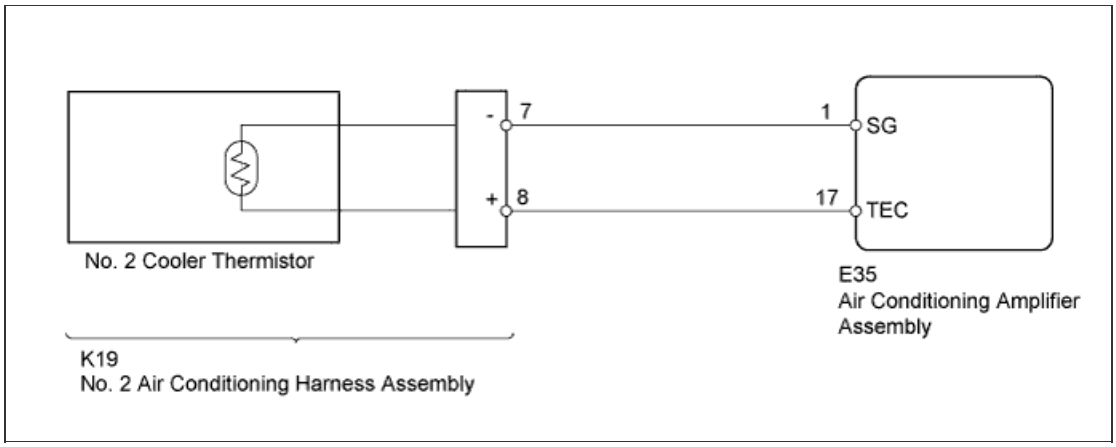
DTC B1417/17 Rear Evaporator Temperature Sensor Circuit



for Preparation Click here

DESCRIPTION

The No. 2 cooler thermistor is installed on the evaporator in the rear air conditioning unit to detect the cooled air temperature that has passed through the evaporator and control the air conditioning. It sends appropriate signals to the air conditioning amplifier assembly. The resistance of the No. 2 cooler thermistor changes in accordance with the cooled air temperature that has passed through the rear evaporator. As the temperature decreases, the resistance increases. As the temperature increases, the resistance decreases.
The air conditioning amplifier assembly applies voltage (5 V) to the No. 2 cooler thermistor and reads voltage changes as the resistance of the No. 2 cooler thermistor changes. This sensor is used for frost prevention.

DTC Code	DTC Detection Condition	Trouble Area
B1417/17	An open or short in the No. 2 cooler thermistor circuit.	• Harness or connector between No. 2 air conditioning harness assembly and air conditioning amplifier assembly • No. 2 air conditioning harness assembly (No. 2 cooler thermistor) • Air conditioning amplifier assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

1.READ VALUE USING INTELLIGENT TESTER (NO. 2 COOLER THERMISTOR)

a. Use the Data List to check if the No. 2 cooler thermistor is functioning properly.

Air Conditioner

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Ambient Temp Sens (Rear)	No. 2 cooler thermistor / Min.: -29.7°C (-21.46°F) Max.: 59.55°C (139.19°F)	Actual rear evaporator temperature displayed	Open in the circuit: -29.7°C (-21.46°F). Short in the circuit: 59.55°C (139.19°F).

OK:
The display is as specified in the normal condition.

NG → Go to step 2

OK

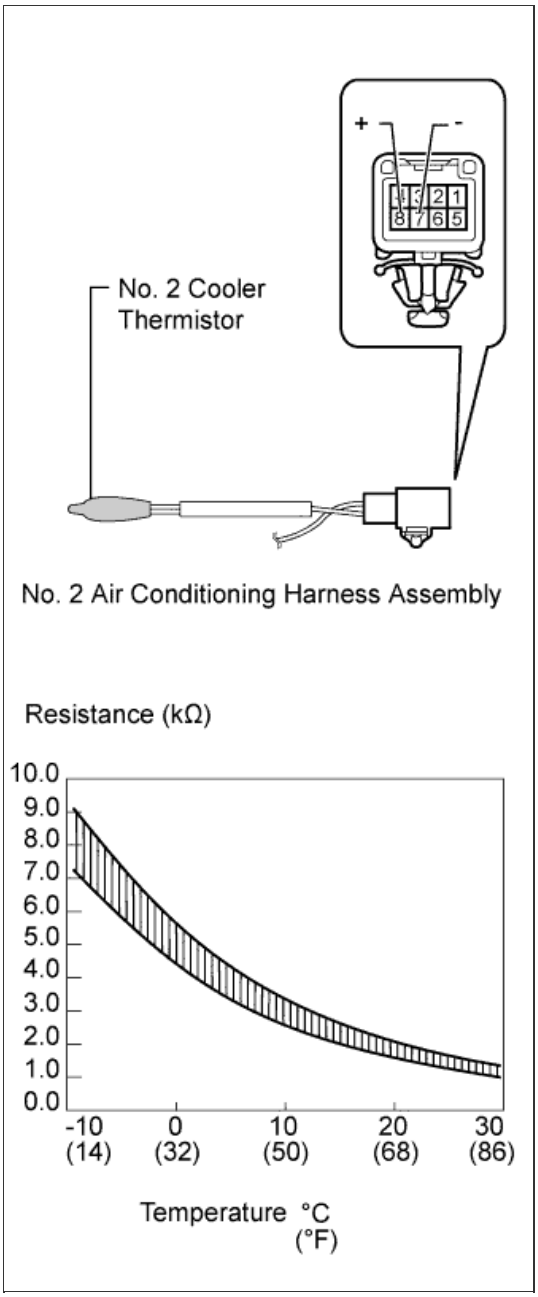
REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

2.INSPECT NO. 2 COOLER THERMISTOR

a. Remove the No. 2 air conditioning harness assembly (Click here).

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:



Tester Connection	Condition	Specified Condition
7 (-) - 8 (+)	-10°C (14°F)	7.40 to 9.20 kΩ
	-5°C (23°F)	5.65 to 7.00 kΩ
	0°C (32°F)	4.35 to 5.40 kΩ
	5°C (41°F)	3.40 to 4.20 kΩ
	10°C (50°F)	2.68 to 3.30 kΩ
	15°C (59°F)	2.10 to 2.60 kΩ
	20°C (68°F)	1.66 to 2.10 kΩ
	25°C (77°F)	1.32 to 1.66 kΩ
	30°C (86°F)	1.05 to 1.35 kΩ

NOTICE:

- **Even slightly touching the sensor may change the resistance value. Be sure to hold the connector of the sensor.**
- **When measuring, the sensor temperature must be the same as the ambient temperature.**

HINT:

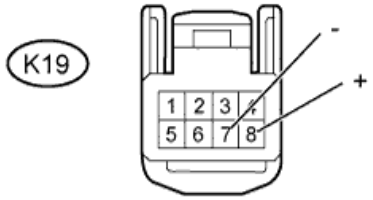
As the temperature increases, the resistance decreases (see the graph).

NG → REPLACE NO. 2 AIR CONDITIONING HARNESS ASSEMBLY (Click here)

OK

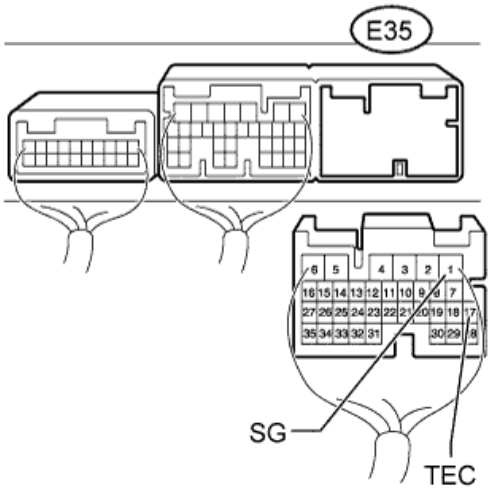
3.CHECK HARNESS AND CONNECTOR (NO. 2 AIR CONDITIONING HARNESS - AIR CONDITIONING AMPLIFIER)

a. Disconnect the K19 No. 2 air conditioning harness connector.



b. Disconnect the E35 amplifier connector.

c. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
K19-8 (+) - E35-17 (TEC)	Always	Below 1 Ω
K19-7 (-) - E35-1 (SG)	Always	Below 1 Ω
E35-17 (TEC) - Body ground	Always	10 kΩ or higher
E35-1 (SG) - Body ground	Always	10 kΩ or higher

4.CHECK NO. 2 AIR CONDITIONING HARNESS ASSEMBLY (OPERATION)

a. Replace the No. 2 air conditioning harness assembly with a normal one and check that the condition returns to normal (Click here).

NEXT

5.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

OK:
DTC B1417 is not output.

NG → REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (**Click here**)

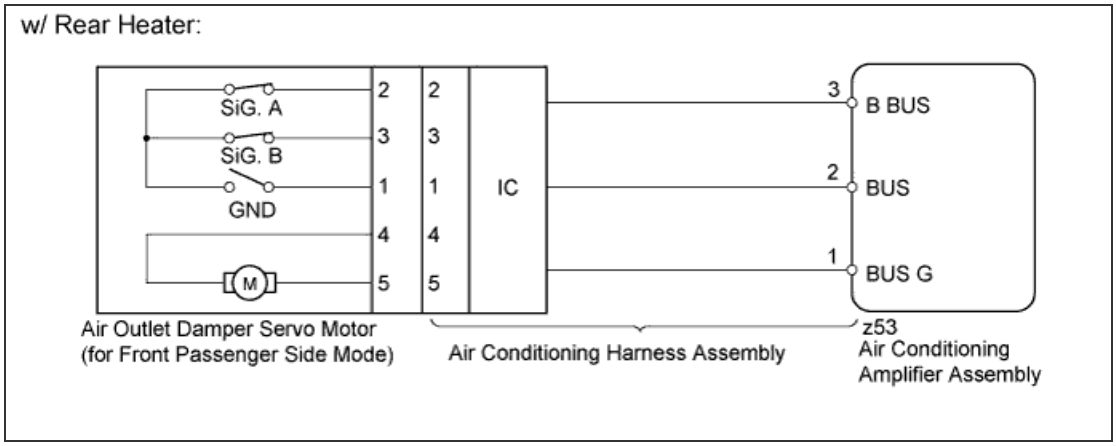
OK

REPLACE NO. 2 AIR CONDITIONING HARNESS ASSEMBLY (Click here)

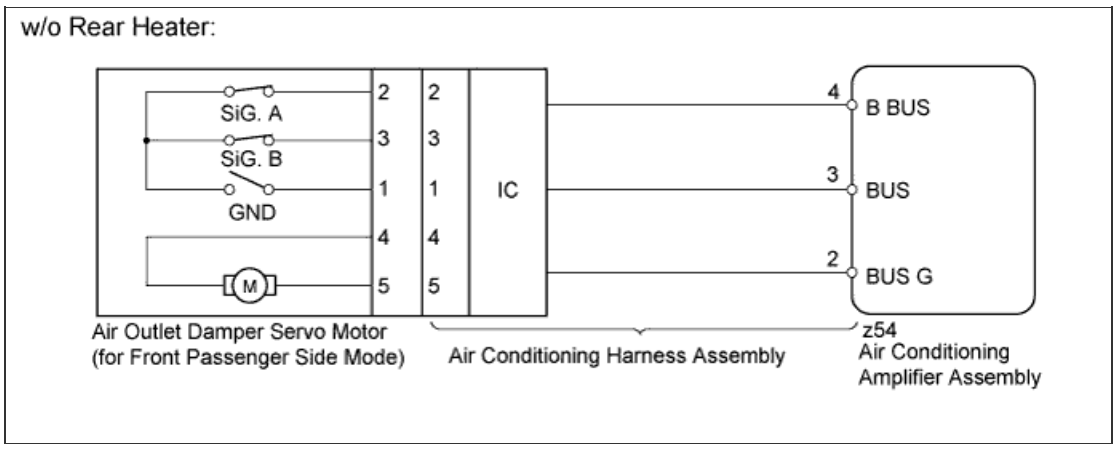
DTC B1448/48 Passenger Side FACE Servo Motor Circuit

for Preparation Click here

DESCRIPTION



The air outlet damper servo motor (for front passenger side mode) sends pulse signals to inform the air conditioning amplifier assembly of the damper position. The air conditioning amplifier assembly activates the motor (normal or reverse) based on the signals to move the air outlet damper (for front passenger side mode) to any position, which controls the air outlet changes.



HINT:

Confirm that no mechanical problem is present because this trouble code can be output when either a damper link or damper is mechanically locked.

