---|---|
| F59-6 (SLDO) - F54-10 (SLDI) | Always | Below 1 Ω |
| F59-3 (MO+) - Body ground | Always | 10 kΩ or higher |
| F59-7 (MO-) - Body ground | Always | 10 kΩ or higher |
| F59-6 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**6.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - STEREO COMPONENT AMPLIFIER)**

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F63 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-11 (MO+) - F63-4 (MI+) | Always | Below 1 Ω |
| F54-25 (MO-) - F63-10 (MI-) | Always | Below 1 Ω |
| F54-24 (SLDI) - F63-5 (SLDI) | Always | Below 1 Ω |
| F54-11 (MO+) - Body ground | Always | 10 kΩ or higher |
| F54-25 (MO-) - Body ground | Always | 10 kΩ or higher |
| F54-24 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**7.REPLACE RADIO RECEIVER ASSEMBLY**

a. Replace the radio receiver assembly (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK

**END**

# DTC B15D0 MOST Communication Malfunction

**for Preparation** Click here

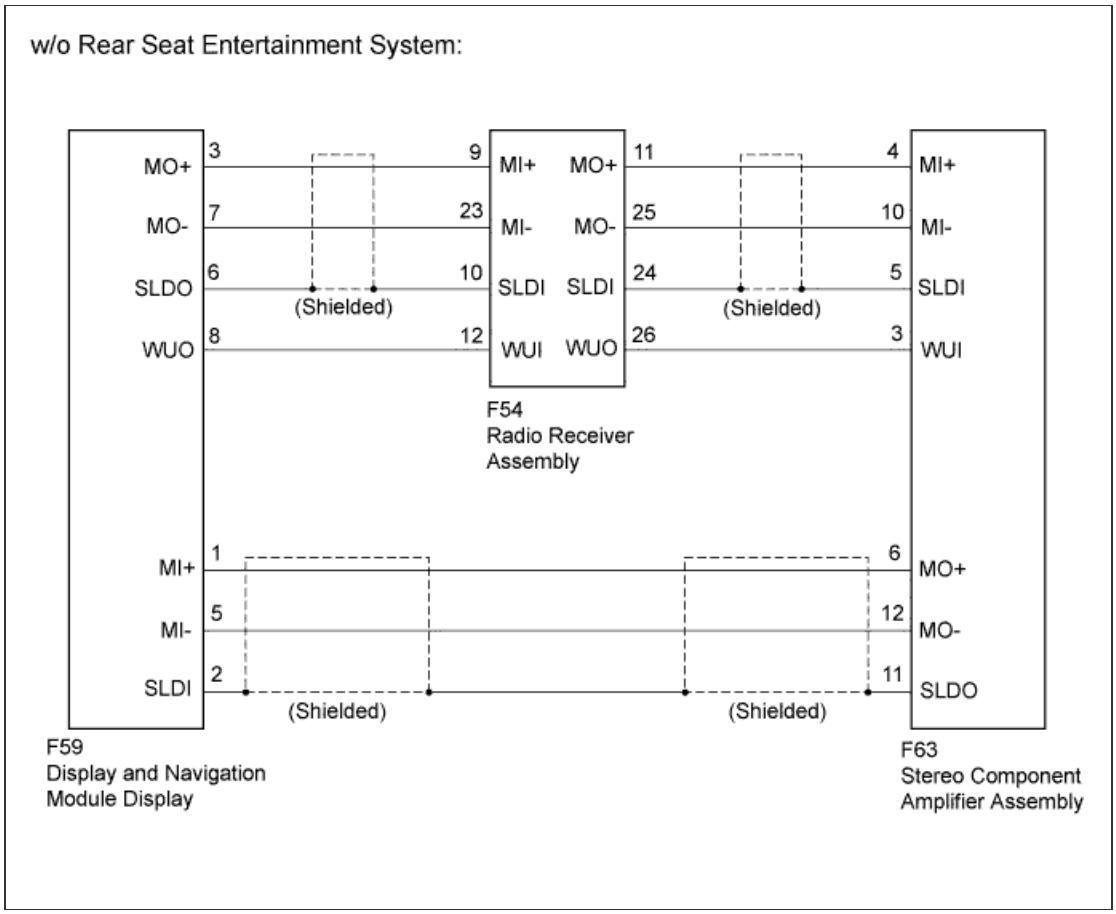
## DESCRIPTION



This DTC is stored when the MOST network cannot be established after the master unit is activated.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15D0 | MOST network cannot be established. | • MOST line check<br>• MOST communication line connector<br>• Wire harness or connector<br>• MOST communication line<br>• Radio receiver assembly<br>• Stereo component amplifier assembly<br>• Television display assembly (w/ Rear Seat Entertainment System)<br>• Display and navigation module display |

**HINT:**

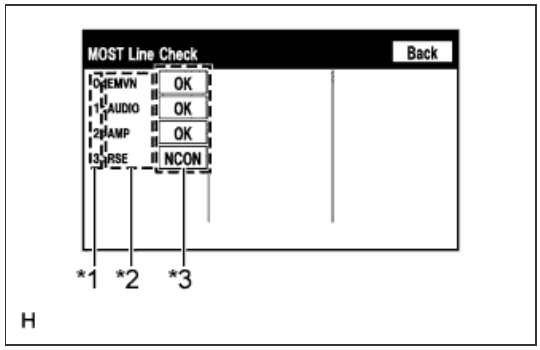
- **For the MOST network, the display and navigation module display is the master unit.**
- **Errors may occur in MOST communication between devices due to problems such as electrical noise.**

## WIRING DIAGRAM

w/ Rear Seat Entertainment System:



## INSPECTION PROCEDURE

### 1.PERFORM MOST LINE CHECK

a. Display the "MOST Line Check" screen ( Click here).

b. Check the result on the "MOST Line Check" screen.

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "AUDIO". | A |
| "NCON" is displayed for "AMP". | B |
| "NCON" is displayed for "RSE" (w/ rear seat entertainment system). | C |
| "OK" is displayed for all items. | D |

**HINT:**

- **When "NCON" is displayed for more than 1 item, proceed to the step for the device that has the smallest node position number.**
- **The "MOST Line Check" screen can be displayed only when DTC B15D0 is stored.**

**Text in Illustration**

| | |
|---|---|
| *1 | Node position number for devices that use MOST communication |
| *2 | Device name |
| *3 | Result |

| | |
|---|---|
| B | Go to step 5 |
| | |

| | |
|---|---|
| C | Go to step 8 |
| D | Go to step 11 |

A

## 2.CHECK MOST COMMUNICATION CONNECTOR

a. Check MOST communication line connector.

i. Check if a MOST communication line connector between the display and navigation module display and radio receiver assembly has any connection problems (Click here).

b. Display the "MOST Line Check" screen and check the result ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "AUDIO". | A |
| The screen cannot be changed to the "MOST Line Check" screen. | B |

**HINT:**

When the malfunction in the MOST network is repaired, the screen cannot be changed to the "MOST Line Check" screen.

| | |
|---|---|
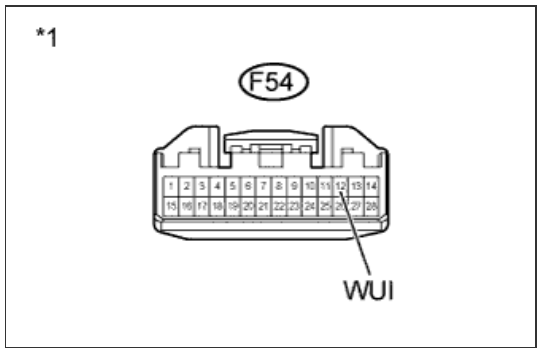
| B | END |

A



## 3.CHECK HARNESS AND CONNECTOR (WAKE UP SIGNAL)

a. Disconnect the F54 radio receiver assembly connector.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-12 (WUI) - Body ground | Engine switch on (ACC) | 4.5 V or higher |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Radio Receiver Assembly) |

| | |
|---|---|
| NG | Go to step 4 |

OK

REPLACE RADIO RECEIVER ASSEMBLY (Click here)

## 4.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - DISPLAY AND NAVIGATION MODULE DISPLAY)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-12 (WUI) - F59-8 (WUO) | Always | Below 1 Ω |
| | | |

| | | |
|---|---|---|
| F54-12 (WUI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

## 5.CHECK MOST COMMUNICATION CONNECTOR

a. Check MOST communication line connector.

i. Check if a MOST communication line connector between the radio receiver assembly and stereo component amplifier assembly has any connection problems (Click here).

b. Display the "MOST Line Check" screen and check the result ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "AMP". | A |
| The screen cannot be changed to the "MOST Line Check" screen. | B |

**HINT:**

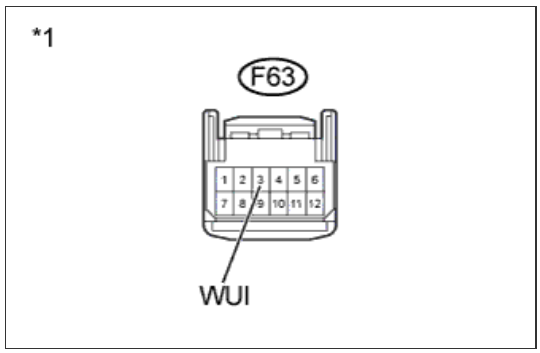
When the malfunction in the MOST network is repaired, the screen cannot be changed to the "MOST Line Check" screen.

B → END

A



## 6.CHECK HARNESS AND CONNECTOR (WAKE UP SIGNAL)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-3 (WUI) - Body ground | Engine switch on (ACC) | 4.5 V or higher |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Stereo Component Amplifier Assembly) |

NG → Go to step 7

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 7.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - RADIO RECEIVER)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the F54 radio receiver assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified |
|---|---|---|

| | | Condition |
|---|---|---|
| F63-3 (WUI) - F54-26 (WUO) | Always | Below 1 Ω |
| F63-3 (WUI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE RADIO RECEIVER ASSEMBLY (Click here)

## 8.CHECK MOST COMMUNICATION CONNECTOR

a. Check MOST communication line connector.

i. Check if a MOST communication line connector between the stereo component amplifier assembly and television display assembly has any connection problems (Click here).

b. Display the "MOST Line Check" screen and check the result ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "RSE". | A |
| The screen cannot be changed to the "MOST Line Check" screen. | B |

**HINT:**

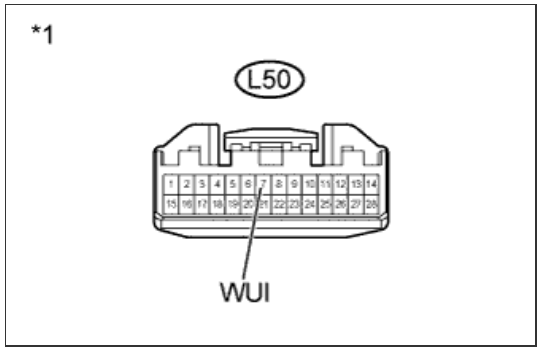
When the malfunction in the MOST network is repaired, the screen cannot be changed to the "MOST Line Check" screen.

B → END

A



## 9.CHECK HARNESS AND CONNECTOR (WAKE UP SIGNAL)

a. Disconnect the L50 television display assembly connector.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-7 (WUI) - Body ground | Engine switch on (ACC) | 4.5 V or higher |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Television Display Assembly) |

NG → Go to step 10

OK

REPLACE TELEVISION DISPLAY ASSEMBLY (Click here)

## 10.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY - STEREO COMPONENT AMPLIFIER)

a. Disconnect the L50 television display assembly connector.

b. Disconnect the F63 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-7 (WUI) - F63-9 (WUO) | Always | Below 1 Ω |
| L50-7 (WUI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

11.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - RADIO RECEIVER)

a. Disconnect the F59 display and navigation module display connector.

b. Disconnect the F54 radio receiver assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F59-3 (MO+) - F54-9 (MI+) | Always | Below 1 Ω |
| F59-7 (MO-) - F54-23 (MI-) | Always | Below 1 Ω |
| F59-6 (SLDO) - F54-10 (SLDI) | Always | Below 1 Ω |
| F59-3 (MO+) - Body ground | Always | 10 kΩ or higher |
| F59-7 (MO-) - Body ground | Always | 10 kΩ or higher |
| F59-6 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

12.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - STEREO COMPONENT AMPLIFIER)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F63 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-11 (MO+) - F63-4 (MI+) | Always | Below 1 Ω |
| F54-25 (MO-) - F63-10 (MI-) | Always | Below 1 Ω |
| F54-24 (SLDI) - F63-5 (SLDI) | Always | Below 1 Ω |
| F54-11 (MO+) - Body ground | Always | 10 kΩ or higher |
| F54-25 (MO-) - Body ground | Always | 10 kΩ or higher |
| F54-24 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

13.CONFIRM MODEL

a. Choose the model to be inspected.

**Result**

| Result | Proceed to |
|---|---|
| w/o Rear Seat Entertainment System | A |
| w/ Rear Seat Entertainment System | B |

B → Go to step 16

A

14.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT - DISPLAY AND NAVIGATION MODULE DISPLAY)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-6 (MO+) - F59-1 (MI+) | Always | Below 1 Ω |
| F63-12 (MO-) - F59-5 (MI-) | Always | Below 1 Ω |
| F63-11 (SLDO) - F59-2 (SLDI) | Always | Below 1 Ω |
| F63-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| F63-12 (MO-) - Body ground | Always | 10 kΩ or higher |
| F63-11 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

15.CHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

USE SIMULATION METHOD TO CHECK (Click here)

16.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - TELEVISION DISPLAY)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the L50 television display assembly.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-6 (MO+) - L50-1 (MI+) | Always | Below 1 Ω |
| F63-12 (MO-) - L50-2 (MI-) | Always | Below 1 Ω |
| F63-11 (SLDO) - L50-3 (SLDI) | Always | Below 1 Ω |
| F63-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| F63-12 (MO-) - Body ground | Always | 10 kΩ or higher |
| F63-11 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**17.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY - DISPLAY AND NAVIGATION MODULE DISPLAY)**

a. Disconnect the L50 television display assembly.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-6 (MO+) - F59-1 (MI+) | Always | Below 1 Ω |
| L50-5 (MO-) - F59-5 (MI-) | Always | Below 1 Ω |
| L50-4 (SLDO) - F59-2 (SLDI) | Always | Below 1 Ω |
| L50-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| L50-5 (MO-) - Body ground | Always | 10 kΩ or higher |
| L50-4 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**18.CHECK DTC**

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK

USE SIMULATION METHOD TO CHECK (Click here)

## DTC B1591 No Response from Audio HU

## DTC B15D1 Audio HU Disconnected

**for Preparation** Click here

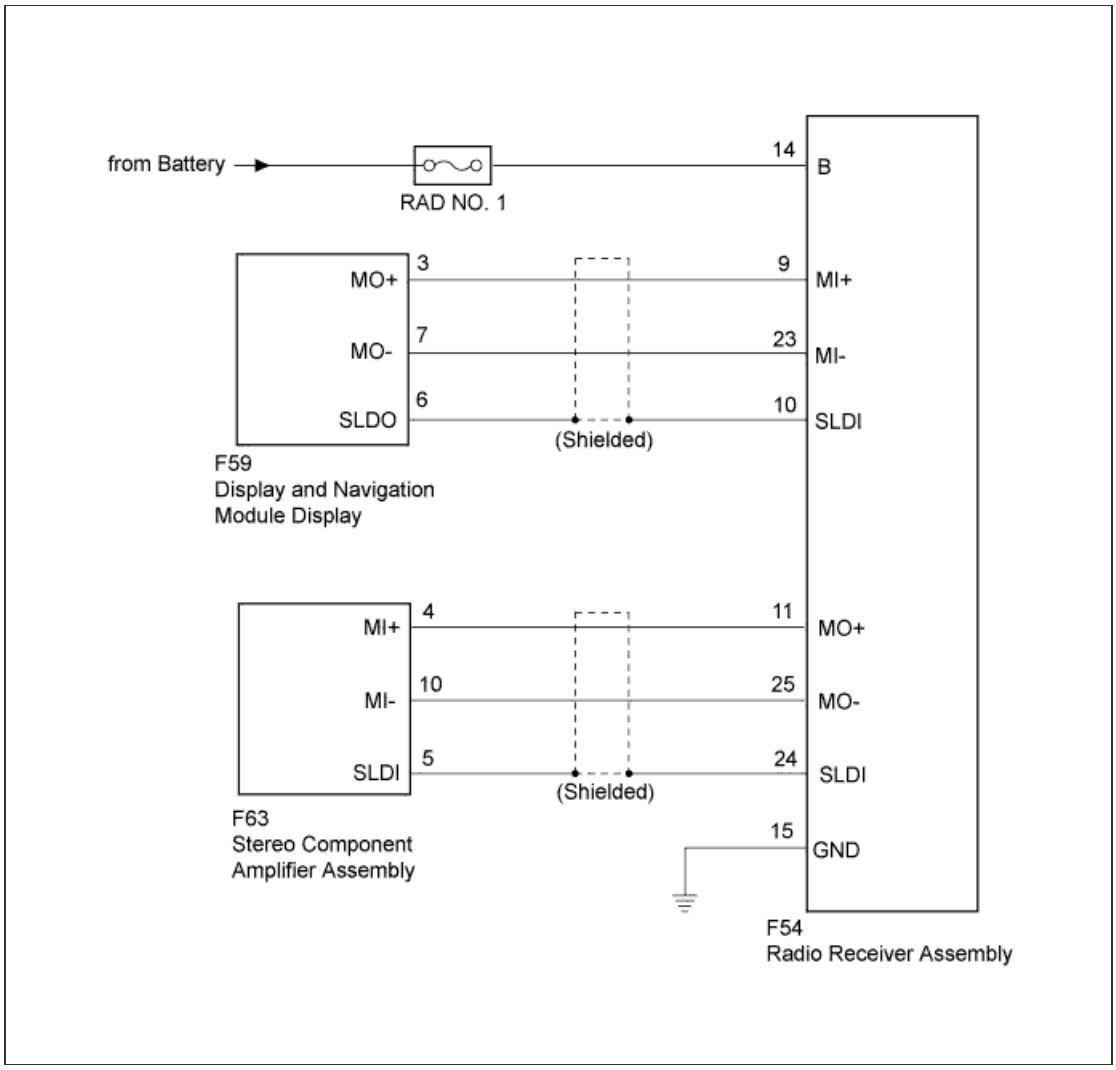
### DESCRIPTION



The display and navigation module display and radio receiver assembly are connected by the MOST communication line.
When an MOST communication error occurs between the display and navigation module display and the radio receiver assembly, these DTCs will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1591 | Within the time-out period, there was no response from the radio receiver assembly to the following requests from the master unit:<br>• System inspection request<br>• System inspection result request<br>• Diagnostic memory request | • Radio receiver assembly power source circuit<br>• MOST circuit between display and navigation module display and radio receiver assembly<br>• MOST circuit between radio receiver assembly and stereo component amplifier assembly<br>• Radio receiver assembly<br>• Display and navigation module display |
| B15D1*1 | When either of the conditions below is met:<br>• Radio receiver assembly is/was not connected while the engine switch is on (IG or ACC).<br>• Communication between the master unit and the radio receiver assembly is not possible when the engine is started. | |

**HINT:**

- ***1: Even if no fault is present, this DTC may be stored depending on the battery condition or engine start voltage.**
- **The display and navigation module display is the master unit.**

### WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

### 1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Check for optional components.

i. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components (including associated wiring) are installed. | A |
| Optional components (including associated wiring) are not installed. | B |

**HINT:**

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect MOST communication.**
- **This DTC may be stored when an MOST communication error occurs due to electrical noise.**

**B** → Go to step 3

**A**

### 2.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

NEXT

### 3.CHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → Go to step 4

OK

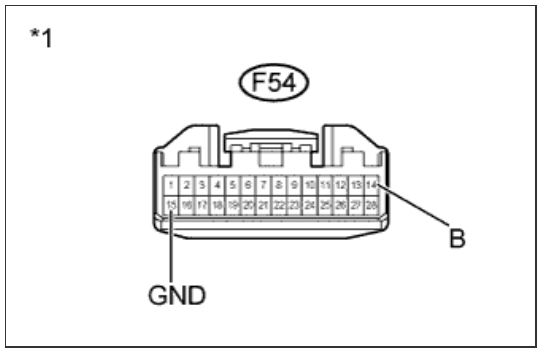
END



### 4.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER ASSEMBLY POWER SOURCE)

a. Disconnect the F54 radio receiver assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-15 (GND) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-14 (B) - F54-15 (GND) | Always | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Radio Receiver Assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

### 5.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - RADIO RECEIVER)

a. Disconnect the F59 display and navigation module display connector.

b. Disconnect the F54 radio receiver assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F59-3 (MO+) - F54-9 (MI+) | Always | Below 1 Ω |
| F59-7 (MO-) - F54-23 (MI-) | Always | Below 1 Ω |

| | | |
|---|---|---|
| F59-6 (SLDO) - F54-10 (SLDI) | Always | Below 1 Ω |
| F59-3 (MO+) - Body ground | Always | 10 kΩ or higher |
| F59-7 (MO-) - Body ground | Always | 10 kΩ or higher |
| F59-6 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**6.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - STEREO COMPONENT AMPLIFIER)**

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F63 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-11 (MO+) - F63-4 (MI+) | Always | Below 1 Ω |
| F54-25 (MO-) - F63-10 (MI-) | Always | Below 1 Ω |
| F54-24 (SLDI) - F63-5 (SLDI) | Always | Below 1 Ω |
| F54-11 (MO+) - Body ground | Always | 10 kΩ or higher |
| F54-25 (MO-) - Body ground | Always | 10 kΩ or higher |
| F54-24 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**7.REPLACE RADIO RECEIVER ASSEMBLY**

a. Replace the radio receiver assembly (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK

**END**

# DTC B15D0 MOST Communication Malfunction

**for Preparation** Click here

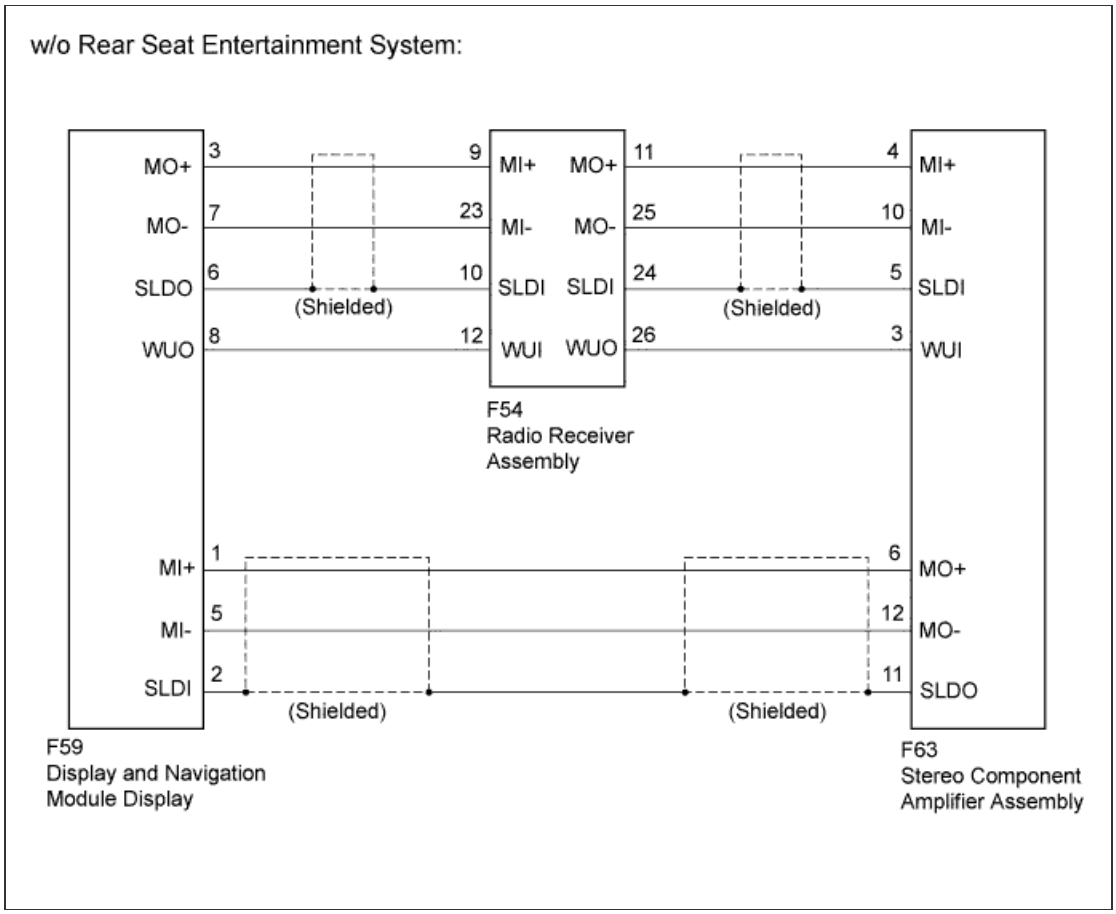
## DESCRIPTION



This DTC is stored when the MOST network cannot be established after the master unit is activated.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15D0 | MOST network cannot be established. | • MOST line check<br>• MOST communication line connector<br>• Wire harness or connector<br>• MOST communication line<br>• Radio receiver assembly<br>• Stereo component amplifier assembly<br>• Television display assembly (w/ Rear Seat Entertainment System)<br>• Display and navigation module display |

**HINT:**

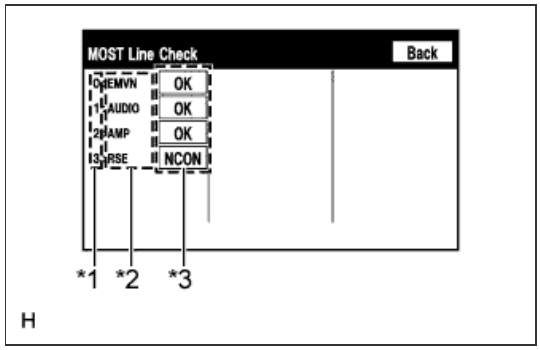
- **For the MOST network, the display and navigation module display is the master unit.**
- **Errors may occur in MOST communication between devices due to problems such as electrical noise.**

## WIRING DIAGRAM

w/ Rear Seat Entertainment System:



## INSPECTION PROCEDURE

### 1.PERFORM MOST LINE CHECK

a. Display the "MOST Line Check" screen ( Click here).

b. Check the result on the "MOST Line Check" screen.

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "AUDIO". | A |
| "NCON" is displayed for "AMP". | B |
| "NCON" is displayed for "RSE" (w/ rear seat entertainment system). | C |
| "OK" is displayed for all items. | D |

**HINT:**

- **When "NCON" is displayed for more than 1 item, proceed to the step for the device that has the smallest node position number.**
- **The "MOST Line Check" screen can be displayed only when DTC B15D0 is stored.**

**Text in Illustration**

| | |
|---|---|
| *1 | Node position number for devices that use MOST communication |
| *2 | Device name |
| *3 | Result |

| | |
|---|---|
| B | Go to step 5 |
| | |

| | |
|---|---|
| C | Go to step 8 |
| D | Go to step 11 |

A

## 2.CHECK MOST COMMUNICATION CONNECTOR

a. Check MOST communication line connector.

i. Check if a MOST communication line connector between the display and navigation module display and radio receiver assembly has any connection problems (Click here).

b. Display the "MOST Line Check" screen and check the result ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "AUDIO". | A |
| The screen cannot be changed to the "MOST Line Check" screen. | B |

**HINT:**

When the malfunction in the MOST network is repaired, the screen cannot be changed to the "MOST Line Check" screen.

| | |
|---|---|
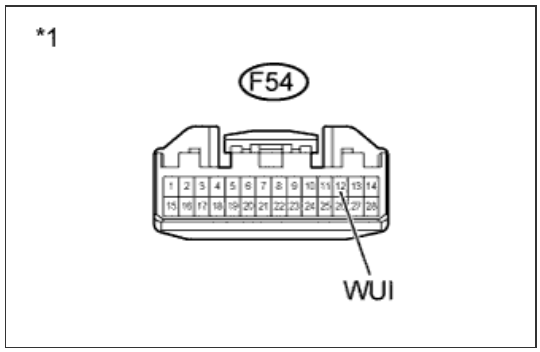
| B | END |

A



## 3.CHECK HARNESS AND CONNECTOR (WAKE UP SIGNAL)

a. Disconnect the F54 radio receiver assembly connector.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-12 (WUI) - Body ground | Engine switch on (ACC) | 4.5 V or higher |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Radio Receiver Assembly) |

| | |
|---|---|
| NG | Go to step 4 |

OK

REPLACE RADIO RECEIVER ASSEMBLY (Click here)

## 4.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - DISPLAY AND NAVIGATION MODULE DISPLAY)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-12 (WUI) - F59-8 (WUO) | Always | Below 1 Ω |
| | | |

| | | |
|---|---|---|
| F54-12 (WUI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

## 5.CHECK MOST COMMUNICATION CONNECTOR

a. Check MOST communication line connector.

i. Check if a MOST communication line connector between the radio receiver assembly and stereo component amplifier assembly has any connection problems (Click here).

b. Display the "MOST Line Check" screen and check the result ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "AMP". | A |
| The screen cannot be changed to the "MOST Line Check" screen. | B |

**HINT:**

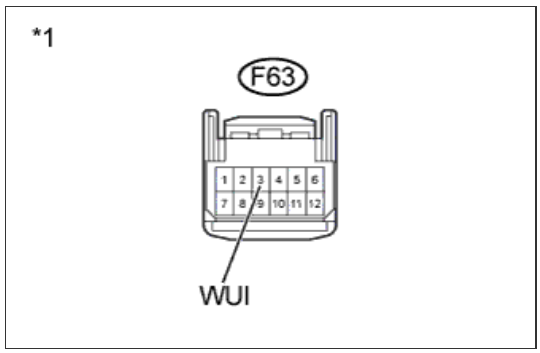
When the malfunction in the MOST network is repaired, the screen cannot be changed to the "MOST Line Check" screen.

B → END

A



## 6.CHECK HARNESS AND CONNECTOR (WAKE UP SIGNAL)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-3 (WUI) - Body ground | Engine switch on (ACC) | 4.5 V or higher |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Stereo Component Amplifier Assembly) |

NG → Go to step 7

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 7.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - RADIO RECEIVER)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the F54 radio receiver assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified |
|---|---|---|

| | | Condition |
|---|---|---|
| F63-3 (WUI) - F54-26 (WUO) | Always | Below 1 Ω |
| F63-3 (WUI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE RADIO RECEIVER ASSEMBLY (Click here)

## 8.CHECK MOST COMMUNICATION CONNECTOR

a. Check MOST communication line connector.

i. Check if a MOST communication line connector between the stereo component amplifier assembly and television display assembly has any connection problems (Click here).

b. Display the "MOST Line Check" screen and check the result ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "RSE". | A |
| The screen cannot be changed to the "MOST Line Check" screen. | B |

**HINT:**

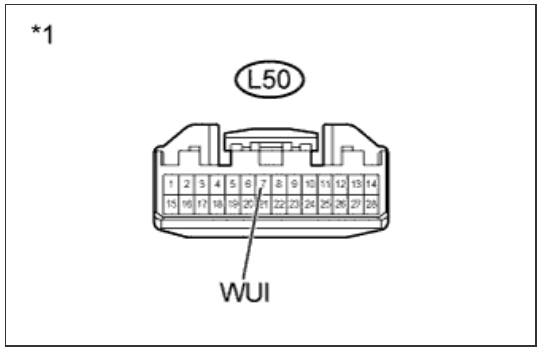
When the malfunction in the MOST network is repaired, the screen cannot be changed to the "MOST Line Check" screen.

B → END

A



## 9.CHECK HARNESS AND CONNECTOR (WAKE UP SIGNAL)

a. Disconnect the L50 television display assembly connector.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-7 (WUI) - Body ground | Engine switch on (ACC) | 4.5 V or higher |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Television Display Assembly) |

NG → Go to step 10

OK

REPLACE TELEVISION DISPLAY ASSEMBLY (Click here)

## 10.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY - STEREO COMPONENT AMPLIFIER)

a. Disconnect the L50 television display assembly connector.

b. Disconnect the F63 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-7 (WUI) - F63-9 (WUO) | Always | Below 1 Ω |
| L50-7 (WUI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

11.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - RADIO RECEIVER)

a. Disconnect the F59 display and navigation module display connector.

b. Disconnect the F54 radio receiver assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F59-3 (MO+) - F54-9 (MI+) | Always | Below 1 Ω |
| F59-7 (MO-) - F54-23 (MI-) | Always | Below 1 Ω |
| F59-6 (SLDO) - F54-10 (SLDI) | Always | Below 1 Ω |
| F59-3 (MO+) - Body ground | Always | 10 kΩ or higher |
| F59-7 (MO-) - Body ground | Always | 10 kΩ or higher |
| F59-6 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

12.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - STEREO COMPONENT AMPLIFIER)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F63 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-11 (MO+) - F63-4 (MI+) | Always | Below 1 Ω |
| F54-25 (MO-) - F63-10 (MI-) | Always | Below 1 Ω |
| F54-24 (SLDI) - F63-5 (SLDI) | Always | Below 1 Ω |
| F54-11 (MO+) - Body ground | Always | 10 kΩ or higher |
| F54-25 (MO-) - Body ground | Always | 10 kΩ or higher |
| F54-24 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

13.CONFIRM MODEL

a. Choose the model to be inspected.

**Result**

| Result | Proceed to |
|---|---|
| w/o Rear Seat Entertainment System | A |
| w/ Rear Seat Entertainment System | B |

B → Go to step 16

A

14.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT - DISPLAY AND NAVIGATION MODULE DISPLAY)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-6 (MO+) - F59-1 (MI+) | Always | Below 1 Ω |
| F63-12 (MO-) - F59-5 (MI-) | Always | Below 1 Ω |
| F63-11 (SLDO) - F59-2 (SLDI) | Always | Below 1 Ω |
| F63-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| F63-12 (MO-) - Body ground | Always | 10 kΩ or higher |
| F63-11 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

15.CHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

USE SIMULATION METHOD TO CHECK (Click here)

16.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - TELEVISION DISPLAY)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the L50 television display assembly.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-6 (MO+) - L50-1 (MI+) | Always | Below 1 Ω |
| F63-12 (MO-) - L50-2 (MI-) | Always | Below 1 Ω |
| F63-11 (SLDO) - L50-3 (SLDI) | Always | Below 1 Ω |
| F63-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| F63-12 (MO-) - Body ground | Always | 10 kΩ or higher |
| F63-11 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**17.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY - DISPLAY AND NAVIGATION MODULE DISPLAY)**

a. Disconnect the L50 television display assembly.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-6 (MO+) - F59-1 (MI+) | Always | Below 1 Ω |
| L50-5 (MO-) - F59-5 (MI-) | Always | Below 1 Ω |
| L50-4 (SLDO) - F59-2 (SLDI) | Always | Below 1 Ω |
| L50-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| L50-5 (MO-) - Body ground | Always | 10 kΩ or higher |
| L50-4 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**18.CHECK DTC**

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK

USE SIMULATION METHOD TO CHECK (Click here)

## DTC B1591 No Response from Audio HU

## DTC B15D1 Audio HU Disconnected

**for Preparation** Click here

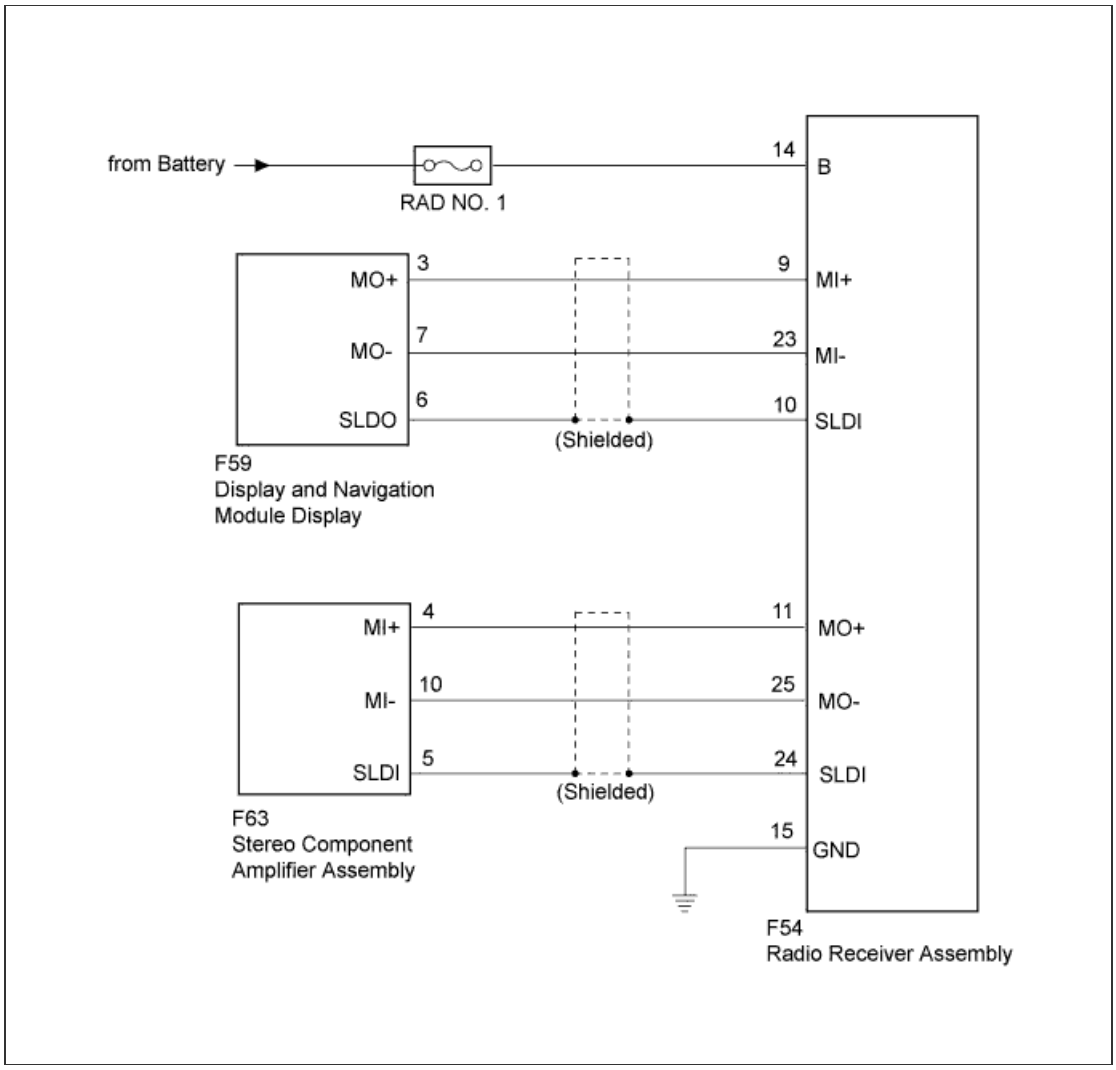
### DESCRIPTION



The display and navigation module display and radio receiver assembly are connected by the MOST communication line.
When an MOST communication error occurs between the display and navigation module display and the radio receiver assembly, these DTCs will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1591 | Within the time-out period, there was no response from the radio receiver assembly to the following requests from the master unit:<br>• System inspection request<br>• System inspection result request<br>• Diagnostic memory request | • Radio receiver assembly power source circuit<br>• MOST circuit between display and navigation module display and radio receiver assembly<br>• MOST circuit between radio receiver assembly and stereo component amplifier assembly<br>• Radio receiver assembly<br>• Display and navigation module display |
| B15D1*1 | When either of the conditions below is met:<br>• Radio receiver assembly is/was not connected while the engine switch is on (IG or ACC).<br>• Communication between the master unit and the radio receiver assembly is not possible when the engine is started. | |

**HINT:**

- ***1: Even if no fault is present, this DTC may be stored depending on the battery condition or engine start voltage.**
- **The display and navigation module display is the master unit.**

### WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

### 1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Check for optional components.

i. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components (including associated wiring) are installed. | A |
| Optional components (including associated wiring) are not installed. | B |

**HINT:**

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect MOST communication.**
- **This DTC may be stored when an MOST communication error occurs due to electrical noise.**

**B** → Go to step 3

**A**

### 2.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

NEXT

### 3.CHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → Go to step 4

OK

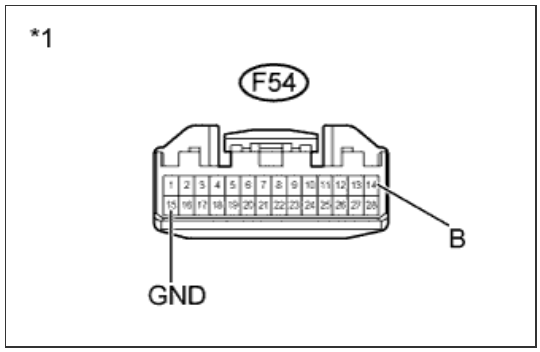
END



### 4.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER ASSEMBLY POWER SOURCE)

a. Disconnect the F54 radio receiver assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-15 (GND) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-14 (B) - F54-15 (GND) | Always | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Radio Receiver Assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

### 5.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - RADIO RECEIVER)

a. Disconnect the F59 display and navigation module display connector.

b. Disconnect the F54 radio receiver assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F59-3 (MO+) - F54-9 (MI+) | Always | Below 1 Ω |
| F59-7 (MO-) - F54-23 (MI-) | Always | Below 1 Ω |

| | | |
|---|---|---|
| F59-6 (SLDO) - F54-10 (SLDI) | Always | Below 1 Ω |
| F59-3 (MO+) - Body ground | Always | 10 kΩ or higher |
| F59-7 (MO-) - Body ground | Always | 10 kΩ or higher |
| F59-6 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**6.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - STEREO COMPONENT AMPLIFIER)**

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F63 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-11 (MO+) - F63-4 (MI+) | Always | Below 1 Ω |
| F54-25 (MO-) - F63-10 (MI-) | Always | Below 1 Ω |
| F54-24 (SLDI) - F63-5 (SLDI) | Always | Below 1 Ω |
| F54-11 (MO+) - Body ground | Always | 10 kΩ or higher |
| F54-25 (MO-) - Body ground | Always | 10 kΩ or higher |
| F54-24 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**7.REPLACE RADIO RECEIVER ASSEMBLY**

a. Replace the radio receiver assembly (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK

**END**

# DTC B15D8 Monitor Disconnected

**for Preparation** Click here

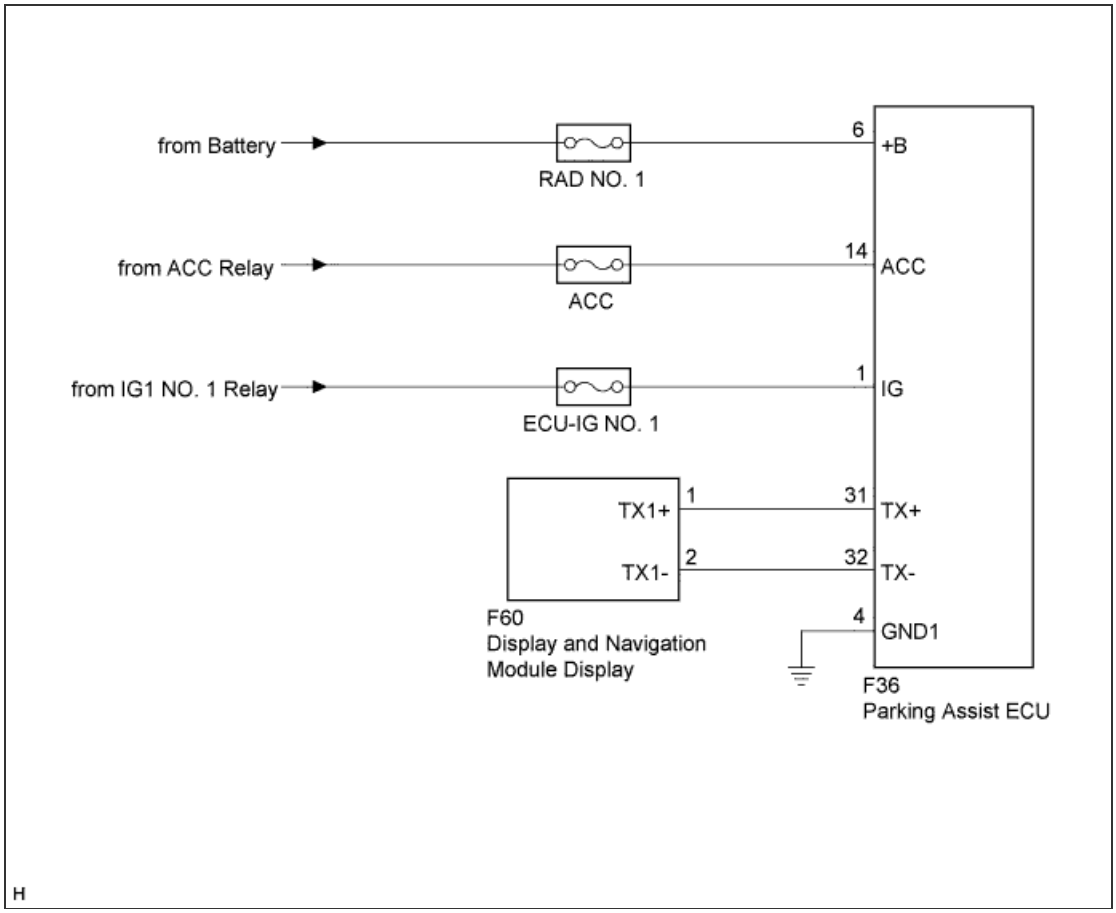
## DESCRIPTION



The display and navigation module display and parking assist ECU are connected by the AVC-LAN communication line.
When an AVC-LAN communication error occurs between the display and navigation module display and parking assist ECU, this DTC will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15D8 | A device that is listed in the AVC-LAN connected device record of the master unit is missing. | • Parking assist ECU power source circuit<br>• AVC-LAN circuit between display and navigation module display and parking assist ECU<br>• Parking assist ECU<br>• Display and navigation module display |

**HINT:**

The display and navigation module display is the master unit.

## 4.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY POWER SOURCE)

a. Disconnect the F2 stereo component amplifier assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F2-2 (GND) - Body ground | Always | Below 1 Ω |
| F2-6 (GND2) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F2-1 (+B) - F2-2 (GND) | Always | 11 to 14 V |
| F2-3 (+B2) - F2-2 (GND) | Always | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Stereo Component Amplifier Assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

### 5.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - RADIO RECEIVER)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the F54 radio receiver assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-4 (MI+) - F54-11 (MO+) | Always | Below 1 Ω |
| F63-10 (MI-) - F54-25 (MO-) | Always | Below 1 Ω |
| F63-5 (SLDI) - F54-24 (SLDI) | Always | Below 1 Ω |
| F63-4 (MI+) - Body ground | Always | 10 kΩ or higher |
| F63-10 (MI-) - Body ground | Always | 10 kΩ or higher |
| F63-5 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

### 6.CONFIRM MODEL

a. Choose the model to be inspected.

**Result**

| Model | Proceed to |
|---|---|
| w/o Rear Seat Entertainment System | A |
| w/ Rear Seat Entertainment System | B |

B → Go to step 9

A

### 7.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - DISPLAY AND NAVIGATION MODULE)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-6 (MO+) - F59-1 (MI+) | Always | Below 1 Ω |
| F63-12 (MO-) - F59-5 (MI-) | Always | Below 1 Ω |
| F63-11 (SLDO) - F59-2 (SLDI) | Always | Below 1 Ω |
| F63-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| F63-12 (MO-) - Body ground | Always | 10 kΩ or higher |
| F63-11 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**8.REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY**

a. Replace the stereo component amplifier assembly (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK

**END**

**9.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - TELEVISION DISPLAY)**

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the L50 television display assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-6 (MO+) - L50-1 (MI+) | Always | Below 1 Ω |
| F63-12 (MO-) - L50-2 (MI-) | Always | Below 1 Ω |
| F63-11 (SLDO) - L50-3 (SLDI) | Always | Below 1 Ω |
| F63-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| F63-12 (MO-) - Body ground | Always | 10 kΩ or higher |
| F63-11 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**10.REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY**

a. Replace the stereo component amplifier assembly (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK

```
END
```

# DTC B15F5 A/C ECU Vehicle Information Reading/Writing Processor Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when items controlled by the A/C ECU (air conditioning amplifier assembly) cannot be customized via the navigation system vehicle customization screen.

**HINT:**

The A/C ECU (air conditioning amplifier assembly) controls the air conditioning system related items that are customizable via the navigation system screen.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15F5 | A/C ECU (air conditioning amplifier assembly) vehicle setting processing error. | • CAN communication system<br>• Air conditioning system<br>• A/C ECU (air conditioning amplifier assembly)<br>• Display and navigation module display |

## INSPECTION PROCEDURE

### 1.CHECK CAN COMMUNICATION SYSTEM

a. Use the intelligent tester to check if the CAN communication system is functioning normally.

**HINT:**

- **for LHD (Click here)**
- **for RHD (Click here)**

**OK:**

**CAN communication DTC is not output.**

Result

| Result | Proceed to |
|---|---|
| OK | A |
| NG (for LHD) | B |
| NG (for RHD) | C |

B → GO TO CAN COMMUNICATION SYSTEM (Click here)

C → GO TO CAN COMMUNICATION SYSTEM (Click here)

A

### 2.CHECK AIR CONDITIONING SYSTEM

a. Check if the air conditioning system is malfunctioning (Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the air conditioning system.

**OK:**

**No malfunctions are present in the air conditioning system.**

NG → GO TO AIR CONDITIONING SYSTEM (Click here)

OK

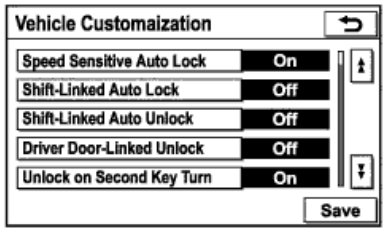
### 3.CHECK CUSTOMIZE ITEMS

a. Display the "Vehicle Customization" screen.



b. Make a note of the customizable items for the air conditioning system.

**HINT:**

These air conditioning system items shown as customizable via the navigation system vehicle customization screen can also be changed using the intelligent tester. In the following steps, the intelligent tester will be used.

i. To match-up the items in the navigation display with the items on the intelligent tester, check the customize parameters list for the air conditioning system related items that can be customized via the navigation system screen (Click here).

Example:

c. Using the intelligent tester, confirm that it is possible to change the settings of the air conditioning system related customize parameters that are shown as customizable via the navigation system screen.

**OK:**

**The items available for customization via the navigation system screen can be customized successfully using the intelligent tester.**

NG → REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

OK → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

## DTC B1593 No Response from Stereo Component Amplifier

## DTC B15D3 Stereo Component Amplifier Disconnected

**for Preparation** Click here

### DESCRIPTION

The display and navigation module display and stereo component amplifier assembly are connected by the MOST communication line.
When an MOST communication error occurs between the display and navigation module display and stereo component amplifier assembly, these DTCs will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1593 | No response to the diagnostic memory request from the master unit. | • Stereo component amplifier assembly power source circuit<br>• MOST circuit between radio receiver assembly and stereo component amplifier assembly<br>• MOST circuit between stereo component amplifier assembly and display and navigation module display (w/o Rear Seat Entertainment System)<br>• MOST circuit between stereo component amplifier assembly and television display assembly (w/ Rear Seat Entertainment System)<br>• Stereo component amplifier assembly<br>• Display and navigation module display |
| B15D3 | A device that is listed in the MOST network connected device record of the master unit is missing. | |

**HINT:**

For the MOST network, the display and navigation module display is the master unit.

### WIRING DIAGRAM

w/o Rear Seat Entertainment System:

w/ Rear Seat Entertainment System:

H

## INSPECTION PROCEDURE

**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

### 1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Check for optional components.

i. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components (including associated wiring) are installed. | A |
| Optional components (including associated wiring) are not installed. | B |

**HINT:**

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect MOST communication.**
- **This DTC may be stored when an MOST communication error occurs due to electrical noise.**

B → Go to step 3

A

## 2.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

NEXT

## 3.CHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → Go to step 4

OK

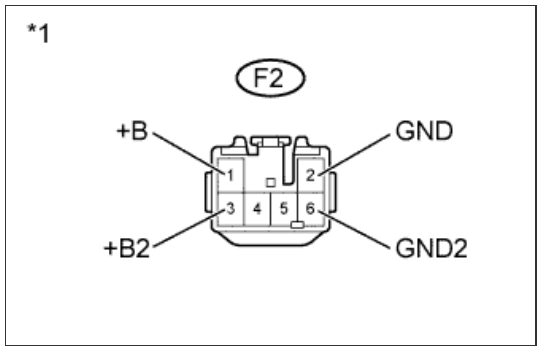
## END



## 4.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY POWER SOURCE)

a. Disconnect the F2 stereo component amplifier assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F2-2 (GND) - Body ground | Always | Below 1 Ω |
| F2-6 (GND2) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F2-1 (+B) - F2-2 (GND) | Always | 11 to 14 V |
| F2-3 (+B2) - F2-2 (GND) | Always | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Stereo Component Amplifier Assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

### 5.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - RADIO RECEIVER)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the F54 radio receiver assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-4 (MI+) - F54-11 (MO+) | Always | Below 1 Ω |
| F63-10 (MI-) - F54-25 (MO-) | Always | Below 1 Ω |
| F63-5 (SLDI) - F54-24 (SLDI) | Always | Below 1 Ω |
| F63-4 (MI+) - Body ground | Always | 10 kΩ or higher |
| F63-10 (MI-) - Body ground | Always | 10 kΩ or higher |
| F63-5 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

### 6.CONFIRM MODEL

a. Choose the model to be inspected.

**Result**

| Model | Proceed to |
|---|---|
| w/o Rear Seat Entertainment System | A |
| w/ Rear Seat Entertainment System | B |

B → Go to step 9

A

### 7.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - DISPLAY AND NAVIGATION MODULE)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-6 (MO+) - F59-1 (MI+) | Always | Below 1 Ω |
| F63-12 (MO-) - F59-5 (MI-) | Always | Below 1 Ω |
| F63-11 (SLDO) - F59-2 (SLDI) | Always | Below 1 Ω |
| F63-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| F63-12 (MO-) - Body ground | Always | 10 kΩ or higher |
| F63-11 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**8.REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY**

a. Replace the stereo component amplifier assembly (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK

**END**

**9.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - TELEVISION DISPLAY)**

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the L50 television display assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-6 (MO+) - L50-1 (MI+) | Always | Below 1 Ω |
| F63-12 (MO-) - L50-2 (MI-) | Always | Below 1 Ω |
| F63-11 (SLDO) - L50-3 (SLDI) | Always | Below 1 Ω |
| F63-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| F63-12 (MO-) - Body ground | Always | 10 kΩ or higher |
| F63-11 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**10.REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY**

a. Replace the stereo component amplifier assembly (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK

```
END
```

# DTC B15F6 Main Body ECU Vehicle Information Reading/Writing Process Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when items controlled by the main body ECU cannot be customized via the navigation system vehicle customization screen.

**HINT:**

**The main body ECU controls the items for the following systems that are customizable via the navigation system screen:**

- **Power door lock control system**
- **Wireless door lock control system**
- **Lighting system**

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15F6 | Main body ECU vehicle setting processing error. | • CAN communication system<br>• Power door lock control system<br>• Wireless door lock control system<br>• Lighting system<br>• Main body ECU<br>• Display and navigation module display |

## INSPECTION PROCEDURE

### 1.CHECK CAN COMMUNICATION SYSTEM

a. Use the intelligent tester to check if the CAN communication system is functioning normally.

**HINT:**

- **for LHD (Click here)**
- **for RHD (Click here)**

**OK:**
**CAN communication DTC is not output.**

Result

| Result | Proceed to |
|---|---|
| OK | A |
| NG (for LHD) | B |
| NG (for RHD) | C |

**B** → GO TO CAN COMMUNICATION SYSTEM (Click here)

**C** → GO TO CAN COMMUNICATION SYSTEM (Click here)

**A**

### 2.CHECK POWER DOOR LOCK CONTROL SYSTEM

a. Check if the power door lock control system is malfunctioning ( Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the power door lock control system.

**OK:**
**No malfunctions are present in the power door lock control system.**

**NG** → GO TO POWER DOOR LOCK CONTROL SYSTEM (Click here)

**OK**

### 3.CHECK WIRELESS DOOR LOCK CONTROL SYSTEM

a. Check if the wireless door lock control system is malfunctioning ( Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the wireless door lock control system.

**OK:**

**No malfunctions are present in the wireless door lock control system.**

NG → GO TO WIRELESS DOOR LOCK CONTROL SYSTEM (**Click here**)

OK

### 4.CHECK LIGHTING SYSTEM

a. Check if the lighting system is malfunctioning (Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the lighting system.

**OK:**

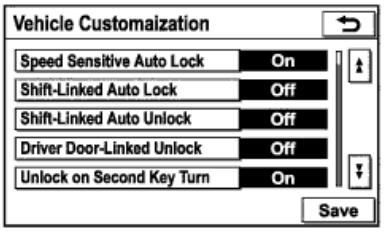
**No malfunctions are present in the lighting system.**

NG → GO TO LIGHTING SYSTEM (**Click here**)

OK

### 5.CHECK CUSTOMIZE ITEMS

a. Display the "Vehicle Customization" screen.



b. Make a note of the customizable items for each main body ECU related system.

**HINT:**

These items shown as customizable via the navigation system vehicle customization screen can also be changed using the intelligent tester. In a following step, the intelligent tester will be used.

i. To match-up the items in the navigation display with the items on the intelligent tester, check the customize parameters list for the power door lock control system related items that can be customized via the navigation system screen (Click here).

Example:

ii. To match-up the items in the navigation display with the items on the intelligent tester, check the customize parameters list for the wireless door lock control system related items that can be customized via the navigation system screen (Click here).

iii. To match-up the items in the navigation display with the items on the intelligent tester, check the customize parameters list for the lighting system related items that can be customized via the navigation system screen (Click here).

c. Using the intelligent tester, confirm that it is possible to change the settings of the customize parameters that are available for customization via the navigation system screen.

**OK:**

**The items available for customization via the navigation system screen can be customized successfully using the intelligent tester.**

NG → REPLACE MAIN BODY ECU

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

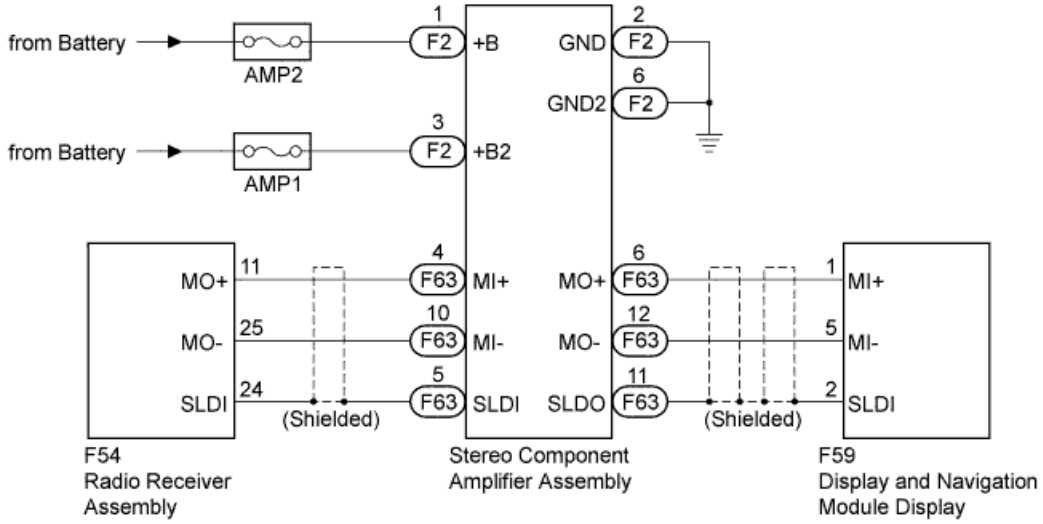
## DTC B1593 No Response from Stereo Component Amplifier

## DTC B15D3 Stereo Component Amplifier Disconnected

**for Preparation** Click here

### DESCRIPTION

The display and navigation module display and stereo component amplifier assembly are connected by the MOST communication line.
When an MOST communication error occurs between the display and navigation module display and stereo component amplifier assembly, these DTCs will be stored.



| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1593 | No response to the diagnostic memory request from the master unit. | • Stereo component amplifier assembly power source circuit<br>• MOST circuit between radio receiver assembly and stereo component amplifier assembly<br>• MOST circuit between stereo component amplifier assembly and display and navigation module display (w/o Rear Seat Entertainment System)<br>• MOST circuit between stereo component amplifier assembly and television display assembly (w/ Rear Seat Entertainment System)<br>• Stereo component amplifier assembly<br>• Display and navigation module display |

```

## DTC B15F7 Certification ECU Vehicle Information Reading/Writing Process Malfunction

**for Preparation** Click here

### DESCRIPTION

This DTC is stored when items controlled by the certification ECU (smart key ECU assembly) cannot be customized via the navigation system vehicle customization screen.

**HINT:**

**The certification ECU (smart key ECU assembly) controls the items for the following systems that are customizable via the navigation system screen:**

- **Entry and start system (for Entry Function)**
- **Entry and start system (for Start Function)**

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15F7 | Certification ECU (smart key ECU assembly) vehicle setting processing error. | • CAN communication system<br>• Entry and start system (for entry function)<br>• Entry and start system (for start function)<br>• Certification ECU (smart key ECU assembly)<br>• Display and navigation module display |

### INSPECTION PROCEDURE

**1.CHECK CAN COMMUNICATION SYSTEM**

a. Use the intelligent tester to check if the CAN communication system is functioning normally.

**HINT:**

- **for LHD (Click here)**
- **for RHD (Click here)**

**OK:**
**CAN communication DTC is not output.**

Result

| Result | Proceed to |
|---|---|
| OK | A |
| NG (for LHD) | B |
| NG (for RHD) | C |

**B** → **GO TO CAN COMMUNICATION SYSTEM (Click here)**

**C** → **GO TO CAN COMMUNICATION SYSTEM (Click here)**

**A**

**2.CHECK ENTRY AND START SYSTEM (for Entry Function)**

a. Check if the entry and start system (for entry function) is malfunctioning ( Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the entry and start system (for entry function).

**OK:**
**No malfunctions are present in the entry and start system (for entry function).**

**NG** → **GO TO ENTRY AND START SYSTEM (for Entry Function) ( Click here)**

**OK**

### 3.CHECK ENTRY AND START SYSTEM (for Start Function)

a. Check if the entry and start system (for start function) is malfunctioning ( Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the entry and start system (for start function).

**OK:**

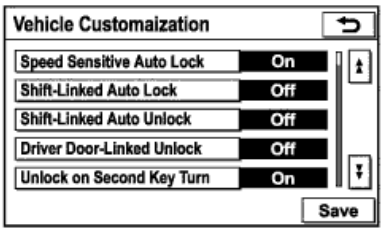
**No malfunctions are present in the entry and start system (for start function).**

NG → GO TO ENTRY AND START SYSTEM (for Start Function) ( **Click here**)

OK ↓

### 4.CHECK CUSTOMIZE ITEMS

a. Display the "Vehicle Customization" screen.



b. Make a note of the customizable items for each certification ECU related system.

**HINT:**

These items shown as customizable via the navigation system vehicle customization screen can also be changed using the intelligent tester. In a following step, the intelligent tester will be used.

i. To match-up the items in the navigation display with the items on the intelligent tester, check the customize parameters list for the entry and start system (for entry function) related items that can be customized via the navigation system screen (Click here).

Example:

ii. To match-up the items in the navigation display with the items on the intelligent tester, check the customize parameters list for the entry and start system (for start function) related items that can be customized via the navigation system screen (Click here).

c. Using the intelligent tester, confirm that it is possible to change the settings of the customize parameters that are available for customization via the navigation system screen.

**OK:**

**The items available for customization via the navigation system screen can be customized successfully using the intelligent tester.**

NG → REPLACE SMART KEY ECU ASSEMBLY

OK ↓

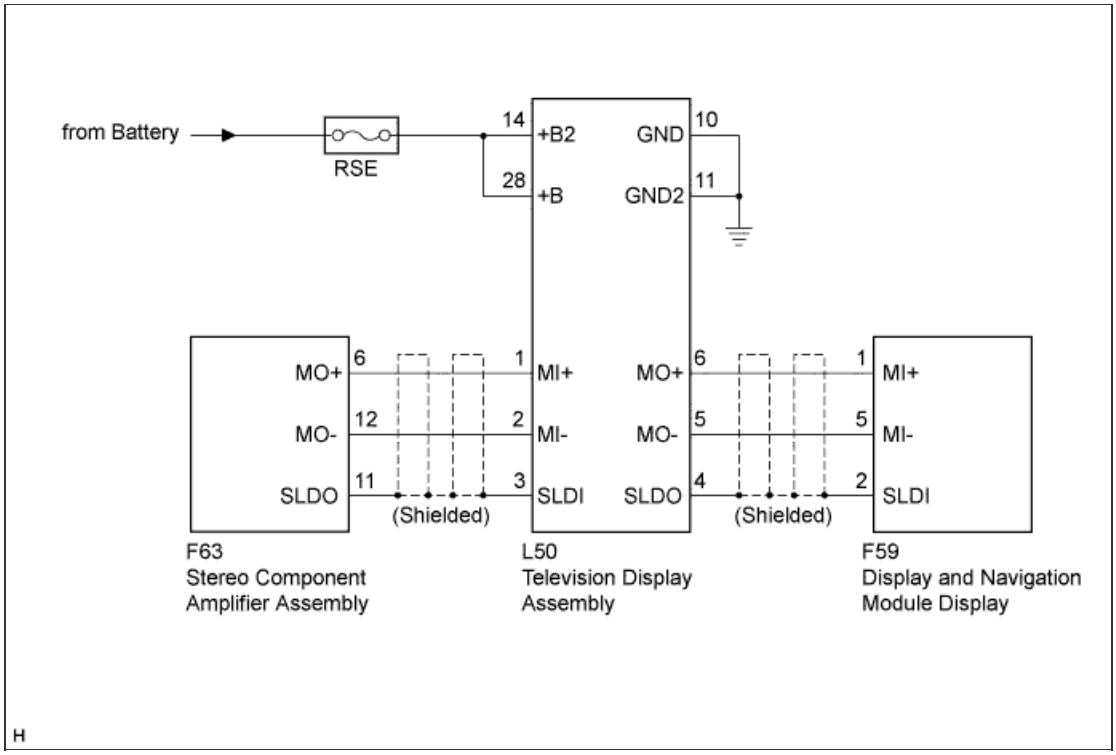
REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

## DTC B1595 No Response from Rear Seat Entertainment System

## DTC B15D5 Rear Seat Entertainment System Disconnected

**for Preparation** Click here

### DESCRIPTION



The display and navigation module display and television display assembly are connected by the MOST communication line.
When an MOST communication error occurs between the display and navigation module display and television display assembly, these DTCs will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1595 | No response to the diagnostic memory request from the master unit. | • Television display assembly power source circuit<br>• MOST circuit between stereo component amplifier assembly and television display assembly<br>• MOST circuit between television display assembly and display and navigation module display<br>• Television display assembly<br>• Display and navigation module display |
| B15D5 | A device that is listed in the MOST network connected device record of the master unit is missing. | |

**HINT:**

For the MOST network, the display and navigation module display is the master unit.

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect MOST communication.**
- **This DTC may be stored when an MOST communication error occurs due to electrical noise.**

**B** → Go to step 3

**A**

## 2.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

**NEXT**

## 3.CHECK DTC

a. Clear the DTCs (Click here).

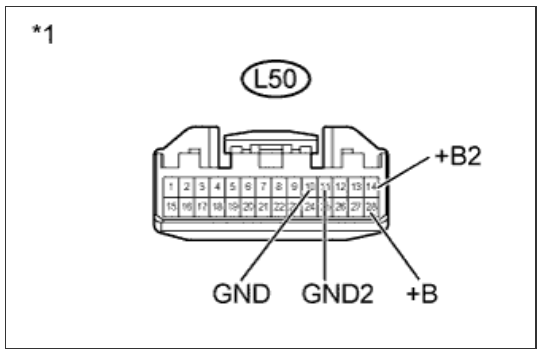
b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

**NG** → Go to step 4

**OK**

## END



## 4.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY ASSEMBLY POWER SOURCE)

a. Disconnect the L50 television display assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-10 (GND) - Body ground | Always | Below 1 Ω |
| L50-11 (GND2) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-14 (+B2) - L50-10 (GND) | Always | 11 to 14 V |

| | | |
|---|---|---|
| L50-28 (+B) - L50-10 (GND) | Always | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Television Display Assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 5.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY - STEREO COMPONENT AMPLIFIER)

a. Disconnect the L50 television display assembly connector.

b. Disconnect the F63 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-1 (MI+) - F63-6 (MO+) | Always | Below 1 Ω |
| L50-2 (MI-) - F63-12 (MO-) | Always | Below 1 Ω |
| L50-3 (SLDI) - F63-11 (SLDO) | Always | Below 1 Ω |
| L50-1 (MI+) - Body ground | Always | 10 kΩ or higher |
| L50-2 (MI-) - Body ground | Always | 10 kΩ or higher |
| L50-3 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 6.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY - DISPLAY AND NAVIGATION MODULE DISPLAY)

a. Disconnect the L50 television display assembly connector.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-6 (MO+) - F59-1 (MI+) | Always | Below 1 Ω |
| L50-5 (MO-) - F59-5 (MI-) | Always | Below 1 Ω |
| L50-4 (SLDO) - F59-2 (SLDI) | Always | Below 1 Ω |
| L50-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| L50-5 (MO-) - Body ground | Always | 10 kΩ or higher |
| L50-4 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**7.REPLACE TELEVISION DISPLAY ASSEMBLY**

a. Replace the television display assembly (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → **REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)**

OK

**END**

## DTC B15F7 Certification ECU Vehicle Information Reading/Writing Process Malfunction

**for Preparation** Click here

### DESCRIPTION

This DTC is stored when items controlled by the certification ECU (smart key ECU assembly) cannot be customized via the navigation system vehicle customization screen.

**HINT:**

**The certification ECU (smart key ECU assembly) controls the items for the following systems that are customizable via the navigation system screen:**

- **Entry and start system (for Entry Function)**
- **Entry and start system (for Start Function)**

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15F7 | Certification ECU (smart key ECU assembly) vehicle setting processing error. | • CAN communication system<br>• Entry and start system (for entry function)<br>• Entry and start system (for start function)<br>• Certification ECU (smart key ECU assembly)<br>• Display and navigation module display |

### INSPECTION PROCEDURE

**1.CHECK CAN COMMUNICATION SYSTEM**

a. Use the intelligent tester to check if the CAN communication system is functioning normally.

**HINT:**

- **for LHD (Click here)**
- **for RHD (Click here)**

**OK:**
**CAN communication DTC is not output.**

Result

| Result | Proceed to |
|---|---|
| OK | A |
| NG (for LHD) | B |
| NG (for RHD) | C |

**B** → **GO TO CAN COMMUNICATION SYSTEM (Click here)**

**C** → **GO TO CAN COMMUNICATION SYSTEM (Click here)**

**A**

**2.CHECK ENTRY AND START SYSTEM (for Entry Function)**

a. Check if the entry and start system (for entry function) is malfunctioning ( Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the entry and start system (for entry function).

**OK:**
**No malfunctions are present in the entry and start system (for entry function).**

**NG** → **GO TO ENTRY AND START SYSTEM (for Entry Function) ( Click here)**

**OK**

### 3.CHECK ENTRY AND START SYSTEM (for Start Function)

a. Check if the entry and start system (for start function) is malfunctioning ( Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the entry and start system (for start function).

**OK:**

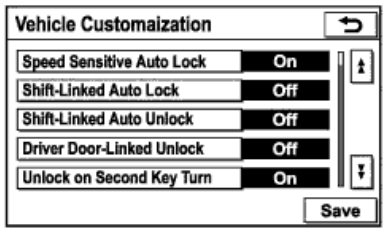
**No malfunctions are present in the entry and start system (for start function).**

NG → GO TO ENTRY AND START SYSTEM (for Start Function) ( **Click here**)

OK

### 4.CHECK CUSTOMIZE ITEMS

a. Display the "Vehicle Customization" screen.



b. Make a note of the customizable items for each certification ECU related system.

**HINT:**

These items shown as customizable via the navigation system vehicle customization screen can also be changed using the intelligent tester. In a following step, the intelligent tester will be used.

i. To match-up the items in the navigation display with the items on the intelligent tester, check the customize parameters list for the entry and start system (for entry function) related items that can be customized via the navigation system screen (Click here).

Example:

ii. To match-up the items in the navigation display with the items on the intelligent tester, check the customize parameters list for the entry and start system (for start function) related items that can be customized via the navigation system screen (Click here).

c. Using the intelligent tester, confirm that it is possible to change the settings of the customize parameters that are available for customization via the navigation system screen.

**OK:**

**The items available for customization via the navigation system screen can be customized successfully using the intelligent tester.**

NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK

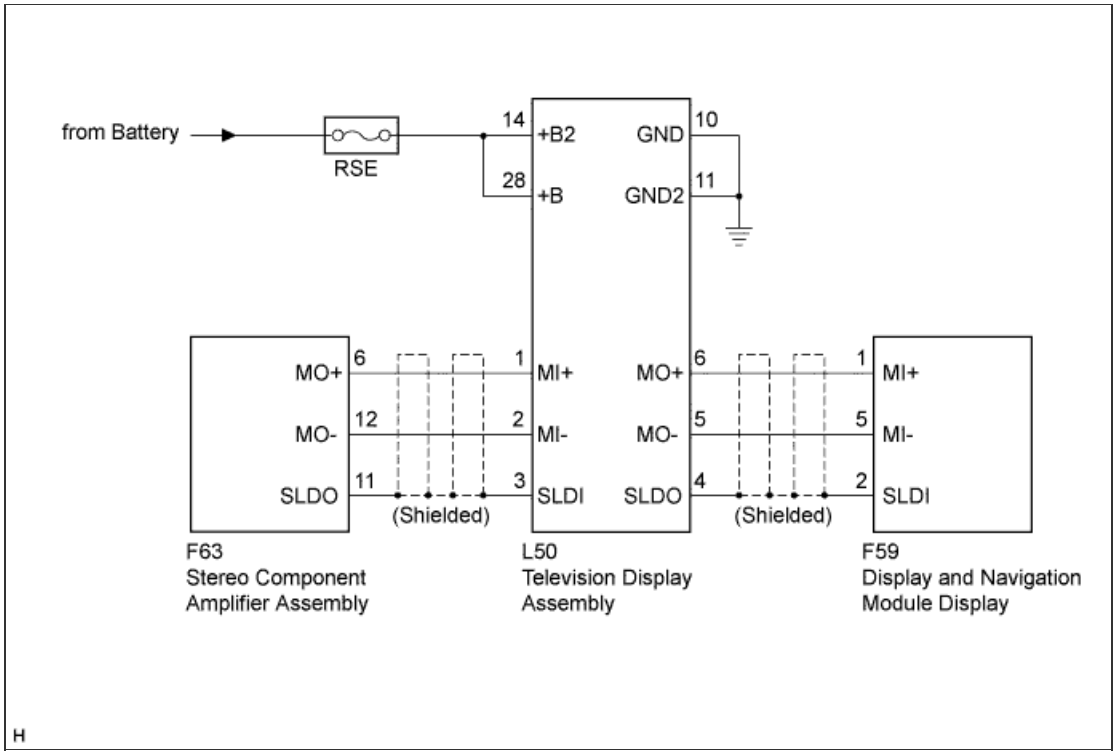
REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

## DTC B1595 No Response from Rear Seat Entertainment System

## DTC B15D5 Rear Seat Entertainment System Disconnected

**for Preparation** Click here

### DESCRIPTION



The display and navigation module display and television display assembly are connected by the MOST communication line.
When an MOST communication error occurs between the display and navigation module display and television display assembly, these DTCs will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1595 | No response to the diagnostic memory request from the master unit. | • Television display assembly power source circuit<br>• MOST circuit between stereo component amplifier assembly and television display assembly<br>• MOST circuit between television display assembly and display and navigation module display<br>• Television display assembly<br>• Display and navigation module display |
| B15D5 | A device that is listed in the MOST network connected device record of the master unit is missing. | |

**HINT:**

For the MOST network, the display and navigation module display is the master unit.

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

#### 1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Check for optional components.

i. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components (including associated wiring) are installed. | A |
| Optional components (including associated wiring) are not installed. | B |

**HINT:**

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect MOST communication.**
- **This DTC may be stored when an MOST communication error occurs due to electrical noise.**

**B** → Go to step 3

**A**

## 2.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

**NEXT**

## 3.CHECK DTC

a. Clear the DTCs (Click here).

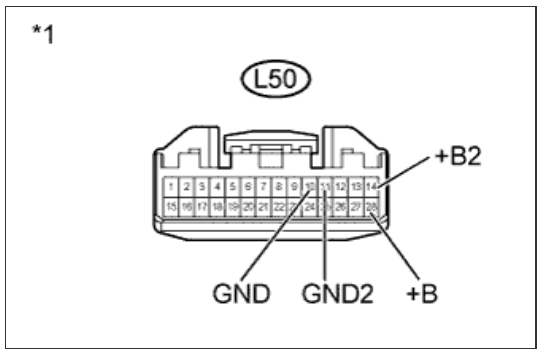
b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

**NG** → Go to step 4

**OK**

## END



## 4.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY ASSEMBLY POWER SOURCE)

a. Disconnect the L50 television display assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-10 (GND) - Body ground | Always | Below 1 Ω |
| L50-11 (GND2) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-14 (+B2) - L50-10 (GND) | Always | 11 to 14 V |

| | | |
|---|---|---|
| L50-28 (+B) - L50-10 (GND) | Always | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Television Display Assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 5.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY - STEREO COMPONENT AMPLIFIER)

a. Disconnect the L50 television display assembly connector.

b. Disconnect the F63 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-1 (MI+) - F63-6 (MO+) | Always | Below 1 Ω |
| L50-2 (MI-) - F63-12 (MO-) | Always | Below 1 Ω |
| L50-3 (SLDI) - F63-11 (SLDO) | Always | Below 1 Ω |
| L50-1 (MI+) - Body ground | Always | 10 kΩ or higher |
| L50-2 (MI-) - Body ground | Always | 10 kΩ or higher |
| L50-3 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 6.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY - DISPLAY AND NAVIGATION MODULE DISPLAY)

a. Disconnect the L50 television display assembly connector.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-6 (MO+) - F59-1 (MI+) | Always | Below 1 Ω |
| L50-5 (MO-) - F59-5 (MI-) | Always | Below 1 Ω |
| L50-4 (SLDO) - F59-2 (SLDI) | Always | Below 1 Ω |
| L50-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| L50-5 (MO-) - Body ground | Always | 10 kΩ or higher |
| L50-4 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**7.REPLACE TELEVISION DISPLAY ASSEMBLY**

a. Replace the television display assembly (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → **REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)**

OK

**END**

### DESCRIPTION

These DTCs are stored when a malfunction occurs in the display and navigation module display.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15A0 | When either of the conditions below is met:<br>• Bus malfunction<br>• Sub-microprocessor malfunction | Display and navigation module display |
| B15AD | When either of the conditions below is met:<br>• A short to ground, short to +B or open occurs in the gyro signal circuit<br>• Gyro sensor malfunction | |

### INSPECTION PROCEDURE

**1.CHECK DTC**

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

**NG** → **REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)**

**OK**

**USE SIMULATION METHOD TO CHECK (Click here)**

## DTC U0073 Control Module Communication Bus Off

## DTC U0155 Lost Communication with Combination Meter

## DTC U0164 Lost Communication with A/C ECU

## DTC U1110 Lost Communication with Clearance Warning ECU

**for Preparation** Click here

### DESCRIPTION

This DTC is stored when a CAN communication circuit malfunction is detected by the display and navigation module display self check.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| U0073 | CAN connection malfunction | CAN communication system |
| U0155 | No communication with combination meter assembly | • Combination meter assembly<br>• CAN communication system |
| U0164 | No communication with A/C amplifier | • Air conditioning amplifier assembly<br>• CAN communication system |
| U1110 | No communication with clearance warning ECU | • Clearance warning ECU assembly<br>• CAN communication system |

### INSPECTION PROCEDURE

**1.CHECK DTC**

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**

**No DTCs are output.**

## INSPECTION PROCEDURE

### 1.CHECK VEHICLE SIGNAL (OPERATION CHECK)

a. Enter the "Vehicle Signal Check Mode" screen. Refer to Check Vehicle Signal in Operation Check (Click here).

b. Cover the automatic light control sensor on the instrument panel with a cloth.

c. Set the instrument panel light control to less than the maximum (to activate the dimmer function that works when the light control switch is in the TAIL position).

d. Check that the display changes between ON and OFF according to the light control switch operation.

**OK:**

| Light Control Switch Condition | Display Condition |
|---|---|
| TAIL or HEAD | ON |
| OFF | OFF |

**HINT:**

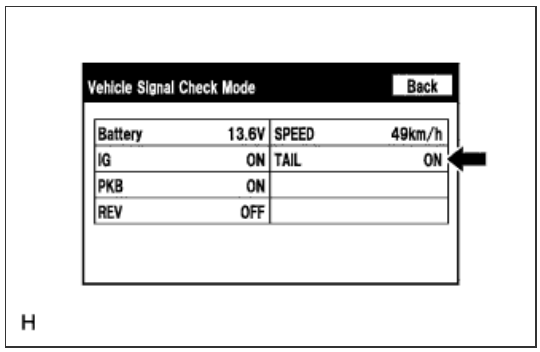
This display is updated once per second. As a result, it is normal for the display to lag behind the actual switch operation.

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE



### 1.CHECK VEHICLE SIGNAL (OPERATION CHECK)

a. Enter the "Vehicle Signal Check Mode" screen. Refer to Check Vehicle Signal in Operation Check (Click here).

b. Cover the automatic light control sensor on the instrument panel with a cloth.

c. Set the instrument panel light control to less than the maximum (to activate the dimmer function that works when the light control switch is in the TAIL position).

d. Check that the display changes between ON and OFF according to the light control switch operation.

**OK:**

| Light Control Switch Condition | Display Condition |
|---|---|
| TAIL or HEAD | ON |
| OFF | OFF |

**HINT:**

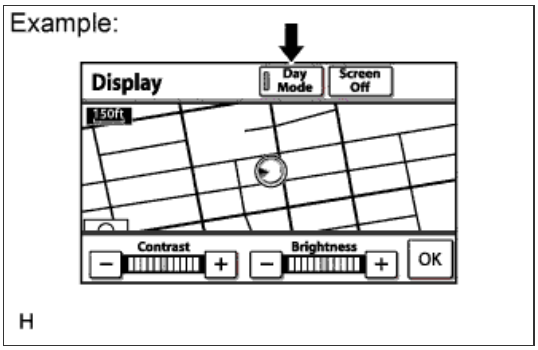
This display is updated once per second. As a result, it is normal for the display to lag behind the actual switch operation.

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE



### 1.CHECK IMAGE QUALITY SETTING

a. Enter the display adjustment screen by pressing the "DISP" switch.

b. Turn the light control switch to the tail position.

c. Check if "Day Mode" on the display adjustment is on.

**OK:**
**"Day Mode" is on.**

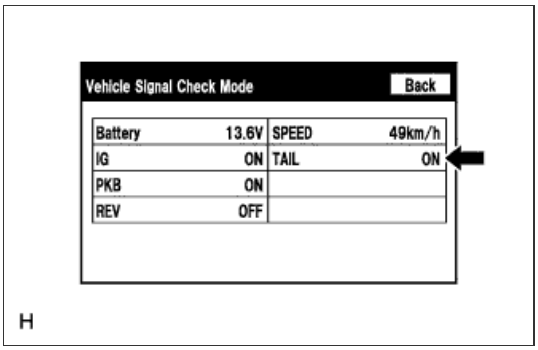
NG → Go to step 2

OK →

### TURN "Day Mode" SETTING OFF

### 2.CHECK VEHICLE SIGNAL (OPERATION CHECK)

a. Enter the "Vehicle Signal Check Mode" screen. Refer to Check Vehicle Signal in Operation Check (Click here).



b. Cover the automatic light control sensor on the instrument panel with a cloth.

c. Set the instrument panel light control to less than the maximum (to activate the dimmer function that works when the light control switch is in the TAIL position).

d. Check that the display changes between ON and OFF according to the light control switch operation.

**OK:**

| Light Control Switch Condition | Display Condition |
|---|---|
| TAIL or HEAD | ON |
| OFF | OFF |

**HINT:**

The display is updated once per second. It is normal for the display to lag behind the actual switch operation.

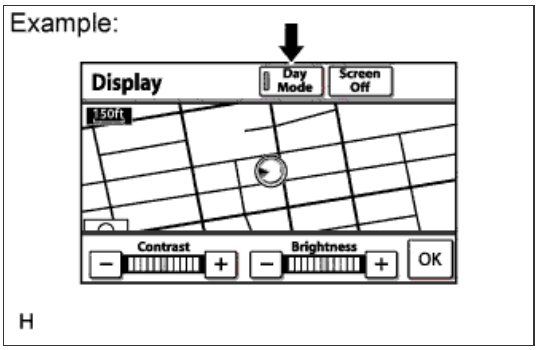
NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK →

### REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE



### 1.CHECK IMAGE QUALITY SETTING

a. Enter the display adjustment screen by pressing the "DISP" switch.

b. Turn the light control switch to the tail position.

c. Check if "Day Mode" on the display adjustment is on.

**OK:**
**"Day Mode" is on.**

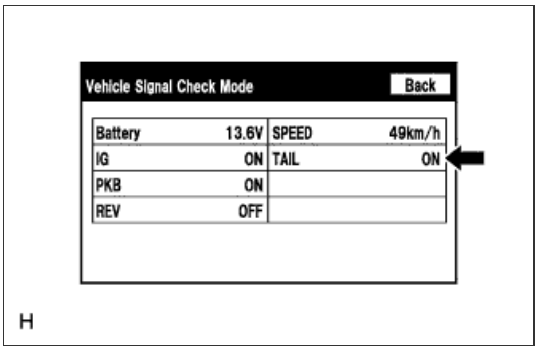
NG → Go to step 2

OK →

### TURN "Day Mode" SETTING OFF

### 2.CHECK VEHICLE SIGNAL (OPERATION CHECK)

a. Enter the "Vehicle Signal Check Mode" screen. Refer to Check Vehicle Signal in Operation Check (Click here).



b. Cover the automatic light control sensor on the instrument panel with a cloth.

c. Set the instrument panel light control to less than the maximum (to activate the dimmer function that works when the light control switch is in the TAIL position).

d. Check that the display changes between ON and OFF according to the light control switch operation.

**OK:**

| Light Control Switch Condition | Display Condition |
|---|---|
| TAIL or HEAD | ON |
| OFF | OFF |

**HINT:**

The display is updated once per second. It is normal for the display to lag behind the actual switch operation.

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK →

### REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK PANEL SWITCH

a. Check for foreign matter around the switches that might prevent operation.

**OK:**
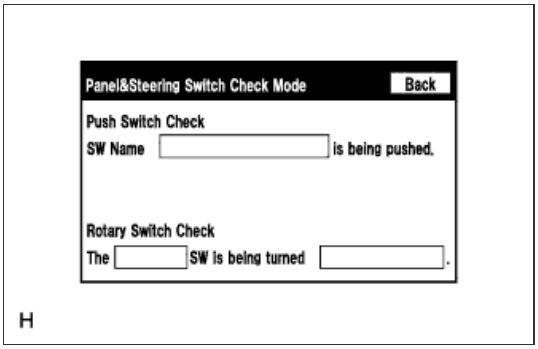
**No foreign matter is found.**

NG → REMOVE ANY FOREIGN MATTER FOUND



OK ↓

### 2.CHECK PANEL SWITCH (OPERATION CHECK)

a. Enter the "Panel & Steering Switch Check Mode" screen. Refer to Check Panel & Steering Switch in Operation Check (Click here).

b. Operate the abnormal switch and check if the switch name and status are correctly displayed.

**OK:**
**The switch name and status are correctly displayed as operated.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK ↓

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK PANEL SWITCH

a. Check for foreign matter around the switches that might prevent operation.

**OK:**
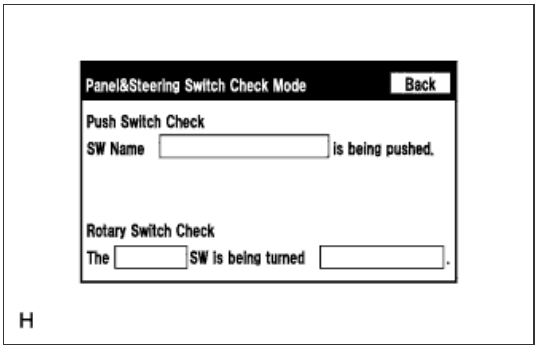
**No foreign matter is found.**

NG → REMOVE ANY FOREIGN MATTER FOUND



OK ↓

### 2.CHECK PANEL SWITCH (OPERATION CHECK)

a. Enter the "Panel & Steering Switch Check Mode" screen. Refer to Check Panel & Steering Switch in Operation Check (Click here).

b. Operate the abnormal switch and check if the switch name and status are correctly displayed.

**OK:**
**The switch name and status are correctly displayed as operated.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK ↓

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK TOUCH PANEL

a. Check for foreign matter on the display.

**OK:**
**The display is clean.**

NG → CLEAN DISPLAY AND RECHECK TOUCH PANEL

OK

### 2.CHECK TOUCH SWITCH (OPERATION CHECK)

a. Enter the "Touch Switch Check" screen. Refer to Check Touch Switch in Operation Check (Click here).

b. Touch the display in the area where the switch malfunction occurs.

**OK:**
**A "+" mark appears at the touched position.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK TOUCH PANEL

a. Check for foreign matter on the display.

**OK:**
**The display is clean.**

NG → CLEAN DISPLAY AND RECHECK TOUCH PANEL

OK

### 2.CHECK TOUCH SWITCH (OPERATION CHECK)

a. Enter the "Touch Switch Check" screen. Refer to Check Touch Switch in Operation Check (Click here).

b. Touch the display in the area where the switch malfunction occurs.

**OK:**
**A "+" mark appears at the touched position.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

**for Preparation** Click here

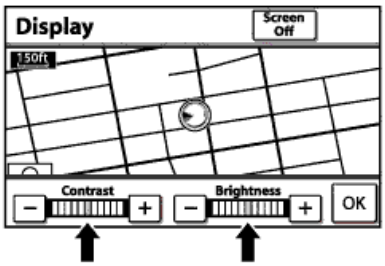
## INSPECTION PROCEDURE



### 1.CHECK DISPLAY SETTING

a. Enter the display adjustment screen by pressing the "DISP" switch.

b. Reset display settings (contrast, brightness) and check that the screen appears normal.

**OK:**
**The display returns to normal.**

Example:

H

NG → Go to step 2

OK →

END

### 2.CHECK CABIN

a. Check that the temperature in the cabin is neither -20°C (-4°F) or lower nor 65°C (149°F) or higher.

**HINT:**

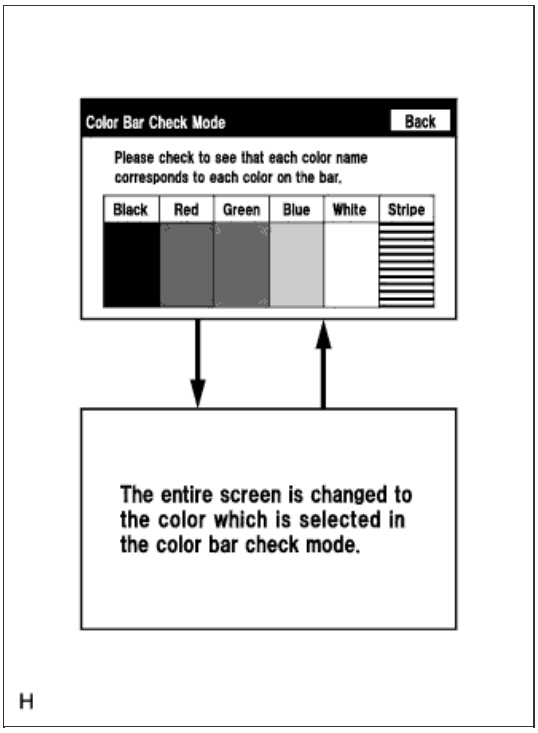
The navigation system may not operate normally when the temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher.

**Standard:**
**Temperature in the cabin is between -20°C (-4°F) and 65°C (149°F).**

NG → SET CABIN TO APPROPRIATE TEMPERATURE



OK →

### 3.CHECK COLOR BAR (OPERATION CHECK)

a. Enter the "Color Bar Check Mode" screen. Refer to Check Color Bar in Operation Check (Click here).

b. Check that the color bars match the displayed names.

**OK:**
**Color bars match the displayed names.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

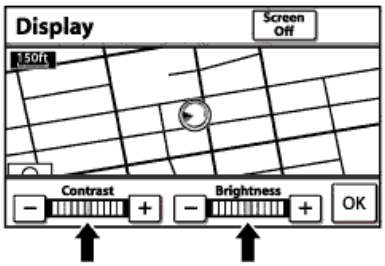
## INSPECTION PROCEDURE



### 1.CHECK DISPLAY SETTING

a. Enter the display adjustment screen by pressing the "DISP" switch.

b. Reset display settings (contrast, brightness) and check that the screen appears normal.

**OK:**
**The display returns to normal.**

Example:

H

NG → Go to step 2

OK →

END

### 2.CHECK CABIN

a. Check that the temperature in the cabin is neither -20°C (-4°F) or lower nor 65°C (149°F) or higher.

**HINT:**

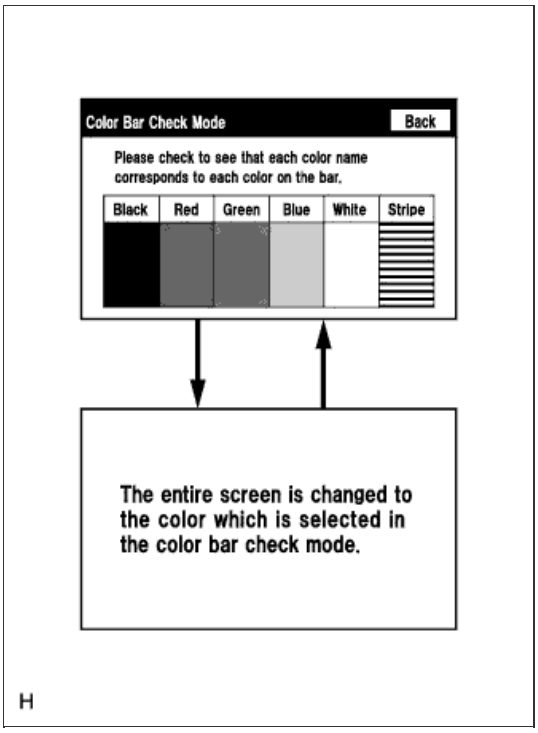
The navigation system may not operate normally when the temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher.

**Standard:**
**Temperature in the cabin is between -20°C (-4°F) and 65°C (149°F).**

NG → SET CABIN TO APPROPRIATE TEMPERATURE



OK →

### 3.CHECK COLOR BAR (OPERATION CHECK)

a. Enter the "Color Bar Check Mode" screen. Refer to Check Color Bar in Operation Check (Click here).

b. Check that the color bars match the displayed names.

**OK:**
**Color bars match the displayed names.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

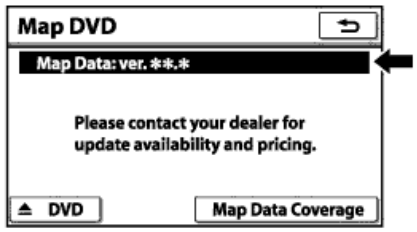
## INSPECTION PROCEDURE

### 1.CHECK NAVIGATION MODULE BOARD

a. Display the "Map DVD" screen.



b. Check if a disc is inserted into the map disc slot.

i. Check if the map data version is displayed in the "Map Data" section.

Result

| Result | Proceed to |
|---|---|
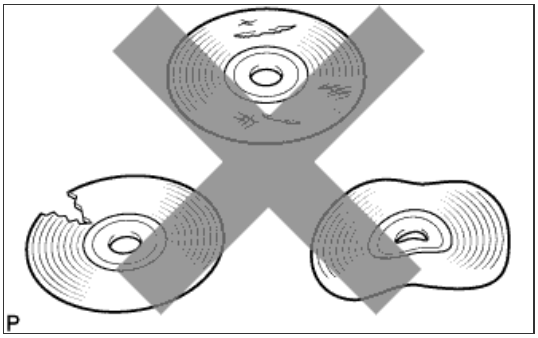
| The map data version is not displayed. | A |
| The map data version is displayed. | B |

Example:

H



B → EJECT MAP DISC

A

### 2.CHECK MAP DISC

a. Check that the map disc is not deformed or cracked.

**OK:**
**No deformations or cracks on the map disc**

P

NG → REPLACE MAP DISC

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

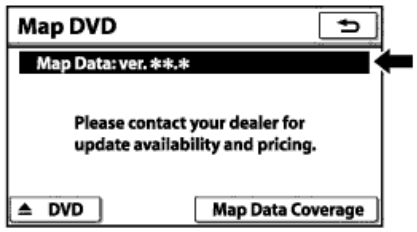
## INSPECTION PROCEDURE

### 1.CHECK NAVIGATION MODULE BOARD

a. Display the "Map DVD" screen.



b. Check if a disc is inserted into the map disc slot.

i. Check if the map data version is displayed in the "Map Data" section.

Result

| Result | Proceed to |
|---|---|
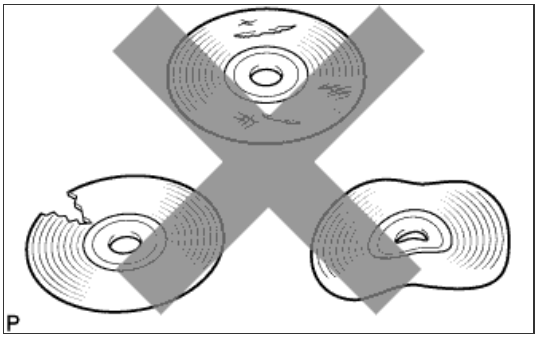
| The map data version is not displayed. | A |
| The map data version is displayed. | B |

Example:

H



B → EJECT MAP DISC

A

### 2.CHECK MAP DISC

a. Check that the map disc is not deformed or cracked.

**OK:**
**No deformations or cracks on the map disc**

P

NG → REPLACE MAP DISC

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK GPS MARK

a. Check that the GPS mark is displayed.

**OK:**
**GPS mark is displayed.**

Example:

H

NG → GO TO "GPS MARK IS NOT DISPLAYED" IN PROBLEM SYMPTOMS TABLE (Click here)

OK

### 2.CHECK VEHICLE SENSOR (OPERATION CHECK)

a. Enter the "Vehicle Sensors" screen. Refer to Check GPS & Vehicle Sensors in Operation Check (Click here).

b. While driving the vehicle, compare the "Speed" indicator to the reading on the speedometer. Check that these readings are almost equal.

**OK:**
**The readings are almost equal.**

H

NG → CHECK DTC OUTPUT (Click here)

OK

### 3.CHECK VEHICLE SIGNAL (OPERATION CHECK)

a. Enter the "Vehicle Signal Check Mode" screen. Refer to Check Vehicle Signal in Operation Check ( Click here).

b. Check that the display changes between ON and OFF according to the shift lever operation.

**OK:**

| Shift Lever Position | Display |
|---|---|
| Except R | OFF |
| R | ON |

**HINT:**

The display is updated once per second. It is normal for the display to lag

behind the actual switch operation.

NG → CHECK DTC OUTPUT (Click here)

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK GPS MARK

a. Check that the GPS mark is displayed.

**OK:**
**GPS mark is displayed.**

Example:

H

NG → GO TO "GPS MARK IS NOT DISPLAYED" IN PROBLEM SYMPTOMS TABLE (Click here)

OK

### 2.CHECK VEHICLE SENSOR (OPERATION CHECK)

a. Enter the "Vehicle Sensors" screen. Refer to Check GPS & Vehicle Sensors in Operation Check (Click here).

b. While driving the vehicle, compare the "Speed" indicator to the reading on the speedometer. Check that these readings are almost equal.

**OK:**
**The readings are almost equal.**

H

NG → CHECK DTC OUTPUT (Click here)

OK

### 3.CHECK VEHICLE SIGNAL (OPERATION CHECK)

a. Enter the "Vehicle Signal Check Mode" screen. Refer to Check Vehicle Signal in Operation Check ( Click here).

b. Check that the display changes between ON and OFF according to the shift lever operation.

**OK:**

| Shift Lever Position | Display |
|---|---|
| Except R | OFF |
| R | ON |

**HINT:**

The display is updated once per second. It is normal for the display to lag

behind the actual switch operation.

NG → CHECK DTC OUTPUT (Click here)

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.CHECK CONDITION**

a. Check with the customer if the vehicle has been turned by a turntable.

**OK:**

**Vehicle has not been turned by turntable.**

**HINT:**

If the vehicle is turned on a turntable with the engine switch on (IG), the system may store the angular velocity. As a result, the vehicle position cursor may deviate.

Example:

P

NG → TURN ENGINE SWITCH ON (IG) WHEN VEHICLE IS COMPLETELY STOPPED

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

**1.CHECK CONDITION**

a. Check with the customer if the vehicle has been turned by a turntable.

**OK:**

**Vehicle has not been turned by turntable.**

**HINT:**

If the vehicle is turned on a turntable with the engine switch on (IG), the system may store the angular velocity. As a result, the vehicle position cursor may deviate.

Example:

P

NG → TURN ENGINE SWITCH ON (IG) WHEN VEHICLE IS COMPLETELY STOPPED

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK MAP DISC

a. Check that the map disc is not deformed or cracked.

**OK:**
**No deformations or cracks on the map disc**

NG → REPLACE MAP DISC

OK

### 2.CHECK CABIN

a. Check that condensation is not likely to occur in the cabin, and that the temperature is not high or extremely low in the cabin.

**HINT:**

- **A humid cabin and a rapid change in temperature may lead to condensation. Condensation in the cabin may cause a short circuit.**
- **The navigation system may not operate normally when the temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher.**

**OK:**
**Condensation is not likely being produced and the temperature is not high or extremely low.**

NG → SET CABIN TO APPROPRIATE TEMPERATURE

OK

### 3.CHECK VEHICLE SENSOR (OPERATION CHECK)

a. Enter the "Vehicle Sensors" screen. Refer to Check GPS & Vehicle Sensors in Operation Check (Click here).

b. While driving the vehicle, compare the "Speed" indicator to the reading on the speedometer. Check if these readings are almost equal.

**OK:**
**The readings are almost equal.**

NG → CHECK DTC OUTPUT (Click here)

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK MAP DISC

a. Check that the map disc is not deformed or cracked.

**OK:**
**No deformations or cracks on the map disc**

NG → REPLACE MAP DISC

OK

### 2.CHECK CABIN

a. Check that condensation is not likely to occur in the cabin, and that the temperature is not high or extremely low in the cabin.

**HINT:**

- **A humid cabin and a rapid change in temperature may lead to condensation. Condensation in the cabin may cause a short circuit.**
- **The navigation system may not operate normally when the temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher.**

**OK:**
**Condensation is not likely being produced and the temperature is not high or extremely low.**

NG → SET CABIN TO APPROPRIATE TEMPERATURE

OK

### 3.CHECK VEHICLE SENSOR (OPERATION CHECK)

a. Enter the "Vehicle Sensors" screen. Refer to Check GPS & Vehicle Sensors in Operation Check (Click here).

b. While driving the vehicle, compare the "Speed" indicator to the reading on the speedometer. Check if these readings are almost equal.

**OK:**
**The readings are almost equal.**

NG → CHECK DTC OUTPUT (Click here)

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

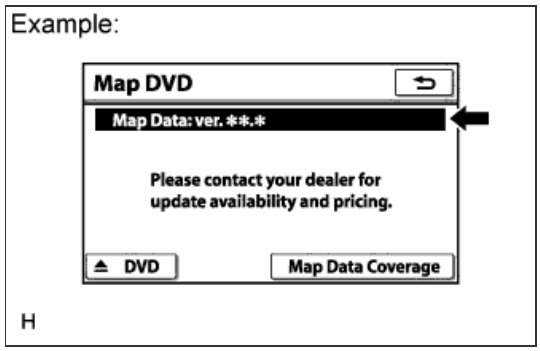
## INSPECTION PROCEDURE

### 1.CHECK NAVIGATION MODULE BOARD



a. Display the "Map DVD" screen.

b. Check if a disc is inserted into the map disc slot.

i. Check if the map data version is displayed in the "Map Data" section.

**Result**

| Result | Proceed to |
|---|---|
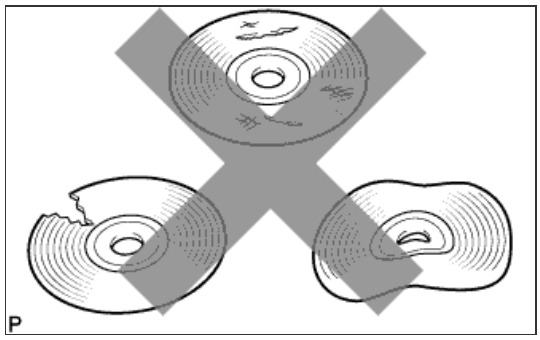
| The map data version is displayed. | A |
| The map data version is not displayed. | B |



B → INSERT MAP DISC IN MAP DISC SLOT

A

### 2.CHECK MAP DISC

a. Check that the map disc is not deformed or cracked.

**OK:**
**No deformations or cracks on the map disc**

NG → REPLACE MAP DISC

OK

### 3.CHECK CABIN

a. Check that condensation is not likely to occur in the cabin, and that the temperature is not high or extremely low in the cabin.

**HINT:**

- **A humid cabin and a rapid change in temperature may lead to condensation. Condensation in the cabin may cause a short circuit.**
- **The navigation system may not operate normally when the temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher.**

**Condensation is not likely being produced and the temperature is not high or extremely low.**

NG → CABIN TO APPROPRIATE TEMPERATURE

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK CABIN

a. Check the cabin for any object that might interrupt radio reception on the instrument panel. If such an object exists, remove it and check if the GPS mark reappears.

**HINT:**

The GPS uses extremely faint radio waves originating from satellites. If the signal is interrupted by obstructions or other radio waves, the GPS may not be able to properly receive the signal.

**OK:**
**The GPS mark appears.**

NG → Go to step 2

OK

### NORMAL OPERATION

### 2.CHECK SURROUNDINGS

a. Check if the vehicle is in a location where GPS signal reception is poor. If the vehicle is in such a place, relocate the vehicle and check if the GPS mark reappears.

**HINT:**

The GPS uses 24 satellites in 6 orbits. At any point in time, 4 satellites should be able to pinpoint your vehicle. However, GPS signals may not reach the vehicle due to influence from the surroundings, vehicle direction and time. For examples, see the following illustration.

**OK:**
**The GPS mark is displayed.**

NG → Go to step 3

OK

SYSTEM RETURNS TO NORMAL

3.CHECK GPS INFORMATION (OPERATION CHECK)

a. Enter the "GPS Information" screen. Refer to Check GPS & Vehicle Sensors in Operation Check (Click here).

b. Check how many of the following codes appear in the "STS" column.

**OK:**
**At least 3 codes appear.**

H

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

**for Preparation** Click here

### NORMAL OPERATION

### 2.CHECK SURROUNDINGS

a. Check if the vehicle is in a location where GPS signal reception is poor. If the vehicle is in such a place, relocate the vehicle and check if the GPS mark reappears.

**HINT:**

The GPS uses 24 satellites in 6 orbits. At any point in time, 4 satellites should be able to pinpoint your vehicle. However, GPS signals may not reach the vehicle due to influence from the surroundings, vehicle direction and time. For examples, see the following illustration.

**OK:**
**The GPS mark is displayed.**

NG → Go to step 3

OK

SYSTEM RETURNS TO NORMAL

3.CHECK GPS INFORMATION (OPERATION CHECK)

a. Enter the "GPS Information" screen. Refer to Check GPS & Vehicle Sensors in Operation Check (Click here).

b. Check how many of the following codes appear in the "STS" column.

**OK:**
**At least 3 codes appear.**

H

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK NAVIGATION SETTING

a. Display the "Voice Settings" screen.

b. Check that "Voice Volume" is not "Off".

**OK:**
**Voice volume is not "Off".**

Example:

H

NG → TURN VOICE VOLUME EXCEPT "Off"

OK

### 2.CHECK NAVIGATION SETTING

a. Display the "Voice Settings" screen.

b. Check that "Auto Voice Guidance" is not "Off".

**OK:**
**Auto voice guidance is not "Off".**

Example:

H

NG → TURN AUTO VOICE GUIDANCE "On"

OK

### 3.CHECK NAVIGATION SETTING

a. Display the "Voice Settings" screen.

b. Check that "Voice Guidance in All Modes" is not "Off".

**OK:**
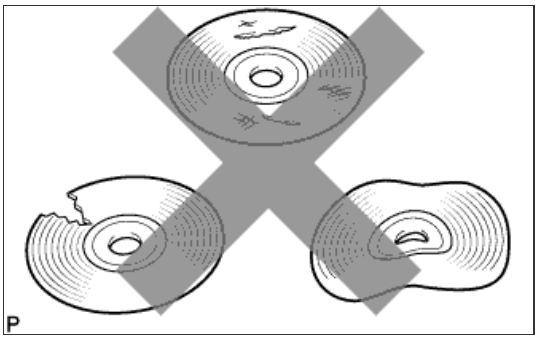
**Voice guidance in all modes is not "Off".**



NG → TURN VOICE GUIDANCE IN ALL MODES "On"

OK

## 4.CHECK MAP DISC

a. Check that the map disc is not deformed or cracked.

**OK:**
**No deformations or cracks on the map disc**

NG → REPLACE MAP DISC

OK

## 5.CHECK CABIN

a. Check that condensation is not likely to occur in the cabin, and that the temperature is not high or extremely low in the cabin.

**HINT:**

- **A humid cabin and a rapid change in temperature may lead to condensation. Condensation in the cabin may cause a short circuit.**
- **The navigation system may not operate normally when the temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher.**

**OK:**
**Condensation is not likely being produced and the temperature is not high or extremely low.**

NG → SET CABIN TO APPROPRIATE TEMPERATURE

OK

## 6.CHECK AUDIO FUNCTION

a. Check that audio sound can be heard from the driver side speaker.

**OK:**
**Sound can be heard from the audio system.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK NAVIGATION SETTING

a. Display the "Voice Settings" screen.

b. Check that "Voice Volume" is not "Off".

**OK:**
**Voice volume is not "Off".**

Example:

H

NG → TURN VOICE VOLUME EXCEPT "Off"

OK

### 2.CHECK NAVIGATION SETTING

a. Display the "Voice Settings" screen.

b. Check that "Auto Voice Guidance" is not "Off".

**OK:**
**Auto voice guidance is not "Off".**

Example:

H

NG → TURN AUTO VOICE GUIDANCE "On"

OK

### 3.CHECK NAVIGATION SETTING

a. Display the "Voice Settings" screen.

b. Check that "Voice Guidance in All Modes" is not "Off".

**OK:**
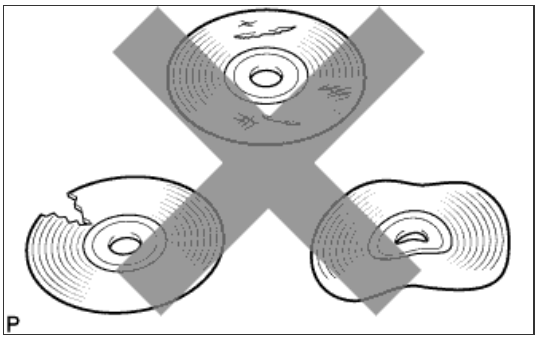
**Voice guidance in all modes is not "Off".**



NG → TURN VOICE GUIDANCE IN ALL MODES "On"

OK

## 4.CHECK MAP DISC

a. Check that the map disc is not deformed or cracked.

**OK:**
**No deformations or cracks on the map disc**

NG → REPLACE MAP DISC

OK

## 5.CHECK CABIN

a. Check that condensation is not likely to occur in the cabin, and that the temperature is not high or extremely low in the cabin.

**HINT:**

- **A humid cabin and a rapid change in temperature may lead to condensation. Condensation in the cabin may cause a short circuit.**
- **The navigation system may not operate normally when the temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher.**

**OK:**
**Condensation is not likely being produced and the temperature is not high or extremely low.**

NG → SET CABIN TO APPROPRIATE TEMPERATURE

OK

## 6.CHECK AUDIO FUNCTION

a. Check that audio sound can be heard from the driver side speaker.

**OK:**
**Sound can be heard from the audio system.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK MAP DISC

a. Check that the map disc is not deformed or cracked.

**OK:**
**No deformations or cracks on the map disc**

NG → REPLACE MAP DISC

OK

### 2.CHECK CABIN

a. Check that condensation is not likely to occur in the cabin, and that the temperature is not high or extremely low in the cabin.

**HINT:**

- **A humid cabin and a rapid change in temperature may lead to condensation. Condensation in the cabin may cause a short circuit.**
- **The navigation system may not operate normally when the temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher.**

**OK:**
**Condensation is not likely being produced and the temperature is not high or extremely low.**

NG → SET CABIN TO APPROPRIATE TEMPERATURE

OK

### 3.CHECK NAVIGATION DISPLAY

a. Check that displays other than the navigation display are complete.

**OK:**
**No other incomplete displays are found.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK MAP DISC

a. Check that the map disc is not deformed or cracked.

**OK:**
**No deformations or cracks on the map disc**

NG → REPLACE MAP DISC

OK

### 2.CHECK CABIN

a. Check that condensation is not likely to occur in the cabin, and that the temperature is not high or extremely low in the cabin.

**HINT:**

- **A humid cabin and a rapid change in temperature may lead to condensation. Condensation in the cabin may cause a short circuit.**
- **The navigation system may not operate normally when the temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher.**

**OK:**
**Condensation is not likely being produced and the temperature is not high or extremely low.**

NG → SET CABIN TO APPROPRIATE TEMPERATURE

OK

### 3.CHECK NAVIGATION DISPLAY

a. Check that displays other than the navigation display are complete.

**OK:**
**No other incomplete displays are found.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK MAP DISC

a. Check that the map disc is not deformed or cracked.

**OK:**
**No deformations or cracks on the map disc**

NG → REPLACE MAP DISC

OK

### 2.CHECK CABIN

a. Check that condensation is not likely to occur in the cabin, and that the temperature is not high or extremely low in the cabin.

**HINT:**

- **A humid cabin and a rapid change in temperature may lead to condensation. Condensation in the cabin may cause a short circuit.**
- **The navigation system may not operate normally when the temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher.**

**OK:**
**Condensation is not likely being produced and the temperature is not high or extremely low.**

NG → CABIN TO APPROPRIATE TEMPERATURE

OK

### 3.SET DESTINATION

a. Set another destination and check if the system can calculate the route correctly.

**OK:**
**Route can be correctly calculated.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

### NORMAL OPERATION

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK MAP DISC

a. Check that the map disc is not deformed or cracked.

**OK:**
**No deformations or cracks on the map disc**

NG → REPLACE MAP DISC

OK

### 2.CHECK CABIN

a. Check that condensation is not likely to occur in the cabin, and that the temperature is not high or extremely low in the cabin.

**HINT:**

- **A humid cabin and a rapid change in temperature may lead to condensation. Condensation in the cabin may cause a short circuit.**
- **The navigation system may not operate normally when the temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher.**

**OK:**
**Condensation is not likely being produced and the temperature is not high or extremely low.**

NG → CABIN TO APPROPRIATE TEMPERATURE

OK

### 3.SET DESTINATION

a. Set another destination and check if the system can calculate the route correctly.

**OK:**
**Route can be correctly calculated.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

### NORMAL OPERATION

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK CONDITION

a. Check if the system voice recognition level is low when recognizing a particular voice.

**Result**

| Result | Proceed to |
|---|---|
| System voice recognition level is low with any voice. | A |
| System voice recognition level is low only for a particular voice. | B |

**HINT:**

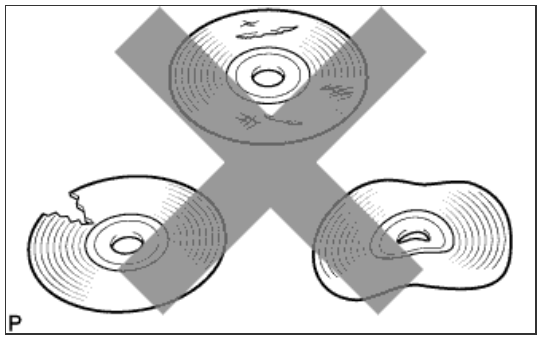
System voice recognition level varies depending on voice and pronunciation. This is not a malfunction.



B → END

A

### 2.CHECK MAP DISC

a. Check that the map disc is not deformed or cracked.

**OK:**
**No deformations or cracks on the map disc**

NG → REPLACE MAP DISC

OK

### 3.CHECK MAP DISC

a. Check for dirt on the map disc surface.

**OK:**
**No dirt is on the map disc surface.**

**NOTICE:**

Do not use a conventional record cleaner or anti-static preservative.

**HINT:**

If dirt on the disc surface, wipe it clean with a soft cloth from the inside to the outside in a radial direction.

NG → CLEAN MAP DISC

OK

## 4.CHECK CABIN

a. Check that condensation is not likely to occur in the cabin, and that the temperature is not high or extremely low in the cabin.

**HINT:**

- **A humid cabin and a rapid change in temperature may lead to condensation. Condensation in the cabin may cause a short circuit.**
- **The navigation system may not operate normally when the temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher.**

**OK:**
**Condensation is not likely being produced and the temperature is not high or extremely low.**

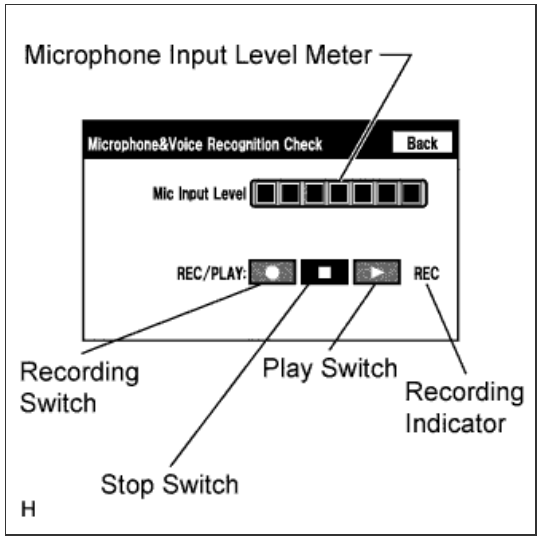
**NG** → CABIN TO APPROPRIATE TEMPERATURE

**OK**

## 5.CHECK MICROPHONE (OPERATION CHECK)

a. Enter the "Microphone & Voice Recognition Check" screen. Refer to Check Mic & Voice Recognition in Operation Check (Click here).

b. When voice is input into the microphone, check that the microphone input level meter changes according to the input voice.



c. Push the recording switch and perform voice recording.

**HINT:**

Voice can be recorded up to 5 seconds.

d. Check that the recording indicator remains on while recording and that the recorded voice is played normally without noise or distortion.

**OK:**
**All check results are normal.**

**NG** → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

**OK**

## END

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK CONDITION

a. Check if the system voice recognition level is low when recognizing a particular voice.

## INSPECTION PROCEDURE

### 1.CHECK CURRENT CONDITIONS

a. Proceed to the next step according to the table below.

**Result**

| Result | Proceed to |
|---|---|
| Another "Bluetooth" compatible cellular phone is present. | A |
| Another "Bluetooth" compatible vehicle is present. | B |
| None of the above | C |

B → Go to step 3

C → Go to step 4

A

### 2.CHECK USING ANOTHER CELLULAR PHONE

a. Check if the system functions using another "Bluetooth" compatible cellular phone.

**HINT:**

- **Confirm that either the same or a different version of another "Bluetooth" compatible cellular phone complies with the system.**
- **Depending on the version, some "Bluetooth" compatible cellular phones cannot be used.**

**OK:**
**The system functions.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

### USE A "Bluetooth" COMPATIBLE CELLULAR PHONE

### 3.CHECK USING ANOTHER "Bluetooth" COMPATIBLE VEHICLE

a. Register the cellular phone with another vehicle and check if the system functions normally.

**HINT:**

Depending on the version, some "Bluetooth" compatible cellular phones cannot be used.

**OK:**
**The system functions.**

NG → REPAIR OR REPLACE CELLULAR PHONE

OK

### REPLACE RADIO RECEIVER ASSEMBLY (Click here)

### 4.CHECK CELLULAR PHONE

a. Check if the cellular phone is "Bluetooth" compatible.

**HINT:**

Some versions of "Bluetooth" compatible cellular phones may not function.

**OK:**

**The phone is "Bluetooth" compatible.**

NG → USE A "Bluetooth" COMPATIBLE CELLULAR PHONE

OK ↓

5.CHECK CELLULAR PHONE

a. Check if a call can be made from the cellular phone.

**HINT:**

When the battery is low, registration or directory transfer cannot be done.

**OK:**

**A call can be made from the cellular phone.**

NG → REPAIR OR REPLACE CELLULAR PHONE

OK ↓

REPLACE RADIO RECEIVER ASSEMBLY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK "Bluetooth" SETTINGS

a. Check if the "Bluetooth" settings are correct.

**OK:**
**"Bluetooth" settings are correct.**

NG → SET SETTINGS CORRECTLY

OK

### 2.CHECK CELLULAR PHONE

a. Check if the cellular phone is "Bluetooth" compatible.

**HINT:**

Some versions of "Bluetooth" compatible cellular phones may not function.

**OK:**
**The phone is "Bluetooth" compatible.**

NG → END (ONLY A "Bluetooth" COMPATIBLE CELLULAR PHONE CAN BE USED)

OK

### 3.CHECK SETTINGS

a. Check if the cellular phone functions.

**HINT:**

The cellular phone is unable to call under any of the following conditions:

- **The cellular phone is locked.**
- **The directory is being transferred.**
- **The line is crossed.**
- **Outside service range**
- **The power is off.**
- **The cellular phone is not connected to "Bluetooth" ("BT" is displayed while connected).**

**OK:**
**None of the above conditions exist.**

NG → SET SETTINGS CORRECTLY

OK

### 4.CHECK CELLULAR PHONE

a. Check if the cellular phone can make a call.

**HINT:**

When the battery is low, calls cannot be made or received.

**OK:**
**Cellular phone can make a call.**

NG → REPAIR OR REPLACE CELLULAR PHONE

OK

5.CHECK RECEPTION

a. Set the cellular phone so that it can receive calls.

b. Place the cellular phone close to the radio receiver assembly.

c. Check if the cellular phone has reception according to the radio receiver assembly.

**OK:**
**The cellular phone has reception.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK "Bluetooth" SETTINGS

a. Check if the "Bluetooth" settings are correct.

**OK:**
**"Bluetooth" settings are correct.**

NG → SET SETTINGS CORRECTLY

OK

### 2.CHECK CELLULAR PHONE

a. Check if the cellular phone is "Bluetooth" compatible.

**HINT:**

Some versions of "Bluetooth" compatible cellular phones may not function.

**OK:**
**The phone is "Bluetooth" compatible.**

NG → END (ONLY A "Bluetooth" COMPATIBLE CELLULAR PHONE CAN BE USED)

OK

### 3.CHECK SETTINGS

a. Check if the cellular phone functions.

**HINT:**

The cellular phone is unable to call under any of the following conditions:

- **The cellular phone is locked.**
- **The directory is being transferred.**
- **The line is crossed.**
- **Outside service range**
- **The power is off.**
- **The cellular phone is not connected to "Bluetooth" ("BT" is displayed while connected).**

**OK:**
**None of the above conditions exist.**

NG → SET SETTINGS CORRECTLY

OK

### 4.CHECK CELLULAR PHONE

a. Check if the cellular phone can make a call.

**HINT:**

When the battery is low, calls cannot be made or received.

**OK:**
**Cellular phone can make a call.**

NG → REPAIR OR REPLACE CELLULAR PHONE

OK

5.CHECK RECEPTION

a. Set the cellular phone so that it can receive calls.

b. Place the cellular phone close to the radio receiver assembly.

c. Check if the cellular phone has reception according to the radio receiver assembly.

**OK:**
**The cellular phone has reception.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK SURROUNDING CONDITIONS

a. Check if the cellular phone can make calls in a certain place.

**OK:**
**It can make calls.**

NG → END (CELLULAR PHONES CAN ONLY FUNCTION IN CELLULAR SERVICE AREAS)

OK

### 2.CHECK RECEPTION

a. Display the "Phone" screen and check the "Bluetooth" connection indicator ("BT" indicator).

**Result**

| Result | Proceed to |
|---|---|
| "BT" indicator color is yellow. | A |
| "BT" indicator color is blue. | B |
| No connection mark is displayed. | C |

Example:

H

B → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

C → SELECT A REGISTERED CELLULAR PHONE OR REGISTER "Bluetooth" COMPATIBLE PHONE

A

MOVE CELLULAR PHONE TO LOCATION WHERE "BT" MARK TURNS BLUE

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK CELLULAR PHONE

a. Check if the voice on the other side can be heard using a cellular phone.

**OK:**
**Voice can be heard.**

NG → REPAIR OR REPLACE CELLULAR PHONE

OK

### 2.CHECK NAVIGATION SYSTEM

a. Check that navigation sound can be heard from the driver side speaker.

**OK:**
**Sound can be heard from the audio system.**

NG → GO TO "VOICE GUIDANCE DOES NOT FUNCTION" IN PROBLEM SYMPTOMS TABLE (Click here)

OK

### 3.CHECK SETTINGS

a. Check if the volume level is set to low on the "Call" screen.

**OK:**
**The level is not set low.**

Example:

NG → SET VOLUME TO HIGH

OK

### 4.CHECK SETTINGS (OPERATION CHECK)

a. Enter the "Hands-free Volume Setting" screen. Refer to Check Hands-free Volume Setting in Operation Check (Click here).

b. Check if the receive voice level is set to "0".

**HINT:**

The receive voice level can be set to 11 different levels, -5 to +5, with a 3 dB difference.

c. Check if the receive voice level is set to the minimum or maximum level.

**HINT:**

When the receive voice level is set to the minimum or maximum level, the sound may be distorted.

**NOTICE:**

"Voice Quality Type" should not be changed.

**OK:**

**The receive voice level is set to "0".**

H

NG → SET RECEIVE VOICE LEVEL TO "0"

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK CELLULAR PHONE

a. Check if the voice on the other side can be heard using a cellular phone.

**OK:**
**Voice can be heard.**

NG → REPAIR OR REPLACE CELLULAR PHONE

OK

### 2.CHECK NAVIGATION SYSTEM

a. Check that navigation sound can be heard from the driver side speaker.

**OK:**
**Sound can be heard from the audio system.**

NG → GO TO "VOICE GUIDANCE DOES NOT FUNCTION" IN PROBLEM SYMPTOMS TABLE (Click here)

OK

### 3.CHECK SETTINGS

a. Check if the volume level is set to low on the "Call" screen.

**OK:**
**The level is not set low.**

Example:

NG → SET VOLUME TO HIGH

OK

### 4.CHECK SETTINGS (OPERATION CHECK)

a. Enter the "Hands-free Volume Setting" screen. Refer to Check Hands-free Volume Setting in Operation Check (Click here).

b. Check if the receive voice level is set to "0".

**HINT:**

The receive voice level can be set to 11 different levels, -5 to +5, with a 3 dB difference.

c. Check if the receive voice level is set to the minimum or maximum level.

**HINT:**

When the receive voice level is set to the minimum or maximum level, the sound may be distorted.

**NOTICE:**

"Voice Quality Type" should not be changed.

**OK:**

**The receive voice level is set to "0".**

H

NG → SET RECEIVE VOICE LEVEL TO "0"

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK CELLULAR PHONE

a. Check if the other caller can hear your voice correctly.

**OK:**
**Your voice can be heard correctly.**

NG → REPLACE CELLULAR PHONE

OK

### 2.CHECK SETTINGS

a. Check if the mute switch is set to on.

**OK:**
**Mute switch is not set to on.**

Example:

H

NG → TURN MUTE SWITCH OFF

OK

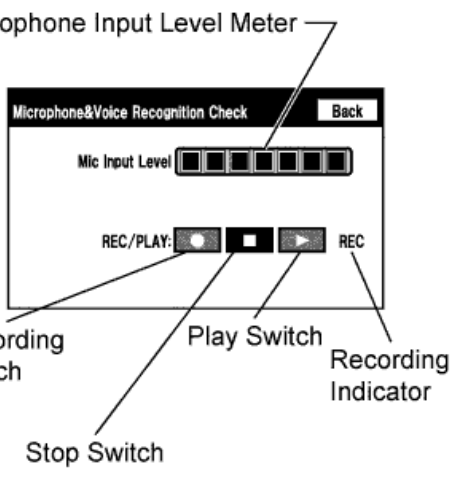
### 3.CHECK MICROPHONE (OPERATION CHECK)

a. Enter the "Microphone & Voice Recognition Check" screen. Refer to Check Mic & Voice Recognition in Operation Check (Click here).

b. When voice is input into the microphone, check that the microphone input level meter changes according to the input voice.



c. Push the recording switch and perform voice recording.

**HINT:**

Voice can be recorded up to 5 seconds.

d. Check that the recording indicator remains on while recording and that the recorded voice is played normally without noise or distortion.

**OK:**
**All check results are normal.**

H

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

**4.REPLACE RADIO RECEIVER ASSEMBLY**

a. Replace the radio receiver assembly (Click here).

b. Check symptoms again.

**OK:**
**The other caller can hear your voice loud enough without noise or distortion.**

NG → **REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)**

OK

**END**

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK CELLULAR PHONE

a. Check if the other caller can hear your voice correctly.

**OK:**
**Your voice can be heard correctly.**

NG → REPLACE CELLULAR PHONE

OK

### 2.CHECK SETTINGS

a. Check if the mute switch is set to on.

**OK:**
**Mute switch is not set to on.**

Example:

H

NG → TURN MUTE SWITCH OFF

OK

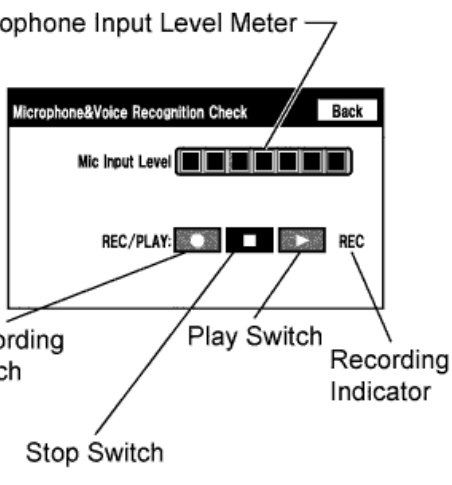
### 3.CHECK MICROPHONE (OPERATION CHECK)

a. Enter the "Microphone & Voice Recognition Check" screen. Refer to Check Mic & Voice Recognition in Operation Check (Click here).

b. When voice is input into the microphone, check that the microphone input level meter changes according to the input voice.



c. Push the recording switch and perform voice recording.

**HINT:**

Voice can be recorded up to 5 seconds.

d. Check that the recording indicator remains on while recording and that the recorded voice is played normally without noise or distortion.

**OK:**
**All check results are normal.**

H

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

**4.REPLACE RADIO RECEIVER ASSEMBLY**

a. Replace the radio receiver assembly (Click here).

b. Check symptoms again.

**OK:**
**The other caller can hear your voice loud enough without noise or distortion.**

NG → **REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)**

OK

**END**

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK DISPLAY SETTING

a. Check that the display is not in "Screen Off" mode.

**OK:**
**The display setting is not in "Screen Off" mode.**

NG → CHANGE SCREEN TO "Screen On" MODE

OK

### 2.CHECK IMAGE QUALITY SETTING

a. Check that the screen color quality can be set.

**OK:**
**Setting is possible.**

NG → Go to step 3

OK

PRESS REMOTE TOUCH SWITCH "DISP" AND SET SCREEN COLOR QUALITY TO NORMAL

### 3.CHECK CABIN

a. Check that condensation is not likely to occur in the cabin, and that the temperature is not high or extremely low in the cabin.

**HINT:**

- **A humid cabin and a rapid change in temperature may lead to condensation. Condensation in the cabin may cause a short circuit.**
- **The navigation system may not operate normally when the temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher.**

**OK:**
**Condensation is not likely being produced and the temperature is not high or extremely low.**

NG → SET CABIN TO APPROPRIATE TEMPERATURE

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK DISPLAY SETTING

a. Check that the display is not in "Screen Off" mode.

**OK:**
**The display setting is not in "Screen Off" mode.**

NG → CHANGE SCREEN TO "Screen On" MODE

OK

### 2.CHECK IMAGE QUALITY SETTING

a. Check that the screen color quality can be set.

**OK:**
**Setting is possible.**

NG → Go to step 3

OK

PRESS REMOTE TOUCH SWITCH "DISP" AND SET SCREEN COLOR QUALITY TO NORMAL

### 3.CHECK CABIN

a. Check that condensation is not likely to occur in the cabin, and that the temperature is not high or extremely low in the cabin.

**HINT:**

- **A humid cabin and a rapid change in temperature may lead to condensation. Condensation in the cabin may cause a short circuit.**
- **The navigation system may not operate normally when the temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher.**

**OK:**
**Condensation is not likely being produced and the temperature is not high or extremely low.**

NG → SET CABIN TO APPROPRIATE TEMPERATURE

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## DESCRIPTION

This circuit sends an operation signal from the steering pad (steering pad switch) to the display and navigation module display.
If there is an open in the circuit, the navigation system cannot be operated using the steering pad (steering pad switch).
If there is a short in the circuit, the resulting condition is the same as if the switch were continuously pressed. Therefore, the display and navigation module display cannot be operated using the steering pad (steering pad switch), and the display and navigation module display itself cannot function.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

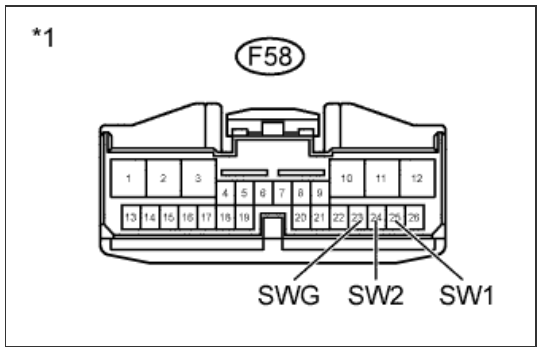
**NOTICE:**

The vehicle is equipped with an Supplemental Restraint System (SRS). Before servicing (including removal or installation of parts), be sure to read the precaution for Supplemental Restraint System (Click here).



### 1.INSPECT DISPLAY AND NAVIGATION MODULE DISPLAY

a. Disconnect the F58 display and navigation module display connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F58-25 (SW1) - F58-23 (SWG) | No switch pushed | 95 to 105 kΩ |
| F58-25 (SW1) - F58-23 (SWG) | Seek+ switch pushed | Below 2.5 Ω |
| F58-25 (SW1) - | Seek- switch | 312 to 345 Ω |

| | | |
|---|---|---|
| F58-23 (SWG) | pushed | |
| F58-25 (SW1) - F58-23 (SWG) | Volume+ switch pushed | 950 to 1050 Ω |
| F58-25 (SW1) - F58-23 (SWG) | Volume- switch pushed | 2954 to 3265 Ω |
| F58-24 (SW2) - F58-23 (SWG) | No switch pushed | 95 to 105 kΩ |
| F58-24 (SW2) - F58-23 (SWG) | MODE switch pushed | Below 2.5 Ω |
| F58-24 (SW2) - F58-23 (SWG) | Voice switch pushed | 2954 to 3265 Ω |
| F58-24 (SW2) - F58-23 (SWG) | On Hook switch pushed | 312 to 345 Ω |
| F58-24 (SW2) - F58-23 (SWG) | Off Hook switch pushed | 950 to 1050 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Display and Navigation Module Display) |

NG → Go to step 2

OK

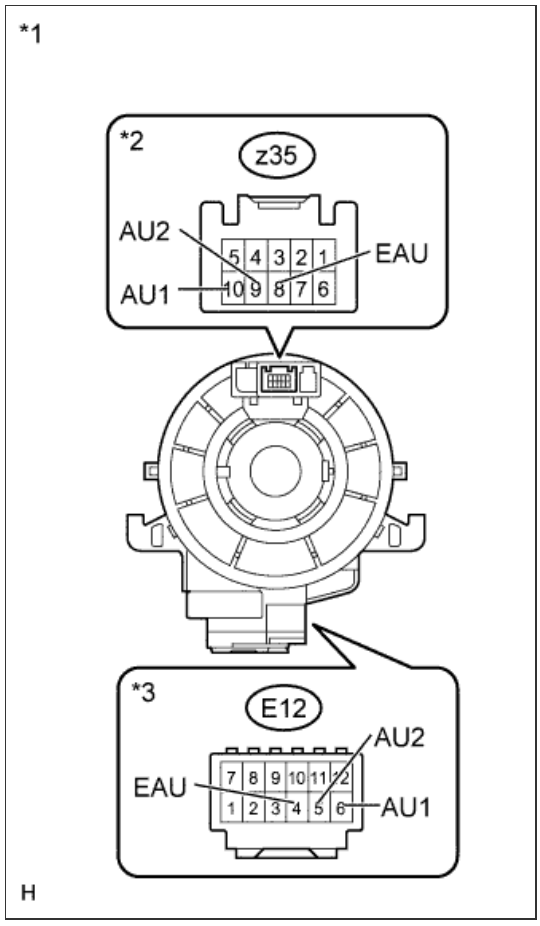
PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)



## 2.INSPECT SPIRAL CABLE SUB-ASSEMBLY

a. Disconnect the z35 and E12 spiral cable sub-assembly connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| z35-8 (EAU) - E12-4 (EAU) | Center | Below 1 Ω |
| | 2.5 rotations to the left | |
| | 2.5 rotations to the right | |
| z35-10 (AU1) - E12-6 (AU1) | Center | Below 1 Ω |
| | 2.5 rotations to the left | |
| | 2.5 rotations to the right | |
| z35-9 (AU2) - E12-5 (AU2) | Center | Below 1 Ω |
| | 2.5 rotations to the left | |
| | 2.5 rotations to the right | |

**NOTICE:**

The spiral cable is an important part of the SRS airbag system. Incorrect removal or installation of the spiral cable may prevent the airbag from deploying. Refer to the pages shown in the brackets.

**HINT:**

- **Removal (Click here)**
- **Installation (Click here)**

| *6 | MODE | *7 | Off Hook |
| *8 | On Hook | *9 | Voice |

a. Disconnect the z51 steering pad (steering pad switch) connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| z51-6 (AU1) - z51-8 (EAU) | No switch pushed | 95 to 105 kΩ |
| z51-6 (AU1) - z51-8 (EAU) | Seek+ switch pushed | Below 2.5 Ω |
| z51-6 (AU1) - z51-8 (EAU) | Seek- switch pushed | 312 to 345 Ω |
| z51-6 (AU1) - z51-8 (EAU) | Volume+ switch pushed | 950 to 1050 Ω |
| z51-6 (AU1) - z51-8 (EAU) | Volume- switch pushed | 2954 to 3265 Ω |
| z51-7 (AU2) - z51-8 (EAU) | No switch pushed | 95 to 105 kΩ |
| z51-7 (AU2) - z51-8 (EAU) | MODE switch pushed | Below 2.5 Ω |
| z51-7 (AU2) - z51-8 (EAU) | Voice switch pushed | 2954 to 3265 Ω |
| z51-7 (AU2) - z51-8 (EAU) | On Hook switch pushed | 312 to 345 Ω |
| z51-7 (AU2) - z51-8 (EAU) | Off Hook switch pushed | 950 to 1050 Ω |

NG → REPLACE STEERING PAD (STEERING PAD SWITCH) (Click here)

OK

**4.CHECK NO. 1 SWITCH WIRE**

a. Disconnect the z35 spiral cable sub-assembly connector.

b. Disconnect the z51 steering pad (steering pad switch) connector.

c. Measure the resistance according to the valve(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
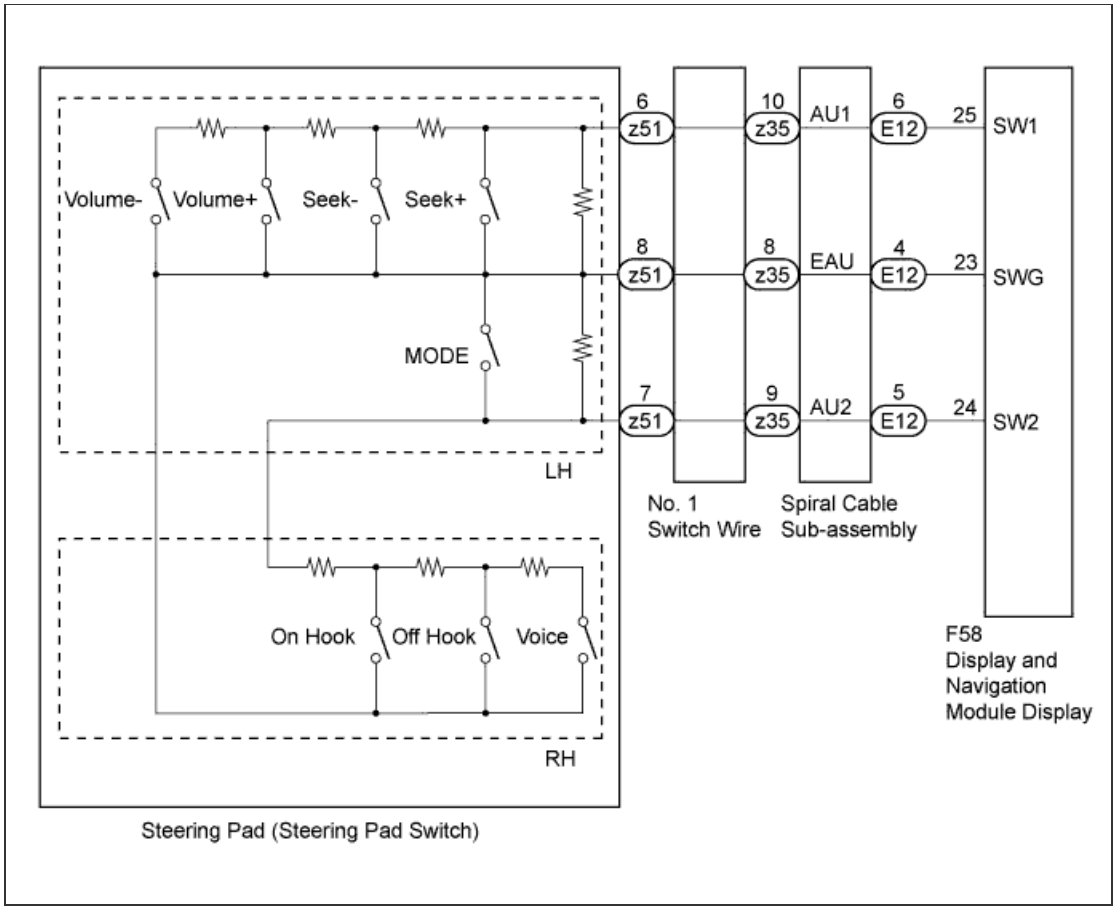
| z35-10 - z51-6 | Always | Below 1 Ω |
| z35-9 - z51-7 | Always | Below 1 Ω |
| z35-8 - z51-8 | Always | Below 1 Ω |
| z35-10 - Body ground | Always | 10 kΩ or higher |
| z35-9 - Body ground | Always | 10 kΩ or higher |
| z35-8 - Body ground | Always | 10 kΩ or higher |

NG → REPLACE NO. 1 SWITCH WIRE



OK → REPAIR OR REPLACE HARNESS OR CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - SPIRAL CABLE)

**for Preparation** Click here

## DESCRIPTION

This circuit sends an operation signal from the steering pad (steering pad switch) to the display and navigation module display.
If there is an open in the circuit, the navigation system cannot be operated using the steering pad (steering pad switch).
If there is a short in the circuit, the resulting condition is the same as if the switch were continuously pressed. Therefore, the display and navigation module display cannot be operated using the steering pad (steering pad switch), and the display and navigation module display itself cannot function.

## WIRING DIAGRAM

| z51-6 (AU1) - z51-8 (EAU) | Volume- switch pushed | 2954 to 3265 Ω |
| z51-7 (AU2) - z51-8 (EAU) | No switch pushed | 95 to 105 kΩ |
| z51-7 (AU2) - z51-8 (EAU) | MODE switch pushed | Below 2.5 Ω |
| z51-7 (AU2) - z51-8 (EAU) | Voice switch pushed | 2954 to 3265 Ω |
| z51-7 (AU2) - z51-8 (EAU) | On Hook switch pushed | 312 to 345 Ω |
| z51-7 (AU2) - z51-8 (EAU) | Off Hook switch pushed | 950 to 1050 Ω |

NG → REPLACE STEERING PAD (STEERING PAD SWITCH) (Click here)

OK

**4.CHECK NO. 1 SWITCH WIRE**

a. Disconnect the z35 spiral cable sub-assembly connector.

b. Disconnect the z51 steering pad (steering pad switch) connector.

c. Measure the resistance according to the valve(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
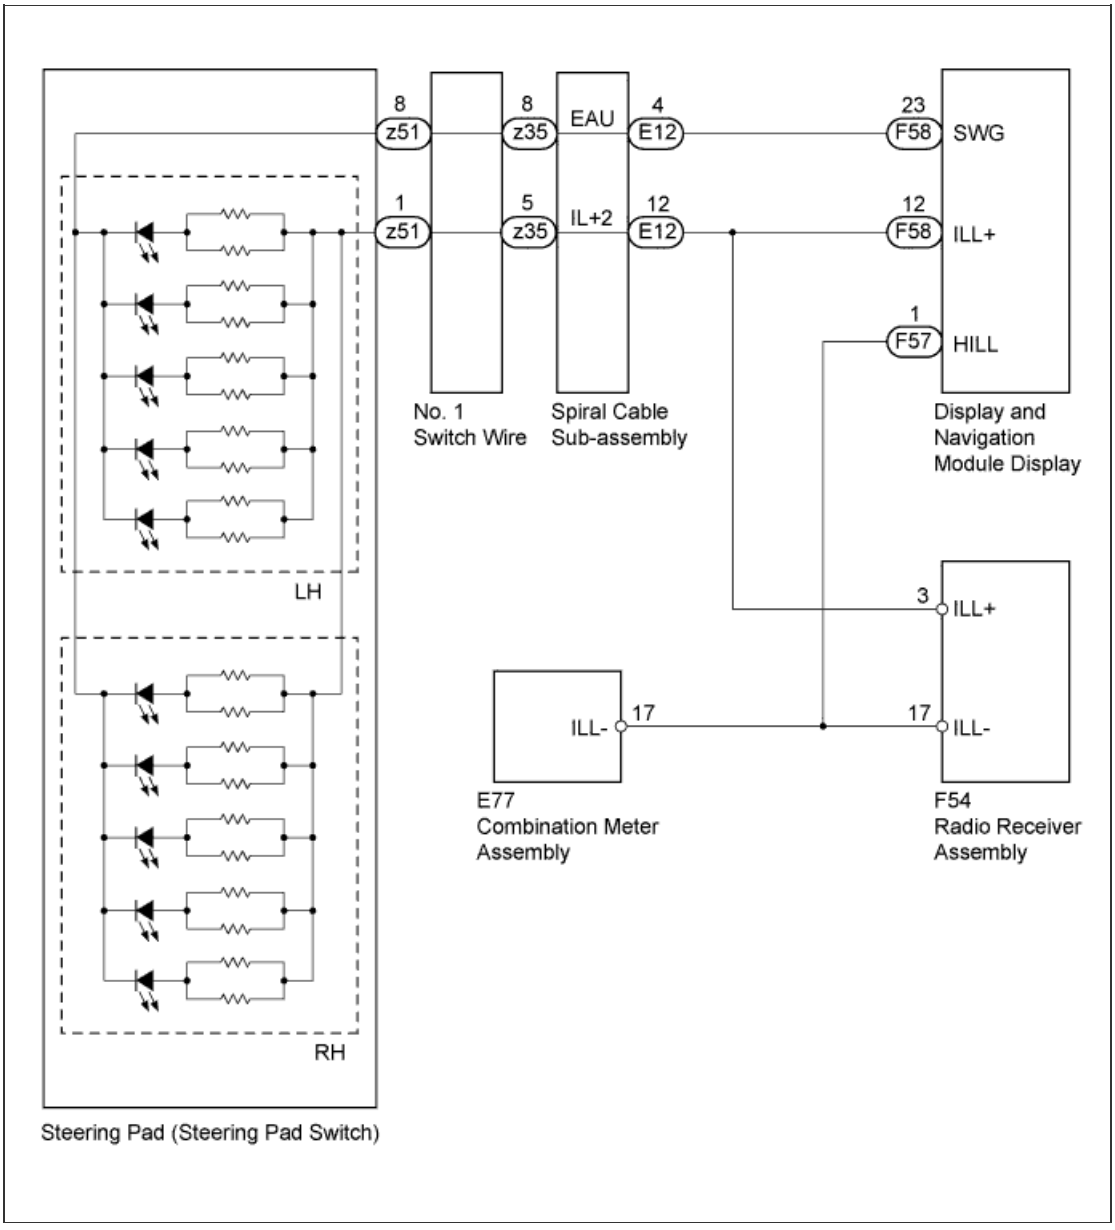
| z35-10 - z51-6 | Always | Below 1 Ω |
| z35-9 - z51-7 | Always | Below 1 Ω |
| z35-8 - z51-8 | Always | Below 1 Ω |
| z35-10 - Body ground | Always | 10 kΩ or higher |
| z35-9 - Body ground | Always | 10 kΩ or higher |
| z35-8 - Body ground | Always | 10 kΩ or higher |

NG → REPLACE NO. 1 SWITCH WIRE



OK → REPAIR OR REPLACE HARNESS OR CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - SPIRAL CABLE)

**for Preparation** Click here

## DESCRIPTION

Power is supplied to the display and navigation module display, radio receiver assembly and steering pad (steering pad switch) illumination when the light control switch is in the TAIL or HEAD position.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

The vehicle is equipped with an SRS (Supplemental Restraint System) which includes components such as airbags. Before servicing (including removal or installation of parts), be sure to read the Precaution in the Supplemental Restraint System (Click here).

### 1.CHECK ILLUMINATION

a. Check if the illumination for the display and navigation module display, steering pad switch, glove box light, cigarette lighter, or other parts (seat heater switch, front seat memory switch, etc.) comes on when the light control switch is turned to the HEAD or TAIL position.

**Result**

| Result | Proceed to |
|---|---|
| Illumination comes on for all components except steering pad (steering pad switch). | A |

| | |
|---|---|
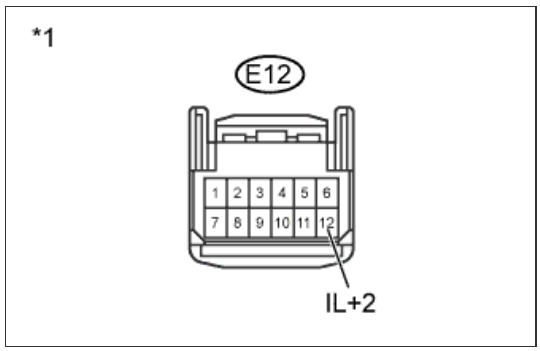
| Illumination comes on for all components except radio receiver assembly. | B |
| Illumination comes on for all components except display and navigation module display. | C |
| No illumination comes on for all components. | D |

B → Go to step 7

C → Go to step 8



D → GO TO LIGHTING SYSTEM (Click here)

A

## 2.CHECK HARNESS AND CONNECTOR (BATTERY - SPIRAL CABLE SUB-ASSEMBLY)

a. Disconnect the E12 spiral cable sub-assembly connector.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| E12-12 (IL+2) - Body ground | Light control switch in tail or head | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Spiral Cable Sub-assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 3.CHECK NO. 1 SWITCH WIRE

a. Disconnect the z35 spiral cable sub-assembly connector.

b. Disconnect the z51 steering pad (steering pad switch) connector.

c. Measure the resistance according to the valve(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| z35-8 - z51-8 | Always | Below 1 Ω |
| z35-5 - z51-1 | Always | Below 1 Ω |
| z35-8 - Body ground | Always | 10 kΩ or higher |
| z35-5 - Body ground | Always | 10 kΩ or higher |

NG → REPLACE NO. 1 SWITCH WIRE

OK

## 4.INSPECT STEERING PAD (STEERING PAD SWITCH)

**Text in Illustration**

| | | | |
|---|---|---|---|
| *A | w/ Dynamic Radar Cruise Control System | *1 | Component without harness connected<br>(Steering Pad (Steering Pad Switch)) |

**Text in Illustration**

| | | | |
|---|---|---|---|
| *A | w/o Dynamic Radar Cruise Control System | *1 | Component without harness connected (Steering Pad (Steering Pad Switch)) |

a. Disconnect the z51 steering pad (steering pad switch) connector.

b. Connect a positive (+) lead from the battery to terminal 1 (IL+2) and a negative (-) lead from the battery to terminal 8 (EAU) of the steering pad switch assembly connector.

c. Check if the illumination for the steering pad switch assembly comes on.

**OK:**

**Illumination for the steering pad switch assembly comes on.**

NG → REPLACE STEERING PAD (STEERING PAD SWITCH) (Click here)

OK

## 5.INSPECT SPIRAL CABLE SUB-ASSEMBLY

a. Disconnect the z35 and E12 spiral cable sub-assembly connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| z35-5 (IL+2) - E12-12 (IL+2) | Center | Below 1 Ω |
| | 2.5 rotations to the left | |
| | 2.5 rotations to the right | |
| z35-8 (EAU) - E12-4 (EAU) | Center | Below 1 Ω |
| | 2.5 rotations to the left | |
| | 2.5 rotations to the right | |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Spiral Cable Sub-assembly) |
| *2 | Steering Pad Switch Side |
| *3 | Vehicle Side |

**NOTICE:**

The spiral cable is an important part of the SRS airbag system. Incorrect removal or installation of the spiral cable may prevent the airbag from deploying. Be sure to read the Precaution for the supplemental restraint system (Click here).

NG → REPLACE SPIRAL CABLE SUB-ASSEMBLY (Click here)

OK

## 6.CHECK HARNESS AND CONNECTOR (SPIRAL CABLE - DISPLAY AND NAVIGATION MODULE DISPLAY AND RADIO RECEIVER)

a. Disconnect the E12 spiral cable sub-assembly connector.

b. Disconnect the F58 display and navigation module display connector.

c. Disconnect the F54 radio receiver assembly connector.

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| E12-12 (IL+2) - F58-12 (ILL+) | Always | Below 1 Ω |
| E12-12 (IL+2) - F54-3 (ILL+) | Always | Below 1 Ω |
| E12-4 (EAU) - F58-23 (SWG) | Always | Below 1 Ω |
| E12-12 (IL+2) - Body ground | Always | 10 kΩ or higher |
| E12-4 (EAU) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

7.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - BATTERY AND COMBINATION METER)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the E77 combination meter assembly connector.

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-3 (ILL+) - Body ground | Light control switch in TAIL or HEAD | 11 to 14 V |

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-17 (ILL-) - E77-17 (ILL-) | Always | Below 1 Ω |
| F54-17 (ILL-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE RADIO RECEIVER ASSEMBLY (Click here)

8.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - BATTERY AND COMBINATION METER)

a. Disconnect the F58 and F57 display and navigation module display connector.

b. Disconnect the E77 combination meter assembly connector.

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-12 (ILL+) - Body ground | Light control switch in TAIL or HEAD | 11 to 14 V |

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F57-1 (HILL) - E77-17 (ILL-) | Always | Below 1 Ω |
| F57-1 (HILL) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

**for Preparation** Click here

## DESCRIPTION

Power is supplied to the display and navigation module display, radio receiver assembly and steering pad (steering pad switch) illumination when the light control switch is in the TAIL or HEAD position.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

The vehicle is equipped with an SRS (Supplemental Restraint System) which includes components such as airbags. Before servicing (including removal or installation of parts), be sure to read the Precaution in the Supplemental Restraint System (Click here).

### 1.CHECK ILLUMINATION

a. Check if the illumination for the display and navigation module display, steering pad switch, glove box light, cigarette lighter, or other parts (seat heater switch, front seat memory switch, etc.) comes on when the light control switch is turned to the HEAD or TAIL position.

**Result**

| Result | Proceed to |
|---|---|
| Illumination comes on for all components except steering pad (steering pad switch). | A |

| | |
|---|---|

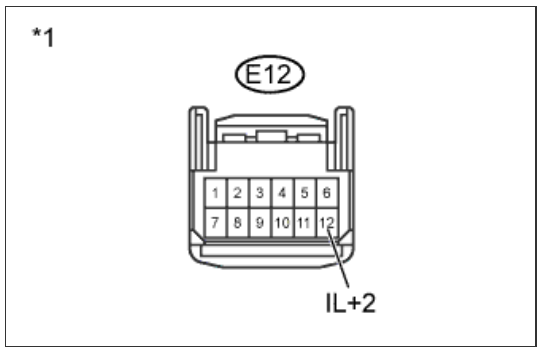
| Illumination comes on for all components except display and navigation module display. | C |
| No illumination comes on for all components. | D |

B → Go to step 7

C → Go to step 8



D → GO TO LIGHTING SYSTEM (Click here)

A

## 2.CHECK HARNESS AND CONNECTOR (BATTERY - SPIRAL CABLE SUB-ASSEMBLY)

a. Disconnect the E12 spiral cable sub-assembly connector.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| E12-12 (IL+2) - Body ground | Light control switch in tail or head | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Spiral Cable Sub-assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 3.CHECK NO. 1 SWITCH WIRE

a. Disconnect the z35 spiral cable sub-assembly connector.

b. Disconnect the z51 steering pad (steering pad switch) connector.

c. Measure the resistance according to the valve(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| z35-8 - z51-8 | Always | Below 1 Ω |
| z35-5 - z51-1 | Always | Below 1 Ω |
| z35-8 - Body ground | Always | 10 kΩ or higher |
| z35-5 - Body ground | Always | 10 kΩ or higher |

NG → REPLACE NO. 1 SWITCH WIRE

OK

## 4.INSPECT STEERING PAD (STEERING PAD SWITCH)

**Text in Illustration**

| | | | |
|---|---|---|---|
| *A | w/ Dynamic Radar Cruise Control System | *1 | Component without harness connected<br>(Steering Pad (Steering Pad Switch)) |

**Text in Illustration**

| | | | |

a. Disconnect the z51 steering pad (steering pad switch) connector.

b. Connect a positive (+) lead from the battery to terminal 1 (IL+2) and a negative (-) lead from the battery to terminal 8 (EAU) of the steering pad switch assembly connector.

c. Check if the illumination for the steering pad switch assembly comes on.

**OK:**

**Illumination for the steering pad switch assembly comes on.**

NG → REPLACE STEERING PAD (STEERING PAD SWITCH) (Click here)

OK

## 5.INSPECT SPIRAL CABLE SUB-ASSEMBLY

a. Disconnect the z35 and E12 spiral cable sub-assembly connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| z35-5 (IL+2) - E12-12 (IL+2) | Center | Below 1 Ω |
| | 2.5 rotations to the left | |
| | 2.5 rotations to the right | |
| z35-8 (EAU) - E12-4 (EAU) | Center | Below 1 Ω |
| | 2.5 rotations to the left | |
| | 2.5 rotations to the right | |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Spiral Cable Sub-assembly) |
| *2 | Steering Pad Switch Side |
| *3 | Vehicle Side |

**NOTICE:**

The spiral cable is an important part of the SRS airbag system. Incorrect removal or installation of the spiral cable may prevent the airbag from deploying. Be sure to read the Precaution for the supplemental restraint system (Click here).

NG → REPLACE SPIRAL CABLE SUB-ASSEMBLY (Click here)

OK

## 6.CHECK HARNESS AND CONNECTOR (SPIRAL CABLE - DISPLAY AND NAVIGATION MODULE DISPLAY AND RADIO RECEIVER)

a. Disconnect the E12 spiral cable sub-assembly connector.

b. Disconnect the F58 display and navigation module display connector.

c. Disconnect the F54 radio receiver assembly connector.

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| E12-12 (IL+2) - F58-12 (ILL+) | Always | Below 1 Ω |
| E12-12 (IL+2) - F54-3 (ILL+) | Always | Below 1 Ω |
| E12-4 (EAU) - F58-23 (SWG) | Always | Below 1 Ω |
| E12-12 (IL+2) - Body ground | Always | 10 kΩ or higher |
| E12-4 (EAU) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

7.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - BATTERY AND COMBINATION METER)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the E77 combination meter assembly connector.

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-3 (ILL+) - Body ground | Light control switch in TAIL or HEAD | 11 to 14 V |

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-17 (ILL-) - E77-17 (ILL-) | Always | Below 1 Ω |
| F54-17 (ILL-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE RADIO RECEIVER ASSEMBLY (Click here)

8.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - BATTERY AND COMBINATION METER)

a. Disconnect the F58 and F57 display and navigation module display connector.

b. Disconnect the E77 combination meter assembly connector.

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-12 (ILL+) - Body ground | Light control switch in TAIL or HEAD | 11 to 14 V |

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F57-1 (HILL) - E77-17 (ILL-) | Always | Below 1 Ω |
| F57-1 (HILL) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

**for Preparation** Click here

## DESCRIPTION

This circuit is from the parking brake switch assembly to the display and navigation module display.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK BRAKE WARNING LIGHT

a. Check that the brake warning light comes on when the parking brake is applied and goes off when it is released.

**OK:**
**The brake warning light operates as specified above.**

NG → Go to step 3

OK ↓

### 2.CHECK HARNESS AND CONNECTOR (PARKING BRAKE SWITCH - DISPLAY AND NAVIGATION MODULE DISPLAY)

a. Disconnect the F58 display and navigation module display connector.

b. Disconnect the E53 parking brake switch assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-17 (PKB) - E53-1 | Always | Below 1 Ω |
| F58-17 (PKB) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ↓

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

### 3.INSPECT PARKING BRAKE SWITCH ASSEMBLY

a. Disconnect the parking brake switch assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
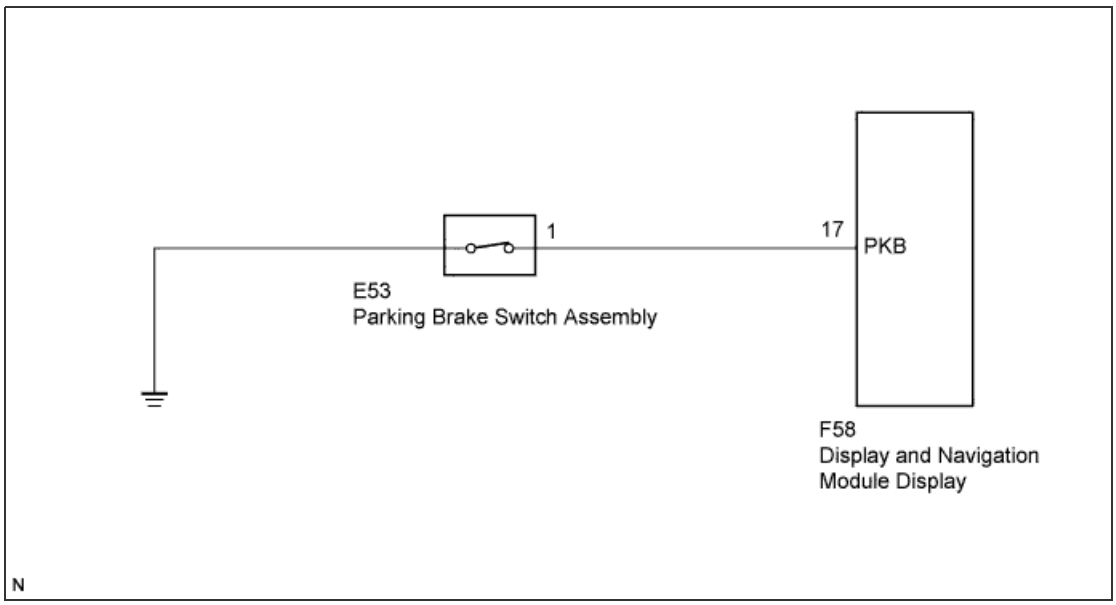
| 1 - Switch body | ON (When shaft is not pressed) | Below 1 Ω |
| 1 - Switch body | OFF (When shaft is pressed) | 10 kΩ or higher |

NG → REPLACE PARKING BRAKE SWITCH ASSEMBLY



OK → REPAIR OR REPLACE HARNESS OR CONNECTOR (PARKING BRAKE SWITCH - BODY GROUND)

**for Preparation** Click here

## DESCRIPTION

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK BRAKE WARNING LIGHT

a. Check that the brake warning light comes on when the parking brake is applied and goes off when it is released.

**OK:**
**The brake warning light operates as specified above.**

NG → Go to step 3

OK ↓

### 2.CHECK HARNESS AND CONNECTOR (PARKING BRAKE SWITCH - DISPLAY AND NAVIGATION MODULE DISPLAY)

a. Disconnect the F58 display and navigation module display connector.

b. Disconnect the E53 parking brake switch assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-17 (PKB) - E53-1 | Always | Below 1 Ω |
| F58-17 (PKB) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ↓

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

### 3.INSPECT PARKING BRAKE SWITCH ASSEMBLY

a. Disconnect the parking brake switch assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - Switch body | ON (When shaft is not pressed) | Below 1 Ω |
| 1 - Switch body | OFF (When shaft is pressed) | 10 kΩ or higher |

NG → REPLACE PARKING BRAKE SWITCH ASSEMBLY

OK → REPAIR OR REPLACE HARNESS OR CONNECTOR (PARKING BRAKE SWITCH - BODY GROUND)

**for Preparation** Click here

## DESCRIPTION

Each unit of the navigation system connected to the AVC-LAN (communication bus) transfers switch signals by the audio visual communication local area network.
If a short to +B or short to ground occurs in this AVC-LAN, the navigation system will not function normally as communication is stopped.

## INSPECTION PROCEDURE

**HINT:**

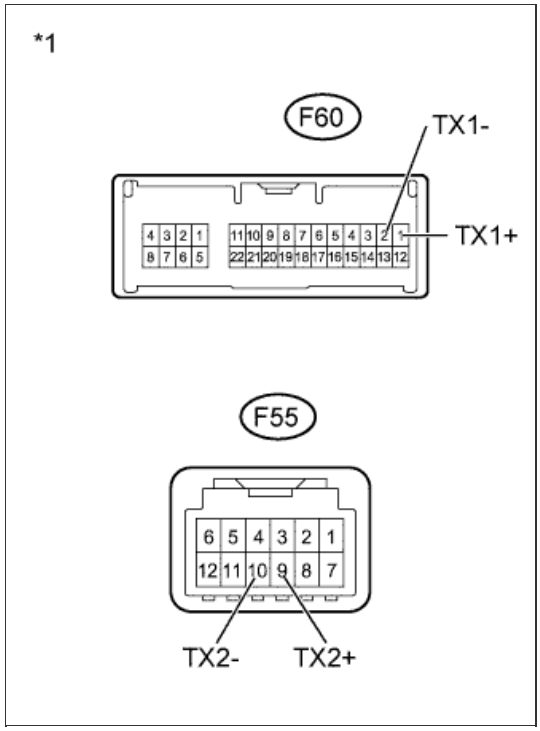
The display and navigation module display is the master unit.

### 1.INSPECT DISPLAY AND NAVIGATION MODULE DISPLAY



a. Disconnect the F60 display and navigation module display connector.

b. Disconnect the F55 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F60-1 (TX1+) - F60-2 (TX1-) | Always | 60 to 80 Ω |
| F55-9 (TX2+) - F55-10 (TX2-) | Always | 60 to 80 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Display and Navigation Module Display) |

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

### 2.CHECK HARNESS AND CONNECTOR (AVC-LAN CIRCUIT)

**HINT:**

For details of the connectors, refer to Terminals of ECU ( Click here).

a. Referring to the AVC-LAN wiring diagram below, check all AVC-LAN circuits.

i. Disconnect all connectors in all AVC-LAN circuits.

ii. Check for an open or short in all AVC-LAN circuits.

AVC-LAN WIRING DIAGRAM:

*1: Master Unit

*2: Slave Unit

**OK:**

**There is no open or short circuit.**

| | |
|---|---|
| NG | REPAIR OR REPLACE HARNESS OR CONNECTOR |

OK

**3.INSPECT MALFUNCTIONING PARTS**

a. Disconnect and reconnect each slave unit one by one until the master unit returns to normal operation.

**HINT:**

- **Check all slave units.**
- **If disconnecting a slave unit causes the master unit to return to normal operation, the slave unit is defective and should be replaced.**

**OK:**

**Master unit returns to normal operation.**

| | |
|---|---|
| NG | REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here) |

OK

**REPLACE MALFUNCTIONING PARTS**

**for Preparation** Click here

## DESCRIPTION

Each unit of the navigation system connected to the AVC-LAN (communication bus) transfers switch signals by the audio visual communication local area network.

## DESCRIPTION

The display and navigation module display receives a reverse signal from the park/neutral position switch and information about the navigation antenna assembly, and then adjusts the vehicle position on the navigation display.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK REVERSE SIGNAL (DISPLAY CHECK MODE)

a. Enter the "Vehicle Signal Check Mode" screen. Refer to Check Vehicle Signal in Operation Check (Click here).

b. Check that the display changes between ON and OFF according to the shift lever operation.

**OK:**

| Condition | Display |
|---|---|
| Shift lever in R | ON |
| Shift lever in any position except R | OFF |

**HINT:**

This display is updated once per second. As a result, it is normal for the display to lag behind the actual switch operation.

NG → Go to step 2

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

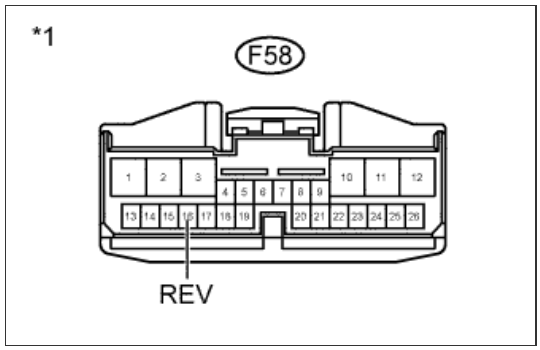
### 2.INSPECT DISPLAY AND NAVIGATION MODULE DISPLAY

a. Disconnect the F58 display and navigation module display connector.

b. Measure the voltage according to the value(s) in the table below.



**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-16 (REV) - Body ground | Engine switch on (IG) | 11 to 14 V |

| | | |
|---|---|---|
| | Shift lever in R | |
| F58-16 (REV) - Body ground | Engine switch on (IG)<br>Shift lever in any position except R | Below 1 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Display and Navigation Module Display) |

NG → Go to step 3

OK →

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

3.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - PNP SWITCH)

a. Disconnect the F58 display and navigation module display connector.

b. Disconnect the C19 park/neutral position switch assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-16 (REV) - C19-1 (RL) | Always | Below 1 Ω |
| F58-16 (REV) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

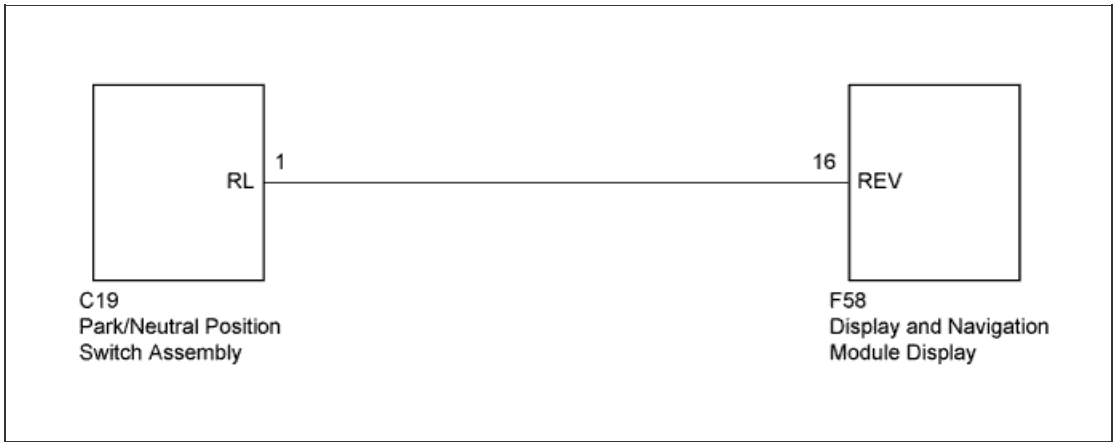
OK →



REPLACE PARK/NEUTRAL POSITION SWITCH ASSEMBLY (Click here)

**for Preparation** Click here

## DESCRIPTION

The display and navigation module display receives a reverse signal from the park/neutral position switch and information about the navigation antenna assembly, and then adjusts the vehicle position on the navigation display.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK REVERSE SIGNAL (DISPLAY CHECK MODE)

a. Enter the "Vehicle Signal Check Mode" screen. Refer to Check Vehicle Signal in Operation Check (Click here).

b. Check that the display changes between ON and OFF according to the shift lever operation.

**OK:**

| Condition | Display |
|---|---|
| Shift lever in R | ON |
| Shift lever in any position except R | OFF |

**HINT:**

This display is updated once per second. As a result, it is normal for the display to lag behind the actual switch operation.

NG → Go to step 2

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

## DESCRIPTION

This circuit sends a DVD image signal from the radio receiver assembly to the display and navigation module display.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - DISPLAY AND NAVIGATION MODULE DISPLAY)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F60 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-8 (NTSC) - F60-9 (VV+) | Always | Below 1 Ω |
| F54-22 (GND) - F60-20 (VV-) | Always | Below 1 Ω |
| F54-8 (NTSC) - Body ground | Always | 10 kΩ or higher |
| F54-22 (GND) - Body ground | Always | 10 kΩ or higher |
| F54-7 (SLD) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

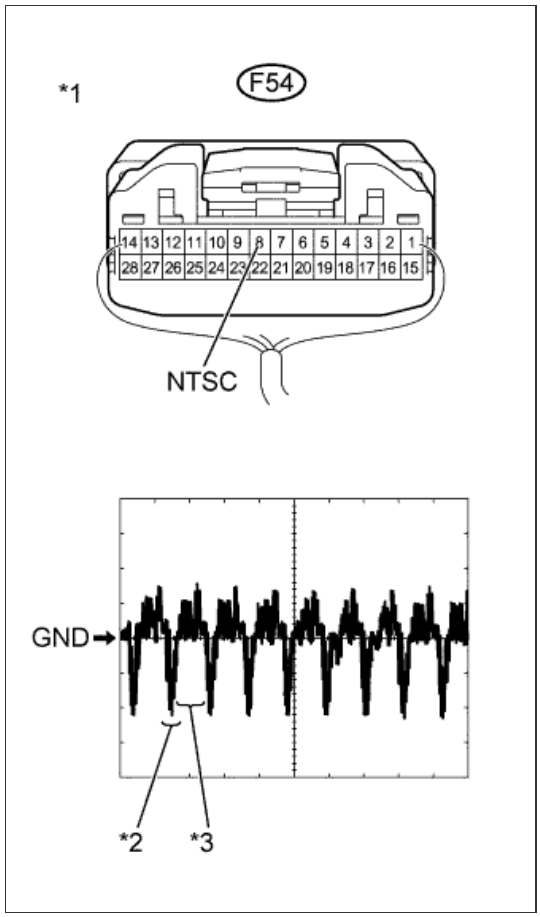
### 2.INSPECT RADIO RECEIVER ASSEMBLY (DVD IMAGE SIGNAL)

a. Reconnect the F54 radio receiver assembly connector.

b. Check the waveform according to the table below.

### Oscilloscope Waveform



| Item | Content |
|---|---|
| Measurement terminal | F54-8 (NTSC) - Body ground |
| Tool setting | 200 mV/DIV., 10 µs/DIV. |
| Condition | DVD display is on |

**HINT:**

The video waveform changes according to the image output from the radio receiver assembly to the display and navigation module display, but the synchronization signal does not change.

### Text in Illustration

## DESCRIPTION

This circuit sends a microphone signal from the map light assembly (telephone microphone assembly) to the display and navigation module display. It also supplies power from the display and navigation module display to the map light assembly (telephone microphone assembly).

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - MAP LIGHT ASSEMBLY)

a. Disconnect the F58 display and navigation module display connector.

b. Disconnect the R7 map light assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-20 (SNS2) - R7-31 (SNS2) | Always | Below 1 Ω |
| F58-4 (MACC) - R7-22 (ACC) | Always | Below 1 Ω |
| F58-5 (MIN+) - R7-21 (MI1+) | Always | Below 1 Ω |
| F58-6 (MIN-) - R7-20 (MIC-) | Always | Below 1 Ω |
| F58-20 (SNS2) - Body ground | Always | 10 kΩ or higher |
| F58-4 (MACC) - Body ground | Always | 10 kΩ or higher |
| F58-5 (MIN+) - Body ground | Always | 10 kΩ or higher |
| F58-6 (MIN-) - Body ground | Always | 10 kΩ or higher |
| F58-7 (SGND) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

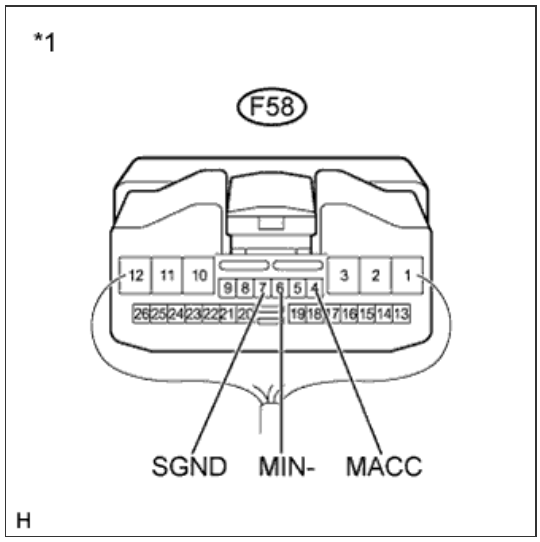
## 2.INSPECT DISPLAY AND NAVIGATION MODULE DISPLAY

a. Reconnect the F58 display and navigation module display connector.

b. Measure the voltage according to the value(s) in the table below.



**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-4 (MACC) - Body ground | Engine switch on (ACC) | 4 to 6 V |

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-7 (SGND) - Body ground | Always | Below 1 Ω |
| F58-6 (MIN-) - Body ground | Always | Below 1 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component with harness connected (Display and Navigation Module Display) |

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

## 3.INSPECT MAP LIGHT ASSEMBLY

a. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| R7-31 (SNS2) - R7-20 (MIC-) | Always | Below 1 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Map Light Assembly) |

NG → Go to step 5

OK

## 4.INSPECT MAP LIGHT ASSEMBLY

a. Reconnect the R7 map light assembly connector.

b. Turn the engine switch on (ACC).

c. Connect an oscilloscope to terminals 21 (MI1+) and 20 (MIC-) of the R7 telephone microphone assembly connector.

d. Check the waveform of the telephone microphone assembly using the oscilloscope.

**Result**

| Result | Proceed to |
|---|---|
| Waveform synchronized with the voice input to the map light assembly is output | A |
| Waveform synchronized with the voice input to the map light assembly is not output | B |

**Text in Illustration**

| | |
|---|---|
| *1 | Component with harness connected (Map Light Assembly) |

B → Go to step 5

A → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

## 5.REPLACE TELEPHONE MICROPHONE ASSEMBLY

a. Replace the telephone microphone assembly ( Click here).

b. Check if the same malfunction recurs.

**Result**

| Result | Proceed to |
|---|---|
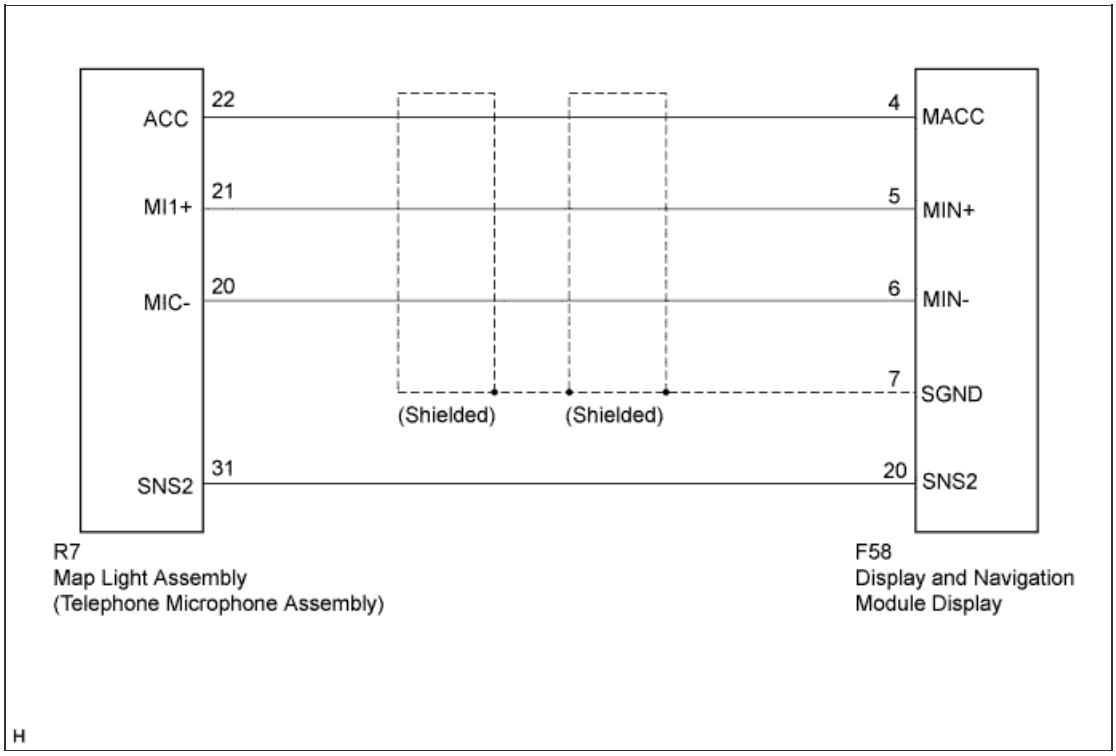
| Malfunction does not recur (returns to normal) | A |
| Malfunction recurs | B |

B → REPLACE MAP LIGHT ASSEMBLY (Click here)



A → END

**for Preparation** Click here

## DESCRIPTION

This circuit sends a microphone signal from the map light assembly (telephone microphone assembly) to the display and navigation module display. It also supplies power from the display and navigation module display to the map light assembly (telephone microphone assembly).

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - MAP LIGHT ASSEMBLY)

a. Disconnect the F58 display and navigation module display connector.

b. Disconnect the R7 map light assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-20 (SNS2) - R7-31 (SNS2) | Always | Below 1 Ω |
| F58-4 (MACC) - R7-22 (ACC) | Always | Below 1 Ω |
| F58-5 (MIN+) - R7-21 (MI1+) | Always | Below 1 Ω |
| F58-6 (MIN-) - R7-20 (MIC-) | Always | Below 1 Ω |
| F58-20 (SNS2) - Body ground | Always | 10 kΩ or higher |
| F58-4 (MACC) - Body ground | Always | 10 kΩ or higher |
| F58-5 (MIN+) - Body ground | Always | 10 kΩ or higher |
| F58-6 (MIN-) - Body ground | Always | 10 kΩ or higher |
| F58-7 (SGND) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

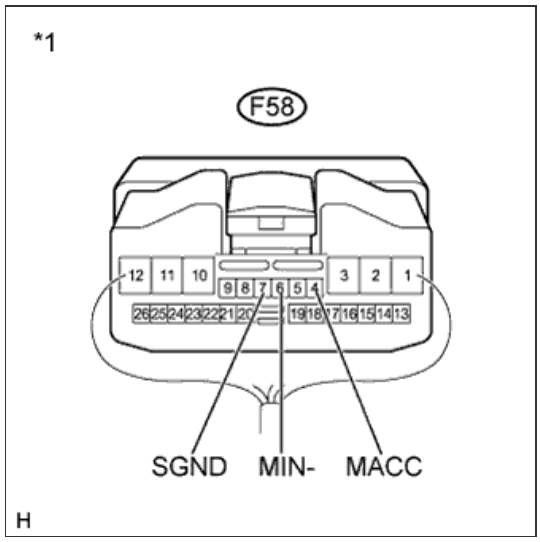
## 2.INSPECT DISPLAY AND NAVIGATION MODULE DISPLAY

a. Reconnect the F58 display and navigation module display connector.

b. Measure the voltage according to the value(s) in the table below.



**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-4 (MACC) - Body ground | Engine switch on (ACC) | 4 to 6 V |

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-7 (SGND) - Body ground | Always | Below 1 Ω |
| F58-6 (MIN-) - Body ground | Always | Below 1 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component with harness connected (Display and Navigation Module Display) |

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

## 3.INSPECT MAP LIGHT ASSEMBLY

a. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| R7-31 (SNS2) - R7-20 (MIC-) | Always | Below 1 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Map Light Assembly) |

NG → Go to step 5

OK

## 4.INSPECT MAP LIGHT ASSEMBLY

a. Reconnect the R7 map light assembly connector.

b. Turn the engine switch on (ACC).

c. Connect an oscilloscope to terminals 21 (MI1+) and 20 (MIC-) of the R7 telephone microphone assembly connector.

d. Check the waveform of the telephone microphone assembly using the oscilloscope.

**Result**

| Result | Proceed to |
|---|---|
| Waveform synchronized with the voice input to the map light assembly is output | A |
| Waveform synchronized with the voice input to the map light assembly is not output | B |

B → Go to step 5

A → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

## 5.REPLACE TELEPHONE MICROPHONE ASSEMBLY

a. Replace the telephone microphone assembly ( Click here).

b. Check if the same malfunction recurs.

**Result**

| Result | Proceed to |
|---|---|
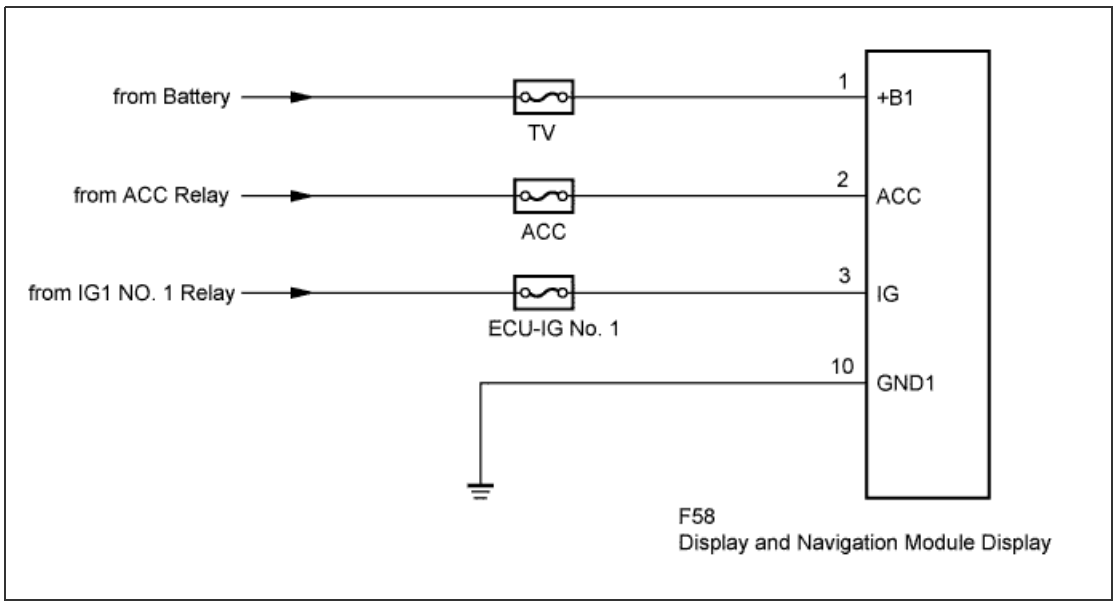
| Malfunction does not recur (returns to normal) | A |
| Malfunction recurs | B |

B → REPLACE MAP LIGHT ASSEMBLY (Click here)



A → END

**for Preparation** Click here

## DESCRIPTION

This is the power source circuit to operate the display and navigation module display.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

### 1.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY POWER SOURCE)

a. Disconnect the F58 display and navigation module display connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-10 (GND1) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-1 (+B1) - F58-10 (GND1) | Always | 11 to 14 V |
| F58-2 (ACC) - F58-10 (GND1) | Engine switch on (ACC) | 11 to 14 V |
| F58-3 (IG) - F58-10 (GND1) | Engine switch on (IG) | 11 to 14 V |

**Text in Illustration**

## 1.PRECAUTION FOR DISCONNECTING CABLE FROM NEGATIVE BATTERY TERMINAL

**NOTICE:**

After the engine switch is turned off, the display and navigation module display (HDD navigation system) records various types of memory and settings. As a result, after turning the engine switch off, make sure to wait for the time specified in the following table before disconnecting the cable from the negative (-) battery terminal.

**Waiting Time before Disconnecting Cable from Negative (-) Battery Terminal**

| Specification | Waiting Time |
|---|---|
| w/o Telematics transceiver | 60 sec. |
| w/ Telematics transceiver | 120 sec. |

## 2.PRECAUTION FOR DISPLAY AND NAVIGATION MODULE DISPLAY

a. An HDD is built into the display and navigation module display to store map data etc. which will be used for the navigation system. Therefore, care must be taken for the following points when handling:

i. When it is necessary to replace the display and navigation module display, be sure to replace it with a new one.

**NOTICE:**

If a used display and navigation module display is installed as a replacement part, the customer's HDD will not be recognized.

ii. Do not apply any vibration or shock to the display and navigation module display.

**NOTICE:**

- **Do not drop or subject the display and navigation module display to severe impacts.**
- **Do not use the display and navigation module display if it has been dropped or subjected to a severe impact.**
- **Do not store the display and navigation module display without the HDD installed. (Only remove the HDD from the display and navigation module display when the replacement display and navigation module display or HDD is ready.)**

iii. Do not remove the display and navigation module display if there is a risk that condensation may occur.

**NOTICE:**

If the temperature of the display and navigation module display changes rapidly, condensation may occur inside the unit. This may cause a malfunction of the HDD.

Therefore, when the display and navigation module display is removed from the instrument panel, it needs to be kept inside the vehicle or in an environment with an equivalent temperature and humidity.

iv. Take measures to prevent static electricity.

**NOTICE:**

Touching the terminals of a connector can cause static electricity to be transmitted to the internal circuits. This may cause a malfunction of the HDD.

v. Keep the display and navigation module display away from magnets or magnetized items.

**NOTICE:**

Keep the display and navigation module display away from speakers, motors, magnetized tools and other magnetic items.

vi. The display and navigation module display functions as the G-BOOK device, it also holds the G-BOOK ID.

**NOTICE:**

When replacing the display and navigation module display, perform vehicle contract setting ( Click here).

## 3.PRECAUTIONS FOR HARD DISK DRIVE (HDD)

a. The map data for the navigation system is stored on the Hard Disk Drive (HDD). Make sure to follow the following instructions when replacing the HDD:

**NOTICE:**

Data recorded by the customer may be stored on the HDD (w/ Sound Library Function). This data will be lost when the HDD is replaced. Make sure to warn the customer that their data will be lost obtain their consent prior to replacing the HDD.

i. The HDD must only be replaced with a new one. Do not attempt to install a used HDD from another vehicle.

**NOTICE:**

The display and navigation module display can recognize only a new HDD.

ii. Do not touch the HDD cover.

**NOTICE:**

When removing or installing the HDD, only hold it by the areas shown in the illustration.

iii. Do not apply any vibration or shock to the HDD.

**NOTICE:**

- **Do not drop or allow anything to strike the HDD.**
- **Never use an HDD that has been dropped or struck.**
- **Do not store a HDD by itself if it has been removed from the display and navigation module display. (Only remove the HDD from the display and navigation module display when the replacement display and navigation module display or HDD is ready.)**

iv. Do not remove the HDD if there is a risk that condensation may occur.

**NOTICE:**

If the temperature of the HDD changes rapidly, condensation may occur inside the unit. This may cause a malfunction of the HDD. Therefore, when the display and navigation module display is removed from the instrument panel, it needs to be kept inside the vehicle or in an environment with an equivalent temperature and humidity.

v. Take measures to prevent static electricity.

**NOTICE:**

Touching the terminals of a connector can cause static electricity to be transmitted to the internal circuits. This may cause a malfunction of the HDD.

vi. Keep the HDD away from magnets or magnetized items.

**NOTICE:**

Keep the HDD away from speakers, motors, magnetized tools and other magnetic items.

vii. Inspection after HDD replacement.

**NOTICE:**

Make sure to perform Check Hard Disk Drive in Operation Check to confirm that there are no HDD abnormalities after removal or installation (Click here).

**for Preparation** Click here

## 1.PRECAUTION FOR DISCONNECTING CABLE FROM NEGATIVE BATTERY TERMINAL

**NOTICE:**

After the engine switch is turned off, the display and navigation module display (HDD navigation system) records various types of memory and settings. As a result, after turning the engine switch off, make sure to wait for the time specified in the following table before disconnecting the cable from the negative (-) battery terminal.

**Waiting Time before Disconnecting Cable from Negative (-) Battery Terminal**

| Specification | Waiting Time |
|---|---|
| w/o Telematics transceiver | 60 sec. |
| w/ Telematics transceiver | 120 sec. |

## 2.PRECAUTION FOR DISPLAY AND NAVIGATION MODULE DISPLAY

a. An HDD is built into the display and navigation module display to store map data etc. which will be used for the navigation system. Therefore, care must be taken for the following points when handling:

i. When it is necessary to replace the display and navigation module display, be sure to replace it with a new one.

**NOTICE:**

If a used display and navigation module display is installed as a replacement part, the customer's HDD will not be recognized.

ii. Do not apply any vibration or shock to the display and navigation module display.

**NOTICE:**

- **Do not drop or subject the display and navigation module display to severe impacts.**
- **Do not use the display and navigation module display if it has been dropped or subjected to a severe impact.**
- **Do not store the display and navigation module display without the HDD installed. (Only remove the HDD from the display and navigation module display when the replacement display and navigation module display or HDD is ready.)**

iii. Do not remove the display and navigation module display if there is a risk that condensation may occur.

**NOTICE:**

If the temperature of the display and navigation module display changes rapidly, condensation may occur inside the unit. This may cause a malfunction of the HDD.

Therefore, when the display and navigation module display is removed from the instrument panel, it needs to be kept inside the vehicle or in an environment with an equivalent temperature and humidity.

iv. Take measures to prevent static electricity.

**NOTICE:**

Touching the terminals of a connector can cause static electricity to be transmitted to the internal circuits. This may cause a malfunction of the HDD.

v. Keep the display and navigation module display away from magnets or magnetized items.

**NOTICE:**

Keep the display and navigation module display away from speakers, motors, magnetized tools and other magnetic items.

vi. The display and navigation module display functions as the G-BOOK device, it also holds the G-BOOK ID.

**NOTICE:**

When replacing the display and navigation module display, perform vehicle contract setting ( Click here).

## 3.PRECAUTIONS FOR HARD DISK DRIVE (HDD)

a. The map data for the navigation system is stored on the Hard Disk Drive (HDD). Make sure to follow the following instructions when replacing the HDD:

**NOTICE:**

Data recorded by the customer may be stored on the HDD (w/ Sound Library Function). This data will be lost when the HDD is replaced. Make sure to warn the customer that their data will be lost obtain their consent prior to replacing the HDD.

i. The HDD must only be replaced with a new one. Do not attempt to install a used HDD from another vehicle.

**NOTICE:**

The display and navigation module display can recognize only a new HDD.

ii. Do not touch the HDD cover.

**NOTICE:**

When removing or installing the HDD, only hold it by the areas shown in the illustration.

iii. Do not apply any vibration or shock to the HDD.

**NOTICE:**

- **Do not drop or allow anything to strike the HDD.**
- **Never use an HDD that has been dropped or struck.**
- **Do not store a HDD by itself if it has been removed from the display and navigation module display. (Only remove the HDD from the display and navigation module display when the replacement display and navigation module display or HDD is ready.)**

iv. Do not remove the HDD if there is a risk that condensation may occur.

**NOTICE:**

If the temperature of the HDD changes rapidly, condensation may occur inside the unit. This may cause a malfunction of the HDD. Therefore, when the display and navigation module display is removed from the instrument panel, it needs to be kept inside the vehicle or in an environment with an equivalent temperature and humidity.

v. Take measures to prevent static electricity.

**NOTICE:**

Touching the terminals of a connector can cause static electricity to be transmitted to the internal circuits. This may cause a malfunction of the HDD.

vi. Keep the HDD away from magnets or magnetized items.

**NOTICE:**

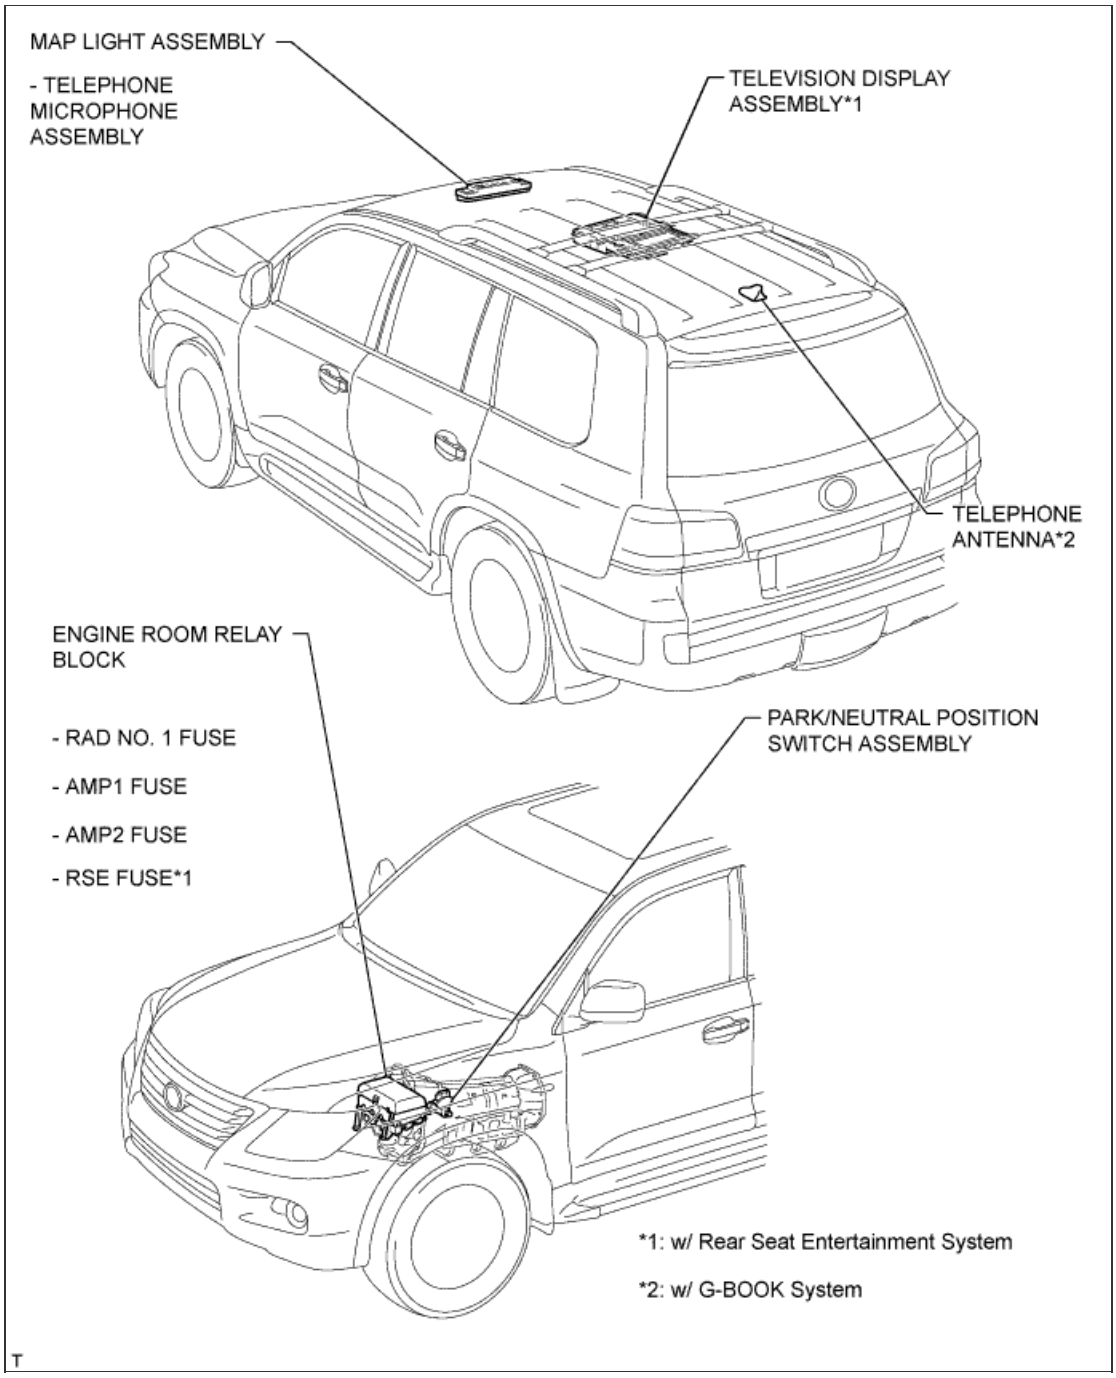
Keep the HDD away from speakers, motors, magnetized tools and other magnetic items.



vii. Inspection after HDD replacement.

**NOTICE:**

Make sure to perform Check Hard Disk Drive in Operation Check to confirm that there are no HDD abnormalities after removal or installation (Click here).

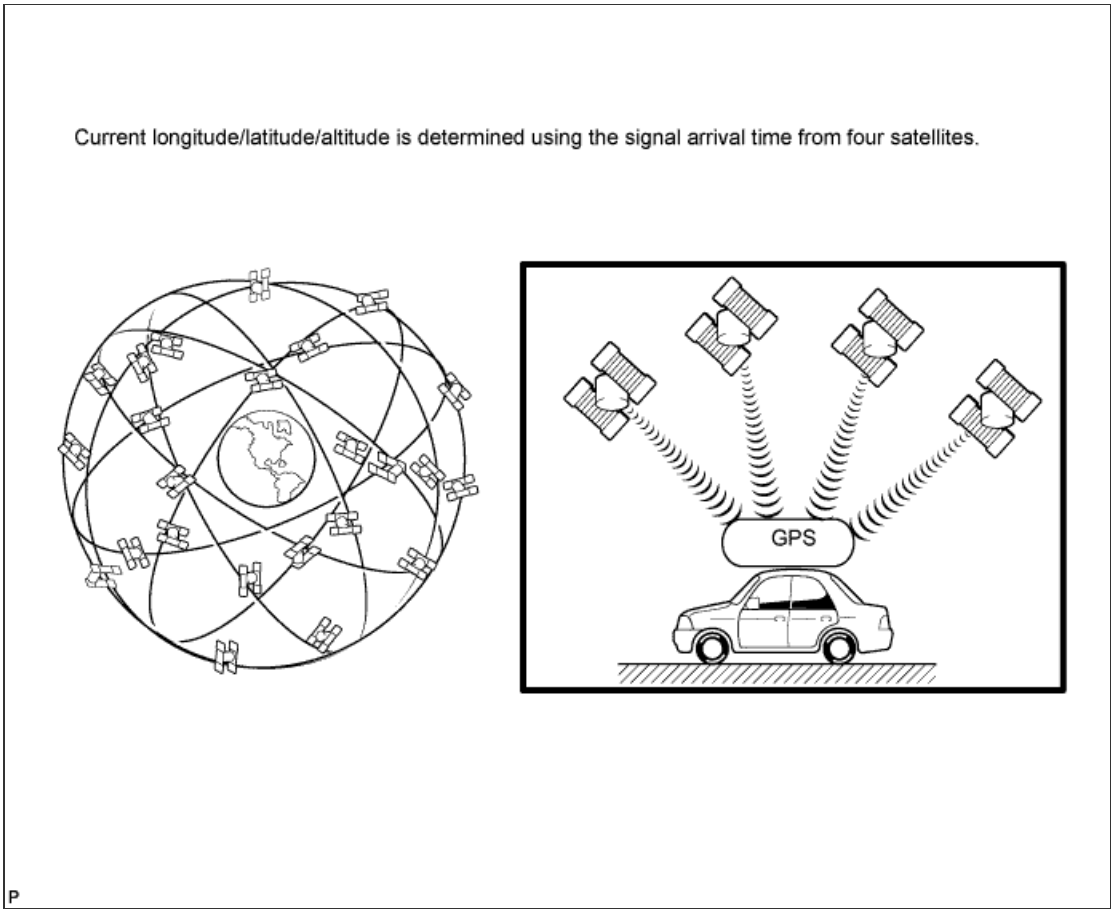
## NAVIGATION SYSTEM OUTLINE

a. Vehicle position tracking methods
It is essential that the navigation system correctly tracks the current vehicle position and displays it on the map. There are 2 methods to track the current vehicle position: autonomous (dead reckoning) and GPS* (satellite) navigation. Both navigation methods are used in conjunction with each other.
*GPS (Global Positioning System)

| Operation | Description |
|---|---|
| Vehicle Position Calculation | The display and navigation module display calculates the current vehicle position (direction and current position) using the direction deviation signal from the gyro sensor and running distance signal from the vehicle speed sensor and creates the driving route. |
| Map Display Processing | The display and navigation module display processes the vehicle position data, vehicle running track and map data from the hard disk drive. |
| Map Matching | The map data from the hard disk drive is compared to the vehicle position and running track data. Then, the vehicle position is matched with the nearest road. |
| GPS Correction | The vehicle position is matched to the position measured by the GPS. Then, the GPS measurement position data is compared with the vehicle position and running track data. If the position is very different, the GPS measurement position is used. |
| Distance Correction | The running distance signal from the vehicle speed sensor includes error caused by tire wear and slippage between the tires and road surface. Distance correction is performed to account for this. The display and navigation module display automatically offsets the running distance signal to make up for the difference between the distance signal and distance data of the map. The offset is automatically updated. |

**HINT:**

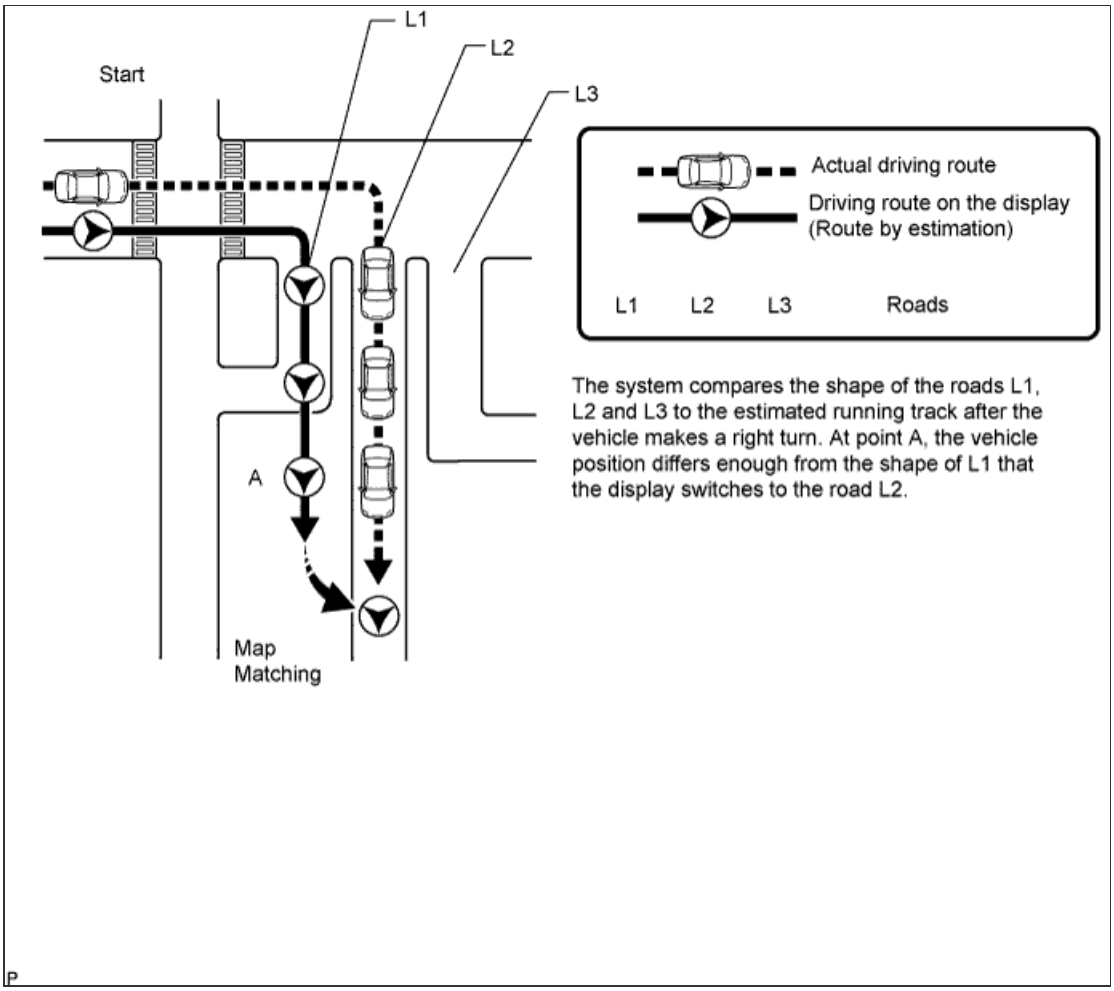
The combination of autonomous and GPS navigation makes it possible to display the vehicle position even when the vehicle is in places where the GPS cannot receive a signal. When only autonomous navigation is used, however, the mapping accuracy may slightly decrease.



b. Autonomous navigation
This method determines the relative vehicle position based on the running track determined by the gyro located in the display and navigation module display and the vehicle speed sensor signal.

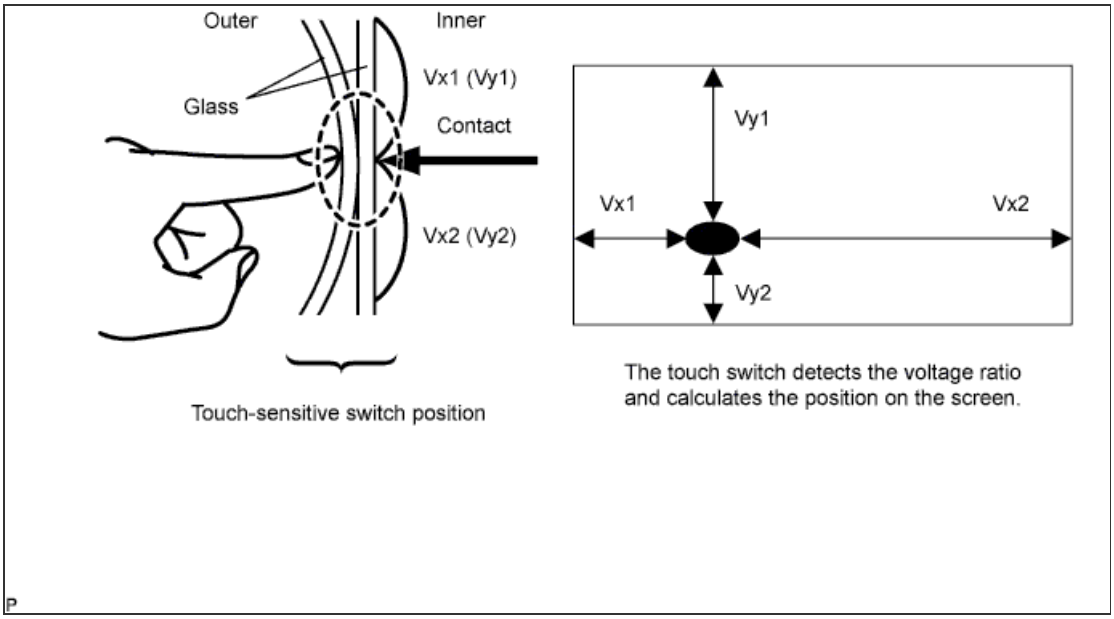
i. Gyro sensor
Used to calculate the direction by detecting angular velocity. It is located in the display and navigation module display.

ii. Vehicle speed sensor signal



Used to calculate the vehicle running distance.

c. GPS* navigation (Satellite navigation)
This method detects the absolute vehicle position using radio waves from GPS satellites.
*GPS satellites were launched by the U.S. Department of Defense for military purposes.



| Number of Satellites | Measurement | Description |
|---|---|---|
| 2 or less | Measurement is impossible | Vehicle position cannot be obtained because the number of satellites is not enough. |
| 3 | 2-dimensional measurement is possible | Vehicle position is obtained based on the current longitude and latitude. (This is less precise than 3-dimensional measurement.) |
| 4 | 3-dimensional measurement is possible | Vehicle position is obtained based on the current longitude, latitude and altitude. |

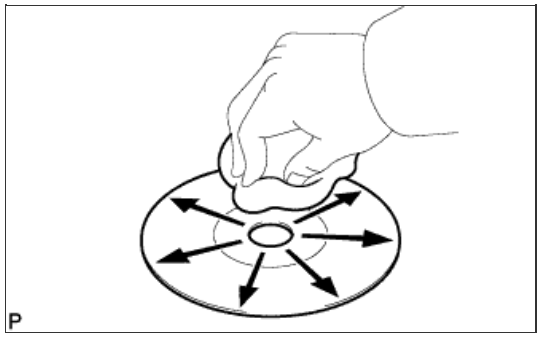
d. Map matching
The current driving route is calculated by autonomous navigation (according to the gyro sensor and vehicle speed sensor) and GPS navigation. This information is then compared with possible road shapes from the map data in the hard disk drive and the vehicle position is set onto the most appropriate road.

e. Touch switch
Touch switches are touch-sensitive (interactive) switches operated by touching the screen. When a switch is pressed, the outer glass bends in to contact the inner glass at the pressed position. By doing this, the voltage ratio is measured and the pressed position is detected.

## DVD (DIGITAL VERSATILE DISC) PLAYER OUTLINE

a. The DVD player can only play DVD videos, DVD audio and video CDs that have any of the following marks:

i. Precaution for use of discs



**NOTICE:**

- **SECAM color television standard discs cannot be played (PAL and NTSC discs can be played).**
- **Keep the discs away from dirt. Be careful not to damage the discs or leave fingerprints on them.**
- **Hold discs by the outer edge and center hole with the label side up.**
- **Leaving the disc exposed halfway out of the slot for a long time after pressing the disc eject button may cause deformation of the disc, making the disc unusable.**
- **Do not use odd-shaped CDs because these may cause player malfunctions.**
- **Do not use discs whose recording portion is transparent or translucent because they may not be inserted, ejected or played normally.**
- **DualDiscs that combine DVD recorded material on one side with CD digital audio material on the other cannot be played.**

b. Cleaning

**NOTICE:**

Do not use a lens cleaner because it may cause a malfunction in the pickup portion of the player.

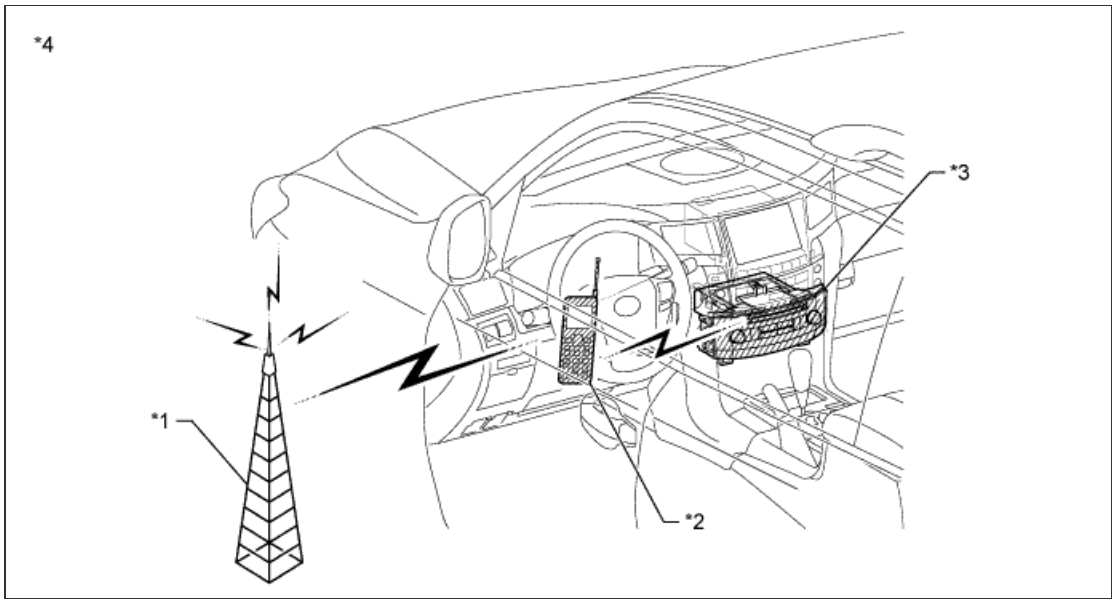
i. If dirt is on the disc surface, wipe it clean with a soft dry cloth such as an eyeglass cleaner for plastic lenses from the inside to the outside in a radial direction.

**NOTICE:**

- **Pressing on the disc by hand or rubbing the disc with a hard cloth may scratch the disc surface.**
- **Use of solvent such as a record spray, antistatic agent, alcohol, benzine and thinner or a chemical cloth may cause damage to the disc, making the disc unusable.**

## "Bluetooth" OUTLINE

a. "Bluetooth" is a trademark owned by Bluetooth SIG. Inc.



b. "Bluetooth" is a new wireless connection technology that uses the 2.4 GHz frequency band.

**HINT:**

The communication performance of "Bluetooth" may vary depending on obstructions or radio wave conditions between communication devices, electromagnetic radiation, communication device sensitivity or antenna capacity.

c. Hands-free function

i. The "Bluetooth" built-in radio receiver assembly and a "Bluetooth" compatible cellular phone*1 can be connected using a "Bluetooth" wireless connection. This enables use of the hands-free function on the cellular phone even the phone may be in a pocket or bag. For this reason, it is not necessary to use a connector or cable to connect the cellular phone.
