The area (labeled*1) which represents a side view of the No. 1 ultrasonic sensor (RLC, RRC sensor) detection range is a cross section of the detection range at the position labeled A which is shown in the top view. The area (labeled*1) does not represent the entire detection range.

f. When the ultrasonic sensors have detected an obstacle, check the multi-display, multi-information display and that the clearance warning buzzer sounds with the back sonar or clearance sonar switch assembly on.

**Operation Condition**

| Shift Lever Position | Vehicle Speed | Multi-display Detection, Multi-information Display Detection, Buzzer Detection | | |
|---|---|---|---|---|
| | | No. 1 Ultrasonic Sensor (FL, FR Sensor) | No. 1 Ultrasonic Sensor (RL, RR Sensor) | No. 1 Ultrasonic Sensor (RLC, RRC Sensor) |
| P | - | Only perform check operation | | |
| D, S, (N) | 9 km/h (5.6 mph) or less | ○ | X | X |
| R | No limit | ○ | ○ | ○ |

i. Check that the buzzer sounds with the back sonar or clearance sonar switch assembly on as shown in the illustration.

**No. 1 Ultrasonic Sensor (FL, FR Sensor) Detection Range**

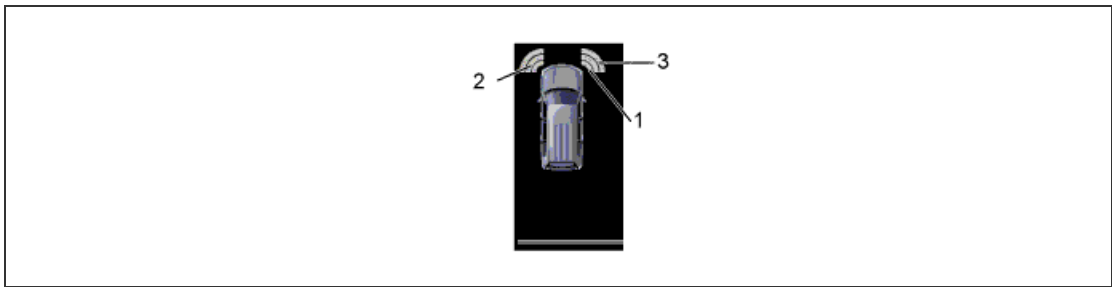
| Detection | Distance |
|---|---|
| 1. Close-range detection | Within 250 +/-30 mm (9.84 +/-1.18 in.) |
| 2. Medium-range detection | 250 +/-30 to 375 +/-40 mm (9.84 +/-1.18 to 14.8 +/-1.57 in.) |
| 3. Long-range detection | 375 +/-40 to 500 +/-50 mm (14.8 +/-1.57 to 19.7 +/-1.97 in.) |

**No. 1 Ultrasonic Sensor Detection Range (RL, RR Sensor)**

| Detection | Distance |
|---|---|
| 1. Close-range detection | Within 300 +/-30 mm (11.8 +/-1.18 in.) |
| 2. Medium-range detection | 300 +/-30 to 450 +/-50 mm (11.8 +/-1.18 to 17.7 +/-1.97 in.) |
| 3. Long-range detection | 450 +/-40 to 600 +/-60 mm (17.7 +/-1.97 to 23.6 +/-2.36 in.) |

**No. 1 Ultrasonic Sensor (RLC, RRC Sensor) Detection Range**

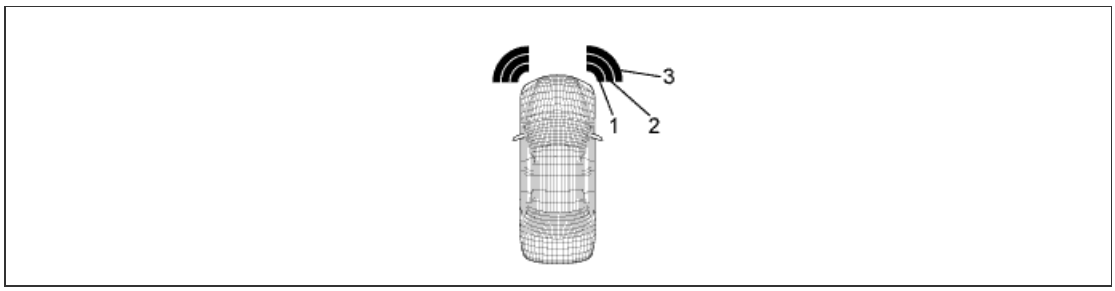
| Detection | Distance |
|---|---|
| 1. Close-range detection | Within 500 +/-50 mm (19.7 +/-1.97 in.) |
| 2. Medium-range detection | 500 +/-50 to 650 +/-70 mm (19.7 +/-1.97 to 25.6 +/-2.76 in.) |
| 3. Long-range detection | 650 +/-70 to 800 +/-80 mm (19.7 +/-1.97 to 31.5 +/-3.15 in.) |
| 4. Maximum long-range detection | 800 +/-80 to 1000 +/-100 mm (31.5 +/-3.15 to 39.4 +/-3.94 in.)<br>800 +/-80 to 1500 +/-150 mm (31.5 +/-3.15 to 59.1 +/-5.91 in.) |



**HINT:**

Ultrasonic waves are used to measure the detection range. However, the detection range may vary depending on the ambient temperature.

ii. Check the multi-information display and buzzer when the No. 1 ultrasonic sensors (FL, FR sensors) have detected an obstacle.



**Operation Condition**

| Engine Switch | back sonar or clearance sonar switch assembly | Shift Lever Position | Vehicle Speed |
|---|---|---|---|
| On (IG) | On | D or N | 9 km/h (5.6 mph) or less |

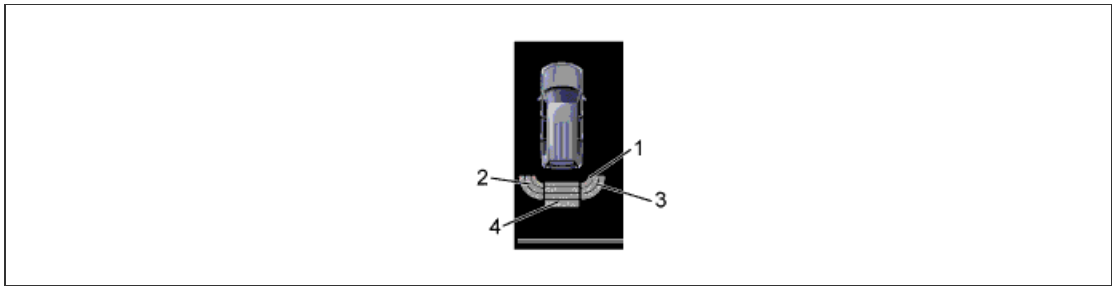
**Multi-information Display**

| Detection Range | Buzzer | Number of Bars Displayed |
|---|---|---|
| 1. Close-range detection | Sounds continuously | 1 (red blinking) |
| 2. Medium-range detection | Sounds intermittently<br>(On: 75 msec., Off: 75 msec.) | 2 (yellow illuminated) |
| 3. Long-range detection | Sounds intermittently<br>(On: 150 msec., Off: 150 msec.) | 3 (yellow illuminated) |

**Multi-display Assembly**

| Detection Range | Buzzer | Number of Bars Displayed |
|---|---|---|
| 1. Close-range detection | Sounds continuously | 1 (red blinking) |

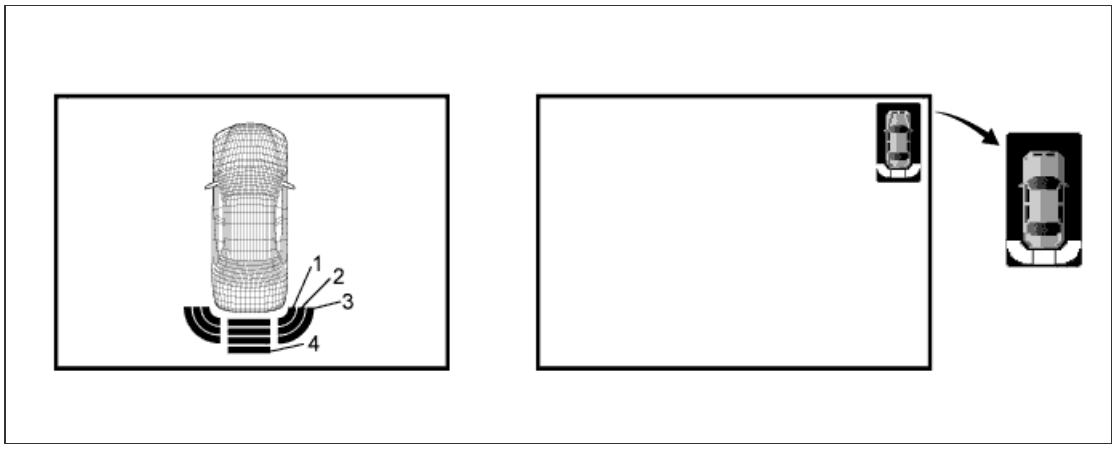
| | | |
|---|---|---|
| 2. Medium-range detection | Sounds intermittently<br>(On: 75 msec., Off: 75 msec.) | 2 (yellow illumination) |
| 3. Long-range detection | Sounds intermittently<br>(On: 150 msec., Off: 150 msec.) | 3 (yellow illumination) |



**HINT:**

Ultrasonic waves are used to measure the detection range. However, the detection range may vary depending on the ambient temperature.

iii. Check the multi-information display and buzzer when the No. 1 ultrasonic sensors (RL, RLC, RRC, RR sensors) have detected an obstacle.



**Operation Condition**

| Engine Switch | back sonar or clearance sonar switch assembly | Shift Lever Position |
|---|---|---|
| On (IG) | On | R |

**Multi-information Display**

| Detection Range | Buzzer | Number of Bars Displayed |
|---|---|---|
| 1. Close-range detection | Sounds continuously | 1 (red blinking) |
| 2. Medium-range detection | Sounds intermittently<br>(On: 75 msec., Off: 75 msec.) | 2 (yellow illuminated) |
| 3. Long-range detection | Sounds intermittently<br>(On: 150 msec., Off: 150 msec.) | 3 (yellow illuminated) |
| 4. Maximum long-range detection<br>(for rear center sensors) | Sounds intermittently<br>(On: 150 msec., Off: 650 msec.) | 4 (yellow illuminated) |

**Multi-display Assembly**

| Detection Range | Buzzer | Number of Bars Displayed |
|---|---|---|
| 1. Close-range detection | Sounds continuously | 1 (red illumination) |
| 2. Medium-range detection | Sounds intermittently<br>(On: 75 msec., Off: 75 msec.) | 2 (yellow illumination) |
| 3. Long-range detection | Sounds intermittently<br>(On: 150 msec., Off: 150 msec.) | 3 (yellow illumination) |
| 4. Maximum long-range detection<br>(for rear center sensors) | Sounds intermittently<br>(On: 150 msec., Off: 650 msec.) | 4 (yellow illumination) |

**HINT:**

Ultrasonic waves are used to measure the detection range. However, the detection range may vary depending on the ambient temperature.

## CUSTOMIZE PARAMETERS

**NOTICE:**

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Be sure to make a note of the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Customize Setting.

e. Select the setting by referring to the table below.

**Warning**

| Display | Default | Contents | Setting |
|---|---|---|---|
| Rr Sensor Onset Range | Wide | Sets the buzzer activation range for the rear sensors. | Narrow or Wide |
| Keep Sense Buzzer | Avail | Makes the buzzer sound when the distance between the vehicle and obstacle does not change for more than 3 seconds. | Not Avail or Avail |
| Fr & Rr Buzzer Volume | H | Changes the buzzer volume setting. | L, M1, M2, M3 or H |

**Sensor**

| Display | Default | Contents | Setting |
|---|---|---|---|
| Sensor Condition N | Avail | Makes the sensors available when the shift lever is in N. | Not Avail or Avail |
| Reverse Range Front Sensor | F | Changes the operation setting for the vehicle front sensors when the shift lever is in R. | F or F Stop |
| Non P/R Range Rear Sensor | R Stop | Changes the operation setting for the vehicle rear sensors when the shift lever is not in P or R. | R, Rcrn or R Stop |

**Display**

| Display | Default | Contents | Setting |
|---|---|---|---|
| Approach Display OFF | Avail | The display when moving away from a previously detected obstacle. | Not Avail or Avail |
| Display Mode | All | The display mode setting (when the LEXUS parking assist-sensor system is normal). | All or Undisp |

**for Preparation** Click here

## CUSTOMIZE LEXUS PARKING ASSIST-SENSOR SYSTEM

**NOTICE:**

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Be sure to make a note of the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

a. Customizing with the intelligent tester.

i. Connect the intelligent tester to the DLC3.

ii. Turn the engine switch on (IG).

iii. Turn the intelligent tester on.

iv. Enter the following menus: Customize Setting.

v. Select the setting by referring to the table below.

**Warning**

| Display | Default | Contents | Setting |
|---|---|---|---|
| Rr Sensor Onset Range | Wide | Sets the buzzer activation range for the rear sensors. | Narrow or Wide |
| Keep Sense Buzzer | Avail | Makes the buzzer sound when the distance between the vehicle and obstacle does not change for more than 3 seconds. | Not Avail or Avail |
| Fr & Rr Buzzer Volume | H | Changes the buzzer volume setting. | L, M1, M2, M3 or H |

**Sensor**

| Display | Default | Contents | Setting |
|---|---|---|---|
| Sensor Condition N | Avail | Makes the sensors available when the shift lever is in N. | Not Avail or Avail |
| Reverse Range Front Sensor | F | Changes the operation setting for the vehicle front sensors when the shift lever is in R. | F or F Stop |
| Non P/R Range Rear Sensor | R Stop | Changes the operation setting for the vehicle rear sensors when the shift lever is not in P or R. | R, Rcrn or R Stop |

**Display**

| Display | Default | Contents | Setting |
|---|---|---|---|
| Approach Display OFF | Avail | The display when moving away from a previously detected obstacle. | Not Avail or Avail |
| Display Mode | All | The display mode setting (when the LEXUS parking assist-sensor system is normal). | All or Undisp |

b. Customizing with multi-display assembly.

**NOTICE:**

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Be sure to make a note of the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

i. Turn the engine switch on (IG).

ii. Enter the following menus: Setup / Vehicle / LEXUS park assist.

iii. Select the setting by referring to the table below.

**Warning**

| Display | Default | Contents | Setting |
|---|---|---|---|
| Alert | 3 | Sets the buzzer activation range for the rear center sensors. | 1, 2, 3, 4 or 5 |

| | | | |
|---|---|---|---|
| Volume Display | On | The display mode setting (when the LEXUS parking assist-sensor system is normal). | On or Off |
| Distance | Wide | Sets the buzzer activation range for the rear center sensors. | Narrow or Wide |

**for Preparation** Click here

**HINT:**

Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table.

Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

### General

| Symptom | Suspected Area | See page |
|---|---|---|
| System does not operate at all (self-check function does not operate) | ECU Power Source Circuit*1 | Click here |
| | Clearance Warning ECU Power Source Circuit*2 | Click here |
| | Clearance Sonar Main Switch Circuit | Click here |
| | Parking Assist ECU*1 | Click here |
| | Clearance Warning ECU*2 | Click here |
| ECU does not operate when clearance sonar main switch is turned on or off | Read value using the intelligent tester (EEPROM status) | Click here |
| | Parking Assist ECU*1 | Click here |
| | Clearance Warning ECU*2 | Click here |

### Sonar Function

| Symptom | Suspected Area | See page |
|---|---|---|
| Freeze condition is displayed as a result of self-check | Remove ice, mud or snow from the ultrasonic sensor | - |
| Open circuit in front sensors is displayed as a result of self-check | Front Left Sensor Malfunction | Click here |
| | Front Right Sensor Malfunction | Click here |
| | Parking Assist ECU*1 | Click here |
| | Clearance Warning ECU*2 | Click here |
| Open circuit in rear sensors is displayed as a result of self-check | Rear Left Sensor Malfunction | Click here |
| | Rear Right Sensor Malfunction | Click here |
| | Rear Left Center Sensor Malfunction | Click here |
| | Rear Right Center Sensor Malfunction | Click here |
| | Parking Assist ECU*1 | Click here |
| | Clearance Warning ECU*2 | Click here |
| Detection operation operates even when vehicle speed is more than 13 km/h (8 mph) | CAN Communication System*5 | Click here |
| | CAN Communication System*6 | Click here |
| | Parking Assist ECU*1 | Click here |
| | Clearance Warning ECU*2 | Click here |

### Display Function

| Symptom | Suspected Area | See page |
|---|---|---|
| Detection operation is normal but sonar displays do not appear on multi-information display | CAN Communication System*5 | Click here |
| | CAN Communication System*6 | Click here |
| | Parking Assist ECU*1 | Click here |
| | Clearance Warning ECU*2 | Click here |
| | Combination Meter | Click here |
| Detection operation is normal but sonar displays do not appear on multi-display*3, *4 | CAN Communication System*5 | Click here |
| | CAN Communication System*6 | Click here |
| | Parking Assist ECU*1 | Click here |
| | Clearance Warning ECU*2 | Click here |
| | Multi-display*3 | Click here |
| | Multi-display*4 | Click here |
| Detection operation is normal but clearance sonar main switch indicator does not illuminate | Clearance Sonar Main Switch Circuit | Click here |
| | Parking Assist ECU*1 | Click here |
| | Clearance Warning ECU*2 | Click here |

### Buzzer

| Symptom | Suspected Area | See page |
|---|---|---|
| Detection operation is normal but buzzer operation is intermittent | Clearance Warning Buzzer Circuit | Click here |
| | Parking Assist ECU*1 | Click here |
| | Clearance Warning ECU*2 | Click here |

### Indicator Function

| Symptom | Suspected Area | See page |
|---|---|---|
| Clearance sonar indicator Light does not come on | CAN Communication System*5 | Click here |
| | CAN Communication System*6 | Click here |
| | Read value using the intelligent tester (EEPROM status) | - |
| | Parking Assist ECU*1 | Click here |
| | Clearance Warning ECU*2 | Click here |
| | Combination Meter | Click here |

## CHECK PARKING ASSIST ECU (w/ Parking Assist Monitor System)

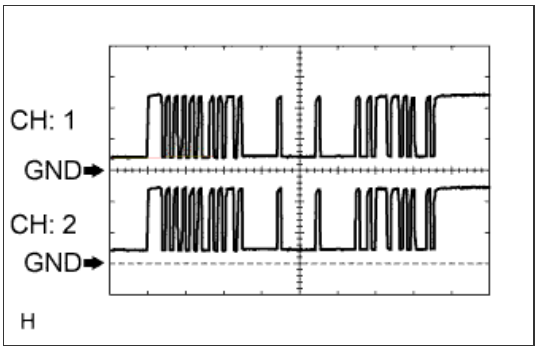
a. Disconnect the F36 and F37 ECU connectors.

b. Measure the voltage and resistance according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F36-6 (+B) - F36-4 (GND1) | L - W-B | Power source signal | Always | 11 to 14 V |
| F36-1 (IG) - F36-4 (GND1) | G - W-B | IG power source signal | Engine switch on (IG) | 11 to 14 V |
| F36-1 (IG) - F36-4 (GND1) | G - W-B | IG power source signal | Engine switch off | Below 1 V |
| F36-14 (ACC) - F36-4 (GND1) | GR - W-B | ACC power source signal | Engine switch on (ACC) | 11 to 14 V |
| F36-14 (ACC) - F36-4 (GND1) | GR - W-B | ACC power source signal | Engine switch off | Below 1 V |
| F37-6 (CSSW) - F36-4 (GND1) | Y - W-B | Clearance sonar main switch power source signal | Engine switch on (IG), clearance sonar main switch on | 11 to 14 V |
| F37-6 (CSSW) - F36-4 (GND1) | Y - W-B | Clearance sonar main switch power source signal | Engine switch on (IG), clearance sonar main switch off | Below 1 V |
| F36-4 (GND1) - Body ground | W-B - Body ground | ECU ground | Always | Below 1 Ω |

c. Reconnect the F36 and F37 ECU connectors.

d. Measure the voltage according to the value(s) in the table below.

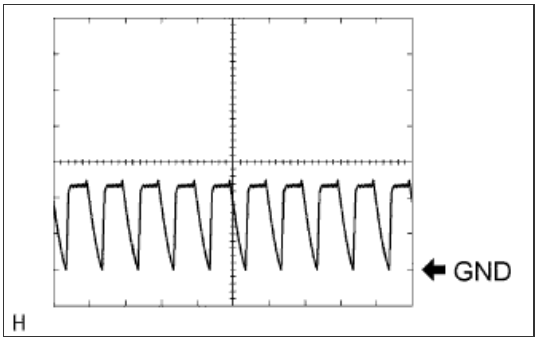


| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F37-28 (BOR) - F37-29 (E2) | R - GR | Rear sensor circuit power source | Engine switch on (IG), clearance sonar main switch on | 7.2 to 8.8 V |
| F37-28 (BOR) - F37-29 (E2) | R - GR | Rear sensor circuit power source | Engine switch off | Below 1 V |
| F37-33 (SOF) - F37-32 (E1) | LG - R | Front sensor circuit power source | Engine switch on (IG), clearance sonar main switch on | Waveform 1 |
| F37-25 (BBZ) - F36-4 (GND1) | G - W-B | Clearance warning buzzer signal | Engine switch on (IG) | 7.2 to 8.8 V |
| F37-25 (BBZ) - F36-4 (GND1) | G - W-B | Clearance warning buzzer signal | Engine switch off | Below 1 V |
| F37-9 (EF) - F36-4 (GND1) | L - W-B | Clearance warning buzzer signal | Buzzer sounding | Waveform 2 |

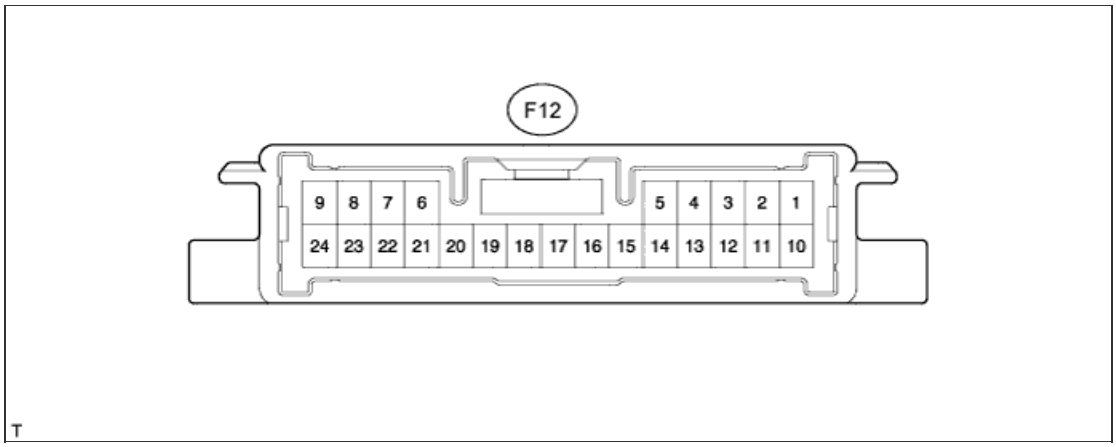
| | | | | |
|---|---|---|---|---|
| F37-31 (BOF) - F37-32 (E1) | GR - R | Front sensor circuit power source | Engine switch off | Below 1 V |
| F37-31 (BOF) - F37-32 (E1) | GR - R | Front sensor circuit power source | Engine switch on (IG), clearance sonar main switch on | 7.2 to 8.8 V |
| F37-30 (SOR) - F37-29 (E2) | LG - GR | Rear sensor circuit power source | Engine switch on (IG), clearance sonar main switch on | Waveform 1 |

e. Using an oscilloscope, check waveform 1.

**Waveform 1 (Reference)**



| Item | Content |
|---|---|
| Terminal No. (Symbol) | • F37-33 (SOF) - F37-32 (E1)<br>• F37-30 (SOR) - F37-29 (E2) |
| Tool Setting | 2 V/DIV., 1 msec./DIV. |
| Condition | Engine switch on (IG), clearance sonar main switch on |



f. Using an oscilloscope, check waveform 2.

**Waveform 2 (Reference)**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F37-9 (EF) - F36-4 (GND1) |
| Tool Setting | 5 V/DIV., 1 msec./DIV. |
| Condition | Engine switch on (IG), shift lever in R |

## CHECK CLEARANCE WARNING ECU (w/o Parking Assist Monitor System)

a. Disconnect the F12 ECU connector.

b. Measure the voltage and resistance according to the value(s) in the table below.

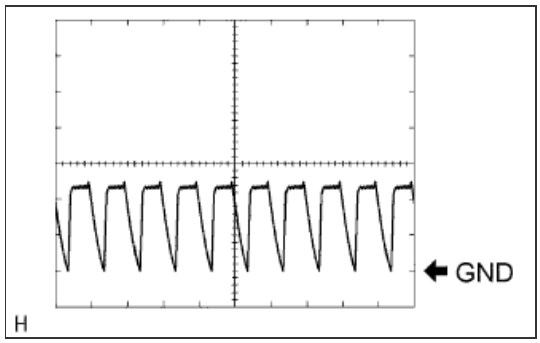
| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F12-15 (IG) - F12-17 (GND1) | G - W-B | IG power source signal | Engine switch on (IG) | 11 to 14 V |
| F12-15 (IG) - F12-17 (GND1) | G - W-B | IG power source signal | Engine switch off | Below 1 V |
| F12-12 (CSSW) - F12-17 (GND1) | Y - W-B | Clearance sonar main switch power source signal | Engine switch on (IG), clearance sonar main switch on | 11 to 14 V |
| F12-12 (CSSW) - F12-17 | Y - W-B | Clearance sonar main switch power source | Engine switch on (IG), clearance sonar main | Below 1 V |

| | | | | |
|---|---|---|---|---|
| (GND1) | | signal | switch off | |
| F12-17 (GND1) - Body ground | W-B - Body ground | ECU ground | Always | Below 1 Ω |

c. Reconnect the F12 ECU connector.

d. Measure the voltage according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F12-10 (BBZ) - F12-11 (EF) | G - L | Clearance warning buzzer signal | Buzzer not sounding | Below 1 V |
| F12-10 (BBZ) - F12-11 (EF) | G - L | Clearance warning buzzer signal | Buzzer sounding | Waveform 1 |
| F12-21 (BOF) - F12-19 (E1) | GR - R | No. 1 ultrasonic sensor circuit power source | Engine switch on (IG), clearance sonar main switch on | 7.2 to 8.8 V |
| F12-21 (BOF) - F12-19 (E1) | GR - R | No. 1 ultrasonic sensor circuit power source | Engine switch off | Below 1 V |
| F12-9 (SOF) - F12-19 (E1) | LG - R | No. 1 ultrasonic sensor circuit power source | Engine switch on (IG), clearance sonar main switch on | Waveform 2 |
| F12-7 (BOR) - F12-18 (E2) | R - GR | Rear ultrasonic sensor circuit power source | Engine switch on (IG), clearance sonar main switch on | 7.2 to 8.8 V |
| F12-7 (BOR) - F12-18 (E2) | R - GR | Rear ultrasonic sensor circuit power source | Engine switch off | Below 1 V |
| F12-24 (SOR) - F12-18 (E2) | LG - GR | Rear ultrasonic sensor circuit power source | Engine switch on (IG), clearance sonar main switch on | Waveform 2 |



e. Using an oscilloscope, check waveform 1.

| Terminal No. (Symbol) | • F12-9 (SOF) - F12-19 (E1)<br>• F12-24 (SOR) - F12-18 (E2) |
| Tool Setting | 2 V/DIV., 1 msec./DIV. |
| Condition | Engine switch on (IG), clearance sonar main switch on |

**for Preparation** Click here

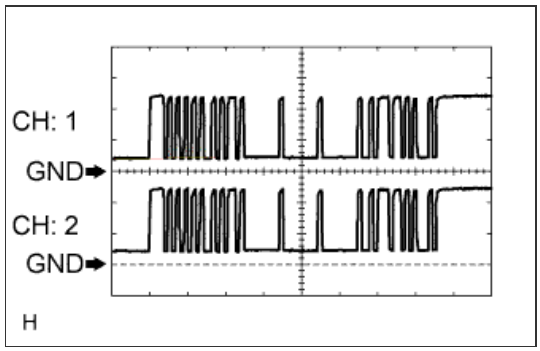
## CHECK PARKING ASSIST ECU (w/ Side Monitor System)

a. Disconnect the F74 and F75 parking assist ECU connectors.

b. Measure the voltage and resistance according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F74-1 (+B) - F74-4 (GND1) | L - W-B | Power source signal | Always | 11 to 14 V |
| F74-4 (GND1) - Body ground | W-B - Body ground | Ground | Always | Below 1 Ω |
| F74-8 (IG) - F74-4 (GND1) | G - W-B | IG power source signal | Engine switch on (IG) | 11 to 14 V |
| | | | Engine switch off | Below 1 V |
| F74-9 (ACC) - F74-4 (GND1) | GR - W-B | ACC power source signal | Engine switch on (ACC) | 11 to 14 V |
| | | | Engine switch off | Below 1 V |
| F75-25 (CSSW) - F74-4 (GND1) | Y - W-B | Back sonar or clearance sonar switch assembly power source signal | Engine switch on (IG), back sonar or clearance sonar switch assembly on | 11 to 14 V |
| | | | Engine switch on (IG), back sonar or clearance sonar switch assembly off | Below 1 V |

c. Reconnect the F74 and F75 parking assist ECU connectors.



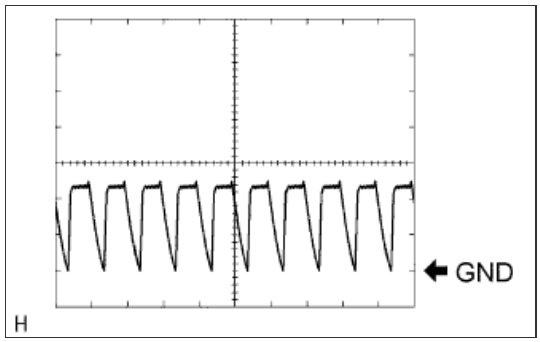
d. Measure the voltage according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F74-7 (BBZ) - F74-6 (EF) | G - L | No. 1 clearance warning buzzer signal | Buzzer does not sounding | Below 1 V |
| | | | Buzzer sounding | Pulse generation (See waveform 2) |
| F75-3 (LIN2) - F75-4 (CSG2) | LG - GR | Rear sensor circuit power source | Engine switch on (IG), back sonar or clearance sonar switch assembly on | Pulse generation (See waveform 1) |
| F75-5 (CSB1) - F75-6 (CSG1) | GR - R | Front sensor circuit power source | Engine switch off | Below 1 V |
| | | | Engine switch on (IG), back sonar or clearance sonar switch assembly on | 7.2 to 8.8 V |
| F75-20 (CSB2) - F75-4 (CSG2) | R - GR | Rear sensor circuit power source | Engine switch on (IG), back sonar or clearance sonar switch assembly on | 7.2 to 8.8 V |
| | | | Engine switch off | Below 1 V |
| F75-23 (LIN1) - F75-6 (CSG1) | LG - R | Front sensor circuit power source | Engine switch on (IG), back sonar or clearance sonar switch assembly on | Pulse generation (See waveform 1) |

e. Using an oscilloscope, check waveform 1.

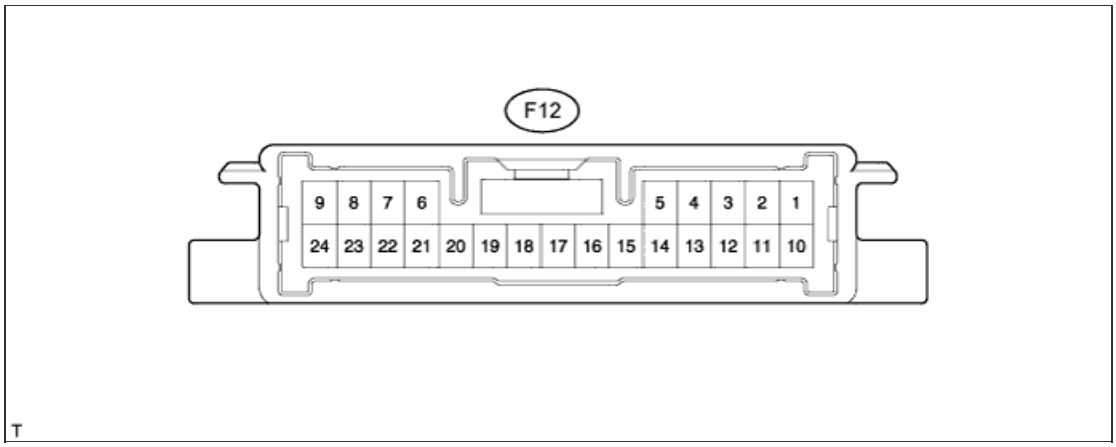
**Waveform 1 (Reference)**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | • F75-3 (LIN2) - F75-4 (CSG2)<br>• F75-23 (LIN1) - F75-6 (CSG1) |
| Tool Setting | 2 V/DIV., 1 msec./DIV. |
| Condition | Engine switch on (IG), back sonar or clearance sonar switch assembly on |



f. Using an oscilloscope, check waveform 2.

**Waveform 2 (Reference)**



| Item | Content |
|---|---|
| Terminal No. (Symbol) | F74-7 (BBZ) - F74-6 (EF) |
| Tool Setting | 5 V/DIV., 1 msec./DIV. |
| Condition | Buzzer sounding |

**NOTICE:**

The waveform amplitude varies depending on the volume setting.

## CHECK CLEARANCE WARNING ECU ASSEMBLY (w/o Side Monitor System)

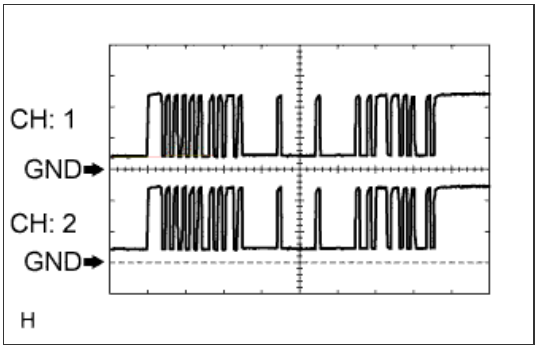
a. Disconnect the F12 clearance warning ECU assembly connector.

b. Measure the voltage and resistance according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F12-15 (IG) - F12-17 (GND1) | G - W-B | IG power source signal | Engine switch on (IG) | 11 to 14 V |
| | | | Engine switch off | Below 1 V |
| F12-12 (CSSW) - F12-17 (GND1) | Y - W-B | Back sonar or clearance sonar switch assembly power source signal | Engine switch on (IG), back sonar or clearance sonar switch assembly on | 11 to 14 V |
| | | | Engine switch on (IG), back sonar or clearance sonar switch assembly off | Below 1 V |
| F12-17 (GND1) - Body ground | W-B - Body ground | Ground | Always | Below 1 Ω |

c. Reconnect the F12 clearance warning ECU assembly connector.

d. Measure the voltage according to the value(s) in the table below.



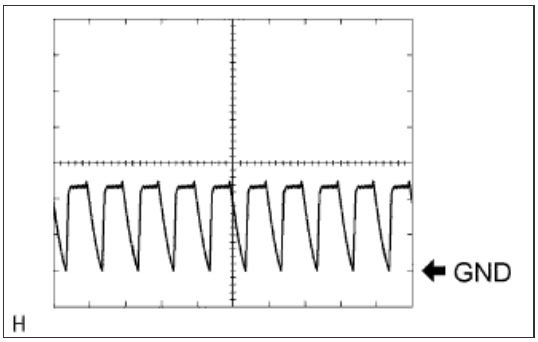
| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|

| | | | | |
|---|---|---|---|---|
| F12-7 (CSB2) - F12-18 (CSG2) | R - GR | Rear ultrasonic sensor circuit power source | Engine switch on (IG), back sonar or clearance sonar switch assembly on | 7.2 to 8.8 V |
| | | | Engine switch off | Below 1 V |
| F12-9 (LIN1) - F12-19 (CSG1) | LG - R | No. 1 ultrasonic sensor circuit power source | Engine switch on (IG), back sonar or clearance sonar switch assembly on | Pulse generation (See waveform 1 |
| F12-10 (BBZ) - F12-11 (EF) | G - L | Clearance warning buzzer signal | Buzzer not sounding | Below 1 V |
| | | | Buzzer sounding | Pulse generation (See waveform 2) |
| F12-21 (CSB1) - F12-19 (CSG1) | GR - R | No. 1 ultrasonic sensor circuit power source | Engine switch on (IG), back sonar or clearance sonar switch assembly on | 7.2 to 8.8 V |
| | | | Engine switch off | Below 1 V |
| F12-24 (LIN2) - F12-18 (CSG2) | LG - GR | Rear ultrasonic sensor circuit power source | Engine switch on (IG), back sonar or clearance sonar switch assembly on | Pulse generation (See waveform 1 |

e. Using an oscilloscope, check waveform 1.

**Waveform 1 (Reference)**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | • F12-9 (LIN1) - F12-19 (CSG1)<br>• F12-24 (LIN2) - F12-18 (CSG2) |
| Tool Setting | 2 V/DIV., 1 msec./DIV. |
| Condition | Engine switch on (IG), back sonar or clearance sonar switch assembly on |



f. Using an oscilloscope, check waveform 2.

**Waveform 2 (Reference)**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F12-10 (BBZ) - F12-11 (EF) |
| Tool Setting | 5 V/DIV., 1 msec./DIV. |
| Condition | Buzzer sounding |

**NOTICE:**

The waveform amplitude varies depending on the volume setting.

**for Preparation** Click here

## CHECK DTC

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus:
Body / Clearance Sonar / DTC.

e. Read the DTCs.

## CLEAR DTC

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus:
Body / Clearance Sonar / DTC.

e. Clear the DTCs.

**for Preparation** Click here

## DATA LIST

**HINT:**

Using the intelligent tester to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

**NOTICE:**

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Clearance Sonar / Data List.

e. According to the display on the tester, read the Data List.

**Clearance Sonar**

| Tester Display | Measurement Item/Range | Normal Condition | Diagnostic Note |
|---|---|---|---|
| Main Switch | Clearance sonar main switch/OFF or ON | OFF: Clearance sonar main switch off<br>ON: Clearance sonar main switch on | - |
| Clearance Sonar ECU Type | Type of clearance warning ECU/Normal or Steer | Normal: Normal clearance sonar type<br>Steer: Steering sensing type | - |
| Rr Sensor Onset Range | Buzzer activation range (for rear sensors)/Narrow or Wide | Narrow: Buzzer activation range narrow<br>Wide: Buzzer activation range wide | - |
| Keep Sense Buzzer | Buzzer operation/Not Avail or Avail | Not Avail: Buzzer sounds continuously<br>Avail: Buzzer stops | When the distance between the vehicle and obstacle does not change for more than 3 seconds. |
| Fr & Rr Buzzer Volume | Buzzer volume setting/L, M1, M2, M3 or H | L: Buzzer volume low<br>M1: Buzzer volume medium low<br>M2: Buzzer volume medium<br>M3: Buzzer volume medium high<br>H: Buzzer volume high | - |
| Sensor Condition N | Sensor operation/Not Avail or Avail | Not Avail: Sensor does not operate<br>Avail: Sensor operates | When the shift lever is in N. |
| Approach Display OFF | Display operation/Not Avail or Avail | Not Avail: Display does not display<br>Avail: Display displays | When moving away from a previously detected obstacle. |
| Display Mode | Display mode setting/All or Updisp | All: Display displays all sensors<br>Updisp: Display does not display | When the LEXUS parking assist-sensor system is normal. |

## ACTIVE TEST

**HINT:**

Using the intelligent tester to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Clearance Sonar / Active Test.

e. According to the display on the tester, perform the Active Test.

**Clearance Sonar**

| Tester Display | Test Part | Control Range | Diagnostic Note |
|---|---|---|---|
| Buzzer | No. 1 clearance warning buzzer | Operate or Stop | - |

**for Preparation** Click here

**HINT:**

If a trouble code is output during the DTC check, inspect the trouble areas listed for that code. For details of the code, refer to the "See page" below.

## DTC C1AE1 Front Left Sensor Malfunction

**for Preparation** Click here

### DESCRIPTION

The No. 1 ultrasonic sensor LH is installed on the front bumper. The ECU detects obstacles based on signals received from the No. 1 ultrasonic sensor LH. If the No. 1 ultrasonic sensor LH has an open or other malfunction, it will not function normally.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1AE1 | A malfunction of the No. 1 ultrasonic sensor LH. | • No. 1 ultrasonic sensor LH<br>• Parking assist ECU*1<br>• Clearance warning ECU*2 |

*1: w/ Parking Assist Monitor System
*2: w/o Parking Assist Monitor System

### INSPECTION PROCEDURE

**NOTICE:**

If the DTC is output after repairs, turn the engine switch on (IG) and move the shift lever to R. Then clear the DTC.

#### 1.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AE1 is output | A |
| No DTC is output | B |

B → USE SIMULATION METHOD TO CHECK (**Click here**)

A

#### 2.REPLACE NO. 1 ULTRASONIC SENSOR LH

a. Replace the No. 1 ultrasonic sensor LH with a normally functioning sensor ( Click here).

NEXT

#### 3.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AE1 is output (w/ Parking Assist Monitor System) | A |
| DTC C1AE1 is output (w/o Parking Assist Monitor System) | B |
| No DTC is output | C |

B → REPLACE CLEARANCE WARNING ECU (**Click here**)

C → END

A

REPLACE PARKING ASSIST ECU (Click here)

## DTC C1AE9 Rear Right Sensor Malfunction

**for Preparation** Click here

### DESCRIPTION

The No. 2 ultrasonic sensor RH is installed on the rear bumper. The ECU detects obstacles based on signals received from the No. 2 ultrasonic sensor RH. If the No. 2 ultrasonic sensor RH has an open or other malfunction, it will not function normally.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1AE9 | A malfunction of the No. 2 ultrasonic sensor RH. | • No. 2 ultrasonic sensor RH<br>• Parking assist ECU*1<br>• Clearance warning ECU*2 |

*1: w/ Parking Assist Monitor System
*2: w/o Parking Assist Monitor System

### INSPECTION PROCEDURE

**NOTICE:**

If the DTC is output after repairs, turn the engine switch on (IG) and move the shift lever to R. Then clear the DTC.

#### 1.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AE9 is output | A |
| No DTC is output | B |

B → USE SIMULATION METHOD TO CHECK (**Click here**)

A

#### 2.REPLACE NO. 2 ULTRASONIC SENSOR RH

a. Replace the No. 2 ultrasonic sensor RH with a normally functioning sensor ( Click here).

NEXT

#### 3.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AE9 is output (w/ Parking Assist Monitor System) | A |
| DTC C1AE9 is output (w/o Parking Assist Monitor System) | B |
| No DTC is output | C |

B → REPLACE CLEARANCE WARNING ECU (**Click here**)

C → END

A

REPLACE PARKING ASSIST ECU (Click here)

# DTC C1AE1 Front Left Sensor Malfunction

**for Preparation** Click here

## DESCRIPTION

The No. 1 ultrasonic sensor (FL sensor) is installed on the front bumper. The ECU detects obstacles based on signals received from the No. 1 ultrasonic sensor (FL sensor). If the No. 1 ultrasonic sensor (FL sensor) has an open or other malfunction, it will not function normally.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1AE1 | A malfunction of the No. 1 ultrasonic sensor (FL sensor). | • No. 1 ultrasonic sensor (FL sensor)<br>• Parking assist ECU*1<br>• Clearance warning ECU assembly*2 |

*1: w/ Side Monitor System
*2: w/o Side Monitor System

## INSPECTION PROCEDURE

**NOTICE:**

If the DTC is output after repairs, turn the engine switch on (IG) and move the shift lever to R. Then clear the DTC.

**1.CHECK FOR DTC**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**
**DTC C1AE1 is not output.**

NG → **Go to step 2**

OK ↓

**USE SIMULATION METHOD TO CHECK (Click here)**

**2.REPLACE NO. 1 ULTRASONIC SENSOR (FL SENSOR)**

a. Replace the No. 1 ultrasonic sensor (FL sensor) with a normally functioning one ( Click here).

NEXT ↓

**3.CHECK FOR DTC**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AE1 is not output | A |
| DTC C1AE1 is output (w/ Side Monitor System) | B |
| DTC C1AE1 is output (w/o Side Monitor System) | C |

B → **REPLACE PARKING ASSIST ECU (Click here)**

C → **REPLACE CLEARANCE WARNING ECU ASSEMBLY (Click here)**

A ↓

**END (NO. 1 ULTRASONIC SENSOR [FL SENSOR] IS DEFECTIVE)**

## DTC C1AE9 Rear Right Sensor Malfunction

**for Preparation** Click here

### DESCRIPTION

The No. 1 ultrasonic sensor (RR sensor) is installed on the rear bumper. The ECU detects obstacles based on signals received from the No. 1 ultrasonic sensor (RR sensor). If the No. 1 ultrasonic sensor (RR sensor) has an open or other malfunction, it will not function normally.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1AE9 | A malfunction of the No. 1 ultrasonic sensor (RR sensor). | • No. 1 ultrasonic sensor (RR sensor)<br>• Parking assist ECU*1<br>• Clearance warning ECU assembly*2 |

*1: w/ Side Monitor System
*2: w/o Side Monitor System

### INSPECTION PROCEDURE

**NOTICE:**

If the DTC is output after repairs, turn the engine switch on (IG) and move the shift lever to R. Then clear the DTC.

**1.CHECK FOR DTC**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**
**DTC C1AE9 is not output.**

NG → Go to step 2

OK

**USE SIMULATION METHOD TO CHECK (Click here)**

**2.REPLACE NO. 1 ULTRASONIC SENSOR (RR SENSOR)**

a. Replace the No. 1 ultrasonic sensor (RR sensor) with a normally functioning one ( Click here).

NEXT

**3.CHECK FOR DTC**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AE9 is not output | A |
| DTC C1AE9 is output (w/ Side Monitor System) | B |
| DTC C1AE9 is output (w/o Side Monitor System) | C |

B → REPLACE PARKING ASSIST ECU (Click here)

C → REPLACE CLEARANCE WARNING ECU ASSEMBLY (Click here)

A

**END (NO. 1 ULTRASONIC SENSOR [RR SENSOR] IS DEFECTIVE)**

## DTC C1AE4 Front Right Sensor Malfunction

**for Preparation** Click here

### DESCRIPTION

The No. 1 ultrasonic sensor RH is installed on the front bumper. The ECU detects obstacles based on signals received from the No. 1 ultrasonic sensor RH. If the No. 1 ultrasonic sensor RH has an open circuit or other malfunction, it will not function normally.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1AE4 | A malfunction of the No. 1 ultrasonic sensor RH. | • No. 1 ultrasonic sensor RH<br>• Parking assist ECU*1<br>• Clearance warning ECU*2 |

*1: w/ Parking Assist Monitor System
*2: w/o Parking Assist Monitor System

### INSPECTION PROCEDURE

**NOTICE:**

If the DTC is output after repairs, turn the engine switch on (IG) and move the shift lever to R. Then clear the DTC.

**1.CHECK FOR DTC**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AE4 is output | A |
| No DTC is output | B |

B → USE SIMULATION METHOD TO CHECK (**Click here**)

A

**2.REPLACE NO. 1 ULTRASONIC SENSOR RH**

a. Replace the No. 1 ultrasonic sensor RH with a normally functioning sensor ( Click here).

NEXT

**3.CHECK FOR DTC**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AE4 is output (w/ Parking Assist Monitor System) | A |
| DTC C1AE4 is output (w/o Parking Assist Monitor System) | B |
| No DTC is output | C |

B → REPLACE CLEARANCE WARNING ECU (**Click here**)

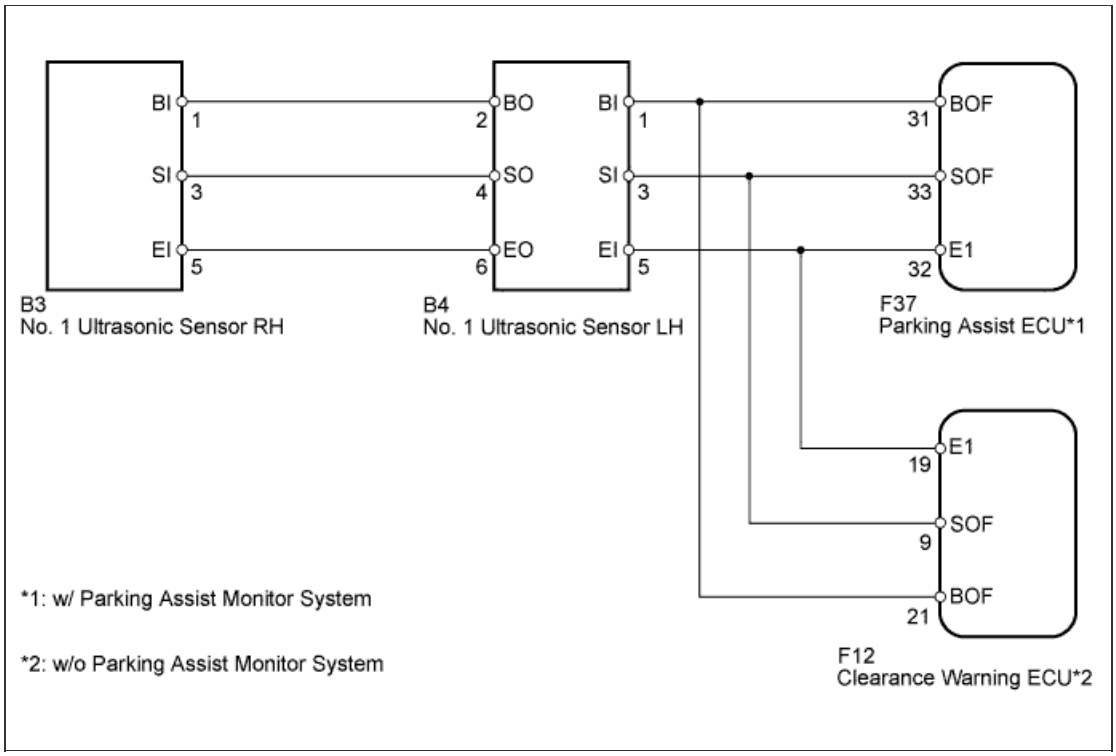
C → END

A

REPLACE PARKING ASSIST ECU (Click here)

## DTC C1AEC Front Sensor Communication Malfunction

**for Preparation** Click here



### DESCRIPTION

This DTC is stored when there is an open or short circuit in the communication line between the front sensors and the ECU, or when there is a malfunction in a front sensor.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1AEC | An open or short circuit in the communication line between the front sensors and ECU or a malfunction in a front sensor during initialization mode after the engine switch is turned on (IG). | • Front ultrasonic sensor circuit<br>• Parking assist ECU*1<br>• Clearance warning ECU*2 |

*1: w/ Parking Assist Monitor System
*2: w/o Parking Assist Monitor System

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**1.CHECK DTC OUTPUT**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AEC is output (w/ Parking Assist Monitor System) | A |
| DTC C1AEC is output (w/o Parking Assist Monitor System) | B |
| No DTC is output | C |

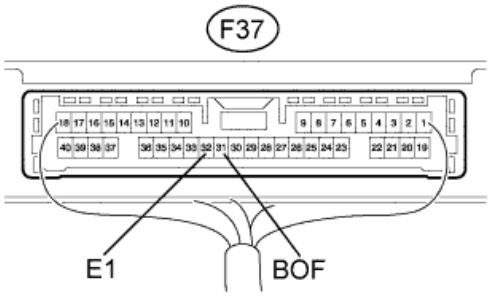
| | |
|---|---|
| B | Go to step 10 |
| C | USE SIMULATION METHOD TO CHECK (Click here) |

A

## 2.CHECK PARKING ASSIST ECU

a. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**



| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F37-31 (BOF) - Body ground | Engine switch on (IG) | 7.2 to 8.8 V |

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F37-32 (E1) - Body ground | Always | Below 1 Ω |

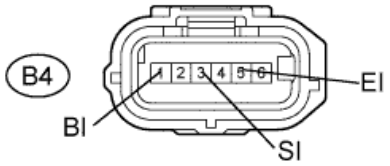
Component with harness connected:
(Parking Assist ECU)

NG → REPLACE PARKING ASSIST ECU (Click here)

OK

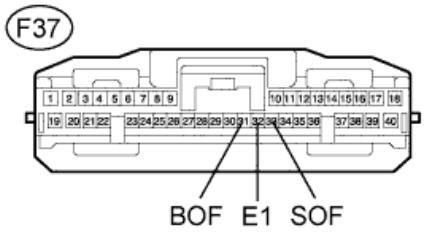
## 3.CHECK HARNESS AND CONNECTOR (NO. 1 ULTRASONIC SENSOR LH - PARKING ASSIST ECU)

a. Disconnect the B4 sensor connector.



b. Disconnect the F37 ECU connector.

c. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| B4-1 (BI) - F37-31 (BOF) | Always | Below 1 Ω |
| B4-3 (SI) - F37-33 (SOF) | Always | Below 1 Ω |
| B4-5 (EI) - F37-32 (E1) | Always | Below 1 Ω |
| B4-1 (BI) - Body ground | Always | 10 kΩ or higher |
| B4-3 (SI) - Body ground | Always | 10 kΩ or higher |
| B4-5 (EI) - Body ground | Always | 10 kΩ or higher |

Front view of wire harness connector:
(to No. 1 Ultrasonic Sensor LH)

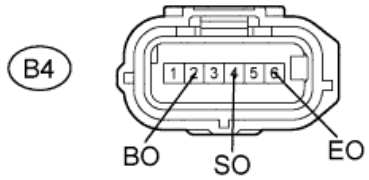
Front view of wire harness connector:
(to Parking Assist ECU)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

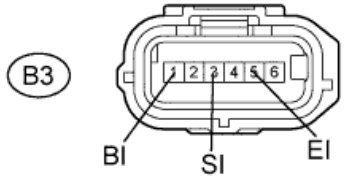
## 4.CHECK HARNESS AND CONNECTOR (NO. 1 ULTRASONIC SENSOR LH - NO. 1 ULTRASONIC SENSOR RH)

a. Disconnect the B4 and B3 sensor connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**



| Tester Connection | Condition | Specified Condition |
|---|---|---|
| B4-2 (BO) - B3-1 | Always | Below 1 Ω |

| | | |
|---|---|---|
| (BI) | | |
| B4-4 (SO) - B3-3 (SI) | Always | Below 1 Ω |
| B4-6 (EO) - B3-5 (EI) | Always | Below 1 Ω |
| B4-2 (BO) - Body ground | Always | 10 kΩ or higher |
| B4-4 (SO) - Body ground | Always | 10 kΩ or higher |
| B4-6 (EO) - Body ground | Always | 10 kΩ or higher |

Front view of wire harness connector:
(to No. 1 Ultrasonic Sensor LH)

Front view of wire harness connector:
(to No. 1 Ultrasonic Sensor RH)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 5.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

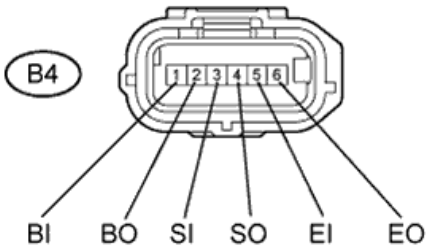
**Result**

| Result | Proceed to |
|---|---|
| DTC C1AEC is output | A |
| No DTC is output | B |

NG → USE SIMULATION METHOD TO CHECK (Click here)

OK

## 6.INSPECT NO. 1 ULTRASONIC SENSOR LH



a. Disconnect the B4 sensor connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| B4-1 (BI) - B4-5 (EI) | Always | 10 kΩ or higher |
| B4-1 (BI) - B4-2 (BO) | Always | 10 kΩ or higher |
| B4-3 (SI) - B4-4 (SO) | Always | Below 1 Ω |
| B4-5 (EI) - B4-6 (EO) | Always | Below 1 Ω |

Front view of wire harness connector:
(to No. 1 Ultrasonic Sensor LH)

NG → REPLACE NO. 1 ULTRASONIC SENSOR LH (Click here)

OK

## 7.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AEC is output | A |
| No DTC is output | B |

B → END

A

## 8.REPLACE NO. 1 ULTRASONIC SENSOR RH

a. Replace the No. 1 ultrasonic sensor RH with a normally functioning sensor ( Click here)

NEXT

## 9.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AEC is output | A |
| No DTC is output | B |

B → END

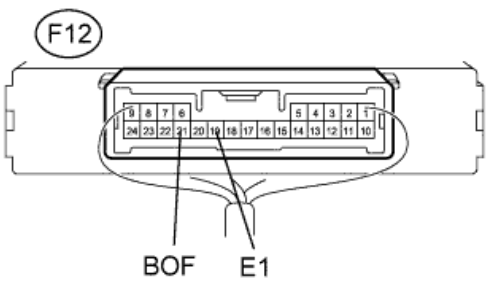
A

REPLACE PARKING ASSIST ECU (Click here)

## 10.CHECK CLEARANCE WARNING ECU

a. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**



| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F12-21 (BOF) - Body ground | Engine switch on (IG) | 7.2 to 8.8 V |

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

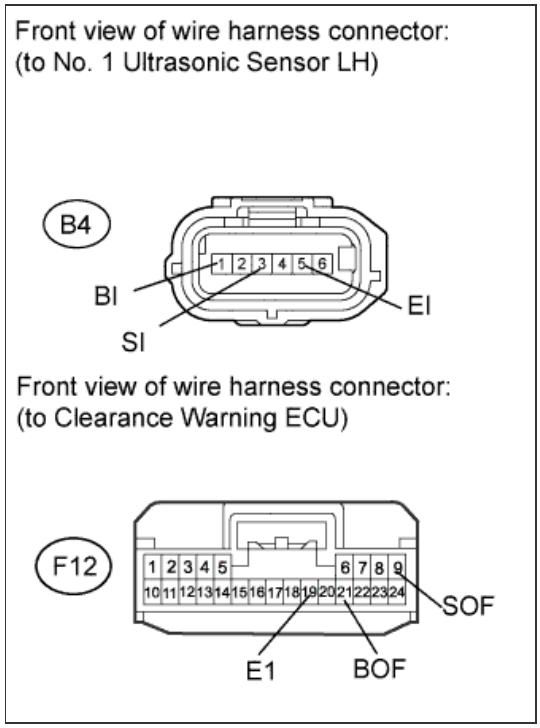
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F12-19 (E1) - Body ground | Always | Below 1 Ω |

Component with harness connected:
(Clearance Warning ECU)

NG → REPLACE CLEARANCE WARNING ECU (Click here)

OK

## 11.CHECK HARNESS AND CONNECTOR (NO. 1 ULTRASONIC SENSOR LH - CLEARANCE WARNING ECU)



a. Disconnect the B4 sensor connector.

b. Disconnect the F12 ECU connector.

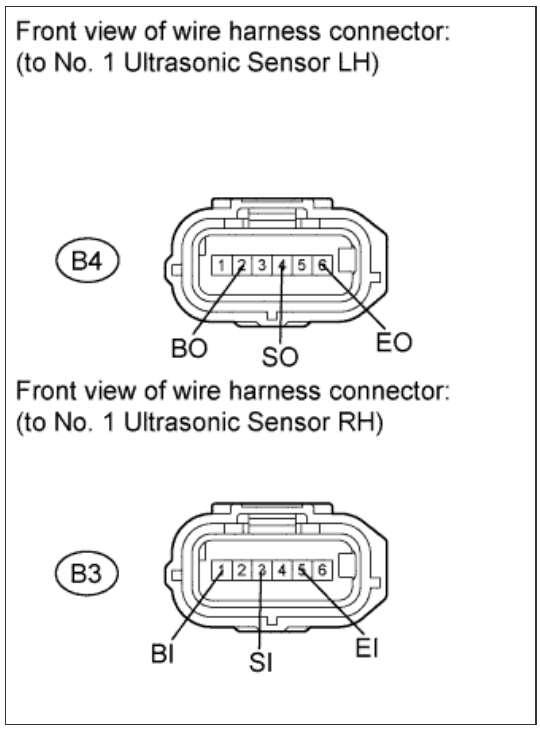
c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| B4-1 (BI) - F12-21 (BOF) | Always | Below 1 Ω |
| B4-3 (SI) - F12-9 (SOF) | Always | Below 1 Ω |
| B4-5 (EI) - F12-19 (E1) | Always | Below 1 Ω |
| B4-1 (BI) - Body ground | Always | 10 kΩ or higher |
| B4-3 (SI) - Body ground | Always | 10 kΩ or higher |
| B4-5 (EI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



## 12.CHECK HARNESS AND CONNECTOR (NO. 1 ULTRASONIC SENSOR LH - NO. 1 ULTRASONIC SENSOR RH)

a. Disconnect the B4 and B3 sensor connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| B4-2 (BO) - B3-1 (BI) | Always | Below 1 Ω |
| B4-4 (SO) - B3-3 (SI) | Always | Below 1 Ω |
| B4-6 (EO) - B3-5 (EI) | Always | Below 1 Ω |
| B4-2 (BO) - Body ground | Always | 10 kΩ or higher |
| B4-4 (SO) - Body ground | Always | 10 kΩ or higher |
| B4-6 (EO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 13.CHECK FOR DTC

a. Clear the DTCs (Click here).

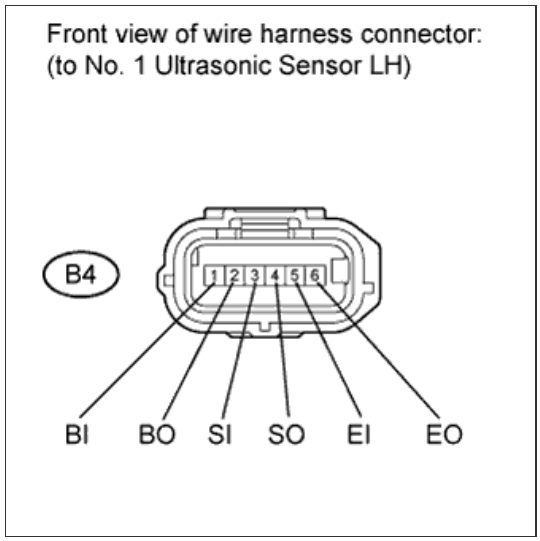
b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AEC is output | A |
| No DTC is output | B |

B → USE SIMULATION METHOD TO CHECK (**Click here**)

A



## 14.INSPECT NO. 1 ULTRASONIC SENSOR LH

a. Disconnect the B4 sensor connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| B4-1 (BI) - B4-5 (EI) | Always | 10 kΩ or higher |
| B4-1 (BI) - B4-2 (BO) | Always | 10 kΩ or higher |
| B4-3 (SI) - B4-4 (SO) | Always | Below 1 Ω |
| B4-5 (EI) - B4-6 (EO) | Always | Below 1 Ω |

NG → REPLACE NO. 1 ULTRASONIC SENSOR LH (**Click here**)

OK

## 15.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AEC is output | A |
| No DTC is output | B |

B → END

A

## 16.REPLACE NO. 1 ULTRASONIC SENSOR RH

a. Replace the No. 1 ultrasonic sensor RH with a normally functioning sensor ( Click here).

NEXT

## 17.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AEC is output | A |
| No DTC is output | B |

B → END

A

REPLACE CLEARANCE WARNING ECU (**Click here**)

## DTC C1AE4 Front Right Sensor Malfunction

**for Preparation** Click here

### DESCRIPTION

The No. 1 ultrasonic sensor (FR sensor) is installed on the front bumper. The ECU detects obstacles based on signals received from the No. 1 ultrasonic sensor (FR sensor). If the No. 1 ultrasonic sensor (FR sensor) has an open circuit or other malfunction, it will not function normally.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1AE4 | A malfunction of the No. 1 ultrasonic sensor (FR sensor). | • No. 1 ultrasonic sensor (FR sensor)<br>• Parking assist ECU*1<br>• Clearance warning ECU assembly*2 |

*1: w/ Side Monitor System
*2: w/o Side Monitor System

### INSPECTION PROCEDURE

**NOTICE:**

If the DTC is output after repairs, turn the engine switch on (IG) and move the shift lever to R. Then clear the DTC.

**1.CHECK FOR DTC**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**
**DTC C1AE4 is not output.**

NG → Go to step 2

OK ↓

**USE SIMULATION METHOD TO CHECK (Click here)**

**2.REPLACE NO. 1 ULTRASONIC SENSOR (FR SENSOR)**

a. Replace the No. 1 ultrasonic sensor (FR sensor) with a normally functioning one ( Click here).

NEXT ↓

**3.CHECK FOR DTC**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AE4 is not output | A |
| DTC C1AE4 is output (w/ Side Monitor System) | B |
| DTC C1AE4 is output (w/o Side Monitor System) | C |

B → REPLACE PARKING ASSIST ECU (Click here)

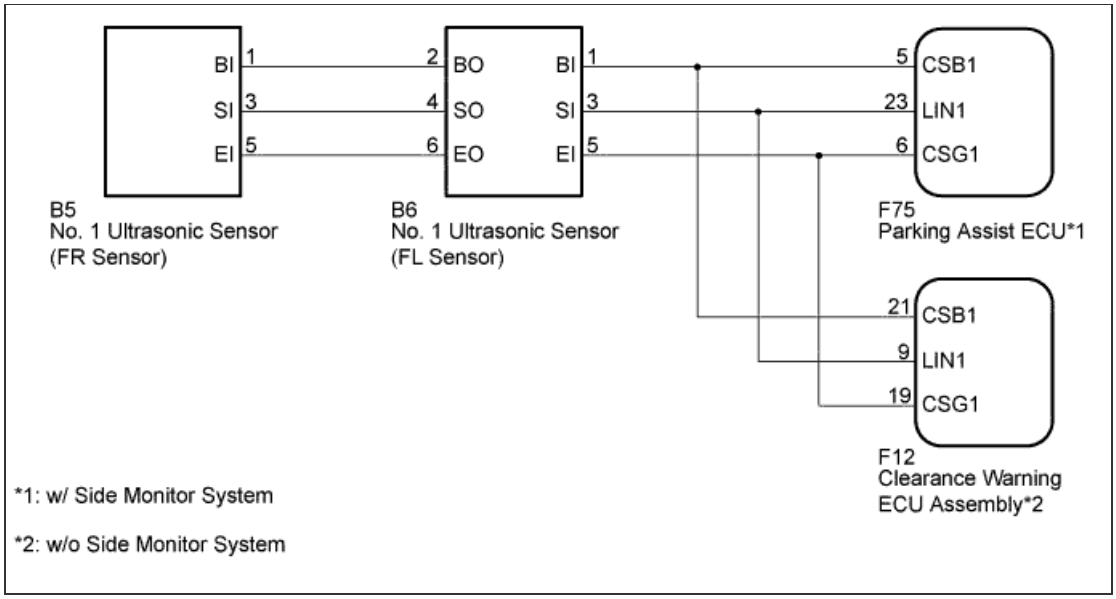
C → REPLACE CLEARANCE WARNING ECU ASSEMBLY (Click here)

A ↓

**END (NO. 1 ULTRASONIC SENSOR [FR SENSOR] IS DEFECTIVE)**

## DTC C1AEC Front Sensor Communication Malfunction

**for Preparation** Click here



### DESCRIPTION

This DTC is stored when there is an open or short circuit in the communication line between the front sensors and the ECU, or when there is a malfunction in a front sensor.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1AEC | An open or short circuit in the communication line between the front sensors and ECU or a malfunction in a front sensor during initialization mode after the engine switch is turned on (IG). | • No. 1 ultrasonic sensor (front side)<br>• Harness or connector<br>• Parking assist ECU*1<br>• Clearance warning ECU assembly*2 |

*1: w/ Side Monitor System
*2: w/o Side Monitor System

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**1.CHECK FOR DTC**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AEC is output (w/ Side Monitor System) | A |
| DTC C1AEC is output (w/o Side Monitor System) | B |
| DTC C1AEC is not output | C |

B → Go to step 10

C → USE SIMULATION METHOD TO CHECK (Click here)

A

**2.CHECK HARNESS AND CONNECTOR (NO. 1 ULTRASONIC SENSOR [FL SENSOR] - PARKING ASSIST ECU)**

a. Disconnect the B6 No. 1 ultrasonic sensor (FL sensor) connector.

b. Disconnect the F75 parking assist ECU connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| B6-1 (BI) - F75-5 (CSB1) | Always | Below 1 Ω |
| B6-3 (SI) - F75-23 (LIN1) | Always | Below 1 Ω |
| B6-5 (EI) - F75-6 (CSG1) | Always | Below 1 Ω |
| B6-1 (BI) - Body ground | Always | 10 kΩ or higher |
| B6-3 (SI) - Body ground | Always | 10 kΩ or higher |
| B6-5 (EI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**3.CHECK HARNESS AND CONNECTOR (NO. 1 ULTRASONIC SENSOR [FL SENSOR] - NO. 1 ULTRASONIC SENSOR [FR SENSOR])**

a. Disconnect the B6 No. 1 ultrasonic sensor (FL sensor) connector.

b. Disconnect the B5 No. 1 ultrasonic sensor (FR sensor) connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| B6-2 (BO) - B5-1 (BI) | Always | Below 1 Ω |
| B6-4 (SO) - B5-3 (SI) | Always | Below 1 Ω |
| B6-6 (EO) - B5-5 (EI) | Always | Below 1 Ω |
| B6-2 (BO) - Body ground | Always | 10 kΩ or higher |
| B6-4 (SO) - Body ground | Always | 10 kΩ or higher |
| B6-6 (EO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

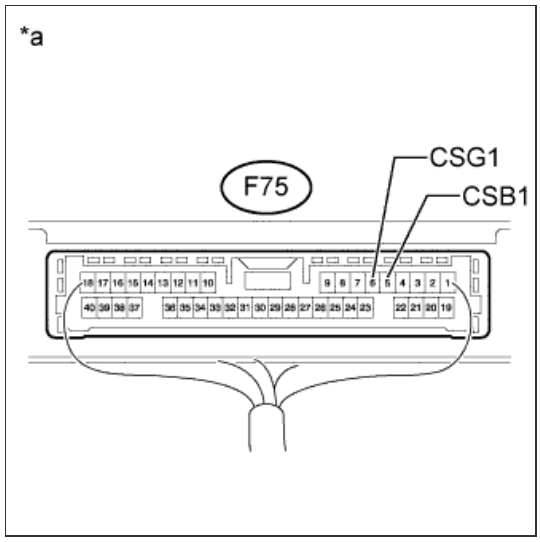
OK

**4.CHECK PARKING ASSIST ECU**

a. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F75-5 (CSB1) - Body ground | Engine switch on (IG) | 7.2 to 8.8 V |



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-6 (CSG1) - Body ground | Always | Below 1 Ω |

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected (Parking Assist ECU) |

NG → REPLACE PARKING ASSIST ECU (Click here)

OK

**5.CHECK FOR DTC**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**
**DTC C1AEC is not output.**

NG → Go to step 6

OK

USE SIMULATION METHOD TO CHECK (Click here)

**6.REPLACE NO. 1 ULTRASONIC SENSOR (FL SENSOR)**

a. Replace the No. 1 ultrasonic sensor (FL sensor) with a normally functioning one ( Click here).

NEXT

**7.CHECK FOR DTC**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**
**DTC C1AEC is not output.**

NG → Go to step 8

OK

END (NO. 1 ULTRASONIC SENSOR [FL SENSOR] IS DEFECTIVE)

**8.REPLACE NO. 1 ULTRASONIC SENSOR (FR SENSOR)**

a. Replace the No. 1 ultrasonic sensor (FR sensor) with a normally functioning one ( Click here).

NEXT

9.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**
**DTC C1AEC is not output.**

NG → REPLACE PARKING ASSIST ECU (Click here)

OK

END (NO. 1 ULTRASONIC SENSOR [FR SENSOR] IS DEFECTIVE)

10.CHECK HARNESS AND CONNECTOR (NO. 1 ULTRASONIC SENSOR [FL SENSOR] - CLEARANCE WARNING ECU)

a. Disconnect the B6 No. 1 ultrasonic sensor (FL sensor) connector.

b. Disconnect the F12 clearance warning ECU assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| B6-1 (BI) - F12-21 (CSB1) | Always | Below 1 Ω |
| B6-3 (SI) - F12-9 (LIN1) | Always | Below 1 Ω |
| B6-5 (EI) - F12-19 (CSG1) | Always | Below 1 Ω |
| B6-1 (BI) - Body ground | Always | 10 kΩ or higher |
| B6-3 (SI) - Body ground | Always | 10 kΩ or higher |
| B6-5 (EI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

11.CHECK HARNESS AND CONNECTOR (NO. 1 ULTRASONIC SENSOR [FL SENSOR] - NO. 1 ULTRASONIC SENSOR [FR SENSOR])

a. Disconnect the B6 No. 1 ultrasonic sensor (FL sensor) connector.

b. Disconnect the B5 No. 1 ultrasonic sensor (FR sensor) connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

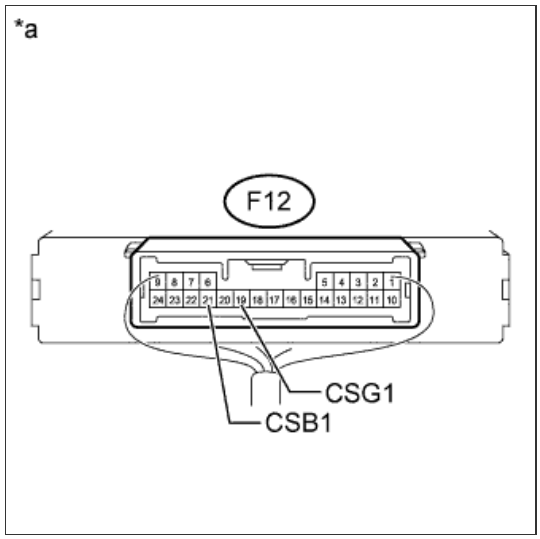
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| B6-2 (BO) - B5-1 (BI) | Always | Below 1 Ω |
| B6-4 (SO) - B5-3 (SI) | Always | Below 1 Ω |
| B6-6 (EO) - B5-5 (EI) | Always | Below 1 Ω |
| B6-2 (BO) - Body ground | Always | 10 kΩ or higher |
| B6-4 (SO) - Body ground | Always | 10 kΩ or higher |
| B6-6 (EO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 12.CHECK CLEARANCE WARNING ECU ASSEMBLY

a. Measure the voltage according to the value(s) in the table below.



**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F12-21 (CSB1) - Body ground | Engine switch on (IG) | 7.2 to 8.8 V |

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F12-19 (CSG1) - Body ground | Always | Below 1 Ω |

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected (Clearance Warning ECU Assembly) |

NG → REPLACE CLEARANCE WARNING ECU ASSEMBLY (Click here)

OK

## 13.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**
**DTC C1AEC is not output.**

NG → Go to step 14

OK

USE SIMULATION METHOD TO CHECK (Click here)

## 14.REPLACE NO. 1 ULTRASONIC SENSOR (FL SENSOR)

a. Replace the No. 1 ultrasonic sensor (FL sensor) with a new functioning one ( Click here).

NEXT

## 15.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**
**DTC C1AEC is not output.**

NG → Go to step 16

OK

END (NO. 1 ULTRASONIC SENSOR [FL SENSOR] IS DEFECTIVE)

16.REPLACE NO. 1 ULTRASONIC SENSOR (FR SENSOR)

a. Replace the No. 1 ultrasonic sensor (FR sensor) with a normally functioning one ( Click here).

NEXT

17.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**
**DTC C1AEC is not output.**

NG → REPLACE CLEARANCE WARNING ECU ASSEMBLY (**Click here**)

OK

END (NO. 1 ULTRASONIC SENSOR [FR SENSOR] IS DEFECTIVE)

## DTC C1AE6 Rear Left Sensor Malfunction

**for Preparation** Click here

### DESCRIPTION

The No. 2 ultrasonic sensor LH is installed on the rear bumper. The ECU detects obstacles based on signals received from the No. 2 ultrasonic sensor LH. If the No. 2 ultrasonic sensor LH has an open circuit or other malfunction, it will not function normally.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1AE6 | A malfunction of the No. 2 ultrasonic sensor LH. | • No. 2 ultrasonic sensor LH<br>• Parking assist ECU*1<br>• Clearance warning ECU*2 |

*1: w/ Parking Assist Monitor System
*2: w/o Parking Assist Monitor System

### INSPECTION PROCEDURE

**NOTICE:**

If the DTC is output after repairs, turn the engine switch on (IG) and move the shift lever to R. Then clear the DTC.

**1.CHECK FOR DTC**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AE6 is output | A |
| No DTC is output | B |

B → USE SIMULATION METHOD TO CHECK (**Click here**)

A

**2.REPLACE NO. 2 ULTRASONIC SENSOR LH**

a. Replace the No. 2 ultrasonic sensor LH with a normally functioning sensor ( Click here).

NEXT

**3.CHECK FOR DTC**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AE6 is output (w/ Parking Assist Monitor System) | A |

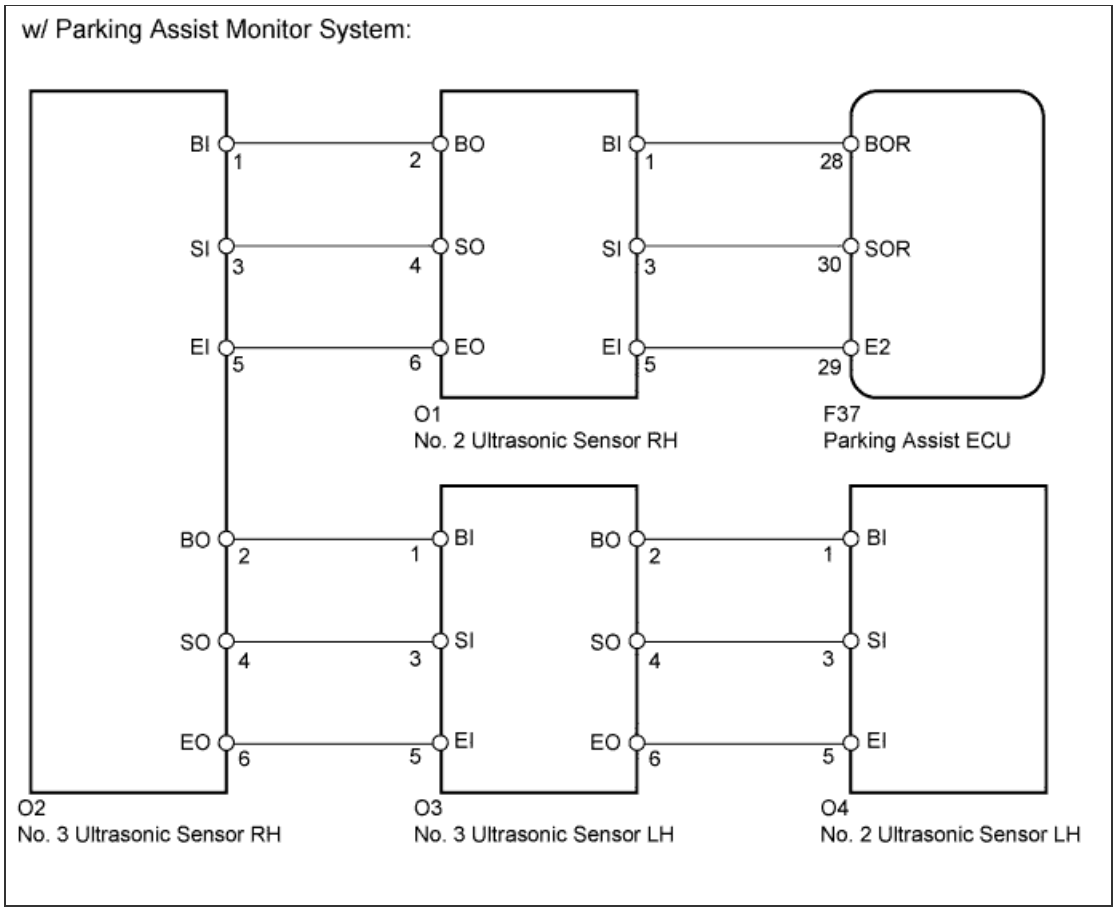
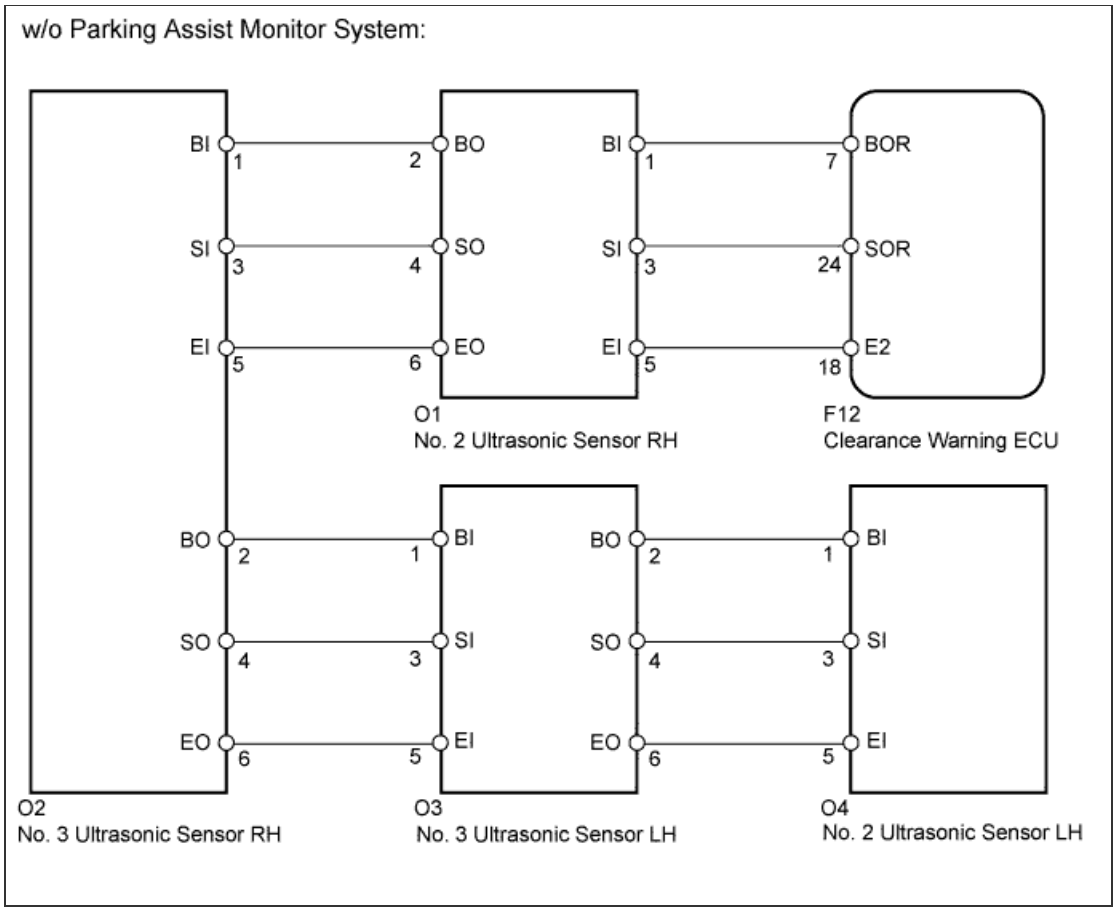
## DTC C1AED Rear Sensor Communication Malfunction

**for Preparation** Click here



### DESCRIPTION



This DTC is stored when there is an open or short circuit in the communication line between the rear sensors and the ECU, or when there is a malfunction in a rear sensor.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1AED | An open or short circuit in the communication line between the rear sensors and ECU or a malfunction in a rear sensor during initialization mode after the engine switch is turned on (IG). | • Rear ultrasonic sensor circuit<br>• Parking assist ECU*1<br>• Clearance warning ECU*2 |

*1: w/ Parking Assist Monitor System
*2: w/o Parking Assist Monitor System

### WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK DTC OUTPUT

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AED is output (w/ Parking Assist Monitor System) | A |
| DTC C1AED is output (w/o Parking Assist Monitor System) | B |
| No DTC is output | C |

B → Go to step 16

C → USE SIMULATION METHOD TO CHECK (Click here)

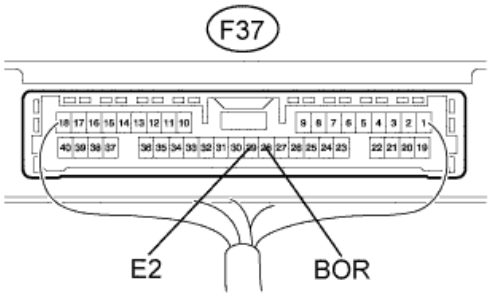
A

### 2.CHECK PARKING ASSIST ECU

a. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F37-28 (BOR) - Body ground | Engine switch on (IG) | 7.2 to 8.8 V |



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|

| | | |
|---|---|---|
| F37-29 (E2) - Body ground | Always | Below 1 Ω |

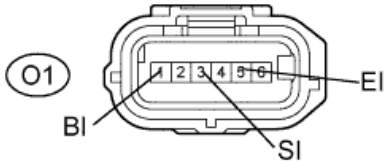
Component with harness connected:
(Parking Assist ECU)

NG → REPLACE PARKING ASSIST ECU (Click here)

OK

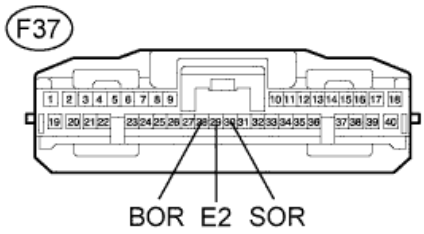
### 3.CHECK HARNESS AND CONNECTOR (NO. 2 ULTRASONIC SENSOR RH - PARKING ASSIST ECU)

a. Disconnect the O1 sensor connector.



b. Disconnect the F37 ECU connector.

c. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| O1-1 (BI) - F37-28 (BOR) | Always | Below 1 Ω |
| O1-3 (SI) - F37-30 (SOR) | Always | Below 1 Ω |
| O1-5 (EI) - F37-29 (E2) | Always | Below 1 Ω |
| O1-1 (BI) - Body ground | Always | 10 kΩ or higher |
| O1-3 (SI) - Body ground | Always | 10 kΩ or higher |
| O1-5 (EI) - Body ground | Always | 10 kΩ or higher |

Front view of wire harness connector:
(to No. 2 Ultrasonic Sensor RH)

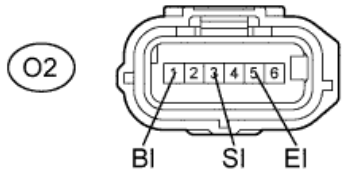
Front view of wire harness connector:
(to Parking Assist ECU)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

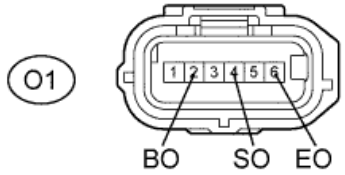
### 4.CHECK HARNESS AND CONNECTOR (NO. 3 ULTRASONIC SENSOR RH - NO. 2 ULTRASONIC SENSOR RH)

a. Disconnect the O1 and O2 sensor connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**



| Tester Connection | Condition | Specified Condition |
|---|---|---|
| O2-1 (BI) - O1-2 (BO) | Always | Below 1 Ω |
| O2-3 (SI) - O1-4 (SO) | Always | Below 1 Ω |
| O2-5 (EI) - O1-6 (EO) | Always | Below 1 Ω |

| | | |
|---|---|---|
| O2-1 (BI) - Body ground | Always | 10 kΩ or higher |
| O2-3 (SI) - Body ground | Always | 10 kΩ or higher |
| O2-5 (EI) - Body ground | Always | 10 kΩ or higher |

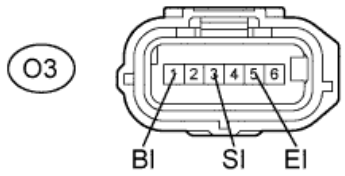
Front view of wire harness connector:
(to No. 3 Ultrasonic Sensor RH)

Front view of wire harness connector:
(to No. 2 Ultrasonic Sensor RH)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

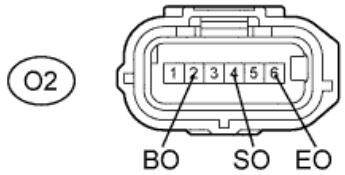
OK

## 5.CHECK HARNESS AND CONNECTOR (NO. 3 ULTRASONIC SENSOR LH - NO. 3 ULTRASONIC SENSOR RH)



a. Disconnect the O2 and O3 sensor connectors.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| O3-1 (BI) - O2-2 (BO) | Always | Below 1 Ω |
| O3-3 (SI) - O2-4 (SO) | Always | Below 1 Ω |
| O3-5 (EI) - O2-6 (EO) | Always | Below 1 Ω |
| O3-1 (BI) - Body ground | Always | 10 kΩ or higher |
| O3-3 (SI) - Body ground | Always | 10 kΩ or higher |
| O3-5 (EI) - Body ground | Always | 10 kΩ or higher |

Front view of wire harness connector:
(to No. 3 Ultrasonic Sensor LH)

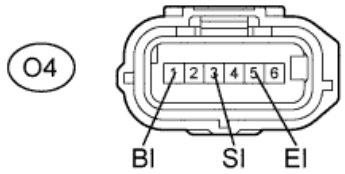
Front view of wire harness connector:
(to No. 3 Ultrasonic Sensor RH)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

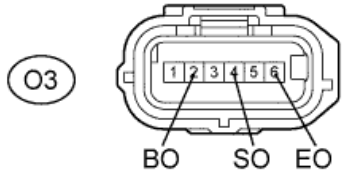
## 6.CHECK HARNESS AND CONNECTOR (NO. 2 ULTRASONIC SENSOR LH - NO. 3 ULTRASONIC SENSOR LH)

a. Disconnect the O3 and O4 sensor connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**



| Tester Connection | Condition | Specified Condition |
|---|---|---|

| | | |
|---|---|---|
| O4-1 (BI) - O3-2 (BO) | Always | Below 1 Ω |
| O4-3 (SI) - O3-4 (SO) | Always | Below 1 Ω |
| O4-5 (EI) - O3-6 (EO) | Always | Below 1 Ω |
| O4-1 (BI) - Body ground | Always | 10 kΩ or higher |
| O4-3 (SI) - Body ground | Always | 10 kΩ or higher |
| O4-5 (EI) - Body ground | Always | 10 kΩ or higher |

Front view of wire harness connector:
(to No. 2 Ultrasonic Sensor LH)

Front view of wire harness connector:
(to No. 3 Ultrasonic Sensor LH)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 7.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

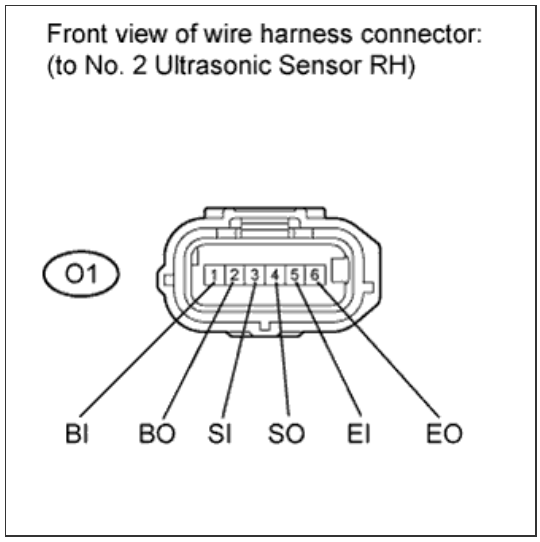
| Result | Proceed to |
|---|---|
| DTC C1AED is output and multi-information display indicates open circuit (rear left, rear center and rear right) | A |
| DTC C1AED is output and multi-information display indicates open circuit (rear left and rear center) | B |
| No DTC is output | C |

B → Go to step 12

C → USE SIMULATION METHOD TO CHECK (Click here)

A

## 8.INSPECT NO. 2 ULTRASONIC SENSOR RH



a. Disconnect the O1 sensor connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| O1-1 (BI) - O1-5 (EI) | Always | 10 kΩ or higher |
| O1-1 (BI) - O1-2 (BO) | Always | 10 kΩ or higher |
| O1-3 (SI) - O1-4 (SO) | Always | Below 1 Ω |
| O1-5 (EI) - O1-6 | | |

| | | |
|---|---|---|
| (EO) | Always | Below 1 Ω |

NG → REPLACE NO. 2 ULTRASONIC SENSOR RH (Click here)

OK

### 9.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AED is output and multi-information display indicates open circuit (rear left, rear center and rear right) | A |
| DTC C1AED is output and multi-information display indicates open circuit (rear left and rear center) | B |
| No DTC is output | C |

B → Go to step 12

C → END

A

### 10.REPLACE NO. 2 ULTRASONIC SENSOR LH

a. Replace the No. 2 ultrasonic sensor LH with a normally functioning sensor ( Click here).

NEXT

### 11.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

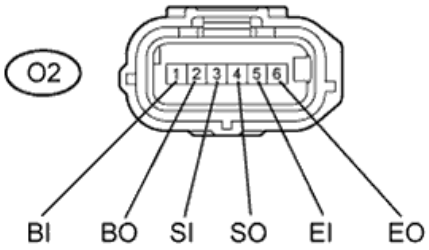
| Result | Proceed to |
|---|---|
| DTC C1AED is output and multi-information display indicates open circuit (rear left and rear center) | A |
| DTC C1AED is output and multi-information display indicates open circuit (rear left, rear center and rear right) | B |
| No DTC is output | C |

B → REPLACE PARKING ASSIST ECU (Click here)

C → END

A

## 12.INSPECT NO. 3 ULTRASONIC SENSOR RH



a. Disconnect the O2 sensor connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| O2-1 (BI) - O2-5 (EI) | Always | 10 kΩ or higher |
| O2-1 (BI) - O2-2 (BO) | Always | 10 kΩ or higher |
| O2-3 (SI) - O2-4 (SO) | Always | Below 1 Ω |
| O2-5 (EI) - O2-6 (EO) | Always | Below 1 Ω |

Front view of wire harness connector:
(to No. 3 Ultrasonic Sensor RH)

NG → REPLACE NO. 3 ULTRASONIC SENSOR RH (Click here)

OK

## 13.CHECK FOR DTC

a. Clear the DTCs (Click here).

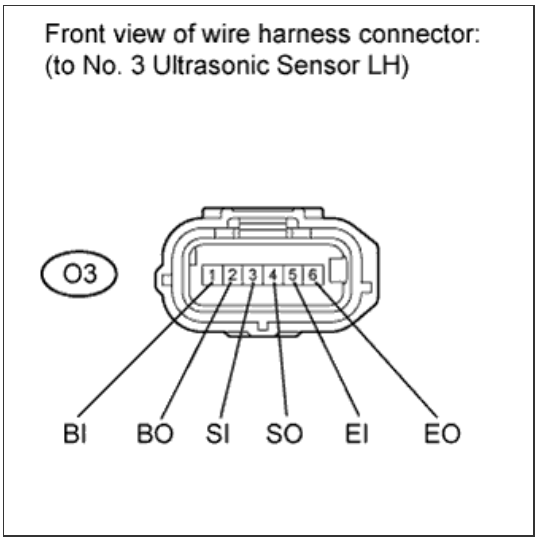
b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AED is output | A |
| No DTC is output | B |

B → END

A



## 14.INSPECT NO. 3 ULTRASONIC SENSOR LH

a. Disconnect the O3 sensor connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| O3-1 (BI) - O3-5 (EI) | Always | 10 kΩ or higher |
| O3-1 (BI) - O3-2 (BO) | Always | 10 kΩ or higher |
| O3-3 (SI) - O3-4 (SO) | Always | Below 1 Ω |
| O3-5 (EI) - O3-6 (EO) | Always | Below 1 Ω |

NG → REPLACE NO. 3 ULTRASONIC SENSOR LH (Click here)

OK

## 15.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AED is output | A |
| No DTC is output | B |

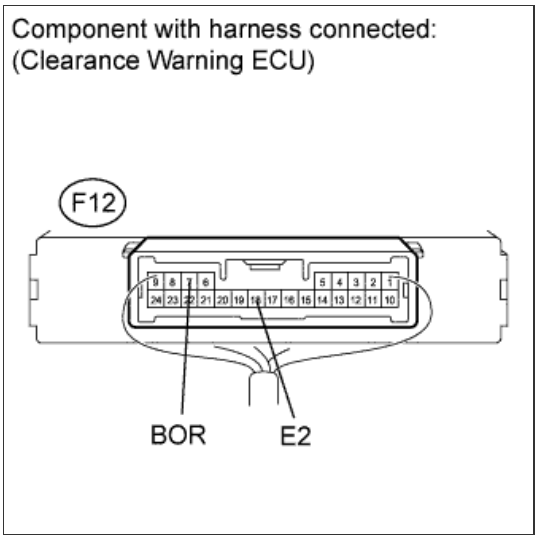
B → END

A

REPLACE PARKING ASSIST ECU (Click here)

## 16.CHECK CLEARANCE WARNING ECU

a. Measure the voltage according to the value(s) in the table below.



**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F12-7 (BOR) - Body ground | Engine switch on (IG) | 7.2 to 8.8 V |

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

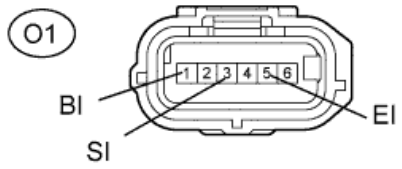
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F12-18 (E2) - Body ground | Always | Below 1 Ω |

NG → REPLACE CLEARANCE WARNING ECU (Click here)

OK

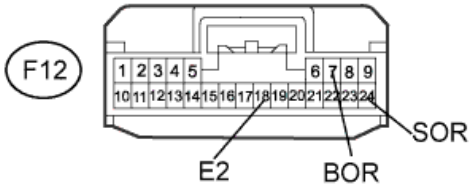
## 17.CHECK HARNESS AND CONNECTOR (NO. 2 ULTRASONIC SENSOR RH - CLEARANCE WARNING ECU)

a. Disconnect the O1 sensor connector.



b. Disconnect the F12 ECU connector.

c. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| O1-1 (BI) - F12-7 (BOR) | Always | Below 1 Ω |
| O1-3 (SI) - F12-24 (SOR) | Always | Below 1 Ω |
| O1-5 (EI) - F12-18 (E2) | Always | Below 1 Ω |
| O1-1 (BI) - Body ground | Always | 10 kΩ or higher |
| O1-3 (SI) - Body ground | Always | 10 kΩ or higher |
| O1-5 (EI) - Body ground | Always | 10 kΩ or higher |

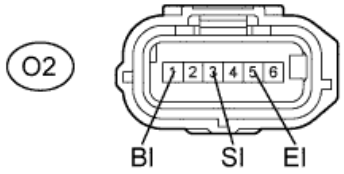
Front view of wire harness connector:
(to No. 2 Ultrasonic Sensor RH)

Front view of wire harness connector:
(to Clearance Warning ECU)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

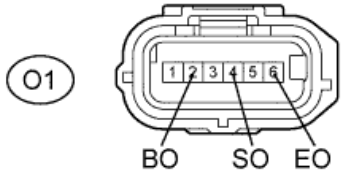
OK

## 18.CHECK HARNESS AND CONNECTOR (NO. 3 ULTRASONIC SENSOR RH - NO. 2 ULTRASONIC SENSOR RH)



a. Disconnect the O1 and O2 sensor connectors.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| O2-1 (BI) - O1-2 (BO) | Always | Below 1 Ω |
| O2-3 (SI) - O1-4 (SO) | Always | Below 1 Ω |
| O2-5 (EI) - O1-6 (EO) | Always | Below 1 Ω |
| O2-1 (BI) - Body ground | Always | 10 kΩ or higher |
| O2-3 (SI) - Body ground | Always | 10 kΩ or higher |
| O2-5 (EI) - Body ground | Always | 10 kΩ or higher |

Front view of wire harness connector:
(to No. 3 Ultrasonic Sensor RH)

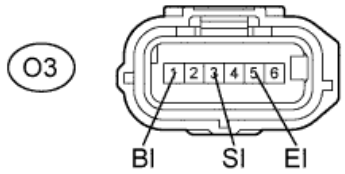
Front view of wire harness connector:
(to No. 2 Ultrasonic Sensor RH)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

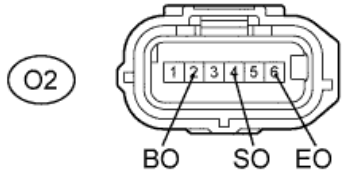
## 19.CHECK HARNESS AND CONNECTOR (NO. 3 ULTRASONIC SENSOR LH - NO. 3 ULTRASONIC SENSOR RH)

a. Disconnect the O2 and O3 sensor connectors.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**



| Tester Connection | Condition | Specified Condition |
|---|---|---|

| | | |
|---|---|---|
| O3-1 (BI) - O2-2 (BO) | Always | Below 1 Ω |
| O3-3 (SI) - O2-4 (SO) | Always | Below 1 Ω |
| O3-5 (EI) - O2-6 (EO) | Always | Below 1 Ω |
| O3-1 (BI) - Body ground | Always | 10 kΩ or higher |
| O3-3 (SI) - Body ground | Always | 10 kΩ or higher |
| O3-5 (EI) - Body ground | Always | 10 kΩ or higher |

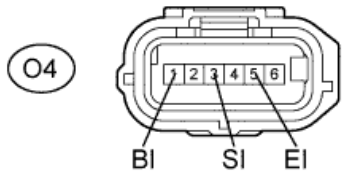
Front view of wire harness connector:
(to No. 3 Ultrasonic Sensor LH)

Front view of wire harness connector:
(to No. 3 Ultrasonic Sensor RH)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

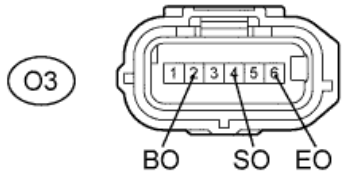
OK

## 20.CHECK HARNESS AND CONNECTOR (NO. 2 ULTRASONIC SENSOR LH - NO. 3 ULTRASONIC SENSOR LH)



a. Disconnect the O3 and O4 sensor connectors.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| O4-1 (BI) - O3-2 (BO) | Always | Below 1 Ω |
| O4-3 (SI) - O3-4 (SO) | Always | Below 1 Ω |
| O4-5 (EI) - O3-6 (EO) | Always | Below 1 Ω |
| O4-1 (BI) - Body ground | Always | 10 kΩ or higher |
| O4-3 (SI) - Body ground | Always | 10 kΩ or higher |
| O4-5 (EI) - Body ground | Always | 10 kΩ or higher |

Front view of wire harness connector:
(to No. 2 Ultrasonic Sensor LH)

Front view of wire harness connector:
(to No. 3 Ultrasonic Sensor LH)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 21.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

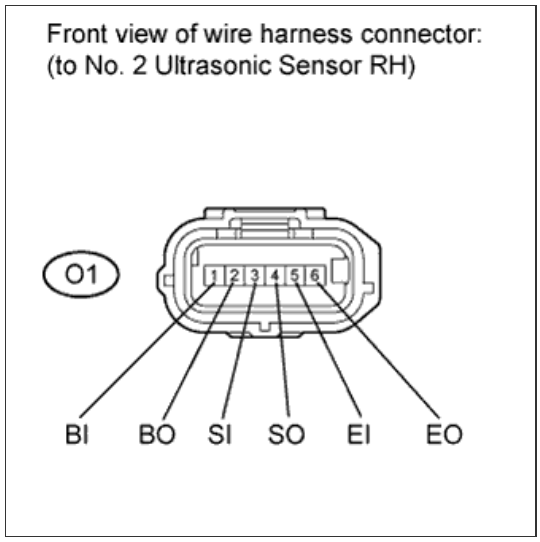
| Result | Proceed to |
|---|---|

| | |
|---|---|
| DTC C1AED is output and multi-information display indicates open circuit (rear left, rear center and rear right) | A |
| DTC C1AED is output and multi-information display indicates open circuit (rear left and rear center) | B |
| No DTC is output | C |

B → Go to step 26

C → USE SIMULATION METHOD TO CHECK (Click here)

A



## 22.INSPECT NO. 2 ULTRASONIC SENSOR RH

a. Disconnect the O1 sensor connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| O1-1 (BI) - O1-5 (EI) | Always | 10 kΩ or higher |
| O1-1 (BI) - O1-2 (BO) | Always | 10 kΩ or higher |
| O1-3 (SI) - O1-4 (SO) | Always | Below 1 Ω |
| O1-5 (EI) - O1-6 (EO) | Always | Below 1 Ω |

NG → REPLACE NO. 2 ULTRASONIC SENSOR RH (Click here)

OK

## 23.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AED is output and multi-information display indicates open circuit (rear left, rear center and rear right) | A |
| DTC C1AED is output and multi-information display indicates open circuit (rear left and rear center) | B |
| No DTC is output | C |

B → Go to step 26

C → END

A

## 24.REPLACE NO. 2 ULTRASONIC SENSOR LH

a. Replace the No. 2 ultrasonic sensor LH with a normally functioning sensor ( Click here).

NEXT

## 25.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

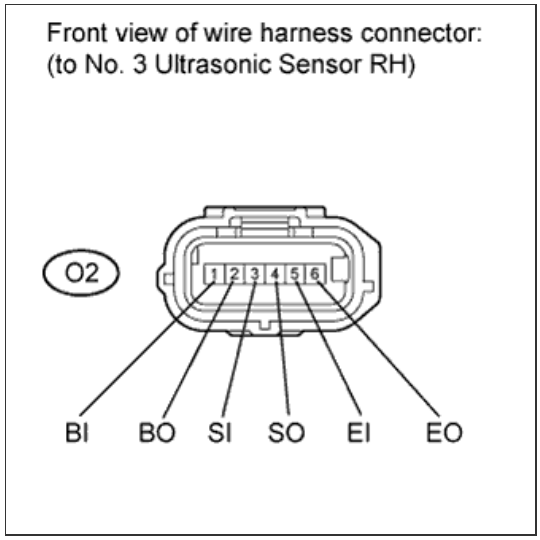
**Result**

| Result | Proceed to |
|---|---|
| DTC C1AED is output and multi-information display indicates open circuit (rear left and rear center) | A |
| DTC C1AED is output and multi-information display indicates open circuit (rear left, rear center and rear right) | B |
| No DTC is output | C |

B → REPLACE CLEARANCE WARNING ECU (Click here)

C → END

A



## 26.INSPECT NO. 3 ULTRASONIC SENSOR RH

a. Disconnect the O2 sensor connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| O2-1 (BI) - O2-5 (EI) | Always | 10 kΩ or higher |
| O2-1 (BI) - O2-2 (BO) | Always | 10 kΩ or higher |
| O2-3 (SI) - O2-4 (SO) | Always | Below 1 Ω |
| O2-5 (EI) - O2-6 (EO) | Always | Below 1 Ω |

NG → REPLACE NO. 3 ULTRASONIC SENSOR RH (Click here)

OK

## 27.CHECK FOR DTC

a. Clear the DTCs (Click here).

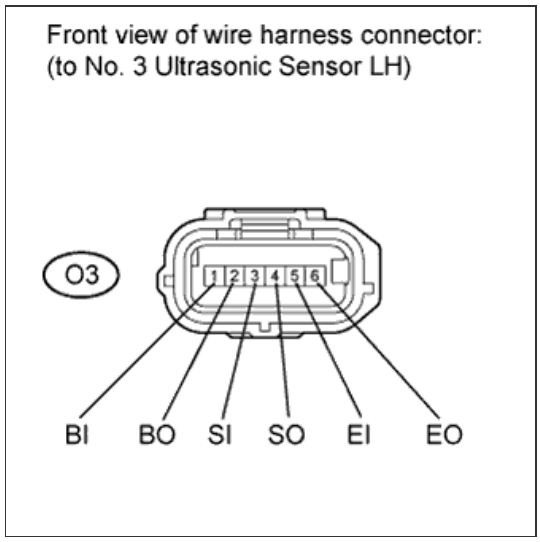
b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AED is output | A |
| No DTC is output | B |

B → END

A



## 28.INSPECT NO. 3 ULTRASONIC SENSOR LH

a. Disconnect the O3 sensor connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| O3-1 (BI) - O3-5 (EI) | Always | 10 kΩ or higher |
| O3-1 (BI) - O3-2 (BO) | Always | 10 kΩ or higher |
| O3-3 (SI) - O3-4 (SO) | Always | Below 1 Ω |
| O3-5 (EI) - O3-6 (EO) | Always | Below 1 Ω |

NG → REPLACE NO. 3 ULTRASONIC SENSOR LH (Click here)

OK

**29.CHECK FOR DTC**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AED is output | A |
| No DTC is output | B |

B → END

A

REPLACE CLEARANCE WARNING ECU (Click here)

## DTC C1AE6 Rear Left Sensor Malfunction

**for Preparation** Click here

### DESCRIPTION

The No. 1 ultrasonic sensor (RL sensor) is installed on the rear bumper. The ECU detects obstacles based on signals received from the No. 1 ultrasonic sensor (RL sensor). If the No. 1 ultrasonic sensor (RL sensor) has an open circuit or other malfunction, it will not function normally.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1AE6 | A malfunction of the No. 1 ultrasonic sensor (RL sensor). | • No. 1 ultrasonic sensor (RL sensor)<br>• Parking assist ECU*1<br>• Clearance warning ECU assembly*2 |

*1: w/ Side Monitor System
*2: w/o Side Monitor System

### INSPECTION PROCEDURE

**NOTICE:**

If the DTC is output after repairs, turn the engine switch on (IG) and move the shift lever to R. Then clear the DTC.

**1.CHECK FOR DTC**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**
**DTC C1AE6 is not output.**

NG → Go to step 2

OK ↓

**USE SIMULATION METHOD TO CHECK (Click here)**

**2.REPLACE NO. 1 ULTRASONIC SENSOR (RL SENSOR)**

a. Replace the No. 1 ultrasonic sensor (RL sensor) with a normally functioning one ( Click here).

NEXT ↓

**3.CHECK FOR DTC**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AE6 is not output | A |
| DTC C1AE6 is output (w/ Side Monitor System) | B |
| DTC C1AE6 is output (w/o Side Monitor System) | C |

B → REPLACE PARKING ASSIST ECU (Click here)

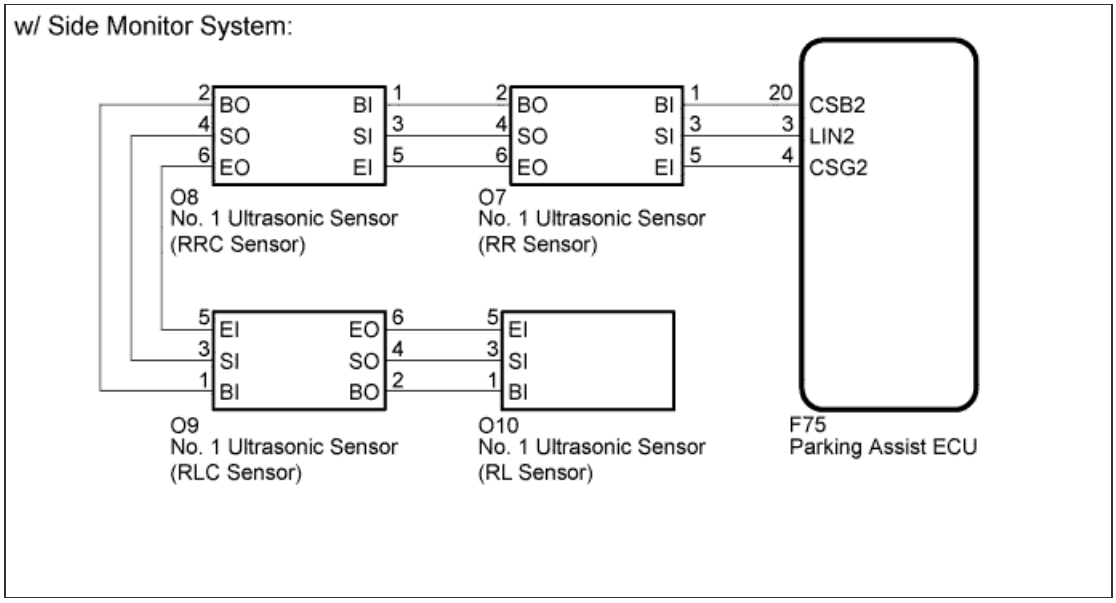
C → REPLACE CLEARANCE WARNING ECU ASSEMBLY (Click here)

A ↓

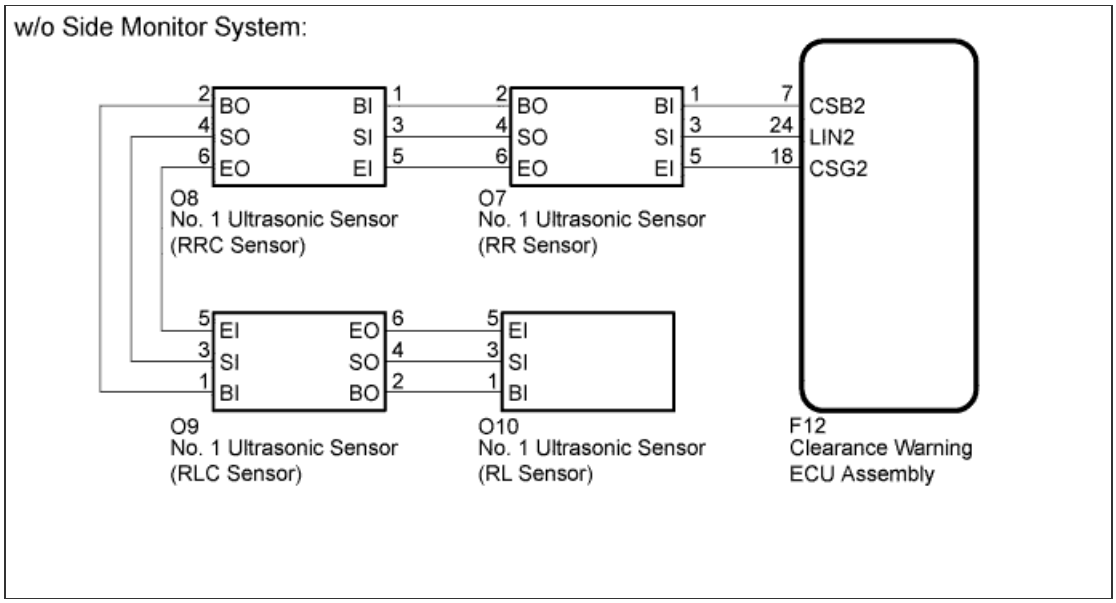
**END (NO. 1 ULTRASONIC SENSOR [RL SENSOR] IS DEFECTIVE)**

## DTC C1AED Rear Sensor Communication Malfunction

**for Preparation** Click here



### DESCRIPTION



This DTC is stored when there is an open or short circuit in the communication line between the rear sensors and the ECU, or when there is a malfunction in a rear sensor.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1AED | An open or short circuit in the communication line between the rear sensors and ECU or a malfunction in a rear sensor during initialization mode after the engine switch is turned on (IG). | • No. 1 ultrasonic sensor (rear side)<br>• Harness or connector<br>• Parking assist ECU*1<br>• Clearance warning ECU assembly*2 |

*1: w/ Side Monitor System
*2: w/o Side Monitor System

### WIRING DIAGRAM

### INSPECTION PROCEDURE

1.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AED is output (w/ Side Monitor System) | A |
| DTC C1AED is output (w/o Side Monitor System) | B |
| DTC C1AED is not output | C |

B → Go to step 16

C → USE SIMULATION METHOD TO CHECK (Click here)

A

**2.CHECK HARNESS AND CONNECTOR (NO. 1 ULTRASONIC SENSOR [RR SENSOR] - PARKING ASSIST ECU)**

a. Disconnect the O7 No. 1 ultrasonic sensor (RR sensor) connector.

b. Disconnect the F75 parking assist ECU connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| O7-1 (BI) - F75-20 (CSB2) | Always | Below 1 Ω |
| O7-3 (SI) - F75-3 (LIN2) | Always | Below 1 Ω |
| O7-5 (EI) - F75-4 (CSG2) | Always | Below 1 Ω |
| O7-1 (BI) - Body ground | Always | 10 kΩ or higher |
| O7-3 (SI) - Body ground | Always | 10 kΩ or higher |
| O7-5 (EI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

Go to step 4

**3.CHECK HARNESS AND CONNECTOR (NO. 1 ULTRASONIC SENSOR [RR SENSOR] - NO. 1 ULTRASONIC SENSOR [RRC SENSOR])**

a. Disconnect the O7 No. 1 ultrasonic sensor (RR sensor) connector.

b. Disconnect the O8 No. 1 ultrasonic sensor (RRC sensor) connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| O7-2 (BO) - O8-1 (BI) | Always | Below 1 Ω |
| O7-4 (SO) - O8-3 (SI) | Always | Below 1 Ω |
| O7-6 (EO) - O8-5 (EI) | Always | Below 1 Ω |
| O7-2 (BO) - Body ground | Always | 10 kΩ or higher |

| | | |
|---|---|---|
| O7-4 (SO) - Body ground | Always | 10 kΩ or higher |
| O7-6 (EO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**4.CHECK HARNESS AND CONNECTOR (NO. 1 ULTRASONIC SENSOR [RRC SENSOR] - NO. 1 ULTRASONIC SENSOR [RLC SENSOR])**

a. Disconnect the O8 No. 1 ultrasonic sensor (RRC sensor) connector.

b. Disconnect the O9 No. 1 ultrasonic sensor (RLC sensor) connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| O8-2 (BO) - O9-1 (BI) | Always | Below 1 Ω |
| O8-4 (SO) - O9-3 (SI) | Always | Below 1 Ω |
| O8-6 (EO) - O9-5 (EI) | Always | Below 1 Ω |
| O8-2 (BO) - Body ground | Always | 10 kΩ or higher |
| O8-4 (SO) - Body ground | Always | 10 kΩ or higher |
| O8-6 (EO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**5.CHECK HARNESS AND CONNECTOR (NO. 1 ULTRASONIC SENSOR [RLC SENSOR] - NO. 1 ULTRASONIC SENSOR [RL SENSOR])**

a. Disconnect the O9 No. 1 ultrasonic sensor (RLC sensor) connector.

b. Disconnect the O10 No. 1 ultrasonic sensor (RL sensor) connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

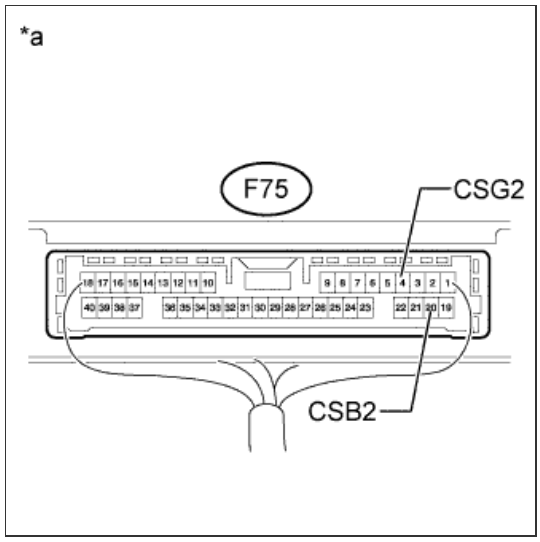
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| O9-2 (BO) - O10-1 (BI) | Always | Below 1 Ω |
| O9-4 (SO) - O10-3 (SI) | Always | Below 1 Ω |
| O9-6 (EO) - O10-5 (EI) | Always | Below 1 Ω |
| O9-2 (BO) - Body ground | Always | 10 kΩ or higher |
| O9-4 (SO) - Body ground | Always | 10 kΩ or higher |
| O9-6 (EO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 6.CHECK PARKING ASSIST ECU

a. Measure the voltage according to the value(s) in the table below.



**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F75-20 (CSB2) - Body ground | Engine switch on (IG) | 7.2 to 8.8 V |

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-4 (CSG2) - Body ground | Always | Below 1 Ω |

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected (Parking Assist ECU) |

NG → REPLACE PARKING ASSIST ECU (Click here)

OK

## 7.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AED is output and multi-information display indicates open circuit (rear left, rear center and rear right) | A |
| DTC C1AED is output and multi-information display indicates open circuit (rear left and rear center) | B |
| DTC C1AED is not output | C |

B → Go to step 12

C → USE SIMULATION METHOD TO CHECK (Click here)

A

## 8.REPLACE NO. 1 ULTRASONIC SENSOR (RR SENSOR)

a. Replace the No. 1 ultrasonic sensor (RR sensor) with a normally functioning one ( Click here).

NEXT

## 9.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AED is output and multi-information display indicates open circuit (rear left, rear center and rear right) | A |
| DTC C1AED is output and multi-information display indicates open circuit (rear left and rear center) | B |
| DTC C1AED is not output | C |

B → Go to step 12

C → END (NO. 1 ULTRASONIC SENSOR [RR SENSOR] IS DEFECTIVE)

A

### 10.REPLACE NO. 1 ULTRASONIC SENSOR (RL SENSOR)

a. Replace the No. 1 ultrasonic sensor (RL sensor) with a normally functioning one ( Click here).

NEXT

### 11.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AED is output and multi-information display indicates open circuit (rear left and rear center) | A |
| DTC C1AED is output and multi-information display indicates open circuit (rear left, rear center and rear right) | B |
| DTC C1AED is not output | C |

B → REPLACE PARKING ASSIST ECU (Click here)

C → END (NO. 1 ULTRASONIC SENSOR [RL SENSOR] IS DEFECTIVE)

A

### 12.REPLACE NO. 1 ULTRASONIC SENSOR RH (RRC SENSOR)

a. Replace the No. 1 ultrasonic sensor (RRC sensor) with a normally functioning one ( Click here).

NEXT

### 13.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**
**DTC C1AED is not output.**

NG → Go to step 14

OK

END (NO. 1 ULTRASONIC SENSOR [RRC SENSOR] IS DEFECTIVE)

14.REPLACE NO. 1 ULTRASONIC SENSOR (RLC SENSOR)

a. Replace the No. 1 ultrasonic sensor (RLC sensor) with a normally functioning one ( Click here).

NEXT

15.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**
**DTC C1AED is not output.**

NG → REPLACE PARKING ASSIST ECU (**Click here**)

OK

END (NO. 1 ULTRASONIC SENSOR [RLC SENSOR] IS DEFECTIVE)

16.CHECK HARNESS AND CONNECTOR (NO. 1 ULTRASONIC SENSOR [RR SENSOR] - CLEARANCE WARNING ECU)

a. Disconnect the O7 No. 1 ultrasonic sensor (RR sensor) connector.

b. Disconnect the F12 clearance warning ECU assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| O7-1 (BI) - F12-7 (CSB2) | Always | Below 1 Ω |
| O7-3 (SI) - F12-24 (LIN2) | Always | Below 1 Ω |
| O7-5 (EI) - F12-18 (CSG2) | Always | Below 1 Ω |
| O7-1 (BI) - Body ground | Always | 10 kΩ or higher |
| O7-3 (SI) - Body ground | Always | 10 kΩ or higher |
| O7-5 (EI) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

17.CHECK HARNESS AND CONNECTOR (NO. 1 ULTRASONIC SENSOR [RR SENSOR] - NO. 1 ULTRASONIC SENSOR [RRC SENSOR])

a. Disconnect the O7 No. 1 ultrasonic sensor (RR sensor) connector.

b. Disconnect the O8 No. 1 ultrasonic sensor (RRC sensor) connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| O7-2 (BO) - O8-1 | | |

| | | |
|---|---|---|
| (BI) | Always | Below 1 Ω |
| O7-4 (SO) - O8-3 (SI) | Always | Below 1 Ω |
| O7-6 (EO) - O8-5 (EI) | Always | Below 1 Ω |
| O7-2 (BO) - Body ground | Always | 10 kΩ or higher |
| O7-4 (SO) - Body ground | Always | 10 kΩ or higher |
| O7-6 (EO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**18.CHECK HARNESS AND CONNECTOR (NO. 1 ULTRASONIC SENSOR [RRC SENSOR] - NO. 1 ULTRASONIC SENSOR [RLC SENSOR])**

a. Disconnect the O8 No. 1 ultrasonic sensor (RRC sensor) connector.

b. Disconnect the O9 No. 1 ultrasonic sensor (RLC sensor) connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| O8-2 (BO) - O9-1 (BI) | Always | Below 1 Ω |
| O8-4 (SO) - O9-3 (SI) | Always | Below 1 Ω |
| O8-6 (EO) - O9-5 (EI) | Always | Below 1 Ω |
| O8-2 (BO) - Body ground | Always | 10 kΩ or higher |
| O8-4 (SO) - Body ground | Always | 10 kΩ or higher |
| O8-6 (EO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**19.CHECK HARNESS AND CONNECTOR (NO. 1 ULTRASONIC SENSOR [RLC SENSOR] - NO. 1 ULTRASONIC SENSOR [RL SENSOR])**

a. Disconnect the O9 No. 1 ultrasonic sensor (RLC sensor) connector.

b. Disconnect the O10 No. 1 ultrasonic sensor (RL sensor) connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| O9-2 (BO) - O10-1 (BI) | Always | Below 1 Ω |
| O9-4 (SO) - O10-3 (SI) | Always | Below 1 Ω |
| O9-6 (EO) - O10-5 (EI) | Always | Below 1 Ω |
| O9-2 (BO) - Body ground | Always | 10 kΩ or higher |
| O9-4 (SO) - Body ground | Always | 10 kΩ or higher |

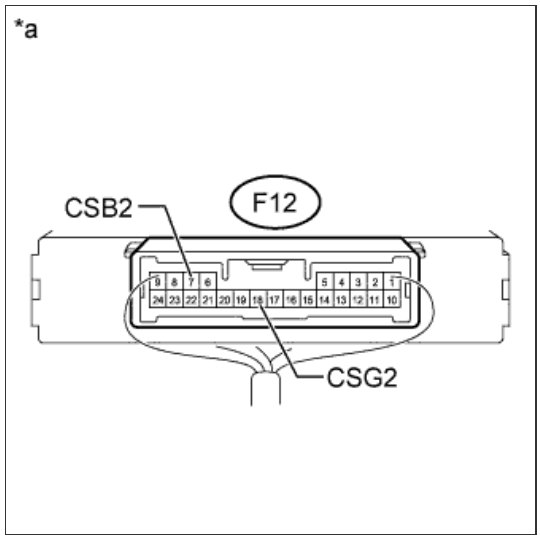
| | | |
|---|---|---|
| O9-6 (EO) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 20.CHECK CLEARANCE WARNING ECU ASSEMBLY

a. Measure the voltage according to the value(s) in the table below.



**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F12-7 (CSB2) - Body ground | Engine switch on (IG) | 7.2 to 8.8 V |

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F12-18 (CSG2) - Body ground | Always | Below 1 Ω |

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected (Clearance Warning ECU Assembly) |

OK

END (NO. 1 ULTRASONIC SENSOR [RLC SENSOR] IS DEFECTIVE)

## DTC C1AE7 Rear Left Center Sensor Malfunction

**for Preparation** Click here

### DESCRIPTION

The No. 3 ultrasonic sensor LH is installed on the rear bumper. The ECU detects obstacles based on signals received from the No. 3 ultrasonic sensor LH. If the No. 3 ultrasonic sensor LH has an open circuit or other malfunction, it will not function normally.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1AE7 | A malfunction of the No. 3 ultrasonic sensor LH. | • No. 3 ultrasonic sensor LH<br>• Parking assist ECU*1<br>• Clearance warning ECU*2 |

*1: w/ Parking Assist Monitor System
*2: w/o Parking Assist Monitor System

### INSPECTION PROCEDURE

**NOTICE:**

If the DTC is output after repairs, turn the engine switch on (IG) and move the shift lever to R. Then clear the DTC.

#### 1.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AE7 is output | A |
| No DTC is output | B |

B → USE SIMULATION METHOD TO CHECK (**Click here**)

A

#### 2.REPLACE NO. 3 ULTRASONIC SENSOR LH

a. Replace the No. 3 ultrasonic sensor LH with a normally functioning sensor ( Click here).

NEXT

#### 3.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1AE7 is output (w/ Parking Assist Monitor System) | A |
| DTC C1AE7 is output (w/o Parking Assist Monitor System) | B |
| No DTC is output | C |

B → REPLACE CLEARANCE WARNING ECU (**Click here**)

C → END

A

REPLACE PARKING ASSIST ECU (Click here)

# DTC C1AEF Shift Position Information

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when a problem with the shift position information sent through the CAN communication system is detected.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1AEF | A problem with the shift position information. | CAN communication system |

## DESCRIPTION

When the clearance sonar main switch turns on, the ON signal is input into the parking assist ECU*1 or clearance warning ECU*2.

*1: w/ Parking Assist Monitor System
*2: w/o Parking Assist Monitor System

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.READ VALUE USING INTELLIGENT TESTER (CLEARANCE SONAR MAIN SWITCH)

a. Check the Data List for proper functioning of the clearance sonar main switch.

Clearance Sonar

| Tester Display | Measurement Item/Range | Normal Condition | Diagnostic Note |
|---|---|---|---|
| Main Switch | Clearance sonar main switch/ON or OFF | OFF: Clearance sonar main switch off<br>ON: Clearance sonar main switch on | - |

**OK:**
**The intelligent tester display changes according to operation of clearance sonar main switch.**

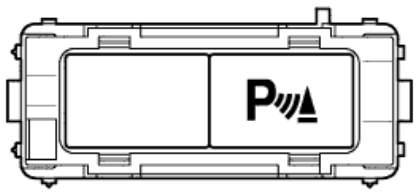
NG → Go to step 2

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

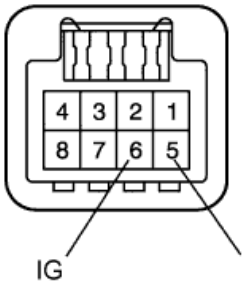
### 2.INSPECT CLEARANCE SONAR MAIN SWITCH

a. Remove the clearance sonar main switch (Click here).



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**



| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| 6 (IG) - 5 (ECU) | Clearance sonar main switch on | Below 1 Ω |
| 6 (IG) - 5 (ECU) | Clearance sonar main switch off | 10 kΩ or higher |

**Result**

| Result | Proceed to |
|---|---|
| OK (w/ Parking Assist Monitor System) | A |
| OK (w/o Parking Assist Monitor System) | B |
| NG | C |

Component without harness connected:
(Clearance Sonar Main Switch)

B → Go to step 4

C → REPLACE CLEARANCE SONAR MAIN SWITCH (Click here)

A

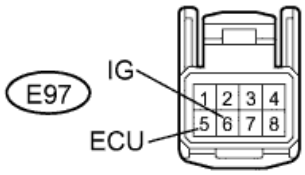
## 3.CHECK HARNESS AND CONNECTOR (MAIN SWITCH - ECU AND BATTERY)

a. Disconnect the E97 switch connector.

b. Disconnect the F37 ECU connector.

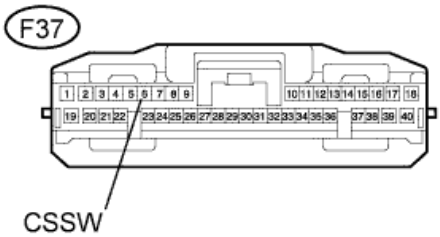
c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**



| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| E97-6 (IG) - Body ground | Engine switch on (IG) | 11 to 14 V |
| E97-6 (IG) - Body ground | Engine switch off | Below 1 V |

d. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| E97-5 (ECU) - F37-6 (CSSW) | Always | Below 1 Ω |
| E97-5 (ECU) - Body ground | Always | 10 kΩ or higher |

Front view of wire harness connector:
(to Clearance Sonar Main Switch)

Front view of wire harness connector:
(to Parking Assist ECU)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE PARKING ASSIST ECU (Click here)

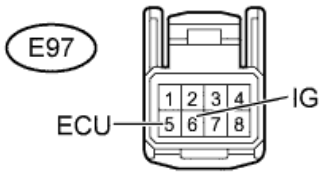
## 4.CHECK HARNESS AND CONNECTOR (MAIN SWITCH - ECU AND BATTERY)

a. Disconnect the E97 switch connector.

b. Disconnect the F12 ECU connector.

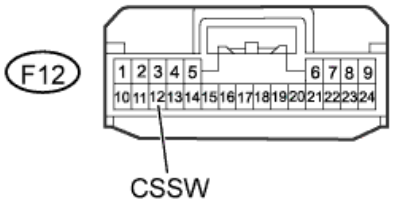
c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**



| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| E97-6 (IG) - Body ground | Engine switch on (IG) | 11 to 14 V |
| E97-6 (IG) - Body ground | Engine switch off | Below 1 V |

d. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| E97-5 (ECU) - F12-12 (CSSW) | Always | Below 1 Ω |
| E97-5 (ECU) - Body ground | Always | 10 kΩ or higher |

Front view of wire harness connector:
(to Clearance Sonar Main Switch)

Front view of wire harness connector:

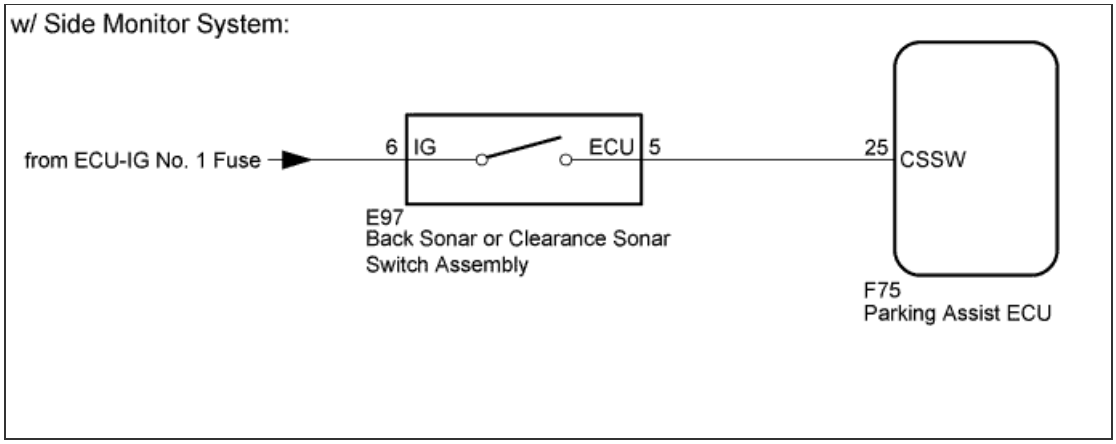
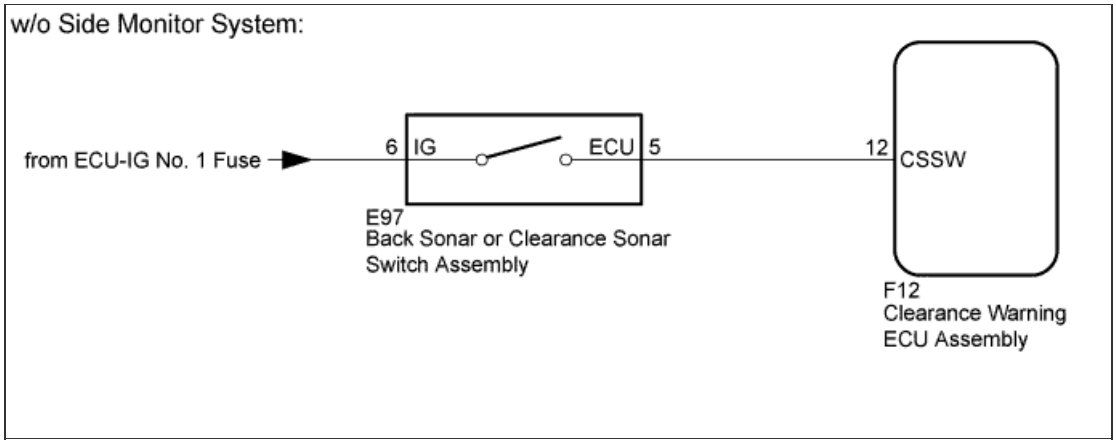
OK → REPLACE CLEARANCE WARNING ECU (Click here)



**for Preparation** Click here



## DESCRIPTION

When the Back sonar or clearance sonar switch assembly turns on, the ON signal is input into the parking assist ECU*1 or clearance warning ECU assembly*2.

*1: w/ Side Monitor System
*2: w/o Side Monitor System

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.READ VALUE USING INTELLIGENT TESTER (BACK SONAR OR CLEARANCE SONAR SWITCH ASSEMBLY)

a. Check the Data List for proper functioning of the back sonar or clearance sonar switch assembly ( Click here).

**Clearance Sonar**

| Tester Display | Measurement Item/Range | Normal Condition | Diagnostic Note |
|---|---|---|---|
| Main Switch | Back sonar or clearance sonar switch assembly / ON or OFF | OFF: Back sonar or clearance sonar switch assembly off<br>ON: Back sonar or clearance sonar switch assembly on | - |

**OK:**

**The intelligent tester display changes according to operation of back sonar or clearance sonar switch assembly.**

NG → Go to step 2

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

2.INSPECT BACK SONAR OR CLEARANCE SONAR SWITCH ASSEMBLY

a. Remove the back sonar or clearance sonar switch assembly (Click here).

b. Inspect the back sonar or clearance sonar switch assembly (Click here).

**Result**

| Result | Proceed to |
|---|---|
| OK (w/ Side Monitor System) | A |
| OK (w/o Side Monitor System) | B |
| NG | C |

B → Go to step 4

C → REPLACE BACK SONAR OR CLEARANCE SONAR SWITCH ASSEMBLY (Click here)

A

3.CHECK HARNESS AND CONNECTOR (BACK SONAR OR CLEARANCE SONAR SWITCH - PARKING ASSIST ECU AND BATTERY)

a. Disconnect the E97 back sonar or clearance sonar switch assembly connector.

b. Disconnect the F75 parking assist ECU connector.

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| E97-6 (IG) - Body ground | Engine switch on (IG) | 11 to 14 V |
| E97-6 (IG) - Body ground | Engine switch off | Below 1 V |

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| E97-5 (ECU) - F75-25 (CSSW) | Always | Below 1 Ω |
| E97-5 (ECU) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE PARKING ASSIST ECU (Click here)

4.CHECK HARNESS AND CONNECTOR (BACK SONAR OR CLEARANCE SONAR SWITCH - CLEARANCE WARNING ECU AND BATTERY)

a. Disconnect the E97 back sonar or clearance sonar switch assembly connector.

b. Disconnect the F12 clearance warning ECU assembly connector.

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| E97-6 (IG) - Body ground | Engine switch on (IG) | 11 to 14 V |
| E97-6 (IG) - Body | | |

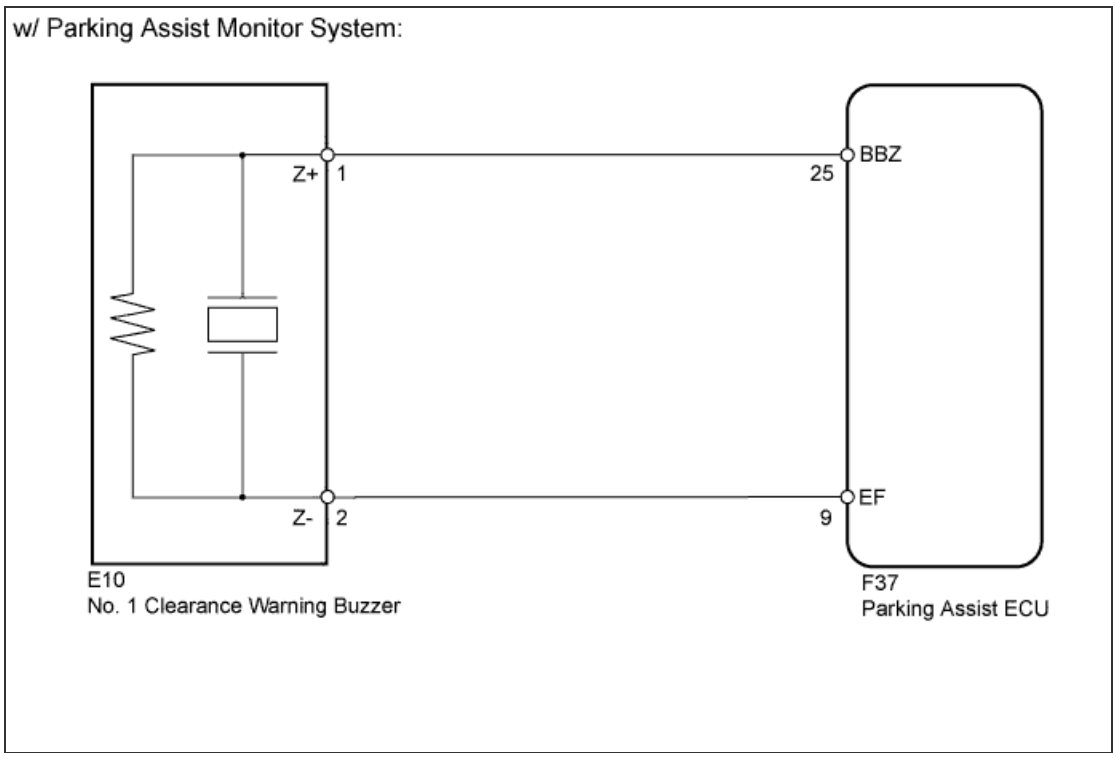
| | | |
|---|---|---|
| ground | Engine switch off | Below 1 V |

d. Measure the resistance according to the value(s) in the table below.

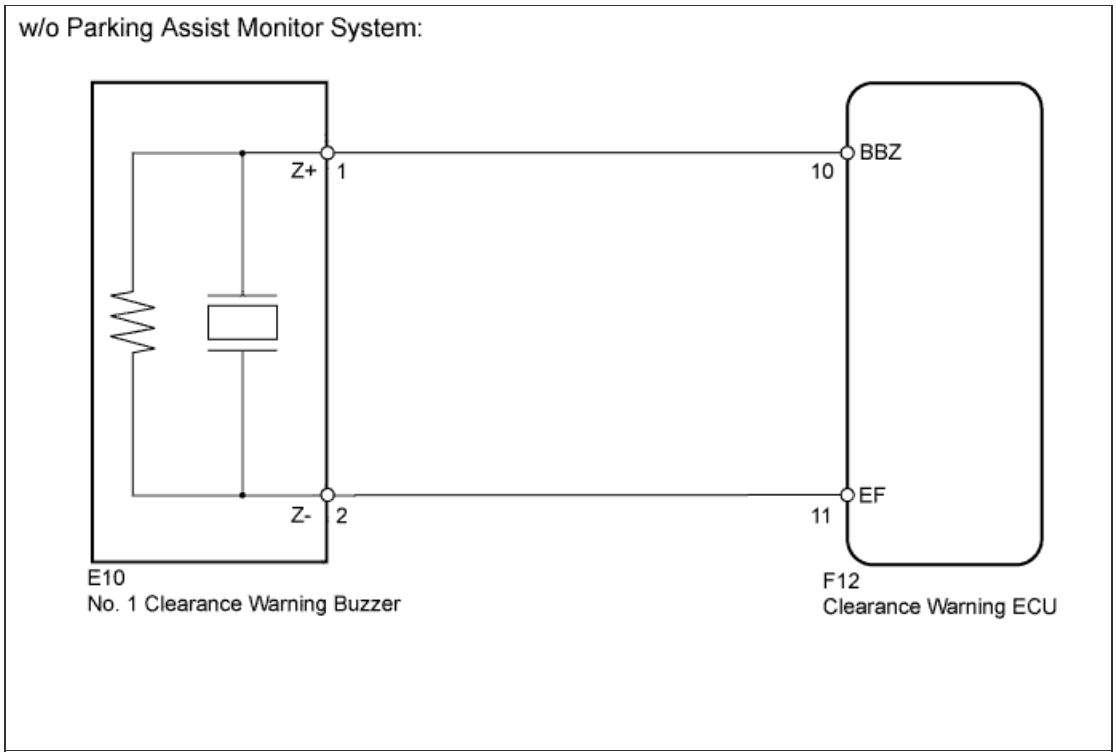
**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| E97-5 (ECU) - F12-12 (CSSW) | Always | Below 1 Ω |
| E97-5 (ECU) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR



OK → REPLACE CLEARANCE WARNING ECU ASSEMBLY (Click here)



**for Preparation** Click here

## DESCRIPTION

The No. 1 clearance warning buzzer sounds to alert the driver and the buzzed frequency changes depending on the distance to an obstacle.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.PERFORM ACTIVE TEST USING INTELLIGENT TESTER (NO. 1 CLEARANCE WARNING BUZZER)

a. Select the Active Test, use the intelligent tester to generate a control command, and then check that the buzzer operates.

**Clearance Sonar**

| Tester Display | Test Part | Control Range | Diagnostic Note |
|---|---|---|---|
| Buzzer | No. 1 clearance warning buzzer | Operate or Stop | - |

**OK:**

**No. 1 clearance warning buzzer sounds.**

**Result**

| Result | Proceed to |
|---|---|
| OK | A |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE NO. 1 CLEARANCE WARNING BUZZER ( Click here)

**for Preparation** Click here

## DESCRIPTION

This circuit is the power source circuit to operate the clearance warning ECU.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.INSPECT FUSE (ECU-IG NO. 1)

a. Remove the ECU-IG No. 1 fuse from the main body ECU.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| ECU-IG No. 1 fuse | Always | Below 1 Ω |

NG → REPLACE FUSE

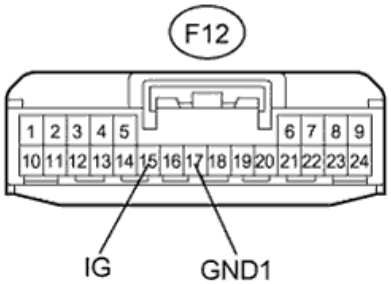
OK

### 2.CHECK HARNESS AND CONNECTOR (CLEARANCE WARNING ECU - BATTERY AND BODY GROUND)

a. Disconnect the F12 ECU connector.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**



| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F12-15 (IG) - Body ground | Engine switch on (IG) | 11 to 14 V |
| F12-15 (IG) - Body ground | Engine switch off | Below 1 V |

c. Measure the resistance according to the value(s) in the table below.

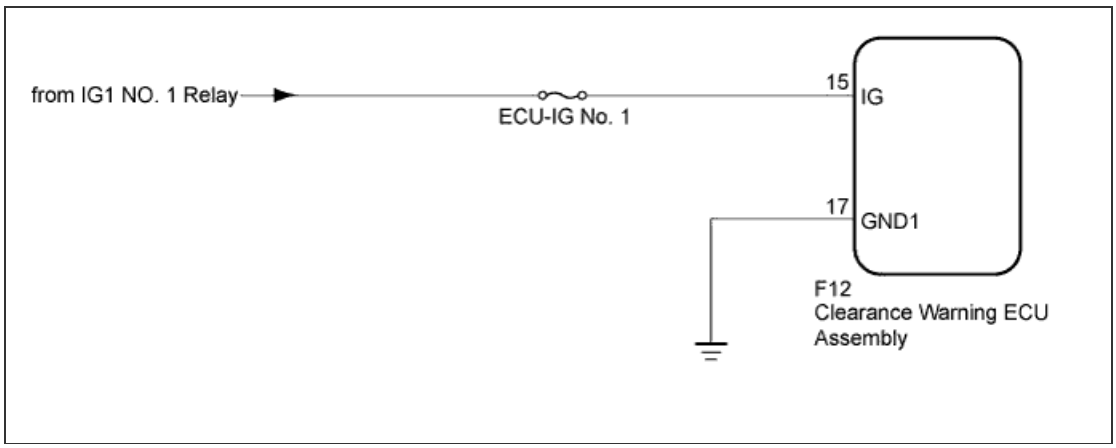
**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F12-17 (GND1) - Body ground | Always | Below 1 Ω |

Front view of wire harness connector:
(to Clearance Warning ECU)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## DESCRIPTION

This circuit is the power source circuit to operate the clearance warning ECU.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

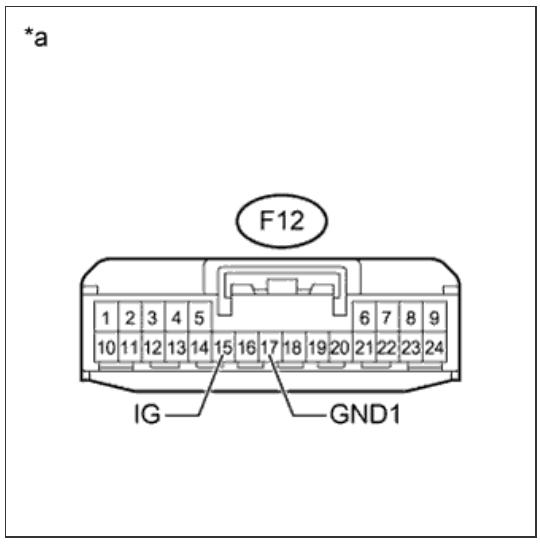
**NOTICE:**

Inspect the fuse for circuits related to this system before performing the following inspection procedure.

### 1.CHECK HARNESS AND CONNECTOR (CLEARANCE WARNING ECU - BATTERY AND BODY GROUND)

a. Disconnect the F12 clearance warning ECU assembly connector.

b. Measure the voltage according to the value(s) in the table below.



**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F12-15 (IG) - Body ground | Engine switch on (IG) | 11 to 14 V |
| F12-15 (IG) - Body ground | Engine switch off | Below 1 V |

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F12-17 (GND1) - Body ground | Always | Below 1 Ω |

**Text in Illustration**

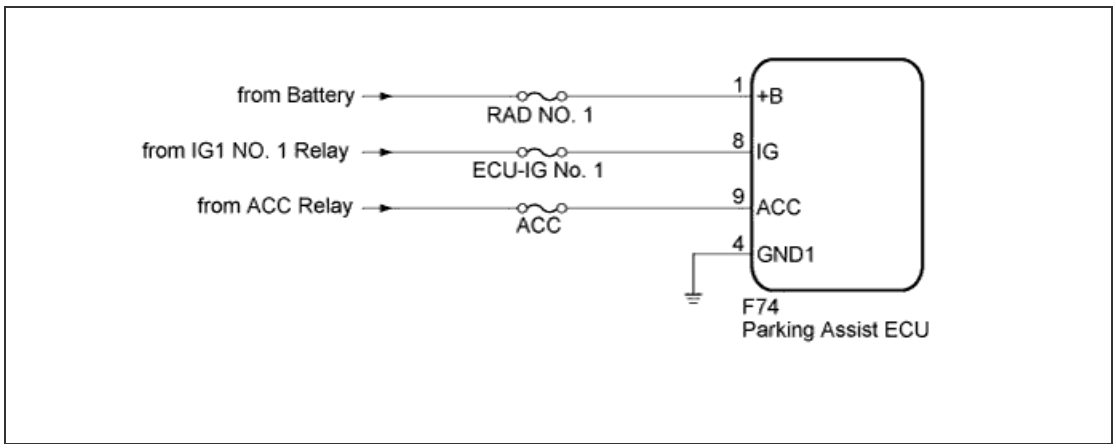
OK



PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## DESCRIPTION

This circuit is the power source circuit to operate the parking assist ECU.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

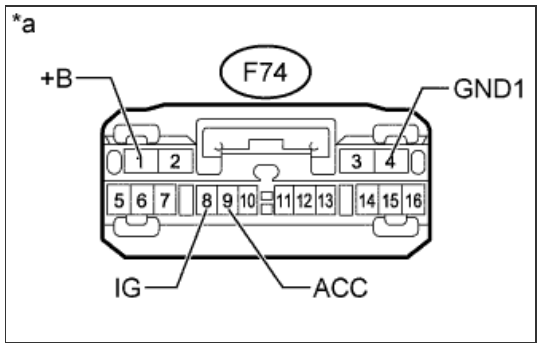
**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

### 1.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - BATTERY AND BODY GROUND)

a. Disconnect the F74 parking assist ECU connector.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F74-4 (GND1) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F74-1 (+B) - F74-4 (GND1) | Always | 11 to 14 V |
| F74-8 (IG) - F74-4 (GND1) | Engine switch on (IG) | 11 to 14 V |
| F74-9 (ACC) - F74-4 (GND1) | Engine switch on (ACC) | 11 to 14 V |

**for Preparation** Click here

## 1.POINTS TO NOTE WHEN SERVICING

a. The maximum steering angle setting must be carried out with the engine running. Apply the parking brake, depress the brake pedal, move the shift lever to N, and ensure that the vehicle is not moving.

b. Pay attention to the following points when servicing.

i. When disconnecting the cable from the negative (-) battery terminal, "System initializing" appears on the multi-display. In this case, correct the steering angle and steering angle neutral point, and adjust the line display position (Click here).

ii. When replacing the parking assist ECU, "System not ready" appears on the multi-display. In this case, set the maximum steering angle and steering angle neutral point, and adjust the line display position (Click here).

iii. When the rear television camera is replaced or its installation angle changes, readjustment of the line display position is required (Click here).

**for Preparation** Click here

## 1.PRECAUTION FOR DISCONNECTING CABLE FROM NEGATIVE BATTERY TERMINAL

**NOTICE:**

- **After the engine switch is turned off, the display and navigation module display records various types of memory and settings. As a result, after turning the engine switch off, make sure to wait for the time specified in the following table before disconnecting the cable from the negative (-) battery terminal.**

  **Waiting Time before Disconnecting Cable from Negative (-) Battery Terminal**

| Specification | Waiting Time |
|---|---|
| w/o Telematics transceiver | 60 sec. |
| w/ Telematics transceiver | 120 sec. |

- **When disconnecting the cable from the negative (-) battery terminal, initialize the following system after the terminal is reconnected.**

| System Name | See Procedure |
|---|---|
| Parking Assist Monitor System | Click here |
| Side Monitor System | |
| Back Door Closer System | |
| Power Back Door System | |

## 2.POINTS TO NOTE WHEN SERVICING

a. Pay attention to the following points when servicing.

i. When disconnecting the cable from the negative (-) battery terminal, "System initializing" may appear on the display and navigation module display. In this case, restore the steering angle neutral point (Click here).

ii. Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system may be needed (Click here).

**HINT:**

Each adjusted value for the calibration of the parking assist monitor system will be stored in the parking assist ECU.

iii. When the lens of the rear television camera assembly is dirty, wash the lens with water and wipe it off with a soft cloth to obtain clear images. For heavy dirt, use neutral detergent to clean the lens.

## 3.NOTES FOR REAR TELEVISION CAMERA

a. Notes for the rear television camera assembly

i. The parking assist monitor system may not function properly if subjected to a severe blow by any hard object.

ii. Do not scrub the outer casing part of the camera (made of transparent resin). Scrubbing may scratch the cover and affect the image. Prevent organic solvents, waxes, bond removing solvents or glass coating from adhering to the cover. If such material adheres to the cover, clean it off immediately and wash with water.

iii. Exposing the camera to a sudden temperature change may affect proper functioning of the camera.

iv. A clear image may not appear if the camera is dirty with snow, mud, etc. In that case, wash it with water and wipe off the lens. Use a detergent to remove dirt if necessary.

b. Images can be difficult to discern even in normal conditions. For example:

i. Noise may occur in the image during power back door operation. (w/ power back door system)

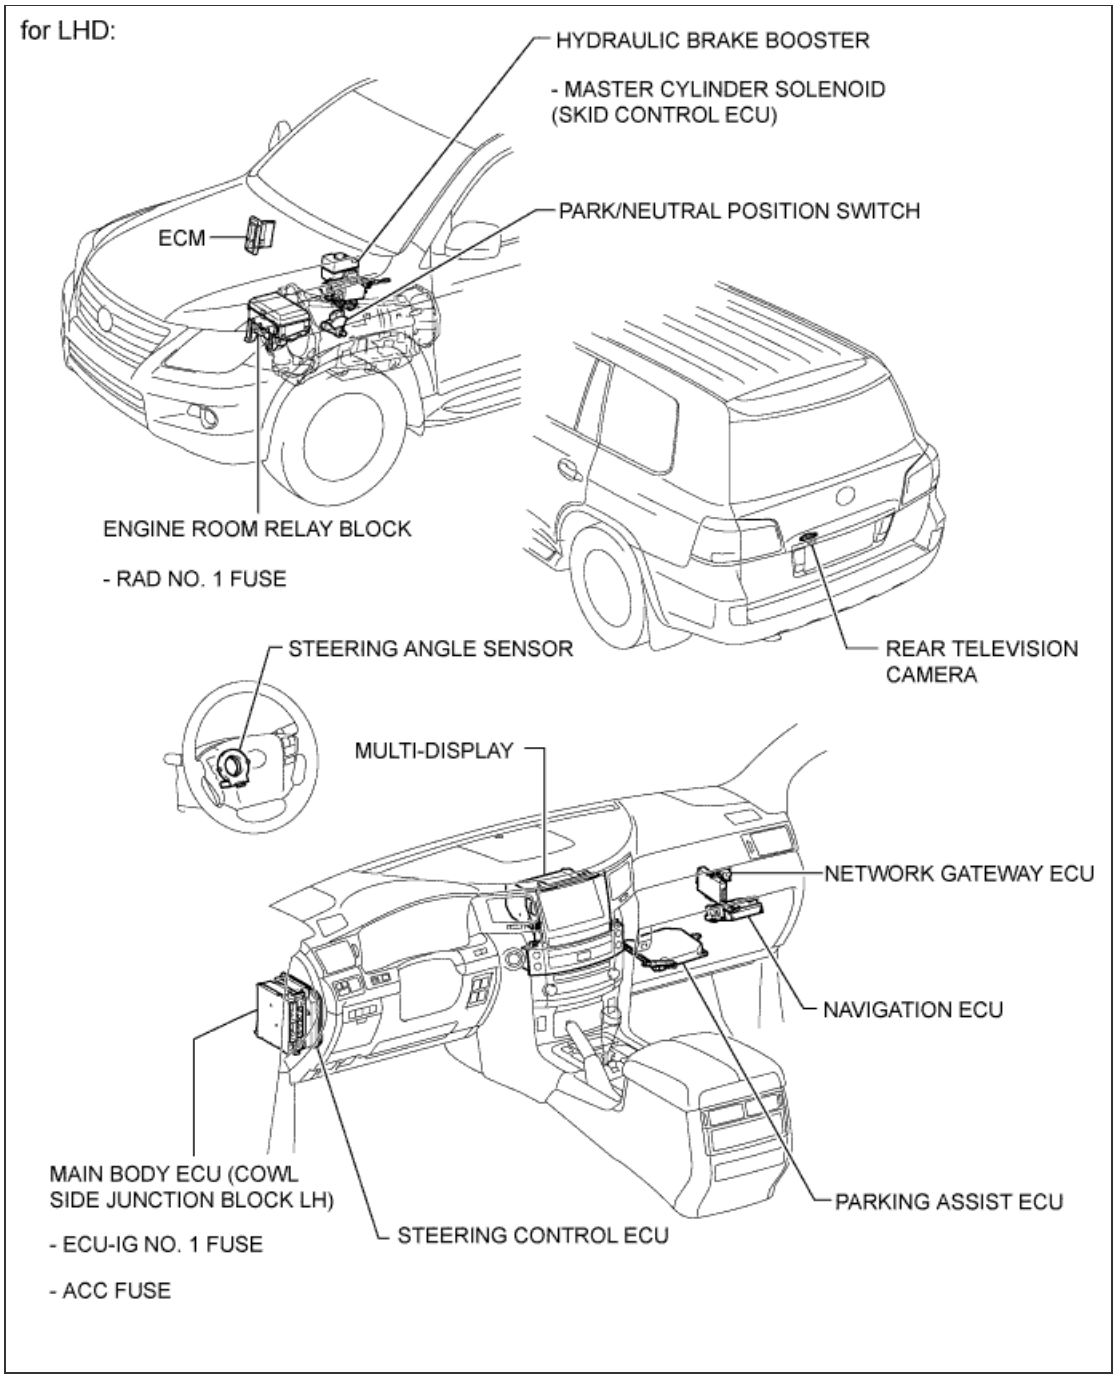
ii. Noise may occur in the image depending on electrical devices used in the cabin.

iii. Noise may occur in the image if accessories that generate radio waves have been installed.

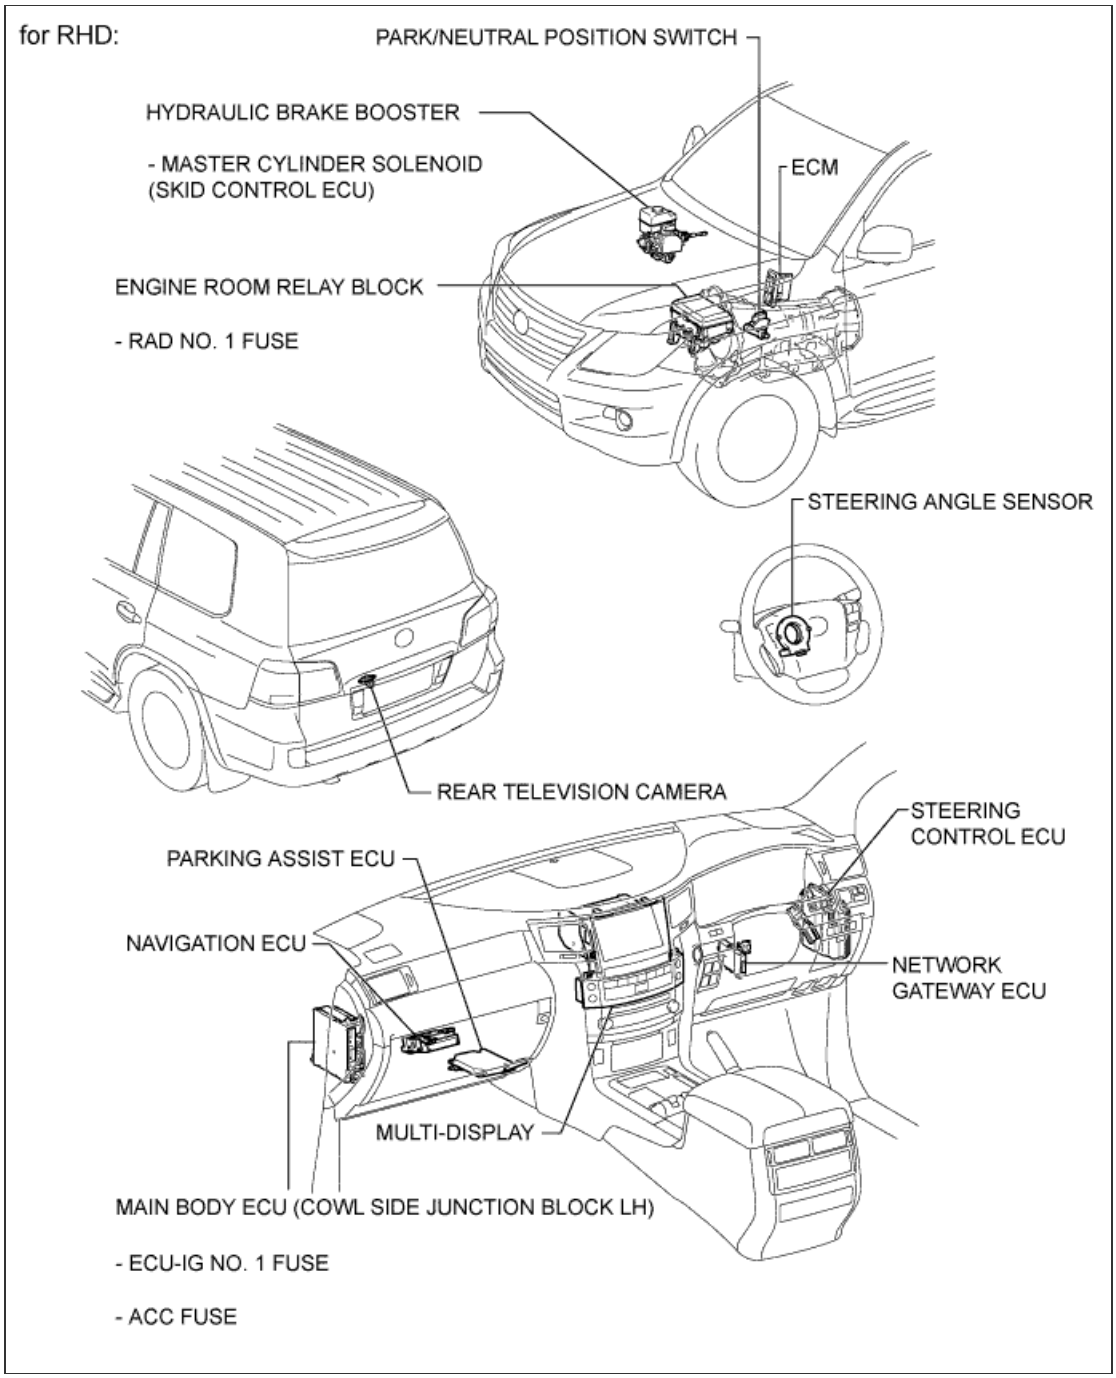
iv. The camera screen is extremely cold (the image immediately after turning the engine switch on (IG) may be blurred or darker than normal).

v. The camera lens is dirty with snow, mud, etc.

vi. A strong beam of light, such as a sunbeam or headlight, hits the camera.

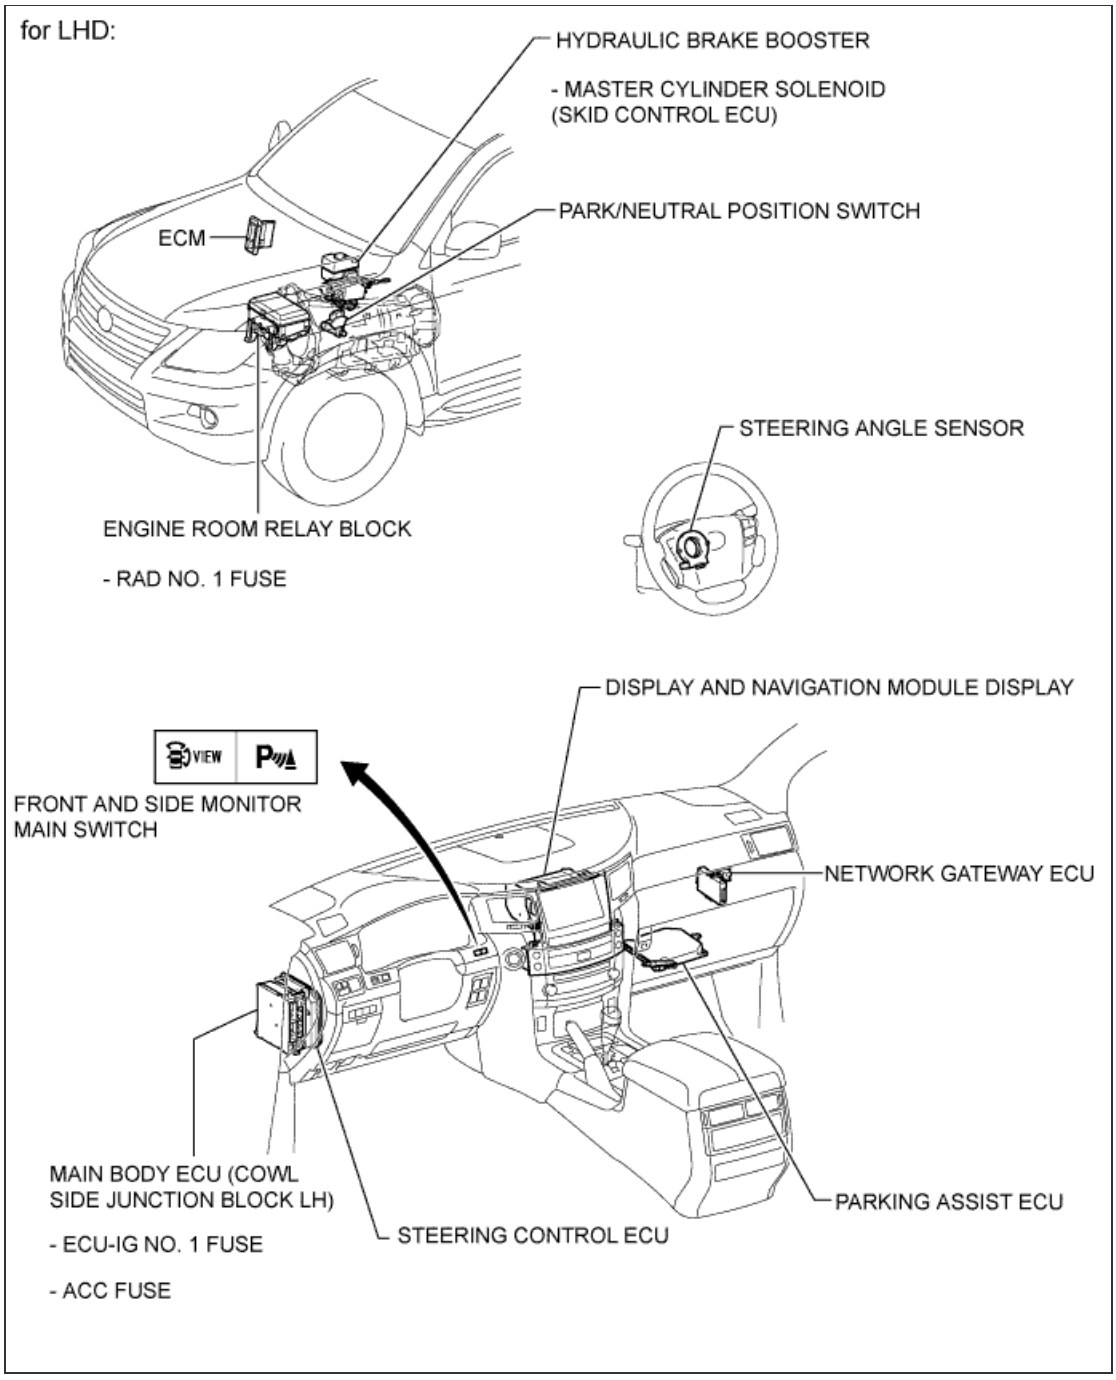


vii. It is too dark around the camera (at night etc.).



viii. The ambient temperature around the camera is either too high or too low.

ix. The vehicle is tilted at a steep angle.



x. The ambience of the camera is too bright. (When a strong light, such as a sunbeam reflected off the vehicle body, hits the camera, the image may be blurred. This is called the "SMEAR" phenomenon, peculiar to the CCD camera.)