DTC Code	DTC Detection Condition	Trouble Area
B1448/48	The air outlet damper position does not change even if the air conditioning amplifier assembly operates the air outlet damper servo motor.	• Air outlet damper servo motor (for front passenger side mode) • Air conditioning harness assembly • Air conditioning amplifier assembly

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK → REPLACE AIR CONDITIONING A PLIFIER ASSE BLY (Click here)

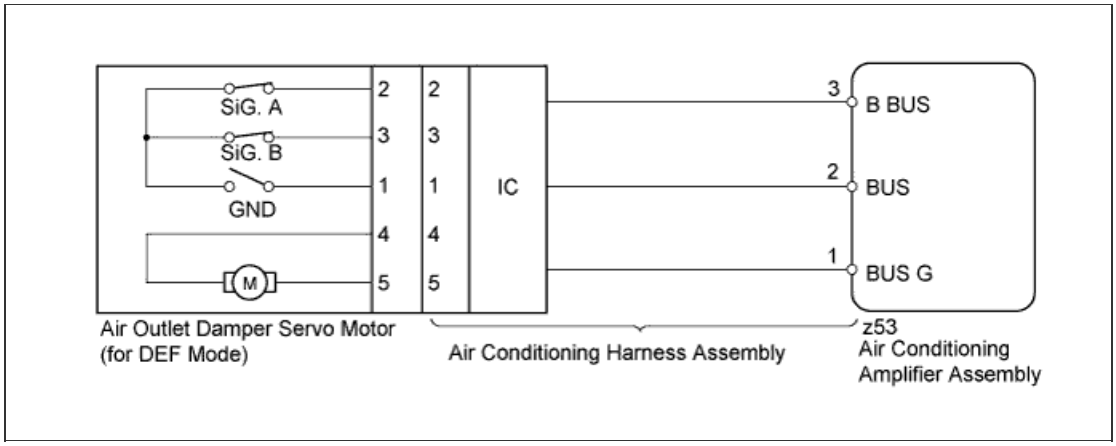
DTC B1455/55 Driver Side Air Outlet Damper FOOT/DEF Control Servo Motor Circuit

for Preparation Click here

DESCRIPTION



Air outlet damper servo motor (for DEF mode) sends pulse signals to inform the air conditioning amplifier assembly of the damper position. The air conditioning amplifier assembly activates the motor (normal or reverse) based on the signals to move the air outlet damper (for DEF mode) to any position, which controls the air outlet changes.

HINT:

Confirm that no mechanical problem is present because this trouble code can be output when either a damper link or damper is mechanically locked.

DTC Code	DTC Detection Condition	Trouble Area
B1455/55	The air outlet damper position does not change even if the air conditioning amplifier assembly operates the air outlet damper servo motor (for DEF mode)	• Air outlet damper servo motor (for DEF mode) • Air conditioning harness assembly • Air conditioning amplifier assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

1.READ VALUE USING INTELLIGENT TESTER (AIR OUTLET DAMPER SERVO MOTOR)

a. Use the Data List to check if the servo motor is functioning properly.

Air Conditioner

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
A/O Damper FOOT/DEF Pos(P)	Air outlet damper servo motor (for DEF mode) target pulse / Min.: 6, Max.: 117	• FACE1: 117 (pulse) • FACE2: 109 (pulse) • B/L1: 93 (pulse) • B/L2: 81 (pulse) • FOOT-D: 52 (pulse) • FOOT-R: 41 (pulse) • FOOT-F: 41 (pulse) • F/D: 18 (pulse) • DEF: 6 (pulse)	-

OK:

The display is as specified in the normal condition.

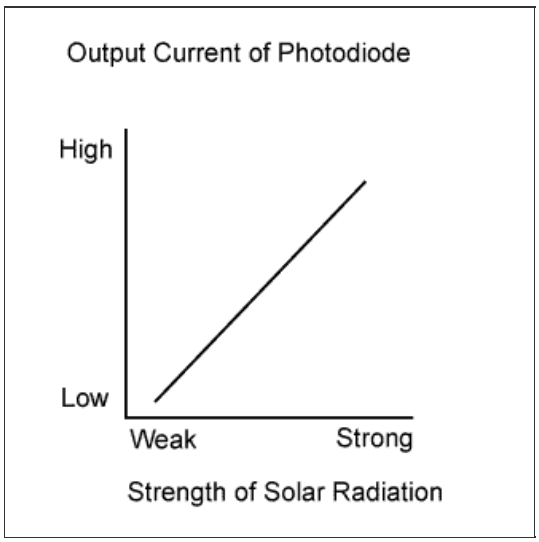
NG → REPLACE AIR CONDITIONING HARNESS ASSEMBLY (**Click here**)



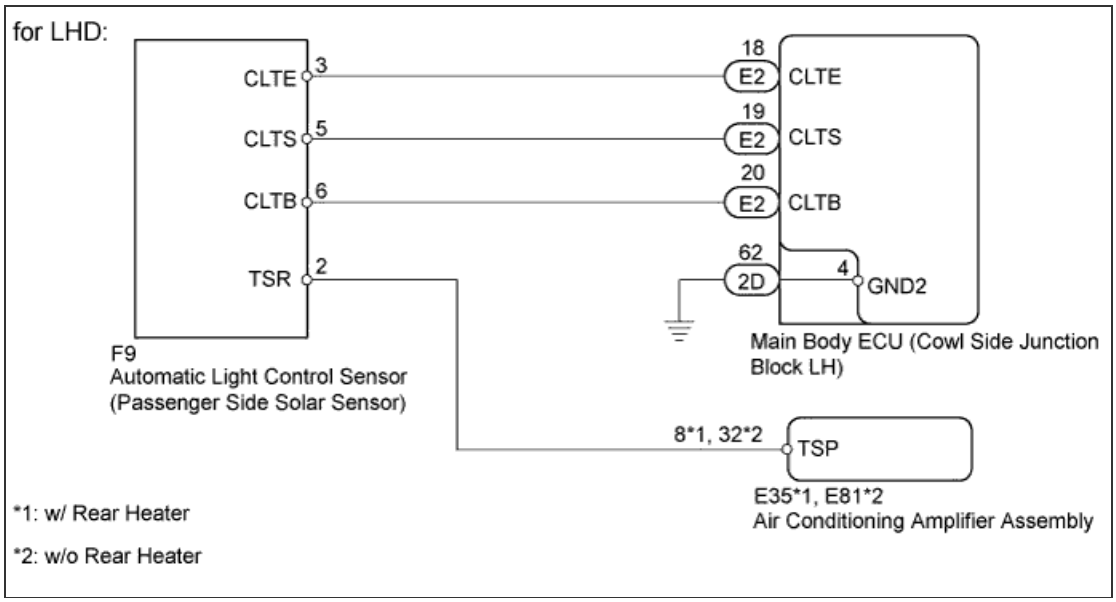
OK

REPLACE AIR OUTLET DAMPER SERVO MOTOR (for DEF mode) (**Click here**)

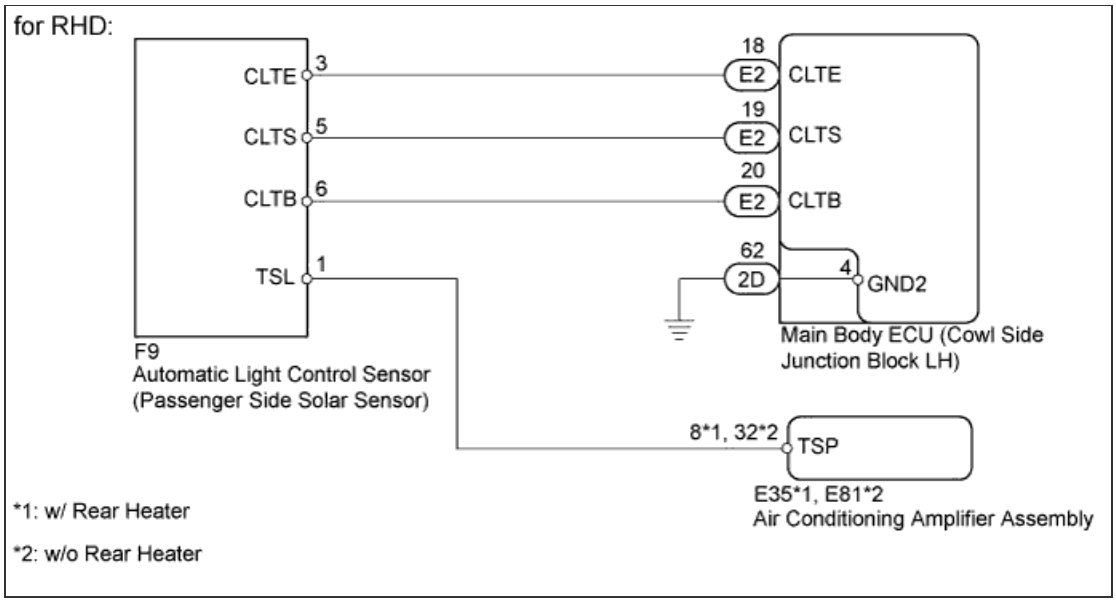
DTC B1421/21 Solar Sensor Circuit (Passenger Side)

for Preparation Click here

DESCRIPTION



The automatic light control sensor (solar sensor), which is installed on the upper side of the instrument panel, detects sunlight and controls the air conditioning in auto mode. The output current from the solar sensor varies according to the amount of sunlight. When the sunlight increases, the output current increases. As the sunlight decreases, the output current decreases. The air conditioning amplifier assembly detects output current from the solar sensor.



DTC Code	DTC Detection Condition	Trouble Area
B1421/21	An open or short in the passenger side solar sensor circuit.	• Automatic light control sensor (solar sensor) • Harness or connector between solar sensor and air conditioning amplifier assembly • Harness or connector between solar sensor and main body ECU (cowl side junction block) • Main body ECU (cowl side junction block) • Air conditioning amplifier assembly

HINT:

If DTC B1244 is output at the same time, troubleshoot DTC B1244 first.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.READ VALUE USING INTELLIGENT TESTER (PASSENGER SIDE SOLAR SENSOR)

a. Use the Data ist to check if the front passenger side solar sensor is functioning properly.

Air Conditioner

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Solar Sensor (P Side)	Passenger side solar sensor / Min.: 0, Max.: 255	Passenger side solar sensor voltage increases as brightness increases	Open in the circuit: 0. Short in the circuit: 255.

OK:

The display is as specified in the normal condition.

NG → Go to step 2

OK →

REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

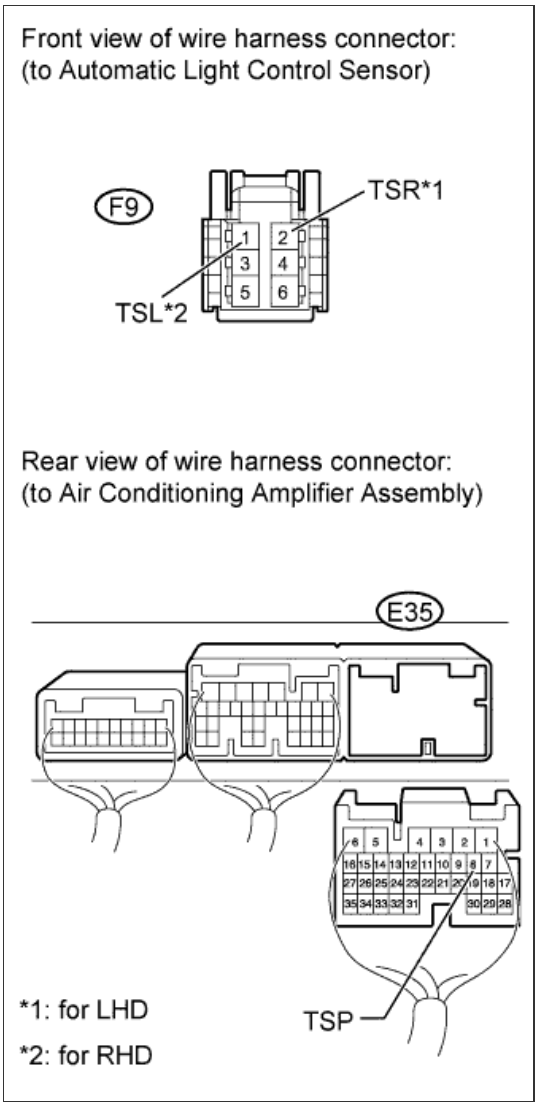
2.CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - AUTOMATIC LIGHT CONTROL SENSOR)

a. w/ Rear Heater

i. Disconnect the F9 sensor connector.

ii. Disconnect the E35 amplifier connector.

iii. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
E35-8 (TSP) - F9-2 (TSR)*1	Always	Below 1 Ω
E35-8 (TSP) - F9-1 (TS)*2	Always	Below 1 Ω
E35-8 (TSP) - Body ground	Always	10 kΩ or higher

HINT:

*1: for D

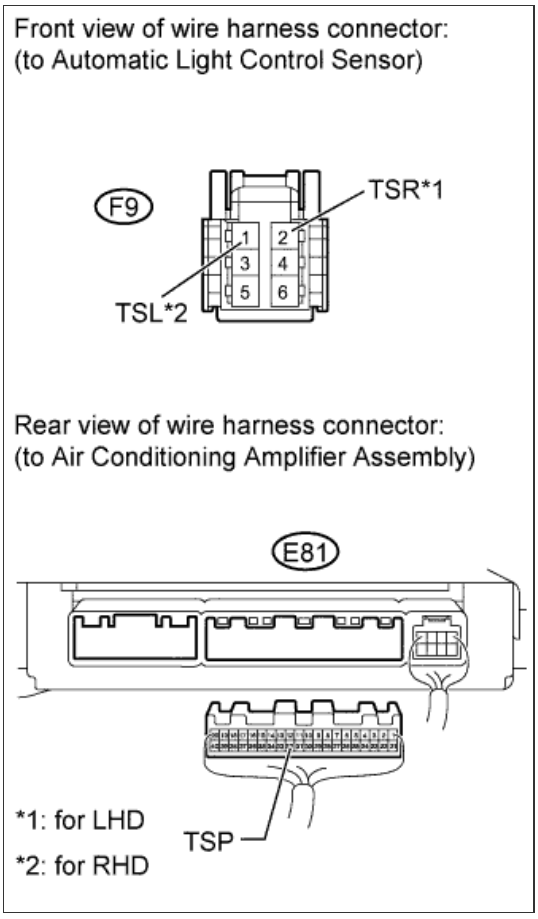
*2: for RHD

b. w/o Rear Heater

i. Disconnect the F9 sensor connector.