*1: Some versions of "Bluetooth" compatible cellular phones may not function.

**Text in Illustration**

| | | | |

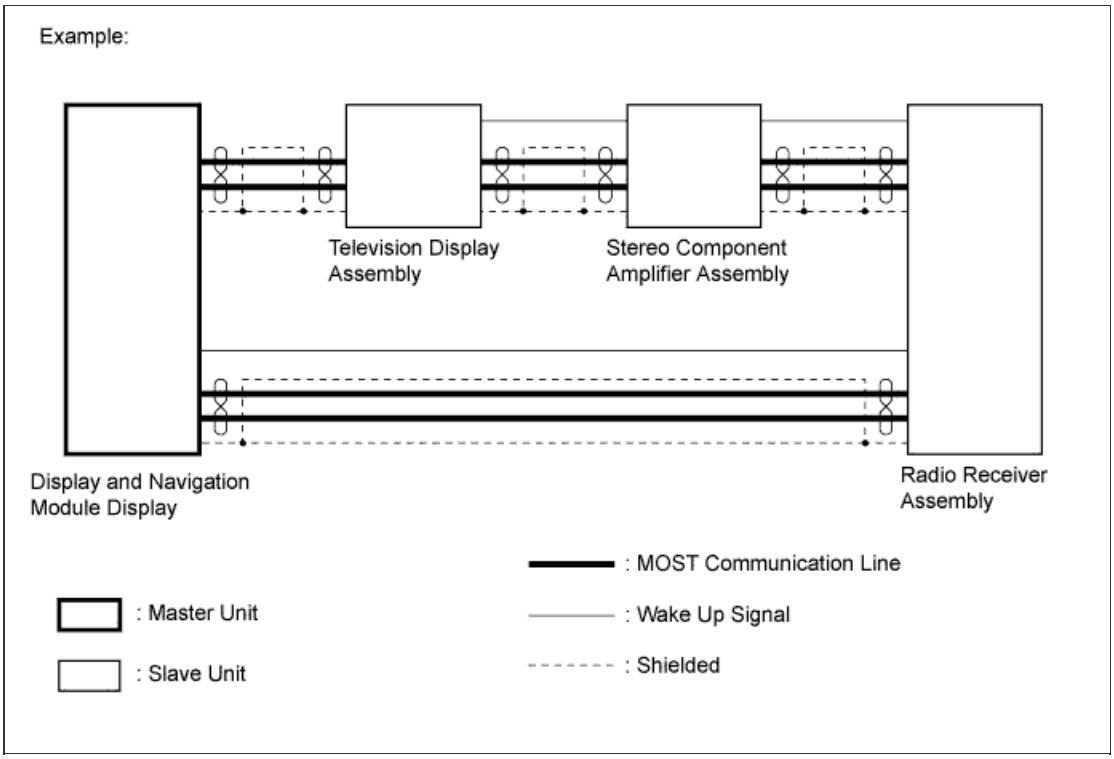
| *3 | Radio Receiver Assembly (Built-in "Bluetooth" receiver antenna) | *4 | Example: |

## RDS-TMC function outline (for Europe)

a. This system has a function which allows the reception of traffic information from RDS-TMC (Radio Data System Traffic Message Channel) stations based on FM-multiple broadcasting. It assists the driver to avoid areas with traffic congestion. It also helps to improve traffic flow and road safety.

b. The radio receiver receives RDS-TMC signals and then transmits these signals to the display and navigation module display.



## RTIC FUNCTION OUTLINE (BROADCAST IN CHINA ONLY)

a. This system has a function which allows the reception of traffic information from Radio Data System Traffic Message Channel Real-time Traffic Information of China (RTIC) stations based on FM-multiple broadcasting. It assists the driver to avoid areas with traffic congestion. It also helps to improve traffic flow and road safety.

b. The radio receiver receives RTIC signals and then transmits these signals to the display and navigation module display.

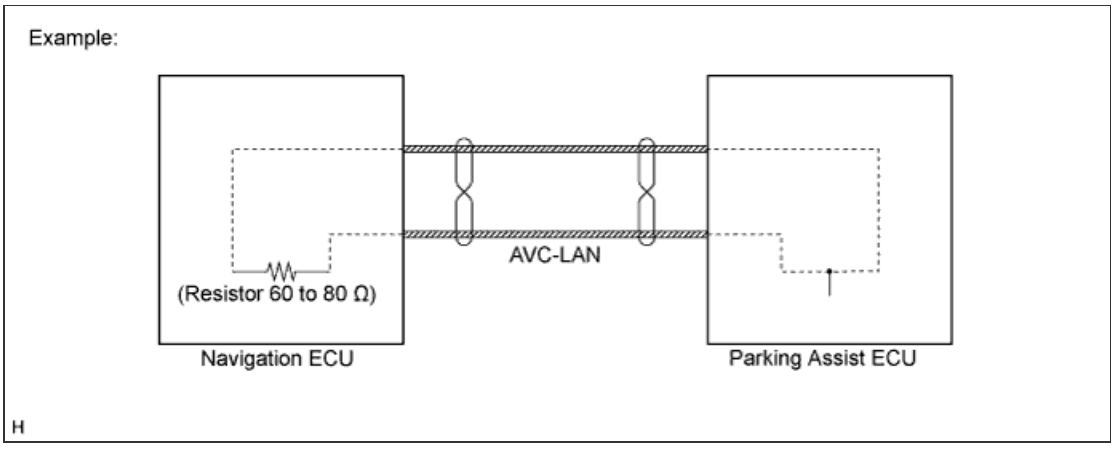
## COMMUNICATION SYSTEM

a. MOST Network Outline

i. Navigation system components communicate with each other via the MOST.

ii. The MOST network uses a shielded twisted pair of wires for its communication lines.

iii. The master unit of the MOST is the navigation ECU (display and navigation module display).



iv. MOST communication lines connect each slave unit centering around the master unit to form a MOST network ring.

v. The master unit sends a wake-up signal to activate each slave unit connected to the MOST network.

**HINT:**

If a short or open circuit occurs in the MOST circuit, communication will be interrupted and the system will not operate normally.

b. AVC-LAN Outline

i. Components of the navigation system communicate with each other via the AVC-LAN.

ii. The AVC-LAN uses a twisted pair of wires for its communication lines.

iii. The master unit of the AVC-LAN is the navigation ECU (display and navigation module display).

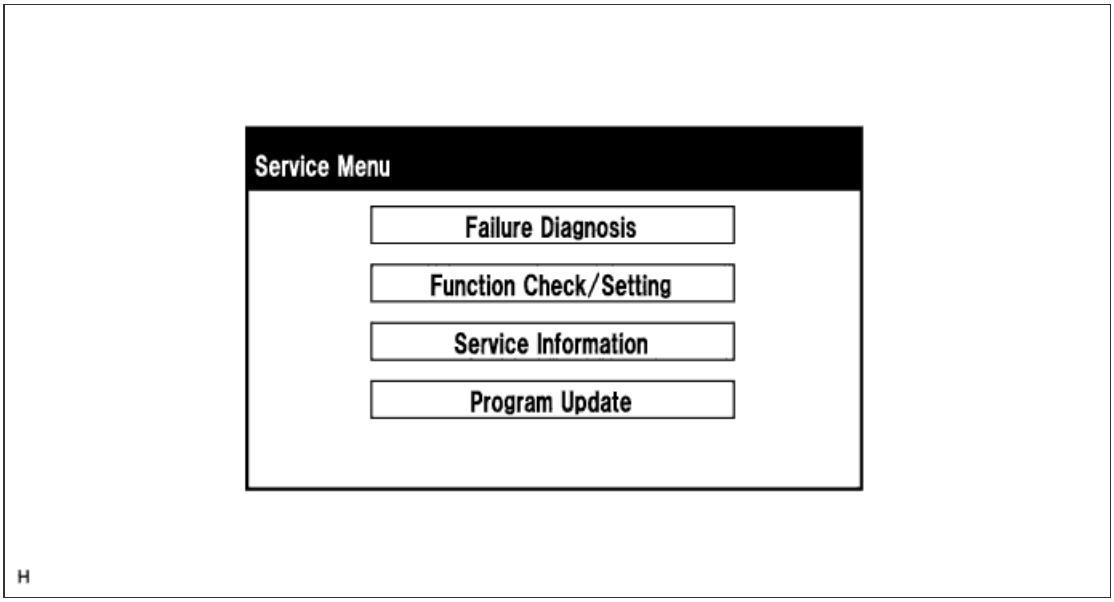
**HINT:**

- **The display and navigation module display has enough resistance (60 to 80 Ω) necessary for communication.**
- **If a short or open circuit occurs in the AVC-LAN circuit, communication is interrupted and the system will not operate normally.**

## DIAGNOSTIC FUNCTION OUTLINE

a. The navigation system has a diagnostic function (the result will be displayed on the master unit or the intelligent tester).

## DIAGNOSIS DISPLAY DETAILED DESCRIPTION

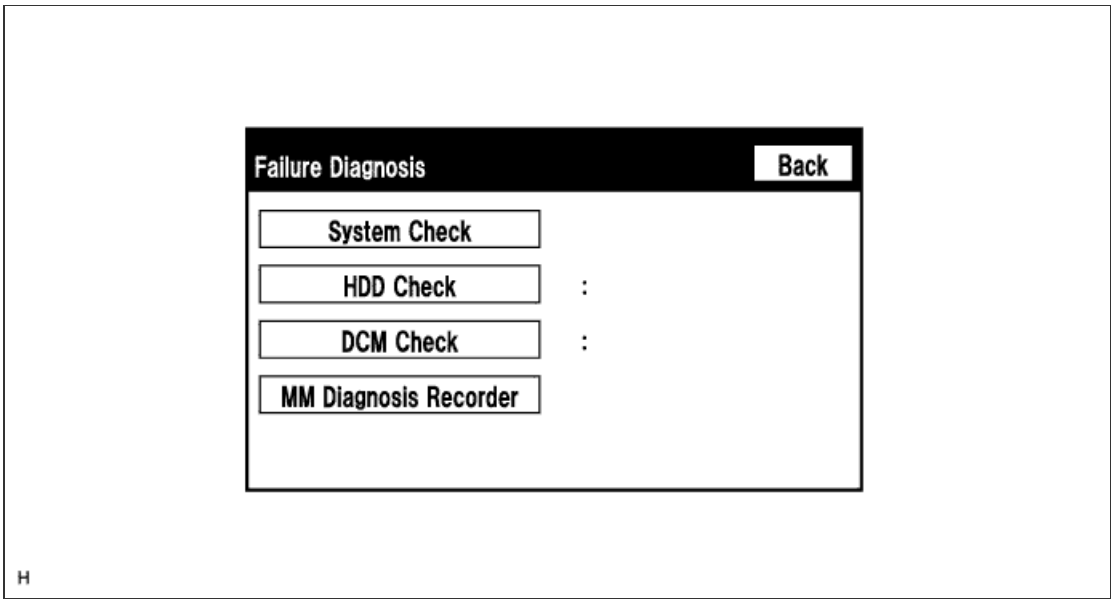


**HINT:**

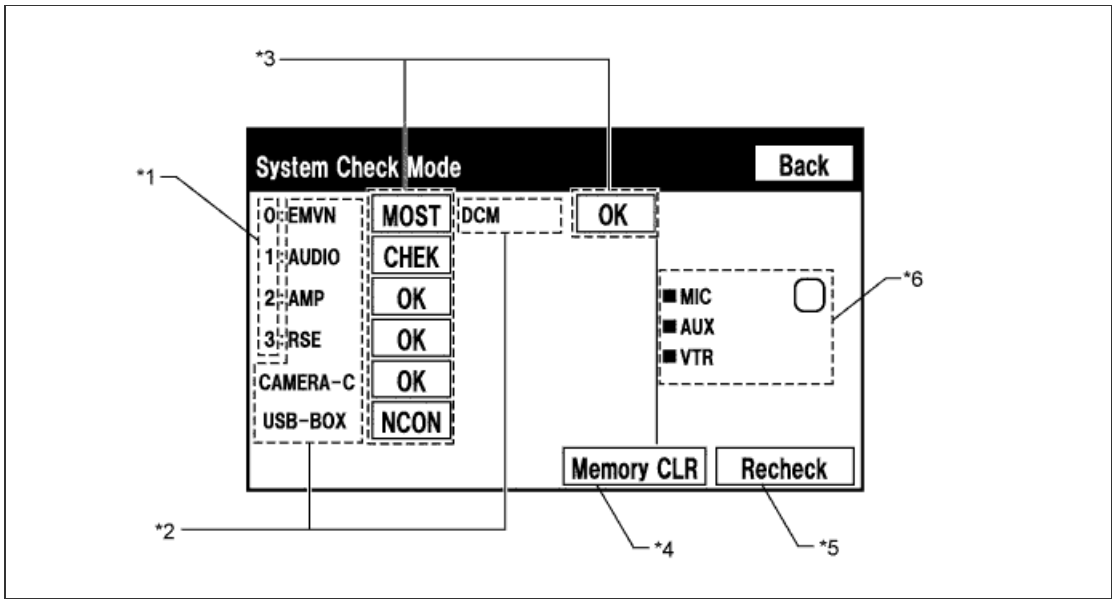
- **This section contains a detailed description of displays in diagnostic mode.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Service Menu Screen

**HINT:**



Each item is grayed out or not displayed based on the device settings.



b. Failure Diagnosis Screen

**HINT:**

Each item is grayed out or not displayed based on the device settings.

i. System Check Mode Screen

*1: Node position number for devices connected to the MOST network.

**HINT:**

MOST node position numbers are provided for devices connected to the MOST network.

*2: Device Name List No. 1

**HINT:**

- **Device Name List No. 1 displays some of the devices that make up the navigation system.**
- **The names of the components from Device Name List No. 1 are shown in the following table.**

| Name | Component | Connection Method |
|---|---|---|
| EMVN | Display and navigation module display | - |
| AUDIO | Radio receiver assembly | Communication line for MOST network |
| AMP | Stereo component amplifier assembly | Communication line for MOST network |
| RSE | Television display assembly | Communication line for MOST network |
| CAMERA-C | Parking assist ECU | Communication line for AVC-LAN |

| | | |
|---|---|---|
| USB-BOX | Multi-media interface ECU | Communication line for AVC-LAN |
| DCM | Telematics transceiver | USB communication line |

*3: Check Result

**HINT:**

- **Result codes for all devices are displayed.**
- **When "MOST" is displayed for the result, press "MODE" on the steering pad switch assembly to display the "MOST Line Check" screen.**
- **Changing to the "MOST Line Check" screen is possible only when "MOST" is displayed for the result.**

| Result | Meaning | Action |
|---|---|---|
| OK | The device does not respond with a DTC. | - |
| MOST | MOST communication error | Perform "MOST Line Check" to check the connection of each device on the MOST network. |
| EXCH | The device responds with a "replace"-type DTC. | Look up the DTC in "Unit Check Mode" and replace the device. |
| CHEK | The device responds with a "check"-type DTC. | Look up the DTC in "Unit Check Mode". |
| NCON | The device was previously present, but does not respond in diagnostic mode. | - Check power supply wire harness of the device.<br>- Check the AVC-LAN, MOST network or USB communication line for the device. |
| NRES | The device responds in diagnostic mode, but gives no DTC information. | - Check power supply wire harness of the device.<br>- Check the AVC-LAN, MOST network or USB communication line for the device. |

*4: Memory Clear

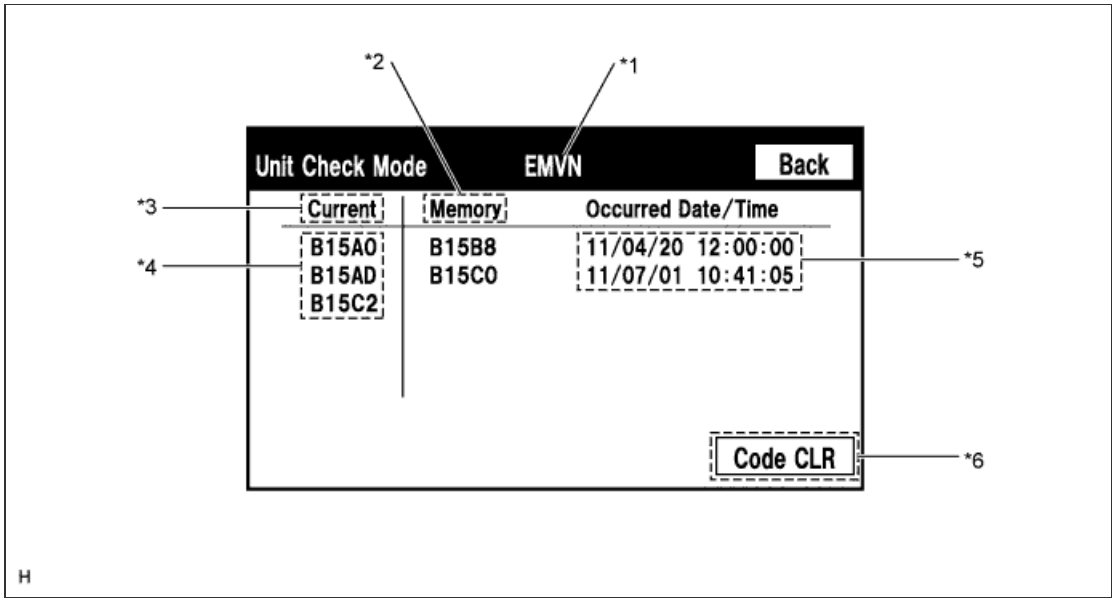
**HINT:**

- **Present and history DTCs and registered connected device names are cleared.**
- **Press the "Memory CLR" switch for 3 seconds.**

*5: Recheck

**HINT:**

- **A system check will be performed again after the memory is cleared.**
- **The "Recheck" switch will dim during a system check.**



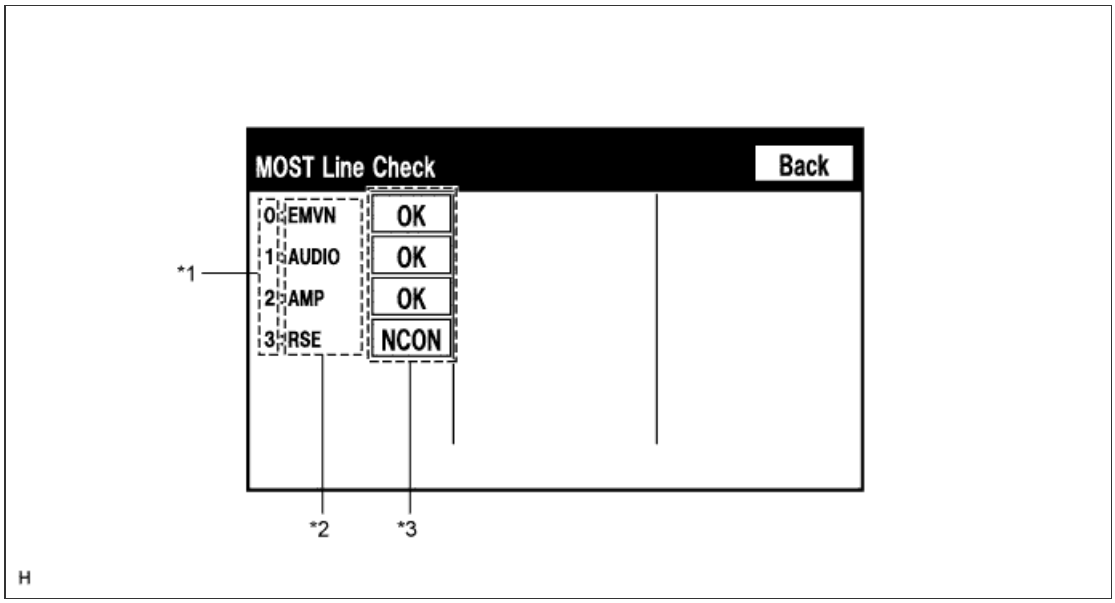
*6: Device Name List No. 2

**HINT:**

- **Device Name List No. 2 displays some of the devices that make up the navigation system.**
- **The names of the components from Device Name List No. 2 are shown in the following table.**

| Name | Component | Connection Method |
|---|---|---|
| MIC | Telephone microphone assembly | Vehicle wire harness |
| AUX | No. 1 stereo jack adapter | Vehicle wire harness |
| VTR | Video (video adapter) terminal | Vehicle wire harness |

ii. Unit Check Mode Screen



**Screen Description**

| Display | Content |
|---|---|
| *1: Device name | Target device |
| *2: History DTC | Diagnostic memory results and stored DTCs are displayed. |
| *3: Present DTC | DTCs output in the service check are displayed. |
| *4: DTC | DTC (Diagnostic Trouble Code) |
| *5: Timestamp | The time and date of history DTCs are displayed. (The year is displayed in 2-digit format.) |
| *6: Diagnosis clear switch | Selecting this switch for 3 seconds clears the diagnostic memory data of the target device. (Both response to diagnostic system check result and the displayed data are cleared.) |

iii. MOST Line Check Screen

**HINT:**

- **The inspection will be performed at the time the screen changes from "System Check Mode" to "MOST Line Check".**
- **The master unit checks the connection of each device on the MOST network.**

*1: Node position number for devices connected to the MOST network.

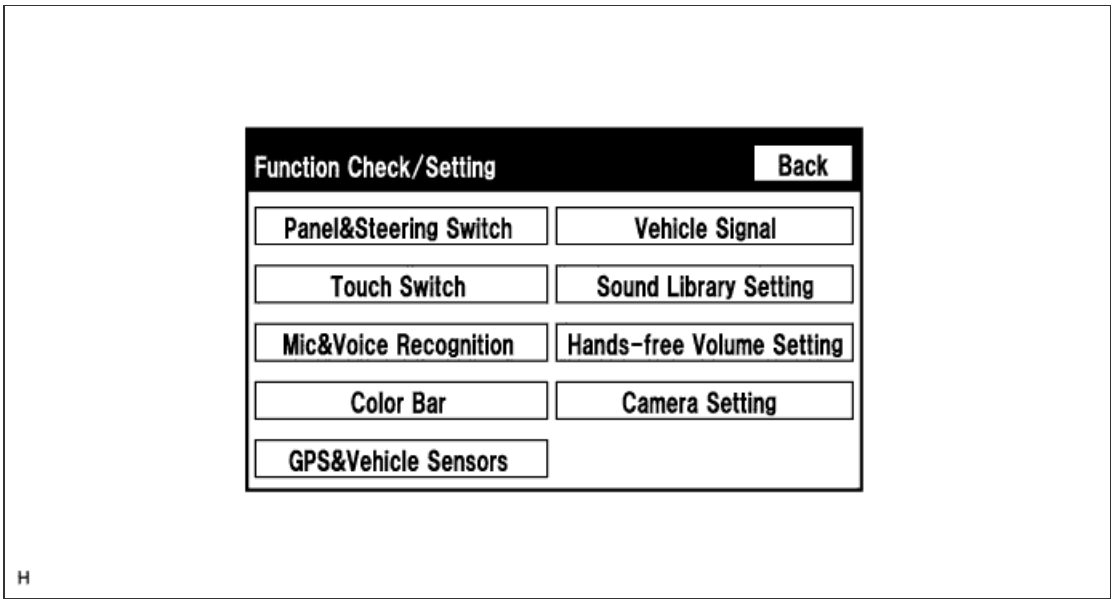
*2: Device Name List

**HINT:**

- **Device Name List displays some of the devices that make up the navigation system.**
- **The names of the components from Device Name List are shown in the following table.**

| Name | Component |
|---|---|
| EMVN | Display and navigation module display |
| AUDIO | Radio receiver assembly |
| AMP | Stereo component amplifier assembly |
| RSE | Television display assembly |

*3: Check Result

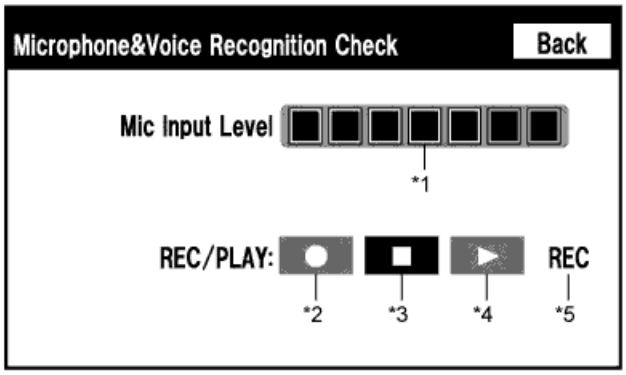


**HINT:**

- **The master unit displays the check result on the screen based on the response information from each slave unit.**
- **Result codes for all devices are displayed.**

| Result | Meaning |
|---|---|
| OK | There was a response for the connection check during the MOST line check. |
| NCON | There was no response for the connection check during the MOST line check. |

- **The device name and result will not be displayed if there is no system registration record and no response for the connection check during the MOST line check even if the device is connected to the MOST network.**



c. Function Check/Setting Screen

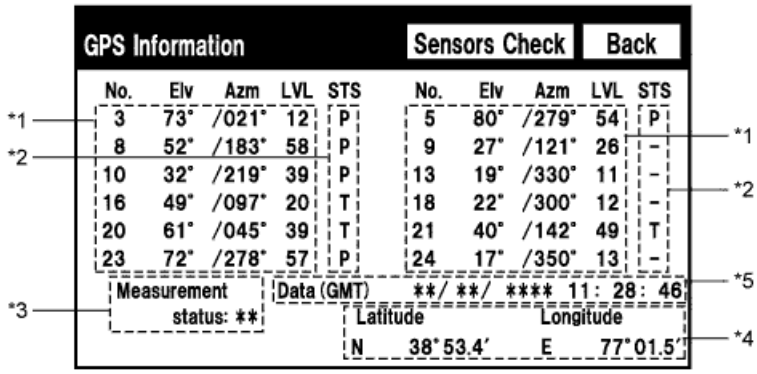
**HINT:**

Each item is grayed out or not displayed based on the device settings.

i. Microphone & Voice Recognition Check Screen

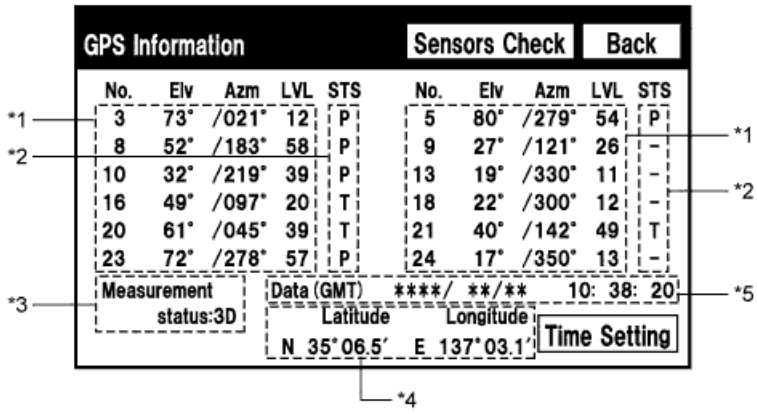
H

**Screen Description**



| Display | Content |
|---|---|
| *1: Microphone input level meter | Monitors the microphone input level every 0.1 sec. and displays the results in 8 different levels. |
| *2: Recording switch | Starts recording. |
| *3: Stop switch | Stops recording and playing. |
| *4: Play switch | Plays the recorded voice. |
| *5: Recording indicator | Comes on while recording. |

**HINT:**



- **The microphone is active at all times when this screen is displayed.**
- **While recording or playing, the switches other than the stop switch cannot be selected.**
- **When no recording is present, the play switch cannot be selected.**
- **Recording will stop after 5 seconds or when the stop switch is selected.**

ii. GPS Information Screen

w/o G-BOOK System:

w/ G-BOOK System:

H

*1: Satellite information
Information from a maximum of 12 satellites is displayed on the screen. This information includes the target GPS satellite number, elevation angle, direction and signal level.
*2: Receiving condition

| Display | Content |
|---|---|
| T | The system is receiving a GPS signal, but is not using it for location. |
| P | The system is using the GPS signal for location. |
| - | The system cannot receive a GPS signal. |

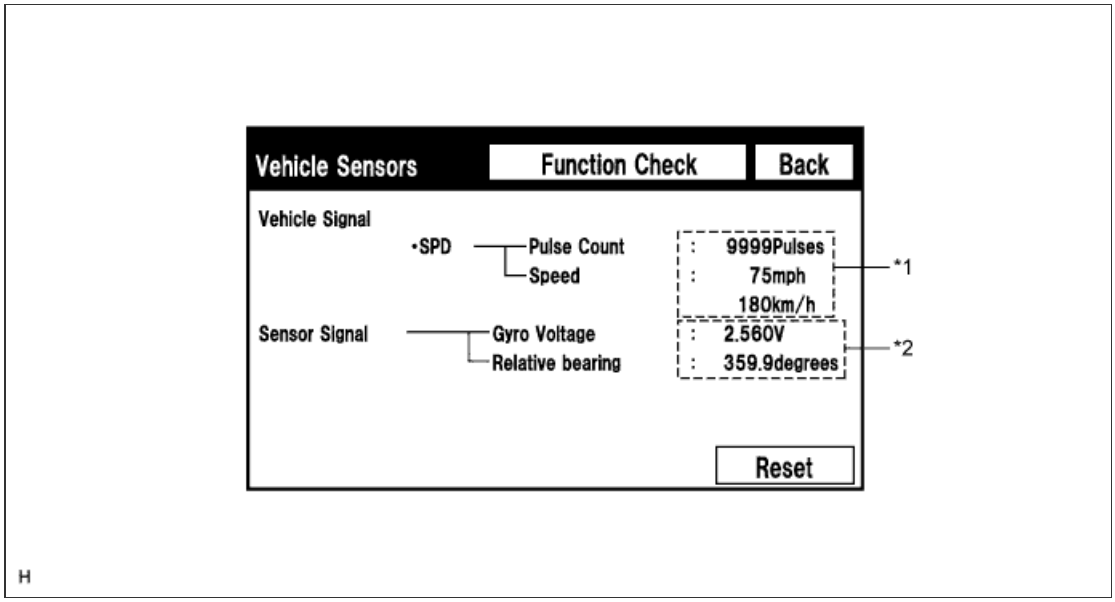
*3: Measurement information

### Screen Description

| Display | Content |
|---|---|
| 2D | 2-dimensional location method is being used. |
| 3D | 3-dimensional location method is being used. |
| NG | Location data cannot be used. |
| Error | Reception error has occurred. |
| - | Any other state. |

*4: Position information

### Screen Description



| Display | Content |
|---|---|
| Position | Latitude and longitude information on the current position is displayed. |

*5: Date information

**Screen Description**

| Display | Content |
|---|---|
| Date (w/o G-BOOK system) | The date/time information obtained from GPS signal is displayed in Greenwich Mean Time (GMT). |
| Date (w/ G-BOOK system) | The date/time information obtained from GPS signal is displayed in Chinese Standard Time (CST). |

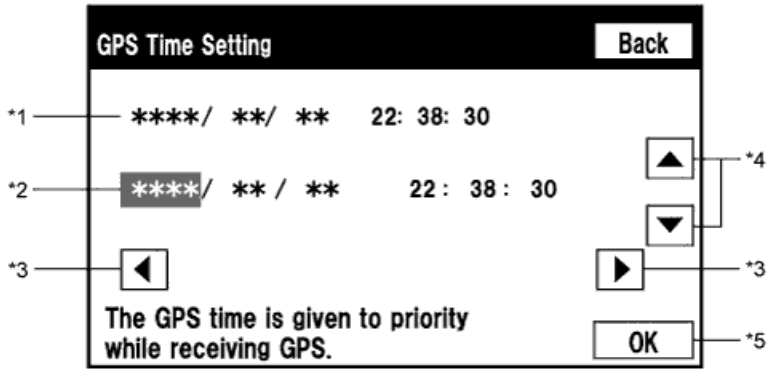
iii. Vehicle Sensors Screen

**Vehicle Signal**

| Display | Content |
|---|---|
| *1: SPD | SPD signal condition is displayed. |

**Sensor Signal**

| Display | Content |
|---|---|
| *2: Gyro sensor | Gyro sensor output condition is displayed. |



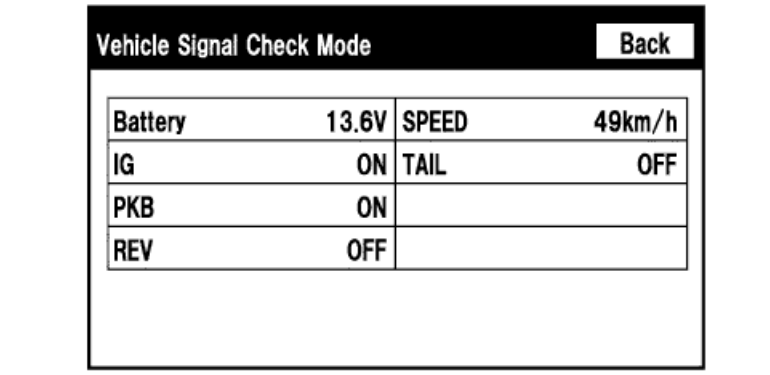
**HINT:**

Signals are updated once per second only when vehicle sensor signals are changed.

iv. GPS Time Setting Screen (w/ G-BOOK system)

**HINT:**

Time setting is possible only when GPS signals are not received. When the navigation system is receiving GPS signals, priority is given to displaying the time and date received via GPS.



H

**Screen Description**

| Display | Content |
|---|---|
| *1: Time display | Displays the time in the device. |
| *2: Time setting screen | Setting is possible only when GPS signals are not received. |
| *3: Cursor movement switch | Moves the cursor on the time setting screen to the right and left. |
| *4: Adjustment switch | Adjusts values of items selected by the cursor. |
| *5: OK switch | Selecting this switch after setting the time updates the time in the device (only when GPS signals are not received). |

v. Vehicle Signal Check Mode Screen

H

**Screen Description**

| Display | Content |
|---|---|
| Battery | Battery voltage is displayed. |
| IG | Engine switch ON/OFF state is displayed. |
| PKB | Parking brake ON/OFF state is displayed. |
| REV | Reverse signal ON/OFF state is displayed. |
| SPEED | Vehicle speed is displayed in km/h. |
| TAIL | TAIL signal (Light control switch) ON/OFF state is displayed. |

**HINT:**

- **Only items sending vehicle signals will be displayed.**
- **This screen is updated once per second when input signals to the vehicle are changed.**

**for Preparation** Click here

**HINT:**

- **Use the following procedure to troubleshoot the navigation system.**
- ***: Use the intelligent tester.**

## 1.VEHICLE BROUGHT TO WORKSHOP

NEXT

## 2.INSPECT BATTERY VOLTAGE

a. Measure the battery voltage with the engine switch off.

**Standard Voltage:**
**11 to 14 V**

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

## 3.DIAGNOSTIC QUESTIONING AND SYMPTOM CONFIRMATION

a. Ask the customer about symptoms and confirm malfunctions.

**Result**

| Result | Proceed to |
|---|---|
| Other symptoms. | A |
| The screen displays nothing. | B |

B. → Go to step 6

A

## 4.OPERATION CHECK

a. Refer to Check System Normal Condition ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| Symptom is not normal operation. | A |
| Symptom is normal operation. | B |

B. → SYMPTOM IS NORMAL OPERATION

A

## 5.CHECK CAN COMMUNICATION SYSTEM*

a. Check for DTC output (Click here).

**Result**

| Result | Proceed to |
|---|---|
| CAN DTC is not output. | A |

| | |
|---|---|
| CAN DTC is output. | B |

B. GO TO CAN COMMUNICATION SYSTEM (Click here)

A

## 6.CHECK FOR DTC*

a. Refer to DTC Check/Clear (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC is output. | A |
| DTC is not output. | B |

**HINT:**

If more information is needed, perform a check using the "System Check Mode" screen after checking for DTCs using the intelligent tester.

B. Go to step 10

A

## 7.DTC CLEAR*

a. Refer to DTC Check/Clear (Click here).

**HINT:**

The present DTCs may not indicate actual malfunctions depending on the vehicle operating conditions.

NEXT

## 8.RECHECK FOR DTC*

a. Refer to DTC Check/Clear (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC is output. | A |
| DTC is not output. | B |

**HINT:**

- **Even if the malfunction symptom is not confirmed, check for DTCs. This is because the system stores history DTCs.**
- **If more information is needed, perform a recheck using the "System Check Mode" screen after rechecking for DTCs using the intelligent tester.**
- **Check the DTCs and inspect the area that the code indicates.**

B. Go to step 10

A

## 9.DIAGNOSTIC TROUBLE CODE CHART

a. Find the output code in Diagnostic Trouble Code Chart ( Click here).

**NOTICE:**

- **The navigation system outputs DTCs for the following systems.**
- **When DTCs other than those in Diagnostic Trouble Code Chart for the navigation system are output, refer to Diagnostic Trouble Code Chart for the system.**
- **Audio and visual system (w/ navigation system) ( Click here)**

- Rear seat entertainment system (w/ rear seat entertainment system) ( Click here).
- G-BOOK system (w/ G-BOOK system) (Click here).

| F. | GO TO WIDE VIEW FRONT MONITOR SYSTEM (Click here) |
| G. | GO TO SIDE MONITOR SYSTEM (Click here) |

## 10.CHECK HARD DISK DRIVE

a. Enter the "Failure Diagnosis" screen. Refer to Check Hard Disk Drive in Operation Check ( Click here).

**OK:**
**"OK" is displayed.**

| | |
|---|---|
| NG. | REPLACE HARD DISK DRIVE (Click here) |

OK

## 11.PROBLEM SYMPTOMS TABLE

a. Refer to Problem Symptoms Table (Click here).

**Result**

| Result | Proceed to |
|---|---|
| Fault is not listed in Problem Symptoms Table. | A |
| Fault is listed in Problem Symptoms Table. | B |

**HINT:**

If the symptom does not recur and no DTC is output, perform the symptom reproduction method ( Click here).

| | |
|---|---|
| B. | Go to step 13 |

A

### 12.CHECK ECU TERMINAL ARRANGEMENT BASED ON MALFUNCTION SYMPTOM

a. Refer to Terminals of ECU (Click here).

NEXT

### 13.CHECK CIRCUIT

a. Adjust, repair or replace as necessary.

**NOTICE:**

When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) (Click here).

NEXT

### 14.RECHECK FOR DIAGNOSTIC TROUBLE CODE

**HINT:**

After clearing DTCs, recheck for DTCs.

NEXT

### 15.PERFORM CONFIRMATION TEST

NEXT

### END

**for Preparation** Click here

**HINT:**

- **Use the following procedure to troubleshoot the navigation system.**
- ***: Use the intelligent tester.**

## 1.VEHICLE BROUGHT TO WORKSHOP

NEXT

## 2.INSPECT BATTERY VOLTAGE

a. Measure the battery voltage with the engine switch off.

**Standard Voltage:**
**11 to 14 V**

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

## 3.DIAGNOSTIC QUESTIONING AND SYMPTOM CONFIRMATION

a. Ask the customer about symptoms and confirm malfunctions.

**Result**

| Result | Proceed to |
|---|---|
| Other symptoms. | A |
| The screen displays nothing. | B |

B. → Go to step 6

A

## 4.OPERATION CHECK

a. Refer to Check System Normal Condition ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| Symptom is not normal operation. | A |
| Symptom is normal operation. | B |

B. → SYMPTOM IS NORMAL OPERATION

A

## 5.CHECK CAN COMMUNICATION SYSTEM*

a. Check for DTC output (Click here).

**Result**

| Result | Proceed to |
|---|---|
| CAN DTC is not output. | A |

| | |
|---|---|
| CAN DTC is output. | B |

B. GO TO CAN COMMUNICATION SYSTEM (Click here)

A

## 6.CHECK FOR DTC*

a. Refer to DTC Check/Clear (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC is output. | A |
| DTC is not output. | B |

**HINT:**

If more information is needed, perform a check using the "System Check Mode" screen after checking for DTCs using the intelligent tester.

B. Go to step 10

A

## 7.DTC CLEAR*

a. Refer to DTC Check/Clear (Click here).

**HINT:**

The present DTCs may not indicate actual malfunctions depending on the vehicle operating conditions.

NEXT

## 8.RECHECK FOR DTC*

a. Refer to DTC Check/Clear (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC is output. | A |
| DTC is not output. | B |

**HINT:**

- **Even if the malfunction symptom is not confirmed, check for DTCs. This is because the system stores history DTCs.**
- **If more information is needed, perform a recheck using the "System Check Mode" screen after rechecking for DTCs using the intelligent tester.**
- **Check the DTCs and inspect the area that the code indicates.**

B. Go to step 10

A

## 9.DIAGNOSTIC TROUBLE CODE CHART

a. Find the output code in Diagnostic Trouble Code Chart ( Click here).

**NOTICE:**

- **The navigation system outputs DTCs for the following systems.**
- **When DTCs other than those in Diagnostic Trouble Code Chart for the navigation system are output, refer to Diagnostic Trouble Code Chart for the system.**
- **Audio and visual system (w/ navigation system) ( Click here)**

- Rear seat entertainment system (w/ rear seat entertainment system) ( Click here).
- G-BOOK system (w/ G-BOOK system) (Click here).
- Parking assist monitor system (w/ Parking assist monitor system) ( Click here).
- Wide view front monitor system (w/ Wide view front monitor system) ( Click here).
- Side monitor system (w/ Side monitor system) (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTCs for the navigation system are output. | A |
| DTCs for the audio and visual system (w/ navigation system) are output. | B |
| Parking assist monitor system (w/ Parking assist monitor system) | C |
| DTCs for the G-BOOK system (w/ G-BOOK system) are output. | D |
| Parking assist monitor system (w/ Parking assist monitor system) | E |
| Wide view front monitor system (w/ Wide view front monitor system) | F |
| Side monitor system (w/ Side monitor system) | G |

| | |
|---|---|
| A. | Go to step 13 |
| B. | GO TO AUDIO AND VISUAL SYSTEM (w/ Navigation System) ( Click here) |
| C. | GO TO REAR SEAT ENTERTAINMENT SYSTEM (Click here) |
| D. | GO TO G-BOOK SYSTEM (Click here) |
| E. | GO TO PARKING ASSIST MONITOR SYSTEM (Click here) |
| F. | GO TO WIDE VIEW FRONT MONITOR SYSTEM (Click here) |
| G. | GO TO SIDE MONITOR SYSTEM (Click here) |

## 10.CHECK HARD DISK DRIVE

a. Enter the "Failure Diagnosis" screen. Refer to Check Hard Disk Drive in Operation Check ( Click here).

**OK:**
**"OK" is displayed.**

| | |
|---|---|
| NG. | REPLACE HARD DISK DRIVE (Click here) |

OK

## 11.PROBLEM SYMPTOMS TABLE

a. Refer to Problem Symptoms Table (Click here).

**Result**

| Result | Proceed to |
|---|---|
| Fault is not listed in Problem Symptoms Table. | A |
| Fault is listed in Problem Symptoms Table. | B |

**HINT:**

If the symptom does not recur and no DTC is output, perform the symptom reproduction method ( Click here).

| | |
|---|---|
| B. | Go to step 13 |

A

### 12.CHECK ECU TERMINAL ARRANGEMENT BASED ON MALFUNCTION SYMPTOM

a. Refer to Terminals of ECU (Click here).

NEXT

### 13.CHECK CIRCUIT

a. Adjust, repair or replace as necessary.

**NOTICE:**

When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) (Click here).

NEXT

### 14.RECHECK FOR DIAGNOSTIC TROUBLE CODE

**HINT:**

After clearing DTCs, recheck for DTCs.

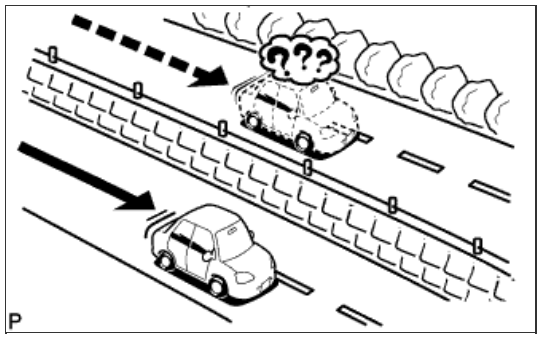
NEXT

### 15.PERFORM CONFIRMATION TEST

NEXT

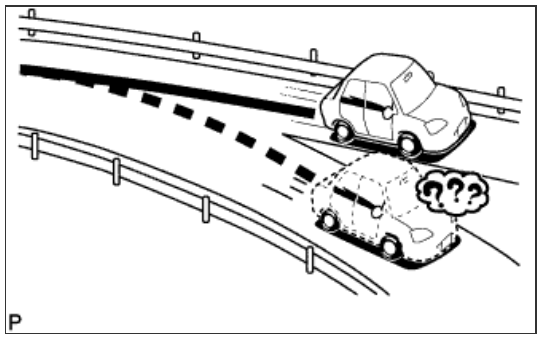
### END

**for Preparation** Click here



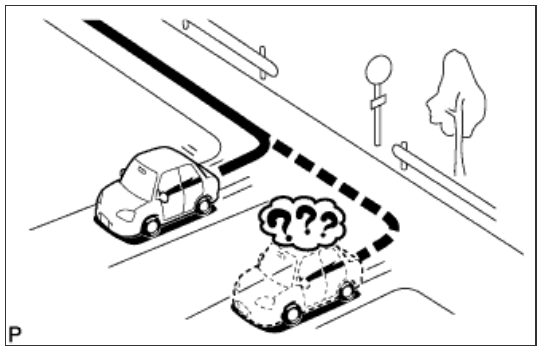
## CHECK SYSTEM NORMAL CONDITION

a. If the symptom is applicable to any of the following, it is intended behavior, and not a malfunction.



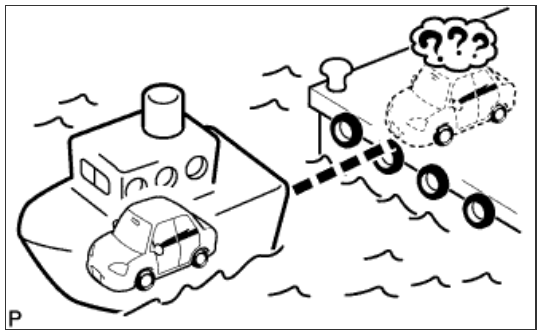
| Symptom | Answer |
|---|---|
| A longer route than expected is chosen. | Depending on the road conditions, the display and navigation module display may determine that a longer route is quicker. |
| Even when distance priority is high, the shortest route is not shown. | Some routes may not be advised due to safety concerns. |
| When the vehicle is put into motion immediately after the engine starts, the navigation system deviates from the current position. | If the vehicle starts before the navigation system activates, the system may not react. |
| When running on certain types of roads, especially new roads, the vehicle position deviates from the current position. | When the vehicle is driving on new roads not available on the map data from the hard disk drive, the system attempts to match it to another nearby road, causing the position mark to deviate. |

b. The following symptoms are not malfunctions, but are caused by errors inherent in the GPS, gyro sensor, speed sensor or display and navigation module display.

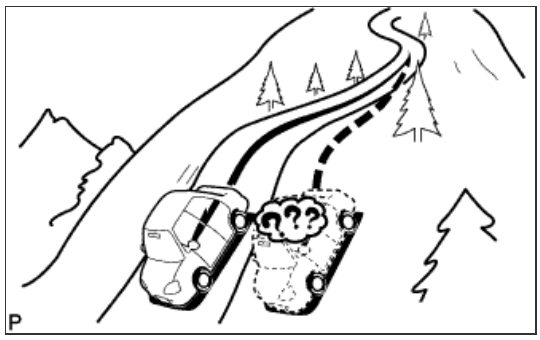


i. The current position mark may be displayed on a nearby parallel road.

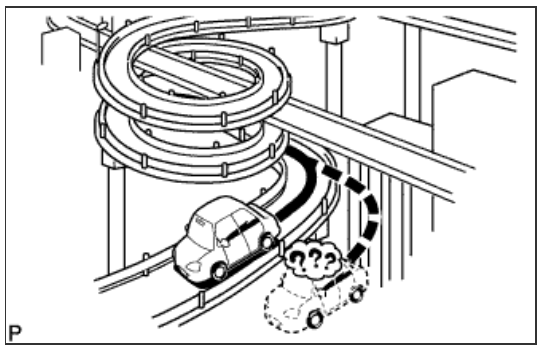
ii. Immediately after a fork in the road, the current vehicle position mark may be displayed on the wrong road.



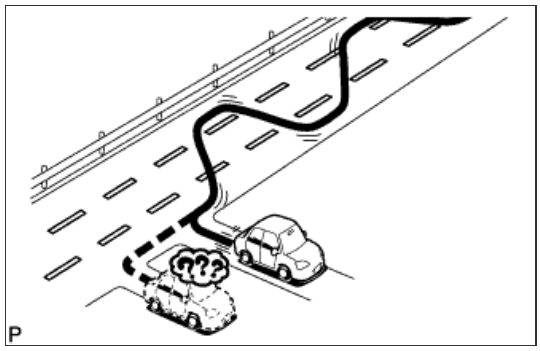
iii. When the vehicle turns right or left at an intersection, the current vehicle position mark may be displayed on a nearby parallel road.



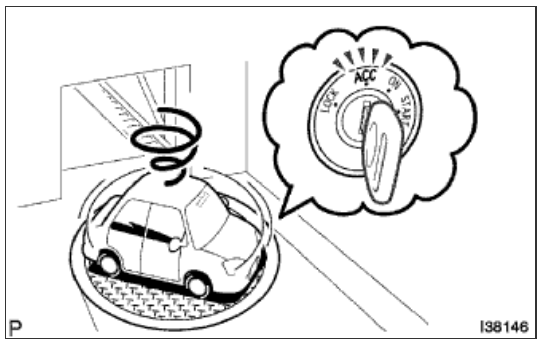
iv. When the vehicle is carried, such as on a ferry, and the vehicle itself is not running, the current vehicle position mark may be displayed in the position where the vehicle was until a measurement can be performed



by GPS.



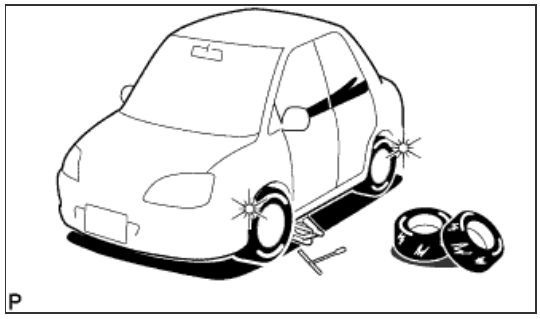
v. When the vehicle travels on a steep hill, the current vehicle position mark may deviate from the correct position.



vi. When the vehicle makes a continuous turn (e.g. 360, 720, 1080 degrees), the current vehicle position mark may deviate from the correct position.

vii. When the vehicle moves erratically, such as constant lane changes, the current vehicle position mark may deviate from the correct position.

viii. When the engine switch is turned on (ACC or IG) on a turntable before parking, the current vehicle position mark may not indicate the correct direction. The same will occur when the vehicle comes out of the parking garage.

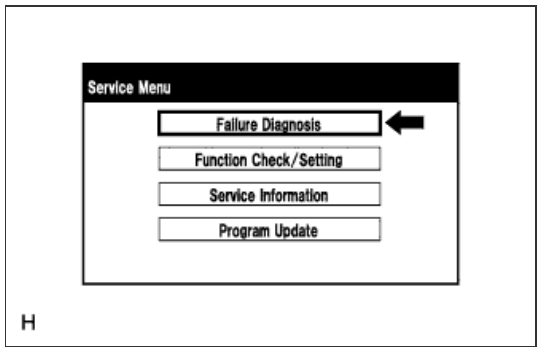


ix. When the vehicle travels on a snowy road or a mountain path with the chains installed or using a spare tire, the current vehicle position mark may deviate from the correct position.

x. When the tires are changed, the current vehicle position mark may deviate from the correct position.

**HINT:**

- **A change in tire diameter may cause a speed sensor error.**
- **Performing "tire change" in calibration mode will allow the system to correct the current vehicle position faster.**



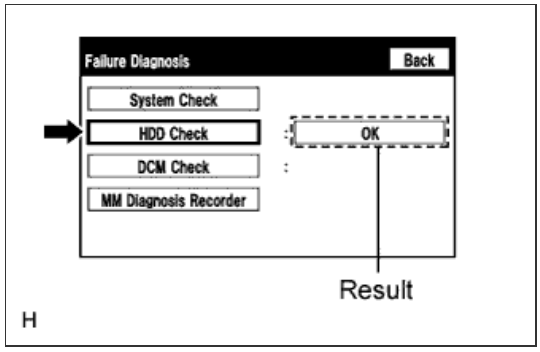
## CHECK HARD DISK DRIVE

**HINT:**

- **Check the hard disk drive (HDD) built into the display and navigation module display.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Failure Diagnosis" from the "Service Menu" screen.



c. Hard disk drive check

i. Select "HDD Check" to start the HDD check.

ii. Check that the result is displayed when the HDD check is completed.

**Screen Description**

| Result | Description |
|---|---|
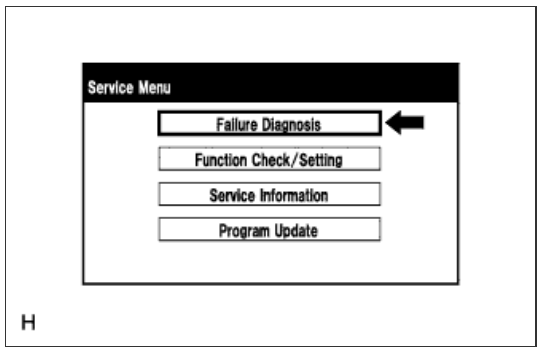
| Checking | While the check is in progress |
| OK | Hard disk drive is normal |
| NG | Hard disk drive is malfunctioning |

**HINT:**

- **After selecting "HDD Check", it may take a while until the result is displayed.**
- **Replace the display and navigation module display when NG is displayed.**

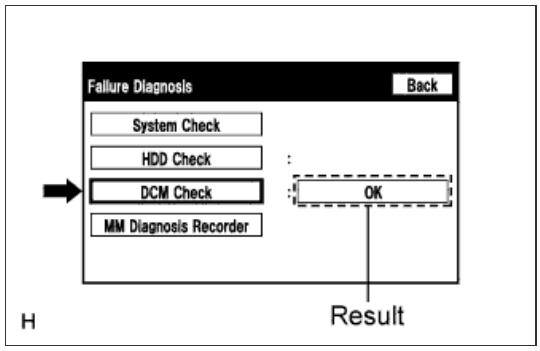


## CHECK TELEMATICS TRANSCEIVER (w/ G-BOOK SYSTEM)

**HINT:**

- **Communication between the telematics transceiver and G-BOOK center is checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).



b. Select "Failure Diagnosis" from the "Service Menu" screen.

c. Telematics transceiver check

i. Select "DCM Check" to start the telematics transceiver communication condition check.

ii. Check that the result is displayed when the DCM check completes.

**Screen Description**

| Result | Description |
|---|---|
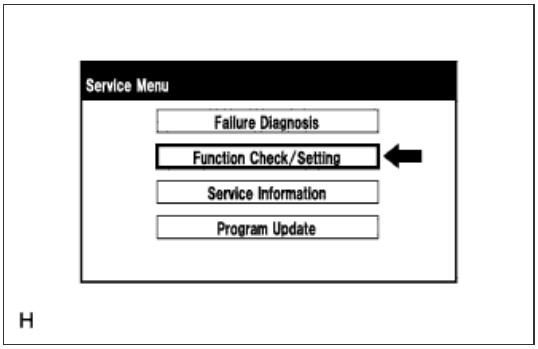
| wait | While the check is in progress |
| OK | Telematics transceiver communication condition is normal |
| NO ANT | Telephone antenna is not connected |
| PLL NG | PLL is unlocked |
| OFF LINE | Service contract is not valid |
| No Service | Out of communication service area |
| RESTRICTION | Restriction of outgoing signal |
| NO CARRIER | RLP link is not established |
| ERROR | High priority service is activated |
| TIME OUT | Check time out |

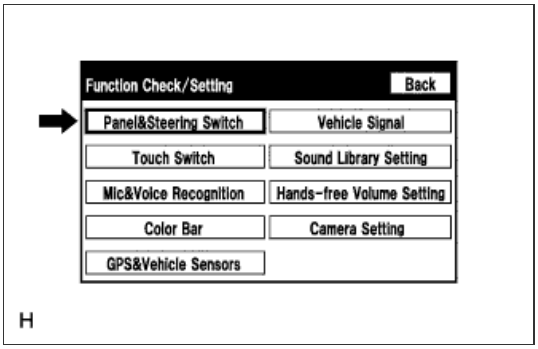
**HINT:**

- **Telematics transceiver check is performed for a maximum of 40 seconds after "DCM Check" is selected.**
- **Check the G-BOOK system when "DCM Check" cannot be performed or the check result is not "OK" ( Click here).**



## CHECK PANEL & STEERING SWITCH

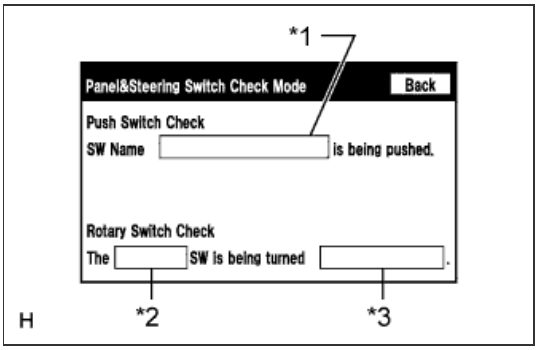
**HINT:**



- **The display and navigation module display panel switches, radio receiver assembly panel switches and steering switch are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.



c. Select "Panel & Steering Switch" from the "Function Check/Setting" screen.

d. Panel & Steering Switch Check Mode

i. Operate each switch and check that the switch names and condition are correctly displayed.

**Screen Description**

| Display | Content |
|---|---|
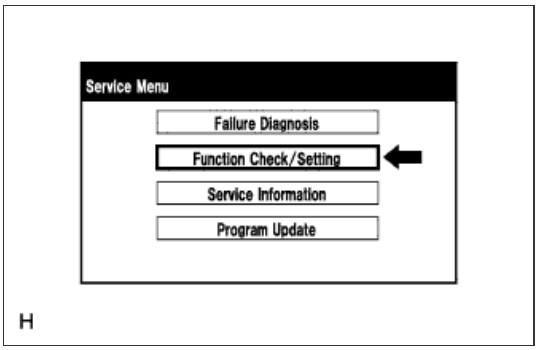
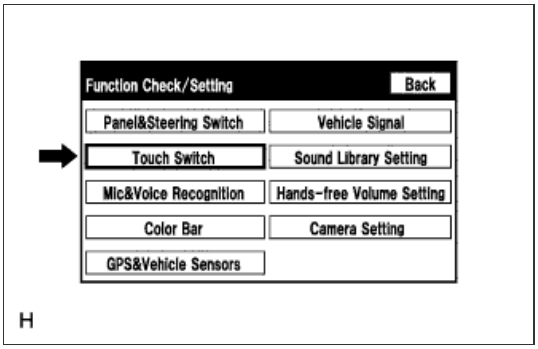
| *1: Push switch name | • Name of the pressed switch is displayed.<br>• If more than one switch is pressed, "MULTIPLE" will be displayed. |
| *2: Rotary switch name | Name of the rotary switch is displayed. |
| *3: Rotary switch direction | Direction of the rotary switch is displayed. |



## CHECK TOUCH SWITCH

**HINT:**

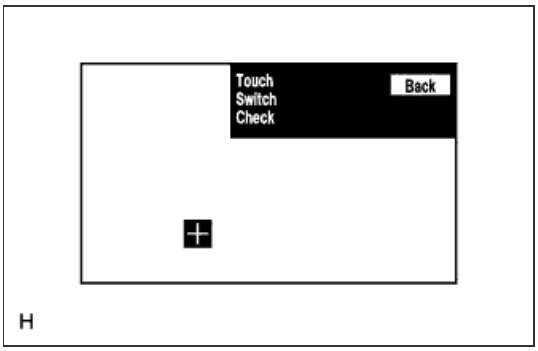


- **The touch switches on the screen are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "Touch Switch" from the "Function Check/Setting" screen.

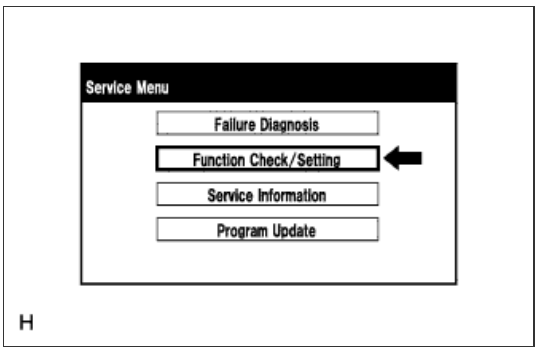


d. Touch Switch Check

i. Touch the display anywhere in the open area to perform the check when the "Touch Switch Check" screen is displayed.

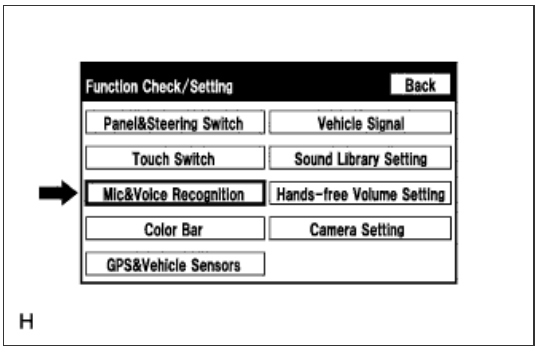
**HINT:**

- **A "+" mark is displayed where the display is touched.**
- **The "+" mark remains on the display even after the finger is removed.**



## CHECK MIC & VOICE RECOGNITION

**HINT:**



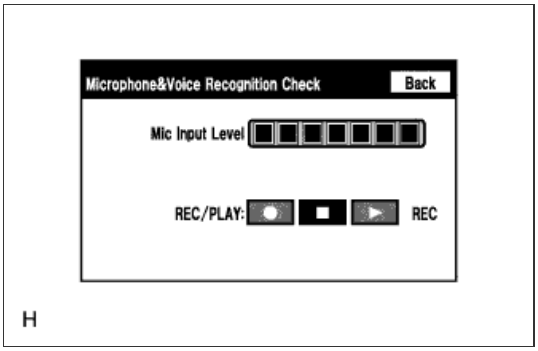
- **The microphone and microphone input level are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "Mic & Voice Recognition" from the "Function Check/Setting" screen.

d. Microphone & Voice Recognition Check



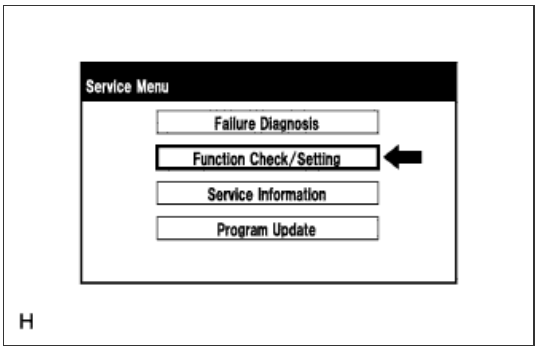
i. When speaking into the microphone, check that the microphone input level meter changes according to the input level.

ii. Push the recording switch and perform voice recording.

iii. Check that the recording indicator remains on while recording and that the recording can be played normally.

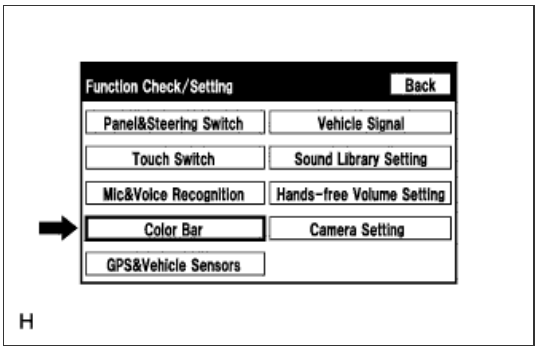
**HINT:**

- **For details of this function, refer to Diagnosis Display Detailed Description in System Description (Click here).**
- **This function is controlled by the display and navigation module display (built-in navigation ECU).**



## CHECK COLOR BAR

**HINT:**

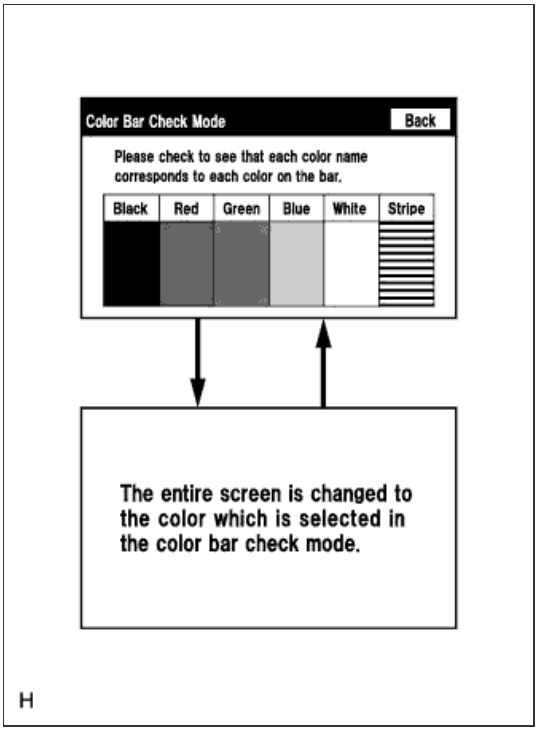


- **The display color on the screen is checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "Color Bar" from the "Function Check/Setting" screen.



d. Color Bar Check Mode

i. Select a color bar from the "Color Bar Check Mode" screen.

ii. Check the display color.

**HINT:**

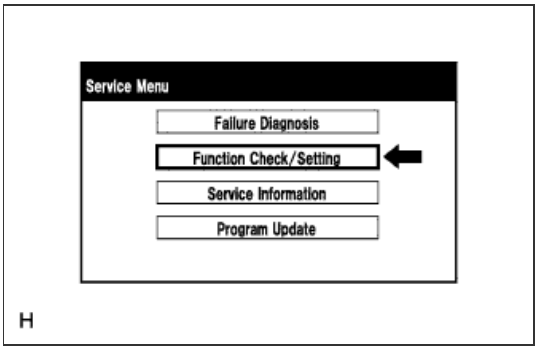
- **The entire screen turns to the color or stripe selected.**
- **Touching the display will return to the "Color Bar Check" screen.**



## CHECK GPS & VEHICLE SENSORS

**HINT:**

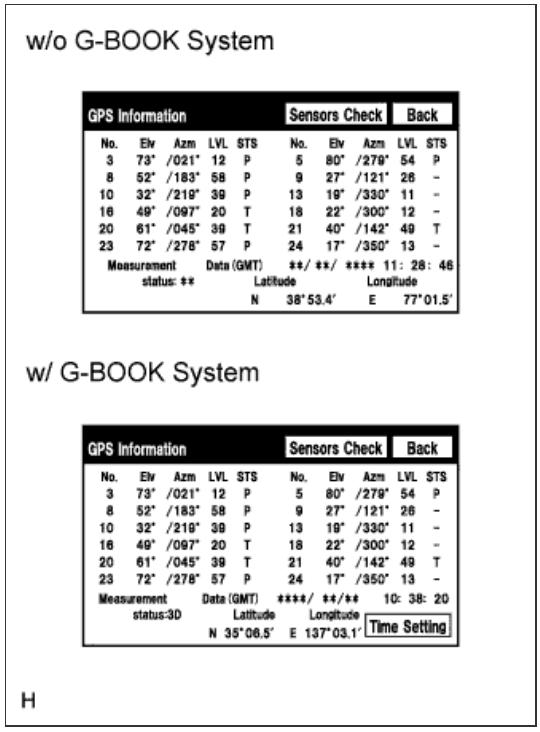
- **GPS information, vehicle signals and sensor signals are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "GPS & Vehicle Sensors" from the "Function Check/Setting" screen.



d. GPS Information

i. When "GPS Information screen" is displayed, check the GPS conditions.

**HINT:**

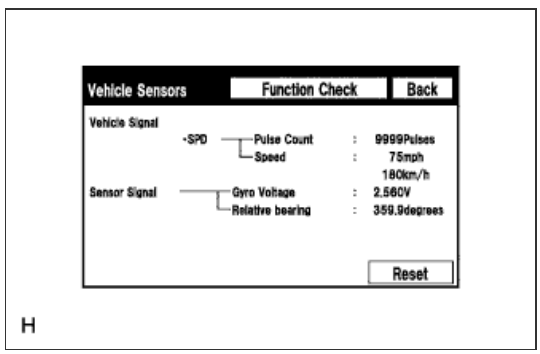
- **This screen is updated once per second when input signals to the vehicle are changed.**
- **For details of this function, refer to Diagnosis Display Detailed Description in System Description (Click here).**

e. Select "Sensors Check" from the "GPS information" screen.



f. Vehicle Sensors

i. Check all the signals and sensors when vehicle signal information is displayed.

**HINT:**

- **This screen is updated once per second when input signals to the vehicle are changed.**
- **This screen displays vehicle signals input to the display and navigation module display (built-in navigation ECU).**
- **For details of this function, refer to Diagnosis Display Detailed Description in System Description (Click here).**

g. Select "GPS Time Setting" from the "GPS & Vehicle Sensors" screen (w/ G-BOOK system).

h. GPS Time Setting (w/ G-BOOK system)

i. When the GPS signals cannot be received, the time in the device can be adjusted.

**HINT:**

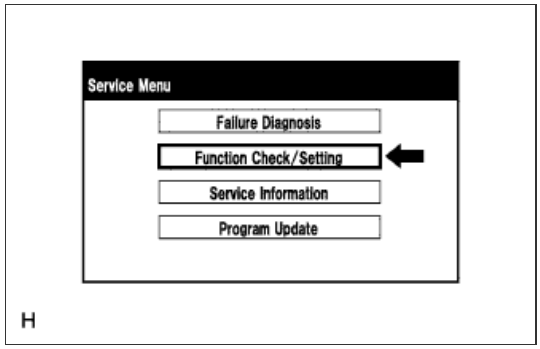
- **The G-BOOK system cannot be used in areas where GPS signals cannot be received. As a result, when using the G-BOOK system in areas such as indoors, set the GPS time from the GPS time setting screen.**
- **Time setting is possible only when GPS signals are not received. When the navigation system is receiving GPS signals, priority is given to displaying the time and date received via GPS.**
- **For details of this function, refer to Diagnosis Display Detailed Description in System Description (Click here).**



## CHECK VEHICLE SIGNAL

**HINT:**

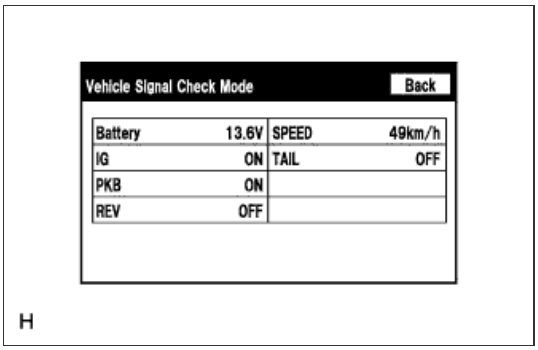
- **Vehicle signals received by the display and navigation module display are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "Vehicle Signal" from the "Function Check/Setting" screen.

d. Vehicle Signal Check Mode



i. When the "Vehicle Signal Check Mode" screen is displayed, check all the vehicle signal conditions.

**HINT:**

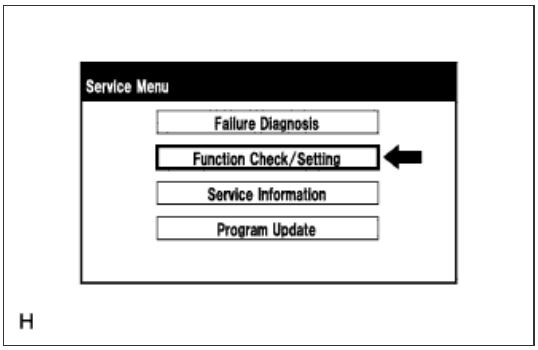
- **Only conditions having inputs are displayed.**
- **This screen displays vehicle signals input to the display and navigation module display (built-in**

navigation ECU).

- For details of this function, refer to Diagnosis Display Detailed Description in System Description (Click here).



## CHECK SOUND LIBRARY SETTING (w/ SOUND LIBRARY)

**HINT:**

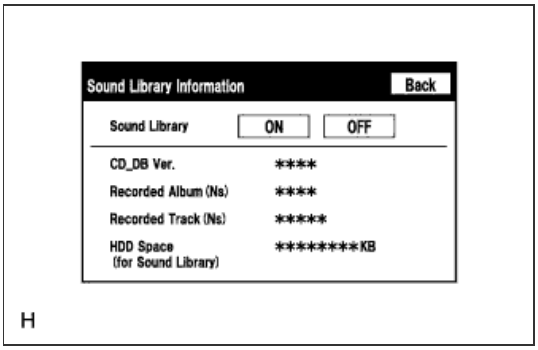
- It is possible to turn the sound library function on and off and check the operation of the sound library function.
- Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.



c. Select "Sound Library Setting" from the "Function Check/Setting" screen.

d. Sound Library Information

**HINT:**

Refer to the audio and visual system (w/ navigation system) for further information (Click here).

## CHECK HANDS-FREE VOLUME SETTING

**HINT:**

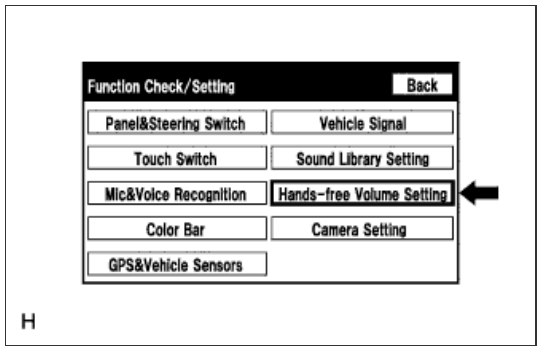
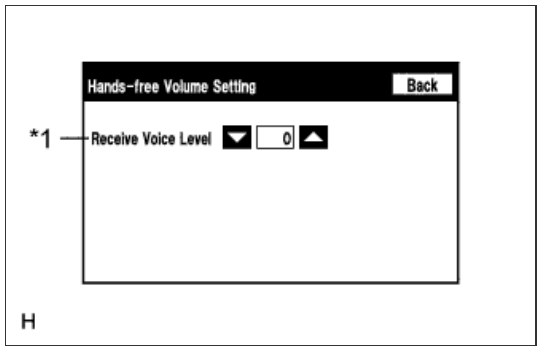
- The hands-free volume of a "Bluetooth" compatible phone can be adjusted using the following procedure.
- Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed



**areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.



c. Select "Hands-free Volume Setting" from the "Function Check/Setting" screen.

d. Hands-free Volume Setting

i. Check the hands-free volume level.

**Screen Description**

| Display | Content |
|---|---|
| *1: Receive voice level adjustment | Setting possible for the voice level received from "Bluetooth" compatible phones. |

**NOTICE:**

Sound quality may deteriorate when the receive voice level is changed more than necessary. For this reason, check that the receive voice quality is still acceptable after changing this setting.

## CHECK CAMERA SETTING (w/ Parking Assist Monitor System)

a. Refer to the parking assist monitor system for further information ( Click here).

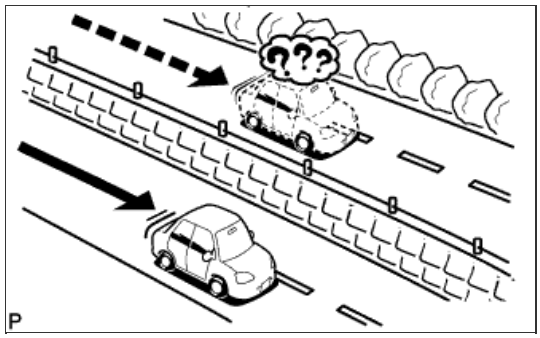
## CHECK CAMERA SETTING (w/ Side Monitor System)

a. Refer to the side monitor system for further information ( Click here).

**CHECK CAMERA SETTING (w/ Wide View Front Monitor System)**

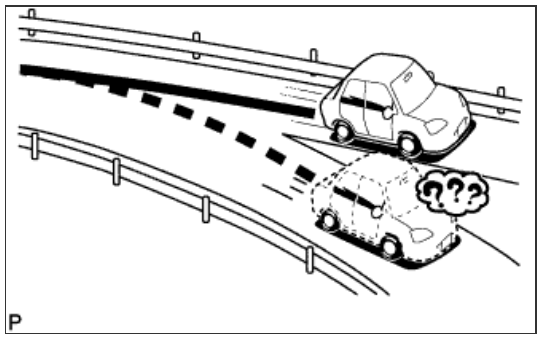
a. Refer to the wide view front monitor system for further information ( Click here).

**for Preparation** Click here



## CHECK SYSTEM NORMAL CONDITION

a. If the symptom is applicable to any of the following, it is intended behavior, and not a malfunction.



| Symptom | Answer |
|---|---|
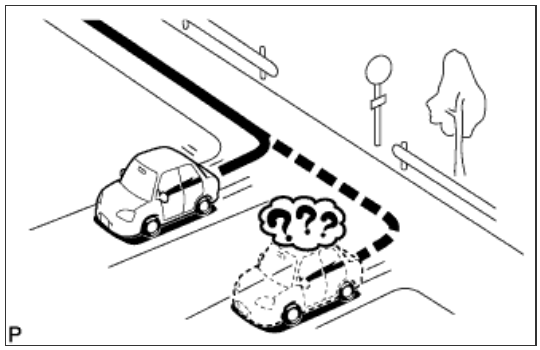
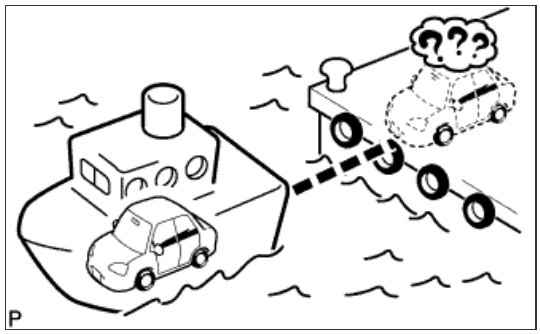
| A longer route than expected is chosen. | Depending on the road conditions, the display and navigation module display may determine that a longer route is quicker. |
| Even when distance priority is high, the shortest route is not shown. | Some routes may not be advised due to safety concerns. |
| When the vehicle is put into motion immediately after the engine starts, the navigation system deviates from the current position. | If the vehicle starts before the navigation system activates, the system may not react. |
| When running on certain types of roads, especially new roads, the vehicle position deviates from the current position. | When the vehicle is driving on new roads not available on the map data from the hard disk drive, the system attempts to match it to another nearby road, causing the position mark to deviate. |

b. The following symptoms are not malfunctions, but are caused by errors inherent in the GPS, gyro sensor, speed sensor or display and navigation module display.

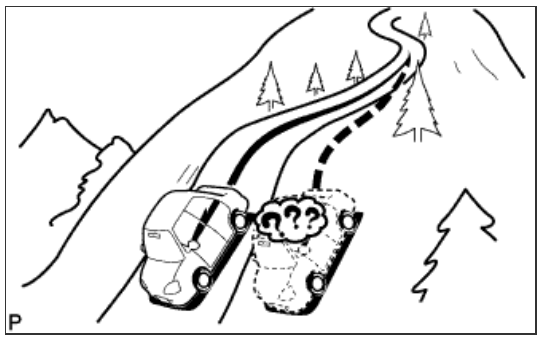


i. The current position mark may be displayed on a nearby parallel road.

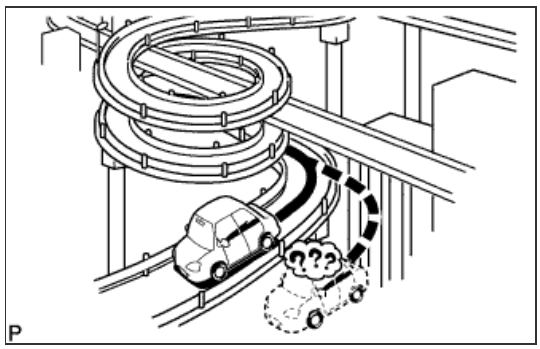
ii. Immediately after a fork in the road, the current vehicle position mark may be displayed on the wrong road.



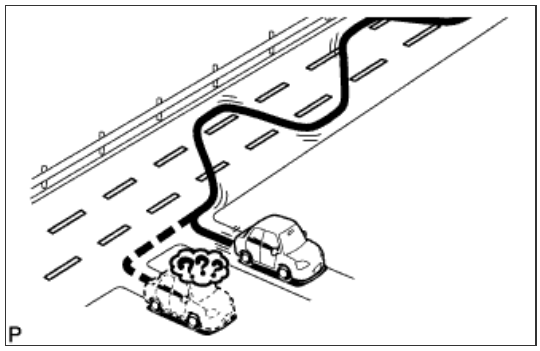
iii. When the vehicle turns right or left at an intersection, the current vehicle position mark may be displayed on a nearby parallel road.



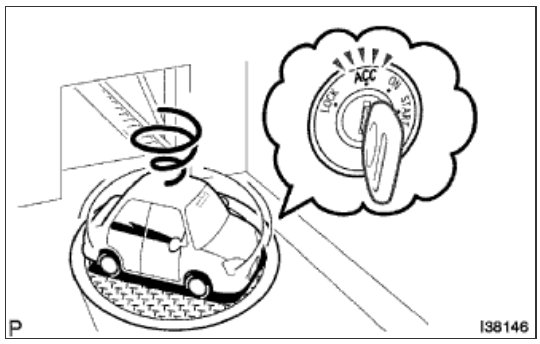
iv. When the vehicle is carried, such as on a ferry, and the vehicle itself is not running, the current vehicle position mark may be displayed in the position where the vehicle was until a measurement can be performed



by GPS.



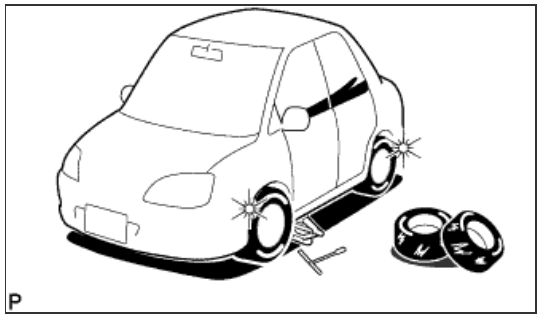
v. When the vehicle travels on a steep hill, the current vehicle position mark may deviate from the correct position.



vi. When the vehicle makes a continuous turn (e.g. 360, 720, 1080 degrees), the current vehicle position mark may deviate from the correct position.

vii. When the vehicle moves erratically, such as constant lane changes, the current vehicle position mark may deviate from the correct position.

viii. When the engine switch is turned on (ACC or IG) on a turntable before parking, the current vehicle position mark may not indicate the correct direction. The same will occur when the vehicle comes out of the parking garage.



ix. When the vehicle travels on a snowy road or a mountain path with the chains installed or using a spare tire, the current vehicle position mark may deviate from the correct position.

x. When the tires are changed, the current vehicle position mark may deviate from the correct position.

**HINT:**

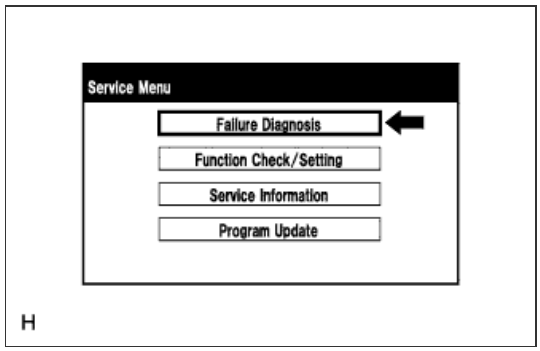
- **A change in tire diameter may cause a speed sensor error.**
- **Performing "tire change" in calibration mode will allow the system to correct the current vehicle position faster.**



## CHECK HARD DISK DRIVE

**HINT:**

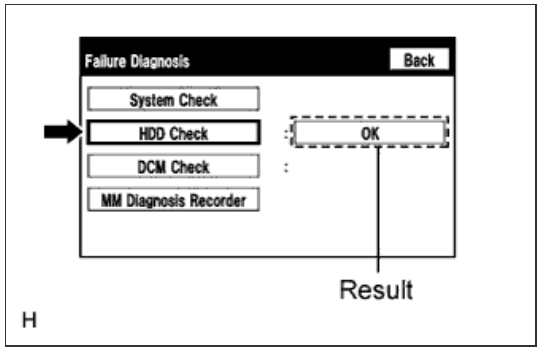
- **Check the hard disk drive (HDD) built into the display and navigation module display.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Failure Diagnosis" from the "Service Menu" screen.



c. Hard disk drive check

i. Select "HDD Check" to start the HDD check.

ii. Check that the result is displayed when the HDD check is completed.

**Screen Description**

| Result | Description |
|---|---|
| Checking | While the check is in progress |
| OK | Hard disk drive is normal |
| NG | Hard disk drive is malfunctioning |

**HINT:**

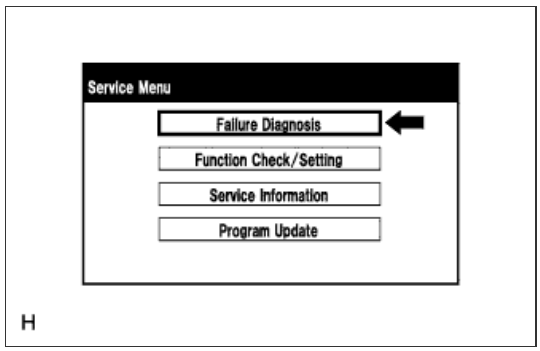
- **After selecting "HDD Check", it may take a while until the result is displayed.**
- **Replace the display and navigation module display when NG is displayed.**



## CHECK TELEMATICS TRANSCEIVER (w/ G-BOOK SYSTEM)

**HINT:**

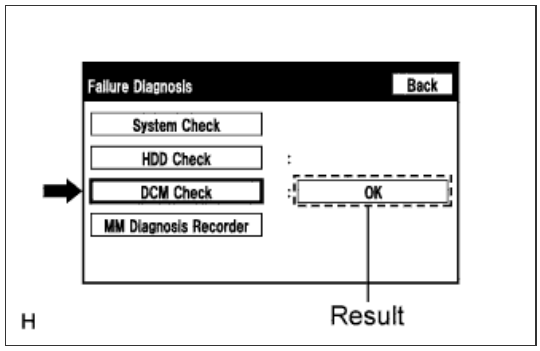
- **Communication between the telematics transceiver and G-BOOK center is checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).



b. Select "Failure Diagnosis" from the "Service Menu" screen.

c. Telematics transceiver check

i. Select "DCM Check" to start the telematics transceiver communication condition check.

ii. Check that the result is displayed when the DCM check completes.

**Screen Description**

| Result | Description |
|---|---|
| wait | While the check is in progress |
| OK | Telematics transceiver communication condition is normal |
| NO ANT | Telephone antenna is not connected |
| PLL NG | PLL is unlocked |
| OFF LINE | Service contract is not valid |
| No Service | Out of communication service area |
| RESTRICTION | Restriction of outgoing signal |
| NO CARRIER | RLP link is not established |
| ERROR | High priority service is activated |
| TIME OUT | Check time out |

**HINT:**

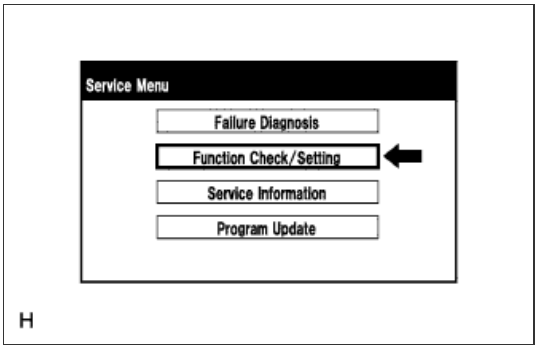
- **Telematics transceiver check is performed for a maximum of 40 seconds after "DCM Check" is selected.**
- **Check the G-BOOK system when "DCM Check" cannot be performed or the check result is not "OK" ( Click here).**



## CHECK PANEL & STEERING SWITCH

**HINT:**

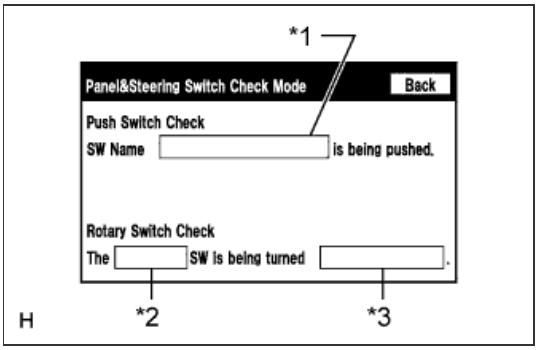
- **The display and navigation module display panel switches, radio receiver assembly panel switches and steering switch are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.



c. Select "Panel & Steering Switch" from the "Function Check/Setting" screen.

d. Panel & Steering Switch Check Mode

i. Operate each switch and check that the switch names and condition are correctly displayed.

**Screen Description**

| Display | Content |
|---|---|
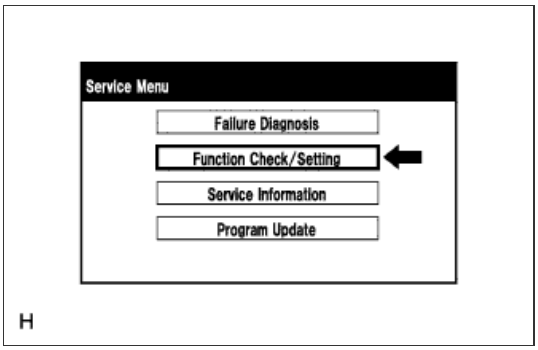
| *1: Push switch name | • Name of the pressed switch is displayed.<br>• If more than one switch is pressed, "MULTIPLE" will be displayed. |
| *2: Rotary switch name | Name of the rotary switch is displayed. |
| *3: Rotary switch direction | Direction of the rotary switch is displayed. |



## CHECK TOUCH SWITCH

**HINT:**

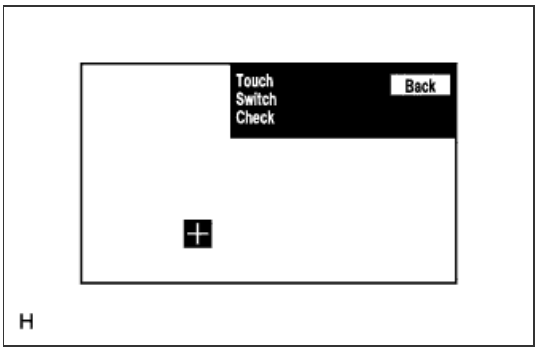
- **The touch switches on the screen are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "Touch Switch" from the "Function Check/Setting" screen.



d. Touch Switch Check

i. Touch the display anywhere in the open area to perform the check when the "Touch Switch Check" screen is displayed.

**HINT:**

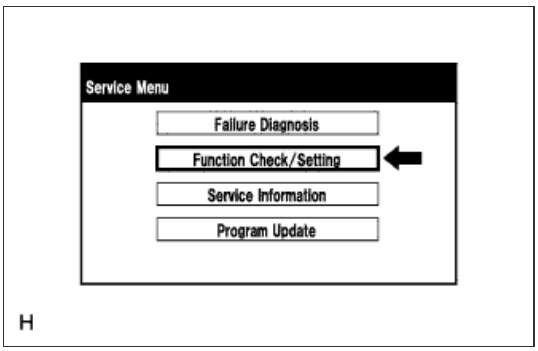
- **A "+" mark is displayed where the display is touched.**
- **The "+" mark remains on the display even after the finger is removed.**



## CHECK MIC & VOICE RECOGNITION

**HINT:**

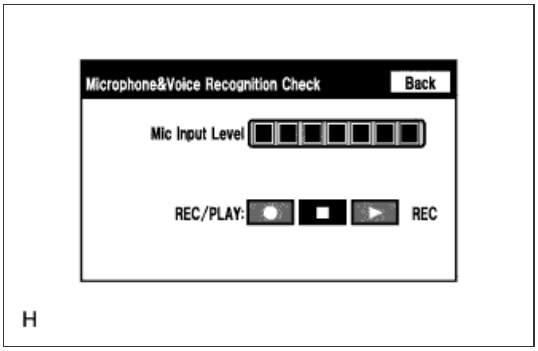
- **The microphone and microphone input level are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "Mic & Voice Recognition" from the "Function Check/Setting" screen.

d. Microphone & Voice Recognition Check



i. When speaking into the microphone, check that the microphone input level meter changes according to the input level.

ii. Push the recording switch and perform voice recording.

iii. Check that the recording indicator remains on while recording and that the recording can be played normally.

**HINT:**

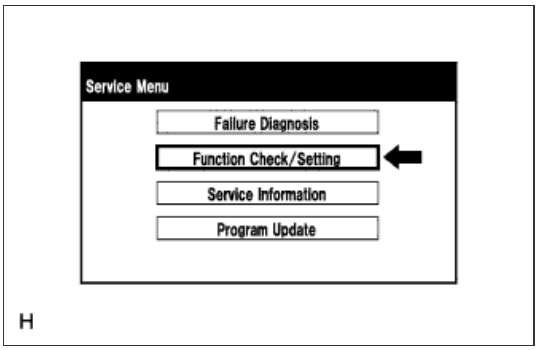
- **For details of this function, refer to Diagnosis Display Detailed Description in System Description (Click here).**
- **This function is controlled by the display and navigation module display (built-in navigation ECU).**



## CHECK COLOR BAR

**HINT:**

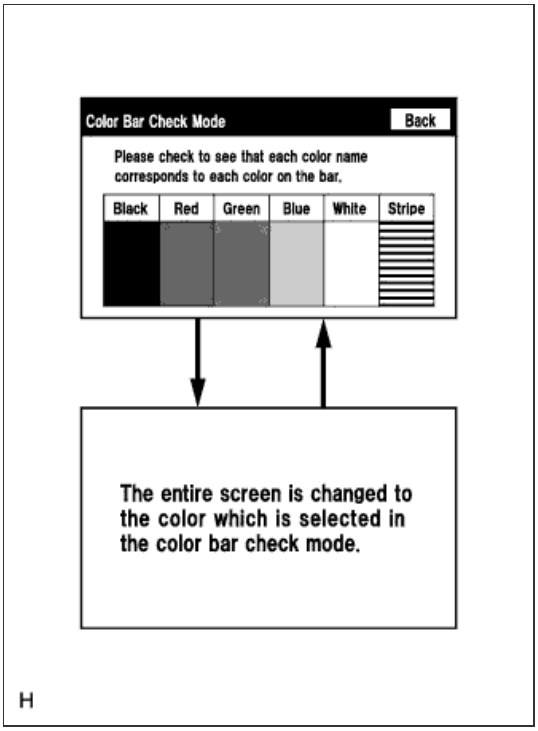
- **The display color on the screen is checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "Color Bar" from the "Function Check/Setting" screen.



d. Color Bar Check Mode

i. Select a color bar from the "Color Bar Check Mode" screen.

ii. Check the display color.

**HINT:**

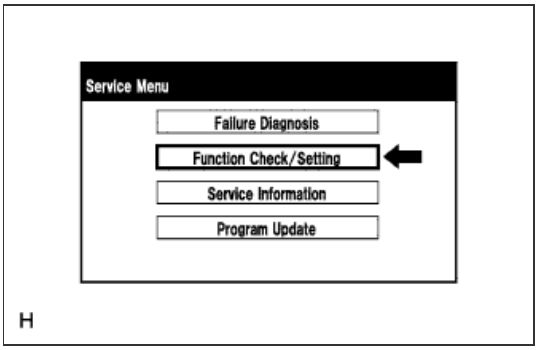
- **The entire screen turns to the color or stripe selected.**
- **Touching the display will return to the "Color Bar Check" screen.**



## CHECK GPS & VEHICLE SENSORS

**HINT:**

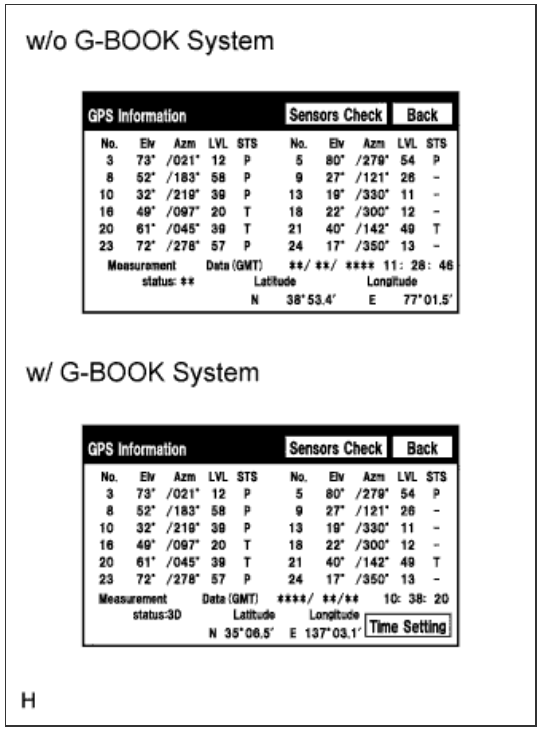
- **GPS information, vehicle signals and sensor signals are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "GPS & Vehicle Sensors" from the "Function Check/Setting" screen.



d. GPS Information

i. When "GPS Information screen" is displayed, check the GPS conditions.

**HINT:**

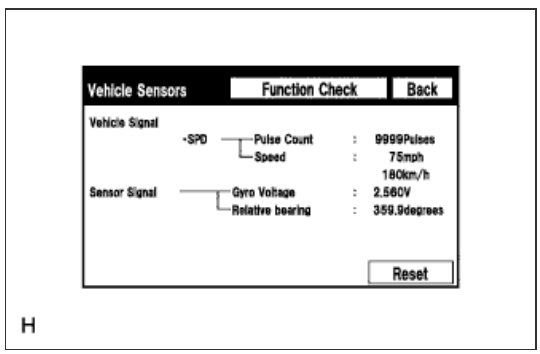
- **This screen is updated once per second when input signals to the vehicle are changed.**
- **For details of this function, refer to Diagnosis Display Detailed Description in System Description (Click here).**

e. Select "Sensors Check" from the "GPS information" screen.



f. Vehicle Sensors

i. Check all the signals and sensors when vehicle signal information is displayed.

**HINT:**

- **This screen is updated once per second when input signals to the vehicle are changed.**
- **This screen displays vehicle signals input to the display and navigation module display (built-in navigation ECU).**
- **For details of this function, refer to Diagnosis Display Detailed Description in System Description (Click here).**

g. Select "GPS Time Setting" from the "GPS & Vehicle Sensors" screen (w/ G-BOOK system).

h. GPS Time Setting (w/ G-BOOK system)

i. When the GPS signals cannot be received, the time in the device can be adjusted.

**HINT:**

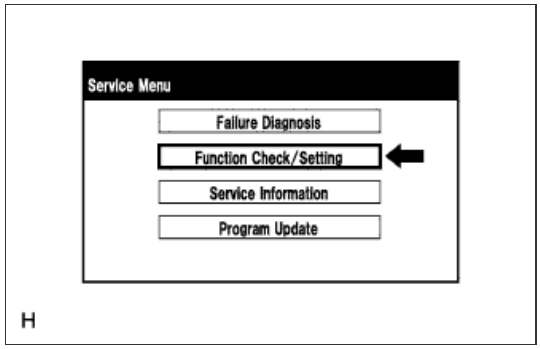
- **The G-BOOK system cannot be used in areas where GPS signals cannot be received. As a result, when using the G-BOOK system in areas such as indoors, set the GPS time from the GPS time setting screen.**
- **Time setting is possible only when GPS signals are not received. When the navigation system is receiving GPS signals, priority is given to displaying the time and date received via GPS.**
- **For details of this function, refer to Diagnosis Display Detailed Description in System Description (Click here).**



## CHECK VEHICLE SIGNAL

**HINT:**

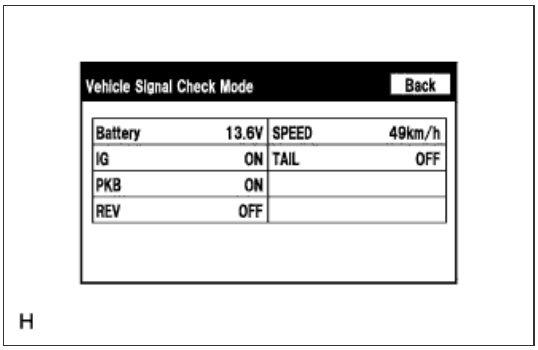
- **Vehicle signals received by the display and navigation module display are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "Vehicle Signal" from the "Function Check/Setting" screen.

d. Vehicle Signal Check Mode



i. When the "Vehicle Signal Check Mode" screen is displayed, check all the vehicle signal conditions.

**HINT:**

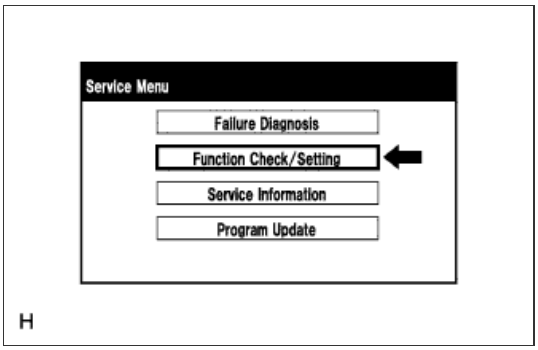
- **Only conditions having inputs are displayed.**
- **This screen displays vehicle signals input to the display and navigation module display (built-in**

navigation ECU).

- For details of this function, refer to Diagnosis Display Detailed Description in System Description (Click here).



## CHECK SOUND LIBRARY SETTING (w/ SOUND LIBRARY)

**HINT:**

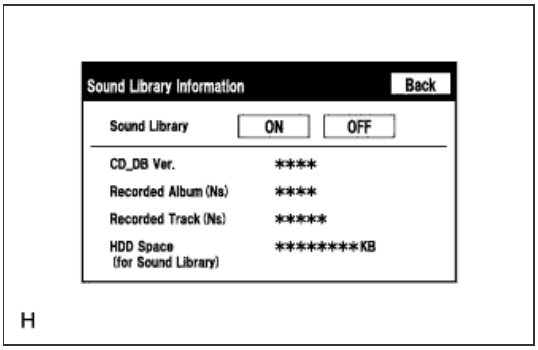
- It is possible to turn the sound library function on and off and check the operation of the sound library function.
- Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.



c. Select "Sound Library Setting" from the "Function Check/Setting" screen.

d. Sound Library Information

**HINT:**

Refer to the audio and visual system (w/ navigation system) for further information (Click here).

## CHECK HANDS-FREE VOLUME SETTING

**HINT:**

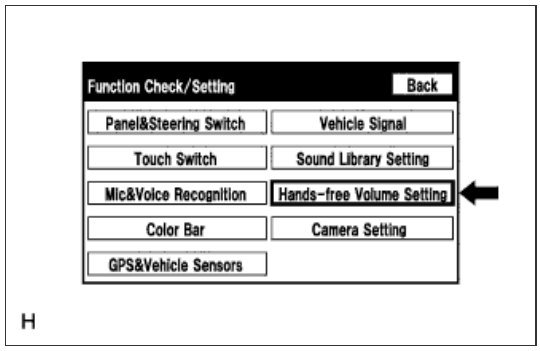
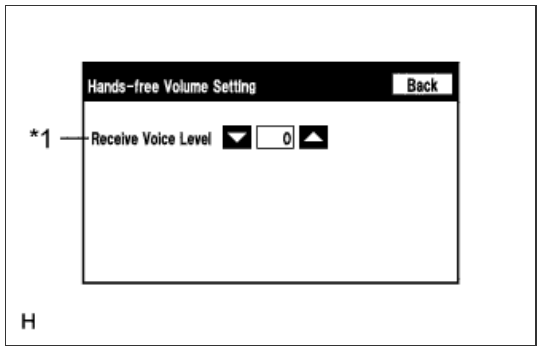
- The hands-free volume of a "Bluetooth" compatible phone can be adjusted using the following procedure.
- Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed



**areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.



c. Select "Hands-free Volume Setting" from the "Function Check/Setting" screen.

d. Hands-free Volume Setting

i. Check the hands-free volume level.

**Screen Description**

| Display | Content |
|---|---|
| *1: Receive voice level adjustment | Setting possible for the voice level received from "Bluetooth" compatible phones. |

**NOTICE:**

Sound quality may deteriorate when the receive voice level is changed more than necessary. For this reason, check that the receive voice quality is still acceptable after changing this setting.

## CHECK CAMERA SETTING (w/ Parking Assist Monitor System)

a. Refer to the parking assist monitor system for further information ( Click here).

## CHECK CAMERA SETTING (w/ Side Monitor System)

a. Refer to the side monitor system for further information ( Click here).

**CHECK CAMERA SETTING (w/ Wide View Front Monitor System)**

a. Refer to the wide view front monitor system for further information ( Click here).

**for Preparation** Click here

**HINT:**

- **Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.**
- **Inspect the fuses and relays related to this system before inspecting the suspected areas below.**

### Display Function

| Symptom | Suspected Area | See page |
|---|---|---|
| Black screen (No image appears on navigation/audio screen.) | Proceed to "Black Screen" | Click here |
| | Hard Disk Drive | Click here |
| | Proceed to "Navigation ECU Power Source Circuit" | Click here |
| | Display and navigation module display | Click here |
| Illumination for panel switch does not come on with tail switch on. | Proceed to "Illumination for Panel Switch does not Come on with Tail Switch ON" | Click here |
| | Proceed to "Illumination Circuit" | Click here |
| | Display and navigation module display | Click here |
| Display does not dim (does not change to night screen) with tail switch on. | Proceed to "Display does not Dim when Light Control Switch is Turned ON" | Click here |
| | Display and navigation module display | Click here |
| Panel switches do not function. | Proceed to "Panel Switches do not Function" | Click here |
| | Proceed to "Steering Pad Switch Circuit" | Click here |
| | Display and navigation module display | Click here |
| Touch panel switch does not function. | Proceed to "Touch Panel Switch does not Function" | Click here |
| | Display and navigation module display | Click here |
| Screen is distorted. | Proceed to "Navigation ECU Power Source Circuit" | Click here |
| | Display and navigation module display | Click here |
| Screen flicker or color distortion | Proceed to "Screen Flicker or Color Distortion" | Click here |
| | Display and navigation module display | Click here |
| DVD image cannot be displayed on multi-display. (Parking brake is on.) | Proceed to "DVD Image Signal Circuit between Radio Receiver and Navigation ECU" | Click here |
| | Proceed to "Parking Brake Switch Circuit" | Click here |
| | Radio receiver assembly | Click here |
| | Display and navigation module display | Click here |
| Navigation function switches can be operated while vehicle is running. | Display and navigation module display | Click here |

### Navigation Function

| | | See |
|---|---|---|

| Symptom | Suspected Area | page |
|---|---|---|
| Vehicle position mark deviates. | Proceed to "Vehicle Position Mark Deviates Greatly" | Click here |
| | Navigation antenna assembly | Click here |
| | Display and navigation module display | Click here |
| Cursor or map rotates when vehicle is stopped. | Proceed to "Cursor or Map Rotates when Vehicle Stopped" | Click here |

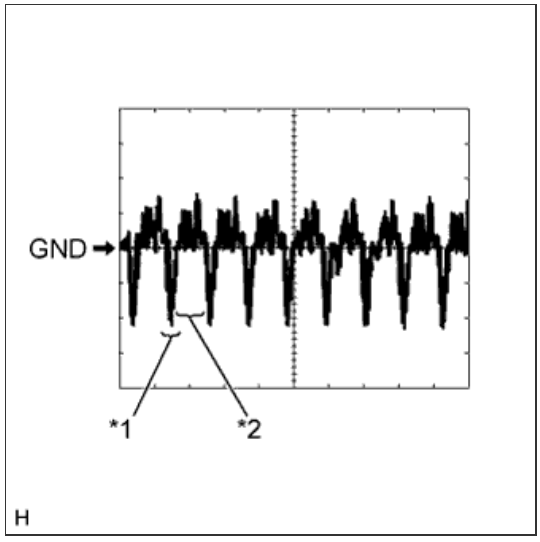
## DISPLAY AND NAVIGATION MODULE DISPLAY

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F58-1 (+B1) - F58-10 (GND1) | R - W-B | Battery | Engine switch off | 11 to 14 V |
| F58-2 (ACC) - F58-10 (GND1) | GR - W-B | Accessory (ON) | Engine switch on (ACC) | 11 to 14 V |
| | | | Engine switch off | Below 1 V |
| F58-3 (IG) - F58-10 (GND1) | G - W-B | Power source (IG) | Engine switch on (IG) | 11 to 14 V |
| | | | Engine switch off | Below 1 V |
| F58-4 (MACC) - F58-10 (GND1) | W - W-B*2 | Telephone microphone assembly power supply | Engine switch off → on (IG) | Below 1 V → 5 V |
| F58-5 (MIN+) - F58-10 (GND1) | B - W-B | Microphone voice signal | See "Microphone & Voice Recognition Check" in Operation Check (Click here) | - |
| F58-6 (MIN-) - Body ground | R - Body ground | Microphone voice signal | See "Microphone & Voice Recognition Check" in Operation Check (Click here) | - |
| F58-7 (SGND) - F58-10 (GND1) | Shield - W-B | Shield ground | Always | Below 1 V |
| F58-9 (TC) - F58-10 (GND1) | V - W-B | Diagnosis ON signal | Engine switch on (IG) | 9 to 14 V |
| F58-10 (GND1) - Body ground | W-B - Body ground | Ground | Always | Below 1 V |
| F58-12 (ILL+) - F58-10 (GND1) | G - W-B | Illumination signal | Engine switch on (IG)<br>Light control switch off → tail or on | Below 1 V → 11 to 14 V |
| F58-16 (REV) - F58-10 (GND1) | L - W-B | Reverse signal | See "Vehicle Signal Check Mode" in Operation Check (Click here) | - |
| F58-17 (PKB) - F58-10 (GND1) | Y - W-B | Parking brake signal | See "Vehicle Signal Check Mode" in Operation Check (Click here) | - |
| F58-18 (SPD) - F58-10 (GND1) | V - W-B | Speed signal from combination meter assembly | See "Vehicle Signal Check Mode" in Operation Check (Click here) | - |
| F58-20 (SNS2) - F58-10 (GND1) | GR - W-B | Microphone connection detection signal | Always | Below 0.1 V |
| F58-21 (CANH) | P | CAN communication signal | - | - |
| F58-22 (CANL) | B | CAN communication signal | - | - |
| F58-23 (SWG) - Body ground | W - Body ground | Steering pad switch signal | Always | Below 1 V |

| | | | | |
|---|---|---|---|---|
| F58-24 (SW2) - F58-23 (SWG) | P - W | Steering pad switch signal | No switch pushed → MODE switch pushed → ON HOOK switch pushed → OFF HOOK switch pushed → VOICE switch pushed | 4.44 to 5.43 V → 0.45 to 0.65 V → 1.19 to 1.49 V → 2.09 to 2.54 V → 3.2 to 3.88 V |
| F58-25 (SW1) - F58-23 (SWG) | L - W | Steering pad switch signal | No switch is pushed → SEEK+ switch pushed → SEEK- switch pushed → VOL+ switch pushed → VOL- switch pushed | 4.44 to 5.43 V → 0.45 to 0.65 V → 1.19 to 1.49 V → 2.09 to 2.54 V → 3.2 to 3.88 V |
| F55-7 (GND) - F58-10 (GND1) | B - W-B | Ground | Always | Below 1 V |
| F55-9 (TX2+) | W | AVC-LAN communication signal | - | - |
| F55-10 (TX2-) | L | AVC-LAN communication signal | - | - |
| F55-11 (ACC) - F58-10 (GND1) | GR - W-B | Accessory (ON) | Engine switch on (ACC) | 11 to 14 V |
| | | | Engine switch off | Below 1 V |
| F55-12 (+B) - F58-10 (GND1) | R - W-B | Battery | Engine switch off | 11 to 14 V |
| F56-1 (AGND) - Body ground | Shield - Body ground | Shield ground | Always | Below 1 V |
| F56-3 (VAR+) - F56-7 (VA-) | W - R | Sound signal (Right) | USB audio device playing (When stereo jack adapter used) | A waveform synchronized with sounds is output. |
| F56-4 (VAL+) - F56-7 (VA-) | B - R | Sound signal (Left) | USB audio device playing (When stereo jack adapter used) | A waveform synchronized with sounds is output. |
| F56-7 (VA-) - F58-10 (GND1) | R - W-B | Sound signal ground | Always | Below 1 V |
| F57-1 (HILL) - F58-10 (GND1) | W - W-B | Illumination signal | Engine switch on (IG) Light control switch off → tail or on (Light intensity is not max. or min.) | Below 1 V → Pulse generation |
| F59-1 (MI+) | W | MOST communication signal | - | - |
| F59-2 (SLDI) - F58-10 (GND1) | BR - W-B | MOST communication signal | Always | Below 1 V |
| F59-3 (MO+) | B | MOST communication signal | - | - |
| F59-5 (MI-) | B | MOST communication signal | - | - |
| F59-6 (SLDO) - Body ground | BR - Body ground | Shield ground | Always | Below 1 V |
| F59-7 (MO-) | W | MOST communication signal | - | - |
| F59-8 (WUO) - F58-10 (GND1) | R - W-B | MOST communication signal | Engine switch on (ACC) | 4.5 V or higher |
| | | | Engine switch off | Below 1 V |
| F60-1 (TX1+) - Body ground*5 | W | AVC-LAN communication signal | - | - |
| F60-2 (TX1-) - Body ground*5 | L | AVC-LAN communication signal | - | - |
| F60-4 (NTSO) - F58-10 (GND1)*4 | B - W-B | Display signal | DVD is played on the display and navigation module display | A waveform synchronized with display signals is output. 1) (Refer to waveform |
| F60-5 (V+) - F58-10 (GND1)*3 | R - W-B | Television camera image signal | Engine switch on (IG) Shift lever in R Under normal conditions | Pulse generation (Refer to waveform 2) |
| | | | Engine switch on (IG) Shift lever in R Camera lens covered, blacking out screen | Pulse generation (Refer to waveform 3) |
| F60-6 (CA+) - F58-10 (GND1)*3 | B - W-B | Television camera power supply | Engine switch on (IG) Shift lever in R | 5.5 to 7 V |
| F60-9 (VV+) - F58-10 (GND1) | W - W-B | Display signal | DVD is played on the display and navigation module display | A waveform synchronized with display signals is output.4) (Refer to waveform |
| F60-14 (SGND) - F58-10 (GND1)*4 | W - W-B | Ground | Always | Below 1 V |
| F60-15 (SLD2) - F58-10 (GND1)*4 | Shield - Body ground | Shield ground | Always | Below 1 V |

| | | | | |
|---|---|---|---|---|
| F60-16 (V-) - F58-10 (GND1)*3 | W - W-B | Ground | Always | Below 1 V |
| F60-17 (CGND) - Body ground*3 | Shield - Body ground | Shield ground | Always | Below 1 V |
| F60-20 (VV-) - Body ground | B - Body ground | Ground | Always | Below 1 V |
| F70-1 (USB)*1 | B | USB communication line | - | - |
| F70-2 (USBG) - F58-10 (GND1)*1 | W - Body ground | Shield ground | Always | Below 1 V |
| F70-3 (VOT+) - F58-10 (GND1)*1 | B - W-B | Sent voice signal | Calling while using the operator service | A waveform synchronized with the sent voice is output. |
| F70-4 (USBV) - F58-10 (GND1)*1 | W - W-B | Telematics transceiver power supply | Engine switch off → on (ACC) | Below 1 V → 5 V |
| F70-5 (VOT-) - F58-10 (GND1)*1 | B - W-B | Sent voice signal | Calling while using the operator service | A waveform synchronized with the sent voice is output. |
| F70-6 (VOR-) - F58-10 (GND1)*1 | B - W-B | Receive voice signal | Receiving a call while using the operator service | A waveform synchronized with the received voice is output. |
| F70-7 (VOR+) - F58-10 (GND1)*1 | B - W-B | Receive voice signal | Receiving a call while using the operator service | A waveform synchronized with the received voice is output. |

*1: w/ G-BOOK System
*2: w/o G-BOOK System
*3: w/ Rear View Monitor System
*4: w/ Rear Seat Entertainment System
*5: w/ Parking Assist Monitor System



a. Reference (Oscilloscope waveform):

i. Waveform 1

| Item | Content |
|---|---|
| Measurement terminal | F60-4 (NTSO) - F58-10 (GND1) |
| Measurement setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | DVD is played on the display and navigation module display |

**Text in Illustration**

| | |
|---|---|
| *1 | Synchronization Signal |
| *2 | Video Waveform |

**HINT:**

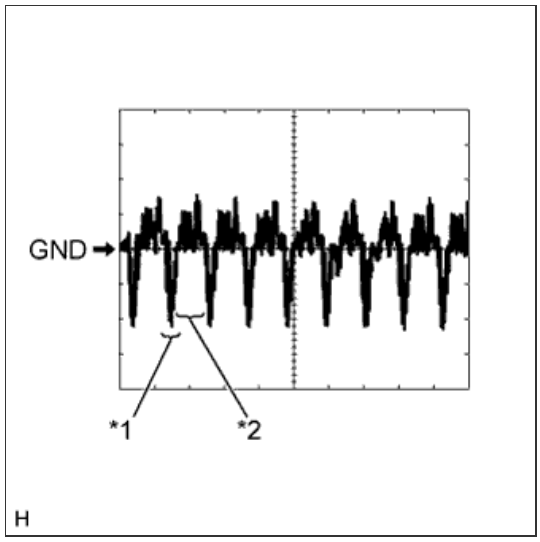
The video waveform changes according to the image output from the display and navigation module display to the television display assembly, but the synchronization signal does not change.

b. Reference (Oscilloscope waveform):

i. Waveform 2 (under normal conditions)



| Item | Content |
|---|---|
| Measurement terminal | F60-5 (V+) - F58-10 (GND1) |
| Measurement setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | Engine switch on (IG), shift lever in R |

**Text in Illustration**

| | |
|---|---|
| *1 | Synchronization Signal |
| *2 | Video Waveform |

**HINT:**

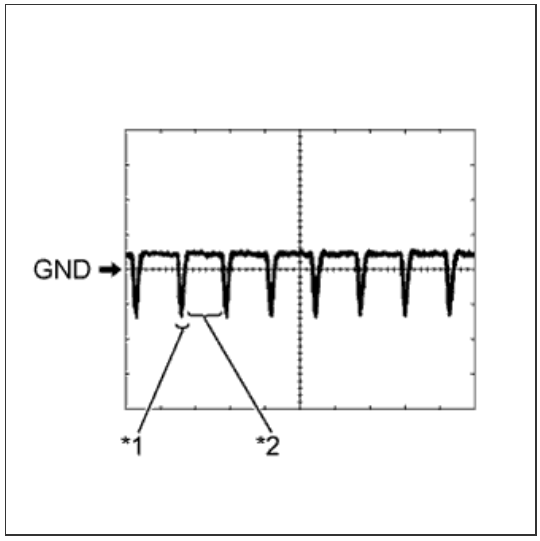
The video waveform changes according to the image from the television camera assembly.

c. Reference (Oscilloscope waveform):

i. Waveform 3 (camera lens is covered, blacking out the screen)



| Item | Content |
|---|---|
| Measurement terminal | F60-5 (V+) - F58-10 (GND1) |
| Measurement setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | Engine switch on (IG), shift lever in R |

**Text in Illustration**

| | |
|---|---|
| *1 | Synchronization Signal |
| *2 | Video Waveform |

**HINT:**

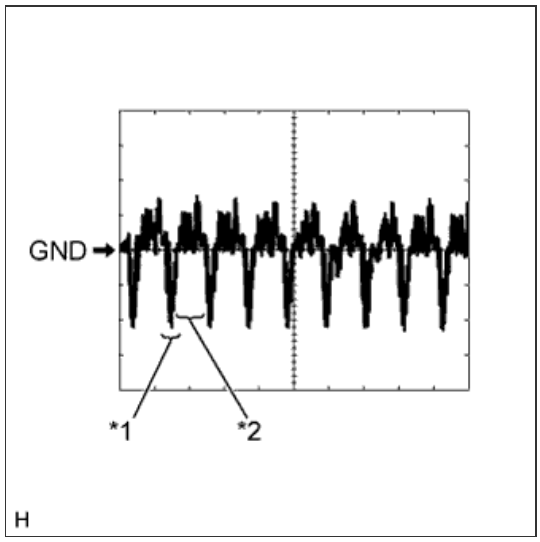
The video waveform changes according to the image that the television camera assembly projects.

d. Reference (Oscilloscope waveform):

i. Waveform 4



| Item | Content |
|---|---|
| Measurement terminal | F60-9 (VV+) - F58-10 (GND1) |
| Measurement setting | 200 mV/DIV., 10 µs/DIV. |
| Condition | DVD is playing |

**Text in Illustration**

| | |
|---|---|
| *1 | Synchronization Signal |
| *2 | Video Waveform |

**HINT:**

The video waveform changes according to the image input from the radio receiver assembly to the display and navigation module display, but the synchronization signal does not change.

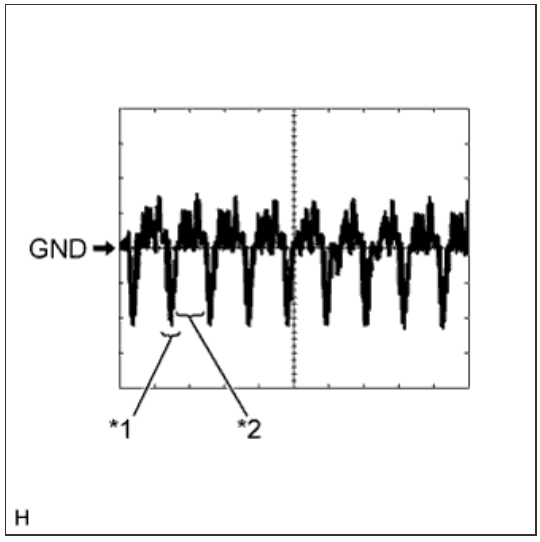
*2: w/o G-BOOK System
*3: w/ Rear View Monitor System
*4: w/ Rear Seat Entertainment System
*5: w/ Parking Assist Monitor System



a. Reference (Oscilloscope waveform):

i. Waveform 1

| Item | Content |
|---|---|
| Measurement terminal | F60-4 (NTSO) - F58-10 (GND1) |
| Measurement setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | DVD is played on the display and navigation module display |

**Text in Illustration**

| | |
|---|---|
| *1 | Synchronization Signal |
| *2 | Video Waveform |

**HINT:**

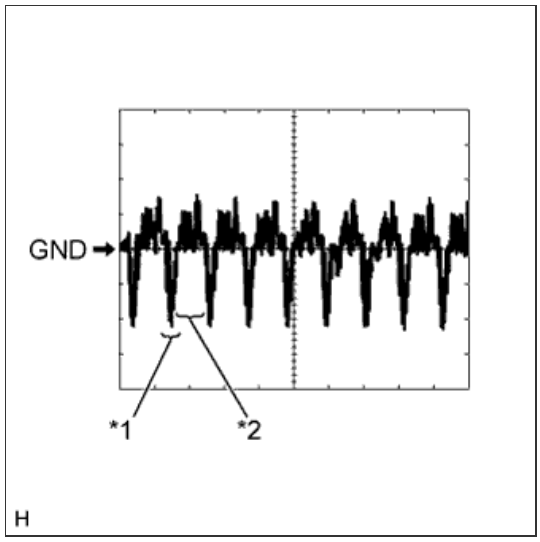
The video waveform changes according to the image output from the display and navigation module display to the television display assembly, but the synchronization signal does not change.

b. Reference (Oscilloscope waveform):

i. Waveform 2 (under normal conditions)



| Item | Content |
|---|---|
| Measurement terminal | F60-5 (V+) - F58-10 (GND1) |
| Measurement setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | Engine switch on (IG), shift lever in R |

**Text in Illustration**

| | |
|---|---|
| *1 | Synchronization Signal |
| *2 | Video Waveform |

**HINT:**

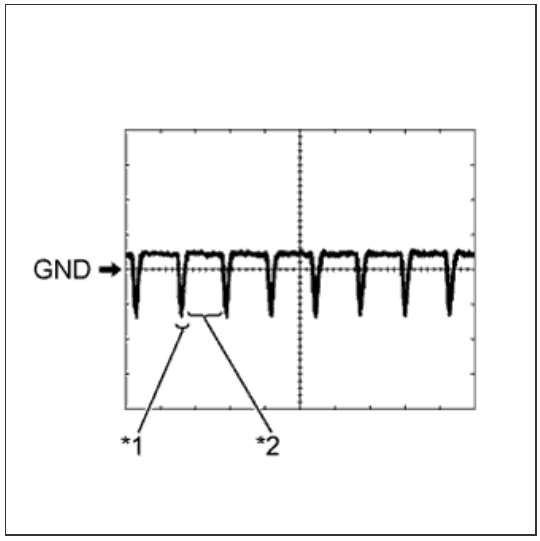
The video waveform changes according to the image from the television camera assembly.

c. Reference (Oscilloscope waveform):

i. Waveform 3 (camera lens is covered, blacking out the screen)



| Item | Content |
|---|---|
| Measurement terminal | F60-5 (V+) - F58-10 (GND1) |
| Measurement setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | Engine switch on (IG), shift lever in R |

**Text in Illustration**

| | |
|---|---|
| *1 | Synchronization Signal |
| *2 | Video Waveform |

**HINT:**

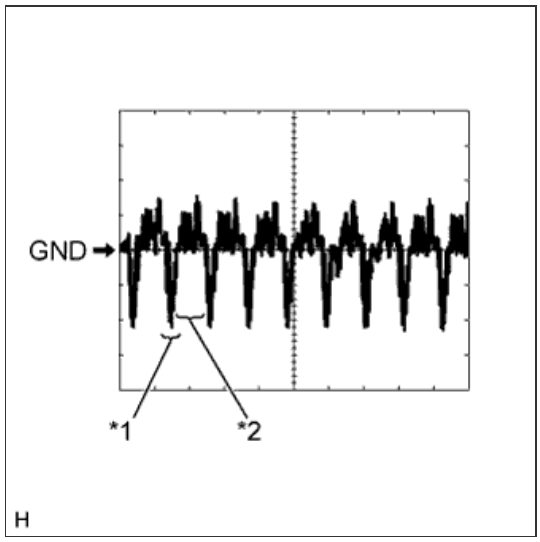
The video waveform changes according to the image that the television camera assembly projects.

d. Reference (Oscilloscope waveform):

i. Waveform 4



| Item | Content |
|---|---|
| Measurement terminal | F60-9 (VV+) - F58-10 (GND1) |
| Measurement setting | 200 mV/DIV., 10 µs/DIV. |
| Condition | DVD is playing |

**Text in Illustration**

| | |
|---|---|
| *1 | Synchronization Signal |
| *2 | Video Waveform |

**HINT:**

The video waveform changes according to the image input from the radio receiver assembly to the display and navigation module display, but the synchronization signal does not change.

## CHECK DTC (CHECK USING INTELLIGENT TESTER)

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Navigation System / DTC.

e. Check for DTC(s) and freeze frame data, and then write them down.

f. Check the details of the DTC(s) ( Click here).

**NOTICE:**

The navigation system outputs DTCs for the following system. When DTCs other than those in Diagnostic Trouble Code Chart for the navigation system are output, refer to Diagnostic Trouble Code Chart for the system.

| System | Proceed to |
|---|---|
| Audio and visual system (w/ navigation system) | Click here |
| Rear seat entertainment system (w/ Rear Seat Entertainment) | Click here |
| G-BOOK system (w/ G-BOOK system) | Click here |
| Parking assist monitor system (w/ Parking assist monitor system) | Click here |
| Wide view front monitor system (w/ Wide view front monitor system) | Click here |
| Side monitor system (w/ Side monitor system) | Click here |

## CLEAR DTC (CHECK USING INTELLIGENT TESTER)

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body Electrical / Navigation System / Trouble Codes.

e. Clear the DTCs.

## START DIAGNOSTIC MODE

**HINT:**

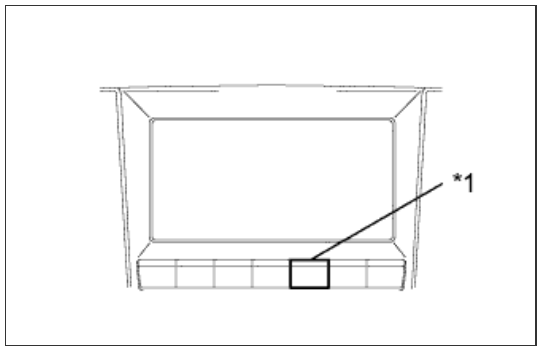
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**
- **To help find the malfunction when the system cannot change to diagnostic mode, check for DTCs using the intelligent tester.**
- **After the engine switch is turned on (IG), check that the map is displayed before starting diagnostic mode. Otherwise, some items cannot be checked.**

a. There are 2 methods to start diagnostic mode. Start the mode by using either of them.

b. Method 1



**Text in Illustration**

| | |
|---|---|
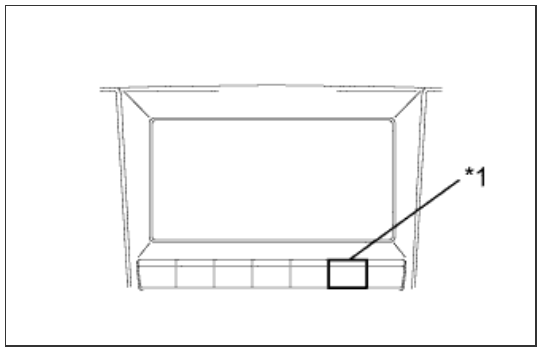
| *1 | "INFO TEL" Switch |

i. Start the engine.

ii. While pressing and holding the "INFO TEL" switch, operate the light control switch: off → Turn on → Turn off → Turn on → Turn off → Turn on → Turn off.

iii. Diagnostic mode starts and the "Service Menu" screen will be displayed.



c. Method 2

i. Start the engine.

ii. Press the "DISP" switch.

**Text in Illustration**

| | |
|---|---|
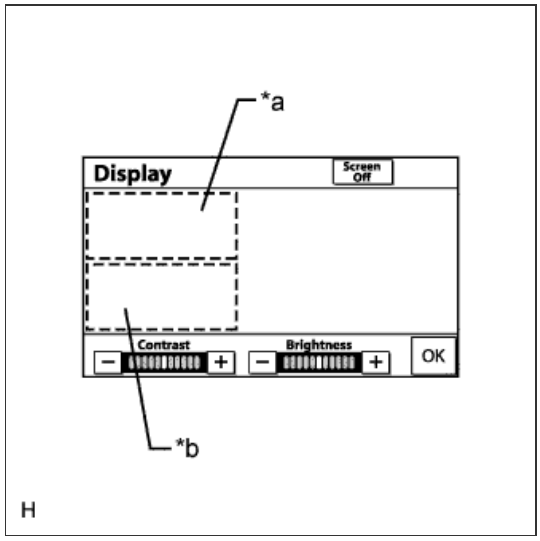
| *1 | "DISP" Switch |



iii. From the display quality adjustment screen, touch the corners of the screen in the following order: Upper left → Lower left → Upper left → Lower left → Upper left → Lower left.

**Text in Illustration**

| | |
|---|---|
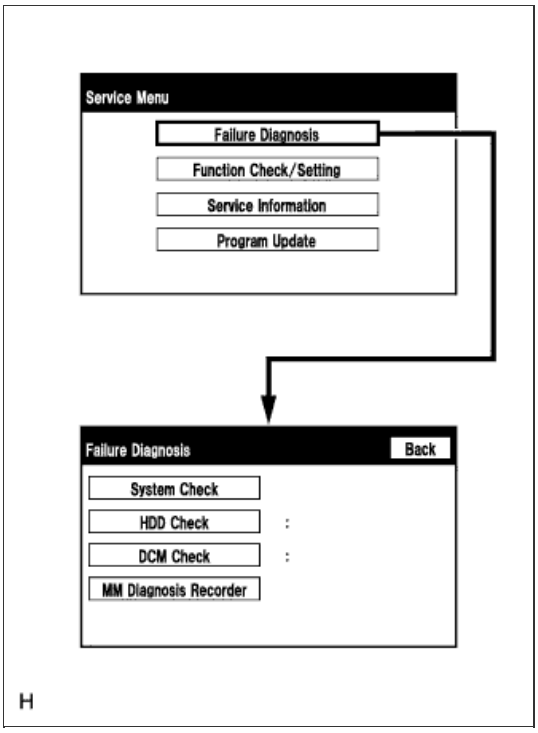
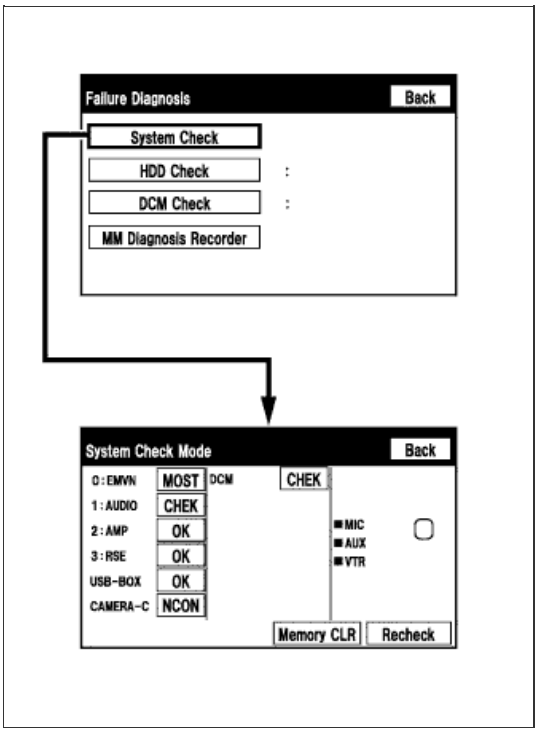
| *a | Upper Left |
| *b | Lower Left |

iv. Diagnostic mode starts and the "System Menu" screen will be displayed.



## FINISH DIAGNOSTIC MODE

a. Turn the engine switch off.



## FAILURE DIAGNOSIS

a. The "Failure Diagnosis" screen is displayed when the "Failure Diagnosis" switch on the "Service Menu" screen is selected.

## SYSTEM CHECK (CHECK USING SYSTEM CHECK MODE SCREEN)

a. The "System Check Mode" screen is displayed when the "System Check" switch on the "Failure Diagnosis" screen is selected.

## CHECK DTC (CHECK USING SYSTEM CHECK MODE SCREEN)

**HINT:**

Refer to Diagnosis Display Detailed Description for further details on the "System Check Mode" screen ( Click here).

a. Read the system check result.

i. When the result is "EXCH" or "CHEK", select the icon which displays the result, and check and record each DTC displayed on the "Unit Check Mode" screen.

**NOTICE:**

A maximum of 6 DTCs can be displayed by the display and navigation module display. When more than 6 DTCs are expected, check DTCs using the intelligent tester.

**HINT:**

- **Refer to Diagnosis Display Detailed Description for further details on the "System Check Mode" screen (Click here).**
- **When all results are "OK", this means that no DTCs are present.**
- **When "MOST" is displayed for the result, select the "MOST" switch to display the "MOST Line Check" and check the MOST network.**
- **Changing to the "MOST Line Check" screen is possible only when the MOST network is malfunctioning and "MOST" is displayed for the result.**
- **If the MOST network had a malfunction in the past, the DTCs will be displayed in the Memory column.**
- **Refer to Diagnosis Display Detailed Description for further details on the "MOST Line Check" screen (Click here).**
- **When "NCON" is displayed for all devices connected using the AVC-LAN, or when all device names are not displayed, check if there is a short circuit in the AVC-LAN or devices connected to the AVC-LAN. Repair or replace parts as necessary (Click here).**
- **When proceeding to view the results of another device, select the "Back" switch to return to the "System Check Mode" screen. Repeat the above step to view the results of other devices.**

ii. Check the details of the DTC(s) ( Click here).

**NOTICE:**

The navigation system outputs DTCs for the following system. When DTCs other than the codes in Diagnostic Trouble Code Chart for the navigation system are output, refer to Diagnostic Trouble Code Chart for the system.

| System | Proceed to |
|---|---|
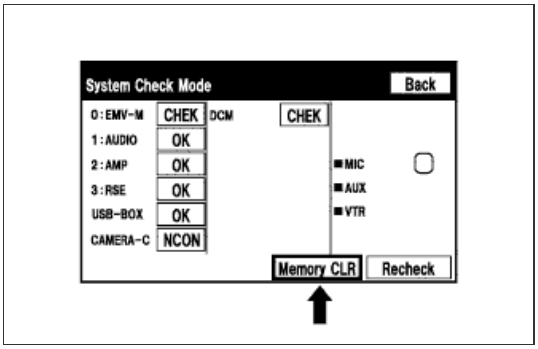
| Audio and visual system (w/ navigation system) | Click here |
| Rear seat entertainment system (w/ Rear Seat Entertainment) | Click here |
| G-BOOK system (w/ G-BOOK system) | Click here |
| Parking assist monitor system (w/ Parking assist monitor system) | Click here |
| Wide view front monitor system (w/ Wide view front monitor system) | Click here |
| Side monitor system (w/ Side monitor system) | Click here |

## DTC CLEAR/RECHECK (CLEAR USING SYSTEM CHECK MODE SCREEN)



a. Clear DTC

i. Select the "Memory CLR" switch for 3 seconds.

ii. Confirm that the check results are cleared.

**HINT:**

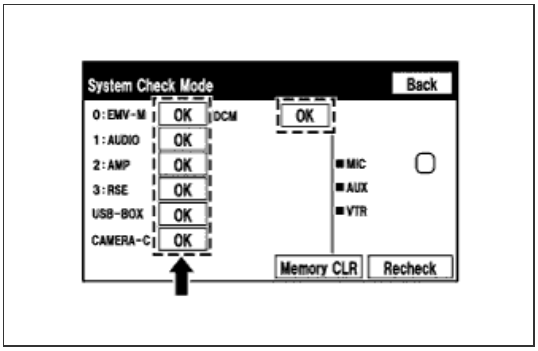
- **To clear the DTC for a specific device, clear the DTC using the "Unit Check Mode" screen.**
- **When clearing a DTC using the "Unit Check Mode" screen, press the "Code CLR" switch for 3 seconds.**

b. Recheck



i. Select the "Recheck" switch.

ii. Confirm that all diagnostic codes are "OK" when the check results are displayed. If a code other than "OK" is displayed, troubleshoot again.

**HINT:**

When a DTC was cleared using the "Unit Check Mode" screen, select the "Back" switch to return to the "System Check Mode" screen and perform this operation.

**for Preparation** Click here

## CHECK DTC (CHECK USING INTELLIGENT TESTER)

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Navigation System / DTC.

e. Check for DTC(s) and freeze frame data, and then write them down.

f. Check the details of the DTC(s) ( Click here).

**NOTICE:**

The navigation system outputs DTCs for the following system. When DTCs other than those in Diagnostic Trouble Code Chart for the navigation system are output, refer to Diagnostic Trouble Code Chart for the system.

| System | Proceed to |
|---|---|
| Audio and visual system (w/ navigation system) | Click here |
| Rear seat entertainment system (w/ Rear Seat Entertainment) | Click here |
| G-BOOK system (w/ G-BOOK system) | Click here |
| Parking assist monitor system (w/ Parking assist monitor system) | Click here |
| Wide view front monitor system (w/ Wide view front monitor system) | Click here |
| Side monitor system (w/ Side monitor system) | Click here |

## CLEAR DTC (CHECK USING INTELLIGENT TESTER)

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body Electrical / Navigation System / Trouble Codes.

e. Clear the DTCs.

## START DIAGNOSTIC MODE

**HINT:**

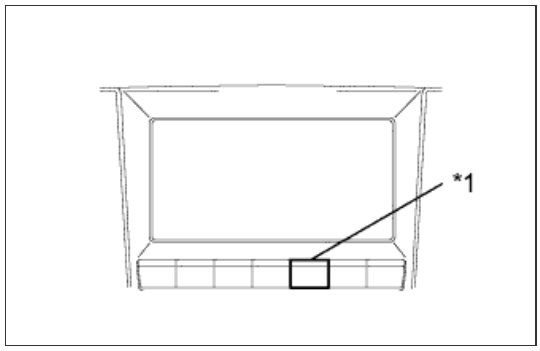
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**
- **To help find the malfunction when the system cannot change to diagnostic mode, check for DTCs using the intelligent tester.**
- **After the engine switch is turned on (IG), check that the map is displayed before starting diagnostic mode. Otherwise, some items cannot be checked.**

a. There are 2 methods to start diagnostic mode. Start the mode by using either of them.

b. Method 1



**Text in Illustration**

| | |
|---|---|
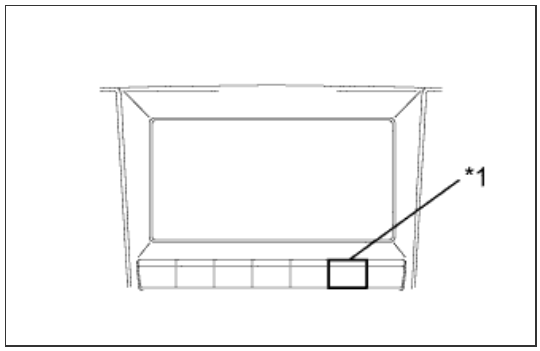
| *1 | "INFO TEL" Switch |

i. Start the engine.

ii. While pressing and holding the "INFO TEL" switch, operate the light control switch: off → Turn on → Turn off → Turn on → Turn off → Turn on → Turn off.

iii. Diagnostic mode starts and the "Service Menu" screen will be displayed.



c. Method 2

i. Start the engine.

ii. Press the "DISP" switch.

**Text in Illustration**

| | |
|---|---|
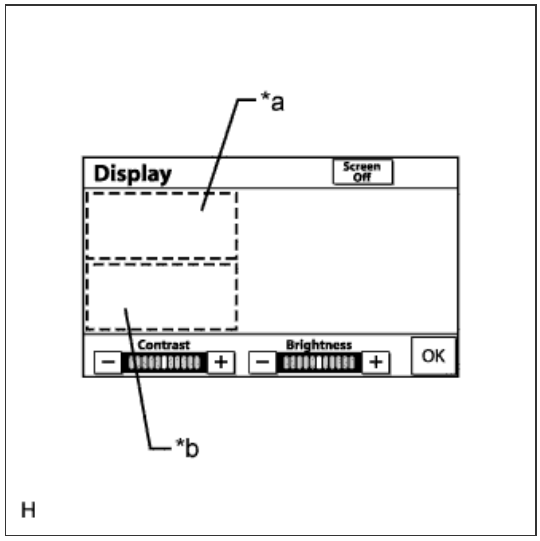
| *1 | "DISP" Switch |



iii. From the display quality adjustment screen, touch the corners of the screen in the following order: Upper left → Lower left → Upper left → Lower left → Upper left → Lower left.

**Text in Illustration**

| | |
|---|---|
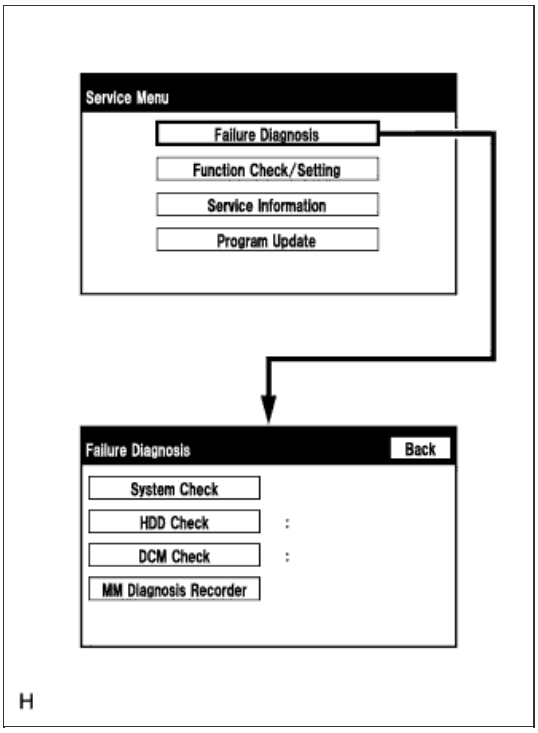
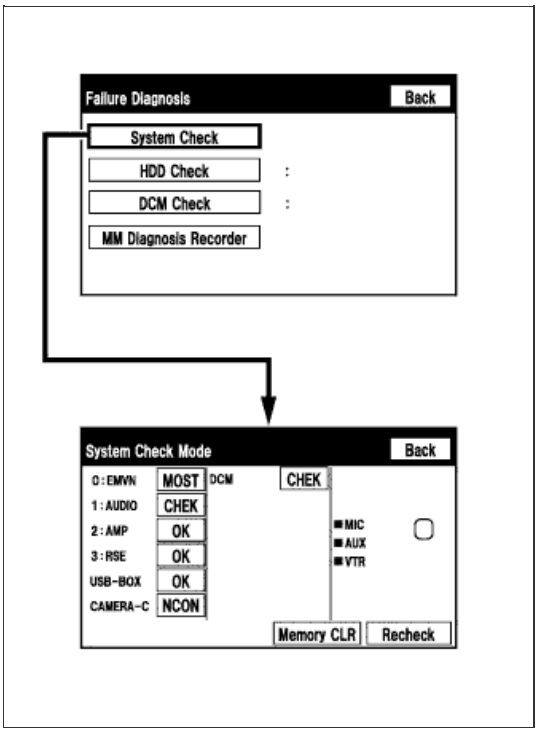
| *a | Upper Left |
| *b | Lower Left |

iv. Diagnostic mode starts and the "System Menu" screen will be displayed.



## FINISH DIAGNOSTIC MODE

a. Turn the engine switch off.



## FAILURE DIAGNOSIS

a. The "Failure Diagnosis" screen is displayed when the "Failure Diagnosis" switch on the "Service Menu" screen is selected.

## SYSTEM CHECK (CHECK USING SYSTEM CHECK MODE SCREEN)

a. The "System Check Mode" screen is displayed when the "System Check" switch on the "Failure Diagnosis" screen is selected.

## CHECK DTC (CHECK USING SYSTEM CHECK MODE SCREEN)

**HINT:**

Refer to Diagnosis Display Detailed Description for further details on the "System Check Mode" screen ( Click here).

a. Read the system check result.

i. When the result is "EXCH" or "CHEK", select the icon which displays the result, and check and record each DTC displayed on the "Unit Check Mode" screen.

**NOTICE:**

A maximum of 6 DTCs can be displayed by the display and navigation module display. When more than 6 DTCs are expected, check DTCs using the intelligent tester.

**HINT:**

- **Refer to Diagnosis Display Detailed Description for further details on the "System Check Mode" screen (Click here).**
- **When all results are "OK", this means that no DTCs are present.**
- **When "MOST" is displayed for the result, select the "MOST" switch to display the "MOST Line Check" and check the MOST network.**
- **Changing to the "MOST Line Check" screen is possible only when the MOST network is malfunctioning and "MOST" is displayed for the result.**
- **If the MOST network had a malfunction in the past, the DTCs will be displayed in the Memory column.**
- **Refer to Diagnosis Display Detailed Description for further details on the "MOST Line Check" screen (Click here).**
- **When "NCON" is displayed for all devices connected using the AVC-LAN, or when all device names are not displayed, check if there is a short circuit in the AVC-LAN or devices connected to the AVC-LAN. Repair or replace parts as necessary (Click here).**
- **When proceeding to view the results of another device, select the "Back" switch to return to the "System Check Mode" screen. Repeat the above step to view the results of other devices.**

ii. Check the details of the DTC(s) ( Click here).

**NOTICE:**

The navigation system outputs DTCs for the following system. When DTCs other than the codes in Diagnostic Trouble Code Chart for the navigation system are output, refer to Diagnostic Trouble Code Chart for the system.

| System | Proceed to |
|---|---|
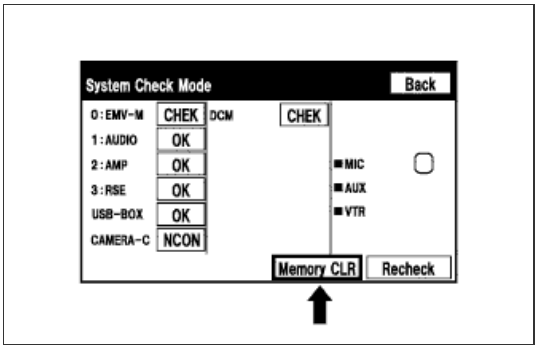
| Audio and visual system (w/ navigation system) | Click here |
| Rear seat entertainment system (w/ Rear Seat Entertainment) | Click here |
| G-BOOK system (w/ G-BOOK system) | Click here |
| Parking assist monitor system (w/ Parking assist monitor system) | Click here |
| Wide view front monitor system (w/ Wide view front monitor system) | Click here |
| Side monitor system (w/ Side monitor system) | Click here |

## DTC CLEAR/RECHECK (CLEAR USING SYSTEM CHECK MODE SCREEN)



a. Clear DTC

i. Select the "Memory CLR" switch for 3 seconds.

ii. Confirm that the check results are cleared.

**HINT:**

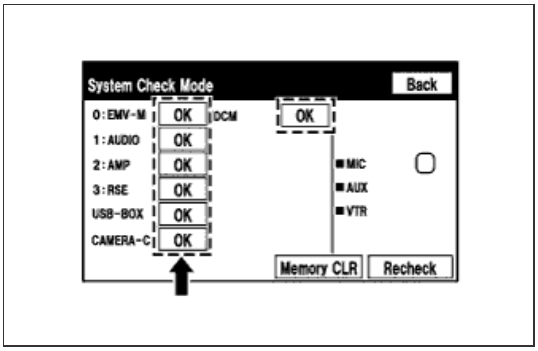
- **To clear the DTC for a specific device, clear the DTC using the "Unit Check Mode" screen.**
- **When clearing a DTC using the "Unit Check Mode" screen, press the "Code CLR" switch for 3 seconds.**

b. Recheck



i. Select the "Recheck" switch.

ii. Confirm that all diagnostic codes are "OK" when the check results are displayed. If a code other than "OK" is displayed, troubleshoot again.

**HINT:**

When a DTC was cleared using the "Unit Check Mode" screen, select the "Back" switch to return to the "System Check Mode" screen and perform this operation.

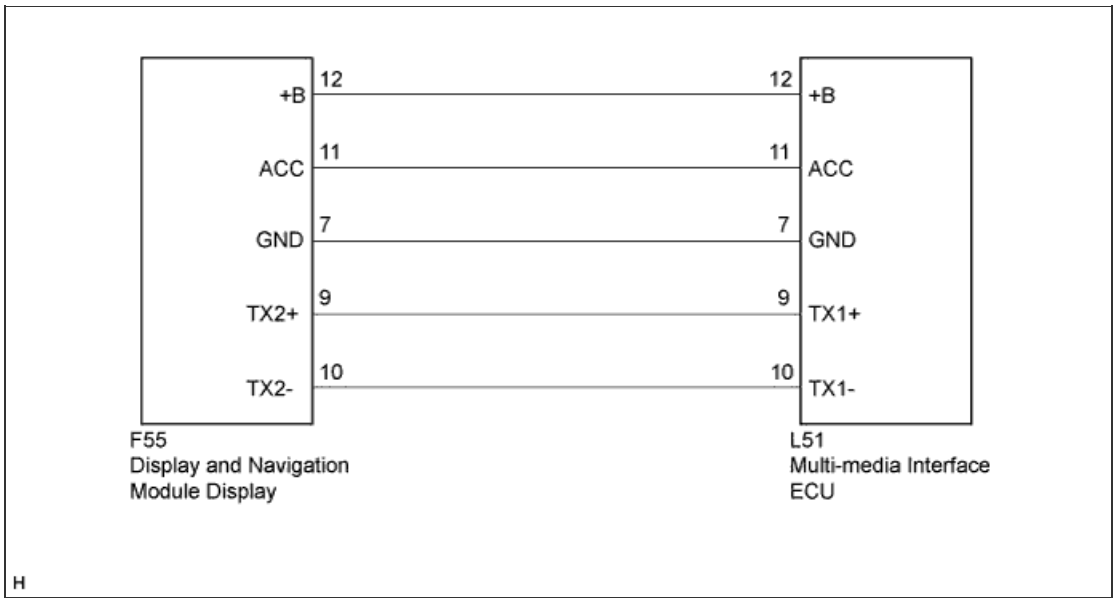
## DTC B156E No Response from Multi-media Interface ECU

## DTC B156B Multi-media Interface ECU Disconnected

**for Preparation** Click here

### DESCRIPTION



The display and navigation module display and multi-media interface ECU are connected by the AVC-LAN communication line.
When an AVC-LAN communication error occurs between the display and navigation module display and multi-media interface ECU, these DTCs will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B156E | No response to the diagnostic memory request from the master unit. | • Multi-media interface ECU power source circuit<br>• AVC-LAN circuit between display and navigation module display and multi-media interface ECU<br>• Multi-media interface ECU<br>• Display and navigation module display |
| B156B*1 | A device that is listed in the AVC-LAN connected device record of the master unit is missing. | |

**HINT:**

- ***1: Even if no fault is present, this DTC may be stored depending on the battery condition or engine start voltage.**
- **The display and navigation module display is the master unit.**

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) ( Click here).

#### 1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Check for optional components.

i. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components (including associated wiring) are installed. | A |
| Optional components (including associated | |

| | |
|---|---|
| wiring) are not installed. | B |

**HINT:**

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect AVC-LAN communication.**
- **This DTC may be stored when an AVC-LAN communication error occurs due to electrical noise.**

**B** → Go to step 3

**A**

## 2.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

**NEXT**

## 3.CHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same DTC is output again.

**OK:**
**No DTCs are output.**

**NG** → Go to step 4

**OK**

**END**

## 4.CHECK HARNESS AND CONNECTOR (INTERFACE ECU - NAVIGATION MODULE)

a. Disconnect the L51 multi-media interface ECU connector.

b. Disconnect the F55 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L51-12 (+B) - F55-12 (+B) | Always | Below 1 Ω |
| L51-11 (ACC) - F55-11 (ACC) | Always | Below 1 Ω |
| L51-7 (GND) - F55-7 (GND) | Always | Below 1 Ω |
| L51-9 (TX1+) - F55-9 (TX2+) | Always | Below 1 Ω |
| L51-10 (TX1-) - F55-10 (TX2-) | Always | Below 1 Ω |
| L51-12 (+B) - Body ground | Always | 10 kΩ or higher |
| L51-11 (ACC) - Body ground | Always | 10 kΩ or higher |
| L51-7 (GND) - Body ground | Always | 10 kΩ or higher |
| L51-9 (TX1+) - Body ground | Always | 10 kΩ or higher |

| | | |
|---|---|---|
| L51-10 (TX1-) - Body ground | Always | 10 kΩ or higher |

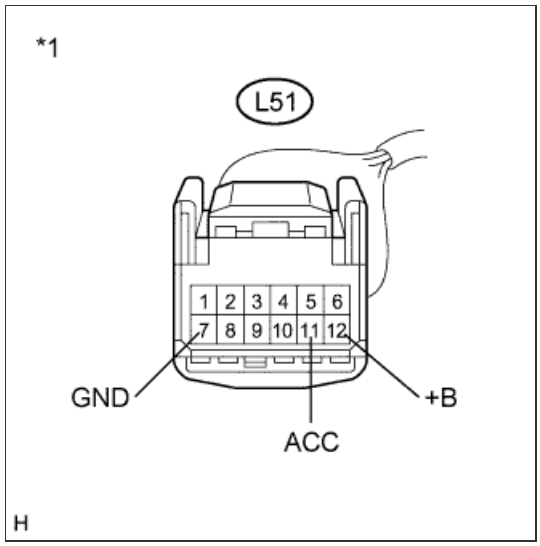
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 5.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA INTERFACE ECU POWER SOURCE)

a. Disconnect the L51 multi-media interface ECU connector.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L51-7 (GND) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| L51-12 (+B) - L51-7 (GND) | Always | 11 to 14 V |
| L51-11 (ACC) - L51-7 (GND) | Engine switch on (ACC) | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Multi-media Interface ECU) |

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

## 6.REPLACE MULTI-MEDIA INTERFACE ECU

a. Replace the multi-media interface ECU (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same DTC is output again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

END

## DTC B15C0 Short in GPS Antenna

## DTC B15C1 Open in GPS Antenna

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored when a malfunction occurs in the navigation antenna assembly.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15C0 | Navigation antenna error | • Wire harness<br>• Navigation antenna assembly<br>• Display and navigation module display |
| B15C1 | Error of the power source to the navigation antenna assembly | |

### INSPECTION PROCEDURE

**NOTICE:**

When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) ( Click here).

**1.CHECK CONNECTION OF ANTENNA CABLE**

a. Check if the navigation antenna cable is securely connected to the display and navigation module display.

**OK:**
**Navigation antenna cable is securely connected.**

NG → **SECURELY CONNECT NAVIGATION ANTENNA CABLE**

OK

**2.REPLACE NAVIGATION ANTENNA ASSEMBLY**

a. Replace the navigation antenna assembly with a known good one and check if the same problem occurs again ( Click here).

i. Clear the DTCs (Click here).

ii. Recheck for DTCs and check if the same DTC is output again.

**OK:**
**No DTCs are output.**

NG → **REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)**

OK

**END**

c. Recheck for DTCs and check if the same DTC is output again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

END

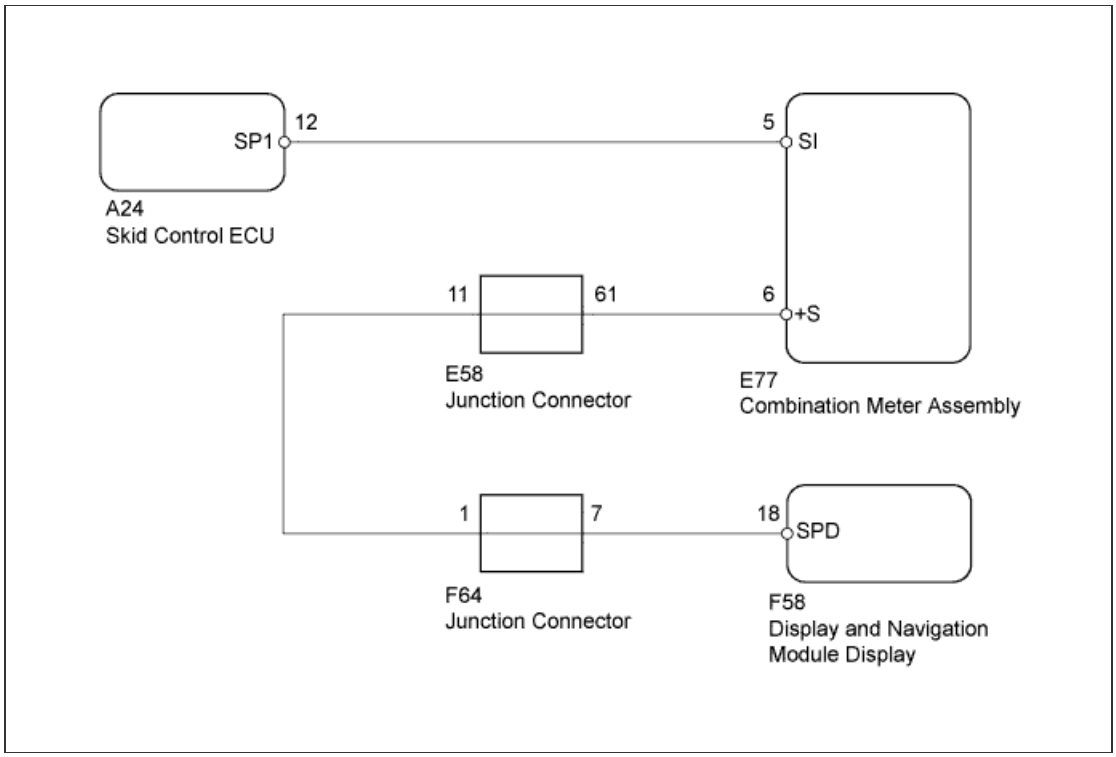
## DTC B15C2 Speed Signal Malfunction

**for Preparation** Click here

### DESCRIPTION



The display and navigation module display receives a vehicle speed signal from the combination meter assembly and information from the navigation antenna, and then adjusts vehicle position.
The display and navigation module display stores this DTC when the difference between the speed information that the navigation antenna receives and the SPD pulse received from the combination meter assembly becomes large.

**HINT:**

- **A voltage of 12 V or 5 V is output from each ECU and then input to the combination meter assembly. The signal is changed to a pulse signal at the transistor in the combination meter assembly. Each ECU controls the respective systems based on the pulse signal.**
- **If a short occurs in any of the ECUs or in the wire harness connected to an ECU, all systems in the diagram below will not operate normally.**

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15C2 | A difference between the GPS speed and SPD pulse is detected | • Wire harness or connector<br>• Combination meter assembly<br>• Display and navigation module display |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

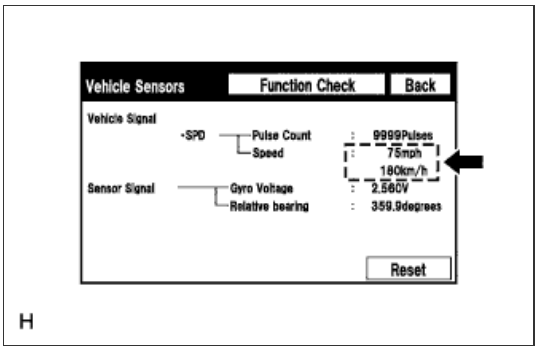
**NOTICE:**

When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) ( Click here).

**1.CHECK VEHICLE SENSOR (OPERATION CHECK)**

a. Enter the "Vehicle Sensors" screen. Refer to Check GPS & Vehicle Sensors in Operation Check (Click here).

b. While driving the vehicle, compare the "SPD" indicator to the reading on the



speedometer. Check if these readings are almost equal.

**HINT:**

The meter ECU receives the vehicle speed signal from the skid control ECU via the direct line. Therefore, perform the following inspection referring to values on the Data List of the skid control ECU because it is the source of the vehicle speed signal.

**OK:**

**Vehicle speed displayed on the "Vehicle Sensors" screen is almost the same as the actual vehicle speed measured using the intelligent tester (Click here).**

NG → Go to step 2

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

## 2.INSPECT COMBINATION METER ASSEMBLY (OUTPUT WAVEFORM)

a. Check the input waveform.

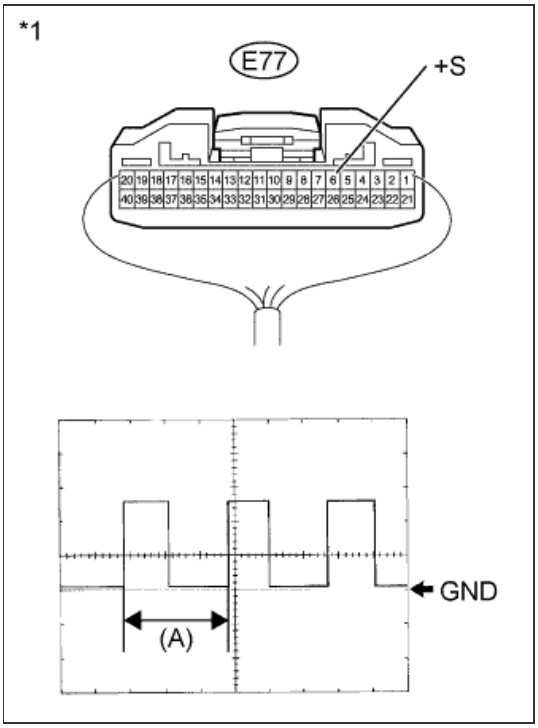
i. Remove the combination meter assembly with the connector(s) still connected.

ii. Connect an oscilloscope to terminal E77-6 (+S) and body ground.

iii. Turn the engine switch on (IG).

iv. Turn the wheel slowly.

v. Check the signal waveform according to the condition(s) in the table below.



| Item | Condition |
|---|---|
| Measurement terminal | E77-6 (+S) - Body ground |
| Tool setting | 5 V/DIV., 20 ms./DIV. |
| Vehicle condition | Driving at approx. 20 km/h (12 mph) |

**OK:**

**The waveform is displayed as shown in the illustration.**

**HINT:**

When the system is functioning normally, one wheel revolution generates 4 pulses. As the vehicle speed increases, the width indicated by (A) in the illustration narrows.

**Text in Illustration**

| | |
|---|---|
| *1 | Rear view of wire harness connector (to Combination meter assembly) |

NG → GO TO METER / GAUGE SYSTEM (Click here)

OK

## 3.CHECK HARNESS AND CONNECTOR (NAVIGATION MODULE - COMBINATION METER)

a. Disconnect the F58 display and navigation module display connector.

b. Disconnect the E77 combination meter assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-18 (SPD) - E77-6 (+S) | Always | Below 1 Ω |
| F58-18 (SPD) - | Always | 10 kΩ or higher |

| | | |
|---|---|---|
| Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

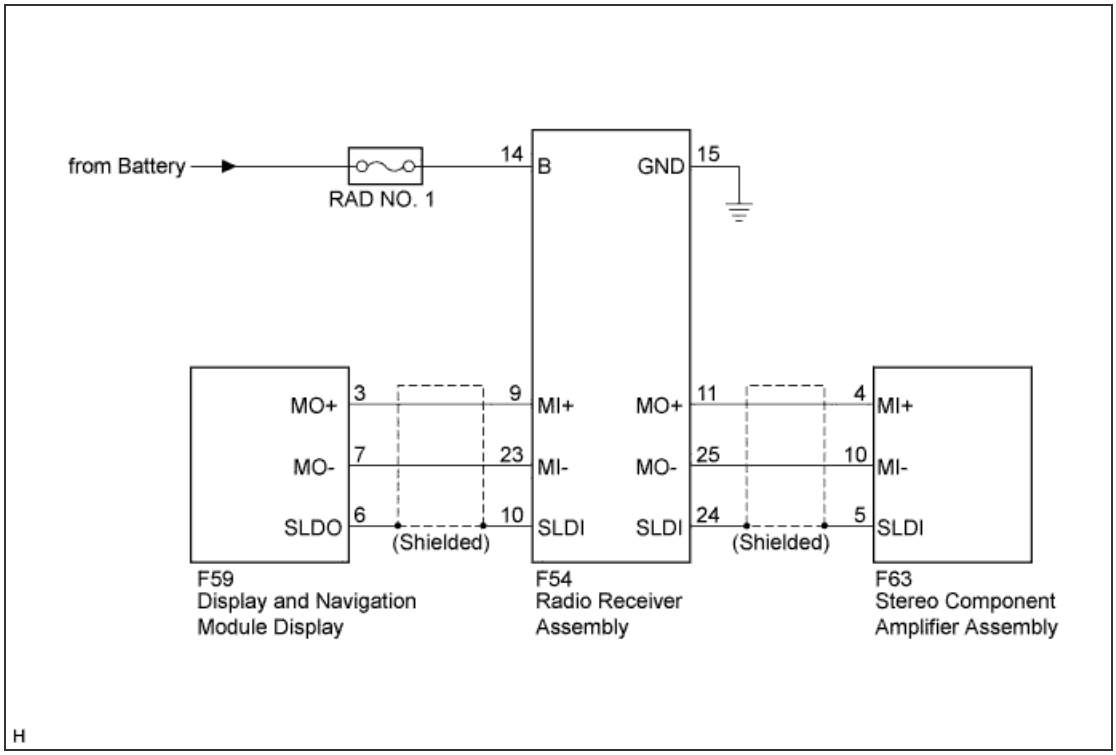
REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

## DTC B1591 No Response from Audio HU

## DTC B15D1 Audio HU Disconnected

**for Preparation** Click here

### DESCRIPTION



The display and navigation module display and radio receiver assembly are connected by the MOST communication line.
When a MOST communication error occurs between the display and navigation module display and radio receiver assembly, these DTCs will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1591 | No response to the diagnostic memory request from the master unit. | • Radio receiver assembly power source circuit<br>• MOST circuit between display and navigation module display and radio receiver assembly<br>• MOST circuit between radio receiver assembly and stereo component amplifier assembly<br>• Radio receiver assembly<br>• Display and navigation module display |
| B15D1 | A device that is listed in the MOST network connected device record of the master unit is missing. | |

**HINT:**

For the MOST network, the display and navigation module display is the master unit.

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

- **Inspect the fuses for circuits related to this system before performing the following inspection procedure.**
- **When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) (Click here).**

#### 1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Check for optional components.

i. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components (including associated wiring) are installed. | A |
| Optional components (including associated wiring) are not installed. | B |

**HINT:**

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect MOST communication.**
- **This DTC may be stored when a MOST communication error occurs due to electrical noise.**

**B** → Go to step 3

**A**

## 2.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

**NEXT**

## 3.CHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same DTC is output again.

**OK:**
**No DTCs are output.**

**NG** → Go to step 4

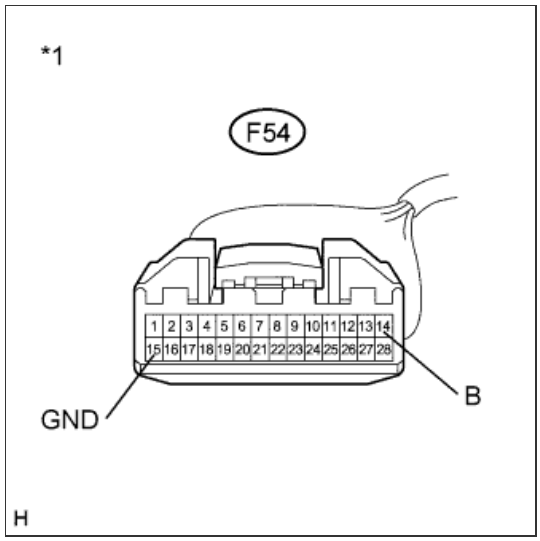
**OK**

**END**

## 4.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER ASSEMBLY POWER SOURCE)

a. Disconnect the F54 radio receiver assembly connector.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-15 (GND) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F54-14 (B) - F54-15 (GND) | Engine switch off | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| | Front view of wire harness connector |

| | |
|---|---|
| *1 | (to Radio Receiver Assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 5.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - NAVIGATION MODULE)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-9 (MI+) - F59-3 (MO+) | Always | Below 1 Ω |
| F54-23 (MI-) - F59-7 (MO-) | Always | Below 1 Ω |
| F54-10 (SLDI) - F59-6 (SLDO) | Always | Below 1 Ω |
| F54-9 (MI+) - Body ground | Always | 10 kΩ or higher |
| F54-23 (MI-) - Body ground | Always | 10 kΩ or higher |
| F54-10 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 6.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - AMPLIFIER)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F63 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-11 (MO+) - F63-4 (MI+) | Always | Below 1 Ω |
| F54-25 (MO-) - F63-10 (MI-) | Always | Below 1 Ω |
| F54-24 (SLDI) - F63-5 (SLDI) | Always | Below 1 Ω |
| F54-11 (MO+) - Body ground | Always | 10 kΩ or higher |
| F54-25 (MO-) - Body ground | Always | 10 kΩ or higher |
| F54-24 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 7.REPLACE RADIO RECEIVER ASSEMBLY

a. Replace the radio receiver assembly (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same DTC is output again.

**OK:**
**No DTCs are output.**

**NG** → **REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)**

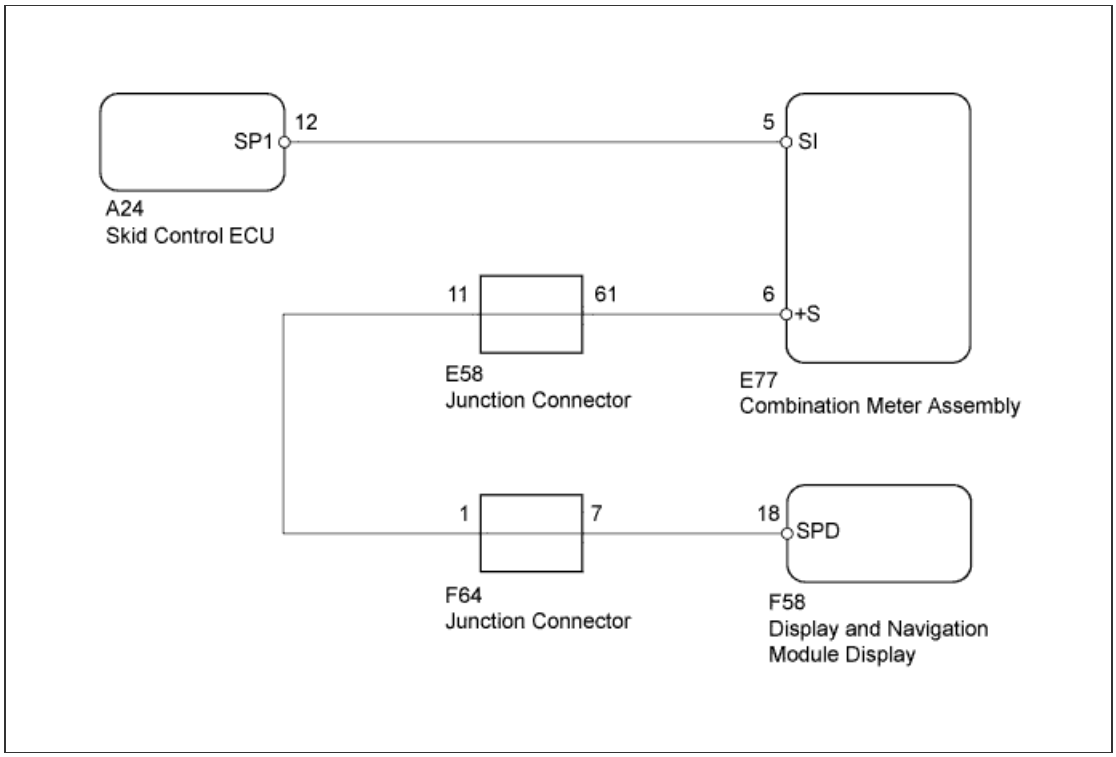
**OK**

**END**

## DTC B15C2 Speed Signal Malfunction

**for Preparation** Click here

### DESCRIPTION



The display and navigation module display receives a vehicle speed signal from the combination meter assembly and information from the navigation antenna, and then adjusts vehicle position.
The display and navigation module display stores this DTC when the difference between the speed information that the navigation antenna receives and the SPD pulse received from the combination meter assembly becomes large.

**HINT:**

- **A voltage of 12 V or 5 V is output from each ECU and then input to the combination meter assembly. The signal is changed to a pulse signal at the transistor in the combination meter assembly. Each ECU controls the respective systems based on the pulse signal.**
- **If a short occurs in any of the ECUs or in the wire harness connected to an ECU, all systems in the diagram below will not operate normally.**

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15C2 | A difference between the GPS speed and SPD pulse is detected | • Wire harness or connector<br>• Combination meter assembly<br>• Display and navigation module display |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

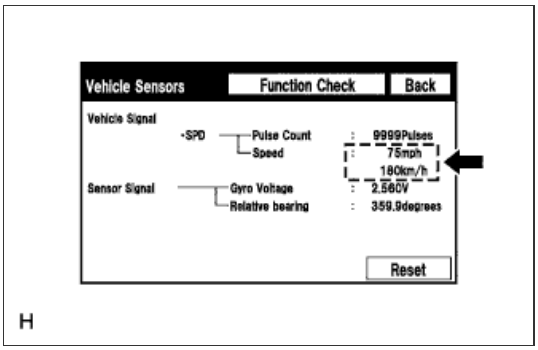
When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) ( Click here).

**1.CHECK VEHICLE SENSOR (OPERATION CHECK)**

a. Enter the "Vehicle Sensors" screen. Refer to Check GPS & Vehicle Sensors in Operation Check (Click here).

b. While driving the vehicle, compare the "SPD" indicator to the reading on the



speedometer. Check if these readings are almost equal.

**HINT:**

The meter ECU receives the vehicle speed signal from the skid control ECU via the direct line. Therefore, perform the following inspection referring to values on the Data List of the skid control ECU because it is the source of the vehicle speed signal.

**OK:**

**Vehicle speed displayed on the "Vehicle Sensors" screen is almost the same as the actual vehicle speed measured using the intelligent tester (Click here).**

NG → Go to step 2

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

## 2.INSPECT COMBINATION METER ASSEMBLY (OUTPUT WAVEFORM)

a. Check the input waveform.

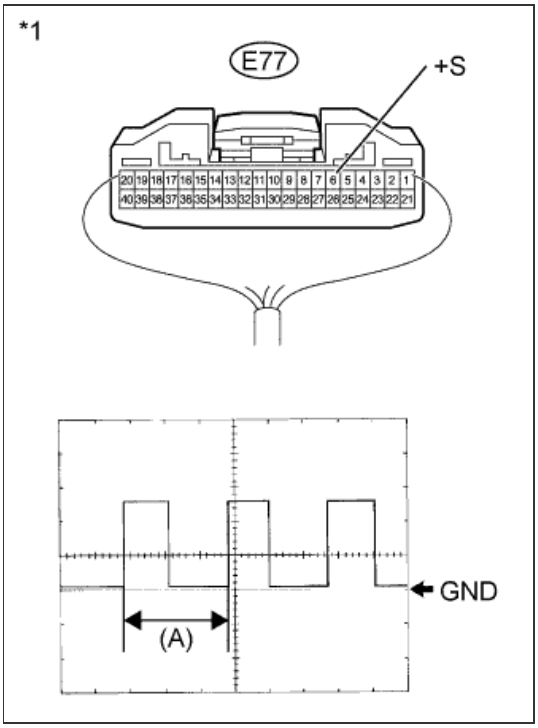
i. Remove the combination meter assembly with the connector(s) still connected.

ii. Connect an oscilloscope to terminal E77-6 (+S) and body ground.

iii. Turn the engine switch on (IG).

iv. Turn the wheel slowly.

v. Check the signal waveform according to the condition(s) in the table below.



| Item | Condition |
|---|---|
| Measurement terminal | E77-6 (+S) - Body ground |
| Tool setting | 5 V/DIV., 20 ms./DIV. |
| Vehicle condition | Driving at approx. 20 km/h (12 mph) |

**OK:**

**The waveform is displayed as shown in the illustration.**

**HINT:**

When the system is functioning normally, one wheel revolution generates 4 pulses. As the vehicle speed increases, the width indicated by (A) in the illustration narrows.

**Text in Illustration**

| | |
|---|---|
| *1 | Rear view of wire harness connector (to Combination meter assembly) |

NG → GO TO METER / GAUGE SYSTEM (Click here)

OK

## 3.CHECK HARNESS AND CONNECTOR (NAVIGATION MODULE - COMBINATION METER)

a. Disconnect the F58 display and navigation module display connector.

b. Disconnect the E77 combination meter assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-18 (SPD) - E77-6 (+S) | Always | Below 1 Ω |
| F58-18 (SPD) - | Always | 10 kΩ or higher |

| | | |
|---|---|---|
| Body ground | | |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

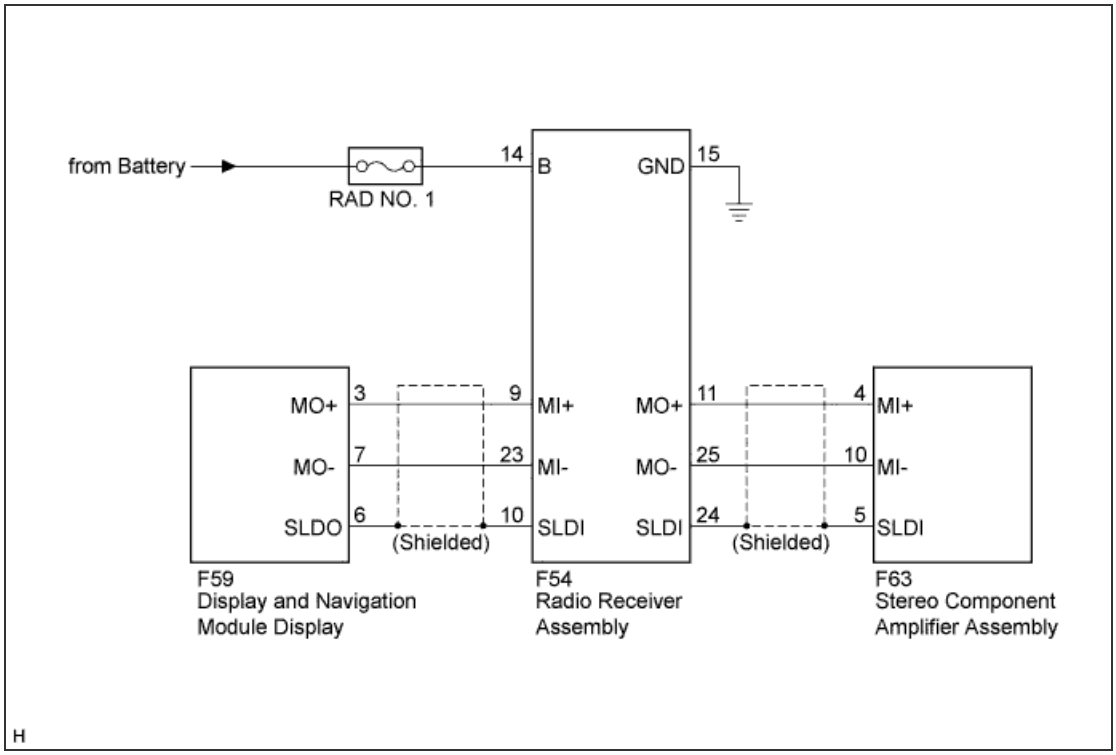
REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

## DTC B1591 No Response from Audio HU

## DTC B15D1 Audio HU Disconnected

**for Preparation** Click here

### DESCRIPTION



The display and navigation module display and radio receiver assembly are connected by the MOST communication line.
When a MOST communication error occurs between the display and navigation module display and radio receiver assembly, these DTCs will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1591 | No response to the diagnostic memory request from the master unit. | • Radio receiver assembly power source circuit<br>• MOST circuit between display and navigation module display and radio receiver assembly<br>• MOST circuit between radio receiver assembly and stereo component amplifier assembly<br>• Radio receiver assembly<br>• Display and navigation module display |
| B15D1 | A device that is listed in the MOST network connected device record of the master unit is missing. | |

**HINT:**

For the MOST network, the display and navigation module display is the master unit.

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

- **Inspect the fuses for circuits related to this system before performing the following inspection procedure.**
- **When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) (Click here).**

#### 1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Check for optional components.

i. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components (including associated wiring) are installed. | A |
| Optional components (including associated wiring) are not installed. | B |

**HINT:**

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect MOST communication.**
- **This DTC may be stored when a MOST communication error occurs due to electrical noise.**

**B** → Go to step 3

**A**

## 2.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

**NEXT**

## 3.CHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same DTC is output again.

**OK:**
**No DTCs are output.**

**NG** → Go to step 4

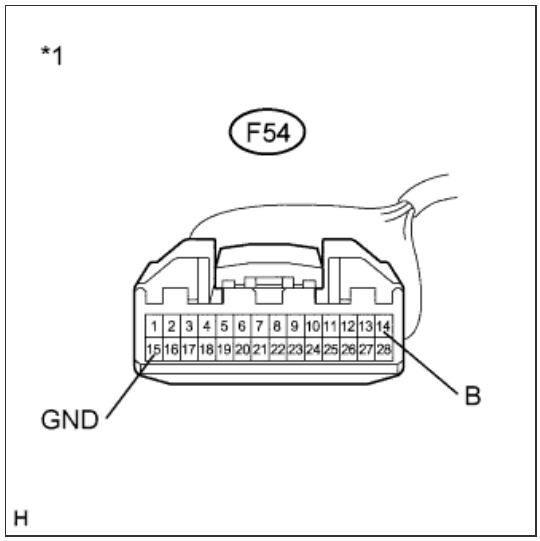
**OK**

**END**

## 4.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER ASSEMBLY POWER SOURCE)

a. Disconnect the F54 radio receiver assembly connector.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-15 (GND) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F54-14 (B) - F54-15 (GND) | Engine switch off | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| | Front view of wire harness connector |

| | |
|---|---|
| *1 | (to Radio Receiver Assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 5.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - NAVIGATION MODULE)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-9 (MI+) - F59-3 (MO+) | Always | Below 1 Ω |
| F54-23 (MI-) - F59-7 (MO-) | Always | Below 1 Ω |
| F54-10 (SLDI) - F59-6 (SLDO) | Always | Below 1 Ω |
| F54-9 (MI+) - Body ground | Always | 10 kΩ or higher |
| F54-23 (MI-) - Body ground | Always | 10 kΩ or higher |
| F54-10 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 6.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - AMPLIFIER)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F63 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-11 (MO+) - F63-4 (MI+) | Always | Below 1 Ω |
| F54-25 (MO-) - F63-10 (MI-) | Always | Below 1 Ω |
| F54-24 (SLDI) - F63-5 (SLDI) | Always | Below 1 Ω |
| F54-11 (MO+) - Body ground | Always | 10 kΩ or higher |
| F54-25 (MO-) - Body ground | Always | 10 kΩ or higher |
| F54-24 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 7.REPLACE RADIO RECEIVER ASSEMBLY

a. Replace the radio receiver assembly (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same DTC is output again.

**OK:**
**No DTCs are output.**

**NG** → **REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)**

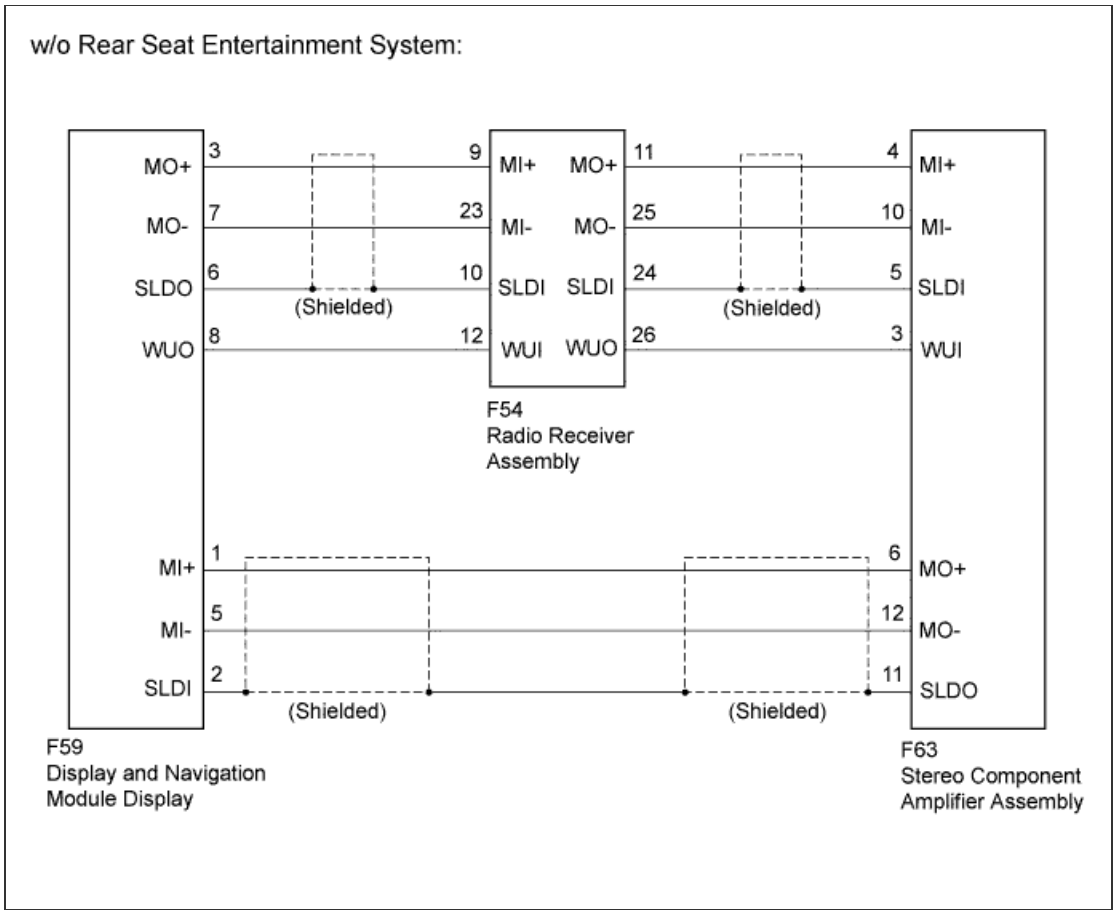
**OK**

**END**

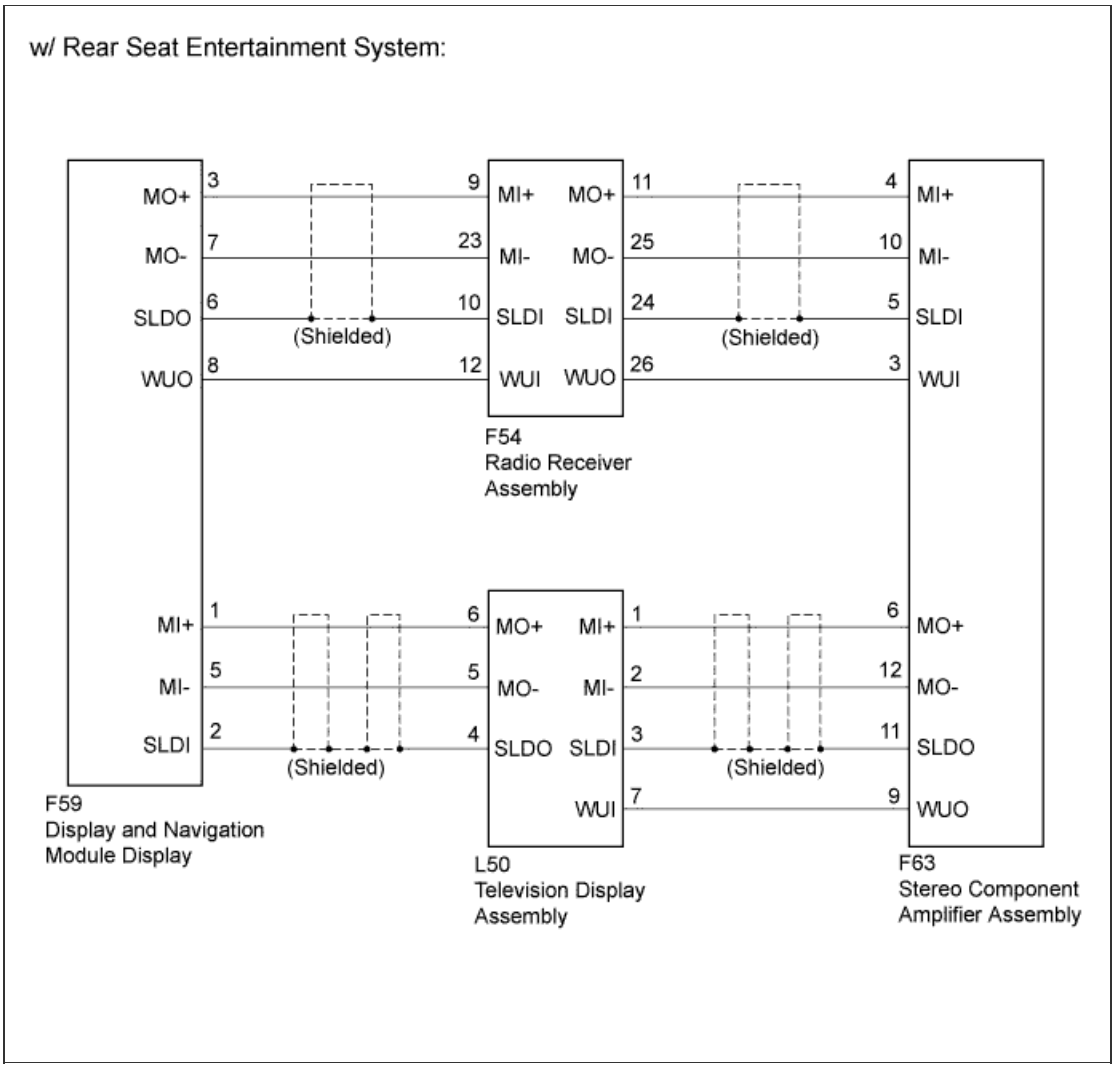
# DTC B15D0 MOST Communication Malfunction

**for Preparation** Click here

## DESCRIPTION



This DTC is stored when the MOST network cannot be established after the master unit is activated.



| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15D0 | MOST network cannot be established. | • MOST line check<br>• MOST communication line connector<br>• Wire harness or connector<br>• MOST communication line<br>• Radio receiver assembly<br>• Stereo component amplifier assembly<br>• Television display assembly (w/ Rear Seat Entertainment System)<br>• Display and navigation module display |

**HINT:**

- **For the MOST network, the display and navigation module display is the master unit.**
- **Errors may occur in MOST communication between devices due to problems such as electrical noise.**

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) ( Click here).

### 1.PERFORM MOST LINE CHECK

a. Display the "MOST Line Check" screen ( Click here).

b. Check the result on the "MOST Line Check" screen.

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "AUDIO". | A |
| "NCON" is displayed for "AMP". | B |
| "NCON" is displayed for "RSE" (w/ rear seat entertainment system). | C |
| "OK" is displayed for all items. | D |

**HINT:**

- **When "NCON" is displayed for more than 1 item, proceed to the step for the device that has the smallest node position number.**
- **The "MOST Line Check" screen can be displayed only when DTC B15D0 is stored.**

**Text in Illustration**

| | |
|---|---|
| *1 | Node position number for devices that use MOST communication |
| *2 | Device name |
| | |

| | |
|---|---|
| *3 | Result |

| | |
|---|---|
| B | Go to step 5 |
| C | Go to step 8 |
| D | Go to step 11 |

A

## 2.CHECK MOST COMMUNICATION CONNECTOR

a. Check MOST communication line connector.

i. Check if a MOST communication line connector between the display and navigation module display and radio receiver assembly has any connection problems (Click here).

b. Display the "MOST Line Check" screen and check the result ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "AUDIO". | A |
| The screen cannot be changed to the "MOST Line Check" screen. | B |

**HINT:**

When the malfunction in the MOST network is repaired, the screen cannot be changed to the "MOST Line Check" screen.

| | |
|---|---|
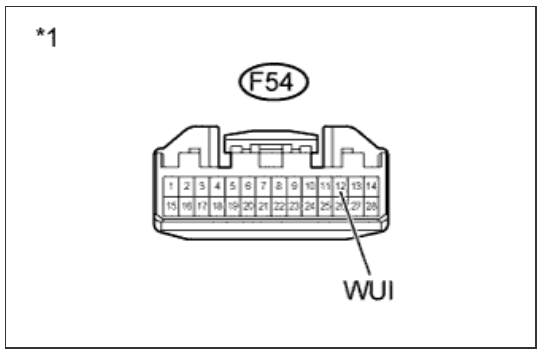
| B | END |

A



## 3.CHECK HARNESS AND CONNECTOR (WAKE UP SIGNAL)

a. Disconnect the F54 radio receiver assembly connector.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F54-12 (WUI) - Body ground | Engine switch on (ACC) | 4.5 V or higher |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Radio Receiver Assembly) |

| | |
|---|---|
| NG | Go to step 4 |

OK

REPLACE RADIO RECEIVER ASSEMBLY (Click here)

## 4.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - DISPLAY AND NAVIGATION MODULE DISPLAY)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-12 (WUI) - F59-8 (WUO) | Always | Below 1 Ω |
| F54-12 (WUI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

## 5.CHECK MOST COMMUNICATION CONNECTOR

a. Check MOST communication line connector.

i. Check if a MOST communication line connector between the radio receiver assembly and stereo component amplifier assembly has any connection problems (Click here).

b. Display the "MOST Line Check" screen and check the result ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "AMP". | A |
| The screen cannot be changed to the "MOST Line Check" screen. | B |

**HINT:**

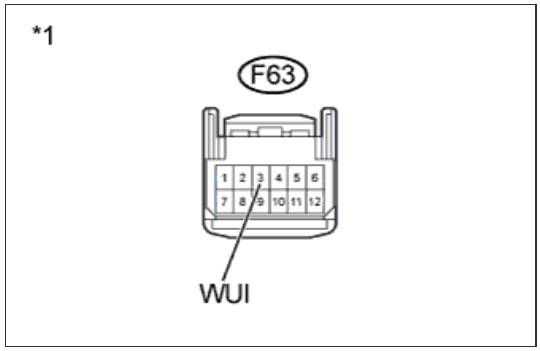
When the malfunction in the MOST network is repaired, the screen cannot be changed to the "MOST Line Check" screen.

B → END

A



## 6.CHECK HARNESS AND CONNECTOR (WAKE UP SIGNAL)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F63-3 (WUI) - Body ground | Engine switch on (ACC) | 4.5 V or higher |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Stereo Component Amplifier Assembly) |

NG → Go to step 7

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 7.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - RADIO RECEIVER)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the F54 radio receiver assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-3 (WUI) - F54-26 (WUO) | Always | Below 1 Ω |
| F63-3 (WUI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK →

REPLACE RADIO RECEIVER ASSEMBLY (Click here)

## 8.CHECK MOST COMMUNICATION CONNECTOR

a. Check MOST communication line connector.

i. Check if a MOST communication line connector between the stereo component amplifier assembly and television display assembly has any connection problems (Click here).

b. Display the "MOST Line Check" screen and check the result ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "RSE". | A |
| The screen cannot be changed to the "MOST Line Check" screen. | B |

**HINT:**

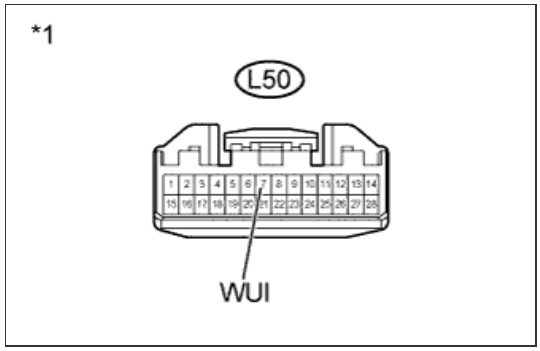
When the malfunction in the MOST network is repaired, the screen cannot be changed to the "MOST Line Check" screen.

B → END

A →



## 9.CHECK HARNESS AND CONNECTOR (WAKE UP SIGNAL)

a. Disconnect the L50 television display assembly connector.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| L50-7 (WUI) - Body ground | Engine switch on (ACC) | 4.5 V or higher |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Television Display Assembly) |

NG → Go to step 10

OK →

REPLACE TELEVISION DISPLAY ASSEMBLY (Click here)

## 10.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY - STEREO COMPONENT AMPLIFIER)

a. Disconnect the L50 television display assembly connector.

b. Disconnect the F63 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-7 (WUI) - F63-9 (WUO) | Always | Below 1 Ω |
| L50-7 (WUI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 11.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - RADIO RECEIVER)

a. Disconnect the F59 display and navigation module display connector.

b. Disconnect the F54 radio receiver assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F59-3 (MO+) - F54-9 (MI+) | Always | Below 1 Ω |
| F59-7 (MO-) - F54-23 (MI-) | Always | Below 1 Ω |
| F59-6 (SLDO) - F54-10 (SLDI) | Always | Below 1 Ω |
| F59-3 (MO+) - Body ground | Always | 10 kΩ or higher |
| F59-7 (MO-) - Body ground | Always | 10 kΩ or higher |
| F59-6 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 12.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - STEREO COMPONENT AMPLIFIER)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F63 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-11 (MO+) - F63-4 (MI+) | Always | Below 1 Ω |
| F54-25 (MO-) - F63-10 (MI-) | Always | Below 1 Ω |
| F54-24 (SLDI) - F63-5 (SLDI) | Always | Below 1 Ω |
| F54-11 (MO+) - Body ground | Always | 10 kΩ or higher |

| | | |
|---|---|---|
| F54-25 (MO-) - Body ground | Always | 10 kΩ or higher |
| F54-24 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 13.CONFIRM MODEL

a. Choose the model to be inspected.

**Result**

| Result | Proceed to |
|---|---|
| w/o Rear Seat Entertainment System | A |
| w/ Rear Seat Entertainment System | B |

B → Go to step 16

A

## 14.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT - DISPLAY AND NAVIGATION MODULE DISPLAY)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-6 (MO+) - F59-1 (MI+) | Always | Below 1 Ω |
| F63-12 (MO-) - F59-5 (MI-) | Always | Below 1 Ω |
| F63-11 (SLDO) - F59-2 (SLDI) | Always | Below 1 Ω |
| F63-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| F63-12 (MO-) - Body ground | Always | 10 kΩ or higher |
| F63-11 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 15.CHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

USE SIMULATION METHOD TO CHECK (Click here)

16.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - TELEVISION DISPLAY)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the L50 television display assembly.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-6 (MO+) - L50-1 (MI+) | Always | Below 1 Ω |
| F63-12 (MO-) - L50-2 (MI-) | Always | Below 1 Ω |
| F63-11 (SLDO) - L50-3 (SLDI) | Always | Below 1 Ω |
| F63-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| F63-12 (MO-) - Body ground | Always | 10 kΩ or higher |
| F63-11 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

17.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY - DISPLAY AND NAVIGATION MODULE DISPLAY)

a. Disconnect the L50 television display assembly.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-6 (MO+) - F59-1 (MI+) | Always | Below 1 Ω |
| L50-5 (MO-) - F59-5 (MI-) | Always | Below 1 Ω |
| L50-4 (SLDO) - F59-2 (SLDI) | Always | Below 1 Ω |
| L50-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| L50-5 (MO-) - Body ground | Always | 10 kΩ or higher |
| L50-4 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

18.CHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**

No DTCs are output.

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

USE SIMULATION METHOD TO CHECK (Click here)

## DTC B1591 No Response from Audio HU

## DTC B15D1 Audio HU Disconnected

**for Preparation** Click here

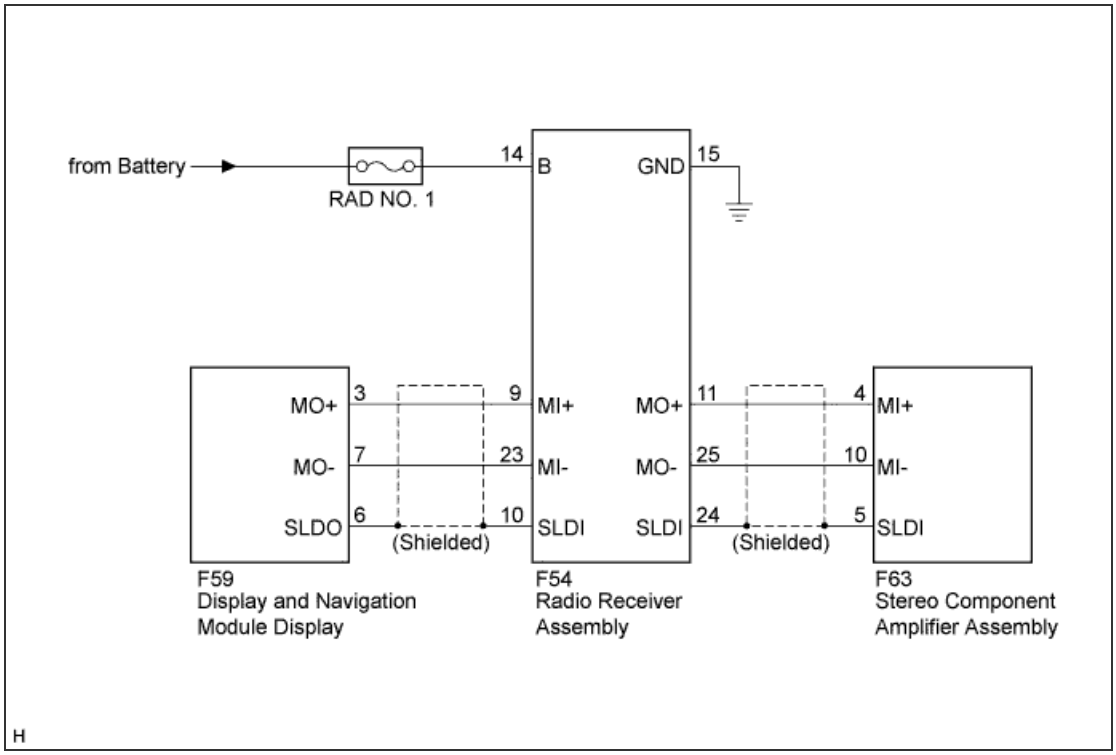
### DESCRIPTION



The display and navigation module display and radio receiver assembly are connected by the MOST communication line.
When a MOST communication error occurs between the display and navigation module display and radio receiver assembly, these DTCs will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1591 | No response to the diagnostic memory request from the master unit. | • Radio receiver assembly power source circuit<br>• MOST circuit between display and navigation module display and radio receiver assembly<br>• MOST circuit between radio receiver assembly and stereo component amplifier assembly<br>• Radio receiver assembly<br>• Display and navigation module display |
| B15D1 | A device that is listed in the MOST network connected device record of the master unit is missing. | |

**HINT:**

For the MOST network, the display and navigation module display is the master unit.

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

- **Inspect the fuses for circuits related to this system before performing the following inspection procedure.**
- **When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) (Click here).**

#### 1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Check for optional components.

i. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components (including associated wiring) are installed. | A |
| Optional components (including associated wiring) are not installed. | B |

**HINT:**

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect MOST communication.**
- **This DTC may be stored when a MOST communication error occurs due to electrical noise.**

**B** → Go to step 3

**A**

## 2.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

**NEXT**

## 3.CHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same DTC is output again.

**OK:**
**No DTCs are output.**

**NG** → Go to step 4

**OK**

**END**

## 4.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER ASSEMBLY POWER SOURCE)

a. Disconnect the F54 radio receiver assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-15 (GND) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F54-14 (B) - F54-15 (GND) | Engine switch off | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| | Front view of wire harness connector |

| | |
|---|---|
| *1 | (to Radio Receiver Assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 5.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - NAVIGATION MODULE)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-9 (MI+) - F59-3 (MO+) | Always | Below 1 Ω |
| F54-23 (MI-) - F59-7 (MO-) | Always | Below 1 Ω |
| F54-10 (SLDI) - F59-6 (SLDO) | Always | Below 1 Ω |
| F54-9 (MI+) - Body ground | Always | 10 kΩ or higher |
| F54-23 (MI-) - Body ground | Always | 10 kΩ or higher |
| F54-10 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 6.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - AMPLIFIER)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F63 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-11 (MO+) - F63-4 (MI+) | Always | Below 1 Ω |
| F54-25 (MO-) - F63-10 (MI-) | Always | Below 1 Ω |
| F54-24 (SLDI) - F63-5 (SLDI) | Always | Below 1 Ω |
| F54-11 (MO+) - Body ground | Always | 10 kΩ or higher |
| F54-25 (MO-) - Body ground | Always | 10 kΩ or higher |
| F54-24 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 7.REPLACE RADIO RECEIVER ASSEMBLY

a. Replace the radio receiver assembly (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same DTC is output again.

**OK:**
**No DTCs are output.**

**NG** → **REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)**

**OK**

**END**

# DTC B15D0 MOST Communication Malfunction

**for Preparation** Click here

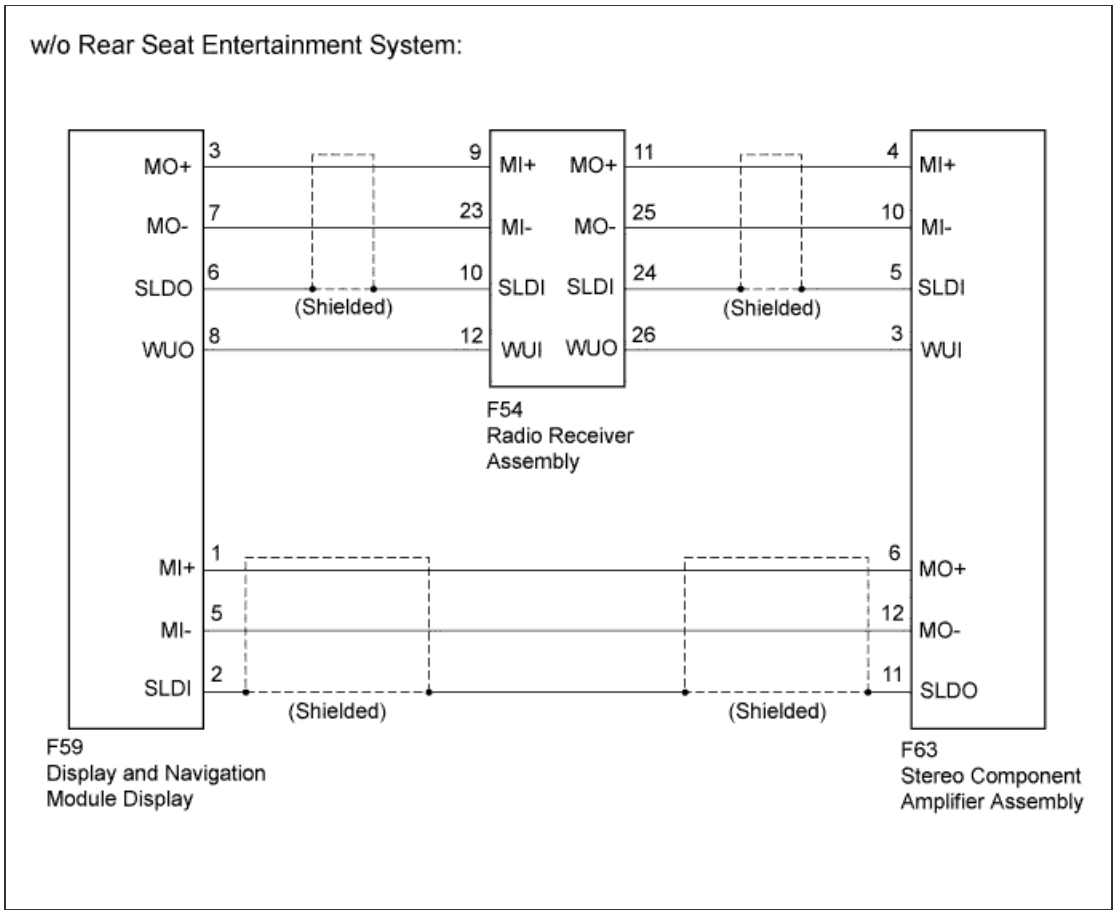
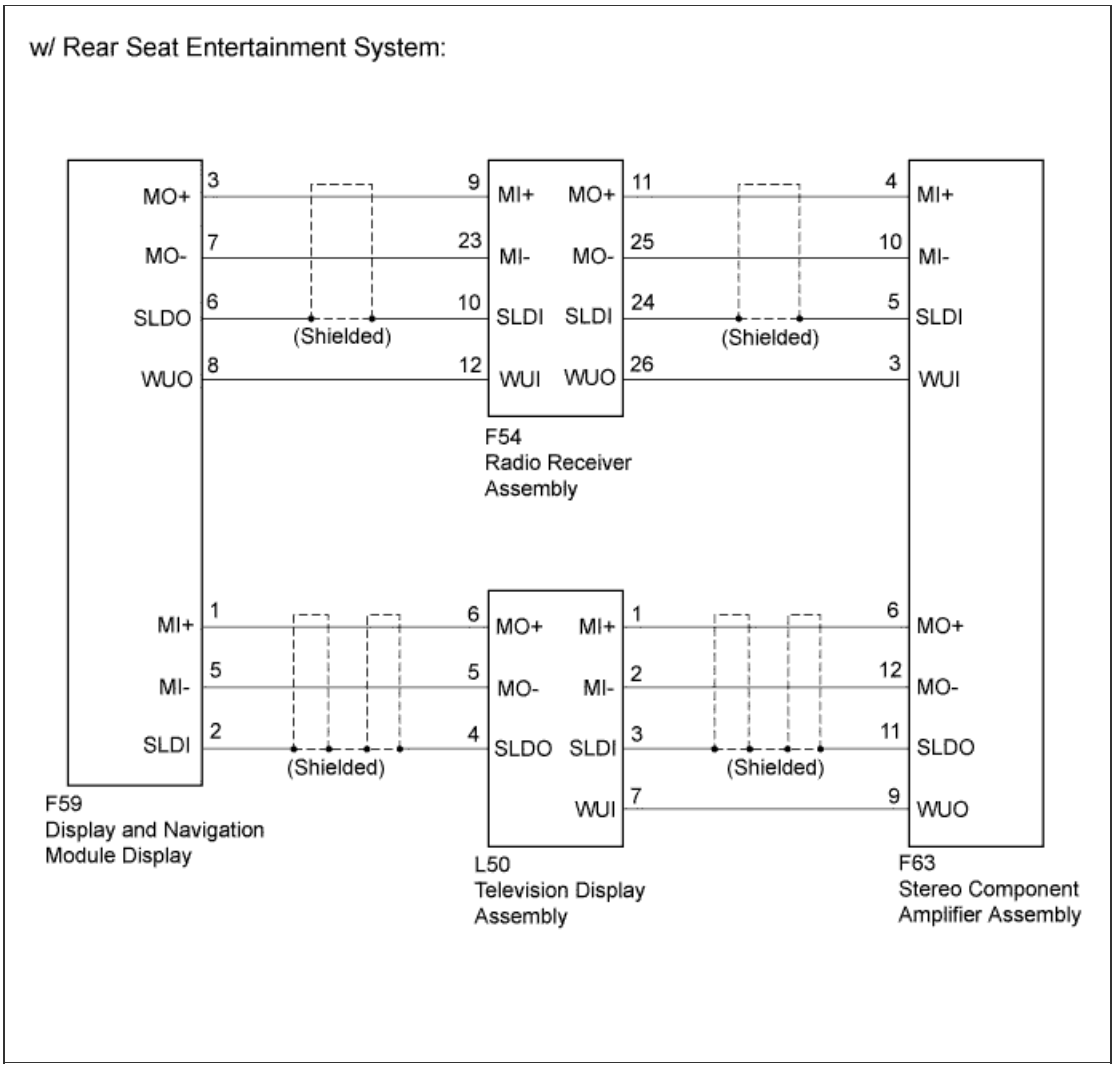
## DESCRIPTION



This DTC is stored when the MOST network cannot be established after the master unit is activated.



| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15D0 | MOST network cannot be established. | • MOST line check<br>• MOST communication line connector<br>• Wire harness or connector<br>• MOST communication line<br>• Radio receiver assembly<br>• Stereo component amplifier assembly<br>• Television display assembly (w/ Rear Seat Entertainment System)<br>• Display and navigation module display |

**HINT:**

- **For the MOST network, the display and navigation module display is the master unit.**
- **Errors may occur in MOST communication between devices due to problems such as electrical noise.**

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) ( Click here).

### 1.PERFORM MOST LINE CHECK

a. Display the "MOST Line Check" screen ( Click here).

b. Check the result on the "MOST Line Check" screen.

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "AUDIO". | A |
| "NCON" is displayed for "AMP". | B |
| "NCON" is displayed for "RSE" (w/ rear seat entertainment system). | C |
| "OK" is displayed for all items. | D |

**HINT:**

- **When "NCON" is displayed for more than 1 item, proceed to the step for the device that has the smallest node position number.**
- **The "MOST Line Check" screen can be displayed only when DTC B15D0 is stored.**

**Text in Illustration**

| | |
|---|---|
| *1 | Node position number for devices that use MOST communication |
| *2 | Device name |
| | |

| | |
|---|---|
| *3 | Result |