## GENERAL

a. This system has a rear television camera mounted on the back door to display the rear view of the vehicle on the multi-display. The display panel also shows a composite view consisting of the area behind the vehicle and parking guidelines to assist the driver in parking the vehicle by monitoring the area behind the vehicle.

b. This system consists of the following components: the parking assist ECU, rear television camera, multi-display, navigation ECU, park/neutral position switch, combination meter, steering control ECU, and steering angle sensor.

c. This system is equipped with a self-diagnosis system, which is operated on a designated window that appears on the display panel, just as in the navigation system.

## FUNCTION OF COMPONENTS

a. The parking assist ECU controls the system by using information from the following components.

| Item | Function |
|---|---|
| Rear television camera | • Mounted on the back door to transmit the rear view of the vehicle to the parking assist ECU.<br>• Has a color video camera that uses a CCD (Charge Coupled Device) and a wide-angle lens. |
| Parking assist ECU | • Transmits video signals, which contain a composite consisting of the rear view of the vehicle taken with the television camera and parking assist guidelines, to the multi-display.<br>• Performs overall control of the system by receiving signals from the sensors and multi-display. |
| Multi-display | Receives the video signals containing a composite of the rear view of the vehicle and parking assist guideline signals from the parking assist ECU, and displays them on the display panel. |
| Navigation ECU | Uses the yaw rate detected by the gyro sensor that is built into the navigation ECU to transmit the movement of the vehicle to the parking assist ECU. |
| Steering angle sensor | Detects the angle of the steering wheel and sends the resulting signals to the parking assist ECU through CAN communication. |
| Park/neutral position switch | Sends the shift position signal to the ECM. |
| Steering control ECU | Receives the variable gear ratio steering signal from the steering angle sensor. |
| Skid control ECU | Transmits a vehicle speed signal to the parking assist ECU. |

## OPERATION EXPLANATION

a. The reverse position signal is sent from the shift lever position switch to the parking assist ECU when the shift lever is moved to R. After receiving the reverse position signal, the parking assist ECU switches the display signal for the multi-display from the navigation system to the parking assist monitor system.

b. In parallel parking assist mode, an appropriate steering angle and timing information can be provided for the driver when parallel parking. This is based on the information from the steering angle sensor signal and the vehicle angle data signal that are sent to the parking assist ECU.

**HINT:**

- **In manual assist mode, the steering angle sensor signal is used to control parking assist.**
- **The vehicle speed signal is required to adjust the steering angle neutral point.**

## COMMUNICATION SYSTEM OUTLINE

a. The components of the parking assist monitor system communicate with each other through the AVC-LAN. Also, parallel parking assist mode judges the vehicle angle data transmitted via the AVC-LAN from the navigation ECU (the data is calculated by the navigation ECU by integrating the yaw rate of the gyro sensor built into the navigation ECU).

b. If a short circuit or open circuit occurs in the AVC-LAN, communication is interrupted and the parking assist monitor system will stop functioning.

## DIAGNOSTIC FUNCTION OUTLINE

a. This parking assist monitor system has a diagnostic function (displayed in "NAVIGATION SYSTEM" of the navigation ECU).

b. A three-digit "unit code (physical address)" number (in hexadecimal notation) is set in each component that makes up the AVC-LAN.

## NOTES FOR PARKING ASSIST MONITOR

a. Notes for the parking assist monitor:

i. The parking assist monitor may not function properly if subjected to a severe blow by a hard object.

ii. Do not "scrub" the cover part of the camera (resin made). Scrubbing it may scratch the cover and affect the image. Prevent organic solvents, waxes, bond removing solvents, or glass coating from adhering to the cover. Clean it off immediately, and wash with water.

iii. Exposing the camera to sudden temperature changes may affect proper function.

iv. A clear image may not appear if the camera is dirty with snow, mud, etc. In that case, wash with water and wipe to clean the lens. Use a detergent to remove dirt if necessary.

b. Images will be difficult to discern even in normal conditions if:

i. The display screen is frosted over (the image immediately after turning the engine switch on (IG) may be blurred or darker than normal).

ii. A strong beam of light, such as a sunbeam or headlight, hits the camera.

**HINT:**

When a strong light, such as a sunbeam reflected off a vehicle body, hits the camera, the image may be blurred. This is called the "SMEAR" phenomenon, peculiar to the CCD camera.

iii. It is too dark around the camera (at night, for example).

iv. The ambient temperature around the camera is either too high or too low.

**for Preparation** Click here

## GENERAL

a. This system has a rear television camera assembly mounted on the back door to display the rear view of the vehicle on the display and navigation module display. The display panel also shows a composite view consisting of the area behind the vehicle and parking guidelines to assist the driver in parking the vehicle by monitoring the area behind the vehicle.

b. This system consists of the following components:

i. Parking assist ECU

ii. Rear television camera assembly

iii. Display and navigation module display

iv. Steering control ECU

v. Steering angle sensor

vi. Skid control ECU

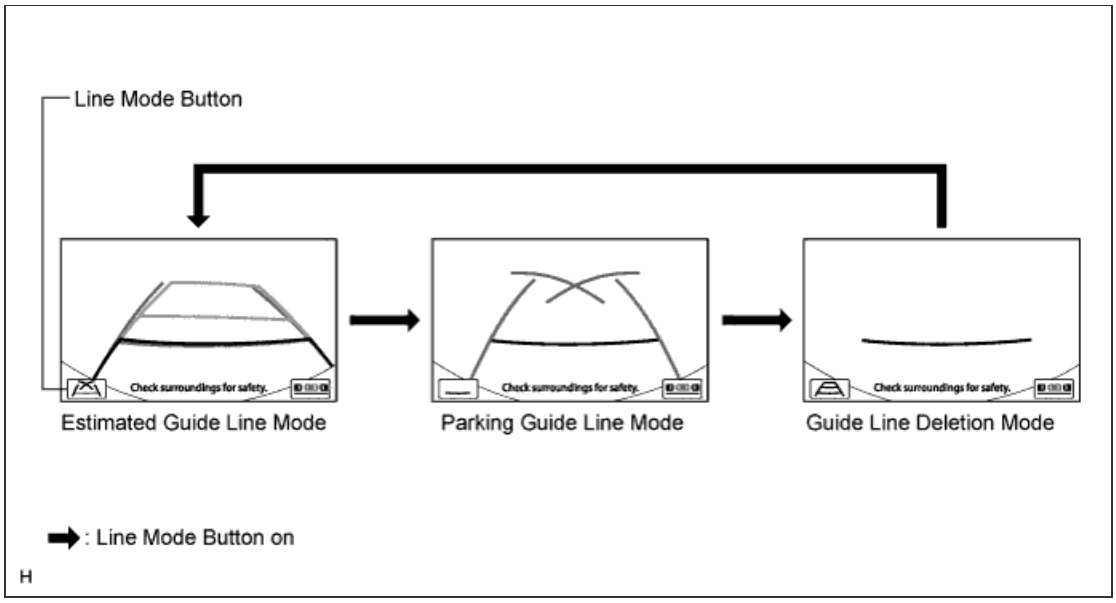
c. This system is equipped with a self-diagnosis system, which is operated on a designated window that appears on the display panel, just as in the navigation system.

## FUNCTION OF COMPONENTS

a. The parking assist ECU controls the system by using information from the following components.

| Item | Function |
|---|---|
| Rear Television Camera | • Mounted on the back door to transmit the rear view of the vehicle to the parking assist ECU.<br>• Has a color video camera that uses a CCD (Charge Coupled Device) and a wide-angle lens. |
| Parking Assist ECU | • Transmits video signals, which contain a composite consisting of the rear view of the vehicle taken with the television camera and parking assist guidelines, to the display and navigation module display.<br>• Performs overall control of the system by receiving signals from the sensors and display and navigation module display. |
| Display and navigation module display | Receives the video signals containing a composite of the rear view of the vehicle and parking assist guideline signals from the parking assist ECU, and displays them on the display panel. |
| Steering angle sensor | Detects the angle of the steering wheel and sends the resulting signals to the parking assist ECU through CAN communication. |
| Park/neutral position switch | Sends the shift position signal to the ECM. |
| Steering control ECU | Receives the variable gear ratio steering signal from the steering angle sensor. |
| Skid control ECU | Transmits a vehicle speed signal to the parking assist ECU. |

## OPERATION EXPLANATION



a. The reverse position signal is sent from the shift lever position switch to the parking assist ECU when the shift lever is moved to R.

b. In parallel parking assist mode, an appropriate steering angle and timing information can be provided for the driver. This is based on the information from the steering angle sensor signal and the vehicle angle data signal that are sent to the parking assist ECU.

**HINT:**

The steering angle sensor signal is used to control parking assist for only estimated guide line mode.

## DISPLAY MODE SETTING

a. While the parking assist monitor is displayed, pressing the line mode button switches the parking assist monitor display mode.

**Parking Assist Monitor Display Mode**

| Parking Assist Monitor Display Mode | Distance Guide Line (Red with Black) | Vehicle Width Extension Line (Green) | Predicted Path Line (Yellow) | Parking Guide Line (Green) |
|---|---|---|---|---|
| Estimated Guide Line Mode | Displayed | Displayed | Displayed | Not displayed |
| Parking Guide Line Mode | Displayed | Displayed | Not displayed | Displayed |
| Guide Line Deletion Mode | Displayed | Not displayed | Not displayed | Not displayed |

## COMMUNICATION SYSTEM OUTLINE

a. The components of the parking assist monitor system communicate with each other through the AVC-LAN. Also, parallel parking assist mode judges the vehicle angle data transmitted via the AVC-LAN from the display and navigation module display (the data is calculated by the display and navigation module display by integrating the yaw rate of the gyro sensor built into the display and navigation module display).

b. If a short circuit or open circuit occurs in the AVC-LAN, communication is interrupted and the parking assist monitor system will stop functioning.

## DIAGNOSTIC FUNCTION OUTLINE

a. This parking assist monitor system has a diagnostic function displayed in the display and navigation module display. This function enables the calibration (adjustment and verification) of the parking assist monitor system (Click here).

b. The parking assist monitor system can check the following items by using the intelligent tester.

| Item | Proceed to |
|---|---|
| DTC | Click here |
| Data List / Active Test | Click here |

**for Preparation** Click here

**HINT:**

- **Use the following procedures to troubleshoot the parking assist monitor system.**
- ***: Use the intelligent tester.**

## 1.VEHICLE BROUGHT TO WORKSHOP

NEXT

## 2.INSPECT BATTERY VOLTAGE

**Standard voltage:**
**11 to 14 V**

If the voltage is below 11 V, replace or recharge the battery before proceeding.

NEXT

## 3.CHECK IF SAME SYMPTOM APPEARS IN NAVIGATION SYSTEM

a. Refer to the navigation system ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| Symptom does not appear | A |
| Symptom appears | B |

B. → FOLLOW NAVIGATION SYMPTOMS CHART TO PERFORM TROUBLESHOOTING

A

## 4.CHECK COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*

a. Use the intelligent tester to check if the CAN communication system is functioning normally.

**Result**

| Result | Proceed to |
|---|---|
| CAN DTC is not output | A |
| CAN DTC is output (for LHD) | B |
| CAN DTC is output (for RHD) | C |

B. → Go to CAN COMMUNICATION SYSTEM (Click here)

C. → Go to CAN COMMUNICATION SYSTEM (Click here)

A

## 5.CHECK DTC OUTPUT*

a. Check for DTCs and note any codes that are output ( Click here).

b. Clear the DTC (Click here).

c. Recheck for DTCs. Based on the DTC output in the first step, try to force output of the parking assist monitor system DTC by simulating the conditions indicated by the DTC.

**Result**

| Result | Proceed to |
|---|---|
| DTC is not output | A |
| DTC is output | B |

B. → Go to step 8

A

## 6.PROBLEM SYMPTOMS TABLE

a. Refer to the Problem Symptoms Table (Click here).

**Result**

| Result | Proceed to |
|---|---|
| Fault is not listed in problem symptoms table | A |
| Fault is listed in problem symptoms table | B |

B. → Go to step 8

A

## 7.OVERALL ANALYSIS AND TROUBLESHOOTING

a. Terminals of ECU (Click here).

## INITIALIZE PARKING ASSIST MONITOR SYSTEM

a. If the following operations are performed, "System initializing" is displayed on the multi-display.

| Part Name | Operation | Initialization Item |
|---|---|---|
| Battery cable | Disconnect | Store the steering angle neutral point in memory |
| Steering angle sensor connector | Disconnect | Store the steering angle neutral point in memory |

b. When "System initializing" is displayed, correct the steering angle neutral point using either of the following methods.

i. METHOD 1:
Fully turn the steering wheel to the right and left.

ii. METHOD 2:

1. Drive the vehicle at more than 20 km/h (12 mph) for more than 5 minutes on a straight road with as little traffic congestion as possible.

   **HINT:**

   While driving at a constant vehicle speed, the ECU recognizes the point where the steering angle changes the least and memorizes it as the steering angle neutral point.

2. Stop the vehicle and check whether the neutral point is stored or not. If it is not stored, drive the vehicle according to the previous step again (the neutral point is stored by driving the vehicle straight).

**for Preparation** Click here

## INITIALIZE PARKING ASSIST MONITOR SYSTEM

a. If the following operations are performed, "System initializing" is displayed on the display and navigation module display.

| Part Name | Operation | Initialization Item |
|---|---|---|
| Battery cable | Disconnect | Store the steering angle neutral point in memory |
| Steering angle sensor connector | Disconnect | Store the steering angle neutral point in memory |

b. When "System initializing" is displayed, correct the steering angle neutral point using either of the following methods.

i. METHOD 1:
Fully turn the steering wheel to the right and left.

ii. METHOD 2:

1. Drive the vehicle at more than 20 km/h (12 mph) for more than 5 minutes on a straight road with as little traffic congestion as possible.

   **HINT:**

   While driving at a constant vehicle speed, the ECU recognizes the point where the steering angle changes the least and memorizes it as the steering angle neutral point.

2. Stop the vehicle and check whether the neutral point is stored or not. If it is not stored, drive the vehicle according to the previous step again (the neutral point is stored by driving the vehicle straight).

**for Preparation** Click here

## ADJUST PARKING ASSIST MONITOR SYSTEM

a. This parking assist monitor system can be set from the diagnostic screen of the "NAVIGATION SYSTEM".

b. If the following operations are performed, it is necessary to perform adjustments and checks on the diagnostic screen.

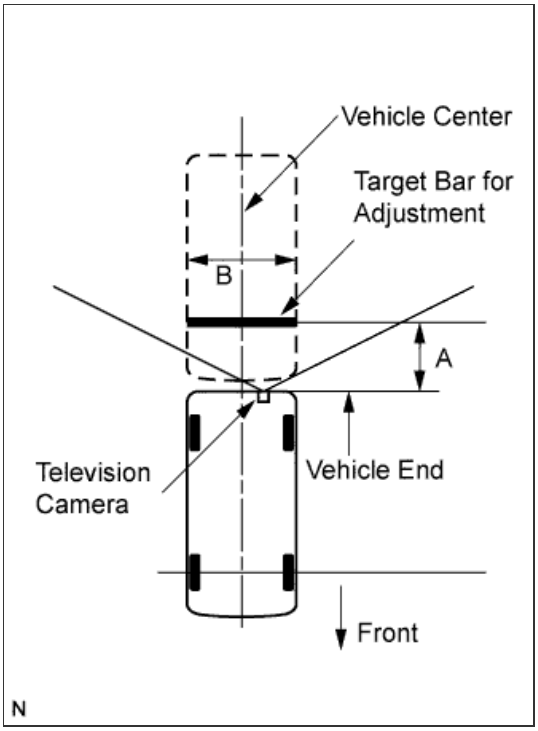
| Part Name | Operation | Adjustment Item |
|---|---|---|
| Rear television camera | • Replace<br>• Installation angle of the rear television camera changes because of the removal and installation of the rear television camera, etc. | Rear television camera optical axis (Camera position setting) |
| Parking assist ECU | Replace | • Store the steering angle neutral point in memory<br>• Store the left and right maximum steering angles<br>• Rear television camera optical axis (Camera position setting) |

## PREPARATION FOR ADJUSTMENT

**HINT:**

Create a target bar for adjustment only when adjusting the optical axis of the camera.

a. Park the vehicle with the steering wheel centered.



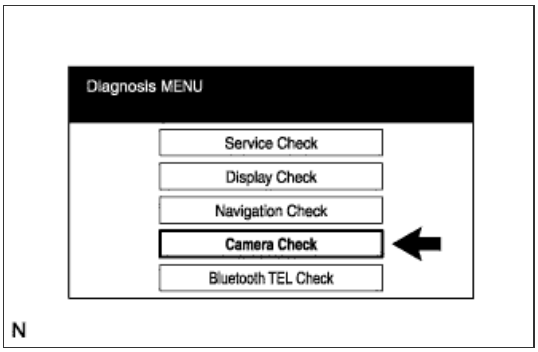
b. Set a target bar for adjustment.

**Dimension**

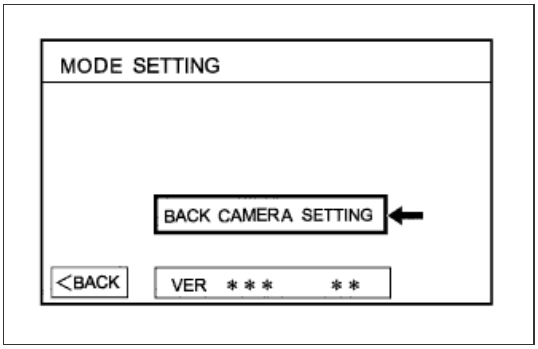
| Area | Specification |
|---|---|
| A | 830 +/-5 mm (32.7 +/-0.194 in.) |
| B | 2000 +/-5 mm (78.7 +/-0.194 in.) |

**HINT:**

- **Set a piece of tape on the ground as the target bar for adjustment. Its width and length are 25 +/-5 mm (0.984 +/-0.194 in.) and 2000 +/-5 mm (78.7 +/-0.194 in.), respectively. Check the color on the multi-display and choose a tape color which can be easily seen.**
- **Before parking the vehicle, be sure to move the vehicle forward and in reverse to check that the tires are facing straight ahead with the steering wheel centered.**



## START DIAGNOSIS MODE

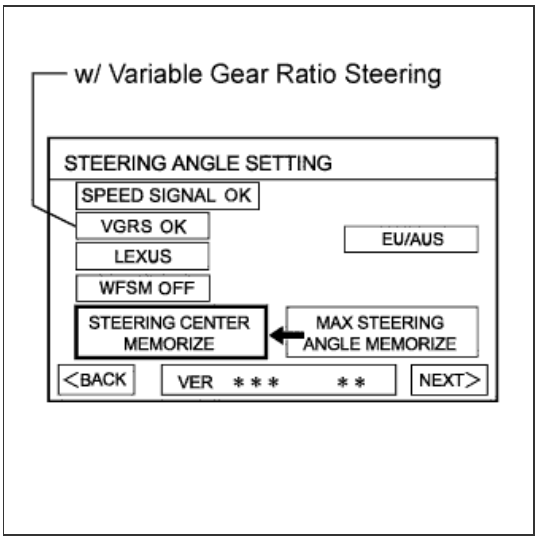


a. Start the engine.

b. Start the diagnostic system (Click here).

c. Select "Camera Check" on the "Diagnosis MENU" screen.

d. Select "BACK CAMERA SETTING" on the "MODE SETTING" screen.



**HINT:**

After performing the rear camera position setting, the option on the menu display will dim. To perform the adjustment again, touch the dimmed button for 2 seconds or more (when the calibration is performed for a new ECU, the screen will not be displayed).

## SET STEERING ANGLE

a. Perform the STEERING CENTER MEMORIZE operation.

**HINT:**

When performing removal and installation, or replacement of the television camera, steering angle adjustment is not required.

i. Check that the steering wheel is centered, and then press "STEERING CENTER MEMORIZE".

ii. Press "NEXT" on the steering angle setting screen.

**HINT:**

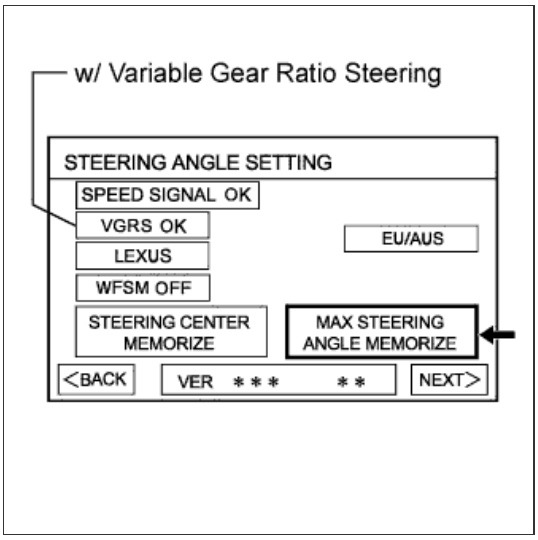
- **Make sure that the steering wheel is centered before pressing "NEXT". The current steering angle is automatically stored as the steering angle neutral point when the display returns to the steering angle setting screen.**
- **When performing removal and installation, or replacement of the television camera, steering angle adjustment is not required.**
- Even when storing the steering angle neutral point only, the system cannot store it unless the operation is completed by following the prompts from "NEXT" to "OK".
- When the system displays "SPEED SIGNAL CHK", first press "SPEED SIGNAL CHK", and then press "MAX STEERING ANGLE MEMORIZE". The display does not change to the next screen if this procedure is not completed.

b. Perform the MAX STEERING ANGLE MEMORIZE operation.

i. After adjusting the steering angle neutral point, turn the steering wheel to the left and right lock positions and press "MAX STEERING ANGLE MEMORIZE". The maximum steering angle is then stored.

**HINT:**

While performing the MAX STEERING ANGLE MEMORIZE operation, "NEXT" does not respond until the system stores the steering angle neutral point and maximum steering angle.



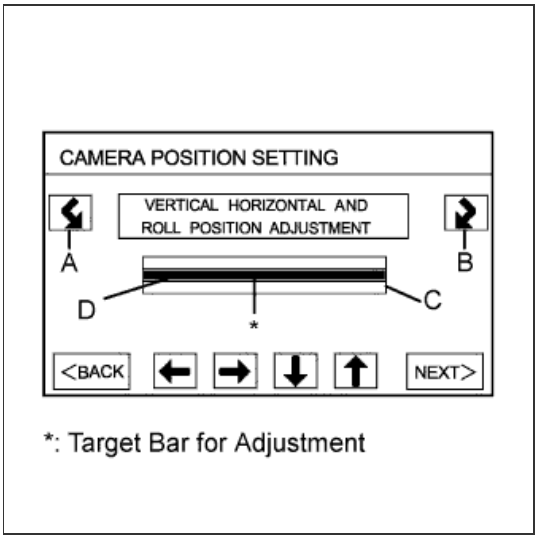
c. w/ Variable Gear Ratio Steering (VGRS) system:

Perform the VGRS inspection.

i. Check that "VGRS OK" is displayed. If the VGRS is malfunctioning, "VGRS CHK" will be displayed, and pressing "NEXT" will not change the screen to the next display.

**HINT:**

For vehicles without VGRS, nothing is displayed.



## SET CAMERA POSITION

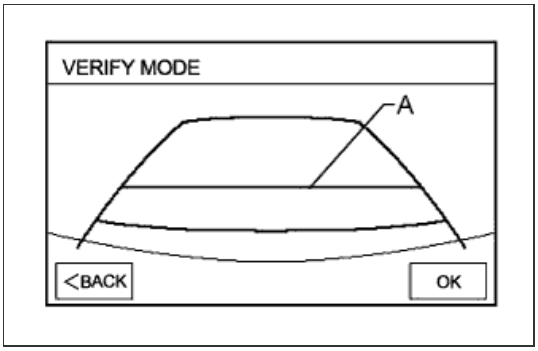
a. Perform the roll angle adjustment.

i. Press switches A and B to rotate C so that it is parallel to the target adjustment bar D.

b. Perform the vertical and horizontal position adjustment.

i. Press the directional switches to move C so that the target adjustment bar D is centered in C.

## VERIFY MODE



a. Check that A and the target adjustment bar are overlapping.

- If the steering angle neutral point is not aligned, perform the STEERING CENTER MEMORIZE and MAX STEERING ANGLE MEMORIZE operations.
- If A and the target adjustment bar are not aligned even if the tires are aligned straight ahead, perform the camera position setting operation.

b. Selecting "OK" will return the screen to the Diagnosis MENU, and complete the adjustment.

**HINT:**

The update is not completed until "OK" is pressed.

**for Preparation** Click here

## ADJUST PARKING ASSIST MONITOR SYSTEM

a. This parking assist monitor system can be set from the diagnostic screen of the display and navigation module display.

b. If the following operations are performed, it is necessary to perform adjustments and checks on the diagnostic screen.

| Part Name | Operation | Adjustment Item | Proceed to |
|---|---|---|---|
| Steering angle sensor | • Removal and installation of the Steering angle sensor<br>• Removal and installation of the connector of the Steering angle sensor | Steering angle neutral point | Click here |
| | | Steering angle setting | Click here |
| Steering angle sensor | Replacement | Steering angle neutral point | Click here |
| | | Steering angle setting | Click here |
| Parking assist ECU | Replacement | Parking assist ECU initialization | Step 2 |
| Suspension, tires, etc. | The vehicle height changes because of suspension or tire replacement | Rear television camera optical axis (Camera position setting) | Step 3 |
| | | Side television camera optical axis (Camera position setting) | Click here |
| Rear television camera assembly | • Replacement<br>• Installation angle of the rear television camera changes because of the removal and installation of the rear television camera, etc. | Rear television camera optical axis (Camera position setting) | Step 3 |
| Display and navigation module display (HDD navigation system) | Replacement | Vehicle contract setting | Click here |
| Display and navigation module display (DVD navigation system) | Replacement | Vehicle contract setting | Click here |

**HINT:**

- **The adjustment values stored while performing parking assist monitor system calibration are stored in the parking assist ECU.**
- **After the engine switch is turned off, the display and navigation module display records various types of memory and settings. As a result, after turning the engine switch off, make sure to wait for the time specified in the following table before disconnecting the cable from the negative (-) battery terminal.**

**Waiting Time before Disconnecting Cable from Negative (-) Battery Terminal**

| Specification | Waiting Time |
|---|---|
| w/o Telematics transceiver | 60 sec. |
| w/ Telematics transceiver | 120 sec. |

## PARKING ASSIST ECU INITIALIZATION

**HINT:**

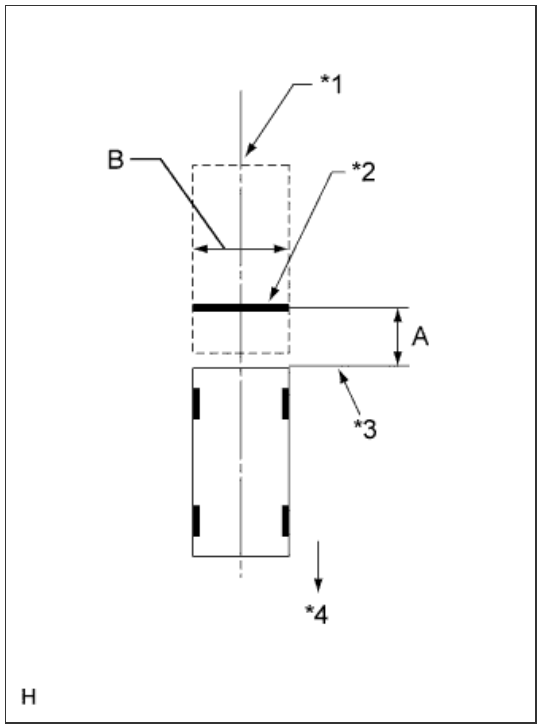
Be sure to check for DTCs before performing this procedure ( Click here).

a. Preparation for adjustment

i. Park the vehicle with the steering wheel centered.

ii. Set a target bar for optical axis adjustment of the rear television camera.

**HINT:**



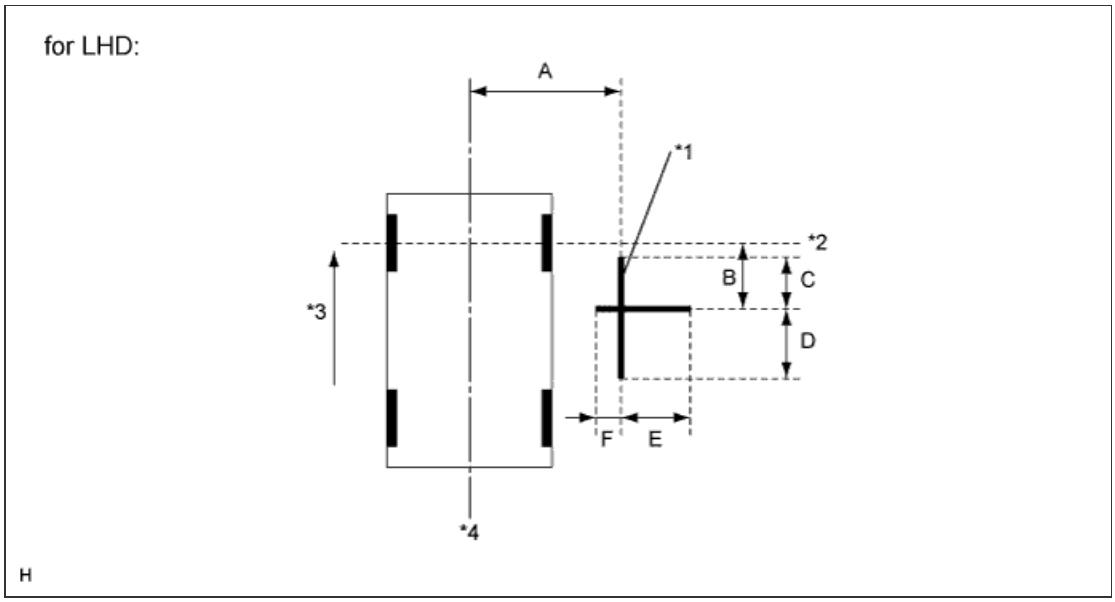
Only when adjusting the optical axis of the camera, create a target bar for adjustment.

**Dimension:**

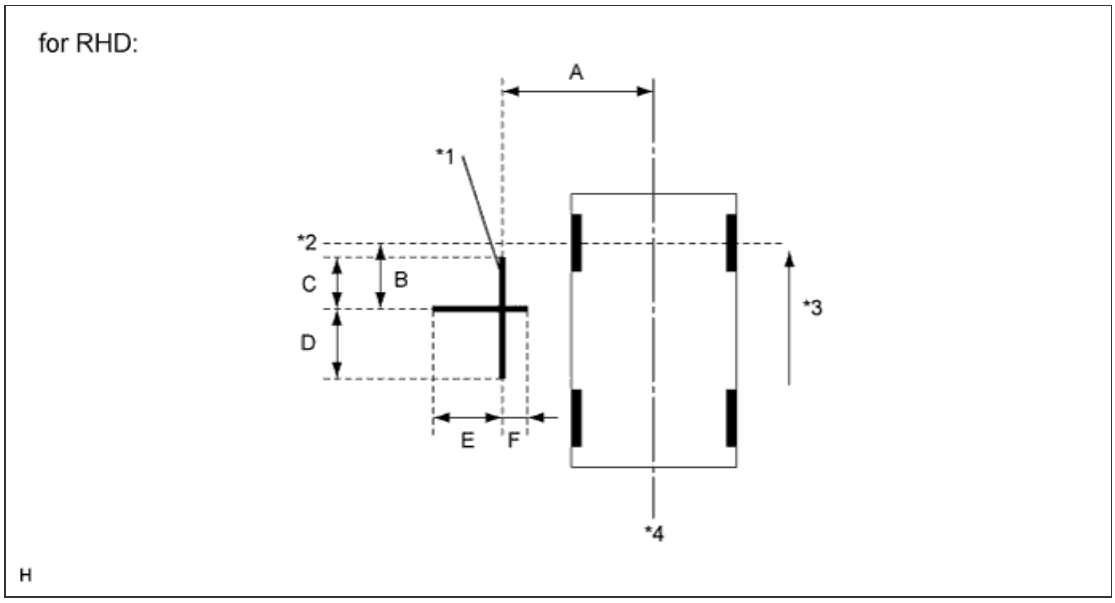
| Area | Specification |
|---|---|
| A | 825 to 835 mm (2.71 to 2.74 ft.) |
| B | 1995 to 2005 mm (6.545 to 6.578 ft.) |

**Text in Illustration**

| | |
|---|---|
| *1 | Vehicle Center |
| *2 | Target Bar for Back Camera Adjustment |
| *3 | Vehicle End |
| *4 | Front Side |



**HINT:**



- **Set a piece of tape on the ground as the target bar for adjustment. Its width and length are 20 to 30 mm (0.787 to 1.181 in.) and 1995 to 2005 mm (6.545 to 6.578 ft.), respectively. Check the color on the display and navigation module display and choose a tape color which can be easily seen.**
- **Before parking the vehicle, be sure to move the vehicle forward and in reverse to check that the tires are facing straight ahead with the steering wheel centered.**
- **Check that the back door is fully closed.**

iii. Set a target bar for optical axis adjustment of the side television camera.

**HINT:**

Only when adjusting the optical axis of the camera, create a target bar for adjustment.

**Dimension:**

| A | B | C | D | E | F |
|---|---|---|---|---|---|
| 1183 mm (3.88 ft.) | 1181 mm (3.87 ft.) | 500 mm (1.64 ft.) | 500 mm (1.64 ft.) | 500 mm (1.64 ft.) | 180 mm (7.09 in.) |

**Text in Illustration**

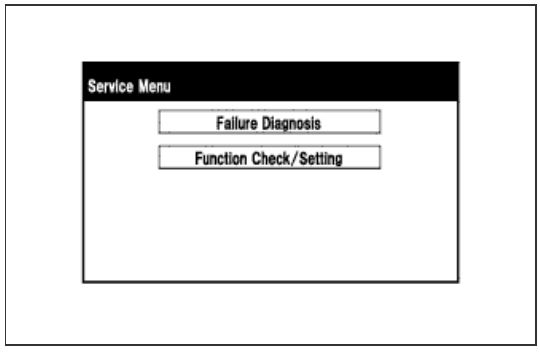
| | | | |
|---|---|---|---|
| *1 | Target Bar for Side Camera Adjustment | *2 | Front Wheel Axis |
| *3 | Front Side | *4 | Vehicle Center |

**HINT:**

Target bars for side camera adjustment should be made with 2 pieces of 2.5 cm wide tape; one piece should be 100 cm (3.28 ft.) (C+D) and the other should be 68 cm (2.23 ft.) (E+F) long. Check the tape color on the display and navigation module display and choose a tape color which can be easily seen.

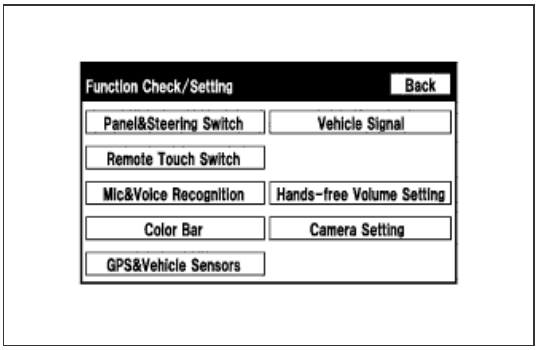
**b.** Start diagnostic mode .

- for HDD (Click here).
- for DVD (Click here).



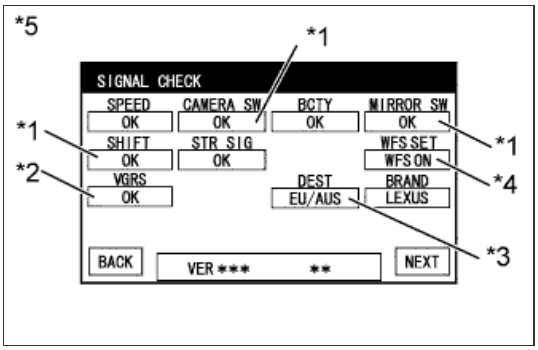
**NOTICE:**

Alignment must be performed with the engine running. For this reason, it is necessary to apply the parking brake, depress the brake pedal, and move the shift lever into the P position, and to exercise all other necessary caution to ensure that the vehicle does not begin moving unexpectedly.



**HINT:**

The displayed items may differ depending on vehicle specifications.



**i.** Select "Function Check/Setting" on the Service Menu screen.

ii. Select "Camera Setting" on the Function Check/Setting screen.

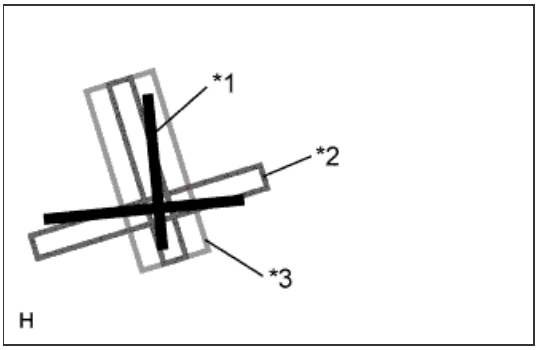
iii. Select "NEXT" on the SIGNAL CHECK screen.

**Text in Illustration**

| | |
|---|---|
| *1 | w/ Side Monitor System |
| *2 | w/ VGRS |
| *3 | "EU/AUS" or "GCC/ZAF" |
| *4 | "WFS ON" (w/ Side Monitor System)<br>"WFS OFF" (w/o Side Monitor System) |
| *5 | Example |

**NOTICE:**

- **When "CHK" (red) is displayed for any items on the SIGNAL CHECK screen, selecting "NEXT" will not change the screen to the SIDE CAMERA POSITION SETTING screen.**
- **When "CHK" (red) is displayed for any items on the SIGNAL CHECK screen, perform inspections using the SIGNAL CHECK screen (Click here).**



**HINT:**

- **When the outer mirrors are retracted, selecting "NEXT" will not change the screen to the SIDE CAMERA POSITION SETTING screen.**
- **If the screen does not change to the SIDE CAMERA POSITION SETTING screen even though the outer mirrors are extended, perform the MIRROR SW check on the SIGNAL CHECK screen (Click here).**
- **If the screen does not change to the SIDE CAMERA POSITION SETTING screen even after "OK" (blue) is displayed as a result of the MIRROR SW check on the SIGNAL CHECK screen, replace the parking assist ECU (Click here).**

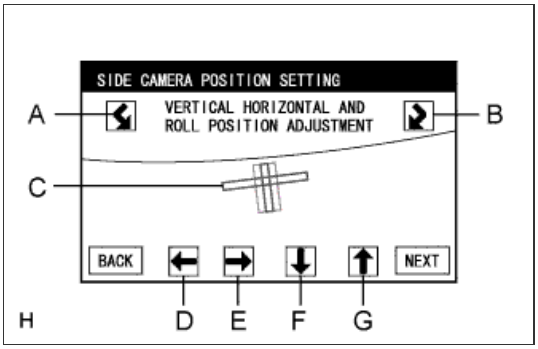
c. SIDE CAMERA POSITION SETTING

**HINT:**

Colors used on the side camera position setting screen

**Text in Illustration**

| | |
|---|---|
| *1 | Target Adjustment Bar for Side Camera Position Setting |
| *2 | Red Frame |
| *3 | Yellow Frame |



i. Perform the roll angle adjustment.

- Select switches A and B to rotate C so that it is parallel to the target adjustment bar.

ii. Perform the vertical and horizontal position adjustment.

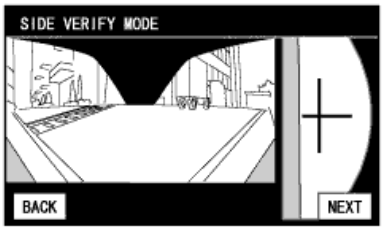
- Select the directional switches D, E, F and G to move C so that the target adjustment bar is centered in C.

iii. Select "NEXT" to display SIDE VERIFY MODE.

d. SIDE VERIFY MODE

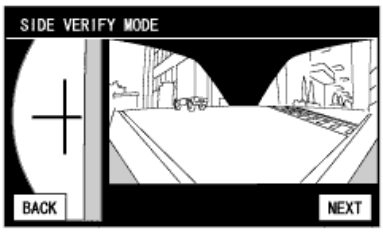
i. Check that the red cross and the target adjustment bar are aligned.

**HINT:**



If they are not aligned, select "BACK" and perform SIDE CAMERA POSITION SETTING again.

ii. Select "NEXT" to store the side camera aiming adjustment value and change the screen to the STEERING ANGLE SETTING screen.



**HINT:**

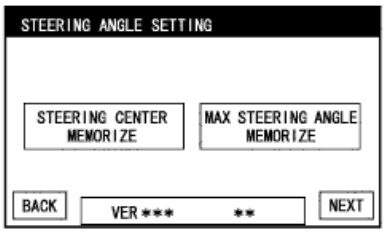
- **When "NEXT" is selected, a beep will sound to confirm that the side camera aiming adjustment values have been stored.**
- **The adjustment value will not be stored unless "NEXT" is selected.**

for LHD:

for RHD:

H

e. STEERING ANGLE SETTING



i. Perform the STEERING CENTER MEMORIZE operation.

- Check that the steering wheel is centered, and then select "STEERING CENTER MEMORIZE".

**HINT:**

When performing removal and installation, or replacement of the television camera, steering angle adjustment is not required.

ii. Perform the MAX STEERING ANGLE MEMORIZE operation.

H

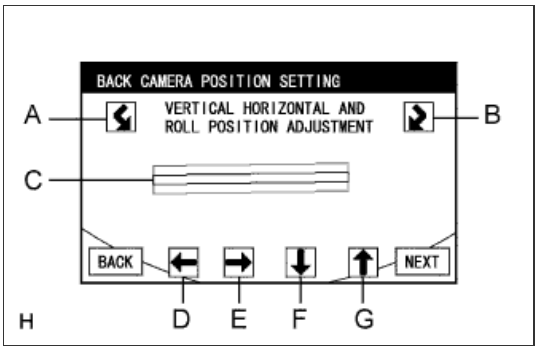
- After adjusting the steering angle neutral point, turn the steering wheel to the left and right lock positions and select "MAX STEERING ANGLE MEMORIZE". The maximum steering angle is then stored and the screen changes to the BACK CAMERA POSITION SETTING screen.

**HINT:**

The "NEXT" button does not respond until the system stores the steering angle neutral point and maximum steering angle.

**HINT:**

- **It is also possible to start by initially turning the steering to the right side.**
- **When "MAX STEERING ANGLE MEMORIZE" is selected, a beep will sound to confirm that the steering adjustment values have been stored.**
- **The adjustment value will not be stored unless "MAX STEERING ANGLE MEMORIZE" is selected after turning the steering wheel side to side.**
- **When "BACK" is selected, the screen changes to SIDE VERIFY MODE without storing the set values.**
- **Even if no DTCs are detected, selecting "MAX STEERING ANGLE MEMORIZE" may not cause the adjustment value to be stored if the steering sensor is malfunctioning.**
- **If selecting "MAX STEERING ANGLE MEMORIZE" does not cause the adjustment value to be stored after adjusting the steering angle, replace the spiral with sensor cable sub-assembly.**



f. BACK CAMERA POSITION SETTING

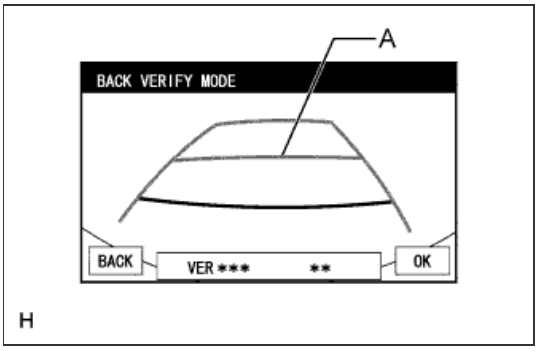
**HINT:**

- **When the back door is open, the "Back door is open. Do not use**

**the rear view monitor when the back door is not completely closed." message will be displayed and camera position setting will not be possible.**

- **If the "Back door is open. Do not use the rear view monitor when the back door is not completely closed." message is displayed even when the back door is closed, perform inspections according to Problem Symptoms Table (A back door open warning message is displayed even after back door is closed) (Click here).**

i. Perform the roll angle adjustment.



- Select switches A and B to rotate C so that it is parallel to the target adjustment bar.

ii. Perform the vertical and horizontal position adjustment.

- Select the directional switches D, E, F and G to move C so that the target adjustment bar is centered in C.

iii. Select the "NEXT" button on the BACK CAMERA POSITION SETTING screen.

g. BACK VERIFY MODE

i. Check that A and the target adjustment bar are overlapping.

- If the steering angle neutral point is not aligned, perform the STEERING CENTER MEMORIZE and MAX STEERING ANGLE MEMORIZE operations.
- If A and the target adjustment bar are not aligned even if the tires are aligned straight ahead, perform the camera position setting operation.

ii. Selecting "OK" will return the screen to the Service Menu screen, and complete the adjustment.

**HINT:**

- **The update is not completed until "OK" is selected.**
- **When "OK" is selected, a beep will sound to confirm that the rear camera aiming adjustment values have been stored.**

h. Finish diagnostic mode.

- for HDD (Click here).
- for DVD (Click here).

## BACK CAMERA POSITION SETTING

**HINT:**

Be sure to check for DTCs before performing this procedure ( Click here).

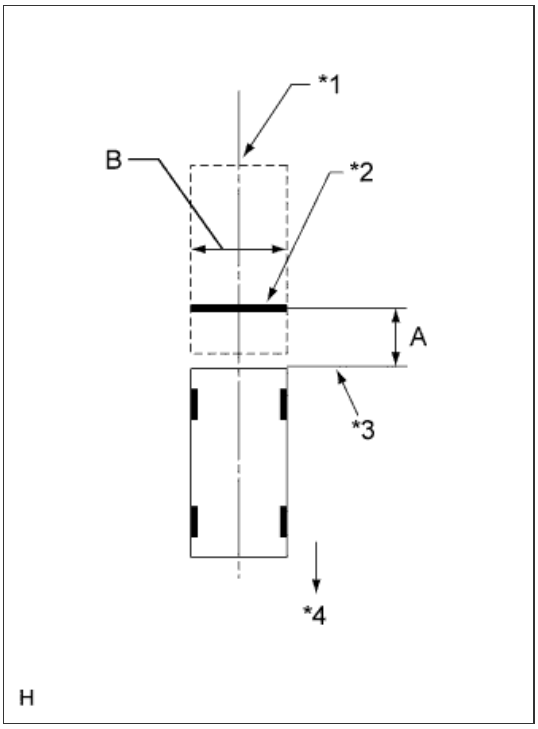
a. Preparation for adjustment

i. Park the vehicle with the steering wheel centered.

ii. Set a target bar for optical axis adjustment of the rear television camera.

**HINT:**

Only when adjusting the optical axis of the camera, create a target bar for adjustment.



**Dimension:**

| Area | Specification |
|---|---|
| | 825 to 835 mm (2.71 to |

| | |
|---|---|
| A | 2.74 ft.) |
| B | 1995 to 2005 mm (6.545 to 6.578 ft.) |

**Text in Illustration**

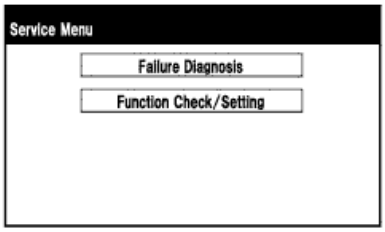
| | |
|---|---|
| *1 | Vehicle Center |
| *2 | Target Bar for Back Camera Adjustment |
| *3 | Vehicle End |
| *4 | Front Side |

**HINT:**

- **Set a piece of tape on the ground as the target bar for adjustment. Its width and length should be 20 to 30 mm (0.787 to 1.181 in.) and 1995 to 2005 mm (6.545 to 6.578 ft.), respectively. Check the color on the multi-display and choose a tape color which can be easily seen.**
- **Before parking the vehicle, be sure to move the vehicle forward and in reverse to check that the tires are facing straight ahead with the steering wheel centered.**
- **Check that the back door is fully closed.**

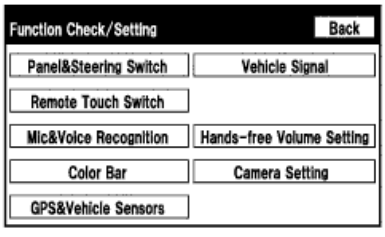
b. Start diagnostic mode.

- for HDD (Click here).
- for DVD (Click here).



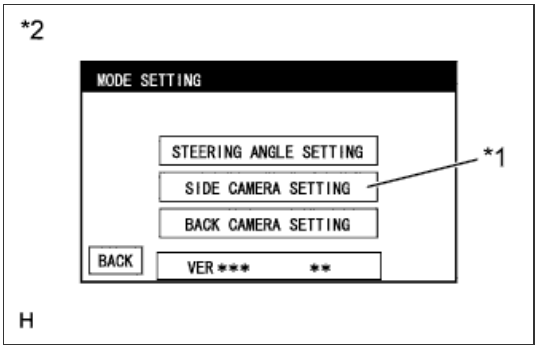
**NOTICE:**

Alignment must be performed with the engine running. For this reason, it is necessary to apply the parking brake, depress the brake pedal, and move the shift lever into the P position, and to exercise all other necessary caution to ensure that the vehicle does not begin moving unexpectedly.



**HINT:**

The displayed items may differ depending on vehicle specifications.



i. Select "Function Check/Setting" on the "Service Menu" screen.

ii. Select "Camera Setting" on the Function Check/Setting screen.

iii. Select "BACK CAMERA SETTING" on the MODE SETTING screen.

## CHECK PARKING ASSIST ECU

a. Disconnect the F36 ECU connector.

b. Measure the resistance and voltage according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F36-6 (+B) - Body ground | L - Body ground | Power source | Always | 11 to 14 V |
| F36-1 (IG) - F36-4 (GND1) | G - W-B | Ignition signal input | Engine switch on (IG) | 11 to 14 V |
| F36-1 (IG) - F36-4 (GND1) | G - W-B | Ignition signal input | Engine switch off | Below 1 V |
| F36-14 (ACC) - F36-4 (GND1) | GR - W-B | Accessory | Engine switch on (ACC) | 11 to 14 V |
| F36-14 (ACC) - F36-4 (GND1) | GR - W-B | Accessory | Engine switch off | Below 1 V |
| F36-4 (GND1) - Body ground | W-B - Body ground | Ground | Always | Below 1 Ω |

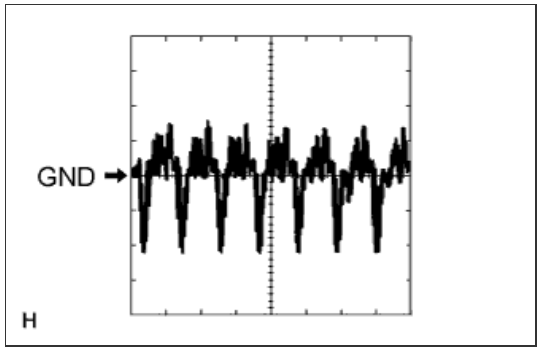
If the result is not as specified, there may be a malfunction on the wire harness side.

c. Reconnect the F36 ECU connector.

d. Measure the voltage according to the value(s) in the table below.

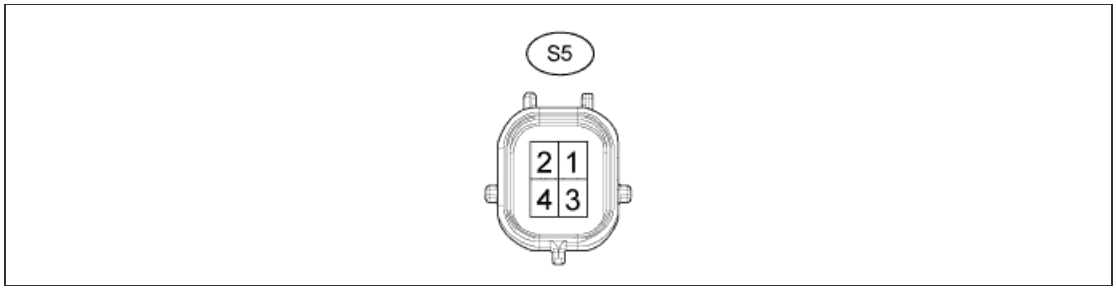
| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F37-10 (CV+) - F37-34 (CV-) | R - Shielded | Television camera display signal (NTSC) input | Engine switch on (IG), shift lever moved to R | Waveform |
| F37-11 (CGND) - F36-4 (GND1) | W - W-B | Television camera ground | Always | Below 1 V |
| F37-34 (CV-) - F36-4 (GND1) | Shielded - W-B | Television camera ground (shielded) | Always | Below 1 V |
| F37-35 (CB+) - F36-4 (GND1) | B - W-B | Power source to television camera | Engine switch on (IG), shift lever moved to R | 5.8 to 6.5 V |

If the result is not as specified, the ECU may have a malfunction.



**HINT:**

Using an oscilloscope, check the waveform.



**Waveform (Reference)**

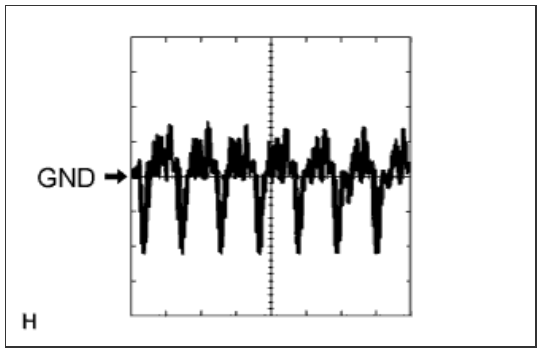
| Item | Content |
|---|---|

| | |
|---|---|
| Terminal No. (Symbol) | F37-10 (CV+) - F37-34 (CV-) |
| Tool Setting | 0.2 V/DIV., 50 µs/DIV. |
| Condition | Engine switch on (IG), shift lever moved to R |

**CHECK REAR TELEVISION CAMERA ASSEMBLY**

a. Measure the voltage and resistance according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| S5-3 (CGND) - Body ground | W - Body ground | Ground | Always | Below 1 Ω |
| S5-4 (CB+) - S5-3 (CGND) | B - W | Power source | Engine switch on (IG), shift lever moved to R | 5.8 to 6.5 V |
| S5-2 (CV+) - S5-1 (CV-) | R - BR | Display signal | Engine switch on (IG), shift lever moved to R | Waveform |

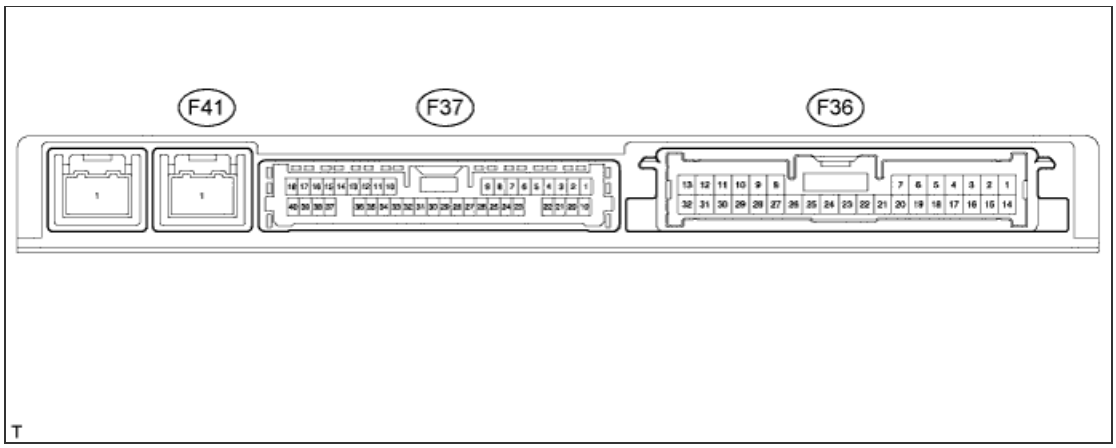


If the result is not as specified, the camera may have a malfunction.

**HINT:**

Using an oscilloscope, check the waveform.

**Waveform (Reference)**



| Item | Content |
|---|---|
| Terminal No. (Symbol) | S5-2 (CV+) - S5-1 (CV-) |
| Tool Setting | 0.2 V/DIV., 50 µs/DIV. |
| Condition | Engine switch on (IG), shift lever moved to R |

**CHECK MULTI-DISPLAY (Click here)**

**for Preparation** Click here

## PARKING ASSIST ECU

a. Disconnect the F36 connector from the ECU.

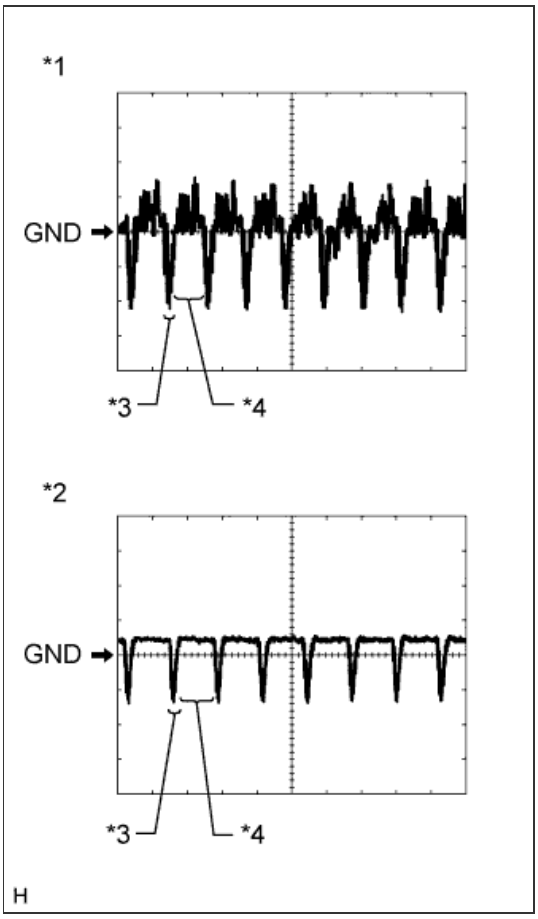
b. Measure the voltage and resistance of each terminal of the wire harness side connector.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F36-6 (+B) - F36-4 (GND1) | L - W-B | Power source signal | Always | 11 to 14 V |
| F36-4 (GND1) - Body ground | W-B - Body ground | Ground | Always | Below 1 Ω |
| F36-1 (IG) - F36-4 (GND1) | G - W-B | IG power source signal | Engine switch on (IG) | 11 to 14 V |
| F36-14 (ACC) - F36-4 (GND1) | GR - W-B | ACC power source signal | Engine switch on (ACC) | 11 to 14 V |
| F37-22 (BLSW) - F36-4 (GND1) | G - W-B | Front and side monitor main switch power source signal | Engine switch on (IG), front and side monitor main switch on | 11 to 14 V |

If the result is not as specified, there may be a malfunction on the wire harness side.

c. Reconnect the F36 connector to the ECU.

d. Measure the voltage and check for pulses according to the value(s) in the table below.



| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F36-10 (CANL) - F36-4 (GND1) | L - W-B | CAN communication signal | CAN communication circuit | Pulse generation |
| F36-9 (CANH) - F36-4 (GND1) | V - W-B | CAN communication signal | CAN communication circuit | Pulse generation |
| F36-32 (TX-) - F36-31 (TX+) | L - W | AVC-LAN communication signal | - | - |
| F37-34 (CV-) - F36-4 (GND1) | W - W-B | Rear television camera ground | Always | Below 1 V |
| F37-10 (CV+) - F36-4 (GND1) | R - W-B | Rear television camera display signal (NTSC) input | Engine switch on (IG)<br>Shift lever in R<br>Under normal conditions | Pulse generation<br>(See waveform 1) |
| | | | Engine switch on (IG)<br>Shift lever in R<br>Camera lens is covered, blacking out screen | Pulse generation<br>(See waveform 2) |
| F37-11 (CGND) - F36-4 (GND1) | Shield - W-B | Rear television camera ground (shield) | Always | Below 1 V |
| F37-35 (CB+) - F36-4 (GND1) | B - W-B | Power source to rear television camera | Engine switch on (IG)<br>Shift lever in R | 5.8 to 7.0 V |

If the result is not as specified, the ECU may have a malfunction.

e. Reference (Oscilloscope waveform):

**HINT:**

A waterproof connector is used for the rear television camera assembly. Therefore, inspect the waveform at the parking assist ECU with the connector connected.

i. Waveform 1 (under normal conditions)

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F37-10 (CV+) - F36-4 (GND1) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | Engine switch on (IG), shift lever in R |

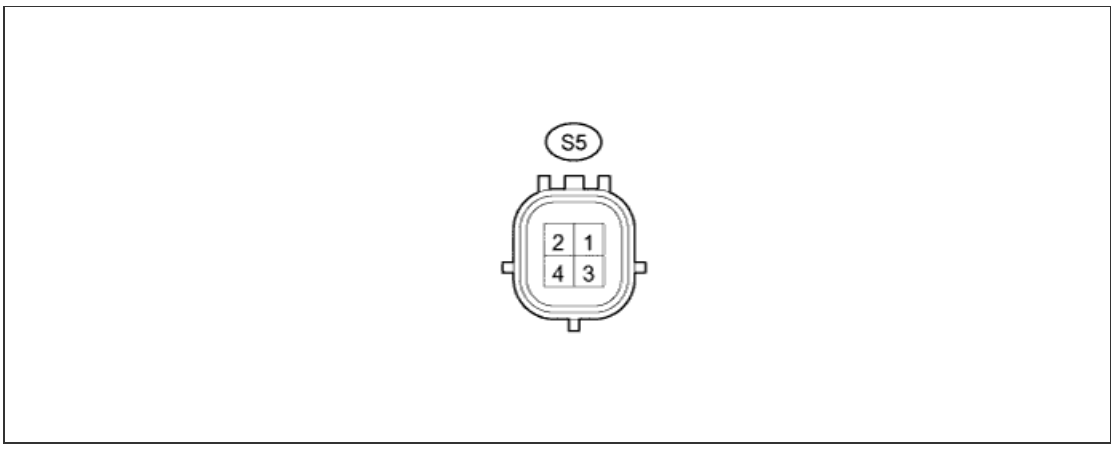
**HINT:**

The video waveform changes according to the image sent by the rear television camera assembly.

ii. Waveform 2 (camera lens is covered, blacking out the screen)

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F37-10 (CV+) - F36-4 (GND1) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | Engine switch on (IG), shift lever in R |

**HINT:**



The video waveform changes according to the image sent by the rear television camera assembly.

## REAR TELEVISION CAMERA ASSEMBLY

a. Disconnect the S5 connector from the rear television camera assembly.

b. Measure the voltage of each terminal of the wire harness side connector.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|

| | | | | |
|---|---|---|---|---|
| S5-4 (CB+) - Body ground | B - Body ground | Power source | Engine switch on (IG)<br>Shift lever in R | 5.8 to 7.0 V |

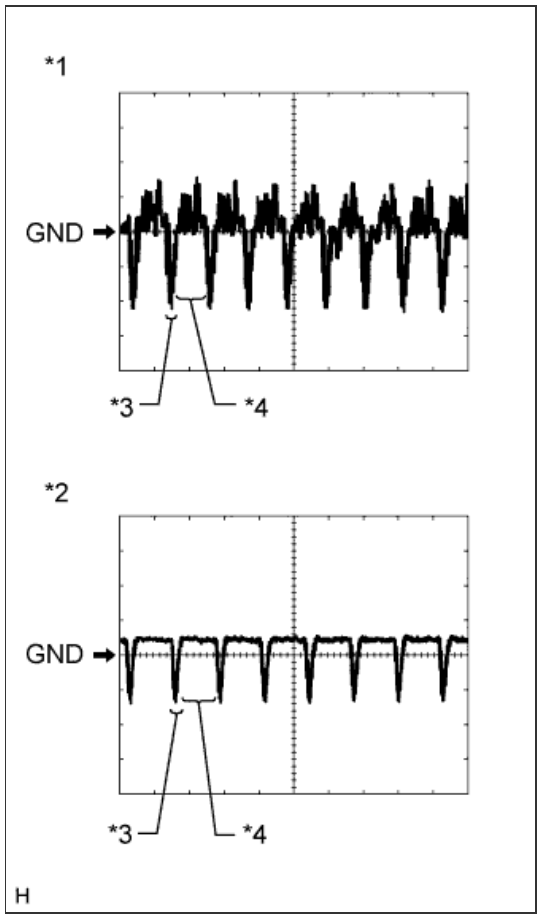
If the result is not as specified, there may be a malfunction on the wire harness side.

c. Reconnect the S5 connector to the rear television camera assembly.

d. Check for pulses between each terminal of the connector.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| S5-2 (CV+) - S5-1 (CV-) | R - W | Display signal | Engine switch on (IG)<br>Shift lever in R<br>Under normal conditions | Pulse generation<br>(See waveform 1) |
| | | | Engine switch on (IG)<br>Shift lever in R<br>Camera lens covered, blacking out screen | Pulse generation<br>(See waveform 2) |

**HINT:**



A waterproof connector is used for the rear television camera assembly. Therefore, inspect the waveform at the parking assist ECU with the connector connected.

If the result is not as specified, the camera may have a malfunction.

e. Reference (Oscilloscope waveform):

**HINT:**

A waterproof connector is used for the rear television camera assembly. Therefore, inspect the waveform at the parking assist ECU with the connector connected.

i. Waveform 1 (under normal conditions)

| Item | Content |
|---|---|
| Terminal No. (Symbol) | S5-2 (CV+) - S5-1 (CV-) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | Engine switch on (IG), shift lever in R |

**HINT:**

The video waveform changes according to the image sent by the rear television camera assembly.

ii. Waveform 2 (camera lens is covered, blacking out the screen)

| Item | Content |
|---|---|
| Terminal No. (Symbol) | S5-2 (CV+) - S5-1 (CV-) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |

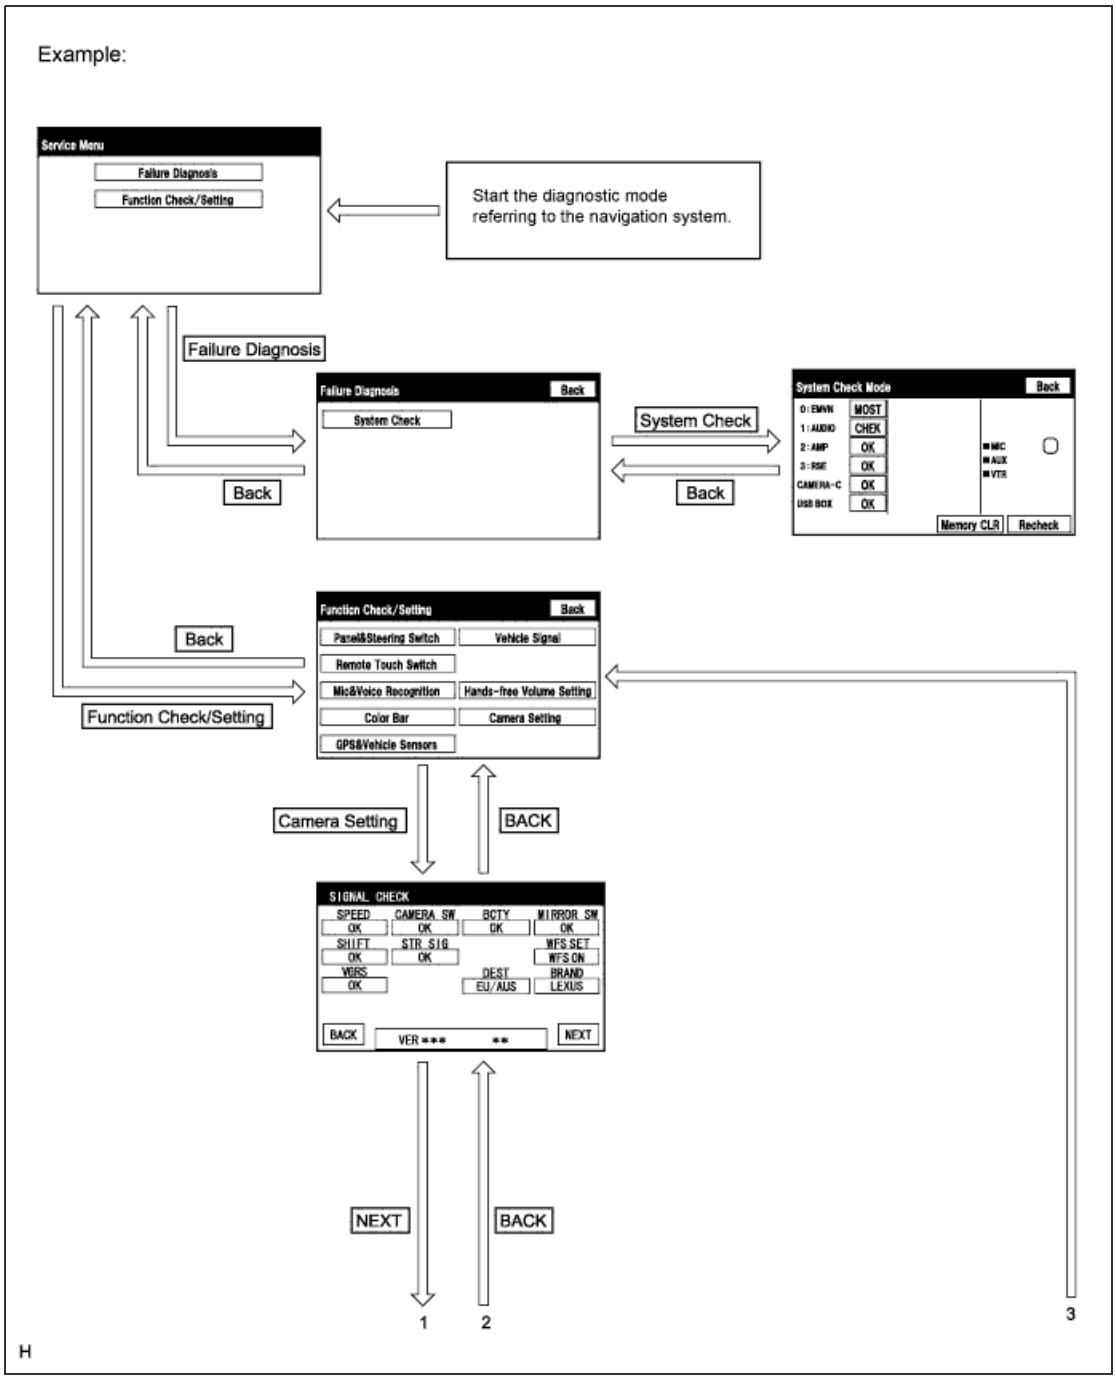
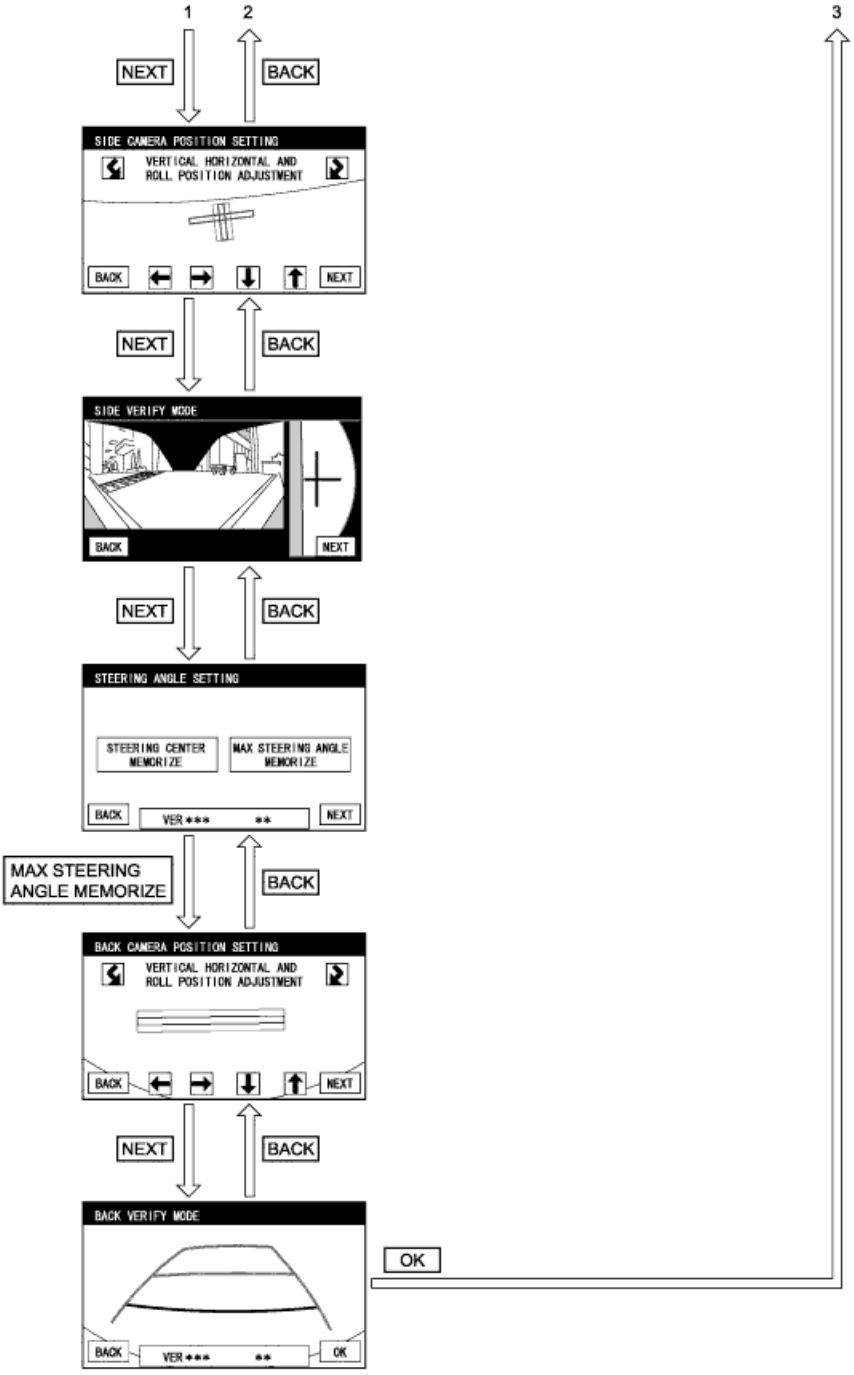
## PARKING ASSIST MONITOR DIAGNOSIS SYSTEM

a. For parking assist monitor system diagnosis, signals received by the parking assist ECU can be checked and the parking assist monitor system can be calibrated, adjusted and checked using the multi-display.



**NOTICE:**

Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system may be needed (Click here).



**HINT:**

The displayed screens and items may differ depending on vehicle specifications.

## DIAGNOSIS SCREEN TRANSITION (during parking assist ECU initialization)

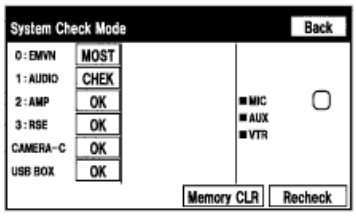
## DIAGNOSTIC MODE

a. Start diagnostic mode.

- for HDD (Click here).
- for DVD (Click here).

b. Failure diagnosis.



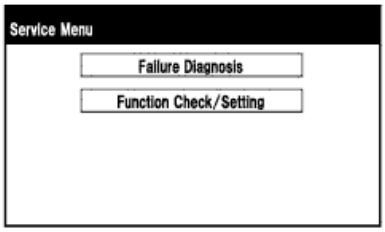
- for HDD (Click here).
- for DVD (Click here).

c. System check (check using system check mode screen).

- for HDD (Click here).
- for DVD (Click here).

d. Finish diagnostic mode.

- for HDD (Click here).
- for DVD (Click here).

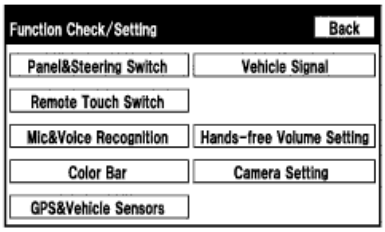


## SIGNAL CHECK (parking assist ECU input signal)

a. Start diagnostic mode.

- for HDD (Click here).
- for DVD (Click here).

i. Select "Function Check/Setting" on the Service Menu screen to display the Function Check/Setting screen.

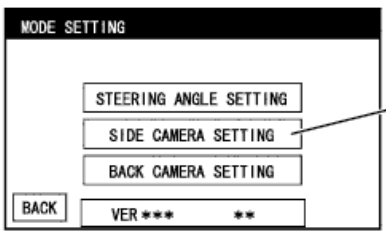


ii. Select "Camera Setting" on the Function Check/Setting screen.

**HINT:**

After "Camera Setting" is selected, the screen transitions differ depending on whether initialization of the parking assist ECU was performed after parking assist ECU replacement.

| Parking Assist ECU Initialization | Screen Transition |
|---|---|
| Not performed | SIGNAL CHECK screen |
| Performed | MODE SETTING screen |



iii. When the screen changes to the MODE SETTING screen, select "BACK CAMERA SETTING" to display the SIGNAL CHECK screen.

**HINT:**

To select a grayed out item, select and hold the item for 2 seconds or more.

**Text in Illustration**

| STR SIG | Steering angle sensor signal input | |
| WFS SET | Front monitor signal input *1 | |
| VGRS *2 | VGRS signal input | |
| DEST | Destination information signal input | |
| BRAND | Brand information input | |

*1: w/ Side Monitor System
*2: w/ VGRS

**HINT:**

- **When "CHK" (red) is displayed, perform inspections based on the result of the following inspections.**
- **If performing the adjustment after proceeding to the next screen, confirm that all items display "OK" (blue) before selecting "NEXT".**

c. SPEED inspection

**HINT:**

If "CHK" (red) is displayed for "SPEED", check for DTCs and perform troubleshooting based on the output DTCs ( Click here).

d. CAMERA SW inspection (w/ Side Monitor System)

i. Check that "OK" (blue) is displayed for "CAMERA SW" and select "OK".

ii. Check that "OK" (blue) changes to "CHK" (red). Press the front and side monitor main switch (steering pad switch assembly) and check that "CHK" (red) returns to "OK" (blue).

**HINT:**

If "CHK" (red) remains displayed or the "CAMERA SW" inspection result is not normal, perform troubleshooting according to Problem Symptoms Table ("CHK" message(s) are displayed on the SIGNAL CHECK screen) (Click here).

e. BCTY inspection

**HINT:**

If "CHK" (red) is displayed for "BCTY", check for DTCs and perform troubleshooting based on the output DTCs ( Click here).

f. MIRROR SW inspection (w/ Side Monitor System)

i. Check that "OK" (blue) is displayed for "MIRROR SW" and select "OK".

ii. Check that "OK" (blue) changes to "CHK" (red). Press the outer mirror switch and check that "CHK" (red) returns to "OK" (blue).

**HINT:**

After operating the outer mirror retract switch, if the outer mirror remains in the retracted state, return the outer mirror to the driving position. If "CHK" (red) remains displayed or the "MIRROR SW" inspection result is not normal, perform troubleshooting according to Problem Symptoms Table ("CHK" message(s) are displayed on the SIGNAL CHECK screen) (Click here)

g. SHIFT inspection (w/ Side Monitor System)

**HINT:**

If "CHK" (red) is displayed for "SHIFT", check for DTCs and perform troubleshooting based on the output DTCs ( Click here).

h. STR SIG inspection

**HINT:**

If "CHK" (red) is displayed for "STR SIG", check for DTCs and perform troubleshooting based on the output DTCs ( Click here).

i. WFS SET inspection (w/ Side Monitor System)

**HINT:**

If "CHK" is displayed, perform a CAMERA SW check and a camera connection check ( Click here).

j. DEST inspection

**HINT:**

If "CHK" (red) is displayed for "DEST", check for DTCs and perform troubleshooting based on the output DTCs ( Click here).

k. VGRS inspection (w/ VGRS)

**HINT:**

If "CHK" (red) is displayed for "VGRS", check for DTCs and perform troubleshooting based on the output DTCs ( Click here).

l. BRAND inspection

**HINT:**

If "CHK" (red) is displayed for "BRAND", check for DTCs and perform troubleshooting based on the output DTCs ( Click here).

m. Finish diagnostic mode.

- for HDD (Click here).
- for DVD (Click here).

## CALIBRATION WHEN SERVICING VEHICLE

**NOTICE:**

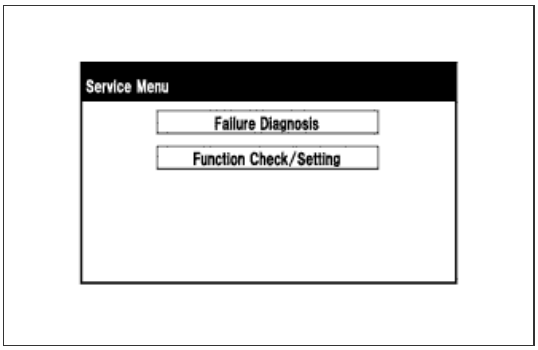
Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system may be needed (Click here).

## STEERING ANGLE SETTING (after parking assist ECU is initialized)

**HINT:**

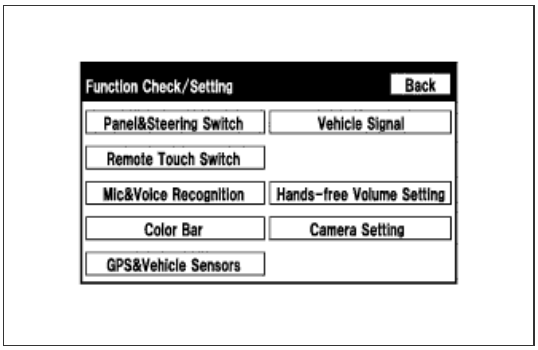
If the vehicle width extension lines and predicted path lines are not aligned when the steering wheel is centered, or if the predicted path line does not move before the steering wheel is fully turned to either the left or right, adjust the steering angle settings.

a. Center the steering wheel and stop the vehicle.



b. Start diagnostic mode.

- for HDD (Click here).
- for DVD (Click here).

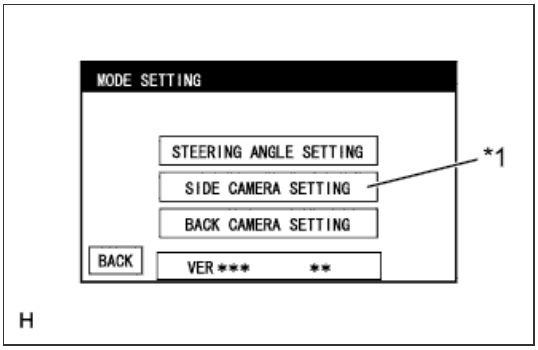


**NOTICE:**

Alignment must be performed with the engine running. For this reason, it is necessary to apply the parking brake, depress the brake pedal, and move the shift lever into the P position, and to exercise all other necessary caution to ensure that the vehicle does not begin moving unexpectedly.

i. Select "Function Check/Setting" on the Service Menu screen.

ii. Select "Camera Setting" on the Function Check/Setting screen.

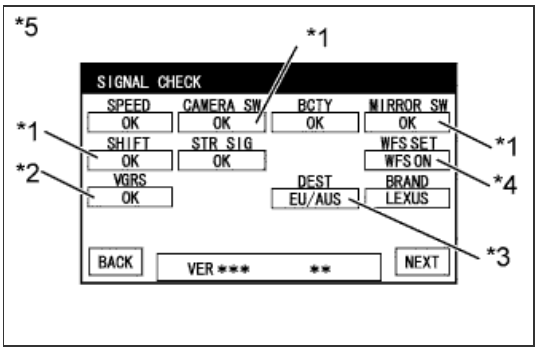


iii. Select "STEERING ANGLE SETTING" on the MODE SETTING screen.

**Text in Illustration**

| | |
|---|---|
| *1 | w/ Side Monitor System |

**HINT:**



To select a grayed out item, select and hold the item for 2 seconds or more.

iv. Select "NEXT" on the SIGNAL CHECK screen to display the STEERING ANGLE SETTING screen.

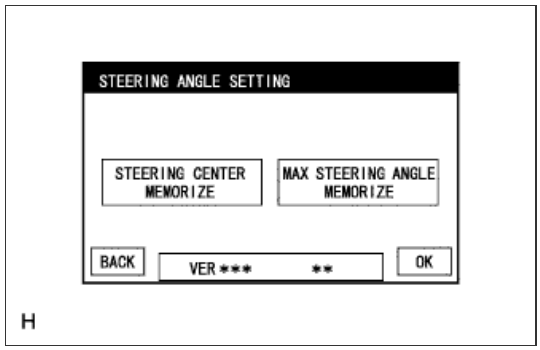
**Text in Illustration**

| | |
|---|---|
| *1 | w/ Side Monitor System |
| *2 | w/ VGRS |
| *3 | "EU/AUS" or "GCC/ZAF" |
| *4 | "WFS ON" (w/ Side Monitor System)<br>"WFS OFF" (w/o Side Monitor System) |
| *5 | Example |

**NOTICE:**

- **When "CHK" (red) is displayed for any items on the SIGNAL CHECK screen, selecting "NEXT" will not change the screen to the STEERING ANGLE SETTING screen.**
- **When "CHK" is displayed for any items on the SIGNAL CHECK screen, perform inspections using the SIGNAL CHECK screen.**

c. Steering angle setting



i. Check that the steering wheel is centered (approximately +/- 5 degrees or less) and select "STEERING CENTER MEMORIZE".

ii. After the centered steering position is memorized, turn the steering wheel to the left and then to the right full lock positions and select "MAX STEERING ANGLE MEMORIZE" or "OK".

**HINT:**

It is also possible to start by initially turning the steering wheel to the right side.

iii. Select "MAX STEERING ANGLE MEMORIZE" or "OK" to store the steering angle adjustment value and change the screen to the MODE SETTING screen.

H

**HINT:**

- **When "MAX STEERING ANGLE MEMORIZE" or "OK" is selected, a beep will sound to confirm that the steering angle adjustment values have been stored.**
- **The adjustment values will not be stored unless "MAX STEERING ANGLE MEMORIZE" or "OK" is selected.**
- **When "BACK" is selected, the screen changes to SIGNAL CHECK without storing the set values.**
- **If the steering angle settings have not been adjusted, selecting "MAX STEERING ANGLE MEMORIZE" or "OK" will not cause the adjustment values to be stored.**
- **Even if no DTCs are detected, selecting "MAX STEERING ANGLE MEMORIZE" or "OK" may not cause the adjustment value to be stored if the steering sensor is malfunctioning.**
- **If selecting "MAX STEERING ANGLE MEMORIZE" or "OK" does not cause the adjustment value to be stored after adjusting the steering angle, replace the spiral with sensor cable sub-assembly.**

d. Finish diagnostic mode.

- for HDD (Click here).
- for DVD (Click here).

e. Confirm steering angle adjustment.

**HINT:**

If the steering angle has been adjusted, confirm the steering angle adjustment on the parking assist monitor screen after finishing diagnosis mode.

i. Check on the parking assist screen that the predicted path line moves until the steering wheel is fully turned to either the left or right.

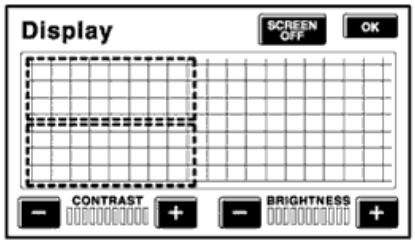
**HINT:**

If the predicted path line stops moving before the steering wheel is fully turned to either the left or right, the steering angle adjustment values have not been stored correctly. In this case, perform "STEERING CENTER MEMORIZE" and "MAX STEERING ANGLE MEMORIZE" again.

**for Preparation** Click here

**HINT:**

- **Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be exactly the same as the actual vehicle display.**
- **If the system cannot enter the diagnostic mode, inspect all AVC-LAN communication components and repair or replace problem parts (Click here).**
- **After turning the engine switch on (IG), check that the map is displayed before starting the diagnostic mode. Otherwise, some items cannot be checked.**



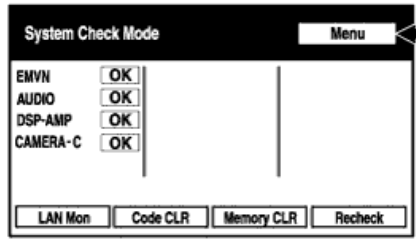
## START DIAGNOSTIC MODE

a. Start the engine.

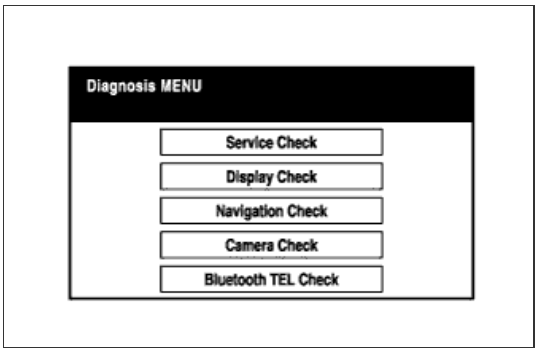
b. Switch to the "Display Check" screen.

c. From the display quality adjustment screen, touch the corners of the screen in the following order: upper left → lower left → upper left → lower left → upper left → lower left.

d. The diagnostic mode starts and the "Diagnosis Inspection" screen will be displayed. Service inspection starts automatically and the result will be displayed.



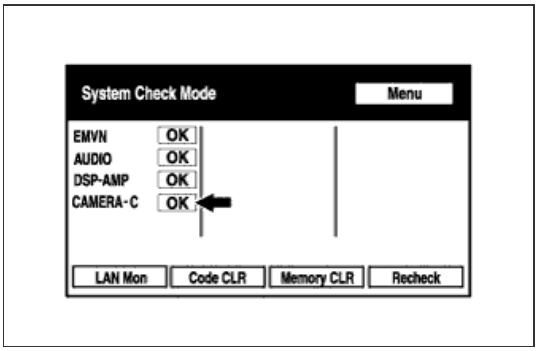
## FINISH DIAGNOSTIC MODE



a. Turn the engine switch off.

## DIAGNOSIS MENU

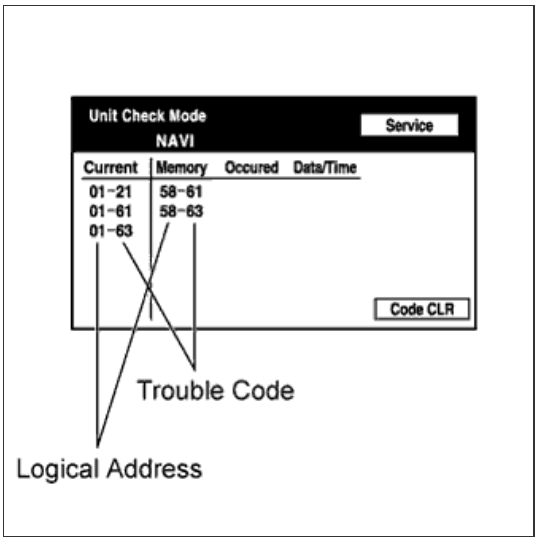
a. Press the "Menu" switch on the "System Check Mode" screen.



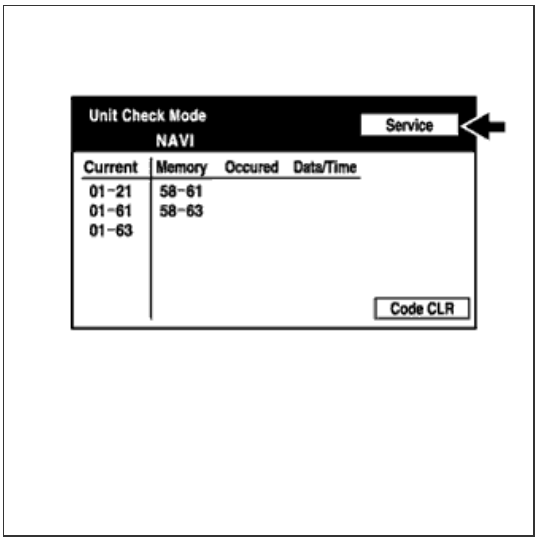
b. The "Diagnosis MENU" screen will be displayed.

## CHECK DTC

a. Read the system check result.

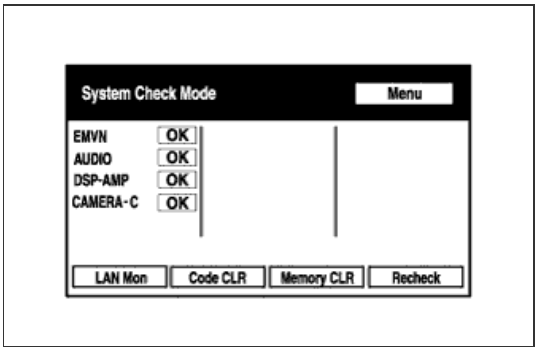


i. If the check result is "EXCH", "CHEK" or "Old", touch the displayed check result.



ii. View the results on the "Unit Check Mode" screen and record them.

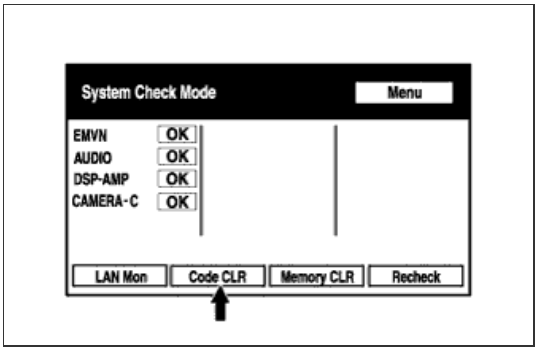
**HINT:**



- **If all check results are "OK", go to the communication DTC check.**
- **If a device name is not known, its physical address is displayed.**

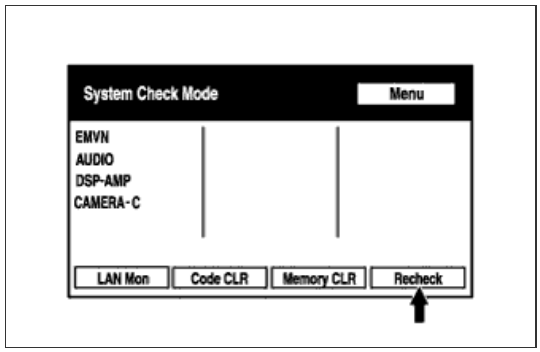
iii. When proceeding to view the results of another device, press the "Service" switch.

iv. Return to the "System Check Mode" screen. Repeat the steps above to read the other results of the system check.



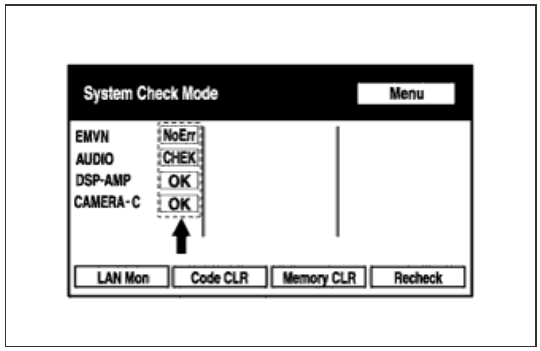
## DTC CLEAR / RECHECK

a. Clear DTC

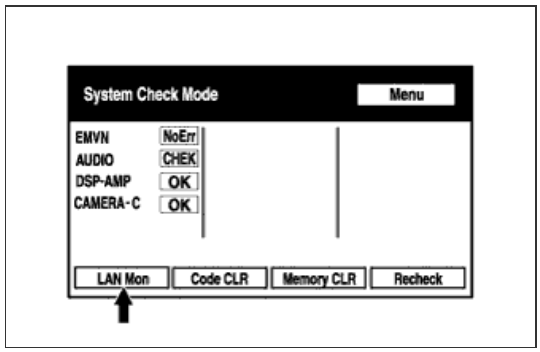


i. Press the "Code CLR" switch for 3 seconds.

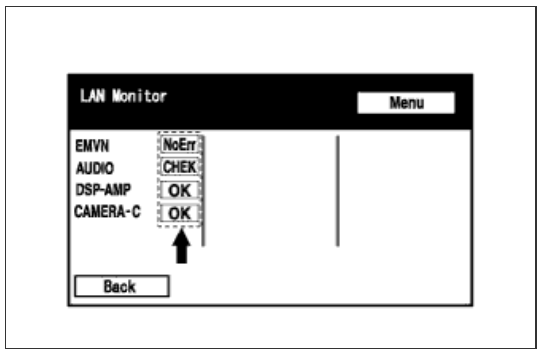
ii. The check results are cleared.



b. Recheck



i. Press the "Recheck" switch.



ii. Confirm that all diagnostic codes are "OK" when the check results are displayed. If a code other than "OK" is displayed, troubleshoot again.

iii. Press the "LAN Mon" switch to change to the "LAN Monitor" screen.

iv. Confirm that all diagnostic codes are "No Err". If a code other than "No Err" is displayed, troubleshoot again.

**for Preparation** Click here

## CHECK DTC

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Chassis / Parking Assist Monitor System / DTC.

e. Check the details of the DTCs ( Click here).

**HINT:**

The parking assist ECU may store the DTCs of the following system. If DTCs other than those specified in Diagnostic Trouble Code Chart of the parking assist monitor system are output, refer to Diagnostic Trouble Code Chart for the applicable system.

| System | Proceed to |
|---|---|
| Side Monitor System | Click here |
| Wide View Front Monitor System | Click here |

## CLEAR DTC

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Chassis / Parking Assist Monitor System / DTC.

e. According to the display on the intelligent tester, select the trouble code data display with the clear button.

**for Preparation** Click here

If the parking assist ECU detects a malfunction, the fail-safe functions shown in the table below operate.

| Malfunctioning Parts | Detection Condition | Function "Manual Assist Mode" | Function "Parallel Parking Assist Mode" |
|---|---|---|---|
| Steering angle sensor | • Transmission of sensor malfunction signal<br>• Open circuit in sensor signal | If in projected path guidance mode, displays "Guidance unavailable". | Displays "Guidance unavailable". |
| | Transmission of neutral steering point correction incomplete signal | If in projected path guidance mode, displays "System initializing". | Displays "System initializing". |
| | Communication malfunction between steering angle sensor and parking assist ECU | If in projected path guidance mode, displays "Guidance unavailable". | Displays "Guidance unavailable". |
| Rear television camera | Transmission of rear television camera malfunction signal | Stops signal reception and displays a dark screen. | |
| Parking assist ECU | Malfunction of parking assist ECU unit | Stops the system operation. | |
| Navigation ECU | • No response from navigation ECU<br>• Transmission of navigation ECU malfunction signal | - | Displays "Guidance unavailable". |

**for Preparation** Click here

## DATA LIST

**HINT:**

Using the intelligent tester to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

**NOTICE:**

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Chassis / Parking Assist Monitor System / Data List.

e. According to the display on the tester, read the Data List.

**Parking Assist Monitor System**

| Tester Display | Measurement Item/Range | Normal Condition | Diagnostic Note |
|---|---|---|---|

## DESCRIPTION

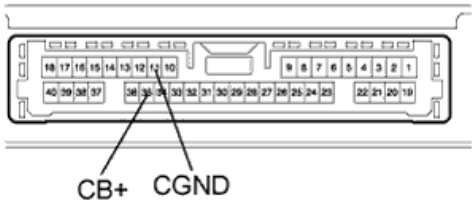
| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 5C-40 | An open or short in the rear television camera signal circuit. | • Rear television camera<br>• Harness or connector<br>• Parking assist ECU |

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

When replacing the parking assist ECU, perform initialization of the rear television camera and calibration of the steering angle sensor.



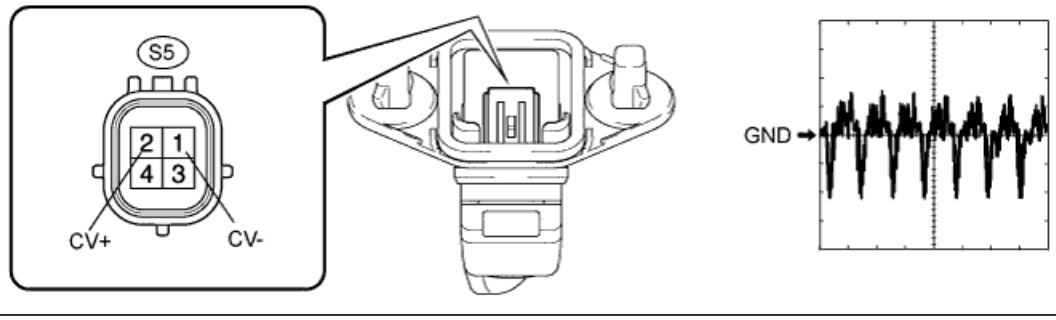
### 1.CHECK PARKING ASSIST ECU

a. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F37-35 (CB+) - F37-11 (CGND) | Engine switch on (IG), shift lever is moved to R | 5.8 to 6.5 V |

Component with harness connected:
(Parking Assist ECU)



NG → REPLACE PARKING ASSIST ECU (Click here)

OK

## 2.CHECK REAR TELEVISION CAMERA ASSEMBLY

Component with harness connected:
(Rear Television Camera Assembly)

a. Using an oscilloscope, check the waveform.

**Measurement Condition**

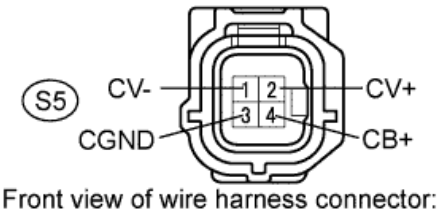
| Item | Content |
|---|---|
| Terminal No. (Symbol) | S5-2 (CV+) - S5-1 (CV-) |
| Tool Setting | 0.2 V/DIV., 50 µs/DIV. |
| Condition | Engine switch on (IG), shift lever in R |

NG → REPLACE REAR TELEVISION CAMERA ASSEMBLY (Click here)

OK

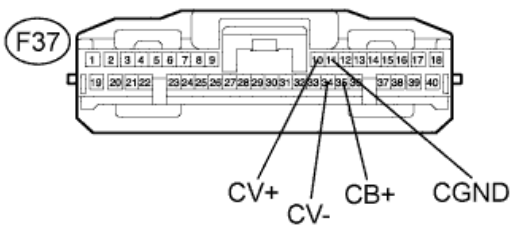
## 3.CHECK HARNESS AND CONNECTOR (REAR TELEVISION CAMERA - PARKING ASSIST ECU)

a. Disconnect the S5 camera connector.



b. Disconnect the F37 ECU connector.

c. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F37-10 (CV+) - S5-2 (CV+) | Always | Below 1 Ω |
| F37-34 (CV-) - S5-1 (CV-) | Always | Below 1 Ω |
| F37-35 (CB+) - S5-4 (CB+) | Always | Below 1 Ω |
| F37-11 (CGND) - S5-3 (CGND) | Always | Below 1 Ω |
| F37-10 (CV+) - Body ground | Always | 10 kΩ or higher |
| F37-34 (CV-) - Body ground | Always | 10 kΩ or higher |
| F37-35 (CB+) - Body ground | Always | 10 kΩ or higher |
| F37-11 (CGND) - Body ground | Always | 10 kΩ or higher |

Front view of wire harness connector:
(to Rear Television Camera Assembly)

Front view of wire harness connector:
(to Parking Assist ECU)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

4.REPLACE HARNESS AND CONNECTOR (GVIF CABLE)

a. Replace the harness and connector (GVIF cable).

NEXT

5.CHECK DTC OUTPUT

a. Clear the DTC (Click here).

b. Recheck for DTC (Click here).

**OK:**
**DTC 5C-40 is not output.**

NG → REPLACE PARKING ASSIST ECU (**Click here**)

OK

END (GVIF CABLE IS DEFECTIVE)

# DTC C1626 Steering Angle Sensor Failure

**for Preparation** Click here

## DESCRIPTION

This DTC is stored if the parking assist ECU receives a signal via CAN communication from the spiral with sensor cable sub-assembly that indicates an internal malfunction.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1626 | A fail flag is transmitted from the steering angle sensor. | • Steering sensor (spiral with sensor cable sub-assembly)<br>• Parking assist ECU |

## INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the display and navigation module display after the battery terminal disconnected, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system may be needed (Click here).**

### 1.REPLACE SPIRAL WITH SENSOR CABLE SUB-ASSEMBLY

a. Replace the spiral with sensor cable sub-assembly ( Click here).

NEXT

### 2.CHECK DTC OUTPUT

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1626 is output | A |
| No DTC is output | B |

B → END

A

### REPLACE PARKING ASSIST ECU (Click here)

## DTC 5C-41 Steering Sensor Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 5C-41 | A fail flag is transmitted from the steering angle sensor. | Steering angle sensor |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs.

**1.REPLACE STEERING SENSOR**

a. Replace the steering angle sensor ( Click here).

**NEXT**

**END**

## DTC C1649 Lost Communication with VGRS ECU

**for Preparation** Click here

### DESCRIPTION

This DTC is set when the Parking Assist ECUs self-diagnosis determines that the connection with the Steering Control ECU of the VGRS System (via CAN communication) is inoperative.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1649 | Steering Control ECU malfunction | VGRS System |

### INSPECTION PROCEDURE

**1.CHECK DTC OUTPUT**

a. Clear the DTCs (Click here).

b. Check the DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| No DTC is output | A |
| DTC C1649 is output | B |

B → GO TO VGRS SYSTEM (Click here)

A → END

## DTC 5C-42 Steering Sensor Communication Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 5C-42 | No signal is transmitted from the steering angle sensor. | • Steering angle sensor<br>• CAN communication system<br>• Parking assist ECU |

### INSPECTION PROCEDURE

**1.CHECK CAN COMMUNICATION SYSTEM (PARKING ASSIST ECU - STEERING ANGLE SENSOR)**

a. for LHD:
Refer to the CAN communication system (Click here).

b. for RHD:
Refer to the CAN communication system (Click here).

**NEXT**

**END**

## DTC C168B AVC-LAN Communication Malfunction

## DTC C168C AVC-LAN Command Time Out

**for Preparation** Click here

### DESCRIPTION

This DTC is stored if the parking assist ECU judges that there is a problem with the AVC-LAN communication system as a result of self check.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| C168B | • AVC-LAN communication malfunction: No master<br>• AVC-LAN communication malfunction: Master reset<br>• AVC-LAN communication malfunction: Master malfunction<br>• AVC-LAN communication malfunction: Abnormal connection check<br>• AVC-LAN communication malfunction: Transmission not completed<br>• AVC-LAN communication malfunction: Abnormal transmission completion notification<br>• AVC-LAN communication malfunction: Registration request transmission<br>• AVC-LAN communication malfunction: Abnormal ON/OFF parameter | AVC-LAN Communication |
| C168C | • AVC-LAN command time out: Output ON request notification command time out<br>• AVC-LAN command time out: Output OFF request notification command time out<br>• AVC-LAN command time out: Voice production start request notification command time out<br>• AVC-LAN command time out: Voice production end request notification command time out | |

### INSPECTION PROCEDURE

**1.CHECK DTC OUTPUT**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| No DTC is output | A |
| DTC C168B or C168C is output (w/ navigation system for DVD) | B |
| DTC C168B or C168C is output (w/ navigation system for HDD) | C |

**HINT:**

If DTC C168B or C168C is output frequently, duplicate the problem symptoms and perform the inspection again, even though the DTC is not output when rechecking for DTCs (Click here).

B → GO TO NAVIGATION SYSTEM (for DVD) (Click here)

C → GO TO NAVIGATION SYSTEM (for HDD) (Click here)

USE SIMULATION METHOD TO CHECK (Click here)

## DTC 5C-43 Steering Control ECU Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 5C-43 | VGRS=1 is sent from the steering control ECU. | Steering control ECU |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs.

**1.CHECK DTC OUTPUT**

a. Clear the DTC (Click here).

b. Check for DTC (Click here).

**OK:**
**DTC 5C-43 is not output.**

NG → **Go to step 2**

OK ↓

**USE SIMULATION METHOD TO CHECK (Click here)**

**2.REPLACE STEERING CONTROL ECU**

a. for LHD:
Replace the steering control ECU (Click here).

b. for RHD:
Replace the steering control ECU (Click here).

NEXT ↓

**3.CHECK DTC OUTPUT**

a. Clear the DTC (Click here).

b. Check for DTC (Click here).

**OK:**
**DTC 5C-43 is not output.**

NG → **GO TO VARIABLE GEAR RATIO STEERING SYSTEM (Click here)**

OK ↓

**END (STEERING CONTROL ECU IS DEFECTIVE)**

## DTC C168B AVC-LAN Communication Malfunction

## DTC C168C AVC-LAN Command Time Out

**for Preparation** Click here

### DESCRIPTION

This DTC is stored if the parking assist ECU judges that there is a problem with the AVC-LAN communication system as a result of self check.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| C168B | • AVC-LAN communication malfunction: No master<br>• AVC-LAN communication malfunction: Master reset<br>• AVC-LAN communication malfunction: Master malfunction<br>• AVC-LAN communication malfunction: Abnormal connection check<br>• AVC-LAN communication malfunction: Transmission not completed<br>• AVC-LAN communication malfunction: Abnormal transmission completion notification<br>• AVC-LAN communication malfunction: Registration request transmission<br>• AVC-LAN communication malfunction: Abnormal ON/OFF parameter | AVC-LAN Communication |
| C168C | • AVC-LAN command time out: Output ON request notification command time out<br>• AVC-LAN command time out: Output OFF request notification command time out<br>• AVC-LAN command time out: Voice production start request notification command time out<br>• AVC-LAN command time out: Voice production end request notification command time out | |

### INSPECTION PROCEDURE

**1.CHECK DTC OUTPUT**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| No DTC is output | A |
| DTC C168B or C168C is output (w/ navigation system for DVD) | B |
| DTC C168B or C168C is output (w/ navigation system for HDD) | C |

**HINT:**

If DTC C168B or C168C is output frequently, duplicate the problem symptoms and perform the inspection again, even though the DTC is not output when rechecking for DTCs (Click here).

B → GO TO NAVIGATION SYSTEM (for DVD) (Click here)

C → GO TO NAVIGATION SYSTEM (for HDD) (Click here)

A

USE SIMULATION METHOD TO CHECK (Click here)

## DTC 5C-44 Steering Control ECU Communication Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 5C-44 | "VGRS available" information is received normally from the steering angle sensor, but the signal from the steering control ECU is not received for 1 second or more. | • Steering control ECU<br>• CAN communication system<br>• Parking assist ECU |

### INSPECTION PROCEDURE

**1.CHECK CAN COMMUNICATION SYSTEM (PARKING ASSIST ECU - STEERING CONTROL ECU)**

a. for LHD:
Refer to the CAN communication system (Click here).

b. for RHD:
Refer to the CAN communication system (Click here).

**NEXT**

DTC U0140 Lost Communication with Main Body ECU

DTC U1110 Lost Communication with Clearance Warning ECU

**for Preparation** Click here

## DESCRIPTION

These DTCs are stored if there is a malfunction in the CAN communication system connected to the parking assist ECU.

**HINT:**

If CAN communication system DTCs are stored, they may also be stored in other systems.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| U0073 | Control module communication bus off | CAN communication system |
| U0100 | Lost communication with ECM | |
| U0126 | Lost communication with steering angle sensor | |
| U0129 | Lost communication with brake system | |
| U0130 | Lost communication with VGRS | |
| U0140 | Lost communication with main body ECU | |
| U1100 | Lost communication with clearance warning ECU | |

## INSPECTION PROCEDURE

1.CHECK DTC OUTPUT

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| No DTC is output | A |
| DTC is output (for LHD) | B |
| DTC is output (for RHD) | C |

**HINT:**

- **If CAN communication system DTCs are stored, they may also be stored in other systems.**
- **If the CAN communication system has been inspected and repaired in other systems, the DTCs will not be output when rechecking for DTCs.**
- **If these DTCs are output frequently, duplicate the conditions that cause the problem symptoms and perform the inspection again, even though the DTC was not output when rechecking for DTCs (Click here).**

B → GO TO CAN COMMUNICATION SYSTEM (for LHD) (Click here)

C → GO TO CAN COMMUNICATION SYSTEM (for RHD) (Click here)

# DTC C1611 ECU Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored if the parking assist ECU judges that there is an internal malfunction as a result of its self check.

**HINT:**

The parking assist ECU stores different types of information during initialization. If the parking assist ECU cannot read the stored information when it is activated, the parking assist ECU judges that there is an internal malfunction and stores this DTC.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1611 | • EEPROM Status (Initial read)<br>• AISIC Output Status | • Parking assist ECU initialization (not initialized parking assist ECU)<br>• Back camera position setting (initialized parking assist ECU)<br>• Side camera position setting (initialized parking assist ECU)*1<br>• Steering Angle setting (initialized parking assist ECU)<br>• Parking assist ECU |

*1: w/ Side Monitor System

## INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the display and navigation module display after the battery terminal disconnected, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system may be needed (Click here).**

### 1.READ VALUE USING INTELLIGENT TESTER

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Chassis / Parking Assist Monitor System / Data List.

e. Check the Data List for proper functioning of the following items.

**Parking Assist Monitor System**

| Tester Display | Measurement Item/Range | Normal Condition | Diagnostic Note |
|---|---|---|---|
| EEPROM Status (Initial read) | Parking assist ECU information/OK or NG | OK: Parking assist ECU is normal<br>NG: Parking assist ECU is abnormal | - |
| AISIC Output Status | Output condition of camera display signal/OK or NG | OK: Output condition of camera display signal is normal<br>NG: Output condition of camera display signal is abnormal | - |

**Result**

| Result | Proceed to |
|---|---|
| OK is displayed for both items. | A |
| NG is displayed for EEPROM Status (Initial read). | A |
| NG is displayed for AISIC Output Status | B |

B → REPLACE PARKING ASSIST ECU (Click here)

A

### 2.SETTINGS (PARKING ASSIST ECU INITIALIZATION)

**HINT:**

- **The parking assist ECU stores different types of information during initialization. If the parking assist ECU cannot read the stored information when it is activated, the parking assist ECU judges that there is an internal malfunction and stores this DTC.**
- **If the parking assist ECU cannot read the stored information when it is activated, allowing the ECU to store the information again may return the system to normal.**

a. Use the transition of diagnosis screens (note which transition pattern occurs) to confirm if the parking assist ECU was able to properly store the information from initialization (Click here).

**HINT:**

The procedure to make the parking assist ECU store the vehicle information differs when the parking assist ECU has stored the information (initialized) and when the information has not been stored (not initialized).

b. Perform the following procedure depending on the memory conditions to register the vehicle information into the parking assist ECU.

| Condition | Procedure |
|---|---|
| Not initialized | Parking assist ECU initialization (Click here) |
| Initialized | • Back camera position setting (Click here)<br>• Steering angle setting (Diagnosis system) (Click here)<br>• Side camera position setting (Click here ) |

**NEXT**

**3.CHECK DTC OUTPUT**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1611 is output | A |
| No DTC is output | B |

**HINT:**

- **If DTC C1611 is output, perform the procedure to allow the parking assist ECU to store the vehicle information again.**
- **If DTC C1611 is still output after performing the procedure to make the parking assist ECU store the vehicle information 3 times, replace the parking assist ECU.**
- **If DTC C1611 is output frequently, replace the parking assist ECU even though the DTC is not output when rechecking for DTCs.**

**B** → **END**

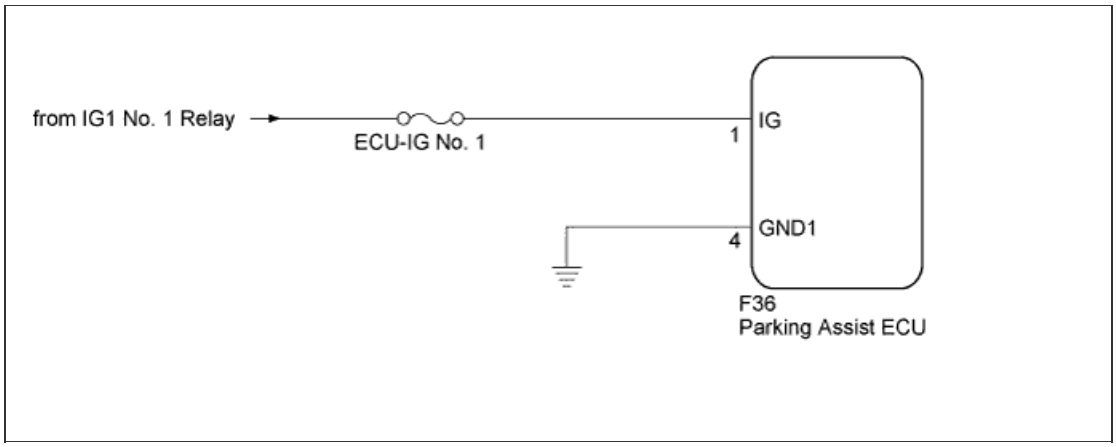
## DTC C1612 IG Voltage is Low or High



**for Preparation** Click here

### DESCRIPTION

This DTC is stored if the parking assist ECU judges as a result of its self check that the voltage received by terminal IG is low or high.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1612 | • IG voltage is low<br>• IG voltage is high | • Harness or connector<br>• Parking assist ECU |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the display and navigation module display after the battery terminal disconnected, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system may be needed (Click here).**
- **Inspect the fuses for circuits related to this system before performing the following inspection procedure.**

#### 1.CHECK DTC OUTPUT

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**Result**

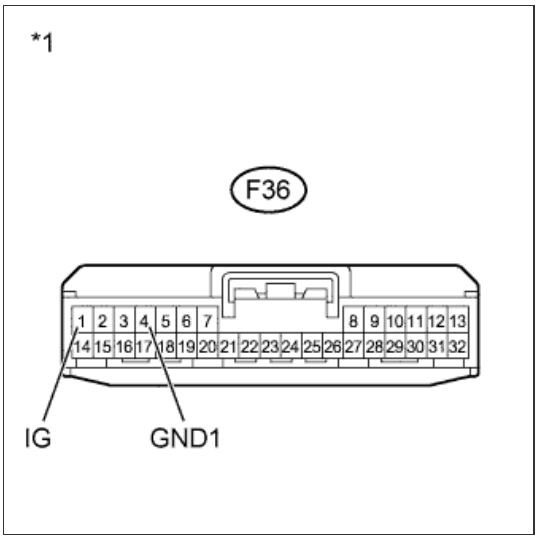
| Result | Proceed to |
|---|---|
| DTC C1612 is output | A |
| No DTC is output | B |

**HINT:**

If the parking assist ECU cannot read the stored information when it is activated, allowing the ECU to store the information again may return the system to normal.

B → USE SIMULATION METHOD TO CHECK (Click here)

A



#### 2.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU IG VOLTAGE)

a. Disconnect the F36 connector from the parking assist ECU.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F36-1 (IG) - F36-4 (GND1) | Engine switch on (IG) | 11 to 14 V |

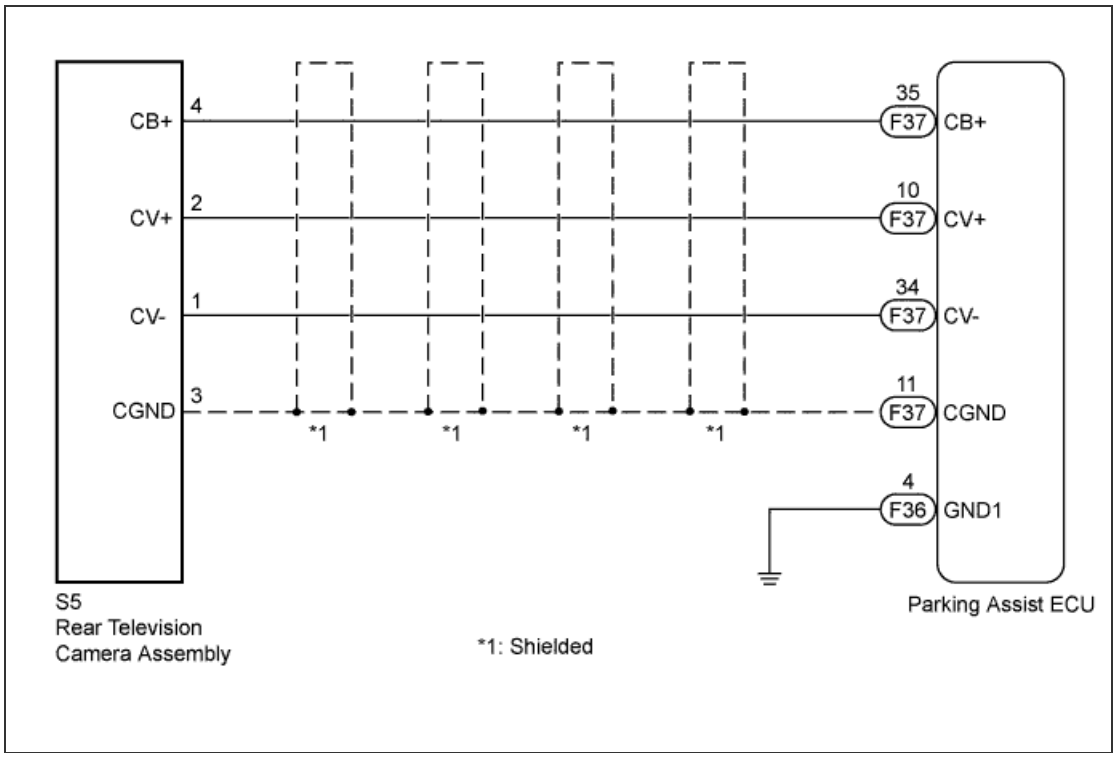
## DTC C1622 Open or Short Circuit in Back Camera Signal



**for Preparation** Click here

### DESCRIPTION

This DTC is stored if the parking assist ECU judges as a result of its self check that the signals or signal lines between the parking assist ECU and the rear television camera assembly are not normal.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1622 | An open or short in the rear television camera signal circuit | • Harness or connector<br>• Rear television camera assembly<br>• Parking assist ECU |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the display and navigation module display after the battery terminal disconnected, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system may be needed (Click here).**

#### 1.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - REAR TELEVISION CAMERA)

a. Disconnect the F37 connector from the parking assist ECU.

b. Disconnect the S5 connector from the rear television camera assembly.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F37-34 (CV-) - S5-1 (CV-) | Always | Below 1 Ω |
| F37-10 (CV+) - S5-2 (CV+) | Always | Below 1 Ω |
| F37-35 (CB+) - S5-4 (CB+) | Always | Below 1 Ω |

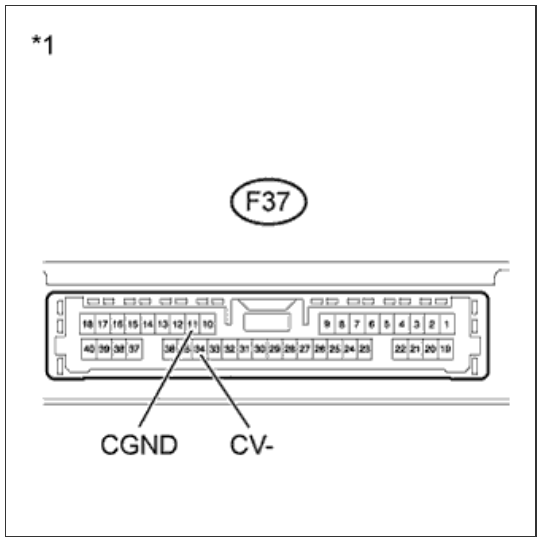
| | | |
|---|---|---|
| F37-34 (CV-) - Body ground | Always | 10 kΩ or higher |
| F37-10 (CV+) - Body ground | Always | 10 kΩ or higher |
| F37-11 (CGND) - Body ground | Always | 10 kΩ or higher |
| F37-35 (CB+) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 2.INSPECT PARKING ASSIST ECU (CV-, CGND)

a. Reconnect the F37 connector to the parking assist ECU.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F37-34 (CV-) - Body ground | Always | Below 1 Ω |
| F37-11 (CGND) - Body ground | Always | Below 1 Ω |

**Text in Illustration**

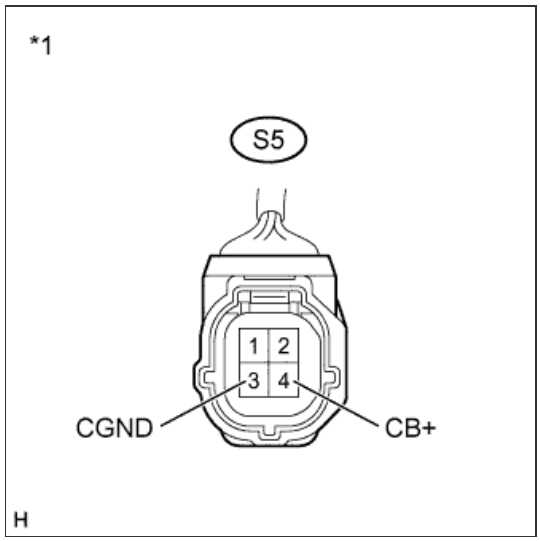
| | |
|---|---|
| *1 | Component with harness connected (Parking Assist ECU) |

NG → REPLACE PARKING ASSIST ECU (Click here)

OK

## 3.INSPECT REAR TELEVISION CAMERA ASSEMBLY (CB+, CGND)

a. Disconnect the S5 connector from the rear television camera assembly.



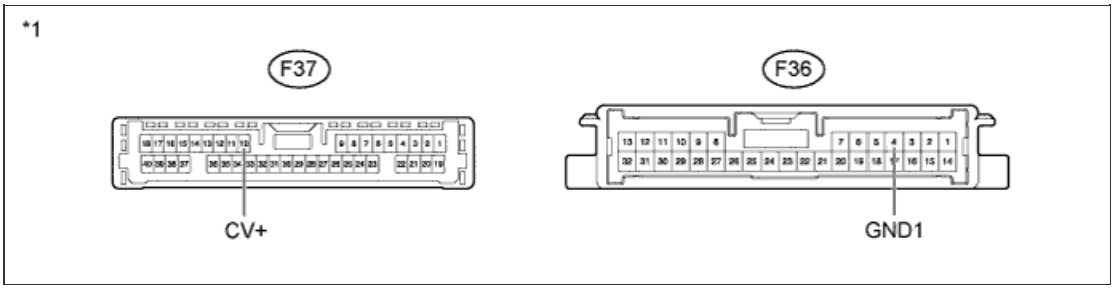
b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| S5-3 (CGND) - S5-4 (CB+) | Engine switch on (IG)<br>Shift lever in R | 5.8 to 7.0 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Rear Television Camera Assembly) |



NG → REPLACE PARKING ASSIST ECU (Click here)

OK

## 4.INSPECT PARKING ASSIST ECU (CV+, GND1)

a. Reconnect the S5 connector to the rear television camera assembly.

b. Reconnect the F36 and F37 connectors to the parking assist ECU.

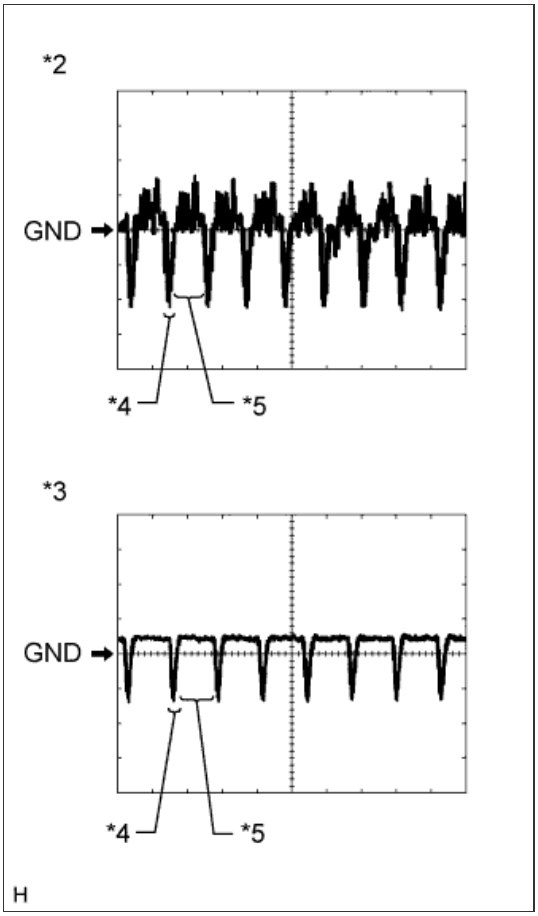
c. Check the waveform of the rear television camera assembly using an oscilloscope.

**HINT:**

A waterproof connector is used for the rear television camera assembly. Therefore, inspect the waveform at the parking assist ECU with the connector connected.

**OK:**

**Waveform is as shown in the illustration.**



| Item | Content |
|---|---|
| Terminal No. (Symbol) | F37-10 (CV+) - F36-4 (GND1) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | Engine switch on (IG), shift lever in R |

**HINT:**

The video waveform changes according to the image sent by the rear television camera assembly.

**Text in Illustration**

| | |
|---|---|
| *1 | Component with harness connected (Parking Assist ECU) |
| *2 | Waveform 1 (under normal conditions) |
| *3 | Waveform 2 (camera lens is covered, blacking out the screen) |
| *4 | Synchronized Signal |
| *5 | Video Waveform |

NG → REPLACE REAR TELEVISION CAMERA ASSEMBLY (Click here)

OK

REPLACE PARKING ASSIST ECU (Click here)

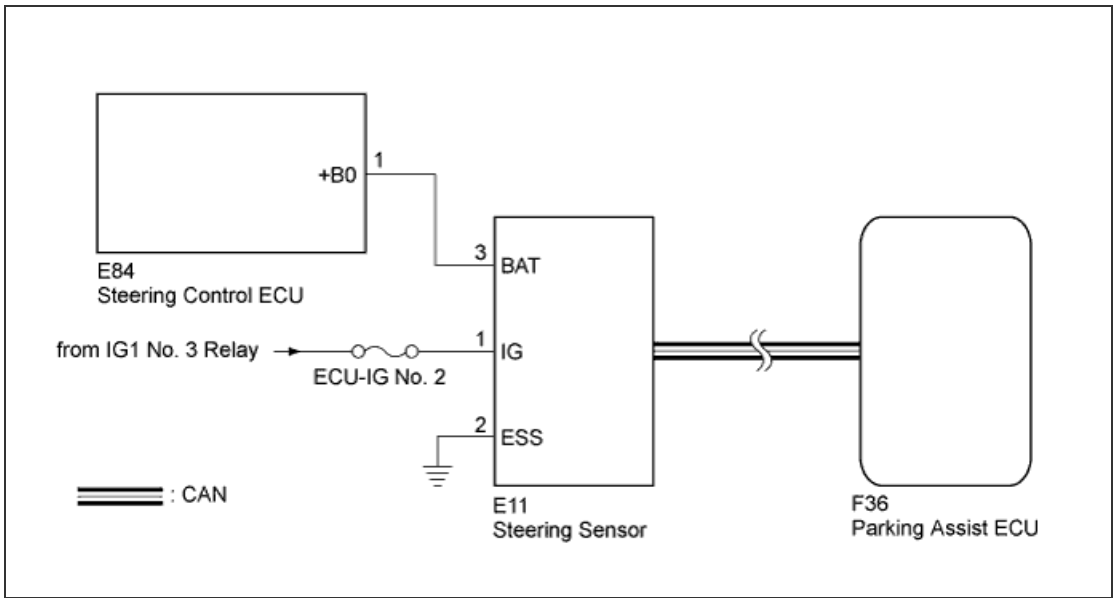
## DTC C1625 Open or Short in Steering Angle Sensor +B



**for Preparation** Click here

### DESCRIPTION

This DTC is stored if the parking assist ECU receives a signal via CAN communication from the spiral with sensor cable sub-assembly that indicates a power supply system problem.

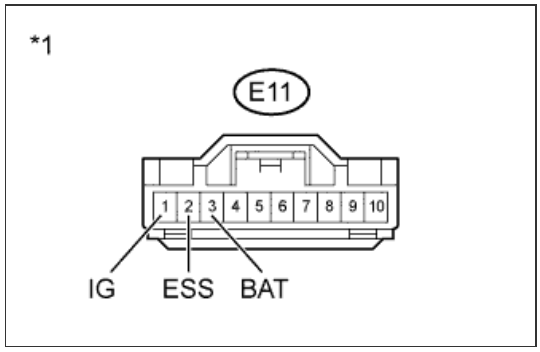
| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1625 | Open or short in steering angle sensor +B | • Harness or connector<br>• Steering sensor (spiral with sensor cable sub-assembly) |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the display and navigation module display after the battery terminal disconnected, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system may be needed (Click here).**
- **Inspect the fuses for circuits related to this system before performing the following inspection procedure.**



#### 1.CHECK HARNESS AND CONNECTOR (SPIRAL WITH SENSOR CABLE SUB-ASSEMBLY POWER SUPPLY)

a. Disconnect the E11 connector from the steering sensor.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| E11-2 (ESS) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| E11-1 (IG) - E11-2 | Engine switch on | |

| | | |
|---|---|---|
| (ESS) | (IG) | 11 to 14 V |
| E11-3 (BAT) - E11-2 (ESS) | Always | 11 to 14 V |

**Text in Illustration**

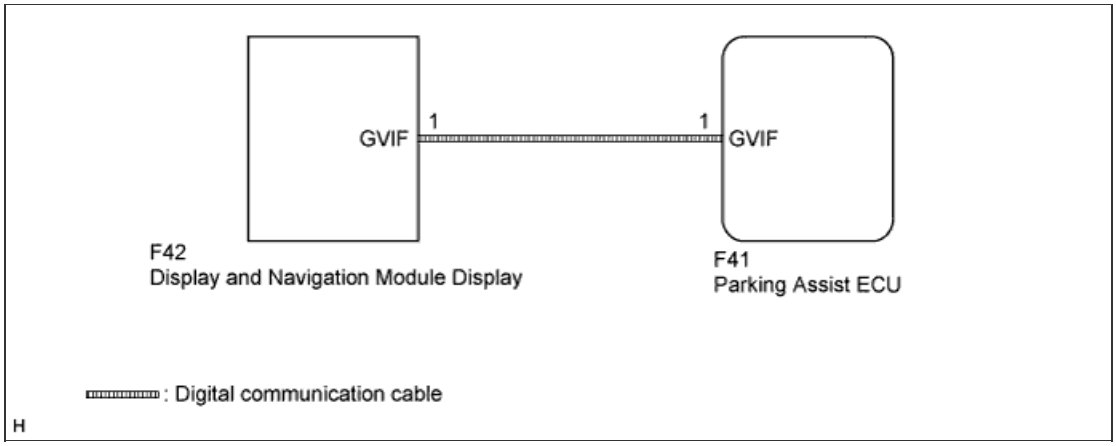
A



USE SIMULATION METHOD TO CHECK (Click here)

**for Preparation** Click here

## DESCRIPTION

The parking assist ECU displays images for the parking assist monitor, front monitor*1 and side monitor*1 screens. Each image signal is sent from the parking assist ECU to the display and navigation module display through the digital communication cable.
*1: w/ Side Monitor System

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the display and navigation module display after the battery terminal has been disconnected, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system may be needed (Click here).**

**HINT:**

Images can be difficult to discern even in normal conditions. For example:

- **Noise may occur in the image during power back door operation. (w/ power back door system)**
- **Noise may occur in the image depending on electrical devices used in the cabin.**
- **Noise may occur in the image if accessories that generate radio waves have been installed.**
- **The camera screen is frosted over (the image immediately after turning the engine switch on (IG) may be blurred or darker than normal).**
- **The camera lens is dirty with snow, mud, etc.**
- **A strong beam of light, such as a sunbeam or headlight, hits the camera.**
- **It is too dark around the camera (at night etc.).**
- **The ambient temperature around the camera is either too high or too low.**
- **The vehicle is tilted at a steep angle.**
- **The ambience of the camera is too bright. (When a strong light, such as a sunbeam reflected off the vehicle body, hits the camera, the image may be blurred. This is called the "SMEAR" phenomenon, peculiar to the CCD camera.)**

### 1.READ VALUE USING INTELLIGENT TESTER

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Chassis / Parking Assist Monitor System / Data List.

e. Check the Data List for proper functioning of the following items.

**Parking Assist Monitor System**

| Tester Display | Measurement Item/Range | Normal Condition | Diagnostic Note |
|---|---|---|---|
| AISIC Output Status | Output condition of camera display/OK or NG | OK: Output condition of camera display is normal<br>NG: Output condition of camera display is abnormal | - |

NG → REPLACE PARKING ASSIST ECU (Click here)

OK

## 2.CHECK DIGITAL COMMUNICATION CABLE CONNECTOR

a. Check the digital communication cable connector.

   i. Check the digital communication cable connectors between the parking assist ECU and display and navigation module display for any connection problems (Click here).

b. Check if the same malfunction recurs when the parking assist monitor, front monitor and side monitor screens are displayed.

**Result**

| Result | Proceed to |
|---|---|
| Malfunction does not reoccur (returns to normal) | A |
| Malfunction reoccurs | B |

B → Go to step 3

A

END

## 3.REPLACE WIRE HARNESS (DIGITAL COMMUNICATION CABLE)

a. Replace the digital communication cable between the parking assist ECU and display and navigation module display with a new one.

b. Check if the same malfunction recurs when the parking assist monitor, front monitor and side monitor screens are displayed.

**Result**

| Result | Proceed to |
|---|---|
| Malfunction does not reoccur (returns to normal) | A |
| Malfunction reoccurs | B |

B → Go to step 4

A

END

## 4.REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY

a. Replace the display and navigation module display with a new or normally functioning one ( Click here).

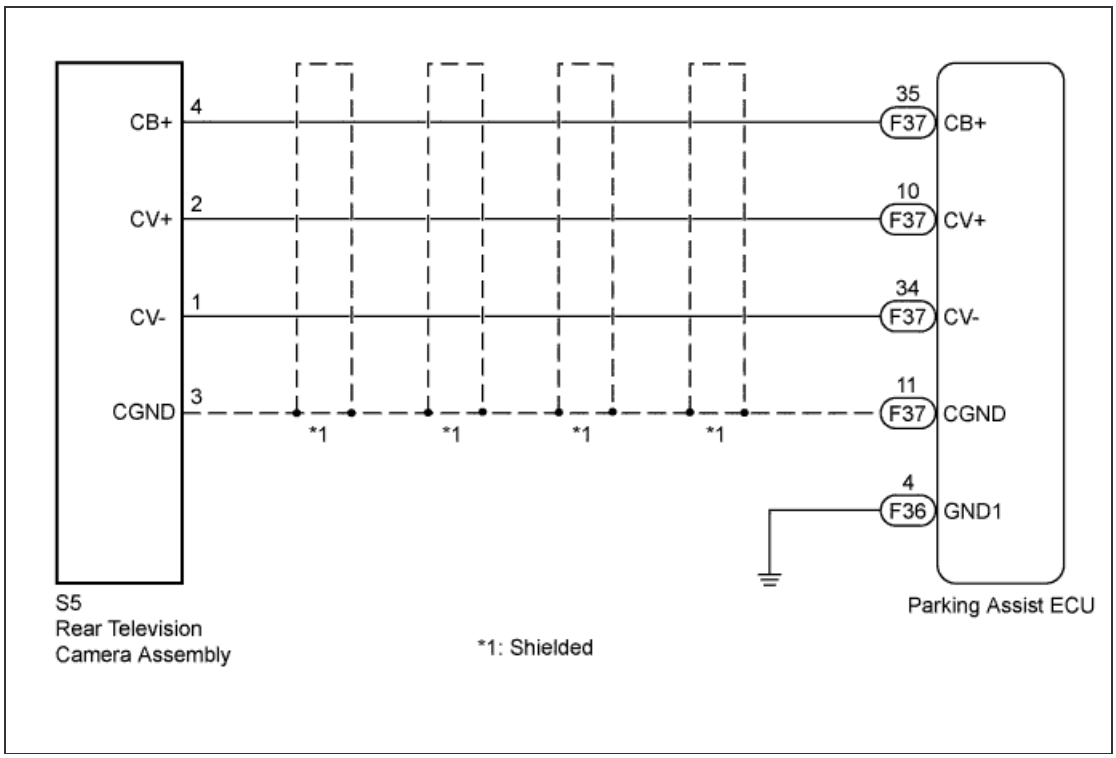
b. Check if the same malfunction recurs when the parking assist monitor, front monitor and side monitor screens are displayed.

**Result**

| Result | Proceed to |
|---|---|
| Malfunction does not reoccur (returns to normal) | A |
| Malfunction reoccurs | B |

B → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

A



END

**for Preparation** Click here

## DESCRIPTION

The display signal from the rear television camera assembly is transmitted to the display and navigation module display via the parking assist ECU.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the display and navigation module display after the battery terminal has been disconnected, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system may be needed (Click here).**

**HINT:**

Images can be difficult to discern even in normal conditions. For example:

- **Noise may occur in the image during power back door operation. (w/ power back door system)**
- **Noise may occur in the image depending on electrical devices used in the cabin.**
- **Noise may occur in the image if accessories that generate radio waves have been installed.**
- **The camera screen is frosted over (the image immediately after turning the engine switch on (IG) may be blurred or darker than normal).**
- **The camera lens is dirty with snow, mud, etc.**
- **A strong beam of light, such as a sunbeam or headlight, hits the camera.**
- **It is too dark around the camera (at night etc.).**
- **The ambient temperature around the camera is either too high or too low.**
- **The vehicle is tilted at a steep angle.**
- **The ambience of the camera is too bright. (When a strong light, such as a sunbeam reflected off the vehicle body, hits the camera, the image may be blurred. This is called the "SMEAR" phenomenon, peculiar to the CCD camera.)**

### 1.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - REAR TELEVISION CAMERA)

a. Disconnect the F37 connector from the parking assist ECU.

b. Disconnect the S5 connector from the rear television camera assembly.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

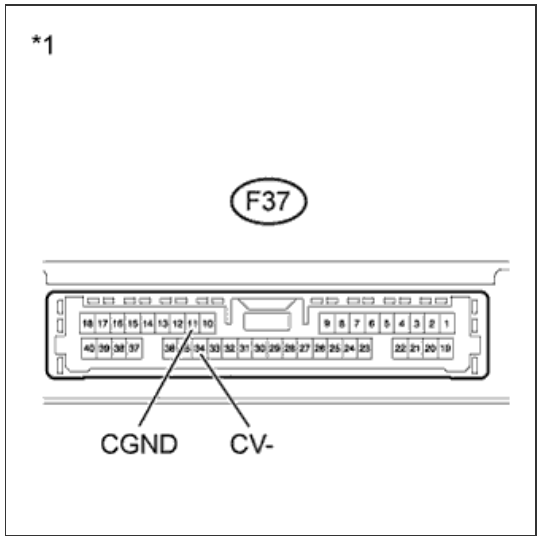
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F37-34 (CV-) - S5-1 (CV-) | Always | Below 1 Ω |
| F37-10 (CV+) - S5-2 (CV+) | Always | Below 1 Ω |
| F37-35 (CB+) - S5-4 (CB+) | Always | Below 1 Ω |
| F37-34 (CV-) - Body ground | Always | 10 kΩ or higher |
| F37-10 (CV+) - Body ground | Always | 10 kΩ or higher |
| F37-11 (CGND) - Body ground | Always | 10 kΩ or higher |
| F37-35 (CB+) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**2.INSPECT PARKING ASSIST ECU (CV-, CGND)**

a. Reconnect the F37 connector to the parking assist ECU.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F37-34 (CV-) - Body ground | Always | Below 1 Ω |
| F37-11 (CGND) - Body ground | Always | Below 1 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component with harness connected (Parking Assist ECU) |

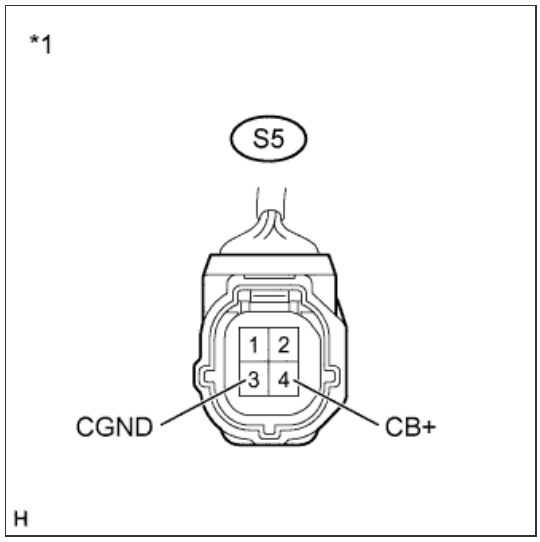
NG → REPLACE PARKING ASSIST ECU (Click here)

OK

**3.INSPECT REAR TELEVISION CAMERA ASSEMBLY (CB+, CGND)**

a. Disconnect the S5 connector from the rear television camera assembly.

b. Measure the voltage according to the value(s) in the table below.



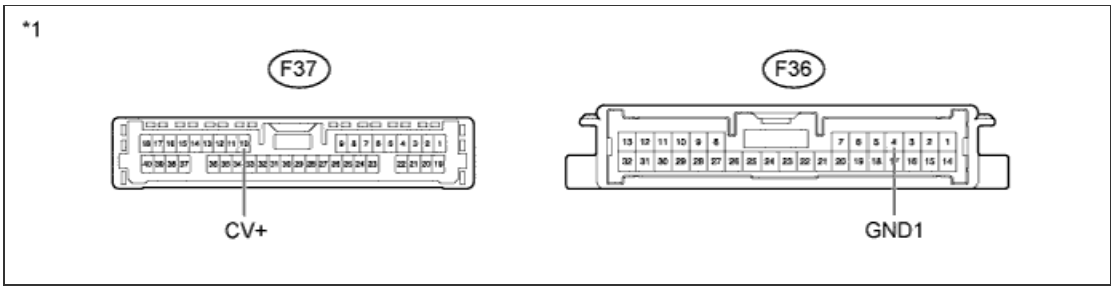
**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| S5-3 (CGND) - S5-4 (CB+) | Engine switch on (IG)<br>Shift lever in R | 5.8 to 7.0 V |

**Text in Illustration**

| | |
|---|---|
| | Front view of wire harness connector |

| | |
|---|---|
| *1 | (to Rear Television Camera Assembly) |



NG → REPLACE PARKING ASSIST ECU (Click here)

OK

## 4.INSPECT PARKING ASSIST ECU (CV+, GND1)

a. Reconnect the S5 connector to the rear television camera assembly.

b. Reconnect the F36 and F37 connectors to the parking assist ECU.

c. Check the waveform of the rear television camera assembly using an oscilloscope.

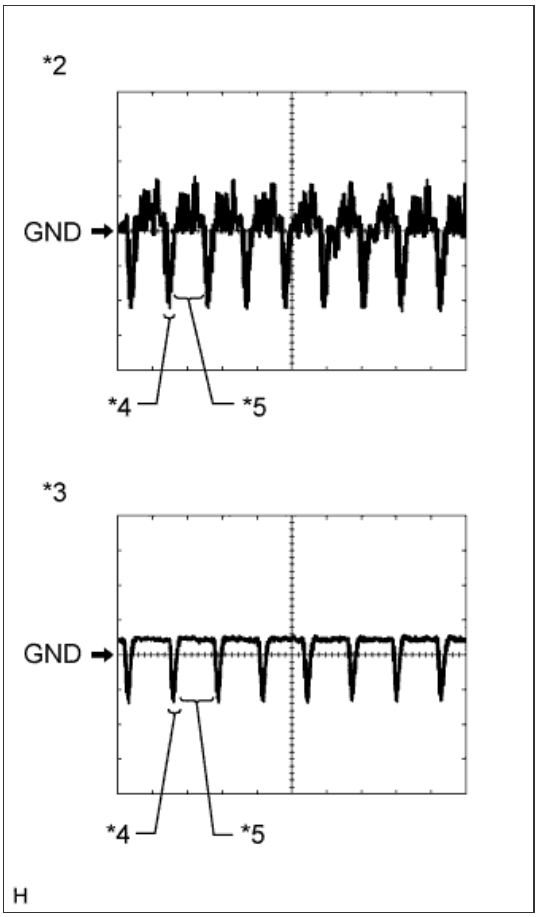
**HINT:**

A waterproof connector is used for the rear television camera assembly. Therefore, inspect the waveform at the parking assist ECU with the connector connected.

**OK:**

**Waveform is as shown in the illustration.**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F37-10 (CV+) - F36-4 (GND1) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | Engine switch on (IG), shift lever in R |



**HINT:**

The video waveform changes according to the image sent by the rear television camera assembly.

**Text in Illustration**

| | |
|---|---|
| *1 | Component with harness connected |

| | |
|---|---|
| | (Parking Assist ECU) |

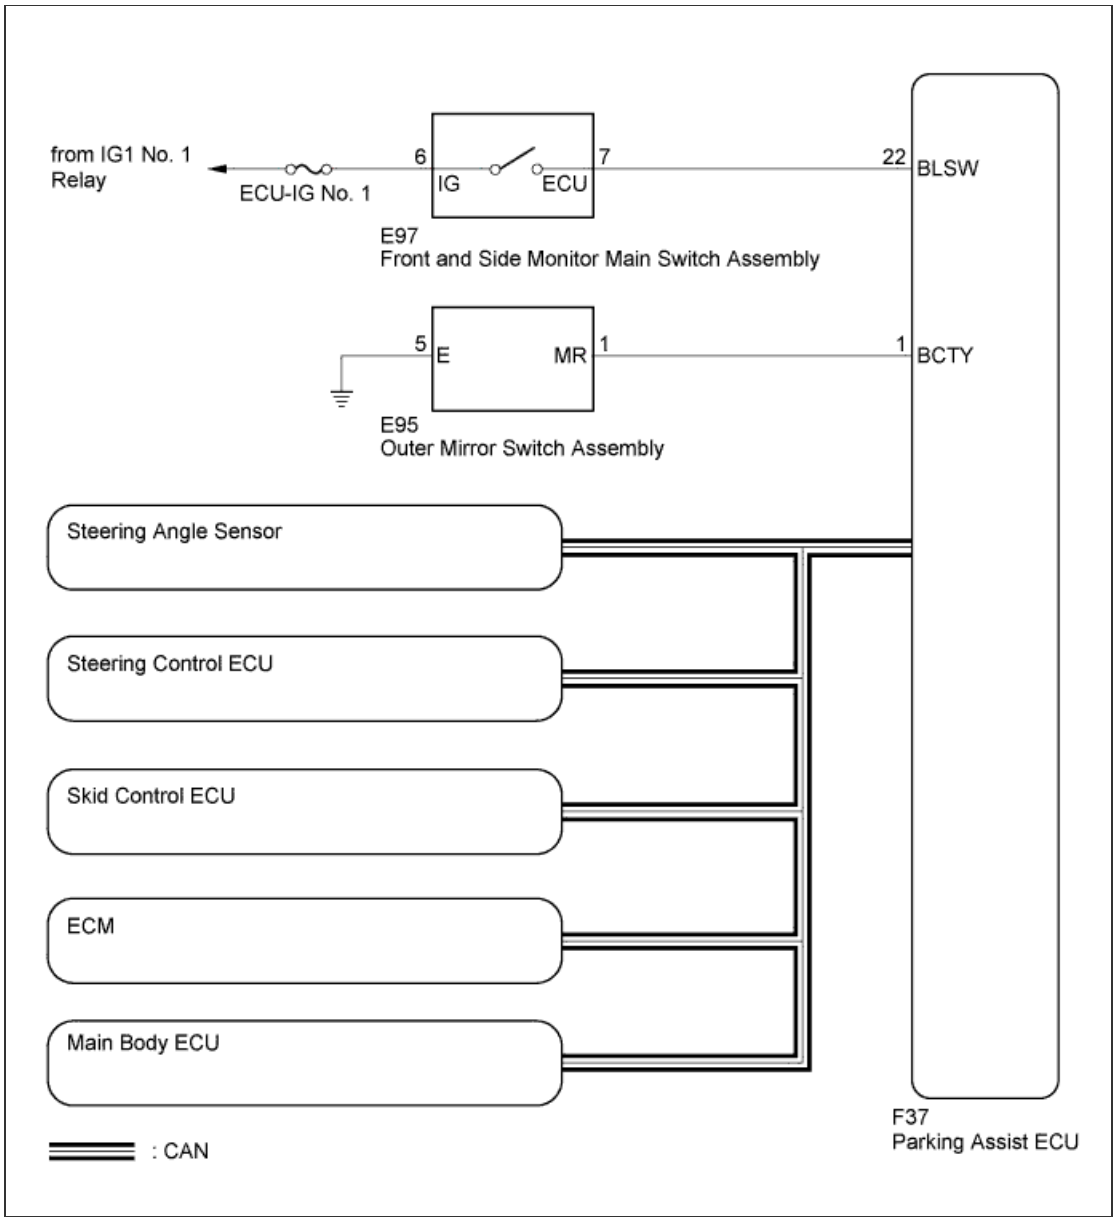
| *3 | Waveform 2 (camera lens is covered, blacking out the screen) |
| *4 | Synchronized Signal |
| *5 | Video Waveform |

NG → REPLACE REAR TELEVISION CAMERA ASSEMBLY (Click here)

OK → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## DESCRIPTION



On the SIGNAL CHECK screen, it is possible to check if the state of signals sent to the parking assist ECU is normal ( Click here).

**HINT:**

- **On the SIGNAL CHECK screen, "OK" (blue) is displayed for items with a normal inspection result and input state.**
- **On the SIGNAL CHECK screen, "CHK" (red) is displayed for items with an abnormal inspection result and input state.**
- **Displayed items may differ depending on the specifications.**

| Item | Signal Input Method | Detail | DTC Output when Abnormal Result is Displayed | Signal Receiver |
|---|---|---|---|---|
| SPEED | CAN communication | Speed signal input | DTC is output | Skid control ECU |
| CAMERA SW | Vehicle wire harness | Front and side monitor main switch assembly signal input | DTC is not output | Parking assist ECU |
| BCTY | CAN communication | CAN communication condition with main body ECU | DTC is output | Main body ECU |
| MIRROR SW | Vehicle wire harness | Outer rear view mirror retract signal input | DTC is not output | Parking assist ECU |
| SHIFT | CAN communication | Shift signal input | DTC is output | ECM |
| STR SIG | CAN communication | Steering angle sensor signal input | DTC is output | Spiral with sensor cable sub-assembly |
| WFS SET | Vehicle wire harness | • Front monitor signal input<br>• Side monitor signal input<br>• Front and side monitor main switch signal input | DTC is output | Parking assist ECU |
| VGRS | CAN communication | VGRS signal input | DTC is output | Steering control ECU |
| DEST | CAN communication | Destination information signal input | DTC is output | Main body ECU |
| BRAND | CAN communication | Brand information signal input | DTC is output | Main body ECU |

## WIRING DIAGRAM

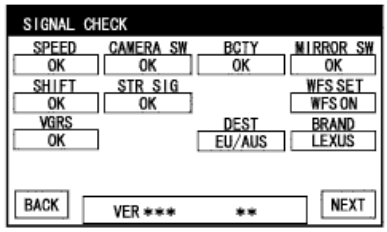
## INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the display and navigation module display after the cable has been disconnected from the negative (-) battery terminal, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the side monitor system may be needed (Click here).**
- **When replacing the display and navigation module display, perform vehicle contract setting (w/ G-BOOK system) ( Click here).**
- **Inspect the fuses for circuits related to this system before performing the following inspection procedure.**

### 1.CHECK DISPLAY CHECK MODE

a. Check which items display "CHK" (red) on the SIGNAL CHECK screen.



**Text in Illustration**

| | |
|---|---|
| *1 | Example |

**Result**

| Result | Proceed to |
|---|---|
| "MIRROR SW" displays "CHK" (red). | A |
| "CAMERA SW" and "WFS SET" displays "CHK" (red). | B |
| Any of "SPEED", "BCTY", "SHIFT", "STR SIG", "DEST", "VGRS" and "BRAND" display "CHK" (red). | C |

*1

B → Go to step 5

C → CHECK DTC OUTPUT (Click here)

A

## 2.INSPECT OUTER MIRROR SWITCH

a. Inspection outer mirror switch (Click here).

NG → REPLACE OUTER MIRROR SWITCH (Click here)

OK

## 3.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - OUTER MIRROR SWITCH)

a. Disconnect the E37 connector from the parking assist ECU.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| E37-1 (BCTY) - E95-1 (MR) | Always | Below 1 Ω |
| E37-1 (BCTY) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 4.CHECK POWER MIRROR CONTROL SYSTEM (POWER RETRACT FUNCTION)

a. Operate the mirror retract switch to check if the power retract mirror function of the outer rear view mirror assembly (passenger side) operates normally (Click here).

NG → GO TO POWER MIRROR CONTROL SYSTEM (Click here)

OK

REPLACE PARKING ASSIST ECU (Click here)

## 5.INSPECT FRONT AND SIDE MONITOR MAIN SWITCH ASSEMBLY

a. Inspection front and side monitor main switch assembly ( Click here).

NG → REPLACE FRONT AND SIDE MONITOR MAIN SWITCH ASSEMBLY (Click here)

OK

## 6.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - MAIN SWITCH ASSEMBLY)

a. Disconnect the F37 connector from the parking assist ECU.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|

| | | |
|---|---|---|
| E97-6 (IG) - Body ground | Engine switch on (IG) | 11 to 14 V |

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

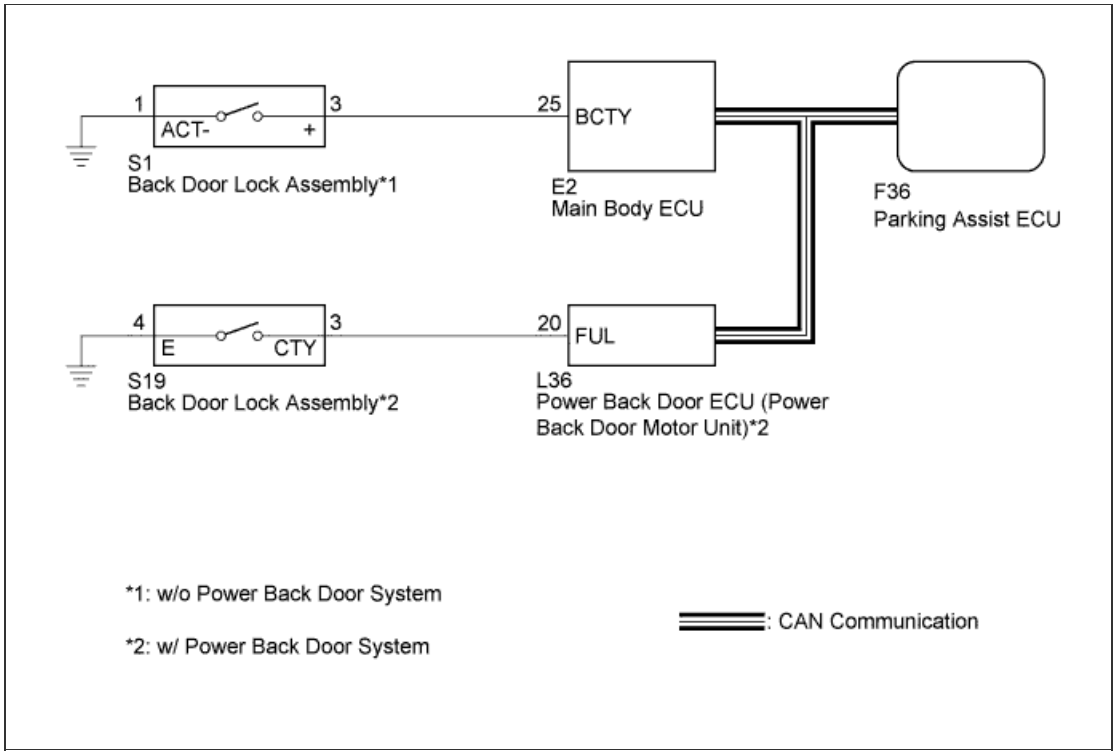
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F37-22 (BLSW) - Body ground | Always | 10 kΩ or higher |
| E97-7 (ECU) - Body ground | Always | 10 kΩ or higher |
| F37-22 (BLSW) - E97-7 (ECU) | Always | Below 1 Ω |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE PARKING ASSIST ECU (Click here)

**for Preparation** Click here



## DESCRIPTION

The parking assist ECU receives back door lock assembly open/close signals from the main body ECU via CAN communication. When the back door is open, the camera aiming cannot be adjusted correctly because the rear television camera assembly is installed on the back door. Therefore, when adjusting the camera aiming calibration while the back door is open, a back door open warning message will be displayed on the screen and camera aiming adjustment will be canceled.

**HINT:**

- **The back door lock assembly is connected to the main body ECU by the vehicle wire harness. (w/o power back door system)**
- **The back door lock assembly is connected to the power back door ECU (power back door motor unit) by the vehicle wire harness. The power back door ECU (power back door motor unit) sends back door lock assembly signals to the main body ECU via CAN communication. (w/ power back door system)**

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the display and navigation module display after the battery terminal disconnected, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system may be needed (Click here).**

### 1.READ VALUE USING INTELLIGENT TESTER

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Main Body / Data List.

e. Check the Data List for proper functioning of the following item.

**Main Body (Main Body ECU)**

| | | | |
|---|---|---|---|
| | | | |

| Tester Display | Measurement Item/Range | Normal Condition | Diagnostic Note |
|---|---|---|---|
| Back Door Courtesy SW | Back door courtesy switch signal/ON or OFF | ON: Back door open<br>OFF: Back door closed | - |

**OK:**

**The back door courtesy switch functions as specified in the normal condition column.**

NG → Go to step 2

OK →

REPLACE PARKING ASSIST ECU (Click here)

## 2.CONFIRM MODEL

a. Choose the model to be inspected.

**Result**

| Result | Proceed to |
|---|---|
| w/o power back door system | A |
| w/ power back door system | B |

B → GO TO BACK DOOR CLOSER SYSTEM (DTC B2251) ( Click here)

A →

## 3.CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - BACK DOOR LOCK)

a. Disconnect the E2 connector from the main body ECU.

b. Disconnect the S1 connector from the back door lock assembly.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| E2-25 (BCTY) - Body ground | Always | 10 kΩ or higher |
| S1-1 (ACT-) - Body ground | Always | Below 1 Ω |
| E2-25 (BCTY) - S1-3 (+) | Always | Below 1 Ω |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK →

## 4.INSPECT BACK DOOR LOCK ASSEMBLY

a. Check the operation of the door lock motor.

i. Move the door lock to the lock position.

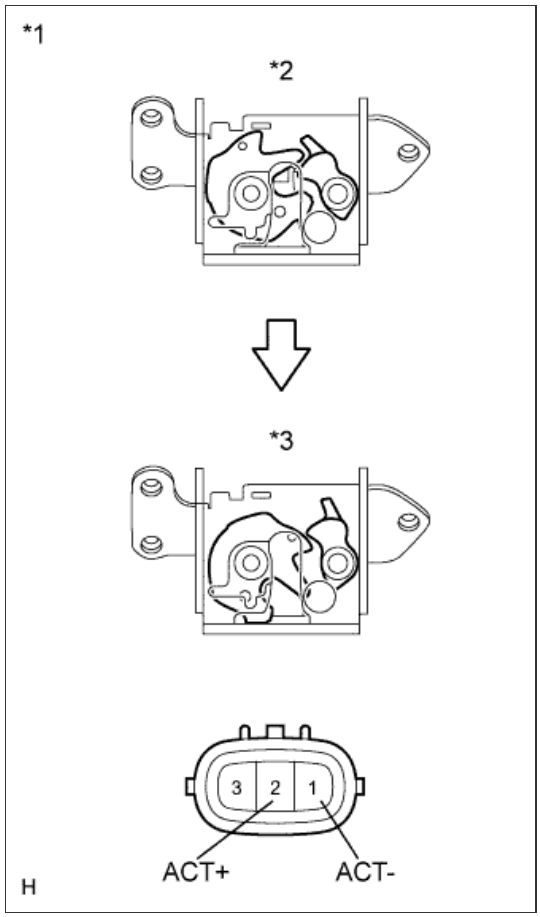
ii. Apply battery voltage to the door lock motor and check the operation of the door lock motor.

**OK**

| Measurement Condition | Specified Condition |
|---|---|
| | |

| | |
|---|---|
| Battery positive (+) → 2 (ACT+)<br>Battery negative (-) → 1 (ACT-) | Unlocks |

b. Check operation of the door courtesy switch.



i. Measure the resistance according to the value(s) in the table below.