ii. Disconnect the E81 amplifier connector.

iii. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
E81-32 (TSP) - F9-2 (TSR)*1	Always	Below 1 Ω
E81-32 (TSP) - F9-1 (TS)*2	Always	Below 1 Ω
E81-32 (TSP) - Body ground	Always	10 kΩ or higher

HINT:

*1: for D

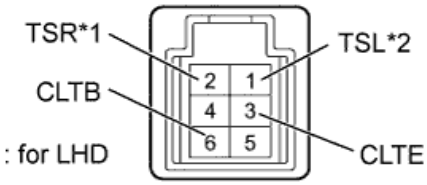
*2: for RHD

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3.INSPECT AUTOMATIC LIGHT CONTROL SENSOR (TSR, TSL - CLTE VOLTAGE)

a. Remove the automatic light control sensor (Click here).



b. Apply battery voltage between terminals 6 (C TB) and 3 (C TE) of the solar sensor.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
2 (TSR) - 3 (C TE)*1	Sensor exposed to electric light	0.8 to 4.3 V
	Sensor covered with a cloth	Below 0.8 V
1 (TS) - 3 (C TE)*2	Sensor exposed to electric light	0.8 to 4.3 V
	Sensor covered with a cloth	Below 0.8 V

Component with harness connected:
(Automatic Light Control Sensor)

*1: for LHD

*2: for RHD

HINT:

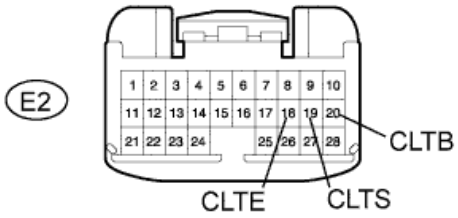
- **As the inspection light is moved away from the sensor, the voltage decreases.**
- **Use an incandescent light for inspection. Bring it about 300 mm (11.8 in.) from the solar sensor.**
- ***1: for LHD**
- ***2: for RHD**

NG → REPLACE AUTOMATIC LIGHT CONTROL SENSOR (Click here)

OK

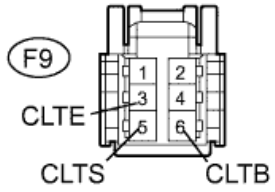
4.CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - AUTOMATIC LIGHT CONTROL SENSOR)

a. Disconnect the E2 ECU connector.



b. Disconnect the F9 sensor connector.

c. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
E2-20 (C TB) - F9-6 (C TB)	Always	Below 1 Ω
E2-19 (C TS) - F9-5 (C TS)		
E2-18 (C TE) - F9-3 (C TE)		
E2-20 (C TB) - Body ground	Always	10 kΩ or higher

DTC B1457/57 Driver Side Air Outlet Damper Control Servo Motor Circuit

for Preparation Click here

DESCRIPTION

The front air mix damper servo motor (for driver side rear air flow) sends pulse signals to inform the air conditioning amplifier assembly of the damper position. The air conditioning amplifier assembly activates the motor (normal or reverse) based on the signals to move the front air mix damper (for driver side rear air flow) to any position. As a result, the amount of air that has passed through the evaporator and is passing through the heater core is adjusted, and the temperature of the air blowing toward the rear driver side is controlled.

HINT:

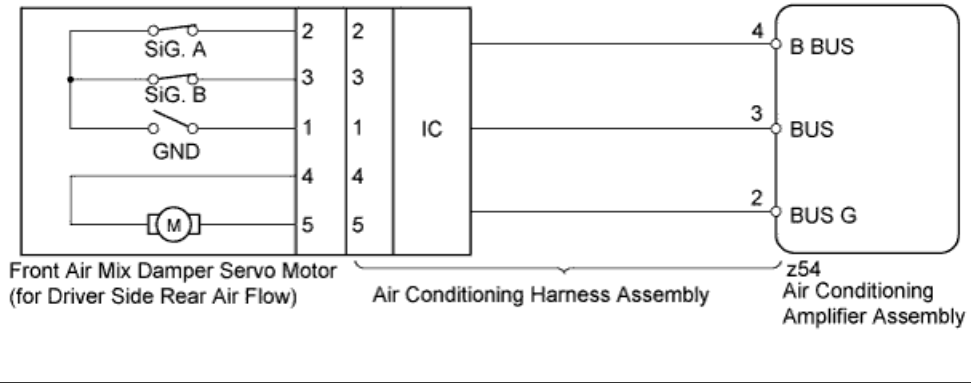
Confirm that no mechanical problem is present because this trouble code can be output when either a damper link or damper is mechanically locked.



DTC Code	DTC Detection Condition	Trouble Area
B1457/57	The air mix damper position does not change even if the air conditioning amplifier assembly operates the front air mix damper servo motor.	• Front air mix damper servo motor (for driver side rear air flow) • Air conditioning harness assembly • Air conditioning amplifier assembly

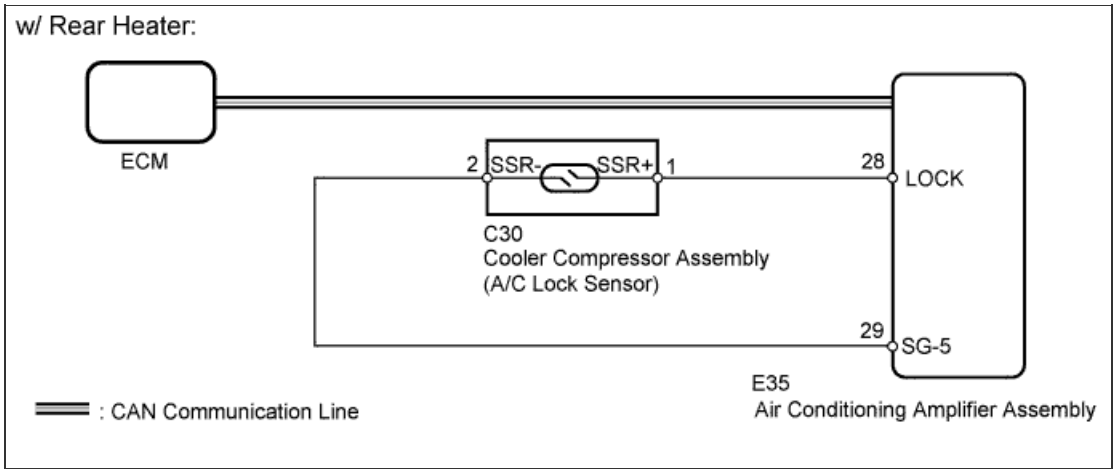
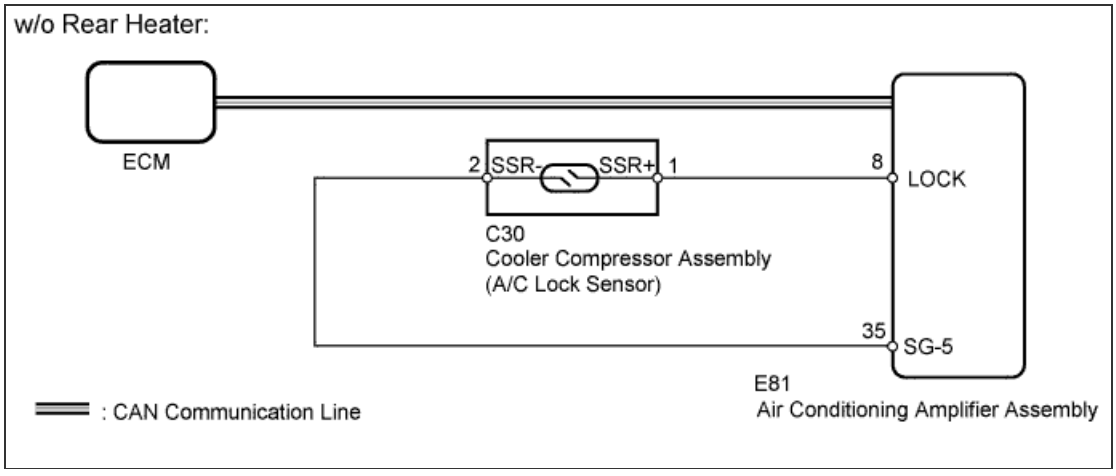
DTC B1422/22 Compressor Lock Sensor Circuit



for Preparation Click here



SYSTEM DESCRIPTION

The ECM sends the engine speed signal to the air conditioning amplifier assembly via CAN communication.
The air conditioning amplifier assembly reads the difference between compressor speed and engine speed. When the difference becomes too large, the air conditioning amplifier assembly determines that the compressor is locked, and turns the magnetic clutch off.

DTC Code	DTC Detection Condition	Trouble Area
B1422/22	An open or short in the compressor lock sensor circuit.	• Cooler compressor assembly (A/C lock sensor) • Compressor drive belt • Harness or connector between cooler compressor assembly and air conditioning amplifier assembly • Air conditioning amplifier assembly • CAN communication line

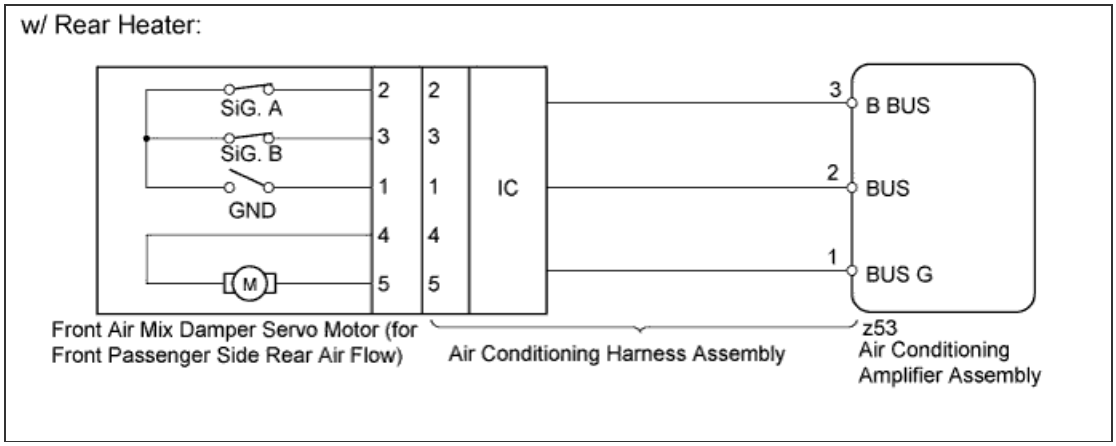
DTC B1458/58 Passenger Side Air Outlet Damper Control Servo Motor Circuit

for Preparation Click here

DESCRIPTION



The front air mix damper servo motor (for front passenger side rear air flow) sends pulse signals to inform the air conditioning amplifier assembly of the damper position. The air conditioning amplifier assembly activates the motor (normal or reverse) based on the signals to move the front air mix damper (for front passenger side rear air flow) to any position. As a result, the amount of air that has passed through the evaporator and is passing through the heater core is adjusted, and the temperature of the air blowing toward the rear passenger side is controlled.

HINT:

Confirm that no mechanical problem is present because this trouble code can be output when either a damper link or damper is mechanically locked.

DTC Code	DTC Detection Condition	Trouble Area
B1458/58	The air mix damper position does not change even if the air conditioning amplifier assembly operates the front air mix damper servo motor.	• Front air mix damper servo motor (for front passenger side rear air flow) • Air conditioning harness assembly • Air conditioning amplifier assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

1.READ VALUE USING INTELLIGENT TESTER (FRONT AIR MIX DAMPER SERVO MOTOR)

a. Use the Data List to check if the servo motor is functioning properly.

Air Conditioner

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
		for LHD • MAX COOL: 33 (pulse)	

Air Mix Servo Targ Pls (F&R P)	Front air mix damper servo motor (for front passenger side rear air flow) target pulse / Min.: 5, Max.: 33 (for LHD) Min.: 13, Max.: 41 (for RHD)	for RHD • MAX HOT: 5 (pulse) • MAX COOL: 13 (pulse) • MAX HOT: 41 (pulse)	-

OK:
The display is as specified in the normal condition.

NG → Go to step 2

OK →

REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

2.CHECK FRONT AIR MIX DAMPER SERVO MOTOR (OPERATION)

a. for LHD:

i. Replace the front air mix damper servo motor (for front passenger side rear air flow) (Click here).

b. for RHD:

i. Replace the front air mix damper servo motor (for front passenger side rear air flow) (Click here).

HINT:

Since the servo motor cannot be inspected while it is removed from the vehicle, replace the servo motor with a normal one.

NEXT →

3.CHECK FOR DTC

a. Clear the DTCs (Click here).

b. Check for DTCs (Click here).

OK:
DTC B1458 is not output.