| | |
|---|---|
| B | Go to step 5 |
| C | Go to step 8 |
| D | Go to step 11 |

A

## 2.CHECK MOST COMMUNICATION CONNECTOR

a. Check MOST communication line connector.

i. Check if a MOST communication line connector between the display and navigation module display and radio receiver assembly has any connection problems (Click here).

b. Display the "MOST Line Check" screen and check the result ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "AUDIO". | A |
| The screen cannot be changed to the "MOST Line Check" screen. | B |

**HINT:**

When the malfunction in the MOST network is repaired, the screen cannot be changed to the "MOST Line Check" screen.

| | |
|---|---|
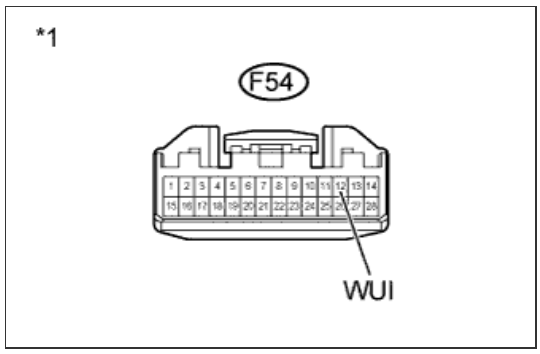
| B | END |

A



## 3.CHECK HARNESS AND CONNECTOR (WAKE UP SIGNAL)

a. Disconnect the F54 radio receiver assembly connector.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F54-12 (WUI) - Body ground | Engine switch on (ACC) | 4.5 V or higher |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Radio Receiver Assembly) |

| | |
|---|---|
| NG | Go to step 4 |

OK

REPLACE RADIO RECEIVER ASSEMBLY (Click here)

## 4.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - DISPLAY AND NAVIGATION MODULE DISPLAY)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-12 (WUI) - F59-8 (WUO) | Always | Below 1 Ω |
| F54-12 (WUI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

## 5.CHECK MOST COMMUNICATION CONNECTOR

a. Check MOST communication line connector.

i. Check if a MOST communication line connector between the radio receiver assembly and stereo component amplifier assembly has any connection problems (Click here).

b. Display the "MOST Line Check" screen and check the result ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "AMP". | A |
| The screen cannot be changed to the "MOST Line Check" screen. | B |

**HINT:**

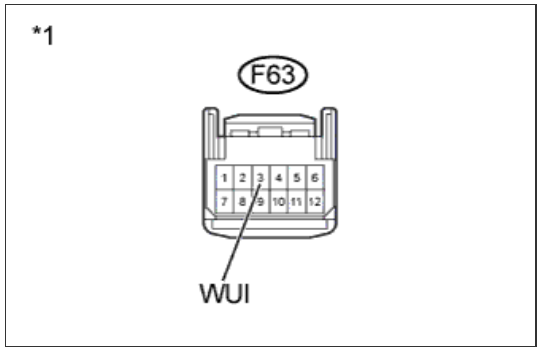
When the malfunction in the MOST network is repaired, the screen cannot be changed to the "MOST Line Check" screen.

B → END

A



## 6.CHECK HARNESS AND CONNECTOR (WAKE UP SIGNAL)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F63-3 (WUI) - Body ground | Engine switch on (ACC) | 4.5 V or higher |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Stereo Component Amplifier Assembly) |

NG → Go to step 7

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 7.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - RADIO RECEIVER)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the F54 radio receiver assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-3 (WUI) - F54-26 (WUO) | Always | Below 1 Ω |
| F63-3 (WUI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK →

REPLACE RADIO RECEIVER ASSEMBLY (Click here)

## 8.CHECK MOST COMMUNICATION CONNECTOR

a. Check MOST communication line connector.

i. Check if a MOST communication line connector between the stereo component amplifier assembly and television display assembly has any connection problems (Click here).

b. Display the "MOST Line Check" screen and check the result ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "RSE". | A |
| The screen cannot be changed to the "MOST Line Check" screen. | B |

**HINT:**

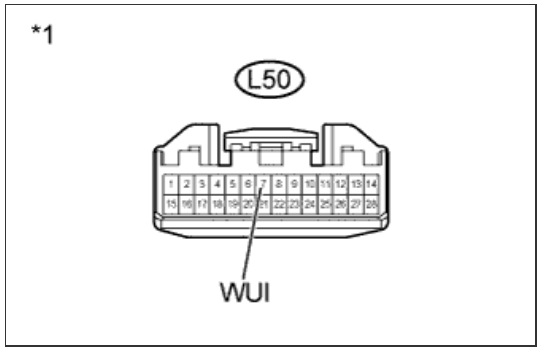
When the malfunction in the MOST network is repaired, the screen cannot be changed to the "MOST Line Check" screen.

B → END

A →



## 9.CHECK HARNESS AND CONNECTOR (WAKE UP SIGNAL)

a. Disconnect the L50 television display assembly connector.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| L50-7 (WUI) - Body ground | Engine switch on (ACC) | 4.5 V or higher |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Television Display Assembly) |

NG → Go to step 10

OK →

REPLACE TELEVISION DISPLAY ASSEMBLY (Click here)

## 10.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY - STEREO COMPONENT AMPLIFIER)

a. Disconnect the L50 television display assembly connector.

b. Disconnect the F63 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-7 (WUI) - F63-9 (WUO) | Always | Below 1 Ω |
| L50-7 (WUI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 11.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - RADIO RECEIVER)

a. Disconnect the F59 display and navigation module display connector.

b. Disconnect the F54 radio receiver assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F59-3 (MO+) - F54-9 (MI+) | Always | Below 1 Ω |
| F59-7 (MO-) - F54-23 (MI-) | Always | Below 1 Ω |
| F59-6 (SLDO) - F54-10 (SLDI) | Always | Below 1 Ω |
| F59-3 (MO+) - Body ground | Always | 10 kΩ or higher |
| F59-7 (MO-) - Body ground | Always | 10 kΩ or higher |
| F59-6 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 12.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - STEREO COMPONENT AMPLIFIER)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F63 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-11 (MO+) - F63-4 (MI+) | Always | Below 1 Ω |
| F54-25 (MO-) - F63-10 (MI-) | Always | Below 1 Ω |
| F54-24 (SLDI) - F63-5 (SLDI) | Always | Below 1 Ω |
| F54-11 (MO+) - Body ground | Always | 10 kΩ or higher |

| | | |
|---|---|---|
| F54-25 (MO-) - Body ground | Always | 10 kΩ or higher |
| F54-24 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 13.CONFIRM MODEL

a. Choose the model to be inspected.

**Result**

| Result | Proceed to |
|---|---|
| w/o Rear Seat Entertainment System | A |
| w/ Rear Seat Entertainment System | B |

B → Go to step 16

A

## 14.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT - DISPLAY AND NAVIGATION MODULE DISPLAY)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-6 (MO+) - F59-1 (MI+) | Always | Below 1 Ω |
| F63-12 (MO-) - F59-5 (MI-) | Always | Below 1 Ω |
| F63-11 (SLDO) - F59-2 (SLDI) | Always | Below 1 Ω |
| F63-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| F63-12 (MO-) - Body ground | Always | 10 kΩ or higher |
| F63-11 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 15.CHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

USE SIMULATION METHOD TO CHECK (Click here)

16.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - TELEVISION DISPLAY)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the L50 television display assembly.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-6 (MO+) - L50-1 (MI+) | Always | Below 1 Ω |
| F63-12 (MO-) - L50-2 (MI-) | Always | Below 1 Ω |
| F63-11 (SLDO) - L50-3 (SLDI) | Always | Below 1 Ω |
| F63-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| F63-12 (MO-) - Body ground | Always | 10 kΩ or higher |
| F63-11 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

17.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY - DISPLAY AND NAVIGATION MODULE DISPLAY)

a. Disconnect the L50 television display assembly.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-6 (MO+) - F59-1 (MI+) | Always | Below 1 Ω |
| L50-5 (MO-) - F59-5 (MI-) | Always | Below 1 Ω |
| L50-4 (SLDO) - F59-2 (SLDI) | Always | Below 1 Ω |
| L50-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| L50-5 (MO-) - Body ground | Always | 10 kΩ or higher |
| L50-4 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

18.CHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**

No DTCs are output.

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

USE SIMULATION METHOD TO CHECK (Click here)

## DTC B1591 No Response from Audio HU

## DTC B15D1 Audio HU Disconnected

**for Preparation** Click here

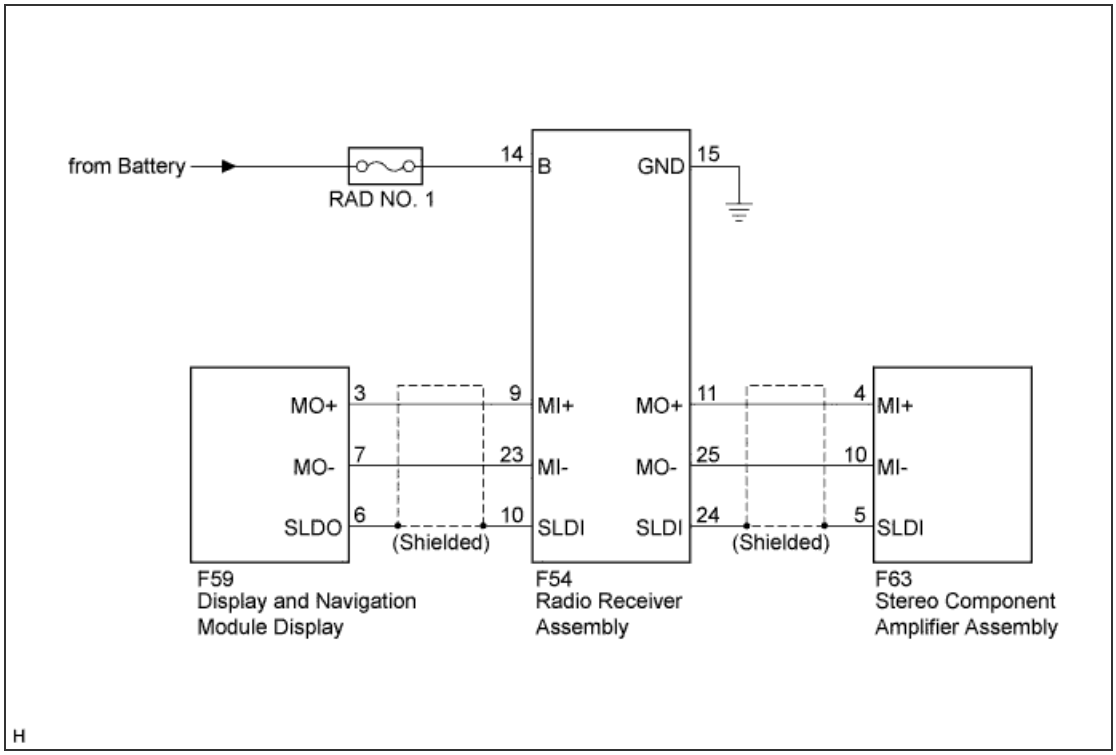
### DESCRIPTION



The display and navigation module display and radio receiver assembly are connected by the MOST communication line.
When a MOST communication error occurs between the display and navigation module display and radio receiver assembly, these DTCs will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1591 | No response to the diagnostic memory request from the master unit. | • Radio receiver assembly power source circuit<br>• MOST circuit between display and navigation module display and radio receiver assembly<br>• MOST circuit between radio receiver assembly and stereo component amplifier assembly<br>• Radio receiver assembly<br>• Display and navigation module display |
| B15D1 | A device that is listed in the MOST network connected device record of the master unit is missing. | |

**HINT:**

For the MOST network, the display and navigation module display is the master unit.

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

- **Inspect the fuses for circuits related to this system before performing the following inspection procedure.**
- **When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) (Click here).**

#### 1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Check for optional components.

i. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components (including associated wiring) are installed. | A |
| Optional components (including associated wiring) are not installed. | B |

**HINT:**

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect MOST communication.**
- **This DTC may be stored when a MOST communication error occurs due to electrical noise.**

**B** → Go to step 3

**A**

## 2.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

**NEXT**

## 3.CHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same DTC is output again.

**OK:**
**No DTCs are output.**

**NG** → Go to step 4

**OK**

**END**

## 4.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER ASSEMBLY POWER SOURCE)

a. Disconnect the F54 radio receiver assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-15 (GND) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F54-14 (B) - F54-15 (GND) | Engine switch off | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| | Front view of wire harness connector |

| | |
|---|---|
| *1 | (to Radio Receiver Assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 5.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - NAVIGATION MODULE)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-9 (MI+) - F59-3 (MO+) | Always | Below 1 Ω |
| F54-23 (MI-) - F59-7 (MO-) | Always | Below 1 Ω |
| F54-10 (SLDI) - F59-6 (SLDO) | Always | Below 1 Ω |
| F54-9 (MI+) - Body ground | Always | 10 kΩ or higher |
| F54-23 (MI-) - Body ground | Always | 10 kΩ or higher |
| F54-10 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 6.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - AMPLIFIER)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F63 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-11 (MO+) - F63-4 (MI+) | Always | Below 1 Ω |
| F54-25 (MO-) - F63-10 (MI-) | Always | Below 1 Ω |
| F54-24 (SLDI) - F63-5 (SLDI) | Always | Below 1 Ω |
| F54-11 (MO+) - Body ground | Always | 10 kΩ or higher |
| F54-25 (MO-) - Body ground | Always | 10 kΩ or higher |
| F54-24 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 7.REPLACE RADIO RECEIVER ASSEMBLY

a. Replace the radio receiver assembly (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same DTC is output again.

**OK:**
**No DTCs are output.**

**NG** → **REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)**

**OK**

**END**

## DTC B15D8 Monitor Disconnected

**for Preparation** Click here

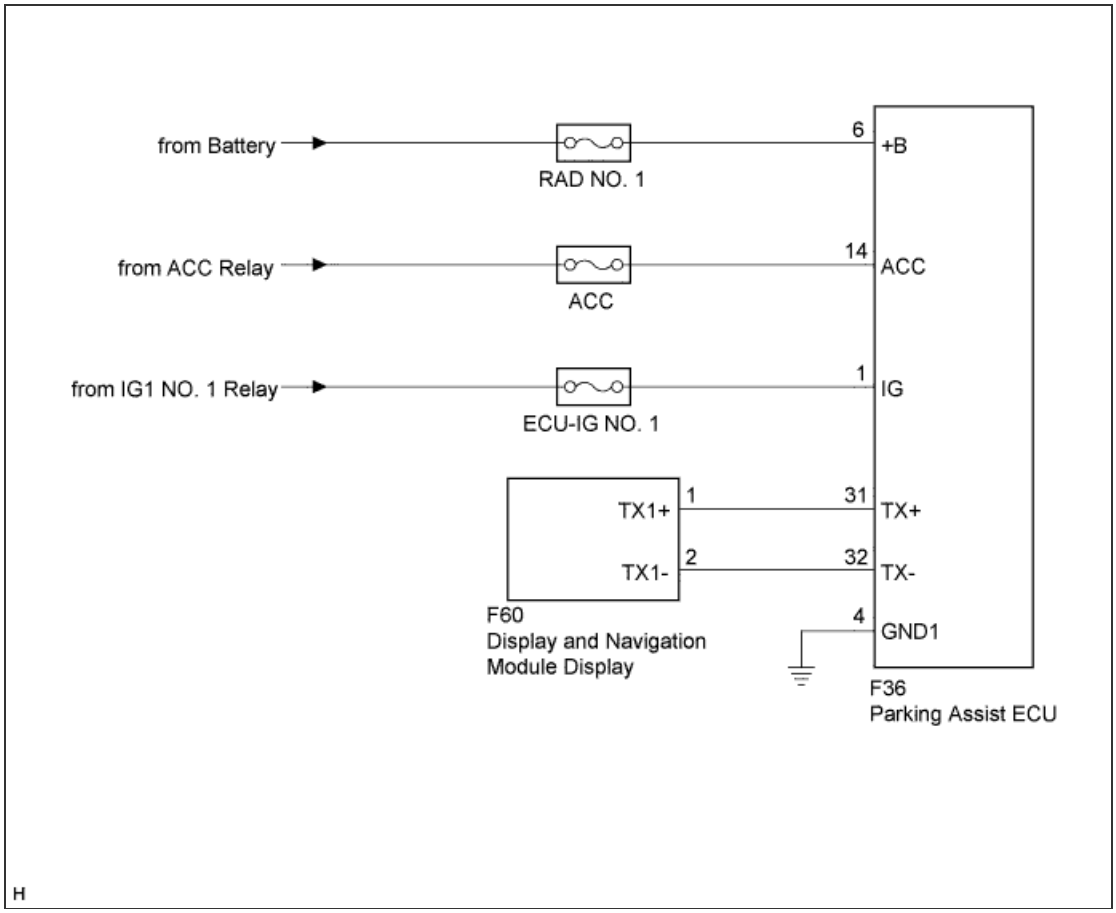
### DESCRIPTION



The display and navigation module display and parking assist ECU are connected by the AVC-LAN communication line.
When an AVC-LAN communication error occurs between the display and navigation module display and parking assist ECU, this DTC will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15D8 | A device that is listed in the AVC-LAN connected device record of the master unit is missing. | • Parking assist ECU power source circuit<br>• AVC-LAN circuit between display and navigation module display and parking assist ECU<br>• Parking assist ECU<br>• Display and navigation module display |

**HINT:**

The display and navigation module display is the master unit.

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

- **When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) (Click here).**
- **Inspect the fuses for circuits related to this system before performing the following inspection procedure.**

**1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)**

a. Check for optional components.

i. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|

- **This DTC may be stored when an AVC-LAN communication error occurs due to electrical noise.**

**B** → Go to step 3

**A**

## 2.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

**NEXT**

## 3.CHECK DTC

a. Clear the DTC (Click here).

b. Recheck for DTC and check if the same DTC is output again.

**OK:**
**No DTC is output.**

**NG** → Go to step 4

**OK**

## END

## 4.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU POWER SOURCE)

a. Disconnect the F36 parking assist ECU connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F36-4 (GND1) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F36-6 (+B) - F36-4 (GND1) | Always | 11 to 14 V |
| F36-1 (IG) - F36-4 (GND1) | Engine switch on (IG) | 11 to 14 V |

| | | |
|---|---|---|
| F36-14 (ACC) - F36-4 (GND1) | Engine switch on (ACC) | 11 to 14 V |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**5.CHECK HARNESS AND CONNECTOR (ASSIST ECU - NAVIGATION MODULE)**

a. Disconnect the F36 parking assist ECU connector.

b. Disconnect the F60 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F36-31 (TX+) - F60-1 (TX1+) | Always | Below 1 Ω |
| F36-32 (TX-) - F60-2 (TX1-) | Always | Below 1 Ω |
| F36-31 (TX+) - Body ground | Always | 10 kΩ or higher |
| F36-32 (TX-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**6.REPLACE PARKING ASSIST ECU**

a. Replace the parking assist ECU (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTC and check if the same DTC is output again.

**OK:**
**No DTC is output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK

**END**

## DTC B1593 No Response from Stereo Component Amplifier

## DTC B15D3 Stereo Component Amplifier Disconnected

**for Preparation** Click here

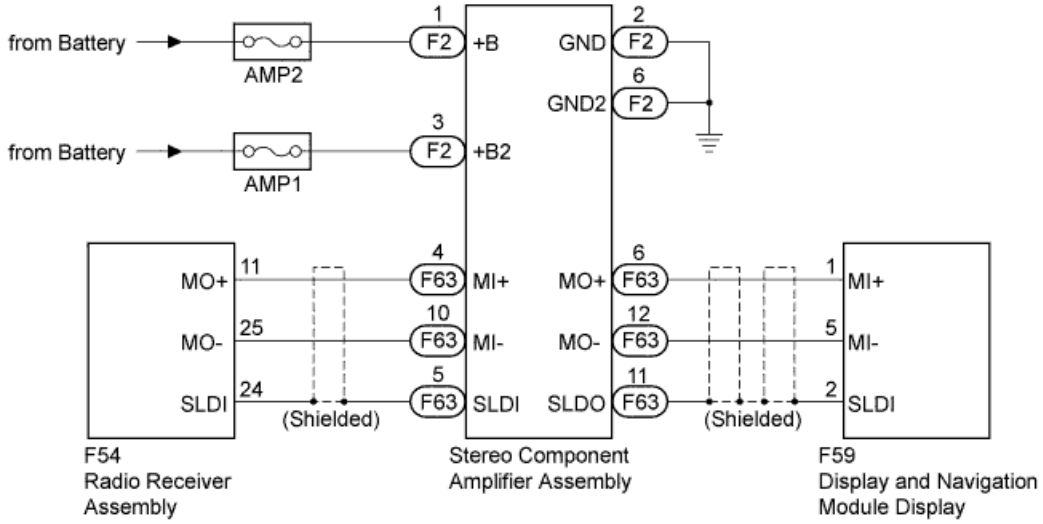
### DESCRIPTION

The display and navigation module display and stereo component amplifier assembly are connected by the MOST communication line.
When an MOST communication error occurs between the display and navigation module display and stereo component amplifier assembly, these DTCs will be stored.



| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1593 | No response to the diagnostic memory request from the master unit. | • Stereo component amplifier assembly power source circuit<br>• MOST circuit between radio receiver assembly and stereo component amplifier assembly<br>• MOST circuit between stereo component amplifier assembly and display and navigation module display (w/o Rear Seat Entertainment System)<br>• MOST circuit between stereo component amplifier assembly and television display assembly (w/ Rear Seat Entertainment System)<br>• Stereo component amplifier assembly<br>• Display and navigation module display |

## 5.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - RADIO RECEIVER)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the F54 radio receiver assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-4 (MI+) - F54-11 (MO+) | Always | Below 1 Ω |
| F63-10 (MI-) - F54-25 (MO-) | Always | Below 1 Ω |
| F63-5 (SLDI) - F54-24 (SLDI) | Always | Below 1 Ω |
| F63-4 (MI+) - Body ground | Always | 10 kΩ or higher |
| F63-10 (MI-) - Body ground | Always | 10 kΩ or higher |
| F63-5 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 6.CONFIRM MODEL

a. Choose the model to be inspected.

**Result**

| Model | Proceed to |
|---|---|
| w/o Rear Seat Entertainment System | A |
| w/ Rear Seat Entertainment System | B |

B → Go to step 9

A

## 7.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - DISPLAY AND NAVIGATION MODULE)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-6 (MO+) - F59-1 (MI+) | Always | Below 1 Ω |
| F63-12 (MO-) - F59-5 (MI-) | Always | Below 1 Ω |
| F63-11 (SLDO) - F59-2 (SLDI) | Always | Below 1 Ω |
| F63-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| F63-12 (MO-) - Body ground | Always | 10 kΩ or higher |
| F63-11 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**8.REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY**

a. Replace the stereo component amplifier assembly (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK

**END**

**9.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - TELEVISION DISPLAY)**

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the L50 television display assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-6 (MO+) - L50-1 (MI+) | Always | Below 1 Ω |
| F63-12 (MO-) - L50-2 (MI-) | Always | Below 1 Ω |
| F63-11 (SLDO) - L50-3 (SLDI) | Always | Below 1 Ω |
| F63-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| F63-12 (MO-) - Body ground | Always | 10 kΩ or higher |
| F63-11 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**10.REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY**

a. Replace the stereo component amplifier assembly (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK
END

## DTC B15D8 Monitor Disconnected

**for Preparation** Click here

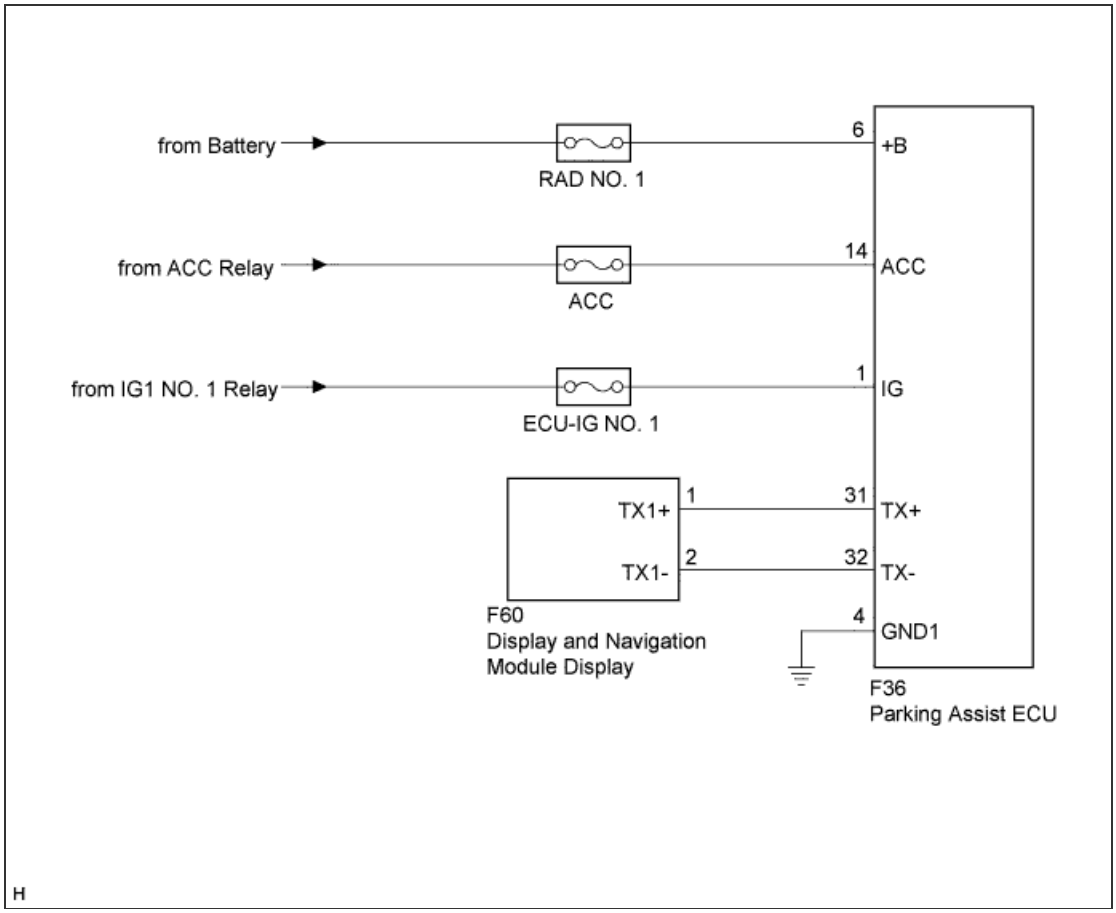
### DESCRIPTION



The display and navigation module display and parking assist ECU are connected by the AVC-LAN communication line.
When an AVC-LAN communication error occurs between the display and navigation module display and parking assist ECU, this DTC will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15D8 | A device that is listed in the AVC-LAN connected device record of the master unit is missing. | • Parking assist ECU power source circuit<br>• AVC-LAN circuit between display and navigation module display and parking assist ECU<br>• Parking assist ECU<br>• Display and navigation module display |

**HINT:**

The display and navigation module display is the master unit.

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

- **When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) (Click here).**
- **Inspect the fuses for circuits related to this system before performing the following inspection procedure.**

**1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)**

a. Check for optional components.

i. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components (including associated wiring) are installed. | A |
| Optional components (including associated wiring) are not installed. | B |

**HINT:**

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect AVC-LAN communication.**
- **This DTC may be stored when an AVC-LAN communication error occurs due to electrical noise.**

**B** → Go to step 3

**A**

## 2.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

**NEXT**

## 3.CHECK DTC

a. Clear the DTC (Click here).

b. Recheck for DTC and check if the same DTC is output again.

**OK:**
**No DTC is output.**

**NG** → Go to step 4

**OK**

## END

## 4.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU POWER SOURCE)

a. Disconnect the F36 parking assist ECU connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F36-4 (GND1) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F36-6 (+B) - F36-4 (GND1) | Always | 11 to 14 V |
| F36-1 (IG) - F36-4 (GND1) | Engine switch on (IG) | 11 to 14 V |

| | | |
|---|---|---|
| F36-14 (ACC) - F36-4 (GND1) | Engine switch on (ACC) | 11 to 14 V |

| *1 | Front view of wire harness connector (to Parking Assist ECU) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**5.CHECK HARNESS AND CONNECTOR (ASSIST ECU - NAVIGATION MODULE)**

a. Disconnect the F36 parking assist ECU connector.

b. Disconnect the F60 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F36-31 (TX+) - F60-1 (TX1+) | Always | Below 1 Ω |
| F36-32 (TX-) - F60-2 (TX1-) | Always | Below 1 Ω |
| F36-31 (TX+) - Body ground | Always | 10 kΩ or higher |
| F36-32 (TX-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**6.REPLACE PARKING ASSIST ECU**

a. Replace the parking assist ECU (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTC and check if the same DTC is output again.

**OK:**
**No DTC is output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK

**END**

## DTC B1593 No Response from Stereo Component Amplifier

## DTC B15D3 Stereo Component Amplifier Disconnected

**for Preparation** Click here

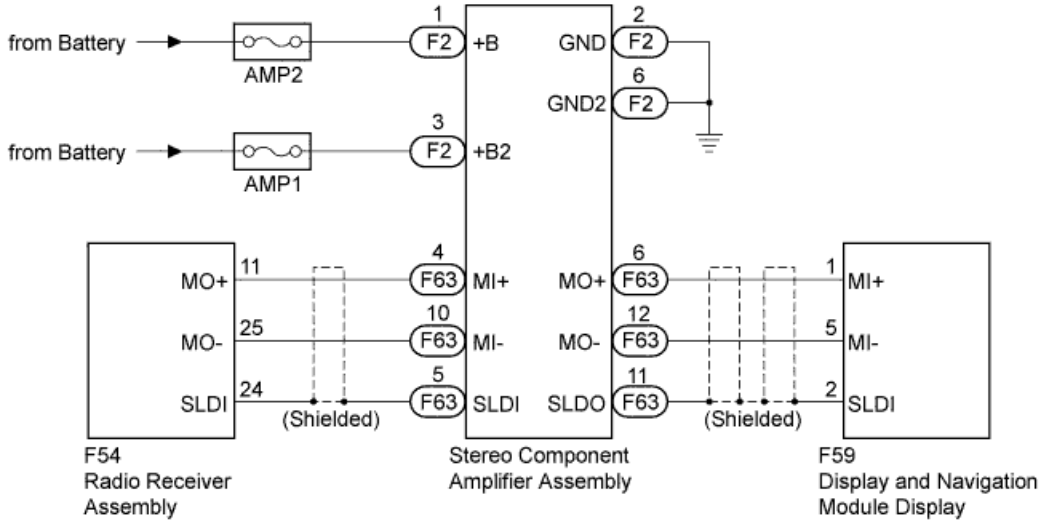
### DESCRIPTION

The display and navigation module display and stereo component amplifier assembly are connected by the MOST communication line.
When an MOST communication error occurs between the display and navigation module display and stereo component amplifier assembly, these DTCs will be stored.



| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1593 | No response to the diagnostic memory request from the master unit. | • Stereo component amplifier assembly power source circuit<br>• MOST circuit between radio receiver assembly and stereo component amplifier assembly<br>• MOST circuit between stereo component amplifier assembly and display and navigation module display (w/o Rear Seat Entertainment System)<br>• MOST circuit between stereo component amplifier assembly and television display assembly (w/ Rear Seat Entertainment System)<br>• Stereo component amplifier assembly<br>• Display and navigation module display |
| B15D3 | A device that is listed in the MOST network connected device record of the master unit is missing. | |

**HINT:**

For the MOST network, the display and navigation module display is the master unit.

OK

## 5.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - RADIO RECEIVER)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the F54 radio receiver assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-4 (MI+) - F54-11 (MO+) | Always | Below 1 Ω |
| F63-10 (MI-) - F54-25 (MO-) | Always | Below 1 Ω |
| F63-5 (SLDI) - F54-24 (SLDI) | Always | Below 1 Ω |
| F63-4 (MI+) - Body ground | Always | 10 kΩ or higher |
| F63-10 (MI-) - Body ground | Always | 10 kΩ or higher |
| F63-5 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 6.CONFIRM MODEL

a. Choose the model to be inspected.

**Result**

| Model | Proceed to |
|---|---|
| w/o Rear Seat Entertainment System | A |
| w/ Rear Seat Entertainment System | B |

B → Go to step 9

A

## 7.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - DISPLAY AND NAVIGATION MODULE)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-6 (MO+) - F59-1 (MI+) | Always | Below 1 Ω |
| F63-12 (MO-) - F59-5 (MI-) | Always | Below 1 Ω |
| F63-11 (SLDO) - F59-2 (SLDI) | Always | Below 1 Ω |
| F63-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| F63-12 (MO-) - Body ground | Always | 10 kΩ or higher |
| F63-11 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**8.REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY**

a. Replace the stereo component amplifier assembly (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK

**END**

**9.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - TELEVISION DISPLAY)**

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the L50 television display assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-6 (MO+) - L50-1 (MI+) | Always | Below 1 Ω |
| F63-12 (MO-) - L50-2 (MI-) | Always | Below 1 Ω |
| F63-11 (SLDO) - L50-3 (SLDI) | Always | Below 1 Ω |
| F63-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| F63-12 (MO-) - Body ground | Always | 10 kΩ or higher |

OK
END

## DTC B15E7 Harddisk Reading/Writing Malfunction(Low Temperature)

## DTC B15E8 Harddisk Reading/Writing Malfunction(High Temperature)

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored when the temperature is higher or lower than the operation range of the hard disk drive built into the display and navigation module display, and hard disk drive read/write errors occur more than a specified number of times.

**HINT:**

The hard drive disk may not operate normally when the temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15E7 | Hard disk drive read/write error at low temperature. | Hard Disk Drive |
| B15E8 | Hard disk drive read/write error at high temperature. | |

### INSPECTION PROCEDURE

**1.CHECK CABIN**

Move the vehicle to an area that is at room temperature and allow the cabin temperature to adjust to between -20°C (-4°F) and 65°C (149°F).

**HINT:**

- **The hard disk drive may not operate normally at very high or low temperatures.**
- **Perform the DTC check at room temperature.**

**NEXT**

**2.CHECK DTC**

a. Clear the DTC (Click here).

b. Recheck for DTCs and check if the same DTC is output again.

**OK:**
**No DTCs are output.**

**NG** → **REPLACE HARD DISK DRIVE (Click here)**

**OK**

**USE SIMULATION METHOD TO CHECK (Click here)**

## 5.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - RADIO RECEIVER)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the F54 radio receiver assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-4 (MI+) - F54-11 (MO+) | Always | Below 1 Ω |
| F63-10 (MI-) - F54-25 (MO-) | Always | Below 1 Ω |
| F63-5 (SLDI) - F54-24 (SLDI) | Always | Below 1 Ω |
| F63-4 (MI+) - Body ground | Always | 10 kΩ or higher |
| F63-10 (MI-) - Body ground | Always | 10 kΩ or higher |
| F63-5 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 6.CONFIRM MODEL

a. Choose the model to be inspected.

**Result**

| Model | Proceed to |
|---|---|
| w/o Rear Seat Entertainment System | A |
| w/ Rear Seat Entertainment System | B |

B → Go to step 9

A

## 7.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - DISPLAY AND NAVIGATION MODULE)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-6 (MO+) - F59-1 (MI+) | Always | Below 1 Ω |
| F63-12 (MO-) - F59-5 (MI-) | Always | Below 1 Ω |
| F63-11 (SLDO) - F59-2 (SLDI) | Always | Below 1 Ω |
| F63-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| F63-12 (MO-) - Body ground | Always | 10 kΩ or higher |
| F63-11 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**8.REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY**

a. Replace the stereo component amplifier assembly (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK

**END**

**9.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER - TELEVISION DISPLAY)**

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the L50 television display assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-6 (MO+) - L50-1 (MI+) | Always | Below 1 Ω |
| F63-12 (MO-) - L50-2 (MI-) | Always | Below 1 Ω |
| F63-11 (SLDO) - L50-3 (SLDI) | Always | Below 1 Ω |
| F63-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| F63-12 (MO-) - Body ground | Always | 10 kΩ or higher |
| F63-11 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**10.REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY**

a. Replace the stereo component amplifier assembly (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK
END

## DTC B15E7 Harddisk Reading/Writing Malfunction(Low Temperature)

## DTC B15E8 Harddisk Reading/Writing Malfunction(High Temperature)

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored when the temperature is higher or lower than the operation range of the hard disk drive built into the display and navigation module display, and hard disk drive read/write errors occur more than a specified number of times.

**HINT:**

The hard drive disk may not operate normally when the temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15E7 | Hard disk drive read/write error at low temperature. | Hard Disk Drive |
| B15E8 | Hard disk drive read/write error at high temperature. | |

### INSPECTION PROCEDURE

**1.CHECK CABIN**

Move the vehicle to an area that is at room temperature and allow the cabin temperature to adjust to between -20°C (-4°F) and 65°C (149°F).

**HINT:**

- **The hard disk drive may not operate normally at very high or low temperatures.**
- **Perform the DTC check at room temperature.**

**NEXT**

**2.CHECK DTC**

a. Clear the DTC (Click here).

b. Recheck for DTCs and check if the same DTC is output again.

**OK:**
**No DTCs are output.**

**NG** → **REPLACE HARD DISK DRIVE (Click here)**

**OK**

**USE SIMULATION METHOD TO CHECK (Click here)**

## DTC B1595 No Response from Rear Seat Entertainment System

## DTC B15D5 Rear Seat Entertainment System Disconnected

**for Preparation** Click here

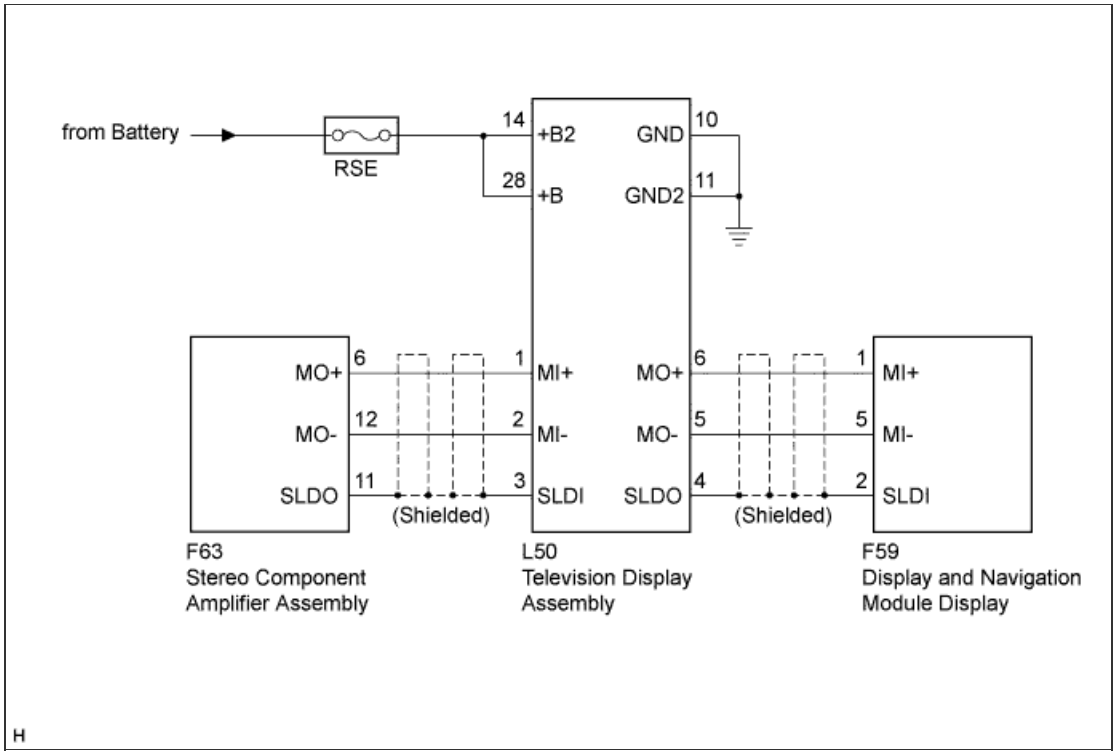
### DESCRIPTION



The display and navigation module display and television display assembly are connected by the MOST communication line.
When an MOST communication error occurs between the display and navigation module display and television display assembly, these DTCs will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1595 | No response to the diagnostic memory request from the master unit. | • Television display assembly power source circuit<br>• MOST circuit between stereo component amplifier assembly and television display assembly<br>• MOST circuit between television display assembly and display and navigation module display<br>• Television display assembly<br>• Display and navigation module display |
| B15D5 | A device that is listed in the MOST network connected device record of the master unit is missing. | |

**HINT:**

For the MOST network, the display and navigation module display is the master unit.

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

- **Inspect the fuses for circuits related to this system before performing the following inspection procedure.**
- **When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) (Click here)**

#### 1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Check for optional components.

i. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components (including associated wiring) are installed. | A |
| Optional components (including associated wiring) are not installed. | B |

**HINT:**

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect MOST communication.**
- **This DTC may be stored when an MOST communication error occurs due to electrical noise.**

**B** → **Go to step 3**

**A**

## 2.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

**NEXT**

## 3.CHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

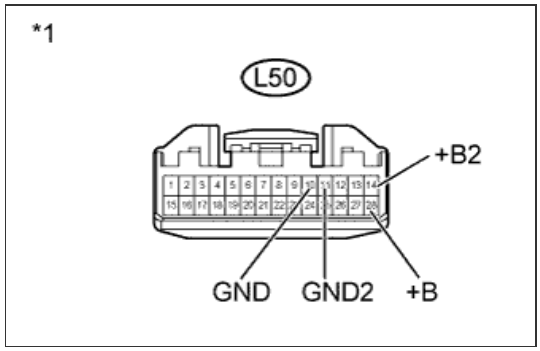
**NG** → **Go to step 4**

**OK**

**END**



## 4.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY ASSEMBLY POWER SOURCE)

a. Disconnect the L50 television display assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-10 (GND) - Body ground | Always | Below 1 Ω |
| L50-11 (GND2) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-14 (+B2) - | | |

| | | |
|---|---|---|
| L50-10 (GND) | Always | 11 to 14 V |
| L50-28 (+B) - L50-10 (GND) | Always | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Television Display Assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**5.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY - STEREO COMPONENT AMPLIFIER)**

a. Disconnect the L50 television display assembly connector.

b. Disconnect the F63 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-1 (MI+) - F63-6 (MO+) | Always | Below 1 Ω |
| L50-2 (MI-) - F63-12 (MO-) | Always | Below 1 Ω |
| L50-3 (SLDI) - F63-11 (SLDO) | Always | Below 1 Ω |
| L50-1 (MI+) - Body ground | Always | 10 kΩ or higher |
| L50-2 (MI-) - Body ground | Always | 10 kΩ or higher |
| L50-3 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**6.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY - DISPLAY AND NAVIGATION MODULE DISPLAY)**

a. Disconnect the L50 television display assembly connector.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-6 (MO+) - F59-1 (MI+) | Always | Below 1 Ω |
| L50-5 (MO-) - F59-5 (MI-) | Always | Below 1 Ω |
| L50-4 (SLDO) - F59-2 (SLDI) | Always | Below 1 Ω |
| L50-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| L50-5 (MO-) - Body ground | Always | 10 kΩ or higher |
| L50-4 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**7.REPLACE TELEVISION DISPLAY ASSEMBLY**

a. Replace the television display assembly (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK

**END**

# DTC B15F5 A/C ECU Vehicle Information Reading/Writing Processor Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when items controlled by the A/C ECU (air conditioning amplifier assembly) cannot be customized via the navigation system vehicle customization screen.

**HINT:**

The A/C ECU (air conditioning amplifier assembly) controls the air conditioning system related items that are customizable via the navigation system screen.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15F5 | A/C ECU (air conditioning amplifier assembly) vehicle setting processing error. | • CAN communication system<br>• Air conditioning system<br>• A/C ECU (air conditioning amplifier assembly)<br>• Display and navigation module display |

## INSPECTION PROCEDURE

**NOTICE:**

When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) ( Click here)

### 1.CHECK CAN COMMUNICATION SYSTEM

a. Use the intelligent tester to check if the CAN communication system is functioning normally ( Click here).

**OK:**
**CAN communication DTC is not output.**

NG → GO TO CAN COMMUNICATION SYSTEM (**Click here**)

OK

### 2.CHECK AIR CONDITIONING SYSTEM

a. Check if the air conditioning system is malfunctioning (Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the air conditioning system.

**OK:**
**No malfunctions are present in the air conditioning system.**

NG → GO TO AIR CONDITIONING SYSTEM (**Click here**)

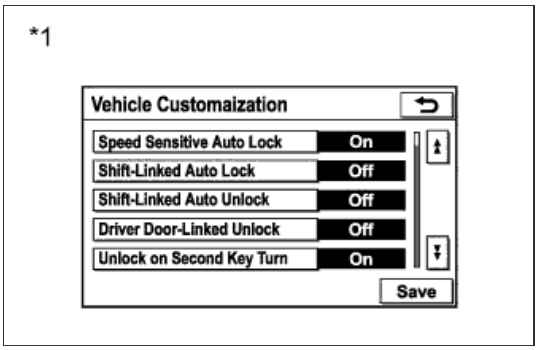
OK

### 3.CHECK CUSTOMIZE ITEMS

a. Display the "Vehicle Customization" screen.

b. Make a note of the customizable items for the air conditioning system.

**HINT:**



These air conditioning system items shown as customizable via the navigation system vehicle customization screen can also be changed using the intelligent tester. In the following steps, the intelligent tester will be used.

i. To match-up the items in the navigation display with the items on the intelligent tester, check the customize parameters list for the air conditioning system related items that can be customized via the navigation system screen (Click here).

c. Using the intelligent tester, confirm that it is possible to change the settings of the air conditioning system related customize parameters that are shown as customizable via the navigation system screen.

**OK:**

**The items available for customization via the navigation system screen can be customized successfully using the intelligent tester.**

**Text in Illustration**

### INSPECTION PROCEDURE

**NOTICE:**

- **Inspect the fuses for circuits related to this system before performing the following inspection procedure.**
- **When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) (Click here)**

#### 1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Check for optional components.

i. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components (including associated wiring) are installed. | A |
| Optional components (including associated wiring) are not installed. | B |

**HINT:**

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect MOST communication.**
- **This DTC may be stored when an MOST communication error occurs due to electrical noise.**

**B** → **Go to step 3**

**A**

## 2.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

**NEXT**

## 3.CHECK DTC

a. Clear the DTCs (Click here).

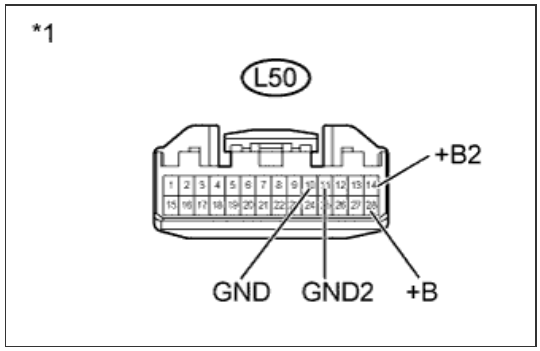
b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

**NG** → **Go to step 4**

**OK**

**END**



## 4.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY ASSEMBLY POWER SOURCE)

a. Disconnect the L50 television display assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-10 (GND) - Body ground | Always | Below 1 Ω |
| L50-11 (GND2) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-14 (+B2) - | | |

| | | |
|---|---|---|
| L50-10 (GND) | Always | 11 to 14 V |
| L50-28 (+B) - L50-10 (GND) | Always | 11 to 14 V |

**Text in Illustration**

**5.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY - STEREO COMPONENT AMPLIFIER)**

a. Disconnect the L50 television display assembly connector.

b. Disconnect the F63 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-1 (MI+) - F63-6 (MO+) | Always | Below 1 Ω |
| L50-2 (MI-) - F63-12 (MO-) | Always | Below 1 Ω |
| L50-3 (SLDI) - F63-11 (SLDO) | Always | Below 1 Ω |
| L50-1 (MI+) - Body ground | Always | 10 kΩ or higher |
| L50-2 (MI-) - Body ground | Always | 10 kΩ or higher |
| L50-3 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**6.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY - DISPLAY AND NAVIGATION MODULE DISPLAY)**

a. Disconnect the L50 television display assembly connector.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-6 (MO+) - F59-1 (MI+) | Always | Below 1 Ω |
| L50-5 (MO-) - F59-5 (MI-) | Always | Below 1 Ω |
| L50-4 (SLDO) - F59-2 (SLDI) | Always | Below 1 Ω |
| L50-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| L50-5 (MO-) - Body ground | Always | 10 kΩ or higher |
| L50-4 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**7.REPLACE TELEVISION DISPLAY ASSEMBLY**

a. Replace the television display assembly (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK

**END**

# DTC B15F6 Main Body ECU Vehicle Information Reading/Writing Process Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when items controlled by the main body ECU (cowl side junction block LH) cannot be customized via the navigation system vehicle customization screen.

**HINT:**

**The main body ECU (cowl side junction block LH) controls the items for the following systems that are customizable via the navigation system screen:**

- **Power door lock control system**
- **Wireless door lock control system**
- **Lighting system**

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15F6 | Main body ECU (cowl side junction block LH) vehicle setting processing error. | • CAN communication system<br>• Power door lock control system<br>• Wireless door lock control system<br>• Lighting system<br>• Main body ECU (cowl side junction block LH)<br>• Display and navigation module display |

## INSPECTION PROCEDURE

**NOTICE:**

When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) ( Click here)

### 1.CHECK CAN COMMUNICATION SYSTEM

a. Use the intelligent tester to check if the CAN communication system is functioning normally ( Click here).

**OK:**
**CAN communication DTC is not output.**

**NG** → GO TO CAN COMMUNICATION SYSTEM (**Click here**)

**OK** ↓

### 2.CHECK POWER DOOR LOCK CONTROL SYSTEM

a. Check if the power door lock control system is malfunctioning ( Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the power door lock control system.

**OK:**
**No malfunctions are present in the power door lock control system.**

**NG** → GO TO POWER DOOR LOCK CONTROL SYSTEM (**Click here**)

**OK** ↓

### 3.CHECK WIRELESS DOOR LOCK CONTROL SYSTEM

a. Check if the wireless door lock control system is malfunctioning ( Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the wireless door lock control system.

**OK:**
**No malfunctions are present in the wireless door lock control system.**

NG → GO TO WIRELESS DOOR LOCK CONTROL SYSTEM (Click here)

OK

## 4.CHECK LIGHTING SYSTEM

a. Check if the lighting system is malfunctioning (Click here).

**HINT:**

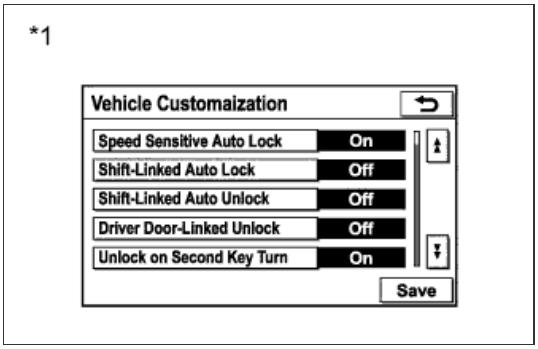
Customization may not be possible depending on the malfunction in the lighting system.

**OK:**
**No malfunctions are present in the lighting system.**

NG → GO TO LIGHTING SYSTEM (Click here)

OK

## 5.CHECK CUSTOMIZE ITEMS



a. Display the "Vehicle Customization" screen.

b. Make a note of the customizable items for each main body ECU (cowl side junction block LH) related system.

**HINT:**

These items shown as customizable via the navigation system vehicle customization screen can also be changed using the intelligent tester. In a following step, the intelligent tester will be used.

i. To match-up the items in the navigation display with the items on the intelligent tester, check the customize parameters list for the power door lock control system related items that can be customized via the navigation system screen (Click here).

ii. To match-up the items in the navigation display with the items on the intelligent tester, check the customize parameters list for the wireless door lock control system related items that can be customized via the navigation system screen (Click here).

iii. To match-up the items in the navigation display with the items on the intelligent tester, check the customize parameters list for the lighting system related items that can be customized via the navigation system screen (Click here).

c. Using the intelligent tester, confirm that it is possible to change the settings of the customize parameters that are available for customization via the navigation system screen.

**OK:**
**The items available for customization via the navigation system screen can be customized successfully using the intelligent tester.**

**Text in Illustration**

| *1 | Example |

NG → REPLACE MAIN BODY ECU (COWL SIDE JUNCTION BLOCK LH)

OK

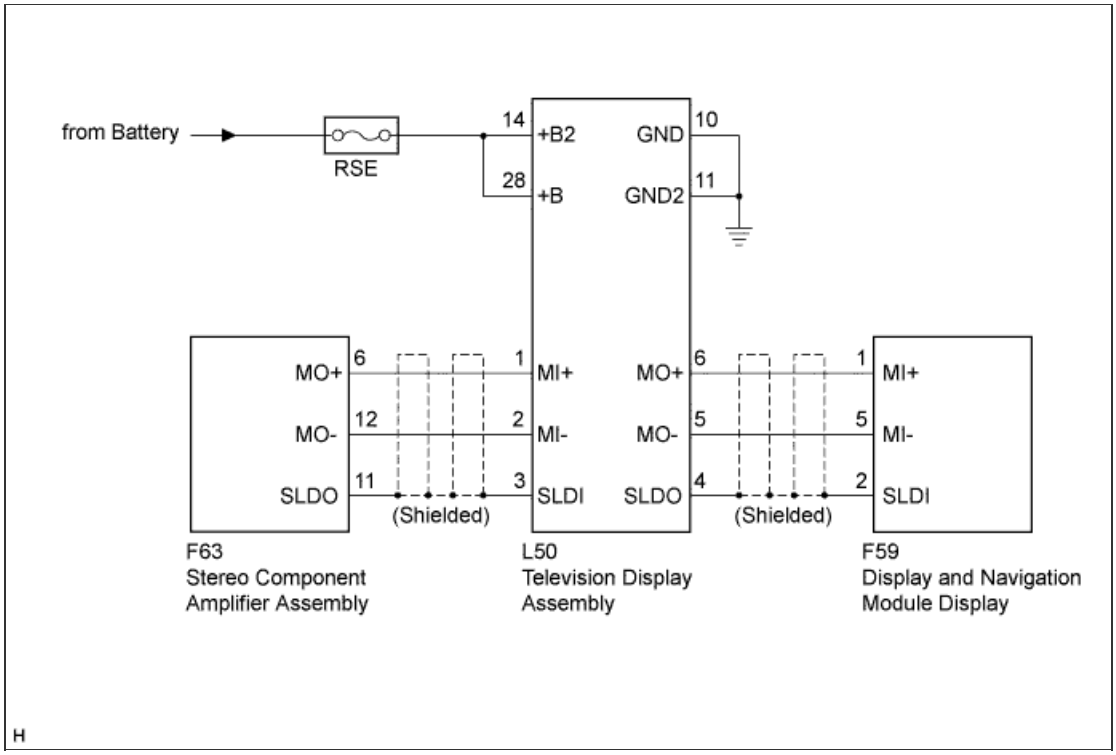
REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

## DTC B1595 No Response from Rear Seat Entertainment System

## DTC B15D5 Rear Seat Entertainment System Disconnected

**for Preparation** Click here

### DESCRIPTION



The display and navigation module display and television display assembly are connected by the MOST communication line.
When an MOST communication error occurs between the display and navigation module display and television display assembly, these DTCs will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1595 | No response to the diagnostic memory request from the master unit. | • Television display assembly power source circuit<br>• MOST circuit between stereo component amplifier assembly and television display assembly<br>• MOST circuit between television display assembly and display and navigation module display<br>• Television display assembly<br>• Display and navigation module display |
| B15D5 | A device that is listed in the MOST network connected device record of the master unit is missing. | |

**HINT:**

For the MOST network, the display and navigation module display is the master unit.

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

- **Inspect the fuses for circuits related to this system before performing the following inspection procedure.**
- **When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) (Click here)**

#### 1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Check for optional components.

i. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components (including associated wiring) are installed. | A |
| Optional components (including associated wiring) are not installed. | B |

**HINT:**

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect MOST communication.**
- **This DTC may be stored when an MOST communication error occurs due to electrical noise.**

**B** → **Go to step 3**

**A**

## 2.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

**NEXT**

## 3.CHECK DTC

a. Clear the DTCs (Click here).

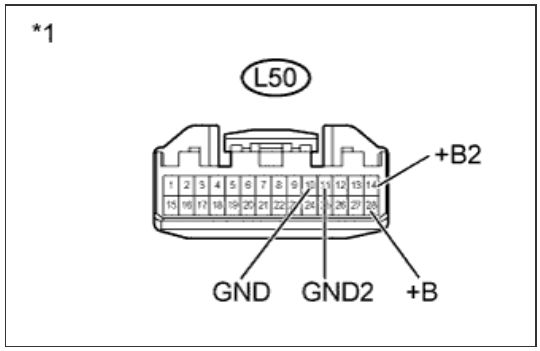
b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

**NG** → **Go to step 4**

**OK**

**END**



## 4.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY ASSEMBLY POWER SOURCE)

a. Disconnect the L50 television display assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-10 (GND) - Body ground | Always | Below 1 Ω |
| L50-11 (GND2) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-14 (+B2) - | | |

| | | |
|---|---|---|
| L50-10 (GND) | Always | 11 to 14 V |
| L50-28 (+B) - L50-10 (GND) | Always | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Television Display Assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**5.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY - STEREO COMPONENT AMPLIFIER)**

a. Disconnect the L50 television display assembly connector.

b. Disconnect the F63 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-1 (MI+) - F63-6 (MO+) | Always | Below 1 Ω |
| L50-2 (MI-) - F63-12 (MO-) | Always | Below 1 Ω |
| L50-3 (SLDI) - F63-11 (SLDO) | Always | Below 1 Ω |
| L50-1 (MI+) - Body ground | Always | 10 kΩ or higher |
| L50-2 (MI-) - Body ground | Always | 10 kΩ or higher |
| L50-3 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**6.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY - DISPLAY AND NAVIGATION MODULE DISPLAY)**

a. Disconnect the L50 television display assembly connector.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-6 (MO+) - F59-1 (MI+) | Always | Below 1 Ω |
| L50-5 (MO-) - F59-5 (MI-) | Always | Below 1 Ω |
| L50-4 (SLDO) - F59-2 (SLDI) | Always | Below 1 Ω |
| L50-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| L50-5 (MO-) - Body ground | Always | 10 kΩ or higher |
| L50-4 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**7.REPLACE TELEVISION DISPLAY ASSEMBLY**

a. Replace the television display assembly (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK

**END**

# DTC B15F7 Certification ECU Vehicle Information Reading/Writing Process Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when items controlled by the certification ECU (smart key ECU assembly) cannot be customized via the navigation system vehicle customization screen.

**HINT:**

**The certification ECU (smart key ECU assembly) controls the items for the following systems that are customizable via the navigation system screen:**

- **Entry and start system (for Entry Function)**
- **Entry and start system (for Start Function)**

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15F7 | Certification ECU (smart key ECU assembly) vehicle setting processing error. | • CAN communication system<br>• Entry and start system (for Entry Function)<br>• Entry and start system (for Start Function)<br>• Certification ECU (smart key ECU assembly)<br>• Display and navigation module display |

## INSPECTION PROCEDURE

**NOTICE:**

When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) ( Click here)

### 1.CHECK CAN COMMUNICATION SYSTEM

a. Use the intelligent tester to check if the CAN communication system is functioning normally ( Click here).

**OK:**
**CAN communication DTC is not output.**

NG → GO TO CAN COMMUNICATION SYSTEM (**Click here**)

OK

### 2.CHECK ENTRY AND START SYSTEM (for Entry Function)

a. Check if the entry and start system (for entry function) is malfunctioning ( Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the entry and start system (for entry function).

**OK:**
**No malfunctions are present in the entry and start system (for entry function).**

NG → GO TO ENTRY AND START SYSTEM (for Entry Function) ( **Click here**)

OK

### 3.CHECK ENTRY AND START SYSTEM (for Start Function)

a. Check if the entry and start system (for start function) is malfunctioning ( Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the entry and start system (for start function).

**OK:**

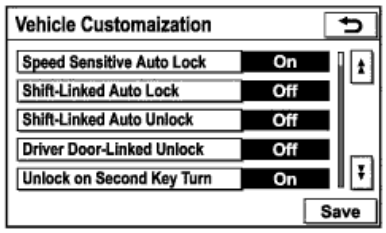
**No malfunctions are present in the entry and start system (for start function).**

NG → GO TO ENTRY AND START SYSTEM (for Start Function) ( **Click here**)

OK ↓

**4.CHECK CUSTOMIZE ITEMS**

a. Display the "Vehicle Customization" screen.



b. Make a note of the customizable items for each certification ECU related system.

**HINT:**

These items shown as customizable via the navigation system vehicle customization screen can also be changed using the intelligent tester. In a following step, the intelligent tester will be used.

i. To match-up the items in the navigation display with the items on the intelligent tester, check the customize parameters list for the entry and start system (for entry function) related items that can be customized via the navigation system screen (Click here).

*1

ii. To match-up the items in the navigation display with the items on the intelligent tester, check the customize parameters list for the entry and start system (for start function) related items that can be customized via the navigation system screen (Click here).

c. Using the intelligent tester, confirm that it is possible to change the settings of the customize parameters that are available for customization via the navigation system screen.

**OK:**

**The items available for customization via the navigation system screen can be customized successfully using the intelligent tester.**

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

## DTC B15A0 LAN Master Malfunction

## DTC B15AD Navigation Processor Malfunction

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored when a malfunction occurs in the display and navigation module display.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15A0 | When one of the conditions below is met:<br>• Bus malfunction<br>• Sub-microprocessor malfunction<br>• EEPROM error | Display and navigation module display |
| B15AD | When either of the conditions below is met:<br>• A short to ground, short to +B or open occurs in the gyro signal circuit<br>• Gyro sensor malfunction | |

### INSPECTION PROCEDURE

**NOTICE:**

When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) ( Click here).

**1.CHECK DTC**

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same DTC is output again.

**OK:**
**No DTCs are output.**

## INSPECTION PROCEDURE

**NOTICE:**

When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) ( Click here)

### 1.CHECK CAN COMMUNICATION SYSTEM

a. Use the intelligent tester to check if the CAN communication system is functioning normally ( Click here).

**OK:**
**CAN communication DTC is not output.**

NG → GO TO CAN COMMUNICATION SYSTEM (**Click here**)

OK

### 2.CHECK ENTRY AND START SYSTEM (for Entry Function)

a. Check if the entry and start system (for entry function) is malfunctioning ( Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the entry and start system (for entry function).

**OK:**
**No malfunctions are present in the entry and start system (for entry function).**

NG → GO TO ENTRY AND START SYSTEM (for Entry Function) ( **Click here**)

OK

### 3.CHECK ENTRY AND START SYSTEM (for Start Function)

a. Check if the entry and start system (for start function) is malfunctioning ( Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the entry and start system (for start function).

**OK:**

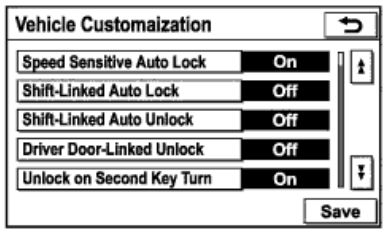
**No malfunctions are present in the entry and start system (for start function).**

NG → GO TO ENTRY AND START SYSTEM (for Start Function) ( **Click here**)

OK

**4.CHECK CUSTOMIZE ITEMS**

a. Display the "Vehicle Customization" screen.



b. Make a note of the customizable items for each certification ECU related system.

**HINT:**

These items shown as customizable via the navigation system vehicle customization screen can also be changed using the intelligent tester. In a following step, the intelligent tester will be used.

i. To match-up the items in the navigation display with the items on the intelligent tester, check the customize parameters list for the entry and start system (for entry function) related items that can be customized via the navigation system screen (Click here).

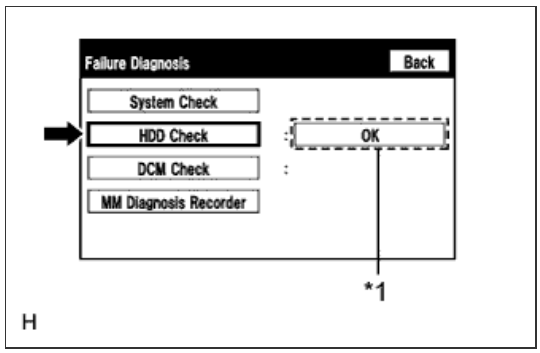
# DTC B15B8 Harddisk Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when the hard disk drive which is built into the display and navigation module display has an initialization malfunction or read/write errors occur more than a specified number of times.



| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15B8 | Hard Disk Drive (HDD) malfunction | Hard Disk Drive |

## INSPECTION PROCEDURE

### 1.CHECK HARD DISK DRIVE (OPERATION CHECK)

a. Enter the "Failure Diagnosis" screen. Refer to Check Hard Disk Drive in Operation Check (Click here).

b. Select "HDD Check" and check the result.

**OK:**
**"OK" is displayed.**

**HINT:**

- **After "HDD Check" is selected, it may take a while until the result is displayed.**
- **If the cabin temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher, the HDD may not operate normally, and NG may be shown on the display. Make sure to perform the inspection with the cabin at an appropriate temperature.**

## DTC B15C0 Short in GPS Antenna

## DTC B15C1 Open in GPS Antenna

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored when a malfunction occurs in the navigation antenna assembly.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15C0 | Navigation antenna error | • Wire harness<br>• Navigation antenna assembly<br>• Display and navigation module display |
| B15C1 | Error of the power source to the navigation antenna assembly | |

### INSPECTION PROCEDURE

**NOTICE:**

When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) ( Click here).

**1.CHECK CONNECTION OF ANTENNA CABLE**

a. Check if the navigation antenna cable is securely connected to the display and navigation module display.

**OK:**
**Navigation antenna cable is securely connected.**

NG → **SECURELY CONNECT NAVIGATION ANTENNA CABLE**

OK

**2.REPLACE NAVIGATION ANTENNA ASSEMBLY**

a. Replace the navigation antenna assembly with a known good one and check if the same problem occurs again ( Click here).

i. Clear the DTCs (Click here).

ii. Recheck for DTCs and check if the same DTC is output again.

**OK:**
**No DTCs are output.**

NG → **REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)**

OK

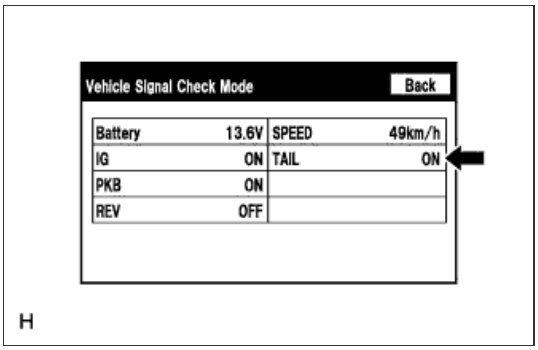
## INSPECTION PROCEDURE

**NOTICE:**

When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) ( Click here).



### 1.CHECK VEHICLE SIGNAL (OPERATION CHECK)

a. Enter the "Vehicle Signal Check Mode" screen. Refer to Check Vehicle Signal in Operation Check (Click here).

b. Cover the automatic light control sensor on the instrument panel with a cloth.

c. Set the instrument panel light control to less than the maximum (to activate the dimmer function that works when the light control switch is in the TAIL position).

d. Check that the display changes between ON and OFF according to the light control switch operation.

**OK:**

| Light Control Switch Condition | Display Condition |
|---|---|
| TAIL or HEAD | ON |
| OFF | OFF |

**HINT:**

This display is updated once per second. As a result, it is normal for the display to lag behind the actual switch operation.

**NG** → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

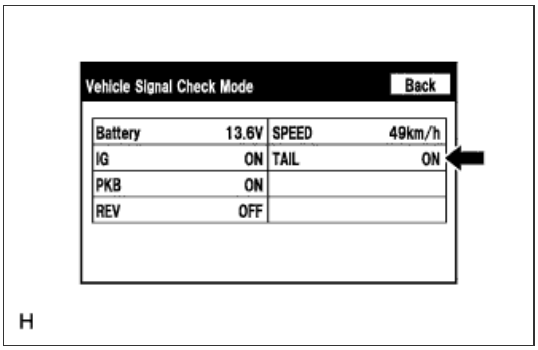
**OK** → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

**NOTICE:**

When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) ( Click here).



### 1.CHECK VEHICLE SIGNAL (OPERATION CHECK)

a. Enter the "Vehicle Signal Check Mode" screen. Refer to Check Vehicle Signal in Operation Check (Click here).

b. Cover the automatic light control sensor on the instrument panel with a cloth.

c. Set the instrument panel light control to less than the maximum (to activate the dimmer function that works when the light control switch is in the TAIL position).

d. Check that the display changes between ON and OFF according to the light control switch operation.

**OK:**

| Light Control Switch Condition | Display Condition |
|---|---|
| TAIL or HEAD | ON |
| OFF | OFF |

**HINT:**

This display is updated once per second. As a result, it is normal for the display to lag behind the actual switch operation.

**NG** → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

**OK** → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

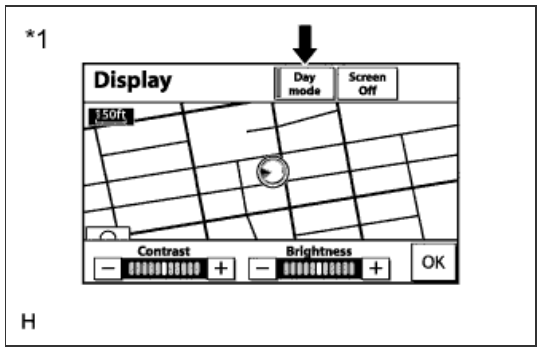
**for Preparation** Click here

## INSPECTION PROCEDURE

**NOTICE:**

When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) ( Click here).

### 1.CHECK IMAGE QUALITY SETTING



a. Enter the display adjustment screen by pressing the "DISP" switch.

b. Turn the light control switch to the tail position.

c. Check if "Day mode" on the display adjustment screen is on.

**Result**

| Result | Proceed to |
|---|---|
| "Day mode" is on | A |
| "Day mode" is off | B |

**Text in Illustration**

| | |
|---|---|
| *1 | Example |

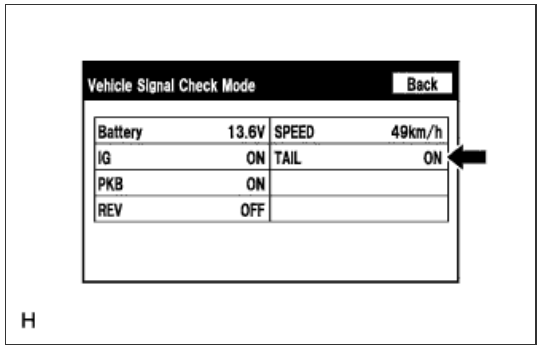
B → Go to step 2

A

### TURN "Day mode" SETTING OFF

### 2.CHECK VEHICLE SIGNAL (OPERATION CHECK)

a. Enter the "Vehicle Signal Check Mode" screen. Refer to Check Vehicle Signal in Operation Check (Click here).



b. Cover the automatic light control sensor on the instrument panel with a cloth.

c. Set the instrument panel light control to less than the maximum (to activate the dimmer function that works when the light control switch is in the TAIL position).

d. Check that the display changes between ON and OFF according to the light control switch operation.

**Result:**

| Light Control Switch Condition | Display Condition |
|---|---|
| TAIL or HEAD | ON |
| OFF | OFF |

**HINT:**

The display is updated once per second. It is normal for the display to lag behind the actual switch operation.

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

### REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

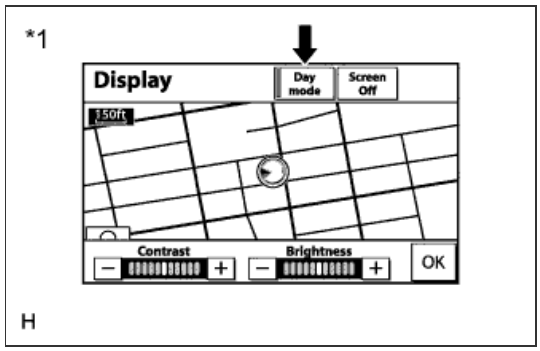
**for Preparation** Click here

## INSPECTION PROCEDURE

**NOTICE:**

When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) ( Click here).

### 1.CHECK IMAGE QUALITY SETTING



a. Enter the display adjustment screen by pressing the "DISP" switch.

b. Turn the light control switch to the tail position.

c. Check if "Day mode" on the display adjustment screen is on.

**Result**

| Result | Proceed to |
|---|---|
| "Day mode" is on | A |
| "Day mode" is off | B |

**Text in Illustration**

| | |

| *1 | Example |

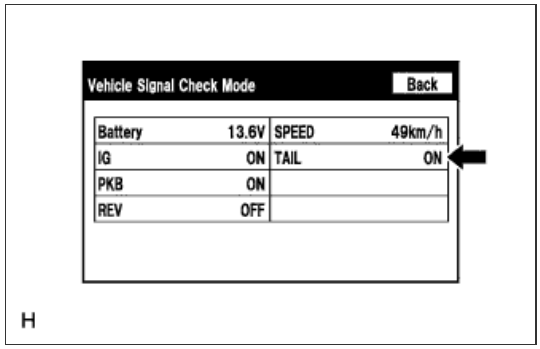
B → Go to step 2

A

### TURN "Day mode" SETTING OFF

### 2.CHECK VEHICLE SIGNAL (OPERATION CHECK)

a. Enter the "Vehicle Signal Check Mode" screen. Refer to Check Vehicle Signal in Operation Check (Click here).



b. Cover the automatic light control sensor on the instrument panel with a cloth.

c. Set the instrument panel light control to less than the maximum (to activate the dimmer function that works when the light control switch is in the TAIL position).

d. Check that the display changes between ON and OFF according to the light control switch operation.

**Result:**

| Light Control Switch Condition | Display Condition |
|---|---|
| TAIL or HEAD | ON |
| OFF | OFF |

**HINT:**

The display is updated once per second. It is normal for the display to lag behind the actual switch operation.

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

### REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

**NOTICE:**

When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) ( Click here).

### 1.CHECK PANEL SWITCH

a. Check for foreign matter around the switches that might prevent operation.

**OK:**
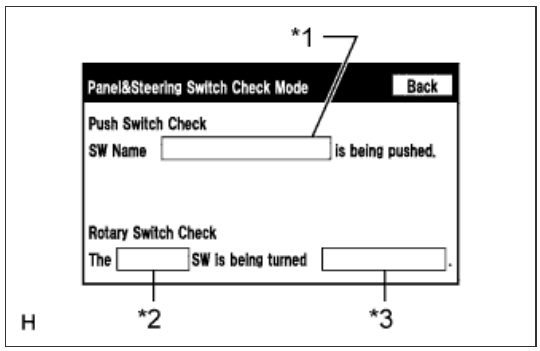
**No foreign matter is found.**

NG → REMOVE ANY FOREIGN MATTER FOUND



OK

### 2.CHECK PANEL SWITCH (OPERATION CHECK)

a. Enter the "Panel & Steering Switch Check Mode" screen. Refer to Check Panel & Steering Switch in Operation Check (Click here).

b. Operate the abnormal switch and check if the switch name and status are correctly displayed.

**OK:**
**The switch name and status are correctly displayed as operated.**

**Text in Illustration**

| | |
|---|---|
| *1 | Name of switch being pushed |
| *2 | Rotary switch name |
| *3 | Rotary switch direction |

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

**NOTICE:**

When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) ( Click here).

**1.CHECK TOUCH PANEL**

a. Check for foreign matter on the display.

**OK:**
**The display is clean.**

NG → **CLEAN DISPLAY AND RECHECK TOUCH PANEL**

OK

**2.CHECK TOUCH SWITCH (OPERATION CHECK)**

a. Enter the "Touch Switch Check" screen. Refer to Check Touch Switch in Operation Check (Click here).

b. Touch the display in the area where the switch malfunction occurs.

**OK:**
**A "+" mark appears at the touched position.**

NG → **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)**

OK

**REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)**

**for Preparation** Click here

## INSPECTION PROCEDURE

**NOTICE:**

When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) ( Click here).

**1.CHECK TOUCH PANEL**

a. Check for foreign matter on the display.

**OK:**
**The display is clean.**

NG → **CLEAN DISPLAY AND RECHECK TOUCH PANEL**

OK

**2.CHECK TOUCH SWITCH (OPERATION CHECK)**

a. Enter the "Touch Switch Check" screen. Refer to Check Touch Switch in Operation Check (Click here).

b. Touch the display in the area where the switch malfunction occurs.

**OK:**
**A "+" mark appears at the touched position.**

NG → **PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)**

OK

**REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)**

**for Preparation** Click here

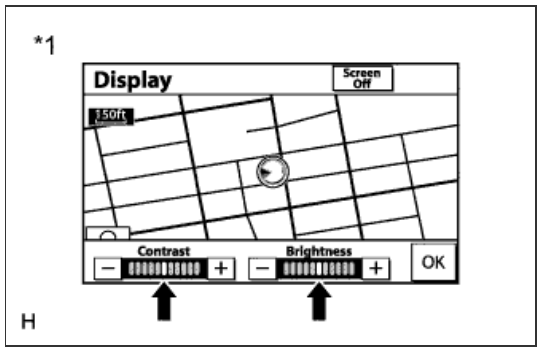
## INSPECTION PROCEDURE

**NOTICE:**



When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) ( Click here).

### 1.CHECK DISPLAY SETTING

a. Enter the display adjustment screen by pressing the "DISP" switch.

b. Reset display settings (contrast, brightness) and check that the screen appears normally.

**OK:**
**The display returns to normal.**

**Text in Illustration**

| | |
|---|---|
| *1 | Example |

NG → Go to step 2

OK →

### END

### 2.CHECK CABIN

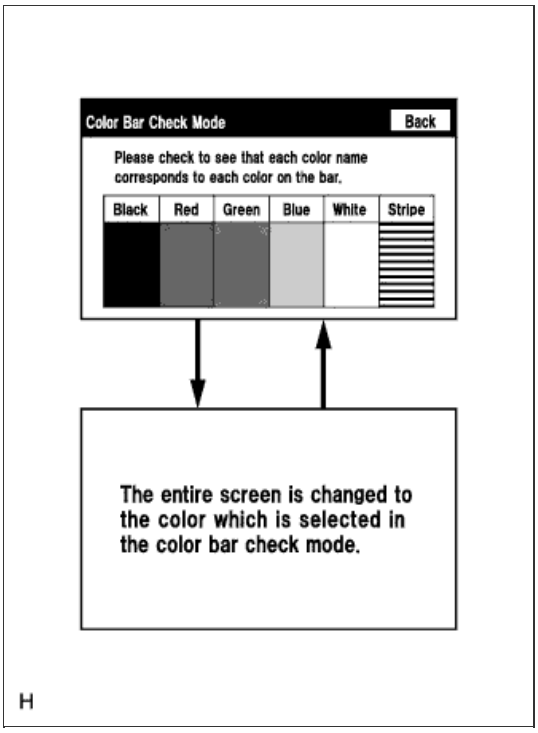
a. Check that the temperature in the cabin is neither -20°C (-4°F) or lower nor 65°C (149°F) or higher.

**HINT:**

The navigation system may not operate normally when the temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher.

**Standard:**
**Temperature in the cabin is between -20°C (-4°F) and 65°C (149°F).**

NG → HEAT OR COOL CABIN AND RECHECK TEMPERATURE



OK →

### 3.CHECK COLOR BAR (OPERATION CHECK)

a. Enter the "Color Bar Check Mode" screen. Refer to Check Color Bar in Operation Check (Click here).

b. Check that the color bars match the displayed names.

**OK:**
**Color bars match the displayed names.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

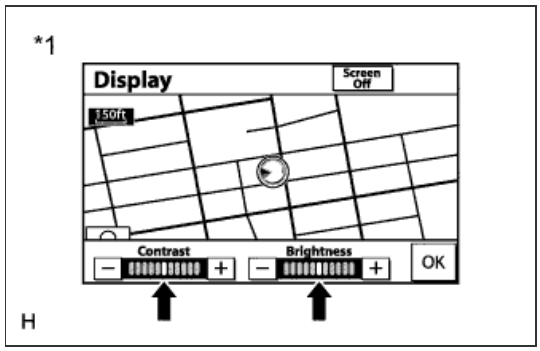
## INSPECTION PROCEDURE

**NOTICE:**



When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) ( Click here).

### 1.CHECK DISPLAY SETTING

a. Enter the display adjustment screen by pressing the "DISP" switch.

b. Reset display settings (contrast, brightness) and check that the screen appears normally.

**OK:**
**The display returns to normal.**

**Text in Illustration**

| | |
|---|---|
| *1 | Example |

NG → Go to step 2

OK →

### END

### 2.CHECK CABIN

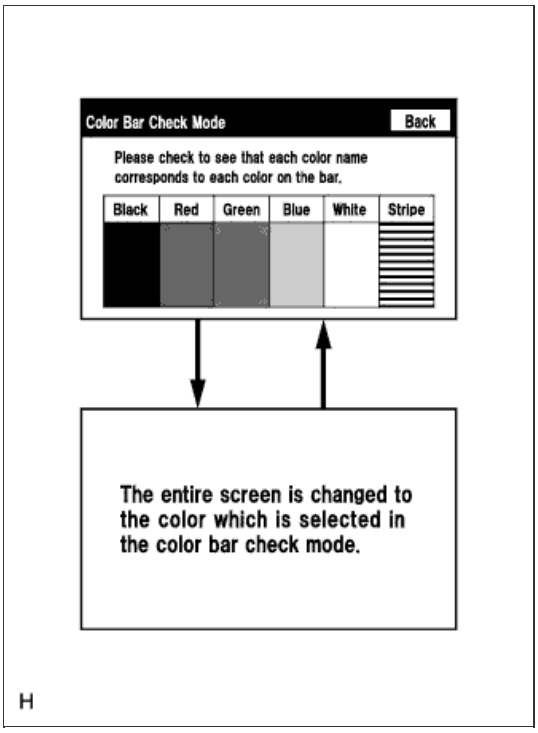
a. Check that the temperature in the cabin is neither -20°C (-4°F) or lower nor 65°C (149°F) or higher.

**HINT:**

The navigation system may not operate normally when the temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher.

**Standard:**
**Temperature in the cabin is between -20°C (-4°F) and 65°C (149°F).**

NG → HEAT OR COOL CABIN AND RECHECK TEMPERATURE



OK →

### 3.CHECK COLOR BAR (OPERATION CHECK)

a. Enter the "Color Bar Check Mode" screen. Refer to Check Color Bar in Operation Check (Click here).

b. Check that the color bars match the displayed names.

**OK:**
**Color bars match the displayed names.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK GPS MARK

a. Check that the GPS mark is displayed.

**OK:**
**GPS mark is displayed.**

**Text in Illustration**

| | |
|---|---|
| *1 | Example |

NG → GO TO "GPS MARK IS NOT DISPLAYED" IN PROBLEM SYMPTOMS TABLE (Click here)

OK

### 2.CHECK VEHICLE SENSOR (OPERATION CHECK)

a. Enter the "Vehicle Sensors" screen. Refer to Check GPS & Vehicle Sensors in Operation Check (Click here).

b. While driving the vehicle, compare the "Speed" indicator to the reading on the speedometer. Check that these readings are almost equal.

**OK:**
**The readings are almost equal.**

NG → CHECK DTC OUTPUT (Click here)

OK

### 3.CHECK VEHICLE SIGNAL (OPERATION CHECK)

a. Enter the "Vehicle Signal Check Mode" screen. Refer to Check Vehicle Signal in Operation Check ( Click here).

b. Check that the display changes between ON and OFF according to the shift lever operation.

**OK:**

| Shift Lever Position | Display |
|---|---|
| Except R | OFF |
| R | ON |

**HINT:**

The display is updated once per second. It is normal for the display to lag

behind the actual switch operation.

NG → CHECK DTC OUTPUT (Click here)

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK GPS MARK

a. Check that the GPS mark is displayed.

**OK:**
**GPS mark is displayed.**

**Text in Illustration**

| | |
|---|---|
| *1 | Example |

NG → GO TO "GPS MARK IS NOT DISPLAYED" IN PROBLEM SYMPTOMS TABLE (Click here)

OK

### 2.CHECK VEHICLE SENSOR (OPERATION CHECK)

a. Enter the "Vehicle Sensors" screen. Refer to Check GPS & Vehicle Sensors in Operation Check (Click here).

b. While driving the vehicle, compare the "Speed" indicator to the reading on the speedometer. Check that these readings are almost equal.

**OK:**
**The readings are almost equal.**

## INSPECTION PROCEDURE

### 1.CHECK CONDITION

a. Check with the customer if the vehicle has been turned by a turntable.

**OK:**

**Vehicle has not been turned by turntable.**

**Text in Illustration**

| | |
|---|---|
| *1 | Example |

**HINT:**

If the vehicle is turned on a turntable with the engine switch on (IG), the system may store the angular velocity. As a result, the vehicle position cursor may deviate.

NG → TURN ENGINE SWITCH TO ON WHEN VEHICLE IS COMPLETELY STOPPED

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

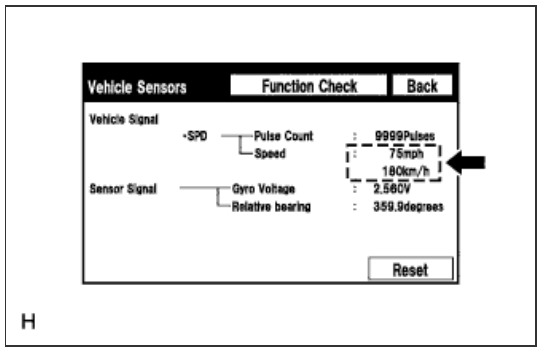
## INSPECTION PROCEDURE

**NOTICE:**



When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) ( Click here).

### 1.CHECK CABIN

a. Check the cabin for any object that might interrupt radio reception on the instrument panel. If such an object exists, remove it and check if the GPS mark reappears.

**HINT:**

The GPS uses extremely faint radio waves originating from satellites. If the signal is interrupted by obstructions or other radio waves, the GPS may not be able to properly receive the signal.

**OK:**
**The GPS mark appears.**

NG → Go to step 2

OK

### NORMAL OPERATION

### 2.CHECK SURROUNDINGS

a. Check if the vehicle is in a location where GPS signal reception is poor. If the vehicle is in such a place, relocate the vehicle and check if the GPS mark reappears.

**HINT:**

The GPS uses 24 satellites in 6 orbits. At any point in time, 4 satellites should be able to pinpoint your vehicle. However, GPS signals may not reach the vehicle due to influence from the surroundings, vehicle direction and time. For examples, see the following illustration.

**Text in Illustration**

| | | | |
|---|---|---|---|
| *1 | Example | *2 | In a tunnel |
| *3 | In a building | *4 | Under an overpass |
| *5 | On a forest or tree-lined path | *6 | Between tall buildings |
| *7 | Under a cliff or overhang | - | - |

**OK:**

**The GPS mark is displayed.**

NG → Go to step 3

OK

SYSTEM RETURNS TO NORMAL

## 3.CHECK GPS INFORMATION (OPERATION CHECK)

a. Enter the "GPS Information" screen. Refer to Check GPS & Vehicle Sensors in Operation Check (Click here).

b. Check how many of the following codes appear in the "STS" column.

**HINT:**

T or P appears.

**OK:**

**At least 3 codes appear.**

*1

*2

## INSPECTION PROCEDURE

### 1.CHECK CONFIRM SYMPTOMS

a. Confirm the information about the situation when the route calculation did not complete.

**Result**

| Result | Proceed to |
|---|---|
| Route cannot be calculated for any destination. | A |
| A road in the route is closed or has not been officially opened yet. | B |
| A ferry crossing is included in the route. | B |
| The destination is too close. | B |
| The route cannot be calculated only when driving on a bumpy road. | B |

**HINT:**

A route cannot be calculated if the route is unavailable, a ferry crossing is included in the route, the destination is too close or when driving on bumpy roads.

B → NORMAL OPERATION

A

### 2.REPLACE HARD DISK DRIVE

a. Replace the hard disk drive (Click here).

b. Set another destination and check if the system can calculate the route correctly.

**OK:**
**Route can be correctly calculated.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

### END

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK CONFIRM SYMPTOMS

a. Confirm the information about the situation when the route calculation did not complete.

**Result**

| Result | Proceed to |
|---|---|
| Route cannot be calculated for any destination. | A |
| A road in the route is closed or has not been officially opened yet. | B |
| A ferry crossing is included in the route. | B |

## INSPECTION PROCEDURE

### 1.CHECK CONDITION

a. Check if the system voice recognition level is low when recognizing a particular voice.

**Result**

| Result | Proceed to |
|---|---|
| System voice recognition level is low with any voice. | A |
| System voice recognition level is low only for a particular voice. | B |

**HINT:**

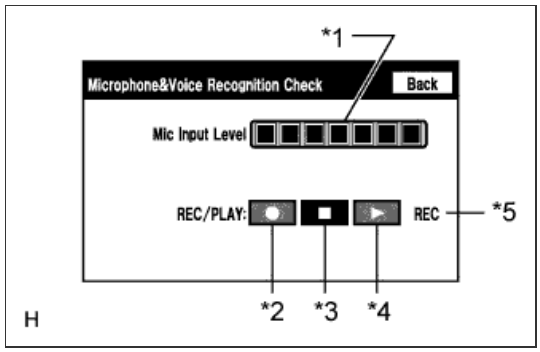
System voice recognition level varies depending on voice and pronunciation. This is not a malfunction.

B → END

A

### 2.CHECK MICROPHONE AND VOICE RECOGNITION (OPERATION CHECK)



a. Enter the "Microphone & Voice Recognition Check" screen. Refer to Check Mic & Voice Recognition in Operation Check (Click here).

b. When voice is input into the microphone, check that the microphone input level meter changes according to the input voice.

c. Push the recording switch and perform voice recording.

**HINT:**

- **Select the recording switch with the blower motor of the air conditioning system stopped. If an outlet of the air conditioning system is facing the microphone, noise may be recorded.**
- **Voice can be recorded up to 5 seconds.**

**HINT:**

Voice can be recorded up to 5 seconds.

d. Check that the recording indicator remains on while recording and that the recorded voice is played normally without noise or distortion.

**OK:**
**All check results are normal.**

**Text in Illustration**

3.REPLACE HARD DISK DRIVE

a. Replace the hard disk drive (Click here).

b. Check that voice recognition is normal.

**OK:**

**Voice can be recognized normally.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK → END

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK NAVIGATION SETTING

a. Display the "Voice Settings" screen.

b. Check that "Voice Recognition Guidance" is not "Off".

**OK:**
**"Voice Recognition Guidance" is not "Off".**

Text in Illustration

| | |
|---|---|
| *1 | Example |

NG → TURN VOICE RECOGNITION GUIDANCE "On"

OK

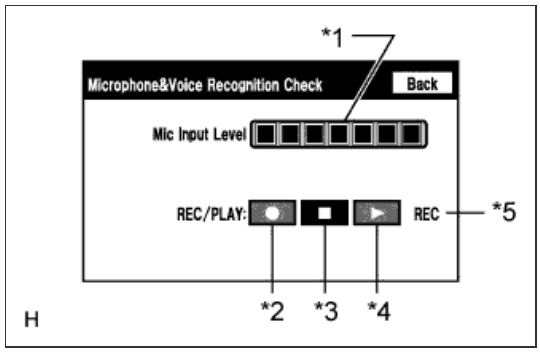
### 2.CHECK MICROPHONE AND VOICE RECOGNITION (OPERATION CHECK)



a. Enter the "Microphone & Voice Recognition Check" screen. Refer to Check Mic & Voice Recognition in Operation Check (Click here).

b. When voice is input into the microphone, check that the microphone input level meter changes according to the input voice.

c. Push the recording switch and perform voice recording.

**HINT:**

- **Select the recording switch with the blower motor of the air conditioning system stopped. If an outlet of the air conditioning system is facing the microphone, noise may be recorded.**
- **Voice can be recorded up to 5 seconds.**

**HINT:**

Voice can be recorded up to 5 seconds.

d. Check that the recording indicator remains on while recording and that the recorded voice is played normally without noise or distortion.

**OK:**
**All check results are normal.**

Text in Illustration

| | |
|---|---|
| *1 | Microphone Input Level Meter |
| *2 | Recording Switch |
| *3 | Stop Switch |
| *4 | Play Switch |
| *5 | Recording Indicator |

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

3.REPLACE HARD DISK DRIVE

a. Replace the hard disk drive (Click here).

b. Check that voice recognition is normal.

**OK:**

**Voice can be recognized normally.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK → END

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK CURRENT CONDITIONS

a. Proceed to the next step according to the table below.

Result

| Result | Proceed to |
|---|---|
| Another "Bluetooth" compatible cellular phone is present. | A |
| Another "Bluetooth" compatible vehicle is present. | B |
| None of the above | C |

B → Go to step 3

C → Go to step 4

A

### 2.CHECK USING ANOTHER CELLULAR PHONE

a. Check if the system functions using another "Bluetooth" compatible cellular phone.

**HINT:**

- **Confirm that either the same or a different version of another "Bluetooth" compatible cellular phone complies with the system.**
- **Depending on the version, some "Bluetooth" compatible cellular phones cannot be used.**

**OK:**
**The system functions.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

### USE A "Bluetooth" COMPATIBLE CELLULAR PHONE

### 3.CHECK USING ANOTHER "Bluetooth" COMPATIBLE VEHICLE

a. Register the cellular phone with another vehicle and check if the system functions normally.

**HINT:**

Depending on the version, some "Bluetooth" compatible cellular phones cannot be used.

**OK:**
**The system functions.**

NG → REPAIR OR REPLACE CELLULAR PHONE

OK

### REPLACE RADIO RECEIVER ASSEMBLY (Click here)

### 4.CHECK CELLULAR PHONE

a. Check if the cellular phone is "Bluetooth" compatible.

**HINT:**

Some versions of "Bluetooth" compatible cellular phones may not function.

**OK:**

**The phone is "Bluetooth" compatible.**

NG → USE A "Bluetooth" COMPATIBLE CELLULAR PHONE

OK ↓

5.CHECK CELLULAR PHONE

a. Check if a call can be made from the cellular phone.

**HINT:**

When the battery is low, registration or directory transfer cannot be done.

**OK:**

**A call can be made from the cellular phone.**

NG → REPAIR OR REPLACE CELLULAR PHONE

OK ↓

REPLACE RADIO RECEIVER ASSEMBLY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK "Bluetooth" SETTINGS

a. Check if the "Bluetooth" settings are correct.

**OK:**
**"Bluetooth" settings are correct.**

NG → SET SETTINGS CORRECTLY

OK

### 2.CHECK CELLULAR PHONE

a. Check if the cellular phone is "Bluetooth" compatible.

**HINT:**

Some versions of "Bluetooth" compatible cellular phones may not function.

**OK:**
**The phone is "Bluetooth" compatible.**

NG → END (ONLY A "Bluetooth" COMPATIBLE CELLULAR PHONE CAN BE USED)

OK

### 3.CHECK SETTINGS

a. Check the cellular phone functions.

**HINT:**

The cellular phone is unable to call under any of the following conditions:

- **The cellular phone is locked.**
- **The directory is being transferred.**
- **The line is crossed.**
- **Outside service range**
- **The power is off.**
- **The cellular phone is not connected to "Bluetooth" ("BT" is displayed while connected).**

**OK:**
**None of the above conditions exist.**

NG → SET CORRECTLY

OK

### 4.CHECK CELLULAR PHONE

a. Check if the cellular phone can make a call.

**HINT:**

When the battery is low, calls cannot be made or received.

**OK:**
**Cellular phone can make a call.**

NG → REPAIR OR REPLACE CELLULAR PHONE

OK

5.CHECK RECEPTION

a. Set the cellular phone so that it can receive calls.

b. Place the cellular phone close to the radio receiver assembly.

c. Check if the cellular phone has reception according to the multi display.

**OK:**
**The cellular phone has reception.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK "Bluetooth" SETTINGS

a. Check if the "Bluetooth" settings are correct.

**OK:**
**"Bluetooth" settings are correct.**

NG → SET SETTINGS CORRECTLY

OK

### 2.CHECK CELLULAR PHONE

a. Check if the cellular phone is "Bluetooth" compatible.

**HINT:**

Some versions of "Bluetooth" compatible cellular phones may not function.

**OK:**
**The phone is "Bluetooth" compatible.**

NG → END (ONLY A "Bluetooth" COMPATIBLE CELLULAR PHONE CAN BE USED)

OK

### 3.CHECK SETTINGS

a. Check the cellular phone functions.

**HINT:**

The cellular phone is unable to call under any of the following conditions:

- **The cellular phone is locked.**
- **The directory is being transferred.**
- **The line is crossed.**
- **Outside service range**
- **The power is off.**
- **The cellular phone is not connected to "Bluetooth" ("BT" is displayed while connected).**

**OK:**
**None of the above conditions exist.**

NG → SET CORRECTLY

OK

### 4.CHECK CELLULAR PHONE

a. Check if the cellular phone can make a call.

**HINT:**

When the battery is low, calls cannot be made or received.

**OK:**
**Cellular phone can make a call.**

NG → REPAIR OR REPLACE CELLULAR PHONE

OK

5.CHECK RECEPTION

a. Set the cellular phone so that it can receive calls.

b. Place the cellular phone close to the radio receiver assembly.

c. Check if the cellular phone has reception according to the multi display.

**OK:**
**The cellular phone has reception.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK SURROUNDING CONDITIONS

a. Check if the cellular phone can make calls in a certain place.

**OK:**
**It can make calls.**

NG → END (CELLULAR PHONES CAN ONLY FUNCTION IN CELLULAR SERVICE AREAS)

OK

### 2.CHECK RECEPTION

a. Display the "Phone" screen and check the "Bluetooth" connection indicator ("BT" indicator).

**Result**

| Result | Proceed to |
|---|---|
| "BT" indicator color is yellow. | A |
| "BT" indicator color is blue. | B |
| No connection mark is displayed. | C |

**Text in Illustration**

| | |
|---|---|
| *1 | Example |

B → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

C → SELECT A REGISTERED CELLULAR PHONE OR REGISTER A "Bluetooth" COMPATIBLE PHONE

A

MOVE CELLULAR PHONE TO A LOCATION WHERE "BT" MARK TURNS BLUE

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK CELLULAR PHONE

a. Check if the voice on the other side can be heard using a cellular phone.

**OK:**
**Voice can be heard.**

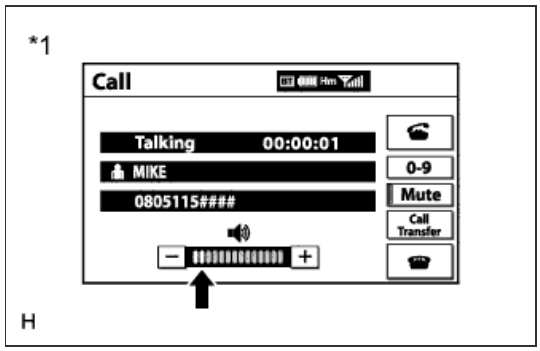
NG → REPAIR OR REPLACE CELLULAR PHONE

OK

### 2.CHECK NAVIGATION SYSTEM

a. Check that navigation sound can be heard from the front speaker.

**OK:**
**Sound can be heard from the navigation system.**



NG → GO TO "VOICE GUIDANCE DOES NOT FUNCTION" IN PROBLEM SYMPTOMS TABLE (Click here)

OK

### 3.CHECK SETTINGS

a. Check if the volume level is set to low on the "Call" screen.

**OK:**
**The level is not set to low.**

Text in Illustration

| | |
|---|---|
| *1 | Example |

NG → SET VOLUME TO HIGH

OK

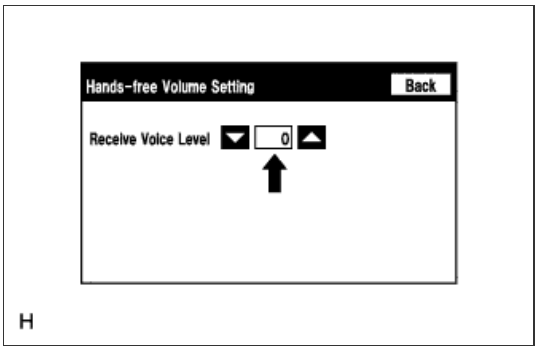
### 4.CHECK SETTINGS (OPERATION CHECK)

a. Enter the "Hands-free Volume Setting" screen. Refer to Check Hands-free Volume Setting in Operation Check (Click here).

b. Check if the Receive Voice Level is set to "0".

**HINT:**

The Receive Voice Level can be set to 11 different levels, -5 to +5, with a 3 dB difference.



c. Check if the Receive Voice Level is set to the minimum or maximum level.

**HINT:**

When the Receive Voice Level is set to the minimum or maximum level, the sound may be distorted.

**OK:**

**The Receive Voice Level is set to "0".**

NG → SET RECEIVE VOICE LEVEL TO "0"

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK CELLULAR PHONE

a. Check if the voice on the other side can be heard using a cellular phone.

**OK:**
**Voice can be heard.**

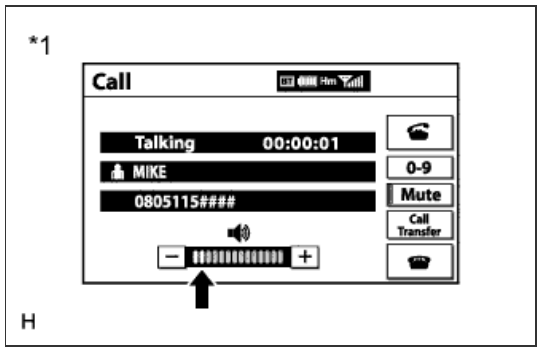
NG → REPAIR OR REPLACE CELLULAR PHONE

OK

### 2.CHECK NAVIGATION SYSTEM

a. Check that navigation sound can be heard from the front speaker.

**OK:**
**Sound can be heard from the navigation system.**



NG → GO TO "VOICE GUIDANCE DOES NOT FUNCTION" IN PROBLEM SYMPTOMS TABLE (Click here)

OK

### 3.CHECK SETTINGS

a. Check if the volume level is set to low on the "Call" screen.

**OK:**
**The level is not set to low.**

Text in Illustration

| | |
|---|---|
| *1 | Example |

NG → SET VOLUME TO HIGH

OK

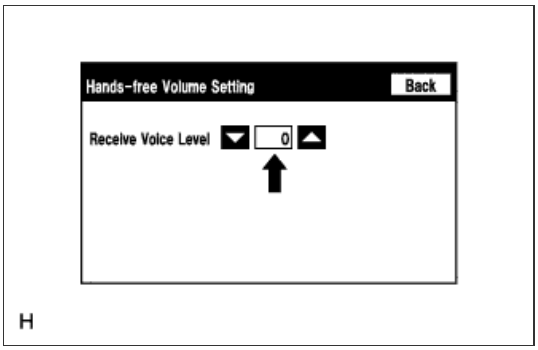
### 4.CHECK SETTINGS (OPERATION CHECK)

a. Enter the "Hands-free Volume Setting" screen. Refer to Check Hands-free Volume Setting in Operation Check (Click here).

b. Check if the Receive Voice Level is set to "0".

**HINT:**

The Receive Voice Level can be set to 11 different levels, -5 to +5, with a 3 dB difference.



c. Check if the Receive Voice Level is set to the minimum or maximum level.

**HINT:**

When the Receive Voice Level is set to the minimum or maximum level, the sound may be distorted.

**OK:**

**The Receive Voice Level is set to "0".**

NG → SET RECEIVE VOICE LEVEL TO "0"

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

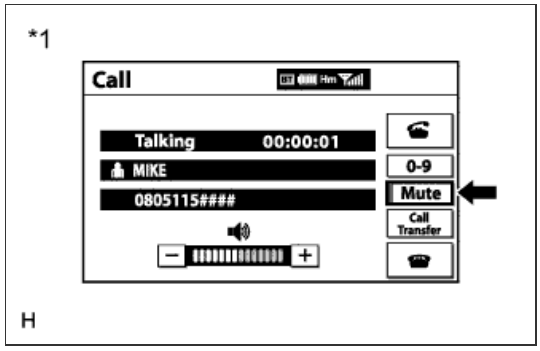
**NOTICE:**

When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) ( Click here).

### 1.CHECK CELLULAR PHONE

a. Check if the other caller can hear your voice correctly.

**OK:**
**Your voice can be heard correctly.**



NG → REPLACE CELLULAR PHONE

OK

### 2.CHECK SETTINGS

a. Check if the Mute switch is set to on.

**OK:**
**Mute switch is not set to on.**

Text in Illustration

| | |
|---|---|
| *1 | Example |

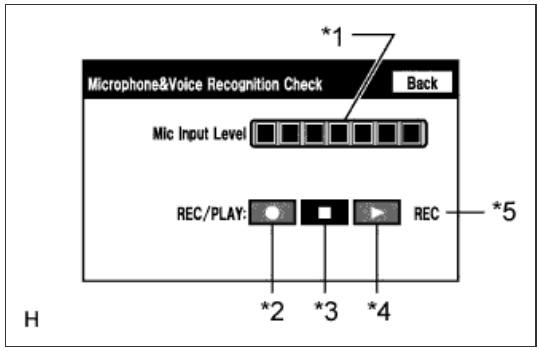
NG → TURN MUTE SWITCH OFF

OK

### 3.CHECK MICROPHONE AND VOICE RECOGNITION (OPERATION CHECK)

a. Enter the "Microphone & Voice Recognition Check" screen. Refer to Check Mic & Voice Recognition in Operation Check (Click here).

b. When voice is input into the microphone, check that the microphone input level meter changes according to the input voice.



c. Push the recording switch and perform voice recording.

**HINT:**

- **Select the recording switch with the blower motor of the air conditioning system stopped. If an outlet of the air conditioning system is facing the microphone, noise may be recorded.**
- **Voice can be recorded up to 5 seconds.**

**HINT:**

Voice can be recorded up to 5 seconds.

d. Check that the recording indicator remains on while recording and that the recorded voice is played normally without noise or distortion.

**OK:**

**All check results are normal.**

**Text in Illustration**

| | |
|---|---|
| *1 | Microphone Input Level Meter |
| *2 | Recording Switch |
| *3 | Stop Switch |
| *4 | Play Switch |
| *5 | Recording Indicator |

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

**4.REPLACE RADIO RECEIVER ASSEMBLY**

a. Replace the radio receiver assembly ( Click here).

b. Check for symptoms again.

**OK:**

**The other caller can hear your voice loud enough without noise or distortion.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

**END**

**for Preparation** Click here

## INSPECTION PROCEDURE

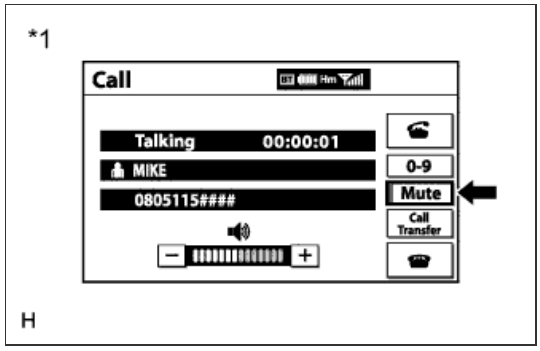
**NOTICE:**

When replacing the display and navigation module display or telematics transceiver, perform vehicle contract setting (w/ G-BOOK system) ( Click here).

### 1.CHECK CELLULAR PHONE

a. Check if the other caller can hear your voice correctly.

**OK:**
**Your voice can be heard correctly.**



NG → REPLACE CELLULAR PHONE

OK

### 2.CHECK SETTINGS

a. Check if the Mute switch is set to on.

**OK:**
**Mute switch is not set to on.**

Text in Illustration

| | |
|---|---|
| *1 | Example |

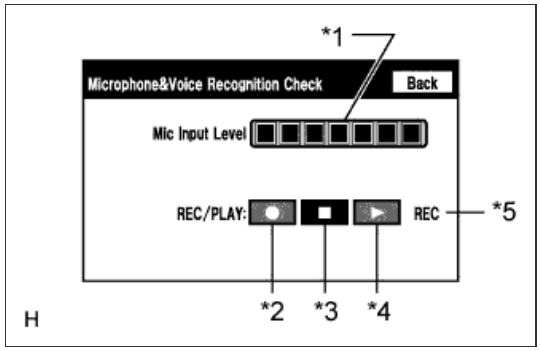
NG → TURN MUTE SWITCH OFF

OK

### 3.CHECK MICROPHONE AND VOICE RECOGNITION (OPERATION CHECK)

a. Enter the "Microphone & Voice Recognition Check" screen. Refer to Check Mic & Voice Recognition in Operation Check (Click here).

b. When voice is input into the microphone, check that the microphone input level meter changes according to the input voice.



c. Push the recording switch and perform voice recording.

**HINT:**

- **Select the recording switch with the blower motor of the air conditioning system stopped. If an outlet of the air conditioning system is facing the microphone, noise may be recorded.**
- **Voice can be recorded up to 5 seconds.**

**HINT:**

Voice can be recorded up to 5 seconds.

d. Check that the recording indicator remains on while recording and that the recorded voice is played normally without noise or distortion.

**OK:**

**All check results are normal.**

**Text in Illustration**

| | |
|---|---|
| *1 | Microphone Input Level Meter |

| *3 | Stop Switch |
| *4 | Play Switch |
| *5 | Recording Indicator |

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

**4.REPLACE RADIO RECEIVER ASSEMBLY**

a. Replace the radio receiver assembly ( Click here).

b. Check for symptoms again.

**OK:**

**The other caller can hear your voice loud enough without noise or distortion.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

**END**

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK DISPLAY SETTING

a. Check that the display is not in "Screen OFF" mode.

**OK:**
**The display setting is not in "Screen OFF" mode.**

NG → CHANGE SCREEN TO "SCREEN ON" MODE

OK ↓

### 2.CHECK IMAGE QUALITY SETTING

a. Check that the screen color quality can be set.

**OK:**
**Setting is possible.**

NG → Go to step 3

OK ↓

PRESS PANEL SWITCH "DISPLAY" AND SET SCREEN COLOR QUALITY TO NORMAL

### 3.CHECK CABIN

a. Check that condensation is not likely to occur in the cabin, and that the temperature is not high or extremely low in the cabin.

**HINT:**

- **A humid cabin and a rapid change in temperature may lead to condensation. Condensation in the cabin may cause a short circuit.**
- **The navigation system may not operate normally when the temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher.**

**OK:**
**Condensation is not likely being produced and the temperature is not high or extremely low.**

NG → SET CABIN TO APPROPRIATE TEMPERATURE

OK ↓

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK DISPLAY SETTING

a. Check that the display is not in "Screen OFF" mode.

**OK:**
**The display setting is not in "Screen OFF" mode.**

NG → CHANGE SCREEN TO "SCREEN ON" MODE

OK ↓

### 2.CHECK IMAGE QUALITY SETTING

a. Check that the screen color quality can be set.

**OK:**
**Setting is possible.**

NG → Go to step 3

OK ↓

PRESS PANEL SWITCH "DISPLAY" AND SET SCREEN COLOR QUALITY TO NORMAL

### 3.CHECK CABIN

a. Check that condensation is not likely to occur in the cabin, and that the temperature is not high or extremely low in the cabin.

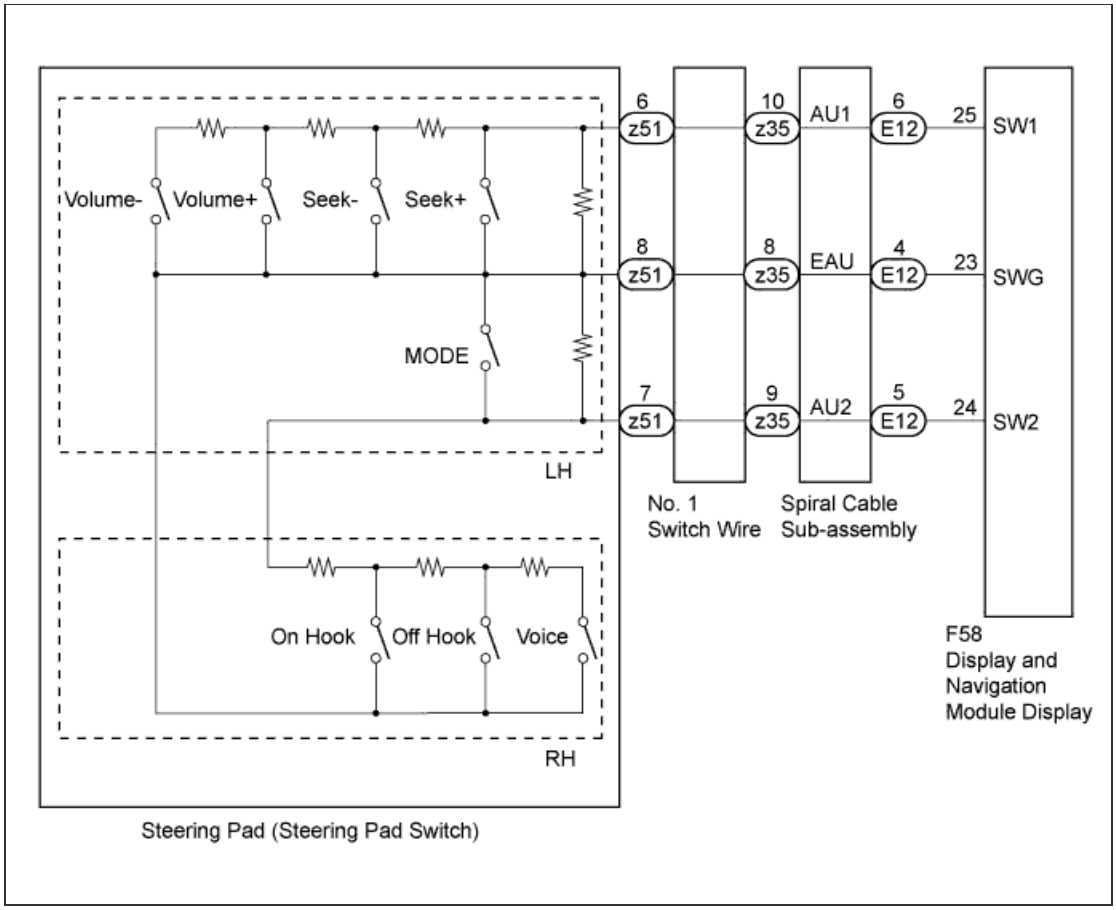
**HINT:**

- **A humid cabin and a rapid change in temperature may lead to condensation. Condensation in the cabin may cause a short circuit.**
- **The navigation system may not operate normally when the temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher.**

**OK:**
**Condensation is not likely being produced and the temperature is not high or extremely low.**

NG → SET CABIN TO APPROPRIATE TEMPERATURE

OK ↓



PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## DESCRIPTION

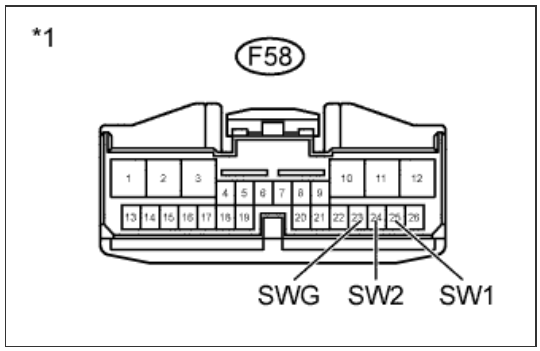
This circuit sends an operation signal from the steering pad (steering pad switch) to the display and navigation module display.
If there is an open in the circuit, the navigation system cannot be operated using the steering pad (steering pad switch).
If there is a short in the circuit, the resulting condition is the same as if the switch were continuously pressed. Therefore, the display and navigation module display cannot be operated using the steering pad (steering pad switch), and the display and navigation module display itself cannot function.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

The vehicle is equipped with an Supplemental Restraint System (SRS). Before servicing (including removal or installation of parts), be sure to read the precaution for Supplemental Restraint System (Click here).



### 1.INSPECT DISPLAY AND NAVIGATION MODULE DISPLAY

a. Disconnect the F58 display and navigation module display connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F58-25 (SW1) - F58-23 (SWG) | No switch pushed | 95 to 105 kΩ |
| F58-25 (SW1) - F58-23 (SWG) | Seek+ switch pushed | Below 2.5 Ω |
| F58-25 (SW1) - | Seek- switch | 312 to 345 Ω |

| | | |
|---|---|---|
| F58-23 (SWG) | pushed | |
| F58-25 (SW1) - F58-23 (SWG) | Volume+ switch pushed | 950 to 1050 Ω |
| F58-25 (SW1) - F58-23 (SWG) | Volume- switch pushed | 2954 to 3265 Ω |
| F58-24 (SW2) - F58-23 (SWG) | No switch pushed | 95 to 105 kΩ |
| F58-24 (SW2) - F58-23 (SWG) | MODE switch pushed | Below 2.5 Ω |
| F58-24 (SW2) - F58-23 (SWG) | Voice switch pushed | 2954 to 3265 Ω |
| F58-24 (SW2) - F58-23 (SWG) | On Hook switch pushed | 312 to 345 Ω |
| F58-24 (SW2) - F58-23 (SWG) | Off Hook switch pushed | 950 to 1050 Ω |

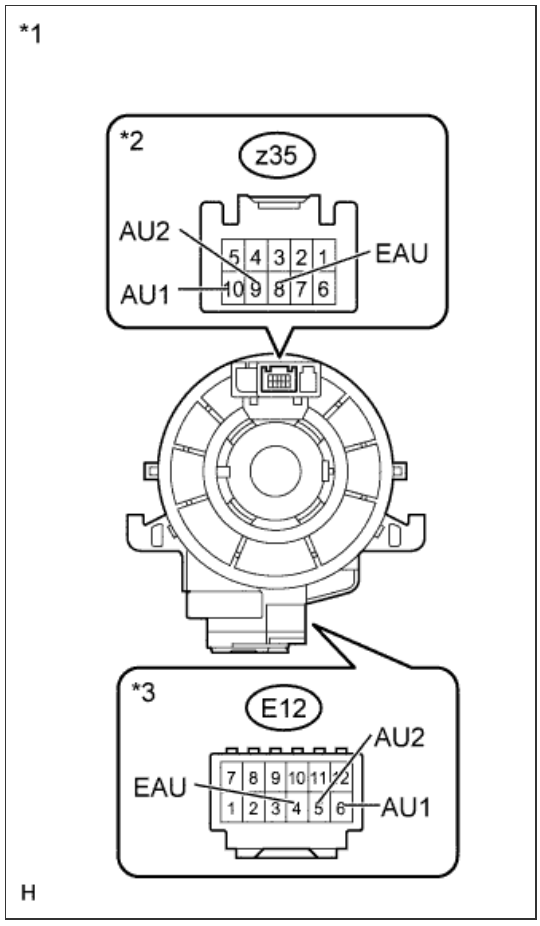
**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Display and Navigation Module Display) |

NG → Go to step 2

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)



## 2.INSPECT SPIRAL CABLE SUB-ASSEMBLY

a. Disconnect the z35 and E12 spiral cable sub-assembly connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| z35-8 (EAU) - E12-4 (EAU) | Center | Below 1 Ω |
| | 2.5 rotations to the left | |
| | 2.5 rotations to the right | |
| z35-10 (AU1) - E12-6 (AU1) | Center | Below 1 Ω |
| | 2.5 rotations to the left | |
| | 2.5 rotations to the right | |
| z35-9 (AU2) - E12-5 (AU2) | Center | Below 1 Ω |
| | 2.5 rotations to the left | |
| | 2.5 rotations to the right | |

**NOTICE:**

The spiral cable is an important part of the SRS airbag system. Incorrect removal or installation of the spiral cable may prevent the airbag from deploying. Refer to the pages shown in the brackets.

**HINT:**

- **Removal (Click here)**
- **Installation (Click here)**

| *2 | Volume+ | *3 | Volume- |
| *4 | Seek- | *5 | Seek+ |
| *6 | MODE | *7 | Off Hook |
| *8 | On Hook | *9 | Voice |

a. Disconnect the z51 steering pad (steering pad switch) connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| z51-6 (AU1) - z51-8 (EAU) | No switch pushed | 95 to 105 kΩ |
| z51-6 (AU1) - z51-8 (EAU) | Seek+ switch pushed | Below 2.5 Ω |
| z51-6 (AU1) - z51-8 (EAU) | Seek- switch pushed | 312 to 345 Ω |
| z51-6 (AU1) - z51-8 (EAU) | Volume+ switch pushed | 950 to 1050 Ω |
| z51-6 (AU1) - z51-8 (EAU) | Volume- switch pushed | 2954 to 3265 Ω |
| z51-7 (AU2) - z51-8 (EAU) | No switch pushed | 95 to 105 kΩ |
| z51-7 (AU2) - z51-8 (EAU) | MODE switch pushed | Below 2.5 Ω |
| z51-7 (AU2) - z51-8 (EAU) | Voice switch pushed | 2954 to 3265 Ω |
| z51-7 (AU2) - z51-8 (EAU) | On Hook switch pushed | 312 to 345 Ω |
| z51-7 (AU2) - z51-8 (EAU) | Off Hook switch pushed | 950 to 1050 Ω |

NG → REPLACE STEERING PAD (STEERING PAD SWITCH) (Click here)

OK

**4.CHECK NO. 1 SWITCH WIRE**

a. Disconnect the z35 spiral cable sub-assembly connector.

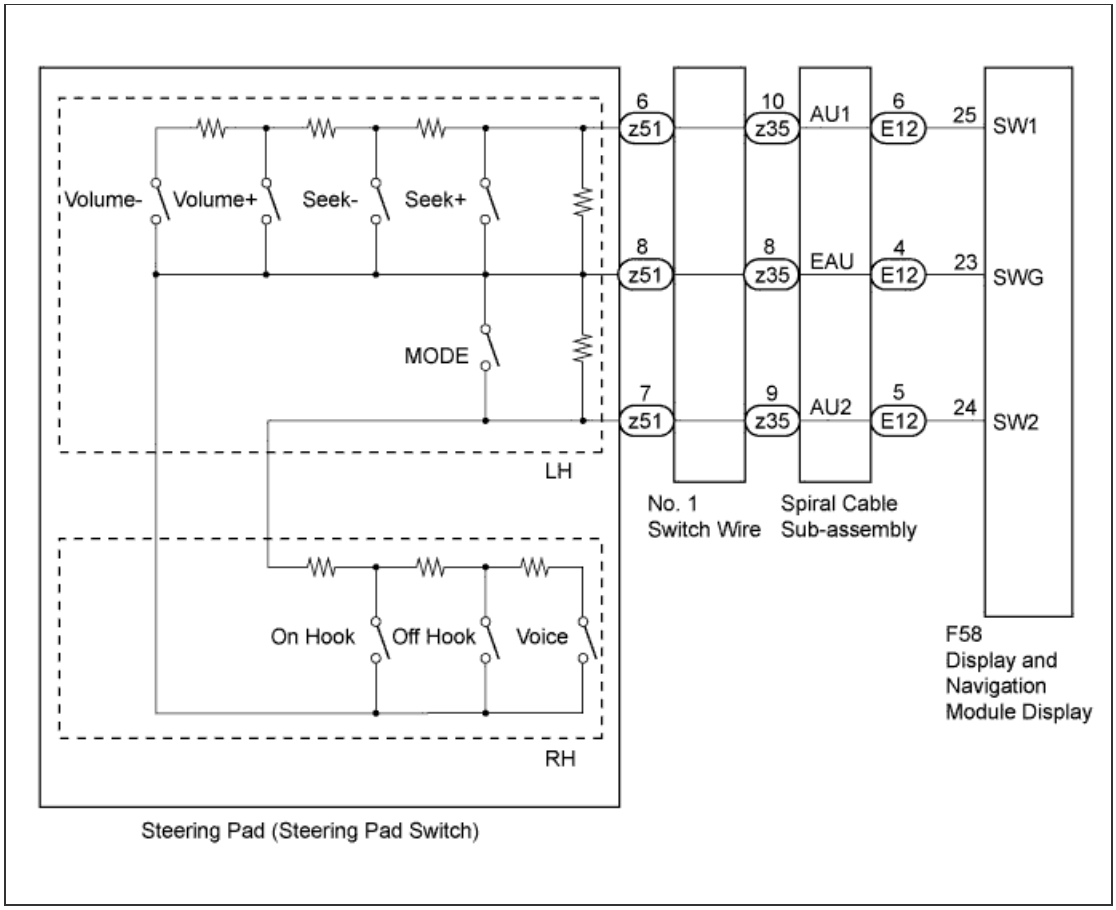
b. Disconnect the z51 steering pad (steering pad switch) connector.

c. Measure the resistance according to the valve(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| z35-10 - z51-6 | Always | Below 1 Ω |
| z35-9 - z51-7 | Always | Below 1 Ω |
| z35-8 - z51-8 | Always | Below 1 Ω |
| z35-10 - Body ground | Always | 10 kΩ or higher |
| z35-9 - Body ground | Always | 10 kΩ or higher |
| z35-8 - Body ground | Always | 10 kΩ or higher |

NG → REPLACE NO. 1 SWITCH WIRE



OK → REPAIR OR REPLACE HARNESS OR CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - SPIRAL CABLE)

**for Preparation** Click here

## DESCRIPTION

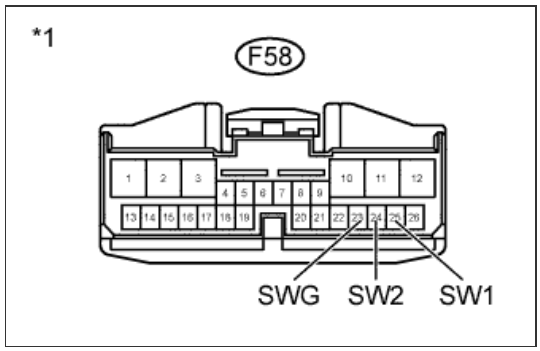
This circuit sends an operation signal from the steering pad (steering pad switch) to the display and navigation module display.
If there is an open in the circuit, the navigation system cannot be operated using the steering pad (steering pad switch).
If there is a short in the circuit, the resulting condition is the same as if the switch were continuously pressed. Therefore, the display and navigation module display cannot be operated using the steering pad (steering pad switch), and the display and navigation module display itself cannot function.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

The vehicle is equipped with an Supplemental Restraint System (SRS). Before servicing (including removal or installation of parts), be sure to read the precaution for Supplemental Restraint System (Click here).



### 1.INSPECT DISPLAY AND NAVIGATION MODULE DISPLAY

a. Disconnect the F58 display and navigation module display connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F58-25 (SW1) - F58-23 (SWG) | No switch pushed | 95 to 105 kΩ |
| F58-25 (SW1) - F58-23 (SWG) | Seek+ switch pushed | Below 2.5 Ω |
| F58-25 (SW1) - | Seek- switch | 312 to 345 Ω |

| | | |

| *6 | MODE | *7 | Off Hook |
| *8 | On Hook | *9 | Voice |

a. Disconnect the z51 steering pad (steering pad switch) connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| z51-6 (AU1) - z51-8 (EAU) | No switch pushed | 95 to 105 kΩ |
| z51-6 (AU1) - z51-8 (EAU) | Seek+ switch pushed | Below 2.5 Ω |
| z51-6 (AU1) - z51-8 (EAU) | Seek- switch pushed | 312 to 345 Ω |
| z51-6 (AU1) - z51-8 (EAU) | Volume+ switch pushed | 950 to 1050 Ω |
| z51-6 (AU1) - z51-8 (EAU) | Volume- switch pushed | 2954 to 3265 Ω |
| z51-7 (AU2) - z51-8 (EAU) | No switch pushed | 95 to 105 kΩ |
| z51-7 (AU2) - z51-8 (EAU) | MODE switch pushed | Below 2.5 Ω |
| z51-7 (AU2) - z51-8 (EAU) | Voice switch pushed | 2954 to 3265 Ω |
| z51-7 (AU2) - z51-8 (EAU) | On Hook switch pushed | 312 to 345 Ω |
| z51-7 (AU2) - z51-8 (EAU) | Off Hook switch pushed | 950 to 1050 Ω |

NG → REPLACE STEERING PAD (STEERING PAD SWITCH) (Click here)

OK

**4.CHECK NO. 1 SWITCH WIRE**

a. Disconnect the z35 spiral cable sub-assembly connector.

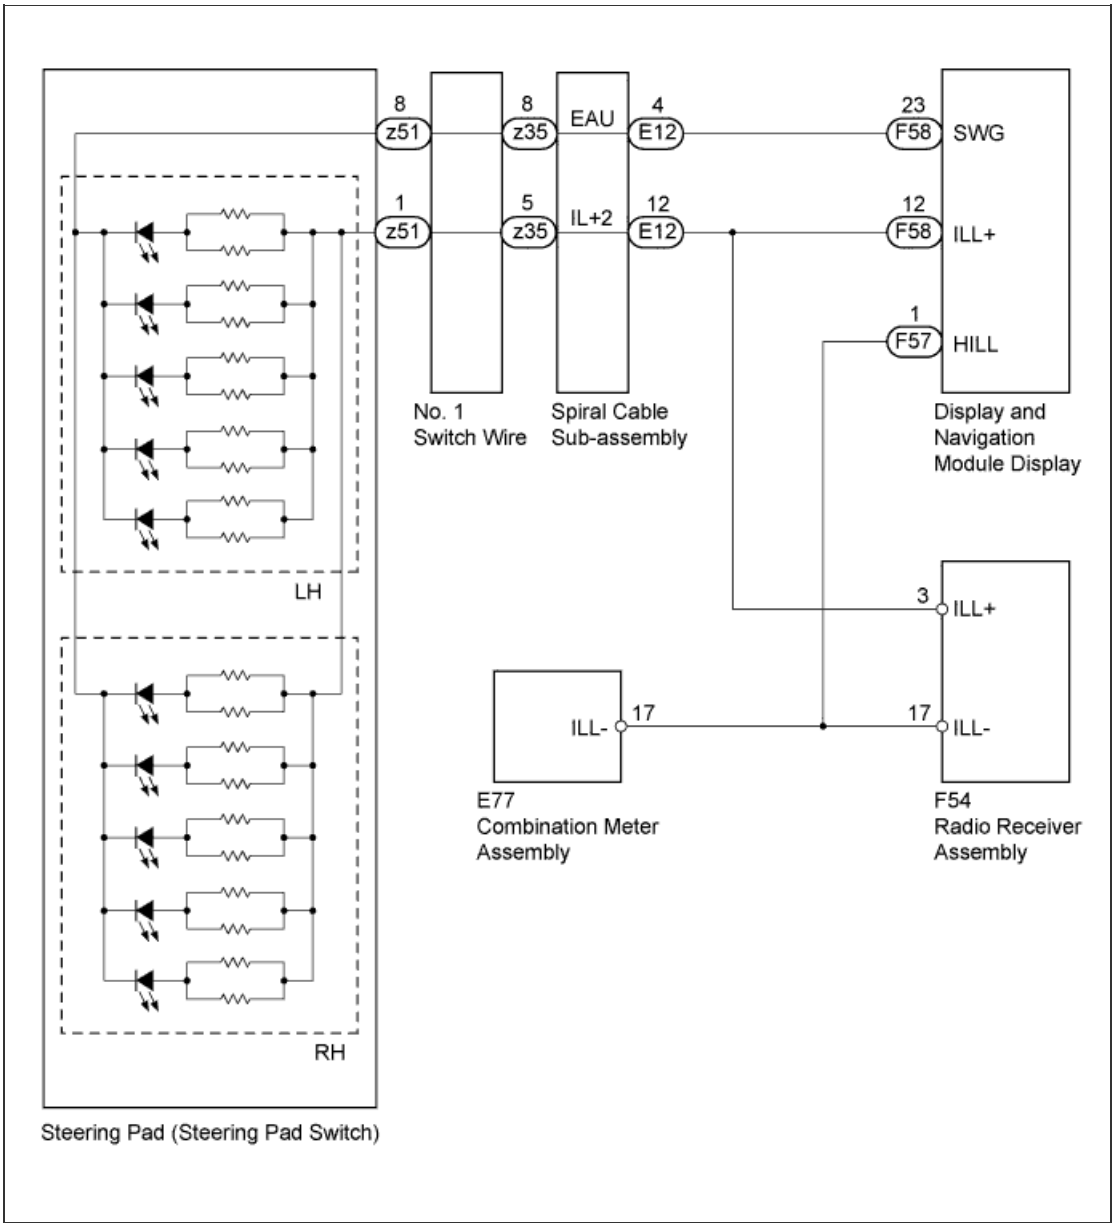
b. Disconnect the z51 steering pad (steering pad switch) connector.

c. Measure the resistance according to the valve(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| z35-10 - z51-6 | Always | Below 1 Ω |
| z35-9 - z51-7 | Always | Below 1 Ω |
| z35-8 - z51-8 | Always | Below 1 Ω |
| z35-10 - Body ground | Always | 10 kΩ or higher |
| z35-9 - Body ground | Always | 10 kΩ or higher |
| z35-8 - Body ground | Always | 10 kΩ or higher |

NG → REPLACE NO. 1 SWITCH WIRE



OK → REPAIR OR REPLACE HARNESS OR CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - SPIRAL CABLE)

**for Preparation** Click here

## DESCRIPTION

Power is supplied to the display and navigation module display, radio receiver assembly and steering pad (steering pad switch) illumination when the light control switch is in the TAIL or HEAD position.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

The vehicle is equipped with an SRS (Supplemental Restraint System) which includes components such as airbags. Before servicing (including removal or installation of parts), be sure to read the Precaution in the Supplemental Restraint System (Click here).

### 1.CHECK ILLUMINATION

a. Check if the illumination for the display and navigation module display, steering pad switch, glove box light, cigarette lighter, or other parts (seat heater switch, front seat memory switch, etc.) comes on when the light control switch is turned to the HEAD or TAIL position.

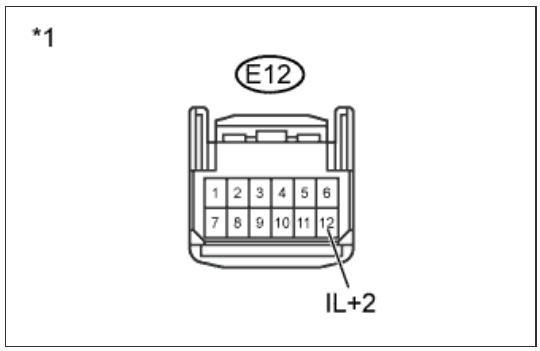
**Result**

| Result | Proceed to |
|---|---|
| Illumination comes on for all components except steering pad (steering pad switch). | A |

| | |
|---|---|
| Illumination comes on for all components except radio receiver assembly. | B |
| Illumination comes on for all components except display and navigation module display. | C |
| No illumination comes on for all components. | D |

B → Go to step 7

C → Go to step 8



D → GO TO LIGHTING SYSTEM (Click here)

A

## 2.CHECK HARNESS AND CONNECTOR (BATTERY - SPIRAL CABLE SUB-ASSEMBLY)

a. Disconnect the E12 spiral cable sub-assembly connector.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| E12-12 (IL+2) - Body ground | Light control switch in tail or head | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Spiral Cable Sub-assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

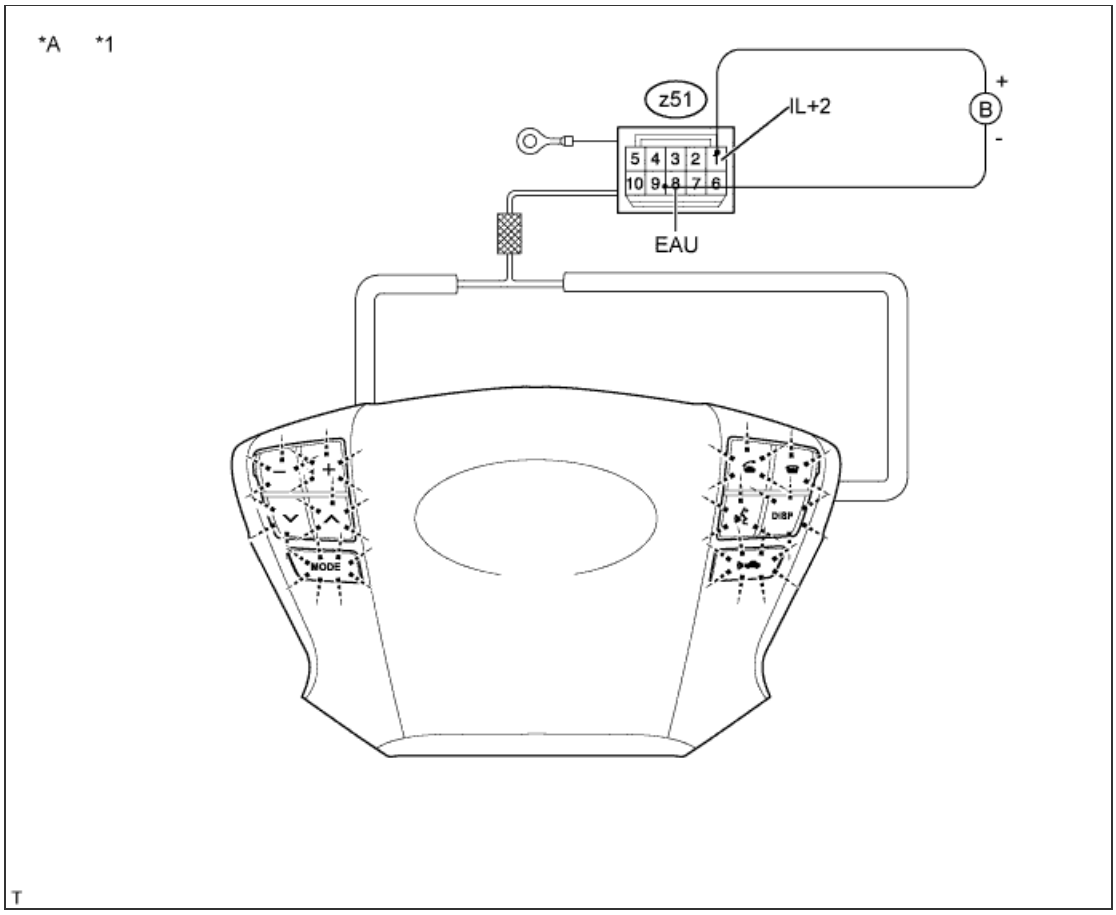
OK

## 3.CHECK NO. 1 SWITCH WIRE

a. Disconnect the z35 spiral cable sub-assembly connector.

b. Disconnect the z51 steering pad (steering pad switch) connector.

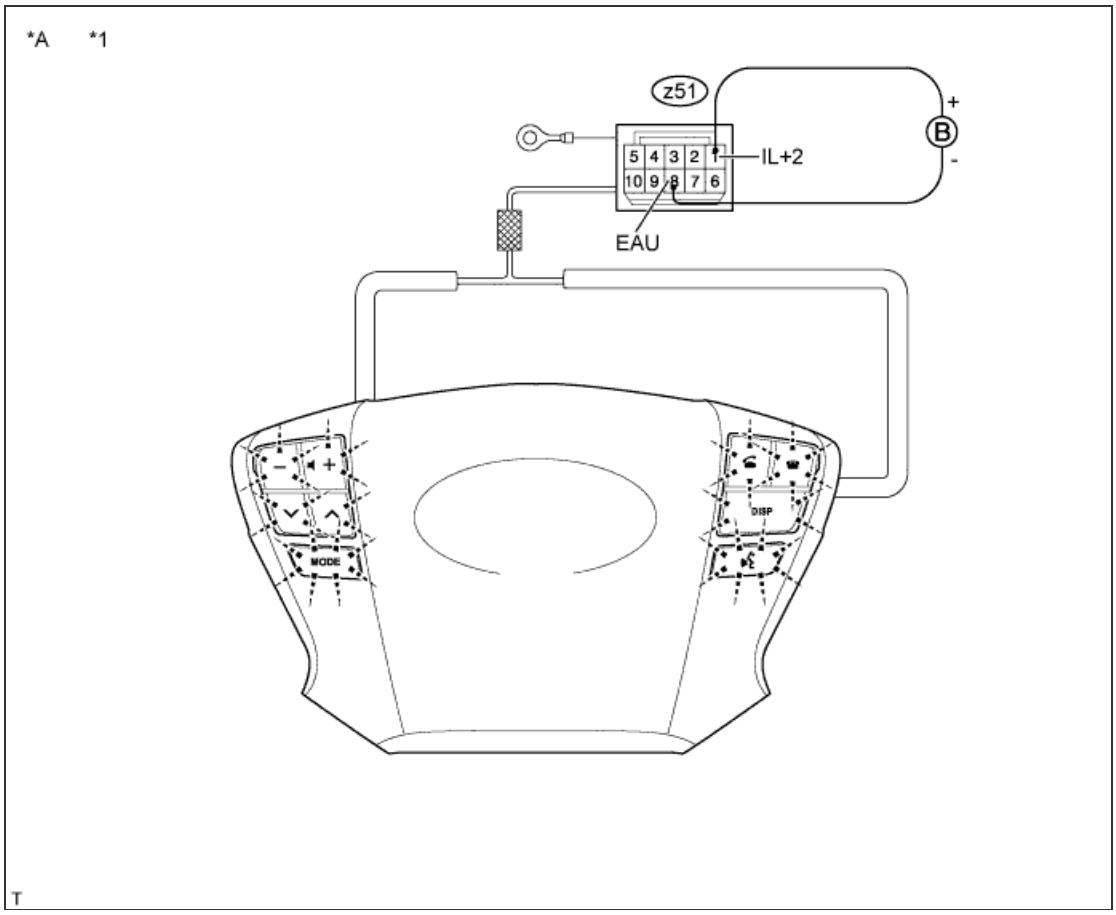
c. Measure the resistance according to the valve(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| z35-8 - z51-8 | Always | Below 1 Ω |
| z35-5 - z51-1 | Always | Below 1 Ω |
| z35-8 - Body ground | Always | 10 kΩ or higher |
| z35-5 - Body ground | Always | 10 kΩ or higher |

NG → REPLACE NO. 1 SWITCH WIRE



OK

## 4.INSPECT STEERING PAD (STEERING PAD SWITCH)

**Text in Illustration**

| | | | |
|---|---|---|---|
| *A | w/ Dynamic Radar Cruise Control System | *1 | Component without harness connected<br>(Steering Pad (Steering Pad Switch)) |

**Text in Illustration**

| | | | |
|---|---|---|---|
| *A | w/o Dynamic Radar Cruise Control System | *1 | Component without harness connected (Steering Pad (Steering Pad Switch)) |

a. Disconnect the z51 steering pad (steering pad switch) connector.

b. Connect a positive (+) lead from the battery to terminal 1 (IL+2) and a negative (-) lead from the battery to terminal 8 (EAU) of the steering pad switch assembly connector.

c. Check if the illumination for the steering pad switch assembly comes on.

**OK:**

**Illumination for the steering pad switch assembly comes on.**

NG → REPLACE STEERING PAD (STEERING PAD SWITCH) (Click here)

OK

## 5.INSPECT SPIRAL CABLE SUB-ASSEMBLY

a. Disconnect the z35 and E12 spiral cable sub-assembly connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| z35-5 (IL+2) - E12-12 (IL+2) | Center | Below 1 Ω |
| | 2.5 rotations to the left | |
| | 2.5 rotations to the right | |
| z35-8 (EAU) - E12-4 (EAU) | Center | Below 1 Ω |
| | 2.5 rotations to the left | |
| | 2.5 rotations to the right | |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Spiral Cable Sub-assembly) |
| *2 | Steering Pad Switch Side |
| *3 | Vehicle Side |

**NOTICE:**

The spiral cable is an important part of the SRS airbag system. Incorrect removal or installation of the spiral cable may prevent the airbag from deploying. Be sure to read the Precaution for the supplemental restraint system (Click here).

NG → REPLACE SPIRAL CABLE SUB-ASSEMBLY (Click here)

OK

## 6.CHECK HARNESS AND CONNECTOR (SPIRAL CABLE - DISPLAY AND NAVIGATION MODULE DISPLAY AND RADIO RECEIVER)

a. Disconnect the E12 spiral cable sub-assembly connector.

b. Disconnect the F58 display and navigation module display connector.

c. Disconnect the F54 radio receiver assembly connector.

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| E12-12 (IL+2) - F58-12 (ILL+) | Always | Below 1 Ω |
| E12-12 (IL+2) - F54-3 (ILL+) | Always | Below 1 Ω |
| E12-4 (EAU) - F58-23 (SWG) | Always | Below 1 Ω |
| E12-12 (IL+2) - Body ground | Always | 10 kΩ or higher |
| E12-4 (EAU) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

7.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - BATTERY AND COMBINATION METER)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the E77 combination meter assembly connector.

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F54-3 (ILL+) - Body ground | Light control switch in TAIL or HEAD | 11 to 14 V |

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-17 (ILL-) - E77-17 (ILL-) | Always | Below 1 Ω |
| F54-17 (ILL-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE RADIO RECEIVER ASSEMBLY (Click here)

8.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - BATTERY AND COMBINATION METER)

a. Disconnect the F58 and F57 display and navigation module display connector.

b. Disconnect the E77 combination meter assembly connector.

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F58-12 (ILL+) - Body ground | Light control switch in TAIL or HEAD | 11 to 14 V |

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F57-1 (HILL) - E77-17 (ILL-) | Always | Below 1 Ω |
| F57-1 (HILL) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

**for Preparation** Click here

## DESCRIPTION

Power is supplied to the display and navigation module display, radio receiver assembly and steering pad (steering pad switch) illumination when the light control switch is in the TAIL or HEAD position.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

The vehicle is equipped with an SRS (Supplemental Restraint System) which includes components such as airbags. Before servicing (including removal or installation of parts), be sure to read the Precaution in the Supplemental Restraint System (Click here).

### 1.CHECK ILLUMINATION

a. Check if the illumination for the display and navigation module display, steering pad switch, glove box light, cigarette lighter, or other parts (seat heater switch, front seat memory switch, etc.) comes on when the light control switch is turned to the HEAD or TAIL position.

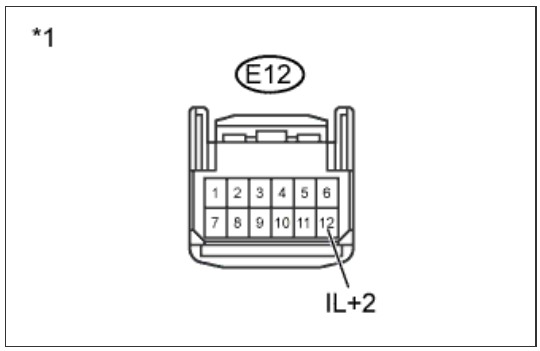
**Result**

| Result | Proceed to |
|---|---|
| Illumination comes on for all components except steering pad (steering pad switch). | A |

| | |
|---|---|
| Illumination comes on for all components except radio receiver assembly. | B |
| Illumination comes on for all components except display and navigation module display. | C |
| No illumination comes on for all components. | D |

B → Go to step 7

C → Go to step 8



D → GO TO LIGHTING SYSTEM (Click here)

A

## 2.CHECK HARNESS AND CONNECTOR (BATTERY - SPIRAL CABLE SUB-ASSEMBLY)

a. Disconnect the E12 spiral cable sub-assembly connector.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| E12-12 (IL+2) - Body ground | Light control switch in tail or head | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Spiral Cable Sub-assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

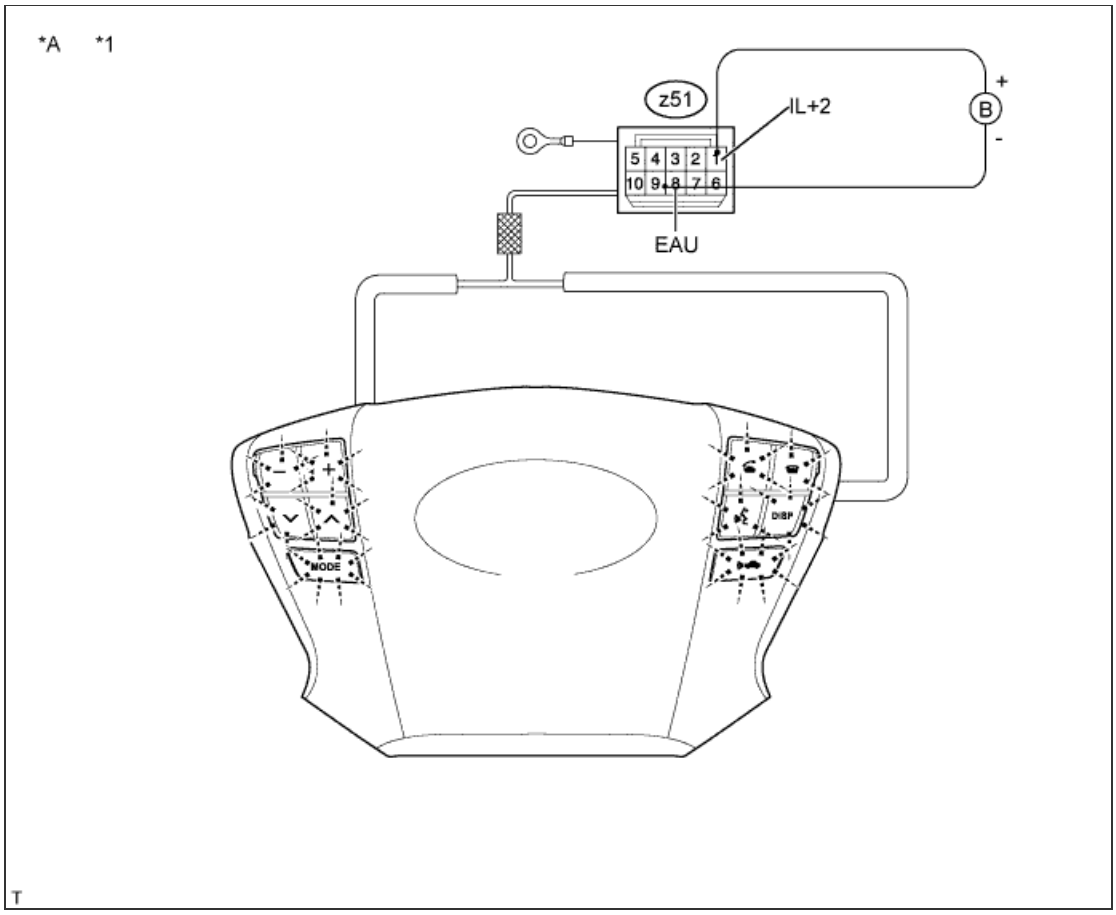
## 3.CHECK NO. 1 SWITCH WIRE

a. Disconnect the z35 spiral cable sub-assembly connector.

b. Disconnect the z51 steering pad (steering pad switch) connector.

c. Measure the resistance according to the valve(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| z35-8 - z51-8 | Always | Below 1 Ω |
| z35-5 - z51-1 | Always | Below 1 Ω |
| z35-8 - Body ground | Always | 10 kΩ or higher |
| z35-5 - Body ground | Always | 10 kΩ or higher |

NG → REPLACE NO. 1 SWITCH WIRE

OK

## 4.INSPECT STEERING PAD (STEERING PAD SWITCH)

**Text in Illustration**

| | | | |
|---|---|---|---|
| *A | w/ Dynamic Radar Cruise Control System | *1 | Component without harness connected<br>(Steering Pad (Steering Pad Switch)) |

**Text in Illustration**

| | | | |
|---|---|---|---|
| *A | w/o Dynamic Radar Cruise Control System | *1 | Component without harness connected (Steering Pad (Steering Pad Switch)) |

a. Disconnect the z51 steering pad (steering pad switch) connector.

b. Connect a positive (+) lead from the battery to terminal 1 (IL+2) and a negative (-) lead from the battery to terminal 8 (EAU) of the steering pad switch assembly connector.

c. Check if the illumination for the steering pad switch assembly comes on.

**OK:**

**Illumination for the steering pad switch assembly comes on.**

NG → REPLACE STEERING PAD (STEERING PAD SWITCH) (Click here)

OK

## 5.INSPECT SPIRAL CABLE SUB-ASSEMBLY

a. Disconnect the z35 and E12 spiral cable sub-assembly connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| z35-5 (IL+2) - E12-12 (IL+2) | Center | Below 1 Ω |
| | 2.5 rotations to the left | |
| | 2.5 rotations to the right | |
| z35-8 (EAU) - E12-4 (EAU) | Center | Below 1 Ω |
| | 2.5 rotations to the left | |
| | 2.5 rotations to the right | |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Spiral Cable Sub-assembly) |
| *2 | Steering Pad Switch Side |
| *3 | Vehicle Side |

**NOTICE:**

The spiral cable is an important part of the SRS airbag system. Incorrect removal or installation of the spiral cable may prevent the airbag from deploying. Be sure to read the Precaution for the supplemental restraint system (Click here).

NG → REPLACE SPIRAL CABLE SUB-ASSEMBLY (Click here)

OK

## 6.CHECK HARNESS AND CONNECTOR (SPIRAL CABLE - DISPLAY AND NAVIGATION MODULE DISPLAY AND RADIO RECEIVER)

a. Disconnect the E12 spiral cable sub-assembly connector.

b. Disconnect the F58 display and navigation module display connector.

c. Disconnect the F54 radio receiver assembly connector.

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| E12-12 (IL+2) - F58-12 (ILL+) | Always | Below 1 Ω |
| E12-12 (IL+2) - F54-3 (ILL+) | Always | Below 1 Ω |
| E12-4 (EAU) - F58-23 (SWG) | Always | Below 1 Ω |
| E12-12 (IL+2) - Body ground | Always | 10 kΩ or higher |
| E12-4 (EAU) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

7.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - BATTERY AND COMBINATION METER)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the E77 combination meter assembly connector.

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F54-3 (ILL+) - Body ground | Light control switch in TAIL or HEAD | 11 to 14 V |

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-17 (ILL-) - E77-17 (ILL-) | Always | Below 1 Ω |
| F54-17 (ILL-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE RADIO RECEIVER ASSEMBLY (Click here)

8.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - BATTERY AND COMBINATION METER)

a. Disconnect the F58 and F57 display and navigation module display connector.

b. Disconnect the E77 combination meter assembly connector.

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F58-12 (ILL+) - Body ground | Light control switch in TAIL or HEAD | 11 to 14 V |

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F57-1 (HILL) - E77-17 (ILL-) | Always | Below 1 Ω |
| F57-1 (HILL) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

**for Preparation** Click here

## DESCRIPTION

This circuit is from the parking brake switch assembly to the display and navigation module display.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK BRAKE WARNING LIGHT

a. Check that the brake warning light comes on when the parking brake is applied and goes off when it is released.

**OK:**
**The brake warning light operates as specified above.**

NG → Go to step 3

OK ↓

### 2.CHECK HARNESS AND CONNECTOR (PARKING BRAKE SWITCH - DISPLAY AND NAVIGATION MODULE DISPLAY)

a. Disconnect the F58 display and navigation module display connector.

b. Disconnect the E53 parking brake switch assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
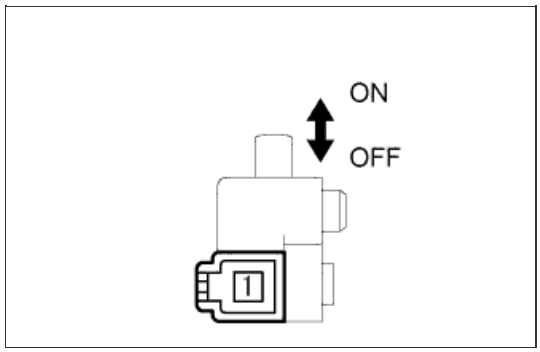
| F58-17 (PKB) - E53-1 | Always | Below 1 Ω |
| F58-17 (PKB) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ↓

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)



### 3.INSPECT PARKING BRAKE SWITCH ASSEMBLY

a. Disconnect the parking brake switch assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
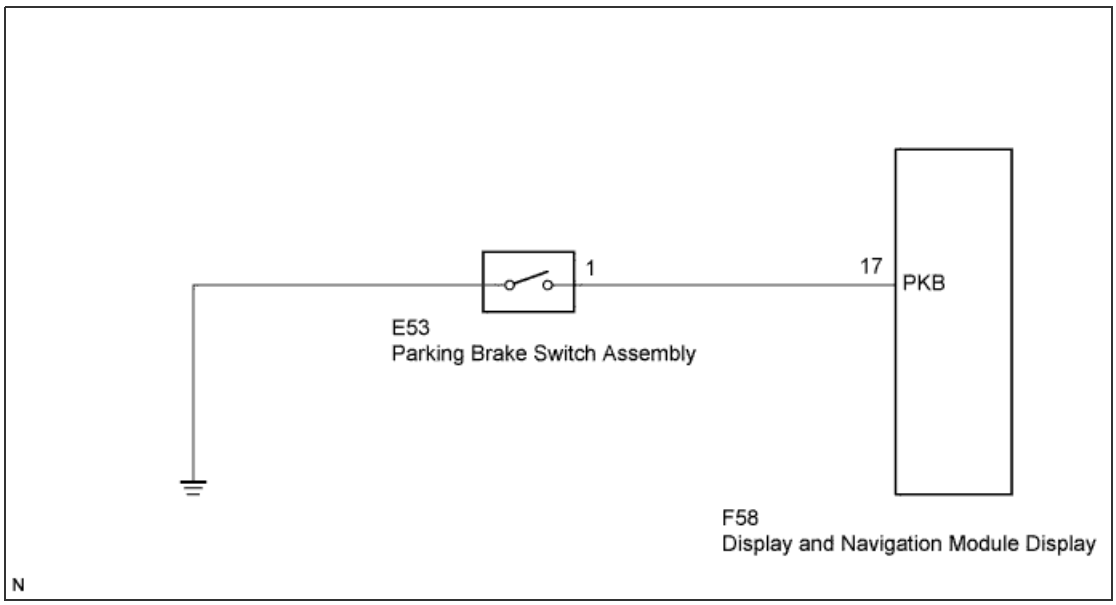
| 1 - Switch body | ON (When shaft is not pressed) | Below 1 Ω |
| 1 - Switch body | OFF (When shaft is pressed) | 10 kΩ or higher |

NG → REPLACE PARKING BRAKE SWITCH ASSEMBLY



OK → REPAIR OR REPLACE HARNESS OR CONNECTOR (PARKING BRAKE SWITCH - BODY GROUND)

**for Preparation** Click here

## DESCRIPTION

This circuit is from the parking brake switch assembly to the display and navigation module display.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK BRAKE WARNING LIGHT

a. Check that the brake warning light comes on when the parking brake is applied and goes off when it is released.

**OK:**
**The brake warning light operates as specified above.**

NG → Go to step 3

OK ↓

### 2.CHECK HARNESS AND CONNECTOR (PARKING BRAKE SWITCH - DISPLAY AND NAVIGATION MODULE DISPLAY)

a. Disconnect the F58 display and navigation module display connector.

b. Disconnect the E53 parking brake switch assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-17 (PKB) - E53-1 | Always | Below 1 Ω |

|---|---|---|
| 1 - Switch body | ON (When shaft is not pressed) | Below 1 Ω |
| 1 - Switch body | OFF (When shaft is pressed) | 10 kΩ or higher |

NG → REPLACE PARKING BRAKE SWITCH ASSEMBLY

OK → REPAIR OR REPLACE HARNESS OR CONNECTOR (PARKING BRAKE SWITCH - BODY GROUND)

**for Preparation** Click here

## DESCRIPTION

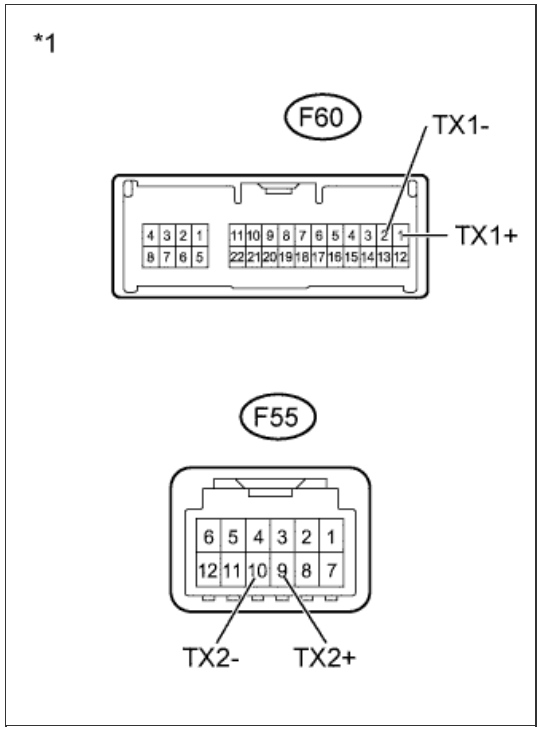
Each unit of the navigation system connected to the AVC-LAN (communication bus) transfers switch signals by the audio visual communication local area network.