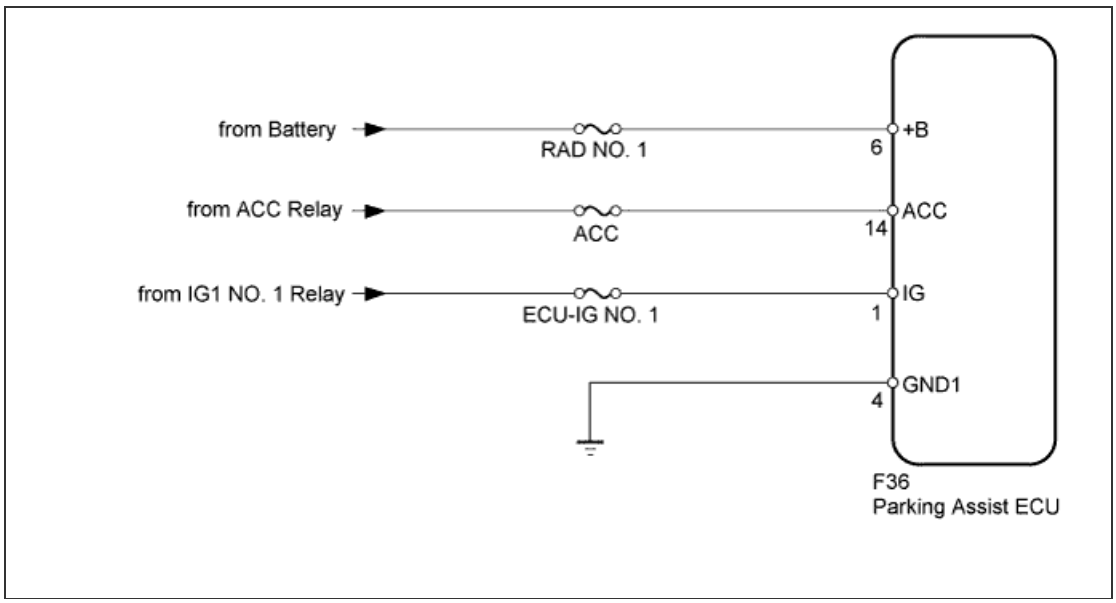
**Standard Resistance:**

| Tester Connection | Door Lock Condition | Specified Condition |
|---|---|---|
| 1 (ACT-) - 3 | Locked | 10 kΩ or higher |
| 1 (ACT-) - 3 | Unlocked | Below 1 Ω |

**Text in Illustration**

| | |
|---|---|
| *1 | Component without harness connected (Back Door Lock Assembly) |
| *2 | Lock |
| *3 | Unlock |

NG → REPLACE BACK DOOR LOCK ASSEMBLY (Click here)



OK → REPLACE MAIN BODY ECU

**for Preparation** Click here

## DESCRIPTION

This circuit is the power source circuit to operate the parking assist ECU.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.INSPECT FUSE (ECU-IG NO. 1, ACC, RAD NO. 1)

a. Remove the ECU-IG NO. 1 and ACC fuses from the main body ECU.

b. Remove the RAD NO. 1 fuse from the engine room relay block.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| ECU-IG NO. 1 fuse | Always | Below 1 Ω |
| ACC fuse | Always | Below 1 Ω |
| RAD NO. 1 fuse | Always | Below 1 Ω |

NG → REPLACE FUSE

OK

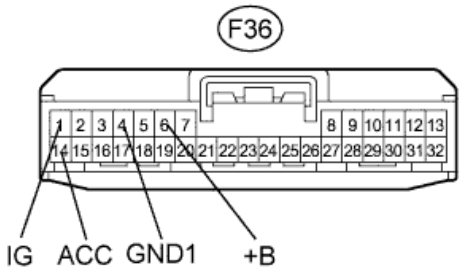
### 2.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - BATTERY AND BODY GROUND)

a. Disconnect the F36 ECU connector.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F36-1 (IG) - Body ground | Engine switch on (IG) | 11 to 14 V |
| F36-1 (IG) - Body ground | Engine switch off | Below 1 V |
| F36-14 (ACC) - | Engine switch on | |



| | | |
|---|---|---|
| Body ground | (ACC) | 11 to 14 V |
| F36-14 (ACC) - Body ground | Engine switch off | Below 1 V |
| F36-6 (+B) - Body ground | Always | 11 to 14 V |

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F36-4 (GND1) - Body ground | Always | Below 1 Ω |

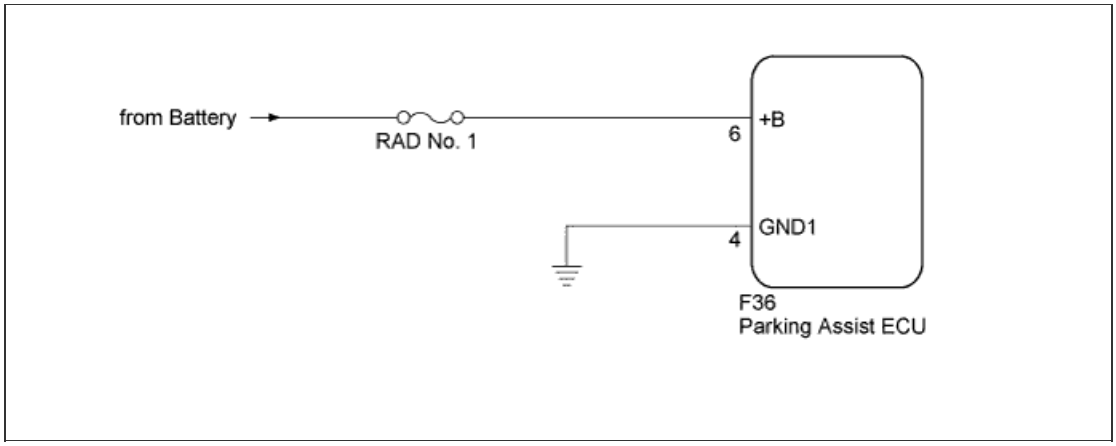
Front view of wire harness connector:
(to Parking Assist ECU)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here



## DESCRIPTION

This circuit is the power source circuit to operate the parking assist ECU. The parking assist ECU controls the parking assist monitor system, side monitor system and Lexus parking assist-sensor system. When a malfunction occurs in this circuit, each system will be abnormal.

**HINT:**

- **The parking assist ECU is connected to other ECUs via CAN communication or AVC-LAN communication.**
- **If the parking assist ECU does not operate due to a power source problem, a navigation system DTC may be stored due to an AVC-LAN communication interruption.**
- **If the parking assist ECU does not operate due to a power source problem, other system DTCs may be stored due to a CAN communication interruption.**

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

Inspect the fuses for circuits related to this system before performing the following inspection procedure.

**1.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - BATTERY AND BODY GROUND)**

a. Disconnect the F36 connector from the parking assist ECU.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F36-4 (GND1) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F36-6 (+B) - F36-4 (GND1) | Always | 11 to 14 V |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK → PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE ( Click here)

**for Preparation** Click here

## 1.POINTS TO NOTE WHEN SERVICING

a. Pay attention to the following points when servicing.

i. When disconnecting the cable from the negative (-) battery terminal, "System initializing" may appear on the multi-media module receiver assembly. In this case, restore the steering angle neutral point (Click here).

ii. Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system (w/ Side Monitor System) may be needed (Click here).

**HINT:**

Each adjusted value for the calibration of the parking assist monitor system (w/ Side Monitor System) will be stored in the parking assist ECU.

iii. When the lens of the rear television camera assembly is dirty, wash the lens with water and wipe it off with a soft cloth to obtain clear images. For heavy dirt, use neutral detergent to clean the lens.

## 2.NOTES FOR REAR TELEVISION CAMERA ASSEMBLY

a. Notes for the rear television camera assembly

i. The parking assist monitor system (w/ Side Monitor System) may not function properly if subjected to a severe blow by any hard object.

ii. Do not scrub the cover part of the camera (resin made). Scrubbing may scratch the cover and affect the image. Prevent organic solvents, waxes, bond removing solvents or glass coating from adhering to the cover. If such material adheres to the cover, clean it off immediately and wash it with water.

iii. Exposing the camera to a sudden temperature change may affect proper functioning of the camera.

iv. A clear image may not appear if the camera is dirty with snow, mud, etc. In that case, wash it with water and wipe off the lens. Use a detergent to remove dirt if necessary.

b. Images may be unclear even in normal conditions if:

i. Noise may occur in the image during power back door operation. (w/ Power Back Door System)

ii. Electrical devices are used in the cabin (noise may occur in the image).

iii. Accessories that generate radio waves have been installed (noise may occur in the image).

iv. The outer mirror switch assembly is operated (noise may occur in the image).

v. The camera lens is frosted over (the image immediately after turning the engine switch on (IG) may be blurred or darker than normal).

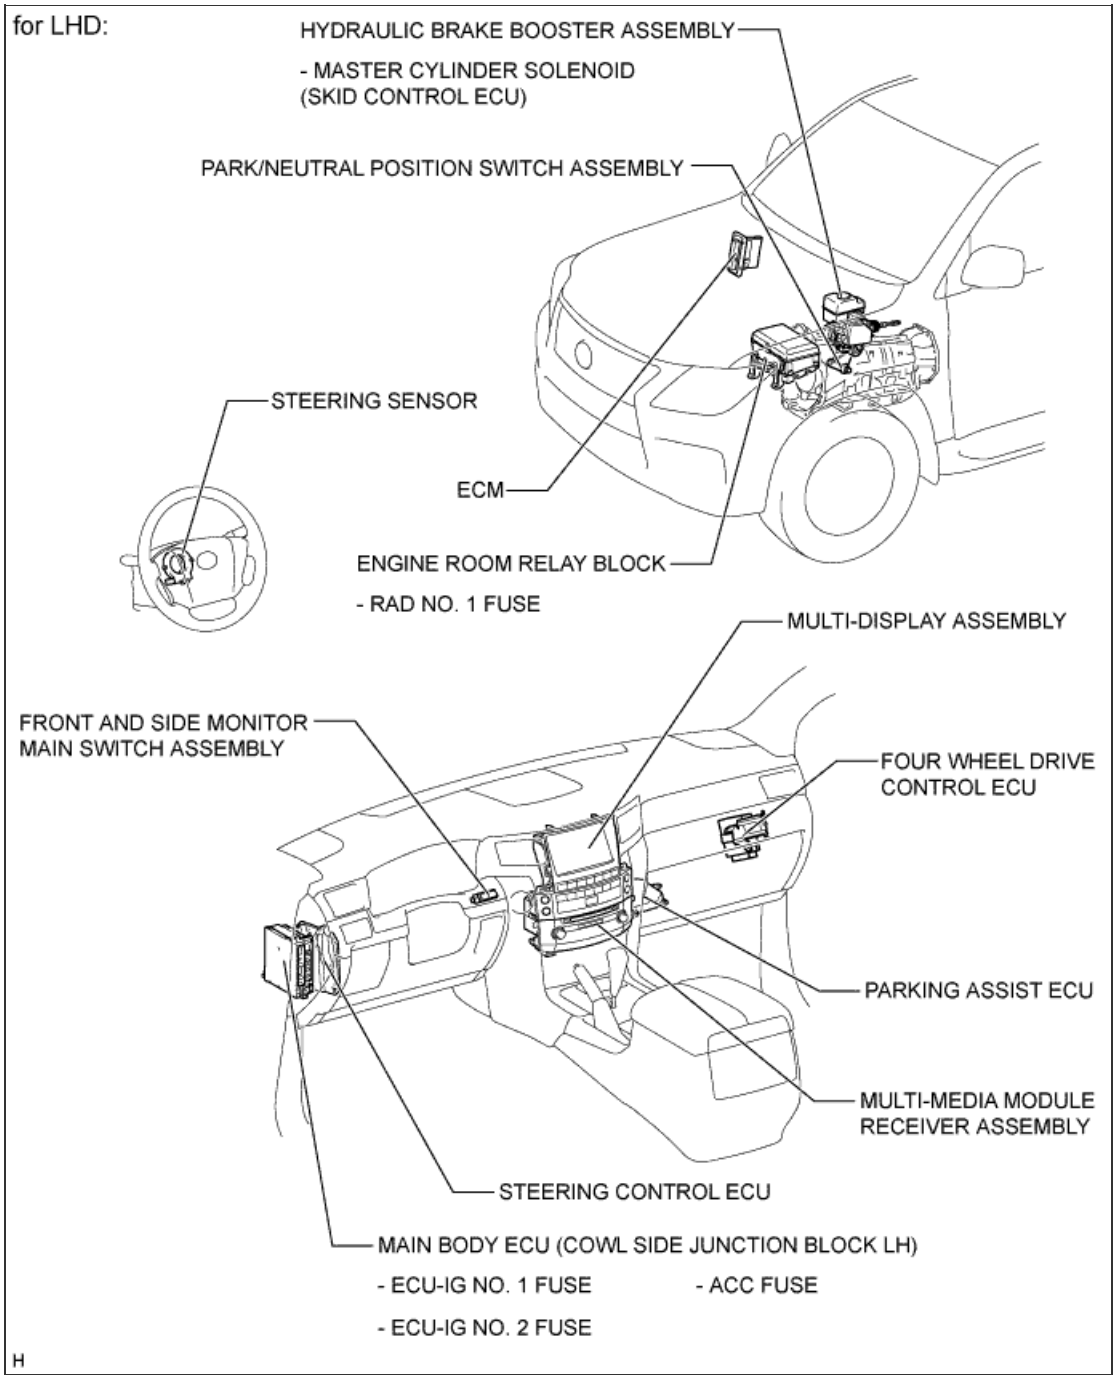
vi. The camera lens is dirty with snow, mud, etc.

vii. A strong beam of light, such as a sunbeam or headlight, hits the camera.

viii. It is too dark around the camera (at night etc.).

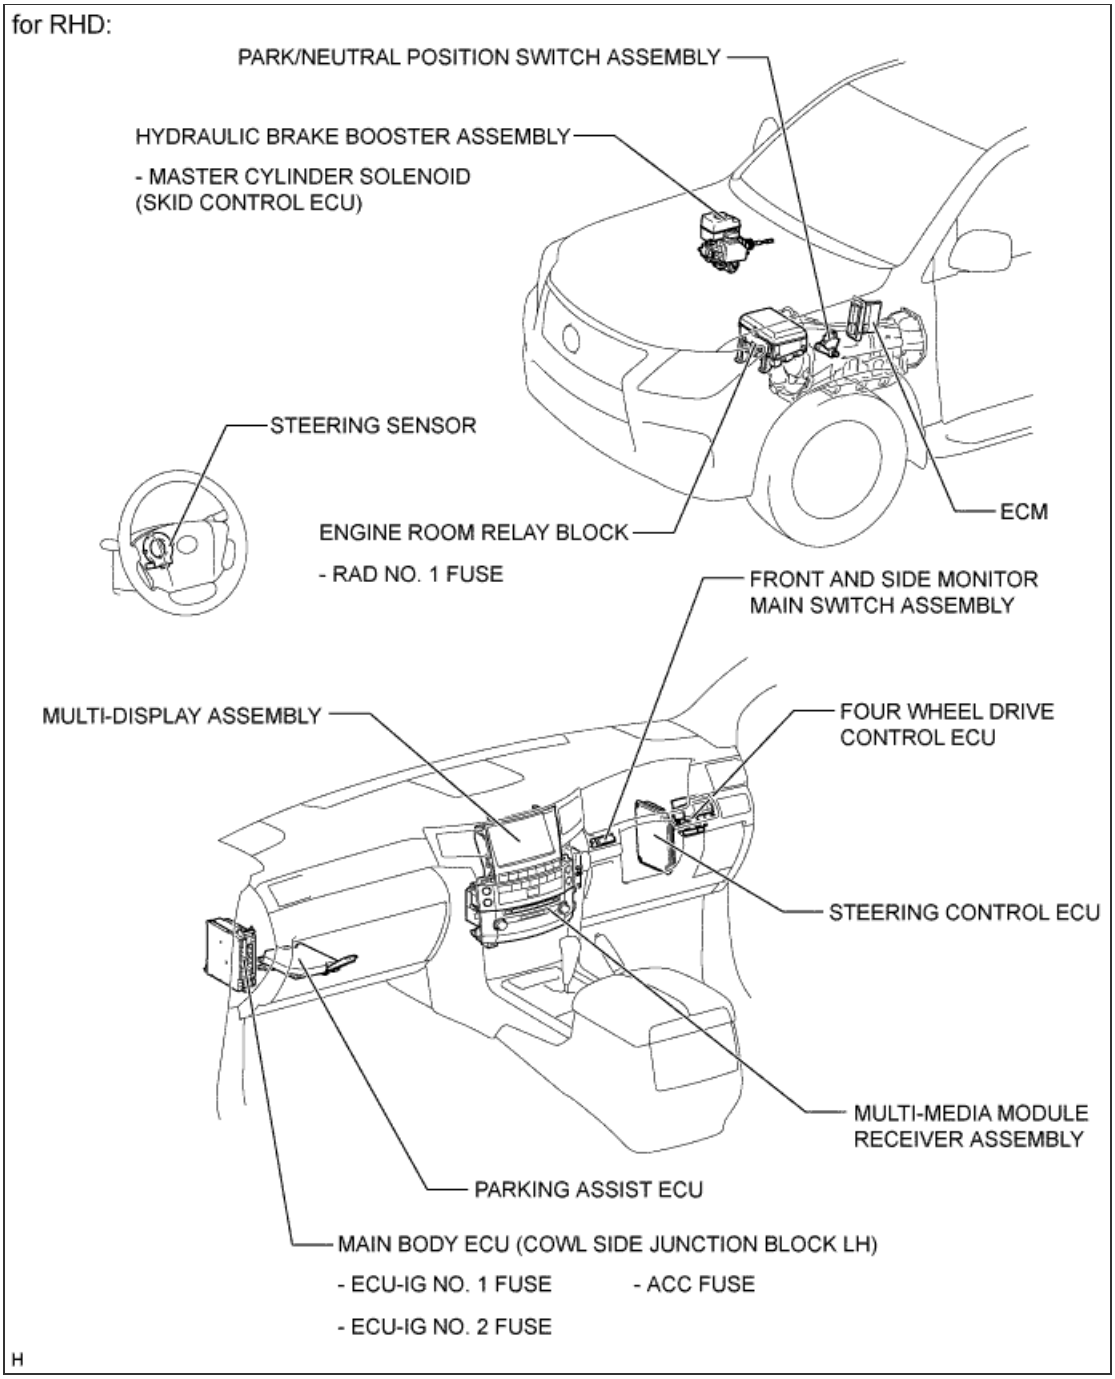
ix. The ambient temperature around the camera is either too high or too low.

x. The vehicle is tilted at a steep angle.



xi. The rear television camera assembly lens is scratched.

xii. The rear television camera assembly lens has drops of water on it or the humidity is high.



xiii. When the camera is used under fluorescent lights, sodium lights, or mercury lights etc., the lights and the illuminated area may appear to flicker.

xiv. The ambience of the camera is too bright. (When a strong light, such as a sunbeam reflected off the vehicle body, hits the camera, the image may be blurred. This is called the "SMEAR" phenomenon, particular to the CCD camera.)

## GENERAL

a. This system has a rear television camera assembly mounted on the back door to display the rear view of the vehicle on the multi-display assembly. The display panel also shows a composite view consisting of the area behind the vehicle and parking guidelines to assist the driver in parking the vehicle by monitoring the area behind the vehicle.

b. This system consists of the following components:

i. Parking assist ECU

ii. Rear television camera assembly

iii. Multi-media module receiver assembly

iv. Multi-display assembly

v. Steering sensor

vi. Steering control ECU

vii. Master cylinder solenoid (skid control ECU assembly)

viii. Four wheel drive control ECU

ix. ECM

x. Main body ECU (cowl side junction block LH)

c. This system is equipped with a self-diagnosis system, which is operated on a designated window that appears on the display panel, just as in the navigation system.

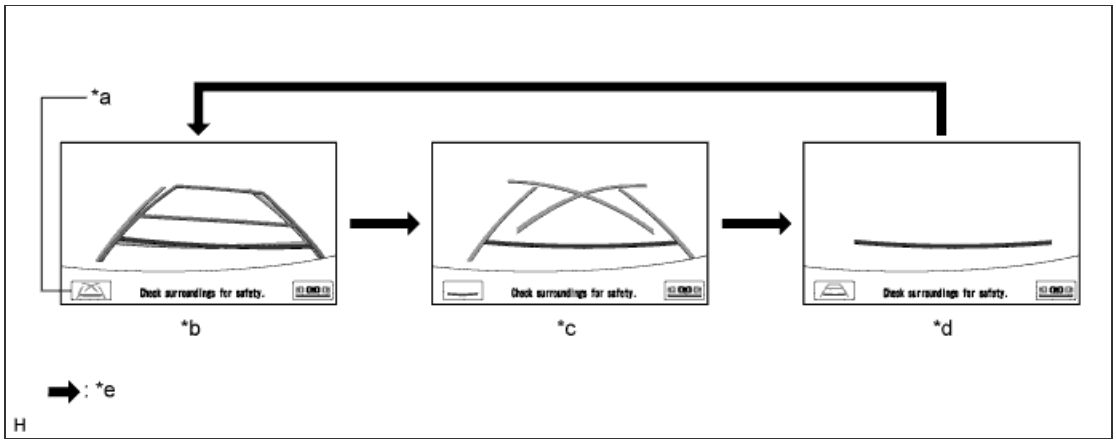
## FUNCTION OF COMPONENTS

a. The parking assist ECU controls the system by using information from the following components.

| Item | Function |
|---|---|
| Rear Television Camera Assembly | • Mounted on the back door to transmit the rear view of the vehicle to the parking assist ECU.<br>• Has a color video camera that uses a Complementary Metal Oxide Semiconductor (CMOS) and a wide-angle lens. |
| Parking Assist ECU | • Receives video signals, which contain an image of the area behind the vehicle taken with the rear television camera assembly.<br>• Performs overall control of the system by receiving signals from the sensors.<br>• Allows operation via the touch panel of the display when the park assist monitor screen or diagnosis screen is displayed.<br>• Creates images and displays adjustment screens performed on the diagnosis screen.<br>• Stops displaying the guide line and buttons displays "Check surrounding for safety" when an open signal is received for the back door.<br>• Displays "Back door is open" on the back camera position setting screen when an open signal is received for the back door. |
| Multi-media Module Receiver Assembly | Receives the video signals containing a composite of the rear view of the vehicle and parking assist guideline signals from the parking assist ECU, and sends them on the multi-display assembly (display panel). |
| Steering Sensor | Detects the angle of the steering wheel and sends the resulting signals to the parking assist ECU through CAN communication. |
| Steering Control ECU | Sends the VGRS relative angle and vehicle condition to the parking assist ECU through CAN communication. |
| Master Cylinder Solenoid (Skid Control ECU Assembly) | Sends the inner brake information and ABS ACT information to the parking assist ECU through CAN communication. |
| Four Wheel Drive Control ECU | Sends the L4 condition signal to the parking assist ECU through CAN communication. |
| | Sends the vehicle condition, 2WD/4WD information and shift position |

| | |
|---|---|
| ECM | information to the parking assist ECU through CAN communication. |
| Main Body ECU (Cowl Side Junction Block LH) | Sends the back door courtesy light switch signal to the parking assist ECU through CAN communication. |

## OPERATION EXPLANATION



a. The reverse position signal is sent from the shift lever position switch to the parking assist ECU when the shift lever is moved to R.

b. In parallel parking assist mode, an appropriate steering angle and timing information can be provided for the driver. This is based on the information from the steering angle sensor signal and the vehicle angle data signal that are sent to the parking assist ECU.

**HINT:**

The steering angle sensor signal is used to control parking assist for only estimated guide line mode.

## DISPLAY MODE SETTING

### Text in Illustration

| | | | |
|---|---|---|---|
| *a | Line Mode Button | *b | Estimated Guide Line Mode |

| Estimated Guide Line Mode | Displayed | Displayed | Displayed | Not displayed |
| Parking Guide Line Mode | Displayed | Displayed | Not displayed | Displayed |
| Guide Line Deletion Mode | Displayed | Not displayed | Not displayed | Not displayed |

## COMMUNICATION SYSTEM OUTLINE

a. The components of the parking assist monitor system (w/ Side Monitor System) communicate with each other through the AVC-LAN. Also, parallel parking assist mode judges the vehicle angle data transmitted via the AVC-LAN from the multi-media module receiver assembly (the data is calculated by the multi-media module receiver assembly by integrating the yaw rate of the gyro sensor built into the multi-media module receiver assembly).

b. If a short circuit or open circuit occurs in the AVC-LAN, communication is interrupted and the parking assist monitor system (w/ Side Monitor System) will stop functioning.

## DIAGNOSTIC FUNCTION OUTLINE

a. This parking assist monitor system (w/ Side Monitor System) has a diagnostic function displayed in the multi-media module receiver assembly. This function enables the calibration (adjustment and verification) of the parking assist monitor system (w/ Side Monitor System) (Click here).

b. The parking assist monitor system (w/ Side Monitor System) can check the following items by using the intelligent tester.

| Item | Proceed to |
|---|---|

| | |
|---|---|
| DTC | Click here |
| Data List / Active Test | Click here |

**for Preparation** Click here

**HINT:**

- **Use the following procedure to troubleshoot the parking assist monitor system (w/ Side Monitor System).**
- ***: Use the intelligent tester.**

## 1.VEHICLE BROUGHT TO WORKSHOP

NEXT

## 2.INSPECT BATTERY VOLTAGE

a. Measure the battery voltage with the engine switch off.

**Standard voltage:**
**11 to 14 V**

If the voltage is below 11 V, replace or recharge the battery before proceeding.

NEXT

## 3.CHECK NAVIGATION SYSTEM

a. Refer to the navigation system (Click here).

**Result**

| Result | Proceed to |
|---|---|
| Navigation system is normal | A |
| Navigation system is abnormal | B |

B. Go to NAVIGATION SYSTEM (Click here)

A

## 4.CHECK COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*

a. Use the intelligent tester to check if the CAN communication system is functioning normally.

- for LHD: Click here
- for RHD: Click here

**Result**

| Result | Proceed to |
|---|---|
| CAN DTC is not output | A |
| CAN DTC is output (for LHD) | B |
| CAN DTC is output (for RHD) | C |

B. Go to CAN COMMUNICATION SYSTEM (Click here)

C. Go to CAN COMMUNICATION SYSTEM (Click here)

A

## 5.CHECK FOR DTC*

a. Check for DTCs and note any codes that are output ( Click here).

b. Clear the DTC (Click here).

c. Recheck for DTCs. Try to prompt the DTC by simulating the original activity that the DTC suggests.

**NOTICE:**

The parking assist ECU may store the DTCs of the following system. If DTCs other than those specified in Diagnostic Trouble Code Chart of the parking assist monitor system are output, refer to Diagnostic Trouble Code Chart for the applicable system.

| System | Proceed to |
|---|---|
| Side Monitor System | Click here |
| Wide View Front Monitor System | Click here |

**Result**

| Result | Proceed to |

## INITIALIZE PARKING ASSIST MONITOR SYSTEM

a. When "System initializing" is displayed on the multi-display assembly, correct the steering angle neutral point using the following method.

i. Fully turn the steering wheel to the right and left on flat ground.

**NOTICE:**

Memorizing the steering angle neutral point must be carried out with the engine started. Apply the parking brake, depress the brake pedal, check that the shift lever is in P, and ensure that the vehicle is not moving.

**HINT:**

The "?" button is displayed at the same time as "System initializing". If the "?" button is selected, this method is displayed.

**for Preparation** Click here

## ADJUST PARKING ASSIST MONITOR SYSTEM

a. This parking assist monitor system (w/ Side Monitor System) can be set from the diagnostic screen of the multi-display assembly.

b. If the following operations are performed, it is necessary to perform adjustments and checks on the diagnostic screen.

| Part Name | Operation | Adjustment Item | Proceed to |
|---|---|---|---|
| Steering sensor | • Removal and installation of the Steering angle sensor<br>• Removal and installation of the connector of the steering sensor | Steering angle neutral point (Initialize parking assist monitor system [w/ Side Monitor System]) | Click here |
| | | Steering angle setting | Procedure 2 |
| | Replacement | Steering angle neutral point (Initialize parking assist monitor system [w/ Side Monitor System]) | Click here |
| | | Steering angle setting | Procedure 2 |
| Multi-media module receiver assembly | Replacement | Vehicle contract setting | Click here |
| Parking assist ECU | Replacement | Parking assist ECU initialization | Procedure 1 |
| Suspension, tires, etc. | The vehicle height changes because of suspension or tire replacement | Rear television camera optical axis (Back camera position setting) | Procedure 3 |
| | | Side television camera optical axis (Side camera position setting) | Click here |
| Rear television camera assembly | • Replacement<br>• Installation angle of the rear television camera changes because of the removal and installation of the rear television camera, etc. | Rear television camera optical axis (Back camera position setting) | Procedure 3 |

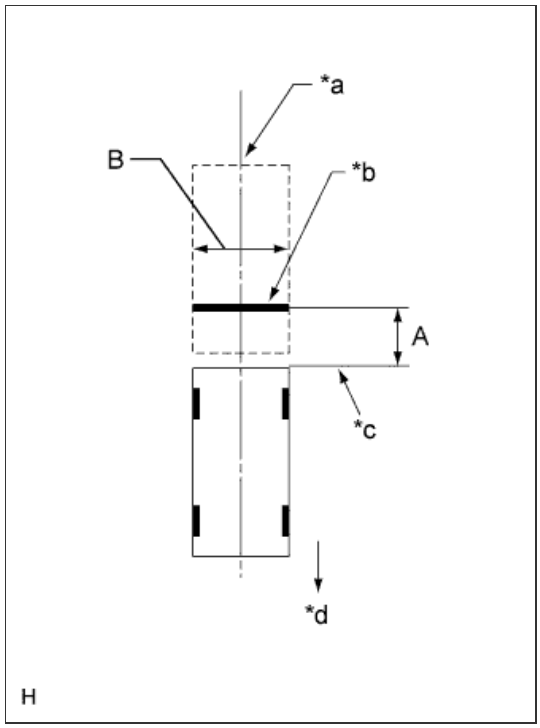
**HINT:**

- **The adjustment values stored while performing parking assist monitor system (w/ Side Monitor System) calibration are stored in the parking assist ECU.**
- **After the engine switch is turned off, the multi-media module receiver assembly records various types of memory and settings. As a result, after turning the engine switch off, make sure to wait for the time specified in the following table before disconnecting the cable from the negative (-) battery terminal.**

**Waiting Time before Disconnecting Cable from Negative (-) Battery Terminal**

| Specification | Waiting Time |
|---|---|
| Vehicle enrolled in G-BOOK system | 6 minutes |
| Vehicle not enrolled in G-BOOK system | 1 minute |

## PARKING ASSIST ECU INITIALIZATION (Procedure 1)



**HINT:**

Be sure to check for DTCs before performing this procedure ( Click here).

a. Preparation for adjustment

i. Park the vehicle with the steering wheel centered.

ii. Set a target bar for optical axis adjustment of the rear television camera assembly.

**HINT:**

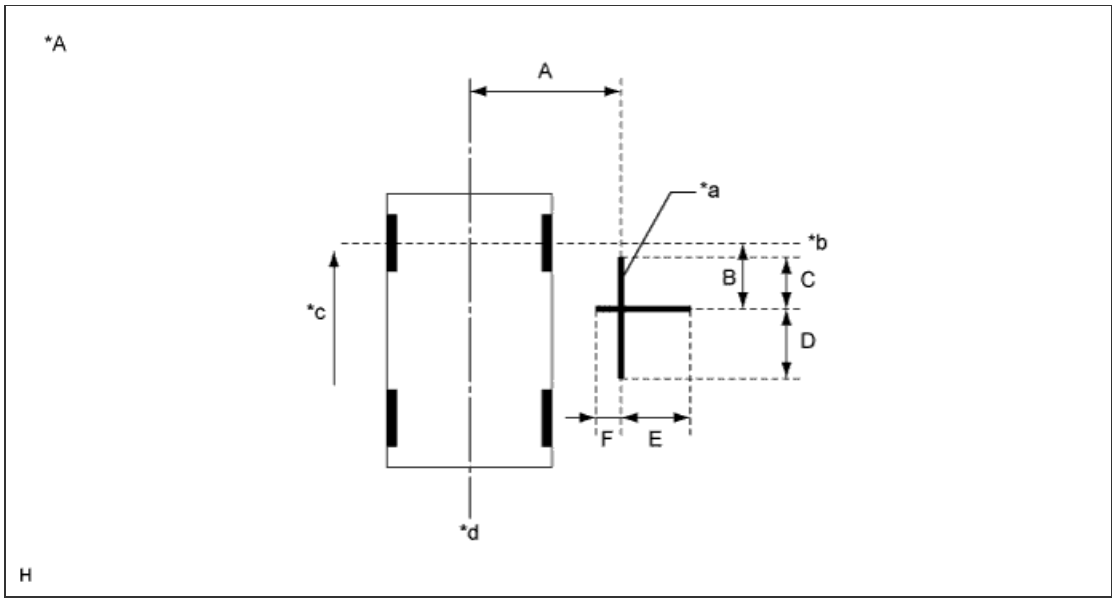
Only when adjusting the optical axis of the camera assembly, create a target bar for adjustment.

**Dimension:**

| Area | Specification |
|---|---|
| A | 824 to 834 mm (2.70 to 2.74 ft.) |
| B | 1995 to 2005 mm (6.55 to 6.58 ft.) |

**Text in Illustration**

| | |
|---|---|
| *a | Vehicle Center |
| *b | Target Bar for Back Camera Adjustment |
| *c | Vehicle End |
| *d | Front Side |

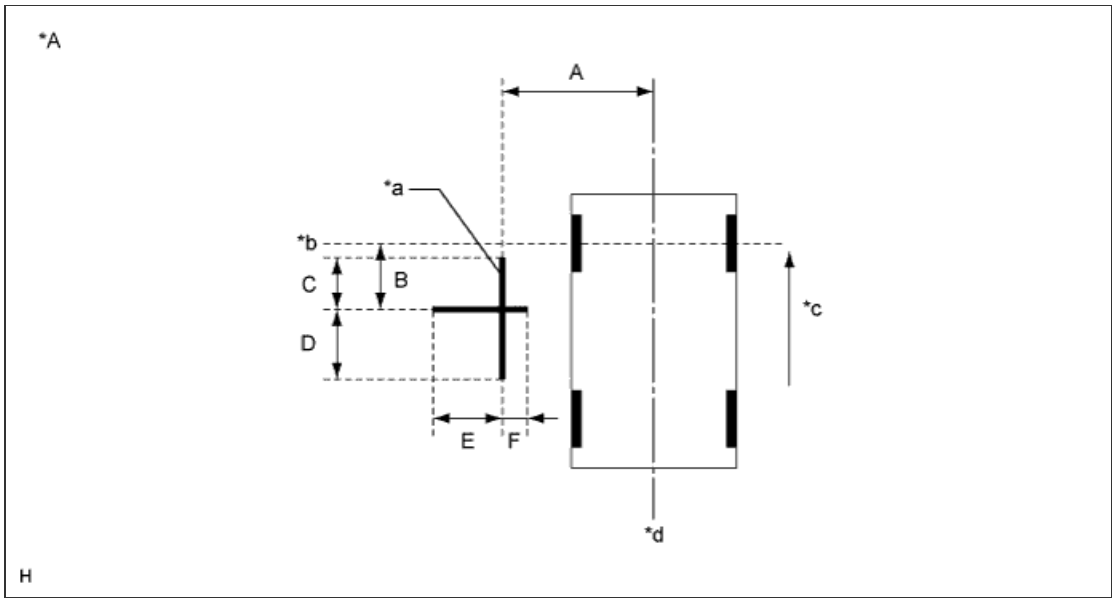


**HINT:**

- **Set a piece of tape on the ground as the target bar for adjustment. Its width and length are 20 to 30 mm (0.787 to 1.18 in.) and 1995 to 2005 mm (6.55 to 6.58 ft.), respectively. Check the color on the multi-display assembly and choose a tape color which can be easily seen.**
- **Before parking the vehicle, be sure to move the vehicle forward and in reverse to check that the tires are facing straight ahead with the steering wheel centered.**
- **Check that the back door is fully closed.**

iii. Set a target bar for optical axis adjustment of the side television camera assembly.

**HINT:**



Only when adjusting the optical axis of the camera assembly, create a target bar for adjustment.

**Text in Illustration**

| | | | |
|---|---|---|---|
| *A | for LHD | - | - |
| *a | Target Bar for Side Camera Adjustment | *b | Front Wheel Axis |

| | | | |
|---|---|---|---|
| *c | Front Side | *d | Vehicle Center |

**Text in Illustration**

| | | | |
|---|---|---|---|
| *A | for RHD | - | - |
| *a | Target Bar for Side Camera Adjustment | *b | Front Wheel Axis |
| *c | Front Side | *d | Vehicle Center |

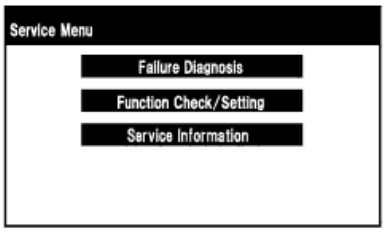
**Dimension:**

| A | B | C | D | E | F |
|---|---|---|---|---|---|
| 1183 mm (3.88 ft.) | 1181 mm (3.87 ft.) | 500 mm (1.64 ft.) | 500 mm (1.64 ft.) | 500 mm (1.64 ft.) | 180 mm (7.09 in.) |

**HINT:**

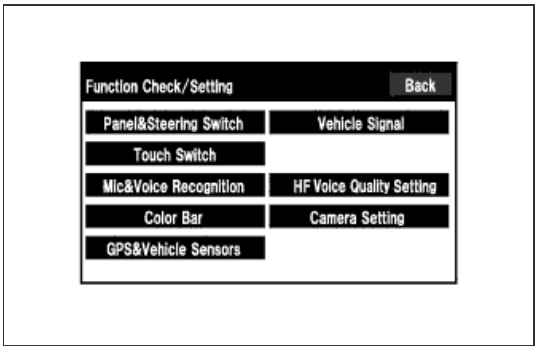
Target bars for side camera adjustment should be made with 2 pieces of 2.5 cm wide tape; one piece should be 100 cm (3.28 ft.) (C+D) and the other should be 68 cm (2.23 ft.) (E+F) long. Check the tape color on the multi-display assembly and choose a tape color which can be easily seen.

b. Start diagnostic mode (Click here).



**NOTICE:**

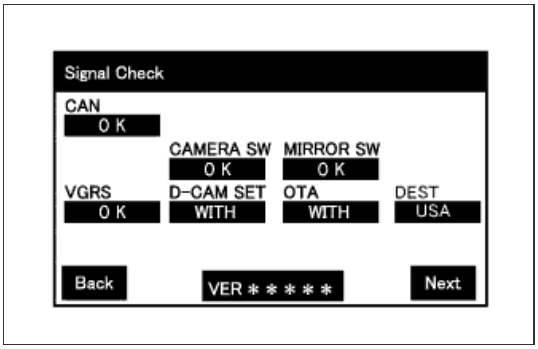
Alignment must be performed with the engine running. For this reason, it is necessary to apply the parking brake, depress the brake pedal, and move the shift lever into the P position, and to exercise all other necessary caution to ensure that the vehicle does not begin moving unexpectedly.



**HINT:**

The displayed items may differ depending on vehicle specifications.

i. Select "Function Check/Setting" on the [Service Menu] screen.



ii. Select "Camera Setting" on the [Function Check/Setting] screen.

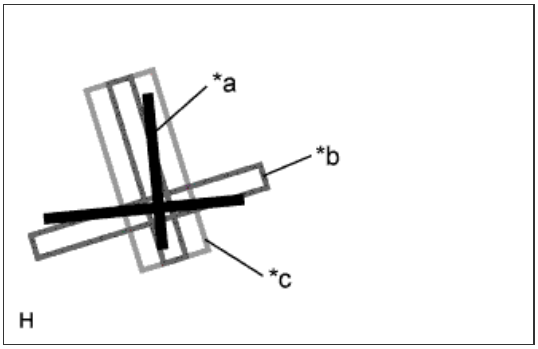
iii. Select "Next" on the [Signal Check] screen.

**NOTICE:**

- **When "CHK" (red) is displayed for any items on the [Signal Check] screen, selecting "Next" will not change the screen to the [Side Camera Position Setting] screen.**
- **When "CHK" (red) is displayed for any items on the [Signal Check] screen, perform inspections using the [Signal Check] screen (Click here).**

**HINT:**

- **When the outer mirrors are retracted, selecting "Next" will not change the screen to the [Side Camera Position Setting] screen.**
- **If the screen does not change to the [Side Camera Position Setting] screen even though the outer mirrors are extended, perform the "MIRROR SW" check on the [Signal Check] screen (Click here).**
- **If the screen does not change to the [Side Camera Position Setting] screen even after "OK" (blue) is displayed as a result of the MIRROR SW check on the [Signal Check] screen, replace the parking assist ECU (Click here).**



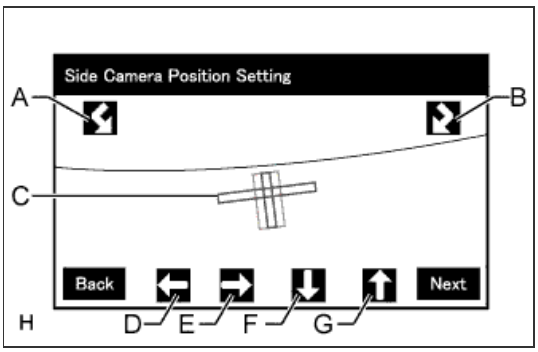
c. Side Camera Position Setting:

**HINT:**

Colors used on the [Side Camera Position Setting] screen

**Text in Illustration**

| | |
|---|---|
| *a | Target Adjustment Bar for Side Camera Position Setting |
| *b | Red Frame |
| *c | Yellow Frame |



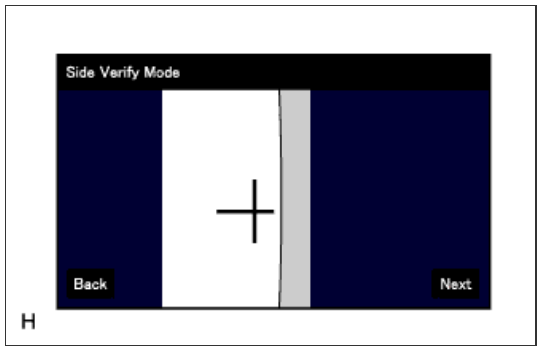
i. Perform the roll angle adjustment.

- Select switches A and B to rotate C so that it is parallel to the target adjustment bar.

ii. Perform the vertical and horizontal position adjustment.

- Select the directional switches D, E, F and G to move C so that the target adjustment bar is centered in C.

iii. Select "Next" to display [Side Verify Mode].



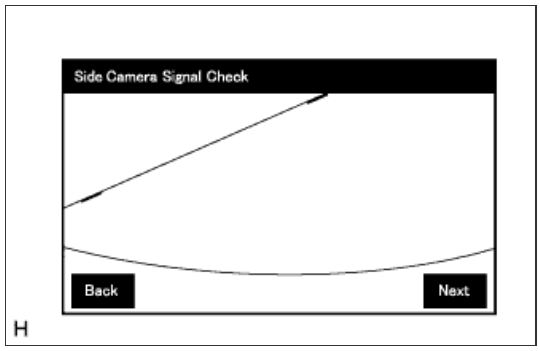
d. Side Verify Mode:

i. Check that the red cross and the target adjustment bar are aligned.

**HINT:**

If they are not aligned, select "Back" and perform [Side Camera Position Setting] again.

ii. Select "Next" to display [Side Camera Signal Check].



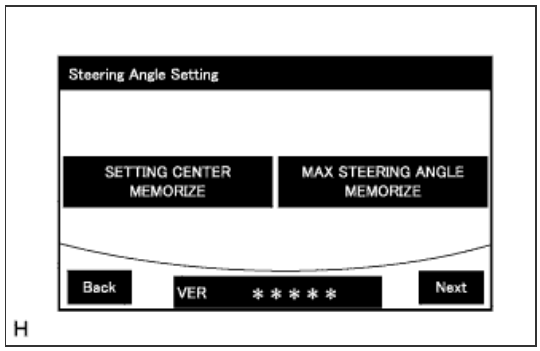
e. Side Camera Signal Check:

i. Select "Next" to store the side camera aiming adjustment value and change the screen to the [Steering Angle Setting] screen.

**HINT:**

- **When "Next" is selected, a beep will sound to confirm that the side camera aiming adjustment values have been stored.**
- **The adjustment value will not be stored unless "Next" is selected.**

f. Steering Angle Setting:



i. Perform the "STEERING CENTER MEMORIZE" operation.

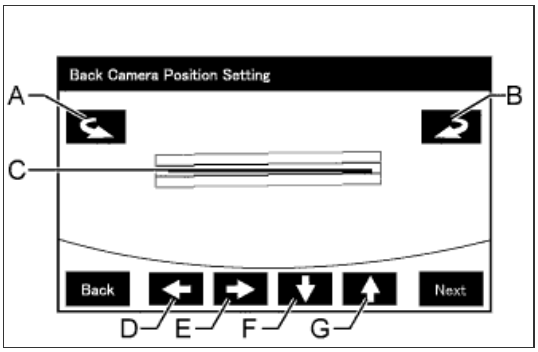
- Check that the steering wheel is centered, and then select "STEERING CENTER MEMORIZE".

**HINT:**

When performing removal and installation, or replacement of the television camera, steering angle adjustment is not required.

ii. Perform the "MAX STEERING ANGLE MEMORIZE" operation.

- After adjusting the steering angle neutral point, turn the steering wheel to the left and right lock positions and select "MAX STEERING ANGLE MEMORIZE". The maximum steering angle is then stored and the screen changes to the [Back Camera Position Setting] screen.



**HINT:**

- **The "Next" button does not respond until the system stores the steering angle neutral point and maximum steering angle.**
- **It is also possible to start by initially turning the steering to the right side.**
- **When "MAX STEERING ANGLE MEMORIZE" is selected, a beep will sound to confirm that the steering adjustment values have been stored.**
- **The adjustment value will not be stored unless "MAX STEERING ANGLE MEMORIZE" is selected after turning the steering wheel side to side.**
- **When "Back" is selected, the screen changes to [Side Verify Mode] without storing the set values.**
- **Even if no DTCs are detected, selecting "MAX STEERING ANGLE MEMORIZE" may not cause the adjustment value to be stored if the steering sensor is malfunctioning.**
- **If selecting "MAX STEERING ANGLE MEMORIZE" does not cause the adjustment value to be stored after adjusting the steering angle, replace the steering sensor.**

g. Back Camera Position Setting:

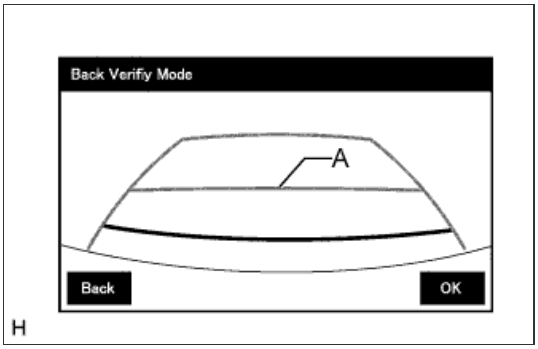
**HINT:**

- **When the back door is open, the "Back door is open. Do not use the rear view monitor when the back door is not completely closed." message will be displayed and camera position setting will not be possible.**
- **If the "Back door is open. Do not use the rear view monitor when the back door is not completely closed." message is displayed even when the back door is closed, perform inspections according to Problem Symptoms Table (A back door open warning message is displayed even after back door is closed) (Click here).**

i. Perform the roll angle adjustment.

- Select switches A and B to rotate C so that it is parallel to the target adjustment bar.

ii. Perform the vertical and horizontal position adjustment.



- Select the directional switches D, E, F and G to move C so that the target adjustment bar is centered in C.

iii. Select the "Next" to display [Back Verify Mode].

h. Back Verify Mode:

i. Check that A and the target adjustment bar are overlapping.

- If the steering angle neutral point is not aligned, perform the "STEERING CENTER MEMORIZE" and "MAX STEERING ANGLE MEMORIZE" operations.
- If A and the target adjustment bar are not aligned even if the tires are aligned straight ahead, perform the camera position setting operation.

ii. Selecting "OK" will return the screen to the [Service Menu] screen, and complete the adjustment.

**HINT:**

- **The update is not completed until "OK" is selected.**
- **When "OK" is selected, a beep will sound to confirm that the rear camera aiming adjustment values have been stored.**

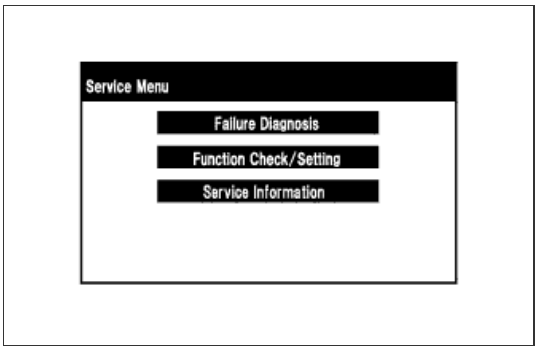
i. Finish diagnostic mode (Click here).

## STEERING ANGLE SETTING (Procedure 2)

a. Preparation for adjustment

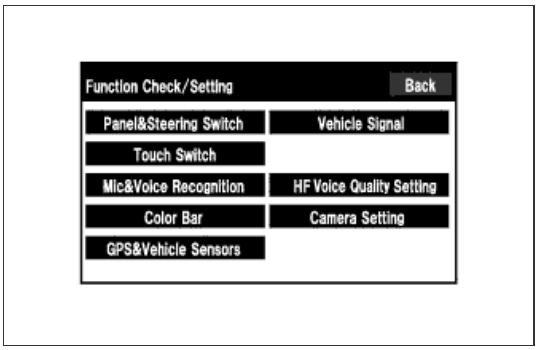
i. Park the vehicle with the steering wheel centered.

b. Start diagnostic mode (Click here).



**NOTICE:**

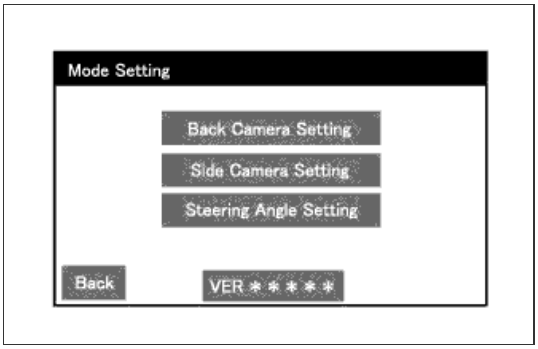
Alignment must be performed with the engine running. For this reason, it is necessary to apply the parking brake, depress the brake pedal, and move the shift lever into the P position, and to exercise all other necessary caution to ensure that the vehicle does not begin moving unexpectedly.



**HINT:**

The displayed items may differ depending on vehicle specifications.

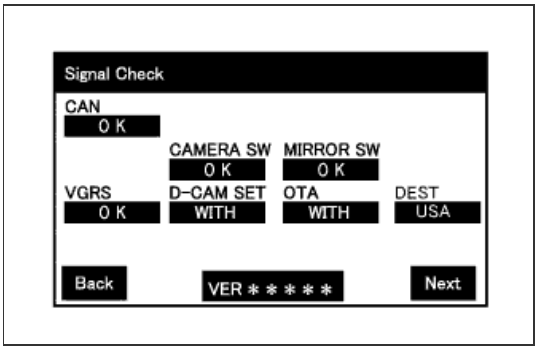
i. Select "Function Check/Setting" on the [Service Menu] screen.



ii. Select "Camera Setting" on the [Function Check/Setting] screen.

iii. Select "Steering Angle Setting" on the [Mode Setting] screen.

**HINT:**



To select a grayed out item, select and hold the item for 2 seconds or more.

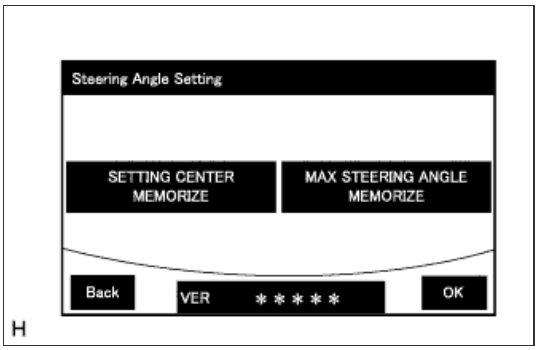
iv. Select "Next" on the [Signal Check] screen.

**NOTICE:**

- **When "CHK" (red) is displayed for any items on the [Signal Check] screen, selecting "Next" will not change the screen to the [Steering Angle Setting] screen.**
- **When "CHK" (red) is displayed for any items on the [Signal Check] screen, perform inspections using the [Signal Check] screen (Click here).**

c. Steering Angle Setting:

i. Perform the "STEERING CENTER MEMORIZE" operation.



Check that the steering wheel is centered, and then select "STEERING CENTER MEMORIZE".

**HINT:**

When performing removal and installation, or replacement of the television camera, steering angle adjustment is not required.

ii. Perform the "MAX STEERING ANGLE MEMORIZE" operation.

After adjusting the steering angle neutral point, turn the steering wheel to the left and right lock positions and select "MAX STEERING ANGLE MEMORIZE". The maximum steering angle is then stored and the screen changes to the [Mode Setting] screen.

H

**HINT:**

- **The "Next" button does not respond until the system stores the steering angle neutral point and maximum steering angle.**
- **It is also possible to start by initially turning the steering to the right side.**
- **When "MAX STEERING ANGLE MEMORIZE" is selected, a beep will sound to confirm that the steering adjustment values have been stored.**
- **The adjustment value will not be stored unless "MAX STEERING ANGLE MEMORIZE" is selected after turning the steering wheel side to side.**
- **When "Back" is selected, the screen changes to [Signal Check] without storing the set values.**
- **Even if no DTCs are detected, selecting "MAX STEERING ANGLE MEMORIZE" may not cause the adjustment value to be stored if the steering sensor is malfunctioning.**
- **If selecting "MAX STEERING ANGLE MEMORIZE" does not cause the adjustment value to be stored after adjusting the steering angle, replace the steering sensor.**

iii. Select "OK" to display [Mode Setting].

d. Finish diagnostic mode (Click here).

e. Confirm steering angle adjustment.

**HINT:**

If the steering angle has been adjusted, confirm the steering angle adjustment on the parking assist monitor screen after finishing diagnostic mode.

i. Check on the parking assist screen that the predicted path line moves until the steering wheel is fully turned to either the left or right.

**HINT:**

If the predicted path line stops moving before the steering wheel is fully turned to either the left or right, the steering angle adjustment values have not been stored correctly. In this case, perform "STEERING CENTER MEMORIZE" and "MAX STEERING ANGLE MEMORIZE" again.

## BACK CAMERA POSITION SETTING (Procedure 3)

**HINT:**

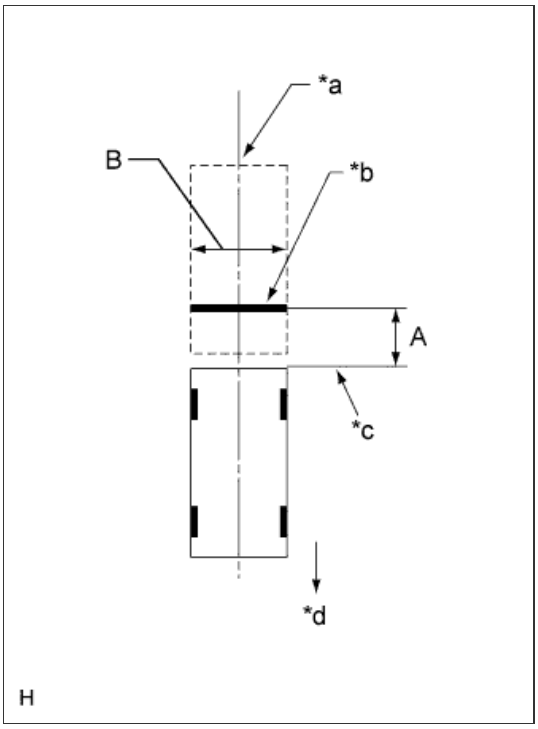
Be sure to check for DTCs before performing this procedure ( Click here).

a. Preparation for adjustment

i. Park the vehicle with the steering wheel centered.

ii. Set a target bar for optical axis adjustment of the rear television camera.

**HINT:**



Only when adjusting the optical axis of the camera, create a target bar for adjustment.

**Dimension:**

| Area | Specification |
|---|---|
| A | 824 to 834 mm (2.70 to 2.74 ft.) |
| B | 1995 to 2005 mm (6.55 to 6.58 ft.) |

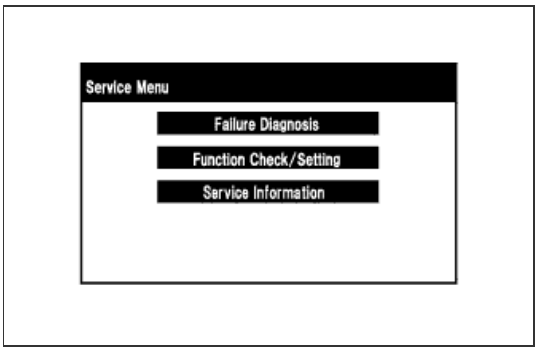
**Text in Illustration**

| | |
|---|---|
| *a | Vehicle Center |
| *b | Target Bar for Back Camera Adjustment |
| *c | Vehicle End |
| *d | Front Side |

**HINT:**

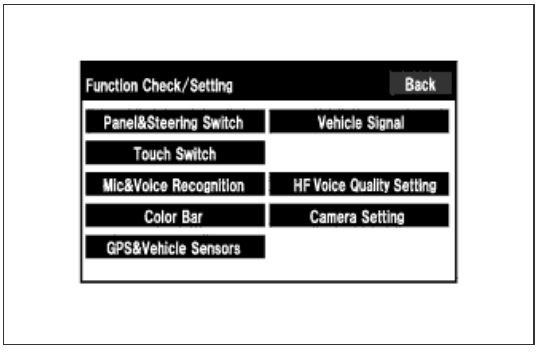
- **Set a piece of tape on the ground as the target bar for adjustment. Its width and length should be 20 to 30 mm (0.787 to 1.18 in.) and 1995 to 2005 mm (6.55 to 6.58 ft.), respectively. Check the color on the multi-display assembly and choose a tape color which can be easily seen.**
- **Before parking the vehicle, be sure to move the vehicle forward and in reverse to check that the tires are facing straight ahead with the steering wheel centered.**
- **Check that the back door is fully closed.**

b. Start diagnostic mode (Click here).



**NOTICE:**

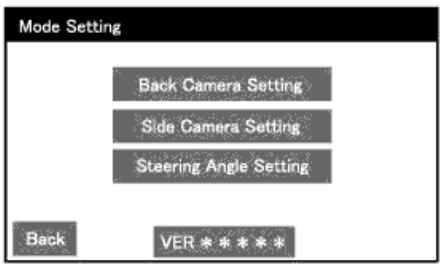
Alignment must be performed with the engine running. For this reason, it is necessary to apply the parking brake, depress the brake pedal, and move the shift lever into the P position, and to exercise all other necessary caution to ensure that the vehicle does not begin moving unexpectedly.



**HINT:**

The displayed items may differ depending on vehicle specifications.

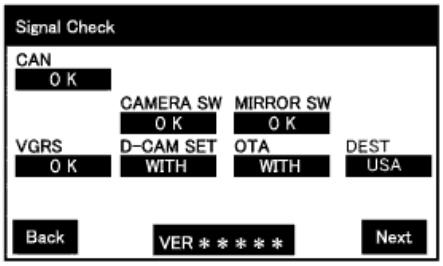
i. Select "Function Check/Setting" on the [Service Menu] screen.



ii. Select "Camera Setting" on the [Function Check/Setting] screen.

iii. Select "Back Camera Setting" on the [Mode Setting] screen.

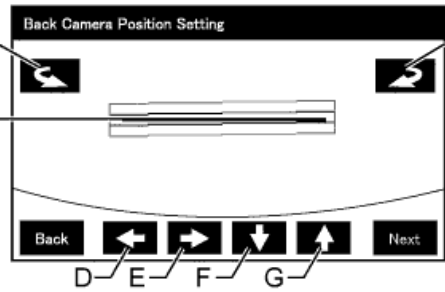
**HINT:**



To select a grayed out item, select and hold the item for 2 seconds or more.

iv. Select "Next" on the [Signal Check] screen.

**NOTICE:**



- **When "CHK" (red) is displayed for any items on the [Signal Check] screen, selecting "Next" will not change the screen to the [Back Camera Position Setting] screen.**
- **When "CHK" (red) is displayed for any items on the [Signal Check] screen, perform inspections using the [Signal Check] screen (Click here).**

c. Back Camera Position Setting:

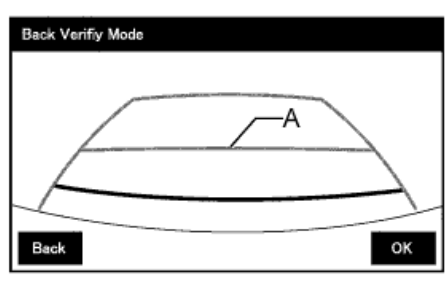
**HINT:**

- **When the back door is open, the "Back door is open. Do not use the rear view monitor when the back door is not completely closed." message will be displayed and camera position setting will not be possible.**
- **If the "Back door is open. Do not use the rear view monitor when the back door is not completely closed." message is displayed even when the back door is closed, perform inspections according to Problem Symptoms Table (A back door open warning message is displayed even after back door is closed) (Click here).**

i. Perform the roll angle adjustment.

- Select switches A and B to rotate C so that it is parallel to the target adjustment bar.

ii. Perform the vertical and horizontal position adjustment.



- Select the directional switches D, E, F and G to move C so that the target adjustment bar is centered in C.

iii. Select the "Next" button on the [Back Camera Position Setting] screen.

d. Back Verify Mode:

i. Check that A and the target adjustment bar are overlapping.

- If the steering angle neutral point is not aligned, perform the STEERING CENTER MEMORIZE and MAX STEERING ANGLE MEMORIZE operations.
- If A and the target adjustment bar are not aligned even if the tires are aligned straight ahead, perform the camera position setting operation.

ii. Selecting "OK" will return the screen to the [Service Menu], and complete the adjustment.

**HINT:**

- **The update is not completed until "OK" is selected.**
- **When "OK" is selected, a beep will sound to confirm that the rear camera aiming adjustment values have been**

**stored.**

e. Finish diagnostic mode (Click here).

**for Preparation** Click here

**HINT:**

Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms the listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

**NOTICE:**

The following inspection procedure of the parking assist monitor system is described on the assumption that the navigation system is normal. If navigation system has any malfunction, first proceed with troubleshooting of the navigation system.

## PARKING ASSIST ECU

a. Disconnect the F74 and F75 parking assist ECU connectors.

b. Measure the voltage and resistance according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F74-1 (+B) - F74-4 (GND1) | L - W-B | Power source signal | Always | 11 to 14 V |
| F74-4 (GND1) - Body ground | W-B - Body ground | Ground | Always | Below 1 Ω |
| F74-8 (IG) - F74-4 (GND1) | G - W-B | IG power source signal | Engine switch on (IG) | 11 to 14 V |
| | | | Engine switch off | Below 1 V |
| F74-9 (ACC) - F74-4 (GND1) | GR - W-B | ACC power source signal | Engine switch on (ACC) | 11 to 14 V |
| | | | Engine switch off | Below 1 V |
| F75-7 (BLSW) - F74-4 (GND1) | G - W-B | Front and side monitor main switch power source signal | Engine switch on (IG), front and side monitor main switch on | 11 to 14 V |

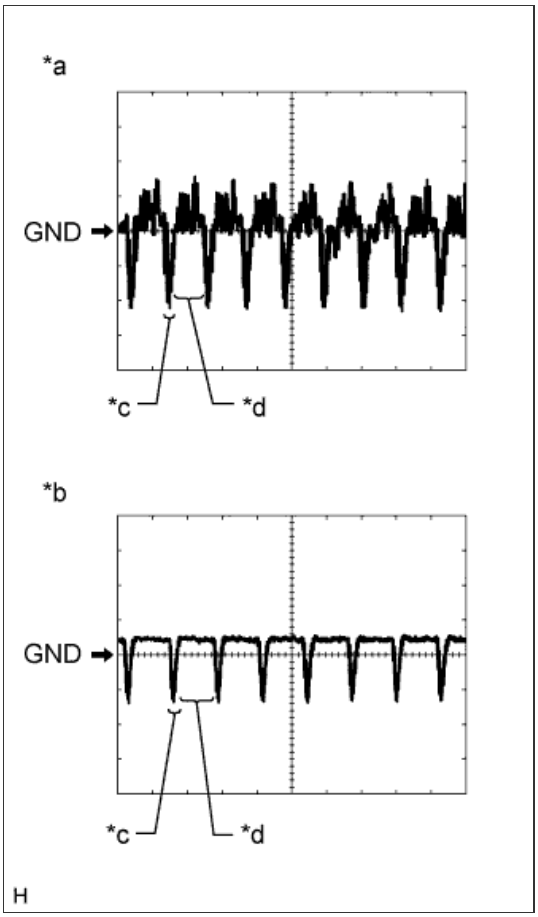
c. Reconnect the F74 and F75 parking assist ECU connectors.

d. Measure the voltage according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F74-10 (TX-) | L | AVC-LAN communication signal | - | - |
| F74-11 (TX+) | W | AVC-LAN communication signal | - | - |
| F75-38 (CV-) - F75-37 (CGND) | W - Shielded | Rear television camera ground | Always | Below 1 V |
| F75-15 (CV+) - F75-37 (CGND) | R - Shielded | Rear television camera display signal (NTSC) input | Engine switch on (IG), shift lever in R | Pulse generation (See waveform) |
| F75-37 (CGND) - F74-4 (GND1) | Shielded - W-B | Rear television camera ground (shield) | Always | Below 1 V |
| F75-14 (CB+) - F75-37 (CGND) | B - Shielded | Power source to rear television camera | Engine switch on (IG), shift lever in R | 5.5 to 7.05 V |

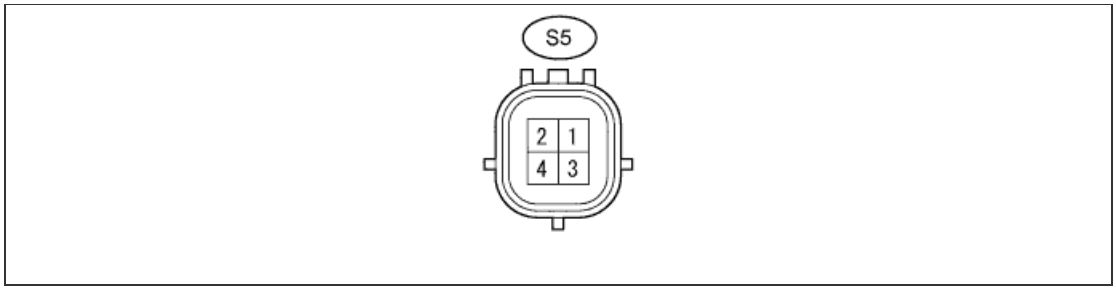
e. Using an oscilloscope, check waveform.

**Text in Illustration**



| | |
|---|---|
| *a | Waveform A (camera lens not covered, displaying an image) |
| *b | Waveform B (camera lens covered, blacking out the screen) |
| *c | Synchronized Signal |
| *d | Video Waveform |

**HINT:**



The video waveform changes according to the image sent by the rear television camera assembly.

i. Waveform

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F75-15 (CV+) - F75-37 (CGND) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | • Waveform A: Engine switch on (IG), shift lever in R and camera lens is not covered, displaying an image.<br>• Waveform B: Engine switch on (IG), shift lever in R and camera lens is covered, blacking out the screen. |

## REAR TELEVISION CAMERA ASSEMBLY

a. Disconnect the S5 rear television camera assembly connector.

b. Measure the voltage and resistance according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| S5-3 (CGND) - Body ground | BR - Body ground | Ground | Always | Below 1 Ω |
| S5-4 (CB+) - S5-3 (CGND) | B - BR | Power source | Engine switch on (IG), shift lever in R | 5.5 to 7.05 V |

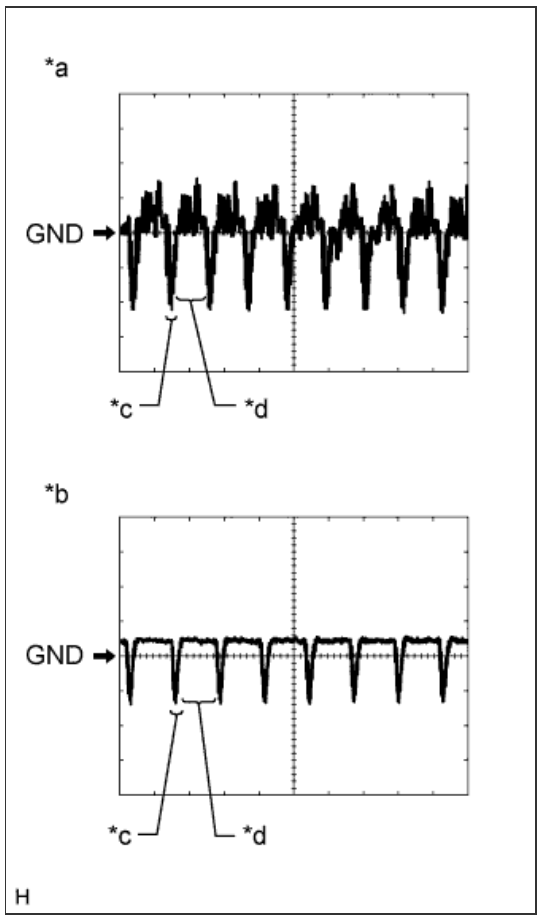
c. Reconnect the S5 rear television camera assembly connector.

**HINT:**

A waterproof connector is used for the rear television camera assembly. Therefore, inspect the waveform at the parking assist ECU with the connector connected. If the result is not as specified, the rear television camera assembly may have a malfunction.

d. Measure the voltage according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| S5-2 (CV+) - S5-3 (CGND) | R - BR | Display signal | Engine switch on (IG), shift lever in R | Pulse generation (See waveform) |
| S5-1 (CV-) - S5-3 (CGND) | W - BR | Rear television camera ground | Always | Below 1 V |



e. Using an oscilloscope, check waveform.

**Text in Illustration**

| | |
|---|---|
| *a | Waveform A (camera lens not covered, displaying an image) |
| *b | Waveform B (camera lens covered, blacking out the screen) |
| *c | Synchronized Signal |
| *d | Video Waveform |

**HINT:**

The video waveform changes according to the image sent by the rear television camera assembly.

i. Waveform

| Item | Content |
|---|---|
| Terminal No. (Symbol) | S5-2 (CV+) - S5-3 (CGND) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | • Waveform A: Engine switch on (IG), shift lever in R and camera lens is not covered, displaying an image.<br>• Waveform B: Engine switch on (IG), shift lever in R and camera lens is covered, blacking out the screen. |

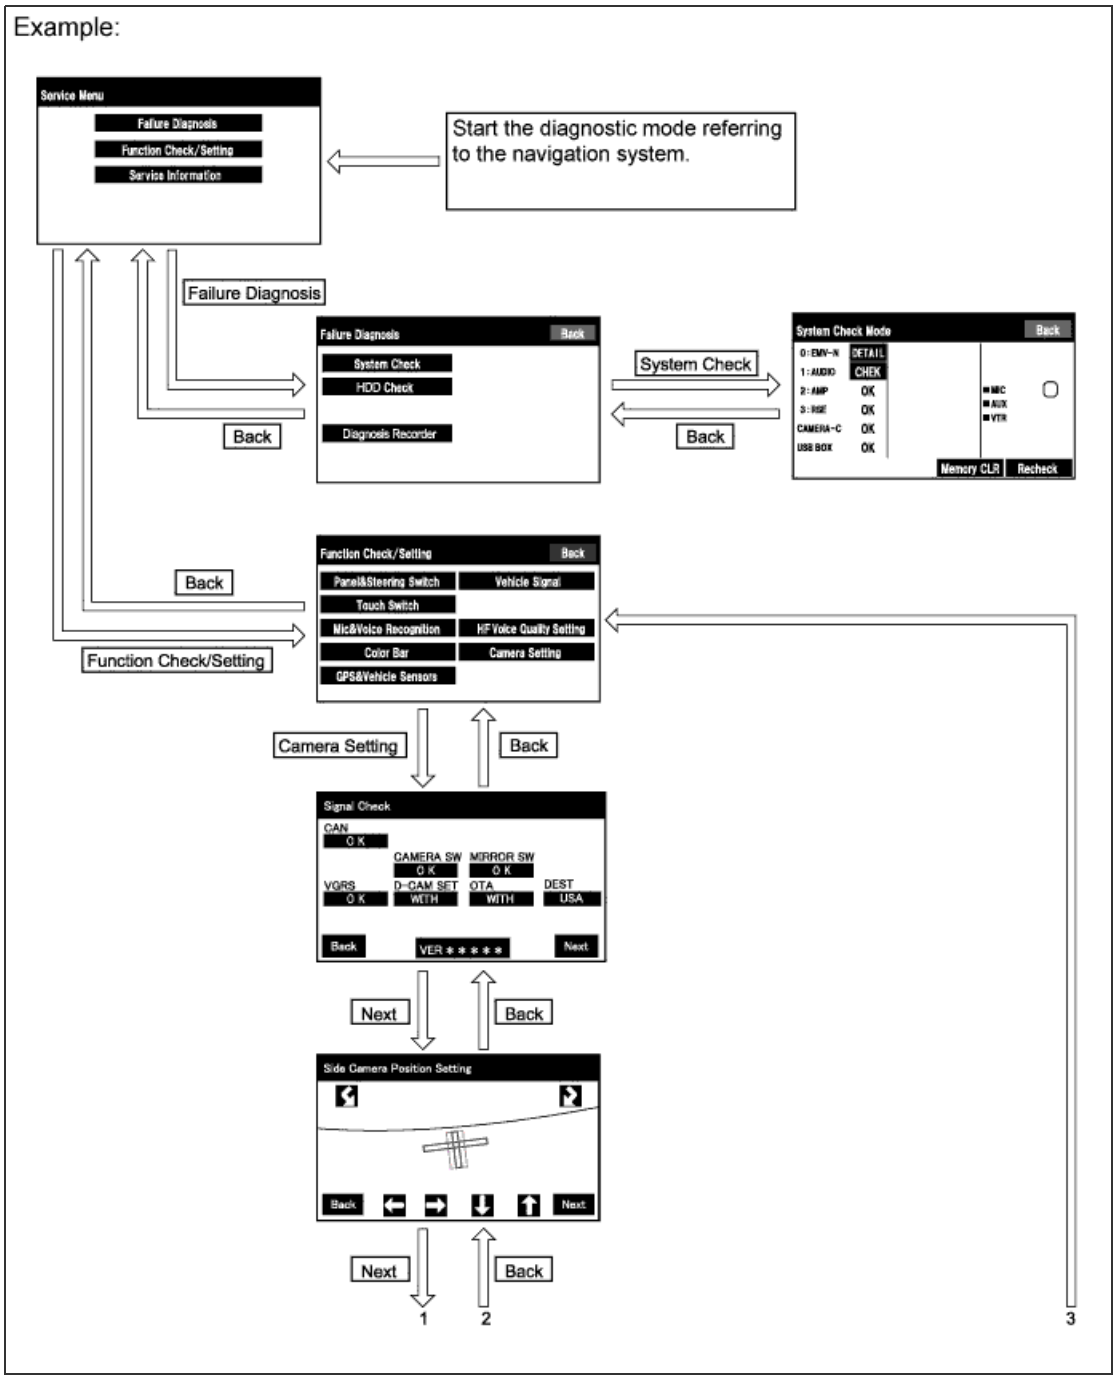
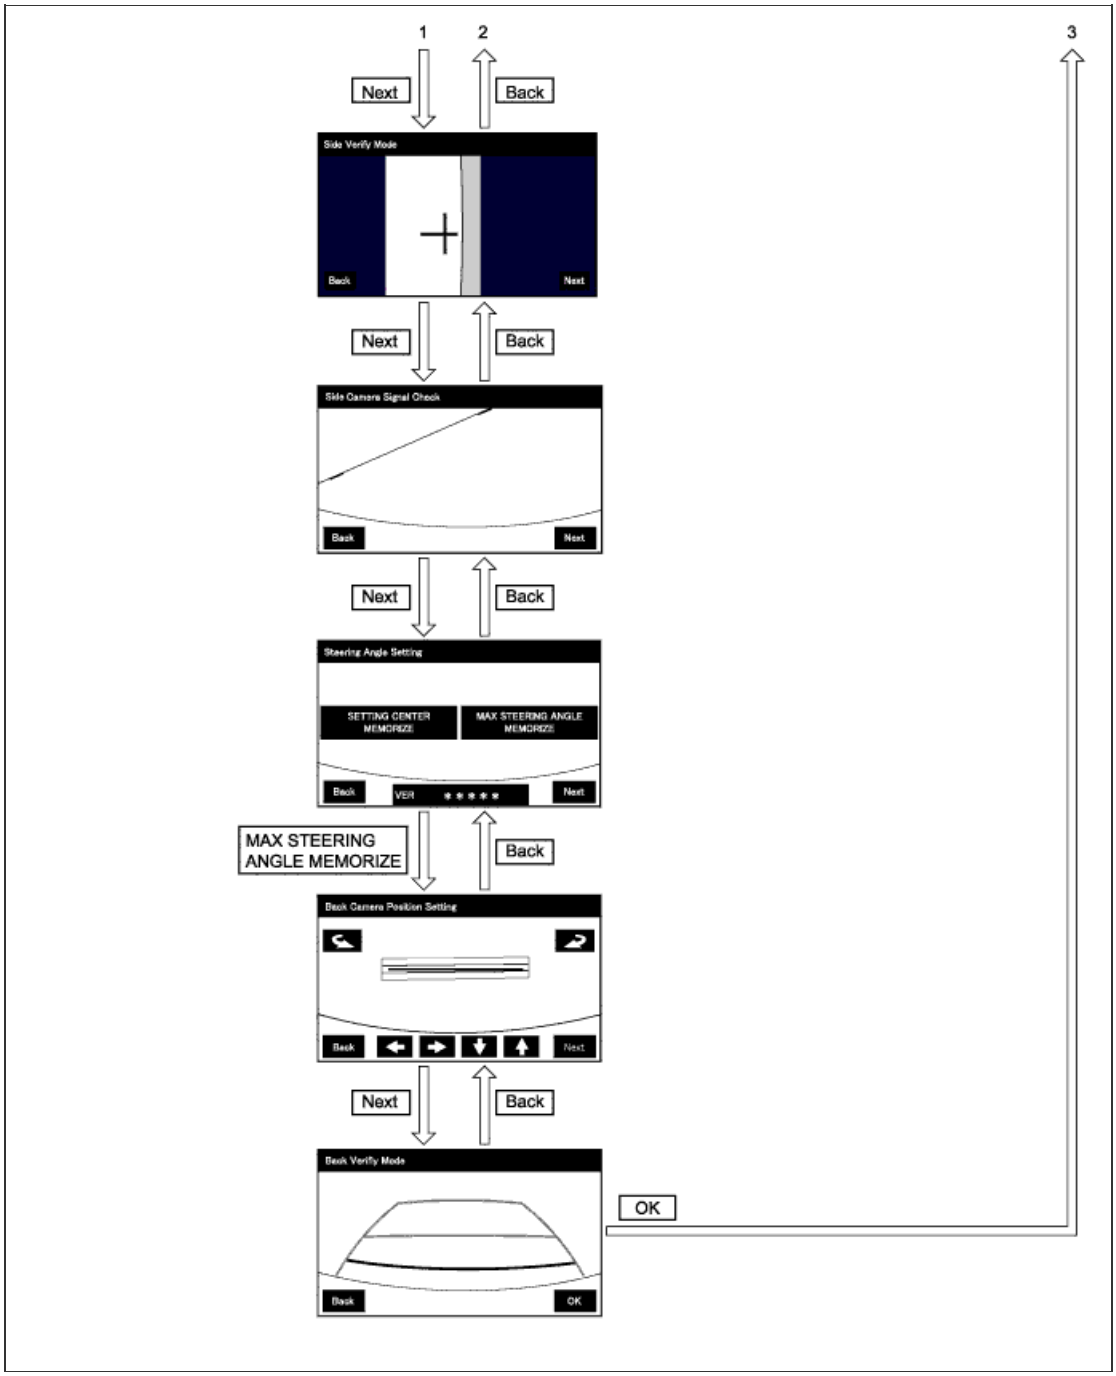
## PARKING ASSIST MONITOR DIAGNOSIS SYSTEM

a. For diagnosis, signals received by the parking assist ECU can be checked and the parking assist monitor system (w/ Side Monitor System) can be calibrated, adjusted and checked using the multi-display.



**NOTICE:**



Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system (w/ Side Monitor System) may be needed (Click here).

**HINT:**

The displayed screens and items may differ depending on vehicle specifications.

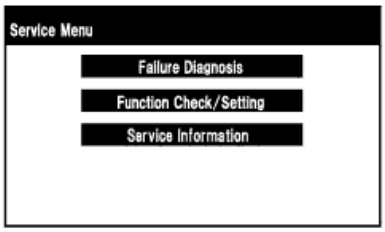
## DIAGNOSTIC MODE

a. Start diagnostic mode (Click here).

b. Failure diagnosis (Click here).

c. System check (check using system check mode screen) (Click here).

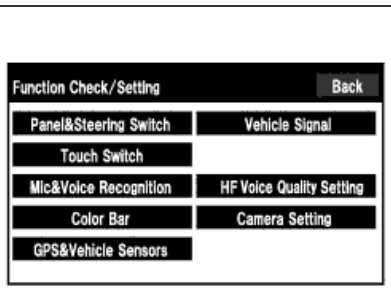


d. Finish diagnostic mode (Click here).

## SIGNAL CHECK (parking assist ECU input signal)

a. Start diagnostic mode (Click here).

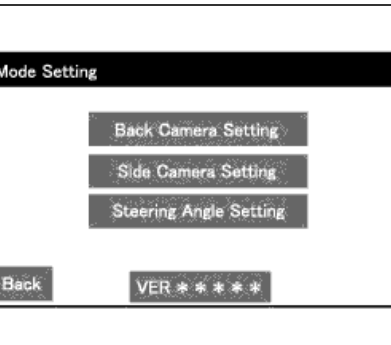
i. Select "Function Check/Setting" on the [Service Menu screen] to display the Function Check/Setting screen.



ii. Select "Camera Setting" on the [Function Check/Setting] screen.

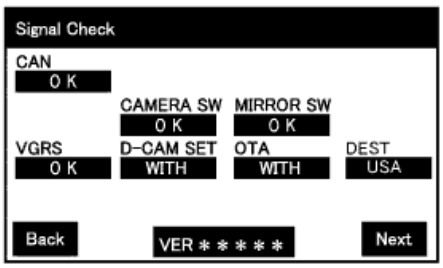
**HINT:**

After "Camera Setting" is selected, the screen transitions differ depending on whether initialization of the parking assist ECU was performed after parking assist ECU replacement.



| Parking Assist ECU Initialization | Screen Transition |
|---|---|
| Not performed | [Signal Check] screen |
| Performed | [Mode Setting] screen |

iii. When the screen changes to the [Mode Setting] screen, select "Back Camera Setting" to display the [Signal Check] screen.



**HINT:**

To select a grayed out item, select and hold the item for 2 seconds or more.

b. Signal Check:

i. On the [Signal Check] screen, it is possible to inspect the state of signals sent to the parking assist ECU and check the settings.

| Item | Inspection Detail | Note |
|---|---|---|
| CAN | Speed signal input | When "CHK" (red) is displayed, selecting "Next" will not change to the next screen. |
| CAMERA SW | Front and side monitor main switch signal input | |
| MIRROR SW | Outer rear view mirror retract signal input | |
| VGRS | VGRS signal input | |
| D-CAM SET | Driver side camera information signal input | - |
| OTA | Off road turn assist function information input | - |
| DEST | Destination code signal input | - |

**HINT:**

- **When "CHK" (red) is displayed, perform inspections based on the result of the following inspections.**
- **If performing the adjustment after proceeding to the next screen, confirm that all items display "OK" (blue) before selecting "Next".**

c. CAN inspection:

**HINT:**

If "CHK" (red) is displayed for "CAN", check for DTCs and perform troubleshooting based on the output DTCs ( Click here).

d. CAMERA SW inspection:

i. Check that "OK" (blue) is displayed for "CAMERA SW" and select "OK".

ii. Check that "OK" (blue) changes to "CHK" (red). Press the front and side monitor main switch assembly and check that "CHK" (red) returns to "OK" (blue).

**HINT:**

If "CHK" (red) remains displayed or the "CAMERA SW" inspection result is not normal, perform troubleshooting according to Problem Symptoms Table ("CHK" message(s) are displayed on the [Signal Check] screen) (Click here).

e. MIRROR SW inspection:

i. Check that "OK" (blue) is displayed for "MIRROR SW" and select "OK".

ii. Check that "OK" (blue) changes to "CHK" (red). Press the outer mirror switch and check that "CHK" (red) returns to "OK" (blue).

**HINT:**

After operating the outer mirror retract switch, if the outer mirror remains in the retracted state, return the outer mirror to the driving position. If "CHK" (red) remains displayed or the "MIRROR SW" inspection result is not normal, perform troubleshooting according to Problem Symptoms Table ("CHK" message(s) are displayed on the [Signal Check] screen) (See page )

f. VGRS inspection:

**HINT:**

If "CHK" (red) is displayed for "VGRS", check for DTCs and perform troubleshooting based on the output DTCs ( Click here).

g. D-CAM SET inspection:

i. Check that "WITH" (blue) is displayed for "D-CAM SET".

h. OTA inspection:

i. Check that displayed for "OTA" is matched off-road turn assist function for vehicles.

i. DEST inspection:

i. Check that displayed for "DEST" is matched destination code for vehicles.

j. Finish diagnostic mode (Click here).

## CALIBRATION WHEN SERVICING VEHICLE

**NOTICE:**

Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system (w/ Side Monitor System) may be needed (Click here).

**for Preparation** Click here

## CHECK DTC

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Chassis / Parking Assist Monitor System / DTC.

e. Check the details of the DTCs ( Click here).

**HINT:**

The parking assist ECU may store the DTCs of the following system. If DTCs other than those specified in Diagnostic Trouble Code Chart of the parking assist monitor system are output, refer to Diagnostic Trouble Code Chart for the applicable system.

| System | Proceed to |
|---|---|
| Side Monitor System | Click here |
| Wide View Front Monitor System | Click here |

## CLEAR DTC

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Chassis / Parking Assist Monitor System / DTC.

e. According to the display on the intelligent tester, select the trouble code data display with the clear button.

**for Preparation** Click here

## DATA LIST

**HINT:**

Using the intelligent tester to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

**NOTICE:**

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Chassis / Parking Assist Monitor System / Data List.

e. Enter the following menus: Body / Main body / Data List.

f. According to the display on the tester, read the Data List.

**Parking Assist Monitor System**

| Tester Display | Measurement Item/Range | Normal Condition | Diagnostic Note |
|---|---|---|---|
| AVC-LAN Master Reset Status | AVC-LAN communication condition / OK or NG | OK: AVC-LAN communication condition is normal<br>NG: AVC-LAN communication condition is abnormal | - |
| AVC-LAN Master Status | AVC-LAN communication condition / OK or NG | OK: AVC-LAN communication condition is normal<br>NG: AVC-LAN communication condition is abnormal | - |
| AVC-LAN Connect Status | AVC-LAN communication condition / OK or NG | OK: AVC-LAN communication condition is normal<br>NG: AVC-LAN communication condition is abnormal | - |
| AVC-LAN Sending Status | AVC-LAN communication condition / OK or NG | OK: AVC-LAN communication condition is normal<br>NG: AVC-LAN communication condition is abnormal | - |
| AVC-LAN Regist Complete Status | AVC-LAN communication condition / OK or NG | OK: AVC-LAN communication condition is normal<br>NG: AVC-LAN communication condition is abnormal | - |
| AVC-LAN Regist Request Status | AVC-LAN communication condition / OK or NG | OK: AVC-LAN communication condition is normal<br>NG: AVC-LAN communication condition is abnormal | - |
| VGRS With or Without Status | Displays "Parking Assist ECU's internal data may or may not match the "with/without VGRS" data that has been input" / OK or NG. | OK: Data Verification Normal<br>NG: Data Verification Abnormal | - |

# DTC C1611 ECU Malfunction

**for Preparation** Click here

## DESCRIPTION

This DTC is stored if the parking assist ECU judges that there is an internal malfunction as a result of its self check.

**HINT:**

The parking assist ECU stores different types of information during initialization. If the parking assist ECU cannot read the stored information when it is activated, the parking assist ECU judges that there is an internal malfunction and stores this DTC.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1611 | • EEPROM Status (Initial read)<br>• AISIC Output Status | • Parking assist ECU initialization (not initialized parking assist ECU)<br>• Back camera position setting (initialized parking assist ECU)<br>• Side camera position setting (initialized parking assist ECU)<br>• Steering Angle setting (initialized parking assist ECU)<br>• Parking assist ECU |

## INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the parking assist ECU after the battery terminal disconnected, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system (w/ Side Monitor System) may be needed (Click here).**

### 1.READ VALUE USING INTELLIGENT TESTER

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Chassis / Parking Assist Monitor System / Data List.

e. Check the Data List for proper functioning of the following items.

**Parking Assist Monitor System**

| Tester Display | Measurement Item/Range | Normal Condition | Diagnostic Note |
|---|---|---|---|
| EEPROM Status (Initial read) | Parking assist ECU information / OK or NG | OK: Parking assist ECU is normal<br>NG: Parking assist ECU is abnormal | - |
| AISIC Output Status | Output condition of camera display signal / OK or NG | OK: Output condition of camera display signal is normal<br>NG: Output condition of camera display signal is abnormal | If displayed "NG", There is a malfunctions in parking assist ECU. |

**Result**

| Result | Proceed to |
|---|---|
| OK is displayed for both items. | A |
| NG is displayed for EEPROM Status (Initial read). | A |
| NG is displayed for AISIC Output Status | B |

B → REPLACE PARKING ASSIST ECU (Click here)

A

### 2.SETTINGS (PARKING ASSIST ECU INITIALIZATION)

**HINT:**

- **The parking assist ECU stores different types of information during initialization. If the parking assist ECU cannot read the stored information when it is activated, the parking assist ECU judges that there is an internal malfunction and stores this DTC.**
- **If the parking assist ECU cannot read the stored information when it is activated, allowing the ECU to store the information again may return the system to normal.**

a. Use the transition of diagnosis screens (note which transition pattern occurs) to confirm if the parking assist ECU was able to properly store the information from initialization (Click here).

**HINT:**

The procedure to make the parking assist ECU store the vehicle information differs when the parking assist ECU has stored the information (initialized) and when the information has not been stored (not initialized).

b. Perform the following procedure depending on the memory conditions to register the vehicle information into the parking assist ECU.

| Condition | Procedure |
|---|---|
| Not initialized | Parking assist ECU initialization (Click here) |
| Initialized | • Back camera position setting (Click here)<br>• Steering angle setting (Click here)<br>• Side camera position setting (Click here ) |

**NEXT**

**3.CHECK FOR DTC**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**
**DTC C1611 is not output.**

**HINT:**

- **If DTC C1611 is output, perform the procedure to allow the parking assist ECU to store the vehicle information again.**
- **If DTC C1611 is still output after performing the procedure to make the parking assist ECU store the vehicle information 3 times, replace the parking assist ECU.**
- **If DTC C1611 is output frequently, replace the parking assist ECU even though the DTC is not output when rechecking for DTCs.**

**NG** → **REPLACE PARKING ASSIST ECU (Click here)**

**OK**

**END (SETTINGS ARE DEFECTIVE)**

# DTC C1691 Back Camera Initialization Incomplete

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when the parking assist ECU judges that the back camera initial setting has not been memorized (rear television camera optical axis adjustment is incomplete).

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1691 | Back camera initial setting has not been memorized | • Rear television camera optical axis adjustment<br>• Parking assist ECU |

## INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the parking assist ECU after disconnecting the cable from the negative (-) battery terminal, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system (w/ Side Monitor System) may be needed (Click here).**

### 1.ADJUST SETTINGS (CAMERA POSITION SETTING)

a. Perform the following procedure depending on the memory conditions to register the vehicle information into the parking assist ECU.

i. Refer to rear television camera optical axis adjustment ( Click here).

**NEXT**

### 2.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**
**DTC C1691 is not output.**

**HINT:**

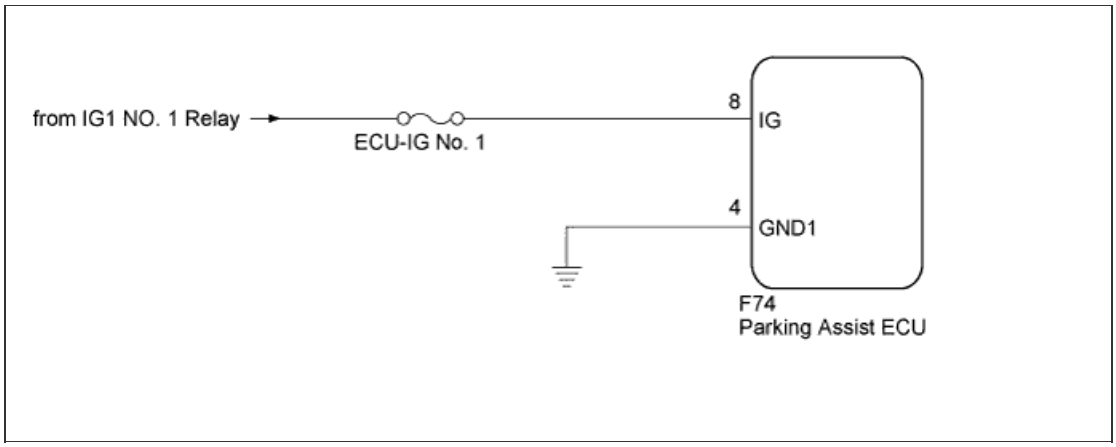
- **If DTC C1691 is output, perform the rear television camera assembly optical axis adjustment again.**
- **If DTC C1691 is still output after performing the rear television camera assembly optical axis adjustment 3 times, replace the parking assist ECU.**

**NG** → REPLACE PARKING ASSIST ECU (Click here)

**OK**

### END (ADJUST SETTINGS ARE DEFECTIVE)

## DTC C1612 IG Voltage is Low or High



**for Preparation** Click here

### DESCRIPTION

This DTC is stored if the parking assist ECU judges as a result of its self check that the voltage received by terminal IG is low or high.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1612 | • IG voltage is low<br>• IG voltage is high | • Harness or connector<br>• Parking assist ECU |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the parking assist ECU after the battery terminal disconnected, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system (w/ Side Monitor System) may be needed (Click here).**
- **Inspect the fuses for circuits related to this system before performing the following inspection procedure.**

**1.CHECK FOR DTC**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**
**DTC C1612 is not output.**

**HINT:**

If the parking assist ECU cannot read the stored information when it is activated, allowing the ECU to store the information again may return the system to normal.

**NG** → **Go to step 2**

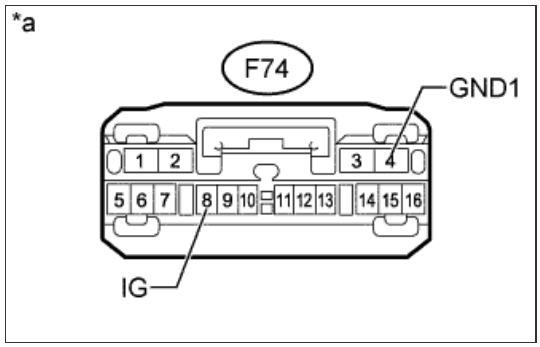
**OK**

**USE SIMULATION METHOD TO CHECK (Click here)**

**2.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - BATTERY AND BODY GROUND)**

a. Disconnect the parking assist ECU connector.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F74-4 (GND1) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F74-8 (IG) - F74-4 (GND1) | Engine switch on (IG) | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *a | Front view of wire harness connector (to Parking Assist ECU) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE PARKING ASSIST ECU (Click here)

# DTC C1694 Steering Angle Initialization Incomplete

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when the parking assist ECU judges that the maximum steering angle has not been memorized (steering angle setting is incomplete).

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1694 | Maximum steering angle has not been memorized | • Steering angle setting<br>• Parking assist ECU |

## INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the parking assist ECU after disconnecting the cable from the negative (-) battery terminal, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system (w/ Side Monitor System) may be needed (Click here).**

**1.PERFORM SETTINGS (STEERING ANGLE SETTING)**

a. Perform the following procedure depending on the memory conditions to register the vehicle information into the parking assist ECU.

i. Refer to steering angle setting (Click here).

**NEXT**

**2.CHECK FOR DTC**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**
**DTC C1694 is not output.**

**HINT:**

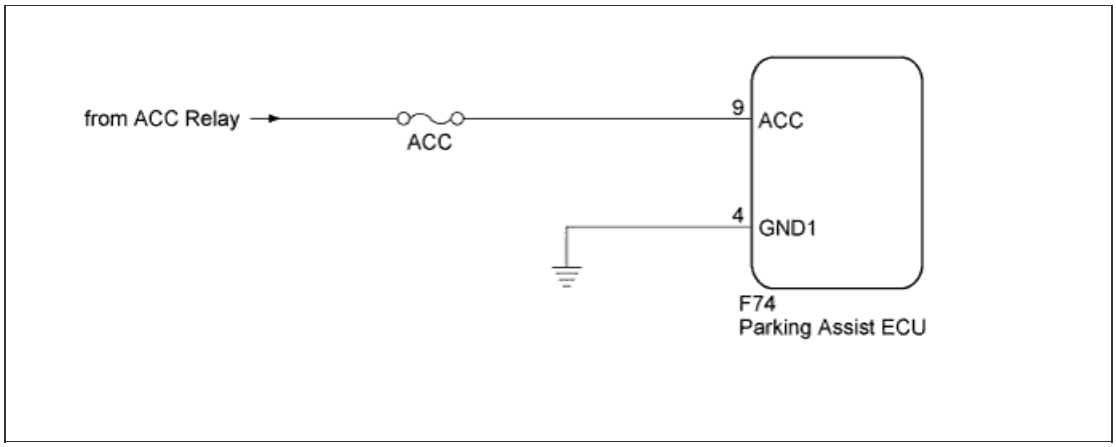
- **If DTC C1694 is output, perform the steering angle setting again.**
- **If DTC C1694 is still output after performing the steering angle setting 3 times, replace the parking assist ECU.**

**NG** → **REPLACE PARKING ASSIST ECU (Click here)**

**OK**

**END (SETTINGS ARE DEFECTIVE)**

## DTC C1613 ACC Voltage is Low or High



**for Preparation** Click here

### DESCRIPTION

This DTC is stored if the parking assist ECU judges as a result of its self check that the voltage received by terminal ACC is not normal.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1613 | • ACC voltage is low<br>• ACC voltage is high | • Harness or connector<br>• Parking assist ECU |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the parking assist ECU after the battery terminal disconnected, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system (w/ Side Monitor System) may be needed (Click here).**
- **Inspect the fuses for circuits related to this system before performing the following inspection procedure.**

**1.CHECK FOR DTC**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**
**DTC C1613 is not output.**

**HINT:**

If the parking assist ECU cannot read the stored information when it is activated, allowing the ECU to store the information again may return the system to normal.

**NG** → **Go to step 2**

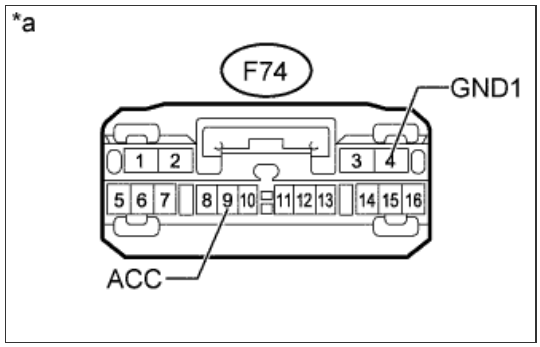
**OK**

**USE SIMULATION METHOD TO CHECK (Click here)**

**2.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - BATTERY AND BODY GROUND)**

a. Disconnect the parking assist ECU connector.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F74-4 (GND1) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F74-9 (ACC) - F74-4 (GND1) | Engine switch on (ACC) | 11 to 14 V |

**Text in Illustration**

| | |

| *a | Front view of wire harness connector (to Parking Assist ECU) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE PARKING ASSIST ECU (Click here)

## DTC U0073 Control Module Communication Bus OFF

## DTC U0100 Lost Communication with ECM

## DTC U0114 Lost Communication with 4WD Control ECU

## DTC U0126 Lost Communication with Steering Angle Sensor Module

## DTC U0129 Lost Communication with Brake System Control Module

## DTC U0130 Lost Communication with VGRS

## DTC U0140 Lost Communication with Main Body ECU

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored if there is a malfunction in the CAN communication system connected to the parking assist ECU.

**HINT:**

If CAN communication system DTCs are stored, they may also be stored in other systems.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| U0073 | Control module communication bus off | CAN communication system |
| U0100 | Lost communication with ECM | |
| U0114 | Lost Communication with 4WD Control ECU | |
| U0126 | Lost communication with steering angle sensor | |
| U0129 | Lost communication with brake system control module | |
| U0130 | Lost communication with VGRS | |
| U0140 | Lost communication with main body ECU | |

### INSPECTION PROCEDURE

**1.CHECK FOR DTC**

a. Clear the DTCs.

- for LHD: Click here
- for RHD: Click here

b. Check for DTCs.

- for LHD: Click here
- for RHD: Click here

**Result**

| Result | Proceed to |
|---|---|
| CAN DTC is output | A |
| DTC is output (for LHD) | B |
| DTC is output (for RHD) | C |

**HINT:**

- **If CAN communication system DTCs are stored, they may also be stored in other systems.**
- **If the CAN communication system has been inspected and repaired in other systems, the DTCs will not be output when rechecking for DTCs.**
- **If these DTCs are output frequently, duplicate the conditions that cause the problem symptoms and perform the inspection again, even though the DTC was not output when rechecking for DTCs (Click here).**

**B** → Go to CAN COMMUNICATION SYSTEM (Click here)

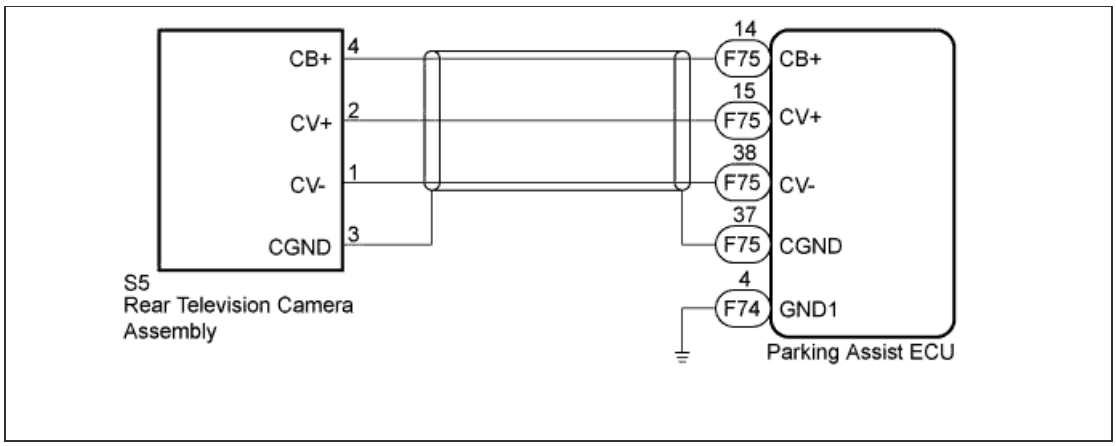
**C** → Go to CAN COMMUNICATION SYSTEM (Click here)

**A**

USE SIMULATION METHOD TO CHECK ( **Click here** )

## DTC C1621 Back Camera Power Supply Failure

## DTC C1622 Open or Short Circuit in Back Camera Signal



**for Preparation** Click here

### DESCRIPTION

These DTC are stored if the parking assist ECU judges as a result of its self check that the signals or signal lines between the parking assist ECU and the rear television camera assembly are not normal.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1621 | An open or short in the rear television camera signal circuit | • Harness or connector<br>• Rear television camera assembly<br>• Parking assist ECU |
| C1622 | An open or short in the rear television camera signal circuit | |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the parking assist ECU after the battery terminal disconnected, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system (w/ Side Monitor System) may be needed (Click here).**

#### 1.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - REAR TELEVISION CAMERA AND BODY GROUND)

a. Disconnect the F74 and F75 parking assist ECU connectors.

b. Disconnect the S5 rear television camera assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-38 (CV-) - S5-1 (CV-) | Always | Below 1 Ω |
| F75-15 (CV+) - S5-2 (CV+) | Always | Below 1 Ω |
| F75-14 (CB+) - S5-4 (CB+) | Always | Below 1 Ω |
| F75-37 (CGND) - S5-3 (CGND) | Always | Below 1 Ω |
| F74-4 (GND1) - Body ground | Always | Below 1 Ω |
| F75-38 (CV-) - Body ground | Always | 10 kΩ or higher |
| F75-15 (CV+) - | Always | 10 kΩ or higher |

| | | |
|---|---|---|
| Body ground | | |
| F75-14 (CB+) - Body ground | Always | 10 kΩ or higher |
| F75-37 (CGND) - Body ground | Always | 10 kΩ or higher |

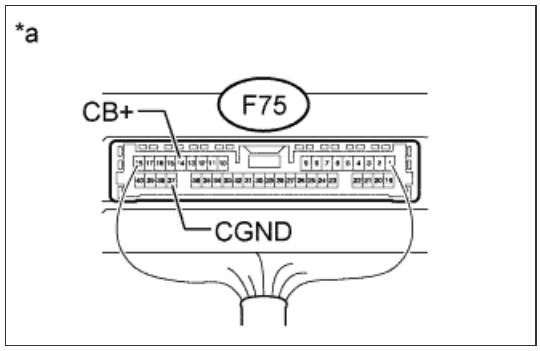
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 2.CHECK PARKING ASSIST ECU (CB+, CGND)

a. Reconnect the F74 and F75 parking assist ECU connectors.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

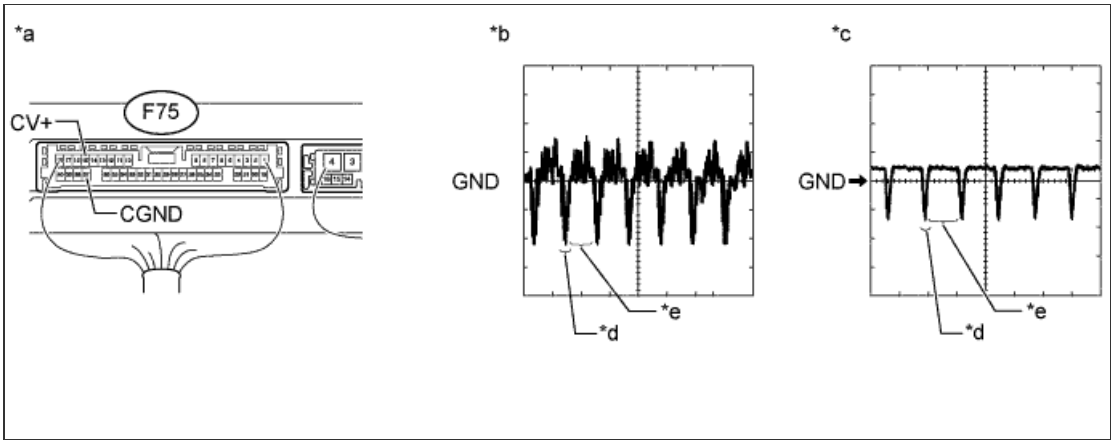
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-37 (CGND) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-14 (CB+) - F75-37 (CGND) | Engine switch on (IG), shift lever in R | 5.5 to 7.05 V |

**Text in Illustration**



| | |
|---|---|
| *a | Component with harness connected (Parking Assist ECU) |

NG → REPLACE PARKING ASSIST ECU (Click here)

OK

## 3.CHECK REAR TELEVISION CAMERA ASSEMBLY (CV+, CGND)

a. Reconnect the S5 rear television camera assembly connector.

**Text in Illustration**

| | | | |
|---|---|---|---|
| *a | Component with harness connected<br>(Parking Assist ECU) | *b | Waveform A |
| *c | Waveform B | *d | Synchronization Signal |
| *e | Video Waveform | - | - |

b. Check the waveform of the rear television camera assembly using an oscilloscope.

**HINT:**

- **A waterproof connector is used for the rear television camera assembly. Therefore, inspect the waveform at the multi-media module receiver assembly with the connector connected.**
- **The video waveform changes according to the image sent by the rear television camera assembly.**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F75-15 (CV+) - F75-37 (CGND) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | • Waveform A: Engine switch on (IG), shift lever in R and camera lens is not covered, displaying an image<br>• Waveform B: Engine switch on (IG), shift lever in R and camera lens is covered, blacking out the screen |

**OK:**

**Waveform is as shown in the illustration.**

NG → REPLACE REAR TELEVISION CAMERA ASSEMBLY (Click here)

OK

REPLACE PARKING ASSIST ECU (Click here)

## DTC U0073 Control Module Communication Bus OFF

## DTC U0100 Lost Communication with ECM

## DTC U0114 Lost Communication with 4WD Control ECU

## DTC U0126 Lost Communication with Steering Angle Sensor Module

## DTC U0129 Lost Communication with Brake System Control Module

## DTC U0130 Lost Communication with VGRS

## DTC U0140 Lost Communication with Main Body ECU

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored if there is a malfunction in the CAN communication system connected to the parking assist ECU.

**HINT:**

If CAN communication system DTCs are stored, they may also be stored in other systems.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| U0073 | Control module communication bus off | CAN communication system |
| U0100 | Lost communication with ECM | |
| U0114 | Lost Communication with 4WD Control ECU | |
| U0126 | Lost communication with steering angle sensor | |
| U0129 | Lost communication with brake system control module | |
| U0130 | Lost communication with VGRS | |
| U0140 | Lost communication with main body ECU | |

### INSPECTION PROCEDURE

**1.CHECK FOR DTC**

a. Clear the DTCs.

- for LHD: Click here
- for RHD: Click here

b. Check for DTCs.

- for LHD: Click here
- for RHD: Click here

**Result**

| Result | Proceed to |
|---|---|
| CAN DTC is output | A |
| DTC is output (for LHD) | B |
| DTC is output (for RHD) | C |

**HINT:**

- **If CAN communication system DTCs are stored, they may also be stored in other systems.**
- **If the CAN communication system has been inspected and repaired in other systems, the DTCs will not be output when rechecking for DTCs.**
- **If these DTCs are output frequently, duplicate the conditions that cause the problem symptoms and perform the inspection again, even though the DTC was not output when rechecking for DTCs (Click here).**

**B** → Go to CAN COMMUNICATION SYSTEM (Click here)

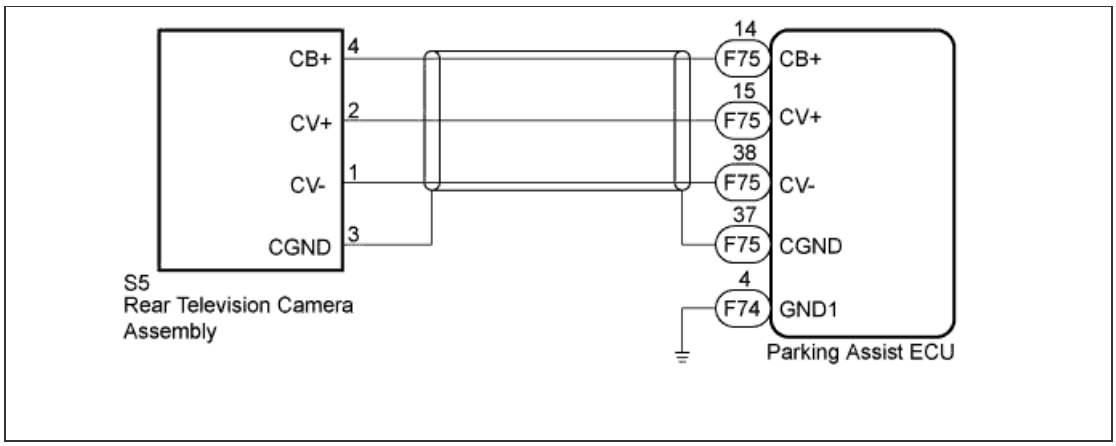
**C** → Go to CAN COMMUNICATION SYSTEM (Click here)

**A**

USE SIMULATION METHOD TO CHECK ( **Click here** )

## DTC C1621 Back Camera Power Supply Failure

## DTC C1622 Open or Short Circuit in Back Camera Signal



**for Preparation** Click here

### DESCRIPTION

These DTC are stored if the parking assist ECU judges as a result of its self check that the signals or signal lines between the parking assist ECU and the rear television camera assembly are not normal.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1621 | An open or short in the rear television camera signal circuit | • Harness or connector<br>• Rear television camera assembly<br>• Parking assist ECU |
| C1622 | An open or short in the rear television camera signal circuit | |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the parking assist ECU after the battery terminal disconnected, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system (w/ Side Monitor System) may be needed (Click here).**

#### 1.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - REAR TELEVISION CAMERA AND BODY GROUND)

a. Disconnect the F74 and F75 parking assist ECU connectors.

b. Disconnect the S5 rear television camera assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-38 (CV-) - S5-1 (CV-) | Always | Below 1 Ω |
| F75-15 (CV+) - S5-2 (CV+) | Always | Below 1 Ω |
| F75-14 (CB+) - S5-4 (CB+) | Always | Below 1 Ω |
| F75-37 (CGND) - S5-3 (CGND) | Always | Below 1 Ω |
| F74-4 (GND1) - Body ground | Always | Below 1 Ω |
| F75-38 (CV-) - Body ground | Always | 10 kΩ or higher |
| F75-15 (CV+) - | Always | 10 kΩ or higher |

| | | |
|---|---|---|
| Body ground | | |
| F75-14 (CB+) - Body ground | Always | 10 kΩ or higher |
| F75-37 (CGND) - Body ground | Always | 10 kΩ or higher |

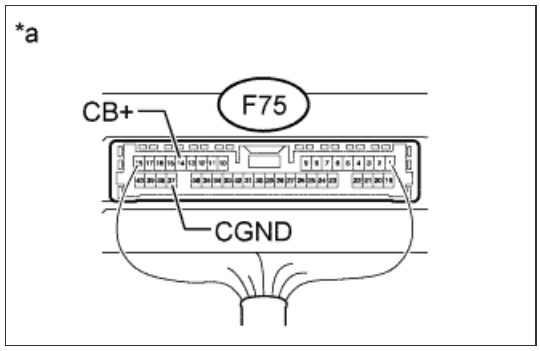
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 2.CHECK PARKING ASSIST ECU (CB+, CGND)

a. Reconnect the F74 and F75 parking assist ECU connectors.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

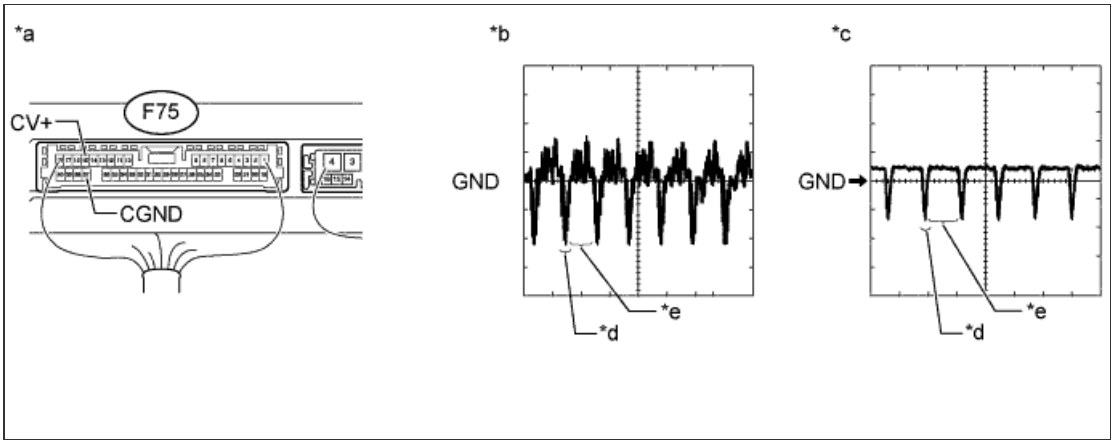
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-37 (CGND) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-14 (CB+) - F75-37 (CGND) | Engine switch on (IG), shift lever in R | 5.5 to 7.05 V |

**Text in Illustration**



| | |
|---|---|
| *a | Component with harness connected (Parking Assist ECU) |

NG → REPLACE PARKING ASSIST ECU (Click here)

OK

## 3.CHECK REAR TELEVISION CAMERA ASSEMBLY (CV+, CGND)

a. Reconnect the S5 rear television camera assembly connector.

**Text in Illustration**

| | | | |
|---|---|---|---|
| *a | Component with harness connected<br>(Parking Assist ECU) | *b | Waveform A |
| *c | Waveform B | *d | Synchronization Signal |
| *e | Video Waveform | - | - |

b. Check the waveform of the rear television camera assembly using an oscilloscope.

**HINT:**

- **A waterproof connector is used for the rear television camera assembly. Therefore, inspect the waveform at the multi-media module receiver assembly with the connector connected.**
- **The video waveform changes according to the image sent by the rear television camera assembly.**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F75-15 (CV+) - F75-37 (CGND) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | • Waveform A: Engine switch on (IG), shift lever in R and camera lens is not covered, displaying an image<br>• Waveform B: Engine switch on (IG), shift lever in R and camera lens is covered, blacking out the screen |

**OK:**

**Waveform is as shown in the illustration.**

NG → REPLACE REAR TELEVISION CAMERA ASSEMBLY (Click here)

OK

REPLACE PARKING ASSIST ECU (Click here)

## DTC U0073 Control Module Communication Bus OFF

## DTC U0100 Lost Communication with ECM

## DTC U0114 Lost Communication with 4WD Control ECU

## DTC U0126 Lost Communication with Steering Angle Sensor Module

## DTC U0129 Lost Communication with Brake System Control Module

## DTC U0130 Lost Communication with VGRS

## DTC U0140 Lost Communication with Main Body ECU

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored if there is a malfunction in the CAN communication system connected to the parking assist ECU.

**HINT:**

If CAN communication system DTCs are stored, they may also be stored in other systems.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| U0073 | Control module communication bus off | CAN communication system |
| U0100 | Lost communication with ECM | |
| U0114 | Lost Communication with 4WD Control ECU | |
| U0126 | Lost communication with steering angle sensor | |
| U0129 | Lost communication with brake system control module | |
| U0130 | Lost communication with VGRS | |
| U0140 | Lost communication with main body ECU | |

### INSPECTION PROCEDURE

**1.CHECK FOR DTC**

a. Clear the DTCs.

- for LHD: Click here
- for RHD: Click here

b. Check for DTCs.

- for LHD: Click here
- for RHD: Click here

**Result**

| Result | Proceed to |
|---|---|
| CAN DTC is output | A |
| DTC is output (for LHD) | B |
| DTC is output (for RHD) | C |

**HINT:**

- **If CAN communication system DTCs are stored, they may also be stored in other systems.**
- **If the CAN communication system has been inspected and repaired in other systems, the DTCs will not be output when rechecking for DTCs.**
- **If these DTCs are output frequently, duplicate the conditions that cause the problem symptoms and perform the inspection again, even though the DTC was not output when rechecking for DTCs (Click here).**

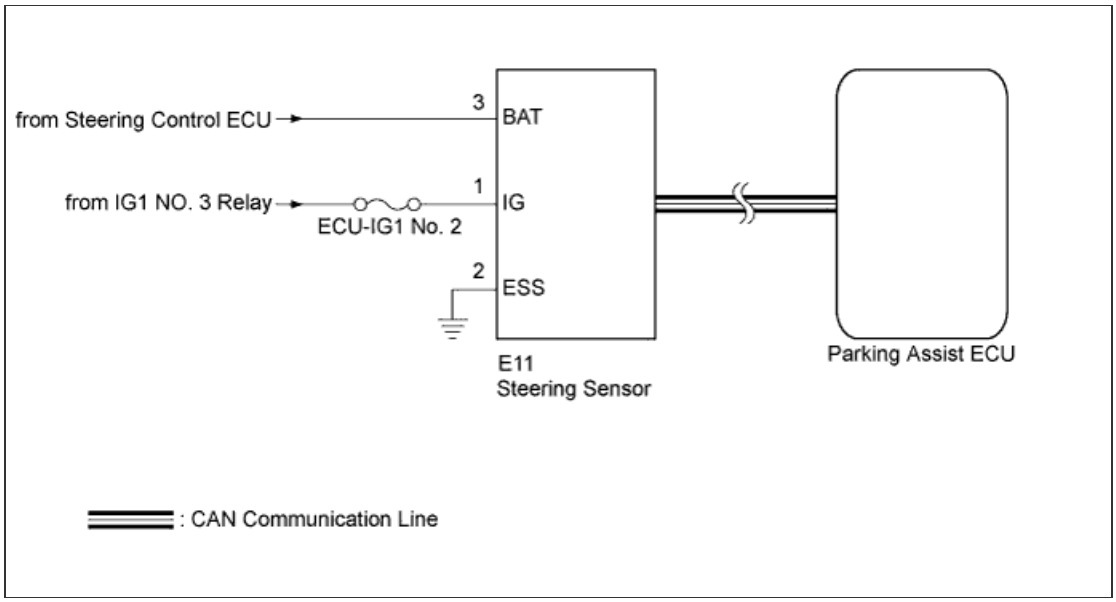
**B** → Go to CAN COMMUNICATION SYSTEM (Click here)

**C** → Go to CAN COMMUNICATION SYSTEM (Click here)

**A**

USE SIMULATION METHOD TO CHECK ( **Click here** )

## DTC C1625 Open or Short in Steering Angle Sensor +B



**for Preparation** Click here

### DESCRIPTION

This DTC is stored if the parking assist ECU receives a signal via CAN communication from the steering sensor that indicates a power supply system problem.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1625 | Open or short in steering angle sensor +B | • Harness or connector<br>• Steering sensor |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

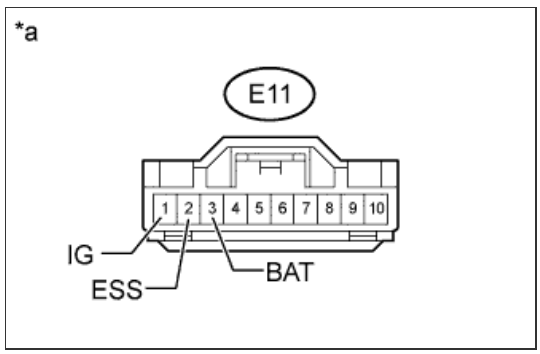
**NOTICE:**

- **Since the parking assist monitor system (w/ Side Monitor System) has functions that use CAN communication system, first confirm that there is no malfunction in the communication system by inspecting the CAN communication functions in accordance with the "How to Proceed with Troubleshooting" procedures. Then, conduct the following inspection procedure.**
- **When "System initializing" is displayed on the parking assist ECU after the battery terminal disconnected, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system (w/ Side Monitor System) may be needed (Click here).**
- **Inspect the fuses for circuits related to this system before performing the following inspection procedure.**

#### 1.CHECK HARNESS AND CONNECTOR (STEERING SENSOR - BATTERY AND BODY GROUND)

a. Disconnect the steering sensor connector.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| E11-2 (ESS) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|

| | | |
|---|---|---|
| E11-1 (IG) - E11-2 (ESS) | Engine switch on (IG) | 11 to 14 V |
| E11-3 (BAT) - E11-2 (ESS) | Always | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|

## DTC C1626 Steering Angle Sensor Failure

**for Preparation** Click here

### DESCRIPTION

This DTC is stored if the parking assist ECU receives a signal via CAN communication from the steering sensor that indicates an internal malfunction.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1626 | A fail flag is transmitted from the steering angle sensor. | • Steering sensor<br>• Parking assist ECU |

### INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the parking assist ECU after the battery terminal disconnected, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system (w/ Side Monitor System) may be needed (Click here).**

**1.REPLACE STEERING SENSOR**

a. Replace the steering sensor with a normally functioning one ( Click here).

**NEXT**

**2.CHECK FOR DTC**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**
**DTC C1626 is not output.**

**NG** → **REPLACE PARKING ASSIST ECU (Click here)**

**OK**

**END (STEERING SENSOR IS DEFECTIVE)**

USE SIMULATION METHOD TO CHECK ( **Click here** )

# DTC C1649 Lost Communication with VGRS ECU

**for Preparation** Click here

## DESCRIPTION

This DTC is set when the parking assist ECUs self-diagnosis determines that the connection with the steering control ECU of the variable gear ratio steering system (via CAN communication) is inoperative.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1649 | Steering Control ECU malfunction | Variable gear ratio steering system |

## INSPECTION PROCEDURE

**1.CHECK FOR DTC (VARIABLE GEAR RATIO STEERING SYSTEM)**

a. Clear the DTCs (Click here).

b. Check the DTCs (Click here).

**OK:**
**DTC C1649 is not output.**

**NG** → **Go to VARIABLE GEAR RATIO STEERING SYSTEM (Click here)**

**OK**

**USE SIMULATION METHOD TO CHECK (Click here)**

USE SIMULATION METHOD TO CHECK ( **Click here** )

# DTC C168D Vehicle Information Unmatched

**for Preparation** Click here

## DESCRIPTION

This DTC is stored if the parking assist ECU judges as a result of its self check that the vehicle information received via CAN communication and the vehicle information stored in the parking assist ECU do not match.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C168D | Vehicle Information Unmatched | • Back camera position setting<br>• Steering angle setting<br>• Side camera position setting<br>• Parking assist ECU |

## INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the parking assist ECU after the battery terminal disconnected, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system (w/ Side Monitor System) may be needed (Click here).**

### 1.PERFORM SETTINGS (BACK CAMERA POSITION SETTING, STEERING ANGLE SETTING, SIDE CAMERA POSITION SETTING)

a. Perform the following procedure depending on the memory conditions to register the vehicle information into the parking assist ECU.

i. Refer to back camera position setting (Click here).

ii. Refer to steering angle setting (Click here).

iii. Refer to side camera position setting (Click here).

**NEXT**

### 2.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**
**DTC C168D is not output.**

**HINT:**

- **If DTC C168D is output, perform the procedure to allow the parking assist ECU to store the vehicle information again.**
- **If DTC C168D is still output after performing the procedure to make the parking assist ECU store the vehicle information 3 times, replace the parking assist ECU.**

**NG** → REPLACE PARKING ASSIST ECU (Click here)

**OK**

END (SETTINGS ARE DEFECTIVE)

## DTC U0073 Control Module Communication Bus OFF

USE SIMULATION METHOD TO CHECK ( **Click here** )

**for Preparation** Click here

## DESCRIPTION

The display signal from the rear television camera assembly is transmitted to the multi-display assembly via the parking assist ECU.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the parking assist ECU after the battery terminal has been disconnected, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system (w/ Side Monitor System) may be needed (Click here).**

**HINT:**

Images can be difficult to discern even in normal conditions. For example:

- **Noise may occur in the image during power back door operation. (w/ Power Back Door System)**
- **Noise may occur in the image during power back door operation.**
- **Electrical devices are used in the cabin (noise may occur in the image).**
- **Accessories that generate radio waves have been installed (noise may occur in the image).**
- **The outer mirror switch assembly is operated (noise may occur in the image).**
- **The camera lens is frosted over (the image immediately after turning the engine switch on (IG) may be blurred or darker than normal).**
- **The camera lens is dirty with snow, mud, etc.**
- **A strong beam of light, such as a sunbeam or headlight, hits the camera.**
- **It is too dark around the camera (at night etc.).**
- **The ambient temperature around the camera is either too high or too low.**
- **The ambient temperature around the camera is either too high or too low.**
- **The rear television camera assembly lens is scratched.**
- **The rear television camera assembly lens has drops of water on it or the humidity is high.**
- **When the camera is used under fluorescent lights, sodium lights, or mercury lights etc., the lights and the illuminated area may appear to flicker.**
- **The ambience of the camera is too bright. (When a strong light, such as a sunbeam reflected off the vehicle body, hits the camera, the image may be blurred. This is called the "SMEAR" phenomenon, particular to the CCD camera.)**

### 1.CHECK SIDE MONITOR SYSTEM

a. Check if the same malfunction occurs when the side monitor screen is displayed.

**Result**

| Result | Proceed to |
|---|---|
| | |

| | |
|---|---|
| Malfunction occurs when parking assist monitor screen is displayed (side monitor screen is normal). | A |
| Malfunction occurs when parking assist monitor screen and side monitor screen are displayed. | B |

B → Go to step 5

A

## 2.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - REAR TELEVISION CAMERA ASSEMBLY AND BODY GROUND)

a. Disconnect the F74 and F75 parking assist ECU connectors.

b. Disconnect the S5 rear television camera assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-38 (CV-) - S5-1 (CV-) | Always | Below 1 Ω |
| F75-15 (CV+) - S5-2 (CV+) | Always | Below 1 Ω |
| F75-14 (CB+) - S5-4 (CB+) | Always | Below 1 Ω |
| F75-37 (CGND) - S5-3 (CGND) | Always | Below 1 Ω |
| F74-4 (GND1) - Body ground | Always | Below 1 Ω |
| F75-38 (CV-) - Body ground | Always | 10 kΩ or higher |
| F75-15 (CV+) - Body ground | Always | 10 kΩ or higher |
| F75-14 (CB+) - Body ground | Always | 10 kΩ or higher |
| F75-37 (CGND) - Body ground | Always | 10 kΩ or higher |

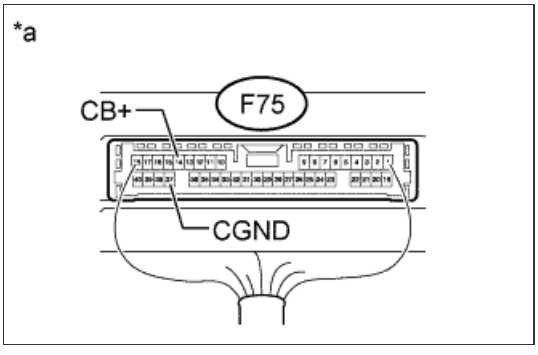
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 3.CHECK PARKING ASSIST ECU (CB+, CGND)

a. Reconnect the F74 and F75 parking assist ECU connectors.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

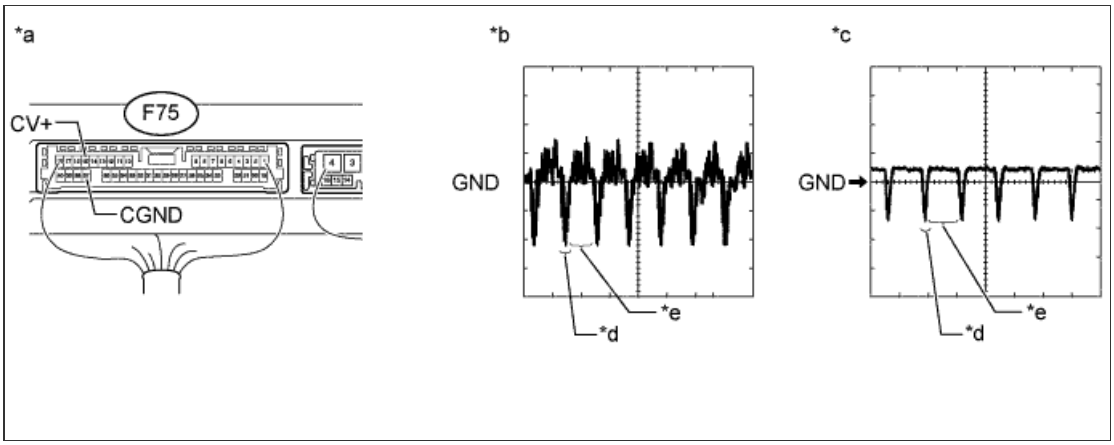
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-37 (CGND) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-14 (CB+) - F75-37 (CGND) | Engine switch on (IG), shift lever in R | 5.5 to 7.05 V |

**Text in Illustration**



| | |
|---|---|
| *a | Component with harness connected (Parking Assist ECU) |

NG → REPLACE PARKING ASSIST ECU (Click here)

OK

**4.CHECK REAR TELEVISION CAMERA ASSEMBLY (CV+, CGND)**

a. Reconnect the S5 rear television camera assembly connector.

**Text in Illustration**

| | | | |
|---|---|---|---|
| *a | Component with harness connected (Parking Assist ECU) | *b | Waveform A |
| *c | Waveform B | *d | Synchronization Signal |
| *e | Video Waveform | - | - |

b. Check the waveform of the rear television camera assembly using an oscilloscope.

**HINT:**

- **A waterproof connector is used for the rear television camera assembly. Therefore, inspect the waveform at the multi-media module receiver assembly with the connector connected.**
- **The video waveform changes according to the image sent by the rear television camera assembly.**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F75-15 (CV+) - F75-37 (CGND) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | • Waveform A: Engine switch on (IG), shift lever in R and camera lens is not covered, displaying an image<br>• Waveform B: Engine switch on (IG), shift lever in R and camera lens is covered, blacking out the screen |

**OK:**

**Waveform is as shown in the illustration.**

NG → REPLACE REAR TELEVISION CAMERA ASSEMBLY (Click here)

OK

5.CHECK HARNESS AND CONNECTOR (GVIF CABLE)

a. Replace the GVIF cable with a normally functioning one.

b. Check if the same malfunction recurs when the parking assist monitor screen is displayed.

**OK:**
**Malfunction does not reoccur (returns to normal).**

NG → Go to step 6

OK →

END (GVIF CABLE IS DEFECTIVE)

6.CHECK MULTI-DISPLAY ASSEMBLY

a. Replace the multi-display assembly with normally functioning one ( Click here).

b. Check if the same malfunction recurs when the parking assist monitor screen is displayed.

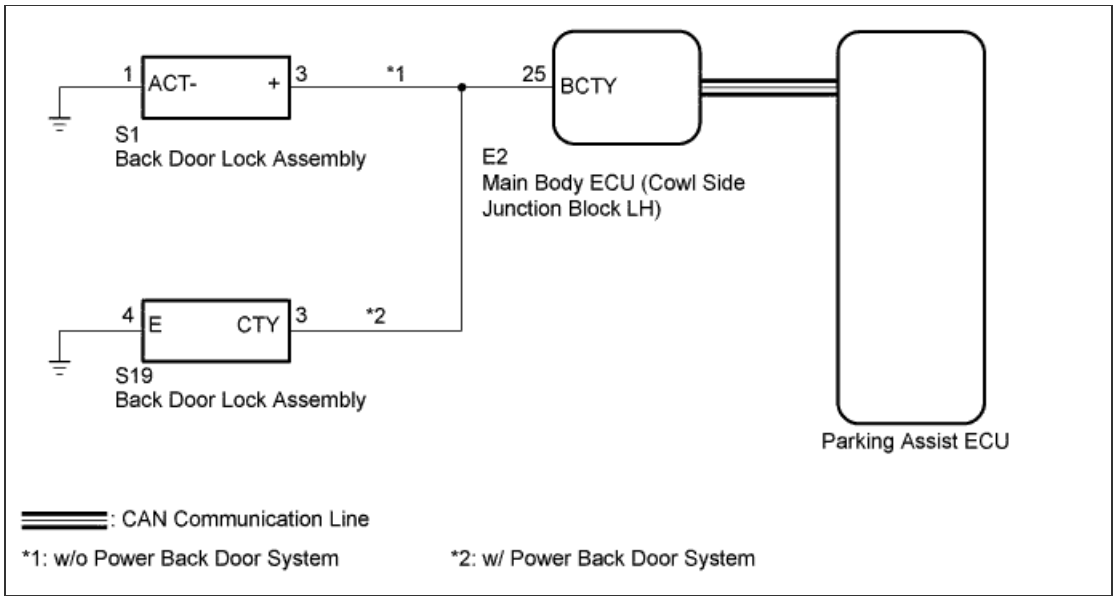
**OK:**
**Malfunction does not reoccur (returns to normal).**

NG → REPLACE PARKING ASSIST ECU (Click here)

OK →

END (MULTI-DISPLAY ASSEMBLY IS DEFECTIVE)

**for Preparation** Click here



## DESCRIPTION

The parking assist ECU receives back door lock assembly open/close signals from the main body ECU (cowl side junction block LH) via CAN communication. When the back door is open, the camera aiming cannot be adjusted correctly because the rear television camera assembly is installed on the back door. Therefore, when adjusting the camera aiming calibration while the back door is open, a back door open warning message will be displayed on the screen and camera aiming adjustment will be canceled.

**HINT:**

The back door lock assembly is connected to the main body ECU (cowl side junction block LH) by the vehicle wire harness.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

- **Since the parking assist monitor system (w/ Side Monitor System) has functions that use CAN communication system, first confirm that there is no malfunction in the communication system by inspecting the CAN communication functions in accordance with the "How to Proceed with Troubleshooting" procedures. Then, conduct the following inspection procedure.**
- **When "System initializing" is displayed on the parking assist ECU after the battery terminal disconnected, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system (w/ Side Monitor System) may be needed (Click here).**

### 1.READ VALUE USING INTELLIGENT TESTER (BACK DOOR COURTESY SWITCH)

a. Use the Data List to check if the back door courtesy switch is functioning properly (See page ).

**Main Body**

| Tester Display | Measurement Item/Range | Normal Condition | Diagnostic Note |
|---|---|---|---|
| Back Door Courtesy SW | Back door courtesy light switch signal/ON or OFF | ON: Back door open<br>OFF: Back door closed | - |

**OK:**

**The back door courtesy switch functions as specified in the normal condition column.**

**NG** → **Go to step 2**

**OK**

REPLACE PARKING ASSIST ECU (Click here)

2.CHECK HARNESS AND CONNECTOR (BACK DOOR LOCK ASSEMBLY - MAIN BODY ECU [COWL SIDE JUNCTION BLOCK LH] AND BODY GROUND)

a. Disconnect the S1*1 or S19*2 back door lock assembly connector.

*1: w/o Power Back Door System
*2: w/ Power Back Door System

b. Disconnect the E2 main body ECU (cowl side junction block LH) connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**w/o Power Back Door System:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| S1-3 (+) - E2-25 (BCTY) | Always | Below 1 Ω |
| S1-3 (+) - Body ground | Always | 10 kΩ or higher |
| S1-1 (ACT-) - Body ground | Always | Below 1 Ω |

**w/ Power Back Door System:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| S19-3 (CTY) - E2-25 (BCTY) | Always | Below 1 Ω |
| S19-3 (CTY) - Body ground | Always | 10 kΩ or higher |
| S19-4 (E) - Body ground | Always | Below 1 Ω |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3.INSPECT BACK DOOR LOCK ASSEMBLY

a. Remove the back door lock assembly (Click here).

b. Inspect the back door lock assembly (Click here).

NG → REPLACE BACK DOOR LOCK ASSEMBLY (Click here)

OK

REPLACE MAIN BODY ECU (COWL SIDE JUNCTION BLOCK LH)

**for Preparation** Click here

## 1.POINTS TO NOTE WHEN SERVICING

a. Pay attention to the following points when servicing.

i. When disconnecting the cable from the negative (-) battery terminal, "System initializing" may appear on the multi-media module receiver assembly. In this case, restore the steering angle neutral point (Click here).

ii. Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system (w/o Side Monitor System) may be needed (Click here).

**HINT:**

Each adjusted value for the calibration of the parking assist monitor system (w/o Side Monitor System) will be stored in the multi-media module receiver assembly.

iii. When the lens of the rear television camera assembly is dirty, wash the lens with water and wipe it off with a soft cloth to obtain clear images. For heavy dirt, use neutral detergent to clean the lens.

## 2.NOTES FOR REAR TELEVISION CAMERA ASSEMBLY

a. Notes for the rear television camera assembly

i. The parking assist monitor system (w/o Side Monitor System) may not function properly if subjected to a severe blow by any hard object.

ii. Do not scrub the cover part of the camera (resin made). Scrubbing may scratch the cover and affect the image. Prevent organic solvents, waxes, bond removing solvents or glass coating from adhering to the cover. If such material adheres to the cover, clean it off immediately and wash it with water.

iii. Exposing the camera to a sudden temperature change may affect proper functioning of the camera.

iv. A clear image may not appear if the camera is dirty with snow, mud, etc. In that case, wash it with water and wipe off the lens. Use a detergent to remove dirt if necessary.

b. Images may be unclear even in normal conditions if:

i. Noise may occur in the image during power back door operation. (w/ Power Back Door System)

ii. Electrical devices are used in the cabin (noise may occur in the image).

iii. Accessories that generate radio waves have been installed (noise may occur in the image).

iv. The outer mirror switch assembly is operated (noise may occur in the image).

v. The camera lens is frosted over (the image immediately after turning the engine switch on (IG) may be blurred or darker than normal).

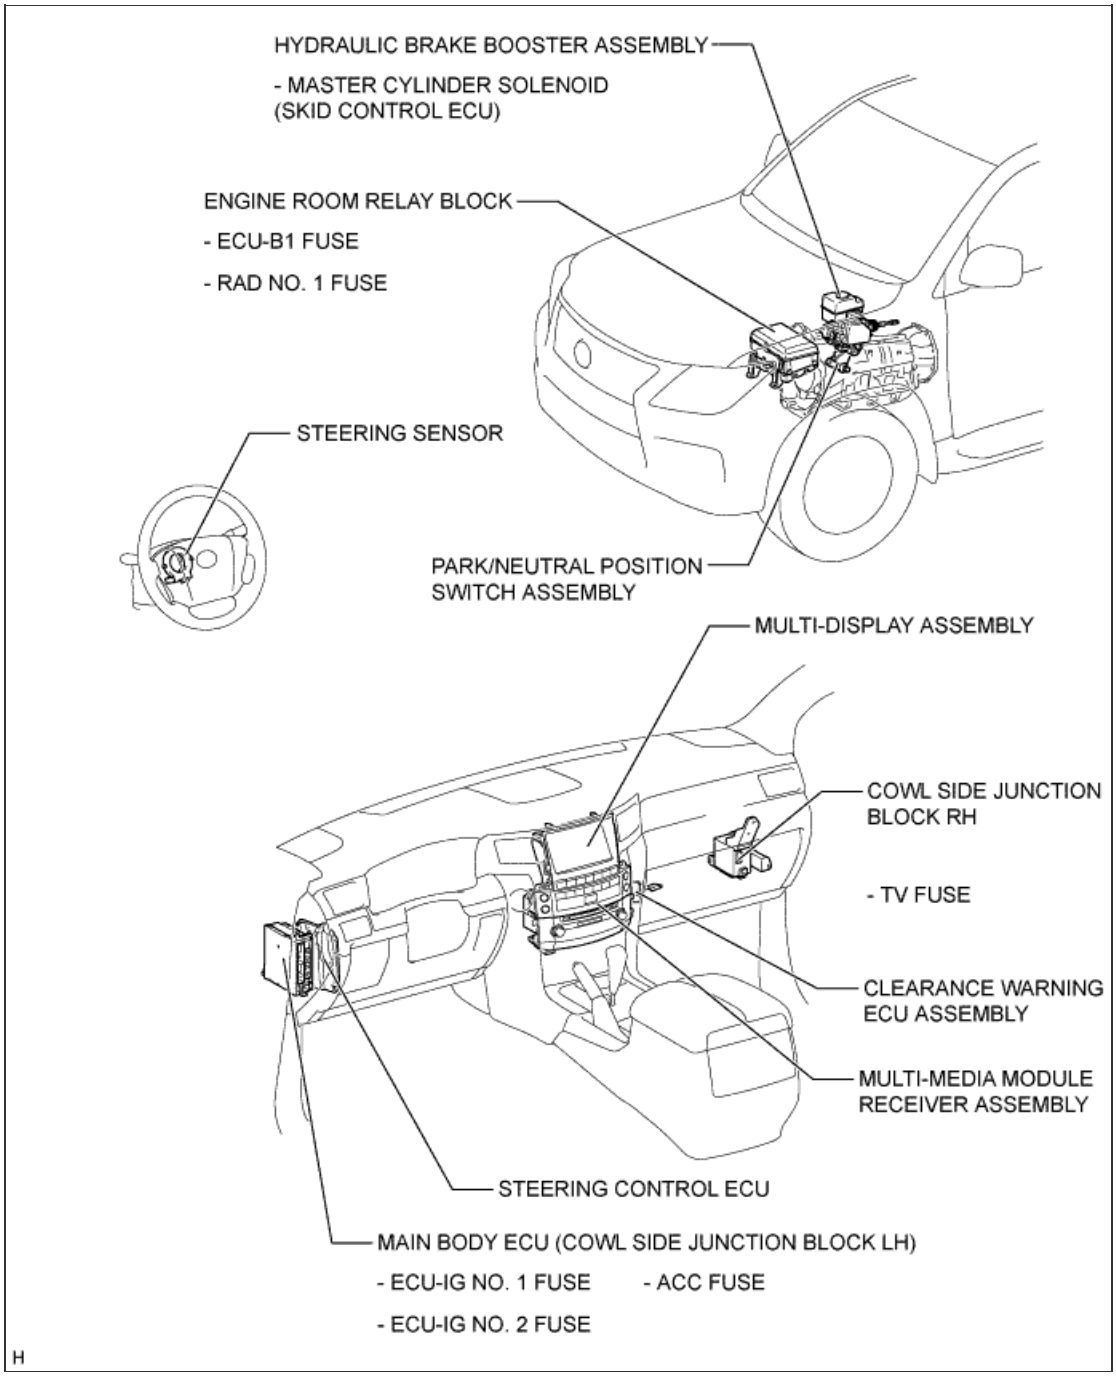
vi. The camera lens is dirty with snow, mud, etc.

vii. A strong beam of light, such as a sunbeam or headlight, hits the camera.

viii. It is too dark around the camera (at night etc.).

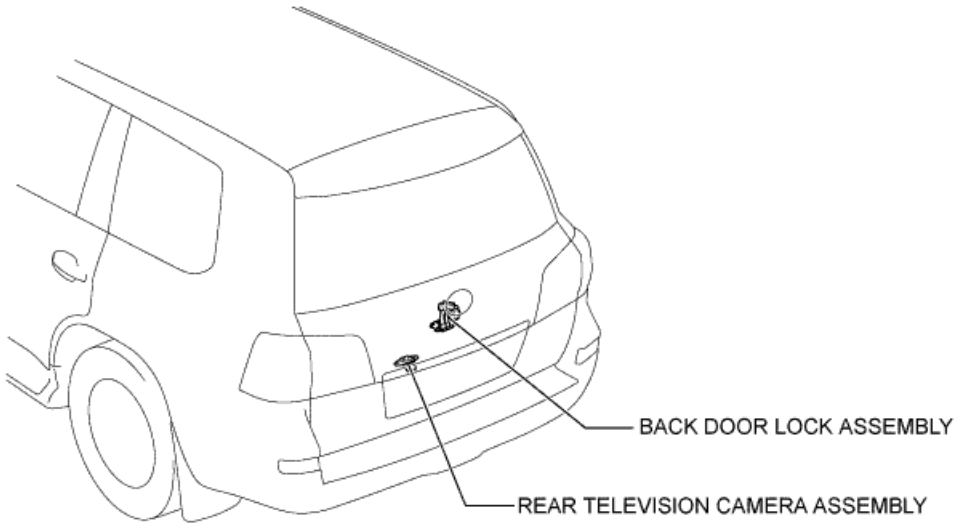
ix. The ambient temperature around the camera is either too high or too low.

x. The vehicle is tilted at a steep angle.



xi. The rear television camera assembly lens is scratched.

xii. The rear television camera assembly lens has drops of water on it or the humidity is high.



xiii. When the camera is used under fluorescent lights, sodium lights, or mercury lights etc., the lights and the illuminated area may appear to flicker.

xiv. The ambience of the camera is too bright. (When a strong light, such as a sunbeam reflected off the vehicle body, hits the camera, the image may be blurred. This is called the "SMEAR" phenomenon, particular to the CCD camera.)

| Steering Control ECU | Multi-media Module Receiver Assembly | VGRS relative angle | CAN |
| Main Body ECU (Cowl Side Junction Block LH) | Multi-media Module Receiver Assembly | • Vehicle information<br>• Back door courtesy light switch | CAN |

**for Preparation** Click here

## GENERAL

a. This system has a rear television camera assembly mounted on the back door to display an image of the area behind the vehicle on the display. The display panel also shows a composite view consisting of the area behind the vehicle and parking guide lines to assist the driver in parking the vehicle by monitoring the area behind the vehicle.

b. This system consists of the following components:

i. Multi-media module receiver assembly

ii. Rear television camera assembly

iii. Clearance warning ECU assembly

iv. Steering sensor

v. Master cylinder solenoid (skid control ECU assembly)

vi. Steering control ECU

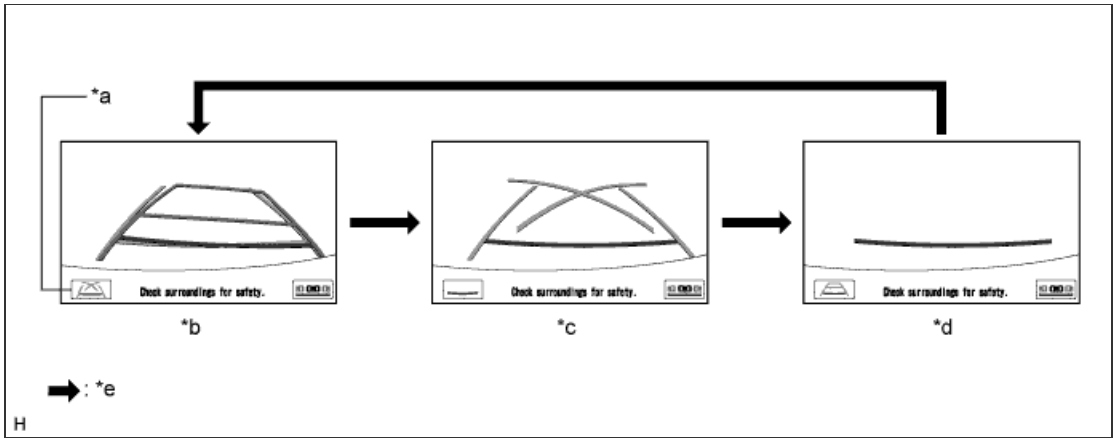
vii. Main body ECU (cowl side junction block LH)

viii. Park/neutral position switch assembly

ix. Multi-display assembly

c. This system is equipped with a self-diagnosis system, which is operated on a designated window that appears on the display panel, just as in the navigation system.

## FUNCTION OF COMPONENTS



a. The multi-media module receiver assembly controls the system by using information from the following components.

| Item | Function |
|---|---|
| Rear Television Camera Assembly | • Mounted on the back door to transmit an image of the area behind the vehicle to the multi-media module receiver assembly.<br>• Has a color video camera that uses a Complementary Metal Oxide Semiconductor (CMOS) and a wide-angle lens. |
| Multi-media Module Receiver Assembly | • Receives video signals, which contain an image of the area behind the vehicle taken with the rear television camera assembly.<br>• Performs overall control of the system by receiving signals from the sensors.<br>• Allows operation via the touch panel of the display when the park assist monitor screen or diagnosis screen is displayed.<br>• Creates images and displays adjustment screens performed on the diagnosis screen.<br>• Stops displaying the guide line and buttons displays "Check surrounding for safety" when an open signal is received for the back door.<br>• Displays "Back door is open" on the back camera position setting screen when an open signal is received for the back door. |
| Park/Neutral Position Switch Assembly | Sends the reverse signal to the multi-media module receiver assembly. |
| Clearance Warning ECU Assembly | Sends the clearance detection information to the multi-media module receiver assembly through CAN communication. |
| Steering Sensor | Detects the angle of the steering wheel and sends the resulting signals to the multimedia module receiver assembly through CAN communication. |
| Master Cylinder Solenoid (Skid Control ECU Assembly) | Transmits a vehicle speed signal to the multi-media module receiver assembly through CAN communication. |
| Steering Control ECU | Sends the VGRS relative angle to the multi-media module receiver assembly through CAN communication. |
| Main Body ECU (Cowl Side Junction Block LH) | Transmits a back door courtesy light switch signal to the multi-media module receiver assembly through CAN communication. |

## OPERATION EXPLANATION

a. The multi-media module receiver assembly receives the reverse signal via CAN communication line when the engine switch on (IG) and the shift lever is moved to R. After receiving the reverse signal, the multi-media module receiver assembly switches from the navigation system to parking assist monitor system (w/o Side Monitor System).

## DISPLAY MODE SETTING

### Text in Illustration

| | | | |
|---|---|---|---|
| *a | Line Mode Button | *b | Estimated Guide Line Mode |
| *c | Parking Guide Line Mode | *d | Guide Line Deletion Mode |
| *e | Line Mode Button Pressed | - | - |

a. While the parking assist monitor is displayed, pressing the line mode button switches the parking assist monitor display mode.

### Parking Assist Monitor Display Mode

## DIAGNOSTIC FUNCTION OUTLINE

a. This parking assist monitor system (w/o Side Monitor System) has a diagnostic function displayed on the multi-media module receiver assembly. This function enables calibration (adjustment and verification) of the parking assist monitor system (w/o Side Monitor System) (Click here).

b. The following items for the parking assist monitor system (w/o Side Monitor System) can be checked using the intelligent tester.

| Item | Proceed to |
|---|---|
| DTC | Click here |
| Data List/Active Test | Click here |

**for Preparation** Click here

**HINT:**

- **Use the following procedure to troubleshoot the parking assist monitor system (w/o Side Monitor System).**
- ***: Use the intelligent tester.**

## 1.VEHICLE BROUGHT TO WORKSHOP

NEXT

## 2.INSPECT BATTERY VOLTAGE

a. Measure the battery voltage.

**Standard voltage:**
**11 to 14 V**

If the voltage is below 11 V, replace or recharge the battery before proceeding.

NEXT

## 3.CHECK AUDIO AND VISUAL SYSTEM

a. Refer to the audio and visual system ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| Audio and visual system is normal | A |
| Audio and visual system is abnormal | B |

B. Go to AUDIO AND VISUAL SYSTEM (**Click here**)

A

## 4.CHECK COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*

a. Use the intelligent tester to check if the CAN communication system is functioning normally ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| CAN communication system DTCs are not output. | A |
| CAN communication system DTCs are output. | B |

B. Go to CAN COMMUNICATION SYSTEM (**Click here**)

A

## 5.CHECK FOR DTC*

a. Check for DTCs and note any codes that are output ( Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs. Try to prompt the DTC by simulating the original activity that the DTC suggests.

**Result**

| Result | Proceed to |
|---|---|
| No DTCs are output. | A |
| DTCs are output. | B |

B. → Go to step 8

A

## 6.PROBLEM SYMPTOMS TABLE

a. Refer to the Problem Symptoms Table (Click here).

**Result**

| Result | Proceed to |
|---|---|
| Fault is not listed in Problem Symptoms Table | A |
| Fault is listed in Problem Symptoms Table | B |

B. → ADJUST, REPAIR OR REPLACE IN ACCORDANCE WITH PROBLEM SYMPTOMS TABLE

**for Preparation** Click here

## INITIALIZE PARKING ASSIST MONITOR SYSTEM

a. When "System initializing" is displayed on the multimedia module receiver assembly, correct the steering angle neutral point using the following method.

i. Fully turn the steering wheel to the right and left on flat ground.

**NOTICE:**

Memorizing the steering angle neutral point must be carried out with the engine started. Apply the parking brake, depress the brake pedal, check that the shift lever is in P, and ensure that the vehicle is not moving.

**HINT:**

The "?" button is displayed at the same time as "System initializing". If the "?" button is selected, this method is displayed.

**for Preparation** Click here

## ADJUST PARKING ASSIST MONITOR SYSTEM (w/o Side Monitor System)

a. This parking assist monitor system (w/o Side Monitor System) can be adjusted using the diagnostic screen of the display.

b. If the following operations are performed, it is necessary to perform adjustments and checks using the diagnostic screen.

| Part Name | Operation | Adjustment Item | Proceed to |
|---|---|---|---|
| Steering sensor | Replacement | Steering angle neutral point (Initialize parking assist monitor system [w/o Side Monitor System]) | Click here |
| | | Steering angle setting | Procedure 3 |
| | • Removal and installation of the steering sensor<br>• Removal and installation of the connector of the steering sensor | Steering angle neutral point (Initialize parking assist monitor system [w/o Side Monitor System]) | Click here |
| | | Steering angle setting | Procedure 3 |
| Suspension, tires, etc. | The vehicle height changes because of suspension or tire replacement | Rear television camera assembly optical axis (Back camera position setting) | Procedure 2 |
| Rear television camera assembly | • Replacement<br>• Installation angle of the rear television camera assembly changes because of the removal and installation of the rear television camera assembly, etc. | Rear television camera assembly optical axis (Back camera position setting) | Procedure 2 |
| Multi-media module receiver assembly | Replacement | Multi-media module receiver assembly | Procedure 1 |

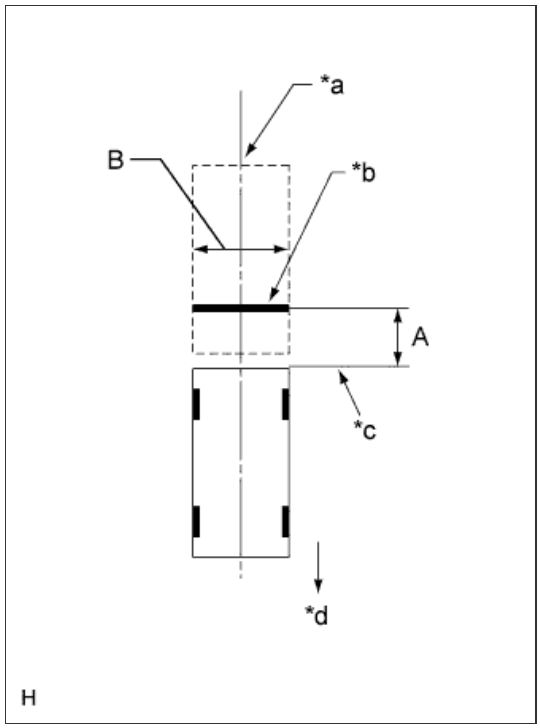
**NOTICE:**

- **The adjustment values stored while performing parking assist monitor system (w/o Side Monitor System) calibration are stored in the multi-media module receiver assembly.**
- **After the engine switch is turned off, the multi-media module receiver assembly records various types of memory and settings. As a result, after turning the engine switch off, make sure to wait for the time specified in the following table before disconnecting the cable from the negative (-) battery terminal.**

**Waiting Time before Disconnecting Cable from Negative (-) Battery Terminal**

| Condition | Waiting Time |
|---|---|
| Vehicle enrolled in G-BOOK system | 6 minutes |
| Vehicle not enrolled in G-BOOK system | 1 minute |

## MULTI-MEDIA MODULE RECEIVER ASSEMBLY (PROCEDURE 1)



**HINT:**

Be sure to check for DTCs before performing this procedure ( Click here).

a. Preparation for adjustment

i. Park the vehicle with the steering wheel centered.

ii. Set a target bar for optical axis adjustment of the rear television camera assembly.

**HINT:**

Only when adjusting the optical axis of the camera, create a target bar for adjustment.

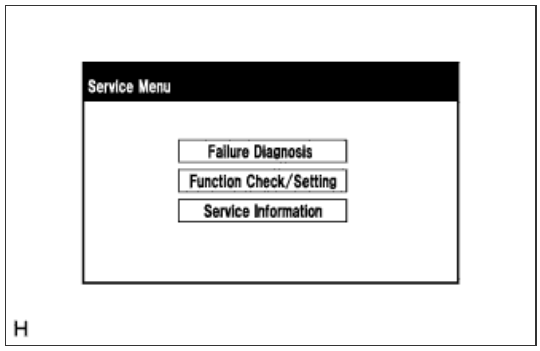
**Dimension:**

| Area | Specification |
|---|---|
| A | 824 to 834 mm (2.70 to 2.74 ft.) |
| B | 1995 to 2005 mm (6.55 to 6.58 ft.) |

**Text in Illustration**

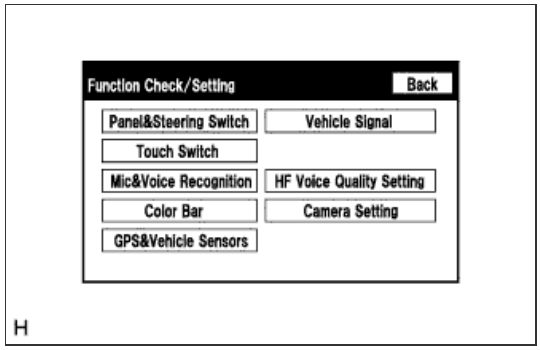
| | |
|---|---|
| *a | Vehicle Center |
| *b | Target Bar for Back Camera Adjustment |
| *c | Vehicle End |
| *d | Front |

**HINT:**



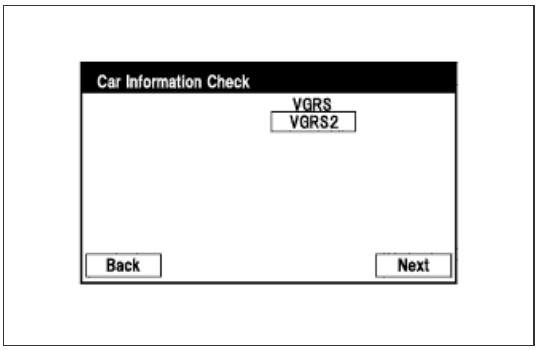
- **Set a piece of tape on the ground as the target bar for adjustment. Its width and length should be 20 to 30 mm (0.787 to 1.18 in.) and 1995 to 2005 mm (6.55 to 6.58 ft.), respectively. Check the color on the display and choose a tape color which can be easily seen.**
- **Before parking the vehicle, be sure to move the vehicle forward and in reverse to check that the tires are facing straight ahead with the steering wheel centered.**
- **Check that the back door is fully closed.**

b. Start diagnostic mode (Click here).



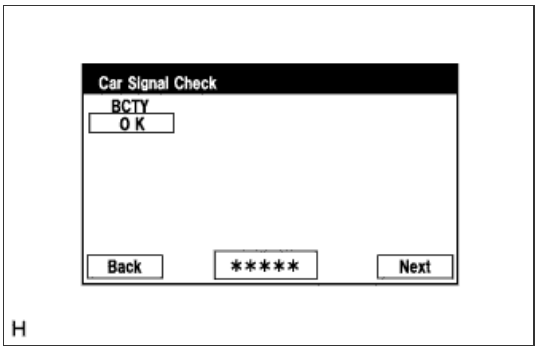
**NOTICE:**

The following must be carried out with the engine started. Apply the parking brake, depress the brake pedal, check that the shift lever is in P, and ensure that the vehicle is not moving.



i. Select "Function Check/Setting" on the [Service Menu] screen.

ii. Select "Camera Setting" on the [Function Check/Setting] screen.

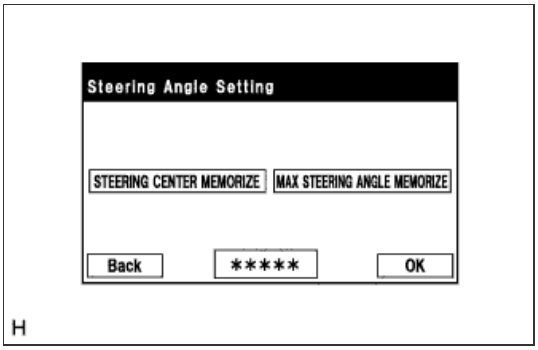


iii. Select "Next" on the [Car Information Check] screen.

iv. Select "Next" on the [Car Signal Check] screen.

**HINT:**

- **When "CHK" (red) is displayed for any items on the [Car Signal Check] screen, selecting "Next" will not change the screen to the [Steering Angle Setting] screen.**
- **When "CHK" (red) is displayed for any items on the [Car Signal Check] screen, perform inspections using the [Car Signal Check] screen (Click here).**



c. Steering Angle Setting:

i. Perform the "STEERING CENTER MEMORIZE" operation.

- Check that the steering wheel is centered, and then select "STEERING CENTER MEMORIZE".

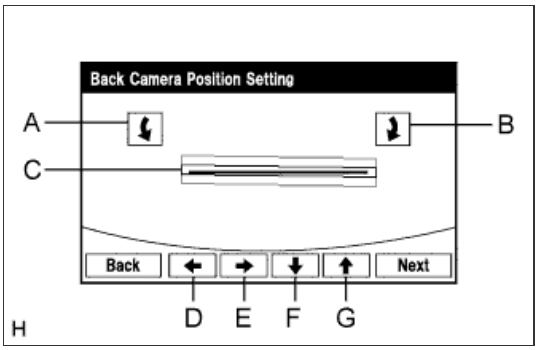
**HINT:**

When performing removal and installation, or replacement of the rear television camera assembly, steering angle setting is not required.

ii. Perform the "MAX STEERING ANGLE MEMORIZE" operation.

- After performing the steering center memorize operation, turn the steering wheel to the left and right lock positions and select "MAX STEERING ANGLE MEMORIZE". The maximum steering angle is then stored and the screen changes to the [Back Camera Position Setting] screen.

**HINT:**



The "Next" button does not respond until the system memorizes the steering center and maximum steering wheel angle.

**HINT:**

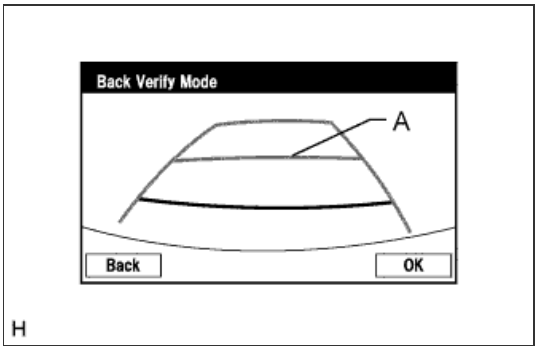
- **It is also possible to start by initially turning the steering to the right side.**
- **When "MAX STEERING ANGLE MEMORIZE" is selected, a beep will sound to confirm that the adjustment values have been stored.**
- **The adjustment values will not be stored unless "MAX STEERING ANGLE MEMORIZE" is selected after turning the steering wheel from lock to lock.**
- **When "BACK" is selected, the screen changes to the [Car Signal Check] screen without storing any values.**
- **Even if no DTCs are detected, selecting "MAX STEERING ANGLE MEMORIZE" may not cause the adjustment values to be stored if the steering sensor is malfunctioning.**
- **If selecting "MAX STEERING ANGLE MEMORIZE" does not cause the adjustment value to be stored after performing the steering angle setting procedure, replace the steering sensor (Click here).**

d. Back Camera Position Setting:

**HINT:**

- **When adjusting the camera optical axis, "Back door is open. Do not use the rear view monitor when the back door is not completely closed." is displayed even after the back door has been closed.**
- **When the back door is open, the "Back door is open. Do not use the rear view monitor when the back door is not completely closed." message will be displayed and camera position setting will not be possible.**
- **If the "Back door is open. Do not use the rear view monitor when the back door is not completely closed." message is displayed even when the back door is closed, perform inspections according to Problem Symptoms Table (When adjusting the camera optical axis, "Back door is open. Do not use the rear view monitor when the back door is not completely closed." is displayed even after the back door has been closed.) (Click here).**

i. Perform roll angle adjustment.



- Use switches A and B to rotate C so that it is parallel to the target adjustment bar.

ii. Perform vertical and horizontal position adjustment.

- Use the directional switches D, E, F and G to move C so that the target adjustment bar is centered in C.

iii. Select the "Next" button on the [Back Camera Position Setting] screen.

e. Back Verify Mode:

i. Check that A and the target adjustment bar are overlapping.

- If the lines are not aligned, perform the "STEERING CENTER MEMORIZE" and "MAX STEERING ANGLE MEMORIZE" operations.
- If A and the target adjustment bar are not aligned even if the tires are aligned straight ahead, perform the back camera position setting operation.

ii. Selecting "OK" will return to the [Service Menu] screen, and complete the adjustment.

**HINT:**

- **The update is not completed until "OK" is selected.**
- **When "OK" is selected, a beep will sound to confirm that the adjustment values have been stored.**
- **The adjustment values are not stored until the beep has sounded.**

f. Finish diagnostic mode (Click here).

g. Confirm steering angle adjustment.