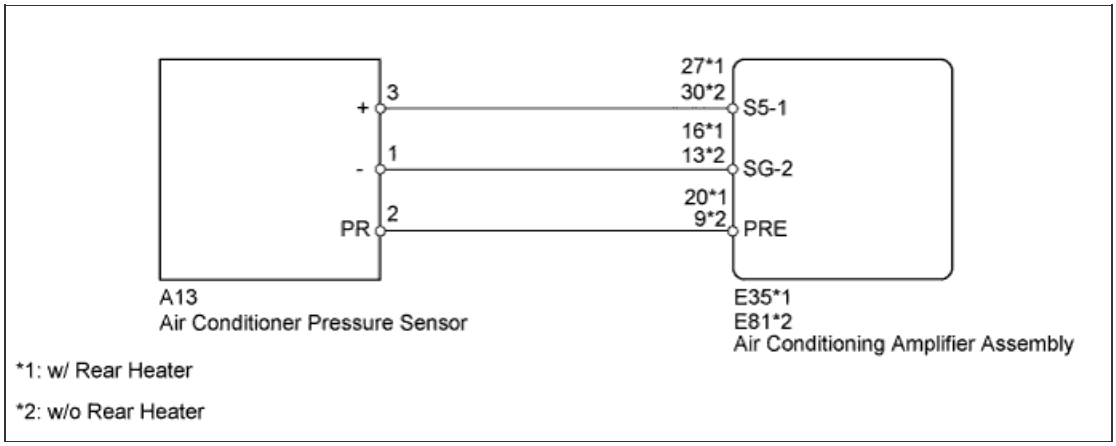
DTC B1423/23 Pressure Sensor Circuit

for Preparation Click here

DESCRIPTION



This DTC is output when refrigerant pressure is extremely low (-0.4566 MPaG (-4.6 kgf/cm ^{2}, -66 psi) or less) or extremely high (3.2943 MPaG (33.6 kgf/cm^2, 477 psi) or more). The air con itioner pressure sensor, which is installe on the pipe of the high pressure si e to etect refrigerant pressure, outputs the refrigerant pressure signal to the air con itioning amplifier assembly. The air con itioning amplifier assembly converts the signal to pressure accor ing to the sensor characteristics to control the compressor.

HINT:

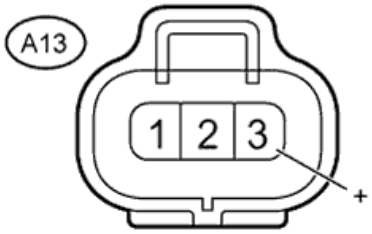
Be sure to check the refrigerant volume first when this DTC is output because this DTC can also be output if there is no refrigerant in the cycle.

DTC Co e	DTC Detection Con ition	Trouble Area
B1423/23	• An open or short in the air con itioner pressure sensor circuit • Refrigerant pressure on the high pressure si e is extremely low (-0.4566 MPaG (-4.6 kgf/cm^2, -66 psi) or less) or extremely high (3.2943 MPaG (33.6 kgf/cm^2, 477 psi) or more)	• Air con itioner pressure sensor • Harness or connector • Cooler expansion valve (blocke stuck) • Cooler con enser assembly (blocke eterioration of cooling capacity ue to irt) • Cooler ryer (moisture in the refrigerant cycle cannot be absorbe • Con enser fan (con enser cannot be coole own) • Air con itioning system (leaks, blocke • efrigerant pipe line • Air con itioning amplifier assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

1.CHECK HARNESS AND CONNECTOR (POWER SOURCE CIRCUIT)



a. Disconnect the A13 air con itioner pressure sensor connector.

b. Measure the voltage accor ing to the value(s) in the table below.

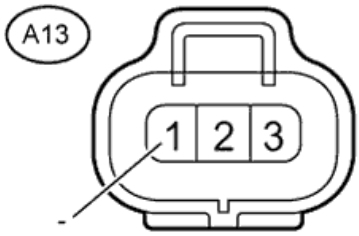
Standard Voltage:

Tester Connection	Switch Con ition	Specifie Con ition
A13-3 ( ) - Bo y groun	ngine switch on (IG)	4.4 to 5.5

Front view of wire harness connector:
(to Air Conditioner Pressure Sensor)

NG → Go to step 5

OK



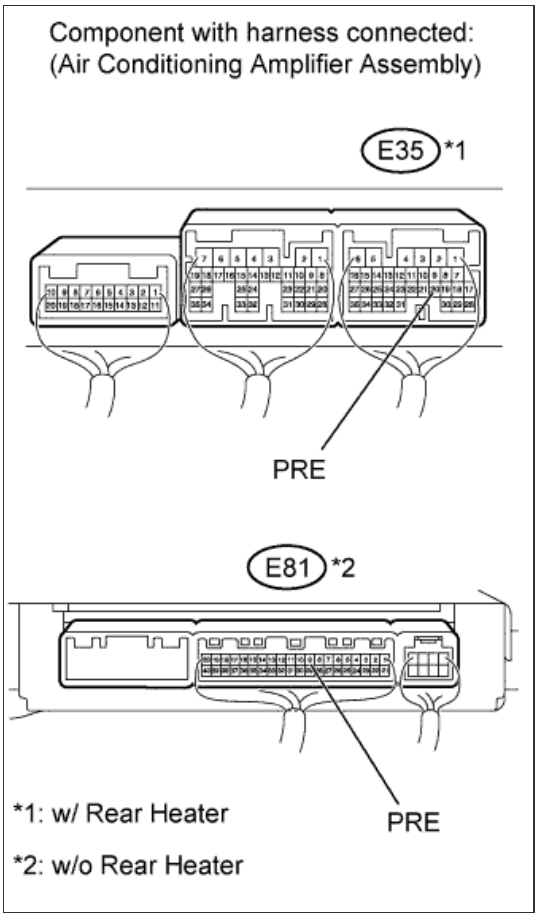
2.CHECK HARNESS AND CONNECTOR (GROUND CIRCUIT)

a. Measure the resistance accor ing to the value(s) in the table below.

Standard Resistance:

Tester Connection	Con ition	Specifie Con ition
A13-1 (-) - Bo y groun	lways	Below 1 Ω

Front view of wire harness connector:
(to Air Conditioner Pressure Sensor)



NG → Go to step 6

OK

3.INSPECT AIR CONDITIONER PRESSURE SENSOR (SENSOR SIGNAL CIRCUIT)

a. Reconnect the A13 pressure sensor connector.

b. Remove the air con itioning amplifier with its connectors still connecte .

Standard Voltage:

w/ Rear Heater:

Tester Connection	Switch Con ition	Specifie Con ition
E35-20 (PRE) - Bo y groun	• ngine switch on (IG) • A/C switch off	0.7 to 4.8

w/o Rear Heater:

Tester Connection	Switch Con ition	Specifie Con ition
E81-9 (PRE) - Bo y groun	• ngine switch on (IG) • A/C switch off	0.7 to 4.8

HINT:

the measure voltage is not within the normal range, there may be a malfunction in the air con itioning amplifier assembly, air con itioner pressure sensor, or wire harness. It is also possible that the amount of refrigerant may not be appropriate.

NG → Go to step 7

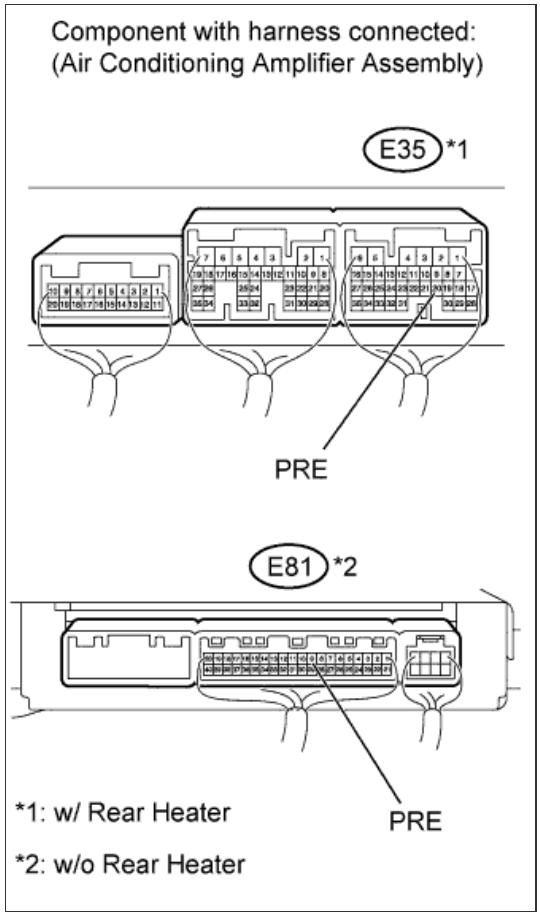
OK

4.INSPECT AIR CONDITIONER PRESSURE SENSOR (SENSOR SIGNAL CIRCUIT)

a. Measure the voltage when the following con itions are satisfie .

Item	Con ition
Engine Spee	500 rpm

ehicle Doors	Fully open
Temperature Setting	MA CO D
Blower Spee	
/C Switch	ON
R/F Switch	RECIRCU ATION
Interior Temperature	25 to 35 C (77 to 95)



NOTICE:

- **If refrigerant pressure on the high pressure side becomes extremely high during the inspection (if the voltage exceeds 4.8 V), the fail-safe function stops compressor operation. Therefore, measure the voltage before the fail-safe operation.**
- **It is necessary to measure the voltage for a certain amount of time (approximately 10 minutes) because the problem symptom may recur after a while.**

HINT:

hen the outsi e air temperature is low (below -1.5 C (29.3)), the compressor stops ue to operation of the ambient temperature an the evaporator temperature sensor to prevent the evaporator from freezing. In this case, perform the inspection in a warm in oor environment.

i. Measure the voltage accor ing to the value(s) in the table below.

Standard Voltage:

w/ Rear Heater:

Tester Connection	Switch Con ition	Specifie Con ition
E35-20 (PRE) - Bo y groun	• ngine switch on (IG) • A/C switch on	0.7 to 4.8

w/o Rear Heater:

Tester Connection	Switch Con ition	Specifie Con ition
B81-9 (PRE) -	• Engine switch on (IG)	

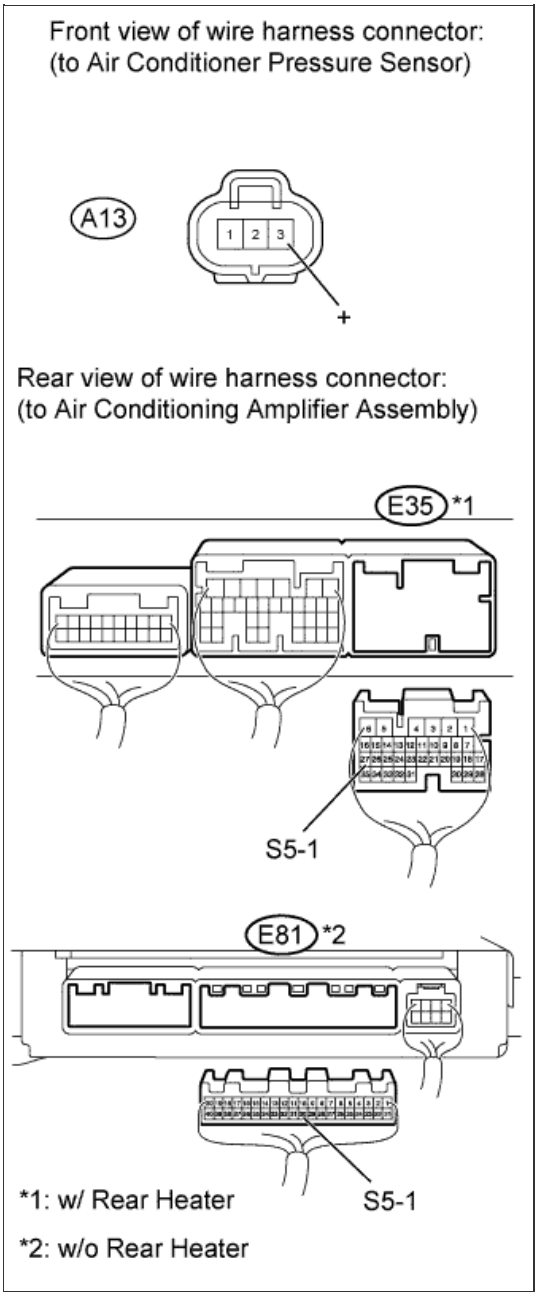
Bo y groun	• /C switch on	0.7 to 4.8

NG → Go to step 13

OK

REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

5.CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - PRESSURE SENSOR)



a. Disconnect the E35 1or E81 2 amplifier connector.

HINT:

1 w/ Rear Heater

2 w/o Rear Heater

b. Measure the resistance accor ing to the value(s) in the table below.