If a short to +B or short to ground occurs in this AVC-LAN, the navigation system will not function normally as communication is stopped.

## INSPECTION PROCEDURE

**HINT:**

The display and navigation module display is the master unit.

### 1.INSPECT DISPLAY AND NAVIGATION MODULE DISPLAY



a. Disconnect the F60 display and navigation module display connector.

b. Disconnect the F55 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F60-1 (TX1+) - F60-2 (TX1-) | Always | 60 to 80 Ω |
| F55-9 (TX2+) - F55-10 (TX2-) | Always | 60 to 80 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Display and Navigation Module Display) |

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

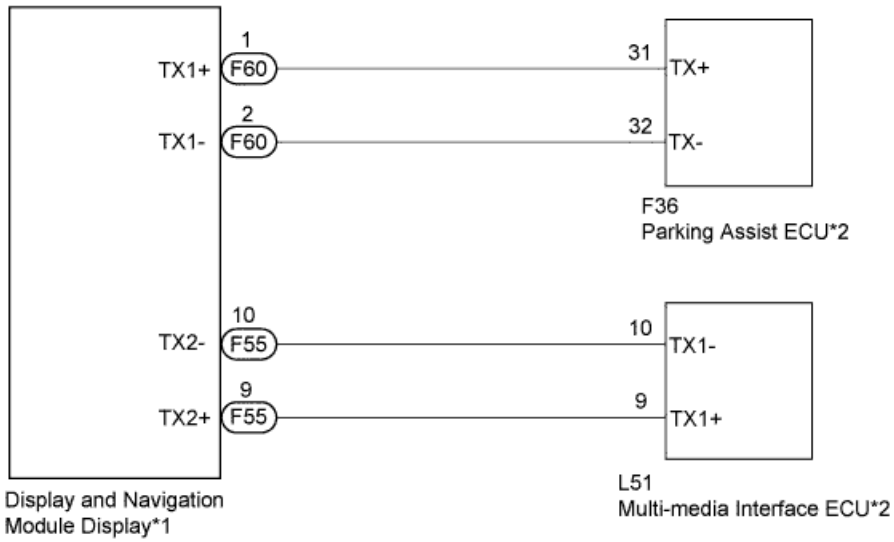
### 2.CHECK HARNESS AND CONNECTOR (AVC-LAN CIRCUIT)

**HINT:**



For details of the connectors, refer to Terminals of ECU ( Click here).

a. Referring to the AVC-LAN wiring diagram below, check all AVC-LAN circuits.

i. Disconnect all connectors in all AVC-LAN circuits.

ii. Check for an open or short in all AVC-LAN circuits.

AVC-LAN WIRING DIAGRAM:

*1: Master Unit

*2: Slave Unit

**OK:**

**There is no open or short circuit.**

| | |
|---|---|
| NG | REPAIR OR REPLACE HARNESS OR CONNECTOR |

OK

**3.INSPECT MALFUNCTIONING PARTS**

a. Disconnect and reconnect each slave unit one by one until the master unit returns to normal operation.

**HINT:**

- **Check all slave units.**
- **If disconnecting a slave unit causes the master unit to return to normal operation, the slave unit is defective and should be replaced.**

**OK:**

**Master unit returns to normal operation.**

| | |
|---|---|
| NG | REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here) |

OK

**REPLACE MALFUNCTIONING PARTS**

**for Preparation** Click here

## DESCRIPTION

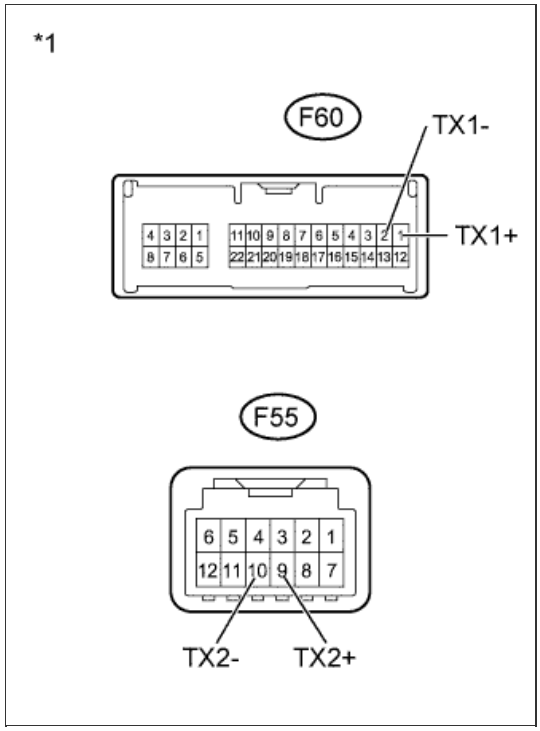
Each unit of the navigation system connected to the AVC-LAN (communication bus) transfers switch signals by the audio visual communication local area network.
If a short to +B or short to ground occurs in this AVC-LAN, the navigation system will not function normally as communication is stopped.

## INSPECTION PROCEDURE

**HINT:**

The display and navigation module display is the master unit.

### 1.INSPECT DISPLAY AND NAVIGATION MODULE DISPLAY



a. Disconnect the F60 display and navigation module display connector.

b. Disconnect the F55 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F60-1 (TX1+) - F60-2 (TX1-) | Always | 60 to 80 Ω |

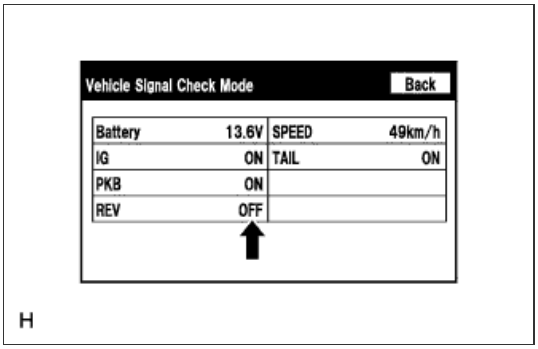
**REPLACE MALFUNCTIONING PARTS**

**for Preparation** Click here

## DESCRIPTION

The display and navigation module display receives a reverse signal from the park/neutral position switch and information about the navigation antenna assembly, and then adjusts the vehicle position on the navigation display.

## WIRING DIAGRAM



## INSPECTION PROCEDURE

### 1.CHECK REVERSE SIGNAL (DISPLAY CHECK MODE)

a. Enter the "Vehicle Signal Check Mode" screen. Refer to Check Vehicle Signal in Operation Check (Click here).

b. Check that the display changes between ON and OFF according to the shift lever operation.

**OK:**

| Condition | Display |
|---|---|
| Shift lever in R | ON |
| Shift lever in any position except R | OFF |

**HINT:**

This display is updated once per second. As a result, it is normal for the display to lag behind the actual switch operation.

NG → Go to step 2

OK

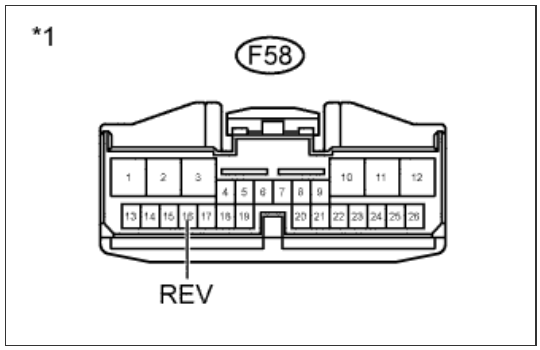
PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

### 2.INSPECT DISPLAY AND NAVIGATION MODULE DISPLAY

a. Disconnect the F58 display and navigation module display connector.

b. Measure the voltage according to the value(s) in the table below.



**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F58-16 (REV) - Body ground | Engine switch on (IG) | 11 to 14 V |

| | | |
|---|---|---|
| | Shift lever in R | |
| F58-16 (REV) - Body ground | Engine switch on (IG)<br>Shift lever in any position except R | Below 1 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Display and Navigation Module Display) |

NG → Go to step 3

OK →

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

3.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - PNP SWITCH)

a. Disconnect the F58 display and navigation module display connector.

b. Disconnect the C19 park/neutral position switch assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
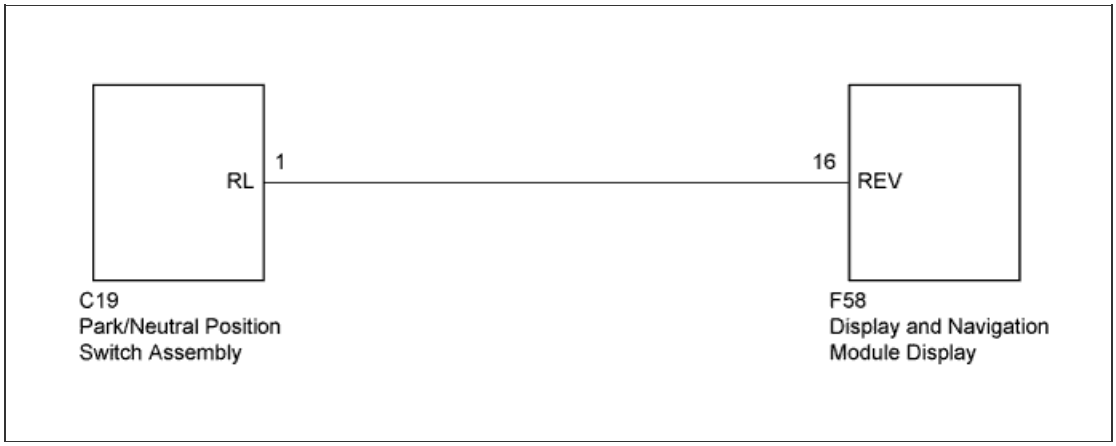
| F58-16 (REV) - C19-1 (RL) | Always | Below 1 Ω |
| F58-16 (REV) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK →



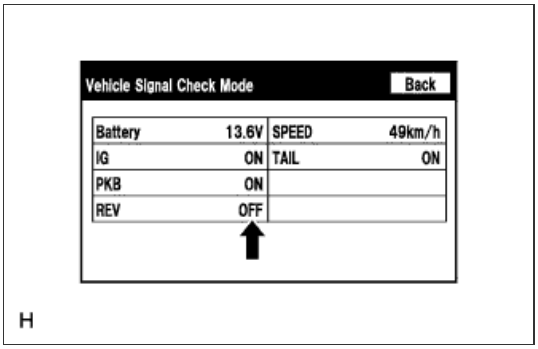
REPLACE PARK/NEUTRAL POSITION SWITCH ASSEMBLY (Click here)

**for Preparation** Click here

## DESCRIPTION

The display and navigation module display receives a reverse signal from the park/neutral position switch and information about the navigation antenna assembly, and then adjusts the vehicle position on the navigation display.

## WIRING DIAGRAM



## INSPECTION PROCEDURE

### 1.CHECK REVERSE SIGNAL (DISPLAY CHECK MODE)

a. Enter the "Vehicle Signal Check Mode" screen. Refer to Check Vehicle Signal in Operation Check (Click here).

b. Check that the display changes between ON and OFF according to the shift lever operation.

**OK:**

| Condition | Display |
|---|---|
| Shift lever in R | ON |
| Shift lever in any position except R | OFF |

**HINT:**

This display is updated once per second. As a result, it is normal for the display to lag behind the actual switch operation.

NG → Go to step 2

OK

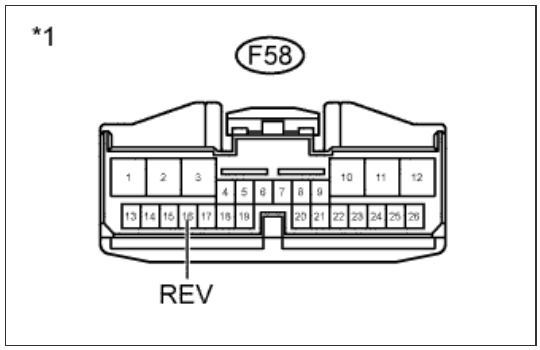
PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

### 2.INSPECT DISPLAY AND NAVIGATION MODULE DISPLAY

a. Disconnect the F58 display and navigation module display connector.

b. Measure the voltage according to the value(s) in the table below.



**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F58-16 (REV) - Body ground | Engine switch on (IG) | 11 to 14 V |

| | | |
|---|---|---|

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

3.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - PNP SWITCH)

a. Disconnect the F58 display and navigation module display connector.

b. Disconnect the C19 park/neutral position switch assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
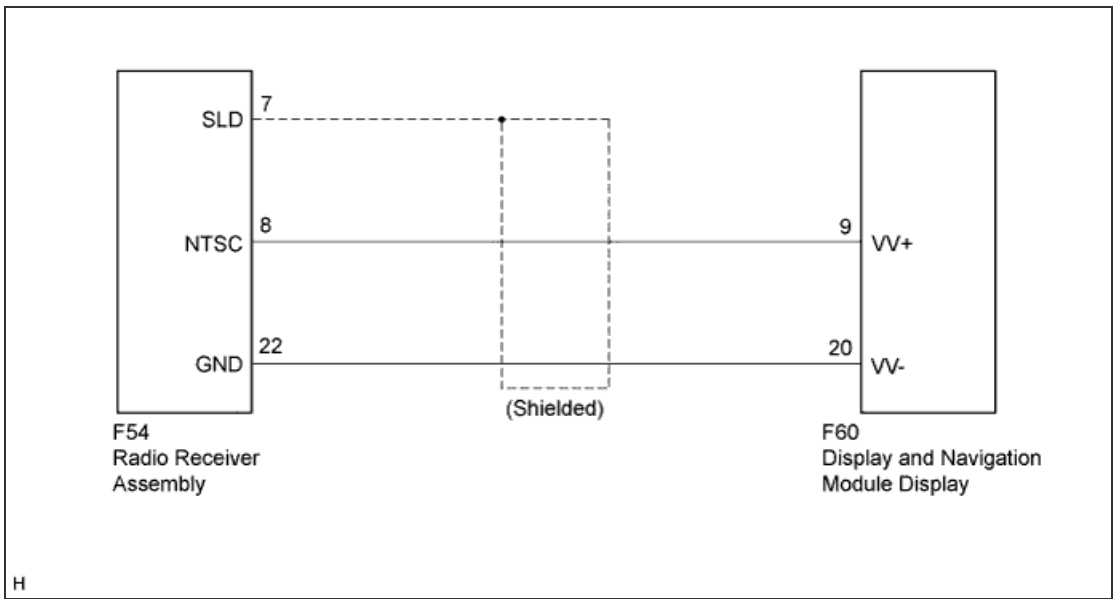
| F58-16 (REV) - C19-1 (RL) | Always | Below 1 Ω |
| F58-16 (REV) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK →



REPLACE PARK/NEUTRAL POSITION SWITCH ASSEMBLY (Click here)

**for Preparation** Click here

## DESCRIPTION

This circuit sends a DVD image signal from the radio receiver assembly to the display and navigation module display.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - DISPLAY AND NAVIGATION MODULE DISPLAY)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F60 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-8 (NTSC) - F60-9 (VV+) | Always | Below 1 Ω |
| F54-22 (GND) - F60-20 (VV-) | Always | Below 1 Ω |
| F54-8 (NTSC) - Body ground | Always | 10 kΩ or higher |
| F54-22 (GND) - Body ground | Always | 10 kΩ or higher |
| F54-7 (SLD) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

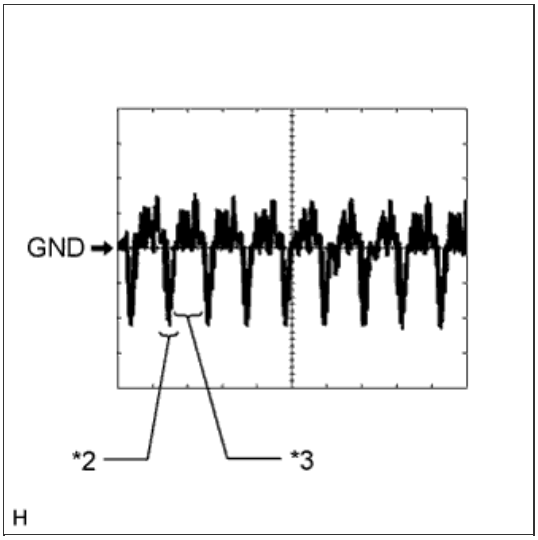
### 2.INSPECT RADIO RECEIVER ASSEMBLY (DVD IMAGE SIGNAL)

a. Reconnect the F54 radio receiver assembly connector.



b. Check the waveform according to the table below.

**Oscilloscope Waveform**

| Item | Content |
|---|---|
| Measurement terminal | F54-8 (NTSC) - Body ground |
| Measurement setting | 200 mV/DIV., 10 µs/DIV. |
| Condition | DVD display is on |

**HINT:**

The video waveform changes according to the image output from the radio receiver assembly to the display and navigation module display, but the synchronization signal does not change.

**Text in Illustration**

**for Preparation** Click here

## DESCRIPTION

This circuit sends a DVD image signal from the radio receiver assembly to the display and navigation module display.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - DISPLAY AND NAVIGATION MODULE DISPLAY)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F60 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-8 (NTSC) - F60-9 (VV+) | Always | Below 1 Ω |
| F54-22 (GND) - F60-20 (VV-) | Always | Below 1 Ω |
| F54-8 (NTSC) - Body ground | Always | 10 kΩ or higher |
| F54-22 (GND) - Body ground | Always | 10 kΩ or higher |
| F54-7 (SLD) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

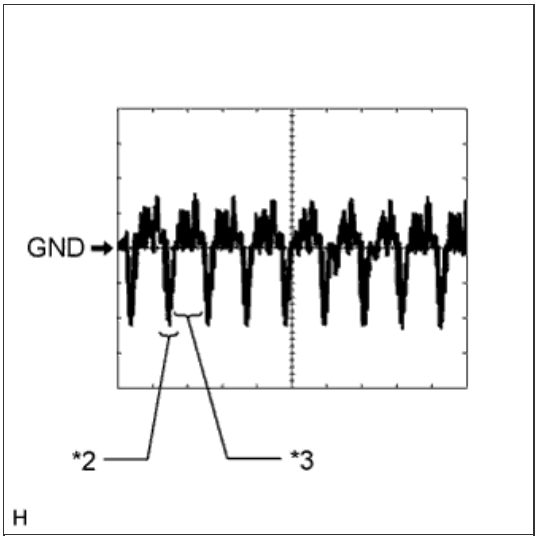
### 2.INSPECT RADIO RECEIVER ASSEMBLY (DVD IMAGE SIGNAL)

a. Reconnect the F54 radio receiver assembly connector.



b. Check the waveform according to the table below.

**Oscilloscope Waveform**

| Item | Content |
|---|---|
| Measurement terminal | F54-8 (NTSC) - Body ground |
| Measurement setting | 200 mV/DIV., 10 µs/DIV. |
| Condition | DVD display is on |

**HINT:**

The video waveform changes according to the image output from the radio receiver assembly to the display and navigation module display, but the synchronization signal does not change.

**Text in Illustration**

| | |
|---|---|
| *1 | Component with harness connected (Radio Receiver Assembly) |
| *2 | Synchronization Signal |
| *3 | Video Waveform |

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## DESCRIPTION

- Using this circuit, the display and navigation module display sends power to the map light assembly (telephone microphone assembly), and the map light assembly sends microphone signals to the display and navigation module display (w/o G-BOOK system).
- Using this circuit, the telematics transceiver sends power to the map light assembly (telephone microphone assembly), and the map light assembly (telephone microphone assembly) sends microphone signals to the display and navigation module display via the telematics transceiver. The display and navigation module display and map light assembly (telephone microphone assembly) are connected to each other using the microphone connection detection signal lines (w/ G-BOOK system).

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CONFIRM MODEL

a. Choose the model to be inspected.

**Result**

| Model | Proceed to |
|---|---|
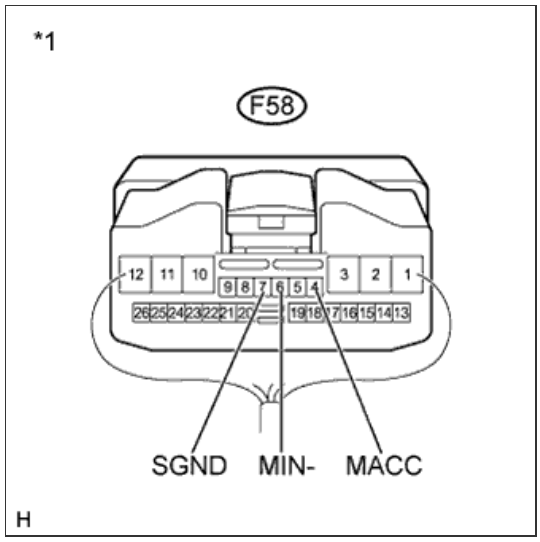
| w/o G-BOOK System | A |
| w/ G-BOOK System | B |

B → Go to step 4

A

## 2.INSPECT DISPLAY AND NAVIGATION MODULE DISPLAY

a. Measure the voltage according to the value(s) in the table below.



**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F58-4 (MACC) - Body ground | Engine switch on (ACC) | 5 V |

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-7 (SGND) - Body ground | Always | Below 1 Ω |
| F58-6 (MIN-) - Body ground | Always | Below 1 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component with harness connected (Display and Navigation Module Display) |

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

## 3.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE - MAP LIGHT ASSEMBLY)

a. Disconnect the F58 display and navigation module display connector.

b. Disconnect the R7 map light assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-20 (SNS2) - R7-31 (SNS2) | Always | Below 1 Ω |
| F58-4 (MACC) - R7-22 (ACC) | Always | Below 1 Ω |
| F58-5 (MIN+) - R7-21 (MI1+) | Always | Below 1 Ω |
| F58-6 (MIN-) - R7-20 (MIC-) | Always | Below 1 Ω |
| F58-20 (SNS2) - Body ground | Always | 10 kΩ or higher |
| F58-4 (MACC) - Body ground | Always | 10 kΩ or higher |
| F58-5 (MIN+) - | | |

| | | |
|---|---|---|
| Body ground | Always | 10 kΩ or higher |
| F58-6 (MIN-) - Body ground | Always | 10 kΩ or higher |
| F58-7 (SGND) - Body ground | Always | 10 kΩ or higher |

d. Proceed to the next step based on the inspection result.

**Result**

| Result | Proceed to |
|---|---|
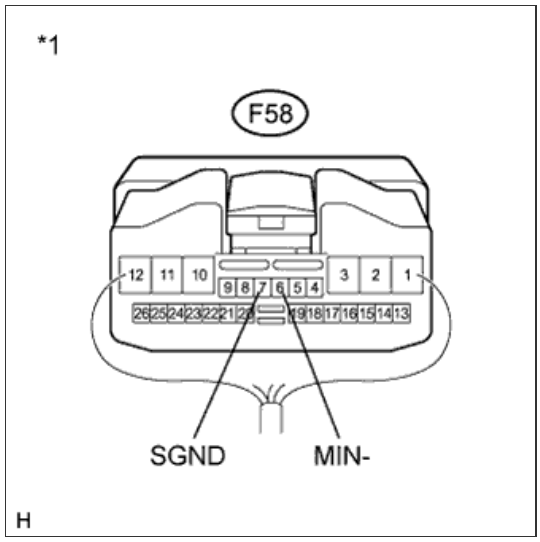
| NG | A |
| OK | B |

B → Go to step 9

A

**REPAIR OR REPLACE HARNESS OR CONNECTOR**

**4.INSPECT DISPLAY AND NAVIGATION MODULE DISPLAY**



a. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-7 (SGND) - Body ground | Always | Below 1 Ω |
| F58-6 (MIN-) - Body ground | Always | Below 1 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component with harness connected (Display and Navigation Module Display) |

NG → **REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY** (Click here)

OK

**5.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION NODULE - MAP LIGHT ASSEMBLY)**

a. Disconnect the F58 display and navigation module display connector.

b. Disconnect the R7 map light assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-20 (SNS2) - R7-31 (SNS2) | Always | Below 1 Ω |

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

### 6.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE - TELEMATICS TRANSCEIVER)

a. Disconnect the F58 display and navigation module display connector.

b. Disconnect the P2 telematics transceiver connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-5 (MIN+) - P2-18 (MCO+) | Always | Below 1 Ω |
| F58-6 (MIN-) - P2-19 (MCO-) | Always | Below 1 Ω |
| F58-5 (MIN+) - Body ground | Always | 10 kΩ or higher |
| F58-6 (MIN-) - Body ground | Always | 10 kΩ or higher |
| F58-7 (SGND) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

### 7.CHECK HARNESS AND CONNECTOR (TELEMATICS TRANSCEIVER - MAP LIGHT ASSEMBLY)

a. Disconnect the P2 telematics transceiver connector.

b. Disconnect the R7 map light assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| P2-33 (MCVD) - R7-22 (ACC) | Always | Below 1 Ω |
| P2-34 (MCI+) - R7-21 (MI1+) | Always | Below 1 Ω |
| P2-35 (MCI-) - R7-20 (MIC-) | Always | Below 1 Ω |
| P2-33 (MCVD) - Body ground | Always | 10 kΩ or higher |
| P2-34 (MCI+) - Body ground | Always | 10 kΩ or higher |
| P2-35 (MCI-) - Body ground | Always | 10 kΩ or higher |
| P2-32 (SGND) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

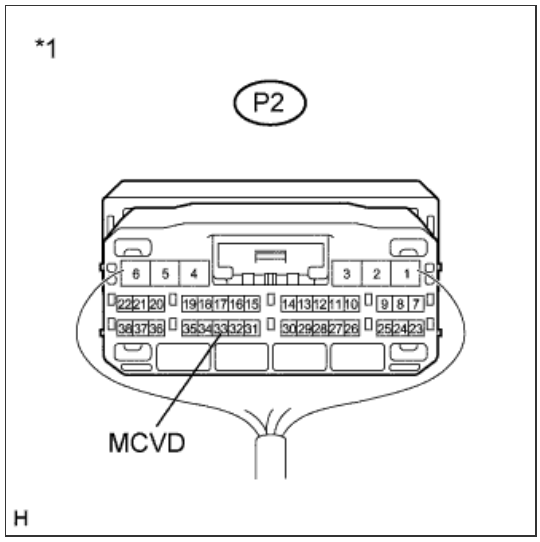
### 8.INSPECT TELEMATICS TRANSCEIVER

a. Measure the voltage according to the value(s) in the table below.



**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|

| | | |
|---|---|---|
| P2-33 (MCVD) - Body ground | Engine switch on (ACC) | 5 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Component with harness connected (Telematics Transceiver) |

NG → REPLACE TELEMATICS TRANSCEIVER (Click here)

OK

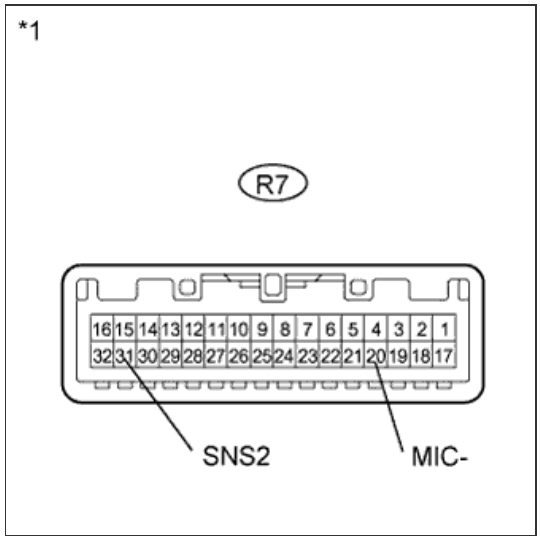
## 9.INSPECT MAP LIGHT ASSEMBLY



a. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| R7-31 (SNS2) - R7-20 (MIC-) | Always | Below 1 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Map Light Assembly) |

NG → Go to step 11

OK

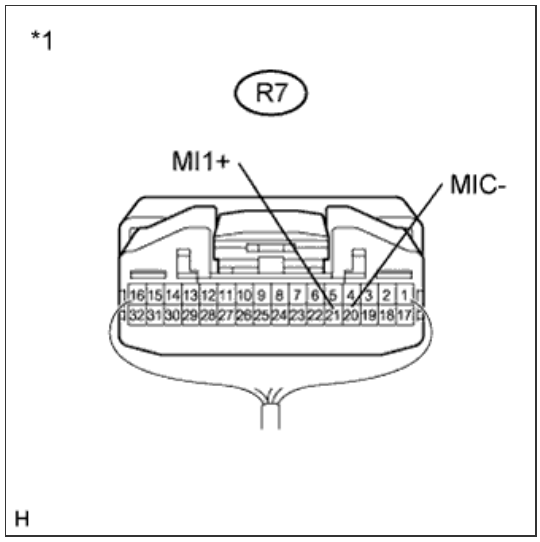
## 10.INSPECT MAP LIGHT ASSEMBLY

a. Reconnect the F58 display and navigation module display connector.

b. Reconnect the P2 telematics transceiver connector (w/ G-BOOK system).

c. Reconnect the R7 map light assembly connector.

d. Turn the engine switch on (ACC).



e. Connect an oscilloscope to terminals MI1+ and MIC- of the R7 telephone microphone assembly connector.

f. Check the waveform of the telephone microphone assembly using an oscilloscope.

**Result**

| | |
|---|---|
| | |

| Result | Proceed to |
|---|---|
| A waveform synchronized with the voice input to the telephone microphone assembly is output | A |
| A waveform synchronized with the voice input to the telephone microphone assembly is not output | B |

**Text in Illustration**

| | |
|---|---|
| *1 | Component with harness connected (Map Light Assembly) |

B → Go to step 11

A → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

## 11.REPLACE TELEMATICS TRANSCEIVER

a. Replace the telephone microphone assembly ( Click here).

b. Check if the same malfunction recurs.

**Result**

| Result | Proceed to |
|---|---|
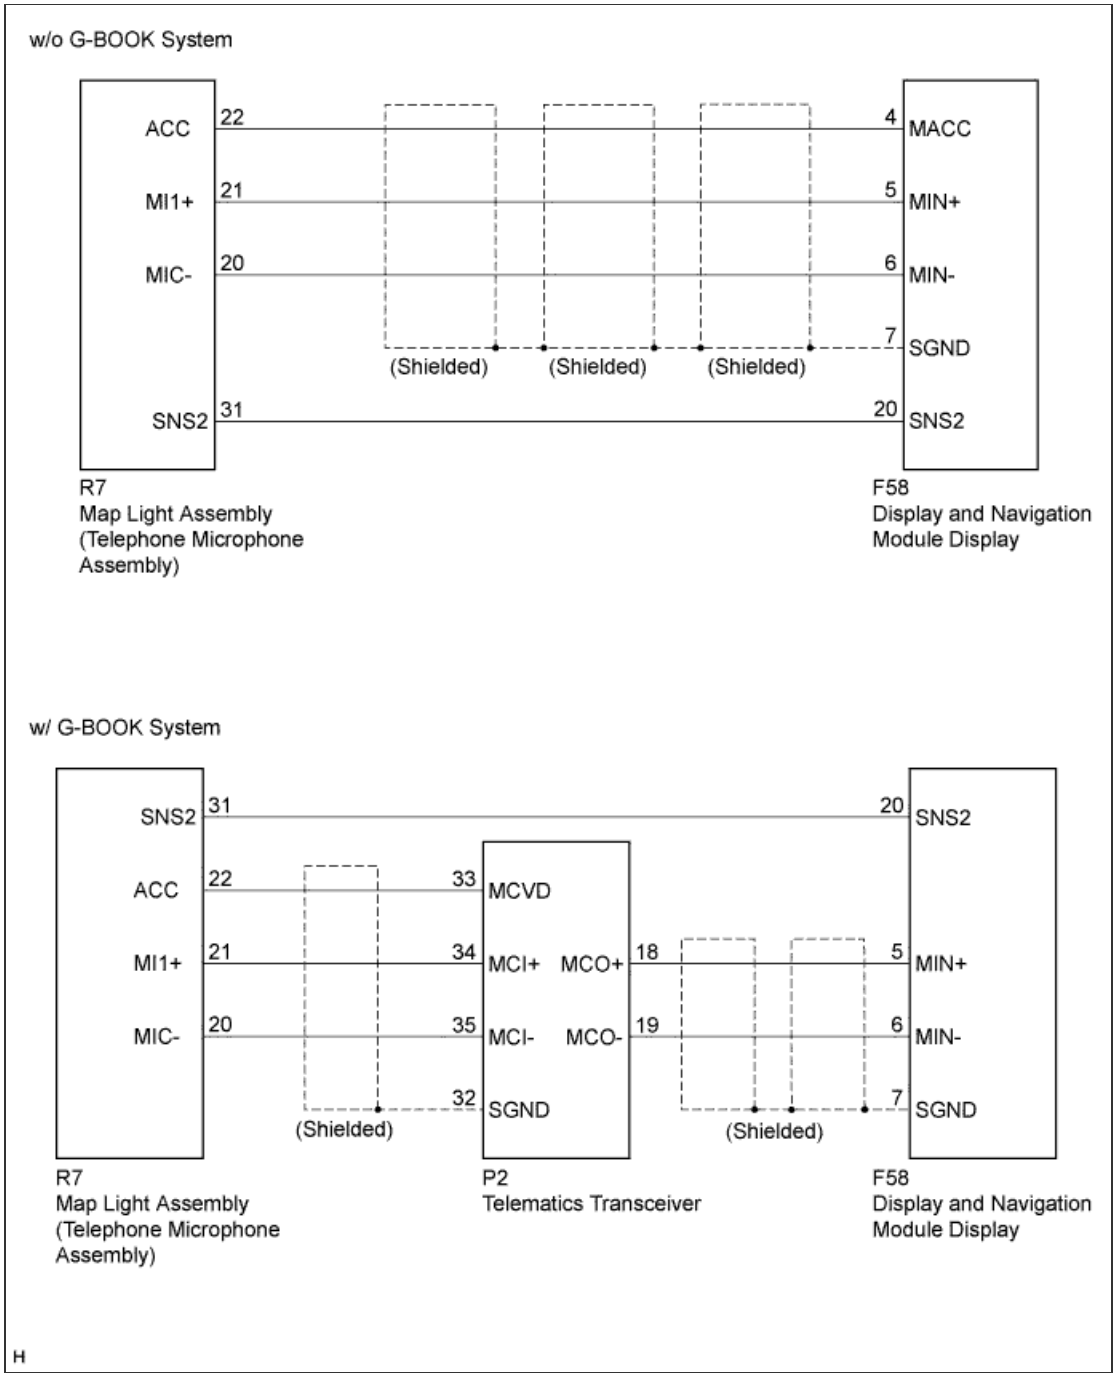
| Malfunction does not recur (returns to normal) | A |
| Malfunction recurs | B |

B → REPLACE MAP LIGHT ASSEMBLY (Click here)



A → END

**for Preparation** Click here

## DESCRIPTION

- Using this circuit, the display and navigation module display sends power to the map light assembly (telephone microphone assembly), and the map light assembly sends microphone signals to the display and navigation module display (w/o G-BOOK system).
- Using this circuit, the telematics transceiver sends power to the map light assembly (telephone microphone assembly), and the map light assembly (telephone microphone assembly) sends microphone signals to the display and navigation module display via the telematics transceiver. The display and navigation module display and map light assembly (telephone microphone assembly) are connected to each other using the microphone connection detection signal lines (w/ G-BOOK system).

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CONFIRM MODEL

a. Choose the model to be inspected.

**Result**

| Model | Proceed to |
|---|---|
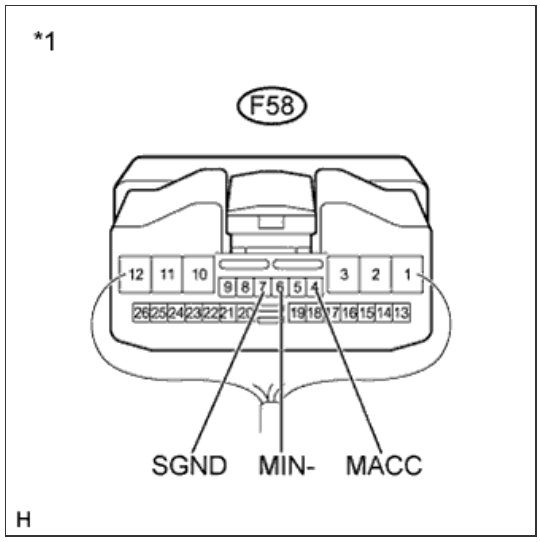
| w/o G-BOOK System | A |
| w/ G-BOOK System | B |

B → Go to step 4

A

## 2.INSPECT DISPLAY AND NAVIGATION MODULE DISPLAY

a. Measure the voltage according to the value(s) in the table below.



**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F58-4 (MACC) - Body ground | Engine switch on (ACC) | 5 V |

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-7 (SGND) - Body ground | Always | Below 1 Ω |
| F58-6 (MIN-) - Body ground | Always | Below 1 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component with harness connected (Display and Navigation Module Display) |

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

## 3.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE - MAP LIGHT ASSEMBLY)

a. Disconnect the F58 display and navigation module display connector.

b. Disconnect the R7 map light assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-20 (SNS2) - R7-31 (SNS2) | Always | Below 1 Ω |
| F58-4 (MACC) - R7-22 (ACC) | Always | Below 1 Ω |
| F58-5 (MIN+) - R7-21 (MI1+) | Always | Below 1 Ω |
| F58-6 (MIN-) - R7-20 (MIC-) | Always | Below 1 Ω |
| F58-20 (SNS2) - Body ground | Always | 10 kΩ or higher |
| F58-4 (MACC) - Body ground | Always | 10 kΩ or higher |
| F58-5 (MIN+) - | | |

| | | |
|---|---|---|
| Body ground | Always | 10 kΩ or higher |
| F58-6 (MIN-) - Body ground | Always | 10 kΩ or higher |
| F58-7 (SGND) - Body ground | Always | 10 kΩ or higher |

d. Proceed to the next step based on the inspection result.

**Result**

| Result | Proceed to |
|---|---|
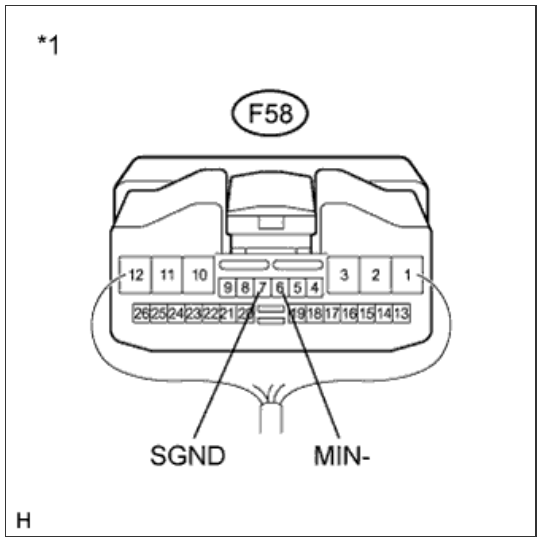
| NG | A |
| OK | B |

B → Go to step 9

A

**REPAIR OR REPLACE HARNESS OR CONNECTOR**

**4.INSPECT DISPLAY AND NAVIGATION MODULE DISPLAY**



a. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-7 (SGND) - Body ground | Always | Below 1 Ω |
| F58-6 (MIN-) - Body ground | Always | Below 1 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component with harness connected (Display and Navigation Module Display) |

NG → **REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY** (Click here)

OK

**5.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION NODULE - MAP LIGHT ASSEMBLY)**

a. Disconnect the F58 display and navigation module display connector.

b. Disconnect the R7 map light assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-20 (SNS2) - R7-31 (SNS2) | Always | Below 1 Ω |

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

### 6.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE - TELEMATICS TRANSCEIVER)

a. Disconnect the F58 display and navigation module display connector.

b. Disconnect the P2 telematics transceiver connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-5 (MIN+) - P2-18 (MCO+) | Always | Below 1 Ω |
| F58-6 (MIN-) - P2-19 (MCO-) | Always | Below 1 Ω |
| F58-5 (MIN+) - Body ground | Always | 10 kΩ or higher |
| F58-6 (MIN-) - Body ground | Always | 10 kΩ or higher |
| F58-7 (SGND) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

### 7.CHECK HARNESS AND CONNECTOR (TELEMATICS TRANSCEIVER - MAP LIGHT ASSEMBLY)

a. Disconnect the P2 telematics transceiver connector.

b. Disconnect the R7 map light assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| P2-33 (MCVD) - R7-22 (ACC) | Always | Below 1 Ω |
| P2-34 (MCI+) - R7-21 (MI1+) | Always | Below 1 Ω |
| P2-35 (MCI-) - R7-20 (MIC-) | Always | Below 1 Ω |
| P2-33 (MCVD) - Body ground | Always | 10 kΩ or higher |
| P2-34 (MCI+) - Body ground | Always | 10 kΩ or higher |
| P2-35 (MCI-) - Body ground | Always | 10 kΩ or higher |
| P2-32 (SGND) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

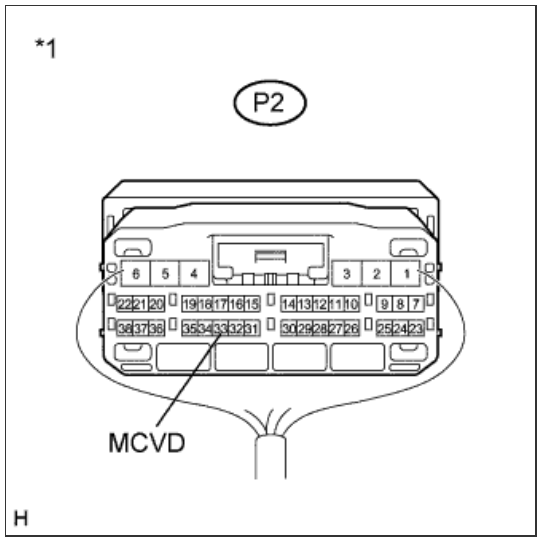
### 8.INSPECT TELEMATICS TRANSCEIVER

a. Measure the voltage according to the value(s) in the table below.



**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|

| | | |
|---|---|---|
| P2-33 (MCVD) - Body ground | Engine switch on (ACC) | 5 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Component with harness connected (Telematics Transceiver) |

NG → REPLACE TELEMATICS TRANSCEIVER (Click here)

OK

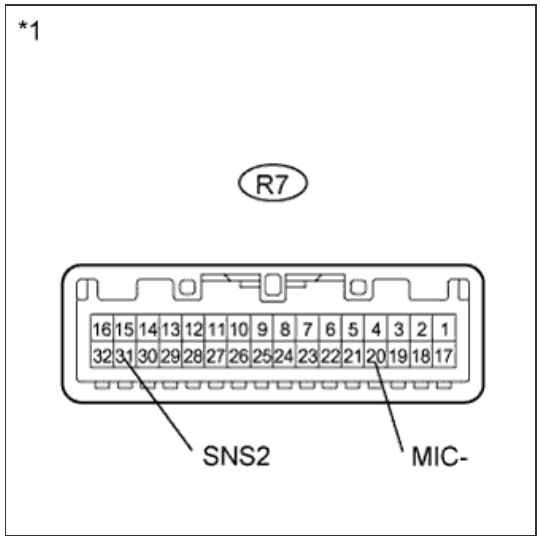
## 9.INSPECT MAP LIGHT ASSEMBLY



a. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| R7-31 (SNS2) - R7-20 (MIC-) | Always | Below 1 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Map Light Assembly) |

NG → Go to step 11

OK

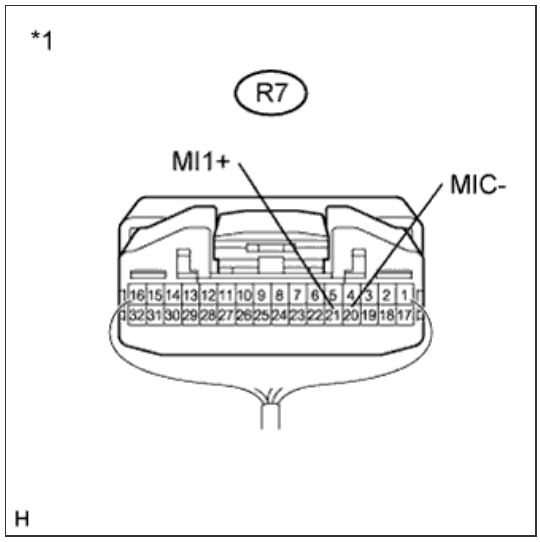
## 10.INSPECT MAP LIGHT ASSEMBLY

a. Reconnect the F58 display and navigation module display connector.

b. Reconnect the P2 telematics transceiver connector (w/ G-BOOK system).

c. Reconnect the R7 map light assembly connector.

d. Turn the engine switch on (ACC).



e. Connect an oscilloscope to terminals MI1+ and MIC- of the R7 telephone microphone assembly connector.

f. Check the waveform of the telephone microphone assembly using an oscilloscope.

**Result**

| | |
|---|---|
| | |

| Result | Proceed to |
|---|---|
| A waveform synchronized with the voice input to the telephone microphone assembly is output | A |
| A waveform synchronized with the voice input to the telephone microphone assembly is not output | B |

**Text in Illustration**

| | |
|---|---|
| *1 | Component with harness connected (Map Light Assembly) |

B → Go to step 11

A → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

## 11.REPLACE TELEMATICS TRANSCEIVER

a. Replace the telephone microphone assembly ( Click here).

b. Check if the same malfunction recurs.

**Result**

| Result | Proceed to |
|---|---|
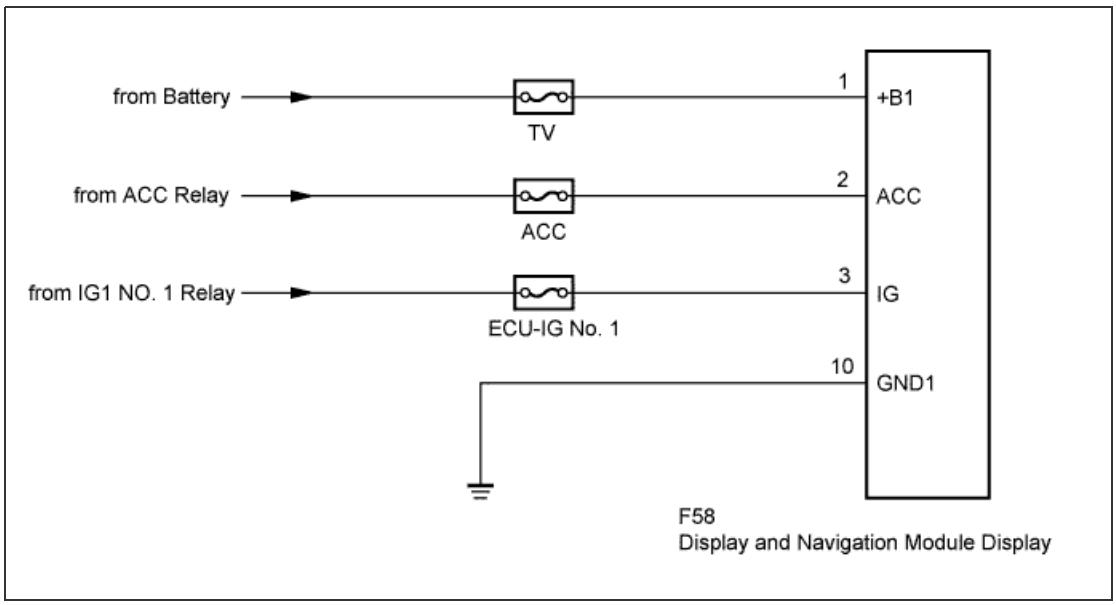
| Malfunction does not recur (returns to normal) | A |
| Malfunction recurs | B |

B → REPLACE MAP LIGHT ASSEMBLY (Click here)



A → END

**for Preparation** Click here

## DESCRIPTION

This is the power source circuit to operate the display and navigation module display.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

### 1.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY POWER SOURCE)

a. Disconnect the F58 display and navigation module display connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F58-10 (GND1) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F58-1 (+B1) - F58-10 (GND1) | Always | 11 to 14 V |
| F58-2 (ACC) - F58-10 (GND1) | Engine switch on (ACC) | 11 to 14 V |
| F58-3 (IG) - F58-10 (GND1) | Engine switch on (IG) | 11 to 14 V |

## TOUCH SCREEN OUTLINE

Touch switches are touch-sensitive (interactive) switches operated by touching the screen. When a switch is pressed, the outer glass bends to contact the inner glass at the pressed position. By doing this, the voltage ratio is measured and the pressed position is detected.

## DVD (Digital Versatile Disc) PLAYER OUTLINE

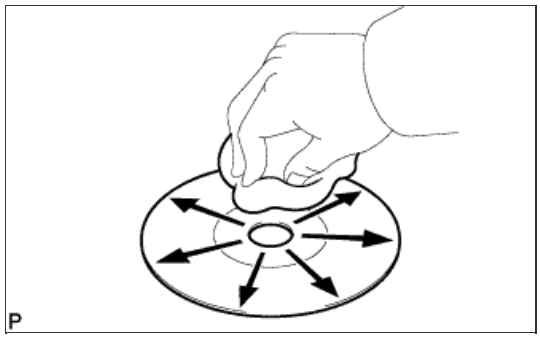
a. The DVD player can only play DVD videos, DVD audio and video CDs that have any of the following marks:

i. Precaution for use of discs

**NOTICE:**

- **PAL or SECAM color television standard discs cannot be played (only NTSC discs can be played).**
- **Keep the discs away from dirt. Be careful not to damage the discs or leave fingerprints on them.**
- **Hold discs by the outer edge and center hole with the label side up.**
- **Leaving the disc exposed halfway out of the slot for a long time after pressing the disc eject button may cause deformation of the disc, making the disc unusable.**
- **Do not use odd-shaped CDs because these may cause player malfunctions.**
- **Do not use discs whose recording portion is transparent or translucent because they may not be inserted, ejected or played normally.**
- **DualDiscs that combine DVD recorded material on one side with CD digital audio material on the other cannot be played.**

b. Cleaning



**NOTICE:**

Do not use a lens cleaner because it may cause a malfunction in the pickup portion of the player.

i. If dirt is on the disc surface, wipe it clean with a soft dry cloth such as an eyeglass cleaner for plastic lenses from the inside to the outside in a radial direction.

**NOTICE:**

- **Pressing on the disc by hand or rubbing the disc with a hard cloth may scratch the disc surface.**
- **Use of solvent such as a record spray, antistatic agent, alcohol, benzine and thinner or a chemical cloth may cause damage to the disc, making the disc unusable.**

## MP3/WMA OUTLINE

a. Playable MP3 file standards

| | |
|---|---|
| Compatible standard | MP3 (MPEG1 LAYER 3, MPEG2 LSF LAYER 3) |
| Compatible sampling frequency | • MPEG1 LAYER 3: 32, 44.1, 48 (kHz)<br>• MPEG2 LSF LAYER 3: 16, 22.05, 24 (kHz) |
| Compatible bit rate | • MPEG1 LAYER 3: 64, 80, 96, 112, 128, 160, 192, 224, 256, 320 (kbps)<br>• MPEG2 LSF LAYER 3: 64, 80, 96, 112, 128, 144, 160 (kbps)<br>• Compatible with VBR |
| Compatible channel mode | Stereo, joint stereo, dual channel, monaural |

b. Playable WMA file standards

| | |
|---|---|
| Compatible standard | WMA Ver. 7, 8, and 9 |
| Compatible sampling frequency | 32, 44.1, 48 (kHz) |
| Compatible bit rate (Only compatible with 2-channel playback) | • Ver. 7, 8: CBR48, 64, 80, 96, 128, 160, 192 (kbps)<br>• Ver. 9: CBR48, 64, 80, 96, 128, 160, 192, 256, 320 (kbps) |

c. ID3 tag and WMA tag

i. Additional textual information called ID3 tag can be input to MP3 files. Information such as song titles and artist names can be stored.

**HINT:**

This player is compatible with the ID3 tags of ID3 Ver. 1.0 and 1.1, and ID3 Ver. 2.2 and 2.3. (Number of characters complies with ID3 Ver. 1.0 and 1.1.)

ii. Additional textual information called WMA tag can be input to WMA files. Information such as song titles and artist names can be stored.

d. Usable media

i. Only CD-ROMs, CD-Rs (CD-Recordable) and CD-RWs (CD-ReWritable) can be used to play MP3/WMA files.

**NOTICE:**

- **CD-Rs and CD-RWs are more easily affected by a hot and humid environment than discs used for normal audio CDs. For this reason, some CD-Rs and CD-RWs will not play.**
- **If there are fingerprints or scratches on a disc, the disc may not play or the CD sound may skip.**
- **Some CD-Rs and CD-RWs may deteriorate if they are left in the cabin for a long time.**
- **Keep CD-Rs and CD-RWs in an opaque case.**

e. Usable media format

i. Usable media format

| | |
|---|---|
| Disc format | CD-ROM Mode 1, CD-ROM XA Mode 2 Form1 |

| | |
|---|---|
| File format | ISO9660 Level 1 and Level 2 (Joliet, Romeo) |

**HINT:**

- **As for MP3/WMA files written in any unlisted format, the contents of the files may not be played normally or the file names or folder names may not be displayed correctly.**
- **This player is compatible with multi-session discs and can play CD-Rs and CD-RWs on which MP3/WMA files are added. However, only the first session can be played.**
- **Discs whose first session includes both music data and MP3 or WMA format data cannot be played.**

ii. Standard and restrictions

| | |
|---|---|
| Maximum directory levels | 8 levels |
| Maximum number of characters for a folder name/file name | 32 characters |
| Maximum number of folders | 192 (Including the empty folders, roof folders, and folders that do not contain MP3/WMA files) |
| Maximum number of files in a disc | 255 (Including non-MP3/WMA files) |

f. File names

i. Only files with an extension of ".mp3" or ".wma" can be recognized and played as MP3 or WMA files.

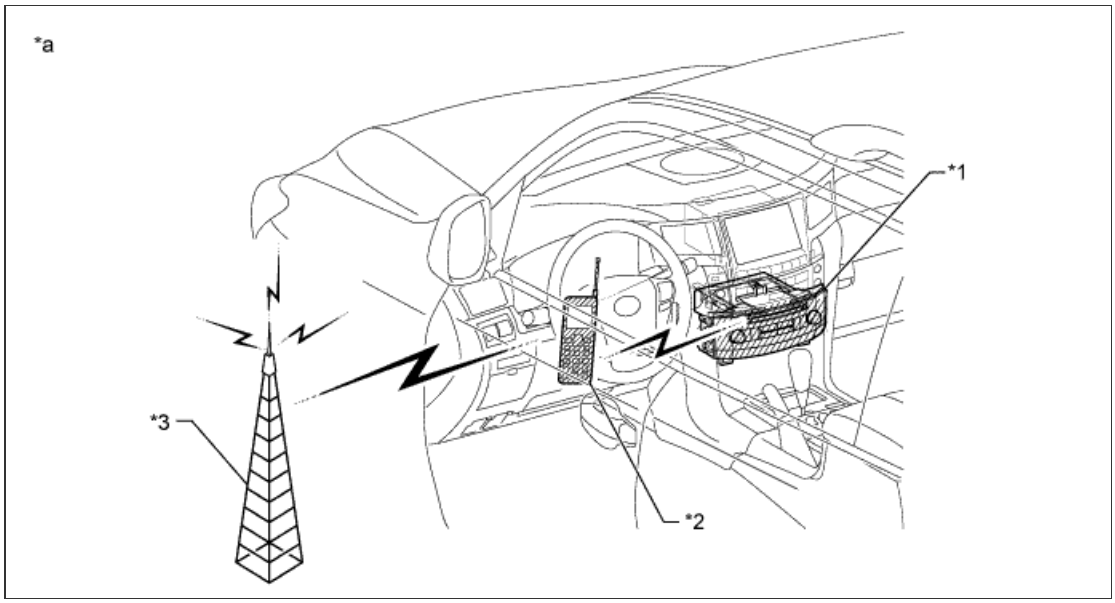
ii. Save MP3 or WMA files with an extension of ".mp3" or ".wma".

**NOTICE:**

If non-MP3 or non-WMA files are saved with an extension of ".mp3" or ".wma", those files may be wrongly recognized as MP3 or WMA files and played. A loud noise may occur and damage to the speakers may result.

## "Bluetooth" OUTLINE

a. "Bluetooth" is a trademark owned by Bluetooth SIG.



b. "Bluetooth" is a new wireless connection technology that uses the 2.4 GHz frequency band.

**HINT:**

The communication performance of "Bluetooth" may vary depending on obstructions or radio wave conditions between communication devices, electromagnetic radiation, communication device sensitivity or antenna capacity.

c. Hands-free function

i. The "Bluetooth" built-in radio receiver and a "Bluetooth" compatible cellular phone*1 can be connected using a "Bluetooth" wireless connection. This enables use of the hands-free function on the cellular phone even the phone may be in a pocket or bag. For this reason, it is not necessary to use a connector or cable to connect the cellular phone.
*1: Some versions of "Bluetooth" compatible cellular phones may not function.

**Text in Illustration**

| | | | |
|---|---|---|---|
| *1 | Radio Receiver Assembly<br>(Built-in "Bluetooth" Receiver Antenna) | *2 | Cellular Phone<br>("Bluetooth" Type) |

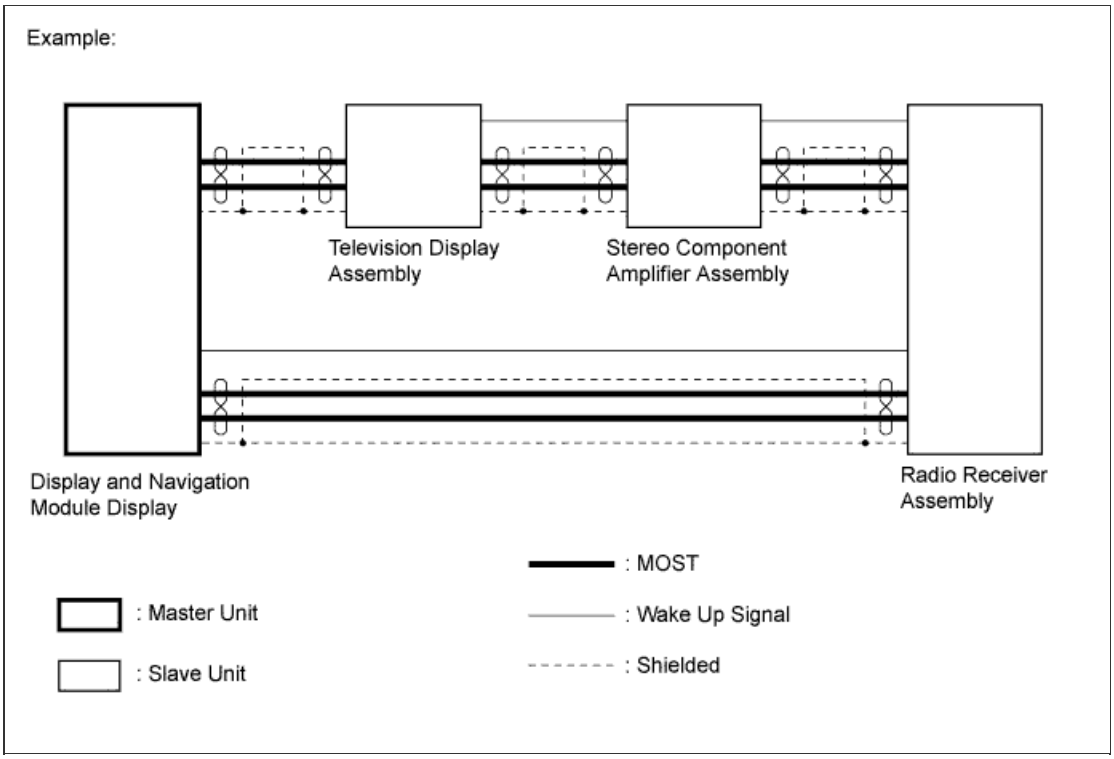
| *a | Example: | - | - |

## VEHICLE CUSTOMIZATION OUTLINE



a. Customization of functions can be performed on the multi display screen. Refer to the owner's manual for further information on customizable items for the electro multi vision system.

**HINT:**

- **Items available for customization via the electro multi vision system can be performed by using the intelligent tester.**
- **Some customize parameters displayed on the intelligent tester will be displayed on the "Vehicle Customization" screen for the electro multi vision system. Users can customize these items.**

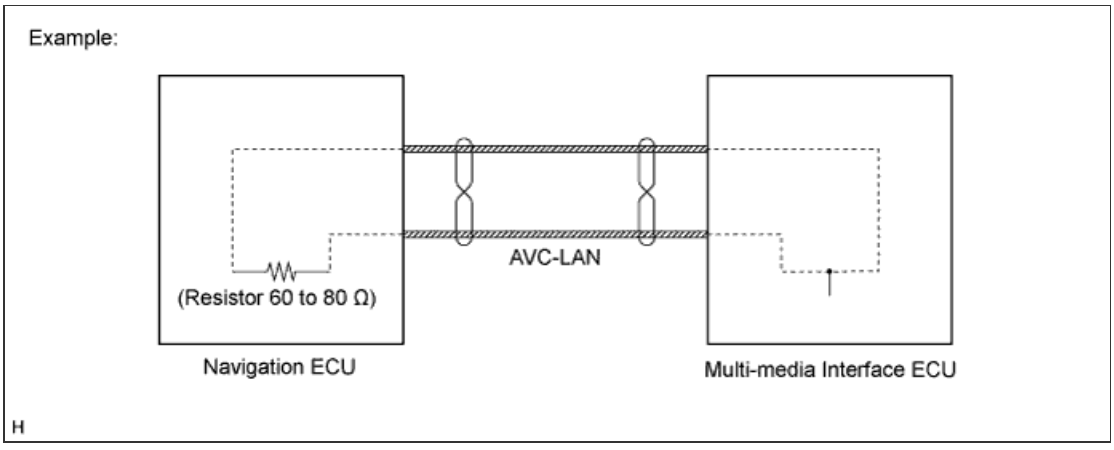
## COMMUNICATION SYSTEM

a. MOST Network Outline

i. Electro multi vision system components communicate with each other via the MOST network.

ii. The MOST network uses a shielded twisted pair of wires for its communication lines.

iii. The master unit of the MOST network is the display and navigation module display (navigation ECU).



iv. MOST communication lines connect each slave unit centering around the master unit to form a MOST network ring.

v. The master unit sends a wake-up signal to activate each slave unit connected to the MOST network.

**HINT:**

If a short or open circuit occurs in the MOST circuit, communication will be interrupted and the system will not operate normally.

b. AVC-LAN Outline

i. Components of the electro multi vision system communicate with each other via the AVC-LAN.

ii. The AVC-LAN uses a twisted pair of wires for its communication lines.

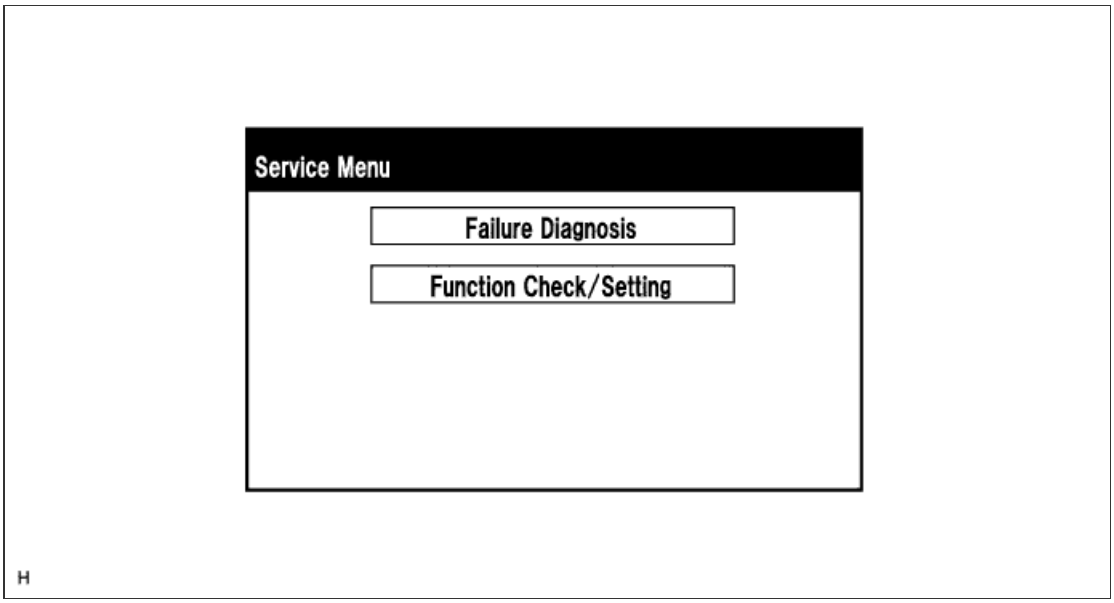
iii. The master unit of the AVC-LAN is the display and navigation module display (navigation ECU).

**HINT:**

- **The display and navigation module display (navigation ECU) has enough resistance (60 to 80 Ω) necessary for communication.**
- **If a short or open circuit occurs in the AVC-LAN circuit, communication is interrupted and the system will not**

operate normally.

## DIAGNOSTIC FUNCTION OUTLINE

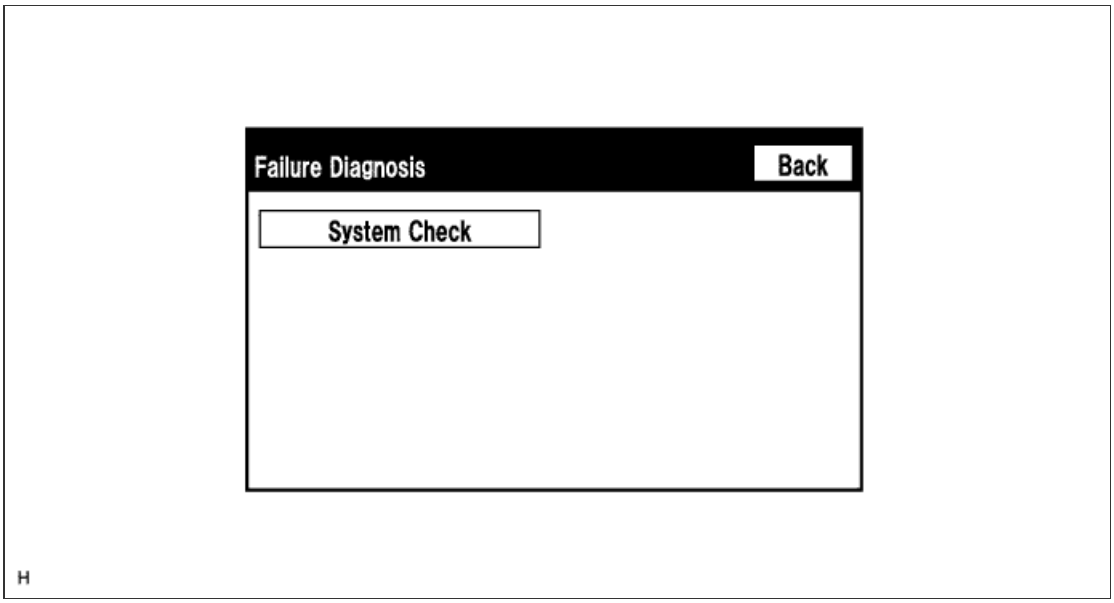


a. The electro multi vision system has a diagnostic function (the result will be displayed on the master unit or the intelligent tester).

## DIAGNOSIS DISPLAY DETAILED DESCRIPTION

**HINT:**

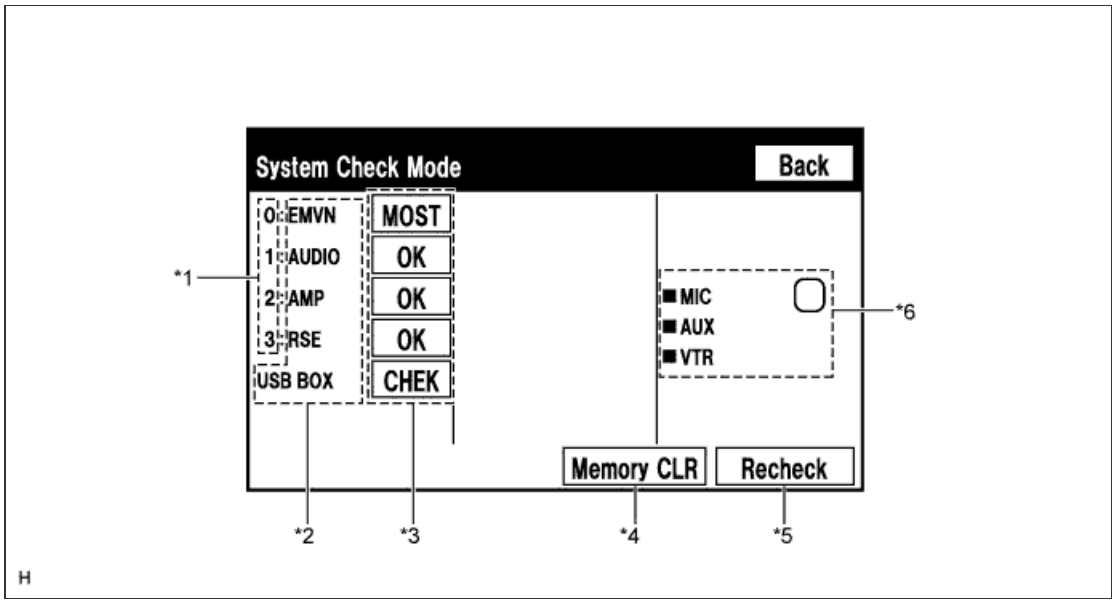
- **This section contains a detailed description of displays in diagnostic mode.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**



a. Service Menu Screen

**HINT:**

Each item is grayed out or not displayed based on the device settings.



b. Failure Diagnosis Screen

**HINT:**

Each item is grayed out or not displayed based on the device settings.

i. System Check Mode Screen

*1: Node position number for devices connected to the MOST network.

**HINT:**

MOST node position numbers are provided for devices connected to the MOST network.

*2: Device Name List No. 1

**HINT:**

- **Device Name List No. 1 displays some of the devices that make up the electro multi vision system.**
- **The names of the components from Device Name List No. 1 are shown in the following table.**

| Name | Component | Connection Method |
|---|---|---|
| EMVN | Display and navigation module display | - |
| AUDIO | Radio receiver assembly | Communication line for MOST network |
| AMP | Stereo component amplifier assembly | Communication line for MOST network |

| | | |
|---|---|---|
| RSE | Television display assembly | Communication line for MOST network |
| USB BOX | Multi-media interface ECU | Communication line for AVC-LAN |

*3: Check Result

**HINT:**

- **Result codes for all devices are displayed.**
- **When "MOST" is displayed for the result, press "MOST" on the display and navigation module display to display the "MOST Line Check" screen.**

| Result | Meaning | Action |
|---|---|---|
| OK | The device does not respond with a DTC. | - |
| MOST | MOST communication error | Perform "MOST Line Check" to check the connection of each device on the MOST network. |
| EXCH | The device responds with a "replace"-type DTC. | Look up the DTC in "Unit Check Mode" and replace the device. |
| CHEK | The device responds with a "check"-type DTC. | Look up the DTC in "Unit Check Mode". |
| NCON | The device was previously present, but does not respond in diagnostic mode. | - Check power supply wire harness of the device.<br>- Check the AVC-LAN or MOST network for the device. |
| NRES | The device responds in diagnostic mode, but gives no DTC information. | - Check power supply wire harness of the device.<br>- Check the AVC-LAN or MOST network for the device. |

*4: Memory Clear

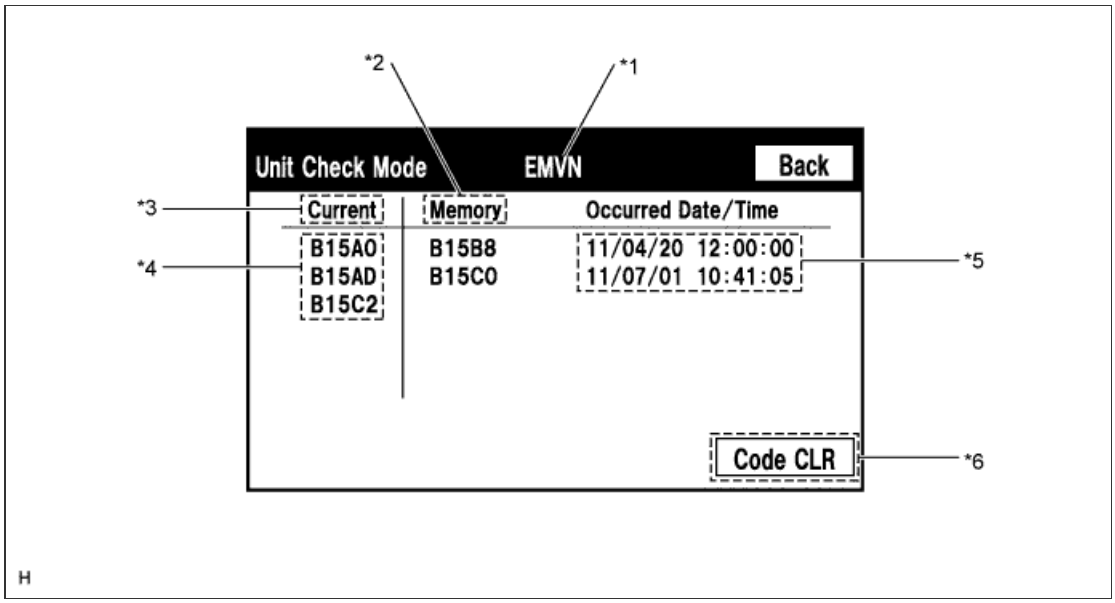
**HINT:**

- **Present and history DTCs and registered connected device names are cleared.**
- **Press the "Memory CLR" switch for 3 seconds.**

*5: Recheck

**HINT:**

- **A system check will be performed again after the memory is cleared.**
- **The "Recheck" switch will dim during a system check.**



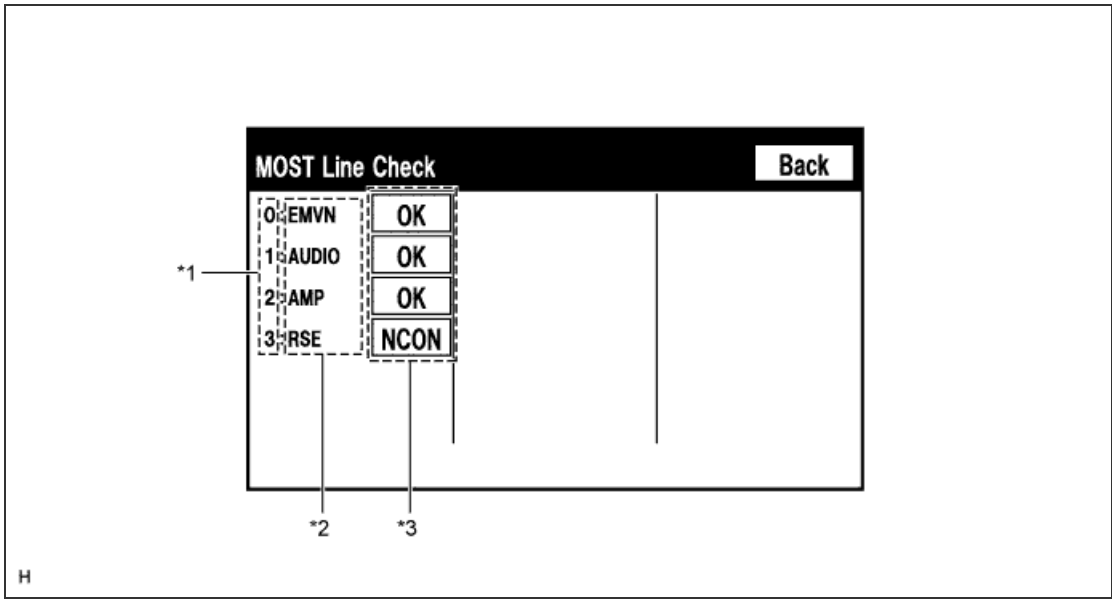
*6: Device Name List No. 2

**HINT:**

- **Device Name List No. 2 displays some of the devices that make up the electro multi vision system.**
- **The names of the components from Device Name List No. 2 are shown in the following table.**

| Name | Component | Connection Method |
|---|---|---|
| MIC | Telephone microphone assembly | Vehicle wire harness |
| AUX | No. 1 Stereo jack adapter | Vehicle wire harness |
| VTR | Video (video adapter) terminal | Vehicle wire harness |

ii. Unit Check Mode Screen



**Screen Description**

| Display | Content |
|---|---|
| *1: Device name | Target device |
| *2: History DTC | Diagnostic memory results and stored DTCs are displayed. |
| *3: Present DTC | DTCs output in the service check are displayed. |
| *4: DTC | DTC (Diagnostic Trouble Code) |
| *5: Timestamp | The time and date of history DTCs are displayed. (The year is displayed in 2-digit format.) |
| *6: Diagnosis clear switch | Pushing this switch for 3 seconds clears the diagnostic memory data of the target device. (Both response to diagnostic system check result and the displayed data are cleared.) |

iii. MOST Line Check Screen

**HINT:**

- **The inspection will be performed at the time the screen changes from "System Check Mode" to "MOST Line Check".**
- **The master unit checks the connection of each device on the MOST network.**

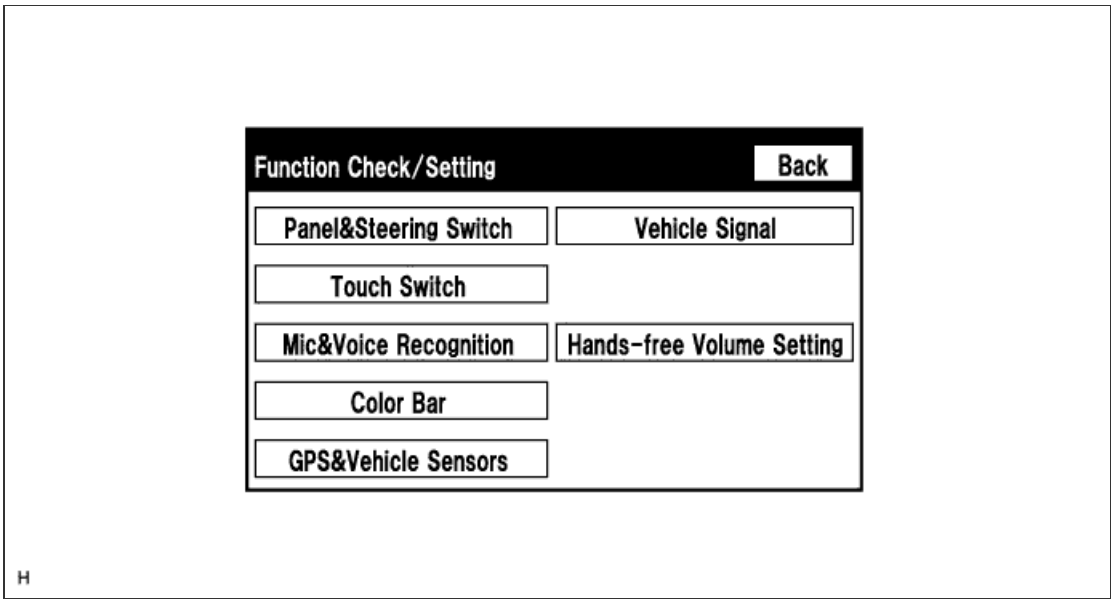
*1: Node position number for devices connected to the MOST network.
*2: Device Name List

**HINT:**

- **Device Name List displays some of the devices that make up the electro multi vision system.**
- **The names of the components from Device Name List are shown in the following table.**

| Name | Component |
|---|---|
| EMVN | Display and navigation module display |
| AUDIO | Radio receiver assembly |
| AMP | Stereo component amplifier assembly |
| RSE | Television display assembly |

*3: Check Result

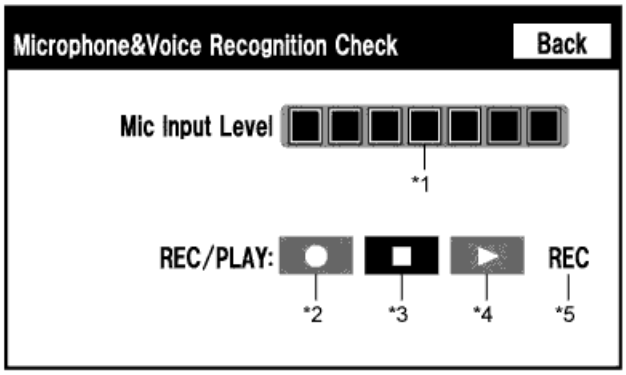


**HINT:**

- **The master unit displays the check result on the screen based on the response information from each slave unit.**
- **Result codes for all devices are displayed.**

| Result | Meaning |
|---|---|
| OK | There was a response for the connection check during the MOST line check. |
| NCON | There was no response for the connection check during the MOST line check. |

- **The device name and result will not be displayed if there is no system registration record and no response for the connection check during the MOST line check even if the device is connected to the MOST network.**



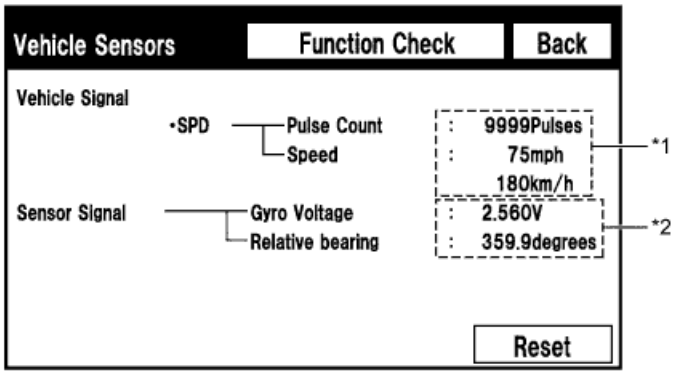
c. Function Check/Setting Screen

**HINT:**

Each item is grayed out or not displayed based on the device settings.

i. Microphone & Voice Recognition Check Screen

H



**Screen Description**

| Display | Content |
|---|---|
| *1: Microphone input level meter | Monitors the microphone input level every 0.1 sec. and displays the results in 8 different levels. |
| *2: Recording switch | Starts recording. |
| *3: Stop switch | Stops recording and playing. |
| *4: Play switch | Plays the recorded voice. |
| *5: Recording indicator | Comes on while recording. |

**HINT:**

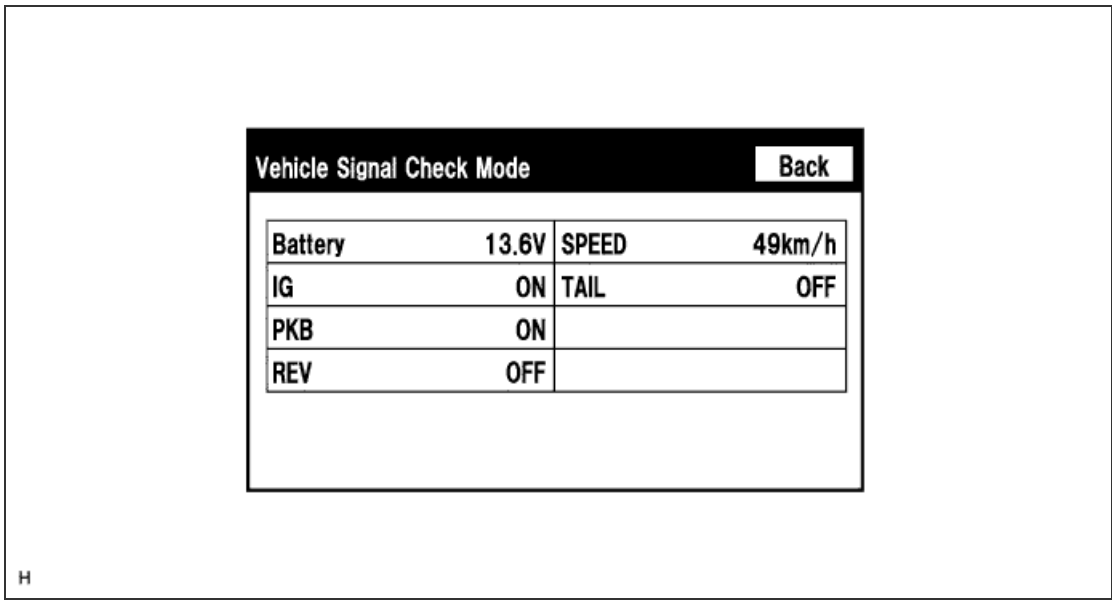
- **The microphone is active at all times when this screen is displayed.**
- **While recording or playing, the switches other than the stop switch cannot be pushed.**
- **When no recording is present, the play switch cannot be pushed.**
- **Recording will stop after 5 seconds or when the stop switch is pushed.**

ii. Vehicle Sensors Screen

H

**Vehicle Signal**

| Display | Content |
|---|---|
| *1: SPD | SPD signal condition is displayed. |



### Sensor Signal

| Display | Content |
|---|---|
| *2: Gyro sensor | Gyro sensor output condition is displayed.<br>2.1 to 2.9 V |

**HINT:**

Signals are updated once per second only when vehicle sensor signals are changed.

iii. Vehicle Signal Check Mode Screen

### Screen Description

| Display | Content |
|---|---|
| Battery | Battery voltage is displayed. |
| IG | Engine switch ON/OFF state is displayed. |
| PKB | Parking brake ON/OFF state is displayed. |
| REV | Reverse signal ON/OFF state is displayed. |
| SPEED | Vehicle speed is displayed in km/h. |
| TAIL | TAIL signal (Light control switch) ON/OFF state is displayed. |

**HINT:**

- **Only items sending vehicle signals will be displayed.**
- **This screen is updated once per second when input signals to the vehicle are changed.**

**for Preparation** Click here

**HINT:**

- **Use the following procedure to troubleshoot the multi vision system.**
- ***: Use the intelligent tester.**

## 1.VEHICLE BROUGHT TO WORKSHOP

**NEXT**

## 2.INSPECT BATTERY VOLTAGE

a. Inspect the battery voltage.

**Standard Voltage:**
**11 to 14 V**

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

**NEXT**

## 3.DIAGNOSTIC QUESTIONING AND SYMPTOM CONFIRMATION

a. Ask the customer about symptoms and confirm malfunctions.

**Result**

| Result | Proceed to |
|---|---|
| Other symptoms. | A |
| The screen displays nothing. | B |

**B.** → **Go to step 10, AND PROCEED TO "BLACK SCREEN"**

**A**

## 4.OPERATION CHECK

a. Refer to Check System Normal Condition ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| Symptom is not normal operation. | A |
| Symptom is normal operation. | B |

**B.** → **SYMPTOM IS NORMAL OPERATION**

**A**

## 5.CHECK CAN COMMUNICATION SYSTEM*

a. Check for DTC output (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC is not output. | A |

| | |
|---|---|
| DTC is output. | B |

B. GO TO CAN COMMUNICATION SYSTEM

A

## 6.CHECK FOR DTC*

a. Refer to DTC Check / Clear ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC is output. | A |
| DTC is not output. | B |

**HINT:**

If more information is needed, perform a recheck using the "System Check Mode" screen after rechecking for DTCs using the intelligent tester (Click here).

B. Go to step 10

A

## 7.DTC CLEAR*

a. Refer to the DTC Check / Clear ( Click here).

**HINT:**

The current DTCs may not indicate actual malfunctions depending on the vehicle operating conditions.

NEXT

## 8.RECHECK FOR DTC*

**Result**

| Result | Proceed to |
|---|---|
| DTC is output. | A |
| DTC is not output. | B |

**HINT:**

- **Even if the malfunction symptom is not confirmed, check for DTCs. This is because the system stores history DTCs.**
- **If more information is needed, perform a recheck using the "System Check Mode" screen after rechecking for DTCs using the intelligent tester (Click here).**
- **Check the DTC and inspect the area code indicates.**

B. Go to step 10

A

## 9.DIAGNOSTIC TROUBLE CODE CHART

a. Find the output code in Diagnostic Trouble Code Chart ( Click here).

**NOTICE:**

- **The electro multi system outputs DTCs for the following system.**
- **When DTCs other than those in Diagnostic Trouble Code Chart for the electro multi vision system are output, refer to Diagnostic Trouble Code Chart for the system.**
- **Refer to Audio and Visual System (w/o Navigation System) ( Click here)**
- **Refer to Rear Seat Entertainment System (w/ Rear Seat Entertainment System) ( Click here)**

**Result**

| Result | Proceed to |
|---|---|
| Electro Multi Vision System are output. | A |
| Audio and Visual System (w/o Navigation System) are output. | B |
| Rear Seat Entertainment System are output. | C |

| | |
|---|---|
| **A.** | **Go to step 12** |
| **B.** | **GO TO AUDIO AND VISUAL SYSTEM** |
| **C.** | **GO TO REAR SEAT ENTERTAINMENT SYSTEM** |

## 10.PROBLEM SYMPTOMS TABLE

a. Refer to Problem Symptoms Table (Click here).

**Result**

| Result | Proceed to |
|---|---|
| Fault is not listed in Problem Symptoms Table. | A |
| Fault is listed in Problem Symptoms Table. | B |

**HINT:**

If the symptom does not recur and no DTC is output, perform the symptom reproduction method ( Click here).

| | |
|---|---|
| **B.** | **Go to step 12** |

**A**

## 11.CHECK ECU TERMINAL ARRANGEMENT BASED ON MALFUNCTION SYMPTOM

a. Refer to Terminals of ECU (Click here).

**NEXT**

## 12.CHECK CIRCUIT

a. Adjust, repair or replace as necessary.

**NEXT**

## 13.RECHECK FOR DIAGNOSTIC TROUBLE CODE

**HINT:**

After clearing the DTCs, recheck for DTCs.

**NEXT**

## 14.PERFORM CONFIRMATION TEST

**NEXT**

## END

**for Preparation** Click here

**HINT:**

- **Use the following procedure to troubleshoot the multi vision system.**
- ***: Use the intelligent tester.**

## 1.VEHICLE BROUGHT TO WORKSHOP

**NEXT**

## 2.INSPECT BATTERY VOLTAGE

a. Inspect the battery voltage.

**Standard Voltage:**
**11 to 14 V**

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

**NEXT**

## 3.DIAGNOSTIC QUESTIONING AND SYMPTOM CONFIRMATION

a. Ask the customer about symptoms and confirm malfunctions.

**Result**

| Result | Proceed to |
|---|---|
| Other symptoms. | A |
| The screen displays nothing. | B |

**B.** → **Go to step 10, AND PROCEED TO "BLACK SCREEN"**

**A**

## 4.OPERATION CHECK

a. Refer to Check System Normal Condition ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| Symptom is not normal operation. | A |
| Symptom is normal operation. | B |

**B.** → **SYMPTOM IS NORMAL OPERATION**

**A**

## 5.CHECK CAN COMMUNICATION SYSTEM*

a. Check for DTC output (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC is not output. | A |

| | |
|---|---|
| DTC is output. | B |

B. GO TO CAN COMMUNICATION SYSTEM

A

## 6.CHECK FOR DTC*

a. Refer to DTC Check / Clear ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC is output. | A |
| DTC is not output. | B |

**HINT:**

If more information is needed, perform a recheck using the "System Check Mode" screen after rechecking for DTCs using the intelligent tester (Click here).

B. Go to step 10

A

## 7.DTC CLEAR*

a. Refer to the DTC Check / Clear ( Click here).

**HINT:**

The current DTCs may not indicate actual malfunctions depending on the vehicle operating conditions.

NEXT

## 8.RECHECK FOR DTC*

**Result**

| Result | Proceed to |
|---|---|
| DTC is output. | A |
| DTC is not output. | B |

**HINT:**

- **Even if the malfunction symptom is not confirmed, check for DTCs. This is because the system stores history DTCs.**
- **If more information is needed, perform a recheck using the "System Check Mode" screen after rechecking for DTCs using the intelligent tester (Click here).**
- **Check the DTC and inspect the area code indicates.**

B. Go to step 10

A

## 9.DIAGNOSTIC TROUBLE CODE CHART

a. Find the output code in Diagnostic Trouble Code Chart ( Click here).

**NOTICE:**

- **The electro multi system outputs DTCs for the following system.**
- **When DTCs other than those in Diagnostic Trouble Code Chart for the electro multi vision system are output, refer to Diagnostic Trouble Code Chart for the system.**
- **Refer to Audio and Visual System (w/o Navigation System) ( Click here)**

| Electro Multi Vision System are output. | A |
| Audio and Visual System (w/o Navigation System) are output. | B |
| Rear Seat Entertainment System are output. | C |

| | |
|---|---|
| **A.** | **Go to step 12** |
| **B.** | **GO TO AUDIO AND VISUAL SYSTEM** |
| **C.** | **GO TO REAR SEAT ENTERTAINMENT SYSTEM** |

## 10.PROBLEM SYMPTOMS TABLE

a. Refer to Problem Symptoms Table (Click here).

**Result**

| Result | Proceed to |
|---|---|
| Fault is not listed in Problem Symptoms Table. | A |
| Fault is listed in Problem Symptoms Table. | B |

**HINT:**

If the symptom does not recur and no DTC is output, perform the symptom reproduction method ( Click here).

| | |
|---|---|
| **B.** | **Go to step 12** |

**A**

## 11.CHECK ECU TERMINAL ARRANGEMENT BASED ON MALFUNCTION SYMPTOM

a. Refer to Terminals of ECU (Click here).

**NEXT**

## 12.CHECK CIRCUIT

a. Adjust, repair or replace as necessary.

**NEXT**

## 13.RECHECK FOR DIAGNOSTIC TROUBLE CODE

**HINT:**

After clearing the DTCs, recheck for DTCs.

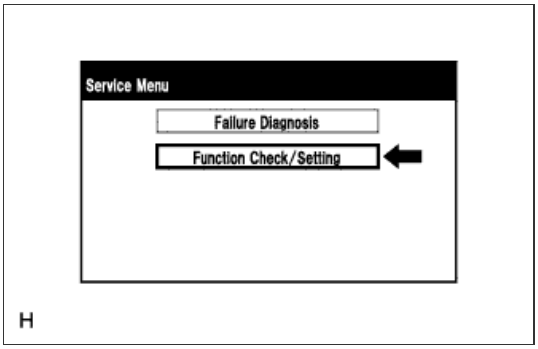
**NEXT**

## 14.PERFORM CONFIRMATION TEST

**NEXT**

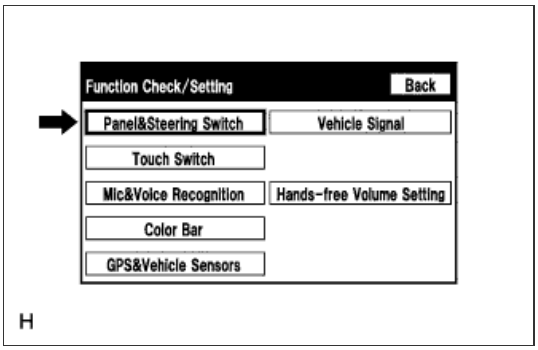
## END

**for Preparation** Click here



## CHECK PANEL & STEERING SWITCH

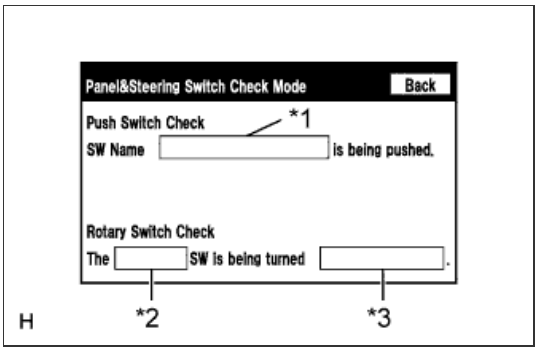
**HINT:**



- **The display and navigation module display panel switches, radio receiver assembly panel switches and steering switches are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.



c. Select "Panel & Steering Switch" from the "Function Check/Setting" screen.

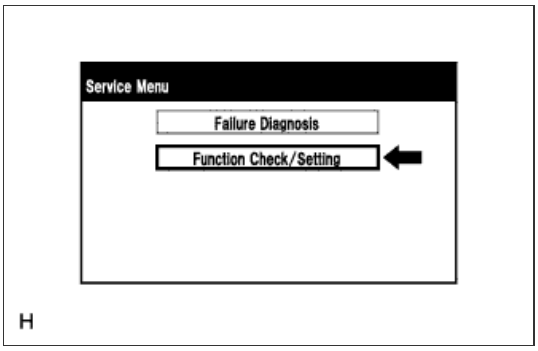
d. Panel & Steering Switch Check Mode

i. Operate each switch and check that the switch names and condition are correctly displayed.

**Screen Description**

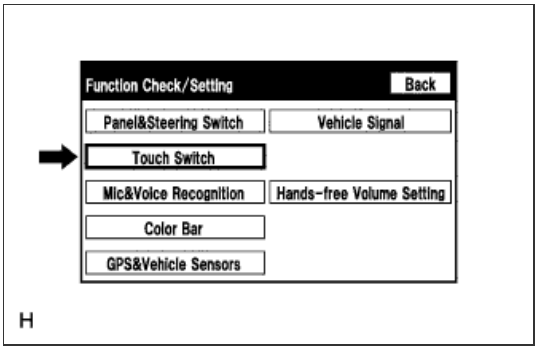
| Display | Content |
|---|---|
| *1: Push switch name | • Name of the pressed switch is displayed.<br>• If more than one switch is pressed, "MULTIPLE" will be displayed. |
| *2: Rotary switch name | Name of the rotary switch is displayed. |

| | |
|---|---|
| *3: Rotary switch direction | Direction of the rotary switch is displayed. |



## CHECK TOUCH SWITCH

**HINT:**

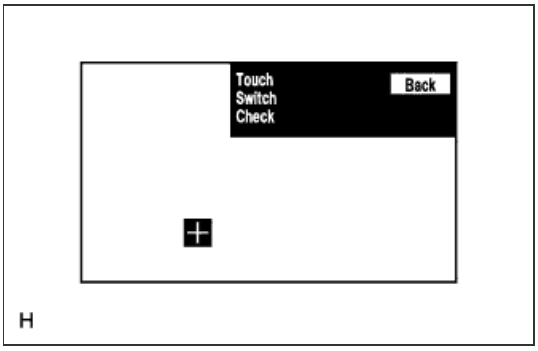


- **The touch switches on the screen are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "Touch Switch" from the "Function Check/Setting" screen.

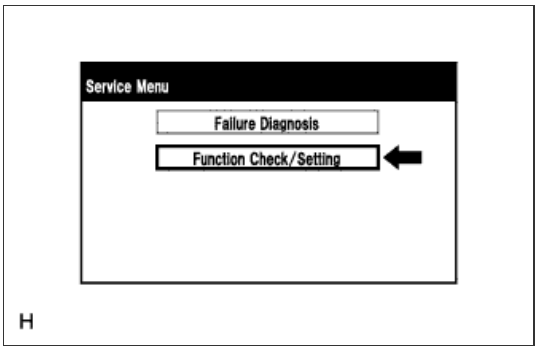


d. Touch Switch Check

i. Touch the display anywhere in the open area to perform the check when the "Touch Switch Check" screen is displayed.

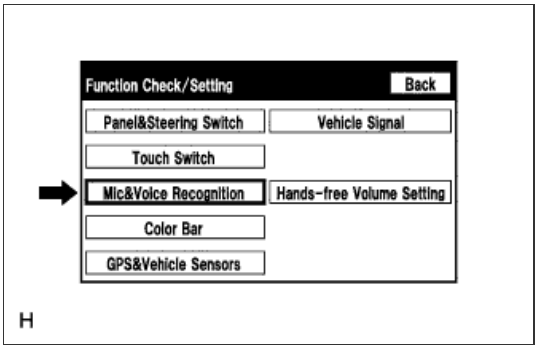
**HINT:**

- **A "+" mark is displayed where the display is touched.**
- **The "+" mark remains on the display even after the finger is removed.**



## CHECK MIC & VOICE RECOGNITION

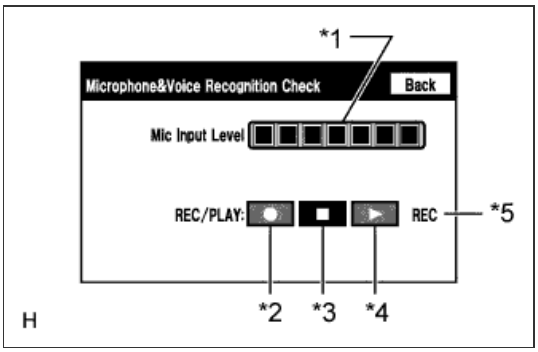
**HINT:**



- **The microphone and microphone input level are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.



c. Select "Mic & Voice Recognition" from the "Function Check/Setting" screen.

d. Microphone & Voice Recognition Check

**Text in Illustration**

| | |
|---|---|
| *1 | Microphone Input Level Meter |
| *2 | Recording Switch |
| *3 | Stop Switch |
| *4 | Play Switch |
| *5 | Recording Indicator |

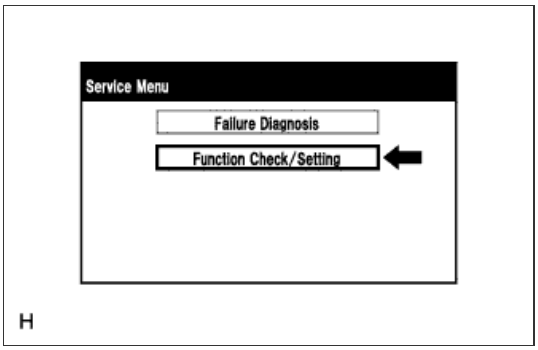
i. When speaking into the microphone, check that the microphone input level meter changes according to the input level.

ii. Push the recording switch and perform voice recording.

iii. Check that the recording indicator remains on while recording and that the recording can be played normally.

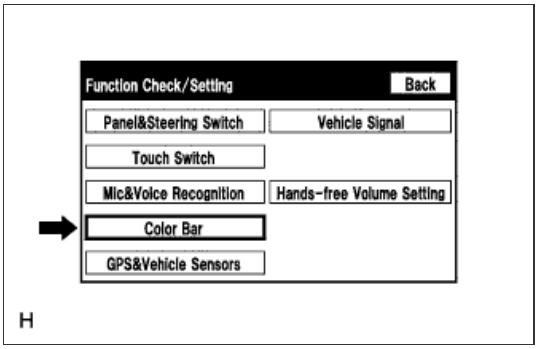
**HINT:**

- **For details of this function, refer to Diagnosis Display Detailed Description ( Click here).**
- **This function is controlled by the display and navigation module display.**



## CHECK COLOR BAR

**HINT:**

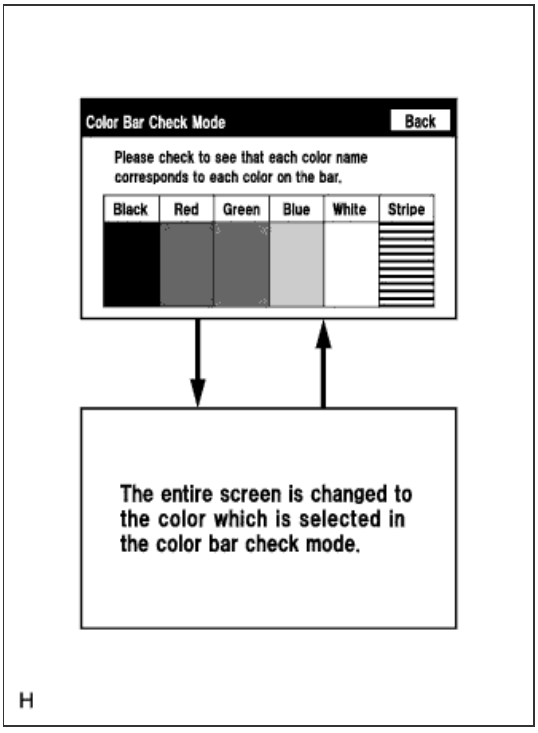


- **The display color on the screen is checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "Color Bar" from the "Function Check/Setting" screen.



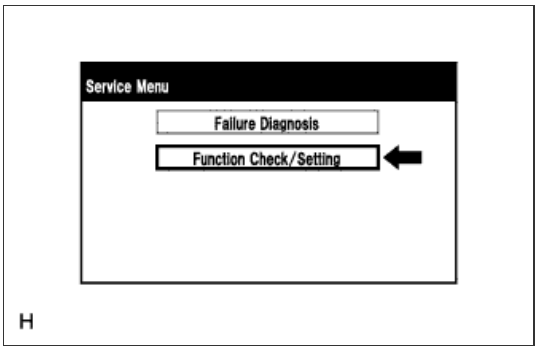
d. Color Bar Check Mode

i. Select a color bar from the "Color Bar Check Mode" screen.

ii. Check the display color.

**HINT:**

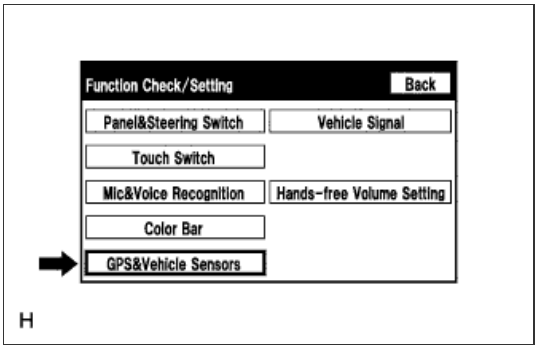
- **The entire screen turns to the color or stripe selected.**
- **Touching the display will return to the "Color Bar Check" screen.**



## CHECK VEHICLE SENSORS

**HINT:**

- **Vehicle signals and sensor signals are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

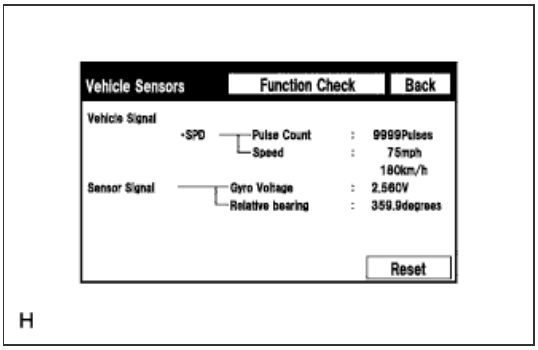


a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "GPS & Vehicle Sensors" from the "Function Check/Setting" screen.

d. Select "Sensors Check" from the "GPS Information" screen.

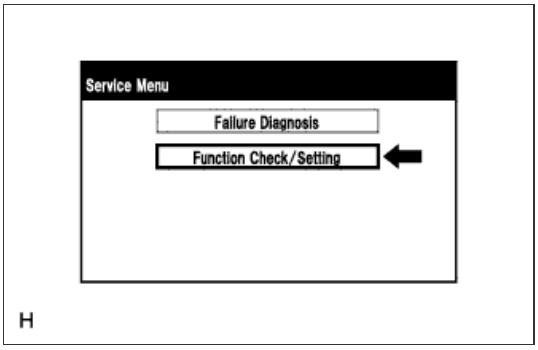


e. Vehicle Sensors

i. Check all the signals and sensors when vehicle signal information is displayed.

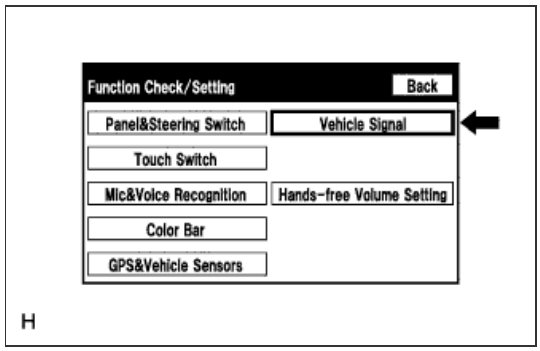
**HINT:**

- **This screen is updated once per second when input signals to the vehicle are changed.**
- **This screen displays vehicle signals input to the display and navigation module display.**
- **For details of this function, refer to Diagnosis Display Detailed Description in System Description (Click here).**



## CHECK VEHICLE SIGNAL

**HINT:**

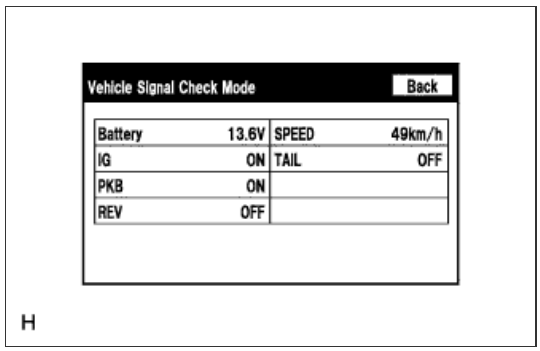


- **Vehicle signals received by the display and navigation module display are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "Vehicle Signal" from the "Function Check/Setting" screen.

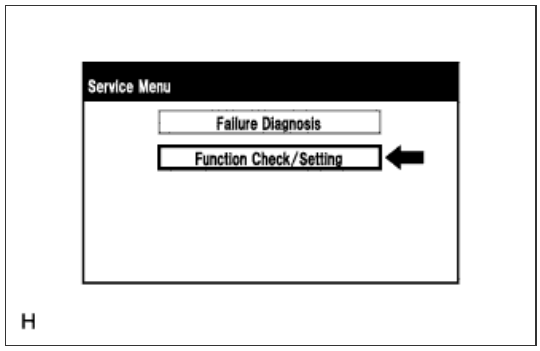


d. Vehicle Signal Check Mode

i. When the "Vehicle Signal Check Mode" screen is displayed, check all the vehicle signal conditions.

**HINT:**

- **Only conditions having inputs are displayed.**
- **This screen displays vehicle signals input to the display and navigation module display.**
- **For details of this function, refer to Diagnosis Display Detailed Description in System Description (Click here).**



## CHECK HANDS-FREE VOLUME SETTING

**HINT:**

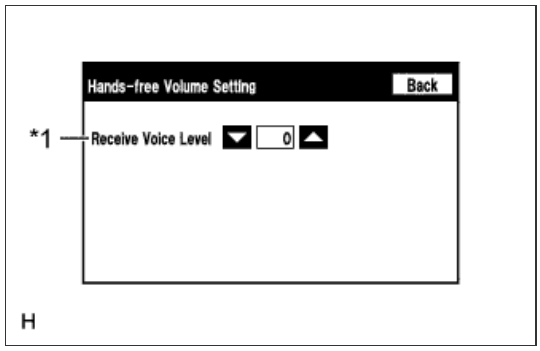
- **The hands-free volume of a "Bluetooth" compatible phone can be adjusted using the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.



c. Select "Hands-free Volume Setting" from the "Function Check/Setting" screen.

d. Hands-free Volume Setting

i. Check the hands-free volume level.

**Screen Description**

| Display | Content |
|---|---|
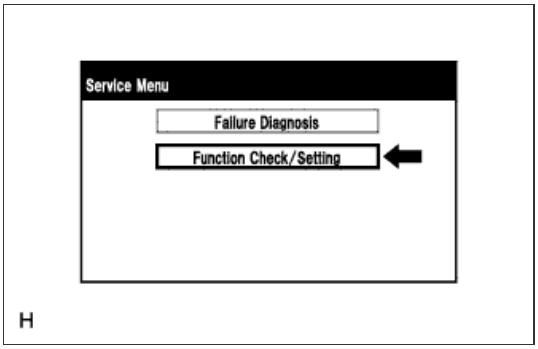
| *1: Receive voice level adjustment | Setting possible for the voice level received from "Bluetooth" compatible phones. |

**NOTICE:**

Sound quality may deteriorate when the receive voice level is changed more than necessary. For this reason, check that the receive voice quality is still acceptable after changing this setting.

**for Preparation** Click here



## CHECK PANEL & STEERING SWITCH

**HINT:**

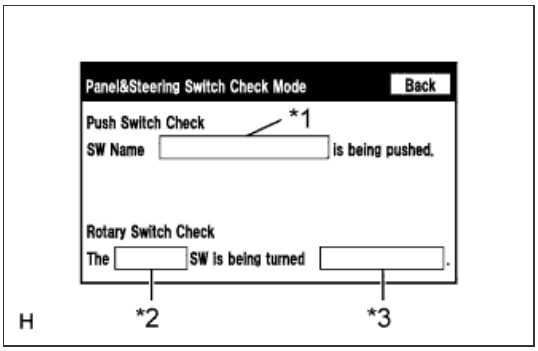
- **The display and navigation module display panel switches, radio receiver assembly panel switches and steering switches are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.



c. Select "Panel & Steering Switch" from the "Function Check/Setting" screen.

d. Panel & Steering Switch Check Mode

i. Operate each switch and check that the switch names and condition are correctly displayed.

**Screen Description**

| Display | Content |
|---|---|
| *1: Push switch name | • Name of the pressed switch is displayed.<br>• If more than one switch is pressed, "MULTIPLE" will be displayed. |
| *2: Rotary switch name | Name of the rotary switch is displayed. |

| | |
|---|---|
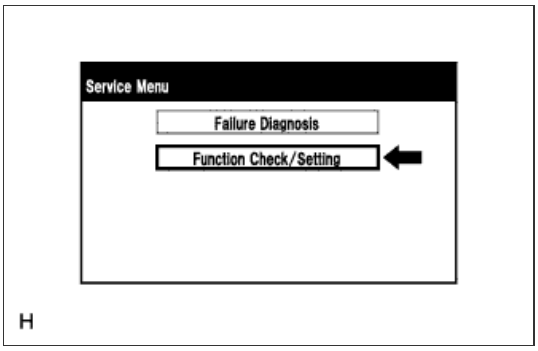
| *3: Rotary switch direction | Direction of the rotary switch is displayed. |



## CHECK TOUCH SWITCH

**HINT:**

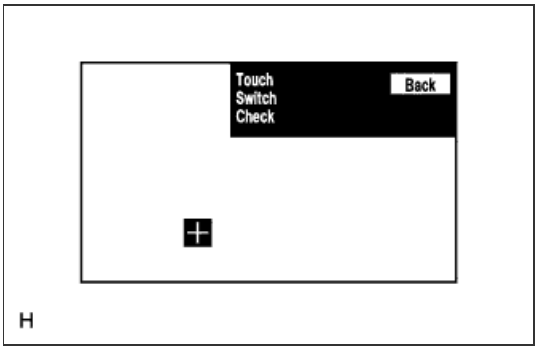
- **The touch switches on the screen are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "Touch Switch" from the "Function Check/Setting" screen.



d. Touch Switch Check

i. Touch the display anywhere in the open area to perform the check when the "Touch Switch Check" screen is displayed.

**HINT:**

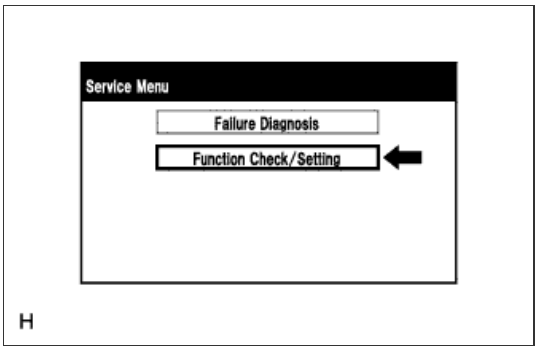
- **A "+" mark is displayed where the display is touched.**
- **The "+" mark remains on the display even after the finger is removed.**



## CHECK MIC & VOICE RECOGNITION

**HINT:**

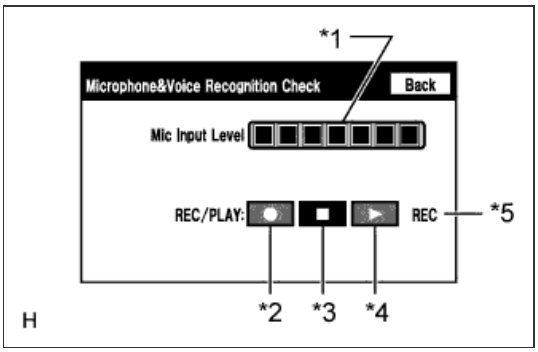
- **The microphone and microphone input level are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.



c. Select "Mic & Voice Recognition" from the "Function Check/Setting" screen.

d. Microphone & Voice Recognition Check

**Text in Illustration**

| | |
|---|---|
| *1 | Microphone Input Level Meter |
| *2 | Recording Switch |
| *3 | Stop Switch |
| *4 | Play Switch |
| *5 | Recording Indicator |

i. When speaking into the microphone, check that the microphone input level meter changes according to the input level.

ii. Push the recording switch and perform voice recording.

iii. Check that the recording indicator remains on while recording and that the recording can be played normally.

**HINT:**

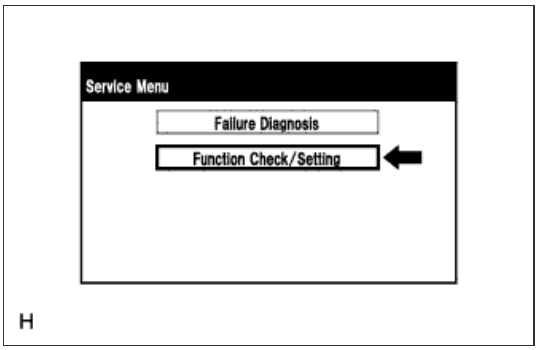
- **For details of this function, refer to Diagnosis Display Detailed Description ( Click here).**
- **This function is controlled by the display and navigation module display.**



## CHECK COLOR BAR

**HINT:**

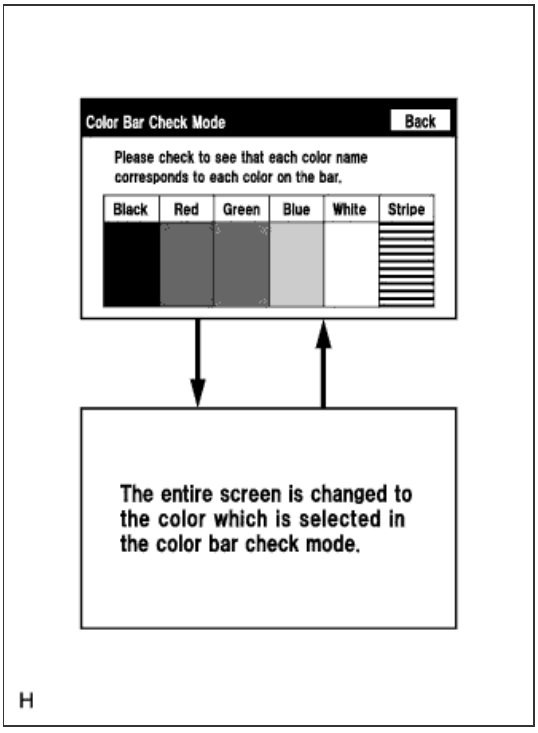
- **The display color on the screen is checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "Color Bar" from the "Function Check/Setting" screen.



d. Color Bar Check Mode

i. Select a color bar from the "Color Bar Check Mode" screen.

ii. Check the display color.

**HINT:**

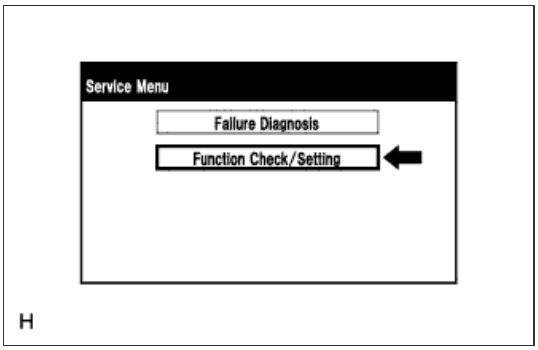
- **The entire screen turns to the color or stripe selected.**
- **Touching the display will return to the "Color Bar Check" screen.**



## CHECK VEHICLE SENSORS

**HINT:**

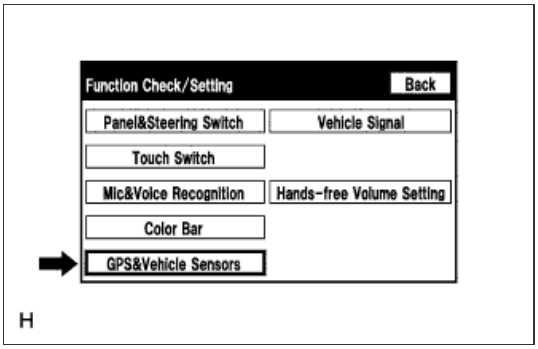
- **Vehicle signals and sensor signals are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

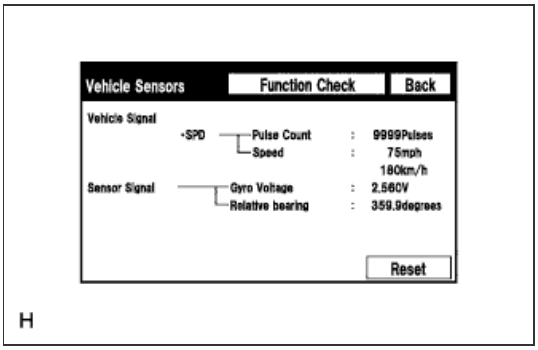


a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "GPS & Vehicle Sensors" from the "Function Check/Setting" screen.

d. Select "Sensors Check" from the "GPS Information" screen.



e. Vehicle Sensors

i. Check all the signals and sensors when vehicle signal information is displayed.

**HINT:**

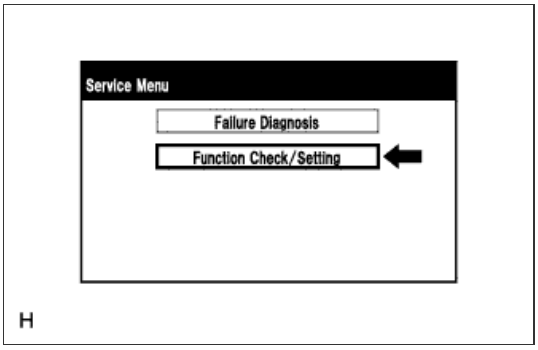
- **This screen is updated once per second when input signals to the vehicle are changed.**
- **This screen displays vehicle signals input to the display and navigation module display.**
- **For details of this function, refer to Diagnosis Display Detailed Description in System Description (Click here).**



## CHECK VEHICLE SIGNAL

**HINT:**

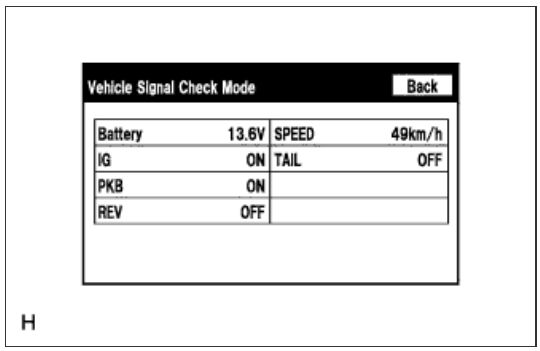
- **Vehicle signals received by the display and navigation module display are checked in the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.

c. Select "Vehicle Signal" from the "Function Check/Setting" screen.



d. Vehicle Signal Check Mode

i. When the "Vehicle Signal Check Mode" screen is displayed, check all the vehicle signal conditions.

**HINT:**

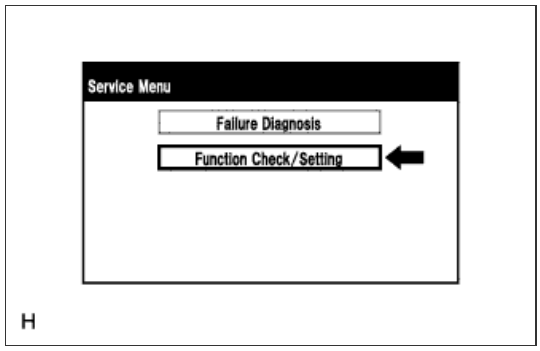
- **Only conditions having inputs are displayed.**
- **This screen displays vehicle signals input to the display and navigation module display.**
- **For details of this function, refer to Diagnosis Display Detailed Description in System Description (Click here).**



## CHECK HANDS-FREE VOLUME SETTING

**HINT:**

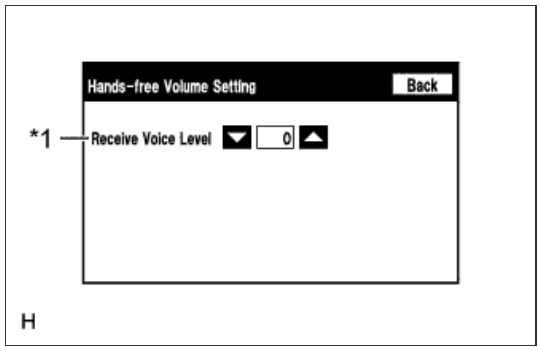
- **The hands-free volume of a "Bluetooth" compatible phone can be adjusted using the following procedure.**
- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**

a. Enter diagnostic mode (Click here).

b. Select "Function Check/Setting" from the "Service Menu" screen.



c. Select "Hands-free Volume Setting" from the "Function Check/Setting" screen.

d. Hands-free Volume Setting

i. Check the hands-free volume level.

**Screen Description**

| Display | Content |
|---|---|
| *1: Receive voice level adjustment | Setting possible for the voice level received from "Bluetooth" compatible phones. |

**NOTICE:**

Sound quality may deteriorate when the receive voice level is changed more than necessary. For this reason, check that the receive voice quality is still acceptable after changing this setting.

**for Preparation** Click here

**HINT:**

- **Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.**
- **Inspect the fuses and relays related to this system before inspecting the suspected areas below.**

### Display Function

| Symptom | Suspected Area | See page |
|---|---|---|
| Black screen (No image appears on audio screen). | Proceed to "Black Screen" | Click here |
| | Display and navigation module display | Click here |
| Illumination for panel switch does not come on with tail switch on. | Proceed to "Illumination for Panel Switch does not Come on with Tail Switch ON" | Click here |
| | Proceed to "Illumination Circuit" | Click here |
| | Display and navigation module display | Click here |
| Display does not dim with tail switch on. | Proceed to "Display does not Dim when Light Control Switch is Turned ON" | Click here |
| | Display and navigation module display | Click here |
| Panel switches do not function. | Proceed to "Panel Switches do not Function" | Click here |
| | Proceed to "Steering Pad Switch Circuit" | Click here |
| | Display and navigation module display | Click here |
| Touch panel switch does not function. | Proceed to "Panel Switch does not Function" | Click here |
| | Display and navigation module display | Click here |
| Screen is distorted. | Proceed to "Navigation ECU Power Source Circuit" | Click here |
| | Display and navigation module display | Click here |
| Screen flicker or color distortion. | Proceed to "Screen Flicker or Color Distortion" | Click here |
| | Display and navigation module display | Click here |
| DVD image cannot be displayed on front screen (Parking brake is on). | Proceed to "DVD Image Signal Circuit between Radio receiver and Navigation ECU" | Click here |
| | Proceed to "Parking Brake Switch Circuit" | Click here |
| | Radio receiver assembly | Click here |
| | Display and navigation module display | Click here |

### Electro Multi Vision Function

| Symptom | Suspected Area | See page |
|---|---|---|
| "MIC" is not displayed on system check mode screen. | Proceed to "Microphone Circuit between Microphone and Navigation ECU" | Click here |
| | Display and navigation module display | Click here |
| | Proceed to "Sound Signal Circuit between Radio Receiver Assembly and Stereo Jack Adapter" | Click here |

| | | |
|---|---|---|
| "AUX" is not displayed on system check mode screen. | Radio receiver assembly | Click here |
| | Display and navigation module display | Click here |

### Steering Pad Switch Function

| Symptom | Suspected Area | See page |
|---|---|---|
| System cannot be operated by steering pad switch. | Proceed to "Steering Pad Switch Circuit" | Click here |
| | Display and navigation module display | Click here |
| Illumination for steering pad switch does not come on with tail switch on. | Proceed to "Illumination Circuit" | Click here |
| | Display and navigation module display | Click here |

### "Bluetooth" Hands-free Function

| Symptom | Suspected Area | See page |
|---|---|---|
| Cellular phone registration failure, phone directory transfer failure. | Proceed to "Cellular Phone Registration Failure, Phone Directory Transfer Failure" | Click here |
| Cellular phone cannot send/receive. | Proceed to "Cellular Phone cannot Send / Receive" | Click here |
| | Proceed to "Steering Pad Switch Circuit" | Click here |
| | Radio receiver assembly | Click here |
| Cellular phone cannot make calls in a certain place. | Proceed to "Cannot Call in a Certain Place" | Click here |
| Other caller's voice cannot be heard, is too quiet, or distorted. | Proceed to "The Other Caller's Voice cannot be Heard, is too Quiet, or Distorted" | Click here |
| | Radio receiver assembly | Click here |
| | Stereo component amplifier assembly | Click here |
| | Display and navigation module display | Click here |
| Other caller cannot hear your voice, or your voice is too quiet or distorted. | Proceed to "The Other Caller cannot Hear Your Voice, or Your Voice is too Quiet or Distorted" | Click here |
| | Proceed to "Microphone Circuit between Microphone and Navigation ECU" | Click here |
| | Radio receiver assembly | Click here |

| | | | Engine switch off | Below 1 V |
| F56-1 (AGND) - Body ground | Shield - Body ground | Shield ground | Always | Below 1 V |
| F56-3 (VAR+) - F56-7 (VA-) | W - R | Sound signal (Right) | USB audio device playing (When stereo jack adapter used) | A waveform synchronized with sounds is output. |
| F56-4 (VAL+) - F56-7 (VA-) | B - R | Sound signal (Left) | USB audio device playing (When stereo jack adapter used) | A waveform synchronized with sounds is output. |
| F56-7 (VA-) - F58-10 (GND1) | R - W-B | Sound signal ground | Always | Below 1 V |
| F55-7 (GND) - F58-10 (GND1) | B - W-B | Ground | Always | Below 1 V |
| F55-9 (TX2+) | W | AVC-LAN communication signal | - | - |
| F55-10 (TX2-) | L | AVC-LAN communication signal | - | - |
| F55-11 (ACC) - F58-10 (GND1) | GR - W-B | Accessory (ON) | Engine switch on (ACC) | 11 to 14 V |
| | | | Engine switch off | Below 1 V |
| F55-12 (+B) - F58-10 (GND1) | R - W-B | Battery | Engine switch off | 11 to 14 V |

a. Reference (Oscilloscope waveform):

i. Waveform 1 (under normal conditions)

| Item | Content |
|---|---|
| Measurement terminal | F60-5 (V+) - F58-10 (GND1) |
| Measurement | 200 mV/DIV., 50 µsec./DIV. |

| | |
|---|---|
| setting | |
| Condition | Engine switch on (IG), shift lever in R |

**HINT:**

The video waveform changes according to the image from the television camera assembly.

ii. Waveform 2 (camera lens is covered, blacking out the screen)

| Item | Content |
|---|---|
| Measurement terminal | F60-5 (V+) - F58-10 (GND1) |
| Measurement setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | Engine switch on (IG), shift lever in R |

**HINT:**

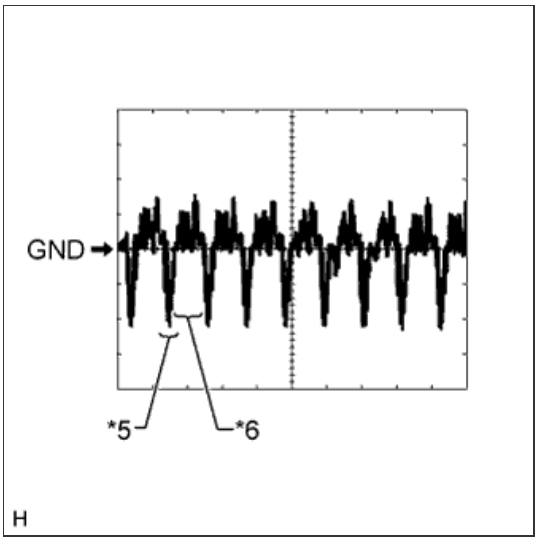
The video waveform changes according to the image that the television camera assembly projects.



b. Reference (Oscilloscope waveform):

i. Waveform 3

| Item | Content |
|---|---|
| Measurement terminal | F60-9 (VV+) - F58-10 (GND1) |
| Measurement setting | 200 mV/DIV., 10 µs/DIV. |
| Condition | DVD is played on the display and navigation module display |

**HINT:**

The video waveform changes according to the image input from the radio receiver assembly to the display and navigation module display, but the synchronization signal does not change.

MULTI-MEDIA INTERFACE ECU (Click here)

TELEVISION DISPLAY ASSEMBLY (w/ Rear Seat Entertainment System) (Click here)

**for Preparation** Click here

## CHECK DTC (CHECK USING INTELLIGENT TESTER)

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Navigation System / DTC.

e. Check the DTC(s) and freeze frame data, and then write them down.

f. Check the details of the DTC(s) ( Click here).

**NOTICE:**

The electro multi vision system outputs DTCs for the following system. When DTCs other than those in Diagnostic Trouble Code Chart for the electro multi vision system are output, refer to Diagnostic Trouble Code Chart for the system.

| System | Proceed to |
|---|---|
| Audio and visual system (w/o Navigation system) | Click here |
| Rear seat entertainment system (w/ Rear seat entertainment system) | Click here |

## CLEAR DTC (CLEAR USING INTELLIGENT TESTER)

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Navigation System / DTC.

e. Clear DTCs.

## START DIAGNOSTIC MODE

**HINT:**

- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**
- **To help find the malfunction when the system cannot change to diagnostic mode, check for DTCs using the intelligent tester.**
- **After the engine switch is turned on (IG), check that the map is displayed before starting diagnostic mode. Otherwise, some items cannot be checked.**

a. There are 2 methods to start diagnostic mode. Start the mode by using one of them.

b. Method 1

**Text in Illustration**

| | |
|---|---|
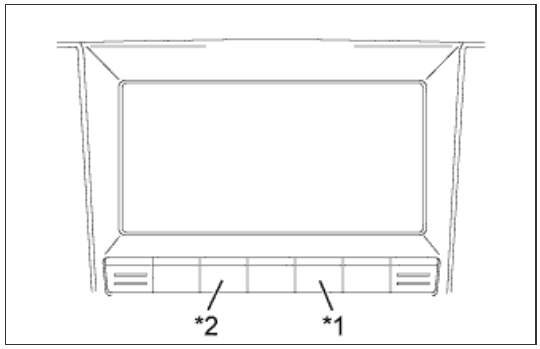
| *1 | "INFO TEL" switch |

i. Start the engine.

ii. While pressing and holding the "INFO TEL" switch, operate the light control switch: off → Turn on → Turn off → Turn on → Turn off → Turn on → Turn off.

iii. The diagnostic mode starts and the "System Check Mode" screen will be displayed.



c. Method 2

i. Start the engine.

ii. Press the "DISP" switch.

**Text in Illustration**

| | |
|---|---|
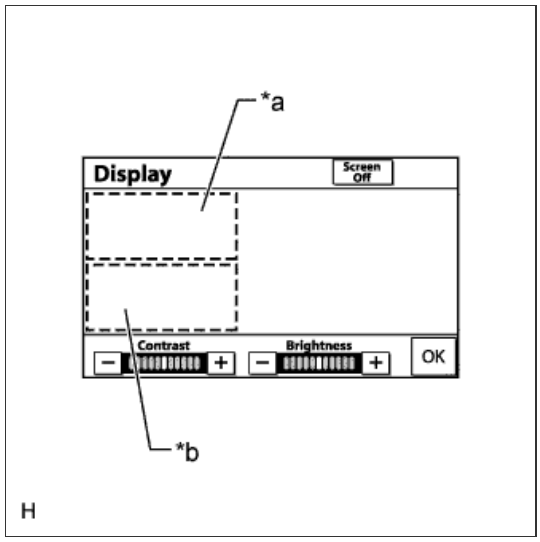
| *1 | "DISP" switch (for LHD) |
| *2 | "DISP" switch (for RHD) |



iii. From the display quality adjustment screen, touch the upper and lower left corners of the screen in the following: Upper left → Lower left → Upper left → Lower left → Upper left → Lower left.

**Text in Illustration**

| | |
|---|---|
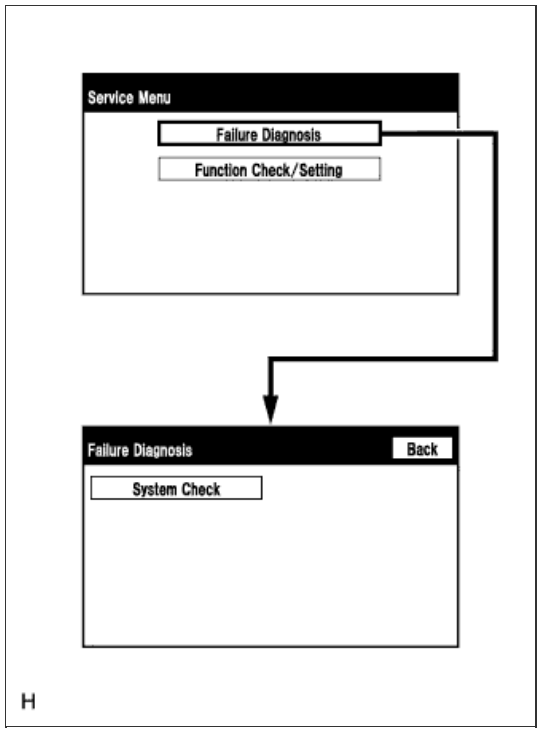
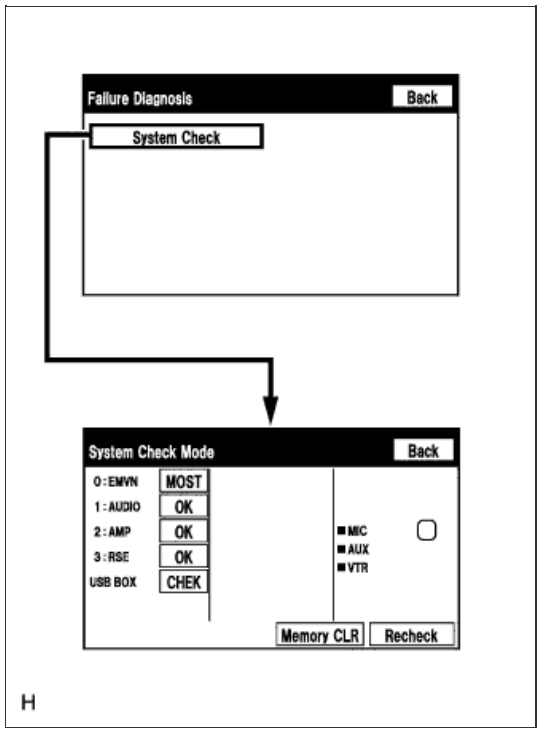
| *a | Upper left |
| *b | Lower left |

iv. Diagnostic mode starts and the "System Check Mode" screen will be displayed. Service inspection starts automatically and the result will be displayed.



## FINISH DIAGNOSTIC MODE

a. Turn the engine switch off.



## FAILURE DIAGNOSIS

a. The "Failure Diagnosis" screen is displayed when the "Failure Diagnosis" switch on the "Service Menu" screen is selected.

## SYSTEM CHECK

a. The "System Check Mode" screen is displayed when the "System Check" switch on the "Failure Diagnosis" screen is selected.

## CHECK DTC (CHECK USING SYSTEM CHECK MODE SCREEN)

**HINT:**

Refer to Diagnosis Display Detailed Description for further details on the "System Check Mode" screen ( Click here).

a. Read the system check result.

**Text in Illustration**

| | |
|---|---|
| *a | Diagnostic Code |

i. When the result is "EXCH" or "CHEK", select the icon which displays the result, and check and record each DTC displayed on the "Unit

Check Mode" screen.

**NOTICE:**

A maximum of 6 DTCs can be displayed by the display and navigation module display. When more than 6 DTCs are expected, check DTCs using the intelligent tester.

**HINT:**

- **Refer to Diagnosis Display Detailed Description for further details on the "System Check Mode" screen (Click here).**
- **When all results are "OK", this means that no DTCs are present.**
- **When "MOST" is displayed for the result, selecting "MOST" displays the "MOST Line Check" screen and performs the MOST line check.**
- **Changing to the "MOST Line Check" screen is possible only when the MOST network is malfunctioning and "MOST" is displayed for the result.**
- **If the MOST network had a malfunction in the past, the DTCs will be displayed in the Memory column.**
- **Refer to Diagnosis Display Detailed Description for further details on the "MOST Line Check" screen (Click here).**
- **When "NCON" is displayed for all devices connected using the AVC-LAN, or when all device names are not displayed, check if there is a short circuit in the AVC-LAN or devices connected to the AVC-LAN. Repair or replace parts as necessary (Click here).**
- **When proceeding to view the results of another device, press the "Back" switch to return to the "System Check Mode" screen. Repeat the step above to view the results of other devices.**

ii. Check the details of the DTC(s) ( Click here).

**NOTICE:**

The electro multi vision system outputs DTCs for the following system. When DTCs other than the codes in Diagnostic Trouble Code Chart for the electro multi vision system are output, refer to Diagnostic Trouble Code Chart for the system.

| System | Proceed to |
|---|---|
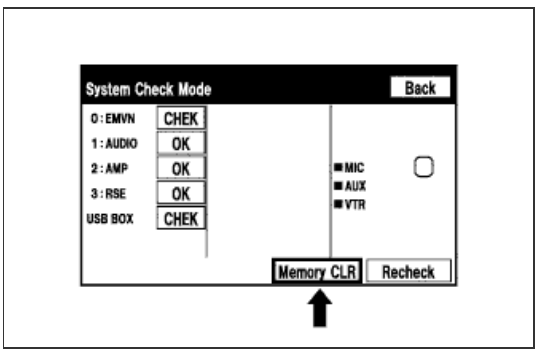
| Audio and visual system (w/o Navigation system) | Click here |
| Rear seat entertainment system (w/ Rear seat entertainment system) | Click here |

H

## DTC CLEAR/RECHECK (CLEAR USING SYSTEM CHECK MODE SCREEN)



a. Clear DTC

i. Press the "Memory CLR" switch for 3 seconds.

ii. The check results are cleared.

**HINT:**

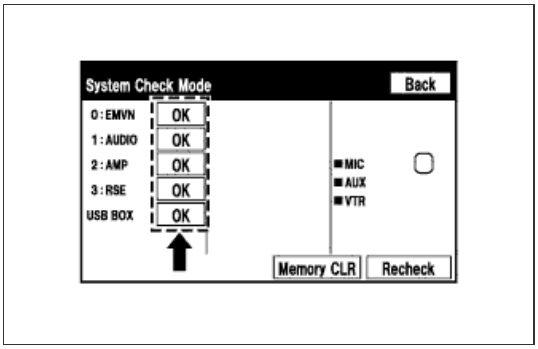
- **To clear the DTC for a specific device, clear the DTC using the "Unit Check Mode" screen.**
- **When clearing a DTC using the "Unit Check Mode" screen, press the "Code CLR" switch for 3 seconds.**

b. Recheck

b. Recheck



i. Press the "Recheck" switch.

ii. Confirm that all diagnostic codes are "OK" when the check results are displayed. If a code other than "OK" is displayed, troubleshoot again.

**HINT:**

When a DTC was cleared using the "Unit Check Mode" screen, press the "Back" switch to return to the "System Check Mode" screen and perform this operation.

**for Preparation** Click here

## CHECK DTC (CHECK USING INTELLIGENT TESTER)

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Navigation System / DTC.

e. Check the DTC(s) and freeze frame data, and then write them down.

f. Check the details of the DTC(s) ( Click here).

**NOTICE:**

The electro multi vision system outputs DTCs for the following system. When DTCs other than those in Diagnostic Trouble Code Chart for the electro multi vision system are output, refer to Diagnostic Trouble Code Chart for the system.

| System | Proceed to |
|---|---|
| Audio and visual system (w/o Navigation system) | Click here |
| Rear seat entertainment system (w/ Rear seat entertainment system) | Click here |

## CLEAR DTC (CLEAR USING INTELLIGENT TESTER)

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Navigation System / DTC.

e. Clear DTCs.

## START DIAGNOSTIC MODE

**HINT:**

- **Illustrations may differ from the actual vehicle screen depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle screen.**
- **To help find the malfunction when the system cannot change to diagnostic mode, check for DTCs using the intelligent tester.**
- **After the engine switch is turned on (IG), check that the map is displayed before starting diagnostic mode. Otherwise, some items cannot be checked.**

a. There are 2 methods to start diagnostic mode. Start the mode by using one of them.

b. Method 1

**Text in Illustration**

| | |
|---|---|
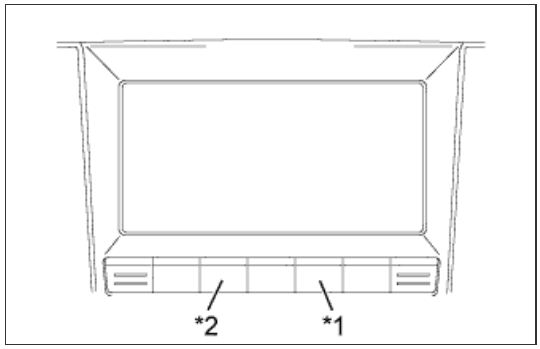
| *1 | "INFO TEL" switch |

i. Start the engine.

ii. While pressing and holding the "INFO TEL" switch, operate the light control switch: off → Turn on → Turn off → Turn on → Turn off → Turn on → Turn off.

iii. The diagnostic mode starts and the "System Check Mode" screen will be displayed.



c. Method 2

i. Start the engine.

ii. Press the "DISP" switch.

**Text in Illustration**

| | |
|---|---|
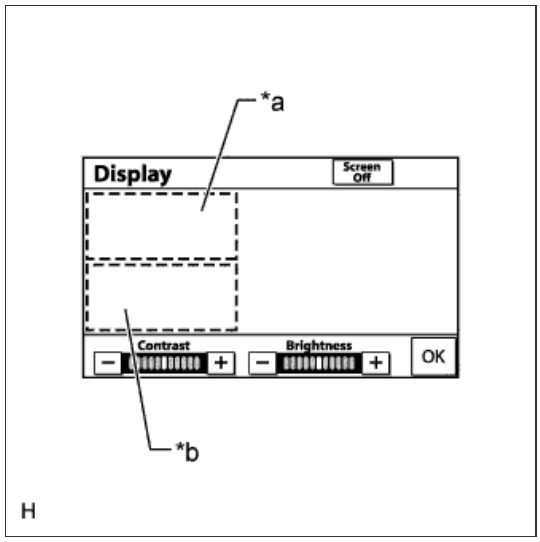
| *1 | "DISP" switch (for LHD) |
| *2 | "DISP" switch (for RHD) |



iii. From the display quality adjustment screen, touch the upper and lower left corners of the screen in the following: Upper left → Lower left → Upper left → Lower left → Upper left → Lower left.

**Text in Illustration**

| | |
|---|---|
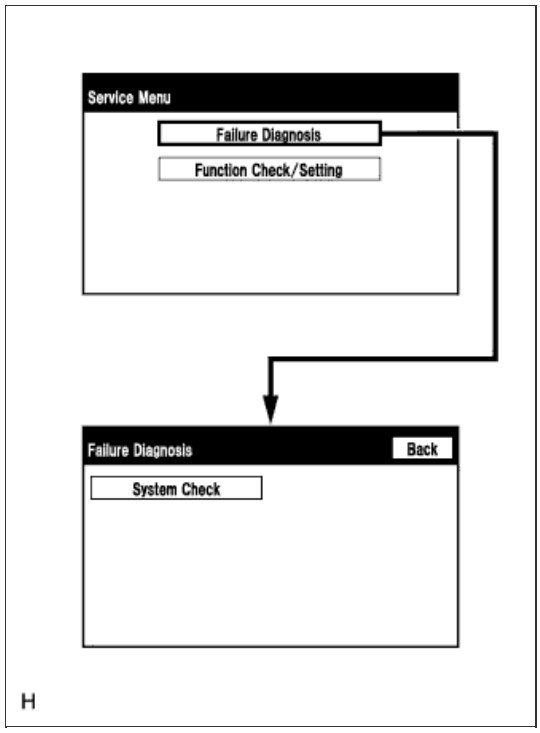
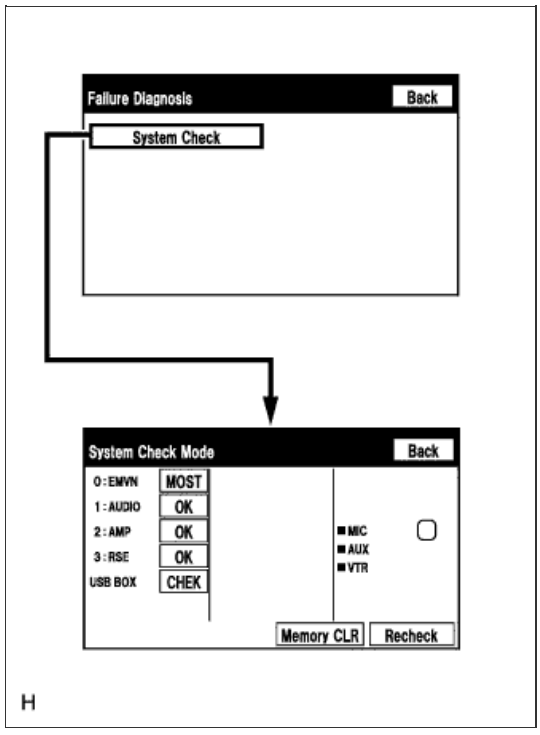
| *a | Upper left |
| *b | Lower left |

iv. Diagnostic mode starts and the "System Check Mode" screen will be displayed. Service inspection starts automatically and the result will be displayed.



## FINISH DIAGNOSTIC MODE

a. Turn the engine switch off.



## FAILURE DIAGNOSIS

a. The "Failure Diagnosis" screen is displayed when the "Failure Diagnosis" switch on the "Service Menu" screen is selected.

## SYSTEM CHECK

a. The "System Check Mode" screen is displayed when the "System Check" switch on the "Failure Diagnosis" screen is selected.

## CHECK DTC (CHECK USING SYSTEM CHECK MODE SCREEN)

**HINT:**

Refer to Diagnosis Display Detailed Description for further details on the "System Check Mode" screen ( Click here).

a. Read the system check result.

**Text in Illustration**

| | |
|---|---|
| *a | Diagnostic Code |

i. When the result is "EXCH" or "CHEK", select the icon which displays the result, and check and record each DTC displayed on the "Unit

Check Mode" screen.

**NOTICE:**

A maximum of 6 DTCs can be displayed by the display and navigation module display. When more than 6 DTCs are expected, check DTCs using the intelligent tester.

**HINT:**

- **Refer to Diagnosis Display Detailed Description for further details on the "System Check Mode" screen (Click here).**
- **When all results are "OK", this means that no DTCs are present.**
- **When "MOST" is displayed for the result, selecting "MOST" displays the "MOST Line Check" screen and performs the MOST line check.**
- **Changing to the "MOST Line Check" screen is possible only when the MOST network is malfunctioning and "MOST" is displayed for the result.**
- **If the MOST network had a malfunction in the past, the DTCs will be displayed in the Memory column.**
- **Refer to Diagnosis Display Detailed Description for further details on the "MOST Line Check" screen (Click here).**
- **When "NCON" is displayed for all devices connected using the AVC-LAN, or when all device names are not displayed, check if there is a short circuit in the AVC-LAN or devices connected to the AVC-LAN. Repair or replace parts as necessary (Click here).**
- **When proceeding to view the results of another device, press the "Back" switch to return to the "System Check Mode" screen. Repeat the step above to view the results of other devices.**

ii. Check the details of the DTC(s) ( Click here).

**NOTICE:**

The electro multi vision system outputs DTCs for the following system. When DTCs other than the codes in Diagnostic Trouble Code Chart for the electro multi vision system are output, refer to Diagnostic Trouble Code Chart for the system.

| System | Proceed to |
|---|---|
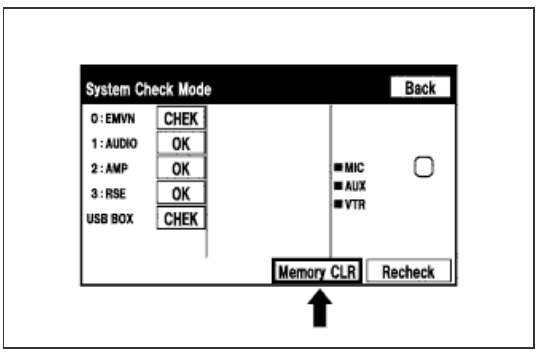
| Audio and visual system (w/o Navigation system) | Click here |
| Rear seat entertainment system (w/ Rear seat entertainment system) | Click here |

H

## DTC CLEAR/RECHECK (CLEAR USING SYSTEM CHECK MODE SCREEN)



a. Clear DTC

i. Press the "Memory CLR" switch for 3 seconds.

ii. The check results are cleared.

**HINT:**

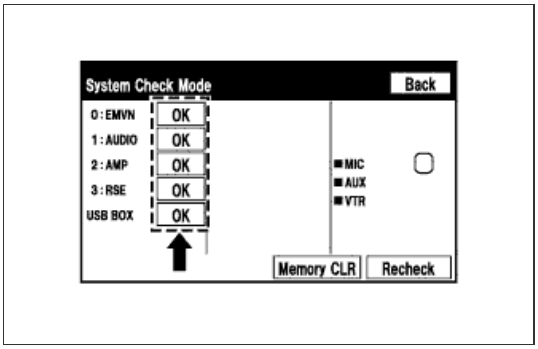
- **To clear the DTC for a specific device, clear the DTC using the "Unit Check Mode" screen.**
- **When clearing a DTC using the "Unit Check Mode" screen, press the "Code CLR" switch for 3 seconds.**

b. Recheck

b. Recheck



i. Press the "Recheck" switch.

ii. Confirm that all diagnostic codes are "OK" when the check results are displayed. If a code other than "OK" is displayed, troubleshoot again.

**HINT:**

When a DTC was cleared using the "Unit Check Mode" screen, press the "Back" switch to return to the "System Check Mode" screen and perform this operation.

**for Preparation** Click here

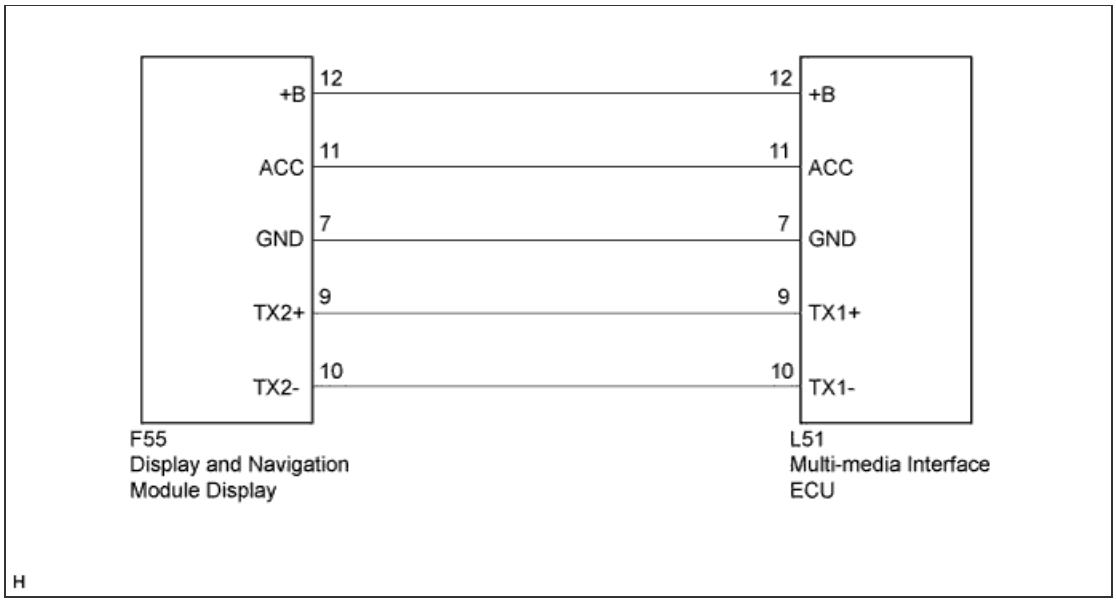
## DTC B156B Multi-media Interface ECU Disconnected

## DTC B156E No Response from Multi-media Interface ECU

**for Preparation** Click here

### DESCRIPTION



The display and navigation module display and multi-media interface ECU are connected by the AVC-LAN communication line.
When an AVC-LAN communication error occurs between the display and navigation module display and the multi-media interface ECU, these DTCs will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B156B*1 | When either condition below is met:<br>• Multi-media interface ECU is/was not connected while the engine switch is on (ON or ACC).<br>• Communication between the master unit and multi-media interface ECU is not possible when the engine is started. | • Multi-media interface ECU power source circuit<br>• AVC-LAN circuit between display and navigation module display and multi-media interface ECU<br>• Multi-media interface ECU<br>• Display and navigation module display |
| B156E | Within the time-out period, there was no response from the display and navigation module display to the following requests from the master unit:<br>• System inspection request<br>• System inspection result request<br>• Diagnostic memory request | |

**HINT:**

- ***1: Even if no fault is present, this DTC may be stored depending on the battery condition or engine start voltage.**
- **The display and navigation module display is the master unit.**

### WIRING DIAGRAM

### INSPECTION PROCEDURE

#### 1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Check for optional components.

i. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| | |

| | |
|---|---|
| Optional components (including associated wiring) are installed. | A |
| Optional components (including associated wiring) are not installed. | B |

**HINT:**

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect AVC-LAN communication.**
- **This DTC may be stored when an AVC-LAN communication error occurs due to electrical noise.**

**B** → Go to step 3

**A**

## 2.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

**NEXT**

## 3.CHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

**NG** → Go to step 4

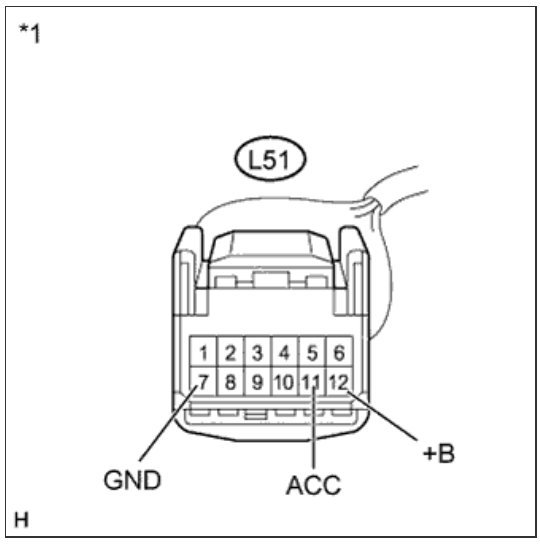
**OK**

**END**

## 4.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA INTERFACE ECU POWER SOURCE)

a. Disconnect the L51 multi-media interface ECU connector.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L51-7 (GND) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| L51-12 (+B) - L51-7 (GND) | Always | 11 to 14 V |
| L51-11 (ACC) - L51-7 (GND) | Engine switch on (ACC) | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| | Front view of wire harness connector |

| | |
|---|---|
| *1 | (to Multi-media Interface ECU) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ↓

**5.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA INTERFACE ECU - DISPLAY AND NAVIGATION MODULE DISPLAY)**

a. Disconnect the L51 multi-media interface ECU connector.

b. Disconnect the F55 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L51-9 (TX1+) - F55-9 (TX2+) | Always | Below 1 Ω |
| L51-10 (TX1-) - F55-10 (TX2-) | Always | Below 1 Ω |
| L51-9 (TX1+) - Body ground | Always | 10 kΩ or higher |
| L51-10 (TX1-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ↓

**6.REPLACE MULTI-MEDIA INTERFACE ECU**

a. Replace the multi-media interface ECU (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK ↓

END

# DTC B15B0 Display Screen Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when a malfunction occurs in the display and navigation module display.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15B0 | Picture circuit (TFT unit) malfunction | Display and navigation module display |

## INSPECTION PROCEDURE

**1.CHECK DTC**

a. Clear the DTC (Click here).

b. Recheck for DTC and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

**NG** → **REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)**

**OK**

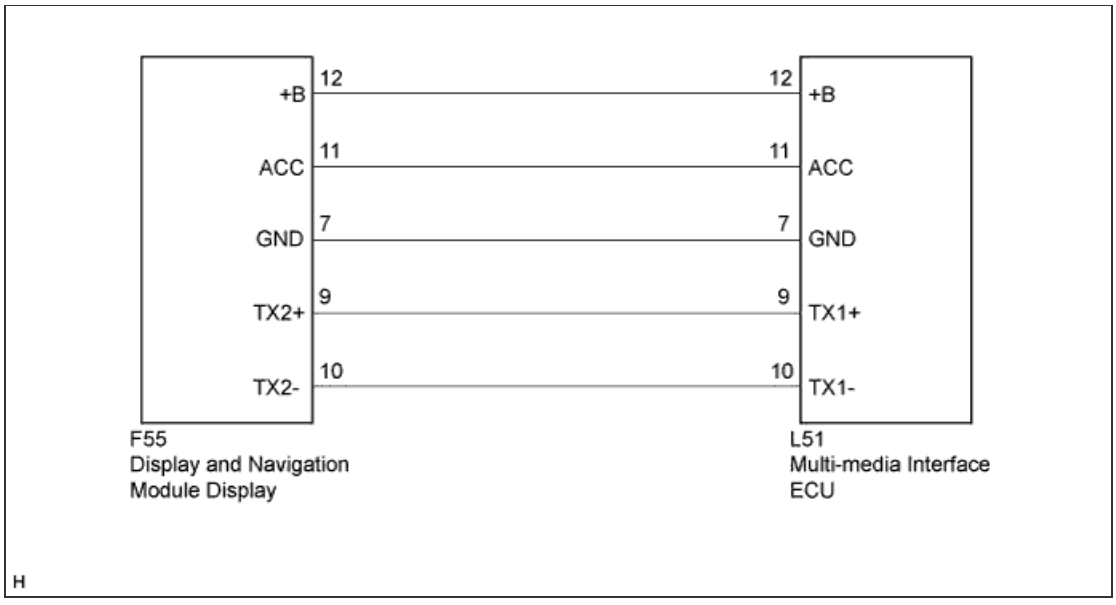
**USE SIMULATION METHOD TO CHECK (Click here)**

## DTC B156B Multi-media Interface ECU Disconnected

## DTC B156E No Response from Multi-media Interface ECU

**for Preparation** Click here

### DESCRIPTION



The display and navigation module display and multi-media interface ECU are connected by the AVC-LAN communication line.
When an AVC-LAN communication error occurs between the display and navigation module display and the multi-media interface ECU, these DTCs will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B156B*1 | When either condition below is met:<br>• Multi-media interface ECU is/was not connected while the engine switch is on (ON or ACC).<br>• Communication between the master unit and multi-media interface ECU is not possible when the engine is started. | • Multi-media interface ECU power source circuit<br>• AVC-LAN circuit between display and navigation module display and multi-media interface ECU<br>• Multi-media interface ECU<br>• Display and navigation module display |
| B156E | Within the time-out period, there was no response from the display and navigation module display to the following requests from the master unit:<br>• System inspection request<br>• System inspection result request<br>• Diagnostic memory request | |

**HINT:**

- ***1: Even if no fault is present, this DTC may be stored depending on the battery condition or engine start voltage.**
- **The display and navigation module display is the master unit.**

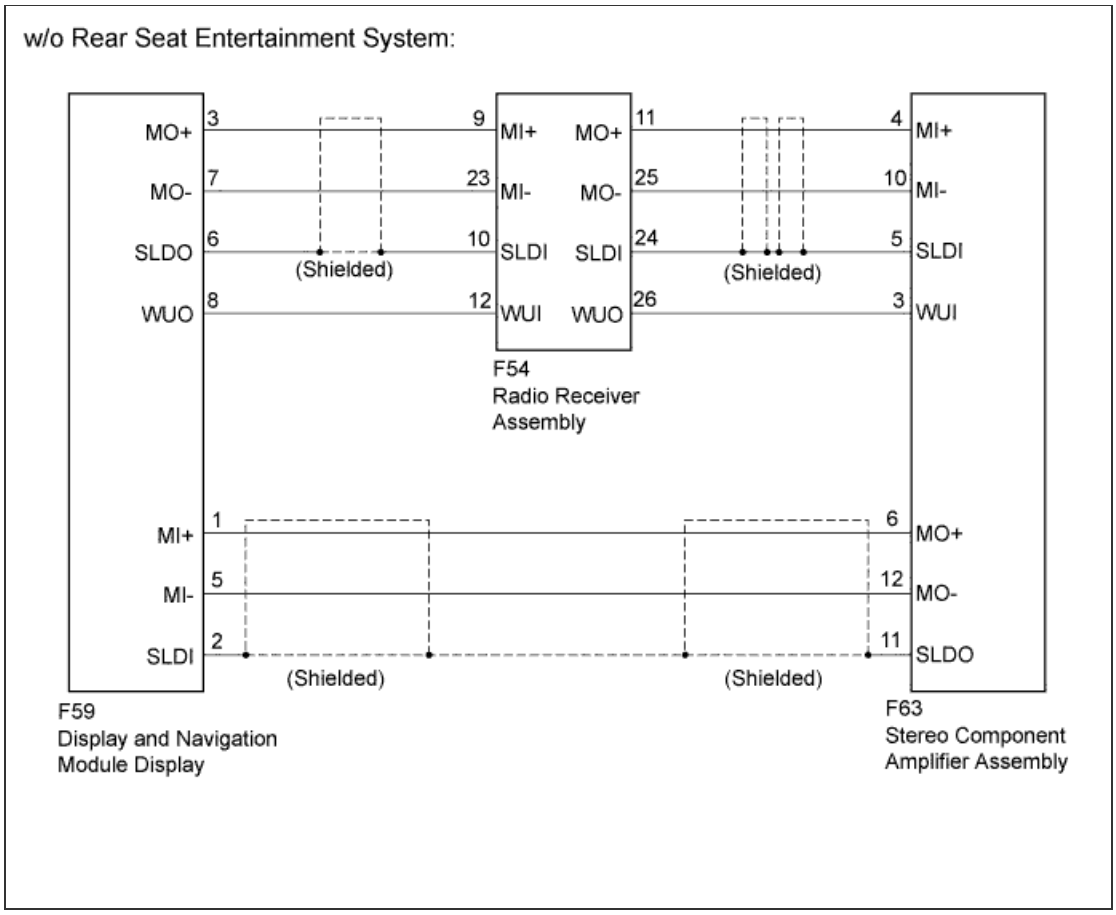
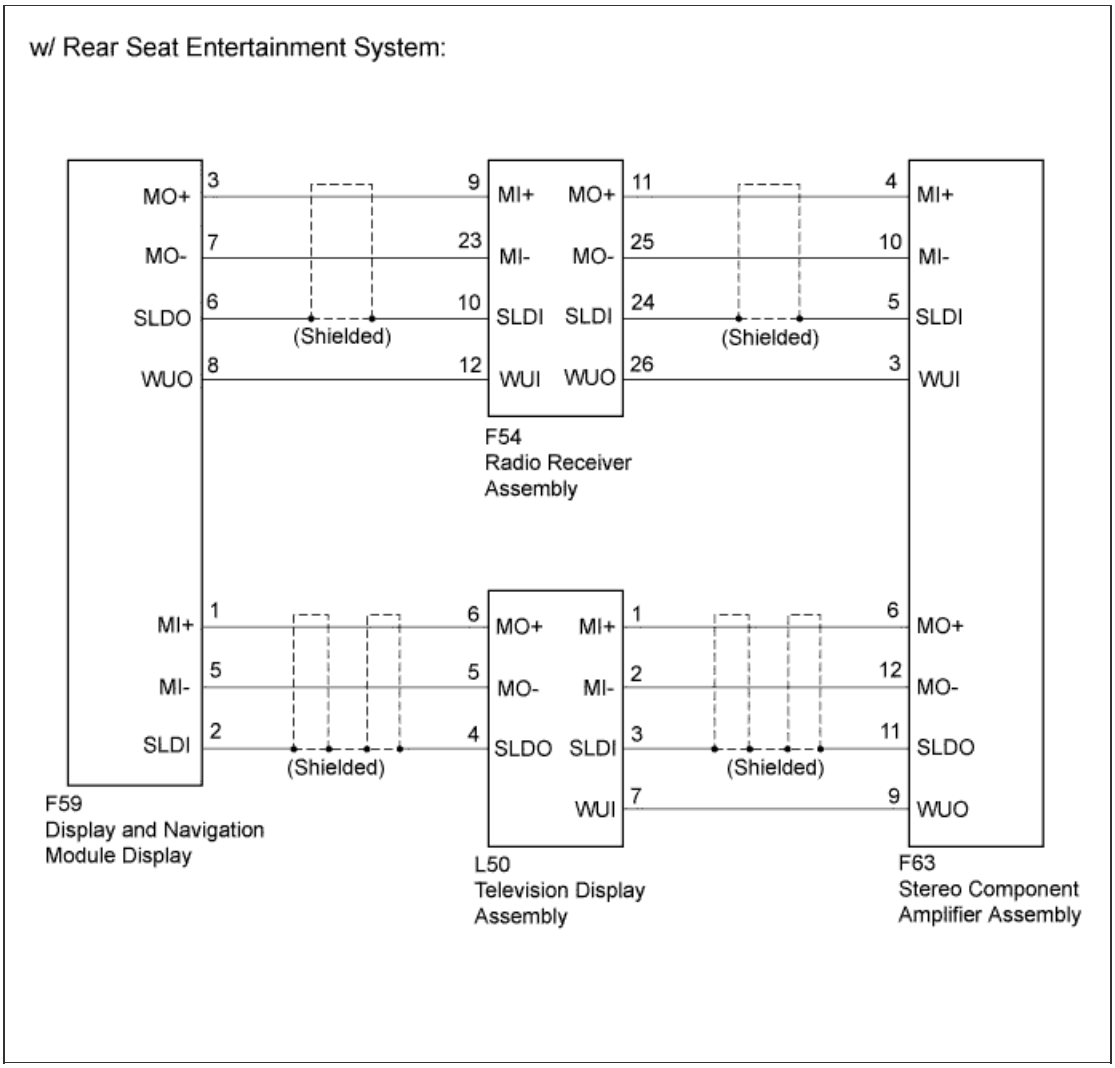
## DTC B15D0 MOST Communication Malfunction

**for Preparation** Click here

### DESCRIPTION



This DTC is stored when the MOST network cannot be established after the master unit is activated.



| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15D0 | MOST network cannot be established. | • MOST line check<br>• MOST communication line connector<br>• Wire harness and connector<br>• MOST communication line<br>• Radio receiver assembly<br>• Stereo component amplifier assembly<br>• Television display assembly (w/ Rear Seat Entertainment System)<br>• Display and navigation module display |

**HINT:**

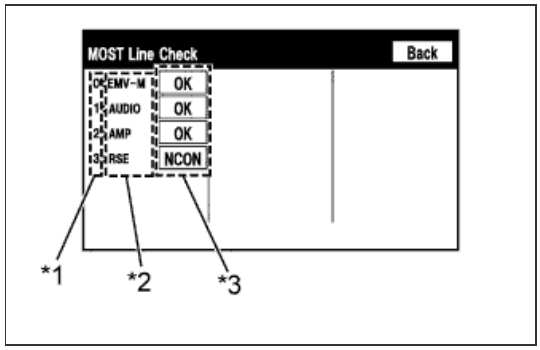
- **The display and navigation module display is the master unit for the MOST network.**
- **Errors may occur in MOST communication between devices due to problems such as electrical noise.**

### WIRING DIAGRAM



## INSPECTION PROCEDURE

### 1.PERFORM MOST LINE CHECK

a. Display the "MOST Line Check" screen ( Click here).

**Text in Illustration**

| | |
|---|---|
| *1 | Node position number for devices that use MOST communication |
| *2 | Device Name |
| *3 | Result |

b. Check the result on the "MOST Line Check" screen.

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "AUDIO". | A |
| "NCON" is displayed for "AMP". | B |
| "NCON" is displayed for "RSE" (w/ rear seat entertainment system). | C |
| "OK" is displayed for all items. | D |

**HINT:**

- **When "NCON" is displayed for more than 1 item, proceed to the step for the device that has the smallest node position number.**
- **The "MOST Line Check" screen can be displayed only when DTC B15D0 is stored.**

| | |
|---|---|
| B | Go to step 5 |

C → Go to step 8

D → Go to step 11

A

## 2.CHECK MOST COMMUNICATION CONNECTOR

a. Check MOST communication line connector.

i. Check if a MOST communication line connector between the display and navigation module display and radio receiver assembly has any connection problems (Click here).

b. Display the "MOST Line Check" screen and check the result ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "AUDIO". | A |
| The screen cannot be changed to the "MOST Line Check" screen. | B |

**HINT:**

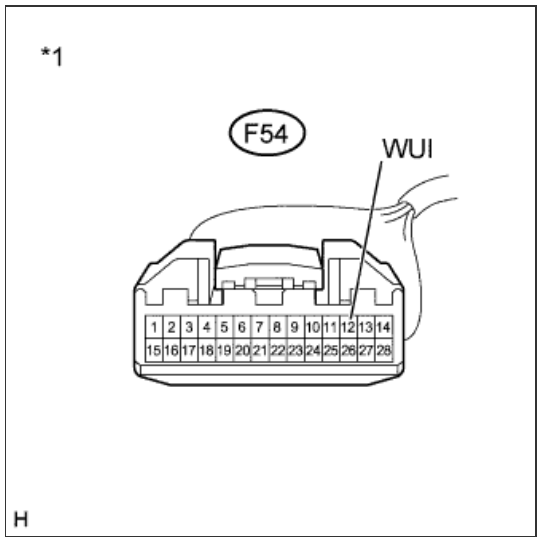
When the malfunction in the MOST network is repaired, the screen cannot be changed to the "MOST Line Check" screen.

B → END

A

## 3.CHECK HARNESS AND CONNECTOR (WAKE UP SIGNAL)

a. Disconnect the F54 radio receiver assembly connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F54-12 (WUI) - Body ground | Engine switch on (ACC) | 4.5 V or higher |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Radio Receiver Assembly) |

NG → Go to step 4

OK

REPLACE RADIO RECEIVER ASSEMBLY (Click here)

## 4.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER ASSEMBLY - DISPLAY AND NAVIGATION MODULE DISPLAY)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-12 (WUI) - F59-8 (WUO) | Always | Below 1 Ω |
| F54-12 (WUI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

## 5.CHECK MOST COMMUNICATION CONNECTOR

a. Check MOST communication line connector.

i. Check if a MOST communication line connector between the radio receiver assembly and stereo component amplifier assembly has any connection problems (Click here).

b. Display the "MOST Line Check" screen and check the result ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "AMP". | A |
| The screen cannot be changed to the "MOST Line Check" screen. | B |

**HINT:**

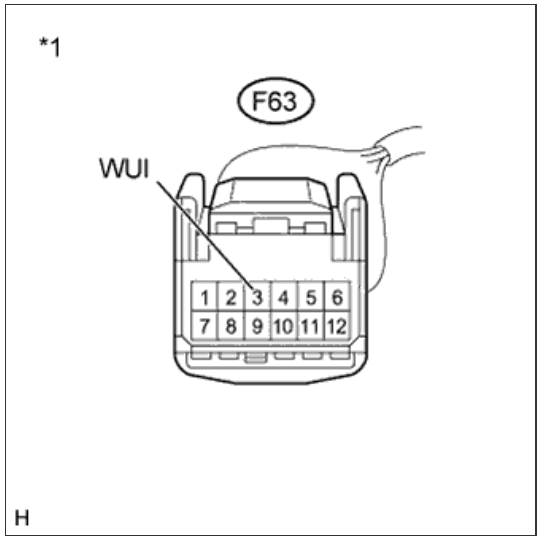
When the malfunction in the MOST network is repaired, the screen cannot be changed to the "MOST Line Check" screen.

B → END

A

## 6.CHECK HARNESS AND CONNECTOR (WAKE UP SIGNAL)

a. Disconnect the F63 stereo component amplifier assembly connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F63-3 (WUI) - Body ground | Engine switch on (ACC) | 4.5 V or higher |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Stereo Component Amplifier Assembly) |

NG → Go to step 7

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 7.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY - RADIO RECEIVER ASSEMBLY)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the F54 radio receiver assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-3 (WUI) - F54-26 (WUO) | Always | Below 1 Ω |
| F63-3 (WUI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

## 8.CHECK MOST COMMUNICATION CONNECTOR

a. Check MOST communication line connector.

i. Check if a MOST communication line connector between the stereo component amplifier assembly and television display assembly has any connection problems (Click here).

b. Display the "MOST Line Check" screen and check the result ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "RSE". | A |
| The screen cannot be changed to the "MOST Line Check" screen. | B |

**HINT:**

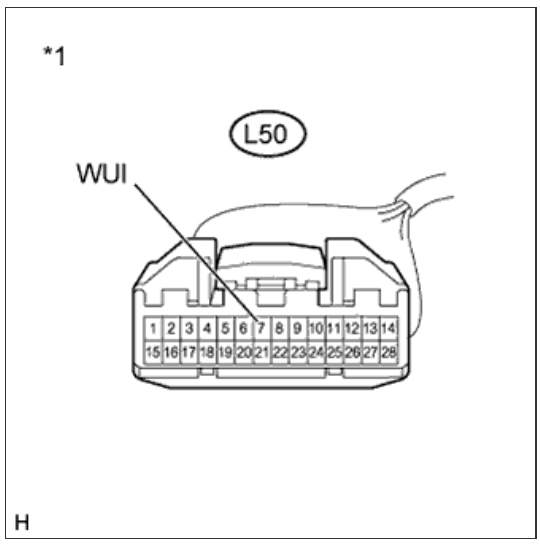
When the malfunction in the MOST network is repaired, the screen cannot be changed to the "MOST Line Check" screen.

B → END

A

## 9.CHECK HARNESS AND CONNECTOR (WAKE UP SIGNAL)

a. Disconnect the L50 television display assembly connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| L50-7 (WUI) - Body ground | Engine switch on (ACC) | 4.5 V or higher |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Television Display assembly) |

NG → Go to step 10

OK

REPLACE TELEVISION DISPLAY ASSEMBLY (Click here)

10.CHECK AND REPLACE HARNESS AND CONNECTOR (TELEVISION DISPLAY ASSEMBLY - STEREO COMPONENT AMPLIFIER ASSEMBLY)

a. Disconnect the L50 television display assembly connector.

b. Disconnect the F63 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-7 (WUI) - F63-9 (WUO) | Always | Below 1 Ω |
| L50-7 (WUI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

11.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - RADIO RECEIVER ASSEMBLY)

a. Disconnect the F59 display and navigation module display connector.

b. Disconnect the F54 radio receiver assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F59-3 (MO+) - F54-9 (MI+) | Always | Below 1 Ω |
| F59-7 (MO-) - F54-23 (MI-) | Always | Below 1 Ω |
| F59-6 (SLDO) - F54-10 (SLDI) | Always | Below 1 Ω |
| F59-8 (WUO) - F54-12 (WUI) | Always | Below 1 Ω |
| F59-3 (MO+) - Body ground | Always | 10 kΩ or higher |
| F59-7 (MO-) - Body ground | Always | 10 kΩ or higher |
| F59-6 (SLDO) - Body ground | Always | 10 kΩ or higher |
| F59-8 (WUO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

12.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER ASSEMBLY - STEREO COMPONENT AMPLIFIER ASSEMBLY)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F63 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-11 (MO+) - F63-4 (MI+) | Always | Below 1 Ω |
| F54-25 (MO-) - F63-10 (MI-) | Always | Below 1 Ω |
| F54-24 (SLDI) - F63-5 (SLDI) | Always | Below 1 Ω |
| F54-26 (WUO) - F63-3 (WUI) | Always | Below 1 Ω |
| F54-11 (MO+) - Body ground | Always | 10 kΩ or higher |
| F54-25 (MO-) - Body ground | Always | 10 kΩ or higher |
| F54-24 (SLDI) - Body ground | Always | 10 kΩ or higher |
| F54-26 (WUO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 13.CONFIRM MODEL

a. Choose the model to be inspected.

**Result**

| Result | Proceed to |
|---|---|
| w/o Rear Seat Entertainment System | A |
| w/ Rear Seat Entertainment System | B |

B → Go to step 16

A

## 14.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY - DISPLAY AND NAVIGATION MODULE DISPLAY)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-6 (MO+) - F59-1 (MI+) | Always | Below 1 Ω |
| F63-12 (MO-) - F59-5 (MI-) | Always | Below 1 Ω |
| F63-11 (SLDO) - F59-2 (SLDI) | Always | Below 1 Ω |
| F63-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| F63-12 (MO-) - Body ground | Always | 10 kΩ or higher |
| F63-11 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

15.CHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → USE SIMULATION METHOD TO CHECK (Click here)

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

16.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY - TELEVISION DISPLAY ASSEMBLY)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the L50 television display assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-6 (MO+) - L50-1 (MI+) | Always | Below 1 Ω |
| F63-12 (MO-) - L50-2 (MI-) | Always | Below 1 Ω |
| F63-11 (SLDO) - L50-3 (SLDI) | Always | Below 1 Ω |
| F63-9 (WUO) - L50-7 (WUI) | Always | Below 1 Ω |
| F63-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| F63-12 (MO-) - Body ground | Always | 10 kΩ or higher |
| F63-11 (SLDO) - Body ground | Always | 10 kΩ or higher |
| F63-9 (WUO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

17.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY ASSEMBLY - DISPLAY AND NAVIGATION MODULE DISPLAY)

a. Disconnect the L50 television display assembly.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-6 (MO+) - F59-1 (MI+) | Always | Below 1 Ω |
| L50-5 (MO-) - F59-5 (MI-) | Always | Below 1 Ω |

| | | |
|---|---|---|
| L50-4 (SLDO) - F59-2 (SLDI) | Always | Below 1 Ω |
| L50-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| L50-5 (MO-) - Body ground | Always | 10 kΩ or higher |
| L50-4 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**18.CHECK DTC**

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK

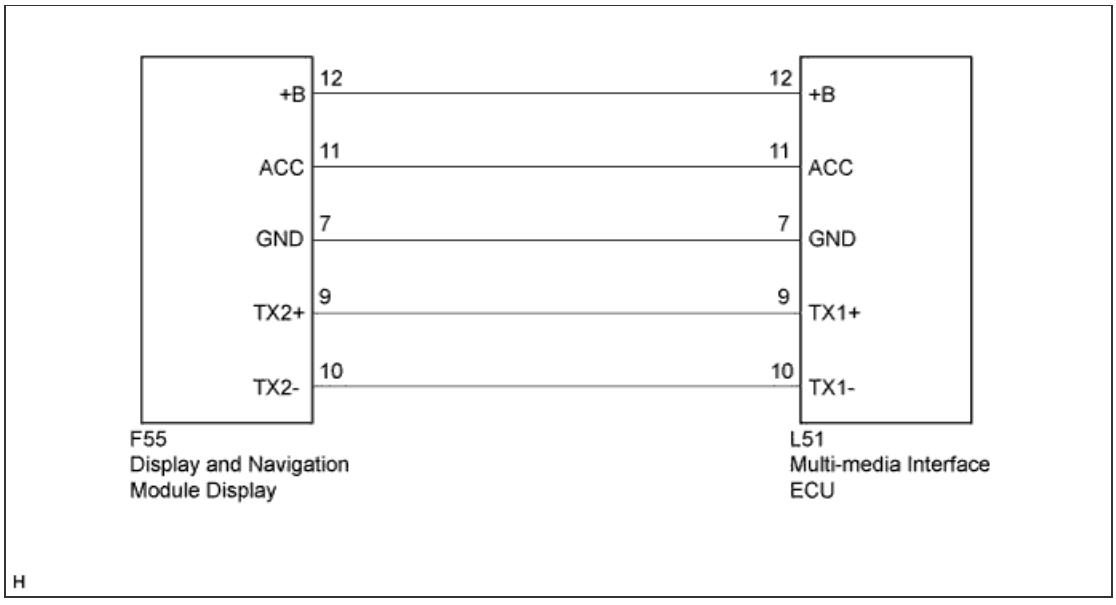
**USE SIMULATION METHOD TO CHECK (Click here)**

## DTC B156B Multi-media Interface ECU Disconnected

## DTC B156E No Response from Multi-media Interface ECU

**for Preparation** Click here

### DESCRIPTION



The display and navigation module display and multi-media interface ECU are connected by the AVC-LAN communication line.
When an AVC-LAN communication error occurs between the display and navigation module display and the multi-media interface ECU, these DTCs will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B156B*1 | When either condition below is met:<br>• Multi-media interface ECU is/was not connected while the engine switch is on (ON or ACC).<br>• Communication between the master unit and multi-media interface ECU is not possible when the engine is started. | • Multi-media interface ECU power source circuit<br>• AVC-LAN circuit between display and navigation module display and multi-media interface ECU<br>• Multi-media interface ECU<br>• Display and navigation module display |
| B156E | Within the time-out period, there was no response from the display and navigation module display to the following requests from the master unit:<br>• System inspection request<br>• System inspection result request<br>• Diagnostic memory request | |

**HINT:**

- ***1: Even if no fault is present, this DTC may be stored depending on the battery condition or engine start voltage.**
- **The display and navigation module display is the master unit.**

### WIRING DIAGRAM

### INSPECTION PROCEDURE

#### 1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Check for optional components.

i. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| | |

| | |
|---|---|
| Optional components (including associated wiring) are installed. | A |
| Optional components (including associated wiring) are not installed. | B |

**HINT:**

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect AVC-LAN communication.**
- **This DTC may be stored when an AVC-LAN communication error occurs due to electrical noise.**

**B** → Go to step 3

**A**

## 2.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

**NEXT**

## 3.CHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

**NG** → Go to step 4

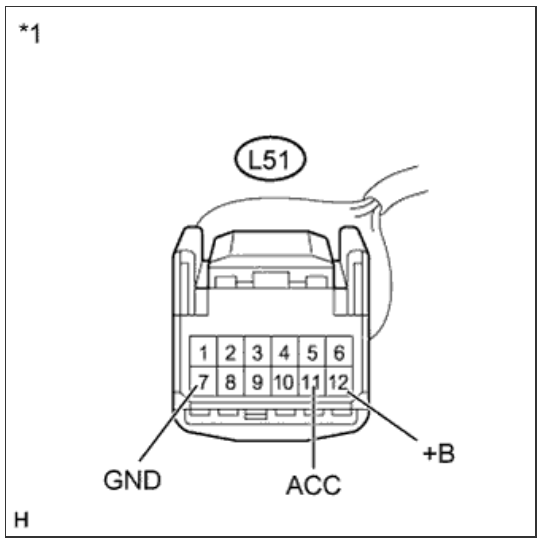
**OK**

**END**

## 4.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA INTERFACE ECU POWER SOURCE)

a. Disconnect the L51 multi-media interface ECU connector.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L51-7 (GND) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| L51-12 (+B) - L51-7 (GND) | Always | 11 to 14 V |
| L51-11 (ACC) - L51-7 (GND) | Engine switch on (ACC) | 11 to 14 V |

**Text in Illustration**

| | |

| | Front view of wire harness connector |

| | |
|---|---|
| *1 | (to Multi-media Interface ECU) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ↓

**5.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA INTERFACE ECU - DISPLAY AND NAVIGATION MODULE DISPLAY)**

a. Disconnect the L51 multi-media interface ECU connector.

b. Disconnect the F55 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L51-9 (TX1+) - F55-9 (TX2+) | Always | Below 1 Ω |
| L51-10 (TX1-) - F55-10 (TX2-) | Always | Below 1 Ω |
| L51-9 (TX1+) - Body ground | Always | 10 kΩ or higher |
| L51-10 (TX1-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ↓

**6.REPLACE MULTI-MEDIA INTERFACE ECU**

a. Replace the multi-media interface ECU (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

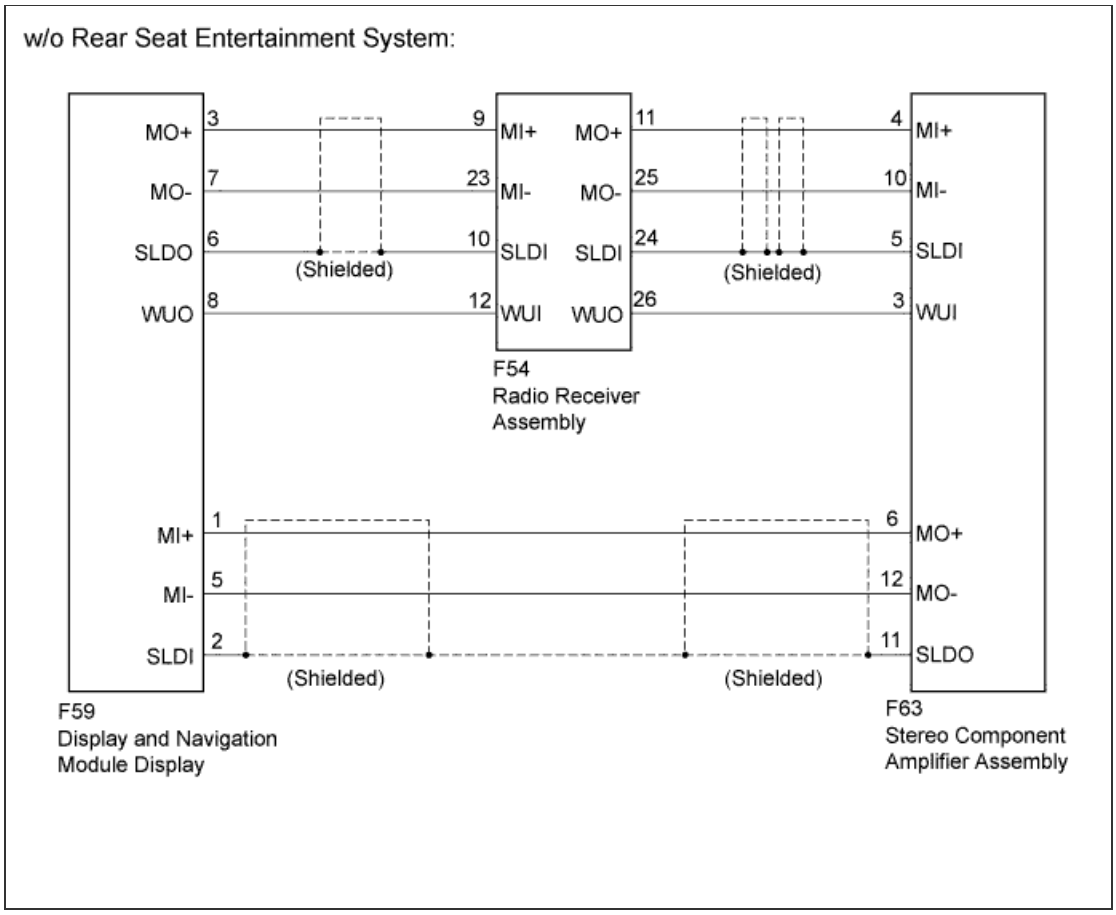
OK ↓

END

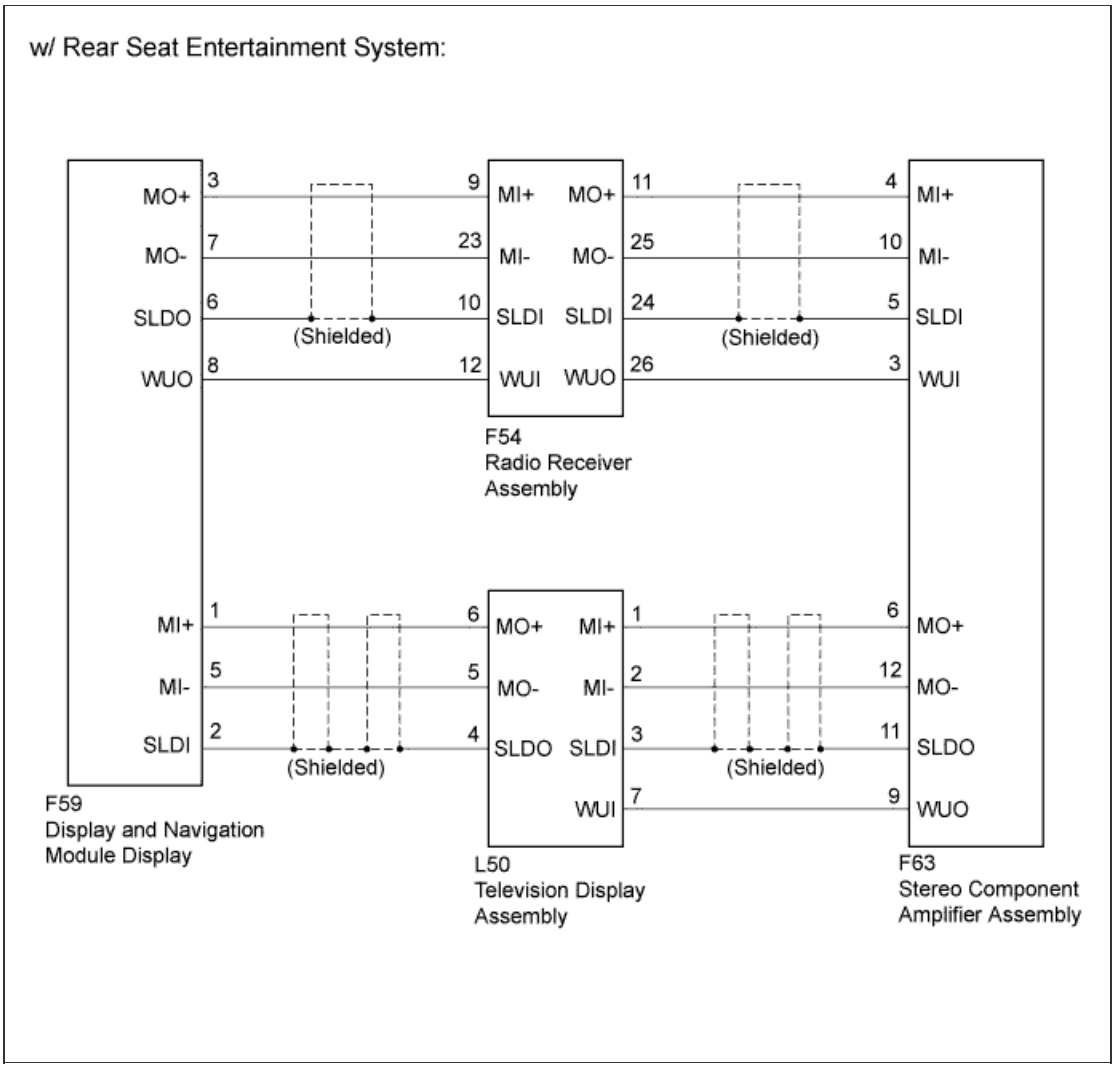
## DTC B15D0 MOST Communication Malfunction

**for Preparation** Click here

### DESCRIPTION



This DTC is stored when the MOST network cannot be established after the master unit is activated.



| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15D0 | MOST network cannot be established. | • MOST line check<br>• MOST communication line connector<br>• Wire harness and connector<br>• MOST communication line<br>• Radio receiver assembly<br>• Stereo component amplifier assembly<br>• Television display assembly (w/ Rear Seat Entertainment System)<br>• Display and navigation module display |

**HINT:**

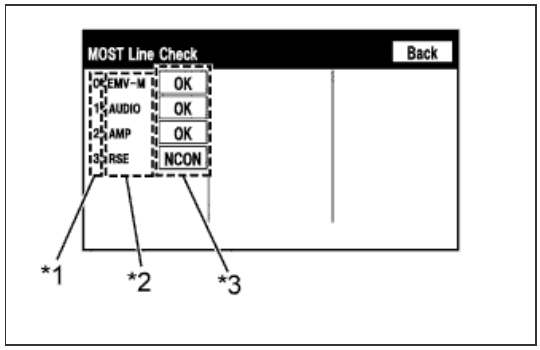
- **The display and navigation module display is the master unit for the MOST network.**
- **Errors may occur in MOST communication between devices due to problems such as electrical noise.**

### WIRING DIAGRAM



## INSPECTION PROCEDURE

### 1.PERFORM MOST LINE CHECK

a. Display the "MOST Line Check" screen ( Click here).

**Text in Illustration**

| | |
|---|---|
| *1 | Node position number for devices that use MOST communication |
| *2 | Device Name |
| *3 | Result |

b. Check the result on the "MOST Line Check" screen.

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "AUDIO". | A |
| "NCON" is displayed for "AMP". | B |
| "NCON" is displayed for "RSE" (w/ rear seat entertainment system). | C |
| "OK" is displayed for all items. | D |

**HINT:**

- **When "NCON" is displayed for more than 1 item, proceed to the step for the device that has the smallest node position number.**
- **The "MOST Line Check" screen can be displayed only when DTC B15D0 is stored.**

| | |
|---|---|
| B | Go to step 5 |

C → Go to step 8

D → Go to step 11

A

## 2.CHECK MOST COMMUNICATION CONNECTOR

a. Check MOST communication line connector.

i. Check if a MOST communication line connector between the display and navigation module display and radio receiver assembly has any connection problems (Click here).

b. Display the "MOST Line Check" screen and check the result ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "AUDIO". | A |
| The screen cannot be changed to the "MOST Line Check" screen. | B |

**HINT:**

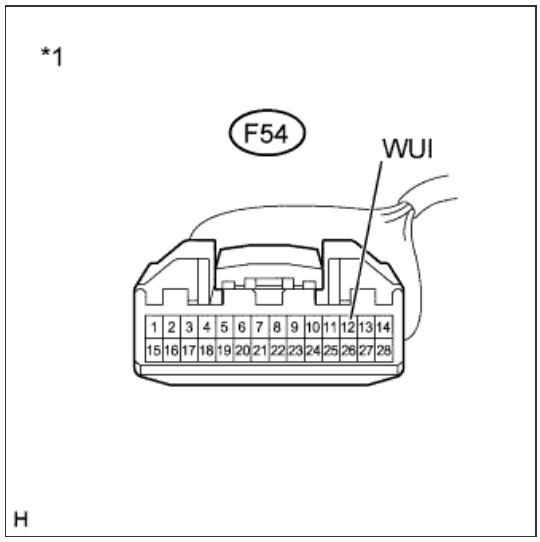
When the malfunction in the MOST network is repaired, the screen cannot be changed to the "MOST Line Check" screen.

B → END

A

## 3.CHECK HARNESS AND CONNECTOR (WAKE UP SIGNAL)

a. Disconnect the F54 radio receiver assembly connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F54-12 (WUI) - Body ground | Engine switch on (ACC) | 4.5 V or higher |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Radio Receiver Assembly) |

NG → Go to step 4

OK

REPLACE RADIO RECEIVER ASSEMBLY (Click here)

## 4.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER ASSEMBLY - DISPLAY AND NAVIGATION MODULE DISPLAY)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-12 (WUI) - F59-8 (WUO) | Always | Below 1 Ω |
| F54-12 (WUI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

## 5.CHECK MOST COMMUNICATION CONNECTOR

a. Check MOST communication line connector.

i. Check if a MOST communication line connector between the radio receiver assembly and stereo component amplifier assembly has any connection problems (Click here).

b. Display the "MOST Line Check" screen and check the result ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "AMP". | A |
| The screen cannot be changed to the "MOST Line Check" screen. | B |

**HINT:**

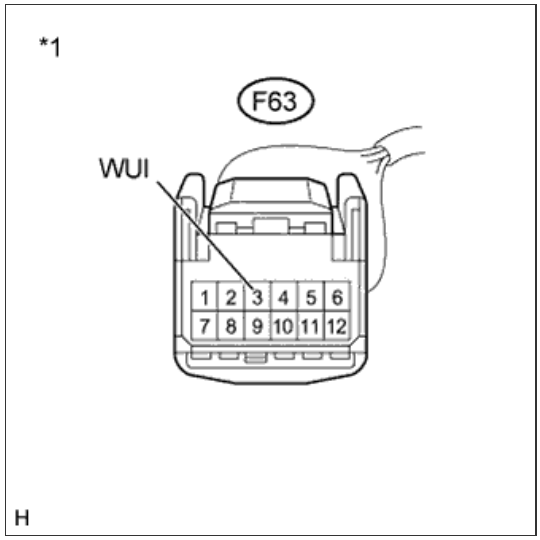
When the malfunction in the MOST network is repaired, the screen cannot be changed to the "MOST Line Check" screen.

B → END

A

## 6.CHECK HARNESS AND CONNECTOR (WAKE UP SIGNAL)

a. Disconnect the F63 stereo component amplifier assembly connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F63-3 (WUI) - Body ground | Engine switch on (ACC) | 4.5 V or higher |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Stereo Component Amplifier Assembly) |

NG → Go to step 7

OK

REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY (Click here)

## 7.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY - RADIO RECEIVER ASSEMBLY)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the F54 radio receiver assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-3 (WUI) - F54-26 (WUO) | Always | Below 1 Ω |
| F63-3 (WUI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

## 8.CHECK MOST COMMUNICATION CONNECTOR

a. Check MOST communication line connector.

i. Check if a MOST communication line connector between the stereo component amplifier assembly and television display assembly has any connection problems (Click here).

b. Display the "MOST Line Check" screen and check the result ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| "NCON" is displayed for "RSE". | A |
| The screen cannot be changed to the "MOST Line Check" screen. | B |

**HINT:**

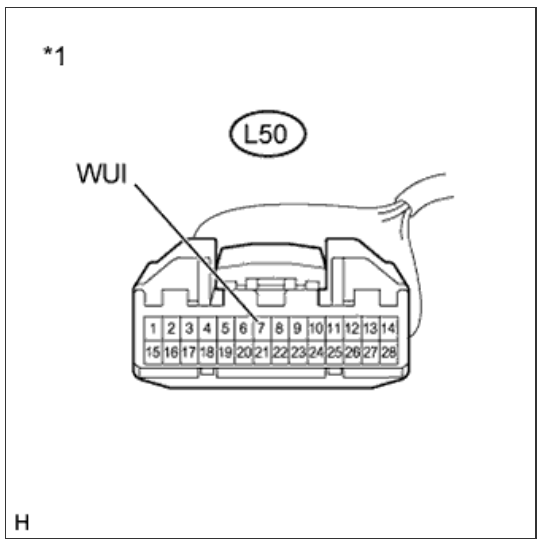
When the malfunction in the MOST network is repaired, the screen cannot be changed to the "MOST Line Check" screen.

B → END

A

## 9.CHECK HARNESS AND CONNECTOR (WAKE UP SIGNAL)

a. Disconnect the L50 television display assembly connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| L50-7 (WUI) - Body ground | Engine switch on (ACC) | 4.5 V or higher |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Television Display assembly) |

NG → Go to step 10

OK

REPLACE TELEVISION DISPLAY ASSEMBLY (Click here)

10.CHECK AND REPLACE HARNESS AND CONNECTOR (TELEVISION DISPLAY ASSEMBLY - STEREO COMPONENT AMPLIFIER ASSEMBLY)

a. Disconnect the L50 television display assembly connector.

b. Disconnect the F63 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-7 (WUI) - F63-9 (WUO) | Always | Below 1 Ω |
| L50-7 (WUI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

11.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - RADIO RECEIVER ASSEMBLY)

a. Disconnect the F59 display and navigation module display connector.

b. Disconnect the F54 radio receiver assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F59-3 (MO+) - F54-9 (MI+) | Always | Below 1 Ω |
| F59-7 (MO-) - F54-23 (MI-) | Always | Below 1 Ω |
| F59-6 (SLDO) - F54-10 (SLDI) | Always | Below 1 Ω |
| F59-8 (WUO) - F54-12 (WUI) | Always | Below 1 Ω |
| F59-3 (MO+) - Body ground | Always | 10 kΩ or higher |
| F59-7 (MO-) - Body ground | Always | 10 kΩ or higher |
| F59-6 (SLDO) - Body ground | Always | 10 kΩ or higher |
| F59-8 (WUO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

12.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER ASSEMBLY - STEREO COMPONENT AMPLIFIER ASSEMBLY)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F63 stereo component amplifier assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-11 (MO+) - F63-4 (MI+) | Always | Below 1 Ω |
| F54-25 (MO-) - F63-10 (MI-) | Always | Below 1 Ω |
| F54-24 (SLDI) - F63-5 (SLDI) | Always | Below 1 Ω |
| F54-26 (WUO) - F63-3 (WUI) | Always | Below 1 Ω |
| F54-11 (MO+) - Body ground | Always | 10 kΩ or higher |
| F54-25 (MO-) - Body ground | Always | 10 kΩ or higher |
| F54-24 (SLDI) - Body ground | Always | 10 kΩ or higher |
| F54-26 (WUO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 13.CONFIRM MODEL

a. Choose the model to be inspected.

**Result**

| Result | Proceed to |
|---|---|
| w/o Rear Seat Entertainment System | A |
| w/ Rear Seat Entertainment System | B |

B → Go to step 16

A

## 14.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY - DISPLAY AND NAVIGATION MODULE DISPLAY)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-6 (MO+) - F59-1 (MI+) | Always | Below 1 Ω |
| F63-12 (MO-) - F59-5 (MI-) | Always | Below 1 Ω |
| F63-11 (SLDO) - F59-2 (SLDI) | Always | Below 1 Ω |
| F63-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| F63-12 (MO-) - Body ground | Always | 10 kΩ or higher |
| F63-11 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

15.CHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → USE SIMULATION METHOD TO CHECK (Click here)

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

16.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY - TELEVISION DISPLAY ASSEMBLY)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the L50 television display assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-6 (MO+) - L50-1 (MI+) | Always | Below 1 Ω |
| F63-12 (MO-) - L50-2 (MI-) | Always | Below 1 Ω |
| F63-11 (SLDO) - L50-3 (SLDI) | Always | Below 1 Ω |
| F63-9 (WUO) - L50-7 (WUI) | Always | Below 1 Ω |
| F63-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| F63-12 (MO-) - Body ground | Always | 10 kΩ or higher |
| F63-11 (SLDO) - Body ground | Always | 10 kΩ or higher |
| F63-9 (WUO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

17.CHECK HARNESS AND CONNECTOR (TELEVISION DISPLAY ASSEMBLY - DISPLAY AND NAVIGATION MODULE DISPLAY)

a. Disconnect the L50 television display assembly.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L50-6 (MO+) - F59-1 (MI+) | Always | Below 1 Ω |
| L50-5 (MO-) - F59-5 (MI-) | Always | Below 1 Ω |

| | | |
|---|---|---|
| L50-4 (SLDO) - F59-2 (SLDI) | Always | Below 1 Ω |
| L50-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| L50-5 (MO-) - Body ground | Always | 10 kΩ or higher |
| L50-4 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**18.CHECK DTC**

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK

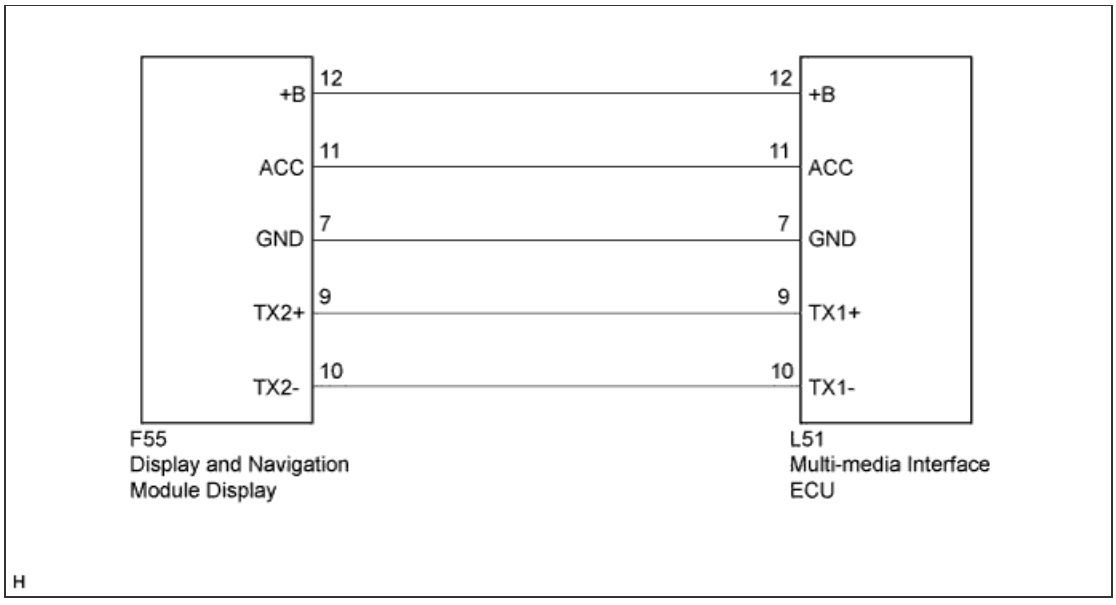
**USE SIMULATION METHOD TO CHECK (Click here)**

## DTC B156B Multi-media Interface ECU Disconnected

## DTC B156E No Response from Multi-media Interface ECU

**for Preparation** Click here

### DESCRIPTION



The display and navigation module display and multi-media interface ECU are connected by the AVC-LAN communication line.
When an AVC-LAN communication error occurs between the display and navigation module display and the multi-media interface ECU, these DTCs will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B156B*1 | When either condition below is met:<br>• Multi-media interface ECU is/was not connected while the engine switch is on (ON or ACC).<br>• Communication between the master unit and multi-media interface ECU is not possible when the engine is started. | • Multi-media interface ECU power source circuit<br>• AVC-LAN circuit between display and navigation module display and multi-media interface ECU<br>• Multi-media interface ECU<br>• Display and navigation module display |
| B156E | Within the time-out period, there was no response from the display and navigation module display to the following requests from the master unit:<br>• System inspection request<br>• System inspection result request<br>• Diagnostic memory request | |

**HINT:**

- ***1: Even if no fault is present, this DTC may be stored depending on the battery condition or engine start voltage.**
- **The display and navigation module display is the master unit.**

### WIRING DIAGRAM

### INSPECTION PROCEDURE

#### 1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Check for optional components.

i. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| | |

| | |
|---|---|
| Optional components (including associated wiring) are installed. | A |
| Optional components (including associated wiring) are not installed. | B |

**HINT:**

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect AVC-LAN communication.**
- **This DTC may be stored when an AVC-LAN communication error occurs due to electrical noise.**

**B** → Go to step 3

**A**

## 2.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

**NEXT**

## 3.CHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

**NG** → Go to step 4

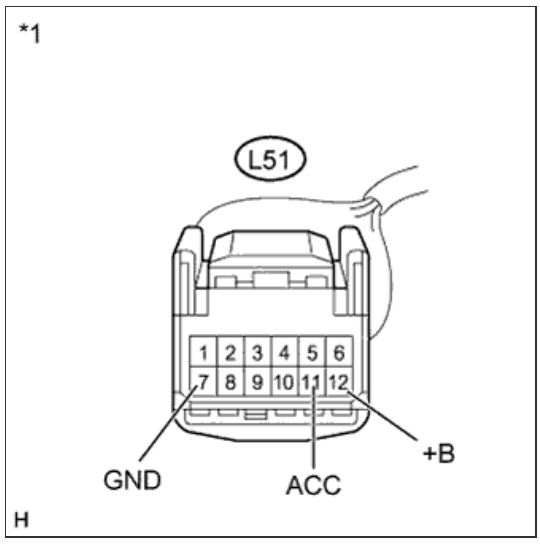
**OK**

**END**

## 4.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA INTERFACE ECU POWER SOURCE)

a. Disconnect the L51 multi-media interface ECU connector.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L51-7 (GND) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| L51-12 (+B) - L51-7 (GND) | Always | 11 to 14 V |
| L51-11 (ACC) - L51-7 (GND) | Engine switch on (ACC) | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| | Front view of wire harness connector |

| | |
|---|---|
| *1 | (to Multi-media Interface ECU) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ↓

**5.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA INTERFACE ECU - DISPLAY AND NAVIGATION MODULE DISPLAY)**

a. Disconnect the L51 multi-media interface ECU connector.

b. Disconnect the F55 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| L51-9 (TX1+) - F55-9 (TX2+) | Always | Below 1 Ω |
| L51-10 (TX1-) - F55-10 (TX2-) | Always | Below 1 Ω |
| L51-9 (TX1+) - Body ground | Always | 10 kΩ or higher |
| L51-10 (TX1-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ↓

**6.REPLACE MULTI-MEDIA INTERFACE ECU**

a. Replace the multi-media interface ECU (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK ↓

END

# DTC B15F5 A/C ECU Vehicle Information Reading/Writing Processor Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when items controlled by the A/C ECU (air conditioning amplifier assembly) cannot be customized via the electro multi vision system vehicle customization screen.

**HINT:**

The A/C ECU (air conditioning amplifier assembly) controls the air conditioning system related items that are customizable via the electro multi vision system screen.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15F5 | A/C ECU (air conditioning amplifier assembly) vehicle setting processing error. | • CAN communication system<br>• Air conditioning system<br>• A/C ECU (air conditioning amplifier assembly)<br>• Display and navigation module display |