**HINT:**

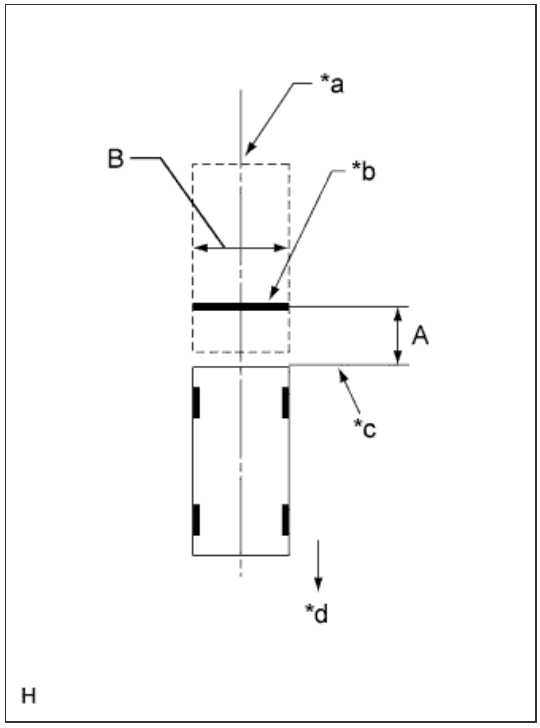
If the steering angle has been adjusted, confirm the steering angle adjustment on the parking assist monitor screen after finishing diagnosis mode.

i. Check on the parking assist screen that the predicted path line moves until the steering wheel is fully turned to either the left or right.

**HINT:**

If the predicted path line stops moving before the steering wheel is fully turned to either the left or right, the steering angle adjustment values have not been stored correctly. In this case, perform "STEERING CENTER MEMORIZE" and "MAX STEERING ANGLE MEMORIZE" again.

## BACK CAMERA POSITION SETTING (PROCEDURE 2)



**HINT:**

Be sure to check for DTCs before performing this procedure ( Click here).

a. Preparation for adjustment

i. Park the vehicle with the steering wheel centered.

ii. Set a target bar behind the vehicle for optical axis adjustment of the rear television camera assembly (back camera position setting).

**HINT:**

Create a target bar for adjustment only when adjusting the optical axis of the camera.

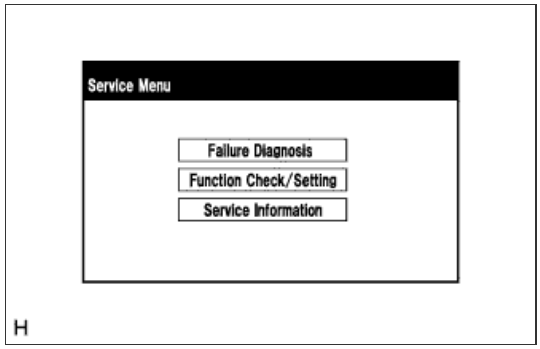
**Dimension:**

| Area | Specification |
|---|---|
| A | 824 to 834 mm (2.70 to 2.74 ft.) |
| B | 1995 to 2005 mm (6.55 to 6.58 ft.) |

**Text in Illustration**

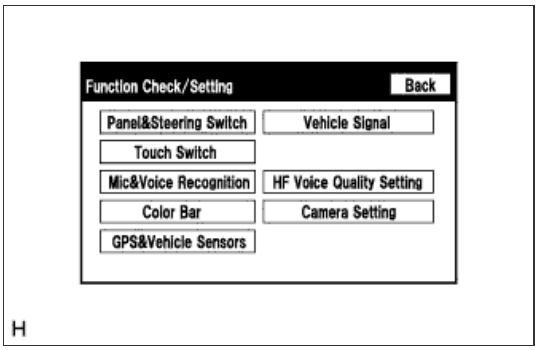
| | |
|---|---|
| *a | Vehicle Center |
| *b | Target Bar for Back Camera Position Setting |
| *c | Vehicle End |
| *d | Front |

**HINT:**



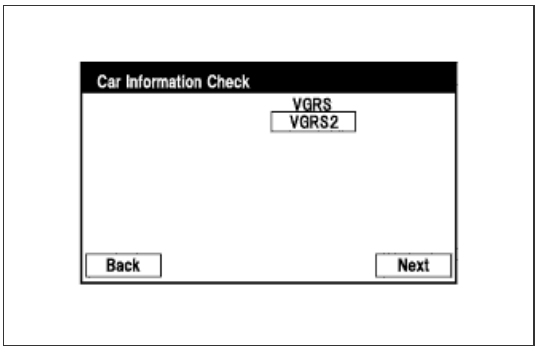
- **Set a piece of tape on the ground as the target bar for adjustment. Its width and length should be 20 to 30 mm (0.787 to 1.18 in.) and 1995 to 2005 mm (6.55 to 6.58 ft.), respectively. Check the color on the multi-display assembly and choose a tape color which can be easily seen.**
- **Before parking the vehicle, be sure to move the vehicle forward and in reverse to check that the tires are facing straight ahead with the steering wheel centered.**
- **Check that the back door is fully closed.**

b. Start diagnostic mode (Click here).



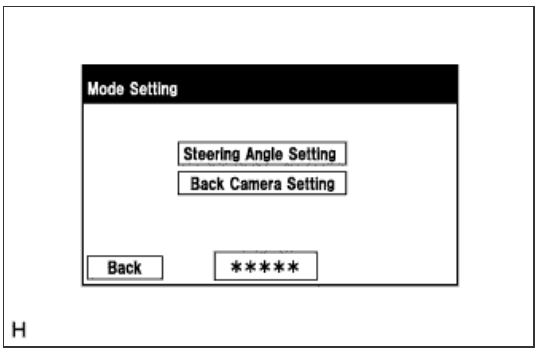
**NOTICE:**

The following must be carried out with the engine started. Apply the parking brake, depress the brake pedal, check that the shift lever is in P, and ensure that the vehicle is not moving.



i. Select "Function Check/Setting" on the [Service Menu] screen.

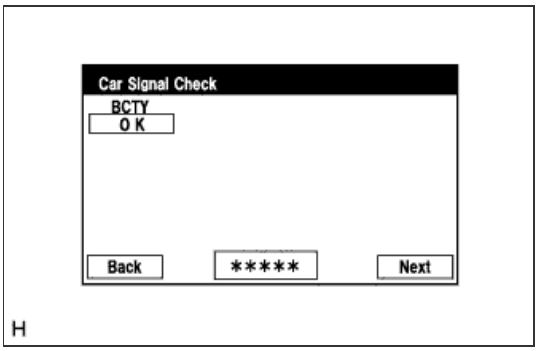
ii. Select "Camera Setting" on the [Function Check/Setting] screen.



iii. Select "Next" on the [Car Information Check] screen.

iv. Select "Back Camera Setting" on the [Mode Setting] screen.

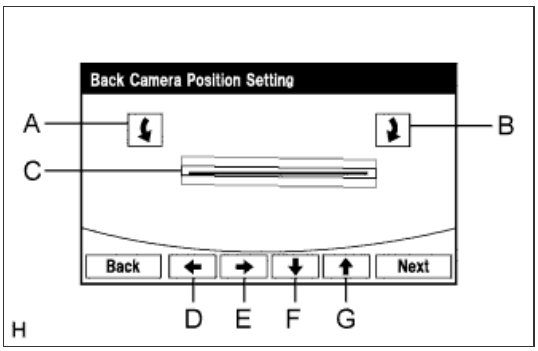
**HINT:**



To select a grayed out item, select and hold the item for 2 seconds or more.

v. Select "Next" on the [Car Signal Check] screen.

**HINT:**



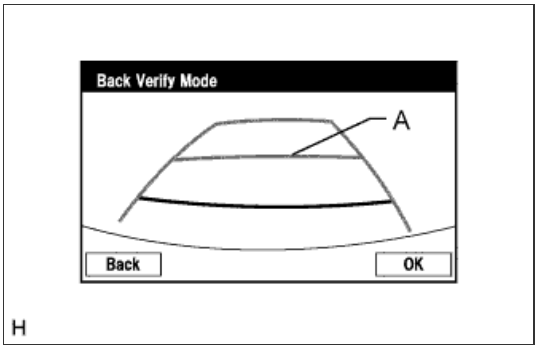
- **When "CHK" (red) is displayed for any items on the [Car Signal Check] screen, selecting "Next" will not change the screen to the [Back Camera Position Setting] screen.**
- **When "CHK" (red) is displayed for any items on the [Car Signal Check] screen, perform inspections using the [Car Signal Check] screen (Click here).**

c. Back Camera Position Setting:

**HINT:**

- **When the back door is open, the "Back door is open. Do not use the rear view monitor when the back door is not completely closed." message will be displayed and camera position setting will not be possible.**
- **If the "Back door is open. Do not use the rear view monitor when the back door is not completely closed." message is displayed even when the back door is closed, perform inspections according to Problem Symptoms Table (When adjusting the camera optical axis, "Back door is open. Do not use the rear view monitor when the back door is not completely closed." is displayed even after the back door has been closed.) (Click here).**

i. Perform roll angle adjustment.



- Use switches A and B to rotate C so that it is parallel to the target adjustment bar.

ii. Perform vertical and horizontal position adjustment.

- Use the directional switches D, E, F and G to move C so that the target adjustment bar is centered in C.

iii. Select the "Next" button on the [Back Camera Position Setting] screen.

d. Back Verify Mode:

H

i. Check that A and the target adjustment bar are overlapping.

- If the lines are not aligned, perform the "STEERING CENTER MEMORIZE" and "MAX STEERING ANGLE MEMORIZE" operations.
- If A and the target adjustment bar are not aligned even if the tires are aligned straight ahead, perform the back camera position setting operation.

ii. Selecting "OK" will return to the [Service Menu], and complete the adjustment.

**HINT:**

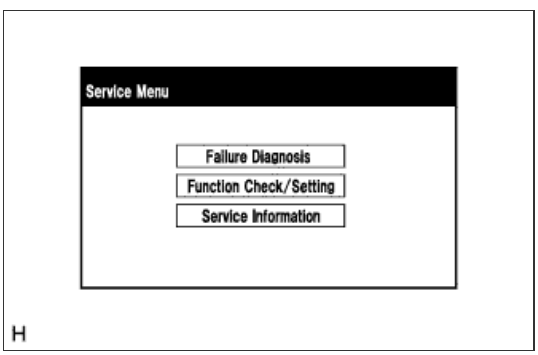
- **The update is not completed until "OK" is selected.**
- **When "OK" is selected, a beep will sound to confirm that the adjustment values have been stored.**
- **The adjustment values are not stored until the beep has sounded.**

e. Finish diagnostic mode (Click here).

## Steering Angle Setting (PROCEDURE 3)

**HINT:**

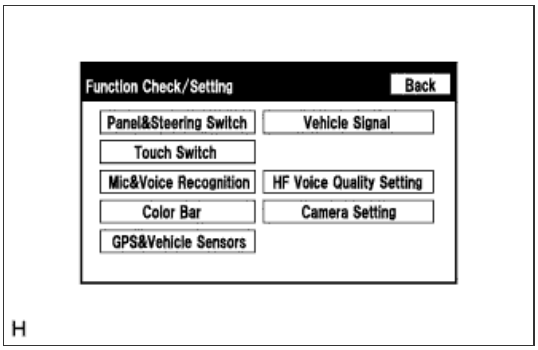
If the vehicle width extension lines and predicted path lines are not aligned when the steering wheel is centered, or if the predicted path line does not move before the steering wheel is fully turned to either the left or right, perform Steering Angle Setting.



a. Center the steering wheel and stop the vehicle.

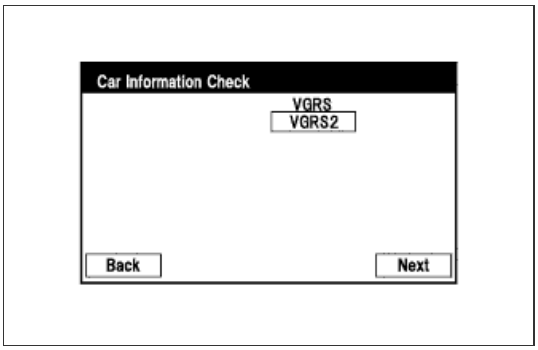
b. Start diagnostic mode (Click here).

**NOTICE:**



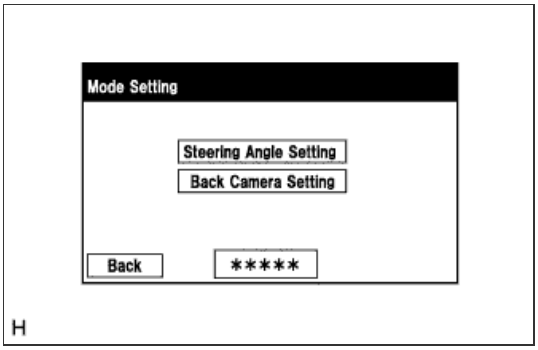
The following must be carried out with the engine started. Apply the parking brake, depress the brake pedal, check that the shift lever is in P, and ensure that the vehicle is not moving.

i. Select "Function Check/Setting" on the [Service Menu] screen.



H

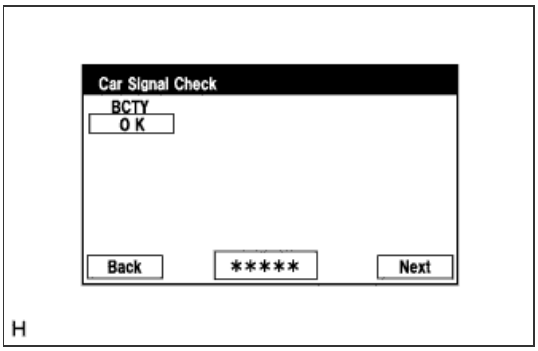
ii. Select "Camera Setting" on the [Function Check/Setting] screen.



iii. Select "Next" on the [Car Information Check] screen.

iv. Select "Steering Angle Setting" on the [Mode Setting] screen.

**HINT:**

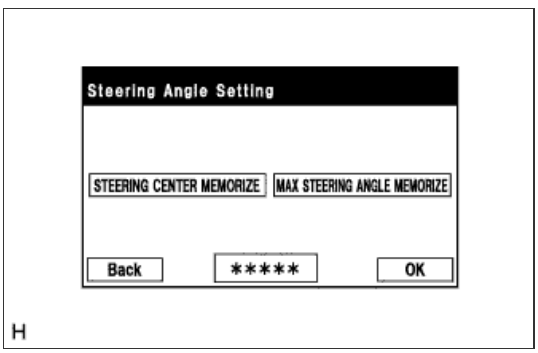


To select a grayed out item, select and hold the item for 2 seconds or more.

v. Select "Next" on the [Car Signal Check] screen to display the [Steering Angle Setting] screen.

**HINT:**

- **When "CHK" (red) is displayed for any items on the [Car Signal Check] screen, selecting "Next" will not change the screen to the [Steering Angle Setting] screen.**
- **When "CHK" is displayed for any items on the [Car Signal Check] screen, perform inspections using the [Car Signal Check] screen (Click here).**



c. Steering Angle Setting:

i. Check that the steering wheel is centered (approximately +/- 5 degrees or less) and select "STEERING CENTER MEMORIZE".

ii. After the centered steering position is memorized, turn the steering wheel to the left and then to the right full lock positions and select "MAX STEERING ANGLE MEMORIZE".

**HINT:**

It is also possible to start by initially turning the steering wheel to the right side.

iii. Select "MAX STEERING ANGLE MEMORIZE" to store the steering angle adjustment value and change the screen to the [Mode

Setting] screen.

**HINT:**

- **When "MAX STEERING ANGLE MEMORIZE" is selected, a beep will sound to confirm that the steering angle adjustment values have been stored.**
- **The adjustment values will not be stored unless "MAX STEERING ANGLE MEMORIZE" is selected.**
- **When "BACK" is selected, the screen changes to Car Signal Check without storing the set values.**
- **If the "Steering Angle Settings" have not been adjusted, selecting "MAX STEERING ANGLE MEMORIZE" will not cause the adjustment values to be stored.**
- **Even if no DTCs are detected, selecting "MAX STEERING ANGLE MEMORIZE" may not cause the adjustment value to be stored if the steering sensor is malfunctioning.**
- **If selecting "MAX STEERING ANGLE MEMORIZE" does not cause the adjustment value to be stored after adjusting the steering angle, replace the steering sensor (Click here).**

d. Finish diagnostic mode (Click here).

e. Confirm steering angle adjustment.

**HINT:**

If the steering angle has been adjusted, confirm the steering angle adjustment on the parking assist monitor screen after finishing diagnosis mode.

i. Check on the parking assist screen that the predicted path line moves until the steering wheel is fully turned to either the left or right.

**HINT:**

If the predicted path line stops moving before the steering wheel is fully turned to either the left or right, the steering angle adjustment values have not been stored correctly. In this case, perform "STEERING CENTER MEMORIZE" and "MAX STEERING ANGLE MEMORIZE" again.

**for Preparation** Click here

**NOTICE:**

The following inspection procedures for the parking assist monitor system are based on the assumption that the audio and visual system is normal. If the audio and visual system has any malfunctions, first proceed with troubleshooting the audio and visual system.

**HINT:**

- **Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.**
- **Inspect the fuses and relays related to this system before inspecting the suspected areas below.**

## REAR TELEVISION CAMERA ASSEMBLY

a. Disconnect the S5 rear television camera assembly connector.

b. Measure the voltage and resistance according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| S5-3 (CGND) - Body ground | BR - Body ground | Ground | Always | Below 1 Ω |
| S5-4 (CB+) - S5-3 (CGND) | B - BR | Power source | Engine switch on (IG), shift lever in R | 5.5 to 7.05 V |

c. Reconnect the S5 rear television camera assembly connector.

**HINT:**

A waterproof connector is used for the rear television camera assembly. Therefore, inspect the waveform at the multi-media module receiver assembly with the connector connected. If the result is not as specified, the rear television camera assembly may have a malfunction.

d. Measure the voltage according to the value(s) in the table.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| S5-2 (CV+) - S5-3 (CGND) | R - BR | Display signal | Engine switch on (IG), shift lever in R | Pulse generation (See waveform) |
| S5-1 (CV-) - S5-3 (CGND) | W - BR | Rear television camera ground | Always | Below 1 V |

e. Using an oscilloscope, check waveform.

**HINT:**

- **A waterproof connector is used for the rear television camera assembly. Therefore, inspect the waveform at the navigation receiver assembly with the connector connected.**
- **The video waveform changes according to the image sent by the rear television camera assembly.**

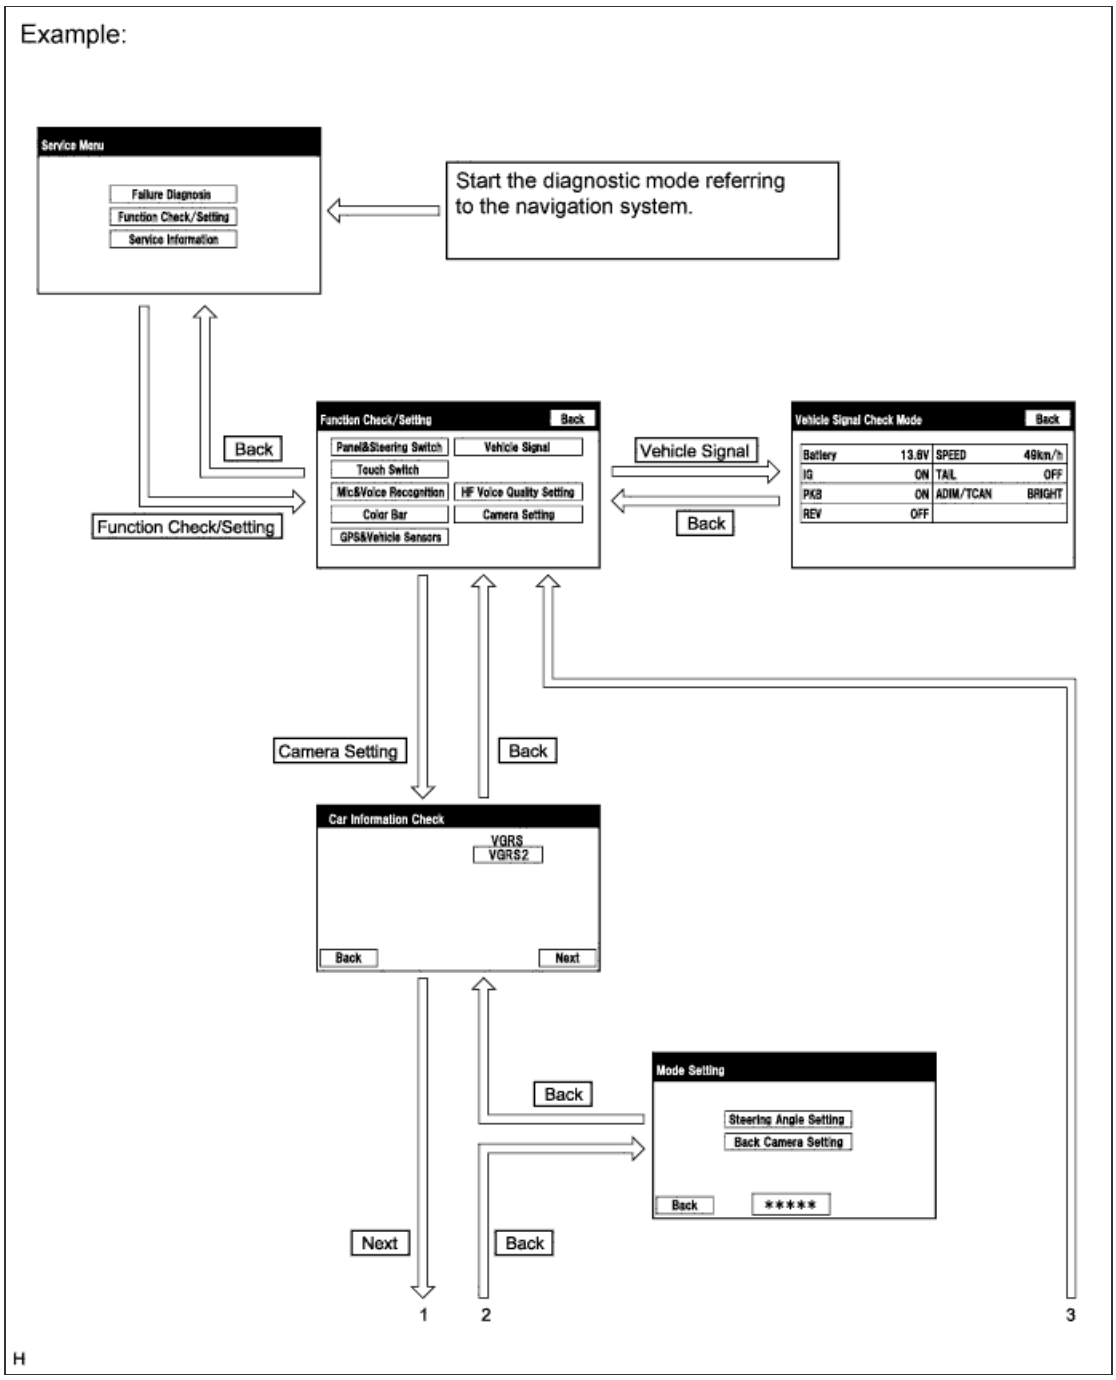
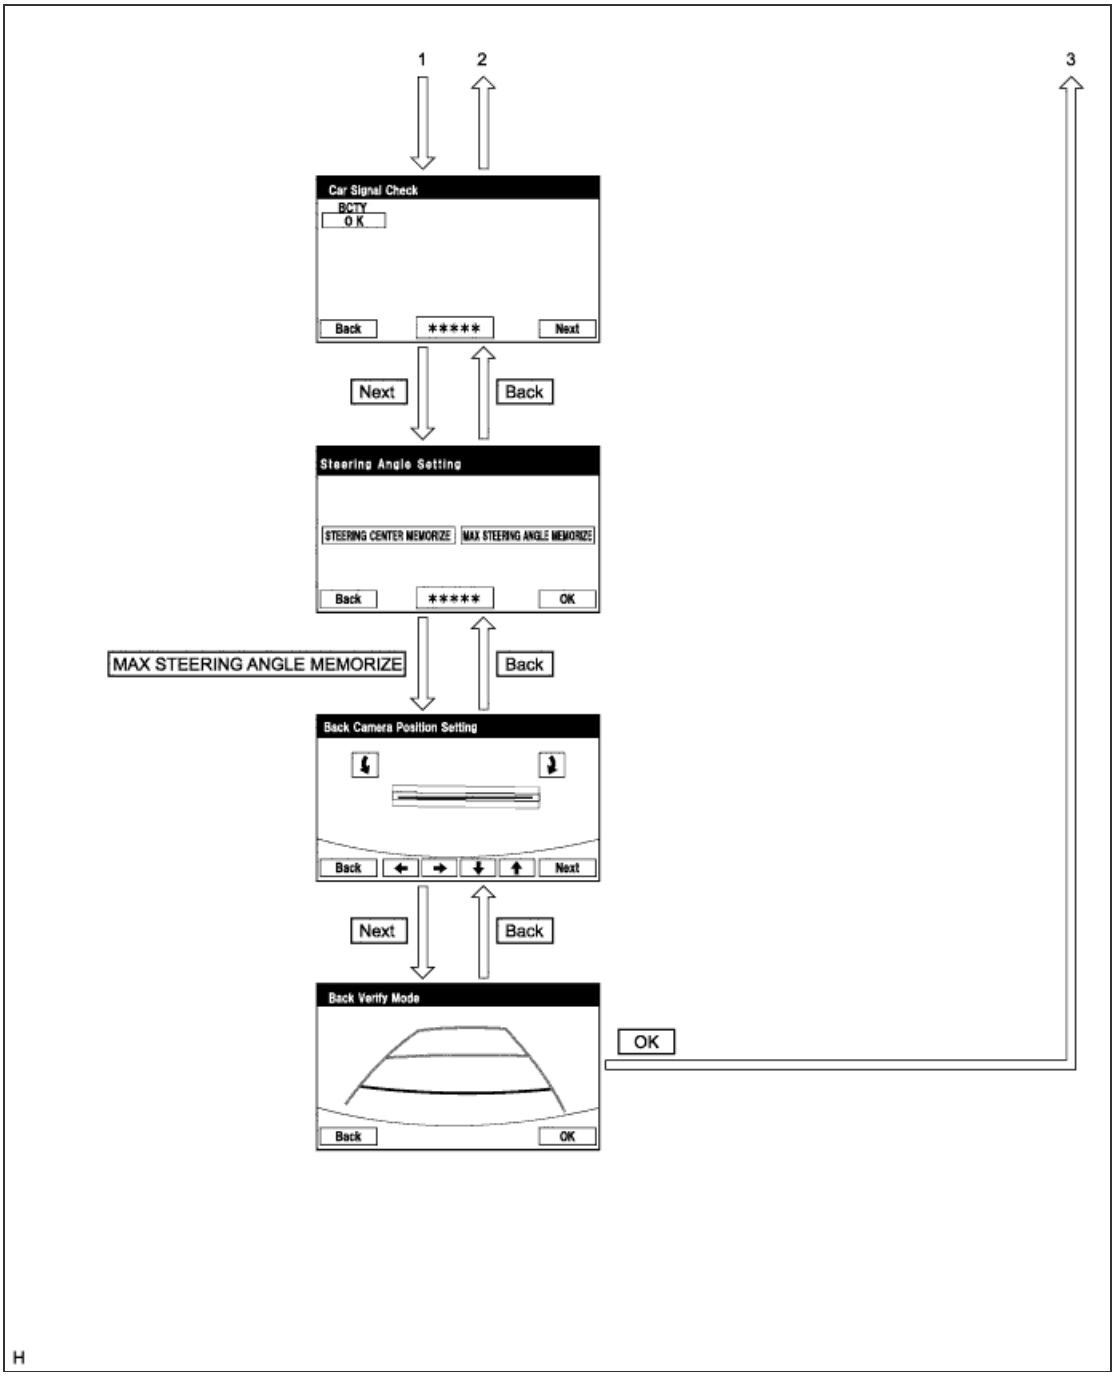
## PARKING ASSIST MONITOR DIAGNOSIS SYSTEM

a. For parking assist monitor system (w/o Side Monitor System) diagnosis, signals received by the multi-media module receiver assembly can be checked and the parking assist monitor system (w/o Side Monitor System) can be calibrated, adjusted and checked using the multi-media module receiver assembly.



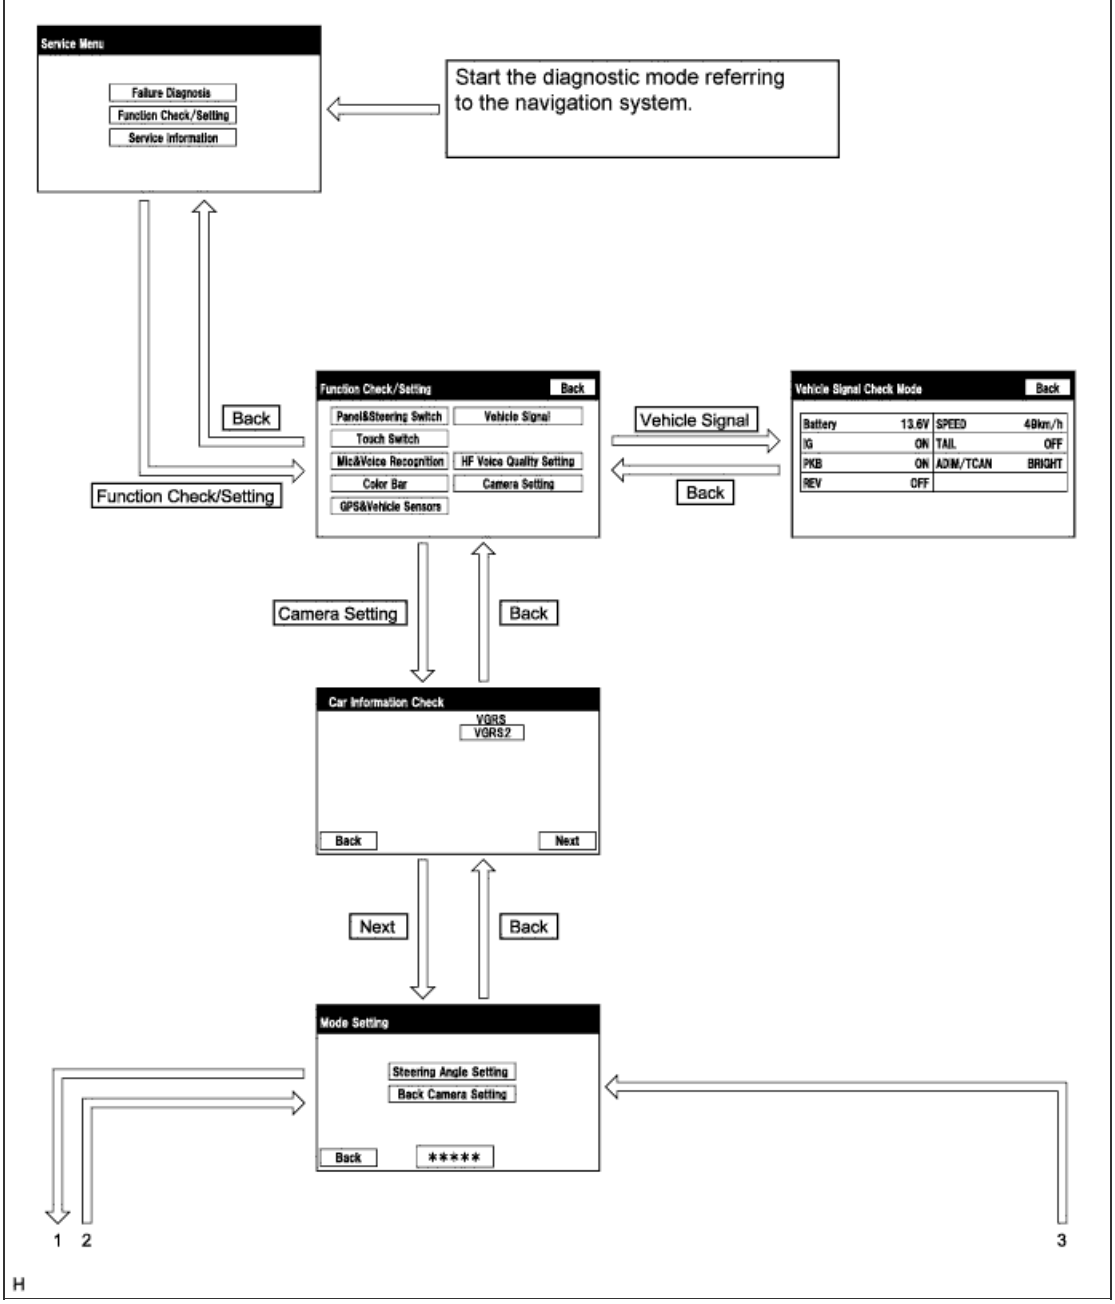
**NOTICE:**



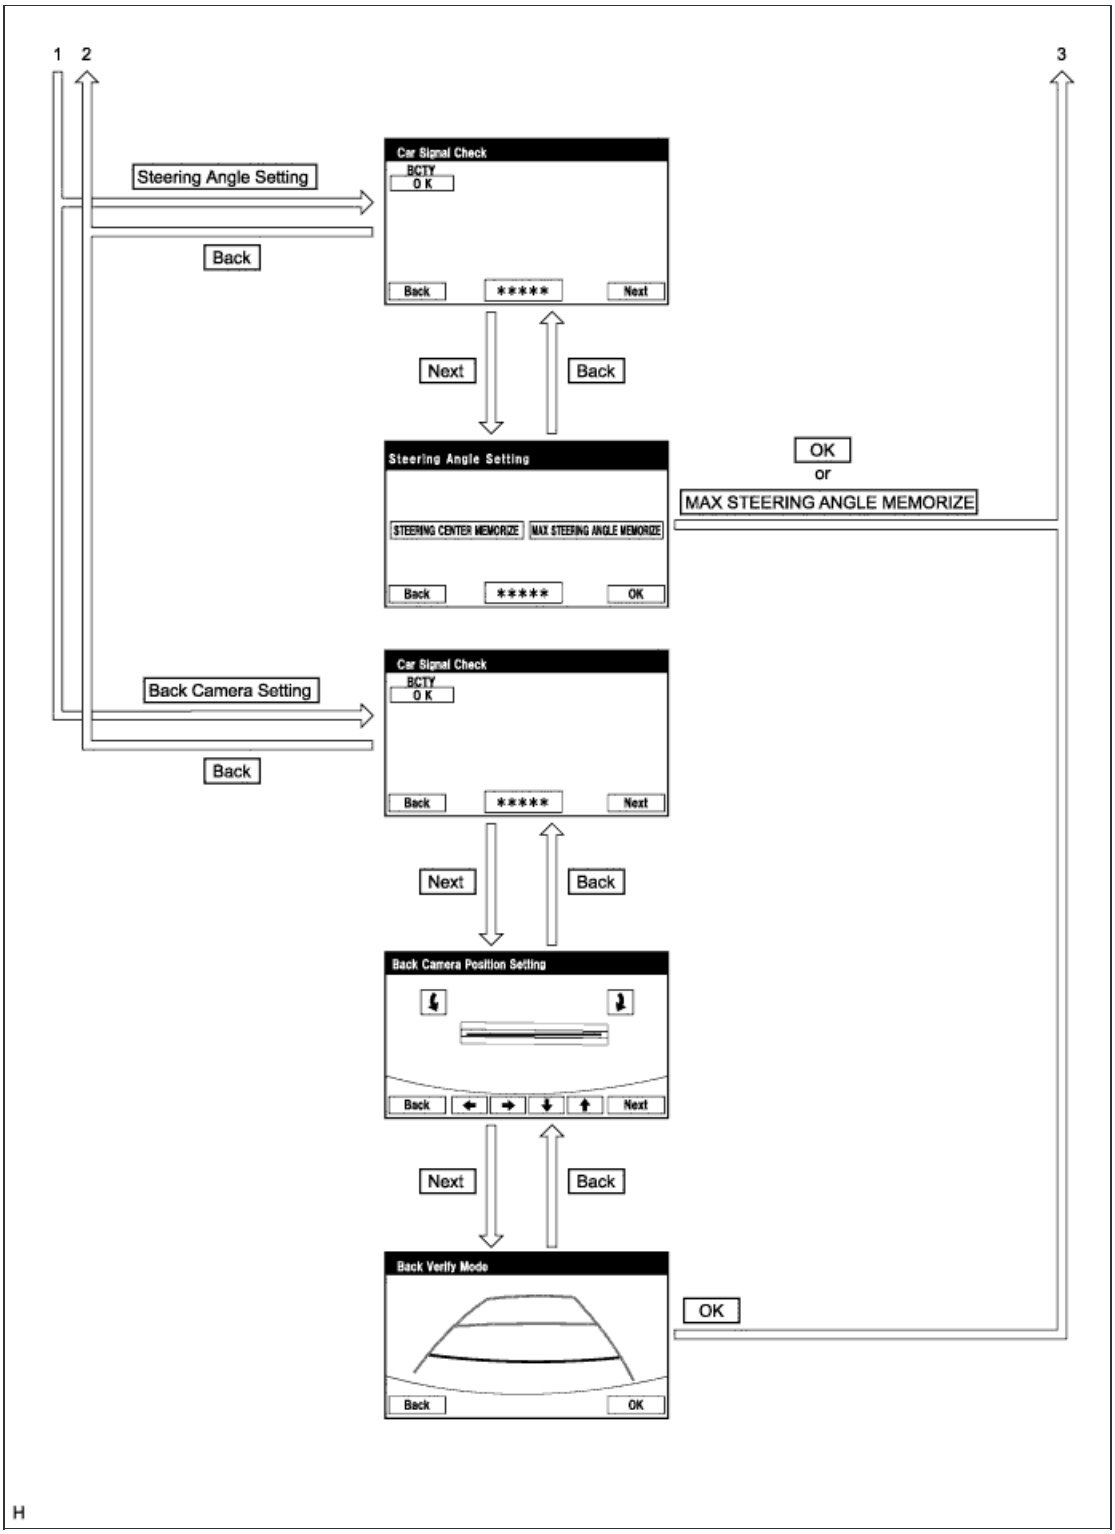
Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system (w/o Side Monitor System) may be needed (Click here).

**HINT:**

The displayed items may differ depending on vehicle specifications.



## DIAGNOSIS SCREEN TRANSITION (during parking assist monitor system [w/o Side Monitor System] initialization)



**DIAGNOSIS SCREEN TRANSITION (after parking assist monitor system initialization [w/o Side Monitor System])**

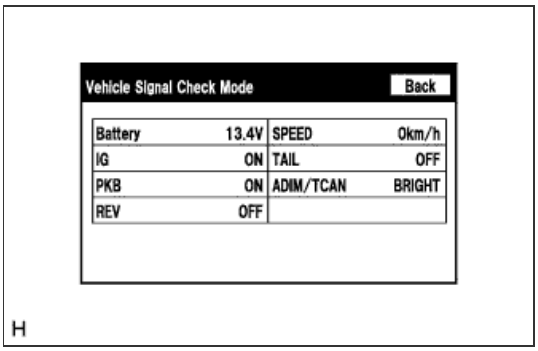
## VEHICLE SIGNAL CHECK

a. Start diagnostic mode (Click here).

b. Select "Function Check/Setting" on the [Service Menu] screen to display the "Function Check/Setting" screen.

c. Select "Vehicle Signal" on the [Function Check/Setting] screen.

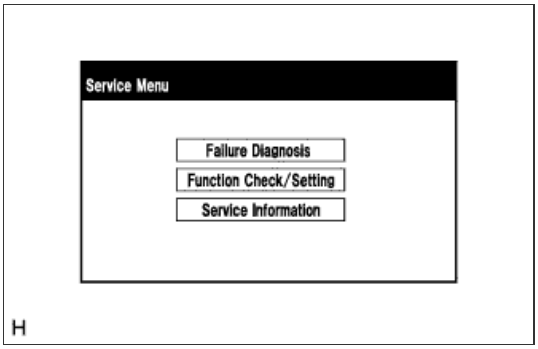


d. Vehicle Signal Check Mode:

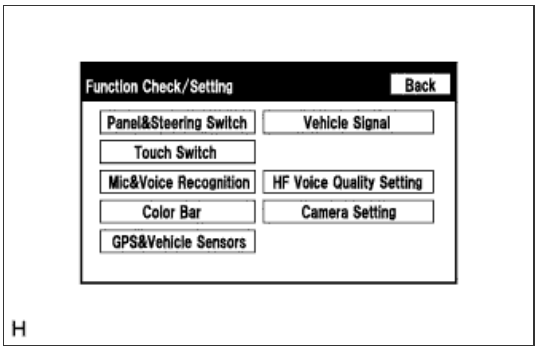
i. When the [Vehicle Signal Check Mode] screen is displayed, check "REV" the vehicle signal conditions.

**HINT:**

- **Only conditions having inputs are displayed.**
- **This screen displays vehicle signals input to the multi-media module receiver assembly.**
- **For details of this function, refer to Diagnosis Display Detailed Description in System Description (Click here)**

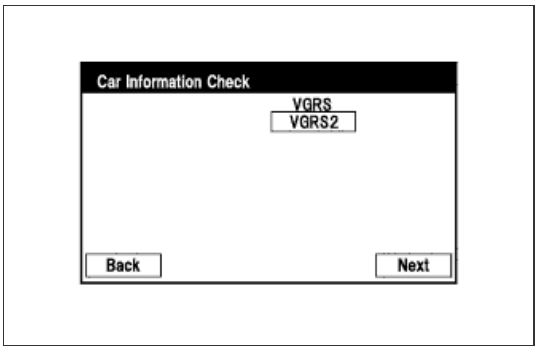


e. Finish diagnostic mode (Click here).



## CAR SIGNAL CHECK (parking assist monitor system [w/o Side Monitor System] input signals)

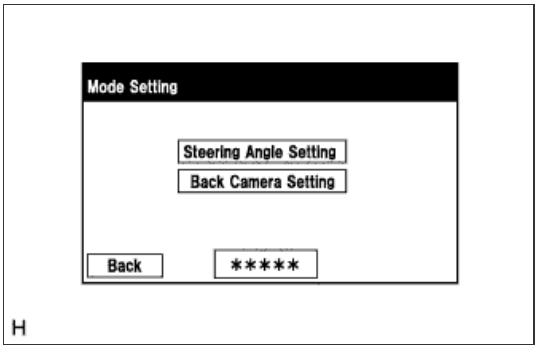
a. Start diagnostic mode (Click here).



i. Select "Function Check/Setting" on the [Service Menu] screen to display the [Function Check/Setting] screen.

ii. Select "Camera Setting" on the [Function Check/Setting] screen.

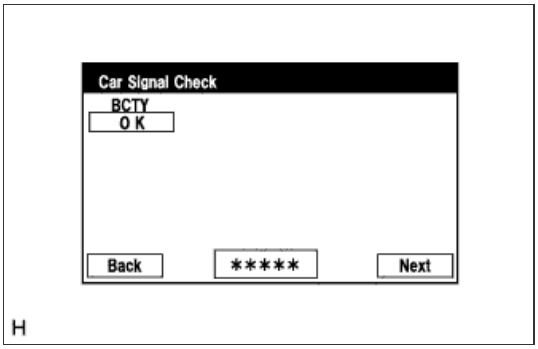
iii. Select "Next" on the [Car Information Check] screen.



**HINT:**

After "Next" is selected, the screen transitions differ depending on whether initialization of the parking assist monitor system (w/o Side Monitor System) was performed after the multi-media module receiver assembly was replaced.

| Parking Assist Monitor System (w/o Side Monitor System) Initialization | Screen Transition |
|---|---|
| Not performed | [Car Signal Check] screen |
| Performed | [Mode Setting] screen |



iv. When the screen changes to the [Mode Setting] screen, select "Back Camera Setting" to display the [Car Signal Check] screen.

**HINT:**

To select a grayed out item, select and hold the item for 2 seconds or more.

b. Car Signal Check:

i. On the [Car Signal Check] screen, it is possible to inspect the state of signals and check the settings.

| Item | Inspection Detail | Note |
|---|---|---|
| BCTY | Back door courtesy light switch signal input | When "CHK" (red) is displayed, selecting "Next" will not change to the next screen. |

**HINT:**

- **When "CHK" (red) is displayed, perform inspections based on the result of the following inspections.**
- **If performing the adjustment after proceeding to the next screen, confirm that all items display "OK" (blue) before selecting "Next".**

c. BCTY inspection:

**HINT:**

If "CHK" (red) is displayed for "BCTY", check for DTCs and perform troubleshooting based on the output DTCs ( Click here).

d. Finish diagnostic mode (Click here).

## CALIBRATION WHEN SERVICING VEHICLE

**NOTICE:**

Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system (w/o Side Monitor System) may be needed (Click here).

**for Preparation** Click here

## CHECK DTC

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Navigation System / DTC.

e. Check for DTCs, and then write them down.

f. Check for DTCs (Click here).

**NOTICE:**

The audio and visual system outputs DTCs for the following system. When DTCs other than those in Diagnostic Trouble Code Chart for the audio and visual system are output, refer to Diagnostic Trouble Code Chart for the relevant system.

| System | Proceed to |
|---|---|
| Audio and visual system | Click here |

## CLEAR DTC

a. Connect the intelligent tester m to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Navigation System / DTC.

e. Clear the DTCs.

**for Preparation** Click here

## DATA LIST

**NOTICE:**

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

**HINT:**

Using the intelligent tester to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Main Body / Data List.

e. Read the Data List according to the display on the intelligent tester.

**Main Body**

| Tester Display | Measurement Item/Range | Normal Condition | Diagnostic Note |
|---|---|---|---|
| Back Door Courtesy SW | Back door courtesy light switch signal / ON or OFF | ON: Back door open<br>OFF: Back door closed | - |

**for Preparation** Click here

**HINT:**

If a trouble code is output during the DTC check, inspect the trouble areas listed for that code. For details of the code, refer to the "See page" in the DTC chart. Inspect fuses and relays before investigating the trouble areas shown in the table below.

**Parking Assist Monitor System (w/o Side Monitor System)**

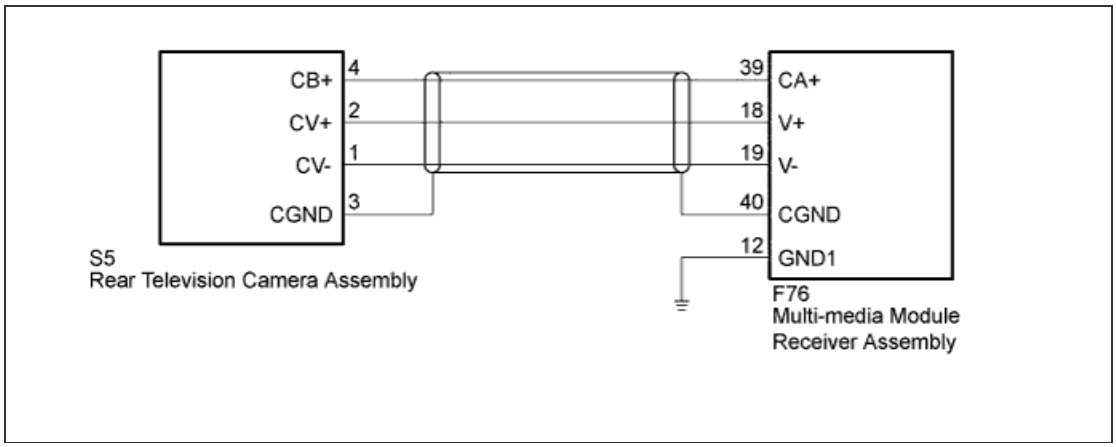
| U0140 | Lost Communication with Body Control Module | Click here |

# DTC C1622 Open or Short Circuit in Back Camera Signal



**for Preparation** Click here

## DESCRIPTION

This DTC is stored if the multi-media module receiver assembly judges that the signals or signal lines between the multi-media module receiver assembly and the rear television camera assembly are not normal as a result of its self check.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1622 | Open or short in the rear television camera assembly signal circuit | • Harness or connector<br>• Rear television camera assembly<br>• Multi-media module receiver assembly |

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the multi-media module receiver assembly after disconnecting the cable from the negative (-) battery terminal, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system (w/o Side Monitor System) may be needed (Click here).**

### 1.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - REAR TELEVISION CAMERA ASSEMBLY AND BODY GROUND)

a. Disconnect the F76 multi-media module receiver assembly connector.

b. Disconnect the S5 rear television camera assembly connector.

c. Measure the resistance according to the value(s) in the table below.

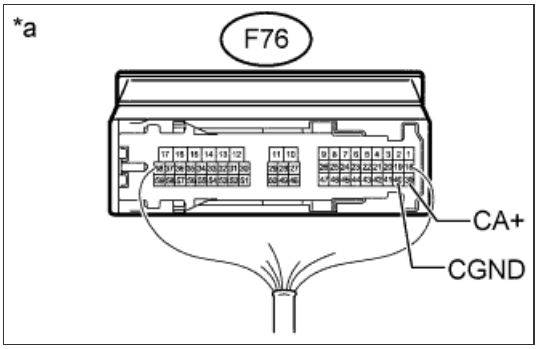
**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-18 (V+) - S5-2 (CV+) | Always | Below 1 Ω |
| F76-19 (V-) - S5-1 (CV-) | Always | Below 1 Ω |
| F76-39 (CA+) - S5-4 (CB+) | Always | Below 1 Ω |
| F76-40 (CGND) - S5-3 (CGND) | Always | Below 1 Ω |
| F76-12 (GND1) - Body ground | Always | Below 1 Ω |
| F76-18 (V+) - Body ground | Always | 10 kΩ or higher |
| F76-19 (V-) - Body ground | Always | 10 kΩ or higher |

| | | |
|---|---|---|
| F76-39 (CA+) - Body ground | Always | 10 kΩ or higher |
| F76-40 (CGND) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



## 2.CHECK MULTI-MEDIA MODULE RECEIVER ASSEMBLY (CA+, CGND)

a. Reconnect the multi-media module receiver assembly connector.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

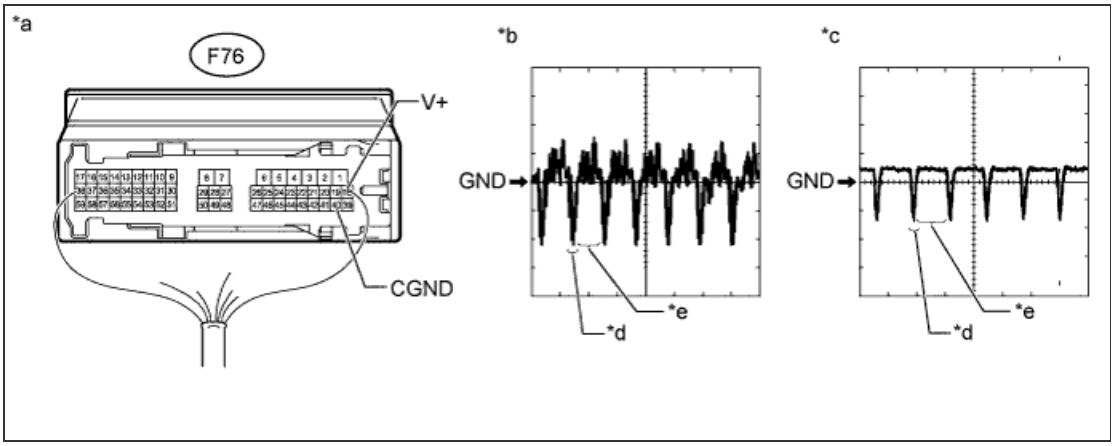
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-40 (CGND) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-39 (CA+) - F76-40 (CGND) | Engine switch on (IG), shift lever in R | 5.5 to 7.05 V |

**Text in Illustration**



| | |
|---|---|
| *a | Component with harness connected (Multi-media Module Receiver Assembly) |

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK

## 3.CHECK REAR TELEVISION CAMERA ASSEMBLY (CV+, CGND)

a. Reconnect the S5 rear television camera assembly connector.

**Text in Illustration**

| | | | |
|---|---|---|---|
| *a | Component with harness connected<br>(Multi-media Module Receiver Assembly) | *b | Waveform A |
| *c | Waveform B | *d | Synchronization Signal |
| *e | Video Waveform | - | - |

b. Check the waveform of the rear television camera assembly using an oscilloscope.

**HINT:**

- **A waterproof connector is used for the rear television camera assembly. Therefore, inspect the waveform at the multi-media module receiver assembly with the connector connected.**
- **The video waveform changes according to the image sent by the rear television camera assembly.**

| Item | Content |
|---|---|
| Terminal No.<br>(Symbol) | F76-18 (V+) - F76-40 (CGND) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | • Waveform A: Engine switch on (IG), shift lever in R and camera lens is not covered, displaying an image<br>• Waveform B: Engine switch on (IG), shift lever in R and camera lens is covered, blacking out the screen |

**OK:**

**Waveform is as shown in the illustration.**

**NG** → REPLACE REAR TELEVISION CAMERA ASSEMBLY (Click here)

**OK** → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

# DTC C1691 Back Camera Initialization Incomplete

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when the multi-media module receiver assembly judges that the back camera initial setting has not been memorized (rear television camera optical axis adjustment is incomplete).

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1691 | Back camera initial setting has not been memorized | • Rear television camera optical axis adjustment<br>• Multi-media module receiver assembly |

## INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the multi-media module receiver assembly after disconnecting the cable from the negative (-) battery terminal, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system (w/o Side Monitor System) may be needed (Click here).**

### 1.ADJUST SETTINGS (CAMERA POSITION SETTING)

a. Perform the following procedure depending on the memory conditions to register the vehicle information into the multi-media module receiver assembly.

i. Refer to rear television camera optical axis adjustment ( Click here).

**NEXT**

### 2.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**
**DTC C1691 is not output.**

**HINT:**

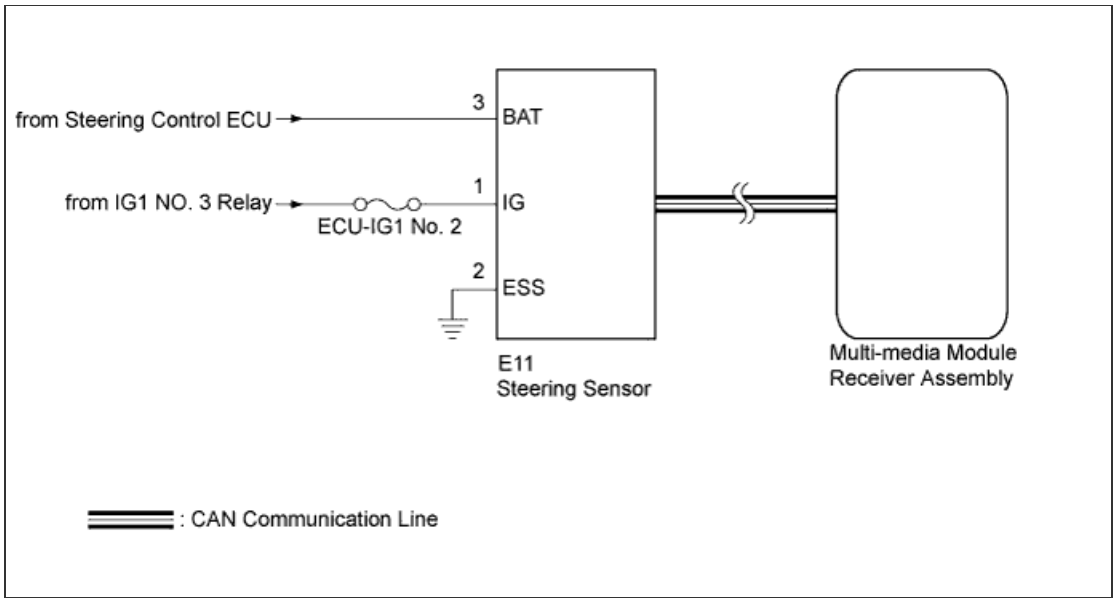
- **If DTC C1691 is output, perform the rear television camera assembly optical axis adjustment again.**
- **If DTC C1691 is still output after performing the rear television camera assembly optical axis adjustment 3 times, replace the multi-media module receiver assembly.**

**NG** → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

**OK**

### END (SETTINGS ARE DEFECTIVE)

## DTC C1625 Open or Short in Steering Angle Sensor +B



**for Preparation** Click here

### DESCRIPTION

This DTC is stored if the multi-media module receiver assembly receives a signal via CAN communication from the steering sensor that indicates a power supply problem.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1625 | Open or short in steering angle sensor +B | • Harness or connector<br>• Steering sensor |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

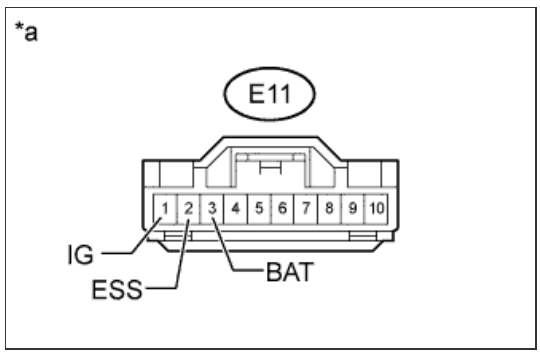
**NOTICE:**

- **Since the parking assist monitor system (w/o Side Monitor System) has functions that use CAN communication system, first confirm that there is no malfunction in the communication system by inspecting the CAN communication functions in accordance with the "How to Proceed with Troubleshooting" procedures. Then, conduct the following inspection procedure.**
- **When "System initializing" is displayed on the multi-media module receiver assembly after disconnecting the cable from the negative (-) battery terminal, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system (w/o Side Monitor System) may be needed (Click here).**
- **Inspect the fuses for circuits related to this system before performing the following inspection procedure.**

#### 1.CHECK HARNESS AND CONNECTOR (STEERING SENSOR - BATTERY AND BODY GROUND)

a. Disconnect the steering sensor connector.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| E11-2 (ESS) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|

| | | |
|---|---|---|
| E11-1 (IG) - E11-2 (ESS) | Engine switch on (IG) | 11 to 14 V |
| E11-3 (BAT) - E11-2 (ESS) | Always | 11 to 14 V |

**Text in Illustration**

| | |
|---|---|
| *a | Front view of wire harness connector (to Steering Sensor) |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE STEERING SENSOR (Click here)

# DTC C1694 Steering Angle Initialization Incomplete

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when the multi-media module receiver assembly judges that the maximum steering angle has not been memorized (steering angle setting is incomplete).

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1694 | Maximum steering angle has not been memorized | • Steering angle setting<br>• Multi-media module receiver assembly |

## INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the multi-media module receiver assembly after disconnecting the cable from the negative (-) battery terminal, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system (w/o Side Monitor System) may be needed (Click here).**

### 1.PERFORM SETTINGS (STEERING ANGLE SETTING)

a. Perform the following procedure depending on the memory conditions to register the vehicle information into the multi-media module receiver assembly.

   i. Refer to steering angle setting (Click here).

**NEXT**

### 2.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**
**C1694 is not output.**

**HINT:**

- **If DTC C1694 is output, perform the steering angle setting again.**
- **If DTC C1694 is still output after performing the steering angle setting 3 times, replace the multi-media module receiver assembly.**

**NG** → **REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)**

**OK**

**END (SETTINGS ARE DEFECTIVE)**

# DTC C1626 Steering Angle Sensor Failure

**for Preparation** Click here

## DESCRIPTION

This DTC is stored if the multi-media module receiver assembly receives a signal via CAN communication from the steering sensor that indicates an internal malfunction.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1626 | A fail flag is transmitted from the steering angle sensor. | • Steering sensor<br>• Multi-media module receiver assembly |

## INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the multi-media module receiver assembly after disconnecting the cable from the negative (-) battery terminal, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system (w/o Side Monitor System) may be needed (Click here).**

**1.REPLACE STEERING SENSOR**

a. Replace the steering sensor with a normally functioning one ( Click here).

**NEXT**

**2.CHECK FOR DTC**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**
**DTC C1626 is not output.**

**NG** → **REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)**

**OK**

**END (STEERING SENSOR IS DEFECTIVE)**

## DTC U0126 Lost Communication with Steering Angle Sensor Module

## DTC U0130 Lost Communication with Steering Effort Control Module

## DTC U0140 Lost Communication with Body Control Module

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored if there is a malfunction in the CAN communication system connected to the multi-media module receiver assembly.

**HINT:**

If CAN communication system DTCs are stored, they may also be stored in other systems.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| U0126 | Lost communication with steering angle sensor | CAN communication system |
| U0130 | Lost Communication with Steering Effort Control Module | |
| U0140 | Lost communication with body control module (multiplex network body ECU) | |

### INSPECTION PROCEDURE

**1.CHECK FOR DTC**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**

**CAN DTCs are not output.**

**HINT:**

- **If CAN communication system DTCs are stored, they may also be stored in other systems.**
- **If the CAN communication system has been inspected and repaired in other systems, the DTCs will not be output when rechecking for DTCs.**
- **If these DTCs are output frequently, duplicate the conditions that cause the problem symptoms and perform the inspection again, even though the DTC was not output when rechecking for DTCs (Click here).**

**NG** → Go to CAN COMMUNICATION SYSTEM (Click here)

**OK**

USE SIMULATION METHOD TO CHECK (Click here)

## DTC C1649 Lost Communication with VGRS ECU

**for Preparation** Click here

### DESCRIPTION

This DTC is stored if the multi-media module receiver assembly receives a signal via CAN communication from the steering control ECU that indicates an internal malfunction.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1649 | Variable gear ratio steering system malfunction. | Variable gear ratio steering system |

### INSPECTION PROCEDURE

**1.CHECK FOR DTC (VARIABLE GEAR RATIO STEERING SYSTEM)**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**
**DTC C1649 is not output.**

**NG** → **Go to VARIABLE GEAR RATIO STEERING SYSTEM (Click here)**

**OK**

**USE SIMULATION METHOD TO CHECK (Click here)**

## DTC U0126 Lost Communication with Steering Angle Sensor Module

## DTC U0130 Lost Communication with Steering Effort Control Module

## DTC U0140 Lost Communication with Body Control Module

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored if there is a malfunction in the CAN communication system connected to the multi-media module receiver assembly.

**HINT:**

If CAN communication system DTCs are stored, they may also be stored in other systems.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| U0126 | Lost communication with steering angle sensor | CAN communication system |
| U0130 | Lost Communication with Steering Effort Control Module | |
| U0140 | Lost communication with body control module (multiplex network body ECU) | |

### INSPECTION PROCEDURE

**1.CHECK FOR DTC**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**

**CAN DTCs are not output.**

**HINT:**

- **If CAN communication system DTCs are stored, they may also be stored in other systems.**
- **If the CAN communication system has been inspected and repaired in other systems, the DTCs will not be output when rechecking for DTCs.**
- **If these DTCs are output frequently, duplicate the conditions that cause the problem symptoms and perform the inspection again, even though the DTC was not output when rechecking for DTCs (Click here).**

**NG** → Go to CAN COMMUNICATION SYSTEM (Click here)

**OK**

USE SIMULATION METHOD TO CHECK (Click here)

# DTC C168D Vehicle Information Unmatched

**for Preparation** Click here

## DESCRIPTION

This DTC is stored if the multi-media module receiver assembly judges as a result of its self check that the vehicle information received via CAN communication and the vehicle information stored in the multi-media module receiver assembly do not match.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C168D | Vehicle Information Unmatched | • Back camera position setting<br>• Steering angle setting<br>• Multi-media module receiver assembly |

## INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the display and navigation module display after the battery terminal disconnected, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system (w/o Side Monitor System) may be needed (Click here).**

### 1.PERFORM SETTINGS (BACK CAMERA POSITION SETTING, STEERING ANGLE SETTING)

a. Perform the following to register the vehicle information into the multi-media module receiver assembly.

i. Refer to Back Camera Position Setting (Click here).

ii. Refer to Steering Angle Setting (Click here).

**NEXT**

### 2.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**
**DTC C168D is not output.**

**HINT:**

- **If DTC C168D is output, perform the procedure to allow the multi-media module receiver assembly to store the vehicle information again.**
- **If DTC C168D is still output after performing the procedure to make the multi-media module receiver assembly store the vehicle information 3 times, replace the multi-media module receiver assembly.**

**NG** → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

**OK**

### END (SETTINGS ARE DEFECTIVE)

## DTC U0126 Lost Communication with Steering Angle Sensor Module

## DTC U0130 Lost Communication with Steering Effort Control Module

## DTC U0140 Lost Communication with Body Control Module

**for Preparation** Click here

### DESCRIPTION

These DTCs are stored if there is a malfunction in the CAN communication system connected to the multi-media module receiver assembly.

**HINT:**

If CAN communication system DTCs are stored, they may also be stored in other systems.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| U0126 | Lost communication with steering angle sensor | CAN communication system |
| U0130 | Lost Communication with Steering Effort Control Module | |
| U0140 | Lost communication with body control module (multiplex network body ECU) | |

### INSPECTION PROCEDURE

**1.CHECK FOR DTC**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**

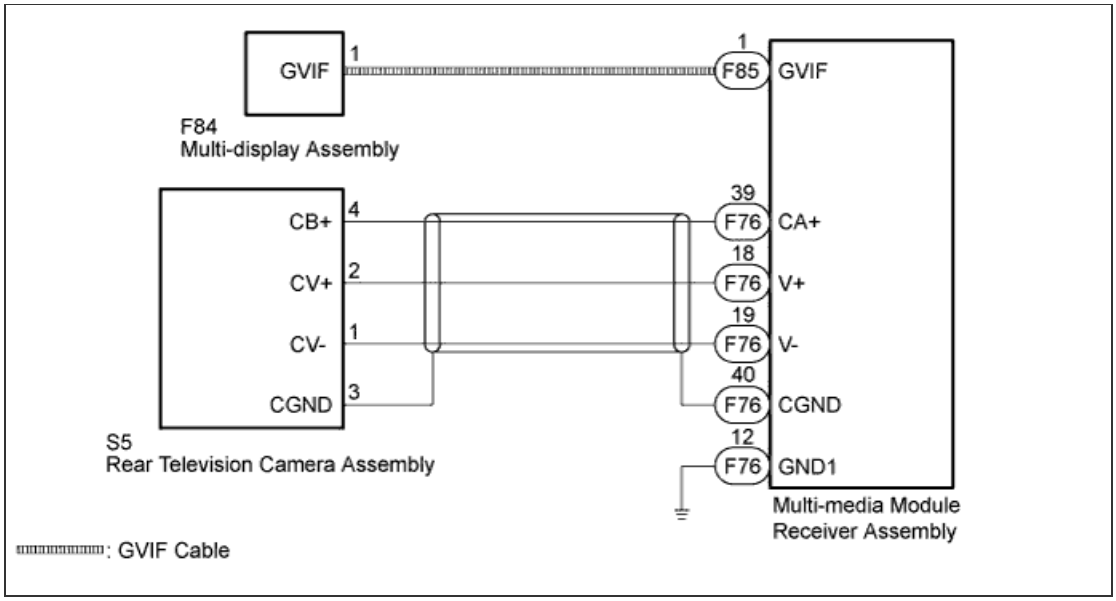
**CAN DTCs are not output.**

**HINT:**

- **If CAN communication system DTCs are stored, they may also be stored in other systems.**
- **If the CAN communication system has been inspected and repaired in other systems, the DTCs will not be output when rechecking for DTCs.**
- **If these DTCs are output frequently, duplicate the conditions that cause the problem symptoms and perform the inspection again, even though the DTC was not output when rechecking for DTCs (Click here).**

**NG** → Go to CAN COMMUNICATION SYSTEM (Click here)

**OK**



USE SIMULATION METHOD TO CHECK (Click here)

**for Preparation** Click here

## DESCRIPTION

The video signal from the rear television camera assembly is transmitted to the multi-media module receiver assembly.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the multi-media module receiver assembly after disconnecting the cable from the negative (-) battery terminal, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system (w/o Side Monitor System) may be needed (Click here).**

**HINT:**

Images may be unclear even in normal conditions if:

- **Noise may occur in the image during power back door operation. (w/ Power Back Door System)**
- **Electrical devices are used in the cabin (noise may occur in the image).**
- **Accessories that generate radio waves have been installed (noise may occur in the image).**
- **The outer mirror switch assembly is operated (noise may occur in the image).**
- **The camera lens is frosted over (the image immediately after turning the engine switch on (IG) may be blurred or darker than normal).**
- **The camera lens is dirty with snow, mud, etc.**
- **A strong beam of light, such as a sunbeam or headlight, hits the camera.**
- **It is too dark around the camera (at night etc.).**
- **The ambient temperature around the camera is either too high or too low.**
- **The vehicle is tilted at a steep angle.**
- **The rear television camera assembly lens is scratched.**
- **The rear television camera assembly lens has drops of water on it or the humidity is high.**
- **When the camera is used under fluorescent lights, sodium lights, or mercury lights etc., the lights and the illuminated area may appear to flicker.**
- **The ambience of the camera is too bright. (When a strong light, such as a sunbeam reflected off the vehicle body, hits the camera, the image may be blurred. This is called the "SMEAR" phenomenon, particular to the CCD camera.)**

### 1.CHECK HARNESS AND CONNECTOR (MULTI-MEDIA MODULE RECEIVER ASSEMBLY - REAR TELEVISION CAMERA ASSEMBLY AND BODY GROUND)

a. Disconnect the F76 multi-media module receiver assembly connector.

b. Disconnect the S5 rear television camera assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-18 (V+) - S5-2 (CV+) | Always | Below 1 Ω |
| F76-19 (V-) - S5-1 (CV-) | Always | Below 1 Ω |
| F76-39 (CA+) - S5-4 (CB+) | Always | Below 1 Ω |
| F76-40 (CGND) - S5-3 (CGND) | Always | Below 1 Ω |
| F76-12 (GND1) - Body ground | Always | Below 1 Ω |
| F76-18 (V+) - Body ground | Always | 10 kΩ or higher |
| F76-19 (V-) - Body ground | Always | 10 kΩ or higher |
| F76-39 (CA+) - Body ground | Always | 10 kΩ or higher |
| F76-40 (CGND) - Body ground | Always | 10 kΩ or higher |

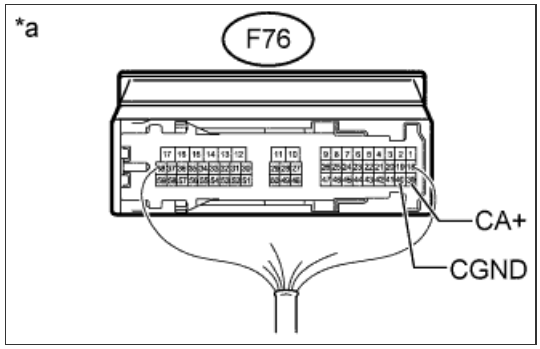
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 2.CHECK MULTI-MEDIA MODULE RECEIVER ASSEMBLY (CA+, CGND)

a. Reconnect the multi-media module receiver assembly connector.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

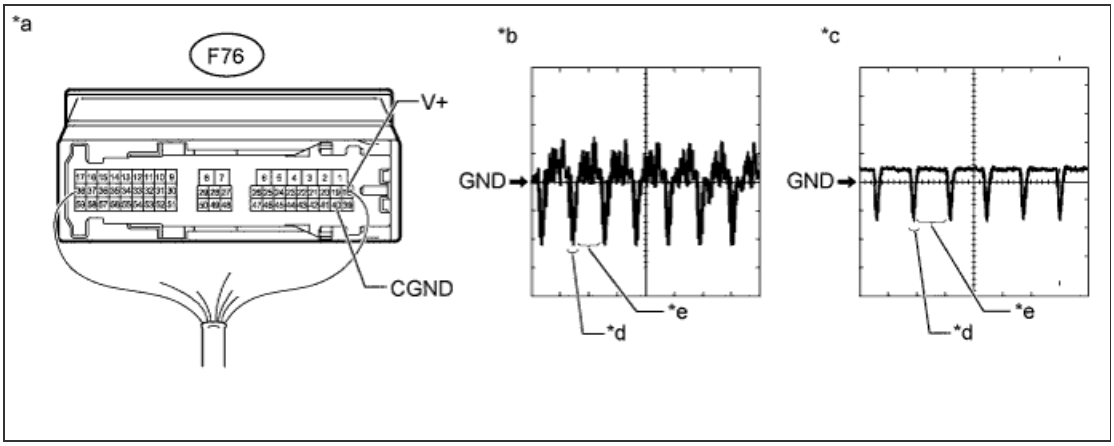
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-40 (CGND) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F76-39 (CA+) - F76-40 (CGND) | Engine switch on (IG), shift lever in R | 5.5 to 7.05 V |

**Text in Illustration**



| | |
|---|---|
| *a | Component with harness connected (Multi-media Module Receiver Assembly) |

NG → REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

OK

## 3.CHECK REAR TELEVISION CAMERA ASSEMBLY (CV+, CGND)

a. Reconnect the S5 rear television camera assembly connector.

**Text in Illustration**

| | | | |
|---|---|---|---|
| *a | Component with harness connected (Multi-media Module Receiver Assembly) | *b | Waveform A |
| *c | Waveform B | *d | Synchronization Signal |
| *e | Video Waveform | - | - |

b. Check the waveform of the rear television camera assembly using an oscilloscope.

**HINT:**

- **A waterproof connector is used for the rear television camera assembly. Therefore, inspect the waveform at the multi-media module receiver assembly with the connector connected.**
- **The video waveform changes according to the image sent by the rear television camera assembly.**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F76-18 (V+) - F76-40 (CGND) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |

## DESCRIPTION

The multi-media module receiver assembly receives back door lock assembly open/close signals from the main body ECU (cowl side junction block LH) via CAN communication. When the back door is open, the camera aiming cannot be adjusted correctly because the rear television camera assembly is installed on the back door. Therefore, when adjusting the camera aiming calibration while the back door is open, a back door open warning message will be displayed on the screen and camera aiming adjustment will be canceled.

**HINT:**

The back door lock assembly is connected to the main body ECU (cowl side junction block LH) by the vehicle wire harness.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

- **Since the parking assist monitor system (w/o Side Monitor System) has functions that use CAN communication system, first confirm that there is no malfunction in the communication system by inspecting the CAN communication functions in accordance with the "How to Proceed with Troubleshooting" procedures. Then, conduct the following inspection procedure.**
- **When "System initializing" is displayed on the multi-media module receiver assembly after disconnecting the cable from the negative (-) battery terminal, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the parking assist monitor system (w/o Side Monitor System) may be needed (Click here).**

### 1.READ VALUE USING INTELLIGENT TESTER (BACK DOOR COURTESY SWITCH)

a. Use the Data List to check if the back door courtesy switch is functioning properly ( Click here).

**Main Body**

| Tester Display | Measurement Item/Range | Normal Condition | Diagnostic Note |
|---|---|---|---|
| Back Door Courtesy SW | Back door courtesy light switch signal/ON or OFF | ON: Back door open<br>OFF: Back door closed | - |

**OK:**

**The back door courtesy switch functions as specified in the normal condition column.**

**NG** → **Go to step 2**

**OK**

REPLACE MULTI-MEDIA MODULE RECEIVER ASSEMBLY (Click here)

2.CHECK HARNESS AND CONNECTOR (BACK DOOR LOCK ASSEMBLY - MAIN BODY ECU [COWL SIDE JUNCTION BLOCK LH] AND BODY GROUND)

a. Disconnect the S1*1 or S19*2 back door lock assembly connector.

*1: w/o Power Back Door System
*2: w/ Power Back Door System

b. Disconnect the E2 main body ECU (cowl side junction block LH) connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**w/o Power Back Door System:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| S1-3 (+) - E2-25 (BCTY) | Always | Below 1 Ω |
| S1-3 (+) - Body ground | Always | 10 kΩ or higher |
| S1-1 (ACT-) - Body ground | Always | Below 1 Ω |

**w/ Power Back Door System:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| S19-3 (CTY) - E2-25 (BCTY) | Always | Below 1 Ω |
| S19-3 (CTY) - Body ground | Always | 10 kΩ or higher |
| S19-4 (E) - Body ground | Always | Below 1 Ω |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3.INSPECT BACK DOOR LOCK ASSEMBLY

a. Remove the back door lock assembly (Click here).

b. Inspect the back door lock assembly (Click here).

NG → REPLACE BACK DOOR LOCK ASSEMBLY (Click here)

OK

REPLACE MAIN BODY ECU (COWL SIDE JUNCTION BLOCK LH)

**for Preparation** Click here

## 1.PRECAUTIONS FOR WIDE VIEW FRONT MONITOR SYSTEM

a. Handling precautions:

i. The wide view front monitor system may not function properly if the camera is subjected to strong shocks, such as striking it, etc.

ii. Scrubbing the lens of the camera may scratch the cover and affect the image.

iii. If waxes or similar compounds adhere to the camera, it is necessary to clean the camera off immediately and wash it with water.

iv. The wide view front monitor system may not function properly if the camera is subjected to sudden temperature changes, such as applying hot water on it when it is cold.

v. If there is condensation, snow, mud, etc. on the camera, wash it with water and wipe it with a soft cloth. If the camera is excessively dirty, wash it with a mild detergent.

b. The system may not operate properly under the following conditions:

i. When driving on frozen, slippery, or snowy roads.

ii. When using tire chains or the spare tire.

iii. When the hood or front passenger door are not completely closed.

iv. When driving on an uneven road that has slopes, bumps, or gravel, etc.

c. Even if the camera is functioning properly, the image may not be clear under the following conditions:

i. When the camera is cold (the image is darker than normal).

ii. When the camera is in a dark area (such as at night).

iii. When the camera is exposed to very high or very low temperatures.

iv. When the vehicle or road is slanted (there is left-right image displacement).

v. As a result of the brightness of the ambient lighting (the image brightness differs between the right and left).

**HINT:**

- **When a strong light (such as when sunlight is reflected off a vehicle body) hits the camera, vertical streaks, a phenomenon peculiar to the camera, may appear in the image.**
- **In order to position the camera, a portion of the vehicle appears in the wide view front monitor image. This is not a malfunction.**
- **Light from buildings or the taillights of vehicles may be reflected in the image when driving at night. This is not a malfunction.**

**for Preparation** Click here

## 1.PRECAUTION FOR DISCONNECTING CABLE FROM NEGATIVE BATTERY TERMINAL

**NOTICE:**

- **After the engine switch is turned off, the display and navigation module display records various types of memory and settings. As a result, after turning the engine switch off, make sure to wait for the time specified in the following table before disconnecting the cable from the negative (-) battery terminal.**

**Waiting Time before Disconnecting Cable from Negative (-) Battery Terminal**

| Specification | Waiting Time |
|---|---|
| w/o Telematics transceiver | 60 sec. |
| w/ Telematics transceiver | 120 sec. |

## 2.POINTS TO NOTE WHEN SERVICING

a. Pay attention to the following points when servicing.

i. When disconnecting the cable from the negative (-) battery terminal, "System initializing" may appear on the display and navigation module display. In this case, restore the steering angle neutral point (Click here).

ii. Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems may be needed.

| Location Operation is Performed | Adjustment Item | Proceed to |
|---|---|---|
| Replacement parking assist ECU | Parking assist ECU initialization | Click here |

iii. When the lens of the front television camera assembly is dirty, wash the lens with water and wipe it off with a soft cloth to obtain clear images. For heavy dirt, use neutral detergent to clean the lens.

## 3.NOTES FOR FRONT TELEVISION CAMERA

a. Notes for the front television camera assembly

i. The front monitor system may not function properly if subjected to a severe blow by any hard object.

ii. Do not scrub the outer casing of the camera (made of transparent resin). Scrubbing may scratch the lens and affect the image. Prevent organic solvents, waxes, bond removing solvents or glass coating from adhering to the lens. If such material adheres to the lens, clean it off immediately and wash with water.

iii. Exposing the camera to a sudden temperature change may affect proper functioning of the camera.

iv. A clear image may not appear if the camera is dirty with snow, mud, etc. In that case, wash it with water and wipe off the lens. Use a detergent to remove dirt if necessary.

b. Images can be difficult to discern even in normal conditions. For example:

i. Noise may occur in the image depending on electrical devices used in the cabin.

ii. Noise may occur in the image if accessories that generate radio waves have been installed.

iii. The camera screen is extremely cold (the image immediately after turning the engine switch on (IG) may be blurred or darker than normal).

iv. The camera lens is dirty with snow, mud, etc.

v. A strong beam of light, such as a sunbeam or headlight, hits the camera.

vi. It is too dark around the camera (at night etc.).

vii. The ambient temperature around the camera is either too high or too low.

viii. The vehicle is tilted at a steep angle.

ix. The ambience of the camera is too bright. (When a strong light, such as a sunbeam reflected off the vehicle body, hits the camera,

the image may be blurred. This is called the "SMEAR" phenomenon, peculiar to the CCD camera.)

x. The camera lens is damaged by plying stones.

**for Preparation** Click here

## 1.POINTS TO NOTE WHEN SERVICING

a. Pay attention to the following points when servicing.

i. When disconnecting the cable from the negative (-) battery terminal, "System initializing" may appear on the multi-display assembly. In this case, restore the steering angle neutral point (Click here).

ii. Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems may be needed.

| Location Operation is Performed | Adjustment Item | Proceed to |
|---|---|---|
| Replacement parking assist ECU | Parking assist ECU initialization | Click here |

iii. When the lens of the front television camera assembly is dirty, wash the lens with water and wipe it off with a soft cloth to obtain clear images. For heavy dirt, use neutral detergent to clean the lens.

## 2.NOTES FOR FRONT TELEVISION CAMERA

a. Notes for the front television camera assembly

i. The front monitor system may not function properly if subjected to a severe blow by any hard object.

ii. Do not scrub the outer casing of the camera (made of transparent resin). Scrubbing may scratch the lens and affect the image. Prevent organic solvents, waxes, bond removing solvents or glass coating from adhering to the lens. If such material adheres to the lens, clean it off immediately and wash with water.

iii. Exposing the camera to a sudden temperature change may affect proper functioning of the camera.

iv. A clear image may not appear if the camera is dirty with snow, mud, etc. In that case, wash it with water and wipe off the lens. Use a detergent to remove dirt if necessary.

b. Images can be difficult to discern even in normal conditions. For example:

i. Noise may occur in the image depending on electrical devices used in the cabin.

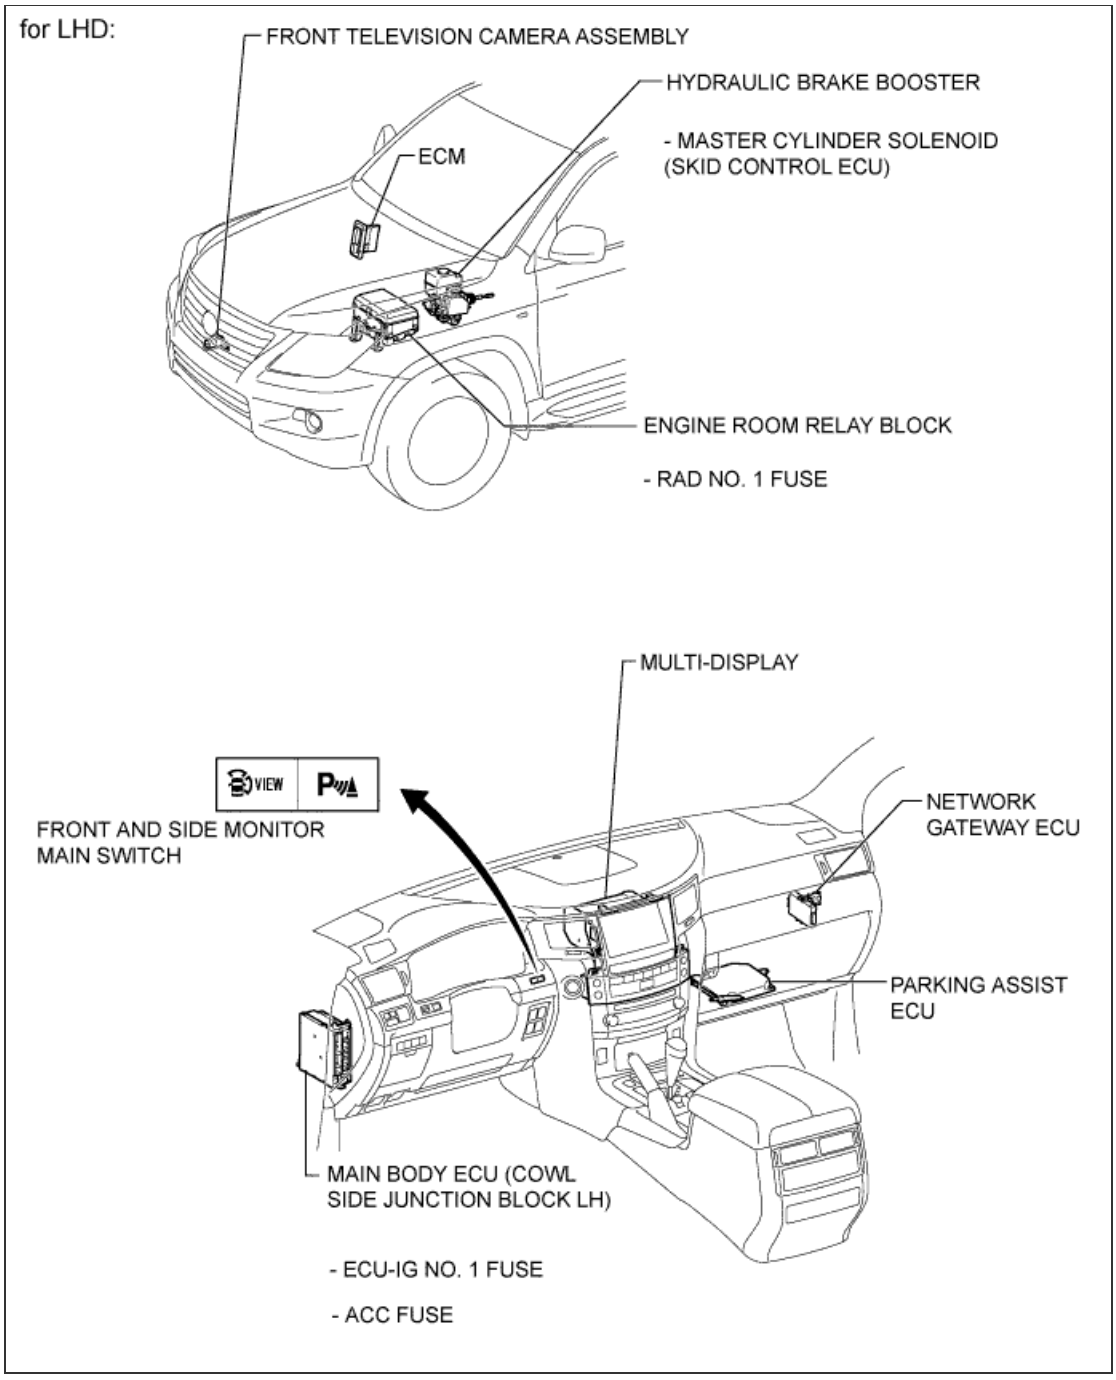
ii. Noise may occur in the image if accessories that generate radio waves have been installed.

iii. The camera screen is extremely cold (the image immediately after turning the engine switch on (IG) may be blurred or darker than normal).

iv. The camera lens is dirty with snow, mud, etc.

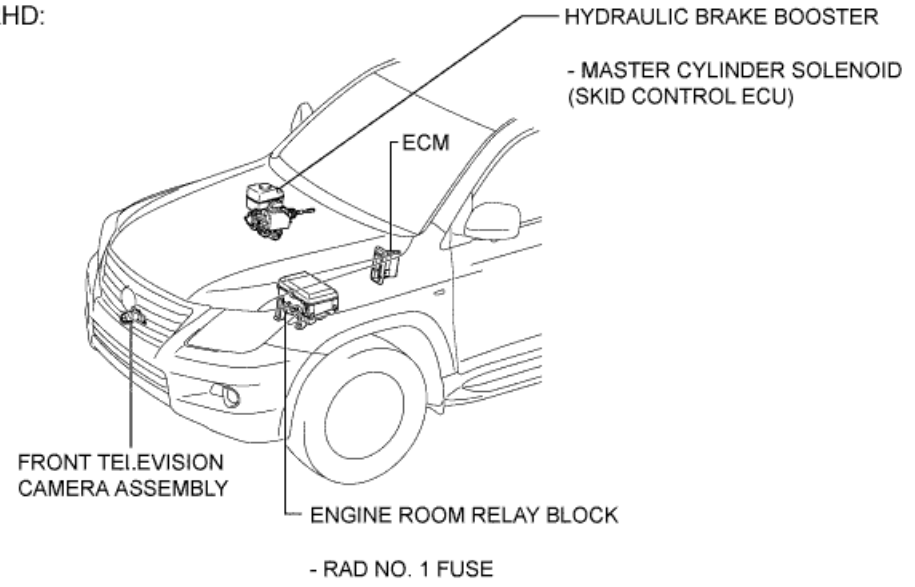
v. A strong beam of light, such as a sunbeam or headlight, hits the camera.

vi. It is too dark around the camera (at night etc.).



vii. The ambient temperature around the camera is either too high or too low.

viii. The vehicle is tilted at a steep angle.



ix. The ambience of the camera is too bright. (When a strong light, such as a sunbeam reflected off the vehicle body, hits the camera, the image may be blurred. This is called the "SMEAR" phenomenon, particular to the CCD camera.)

## WIDE VIEW FRONT MONITOR SYSTEM DESCRIPTION

a. The wide view front monitor system is controlled by the parking assist ECU. This system is equipped with a front television camera in the front radiator grille. Images from the camera are displayed on the display screen to inform the driver of conditions ahead, shorten the amount the vehicle has to enter an intersection, etc.

## FUNCTION OF COMPONENTS

a. The wide view front monitor system operates by controlling the components listed below.

| Components | Function |
|---|---|
| Front television camera | Equipped in the front radiator grille and sends images to the parking assist ECU. |
| Parking assist ECU | Receives image signals and sends these signals to the multi-display to display the view in front of the vehicle on the screen. |
| Front and side monitor main switch | When auto-display mode is not set and the vehicle speed is approximately 12 km/h (7 mph) or less, by pressing the main switch, the display changes from the displayed screen to the wide view front and side monitor simultaneous display screen.<br><br>**HINT:**<br>• **When the vehicle speed is approximately 12 km/h (7 mph) or less, auto-display mode is not set, the front and side monitor main switch is on, and the shift lever is in R, only the wide view front and side monitor simultaneous display screen will be displayed. The display will not change to the wide view front monitor display screen or side monitor display screen.**<br>• **While the wide view front monitor display screen is displayed, if the DISP switch is pressed, the vehicle speed exceeds the display permission vehicle speed (approximately 12 km/h (7 mph) or less), or the shift lever is moved to R and the screen changes to the rear view monitor, the display changes in the following order the next time the wide view front and side monitor simultaneous display screen is displayed: wide view front and side monitor simultaneous display screen → wide view front monitor display screen → side monitor display screen.**<br>• **While the side monitor display screen is displayed, if the DISP switch is pressed, the vehicle speed exceeds the display permission vehicle speed (approximately 12 km/h (7 mph) or less), or the shift lever is moved to R and the screen changes to the rear view monitor, the display changes in the following order the next time the wide view front and side monitor simultaneous screen is displayed: wide view front and side monitor simultaneous display screen → side monitor display screen → wide view front monitor display screen.** |
| Skid control ECU | Receives vehicle speed signals from the vehicle speed sensor and transmits these signals to the parking assist ECU using the CAN communication line. |
| Multi-display | Receives front television camera display signals from the parking assist ECU, and displays the camera image on the display screen. |
| ECM | Sends shift position signals to the parking assist ECU. |
| Network gateway ECU | Performs CAN communication line switching between the ECM and parking assist ECU. |

## WIDE VIEW FRONT MONITOR SYSTEM CONTROL DESCRIPTION

a. Wide view front monitor operation conditions (when auto-display mode is set).

i. When either of the following conditions is met, the wide view front monitor display screen automatically changes to the wide view front and side monitor simultaneous display screen.

| Condition | Engine Switch | AUTO Switch | Vehicle Speed | Shift Lever |
|---|---|---|---|---|
| 1 | On (IG) | On | Decreases to 10 km/h (6 mph) or less from a speed of 12 km/h (7 mph) or more | Moved from P to D or N |
| 2 | On (IG) | On | 12 km/h (7 mph) or less | Moved from R to D or N |

**HINT:**

The AUTO switch is displayed in the bottom left when the wide view front monitor is displayed. Auto-display mode can be set/unset by turning the AUTO switch on/off.

b. Wide view front monitor operation conditions (when auto-display mode is not set).

i. When the following conditions are met and the wide view front and side monitor main switch is pushed, the wide view front monitor display screen changes to the wide view front and side monitor simultaneous display screen.

| Engine Switch | AUTO Switch | Vehicle Speed |
|---|---|---|
| On (IG) | Off | 12 km/h (7 mph) or less |

**for Preparation** Click here

## GENERAL

a. This system has a front television camera assembly to display the front view of the vehicle on the display and navigation module display.

b. This system consists of the following components:

i. Front television camera assembly

ii. Parking assist ECU

iii. Display and navigation module display

iv. Skid Control ECU

v. Front and Side Monitor Main Switch

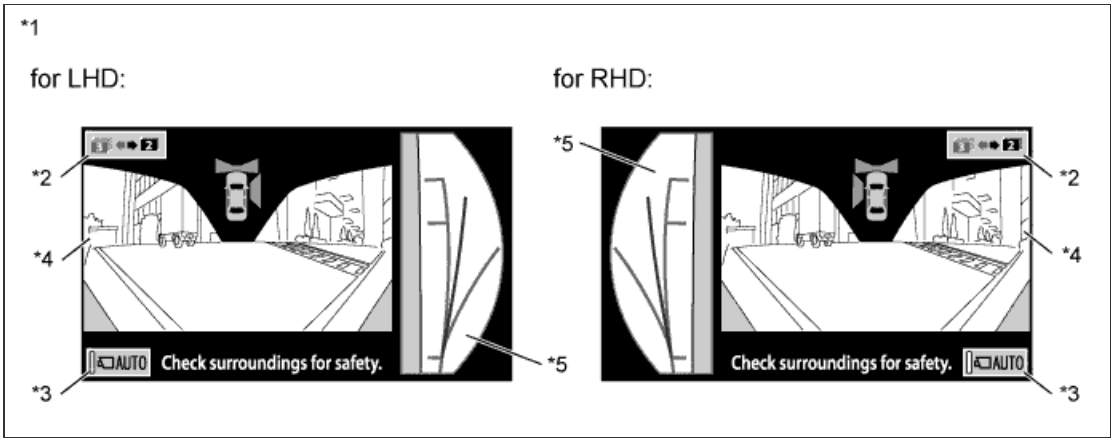
- Steering angle sensor
- ECM
- Steering control ECU *1

*1: w/ Parking Assist Monitor System

c. This system is equipped with a self-diagnosis system, which is operated on a designated window that appears on the display panel, just as in the navigation system.

## FUNCTION OF COMPONENTS

a. The parking assist ECU controls the system by using information from the following components.



| Item | Function |
|---|---|
| Parking assist ECU | • Turns the side television camera assembly on or off based on parameters such as the display settings, the front and side monitor main switch signal, the shift signal and the vehicle speed signal.<br>• Transmits the wide view front and side monitor, side monitor, or wide view front monitor signals to the multi-display based on parameters such as the display settings, the front and side monitor main switch signal, the shift signal and the vehicle speed signal.<br>• Depending on the display settings, renders the output display for the wide view front and side monitor, the side monitor, or the wide view front monitor, and outputs them to the screen of the display and navigation module display.<br>• Renders each configuration page in the diagnosis window and outputs the screen to the display and navigation module display. |
| Front television camera | Generates a video feed showing the front side of the vehicle and transmits the video to the parking assist ECU. |
| Front and side monitor main switch | Operating the switch sends a signal to the parking assist ECU. |
| ECM | Transmits shift position signal, drivetrain signal, engine type signal, and system status signals to the parking assist CPU via CAN communication. |
| Skid control ECU | Transmits vehicle speed signal and system status signals to the parking assist ECU via CAN communication. |
| Display and navigation module display | This touchpanel display is used to view and interact with the wide view front and side monitor, side view monitor, wide view front monitor, and diagnosis screens. |

## OPERATION EXPLANATION

a. The front and side monitor main switch ON signal is sent from the main switch to the parking assist ECU.
After receiving the front and side monitor main switch ON signal, the parking assist ECU switches the display signal for the display and navigation module display from the navigation system to the wide view front monitor system.

## DISPLAY CONDITIONS FOR FRONT MONITOR DISPLAY

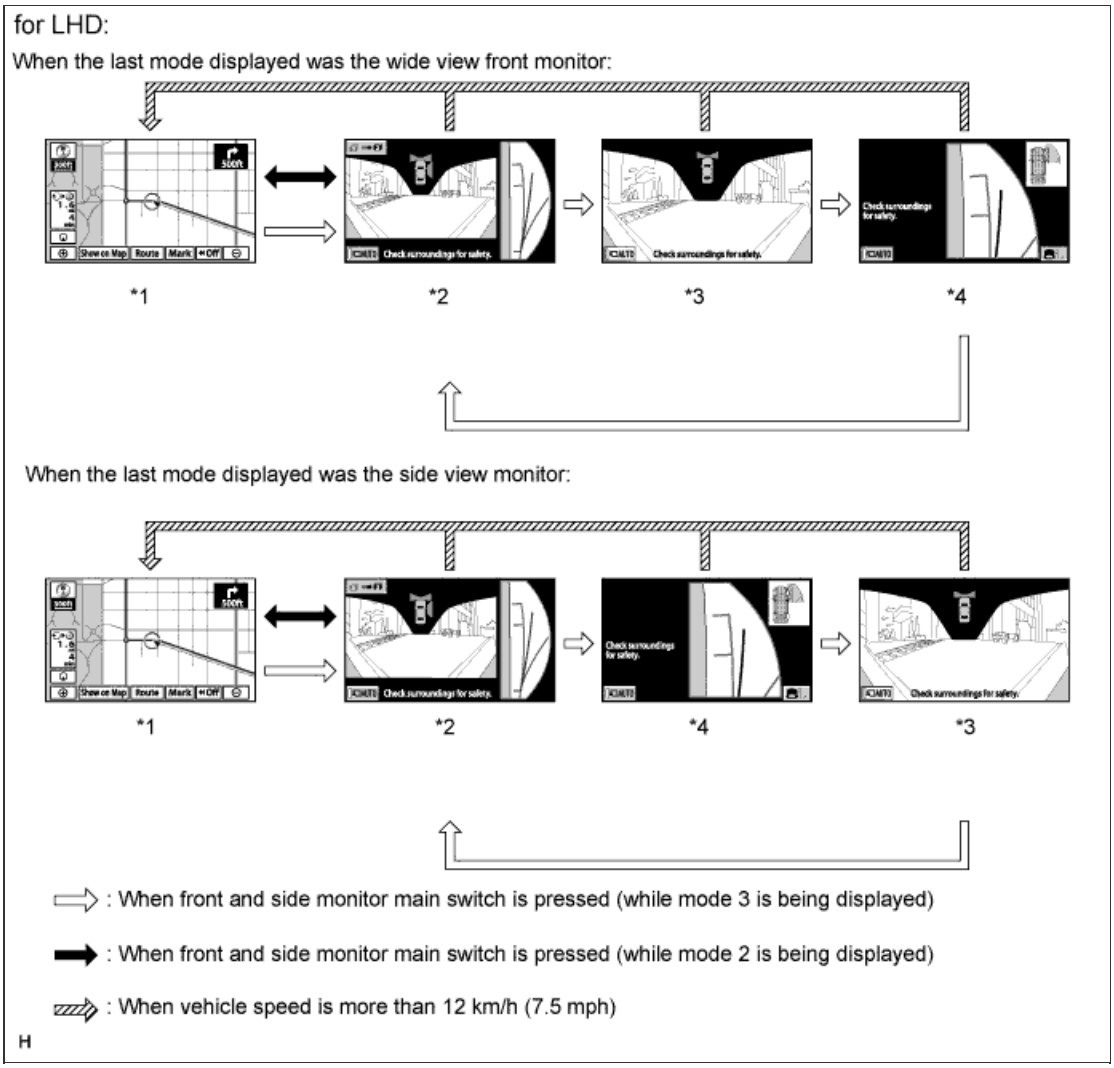
a. Screen display operation

**Text in Illustration**

| | | | |
|---|---|---|---|
| *1 | Wide View Front and Side Monitor Screen | *2 | Change display mode switch<br>(Illustration shows mode 3) |
| *3 | Automatic display mode set/cancel switch<br>(Illustration shows automatic display mode off) | *4 | Wide View Front Monitor Screen |
| *5 | Side Monitor Screen | - | - |

i. After the display conditions have been met while the wide view front monitor system and the side monitor system are operating normally (when no DTCs are output), the wide view front and side monitor screen will be the initial display in both manual and automatic modes.

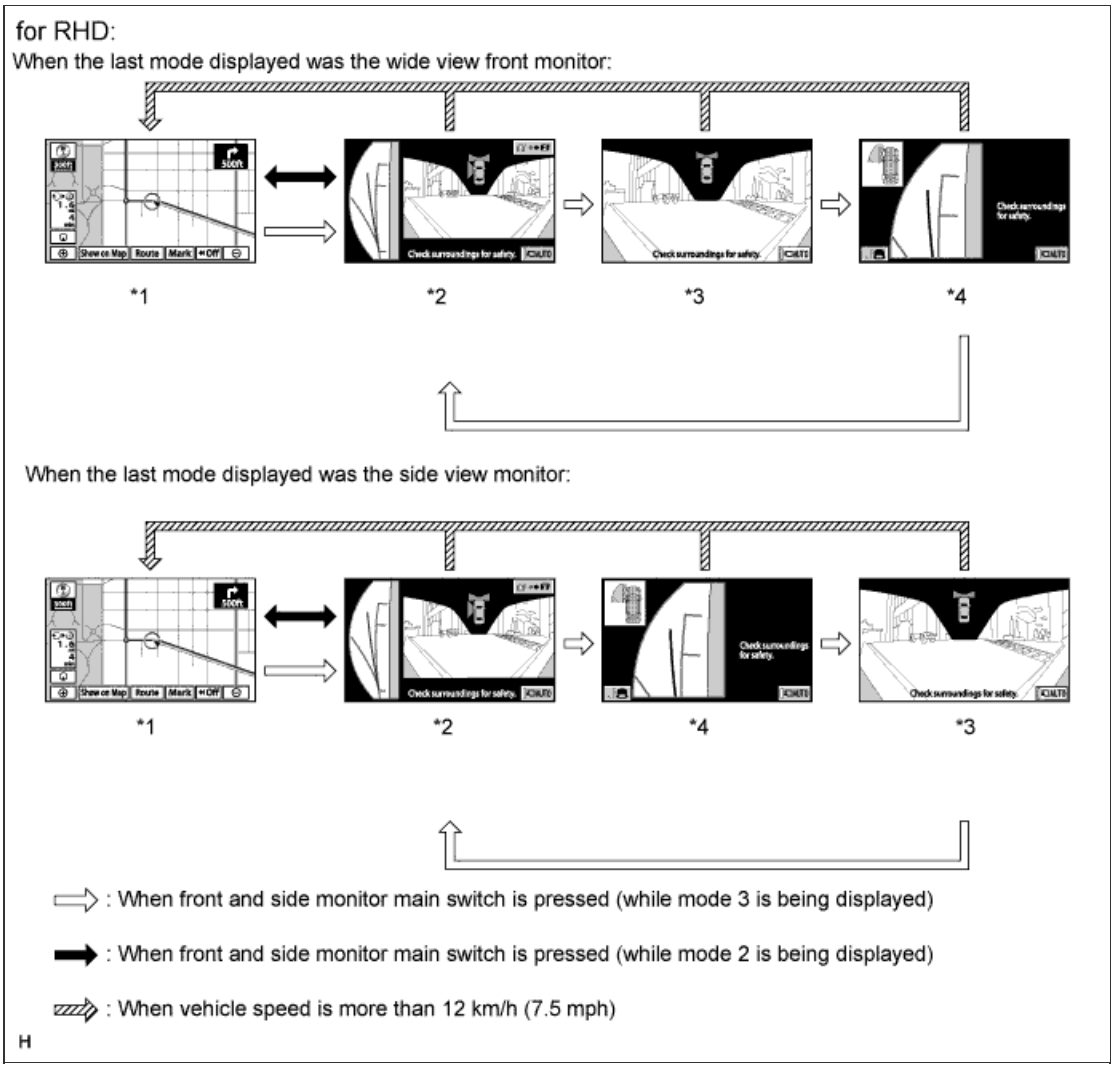
**HINT:**



- **When the shift lever is in a position other than R, and the wide view front and side monitor screen displays the change display mode switch or the automatic mode set / cancel switch, the following operations are possible:**
- **Change display mode button**

| Display Mode | Change Display Mode Switch | Function |
|---|---|---|
| 3 | 3 is grayed out | While the wide view front and side monitor screen is displayed, pressing the front and side monitor main switch will change to either the wide view front monitor or the side view monitor displays (the specific transition will depend on the last mode displayed). |
| 2 | 2 is grayed out | While the wide view front and side monitor screen is displayed, pressing the front and side monitor main switch will change to the navigation screen, the information configuration screen, or similar. |

- **Automatic display mode set/cancel button**



| Automatic mode display button (Indicator in the button) | Display mode |
|---|---|
| ON<br>(Illuminated) | Automatic display mode |
| OFF<br>(Not illuminated) | Manual display mode |

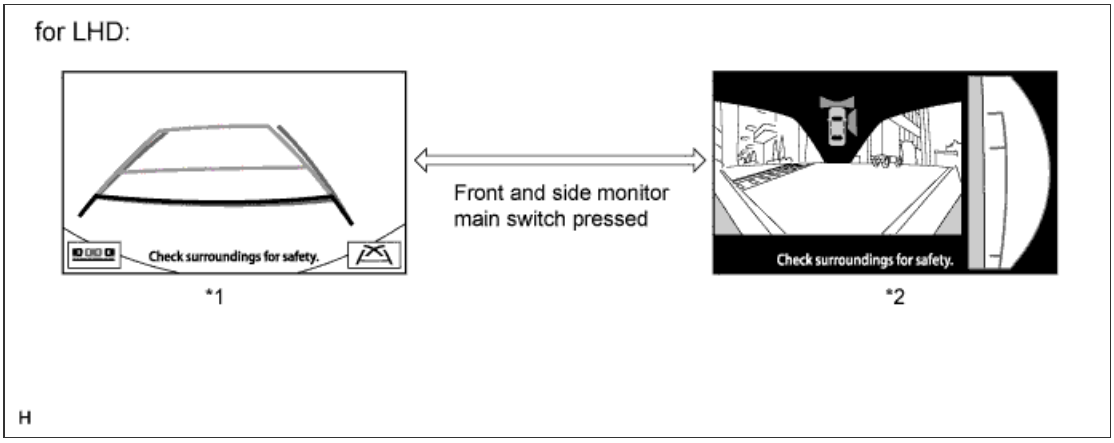
b. Display conditions for manual display mode (Shift lever in a position other than R)

### Text in Illustration

| | | | |
|---|---|---|---|
| *1 | Navigation display etc. | *2 | Wide view front and side monitor screen |
| *3 | Wide view front monitor screen | *4 | Side monitor screen |

**Text in Illustration**

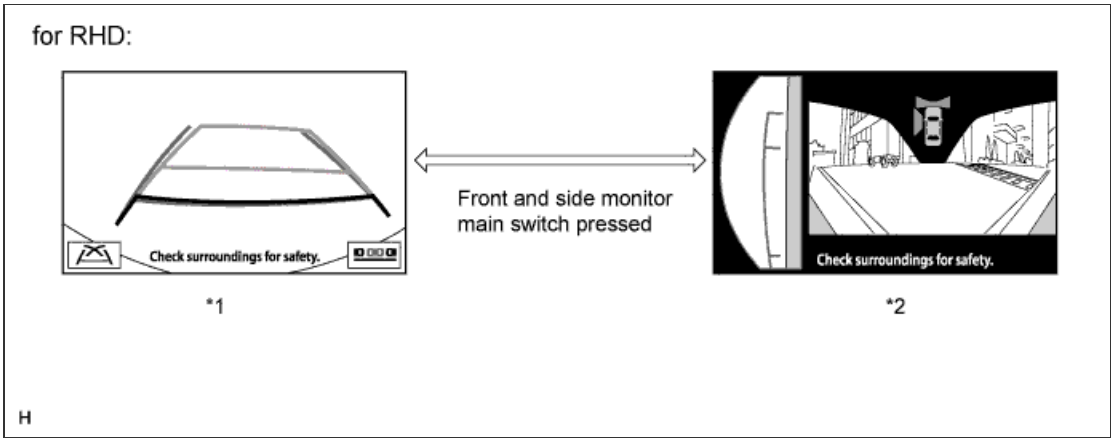
| | | | |
|---|---|---|---|
| *1 | Navigation display etc. | *2 | Wide view front and side monitor screen |
| *3 | Wide view front monitor screen | *4 | Side monitor screen |



i. During manual display mode (shift lever in a position other than R), during IG ON or engine startup (no DTCs are output), if the following conditions have been met, pressing the front and side monitor main switch will change the display mode as follows

| Automatic mode display button | Display and Navigation Module Display Screen | Shift Lever Position | Vehicle Speed | Last Mode Screen | Screen (changes due to front and side monitor main switch operation) |
|---|---|---|---|---|---|
| OFF | Navigation display etc. | Other than R | 12 km/h (7.5 mph) or less | Wide view front monitor display | Navigation display etc. → Wide view front and side monitor display → Wide view front monitor display → Side monitor display → Wide view front and side monitor display |
| OFF | Navigation display etc. | Other than R | 12 km/h (7.5 mph) or less | Side monitor display | Navigation display etc. → Wide view front and side monitor display → Side monitor display → Wide view front monitor display → Wide view front and side monitor display |

**HINT:**



*1: In this case, the side monitor display is in path line deletion mode.

c. Display conditions for manual display mode (Shift lever in R)

**Text in Illustration**

| | | | |
|---|---|---|---|
| *1 | Parking assist monitor display | *2 | Wide view front and side monitor display |

**Text in Illustration**

| | | | |
|---|---|---|---|
| *1 | Parking assist monitor display | *2 | Wide view front and side monitor display |

i. During manual display mode (shift lever in R position), during IG ON or engine startup (no DTCs are output), if the following conditions have been met, pressing the front and side monitor main switch will change the display mode as follows:

| Display and Navigation Module Display Screen | Vehicle Speed | Screen (changes due to front and side monitor main switch operation) |
|---|---|---|
| Parking assist monitor display | 12 km/h (7.5 mph) or less | Parking assist monitor display → Wide view front monitor and side monitor display → Parking assist monitor display |

d. Display conditions for automatic display mode

i. In automatic display mode, the wide view front monitor system automatically changes the displayed image depending on the vehicle conditions while the following conditions are met and the system is operating normally (no DTCs output).

| Vehicle Condition | Display and Navigation Module Display Screen | Shift Position | Vehicle Speed | Screen |
|---|---|---|---|---|
| Stopped → Driving | Navigation display etc. | Except in P or R | 12 km/h (7.5 mph) or less | Navigation display etc. → Wide view front monitor and side monitor display *1 |
| Driving → Stopped | Navigation display etc. | Except in P or R | 10 km/h (6.2 mph) or less | Navigation display etc. → Wide view front monitor and side monitor display *1 |

*1: Screen changes and screen transition conditions after the screen is automatically changed are the same as those for manual display mode (shift lever in a position other than R).

## COMMUNICATION SYSTEM OUTLINE

a. The components of the wide view front monitor system communicate with each other through the AVC-LAN. If a short circuit or open circuit occurs in the AVC-LAN, communication is interrupted and the front monitor system will stop functioning.

## DIAGNOSTIC FUNCTION OUTLINE

a. This wide view front monitor system has a diagnostic function displayed in the display and navigation module display. This function enables the calibration (adjustment and confirmation) of the system (Click here).

b. The system can check the following items by using the intelligent tester.

| Item | Proceed to |
|---|---|
| DTC | Click here |
| Data List / Active Test | Click here |

**for Preparation** Click here

## GENERAL

a. This system has a front television camera assembly to display the front view of the vehicle on the multi-display assembly.

b. This system consists of the following components:

i. Parking assist ECU

ii. Front television camera assembly

iii. Multi-media module receiver assembly

iv. Steering sensor

v. Steering control ECU

vi. Master cylinder solenoid (skid control ECU assembly)

vii. Four wheel drive control ECU

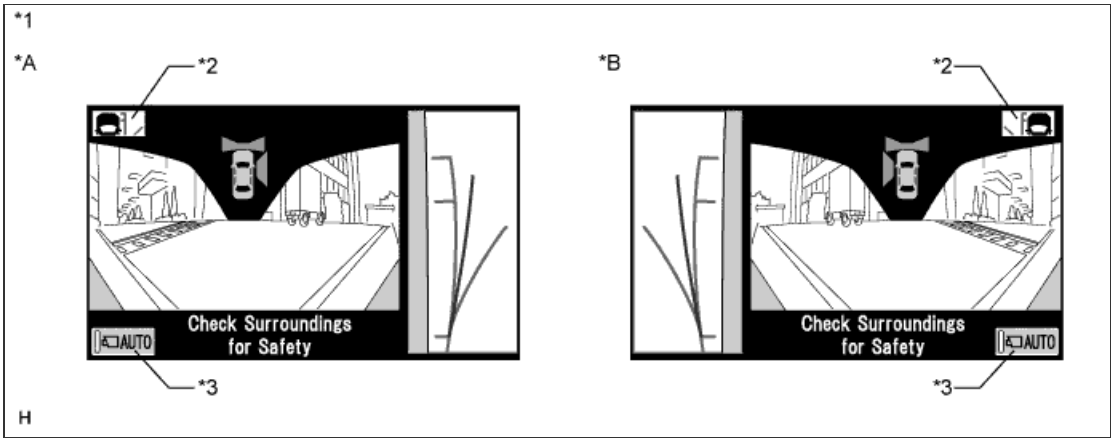
viii. ECM

ix. Front and side monitor main switch assembly

c. This system is equipped with a self-diagnosis system, which is operated on a designated window that appears on the display panel, just as in the navigation system.

## FUNCTION OF COMPONENTS

a. The parking assist ECU controls the system by using information from the following components.



| Item | Function |
|---|---|
| Front Television Camera Assembly | Generates a video feed showing the front side of the vehicle and transmits the video to the parking assist ECU. |
| Front and Side Monitor Main Switch Assembly | Operating the switch sends a signal to the parking assist ECU. |
| Parking Assist ECU | • Turns the side television camera assembly on or off based on parameters such as the display settings, the front and side monitor main switch signal, the shift signal and the vehicle speed signal.<br>• Transmits the wide view front and side monitor, side monitor, or wide view front monitor signals to the multi-media module receiver assembly based on parameters such as the display settings, the front and side monitor main switch signal, the shift signal and the vehicle speed signal.<br>• Depending on the display settings, renders the output display for the wide view front and side monitor, the side monitor, or the wide view front monitor, and outputs them to the screen of the multi-display assembly.<br>• Renders each configuration page in the diagnosis window and outputs the screen to the multi-display assembly. |
| Multi-media Module Receiver Assembly | Communicates with the parking assist ECU through AVC-LAN communication. |
| Multi-display Assembly | This touch panel display is used to view and interact with the wide view front and side monitor, side view monitor, wide view front monitor, and diagnosis screens. |
| Steering Sensor | Detects the angle of the steering wheel and sends the resulting signals to the parking assist ECU through CAN communication. |
| Steering Control ECU | Sends the VGRS relative angle and vehicle condition to the parking assist ECU through CAN communication. |
| Master Cylinder Solenoid (Skid Control ECU Assembly) | Sends the inner brake information and ABS ACT information to the parking assist ECU through CAN communication. |
| Four Wheel Drive Control ECU | Sends the L4 condition signal to the parking assist ECU through CAN communication. |
| ECM | Sends the vehicle condition, 2WD/4WD information and shift position information to the parking assist ECU through CAN communication. |

## OPERATION EXPLANATION

a. The front and side monitor main switch ON signal is sent from the main switch to the parking assist ECU.
After receiving the front and side monitor main switch ON signal, the parking assist ECU switches the display signal for the display and navigation module display from the navigation system to the wide view front monitor system.

## DISPLAY CONDITIONS FOR FRONT MONITOR DISPLAY

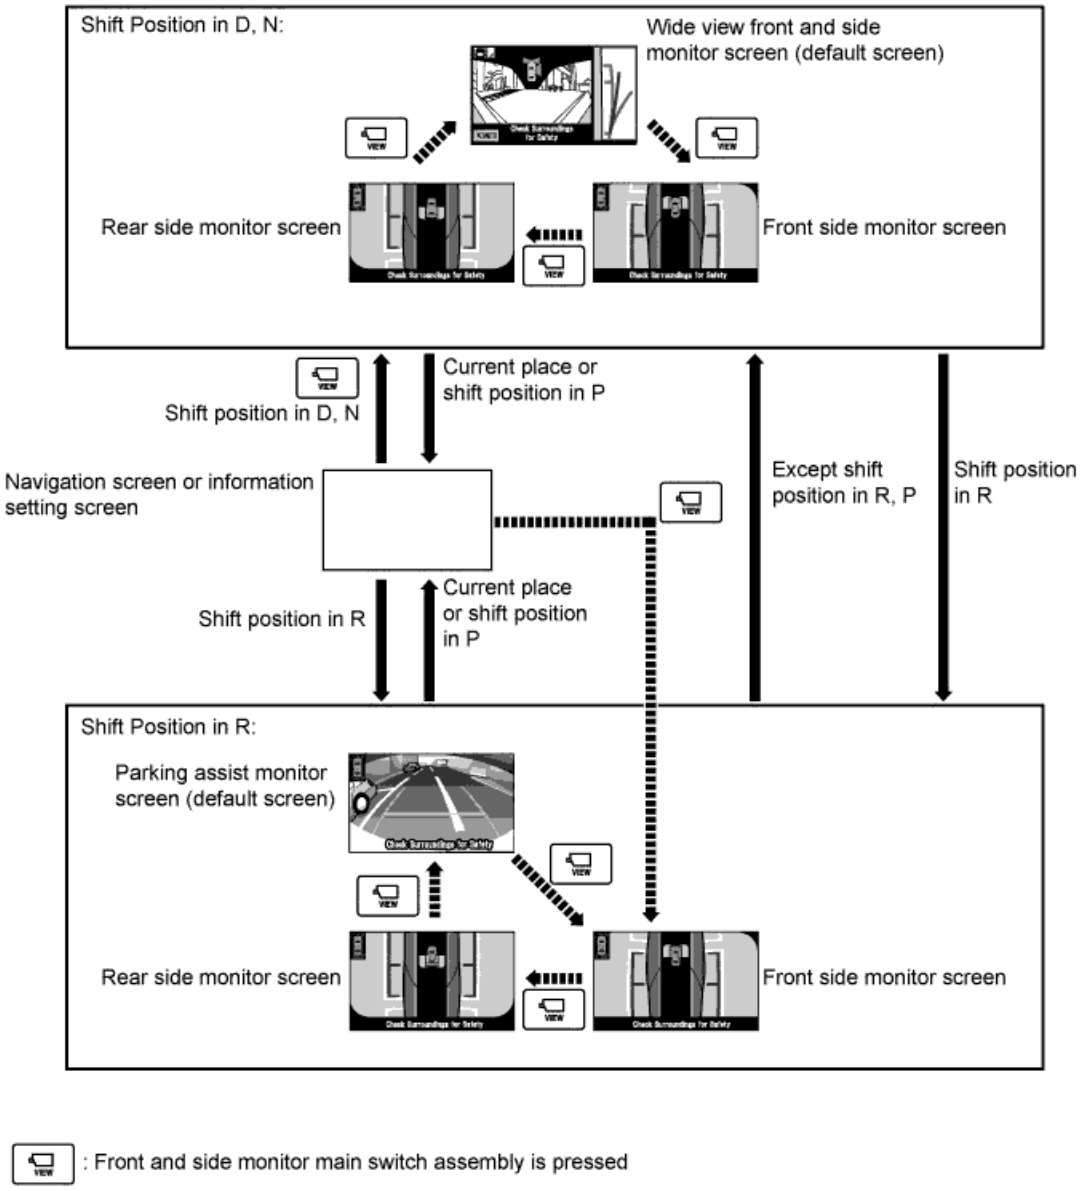
a. Screen display operation

**Text in Illustration**

| | | | |
|---|---|---|---|
| *A | for LHD | *B | for RHD |
| *1 | Wide View Front and Side Monitor Screen | *2 | Course guideline display change switch |
| *3 | Automatic display mode set/cancel switch<br>(Illustration shows automatic display mode off) | - | - |

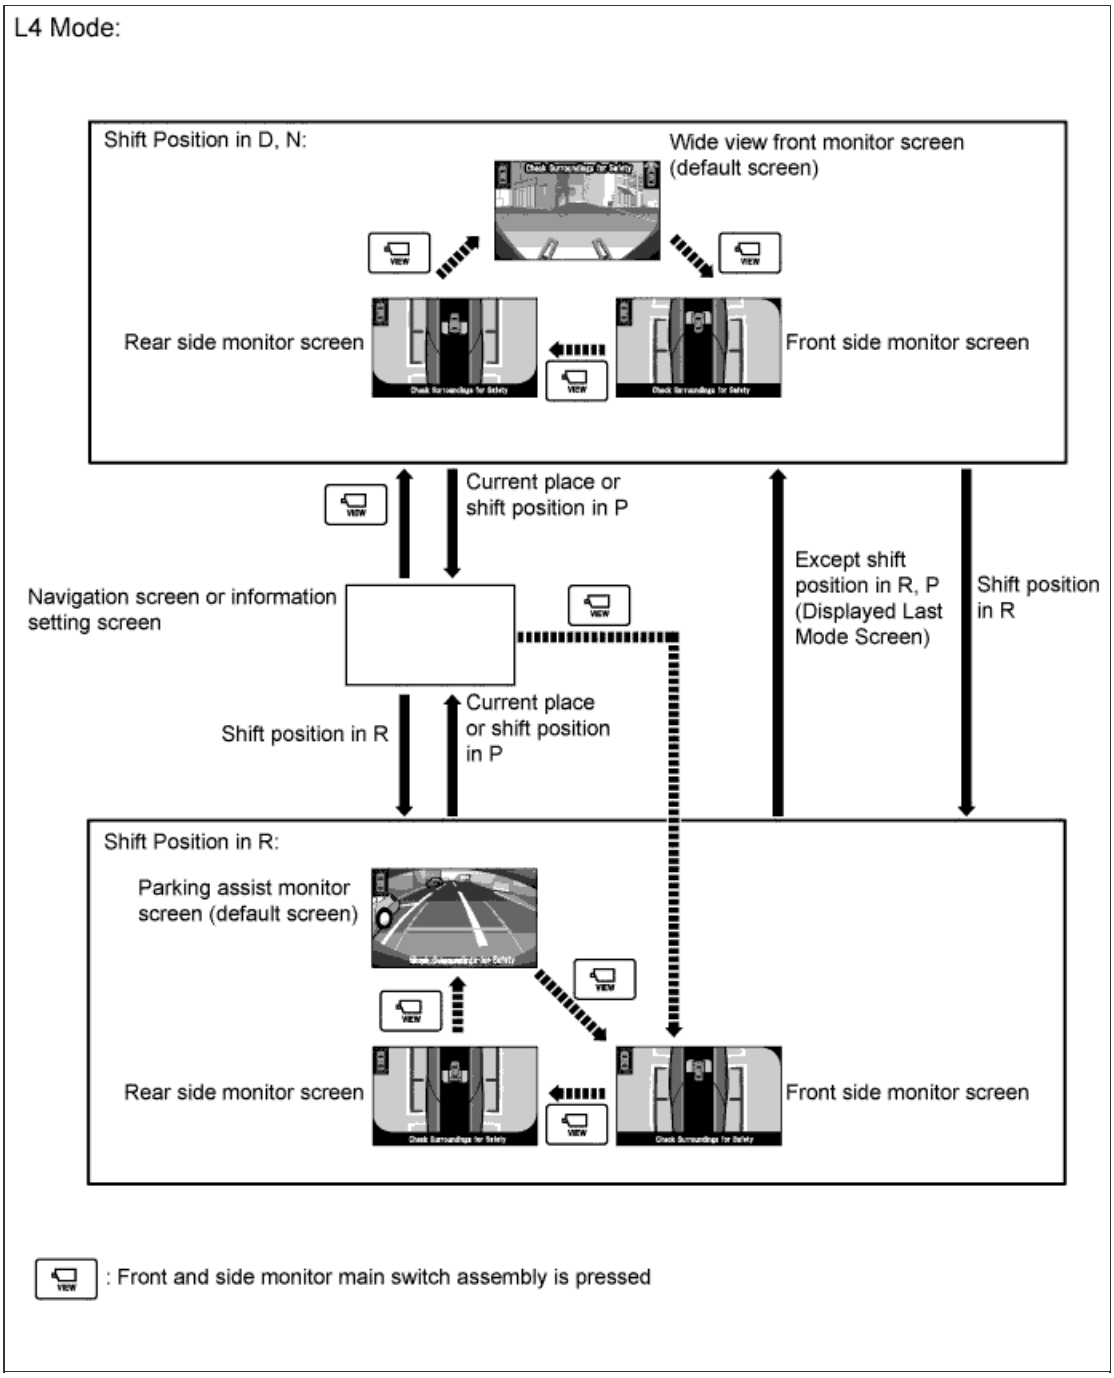
i. After the display conditions are met when the wide view front and side monitor systems are normally functioning, if the screen is changed from the manual display mode or automatic display mode screen, the wide view front and side monitor screen (H4 mode) or wide view front monitor screen (L4 mode) is displayed as the initial screen.

**HINT:**



- **If the shift lever is not in R and the wide view front and side monitor screen is displayed, the course guideline display change switch and automatic display mode set/cancel switch are displayed and the following operations can be performed.**
- **For the course guideline display change switch, refer to the following procedures ( Click here).**
- **Automatic display mode set/cancel switch**

| Automatic mode display switch<br>(Indicator in the button) | Display mode |
|---|---|
| ON<br>(Illuminated) | Automatic display mode |
| OFF<br>(Not illuminated) | Manual display mode |



- **The last mode screen is the screen that was displayed last when the screen was changed to the navigation screen, information setting screen, etc.**

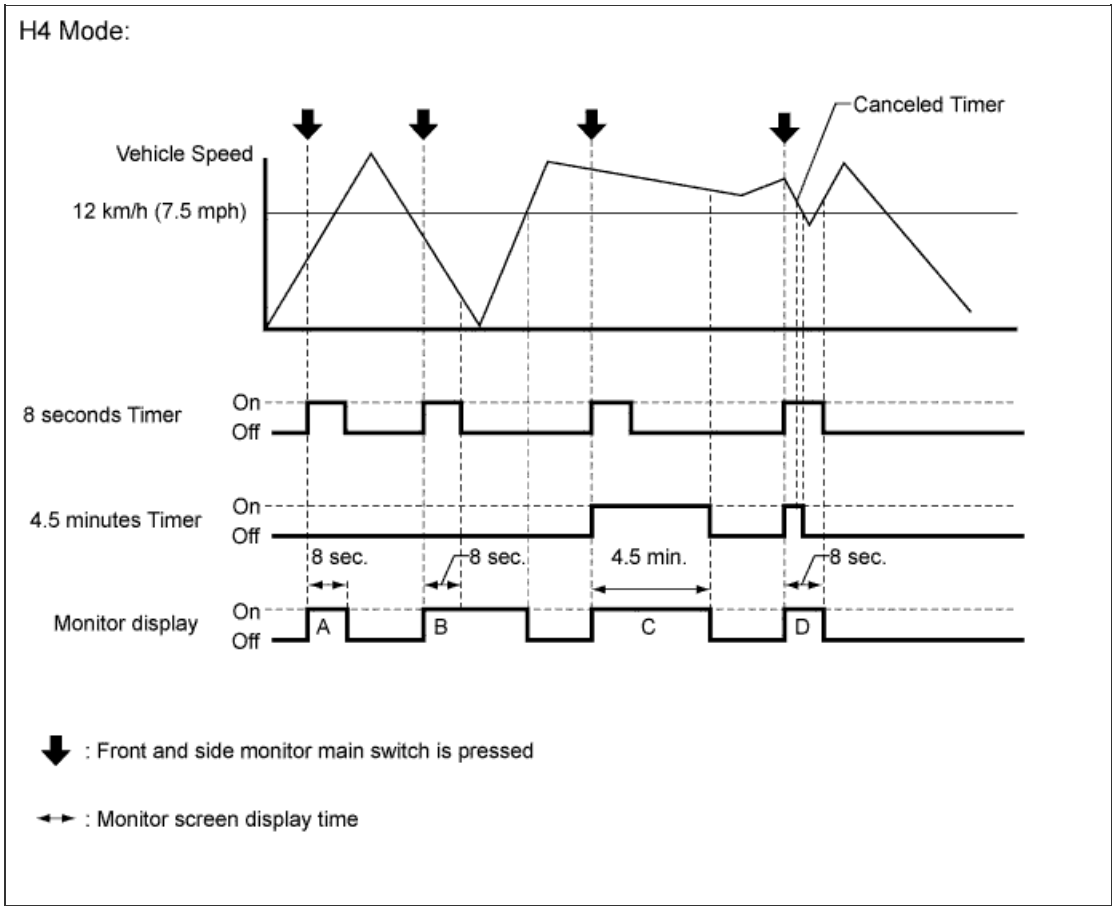
b. Display conditions for manual display mode

H4 Mode:

: Front and side monitor main switch assembly is pressed

i. H4 mode:
During manual display mode (shift lever in a position other than R), during engine switch on (IG) or engine startup (no DTCs are output), if the following conditions have been met, pressing the front and side monitor main switch will change the display mode as follows

| Automatic Mode Display Switch | Multi-display Screen | Shift Lever Position | Vehicle Speed | Screen (changes due to front and side monitor main switch assembly operation) |
|---|---|---|---|---|
| OFF | Navigation screen or information setting screen | Other than R | 12 km/h (7.5 mph) or less | Navigation screen or information setting screen → Wide view front and side monitor screen → Front side monitor screen → Rear side monitor screen → Wide view front and side monitor screen |
| | | R position | 0 km/h (0 mph) | Navigation screen or information setting screen → Parking assist monitor screen → Wide view front and side monitor screen → Front side monitor screen → Rear side monitor screen → Parking assist monitor screen |

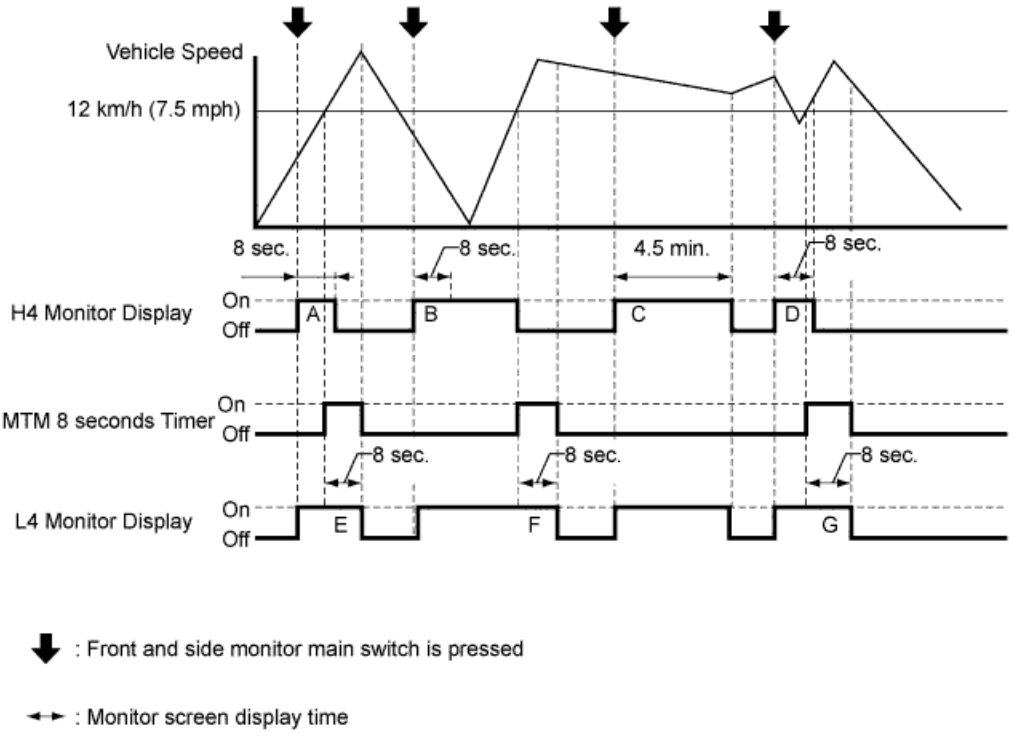


ii. L4 mode:
During manual display mode (shift lever in a position other than R), during engine switch on (IG) or engine startup (no DTCs are output), if the following conditions have been met, pressing the front and side monitor main switch will change the display mode as

follows

| Automatic Mode Display Switch | Multi-display Screen | Shift Lever Position | Vehicle Speed | Screen (changes due to front and side monitor main switch assembly operation) |
|---|---|---|---|---|
| OFF | Navigation screen or information setting screen | Other than R | 12 km/h (7.5 mph) or less | Navigation screen or information setting screen → Wide view front monitor screen → Front side monitor screen → Rear side monitor screen → Wide view front monitor screen |
| | | R position | 0 km/h (0 mph) | Navigation screen or information setting screen → Parking assist monitor screen → Wide view front and side monitor screen → Front side monitor screen → Rear side monitor screen → Parking assist monitor screen |

c. Screen display timer function

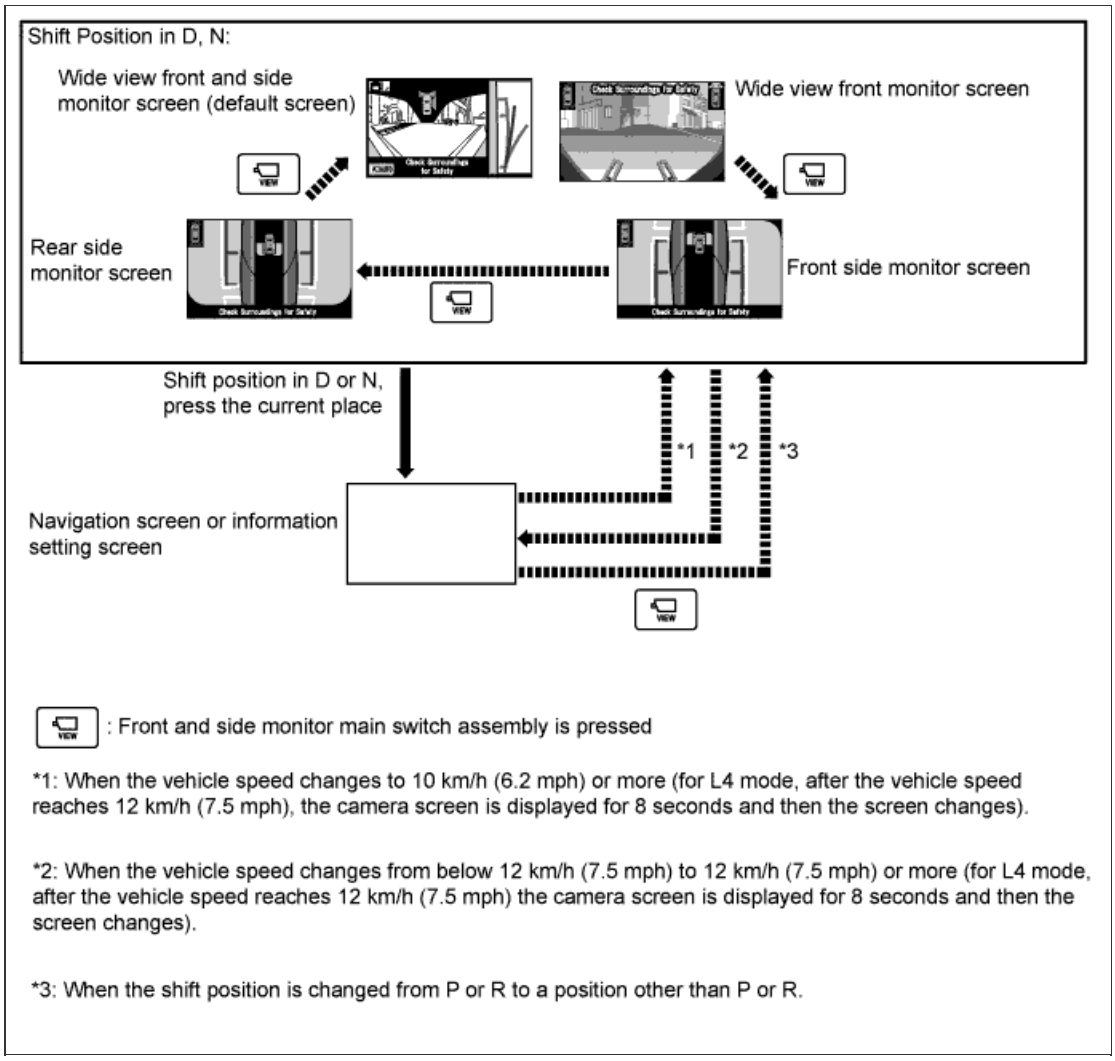


i. During manual display mode (when the shift lever is not in R), when the front and side monitor main switch is pressed and the following conditions are met, the wide view front and side monitor screen is displayed for a certain period of time even when the vehicle speed is more than 12 km/h (7.5 mph).

| Screen Display Time | Time when Front and Side Monitor Main Switch Assembly is Pressed | Change in Vehicle Speed | Timer Operation Time | Note |
|---|---|---|---|---|
| | | | | When the front and side monitor main switch assembly is pressed with the vehicle speed at 12 km/h (7.5 mph) or |

| | | | | |
|---|---|---|---|---|
| A<br>B | 12 km/h (7.5 mph) or less | 12 km/h (7.5 mph) or less | 8 seconds | less, the camera screen is displayed for 8 seconds from the moment the switch is pressed. After this, if the vehicle speed increases to above 12 km/h (7.5 mph), the camera screen is not displayed. |
| C | More than 12 km/h (7.5 mph) | More than 12 km/h (7.5 mph) | 8 seconds or 4 minutes and 30 seconds | When the front and side monitor main switch assembly is pressed while the vehicle speed is more than 12 km/h (7.5 mph), the camera screen is displayed for 4 minutes and 30 seconds the moment the switch is pressed (when the vehicle speed is more than 12 km/h (7.5 mph) after 4 minutes and 30 seconds elapse from the time the switch is pressed). |
| D | More than 12 km/h (7.5 mph) | More than 12 km/h (7.5 mph) → 12 km/h (7.5 mph) or less → More than 12 km/h (7.5 mph) | 8 seconds or 4 minutes and 30 seconds | When the front and side monitor main switch assembly is pressed while the vehicle speed is more than 12 km/h (7.5 mph), the screen display timer operates and the camera screen is displayed. However, after the vehicle speed decreases to 12 km/h (7.5 mph) or less within 4 minutes and 30 seconds (after 8 seconds have elapsed), if the vehicle speed increases to more than 12 km/h (7.5 mph) again, the screen switches to the navigation or information setting screen.<br>After the vehicle speed decreases to 12 km/h (7.5 mph) or less within 8 seconds, if the vehicle speed increases to more than 12 km/h (7.5 mph) again, the 4 minutes 30 seconds timer is canceled and the camera screen is displayed for 8 seconds the moment the front and side monitor main switch assembly is pressed. |

L4 Mode:



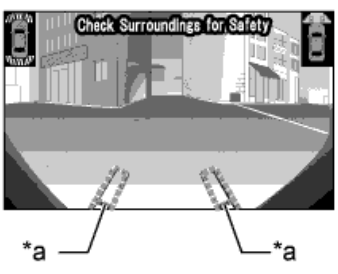
| | | | | |
|---|---|---|---|---|
| | Time when Front and Side | | | |

| Screen Display Time | Monitor Main Switch Assembly is Pressed | Change in Vehicle Speed | Timer Operation Time | Note |
|---|---|---|---|---|
| A<br>B | 12 km/h (7.5 mph) or less | 12 km/h (7.5 mph) or less | 8 seconds | When the front and side monitor main switch assembly is pressed with the vehicle speed at 12 km/h (7.5 mph) or less, the camera screen is displayed for 8 seconds from the moment the switch is pressed. After this, if the vehicle speed increases to above 12 km/h (7.5 mph), the camera screen is not displayed. |
| C | More than 12 km/h (7.5 mph) | More than 12 km/h (7.5 mph) | 8 seconds or 4 minutes and 30 seconds | When the front and side monitor main switch assembly is pressed while the vehicle speed is more than 12 km/h (7.5 mph), the camera screen is displayed for 4 minutes and 30 seconds the moment the switch is pressed (when the vehicle speed is more than 12 km/h (7.5 mph) after 4 minutes and 30 seconds elapse from the time the switch is pressed). |
| D | More than 12 km/h (7.5 mph) | More than 12 km/h (7.5 mph) → 12 km/h (7.5 mph) or less → More than 12 km/h (7.5 mph) | 8 seconds or 4 minutes and 30 seconds | When the front and side monitor main switch assembly is pressed while the vehicle speed is more than 12 km/h (7.5 mph), the screen display timer operates and the camera screen is displayed. However, after the vehicle speed decreases to 12 km/h (7.5 mph) or less within 4 minutes and 30 seconds (after 8 seconds have elapsed), if the vehicle speed increases to more than 12 km/h (7.5 mph) again, the screen switches to the navigation or information setting screen.<br>After the vehicle speed decreases to 12 km/h (7.5 mph) or less within 8 seconds, if the vehicle speed increases to more than 12 km/h (7.5 mph) again, the 4 minutes 30 seconds timer is canceled and the camera screen is displayed for 8 seconds the moment the front and side monitor main switch assembly is pressed. |
| E<br>F<br>G | More than 12 km/h (7.5 mph) | More than 12 km/h (7.5 mph) | 8 seconds | If the vehicle speed is more than 12 km/h (7.5 mph), the camera screen is displayed for 8 seconds. After that, the camera screen is not displayed. The timer is canceled the moment the vehicle speed decreases to below 12 km/h (7.5 mph) during the 8 second timer. |

d. Display conditions for automatic display mode

i. In automatic display mode, the screen display is automatically displayed according to driving conditions when the following conditions are met and the wide view front and side monitor systems are normally operating.

| Vehicle Condition | Multi-display Assembly Display Screen | Shift Lever | Vehicle Speed | Display Screen |
|---|---|---|---|---|
| Stopped → Driving | Navigation screen or information setting screen | Not in P or R | 12 km/h (7.5 mph) or less | Navigation screen or information setting screen → Wide view front monitor and side monitor screen* |
| Driving → Stopped | | Not in P or R | 10 km/h (6.2 mph) or less | Navigation screen or information setting screen → Wide view front monitor and side monitor screen* |



*:The conditions to change the screen after the display screen changes automatically are the same as in manual display mode.

e. Off-road turn assist function

i. With the off-road turn assist function on, the path traveled is displayed as dotted lines on the front screen. In this state, the vehicle may not move exactly as the front lines indicate. (The lines indicate the direction the front wheels are turned. However, with the off-road assist function on, the vehicle turns using a difference in drive force between the left and right wheels.)

## COMMUNICATION SYSTEM OUTLINE

a. The components of the wide view front monitor system communicate with each other through the AVC-LAN. If a short circuit or open circuit occurs in the AVC-LAN, communication is interrupted and the front monitor system will stop functioning.

## DIAGNOSTIC FUNCTION OUTLINE

a. This wide view front monitor system has a diagnostic function displayed in the display and navigation module display. This function enables the calibration (adjustment and confirmation) of the system (Click here).

b. The system can check the following items by using the intelligent tester.

| Item | Proceed to |
|---|---|
| DTC | Click here |

**for Preparation** Click here

**HINT:**

- **Use the following procedures to troubleshoot the wide view front monitor system.**
- ***: Use the intelligent tester.**

## 1.VEHICLE BROUGHT TO WORKSHOP

NEXT

## 2.INSPECT BATTERY VOLTAGE

**Standard voltage:**
**11 to 14 V**

If the voltage is below 11 V, replace or recharge the battery before proceeding.

NEXT

## 3.CHECK COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*

a. Use the intelligent tester to check if the CAN communication system is functioning normally.

**Result**

| Result | Proceed to |
|---|---|
| CAN DTC is not output | A |
| CAN DTC is output (for LHD) | B |
| CAN DTC is output (for RHD) | C |

B. → Go to CAN COMMUNICATION SYSTEM (Click here)

C. → Go to CAN COMMUNICATION SYSTEM (Click here)

A

## 4.CHECK DTC OUTPUT*

a. Check for DTCs (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| No DTC is output | A |
| DTC is output | B |

B. → Go to DIAGNOSTIC TROUBLE CODE CHART ( Click here)

A

## 5.PROBLEM SYMPTOMS TABLE

a. Refer to the Problem Symptoms Table (Click here).

**Result**

| Result | Proceed to |
|---|---|
| Fault is not listed in problem symptoms table | A |
| Fault is listed in problem symptoms table | B |

B. → Go to step 7

A

## 6.OVERALL ANALYSIS AND TROUBLESHOOTING*

a. Terminals of ECU (Click here).

NEXT

## 7.ADJUST, REPAIR OR REPLACE

NEXT

## 8.CONFIRMATION TEST

NEXT

## END

**for Preparation** Click here

**HINT:**

- **Use the following procedure to troubleshoot the wide view front monitor system.**
- ***: Use the intelligent tester.**

## 1.VEHICLE BROUGHT TO WORKSHOP

NEXT

## 2.INSPECT BATTERY VOLTAGE

a. Measure the battery voltage with the engine switch off.

**Standard Voltage:**
**11 to 14 V**

If the voltage is below 11 V, replace or recharge the battery before proceeding to the next step.

NEXT

## 3.CHECK NAVIGATION SYSTEM

a. Refer to the navigation system (for HDD) (Click here).

b. Refer to the navigation system (for DVD) (Click here).

**Result**

| Result | Proceed to |
|---|---|
| Navigation system is normal | A |
| Navigation system (for HDD) is abnormal | B |
| Navigation system (for DVD) is abnormal | C |

B. → GO TO NAVIGATION SYSTEM (for HDD) (**Click here**)

C. → GO TO NAVIGATION SYSTEM (for DVD) (**Click here**)

A

## 4.CHECK COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*

a. Use the intelligent tester to check if the CAN communication system is functioning normally.

**Result**

| Result | Proceed to |
|---|---|
| CAN DTC is not output | A |
| CAN DTC is output (for LHD) | B |
| CAN DTC is output (for RHD) | C |

B. → GO TO CAN COMMUNICATION SYSTEM (for LHD) (**Click here**)

C. → GO TO CAN COMMUNICATION SYSTEM (for RHD) (**Click here**)

A

## 5.CHECK FOR DTC*

a. Check for DTCs and note any codes that are output ( Click here).

b. Clear the DTC (Click here).

c. Recheck for DTCs. Try to prompt the DTC by simulating the original activity that the DTC suggests.

**NOTICE:**

The parking assist ECU may store the DTCs of the following system. If DTCs other than those specified in Diagnostic Trouble Code Chart of the side monitor system are output, refer to Diagnostic Trouble Code Chart for the applicable system.

| System | Proceed to |

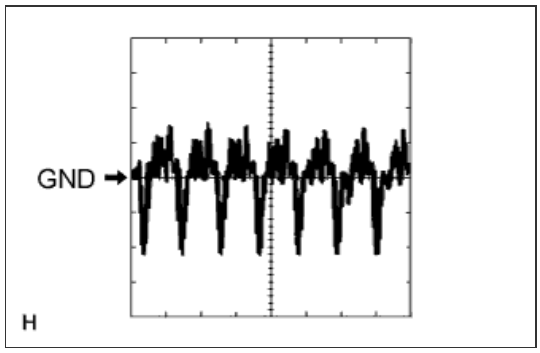
## CHECK PARKING ASSIST ECU

a. Disconnect the F36 and F37 ECU connectors.

b. Measure the voltage and resistance according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F36-6 (+B) - F36-4 (GND1) | L - W-B | Power source signal | Always | 11 to 14 V |
| F36-1 (IG) - F36-4 (GND1) | G - W-B | IG power source signal | Engine switch on (IG) | 11 to 14 V |
| F36-1 (IG) - F36-4 (GND1) | G - W-B | IG power source signal | Engine switch off | Below 1 V |
| F36-14 (ACC) - F36-4 (GND1) | GR - W-B | ACC power source signal | Engine switch on (ACC) | 11 to 14 V |
| F36-14 (ACC) - F36-4 (GND1) | GR - W-B | ACC power source signal | Engine switch off | Below 1 V |
| F37-22 (BLSW) - F36-4 (GND1) | G - W-B | Front and side monitor main switch power source signal | Engine switch on (IG), front and side monitor main switch on | 11 to 14 V |
| F37-22 (BLSW) - F36-4 (GND1) | G - W-B | Front and side monitor main switch power source signal | Engine switch on (IG), front and side monitor main switch off | Below 1 V |
| F36-4 (GND1) - Body ground | W-B - Body ground | ECU ground | Always | Below 1 Ω |

c. Reconnect the F36 and F37 ECU connectors.

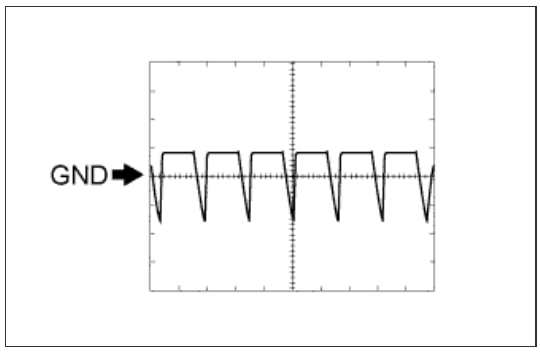


d. Measure the voltage and waveform according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F37-15 (BCV-) - F36-4 (GND1) | Shielded - W-B | Front television camera ground (shielded) | Always | Below 1 V |
| F37-38 (BGND) - F36-4 (GND1) | W - W-B | Front television camera ground | Always | Below 1 V |
| F37-37 (BCV+) - F36-4 (GND1) | R - W-B | Display signal | Wide view front monitor display screen displayed | Waveform 1 |
| F37-37 (BCV+) - F36-4 (GND1) | R - W-B | Display signal | Camera lens covered to make image black while wide view front monitor display screen displayed | Waveform 2 |
| F37-16 (BCB+) - F36-4 (GND1) | B - W-B | Front television camera power source signal | Wide view front monitor display screen displayed | 5.8 to 6.5 V |

e. Using an oscilloscope, check the waveform 1.

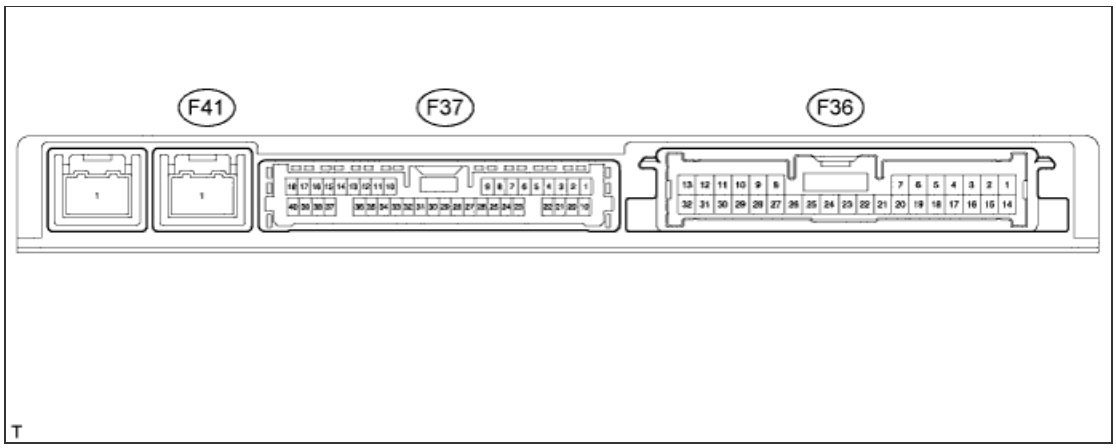
**Waveform 1 (Reference)**



| Item | Content |
|---|---|
| Terminal No. (Symbol) | F37-37 (BCV+) - F36-4 (GND1) |
| Tool Setting | 0.2 V/DIV., 50 µs/DIV. |
| Condition | Wide view front monitor display screen displayed |

f. Using an oscilloscope, check the waveform 2.

**Waveform 2 (Reference)**



| Item | Content |
|---|---|
| Terminal No. (Symbol) | F37-37 (BCV+) - F36-4 (GND1) |
| Tool Setting | 0.2 V/DIV., 50 µs/DIV. |
| Condition | Camera lens covered to make image black while wide view front monitor display screen displayed |

**CHECK DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)**

**for Preparation** Click here

## PARKING ASSIST ECU

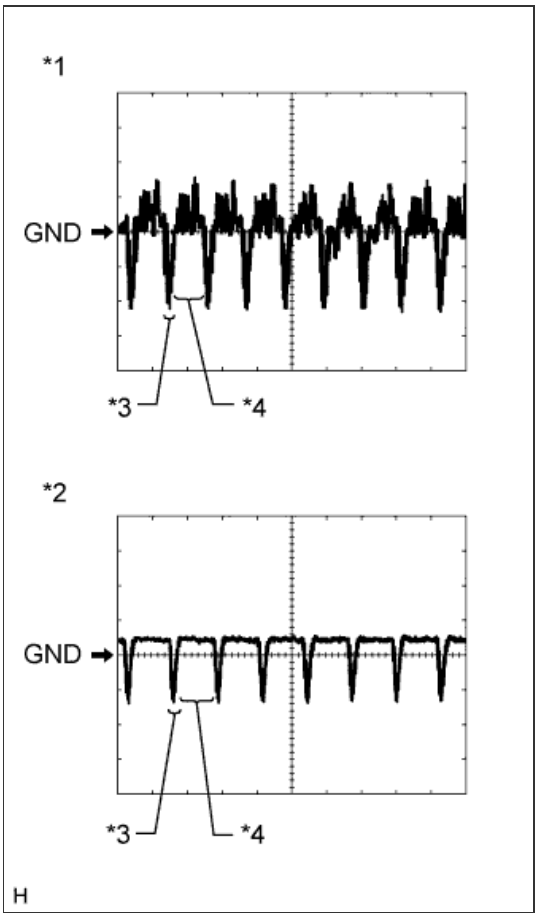
a. Disconnect the F36 connector from the ECU.

b. Measure the resistance and voltage of each terminal of the wire harness side connector.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F36-6 (+B) - F36-4 (GND1) | L - W-B | Power source signal | Always | 11 to 14 V |
| F36-4 (GND1) - Body ground | W-B - Body ground | Ground | Always | Below 1 Ω |
| F36-1 (IG) - F36-4 (GND1) | G - W-B | IG Power source signal | Engine switch on (IG) | 11 to 14 V |
| F36-14 (ACC) - F36-4 (GND1) | GR - W-B | ACC Power source signal | Engine switch off (ACC) | 11 to 14 V |

If the result is not as specified, there may be a malfunction on the wire harness side.

c. Reconnect the F36 connector to the ECU.



d. Measure the voltage and check for pulses according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F36-10 (CANL) - F36-4 (GND1) | L - W-B | CAN communication signal | CAN communication circuit | Pulse generation |
| F36-9 (CANH) - F36-4 (GND1) | V - W-B | CAN communication signal | CAN communication circuit | Pulse generation |
| F37-22 (BLSW) - F36-4 (GND1) | G - W-B | Front and side monitor main switch signal | Engine switch on (IG) Front and side monitor main switch pushed in | 11 to 14 V |
| | | | Engine switch on (IG) Front and side monitor main switch not pushed in | Below 1 V |
| F36-32 (TX-) - F36-31 (TX+) | L - W | AVC-LAN communication signal | - | - |
| F37-15 (BCV-) - F36-4 (GND1) | W - W-B | Front television camera ground | Always | Below 1 V |
| F37-37 (BCV+) - F36-4 (GND1) | R - W-B | Front television camera display signal (NTSC) input | Engine switch on (IG) Front and side monitor main switch on Under normal conditions | Pulse generation (See waveform 1) |
| | | | Engine switch on (IG) Front and side monitor main switch on Camera lens is covered, blacking out the screen | Pulse generation (See waveform 2) |

| | | | | |
|---|---|---|---|---|
| F37-38 (BGND) - F36-4 (GND1) | Shielded - W-B | Front television camera ground (shield) | Always | Below 1 V |
| F37-16 (BCB+) - F36-4 (GND1) | B - W-B | Power source to front television camera | Engine switch on (IG) Shift lever in R | 5.8 to 7.0 V |

If the result is not as specified, the ECU may have a malfunction.

e. Reference (Oscilloscope waveform):

**HINT:**

A waterproof connector is used for the front television camera assembly. Therefore, inspect the waveform at the parking assist ECU with the connector connected.

i. Waveform 1 (under normal conditions) Reference

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F37-37 (BCV+) - F36-4 (GND1) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | Engine switch on (IG), shift lever in R |

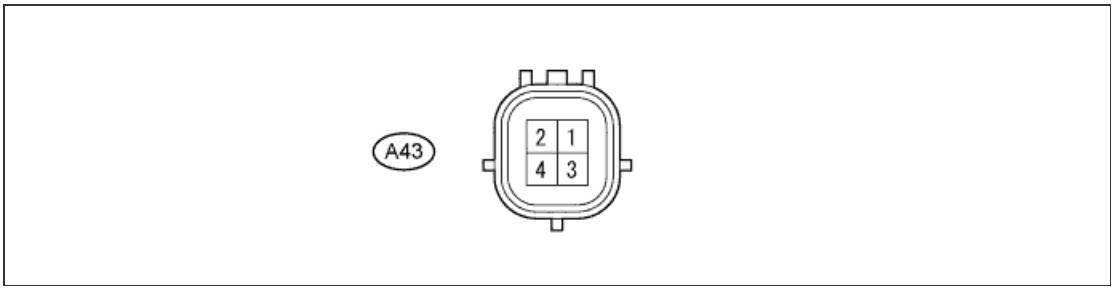
**HINT:**

The video waveform changes according to the image sent by the front television camera assembly.

ii. Waveform 2 (camera lens is covered, blacking out the screen) Reference

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F37-37 (BCV+) - F36-4 (GND1) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | Engine switch on (IG), shift lever in R |

**HINT:**



The video waveform changes according to the image sent by the front television camera assembly.

## FRONT TELEVISION CAMERA ASSEMBLY

a. Disconnect the connector from the front television camera assembly.

b. Measure the voltage of each terminal of the wire harness side connector.

| Terminal No. (Symbol) | Terminal Description | Condition | Specified Condition |
|---|---|---|---|
| A43-3 (BGND) - Body ground | Ground | Always | Below 1 V |
| A43-1 (BCB+) - A43-3 (BGND) | Power source | Engine switch on (IG)<br>Front and side monitor main switch on | 5.8 to 7.0 V |

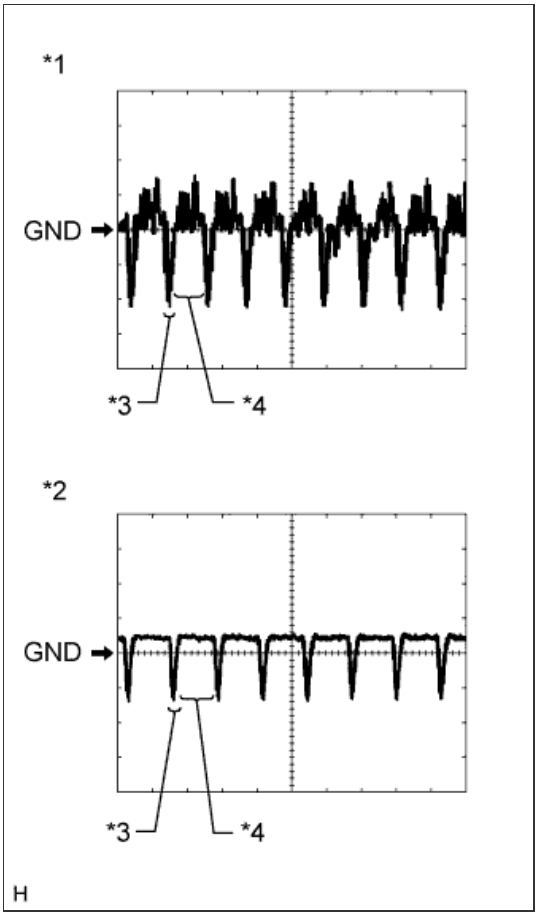
If the result is not as specified, there may be a malfunction on the wire harness side.

c. Reconnect the connector to the front television camera assembly.

d. Check for pulses between each terminal of the connector.

| Terminal No. (Symbol) | Terminal Description | Condition | Specified Condition |
|---|---|---|---|
| A43-2 (BCV+) - A43-4 (BCV-) | Display signal | Engine switch on (IG)<br>Front and side monitor main switch on<br>Under normal conditions | Pulse generation<br>(See waveform 1) |
| | | Engine switch on (IG)<br>Front and side monitor main switch on<br>Camera lens covered, blacking out screen | Pulse generation<br>(See waveform 2) |

**HINT:**



A waterproof connector is used for the front television camera assembly. Therefore, inspect the waveform at the parking assist ECU with the connector connected.

If the result is not as specified, the camera may have a malfunction.

e. Reference (Oscilloscope waveform):

**HINT:**

A waterproof connector is used for the front television camera assembly. Therefore, inspect the waveform at the parking assist ECU with the connector connected.

i. Waveform 1 (under normal conditions) Reference

| Item | Content |
|---|---|
| Terminal No. (Symbol) | A43-2 (BCV+) - A43-4 (BCV-) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | Engine switch on (IG), front and side monitor main switch on |

**HINT:**

The video waveform changes according to the image sent by the front television camera assembly.

ii. Waveform 2 (camera lens is covered, blacking out the screen) Reference

| Item | Content |
|---|---|
| Terminal No. (Symbol) | A43-2 (BCV+) - A43-4 (BCV-) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | Engine switch on (IG), front and side monitor main switch on |

**HINT:**

The video waveform changes according to the image sent by the front television camera assembly.

## DISPLAY AND NAVIGATION MODULE DISPLAY

- for HDD navigation system (Click here).
- for DVD navigation system (Click here).

**for Preparation** Click here

## PARKING ASSIST ECU

a. Disconnect the F74 and F75 parking assist ECU connectors.

b. Measure the voltage and resistance according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F74-1 (+B) - F74-4 (GND1) | L - W-B | Power source signal | Always | 11 to 14 V |
| F74-4 (GND1) - Body ground | W-B - Body ground | Ground | Always | Below 1 Ω |
| F74-8 (IG) - F74-4 (GND1) | G - W-B | IG Power source signal | Engine switch on (IG) | 11 to 14 V |
| | | | Engine switch off | Below 1 V |
| F74-9 (ACC) - F74-4 (GND1) | GR - W-B | ACC Power source signal | Engine switch on (ACC) | 11 to 14 V |
| | | | Engine switch off | Below 1 V |
| F75-7 (BLSW) - F74-4 (GND1) | G - W-B | Front and side monitor main switch power source signal | Engine switch on (IG), front and side monitor main switch assembly on | 11 to 14 V |

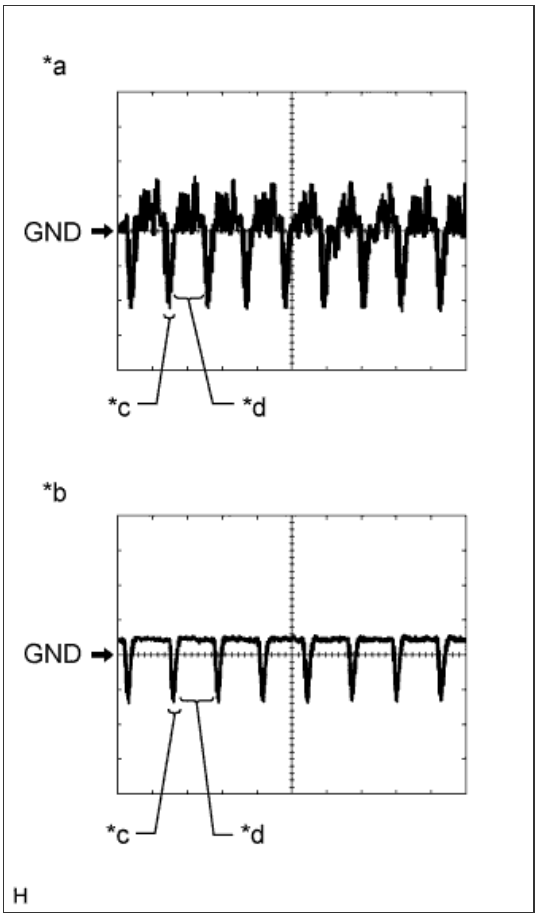
c. Reconnect the F74 and F75 parking assist ECU connectors.

d. Measure the voltage according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F74-10 (TX-) | L | AVC-LAN communication signal | - | - |
| F74-11 (TX+) | W | AVC-LAN communication signal | - | - |
| F75-36 (BCV-) - F75-35 (BGND) | W - Shielded | Front television camera ground | Always | Below 1 V |
| F75-12 (BCV+) - F75-35 (BGND) | R - Shielded | Front television camera display signal input | Engine switch on (IG), front and side monitor main switch assembly on | Pulse generation (See waveform) |
| F75-35 (BGND) - F74-4 (GND1) | Shielded - W-B | Front television camera ground (shield) | Always | Below 1 V |
| F75-11 (BCB+) - F75-35 (BGND)) | B - Shielded | Power source to front television camera | Engine switch on (IG), front and side monitor main switch assembly on | 5.5 to 7.05 V |

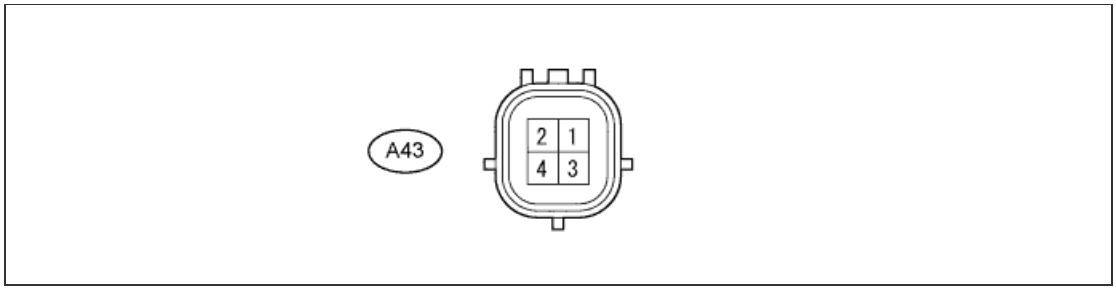
e. Using an oscilloscope, check waveform.

**Text in Illustration**



| | |
|---|---|
| *a | Waveform A (under normal conditions) |
| *b | Waveform B (camera lens is covered, blacking out the screen) |
| *c | Synchronized Signal |
| *d | Video Waveform |

**HINT:**



The video waveform changes according to the image sent by the rear television camera assembly.

i. Waveform

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F75-12 (BCV+) - F75-35 (BGND) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | • Waveform A: Engine switch on (IG), front and side monitor main switch assembly on and camera lens is not covered, displaying an image<br>• Waveform B: Engine switch on (IG), front and side monitor main switch assembly on and camera lens is covered, blacking out the screen. |

## FRONT TELEVISION CAMERA ASSEMBLY

a. Disconnect the A43 front television camera assembly connector.

b. Measure the voltage according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| A43-3 (BGND) - Body ground | BR - Body ground | Ground | Always | Below 1 V |
| A43-1 (BCB+) - A43-3 (BGND) | G - BR | Power source | Engine switch on (IG) Front and side monitor main switch on | 5.5 to 7.05 V |

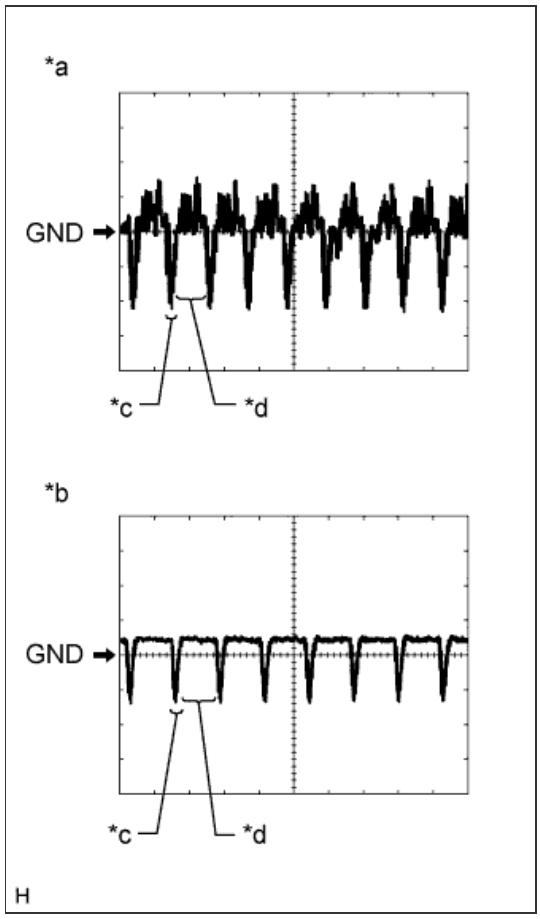
c. Reconnect the A43 front television camera assembly connector.