Standard Resistance:

w/ Rear Heater:

Tester Connection	Con ition	Specifie Con ition
A13-3 (+) - E35-27 (S5-1)	Always	Below 1 Ω
E35-27 (S5-1) - Bo y groun	lways	10 kΩ or higher

w/o Rear Heater:

Tester Connection	Con ition	Specifie Con ition

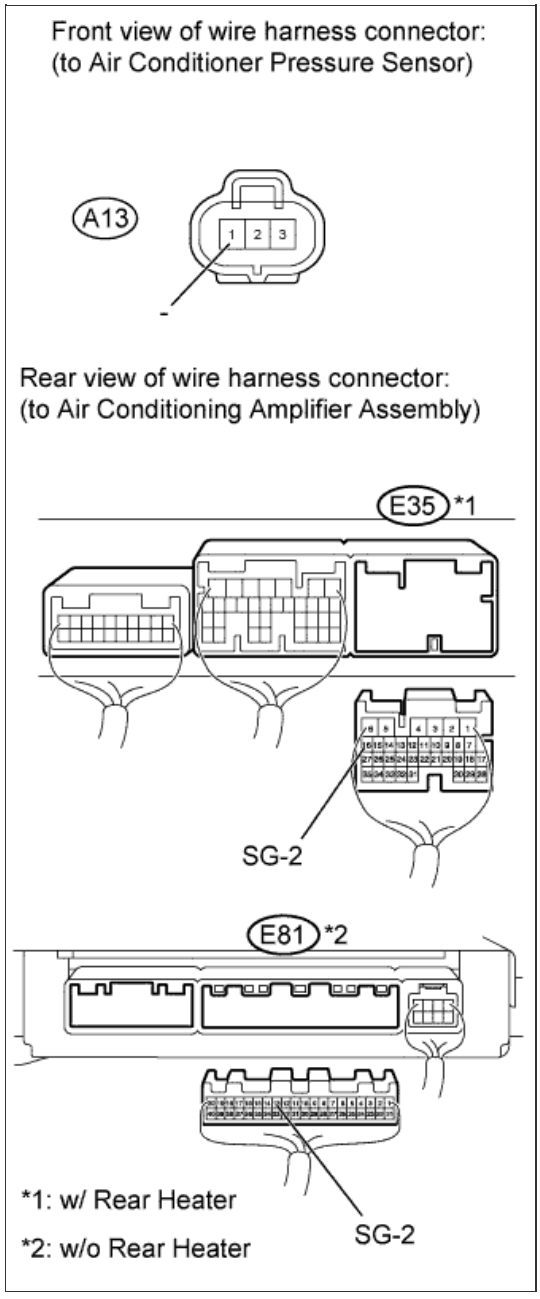
A13-3 (+) - E81-30 (S5-1)	Always	Below 1 Ω
E81-30 (S5-1) - Bo y groun	lways	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

6.CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - PRESSURE SENSOR)



a. Disconnect the E35 1 or E81 2 amplifier connector.

HINT:

1 w/ Rear Heater

2 w/o Rear Heater

b. Measure the resistance accor ing to the value(s) in the table below.

Standard Resistance:

w/ Rear Heater:

Tester Connection	Con ition	Specifie Con ition
A13-1 (-) - E35-16 (SG-2)	Always	Below 1 Ω
E35-16 (SG-2) - Bo y groun	lways	10 kΩ or higher

w/o Rear Heater:

		Specifie

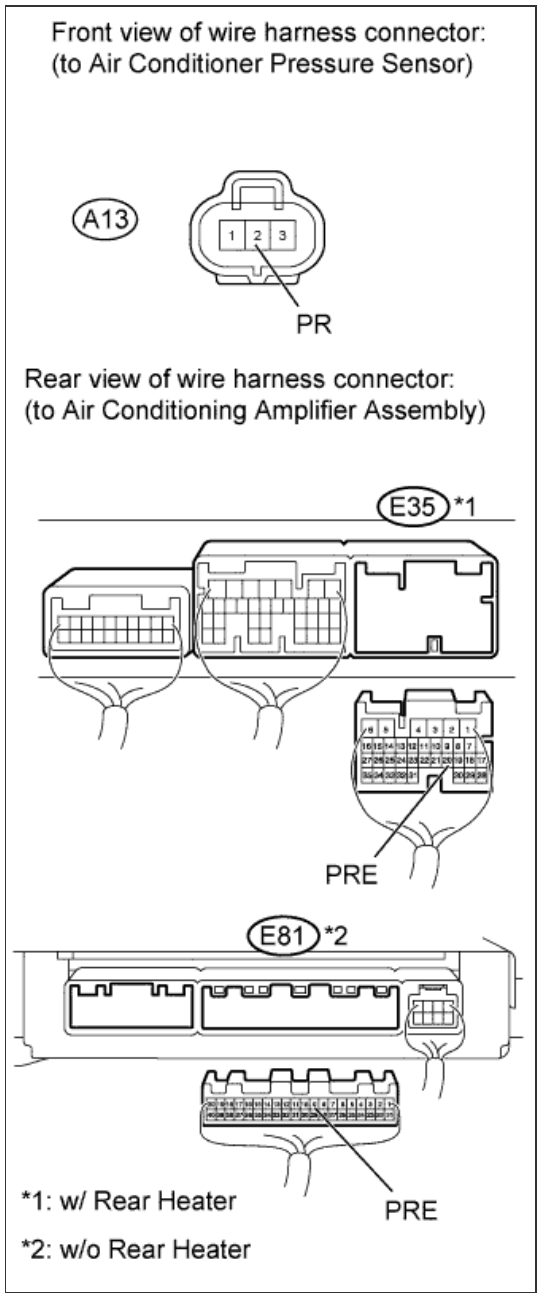
Tester Connection	Con ition	Con ition
A13-1 (-) - E81-13 (SG-2)	Always	Below 1 Ω
E81-13 (SG-2) - Bo y groun	lways	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

7.CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - PRESSURE SENSOR)



a. Disconnect the E35 1 or E81 2 amplifier connector.

HINT:

1 w/ Rear Heater

2 w/o Rear Heater

b. Measure the resistance accor ing to the value(s) in the table below.

Standard Resistance:

w/ Rear Heater:

Tester Connection	Con ition	Specifie Con ition
A13-2 (PR) - E35-20 (PRE)	Always	Below 1 Ω
E35-20 (PRE) - Bo y groun	lways	10 kΩ or higher

w/o Rear Heater:

Tester Connection	Con ition	Specifie Con ition
A13-2 (PR) - E81-9 (PRE)	Always	Below 1 Ω
E81-9 (PRE) - Bo y groun	lways	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

8.INSPECT FOR AIR CONDITIONING SYSTEM LEAK

a. Install the manifol gauge set.

b. Recover the refrigerant from the air con itioning system using a refrigerant recovery unit.

c. Evacuate the air con itioning system an check that vacuum can be maintaine in it.

OK:

Vacuum can be maintained in the air conditioning system.

HINT:

If vacuum cannot be maintaine in the air con itioning system, refrigerant may be leaking from it. In this case, it is necessary to repair or replace the leaking part of the air con itioning system.

NG → Go to step 12

OK

9.CHARGE REFRIGERANT

a. A an appropriate amount of refrigerant (Click here).

NEXT

10.RECHECK DTC

a. Recheck for the DTC when the following con itions are satisfie .

Item	Con ition
Engine Spee	500 rpm
ehicle Doors	Fully open
Temperature Setting	MA CO D
Blower Spee	
/C Switch	ON
R/F Switch	RECIRCU ATION
Interior Temperature	25 to 35 C (77 to 95 F)

NOTICE:

If refrigerant pressure on the high pressure si e becomes high, the DTC will be store . Therefore, it is necessary to measure the voltage for a certain amount of time (approximately 10 minutes) because the DTC may be store after the air con itioning system operates for a while.

HINT:

hen the outsi e air temperature is low (below -1.5 C (29.3 F)), the compressor stops ue to operation of the ambient temperature sensor an the evaporator temperature sensor to prevent the evaporator from freezing. In this case, perform the inspection in a warm in oor environment.

OK:

DTC B1423 is not output.

NOTICE:

If the DTC was output ue to an insufficient or excessive amount of refrigerant, the problem may have been solve after performing the

previous step. However, the root cause of insufficient refrigerant may be refrigerant leaks. The root cause of excessive refrigerant may be a ing refrigerant when the level was insufficient. Therefore, i entify an repair the area where refrigerant leaks as necessary.

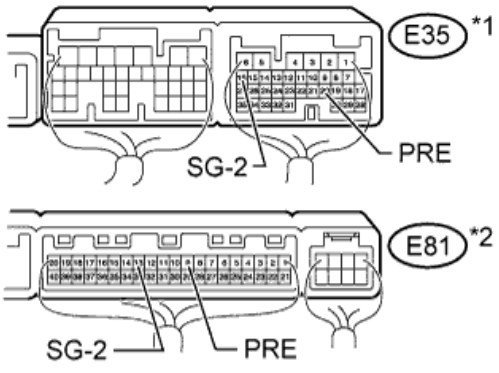
NG → Go to step 11

OK

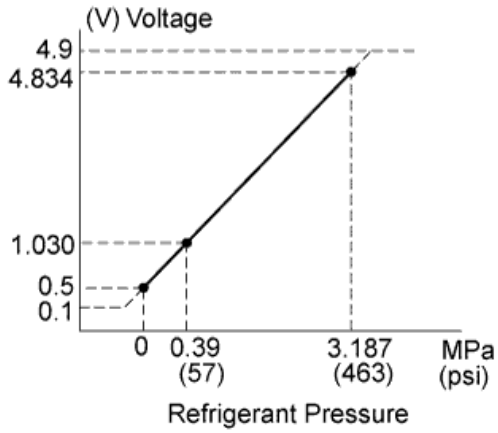
END

11.CHECK AIR CONDITIONER PRESSURE SENSOR

a. Install the manifol gauge set.



b. Reconnect the A13 air con itioner pressure sensor connector.



c. Remove the air con itioning amplifier assembly with its connectors still connecte .

d. Turn the engine switch on (IG).

e. Measure the voltage accor ing to the value(s) in the table below.

Component with harness connected:
(Air Conditioning Amplifier Assembly)

*1: w/ Rear Heater

*2: w/o Rear Heater

Standard Voltage:

w/ Rear Heater:

Tester Connection	Con ition	Specifie Con ition
E35-20 (PRE) - E35-16 (SG-2)	Refrigerant pressure Normal pressure (less than 3.0732 MPa 31.4 kgf/cm^2, 445 psi an more than 0.1762 MPa 1.8 kgf/cm^2, 25 psi)	1.0 to 4.8
	Refrigerant pressure Abnormal (less than 0.1762 MPa 1.8 kgf/cm^2, 25 psi)	Below 1
	Refrigerant pressure Abnormal (more than 3.0732 MPa 31.4 kgf/cm^2, 445 psi)	4.8 or higher

w/o Rear Heater:

Tester Connection	Con ition	Specifie Con ition
E81-9 (PRE) - E81-13 (SG-2)	Refrigerant pressure Normal pressure (less than 3.0732 MPa 31.4 kgf/cm^2, 445 psi an more than 0.1762 MPa 1.8 kgf/cm^2, 25 psi)	1.0 to 4.8
	Refrigerant pressure Abnormal (less than 0.1762 MPa 1.8 kgf/cm^2, 25 psi)	Below 1
	Refrigerant pressure Abnormal (more than 3.0732 MPa 31.4 kgf/cm^2, 445 psi)	4.8 or higher

NG → REPLACE AIR CONDITIONER PRESSURE SENSOR (Click here)

OK

REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

12.REPAIR AIR CONDITIONING SYSTEM LEAK

a. I entify the area where refrigerant leaks (Click here).

b. Repair the i entifie area of the air con itioning system.

c. Evacuate the air con itioning system.

NEXT

CHARGE REFRIGERANT (Click here)

13.INSPECT CONDENSER FAN

a. Inspect that the con enser fan operates normally (Click here).

NG → REPLACE CONDENSER FAN (Click here)

OK

14.CHARGE REFRIGERANT

a. Use a refrigerant recovery unit to recover refrigerant.

b. Evacuate the air con itioning system.

c. A an appropriate amount of refrigerant (Click here).

HINT:

If refrigerant is a e an the system has not been properly evacuate (insufficient vacuum time), moisture in the air remaining in the system will freeze in the expansion valve, blocking the flow on the high pressure si e. Therefore, in or er to confirm the problem, recover the refrigerant an properly evacuate the system. A an appropriate amount of refrigerant, an check for the DTC.

NEXT

15.RECHECK DTC

a. Recheck for the DTC when the following con itions are satisfie .

Item	Con ition
Engine Spee	500 rpm

ehicle Doors	Fully open
Temperature Setting	MA CO D
Blower Spee	
/C Switch	ON
R/F Switch	RECIRCU ATION
Interior Temperature	25 to 35 C (77 to 95 F)

NOTICE:

If refrigerant pressure on the high pressure si e becomes high, the DTC will be store . Therefore, it is necessary to measure the voltage for a certain amount of time (approximately 10 minutes) because the DTC may be store after the air con itioning system operates for a while.

HINT:

- **When the outside air temperature is low (below -1.5°C (29.3°F)), the compressor stops due to operation of the ambient temperature sensor and the evaporator temperature sensor to prevent the evaporator from freezing. In this case, perform the inspection in a warm indoor environment.**
- **If refrigerant is added and the system has not been properly evacuated (insufficient vacuum time), moisture in the air remaining in the system will freeze in the expansion valve, blocking the flow on the high pressure side. Therefore, in order to confirm the problem, recover the refrigerant and properly evacuate the system. Add an appropriate amount of refrigerant, and check for the DTC. If the DTC is not output after this procedure, it indicates that the cooler dryer in the condenser is not able to absorb moisture in the refrigerant cycle. In this case, to complete the repair it is necessary to replace the cooler dryer.**

OK:
DTC B1423 is not output.