## INSPECTION PROCEDURE

### 1.CHECK CAN COMMUNICATION SYSTEM

a. Use the intelligent tester to check if the CAN communication system is functioning normally.

**HINT:**

- **for LHD (Click here)**
- **for RHD (Click here)**

**OK:**

**CAN communication DTC is not output.**

Result

| Result | Proceed to |
|---|---|
| OK | A |
| NG (for LHD) | B |
| NG (for RHD) | C |

B → GO TO CAN COMMUNICATION SYSTEM (Click here)

C → GO TO CAN COMMUNICATION SYSTEM (Click here)

A

### 2.CHECK AIR CONDITIONING SYSTEM

a. Check if the air conditioning system is malfunctioning (Click here).

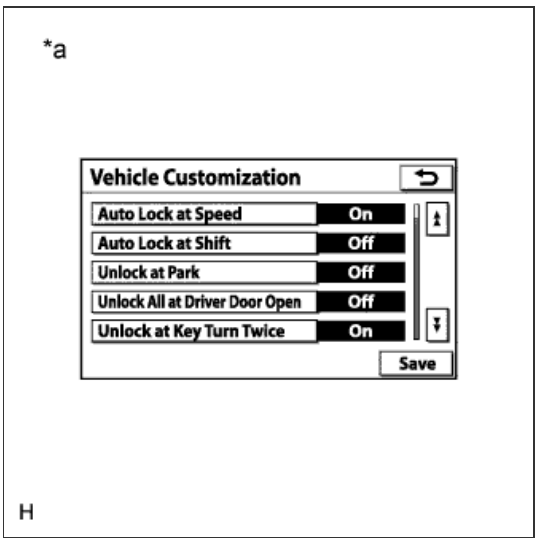
**HINT:**

Customization may not be possible depending on the malfunction in the air conditioning system.

**OK:**

**No malfunctions are present in the air conditioning system.**

NG → GO TO AIR CONDITIONING SYSTEM (Click here)



OK

### 3.CHECK CUSTOMIZE ITEMS

a. Display the "Vehicle Customization" screen.

**Text in Illustration**

| | |
|---|---|
| *a | Example: |

b. Make a note of the customizable items for the air conditioning system.

**HINT:**

These air conditioning system items shown as customizable via the electro multi vision system vehicle customization screen can also be changed using the intelligent tester. In the following steps, the intelligent tester will be used.

i. To match-up the items in the electro multi vision display with the items on the intelligent tester, check the customize parameters list for the air conditioning system related items that can be customized via the electro multi vision system screen (Click here).

c. Using the intelligent tester, confirm that it is possible to change the settings of the air conditioning system related customize parameters that are shown as customizable via the electro multi vision system screen.

**OK:**

**The items available for customization via the electro multi vision system screen can be customized successfully using the intelligent tester.**

NG → REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

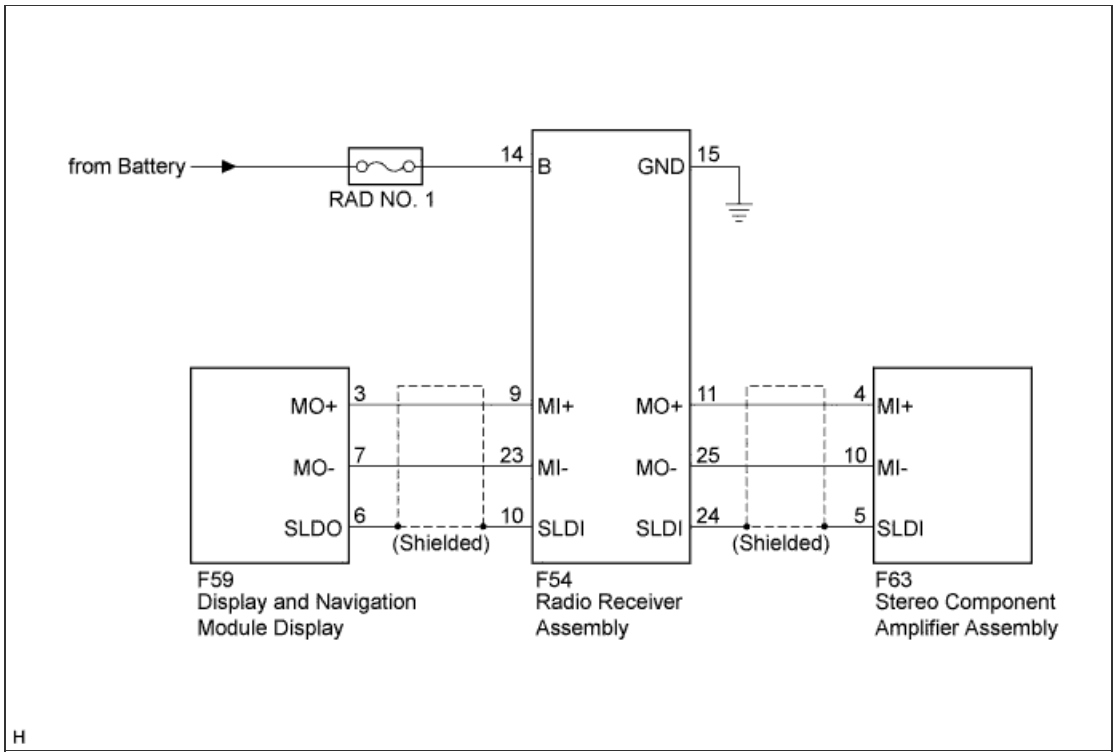
OK → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

## DTC B1591 No Response from Audio HU

## DTC B15D1 Audio HU Disconnected

**for Preparation** Click here

### DESCRIPTION



The display and navigation module display and radio receiver assembly are connected by the MOST communication line.
When an MOST communication error occurs between the display and navigation module display and the radio receiver assembly, these DTCs will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1591 | Within the time-out period, there was no response from the radio receiver assembly to the following requests from the master unit:<br>• System inspection request<br>• System inspection result request<br>• Diagnostic memory request | • Radio receiver assembly power source circuit<br>• MOST circuit between display and navigation module display and radio receiver assembly<br>• MOST circuit between radio receiver assembly and stereo component amplifier assembly<br>• Radio receiver assembly<br>• Display and navigation module display |
| B15D1*1 | When either of the conditions below is met:<br>• Radio receiver assembly is/was not connected while the engine switch is on (IG or ACC).<br>• Communication between the master unit and the radio receiver assembly is not possible when the engine is started. | |

**HINT:**

- ***1: Even if no fault is present, this DTC may be stored depending on the battery condition or engine start voltage.**
- **The display and navigation module display is the master unit.**

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

## 1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Check for optional components.

i. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components (including associated wiring) are installed. | A |
| Optional components (including associated wiring) are not installed. | B |

**HINT:**

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect MOST communication.**
- **This DTC may be stored when an MOST communication error occurs due to electrical noise.**

**B** → **Go to step 3**

**A**

## 2.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

**NEXT**

## 3.CHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

**NG** → **Go to step 4**

**OK**

## END

## 4.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER ASSEMBLY POWER SOURCE)

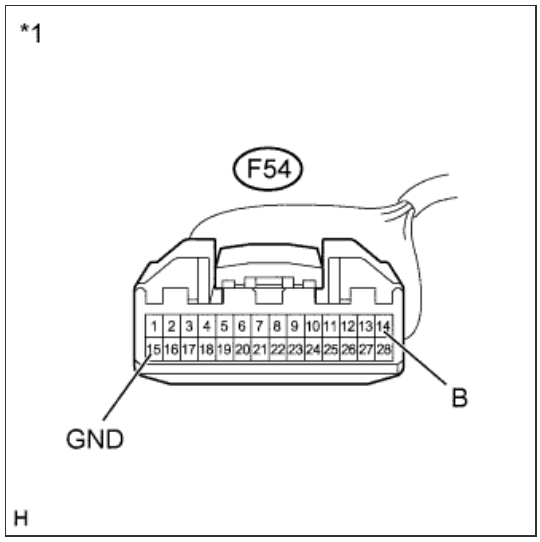
a. Disconnect the F54 radio receiver assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-15 (GND) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.



**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|

| | | |
|---|---|---|
| F54-14 (B) - F54-15 (GND) | Always | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Radio Receiver Assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 5.CHECK HARNESS AND CONNECTOR (MOST COMMUNICATION LINE)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F63 stereo component amplifier assembly connector.

c. Disconnect the F59 display and navigation module display connector.

d. Measure the resistance between the display and navigation module display and the radio receiver assembly according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F59-3 (MO+) - F54-9 (MI+) | Always | Below 1 Ω |
| F59-7 (MO-) - F54-23 (MI-) | Always | Below 1 Ω |
| F59-6 (SLDO) - F54-10 (SLDI) | Always | Below 1 Ω |
| F59-3 (MO+) - Body ground | Always | 10 kΩ or higher |
| F59-7 (MO-) - Body ground | Always | 10 kΩ or higher |
| F59-6 (SLDO) - Body ground | Always | 10 kΩ or higher |

e. Measure the resistance between the radio receiver assembly and the stereo component amplifier assembly according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-11 (MO+) - F63-4 (MI+) | Always | Below 1 Ω |
| F54-25 (MO-) - F63-10 (MI-) | Always | Below 1 Ω |
| F54-24 (SLDI) - F63-5 (SLDI) | Always | Below 1 Ω |
| F54-11 (MO+) - Body ground | Always | 10 kΩ or higher |
| F54-25 (MO-) - Body ground | Always | 10 kΩ or higher |
| F54-24 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**6.REPLACE RADIO RECEIVER ASSEMBLY**

a. Replace the radio receiver assembly (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK

**END**

# DTC B15F6 Main Body ECU Vehicle Information Reading/Writing Process Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when items controlled by the main body ECU (cowl side junction block LH) cannot be customized via the electro multi vision system vehicle customization screen.

**HINT:**

**The main body ECU (cowl side junction block LH) controls the items for the following systems that are customizable via the electro multi vision system screen:**

- **Power door lock control system**
- **Wireless door lock control system**
- **Lighting system**

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15F6 | Main body ECU (cowl side junction block LH) vehicle setting processing error. | • CAN communication system<br>• Power door lock control system<br>• Wireless door lock control system<br>• Lighting system<br>• Main body ECU (cowl side junction block LH)<br>• Display and navigation module display |

## INSPECTION PROCEDURE

### 1.CHECK CAN COMMUNICATION SYSTEM

a. Use the intelligent tester to check if the CAN communication system is functioning normally.

**HINT:**

- **for LHD (Click here)**
- **for RHD (Click here)**

**OK:**

**CAN communication DTC is not output.**

**Result**

| Result | Proceed to |
|---|---|
| OK | A |
| NG (for LHD) | B |
| NG (for RHD) | C |

**B** → GO TO CAN COMMUNICATION SYSTEM (Click here)

**C** → GO TO CAN COMMUNICATION SYSTEM (Click here)

**A**

### 2.CHECK POWER DOOR LOCK CONTROL SYSTEM

a. Check if the power door lock control system is malfunctioning ( Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the power door lock control system.

**OK:**

**No malfunctions are present in the power door lock control system.**

**NG** → GO TO POWER DOOR LOCK CONTROL SYSTEM (Click here)

**OK**

### 3.CHECK WIRELESS DOOR LOCK CONTROL SYSTEM

a. Check if the wireless door lock control system is malfunctioning ( Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the wireless door lock control system.

**OK:**
**No malfunctions are present in the wireless door lock control system.**

NG → GO TO WIRELESS DOOR LOCK CONTROL SYSTEM ( **Click here**)

OK

### 4.CHECK LIGHTING SYSTEM

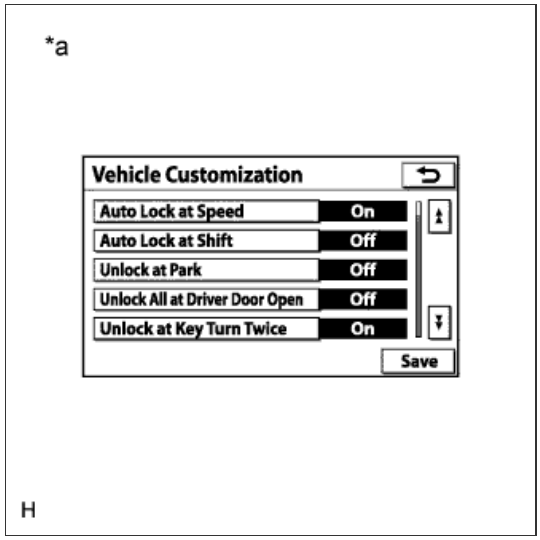
a. Check if the lighting system is malfunctioning ( Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the lighting system.

**OK:**
**No malfunctions are present in the lighting system.**

NG → GO TO LIGHTING SYSTEM (**Click here**)



OK

### 5.CHECK CUSTOMIZE ITEMS

a. Display the "Vehicle Customization" screen.

**Text in Illustration**

| | |
|---|---|
| *a | Example: |

b. Make a note of the customizable items for each main body ECU (cowl side junction block LH) related system.

**HINT:**

These items shown as customizable via the electro multi vision system vehicle customization screen can also be changed using the intelligent tester. In a following step, the intelligent tester will be used.

i. To match-up the items in the electro multi vision display with the items on the intelligent tester, check the customize parameters list for the power door lock control system related items that can be customized via the electro multi vision system screen (Click here).

ii. To match-up the items in the electro multi vision display with the items on the intelligent tester, check the customize parameters list for the wireless door lock control system related items that can be customized via the electro multi vision system screen (Click here).

iii. To match-up the items in the electro multi vision display with the items on the intelligent tester, check the customize parameters list for the lighting system related items that can be customized via the electro multi vision system screen (Click here).

c. Using the intelligent tester, confirm that it is possible to change the settings of the customize parameters that are available for customization via the electro multi vision system screen.

**OK:**
**The items available for customization via the electro multi vision system screen can be customized successfully using the intelligent tester.**

NG → REPLACE MAIN BODY ECU (COWL SIDE JUNCTION BLOCK LH)

OK

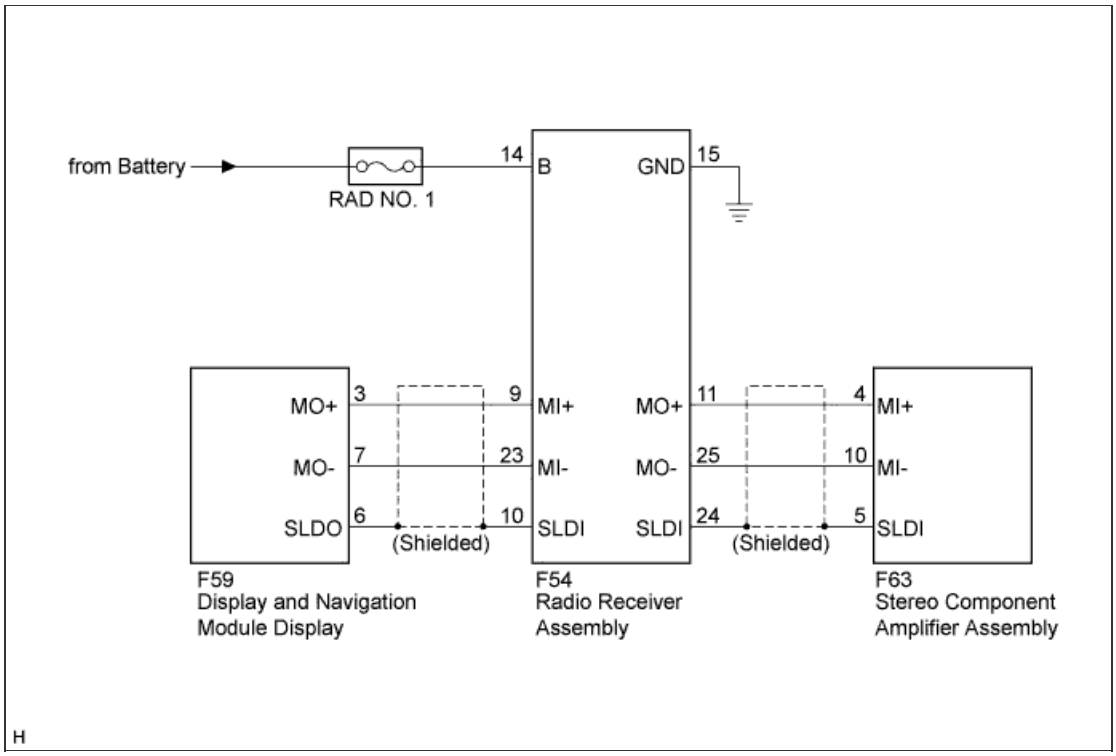
REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

## DTC B1591 No Response from Audio HU

## DTC B15D1 Audio HU Disconnected

**for Preparation** Click here

### DESCRIPTION



The display and navigation module display and radio receiver assembly are connected by the MOST communication line.
When an MOST communication error occurs between the display and navigation module display and the radio receiver assembly, these DTCs will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1591 | Within the time-out period, there was no response from the radio receiver assembly to the following requests from the master unit:<br>• System inspection request<br>• System inspection result request<br>• Diagnostic memory request | • Radio receiver assembly power source circuit<br>• MOST circuit between display and navigation module display and radio receiver assembly<br>• MOST circuit between radio receiver assembly and stereo component amplifier assembly<br>• Radio receiver assembly<br>• Display and navigation module display |
| B15D1*1 | When either of the conditions below is met:<br>• Radio receiver assembly is/was not connected while the engine switch is on (IG or ACC).<br>• Communication between the master unit and the radio receiver assembly is not possible when the engine is started. | |

**HINT:**

- ***1: Even if no fault is present, this DTC may be stored depending on the battery condition or engine start voltage.**
- **The display and navigation module display is the master unit.**

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

## 1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Check for optional components.

i. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components (including associated wiring) are installed. | A |
| Optional components (including associated wiring) are not installed. | B |

**HINT:**

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect MOST communication.**
- **This DTC may be stored when an MOST communication error occurs due to electrical noise.**

**B** → **Go to step 3**

**A**

## 2.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

**NEXT**

## 3.CHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Radio Receiver Assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 5.CHECK HARNESS AND CONNECTOR (MOST COMMUNICATION LINE)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F63 stereo component amplifier assembly connector.

c. Disconnect the F59 display and navigation module display connector.

d. Measure the resistance between the display and navigation module display and the radio receiver assembly according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F59-3 (MO+) - F54-9 (MI+) | Always | Below 1 Ω |
| F59-7 (MO-) - F54-23 (MI-) | Always | Below 1 Ω |
| F59-6 (SLDO) - F54-10 (SLDI) | Always | Below 1 Ω |
| F59-3 (MO+) - Body ground | Always | 10 kΩ or higher |
| F59-7 (MO-) - Body ground | Always | 10 kΩ or higher |
| F59-6 (SLDO) - Body ground | Always | 10 kΩ or higher |

e. Measure the resistance between the radio receiver assembly and the stereo component amplifier assembly according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-11 (MO+) - F63-4 (MI+) | Always | Below 1 Ω |
| F54-25 (MO-) - F63-10 (MI-) | Always | Below 1 Ω |
| F54-24 (SLDI) - F63-5 (SLDI) | Always | Below 1 Ω |
| F54-11 (MO+) - Body ground | Always | 10 kΩ or higher |
| F54-25 (MO-) - Body ground | Always | 10 kΩ or higher |
| F54-24 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**6.REPLACE RADIO RECEIVER ASSEMBLY**

a. Replace the radio receiver assembly (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

# DTC B15F7 Certification ECU Vehicle Information Reading/Writing Process Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when items controlled by the certification ECU (smart key ECU assembly) cannot be customized via the electro multi vision system vehicle customization screen.

**HINT:**

**The certification ECU (smart key ECU assembly) controls the items for the following systems that are customizable via the electro multi vision system screen:**

- **Smart access system with push-button start (for Entry Function)**
- **Smart access system with push-button start (for Start Function)**

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15F7 | Certification ECU (smart key ECU assembly) vehicle setting processing error. | • CAN communication system<br>• Smart access system with push-button start (for Entry Function)<br>• Smart access system with push-button start (for Start Function)<br>• Certification ECU (smart key ECU assembly)<br>• Display and navigation module display |

## INSPECTION PROCEDURE

### 1.CHECK CAN COMMUNICATION SYSTEM

a. Use the intelligent tester to check if the CAN communication system is functioning normally.

**HINT:**

- **for LHD (Click here)**
- **for RHD (Click here)**

**OK:**

**CAN communication DTC is not output.**

**Result**

| Result | Proceed to |
|---|---|
| OK | A |
| NG (for LHD) | B |
| NG (for RHD) | C |

**B** → GO TO CAN COMMUNICATION SYSTEM (Click here)

**C** → GO TO CAN COMMUNICATION SYSTEM (Click here)

**A**

### 2.CHECK SMART ACCESS SYSTEM WITH PUSH-BUTTON START (for Entry Function)

a. Check if the smart access system with push-button start (for entry function) is malfunctioning ( Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the smart access system with push-button start (for entry function).

**OK:**

**No malfunctions are present in the smart access system with push-button start (for entry function).**

**NG** → GO TO SMART ACCESS SYSTEM WITH PUSH-BUTTON START (for Entry Function) (Click here)

**OK**

### 3.CHECK SMART ACCESS SYSTEM WITH PUSH-BUTTON START (for Start Function)

a. Check if the smart access system with push-button start (for start function) is malfunctioning ( Click here).

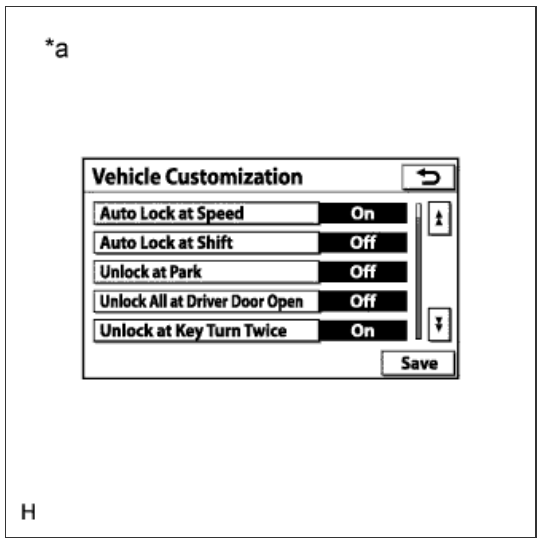
**HINT:**

Customization may not be possible depending on the malfunction in the smart access system with push-button start (for start function).

**OK:**

**No malfunctions are present in the smart access system with push-button start (for start function).**

NG → GO TO SMART ACCESS SYSTEM WITH PUSH-BUTTON START (for Start Function) (**Click here**)



OK

### 4.CHECK CUSTOMIZE ITEMS

a. Display the "Vehicle Customization" screen.

**Text in Illustration**

| | |
|---|---|
| *a | Example: |

b. Make a note of the customizable items for each certification ECU related system.

**HINT:**

These items shown as customizable via the electro multi vision system vehicle customization screen can also be changed using the intelligent tester. In a following step, the intelligent tester will be used.

i. To match-up the items in the electro multi vision display with the items on the intelligent tester, check the customize parameters list for the smart access system with push button start (for entry function) related items that can be customized via the electro multi vision system screen (Click here).

ii. To match-up the items in the electro multi vision display with the items on the intelligent tester, check the customize parameters list for the smart access system with push button start (for start function) related items that can be customized via the electro multi vision system screen (Click here).

c. Using the intelligent tester, confirm that it is possible to change the settings of the customize parameters that are available for customization via the electro multi vision system screen.

**OK:**

**The items available for customization via the electro multi vision system screen can be customized successfully using the intelligent tester.**

NG → REPLACE SMART KEY ECU ASSEMBLY

OK

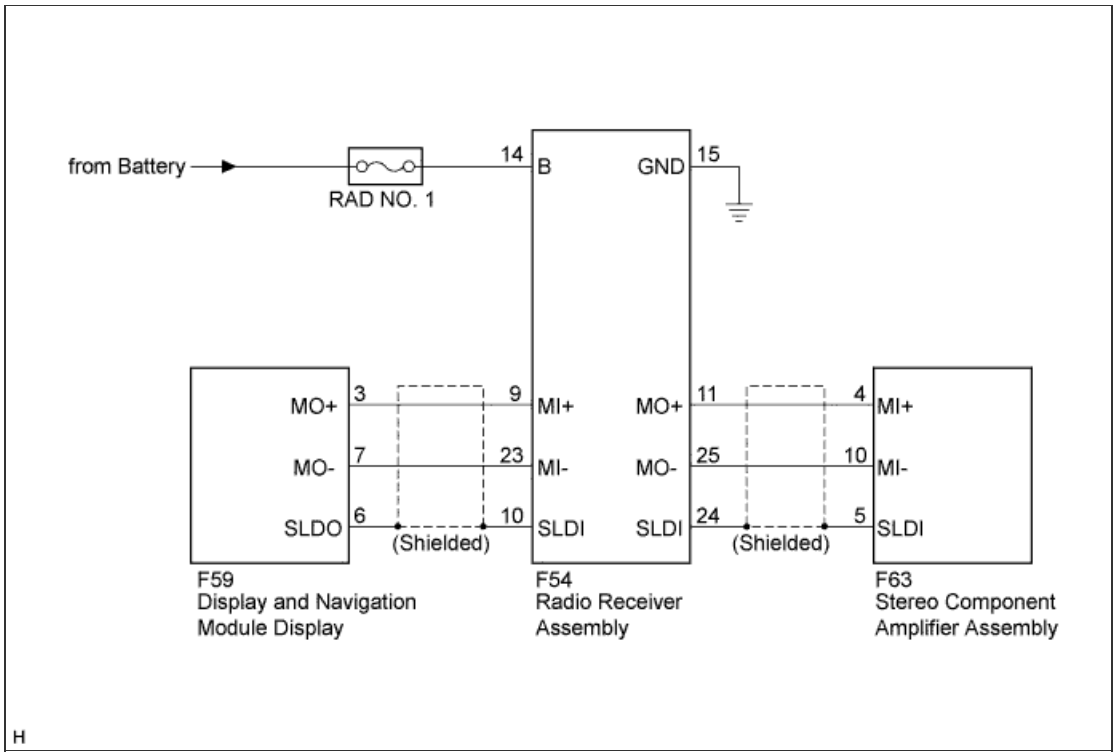
REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

## DTC B1591 No Response from Audio HU

## DTC B15D1 Audio HU Disconnected

**for Preparation** Click here

### DESCRIPTION



The display and navigation module display and radio receiver assembly are connected by the MOST communication line.
When an MOST communication error occurs between the display and navigation module display and the radio receiver assembly, these DTCs will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1591 | Within the time-out period, there was no response from the radio receiver assembly to the following requests from the master unit:<br>• System inspection request<br>• System inspection result request<br>• Diagnostic memory request | • Radio receiver assembly power source circuit<br>• MOST circuit between display and navigation module display and radio receiver assembly<br>• MOST circuit between radio receiver assembly and stereo component amplifier assembly<br>• Radio receiver assembly<br>• Display and navigation module display |
| B15D1*1 | When either of the conditions below is met:<br>• Radio receiver assembly is/was not connected while the engine switch is on (IG or ACC).<br>• Communication between the master unit and the radio receiver assembly is not possible when the engine is started. | |

**HINT:**

- ***1: Even if no fault is present, this DTC may be stored depending on the battery condition or engine start voltage.**
- **The display and navigation module display is the master unit.**

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

## 1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Check for optional components.

i. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components (including associated wiring) are installed. | A |
| Optional components (including associated wiring) are not installed. | B |

**HINT:**

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect MOST communication.**
- **This DTC may be stored when an MOST communication error occurs due to electrical noise.**

**B** → **Go to step 3**

**A**

## 2.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

**NEXT**

## 3.CHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

**NG** → **Go to step 4**

**OK**

## END

## 4.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER ASSEMBLY POWER SOURCE)

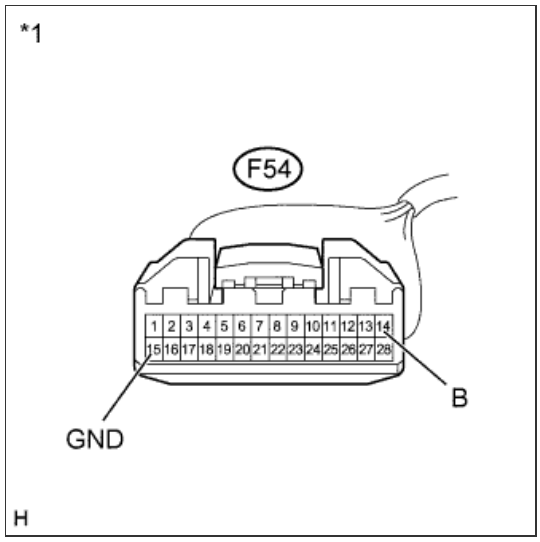
a. Disconnect the F54 radio receiver assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-15 (GND) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.



**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|

| | | |
|---|---|---|
| F54-14 (B) - F54-15 (GND) | Always | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Radio Receiver Assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 5.CHECK HARNESS AND CONNECTOR (MOST COMMUNICATION LINE)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F63 stereo component amplifier assembly connector.

c. Disconnect the F59 display and navigation module display connector.

d. Measure the resistance between the display and navigation module display and the radio receiver assembly according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F59-3 (MO+) - F54-9 (MI+) | Always | Below 1 Ω |
| F59-7 (MO-) - F54-23 (MI-) | Always | Below 1 Ω |
| F59-6 (SLDO) - F54-10 (SLDI) | Always | Below 1 Ω |
| F59-3 (MO+) - Body ground | Always | 10 kΩ or higher |
| F59-7 (MO-) - Body ground | Always | 10 kΩ or higher |
| F59-6 (SLDO) - Body ground | Always | 10 kΩ or higher |

e. Measure the resistance between the radio receiver assembly and the stereo component amplifier assembly according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-11 (MO+) - F63-4 (MI+) | Always | Below 1 Ω |
| F54-25 (MO-) - F63-10 (MI-) | Always | Below 1 Ω |
| F54-24 (SLDI) - F63-5 (SLDI) | Always | Below 1 Ω |
| F54-11 (MO+) - Body ground | Always | 10 kΩ or higher |
| F54-25 (MO-) - Body ground | Always | 10 kΩ or higher |
| F54-24 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**6.REPLACE RADIO RECEIVER ASSEMBLY**

a. Replace the radio receiver assembly (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK

**END**

# DTC B15F7 Certification ECU Vehicle Information Reading/Writing Process Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when items controlled by the certification ECU (smart key ECU assembly) cannot be customized via the electro multi vision system vehicle customization screen.

**HINT:**

**The certification ECU (smart key ECU assembly) controls the items for the following systems that are customizable via the electro multi vision system screen:**

- **Smart access system with push-button start (for Entry Function)**
- **Smart access system with push-button start (for Start Function)**

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15F7 | Certification ECU (smart key ECU assembly) vehicle setting processing error. | • CAN communication system<br>• Smart access system with push-button start (for Entry Function)<br>• Smart access system with push-button start (for Start Function)<br>• Certification ECU (smart key ECU assembly)<br>• Display and navigation module display |

## INSPECTION PROCEDURE

### 1.CHECK CAN COMMUNICATION SYSTEM

a. Use the intelligent tester to check if the CAN communication system is functioning normally.

**HINT:**

- **for LHD (Click here)**
- **for RHD (Click here)**

**OK:**

**CAN communication DTC is not output.**

**Result**

| Result | Proceed to |
|---|---|
| OK | A |
| NG (for LHD) | B |
| NG (for RHD) | C |

**B** → GO TO CAN COMMUNICATION SYSTEM (Click here)

**C** → GO TO CAN COMMUNICATION SYSTEM (Click here)

**A**

### 2.CHECK SMART ACCESS SYSTEM WITH PUSH-BUTTON START (for Entry Function)

a. Check if the smart access system with push-button start (for entry function) is malfunctioning ( Click here).

**HINT:**

Customization may not be possible depending on the malfunction in the smart access system with push-button start (for entry function).

**OK:**

**No malfunctions are present in the smart access system with push-button start (for entry function).**

**NG** → GO TO SMART ACCESS SYSTEM WITH PUSH-BUTTON START (for Entry Function) (Click here)

**OK**

### 3.CHECK SMART ACCESS SYSTEM WITH PUSH-BUTTON START (for Start Function)

a. Check if the smart access system with push-button start (for start function) is malfunctioning ( Click here).

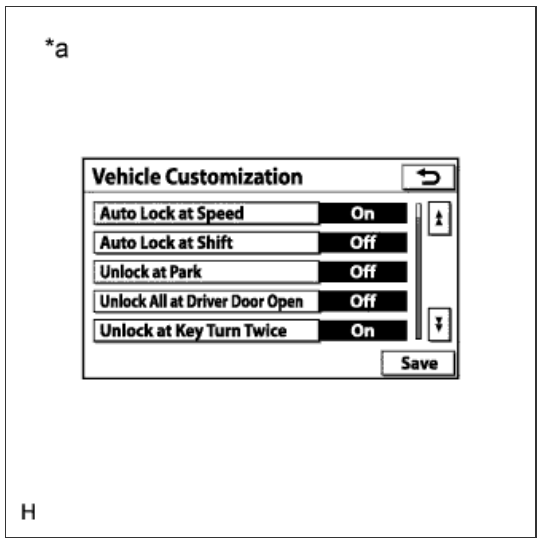
**HINT:**

Customization may not be possible depending on the malfunction in the smart access system with push-button start (for start function).

**OK:**

**No malfunctions are present in the smart access system with push-button start (for start function).**

NG → GO TO SMART ACCESS SYSTEM WITH PUSH-BUTTON START (for Start Function) (**Click here**)



OK

### 4.CHECK CUSTOMIZE ITEMS

a. Display the "Vehicle Customization" screen.

**Text in Illustration**

| | |
|---|---|
| *a | Example: |

b. Make a note of the customizable items for each certification ECU related system.

**HINT:**

These items shown as customizable via the electro multi vision system vehicle customization screen can also be changed using the intelligent tester. In a following step, the intelligent tester will be used.

i. To match-up the items in the electro multi vision display with the items on the intelligent tester, check the customize parameters list for the smart access system with push button start (for entry function) related items that can be customized via the electro multi vision system screen (Click here).

ii. To match-up the items in the electro multi vision display with the items on the intelligent tester, check the customize parameters list for the smart access system with push button start (for start function) related items that can be customized via the electro multi vision system screen (Click here).

c. Using the intelligent tester, confirm that it is possible to change the settings of the customize parameters that are available for customization via the electro multi vision system screen.

**OK:**

**The items available for customization via the electro multi vision system screen can be customized successfully using the intelligent tester.**

NG → REPLACE SMART KEY ECU ASSEMBLY

OK

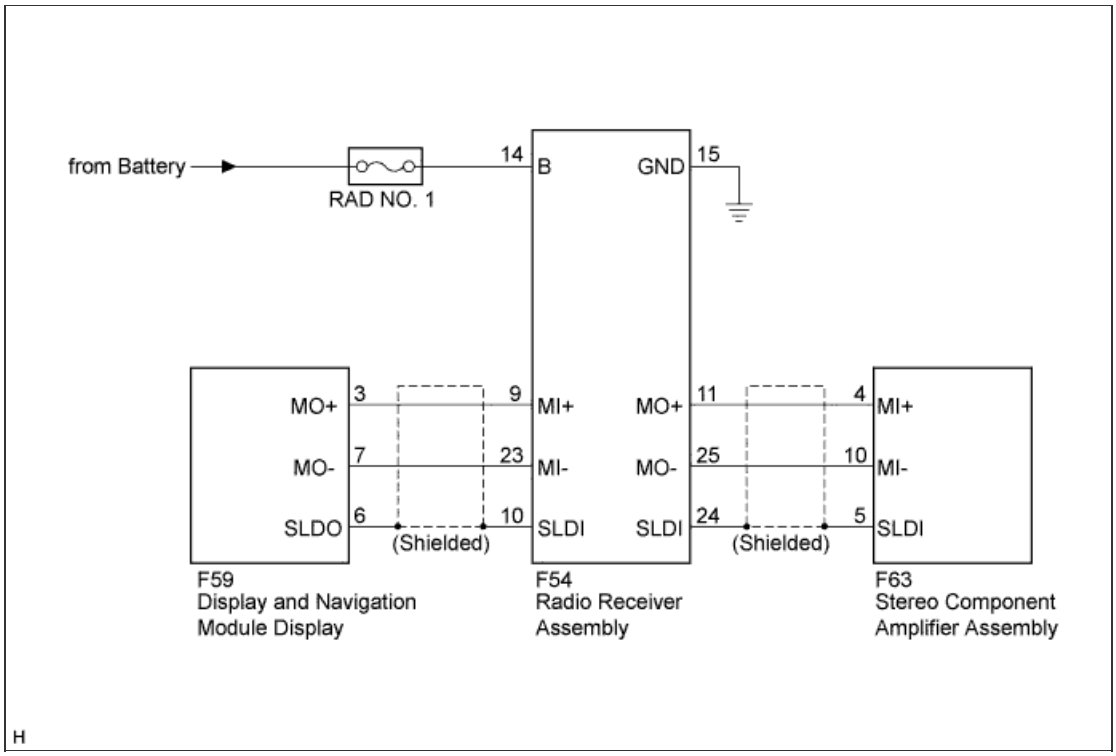
REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

## DTC B1591 No Response from Audio HU

## DTC B15D1 Audio HU Disconnected

**for Preparation** Click here

### DESCRIPTION



The display and navigation module display and radio receiver assembly are connected by the MOST communication line.
When an MOST communication error occurs between the display and navigation module display and the radio receiver assembly, these DTCs will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B1591 | Within the time-out period, there was no response from the radio receiver assembly to the following requests from the master unit:<br>• System inspection request<br>• System inspection result request<br>• Diagnostic memory request | • Radio receiver assembly power source circuit<br>• MOST circuit between display and navigation module display and radio receiver assembly<br>• MOST circuit between radio receiver assembly and stereo component amplifier assembly<br>• Radio receiver assembly<br>• Display and navigation module display |
| B15D1*1 | When either of the conditions below is met:<br>• Radio receiver assembly is/was not connected while the engine switch is on (IG or ACC).<br>• Communication between the master unit and the radio receiver assembly is not possible when the engine is started. | |

**HINT:**

- ***1: Even if no fault is present, this DTC may be stored depending on the battery condition or engine start voltage.**
- **The display and navigation module display is the master unit.**

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

## 1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Check for optional components.

i. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components (including associated wiring) are installed. | A |
| Optional components (including associated wiring) are not installed. | B |

**HINT:**

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect MOST communication.**
- **This DTC may be stored when an MOST communication error occurs due to electrical noise.**

**B** → **Go to step 3**

**A**

## 2.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

**NEXT**

## 3.CHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

**NG** → **Go to step 4**

**OK**

## END

## 4.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER ASSEMBLY POWER SOURCE)

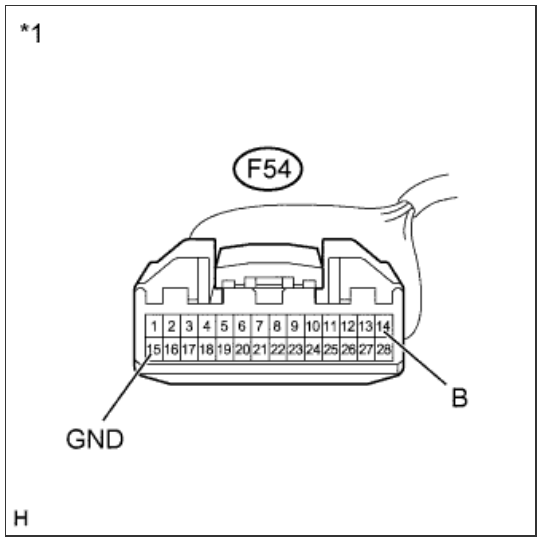
a. Disconnect the F54 radio receiver assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-15 (GND) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.



**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|

| | | |
|---|---|---|
| F54-14 (B) - F54-15 (GND) | Always | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Radio Receiver Assembly) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 5.CHECK HARNESS AND CONNECTOR (MOST COMMUNICATION LINE)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F63 stereo component amplifier assembly connector.

c. Disconnect the F59 display and navigation module display connector.

d. Measure the resistance between the display and navigation module display and the radio receiver assembly according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F59-3 (MO+) - F54-9 (MI+) | Always | Below 1 Ω |
| F59-7 (MO-) - F54-23 (MI-) | Always | Below 1 Ω |
| F59-6 (SLDO) - F54-10 (SLDI) | Always | Below 1 Ω |
| F59-3 (MO+) - Body ground | Always | 10 kΩ or higher |
| F59-7 (MO-) - Body ground | Always | 10 kΩ or higher |
| F59-6 (SLDO) - Body ground | Always | 10 kΩ or higher |

e. Measure the resistance between the radio receiver assembly and the stereo component amplifier assembly according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-11 (MO+) - F63-4 (MI+) | Always | Below 1 Ω |
| F54-25 (MO-) - F63-10 (MI-) | Always | Below 1 Ω |
| F54-24 (SLDI) - F63-5 (SLDI) | Always | Below 1 Ω |
| F54-11 (MO+) - Body ground | Always | 10 kΩ or higher |
| F54-25 (MO-) - Body ground | Always | 10 kΩ or higher |
| F54-24 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**6.REPLACE RADIO RECEIVER ASSEMBLY**

a. Replace the radio receiver assembly (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK

**END**

## DTC U0073 Control Module Communication Bus Off

## DTC U0155 Lost Communication with Combination Meter

## DTC U0164 Lost Communication with A/C ECU

## DTC U1110 Lost Communication with Clearance Warning ECU

**for Preparation** Click here

### DESCRIPTION

This DTC is stored when a malfunction occurs in the CAN communication circuit.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| U0073 | CAN bus connection error | CAN communication system |
| U0155 | CAN reception error | |
| U0164 | CAN reception error | |
| U1110 | CAN reception error | |

### INSPECTION PROCEDURE

**1.CHECK DTC**

a. Clear the DTC (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 5.CHECK HARNESS AND CONNECTOR (MOST COMMUNICATION LINE)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the F54 radio receiver assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-4 (MI+) - F54-11 (MO+) | Always | Below 1 Ω |
| F63-10 (MI-) - F54-25 (MO-) | Always | Below 1 Ω |
| F63-5 (SLDI) - F54-24 (SLDI) | Always | Below 1 Ω |
| F63-4 (MI+) - Body ground | Always | 10 kΩ or higher |
| F63-10 (MI-) - Body ground | Always | 10 kΩ or higher |
| F63-5 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 6.CONFIRM MODEL

a. Choose the model to be inspected.

**Result:**

| Result | Proceed to |
|---|---|
| w/o Rear Seat Entertainment System | A |
| w/ Rear Seat Entertainment System | B |

B → Go to step 9

A

## 7.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY - DISPLAY AND NAVIGATION MODULE DISPLAY)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-6 (MO+) - F59-1 (MI+) | Always | Below 1 Ω |
| F63-12 (MO-) - F59-5 (MI-) | Always | Below 1 Ω |
| F63-11 (SLDO) - F59-2 (SLDI) | Always | Below 1 Ω |
| F63-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| F63-12 (MO-) - Body ground | Always | 10 kΩ or higher |
| F63-11 (SLDO) - | | |

| | | |
|---|---|---|
| Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**8.REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY**

a. Replace the stereo component amplifier assembly ( Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK

**END**

**9.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY - TELEVISION DISPLAY ASSEMBLY)**

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the L50 television display assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-6 (MO+) - L50-1 (MI+) | Always | Below 1 Ω |
| F63-12 (MO-) - L50-2 (MI-) | Always | Below 1 Ω |
| F63-11 (SLDO) - L50-3 (SLDI) | Always | Below 1 Ω |
| F63-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| F63-12 (MO-) - Body ground | Always | 10 kΩ or higher |
| F63-11 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**10.REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY**

a. Replace the stereo component amplifier assembly ( Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK
END

## 3.CHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → Go to step 4

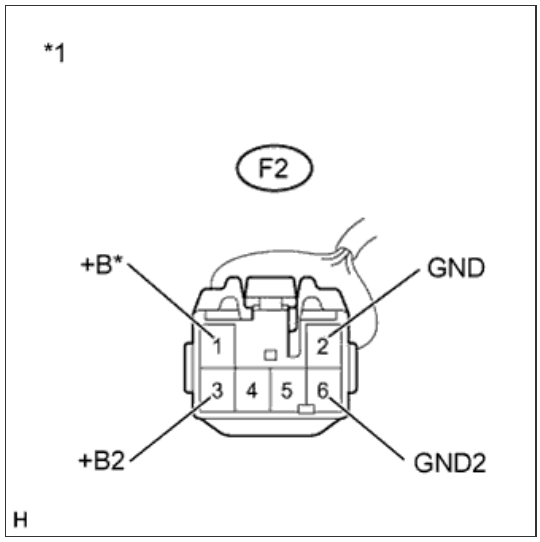
OK

END

## 4.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY POWER SOURCE)

a. Disconnect the F2 stereo component amplifier assembly connector.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F2-2 (GND) - Body ground | Always | Below 1 Ω |
| F2-6 (GND2) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F2-1 (+B) - F2-2 (GND)* | Always | 11 to 14 V |
| F2-3 (+B2) - F2-2 (GND) | Always | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Stereo Component Amplifier Assembly) |

*: for 19 Speakers

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 5.CHECK HARNESS AND CONNECTOR (MOST COMMUNICATION LINE)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the F54 radio receiver assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-4 (MI+) - F54-11 (MO+) | Always | Below 1 Ω |
| F63-10 (MI-) - F54-25 (MO-) | Always | Below 1 Ω |
| F63-5 (SLDI) - F54-24 (SLDI) | Always | Below 1 Ω |
| F63-4 (MI+) - Body ground | Always | 10 kΩ or higher |
| F63-10 (MI-) - Body ground | Always | 10 kΩ or higher |
| F63-5 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 6.CONFIRM MODEL

a. Choose the model to be inspected.

**Result:**

| Result | Proceed to |
|---|---|
| w/o Rear Seat Entertainment System | A |
| w/ Rear Seat Entertainment System | B |

B → Go to step 9

A

## 7.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY - DISPLAY AND NAVIGATION MODULE DISPLAY)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-6 (MO+) - F59-1 (MI+) | Always | Below 1 Ω |
| F63-12 (MO-) - F59-5 (MI-) | Always | Below 1 Ω |
| F63-11 (SLDO) - F59-2 (SLDI) | Always | Below 1 Ω |
| F63-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| F63-12 (MO-) - Body ground | Always | 10 kΩ or higher |
| F63-11 (SLDO) - | | |

| | | |
|---|---|---|
| Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**8.REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY**

a. Replace the stereo component amplifier assembly ( Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK

**END**

**9.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY - TELEVISION DISPLAY ASSEMBLY)**

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the L50 television display assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-6 (MO+) - L50-1 (MI+) | Always | Below 1 Ω |
| F63-12 (MO-) - L50-2 (MI-) | Always | Below 1 Ω |
| F63-11 (SLDO) - L50-3 (SLDI) | Always | Below 1 Ω |
| F63-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| F63-12 (MO-) - Body ground | Always | 10 kΩ or higher |
| F63-11 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**10.REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY**

a. Replace the stereo component amplifier assembly ( Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK
END

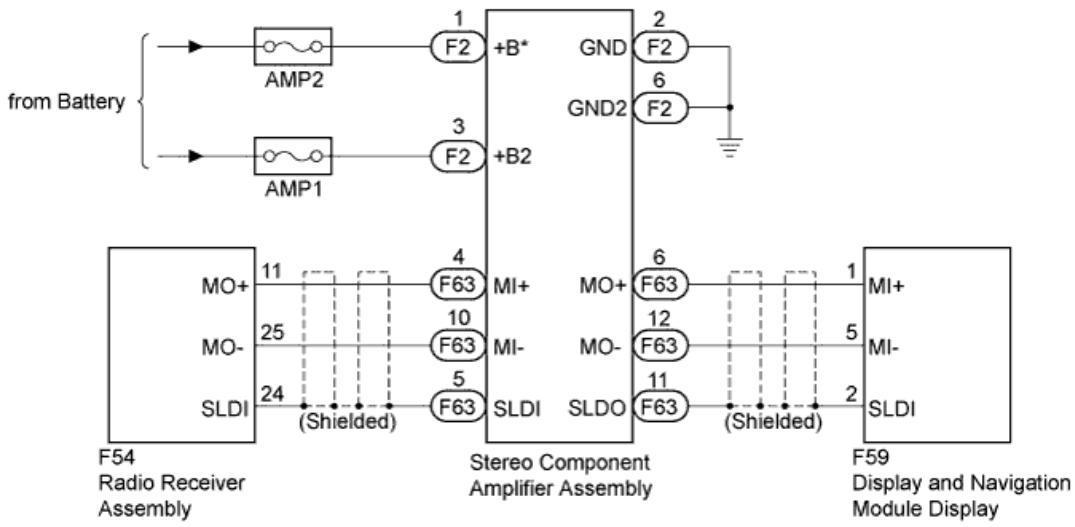
## DTC B1593 No Response from Stereo Component Amplifier

## DTC B15D3 Stereo Component Amplifier Disconnected

**for Preparation** Click here

### DESCRIPTION

The display and navigation module display and stereo component amplifier assembly are connected by the MOST communication line.
When a MOST communication error occurs between the display and navigation module display and the stereo component amplifier assembly, these DTCs will be stored.



| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
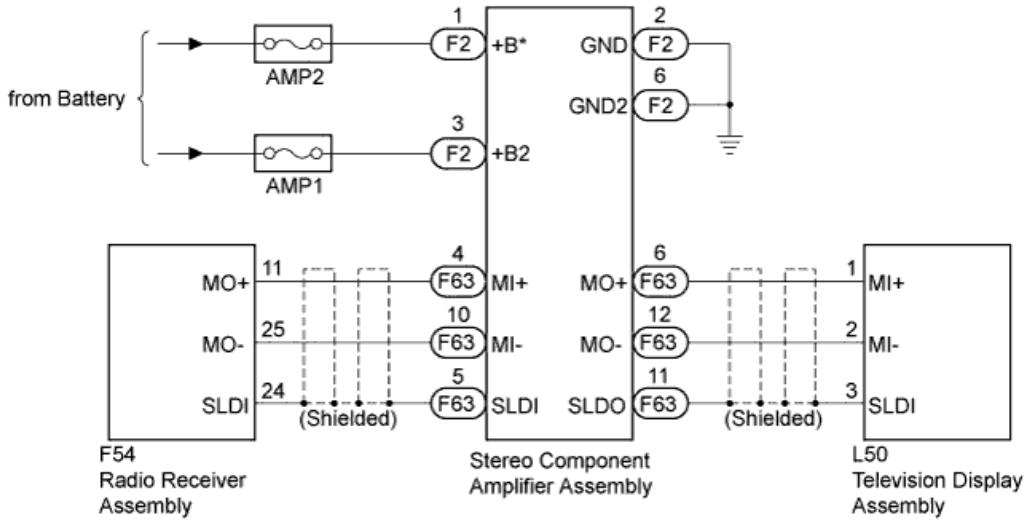
| B1593 | Within the time-out period, there was no response from the stereo component amplifier assembly to the following requests from the master unit:<br>• System inspection request<br>• System inspection result request<br>• Diagnostic memory request | • Stereo component amplifier assembly power source circuit<br>• MOST circuit between radio receiver assembly and stereo component amplifier assembly<br>• MOST circuit between stereo component amplifier assembly and display and navigation module display (w/o Rear Seat Entertainment System)<br>• MOST circuit between stereo component amplifier assembly and television display assembly (w/ Rear Seat Entertainment System)<br>• Stereo component amplifier assembly<br>• Display and navigation module display |
| B15D3*1 | When either of the conditions below is met:<br>• Stereo component amplifier assembly is/was not connected while the engine switch is on (IG or ACC).<br>• Communication between the master unit and the stereo component amplifier assembly is not possible when the engine is started. | |

**HINT:**



- ***1: Even if no fault is present, this DTC may be stored depending on the battery condition or engine start voltage.**
- **The display and navigation module display is the master unit.**

*: for 19 Speakers

H

## INSPECTION PROCEDURE

**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

### 1.CHECK OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Check for optional components.

i. Check that optional components (including associated wiring) which generate radio waves are not installed.

**Result**

| Result | Proceed to |
|---|---|
| Optional components (including associated wiring) are installed. | A |
| Optional components (including associated wiring) are not installed. | B |

**HINT:**

- **Electrical noise from radio waves generated by optional components or the wiring for those components may affect MOST communication.**
- **This DTC may be stored when an MOST communication error occurs due to electrical noise.**

B → Go to step 3

A

## 2.REMOVE OPTIONAL COMPONENTS (INCLUDING ASSOCIATED WIRING)

a. Remove optional components (including associated wiring).

**NOTICE:**

Do not remove optional components or associated wiring without the permission of the customer.

NEXT

## 3.CHECK DTC

a. Clear the DTCs (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → Go to step 4

OK

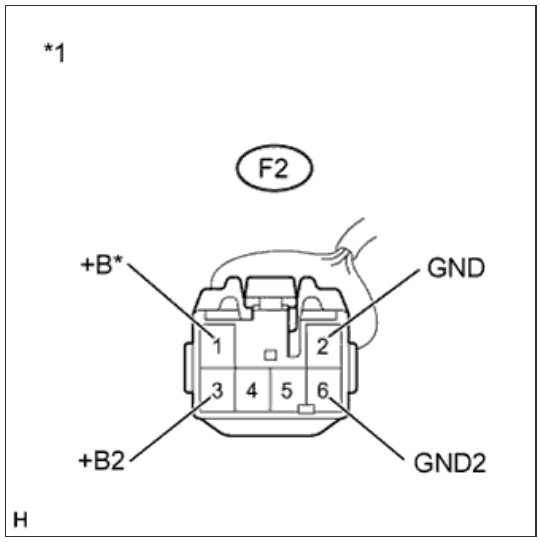
END

## 4.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY POWER SOURCE)

a. Disconnect the F2 stereo component amplifier assembly connector.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F2-2 (GND) - Body ground | Always | Below 1 Ω |
| F2-6 (GND2) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F2-1 (+B) - F2-2 (GND)* | Always | 11 to 14 V |
| F2-3 (+B2) - F2-2 (GND) | Always | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Stereo Component Amplifier Assembly) |

*: for 19 Speakers

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 5.CHECK HARNESS AND CONNECTOR (MOST COMMUNICATION LINE)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the F54 radio receiver assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-4 (MI+) - F54-11 (MO+) | Always | Below 1 Ω |
| F63-10 (MI-) - F54-25 (MO-) | Always | Below 1 Ω |
| F63-5 (SLDI) - F54-24 (SLDI) | Always | Below 1 Ω |
| F63-4 (MI+) - Body ground | Always | 10 kΩ or higher |
| F63-10 (MI-) - Body ground | Always | 10 kΩ or higher |
| F63-5 (SLDI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 6.CONFIRM MODEL

a. Choose the model to be inspected.

**Result:**

| Result | Proceed to |
|---|---|
| w/o Rear Seat Entertainment System | A |
| w/ Rear Seat Entertainment System | B |

B → Go to step 9

A

## 7.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY - DISPLAY AND NAVIGATION MODULE DISPLAY)

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the F59 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-6 (MO+) - F59-1 (MI+) | Always | Below 1 Ω |
| F63-12 (MO-) - F59-5 (MI-) | Always | Below 1 Ω |
| F63-11 (SLDO) - F59-2 (SLDI) | Always | Below 1 Ω |
| F63-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| F63-12 (MO-) - Body ground | Always | 10 kΩ or higher |
| F63-11 (SLDO) - | | |

| | | |
|---|---|---|
| Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**8.REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY**

a. Replace the stereo component amplifier assembly ( Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK

**END**

**9.CHECK HARNESS AND CONNECTOR (STEREO COMPONENT AMPLIFIER ASSEMBLY - TELEVISION DISPLAY ASSEMBLY)**

a. Disconnect the F63 stereo component amplifier assembly connector.

b. Disconnect the L50 television display assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F63-6 (MO+) - L50-1 (MI+) | Always | Below 1 Ω |
| F63-12 (MO-) - L50-2 (MI-) | Always | Below 1 Ω |
| F63-11 (SLDO) - L50-3 (SLDI) | Always | Below 1 Ω |
| F63-6 (MO+) - Body ground | Always | 10 kΩ or higher |
| F63-12 (MO-) - Body ground | Always | 10 kΩ or higher |
| F63-11 (SLDO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**10.REPLACE STEREO COMPONENT AMPLIFIER ASSEMBLY**

a. Replace the stereo component amplifier assembly ( Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTCs are output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK
END

## INSPECTION PROCEDURE

### 1.CHECK VEHICLE SIGNAL (OPERATION CHECK)

a. Enter the "Vehicle Signal Check Mode" screen. Refer to Check Vehicle Signal in Operation Check (Click here).

b. Cover the automatic light control sensor on the instrument panel with a cloth.

c. Set the instrument panel light control to less than the maximum (to activate the dimmer function that works when the light control switch is in the TAIL position).

d. Check that the display changes between ON and OFF according to the light control switch operation.

**OK:**

| Light Control Switch Condition | Display Condition |
|---|---|
| TAIL or HEAD | ON |
| OFF | OFF |

**HINT:**

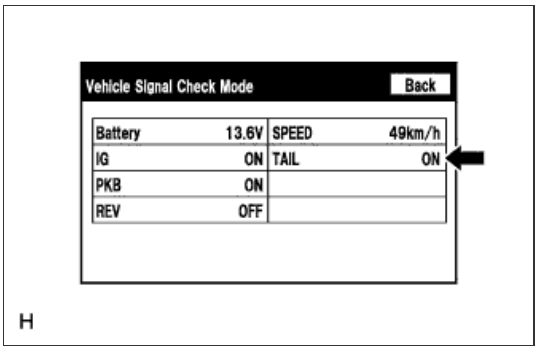
This display is updated once per second. As a result, it is normal for the display to lag behind the actual switch operation.

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE



### 1.CHECK VEHICLE SIGNAL (OPERATION CHECK)

a. Enter the "Vehicle Signal Check Mode" screen. Refer to Check Vehicle Signal in Operation Check (Click here).

b. Cover the automatic light control sensor on the instrument panel with a cloth.

c. Set the instrument panel light control to less than the maximum (to activate the dimmer function that works when the light control switch is in the TAIL position).

d. Check that the display changes between ON and OFF according to the light control switch operation.

**OK:**

| Light Control Switch Condition | Display Condition |
|---|---|
| TAIL or HEAD | ON |
| OFF | OFF |

**HINT:**

This display is updated once per second. As a result, it is normal for the display to lag behind the actual switch operation.

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

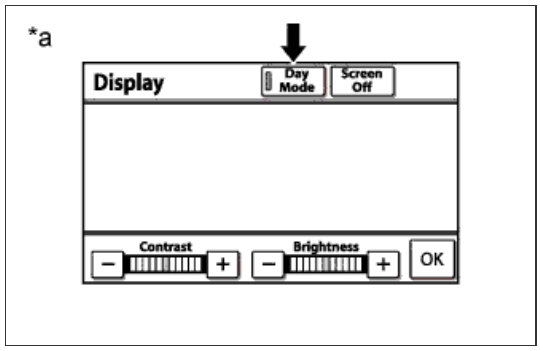
OK → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK IMAGE QUALITY SETTING

a. Enter the display adjustment screen by pressing the "DISP" switch.



b. Turn the light control switch to the TAIL position.

c. Check if "Day Mode" on the display adjustment is on.

**OK:**
**"Day Mode" is on.**

**Text in Illustration**

| | |
|---|---|
| *a | Example: |

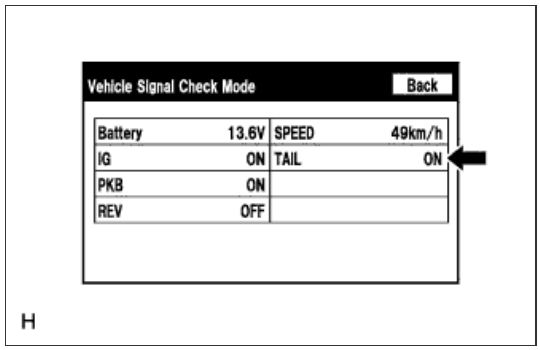
NG → Go to step 2

OK →

### TURN "Day Mode" SETTING OFF

### 2.CHECK VEHICLE SIGNAL (OPERATION CHECK)

a. Enter the "Vehicle Signal Check Mode" screen. Refer to Check Vehicle Signal in Operation Check (Click here).



b. Cover the automatic light control sensor on the instrument panel with a cloth.

c. Set the instrument panel light control to less than the maximum (to activate the dimmer function that works when the light control switch is in the TAIL position).

d. Check that the display changes between ON and OFF according to the light control switch operation.

**OK:**

| Light Control Switch Condition | Display Condition |

OK →

### REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK PANEL SWITCH

a. Check for foreign matter around the switches that might prevent operation.

**OK:**
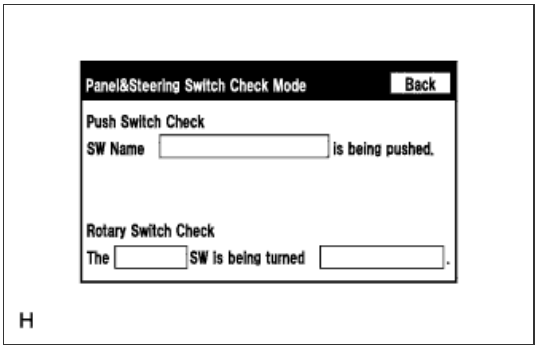
**No foreign matter is found.**

NG → REMOVE ANY FOREIGN MATTER FOUND



OK ↓

### 2.CHECK PANEL SWITCH (OPERATION CHECK)

a. Enter the "Panel & Steering Switch Check Mode" screen. Refer to Check Panel & Steering Switch in Operation Check (Click here).

b. Operate the abnormal switch and check if the switch name and status are correctly displayed.

**OK:**
**The switch name and status are correctly displayed as operated.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK ↓

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK PANEL SWITCH

a. Check for foreign matter around the switches that might prevent operation.

**OK:**
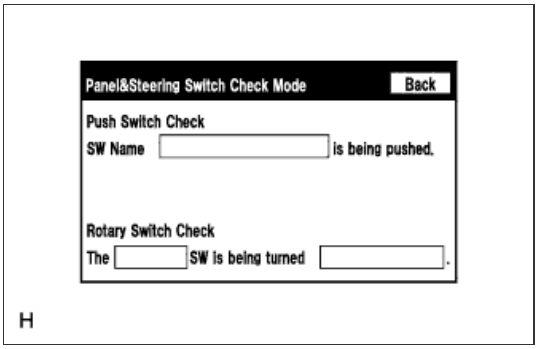
**No foreign matter is found.**

NG → REMOVE ANY FOREIGN MATTER FOUND



OK ↓

### 2.CHECK PANEL SWITCH (OPERATION CHECK)

a. Enter the "Panel & Steering Switch Check Mode" screen. Refer to Check Panel & Steering Switch in Operation Check (Click here).

b. Operate the abnormal switch and check if the switch name and status are correctly displayed.

**OK:**
**The switch name and status are correctly displayed as operated.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK ↓

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK TOUCH PANEL

a. Check for foreign matter on the display.

**OK:**
**The display is clean.**

NG → CLEAN DISPLAY AND RECHECK TOUCH PANEL

OK

### 2.CHECK TOUCH SWITCH (OPERATION CHECK)

a. Enter the "Touch Switch Check" screen. Refer to Check Touch Switch in Operation Check (Click here).

b. Touch the display in the area where the switch malfunction occurs.

**OK:**
**A "+" mark appears at the touched position.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK TOUCH PANEL

a. Check for foreign matter on the display.

**OK:**
**The display is clean.**

NG → CLEAN DISPLAY AND RECHECK TOUCH PANEL

OK

### 2.CHECK TOUCH SWITCH (OPERATION CHECK)

a. Enter the "Touch Switch Check" screen. Refer to Check Touch Switch in Operation Check (Click here).

b. Touch the display in the area where the switch malfunction occurs.

**OK:**
**A "+" mark appears at the touched position.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK DISPLAY SETTING

a. Enter the display adjustment screen by pressing the "DISP" switch.

b. Reset display settings (contrast, brightness) and check that the screen appears normal.

**OK:**
**The display returns to normal.**

Text in Illustration

| | |
|---|---|
| *a | Example: |

NG → Go to step 2

OK →

### END

### 2.CHECK CABIN

a. Check that the temperature in the cabin is neither -20°C (-4°F) or lower nor 65°C (149°F) or higher.

**HINT:**

The electro multi vision system may not operate normally when the temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher.

**OK:**
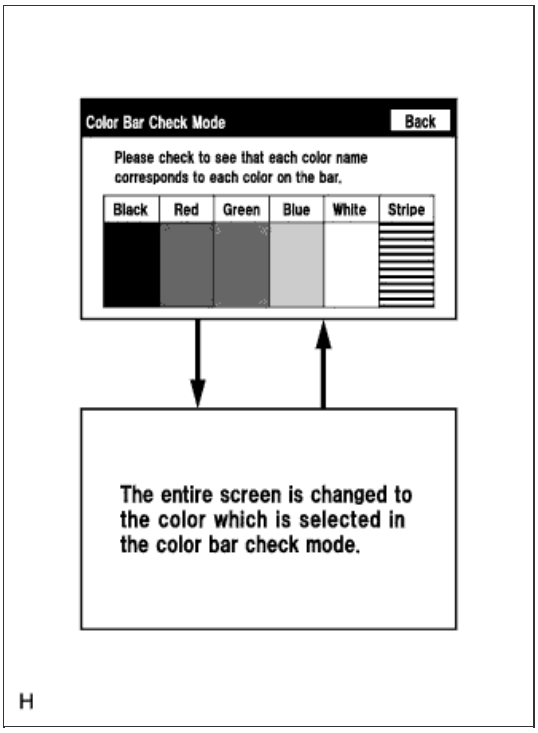
**Temperature in the cabin is between -20°C (-4°F) and 65°C (149°F).**

NG → SET CABIN TO APPROPRIATE TEMPERATURE



OK →

### 3.CHECK COLOR BAR (OPERATION CHECK)

a. Enter the "Color Bar Check Mode" screen. Refer to Check Color Bar in Operation Check (Click here).

b. Check that the color bars match the displayed names.

**OK:**
**Color bars match the displayed names.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK DISPLAY SETTING

a. Enter the display adjustment screen by pressing the "DISP" switch.

b. Reset display settings (contrast, brightness) and check that the screen appears normal.

**OK:**
**The display returns to normal.**

Text in Illustration

| | |
|---|---|
| *a | Example: |

NG → Go to step 2

### END

### 2.CHECK CABIN

a. Check that the temperature in the cabin is neither -20°C (-4°F) or lower nor 65°C (149°F) or higher.

**HINT:**

The electro multi vision system may not operate normally when the temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher.

**OK:**
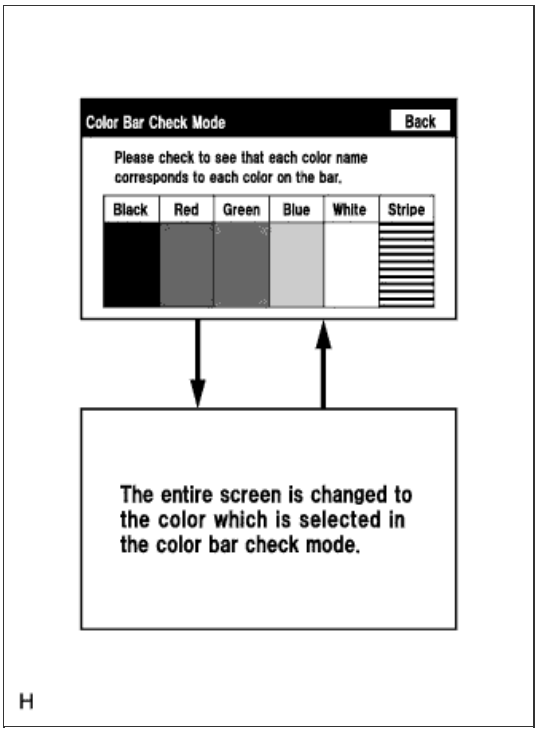
**Temperature in the cabin is between -20°C (-4°F) and 65°C (149°F).**

NG → SET CABIN TO APPROPRIATE TEMPERATURE



OK →

### 3.CHECK COLOR BAR (OPERATION CHECK)

a. Enter the "Color Bar Check Mode" screen. Refer to Check Color Bar in Operation Check (Click here).

b. Check that the color bars match the displayed names.

**OK:**
**Color bars match the displayed names.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK CURRENT CONDITIONS

a. Proceed to the next step according to the table below.

**Result**

| Result | Proceed to |
|---|---|
| Another "Bluetooth" compatible cellular phone is present. | A |
| Another "Bluetooth" compatible vehicle is present. | B |
| None of the above | C |

B → Go to step 3

C → Go to step 4

A

### 2.CHECK USING ANOTHER CELLULAR PHONE

a. Check if the system functions using another "Bluetooth" compatible cellular phone.

**HINT:**

- **Confirm that either the same or a different version of another "Bluetooth" compatible cellular phone complies with the system.**
- **Depending on the version, some "Bluetooth" compatible cellular phones cannot be used.**

**OK:**
**The system functions.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

### USE A "Bluetooth" COMPATIBLE CELLULAR PHONE

### 3.CHECK USING ANOTHER "Bluetooth" COMPATIBLE VEHICLE

a. Register the cellular phone with another vehicle and check if the system functions normally.

**HINT:**

Depending on the version, some "Bluetooth" compatible cellular phones cannot be used.

**OK:**
**The system functions.**

NG → REPAIR OR REPLACE CELLULAR PHONE

OK

### REPLACE RADIO RECEIVER ASSEMBLY (Click here)

### 4.CHECK CELLULAR PHONE

a. Check if the cellular phone is "Bluetooth" compatible.

**HINT:**

Some versions of "Bluetooth" compatible cellular phones may not function.

**OK:**

**The phone is "Bluetooth" compatible.**

NG → USE A "Bluetooth" COMPATIBLE CELLULAR PHONE

OK ↓

5.CHECK CELLULAR PHONE

a. Check if a call can be made from the cellular phone.

**HINT:**

When the battery is low, registration or directory transfer cannot be done.

**OK:**

**A call can be made from the cellular phone.**

NG → REPAIR OR REPLACE CELLULAR PHONE

OK ↓

REPLACE RADIO RECEIVER ASSEMBLY (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK "Bluetooth" SETTINGS

a. Check if the "Bluetooth" settings are correct.

**OK:**
**"Bluetooth" settings are correct.**

NG → SET SETTINGS CORRECTLY

OK

### 2.CHECK CELLULAR PHONE

a. Check if the cellular phone is "Bluetooth" compatible.

**HINT:**

Some versions of "Bluetooth" compatible cellular phones may not function.

**OK:**
**The phone is "Bluetooth" compatible.**

NG → END (ONLY A "Bluetooth" COMPATIBLE CELLULAR PHONE CAN BE USED)

OK

### 3.CHECK SETTINGS

a. Check if the cellular phone functions.

**HINT:**

The cellular phone is unable to call under any of the following conditions:

- **The cellular phone is locked.**
- **The directory is being transferred.**
- **The line is crossed.**
- **Outside service range**
- **The power is off.**
- **The cellular phone is not connected to "Bluetooth" ("BT" is displayed while connected).**

**OK:**
**None of the above conditions exist.**

NG → SET SETTINGS CORRECTLY

OK

### 4.CHECK CELLULAR PHONE

a. Check if the cellular phone can make a call.

**HINT:**

When the battery is low, calls cannot be made or received.

**OK:**
**Cellular phone can make a call.**

NG → REPAIR OR REPLACE CELLULAR PHONE

OK

5.CHECK RECEPTION

a. Set the cellular phone so that it can receive calls.

b. Place the cellular phone close to the radio receiver assembly.

c. Check if the cellular phone has reception according to the radio receiver assembly.

**OK:**
**The cellular phone has reception.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK "Bluetooth" SETTINGS

a. Check if the "Bluetooth" settings are correct.

**OK:**
**"Bluetooth" settings are correct.**

NG → SET SETTINGS CORRECTLY

OK

### 2.CHECK CELLULAR PHONE

a. Check if the cellular phone is "Bluetooth" compatible.

**HINT:**

Some versions of "Bluetooth" compatible cellular phones may not function.

**OK:**
**The phone is "Bluetooth" compatible.**

NG → END (ONLY A "Bluetooth" COMPATIBLE CELLULAR PHONE CAN BE USED)

OK

### 3.CHECK SETTINGS

a. Check if the cellular phone functions.

**HINT:**

The cellular phone is unable to call under any of the following conditions:

- **The cellular phone is locked.**
- **The directory is being transferred.**
- **The line is crossed.**
- **Outside service range**
- **The power is off.**
- **The cellular phone is not connected to "Bluetooth" ("BT" is displayed while connected).**

**OK:**
**None of the above conditions exist.**

NG → SET SETTINGS CORRECTLY

OK

### 4.CHECK CELLULAR PHONE

a. Check if the cellular phone can make a call.

**HINT:**

When the battery is low, calls cannot be made or received.

**OK:**
**Cellular phone can make a call.**

NG → REPAIR OR REPLACE CELLULAR PHONE

OK

5.CHECK RECEPTION

a. Set the cellular phone so that it can receive calls.

b. Place the cellular phone close to the radio receiver assembly.

c. Check if the cellular phone has reception according to the radio receiver assembly.

**OK:**
**The cellular phone has reception.**

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK SURROUNDING CONDITIONS

a. Check if the cellular phone can make calls in a certain place.

**OK:**
**It can make calls.**

NG → END (CELLULAR PHONES CAN ONLY FUNCTION IN CELLULAR SERVICE AREAS)

OK

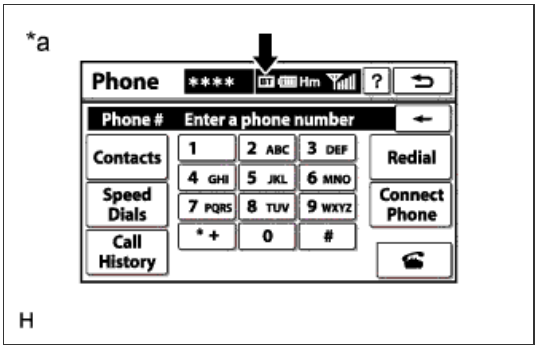
### 2.CHECK RECEPTION



a. Display the "Phone" screen and check the "Bluetooth" connection indicator ("BT" indicator).

**Text in Illustration**

| | |
|---|---|
| *a | Example: |

**Result**

| Result | Proceed to |
|---|---|
| "BT" indicator color is yellow. | A |
| "BT" indicator color is blue. | B |
| No connection mark is displayed. | C |

B → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

C → SELECT A REGISTERED CELLULAR PHONE OR REGISTER "Bluetooth" COMPATIBLE PHONE

A

MOVE CELLULAR PHONE TO LOCATION WHERE "BT" MARK TURNS BLUE

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK CELLULAR PHONE

a. Check if the voice on the other side can be heard using a cellular phone.

**OK:**
**Voice can be heard.**

NG → REPAIR OR REPLACE CELLULAR PHONE

OK

### 2.CHECK SETTINGS

a. Check if the volume level is set to low on the "Call" screen.

**OK:**
**The level is not set low.**

**Text in Illustration**

| | |
|---|---|
| *a | Example: |

NG → SET VOLUME TO HIGH

OK

### 3.CHECK SETTINGS (OPERATION CHECK)

a. Enter the "Hands-free Volume Setting" screen. Refer to Check Hands-free Volume Setting in Operation Check (Click here).

b. Check if the receive voice level is set to "0".

**HINT:**

The receive voice level can be set to 11 different levels, -5 to +5, with a 3 dB difference.

c. Check if the receive voice level is set to the minimum or maximum level.

**HINT:**

When the receive voice level is set to the minimum or maximum level, the sound may be distorted.

**NOTICE:**

"Voice Quality Type" should not be changed.

**OK:**
**The receive voice level is set to "0".**

NG → SET RECEIVE VOICE LEVEL TO "0"

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK CELLULAR PHONE

a. Check if the voice on the other side can be heard using a cellular phone.

**OK:**
**Voice can be heard.**

NG → REPAIR OR REPLACE CELLULAR PHONE

OK

### 2.CHECK SETTINGS

a. Check if the volume level is set to low on the "Call" screen.

**OK:**
**The level is not set low.**

**Text in Illustration**

| | |
|---|---|
| *a | Example: |

NG → SET VOLUME TO HIGH

OK

### 3.CHECK SETTINGS (OPERATION CHECK)

a. Enter the "Hands-free Volume Setting" screen. Refer to Check Hands-free Volume Setting in Operation Check (Click here).

b. Check if the receive voice level is set to "0".

**HINT:**

The receive voice level can be set to 11 different levels, -5 to +5, with a 3 dB difference.

c. Check if the receive voice level is set to the minimum or maximum level.

**HINT:**

When the receive voice level is set to the minimum or maximum level, the sound may be distorted.

**NOTICE:**

"Voice Quality Type" should not be changed.

**OK:**
**The receive voice level is set to "0".**

NG → SET RECEIVE VOICE LEVEL TO "0"

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK CELLULAR PHONE

a. Check if the other caller can hear your voice correctly.

**OK:**
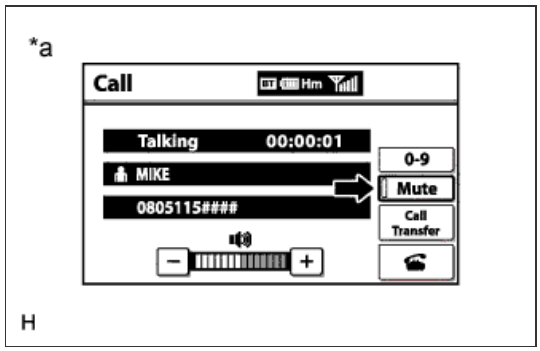
**Your voice can be heard correctly.**



NG → REPLACE CELLULAR PHONE

OK

### 2.CHECK SETTINGS

a. Check if the mute switch is set to on.

**OK:**
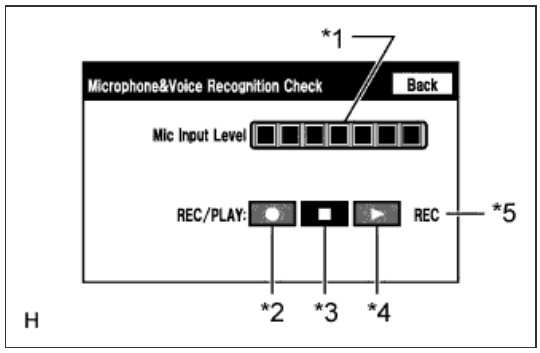
**Mute switch is not set to on.**

Text in Illustration



| | |
|---|---|
| *a | Example: |

NG → TURN MUTE SWITCH OFF

OK

### 3.CHECK MICROPHONE (OPERATION CHECK)

a. Enter the "Microphone & Voice Recognition Check" screen. Refer to Check Mic & Voice Recognition in Operation Check (Click here).

Text in Illustration

| | |
|---|---|
| *1 | Microphone Input Level Meter |
| *2 | Recording Switch |
| *3 | Stop Switch |
| *4 | Play Switch |
| *5 | Recording Indicator |

b. When voice is input into the microphone, check that the microphone input level meter changes according to the input voice.

c. Push the recording switch and perform voice recording.

**HINT:**

Voice can be recorded up to 5 seconds.

d. Check that the recording indicator remains on while recording and that the recorded voice is played normally without noise or distortion.

**OK:**
**All check results are normal.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

**4.REPLACE RADIO RECEIVER ASSEMBLY**

a. Replace the radio receiver assembly ( Click here).

b. Check symptoms again.

**OK:**
**The other caller can hear your voice loud enough without noise or distortion.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

**END**

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK CELLULAR PHONE

a. Check if the other caller can hear your voice correctly.

**OK:**
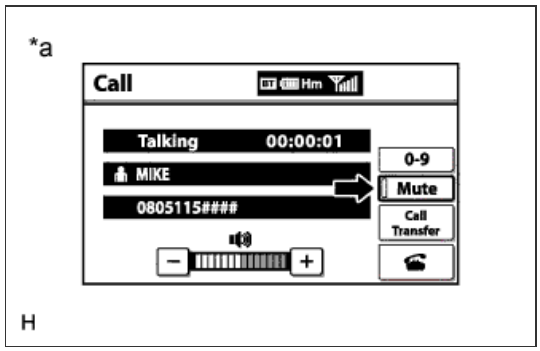
**Your voice can be heard correctly.**



NG → REPLACE CELLULAR PHONE

OK

### 2.CHECK SETTINGS

a. Check if the mute switch is set to on.

**OK:**
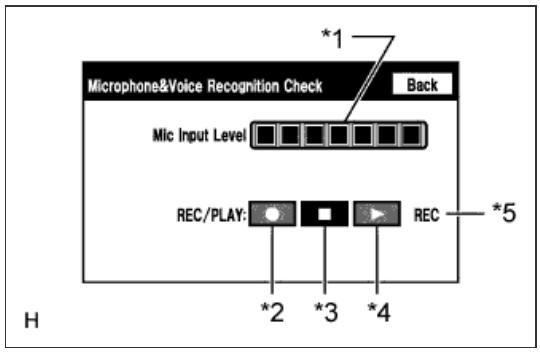
**Mute switch is not set to on.**

Text in Illustration



| | |
|---|---|
| *a | Example: |

NG → TURN MUTE SWITCH OFF

OK

### 3.CHECK MICROPHONE (OPERATION CHECK)

a. Enter the "Microphone & Voice Recognition Check" screen. Refer to Check Mic & Voice Recognition in Operation Check (Click here).

Text in Illustration

| | |
|---|---|
| *1 | Microphone Input Level Meter |
| *2 | Recording Switch |
| *3 | Stop Switch |
| *4 | Play Switch |
| *5 | Recording Indicator |

b. When voice is input into the microphone, check that the microphone input level meter changes according to the input voice.

c. Push the recording switch and perform voice recording.

**HINT:**

Voice can be recorded up to 5 seconds.

d. Check that the recording indicator remains on while recording and that the recorded voice is played normally without noise or distortion.

**OK:**
**All check results are normal.**

NG → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

OK

**4.REPLACE RADIO RECEIVER ASSEMBLY**

a. Replace the radio receiver assembly ( Click here).

b. Check symptoms again.

**OK:**
**The other caller can hear your voice loud enough without noise or distortion.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

**END**

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK DISPLAY SETTING

a. Check that the display is not in "Screen Off" mode.

**OK:**
**The display setting is not in "Screen Off" mode.**

NG → CHANGE SCREEN TO "Screen On" MODE

OK ↓

### 2.CHECK IMAGE QUALITY SETTING

a. Check that the screen color quality can be set.

**OK:**
**Setting is possible.**

NG → Go to step 3

OK ↓

PRESS PANEL SWITCH "DISP" AND SET SCREEN COLOR QUALITY TO NORMAL

### 3.CHECK CABIN

a. Check that condensation is not likely to occur in the cabin, and that the temperature is not high or extremely low in the cabin.

**HINT:**

- **A humid cabin and a rapid change in temperature may lead to condensation. Condensation in the cabin may cause a short circuit.**
- **The electro multi vision system may not operate normally when the temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher.**

**OK:**
**Condensation is not likely being produced and the temperature is not high or extremely low.**

NG → SET CABIN TO APPROPRIATE TEMPERATURE

OK ↓

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK DISPLAY SETTING

a. Check that the display is not in "Screen Off" mode.

**OK:**
**The display setting is not in "Screen Off" mode.**

NG → CHANGE SCREEN TO "Screen On" MODE

OK ↓

### 2.CHECK IMAGE QUALITY SETTING

a. Check that the screen color quality can be set.

**OK:**
**Setting is possible.**

NG → Go to step 3

OK ↓

PRESS PANEL SWITCH "DISP" AND SET SCREEN COLOR QUALITY TO NORMAL

### 3.CHECK CABIN

a. Check that condensation is not likely to occur in the cabin, and that the temperature is not high or extremely low in the cabin.

**HINT:**

- **A humid cabin and a rapid change in temperature may lead to condensation. Condensation in the cabin may cause a short circuit.**
- **The electro multi vision system may not operate normally when the temperature is -20°C (-4°F) or lower, or 65°C (149°F) or higher.**

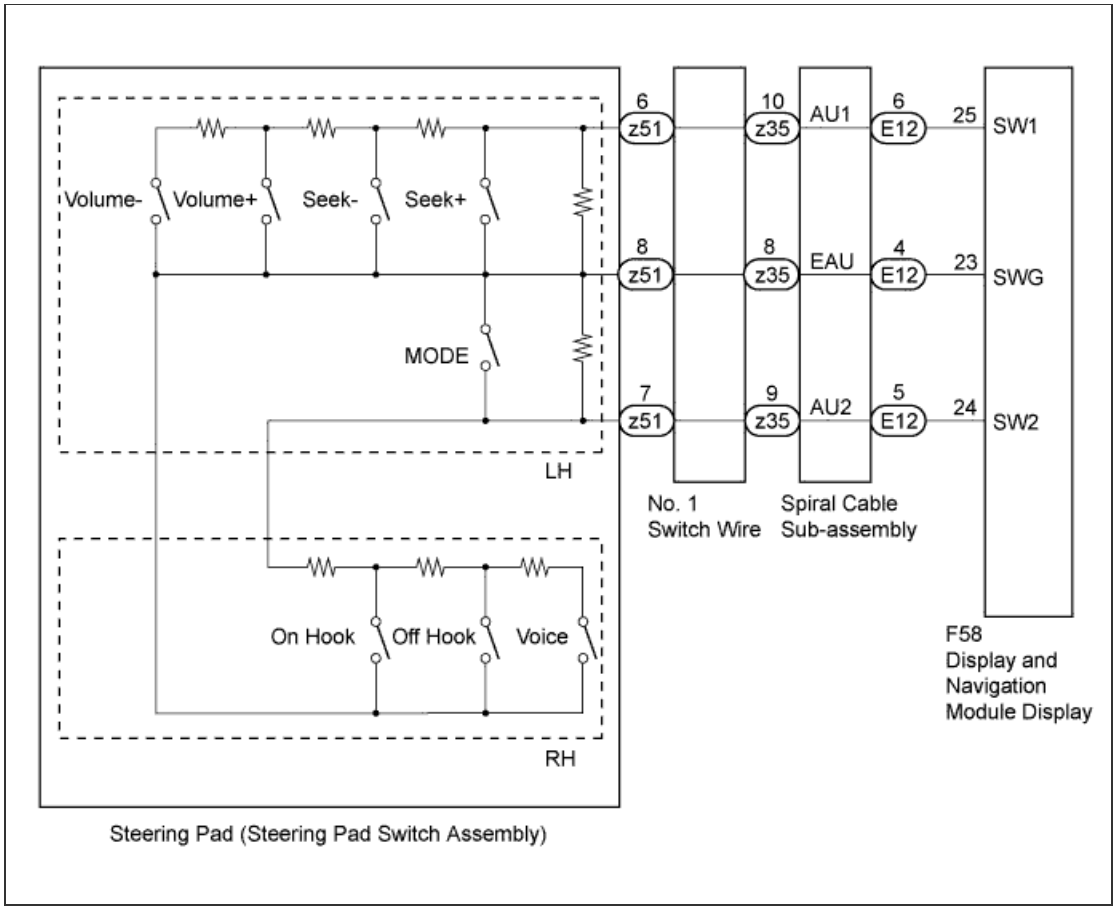
**Condensation is not likely being produced and the temperature is not high or extremely low.**

NG → SET CABIN TO APPROPRIATE TEMPERATURE

OK ↓



PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## DESCRIPTION

This circuit sends an operation signal from the steering pad (steering pad switch assembly) to the radio receiver assembly.
If there is an open in the circuit, the electro multi vision system cannot be operated using the steering pad (steering pad switch assembly).
If there is a short in the circuit, the resulting condition is the same as if the switch were continuously depressed. Therefore, the electro multi vision system cannot be operated using the steering pad (steering pad switch assembly), and the electro multi vision system itself cannot function.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

The vehicle is equipped with an SRS (Supplemental Restraint System) which includes components such as airbags. Before servicing (including removal or installation of parts), be sure to read the Precaution in the Supplemental Restraint System (Click here).

### 1.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - SPIRAL CABLE)

a. Disconnect the F58 display and navigation module display connector.

b. Disconnect the E12 cable connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-24 (SW2) - E12-5 (AU2) | Always | Below 1 Ω |
| F58-23 (SWG) - E12-4 (EAU) | Always | Below 1 Ω |
| F58-25 (SW1) - E12-6 (AU1) | Always | Below 1 Ω |
| | | |

| | | |
|---|---|---|
| F58-24 (SW2) - Body ground | Always | 10 kΩ or higher |
| F58-23 (SWG) - Body ground | Always | 10 kΩ or higher |
| F58-25 (SW1) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 2.CHECK NO. 1 SWITCH WIRE

a. Disconnect the z35 cable connector.

b. Disconnect the z51 steering pad switch connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| z35-10 - z51-6 | Always | Below 1 Ω |
| z35-9 - z51-7 | Always | Below 1 Ω |
| z35-8 - z51-8 | Always | Below 1 Ω |
| z35-10 - Body ground | Always | 10 kΩ or higher |
| z35-9 - Body ground | Always | 10 kΩ or higher |
| z35-8 - Body ground | Always | 10 kΩ or higher |

NG → REPLACE NO. 1 SWITCH WIRE

OK

## 3.INSPECT SPIRAL CABLE SUB-ASSEMBLY

**Text in Illustration**

| | | | |
|---|---|---|---|
| *1 | Component without harness connected (Spiral Cable Sub-assembly) | *2 | Steering Pad Switch Assembly Side |
| *3 | Vehicle Side | - | - |

a. Disconnect the z35 and E12 cable connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
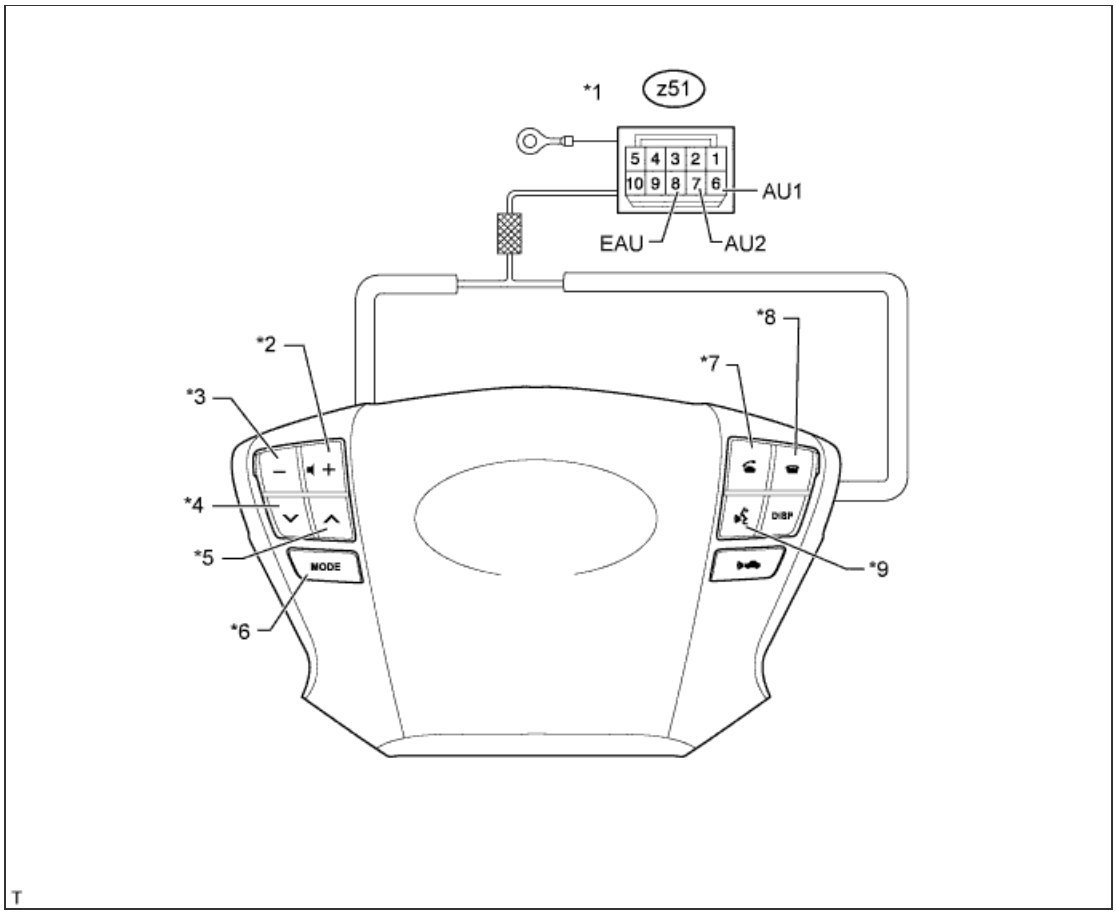
| E12-4 (EAU) - z35-8 (EAU) | Spiral cable is turned 2.5 rotations counterclockwise | Below 3 Ω |
| | Spiral cable is centered | |
| | Spiral cable is turned 2.5 rotations clockwise | |
| E12-5 (AU2) - z35-9 (AU2) | Spiral cable is turned 2.5 rotations counterclockwise | Below 3 Ω |
| | Spiral cable is centered | |
| | Spiral cable is turned 2.5 rotations clockwise | |
| E12-6 (AU1) - z35-10 (AU1) | Spiral cable is turned 2.5 rotations counterclockwise | Below 3 Ω |
| | Spiral cable is centered | |
| | Spiral cable is turned 2.5 rotations clockwise | |



**NOTICE:**

The spiral cable is an important part of the SRS airbag system. Incorrect removal or installation of the spiral cable may prevent the airbag from deploying. Be sure to read the Precaution for the supplemental restraint system (Click here).

NG → REPLACE SPIRAL CABLE SUB-ASSEMBLY (**Click here**)

OK

**4.INSPECT STEERING PAD (STEERING PAD SWITCH ASSEMBLY)**

**Text in Illustration (w/ Dynamic Radar Cruise Control System:)**

| | | | |
|---|---|---|---|
| *1 | Component without harness connected<br>(Steering Pad Switch Assembly) | *2 | Volume+ |

| *3 | Volume- | *4 | Seek- |
| *5 | Seek+ | *6 | MODE |
| *7 | Off Hook | *8 | On Hook |
| *9 | Voice Switch | - | - |

a. Disconnect the z51 steering pad switch connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| 6 (AU1) - 8 (EAU) | No switch is pushed | 95 to 105 kΩ |
| 6 (AU1) - 8 (EAU) | Seek+ switch pushed | Below 2.5 Ω |
| 6 (AU1) - 8 (EAU) | Seek- switch pushed | 312 to 345 Ω |
| 6 (AU1) - 8 (EAU) | Volume+ switch pushed | 950 to 1050 Ω |
| 6 (AU1) - 8 (EAU) | Volume- switch pushed | 2954 to 3265 Ω |
| 7 (AU2) - 8 (EAU) | No switch is pushed | 95 to 105 kΩ |
| 7 (AU2) - 8 (EAU) | MODE switch pushed | Below 2.5 Ω |
| 7 (AU2) - 8 (EAU) | On hook switch pushed | 312 to 345 Ω |
| 7 (AU2) - 8 (EAU) | Off hook switch pushed | 950 to 1050 Ω |
| 7 (AU2) - 8 (EAU) | Voice switch pushed | 2950 to 3265 Ω |

NG

REPLACE STEERING PAD (STEERING PAD SWITCH ASSEMBLY) (Click here)

## DESCRIPTION

Power is supplied to the display and navigation module display, radio receiver and steering pad (steering pad switch assembly) illumination when the light control switch is in the TAIL or HEAD position.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

The vehicle is equipped with an SRS (Supplemental Restraint System) which includes components such as airbags. Before servicing (including removal or installation of parts), be sure to read the Precaution in the Supplemental Restraint System (Click here).

### 1.CHECK ILLUMINATION

a. Check if the illumination for the display and navigation module display, steering pad switch, glove box light, cigarette lighter, or other parts (seat heater switch, front seat memory switch, etc.) comes on when the light control switch is turned to the HEAD or TAIL position.

**Result**

| Result | Proceed to |
|---|---|
| Illumination comes on for all components except | A |

| | |
|---|---|
| steering pad switch. | |
| Illumination comes on for all components except radio receiver. | B |
| Illumination comes on for all components except display and navigation assembly. | C |
| No illumination comes on for all components. | D |

B → Go to step 7

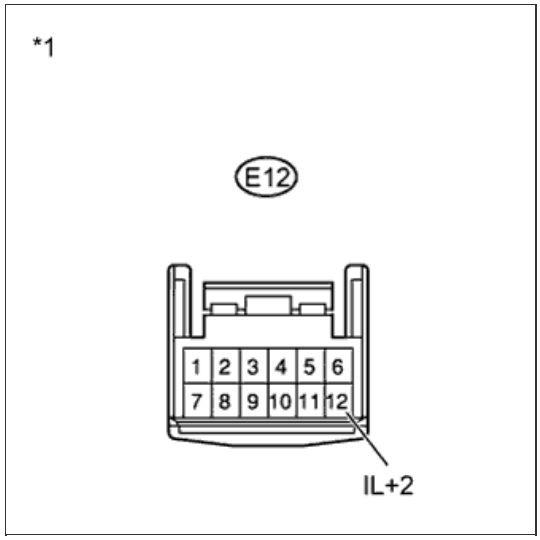
C → Go to step 8

D → GO TO LIGHTING SYSTEM (Click here)

A

## 2.CHECK HARNESS AND CONNECTOR (BATTERY - SPIRAL CABLE)

a. Disconnect the E12 cable connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| E12-12 (IL+2) - Body ground | Always | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Spiral Cable) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 3.CHECK NO. 1 SWITCH WIRE

a. Disconnect the z35 cable connector.

b. Disconnect the z51 steering pad switch connector.

c. Measure the resistance according to the valvue(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| z35-8 - z51-8 | Always | Below 1 Ω |
| z35-5 - z51-1 | Always | Below 1 Ω |
| z35-8 - Body ground | Always | 10 kΩ or higher |
| z35-5 - Body ground | Always | 10 kΩ or higher |

NG → REPLACE NO. 1 SWITCH WIRE

OK

## 4.INSPECT STEERING PAD (STEERING PAD SWITCH ASSEMBLY)

**Text in Illustration (w/ Dynamic Radar Cruise Control System:)**

| | | | |
|---|---|---|---|
| *1 | Component without harness connected<br>(Steering Pad Switch Assembly) | - | - |

**Text in Illustration (w/o Dynamic Radar Cruise Control System:)**

| | | | |
|---|---|---|---|
| *1 | Component without harness connected<br>(Steering Pad Switch Assembly) | - | - |

a. Disconnect the z51 steering pad switch connector.

b. Connect the positive (+) lead to terminal 1 (IL+2) and the negative (-) lead to terminal 8 (EAU) of the steering pad switch connector.

c. Check if the illumination for the steering pad switch comes on.

**OK:**

**Illumination for the steering pad switch comes on.**

NG → REPLACE STEERING PAD (STEERING PAD SWITCH ASSEMBLY) (Click here)

OK

## 5.INSPECT SPIRAL CABLE SUB-ASSEMBLY

**Text in Illustration**

| | | | |
|---|---|---|---|
| *1 | Component without harness connected<br>(Spiral Cable Sub-assembly) | *2 | Steering Pad Switch Assembly Side |
| *3 | Vehicle Side | - | - |

a. Disconnect the cable connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Spiral Cable Position | Specified Condition |
|---|---|---|
| E12-12 (IL+2) - z35-5 (IL+2) | 2.5 rotations to left | Below 3 Ω |
| | Center | |
| | 2.5 rotations to right | |
| E12-4 (EAU) - z35-8 (EAU) | 2.5 rotations to left | Below 3 Ω |
| | Center | |
| | 2.5 rotations to right | |

**NOTICE:**

The spiral cable is an important part of the SRS airbag system. Incorrect removal or installation of the spiral cable may prevent the airbag from deploying. Be sure to read the Precaution for the supplemental restraint system (Click here).

NG → REPLACE SPIRAL CABLE SUB-ASSEMBLY (Click here)

OK

## 6.CHECK HARNESS AND CONNECTOR (SPIRAL CABLE - DISPLAY AND NAVIGATION MODULE DISPLAY AND RADIO RECEIVER)

a. Disconnect the E12 spiral cable connector.

b. Disconnect the F54 receiver connector.

c. Disconnect the F57 and F58 display and navigation module display connectors.

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| E12-12 (IL+2) - F58-12 (ILL+) | Always | Below 1 Ω |
| E12-12 (IL+2) - F54-3 (ILL+) | Always | Below 1 Ω |
| E12-4 (EAU) - F58-23 (SWG) | Always | Below 1 Ω |
| E12-12 (IL+2) - Body ground | Always | 10 kΩ or higher |
| E12-4 (EAU) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

7.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - COMBINATION METER)

a. Disconnect the F54 receiver connector.

b. Disconnect the E77 meter connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-17 (ILL-) - E77-17 (ILL-) | Always | Below 1 Ω |
| F54-17 (ILL-) - Body ground | Always | 10 kΩ or higher |

d. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F54-3 (ILL+) - Body ground | Light control Switch TAIL or HEAD | 11 to 14 V |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE RADIO RECEIVER ASSEMBLY (Click here)

8.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - BATTERY AND COMBINATION METER)

a. Disconnect the F57 and F58 display and navigation module display connectors.

b. Disconnect the E77 meter connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F57-1 (HILL) - E77-17 (ILL-) | Always | Below 1 Ω |
| F57-1 (HILL) - Body ground | Always | 10 kΩ or higher |

d. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F58-12 (ILL+) - Body ground | Light control switch TAIL or HEAD | 11 to 14 V |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

**for Preparation** Click here

## DESCRIPTION

Power is supplied to the display and navigation module display, radio receiver and steering pad (steering pad switch assembly) illumination when the light control switch is in the TAIL or HEAD position.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

The vehicle is equipped with an SRS (Supplemental Restraint System) which includes components such as airbags. Before servicing (including removal or installation of parts), be sure to read the Precaution in the Supplemental Restraint System (Click here).

### 1.CHECK ILLUMINATION

a. Check if the illumination for the display and navigation module display, steering pad switch, glove box light, cigarette lighter, or other parts (seat heater switch, front seat memory switch, etc.) comes on when the light control switch is turned to the HEAD or TAIL position.

**Result**

| Result | Proceed to |
|---|---|
| Illumination comes on for all components except | A |

| | |
|---|---|
| steering pad switch. | |
| Illumination comes on for all components except radio receiver. | B |
| Illumination comes on for all components except display and navigation assembly. | C |
| No illumination comes on for all components. | D |

B → Go to step 7

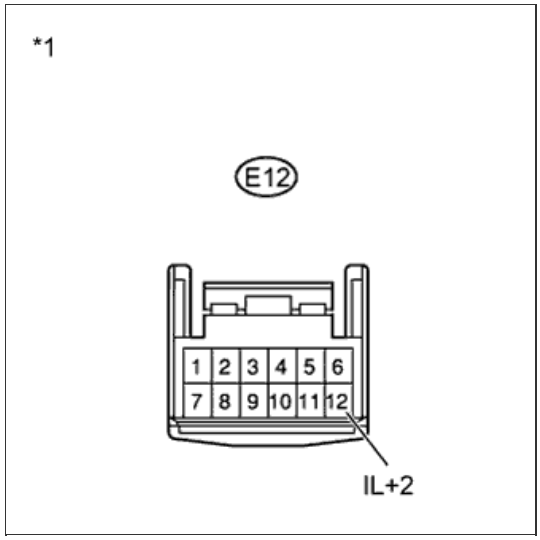
C → Go to step 8

D → GO TO LIGHTING SYSTEM (Click here)

A

## 2.CHECK HARNESS AND CONNECTOR (BATTERY - SPIRAL CABLE)

a. Disconnect the E12 cable connector.



b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| E12-12 (IL+2) - Body ground | Always | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Spiral Cable) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 3.CHECK NO. 1 SWITCH WIRE

a. Disconnect the z35 cable connector.

b. Disconnect the z51 steering pad switch connector.

c. Measure the resistance according to the valvue(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| z35-8 - z51-8 | Always | Below 1 Ω |
| z35-5 - z51-1 | Always | Below 1 Ω |
| z35-8 - Body ground | Always | 10 kΩ or higher |
| z35-5 - Body ground | Always | 10 kΩ or higher |

NG → REPLACE NO. 1 SWITCH WIRE

OK

## 4.INSPECT STEERING PAD (STEERING PAD SWITCH ASSEMBLY)

**Text in Illustration (w/ Dynamic Radar Cruise Control System:)**

| | | | |
|---|---|---|---|
| *1 | Component without harness connected<br>(Steering Pad Switch Assembly) | - | - |

**Text in Illustration (w/o Dynamic Radar Cruise Control System:)**

| | | | |
|---|---|---|---|
| *1 | Component without harness connected<br>(Steering Pad Switch Assembly) | - | - |

a. Disconnect the z51 steering pad switch connector.

b. Connect the positive (+) lead to terminal 1 (IL+2) and the negative (-) lead to terminal 8 (EAU) of the steering pad switch connector.

c. Check if the illumination for the steering pad switch comes on.

**OK:**

**Illumination for the steering pad switch comes on.**

NG → REPLACE STEERING PAD (STEERING PAD SWITCH ASSEMBLY) (Click here)

OK

## 5.INSPECT SPIRAL CABLE SUB-ASSEMBLY

**Text in Illustration**

| | | | |
|---|---|---|---|
| *1 | Component without harness connected<br>(Spiral Cable Sub-assembly) | *2 | Steering Pad Switch Assembly Side |
| *3 | Vehicle Side | - | - |

a. Disconnect the cable connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Spiral Cable Position | Specified Condition |
|---|---|---|
| E12-12 (IL+2) - z35-5 (IL+2) | 2.5 rotations to left | Below 3 Ω |
| | Center | |
| | 2.5 rotations to right | |
| E12-4 (EAU) - z35-8 (EAU) | 2.5 rotations to left | Below 3 Ω |
| | Center | |
| | 2.5 rotations to right | |

**NOTICE:**

The spiral cable is an important part of the SRS airbag system. Incorrect removal or installation of the spiral cable may prevent the airbag from deploying. Be sure to read the Precaution for the supplemental restraint system (Click here).

NG → REPLACE SPIRAL CABLE SUB-ASSEMBLY (Click here)

OK

## 6.CHECK HARNESS AND CONNECTOR (SPIRAL CABLE - DISPLAY AND NAVIGATION MODULE DISPLAY AND RADIO RECEIVER)

a. Disconnect the E12 spiral cable connector.

b. Disconnect the F54 receiver connector.

c. Disconnect the F57 and F58 display and navigation module display connectors.

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| E12-12 (IL+2) - F58-12 (ILL+) | Always | Below 1 Ω |
| E12-12 (IL+2) - F54-3 (ILL+) | Always | Below 1 Ω |
| E12-4 (EAU) - F58-23 (SWG) | Always | Below 1 Ω |
| E12-12 (IL+2) - Body ground | Always | 10 kΩ or higher |
| E12-4 (EAU) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

7.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - COMBINATION METER)

a. Disconnect the F54 receiver connector.

b. Disconnect the E77 meter connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-17 (ILL-) - E77-17 (ILL-) | Always | Below 1 Ω |
| F54-17 (ILL-) - Body ground | Always | 10 kΩ or higher |

d. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F54-3 (ILL+) - Body ground | Light control Switch TAIL or HEAD | 11 to 14 V |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE RADIO RECEIVER ASSEMBLY (Click here)

8.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - BATTERY AND COMBINATION METER)

a. Disconnect the F57 and F58 display and navigation module display connectors.

b. Disconnect the E77 meter connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F57-1 (HILL) - E77-17 (ILL-) | Always | Below 1 Ω |
| F57-1 (HILL) - Body ground | Always | 10 kΩ or higher |

d. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F58-12 (ILL+) - Body ground | Light control switch TAIL or HEAD | 11 to 14 V |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

**for Preparation** Click here

## DESCRIPTION

This circuit is from the parking brake switch assembly to the display and navigation module display.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK BRAKE WARNING LIGHT

a. Check that the brake warning light comes on when the parking brake is applied and goes off when it is released.

**OK:**
**The brake warning light operates as specified above.**

NG → Go to step 3

OK ↓

### 2.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - PARKING BRAKE SWITCH ASSEMBLY)

a. Disconnect the F58 display and navigation module display connector.

b. Disconnect the E53 parking brake switch assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester connection | Condition | Specified condition |
|---|---|---|
| F58-17 (PKB) - E53-1 | Always | Below 1 Ω |
| F58-17 (PKB) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

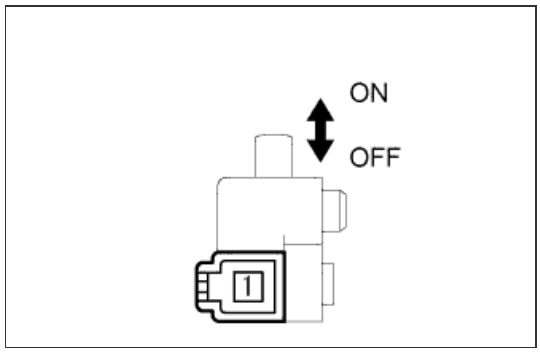
OK ↓

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)



### 3.INSPECT PARKING BRAKE SWITCH ASSEMBLY

a. Disconnect the parking brake switch assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester connection | Switch Condition | Specified condition |
|---|---|---|
| 1 - Switch body | ON (When shaft is not pressed) | Below 1 Ω |
| 1 - Switch body | OFF (When shaft is pressed) | 10 kΩ or higher |

NG → REPLACE PARKING BRAKE SWITCH ASSEMBLY (Click here)

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR (PARKING BRAKE SWITCH - BODY GROUND)

**for Preparation** Click here

## DESCRIPTION

This circuit is from the parking brake switch assembly to the display and navigation module display.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK BRAKE WARNING LIGHT

a. Check that the brake warning light comes on when the parking brake is applied and goes off when it is released.

**OK:**
**The brake warning light operates as specified above.**

NG → Go to step 3

OK ↓

### 2.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - PARKING BRAKE SWITCH ASSEMBLY)

a. Disconnect the F58 display and navigation module display connector.

b. Disconnect the E53 parking brake switch assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester connection | Condition | Specified condition |
|---|---|---|
| F58-17 (PKB) - E53-1 | Always | Below 1 Ω |
| F58-17 (PKB) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

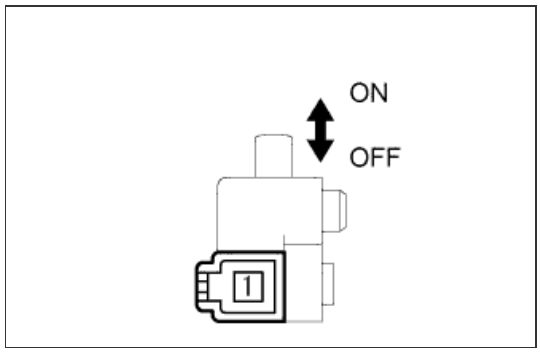
OK ↓

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)



### 3.INSPECT PARKING BRAKE SWITCH ASSEMBLY

a. Disconnect the parking brake switch assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester connection | Switch Condition | Specified condition |
|---|---|---|
| 1 - Switch body | ON (When shaft is not pressed) | Below 1 Ω |
| 1 - Switch body | OFF (When shaft is pressed) | 10 kΩ or higher |

NG → REPLACE PARKING BRAKE SWITCH ASSEMBLY (Click here)

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR (PARKING BRAKE SWITCH - BODY GROUND)

**for Preparation** Click here

## DESCRIPTION

Each unit of the electro multi vision system connected to the AVC-LAN (communication bus) transfers switch signals by the AVC-LAN.
If a short to +B or short to ground occurs in this AVC-LAN, the electro multi vision system will not function normally as communication is stopped.

## INSPECTION PROCEDURE

**NOTICE:**

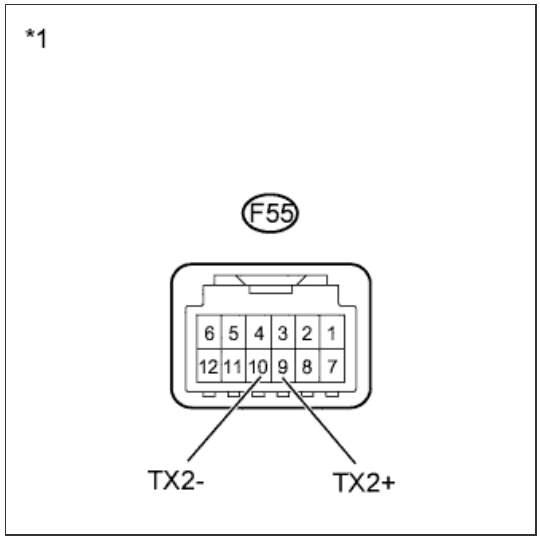
The display and navigation module display is the master unit.

### 1.INSPECT DISPLAY AND NAVIGATION MODULE DISPLAY

a. Disconnect the F55 display and navigation module display connector.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F55-9 (TX2+) - F55-10 (TX2-) | Always | 60 to 80 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Display and Navigation Module Display) |

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

### 2.CHECK HARNESS AND CONNECTOR (AVC-LAN CIRCUIT)

**HINT:**

For details of the connectors, refer to Terminals of ECU ( Click here).

a. Referring to the AVC-LAN wiring diagram below, check all AVC-LAN circuits.

i. Disconnect all connectors in all AVC-LAN circuits.

ii. Check for an open or short in all AVC-LAN circuits.

AVC-LAN WIRING DIAGRAM:

*1: Master Unit

*2: Slave Unit

**OK:**

**There is no open or short circuit.**

| | |
|---|---|
| NG | REPAIR OR REPLACE HARNESS OR CONNECTOR |

OK

**3.INSPECT MALFUNCTIONING PARTS**

a. Disconnect and reconnect each slave unit one by one until the master unit returns to normal operation.

**HINT:**

- **Check all slave units.**
- **If disconnecting a slave unit causes the master unit to return to normal operation, the slave unit is defective and should be replaced.**

**OK:**

**Master unit returns to normal operation.**

| | |
|---|---|
| NG | REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here) |

OK

**REPLACE MALFUNCTIONING PARTS**

**for Preparation** Click here

## DESCRIPTION

Each unit of the electro multi vision system connected to the AVC-LAN (communication bus) transfers switch signals by the AVC-LAN.
If a short to +B or short to ground occurs in this AVC-LAN, the electro multi vision system will not function normally as communication is stopped.

## INSPECTION PROCEDURE

**NOTICE:**

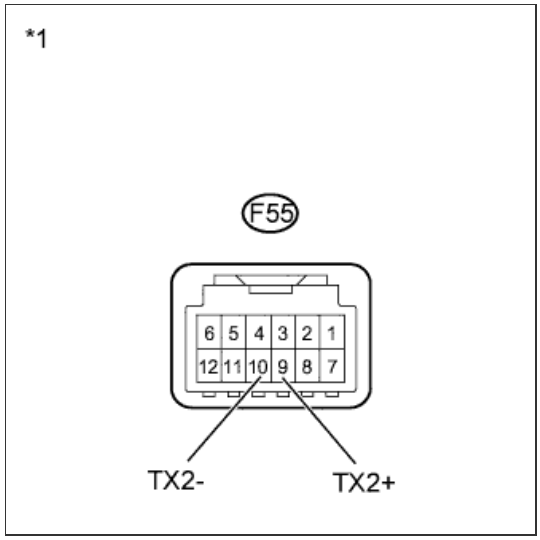
The display and navigation module display is the master unit.

### 1.INSPECT DISPLAY AND NAVIGATION MODULE DISPLAY

a. Disconnect the F55 display and navigation module display connector.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F55-9 (TX2+) - F55-10 (TX2-) | Always | 60 to 80 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Display and Navigation Module Display) |

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

### 2.CHECK HARNESS AND CONNECTOR (AVC-LAN CIRCUIT)

**HINT:**

For details of the connectors, refer to Terminals of ECU ( Click here).

a. Referring to the AVC-LAN wiring diagram below, check all AVC-LAN circuits.

i. Disconnect all connectors in all AVC-LAN circuits.

ii. Check for an open or short in all AVC-LAN circuits.

AVC-LAN WIRING DIAGRAM:

*1: Master Unit

*2: Slave Unit

**OK:**

**There is no open or short circuit.**

| | |
|---|---|
| NG | REPAIR OR REPLACE HARNESS OR CONNECTOR |

OK

**3.INSPECT MALFUNCTIONING PARTS**

a. Disconnect and reconnect each slave unit one by one until the master unit returns to normal operation.

**HINT:**

- **Check all slave units.**
- **If disconnecting a slave unit causes the master unit to return to normal operation, the slave unit is defective and should be replaced.**

**OK:**

**Master unit returns to normal operation.**

**for Preparation** Click here

## DESCRIPTION

This circuit sends a DVD image signal from the radio receiver assembly to the display and navigation module display.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER ASSEMBLY - DISPLAY AND NAVIGATION MODULE DISPLAY)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F60 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-8 (NTSC) - F60-9 (VV+) | Always | Below 1 Ω |
| F54-22 (GND) - F60-20 (VV-) | Always | Below 1 Ω |
| F54-8 (NTSC) - Body ground | Always | 10 kΩ or higher |
| F54-22 (GND) - Body ground | Always | 10 kΩ or higher |
| F54-7 (SLD) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

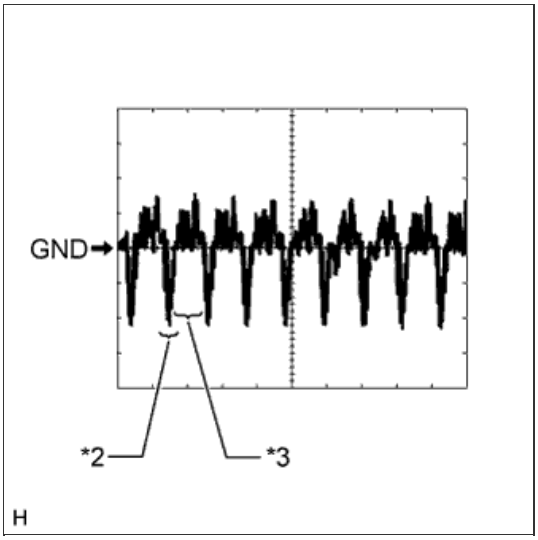
### 2.INSPECT RADIO RECEIVER ASSEMBLY (DVD IMAGE SIGNAL)



a. Reconnect the F54 radio receiver assembly connector.

b. Check the waveform according to the table below.

c. Oscilloscope waveform

| Item | Content |
|---|---|
| Measurement terminal | F54-8 (NTSC) - Body ground |
| Measurement setting | 200 mV/DIV., 10 µs/DIV. |
| Condition | DVD display is on |

**HINT:**

The video waveform changes according to the image output from the radio receiver assembly to the display and navigation module display, but the synchronization signal does not change.

**Text in Illustration**

| | |
|---|---|
| *1 | Component with harness connected (Radio Receiver Assembly) |
| *2 | Synchronization Signal |
| *3 | Video Waveform |

NG → REPLACE RADIO RECEIVER ASSEMBLY (Click here)

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## DESCRIPTION

This circuit sends a DVD image signal from the radio receiver assembly to the display and navigation module display.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK HARNESS AND CONNECTOR (RADIO RECEIVER ASSEMBLY - DISPLAY AND NAVIGATION MODULE DISPLAY)

a. Disconnect the F54 radio receiver assembly connector.

b. Disconnect the F60 display and navigation module display connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F54-8 (NTSC) - F60-9 (VV+) | Always | Below 1 Ω |
| F54-22 (GND) - F60-20 (VV-) | Always | Below 1 Ω |
| F54-8 (NTSC) - Body ground | Always | 10 kΩ or higher |
| F54-22 (GND) - Body ground | Always | 10 kΩ or higher |
| F54-7 (SLD) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

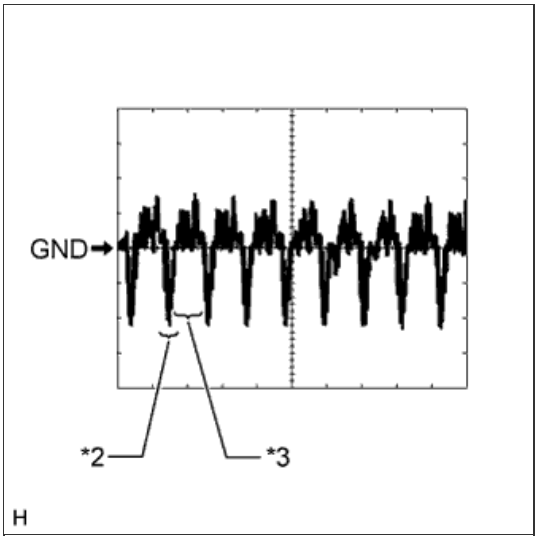
### 2.INSPECT RADIO RECEIVER ASSEMBLY (DVD IMAGE SIGNAL)



a. Reconnect the F54 radio receiver assembly connector.

b. Check the waveform according to the table below.

c. Oscilloscope waveform

| Item | Content |
|---|---|
| Measurement terminal | F54-8 (NTSC) - Body ground |
| Measurement setting | 200 mV/DIV., 10 µs/DIV. |
| Condition | DVD display is on |

**HINT:**

The video waveform changes according to the image output from the radio receiver assembly to the display and navigation module display, but the synchronization signal does not change.

## DESCRIPTION

This circuit sends a microphone signal from the map light assembly (telephone microphone assembly) to the display and navigation module display. It also supplies power from the display and navigation module display to the map light assembly (telephone microphone assembly).

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - MAP LIGHT ASSEMBLY)

a. Disconnect the F58 display and navigation module display connector.

b. Disconnect the R7 map light assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-20 (SNS2) - R7-31 (SNS2) | Always | Below 1 Ω |
| F58-4 (MACC) - R7-22 (ACC) | Always | Below 1 Ω |
| F58-5 (MIN+) - R7-21 (MI1+) | Always | Below 1 Ω |
| F58-6 (MIN-) - R7-20 (MIC-) | Always | Below 1 Ω |
| F58-20 (SNS2) - Body ground | Always | 10 kΩ or higher |
| F58-4 (MACC) - Body ground | Always | 10 kΩ or higher |
| F58-5 (MIN+) - Body ground | Always | 10 kΩ or higher |
| F58-6 (MIN-) - Body ground | Always | 10 kΩ or higher |
| F58-7 (SGND) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

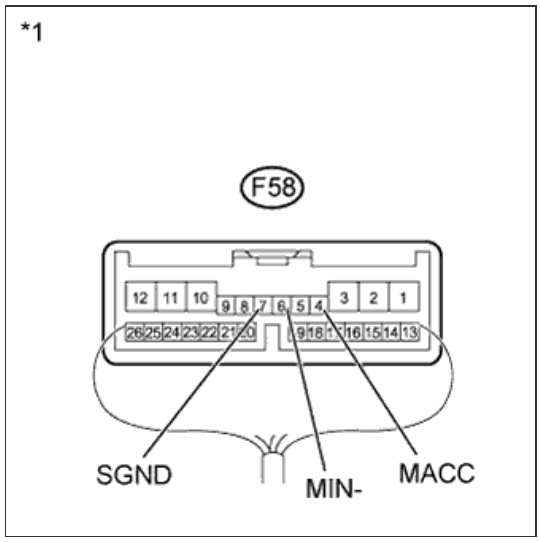
## 2.INSPECT DISPLAY AND NAVIGATION MODULE DISPLAY

a. Reconnect the F58 display and navigation module display connector.

b. Measure the voltage according to the value(s) in the table below.



**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F58-4 (MACC) - Body ground | Engine switch on (ACC) | 4 to 6 V |

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-7 (SGND) - Body ground | Always | Below 1 Ω |
| F58-6 (MIN-) - Body ground | Always | Below 1 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component with harness connected (Display and Navigation Module Display) |

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

## 3.INSPECT MAP LIGHT ASSEMBLY

a. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| R7-31 (SNS2) - R7-20 (MIC-) | Always | Below 1 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Map Light Assembly) |

NG → Go to step 4

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

4.REPLACE TELEPHONE MICROPHONE ASSEMBLY

a. Replace the telephone microphone assembly ( Click here).

**NOTICE:**

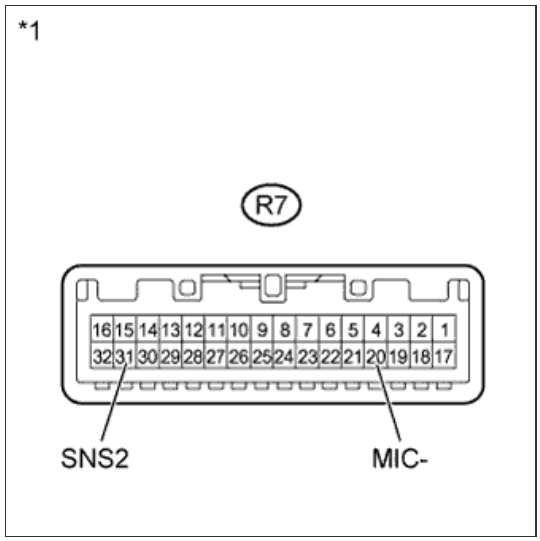
The connector of the telephone microphone assembly is too small to be inspected. Therefore, after replacing the telephone microphone assembly, inspect it using the connector of the map light assembly.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| R7-31 (SNS2) - R7-20 (MIC-) | Always | Below 1 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Map Light Assembly) |

NG → REPLACE MAP LIGHT ASSEMBLY (Click here)

OK

PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## DESCRIPTION

This circuit sends a microphone signal from the map light assembly (telephone microphone assembly) to the display and navigation module display. It also supplies power from the display and navigation module display to the map light assembly (telephone microphone assembly).

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - MAP LIGHT ASSEMBLY)

a. Disconnect the F58 display and navigation module display connector.

b. Disconnect the R7 map light assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-20 (SNS2) - R7-31 (SNS2) | Always | Below 1 Ω |
| F58-4 (MACC) - R7-22 (ACC) | Always | Below 1 Ω |
| F58-5 (MIN+) - R7-21 (MI1+) | Always | Below 1 Ω |
| F58-6 (MIN-) - R7-20 (MIC-) | Always | Below 1 Ω |
| F58-20 (SNS2) - Body ground | Always | 10 kΩ or higher |
| F58-4 (MACC) - Body ground | Always | 10 kΩ or higher |
| F58-5 (MIN+) - Body ground | Always | 10 kΩ or higher |
| F58-6 (MIN-) - Body ground | Always | 10 kΩ or higher |
| F58-7 (SGND) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

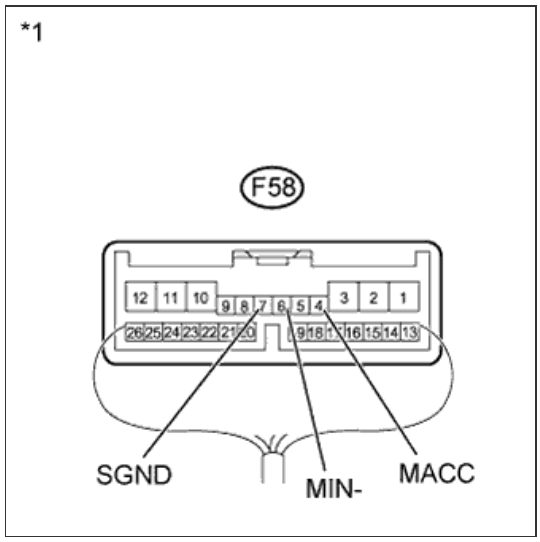
## 2.INSPECT DISPLAY AND NAVIGATION MODULE DISPLAY

a. Reconnect the F58 display and navigation module display connector.

b. Measure the voltage according to the value(s) in the table below.



**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F58-4 (MACC) - Body ground | Engine switch on (ACC) | 4 to 6 V |

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F58-7 (SGND) - Body ground | Always | Below 1 Ω |
| F58-6 (MIN-) - Body ground | Always | Below 1 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component with harness connected (Display and Navigation Module Display) |

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

## 3.INSPECT MAP LIGHT ASSEMBLY

a. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| R7-31 (SNS2) - R7-20 (MIC-) | Always | Below 1 Ω |

## DESCRIPTION

This is the power source circuit to operate the display and navigation module display.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

### 1.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY POWER SOURCE)

a. Disconnect the F58 display and navigation module display connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
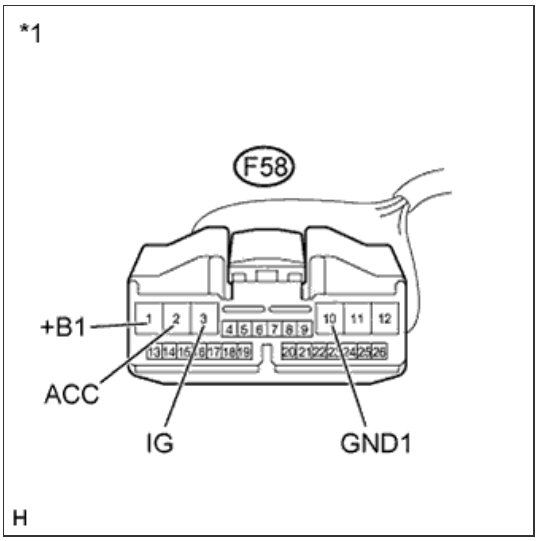
| F58-10 (GND1) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.



**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F58-1 (+B1) - F58-10 (GND1) | Always | 11 to 14 V |

| | | |
|---|---|---|
| F58-2 (ACC) - F58-10 (GND1) | Engine switch on (ACC) | 11 to 14 V |
| F58-3 (IG) - F58-10 (GND1) | Engine switch on (IG) | 11 to 14 V |

**Text in Illustration**

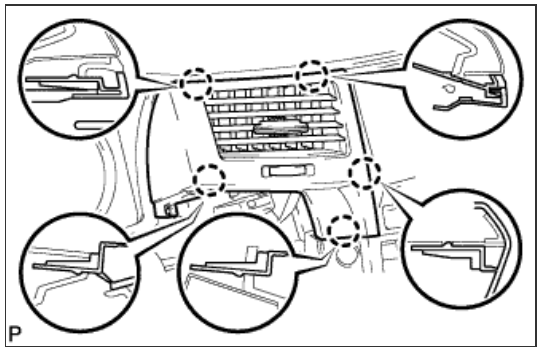
## 1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.



## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

**NOTICE:**

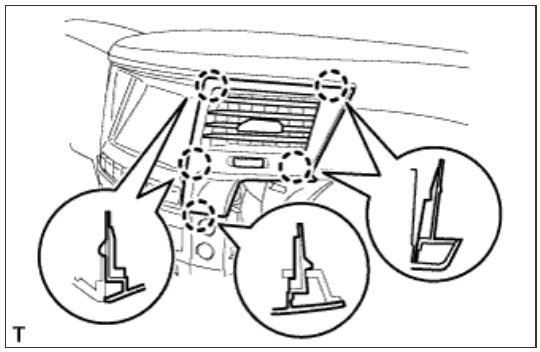
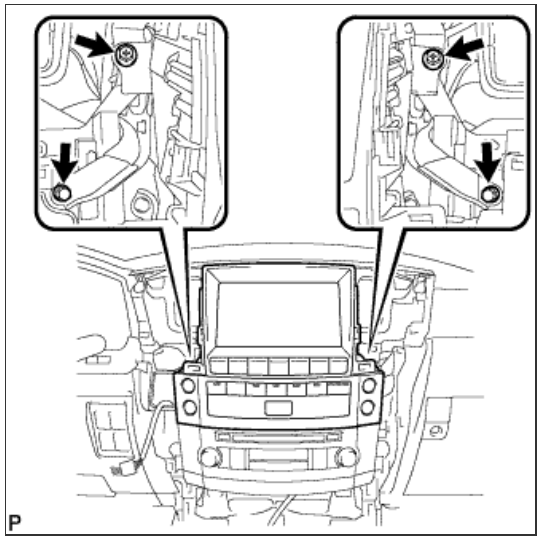
When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).



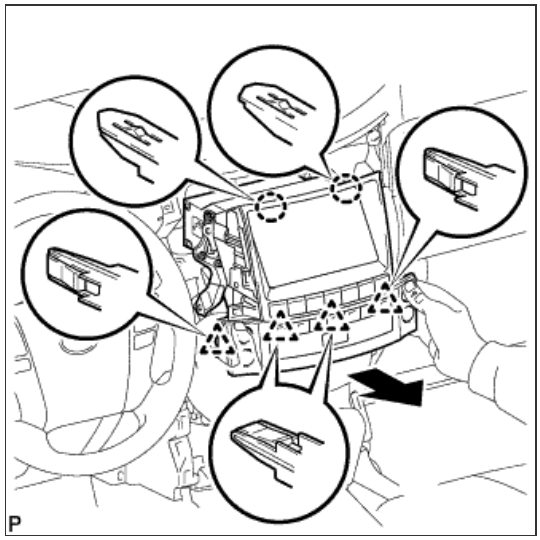
## 3. REMOVE NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY

a. Detach the 5 claws and remove the register.



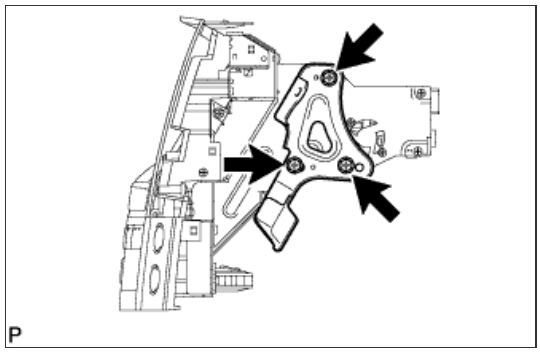
## 4. REMOVE NO. 4 INSTRUMENT PANEL REGISTER ASSEMBLY

a. Detach the 5 claws and remove the register.



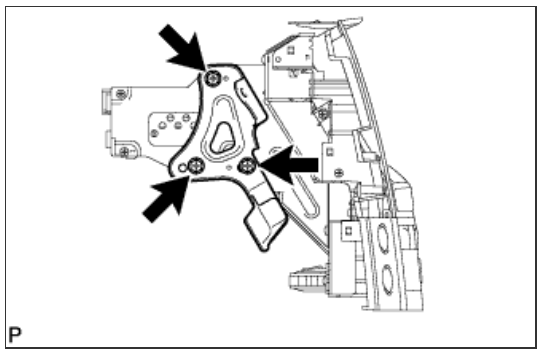
## 5. REMOVE MULTI-DISPLAY ASSEMBLY

a. Remove the 2 screws and 2 bolts.



b. Pull the radio receiver to detach the 2 claws and 4 clips on the backside of the display.

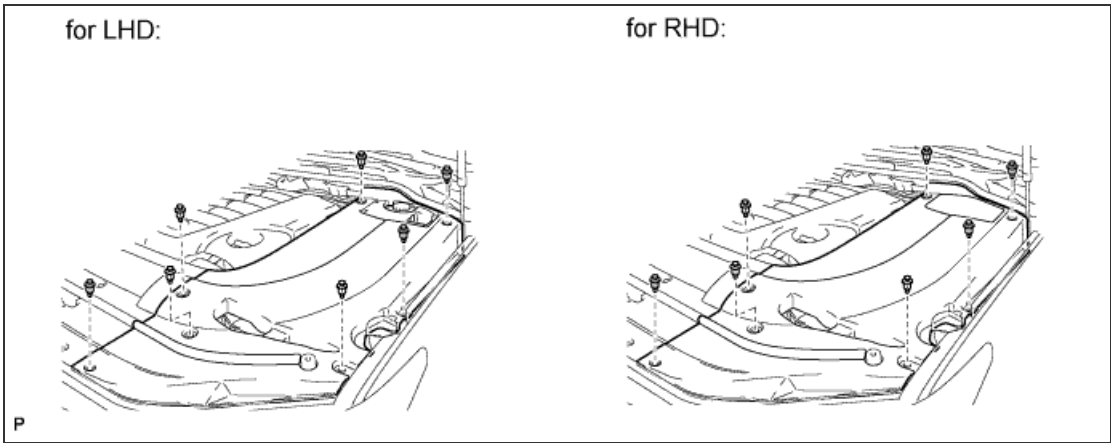
c. Disconnect the connectors and remove the display.



## 6. REMOVE NO. 1 RADIO RECEIVER BRACKET

a. Remove the 3 bolts and bracket.

### 7. REMOVE NO. 2 RADIO RECEIVER BRACKET

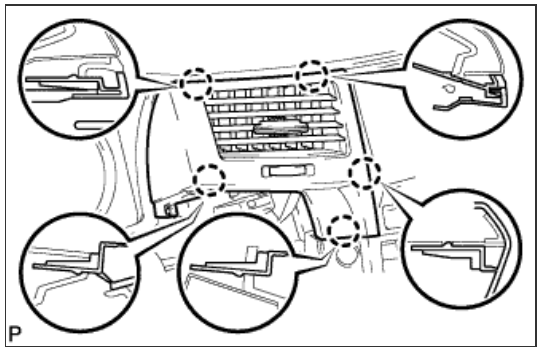


a. Remove the 3 bolts and bracket.

**for Preparation** Click here

## 1. REMOVE ENGINE ROOM SIDE COVER LH

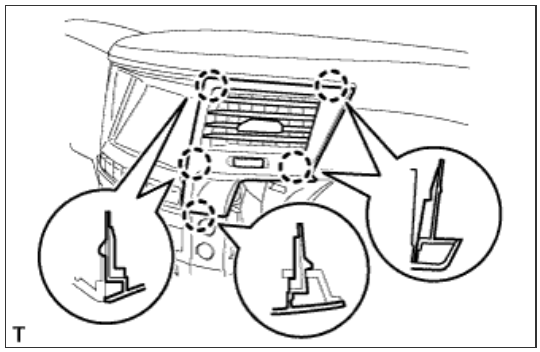
a. Remove the 7 clips and engine room side cover LH.



## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

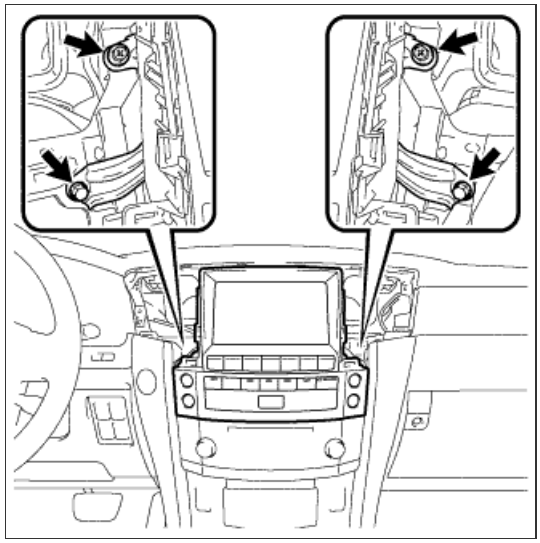
**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).



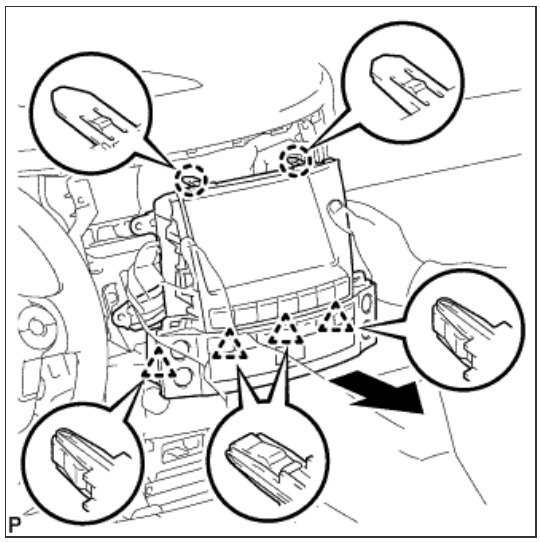
## 3. REMOVE NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY

a. Detach the 5 claws and remove the register.



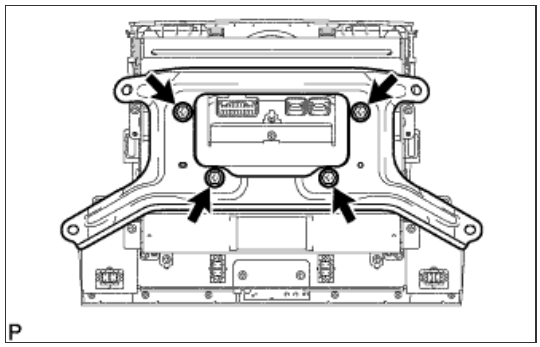
## 4. REMOVE NO. 4 INSTRUMENT PANEL REGISTER ASSEMBLY

a. Detach the 5 claws and remove the register.



## 5. REMOVE MULTI-DISPLAY ASSEMBLY WITH BRACKET

a. Remove the 2 screws and 2 bolts.

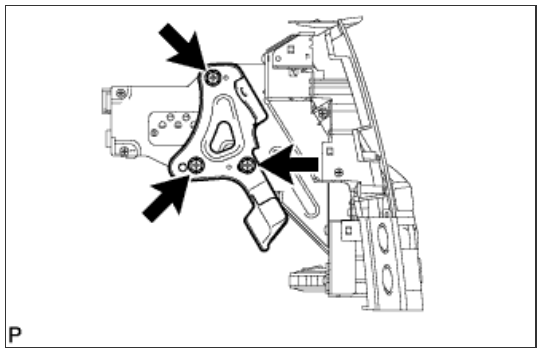


b. Pull the radio receiver to detach the 2 claws and 4 clips on the backside of the display.

c. Disconnect the connectors and remove the display.

## 6. REMOVE NO. 1 RADIO RECEIVER BRACKET

a. Remove the 3 bolts and bracket.

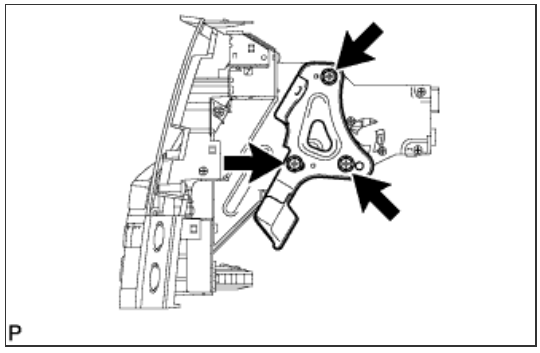


P

**for Preparation** Click here

## 1. INSTALL NO. 2 RADIO RECEIVER BRACKET

a. Install the bracket with the 3 bolts.

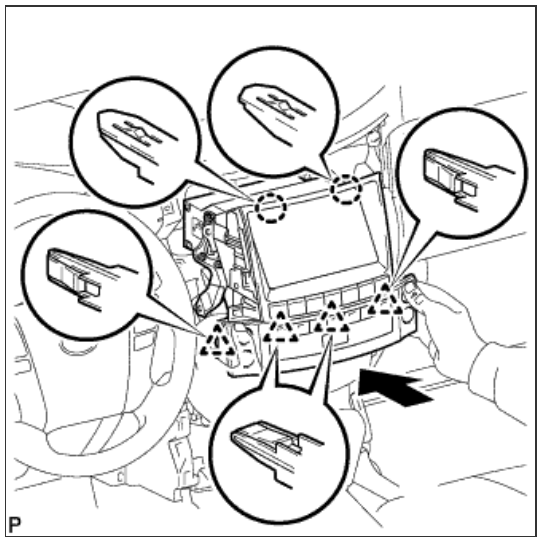


**Torque:**
**3.0 N*m{ 30 kgf*cm , 26 in.*lbf }**

## 2. INSTALL NO. 1 RADIO RECEIVER BRACKET

a. Install the bracket with the 3 bolts.

**Torque:**
**3.0 N*m{ 30 kgf*cm , 26 in.*lbf }**

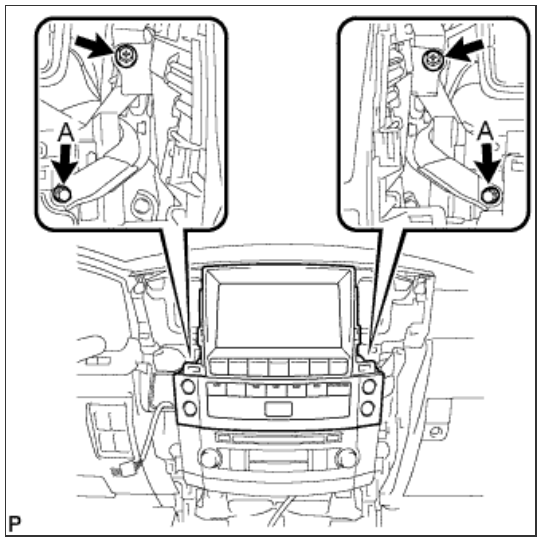


## 3. INSTALL MULTI-DISPLAY ASSEMBLY

a. Connect the connectors.

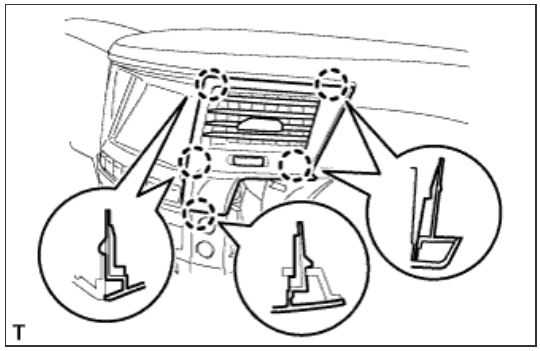
b. Insert the display and attach the 2 claws and 4 clips on its backside.

**NOTICE:**



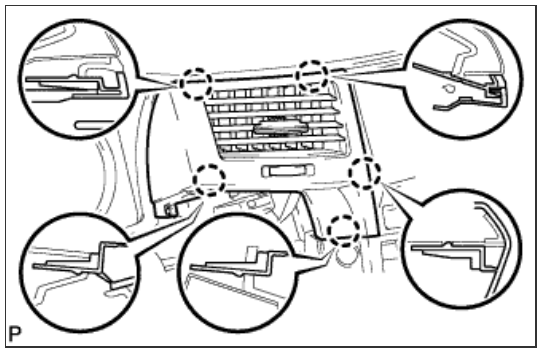
When inserting the display, do not press the knobs on it.

c. Install the display with the 2 screws and 2 bolts.



c. Install the display with the 2 screws and 2 bolts.

**Torque:**
**for bolts labeled A:**
**12 N*m{ 122 kgf*cm , 8 ft.*lbf }**



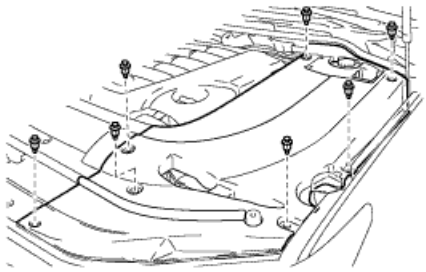
## 4. INSTALL NO. 4 INSTRUMENT PANEL REGISTER ASSEMBLY

a. Attach the 5 claws to install the register.

## 5. INSTALL NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY

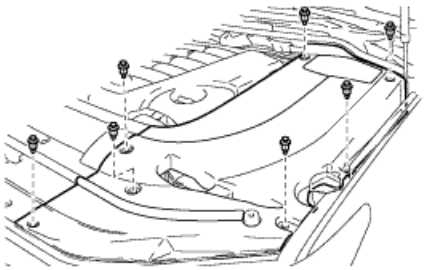
a. Attach the 5 claws to install the register.

## 6. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).



## 7. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.

for LHD:

for RHD:

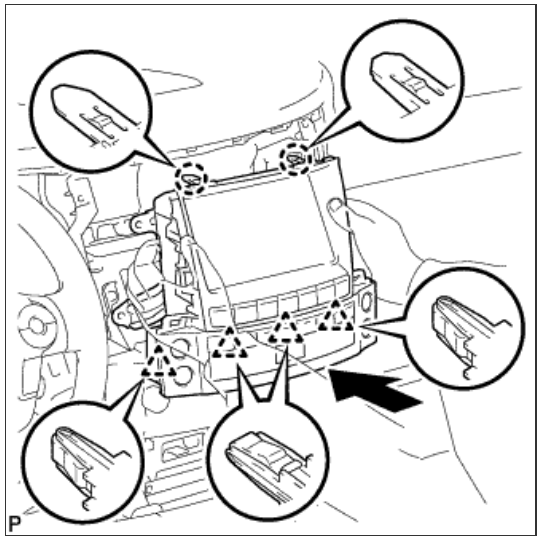
P

**for Preparation** Click here

## 1. INSTALL NO. 1 RADIO RECEIVER BRACKET

a. Install the No. 1 radio receiver bracket with the 3 bolts.

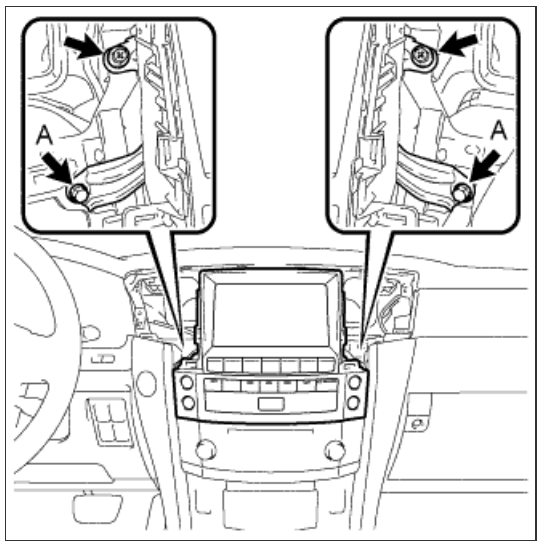
**Torque:**
**3.0 N*m{ 30 kgf*cm , 26 in.*lbf }**



## 2. INSTALL MULTI-DISPLAY ASSEMBLY WITH BRACKET

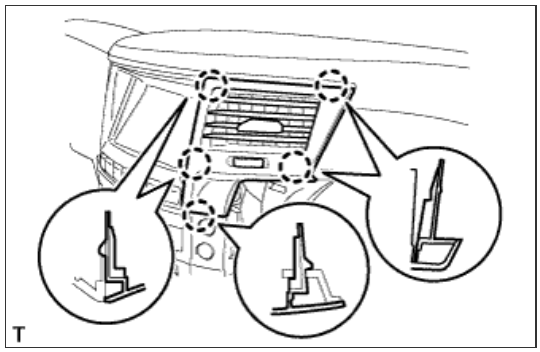
a. Connect the connectors.

b. Insert the multi-display assembly with bracket and attach the 2 claws and 4 clips on its backside.



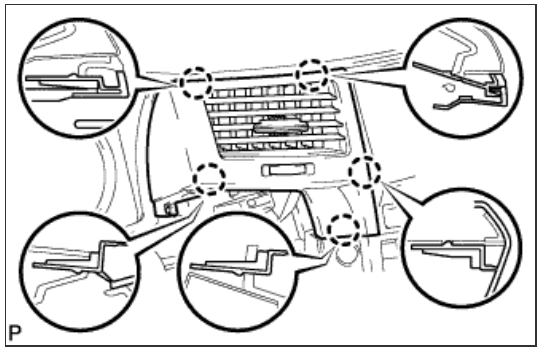
**NOTICE:**

When inserting the multi-display assembly, do not press the knobs on it.



c. Install the multi-display assembly with the 2 screws and 2 bolts.

**Torque:**
**for bolts labeled A:**
**12 N*m{ 122 kgf*cm , 8 ft.*lbf }**



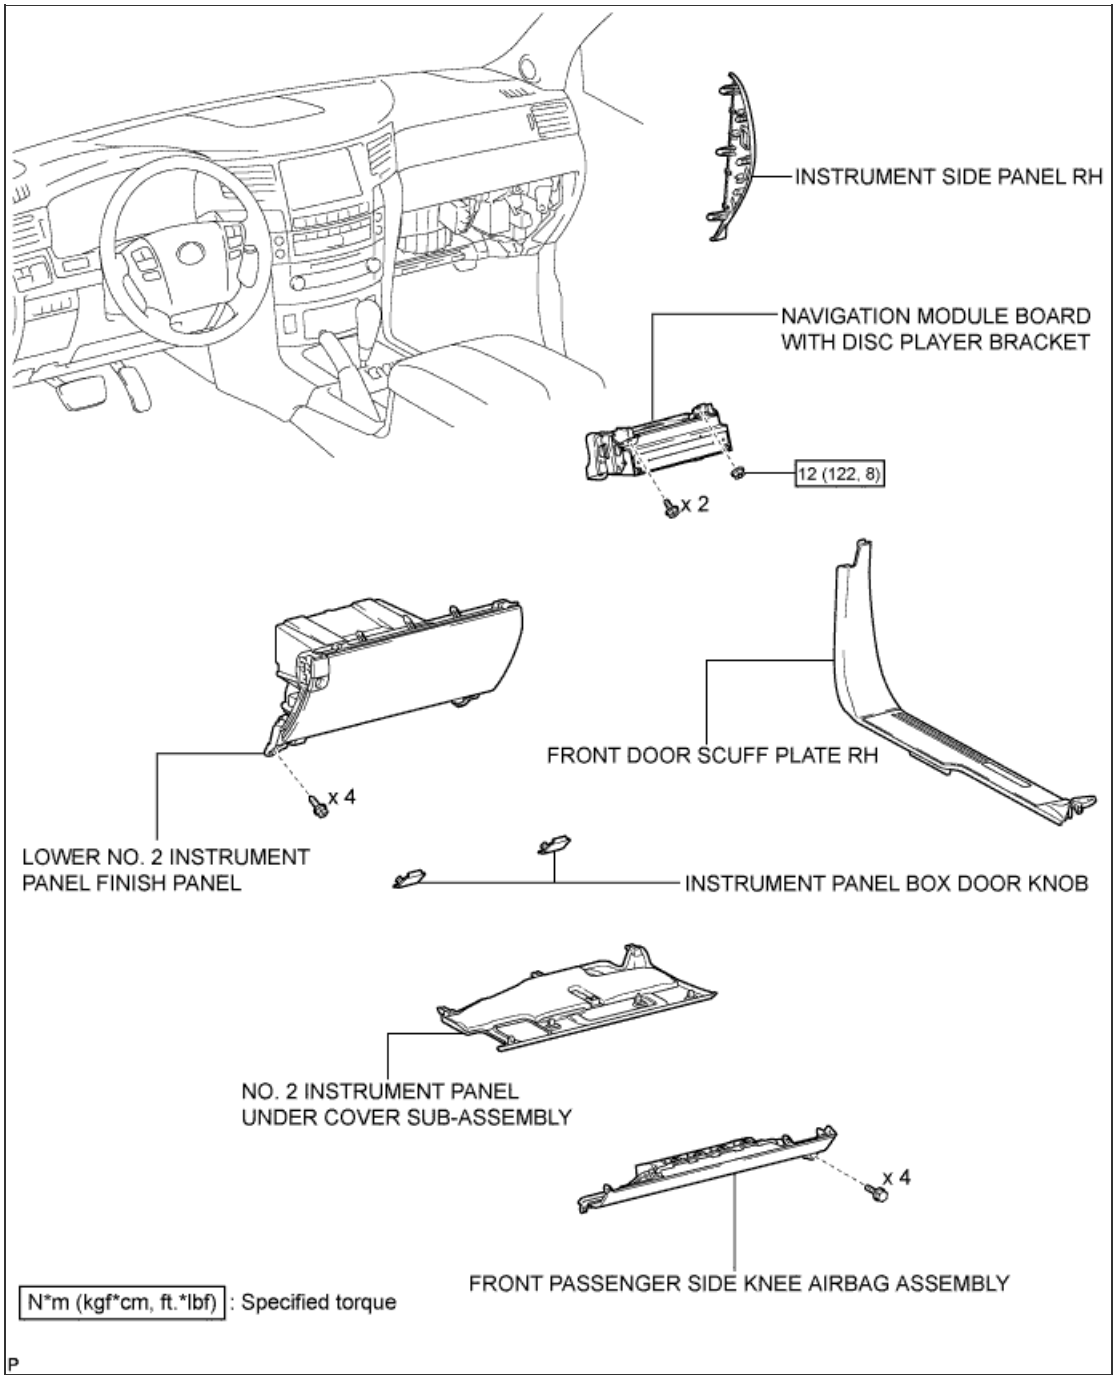
## 3. INSTALL NO. 4 INSTRUMENT PANEL REGISTER ASSEMBLY

a. Attach the 5 claws to install the register.

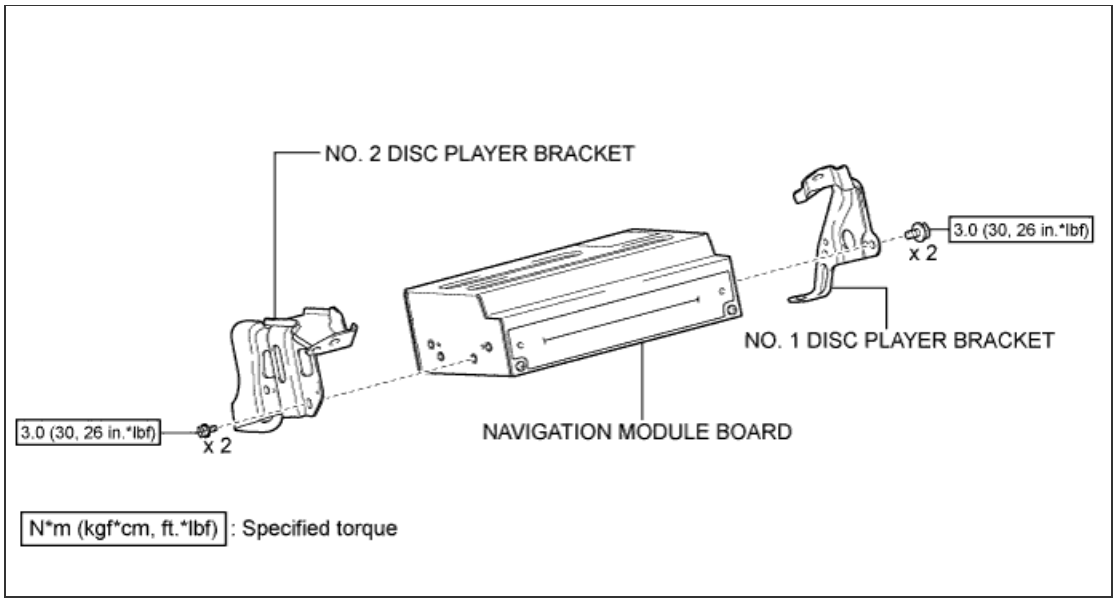
## 4. INSTALL NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY

a. Attach the 5 claws to install the register.

## 5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



**NOTICE:**



When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

## 6. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover LH with the 7 clips.

**for Preparation** Click here

NO. 2 DISC PLAYER BRACKET
3.0 (30, 26 in.*lbf)
x 2
NO. 1 DISC PLAYER BRACKET
3.0 (30, 26 in.*lbf)
x 2
NAVIGATION MODULE BOARD

**for Preparation** Click here

**HINT:**

- **Use the same procedures for LHD and RHD vehicles.**
- **The procedures listed below are for LHD vehicles.**

## 1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

**CAUTION:**

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

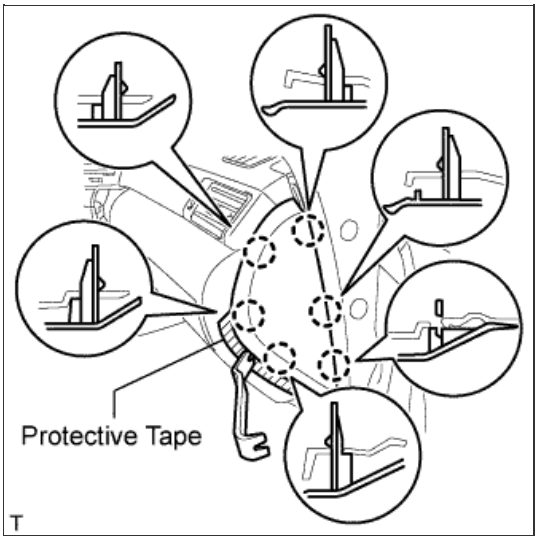
**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

## 2. REMOVE INSTRUMENT SIDE PANEL RH

a. w/o Airbag Cut Off Switch:

i. Place protective tape as shown in the illustration.



ii. Using a moulding remover, detach the 6 claws and remove the side panel.

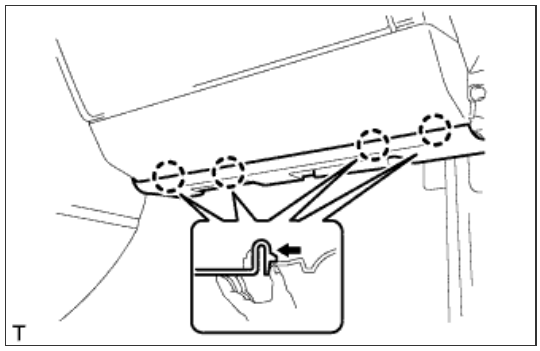
b. w/ Airbag Cut Off Switch:

i. Place protective tape as shown in the illustration.

ii. Using a moulding remover, detach the 6 claws.

iii. Remove the side panel and disconnect the connector.

## 3. REMOVE FRONT DOOR SCUFF PLATE RH



**HINT:**

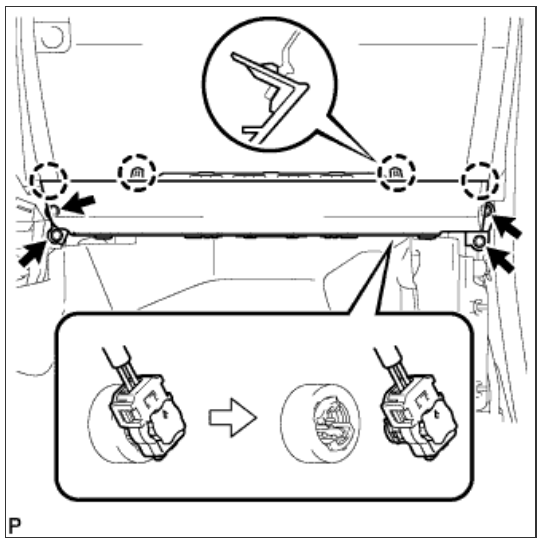
Use the same procedures described for the LH side.

## 4. REMOVE NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

a. Detach the 4 claws.

b. Remove the under cover and disconnect the connector.

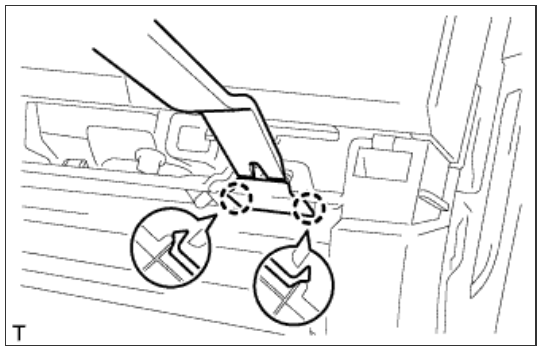
## 5. REMOVE FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY



a. Remove the 4 bolts.

b. Detach the 4 claws and remove the front passenger side knee airbag.

c. Disconnect the connector.

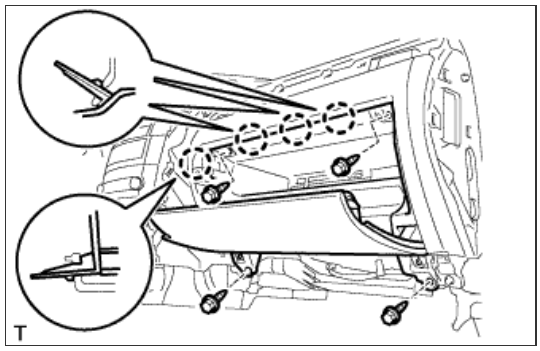


**NOTICE:**

When handling the airbag connector, take care not to damage the airbag wire harness.

## 6. REMOVE INSTRUMENT PANEL BOX DOOR KNOB

a. Using a moulding remover, detach the 2 claws and remove the knob.

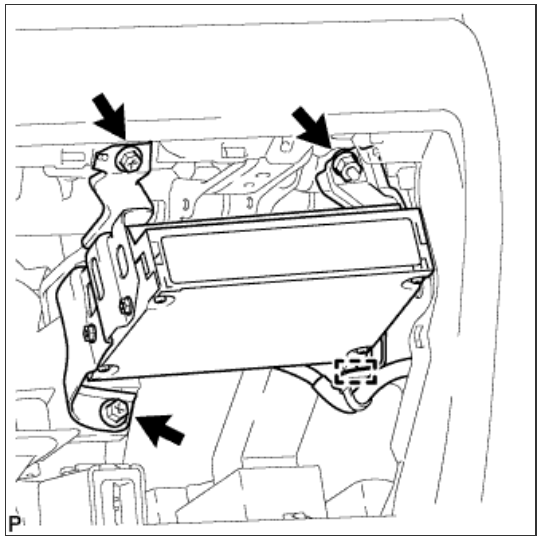


## 7. REMOVE LOWER NO. 2 INSTRUMENT PANEL FINISH PANEL

a. Remove the 4 bolts.

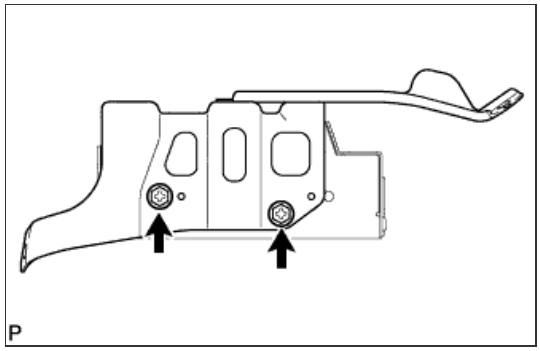
b. Detach the 4 claws.

c. Remove the finish panel and then disconnect the connector.



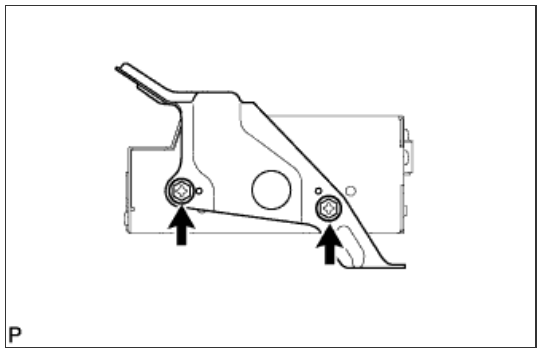
## 8. REMOVE NAVIGATION MODULE BOARD WITH DISC PLAYER BRACKET

a. Detach the clamp.



b. Remove the 2 screws and nut.

c. Disconnect the navigation module board connectors and remove the navigation module board with disc player bracket.



## 9. REMOVE NO. 2 DISC PLAYER BRACKET

a. Remove the 2 screws and bracket.

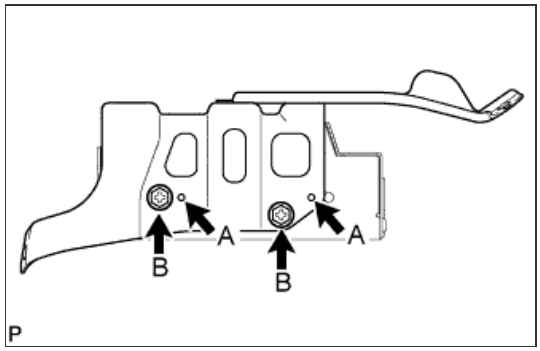
## 10. REMOVE NO. 1 DISC PLAYER BRACKET

a. Remove the 2 screws and bracket.

P

**for Preparation** Click here

**HINT:**



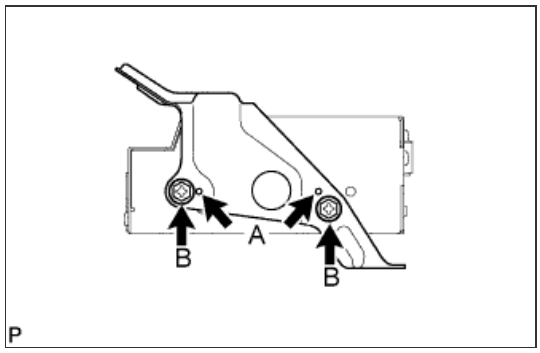
- **Use the same procedures for LHD and RHD vehicles.**
- **The procedures listed below are for LHD vehicles.**
- **A bolt without a torque specification is shown in the standard bolt chart ( Click here).**

## 1. INSTALL NO. 2 DISC PLAYER BRACKET

a. Align the protrusions of the bracket, labeled A, with the indentations of the navigation module board.

b. Install the bracket with the 2 screws labeled B.

**Torque:**
**3.0 N*m{ 30 kgf*cm , 26 in.*lbf }**

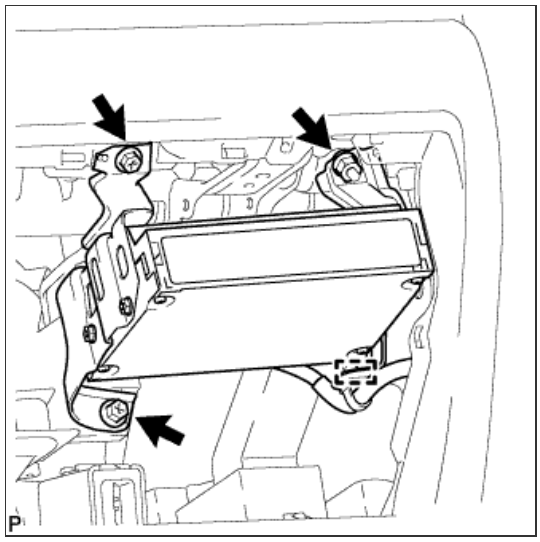


## 2. INSTALL NO. 1 DISC PLAYER BRACKET

a. Align the protrusions of the bracket, labeled A, with the indentations of the navigation module board.

b. Install the bracket with the 2 screws labeled B.

**Torque:**
**3.0 N*m{ 30 kgf*cm , 26 in.*lbf }**



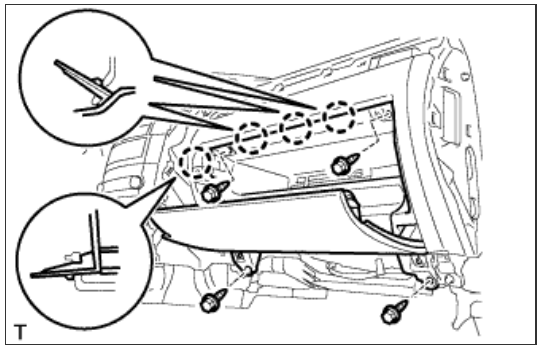
## 3. INSTALL NAVIGATION MODULE BOARD WITH DISC PLAYER BRACKET

a. Connect the navigation module board connectors.

b. Install the navigation module board with disc player bracket with the nut and 2 screws.

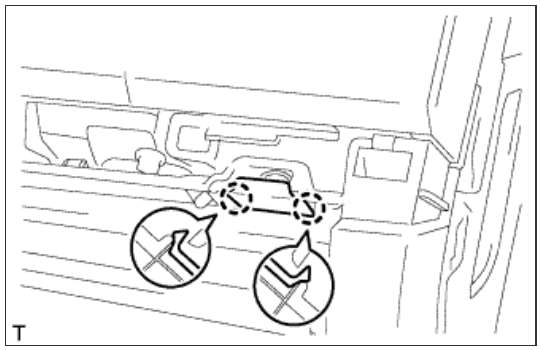
**Torque:**
**Nut:**
**12 N*m{ 122 kgf*cm , 8 ft.*lbf }**

c. Attach the clamp.



### 4. INSTALL LOWER NO. 2 INSTRUMENT PANEL FINISH PANEL

a. Connect the connector.



b. Attach the 4 claws to install the finish panel.

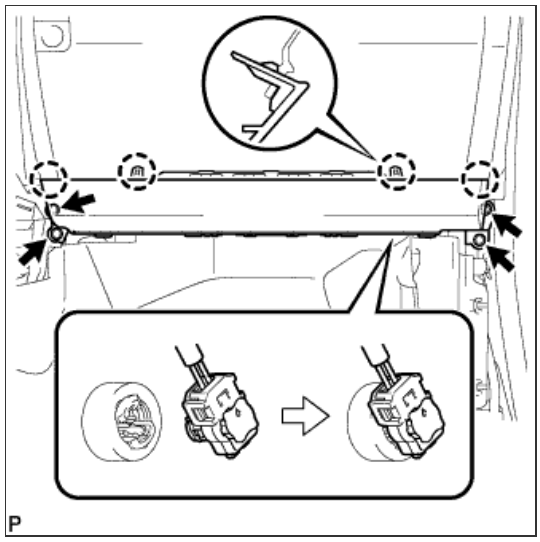
c. Install the 4 bolts.

### 5. INSTALL INSTRUMENT PANEL BOX DOOR KNOB

a. Attach the 2 claws to install the knob.

### 6. INSTALL FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY

a. Connect the connector.

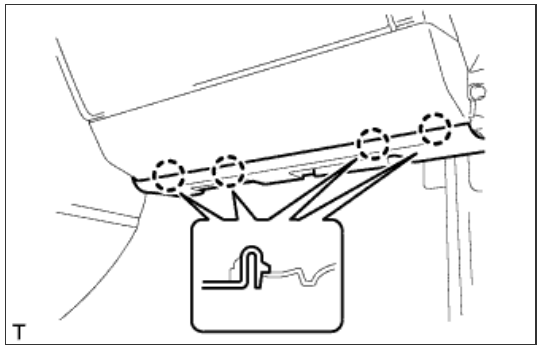


**NOTICE:**

When handling the airbag connector, take care not to damage the airbag wire harness.

b. Attach the 4 claws to install the front passenger side knee airbag.

c. Install the 4 bolts.



**Torque:**
**10 N*m{ 102 kgf*cm , 7 ft.*lbf }**

## 7. INSTALL NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

a. Connect the connector.

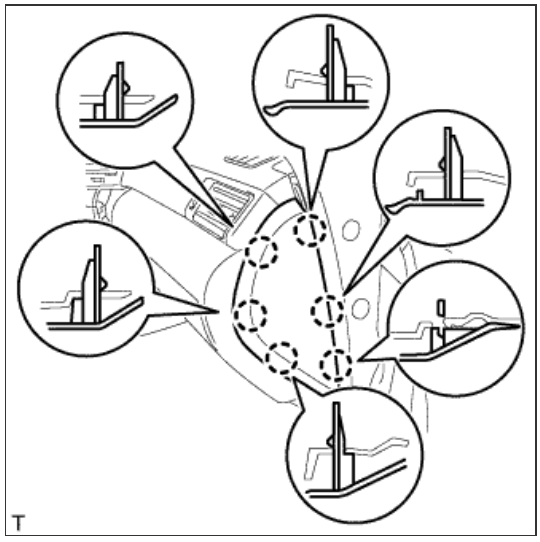
b. Attach the 4 claws to install the under cover.

## 8. INSTALL FRONT DOOR SCUFF PLATE RH

**HINT:**

Use the same procedures described for the LH side.

## 9. INSTALL INSTRUMENT SIDE PANEL RH



a. w/o Airbag Cut Off Switch:

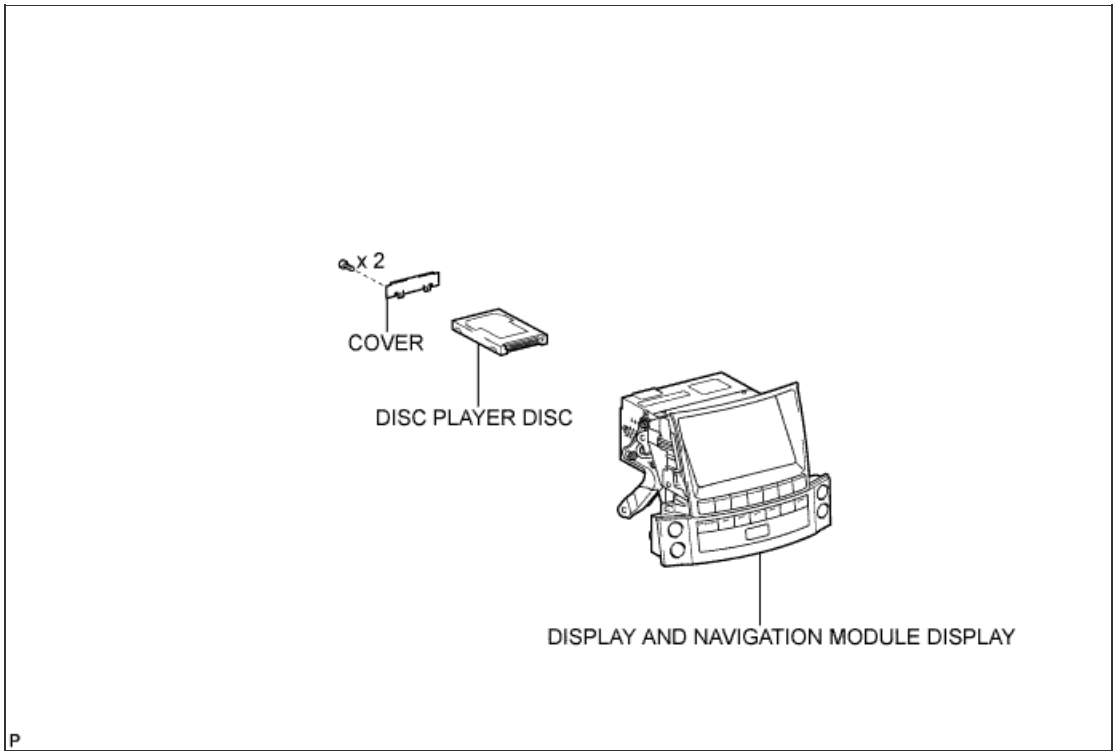
i. Attach the 6 claws to install the side panel.

b. w/ Airbag Cut Off Switch:

i. Connect the connector.

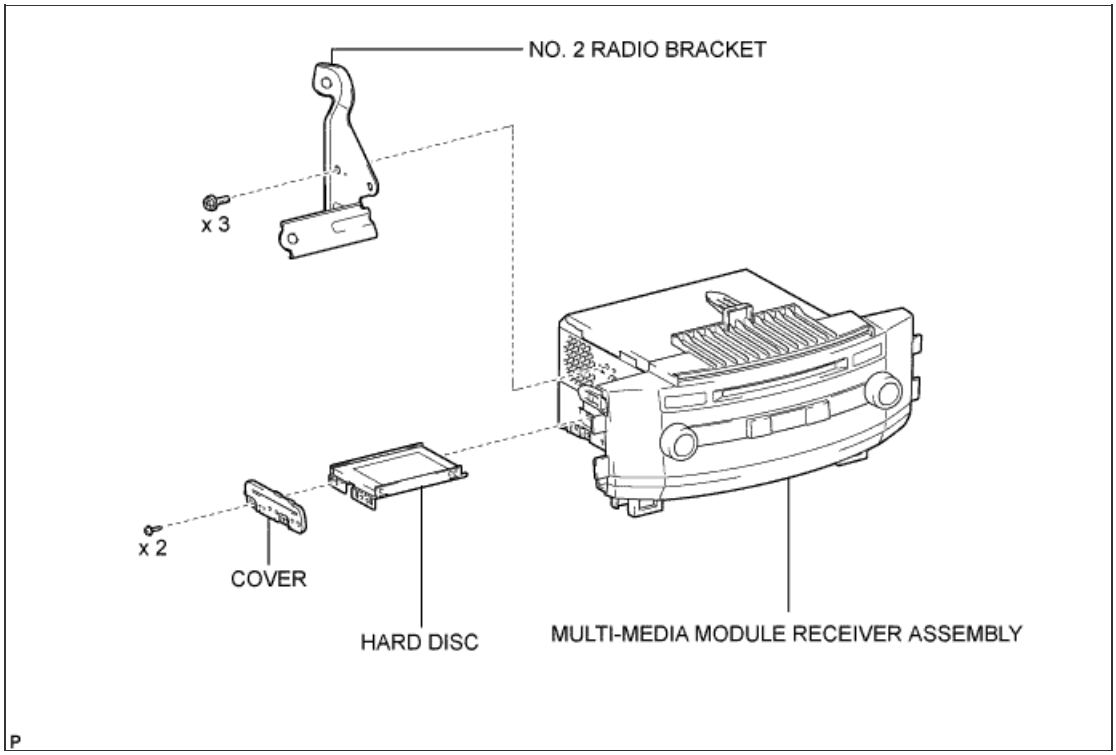
ii. Attach the 6 claws to install the side panel.

## 10. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



**NOTICE:**

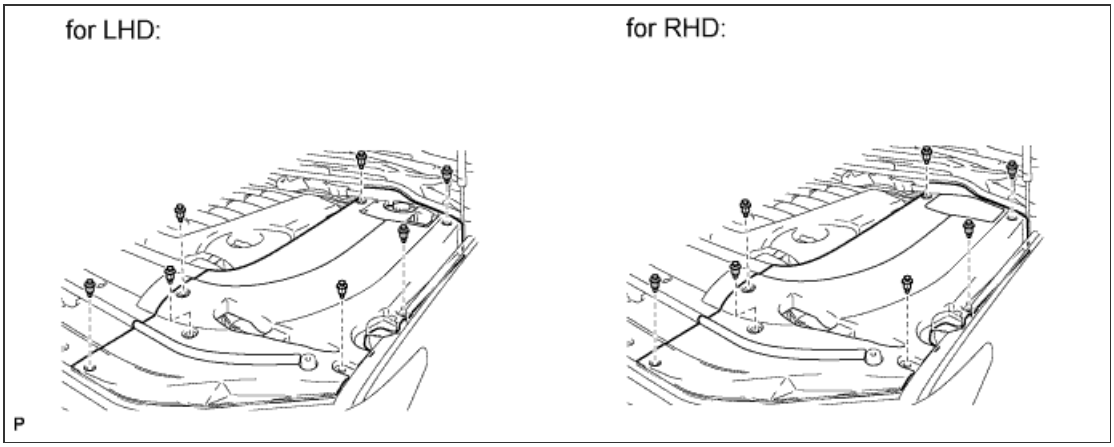
When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).



## 11. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).

**for Preparation** Click here



**for Preparation** Click here

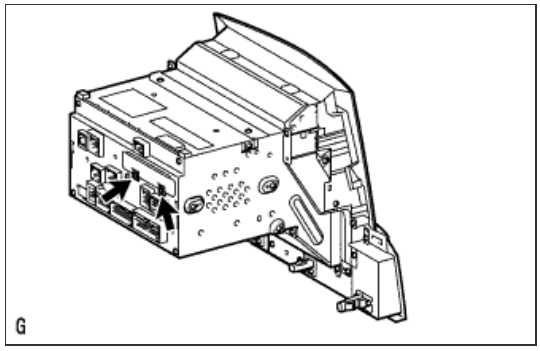
**for Preparation** Click here

## 1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.

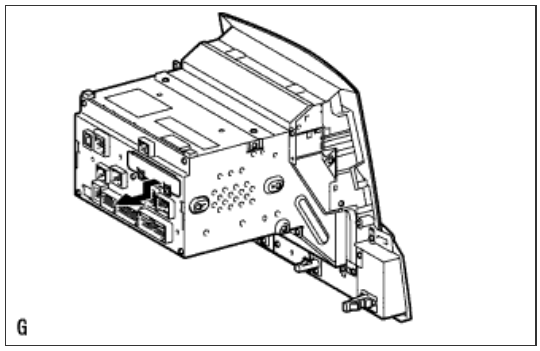
## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

**NOTICE:**



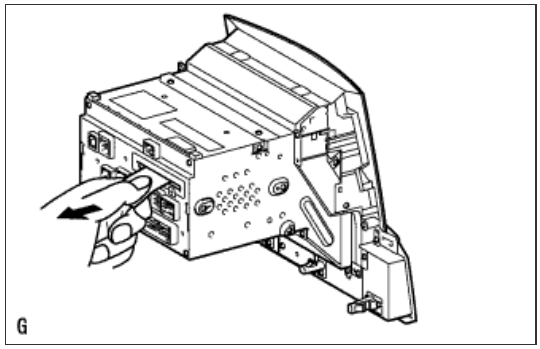
- **After the engine switch is turned off, the HDD navigation system requires approximately 6 minutes to record various types of memory and settings. As a result, after turning the engine switch off, wait 6 minutes or more before disconnecting the cable from the negative (-) battery terminal.**
- **When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).**

## 3. REMOVE DISPLAY AND NAVIGATION MODULE DISPLAY



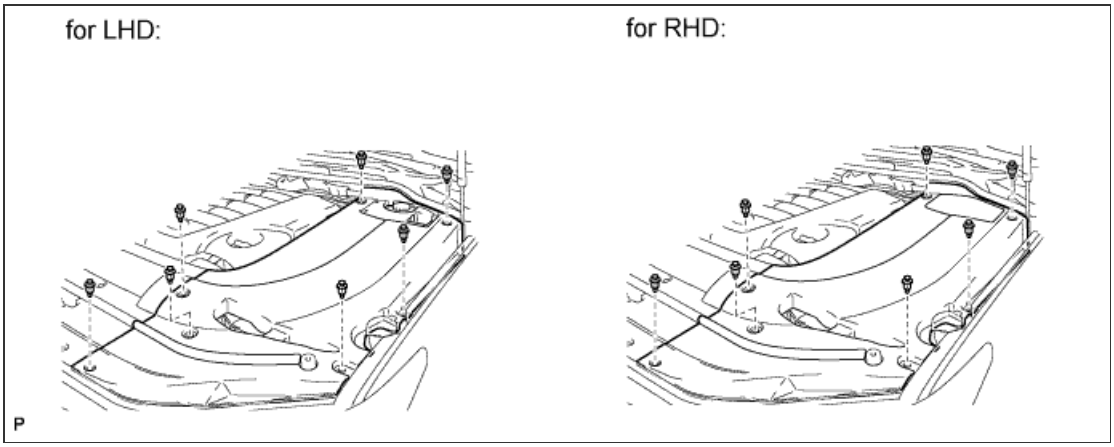
a. Remove the display and navigation module display (Click here).

## 4. REMOVE DISC PLAYER DISC



a. Remove the 2 screws.

b. Move the cover in the direction of the arrow shown in the illustration to remove it.



c. Remove the disc player disc in the direction of the arrow shown in the illustration.

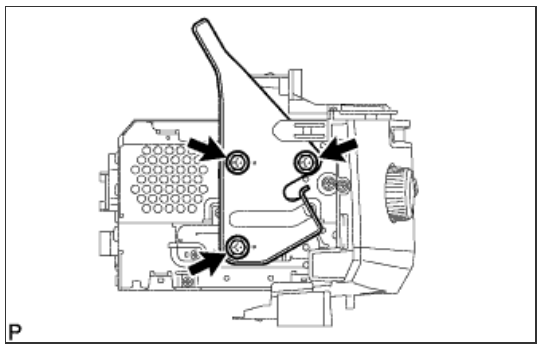
**for Preparation** Click here

## 1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover LH.

## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

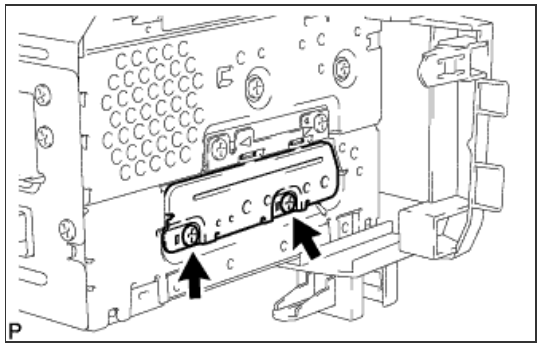
**NOTICE:**



- **After the engine switch is turned off, the HDD navigation system requires approximately 6 minutes to record various types of memory and settings. As a result, after turning the engine switch off, wait 6 minutes or more before disconnecting the cable from the negative (-) battery terminal.**
- **When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).**

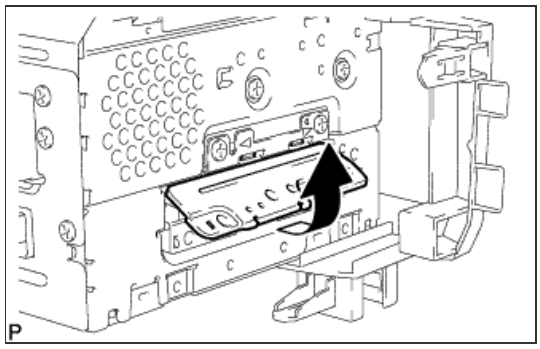
## 3. REMOVE MULTI-MEDIA MODULE RECEIVER ASSEMBLY WITH BRACKET

(Click here)

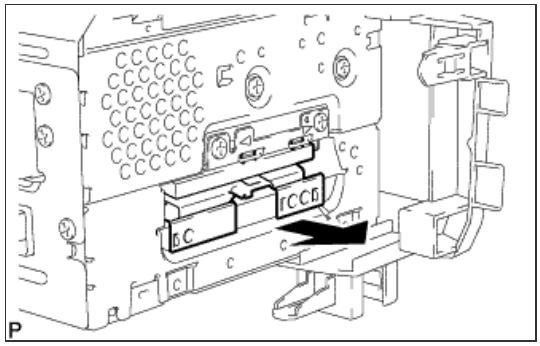


## 4. REMOVE NO. 2 RADIO BRACKET

a. Remove the 3 bolts and No. 2 radio bracket.

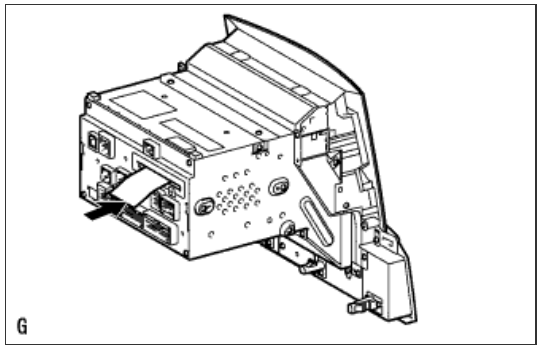


## 5. REMOVE HARD DISC

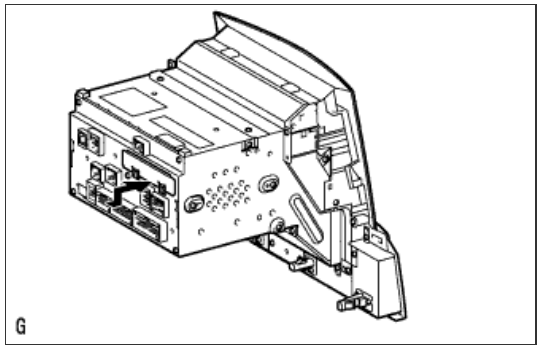


a. Remove the 2 screws.

b. Move the cover in the direction of the arrow shown in the illustration to remove it.

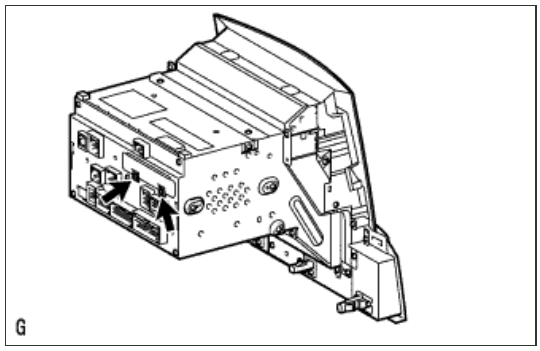


c. Remove the hard disc in the direction of the arrow shown in the illustration.



**for Preparation** Click here

## 1. INSTALL DISC PLAYER DISC



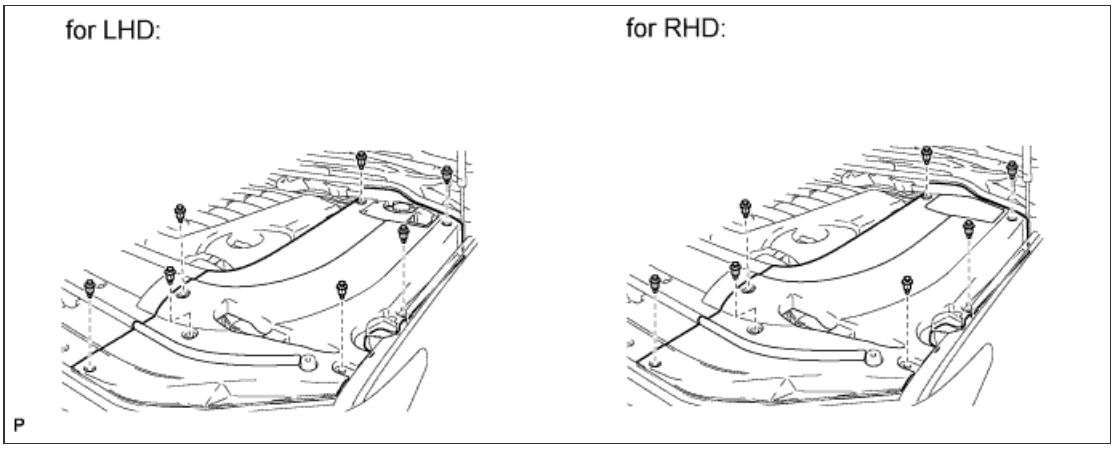
a. Push the disc player disc in the direction of the arrow shown in the illustration to install it.

b. Install the cover in the direction of the arrow shown in the illustration.

c. Install the 2 screws.

## 2. INSTALL DISPLAY AND NAVIGATION MODULE DISPLAY

a. Install the display and navigation module display ( Click here).

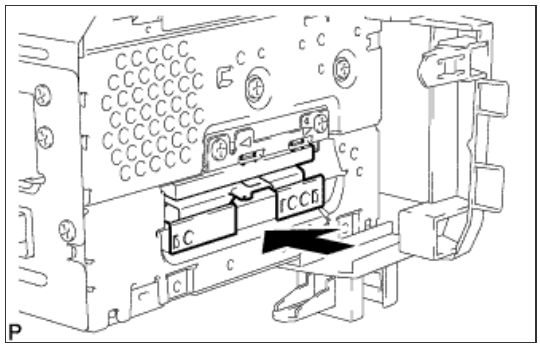


## 3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

**NOTICE:**

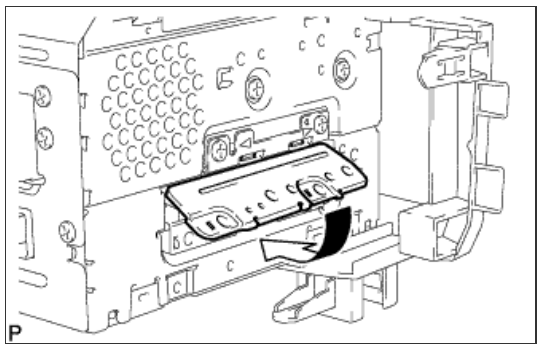
When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

## 4. INSTALL ENGINE ROOM SIDE COVER LH



a. Install the engine room side cover with the 7 clips.

**for Preparation** Click here



## 1. INSTALL HARD DISC

a. Push the hard disc in the direction of the arrow shown in the illustration to install it.

b. Install the cover in the direction of the arrow shown in the illustration.

c. Install the 2 screws.

## 2. INSTALL NO. 2 RADIO BRACKET

a. Install the No. 2 radio bracket with the 3 bolts.

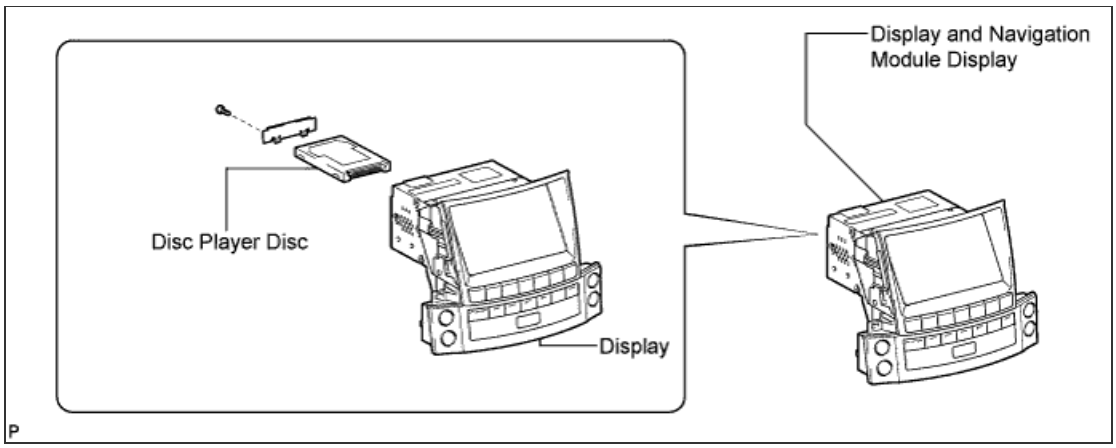
**Torque:**
**3.0 N*m{ 30 kgf*cm , 26 in.*lbf }**

## 3. INSTALL MULTI-MEDIA MODULE RECEIVER ASSEMBLY WITH BRACKET

(Click here)

## 4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

**NOTICE:**



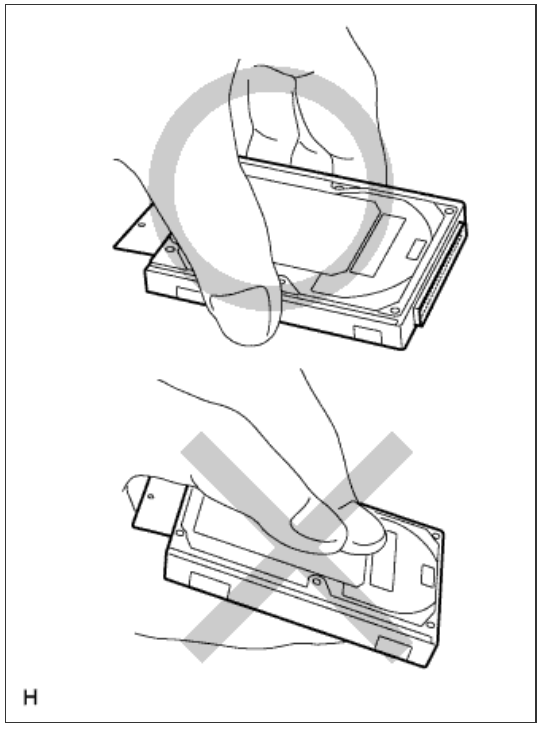
When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

## 5. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover LH with the 7 clips.

**for Preparation** Click here

## 1.PRECAUTION FOR DISPLAY AND NAVIGATION ASSEMBLY



a. The disc player disc has a built-in hard disk drive (HDD) for storing maps and other data used by the navigation system. When handling the disc player disc, follow the precautions below.

i. Do not touch cover of the HDD

**NOTICE:**

When removing or installing the disc player disc, hold it as shown in the illustration.

ii. Avoid vibrations and impacts

**NOTICE:**

- **Do not drop or strike the disc player disc. Do not use a disc player disc that has been dropped or struck.**
- **Prepare a new disc player disc before removing the disc player disc.**

iii. Avoid condensation

**NOTICE:**

- **Introducing the disc player disc to sudden temperature changes may cause condensation to form inside it, and may lead to malfunctions in the HDD.**
- **The removed display and navigation module display must be stored in an environment where the temperature, humidity, etc. is the same as the vehicle interior, and the disc player disc must not be removed.**
- **If transporting the disc player disc from its storage area to a location where the temperature, humidity, etc. is different, allow it some time to adapt to the surrounding environment.**