**HINT:**

A waterproof connector is used for the front television camera assembly. Therefore, inspect the waveform at the parking assist ECU with the connector connected.

d. Measure the voltage according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| A43-2 (BCV+) - A43-3 (BGND) | L - BR | Display signal | Engine switch on (IG), front and side monitor main switch assembly on | Pulse generation (See waveform) |
| A43-4 (BCV-) - A43-3 (BGND) | Y - BR | Front television camera ground | Always | Below 1 V |



e. Using an oscilloscope, check waveform.

**Text in Illustration**

| | |
|---|---|
| *a | Waveform A (under normal conditions) |
| *b | Waveform B (camera lens is covered, blacking out the screen) |
| *c | Synchronized Signal |
| *d | Video Waveform |

**HINT:**

The video waveform changes according to the image sent by the front television camera assembly.

i. Waveform

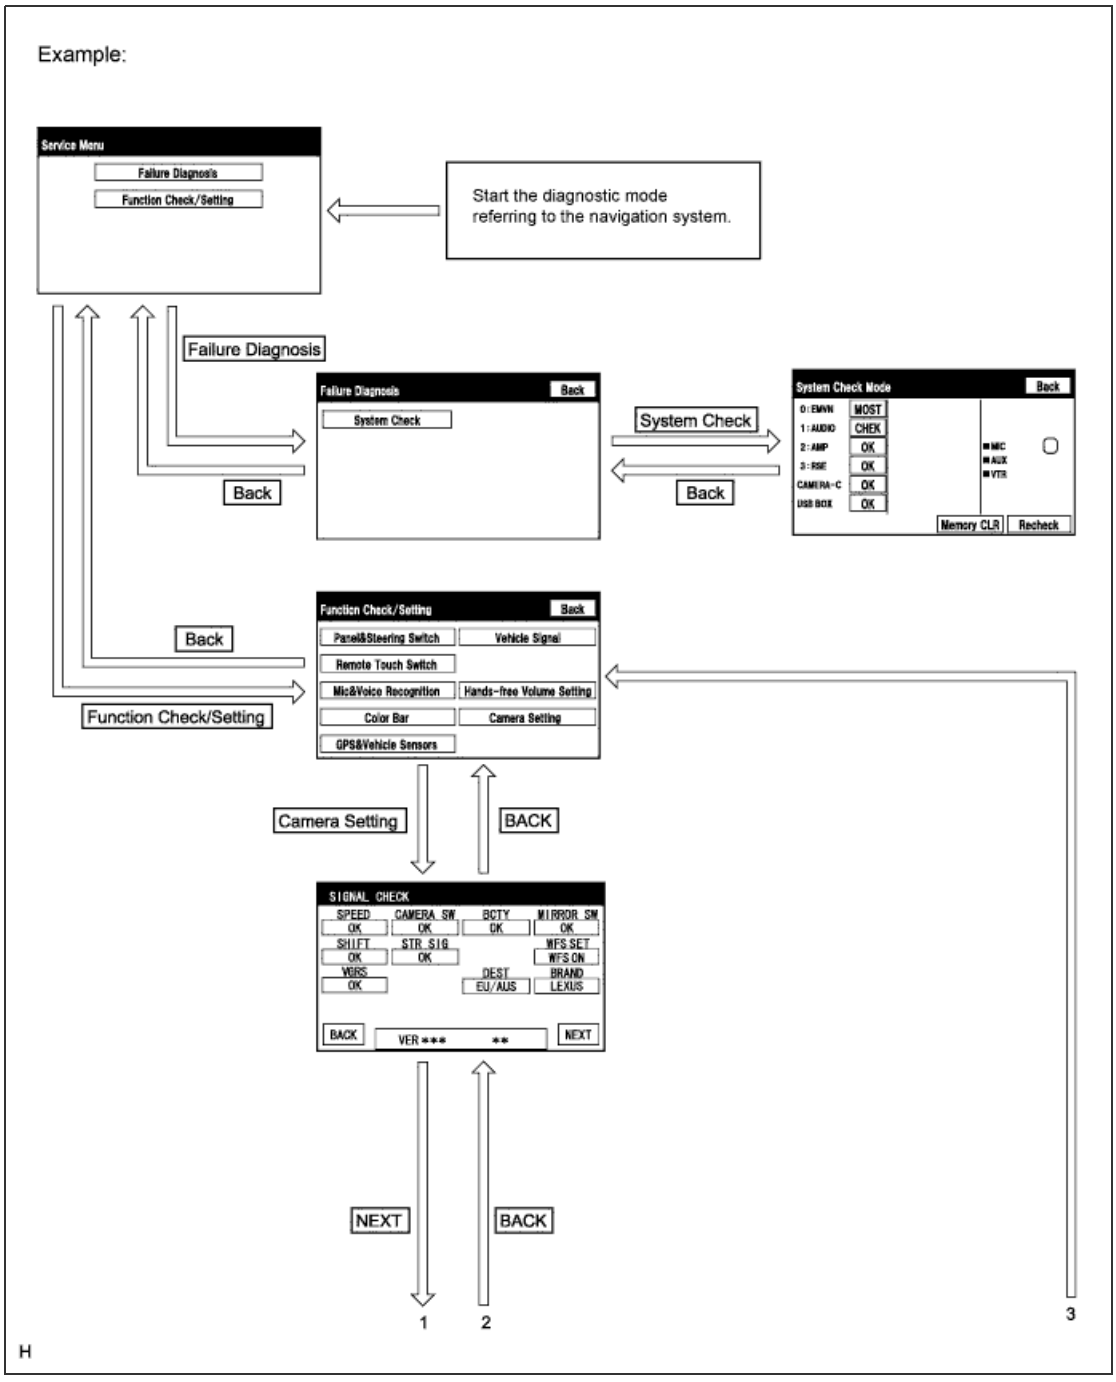
**for Preparation** Click here

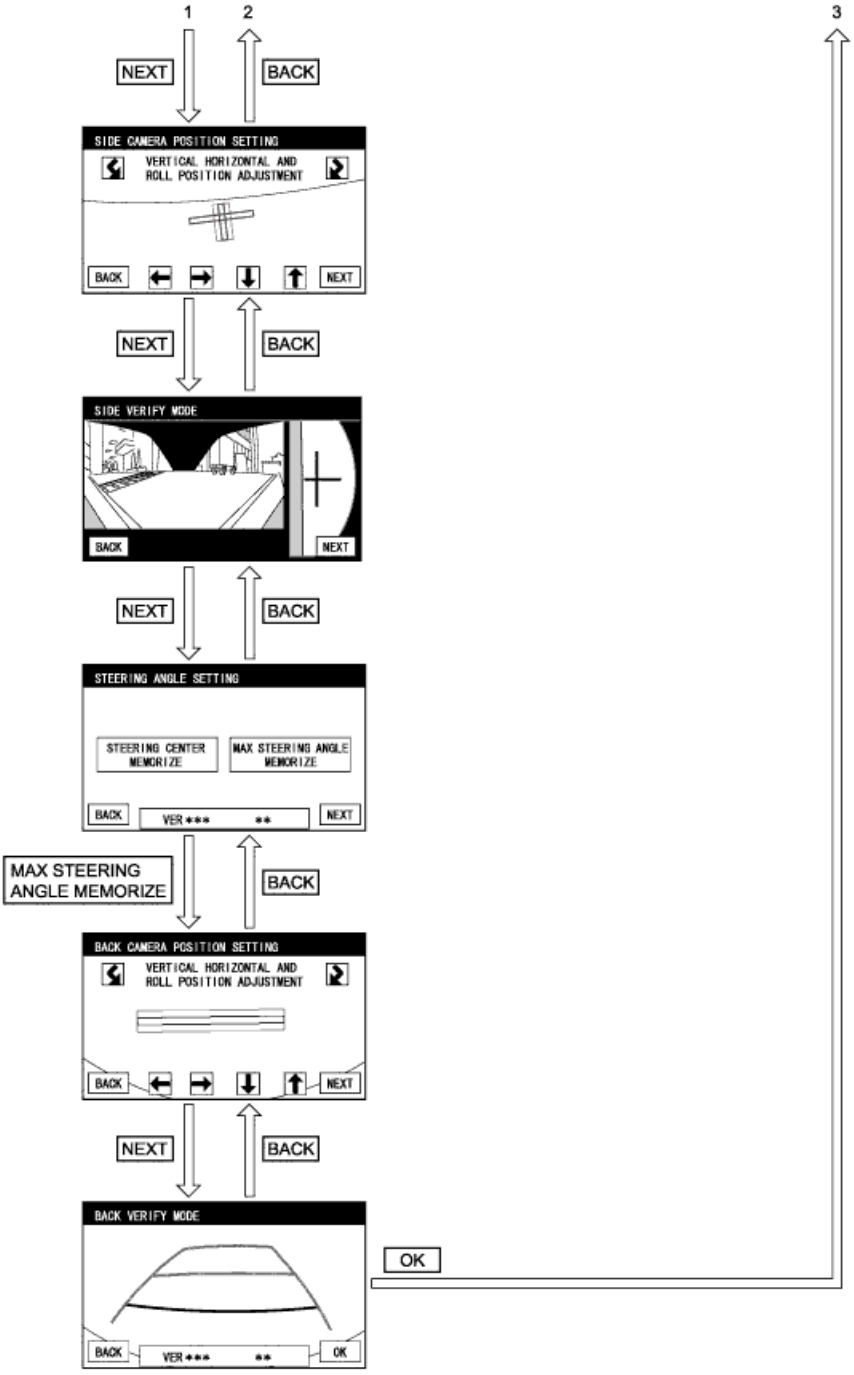
## FRONT MONITOR DIAGNOSIS SYSTEM

a. In the front monitor diagnosis system, signals received by the parking assist ECU can be checked and the wide view front monitor system can be calibrated, adjusted and checked on the display and navigation module display.



**NOTICE:**

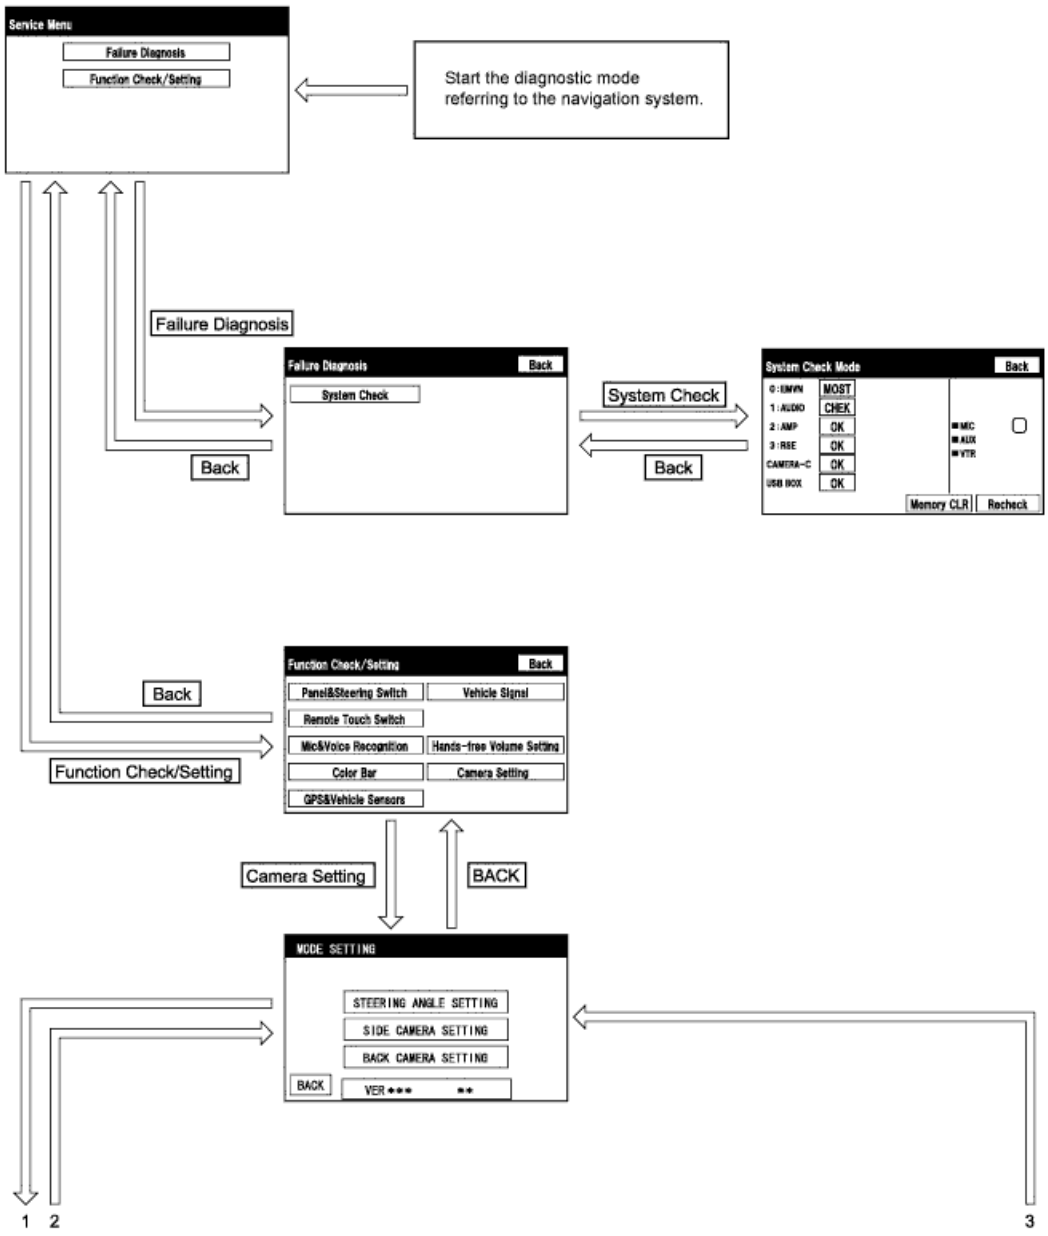
Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems may be needed (Click here).

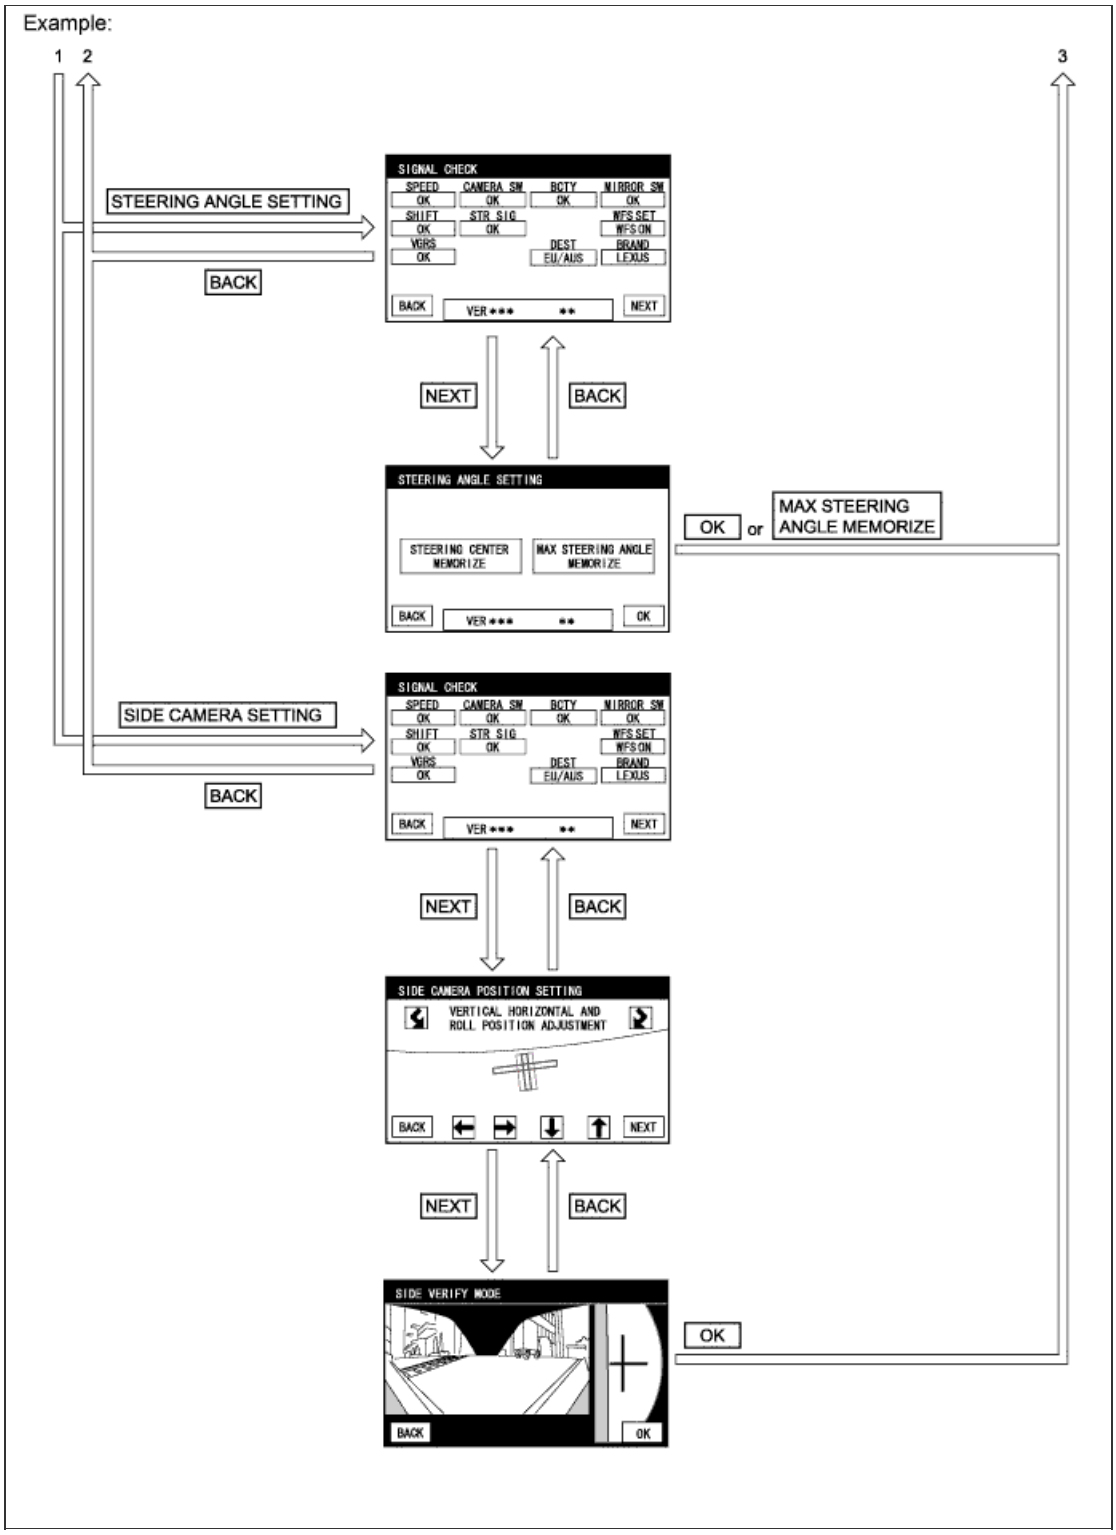


**HINT:**

The displayed screens and items may differ depending on vehicle specifications.

## DIAGNOSIS SCREEN TRANSITION (during first-time parking assist ECU initialization)





Example:

**DIAGNOSIS SCREEN TRANSITION (after parking assist ECU initialization)**

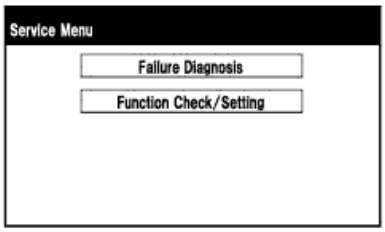
## DIAGNOSTIC MODE

a. Start diagnostic mode (Click here).

b. Failure diagnosis (Click here).

c. System check (check using system check mode screen) (Click here).

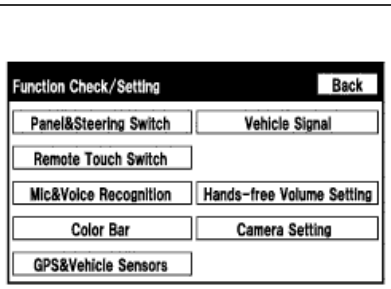


d. Finish diagnostic mode (Click here).

## SIGNAL CHECK (parking assist ECU input signal)

a. Start diagnostic mode (Click here).

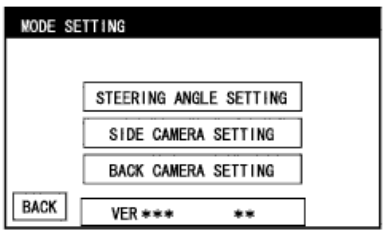
i. Select "Function Check/Setting" on the Service Menu screen to display the Function Check/Setting screen.



ii. Select "Camera Setting" on the Function Check/Setting screen.

**HINT:**

After "Camera Setting" is selected, the screen transitions differ depending on whether initialization of the parking assist ECU was performed after parking assist ECU replacement.



| Parking Assist ECU Initialization | Screen Transition |
|---|---|
| Not performed | SIGNAL CHECK screen |
| Performed | MODE SETTING screen |

iii. When the screen changes to the MODE SETTING screen, select "BACK CAMERA SETTING" to display the SIGNAL CHECK screen.

**HINT:**

To select a grayed out item, select and hold the item for 2 seconds or more.

b. SIGNAL CHECK

**Text in Illustration**

| | |
|---|---|
| *1 | w/ VGRS |
| *2 | "EU/AUS" or "GCC/ZAF" |
| | |

*3 Example

i. On the SIGNAL CHECK screen, it is possible to inspect the state of signals sent to the parking assist ECU and check the settings.

| Item | Inspection Detail | Note |
|---|---|---|
| SPEED | Speed signal input | When "CHK" (red) is displayed, selecting "NEXT" will not change to the next screen. |
| CAMERA SW | Front and side monitor main switch signal input | |
| BCTY | CAN communication condition with main body ECU | |
| MIRROR SW | Outer rear view mirror retract signal input | |
| SHIFT | Shift signal input | |
| STR SIG | Steering angle sensor signal input | |
| WFS SET | Front monitor signal input<br>Side monitor signal input<br>Front and side monitor main switch signal input | |
| VGRS *1 | VGRS signal input | |
| DEST | Destination information signal input | |
| BRAND | Brand information input | |

*1: w/VGRS

**HINT:**

- **When "CHK" (red) is displayed, perform inspections based on the result of the following inspections.**
- **If performing the adjustment after proceeding to the next screen, confirm that all items display "OK" (blue) before selecting "NEXT".**

c. SPEED inspection

**HINT:**

If "CHK" (red) is displayed for "SPEED", check for DTCs and perform troubleshooting based on the output DTCs ( Click here).

d. CAMERA SW inspection

i. Check that "OK" (blue) is displayed for "CAMERA SW" and select "OK".

ii. Check that "OK" (blue) changes to "CHK" (red). Press the front and side monitor main switch and check that "CHK" (red) returns to "OK" (blue).

**HINT:**

If "CHK" (red) remains displayed or the "CAMERA SW" inspection result is not normal, perform troubleshooting according to Problem Symptoms Table ("CHK" message(s) are displayed on the SIGNAL CHECK screen) (Click here).

e. BCTY inspection

**HINT:**

If "CHK" (red) is displayed for "BCTY", check for DTCs and perform troubleshooting based on the output DTCs ( Click here).

f. MIRROR SW inspection

i. Check that "OK" (blue) is displayed for "MIRROR SW" and select "OK".

ii. Check that "OK" (blue) changes to "CHK" (red). Press the outer mirror switch and check that "CHK" (red) returns to "OK" (blue).

**HINT:**

After operating the outer mirror retract switch, if the outer mirror remains in the retracted state, return the outer mirror to the driving position. If "CHK" (red) remains displayed or the "MIRROR SW" inspection result is not normal, perform troubleshooting according to Problem Symptoms Table ("CHK" message(s) are displayed on the SIGNAL CHECK screen) (Click here).

g. SHIFT inspection

**HINT:**

If "CHK" (red) is displayed for "SHIFT", check for DTCs and perform troubleshooting based on the output DTCs ( Click here).

h. STR SIG inspection

**HINT:**

If "CHK" (red) is displayed for "STR SIG", check for DTCs and perform troubleshooting based on the output DTCs ( Click here).

i. WFS SET inspection

**HINT:**

If "CHK" is displayed, perform a CAMERA SW check and a camera connection check ( Click here).

j. VGRS inspection (w/ VGRS)

**HINT:**

If "CHK" (red) is displayed for "VGRS", check for DTCs and perform troubleshooting based on the output DTCs ( Click here).

k. DEST inspection

**HINT:**

If "CHK" (red) is displayed for "DEST", check for DTCs and perform troubleshooting based on the output DTCs ( Click here).

l. BRAND inspection

**HINT:**

If "CHK" (red) is displayed for "BRAND", check for DTCs and perform troubleshooting based on the output DTCs ( Click here).

m. Finish diagnostic mode (Click here).

## CALIBRATION WHEN SERVICING VEHICLE

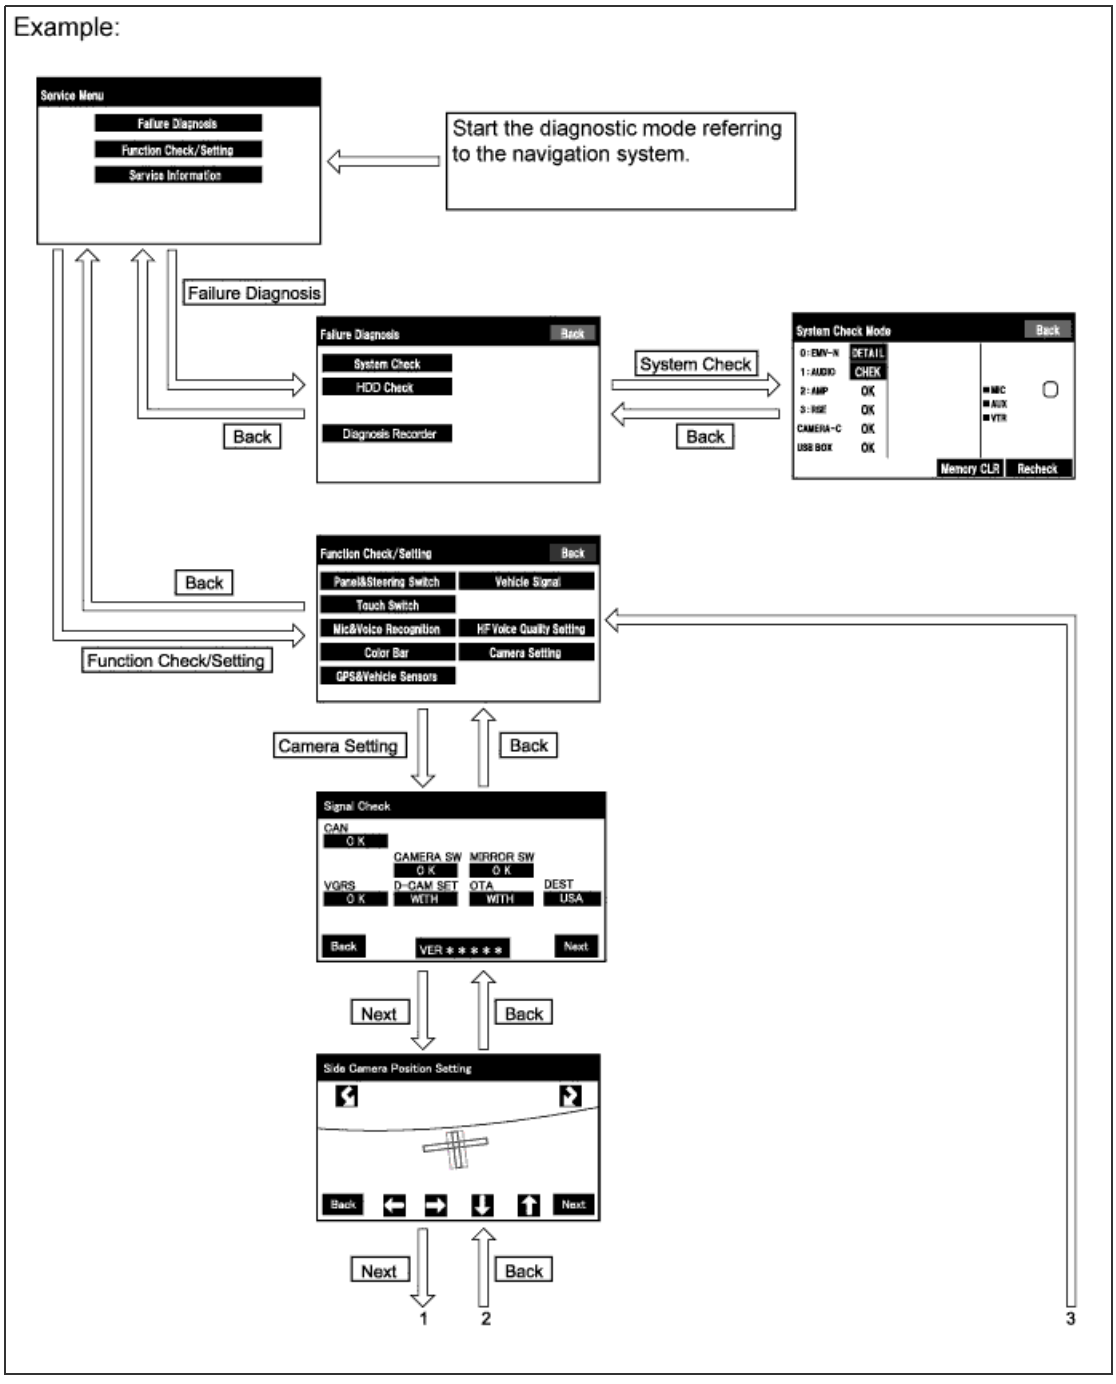
**NOTICE:**

Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems may be needed (Click here).

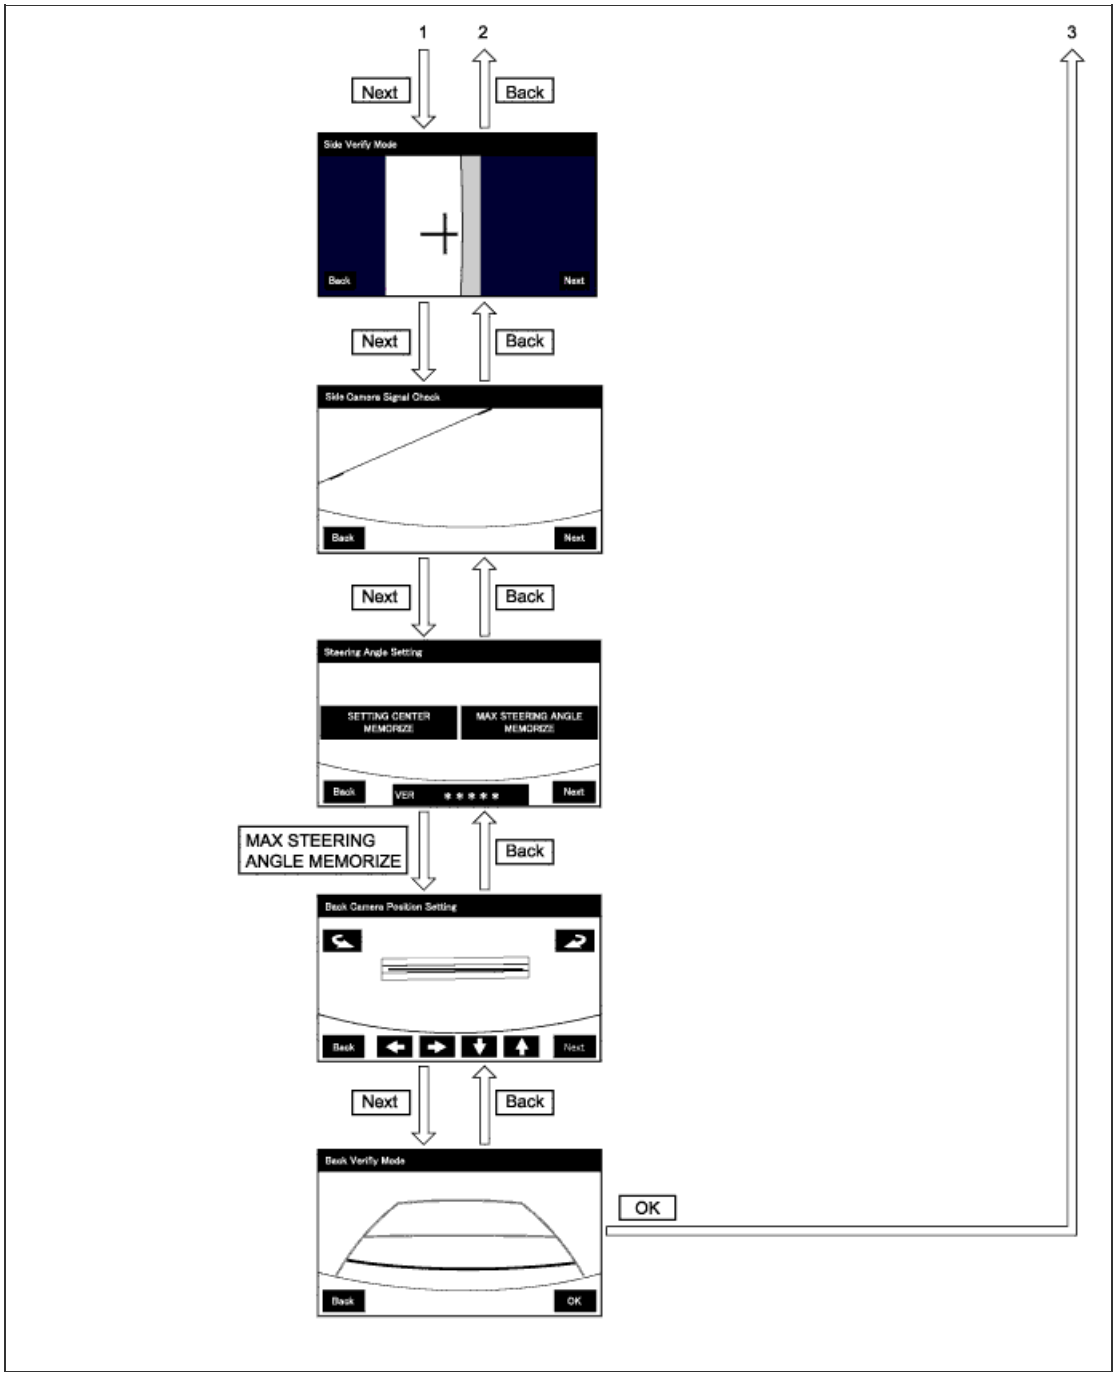
**for Preparation** Click here

## WIDE VIEW FRONT MONITOR DIAGNOSIS SYSTEM

a. For wide view front monitor system diagnosis, signals received by the parking assist ECU can be checked and the wide view front monitor system can be calibrated, adjusted and checked using the multi-display assembly.



**NOTICE:**



Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the wide view front monitor system may be needed (Click here).

**HINT:**

The displayed screens and items may differ depending on vehicle specifications.

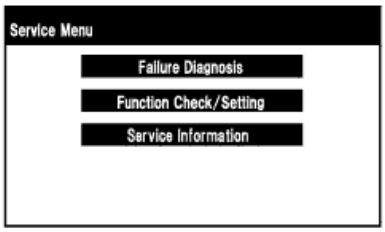
## DIAGNOSTIC MODE

a. Start diagnostic mode (Click here).

b. Failure diagnosis (Click here).

c. System check (check using system check mode screen) (Click here).

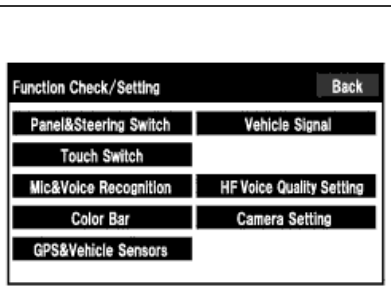


d. Finish diagnostic mode (Click here).

## SIGNAL CHECK (parking assist ECU input signal)

a. Start diagnostic mode (Click here).

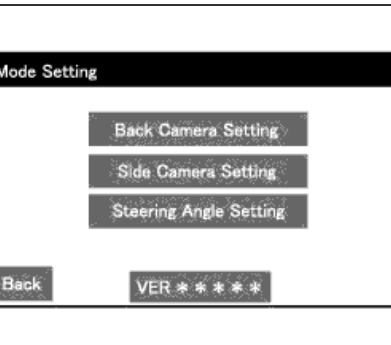
i. Select "Function Check/Setting" on the [Service Menu screen] to display the Function Check/Setting screen.



ii. Select "Camera Setting" on the [Function Check/Setting] screen.

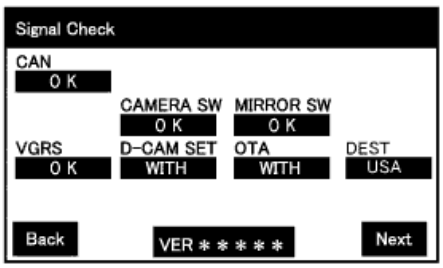
**HINT:**

After "Camera Setting" is selected, the screen transitions differ depending on whether initialization of the parking assist ECU was performed after parking assist ECU replacement.



| Parking Assist ECU Initialization | Screen Transition |
|---|---|
| Not performed | [Signal Check] screen |
| Performed | [Mode Setting] screen |

iii. When the screen changes to the [Mode Setting] screen, select "Back Camera Setting" to display the [Signal Check] screen.



**HINT:**

To select a grayed out item, select and hold the item for 2 seconds or more.

b. Signal Check:

i. On the [Signal Check] screen, it is possible to inspect the state of signals sent to the parking assist ECU and check the settings.

| Item | Inspection Detail | Note |
|---|---|---|
| CAN | Speed signal input | When "CHK" (red) is displayed, selecting "Next" will not change to the next screen. |
| CAMERA SW | Front and side monitor main switch signal input | |
| MIRROR SW | Outer rear view mirror retract signal input | |
| VGRS | VGRS signal input | |
| D-CAM SET | Driver side camera information signal input | - |
| OTA | Off-road turn assist function information input | - |
| DEST | Destination code signal input | - |

**HINT:**

- **When "CHK" (red) is displayed, perform inspections based on the result of the following inspections.**
- **If performing the adjustment after proceeding to the next screen, confirm that all items display "OK" (blue) before selecting "Next".**

c. CAN inspection:

**HINT:**

If "CHK" (red) is displayed for "CAN", check for DTCs and perform troubleshooting based on the output DTCs ( Click here).

d. CAMERA SW inspection:

i. Check that "OK" (blue) is displayed for "CAMERA SW" and select "OK".

ii. Check that "OK" (blue) changes to "CHK" (red). Press the front and side monitor main switch (steering pad switch assembly) and check that "CHK" (red) returns to "OK" (blue).

**HINT:**

If "CHK" (red) remains displayed or the "CAMERA SW" inspection result is not normal, perform troubleshooting according to Problem Symptoms Table ("CHK" message(s) are displayed on the [Signal Check] screen) (Click here).

e. MIRROR SW inspection:

i. Check that "OK" (blue) is displayed for "MIRROR SW" and select "OK".

ii. Check that "OK" (blue) changes to "CHK" (red). Press the outer mirror switch and check that "CHK" (red) returns to "OK" (blue).

**HINT:**

After operating the outer mirror retract switch, if the outer mirror remains in the retracted state, return the outer mirror to the driving position. If "CHK" (red) remains displayed or the "MIRROR SW" inspection result is not normal, perform troubleshooting according to Problem Symptoms Table ("CHK" message(s) are displayed on the [Signal Check] screen) (Click here).

f. VGRS inspection:

**HINT:**

If "CHK" (red) is displayed for "VGRS", check for DTCs and perform troubleshooting based on the output DTCs ( Click here).

g. D-CAM SET inspection:

i. Check that "WITH" (blue) is displayed for "D-CAM SET".

h. OTA inspection:

i. Check that displayed for "OTA" is matched off-road turn assist function for vehicles.

i. DEST inspection:

i. Check that displayed for "OTA" is matched destination code for vehicles.

j. Finish diagnostic mode (Click here).

## CALIBRATION WHEN SERVICING VEHICLE

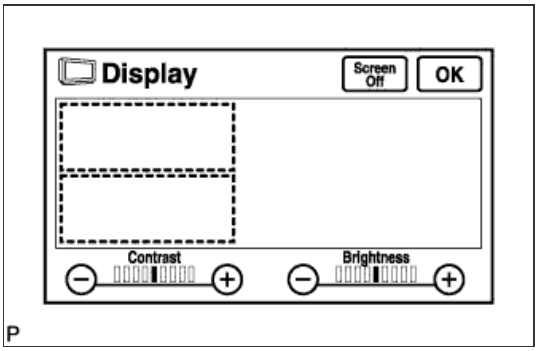
**NOTICE:**

Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the wide view front monitor system may be needed (Click here).

**for Preparation** Click here

**HINT:**

- **Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be exactly the same as the actual vehicle.**
- **If the system cannot enter the diagnostic mode, inspect all AVC-LAN communication components and repair or replace problem parts (Click here).**
- **After turning the engine switch on (IG) and before entering diagnostic mode, check that the air conditioning can be operated on the display screen. Otherwise, some items cannot be checked.**



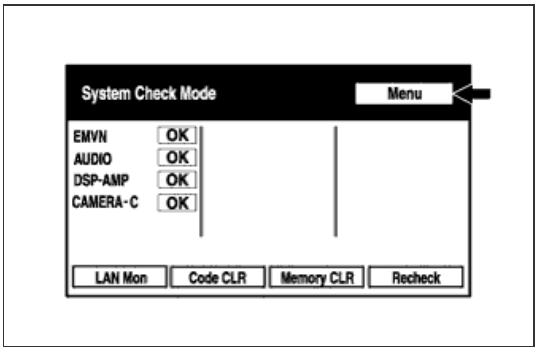
## START DIAGNOSTIC MODE

a. Start the engine.

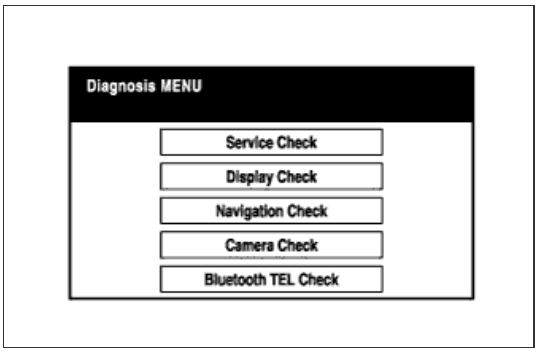
b. Switch to the "Display Check" screen.

c. From the display quality adjustment screen, touch the corners of the screen in the following order: upper left → lower left → upper left → lower left → upper left → lower left.

d. The diagnostic mode starts and the "Diagnosis Inspection" screen will be displayed. Service inspection starts automatically and the result will be displayed.



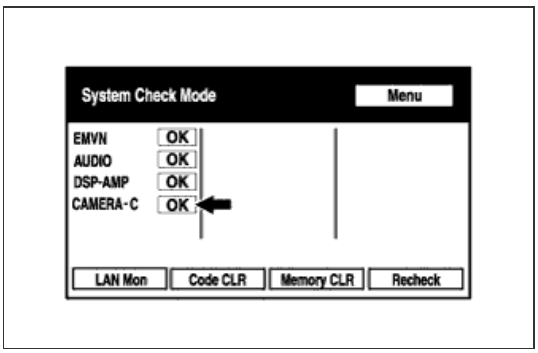
## FINISH DIAGNOSTIC MODE



a. Turn the engine switch off.

## DIAGNOSIS MENU

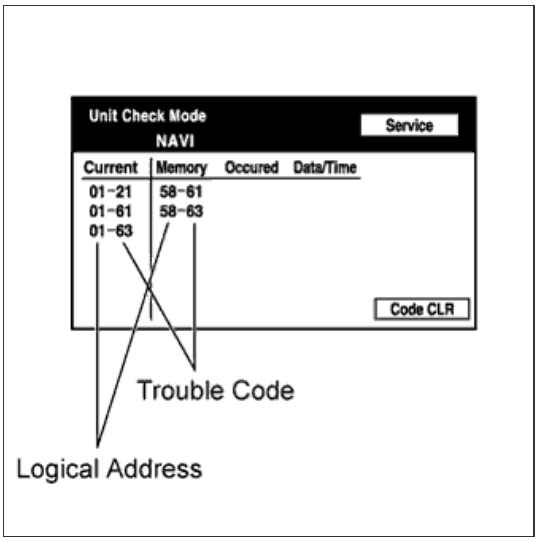
a. Press the "Menu" switch on the "System Check Mode" screen.



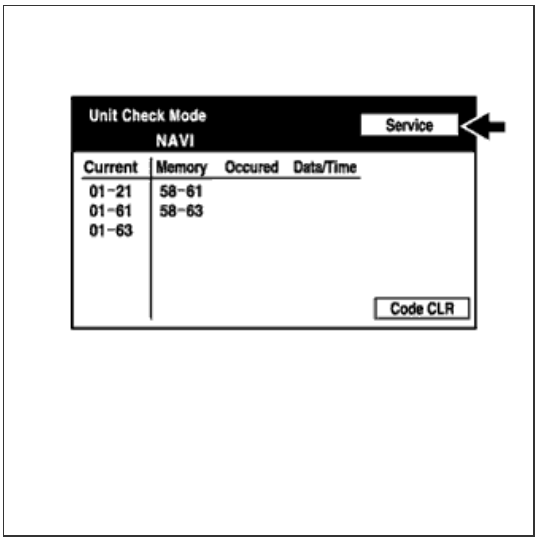
b. The "Diagnosis MENU" screen will be displayed.

## CHECK DTC

a. Read the system check result.

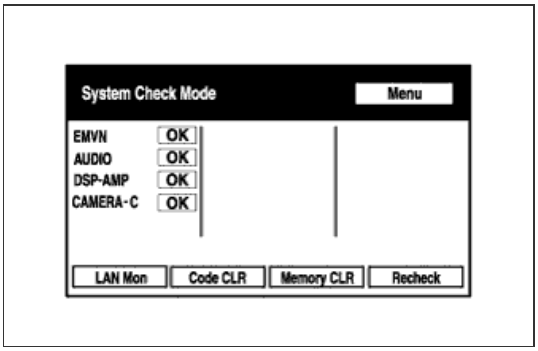


i. If the check result is "EXCH", "CHEK" or "Old", touch the displayed check result.



ii. View the results on the "Unit Check Mode" screen and record them.

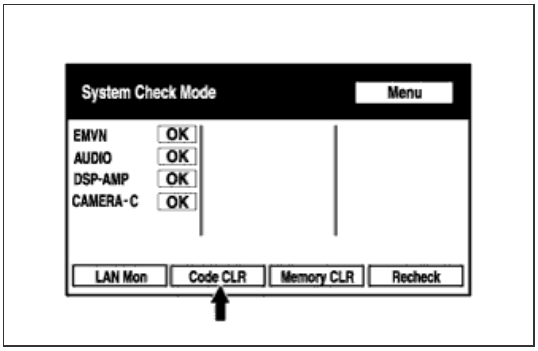
**HINT:**



- **If all check results are "OK", go to the communication DTC check.**
- **If a device name is not known, its logical address is displayed.**

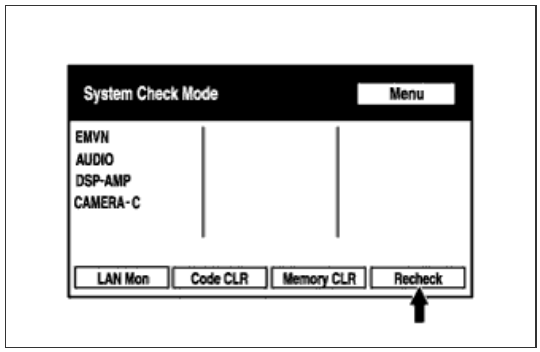
iii. When proceeding to view the results of another device, press the "Service" switch.

iv. Return to the "System Check Mode" screen. Repeat the steps above to read the other results of the system check.



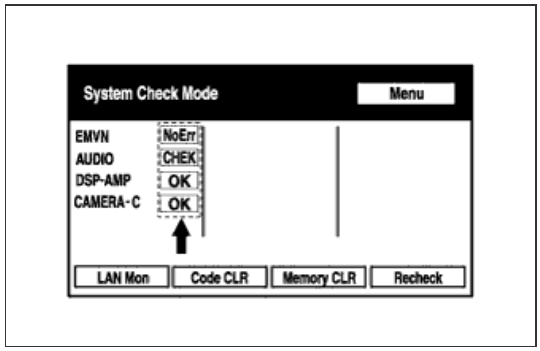
## DTC CLEAR / RECHECK

a. Clear DTCs

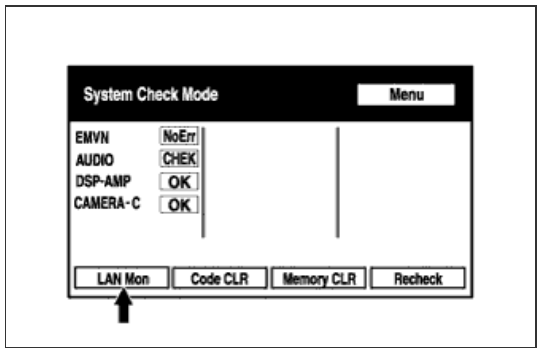


i. Press the "Code CLR" switch for 3 seconds.

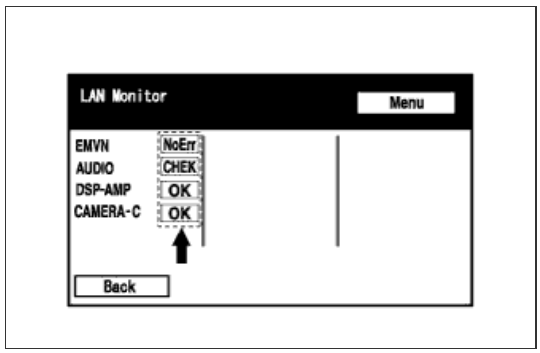
ii. The check results are cleared.



b. Recheck



i. Press the "Recheck" switch.



ii. Confirm that all diagnostic codes are "OK" when the check results are displayed. If a code other than "OK" is displayed, troubleshoot again.

iii. Press the "LAN Mon" switch to change to the "LAN Monitor" screen.

iv. Confirm that all diagnostic codes are "No Err". If a code other than "No Err" is displayed, troubleshoot again.

**for Preparation** Click here

## CHECK DTC

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Chassis / Parking Assist Monitor System / DTC.

e. Check the details of the DTCs ( Click here).

**HINT:**

Parking assist ECU may output the DTCs of the following system. If DTCs other than those specified in Diagnostic Trouble Code Chart of the front monitor system are output, refer to Diagnostic Trouble Code Chart for the applicable system.

| System | Proceed to |
|---|---|
| Parking assist monitor system | Click here |
| Side monitor system | Click here |

## CLEAR DTC

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Operate the intelligent tester to clear the codes. Enter the following menus: Chassis / Parking Assist Monitor System / DTC.

e. According to the display on the intelligent tester, select the trouble code data display with the clear button.

**for Preparation** Click here

## CHECK DTC

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Chassis / Parking Assist Monitor System / DTC.

e. Check the details of the DTCs ( Click here).

**HINT:**

Parking assist ECU may output the DTCs of the following system. If DTCs other than those specified in Diagnostic Trouble Code Chart of the front monitor system are output, refer to Diagnostic Trouble Code Chart for the applicable system.

| System | Proceed to |
|---|---|
| Parking assist monitor system (w/ Side Monitor System) | Click here |
| Side monitor system | Click here |

## CLEAR DTC

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Operate the intelligent tester to clear the codes. Enter the following menus: Chassis / Parking Assist Monitor System / DTC.

e. According to the display on the intelligent tester, select the trouble code data display with the clear button.

**for Preparation** Click here

**HINT:**

If a trouble code is output during the DTC check, inspect the trouble areas listed for that code. For details of the code, refer to the "See page" below.

**Wide View Front Monitor System**

| DTC Code | Detection Item | Trouble Area | See page |
|---|---|---|---|
| 5C-40 | Camera Picture Error | - Front television camera assembly<br>- Harness or connector<br>- Parking assist ECU | Click here |
| 5C-45 | Shift Signal Communication Error | - ECM<br>- CAN communication system<br>- Parking assist ECU | Click here |

**for Preparation** Click here

**HINT:**

If a trouble code is output during the DTC check, inspect the trouble areas listed for that code. For details of the code, refer to the "See page" in the DTC chart. Inspect fuses and relays before investigating the trouble areas shown in the table below.

**Wide View Front Monitor System**

| DTC Code | Detection Item | Trouble Area | See page |

## DTC 5C-40 Camera Picture Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 5C-40 | Open or short in the front television camera signal circuit. | • Front television camera<br>• Harness or connector<br>• Parking assist ECU |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

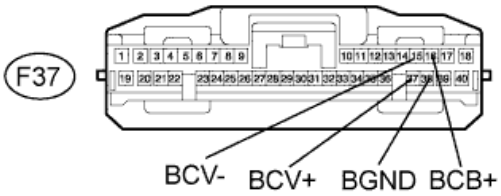
**NOTICE:**

When replacing the parking assist ECU, perform initialization of the front television camera.

#### 1.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - FRONT TELEVISION CAMERA)

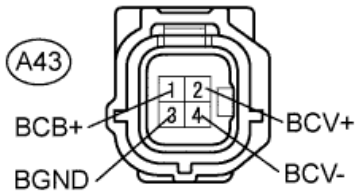
a. Disconnect the F37 ECU connector.

b. Disconnect the A43 camera connector.



c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**



| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F37-37 (BCV+) - A43-2 (BCV+) | Always | Below 1 Ω |
| F37-15 (BCV-) - A43-4 (BCV-) | Always | Below 1 Ω |
| F37-16 (BCB+) - | Always | Below 1 Ω |

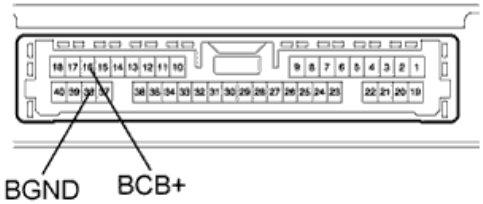
| | | |
|---|---|---|
| A43-1 (BCB+) | | |
| F37-38 (BGND) - A43-3 (BGND) | Always | Below 1 Ω |
| F37-37 (BCV+) - Body ground | Always | 10 kΩ or higher |
| F37-15 (BCV-) - Body ground | Always | 10 kΩ or higher |
| F37-38 (BGND) - Body ground | Always | 10 kΩ or higher |
| F37-16 (BCB+) - Body ground | Always | 10 kΩ or higher |

Front view of wire harness connector:
(to Parking Assist ECU)

Front view of wire harness connector:
(to Front Television Camera Assembly)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



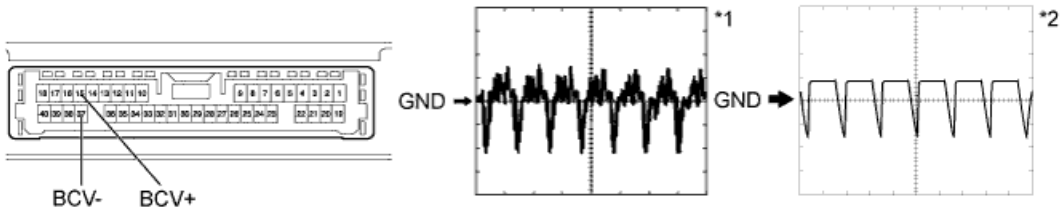
## 2.CHECK PARKING ASSIST ECU

a. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F37-16 (BCB+) - F37-38 (BGND) | Wide view front monitor display screen displayed | 5.8 to 6.5 V |

Component with harness connected:
(Parking Assist ECU)



NG → REPLACE PARKING ASSIST ECU (Click here)

OK

## 3.CHECK FRONT TELEVISION CAMERA ASSEMBLY

Component with harness connected:
(Parking Assist ECU)

a. Using an oscilloscope, check the waveform.

**Measurement Condition**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F37-37 (BCV+) - F37-15 (BCV-) |
| Tool Setting | 0.2 V/DIV., 50 µs/DIV. |
| Condition | • Wide view front monitor display screen displayed*1<br>• Camera lens covered to make image black while wide view front monitor display screen displayed*2 |

NG → REPLACE FRONT TELEVISION CAMERA ASSEMBLY (Click here)

OK

**4.REPLACE HARNESS AND CONNECTOR (GVIF CABLE)**

a. Replace the harness and connector (GVIF cable).

NEXT

**5.CHECK DTC OUTPUT**

a. Clear the DTCs (Click here).

b. Recheck for DTCs (Click here).

**OK:**
**DTC 5C-40 is not output.**

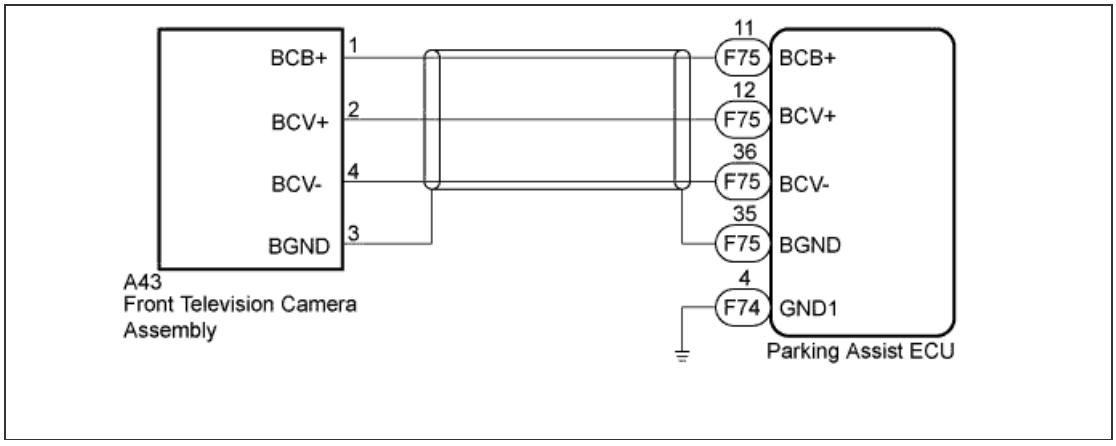
NG → REPLACE PARKING ASSIST ECU (Click here)

OK

**END (GVIF CABLE IS DEFECTIVE)**

## DTC C1681 Front Camera Feedback Malfunction

## DTC C1682 Front Camera Current Malfunction



**for Preparation** Click here

### DESCRIPTION

DTC 1681 is stored if the parking assist ECU judges as a result of its self check that a synchronization problem is occurring in the image signal sent from the front television camera assembly to the parking assist ECU.
DTC 1682 is stored if the parking assist ECU judges as a result of its self check that there is a problem with the current supplied from the front television camera assembly connected to the parking assist ECU.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1681 | Front Camera Feedback Malfunction | • Harness or connector<br>• Parking assist ECU<br>• Front television camera assembly |
| C1682 | Front Camera Current Malfunction | |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the parking assist ECU after the cable is disconnected from the negative (-) battery terminal, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as wide view front monitor system may be needed (Click here).**

**1.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - FRONT TELEVISION CAMERA ASSEMBLY AND BODY GROUND)**

a. Disconnect the F74 and F75 parking assist ECU connectors.

b. Disconnect the A43 front television camera assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-36 (BCV-) - A43-4 (BCV-) | Always | Below 1 Ω |
| F75-12 (BCV+) - A43-2 (BCV+) | Always | Below 1 Ω |
| F75-35 (BGND) - A43-3 (BGND) | Always | Below 1 Ω |
| F75-11 (BCB+) - A43-1 (BCB+) | Always | Below 1 Ω |
| F74-4 (GND1) - Body ground | Always | Below 1 Ω |
| F75-36 (BCV-) - Body ground | Always | 10 kΩ or higher |

| | | |
|---|---|---|
| F75-12 (BCV+) - Body ground | Always | 10 kΩ or higher |
| F75-35 (BGND) - Body ground | Always | 10 kΩ or higher |
| F75-11 (BCB+) - Body ground | Always | 10 kΩ or higher |

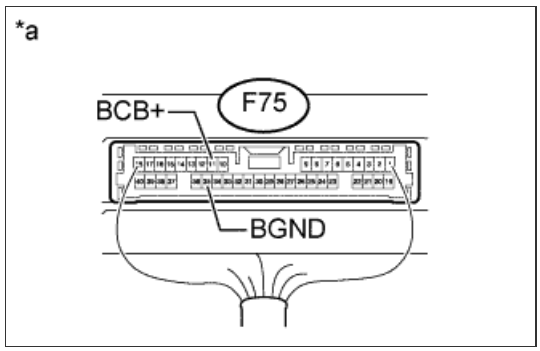
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 2.CHECK PARKING ASSIST ECU (BCB+, BGND)

a. Reconnect the F74 and F75 parking assist ECU connectors.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

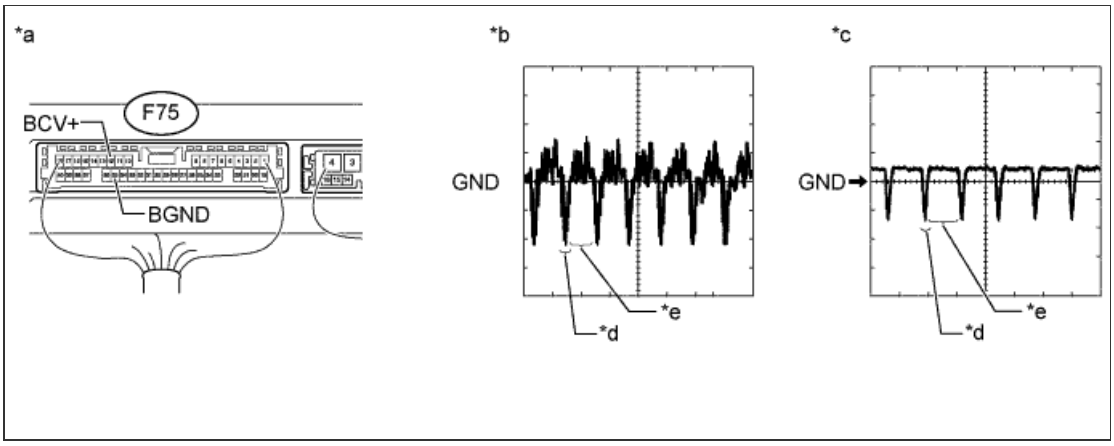
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-35 (BGND) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F75-11 (BCB+) - F75-35 (BGND) | Engine switch on (IG), front and side monitor main switch assembly on | 5.5 to 7.05 V |

**Text in Illustration**



| | |
|---|---|
| *a | Component with harness connected (Parking Assist ECU) |

NG → REPLACE PARKING ASSIST ECU (Click here)

OK

## 3.CHECK FRONT TELEVISION CAMERA ASSEMBLY (BCV+, BGND)

a. Reconnect the A43 front television camera assembly connector.

**Text in Illustration**

| | | | |
|---|---|---|---|
| *a | Component with harness connected (Parking Assist ECU) | *b | Waveform A |
| *c | Waveform B | *d | Synchronization Signal |
| *e | Video Waveform | - | - |

**HINT:**

- **A waterproof connector is used for the front television camera assembly. Therefore, inspect the waveform at the parking assist ECU with the connector connected.**
- **The video waveform changes according to the image sent by the front television camera assembly.**

b. Measure the resistance according to the value(s) in the table below.

**OK:**

**Waveform is as shown in the illustration.**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F75-12 (BCV+) - F75-35 (BGND) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | • Waveform A: Engine switch on (IG), front and side monitor main switch assembly on and camera lens is not covered, displaying an image<br>• Waveform B: Engine switch on (IG), front and side monitor main switch assembly on and camera lens is covered, blacking out the screen |

NG → REPLACE FRONT TELEVISION CAMERA ASSEMBLY (Click here)

OK → REPLACE PARKING ASSIST ECU (Click here)

## DTC 5C-45 Shift Signal Communication Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 5C-45 | No signal is transmitted from the ECM. | • ECM<br>• CAN communication system<br>• Parking assist ECU |

### INSPECTION PROCEDURE

**1.CHECK CAN COMMUNICATION SYSTEM (PARKING ASSIST ECU - ECM)**

a. for LHD:
Refer to the CAN communication system (Click here).

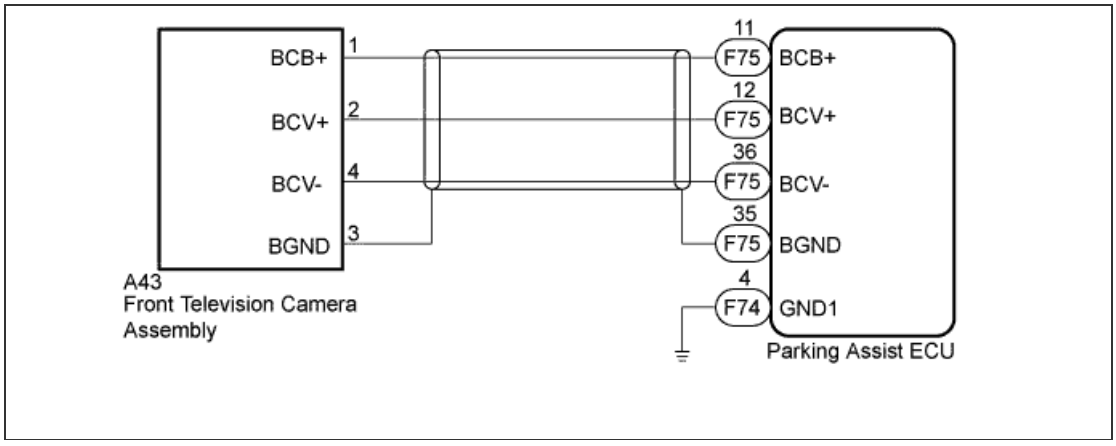
b. for RHD:
Refer to the CAN communication system (Click here).

**NEXT**

**END**

## DTC C1681 Front Camera Feedback Malfunction

## DTC C1682 Front Camera Current Malfunction



**for Preparation** Click here

### DESCRIPTION

DTC 1681 is stored if the parking assist ECU judges as a result of its self check that a synchronization problem is occurring in the image signal sent from the front television camera assembly to the parking assist ECU.
DTC 1682 is stored if the parking assist ECU judges as a result of its self check that there is a problem with the current supplied from the front television camera assembly connected to the parking assist ECU.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1681 | Front Camera Feedback Malfunction | • Harness or connector<br>• Parking assist ECU<br>• Front television camera assembly |
| C1682 | Front Camera Current Malfunction | |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the parking assist ECU after the cable is disconnected from the negative (-) battery terminal, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as wide view front monitor system may be needed (Click here).**

**1.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - FRONT TELEVISION CAMERA ASSEMBLY AND BODY GROUND)**

a. Disconnect the F74 and F75 parking assist ECU connectors.

b. Disconnect the A43 front television camera assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-36 (BCV-) - A43-4 (BCV-) | Always | Below 1 Ω |
| F75-12 (BCV+) - A43-2 (BCV+) | Always | Below 1 Ω |
| F75-35 (BGND) - A43-3 (BGND) | Always | Below 1 Ω |
| F75-11 (BCB+) - A43-1 (BCB+) | Always | Below 1 Ω |
| F74-4 (GND1) - Body ground | Always | Below 1 Ω |
| F75-36 (BCV-) - Body ground | Always | 10 kΩ or higher |

| | | |
|---|---|---|
| F75-12 (BCV+) - Body ground | Always | 10 kΩ or higher |
| F75-35 (BGND) - Body ground | Always | 10 kΩ or higher |
| F75-11 (BCB+) - Body ground | Always | 10 kΩ or higher |

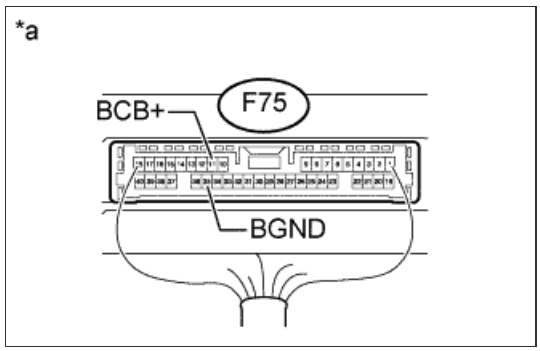
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 2.CHECK PARKING ASSIST ECU (BCB+, BGND)

a. Reconnect the F74 and F75 parking assist ECU connectors.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

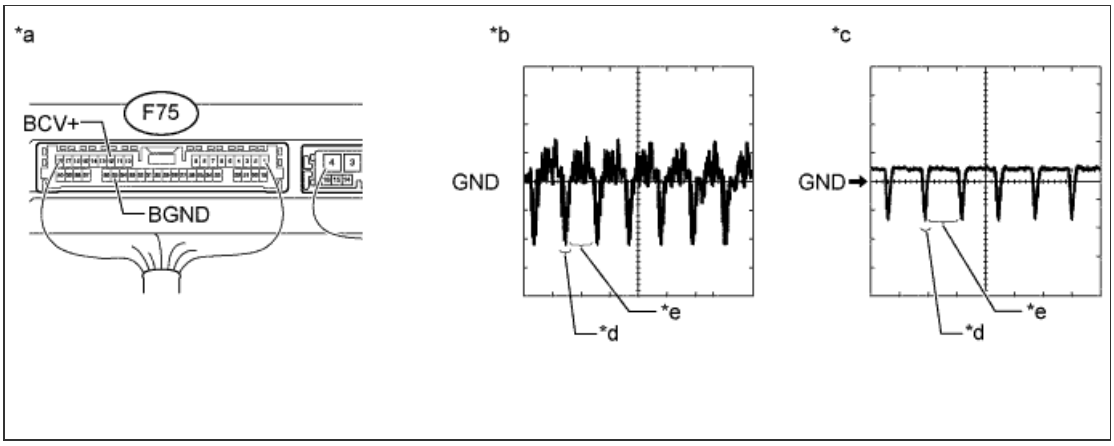
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-35 (BGND) - Body ground | Always | Below 1 Ω |

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F75-11 (BCB+) - F75-35 (BGND) | Engine switch on (IG), front and side monitor main switch assembly on | 5.5 to 7.05 V |

**Text in Illustration**



| | |
|---|---|
| *a | Component with harness connected (Parking Assist ECU) |

NG → REPLACE PARKING ASSIST ECU (Click here)

OK

## 3.CHECK FRONT TELEVISION CAMERA ASSEMBLY (BCV+, BGND)

a. Reconnect the A43 front television camera assembly connector.

**Text in Illustration**

| | | | |
|---|---|---|---|
| *a | Component with harness connected (Parking Assist ECU) | *b | Waveform A |
| *c | Waveform B | *d | Synchronization Signal |
| *e | Video Waveform | - | - |

**HINT:**

- **A waterproof connector is used for the front television camera assembly. Therefore, inspect the waveform at the parking assist ECU with the connector connected.**
- **The video waveform changes according to the image sent by the front television camera assembly.**

b. Measure the resistance according to the value(s) in the table below.

**OK:**

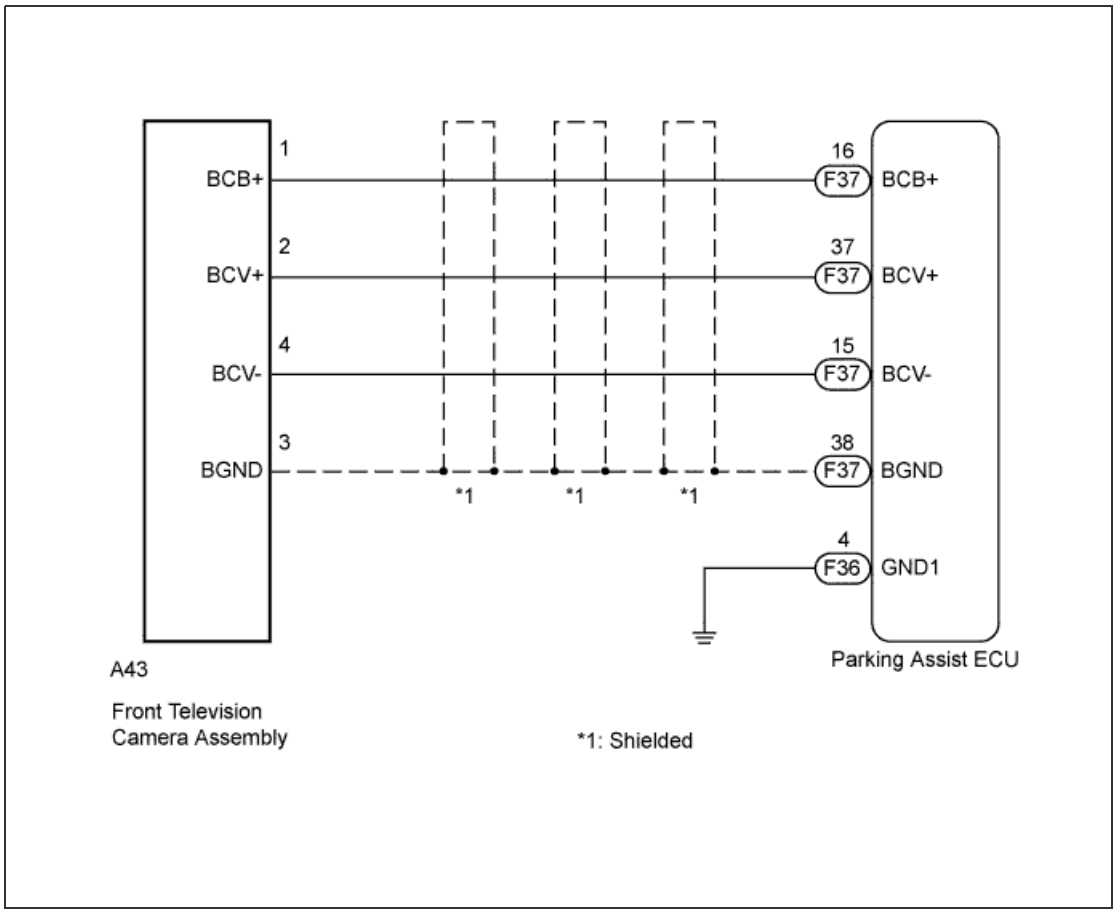
**Waveform is as shown in the illustration.**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F75-12 (BCV+) - F75-35 (BGND) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | • Waveform A: Engine switch on (IG), front and side monitor main switch assembly on and camera lens is not covered, displaying an image<br>• Waveform B: Engine switch on (IG), front and side monitor main switch assembly on and camera lens is covered, blacking out the screen |

NG → REPLACE FRONT TELEVISION CAMERA ASSEMBLY (Click here)

OK → REPLACE PARKING ASSIST ECU (Click here)

## DTC C1681 Front Camera Feedback Malfunction



**for Preparation** Click here

### DESCRIPTION

This DTC is stored if the parking assist ECU judges as a result of its self check that a synchronization problem is occurring in the image signal sent from the front television camera assembly to the parking assist ECU.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1681 | Front Camera Feedback Malfunction | • Harness or connector<br>• Parking assist ECU<br>• Front television camera assembly |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the display and navigation module display after the cable is disconnected from the negative (-) battery terminal, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems may be needed (Click here).**

#### 1.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - FRONT TELEVISION CAMERA ASSEMBLY)

a. Disconnect the F37 connector from the parking assist ECU.

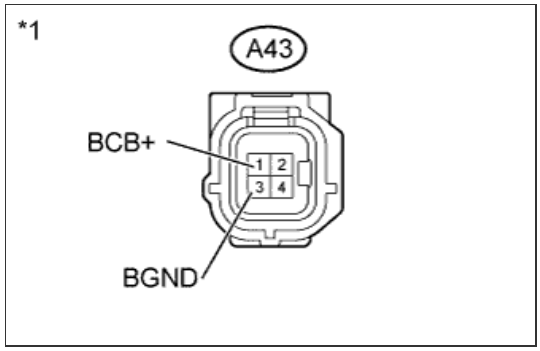
b. Disconnect the A43 connector from the front television camera assembly.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F37-15 (BCV-) - | | |

| | | |
|---|---|---|
| A43-4 (BCV-) | Always | Below 1 Ω |
| F37-37 (BCV+) - A43-2 (BCV+) | Always | Below 1 Ω |
| F37-38 (BGND) - A43-3 (BGND) | Always | Below 1 Ω |
| F37-16 (BCB+) - A43-1 (BCB+) | Always | Below 1 Ω |
| F37-15 (BCV-) - Body ground | Always | 10 kΩ or higher |
| F37-37 (BCV+) - Body ground | Always | 10 kΩ or higher |
| F37-38 (BGND) - Body ground | Always | 10 kΩ or higher |
| F37-16 (BCB+) - Body ground | Always | 10 kΩ or higher |



NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 2.INSPECT FRONT TELEVISION CAMERA ASSEMBLY (BCB+, BGND)

a. Reconnect the F37 connector to the parking assist ECU.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| A43-3 (BGND) - Body ground | Always | Below 1 Ω |

c. Disconnect the A43 connector from the front television camera assembly.

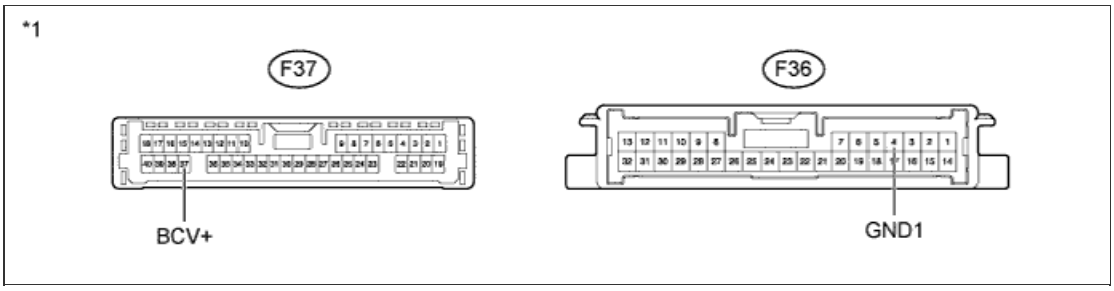
d. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| A43-3 (BGND) - A43-1 (BCB+) | Wide View Front Monitor Screen Displayed | 5.8 to 7.0 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Front Television Camera Assembly) |



NG → REPLACE PARKING ASSIST ECU (Click here)

OK

## 3.INSPECT PARKING ASSIST ECU (BCV+, GND1)

a. Reconnect the A43 connector to the front television camera assembly.

b. Reconnect the F36 and F37 connectors to the parking assist ECU.

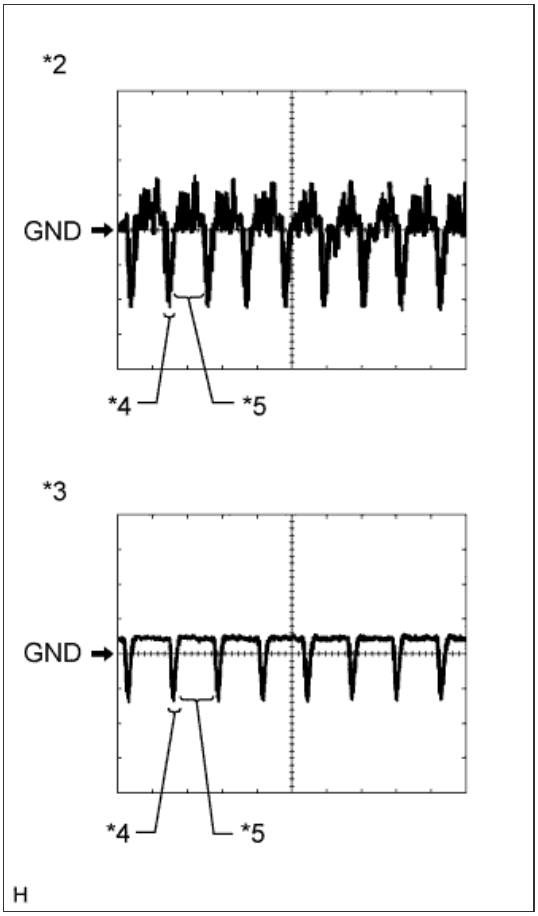
c. Check the waveform of the front television camera assembly using an oscilloscope.

**HINT:**

A waterproof connector is used for the front television camera assembly. Therefore, inspect the waveform at the parking assist ECU with the connector connected.

**OK:**

**Waveform is as shown in the illustration.**



| Item | Content |
|---|---|
| Terminal No. (Symbol) | F37-37 (BCV+) - F36-4 (GND1) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | Engine switch on (IG), front and side monitor main switch on |

**HINT:**

The video waveform changes according to the image sent by the front television camera assembly.

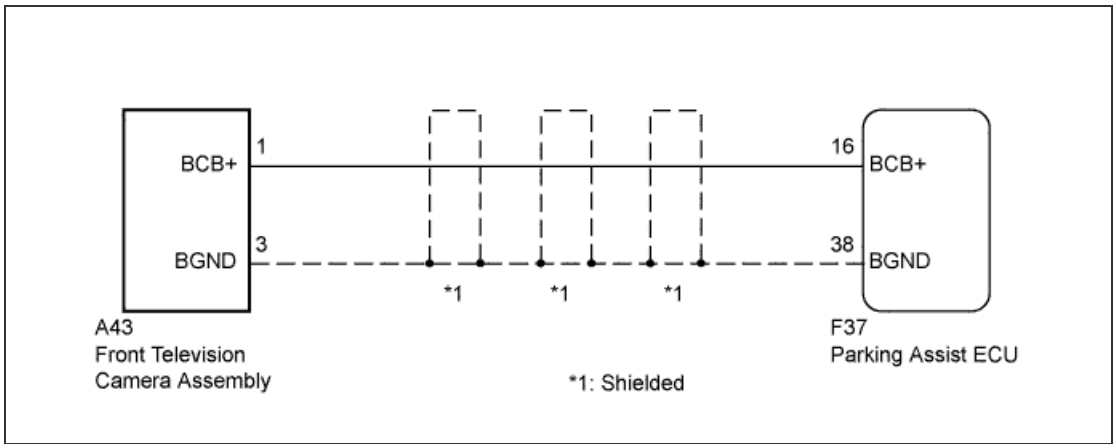
**Text in Illustration**

| | |
|---|---|
| *1 | Component with harness connected (Parking Assist ECU) |
| *2 | Waveform 1 (under normal conditions) |
| *3 | Waveform 2 (camera lens is covered, blacking out the screen) |
| *4 | Synchronized Signal |
| *5 | Video Waveform |

NG → REPLACE FRONT TELEVISION CAMERA ASSEMBLY (Click here)

OK → REPLACE PARKING ASSIST ECU (Click here)

## DTC C1682 Front Camera Current Malfunction



**for Preparation** Click here

### DESCRIPTION

This DTC is stored if the parking assist ECU judges as a result of its self check that there is a problem with the current supplied to the front television camera assembly connected to the parking assist ECU.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1682 | Front Camera Current Malfunction | • Harness or connector<br>• Parking assist ECU<br>• Front television camera assembly |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the display and navigation module display after the cable is disconnected from the negative (-) battery terminal, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems may be needed (Click here).**

**1.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - FRONT TELEVISION CAMERA ASSEMBLY)**

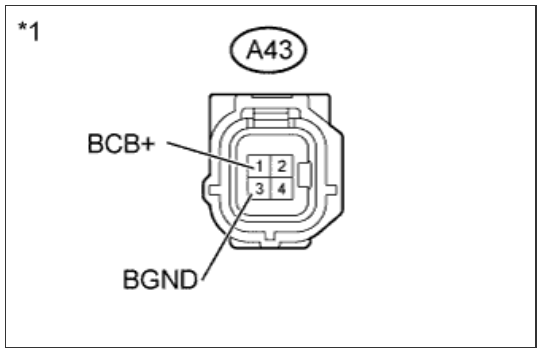
a. Disconnect the F37 connector from the parking assist ECU.

b. Disconnect the A43 connector from the front television camera assembly.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F37-16 (BCB+) - A43-1 (BCB+) | Always | Below 1 Ω |
| F37-38 (BGND) - A43-3 (BGND) | Always | Below 1 Ω |
| F37-16 (BCB+) - Body ground | Always | 10 kΩ or higher |
| F37-38 (BGND) - Body ground | Always | 10 kΩ or higher |



NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 2.INSPECT FRONT TELEVISION CAMERA ASSEMBLY (BCB+, BGND)

a. Reconnect the F37 connector to the parking assist ECU.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| A43-3 (BGND) - Body ground | Always | Below 1 Ω |

c. Disconnect the A43 connector from the front television camera assembly.

d. Measure the voltage according to the value(s) in the table below.

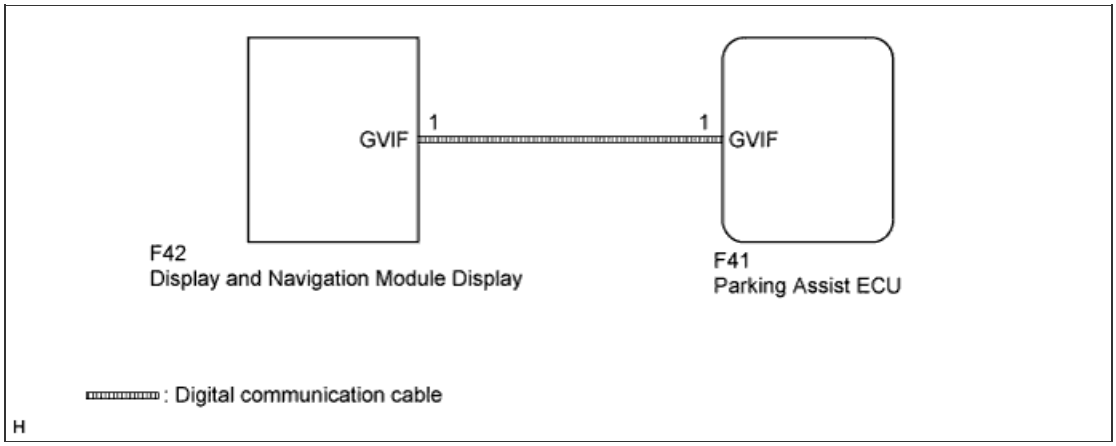
**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| A43-3 (BGND) - A43-1 (BCB+) | Wide View Front Monitor Screen Displayed | 5.8 to 7.0 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Front Television Camera Assembly) |

NG → REPLACE PARKING ASSIST ECU (Click here)



OK → REPLACE FRONT TELEVISION CAMERA ASSEMBLY

**for Preparation** Click here

## DESCRIPTION

The parking assist ECU displays images for the parking assist monitor, front monitor and side monitor screens. The image signals are sent from the parking assist ECU to the display and navigation module display through the digital communication cable.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**HINT:**

Images are difficult to discern even in normal conditions if:

- **Noise may occur in the image depending on electrical devices used in the cabin.**
- **Noise may occur in the image if accessories that generate radio waves have been installed.**
- **The camera screen is frosted over (the image immediately after turning the engine switch on (IG) may be blurred or darker than normal).**
- **The camera lens is dirty with snow, mud, etc.**
- **A strong beam of light, such as a sunbeam or headlight, hits the camera.**
- **It is too dark around the camera (at night etc.).**
- **The ambient temperature around the camera is either too high or too low.**
- **The vehicle is tilted at a steep angle.**
- **The ambience of the camera is too bright. (When a strong light, such as a sunbeam reflected off the vehicle body, hits the camera, the image may be blurred. This is called the "SMEAR" phenomenon, peculiar to the CCD camera.)**

### 1.READ VALUE USING INTELLIGENT TESTER

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Chassis / Parking Assist Monitor System / Data List.

e. Check the Data List for proper functioning of the following items.

**Parking Assist Monitor System**

| Tester Display | Measurement Item/Range | Normal Condition | Diagnostic Note |
|---|---|---|---|
| AISIC Output Status | Output condition of camera display/OK or NG | OK: Output condition of camera display is normal<br>NG: Output condition of camera display is abnormal | - |

NG → REPLACE PARKING ASSIST ECU (Click here)

OK

## 2.CHECK DIGITAL COMMUNICATION CABLE CONNECTOR

a. Check the digital communication cable connector.

i. Check the digital communication cable connectors between the parking assist ECU and display and navigation module display for any connection problems (Click here).

b. Check if the same malfunction recurs when the parking assist monitor, front monitor and side monitor screens are displayed.

**Result**

| Result | Proceed to |
|---|---|
| Malfunction does not reoccur (returns to normal) | A |
| Malfunction reoccurs | B |

B → Go to step 3

A → END

## 3.REPLACE WIRE HARNESS (DIGITAL COMMUNICATION CABLE)

a. Replace the digital communication cable between the parking assist ECU and display and navigation module display with a new one.

b. Check if the same malfunction recurs when the parking assist monitor, front monitor and side monitor screens are displayed.

**Result**

| Result | Proceed to |
|---|---|
| Malfunction does not reoccur (returns to normal) | A |
| Malfunction reoccurs | B |

B → Go to step 4

A → END

## 4.REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY

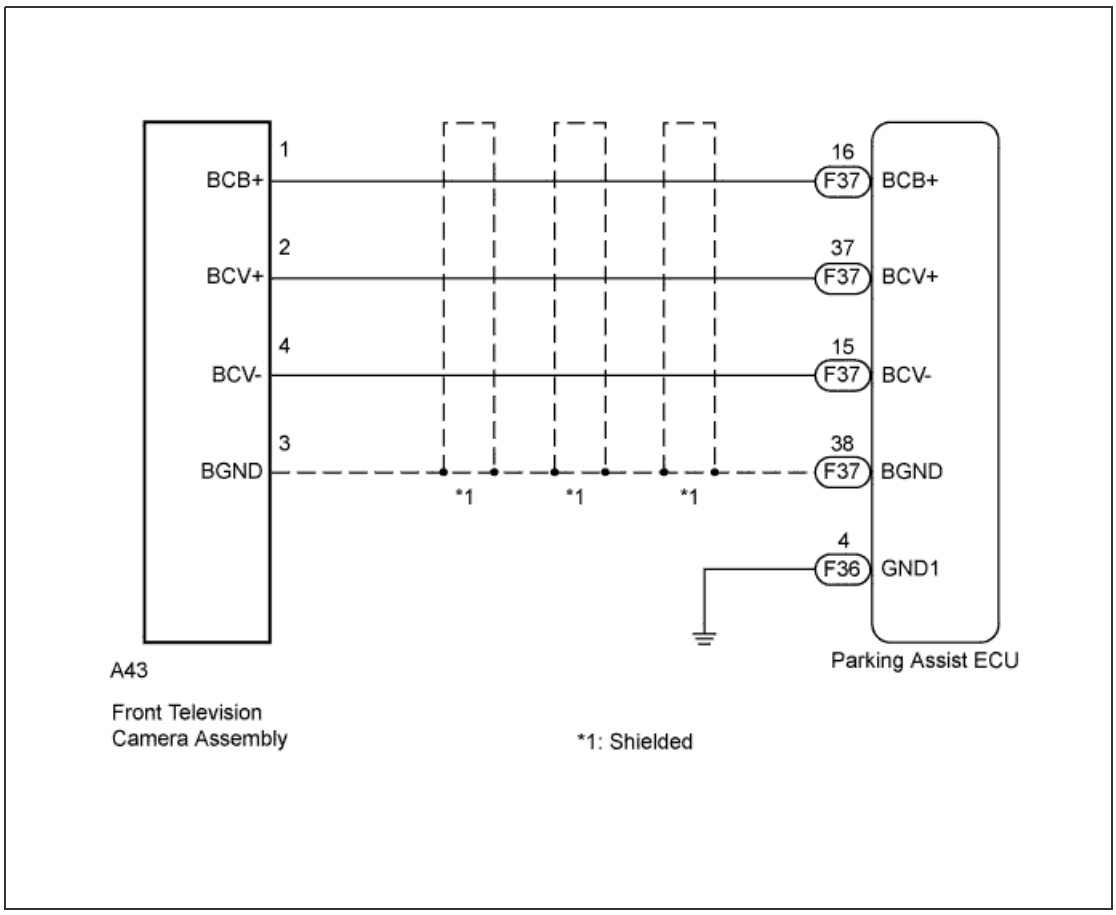
a. Replace the display and navigation module display with a new or normally functioning one ( Click here).

b. Check if the same malfunction recurs when the parking assist monitor, front monitor and side monitor screens are displayed.

**Result**

| Result | Proceed to |
|---|---|
| Malfunction does not reoccur (returns to normal) | A |
| Malfunction reoccurs | B |

B → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)



A → END

**for Preparation** Click here

## DESCRIPTION

The display signal from the front television camera assembly is transmitted to the display and navigation module display via the parking assist ECU.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the display and navigation module display after the cable is disconnected from the negative (-) battery terminal, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems may be needed (Click here).**

**HINT:**

Images are difficult to discern even in normal conditions if:

- **Noise may occur in the image depending on electrical devices used in the cabin.**
- **Noise may occur in the image if accessories that generate radio waves have been installed.**
- **The camera screen is frosted over (the image immediately after turning the engine switch on (IG) may be blurred or darker than normal).**
- **The camera lens is dirty with snow, mud, etc.**
- **A strong beam of light, such as a sunbeam or headlight, hits the camera.**
- **It is too dark around the camera (at night etc.).**
- **The ambient temperature around the camera is either too high or too low.**
- **The vehicle is tilted at a steep angle.**
- **The ambience of the camera is too bright. (When a strong light, such as a sunbeam reflected off the vehicle body, hits the camera, the image may be blurred. This is called the "SMEAR" phenomenon, peculiar to the CCD camera.)**

### 1.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - FRONT TELEVISION CAMERA ASSEMBLY)

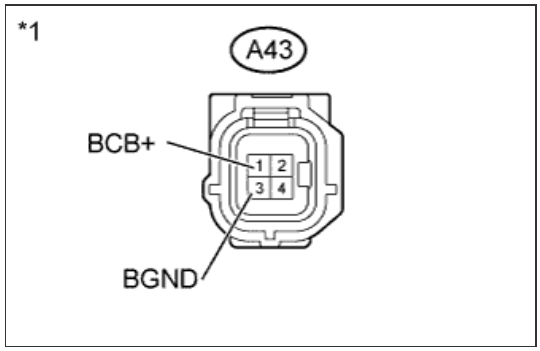
a. Disconnect the F37 connector from the parking assist ECU.

b. Disconnect the A43 connector from the front television camera assembly.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F37-15 (BCV-) - A43-4 (BCV-) | Always | Below 1 Ω |
| F37-37 (BCV+) - A43-2 (BCV+) | Always | Below 1 Ω |
| F37-38 (BGND) - A43-3 (BGND) | Always | Below 1 Ω |
| F37-16 (BCB+) - A43-1 (BCB+) | Always | Below 1 Ω |
| F37-15 (BCV-) - Body ground | Always | 10 kΩ or higher |
| F37-37 (BCV+) - Body ground | Always | 10 kΩ or higher |
| F37-38 (BGND) - Body ground | Always | 10 kΩ or higher |
| F37-16 (BCB+) - Body ground | Always | 10 kΩ or higher |



NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 2.INSPECT FRONT TELEVISION CAMERA ASSEMBLY (BCB+, BGND)

a. Reconnect the F37 connector to the parking assist ECU.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| A43-3 (BGND) - Body ground | Always | Below 1 Ω |

c. Disconnect the A43 connector from the front television camera assembly.

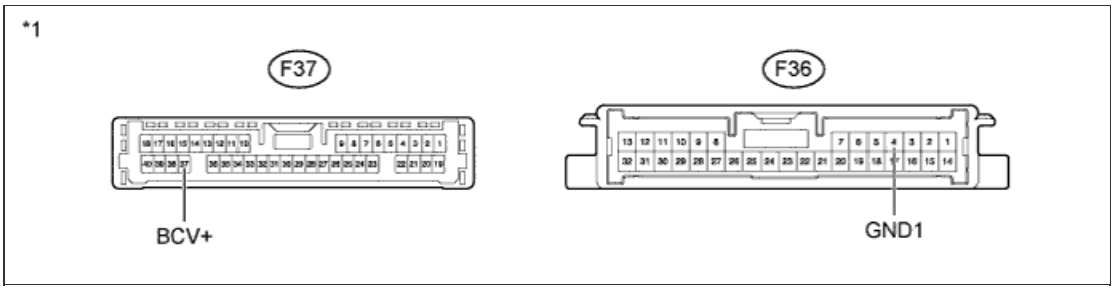
d. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| A43-3 (BGND) - A43-1 (BCB+) | Wide View Front Monitor Screen Displayed | 5.8 to 7.0 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Front Television Camera Assembly) |



NG → REPLACE PARKING ASSIST ECU (Click here)

OK

## 3.INSPECT PARKING ASSIST ECU (BCV+, GND1)

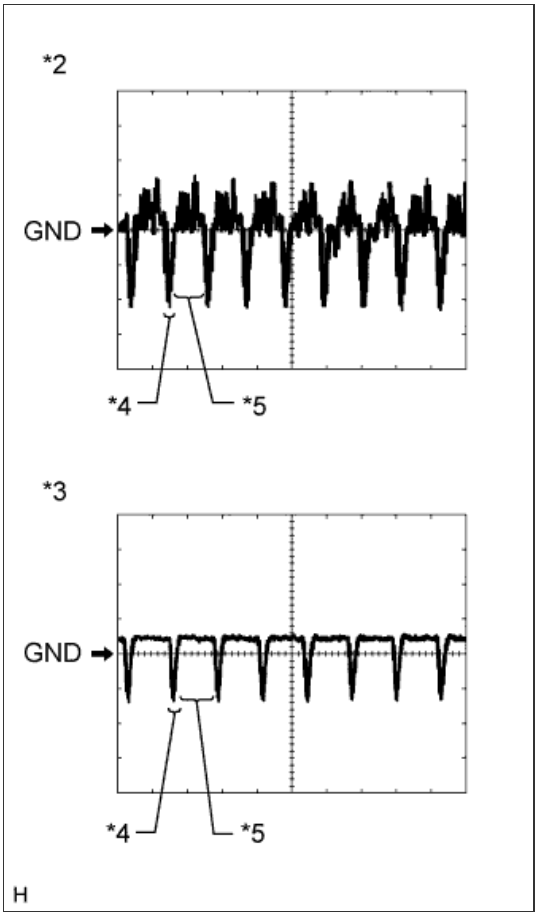
a. Reconnect the A43 connector to the front television camera assembly.

b. Reconnect the F36 and F37 connectors to the parking assist ECU.

c. Check the waveform of the front television camera assembly using an oscilloscope.

**HINT:**

A waterproof connector is used for the front television camera assembly. Therefore, inspect the waveform at the parking assist ECU with the connector connected.



**OK:**

**Waveform is as shown in the illustration.**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F37-37 (BCV+) - F36-4 (GND1) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | Engine switch on (IG), front and side monitor main switch on |

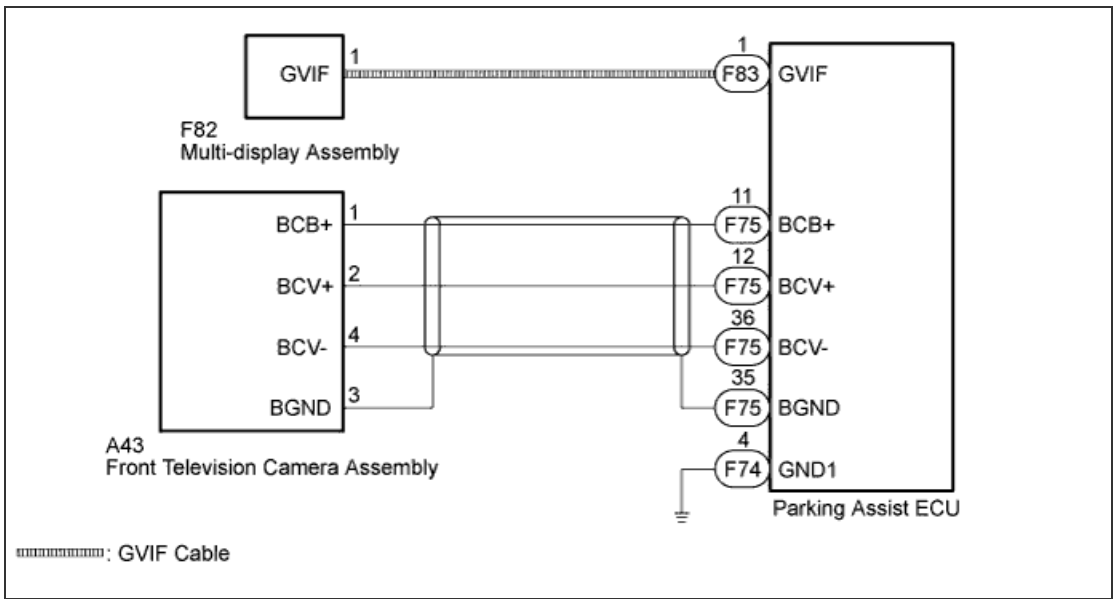
**HINT:**

The video waveform changes according to the image sent by the front television camera assembly.

**Text in Illustration**

| | |
|---|---|
| *1 | Component with harness connected (Parking Assist ECU) |
| *2 | Waveform 1 (under normal conditions) |
| *3 | Waveform 2 (camera lens is covered, blacking out the screen) |
| *4 | Synchronized Signal |
| *5 | Video Waveform |

NG → REPLACE FRONT TELEVISION CAMERA ASSEMBLY (Click here)



OK → REPLACE PARKING ASSIST ECU (Click here)

**for Preparation** Click here

## DESCRIPTION

The display signal from the front television camera assembly is transmitted to the multi-display assembly via the parking assist ECU.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the parking assist ECU after the cable is disconnected from the negative (-) battery terminal, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as wide view front monitor system may be needed (Click here).**

**HINT:**

Images are difficult to discern even in normal conditions if:

- **Noise may occur in the image depending on electrical devices used in the cabin.**
- **Noise may occur in the image if accessories that generate radio waves have been installed.**
- **The camera screen is extremely cold (the image immediately after turning the engine switch on (IG) may be blurred or darker than normal).**
- **The camera lens is dirty with snow, mud, etc.**
- **A strong beam of light, such as a sunbeam or headlight, hits the camera.**
- **It is too dark around the camera (at night etc.).**
- **The ambient temperature around the camera is either too high or too low.**
- **The vehicle is tilted at a steep angle.**
- **The ambience of the camera is too bright. (When a strong light, such as a sunbeam reflected off the vehicle body, hits the camera, the image may be blurred. This is called the "SMEAR" phenomenon, particular to the CCD camera.)**
- **The camera lens is damaged by plying stones.**

### 1.CHECK SIDE MONITOR SYSTEM

a. Check if the same malfunction occurs when the side monitor screen is displayed.

**Result**

| Result | Proceed to |
|---|---|
| Malfunction occurs when front monitor screen is displayed (side monitor screen is normal). | A |
| Malfunction occurs when front assist monitor screen and side monitor screen are displayed. | B |

B → Go to step 5

A

## 2.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - FRONT TELEVISION CAMERA ASSEMBLY AND BODY GROUND)

a. Disconnect the F74 and F75 parking assist ECU connectors.

b. Disconnect the A43 front television camera assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-36 (BCV-) - A43-4 (BCV-) | Always | Below 1 Ω |
| F75-12 (BCV+) - A43-2 (BCV+) | Always | Below 1 Ω |
| F75-35 (BGND) - A43-3 (BGND) | Always | Below 1 Ω |
| F75-11 (BCB+) - A43-1 (BCB+) | Always | Below 1 Ω |
| F74-4 (GND1) - Body ground | Always | Below 1 Ω |
| F75-36 (BCV-) - Body ground | Always | 10 kΩ or higher |
| F75-12 (BCV+) - Body ground | Always | 10 kΩ or higher |
| F75-35 (BGND) - Body ground | Always | 10 kΩ or higher |
| F75-11 (BCB+) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

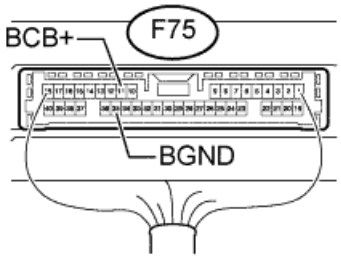
OK

## 3.CHECK PARKING ASSIST ECU (BCB+, BGND)

a. Reconnect the F74 and F75 parking assist ECU connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**



| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-35 (BGND) - Body ground | Always | Below 1 Ω |

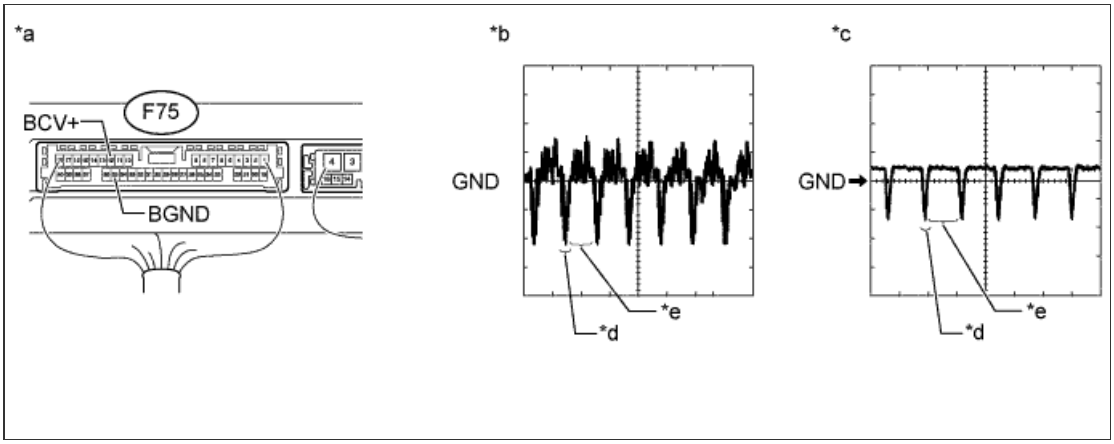
c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F75-11 (BCB+) - F75-35 (BGND) | Engine switch on (IG), front and side monitor main switch assembly on | 5.5 to 7.05 V |

*a

**Text in Illustration**



| | |
|---|---|
| *a | Component with harness connected (Parking Assist ECU) |

NG → REPLACE PARKING ASSIST ECU (Click here)

OK

## 4.CHECK FRONT TELEVISION CAMERA ASSEMBLY (BCV+, BGND)

a. Reconnect the A43 front television camera assembly connector.

**Text in Illustration**

| | | | |
|---|---|---|---|
| *a | Component with harness connected (Parking Assist ECU) | *b | Waveform A |
| *c | Waveform B | *d | Synchronization Signal |
| *e | Video Waveform | - | - |

**HINT:**

- **A waterproof connector is used for the front television camera assembly. Therefore, inspect the waveform at the parking assist ECU with the connector connected.**
- **The video waveform changes according to the image sent by the front television camera assembly.**

b. Measure the resistance according to the value(s) in the table below.

**OK:**

**Waveform is as shown in the illustration.**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F75-12 (BCV+) - F75-35 (BGND) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | • Waveform A: Engine switch on (IG), front and side monitor main switch assembly on and camera lens is not covered, displaying an image<br>• Waveform B: Engine switch on (IG), front and side monitor main switch assembly on and camera lens is covered, blacking out the screen |

NG → REPLACE FRONT TELEVISION CAMERA ASSEMBLY (Click here)

OK

5.CHECK HARNESS AND CONNECTOR (GVIF CABLE)

a. Replace GVIF cable with a normally functioning one.

b. Check if the same malfunction recurs when the front monitor and side monitor screens are displayed.

**OK:**
**Malfunction does not reoccur (returns to normal).**

NG → Go to step 6

OK

END (GVIF CABLE IS DEFECTIVE)

6.CHECK MULTI-DISPLAY ASSEMBLY

a. Replace the multi-display assembly with a normally functioning one ( Click here).

b. Check if the same malfunction recurs when the front monitor and side monitor screens are displayed.

**OK:**
**Malfunction does not reoccur (returns to normal).**

NG → REPLACE PARKING ASSIST ECU (Click here)

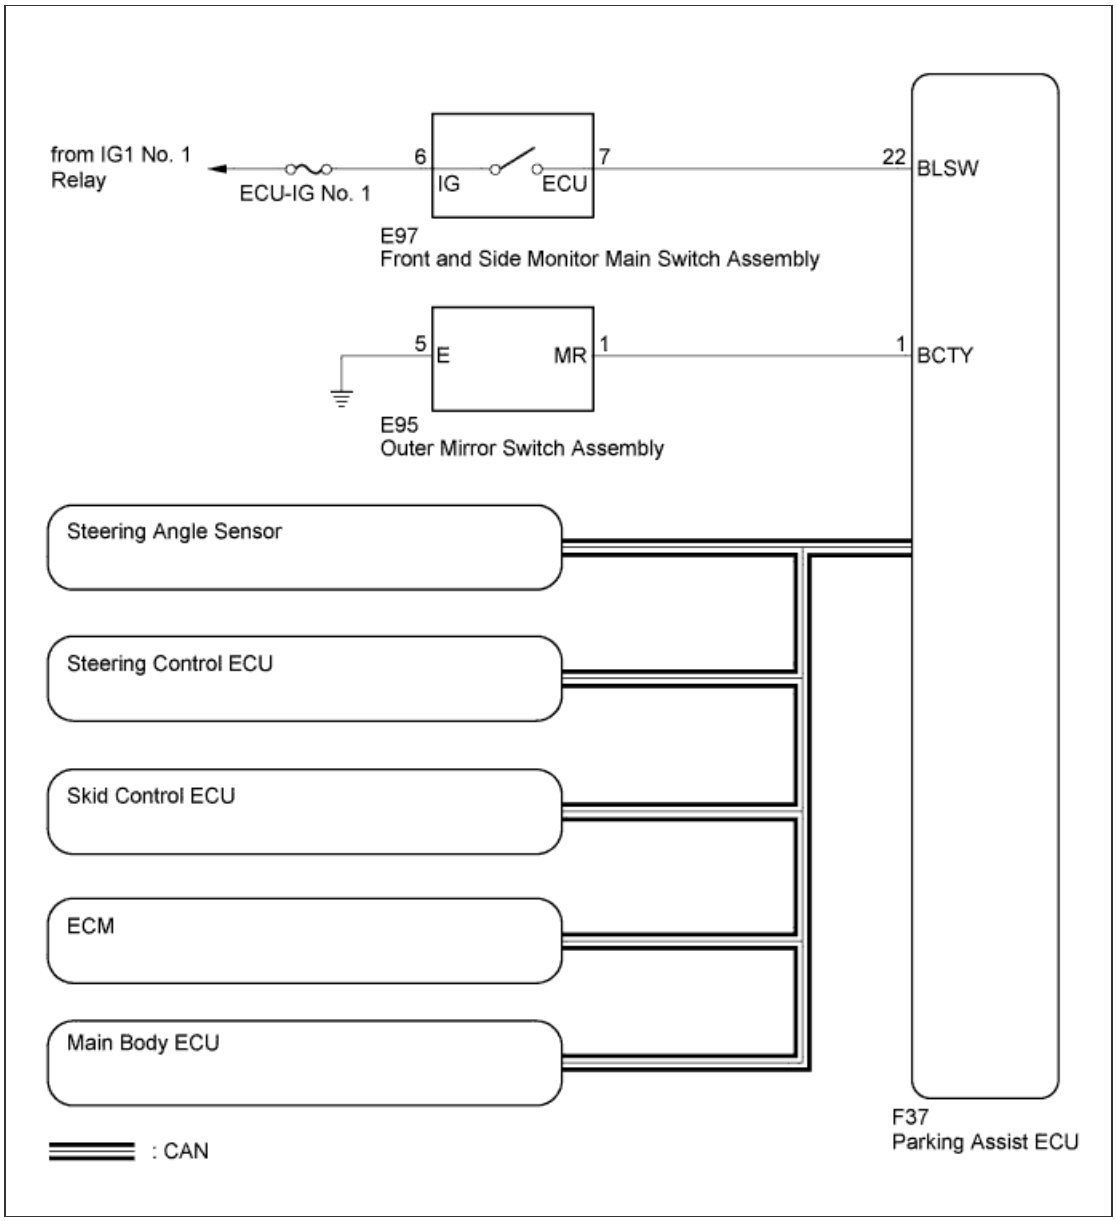
OK

END (MULTI-DISPLAY IS DEFECTIVE)

**for Preparation** Click here

## DESCRIPTION

On the SIGNAL CHECK screen, it is possible to check if the state of signals sent to the parking assist ECU is normal ( Click here).



**HINT:**

- **On the SIGNAL CHECK screen, "OK" (blue) is displayed for items with a normal inspection result and input state.**
- **On the SIGNAL CHECK screen, "CHK" (red) is displayed for items with an abnormal inspection result and input state.**
- **Displayed items may differ depending on the specifications.**

| Item | Signal Input Method | Detail | DTC Output when Abnormal Result is Displayed | Signal Receiver |
|---|---|---|---|---|
| SPEED | CAN communication | Speed signal input | DTC is output | Skid control ECU |
| CAMERA SW | Vehicle wire harness | Front and side monitor main switch signal input | DTC is not output | Parking assist ECU |
| BCTY | CAN communication | CAN communication condition with main body ECU | DTC is output | Main body ECU |
| MIRROR SW | Vehicle wire harness | Outer rear view mirror retract signal input | DTC is not output | Parking assist ECU |
| SHIFT | CAN communication | Shift signal input | DTC is output | ECM |
| STR SIG | CAN communication | Steering angle sensor signal input | DTC is output | Spiral with sensor cable sub-assembly |
| WFS SET | Vehicle wire harness | • Front monitor signal input<br>• Side monitor signal input<br>• Front and side monitor main switch signal input | DTC is output | Parking assist ECU |
| VGRS *1 | CAN communication | VGRS signal input | DTC is output | Steering control ECU |
| DEST | CAN communication | Destination information signal input | DTC is output | Main body ECU |
| BRAND | CAN communication | Brand information signal input | DTC is output | Main body ECU |

## WIRING DIAGRAM

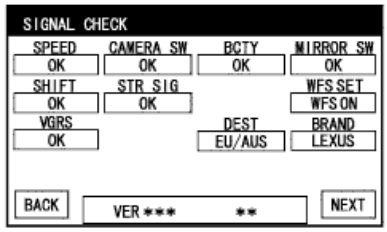
## INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the display and navigation module display after the cable is disconnected from the negative (-) battery terminal, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems may be needed (Click here).**
- **Inspect the fuses for circuits related to this system before performing the following inspection procedure.**
- **When replacing the display and navigation module display, perform vehicle contract setting (w/ G-BOOK system) ( Click here).**

### 1.CHECK DISPLAY CHECK MODE

a. Check which items display "CHK" (red) on the SIGNAL CHECK screen.



**Text in Illustration**

| | |
|---|---|
| *1 | Example |

**Result**

| Result | Proceed to |
|---|---|
| "MIRROR SW" displays "CHK" (red). | A |
| "CAMERA SW" and "WFS SET" displays "CHK" (red). | B |
| Any of "SPEED", "BCTY", "SHIFT", "STR SIG", "DEST", "VGRS" and "BRAND" display "CHK" (red). | C |

*1

B → Go to step 5

C → CHECK DTC OUTPUT (Click here)

A

## 2.INSPECT OUTER MIRROR SWITCH

a. Inspection outer mirror switch (Click here).

NG → REPLACE OUTER MIRROR SWITCH (Click here)

OK

## 3.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - OUTER MIRROR SWITCH)

a. Disconnect the E37 connector from the parking assist ECU.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| E37-1 (BCTY) - E95-1 (MR) | Always | Below 1 Ω |
| E37-1 (BCTY) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 4.CHECK POWER MIRROR CONTROL SYSTEM (POWER RETRACT FUNCTION)

a. Operate the mirror retract switch to check if the power retract mirror function of the outer rear view mirror assembly (passenger side) operates normally (Click here).

NG → GO TO POWER MIRROR CONTROL SYSTEM (Click here)

OK

REPLACE PARKING ASSIST ECU (Click here)

## 5.INSPECT FRONT AND SIDE MONITOR MAIN SWITCH ASSEMBLY

a. Inspection front and side monitor main switch assembly ( Click here).

NG → REPLACE FRONT AND SIDE MONITOR MAIN SWITCH ASSEMBLY (Click here)

OK

## 6.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - MAIN SWITCH ASSEMBLY)

a. Disconnect the F37 connector from the parking assist ECU.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|

| | | |
|---|---|---|
| E97-6 (IG) - Body ground | Engine switch on (IG) | 11 to 14 V |

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F37-22 (BLSW) - Body ground | Always | 10 kΩ or higher |
| E97-7 (ECU) - Body ground | Always | 10 kΩ or higher |
| F37-22 (BLSW) - E97-7 (ECU) | Always | Below 1 Ω |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE PARKING ASSIST ECU (Click here)

## 1.PRECAUTIONS FOR SIDE MONITOR SYSTEM

a. Handling precautions:

i. The side monitor system may not function properly if the camera is dropped or subjected to strong shocks, such as striking it, etc.

ii. Scrubbing the lens of the camera may scratch the cover and affect the image.

iii. If waxes or similar compounds adhere to the camera, it is necessary to clean the camera off immediately and wash it with water.

iv. The side monitor system may not function properly if the camera is subjected to sudden temperature changes, such as applying hot water on it when it is cold.

v. If there is condensation, snow, mud, etc. on the camera, wash it with water and wipe it with a soft cloth. If the camera is excessively dirty, wash it with a mild detergent.

b. The system may not operate properly under the following conditions:

i. When driving on frozen, slippery, or snowy roads.

ii. When using tire chains or the spare tire.

iii. When the hood or front passenger door are not completely closed.

iv. When driving on an uneven road that has slopes, bumps, or gravel, etc.

c. Even if the camera is functioning properly, the image may not be clear under the following conditions:

i. When the camera is cold (the image is darker than normal).

ii. When the camera is in a dark area (such as at night).

iii. When the camera is exposed to very high or very low temperatures.

iv. When the vehicle or road is slanted.

v. As a result of the brightness of the ambient lighting.

**HINT:**

When a strong light (such as when sunlight is reflected off a vehicle body) hits the camera, vertical streaks, a phenomenon peculiar to the camera, may appear in the image.

**for Preparation** Click here

## 1.PRECAUTION FOR DISCONNECTING CABLE FROM NEGATIVE BATTERY TERMINAL

**NOTICE:**

- **After the engine switch is turned off, the display and navigation module display (HDD navigation system) records various types of memory and settings. As a result, after turning the engine switch off, make sure to wait for the time specified in the following table before disconnecting the cable from the negative (-) battery terminal.**

**Waiting Time before Disconnecting Cable from Negative (-) Battery Terminal**

| Specification | Waiting Time |
|---|---|
| w/o Telematics transceiver | 60 sec. |
| w/ Telematics transceiver | 120 sec. |

## 2.POINTS TO NOTE WHEN SERVICING

a. Pay attention to the following points when servicing.

i. When disconnecting the cable from the negative (-) battery terminal, "System initializing" may appear on the display and navigation module display. In this case, restore the steering angle neutral point (Click here).

ii. Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the side monitor system may be needed (Click here).

**HINT:**

The side monitor system calibration adjustment values are stored in the parking assist ECU.

iii. When the lens of the side television camera assembly is dirty, wash the lens with water and wipe it off with a soft cloth to obtain clear images. For heavy dirt, use neutral detergent to clean the lens.

## 3.NOTES FOR SIDE TELEVISION CAMERA

a. Notes for the side television camera assembly

i. The side monitor system may not function properly if subjected to a severe blow by any hard object.

ii. Do not scrub the outer casing of the camera (made of transparent resin). Scrubbing may scratch the cover and affect the image. Prevent organic solvents, waxes, bond removing solvents or glass coating from adhering to the cover. If such material adheres to the cover, clean it off immediately and wash with water.

iii. Exposing the camera to a sudden temperature change may affect proper functioning of the camera.

iv. A clear image may not appear if the camera is dirty with snow, mud, etc. In that case, wash it with water and wipe off the lens. Use a detergent to remove dirt if necessary.

b. Images can be difficult to discern even in normal conditions. For example:

i. Noise may occur in the image while adjusting or retracting the outer rear view mirror assembly (passenger side).

ii. Noise may occur in the image depending on electrical devices used in the cabin.

iii. Noise may occur in the image if accessories that generate radio waves have been installed.

iv. The camera screen is extremely cold (the image immediately after turning the engine switch on (IG) may be blurred or darker than normal).

v. The camera lens is dirty with snow, mud, etc.

vi. A strong beam of light, such as a sunbeam or headlight, hits the camera.

vii. It is too dark around the camera (at night etc.).

viii. The ambient temperature around the camera is either too high or too low.

ix. The vehicle is tilted at a steep angle.

x. The ambience of the camera is too bright. (When a strong light, such as a sunbeam reflected off the vehicle body, hits the camera, the image may be blurred. This is called the "SMEAR" phenomenon, peculiar to the CCD camera.)

**for Preparation** Click here

## 1.POINTS TO NOTE WHEN SERVICING

a. Pay attention to the following points when servicing.

i. When disconnecting the cable from the negative (-) battery terminal, "System initializing" may appear on the multi-display assembly. In this case, restore the steering angle neutral point (Click here).

ii. Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the side monitor system may be needed (Click here).

**HINT:**

The side monitor system calibration adjustment values are stored in the parking assist ECU.

iii. When the lens of the side television camera assembly is dirty, wash the lens with water and wipe it off with a soft cloth to obtain clear images. For heavy dirt, use neutral detergent to clean the lens.

## 2.NOTES FOR SIDE TELEVISION CAMERA

a. Notes for the side television camera assembly

i. The side monitor system may not function properly if subjected to a severe blow by any hard object.

ii. Do not scrub the outer casing of the camera (made of transparent resin). Scrubbing may scratch the cover and affect the image. Prevent organic solvents, waxes, bond removing solvents or glass coating from adhering to the cover. If such material adheres to the cover, clean it off immediately and wash with water.

iii. Exposing the camera to a sudden temperature change may affect proper functioning of the camera.

iv. A clear image may not appear if the camera is dirty with snow, mud, etc. In that case, wash it with water and wipe off the lens. Use a detergent to remove dirt if necessary.

b. Images can be difficult to discern even in normal conditions. For example:

i. Noise may occur in the image while adjusting or retracting the outer rear view mirror assembly.

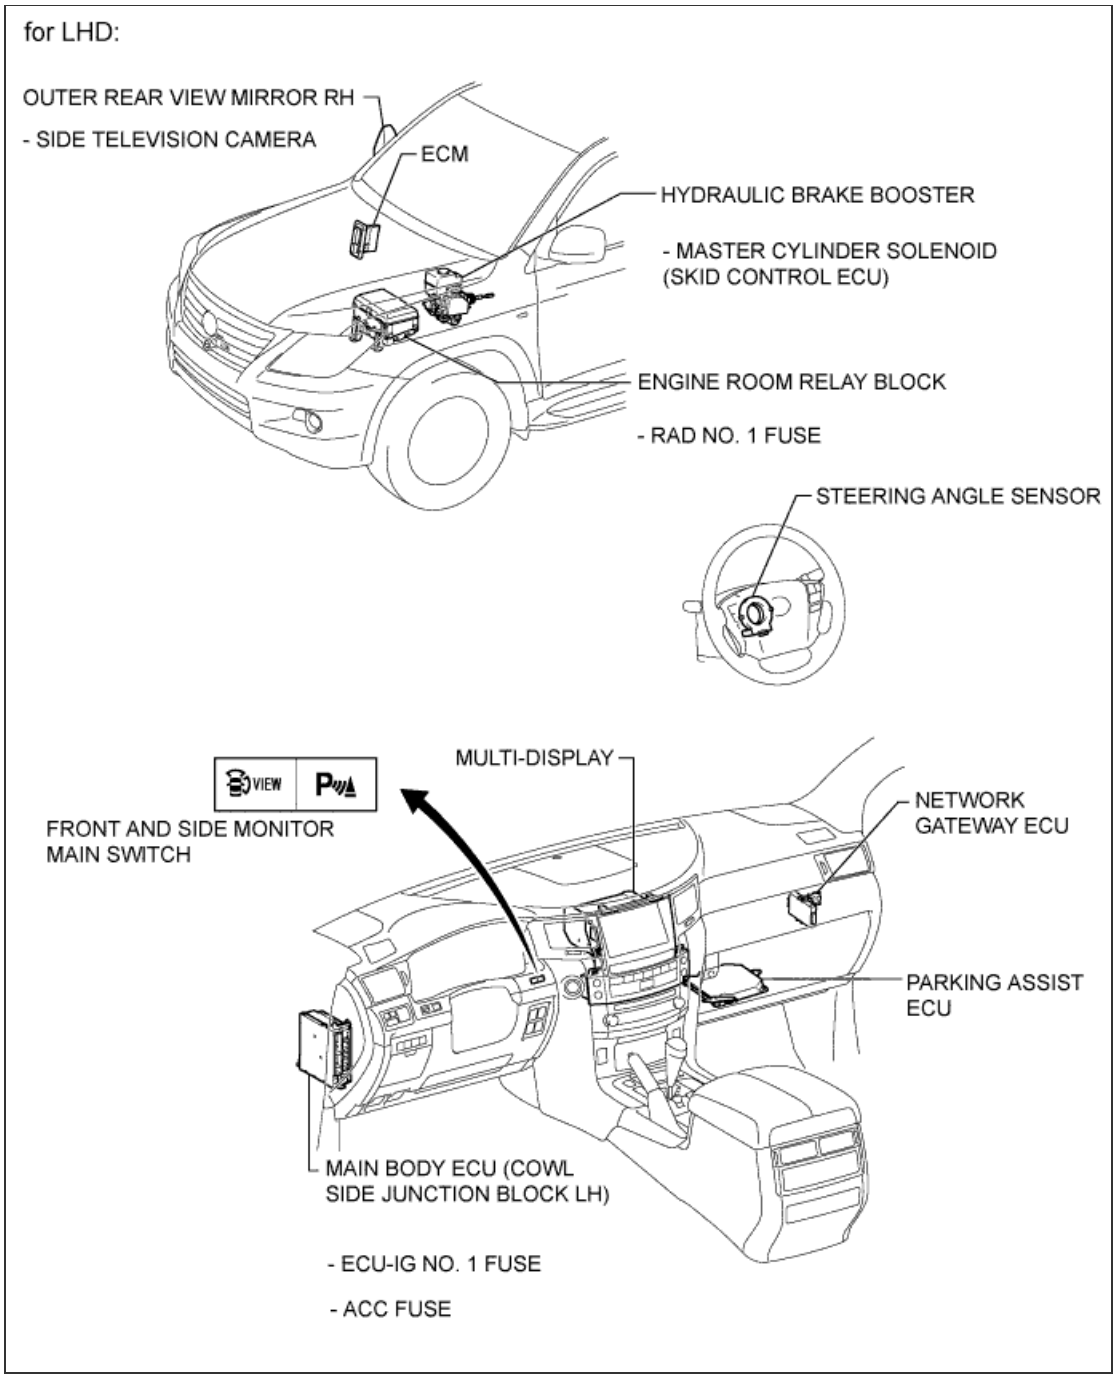
ii. Noise may occur in the image depending on electrical devices used in the cabin.

iii. Noise may occur in the image if accessories that generate radio waves have been installed.

iv. The camera screen is extremely cold (the image immediately after turning the engine switch on (IG) may be blurred or darker than normal).

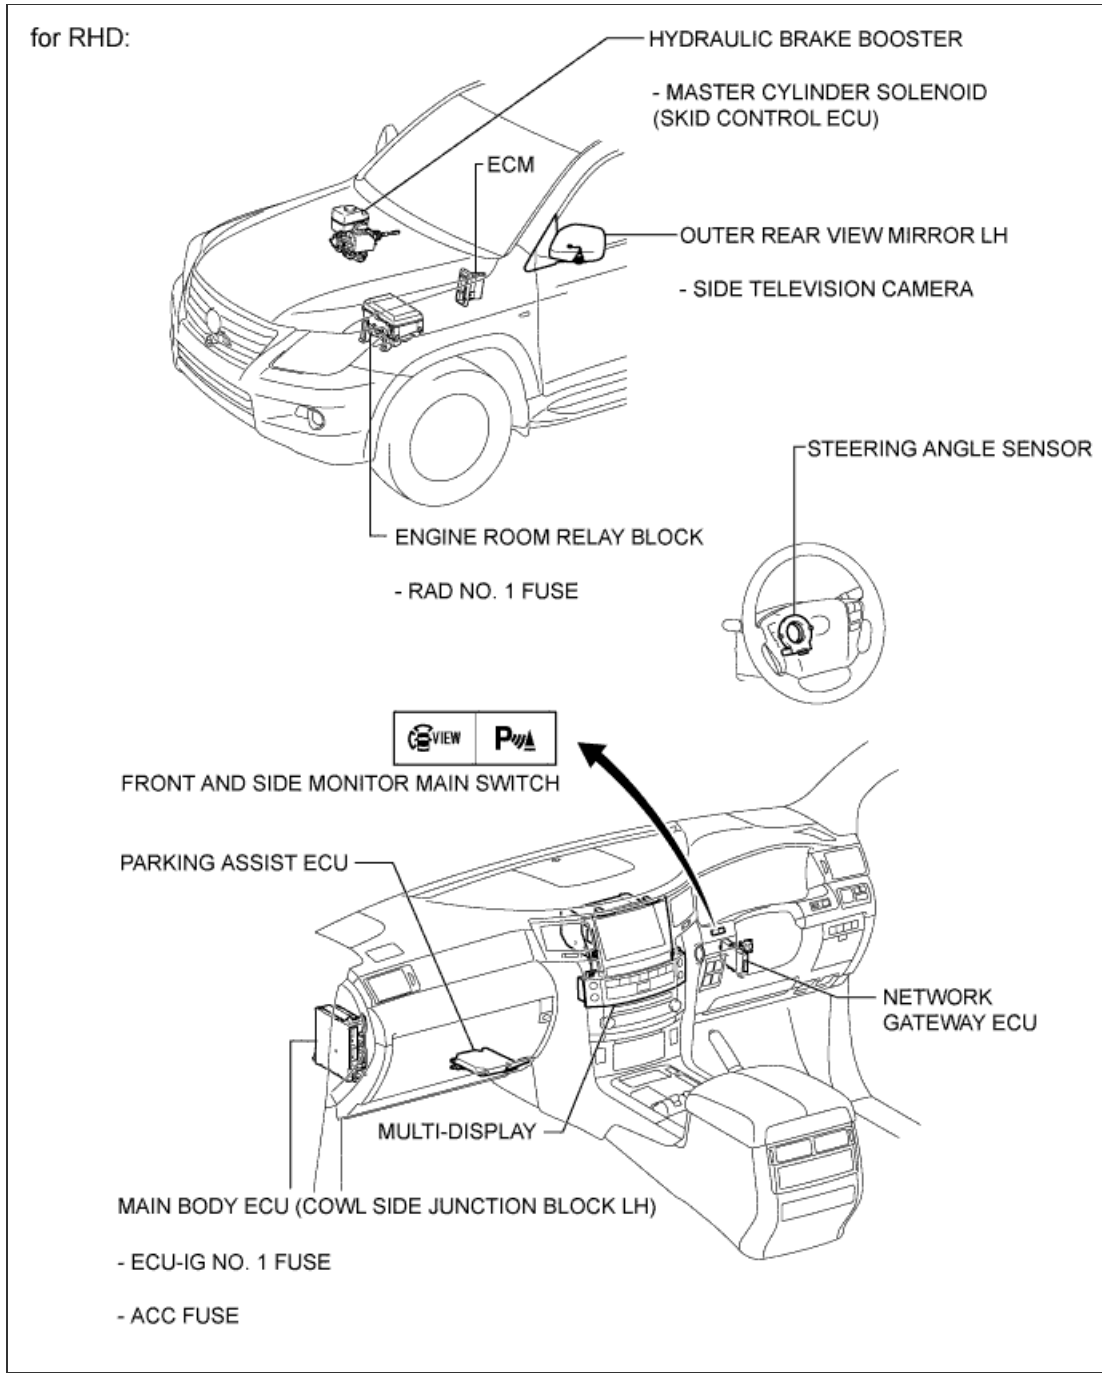
v. The camera lens is dirty with snow, mud, etc.

vi. A strong beam of light, such as a sunbeam or headlight, hits the camera.



vii. It is too dark around the camera (at night etc.).

viii. The ambient temperature around the camera is either too high or too low.



ix. The vehicle is tilted at a steep angle.

x. The ambience of the camera is too bright. (When a strong light, such as a sunbeam reflected off the vehicle body, hits the camera, the image may be blurred. This is called the "SMEAR" phenomenon, particular to the CCD camera.)

## SIDE MONITOR SYSTEM DESCRIPTION

a. The side monitor system is controlled by the parking assist ECU. This system is equipped with a television camera built into the front passenger side outer mirror. Images from the camera are displayed on the display screen to inform the driver of conditions on the side of the vehicle, assist in smooth movement to the road shoulder, and help prevent vehicle accidents.

## FUNCTION OF COMPONENTS

a. The side monitor system operates by controlling the components listed below.

| Components | Function |
|---|---|
| Side television camera | Built into the front passenger side outer mirror and sends camera images to the parking assist ECU. |
| Parking assist ECU | Receives image signals and sends these signals to the multi-display to display the view from the side in front of the vehicle on the screen. |
| Front and side monitor main switch | When auto-display mode is not set and the vehicle speed is approximately 12 km/h (7 mph) or less, by pressing the main switch, the display changes from the displayed screen to the wide view front and side monitor simultaneous display screen.<br><br>**HINT:**<br>• **When the vehicle speed is approximately 12 km/h (7 mph) or less, auto-display mode is not set, the front and side monitor main switch is on, and the shift lever is in R, only the wide view front and side monitor simultaneous display screen will be displayed. The display will not change to the wide view front display screen or side monitor display screen.**<br>• **While the wide view front monitor display screen is displayed, if the DISP switch is pressed, the vehicle speed exceeds the display permission vehicle speed (approximately 12 km/h (7 mph) or less), or the shift lever is moved to R and the screen changes to the rear view monitor, the display changes in the following order the next time the wide view front and side monitor simultaneous display screen is displayed: wide view front and side monitor simultaneous display screen → wide view front monitor display screen → side monitor display screen.**<br>• **While the side monitor display screen is displayed, if the DISP switch is pressed, the vehicle speed exceeds the display permission vehicle speed (approximately 12 km/h (7 mph) or less), or the shift lever is moved to R and the screen changes to the rear view monitor, the display changes in the following order the next time the wide view front and side monitor simultaneous display screen is displayed: wide view front and side monitor simultaneous display screen → side monitor display screen → wide view front monitor display screen.** |
| Skid control ECU | Receives vehicle speed signals from the vehicle speed sensor and transmits these signals to the parking assist ECU using the CAN communication line. |
| Multi-display | Receives side television camera display signals from the parking assist ECU, and displays the camera image on the display screen. |
| ECM | Sends shift position signals to the parking assist ECU. |
| Network gateway ECU | Performs CAN communication line switching between the ECM and parking assist ECU. |

| | |
|---|---|
| Steering angle sensor | Detects the angle of the steering wheel and sends the resulting signals to the parking assist ECU through CAN communication. |
| Steering control ECU | Receives the variable gear ratio steering signal from the steering angle sensor. |

## SIDE MONITOR SYSTEM CONTROL DESCRIPTION

a. Side monitor operation conditions (when auto-display mode is set).

i. When the following conditions are met, the side monitor display screen automatically changes to the wide view front and side monitor simultaneous display screen.

| Condition | Engine Switch | AUTO Switch | Vehicle Speed | Shift Lever |
|---|---|---|---|---|
| 1 | On (IG) | On | Decreases to 10 km/h (6 mph) or less from a speed of 12 km/h (7 mph) or more | Moved from P to D or N |
| 2 | On (IG) | On | 12 km/h (7 mph) or less | Moved from R to D or N |

**HINT:**

The AUTO switch is displayed in the bottom left when the side monitor is displayed. Auto-display mode can be set/unset by turning the AUTO switch on/off.

b. Side monitor operation conditions (when auto-display mode is not set).

i. When the following conditions are met and the wide view front and side monitor main switch is pushed, the side monitor display screen changes to the wide view front and side monitor simultaneous display screen.

| Engine Switch | AUTO Switch | Vehicle Speed |
|---|---|---|
| On (IG) | Off | 12 km/h (7 mph) or less |

## DIAGNOSTIC FUNCTION

a. The side monitor system can be adjusted with the "Diagnostic Menu" of the multi-display.

**HINT:**

If any of the work listed below is performed, it is necessary to perform adjustments/inspections via the "Diagnostic Menu".

| Work | Adjustment Item | See page |
|---|---|---|
| • When the installation angle of the side television camera assembly is misaligned (such as when the camera is removed or installed).<br>• When replacing the side television camera assembly.<br>• When replacing the parking assist ECU. | Side television camera assembly position setting | Click here |
| When replacing the parking assist ECU. | • Steering angle neutral point adjustment<br>• Left/right maximum steering angle adjustment | Click here |
| • When disconnecting the battery cable.<br>• When removing/installing or replacing the steering angle sensor.<br>• When the expected course lines are not displayed in expected course line display mode, and when there is not a malfunction in the steering angle sensor. | Steering angle neutral point adjustment | Click here |

**for Preparation** Click here

## GENERAL

a. This system has a side television camera assembly built into the outer rear view mirror assembly (passenger side) to display the passenger side view of the vehicle on the display and navigation module display.

b. This system consists of the following components:

i. Side television camera assembly

ii. Parking assist ECU

- Outer mirror switch assembly

iii. Display and navigation module display

iv. Skid Control ECU

v. Main body ECU

vi. Front and Side Monitor Main Switch

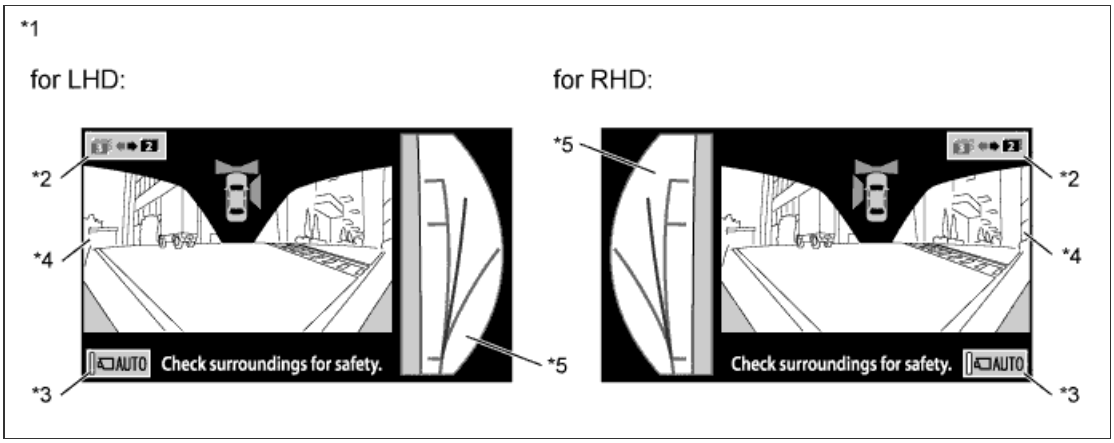
- Steering angle sensor
- ECM
- Steering control ECU

c. This system is equipped with a self-diagnosis system, which is operated on a designated window that appears on the display panel, just as in the navigation system.

## FUNCTION OF COMPONENTS

a. The parking assist ECU controls the system by using information from the following components.

| Item | Function |
|---|---|
| Parking assist ECU | • Turns the side television camera assembly on or off based on parameters such as the display settings, the front and side monitor main switch signal, the shift signal and the vehicle speed signal.<br>• Transmits the wide view front and side monitor, side monitor, or wide view front monitor signals to the multi-display based on parameters such as the display settings, the front and side monitor main switch signal, the shift signal and the vehicle speed signal.<br>• Depending on the display settings, renders the output display for the wide view front and side monitor, the side monitor, or the wide view front monitor, and outputs them to the screen of the multi-display.<br>• With the video feed from the side television camera assembly showing the vehicle's left-side surroundings as a base, uses vehicle information such as the signal from the steering angle sensor to calculate and overlay a composite image and output this to the screen of the multi-display.<br>• Renders each configuration page in the diagnosis window and outputs the screen to the multi-display.<br>• When the outer mirror retraction signal is received, terminates the side camera collimation/alignment.<br>• Stores each configuration setting from the diagnosis window. |
| Side television camera | Generates a video feed showing the passenger side of the vehicle and transmits the video to the parking assist ECU. |
| Front and side monitor main switch | Operating the switch sends a signal to the parking assist ECU. |
| Outer mirror switch | Transmits outer mirror retraction signal to parking assist ECU. |
| Steering angle sensor | Transmits steering angle signal and sensor status signal to multi-display via CAN communication. |



| | |
|---|---|
| ECM | Transmits shift position signal, drivetrain signal, engine type signal, and system status signals to the parking assist ECU via CAN communication. |
| Skid control ECU | Transmits vehicle speed signal and system status signals to the parking assist ECU via CAN communication. |
| Display and navigation module display | This touchpanel display is used to view and interact with the wide view front and side monitor, side view monitor, wide view front monitor, and diagnosis screens. |

## OPERATION EXPLANATION

a. The front and side monitor main switch ON signal is sent from the main switch to the parking assist ECU.
After receiving the front and side monitor main switch ON signal, the parking assist ECU switches the display signal for the display and navigation module display from the navigation system to the side monitor system.

## DISPLAY CONDITIONS FOR SIDE MONITOR DISPLAY

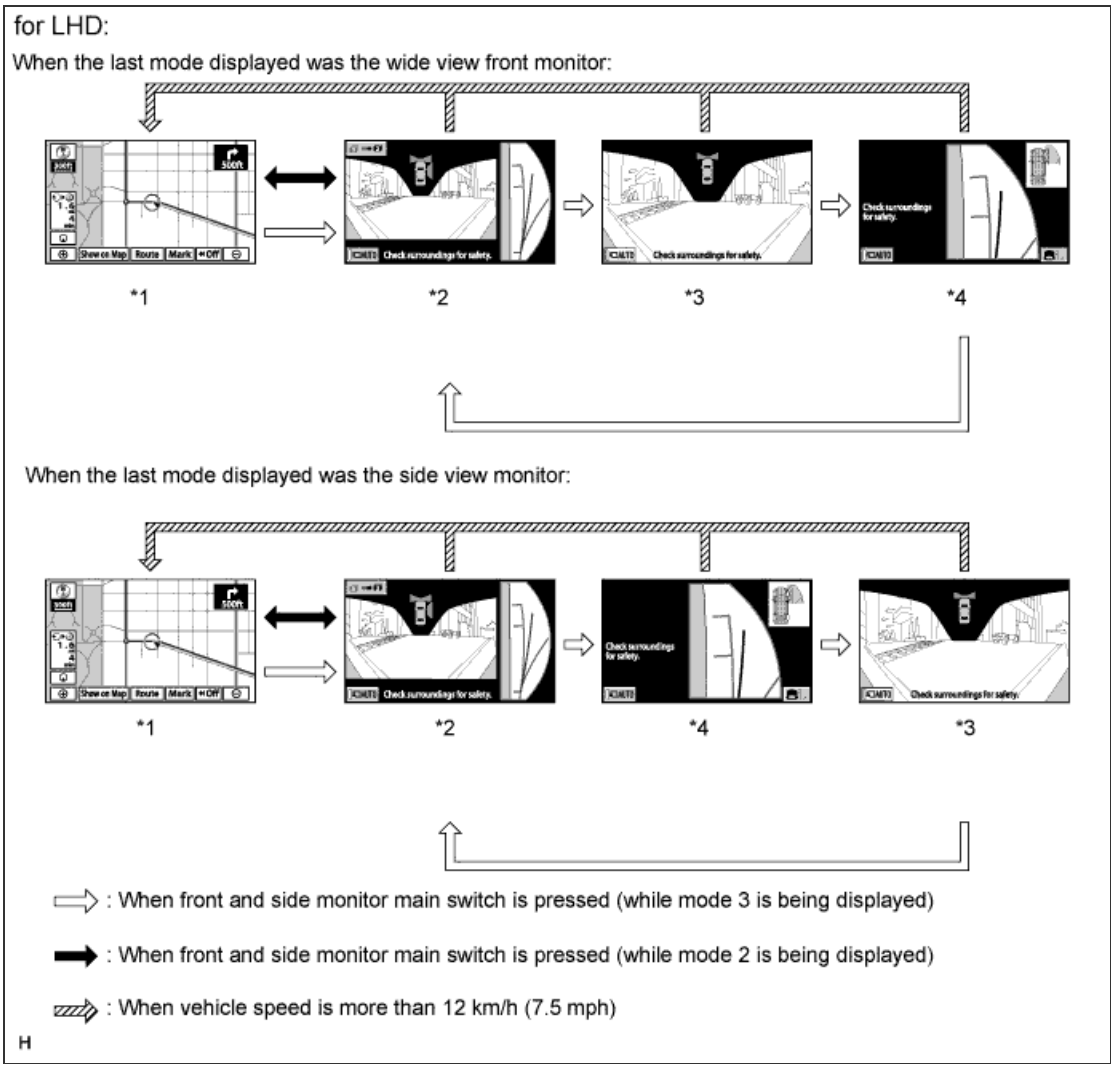
a. Screen display operation

**Text in Illustration**

| | | | |
|---|---|---|---|
| *1 | Wide View Front and Side Monitor Screen | *2 | Change Display Mode Switch (Illustration Shows Mode 3) |
| *3 | Automatic Display Mode Set/Cancel Switch (Illustration Shows Autzomatic Display Mode Off) | *4 | Wide View Front Monitor Screen |
| *5 | Side Monitor Screen | - | - |

i. After the display conditions have been met while the wide view front monitor system and the side monitor system are operating normally (when no DTCs are output), the wide view front and side monitor screen will be the initial display in both manual and automatic modes.

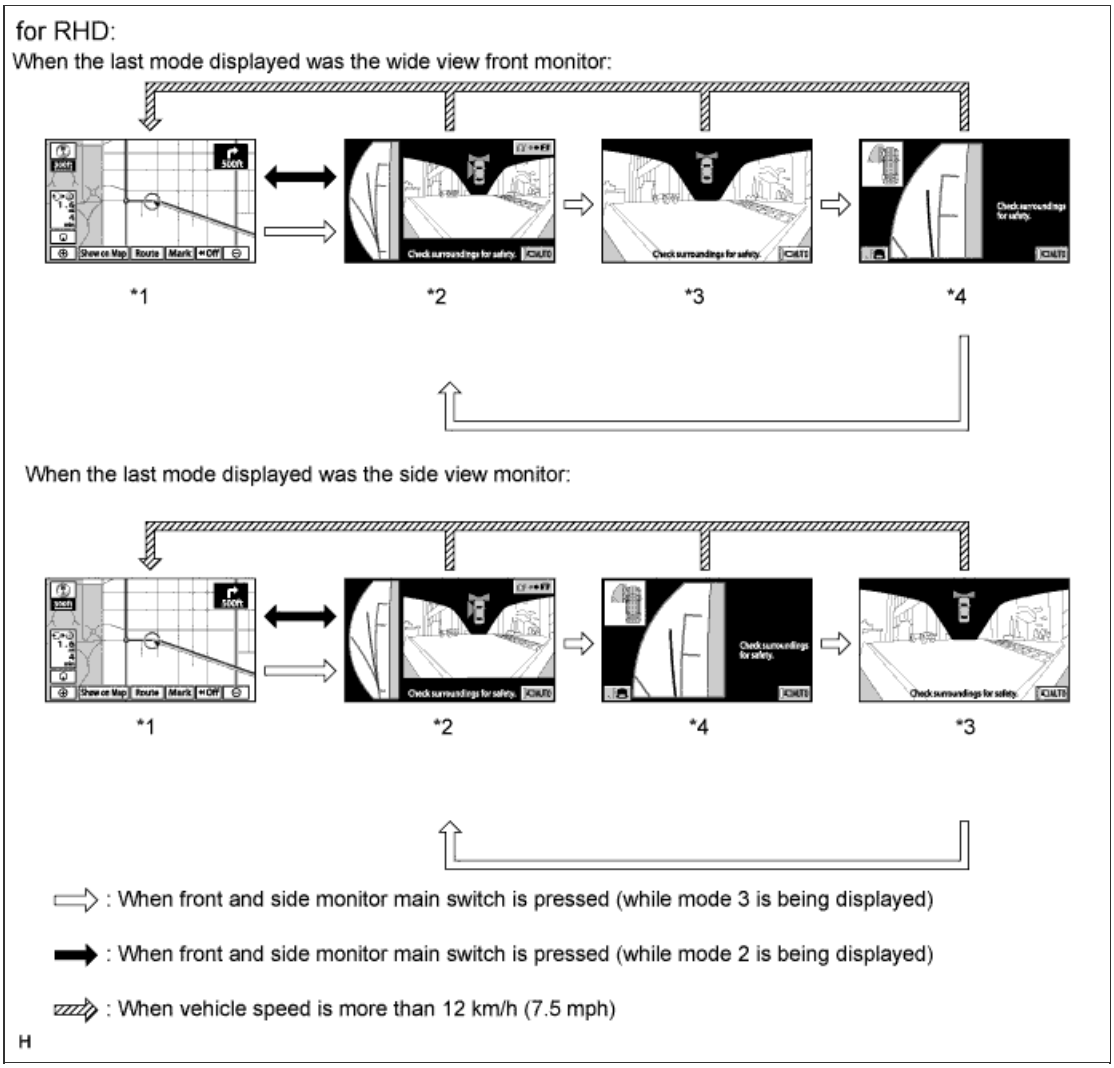
**HINT:**



- **When the shift lever is in a position other than R, and the wide view front and side monitor screen displays the change display mode switch or the automatic mode set / cancel switch, the following operations are possible.**
- **Change display mode button**

| Display Mode | Change Display Mode Switch | Function |
|---|---|---|
| 3 | 3 is grayed out | While the wide view front and side monitor screen is displayed, pressing the front and side monitor main switch will change to either the wide view front monitor or the side view monitor displays (the specific transition will depend on the last mode displayed). |
| 2 | 2 is grayed out | While the wide view front and side monitor screen is displayed, pressing the front and side monitor main switch will change to the navigation screen, the information configuration screen, or similar. |

- **Automatic display mode set/cancel button**



| Automatic Mode Display Button (Indicator in the Button) | Display Mode |
|---|---|
| ON (Illuminated) | Automatic Display Mode |
| OFF (Not Illuminated) | Manual Display Mode |

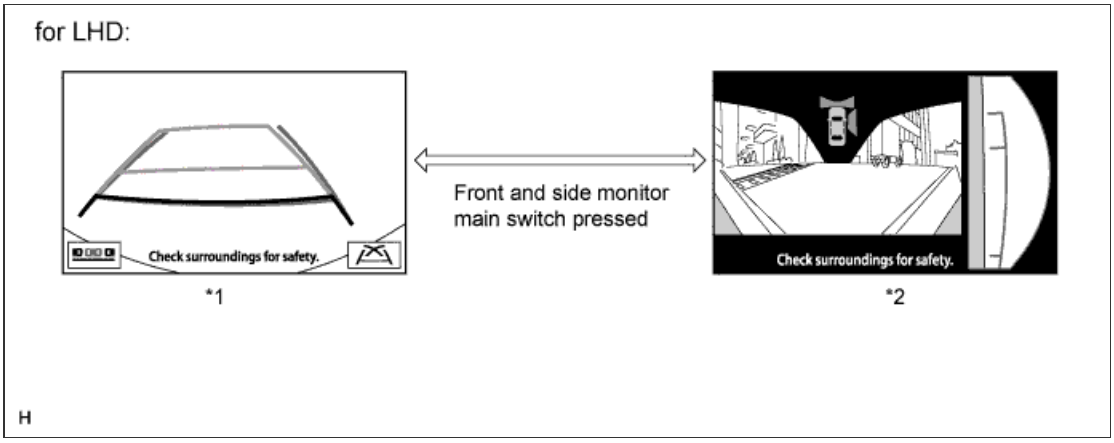
b. Display conditions for manual display mode (Shift lever in a position other than R)

**Text in Illustration**

| | | | |
|---|---|---|---|
| *1 | Navigation Display etc. | *2 | Wide View Front and Side Monitor Screen |
| *3 | Wide View Front Monitor Screen | *4 | Side Monitor Screen |

**Text in Illustration**

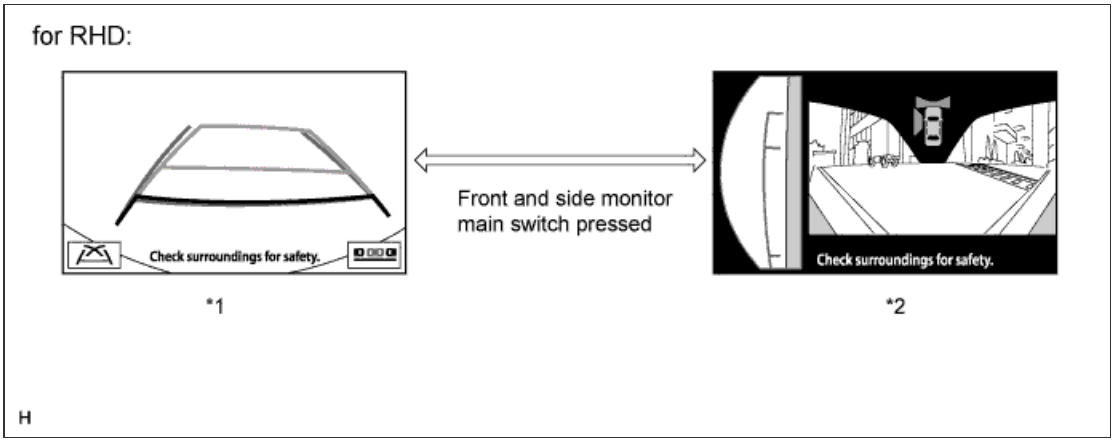
| | | | |
|---|---|---|---|
| *1 | Navigation Display etc. | *2 | Wide View Front and Side Monitor Screen |
| *3 | Wide View Front Monitor Screen | *4 | Side Monitor Screen |



i. During manual display mode (shift lever in a position other than R), during IG ON or engine startup (no DTCs are output), if the following conditions have been met, pressing the front and side monitor main switch will change the display mode as follows.

| Automatic mode display button | Display and Navigation Module Display Screen | Shift Lever Position | Vehicle Speed | Last Mode Screen | Screen (changes due to front and side monitor main switch operation) |
|---|---|---|---|---|---|
| OFF | Navigation display etc. | Other than R | 12 km/h (7.5 mph) or less | Wide view front monitor display | Navigation display etc. → Wide view front and side monitor display → Wide view front monitor display → Side monitor display → Wide view front and side monitor display |
| OFF | Navigation display etc. | Other than R | 12 km/h (7.5 mph) or less | Side monitor display | Navigation display etc. → Wide view front and side monitor display → Side monitor display → Wide view front monitor display → Wide view front and side monitor display |

**HINT:**



*1: In this case, the side monitor display is in path line deletion mode.

c. Display conditions for manual display mode (Shift lever in R)

**Text in Illustration**

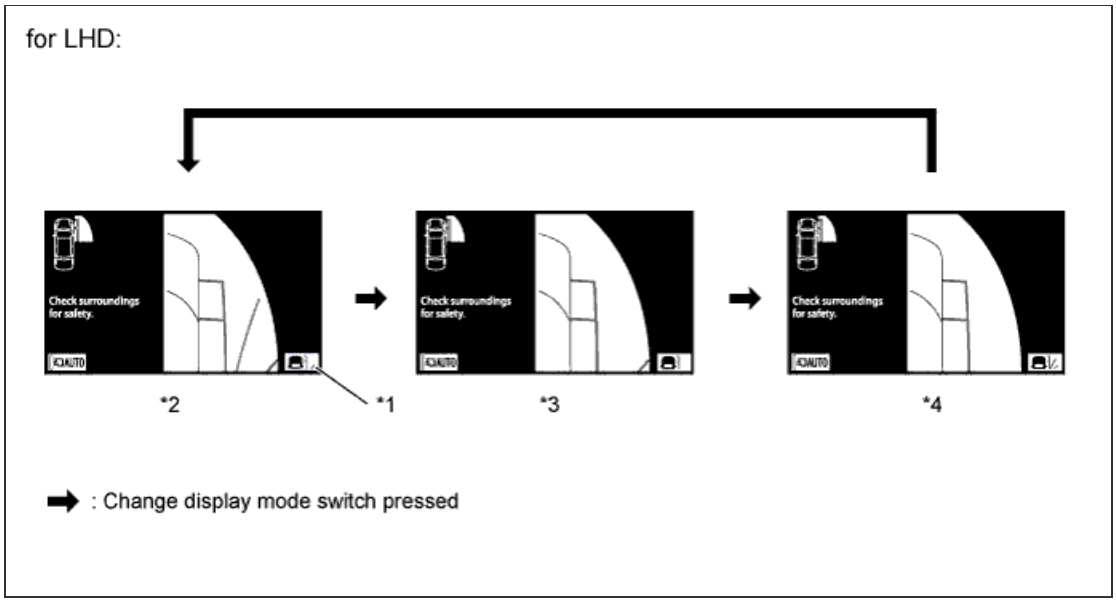
| | | | |
|---|---|---|---|
| *1 | Parking Assist Monitor Display | *2 | Wide View Front and Side Monitor Display |

**Text in Illustration**

| | | | |
|---|---|---|---|
| *1 | Parking Assist Monitor Display | *2 | Wide View Front and Side Monitor Display |

i. During manual display mode (shift lever in R position), during IG ON or engine startup (no DTCs are output), if the following conditions have been met, pressing the front and side monitor main switch will change the display mode as follows.

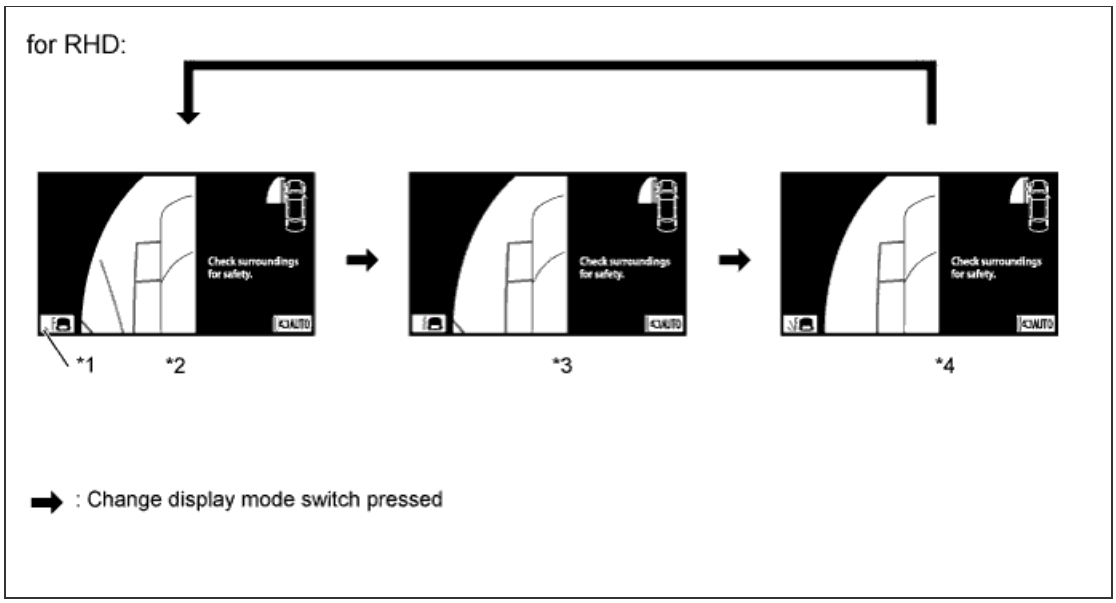
| Display and Navigation Module Display Screen | Vehicle Speed | Screen (changes due to front and side monitor main switch operation) |
|---|---|---|
| Navigation Display etc. | 12 km/h (7.5 mph) or less | Parking assist monitor display → Wide view front monitor and side monitor display → Parking assist monitor display |



d. Display conditions for automatic display mode

i. In automatic display mode, the side monitor system automatically changes the displayed image depending on the vehicle conditions while the following conditions are met and the system is operating normally (no DTCs output).

| Vehicle Condition | Display and Navigation Module Display Screen | Shift Position | Vehicle Speed | Screen |
|---|---|---|---|---|
| Stopped → Driving | Navigation display etc. | Except in P or R | 12 km/h (7.5 mph) or less | Navigation display etc. → Wide view front monitor and side monitor display *1 |
| Driving → Stopped | Navigation display etc. | Except in P or R | 10 km/h (6.2 mph) or less | Navigation display etc. → Wide view front monitor and side monitor display *1 |



*1: Screen changes and screen transition conditions after the screen is automatically changed are the same as those for manual display mode (shift lever in a position other than R).

## SIDE MONITOR DISPLAY MODE SETTING

**Text in Illustration**

| | | | |
|---|---|---|---|
| *1 | Change Display Mode Switch | *2 | Predicted Minimum Turning Path Line + Predicted Path Line Mode |
| *3 | Predicted Minimum Turning Path Line Mode | *4 | Predicted Path Line Mode |

**Text in Illustration**

| | | | |
|---|---|---|---|
| *1 | Change Display Mode Switch | *2 | Predicted Minimum Turning Path Line + Predicted Path Line Mode |
| *3 | Predicted Minimum Turning Path Line Mode | *4 | Predicted Path Line Mode |

a. When the side monitor screen is displayed, pressing the change display mode switch will change the display modes of the side monitor system.

b. The side monitor system switches display modes when the side monitor display is displayed and the line mode button is operated. In each display mode, when the display range button (for forward view) is operated, the forward view is displayed on the screen.

**HINT:**

- **The display mode selected on the side monitor screen will also take effect for the wide view front and side monitor screen when the shift lever is not in R.**
- **When the wide view front and side monitor screen is displayed with the shift lever in R, the side monitor will not display the predicted path line.**

**Side Monitor Display Mode**

| Side Monitor Display Mode | Vehicle Width Parallel Line (Green) | Predicted Minimum Turning Path Line (Green) | Predicted Path Line (Yellow) |
|---|---|---|---|
| Predicted Minimum Turning Path Line + Predicted Path | | | |

| | | | |
|---|---|---|---|
| Line Mode | Displayed | Displayed | Displayed |
| Predicted Minimum Turning Path Line Mode | Displayed | Displayed | Not displayed |
| Path Line Deletion Mode | Displayed | Not displayed | Not displayed |

## COMMUNICATION SYSTEM OUTLINE

a. The components of the side monitor system communicate with each other through the AVC-LAN. If a short circuit or open circuit occurs in the AVC-LAN, communication is interrupted and the side monitor system will stop functioning.

## DIAGNOSTIC FUNCTION OUTLINE

a. This side monitor system has a diagnostic function displayed in the display and navigation module display. This function enables the calibration (adjustment and confirmation) of the system (Click here).

b. The system can check the following items by using the intelligent tester.

| Item | Proceed to |
|---|---|
| DTC | Click here |
| Data List / Active Test | Click here |

**for Preparation** Click here

## GENERAL

a. This system has a side television camera assembly built into the outer rear view mirror assembly (passenger side) to display the passenger side view of the vehicle on the display and navigation module display.

b. This system consists of the following components:

i. Outer rear view mirror assembly LH (side television camera assembly)

ii. Outer rear view mirror assembly RH (side television camera assembly)

iii. Parking assist ECU

iv. Multi-media module receiver assembly

v. Multi-display assembly

vi. Master cylinder solenoid (skid control ECU assembly)

vii. Steering sensor

viii. Steering control ECU

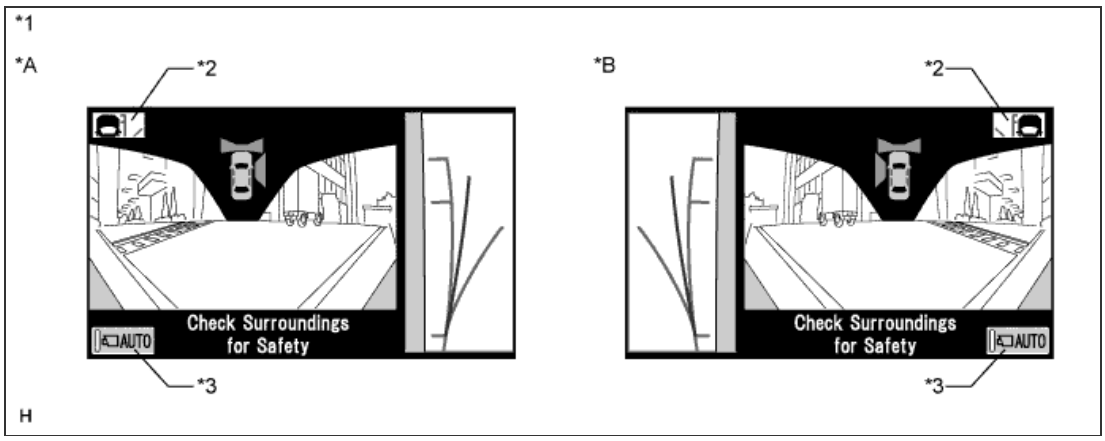
ix. Front and side monitor main switch assembly

x. Outer mirror switch assembly

xi. Four wheel drive control ECU

c. This system is equipped with a self-diagnosis system, which is operated on a designated window that appears on the display panel, just as in the navigation system.