NG → **Go to step 16**

OK

REPLACE COOLER DRYER (Click here)

16.REPLACE COOLER EXPANSION VALVE

a. Replace the cooler expansion valve with a normal one.
for HD (Click here)
for RHD (Click here)

HINT:

Replace the cooler expansion valve with a normal one because the cooler expansion valve is either stuck or clogge .

NEXT

17.CHARGE REFRIGERANT

a. A an appropriate amount of refrigerant (Click here).

NEXT

18.RECHECK DTC

a. Recheck for the DTC when the following con itions are satisfie .

Item	Con ition
Engine Spee	500 rpm
ehicle Doors	Fully open
Temperature Setting	MA CO D
Blower Spee	
/C Switch	ON
R/F Switch	RECIRCU ATION
Interior Temperature	25 to 35 C (77 to 95 F)

NOTICE:

If refrigerant pressure on the high pressure si e becomes high, the DTC will be store . Therefore, it is necessary to measure the voltage for a certain amount of time (approximately 10 minutes) because the DTC may be store after the air con itioning system operates for a while.

HINT:

- **When the outside air temperature is low (below -1.5°C (29.3°F)), the compressor stops due to operation of the ambient temperature sensor and the evaporator temperature sensor to prevent the evaporator from freezing. In this case, perform the inspection in a warm indoor environment.**
- **If refrigerant pressure is not normal after replacing the expansion valve with a normal one, the condenser or pipes may be clogged due to dirt, dust or other contaminants. In this case, clean or replace the condenser or pipes.**

OK:
DTC B1423 is not output.

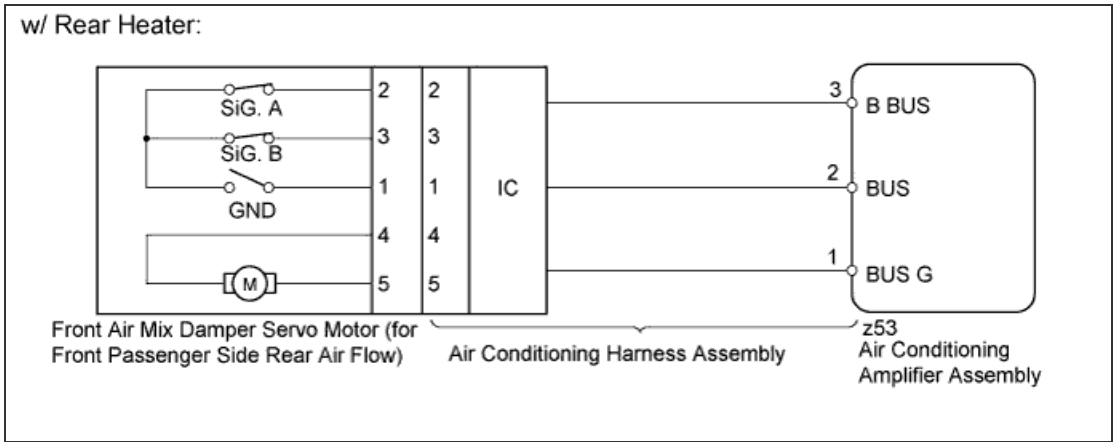
NG → REPLACE COOLER CONDENSER ASSEMBLY (Click here)

OK → END

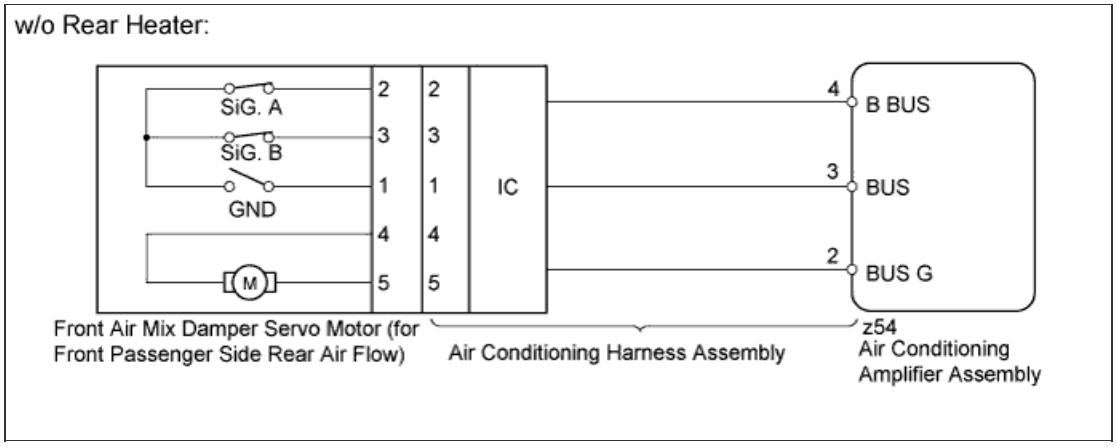
DTC B1458/58 Passenger Side Air Outlet Damper Control Servo Motor Circuit

for Preparation Click here

DESCRIPTION



The front air mix damper servo motor (for front passenger side rear air flow) sends pulse signals to inform the air conditioning amplifier assembly of the damper position. The air conditioning amplifier assembly activates the motor (normal or reverse) based on the signals to move the front air mix damper (for front passenger side rear air flow) to any position. As a result, the amount of air that has passed through the evaporator and is passing through the heater core is adjusted, and the temperature of the air blowing toward the rear passenger side is controlled.



HINT:

Confirm that no mechanical problem is present because this trouble code can be output when either a damper link or damper is mechanically locked.

DTC Code	DTC Detection Condition	Trouble Area
B1458/58	The air mix damper position does not change even if the air conditioning amplifier assembly operates the front air mix damper servo motor.	• Front air mix damper servo motor (for front passenger side rear air flow) • Air conditioning harness assembly • Air conditioning amplifier assembly

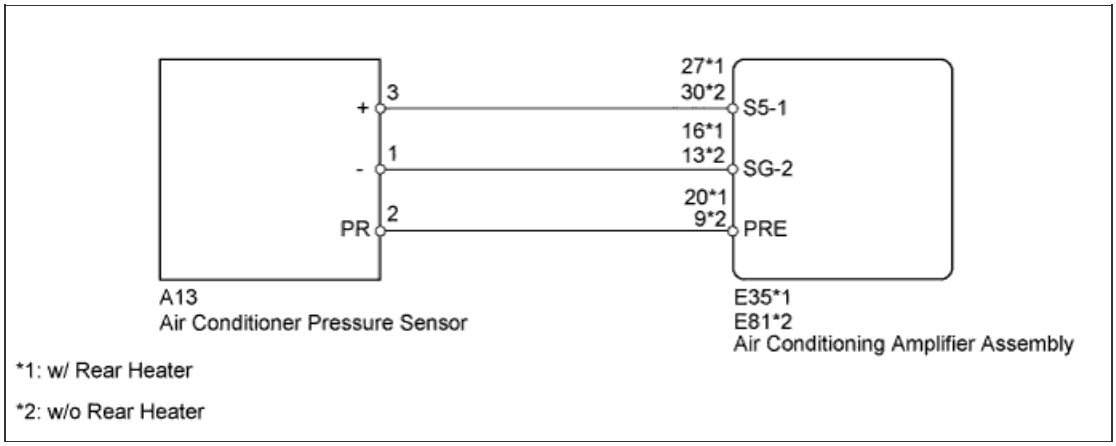
DTC B1423/23 Pressure Sensor Circuit

for Preparation Click here

DESCRIPTION



This DTC is output when refrigerant pressure is extremely low (-0.4566 MPaG (-4.6 kgf/cm ^{2}, -66 psi) or less) or extremely high (3.2943 MPaG (33.6 kgf/cm^2, 477 psi) or more). The air con itioner pressure sensor, which is installe on the pipe of the high pressure si e to etect refrigerant pressure, outputs the refrigerant pressure signal to the air con itioning amplifier assembly. The air con itioning amplifier assembly converts the signal to pressure accor ing to the sensor characteristics to control the compressor.

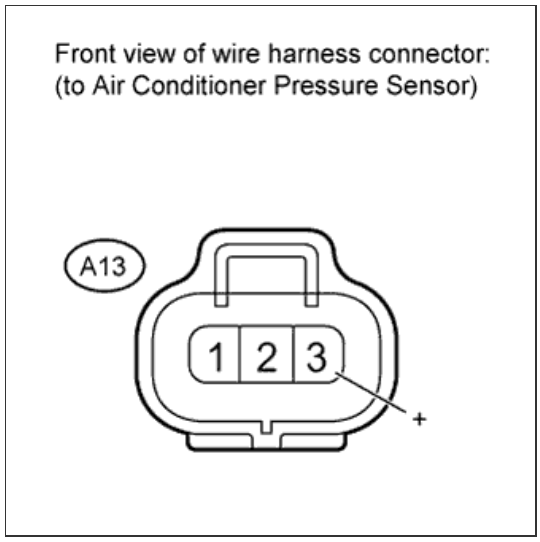
HINT:

Be sure to check the refrigerant volume first when this DTC is output because this DTC can also be output if there is no refrigerant in the cycle.

DTC Co e	DTC Detection Con ition	Trouble Area
B1423/23	• An open or short in the air con itioner pressure sensor circuit • Refrigerant pressure on the high pressure si e is extremely low (-0.4566 MPaG (-4.6 kgf/cm^2, -66 psi) or less) or extremely high (3.2943 MPaG (33.6 kgf/cm^2, 477 psi) or more)	• Air con itioner pressure sensor • Harness or connector • Cooler expansion valve (blocke stuck) • Cooler con enser assembly (blocke eterioration of cooling capacity ue to irt) • Cooler ryer (moisture in the refrigerant cycle cannot be absorbe • Con enser fan (con enser cannot be coole own) • Air con itioning system (leaks, blocke • efrigerant pipe line • Air con itioning amplifier assembly

WIRING DIAGRAM

INSPECTION PROCEDURE



1.CHECK HARNESS AND CONNECTOR (POWER SOURCE CIRCUIT)

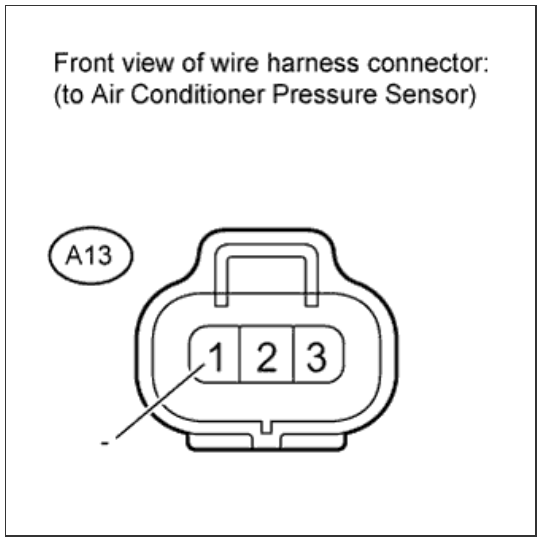
a. Disconnect the A13 air con itioner pressure sensor connector.

b. Measure the voltage accor ing to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Con ition	Specifie Con ition
A13-3 (+) - Bo y groun	ngine switch on (IG)	4.4 to 5.5

NG → Go to step 5



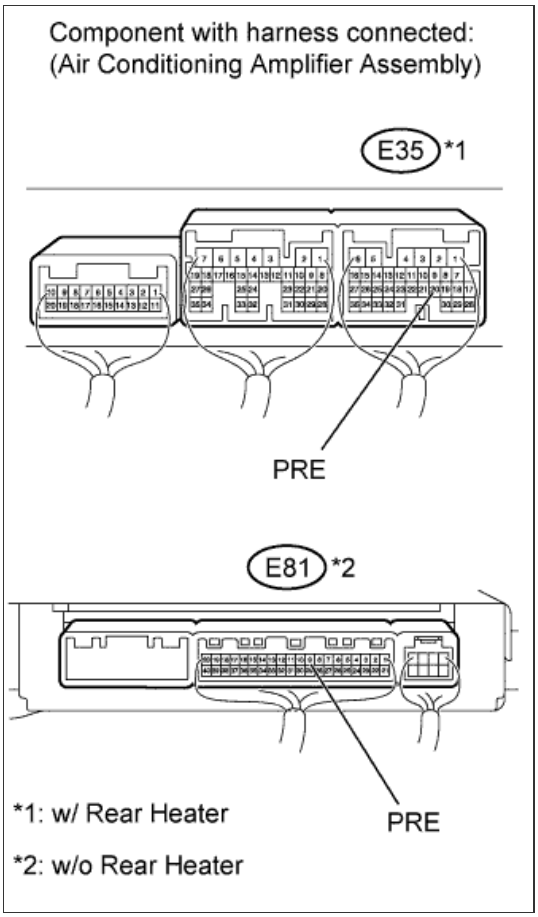
OK

2.CHECK HARNESS AND CONNECTOR (GROUND CIRCUIT)

a. Measure the resistance accor ing to the value(s) in the table below.