iv. Avoid static electricity

**NOTICE:**

- **Touching the connector terminals may transmit static electricity to the inner circuits and may lead to malfunctions in the HDD.**
- **When installing or removing the disc player disc, observe all precautions to prevent damage to the system by electrostatic discharge (ESD).**

v. Keep away from magnetic items

**NOTICE:**

Keep speakers, motors, magnetized tools, etc. away from the disc player disc.

b. When replacing the disc player disc, follow the precaution below.

i. After removing and installing the disc player disc, use the HDD information screen to perform the SMART inspection and confirm that there are no malfunctions in the HDD (Click here).

## 2.PRECAUTIONS DURING REPLACEMENT

**NOTICE:**

When replacing electronic parts, if there is a possibility that your body may contact a circuit board, etc., use the recommended tools and observe all precautions to prevent damage to the system by electrostatic discharge (ESD).

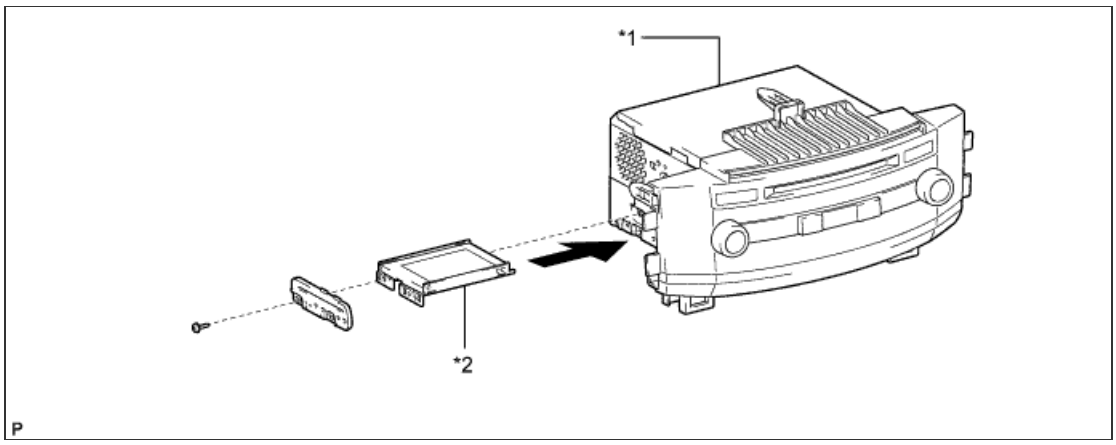
a. Procedures where static electricity countermeasures are necessary

i. Disc player disc replacement.

ii. Internal wiring connection/disconnection, inspection, and replacement.

b. Precautions during procedures

i. Before performing any procedures, touch an unpainted metal part or ground bolt of the vehicle to eliminate any static electricity.



ii. To prevent damage to electrical equipment, disconnect the battery's power supply before installing and removing electrical equipment.

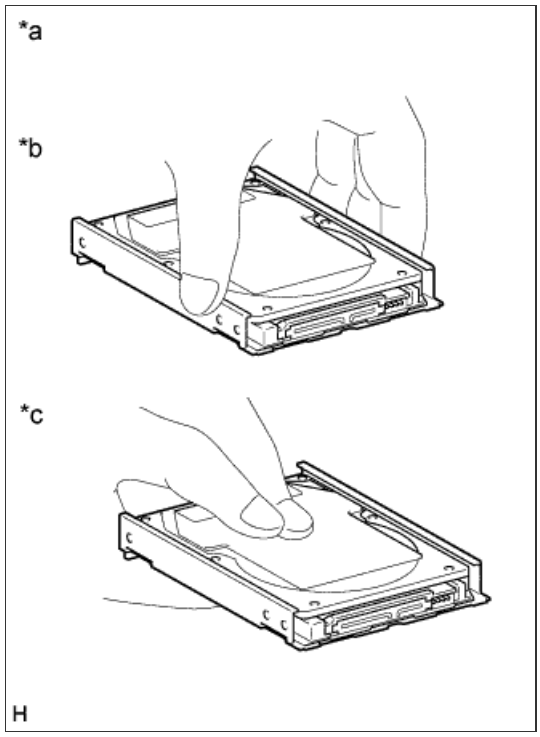
iii. Never touch the electronic parts of a circuit board, or the pins of an integrated circuit.

iv. When performing procedures, do not allow clothing to come near or contact parts.

**for Preparation** Click here

## 1.PRECAUTION FOR MULTI-MEDIA MODULE RECEIVER ASSEMBLY

**Text in Illustration**



| | | | |
|---|---|---|---|
| *1 | Hard disc | *2 | Multi-media module receiver assembly |

a. The hard disc has a built-in hard disk drive (HDD) for storing maps and other data used by the navigation system. When handling the hard disc, follow the precautions below.

i. Do not touch cover of the HDD

**Text in Illustration**

| | |
|---|---|
| *a | Example |
| *b | CORRECT |
| *c | INCORRECT |

**NOTICE:**

When removing or installing the hard disc, hold it as shown in the illustration.

ii. Avoid vibrations and impacts

**NOTICE:**

- **Do not drop or strike the hard disc. Do not use a hard disc that has been dropped or struck.**
- **Prepare a new hard disc before removing the hard disc.**

iii. Avoid condensation

**NOTICE:**

- **Introducing the hard disc to sudden temperature changes may cause condensation to form inside it, and may lead to malfunctions in the HDD.**
- **The removed multi-media module receiver assembly must be stored in an environment where the temperature, humidity, etc. is the same as the vehicle interior, and the hard disc must not be removed.**
- **If transporting the hard disc from its storage area to a location where the temperature, humidity, etc. is different, allow it some time to adapt to the surrounding environment.**

iv. Avoid static electricity

**NOTICE:**

- **Touching the connector terminals may transmit static electricity to the inner circuits and may lead to malfunctions in the HDD.**
- **When installing or removing the hard disc, observe all precautions to prevent damage to the system by electrostatic discharge (ESD).**

v. Keep away from magnetic items

**NOTICE:**

Keep speakers, motors, magnetized tools, etc. away from the hard disc.

b. When replacing the hard disc, follow the precaution below.

i. After removing and installing the hard disc, use the HDD information screen to perform the SMART inspection and confirm that there are no malfunctions in the HDD (Click here).

## 2.PRECAUTIONS DURING REPLACEMENT

**NOTICE:**

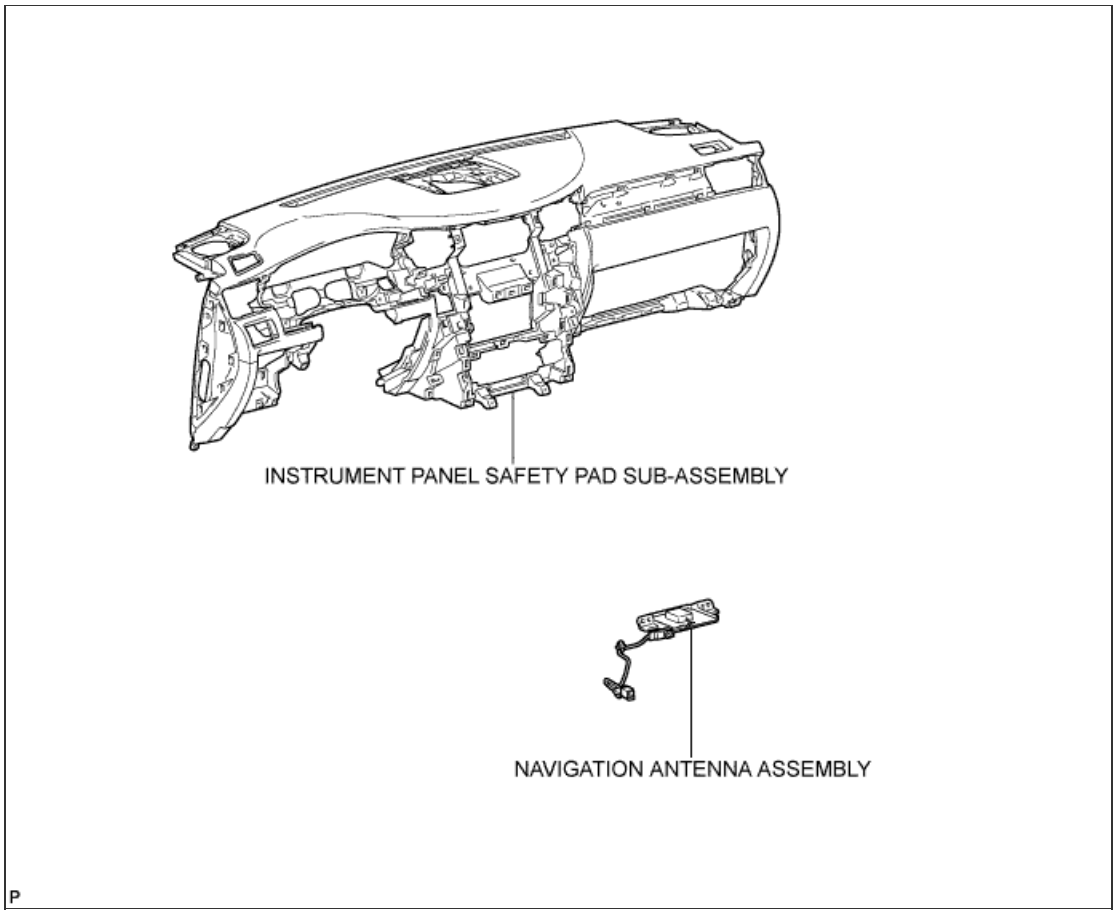
When replacing electronic parts, if there is a possibility that your body may contact a circuit board, etc., use the recommended tools and observe all precautions to prevent damage to the system by electrostatic discharge (ESD).

a. Procedures where static electricity countermeasures are necessary

i. Hard disc replacement.

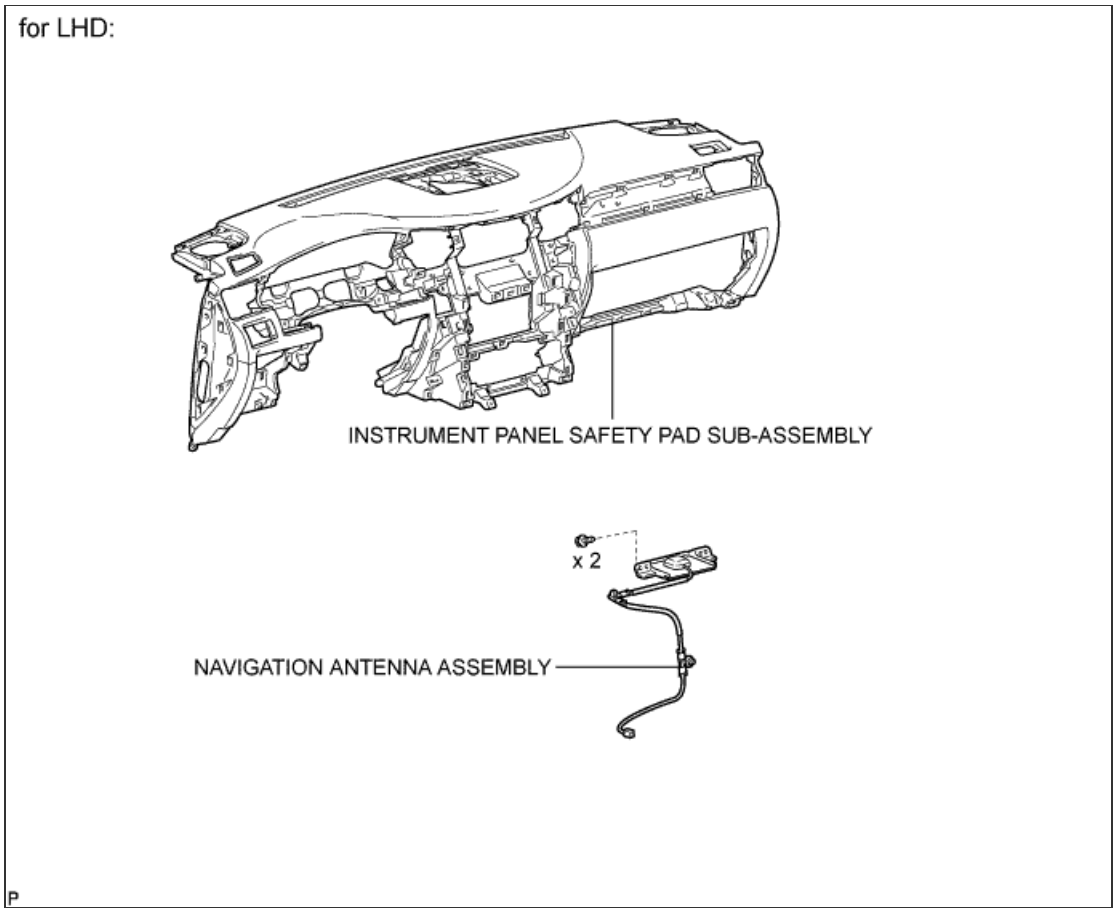
ii. Internal wiring connection/disconnection, inspection, and replacement.

b. Precautions during procedures



i. Before performing any procedures, touch an unpainted metal part or ground bolt of the vehicle to eliminate any static electricity.

ii. To prevent damage to electrical equipment, disconnect the battery's power supply before installing and removing electrical equipment.



iii. Never touch the electronic parts of a circuit board, or the pins of an integrated circuit.

iv. When performing procedures, do not allow clothing to come near or contact parts.

P

# NAVIGATION ANTENNA > REMOVAL

**for Preparation** Click here

## 1. REMOVE ENGINE ROOM SIDE COVER LH

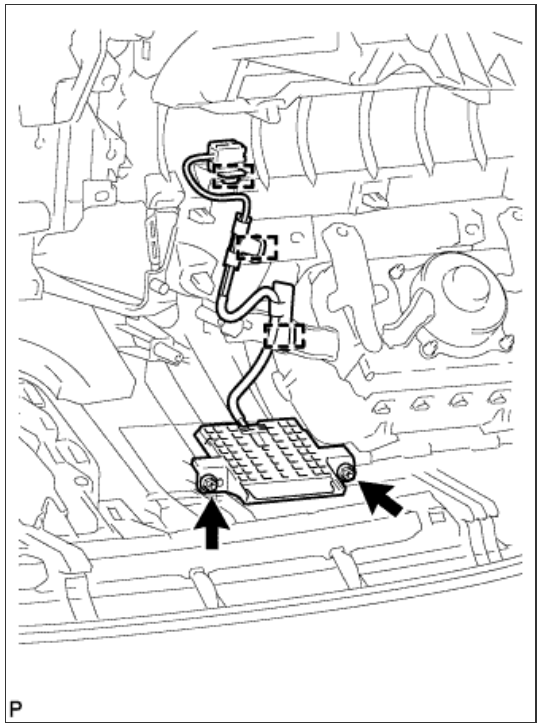
## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

**CAUTION:**

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

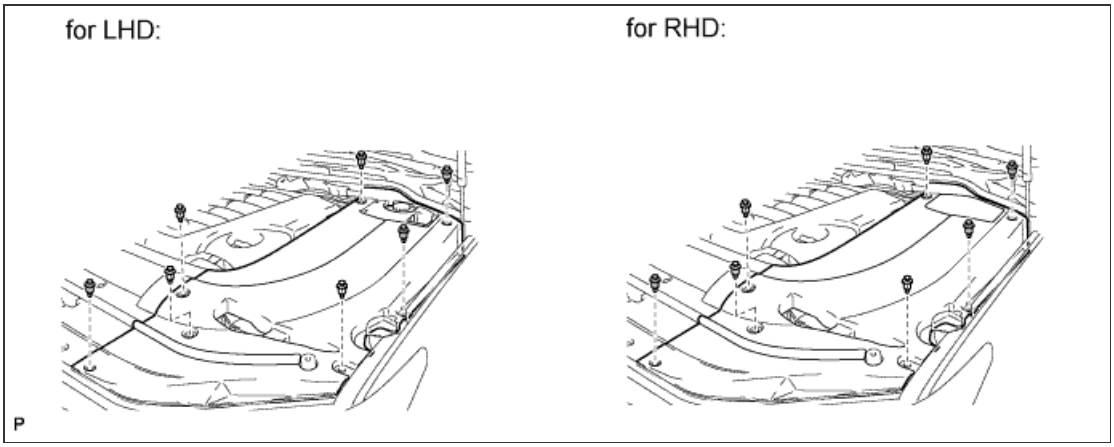


## 3. REMOVE INSTRUMENT PANEL SAFETY PAD SUB-ASSEMBLY

a. Remove the instrument panel safety pad ( Click here).

## 4. REMOVE NAVIGATION ANTENNA ASSEMBLY

a. Detach the 3 clamps.



b. Remove the 2 screws and antenna.

**for Preparation** Click here

## 1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover LH.

## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

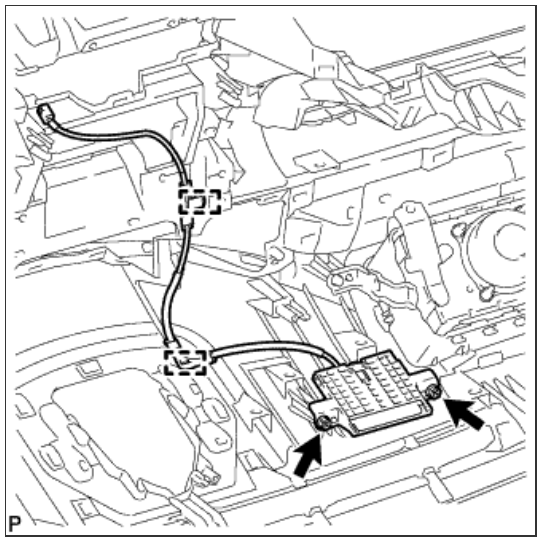
**CAUTION:**

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

## 3. REMOVE INSTRUMENT PANEL SAFETY PAD SUB-ASSEMBLY

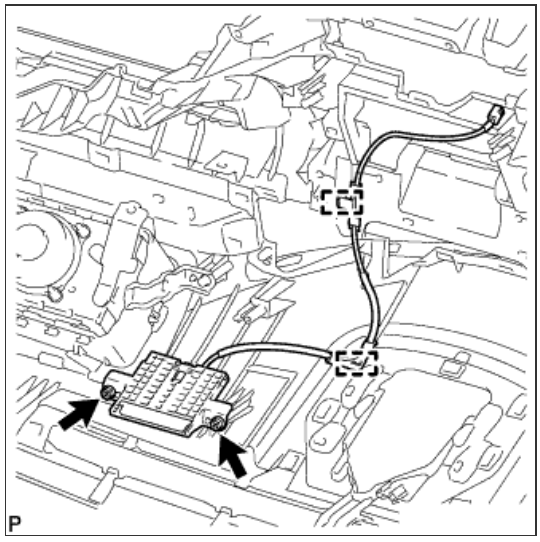


a. Remove the instrument panel safety pad ( Click here).

## 4. REMOVE NAVIGATION ANTENNA ASSEMBLY

a. for LHD:

i. Detach the 2 clamps.



ii. Remove the 2 screws and navigation antenna assembly.

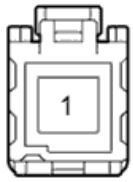
**b.** for RHD:

**i.** Detach the 2 clamps.

**ii.** Remove the 2 screws and navigation antenna assembly.

**for Preparation** Click here

## 1. INSPECT NAVIGATION ANTENNA ASSEMBLY



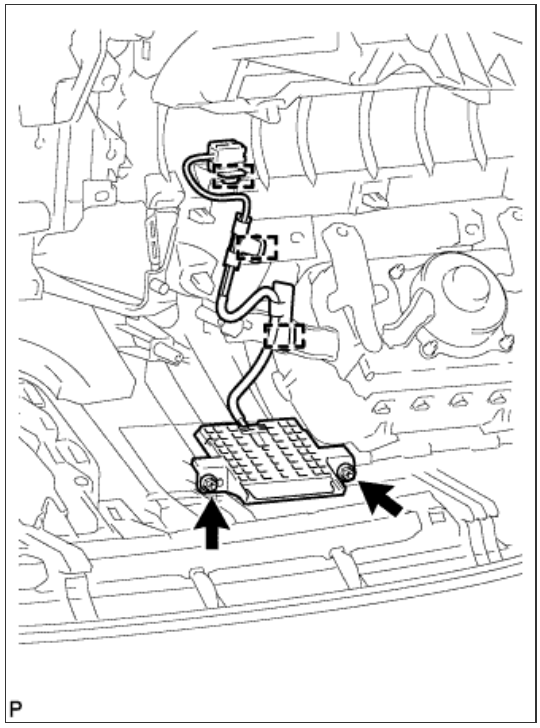
a. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - Shield | Always | 50 to 500 Ω |

If the result is not as specified, replace the navigation antenna assembly.

Component without harness connected:
(Navigation Antenna)



**for Preparation** Click here

## 1. INSTALL NAVIGATION ANTENNA ASSEMBLY

a. Install the antenna with the 2 screws.

b. Attach the 3 clamps.

## 2. INSTALL INSTRUMENT PANEL SAFETY PAD SUB-ASSEMBLY

a. Install the instrument panel safety pad ( Click here).

## 3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

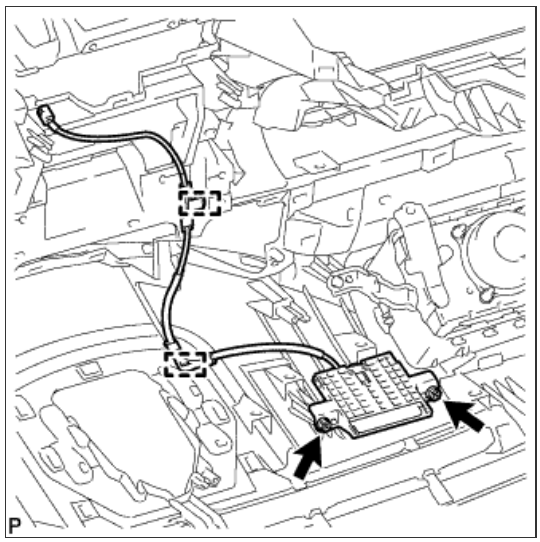
**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

## 4. INSTALL ENGINE ROOM SIDE COVER LH

## 5. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).

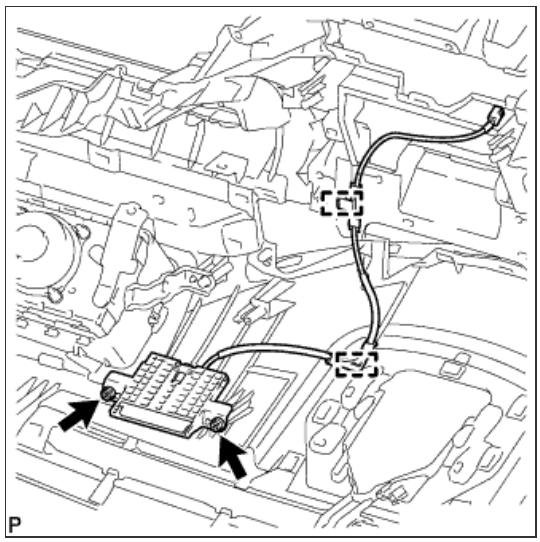


**for Preparation** Click here

## 1. INSTALL NAVIGATION ANTENNA ASSEMBLY

a. for LHD:

i. Install the antenna with the 2 screws.



ii. Attach the 2 clamps.

b. for RHD:

i. Install the antenna with the 2 screws.

ii. Attach the 2 clamps.

## 2. INSTALL INSTRUMENT PANEL SAFETY PAD SUB-ASSEMBLY

a. Install the instrument panel safety pad ( Click here).

## 3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

### 4. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover LH with the 7 clips.

### 5. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).

**for Preparation** Click here

## 1.WARNING NOTIFICATION FUNCTION

**NOTICE:**

- **Before performing inspections or repairs which may cause warning messages or DTC to occur, such as a simulation test or road test, it is necessary to activate warning notification restraint mode so that the G-BOOK center does not recognize the warnings as real ones.**
- **Warning notification restraint mode can be entered by using the intelligent tester or operating the multi-display.**

**HINT:**

The warning notification function sends a warning ON signal, received from the combination meter assembly via CAN communication, to the G-BOOK center using the G-BOOK device if a warning is displayed due to a vehicle malfunction.

a. Warning notification restraint mode

**HINT:**

- **Performing the following procedure will select warning notification restraint mode.**
- **After warning notification restraint mode is entered, driving the vehicle 10 km (6 miles) will cancel the mode.**

i. Warning notification restraint mode (Using the intelligent tester)

1. Turn the engine switch off.
2. Connect the intelligent tester to the DLC3.
3. Start the engine.
4. Turn the tester on.
5. Enter the following menus: Powertrain / Engine / DTC.

ii. Warning notification restraint mode (Operating the multi-display)

1. Enter diagnostic mode of the navigation system (for HDD) (Click here).

## 2.STRICT PROHIBITION OF MANUAL EMERGENCY CALL USING EMERGENCY CALL SERVICE

a. Do not make an emergency call when not in emergency situations. For inspections, use the manual maintenance check.

**NOTICE:**

- **If the emergency call service is used to connect to the G-BOOK center when not in an emergency situation, an unnecessary workload will be generated at the G-BOOK center. This may cause a delayed response by the G-BOOK center to other emergency calls.**
- **If emergency vehicles are dispatched due to an accidental operation of the emergency call switch, you may be charged for the dispatch of the vehicle or punished according to related laws.**

b. If an accidental operation of the emergency call switch is made:

i. If an accidental operation of the emergency call switch is made, contact the G-BOOK center to tell that the call was made by mistake.

ii. The emergency call cannot be halted or finished from the vehicle. Only the G-BOOK center can halt or finish the call.

iii. If the G-BOOK center cannot be informed that the call was made by mistake, the center will report to authorities, emergency facilities and dealerships in compliance with its agreements. As a result, emergency vehicles may be dispatched.

## 3.PRECAUTIONS FOR G-BOOK

a. After replacing the display and navigation module display or the telematics transceiver and performing the vehicle contract setting, perform the procedure to resume the G-BOOK service and to start the emergency call service (Click here).

b. On this model, the display and navigation module display functions as the G-BOOK device and has the G-BOOK ID.

## 4.INSPECTION PROCEDURE FOR TELEMATICS TRANSCEIVER (DATA COMMUNICATION MODULE (DCM))

a. The telematics transceiver uses a CDMA2000 1X type radio wave signal. The radio signals and communication lines may occasionally be

unstable depending on time or location factors. Therefore, network access errors may occur intermittently because of radio signal conditions. To determine if there is a problem, it may be necessary to make a judgment based on frequency of the phenomenon or by making a comparison with a comparable type of cell phone.

b. The display and navigation module display and the telematics transceiver have a one-to-one relationship on the registered G-BOOK system. Therefore, if the display and navigation module display or the telematics transceiver is replaced, a network access cannot be made unless the vehicle contract setting is performed. Use of a substitute component is also not possible to confirm network access.

c. It is not permitted to disassemble the telematics transceiver (the case cannot be opened). If the telematics transceiver malfunctions, replace it.

## 5.PRECAUTIONS FOR DISPLAY AND NAVIGATION MODULE DISPLAY

a. An HDD is built into the display and navigation module display to store map data etc. which will be used for the navigation system. Therefore, care must be taken for the following points when handling:

i. Do not apply any vibration or shock to the display and navigation module display.

**NOTICE:**

- **Do not drop or subject the display and navigation module display to severe impacts.**
- **Do not use the display and navigation module display if it has been dropped or subjected to a severe impact.**

ii. Do not remove the display and navigation module display if there is a risk that condensation may occur.

**NOTICE:**

If the temperature of the display and navigation module display changes rapidly, condensation may occur inside the unit. This may cause a malfunction of the HDD. Therefore, when the display and navigation module display is removed from the instrument panel, it needs to be kept inside the vehicle or in an environment with an equivalent temperature and humidity.

iii. Take measures to prevent static electricity.

**NOTICE:**

Touching the terminals of a connector can cause static electricity to be transmitted to the internal circuits. This may cause a malfunction of the HDD.

iv. Keep the display and navigation module display away from magnets or magnetized items.

**NOTICE:**

Keep the display and navigation module display away from speakers, motors, magnetized tools and other magnetic items.

## 6.PRECAUTIONS FOR HARD DISK DRIVE (HDD)

a. The map data for the navigation system is stored on the Hard Disk Drive (HDD). Make sure to follow the following instructions when replacing the HDD:

**NOTICE:**

Data recorded by the customer may be stored on the HDD. (w/ Sound Library Function) This data will be lost when the HDD is replaced. Make sure to warn the customer that their data will be lost and obtain their consent prior to replacing the HDD.

i. The HDD must only be replaced with a new one. Do not attempt to install a used HDD from another vehicle.

**NOTICE:**

The display and navigation module display can only recognize a new HDD.

ii. Do not touch the HDD cover.

**NOTICE:**

When removing or installing the HDD, only hold it by the areas shown in the illustration.

iii. Do not apply any vibration or shock to the HDD.

**NOTICE:**

- **Do not drop or allow anything to strike the HDD.**
- **Never use an HDD that has been dropped or struck.**

iv. Do not remove the HDD if there is a risk that condensation may occur.

**NOTICE:**

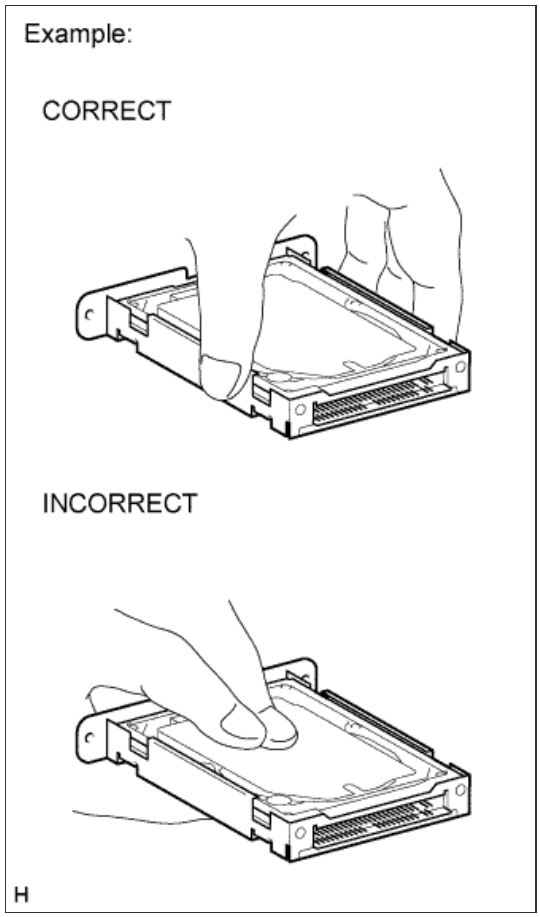
If the temperature of the HDD changes rapidly, condensation may occur inside the unit. This may cause a malfunction of the HDD. Therefore, when the display and navigation module display is removed from the instrument panel, it needs to be kept inside the vehicle or in an environment with an equivalent temperature and humidity.

v. Take measures to prevent static electricity.

**NOTICE:**

Touching the terminals of a connector can cause static electricity to be transmitted to the internal circuits. This may cause a malfunction of the HDD.

vi. Keep the HDD away from magnets or magnetized items.



**NOTICE:**

Keep the HDD away from speakers, motors, magnetized tools and other magnetic items.

vii. Inspection after HDD replacement.

**NOTICE:**

Make sure to perform Check Hard Disk Drive in Operation Check to confirm that there are no HDD abnormalities after removal or installation (Click here).

## 7.PRECAUTIONS FOR EMERGENCY CALL SERVICE

a. Depending on the content of troubleshooting, a manual maintenance check may be performed.

**HINT:**

Communication charges are not incurred for the manual maintenance check because the telematics transceiver is used for communication (the communication cost is included in the G-BOOK service cost).

b. The telematics transceiver functions as the emergency call service device and it has the mayday ID.

## 8.AUTOMATIC MAINTENANCE CHECK FOR EMERGENCY CALL SERVICE

a. The emergency call system regularly performs an automatic maintenance check and communication test with the G-BOOK center so that the emergency call service can always function correctly. There are no operations required to initiate an automatic maintenance check. The automatic maintenance check is performed as follows:

- The automatic maintenance check ends 1 to 2 minutes after it starts.
- During the automatic maintenance check, a telephone call or network access is not possible using G-BOOK system. In this case, wait several minutes before trying again.
- If communication is interrupted for some reason after the automatic maintenance check has started, the automatic maintenance check will resume the next time the engine switch is turned on (ACC).
- There are no communication charges incurred for the manual and automatic maintenance check because the telematics transceiver is used for communication (the communication cost is included in the G-BOOK service cost).

## 9.IF EMERGENCY CALL CANNOT BE MADE

a. The emergency call service may not be available, or its quality may deteriorate in the following cases. (For details, refer to the terms of service and operation manual for the device.)

| Cause | Detail |
|---|---|
| Communication is interrupted due to malfunctions in the G-BOOK device or any other related device. | The G-BOOK device does not operate normally, such as when the device is damaged or malfunctioning due to an impact caused by a collision. |
| Communication is interrupted due to a G- | • The G-BOOK center system may need either periodic or urgent maintenance.<br>• An extreme volume of emergency calls is made to the G-BOOK center due to a large-scale traffic accident or fire. |

| | |
|---|---|
| BOOK center system error. | • Malfunctions or problems with the G-BOOK center system.<br>• The G-BOOK center system is damaged due to a fire.<br>• The emergency call service is suspended or halted due to emergency call provider reasons. |
| Communication is interrupted due to the network used for the emergency call system.*1 | • The registered vehicle is located outside the cellular phone service area used for the emergency call system.<br>• The vehicle is overseas.<br>• The vehicle is in a cellular phone service area where communication is not possible, such as an indoor environment, a basement parking area, mountains, tunnels or beside a building.<br>• Network availability or the time of use is limited, such as when cellular phone networks or public fixed networks (including junction networks) are extremely busy.<br>• Network availability is limited by the communication service provider due to a large-scale disaster.<br>• The cellular phone network or public fixed network (including junction networks) service used for the emergency call system is suspended or halted due to accidents, maintenance or engineering works. |
| The G-BOOK center system cannot determine the vehicle location. | • The vehicle is in the area where the Global Positioning System (GPS) radio waves cannot be received or where it is difficult for radio waves to penetrate, such as indoor environment, a basement parking area, mountains, tunnels or beside a building.<br>• The vehicle location cannot be determined normally or accurately because the vehicle is in the following areas:<br>  • Areas that cause a large error of the location calculation using the GPS, such as in tunnels or a densely built-up area, or after getting off a ferry.<br>  • Areas that cause a large error of map matching due to an old map database.<br>• The GPS system malfunctions. |
| Others | • Although a manual call is made, the situation cannot be confirmed because the user cannot respond to questions from the G-BOOK center.<br>• The G-BOOK contract has not been established, the user fell behind in payments or cancelled the service.<br>• The emergency call service start procedure has not been completed. |

**NOTICE:**

*1: Even when the vehicle is within the cellular phone service area, emergency or phone calls may be difficult to be made due to radio wave signal conditions or busy lines. In this case, it may not be possible to access the G-BOOK center. As a result, no calls can be made to ask for rescue in the event of a traffic accident. If emergency calls cannot be made, use a landline telephone or cellular phone.

## 10.ALARM NOTIFICATION FUNCTION

a. If the vehicle automatic alarm is activated, the G-BOOK center makes a phone call to the customer.

**NOTICE:**

- **When servicing the vehicle, ensure that the vehicle does not experience any conditions that cause a telephone call to be made by a G-BOOK operator.**
- **Before performing inspections or repairs which may activate the alarm notification function, be sure to inform the customer that they may receive a telephone call from a G-BOOK operator.**

**HINT:**

Customers can cancel the alarm notification on the display and navigation module display.

**for Preparation** Click here

## 1.WHEN DISCONNECTING BATTERY CABLE

a. After the engine switch is turned off, the multi-media module receiver assembly requires approximately 6 minutes to record various types of memory and settings. As a result, after turning the engine switch off, wait 6 minutes or more before disconnecting the cable from the negative (-) battery terminal.

## 2.WARNING NOTIFICATION FUNCTION

**NOTICE:**

- **Before performing inspections or repairs which may cause warning messages or DTCs to occur, such as a simulation test or road test, it is necessary to activate warning notification restraint mode so that the G-BOOK center does not recognize the warnings as real ones.**
- **Warning notification restraint mode can be entered by using the intelligent tester or operating the multi-display.**

**HINT:**

The warning notification function sends a warning ON signal, received from the combination meter assembly via CAN communication, to the G-BOOK center using the G-BOOK device if a warning is displayed due to a vehicle malfunction.

a. Warning notification restraint mode

**HINT:**

- **Performing the following procedure will select warning notification restraint mode.**
- **To cancel warning notification restraint mode, turn the engine switch off and on (IG) to display the service mode screen and select "Cancel" button on the screen.**

i. Warning notification restraint mode (Using the intelligent tester)

1. Turn the engine switch off.
2. Connect the intelligent tester to the DLC3.
3. Start the engine.
4. Enter the following menus: Powertrain / Engine / DTC.

ii. Warning notification restraint mode (Operating the multi-display)

1. Enter diagnostic mode of the navigation system (Click here).

## 3.STRICT PROHIBITION OF MANUAL EMERGENCY CALL USING EMERGENCY CALL SERVICE

a. Do not make an emergency call when not in emergency situations. For inspections, use the manual maintenance check.

**NOTICE:**

- **If the emergency call service is used to connect to the G-BOOK center when not in an emergency situation, an unnecessary workload will be generated at the G-BOOK center. This may cause a delayed response by the G-BOOK center to other emergency calls.**
- **If emergency vehicles are dispatched due to an accidental operation of the emergency call switch, you may be charged for the dispatch of the vehicle or punished according to related laws.**

b. If an accidental operation of the emergency call switch is made:

i. If an accidental operation of the emergency call switch is made, contact the G-BOOK center to tell that the call was made by mistake.

ii. The emergency call cannot be halted or finished from the vehicle. Only the G-BOOK center can halt or finish the call.

iii. If the G-BOOK center cannot be informed that the call was made by mistake, the center will report to authorities, emergency facilities and dealerships in compliance with its agreements. As a result, emergency vehicles may be dispatched.

## 4.PRECAUTIONS FOR G-BOOK

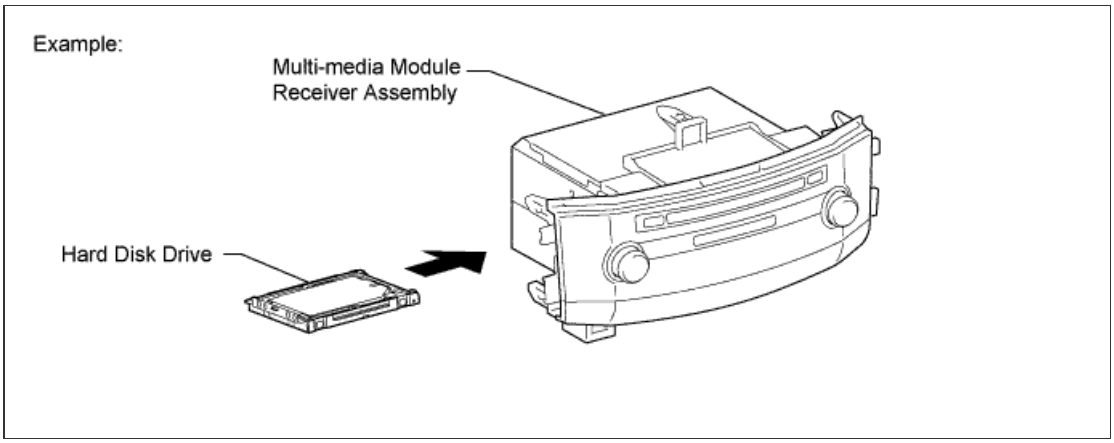
a. After replacing the multi-media module receiver assembly or the telematics transceiver and performing the vehicle contract setting, perform the procedure to resume the G-BOOK service and to start the emergency call service (Click here).

b. On this model, the multi-media module receiver assembly functions as the G-BOOK device and has the G-BOOK ID.

c. If the hard disk drive is replaced on vehicles that have a contract for the G-BOOK service, perform "Download necessary data" after installing the new hard disk drive (Click here).

d. Necessary data for the G-BOOK system is stored in the hard disk drive that is built into the multi-media module receiver assembly.

## 5.INSPECTION PROCEDURE FOR TELEMATICS TRANSCEIVER (DATA COMMUNICATION MODULE [DCM])



a. The telematics transceiver uses a CDMA2000 1X type radio wave signal. The radio signals and communication lines may occasionally be unstable depending on time or location factors. Therefore, network access errors may occur intermittently because of radio signal conditions. To determine if there is a problem, it may be necessary to make a judgment based on frequency of the phenomenon or by making a comparison with a comparable type of cell phone.

b. The multi-media module receiver assembly and the telematics transceiver have a one-to-one relationship on the registered G-BOOK system. Therefore, if the multi-media module receiver assembly or the telematics transceiver is replaced, a network access cannot be made unless the vehicle contract setting is performed. Use of a substitute component is also not possible to confirm network access.

c. It is not permitted to disassemble the telematics transceiver (the case cannot be opened). If the telematics transceiver malfunctions, replace it.

## 6.PRECAUTIONS FOR MULTI-MEDIA MODULE RECEIVER ASSEMBLY

a. An HDD is built into the multi-media module receiver assembly to store map and other data which are used for the navigation system. Therefore, care must be taken with the following points when handling it.

i. Do not apply any vibration or shock to the multi-media module receiver assembly.

**NOTICE:**

- **Do not drop or subject the multi-media module receiver assembly to severe impacts.**
- **Do not use the multi-media module receiver assembly if it has been dropped or subjected to any severe impacts.**

ii. Do not remove the multi-media module receiver assembly if there is a risk that condensation may occur.

**NOTICE:**

If the temperature of the multi-media module receiver assembly changes rapidly, condensation may occur inside the unit. This may cause a malfunction of the HDD. Therefore, when the multi-media module receiver assembly is removed from the instrument panel, it needs to be kept inside the vehicle or in an environment with an equivalent temperature and humidity.

iii. Take measures to prevent static electricity.

**NOTICE:**

Touching the terminals of a connector can cause static electricity to be transmitted to the internal circuits. This may cause a malfunction of the HDD.

iv. Keep the multi-media module receiver assembly away from magnets or magnetized items.

**NOTICE:**

Keep the multi-media module receiver assembly away from speakers, motors, magnetized tools and other magnetic items.

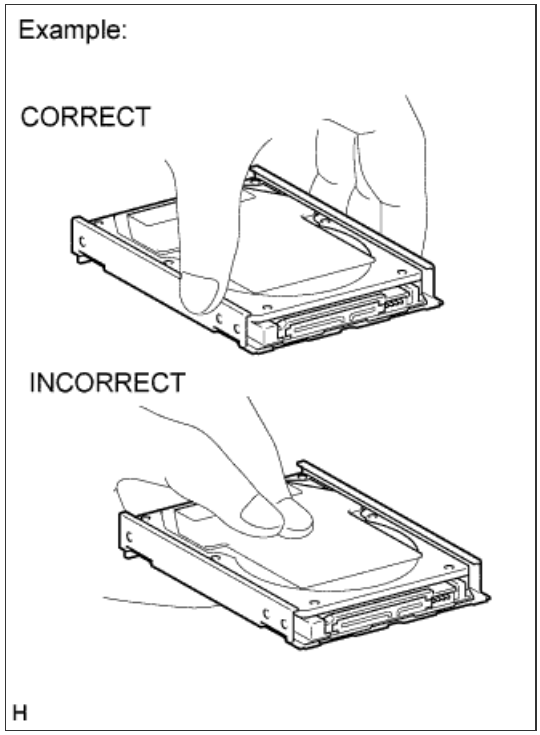
## 7.PRECAUTIONS FOR HARD DISK DRIVE (HDD)

a. The map data for the navigation system is stored on the Hard Disk Drive (HDD). Make sure to follow the following instructions when replacing the HDD.

**NOTICE:**

Data downloaded by the customer may be stored on the HDD. This data will be lost when the HDD is replaced. Make sure to warn the customer that the data will be lost and obtain their consent prior to replacing the HDD.

i. The HDD must only be replaced with a new one. Do not install a used HDD from another vehicle.



**NOTICE:**

The multi-media module receiver assembly can only recognize a new HDD.

ii. Do not touch the HDD cover.

**NOTICE:**

When removing or installing the HDD, only hold it by the areas shown in the illustration.

iii. Do not apply any vibration or shock to the HDD.

**NOTICE:**

- **Do not drop or allow anything to strike the HDD.**
- **Never use an HDD that has been dropped or struck.**

iv. Do not remove the HDD if there is a risk that condensation may occur.

**NOTICE:**

If the temperature of the HDD changes rapidly, condensation may occur inside the unit. This may cause a malfunction of the HDD. Therefore, when the multi-media module receiver assembly is removed from the instrument panel, it needs to be kept inside the vehicle or in an environment with an equivalent temperature and humidity.

v. Take measures to prevent static electricity.

**NOTICE:**

Touching the terminals of a connector can cause static electricity to be transmitted to the internal circuits. This may cause a malfunction of the HDD.

vi. Keep the HDD away from magnets or magnetized items.

**NOTICE:**

Keep the HDD away from speakers, motors, magnetized tools and other magnetic items.

vii. Inspection after HDD replacement.

**NOTICE:**

Make sure to perform Check Hard Disk Drive in Operation Check to confirm that there are no HDD abnormalities after removal or installation (Click here).

## 8.PRECAUTIONS FOR EMERGENCY CALL SERVICE

a. Depending on the content of troubleshooting, a manual maintenance check may be performed.

**HINT:**

Communication charges are not incurred for the manual maintenance check because the telematics transceiver is used for communication (the communication cost is included in the G-BOOK service cost).

b. The telematics transceiver functions as the emergency call service device and it has the mayday ID.

## 9.AUTOMATIC MAINTENANCE CHECK FOR EMERGENCY CALL SERVICE

a. The emergency call system regularly performs an automatic maintenance check and communication test with the G-BOOK center so that the emergency call service can always function correctly. There are no operations required to initiate an automatic maintenance check. The automatic maintenance check is performed as follows:

- The automatic maintenance check ends 1 to 2 minutes after it starts.
- During the automatic maintenance check, a telephone call or network access is not possible using the G-BOOK system. In this case, wait several minutes before trying again.
- If communication is interrupted for some reason after the automatic maintenance check has started, the automatic maintenance check will resume the next time the engine switch is turned on (ACC).
- There are no communication charges incurred for the manual and automatic maintenance check because the telematics transceiver is used for communication (the communication cost is included in the G-BOOK service cost).

## 10.IF EMERGENCY CALL CANNOT BE MADE

a. The emergency call service may not be available, or its quality may deteriorate in the following cases. (For details, refer to the terms of service and operation manual for the device.)

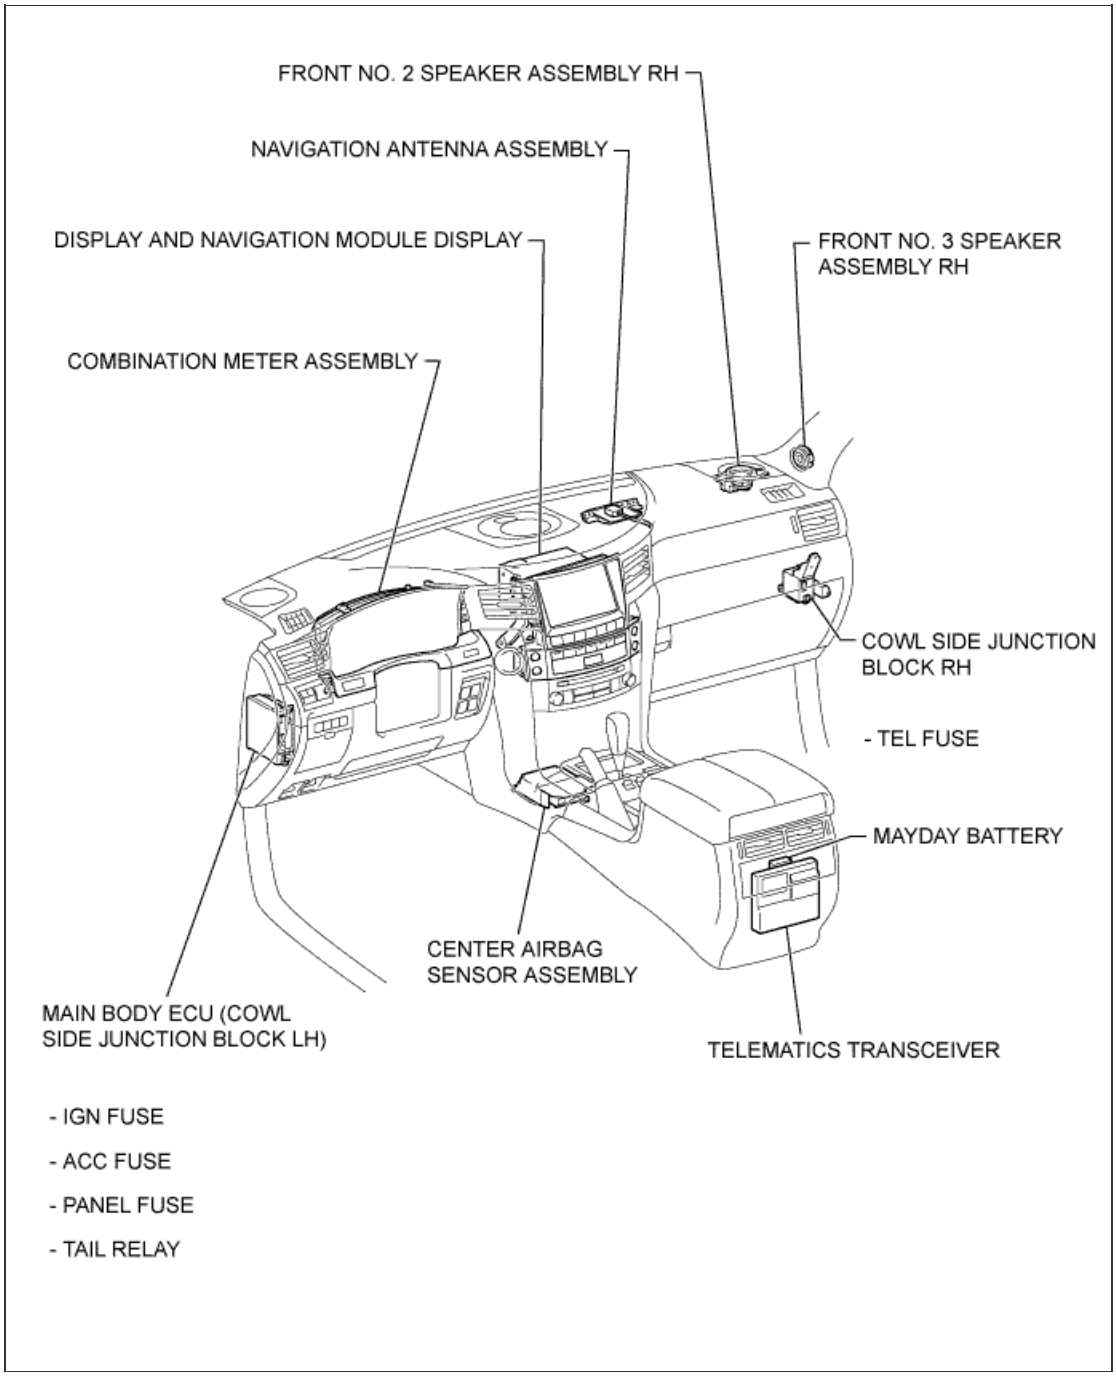
| Cause | Detail |
|---|---|
| Communication is interrupted due to malfunctions in the G-BOOK device or any other related device. | The G-BOOK device does not operate normally, such as when the device is damaged or malfunctioning due to an impact caused by a collision. |
| Communication is interrupted due to a G-BOOK center system error. | • The G-BOOK center system may need either periodic or urgent maintenance.<br>• An extreme volume of emergency calls is made to the G-BOOK center due to a large-scale traffic accident or fire.<br>• Malfunctions or problems with the G-BOOK center system.<br>• The G-BOOK center system is damaged due to a fire.<br>• The emergency call service is suspended or halted due to emergency call provider reasons. |
| Communication is interrupted due to the network used for the emergency call system.* | • The registered vehicle is located outside the cellular phone service area used for the emergency call system.<br>• The vehicle is overseas.<br>• The vehicle is in a cellular phone service area where communication is not possible, such as an indoor environment, a basement parking area, mountains, tunnels or beside a building.<br>• Network availability or the time of use is limited, such as when cellular phone networks or public fixed networks (including junction networks) are extremely busy.<br>• Network availability is limited by the communication service provider due to a large-scale disaster.<br>• The cellular phone network or public fixed network (including junction networks) service used for the emergency call system is suspended or halted due to accidents, maintenance or construction. |
| The G-BOOK center system cannot determine the vehicle location. | • The vehicle is in an area where the Global Positioning System (GPS) radio waves cannot be received or where it is difficult for radio waves to penetrate, such as an indoor environment, a basement parking area, mountains, tunnels or beside a building.<br>• The vehicle location cannot be determined normally or accurately because the vehicle is in the following areas:<br>  • Areas that cause a large error of the location calculation using the GPS, such as in tunnels or a densely built-up area, or after getting off a ferry.<br>  • Areas that cause a large error of map matching due to an old map database.<br>• The GPS system malfunctions. |
| Others | • Although a manual call is made, the situation cannot be confirmed because the user cannot respond to questions from the G-BOOK center.<br>• The G-BOOK contract has not been established, the user fell behind in payments or cancelled the service.<br>• The emergency call service start procedure has not been completed. |

**NOTICE:**

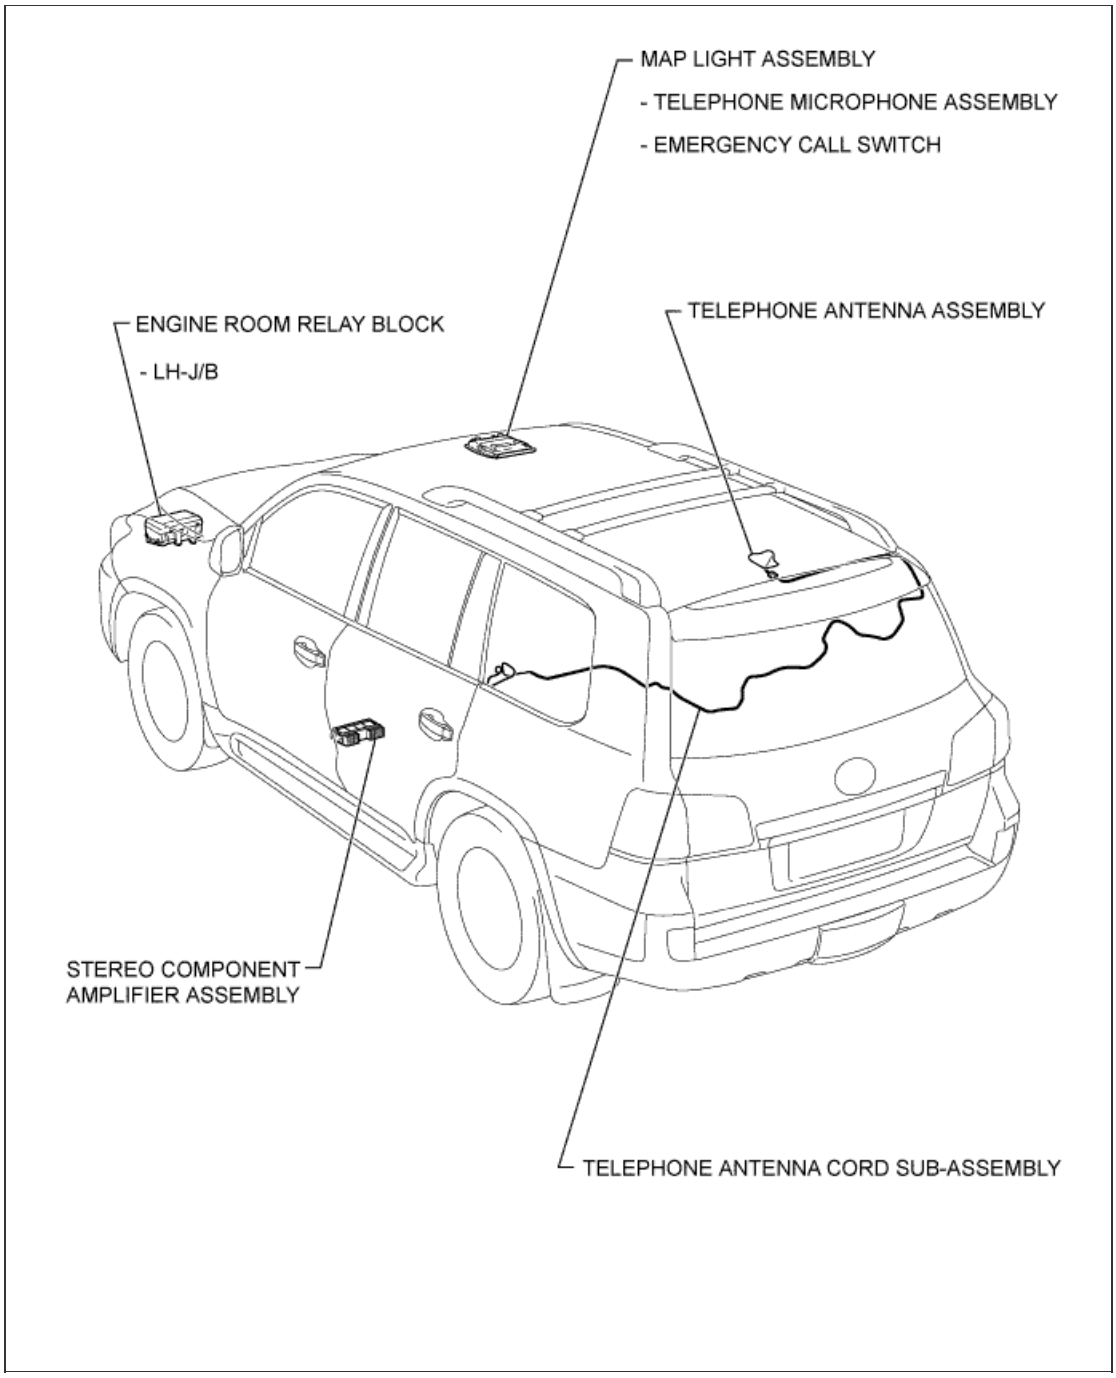
*: Even when the vehicle is within a cellular phone service area, emergency or phone calls may be difficult to be made due to radio wave signal conditions or busy lines. In this case, it may not be possible to access the G-BOOK center. As a result, no calls can be made to ask for rescue in the event of a traffic accident. If emergency calls cannot be made, use a landline telephone or cellular phone.

## 11.ALARM NOTIFICATION FUNCTION

a. If the vehicle automatic alarm is activated, the G-BOOK center makes a phone call to the customer.

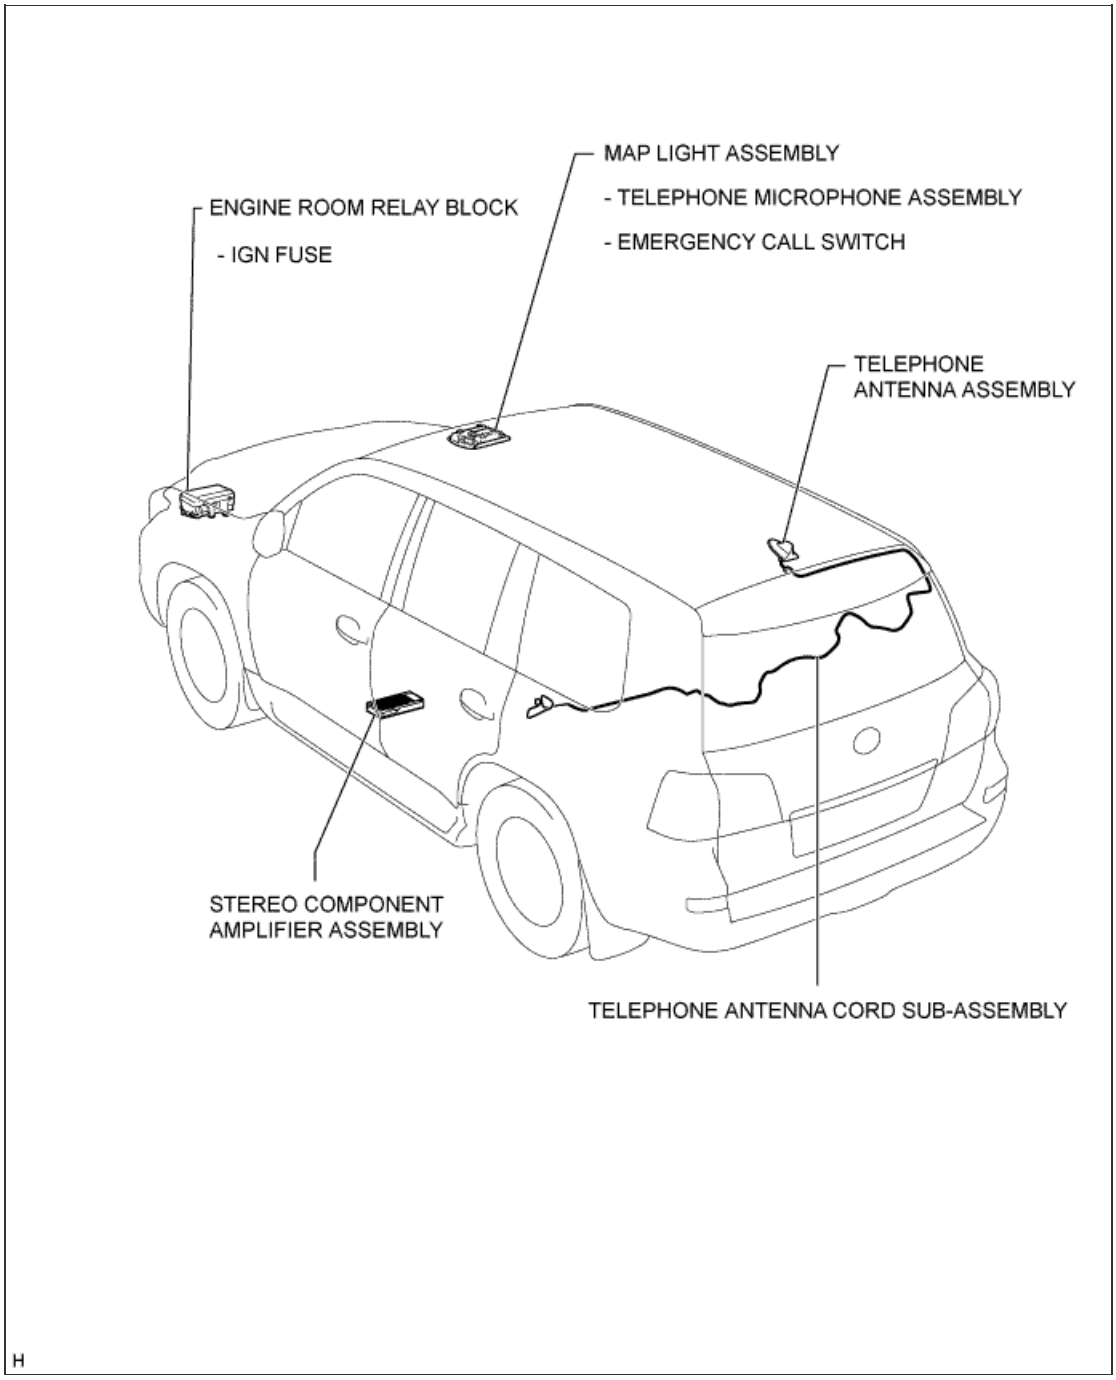


**NOTICE:**



- **When servicing the vehicle, ensure that the vehicle does not experience any conditions that cause a telephone call to be made by a G-BOOK operator.**
- **Before performing inspections or repairs which may activate the alarm notification function, be sure to inform the customer that they may receive a telephone call from a G-BOOK operator.**

**HINT:**



Customers can cancel the alarm notification on the multi-display.

## G-BOOK SYSTEM OUTLINE

a. The G-BOOK system is a telematics service that links the vehicle and G-BOOK network (provides information from the G-BOOK center or content providers).

b. To use the G-BOOK system, it is necessary to connect the telematics transceiver (data communication module) to the display and navigation module display.

c. The user needs to follow the instructions on the display and navigation module display to start using the G-BOOK system service after applying for the service at a dealership.

## FUNCTION OF MAIN COMPONENTS

| Component | Function | | |
|---|---|---|---|
| Emergency Call Switch | When the emergency call switch is pressed, a switch signal is sent to the telematics transceiver.<br>(When a manual maintenance check or manual emergency call is performed.) | | |
| | | Green | • Turns on for 5 seconds after the engine switch is turned on (ACC).<br>• Turns on when the system is under a service contract and operating normally.<br>• Blinks during a emergency call.<br>• Blinks during a manual maintenance check.<br>• Turns off when the system is malfunctioning. |

| | | | |
|---|---|---|---|
| | LED Indicator Light | Red | • Turns on for 5 seconds after the engine switch is turned on (ACC).<br>• Turns on when the telematics transceiver is not within the service area.<br>• Blinks when a call is made while the system is still malfunctioning.<br>• Turns off when the system is operating normally.<br>• Blinks when the mayday battery needs to be replaced.<br>• Blinks when in diagnostic mode to indicate a DTC. |
| Telephone Microphone Assembly | • When the operator service is used: Sends the microphone voice signal to the display and navigation module display.<br>• When an emergency call is made: Sends the microphone voice signal to the telematics transceiver. | | |
| Telephone Antenna Assembly | Sends and receives the data and voice signals used for the G-BOOK service through a communication network. | | |
| Telematics Transceiver | • Uses the telephone antenna assembly to send and receive the data and voice signals used for the G-BOOK service through a communication network.<br>  • When the operator service is used: Sends a received voice signal to the display and navigation module display.<br>  • When the operator service is used: Sends a sent voice signal from the display and navigation module display to the telephone antenna assembly.<br>  • When an emergency call is made: Sends a received voice signal to the vehicle speakers.<br>  • When an emergency call is made: Receives a sent voice signal from the telephone microphone assembly.<br>  • When an emergency call is made: Sends a mute signal to the stereo component amplifier assembly. (Mute function becomes active during the call.)<br>  • When an emergency call is made: Sends the location information to the G-BOOK center. | | |
| Mayday Battery (Back-up battery) | • When automatic emergency call is performed, the mayday battery provides power to the DCM.<br>• When a manual emergency call is made, the mayday battery is not used as the power source.<br>• The mayday battery conducts a self-diagnosis every time the engine switch is turned on (IG), and after an automatic emergency call or manual emergency call is made, and the result is sent to the DCM. | | |
| GPS Antenna | Receives GPS radio waves and sends them to the display and navigation module display. | | |
| Main Body ECU (Cowl side junction block LH) | Sends a security horn sounding signal to the display and navigation module display when the theft deterrent system is activated. | | |
| Display and Navigation Module Display | • Sends and receives the data used for the G-BOOK service to and from the telematics transceiver using a telematics data signal.<br>  • When the operator service is used: Sends the sent voice signal from the telephone microphone assembly to the telematics transceiver.<br>  • When the operator service is used: Sends the received voice signal from the telematics transceiver to the stereo component amplifier assembly using a MOST signal.<br>  • Sends the vehicle location information to the telematics transceiver.<br>  • When a warning comes on, the display and navigation module display receives a warning ON signal from the combination meter assembly via CAN communication and the telematics transceiver sends it to the G-BOOK center.<br>  • When the theft deterrent system is activated, the telematics transceiver sends the G-BOOK center information that the security horn has sounded. | | |
| Stereo Component Amplifier Assembly | Receives the received voice signal sent from the display and navigation module display as a MOST signal and outputs it as sound from the vehicle speakers.<br>(When the operator service is used.) | | |
| Center Airbag Sensor Assembly | Sends an activation signal to the telematics transceiver when airbags deploy.<br>(An automatic emergency call is made.) | | |

## DEVICE USED FOR G-BOOK SYSTEM COMMUNICATION

a. The telematics transceiver is used for data communication or emergency call service telephone calls and operator service telephone calls.

b. The hands-free function cannot use the telematics transceiver. A user's "Bluetooth" compatible cellular phone needs to be used.

c. Perform the following if the device used for G-BOOK system communication is replaced.

**HINT:**

- **If the display and navigation module display or the telematics transceiver is replaced on vehicles that do not have a contract for the G-BOOK service, perform the vehicle contract setting.**
- **If the display and navigation module display or the telematics transceiver is replaced on vehicles that have a contract for the G-BOOK service, perform the vehicle contract setting and the procedure to resume the G-BOOK service and to start the emergency call service.**

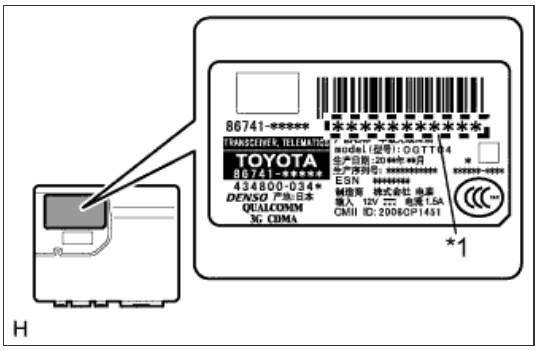
## G-BOOK ID OUTLINE

a. On this model, the display and navigation module display functions as the G-BOOK device.

b. The display and navigation module display has a serial number (G-BOOK ID) which can be used to determine the individual device when servicing.

## MAYDAY ID OUTLINE

a. On this model, the telematics transceiver functions as the emergency call service device to perform emergency calls.



b. The telematics transceiver has a serial number (mayday ID) which can be used to identify the individual device when servicing.

## Data Communication Module (DCM) OUTLINE

a. The G-BOOK device uses the DCM (telematics transceiver) to provide access to the network service.

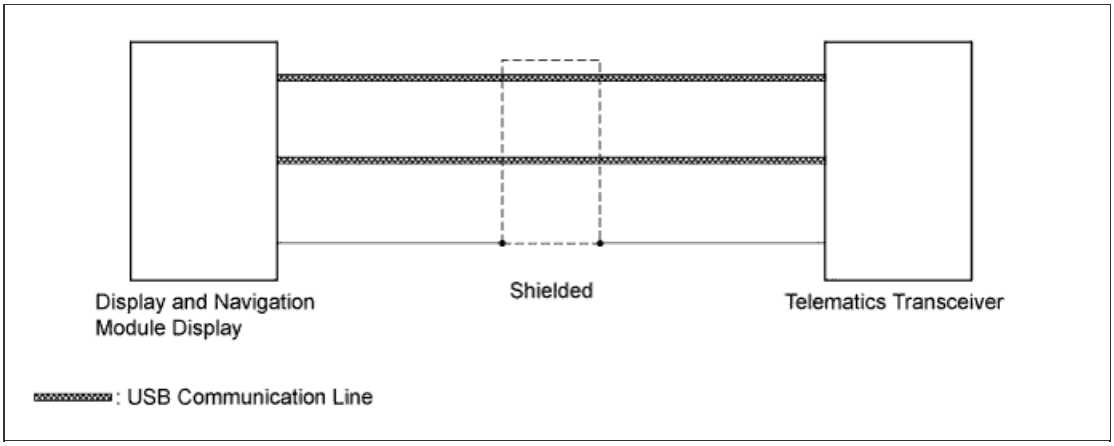
b. The DCM has a DCM ID (described on the label attached to the DCM).

c. As is the case with cellular phones, the DCM has a phone number.

**Text in Illustration**

| | |
|---|---|
| *1 | DCM ID |

## G-BOOK SUPPORT CENTER OUTLINE



a. The G-BOOK support center provides members with opportunities to ask questions and information necessary for troubleshooting.

**G-BOOK Support Center**

| Main Service | Outline |
|---|---|
| Answering questions about the G-BOOK system | Answering questions from customers about the G-BOOK system |
| Contracting or canceling the G-BOOK online service | Performing procedure to make or cancel a contract for customers |
| Confirming server or communication conditions | Confirming the G-BOOK center condition |
| Re-registering a G-BOOK device or telematics transceiver | Performing procedure for re-registration when the G-BOOK device or telematics transceiver is replaced |
| Answering questions about a manual maintenance check for the emergency call service | Answering questions when a manual maintenance check for the emergency call service has not completed normally |

## COMMUNICATION SYSTEM

a. USB Outline

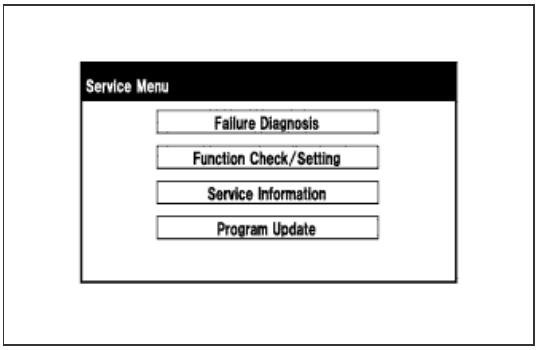
i. G-BOOK system components communicate with each other via the USB.

**HINT:**

If a short or open circuit occurs in the USB circuit, communication will be interrupted and the system will not operate normally.

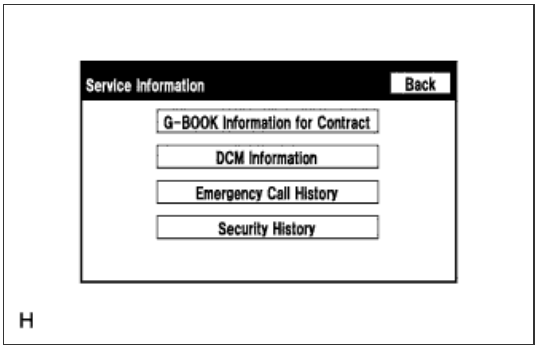
## DIAGNOSTIC FUNCTION OUTLINE

a. The G-BOOK system has a diagnostic function (the result will be displayed on the master unit or intelligent tester).



## DIAGNOSIS DISPLAY DETAILED DESCRIPTION

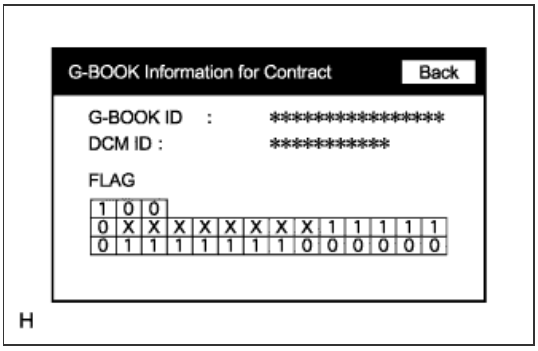
**HINT:**



This section contains a detailed description of displays in diagnostic mode.

a. Enter diagnostic mode (Click here).

b. Select "Service Information" on the Service Menu screen.

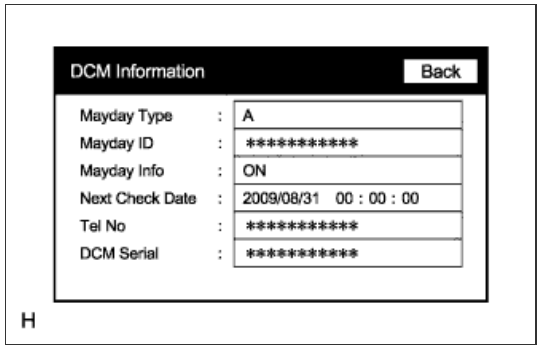


c. Service Information Screen

### Screen Description

| Display | Content |
|---|---|
| G-BOOK Information for Contract | The G-BOOK ID, flag information, etc. are displayed. |
| DCM Information | The ID, contract information, maintenance check date, etc. which are related to the emergency call service are displayed. |
| Emergency Call History | The history (date and condition) of emergency calls is displayed ( Click here). |
| Security History | The history (date and result) of an alarm notification is displayed ( Click here). |

i. G-BOOK Information for Contract Screen



### Screen Description

| Display | Content |
|---|---|

| | |
|---|---|
| G-BOOK ID | The G-BOOK ID of the display and navigation module display is displayed. |
| DCM ID | The 11-digit serial number of the telematics transceiver is displayed. |
| FLAG | The G-BOOK contract flag or service flag of the display and navigation module display is displayed. |

ii. DCM Information Screen

**Screen Description**

| Display | Content |
|---|---|
| Mayday Type | The type of installed emergency call service device is displayed (on this model, "A" (airbag-linked type) is displayed). |
| Mayday ID | The ID of the installed emergency call service device is displayed. |
| Mayday Info | **The emergency call service contract condition is displayed as follows:**<br>• "ON": Contract has been made and membership has been registered<br>• "OFF": Contract has been made but membership has not been registered<br>• "NO CONT": Not contracted |
| Next Check Date | The date on which the automatic maintenance check will be performed next is displayed. |
| Tel No | • The phone number of the telematics transceiver is displayed.<br>• "NO DCM" is displayed when the telematics transceiver is not connected to the display and navigation module display. |
| DCM Serial | • The 11-digit serial number of the telematics transceiver is displayed (DCM ID).<br>• "NO DCM" is displayed when the telematics transceiver is not connected to the display and navigation module display. |

## MAYDAY BATTERY OUTLINE

a. As the mayday battery is a non-rechargeable (primary) battery, it cannot be recharged.

b. When it is time to replace the mayday battery, the emergency call switch red indicator will come on. The DCM will also store a DTC.

**NOTICE:**

After automatic emergency call is performed, the mayday battery must be replaced with a new one.

## WARNING NOTIFICATION FUNCTION

**NOTICE:**

- **Before performing inspections or repairs which may cause warning messages or DTC to occur, such as a simulation test or road test, it is necessary to activate warning notification restraint mode so that the G-BOOK center does not recognize the warnings as real ones.**
- **Warning notification restraint mode can be entered by using the intelligent tester or operating the multi-display.**

**HINT:**

The warning notification function sends a warning ON signal, received from the combination meter assembly via CAN communication, to the G-BOOK center using the G-BOOK device if a warning is displayed due to a vehicle malfunction.

a. Warning notification restraint mode

**HINT:**

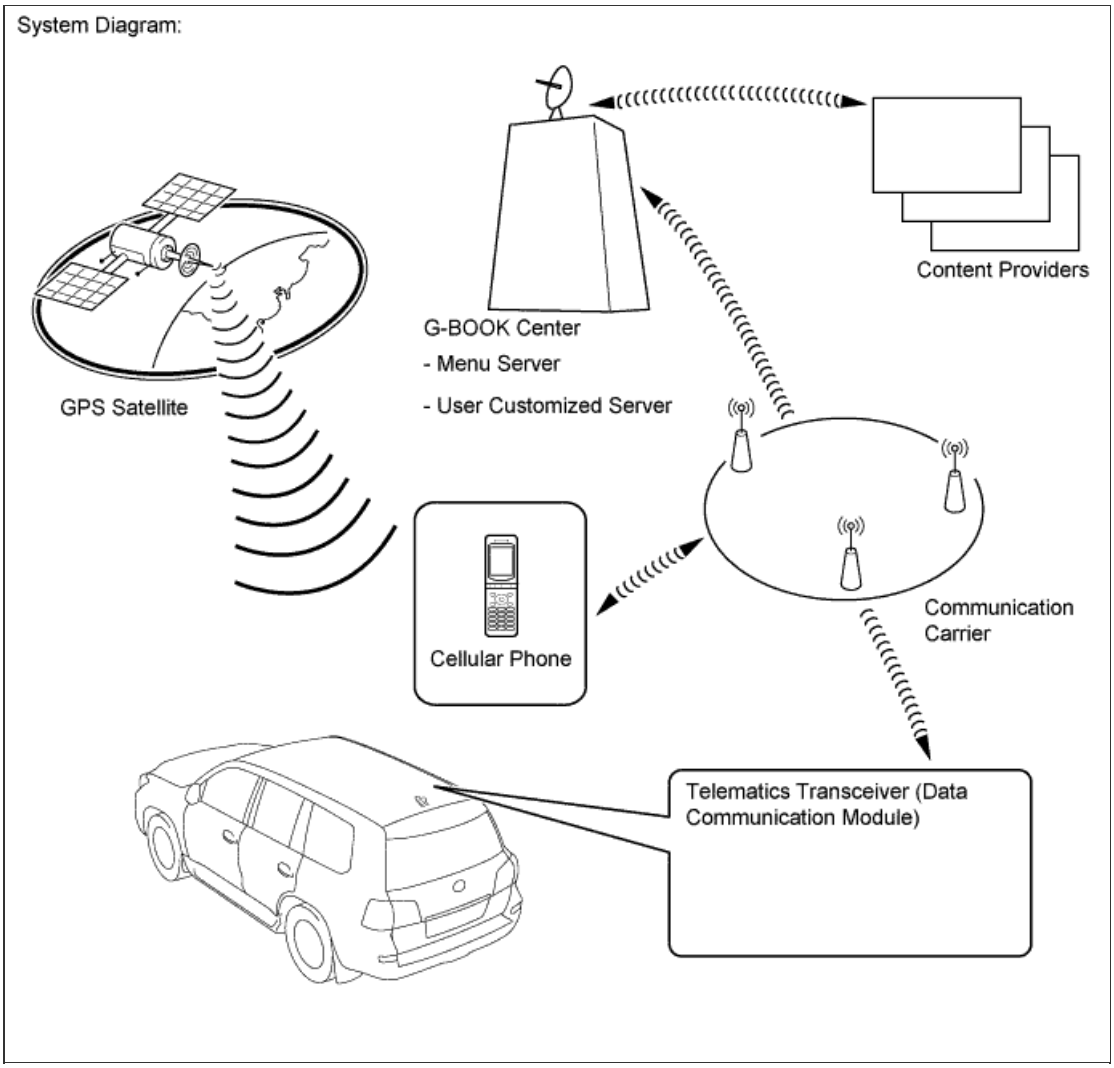
- **Performing the following procedure will select warning notification restraint mode.**
- **After warning notification restraint mode is entered, driving the vehicle 10 km (6 miles) will cancel the mode.**

i. Warning notification restraint mode (Using the intelligent tester)

1. Turn the engine switch off.
2. Connect the intelligent tester to the DLC3.
3. Start the engine.
4. Turn the tester on.
5. Enter the following menus: Powertrain / Engine / DTC.

ii. Warning notification restraint mode (Operating the multi-display)

1. Enter diagnostic mode of the navigation system (for HDD) (Click here).



**for Preparation** Click here

## G-BOOK SYSTEM OUTLINE

a. The G-BOOK system is a telematics service that links the vehicle and G-BOOK network (provides information from the G-BOOK center or content providers).

b. To use the G-BOOK system, it is necessary to connect the telematics transceiver (data communication module [DCM]) to the multi-media module receiver assembly.

c. The user needs to follow the instructions on the multi-media module receiver assembly to start using the G-BOOK system service after applying for the service at a dealership.

## FUNCTION OF MAIN COMPONENTS

| Component | Function | | |
|---|---|---|---|
| Emergency Call Switch | When the emergency call switch is pressed, a switch signal is sent to the telematics transceiver.<br>(When a manual maintenance check or manual emergency call is performed.) | | |
| | | Green | • Turns on for 5 seconds after the engine switch is turned on (ACC).<br>• Turns on when the system is under a service contract and operating normally.<br>• Blinks during a emergency call.<br>• Blinks during a manual maintenance check.<br>• Turns off when the system is malfunctioning. |

| | | | |
|---|---|---|---|
| | LED Indicator Light | Red | • Turns on for 5 seconds after the engine switch is turned on (ACC).<br>• Turns on when the telematics transceiver is not within the service area.<br>• Blinks when a call is made while the system is still malfunctioning.<br>• Turns off when the system is operating normally.<br>• Blinks when the mayday battery needs to be replaced.<br>• Blinks when in diagnostic mode to indicate a DTC. |
| Telephone Microphone Assembly | • When the operator service is used: Sends the microphone voice signal to the multi-media module receiver assembly.<br>• When an emergency call is made: Sends the microphone voice signal to the telematics transceiver. | | |
| Telephone Antenna Assembly | Sends and receives the data and voice signals used for the G-BOOK service through a communication network. | | |
| Telematics Transceiver | • Uses the telephone antenna assembly to send and receive the data and voice signals used for the G-BOOK service through a communication network.<br>  • When the operator service is used: Sends a received voice signal to the multi-media module receiver assembly.<br>  • When the operator service is used: Sends a sent voice signal from the multi-media module receiver assembly to the telephone antenna assembly.<br>  • When an emergency call is made: Sends a received voice signal to the vehicle speakers.<br>  • When an emergency call is made: Receives a sent voice signal from the telephone microphone assembly.<br>  • When an emergency call is made: Sends a mute signal to the stereo component amplifier assembly. (Mute function becomes active during the call.)<br>  • When an emergency call is made: Sends the location information to the G-BOOK center. | | |
| Mayday Battery (Back-up battery) | • When automatic emergency call is performed, the mayday battery provides power to the DCM.<br>• When a manual emergency call is made, the mayday battery is not used as the power source.<br>• The mayday battery conducts a self-diagnosis every time the engine switch is turned on (IG), and after an automatic emergency call or manual emergency call is made, and the result is sent to the DCM. | | |
| GPS Antenna | Receives GPS radio waves and sends them to the multi-media module receiver assembly. | | |
| Certification ECU (Smart key ECU assembly) | Sends a security horn sounding signal to the multi-media module receiver assembly when the theft deterrent system is activated. | | |
| Multi-media Module Receiver Assembly | • Sends and receives the data used for the G-BOOK service to and from the telematics transceiver using a telematics data signal.<br>  • When the operator service is used: Sends the sent voice signal from the telephone microphone assembly to the telematics transceiver.<br>  • When the operator service is used: Sends the received voice signal from the telematics transceiver to the stereo component amplifier assembly using a MOST signal.<br>  • Sends the vehicle location information to the telematics transceiver.<br>  • When a warning comes on, the multi-media module receiver assembly receives a warning ON signal from the combination meter assembly via CAN communication and the telematics transceiver sends it to the G-BOOK center.<br>  • When the theft deterrent system is activated, the telematics transceiver sends the G-BOOK center information that the security horn has sounded. | | |
| Stereo Component Amplifier Assembly | Receives the received voice signal sent from the multi-media module receiver assembly as a MOST signal and outputs it as sound from the vehicle speakers.<br>(When the operator service is used.) | | |
| Center Airbag Sensor Assembly | Sends an activation signal to the telematics transceiver when airbags deploy.<br>(An automatic emergency call is made.) | | |

## DEVICE USED FOR G-BOOK SYSTEM COMMUNICATION

a. The telematics transceiver is used for data communication or emergency call service telephone calls and operator service telephone calls.

b. The hands-free function cannot use the telematics transceiver. A user's "Bluetooth" compatible cellular phone needs to be used.

c. Perform the following if the device used for G-BOOK system communication is replaced.

**HINT:**

- **If the multi-media module receiver assembly or the telematics transceiver is replaced on vehicles that do not have a contract for the G-BOOK service, perform the vehicle contract setting.**
- **If the multi-media module receiver assembly or the telematics transceiver is replaced on vehicles that have a contract for the G-BOOK service, perform the vehicle contract setting and the procedure to resume the G-BOOK service and to start the emergency call service.**

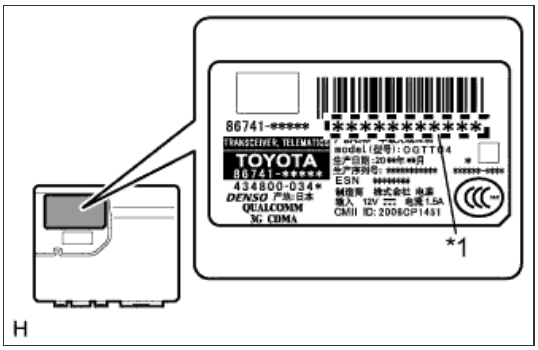
## G-BOOK ID OUTLINE

a. On this model, the multi-media module receiver assembly functions as the G-BOOK device.

b. The multi-media module receiver assembly has a serial number (G-BOOK ID) which can be used to determine the individual device when servicing.

## MAYDAY ID OUTLINE

a. On this model, the telematics transceiver functions as the emergency call service device to perform emergency calls.



b. The telematics transceiver has a serial number (mayday ID) which can be used to identify the individual device when servicing.

## Data Communication Module (DCM) OUTLINE

a. The G-BOOK device uses the DCM (telematics transceiver) to provide access to the network service.

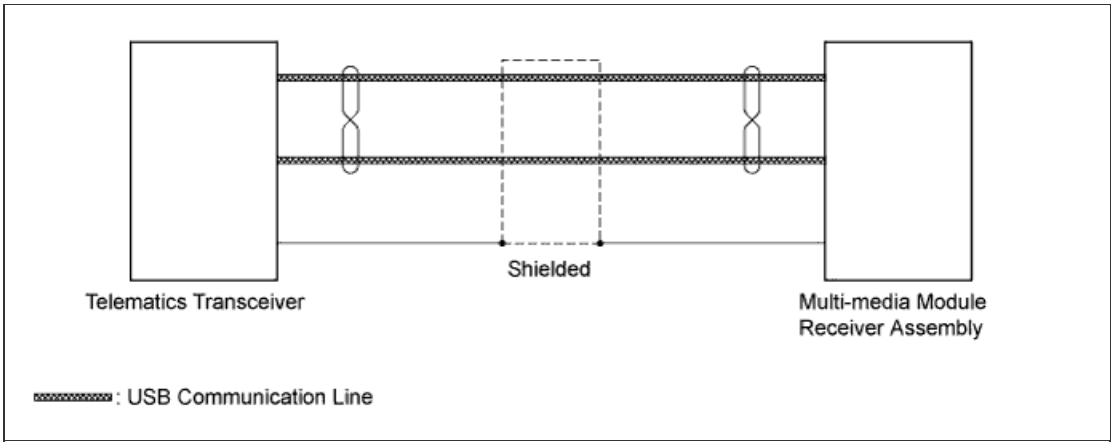
b. The DCM has a DCM ID (printed on the label attached to the DCM).

c. As is the case with cellular phones, the DCM has a phone number.

**Text in Illustration**

| | |
|---|---|
| *1 | DCM ID |

## G-BOOK SUPPORT CENTER OUTLINE



a. The G-BOOK support center provides members with opportunities to ask questions and information necessary for troubleshooting.

**G-BOOK Support Center**

| Main Service | Outline |
|---|---|
| Answering questions about the G-BOOK system | Answering questions from customers about the G-BOOK system |
| Contracting or canceling the G-BOOK online service | Performing procedure to make or cancel a contract for customers |
| Confirming server or communication conditions | Confirming the G-BOOK center condition |
| Re-registering a G-BOOK device or telematics transceiver | Performing procedure for re-registration when the G-BOOK device or telematics transceiver is replaced |
| Answering questions about a manual maintenance check for the emergency call service | Answering questions when a manual maintenance check for the emergency call service has not completed normally |

## COMMUNICATION SYSTEM

a. USB Outline

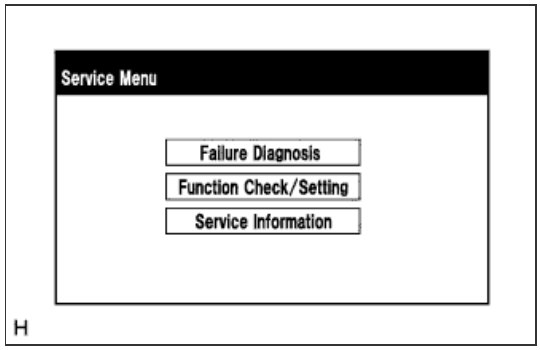
i. G-BOOK system components communicate with each other via the USB.

**HINT:**

If a short or open circuit occurs in the USB circuit, communication will be interrupted and the system will not operate normally.

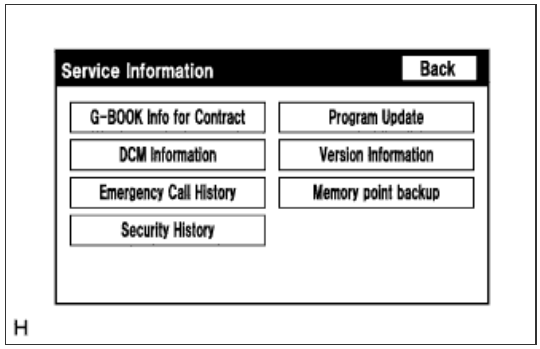
## DIAGNOSTIC FUNCTION OUTLINE

a. The G-BOOK system has a diagnostic function (the result will be displayed on the master unit or intelligent tester).



## DIAGNOSIS DISPLAY DETAILED DESCRIPTION

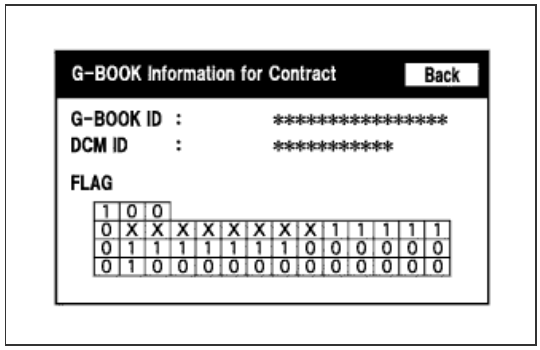
**HINT:**



This section contains a detailed description of displays in diagnostic mode.

a. Enter diagnostic mode (Click here).

b. Select "Service Information" on the Service Menu screen.

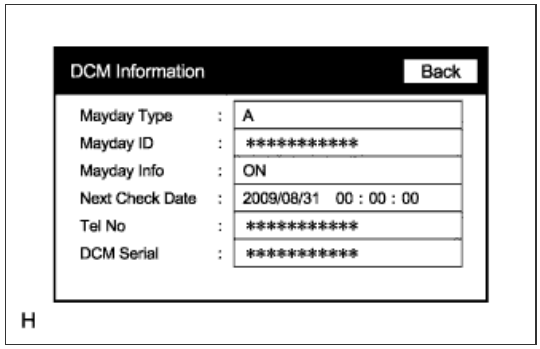


c. Service Information Screen

**Screen Description**

| Display | Content |
|---|---|
| G-BOOK Information for Contract | The G-BOOK ID, flag information, etc. are displayed. |
| DCM Information | The ID, contract information, maintenance check date, etc. which are related to the emergency call service are displayed. |
| Emergency Call History | The history (date and condition) of emergency calls is displayed ( Click here). |
| Security History | The history (date and result) of an alarm notification is displayed ( Click here). |

i. G-BOOK Information for Contract Screen



**Screen Description**

| Display | Content |
|---|---|

| | |
|---|---|
| G-BOOK ID | The G-BOOK ID of the multi-media module receiver assembly is displayed. |
| DCM ID | The 11-digit serial number of the telematics transceiver is displayed. |
| FLAG | The G-BOOK contract flag or service flag of the multi-media module receiver assembly is displayed. |

ii. DCM Information Screen

**Screen Description**

| Display | Content |
|---|---|
| Mayday Type | The type of installed emergency call service device is displayed (on this model, "A" (airbag-linked type) is displayed). |
| Mayday ID | The ID of the installed emergency call service device is displayed. |
| Mayday Info | **The emergency call service contract condition is displayed as follows:**<br>• "ON": Contract has been made and membership has been registered<br>• "OFF": Contract has been made but membership has not been registered<br>• "NO CONT": Not contracted |
| Next Check Date | The date on which the automatic maintenance check will be performed next is displayed. |
| Tel No | • The phone number of the telematics transceiver is displayed.<br>• "NO DCM" is displayed when the telematics transceiver is not connected to the multi-media module receiver assembly. |
| DCM Serial | • The 11-digit serial number of the telematics transceiver is displayed (DCM ID).<br>• "NO DCM" is displayed when the telematics transceiver is not connected to the multi-media module receiver assembly. |

## MAYDAY BATTERY OUTLINE

a. As the mayday battery is a non-rechargeable (primary) battery, it cannot be recharged.

b. When it is time to replace the mayday battery, the emergency call switch red indicator will come on. The DCM will also store a DTC.

**NOTICE:**

After automatic emergency call is performed, the mayday battery must be replaced with a new one.

## WARNING NOTIFICATION FUNCTION

**NOTICE:**

- **Before performing inspections or repairs which may cause warning messages or DTC to occur, such as a simulation test or road test, it is necessary to activate warning notification restraint mode so that the G-BOOK center does not recognize the warnings as real ones.**
- **Warning notification restraint mode can be entered by using the intelligent tester or operating the multi-display.**

**HINT:**

The warning notification function sends a warning ON signal, received from the combination meter assembly via CAN communication, to the G-BOOK center using the G-BOOK device if a warning is displayed due to a vehicle malfunction.

a. Warning notification restraint mode

**HINT:**

- **Performing the following procedure will select warning notification restraint mode.**
- **To cancel warning notification restraint mode, turn the engine switch off and on (IG) to display the service mode screen and select "Cancel" button on the screen.**

i. Warning notification restraint mode (Using the intelligent tester)

1. Turn the engine switch off.
2. Connect the intelligent tester to the DLC3.
3. Start the engine.
4. Turn the tester on.
5. Enter the following menus: Powertrain / Engine / DTC.

ii. Warning notification restraint mode (Operating the multi-display)

1. Enter diagnostic mode of the navigation system (Click here).

**for Preparation** Click here

**HINT:**

- **Use the following procedure to troubleshoot the G-BOOK system.**
- ***: Use the intelligent tester.**

## 1.VEHICLE BROUGHT TO WORKSHOP

**NEXT**

## 2.CHECK PROBLEM SYMPTOM

a. The G-BOOK system provides a variety of functions. Therefore, it is important to identify whether a malfunction is related to the communication system including radio wave conditions or any other systems. Carefully confirm the conditions that caused the malfunction in order to determine if a temporary problem with the radio wave caused the malfunction.

| Displayed Message and Problem Symptom | Cause |
|---|---|
| "The lines are busy and it is not possible to display the desired content. Please try again (operate it again) after waiting for a while." is temporarily displayed. | This is caused when there is a problem with the radio wave signal conditions or when the base station is busy. This is not a malfunction (convince the customer that this is not a malfunction and ask them to use the system as is). |
| "The lines are busy and information was not able to be acquired." is temporarily displayed. | This is caused when there is a problem with the radio wave signal conditions or when the base station is busy. This is not a malfunction (convince the customer that this is not a malfunction and ask them to use the system as is). |
| After "Wait for a while." is displayed, the condition that it takes a long time to display the screen occurs temporarily. | This is caused when there is a problem with the radio wave signal conditions or when the base station is busy. This is not a malfunction (convince the customer that this is not a malfunction and ask them to use the system as is). |

**Result**

| Result | Proceed to |
|---|---|
| Problems other than above occur constantly. | A |

**A**

## 3.INSPECT BATTERY VOLTAGE

a. Measure the battery voltage with the engine switch off.

**Standard Voltage:**
**11 to 14 V**

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

**NEXT**

## 4.CHECK CAN COMMUNICATION SYSTEM*

a. Check for DTC output (Click here).

**Result**

| Result | Proceed to |
|---|---|
| CAN DTC is not output. | A |
| CAN DTC is output. | B |

B. GO TO CAN COMMUNICATION SYSTEM (Click here)

A

## 5.INSPECTION USING "SYSTEM CHECK MODE" SCREEN

a. Perform inspections indicated on the System Check Mode screen to confirm the DCM inspection result ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| "OK" is displayed in "DCM" on the System Check Mode screen. | A |
| "CHEK" is displayed in "DCM" on the System Check Mode screen. | |
| "EXEH" is displayed in "DCM" on the System Check Mode screen. | |
| "NCON" is displayed in "DCM" on the System Check Mode screen. | B |
| "NRES" is displayed in "DCM" on the System Check Mode screen. | C |

B. GO TO INSPECTION PROCEDURE FOR "NCON" IS DISPLAYED IN "DCM" ON THE SYSTEM CHECK MODE SCREEN (Click here)

C. GO TO INSPECTION PROCEDURE OF "NRES" IS DISPLAYED IN "DCM" ON THE SYSTEM CHECK MODE SCREEN (Click here)

A

## 6.CHECK FOR DTC*

a. Refer to DTC Check/Clear (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC is output. | A |
| DTC is not output. | B |

B. Go to step 10

A

## 7.DTC CLEAR*

a. Refer to DTC Check/Clear (Click here).

**HINT:**

The current DTCs may not indicate actual malfunctions depending on the vehicle operating conditions.

NEXT

## 8.RECHECK FOR DTC*

a. Refer to DTC Check/Clear (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC is output. | A |
| DTC is not output. | B |

**HINT:**

- **Even if the malfunction symptom is not confirmed, check for DTCs. This is because the system stores history DTCs.**
- **Check the DTCs and inspect the area code indicates.**

| | |
|---|---|
| **B.** | **Go to step 10** |

**A**

## 9.DIAGNOSTIC TROUBLE CODE CHART

a. Find the output code in Diagnostic Trouble Code Chart ( Click here).

**NOTICE:**

- **The navigation system (for HDD) outputs DTCs for the following systems.**
- **When DTCs other than those in Diagnostic Trouble Code Chart for the G-BOOK system are output, refer to Diagnostic Trouble Code Chart for the system.**
- **Audio and visual system (w/ navigation system) ( Click here)**
- **Rear seat entertainment system (w/ rear seat entertainment system) ( Click here)**
- **Navigation system (for HDD) (Click here)**

**Result**

| Result | Proceed to |
|---|---|
| DTCs for the G-BOOK system are output. | A |
| DTCs for the audio and visual system (w/ navigation system) are output. | B |
| DTCs for the rear seat entertainment system (w/ rear seat entertainment system) are output. | C |
| DTCs for the navigation system (for HDD) are output. | D |

| | |
|---|---|
| **A.** | **Go to step 11** |
| **B.** | **GO TO AUDIO AND VISUAL SYSTEM (w/ Navigation System)** |
| **C.** | **GO TO REAR SEAT ENTERTAINMENT SYSTEM** |
| **D.** | **GO TO NAVIGATION SYSTEM (for HDD)** |

## 10.PROBLEM SYMPTOMS TABLE

a. Refer to Problem Symptoms Table (Click here).

**Result**

| Result | Proceed to |
|---|---|
| Fault is not listed in Problem Symptoms Table. | A |
| Fault is listed in Problem Symptoms Table. | B |

**HINT:**

If the symptom does not recur and no DTC is output, perform the symptom reproduction method ( Click here).

| | |
|---|---|
| **B.** | **Go to step 12** |

**A**

## 11.CHECK ECU TERMINAL ARRANGEMENT BASED ON MALFUNCTION SYMPTOM

a. Refer to Terminals of ECU (Click here).

**NEXT**

**12.CHECK CIRCUIT**

a. Adjust, repair or replace as necessary.

**NOTICE:**

If the display and navigation module display or the telematics transceiver is replaced, perform the vehicle contract setting ( Click here).

**NEXT**

**13.RECHECK FOR DTC**

**HINT:**

After clearing DTCs, recheck for DTCs.

**NEXT**

**14.PERFORM CONFIRMATION TEST**

**NEXT**

**END**

**for Preparation** Click here

**HINT:**

- **Use the following procedure to troubleshoot the G-BOOK system.**
- ***: Use the intelligent tester.**

## 1.VEHICLE BROUGHT TO WORKSHOP

**NEXT**

## 2.CHECK PROBLEM SYMPTOM

a. The G-BOOK system provides a variety of functions. Therefore, it is important to identify whether a malfunction is related to the communication system including radio wave conditions or any other systems. Carefully confirm the conditions that caused the malfunction in order to determine if a temporary problem with the radio wave caused the malfunction.

| Displayed Message and Problem Symptom | Cause |
|---|---|
| "The lines are busy and it is not possible to display the desired content. Please try again (operate it again) after waiting for a while." is temporarily displayed. | This is caused when there is a problem with the radio wave signal conditions or when the base station is busy. This is not a malfunction (convince the customer that this is not a malfunction and ask them to use the system as is). |
| "The lines are busy and information was not able to be acquired." is temporarily displayed. | This is caused when there is a problem with the radio wave signal conditions or when the base station is busy. This is not a malfunction (convince the customer that this is not a malfunction and ask them to use the system as is). |
| After "Wait for a while." is displayed, the condition that it takes a long time to display the screen occurs temporarily. | This is caused when there is a problem with the radio wave signal conditions or when the base station is busy. This is not a malfunction (convince the customer that this is not a malfunction and ask them to use the system as is). |

**Result**

## MANUAL MAINTENANCE CHECK

**HINT:**

- **Using the manual maintenance check, it is possible to perform a maintenance check of the G-BOOK device (inspection or repair of the device, or maintenance check after a vehicle repair), confirm if the customer is a registered member (when applying for or canceling the service, or changing the contract details). It is also possible to enable or disable the emergency call service.**
- **The screen illustrations provided are samples only and may be different from actual screens.**

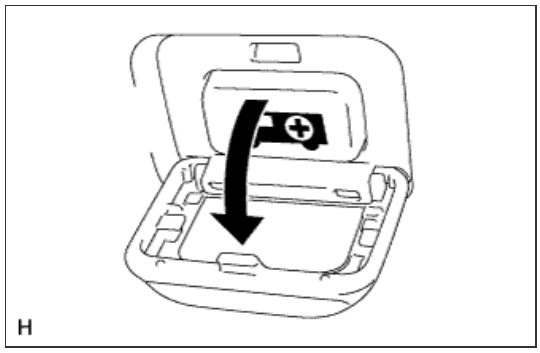
a. Check GPS Reception

i. Check that the GPS mark is displayed on the present location screen.

**HINT:**

The purpose of the manual maintenance check is to confirm that the location information can be sent correctly. Therefore, the manual maintenance check should be performed in a wide-open area where GPS radio waves can be received. Do not perform the check in an area between buildings or in an indoor environment such as a workshop.

b. Perform Manual Maintenance Check

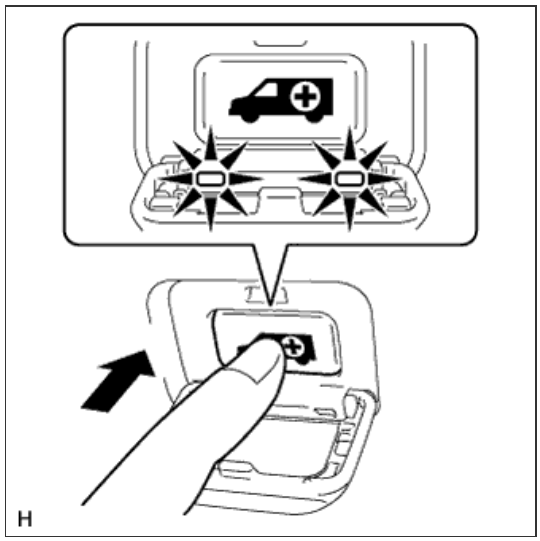


**NOTICE:**

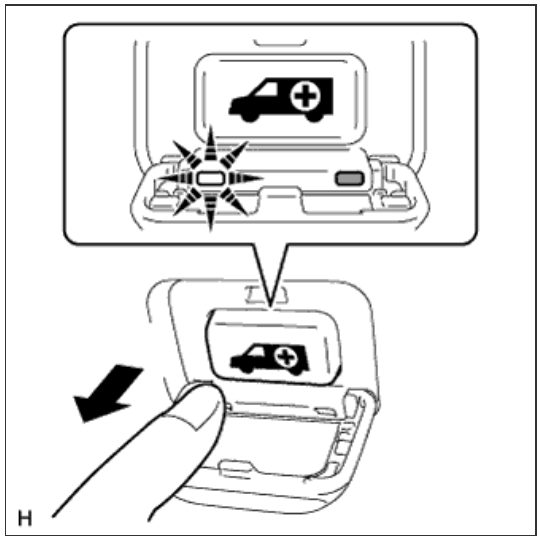
To prevent the accidental summoning of emergency vehicles, make sure to follow the following procedure from the beginning when performing a manual maintenance check.

i. Open the emergency call switch panel cover.

ii. Turn the engine switch off.



iii. Turn the engine switch on (IG).



iv. Press and hold about 10 seconds, the emergency call switch immediately after the red and green indicators come on.

**HINT:**

- **Pressing and holding the emergency call switch at this time will cause the system to begin the manual maintenance check without summoning emergency vehicles.**
- **If only the green indicator is illuminated, do not press the emergency call switch, as this will trigger an emergency call and emergency vehicles may be summoned. Return to the first step and begin the procedure again.**

v. After the manual maintenance check starts, the green indicator will start blinking. Release the emergency call switch immediately after the green indicator starts blinking.

vi. The system starts accessing the G-BOOK center.

vii. After connecting to the G-BOOK center, data communication is first performed to confirm where the vehicle is, that a manual maintenance check is being performed, and that the customer is registered to the G-BOOK center.

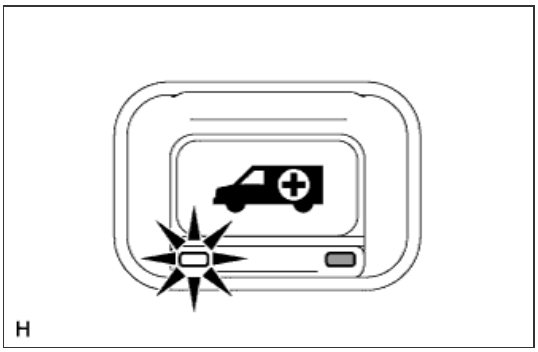
viii. After data communication is completed, the system enters call mode.

ix. Try to talk to the G-BOOK center operator through the microphone to confirm that a call can be made normally and the call location is correct.

**HINT:**

If the voice quality is poor, or the call location is incorrect, please contact the G-BOOK support center.

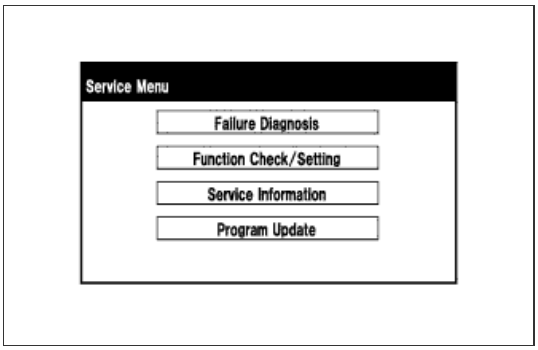
x. Finish the manual maintenance check after the call to the G-BOOK center operator ends.



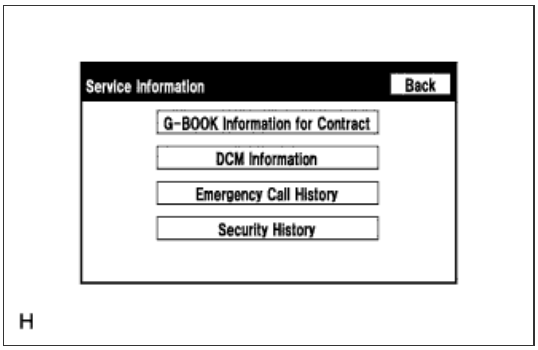
xi. Display the present location screen after finishing the manual maintenance check.

xii. Check that the green indicator is illuminating.

**HINT:**

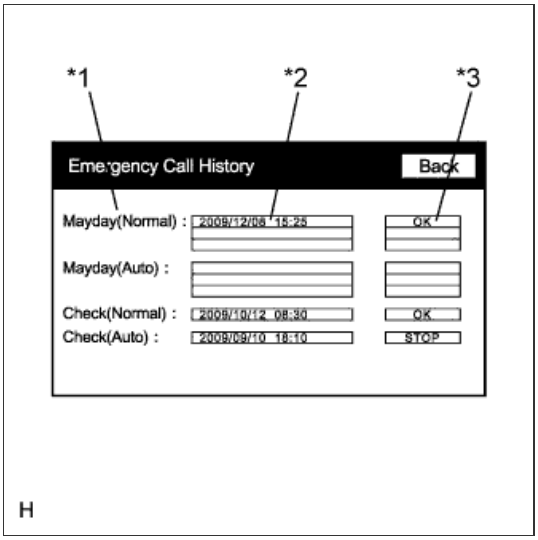


If the manual maintenance check cannot be finished normally, perform the inspections indicated by Problem Symptoms Table (performing the manual maintenance check cannot access the G-BOOK center) (Click here).



## EMERGENCY CALL HISTORY

a. Enter diagnostic mode (Click here).



b. Select "Service Information" on the Service Menu screen.

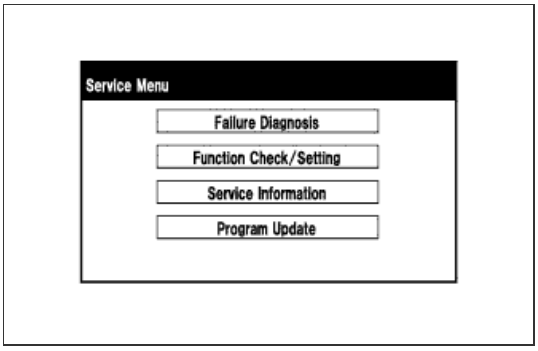
c. Select "Emergency Call History" on the Service Information screen.

d. Emergency Call History

i. Check the call result.

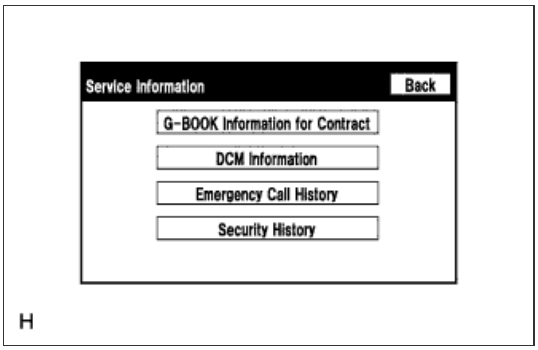
| Display | Content |
|---|---|
| *1: Type of call | Displays the type of call. |
| *2: Time and date of call | Displays the time and date when a call is made in the form of year/month/day hour:minute. |
| *3: Call result | Displays the result of the communication with the G-BOOK center as follows:<br>• "OK": Communication with the center finished normally.<br>• "FAIL": Communication with the center did not finish normally.<br>• "STOP": Communication with the center was interrupted.<br>• "NO CONT": Membership registration has not been performed. |

**OK:**
**"OK" is displayed for the call result of the manual maintenance check.**



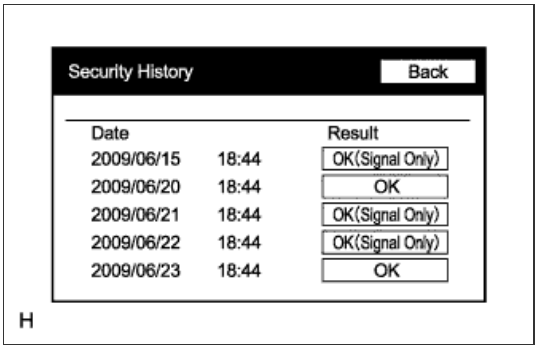
**HINT:**

- **If "FAIL" is displayed, perform a manual maintenance check and confirm that a call can be made normally.**
- **If the manual maintenance check cannot be finished normally, perform the inspections indicated by Problem Symptoms Table (performing the manual maintenance check cannot access the G-BOOK center) (Click here).**



## SECURITY HISTORY

a. Enter diagnostic mode (Click here).



b. Select "Service Information" on the Service Menu screen.

c. Select "Security History" on the Service Information screen.

d. Security History

i. Check the result.

**Displayed Content of Security History Screen**

| Item | Displayed Content |
|---|---|
| Date | Indicates the time and date when the vehicle automatic alarm is activated in the form of year/month/day hour:minute. |
| Result | Displays the result of the call to the G-BOOK center when the vehicle automatic alarm is activated as follows:<br>• "OK (Signal Only)": A security horn sounding signal was received but the call to the center failed.<br>• "OK": A security horn sounding signal was received and the call to the center completed. |

**OK:**

**Either "OK" or "OK (Signal Only)" is displayed after the security horn sounds.**

**HINT:**

- **If neither "OK" nor "OK (Signal Only)" is displayed after the security horn sounds, proceed to the inspection procedure for Security Horn Signal Circuit (Click here).**
- **History will be recorded only for vehicles that have a contract for the G-BOOK service.**

**for Preparation** [Click here]

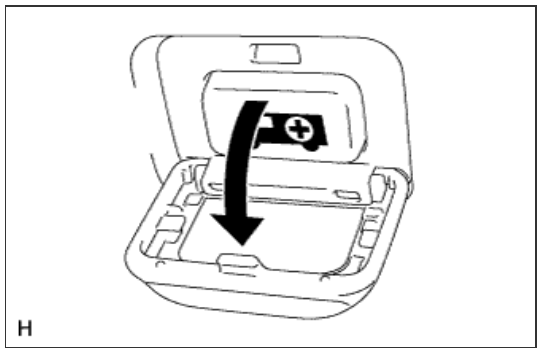
## MANUAL MAINTENANCE CHECK

**HINT:**

- **Using the manual maintenance check, it is possible to perform a maintenance check of the G-BOOK device (inspection or repair of the device, or maintenance check after a vehicle repair), confirm if the customer is a registered member (when applying for or canceling the service, or changing the contract details). It is also possible to enable or disable the emergency call service.**
- **The screen illustrations provided are samples only and may be different from actual screens.**

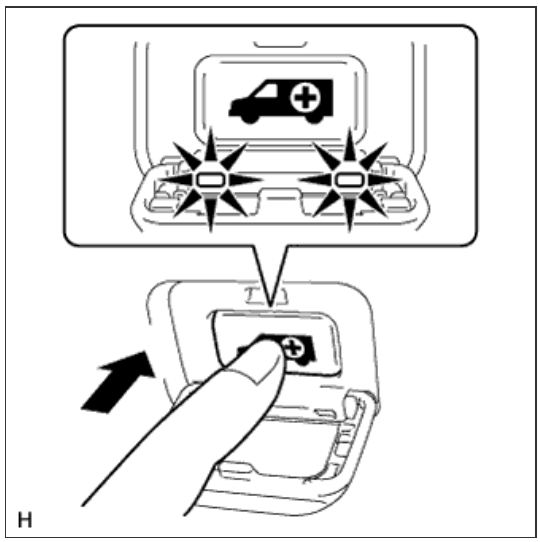
a. Check GPS Reception

i. Check that the GPS mark is displayed on the present location screen.



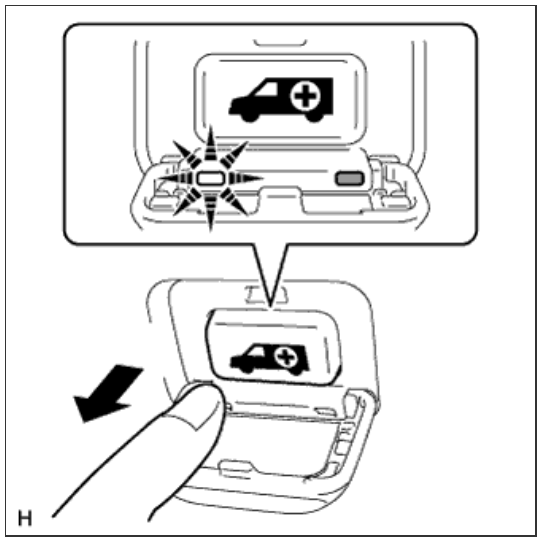
**HINT:**

The purpose of the manual maintenance check is to confirm that the location information can be sent correctly. Therefore, the manual maintenance check should be performed in a wide-open area where GPS radio waves can be received. Do not perform the check in an area between buildings or in an indoor environment such as a workshop.



b. Perform Manual Maintenance Check

i. Open the emergency call switch panel cover.



ii. Turn the engine switch on (ACC) or (IG).

iii. Press and hold the emergency call switch immediately after the red and green indicators come on.

iv. After the manual maintenance check starts, the green indicator will start blinking. Release the emergency call switch immediately after the green indicator starts blinking.

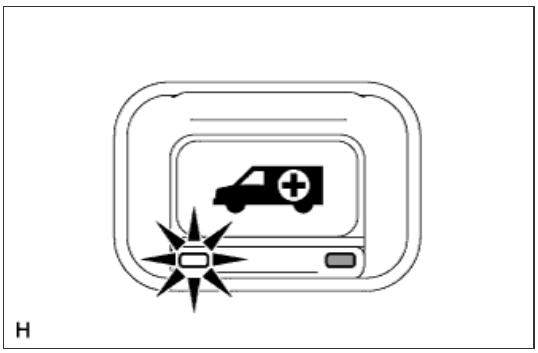
v. The system starts accessing the G-BOOK center.

vi. After connecting to the G-BOOK center, data communication is first performed to confirm where the vehicle is, that a manual maintenance check is being performed, and that the customer is registered to the G-BOOK center.

vii. After data communication is completed, the system enters call mode.

viii. Try to talk to the G-BOOK center operator through the microphone to confirm that a call can be made normally and the call location is correct.

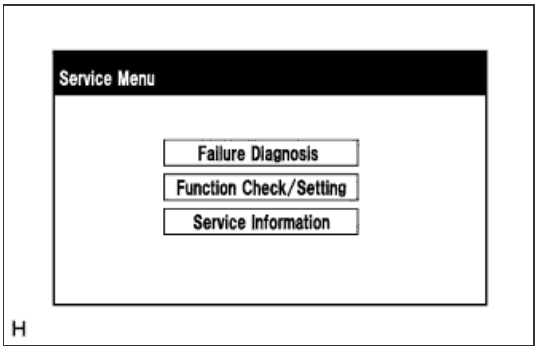
ix. Finish the manual maintenance check after the call to the G-BOOK center operator ends.



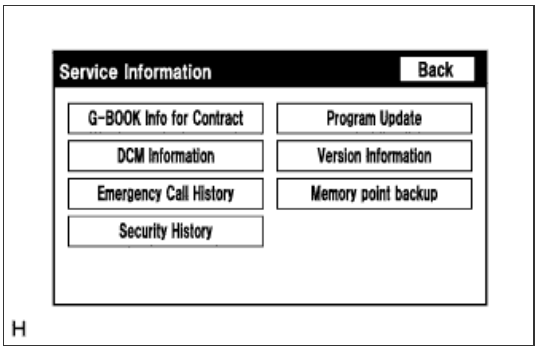
x. Display the present location screen after finishing the manual maintenance check.

xi. Check that the green indicator is illuminating.

**HINT:**

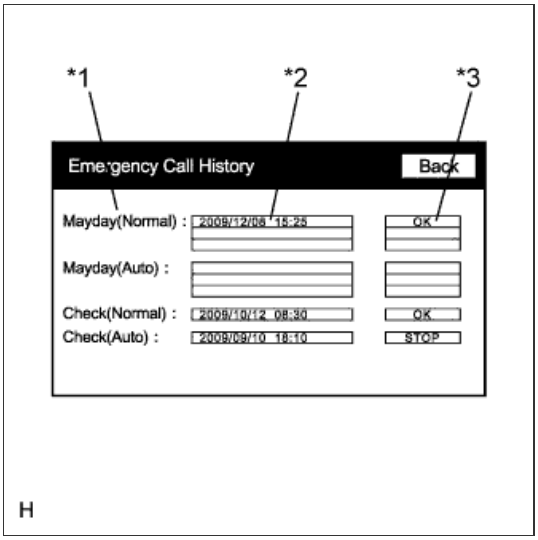


If the manual maintenance check cannot be finished normally, perform the inspections indicated by Problem Symptoms Table (the G-BOOK center cannot be accessed even after a manual maintenance check is performed) (Click here).



## Emergency Call History

a. Enter diagnostic mode (Click here).



b. Select "Service Information" on the "Service Menu" screen.

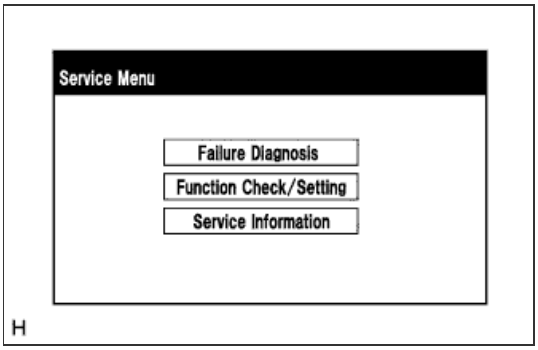
c. Select "Emergency Call History" on the "Service Information" screen.

d. Emergency Call History

i. Check the call result.

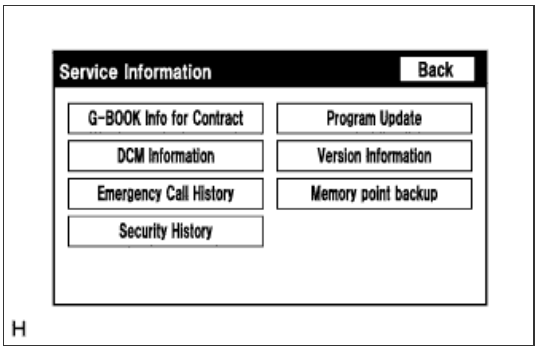
| Display | Content |
|---|---|
| *1: Type of call | Displays the type of call. |
| *2: Time and date of call | Displays the time and date when a call is made in the form of year/month/day hour:minute. |
| *3: Call result | Displays the result of the communication with the G-BOOK center as follows:<br>• "OK": Communication with the center finished normally.<br>• "FAIL": Communication with the center did not finish normally.<br>• "STOP": Communication with the center was interrupted.<br>• "NO CONT": Membership registration has not been performed. |

**OK:**
**"OK" is displayed for the call result of the manual maintenance check.**



**HINT:**

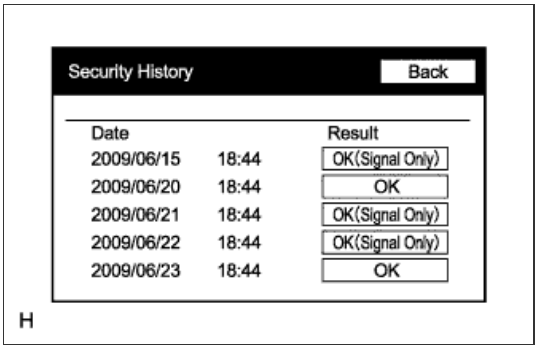
- **If "FAIL" is displayed, perform a manual maintenance check and confirm that a call can be made normally.**
- **If the manual maintenance check cannot be finished normally, perform the inspections indicated by Problem Symptoms Table (the G-BOOK center cannot be accessed even after a manual maintenance check is performed) (Click here).**



## Security History

a. Enter diagnostic mode (Click here).

b. Select "Service Information" on the "Service Menu" screen.



c. Select "Security History" on the "Service Information" screen.

d. Security History

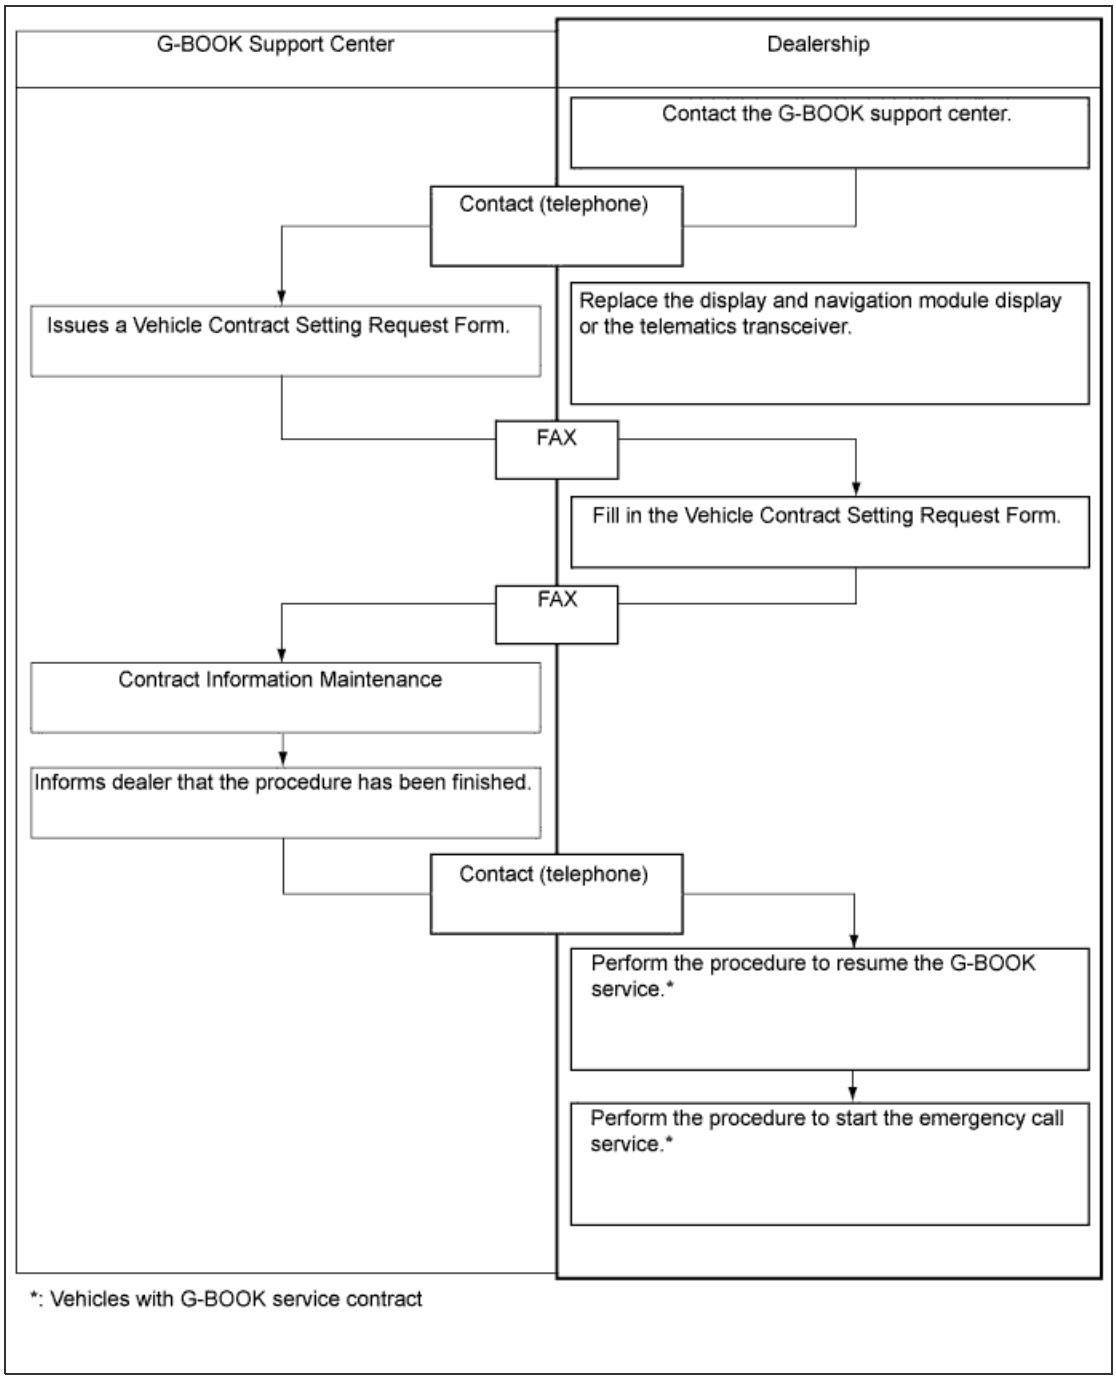
**Displayed Content of Security History Screen**

| Item | Displayed Content |
|---|---|
| Date | Indicates the time and date when the vehicle automatic alarm is activated in the form of year/month/day hour:minute. |
| Result | Displays the result of the call to the G-BOOK center when the vehicle automatic alarm is activated as follows:<br>• "OK (Signal Only)": A security horn sounding signal was received but the call to the center failed.<br>• "OK": A security horn sounding signal was received and the call to the center completed. |

**OK:**

**Either "OK" or "OK (Signal Only)" is displayed after the security horn sounds.**

**HINT:**



- **If neither "OK" nor "OK (Signal Only)" is displayed after the security horn sounds, proceed to the inspection procedure for Security Horn Signal Circuit (Click here).**
- **History will be recorded only for vehicles that have a contract for the G-BOOK service.**

**for Preparation** Click here

## 1. VEHICLE CONTRACT SETTING

**HINT:**

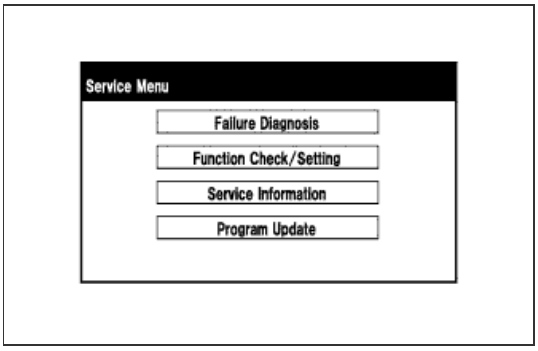
- **If the display and navigation module display or the telematics transceiver is replaced on vehicles that do not have a contract for the G-BOOK service, perform the vehicle contract setting.**
- **If the display and navigation module display or the telematics transceiver is replaced on vehicles that have a contract for the G-BOOK service, perform the vehicle contract setting and the procedure to resume the G-BOOK service and to start the emergency call service.**

a. Contact the G-BOOK center.

i. Contact the G-BOOK center to inform them that vehicle contract setting will be performed.

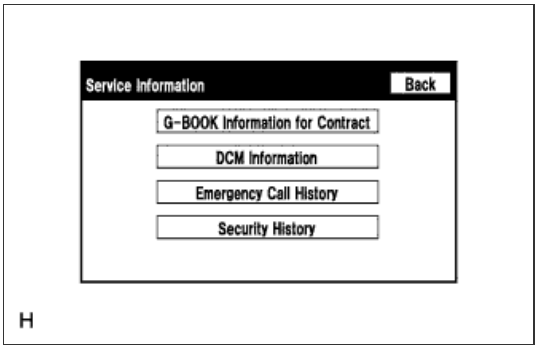
**HINT:**

After contacting the G-BOOK center, the center will send a Vehicle Contract Setting Request Form by fax.



b. Check the ID before replacement (when diagnosis can be activated).

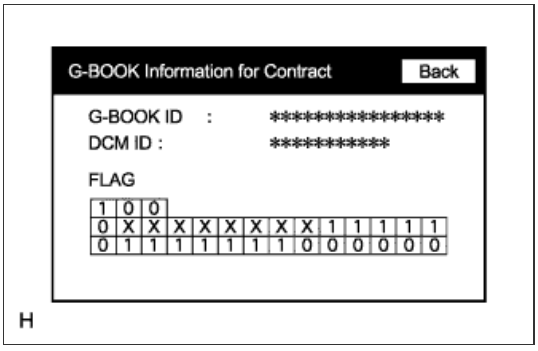
**HINT:**



- **If the display and navigation module display is replaced, check the G-BOOK ID.**
- **If the telematics transceiver is replaced, check the DCM ID.**

i. Enter diagnostic mode (Click here).

ii. Select "Service Information" on the Service Menu screen.



iii. Select "G-BOOK Information for Contract" on the Service Information screen.

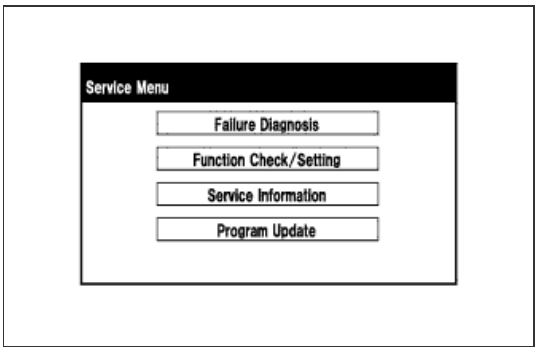
iv. Check the G-BOOK ID or DCM ID.

**HINT:**

The DCM ID is also specified on the telematics transceiver label.

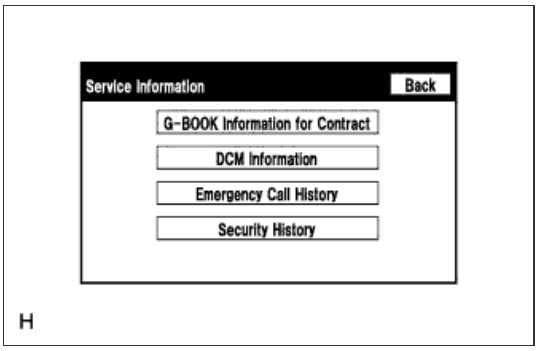
c. Replace the display and navigation module display or the telematics transceiver.

i. Replace the display and navigation module display or the telematics transceiver at a dealership.



d. Check the ID after replacement.

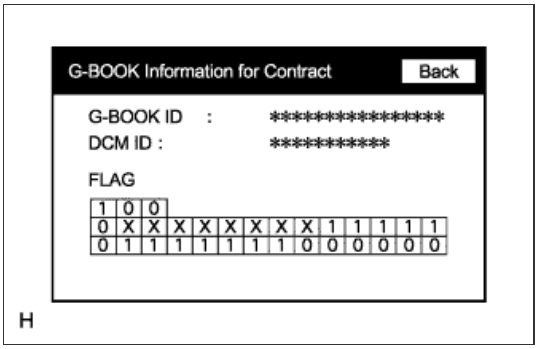
**HINT:**



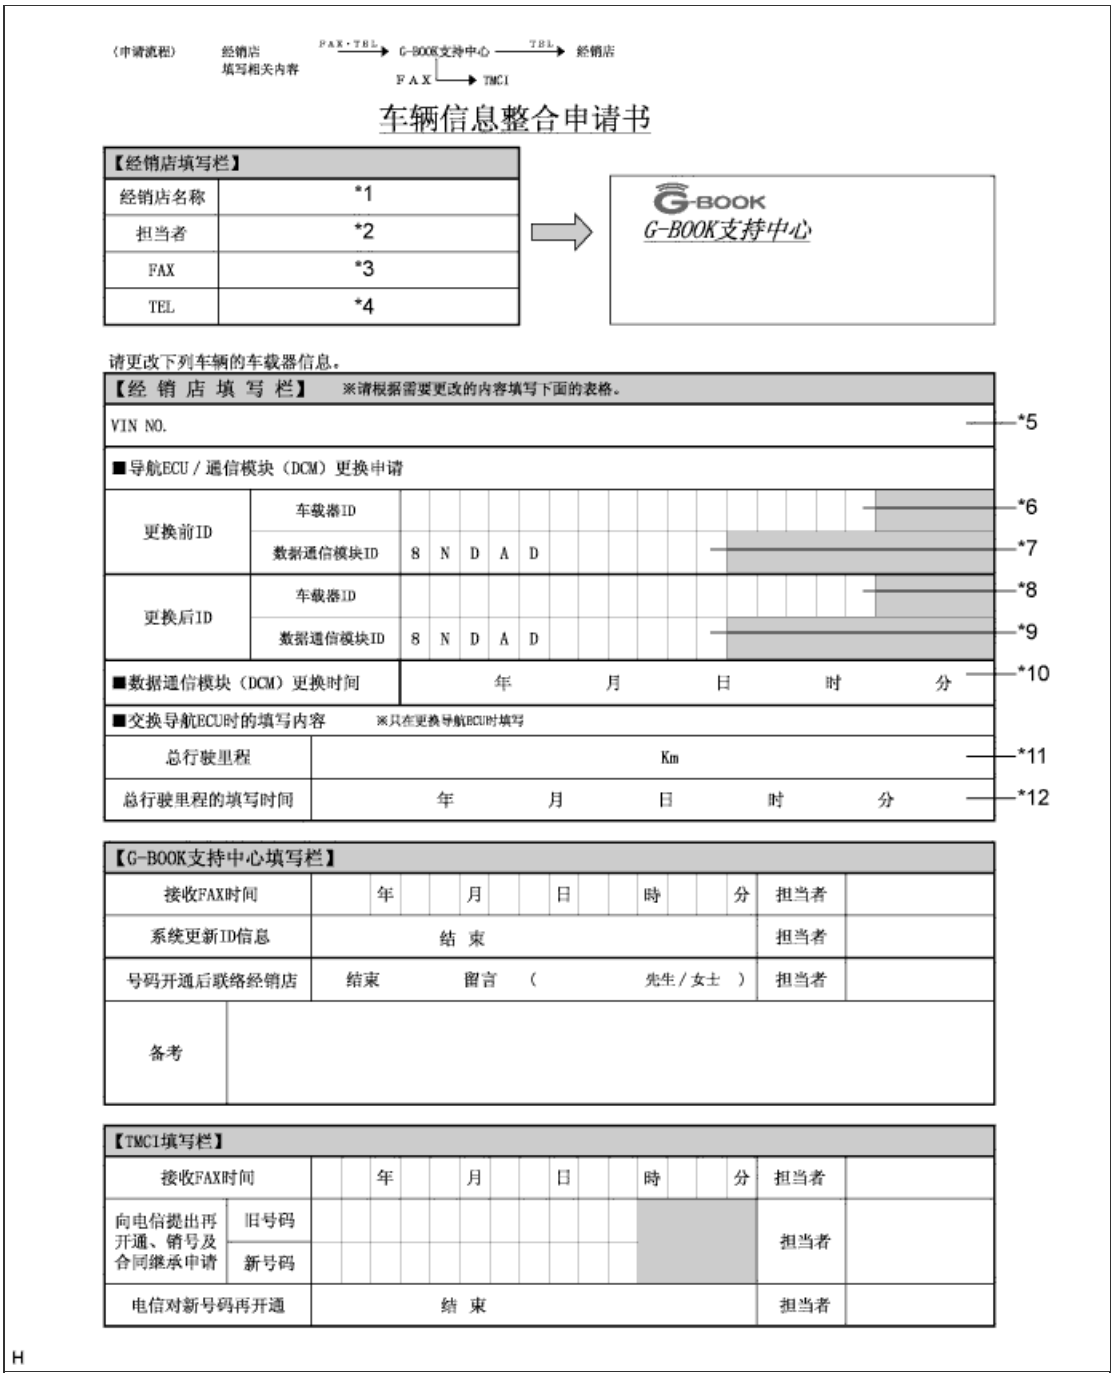
- **If the display and navigation module display is replaced, check the G-BOOK ID.**
- **If the telematics transceiver is replaced, check the DCM ID.**

i. Enter diagnostic mode (Click here).

ii. Select "Service Information" on the Service Menu screen.



iii. Select "G-BOOK Information for Contract" on the Service Information screen.



iv. Check the G-BOOK ID or DCM ID.

**HINT:**

The DCM ID is also specified on the telematics transceiver label.

e. Fill-in the Vehicle Contract Setting Request Form.

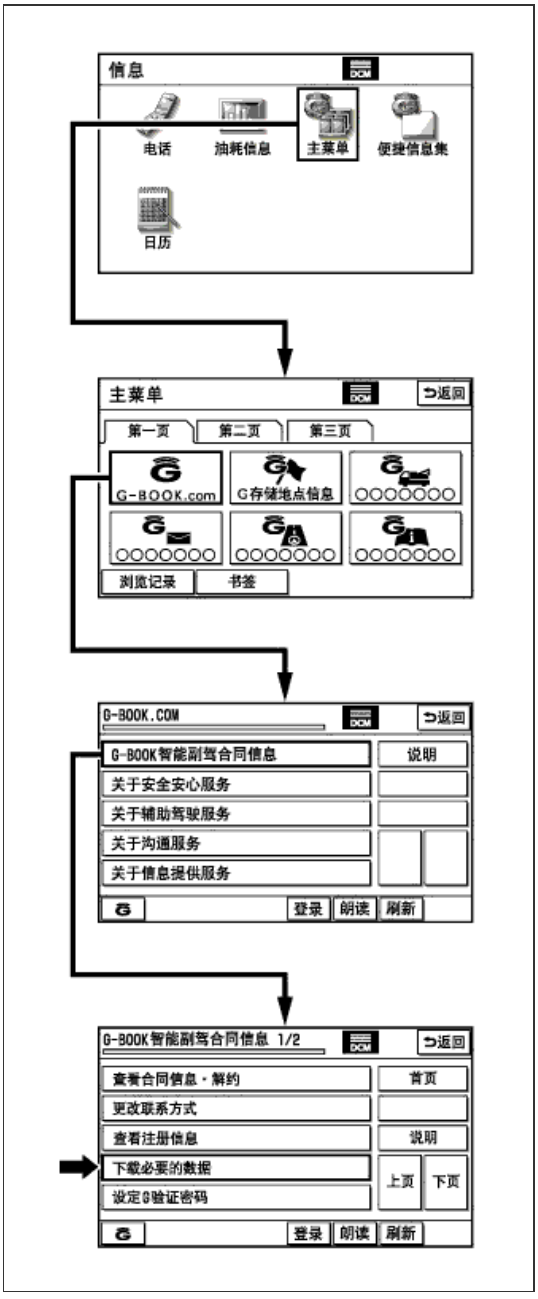
**for Preparation** [Click here]

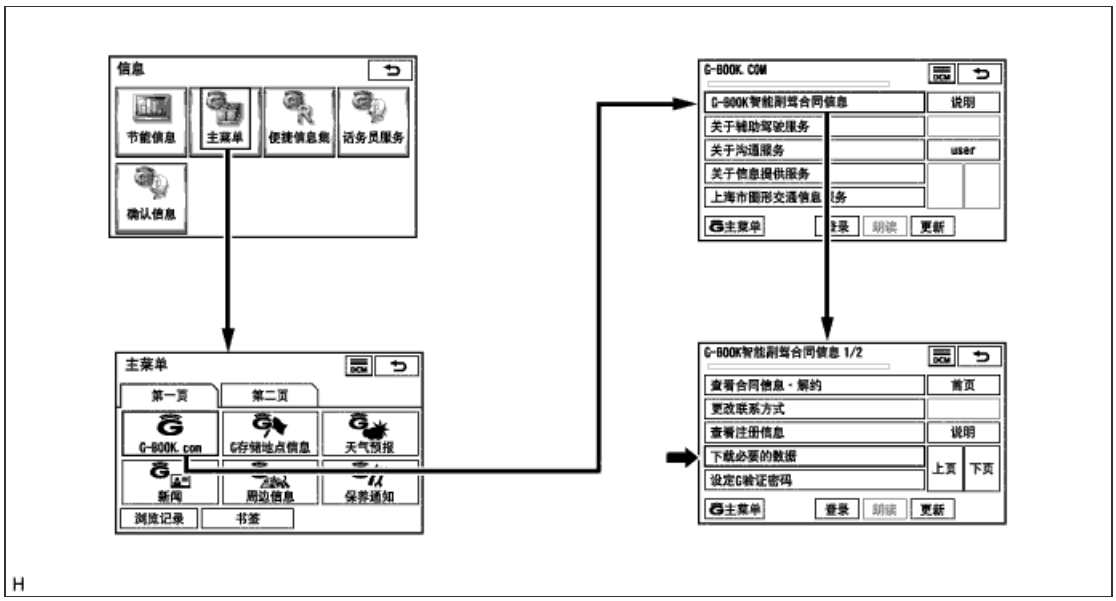
**Perform "Download necessary data".**



**HINT:**

If the hard disk drive is replaced on vehicles that have a contract for the G-BOOK service, perform "Download necessary data" after installing the new hard disk drive.

a. Perform the operations shown in the illustration and select "Download necessary data".



**HINT:**

The screen illustrations provided are samples only and may be different from actual screens.

**for Preparation** Click here

## PERFORM "DOWNLOAD NECESSARY DATA"

**HINT:**

If the hard disc is replaced on vehicles that have a contract for the G-BOOK service, perform "Download necessary data" after installing the new hard disc.

a. Perform the operations shown in the illustration and select "Download necessary data".

**HINT:**

The screen illustrations provided are samples only and may be different from actual screens.

**for Preparation** Click here

**HINT:**

- **Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.**
- **Inspect the fuses and relays related to this system before inspecting the suspected areas below.**

**G-BOOK On-screen Message**

| Symptom | Suspected Area | See page |
|---|---|---|
| After "Wait for a while." is displayed, the condition that it takes a long time to display the screen occurs temporarily. | This is caused when there is a problem with the radio wave signal conditions or when the base station is busy. This is not a malfunction (convince the customer that this is not a malfunction and ask them to use the system as is). | - |
| "The lines are busy. Operate it after waiting for a while." is displayed. | Telephone calls are being restricted by the communication provider. Explain to the customer that they need to wait for a while before using the service. | - |
| "The lines are busy and it is not possible to display the desired content. Please try again (operate it again) after waiting for a while." is temporarily displayed. | This is caused when there is a problem with the radio wave signal conditions or when the base station is busy. This is not a malfunction (convince the customer that this is not a malfunction and ask them to use the system as is). | - |
| "The lines are busy and it is not possible to display the desired content. Please try again (operate it again) after waiting for a while." remains displayed. | Proceed to "Communication Access Failed". | Click here |
| "The lines are busy and information was not able to be acquired." is displayed. | Wait for a while and perform the operation again in a different location. | - |
| | Proceed to "Communication Access Failed". | Click here |
| "The lines are shut off and information was not able to be acquired." is displayed. | Proceed to "Communication Access Failed". | Click here |
| "Information was not able to be acquired." is displayed. | Proceed to "Communication Access Failed". | Click here |

### G-BOOK Announcement Sound

| Symptom | Suspected Area | See page |
|---|---|---|
| G-BOOK announcement sound is not output. | Adjust the volume by referring to the owner's manual. G-BOOK announcement sound is not linked with the audio volume. | - |

### Contract

| Symptom | Suspected Area | See page |
|---|---|---|
| "Communication needs to be initialized. Proceed to G-BOOK.com on the Main Menu screen to initialize." is displayed. | Explain to the customer that a procedure is necessary to use the G-BOOK service. Ask the customer to perform the procedure by referring to the owner's manual. | - |
| "G-BOOK contract is needed. Ask a dealership how to apply for the G-BOOK service." is displayed. | Fill in the vehicle contract setting request form and contact the G-BOOK support center. | - |

### Emergency Call Service On-screen Message

| Symptom | Suspected Area | See page |
|---|---|---|
| "Please note that this service is not available now." is displayed. | Proceed to "G-BOOK Service cannot be Used". | Click here |
| "Contract is not completed for this service. Complete the contract before use." is displayed. | Proceed to "G-BOOK Service cannot be Used". | Click here |
| "Emergency call service is not available because the procedure to start the service has not been performed." is displayed. | Proceed to "G-BOOK Service cannot be Used". | Click here |

### Emergency Call Service Indicator Display Problem

| Symptom | Suspected Area | See page |
|---|---|---|
| The indicator lights on the emergency call switch panel do not come on when the engine switch is turned on (ACC). | Check that G-BOOK contract and procedure to start the emergency call service have been completed successfully. | - |
| | Proceed to "Emergency Call Switch Indicator Circuit". | Click here |
| Illumination on the emergency call switch panel does not turn on. | Proceed to "Emergency Call Switch Illumination Circuit". | Click here |
| The red indicator light on the emergency call switch panel comes on after the engine switch is turned on (ACC). | The vehicle is outside the communication service area. Move the vehicle to a communication service area. | - |
| The red indicator light on the emergency call switch panel blinks after the engine switch is turned on (ACC). | Check for DTCs. | Click here |
| Turning the engine switch on (ACC) will cause a manual maintenance check to start. | Proceed to DTC B15C5. | Click here |
| The red indicator light on the emergency call switch panel does not blink after the engine switch is turned on (ACC), but it blinks after the hybrid system is started and the vehicle is driven. | Proceed to DTC B15C6. | Click here |

### Emergency Call Service Function

| Symptom | Suspected Area | See page |
|---|---|---|
| The G-BOOK center cannot be accessed even after a manual maintenance check is performed. | Check that the G-BOOK service is available. | - |
| | Proceed to "Communication Access Failed". | Click here |
| The automatic maintenance check does not complete normally. | Perform a manual maintenance check. If it does not complete normally, refer to "The G-BOOK center cannot be accessed even after a manual maintenance check is performed". | - |
| The G-BOOK center cannot be accessed by pressing the emergency call switch. | Perform a manual maintenance check. If it does not complete normally, refer to "The G-BOOK center cannot be accessed even after a manual maintenance check is performed". | - |

### Warning Notification Function

| Symptom | Suspected Area | See page |
|---|---|---|
| The multi-display does not show a warning message even though a warning light turns on and the multi-information display indicates a warning. | Proceed to "Warning Notification Function Malfunction". | Click here |
| The multi-display shows a warning message even though a warning light is not on and the multi-information display does not indicate a warning. | Proceed to "Warning Notification Function Malfunction". | Click here |
| The multi-display shows a warning message different from the warning light or the multi-information display. | Proceed to "Warning Notification Function Malfunction". | Click here |
| The same warning notification is repeated. | Proceed to "Warning Notification Function Malfunction". | Click here |

### Alarm Notification Function

| Symptom | Suspected Area | See page |
|---|---|---|
| When the vehicle automatic alarm is activated, the G-BOOK center is not informed of the alarm. | Proceed to "Security History". | Click here |
| | Check CAN communication system. | Click here |
| | Proceed to Security Horn Circuit of the Theft Deterrent System section. | Click here |
| | Proceed to "Telematics Transceiver Malfunction". | Click here |

### My Request On-screen Message

| Symptom | Suspected Area | See page |
|---|---|---|
| "Please note that this service is not available now." is displayed. | Proceed to "G-BOOK Service cannot be Used". | Click here |
| "Contract is not completed for this service. Complete the contract before use." is displayed. | Proceed to "G-BOOK Service cannot be Used". | Click here |

### Operator Service Function

| Symptom | Suspected Area | See page |
|---|---|---|
| When using the operator service, the other caller's voice cannot be heard. | Check if the navigation voice guidance is output normally. If not, refer to Navigation System (for HDD). | Click here |
| | Proceed to "Received Voice Signal Circuit". | Click here |
| When using the operator service, noise occurs in the transmitted voice (caller's voice). | Proceed to "Transmitted Voice Signal Circuit". | Click here |
| When using the operator service, voice cannot be transmitted (the other caller cannot hear the caller's voice). | Proceed to "Transmitted Voice Signal Circuit". | Click here |

| Symptom | Suspected Area | See page |
|---|---|---|
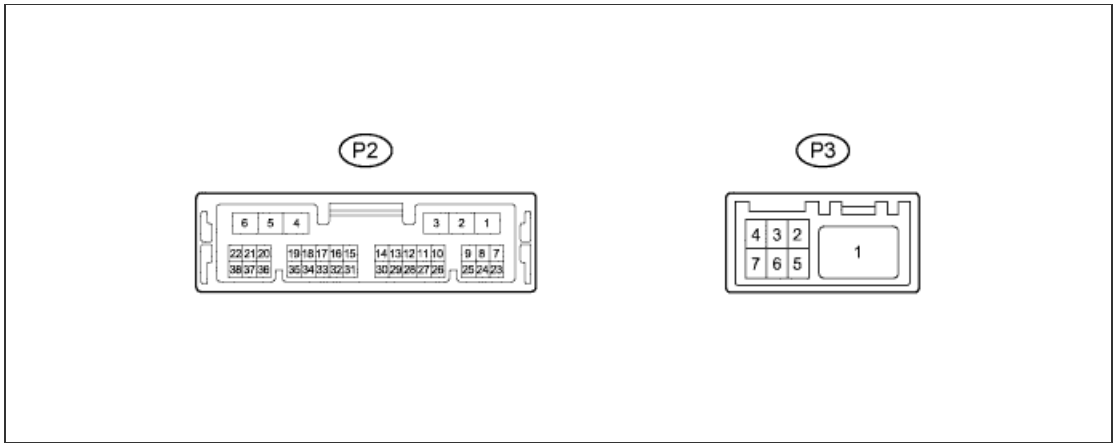
| The multi-display does not show a warning message even though a warning light turns on or the multi-information display indicates a warning. | Proceed to "Warning Notification Function Malfunction". | Click here |
| The multi-display shows a warning message even though a warning light is not on and the multi-information display does not indicate a warning. | Proceed to "Warning Notification Function Malfunction". | Click here |
| The multi-display shows a warning message different from the warning light or the multi-information display. | Proceed to "Warning Notification Function Malfunction". | Click here |
| The same warning notification is repeated. | Proceed to "Warning Notification Function Malfunction". | Click here |

### Alarm Notification Function

| Symptom | Suspected Area | See page |
|---|---|---|
| When the vehicle automatic alarm is activated, the G-BOOK center is not informed of the alarm. | Proceed to "Security History". | Click here |
| | Check CAN communication system. | Click here |
| | Proceed to Security Horn Circuit of the Theft Deterrent System section. | Click here |
| | Proceed to "Telematics Transceiver Malfunction". | Click here |

### My Request On-screen Message



| Symptom | Suspected Area | See page |
|---|---|---|
| "Please note that this service is not available now." is displayed. | Proceed to "G-BOOK Service cannot be Used". | Click here |
| "Contract is not completed for this service. Complete the contract before use." is displayed. | Proceed to "G-BOOK Service cannot be Used". | Click here |

### Operator Service Function

| Symptom | Suspected Area | See page |
|---|---|---|
| When using the operator service, the other caller's voice cannot be heard. | Check if the navigation voice guidance is output normally. If not, refer to Navigation System. | Click here |
| | Proceed to "Received Voice Signal Circuit". | Click here |
| When using the operator service, noise occurs in the transmitted voice (caller's voice). | Proceed to "Transmitted Voice Signal Circuit". | Click here |
| When using the operator service, voice cannot be transmitted (the other caller cannot hear the caller's voice). | Proceed to "Transmitted Voice Signal Circuit". | Click here |

# DTC B15A8 Telematics Transceiver Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when an internal circuit malfunction is detected by the telematics transceiver self check.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15A8 | DCM internal malfunction | Telematics transceiver |

## INSPECTION PROCEDURE

**NOTICE:**

Regardless of whether DTC B15A8 has been output as a present or history DTC, the telematics transceiver should be replaced.

**HINT:**

When replacing the telematics transceiver, perform the vehicle contract setting ( Click here).

**1.REPLACE TELEMATICS TRANSCEIVER**

a. Replace the telematics transceiver ( Click here).

**NEXT**

**END**

# DTC B15DE Telematics Transceiver Location Data Blackout

**for Preparation** Click here

## DESCRIPTION

The telematics transceiver checks the reception condition of the location data every minute after the engine switch is turned on (ACC). If the location data is not received from the display and navigation module display for 5 minutes, this DTC will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15DE | Location information from USB communication is interrupted. | • Wire harness or connector<br>• Telematics transceiver<br>• Display and navigation module display |

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**HINT:**

When replacing the display and navigation module display or the telematics transceiver, perform the vehicle contract setting ( Click here).

### 1.INSPECTION USING "SYSTEM CHECK MODE" SCREEN

a. Perform inspections indicated on the System Check Mode screen to confirm the DCM inspection result ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| "OK" is displayed in "DCM" on the System Check Mode screen. | A |
| "NCON" is displayed in "DCM" on the System Check Mode screen. | B |

B → GO TO INSPECTION PROCEDURE FOR "NCON" IS DISPLAYED IN "DCM" ON THE SYSTEM CHECK MODE SCREEN (Click here)

A

### 2.CHECK DTC

a. Clear the DTC (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**Result**

| Result | Proceed to |
|---|---|
| B15DE is output. | A |
| No DTC is output. | B |

B → USE SIMULATION METHOD TO CHECK (Click here)

A

## 3.CHECK HARNESS AND CONNECTOR (NAVIGATION ECU - TELEMATICS TRANSCEIVER)

a. Check the installation condition.

   i. Check the USB communication cable (digital communication cable) between the display and navigation module display and the telematics transceiver for any installation or connection problems.

b. Disconnect the F70 display and navigation module display connector.

c. Disconnect the P3 telematics transceiver connector.

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F70-1 (USB) - P3-1 (USB) | Always | Below 1 Ω |
| F70-2 (USBG) - P3-2 (USBG) | Always | Below 1 Ω |
| F70-4 (USBV) - P3-4 (USBV) | Always | Below 1 Ω |
| P3-1 (USB) - Body ground | Always | 10 kΩ or higher |
| P3-2 (USBG) - Body ground | Always | 10 kΩ or higher |
| P3-4 (USBV) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 4.REPLACE TELEMATICS TRANSCEIVER

a. Replace the telematics transceiver with a normal one and check if the same problem occurs again ( Click here).

   i. Clear the DTC (Click here).

   ii. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

END

# DTC B15A8 Telematics Transceiver Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when an internal circuit malfunction is detected by the telematics transceiver self check.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15A8 | DCM internal malfunction | Telematics transceiver |

## INSPECTION PROCEDURE

**NOTICE:**

Regardless of whether DTC B15A8 has been output as a present or history DTC, the telematics transceiver should be replaced.

**HINT:**

When replacing the telematics transceiver, perform the vehicle contract setting ( Click here).

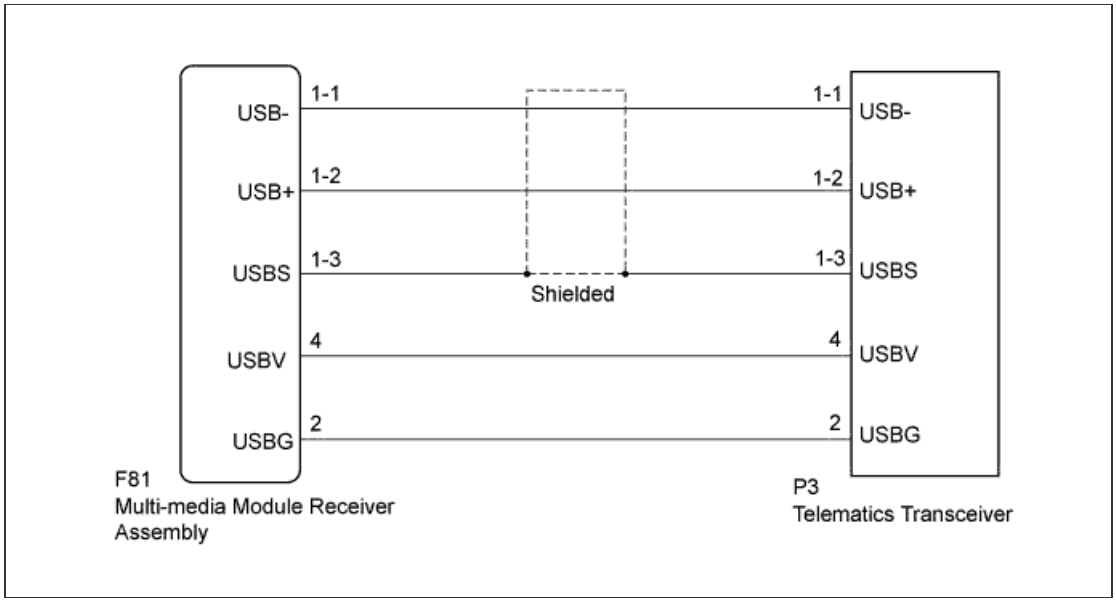
**1.REPLACE TELEMATICS TRANSCEIVER**

a. Replace the telematics transceiver ( Click here).

**NEXT**

**END**

# DTC B15DE Telematics Transceiver Location Data Blackout



**for Preparation** Click here

## DESCRIPTION

The telematics transceiver checks the reception condition of the location data every minute after the engine switch is turned on (ACC). If the location data is not received from the multi-media module receiver assembly for 5 minutes, this DTC will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15DE | Location information from USB communication is interrupted. | • Harness or connector<br>• Telematics transceiver<br>• Multi-media module receiver assembly |

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**HINT:**

When replacing the multi-media module receiver assembly or the telematics transceiver, perform the vehicle contract setting ( Click here).

### 1.INSPECTION USING "SYSTEM CHECK MODE" SCREEN

a. Perform inspections indicated on the System Check Mode screen to confirm the DCM inspection result ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| "OK" is displayed in "DCM" on the System Check Mode screen. | A |
| "NCON" is displayed in "DCM" on the System Check Mode screen. | B |

B → GO TO INSPECTION PROCEDURE FOR "NCON" IS DISPLAYED IN "DCM" ON THE SYSTEM CHECK MODE SCREEN (Click here)

A

### 2.CHECK DTC

a. Clear the DTC (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**Result**

| Result | Proceed to |
|---|---|
| No DTC is output. | A |
| B15DE is output. | B |

B → Go to step 3

A

USE SIMULATION METHOD TO CHECK (Click here)

## 3.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - TELEMATICS TRANSCEIVER)

a. Check the installation condition.

i. Check the USB communication cable (digital communication cable) between the multi-media module receiver assembly and the telematics transceiver for any installation or connection problems.

b. Disconnect the F81 multi-media module receiver assembly connector.

c. Disconnect the P3 telematics transceiver connector.

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F81-1-1 (USB-) - P3-1-1 (USB-) | Always | Below 1 Ω |
| F81-1-2 (USB+) - P3-1-2 (USB+) | Always | Below 1 Ω |
| F81-1-3 (USBS) - P3-1-3 (USBS) | Always | Below 1 Ω |
| F81-2 (USBG) - P3-2 (USBG) | Always | Below 1 Ω |
| F81-4 (USBV) - P3-4 (USBV) | Always | Below 1 Ω |
| F81-1-1 (USB-) - Body ground | Always | 10 kΩ or higher |
| F81-1-2 (USB+) - Body ground | Always | 10 kΩ or higher |
| F81-1-3 (USBS) - Body ground | Always | 10 kΩ or higher |
| F81-2 (USBG) - Body ground | Always | 10 kΩ or higher |
| P3-4 (USBV) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 4.CHECK TELEMATICS TRANSCEIVER

a. Replace the telematics transceiver with a normal one and check if the same problem occurs again ( Click here).

i. Clear the DTC (Click here).

ii. Recheck for DTCs and check if the same trouble occurs again.

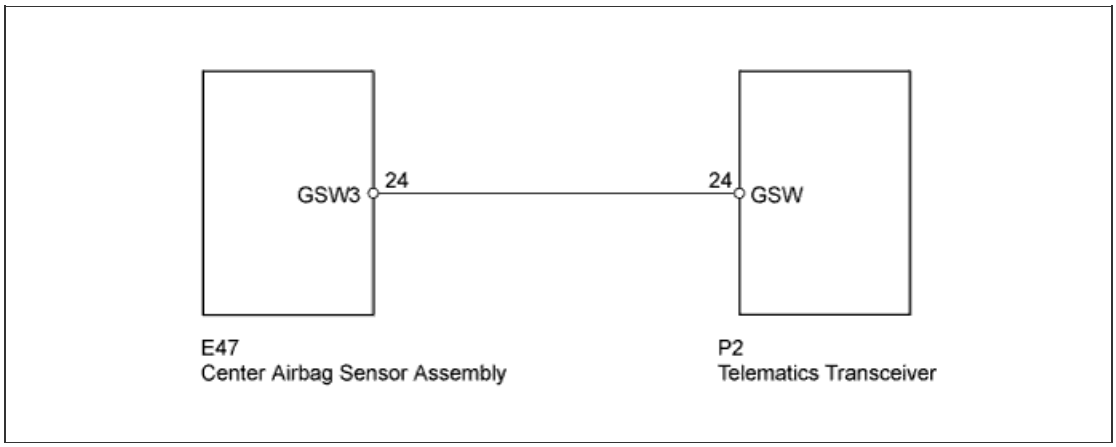
**OK:**
**No DTC is output.**

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK

END (TELEMATICS TRANSCEIVER IS DEFECTIVE)

## DTC B15C4 Airbag Signal Malfunction/Not Input



**for Preparation** Click here

### DESCRIPTION

If the telematics transceiver detects an error in communication between the telematics transceiver and the center airbag sensor assembly as a result of the telematics transceiver self check, this DTC will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15C4 | Airbag signal problem | • SRS airbag system<br>• Wire harness or connector<br>• Center airbag sensor assembly<br>• Telematics transceiver |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**HINT:**

When replacing the telematics transceiver, perform the vehicle contract setting ( Click here).

**1.CHECK DTC (SRS AIRBAG SYSTEM)**

a. Clear the DTC (Click here).

b. Recheck for DTCs and check if the same trouble occurs again ( Click here).

**OK:**
**No DTC is output.**

**NG** → GO TO SRS AIRBAG SYSTEM (**Click here**)

**OK**

**2.CLEAR DTC**

a. Clear the DTC (Click here).

**NEXT**

**3.RECHECK DTC**

a. Recheck for DTCs and check if the same trouble occurs again ( Click here).

**OK:**
**No DTC is output.**

NG → Go to step 4

OK → END

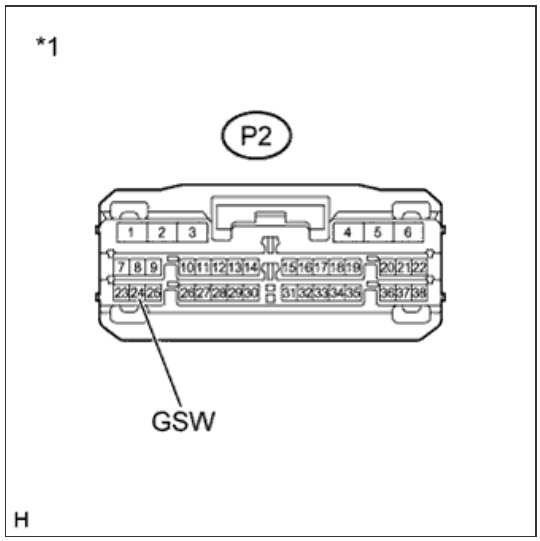
## 4.CHECK HARNESS AND CONNECTOR (TELEMATICS TRANSCEIVER - CENTER AIRBAG SENSOR ASSEMBLY)

a. Disconnect the P2 telematics transceiver connector.

b. Disconnect the E47 center airbag sensor connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**



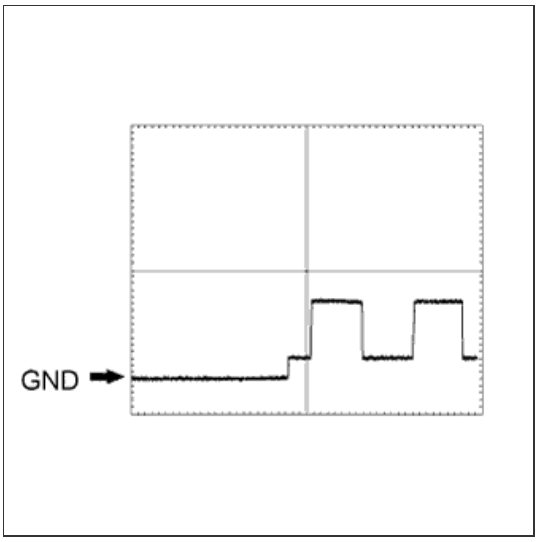
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| P2-24 (GSW) - E47-24 (GSW3) | Always | Below 1 Ω |
| P2-24 (GSW) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 5.INSPECT TELEMATICS TRANSCEIVER

a. Disconnect the P2 telematics transceiver connector.



b. Check the input waveform.

i. Check the signal waveform according to the condition(s) in the table below. (Check the waveform from the back of the wire harness connector of the telematics transceiver while the center airbag sensor assembly connectors are connected.)

| Item | Condition |
|---|---|
| Tester Connection | P2-24 (GSW) - Body ground |
| Tool setting | 5.0 V/DIV., 20 ms/DIV. |
| Vehicle condition | Engine switch on (IG) |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Telematics Transceiver) |

NG → Go to step 6

OK

REPLACE TELEMATICS TRANSCEIVER (Click here)

6.REPLACE CENTER AIRBAG SENSOR ASSEMBLY

a. Replace the center airbag sensor assembly with a normal one and check if the same problem occurs again ( Click here).

NEXT

7.CLEAR DTC

a. Clear the DTC (Click here).

NEXT

8.RECHECK DTC

a. Recheck for DTCs and check if the same trouble occurs again ( Click here).

**OK:**
**No DTC is output.**

NG → REPLACE TELEMATICS TRANSCEIVER (Click here)

OK

END

## DTC B15E9 Telematics Communication Malfunction

**for Preparation** Click here

### DESCRIPTION

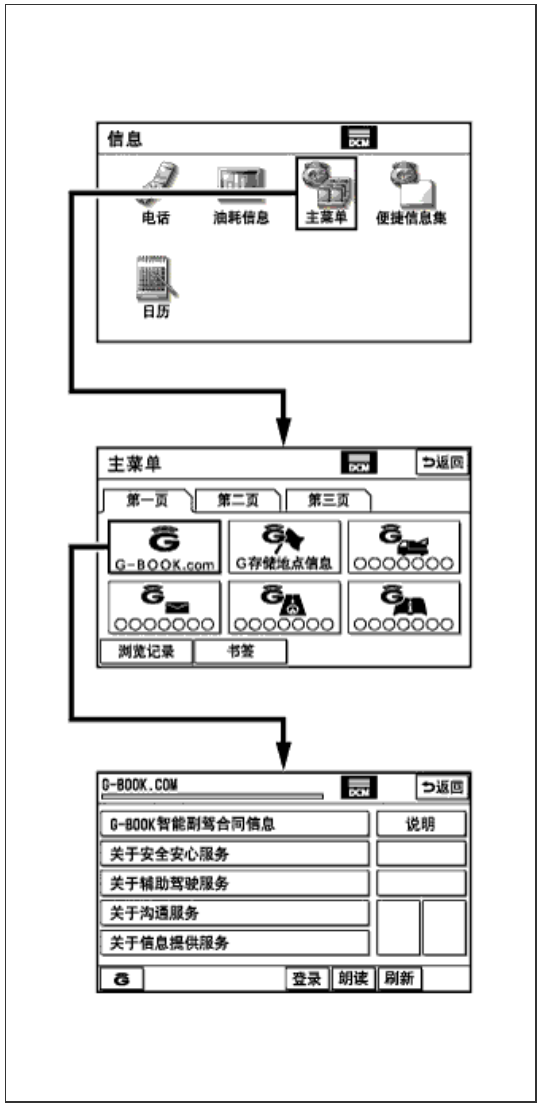
This DTC will be stored when any of the following conditions is met:

- A manual maintenance check does not complete normally (for a reason such as no response from the G-BOOK center within specified time).
- An automatic maintenance check does not complete normally (for a reason such as no response from the G-BOOK center within specified time) 30 times in a row.
- A manual emergency call or automatic emergency call does not complete normally.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15E9 | Communication processing error | G-BOOK center |

### INSPECTION PROCEDURE

#### 1.CHECK CONNECTION



a. Check the connection to the G-BOOK center.

i. Turn the engine switch on (ACC) and wait 1 minute.

ii. Perform the operations shown in the illustration and check that G-BOOK.com is displayed.

**HINT:**

- **If the G-BOOK.com screen is displayed, select "Renew" to check if it is possible to access the G-BOOK.com.**
- **The screen illustrations provided are samples only and may be different from actual screens.**

**Result**

| Result | Proceed to |
|---|---|
| G-BOOK.com can be accessed. | A |
| G-BOOK.com cannot be accessed. | B |

| | |
|---|---|
| B | GO TO PROBLEM SYMPTOMS TABLE (Click here) |

A

## 2.PERFORM MANUAL MAINTENANCE CHECK

a. Perform a manual maintenance check.

i. Move the vehicle to a communication service area. Wait for a while and perform a manual maintenance check ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| Manual maintenance check does not complete normally. | A |
| Manual maintenance check completes normally. | B |

**HINT:**

If the manual maintenance check completes normally, clear history DTCs (this problem was caused by DTCs stored due to past environmental factors).

B → END

A

## 3.CONTACT G-BOOK SUPPORT CENTER

a. Contact the G-BOOK support center.

i. Contact the G-BOOK support center and inform them about the following:

Symptom:G-BOOK.com can be accessed but the manual maintenance check does not complete normally.

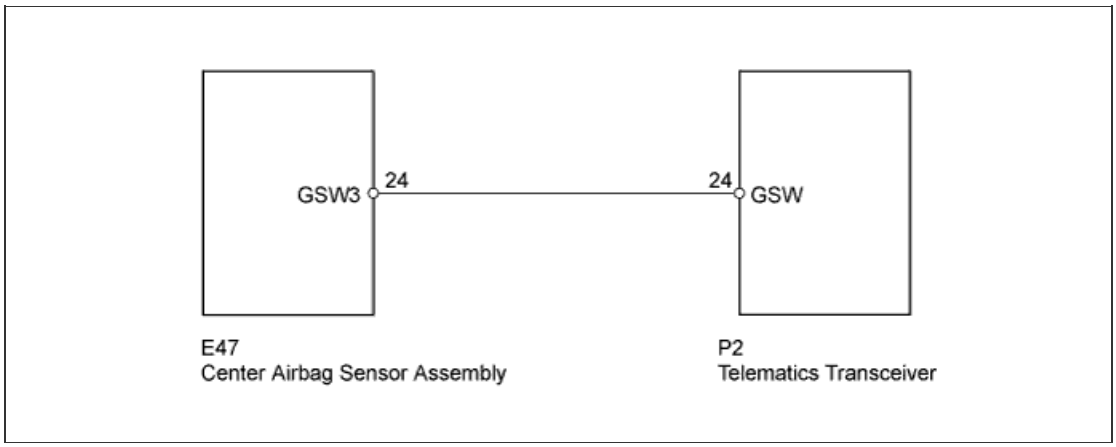
**HINT:**

The G-BOOK support center will perform an investigation and provide the results.

NEXT

## FOLLOW INSTRUCTIONS PROVIDED BY G-BOOK SUPPORT CENTER

## DTC B15C4 Airbag Signal Malfunction/Not Input



**for Preparation** Click here

### DESCRIPTION

If the telematics transceiver detects an error in communication between the telematics transceiver and the center airbag sensor assembly as a result of the telematics transceiver self check, this DTC will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15C4 | Airbag signal problem | • Airbag system<br>• Harness or connector<br>• Center airbag sensor assembly<br>• Telematics transceiver |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

The vehicle is equipped with an SRS (Supplemental Restraint System) which includes components such as airbags. Before servicing (including removal or installation of parts), be sure to read the Precaution in the SRS (Click here).

**HINT:**

When replacing the telematics transceiver, perform the vehicle contract setting ( Click here).

**1.CHECK DTC (SRS AIRBAG SYSTEM)**

a. Clear the DTC (Click here).

b. Recheck for DTCs and check if the same trouble occurs again ( Click here).

**OK:**
**No DTC is output.**

NG → GO TO SRS AIRBAG SYSTEM (Click here)

OK

**2.CLEAR DTC**

a. Clear the DTC (Click here).

NEXT

**3.RECHECK DTC**

a. Recheck for DTCs and check if the same trouble occurs again ( Click here).

**OK:**
**No DTC is output.**

NG → Go to step 4

OK ↓

USE SIMULATION METHOD TO CHECK (Click here)

## 4.CHECK HARNESS AND CONNECTOR (TELEMATICS TRANSCEIVER - CENTER AIRBAG SENSOR ASSEMBLY)

a. Disconnect the P2 telematics transceiver connector.

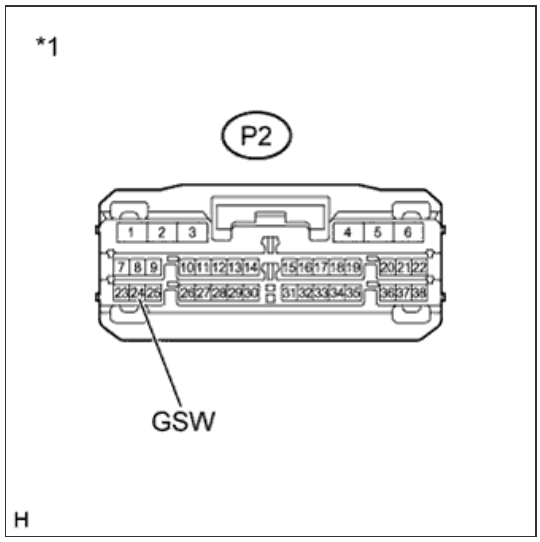
b. Disconnect the E47 center airbag sensor connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| P2-24 (GSW) - E47-24 (GSW3) | Always | Below 1 Ω |
| P2-24 (GSW) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

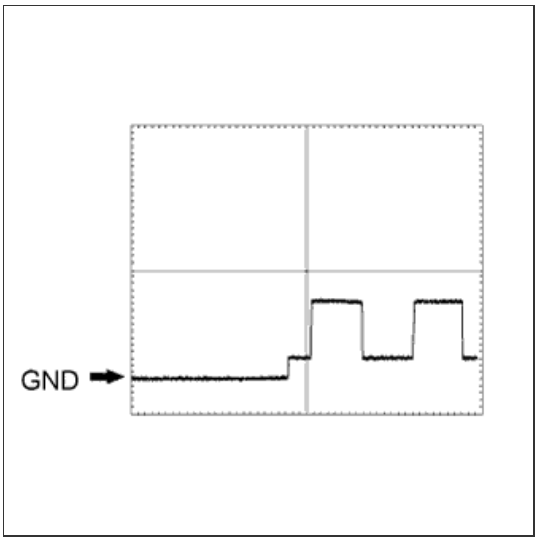


OK ↓

## 5.CHECK TELEMATICS TRANSCEIVER

a. Disconnect the P2 telematics transceiver connector.

**Text in Illustration**



| | |
|---|---|
| *1 | Front view of wire harness connector (to Telematics Transceiver) |

b. Check the input waveform.

i. Check the signal waveform according to the condition(s) in the table below. (Check the waveform from the back of the wire harness connector of the telematics transceiver while the center airbag sensor assembly connectors are connected.)

| Item | Condition |
|---|---|
| Tester Connection | P2-24 (GSW) - Body ground |
| Tool setting | 5.0 V/DIV., 20 ms/DIV. |
| Vehicle condition | Engine switch on (IG) |

NG → Go to step 6

OK

REPLACE TELEMATICS TRANSCEIVER (Click here)

6.REPLACE CENTER AIRBAG SENSOR ASSEMBLY

a. Replace the center airbag sensor assembly with a normal one ( Click here).

NEXT

7.CLEAR DTC

a. Clear the DTC (Click here).

NEXT

8.RECHECK DTC

a. Recheck for DTCs and check if the same trouble occurs again ( Click here).

**OK:**
**No DTC is output.**

NG → REPLACE TELEMATICS TRANSCEIVER (Click here)

OK

END (CENTER AIRBAG SENSOR ASSEMBLY IS DEFECTIVE)

# DTC B15E9 Telematics Communication Malfunction

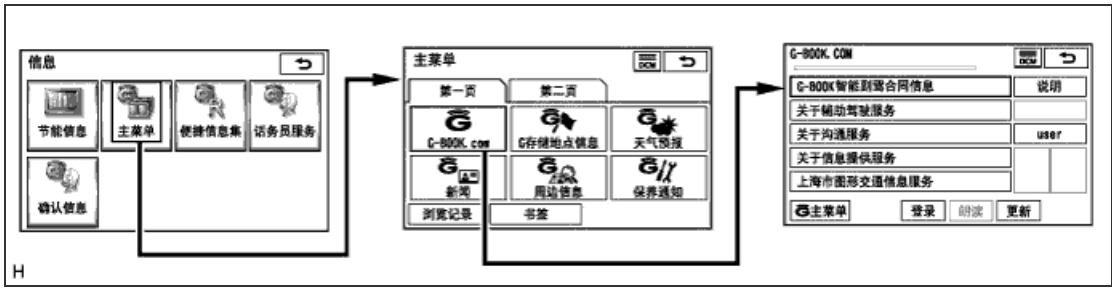
**for Preparation** Click here

## DESCRIPTION

This DTC will be stored when any of the following conditions is met:

- A manual maintenance check does not complete normally (for a reason such as no response from the G-BOOK center within specified time).
- An automatic maintenance check does not complete normally (for a reason such as no response from the G-BOOK center within specified time) 30 times in a row.
- A manual emergency call or automatic emergency call does not complete normally.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15E9 | Communication processing error | G-BOOK center |



## INSPECTION PROCEDURE

### 1.CHECK CONNECTION

a. Check the connection to the G-BOOK center.

i. Turn the engine switch on (ACC) and wait 1 minute.

ii. Perform the operations shown in the illustration and check that G-BOOK.com is displayed.

**HINT:**

- **If the G-BOOK.com screen is displayed, select "Renew" to check if it is possible to access the G-BOOK.com.**
- **The screen illustrations provided are samples only and may be different from actual screens.**

**Result**

| Result | Proceed to |
|---|---|
| G-BOOK.com can be accessed. | A |
| G-BOOK.com cannot be accessed. | B |

B → GO TO PROBLEM SYMPTOMS TABLE (Click here)

A

### 2.PERFORM MANUAL MAINTENANCE CHECK

a. Perform a manual maintenance check.

i. Move the vehicle to a communication service area. Wait for a while and perform a manual maintenance check ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| Manual maintenance check does not | A |

| | |
|---|---|
| complete normally. | |
| Manual maintenance check completes normally. | B |

**HINT:**

If the manual maintenance check completes normally, clear history DTCs (this problem was caused by DTCs stored due to past environmental factors).

B → END

A