## FUNCTION OF COMPONENTS



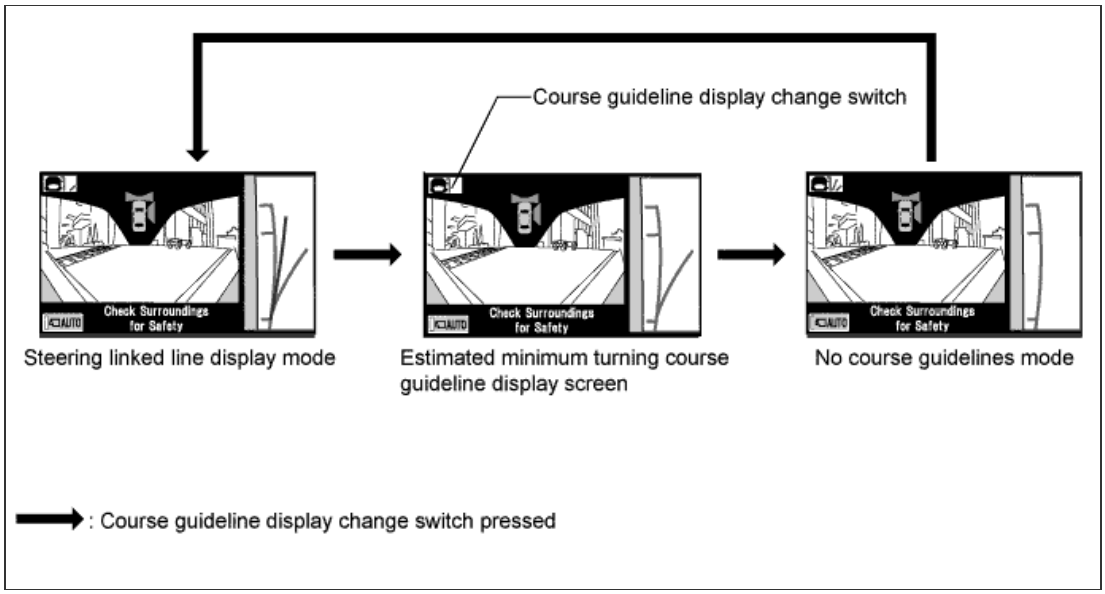
a. The parking assist ECU controls the system by using information from the following components.

| Item | Function |
|---|---|
| Parking Assist ECU | • Turns the side television camera assembly on or off based on parameters such as the display settings, the front and side monitor main switch signal, the shift signal and the vehicle speed signal.<br>• Transmits the wide view front and side monitor, side monitor, or wide view front monitor signals to the multi-media module receiver assembly based on parameters such as the display settings, the front and side monitor main switch signal, the shift signal and the vehicle speed signal.<br>• Depending on the display settings, renders the output display for the wide view front and side monitor, the side monitor, or the wide view front monitor, and outputs them to the screen of the multi-display assembly.<br>• With the video feed from the side television camera assembly showing the vehicle's left-side surroundings as a base, uses vehicle information such as the signal from the steering angle sensor to calculate and overlay a composite image and output this to the screen of the multi-display.<br>• Renders each configuration page in the diagnosis window and outputs the screen to the multi-display assembly.<br>• When the outer mirror retraction signal is received, terminates the side camera collimation/alignment.<br>• Stores each configuration setting from the diagnosis window. |
| Multi-media Module Receiver Assembly | Communicates with the parking assist ECU through AVC-LAN communication. |
| Multi-display Assembly | This touch panel display is used to view and interact with the wide view front and side monitor, side view monitor, wide view front monitor, and diagnosis screens. |
| Side television camera assembly | Generates a video feed showing the passenger side of the vehicle and transmits the video to the parking assist ECU. |
| Front and Side Monitor Main Switch Assembly | Operating the switch sends a signal to the parking assist ECU. |

| | |
|---|---|
| Outer Mirror Switch Assembly | Transmits outer mirror retraction signal to parking assist ECU. |
| Steering Sensor | Transmits steering angle signal and sensor status signal to multi-display via CAN communication. |
| Steering Control ECU | Sends the VGRS relative angle and vehicle condition to the parking assist ECU through CAN communication. |
| Master Cylinder Solenoid (Skid Control ECU Assembly) | Sends the inner brake information and ABS ACT information to the parking assist ECU through CAN communication. |
| Four Wheel Drive Control ECU | Sends the L4 condition signal to the parking assist ECU through CAN communication. |
| ECM | Sends the vehicle condition, 2WD/4WD information and shift position information to the parking assist ECU through CAN communication. |

## DISPLAY CONDITIONS FOR SIDE MONITOR DISPLAY

a. Screen display operation



**Text in Illustration**

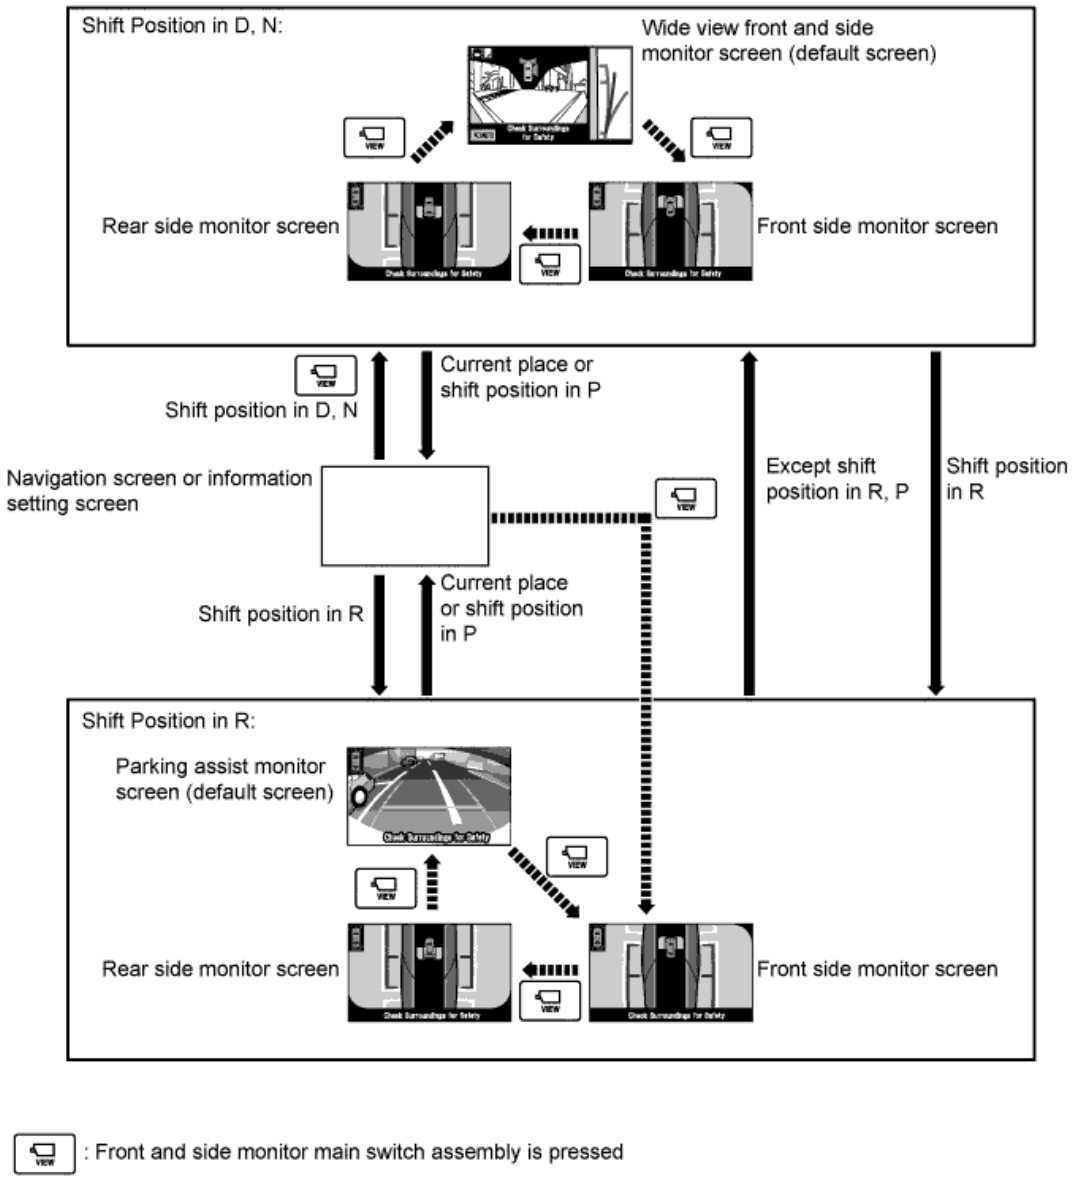
| | | | |
|---|---|---|---|
| *A | for LHD | *B | for RHD |
| *1 | Wide View Front and Side Monitor Screen | *2 | Course guideline display change switch |
| *3 | Automatic display mode set/cancel switch (Illustration shows automatic display mode off) | - | - |

i. After the display conditions are met when the wide view front and side monitor systems are normally functioning, if the screen is changed from the manual display mode or automatic display mode screen, the wide view front and side monitor screen (H4 mode) or wide view front monitor screen (L4 mode) is displayed as the initial screen.

**HINT:**

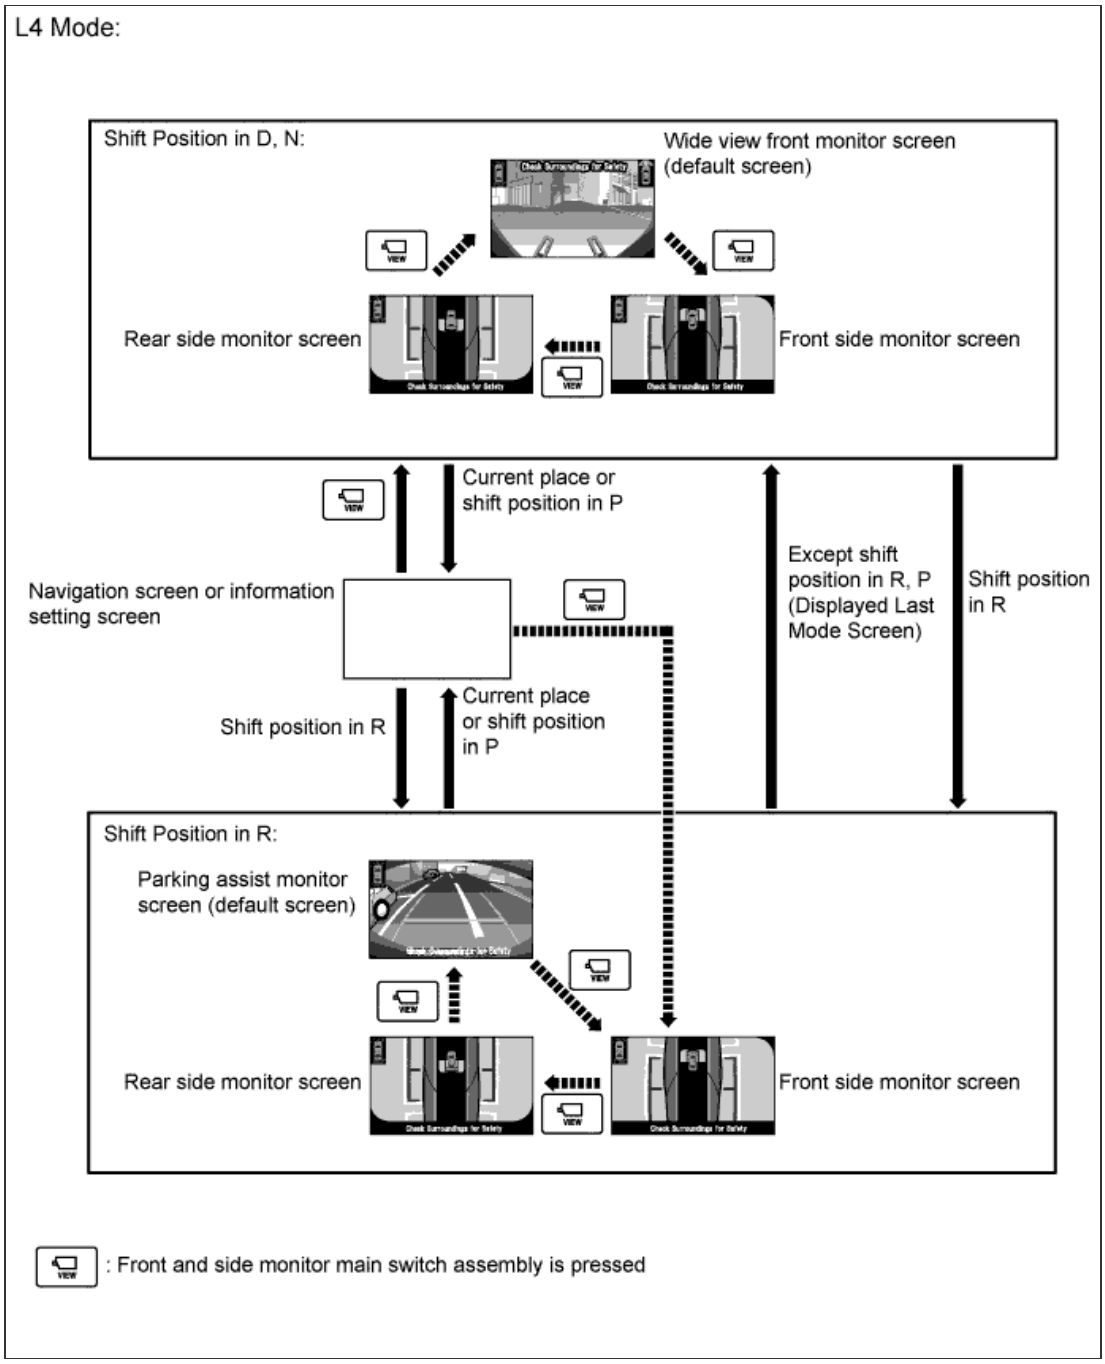
- **If the shift lever is not in R and the wide view front and side monitor screen is displayed, the course guideline display change switch and automatic display mode set/cancel switch are displayed and the following operations can be performed.**
- **For the course guideline display change switch, refer to the below procedures.**

| Side Monitor Screen Display Mode | Vehicle Width Parallel Lines (Blue) | Estimated Minimum Turning Course Guidelines (Blue) | Estimated Course Guidelines (Yellow) |
|---|---|---|---|
| No course guidelines mode | Displayed | Not Displayed | Not Displayed |
| Estimated minimum turning course guideline display screen | Displayed | Displayed | Not Displayed |
| Steering linked line display mode | Displayed | Displayed | Displayed |



- **Automatic display mode set/cancel switch**

| Automatic mode display switch (Indicator in the button) | Display mode |
|---|---|
| ON (Illuminated) | Automatic display mode |
| OFF (Not illuminated) | Manual display mode |



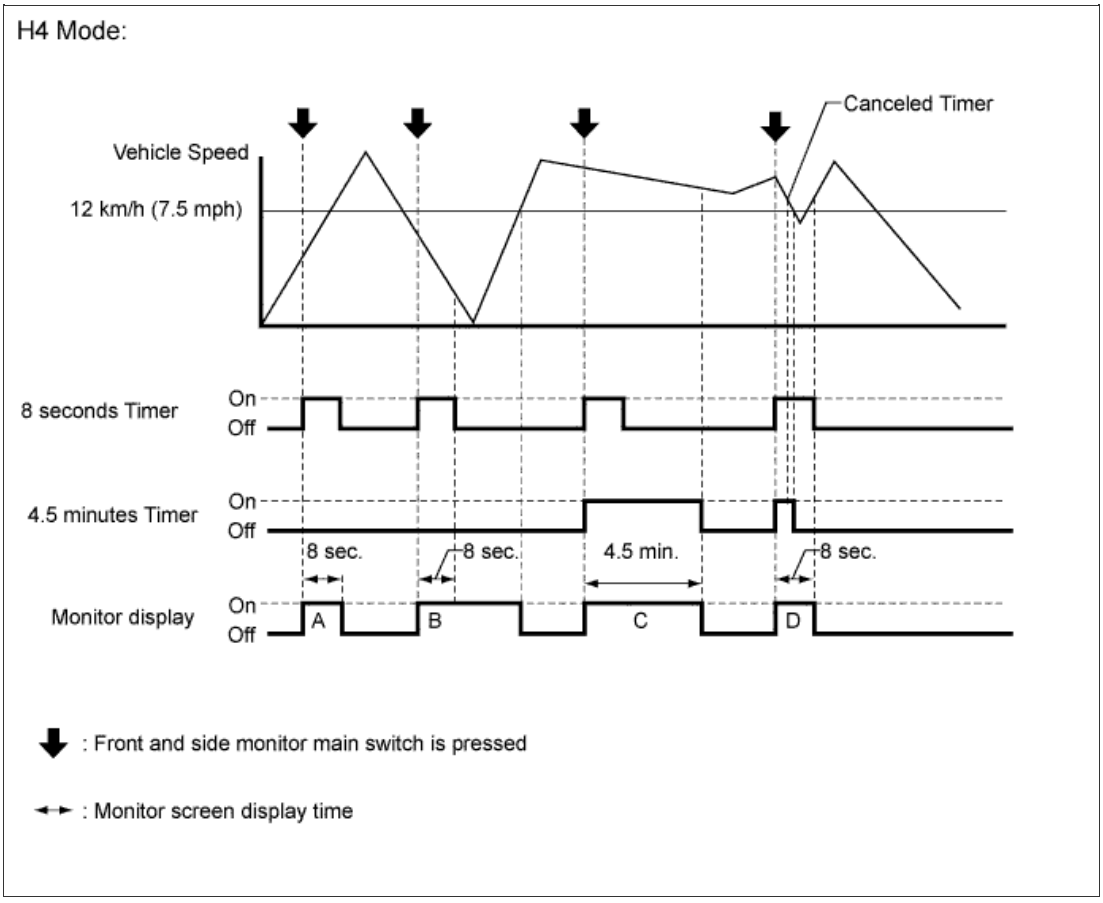
- **The last mode screen is the screen that was displayed last when the screen was changed to the navigation screen, information setting screen, etc.**

b. Display conditions for manual display mode

H4 Mode:

: Front and side monitor main switch assembly is pressed

i. H4 mode:
During manual display mode (shift lever in a position other than R), during engine switch on (IG) or engine startup (no DTCs are output), if the following conditions have been met, pressing the front and side monitor main switch will change the display mode as follows

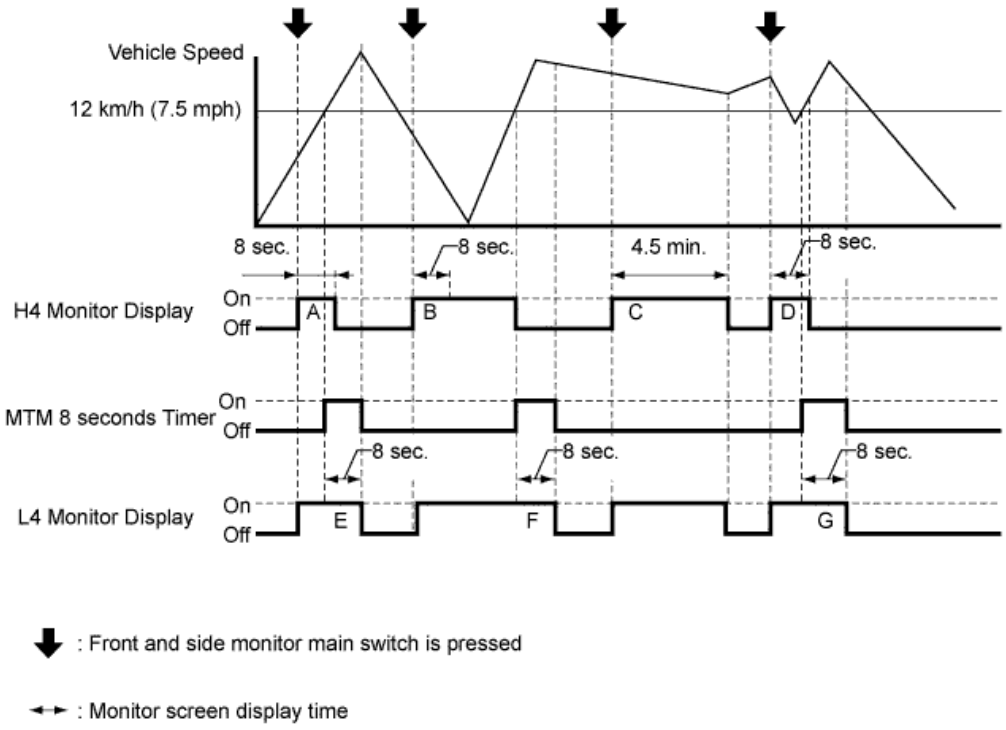


| Automatic Mode Display Switch | Multi-display Screen | Shift Lever Position | Vehicle Speed | Screen (changes due to front and side monitor main switch assembly operation) |
|---|---|---|---|---|
| OFF | Navigation screen or information setting screen | Other than R | 12 km/h (7.5 mph) or less | Navigation screen or information setting screen → Wide view front and side monitor screen → Front side monitor screen → Rear side monitor screen → Wide view front and side monitor screen |
| | | R position | 0 km/h (0 mph) | Navigation screen or information setting screen → Parking assist monitor screen → Wide view front and side monitor screen → Front side monitor screen → Rear side monitor screen → Parking assist monitor screen |

ii. L4 mode:
In manual display mode, when the following conditions are met with the engine switch on (IG) or the engine started (no DTCs are output), the screen display can be changed by pressing the front and side monitor main switch assembly.

| Automatic Mode Display Switch | Multi-display Screen | Shift Lever Position | Vehicle Speed | Screen (changes due to front and side monitor main switch assembly operation) |
|---|---|---|---|---|
| OFF | Navigation screen or information setting screen | Other than R | 12 km/h (7.5 mph) or less | Navigation screen or information setting screen → Wide view front monitor screen → Front side monitor screen → Rear side monitor screen → Wide view front monitor screen |
| | | R position | 0 km/h (0 mph) | Navigation screen or information setting screen → Parking assist monitor screen → Wide view front and side monitor screen → Front side monitor screen → Rear side monitor screen → Parking assist monitor screen |

c. Screen display timer function

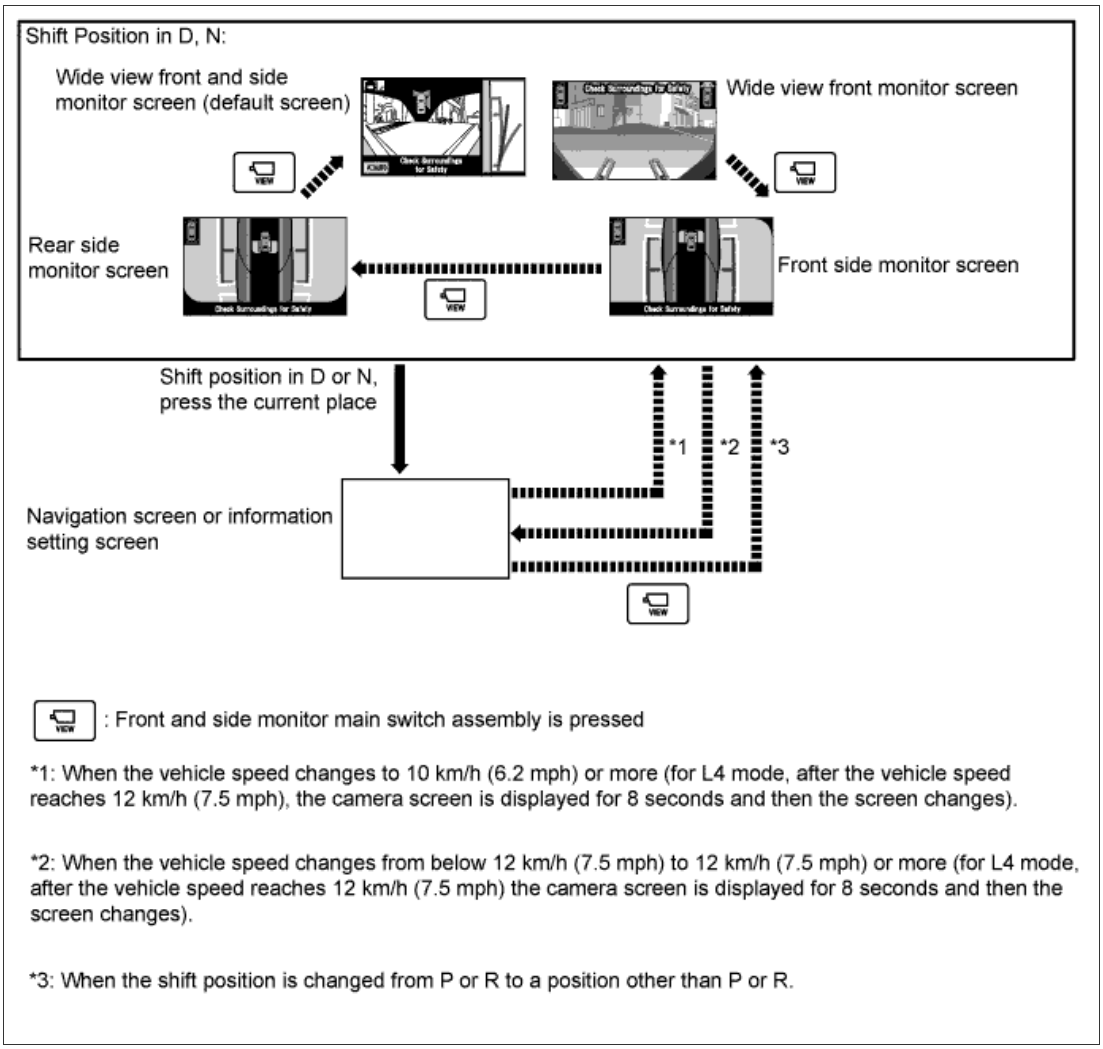


i. During manual display mode (when the shift lever is not in R), when the front and side monitor main switch is pressed and the following conditions are met, the wide view front and side monitor screen is displayed for a certain period of time even when the vehicle speed is more than 12 km/h (7.5 mph).

| Screen Display Time | Time when Front and Side Monitor Main Switch Assembly is Pressed | Change in Vehicle Speed | Timer Operation Time | Note |
|---|---|---|---|---|
| A<br>B | 12 km/h (7.5 mph) or less | 12 km/h (7.5 mph) or less | 8 seconds | When the front and side monitor main switch assembly is pressed with the vehicle speed at 12 km/h (7.5 mph) or less, the camera screen is displayed for 8 seconds from the moment the switch is pressed. After this, if the vehicle |

| | | | | |
|---|---|---|---|---|
| | | | | speed increases to above 12 km/h (7.5 mph), the camera screen is not displayed. |
| C | More than 12 km/h (7.5 mph) | More than 12 km/h (7.5 mph) | 8 seconds or 4 minutes and 30 seconds | When the front and side monitor main switch assembly is pressed while the vehicle speed is more than 12 km/h (7.5 mph), the camera screen is displayed for 4 minutes and 30 seconds the moment the switch is pressed (when the vehicle speed is more than 12 km/h (7.5 mph) after 4 minutes and 30 seconds elapse from the time the switch is pressed). |
| D | More than 12 km/h (7.5 mph) | More than 12 km/h (7.5 mph) → 12 km/h (7.5 mph) or less → More than 12 km/h (7.5 mph) | 8 seconds or 4 minutes and 30 seconds | When the front and side monitor main switch assembly is pressed while the vehicle speed is more than 12 km/h (7.5 mph), the screen display timer operates and the camera screen is displayed. However, after the vehicle speed decreases to 12 km/h (7.5 mph) or less within 4 minutes and 30 seconds (after 8 seconds have elapsed), if the vehicle speed increases to more than 12 km/h (7.5 mph) again, the screen switches to the navigation or information setting screen.<br>After the vehicle speed decreases to 12 km/h (7.5 mph) or less within 8 seconds, if the vehicle speed increases to more than 12 km/h (7.5 mph) again, the 4 minutes 30 seconds timer is canceled and the camera screen is displayed for 8 seconds the moment the front and side monitor main switch assembly is pressed. |

L4 Mode:



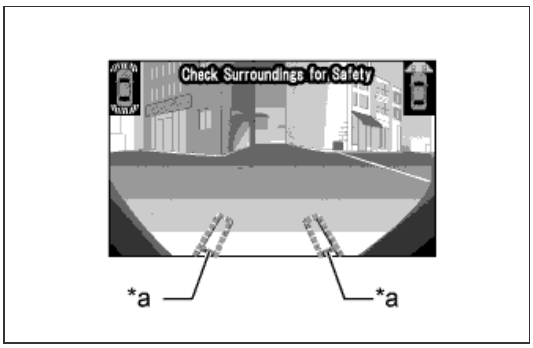
| Screen Display Time | Time when Front and Side Monitor Main Switch Assembly is | Change in Vehicle Speed | Timer Operation Time | Note |
|---|---|---|---|---|

| | | | | |
|---|---|---|---|---|
| | Pressed | | | |
| A<br>B | 12 km/h (7.5 mph) or less | 12 km/h (7.5 mph) or less | 8 seconds | When the front and side monitor main switch assembly is pressed with the vehicle speed at 12 km/h (7.5 mph) or less, the camera screen is displayed for 8 seconds from the moment the switch is pressed. After this, if the vehicle speed increases to above 12 km/h (7.5 mph), the camera screen is not displayed. |
| C | More than 12 km/h (7.5 mph) | More than 12 km/h (7.5 mph) | 8 seconds or 4 minutes and 30 seconds | When the front and side monitor main switch assembly is pressed while the vehicle speed is more than 12 km/h (7.5 mph), the camera screen is displayed for 4 minutes and 30 seconds the moment the switch is pressed (when the vehicle speed is more than 12 km/h (7.5 mph) after 4 minutes and 30 seconds elapse from the time the switch is pressed). |
| D | More than 12 km/h (7.5 mph) | More than 12 km/h (7.5 mph) → 12 km/h (7.5 mph) or less → More than 12 km/h (7.5 mph) | 8 seconds or 4 minutes and 30 seconds | When the front and side monitor main switch assembly is pressed while the vehicle speed is more than 12 km/h (7.5 mph), the screen display timer operates and the camera screen is displayed. However, after the vehicle speed decreases to 12 km/h (7.5 mph) or less within 4 minutes and 30 seconds (after 8 seconds have elapsed), if the vehicle speed increases to more than 12 km/h (7.5 mph) again, the screen switches to the navigation or information setting screen.<br>After the vehicle speed decreases to 12 km/h (7.5 mph) or less within 8 seconds, if the vehicle speed increases to more than 12 km/h (7.5 mph) again, the 4 minutes 30 seconds timer is canceled and the camera screen is displayed for 8 seconds the moment the front and side monitor main switch assembly is pressed. |
| E<br>F<br>G | More than 12 km/h (7.5 mph) | More than 12 km/h (7.5 mph) | 8 seconds | If the vehicle speed is more than 12 km/h (7.5 mph), the camera screen is displayed for 8 seconds. After that, the camera screen is not displayed. The timer is canceled the moment the vehicle speed decreases to below 12 km/h (7.5 mph) during the 8 second timer. |

d. Display conditions for automatic display mode

i. In automatic display mode, the screen display is automatically displayed according to driving conditions when the following conditions are met and the wide view front and side monitor systems are normally operating.

| Vehicle Condition | Multi-display Assembly Display Screen | Shift Lever | Vehicle Speed | Display Screen |
|---|---|---|---|---|
| Stopped → Driving | Navigation screen or information setting screen | Not in P or R | 12 km/h (7.5 mph) or less | Navigation screen or information setting screen → Wide view front monitor and side monitor screen* |
| Driving → Stopped | | Not in P or R | 10 km/h (6.2 mph) or less | Navigation screen or information setting screen → Wide view front monitor and side monitor screen* |



*:The conditions to change the screen after the display screen changes automatically are the same as in manual display mode.

e. Off-road turn assist function

i. With the off-road turn assist function on, the path traveled is displayed as dotted lines on the front screen. In this state, the vehicle may not move exactly as the front lines indicate. (The lines indicate the direction the front wheels are turned. However, with the off-road assist function on, the vehicle turns using a difference in drive force between the left and right wheels.)

**Text in Illustration**

| | |
|---|---|
| *a | Line Indicating Travel Path |

## OPERATION EXPLANATION

a. The front and side monitor main switch ON signal is sent from the main switch to the parking assist ECU.

After receiving the front and side monitor main switch ON signal, the parking assist ECU switches the display signal for the display and navigation module display from the navigation system to the side monitor system.

## COMMUNICATION SYSTEM OUTLINE

a. The components of the side monitor system communicate with each other through the AVC-LAN. If a short circuit or open circuit occurs in the AVC-LAN, communication is interrupted and the side monitor system will stop functioning.

## DIAGNOSTIC FUNCTION OUTLINE

a. This side monitor system has a diagnostic function displayed in the display and navigation module display. This function enables the calibration (adjustment and confirmation) of the system (Click here).

b. The system can check the following items by using the intelligent tester.

| Item | Proceed to |
|---|---|
| DTC | Click here |

**for Preparation** Click here

**HINT:**

- **Use the following procedures to troubleshoot the side monitor system.**
- ***: Use the intelligent tester.**

## 1.VEHICLE BROUGHT TO WORKSHOP

NEXT

## 2.INSPECT BATTERY VOLTAGE

**Standard voltage:**
**11 to 14 V**

If the voltage is below 11 V, replace or recharge the battery before proceeding.

NEXT

## 3.CHECK COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*

a. Use the intelligent tester to check if the CAN communication system is functioning normally.

**Result**

| Result | Proceed to |
|---|---|
| CAN DTC is not output | A |
| CAN DTC is output (for LHD) | B |
| CAN DTC is output (for RHD) | C |

B. → Go to CAN COMMUNICATION SYSTEM (Click here)

C. → Go to CAN COMMUNICATION SYSTEM (Click here)

A

## 4.CHECK DTC OUTPUT*

a. Check for DTCs (Click here).

b. Clear the DTCs (Click here).

c. Recheck for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| No DTC is output | A |
| DTC is output | B |

B. → Go to DIAGNOSTIC TROUBLE CODE CHART ( Click here)

A

## 5.PROBLEM SYMPTOMS TABLE

a. Refer to the Problem Symptoms Table (Click here).

**Result**

| Result | Proceed to |
|---|---|
| Fault is not listed in problem symptoms table | A |
| Fault is listed in problem symptoms table | B |

B. → Go to step 7

A

## 6.OVERALL ANALYSIS AND TROUBLESHOOTING*

a. Terminals of ECU (Click here).

NEXT

## 7.ADJUST, REPAIR OR REPLACE

NEXT

## 8.CONFIRMATION TEST

NEXT

## END

**for Preparation** Click here

**HINT:**

- **Use the following procedure to troubleshoot the side monitor system.**
- ***: Use the intelligent tester.**

## 1.VEHICLE BROUGHT TO WORKSHOP

NEXT

## 2.INSPECT BATTERY VOLTAGE

a. Measure the battery voltage with the engine switch off.

**Standard Voltage:**
**11 to 14 V**

If the voltage is below 11 V, replace or recharge the battery before proceeding to the next step.

NEXT

## 3.CHECK NAVIGATION SYSTEM

a. Refer to the navigation system (for HDD) (Click here).

b. Refer to the navigation system (for DVD) (Click here).

**Result**

| Result | Proceed to |
|---|---|
| Navigation system is normal | A |
| Navigation system (for HDD) is abnormal | B |
| Navigation system (for DVD) is abnormal | C |

B. → GO TO NAVIGATION SYSTEM (Click here)

C. → GO TO NAVIGATION SYSTEM (Click here)

A

## 4.CHECK COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*

a. Use the intelligent tester to check if the CAN communication system is functioning normally.

**Result**

| Result | Proceed to |
|---|---|
| CAN DTC is not output | A |
| CAN DTC is output (for LHD) | B |
| CAN DTC is output (for RHD) | C |

B. → GO TO CAN COMMUNICATION SYSTEM (Click here)

C. → GO TO CAN COMMUNICATION SYSTEM (Click here)

A

## 5.CHECK FOR DTC*

a. Check for DTCs and note any codes that are output ( Click here).

b. Clear the DTC (Click here).

c. Recheck for DTCs. Try to prompt the DTC by simulating the original activity that the DTC suggests.

**NOTICE:**

The parking assist ECU may store the DTCs of the following system. If DTCs other than those specified in Diagnostic Trouble Code Chart of the side monitor system are output, refer to Diagnostic Trouble Code Chart for the applicable system.

| System | Proceed to |
|---|---|
| Parking Assist Monitor System | Click here |

**Result**

| Result | Proceed to |
|---|---|
| DTC is not output | A |
| DTC is output | B |

B. → Go to step 8

A

## 6.PROBLEM SYMPTOMS TABLE

a. Refer to the Problem Symptoms Table (Click here).

**Result**

| Result | Proceed to |
|---|---|
| Fault is not listed in Problem Symptoms Table | A |
| Fault is listed in Problem Symptoms Table | B |

B. → Go to step 8

A

## 7.OVERALL ANALYSIS AND TROUBLESHOOTING

a. Refer to Terminals of ECU (Click here).

## INITIALIZE SIDE MONITOR SYSTEM

a. If the following operations are performed, "System initializing" is displayed on the multi-display.

| Part Name | Operation | Initialization Item |
|---|---|---|
| Battery cable | Disconnect | Store the steering angle neutral point in memory |
| Steering angle sensor connector | Disconnect | Store the steering angle neutral point in memory |

b. When "System initializing" is displayed, correct the steering angle neutral point using either of the following methods.

i. METHOD 1:
Fully turn the steering wheel to the right and left.

ii. METHOD 2:

1. Drive the vehicle at more than 20 km/h (12 mph) for more than 5 minutes on a straight road with as little traffic congestion as possible.

   **HINT:**

   While driving at a constant vehicle speed, the ECU recognizes the point where the steering angle changes the least and memorizes it as the steering angle neutral point.

2. Stop the vehicle and check whether the neutral point is stored or not. If it is not stored, drive the vehicle according to the previous step again (the neutral point is stored by driving the vehicle straight).

**for Preparation** Click here

## INITIALIZE SIDE MONITOR SYSTEM

a. If the following operations are performed, "System initializing" is displayed on the display and navigation module display.

| Part Name | Operation | Initialization Item |
|---|---|---|
| Battery cable | Disconnect | Store the steering angle neutral point in memory |
| Steering angle sensor connector | Disconnect | Store the steering angle neutral point in memory |

b. When "System initializing" is displayed, correct the steering angle neutral point using either of the following methods.

i. METHOD 1:
Fully turn the steering wheel to the right and left.

ii. METHOD 2:

1. Drive the vehicle at more than 20 km/h (12 mph) for more than 5 minutes on a straight road with as little traffic congestion as possible.

   **HINT:**

   While driving at a constant vehicle speed, the ECU recognizes the point where the steering angle changes the least and memorizes it as the steering angle neutral point.

2. Stop the vehicle and check whether the neutral point is stored or not. If it is not stored, drive the vehicle according to the previous step again (the neutral point is stored by driving the vehicle straight).

**for Preparation** Click here

## INITIALIZE SIDE MONITOR SYSTEM

a. When "System initializing" is displayed on the multimedia module receiver assembly, correct the steering angle neutral point using the following method.

i. Fully turn the steering wheel to the right and left on flat ground.

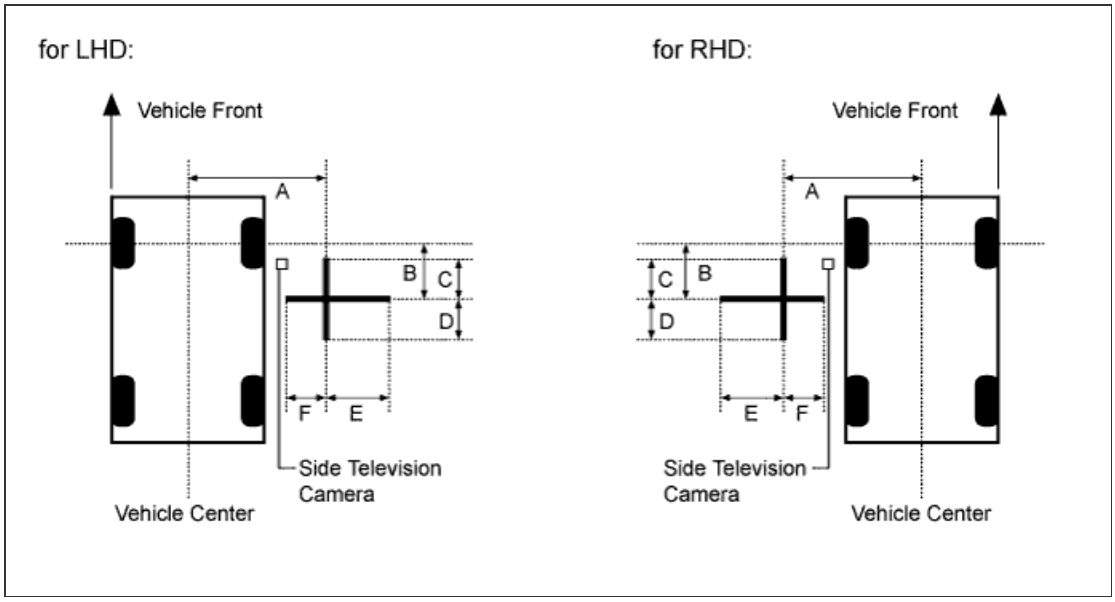
**NOTICE:**

Memorizing the steering angle neutral point must be carried out with the engine started. Apply the parking brake, depress the brake pedal, check that the shift lever is in P, and ensure that the vehicle is not moving.

**HINT:**

The "?" button is displayed at the same time as "System initializing". If the "?" button is selected, this method is displayed.

**for Preparation** Click here



## INSPECTION AND ADJUSTMENT

a. Preparation for adjustment.

i. Make sure that the outer mirror is in the driving position.

ii. Center the steering wheel and stop the vehicle.

iii. Set the adjustment target bar as shown in the illustration.

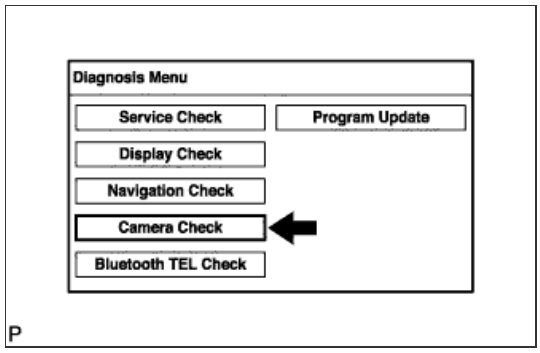
| Position | Standard Value |
|---|---|
| A | 1178 to 1188 mm (46.4 to 46.8 in.) |
| B | 1176 to 1186 mm (46.3 to 46.7 in.) |
| C | 495 to 505 mm (19.5 to 19.9 in.) |
| D | 495 to 505 mm (19.5 to 19.9 in.) |
| E | 495 to 505 mm (19.5 to 19.9 in.) |
| F | 175 to 185 mm (6.89 to 7.28 in.) |

**HINT:**

- **As the adjustment target bar is a 50 mm (1.97 in.) wide piece of tape affixed to the floor, confirm the color on the vehicle display to make sure it is highly visible.**
- **Before stopping the vehicle, be sure to move the vehicle forward and in reverse and check that the tires are facing straight ahead with the steering wheel centered.**

b. Diagnosis activation.

i. Turn the engine switch on (IG).



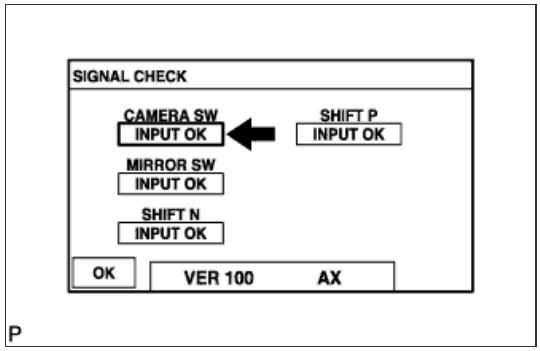
ii. Activate diagnosis mode (Click here).

iii. From the Diagnosis Menu, select "Camera Check".

iv. From the Mode Setting, select "Side Camera Setting".

**HINT:**

After performing the side camera position setting, the option on the menu display will dim. To perform the adjustment again, touch the dimmed button for 2 seconds or more.



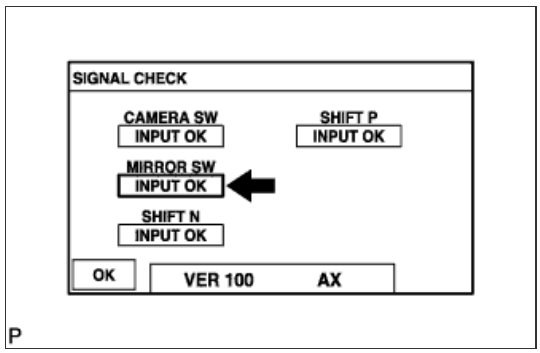
## SIGNAL CONNECTION CHECK

a. "CAMERA SW" check.

i. Check that "INPUT OK" (indicated by the arrow in the illustration) under "CAMERA SW" is displayed in blue, and then touch the display.

ii. Check that "INPUT OK" (indicated by the arrow in the illustration) changes to "CHECK" (displayed in red), and then press the front and side monitor main switch.

iii. Check that "INPUT OK" (indicated by the arrow in the illustration) under "CAMERA SW" is displayed in blue.

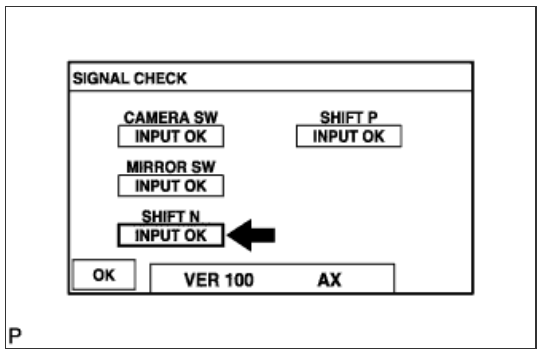


b. "MIRROR SW" check.

i. Check that "INPUT OK" (indicated by the arrow in the illustration) under "MIRROR SW" is displayed in blue, and then touch the display.

ii. Check that "INPUT OK" (indicated by the arrow in the illustration) changes to "CHECK" (displayed in red), and then press the outer mirror switch.

iii. Check that "INPUT OK" (indicated by the arrow in the illustration) under "MIRROR SW" is displayed in blue.

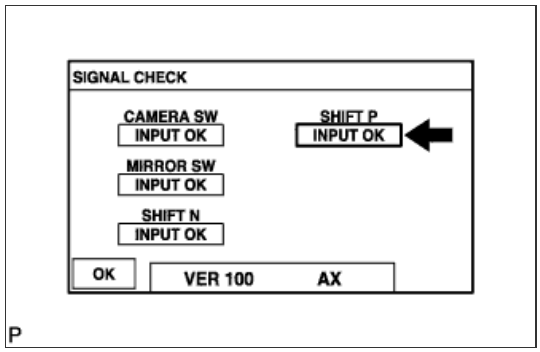


c. "SHIFT N" check.

i. Check that "INPUT OK" (indicated by the arrow in the illustration) under "SHIFT N" is displayed in blue, and then touch the display.

ii. Check that "INPUT OK" (indicated by the arrow in the illustration) changes to "CHECK" (displayed in red), and then move the shift lever to N.

iii. Check that "INPUT OK" (indicated by the arrow in the illustration) under "SHIFT N" is displayed in blue.



d. "SHIFT P" check.

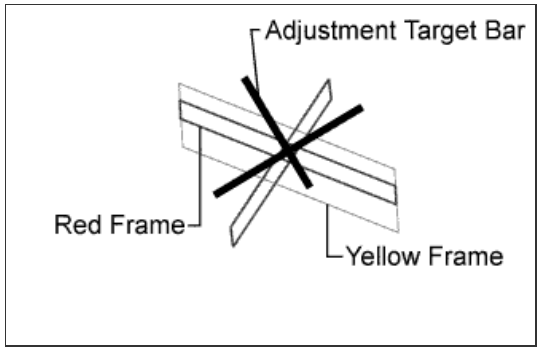
i. Check that "INPUT OK" (indicated by the arrow in the illustration) under "SHIFT P" is displayed in blue, and then touch the display.

ii. Check that "INPUT OK" (indicated by the arrow in the illustration) changes to "CHECK" (displayed in red), and then move the shift lever to P.

iii. Check that "INPUT OK" (indicated by the arrow in the illustration) under "SHIFT P" is displayed in blue.

**HINT:**

- **After the cable is connected to the negative (-) battery terminal, even if each signal is only input 1 time into the parking assist ECU, "INPUT OK" is displayed.**
- **If the signals are not input, "CHECK" and the item are displayed in red.**
- **If "INPUT OK" is displayed in blue for all signals, it is possible to proceed to the next screen by touching "OK".**
- **If "CHECK" is displayed in red for 1 or more items, touch "CHECK" (the color will change from red to orange) and then touch "OK" to proceed to the next screen.**



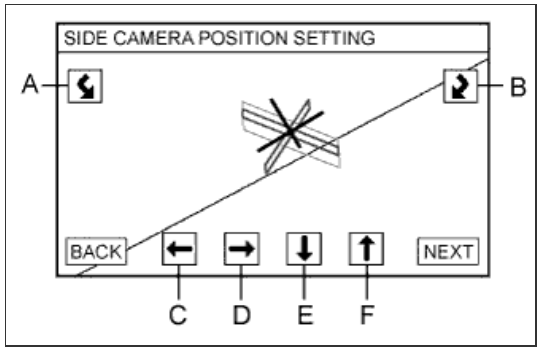
e. Select "OK".

**HINT:**

If the outer mirror is retracted, a "beep" will sound and the side monitor camera position setting screen will not be displayed.

## SIDE CAMERA POSITION SETTING

a. Colors displayed in the adjustment screen.



b. Side camera position setting.

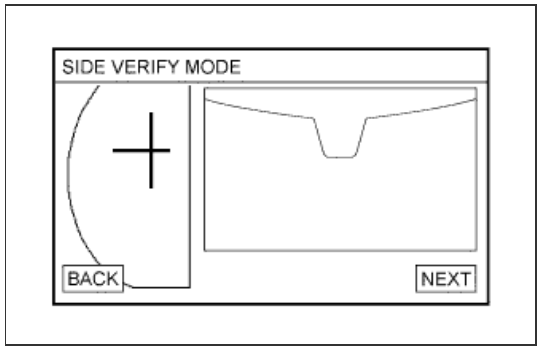
i. Press the buttons labeled A and B to rotate the yellow frame.

ii. Next press the buttons labeled C, D, E, and F to move the yellow frame left, right, up, and down. Align the yellow frame so that the adjustment target bar is in the center of the red frame.

iii. Select "NEXT" to proceed to the side verify mode.

c. Side verify mode.

i. Check that the adjustment target bar and the cross line displayed on the screen overlap.



**HINT:**

If they do not overlap, perform the position setting again.

ii. Select "NEXT".

**HINT:**

When "NEXT" is selected, a "beep" will sound for several seconds.

**for Preparation** Click here

## ADJUST SIDE MONITOR SYSTEM

a. This side monitor system can be set from the diagnostic screen of the display and navigation module display.

b. If the following operations are performed, it is necessary to perform adjustments and checks on the diagnostic screen.

| Part Name | Operation | Adjustment Item | Proceed to |
|---|---|---|---|
| Spiral with sensor cable sub-assembly | • Removal and installation of the spiral with sensor cable sub-assembly<br>• Removal and installation of the connector of the spiral with sensor cable sub-assembly | Steering angle neutral point | Click here |
| | | Steering angle setting | Click here |
| Spiral with sensor cable sub-assembly | Replacement | Steering angle neutral point | Click here |
| | | Steering angle setting | Click here |
| Parking assist ECU | Replacement | Parking assist ECU initialization | Click here |
| Suspension, tires, etc. | The vehicle height changes because of suspension or tire replacement | Rear television camera optical axis (Camera position setting) | Click here |
| | | Side television camera optical axis (Camera position setting) | Step 2 |
| Side television camera assembly | • Replace<br>• Installation angle of the side television camera changes because of the removal and installation of the side television camera, etc. | Side television camera optical axis (Camera position setting) | Step 2 |
| Outer rear view mirror assembly (passenger side) | Replacement | Side television camera optical axis (Camera position setting) | Step 2 |
| Display and navigation module display | Replacement | Vehicle contract setting | Click here |

**HINT:**

- **The adjustment values stored while performing side monitor system calibration are stored in the parking assist ECU.**
- **After the engine switch is turned off, the display and navigation module display (HDD navigation system) records various types of memory and settings. As a result, after turning the engine switch off, make sure to wait for the time specified in the following table before disconnecting the cable from the negative (-) battery terminal.**

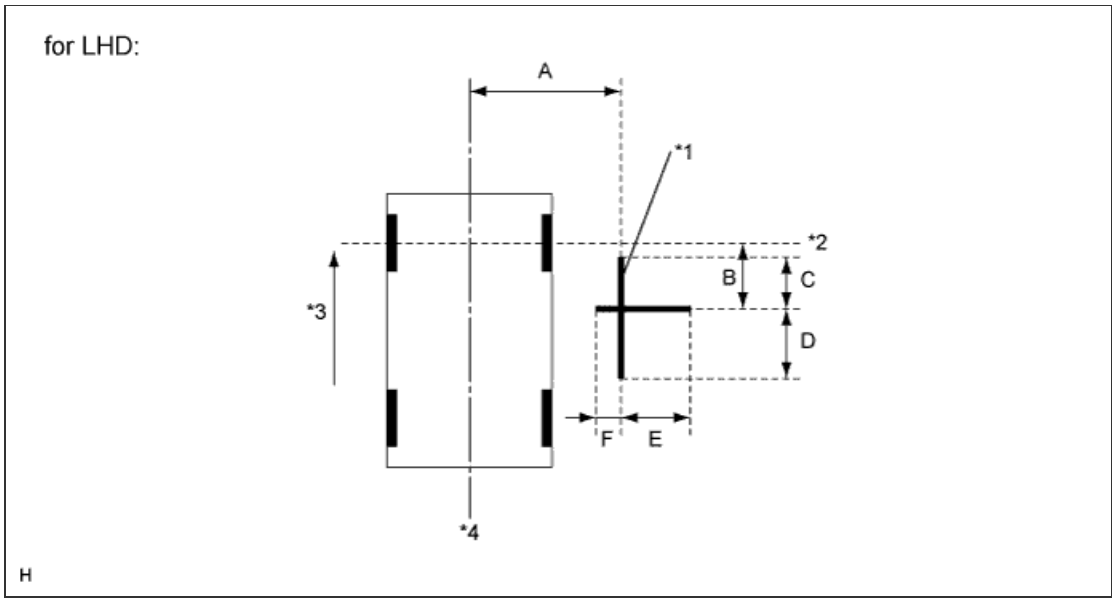
**Waiting Time before Disconnecting Cable from Negative (-) Battery Terminal**

| Specification | Waiting Time |
|---|---|
| w/o Telematics transceiver | 60 sec. |
| w/ Telematics transceiver | 120 sec. |

## SIDE CAMERA POSITION SETTING

**HINT:**

Be sure to check for DTCs before performing this procedure ( Click here).



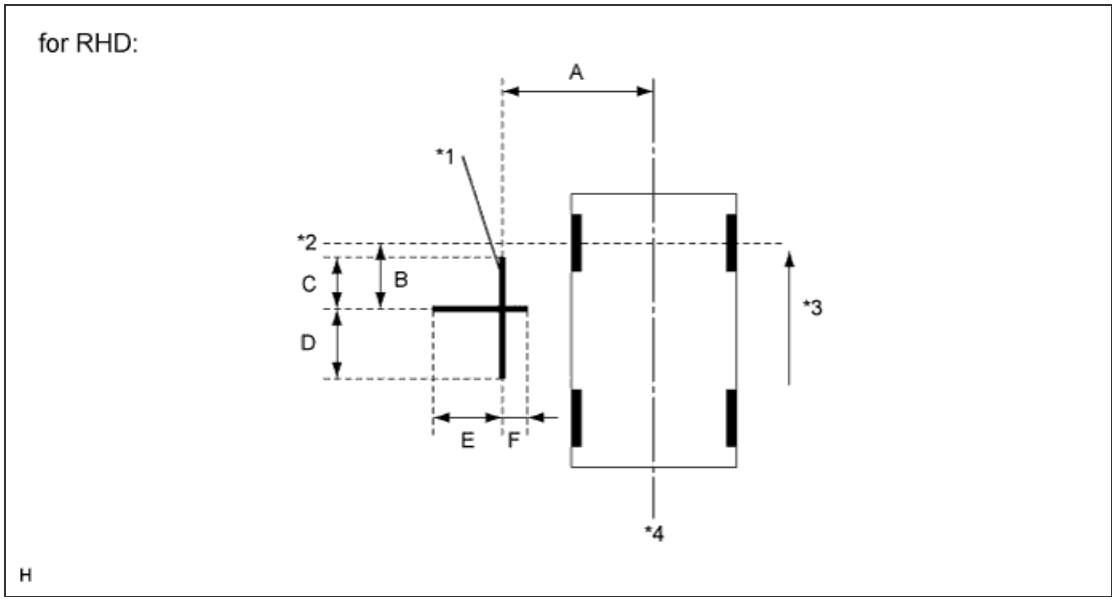
a. Preparation for adjustment

i. Park the vehicle with the steering wheel centered.

ii. Set a target bar for optical axis adjustment of the side television camera.

**HINT:**

Only when adjusting the optical axis of the camera, create a target bar for adjustment.



**Text in Illustration**

| | | | |
|---|---|---|---|
| *1 | Target Bar for Side Camera Adjustment | *2 | Front Wheel Axis |
| *3 | Front Side | *4 | Vehicle Center |

**Dimension:**

| A | B | C | D | E | F |
|---|---|---|---|---|---|
| 1183 mm (3.88 ft.) | 1181 mm (3.87 ft.) | 500 mm (1.64 ft.) | 500 mm (1.64 ft.) | 500 mm (1.64 ft.) | 180 mm (7.09 in.) |

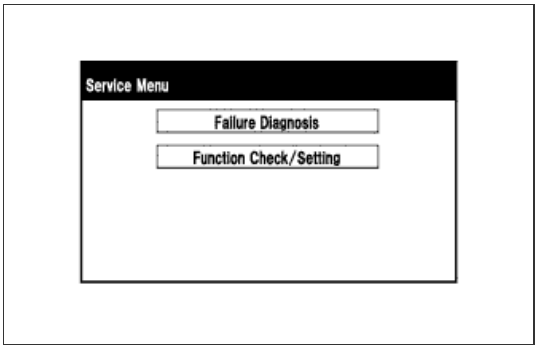
**Text in Illustration**

| | | | |
|---|---|---|---|
| *1 | Target Bar for Side Camera Adjustment | *2 | Front Wheel Axis |
| *3 | Front Side | *4 | Vehicle Center |

**Dimension:**

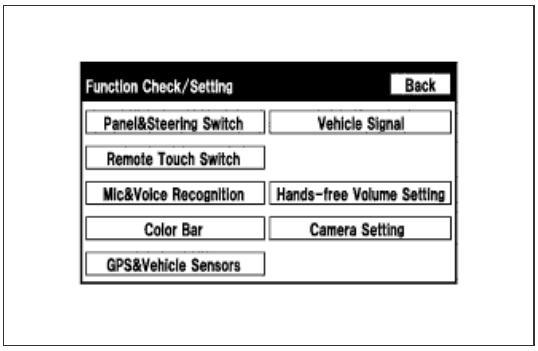
| A | B | C | D | E | F |
|---|---|---|---|---|---|
| 1183 mm (3.88 ft.) | 1181 mm (3.87 ft.) | 500 mm (1.64 ft.) | 500 mm (1.64 ft.) | 500 mm (1.64 ft.) | 180 mm (7.09 in.) |

**HINT:**



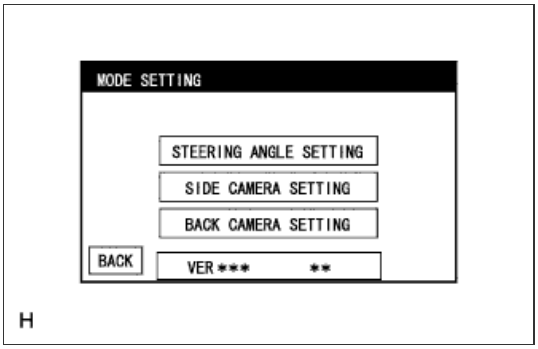
Target bars for side camera adjustment should be made with 2 pieces of 2.5 cm wide tape; one piece should be 100 cm (3.28 ft.) (C+D) and the other should be 68 cm (2.23 ft.) (E+F) long. Check the tape color on the display and navigation module display and choose a tape color which can be easily seen.

**b.** Start the diagnostic mode (Click here).



**NOTICE:**

Mode setting must be carried out with the engine start. Apply the parking brake, depress the brake pedal, move the shift lever to P, and ensure that the vehicle is not moving.

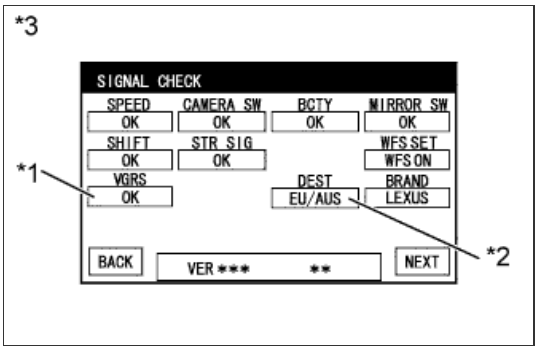


**i.** Select "Function Check/Setting" on the Service Menu screen.

**ii.** Select the "Camera Setting" on the Function Check/Setting screen."

**iii.** Select the "SIDE CAMERA SETTING" on the MODE SETTING screen.

H



**iv.** Select "NEXT" on the SIGNAL CHECK screen.

**Text in Illustration**

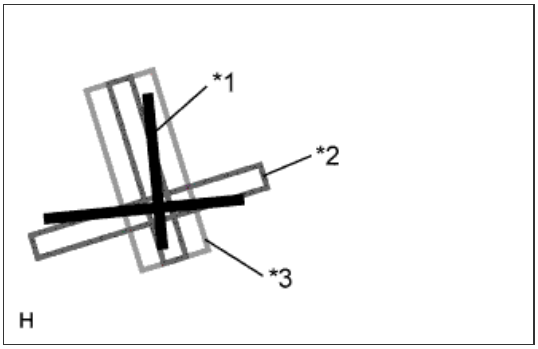
| | |
|---|---|
| *1 | w/ VGRS |
| *2 | "EU/AUS" or "GCC/ZAF" |
| *3 | Example |

**NOTICE:**

- **When "CHK" (red) is displayed for any items on the SIGNAL CHECK screen, selecting "NEXT" will not change the screen to the SIDE CAMERA POSITION SETTING screen.**
- **When "CHK" (red) is displayed for any items on the SIGNAL CHECK screen, perform inspections using the SIGNAL CHECK screen (Click here).**

**HINT:**

- **When the outer mirrors are retracted, selecting "NEXT" will not change the screen to the SIDE CAMERA POSITION SETTING screen.**
- **If the screen does not change to the SIDE CAMERA POSITION SETTING screen even though the outer mirrors are extended, perform the MIRROR SW check on the SIGNAL CHECK screen (Click here).**
- **If the screen does not change to the SIDE CAMERA POSITION SETTING screen even after "OK" (blue) is displayed as a result of the MIRROR SW check on the SIGNAL CHECK screen, replace the parking assist ECU (Click here).**



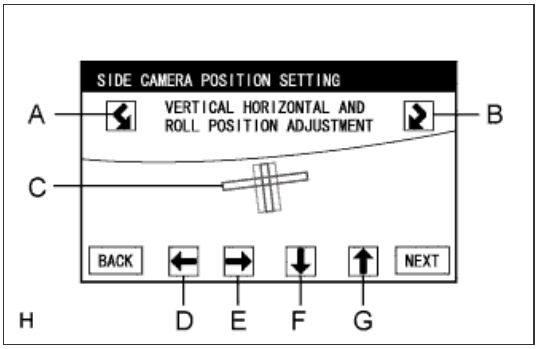
c. SIDE CAMERA POSITION SETTING

**HINT:**

Colors used on the side camera position setting screen

**Text in Illustration**

| | |
|---|---|
| *1 | Target Bar for Side Camera Adjustment |
| *2 | Red Frame |
| *3 | Yellow Frame |



i. Perform the roll angle adjustment.

- Select switches A and B to rotate C so that it is parallel to the target adjustment bar.

ii. Perform the vertical and horizontal position adjustment.

- Select the directional switches D, E, F and G to move C so that the target adjustment bar is centered in C.

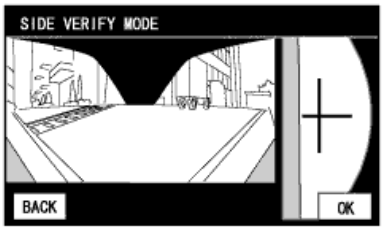
iii. Select "NEXT" to display SIDE VERIFY MODE.

d. SIDE VERIFY MODE

i. Check that the red cross and the target adjustment bar are aligned.

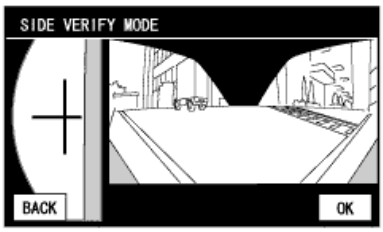
**HINT:**

If they are not aligned, select "BACK" and perform SIDE CAMERA POSITION SETTING again.



ii. Select "OK" to store the side camera aiming adjustment value and change the screen to the STEERING ANGLE SETTING screen.

**HINT:**



- **When "OK" is selected, a beep will sound to confirm that the side camera aiming adjustment values have been stored.**
- **The adjustment value will not be stored unless "OK" is selected.**

e. Finish the diagnostic mode (Click here).

## ADJUST SIDE MONITOR SYSTEM

a. This side monitor system can be set from the diagnostic screen of the multi-display assembly.

b. If the following operations are performed, it is necessary to perform adjustments and checks on the diagnostic screen.

| Part Name | Operation | Adjustment Item | Proceed to |
|---|---|---|---|
| Steering sensor | • Removal and installation of the Steering angle sensor<br>• Removal and installation of the connector of the Steering angle sensor<br>• Replacement | Steering angle neutral point | Click here |
| | | Steering angle setting | Click here |
| Multi-media module receiver assembly | Replacement | Vehicle contract setting | Click here |
| Parking assist ECU | Replacement | Parking assist ECU initialization | Click here |
| Suspension, tires, etc. | The vehicle height changes because of suspension or tire replacement | Rear television camera optical axis (Camera position setting) | Click here |
| | | Side television camera optical axis (Camera position setting) | Procedure 1 |
| Side television camera assembly | • Replacement<br>• Installation angle of the side television camera changes because of the removal and installation of the side television camera, etc. | Side television camera optical axis (Camera position setting) | Procedure 1 |
| Outer rear view mirror assembly | Replacement | Side television camera optical axis (Camera position setting) | Procedure 1 |

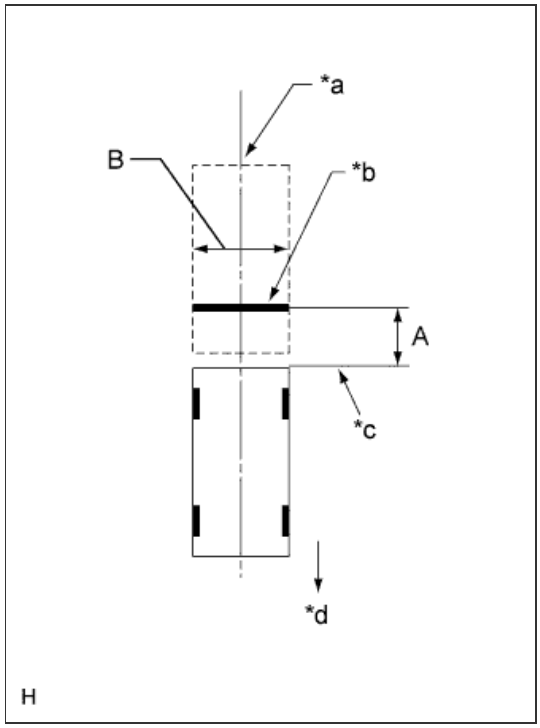
**HINT:**

- **The adjustment values stored while performing side monitor system calibration are stored in the parking assist ECU.**
- **After the engine switch is turned off, the multi-media module receiver assembly records various types of memory and settings. As a result, after turning the engine switch off, make sure to wait for the time specified in the following table before disconnecting the cable from the negative (-) battery terminal.**

**Waiting Time before Disconnecting Cable from Negative (-) Battery Terminal**

| Specification | Waiting Time |
|---|---|
| Vehicle enrolled in G-BOOK system | 6 minutes |
| Vehicle not enrolled in G-BOOK system | 1 minute |

## SIDE CAMERA SETTING (Procedure 1)



**HINT:**

Be sure to check for DTCs before performing this procedure ( Click here).

a. Preparation for adjustment

i. Park the vehicle with the steering wheel centered.

ii. Set a target bar for optical axis adjustment of the rear television camera assembly.

**HINT:**

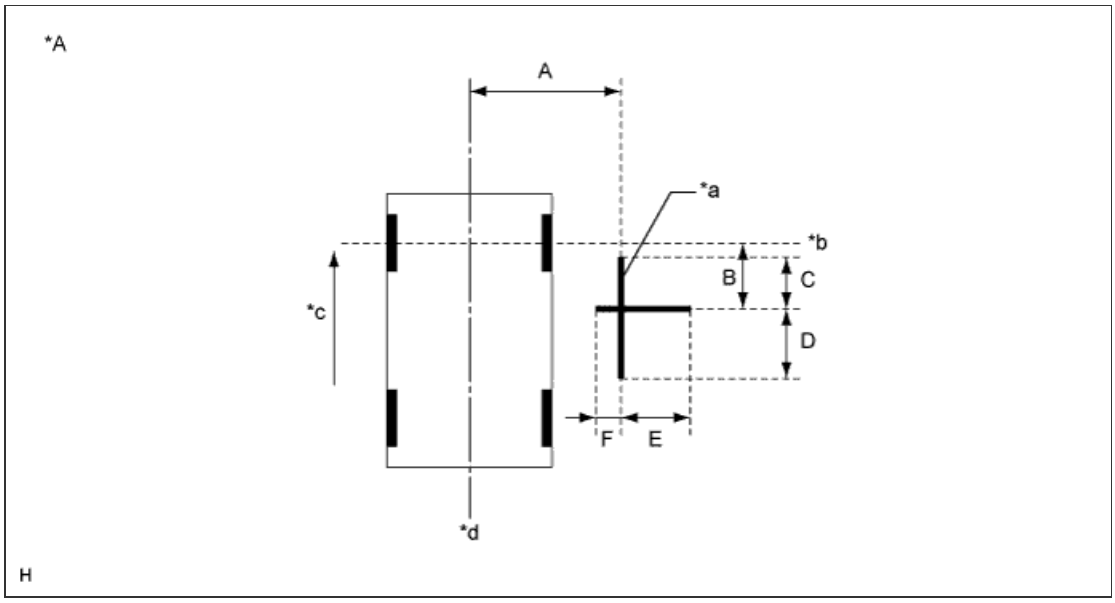
Only when adjusting the optical axis of the camera assembly, create a target bar for adjustment.

**Dimension:**

| Area | Specification |
|---|---|
| A | 824 to 834 mm (2.70 to 2.74 ft.) |
| B | 1995 to 2005 mm (6.55 to 6.58 ft.) |

**Text in Illustration**

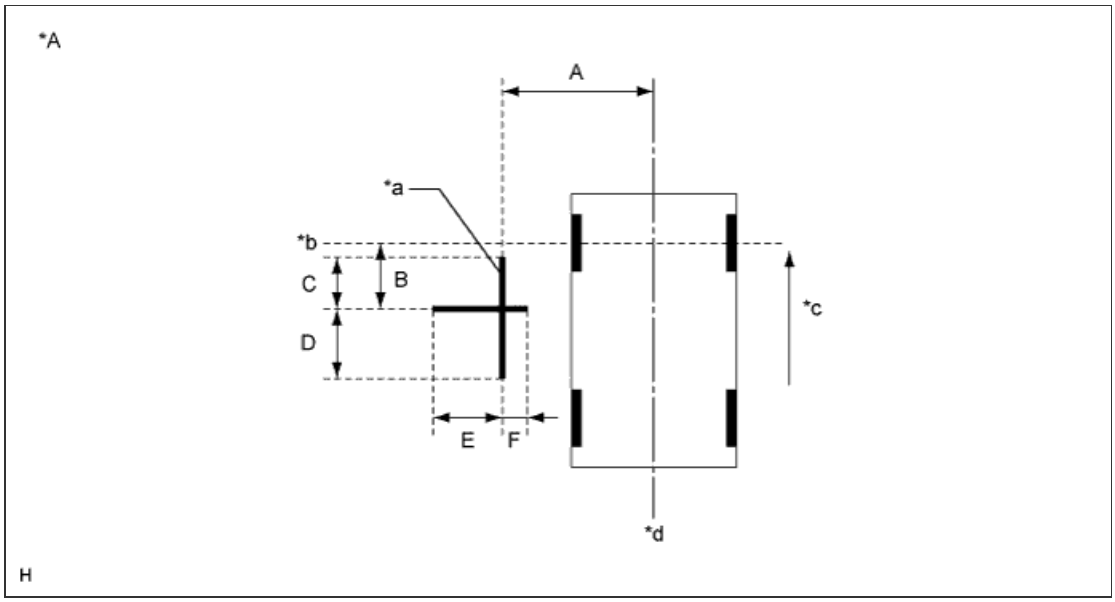
| | |
|---|---|
| *a | Vehicle Center |
| *b | Target Bar for Back Camera Adjustment |
| *c | Vehicle End |
| *d | Front Side |



**HINT:**

- **Set a piece of tape on the ground as the target bar for adjustment. Its width and length are 20 to 30 mm (0.787 to 1.18 in.) and 1995 to 2005 mm (6.55 to 6.58 ft.), respectively. Check the color on the multi-display assembly and choose a tape color which can be easily seen.**
- **Before parking the vehicle, be sure to move the vehicle forward and in reverse to check that the tires are facing straight ahead with the steering wheel centered.**
- **Check that the back door is fully closed.**

iii. Set a target bar for optical axis adjustment of the side television camera assembly.



**HINT:**

Only when adjusting the optical axis of the camera assembly, create a target bar for adjustment.

**Text in Illustration**

| | | | |
|---|---|---|---|
| *A | for LHD | - | - |
| *a | Target Bar for Side Camera Adjustment | *b | Front Wheel Axis |

**Text in Illustration**

| | | | |
|---|---|---|---|
| *A | for RHD | - | - |
| *a | Target Bar for Side Camera Adjustment | *b | Front Wheel Axis |
| *c | Front Side | *d | Vehicle Center |

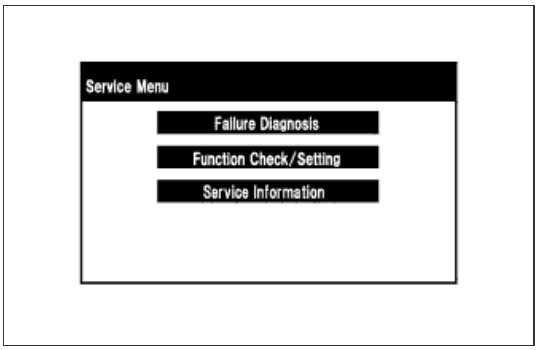
**Dimension:**

| A | B | C | D | E | F |
|---|---|---|---|---|---|
| 1183 mm (3.88 ft.) | 1181 mm (3.87 ft.) | 500 mm (1.64 ft.) | 500 mm (1.64 ft.) | 500 mm (1.64 ft.) | 180 mm (7.09 in.) |

**HINT:**

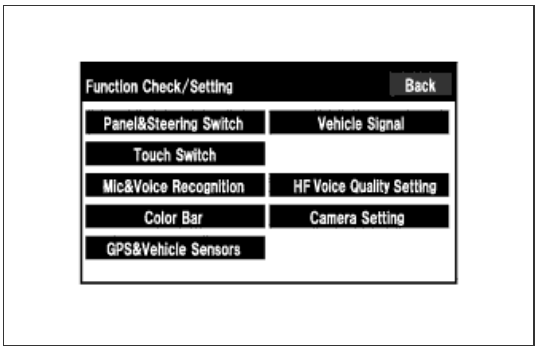
Target bars for side camera adjustment should be made with 2 pieces of 2.5 cm wide tape; one piece should be 100 cm (3.28 ft.) (C+D) and the other should be 68 cm (2.23 ft.) (E+F) long. Check the tape color on the multi-display assembly and choose a tape color which can be easily seen.

b. Start diagnostic mode (Click here).



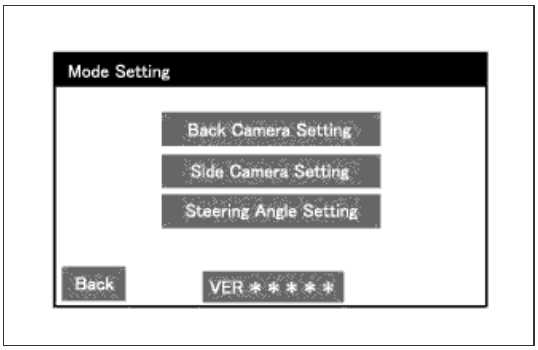
**NOTICE:**

Alignment must be performed with the engine running. For this reason, it is necessary to apply the parking brake, depress the brake pedal, and move the shift lever into the P position, and to exercise all other necessary caution to ensure that the vehicle does not begin moving unexpectedly.



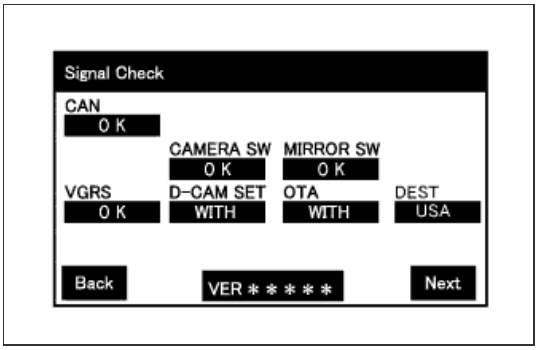
**HINT:**

The displayed items may differ depending on vehicle specifications.



i. Select "Function Check/Setting" on the [Service Menu] screen.

ii. Select "Camera Setting" on the [Function Check/Setting] screen.

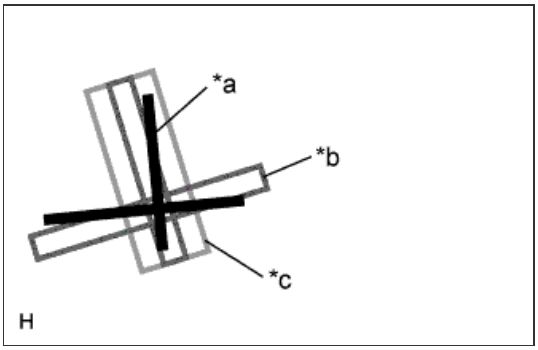


iii. Select "Side Camera Setting" on the [Mode Setting] screen.

**HINT:**

To select a grayed out item, select and hold the item for 2 seconds or more.

iv. Select "Next" on the [Signal Check] screen.



**NOTICE:**

- **When "CHK" (red) is displayed for any items on the [Signal Check] screen, selecting "Next" will not change the screen to the [Side Camera Position Setting] screen.**
- **When "CHK" (red) is displayed for any items on the [Signal Check] screen, perform inspections using the [Signal Check] screen (Click here).**

**HINT:**

- **When the outer mirrors are retracted, selecting "Next" will not change the screen to the [Side Camera Position Setting] screen.**
- **If the screen does not change to the [Side Camera Position Setting] screen even though the outer mirrors are extended, perform the "MIRROR SW" check on the [Signal Check] screen (Click here).**
- **If the screen does not change to the [Side Camera Position Setting] screen even after "OK" (blue) is displayed as a result of the MIRROR SW check on the [Signal Check] screen, replace the parking assist ECU (Click here).**

c. Side Camera Position Setting:

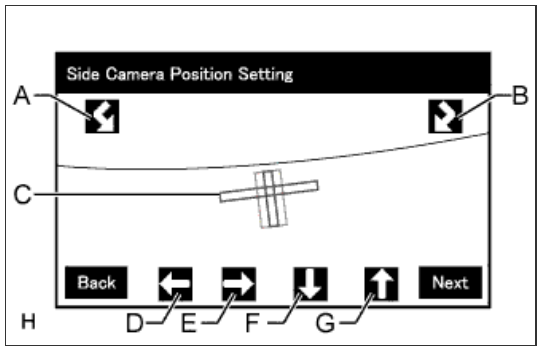
**HINT:**

Colors used on the [Side Camera Position Setting] screen

**Text in Illustration**

| | |
|---|---|
| *a | Target Adjustment Bar for Side Camera Position Setting |
| *b | Red Frame |
| *c | Yellow Frame |

i. Perform the roll angle adjustment.



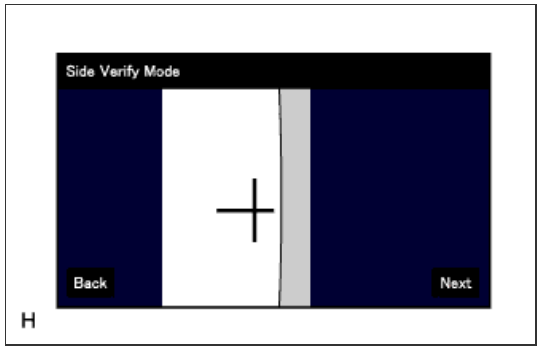
- Select switches A and B to rotate C so that it is parallel to the target adjustment bar.

ii. Perform the vertical and horizontal position adjustment.

- Select the directional switches D, E, F and G to move C

so that the target adjustment bar is centered in C.

iii. Select "Next" to display [Side Verify Mode].



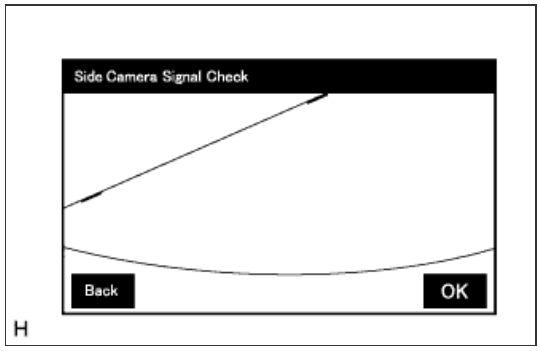
d. Side Verify Mode:

i. Check that the red cross and the target adjustment bar are aligned.

**HINT:**

If they are not aligned, select "Back" and perform [Side Camera Position Setting] again.

ii. Select "Next" to display [Side Camera Signal Check].



e. Side Camera Signal Check:

i. Select "OK" to store the side camera aiming adjustment value and change the screen to the [Service Menu] screen.

**HINT:**

- **When "OK" is selected, a beep will sound to confirm that the side camera aiming adjustment values have been stored.**
- **The adjustment value will not be stored unless "Back" is selected.**

f. Finish diagnostic mode (Click here).

**for Preparation** Click here

**HINT:**

Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

**Side Monitor System**

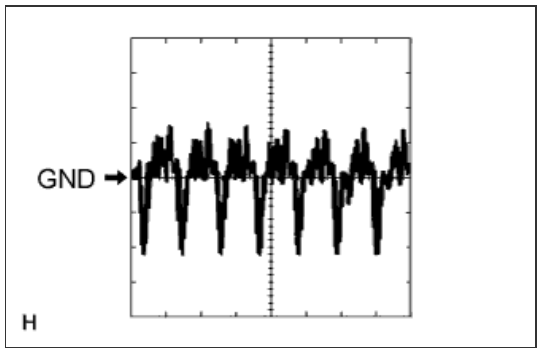
## CHECK PARKING ASSIST ECU

a. Disconnect the F36 and F37 ECU connectors.

b. Measure the voltage and resistance according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F36-6 (+B) - F36-4 (GND1) | L - W-B | Power source signal | Always | 11 to 14 V |
| F36-1 (IG) - F36-4 (GND1) | G - W-B | IG power source signal | Engine switch on (IG) | 11 to 14 V |
| F36-1 (IG) - F36-4 (GND1) | G - W-B | IG power source signal | Engine switch off | Below 1 V |
| F36-14 (ACC) - F36-4 (GND1) | GR - W-B | ACC power source signal | Engine switch on (ACC) | 11 to 14 V |
| F36-14 (ACC) - F36-4 (GND1) | GR - W-B | ACC power source signal | Engine switch off | Below 1 V |
| F37-22 (BLSW) - F36-4 (GND1) | G - W-B | Front and side monitor main switch power source signal | Engine switch on (IG), front and side monitor main switch on | 11 to 14 V |
| F37-22 (BLSW) - F36-4 (GND1) | G - W-B | Front and side monitor main switch power source signal | Engine switch on (IG), front and side monitor main switch off | Below 1 V |
| F36-4 (GND1) - Body ground | W-B - Body ground | ECU ground | Always | Below 1 Ω |

c. Reconnect the F36 and F37 ECU connectors.

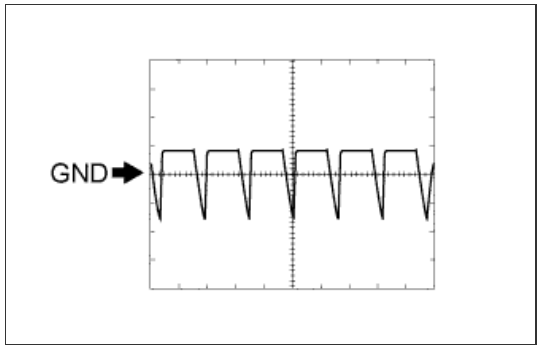


d. Measure the voltage and waveform according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F37-36 (SCV-) - F36-4 (GND1) | Shielded - W-B | Side television camera ground | Always | Below 1 V |
| F37-13 (SGND) - F36-4 (GND1) | W - W-B | Side television camera ground (shielded) | Always | Below 1 V |
| F37-12 (SCV+) - F36-4 (GND1) | R - W-B | Display signal | Side monitor display screen displayed | Waveform 1 |
| F37-12 (SCV+) - F36-4 (GND1) | R - W-B | Display signal | Camera lens covered to make image black while side view monitor display screen displayed | Waveform 2 |
| F37-14 (SCB+) - F36-4 (GND1) | B - W-B | Side television camera power source signal | Side monitor display screen displayed | 5.8 to 6.5 V |

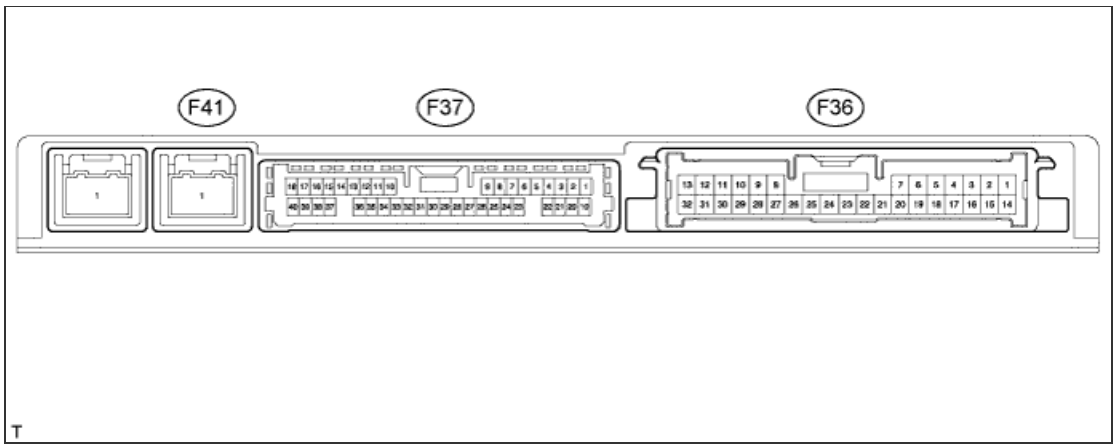
e. Using an oscilloscope, check the waveform 1.

**Waveform 1 (Reference)**



| Item | Content |
|---|---|
| Terminal No. (Symbol) | F37-12 (SCV+) - F36-4 (GND1) |
| Tool Setting | 0.2 V/DIV., 50 µs/DIV. |
| Condition | Side monitor display screen displayed |

f. Using an oscilloscope, check waveform 2.



**Waveform 2 (Reference)**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F37-12 (SCV+) - F36-4 (GND1) |
| Tool Setting | 0.2 V/DIV., 50 µs/DIV. |
| Condition | Camera lens covered to make image black while side view monitor display screen displayed |

**for Preparation** Click here

## PARKING ASSIST ECU

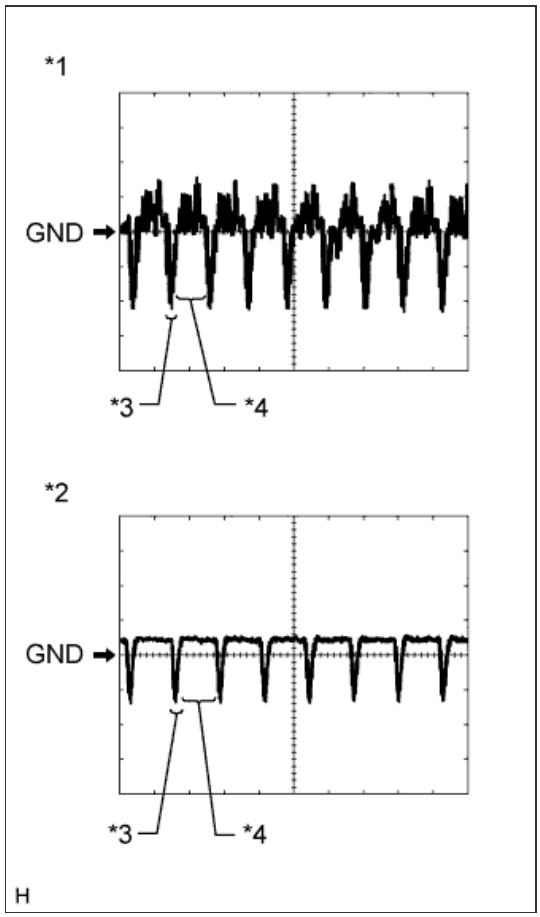
a. Disconnect the F36 connector from the ECU.

b. Measure the resistance and voltage of each terminal of the wire harness side connector.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F36-6 (+B) - F36-4 (GND1) | L - W-B | Power source signal | Always | 11 to 14 V |
| F36-4 (GND1) - Body ground | W-B - Body ground | Ground | Always | Below 1 Ω |
| F36-1 (IG) - F36-4 (GND1) | G - W-B | IG Power source signal | Engine switch on (IG) | 11 to 14 V |
| F36-14 (ACC) - F36-4 (GND1) | GR - W-B | ACC Power source signal | Engine switch off (ACC) | 11 to 14 V |

If the result is not as specified, there may be a malfunction on the wire harness side.

c. Reconnect the F36 connector to the ECU.



d. Measure the voltage and check for pulses according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F36-10 (CANL) - F36-4 (GND1) | L - W-B | CAN communication signal | CAN communication circuit | Pulse generation |
| F36-9 (CANH) - F36-4 (GND1) | V - W-B | CAN communication signal | CAN communication circuit | Pulse generation |
| F37-22 (BLSW) - F36-4 (GND1) | G - W-B | Front and side monitor main switch signal | Engine switch on (IG) Front and side monitor main switch pushed in | 11 to 14 V |
| | | | Engine switch on (IG) Front and side monitor main switch not pushed in | Below 1 V |
| F36-32 (TX-) - F36-31 (TX+) | L - W | AVC-LAN communication signal | - | - |
| F37-36 (SCV-) - F36-4 (GND1) | W - W-B | Side television camera ground | Always | Below 1 V |
| F37-12 (SCV+) - F36-4 (GND1) | R - W-B | Side television camera display signal (NTSC) input | Engine switch on (IG) Front and side monitor main switch on Under normal conditions | Pulse generation (See waveform 1) |
| | | | Engine switch on (IG) Front and side monitor main switch on Camera lens is covered, blacking out the screen | Pulse generation (See waveform 2) |

| | | | | |
|---|---|---|---|---|
| F37-13 (SGND) - F36-4 (GND1) | Shielded - W-B | Side television camera ground (shield) | Always | Below 1 V |
| F37-14 (SCB+) - F36-4 (GND1) | B - W-B | Power source to side television camera | Engine switch on (IG) Shift lever in R | 5.8 to 7.0 V |

If the result is not as specified, the ECU may have a malfunction.

e. Reference (Oscilloscope waveform):

**HINT:**

A waterproof connector is used for the side television camera assembly. Therefore, inspect the waveform at the parking assist ECU with the connector connected.

i. Waveform 1 (under normal conditions)

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F37-12 (SCV+) - F36-4 (GND1) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | Engine switch on (IG), shift lever in R |

**HINT:**

The video waveform changes according to the image sent by the side television camera assembly.

ii. Waveform 2 (camera lens is covered, blacking out the screen)

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F37-12 (SCV+) - F36-4 (GND1) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |

## SIDE TELEVISION CAMERA ASSEMBLY

a. Disconnect the connector from the side television camera assembly.

b. Measure the voltage of each terminal of the wire harness side connector.

| | | | |
|---|---|---|---|

| Terminal No. (Symbol) | Terminal Description | Condition | Specified Condition |
|---|---|---|---|
| 4 (SGND) - Body ground | Ground | Always | Below 1 V |
| 1 (SCB+) - 4 (SGND) | Power source | Engine switch on (IG)<br>Front and side monitor main switch on | 5.8 to 7.0 V |

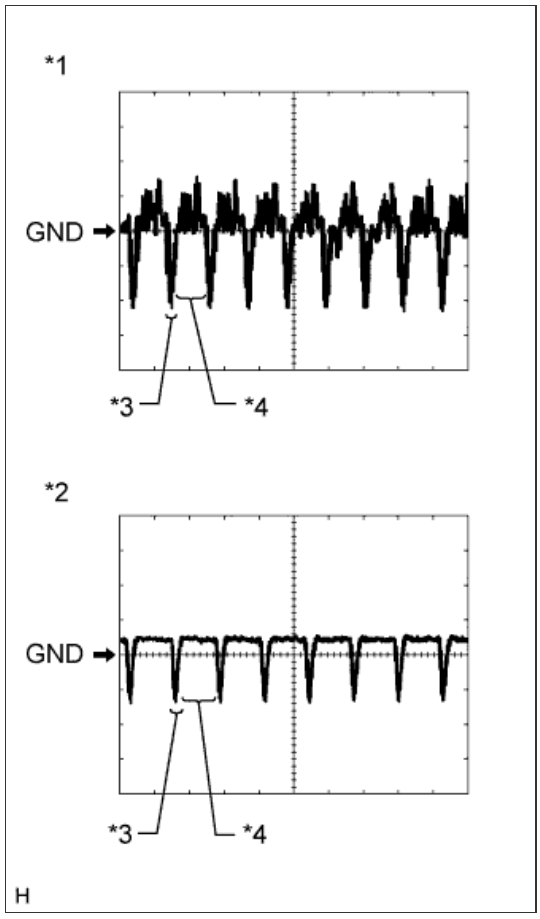
If the result is not as specified, there may be a malfunction on the wire harness side.

c. Reconnect the connector to the side television camera assembly.

d. Check for pulses between each terminal of the connector.

| Terminal No. (Symbol) | Terminal Description | Condition | Specified Condition |
|---|---|---|---|
| 3 (SCV+) - 6 (SCV-) | Display signal | Engine switch on (IG)<br>Front and side monitor main switch on<br>Under normal conditions | Pulse generation<br>(See waveform 1) |
| | | Engine switch on (IG)<br>Front and side monitor main switch on<br>Camera lens covered, blacking out screen | Pulse generation<br>(See waveform 2) |

**HINT:**



A waterproof connector is used for the side television camera assembly. Therefore, inspect the waveform at the parking assist ECU with the connector connected.

If the result is not as specified, the camera may have a malfunction.

e. Reference (Oscilloscope waveform):

**HINT:**

A waterproof connector is used for the side television camera assembly. Therefore, inspect the waveform at the parking assist ECU with the connector connected.

i. Waveform 1 (under normal conditions)

| Item | Content |
|---|---|
| Terminal No. (Symbol) | 3 (SCV+) - 6 (SCV-) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | Engine switch on (IG), front and side monitor main switch on |

**HINT:**

The video waveform changes according to the image sent by the side television camera assembly.

ii. Waveform 2 (camera lens is covered, blacking out the screen)

| Item | Content |
|---|---|
| Terminal No. (Symbol) | 3 (SCV+) - 6 (SCV-) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |

## PARKING ASSIST ECU

a. Disconnect the F74 and F75 parking assist ECU connectors.

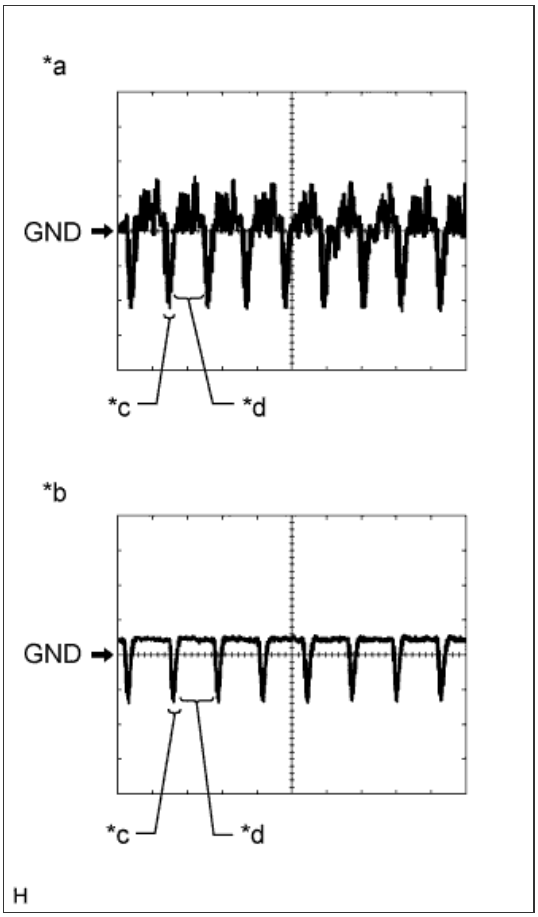
b. Measure the voltage and resistance according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F74-1 (+B) - F74-4 (GND1) | L - W-B | Power source signal | Always | 11 to 14 V |
| F74-4 (GND1) - Body ground | W-B - Body ground | Ground | Always | Below 1 Ω |
| F74-8 (IG) - F74-4 (GND1) | G - W-B | IG Power source signal | Engine switch on (IG) | 11 to 14 V |
| | | | Engine switch off | Below 1 V |
| F74-9 (ACC) - F74-4 (GND1) | GR - W-B | ACC Power source signal | Engine switch off (ACC) | 11 to 14 V |
| | | | Engine switch off | Below 1 V |
| F75-7 (BLSW) - F74-4 (GND1) | G - W-B | Front and side monitor main switch power source signal | Engine switch on (IG), front and side monitor main switch assembly on | 11 to 14 V |

c. Reconnect the F74 and F75 parking assist ECU connectors.

d. Measure the voltage according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| F74-10 (TX-) | L | AVC-LAN communication signal | - | - |
| F74-11 (TX+) | W | AVC-LAN communication signal | - | - |
| F75-34 (SCV-) - F75-33 (SGND) | W - Shielded | Side television camera ground | Always | Below 1 V |
| F75-10 (SCV+) - F75-33 (SGND) | R - Shielded | Side television camera display signal input | Engine switch on (IG), front and side monitor main switch assembly on | Pulse generation (See waveform) |
| F75-33 (SGND) - F74-4 (GND1) | Shielded - W-B | Side television camera ground (shield) | Always | Below 1 V |
| F75-32 (SCB+) - F75-33 (SGND) | B - Shielded | Power source to side television camera | Engine switch on (IG), shift lever in R | 5.5 to 7.05 V |
| F75-31 (DCV-) - F75-29 (DGND) | W - Shielded | Side television camera ground | Always | Below 1 V |
| F75-30 (DCV+) - F75-29 (DGND) | R - Shielded | Side television camera display signal input | Engine switch on (IG), front and side monitor main switch assembly on | Pulse generation (See waveform) |
| F75-29 (DGND) - F74-4 (GND1) | Shielded - W-B | Side television camera ground (shield) | Always | Below 1 V |
| F75-28 (DCB+) - F75-29 (DGND) | B - Shielded | Power source to side television camera | Engine switch on (IG), front and side monitor main switch assembly on | 5.5 to 7.05 V |



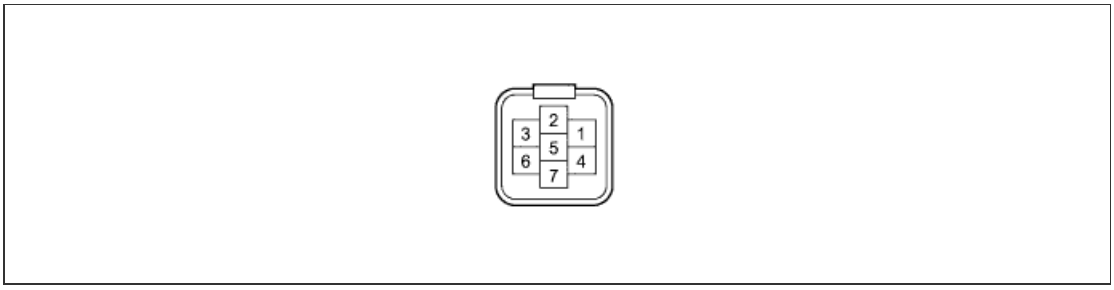
e. Using an oscilloscope, check waveform.

**Text in Illustration**

| | |
|---|---|
| *a | Waveform A (under normal conditions) |
| *b | Waveform B (camera lens is covered, blacking out the screen) |
| *c | Synchronized Signal |
| *d | Video Waveform |

**HINT:**

The video waveform changes according to the image sent by the side television camera assembly.



i. Waveform

| Item | Content |
|---|---|
| Terminal No. (Symbol) | • F75-10 (SCV+) - F75-33 (SGND)<br>• F75-30 (DCV+) - F75-29 (DGND) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | • Waveform A: Engine switch on (IG), front and side monitor main switch assembly on and camera lens is not covered, displaying an image<br>• Waveform B: Engine switch on (IG), front and side monitor main switch assembly on and camera lens is not covered, displaying an image. |

## SIDE TELEVISION CAMERA ASSEMBLY

a. Disconnect the side television camera assembly connector.

b. Measure the voltage according to the value(s) in the table below.

**for LHD**

| Terminal No. (Symbol) | Terminal Description | Condition | Specified Condition |
|---|---|---|---|
| 4 - Body ground | Ground | Always | Below 1 V |
| 1 - 4 | Power source | Engine switch on (IG)<br>Front and side monitor main switch on | 5.8 to 7.0 V |

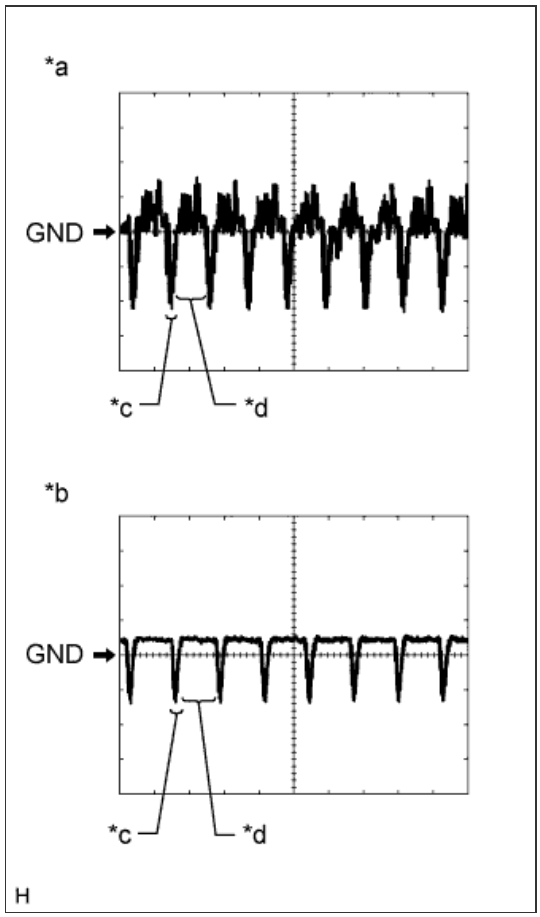
**for RHD**

| Terminal No. (Symbol) | Terminal Description | Condition | Specified Condition |
|---|---|---|---|
| 4 - Body ground | Ground | Always | Below 1 V |
| 1 - 4 | Power source | Engine switch on (IG)<br>Front and side monitor main switch on | 5.8 to 7.0 V |

c. Reconnect the side television camera assembly connector.

**HINT:**

A waterproof connector is used for the front television camera assembly. Therefore, inspect the waveform at the parking assist ECU with the connector connected.



d. Measure the voltage according to the value(s) in the table below.

| Terminal No. (Symbol) | Terminal Description | Condition | Specified Condition |
|---|---|---|---|
| 3 - 4 | Display signal | Engine switch on (IG), front and side monitor main switch assembly on | Pulse generation (See waveform) |

e. Using an oscilloscope, check waveform.

**Text in Illustration**

| | |
|---|---|
| *a | Waveform A (under normal conditions) |
| *b | Waveform B (camera lens is covered, blacking out the screen) |
| *c | Synchronized Signal |
| *d | Video Waveform |

**HINT:**

The video waveform changes according to the image sent by the side television camera assembly.

i. Waveform 1

| Item | Content |
|---|---|
| Terminal No. (Symbol) | 3 - 4 |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | • Waveform A: Engine switch on (IG), front and side monitor main switch assembly on and camera lens is not covered, displaying an image.<br>• Waveform B: Engine switch on (IG), front and side monitor main switch assembly on and camera lens is covered, blacking out the screen. |

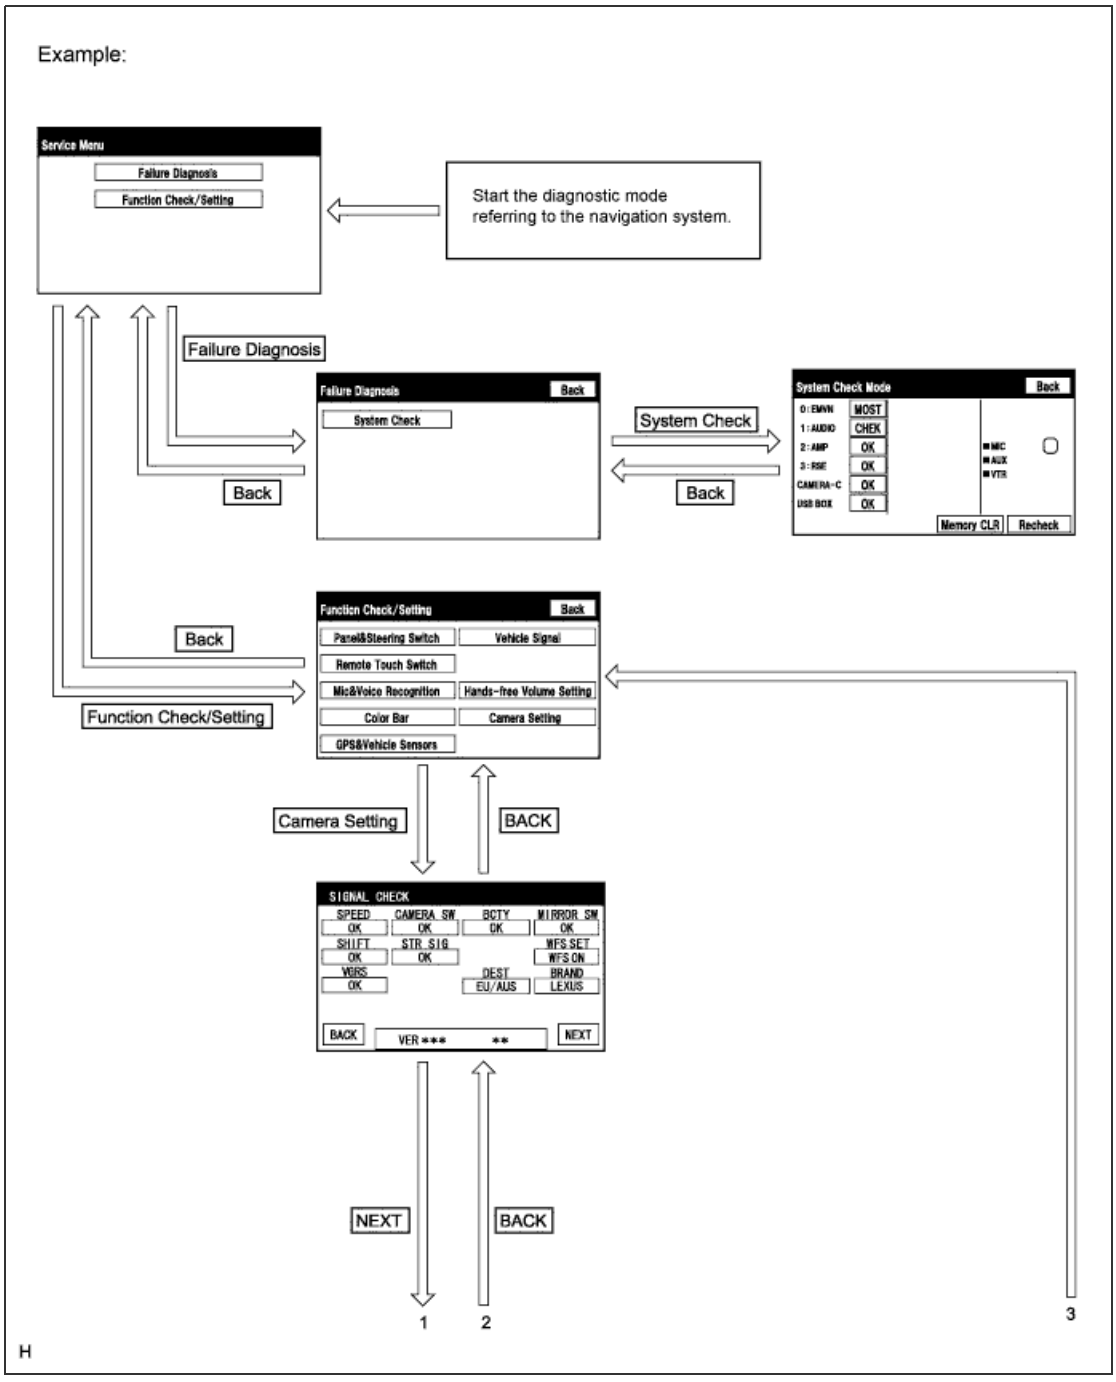
**MULTI-DISPLAY ASSEMBLY (Click here)**

**for Preparation** Click here

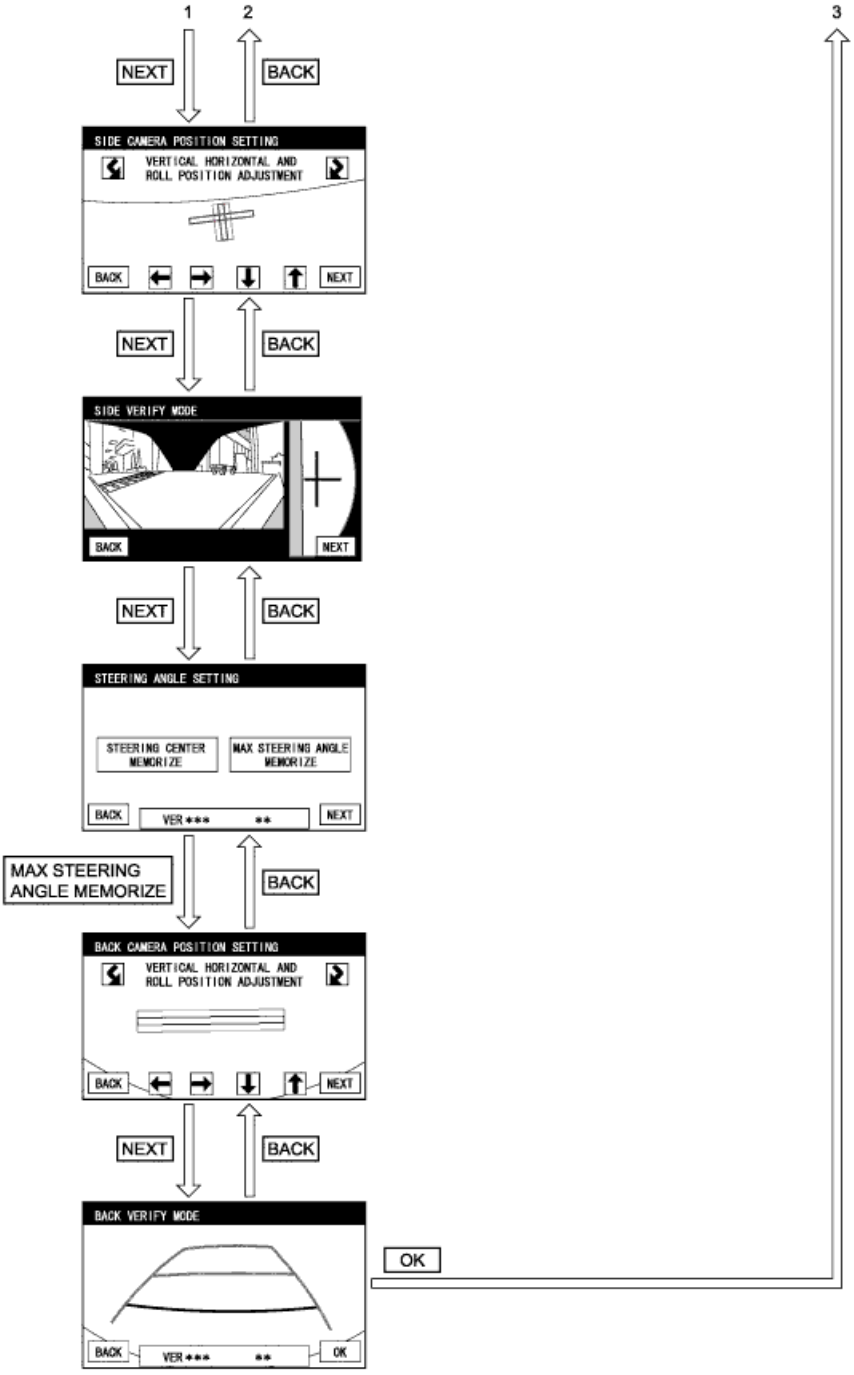
## SIDE MONITOR DIAGNOSIS SYSTEM

a. In the side monitor diagnosis system, signals received by the parking assist ECU can be checked and the side monitor system can be calibrated, adjusted and checked on the display and navigation module display.



**NOTICE:**

Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the side monitor system may be needed (Click here).



**HINT:**

The displayed screens and items may differ depending on vehicle specifications.

## DIAGNOSIS SCREEN TRANSITION (during first-time parking assist ECU initialization)

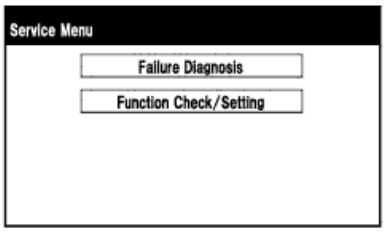
## DIAGNOSTIC MODE

a. Start diagnostic mode (Click here).

b. Failure diagnosis (Click here).

c. System check (check using system check mode screen) (Click here).

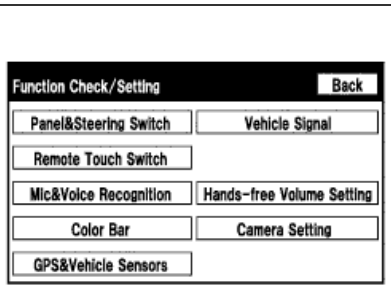


d. Finish diagnostic mode (Click here).

## SIGNAL CHECK (parking assist ECU input signal)

a. Start diagnostic mode (Click here).

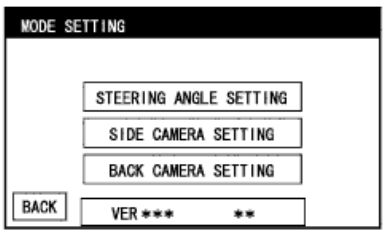
i. Select "Function Check/Setting" on the Service Menu screen to display the Function Check/Setting screen.



ii. Select "Camera Setting" on the Function Check/Setting screen.

**HINT:**

After "Camera Setting" is selected, the screen transitions differ depending on whether initialization of the parking assist ECU was performed after parking assist ECU replacement.

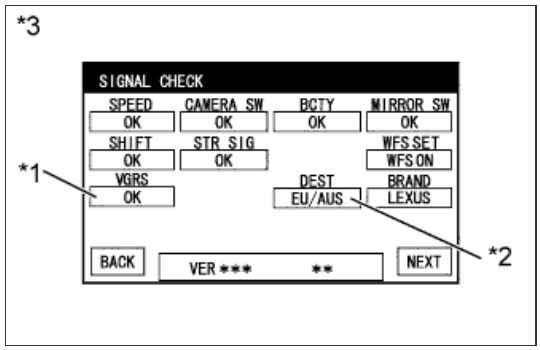


| Parking Assist ECU Initialization | Screen Transition |
|---|---|
| Not performed | SIGNAL CHECK screen |
| Performed | MODE SETTING screen |

iii. When the screen changes to the MODE SETTING screen, select "BACK CAMERA SETTING" to display the SIGNAL CHECK screen.

**HINT:**

To select a grayed out item, select and hold the item for 2 seconds or more.



H

b. SIGNAL CHECK

**Text in Illustration**

| | |
|---|---|
| *1 | w/ VGRS |
| *2 | "EU/AUS" or "GCC/ZAF" |
| | |

*3 Example

i. On the SIGNAL CHECK screen, it is possible to inspect the state of signals sent to the parking assist ECU and check the settings.

| Item | Inspection Detail | Note |
|---|---|---|
| SPEED | Speed signal input | When "CHK" (red) is displayed, selecting "NEXT" will not change to the next screen. |
| CAMERA SW | Front and side monitor main switch signal input | |
| BCTY | CAN communication condition with main body ECU | |
| MIRROR SW | Outer rear view mirror retract signal input | |
| SHIFT | Shift signal input | |
| STR SIG | Steering angle sensor signal input | |
| WFS SET | Front monitor signal and side monitor switch signal input | |
| VGRS *1 | VGRS signal input | |
| DEST | Destination information signal input | |
| BRAND | Brand information input | |

*1: w/VGRS

**HINT:**

- **When "CHK" (red) is displayed, perform inspections based on the result of the following inspections.**
- **If performing the adjustment after proceeding to the next screen, confirm that all items display "OK" (blue) before selecting "NEXT".**

c. SPEED inspection

**HINT:**

If "CHK" (red) is displayed for "SPEED", check for DTCs and perform troubleshooting based on the output DTCs ( Click here).

d. CAMERA SW inspection

i. Check that "OK" (blue) is displayed for "CAMERA SW" and select "OK".

ii. Check that "OK" (blue) changes to "CHK" (red). Press the front and side monitor main switch and check that "CHK" (red) returns to "OK" (blue).

**HINT:**

If "CHK" (red) remains displayed or the "CAMERA SW" inspection result is not normal, perform troubleshooting according to Problem Symptoms Table ("CHK" message(s) are displayed on the SIGNAL CHECK screen) (Click here).

e. BCTY inspection

**HINT:**

If "CHK" (red) is displayed for "BCTY", check for DTCs and perform troubleshooting based on the output DTCs ( Click here).

f. MIRROR SW inspection

i. Check that "OK" (blue) is displayed for "MIRROR SW" and select "OK".

ii. Check that "OK" (blue) changes to "CHK" (red). Press the outer mirror switch and check that "CHK" (red) returns to "OK" (blue).

**HINT:**

After operating the outer mirror retract switch, if the outer mirror remains in the retracted state, return the outer mirror to the driving position. If "CHK" (red) remains displayed or the "MIRROR SW" inspection result is not normal, perform troubleshooting according to Problem Symptoms Table ("CHK" message(s) are displayed on the SIGNAL CHECK screen) (Click here).

g. SHIFT inspection

**HINT:**

If "CHK" (red) is displayed for "SHIFT", check for DTCs and perform troubleshooting based on the output DTCs ( Click here).

h. STR SIG inspection

**HINT:**

If "CHK" (red) is displayed for "STR SIG", check for DTCs and perform troubleshooting based on the output DTCs ( Click here).

i. WFS SET inspection

**HINT:**

If "CHK" is displayed, perform a CAMERA SW check and a camera connection check ( Click here).

j. VGRS inspection (w/ VGRS)

**HINT:**

If "CHK" (red) is displayed for "VGRS", check for DTCs and perform troubleshooting based on the output DTCs ( Click here).

k. DEST inspection

**HINT:**

If "CHK" (red) is displayed for "DEST", check for DTCs and perform troubleshooting based on the output DTCs ( Click here).

l. BRAND inspection

**HINT:**

If "CHK" (red) is displayed for "BRAND", check for DTCs and perform troubleshooting based on the output DTCs ( Click here).

m. Finish diagnostic mode (Click here).

## CALIBRATION WHEN SERVICING VEHICLE

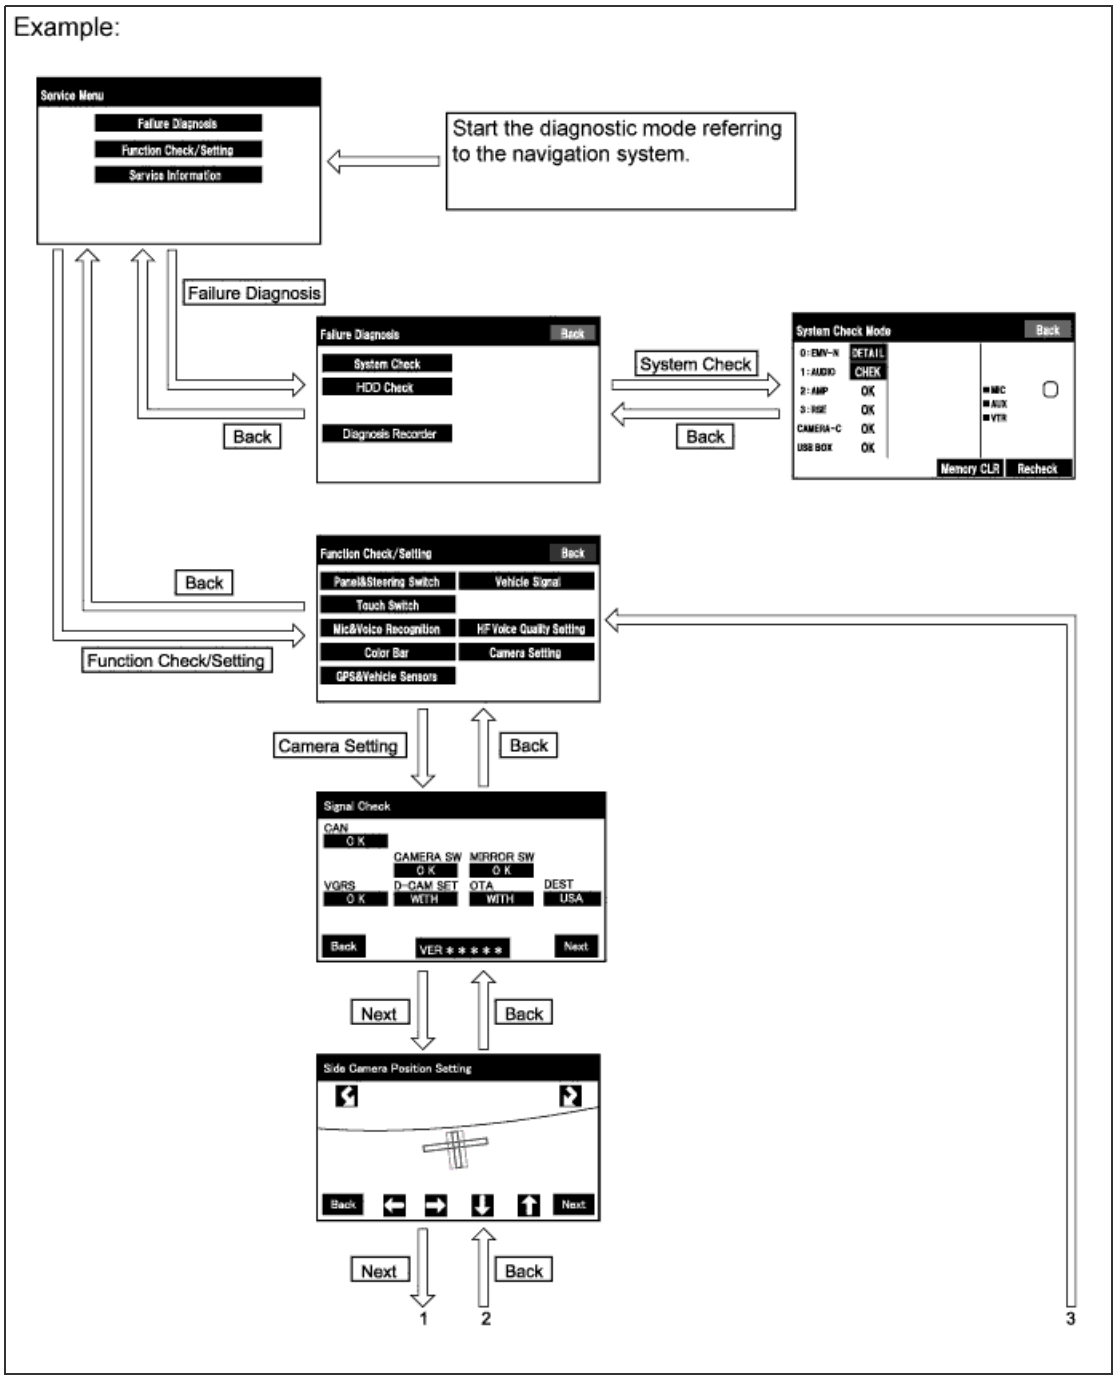
**NOTICE:**

Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the side monitor system may be needed (Click here).

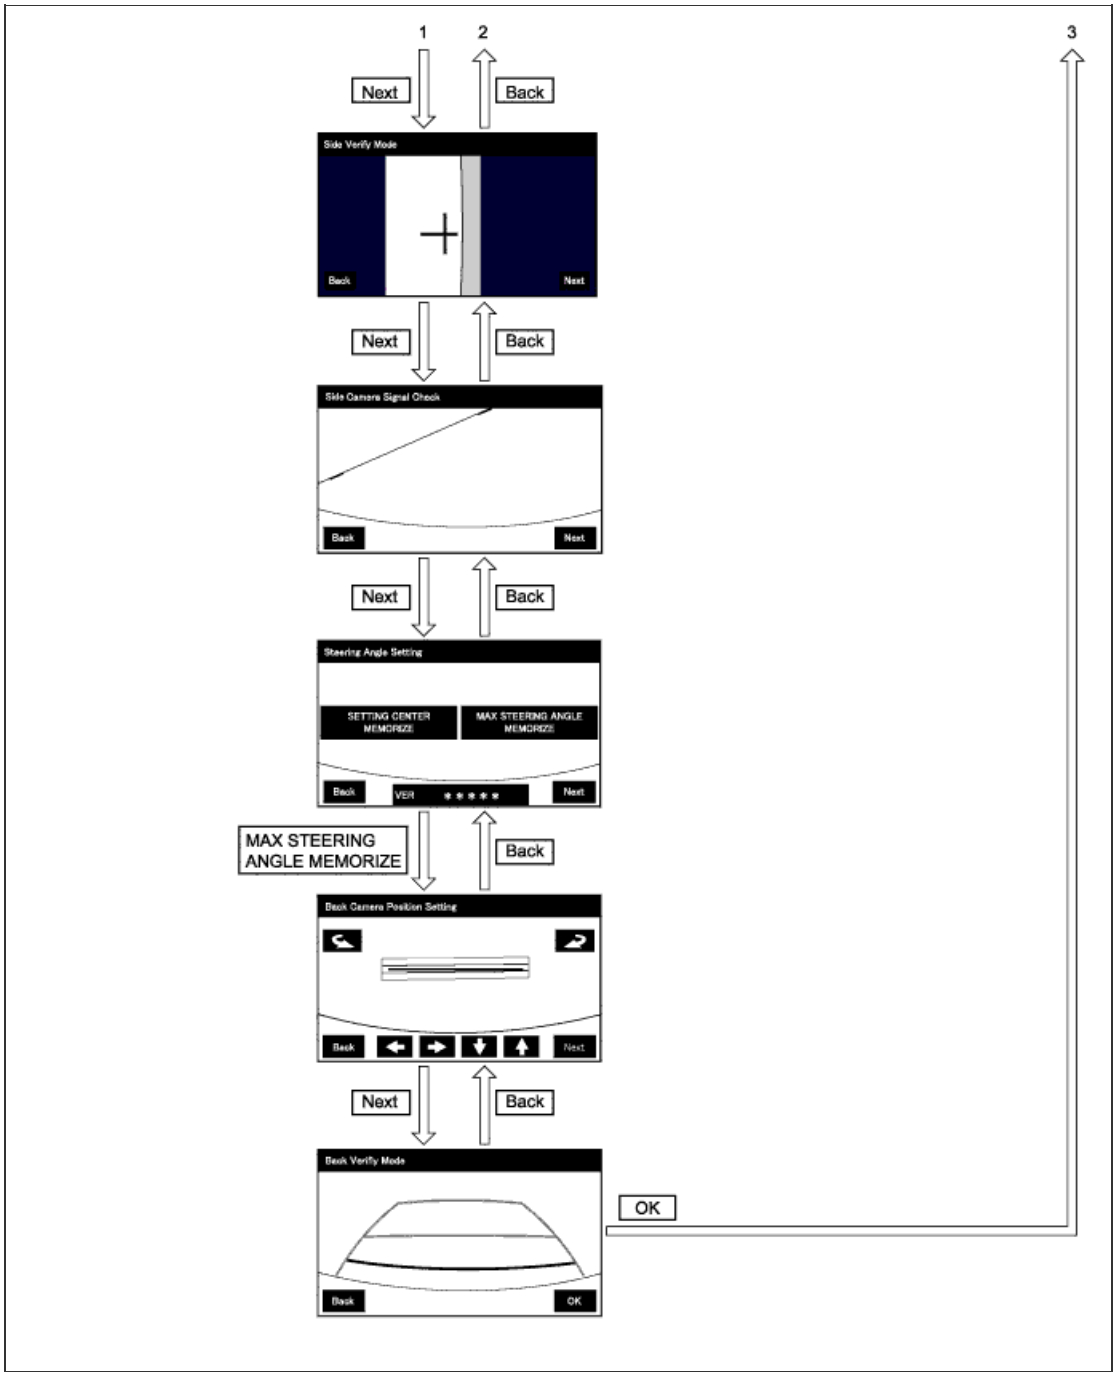
**for Preparation** Click here

## SIDE MONITOR DIAGNOSIS SYSTEM

a. For side monitor system diagnosis, signals received by the parking assist ECU can be checked and the side monitor system can be calibrated, adjusted and checked using the multi-display assembly.



**NOTICE:**



Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the side monitor system may be needed (Click here).

**HINT:**

The displayed screens and items may differ depending on vehicle specifications.

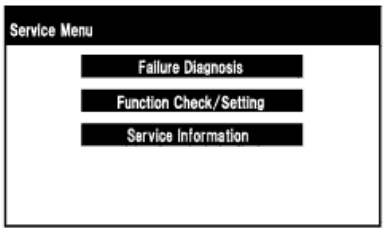
## DIAGNOSTIC MODE

a. Start diagnostic mode (Click here).

b. Failure diagnosis (Click here).

c. System check (check using system check mode screen) (Click here).

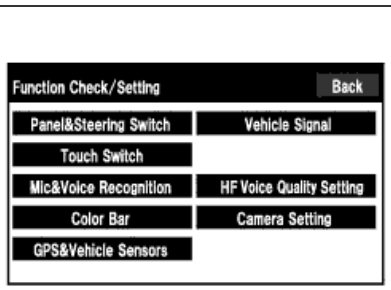


d. Finish diagnostic mode (Click here).

## SIGNAL CHECK (parking assist ECU input signal)

a. Start diagnostic mode (Click here).

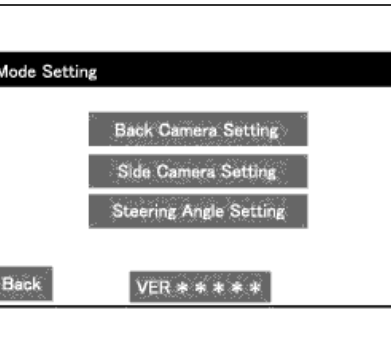
i. Select "Function Check/Setting" on the [Service Menu screen] to display the Function Check/Setting screen.



ii. Select "Camera Setting" on the [Function Check/Setting] screen.

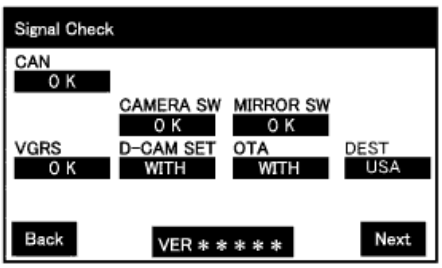
**HINT:**

After "Camera Setting" is selected, the screen transitions differ depending on whether initialization of the parking assist ECU was performed after parking assist ECU replacement.



| Parking Assist ECU Initialization | Screen Transition |
|---|---|
| Not performed | [Signal Check] screen |
| Performed | [Mode Setting] screen |

iii. When the screen changes to the [Mode Setting] screen, select "Back Camera Setting" to display the [Signal Check] screen.



**HINT:**

To select a grayed out item, select and hold the item for 2 seconds or more.

b. Signal Check:

i. On the [Signal Check] screen, it is possible to inspect the state of signals sent to the parking assist ECU and check the settings.

| Item | Inspection Detail | Note |
|---|---|---|
| CAN | Speed signal input | When "CHK" (red) is displayed, selecting "Next" will not change to the next screen. |
| CAMERA SW | Front and side monitor main switch signal input | |
| MIRROR SW | Outer rear view mirror retract signal input | |
| VGRS | VGRS signal input | |
| D-CAM SET | Driver side camera information signal input | - |
| OTA | Off-road turn assist function information input | - |
| DEST | Destination code signal input | - |

**HINT:**

- **When "CHK" (red) is displayed, perform inspections based on the result of the following inspections.**
- **If performing the adjustment after proceeding to the next screen, confirm that all items display "OK" (blue) before selecting "Next".**

c. CAN inspection;

**HINT:**

If "CHK" (red) is displayed for "CAN", check for DTCs and perform troubleshooting based on the output DTCs ( Click here).

d. CAMERA SW inspection;

i. Check that "OK" (blue) is displayed for "CAMERA SW" and select "OK".

ii. Check that "OK" (blue) changes to "CHK" (red). Press the front and side monitor main switch (steering pad switch assembly) and check that "CHK" (red) returns to "OK" (blue).

**HINT:**

If "CHK" (red) remains displayed or the "CAMERA SW" inspection result is not normal, perform troubleshooting according to Problem Symptoms Table ("CHK" message(s) are displayed on the [Signal Check] screen) (Click here).

e. MIRROR SW inspection;

i. Check that "OK" (blue) is displayed for "MIRROR SW" and select "OK".

ii. Check that "OK" (blue) changes to "CHK" (red). Press the outer mirror switch and check that "CHK" (red) returns to "OK" (blue).

**HINT:**

After operating the outer mirror retract switch, if the outer mirror remains in the retracted state, return the outer mirror to the driving position. If "CHK" (red) remains displayed or the "MIRROR SW" inspection result is not normal, perform troubleshooting according to Problem Symptoms Table ("CHK" message(s) are displayed on the [Signal Check] screen) (Click here)

f. VGRS inspection;

**HINT:**

If "CHK" (red) is displayed for "VGRS", check for DTCs and perform troubleshooting based on the output DTCs (See page ).

g. D-CAM SET inspection;

i. Check that "WITH" (blue) is displayed for "D-CAM SET".

h. OTA inspection:

i. Check that displayed for "OTA" is matched off-road turn assist function for vehicles.

i. DEST inspection:

i. Check that displayed for "DEST" is matched destination code for vehicles.

j. Finish diagnostic mode (Click here).

## CALIBRATION WHEN SERVICING VEHICLE

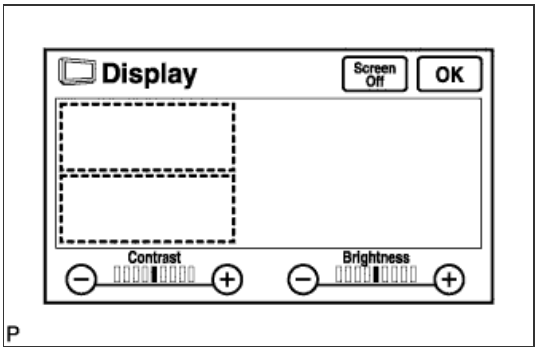
**NOTICE:**

Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as theside monitor system may be needed (Click here).

**for Preparation** Click here

**HINT:**

- **Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be exactly the same as the actual vehicle.**
- **If the system cannot enter the diagnostic mode, inspect all AVC-LAN communication components and repair or replace problem parts (Click here).**
- **After turning the engine switch on (IG) and before entering diagnostic mode, check that the air conditioning can be operated on the display screen. Otherwise, some items cannot be checked.**



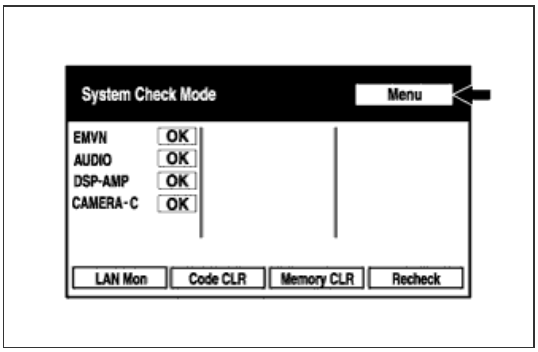
## START DIAGNOSTIC MODE

a. Start the engine.

b. Switch to the "Display Check" screen.

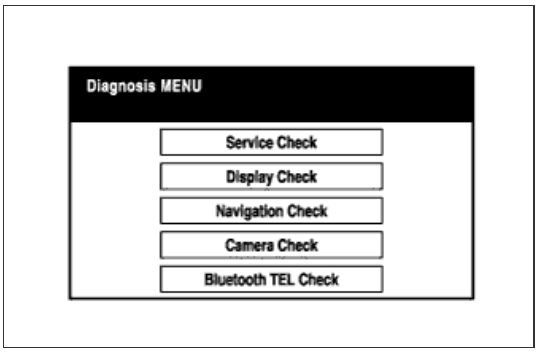
c. From the display quality adjustment screen, touch the corners of the screen in the following order: upper left → lower left → upper left → lower left → upper left → lower left.

d. The diagnostic mode starts and the "Diagnosis Inspection" screen will be displayed. Service inspection starts automatically and the result will be displayed.



P

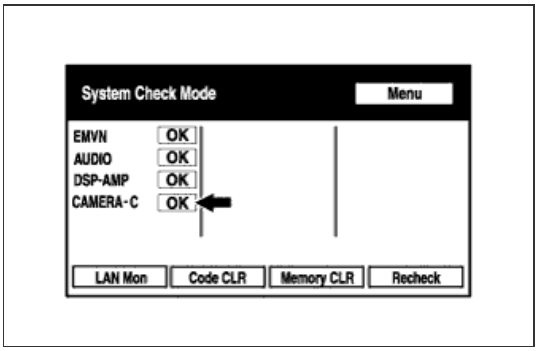
## FINISH DIAGNOSTIC MODE



a. Turn the engine switch off.

## DIAGNOSIS MENU

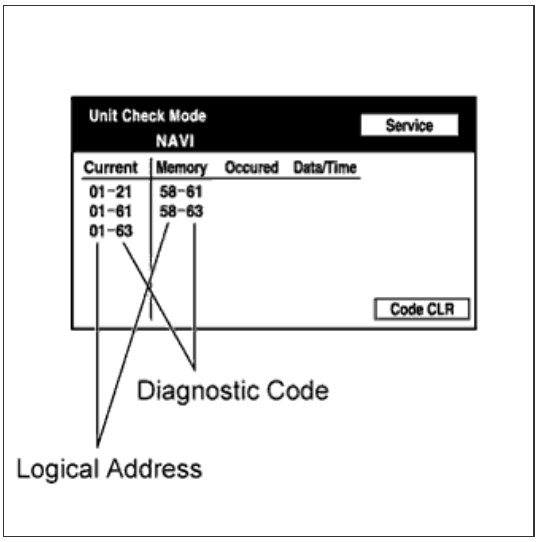
a. Press the "Menu" switch on the "System Check Mode" screen.



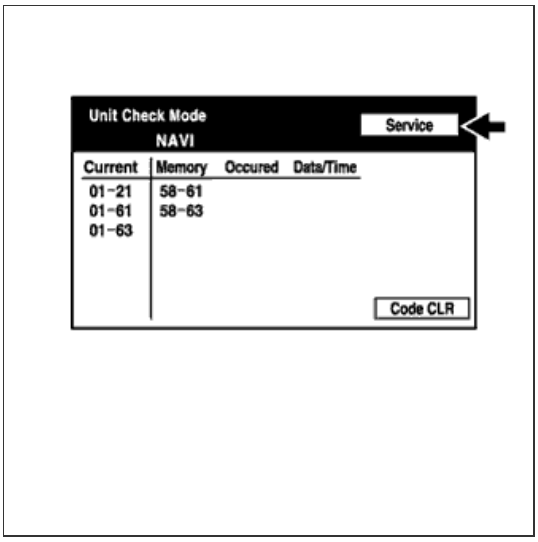
b. The "Diagnosis MENU" screen will be displayed.

## CHECK DTC

a. Read the system check result.

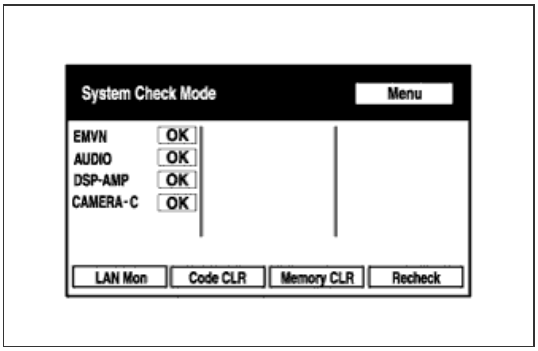


i. If the check result is "EXCH", "CHEK" or "Old", touch the displayed check result.



ii. View the results on the "Unit Check Mode" screen and record them.

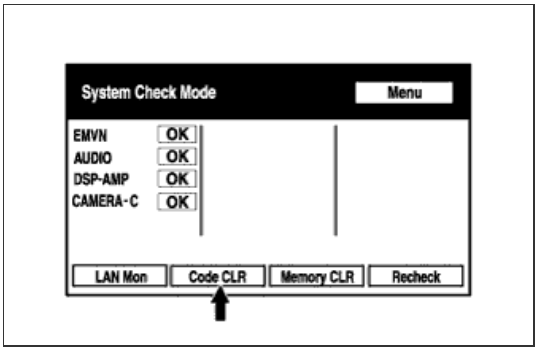
**HINT:**



- **If all check results are "OK", go to the communication DTC check.**
- **If a device name is not known, its logical address is displayed.**

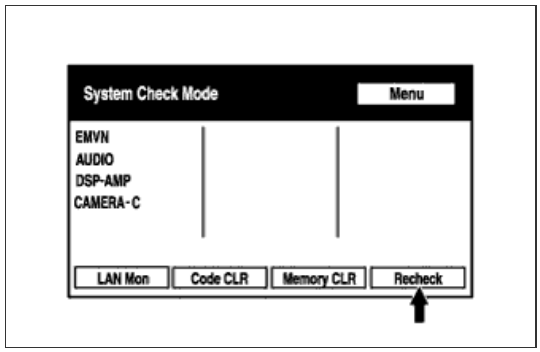
iii. When proceeding to view the results of another device, press the "Service" switch.

iv. Return to the "System Check Mode" screen. Repeat the steps above to read the other results of the system check.



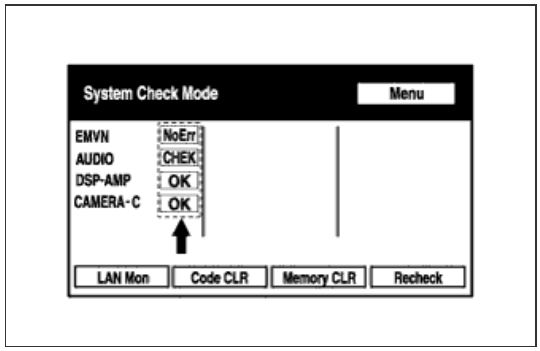
## DTC CLEAR / RECHECK

a. Clear DTCs

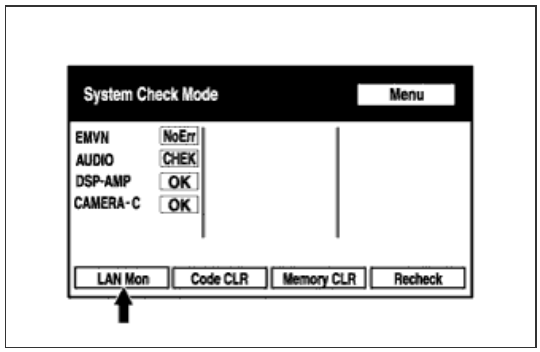


i. Press the "Code CLR" switch for 3 seconds.

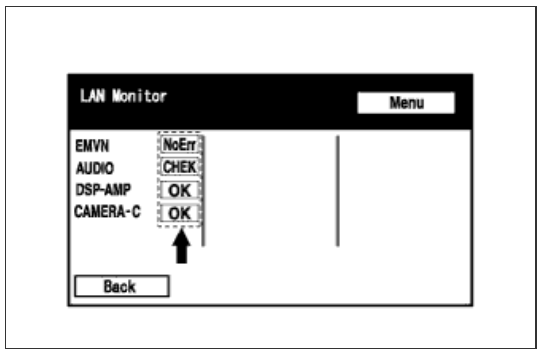
ii. The check results are cleared.



b. Recheck



i. Press the "Recheck" switch.



ii. Confirm that all diagnostic codes are "OK" when the check results are displayed. If a code other than "OK" is displayed, troubleshoot again.

iii. Press the "LAN Mon" switch to change to the "LAN Monitor" screen.

iv. Confirm that all diagnostic codes are "No Err". If a code other than "No Err" is displayed, troubleshoot again.

**for Preparation** Click here

## CHECK DTC

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Chassis / Parking Assist Monitor System / DTC.

e. Check the details of the DTCs ( Click here).

**HINT:**

Parking assist ECU may output the DTCs of the following system. If DTCs other than those specified in Diagnostic Trouble Code Chart of the side monitor system are output, refer to Diagnostic Trouble Code Chart for the applicable system.

| System | Proceed to |
|---|---|
| Parking assist monitor system | Click here |

## CLEAR DTC

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Operate the intelligent tester to clear the codes. Enter the following menus: Chassis / Parking Assist Monitor System / DTC.

e. According to the display on the intelligent tester, select the trouble code data display with the clear button.

**for Preparation** Click here

## CHECK DTC

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Chassis / Parking Assist Monitor System / DTC.

e. Check the details of the DTCs ( Click here).

**HINT:**

Parking assist ECU may output the DTCs of the following system. If DTCs other than those specified in Diagnostic Trouble Code Chart of the side monitor system are output, refer to Diagnostic Trouble Code Chart for the applicable system.

| System | Proceed to |
|---|---|
| Parking assist monitor system (w/ Side Monitor System) | Click here |
| Wide view front monitor system | Click here |

## CLEAR DTC

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Operate the intelligent tester to clear the codes. Enter the following menus: Chassis / Parking Assist Monitor System / DTC.

e. According to the display on the intelligent tester, select the trouble code data display with the clear button.

**for Preparation** Click here

**HINT:**

If a trouble code is output during the DTC check, inspect the trouble areas listed for that code. For details of the code, refer to the "See page" below.

**Side Monitor System**

*1: for LHD
*2: for RHD

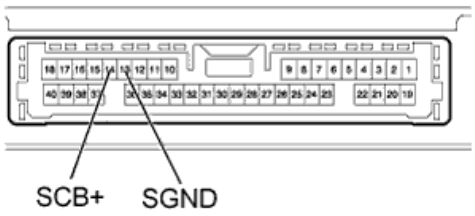
## WIRING DIAGRAM

## INSPECTION PROCEDURE



### 1.CHECK PARKING ASSIST ECU

a. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F37-14 (SCB+) - F37-13 (SGND) | Side monitor display screen displayed | 5.8 to 6.5 V |

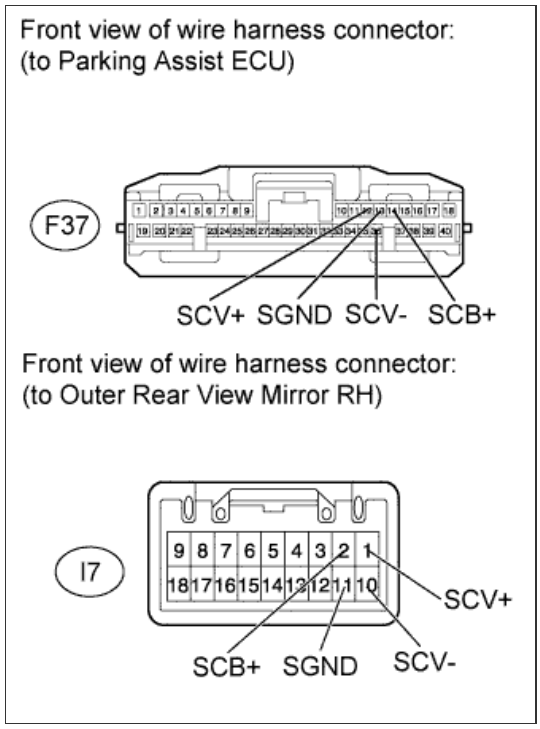
Component with harness connected:
(Parking Assist ECU)

NG → REPLACE PARKING ASSIST ECU (Click here)

OK

### 2.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - OUTER REAR VIEW MIRROR)

a. for LHD:



i. Disconnect the F37 ECU connector.

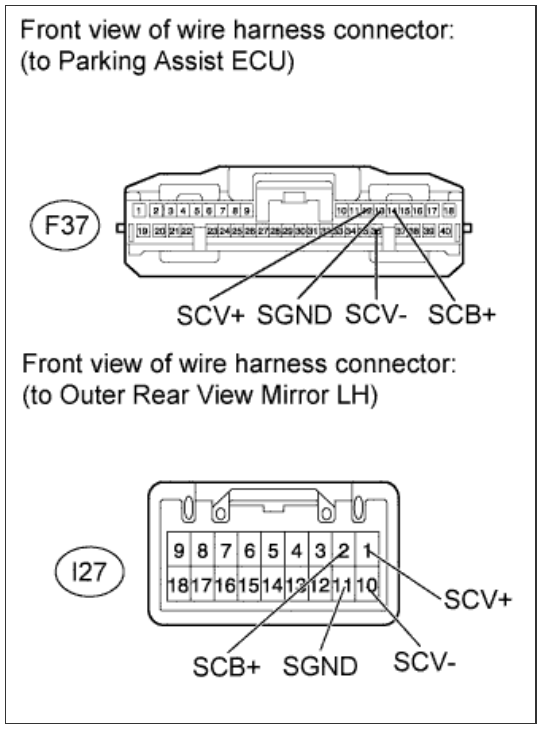
ii. Disconnect the I7 mirror connector.

iii. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F37-14 (SCB+) - I7-2 (SCB+) | Always | Below 1 Ω |
| F37-13 (SGND) - I7-11 (SGND) | Always | Below 1 Ω |
| F37-12 (SCV+) - I7-1 (SCV+) | Always | Below 1 Ω |
| F37-36 (SCV-) - I7-10 (SCV-) | Always | Below 1 Ω |
| F37-14 (SCB+) - Body ground | Always | 10 kΩ or higher |
| F37-13 (SGND) - Body ground | Always | 10 kΩ or higher |
| F37-12 (SCV+) - Body ground | Always | 10 kΩ or higher |
| F37-36 (SCV-) - Body ground | Always | 10 kΩ or higher |

b. for RHD:



i. Disconnect the F37 ECU connector.

ii. Disconnect the I27 mirror connector.

iii. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

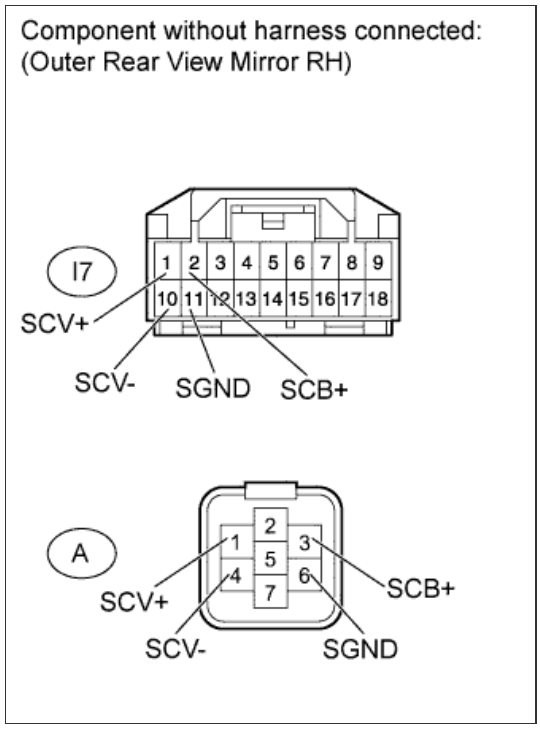
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F37-14 (SCB+) - I27-2 (SCB+) | Always | Below 1 Ω |
| F37-13 (SGND) - I27-11 (SGND) | Always | Below 1 Ω |
| F37-12 (SCV+) - I27-1 (SCV+) | Always | Below 1 Ω |
| F37-36 (SCV-) - I27-10 (SCV-) | Always | Below 1 Ω |
| F37-14 (SCB+) - Body ground | Always | 10 kΩ or higher |
| F37-13 (SGND) - Body ground | Always | 10 kΩ or higher |
| F37-12 (SCV+) - Body ground | Always | 10 kΩ or higher |
| F37-36 (SCV-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 3.INSPECT OUTER REAR VIEW MIRROR ASSEMBLY

a. for LHD:



i. Remove the outer rear view mirror RH ( Click here).

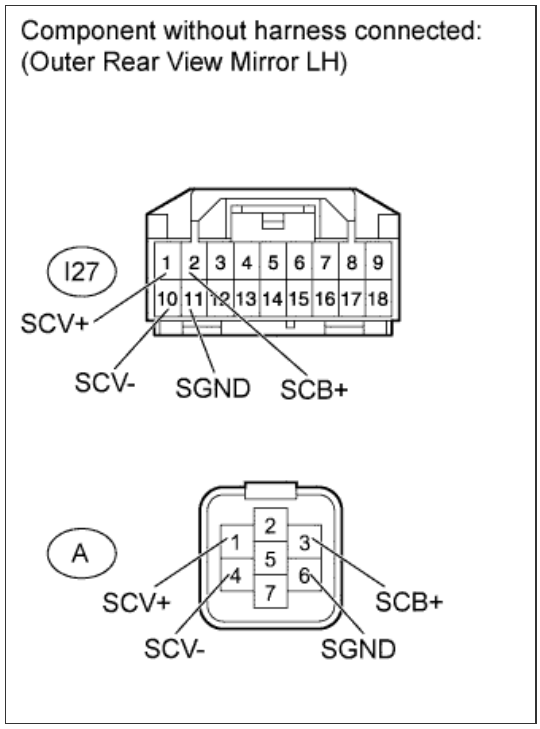
ii. Disconnect the side television camera connector.

iii. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| I7-2 (SCB+) - A-3 (SCB+) | Always | Below 1 Ω |
| I7-11 (SGND) - A-6 (SGND) | Always | Below 1 Ω |
| I7-1 (SCV+) - A-1 (SCV+) | Always | Below 1 Ω |
| I7-10 (SCV-) - A-4 (SCV-) | Always | Below 1 Ω |

b. for RHD:



i. Remove the outer rear view mirror LH ( Click here ).

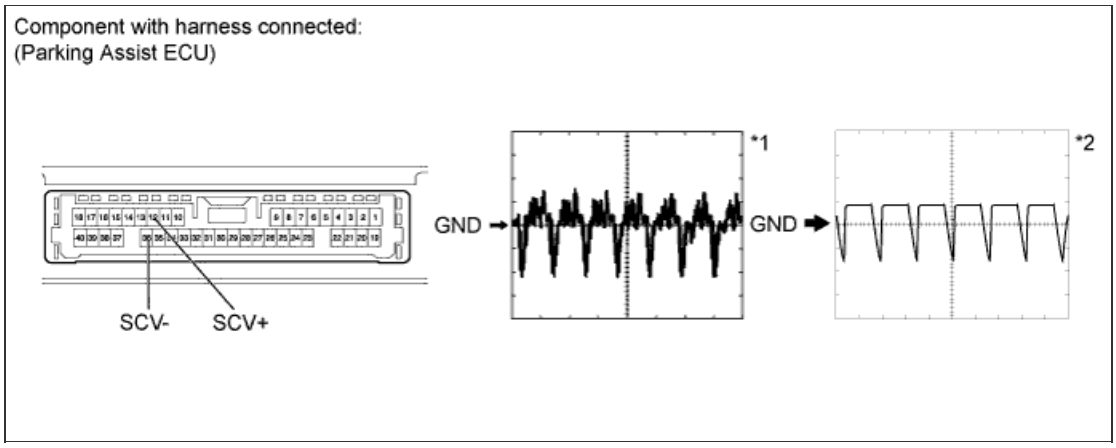
ii. Disconnect the side television camera connector.

iii. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| I27-2 (SCB+) - A-3 (SCB+) | Always | Below 1 Ω |
| I27-11 (SGND) - A-6 (SGND) | Always | Below 1 Ω |
| I27-1 (SCV+) - A-1 (SCV+) | Always | Below 1 Ω |
| I27-10 (SCV-) - A-4 (SCV-) | Always | Below 1 Ω |

**Result**



| Result | Proceed to |
|---|---|
| OK | A |
| NG (for LHD) | B |
| NG (for RHD) | C |

B → REPLACE OUTER REAR VIEW MIRROR ASSEMBLY RH ( Click here)

C → REPLACE OUTER REAR VIEW MIRROR ASSEMBLY LH ( Click here)

A

**4.CHECK SIDE TELEVISION CAMERA ASSEMBLY**

a. Using an oscilloscope, check the waveform.

**Measurement Condition**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F37-12 (SCV+) - F37-36 (SCV-) |
| Tool Setting | 0.2 V/DIV., 50 µs/DIV. |
| Condition | • Side monitor display screen displayed*1<br>• Camera lens covered to make image black while side view monitor display screen displayed*2 |

NG → REPLACE SIDE TELEVISION CAMERA ASSEMBLY (Click here)

OK

**5.REPLACE HARNESS AND CONNECTOR (GVIF CABLE)**

a. Replace the harness and connector (GVIF cable).

NEXT

**6.CHECK DTC OUTPUT**

a. Clear the DTCs (Click here).

b. Recheck for DTCs (Click here).

**OK:**
**DTC 5C-40 is not output.**

NG → REPLACE PARKING ASSIST ECU (Click here)

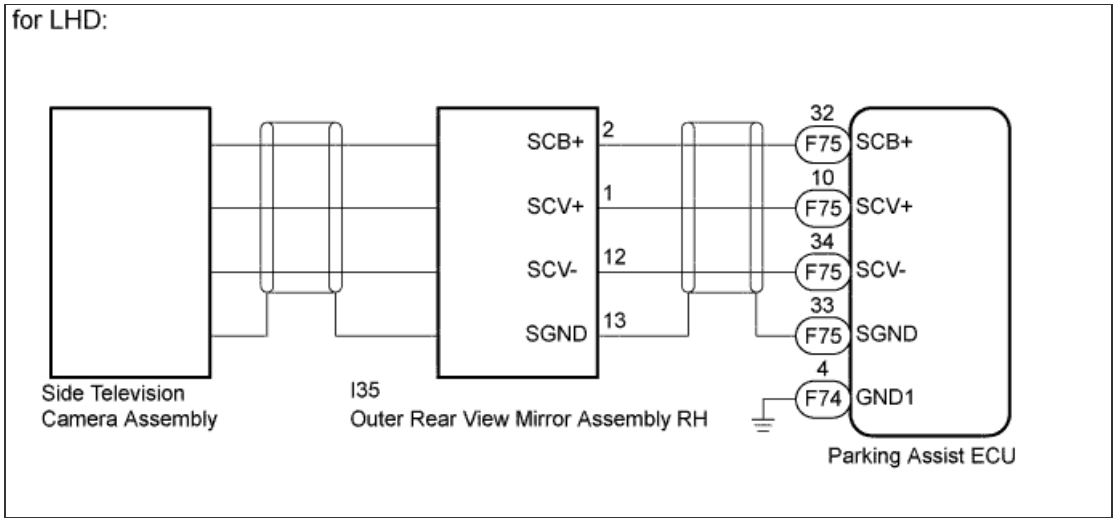
OK

**END (GVIF CABLE IS DEFECTIVE)**

## DTC C1683 Side Camera Feedback Malfunction

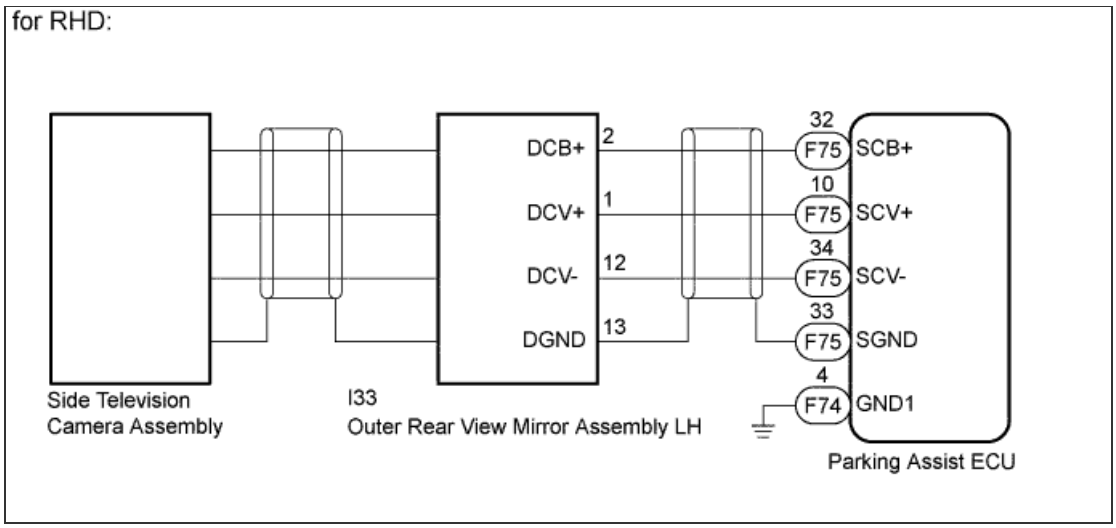
## DTC C1684 Side Camera Current Malfunction

**for Preparation** Click here



### DESCRIPTION

DTC C1683 is stored if the parking assist ECU judges as a result of its self check that a synchronization problem is occurring in the image signal sent from the side television camera assembly (for Front Passenger Side) to the parking assist ECU.
DTC C1684 is stored if the parking assist ECU judges as a result of its self check that there is a problem with the current supplied from the side television camera assembly (for Front Passenger Side) connected to the parking assist ECU.



| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1683 | Side Camera Feedback Malfunction | • Harness or connector<br>• Parking assist ECU<br>• Side television camera assembly (for Front Passenger Side)<br>• Outer rear view mirror assembly (for Front Passenger Side) |
| C1684 | Side Camera Current Malfunction | |

### WIRING DIAGRAM

for LHD:

for RHD:

### INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the parking assist ECU after the cable is disconnected from the negative (-) battery terminal, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of**

other systems as well as the side monitor system may be needed (Click here).

**1.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - OUTER REAR VIEW MIRROR ASSEMBLY AND BODY GROUND)**

a. Disconnect the F74 and F75 parking assist ECU connectors.

b. Disconnect the I35*1 or I33*2 outer rear view mirror assembly (for Front Passenger Side) connector.

*1: for LHD
*2: for RHD

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LHD:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-34 (SCV-) - I35-12 (SCV-) | Always | Below 1 Ω |
| F75-10 (SCV+) - I35-1 (SCV+) | Always | Below 1 Ω |
| F75-33 (SGND) - I35-13 (SGND) | Always | Below 1 Ω |
| F75-32 (SCB+) - I35-2 (SCB+) | Always | Below 1 Ω |
| F74-4 (GND1) - Body ground | Always | Below 1 Ω |
| F75-34 (SCV-) - Body ground | Always | 10 kΩ or higher |
| F75-10 (SCV+) - Body ground | Always | 10 kΩ or higher |
| F75-33 (SGND) - Body ground | Always | 10 kΩ or higher |
| F75-32 (SCB+) - Body ground | Always | 10 kΩ or higher |

**for RHD:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-34 (SCV-) - I33-12 (DCV-) | Always | Below 1 Ω |
| F75-10 (SCV+) - I33-1 (DCV+) | Always | Below 1 Ω |
| F75-33 (SGND) - I33-13 (DGND) | Always | Below 1 Ω |
| F75-32 (SCB+) - I33-2 (DCB+) | Always | Below 1 Ω |
| F74-4 (GND1) - Body ground | Always | Below 1 Ω |
| F75-34 (SCV-) - Body ground | Always | 10 kΩ or higher |
| F75-10 (SCV+) - Body ground | Always | 10 kΩ or higher |
| F75-33 (SGND) - Body ground | Always | 10 kΩ or higher |
| F75-32 (SCB+) - Body ground | Always | 10 kΩ or higher |

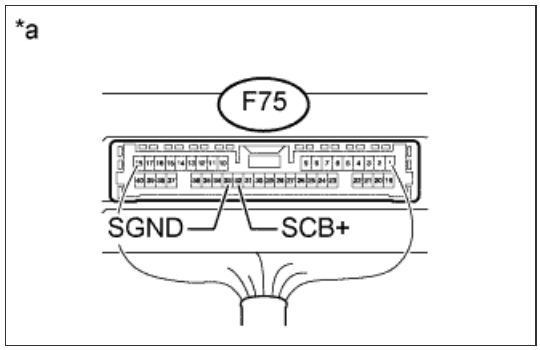
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**2.CHECK PARKING ASSIST ECU (SCB+, SGND)**

a. Reconnect the F74 and F75 parking assist ECU connectors.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-33 (SGND) - Body ground | Always | Below 1 Ω |

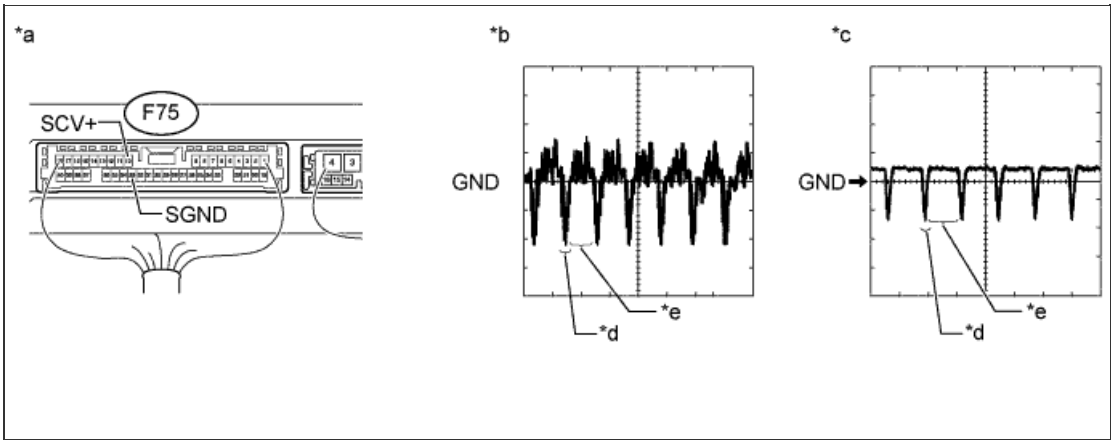
c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F75-32 (SCB+) - F75-33 (SGND) | Engine switch on (IG), front and side monitor main switch assembly on | 5.5 to 7.05 V |

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected (Parking Assist ECU) |



NG → REPLACE PARKING ASSIST ECU (Click here)

OK

**3.CHECK OUTER REAR VIEW MIRROR ASSEMBLY (SCV+, SGND OR DCV+, DGND)**

a. Reconnect the I35*1 or I33*2 outer rear view mirror assembly (for Front Passenger Side) connector.