Standard Resistance:

Tester Connection	Con ition	Specifie Con ition
A13-1 (-) - Bo y groun	lways	Below 1 Ω



NG → Go to step 6

OK

3.INSPECT AIR CONDITIONER PRESSURE SENSOR (SENSOR SIGNAL CIRCUIT)

a. Reconnect the A13 pressure sensor connector.

b. Remove the air con itioning amplifier with its connectors still connecte .

Standard Voltage:

w/ Rear Heater:

Tester Connection	Switch Con ition	Specifie Con ition
E35-20 (PRE) - Bo y groun	• ngine switch on (IG) • A/C switch off	0.7 to 4.8

w/o Rear Heater:

Tester Connection	Switch Con ition	Specifie Con ition
E81-9 (PRE) - Bo y groun	• ngine switch on (IG) • A/C switch off	0.7 to 4.8

HINT:

f the measure voltage is not within the normal range, there may be a malfunction in the air con itioning amplifier assembly, air con itioner pressure sensor, or wire harness. It is also possible that the amount of refrigerant may not be appropriate.

NG → Go to step 7

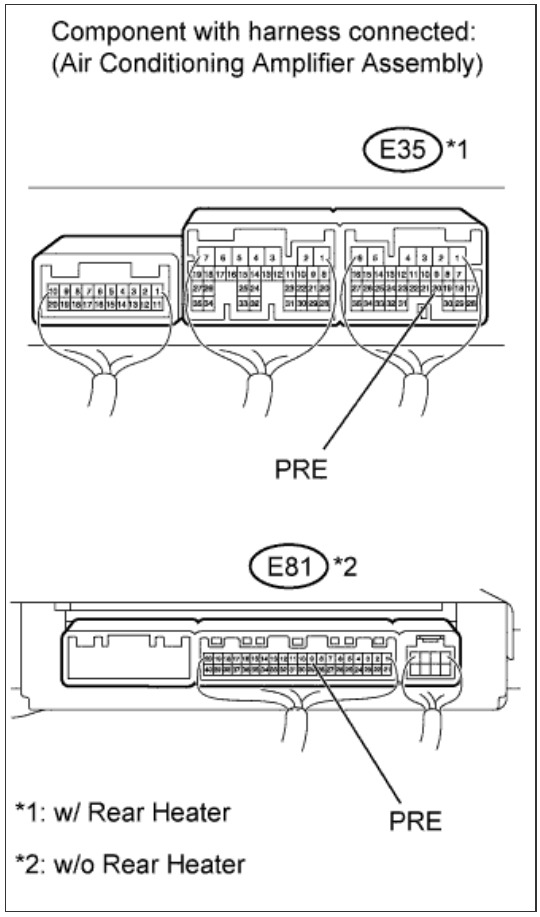
OK

4.INSPECT AIR CONDITIONER PRESSURE SENSOR (SENSOR SIGNAL CIRCUIT)

a. Measure the voltage when the following con itions are satisfie .

Item	Con ition
Engine Spee	500 rpm

ehicle Doors	Fully open
Temperature Setting	MA CO D
Blower Spee	
/C Switch	ON
R/F Switch	RECIRCU ATION
Interior Temperature	25 to 35 C (77 to 95 F)



NOTICE:

- **If refrigerant pressure on the high pressure side becomes extremely high during the inspection (if the voltage exceeds 4.8 V), the fail-safe function stops compressor operation. Therefore, measure the voltage before the fail-safe operation.**
- **It is necessary to measure the voltage for a certain amount of time (approximately 10 minutes) because the problem symptom may recur after a while.**

HINT:

an the outsi e air temperature is low (below -1.5 C (29.3 F)), the compressor stops ue to operation of the ambient temperature an the evaporator temperature sensor to prevent the evaporator from freezing. In this case, perform the inspection in a warm in oor environment.

i. Measure the voltage accor ing to the value(s) in the table below.

Standard Voltage:

w/ Rear Heater:

Tester Connection	Switch Con ition	Specifie Con ition
E35-20 (PRE) - Bo y groun	• ngine switch on (IG) • A/C switch on	0.7 to 4.8

w/o Rear Heater:

Tester Connection	Switch Con ition	Specifie Con ition
B81-9 (PRE) -	• Engine switch on (IG)	

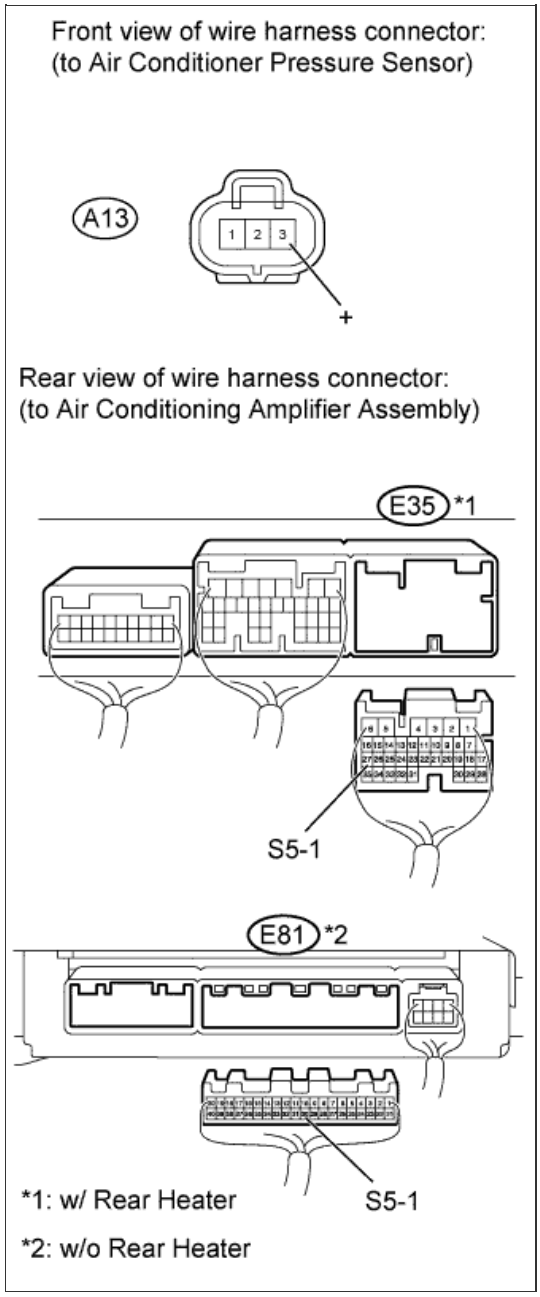
Bo y groun	• /C switch on	0.7 to 4.8

NG → Go to step 13

OK

REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

5.CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - PRESSURE SENSOR)



a. Disconnect the E35 1 or E81 2 amplifier connector.

HINT:

1 w/ Rear Heater

2 w/o Rear Heater

b. Measure the resistance accor ing to the value(s) in the table below.

Standard Resistance:

w/ Rear Heater:

Tester Connection	Con ition	Specifie Con ition
A13-3 (+) - E35-27 (S5-1)	Always	Below 1 Ω
E35-27 (S5-1) - Bo y groun	lways	10 kΩ or higher

w/o Rear Heater:

Tester Connection	Con ition	Specifie Con ition

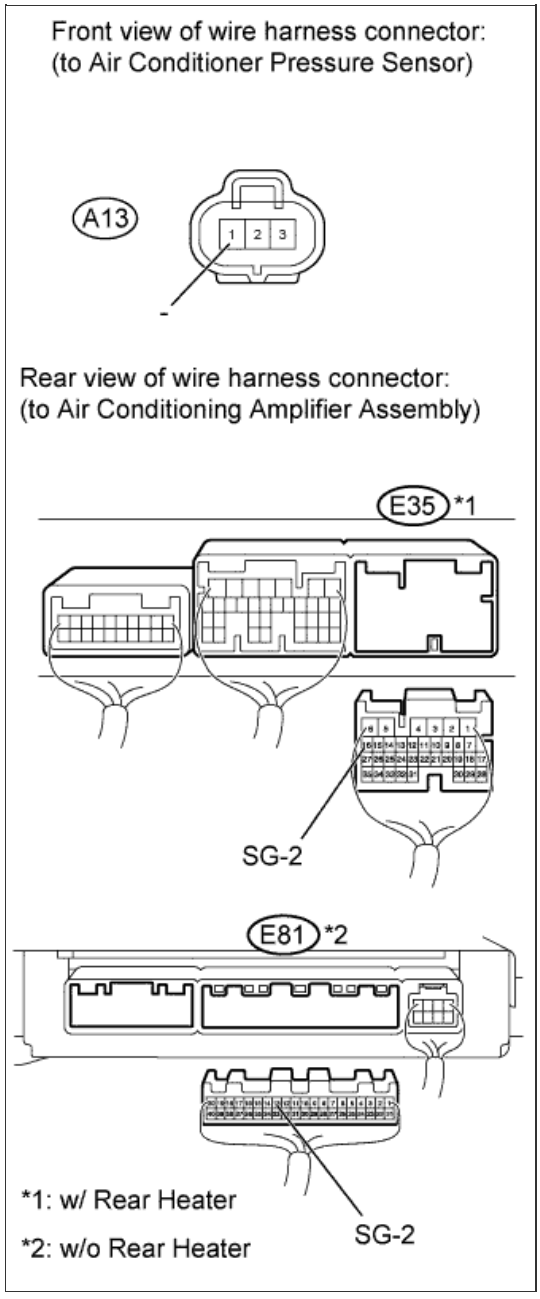
A13-3 (+) - E81-30 (S5-1)	Always	Below 1 Ω
E81-30 (S5-1) - Bo y groun	lways	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

6.CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - PRESSURE SENSOR)



a. Disconnect the E35 1 or E81 2 amplifier connector.

HINT:

1 w/ Rear Heater

2 w/o Rear Heater

b. Measure the resistance accor ing to the value(s) in the table below.

Standard Resistance:

w/ Rear Heater:

Tester Connection	Con ition	Specifie Con ition
A13-1 (-) - E35-16 (SG-2)	Always	Below 1 Ω
E35-16 (SG-2) - Bo y groun	lways	10 kΩ or higher

w/o Rear Heater:

		Specifie

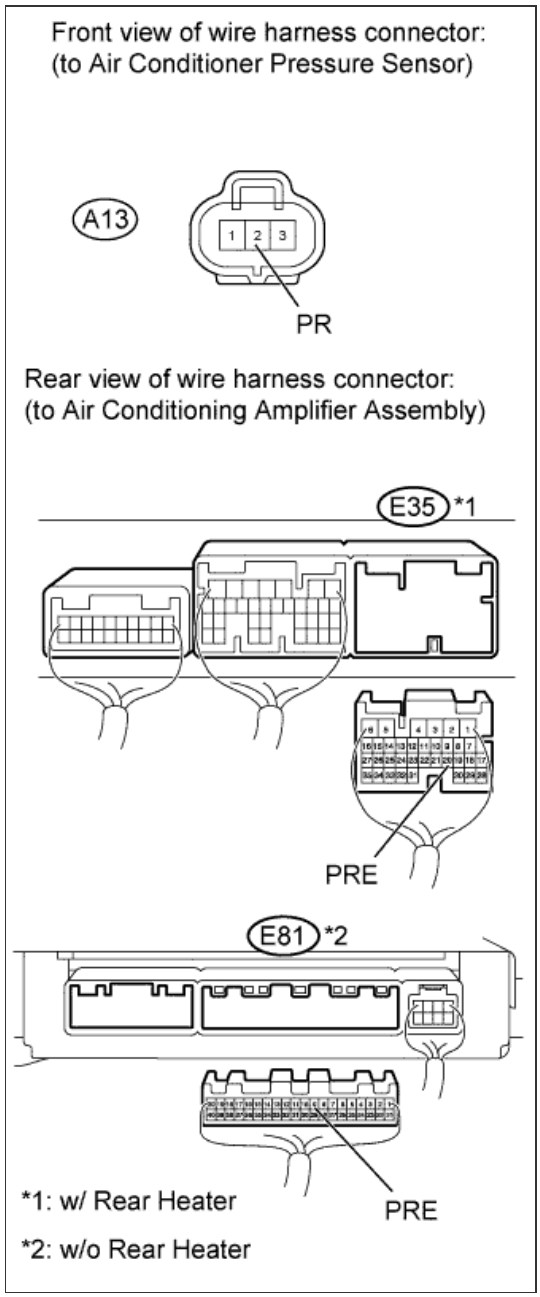
Tester Connection	Con ition	Con ition
A13-1 (-) - E81-13 (SG-2)	Always	Below 1 Ω
E81-13 (SG-2) - Bo y groun	lways	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

7.CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - PRESSURE SENSOR)



a. Disconnect the E35 1 or E81 2 amplifier connector.

HINT:

1 w/ Rear Heater

2 w/o Rear Heater

b. Measure the resistance accor ing to the value(s) in the table below.

Standard Resistance:

w/ Rear Heater:

Tester Connection	Con ition	Specifie Con ition
A13-2 (PR) - E35-20 (PRE)	Always	Below 1 Ω
E35-20 (PRE) - Bo y groun	lways	10 kΩ or higher

w/o Rear Heater:

Tester Connection	Con ition	Specifie Con ition
A13-2 (PR) - E81-9 (PRE)	Always	Below 1 Ω
E81-9 (PRE) - Bo y groun	lways	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

8.INSPECT FOR AIR CONDITIONING SYSTEM LEAK

a. Install the manifol gauge set.

b. Recover the refrigerant from the air con itioning system using a refrigerant recovery unit.

c. Evacuate the air con itioning system an check that vacuum can be maintaine in it.