**3.CONTACT G-BOOK SUPPORT CENTER**

a. Contact the G-BOOK support center.

i. Contact the G-BOOK support center and inform them about the following:

Symptom:G-BOOK.com can be accessed but the manual maintenance check does not complete normally.

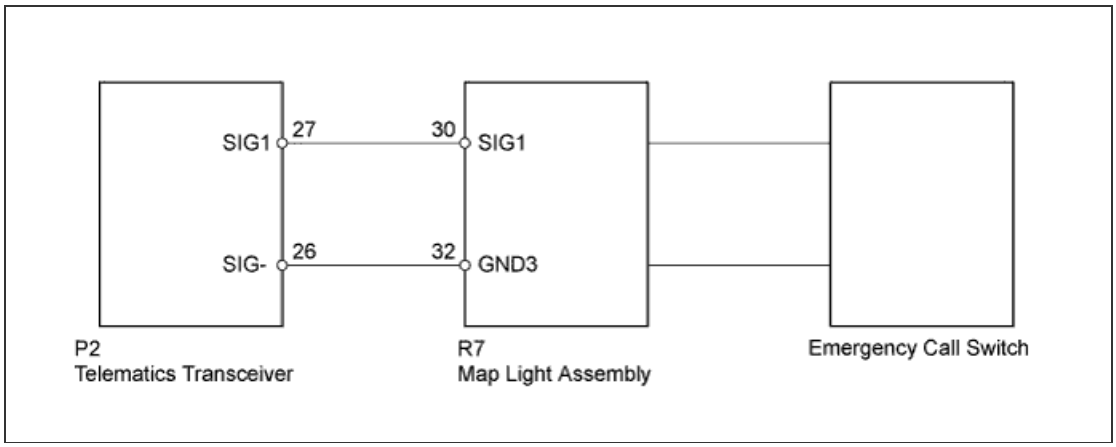
**HINT:**

The G-BOOK support center will perform an investigation and provide the results.

NEXT

**FOLLOW INSTRUCTIONS PROVIDED BY G-BOOK SUPPORT CENTER**

## DTC B15C5 Manual Button Malfunction



**for Preparation** Click here

### DESCRIPTION

If the telematics transceiver detects an error in the communication between the telematics transceiver and the emergency call switch as a result of the telematics transceiver self check, this DTC will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15C5 | A problem with the emergency call switch is detected. | • Map light assembly<br>• Wire harness or connector<br>• Telematics transceiver |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**HINT:**

When replacing the telematics transceiver, perform the vehicle contract setting ( Click here).

**1.CLEAR DTC**

a. Clear the DTC (Click here).

**NEXT**

**2.CHECK DTC**

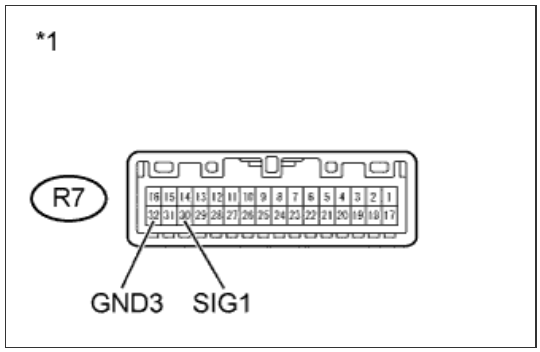
a. Recheck for DTCs and check if the same trouble occurs again ( Click here).

**OK:**
**No DTC is output.**

**NG** → **Go to step 3**

**OK**

**USE SIMULATION METHOD TO CHECK (Click here)**



**3.INSPECT MAP LIGHT ASSEMBLY**

a. Disconnect the R7 map light assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| R7-30 (SIG1) - R7-32 (GND3) | Emergency call switch not operated | 410 to 414 Ω |
| R7-30 (SIG1) - R7-32 (GND3) | Emergency call switch operated | 81 to 83 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Map Light Assembly) |

NG → REPLACE MAP LIGHT ASSEMBLY (Click here)

OK

**4.CHECK HARNESS AND CONNECTOR (TELEMATICS TRANSCEIVER - MAP LIGHT ASSEMBLY)**

a. Disconnect the P2 telematics transceiver connector.

b. Disconnect the R7 map light assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| P2-27 (SIG1) - R7-30 (SIG1) | Always | Below 1 Ω |
| P2-26 (SIG-) - R7-32 (GND3) | Always | Below 1 Ω |
| P2-27 (SIG1) - Body ground | Always | 10 kΩ or higher |
| P2-26 (SIG-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE TELEMATICS TRANSCEIVER (Click here)

# DTC B15EC Backup Battery Degradation

**for Preparation** Click here

## DESCRIPTION

If the mayday battery gets low or automatic call is made, this DTC will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15EC | Mayday battery is consumption. | Mayday battery |

## INSPECTION PROCEDURE

**1.CHECK DTC**

a. Clear the DTC (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

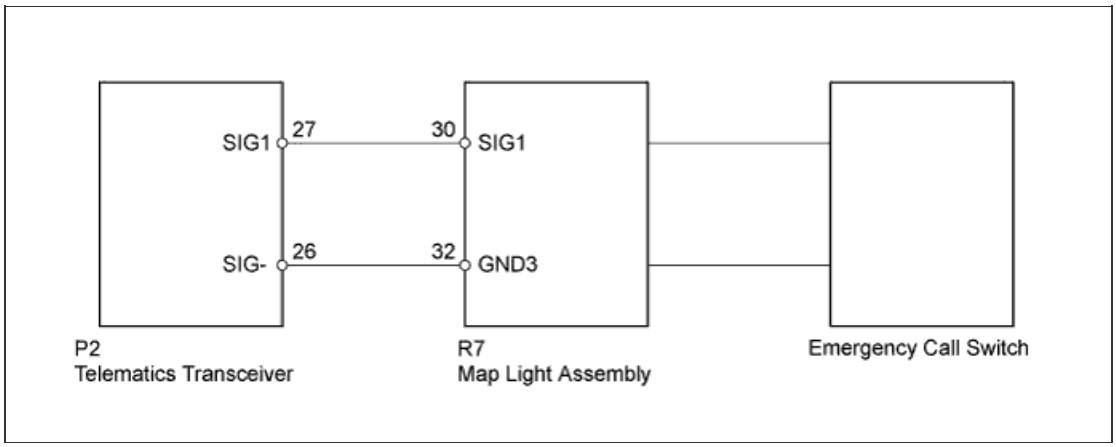
**OK:**
**No DTC is output.**

**NG** → **REPLACE MAYDAY BATTERY (Click here)**

**OK**

**END**

## DTC B15C5 Manual Button Malfunction



**for Preparation** Click here

### DESCRIPTION

If the telematics transceiver detects an error in the communication between the telematics transceiver and the emergency call switch as a result of the telematics transceiver self check, this DTC will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15C5 | A problem with the emergency call switch is detected. | • Map light assembly (emergency call switch)<br>• Harness or connector<br>• Telematics transceiver |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**HINT:**

When replacing the telematics transceiver, perform the vehicle contract setting ( Click here).

**1.CLEAR DTC**

a. Clear the DTC (Click here).

NEXT

**2.CHECK DTC**

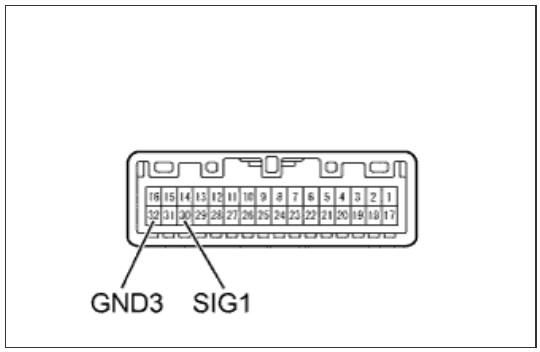
a. Recheck for DTCs and check if the same trouble occurs again ( Click here).

**OK:**
**No DTC is output.**

NG → **Go to step 3**

OK

**USE SIMULATION METHOD TO CHECK (Click here)**



**3.INSPECT MAP LIGHT ASSEMBLY**

a. Remove the map light assembly (Click here).

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| 30 (SIG1) - 32 (GND3) | Emergency call switch not operated | 410 to 414 Ω |
| 30 (SIG1) - 32 (GND3) | Emergency call switch operated | 81 to 83 Ω |

NG → REPLACE MAP LIGHT ASSEMBLY (Click here)

OK

**4.CHECK HARNESS AND CONNECTOR (TELEMATICS TRANSCEIVER - MAP LIGHT ASSEMBLY)**

a. Disconnect the P2 telematics transceiver connector.

b. Disconnect the R7 map light assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| P2-27 (SIG1) - R7-30 (SIG1) | Always | Below 1 Ω |
| P2-26 (SIG-) - R7-32 (GND3) | Always | Below 1 Ω |
| P2-27 (SIG1) - Body ground | Always | 10 kΩ or higher |
| P2-26 (SIG-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE TELEMATICS TRANSCEIVER (Click here)

# DTC B15EC Backup Battery Degradation

**for Preparation** Click here

## DESCRIPTION

If the mayday battery gets low or automatic call is made, this DTC will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15EC | Mayday battery is consumption. | Mayday battery |

## INSPECTION PROCEDURE

**1.CHECK DTC**

a. Clear the DTC (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

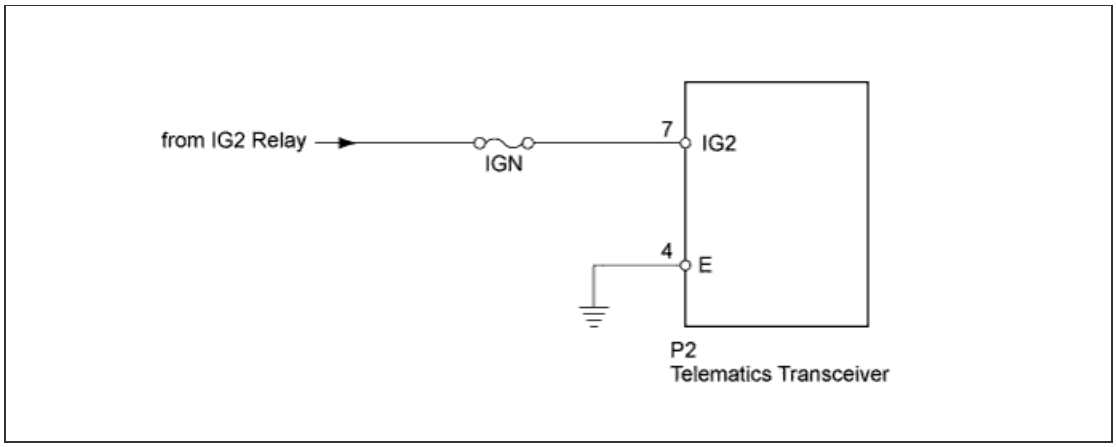
**OK:**
**No DTC is output.**

**NG** → **REPLACE MAYDAY BATTERY (Click here)**

**OK**

**END**

## DTC B15C6 Ignition Switch Signal Malfunction



**for Preparation** Click here

### DESCRIPTION

If vehicle movement (10 km/h (6 mph) or more for 10 seconds) is detected based on the location data sent from the display and navigation module display even when the telematics transceiver detects that the engine switch is off, this DTC will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15C6 | IG signal error | • Wire harness or connector<br>• Telematics transceiver |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**HINT:**

When replacing the telematics transceiver, perform the vehicle contract setting ( Click here).

**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

**1.CLEAR DTC**

a. Clear the DTC (Click here).

**NEXT**

**2.CHECK DTC**

a. Recheck for DTCs and check if the same trouble occurs again ( Click here).

**OK:**
**No DTC is output.**

**NG** → **Go to step 3**

**OK**

**END**

**3.CHECK HARNESS AND CONNECTOR (TELEMATICS TRANSCEIVER - BATTERY AND BODY GROUND)**

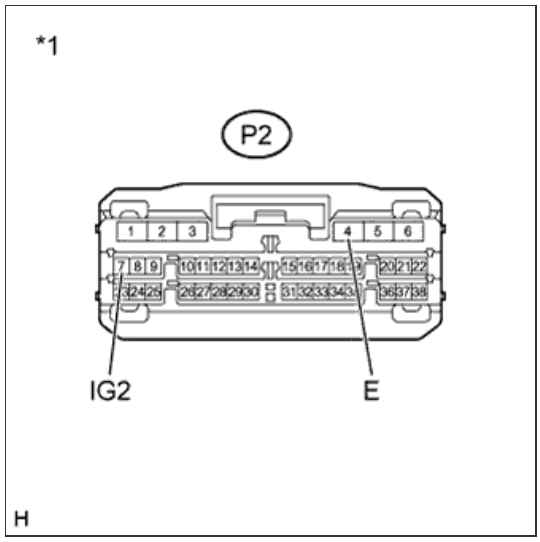
a. Disconnect the P2 telematics transceiver connector.

a. Disconnect the P2 telematics transceiver connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| P2-4 (E) - Body ground | Always | Below 1 Ω |



c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| P2-7 (IG2) - Body ground | Engine switch on (IG) | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Telematics Transceiver) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK → REPLACE TELEMATICS TRANSCEIVER (Click here)

# DTC B15ED Backup Battery Correspondence Not Detected

**for Preparation** Click here

## DESCRIPTION

If the not compatible mayday battery is connected to the telematics transceiver, this DTC will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15ED | The installed mayday battery is not compatible. | • Mayday battery<br>• Telematics transceiver |

## INSPECTION PROCEDURE

**HINT:**

When replacing the telematics transceiver, perform the vehicle contract setting ( Click here).

### 1.CHECK DTC

a. Clear the DTC (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

NG → Go to step 2

OK ↓

END

### 2.CONFIRM PART NUMBER (MAYDAY BATTERY)

a. Check the mayday battery part number.

i. Check if the part number of the mayday battery installed on the vehicle is correct.

**OK:**
**86777-0W050**

NG → REPLACE MAYDAY BATTERY (Click here)

OK ↓

### 3.CONFIRM PART NUMBER (TELEMATICS TRANSCEIVER)

a. Check the telematics transceiver part number.

i. Check if the part number of the telematics transceiver installed on the vehicle is correct.

**OK:**
**86741-48020 or 86741-48040**

NG → REPLACE TELEMATICS TRANSCEIVER (Click here)

OK ↓

### 4.REPLACE MAYDAY BATTERY

a. Replace the mayday battery with a normal one and check if the same problem occurs again ( Click here).

i. Clear the DTC (Click here).

ii. Recheck for DTCs and check if the same trouble occurs again.

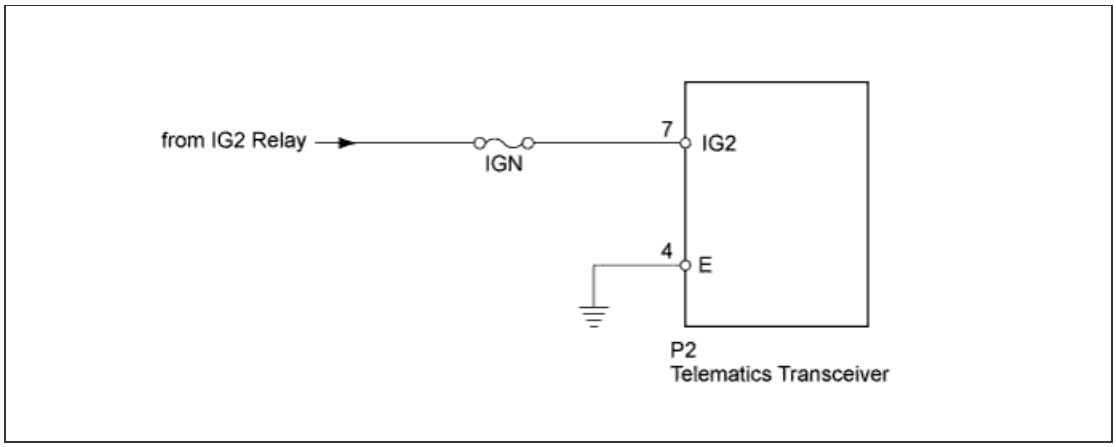
**OK:**
**No DTC is output.**

**NG** → REPLACE TELEMATICS TRANSCEIVER (Click here)

**OK**

END

## DTC B15C6 Ignition Switch Signal Malfunction



**for Preparation** Click here

### DESCRIPTION

If vehicle movement (10 km/h (6 mph) or more for 10 seconds) is detected based on the location data sent from the multi-media module receiver assembly even when the telematics transceiver detects that the engine switch is off, this DTC will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15C6 | IG signal error | • Harness or connector<br>• Telematics transceiver |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

Inspect the fuses and relays for circuits related to this system before performing the following inspection procedure.

**HINT:**

When replacing the telematics transceiver, perform the vehicle contract setting ( Click here).

#### 1.CLEAR DTC

a. Clear the DTC (Click here).

NEXT

#### 2.CHECK DTC

a. Recheck for DTCs and check if the same trouble occurs again ( Click here).

**OK:**
**No DTC is output.**

NG → Go to step 3

OK

#### USE SIMULATION METHOD TO CHECK (Click here)

#### 3.CHECK HARNESS AND CONNECTOR (TELEMATICS TRANSCEIVER - BATTERY AND BODY GROUND)

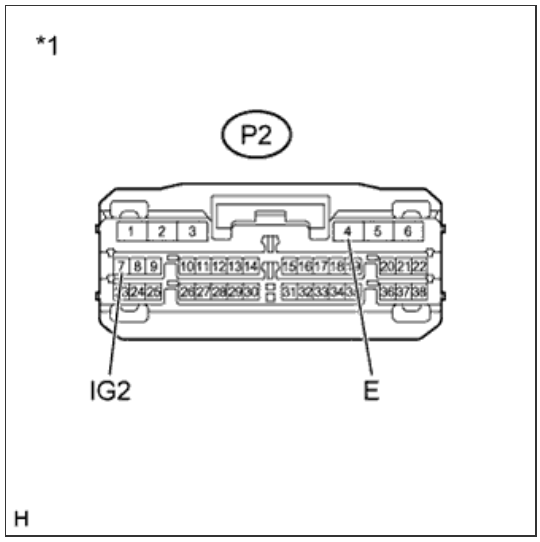
a. Disconnect the P2 telematics transceiver connector.

a. Disconnect the P2 telematics transceiver connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| P2-4 (E) - Body ground | Always | Below 1 Ω |



c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |

# DTC B15ED Backup Battery Correspondence Not Detected

**for Preparation** Click here

## DESCRIPTION

If the not compatible mayday battery is connected to the telematics transceiver, this DTC will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15ED | The installed mayday battery is not compatible. | • Mayday battery<br>• Telematics transceiver |

## INSPECTION PROCEDURE

**HINT:**

When replacing the telematics transceiver, perform the vehicle contract setting ( Click here).

### 1.CHECK DTC

a. Clear the DTC (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

NG → Go to step 2

OK ↓

END

### 2.CONFIRM PART NUMBER (MAYDAY BATTERY)

a. Check the mayday battery part number.

i. Check if the part number of the mayday battery installed on the vehicle is correct.

**OK:**
**86777-0W050**

NG → REPLACE MAYDAY BATTERY (Click here)

OK ↓

### 3.CONFIRM PART NUMBER (TELEMATICS TRANSCEIVER)

a. Check the telematics transceiver part number.

i. Check if the part number of the telematics transceiver installed on the vehicle is correct.

**OK:**
**86741-48020 or 86741-48040**

NG → REPLACE TELEMATICS TRANSCEIVER (Click here)

OK ↓

### 4.REPLACE MAYDAY BATTERY

a. Replace the mayday battery with a normal one and check if the same problem occurs again ( Click here).

i. Clear the DTC (Click here).

ii. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

**NG** → REPLACE TELEMATICS TRANSCEIVER (Click here)

**OK**

END

# DTC B15CB Telematics Transceiver Antenna Disconnected

**for Preparation** Click here

## DESCRIPTION

If an open circuit in the telephone antenna assembly is detected continuously for 1 minute as a result of a terminal check performed by the telematics transceiver every minute after the engine switch is turned on (ACC), this DTC will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15CB | DCM antenna is not connected or has an open circuit. | • Telephone antenna assembly<br>• Telephone antenna cord sub-assembly<br>• Telematics transceiver<br>• Display and navigation module display |

## INSPECTION PROCEDURE

**HINT:**

When replacing the display and navigation module display or the telematics transceiver, perform the vehicle contract setting ( Click here).

### 1.CLEAR DTC

a. Clear the DTC (Click here).

NEXT

### 2.CHECK DTC

a. Recheck for DTCs and check if the same trouble occurs again ( Click here).

**OK:**
**No DTC is output.**

NG → Go to step 3

OK

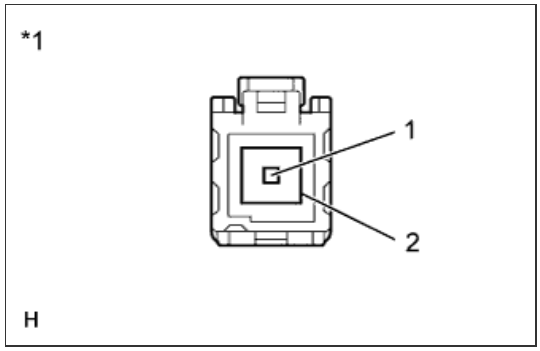
### END

### 3.INSPECT TELEPHONE ANTENNA ASSEMBLY

a. Check the installation condition.

i. Check the telephone antenna assembly for any installation problems.

**OK:**
**The telephone antenna assembly is installed correctly.**



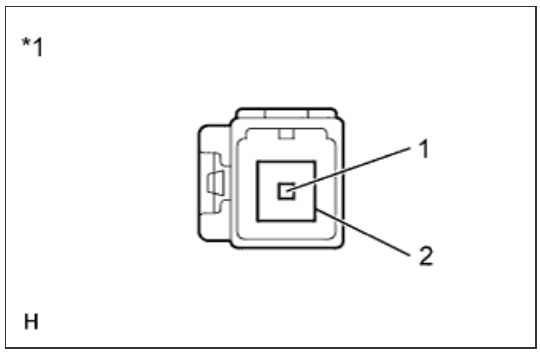
b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4 to 11 kΩ |

**Text in Illustration**

| | |
|---|---|
| *1 | Telephone Antenna Assembly |

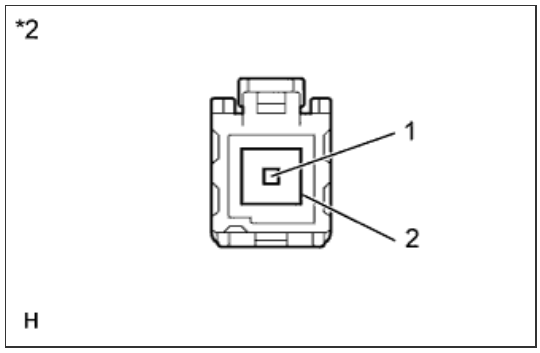


NG → REPLACE TELEPHONE ANTENNA ASSEMBLY (Click here)

OK

## 4.INSPECT TELEPHONE ANTENNA CORD SUB-ASSEMBLY

a. Disconnect the telephone antenna cord sub-assembly connector from the telephone antenna assembly.



b. Disconnect the telephone antenna cord sub-assembly connector from the telematics transceiver.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 1 | Always | Below 1 Ω |
| 1 - Body ground | Always | 10 kΩ or higher |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of telephone antenna cord sub-assembly connector (to Telephone Antenna Assembly) |
| *2 | Front view of telephone antenna cord sub-assembly connector (to Telematics Transceiver) |

NG → REPLACE HARNESS OR CONNECTOR (TELEPHONE ANTENNA CORD SUB-ASSEMBLY)

OK

## 5.RECHECK DTC

a. Clear the DTC (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

NG → Go to step 6

OK

END

## 6.REPLACE TELEMATICS TRANSCEIVER

a. Replace the telematics transceiver with a normal one and check if the same problem occurs again ( Click here).

NEXT

7.RECHECK DTC

a. Recheck for DTCs and check if the same trouble occurs again ( Click here).

**OK:**
**No DTC is output.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

OK

END

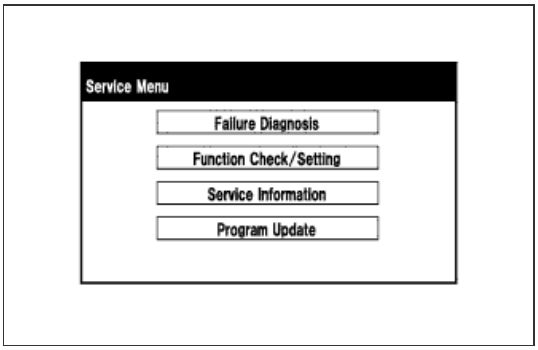
# DTC B15EE Telematics Contract Invalid

**for Preparation** Click here

## DESCRIPTION

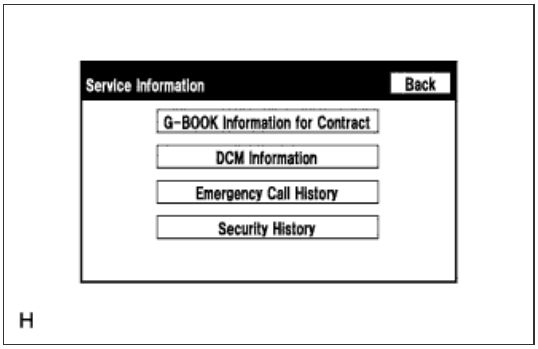
If an unauthorized contract flag is stored by the G-BOOK device, this DTC will be stored.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15EE | Contract is invalid. | - |



## INSPECTION PROCEDURE

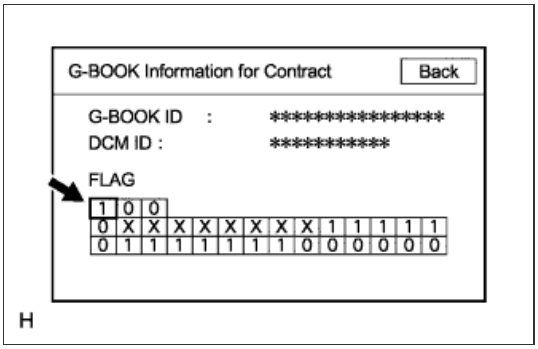
### 1.CHECK CONTRACT FLAG



a. Check the contract flag.

i. Enter diagnostic mode (Click here).

ii. Select "Service Information" on the Service Menu screen.

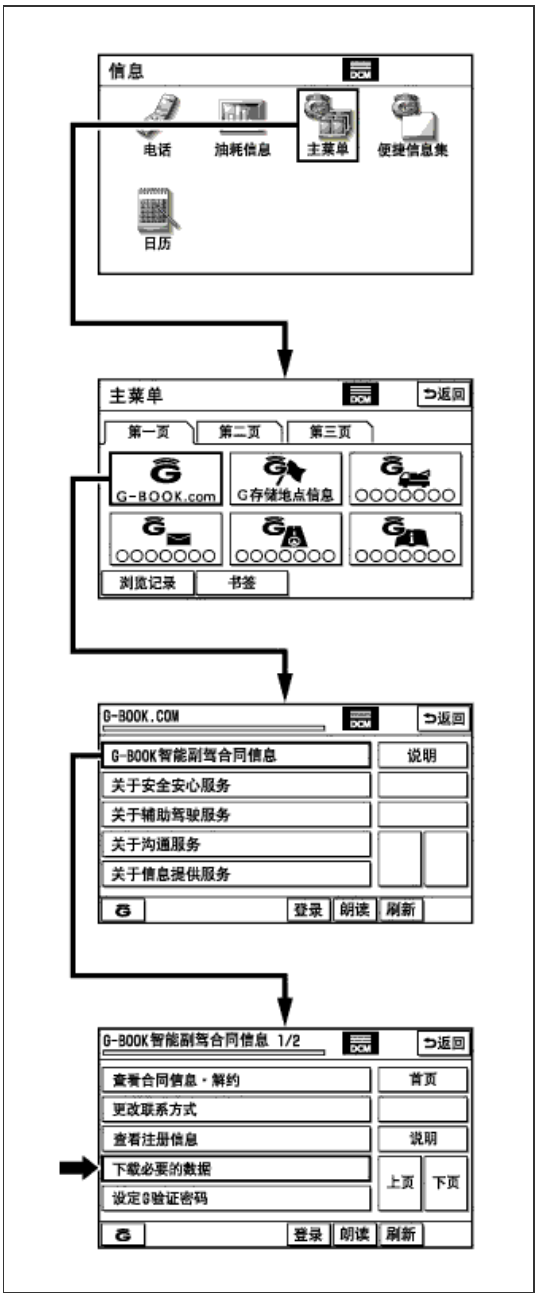


iii. Select "G-BOOK Information for Contract" on the Service Information screen.

iv. Check if the flag information shown in the illustration indicates "1".

**Result**

| Result | Proceed to |
|---|---|
| "1" is not indicated. | A |
| "1" is indicated. | B |



B → Go to step 3

A

## 2.PERFORM OPERATION

a. Perform "Download necessary data" again.

i. Perform the operations shown in the illustration and select "Download necessary data".

**HINT:**

The screen illustrations provided are samples only and may be different from actual screens.

**NEXT**

## 3.MANUAL MAINTENANCE CHECK

a. Manual maintenance check

i. Move the vehicle to a communication service area. Wait for a while and perform a manual maintenance check ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| Manual maintenance check does not complete normally. | A |
| Manual maintenance check completes normally. | B |

**HINT:**

If the manual maintenance check completes normally, clear history DTCs (this problem was caused by DTCs stored due to past environmental factors).

B

END

A

4.CONTACT G-BOOK SUPPORT CENTER

a. Contact the G-BOOK support center.

i. Contact the G-BOOK support center and inform them about the following.

- Flag information is either "1" or "0".
- The manual maintenance check did not complete normally.

**HINT:**

The G-BOOK support center will perform an investigation and provide the results.

NEXT

END

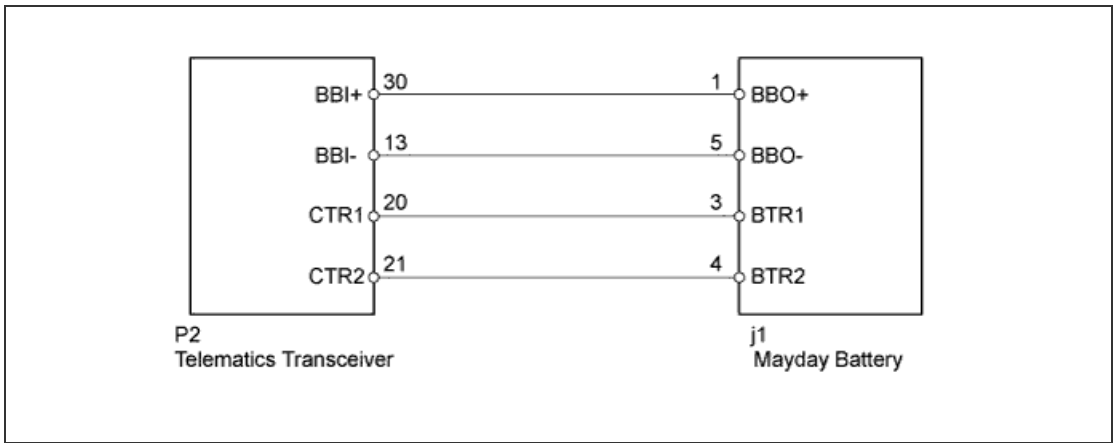
## DTC B15CC Backup Battery Failure



**for Preparation** Click here

### DESCRIPTION

If the telematics transceiver receives a result "Defect", "High Temperature" or "Low Voltage" or cannot receive any signals when mayday battery self-diagnosises.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15CC | Mayday battery malfunction | • Mayday battery<br>• Wire harness or connector<br>• Telematics transceiver |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**HINT:**

When replacing the telematics transceiver, perform the vehicle contract setting ( Click here).

**1.CHECK DTC**

a. Clear the DTC (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

**NG** → **Go to step 2**

**OK**

**END**

**2.CHECK HARNESS AND CONNECTOR (TELEMATICS TRANSCEIVER - MAYDAY BATTERY)**

a. Disconnect the P2 telematics transceiver connector.

b. Disconnect the j1 mayday battery connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| P2-30 (BBI+) - j1-1 (BBO+) | Always | Below 1 Ω |
| P2-13 (BBI-) - j1-5 | | |

| | | |
|---|---|---|

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**3.REPLACE MAYDAY BATTERY**

a. Replace the mayday battery with a normal one and check if the same problem occurs again ( Click here).

i. Clear the DTC (Click here).

ii. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

NG → REPLACE TELEMATICS TRANSCEIVER (**Click here**)

OK

**END**

# DTC B15EF Helpnet Vehicle Installation Device ID Malfunction/Unmatched

**for Preparation** Click here

## DESCRIPTION

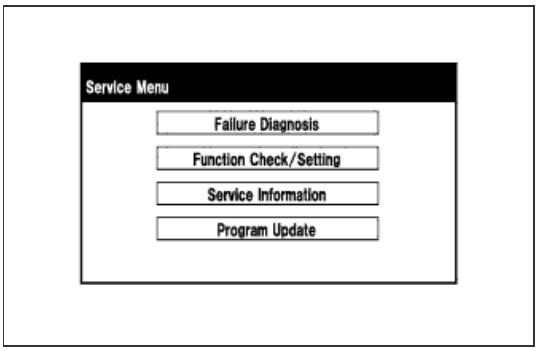
This DTC will be stored when either of the following conditions is met:

- The mayday ID is not detected in the nonvolatile memory for 5 minutes during the mayday ID confirmations that are performed every minute after the engine switch is turned on (ACC).
- The mayday ID stored in the display and navigation module display and the mayday ID stored in the telematics transceiver are different.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15EF | Mayday ID is invalid. | - |

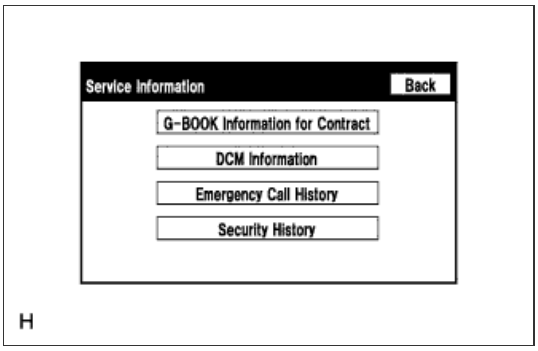
## INSPECTION PROCEDURE

### 1.CHECK DEVICE



a. Check the part replacement history.

i. Check if the display and navigation module display or the telematics transceiver has been replaced in the past.



b. Check the mayday ID.

i. Enter diagnostic mode (Click here).

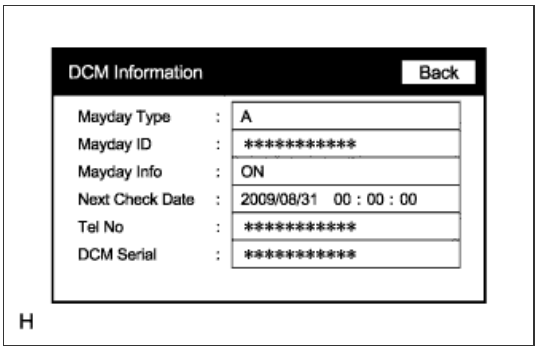
ii. Select "Service Information" on the Service Menu screen.

iii. Select "DCM Information" on the Service Information screen.

H

iv. Check the mayday ID using the DCM Information screen.

c. Contact the G-BOOK support center.



i. Contact the G-BOOK support center and inform them about the following:

- Replacement history of the display and navigation module display
- Replacement history of the telematics transceiver
- Mayday ID

**HINT:**

The G-BOOK support center will perform an investigation and provide the results.

ii. Perform the vehicle contract setting.

NEXT

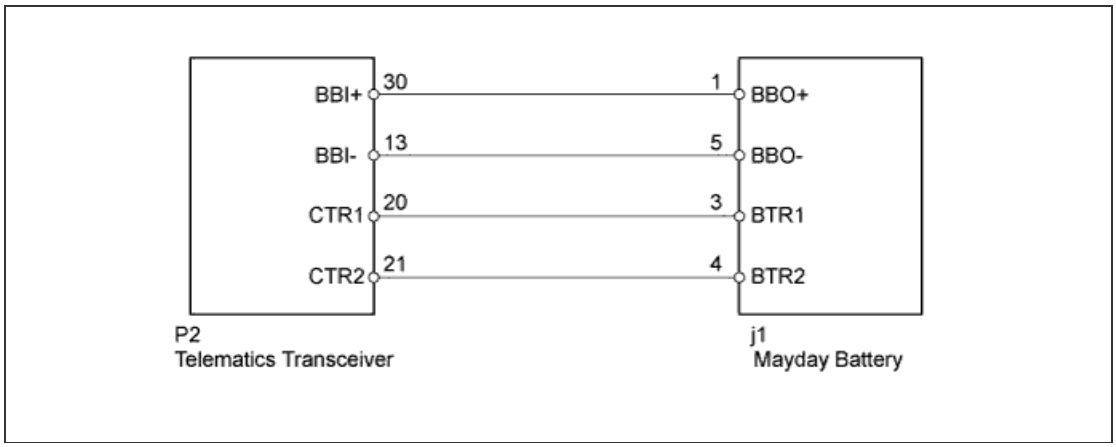
## 2.CLEAR DTC

a. Clear the DTC (Click here).

NEXT

## END

# DTC B15CC Backup Battery Failure



**for Preparation** Click here

## DESCRIPTION

If the telematics transceiver receives a result "Defect", "High Temperature" or "Low Voltage" or cannot receive any signals when mayday battery self-diagnosises.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15CC | Mayday battery malfunction | • Mayday battery<br>• Harness or connector<br>• Telematics transceiver |

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**HINT:**

When replacing the telematics transceiver, perform the vehicle contract setting ( Click here).

### 1.CHECK DTC

a. Clear the DTC (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

**NG** → **Go to step 2**

**OK**

### USE SIMULATION METHOD TO CHECK (Click here)

### 2.CHECK HARNESS AND CONNECTOR (TELEMATICS TRANSCEIVER - MAYDAY BATTERY)

a. Disconnect the P2 telematics transceiver connector.

b. Disconnect the j1 mayday battery connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| P2-30 (BBI+) - j1-1 (BBO+) | Always | Below 1 Ω |
| P2-13 (BBI-) - j1-5 | | |

| | | |
|---|---|---|
| (BBO-) | Always | Below 1 Ω |
| P2-20 (CTR1) - j1-3 (BTR1) | Always | Below 1 Ω |
| P2-21 (CTR2) - j1-4 (BTR2) | Always | Below 1 Ω |
| P2-30 (BBI+) - Body ground | Always | 10 kΩ or higher |
| P2-13 (BBI-) - Body ground | Always | 10 kΩ or higher |
| P2-20 (CTR1) - Body ground | Always | 10 kΩ or higher |
| P2-21 (CTR2) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**3.CHECK MAYDAY BATTERY**

a. Replace the mayday battery with a normal one and check if the same problem occurs again ( Click here).

i. Clear the DTC (Click here).

ii. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

NG → REPLACE TELEMATICS TRANSCEIVER (**Click here**)

OK

**END (MAYDAY BATTERY IS DEFECTIVE)**

# DTC B15EF Helpnet Vehicle Installation Device ID Malfunction/Unmatched

## DESCRIPTION

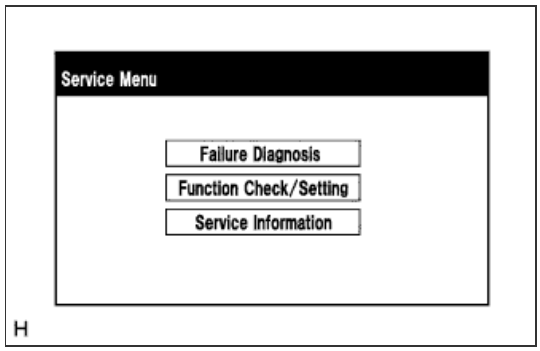
This DTC will be stored when either of the following conditions is met:

- The mayday ID is not detected in the nonvolatile memory for 5 minutes during the mayday ID confirmations that are performed every minute after the engine switch is turned on (ACC).
- The mayday ID stored in the multi-media module receiver assembly and the mayday ID stored in the telematics transceiver are different.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| B15EF | Mayday ID is invalid. | - |

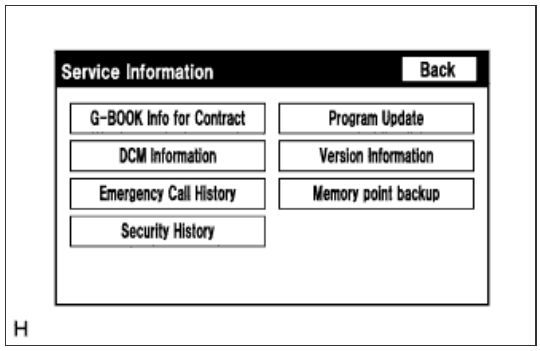
## INSPECTION PROCEDURE

### 1.CHECK DEVICE



a. Check the part replacement history.

i. Check if the multi-media module receiver assembly or the telematics transceiver has been replaced in the past.



b. Check the mayday ID.

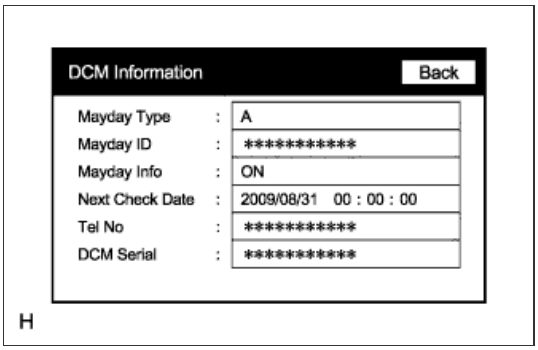
i. Enter diagnostic mode (Click here).

ii. Select "Service Information" on the Service Menu screen.

iii. Select "DCM Information" on the Service Information screen.

iv. Check the mayday ID using the DCM Information screen.

c. Contact the G-BOOK support center.



i. Contact the G-BOOK support center and inform them about the following:

- Replacement history of the multi-media module receiver assembly
- Replacement history of the telematics transceiver
- Mayday ID

**HINT:**

The G-BOOK support center will perform an investigation and provide the results.

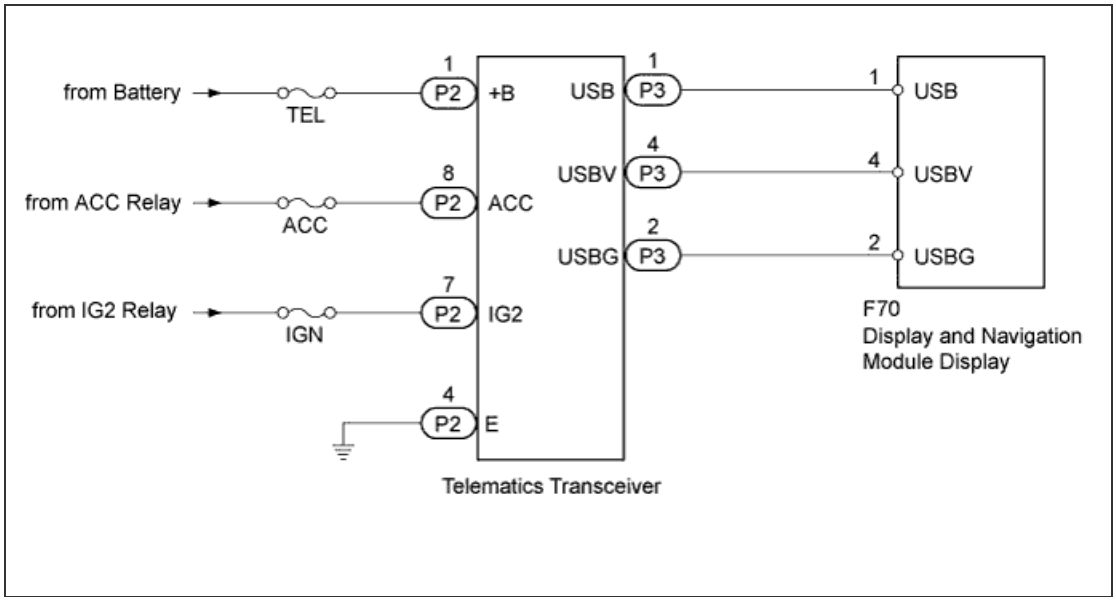
ii. Perform the vehicle contract setting.

NEXT

## 2.CLEAR DTC

a. Clear the DTC (Click here).

NEXT



## END

**for Preparation** Click here

## DESCRIPTION

If the display and navigation module display cannot detect the DCM for a certain period of time (15 seconds) after the engine switch is turned on (ACC) and the display and navigation module display confirms that the information is missing by checking past DCM recognition information (registered information), "NCON" will be displayed.
The G-BOOK system uses USB communication between devices. If an open, short, short to +B or short to ground occurs in the USB circuit, communication is interrupted and the G-BOOK system will not operate normally.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**HINT:**

When replacing the display and navigation module display or the telematics transceiver, perform the vehicle contract setting ( Click here).

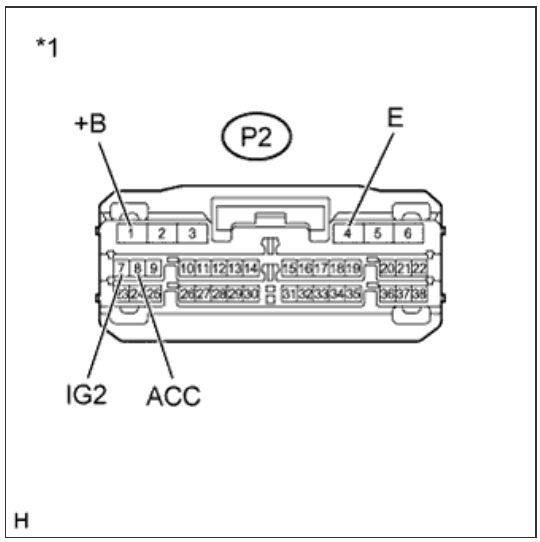
**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

### 1.CHECK HARNESS AND CONNECTOR (TELEMATICS TRANSCEIVER - BATTERY AND BODY GROUND)

a. Disconnect the P2 telematics transceiver connector.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| P2-4 (E) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| P2-1 (+B) - Body ground | Engine switch off | 11 to 14 V |
| P2-7 (IG2) - Body ground | Engine switch on (IG) | 11 to 14 V |
| P2-8 (ACC) - Body | Engine switch on | |

| | | |
|---|---|---|
| ground | (ACC) | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Telematics Transceiver) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

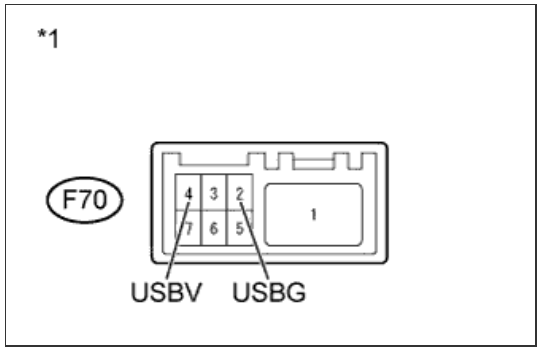
## 2.INSPECT DISPLAY AND NAVIGATION MODULE DISPLAY (USBV, UGND)

a. Disconnect the F70 display and navigation module display connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F70-2 (USBG) - Body ground | Always | Below 1 Ω |



c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F70-4 (USBV) - F70-2 (USBG) | Engine switch on (ACC) | 5 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Display and Navigation Module Display) |

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

## 3.CHECK HARNESS AND CONNECTOR (NAVIGATION ECU - TELEMATICS TRANSCEIVER)

a. Check the installation condition.

i. Check the USB communication cable (digital communication cable) between the display and navigation module display and the telematics transceiver for any installation or connection problems.

b. Disconnect the F70 display and navigation module display connector.

c. Disconnect the P3 telematics transceiver connector.

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F70-1 (USB) - P3-1 (USB) | Always | Below 1 Ω |
| F70-2 (USBG) - P3-2 (USBG) | Always | Below 1 Ω |
| F70-4 (USBV) - P3-4 (USBV) | Always | Below 1 Ω |
| P3-1 (USB) - Body ground | Always | 10 kΩ or higher |
| P3-2 (USBG) - | | |

| | | |
|---|---|---|
| Body ground | Always | 10 kΩ or higher |
| P3-4 (USBV) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**4.REPLACE TELEMATICS TRANSCEIVER**

a. Replace the telematics transceiver with a normal one and check if the same problem occurs again ( Click here).

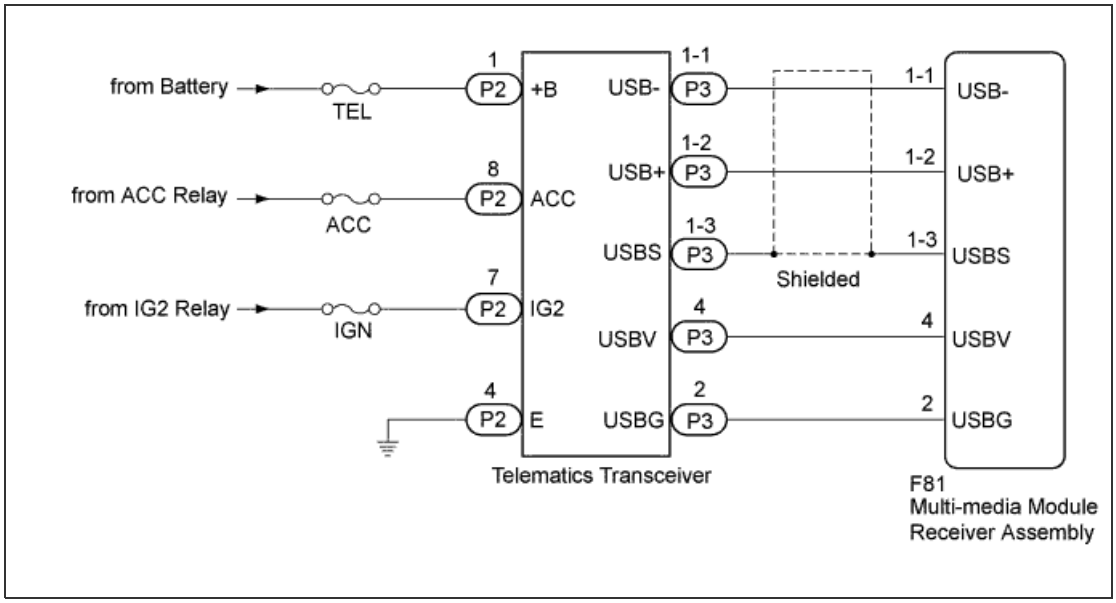
i. Perform inspections indicated on the System Check Mode screen to confirm the DCM inspection result ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| "OK" is displayed in "DCM" on the System Check Mode screen. | A |
| "NCON" is displayed in "DCM" on the System Check Mode screen. | B |

B → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (**Click here**)

A



**END**

**for Preparation** Click here

## DESCRIPTION

If the multi-media module receiver assembly cannot detect the DCM for a certain period of time (15 seconds) after the engine switch is turned on (ACC) and the multi-media module receiver assembly confirms that the information is missing by checking past DCM recognition information (registered information), "NCON" will be displayed.
The G-BOOK system uses USB communication between devices. If an open, short, short to +B or short to ground occurs in the USB circuit, communication is interrupted and the G-BOOK system will not operate normally.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

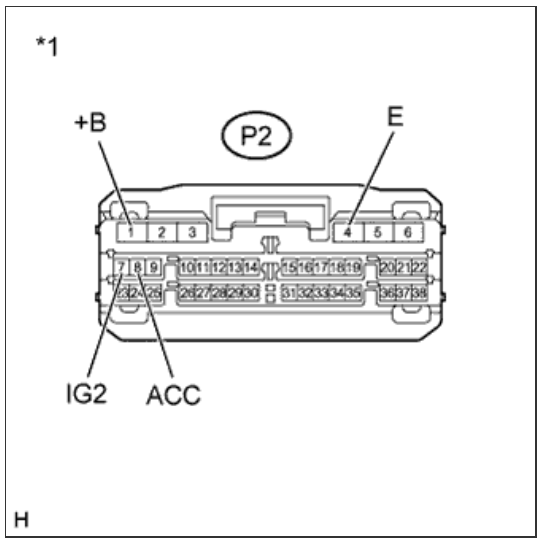
**HINT:**

When replacing the multi-media module receiver assembly or the telematics transceiver, perform the vehicle contract setting ( Click here).

### 1.CHECK HARNESS AND CONNECTOR (TELEMATICS TRANSCEIVER - BATTERY AND BODY GROUND)

a. Disconnect the P2 telematics transceiver connector.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| P2-4 (E) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| P2-1 (+B) - Body ground | Always | 11 to 14 V |
| P2-7 (IG2) - Body ground | Engine switch on (IG) | 11 to 14 V |
| P2-8 (ACC) - Body | Engine switch on | |

| | | |
|---|---|---|
| ground | (ACC) | 11 to 14 V |

**Text in Illustration**

OK

## 2.CHECK MULTI-MEDIA MODULE RECEIVER ASSEMBLY (USBV, USBG)

a. Disconnect the F81 multi-media module receiver assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F81-2 (USBG) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F81-4 (USBV) - F81-2 (USBG) | Engine switch on (ACC) | 4.75 to 5.25 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Multi-media Module Receiver Assembly) |

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK

## 3.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - TELEMATICS TRANSCEIVER)

a. Check the installation condition.

i. Check the USB communication cable (digital communication cable) between the multi-media module receiver assembly and the telematics transceiver for any installation or connection problems.

b. Disconnect the F81 multi-media module receiver assembly connector.

c. Disconnect the P3 telematics transceiver connector.

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F81-1-1 (USB-) - P3-1-1 (USB-) | Always | Below 1 Ω |
| F81-1-2 (USB+) - P3-1-2 (USB+) | Always | Below 1 Ω |
| F81-1-3 (USBS) - P3-1-3 (USBS) | Always | Below 1 Ω |
| F81-2 (USBG) - P3-2 (USBG) | Always | Below 1 Ω |
| F81-4 (USBV) - | | |

| | | |
|---|---|---|
| P3-4 (USBV) | Always | Below 1 Ω |
| F81-1-1 (USB-) - Body ground | Always | 10 kΩ or higher |
| F81-1-2 (USB+) - Body ground | Always | 10 kΩ or higher |
| F81-1-3 (USBS) - Body ground | Always | 10 kΩ or higher |
| F81-2 (USBG) - Body ground | Always | 10 kΩ or higher |
| P3-4 (USBV) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**4.CHECK TELEMATICS TRANSCEIVER**

a. Replace the telematics transceiver with a normal one and check if the same problem occurs again ( Click here).

i. Perform inspections indicated on the System Check Mode screen to confirm the DCM inspection result ( Click here).

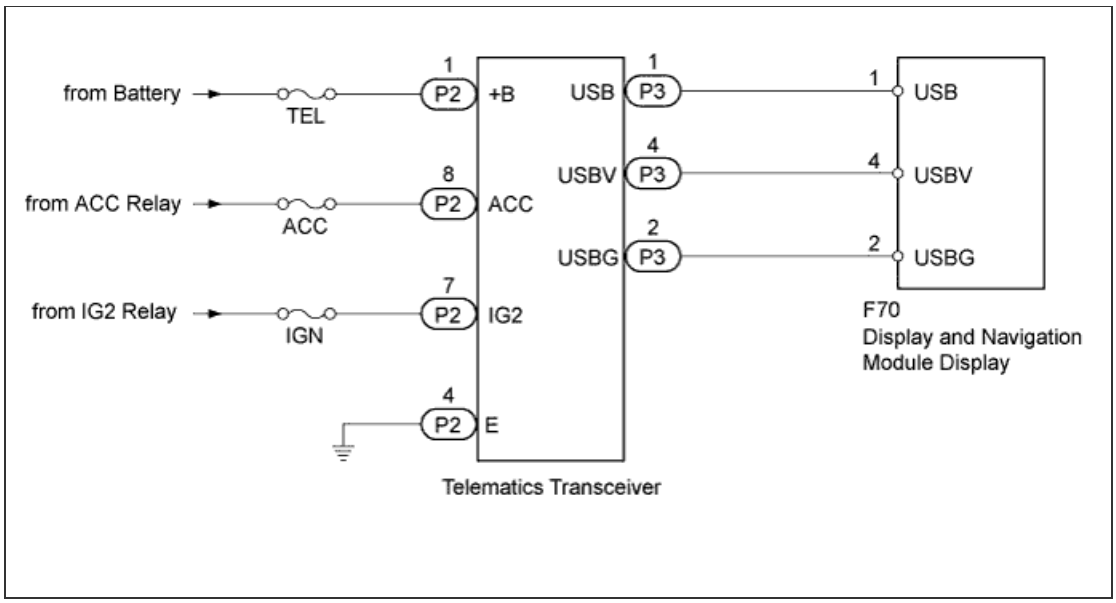
**Result**

| Result | Proceed to |
|---|---|
| "OK" is displayed in "DCM" on the System Check Mode screen. | A |
| "NCON" is displayed in "DCM" on the System Check Mode screen. | B |

B → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (**Click here**)

A

**END (TELEMATICS TRANSCEIVER IS DEFECTIVE)**



**for Preparation** Click here

## DESCRIPTION

If the telematics transceiver does not receive any of the following from the display and navigation module display within the specified time, "NRES" will be displayed.

- System inspection request signal
- System inspection result request signal
- Diagnosis memory request signal

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**HINT:**

When replacing the display and navigation module display or the telematics transceiver, perform the vehicle contract setting ( Click here).

**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

### 1.INSPECTION USING "SYSTEM CHECK MODE" SCREEN

a. Perform inspections indicated on the System Check Mode screen to confirm the DCM inspection result ( Click here).

|---|---|
| *1 | Component without harness connected (Multi-media Module Receiver Assembly) |

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK

## 4.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - TELEMATICS TRANSCEIVER)

a. Check the installation condition.

i. Check the USB communication cable (digital communication cable) between the multi-media module receiver assembly and the

telematics transceiver for any installation or connection problems.

b. Disconnect the F81 multi-media module receiver assembly connector.

c. Disconnect the P3 telematics transceiver connector.

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F81-1-1 (USB-) - P3-1-1 (USB-) | Always | Below 1 Ω |
| F81-1-2 (USB+) - P3-1-2 (USB+) | Always | Below 1 Ω |
| F81-1-3 (USBS) - P3-1-3 (USBS) | Always | Below 1 Ω |
| F81-2 (USBG) - P3-2 (USBG) | Always | Below 1 Ω |
| F81-4 (USBV) - P3-4 (USBV) | Always | Below 1 Ω |
| F81-1-1 (USB-) - Body ground | Always | 10 kΩ or higher |
| F81-1-2 (USB+) - Body ground | Always | 10 kΩ or higher |
| F81-1-3 (USBS) - Body ground | Always | 10 kΩ or higher |
| F81-2 (USBG) - Body ground | Always | 10 kΩ or higher |
| P3-4 (USBV) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**5.CHECK TELEMATICS TRANSCEIVER**

a. Replace the telematics transceiver with a normal one and check if the same problem occurs again ( Click here).

i. Perform inspections indicated on the System Check Mode screen to confirm the DCM inspection result ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| "OK" is displayed in "DCM" on the System Check Mode screen. | A |
| "NRES" is displayed in "DCM" on the System Check Mode screen. | B |

B → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

A

**END (TELEMATICS TRANSCEIVER IS DEFECTIVE)**

**for Preparation** Click here

## INSPECTION PROCEDURE

**HINT:**

When replacing the display and navigation module display or the telematics transceiver, perform the vehicle contract setting ( Click here).

### 1.CHECK COMMUNICATION SERVICE CONDITION

a. Move the vehicle.

i. If the vehicle is outside the communication service area, move the vehicle to a communication service area, wait for a while and perform the operation again.

NEXT

### 2.CHECK DTC

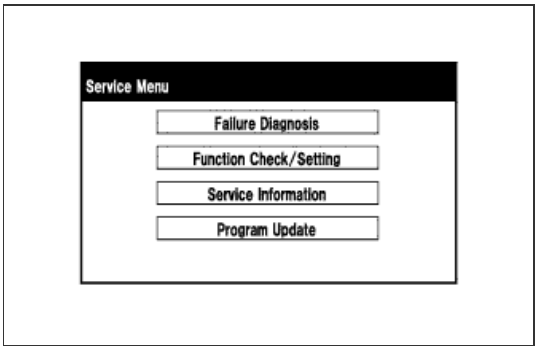
a. Clear the DTC (Click here).

b. Recheck for DTCs and check if the same trouble occurs again.

**OK:**
**No DTC is output.**

NG → Go to step 3

OK



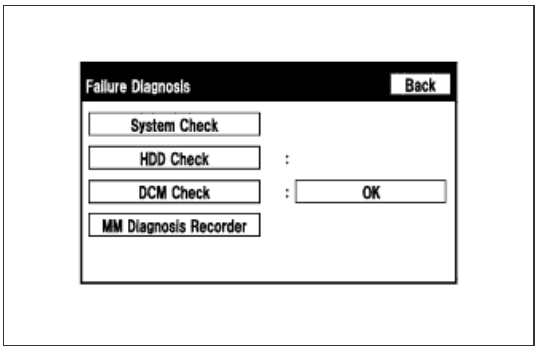
### GO TO DTC CHART

### 3.DCM CHECK

a. DCM Check

i. Enter diagnostic mode (Click here).

ii. Select "Failure Diagnosis" on the Service Menu screen.



iii. Select "DCM Check" on the Failure Diagnosis screen to perform the DCM Check.

**Result**

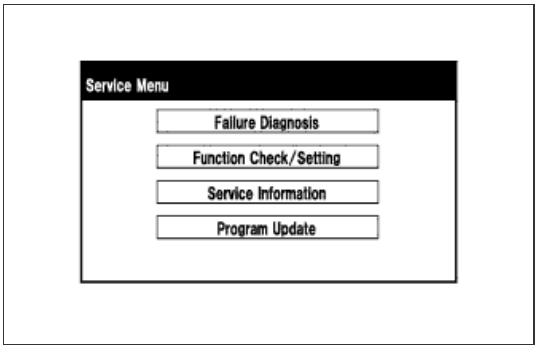
| Result | Proceed to |
|---|---|
| • DCM Check cannot be performed. | A |

| | |
|---|---|
| • "OK" is displayed for the result of DCM Check. | |
| • "No Service" is displayed for the result of DCM Check.<br>• "RESTRICTION" is displayed for the result of DCM Check. | B |
| "OFF LINE" is displayed for the result of DCM Check. | C |
| "NO CARRIER" is displayed for the result of DCM Check. | D |
| "ERROR" is displayed for the result of DCM Check. | E |

**HINT:**

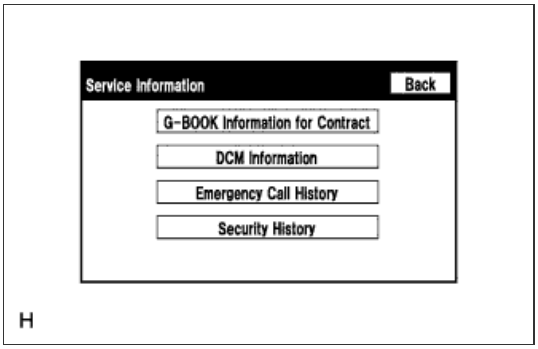
If the vehicle is moved while the screen is displayed, select "DCM Check" again to renew the result.

| | |
|---|---|
| B | MOVE VEHICLE |
| C | Go to step 12 |
| D | CONTACT G-BOOK SUPPORT CENTER |
| E | Go to step 13 |



A

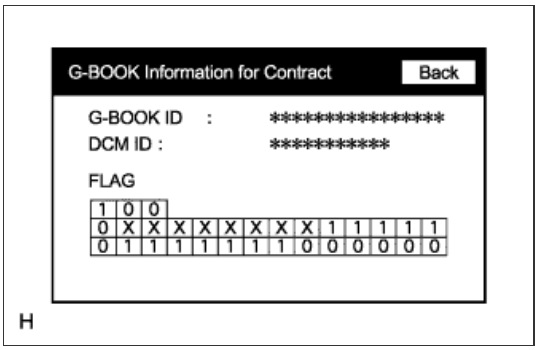
## 4.CONTACT G-BOOK SUPPORT CENTER



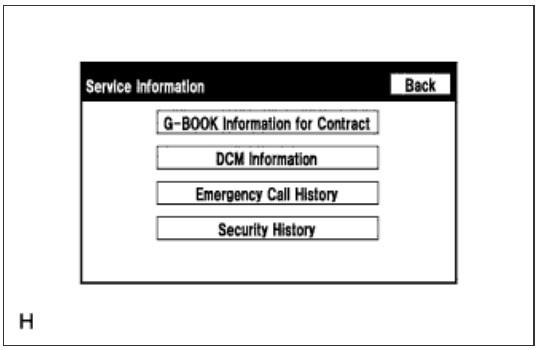
a. Check the contract flag.

i. Enter diagnostic mode (Click here).

ii. Select "Service Information" on the Service Menu screen.

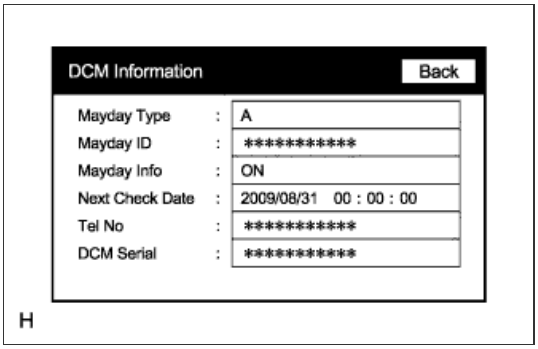


iii. Select "G-BOOK Information for Contract" on the Service Information screen.



H

iv. Check the flag information item.



b. Check the device information.

i. Select "DCM Information" on the Service Information screen.

ii. Check the following items on the DCM Information screen.

| Item | Content |
|---|---|
| Tel No | Check if the DCM phone number is displayed. If the number is displayed, record it. |
| DCM Serial | Record the DCM serial number. |

c. Contact the G-BOOK support center.

i. Contact the G-BOOK support center and inform them about the following:

- Phenomenon: Communication has been initialized but communication is not possible.
- Flag information
- Telephone number (Tel No): Not displayed / Displayed number
- Serial number (DCM Serial): Displayed number
- VIN

**HINT:**

The G-BOOK support center will perform an investigation and provide the results.

ii. Check for problem symptoms after receiving a call from the G-BOOK support center.

**Result**

| Result | Proceed to |
|---|---|
| Problem symptom recurs. | A |
| System returns to normal. | B |

B → END

A

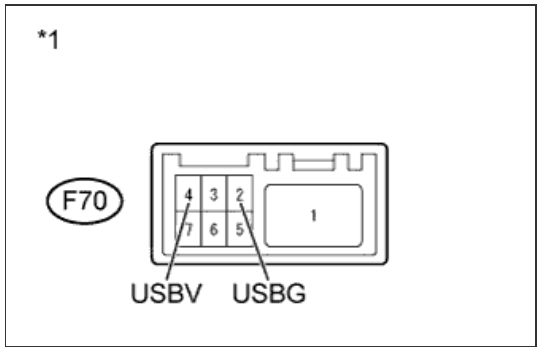
**5.INSPECT DISPLAY AND NAVIGATION MODULE DISPLAY (USBV, UGND)**

a. Disconnect the F70 display and navigation module display connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F70-2 (USBG) - Body ground | Always | Below 1 Ω |



c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F70-4 (USBV) - F70-2 (USBG) | Engine switch on (ACC) | 5 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Display and Navigation Module Display) |

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

## 6.CHECK HARNESS AND CONNECTOR (NAVIGATION ECU - TELEMATICS TRANSCEIVER)

a. Check the installation condition.

i. Check the USB communication cable (digital communication cable) between the display and navigation module display and the telematics transceiver for any installation or connection problems.

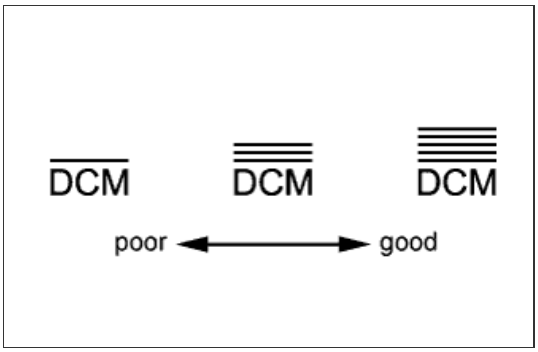
b. Disconnect the F70 display and navigation module display connector.

c. Disconnect the P3 telematics transceiver connector.

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F70-1 (USB) - P3-1 (USB) | Always | Below 1 Ω |
| F70-2 (USBG) - P3-2 (USBG) | Always | Below 1 Ω |
| F70-4 (USBV) - P3-4 (USBV) | Always | Below 1 Ω |
| P3-1 (USB) - Body ground | Always | 10 kΩ or higher |
| P3-2 (USBG) - Body ground | Always | 10 kΩ or higher |
| P3-4 (USBV) - Body ground | Always | 10 kΩ or higher |



NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 7.CHECK RECEPTION LEVEL

a. Check the reception level.

i. Check the reception level of the DCM.

**HINT:**

- **Check if the reception level is significantly lower by comparing it to a China Telecom cellular phone.**
- **If there is no China Telecom cellular phone available, move the vehicle to a location where the reception level indicator shows 3 bars or more.**
- **If a problem occurred because the G-BOOK contract has not been completed, proceed to the contract procedure and check the DCM reception level on the screen during the contract procedure.**

**Result**

| Result | Proceed to |
|---|---|
| • The reception level is not lower than a China Telecom cellular phone.<br>• 3 or more bars are displayed for the reception level. | A |
| • The reception level is lower than a China Telecom cellular phone.<br>• Cannot reach 3 or more bars for the reception level even after moving the vehicle. | B |

B → Go to step 9

A

## 8.REPLACE TELEMATICS TRANSCEIVER

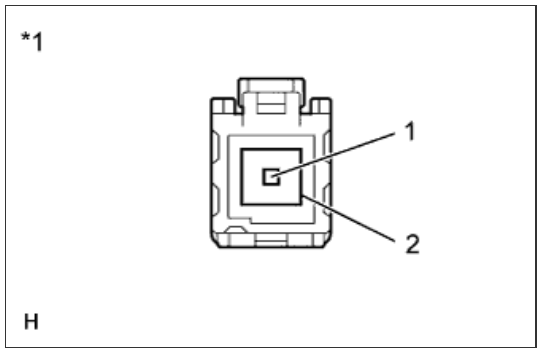
a. Replace the telematics transceiver with a normal one and check if the same problem occurs again ( Click here).

**OK:**
**The system returns to normal.**

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

END



## 9.INSPECT TELEPHONE ANTENNA ASSEMBLY

a. Check the installation condition.

i. Check the telephone antenna assembly for any installation problems.

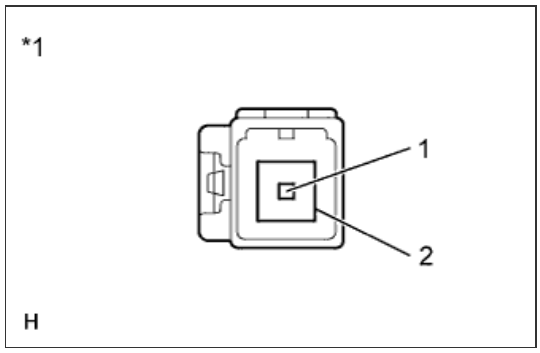
**OK:**
**The telephone antenna assembly is installed correctly.**

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4 to 11 kΩ |

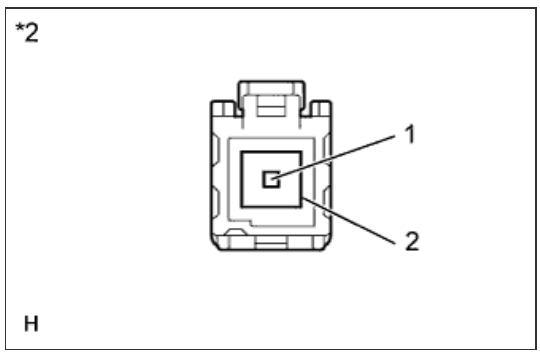
**Text in Illustration**



| | |
|---|---|
| *1 | Telephone Antenna Assembly |

NG → REPLACE TELEPHONE ANTENNA ASSEMBLY (Click here)

OK ↓



**10.INSPECT TELEPHONE ANTENNA CORD SUB-ASSEMBLY**

a. Disconnect the telephone antenna cord sub-assembly connector from the telephone antenna assembly.

b. Disconnect the telephone antenna cord sub-assembly connector from the telematics transceiver.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 1 | Always | Below 1 Ω |
| 1 - Body ground | Always | 10 kΩ or higher |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of telephone antenna cord sub-assembly connector (to Telephone Antenna Assembly) |
| *2 | Front view of telephone antenna cord sub-assembly connector (to Telematics Transceiver) |

NG → REPLACE HARNESS OR CONNECTOR (TELEPHONE ANTENNA CORD SUB-ASSEMBLY)

OK ↓

## 11.REPLACE TELEMATICS TRANSCEIVER

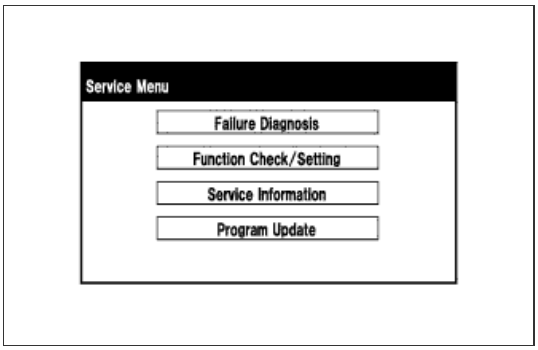
a. Replace the telematics transceiver with a normal one and check if the same problem occurs again ( Click here).

b. Recheck for DTCs and check if the same trouble occurs again ( Click here).

**OK:**
**No DTC is output.**

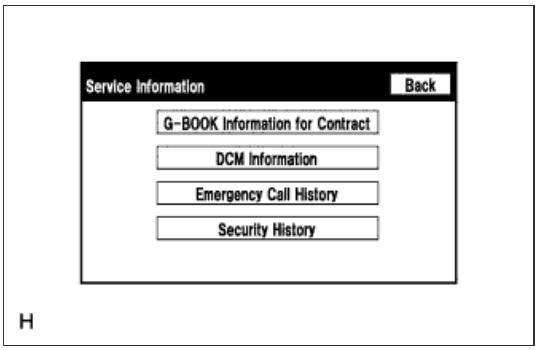
NG → **REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)**

OK



## END

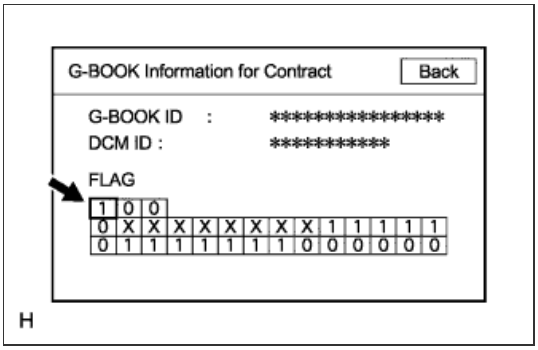
## 12.CHECK CONTRACT FLAG



a. Check the contract flag.

i. Enter diagnostic mode (Click here).

ii. Select "Service Information" on the Service Menu screen.



iii. Select "G-BOOK Information for Contract" on the Service Information screen.

iv. Check if the flag information shown in the illustration indicates "1".

v. Turn the engine switch off and then on (ACC).

vi. Check again if the flag information shown in the illustration indicates "1".

b. Recheck the problem symptom.

i. Select G-BOOK.com and perform the contract procedure again.

ii. Check for the problem symptom.

**Result**

| Result | Proceed to |
|---|---|

| | |
|---|---|
| Contract flag indicates "1" and the system returns to normal. | A |
| Contract flag indicates "1" but the problem symptom recurs. | B |
| Contract flag does not indicate "1" and the problem symptom recurs. | C |

B → REPLACE TELEMATICS TRANSCEIVER (Click here)

C → CONTACT G-BOOK SUPPORT CENTER

A

END

13.CHECK PROBLEM SYMPTOM (IG OFF to ACC ON)

a. Check for the problem symptom.

i. Turn the engine switch off and then on (ACC).

ii. Check if the problem symptom recurs.

Result

| Result | Proceed to |
|---|---|
| System returns to normal. | A |
| System does not return to normal. | B |

B → REPLACE TELEMATICS TRANSCEIVER (Click here)

A

END

**for Preparation** Click here

## INSPECTION PROCEDURE

**HINT:**

When replacing the multi-media module receiver assembly or the telematics transceiver, perform the vehicle contract setting ( Click here).

### 1.CHECK COMMUNICATION SERVICE CONDITION

a. Move the vehicle.

i. If the vehicle is outside the communication service area, move the vehicle to a communication service area, wait for a while and perform the operation again.

NEXT

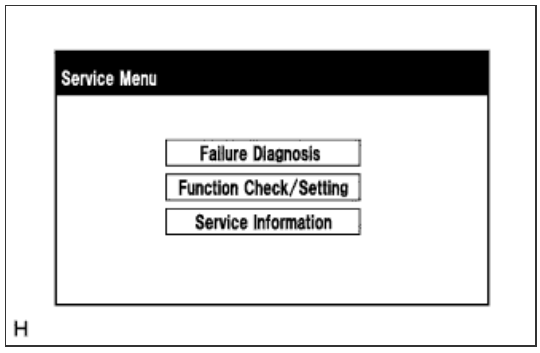
### 2.CHECK DTC

a. Clear the DTC (Click here).

b. Check for DTCs and check if the same trouble occurs again.

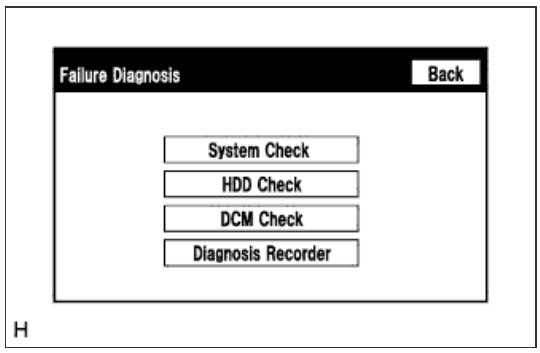
**OK:**
**No DTC is output.**

NG → Go to step 3



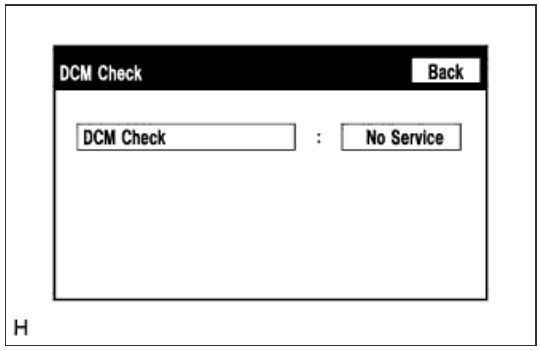
OK

GO TO DTC CHART (**Click here**)



### 3.DCM CHECK

a. Enter diagnostic mode (Click here).



b. Select "Failure Diagnosis" on the Service Menu screen.

c. Select "DCM Check" on the Failure Diagnosis screen to perform the DCM Check.

d. Touch "DCM Check" to perform the DCM Check.

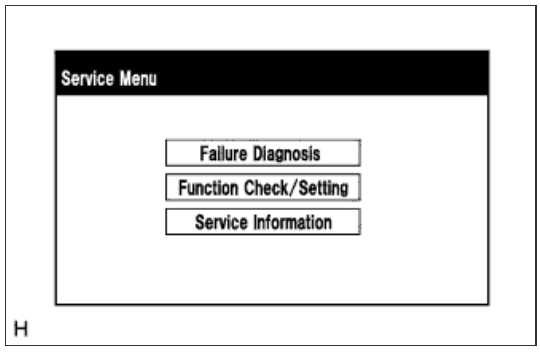
**Result**

| Result | Proceed to |
|---|---|
| • DCM Check cannot be performed.<br>• OK" is displayed for the result of DCM Check. | A |
| "No Service" is displayed for the result of DCM Check. | B |
| "OFF LINE" is displayed for the result of DCM Check. | C |
| "NO CARRIER" is displayed for the result of DCM Check. | D |
| Other results are displayed for the result of DCM Check. | E |

**HINT:**

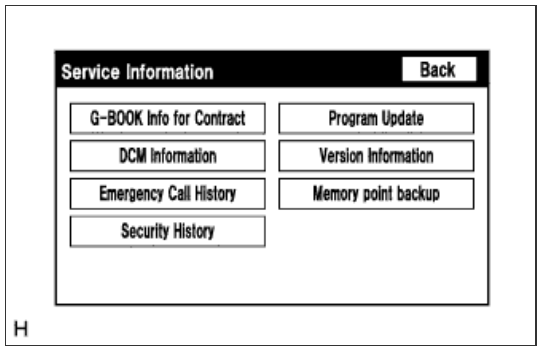
If the vehicle is moved while the screen is displayed, select "DCM Check" again to renew the result.

| | |
|---|---|
| B | MOVE VEHICLE |
| C | Go to step 13 |
| D | CONTACT G-BOOK SUPPORT CENTER |
| E | Go to step 9 |



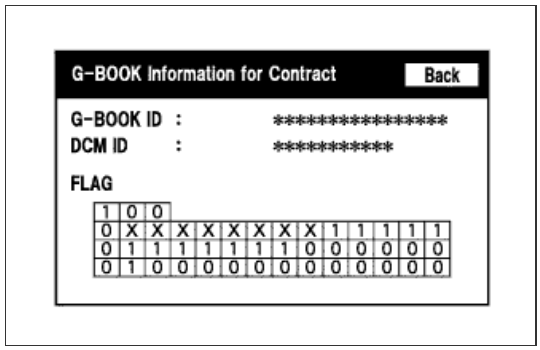
A

## 4.CONTACT G-BOOK SUPPORT CENTER



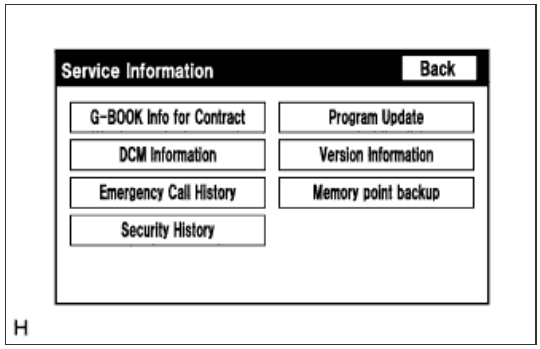
a. Check the contract flag.

i. Enter diagnostic mode (Click here).

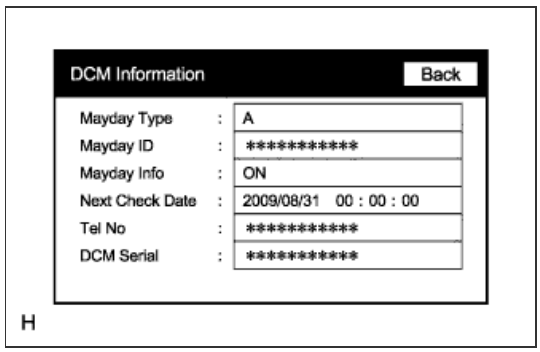


ii. Select "Service Information" on the Service Menu screen.

iii. Select "G-BOOK Information for Contract" on the Service Information screen.



iv. Check the flag information item.



b. Check the device information.

i. Select "DCM Information" on the Service Information screen.

ii. Check the following items on the DCM Information screen.

| Item | Content |
|---|---|
| Tel No | Check if the DCM phone number is displayed. If the number is displayed, record it. |
| DCM Serial | Record the DCM serial number. |

c. Contact the G-BOOK support center.

i. Contact the G-BOOK support center and inform them about the following:

- Phenomenon: Communication has been initialized but communication is not possible.
- Flag information
- Telephone number (Tel No): Not displayed / Displayed number
- Serial number (DCM Serial): Displayed number
- VIN

**HINT:**

The G-BOOK support center will perform an investigation and provide the results.

ii. Check for problem symptoms after receiving a call from the G-BOOK support center.

**Result**

| Result | Proceed to |
|---|---|
| System does not return to normal. | A |
| System returns to normal. | B |

B → END

A

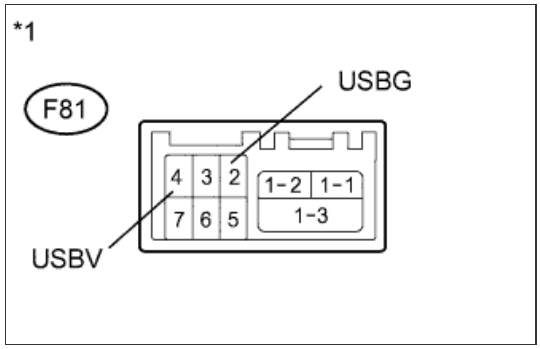
## 5.CHECK MULTI-MEDIA MODULE RECEIVER ASSEMBLY (USBV, USBG)

a. Disconnect the F81 multi-media module receiver assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F81-2 (USBG) - Body ground | Always | Below 1 Ω |



c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F81-4 (USBV) - F81-2 (USBG) | Engine switch on (ACC) | 4.75 to 5.25 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Multi-media Module Receiver Assembly) |

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK

## 6.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - TELEMATICS TRANSCEIVER)

a. Check the installation condition.

i. Check the USB communication cable (digital communication cable) between the multi-media module receiver assembly and the telematics transceiver for any installation or connection problems.

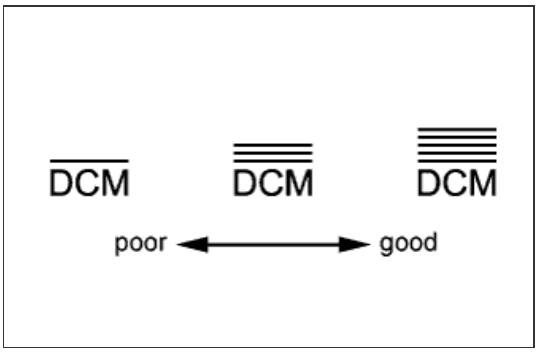
b. Disconnect the F81 multi-media module receiver assembly connector.

c. Disconnect the P3 telematics transceiver connector.

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F81-1-1 (USB-) - P3-1-1 (USB-) | Always | Below 1 Ω |
| F81-1-2 (USB+) - P3-1-2 (USB+) | Always | Below 1 Ω |
| F81-1-3 (USBS) - P3-1-3 (USBS) | Always | Below 1 Ω |
| F81-2 (USBG) - P3-2 (USBG) | Always | Below 1 Ω |
| F81-4 (USBV) - P3-4 (USBV) | Always | Below 1 Ω |



| | | |
|---|---|---|
| F81-1-1 (USB-) - Body ground | Always | 10 kΩ or higher |
| F81-1-2 (USB+) - Body ground | Always | 10 kΩ or higher |
| F81-1-3 (USBS) - Body ground | Always | 10 kΩ or higher |
| F81-2 (USBG) - Body ground | Always | 10 kΩ or higher |
| P3-4 (USBV) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**7.CHECK RECEPTION LEVEL**

a. Check the reception level.

i. Check the reception level of the DCM.

**HINT:**

- **Check if the reception level is significantly lower by comparing it to a China Telecom cellular phone.**
- **If there is no China Telecom cellular phone available, move the vehicle to a location where the reception level indicator shows 3 bars or more.**
- **If a problem occurred because the G-BOOK contract has not been completed, proceed to the contract procedure and check the DCM reception level on the screen during the contract procedure.**

**Result**

| Result | Proceed to |
|---|---|
| • The reception level is not lower than a China Telecom cellular phone.<br>• 3 or more bars are displayed for the reception level. | A |
| • The reception level is lower than a China Telecom cellular phone.<br>• Cannot reach 3 or more bars for the reception level even after moving the vehicle. | B |

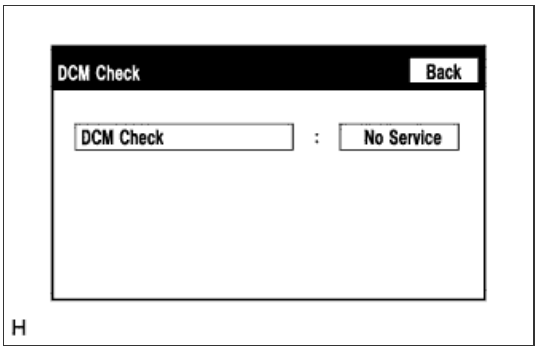
B → Go to step 10

A

**8.REPLACE TELEMATICS TRANSCEIVER**

a. Replace the telematics transceiver with a known good one and check if the same problem occurs again ( Click here).

**OK:**
**The system returns to normal.**



NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY

OK

**END (TELEMATICS TRANSCEIVER IS DEFECTIVE)**

## 9.DCM CHECK

a. Touch "DCM Check" to perform the DCM Check.

**Result**

| Result | Proceed to |
|---|---|
| "RESTRICTION" is displayed for the result of DCM Check. | A |
| "NO ANTENNA" is displayed for the result of DCM Check. | B |
| "ERROR" is displayed for the result of DCM Check. | C |
| "PLL LOCK" is displayed for the result of DCM Check. | D |
| "TIME OUT" is displayed for the result of DCM Check. | E |

**HINT:**

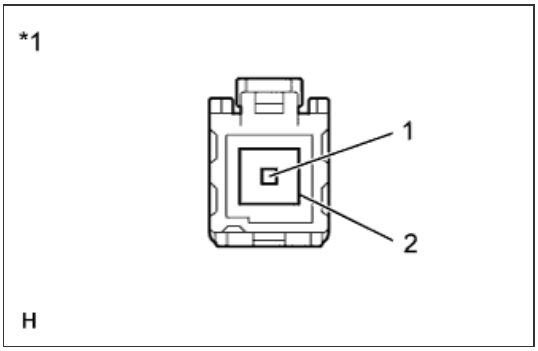
If the vehicle is moved while the screen is displayed, select "DCM Check" again to renew the result.

| | |
|---|---|
| B | Go to step 10 |
| C | Go to step 14 |
| D | Go to step 15 |
| E | DCM CHECK AGAIN |

A

RETRY AFTER WAITING FOR 10 TO 30 MINUTES

## 10.INSPECT TELEPHONE ANTENNA ASSEMBLY



a. Check the installation condition.

i. Check the telephone antenna assembly for any installation problems.

**OK:**

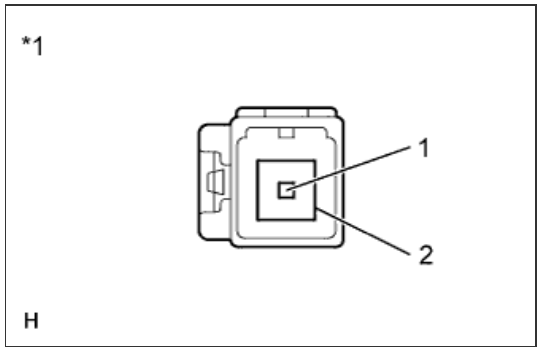
**The telephone antenna assembly is installed correctly.**

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 2 | Always | 4 to 11 kΩ |

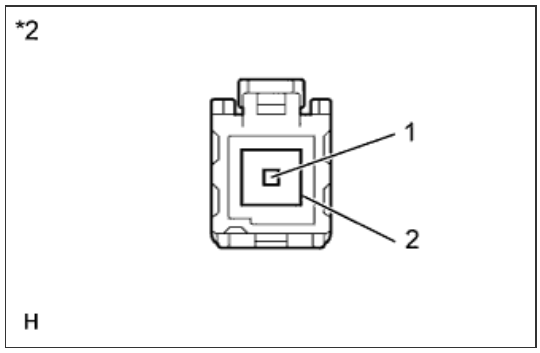
**Text in Illustration**



| | |
|---|---|
| *1 | Telephone Antenna Assembly |

NG → REPLACE TELEPHONE ANTENNA ASSEMBLY

OK



## 11.INSPECT TELEPHONE ANTENNA CORD SUB-ASSEMBLY

a. Disconnect the telephone antenna cord sub-assembly connector from the telephone antenna assembly.

b. Disconnect the telephone antenna cord sub-assembly connector from the telematics transceiver.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 - 1 | Always | Below 1 Ω |
| 1 - Body ground | Always | 10 kΩ or higher |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of telephone antenna cord sub-assembly connector (to Telephone Antenna Assembly) |
| *2 | Front view of telephone antenna cord sub-assembly connector (to Telematics Transceiver) |

NG → REPLACE TELEVISION ANTENNA CORD SUB-ASSEMBLY (**Click here**)

OK

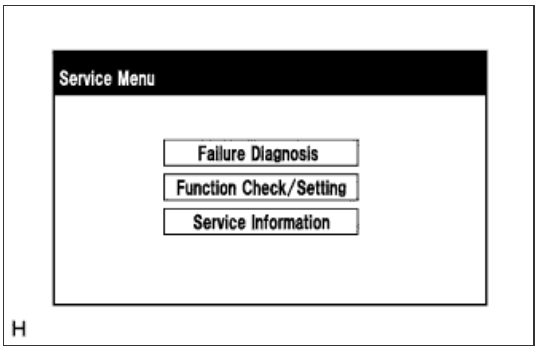
**12.CHECK TELEMATICS TRANSCEIVER**

a. Replace the telematics transceiver with a known good one and check if the same problem occurs again ( Click here).

b. Recheck for DTCs and check if the same trouble occurs again ( Click here).

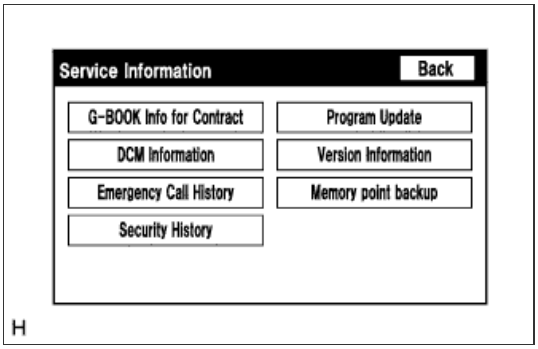
**OK:**
**No DTC is output.**

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (**Click here**)



OK

**END (TELEMATICS TRANSCEIVER IS DEFECTIVE)**



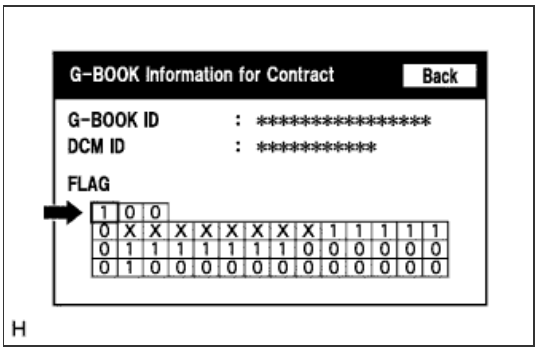
**13.CHECK CONTRACT FLAG**

a. Enter diagnostic mode (Click here).

b. Select "Service Information" on the Service Menu screen.

c. Select "G-BOOK Information for Contract" on the Service Information screen.

d. Check if the flag information shown in the illustration indicates "1".



e. Turn the engine switch off and then on (ACC).

f. Check again if the flag information shown in the illustration indicates "1".

g. Recheck the problem symptom.

i. Select G-BOOK.com and perform the contract setting procedure again.

ii. Check for the problem symptom.

**Result**

| Result | Proceed to |
|---|---|
| Contract flag indicates "1" and the system returns to normal. | A |
| Contract flag indicates "1" but the problem symptom recurs. | B |
| Contract flag does not indicate "1" and the problem symptom recurs. | C |

B → REPLACE TELEMATICS TRANSCEIVER

C → CONTACT G-BOOK SUPPORT CENTER

A

END

## 14.CHECK PROBLEM SYMPTOM (ENGINE SWITCH off to on [ACC])

a. Turn the engine switch off and then on (ACC).

b. Check if the problem symptom recurs.

**Result**

| Result | Proceed to |
|---|---|
| System returns to normal. | A |
| System does not return to normal. | B |

B → REPLACE TELEMATICS TRANSCEIVER

A

END

15.CHECK HARNESS AND CONNECTOR (TELEMATICS TRANSCEIVER - BATTERY AND BODY GROUND)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE TELEMATICS TRANSCEIVER (Click here)

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK PROBLEM SYMPTOM

a. Perform procedures indicated by the displayed message and check that the problem symptom recurs.

| Displayed Message | Cause | Check Item |
|---|---|---|
| "The lines are busy and information was not able to be acquired." is displayed. | • Other communication error<br>• DCM malfunction<br>• Cellular phone carrier is different from the setting<br>• Excessive number of retries to access<br>• PPP certification error<br>• Error other than PPP certification<br>• No available sockets<br>• No response from the G-BOOK center for a certain period of time after a request is sent<br>• HTTP error | Wait for a while, perform the operation again and check if the problem symptom recurs.*1 |
| "The lines are busy and it is not possible to display the desired content. Please try again (operate it again) after waiting for a while." is displayed. | | Wait for a while, perform the operation again and check if the problem symptom recurs.*1 |
| "The lines are busy. Operate it after waiting for a while." is displayed. | Transmission from the DCM is restricted. | Wait for a while, perform the operation again and check if the problem symptom recurs.*1 |
| "The lines are shut off and information was not able to be acquired." is displayed. | Unexpected shutoff of the telephone line | Wait for a while, perform the operation again and check if the problem symptom recurs.*1 |
| "Outside the telephone call area. Move to the telephone call area and use it." is displayed. | • Vehicle is outside the communication service area<br>• Service becomes unavailable during communication | Move the vehicle to a communication service area, perform the operation again and check if the problem symptom recurs. |

**HINT:**

*1: If this message is temporarily displayed, there is a problem with the radio wave signal conditions or the base station was busy. This is not a malfunction (convince the customer that this is not a malfunction and ask them to use the system as is).

**NEXT**

### 2.MOVE VEHICLE

a. Move the vehicle.

i. If the vehicle is outside the communication service area, move the vehicle to a communication service area, wait for a while and perform the operation again.

**Result**

| Result | Proceed to |
|---|---|
| System returns to normal. | A |
| System does not return to normal. | B |

**B** → GO TO PROBLEM SYMPTOMS TABLE (Click here)

**A**

### END

## INSPECTION PROCEDURE

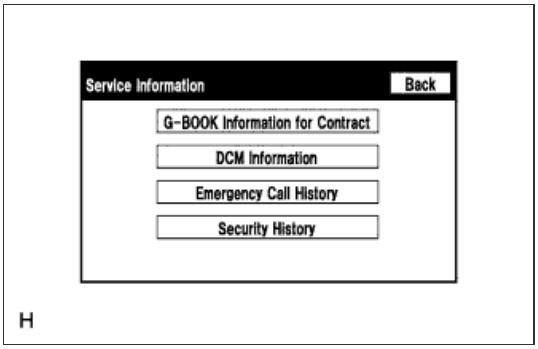
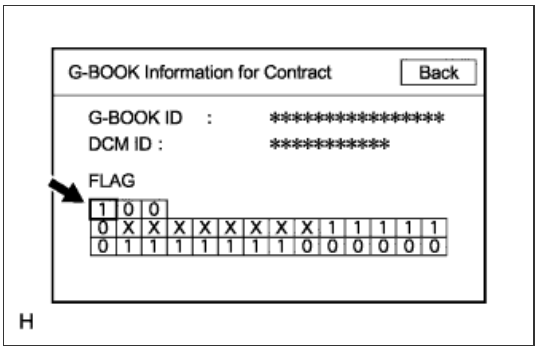
### 1.CHECK CONTACT FLAG



a. Check the contract flag.

i. Enter diagnostic mode (Click here).

ii. Select "Service Information" on the Service Menu screen.



iii. Select "G-BOOK Information for Contract" on the Service Information screen.

iv. Check if the flag information shown in the illustration indicates "1".

**Result**

| Result | Proceed to |
|---|---|
| "1" is not indicated. | A |
| "1" is indicated. | B |

**B** → Go to step 3

**A**

### 2.PERFORM OPERATION AGAIN

a. Perform the contract procedure again.

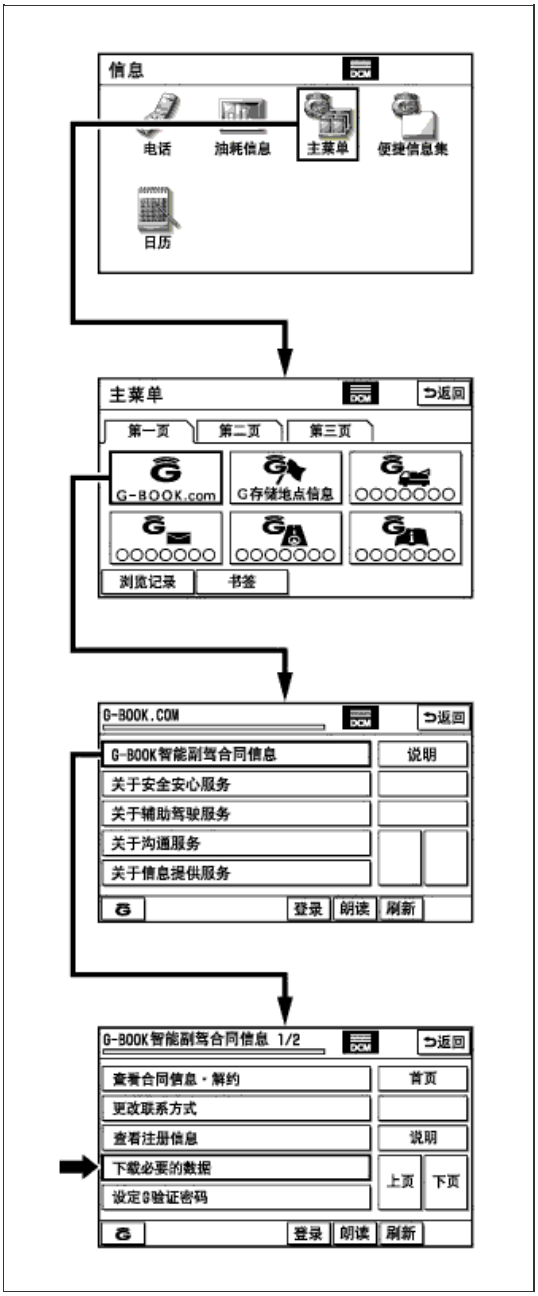
i. Select G-BOOK.com and perform the contract procedure again.

ii. Check for the problem symptom.

**Result**

| Result | Proceed to |
|---|---|
| System returns to normal. | A |
| System does not return to normal. | B |

B → CONTACT G-BOOK SUPPORT CENTER



A

END

## 3.PERFORM OPERATION

a. Perform "Download necessary data" again.

i. Perform the operations shown in the illustration and select "Download necessary data".

**HINT:**

The screen illustrations provided are samples only and may be different from actual screens.

ii. Check if the problem symptom recurs.

**Result**

| Result | Proceed to |
|---|---|
| System returns to normal. | A |
| Problem symptom recurs. | B |

B → CONTACT G-BOOK SUPPORT CENTER

## INSPECTION PROCEDURE

### 1.CHECK PROBLEM SYMPTOM (WARNING NOTIFICATION FUNCTION)

a. Check the problem symptom.

i. Check the problem symptom of the warning notification function.

**Result**

| Result | Proceed to |
|---|---|
| The multi-display does not show a warning message even though a warning light turns on and the multi-information display indicates a warning. | A |
| The multi-display shows a warning message even though a warning light is not on and the multi-information display does not indicate a warning. | B |
| The multi-display shows a warning message different from the warning light or the multi-information display. | B |
| The same warning notification is repeated. | C |

**HINT:**

- **The warning notification function sends information to the G-BOOK center.**
- **In order to determine if a temporary problem with radio waves caused the malfunction, carefully confirm the conditions that were present when the malfunction occurred.**

| | |
|---|---|
| B | Go to step 6 |
| C | Go to step 9 |

A

### 2.INSPECT WARNING LIGHT

a. Check if the indicated warning light or message is listed in the following table.

**HINT:**

Only messages listed in the table are included in the G-BOOK warning notification function.

| Warning Name |
|---|
| AFS warning |
| High coolant temperature warning |
| Check engine warning |
| Engine oil level warning |
| Brake system warning |
| Brake fluid warning |
| ABS warning |
| VSC warning |
| 4LO warning |
| VGRS warning |
| 4-WHEEL AHC warning |
| Power steering lock warning |
| Charging system warning |
| Airbag warning |
| PCS warning |
| Cruise warning |

| |
|---|
| Clearance sonar warning |

**Result**

| Result | Proceed to |
|---|---|
| Warning light or message is listed in the table. | A |
| Warning light or message is not listed in the table. | B |

B → END

A

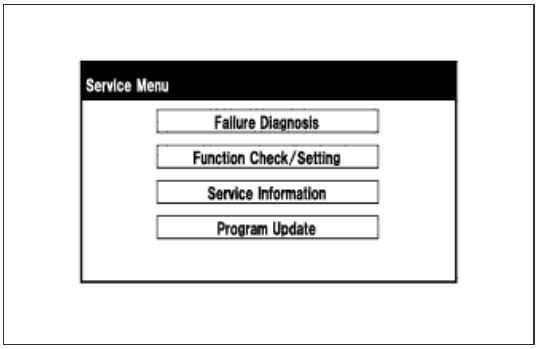
## 3.CONFIRM SETTING (COMMUNICATION LOCK)

a. Check if the G-BOOK communication lock is set.

**Result**

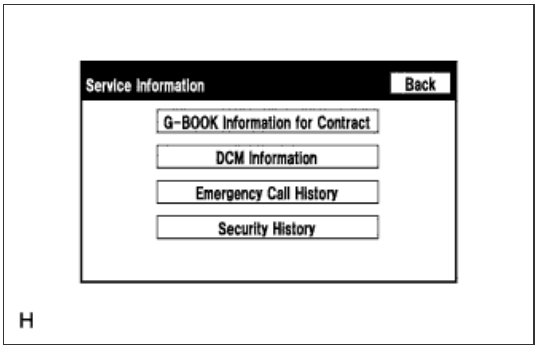
| Result | Proceed to |
|---|---|
| Communication lock is not set. | A |
| Communication lock is set. | B |

B → RELEASE COMMUNICATION LOCK



A

## 4.CHECK FOR SERVICE FLAG

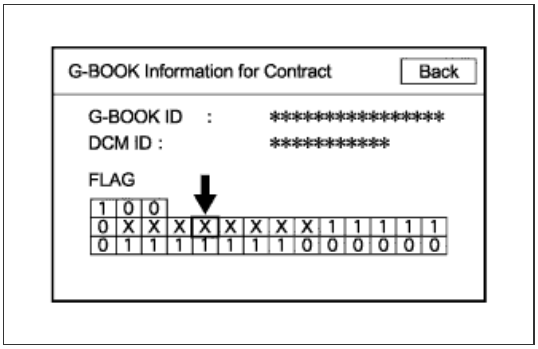


a. Check for service flags.

i. Enter diagnostic mode (Click here).

ii. Select "Service Information" on the Service Menu screen.

iii. Select "G-BOOK Information for Contract" on the Service Information screen.



iv. Using the illustration as reference, check if the flag information indicated by the arrow indicates "1".

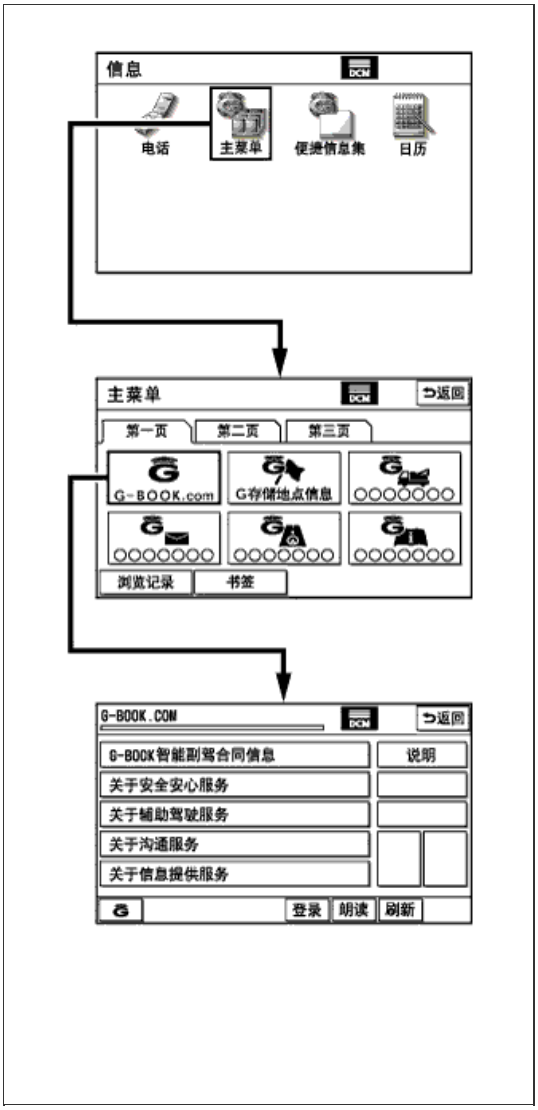
**Result**

| |
|---|
| |

| Result | Proceed to |
|---|---|
| "1" is indicated. | A |
| "1" is not indicated. | B |

B → Go to step 10

A



## 5.CHECK CONNECTION (G-BOOK)

a. Perform the operations shown in the illustrations and check that G-BOOK.com is displayed.

**HINT:**

The screen illustrations provided are samples only and may be different from actual screens.

**OK:**
**G-BOOK.com can be accessed.**

NG → GO TO PROBLEM SYMPTOMS TABLE (Click here)

OK

## 6.INSPECT METER WARNING LIGHT

a. Check if a warning light on the combination meter assembly comes on or a warning message on the multi-information display is displayed even when there is no problem.

**OK:**

**There are no problems with warning lights or warning messages.**

**HINT:**

The warning notification function of the G-BOOK system uses the warning notification signals sent and received by the meter and gauge system. Therefore, if the meter and gauge system is not operating normally, the warning notification function will not operate normally.

NG → GO TO METER / GAUGE SYSTEM (Click here)

OK ↓

**7.INSPECT CAN COMMUNICATION SYSTEM**

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the tester on.

d. Enter the following menus: System Select / CAN Bus Check.

e. Check that all ECUs and sensors that use CAN communication are connected.

**Result**

| Result | Proceed to |
|---|---|
| There are no connection problems. | A |
| There is a connection problem. | B |

B → GO TO CAN COMMUNICATION SYSTEM (Click here)

A ↓

**8.CHECK FOR DTC**

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the tester on.

d. Enter the following menus: Utility / All Codes.

e. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| No DTC is output. | A |
| DTC is output. | B |
| DTCs cannot be checked. | |

B → INSPECT EACH ECU SYSTEM

A ↓

**9.INSPECT NAVIGATION SYSTEM (for HDD)**

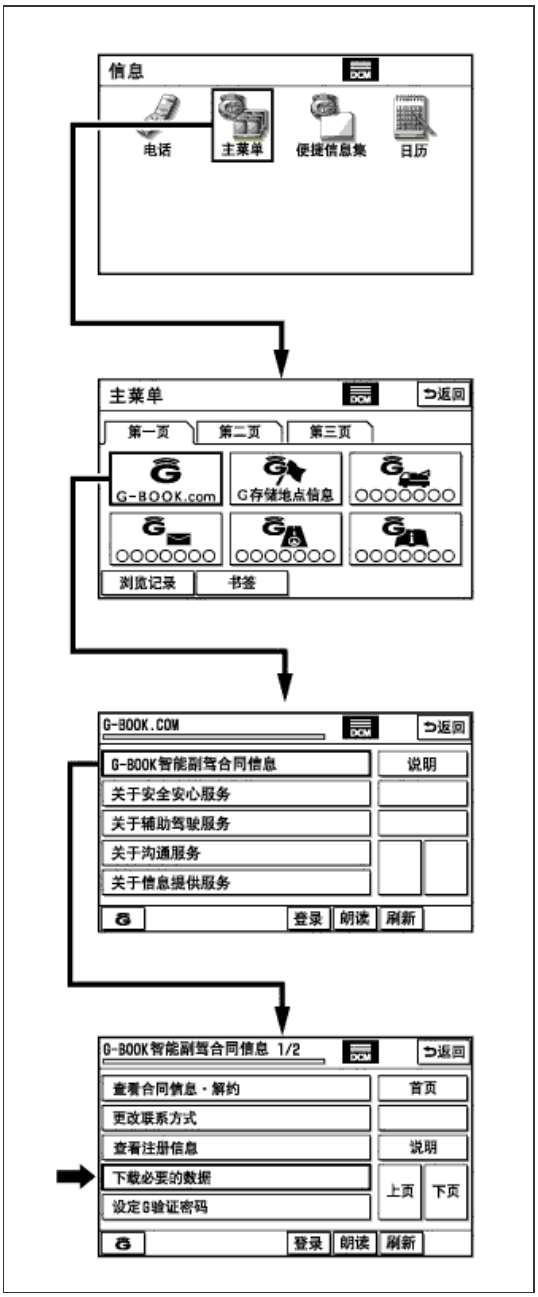
a. Check if the HDD navigation system is operating and functioning normally.

**OK:**

**The HDD navigation system is normal.**

NG → GO TO NAVIGATION SYSTEM (for HDD) (Click here)

OK ↓



## 10.RENEW DATA TABLE

a. Renew the data.

i. Perform the operations shown in the illustrations and select "Download necessary data".

**HINT:**

The screen illustrations provided are samples only and may be different from actual screens.

**Result**

| Result | Proceed to |
|---|---|
| Data can be renewed. | A |
| Data cannot be renewed. | B |

B → CONTACT G-BOOK SUPPORT CENTER

A → END

**for Preparation** Click here

## INSPECTION PROCEDURE

### 1.CHECK PROBLEM SYMPTOM (WARNING NOTIFICATION FUNCTION)

a. Check the problem symptom.

i. Check the problem symptom of the warning notification function.

**Result**

| Result | Proceed to |
|---|---|
| The multi-display does not show a warning message even though a warning light turns on or the multi-information display indicates a warning. | A |
| The multi-display shows a warning message even though a warning light is not on and the multi-information display does not indicate a warning. | B |
| The multi-display shows a warning message different from the warning light or the multi-information display. | B |
| The same warning notification is repeated. | C |

**HINT:**

- **The warning notification function sends information to the G-BOOK center.**
- **In order to determine if a temporary problem with radio waves caused the malfunction, carefully confirm the conditions that were present when the malfunction occurred.**

| | |
|---|---|
| B | Go to step 5 |
| C | Go to step 8 |

A

### 2.INSPECT WARNING LIGHT

a. Check if the indicated warning light or message is listed in the following table.

**HINT:**

Only messages listed in the table are included in the G-BOOK warning notification function.

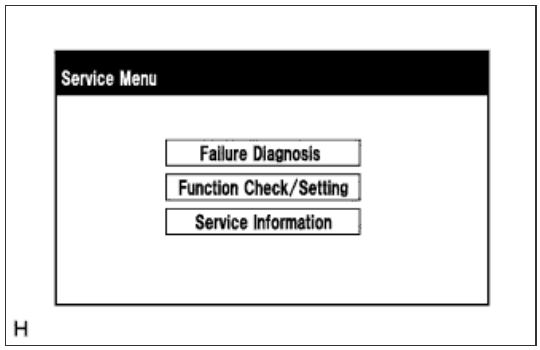
| Warning Name |
|---|
| AFS warning |
| High coolant temperature warning |
| Check engine warning |
| Engine oil level warning |
| Brake system warning |
| Brake fluid warning |
| ABS warning |
| VSC warning |
| AWD (4Lo, CTR, DIFF, RrDIFF) warning |
| VGRS warning |
| 4-WHEEL AHC warning |
| Power steering lock warning |
| Charging system warning |
| Airbag warning |
| PCS warning |
| Cruise warning |

| |
|---|
| Lexus parking assist-sensor system open circuit warning |
| Washer fluid level warning |
| Automatic Hi-beam warning |
| Automatic transmission high temperature warning |

**Result**

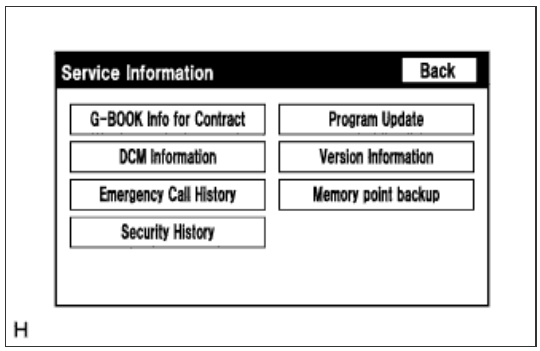
| Result | Proceed to |
|---|---|
| Warning light or message is listed in the table. | A |
| Warning light or message is not listed in the table. | B |

B → END



A

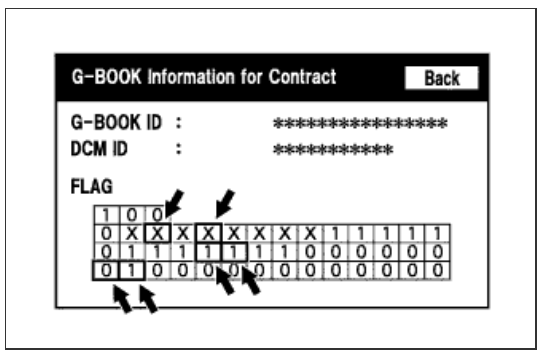
## 3.CHECK FOR SERVICE FLAG



a. Check for service flags.

i. Enter diagnostic mode (Click here).

ii. Select "Service Information" on the Service Menu screen.



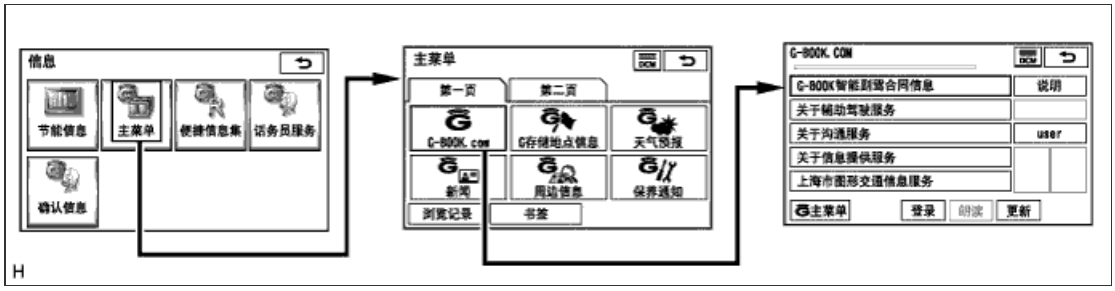
iii. Select "G-BOOK Information for Contract" on the Service Information screen.

iv. Using the illustration as reference, check if the flag information indicated by the arrow indicates "1".

**Result**

| Result | Proceed to |
|---|---|
| "1" is indicated. | A |
| "1" is not indicated. | B |

B → Go to step 9



A

## 4.CHECK CONNECTION (TO G-BOOK CENTER)

a. Check the connection to the G-BOOK center.

i. Turn the engine switch on (ACC) and wait 1 minute.

ii. Perform the operations shown in the illustration and check that G-BOOK.com is displayed.

**HINT:**

- **If the G-BOOK.com screen is displayed, select "Renew" to check if it is possible to access the G-BOOK.com.**
- **The screen illustrations provided are samples only and may be different from actual screens.**

**Result**

| Result | Proceed to |
|---|---|
| G-BOOK.com can be accessed. | A |
| G-BOOK.com cannot be accessed. | B |

B → GO TO PROBLEM SYMPTOMS TABLE (Click here)

A

## 5.INSPECT METER WARNING LIGHT

a. Check if a warning light on the combination meter assembly comes on or a warning message on the multi-information display is displayed even when there is no problem.

**OK:**

**There are no problems with warning lights or warning messages.**

**HINT:**

The warning notification function of the G-BOOK system uses the warning notification signals sent and received by the meter / gauge system. Therefore, if the meter / gauge system is not operating normally, the warning notification function will not operate normally.

NG → GO TO METER / GAUGE SYSTEM (Click here)

OK

## 6.INSPECT CAN COMMUNICATION SYSTEM

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the tester on.

d. Enter the following menus: System Select / CAN Bus Check.

e. Check that all ECUs and sensors that use CAN communication are connected.

**Result**

| Result | Proceed to |
|---|---|
| There are no connection problems. | A |
| There is a connection problem. | B |

B → GO TO CAN COMMUNICATION SYSTEM (Click here)

A

## 7.CHECK FOR DTC

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the tester on.

d. Enter the following menus: Utility / All Codes.

e. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| No DTC is output. | A |
| DTC is output. | B |
| DTCs cannot be checked. | |

B → INSPECT EACH ECU SYSTEM

A

## 8.CHECK NAVIGATION SYSTEM

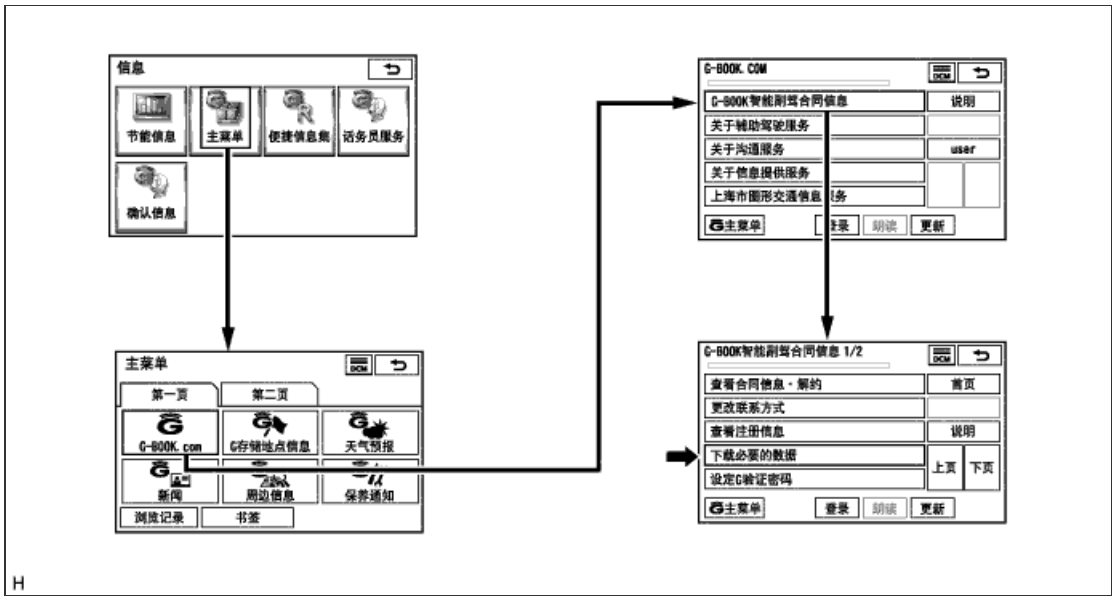
a. Check if the navigation system is operating and functioning normally.

**OK:**

**The navigation system is normal.**

NG → GO TO NAVIGATION SYSTEM (Click here)

OK



## 9.RENEW DATA TABLE

a. Renew the data.

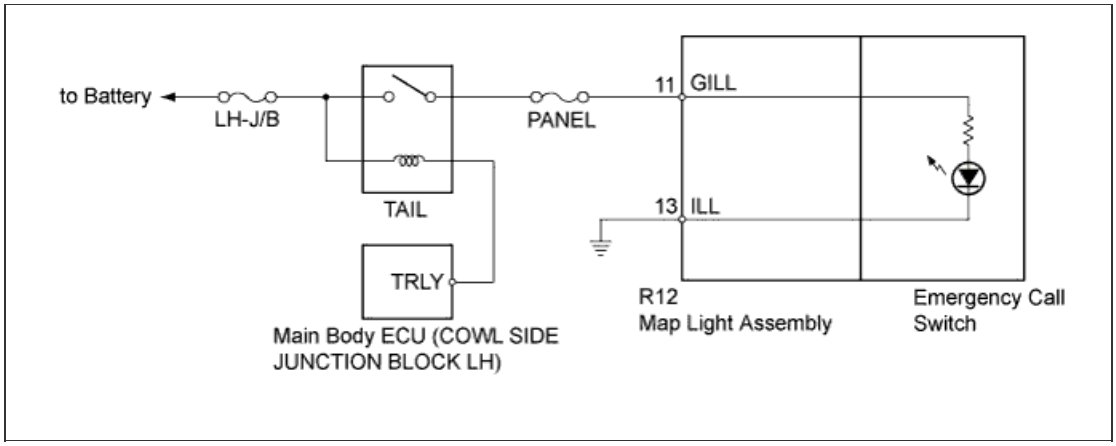
i. Perform the operations shown in the illustrations and select "Download necessary data".

**HINT:**

The screen illustrations provided are samples only and may be different from actual screens.

**Result**

| Result | Proceed to |
|---|---|
| Data can be renewed. | A |
| Data cannot be renewed. | B |



B → CONTACT G-BOOK SUPPORT CENTER

A

END

## WIRING DIAGRAM

## INSPECTION PROCEDURE

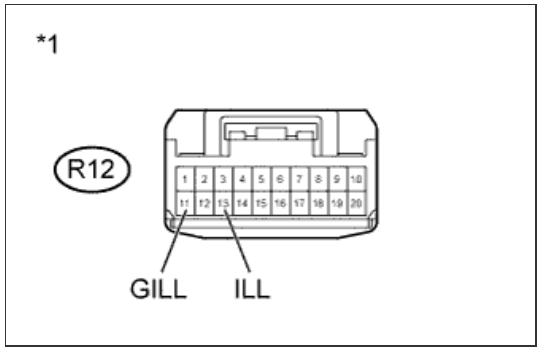
**HINT:**

When replacing the telematics transceiver, perform the vehicle contract setting ( Click here).

**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

### 1.CHECK HARNESS AND CONNECTOR (TELEMATICS TRANSCEIVER - BATTERY AND BODY GROUND)



a. Disconnect the R12 map light assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| R12-13 (ILL) - Body ground | Always | 10 kΩ or higher |

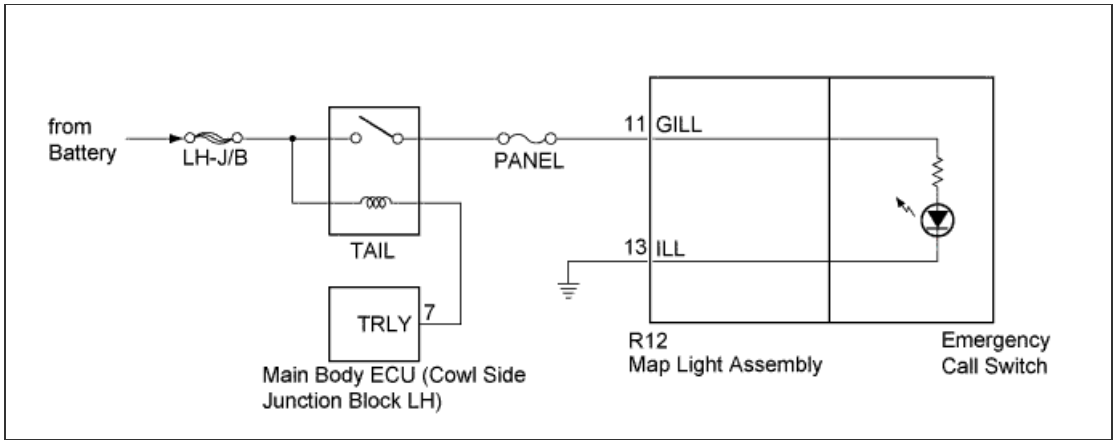
c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| R12-11 (GILL) - Body ground | Light control switch in TAIL or HEAD | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Map Light Assembly) |



NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

### REPLACE MAP LIGHT ASSEMBLY (Click here)

**for Preparation** Click here

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**HINT:**

When replacing the telematics transceiver, perform the vehicle contract setting ( Click here).

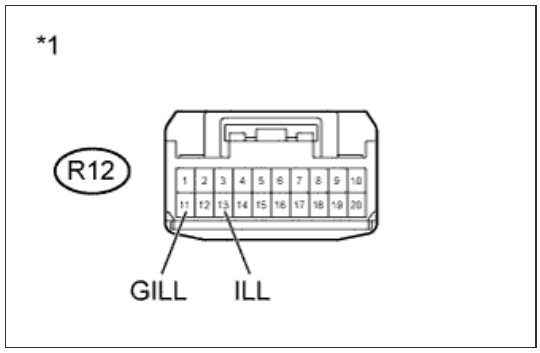
**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

**1.CHECK HARNESS AND CONNECTOR (TELEMATICS TRANSCEIVER - BATTERY AND BODY GROUND)**

a. Disconnect the R12 map light assembly connector.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| R12-13 (ILL) - Body ground | Always | 10 kΩ or higher |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| R12-11 (GILL) - Body ground | Light control switch in TAIL or HEAD | 11 to 14 V |

**Text in Illustration**

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**REPLACE MAP LIGHT ASSEMBLY (Click here)**

**for Preparation** Click here

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**HINT:**

When replacing the telematics transceiver, perform the vehicle contract setting ( Click here).

### 1.CHECK HARNESS AND CONNECTOR (TELEMATICS TRANSCEIVER - MAP LIGHT ASSEMBLY)

a. Disconnect the P2 telematics transceiver connector.

b. Disconnect the R7 and R12 map light assembly connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

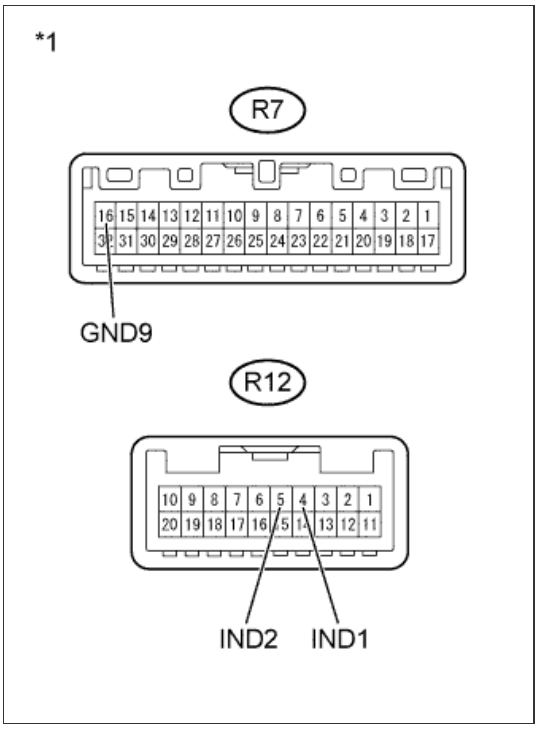
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| P2-11 (IND1) - R12-4 (IND1) | Always | Below 1 Ω |
| P2-12 (IND2) - R12-5 (IND2) | Always | Below 1 Ω |
| R7-16 (GND9) - Body ground | Always | Below 1 Ω |
| P2-11 (IND1) - Body ground | Always | 10 KΩ or higher |
| P2-12 (IND2) - Body ground | Always | 10 KΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

### 2.INSPECT MAP LIGHT ASSEMBLY

a. Disconnect the R7 AND R12 map light assembly connectors.



b. Connect 2 dry-cell batteries in series.

c. Connect a positive (+) lead to terminal R12-4 (IND1) or R12-5 (IND2), and a negative (-) lead to terminal R7-16 (GND9) of the map light assembly connector.

d. Check if the illumination for the emergency call switch comes on.

**OK:**

**The red indicator comes on when the positive (+) lead from the batteries is connected to terminal R12-4 (IND1) and the negative (-) lead is connected to terminal R7-16 (GND9).**
**The green indicator comes on when the positive (+) lead from the batteries is connected to terminal R12-5 (IND2) and the negative (-) lead is connected to terminal R7-16 (GND9).**

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**HINT:**

When replacing the telematics transceiver, perform the vehicle contract setting ( Click here).

### 1.CHECK HARNESS AND CONNECTOR (TELEMATICS TRANSCEIVER - MAP LIGHT ASSEMBLY)

a. Disconnect the P2 telematics transceiver connector.

b. Disconnect the R7 and R12 map light assembly connectors.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

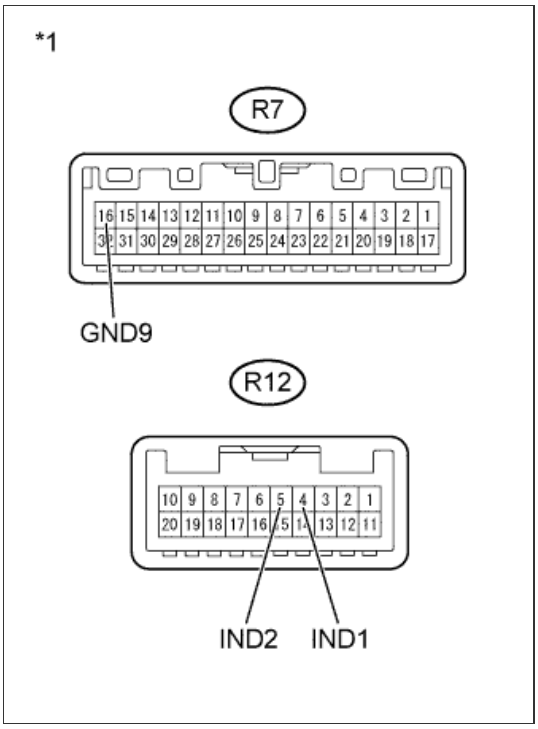
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| P2-11 (IND1) - R12-4 (IND1) | Always | Below 1 Ω |
| P2-12 (IND2) - R12-5 (IND2) | Always | Below 1 Ω |
| R7-16 (GND9) - Body ground | Always | Below 1 Ω |
| P2-11 (IND1) - Body ground | Always | 10 KΩ or higher |
| P2-12 (IND2) - Body ground | Always | 10 KΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

### 2.INSPECT MAP LIGHT ASSEMBLY

a. Disconnect the R7 and R12 map light assembly connectors.



b. Connect 2 dry-cell batteries in series.

c. Connect a positive (+) lead to terminal R12-4 (IND1) or R12-5 (IND2), and a negative (-) lead to terminal R7-16 (GND9) of the map light assembly connector.

d. Check if the illumination for the emergency call switch comes on.

**OK:**

**The red indicator comes on when the positive (+) lead from the batteries is connected to terminal R12-4 (IND1) and the negative (-) lead is connected to terminal R7-16 (GND9).**
**The green indicator comes on when the positive (+) lead from the batteries is connected to terminal R12-5 (IND2) and the negative (-) lead is connected to terminal R7-16 (GND9).**

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**HINT:**

When replacing the display and navigation module display or the telematics transceiver, perform the vehicle contract setting ( Click here).

### 1.CHECK HARNESS AND CONNECTOR (NAVIGATION ECU - TELEMATICS TRANSCEIVER)

a. Disconnect the F70 display and navigation module display connector.

b. Disconnect the P3 telematics transceiver connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

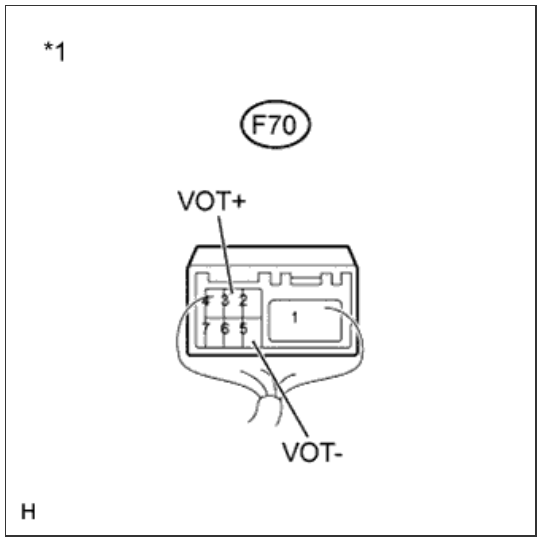
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F70-7 (VOR+) - P3-7 (VOR+) | Always | Below 1 Ω |
| F70-6 (VOR-) - P3-6 (VOR-) | Always | Below 1 Ω |
| F70-3 (VOT+) - P3-3 (VOT+) | Always | Below 1 Ω |
| F70-5 (VOT-) - P3-5 (VOT-) | Always | Below 1 Ω |
| F70-7 (VOR+) - Body ground | Always | 10 kΩ or higher |
| F70-6 (VOR-) - Body ground | Always | 10 kΩ or higher |
| F70-3 (VOR+) - Body ground | Always | 10 kΩ or higher |
| F70-5 (VOR-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

### 2.INSPECT DISPLAY AND NAVIGATION MODULE DISPLAY

a. Check for pulses according to the value(s) in the table below



a. Check for pulses according to the value(s) in the table below.

**OK:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F70-3 (VOT+) - Body ground | Calling while using the operator service | A waveform synchronized with the sent voice is output. |
| F70-5 (VOT-) - Body ground | Calling while using the operator service | A waveform synchronized with the sent voice is output. |

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**HINT:**

When replacing the multi-media module receiver assembly or the telematics transceiver, perform the vehicle contract setting ( Click here).

### 1.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - TELEMATICS TRANSCEIVER)

a. Disconnect the F81 multi-media module receiver assembly connector.

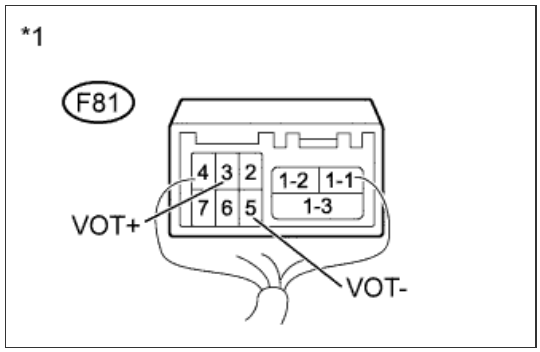
b. Disconnect the P3 telematics transceiver connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F81-7 (VOR+) - P3-7 (VOR+) | Always | Below 1 Ω |
| F81-6 (VOR-) - P3-6 (VOR-) | Always | Below 1 Ω |
| F81-3 (VOT+) - P3-3 (VOT+) | Always | Below 1 Ω |
| F81-5 (VOT-) - P3-5 (VOT-) | Always | Below 1 Ω |
| F81-7 (VOR+) - Body ground | Always | 10 kΩ or higher |
| F81-6 (VOR-) - Body ground | Always | 10 kΩ or higher |
| F81-3 (VOT+) - Body ground | Always | 10 kΩ or higher |
| F81-5 (VOT-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR



OK

### 2.INSPECT MULTI-MEDIA MODULE RECEIVER ASSEMBLY

a. Check for pulses according to the value(s) in the table below.

**OK:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F81-3 (VOT+) - Body ground | Calling while using the operator service | A waveform synchronized with the sent voice is output. |
| F81-5 (VOT-) - Body ground | Calling while using the operator service | A waveform synchronized with the sent voice is output. |

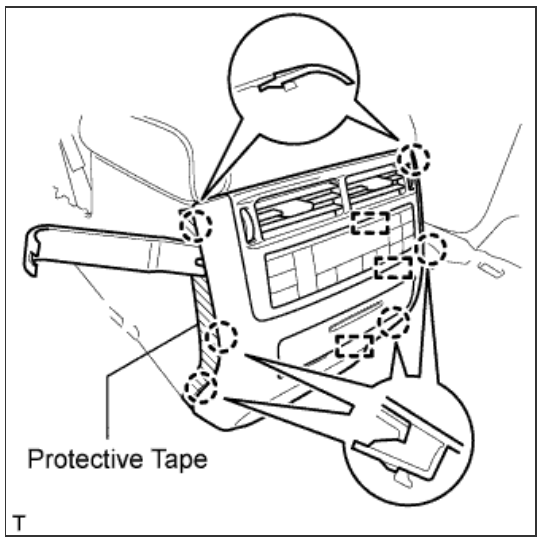
## 1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.

## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

**NOTICE:**

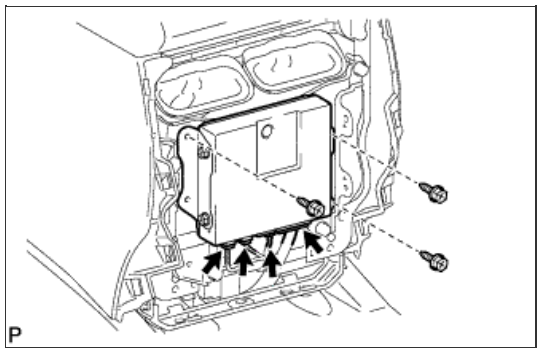


- **w/ Navigation System:**
  **After the engine switch is turned off, the HDD navigation system requires approximately 6 minutes to record various types of memory and settings. As a result, after turning the engine switch off, wait 6 minutes or more before disconnecting the cable from the negative (-) battery terminal.**
- **When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).**

## 3. REMOVE REAR CONSOLE END PANEL SUB-ASSEMBLY

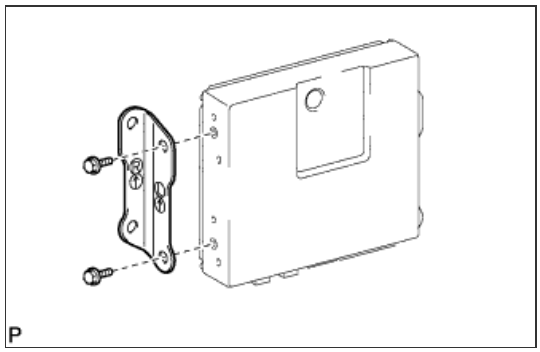
a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 6 claws.



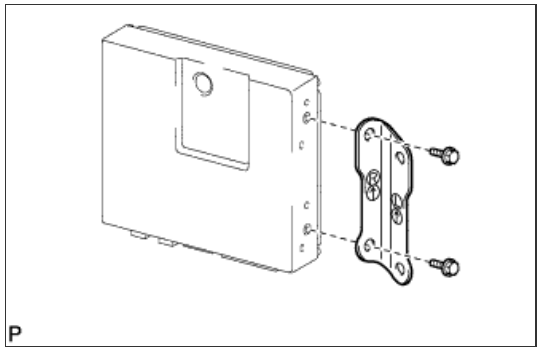
c. Remove the end panel and disconnect the connectors and 3 clamps.

## 4. REMOVE TELEMATICS TRANSCEIVER



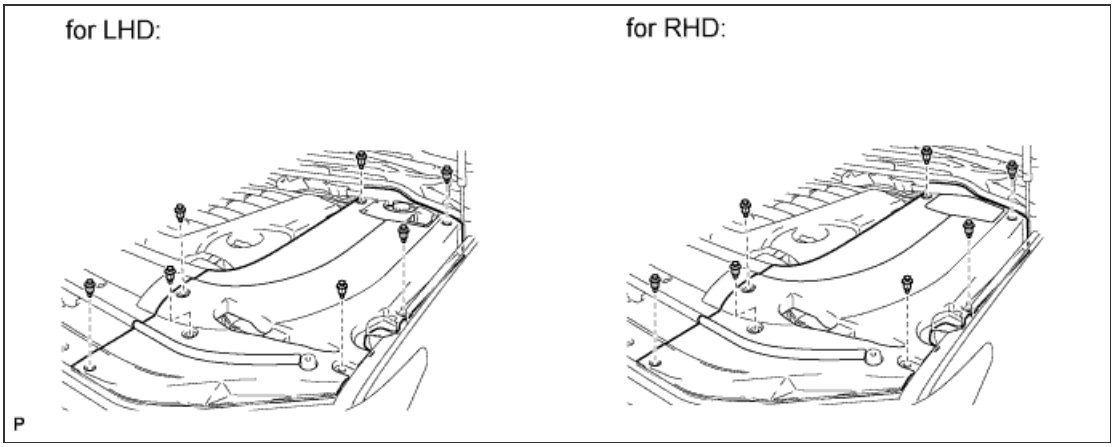
a. Disconnect the 4 connectors.

b. Remove the 3 screws and telematics transceiver with bracket.



## 5. REMOVE NO. 2 TELEPHONE BRACKET

a. Remove the 2 screws and telephone bracket LH.



b. Remove the 2 screws and telephone bracket RH.

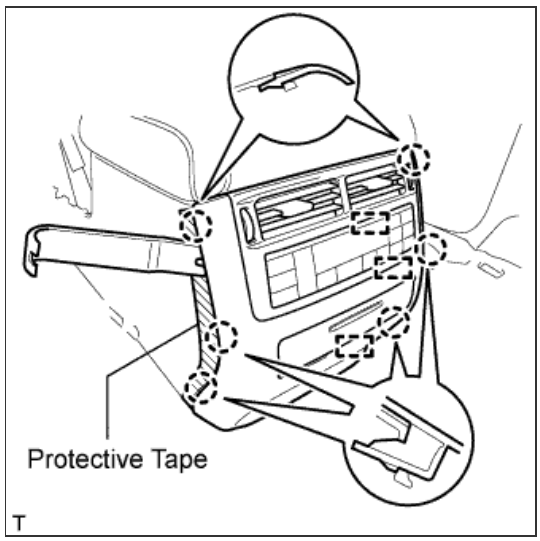
**for Preparation** Click here

## 1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover LH.

## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

**NOTICE:**

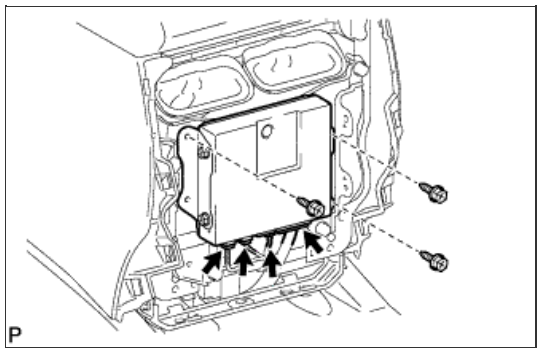


- **w/ Navigation System:**
  **After the engine switch is turned off, the HDD navigation system requires approximately 6 minutes to record various types of memory and settings. As a result, after turning the engine switch off, wait 6 minutes or more before disconnecting the cable from the negative (-) battery terminal.**
- **When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).**

## 3. REMOVE REAR CONSOLE END PANEL SUB-ASSEMBLY

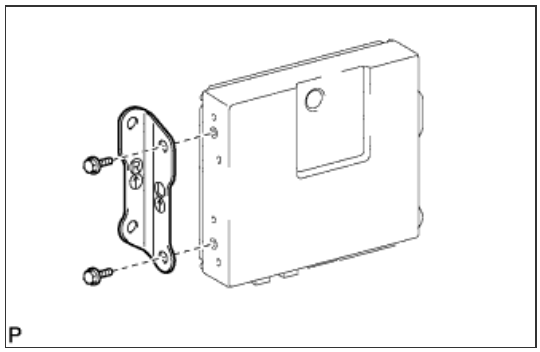
a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 6 claws.



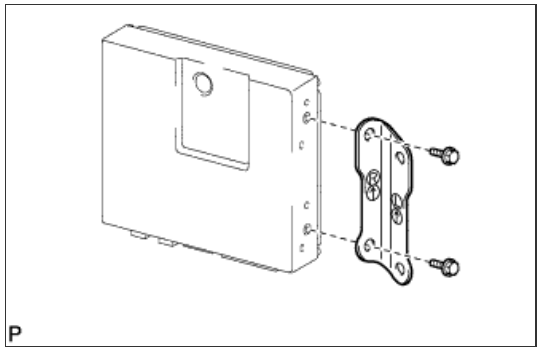
c. Remove the end panel and disconnect the connectors and 3 clamps.

## 4. REMOVE TELEMATICS TRANSCEIVER



a. Disconnect the 4 connectors.

b. Remove the 3 screws and telematics transceiver with bracket.



## 5. REMOVE NO. 2 TELEPHONE BRACKET

a. Remove the 2 screws and telephone bracket LH.

b. Remove the 2 screws and telephone bracket RH.

**for Preparation** Click here

## 1. INSTALL NO. 2 TELEPHONE BRACKET

a. Install the telephone bracket RH to the telematics transceiver with the 2 screws.

**Torque:**
**3.0 N*m{ 31 kgf*cm , 27 in.*lbf }**

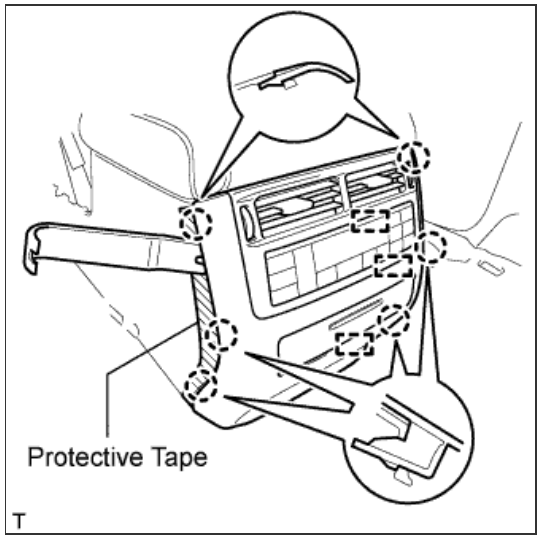
b. Install the telephone bracket LH to the telematics transceiver with the 2 screws.

**Torque:**
**3.0 N*m{ 31 kgf*cm , 27 in.*lbf }**

## 2. INSTALL TELEMATICS TRANSCEIVER

a. Install the telematics transceiver with bracket with the 3 screws.

**Torque:**
**3.0 N*m{ 31 kgf*cm , 27 in.*lbf }**



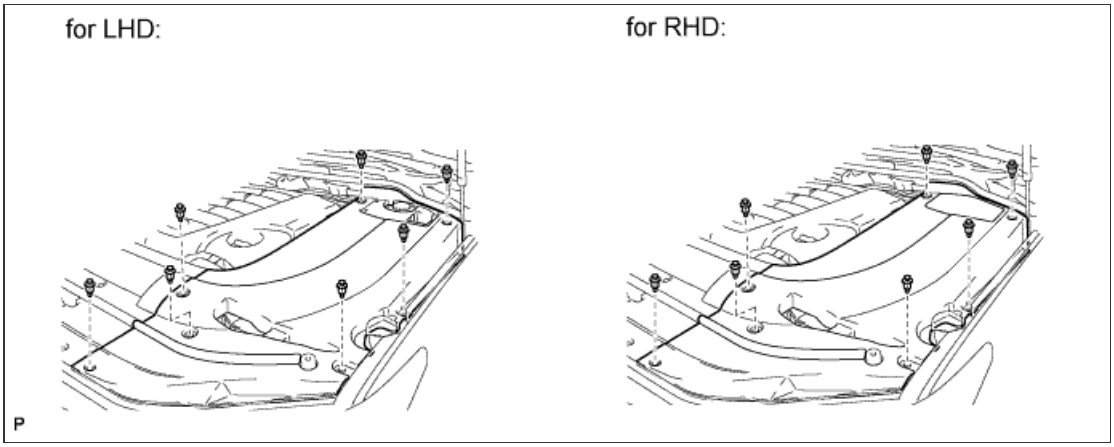
b. Connect the 4 connectors.

## 3. INSTALL REAR CONSOLE END PANEL SUB-ASSEMBLY

a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 6 claws.

c. Remove the end panel and disconnect the connectors and 3 clamps.



## 4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

## 5. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.

## 6. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).

## 7. PERFORM REGISTRATION

a. Perform registration (Click here).

**NOTICE:**

When replacing the telematics transceiver, perform registration.

**for Preparation** Click here

## 1. INSTALL NO. 2 TELEPHONE BRACKET

a. Install the telephone bracket RH to the telematics transceiver with the 2 screws.

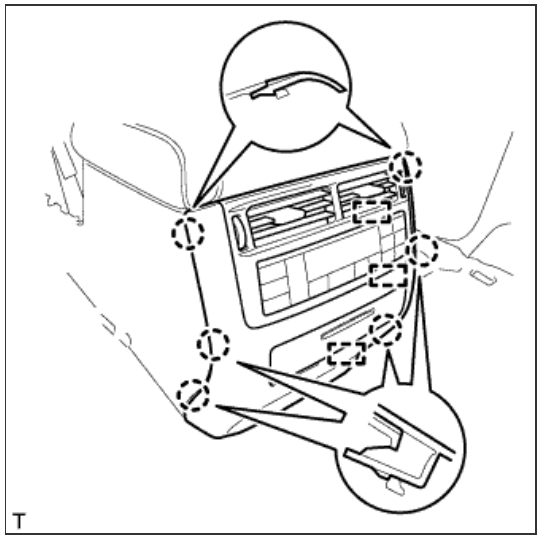
**Torque:**
**3.0 N*m{ 31 kgf*cm , 27 in.*lbf }**

b. Install the telephone bracket LH to the telematics transceiver with the 2 screws.

**Torque:**
**3.0 N*m{ 31 kgf*cm , 27 in.*lbf }**

## 2. INSTALL TELEMATICS TRANSCEIVER

a. Install the telematics transceiver with bracket with the 3 screws.



**Torque:**
**3.0 N*m{ 31 kgf*cm , 27 in.*lbf }**

b. Connect the 4 connectors.

## 3. INSTALL REAR CONSOLE END PANEL SUB-ASSEMBLY

a. Connect the connectors and 3 clamps.

b. Attach the 6 claws to install the end panel.

## 4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

## 5. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover LH with the 7 clips.

## 6. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).

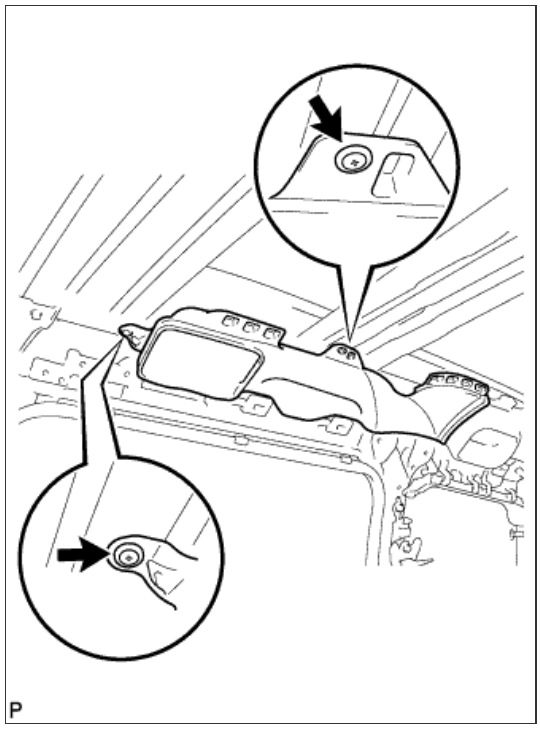
## 1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.

## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

**NOTICE:**



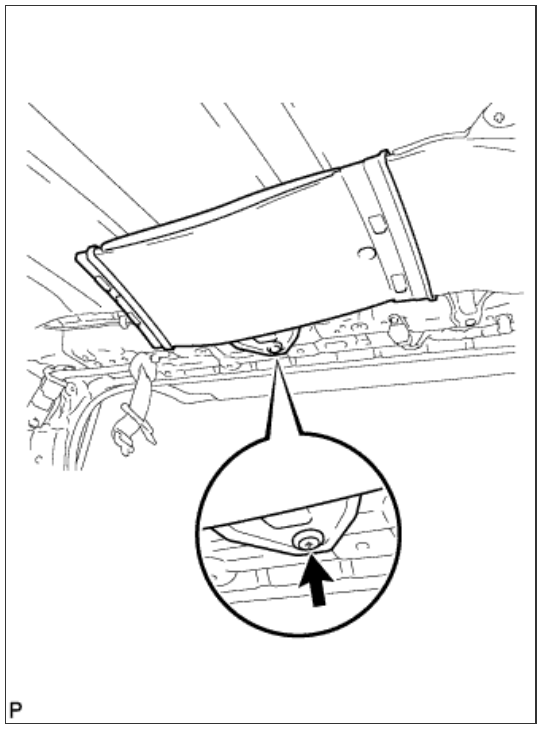
- **w/ Navigation System:**
  **After the engine switch is turned off, the HDD navigation system requires approximately 6 minutes to record various types of memory and settings. As a result, after turning the engine switch off, wait 6 minutes or more before disconnecting the cable from the negative (-) battery terminal.**
- **When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).**

## 3. REMOVE ROOF HEADLINING ASSEMBLY

a. Remove the roof headlining (Click here).

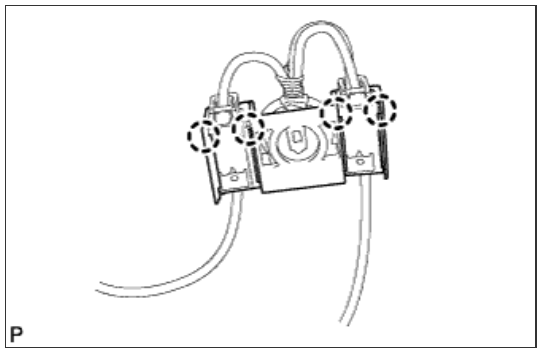
## 4. REMOVE NO. 5 REAR ROOF AIR DUCT

a. Remove the 2 clips and duct.



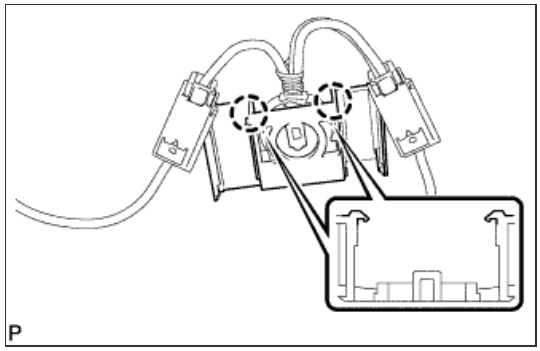
### 5. REMOVE NO. 4 REAR ROOF AIR DUCT

a. Remove the 2 clips and duct.

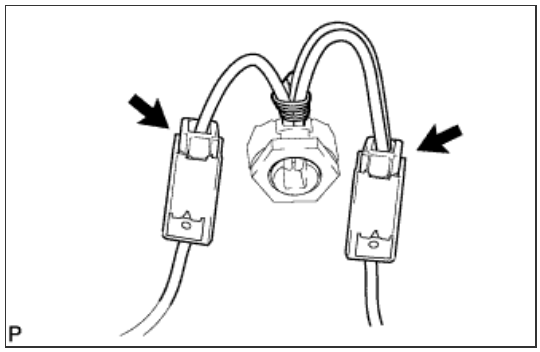


### 6. REMOVE NO. 3 REAR ROOF AIR DUCT

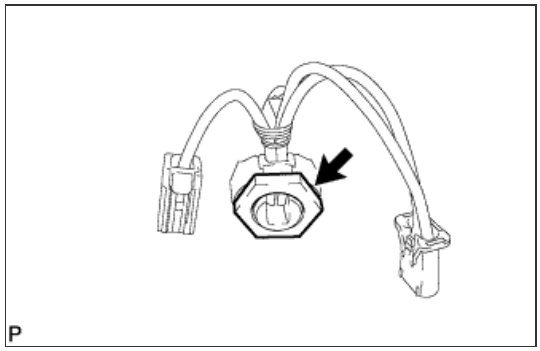
a. Remove the clip and duct.



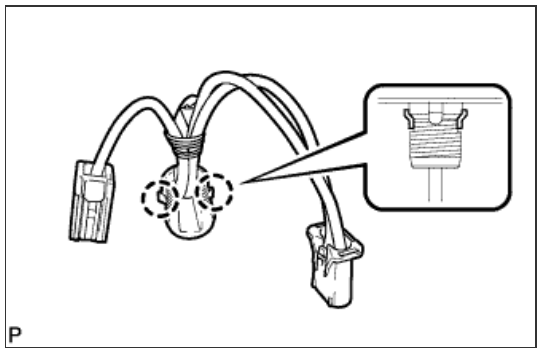
## 7. REMOVE TELEPHONE ANTENNA ASSEMBLY



a. Detach the 4 claws and remove the 2 antenna cord connectors from the protector.

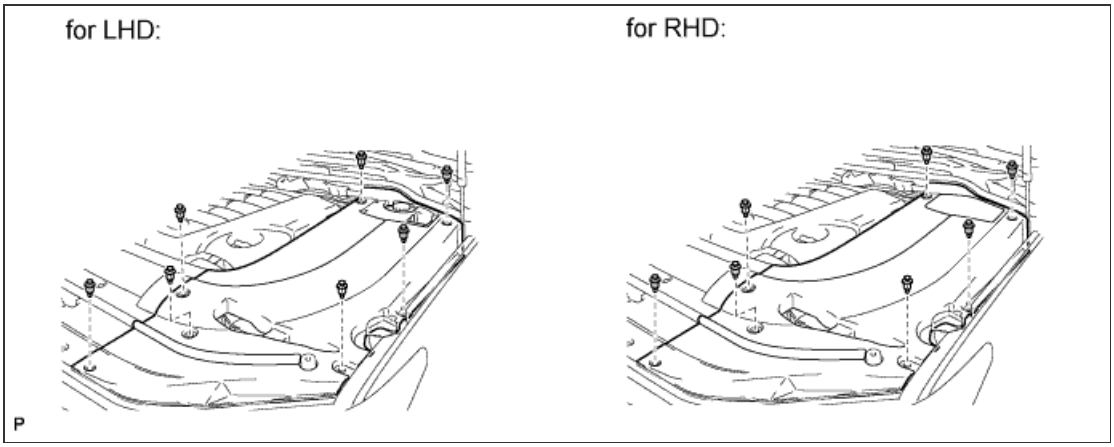


b. Detach the 2 claws and remove the protector.



c. Disconnect the 2 antenna cord connectors.

d. Remove the antenna nut.



e. Detach the 2 claws and remove the telephone antenna.

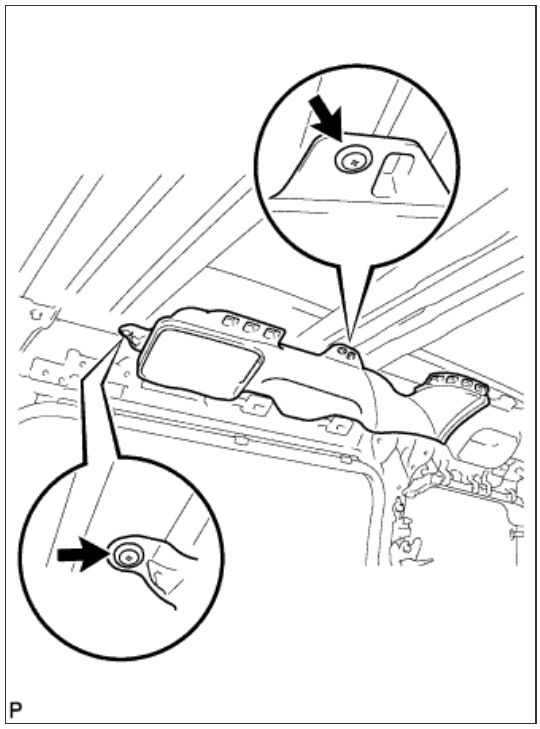
**for Preparation** Click here

## 1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover LH.

## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

**NOTICE:**



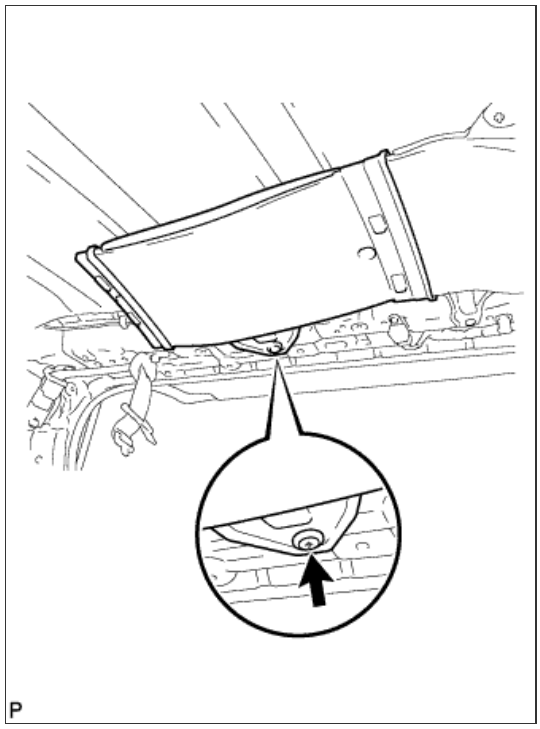
- **w/ Navigation System:**
  **After the engine switch is turned off, the HDD navigation system requires approximately 6 minutes to record various types of memory and settings. As a result, after turning the engine switch off, wait 6 minutes or more before disconnecting the cable from the negative (-) battery terminal.**
- **When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).**

## 3. REMOVE ROOF HEADLINING ASSEMBLY

a. Remove the roof headlining (Click here).

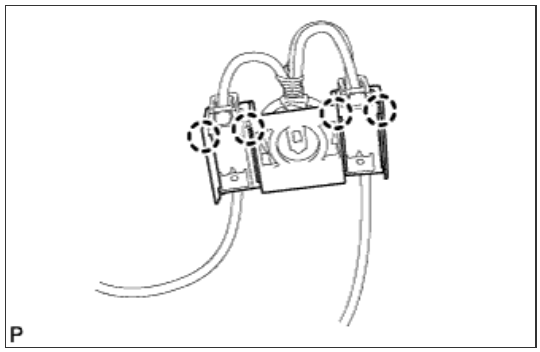
## 4. REMOVE NO. 5 REAR ROOF AIR DUCT

a. Remove the 2 clips and duct.



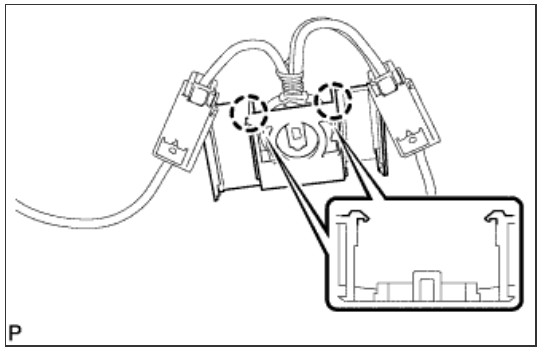
### 5. REMOVE NO. 4 REAR ROOF AIR DUCT

a. Remove the 2 clips and duct.

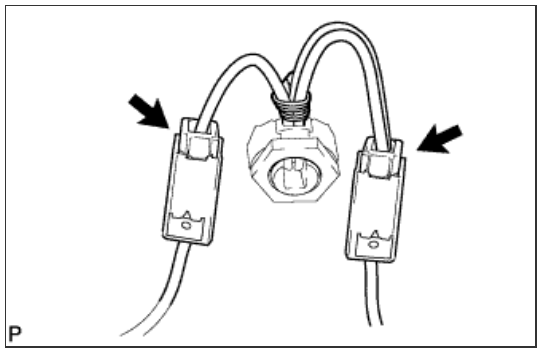


### 6. REMOVE NO. 3 REAR ROOF AIR DUCT

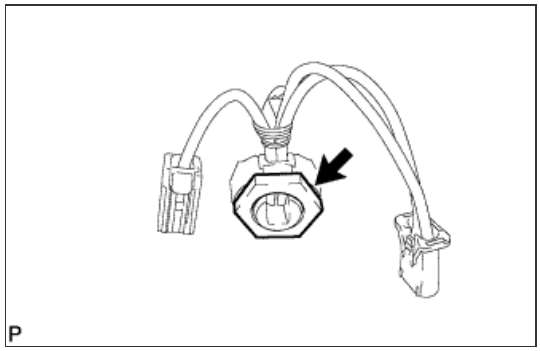
a. Remove the clip and duct.



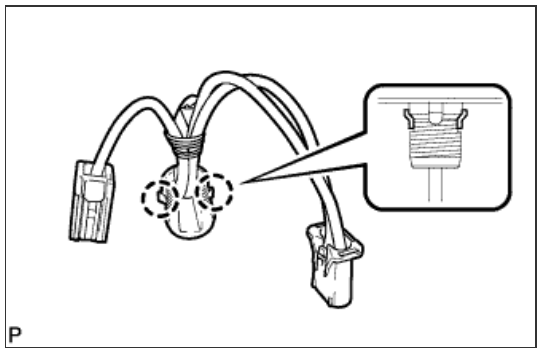
## 7. REMOVE TELEPHONE ANTENNA ASSEMBLY



a. Detach the 4 claws and remove the 2 antenna cord connectors from the protector.



b. Detach the 2 claws and remove the protector.



c. Disconnect the 2 antenna cord connectors.

d. Remove the antenna nut.

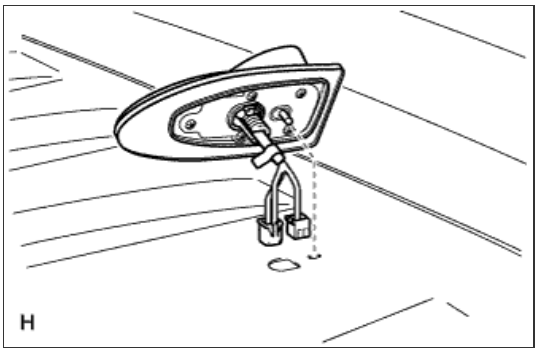
e. Detach the 2 claws and remove the telephone antenna.

**for Preparation** Click here

## 1. INSTALL TELEPHONE ANTENNA ASSEMBLY

a. Align the positioning pin of the telephone antenna and set the antenna on the vehicle.

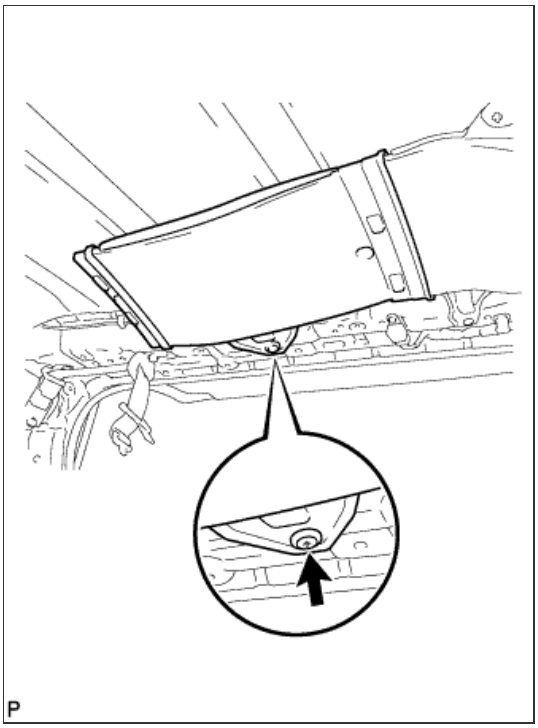
b. Attach the 2 claws to install the telephone antenna.



c. Install the antenna nut.

**Torque:**
**4.5 N*m{ 46 kgf*cm , 40 in.*lbf }**

d. Connect the 2 antenna cord connectors.

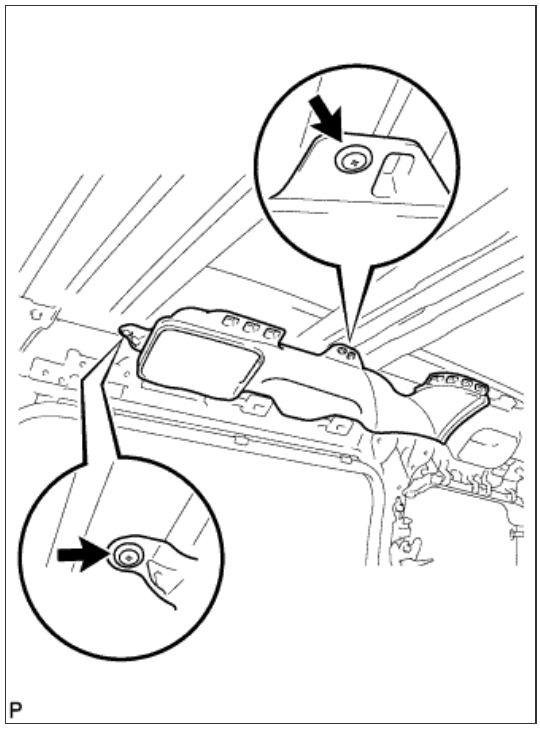


e. Attach the 2 claws to install the protector.

f. Attach the 4 claws to install the 2 antenna cord connectors.

## 2. INSTALL NO. 3 REAR ROOF AIR DUCT

a. Install the duct with the clip.



## 3. INSTALL NO. 4 REAR ROOF AIR DUCT

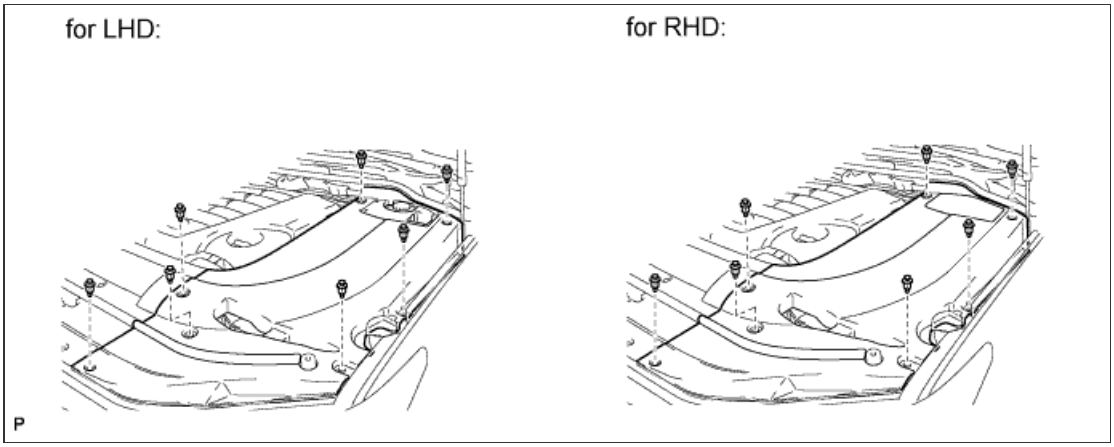
a. Install the duct with the 2 clips.

### 4. INSTALL NO. 5 REAR ROOF AIR DUCT

a. Install the duct with the 2 clips.

### 5. INSTALL ROOF HEADLINING ASSEMBLY

a. Install the roof headlining (Click here).



### 6. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

## 7. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.

## 8. CHECK SRS WARNING LIGHT

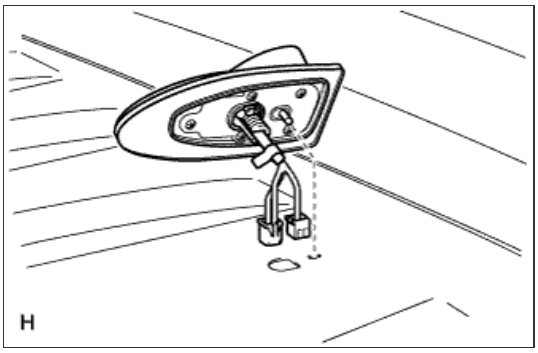
a. Check the SRS warning light (Click here).

**for Preparation** Click here

## 1. INSTALL TELEPHONE ANTENNA ASSEMBLY

a. Align the positioning pin of the telephone antenna and set the antenna on the vehicle.

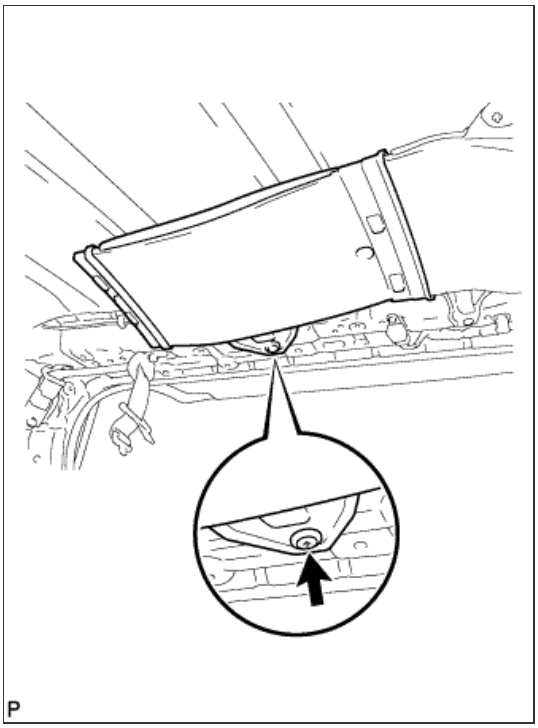
b. Attach the 2 claws to install the telephone antenna.



c. Install the antenna nut.

**Torque:**
**4.5 N*m{ 46 kgf*cm , 40 in.*lbf }**

d. Connect the 2 antenna cord connectors.

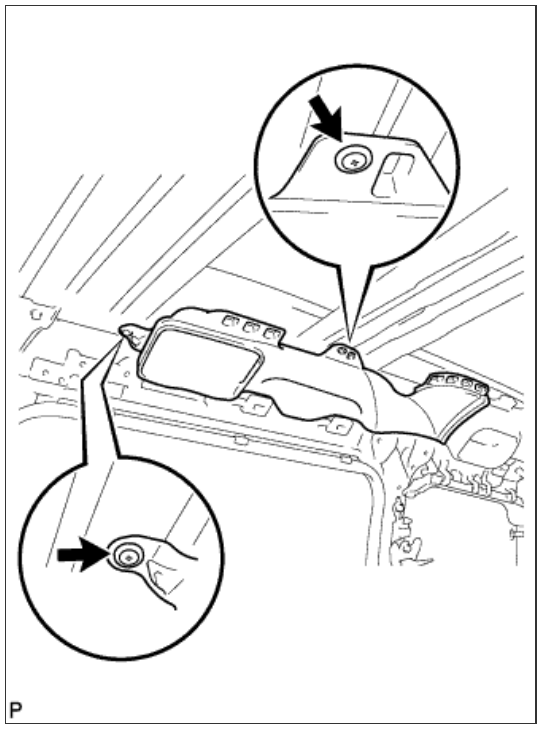


e. Attach the 2 claws to install the protector.

f. Attach the 4 claws to install the 2 antenna cord connectors.

## 2. INSTALL NO. 3 REAR ROOF AIR DUCT

a. Install the duct with the clip.



## 3. INSTALL NO. 4 REAR ROOF AIR DUCT

a. Install the duct with the 2 clips.

### 4. INSTALL NO. 5 REAR ROOF AIR DUCT

a. Install the duct with the 2 clips.

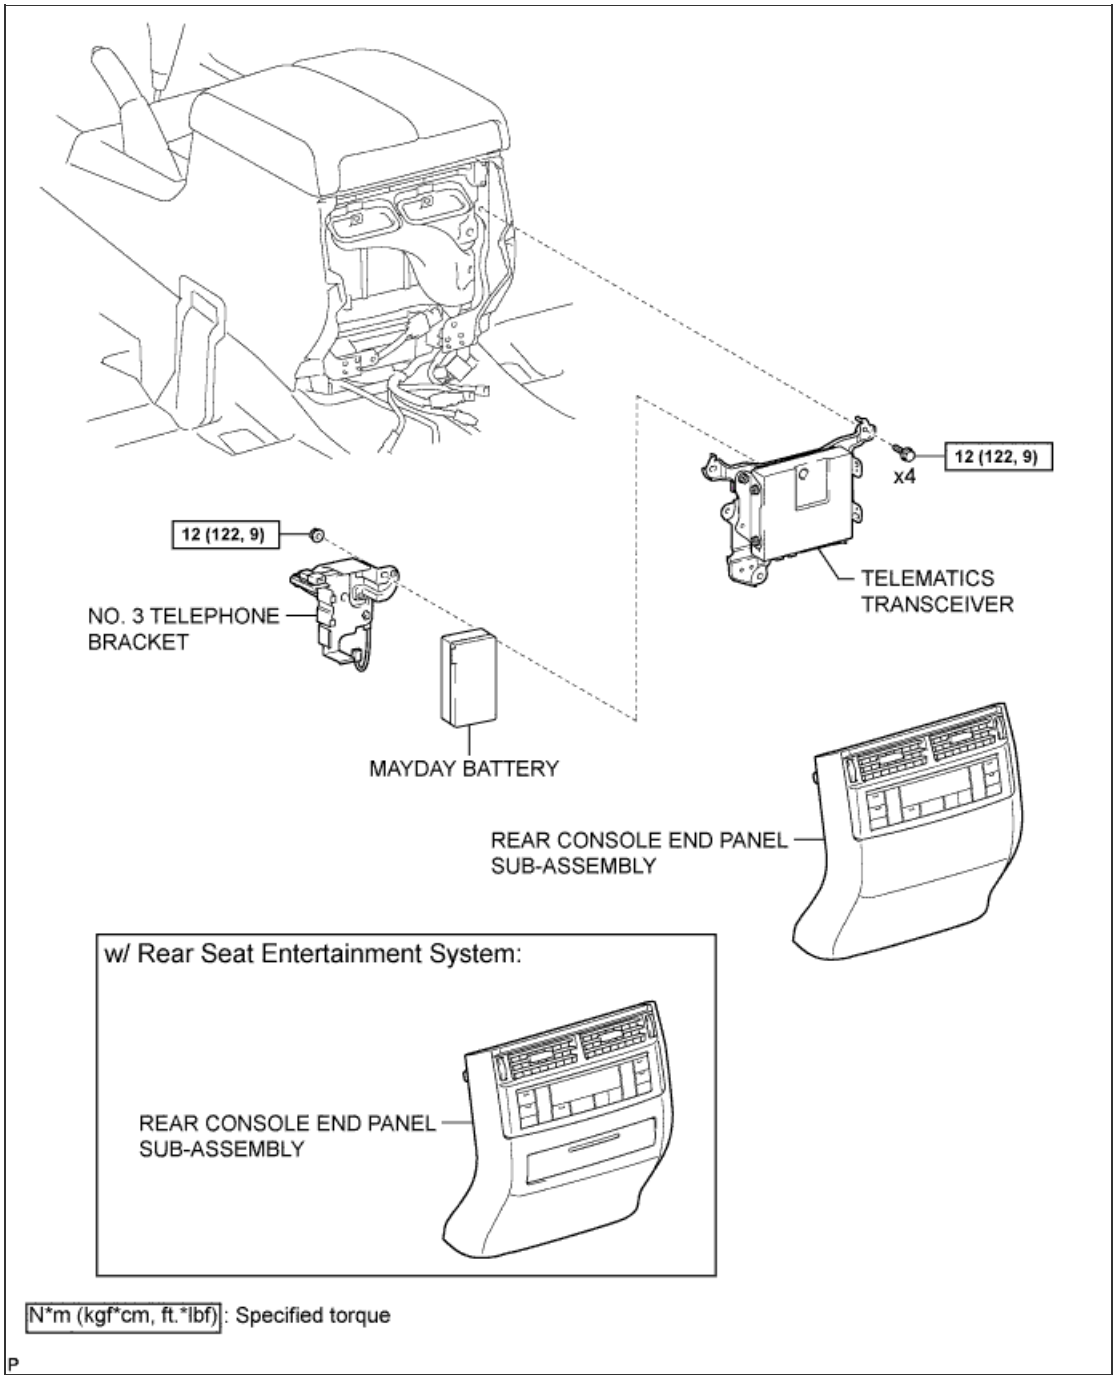
### 5. INSTALL ROOF HEADLINING ASSEMBLY

a. Install the roof headlining (Click here).

### 6. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

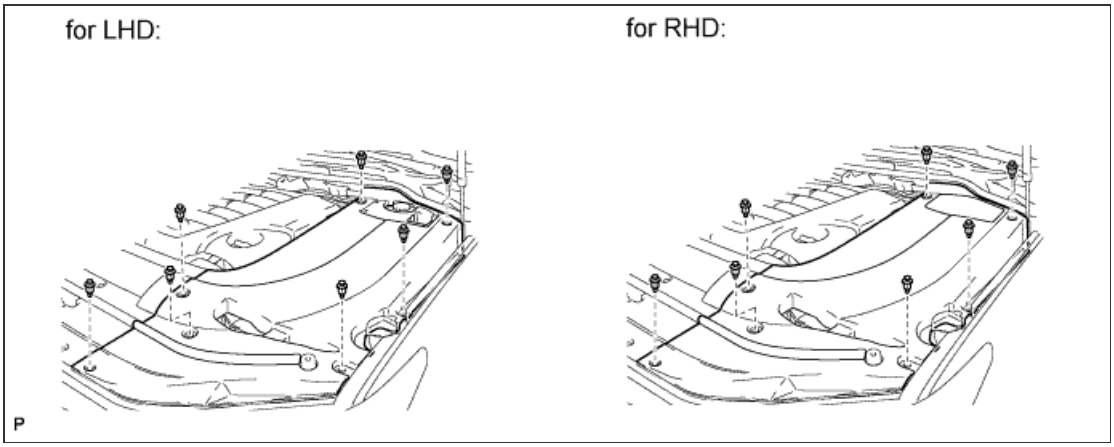


### 7. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover LH with the 7 clips.

### 8. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).



**for Preparation** Click here

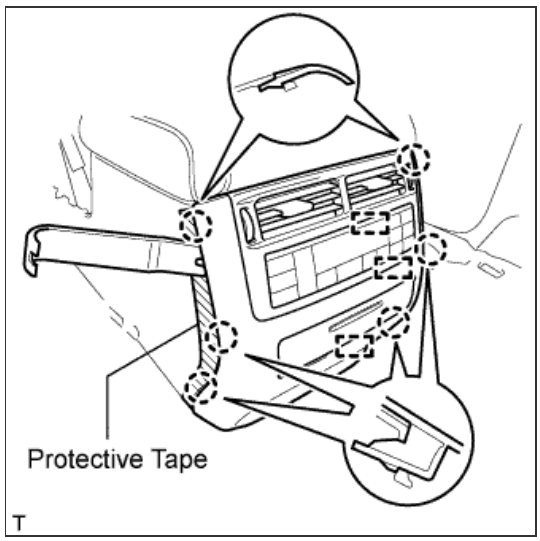
**for Preparation** Click here

## 1. REMOVE ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.

## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

**NOTICE:**

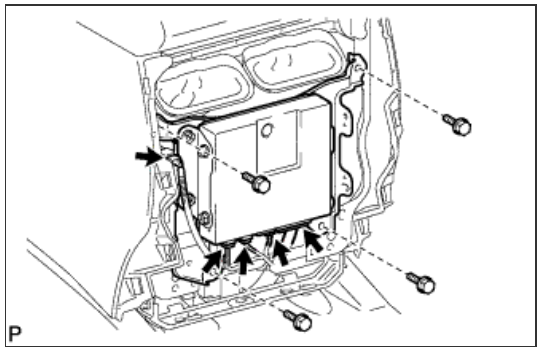


- **w/ Navigation System:**
  **After the engine switch is turned off, the HDD navigation system requires approximately 6 minutes to record various types of memory and settings. As a result, after turning the engine switch off, wait 6 minutes or more before disconnecting the cable from the negative (-) battery terminal.**
- **When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).**

## 3. REMOVE REAR CONSOLE END PANEL SUB-ASSEMBLY

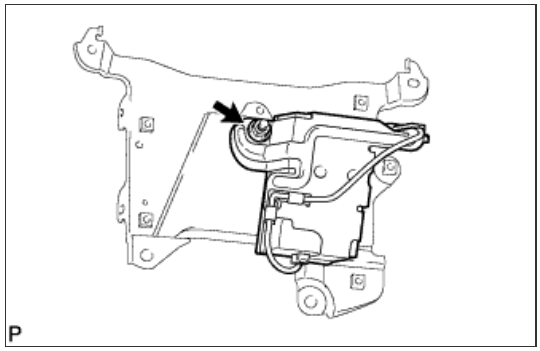
a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 6 claws.



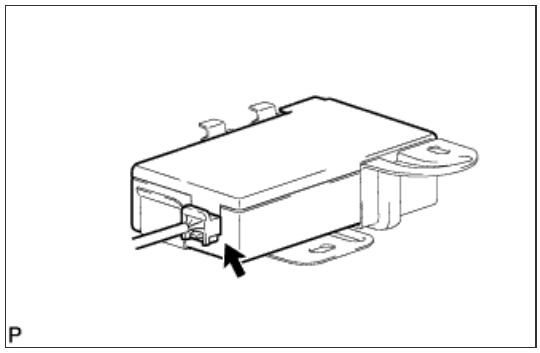
c. Remove the end panel and disconnect the connectors and 3 clamps.

## 4. REMOVE TELEMATICS TRANSCEIVER



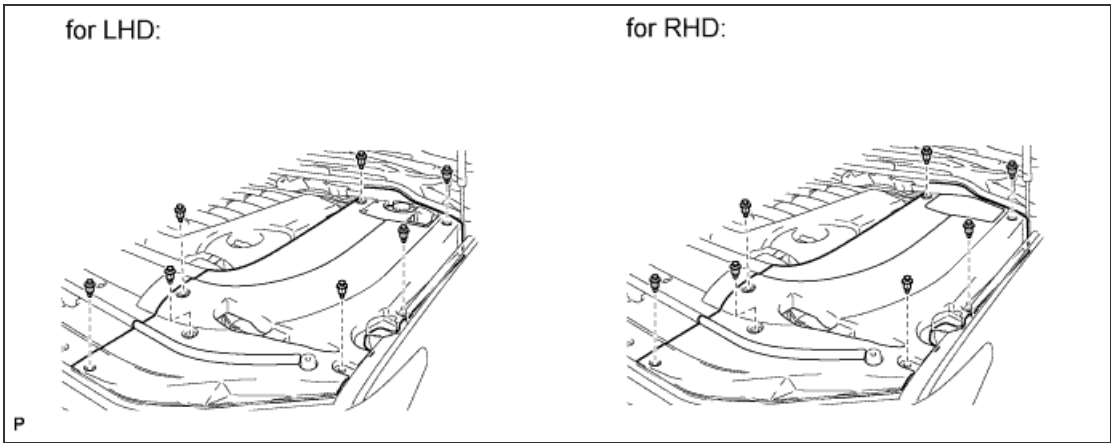
a. Disconnect the 5 connectors.

b. Remove the 4 bolts and telematics transceiver with bracket.



## 5. REMOVE MAYDAY BATTERY

a. Remove the nut and No. 3 telephone bracket together with the mayday battery.



b. Disconnect the connector and remove the mayday battery.

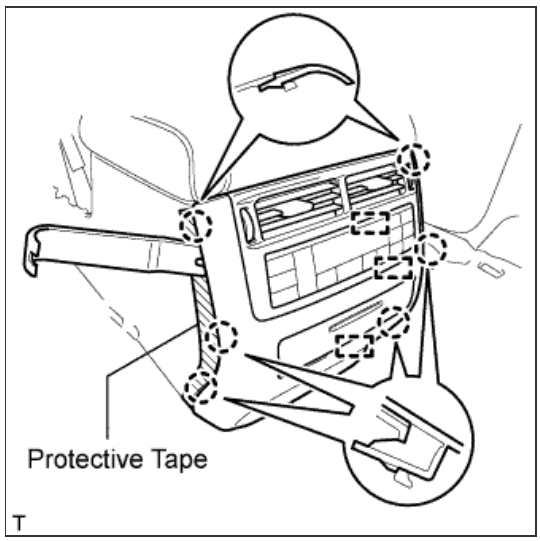
**for Preparation** Click here

## 1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover LH.

## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

**NOTICE:**

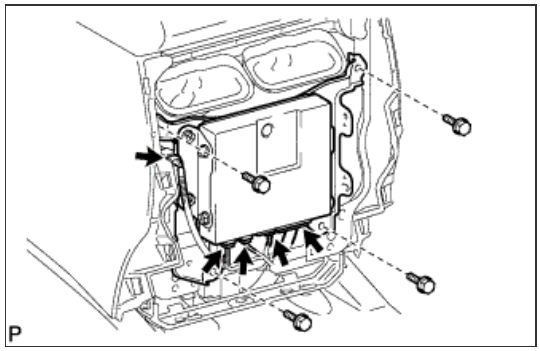


- **w/ Navigation System:**
  **After the engine switch is turned off, the HDD navigation system requires approximately 6 minutes to record various types of memory and settings. As a result, after turning the engine switch off, wait 6 minutes or more before disconnecting the cable from the negative (-) battery terminal.**
- **When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).**

## 3. REMOVE REAR CONSOLE END PANEL SUB-ASSEMBLY

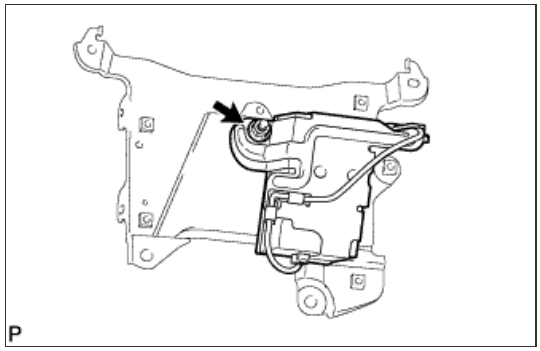
a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 6 claws.



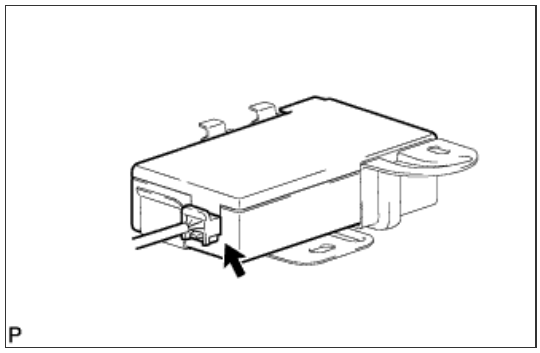
c. Remove the end panel and disconnect the connectors and 3 clamps.

## 4. REMOVE TELEMATICS TRANSCEIVER



a. Disconnect the 5 connectors.

b. Remove the 4 bolts and telematics transceiver with bracket.



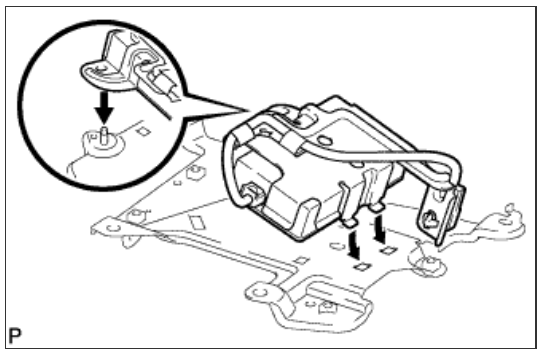
## 5. REMOVE MAYDAY BATTERY

a. Remove the nut and No. 3 telephone bracket together with the mayday battery.

b. Disconnect the connector and remove the mayday battery.

**for Preparation** Click here

## 1. INSTALL MAYDAY BATTERY



a. Install the mayday battery to the No. 3 telephone bracket.

b. Connect the connector.

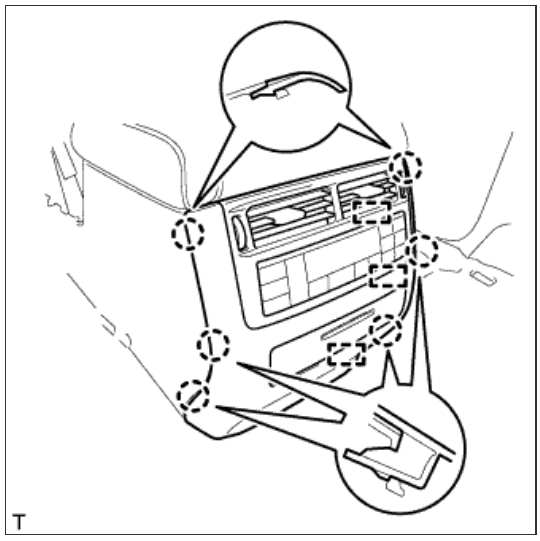
c. Align the bracket, 2 claws and the nut attachment shaft, and assembly the mayday battery and bracket together.

d. Install the No. 3 telephone bracket with mayday battery with the nut.

**Torque:**
**12 N*m{ 122 kgf*cm , 9 ft.*lbf }**

## 2. INSTALL TELEMATICS TRANSCEIVER

a. Install the telematics transceiver with bracket with the 4 bolts.



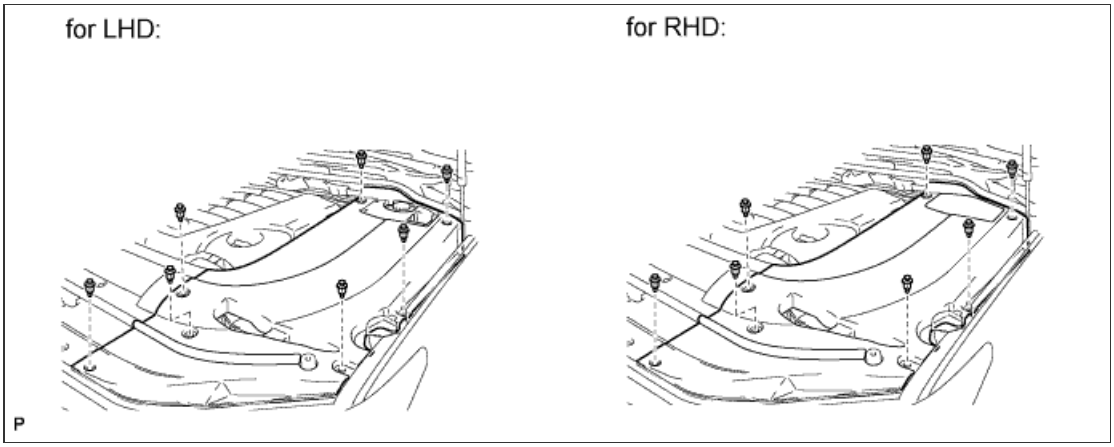
**Torque:**
**12 N*m{ 122 kgf*cm , 9 ft.*lbf }**

b. Connect the 5 connectors.

## 3. INSTALL REAR CONSOLE END PANEL SUB-ASSEMBLY

a. Connect the connectors and 3 clamps.

b. Attach the 6 claws to install the end panel.



## 4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

## 5. INSTALL ENGINE ROOM SIDE COVER LH

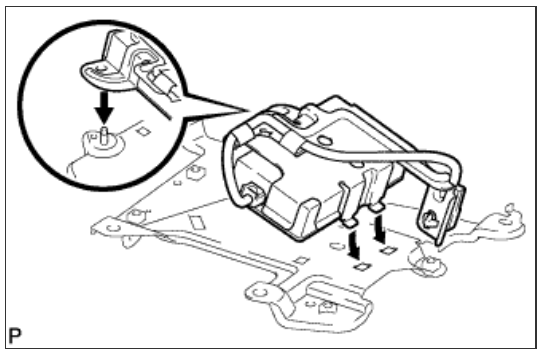
a. Install the engine room side cover with the 7 clips.

## 6. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).

**for Preparation** Click here

## 1. INSTALL MAYDAY BATTERY



a. Install the mayday battery to the No. 3 telephone bracket.

b. Connect the connector.

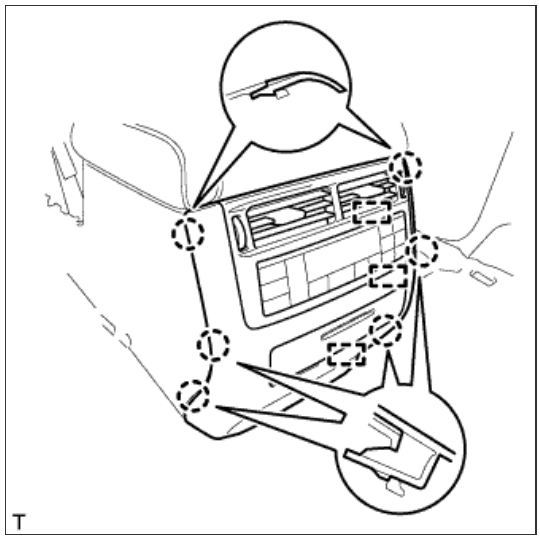
c. Align the bracket, 2 claws and the nut attachment shaft, and assembly the mayday battery and bracket together.

d. Install the No. 3 telephone bracket with mayday battery with the nut.

**Torque:**
**12 N*m{ 122 kgf*cm , 9 ft.*lbf }**

## 2. INSTALL TELEMATICS TRANSCEIVER

a. Install the telematics transceiver with bracket with the 4 bolts.



**Torque:**
**12 N*m{ 122 kgf*cm , 9 ft.*lbf }**

b. Connect the 5 connectors.

## 3. INSTALL REAR CONSOLE END PANEL SUB-ASSEMBLY

a. Connect the connectors and 3 clamps.

b. Attach the 6 claws to install the end panel.

## 4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

### 5. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover LH with the 7 clips.

### 6. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).

**for Preparation** Click here

## 1.PRECAUTION FOR LEXUS PARKING ASSIST-SENSOR SYSTEM

**HINT:**

- **In very cold weather where a malfunction display appears, the sensor may not detect obstacles.**
- **If the malfunction display appears, visually check the sensor first. If the sensor is free of foreign matter but the malfunction display remains, the sensor may have a malfunction.**

a. Under the following conditions, the detection function may not function properly:

i. The sensor is covered with foreign matter, such as mud or snow (detection function returns to normal if sensor is cleaned).

ii. The sensor is frozen (detection function returns to normal when defrosted).

iii. A hand is blocking the sensor.

b. The detection range may be affected by the following conditions:

i. The sensor is covered with foreign matter, such as mud or snow.

ii. The vehicle is in a very hot or cold area.

c. Under the following conditions, a detection error may occur:

i. Driving on a bumpy road, on an unpaved road or in tall grass.

ii. Things that transmit ultrasonic waves, such as other vehicle horns or sonar systems, motorcycle engines, or large vehicle air brakes, are near the vehicle.

iii. It is raining heavily or water is sprayed on the sensor.

iv. The vehicle is extremely tilted.

v. The vehicle is equipped with a commercial fender pole or a wireless mechanism antenna.

vi. The sensor is covered with foreign matter, such as mud or snow.

vii. The vehicle is moved forward or backward towards high curbs or objects that are perpendicular to the ground.

d. The sensor cannot detect the following objects.

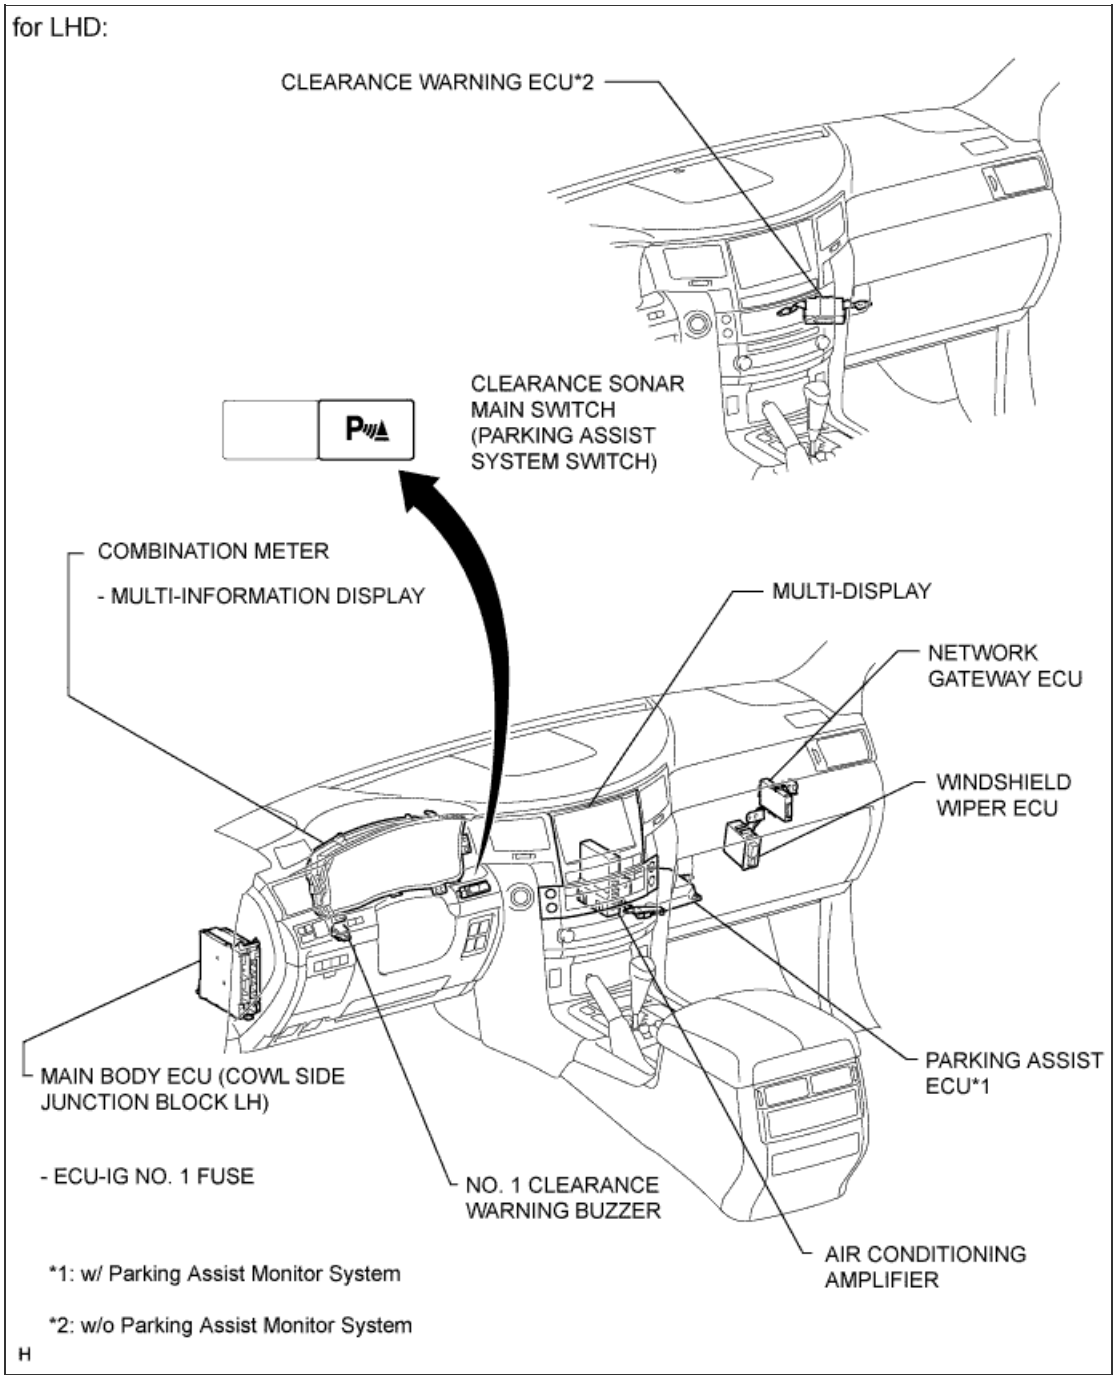
i. Thin objects, such as wires and ropes.

ii. Materials that easily absorb ultrasonic waves, such as cotton, snow, etc.

iii. Objects with sharp edges.

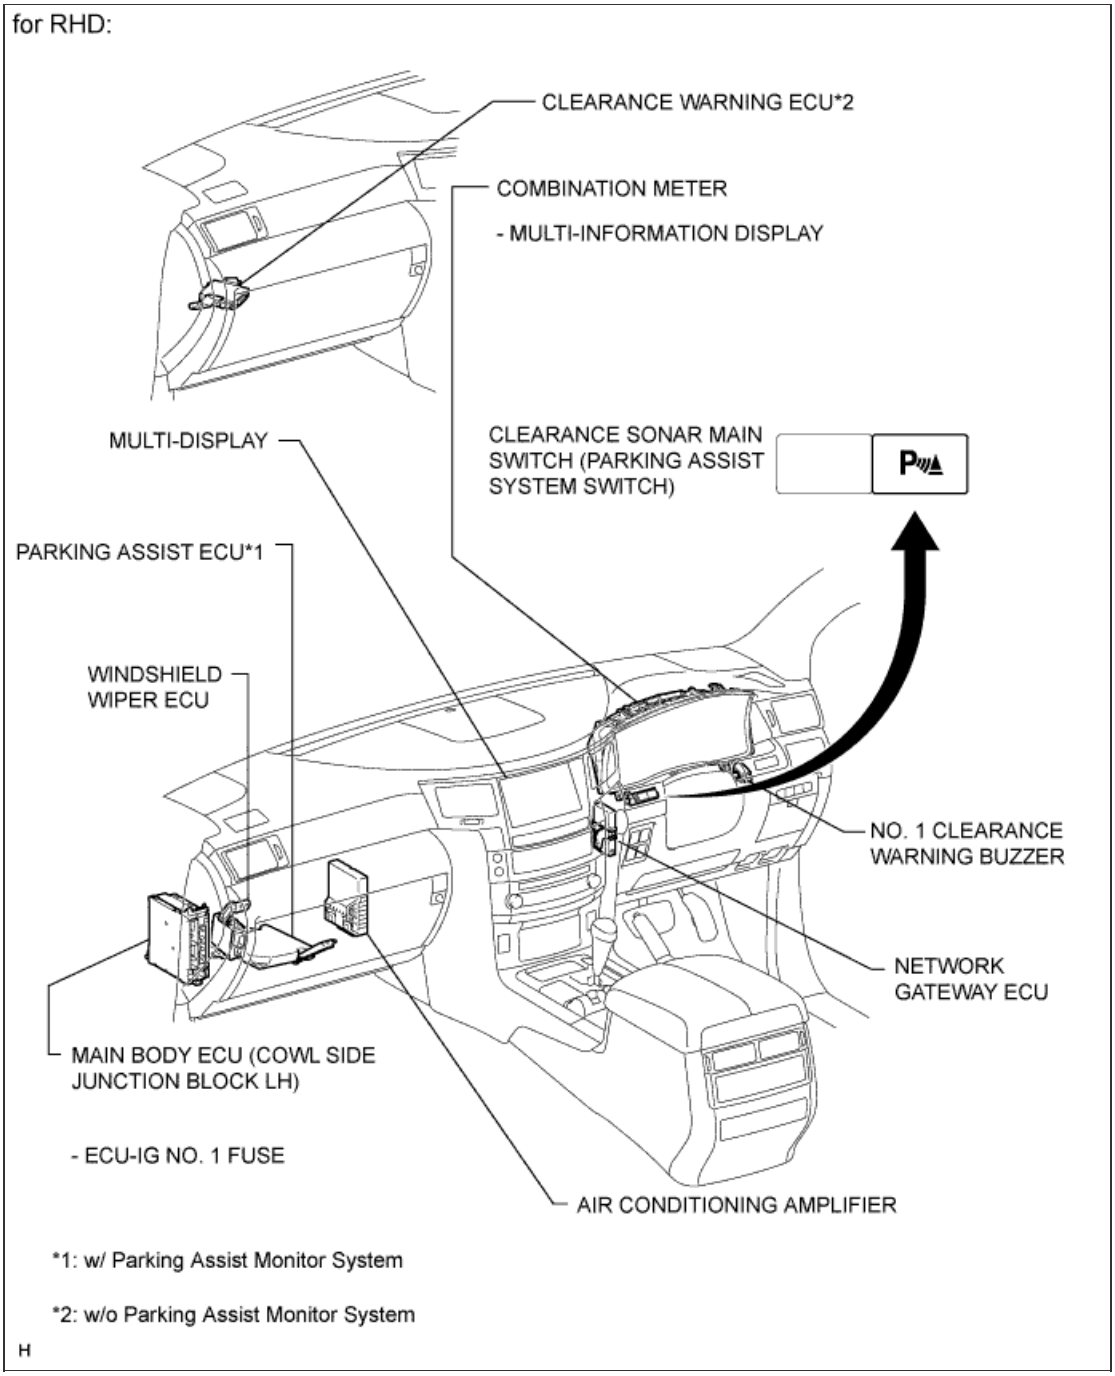
iv. Short objects.

v. Tall objects with a projected upper part.



e. Other notices:

i. The sensor cannot detect objects directly under the bumper (the sensor may detect low objects and thin poles, and then lose track of the objects).



ii. The sensor may be unable to detect obstacles that are too close to the sensor.

iii. The sensor may be unable to detect obstacles if it is dropped or subjected to a strong impact.

## GENERAL

a. When the vehicle is driven at 9 km/h (5.8 mph) or less, the ultrasonic sensors detect any obstacles at the corners and rear of the vehicle. The system then informs the driver of the distance between the sensors and the obstacles as well as their positions by indicating them on the combination meter and by sounding a buzzer.

## FUNCTION OF COMPONENTS

| Components | Function |
|---|---|
| Ultrasonic sensor | The ultrasonic sensor sends and receives ultrasonic waves. Based on the received wave, the sensor calculates the approximate distance value between the vehicle and obstacle, and sends the distance value as a signal to the parking assist ECU*1 or clearance warning ECU*2. |
| Combination meter | Transmits a vehicle speed signal to the parking assist ECU*1 or clearance warning ECU*2.<br>Receives information from the parking assist ECU*1 or clearance warning ECU*2.<br>• Displays the location of an obstacle and the approximate distance between the vehicle and obstacle.<br>• Informs the driver if the ultrasonic sensors malfunction, or if they freeze or become dirty. |
| Clearance sonar main switch | Built into the drive monitor switch. Outputs the system ON/OFF signals to the parking assist ECU*1 or clearance warning ECU*2. |
| • Parking assist ECU*1<br>• Clearance warning ECU*2 | • Receives the signals from the ultrasonic sensors and sends the display signal to the combination meter.<br>• Receives signals from the ultrasonic sensors and sends the display signal to the multi-display.<br>• Receives signals from the ultrasonic sensors and sends the buzzer signal to the No. 1 clearance warning buzzer. |
| Park/neutral position switch | Sends the signal that activates the LEXUS parking assist-sensor system when the shift lever is moved to R. |
| Multi-display | Receives the information from the parking assist ECU*1 or clearance warning ECU*2 through the CAN.<br>• Displays the location of an obstacle and the approximate distance between the vehicle and obstacle.<br>• Informs the driver if the ultrasonic sensors malfunction, or if they freeze or become dirty. |
| No. 1 clearance warning buzzer | Sounds the buzzer to inform the driver according to the distance to the obstacle. |
| ECM | Transmits the shift position signal to the parking assist ECU*1 or clearance warning ECU*2. |
| Air conditioning amplifier | Transmits the ambient temperature to the parking assist ECU*1 or clearance warning ECU*2. |
| Main body ECU | Transmits the destination signal, dimmer signal and steering information to the parking assist ECU*1 or clearance warning ECU*2. |
| Windshield wiper ECU | Transmits the wiper status signal to the parking assist ECU*1 or clearance warning ECU*2. |

*1: w/ Parking Assist Monitor System
*2: w/o Parking Assist Monitor System

## OPERATION EXPLANATION

a. The ECU determines whether the LEXUS parking assist-sensor system should be operated based on the clearance sonar main switch on/off status, the shift position and the vehicle speed.

b. When the system operates, the ECU transmits ultrasonic waves from the ultrasonic sensors. If these waves encounter an obstacle within one or more of the ranges of the sensors, the waves are reflected back to the sensors, which transmit them to the ECU. Based on this

information, the ECU sends signals to the multi-information display, the multi-display and the clearance warning buzzer. The approximate distance between the vehicle and the obstacle is then indicated, and the buzzer sounds.

**HINT:**

Refer to "Operation Check" for the detailed operation ( Click here).

*2: w/o Side Monitor System

## OPERATION EXPLANATION

a. The ECU determines whether the LEXUS parking assist-sensor system should be operated based on the back sonar or clearance sonar switch assembly on/off status, the shift position and the vehicle speed.

b. When the system operates, the ECU transmits ultrasonic waves from the No. 1 ultrasonic sensors. If these waves encounter an obstacle within one or more of the ranges of the sensors, the waves are reflected back to the sensors, which transmit them to the ECU. Based on this information, the ECU sends signals to the multi-information display, the multi-display assembly and the No. 1 clearance warning buzzer. The approximate distance between the vehicle and the obstacle is then indicated, and the buzzer sounds.

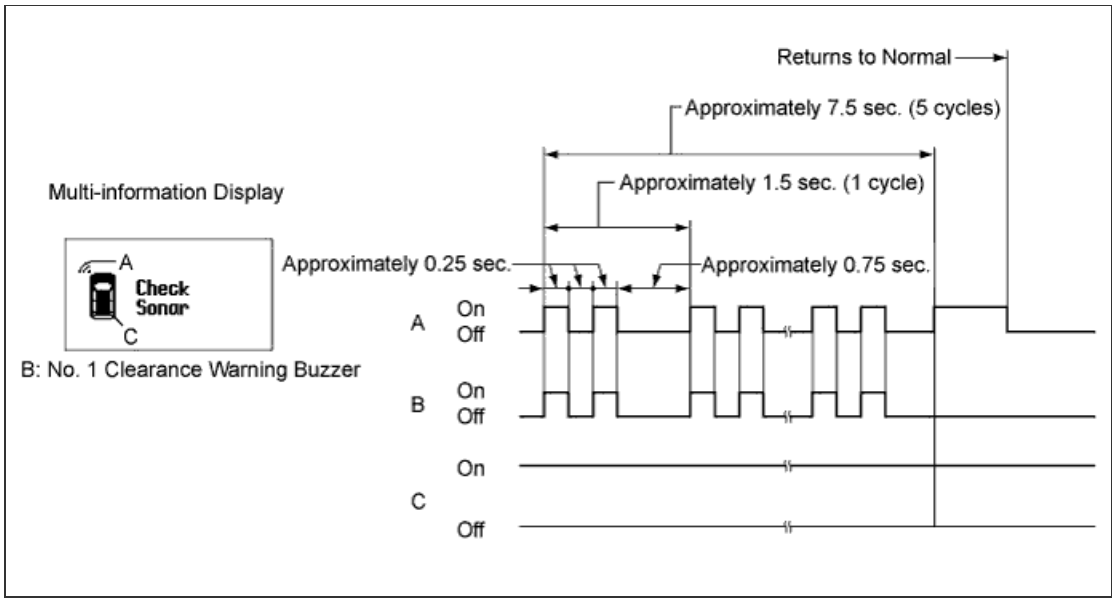
## INITIAL CHECK FUNCTION

a. Turn the engine switch on (IG).

b. After 2 seconds or more have passed, turn the clearance sonar main switch on. Then check the buzzer sounding condition.

**Buzzer sounding:**
**1 +/-0.3 seconds**



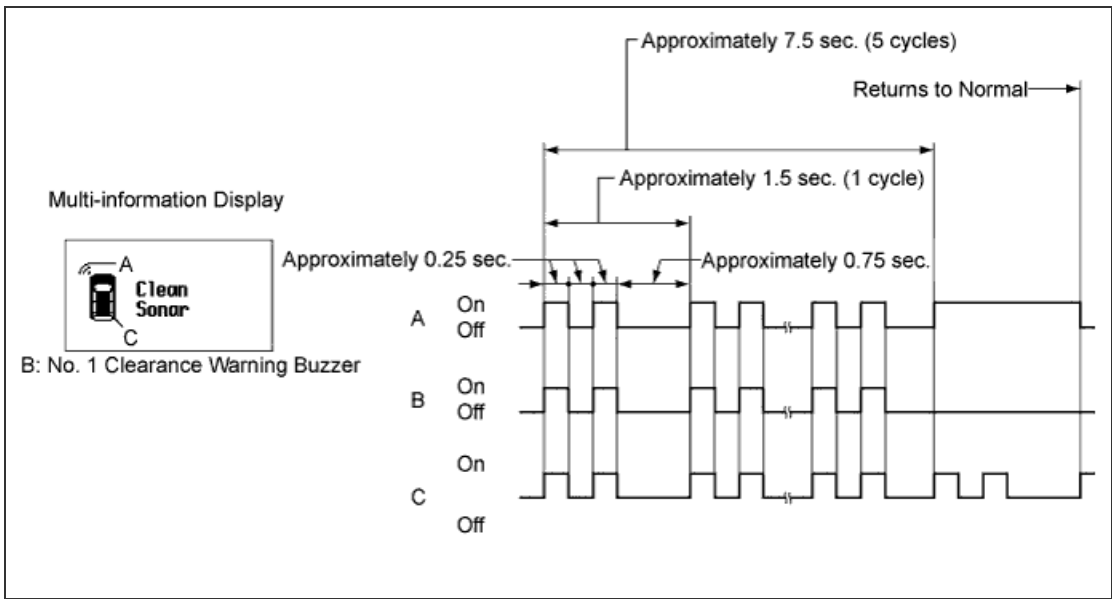
**HINT:**

- **If a malfunction is detected in the ultrasonic sensor circuits, the location of the malfunctioning sensor blinks on the displayed vehicle graphic. However, after the sensor returns to normal, the display also returns to normal.**
- **When the engine switch is turned on (IG) while the clearance sonar main switch is on, the buzzer will not sound.**

## MALFUNCTION OF MULTI-INFORMATION DISPLAY

a. Ultrasonic sensor open circuit

i. If there is an open circuit between the ultrasonic sensor and the ECU or a sensor is malfunctioning, the malfunction is displayed as shown in the illustration.

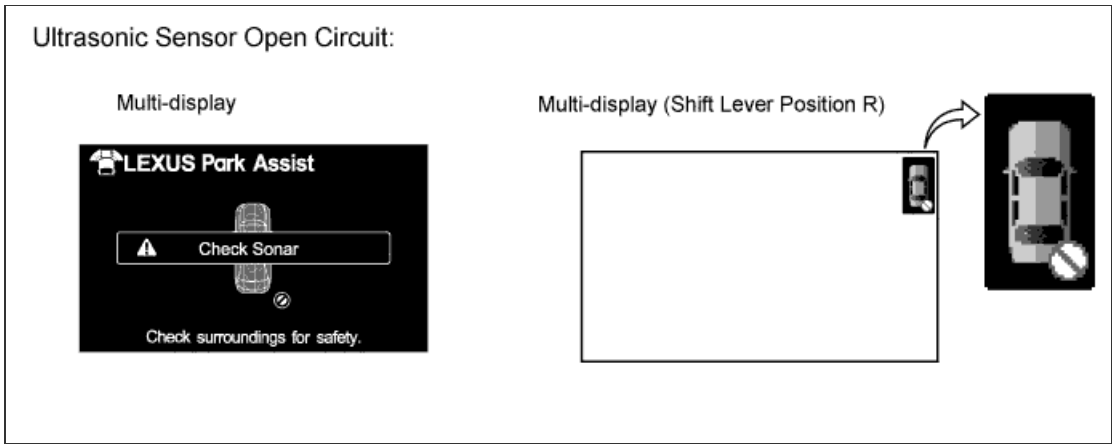


**HINT:**

- **The example shows an open circuit in the No. 1 ultrasonic sensor (front left sensor).**
- **If a sensor has an open circuit, "Check Sonar" is displayed. Refer to "open circuit in front sensor is displayed as a result or self-check" in the problem symptoms table to inspect it.**

b. Ultrasonic sensor frozen

i. If a sensor is covered with foreign matter, such as mud or snow, the affected sensor is displayed as shown in the illustration.



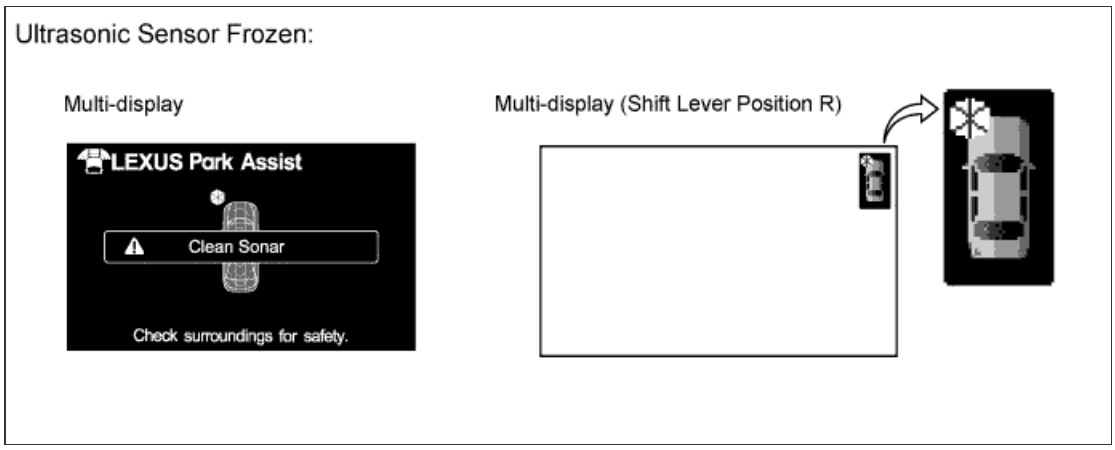
**HINT:**

- **The example shows that the No. 1 ultrasonic sensor (front left sensor) is covered with foreign matter.**
- **If "Clean Sonar" is displayed, cleaning the foreign matter from the sensor will return the sensor to normal.**

## MALFUNCTION OF MULTI-DISPLAY

a. Ultrasonic sensor open circuit

i. If there is an open circuit between the ultrasonic sensor and the ECU or a sensor is malfunctioning, the malfunction is displayed as shown in the illustration.



**HINT:**

- **This example shows an open circuit in the No. 2 ultrasonic sensor (rear right sensor).**
- **If a sensor has an open circuit, refer to "open circuit in rear sensor is displayed as a result of self-check" in the problem symptoms table to inspect it.**

b. Ultrasonic sensor frozen

i. If a sensor is covered with foreign matter, such as mud or snow, the affected sensor is displayed as shown in the illustration.

**HINT:**

- **The example shows that the No. 1 ultrasonic sensor (front left sensor) is covered with foreign matter.**
- **If "Clean Sonar" is displayed, cleaning the foreign matter from the sensor will return the sensor to normal.**

## DETECTION RANGE MEASUREMENT AND DISPLAY CHECK

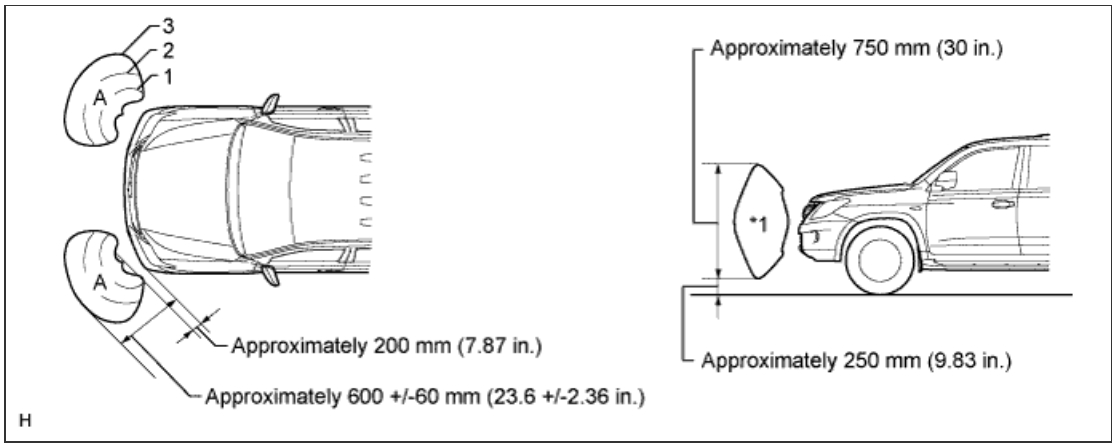
**NOTICE:**

Apply the parking brake securely so that the vehicle does not move.

a. Turn the engine switch on (IG).

b. Turn the clearance sonar main switch on.

c. Move the shift lever to R to check the No. 1 ultrasonic sensors, No. 2 ultrasonic sensors and No. 3 ultrasonic sensors.

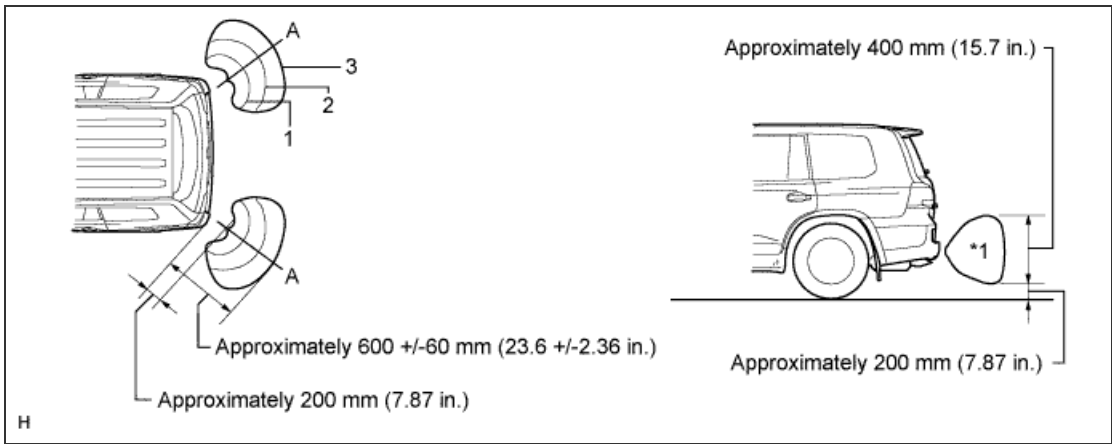


d. Move the shift lever to D and N to check the No. 1 ultrasonic sensors.

e. Move a φ60 mm (2.36 in.) pole around the sensor to measure the detection range of the sensor.

**NOTICE:**

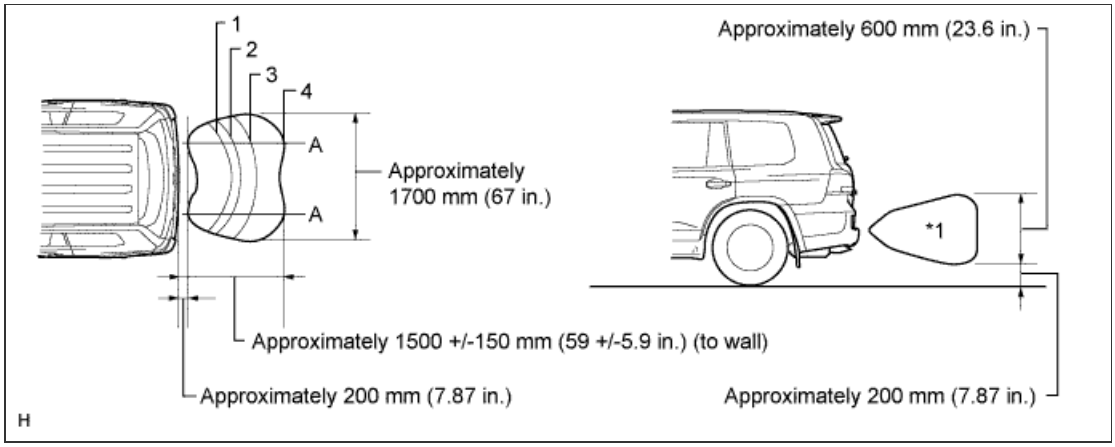
- **These detection ranges are applicable when positioning the φ60 mm (2.36 in.) pole parallel or perpendicular to the ground.**
- **The ranges vary depending on the measuring method and type of obstacle (such as walls).**
- **For close-range and medium-range detection, the values shown are for when using a pole with a diameter of 60 mm (2.36 in.). For long-range detection, the values shown are for when using walls.**
- **The detection range of the resin bumper and steel bumper are not the same, as their installation positions are slightly different.**



i. No. 1 ultrasonic sensors detection range

**NOTICE:**

The area (labeled *1) which represents a side view of the No. 1 ultrasonic sensor detection range is a cross section of the detection range at the position labeled A which is shown in the top view. The area (labeled* 1) does not represent the entire detection range.



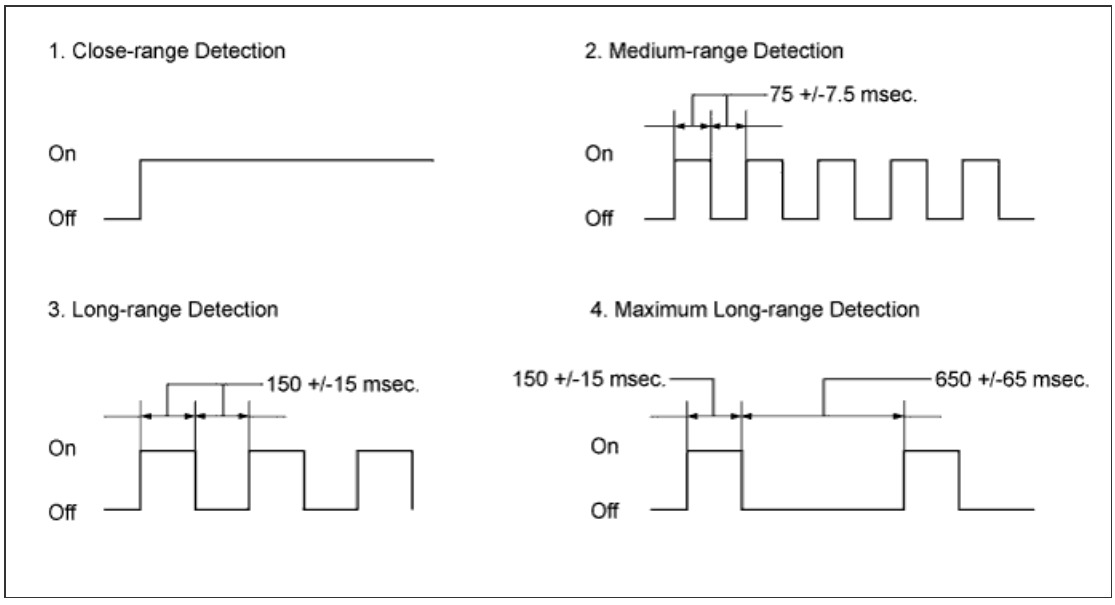
ii. No. 2 ultrasonic sensor detection range

**NOTICE:**

The area (labeled *1) which represents a side view of the No. 2 ultrasonic sensor detection range is a cross section of the detection range at the position labeled A which is shown in the top view. The area (labeled *1) does not represent the entire detection range.

iii. No. 3 ultrasonic sensor detection range

**NOTICE:**



The area (labeled *1) which represents a side view of the No. 3 ultrasonic sensor detection range is a cross section of the detection range at the position labeled A which is shown in the top view. The area (labeled *1) does not represent the entire detection range.

f. When the ultrasonic sensors have detected an obstacle, check the multi-display, multi-information display and that the clearance warning buzzer sounds with the clearance sonar main switch on.

**Operation Condition**

| Shift Lever Position | Vehicle Speed | Multi-display Detection, Multi-information Display Detection, Buzzer Detection | | |
|---|---|---|---|---|
| | | No. 1 Ultrasonic Sensor | No. 2 Ultrasonic Sensor | No. 3 Ultrasonic Sensor |
| P | - | Only perform check operation | | |
| D, S, (N) | 9 km/h (5.6 mph) or less | ○ | X | X |
| R | No limit | ○ | ○ | ○ |

i. Check that the buzzer sounds with the clearance sonar main switch on as shown in the illustration.

**No. 1 Ultrasonic Sensor Detection Range**

| Detection | Distance |
|---|---|
| | |

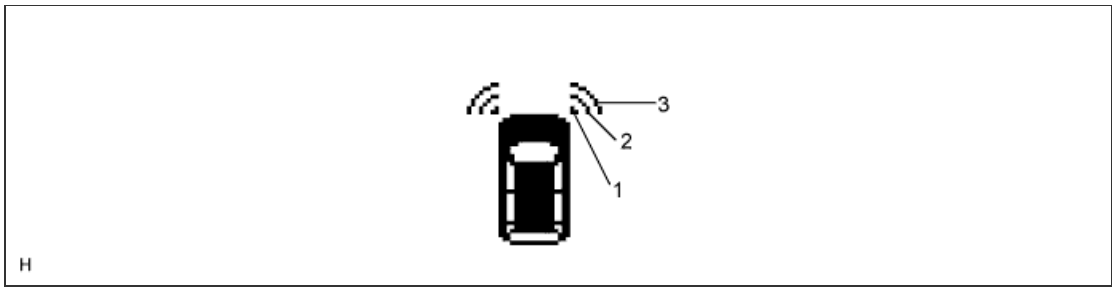
| | |
|---|---|
| 1. Close-range detection | Within 350 +/-40 mm (13.8 +/-1.57 in.) |
| 2. Medium-range detection | 350 +/-40 to 475 +/-50 mm (13.8 +/-1.57 to 18.7 +/-1.96 in.) |
| 3. Long-range detection | 475 +/-50 to 600 +/-60 mm (18.7 +/-1.96 to 23.6 +/-2.36 in.) |

**No. 2 Ultrasonic Sensor Detection Range**

| Detection | Distance |
|---|---|
| 1. Close-range detection | Within 300 +/-30 mm (11.8 +/-1.18 in.) |
| 2. Medium-range detection | 300 +/-30 to 375 +/-40 mm (11.8 +/-1.18 to 14.8 +/-1.57 in.) |
| 3. Long-range detection | 375 +/-40 to 600 +/-60 mm (14.8 +/-1.57 to 23.6 +/-2.36 in.) |

**No. 3 Ultrasonic Sensor Detection Range**

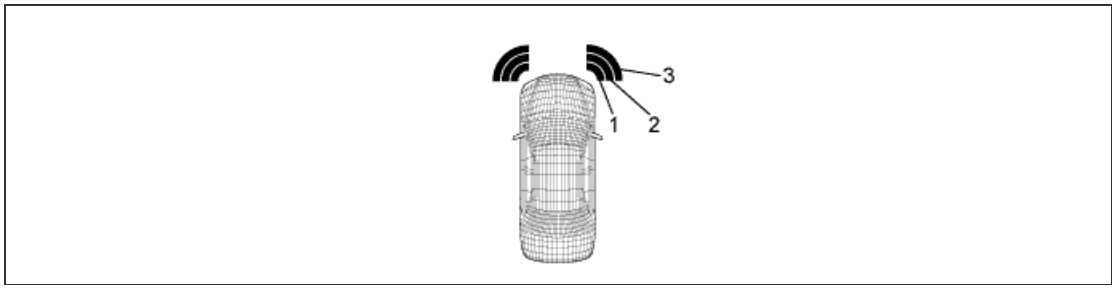
| Detection | Distance |
|---|---|
| 1. Close-range detection | Within 350 +/-40 mm (13.8 +/-1.57 in.) |
| 2. Medium-range detection | 350 +/-40 to 450 +/-50 mm (13.8 +/-1.57 to 17.7 +/-1.96 in.) |
| 3. Long-range detection | 450 +/-50 to 600 +/-60 mm (17.7 +/-1.96 to 23.6 +/-2.36 in.) |
| 4. Maximum long-range detection | 600 +/-60 to 1500 +/-150 mm (23.6 +/-2.36 to 59.1 +/-5.91 in.) |



**HINT:**

Ultrasonic waves are used to measure the detection range. However, the detection range may vary depending on the ambient temperature.

ii. Check the multi-information display and buzzer when the No. 1 ultrasonic sensors have detected an obstacle.



**Operation Condition**

| Engine Switch | Clearance Sonar Main Switch | Shift Lever Position | Vehicle Speed |
|---|---|---|---|
| On (IG) | On | D or N | 9 km/h (5.6 mph) or less |

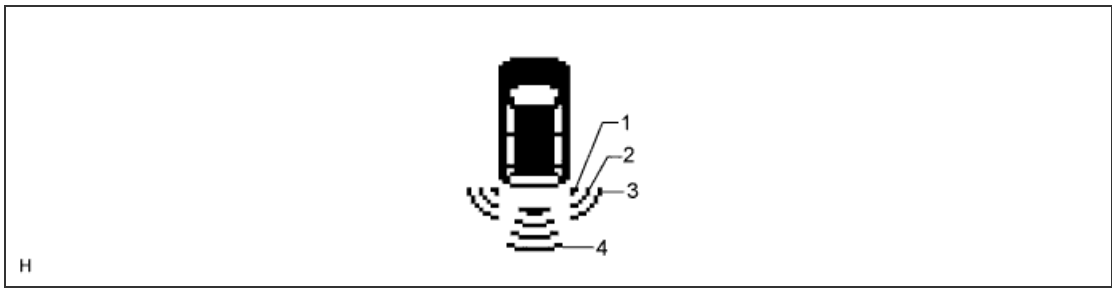
**Multi-information Display**

| Detection Range | Buzzer | Number of Bars Displayed |
|---|---|---|
| 1. Close-range detection | Sounds continuously | 1 (blinking) |
| 2. Medium-range detection | Sounds intermittently (On: 75 msec., Off: 75 msec.) | 2 (illuminated) |
| 3. Long-range detection | Sounds intermittently (On: 150 msec., Off: 150 msec.) | 3 (illuminated) |

**Multi-display**

| Detection Range | Buzzer | Number of Bars Displayed |
|---|---|---|
| 1. Close-range detection | Sounds continuously | 1 (red illumination) |
| | Sounds intermittently | |

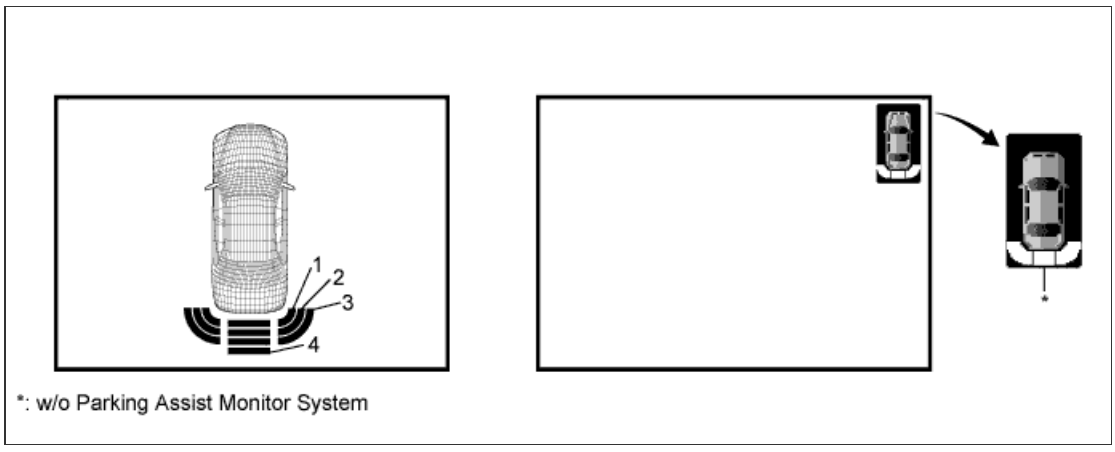
| | | |
|---|---|---|
| 2. Medium-range detection | (On: 75 msec., Off: 75 msec.) | 2 (yellow illumination) |
| 3. Long-range detection | Sounds intermittently<br>(On: 150 msec., Off: 150 msec.) | 3 (yellow illumination) |



**HINT:**

Ultrasonic waves are used to measure the detection range. However, the detection range may vary depending on the ambient temperature.

iii. Check the multi-information display and buzzer when the No. 2 ultrasonic sensors and No. 3 ultrasonic sensors have detected an obstacle.



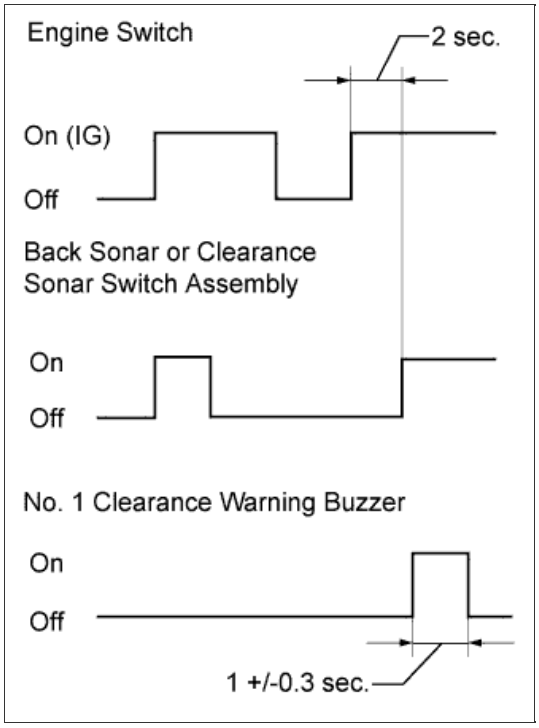
**Operation Condition**

| Engine Switch | Clearance Sonar Main Switch | Shift Lever Position |
|---|---|---|
| On (IG) | On | R |

**Multi-information Display**

| Detection Range | Buzzer | Number of Bars Displayed |
|---|---|---|
| 1. Close-range detection | Sounds continuously | 1 (blinking) |
| 2. Medium-range detection | Sounds intermittently<br>(On: 75 msec., Off: 75 msec.) | 2 (illuminated) |
| 3. Long-range detection | Sounds intermittently<br>(On: 150 msec., Off: 150 msec.) | 3 (illuminated) |
| 4. Maximum long-range detection<br>(for rear center sensors) | Sounds intermittently<br>(On: 150 msec., Off: 650 msec.) | 4 (illuminated) |

**Multi-display**



| Detection Range | Buzzer | Number of Bars Displayed |
|---|---|---|
| 1. Close-range detection | Sounds continuously | 1 (red illumination)<br>*: Illumination (red) |
| 2. Medium-range detection | Sounds intermittently<br>(On: 75 msec., Off: 75 msec.) | 2 (yellow illumination)<br>*: Blinking (yellow) |
| 3. Long-range detection | Sounds intermittently<br>(On: 150 msec., Off: 150 msec.) | 3 (yellow illumination)<br>*: Blinking (yellow) |
| 4. Maximum long-range detection<br>(for rear center sensors) | Sounds intermittently<br>(On: 150 msec., Off: 650 msec.) | 4 (yellow illumination)<br>*: Blinking (yellow) |

*: w/o Parking Assist Monitor System

**HINT:**

Ultrasonic waves are used to measure the detection range. However, the detection range may vary depending on the ambient temperature.

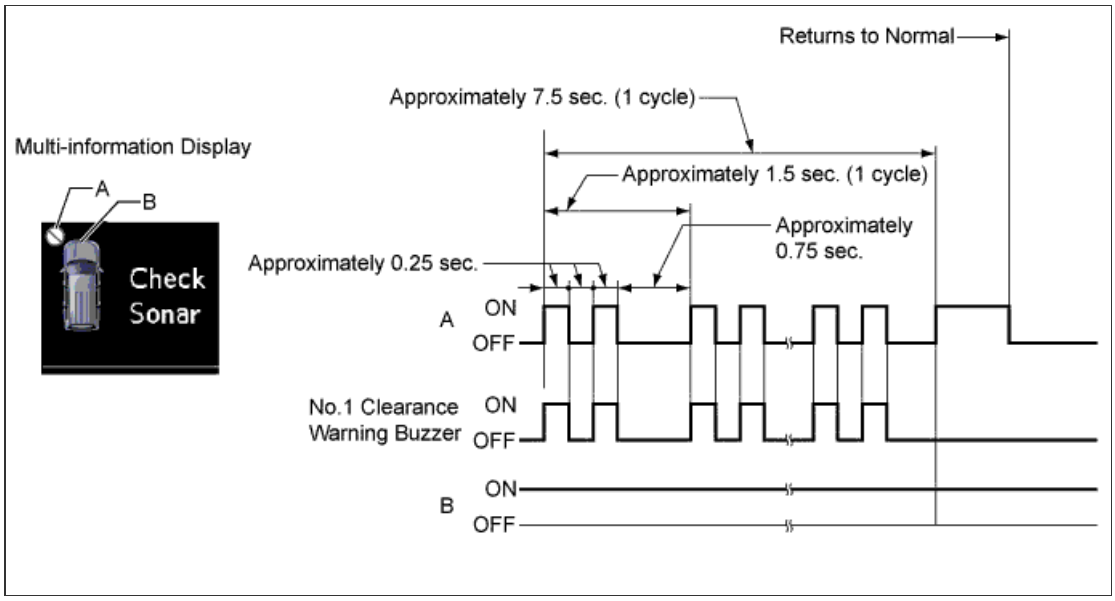
## INITIAL CHECK FUNCTION

a. Turn the engine switch on (IG).

b. After 2 seconds or more have passed, turn the back sonar or clearance sonar switch assembly on. Then check the buzzer sounding condition.

**Buzzer sounding:**
**1 +/-0.3 seconds**



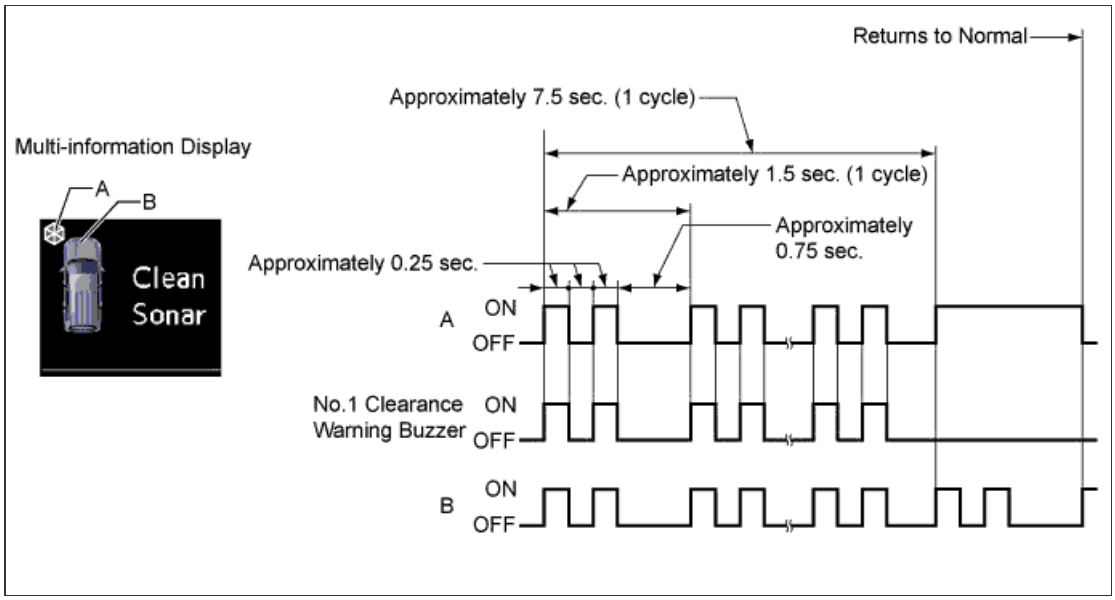
**HINT:**

- **If a malfunction is detected in the ultrasonic sensor circuits, the location of the malfunctioning sensor blinks on the displayed vehicle graphic. However, after the sensor returns to normal, the display also returns to normal.**
- **When the engine switch is turned on (IG) while the back sonar or clearance sonar switch assembly is on, the buzzer will not sound.**

## MALFUNCTION OF MULTI-INFORMATION DISPLAY

a. Ultrasonic sensor open circuit

i. If there is an open circuit between the No. 1 ultrasonic sensor and the ECU or a sensor is malfunctioning, the malfunction is displayed as shown in the illustration.

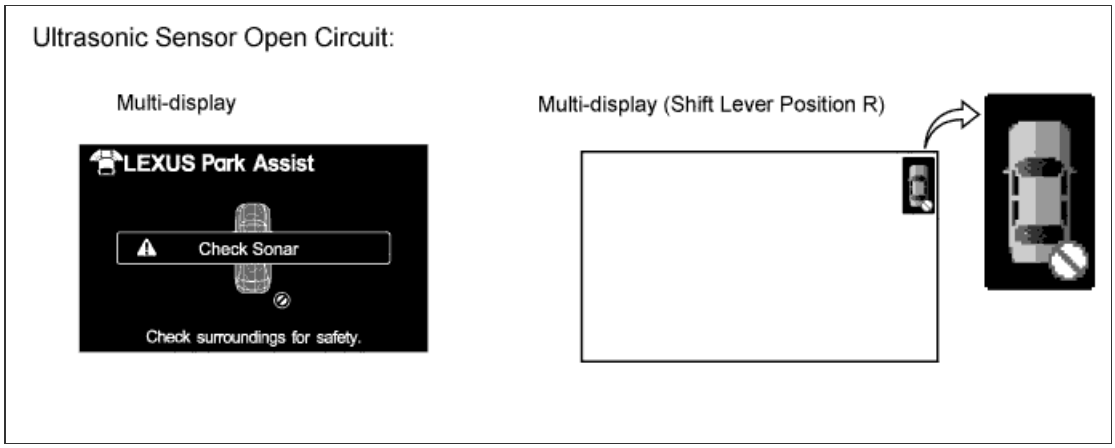


**HINT:**

- **The example shows an open circuit in the No. 1 ultrasonic sensor (FL sensor).**
- **If a sensor has an open circuit, "Check Sonar" is displayed. Refer to "open circuit in front sensor is displayed as a result or self-check" in the problem symptoms table to inspect it.**

b. Ultrasonic sensor frozen

i. If a sensor is covered with foreign matter, such as mud or snow, the affected sensor is displayed as shown in the illustration.



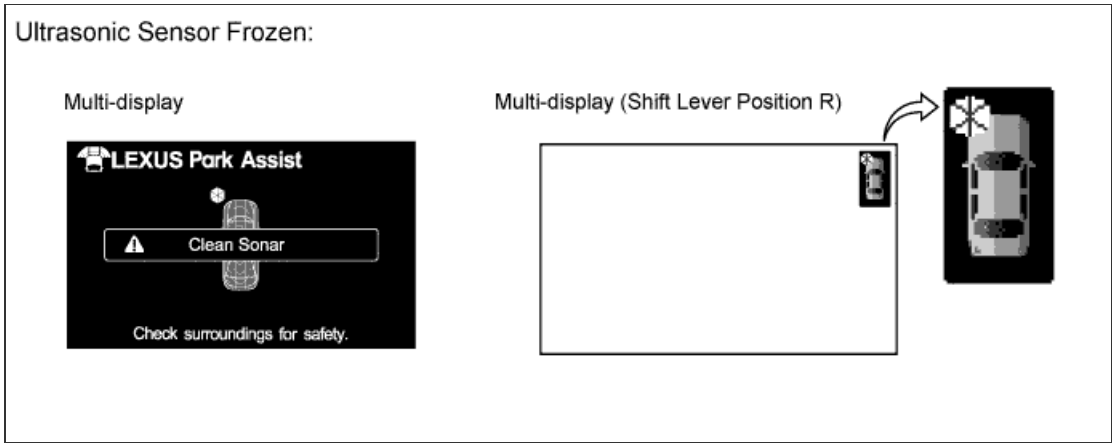
**HINT:**

- **The example shows that the No. 1 ultrasonic sensor (FL sensor) is covered with foreign matter.**
- **If "Clean Sonar" is displayed, cleaning the foreign matter from the sensor will return the sensor to normal.**

## MALFUNCTION OF MULTI-DISPLAY

a. Ultrasonic sensor open circuit

i. If there is an open circuit between the No. 1 ultrasonic sensor and the ECU or a sensor is malfunctioning, the malfunction is displayed as shown in the illustration.



**HINT:**

- **This example shows an open circuit in the No. 1 ultrasonic sensor (RR sensor).**
- **If a sensor has an open circuit, refer to "open circuit in rear sensor is displayed as a result of self-check" in the problem symptoms table to inspect it.**

b. Ultrasonic sensor frozen

i. If a sensor is covered with foreign matter, such as mud or snow, the affected sensor is displayed as shown in the illustration.

**HINT:**

- **The example shows that the No. 1 ultrasonic sensor (FL sensor) is covered with foreign matter.**
- **If "Clean Sonar" is displayed, cleaning the foreign matter from the sensor will return the sensor to normal.**

## DETECTION RANGE MEASUREMENT AND DISPLAY CHECK

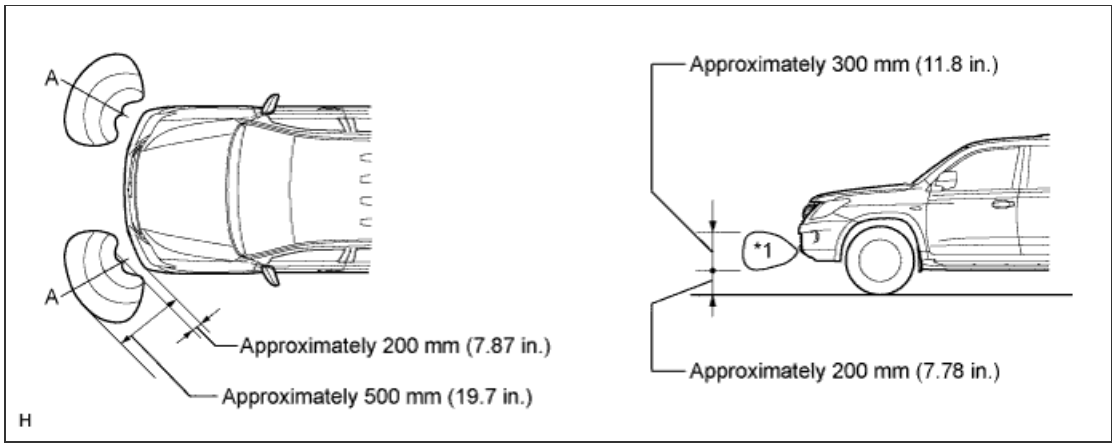
**NOTICE:**

Apply the parking brake securely so that the vehicle does not move.

a. Turn the engine switch on (IG).

b. Turn the back sonar or clearance sonar switch assembly on.

c. Move the shift lever to R to check the No. 1 ultrasonic sensors, No. 2 ultrasonic sensors and No. 3 ultrasonic sensors.

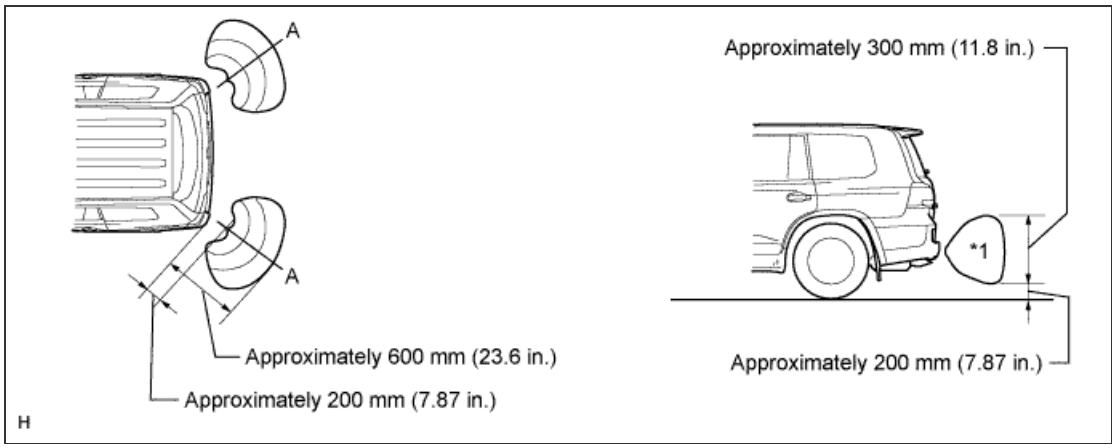


d. Move the shift lever to D and N to check the No. 1 ultrasonic sensors.

e. Move a a diameter of 60 mm (2.36 in.) pole around the sensor to measure the detection range of the sensor.

**NOTICE:**

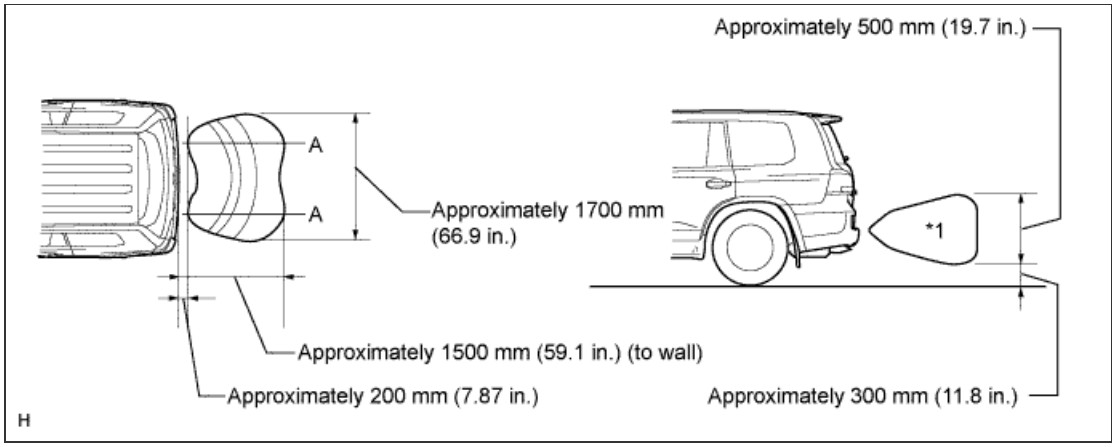
- **These detection ranges are applicable when positioning the a diameter of 60 mm (2.36 in.) pole parallel or perpendicular to the ground.**
- **The ranges vary depending on the measuring method and type of obstacle (such as walls).**
- **For close-range and medium-range detection, the values shown are for when using a pole with a diameter of 60 mm (2.36 in.). For long-range detection, the values shown are for when using walls.**
- **The detection range of the resin bumper and steel bumper are not the same, as their installation positions are slightly different.**



i. No. 1 ultrasonic sensor (FL, FR sensor) detection range

**NOTICE:**

The area (labeled*1) which represents a side view of the No. 1 ultrasonic sensor (FL, FR sensor) detection range is a cross section of the detection range at the position labeled A which is shown in the top view. The area (labeled* 1) does not represent the entire detection range.



ii. No. 1 ultrasonic sensor (RL, RR sensor) detection range

**NOTICE:**

The area (labeled*1) which represents a side view of the No. 1 ultrasonic sensor (RL, RR sensor) detection range is a cross section of the detection range at the position labeled A which is shown in the top view. The area (labeled*1) does not represent the entire detection range.

iii. No. 1 ultrasonic sensor (RLC, RRC sensor) detection range

**NOTICE:**