*1: for LHD
*2: for RHD

**Text in Illustration**

| | | | |
|---|---|---|---|
| *a | Component with harness connected (Parking Assist ECU) | *b | Waveform A |
| *c | Waveform B | *d | Synchronization Signal |
| *e | Video Waveform | - | - |

**HINT:**

- **A waterproof connector is used for the side television camera assembly (for Front Passenger Side). Therefore, inspect the waveform at the parking assist ECU with the connector connected.**
- **The video waveform changes according to the image sent by the side television camera assembly (for Front Passenger Side).**

b. Measure the resistance according to the value(s) in the table below.

**OK:**

**Waveform is as shown in the illustration.**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F75-10 (SCV+) - F75-33 (SGND) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | • Waveform A: Engine switch on (IG), front and side monitor main switch assembly on and camera lens is not covered, displaying an image<br>• Waveform B: Engine switch on (IG), front and side monitor main switch assembly on and camera lens is covered, blacking out the screen |

NG → Go to step 4

OK ↓

REPLACE PARKING ASSIST ECU (Click here)

**4.REPLACE SIDE TELEVISION CAMERA ASSEMBLY**

a. Replace the side television camera assembly (for Front Passenger Side) with a new or normally functioning one ( Click here).

NEXT ↓

**5.CHECK FOR DTC**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**

**DTC C1683 or C1684 is not output.**

NG → REPLACE OUTER REAR VIEW MIRROR ASSEMBLY (Click here)

OK ↓

END (SIDE TELEVISION CAMERA ASSEMBLY IS DEFECTIVE)

## DTC 5C-41 Steering Sensor Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 5C-41 | A fail flag is transmitted from the steering angle sensor. | Steering angle sensor |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs.

**1.REPLACE STEERING ANGLE SENSOR**

a. Replace the steering angle sensor ( Click here).

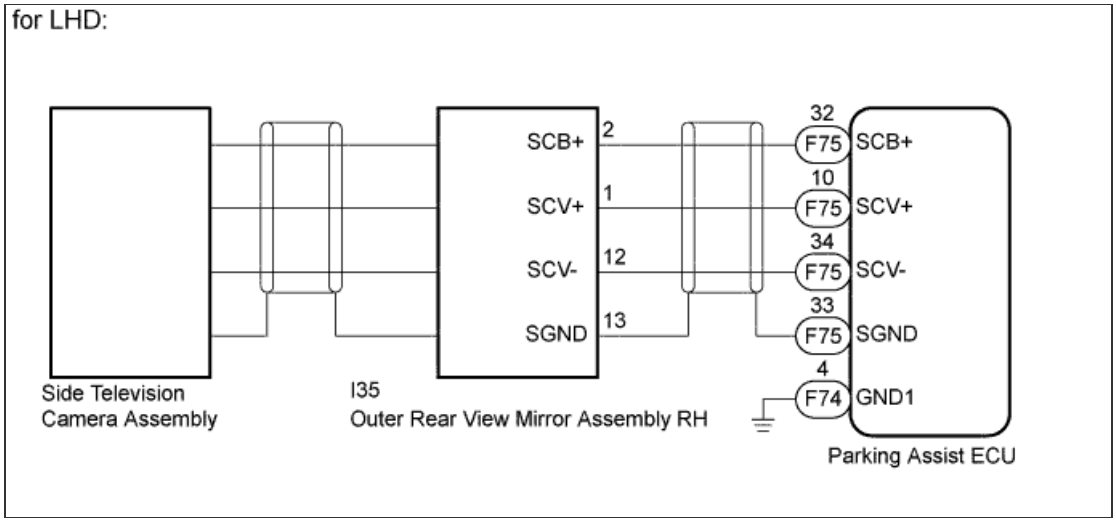
**NEXT**

**END**

## DTC C1683 Side Camera Feedback Malfunction

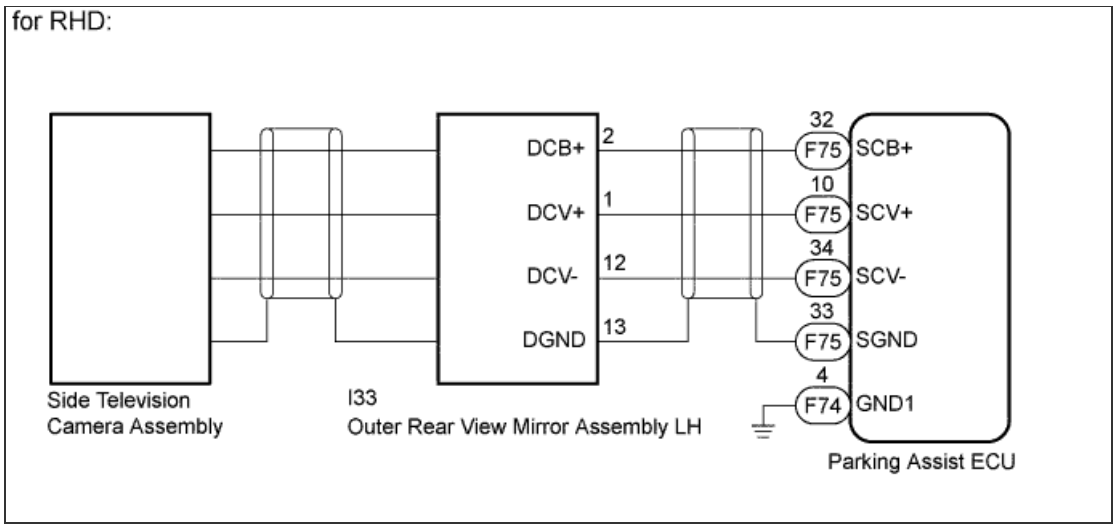
## DTC C1684 Side Camera Current Malfunction

**for Preparation** Click here



### DESCRIPTION

DTC C1683 is stored if the parking assist ECU judges as a result of its self check that a synchronization problem is occurring in the image signal sent from the side television camera assembly (for Front Passenger Side) to the parking assist ECU.
DTC C1684 is stored if the parking assist ECU judges as a result of its self check that there is a problem with the current supplied from the side television camera assembly (for Front Passenger Side) connected to the parking assist ECU.



| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1683 | Side Camera Feedback Malfunction | • Harness or connector<br>• Parking assist ECU<br>• Side television camera assembly (for Front Passenger Side)<br>• Outer rear view mirror assembly (for Front Passenger Side) |
| C1684 | Side Camera Current Malfunction | |

END (SIDE TELEVISION CAMERA ASSEMBLY IS DEFECTIVE)

## DTC 5C-42 Steering Sensor Communication Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 5C-42 | No signal is transmitted from the steering angle sensor. | • Steering angle sensor<br>• CAN communication system<br>• Parking assist ECU |

### INSPECTION PROCEDURE

**1.CHECK CAN COMMUNICATION SYSTEM (PARKING ASSIST ECU - STEERING ANGLE SENSOR)**

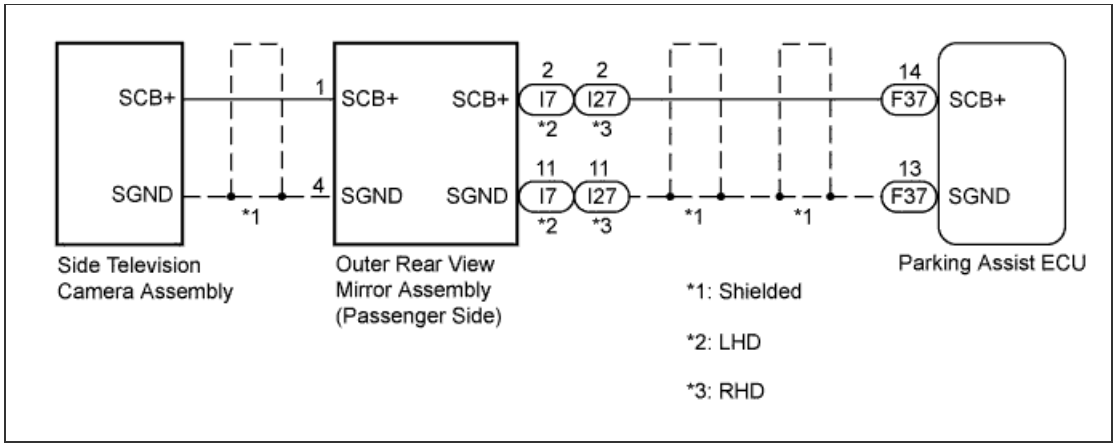
a. for LHD:
Refer to the CAN communication system (Click here).

b. for RHD:
Refer to the CAN communication system (Click here).

**NEXT**

**END**

## DTC C1684 Side Camera Current Malfunction



**for Preparation** Click here

### DESCRIPTION

This DTC is stored if the parking assist ECU judges as a result of its self check that there is a problem with the current supplied to the side television camera assembly connected to the parking assist ECU.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1684 | Side Camera Current Malfunction | • Harness or connector<br>• Parking assist ECU<br>• Side television camera assembly<br>• Outer rear view mirror assembly (passenger side) |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the display and navigation module display after the cable is disconnected from the negative (-) battery terminal, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the side monitor system may be needed (Click here).**

#### 1.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - OUTER REAR VIEW MIRROR ASSEMBLY)

a. Disconnect the F37 connector from the parking assist ECU.

b. for LHD:

i. Disconnect the I7 connector from the outer rear view mirror assembly RH.

ii. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F37-13 (SGND) - I7-11 (SGND) | Always | Below 1 Ω |
| F37-14 (SCB+) - I7-2 (SCB+) | Always | Below 1 Ω |
| F37-13 (SGND) - Body ground | Always | 10 kΩ or higher |
| F37-14 (SCB+) - Body ground | Always | 10 kΩ or higher |

c. for RHD:

i. Disconnect the I27 connector from the outer rear view mirror assembly LH.

ii. Measure the resistance according to the value(s) in the table below.

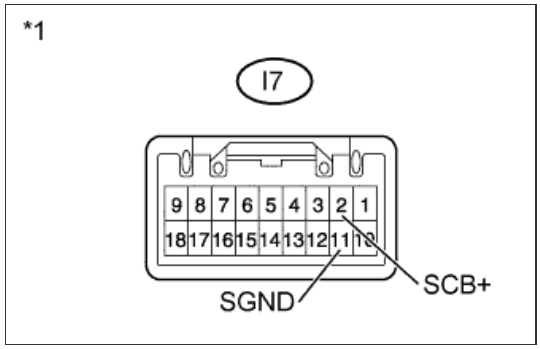
**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F37-13 (SGND) - I27-11 (SGND) | Always | Below 1 Ω |
| F37-14 (SCB+) - I27-2 (SCB+) | Always | Below 1 Ω |
| F37-13 (SGND) - Body ground | Always | 10 kΩ or higher |
| F37-14 (SCB+) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**2.INSPECT OUTER REAR VIEW MIRROR ASSEMBLY (SCB+, SGND)**



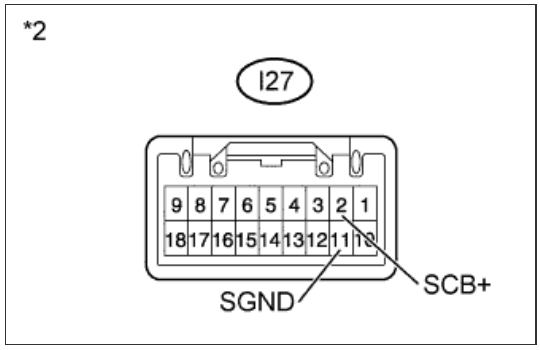
a. for LHD:

i. Disconnect the I7 connector from the outer rear view mirror assembly RH.

ii. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| I7-11 (SGND) - I7-2 (SCB+) | Engine switch on (IG) Front and side monitor main switch on | 5.8 to 7.0 V |



b. for RHD:

i. Disconnect the I27 connector from the outer rear view mirror assembly LH.

ii. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| I27-11 (SGND) - I27-2 (SCB+) | Engine switch on (IG) Front and side monitor main switch on | 5.8 to 7.0 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Outer Rear View Mirror Assembly RH) |
| *2 | Front view of wire harness connector (to Outer Rear View Mirror Assembly LH) |

NG → REPLACE PARKING ASSIST ECU (Click here)

OK

3.REPLACE SIDE TELEVISION CAMERA ASSEMBLY

a. Replace the side television camera assembly with a new or normally functioning one ( Click here).

NEXT

4.CHECK DTC OUTPUT

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

Result

| Result | Proceed to |
|---|---|
| DTC C1684 is output | A |
| No DTC is output | B |

B

END

A

REPLACE OUTER REAR VIEW MIRROR ASSEMBLY (**Click here**)

## DTC 5C-43 Steering Control ECU Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 5C-43 | VGRS=1 is sent from the steering control ECU. | Steering control ECU |

### INSPECTION PROCEDURE

**HINT:**

After the inspection is completed, clear the DTCs.

**1.CHECK DTC OUTPUT**

a. Clear the DTCs (Click here).

b. Recheck for DTCs (Click here).

**OK:**
**DTC 5C-43 is not output.**

NG → **Go to step 2**

OK ↓

**USE SIMULATION METHOD TO CHECK (Click here)**

**2.REPLACE STEERING CONTROL ECU**

a. for LHD:
Replace the steering control ECU (Click here).

b. for RHD:
Replace the steering control ECU (Click here).

NEXT ↓

**3.CHECK DTC OUTPUT**

a. Clear the DTCs (Click here).

b. Recheck for DTCs (Click here).

**OK:**
**DTC 5C-43 is not output.**

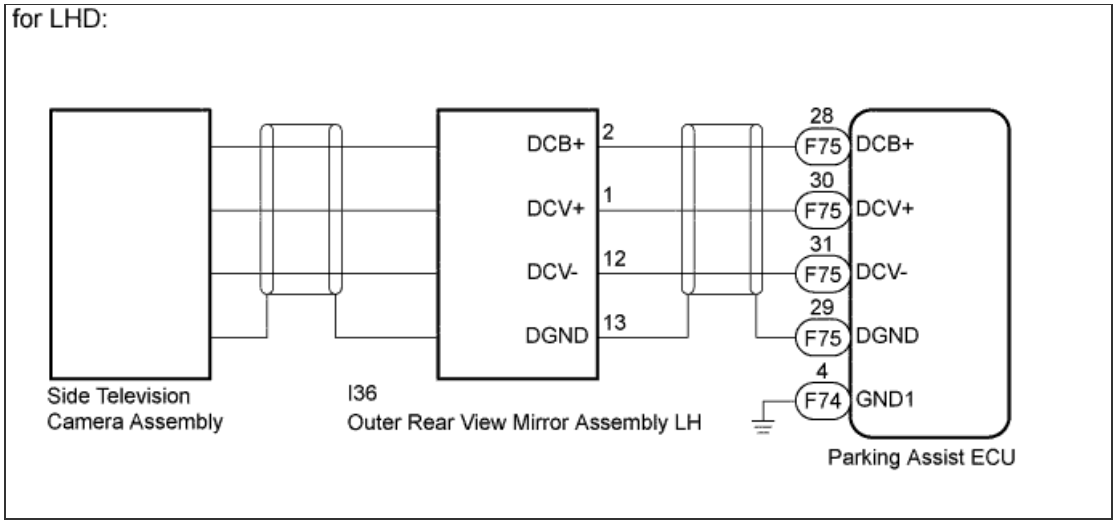
NG → **GO TO VARIABLE GEAR RATIO STEERING SYSTEM (Click here)**

OK ↓

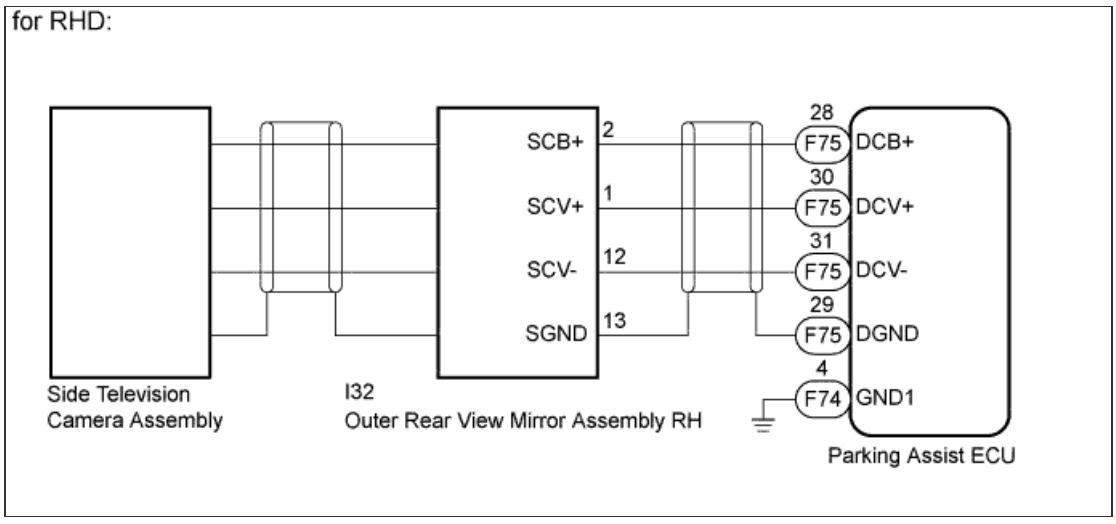
**END (STEERING CONTROL ECU IS DEFECTIVE)**

## DTC C1686 Driver Side Camera Video Sync Signal Malfunction

## DTC C1687 Over Current Detected in Driver Side Camera



**for Preparation** Click here



### DESCRIPTION

DTC C1686 is stored if the parking assist ECU judges as a result of its self check that a synchronization problem is occurring in the image signal sent from the side television camera assembly (for Driver Side) to the parking assist ECU.
DTC C1687 is stored if the parking assist ECU judges as a result of its self check that there is a problem with the current supplied from the side television camera assembly (for Driver Side) connected to the parking assist ECU.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1686 | Side Camera Feedback Malfunction | • Harness or connector<br>• Parking assist ECU<br>• Side television camera assembly (for Driver Side)<br>• Outer rear view mirror assembly (for Driver Side) |
| C1687 | Side Camera Current Malfunction | |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the parking assist ECU after the cable is disconnected from the negative (-) battery terminal, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of**

other systems as well as the side monitor system may be needed (Click here).

**1.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - OUTER REAR VIEW MIRROR ASSEMBLY AND BODY GROUND)**

a. Disconnect the F74 and F75 parking assist ECU connectors.

b. Disconnect the I36*1 or I32*2 outer rear view mirror assembly (for Driver Side) connector.

*1: for LHD
*2: for RHD

c. Measure the resistance according to the value(s) in the table below.

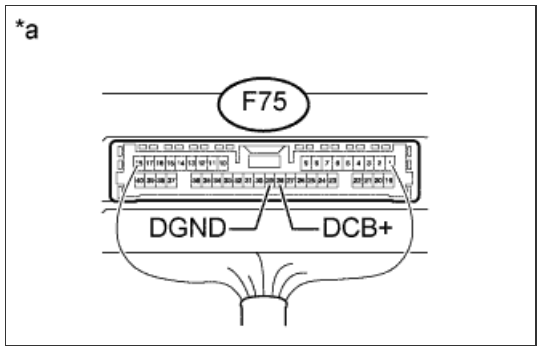
**Standard Resistance:**

**for LHD:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-31 (DCV-) - I36-12 (DCV-) | Always | Below 1 Ω |
| F75-30 (DCV+) - I36-1 (DCV+) | Always | Below 1 Ω |
| F75-29 (DGND) - I36-13 (DGND) | Always | Below 1 Ω |
| F75-28 (DCB+) - I36-2 (DCB+) | Always | Below 1 Ω |
| F74-4 (GND1) - Body ground | Always | Below 1 Ω |
| F75-31 (DCV-) - Body ground | Always | 10 kΩ or higher |
| F75-30 (DCV+) - Body ground | Always | 10 kΩ or higher |
| F75-29 (DGND) - Body ground | Always | 10 kΩ or higher |
| F75-28 (DCB+) - Body ground | Always | 10 kΩ or higher |

**for RHD:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-31 (DCV-) - I32-12 (SCV-) | Always | Below 1 Ω |
| F75-30 (DCV+) - I32-1 (SCV+) | Always | Below 1 Ω |
| F75-29 (DGND) - I32-13 (SGND) | Always | Below 1 Ω |
| F75-28 (DCB+) - I32-2 (SCB+) | Always | Below 1 Ω |
| F74-4 (GND1) - Body ground | Always | Below 1 Ω |
| F75-31 (DCV-) - Body ground | Always | 10 kΩ or higher |
| F75-30 (DCV+) - Body ground | Always | 10 kΩ or higher |
| F75-29 (DGND) - Body ground | Always | 10 kΩ or higher |
| F75-28 (DCB+) - Body ground | Always | 10 kΩ or higher |



NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**2.CHECK PARKING ASSIST ECU (DCB+, DGND)**

a. Reconnect the F74 and F75 parking assist ECU connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-29 (DGND) - Body ground | Always | Below 1 Ω |

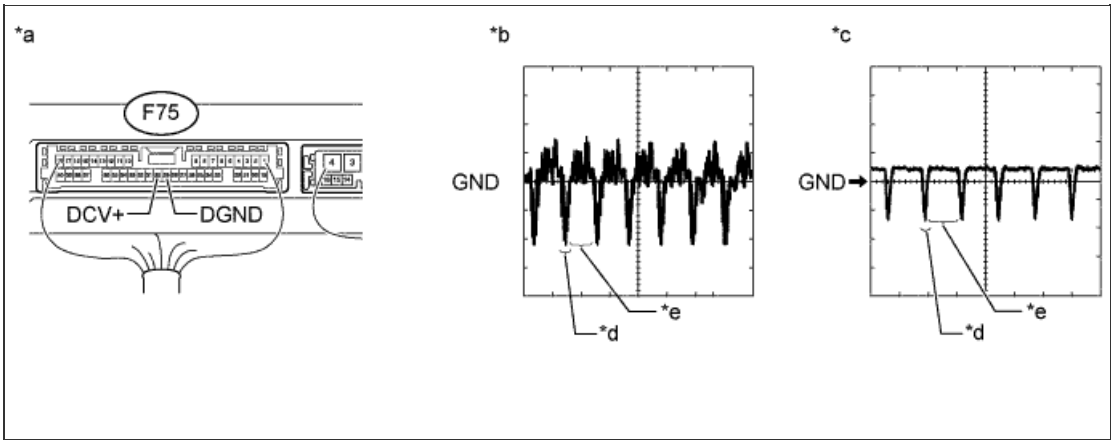
c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-28 (DCB+) - F75-29 (DGND) | Engine switch on (IG), front and side monitor main switch assembly on | 5.5 to 7.05 V |

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected (Parking Assist ECU) |



NG → REPLACE PARKING ASSIST ECU (Click here)

OK

**3.CHECK OUTER REAR VIEW MIRROR ASSEMBLY (DCV+, DGND OR SCV+. SGND)**

a. Reconnect the I36*1 or I32*2 outer rear view mirror assembly (for Front Passenger Side) connector.

*1: for LHD
*2: for RHD

**Text in Illustration**

| | | | |
|---|---|---|---|
| *a | Component with harness connected (Parking Assist ECU) | *b | Waveform A |
| *c | Waveform B | *d | Synchronization Signal |
| *e | Video Waveform | - | - |

**HINT:**

- **A waterproof connector is used for the side television camera assembly (for Driver Side). Therefore, inspect the waveform at the parking assist ECU with the connector connected.**
- **The video waveform changes according to the image sent by the side television camera assembly (for Driver Side).**

b. Measure the resistance according to the value(s) in the table below.

**OK:**

**Waveform is as shown in the illustration.**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F75-30 (DCV+) - F75-29 (DGND) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | • Waveform A: Engine switch on (IG), front and side monitor main switch assembly on and camera lens is not covered, displaying an image<br>• Waveform B: Engine switch on (IG), front and side monitor main switch assembly on and camera lens is covered, blacking out the screen |

NG → Go to step 4

OK

REPLACE PARKING ASSIST ECU (Click here)

4.REPLACE SIDE TELEVISION CAMERA ASSEMBLY

a. Replace the side television camera assembly (for Driver Side) with a new or normally functioning one ( Click here).

NEXT

5.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**
**DTC C1686 or C1687 is not output.**

B → REPLACE OUTER REAR VIEW MIRROR ASSEMBLY (Click here)

A

END (SIDE TELEVISION CAMERA ASSEMBLY IS DEFECTIVE)

## DTC 5C-44 Steering Control ECU Communication Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 5C-44 | "VGRS available" information is received normally from the steering angle sensor, but the signal from the steering control ECU is not received for 1 second or more. | • Steering control ECU<br>• CAN communication system<br>• Parking assist ECU |

### INSPECTION PROCEDURE

**1.CHECK CAN COMMUNICATION SYSTEM (PARKING ASSIST ECU - STEERING CONTROL ECU)**

a. for LHD:
Refer to the CAN communication system (Click here).

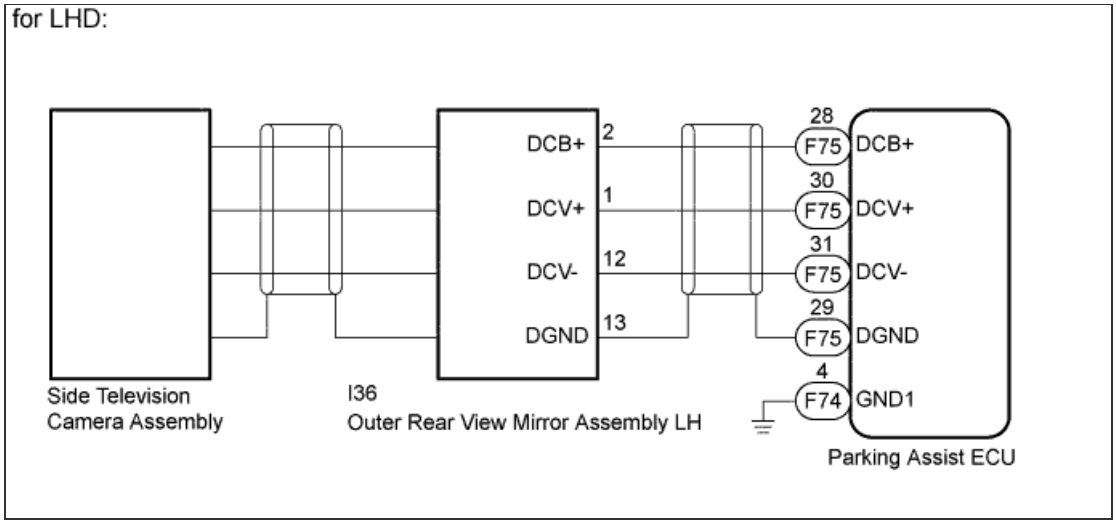
b. for RHD:
Refer to the CAN communication system (Click here).

**NEXT**

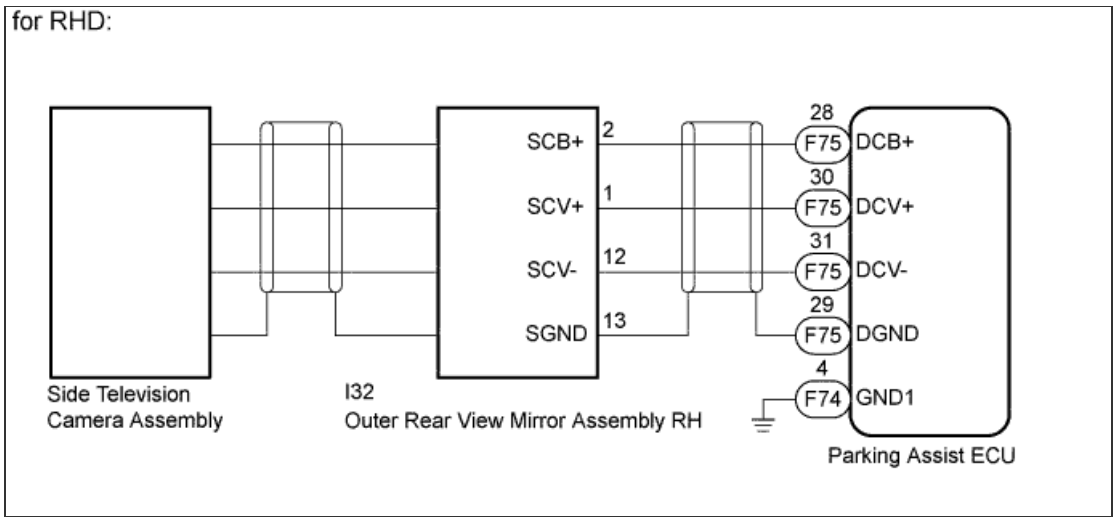
**END**

## DTC C1686 Driver Side Camera Video Sync Signal Malfunction

## DTC C1687 Over Current Detected in Driver Side Camera



**for Preparation** Click here



### DESCRIPTION

DTC C1686 is stored if the parking assist ECU judges as a result of its self check that a synchronization problem is occurring in the image signal sent from the side television camera assembly (for Driver Side) to the parking assist ECU.
DTC C1687 is stored if the parking assist ECU judges as a result of its self check that there is a problem with the current supplied from the side television camera assembly (for Driver Side) connected to the parking assist ECU.

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1686 | Side Camera Feedback Malfunction | • Harness or connector<br>• Parking assist ECU<br>• Side television camera assembly (for Driver Side)<br>• Outer rear view mirror assembly (for Driver Side) |
| C1687 | Side Camera Current Malfunction | |

### WIRING DIAGRAM

### INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the parking assist ECU after the cable is disconnected from the negative (-) battery terminal, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of**

other systems as well as the side monitor system may be needed (Click here).

**1.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - OUTER REAR VIEW MIRROR ASSEMBLY AND BODY GROUND)**

a. Disconnect the F74 and F75 parking assist ECU connectors.

b. Disconnect the I36*1 or I32*2 outer rear view mirror assembly (for Driver Side) connector.

*1: for LHD
*2: for RHD

c. Measure the resistance according to the value(s) in the table below.

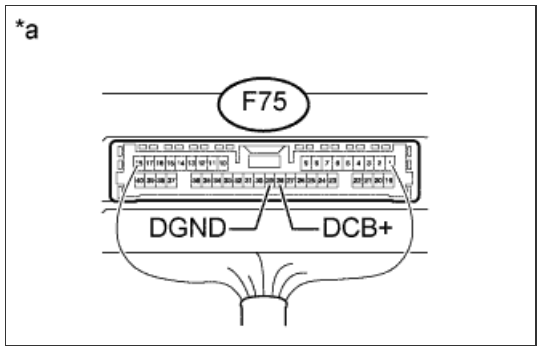
**Standard Resistance:**

**for LHD:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-31 (DCV-) - I36-12 (DCV-) | Always | Below 1 Ω |
| F75-30 (DCV+) - I36-1 (DCV+) | Always | Below 1 Ω |
| F75-29 (DGND) - I36-13 (DGND) | Always | Below 1 Ω |
| F75-28 (DCB+) - I36-2 (DCB+) | Always | Below 1 Ω |
| F74-4 (GND1) - Body ground | Always | Below 1 Ω |
| F75-31 (DCV-) - Body ground | Always | 10 kΩ or higher |
| F75-30 (DCV+) - Body ground | Always | 10 kΩ or higher |
| F75-29 (DGND) - Body ground | Always | 10 kΩ or higher |
| F75-28 (DCB+) - Body ground | Always | 10 kΩ or higher |

**for RHD:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-31 (DCV-) - I32-12 (SCV-) | Always | Below 1 Ω |
| F75-30 (DCV+) - I32-1 (SCV+) | Always | Below 1 Ω |
| F75-29 (DGND) - I32-13 (SGND) | Always | Below 1 Ω |
| F75-28 (DCB+) - I32-2 (SCB+) | Always | Below 1 Ω |
| F74-4 (GND1) - Body ground | Always | Below 1 Ω |
| F75-31 (DCV-) - Body ground | Always | 10 kΩ or higher |
| F75-30 (DCV+) - Body ground | Always | 10 kΩ or higher |
| F75-29 (DGND) - Body ground | Always | 10 kΩ or higher |
| F75-28 (DCB+) - Body ground | Always | 10 kΩ or higher |



NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**2.CHECK PARKING ASSIST ECU (DCB+, DGND)**

a. Reconnect the F74 and F75 parking assist ECU connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-29 (DGND) - Body ground | Always | Below 1 Ω |

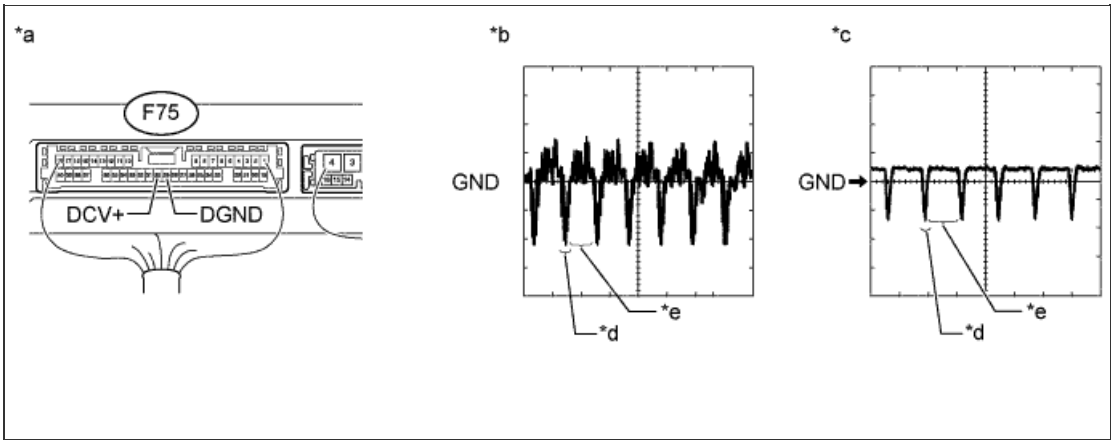
c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-28 (DCB+) - F75-29 (DGND) | Engine switch on (IG), front and side monitor main switch assembly on | 5.5 to 7.05 V |

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected (Parking Assist ECU) |



NG → REPLACE PARKING ASSIST ECU (Click here)

OK

**3.CHECK OUTER REAR VIEW MIRROR ASSEMBLY (DCV+, DGND OR SCV+. SGND)**

a. Reconnect the I36*1 or I32*2 outer rear view mirror assembly (for Front Passenger Side) connector.

*1: for LHD
*2: for RHD

**Text in Illustration**

| | | | |
|---|---|---|---|
| *a | Component with harness connected (Parking Assist ECU) | *b | Waveform A |
| *c | Waveform B | *d | Synchronization Signal |
| *e | Video Waveform | - | - |

**HINT:**

- **A waterproof connector is used for the side television camera assembly (for Driver Side). Therefore, inspect the waveform at the parking assist ECU with the connector connected.**
- **The video waveform changes according to the image sent by the side television camera assembly (for Driver Side).**

b. Measure the resistance according to the value(s) in the table below.

**OK:**

**Waveform is as shown in the illustration.**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F75-30 (DCV+) - F75-29 (DGND) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | • Waveform A: Engine switch on (IG), front and side monitor main switch assembly on and camera lens is not covered, displaying an image<br>• Waveform B: Engine switch on (IG), front and side monitor main switch assembly on and camera lens is covered, blacking out the screen |

NG → Go to step 4

OK

REPLACE PARKING ASSIST ECU (Click here)

4.REPLACE SIDE TELEVISION CAMERA ASSEMBLY

a. Replace the side television camera assembly (for Driver Side) with a new or normally functioning one ( Click here).

NEXT

5.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**
**DTC C1686 or C1687 is not output.**

B → REPLACE OUTER REAR VIEW MIRROR ASSEMBLY (Click here)

A

END (SIDE TELEVISION CAMERA ASSEMBLY IS DEFECTIVE)

## DTC 5C-45 Shift Signal Communication Error

**for Preparation** Click here

### DESCRIPTION

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| 5C-45 | No signal is transmitted from the ECM. | • ECM<br>• CAN communication system<br>• Parking assist ECU |

### INSPECTION PROCEDURE

**1.CHECK CAN COMMUNICATION SYSTEM (ECM - PARKING ASSIST ECU)**

a. for LHD:
Refer to the CAN communication system (Click here).

b. for RHD:
Refer to the CAN communication system (Click here).

**NEXT**

**END**

# DTC C1693 Side Camera Initialization Incomplete

**for Preparation** Click here

## DESCRIPTION

This DTC is stored when the parking assist ECU judges that the side camera initial setting has not been memorized (side television camera optical axis adjustment is incompleted).

| DTC Code | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1693 | Side camera initial setting has not been memorized | • Side television camera optical axis adjustment<br>• Parking assist ECU |

## INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the parking assist ECU after the cable is disconnected from the negative (-) battery terminal, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the side monitor system may be needed (Click here).**

**1.ADJUST SETTINGS (CAMERA POSITION SETTING)**

a. Perform the following procedure depending on the memory conditions to register the vehicle information into the parking assist ECU.

i. Refer to side television camera optical axis adjustment ( Click here).

**NEXT**

**2.CHECK FOR DTC**

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

**OK:**
**DTC C1693 is not output.**

**HINT:**

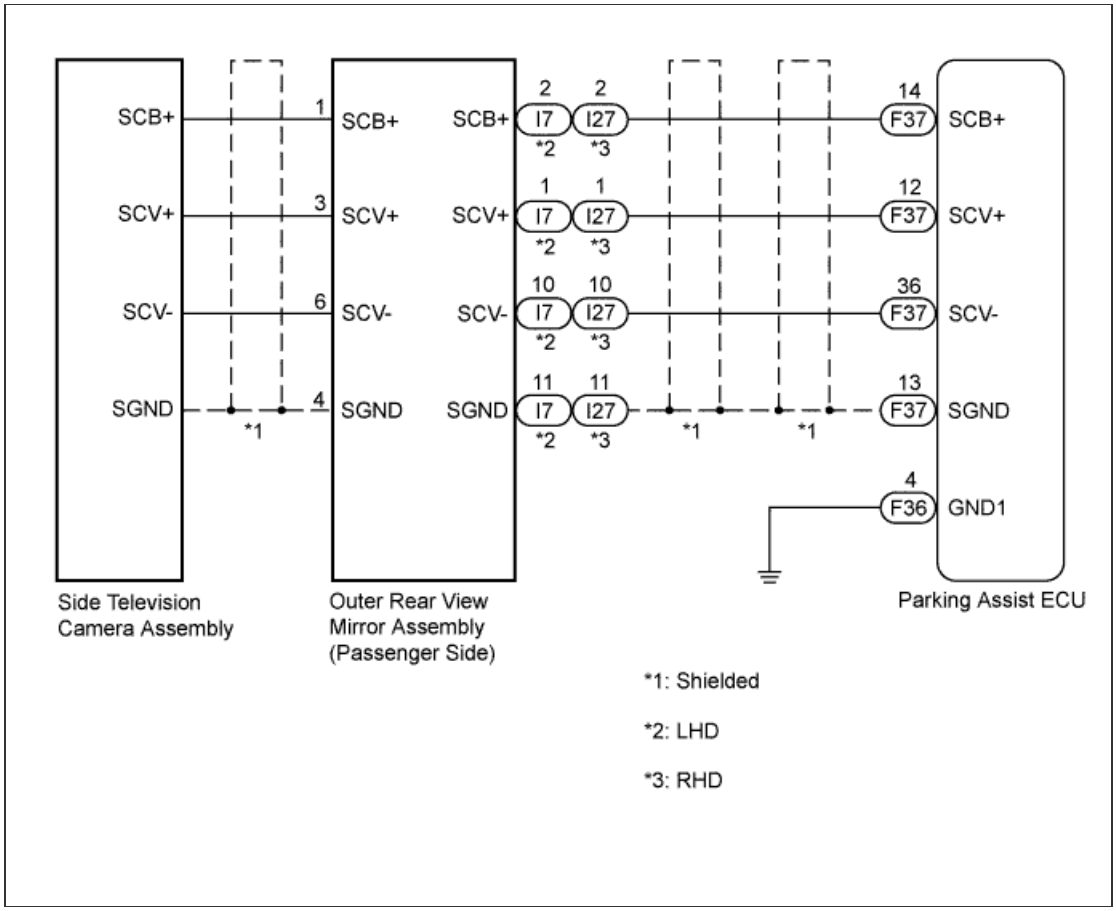
- **If DTC C1693 is output, perform the side television camera assembly optical axis adjustment again.**
- **If DTC C1693 is still output after performing the rear television camera assembly optical axis adjustment 3 times, replace the parking assist ECU.**

**NG** → **REPLACE PARKING ASSIST ECU (Click here)**

**OK**

**END (SETTINGS ARE DEFECTIVE)**

# DTC C1683 Side Camera Feedback Malfunction



**for Preparation** Click here

## DESCRIPTION

This DTC is stored if the parking assist ECU judges as a result of its self check that a synchronization problem is occurring in the image signal sent from the side television camera assembly to the parking assist ECU.

| DTC No. | DTC Detection Condition | Trouble Area |
|---|---|---|
| C1683 | Side Camera Feedback Malfunction | • Harness or connector<br>• Parking assist ECU<br>• Side television camera assembly<br>• Outer rear view mirror assembly (passenger side) |

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the display and navigation module display after the cable is disconnected from the negative (-) battery terminal, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the side monitor system may be needed (Click here).**

### 1.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - OUTER REAR VIEW MIRROR ASSEMBLY)

a. Disconnect the F37 connector from the parking assist ECU.

b. for LHD:

i. Disconnect the I7 connector from the outer rear view mirror assembly RH.

ii. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| | | |
|---|---|---|

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F37-36 (SCV-) - I7-10 (SCV-) | Always | Below 1 Ω |
| F37-12 (SCV+) - I7-1 (SCV+) | Always | Below 1 Ω |
| F37-13 (SGND) - I7-11 (SGND) | Always | Below 1 Ω |
| F37-14 (SCB+) - I7-2 (SCB+) | Always | Below 1 Ω |
| F37-36 (SCV-) - Body ground | Always | 10 kΩ or higher |
| F37-12 (SCV+) - Body ground | Always | 10 kΩ or higher |
| F37-13 (SGND) - Body ground | Always | 10 kΩ or higher |
| F37-14 (SCB+) - Body ground | Always | 10 kΩ or higher |

c. for RHD:

i. Disconnect the I27 connector from the outer rear view mirror assembly LH.

ii. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

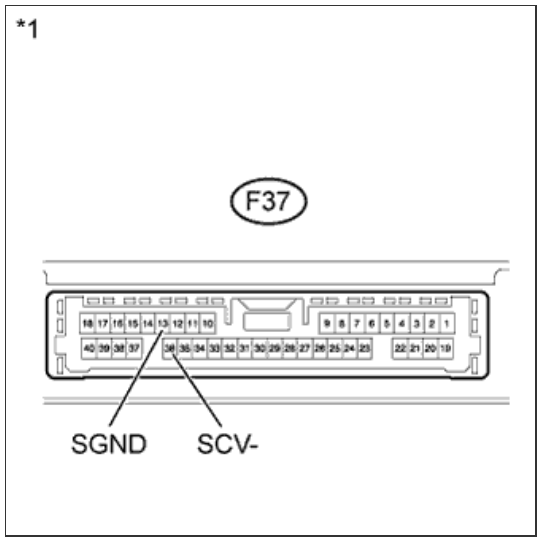
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F37-36 (SCV-) - I27-10 (SCV-) | Always | Below 1 Ω |
| F37-12 (SCV+) - I27-1 (SCV+) | Always | Below 1 Ω |
| F37-13 (SGND) - I27-11 (SGND) | Always | Below 1 Ω |
| F37-14 (SCB+) - I27-2 (SCB+) | Always | Below 1 Ω |
| F37-36 (SCV-) - Body ground | Always | 10 kΩ or higher |
| F37-12 (SCV+) - Body ground | Always | 10 kΩ or higher |
| F37-13 (SGND) - Body ground | Always | 10 kΩ or higher |
| F37-14 (SCB+) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**2.INSPECT PARKING ASSIST ECU (SCV-, SGND)**

a. Reconnect the F37 connector to the parking assist ECU.



b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F37-36 (SCV-) - Body ground | Always | Below 1 Ω |
| F37-13 (SGND) - Body ground | Always | Below 1 Ω |

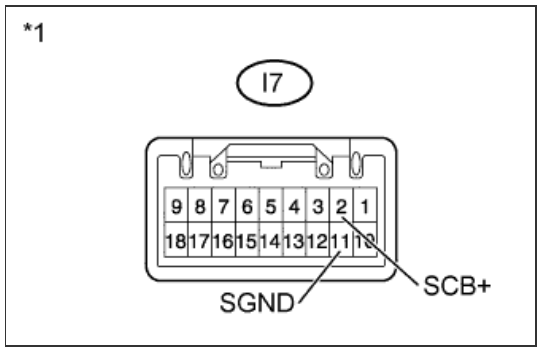
**Text in Illustration**

| | |
|---|---|
| *1 | Component with harness connected (Parking Assist ECU) |

NG → REPLACE PARKING ASSIST ECU (Click here)

OK

### 3.INSPECT OUTER REAR VIEW MIRROR ASSEMBLY (SCB+, SGND)



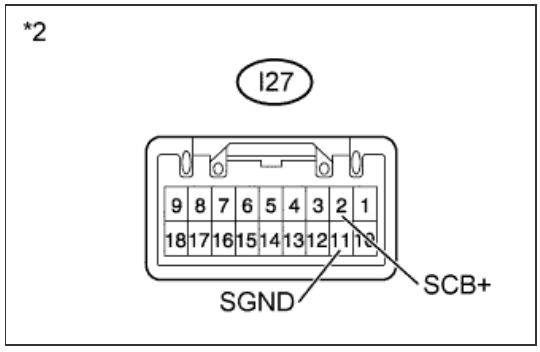
a. for LHD:

i. Disconnect the I7 connector from the outer rear view mirror assembly RH.

ii. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| I7-11 (SGND) - I7-2 (SCB+) | Engine switch on (IG) Front and side monitor main switch on | 5.8 to 7.0 V |



b. for RHD:

i. Disconnect the I27 connector from the outer rear view mirror assembly LH.

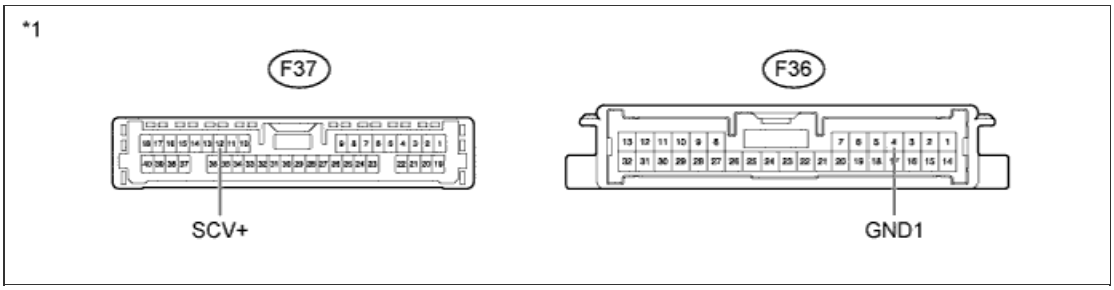
ii. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| I27-11 (SGND) - I27-2 (SCB+) | Engine switch on (IG) Front and side monitor main switch on | 5.8 to 7.0 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Front view of wire harness connector (to Outer Rear View Mirror Assembly RH) |
| *2 | Front view of wire harness connector (to Outer Rear View Mirror Assembly LH) |



NG → REPLACE PARKING ASSIST ECU (Click here)

OK

## 4.INSPECT PARKING ASSIST ECU (SCV+, GND1)

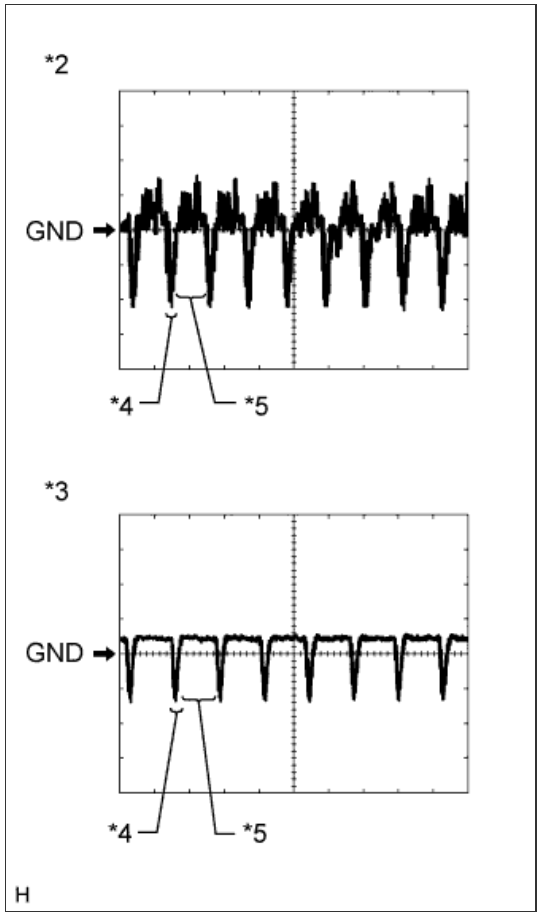
a. Reconnect the I7 or I27 connector to the outer rear view mirror assembly (passenger side).

b. Reconnect the F36 and F37 connectors to the parking assist ECU.

c. Check the waveform of the side television camera assembly using an oscilloscope.

**HINT:**

A waterproof connector is used for the side television camera assembly. Therefore, inspect the waveform at the parking assist ECU with the connector connected.



**OK:**

**Waveform is as shown in the illustration.**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F37-12 (SCV+) - F36-4 (GND1) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | Engine switch on (IG), front and side monitor main switch on |

**HINT:**

The video waveform changes according to the image sent by the side television camera assembly.

**Text in Illustration**

| | |
|---|---|
| *1 | Component with harness connected (Parking Assist ECU) |
| *2 | Waveform 1 (under normal conditions) |
| *3 | Waveform 2 (camera lens is covered, blacking out the screen) |
| *4 | Synchronized Signal |
| *5 | Video Waveform |

NG → Go to step 5

OK

REPLACE PARKING ASSIST ECU (Click here)

## 5.REPLACE SIDE TELEVISION CAMERA ASSEMBLY

a. Replace the side television camera assembly with a new or normally functioning one ( Click here).

NEXT

## 6.CHECK DTC OUTPUT

a. Clear the DTCs (Click here).

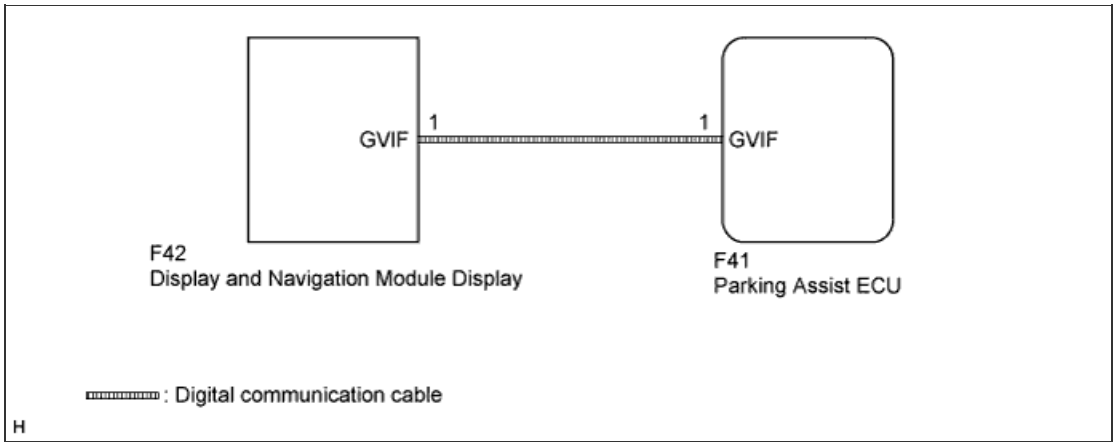
b. Check for DTCs (Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC C1683 is output | A |
| No DTC is output | B |

B → END

A



## REPLACE OUTER REAR VIEW MIRROR ASSEMBLY (Click here)

**for Preparation** Click here

## DESCRIPTION

The parking assist ECU displays images for the parking assist monitor and side monitor screens. The image signals are sent from the parking assist ECU to the display and navigation module display through the digital communication cable.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the display and navigation module display after the cable is disconnected from the negative (-) battery terminal, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the side monitor system may be needed (Click here).**

**HINT:**

Images are difficult to discern even in normal conditions if:

- **Noise may occur in the image while adjusting or retracting the outer rear view mirror assembly (passenger side).**
- **Noise may occur in the image depending on electrical devices used in the cabin.**
- **Noise may occur in the image if accessories that generate radio waves have been installed.**
- **The camera screen is frosted over (the image immediately after turning the engine switch on (IG) may be blurred or darker than normal).**
- **The camera lens is dirty with snow, mud, etc.**
- **A strong beam of light, such as a sunbeam or headlight, hits the camera.**
- **It is too dark around the camera (at night etc.).**
- **The ambient temperature around the camera is either too high or too low.**
- **The vehicle is tilted at a steep angle.**
- **The ambience of the camera is too bright. (When a strong light, such as a sunbeam reflected off the vehicle body, hits the camera, the image may be blurred. This is called the "SMEAR" phenomenon, peculiar to the CCD camera.)**

### 1.READ VALUE USING INTELLIGENT TESTER

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Chassis / Parking Assist Monitor System / Data List.

e. Check the Data List for proper functioning of the following items.

**Parking Assist Monitor System**

| Tester Display | Measurement Item/Range | Normal Condition | Diagnostic Note |
|---|---|---|---|
| AISIC Output Status | Output condition of camera display/OK or NG | OK: Output condition of camera display is normal<br>NG: Output condition of camera display is abnormal | - |

NG → REPLACE PARKING ASSIST ECU (Click here)

OK

## 2.CHECK DIGITAL COMMUNICATION CABLE CONNECTOR

a. Check the digital communication cable connector.

   i. Check the digital communication cable connectors between the parking assist ECU and display and navigation module display for any connection problems (Click here).

b. Check if the same malfunction recurs when the parking assist monitor, front monitor and side monitor screens are displayed.

**Result**

| Result | Proceed to |
|---|---|
| Malfunction does not reoccur (returns to normal) | A |
| Malfunction reoccurs | B |

B → Go to step 3

A

END

## 3.REPLACE WIRE HARNESS (DIGITAL COMMUNICATION CABLE)

a. Replace the digital communication cable between the parking assist ECU and display and navigation module display with a new one.

b. Check if the same malfunction recurs when the parking assist monitor, front monitor and side monitor screens are displayed.

**Result**

| Result | Proceed to |
|---|---|
| Malfunction does not reoccur (returns to normal) | A |
| Malfunction reoccurs | B |

B → Go to step 4

A

END

## 4.REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY

a. Replace the display and navigation module display with a new or normally functioning one ( Click here).

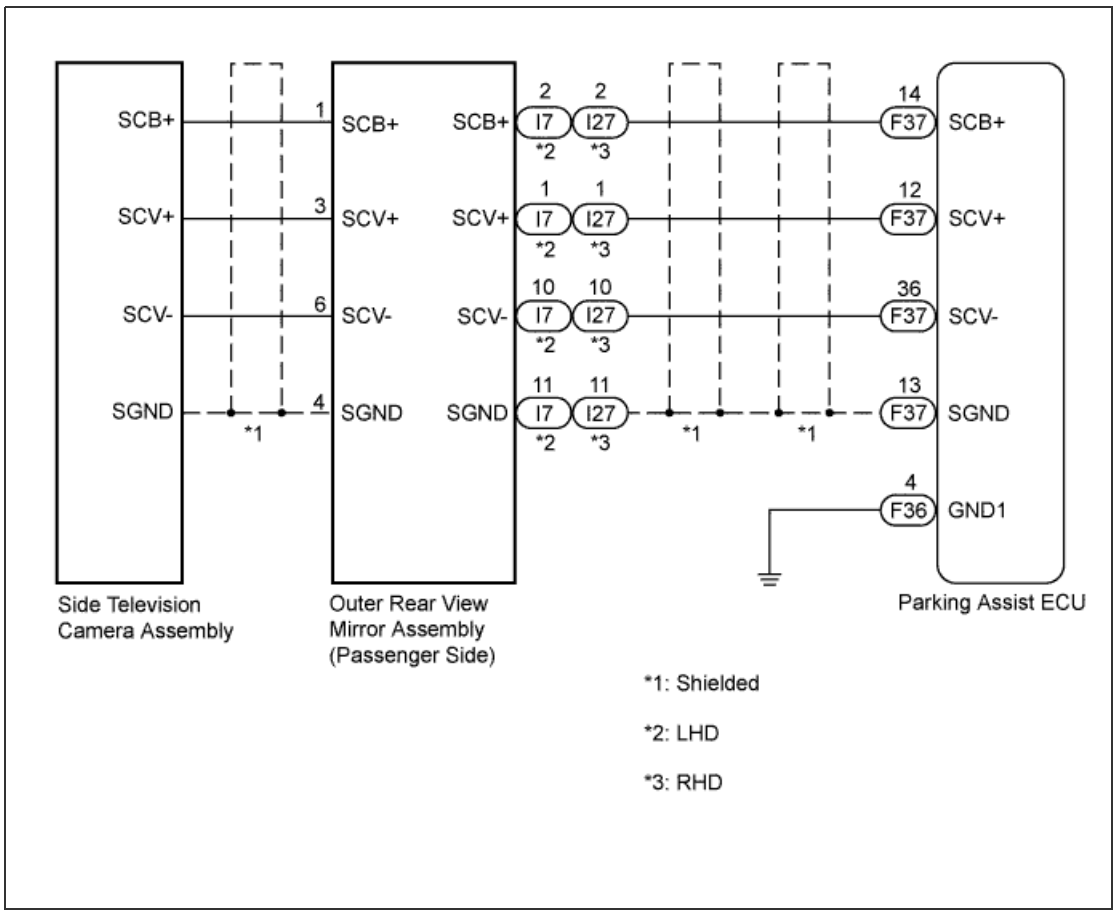
b. Check if the same malfunction recurs when the parking assist monitor, front monitor and side monitor screens are displayed.

**Result**

| Result | Proceed to |
|---|---|
| Malfunction does not reoccur (returns to normal) | A |
| Malfunction reoccurs | B |

B → PROCEED TO NEXT SUSPECTED AREA SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

A



END

**for Preparation** Click here

## DESCRIPTION

The display signal from the side television camera assembly is transmitted to the display and navigation module display via the parking assist ECU.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the display and navigation module display after the cable is disconnected from the negative (-) battery terminal, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the side monitor system may be needed (Click here).**

**HINT:**

Images are difficult to discern even in normal conditions if:

- **Noise may occur in the image while adjusting or retracting the outer rear view mirror assembly (passenger side).**
- **Noise may occur in the image depending on electrical devices used in the cabin.**
- **Noise may occur in the image if accessories that generate radio waves have been installed.**
- **The camera screen is frosted over (the image immediately after turning the engine switch on (IG) may be blurred or darker than normal).**
- **The camera lens is dirty with snow, mud, etc.**
- **A strong beam of light, such as a sunbeam or headlight, hits the camera.**
- **It is too dark around the camera (at night etc.).**
- **The ambient temperature around the camera is either too high or too low.**
- **The vehicle is tilted at a steep angle.**
- **The ambience of the camera is too bright. (When a strong light, such as a sunbeam reflected off the vehicle body, hits the camera, the image may be blurred. This is called the "SMEAR" phenomenon, peculiar to the CCD camera.)**

### 1.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - OUTER REAR VIEW MIRROR ASSEMBLY)

a. Disconnect the F37 connector from the parking assist ECU.

b. for LHD:

i. Disconnect the I7 connector from the outer rear view mirror assembly RH.

ii. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F37-36 (SCV-) - I7-10 (SCV-) | Always | Below 1 Ω |
| F37-12 (SCV+) - I7-1 (SCV+) | Always | Below 1 Ω |
| F37-13 (SGND) - I7-11 (SGND) | Always | Below 1 Ω |
| F37-14 (SCB+) - I7-2 (SCB+) | Always | Below 1 Ω |
| F37-36 (SCV-) - Body ground | Always | 10 kΩ or higher |
| F37-12 (SCV+) - Body ground | Always | 10 kΩ or higher |
| F37-13 (SGND) - Body ground | Always | 10 kΩ or higher |
| F37-14 (SCB+) - Body ground | Always | 10 kΩ or higher |

c. for RHD:

i. Disconnect the I27 connector from the outer rear view mirror assembly LH.

ii. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F37-36 (SCV-) - I27-10 (SCV-) | Always | Below 1 Ω |
| F37-12 (SCV+) - I27-1 (SCV+) | Always | Below 1 Ω |
| F37-13 (SGND) - I27-11 (SGND) | Always | Below 1 Ω |
| F37-14 (SCB+) - I27-2 (SCB+) | Always | Below 1 Ω |
| F37-36 (SCV-) - Body ground | Always | 10 kΩ or higher |
| F37-12 (SCV+) - Body ground | Always | 10 kΩ or higher |
| F37-13 (SGND) - Body ground | Always | 10 kΩ or higher |
| F37-14 (SCB+) - Body ground | Always | 10 kΩ or higher |

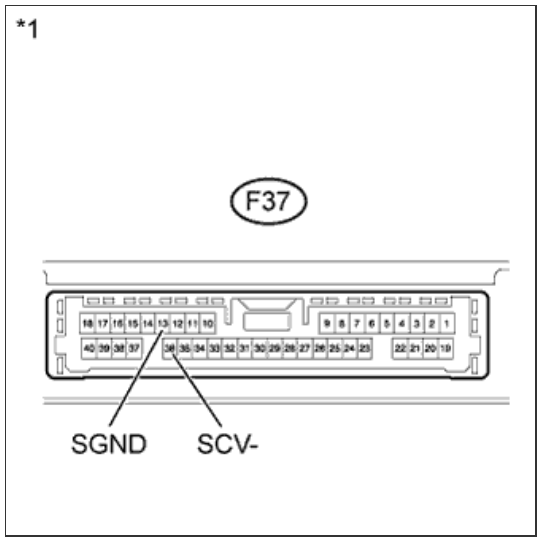
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

**2.INSPECT PARKING ASSIST ECU (SCV-, SGND)**

a. Reconnect the F37 connector to the parking assist ECU.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|

| | | |
|---|---|---|
| F37-36 (SCV-) - Body ground | Always | Below 1 Ω |
| F37-13 (SGND) - Body ground | Always | Below 1 Ω |

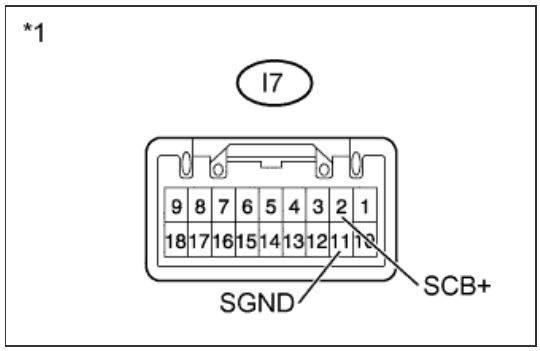
**Text in Illustration**

| | |
|---|---|
| *1 | Component with harness connected (Parking Assist ECU) |

NG → REPLACE PARKING ASSIST ECU (Click here)

OK

**3.INSPECT OUTER REAR VIEW MIRROR ASSEMBLY (SCB+, SGND)**



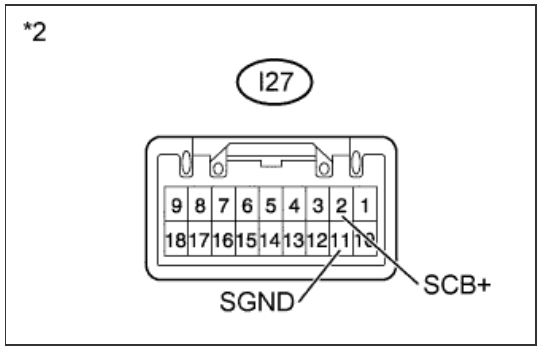
a. for LHD:

i. Disconnect the I7 connector from the outer rear view mirror assembly RH.

ii. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| I7-11 (SGND) - I7-2 (SCB+) | Engine switch on (IG) Front and side monitor main switch on | 5.8 to 7.0 V |



b. for RHD:

i. Disconnect the I27 connector from the outer rear view mirror assembly LH.

ii. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| I27-11 (SGND) - I27-2 (SCB+) | Engine switch on (IG) Front and side monitor main switch on | 5.8 to 7.0 V |

## DESCRIPTION

The display signal from the side television camera assembly is transmitted to the multi-display assembly via the parking assist ECU.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the parking assist ECU after the cable is disconnected from the negative (-) battery terminal, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the side monitor system may be needed (Click here).**

**HINT:**

Images are difficult to discern even in normal conditions if:

- **Noise may occur in the image while adjusting or retracting the outer rear view mirror assembly.**
- **Noise may occur in the image depending on electrical devices used in the cabin.**
- **Noise may occur in the image if accessories that generate radio waves have been installed.**
- **The camera screen is frosted over (the image immediately after turning the engine switch on (IG) may be blurred or darker than normal).**
- **The camera lens is dirty with snow, mud, etc.**
- **A strong beam of light, such as a sunbeam or headlight, hits the camera.**
- **It is too dark around the camera (at night etc.).**
- **The ambient temperature around the camera is either too high or too low.**
- **The vehicle is tilted at a steep angle.**
- **The ambience of the camera is too bright. (When a strong light, such as a sunbeam reflected off the vehicle body, hits the camera, the image may be blurred. This is called the "SMEAR" phenomenon, peculiar to the CCD camera.)**

### 1.CHECK SIDE MONITOR SYSTEM

a. Check if the same malfunction occurs when the parking assist monitor screen is displayed.

**Result**

| Result | Proceed to |
|---|---|
| Malfunction occurs when side monitor screen (for Driver Side) is displayed (parking assist monitor screen is normal). | A |

| | |
|---|---|
| Malfunction occurs when side monitor screen (for Front Passenger Side) is displayed (parking assist monitor screen is normal). | B |
| Malfunction occurs when parking assist monitor screen and side monitor screen are displayed | C |

| | |
|---|---|
| B | Go to step 7 |
| C | Go to step 12 |

A

**2.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - OUTER REAR VIEW MIRROR ASSEMBLY AND BODY GROUND)**

a. Disconnect the F74 and F75 parking assist ECU connectors.

b. Disconnect the I36*1 or I32*2 outer rear view mirror assembly (for Driver Side) connector.

*1: for LHD
*2: for RHD

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LHD:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-31 (DCV-) - I36-12 (DCV-) | Always | Below 1 Ω |
| F75-30 (DCV+) - I36-1 (DCV+) | Always | Below 1 Ω |
| F75-29 (DGND) - I36-13 (DGND) | Always | Below 1 Ω |
| F75-28 (DCB+) - I36-2 (DCB+) | Always | Below 1 Ω |
| F74-4 (GND1) - Body ground | Always | Below 1 Ω |
| F75-31 (DCV-) - Body ground | Always | 10 kΩ or higher |
| F75-30 (DCV+) - Body ground | Always | 10 kΩ or higher |
| F75-29 (DGND) - Body ground | Always | 10 kΩ or higher |
| F75-28 (DCB+) - Body ground | Always | 10 kΩ or higher |

**for RHD:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-31 (DCV-) - I32-12 (SCV-) | Always | Below 1 Ω |
| F75-30 (DCV+) - I32-1 (SCV+) | Always | Below 1 Ω |
| F75-29 (DGND) - I32-13 (SGND) | Always | Below 1 Ω |
| F75-28 (DCB+) - I32-2 (SCB+) | Always | Below 1 Ω |
| F74-4 (GND1) - Body ground | Always | Below 1 Ω |
| F75-31 (DCV-) - Body ground | Always | 10 kΩ or higher |
| F75-30 (DCV+) - Body ground | Always | 10 kΩ or higher |
| F75-29 (DGND) - Body ground | Always | 10 kΩ or higher |
| F75-28 (DCB+) - | | |

| | | |
|---|---|---|
| Body ground | Always | 10 kΩ or higher |

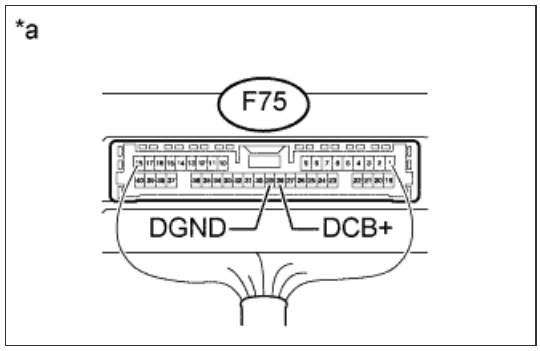
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 3.CHECK PARKING ASSIST ECU (DCB+, DGND)

a. Reconnect the F74 and F75 parking assist ECU connectors.

b. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-29 (DGND) - Body ground | Always | Below 1 Ω |

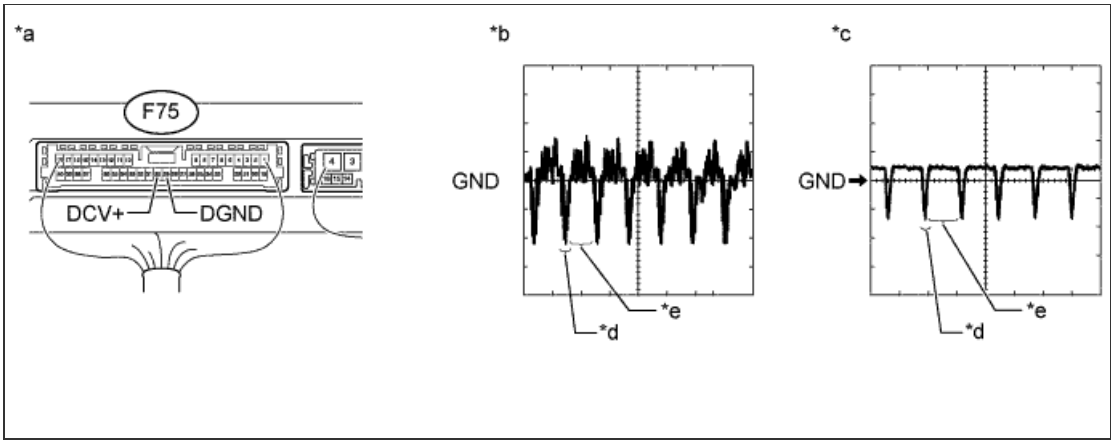
c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-28 (DCB+) - F75-29 (DGND) | Engine switch on (IG), front and side monitor main switch assembly on | 5.5 to 7.05 V |

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected (Parking Assist ECU) |



NG → REPLACE PARKING ASSIST ECU (Click here)

OK

## 4.CHECK OUTER REAR VIEW MIRROR ASSEMBLY (DCV+, DGND OR SCV+, SGND)

a. Reconnect the I36*1 or I32*2 outer rear view mirror assembly (for Front Passenger Side) connector.

*1: for LHD
*2: for RHD

**Text in Illustration**

| | | | |
|---|---|---|---|
| | | | |

| | | | |
|---|---|---|---|
| *a | Component with harness connected (Parking Assist ECU) | *b | Waveform A |
| *c | Waveform B | *d | Synchronization Signal |
| *e | Video Waveform | - | - |

**HINT:**

- **A waterproof connector is used for the side television camera assembly (for Driver Side). Therefore, inspect the waveform at the parking assist ECU with the connector connected.**
- **The video waveform changes according to the image sent by the side television camera assembly (for Driver Side).**

b. Measure the resistance according to the value(s) in the table below.

**OK:**
**Waveform is as shown in the illustration.**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F75-30 (DCV+) - F75-29 (DGND) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |
| Condition | • Waveform A: Engine switch on (IG), front and side monitor main switch assembly on and camera lens is not covered, displaying an image<br>• Waveform B: Engine switch on (IG), front and side monitor main switch assembly on and camera lens is covered, blacking out the screen |

NG → Go to step 5

OK

REPLACE PARKING ASSIST ECU (Click here)

## 5.REPLACE SIDE TELEVISION CAMERA ASSEMBLY

a. Replace the side television camera assembly (for Driver Side) with a new or normally functioning one ( Click here).

NEXT

## 6.CONFIRM SYMPTOMS

a. Check if the same malfunction recurs when the side monitor screen is displayed.

**Result**

| Result | Proceed to |
|---|---|
| Malfunction does not reoccur (returns to normal) | A |
| Malfunction reoccurs | B |

B → REPLACE OUTER REAR VIEW MIRROR ASSEMBLY (Click here)

A

END (SIDE TELEVISION CAMERA ASSEMBLY IS DEFECTIVE)

## 7.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - OUTER REAR VIEW MIRROR ASSEMBLY AND BODY GROUND)

a. Disconnect the F74 and F75 parking assist ECU connectors.

b. Disconnect the I35*1 or I33*2 outer rear view mirror assembly (for Front Passenger Side) connector.

*1: for LHD

*2: for RHD

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

**for LHD:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-34 (SCV-) - I35-12 (SCV-) | Always | Below 1 Ω |
| F75-10 (SCV+) - I35-1 (SCV+) | Always | Below 1 Ω |
| F75-33 (SGND) - I35-13 (SGND) | Always | Below 1 Ω |
| F75-32 (SCB+) - I35-2 (SCB+) | Always | Below 1 Ω |
| F74-4 (GND1) - Body ground | Always | Below 1 Ω |
| F75-34 (SCV-) - Body ground | Always | 10 kΩ or higher |
| F75-10 (SCV+) - Body ground | Always | 10 kΩ or higher |
| F75-33 (SGND) - Body ground | Always | 10 kΩ or higher |
| F75-32 (SCB+) - Body ground | Always | 10 kΩ or higher |

**for RHD:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-34 (SCV-) - I33-12 (DCV-) | Always | Below 1 Ω |
| F75-10 (SCV+) - I33-1 (DCV+) | Always | Below 1 Ω |
| F75-33 (SGND) - I33-13 (DGND) | Always | Below 1 Ω |
| F75-32 (SCB+) - I33-2 (DCB+) | Always | Below 1 Ω |
| F74-4 (GND1) - Body ground | Always | Below 1 Ω |
| F75-34 (SCV-) - Body ground | Always | 10 kΩ or higher |
| F75-10 (SCV+) - Body ground | Always | 10 kΩ or higher |
| F75-33 (SGND) - Body ground | Always | 10 kΩ or higher |
| F75-32 (SCB+) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

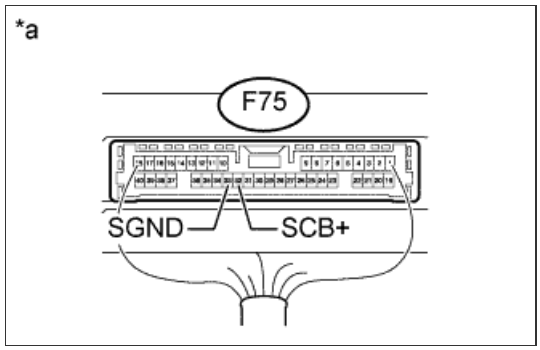
OK

**8.CHECK PARKING ASSIST ECU (SCB+, SGND)**

a. Reconnect the F74 and F75 parking assist ECU connectors.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**



| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F75-33 (SGND) - | | |

| | | |
|---|---|---|
| Body ground | Always | Below 1 Ω |

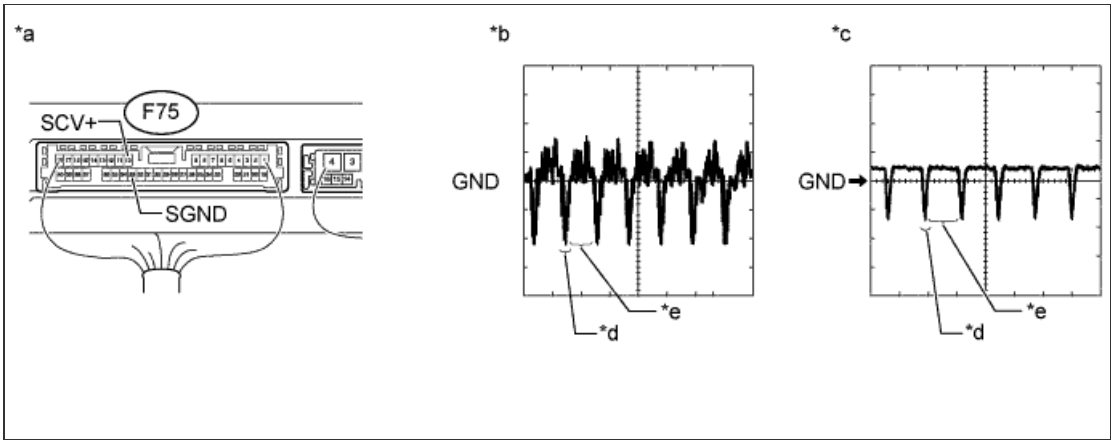
c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F75-32 (SCB+) - F75-33 (SGND) | Engine switch on (IG), front and side monitor main switch assembly on | 5.5 to 7.05 V |

**Text in Illustration**

| | |
|---|---|
| *a | Component with harness connected (Parking Assist ECU) |



NG → REPLACE PARKING ASSIST ECU (Click here)

OK

## 9.CHECK OUTER REAR VIEW MIRROR ASSEMBLY (SCV+, SGND OR DCV+, DGND)

a. Reconnect the I35*1 or I33*2 outer rear view mirror assembly (for Front Passenger Side) connector.

*1: for LHD
*2: for RHD

**Text in Illustration**

| | | | |
|---|---|---|---|
| *a | Component with harness connected (Parking Assist ECU) | *b | Waveform A |
| *c | Waveform B | *d | Synchronization Signal |
| *e | Video Waveform | - | - |

**HINT:**

- **A waterproof connector is used for the side television camera assembly (for Front Passenger Side). Therefore, inspect the waveform at the parking assist ECU with the connector connected.**
- **The video waveform changes according to the image sent by the side television camera assembly (for Front Passenger Side).**

b. Measure the resistance according to the value(s) in the table below.

**OK:**
**Waveform is as shown in the illustration.**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | F75-10 (SCV+) - F75-33 (SGND) |
| Tool Setting | 200 mV/DIV., 50 µsec./DIV. |

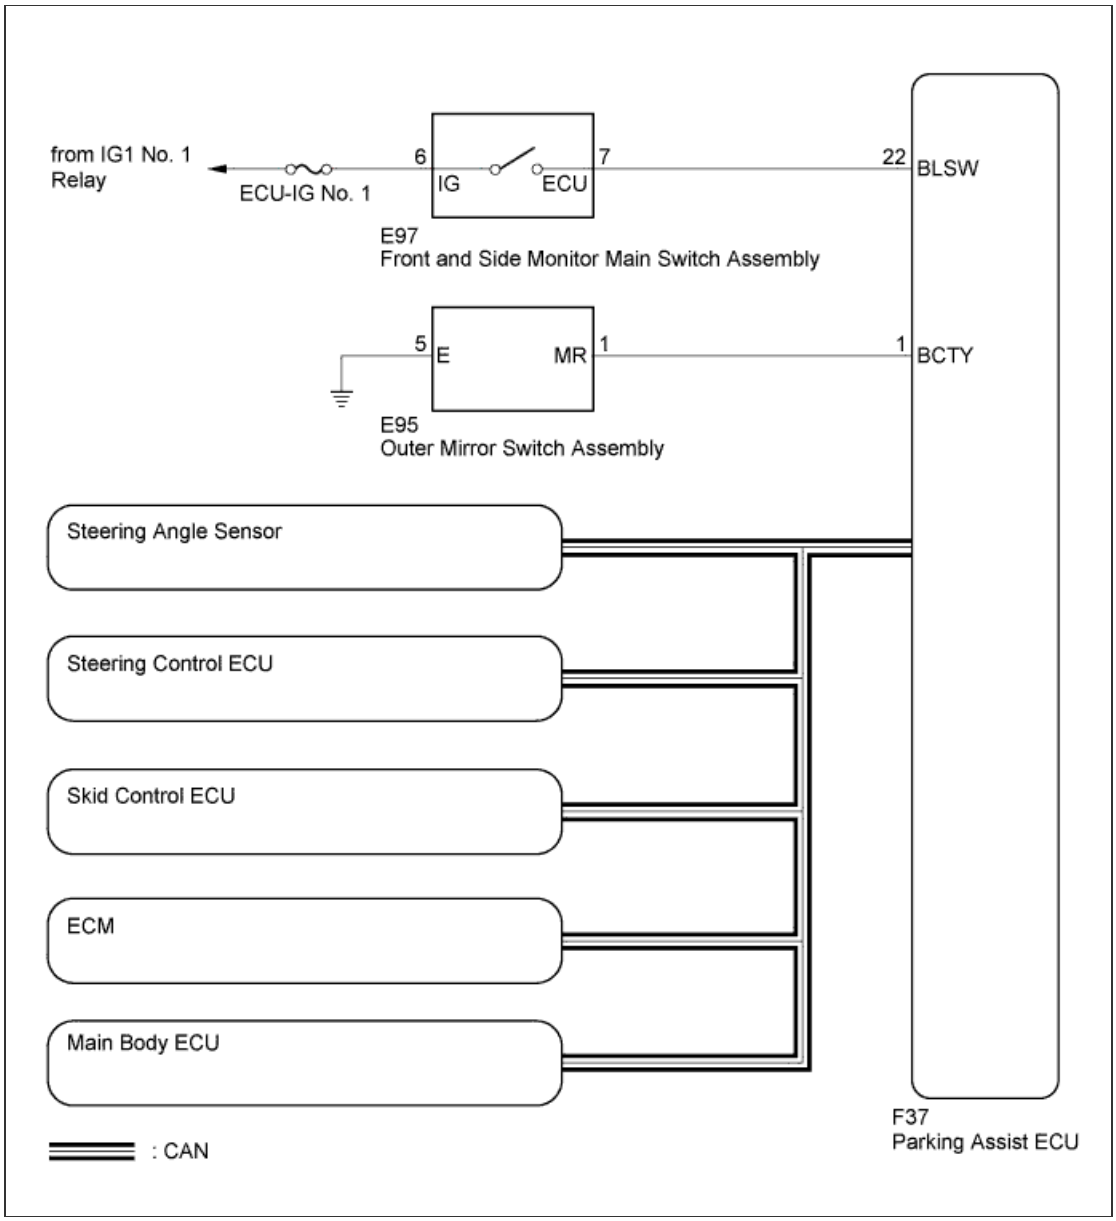
END (GVIF CABLE IS DEFECTIVE)

**for Preparation** Click here

## DESCRIPTION

On the SIGNAL CHECK screen, it is possible to check if the state of signals sent to the parking assist ECU is normal ( Click here).



**HINT:**

- **On the SIGNAL CHECK screen, "OK" (blue) is displayed for items with a normal inspection result and input state.**
- **On the SIGNAL CHECK screen, "CHK" (red) is displayed for items with an abnormal inspection result and input state.**
- **Displayed items may differ depending on the specifications.**

| Item | Signal Input Method | Detail | DTC Output when Abnormal Result is Displayed | Signal Receiver |
|---|---|---|---|---|
| SPEED | CAN communication | Speed signal input | DTC is output | Skid control ECU |
| CAMERA SW | Vehicle wire harness | Front and side monitor main switch signal input | DTC is not output | Parking assist ECU |
| BCTY | CAN communication | CAN communication condition with main body ECU | DTC is output | Main body ECU |
| MIRROR SW | Vehicle wire harness | Outer rear view mirror retract signal input | DTC is not output | Parking assist ECU |
| SHIFT | CAN communication | Shift signal input | DTC is output | ECM |
| STR SIG | CAN communication | Steering angle sensor signal input | DTC is output | Spiral with sensor cable sub-assembly |
| WFS SET | Vehicle wire harness | Front monitor signal input<br>Side monitor signal input<br>Front and side monitor main switch signal input | DTC is not output | Parking assist ECU |
| VGRS *1 | CAN communication | VGRS signal input | DTC is output | Steering control ECU |
| DEST | CAN communication | Destination information signal input | DTC is output | Main body ECU |
| BRAND | CAN communication | Brand information signal input | DTC is output | Main body ECU |

*1: w/ VGRS

## WIRING DIAGRAM

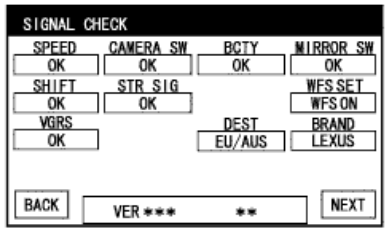
## INSPECTION PROCEDURE

**NOTICE:**

- **When "System initializing" is displayed on the display and navigation module display after the cable is disconnected from the negative (-) battery terminal, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the side monitor system may be needed (Click here).**
- **When replacing the display and navigation module display, perform vehicle contract setting (w/ G-BOOK system) ( Click here).**
- **Inspect the fuses for circuits related to this system before performing the following inspection procedure.**

### 1.CHECK DISPLAY CHECK MODE

a. Check which items display "CHK" (red) on the SIGNAL CHECK screen.



**Text in Illustration**

| | |
|---|---|
| *1 | Example |

**Result**

| Result | Proceed to |
|---|---|
| "MIRROR SW" displays "CHK" (red). | A |
| "CAMERA SW" and "WFS SET" displays "CHK" (red). | B |
| Any of "SPEED", "BCTY", "SHIFT", "STR SIG", "DEST", "VGRS" and "BRAND" display "CHK" (red). | C |

*1

B → Go to step 5

C → CHECK DTC OUTPUT (Click here)

A

## 2.INSPECT OUTER MIRROR SWITCH

a. Inspection outer mirror switch (Click here).

NG → REPLACE OUTER MIRROR SWITCH (Click here)

OK

## 3.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - OUTER MIRROR SWITCH)

a. Disconnect the E37 connector from the parking assist ECU.

b. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| E37-1 (BCTY) - E95-1 (MR) | Always | Below 1 Ω |
| E37-1 (BCTY) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

## 4.CHECK POWER MIRROR CONTROL SYSTEM (POWER RETRACT FUNCTION)

a. Operate the mirror retract switch to check if the power retract mirror function of the outer rear view mirror assembly (passenger side) operates normally (Click here).

NG → GO TO POWER MIRROR CONTROL SYSTEM (Click here)

OK

REPLACE PARKING ASSIST ECU (Click here)

## 5.INSPECT FRONT AND SIDE MONITOR MAIN SWITCH ASSEMBLY

a. Inspection front and side monitor main switch assembly ( Click here).

NG → REPLACE FRONT AND SIDE MONITOR MAIN SWITCH ASSEMBLY (Click here)

OK

## 6.CHECK HARNESS AND CONNECTOR (PARKING ASSIST ECU - MAIN SWITCH ASSEMBLY)

a. Disconnect the F37 connector from the parking assist ECU.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|

| | | |
|---|---|---|
| E97-6 (IG) - Body ground | Engine switch on (IG) | 11 to 14 V |

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F37-22 (BLSW) - Body ground | Always | 10 kΩ or higher |
| E97-7 (ECU) - Body ground | Always | 10 kΩ or higher |
| F37-22 (BLSW) - E97-7 (ECU) | Always | Below 1 Ω |

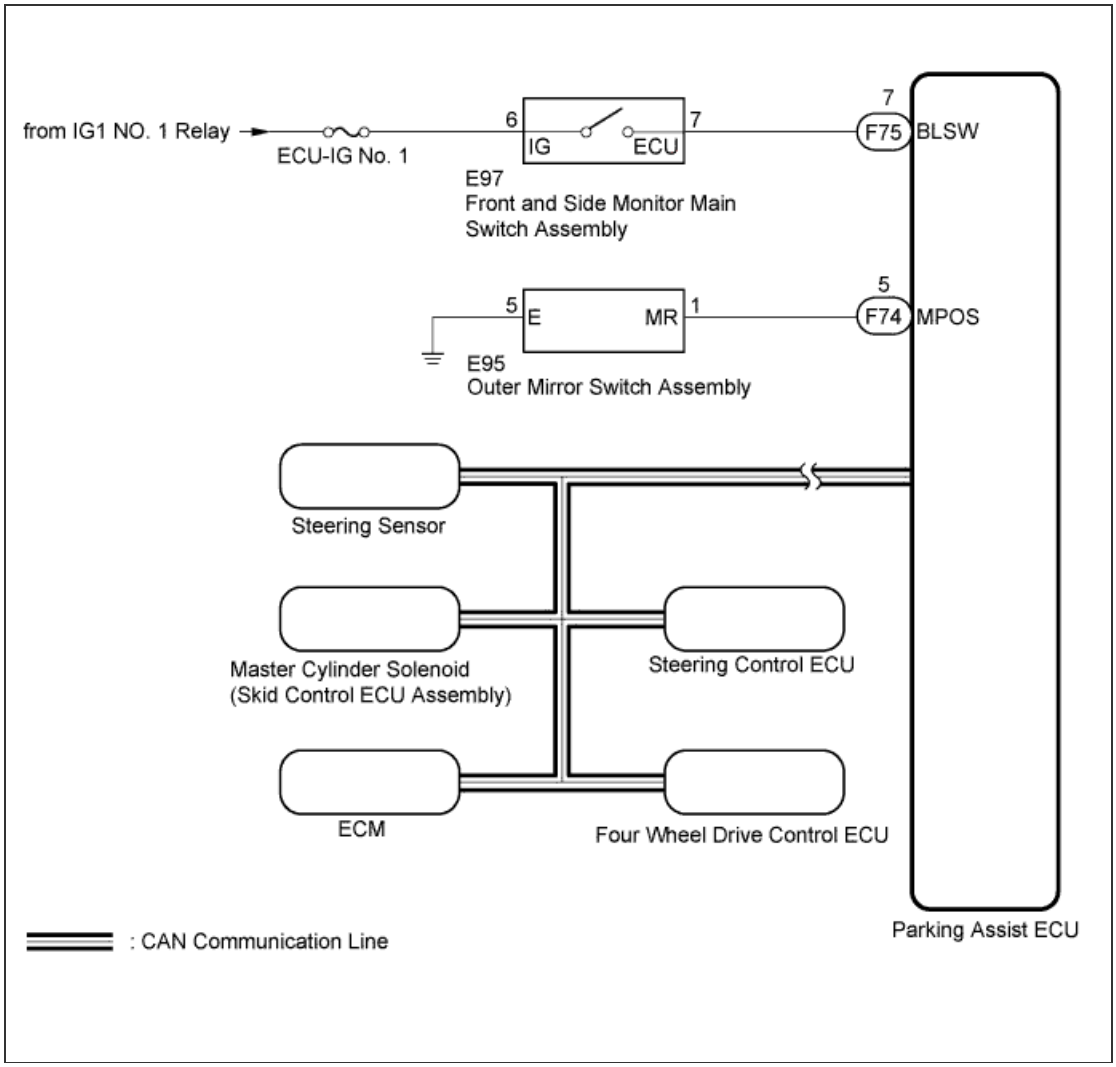
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE PARKING ASSIST ECU (Click here)

**for Preparation** Click here

## DESCRIPTION



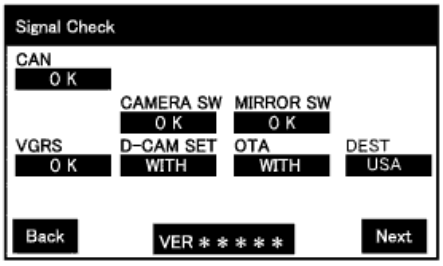
On the [Signal Check] screen, it is possible to check if the state of signals sent to the parking assist ECU is normal ( Click here).

**HINT:**

- **On the [Signal Check] screen, "OK" (blue) is displayed for items with a normal inspection result and input state.**
- **On the [Signal Check] screen, "CHK" (red) is displayed for items with an abnormal inspection result and input state.**
- **Displayed items may differ depending on the specifications.**

| Item | Signal Input Method | Detail | DTC Output when Abnormal Result is Displayed |
|---|---|---|---|
| CAN | CAN communication | Speed signal input | DTC is output |
| CAMERA SW | Vehicle wire harness | Front and side monitor main switch signal input | DTC is not output |
| MIRROR SW | Vehicle wire harness | Outer rear view mirror retract signal input | DTC is not output |
| VGRS | CAN communication | VGRS signal input | DTC is output |
| D-CAM SET | Vehicle wire harness | Driver side camera information signal input | DTC is not output |
| OTA | Vehicle wire harness | Off-road turn assist function information signal input | DTC is not output |
| DEST | Vehicle wire harness | Destination code signal input | DTC is not output |

## WIRING DIAGRAM



## INSPECTION PROCEDURE

**NOTICE:**

- **Since the side monitor system has functions that use CAN communication system, first confirm that there is no malfunction in the communication system by inspecting the CAN communication functions in accordance with the "How to Proceed with Troubleshooting" procedures. Then, conduct the following inspection procedure.**
- **When "System initializing" is displayed on the display and navigation module display after the cable is disconnected from the negative (-) battery terminal, correct the steering angle neutral point (Click here).**
- **Depending on the parts that are replaced or operations that are performed during vehicle inspection or maintenance, calibration of other systems as well as the side monitor system may be needed (Click here).**
- **Inspect the fuses for circuits related to this system before performing the following inspection procedure.**

## 1.CHECK DISPLAY CHECK MODE

a. Check which items display "CHK" (red) on the [Signal Check] screen.

**Result**

| Result | Proceed to |
|---|---|
| "CAMERA SW" and "WFS SET" displays "CHK" (red). | A |
| "MIRROR SW" displays "CHK" (red). | B |
| "VGRS" displays "CHK" (red). | C |
| "CAN" displays "CHK" (red). | C |

**B** → Go to step 5

**C** → CHECK DTC OUTPUT (Click here)

**A**

## 2.INSPECT FRONT AND SIDE MONITOR MAIN SWITCH ASSEMBLY

a. Remove the front and side monitor main switch assembly ( Click here).

b. Inspect the front and side monitor main switch assembly ( Click here).

**NG** → REPLACE FRONT AND SIDE MONITOR MAIN SWITCH ASSEMBLY (Click here)

**OK**

## 3.CHECK HARNESS AND CONNECTOR (FRONT AND SIDE MONITOR MAIN SWITCH ASSEMBLY - PARKING ASSIST ECU AND BODY GROUND)

a. Disconnect the E97 front and side monitor main switch assembly connector.

b. Disconnect the F75 parking assist ECU assembly connector.

c. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| E97-6 (IG) - Body ground | Engine switch on (IG) | 11 to 14 V |
| E97-6 (IG) - Body ground | Engine switch off | Below 1 V |

d. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F75-7 (BLSW) - E97-7 (ECU) | Always | Below 1 Ω |

| | | |
|---|---|---|
| E97-7 (ECU) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ↓

REPLACE PARKING ASSIST ECU (**Click here**)

## 4.INSPECT OUTER MIRROR SWITCH ASSEMBLY

a. Remove the outer mirror switch assembly ( Click here).

b. Inspect the outer mirror switch assembly ( Click here).

NG → REPLACE OUTER MIRROR SWITCH ASSEMBLY (**Click here**)

OK ↓

## 5.CHECK HARNESS AND CONNECTOR (OUTER MIRROR SWITCH ASSEMBLY - PARKING ASSIST ECU)

a. Disconnect the F74 parking assist ECU connector.

b. Disconnect the E95 outer mirror switch assembly connector.

c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| F74-5 (MPOS) - E95-1 (MR) | Always | Below 1 Ω |
| F74-5 (MPOS) - Body ground | Always | 10 kΩ or higher |

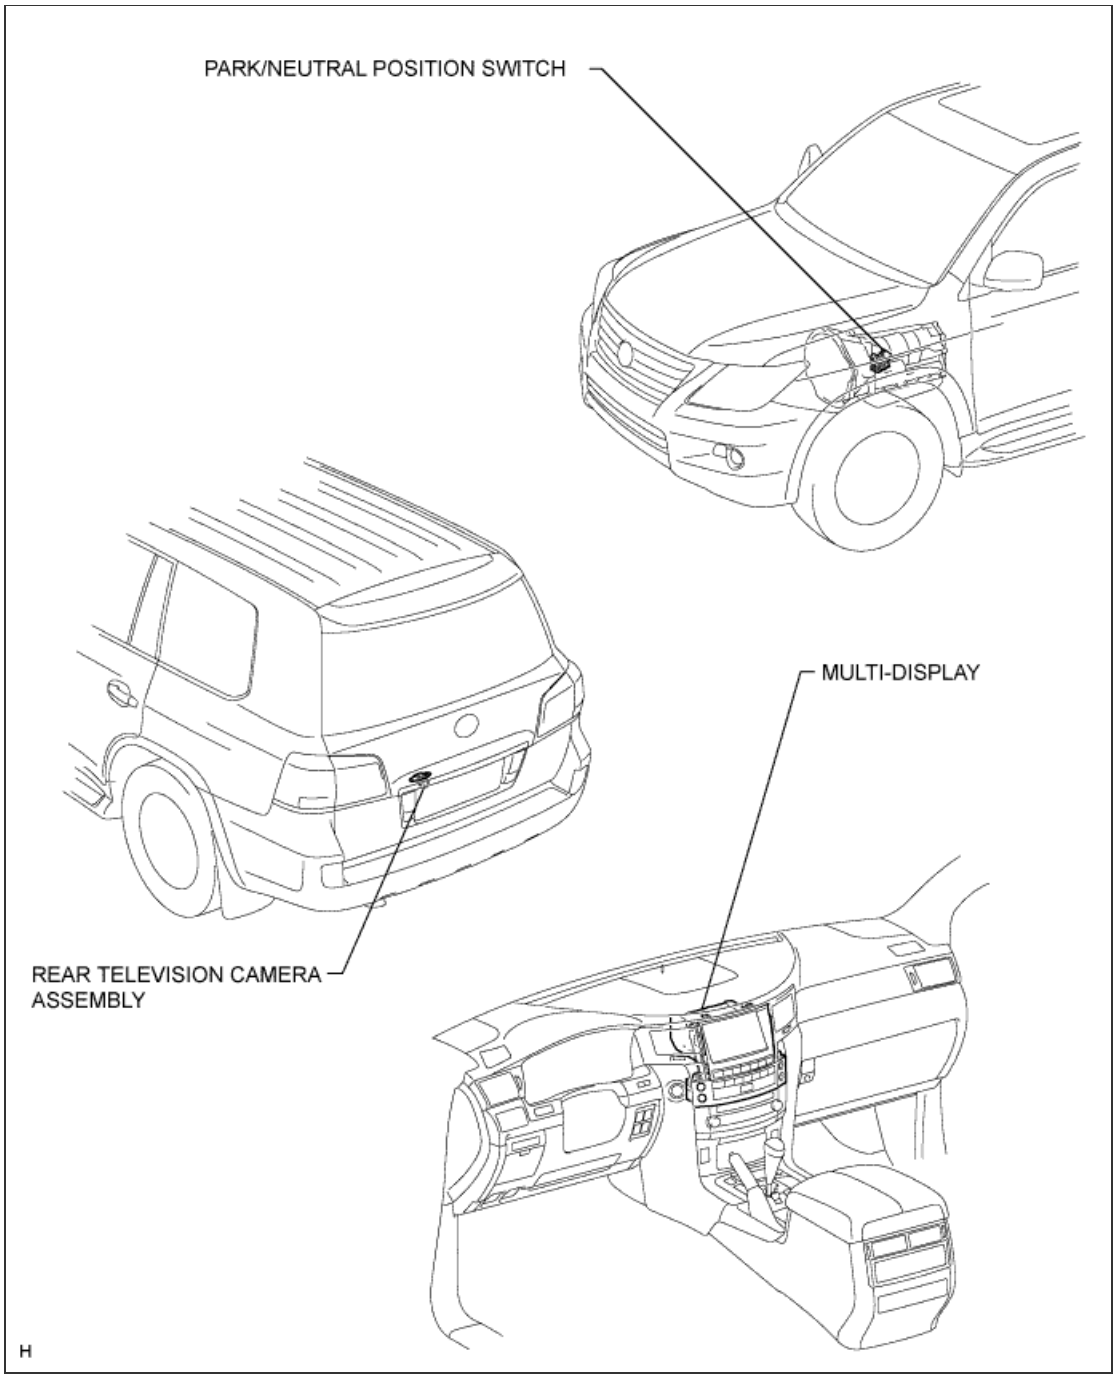
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ↓

## 6.CHECK POWER MIRROR CONTROL SYSTEM (POWER RETRACT FUNCTION)

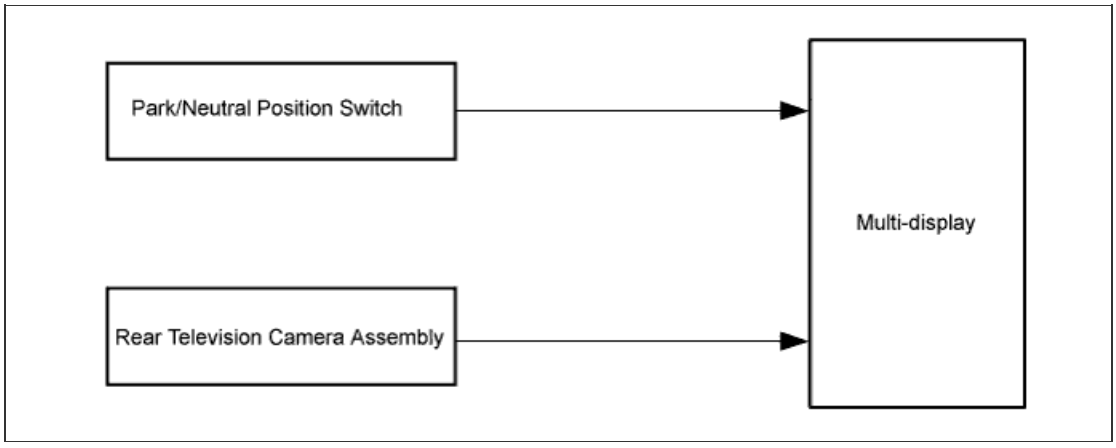
a. Check the power mirror control system (power retract function) ( Click here).

**OK:**



**Power mirror control system (power retract function) is normal.**

NG → Go to POWER MIRROR CONTROL SYSTEM (**Click here**)



OK ↓

REPLACE PARKING ASSIST ECU (**Click here**)

**for Preparation** Click here

**for Preparation** Click here

**for Preparation** Click here

## GENERAL

a. This system has a rear television camera mounted on the back door to assist the driver in parking the vehicle by displaying an image of the area behind the vehicle. The system displays the image on the multi-display.

b. This system consists of the following components:

i. Multi-display

ii. Rear television camera assembly

iii. Park/neutral position switch

## FUNCTION OF COMPONENTS

a. The multi-display controls the system by using information from the following components:

| Components | Function |
|---|---|
| Rear television camera assembly | • Mounted on the back door to transmit an image of the area behind the vehicle to the multi-display.<br>• Has a color video camera that uses a CCD (Charge Coupled Device) and a wide-angle lens. |
| Multi-display | • Receives the video signals which contain an image of the area behind the vehicle taken with the rear television camera.<br>• Performs control of the system by receiving a shift position signal from the park/neutral position switch.<br>• Displays the rear view monitor image on the display panel. |
| Park/neutral position switch | Transmits a reverse shift position signal to the multi-display. |

## OPERATION EXPLANATION

a. The park/neutral position switch outputs the R position signal to the multi-display when the shift lever is moved to R. After receiving the R position signal, the multi-display switches to the rear view monitor system.

## NOTES FOR REAR VIEW MONITOR

a. Notes for the rear view monitor.

i. The rear view monitor may not function properly if subjected to a severe blow by any hard object.

ii. Do not "scrub" the camera because it is made of resin. Scrubbing it may scratch the cover and affect the image. Prevent organic solvents, waxes, bond removing solvents, or glass coating from adhering to the cover. Clean it off immediately, and wash with water.

iii. Exposing the camera to a sudden temperature change may affect proper functioning of the camera.

iv. A clear image may not appear if the camera is dirty with snow, mud, etc. In this case, wash it with water and wipe off the lens. Use a detergent to remove dirt if necessary.

b. Images are difficult to discern even in normal conditions if:

i. The camera lens is frosted over (the image immediately after turning the engine switch on (IG) may be blurred or darker than normal).

ii. A strong beam of light, such as a sunbeam or headlight, hits the camera.

**HINT:**

When a strong light, such as a sunbeam reflected off the vehicle body, hits the camera, the image may be blurred. This is called the "SMEAR" phenomenon, peculiar to the CCD camera.

iii. It is too dark around the camera (at night, etc.).

iv. The ambient temperature around the camera is either too high or too low.

**for Preparation** Click here

**HINT:**

Use the following procedures to troubleshoot the rear view monitor system.

## 1.VEHICLE BROUGHT TO WORKSHOP

NEXT

## 2.INSPECT BATTERY VOLTAGE

**Standard voltage:**
**11 to 14 V**

a. If the voltage is below 11V, replace or recharge the battery before proceeding.

NEXT

## 3.CUSTOMER PROBLEM ANALYSIS

NEXT

## 4.CHECK FOR DTC (5C-40)

a. Refer to the DTC Check / Clear procedures of the navigation system ( Click here).

**Result**

| Result | Proceed to |
|---|---|
| DTC 5C-40 is not output | A |

## CHECK REAR TELEVISION CAMERA ASSEMBLY

a. Disconnect the S5 camera connector.

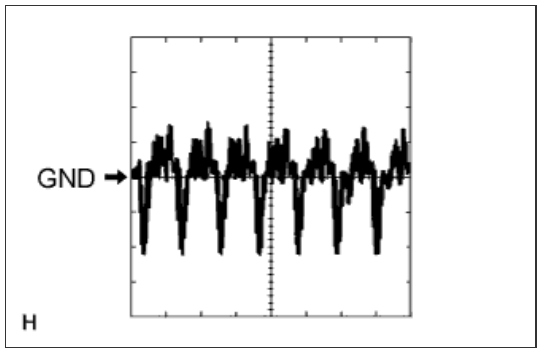
b. Measure the voltage and resistance according to the value(s) in the table below.

| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| S5-3 (CGND) - Body ground | W - Body ground | Ground | Always | Below 1 Ω |
| S5-4 (CB+) - S5-3 (CGND) | B - W | Power source | Engine switch on (IG), shift lever in R | 5.8 to 6.5 V |

If the result is not as specified, there may be a malfunction on the wire harness side.

c. Reconnect the S5 camera connector.

d. Measure the voltage according to the value(s) in the table below.



| Terminal No. (Symbol) | Wiring Color | Terminal Description | Condition | Specified Condition |
|---|---|---|---|---|
| S5-2 (CV+) - S5-1 (CV-) | R - BR | Display signal | Engine switch on (IG), shift lever in R | Waveform 1 |

If the result is not as specified, the camera may have a malfunction.

e. Using an oscilloscope, check waveform 1.

**Waveform 1 (Reference)**

| Item | Content |
|---|---|
| Terminal No. (Symbol) | S5-2 (CV+) - S5-1 (CV-) |
| Tool Setting | 0.2 V/DIV., 50 µsec./DIV. |
| Condition | Engine switch on (IG), shift lever in R |

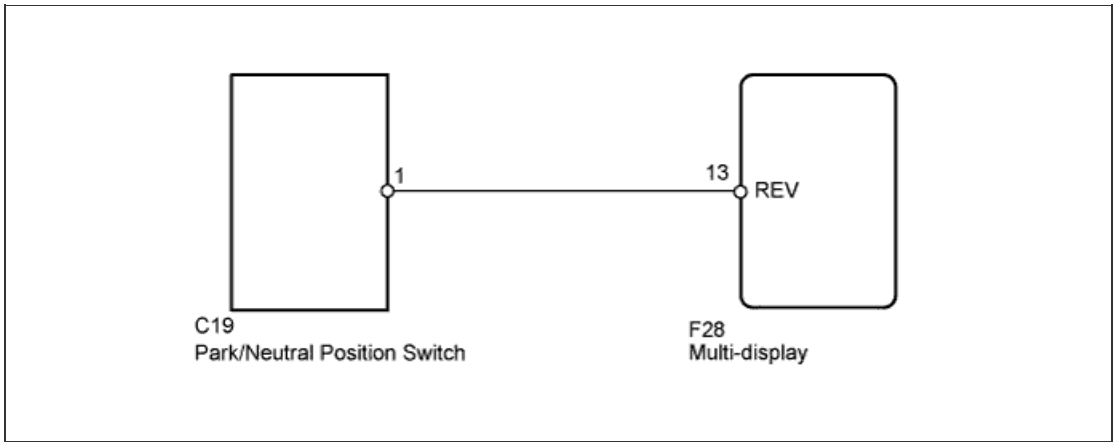
## CHECK DISPLAY AND NAVIGATION MODULE DISPLAY (w/ Navigation System)

for HDD (Click here).
for DVD (Click here).



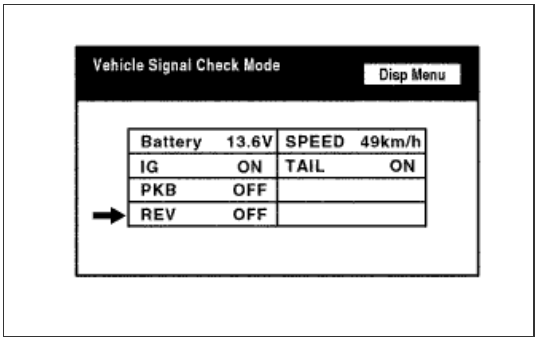
## CHECK DISPLAY AND NAVIGATION MODULE DISPLAY (w/o Navigation System) ( Click here)

**for Preparation** Click here

## DESCRIPTION

The multi-display receives a reverse signal from the park/neutral position switch.
This inspection procedure is for vehicles that are not equipped with a navigation system.

## WIRING DIAGRAM



## INSPECTION PROCEDURE

### 1.CHECK REVERSE SIGNAL (DISPLAY CHECK MODE)

a. Enter the "Display Check" mode and select "Vehicle Signal Check Mode" ( Click here).

b. Check that the display changes between ON and OFF according to the shift lever operation.

**OK:**

| Shift Lever Position | Display |
|---|---|
| R | ON |
| Except R | OFF |

**HINT:**

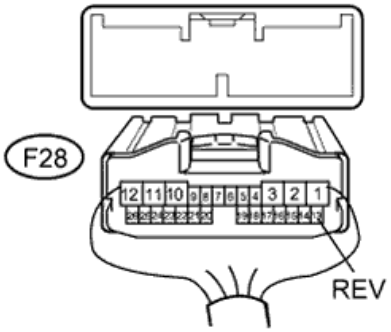
This display is updated once per second. As a result, it is normal for the display to lag behind the actual change in the switch.

NG → Go to step 2

OK

PROCEED TO NEXT CIRCUIT INSPECTION PROCEDURE IN PROBLEM SYMPTOMS TABLE ( Click here)

### 2.CHECK PARK/NEUTRAL POSITION SWITCH



a. Disconnect the F28 display connector.

b. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F28-13 (REV) - Body ground | Engine switch on (IG), shift lever in R | 11 to 14 V |
| F28-13 (REV) - Body ground | Engine switch on (IG), shift lever not in R | Below 1 V |

Rear view of wire harness connector:
(to Multi-display)

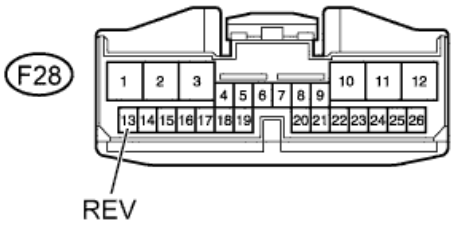
NG → Go to step 3

OK

REPLACE MULTI-DISPLAY (Click here)

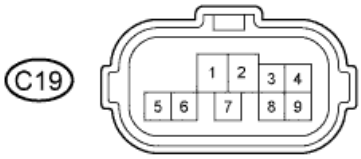
3.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - PARK/NEUTRAL POSITION SWITCH)

a. Disconnect the F28 display connector.



b. Disconnect the C19 position switch connector.

c. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

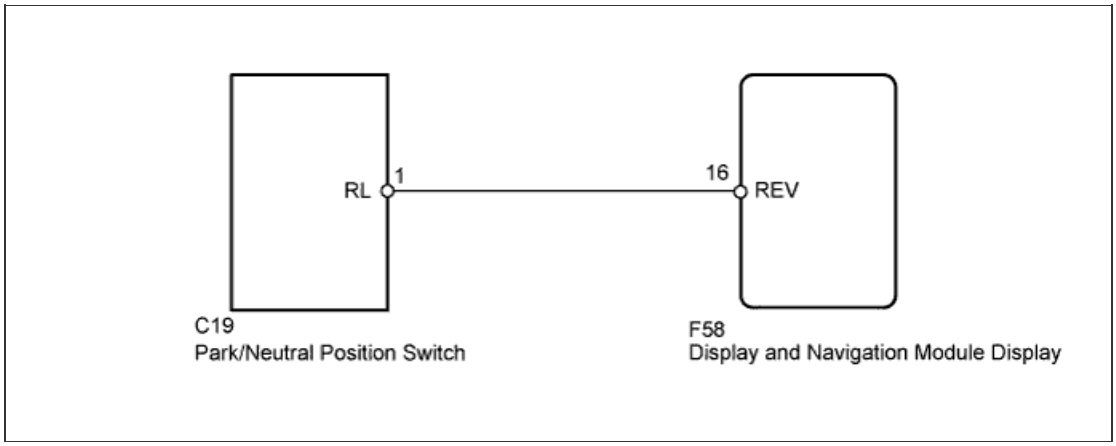
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F28-13 (REV) - C19-1 | Always | Below 1 Ω |
| F28-13 (REV) - Body ground | Always | 10 kΩ or higher |

Front view of wire harness connector:
(to Multi-display)

Front view of wire harness connector:
(to Park/Neutral Position Switch)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



REPLACE PARK/NEUTRAL POSITION SWITCH (Click here)

**for Preparation** Click here

## DESCRIPTION

The display and navigation module display receives a reverse signal from the park/neutral position switch.
This inspection procedure is for vehicles that are not equipped with a navigation system.

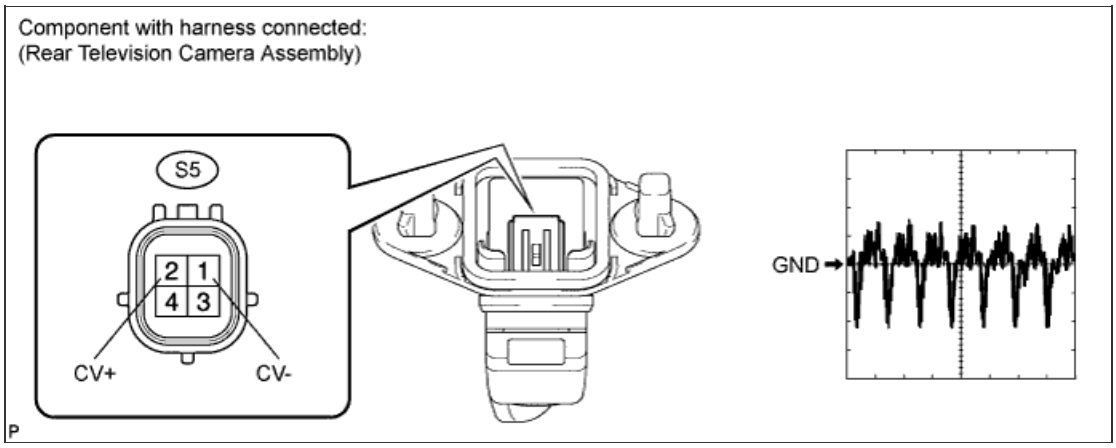
## DESCRIPTION



This is the display signal circuit of the rear television camera.
This inspection procedure is for vehicles that are not equipped with a navigation system.

## WIRING DIAGRAM

## INSPECTION PROCEDURE

### 1.CHECK REAR TELEVISION CAMERA ASSEMBLY

a. Using an oscilloscope, check the waveform.

**Measurement Condition**

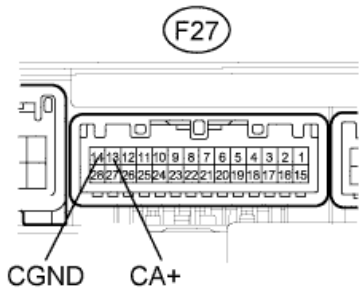
| Item | Content |
|---|---|
| Terminal No. (Symbol) | S5-2 (CV+) - S5-1 (CV-) |
| Tool Setting | 0.2 V/DIV., 50 µsec./DIV. |
| Condition | Engine switch on (IG), shift lever in R |

**OK:**

**Waveform is as shown in illustration.**

NG → REPLACE REAR TELEVISION CAMERA ASSEMBLY (Click here)

OK



## 2.CHECK MULTI-DISPLAY

a. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F27-13 (CA+) - F27-14 (CGND) | Engine switch on (IG), shift lever in R | 5.8 to 6.5 V |

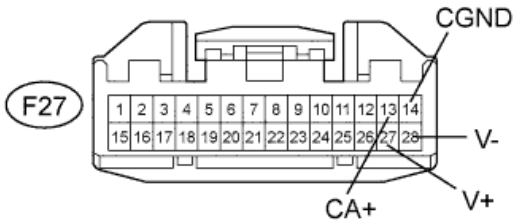
Component with harness connected:
(Multi-display)

NG → REPLACE MULTI-DISPLAY (Click here)

OK

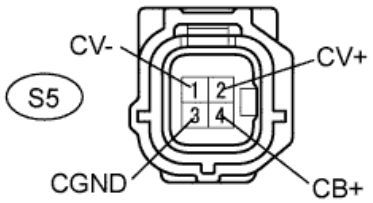
## 3.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - REAR TELEVISION CAMERA)

a. Disconnect the F27 multi-display connector.



b. Disconnect the S5 camera connector.

c. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F27-13 (CA+) - S5-4 (CB+) | Always | Below 1 Ω |
| F27-14 (CGND) - S5-3 (CGND) | Always | Below 1 Ω |
| F27-27 (V+) - S5-2 (CV+) | Always | Below 1 Ω |
| F27-28 (V-) - S5-1 (CV-) | Always | Below 1 Ω |
| F27-13 (CA+) - Body ground | Always | 10 kΩ or higher |
| F27-14 (CGND) - Body ground | Always | 10 kΩ or higher |
| F27-27 (V+) - Body ground | Always | 10 kΩ or higher |
| F27-28 (V-) - Body ground | Always | 10 kΩ or higher |

| Tool Setting | 0.2 V/DIV., 50 µsec./DIV. |
| Condition | Engine switch on (IG), shift lever in R |

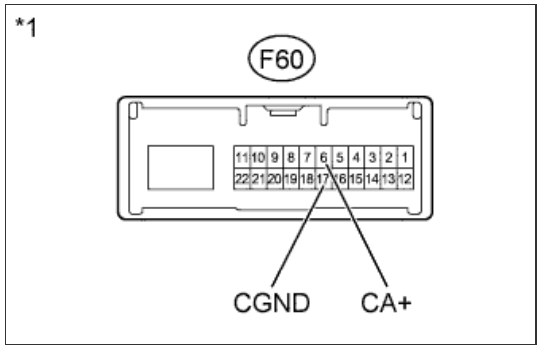
**OK:**

**Waveform is as shown in illustration.**

NG → REPLACE REAR TELEVISION CAMERA ASSEMBLY (Click here)

OK

## 2.CHECK DISPLAY AND NAVIGATION MODULE DISPLAY



a. Measure the voltage according to the value(s) in the table below.

**Standard Voltage:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F60-6 (CA+) - F60-17 (CGND) | Engine switch on (IG), shift lever in R | 5.8 to 6.5 V |

**Text in Illustration**

| | |
|---|---|
| *1 | Component with harness connected (to Display and Navigation Module Display) |

NG → REPLACE DISPLAY AND NAVIGATION MODULE DISPLAY (Click here)

OK

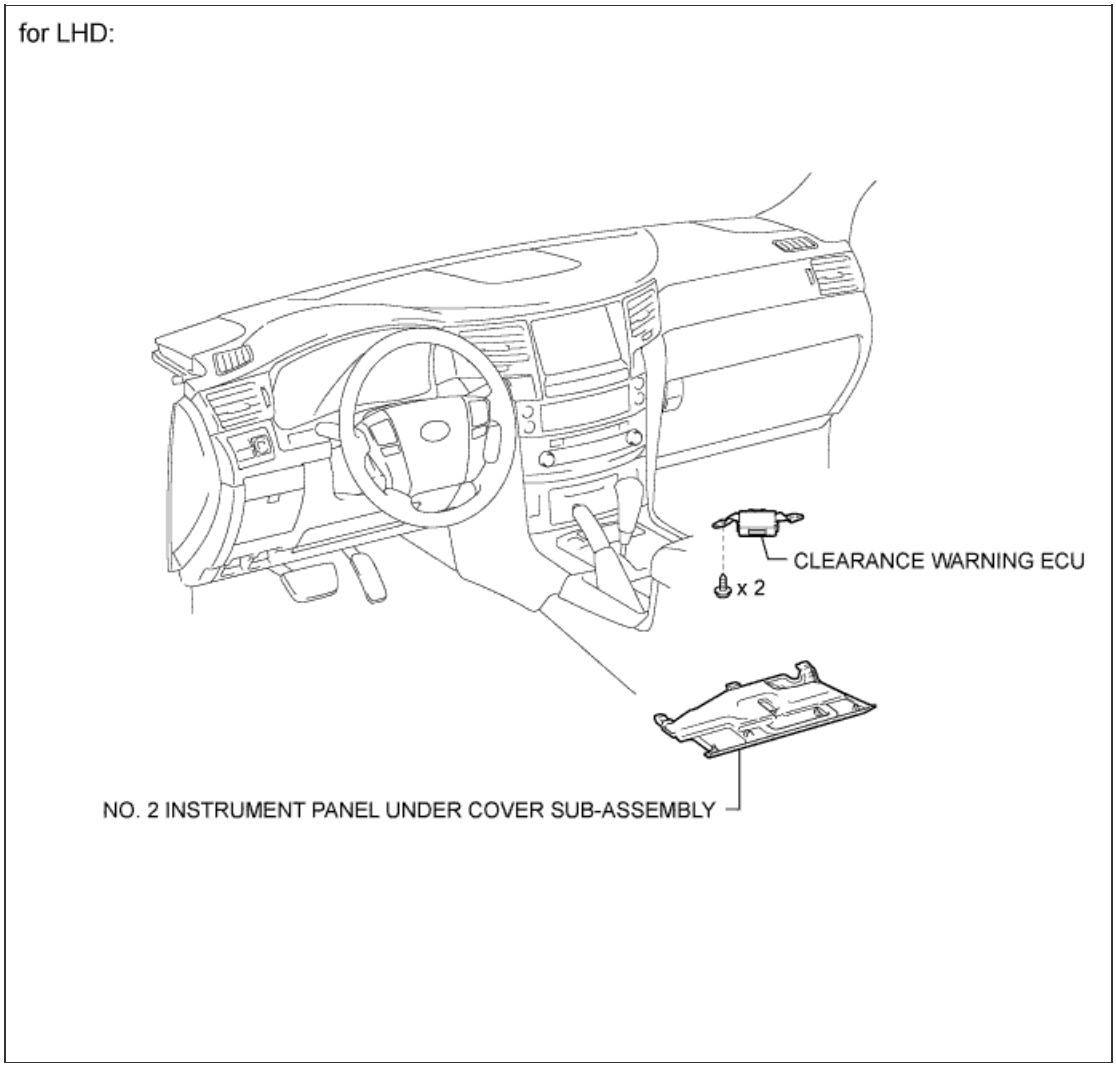
## 3.CHECK HARNESS AND CONNECTOR (DISPLAY AND NAVIGATION MODULE DISPLAY - REAR TELEVISION CAMERA)

a. Disconnect the F60 display and navigation module display connector.

b. Disconnect the S5 camera connector.

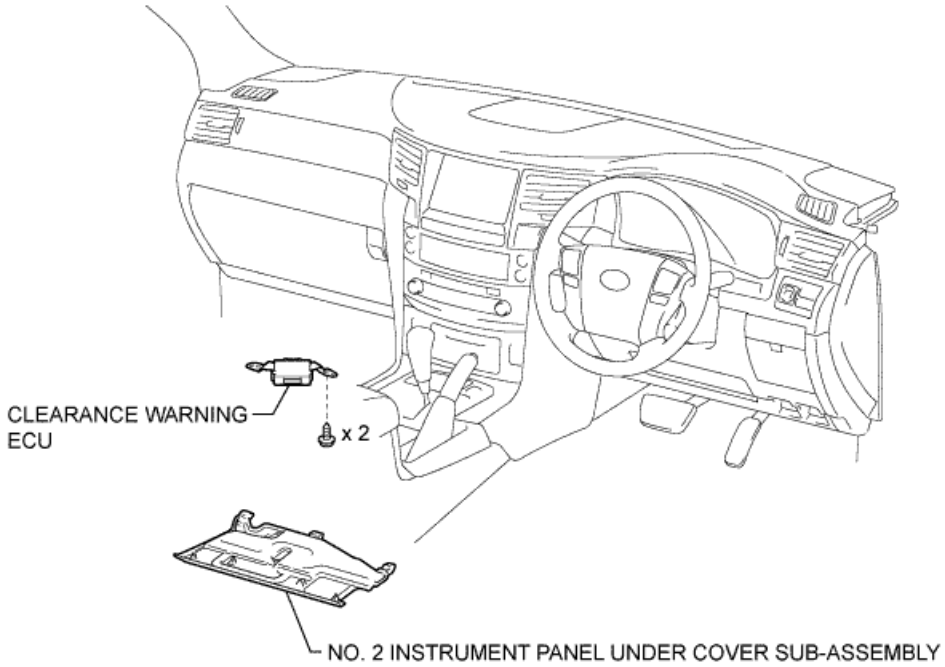
c. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**



| Tester Connection | Condition | Specified Condition |
|---|---|---|
| F60-6 (CA+) - S5-4 (CB+) | Always | Below 1 Ω |
| F60-17 (CGND) - S5-3 (CGND) | Always | Below 1 Ω |
| F60-5 (V+) - S5-2 (CV+) | Always | Below 1 Ω |
| F60-16 (V-) - S5-1 (CV-) | Always | Below 1 Ω |
| F60-6 (CA+) - Body ground | Always | 10 kΩ or higher |
| F60-17 (CGND) - Body ground | Always | 10 kΩ or higher |
| F60-5 (V+) - Body ground | Always | 10 kΩ or higher |
| F60-16 (V-) - Body ground | Always | 10 kΩ or higher |

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR



OK

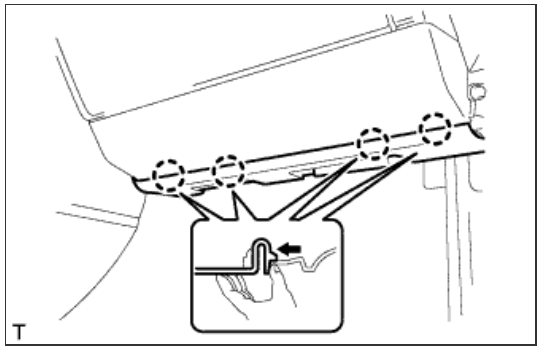
CLEARANCE WARNING ECU
x 2
NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

# CLEARANCE WARNING ECU (w/o Parking Assist Monitor System) > REMOVAL

**for Preparation** Click here

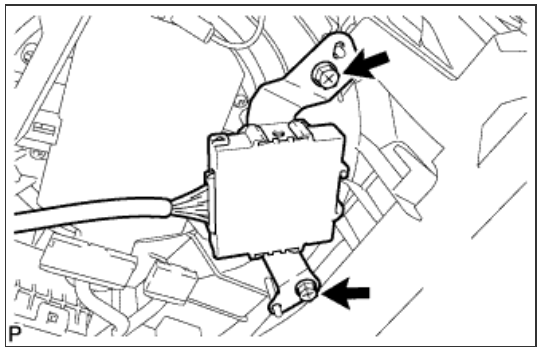


**HINT:**

- **Use the same procedures for LHD and RHD vehicles.**
- **The procedures listed below are for LHD vehicles.**

## 1. REMOVE NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

a. Detach the 4 claws.



b. Remove the under cover and disconnect the connector.

## 2. REMOVE CLEARANCE WARNING ECU

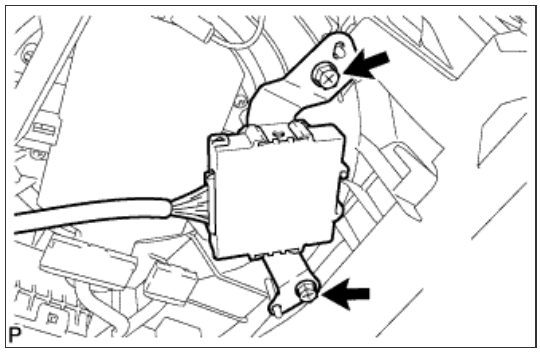
a. Disconnect the connector.

b. Remove the 2 screws and clearance warning ECU.

**for Preparation** Click here

**HINT:**

- **Use the same procedures for LHD and RHD vehicles.**
- **The procedures listed below are for LHD vehicles.**

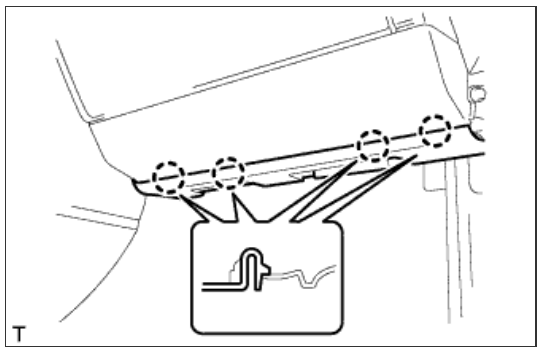


## 1. INSTALL CLEARANCE WARNING ECU

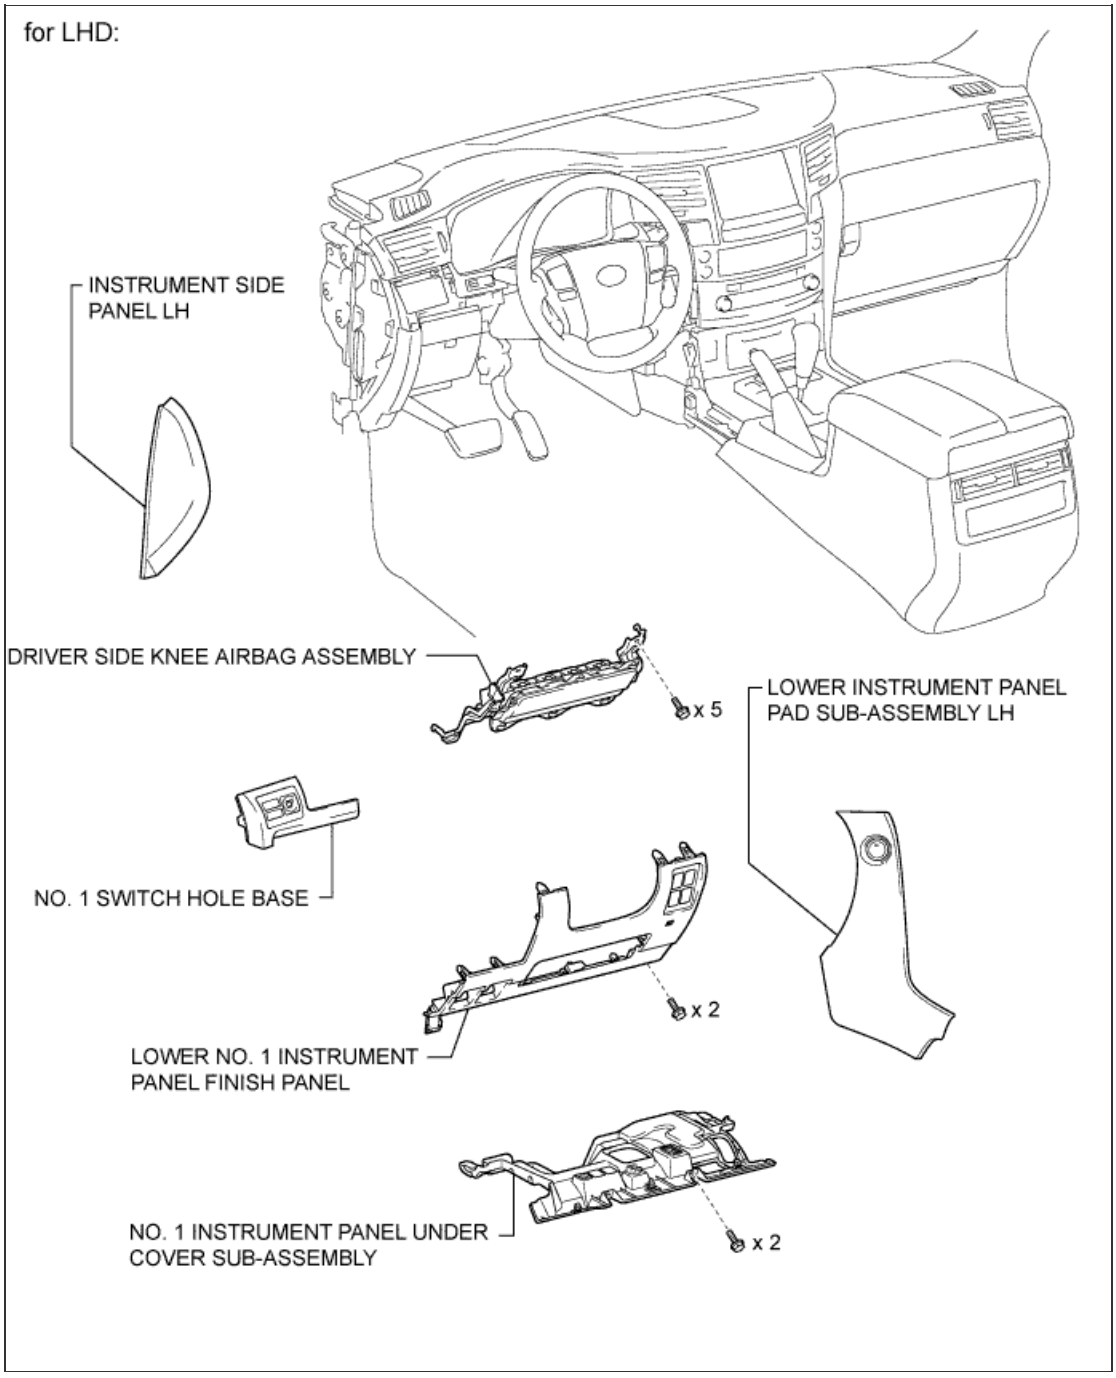
a. Install the clearance warning ECU to the blower unit with the 2 screws.

**NOTICE:**

- **Avoid any impact to the clearance warning ECU.**
- **Do not drop the ECU. If it is dropped, replace it with a new one.**

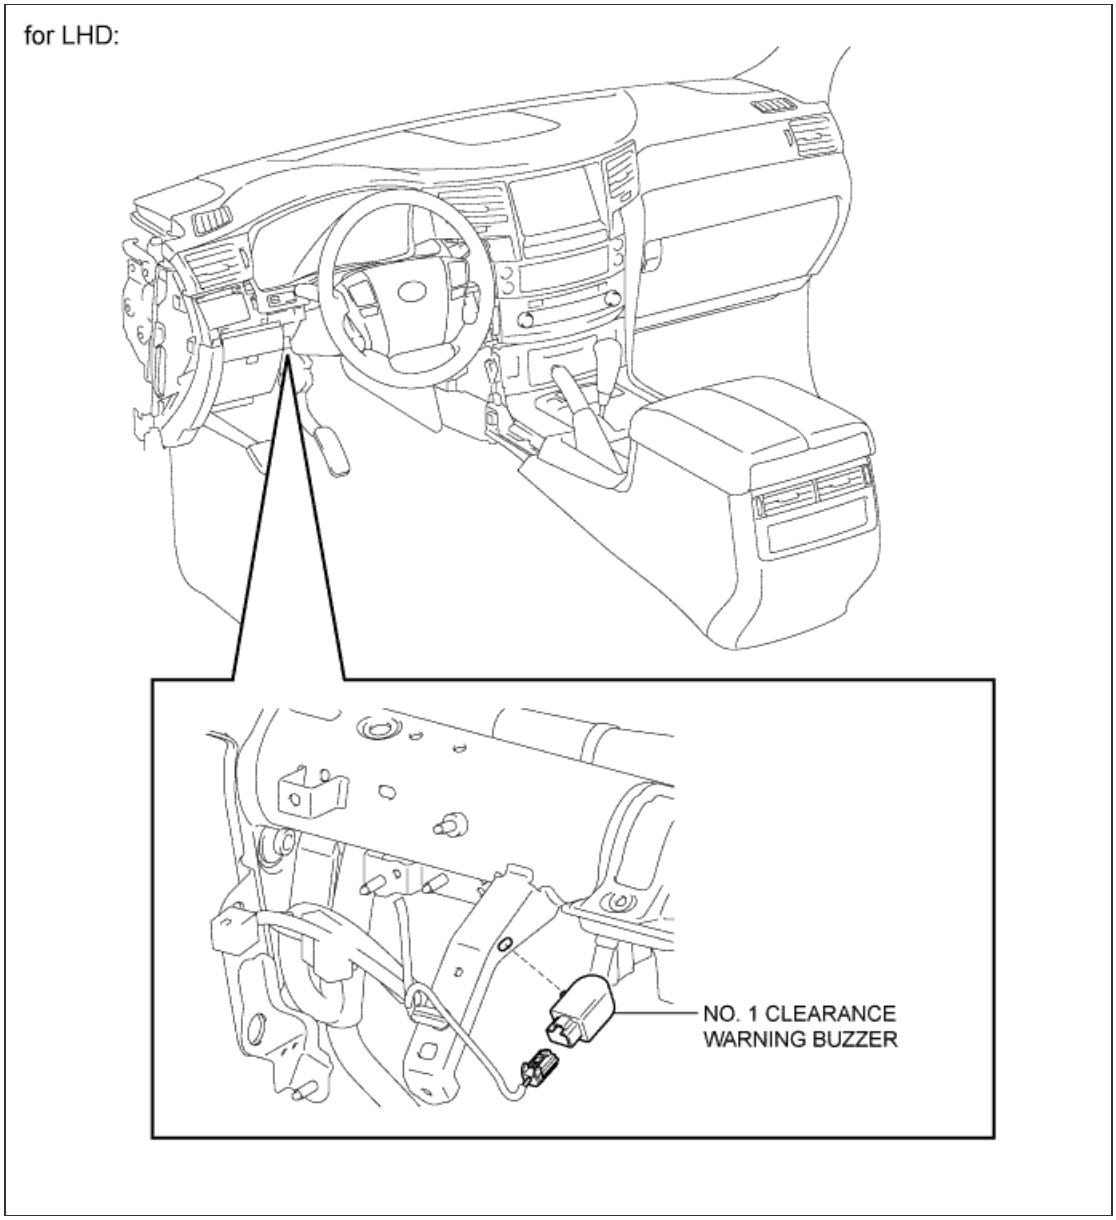


b. Connect the connector.

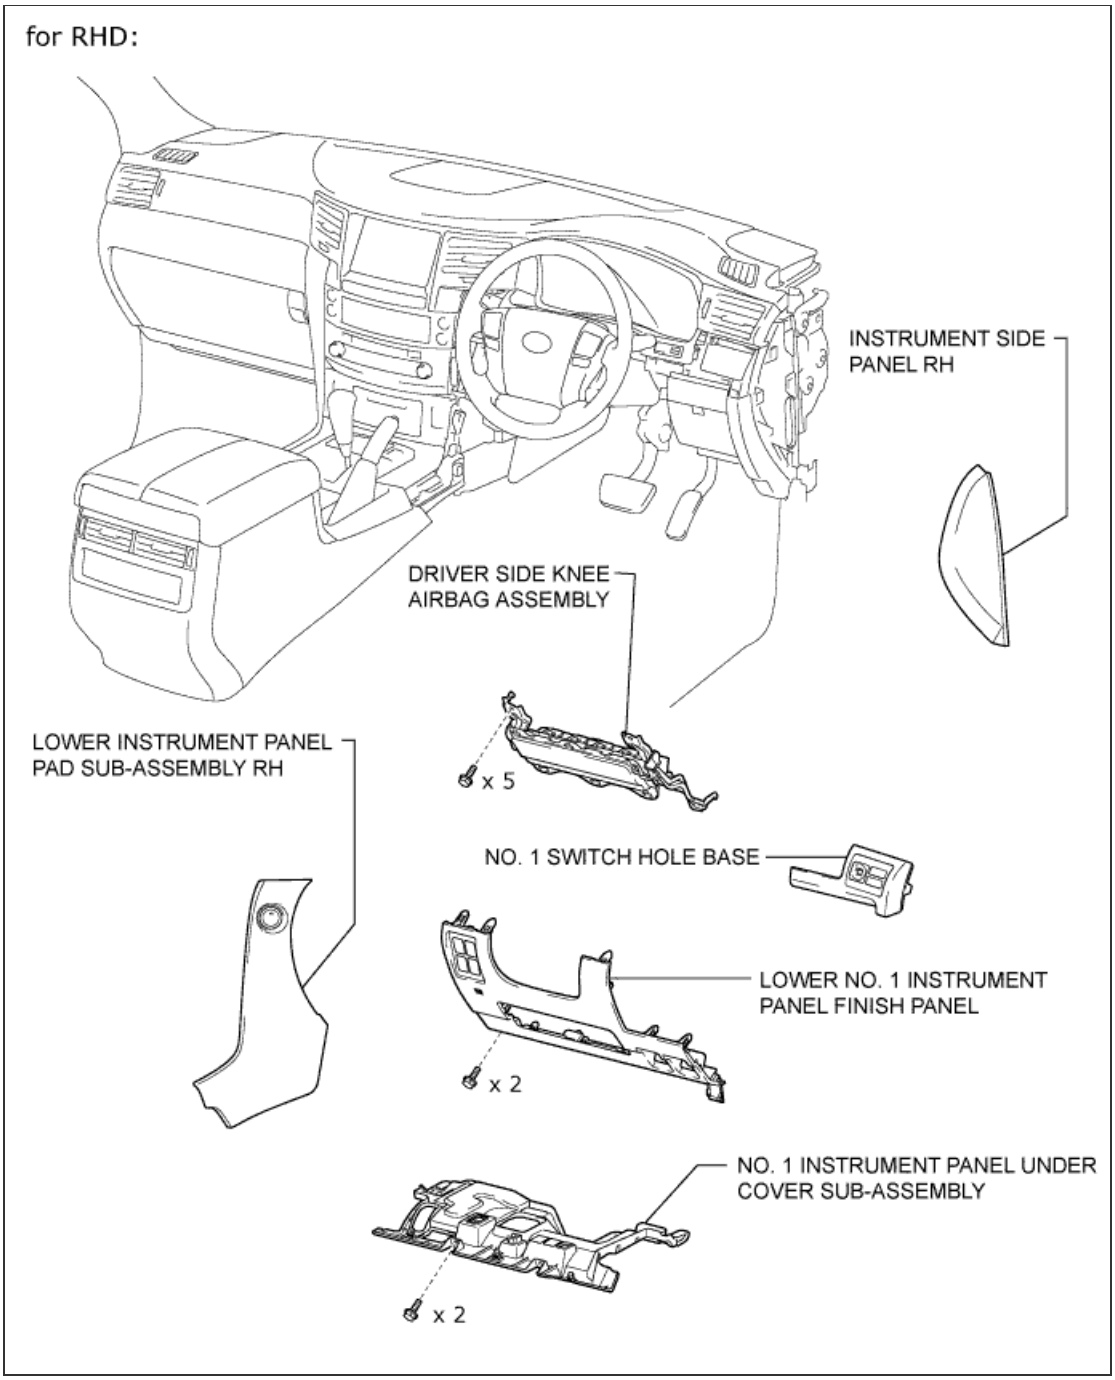


## 2. INSTALL NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

a. Connect the connector.



b. Attach the 4 claws to install the under cover.



**for Preparation** Click here

**for Preparation** Click here

**HINT:**

- **Use the same procedures for LHD and RHD vehicles.**
- **The procedures listed below are for LHD vehicles.**

## 1. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.

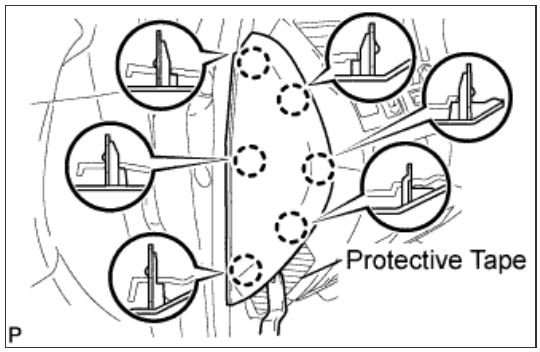
## 2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

**CAUTION:**

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

**NOTICE:**
**w/ Navigation System:**

After the engine switch is turned off, the HDD navigation system requires approximately 6 minutes to record various types of memory and settings. As a result, after turning the engine switch off, wait 6 minutes or more before disconnecting the cable from the negative (-) battery terminal.

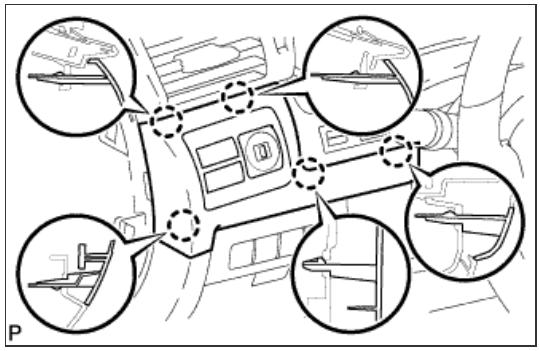


**NOTICE:**

When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).

## 3. REMOVE INSTRUMENT SIDE PANEL LH

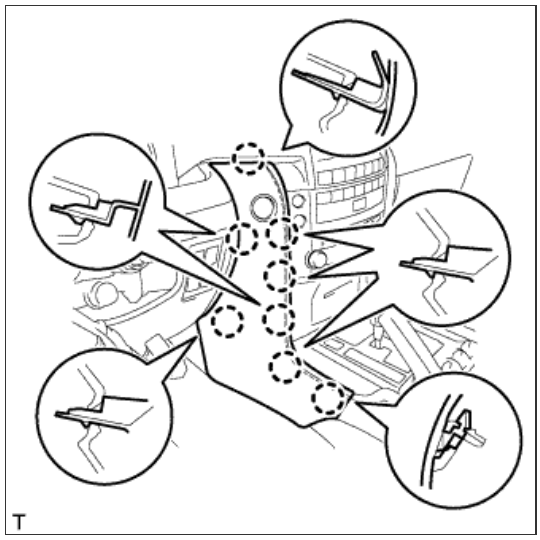
a. Place protective tape as shown in the illustration.



b. Using a moulding remover, detach the 6 claws and remove the side panel.

## 4. REMOVE NO. 1 SWITCH HOLE BASE

a. Detach the 5 claws.

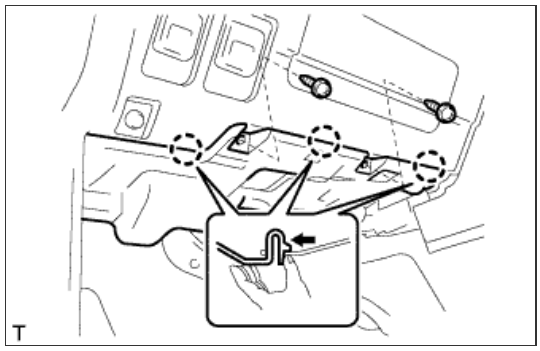


b. Disconnect the connectors and remove the switch hole base.

## 5. REMOVE LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

a. Detach the 8 claws.

b. Disconnect the connector and remove the panel pad.

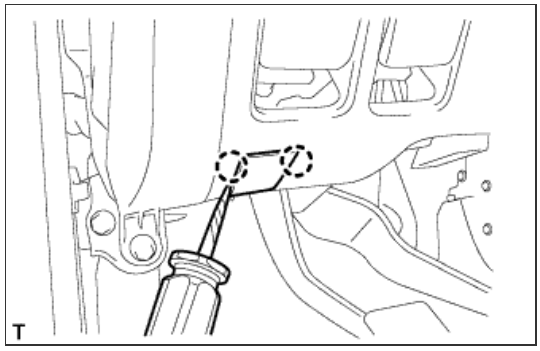


## 6. REMOVE NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

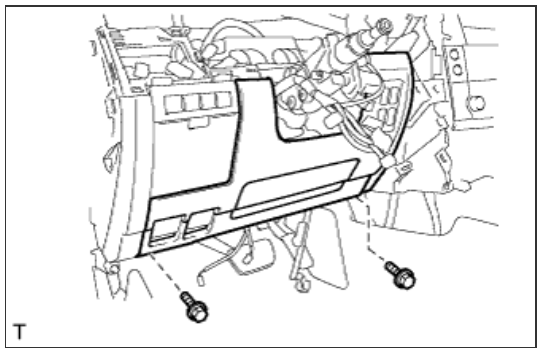
a. Remove the 2 screws.

b. Detach the 3 claws.

c. Remove the under cover and disconnect the connectors.

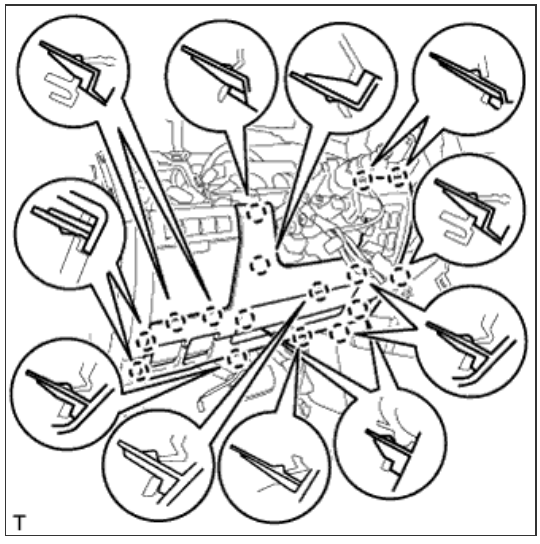


## 7. REMOVE LOWER NO. 1 INSTRUMENT PANEL FINISH PANEL

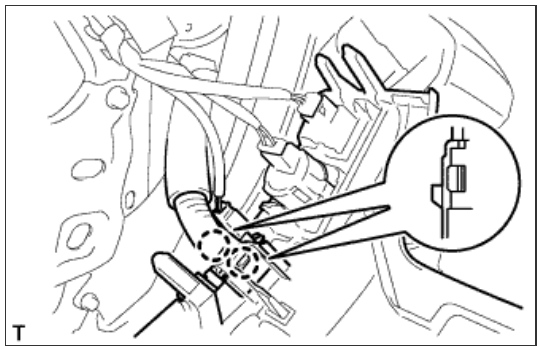


a. Using a screwdriver, detach the 2 claws and open the hole cover.

**HINT:**

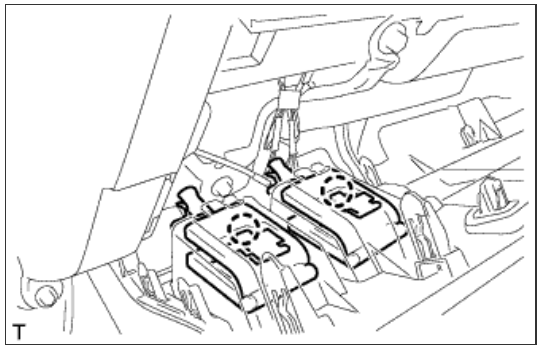


Tape the screwdriver tip before use.



b. Remove the 2 bolts.

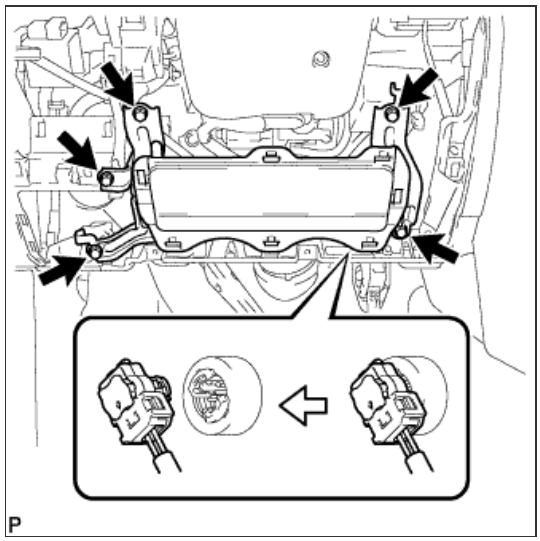
c. Detach the 16 claws.



d. Detach the 2 claws and remove the sensor.

e. Detach the 2 claws and disconnect the 2 control cables.

f. Remove the finish panel and then disconnect the connectors.

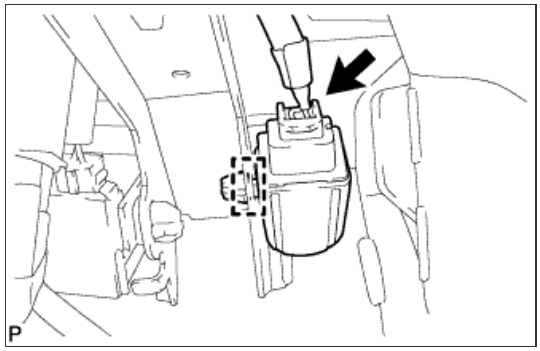


## 8. REMOVE DRIVER SIDE KNEE AIRBAG ASSEMBLY

a. Remove the 5 bolts and driver side knee airbag.

b. Disconnect the connector.

**NOTICE:**



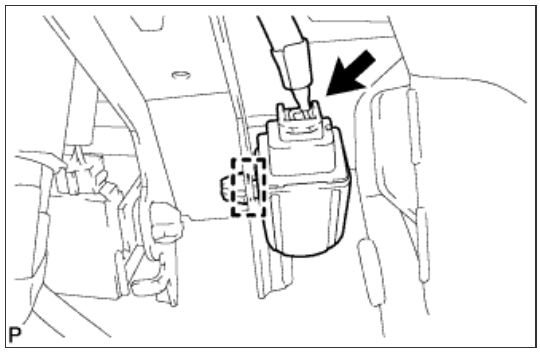
When handling the airbag connector, take care not to damage the airbag wire harness.

## 9. REMOVE NO. 1 CLEARANCE WARNING BUZZER

a. Disconnect the connector.

b. Using a clip remover, detach the clamp and remove the No. 1 clearance warning buzzer.

**for Preparation** Click here



**HINT:**

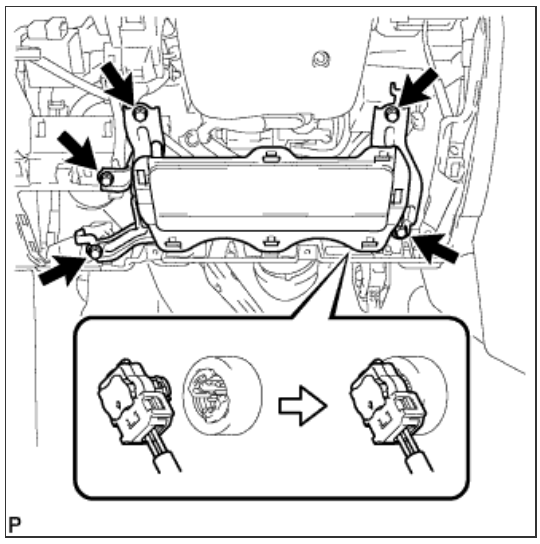
- **Use the same procedures for LHD and RHD vehicles.**
- **The procedures listed below are for LHD vehicles.**

## 1. INSTALL NO. 1 CLEARANCE WARNING BUZZER

a. Attach the clamp to install the No. 1 clearance warning buzzer.

b. Connect the connector.

## 2. INSTALL DRIVER SIDE KNEE AIRBAG ASSEMBLY

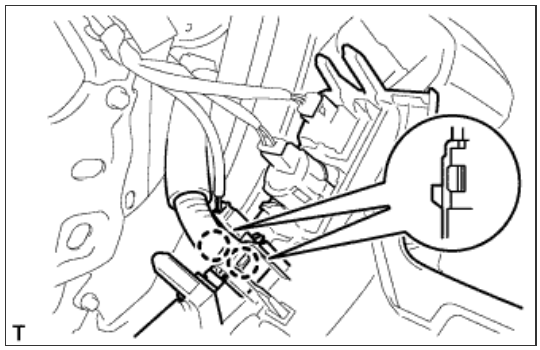


a. Connect the connector.

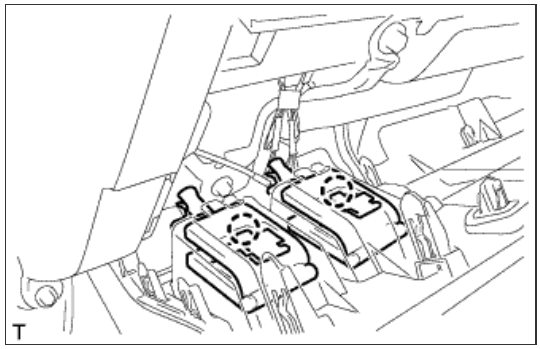
**NOTICE:**

When handling the airbag connector, take care not to damage the airbag wire harness.

b. Install the driver side knee airbag with the 5 bolts.

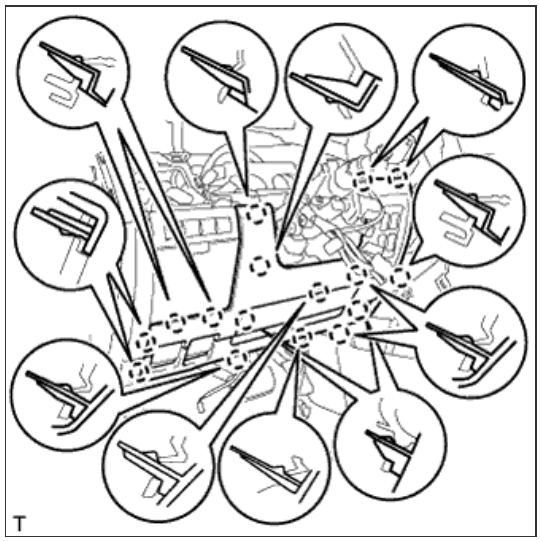


**Torque:**
**10 N*m{ 102 kgf*cm , 7 ft.*lbf }**

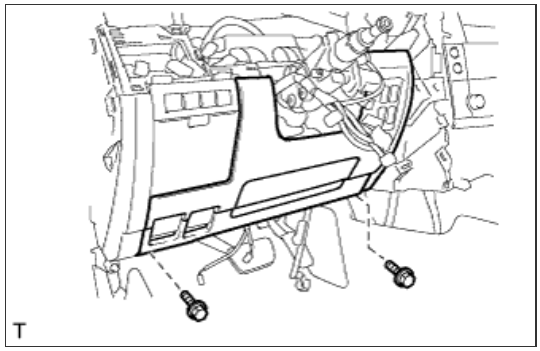


## 3. INSTALL LOWER NO. 1 INSTRUMENT PANEL FINISH PANEL

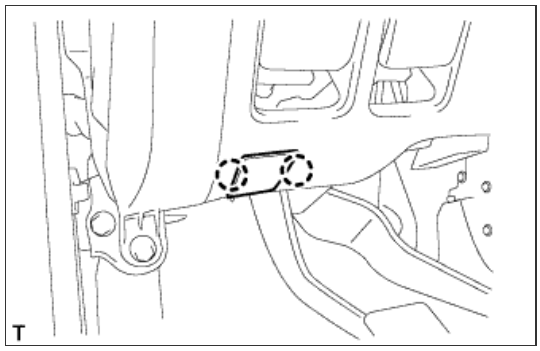
a. Connect the connectors.



b. Attach the 2 claws to install the sensor.



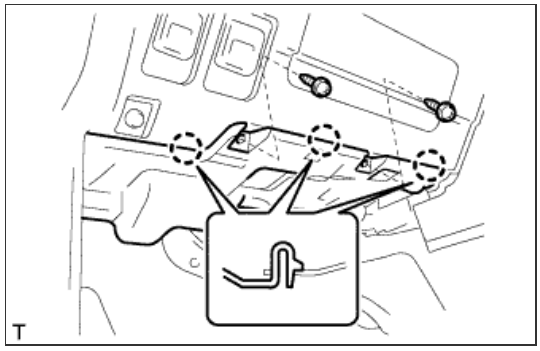
c. Attach the 2 claws to connect the 2 control cables.



d. Attach the 16 claws to install the finish panel.

e. Install the 2 bolts.

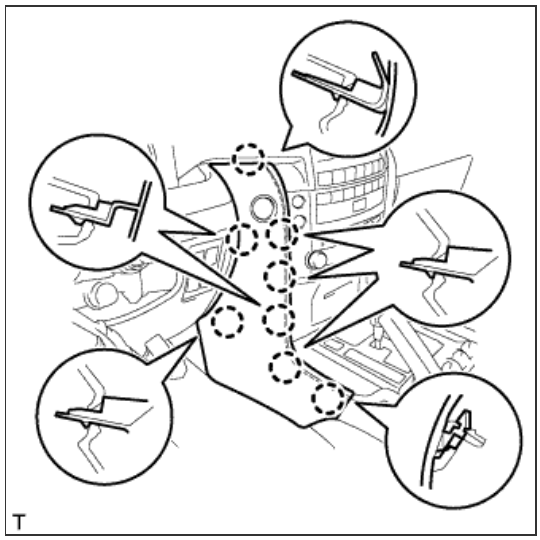
f. Attach the 2 claws to close the hole cover.



## 4. INSTALL NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

a. Connect the connectors.

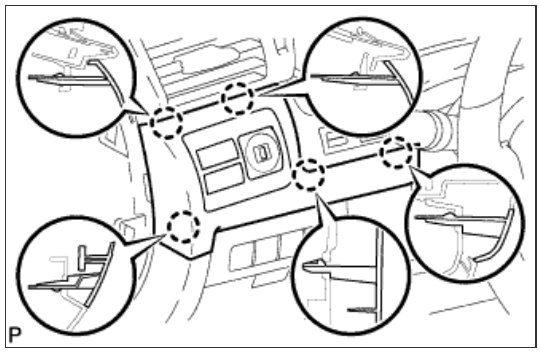
b. Attach the 3 claws to install the under cover.



c. Install the 2 screws.

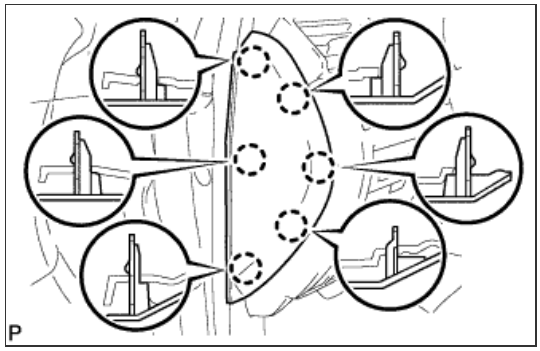
## 5. INSTALL LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

a. Connect the connector.



b. Attach the 8 claws to install the panel pad.

## 6. INSTALL NO. 1 SWITCH HOLE BASE

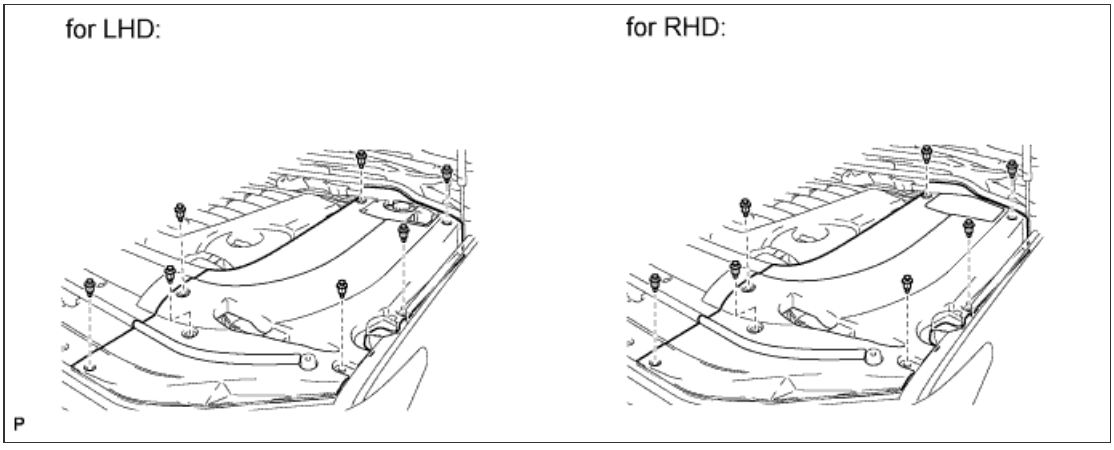


a. Connect the connectors.

b. Attach the 5 claws to install the switch hole base.

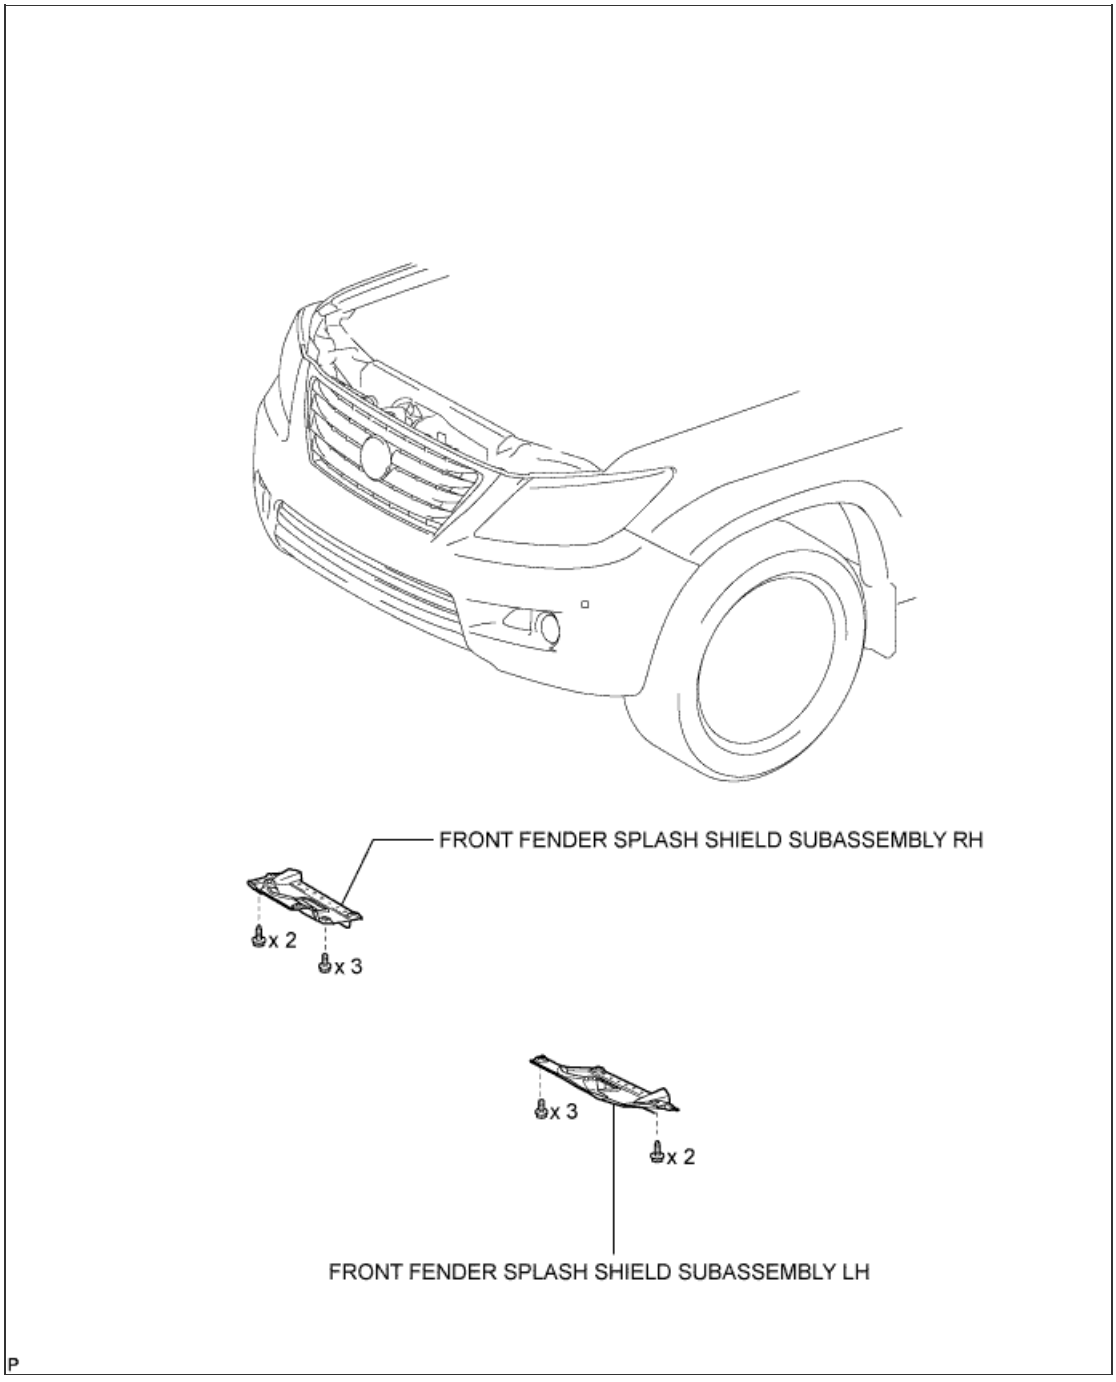
## 7. INSTALL INSTRUMENT SIDE PANEL LH

a. Attach the 6 claws to install the side panel.

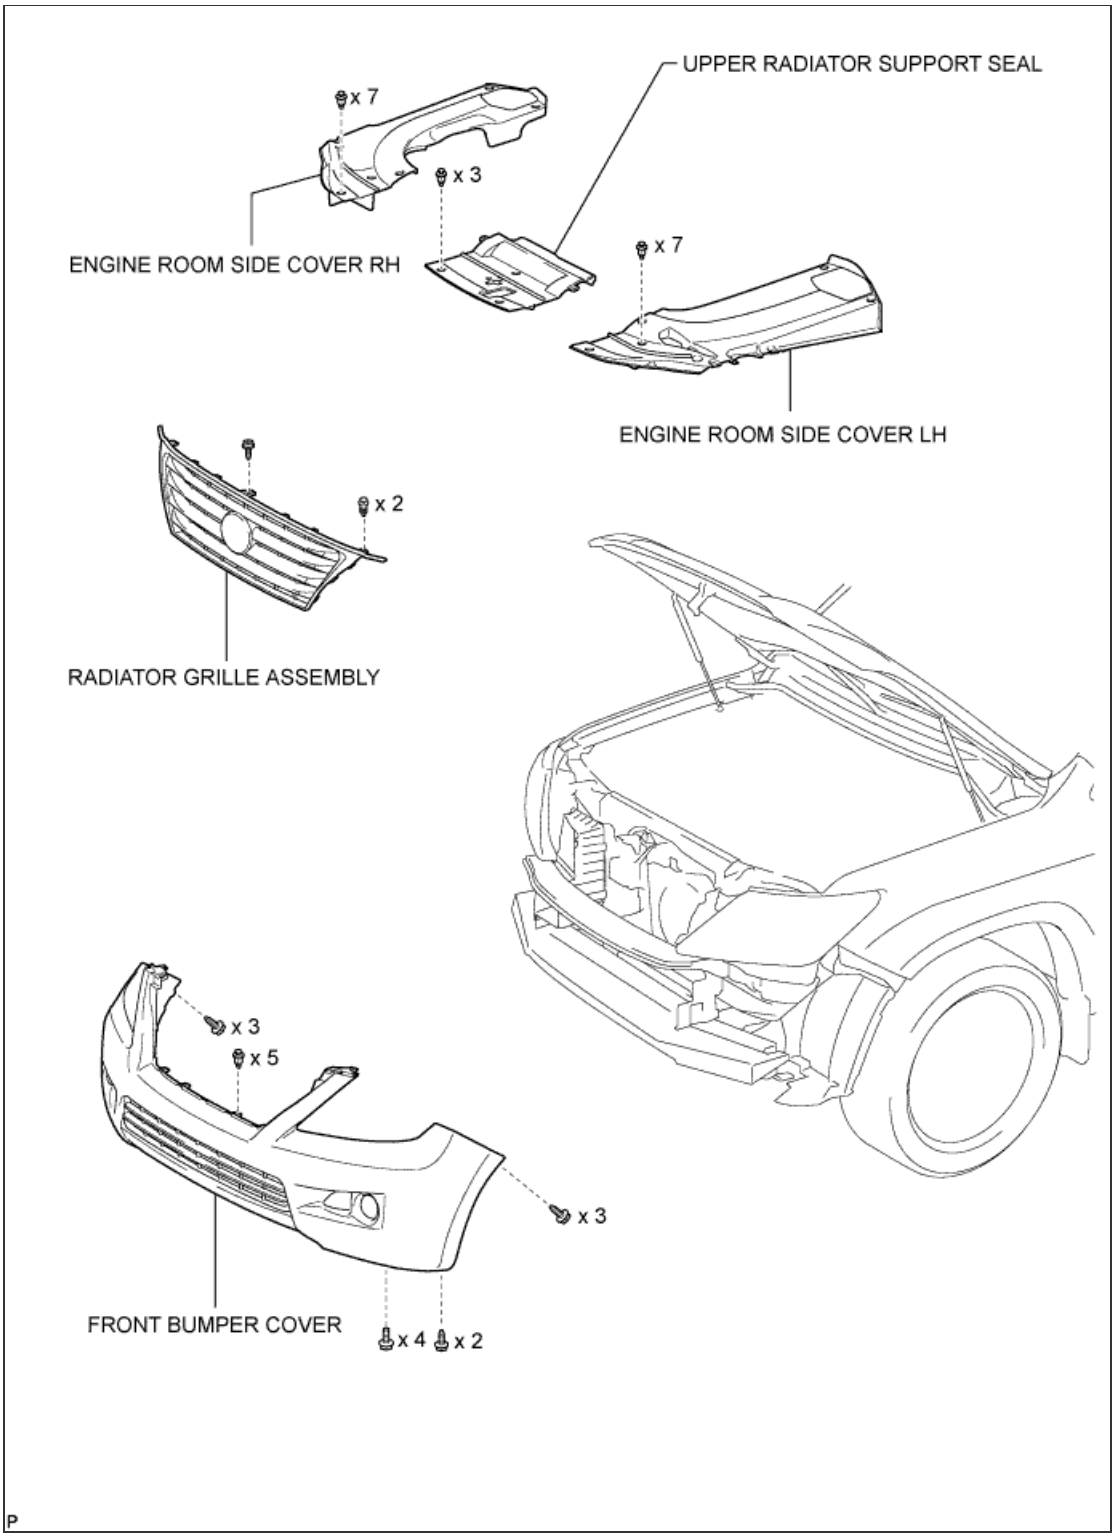


## 8. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

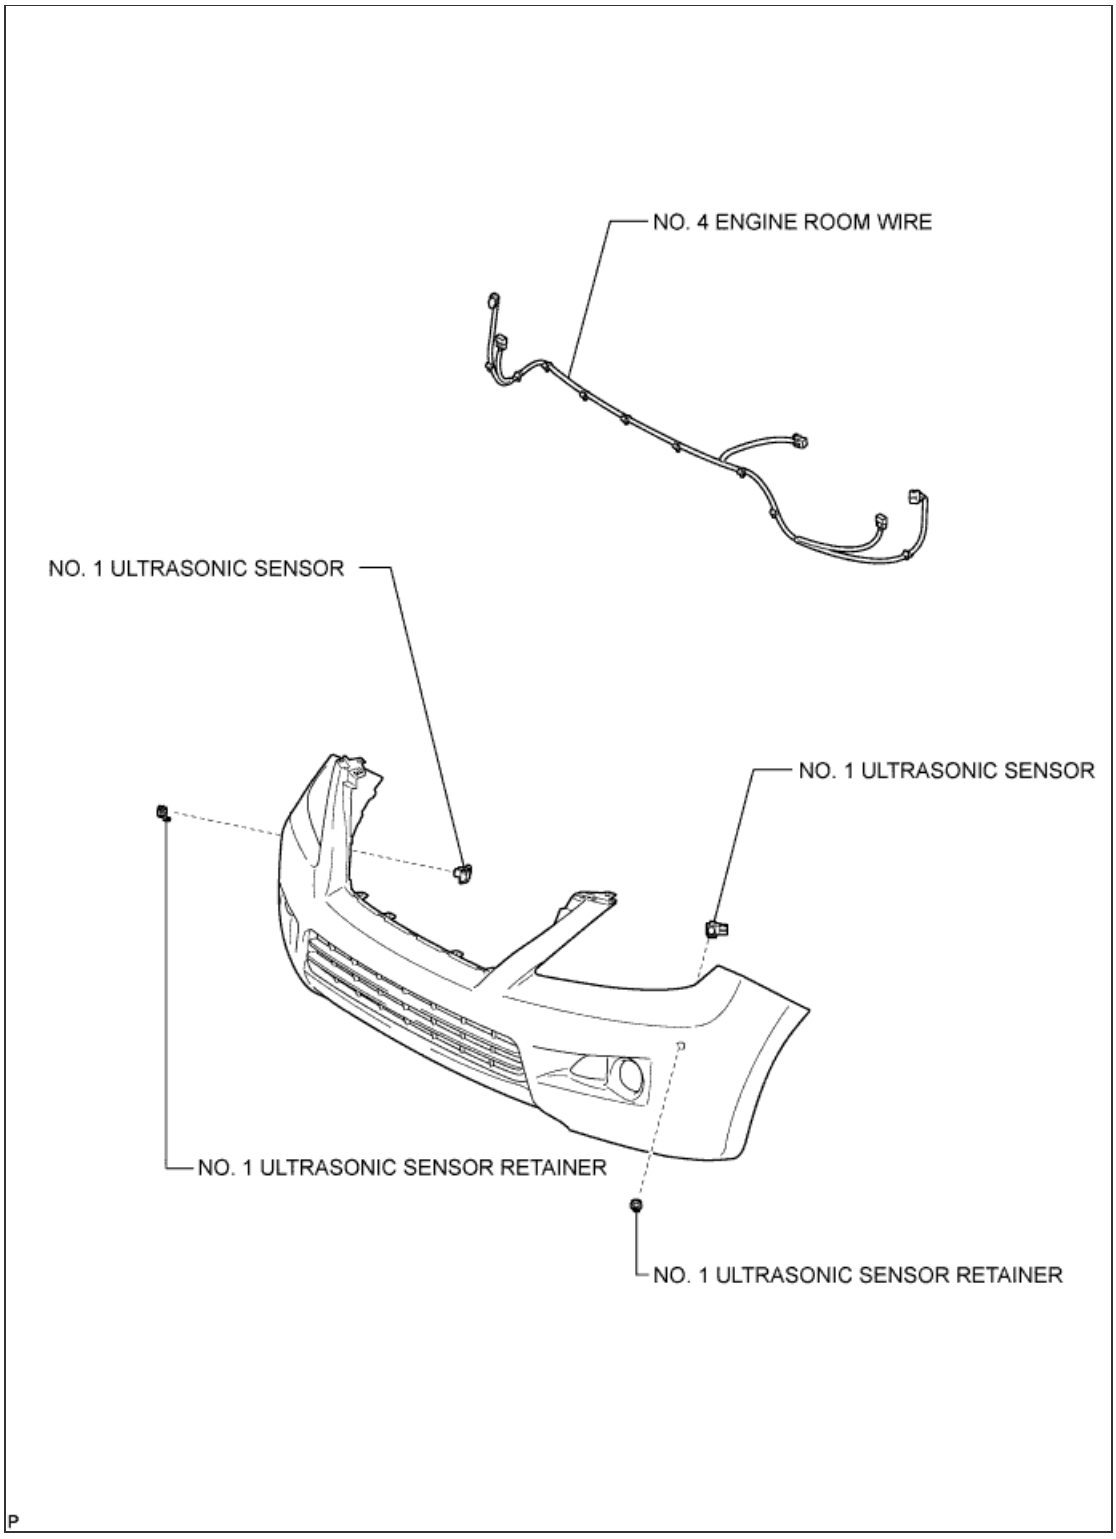
**NOTICE:**



When disconnecting the cable, some systems need to be initialized after the cable is reconnected ( Click here).



## 9. INSTALL ENGINE ROOM SIDE COVER LH



a. Install the engine room side cover with the 7 clips.

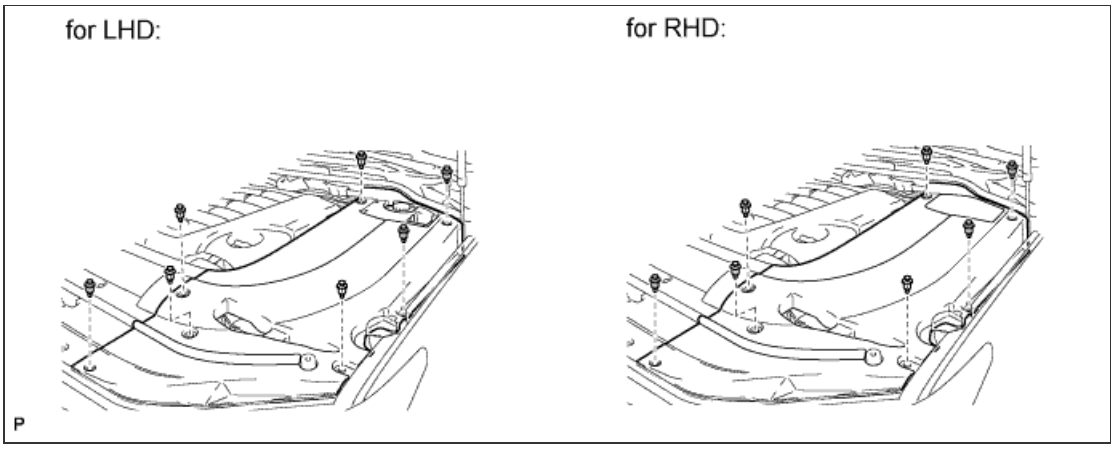
## 1. REMOVE FRONT FENDER SPLASH SHIELD SUBASSEMBLY LH

a. Remove the 3 bolts and 2 screws.

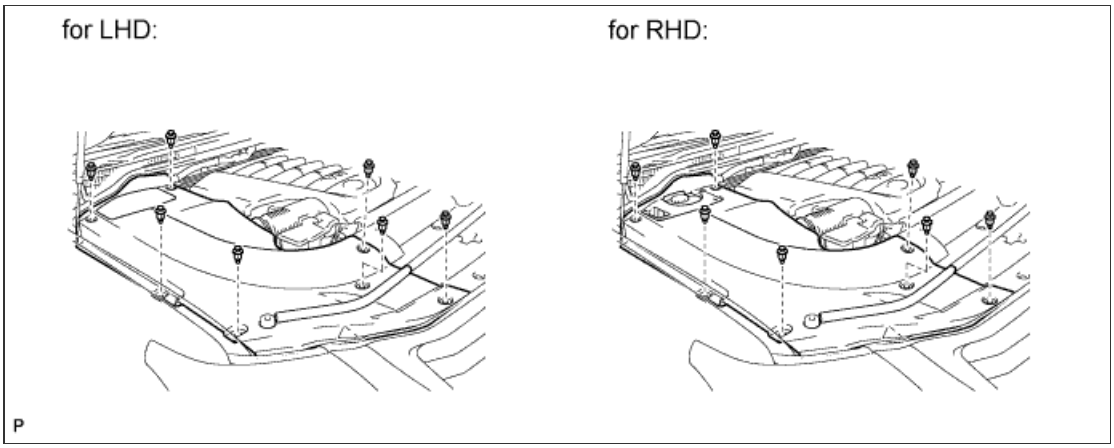
b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



## 2. REMOVE FRONT FENDER SPLASH SHIELD SUBASSEMBLY RH

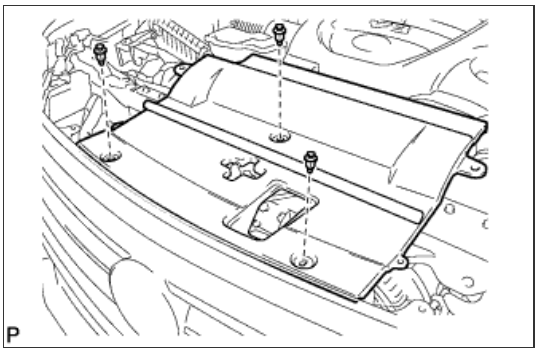
**HINT:**

Use the same procedures described for the LH side.



## 3. REMOVE ENGINE ROOM SIDE COVER LH

a. Remove the 7 clips and engine room side cover.



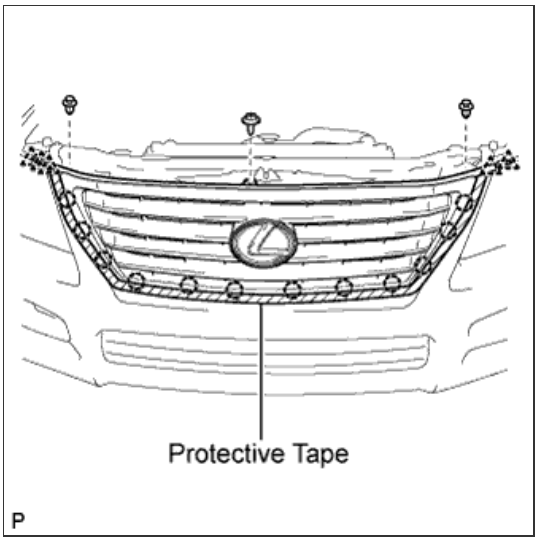
## 4. REMOVE ENGINE ROOM SIDE COVER RH

a. Remove the 7 clips and engine room side cover.

## 5. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 3 clips and upper radiator support seal.

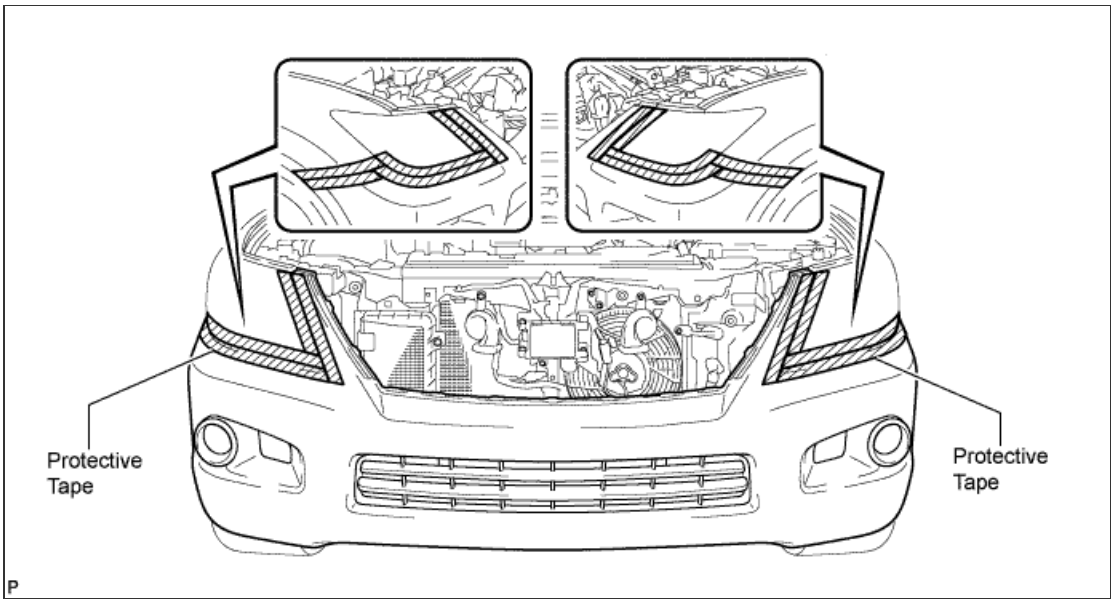
## 6. REMOVE RADIATOR GRILLE ASSEMBLY



a. Put protective tape around the radiator grille.

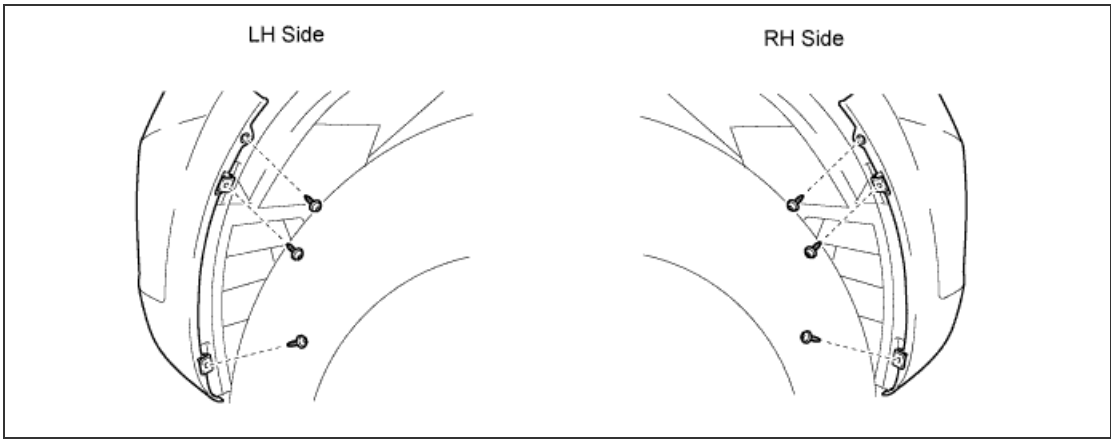
b. Remove the screw and 2 clips.

c. Detach the 5 clips and partially remove the upper radiator seal.



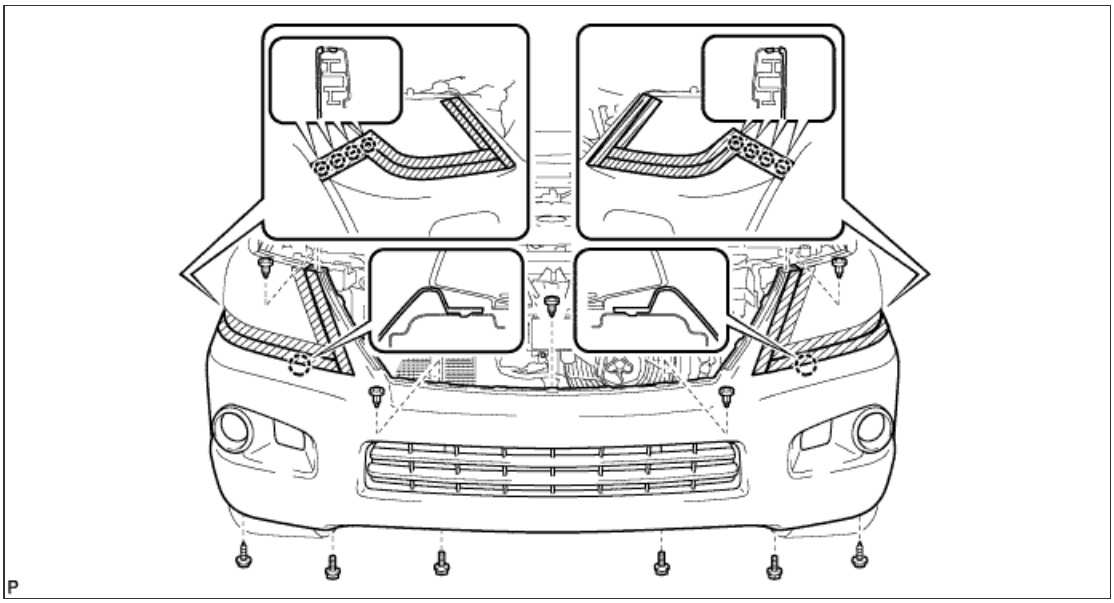
d. w/o Wide View Front Monitor System:
Detach the 12 claws and remove the radiator grille.

e. w/ Wide View Front Monitor System:
Detach the 12 claws, disconnect the connector and remove the radiator grille.

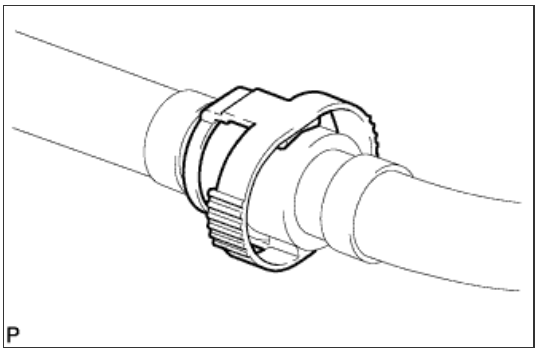


## 7. REMOVE FRONT BUMPER COVER

a. Put protective tape around the bumper cover.



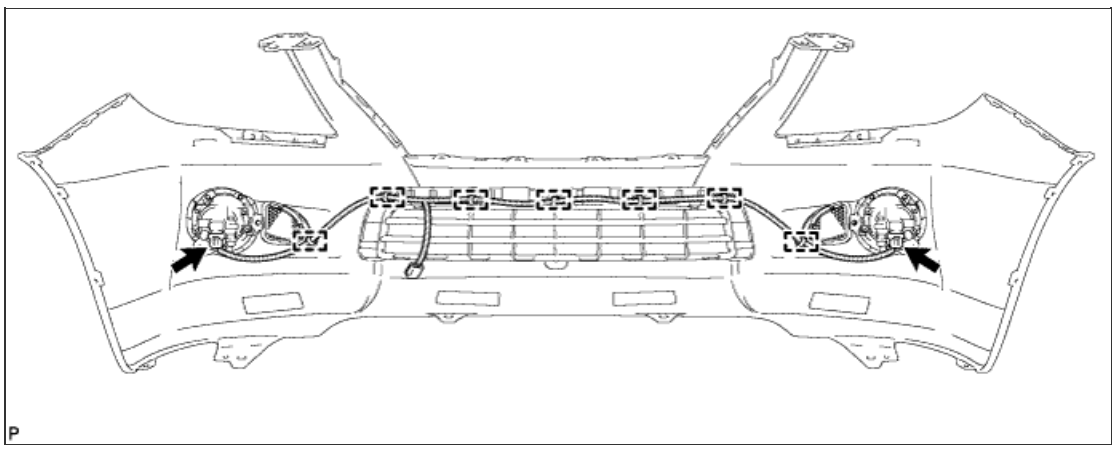
b. Using a T30 "TORX" socket, remove the 6 screws.



c. Remove the 5 clips, 2 screws and 4 bolts.

d. Detach the 10 claws, disconnect the No. 4 engine room wire connector and remove the bumper cover.

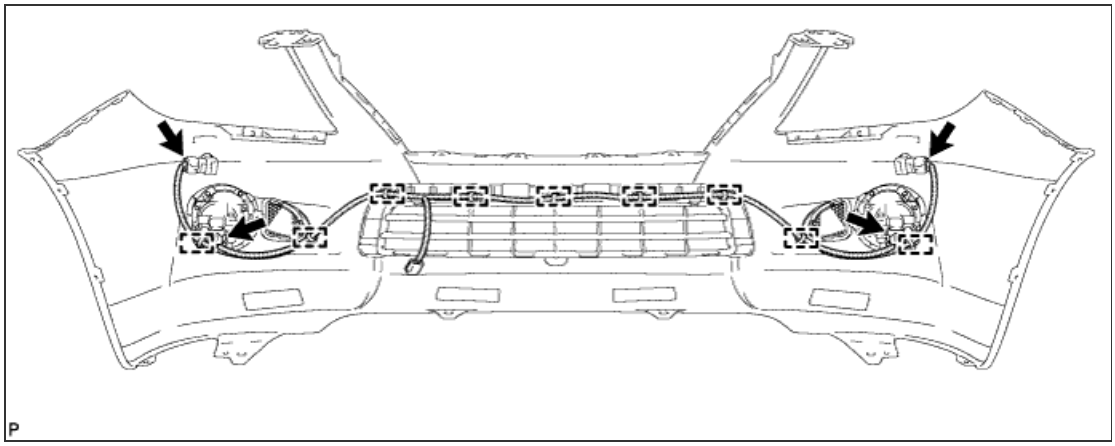
e. w/ Headlight Cleaner System:
Disconnect the headlight cleaner hose and remove the bumper cover.



## 8. REMOVE NO. 4 ENGINE ROOM WIRE

a. w/o LEXUS Parking Assist-sensor System
Remove the No. 4 engine room wire.

i. Disconnect the 2 connectors.



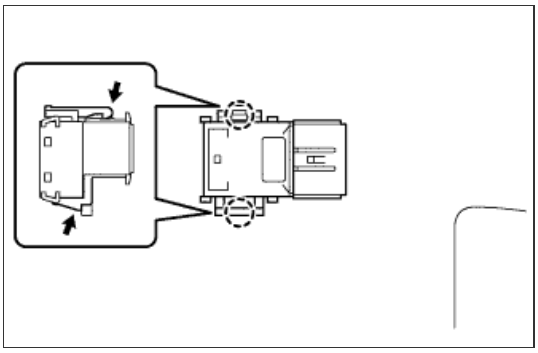
ii. Detach the 7 clamps and remove the engine room wire.

b. w/ LEXUS Parking Assist-sensor System:
Remove the No. 4 engine room wire.

i. Disconnect the 4 connectors.

ii. Detach the 9 clamps and remove the engine room wire.

## 9. REMOVE NO. 1 ULTRASONIC SENSOR



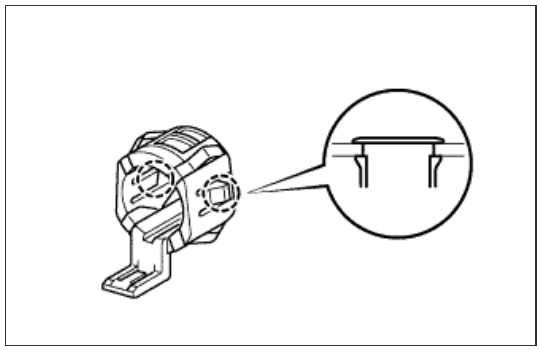
**HINT:**

Use the same procedure to remove the No. 1 ultrasonic sensor on the other side.

a. While pushing down on the lever with a finger to release the one claw, detach the claw on the other side to remove the ultrasonic sensor.

**HINT:**

The type of claw on the top and the type of claw on the bottom of the sensor are different. Observe the claws carefully before removing the sensor.

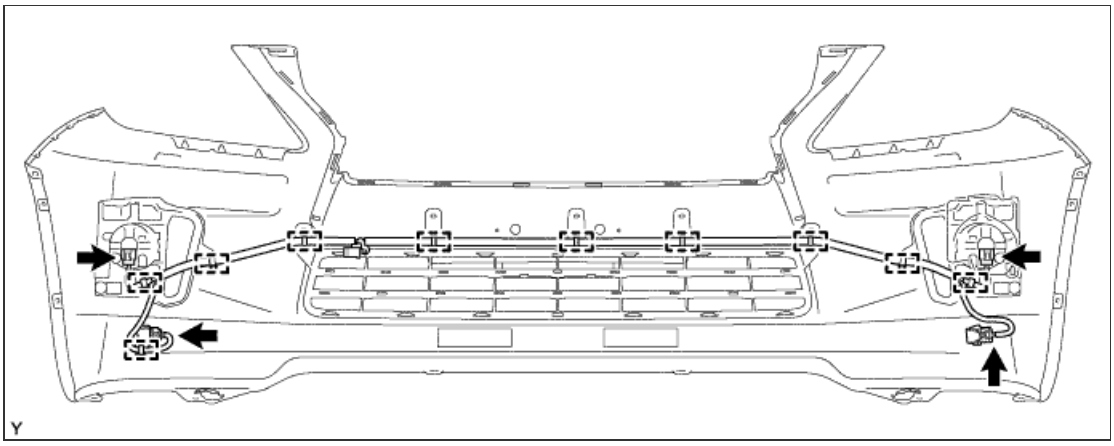


## 10. REMOVE NO. 1 ULTRASONIC SENSOR RETAINER

**HINT:**

Use the same procedure to remove the No. 1 ultrasonic sensor retainer on the other side.

a. Detach the 2 claws and remove the ultrasonic sensor retainer from the front bumper cover.

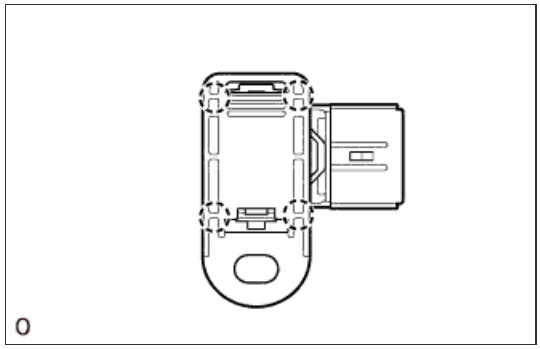


**for Preparation** Click here

## 1. REMOVE FRONT BUMPER COVER

(Click here)

## 2. REMOVE NO. 4 ENGINE ROOM WIRE



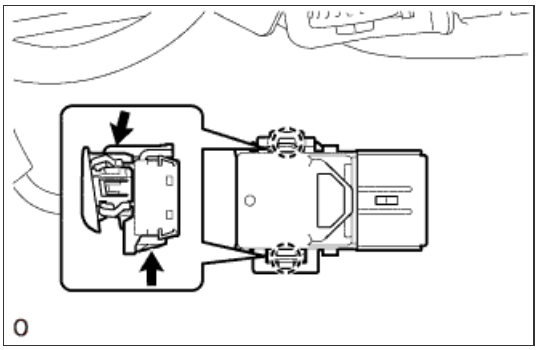
a. Disconnect the 4 connectors.

b. Detach the 10 clamps and remove the No. 4 engine room wire.

## 3. REMOVE ULTRASONIC SENSOR CLIP

a. Detach the 4 claws and remove the ultrasonic sensor clip.

## 4. REMOVE NO. 1 ULTRASONIC SENSOR



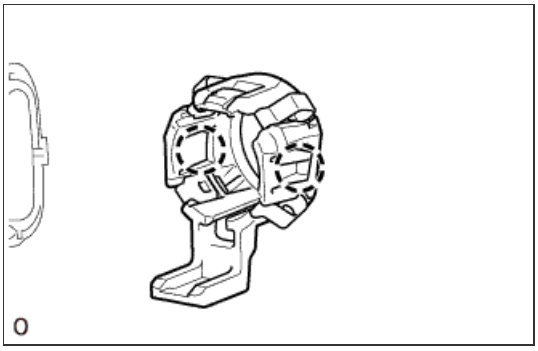
**HINT:**

Use the same procedure to remove the No. 1 ultrasonic sensor on the other side.

a. While pushing down on the lever with a finger to release the one claw, detach the claw on the other side to remove the No. 1 ultrasonic sensor.

**HINT:**

The type of claw on the top and bottom of the sensor are different. Observe the claws carefully before removing the No. 1 ultrasonic sensor.



## 5. REMOVE NO. 2 ULTRASONIC SENSOR RETAINER

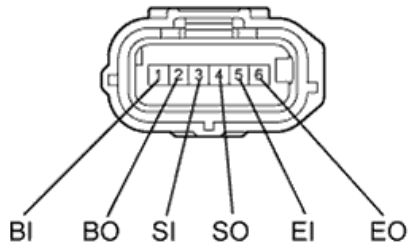
a. Detach the 2 claws and remove the No. 2 ultrasonic sensor retainer from the front bumper cover.

**HINT:**

Use the same procedure to remove the No. 2 ultrasonic sensor retainer on the other side.

**for Preparation** Click here

## 1. INSPECT NO. 1 ULTRASONIC SENSOR



a. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 (BI) - 5 (EI) | Always | 10 kΩ or higher |
| 1 (BI) - 2 (BO) | Always | 10 kΩ or higher |
| 3 (SI) - 4 (SO) | Always | 10 kΩ or higher |
| 5 (EI) - 6 (EO) | Always | 10 kΩ or higher |

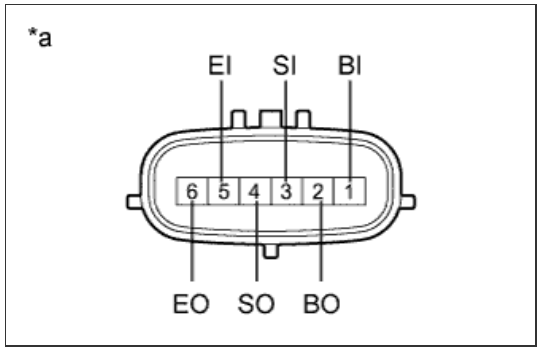
If the result is not as specified, replace the sensor.

Component without harness connected:
(No. 1 Ultrasonic Sensor)

**for Preparation** Click here

## 1. INSPECT NO. 1 ULTRASONIC SENSOR

a. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 (BI) - 5 (EI) | Always | 10 kΩ or higher |
| 1 (BI) - 2 (BO) | Always | 10 kΩ or higher |
| 3 (SI) - 4 (SO) | Always | 10 kΩ or higher |
| 5 (EI) - 6 (EO) | Always | 10 kΩ or higher |

If the result is not as specified, replace the No. 1 ultrasonic sensor.

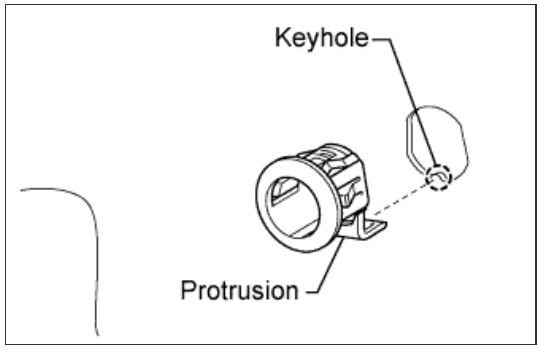
**Test in Illustration**

| | |
|---|---|
| *a | Component without harness connected (No. 1 Ultrasonic Sensor) |

**for Preparation** Click here

## 1. INSTALL NO. 1 ULTRASONIC SENSOR RETAINER

**HINT:**



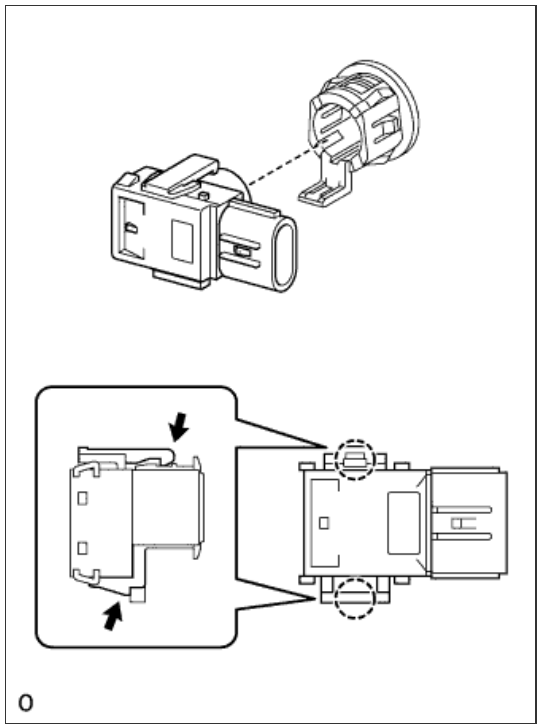
Use the same procedure to install the No. 1 ultrasonic sensor retainer on the other side.

a. Align the keyhole and protrusion as shown in the illustration.

b. Install the ultrasonic sensor retainer to the front bumper cover.

**NOTICE:**

Do not damage the bumper with the protrusion when installing the retainer.



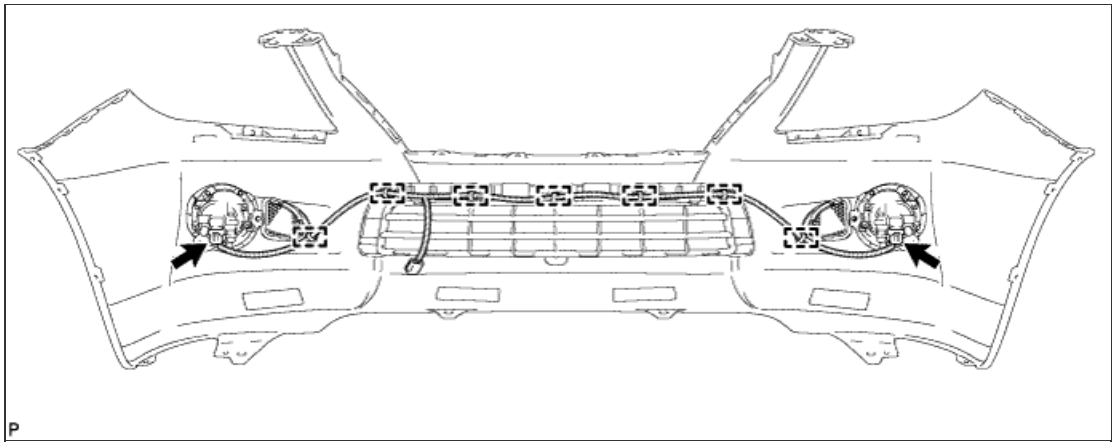
## 2. INSTALL NO. 1 ULTRASONIC SENSOR

**HINT:**

Use the same procedure to install the No. 1 ultrasonic sensor on the other side.

a. Attach the 2 claws to install the ultrasonic sensor.

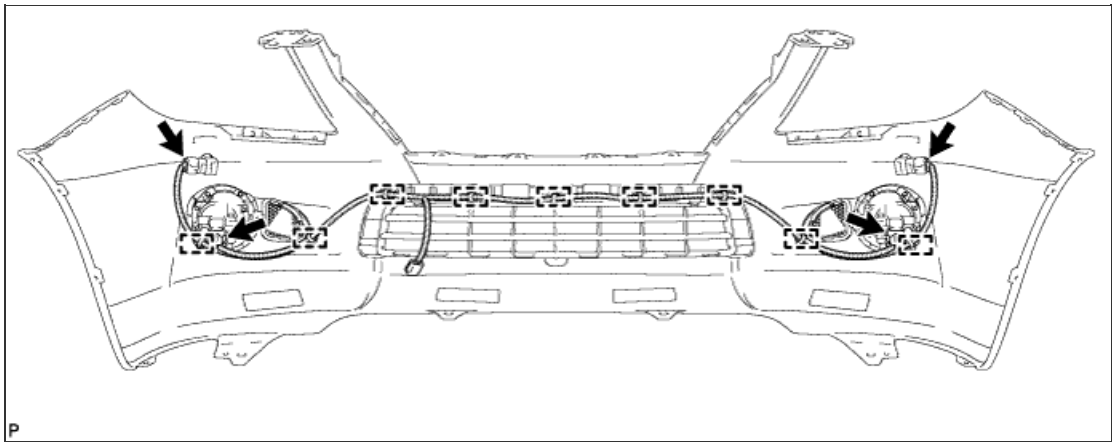
b. Connect the connector.



## 3. INSTALL NO. 4 ENGINE ROOM WIRE

a. w/o LEXUS Parking Assist-sensor System:
Install the No. 4 engine room wire.

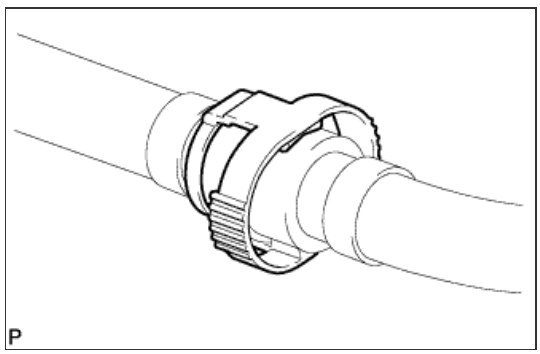
i. Attach the 7 clamps to install the engine room wire.



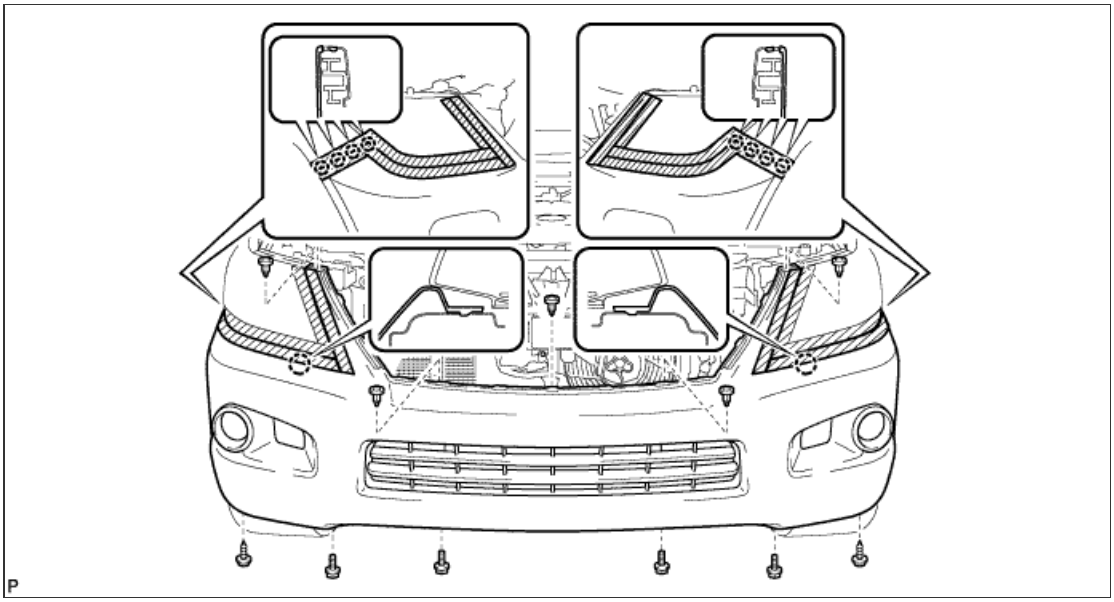
ii. Connect the 2 connectors.

b. w/ LEXUS Parking Assist-sensor System:
Install the No. 4 engine room wire.

i. Attach the 9 clamps to install the engine room wire.

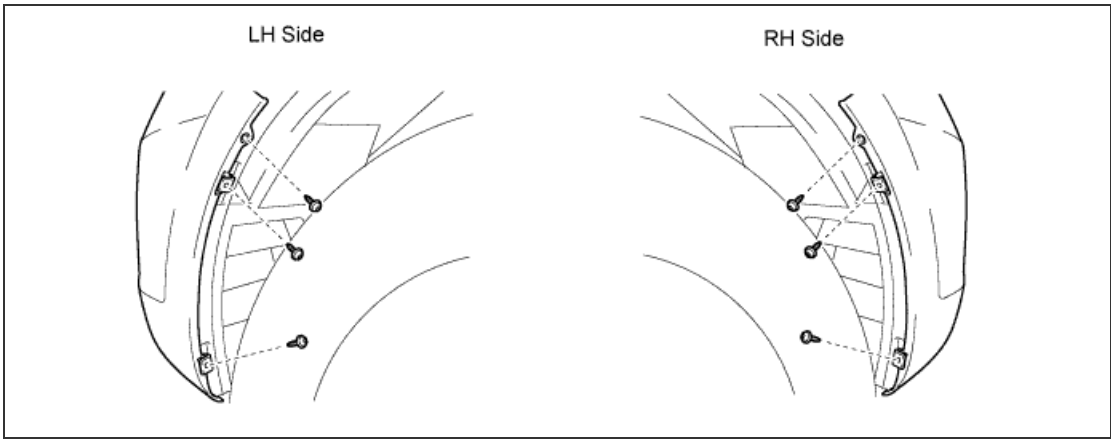


ii. Connect the 4 connectors.



## 4. INSTALL FRONT BUMPER COVER

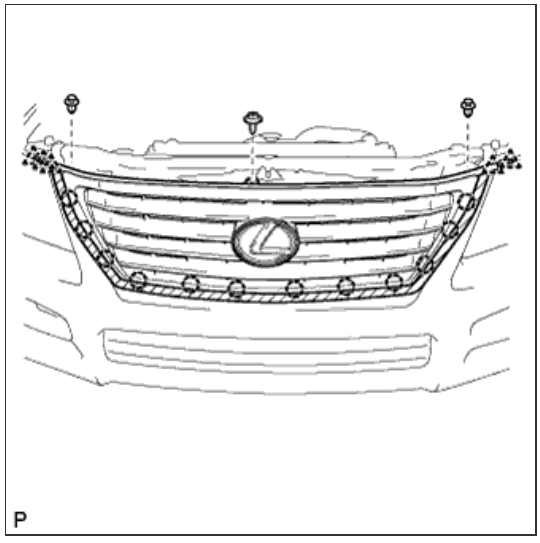
a. w/ Headlight Cleaner System:
Connect the headlight cleaner hose.



b. Connect the No. 4 engine room wire connector and attach the 10 claws to install the bumper cover.

c. Install the 5 clips, 2 screws and 4 bolts.

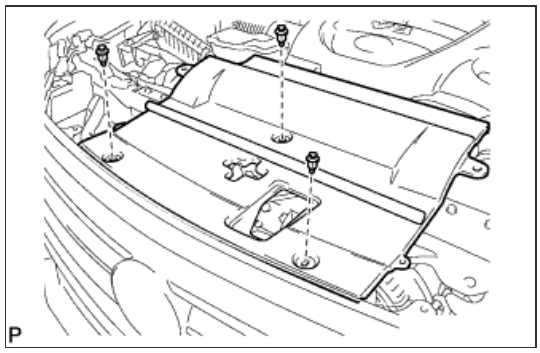
d. Using a T30 "TORX" socket, install the 6 screws.



## 5. INSTALL RADIATOR GRILLE ASSEMBLY

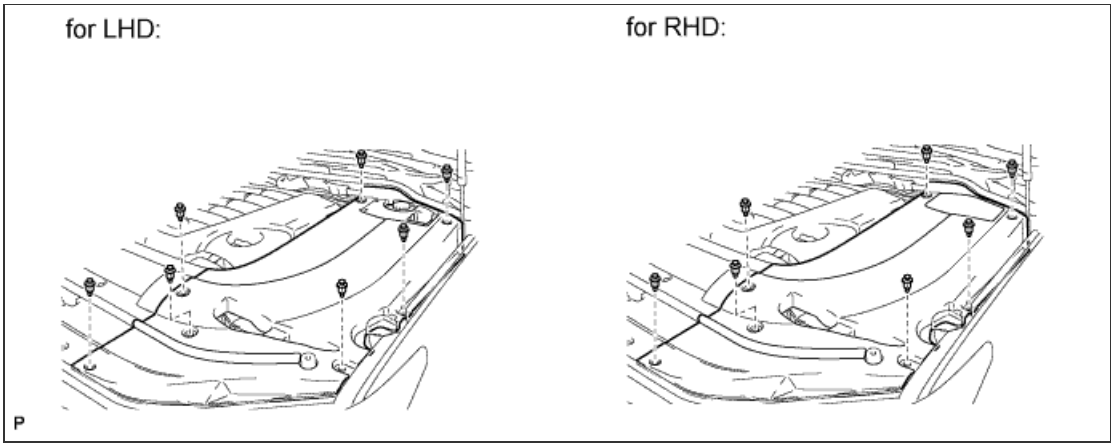
a. w/ Wide View Front Monitor System:
Connect the connector.

b. Attach the 12 claws to install the radiator grille.



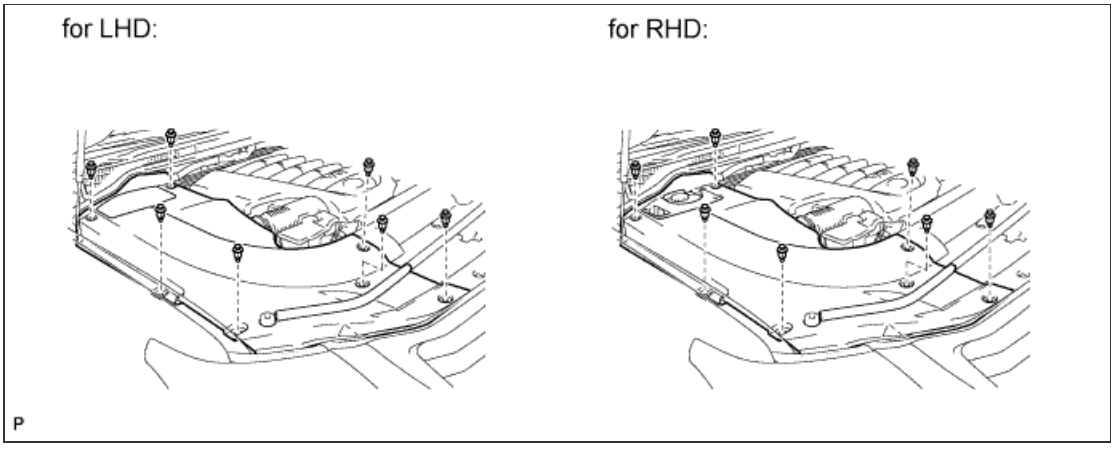
c. Attach the 5 clips to install the detached part of the upper radiator seal.

d. Install the screw and 2 clips.



## 6. INSTALL UPPER RADIATOR SUPPORT SEAL

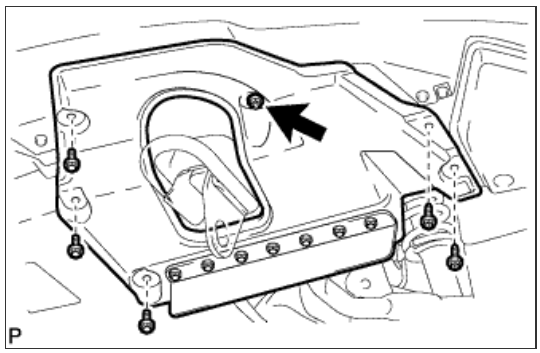
a. Install the upper radiator support seal with the 3 clips.



## 7. INSTALL ENGINE ROOM SIDE COVER LH

a. Install the engine room side cover with the 7 clips.

## 8. INSTALL ENGINE ROOM SIDE COVER RH



a. Install the engine room side cover with the 7 clips.

## 9. INSTALL FRONT FENDER SPLASH SHIELD SUBASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the 3 bolts and 2 screws.

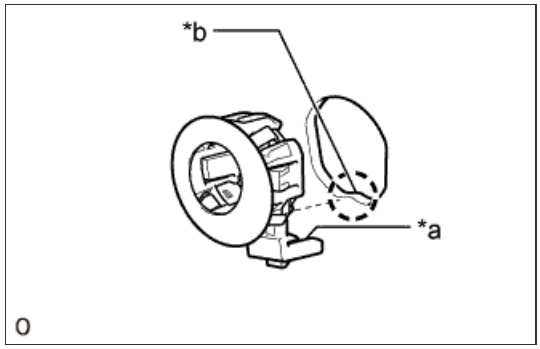
## 10. INSTALL FRONT FENDER SPLASH SHIELD SUBASSEMBLY RH

**HINT:**

Use the same procedures described for the LH side.

**for Preparation** Click here

## 1. INSTALL NO. 2 ULTRASONIC SENSOR RETAINER

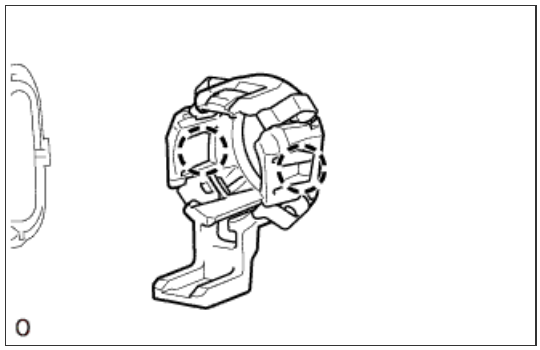


**HINT:**

Use the same procedure to install the No. 2 ultrasonic sensor retainer on the other side.

a. Temporarily install the No. 2 ultrasonic sensor retainer to the front bumper.

**Text in Illustration**



| | |
|---|---|
| *a | Protrusion |
| *b | Keyhole |

**NOTICE:**

- **Do not damage the bumper with the protrusion when installing the retainer.**
- **Securely install the No. 2 ultrasonic sensor retainer so that there are no gaps between the retainer and surface of the front bumper.**

b. Attach the 2 claws to install the No. 2 ultra sonic sensor retainer.

## 2. INSTALL NO. 1 ULTRASONIC SENSOR

**HINT:**

Use the same procedure to install the No. 1 ultrasonic sensor on the other side.

a. Attach the 2 claws to install the ultrasonic sensor.

**NOTICE:**

Push the No. 2 ultrasonic sensor retainer from the outside of the bumper when there is a gap between the retainer and the bumper surface. In this case, do not push on the No. 1 ultrasonic sensor.

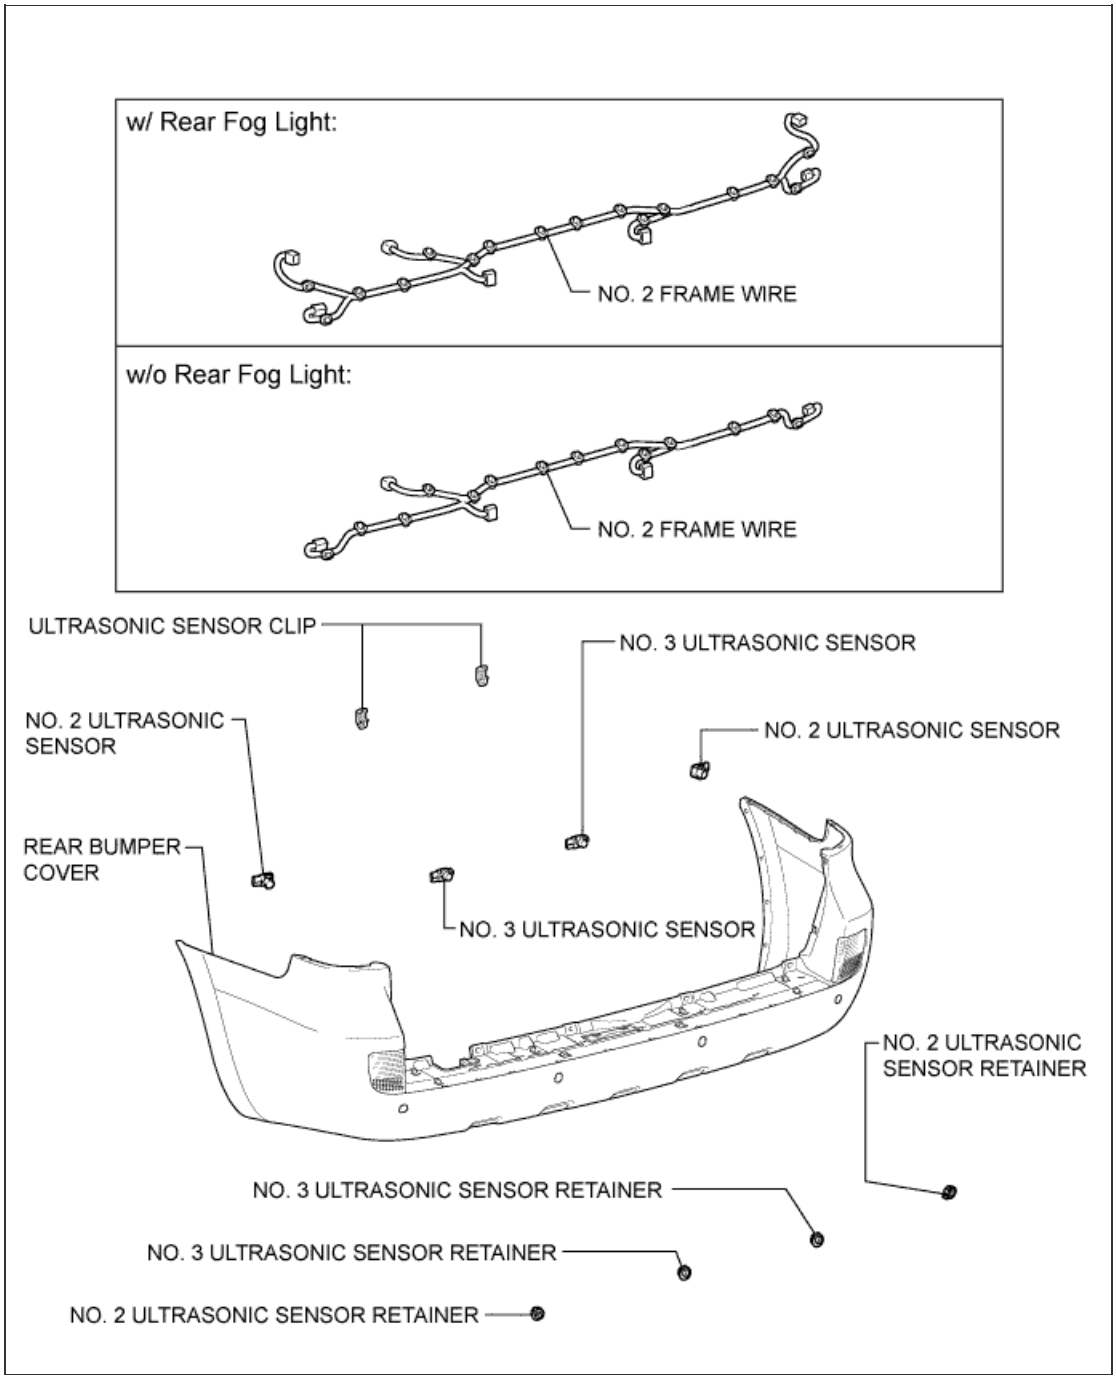
## 3. INSTALL ULTRASONIC SENSOR CLIP

a. Attach the 4 claws to install the ultrasonic sensor clip.

**NOTICE:**

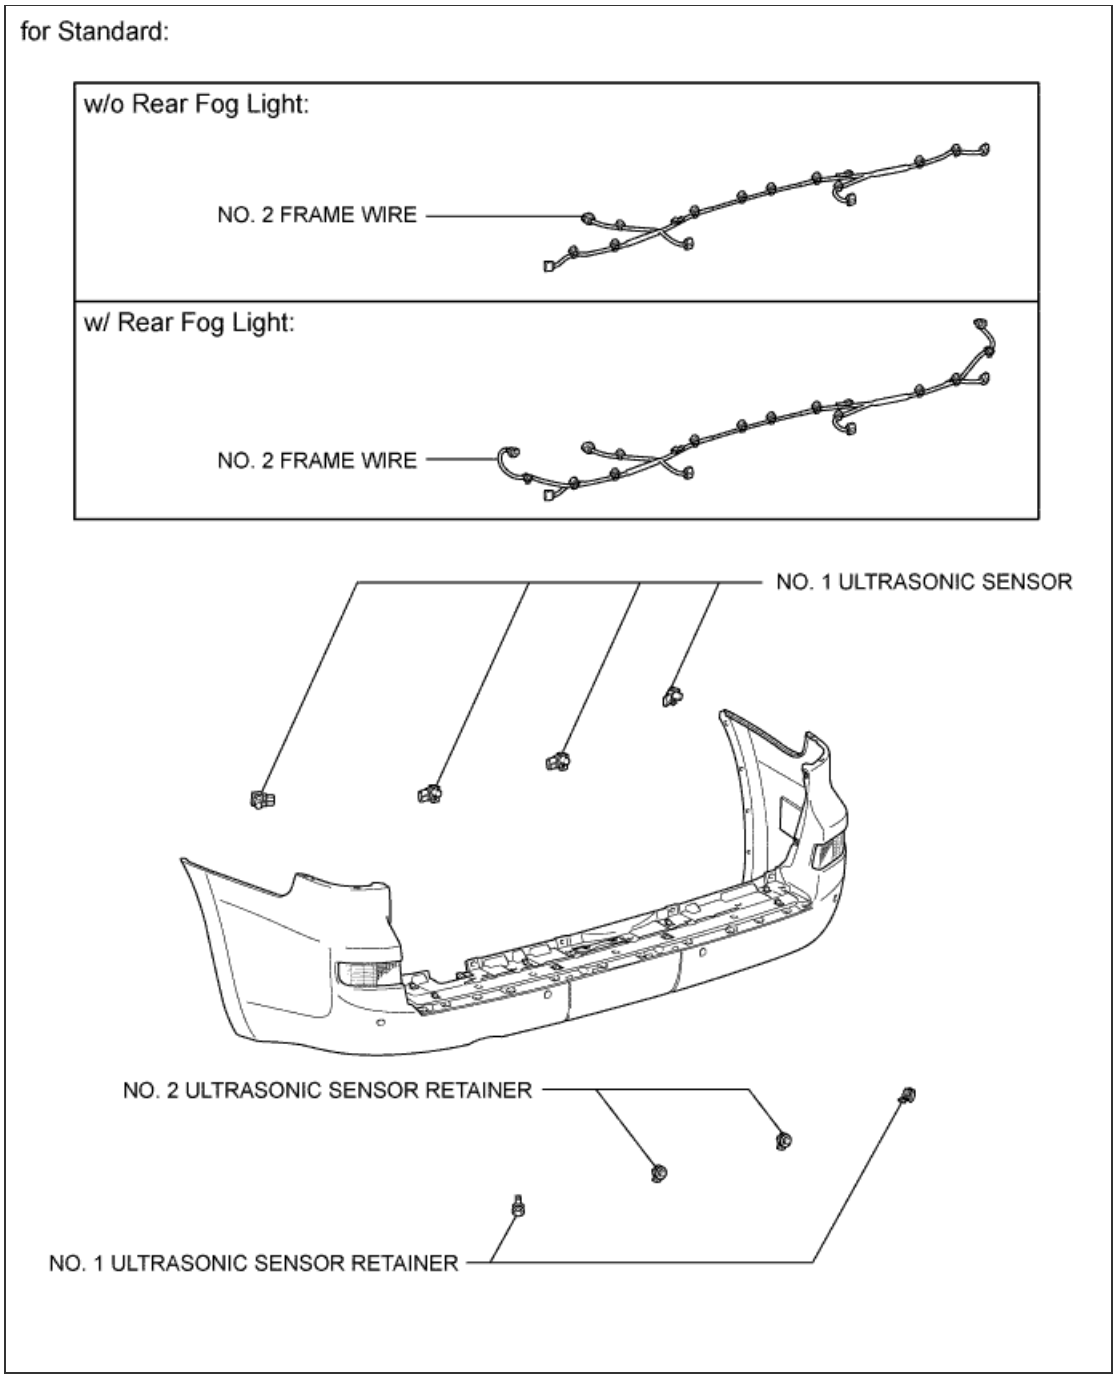
Hold the No. 1 ultrasonic sensor in place so that the No. 2 ultrasonic sensor retainer does not come out when installing the ultrasonic sensor clip.

## 4. INSTALL NO. 4 ENGINE ROOM WIRE



a. Attach the 10 clamps to install the No. 4 engine room wire.

b. Connect the 4 connectors.



### 5. INSTALL FRONT BUMPER COVER

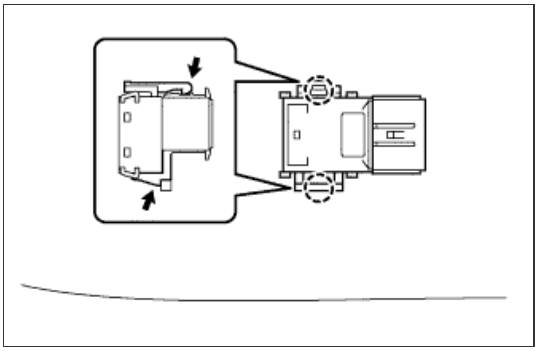
## 2. REMOVE NO. 2 FRAME WIRE

a. for Standard:
Remove the No. 2 frame wire (Click here).

b. w/ Towing Hitch:
Remove the No. 2 frame wire (Click here).

c. w/ Pintle Hook:
Remove the No. 2 frame wire (Click here).

## 3. REMOVE NO. 2 ULTRASONIC SENSOR



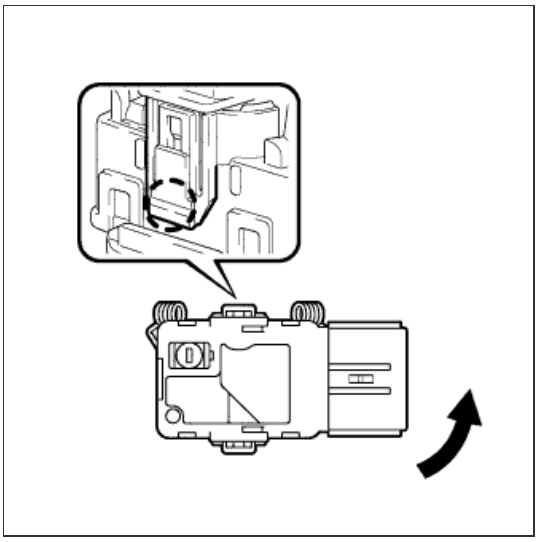
**HINT:**

Use the same procedure to remove the No. 2 ultrasonic sensor on the other side.

a. While pushing down on the lever with a finger to release the one claw, detach the claw on the other side to remove the ultrasonic sensor.

**HINT:**

The type of claw on the top and the type of claw on the bottom of the sensor are different. Observe the claws carefully before removing the sensor.



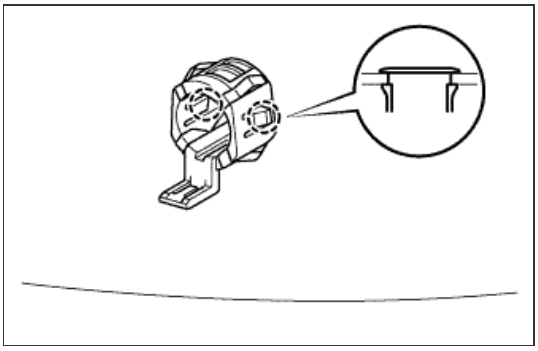
## 4. REMOVE NO. 3 ULTRASONIC SENSOR

**HINT:**

Use the same procedure to remove the No. 3 ultrasonic sensor on the other side.

a. Remove the ultrasonic sensor clip.

b. Detach the claw and remove the ultrasonic sensor as shown in the illustration.

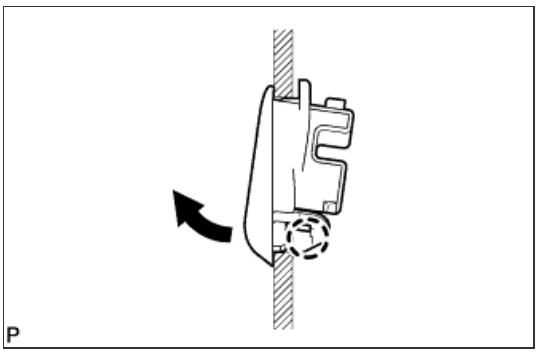


## 5. REMOVE NO. 2 ULTRASONIC SENSOR RETAINER

**HINT:**

Use the same procedure to remove the No. 2 ultrasonic sensor retainer on the other side.

a. Detach the 2 claws and remove the ultrasonic sensor retainer from the rear bumper cover.



## 6. REMOVE NO. 3 ULTRASONIC SENSOR RETAINER

**HINT:**

Use the same procedure to remove the No. 3 ultrasonic sensor retainer on the other side.

a. Detach the claw and remove the ultrasonic sensor retainer from the rear bumper cover.

**for Preparation** Click here

## 1. REMOVE REAR BUMPER COVER

a. for Standard:
(Click here)

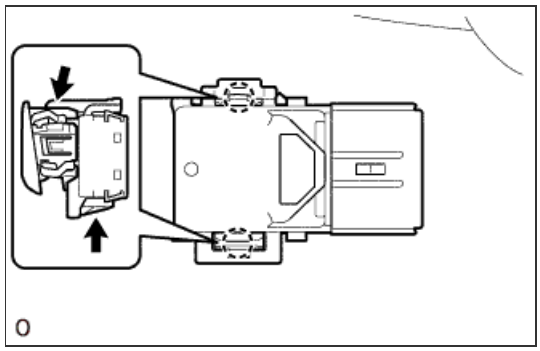
b. w/ Towing Hitch:
(Click here)

c. w/ Pintle Hook:
(Click here)

## 2. REMOVE NO. 2 FRAME WIRE

a. for Standard:
(Click here).

b. w/ Towing Hitch:
(Click here).



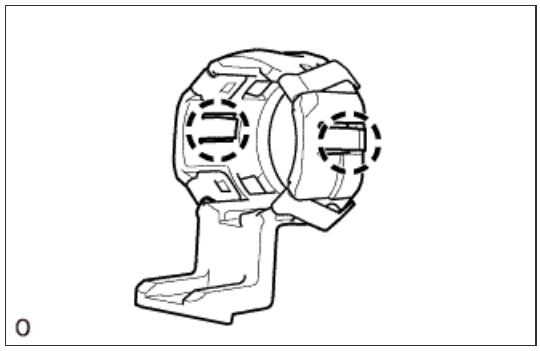
c. w/ Pintle Hook:
(Click here).

## 3. REMOVE NO. 1 ULTRASONIC SENSOR

a. Detach the 2 claws and remove the No. 1 ultrasonic sensor.

**HINT:**

- **Use the same procedure for all No. 1 ultrasonic sensors.**
- **The illustration shows the No. 1 ultrasonic sensor for the RH corner and back sensor LH and RH. The installation position of the No. 1 ultrasonic sensor for the LH corner is on the opposite side.**

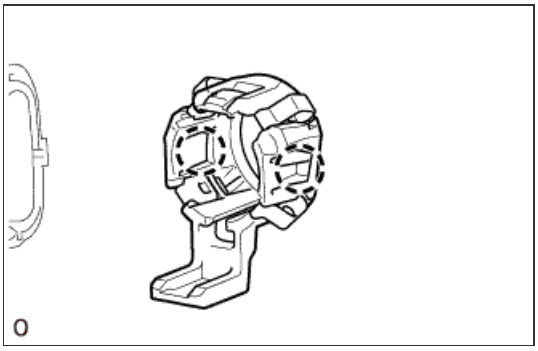


## 4. REMOVE NO. 1 ULTRASONIC SENSOR RETAINER

a. Detach the 2 claws and remove the No. 1 ultrasonic sensor retainer from the rear bumper cover.

**HINT:**

Use the same procedure to remove the No. 1 ultrasonic sensor retainer on the other side.



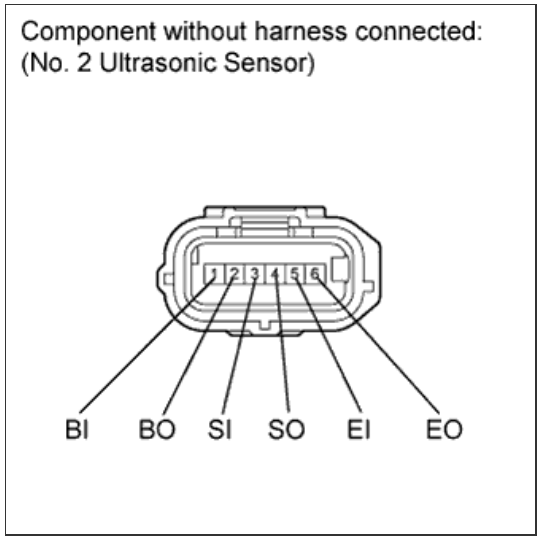
## 5. REMOVE NO. 2 ULTRASONIC SENSOR RETAINER

a. Detach the 2 claws and remove the No. 2 ultrasonic sensor retainer from the rear bumper cover.

**HINT:**

Use the same procedure to remove the No. 2 ultrasonic sensor retainer on the other side.

**for Preparation** Click here



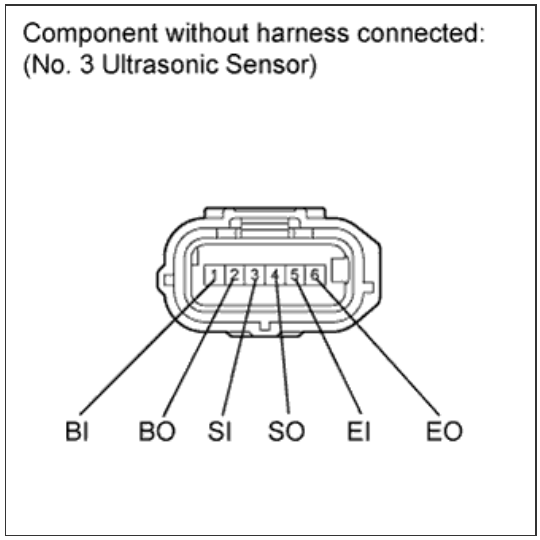
## 1. INSPECT NO. 2 ULTRASONIC SENSOR

a. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 (BI) - 5 (EI) | Always | 10 kΩ or higher |
| 1 (BI) - 2 (BO) | Always | 10 kΩ or higher |
| 3 (SI) - 4 (SO) | Always | 10 kΩ or higher |
| 5 (EI) - 6 (EO) | Always | 10 kΩ or higher |

If the result is not as specified, replace the sensor.



## 2. INSPECT NO. 3 ULTRASONIC SENSOR

a. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

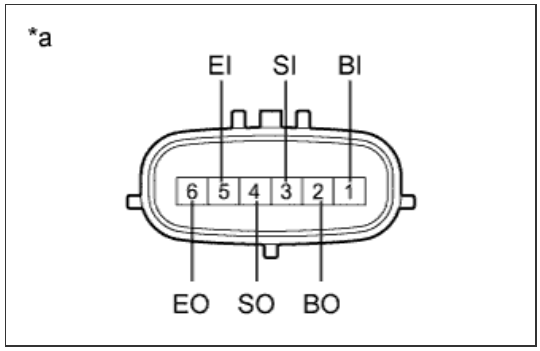
| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 (BI) - 5 (EI) | Always | 10 kΩ or higher |
| 1 (BI) - 2 (BO) | Always | 10 kΩ or higher |
| 3 (SI) - 4 (SO) | Always | 10 kΩ or higher |
| 5 (EI) - 6 (EO) | Always | 10 kΩ or higher |

If the result is not as specified, replace the sensor.

**for Preparation** Click here

## 1. INSPECT NO. 1 ULTRASONIC SENSOR

a. Measure the resistance according to the value(s) in the table below.



**Standard Resistance:**

| Tester Connection | Condition | Specified Condition |
|---|---|---|
| 1 (BI) - 5 (EI) | Always | 10 kΩ or higher |
| 1 (BI) - 2 (BO) | Always | 10 kΩ or higher |
| 3 (SI) - 4 (SO) | Always | 10 kΩ or higher |
| 5 (EI) - 6 (EO) | Always | 10 kΩ or higher |

If the result is not as specified, replace the No. 1 ultrasonic sensor.

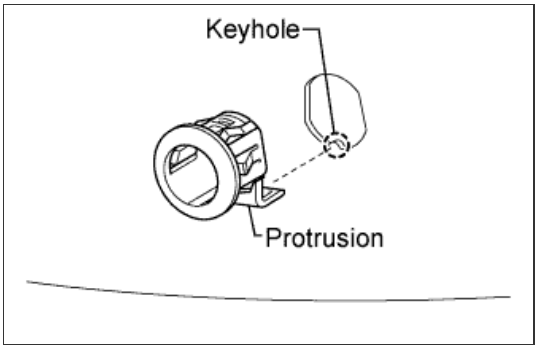
**Test in Illustration**

| | |
|---|---|
| *a | Component without harness connected (No. 1 Ultrasonic Sensor) |

**for Preparation** Click here

## 1. INSTALL NO. 2 ULTRASONIC SENSOR RETAINER

**HINT:**



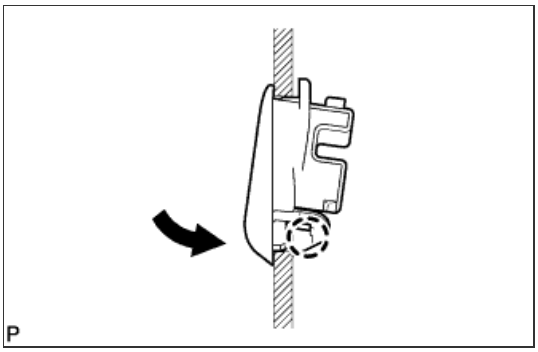
Use the same procedure to install the No. 2 ultrasonic sensor retainer on the other side.

a. Align the keyhole and protrusion as shown in the illustration.

b. Install the ultrasonic sensor retainer to the rear bumper.

**NOTICE:**

Do not damage the bumper with the protrusion when installing the retainer.



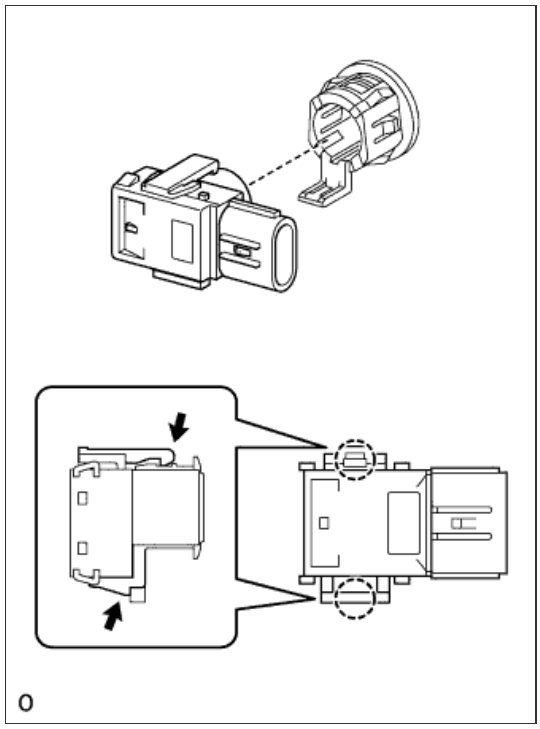
## 2. INSTALL NO. 3 ULTRASONIC SENSOR RETAINER

**HINT:**

Use the same procedure to install the No. 3 ultrasonic sensor retainer on the other side.

a. Attach the claw to install the ultrasonic sensor retainer as shown in the illustration.

## 3. INSTALL NO. 2 ULTRASONIC SENSOR

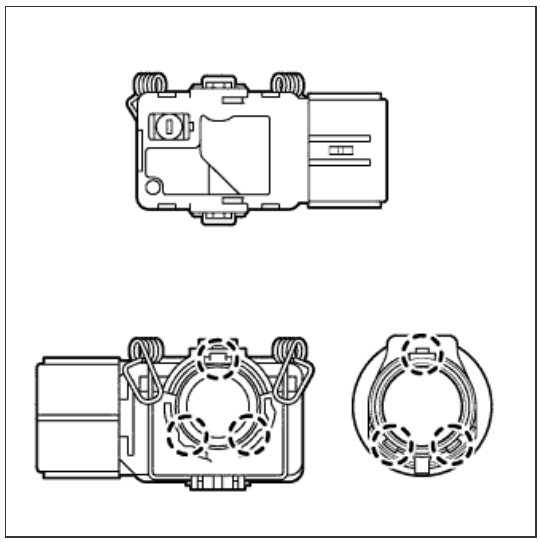


**HINT:**

Use the same procedure to install the No. 2 ultrasonic sensor on the other side.

a. Attach the 2 claws to install the ultrasonic sensor.

b. Connect the connector.



c. Install the ultrasonic sensor clip.

## 4. INSTALL NO. 3 ULTRASONIC SENSOR

**HINT:**

Use the same procedure to install the No. 3 ultrasonic sensor on the other side.

a. Attach the 3 claws to install the ultrasonic sensor.

b. Connect the connector.

## 5. INSTALL NO. 2 FRAME WIRE

a. for Standard:
Install the No. 2 frame wire (Click here).

b. w/ Towing Hitch:
Install the No. 2 frame wire (Click here).

c. w/ Pintle Hook:
Install the No. 2 frame wire (Click here).

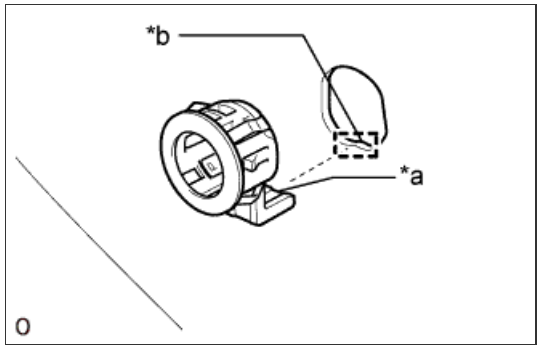
## 6. INSTALL REAR BUMPER COVER

a. for Standard:
Install the rear bumper cover (Click here).

b. w/ Towing Hitch:
Install the rear bumper cover (Click here).

c. w/ Pintle Hook:

Install the rear bumper cover (Click here).



**for Preparation** Click here

## 1. INSTALL NO. 1 ULTRASONIC SENSOR RETAINER

**HINT:**

Use the same procedure to install the No. 1 ultrasonic sensor retainer on the other side.

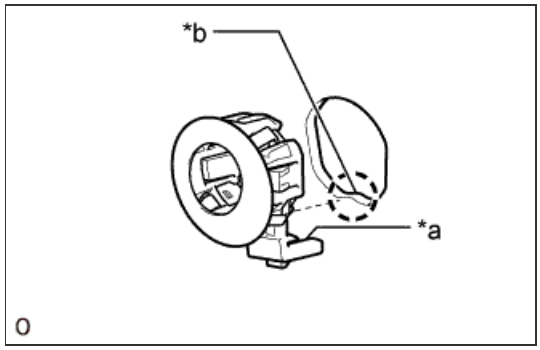
a. Align the keyhole and protrusion as shown in the illustration.

Text in Illustration

| | |
|---|---|
| *a | Protrusion |
| *b | Keyhole |

**NOTICE:**

- **Do not damage the bumper with the protrusion when installing the No. 1 ultrasonic sensor retainer.**
- **Securely install the No. 1 ultrasonic sensor retainer so that there are no gaps between the retainer and surface of the rear bumper.**



b. Attach the 2 claws to install the No. 1 ultrasonic sensor retainer.

## 2. INSTALL NO. 2 ULTRASONIC SENSOR RETAINER

**HINT:**

Use the same procedure to install the No. 2 ultrasonic sensor retainer on the other side.

a. Align the keyhole and protrusion as shown in the illustration.

Text in Illustration

| | |
|---|---|
| *a | Protrusion |
| *b | Keyhole |

**NOTICE:**

- **Do not damage the bumper with the protrusion when installing the No. 1 ultrasonic sensor retainer.**
- **Securely install the No. 2 ultrasonic sensor retainer so that there are no gaps between the retainer and surface of the rear bumper.**

b. Attach the 2 claws to install the No. 2 ultrasonic sensor retainer.

## 3. INSTALL NO. 1 ULTRASONIC SENSOR

**HINT:**

Use the same procedure for all No. 1 ultrasonic sensors.

a. Attach the 2 claws to install the No. 1 ultrasonic sensor.

**NOTICE:**

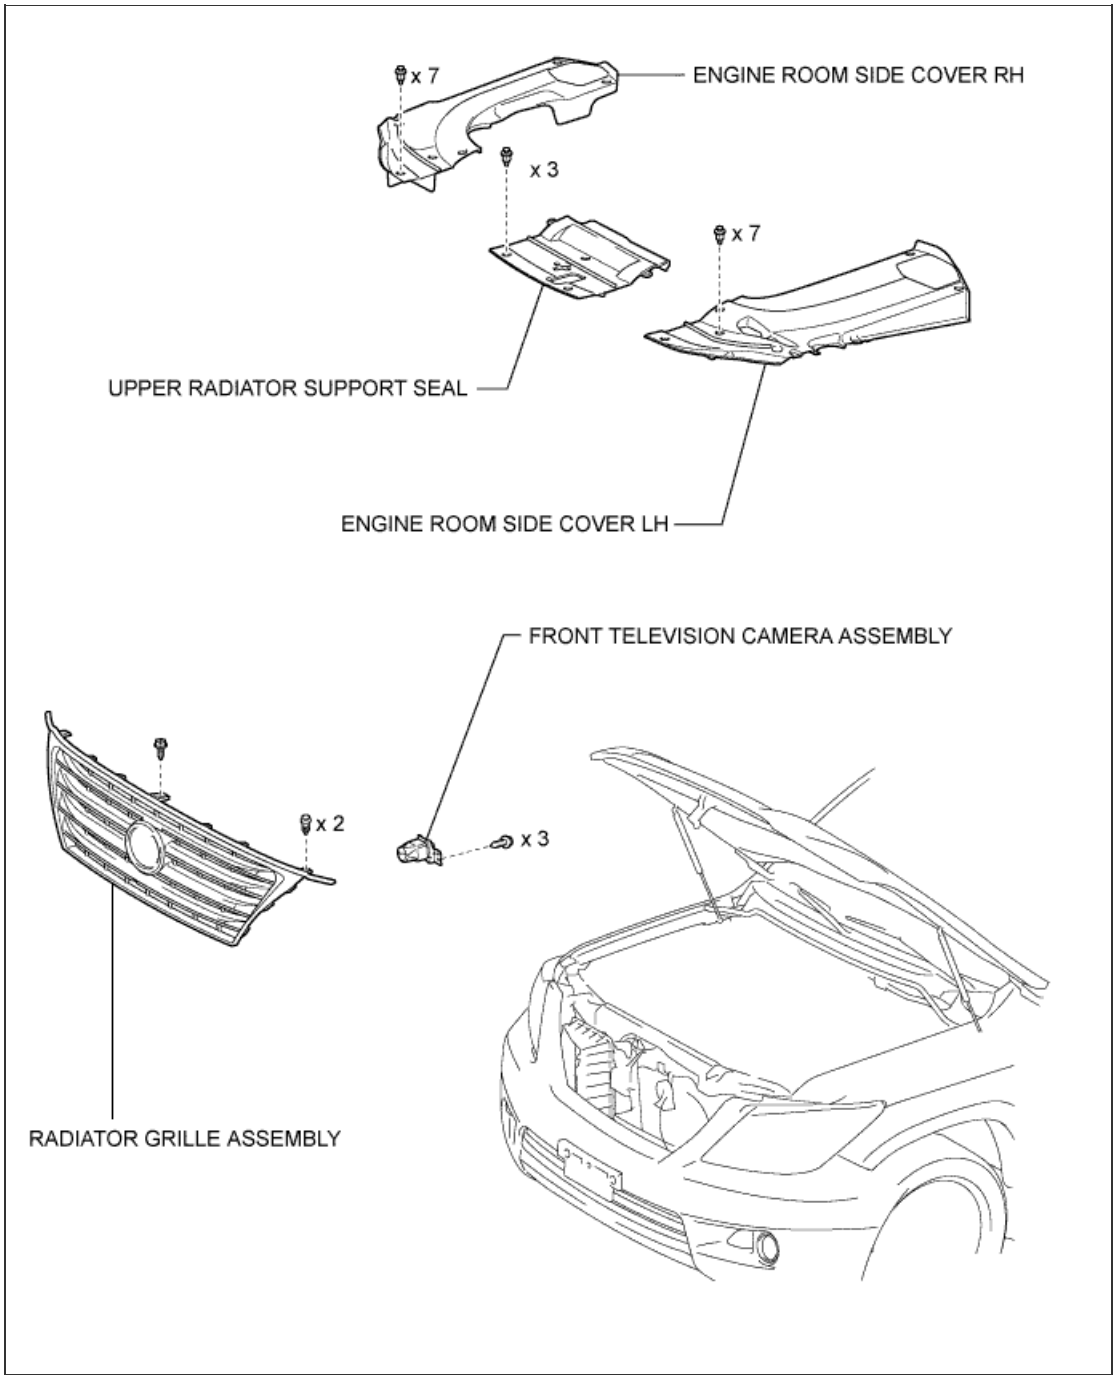
Push the ultrasonic sensor retainer from the outside of the bumper when there is a gap between the retainer and the bumper surface. In this case, do not push on the ultrasonic sensor.

## 4. INSTALL NO. 2 FRAME WIRE

a. for Standard:
(Click here)

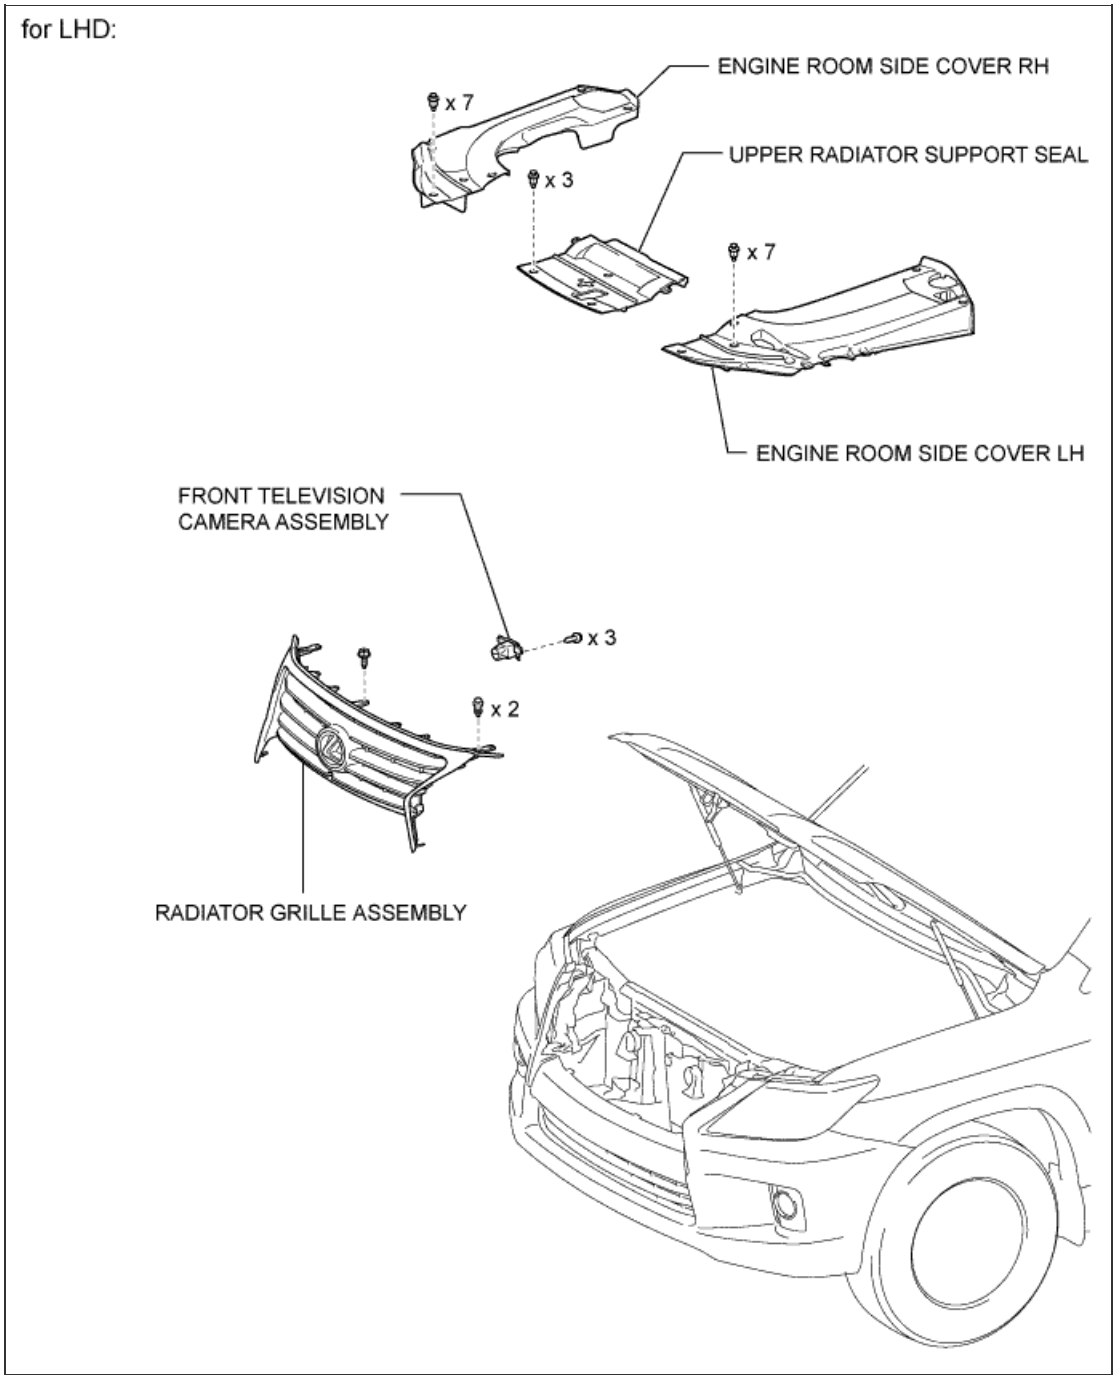
b. w/ Towing Hitch:
(Click here)

c. w/ Pintle Hook:
(Click here)



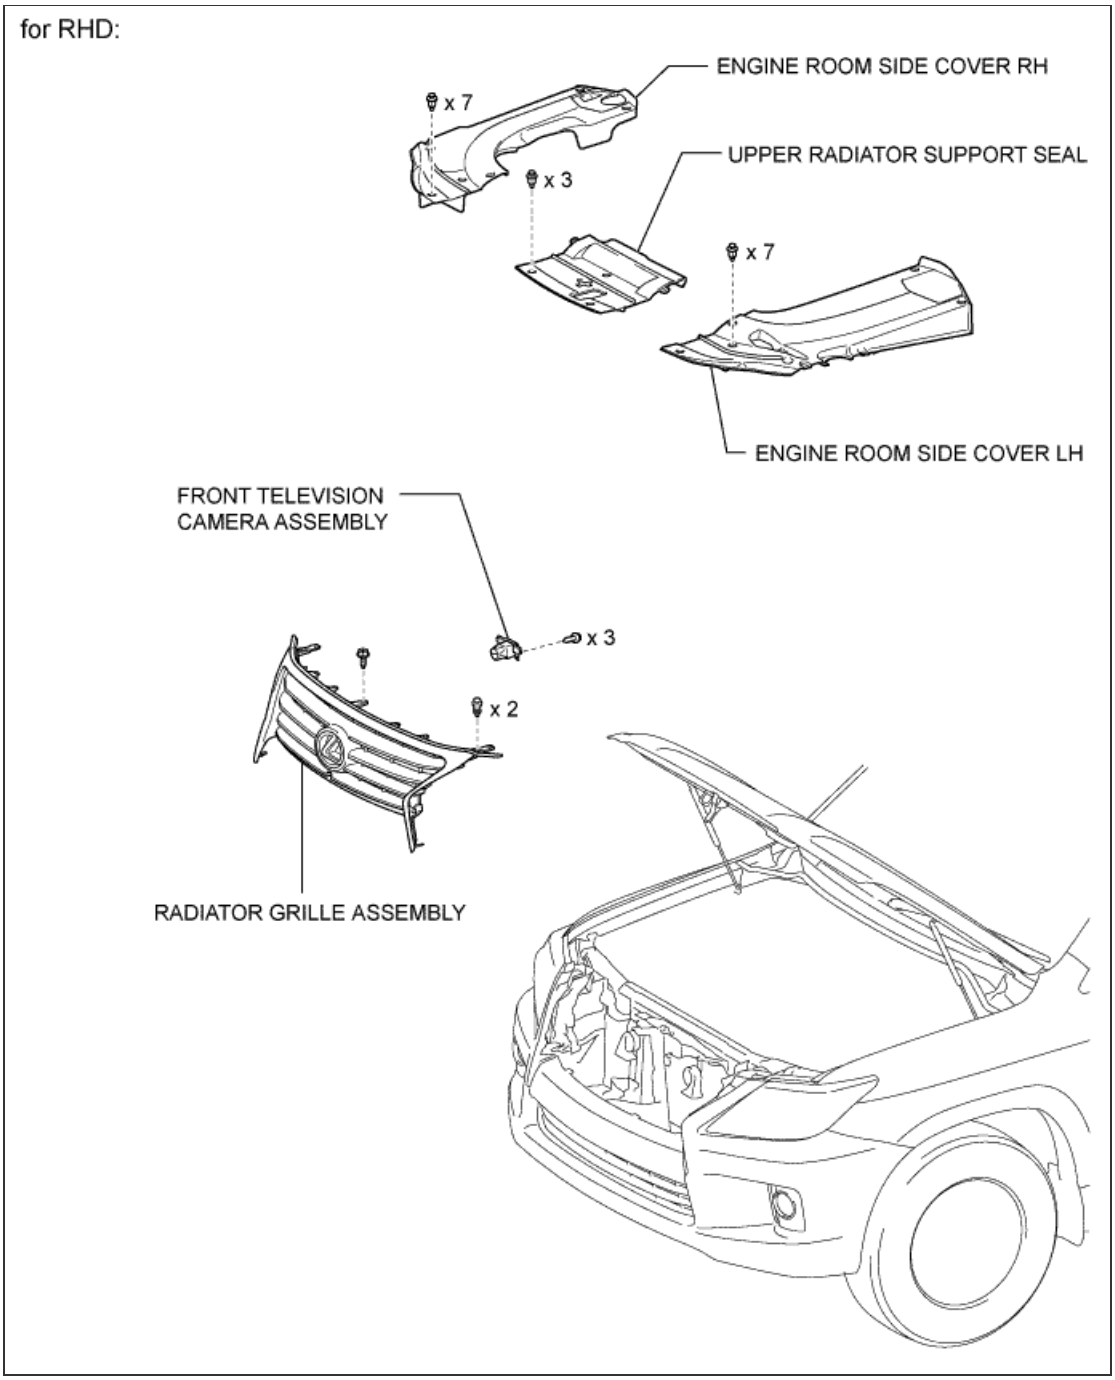
## 5. INSTALL REAR BUMPER COVER

a. for Standard:
(Click here)



b. w/ Towing Hitch:
(Click here)

c. w/ Pintle Hook:
(Click here)



**for Preparation** Click here

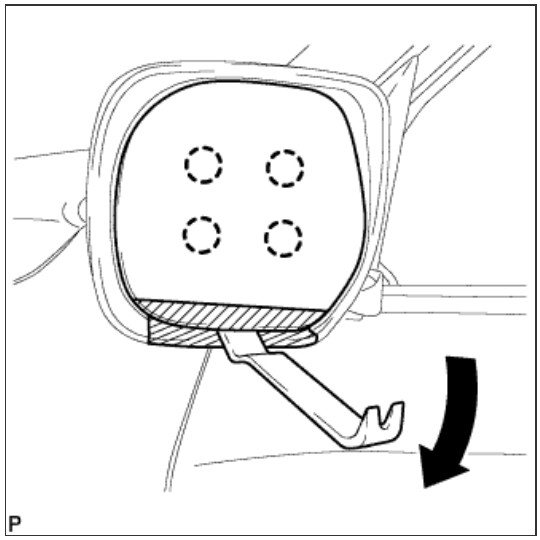
**HINT:**

- **Use the same procedures for LHD and RHD vehicles.**
- **The procedures listed below are for LHD vehicles.**

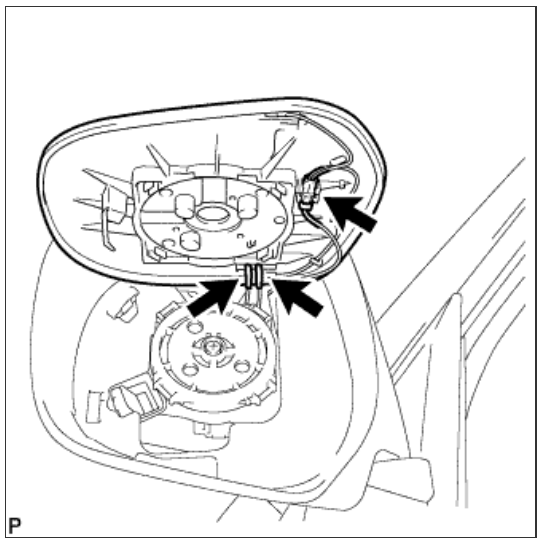
## 1. REMOVE OUTER REAR VIEW MIRROR ASSEMBLY RH

a. Remove the outer rear view mirror RH ( Click here).



## 2. REMOVE OUTER MIRROR RH

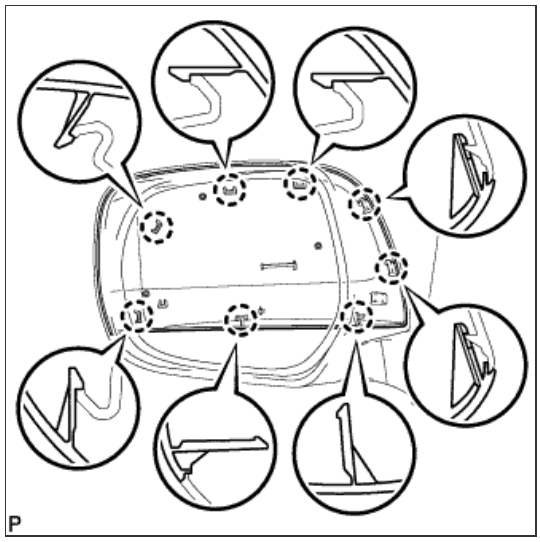
a. Push the upper part of the mirror surface and tilt it.



b. Using a moulding remover, detach the 4 claws and separate the outer rear view mirror glass from the mirror body.

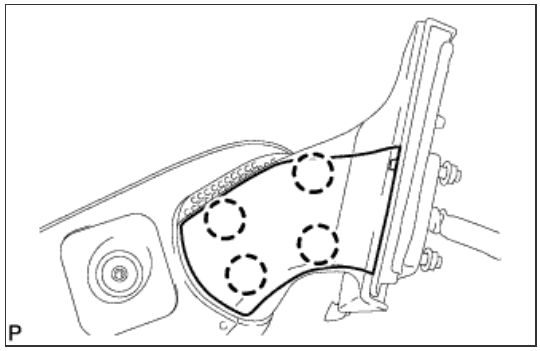
**HINT:**

Apply protective tape to the outer rear view mirror to prevent it from being damaged.

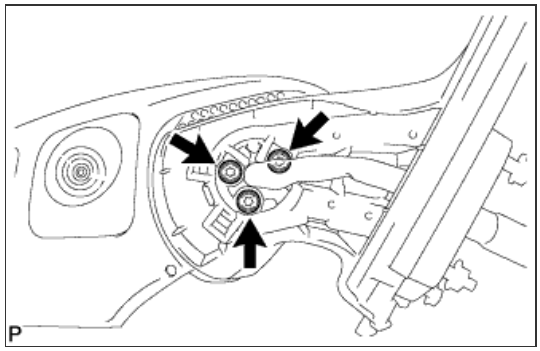


c. Disconnect the 3 connectors and remove the mirror glass.

## 3. REMOVE SIDE TELEVISION CAMERA ASSEMBLY

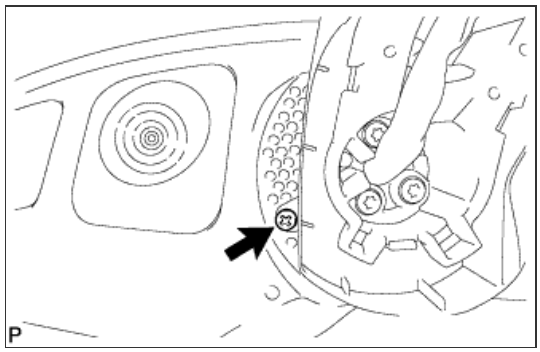


a. Detach the 8 claws and remove the outer mirror cover RH.

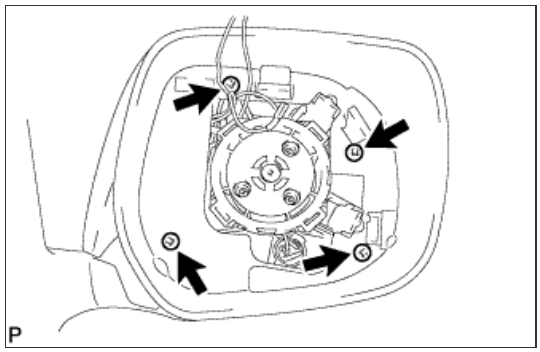


b. Using a screwdriver, detach the 4 claws and open the cover.

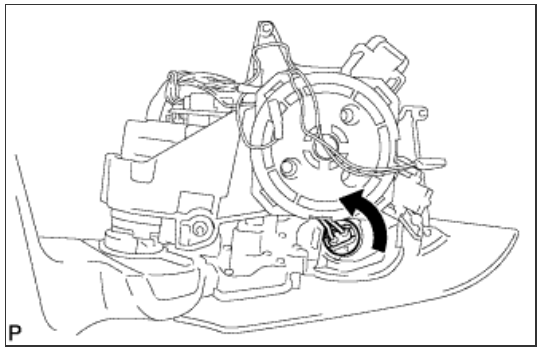
**HINT:**



Tape the screwdriver tip before use.

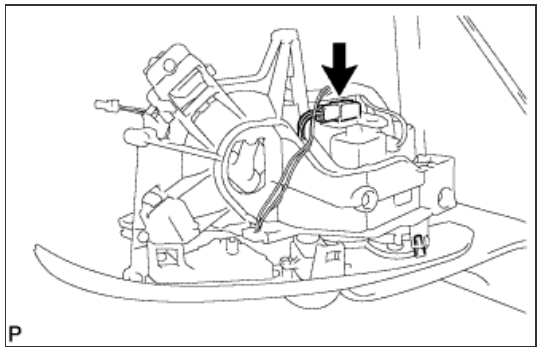


c. Using a T25 "TORX" socket wrench, remove the 3 screws.

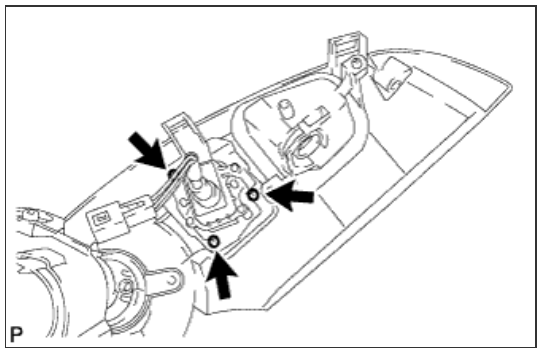


d. Remove the screw.

e. Remove the 4 screws.



f. Turn the bulb in the direction shown in the illustration to remove it.



g. Disconnect the connector and detach the claw.

**NOTICE:**

Be careful when detaching the claw as it is easily broken.

h. Remove the 3 screws and side television camera.

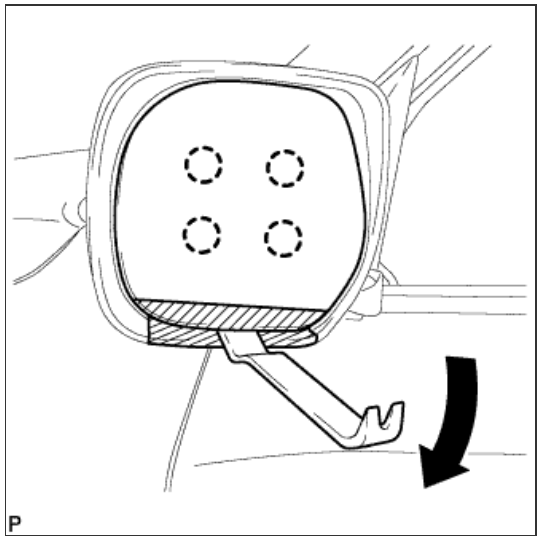
**for Preparation** Click here

**HINT:**

- **Use the same procedure for the RH and LH sides.**
- **The procedure listed below is for the LH side.**

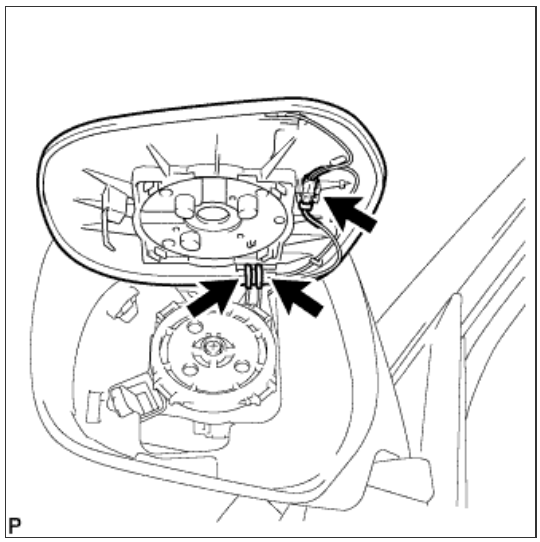
## 1. REMOVE OUTER REAR VIEW MIRROR ASSEMBLY LH

(Click here)



## 2. REMOVE OUTER MIRROR LH

a. Push the upper part of the mirror surface and tilt it.

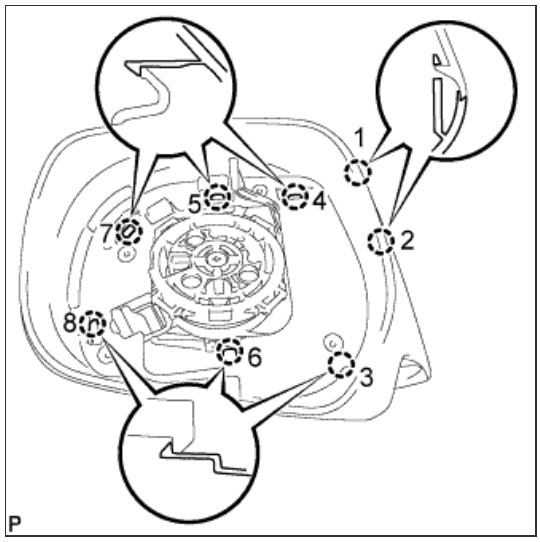


b. Using a moulding remover, detach the 4 claws and separate the outer rear view mirror glass from the mirror body.

**HINT:**

Apply protective tape to the outer rear view mirror to prevent it from being damaged.

c. Disconnect the 3 connectors and remove the mirror glass.

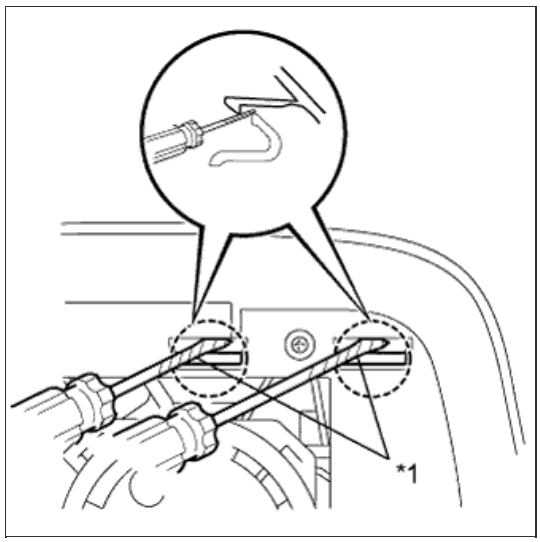


## 3. REMOVE SIDE TURN SIGNAL LIGHT ASSEMBLY LH

a. Remove the outer mirror cover.

**HINT:**

Be sure to detach the claws of the outer mirror cover in the order shown in the illustration.



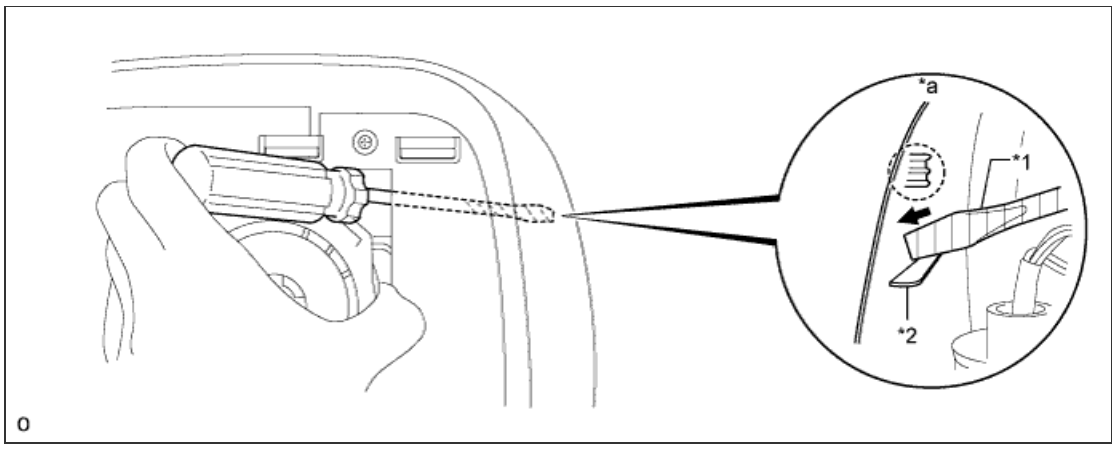
i. Using 2 screwdrivers, detach the 2 claws.

**HINT:**

Tape the screwdriver tip before use.

**Text in Illustration**

| | |
|---|---|
| *1 | Protective Tape |



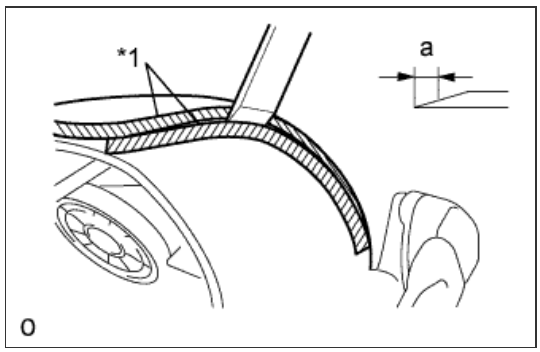
ii. Insert a screwdriver into the slot as shown in the illustration and push on the outer mirror body to create a space between the outer mirror body and outer mirror cover.

**NOTICE:**

Be careful not to break the ribs.

**HINT:**

Tape the screwdriver tip before use.



**Text in Illustration**

| | | | |
|---|---|---|---|
| *1 | Protective Tape | *2 | Rib |

| | | | |
|---|---|---|---|
| *a | Inner Side of Outer Mirror Cover | - | - |

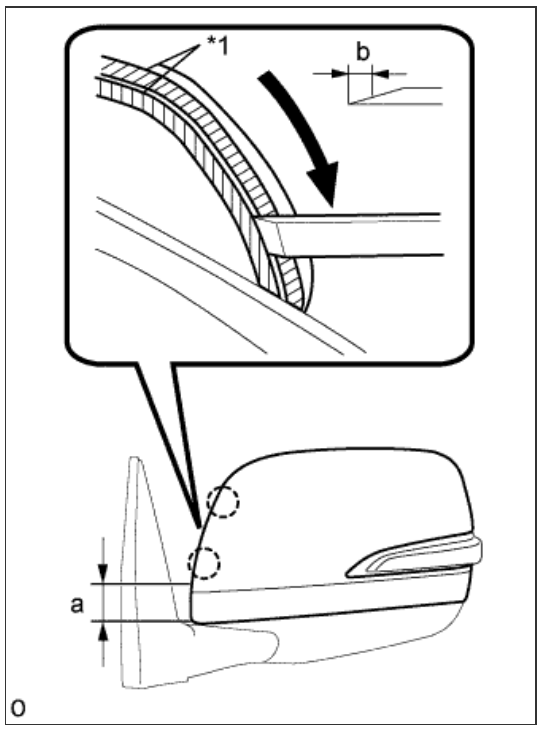
iii. Insert a moulding remover into the space made between the outer mirror body and outer mirror cover.

**NOTICE:**

Do not insert the moulding remover more than 4 mm (0.157 in.).

**HINT:**

Tape the moulding remover before use.



**Standard:**

| Area | Specified Condition |
|---|---|
| a | 4mm |

**Text in Illustration**

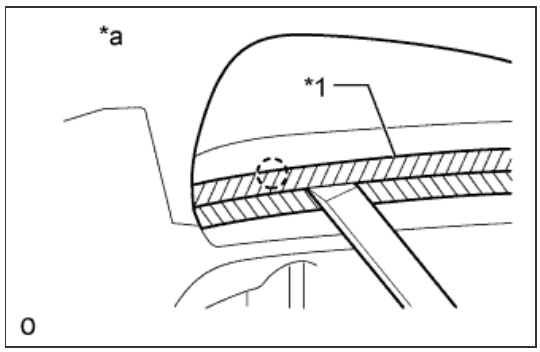
| | |
|---|---|
| *1 | Protective Tape |

iv. Slide the moulding remover downwards as shown in the illustration to detach the 2 claws.

**NOTICE:**

- **Do not insert the moulding remover more than 4 mm (0.157 in.).**
- **Do not slide the moulding remover past the point approximately 40 mm (1.57 in.) from the bottom edge of the outer mirror cover as the outer mirror body will become damaged.**

**Standard:**



| Area | Specified Condition |
|---|---|
| a | 40mm |
| b | 4mm |

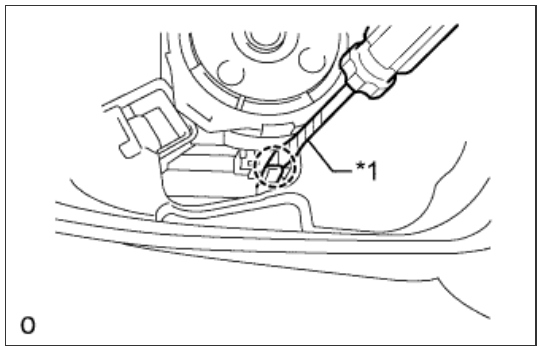
**Text in Illustration**

| | |
|---|---|
| *1 | Protective Tape |

v. Remove the moulding remover B.

vi. Apply protective tape to the areas of the body cover and outer mirror cover as shown in the illustration.

**Text in Illustration**

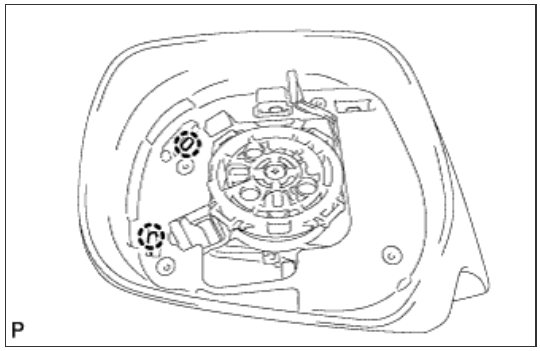


| | |
|---|---|
| *1 | Protective Tape |
| *a | Lower Side |

vii. Insert a moulding remover B between the outer mirror cover and outer mirror body as shown in the illustration and detach the claw.

viii. Using a screwdriver, detach the claw.

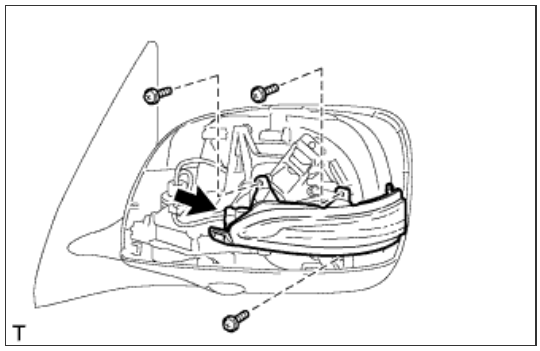
**Text in Illustration**



| | |
|---|---|
| *1 | Protective Tape |

ix. Detach the 2 claws and remove the outer mirror cover.

**NOTICE:**



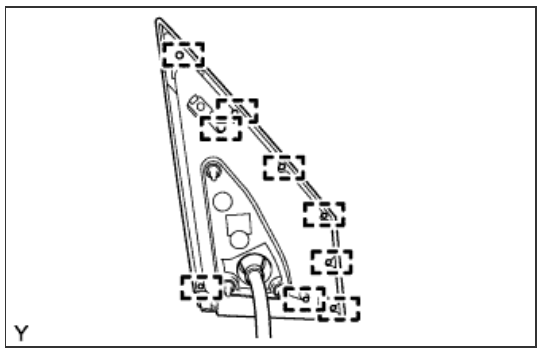
When removing the cover, be careful not to damage the side turn signal light assembly or cover.

b. Remove the side turn signal light assembly LH.

i. Remove the 3 screws and side turn signal light assembly LH.

ii. Disconnect the connector.

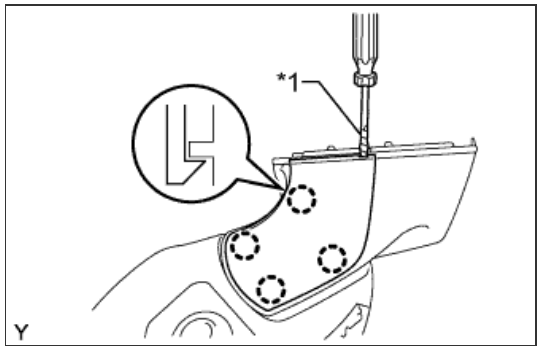
## 4. REMOVE SIDE TELEVISION CAMERA ASSEMBLY



a. Remove the gasket.

i. Remove the tape.

ii. Detach the 9 guides and remove the gasket.

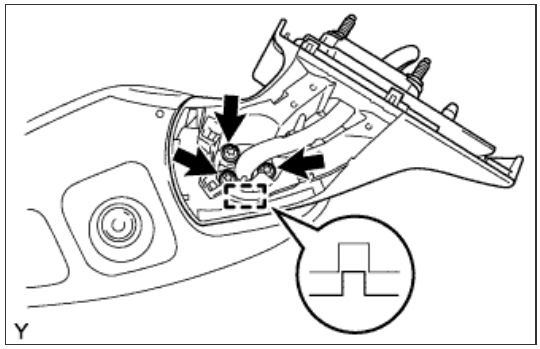


**HINT:**

Slightly lower the gasket so that the television camera assembly can be removed.

b. Remove the lower mirror cover.

i. Using a screwdriver with its tip wrapped in protective tape, disconnect the 4 claws and remove the lower mirror cover.



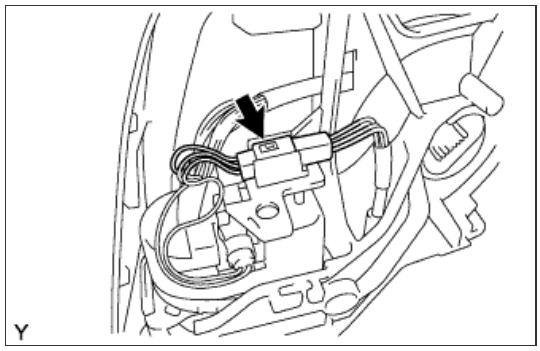
**Text in Illustration**

| | |
|---|---|
| *1 | Protective Tape |

c. Remove the base.

i. Remove the wire harness.

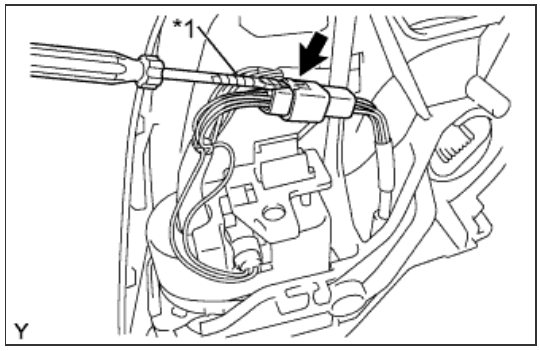
ii. Using "TORX" socket wrench T25, remove the 3 screws.



**NOTICE:**

Make sure to replace the "TORX" screws with new ones.

iii. Disconnect the guide and remove the base.

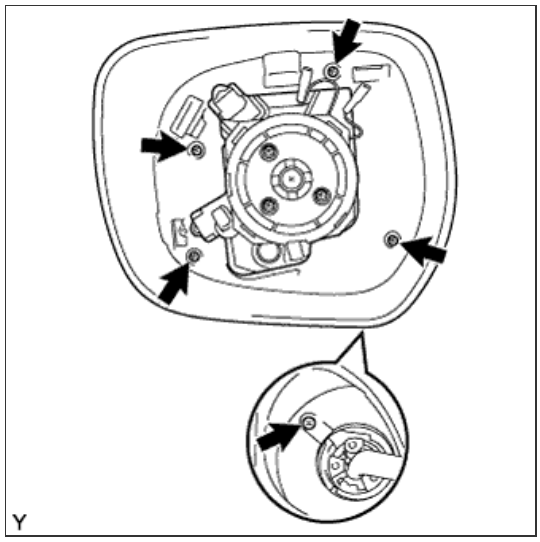


d. Detach the connector from the wire clip.

e. Using a screwdriver, disconnect the connector.

**HINT:**

Tape the moulding remover before use.



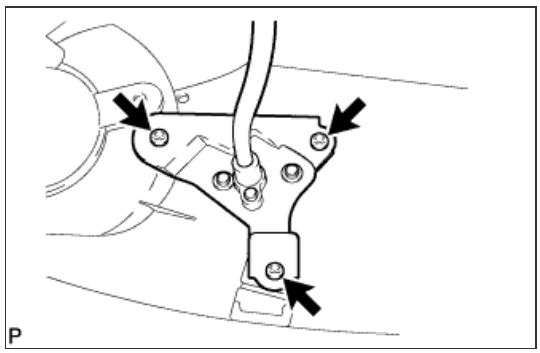
**Text in Illustration**

| | |
|---|---|
| *1 | Protective Tape |

f. Remove the body cover.

i. Remove the 5 screws and body cover.

g. Remove the body.

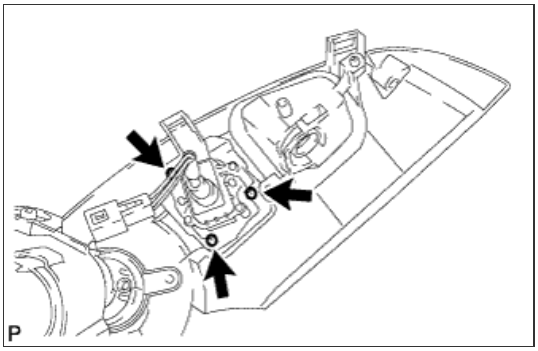


i. Disconnect the 2 guides and remove the body.

**NOTICE:**

Be careful not to break the guide shown in the part of the illustration labeled A.

h. Remove the 3 screws and side television camera assembly.

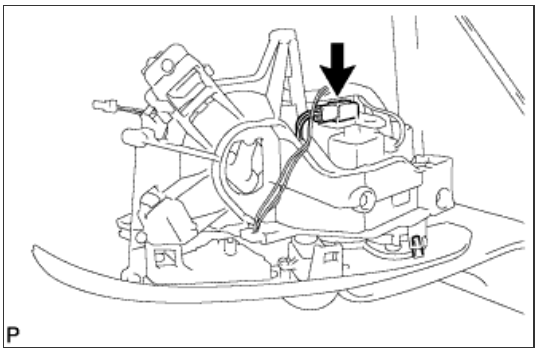


**for Preparation** Click here

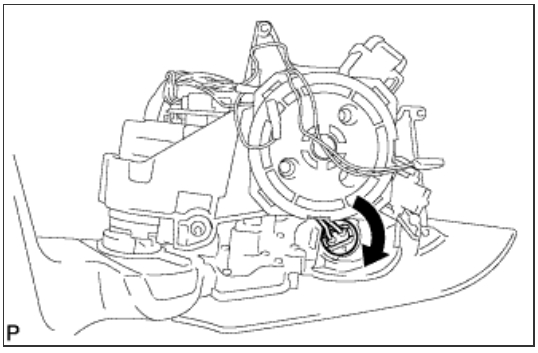
**HINT:**

- **Use the same procedures for LHD and RHD vehicles.**
- **The procedures listed below are for LHD vehicles.**

## 1. INSTALL SIDE TELEVISION CAMERA ASSEMBLY

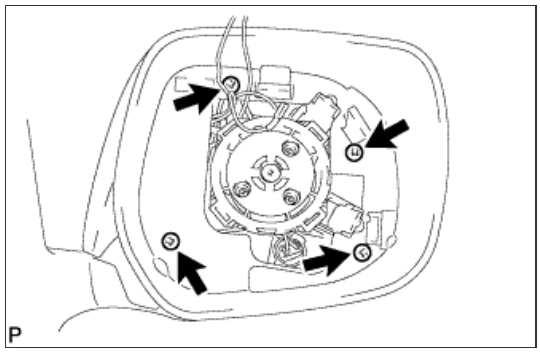


a. Install the side television camera with the 3 screws.

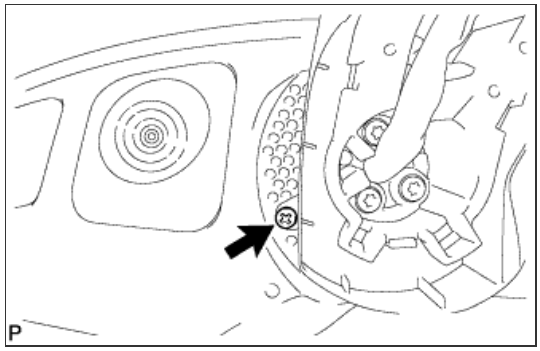


b. Attach the claw to connect the connector.

**NOTICE:**

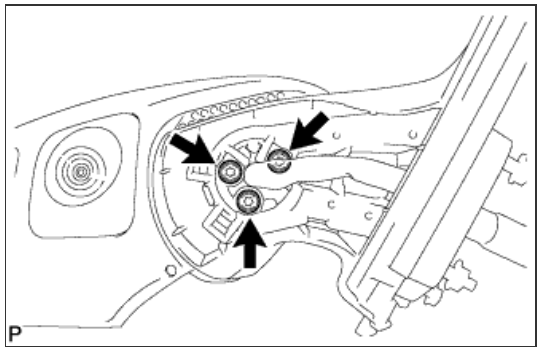


Be careful when attaching the claw as it is easily broken.

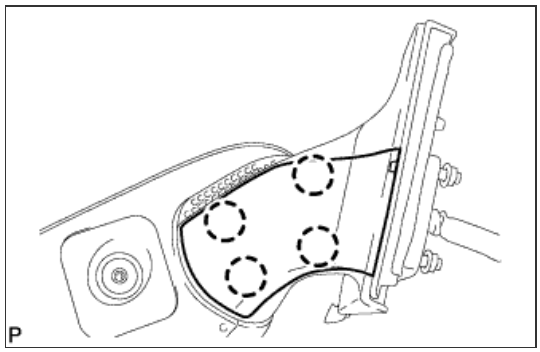


c. Turn the bulb in the direction shown in the illustration to install it.

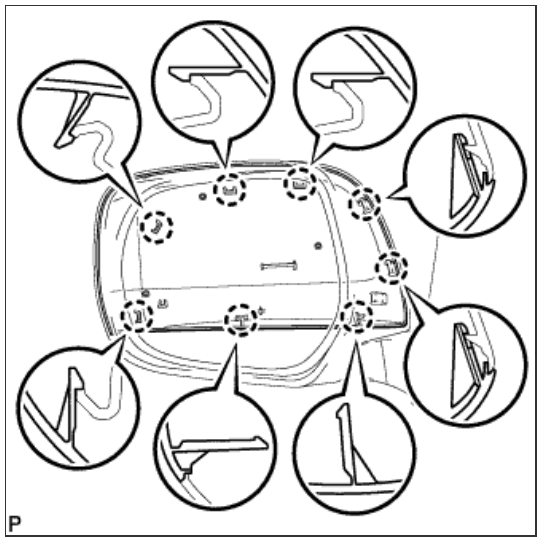
d. Install the 4 screws and cover.



e. Install the screw.

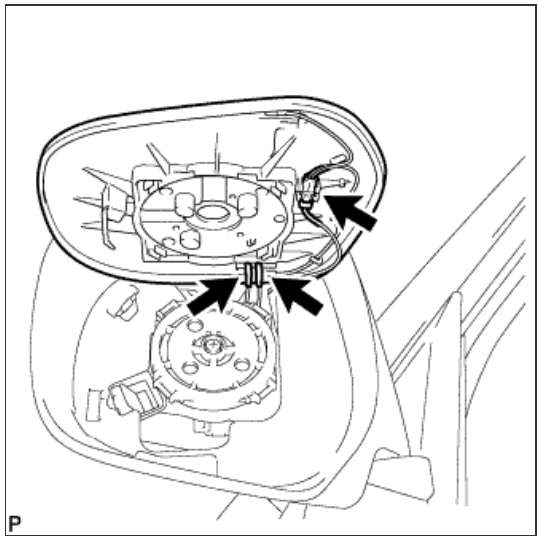


f. Using a T25 "TORX" socket wrench, install the 3 screws.

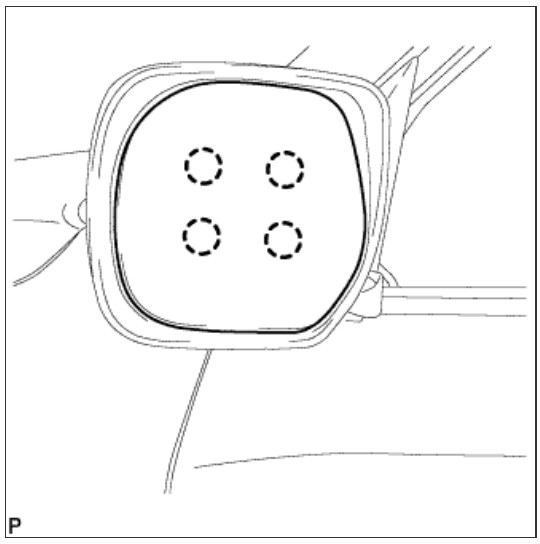


**Torque:**
**3.8 N*m{ 39 kgf*cm , 34 in.*lbf }**

g. Attach the 4 claws to install the cover.



h. Attach the 8 claws to install the outer mirror cover RH.



## 2. INSTALL OUTER MIRROR RH

a. Connect the 3 connectors.

b. Attach the 4 claws to install the mirror glass.

## 3. INSTALL OUTER REAR VIEW MIRROR ASSEMBLY RH

a. Install the outer rear view mirror RH ( Click here).

## 4. ADJUST SIDE TELEVISION CAMERA ASSEMBLY

a. Adjust the side television camera assembly (Click here).

**for Preparation** Click here

**HINT:**

- **Use the same procedure for the RH and LH sides.**
- **The procedure listed below is for the LH side.**

## 1. INSTALL SIDE TELEVISION CAMERA ASSEMBLY

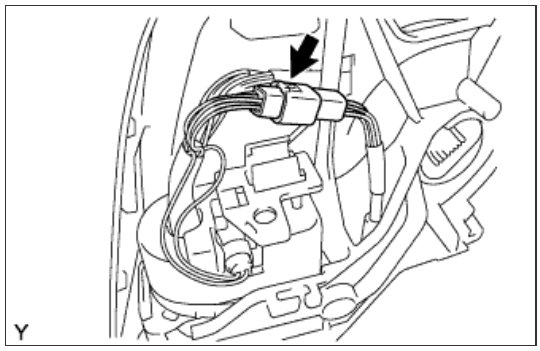
a. Install the side television camera assembly with the 3 screws.

b. Install the body.

i. Attach the 2 guides and body.

**NOTICE:**

Be careful not to break the guide.



c. Install the body cover.

i. Install the body with the 5 screws.

d. Connect the connector.

e. Attach the connector to the wire clip.

f. Install the base.

i. Attach the guide.

ii. Using "TORX" socket wrench T25, install the base with 3 new screws.

**NOTICE:**

When installing the base, check that the wire harness is not caught between the base and housing. Failure to do so may cause a short circuit.

g. Install the lower mirror cover.

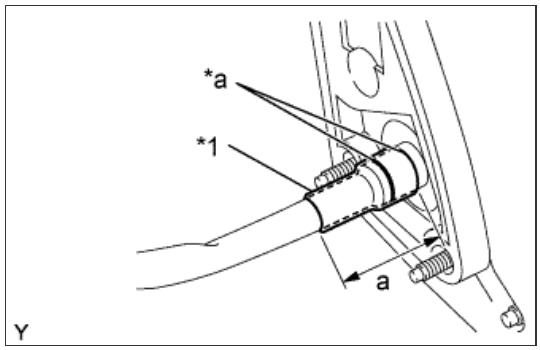
i. Attach the 4 claws and install the new lower mirror cover.

h. Install the gasket.

i. Attach the 9 guides and install the gasket.

ii. Align the marking on the wire harness with the marking on the end of the wire harness insertion hole of the gasket as shown in the illustration, and wrap them with new vinyl tape starting from the gasket marking.

**Standard:**



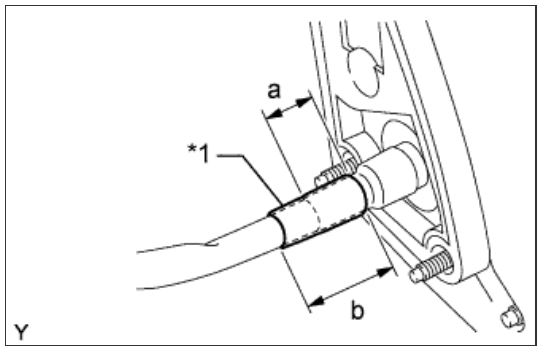
| Area | Specified Condition |
|---|---|
| a | 50.0 mm (1.97 in.) |

**NOTICE:**

If the vinyl tape is wrinkled, water may run down the wire harness and enter the vehicle. Make sure to wind the vinyl tape properly.

**Text in Illustration**

| | |
|---|---|
| *1 | New Vinyl Tape |
| *a | Marking |



iii. Wrap new vinyl tape as shown in the illustration.

**Standard:**

| Area | Specified Condition |
|---|---|
| a | 30.0 mm (1.18 in.) |
| b | 50.0 mm (1.97 in.) |

**Text in Illustration**

| | |
|---|---|
| *1 | New Vinyl Tape |

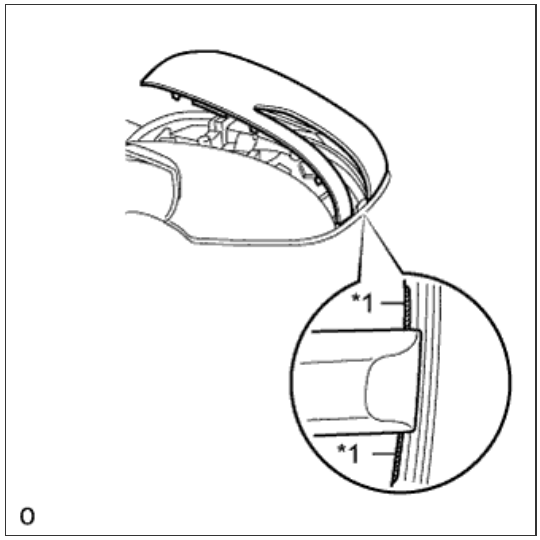
## 2. INSTALL SIDE TURN SIGNAL LIGHT ASSEMBLY LH

a. Install the side turn signal light assembly.

i. Connect the connector.

ii. Install the side turn signal light assembly with the 3 screws.

b. Install the outer mirror cover.



i. Insert the rib on the outer edge of the cover into the groove of the mirror body.

**NOTICE:**

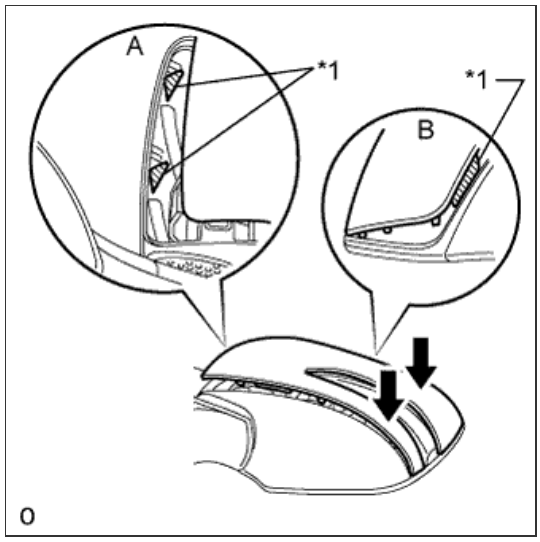
Do not scratch the turn light.

**Text in Illustration**

| | |
|---|---|
| *1 | Rib |

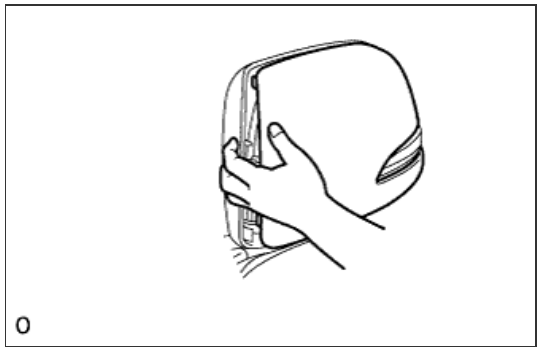
ii. Confirm that the cover and mirror body are aligned properly, and then push the outer end of the cover to attach the outer claws.

**NOTICE:**



- **Make sure that the upper ribs of the cover shown in part A of the illustration are properly attached to the**

mirror body.

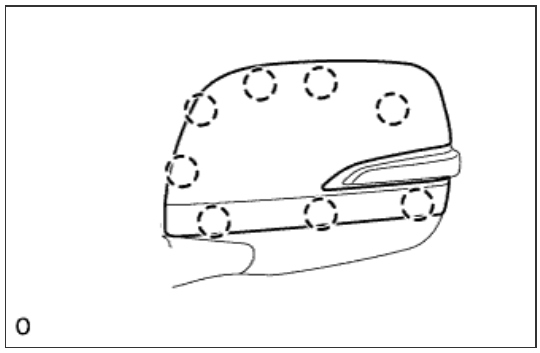


- Make sure that the ribs of the mirror body shown in part B of the illustration are not protruding from the cover.

**Text in Illustration**

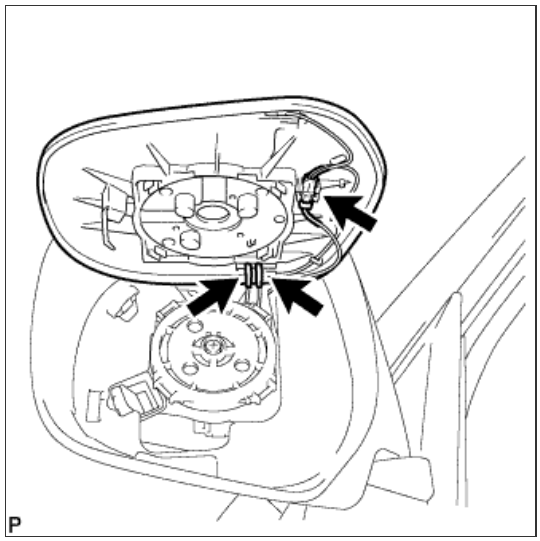
| | |
|---|---|
| *1 | Rib |

iii. While making sure that the rib of the cover fits properly into the groove of the mirror body, squeeze the inner end of the cover and the mirror body together to attach the inner claws.



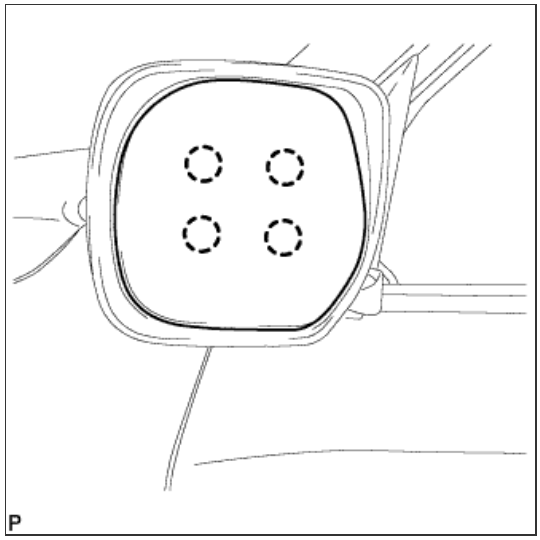
c. Push on the cover at the locations of the 8 claws to confirm that the claws are attached properly.

d. Check that there is no gap between the cover and mirror body.



**HINT:**

If there is a gap between the cover and body, noise will occur during driving.



## 3. INSTALL OUTER MIRROR LH

a. Connect the 3 connectors.

b. Attach the 4 claws to install the mirror glass.

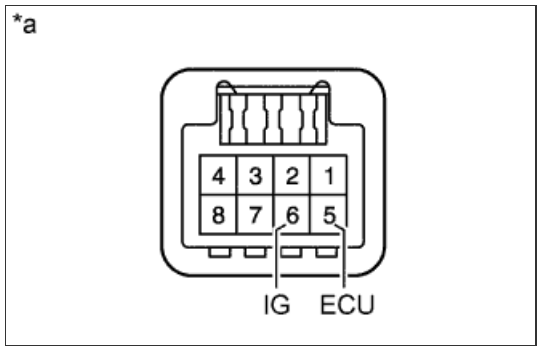
## 1. INSPECT CLEARANCE SONAR MAIN SWITCH

a. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**

| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| 5 (ECU) - 6 (IG) | Clearance sonar main switch on | Below 1 Ω |
| 5 (ECU) - 6 (IG) | Clearance sonar main switch off | 10 kΩ or higher |



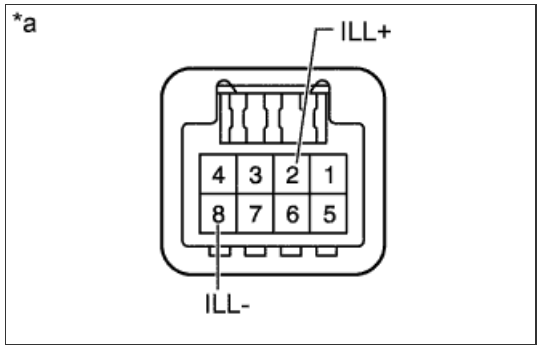
If the result is not as specified, replace the switch.

**for Preparation** Click here

## 1. INSPECT MAIN SWITCH ASSEMBLY (CLEARANCE SONAR MAIN SWITCH)

a. Measure the resistance according to the value(s) in the table below.

**Standard Resistance:**



| Tester Connection | Switch Condition | Specified Condition |
|---|---|---|
| 5 (ECU) - 6 (IG) | Main switch assembly (Clearance sonar main switch) on | Below 1 Ω |
| 5 (ECU) - 6 (IG) | Main switch assembly (Clearance sonar main switch) off | 10 kΩ or higher |

If the result is not as specified, replace the main switch assembly.

**Text in Illustration**

| | |
|---|---|
| *a | Component without harness connected (Main Switch Assembly (Clearance Sonar Main Switch)) |

b. Check the switch illuminates.

i. Apply battery voltage to the main switch assembly (clearance sonar main switch) and check that the switch illuminates.

**OK:**

| Tester Connection | Specified Condition |
|---|---|
| Battery positive (+) → Terminal 2 (ILL+)<br>Battery negative (-) → Terminal 8 (ILL-) | Illuminates |

If the result is not as specified, replace the main switch assembly.

| *a | Component without harness connected (Main Switch Assembly (Front And Side Monitor Main Switch)) |

If the result is not as specified, replace the main switch assembly.

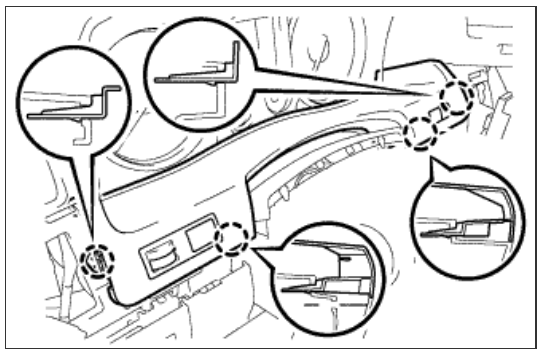
**for Preparation** Click here

**HINT:**

- **Use the same procedures for LHD and RHD vehicles.**
- **The procedures listed below are for LHD vehicles.**

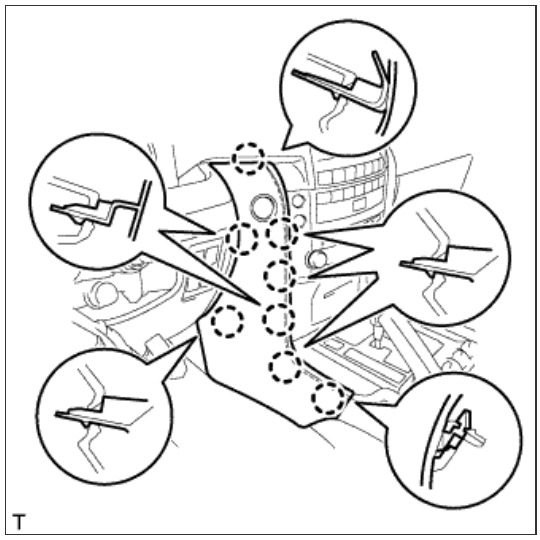
## 1. INSTALL FRONT AND SIDE MONITOR MAIN SWITCH



a. Detach the 2 claws and remove the front and side monitor main switch.

## 2. INSTALL INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY

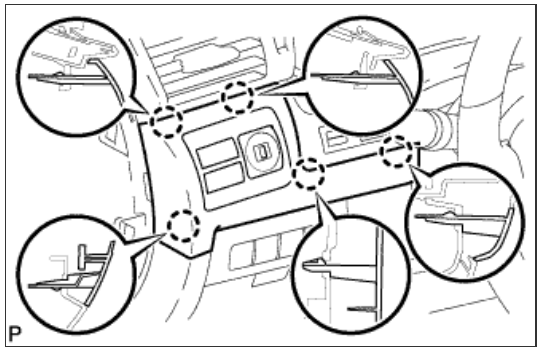
a. Connect the connectors.



b. Attach the 4 claws to install the finish panel.

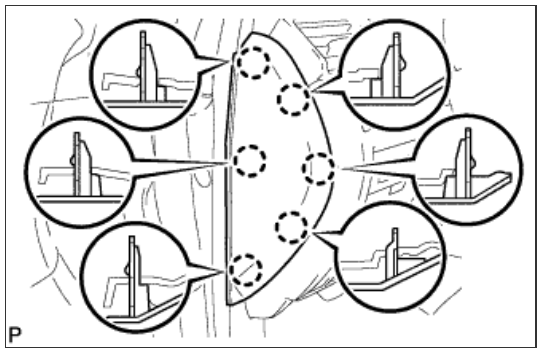
## 3. INSTALL LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

a. Connect the connector.



b. Attach the 8 claws to install the panel pad.

### 4. INSTALL NO. 1 SWITCH HOLE BASE

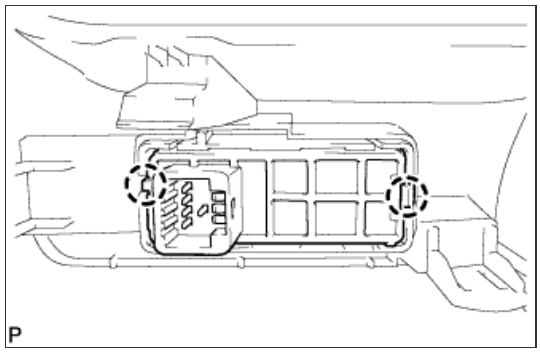


a. Connect the connectors.

b. Attach the 5 claws to install the switch hole base.

### 5. INSTALL INSTRUMENT SIDE PANEL LH

a. Attach the 6 claws to install the side panel.

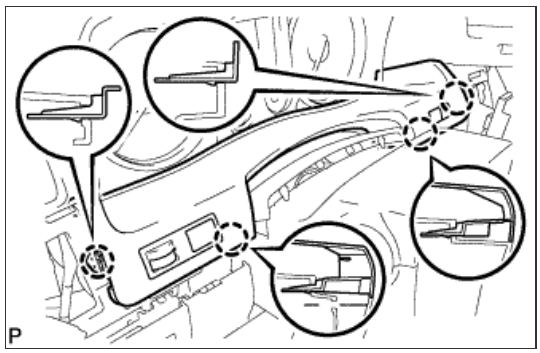


**for Preparation** Click here

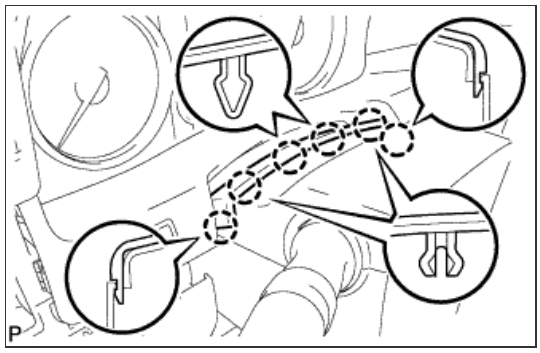
**HINT:**

- **Use the same procedure for LHD and RHD vehicles.**
- **The procedure listed below is for LHD vehicles.**

## 1. INSTALL MAIN SWITCH ASSEMBLY



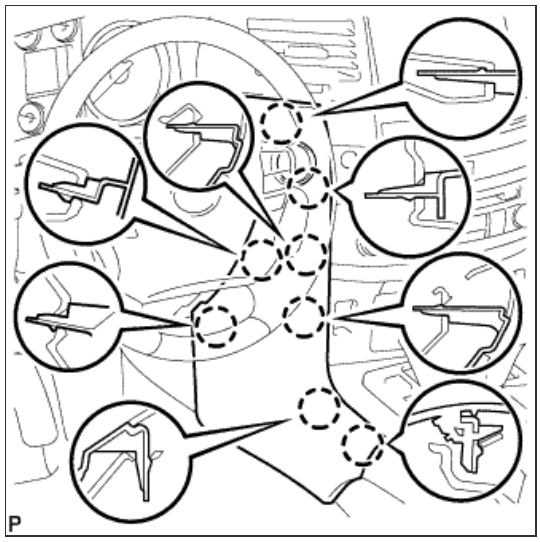
a. Detach the 2 claws and remove the main switch assembly.



## 2. INSTALL INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY

a. Connect the connectors.

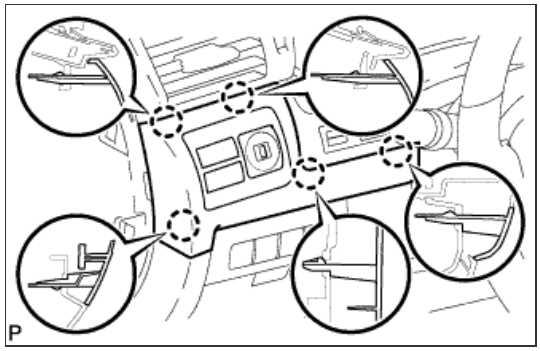
b. Attach the 4 claws to install the finish panel.



c. Attach the 6 claws.

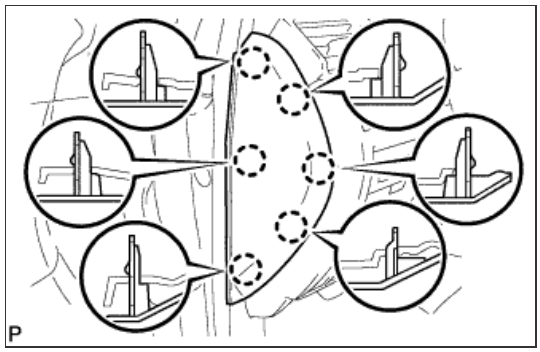
## 3. INSTALL LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

a. Connect the connector.



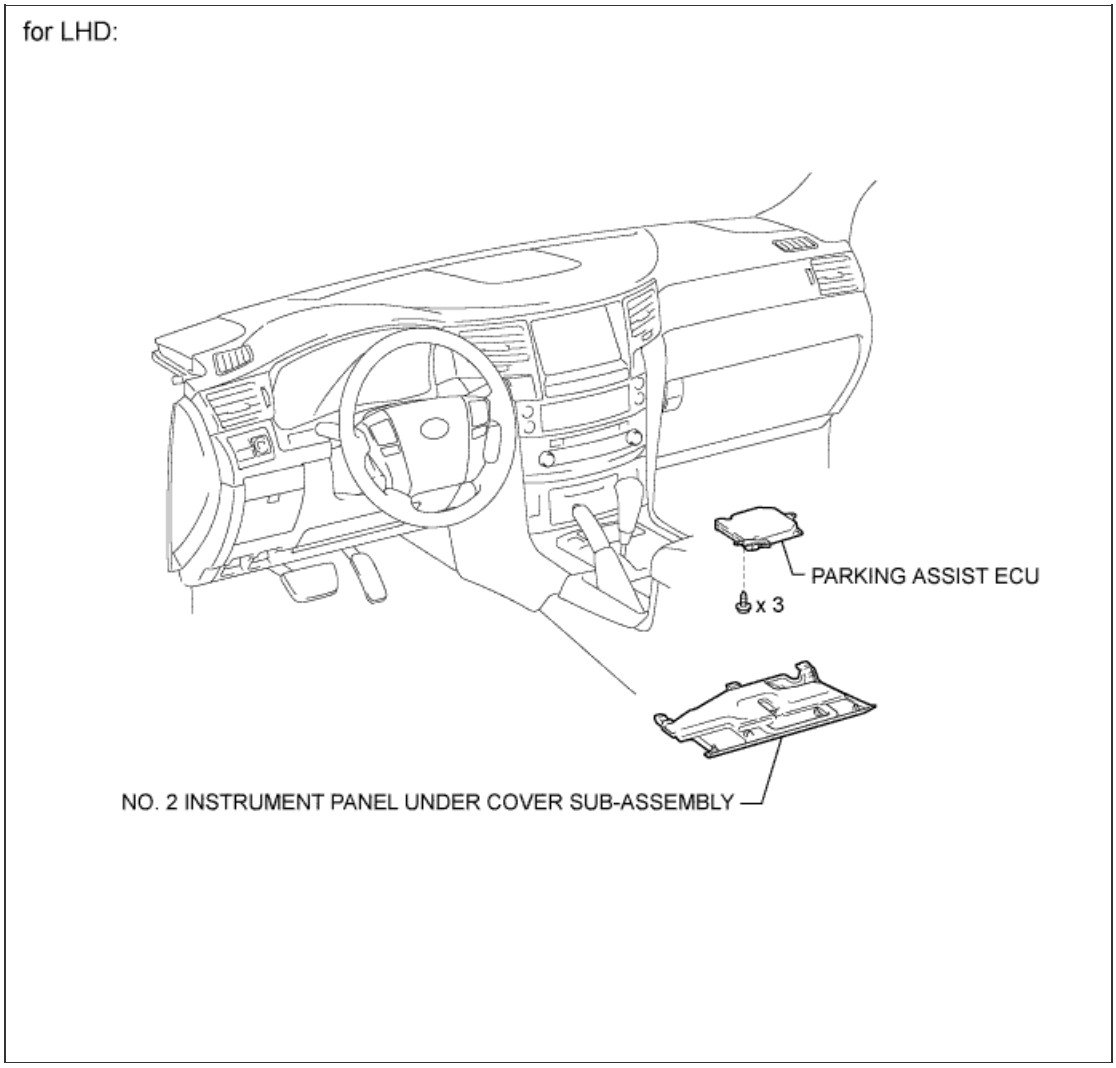
b. Attach the 8 claws to install the instrument panel pad.

### 4. INSTALL NO. 1 SWITCH HOLE BASE

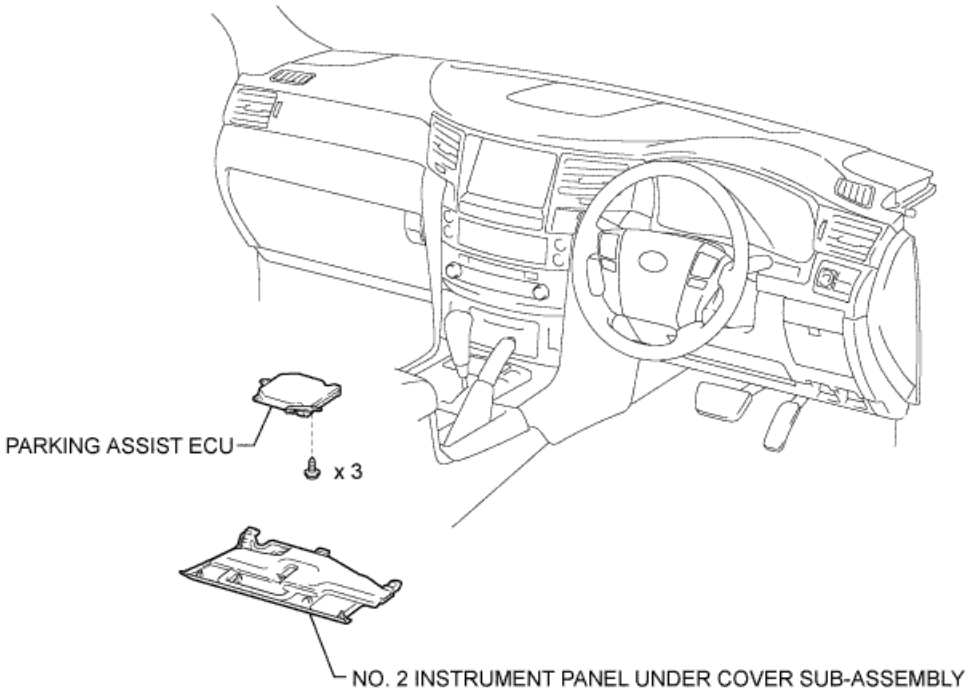


a. Connect the connectors.

b. Attach the 5 claws to install the switch hole base.



### 5. INSTALL INSTRUMENT SIDE PANEL LH



a. Attach the 6 claws to install the side panel.

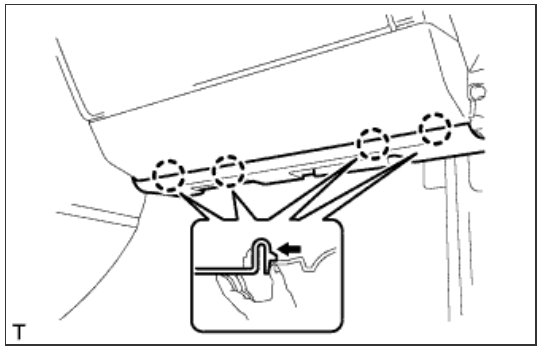
for RHD:

PARKING ASSIST ECU
x 3
NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

**for Preparation** Click here

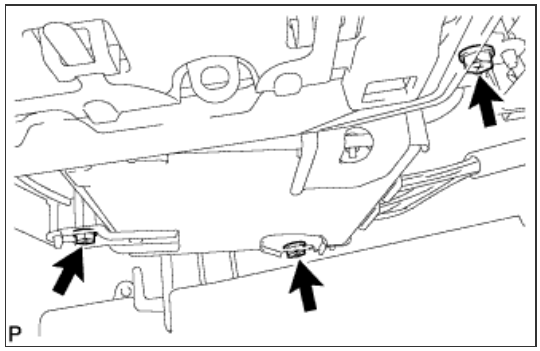


**HINT:**

- **Use the same procedures for LHD and RHD vehicles.**
- **The procedures listed below are for LHD vehicles.**

## 1. REMOVE NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

a. Detach the 4 claws.



b. Remove the under cover and disconnect the connector.

## 2. REMOVE PARKING ASSIST ECU

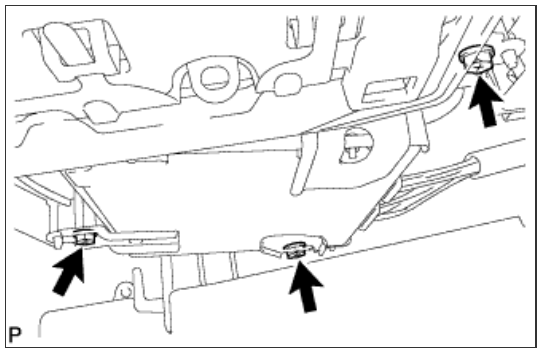
a. Disconnect the connector.

b. Remove the 3 screws and parking assist ECU.

**for Preparation** Click here

**HINT:**

- **Use the same procedures for LHD and RHD vehicles.**
- **The procedures listed below are for LHD vehicles.**



## 1. INSTALL PARKING ASSIST ECU

a. Install the parking assist ECU to the blower unit with the 3 screws.

**NOTICE:**

- **Avoid any impact to the parking assist ECU.**
- **Do not drop the ECU. If it is dropped, replace it with a new one.**

b. Connect the connector.

## 2. INSTALL NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY

a. Connect the connector.

b. Attach the 4 claws to install the under cover.