OK:

Vacuum can be maintained in the air conditioning system.

HINT:

If vacuum cannot be maintaine in the air con itioning system, refrigerant may be leaking from it. In this case, it is necessary to repair or replace the leaking part of the air con itioning system.

NG → Go to step 12

OK

9.CHARGE REFRIGERANT

a. A an appropriate amount of refrigerant (Click here).

NEXT

10.RECHECK DTC

a. Recheck for the DTC when the following con itions are satisfie .

Item	Con ition
Engine Spee	500 rpm
ehicle Doors	Fully open
Temperature Setting	MA CO D
Blower Spee	
/C Switch	ON
R/F Switch	RECIRCU ATION
Interior Temperature	25 to 35 C (77 to 95 F)

NOTICE:

If refrigerant pressure on the high pressure si e becomes high, the DTC will be store . Therefore, it is necessary to measure the voltage for a certain amount of time (approximately 10 minutes) because the DTC may be store after the air con itioning system operates for a while.

HINT:

hen the outsi e air temperature is low (below -1.5 C (29.3 F)), the compressor stops ue to operation of the ambient temperature sensor an the evaporator temperature sensor to prevent the evaporator from freezing. In this case, perform the inspection in a warm in oor environment.

OK:

DTC B1423 is not output.

NOTICE:

If the DTC was output ue to an insufficient or excessive amount of refrigerant, the problem may have been solve after performing the

previous step. However, the root cause of insufficient refrigerant may be refrigerant leaks. The root cause of excessive refrigerant may be a ing refrigerant when the level was insufficient. Therefore, i entify an repair the area where refrigerant leaks as necessary.

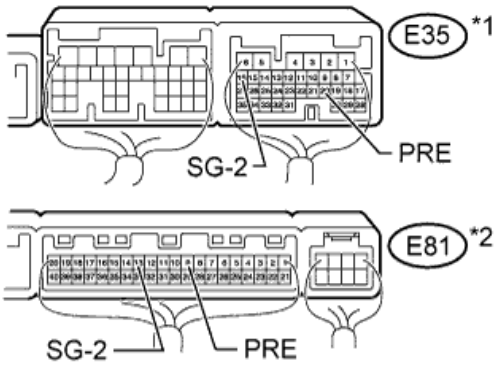
NG → Go to step 11

OK

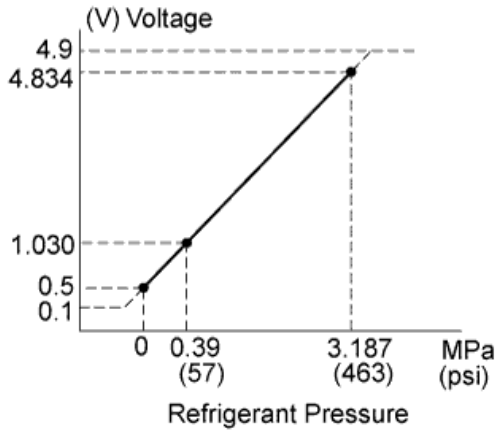
END

11.CHECK AIR CONDITIONER PRESSURE SENSOR

a. Install the manifol gauge set.



b. Reconnect the A13 air con itioner pressure sensor connector.



c. Remove the air con itioning amplifier assembly with its connectors still connecte .

d. Turn the engine switch on (IG).

e. Measure the voltage accor ing to the value(s) in the table below.

Component with harness connected:
(Air Conditioning Amplifier Assembly)

*1: w/ Rear Heater

*2: w/o Rear Heater

Standard Voltage:

w/ Rear Heater:

Tester Connection	Con ition	Specifie Con ition
E35-20 (PRE) - E35-16 (SG-2)	Refrigerant pressure Normal pressure (less than 3.0732 MPa 31.4 kgf/cm^2, 445 psi an more than 0.1762 MPa 1.8 kgf/cm^2, 25 psi)	1.0 to 4.8
	Refrigerant pressure Abnormal (less than 0.1762 MPa 1.8 kgf/cm^2, 25 psi)	Below 1
	Refrigerant pressure Abnormal (more than 3.0732 MPa 31.4 kgf/cm^2, 445 psi)	4.8 or higher

w/o Rear Heater:

Tester Connection	Con ition	Specifie Con ition
E81-9 (PRE) - E81-13 (SG-2)	Refrigerant pressure Normal pressure (less than 3.0732 MPa 31.4 kgf/cm^2, 445 psi an more than 0.1762 MPa 1.8 kgf/cm^2, 25 psi)	1.0 to 4.8
	Refrigerant pressure Abnormal (less than 0.1762 MPa 1.8 kgf/cm^2, 25 psi)	Below 1
	Refrigerant pressure Abnormal (more than 3.0732 MPa 31.4 kgf/cm^2, 445 psi)	4.8 or higher

NG → REPLACE AIR CONDITIONER PRESSURE SENSOR (Click here)

OK

REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

12.REPAIR AIR CONDITIONING SYSTEM LEAK

a. I entify the area where refrigerant leaks (Click here).

b. Repair the i entifie area of the air con itioning system.

c. Evacuate the air con itioning system.

NEXT

CHARGE REFRIGERANT (Click here)

13.INSPECT CONDENSER FAN

a. Inspect that the con enser fan operates normally (Click here).

NG → REPLACE CONDENSER FAN (Click here)

OK

14.CHARGE REFRIGERANT

a. Use a refrigerant recovery unit to recover refrigerant.

b. Evacuate the air con itioning system.

c. A an appropriate amount of refrigerant (Click here).

HINT:

If refrigerant is a e an the system has not been properly evacuate (insufficient vacuum time), moisture in the air remaining in the system will freeze in the expansion valve, blocking the flow on the high pressure si e. Therefore, in or er to confirm the problem, recover the refrigerant an properly evacuate the system. A an appropriate amount of refrigerant, an check for the DTC.

NEXT

15.RECHECK DTC

a. Recheck for the DTC when the following con itions are satisfie .

Item	Con ition
Engine Spee	500 rpm

ehicle Doors	Fully open
Temperature Setting	MA CO D
Blower Spee	
/C Switch	ON
R/F Switch	RECIRCU ATION
Interior Temperature	25 to 35 C (77 to 95 F)

NOTICE:

If refrigerant pressure on the high pressure si e becomes high, the DTC will be store . Therefore, it is necessary to measure the voltage for a certain amount of time (approximately 10 minutes) because the DTC may be store after the air con itioning system operates for a while.

HINT:

- **When the outside air temperature is low (below -1.5°C (29.3°F)), the compressor stops due to operation of the ambient temperature sensor and the evaporator temperature sensor to prevent the evaporator from freezing. In this case, perform the inspection in a warm indoor environment.**
- **If refrigerant is added and the system has not been properly evacuated (insufficient vacuum time), moisture in the air remaining in the system will freeze in the expansion valve, blocking the flow on the high pressure side. Therefore, in order to confirm the problem, recover the refrigerant and properly evacuate the system. Add an appropriate amount of refrigerant, and check for the DTC. If the DTC is not output after this procedure, it indicates that the cooler dryer in the condenser is not able to absorb moisture in the refrigerant cycle. In this case, to complete the repair it is necessary to replace the cooler dryer.**

OK:
DTC B1423 is not output.

NG → **Go to step 16**

OK

REPLACE COOLER DRYER (Click here)

16.REPLACE COOLER EXPANSION VALVE

a. Replace the cooler expansion valve with a normal one.
for HD (Click here)
for RHD (Click here)

HINT:

Replace the cooler expansion valve with a normal one because the cooler expansion valve is either stuck or clogge .

NEXT

17.CHARGE REFRIGERANT

a. A an appropriate amount of refrigerant (Click here).

NEXT

18.RECHECK DTC

a. Recheck for the DTC when the following con itions are satisfie .

Item	Con ition
Engine Spee	500 rpm
ehicle Doors	Fully open
Temperature Setting	MA CO D
Blower Spee	
/C Switch	ON
R/F Switch	RECIRCU ATION
Interior Temperature	25 to 35 C (77 to 95 F)

NOTICE:

If refrigerant pressure on the high pressure si e becomes high, the DTC will be store . Therefore, it is necessary to measure the voltage for a certain amount of time (approximately 10 minutes) because the DTC may be store after the air con itioning system operates for a while.

HINT:

- **When the outside air temperature is low (below -1.5°C (29.3°F)), the compressor stops due to operation of the ambient temperature sensor and the evaporator temperature sensor to prevent the evaporator from freezing. In this case, perform the inspection in a warm indoor environment.**
- **If refrigerant pressure is not normal after replacing the expansion valve with a normal one, the condenser or pipes may be clogged due to dirt, dust or other contaminants. In this case, clean or replace the condenser or pipes.**

OK:
DTC B1423 is not output.

NG → REPLACE COOLER CONDENSER ASSEMBLY (Click here)

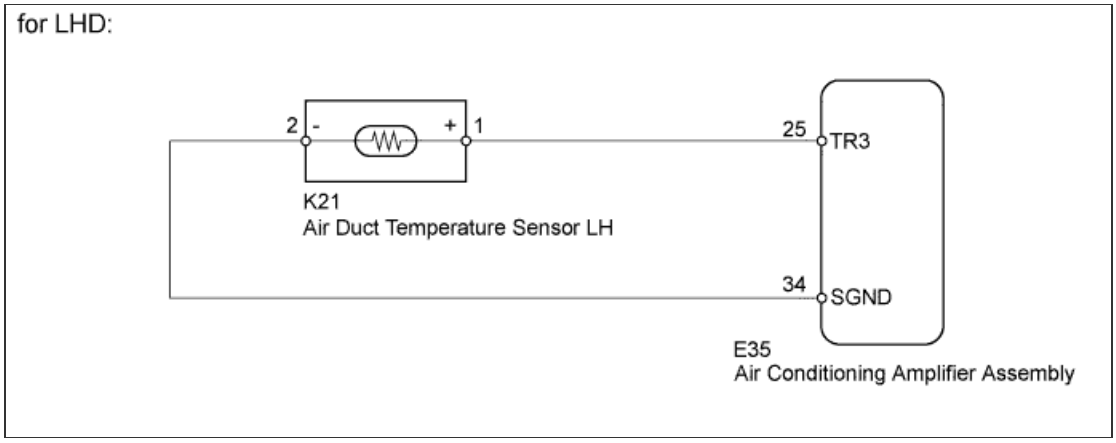
OK → END

DTC B1467/67 Rear Air Foot Duct Sensor Circuit on Driver Side

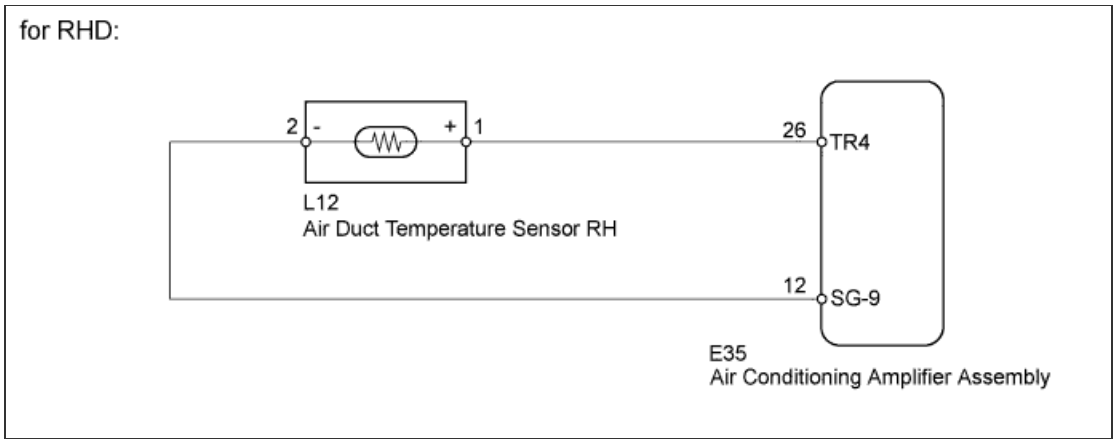
for Preparation Click here

DESCRIPTION

The air duct temperature sensor LH*1 or RH*2 (for driver side) detects the duct temperature and sends the appropriate signals to the air conditioning amplifier assembly.



DTC Code	DTC Detection Condition	Trouble Area
B1467/67	An open or short in the air duct temperature sensor LH*1 or RH*2 circuit.	• Air duct temperature sensor LH*1 • Air duct temperature sensor RH*2 • Harness or connector (air duct temperature sensor LH)*1 • Harness or connector (air duct temperature sensor RH)*2 • Air conditioning amplifier assembly



HINT:

*1: for LHD

*2: for RHD

WIRING DIAGRAM

INSPECTION PROCEDURE

1.READ VALUE USING INTELLIGENT TESTER (AIR DUCT TEMPERATURE SENSOR)

a. Use the Data List to check if the air duct temperature sensor LH*1 or RH*2 (for driver side) is functioning properly.

Air Conditioner

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note

Foot Duct Sensor (Rear D)	Min.: -12.7°C (9.14°F) Max.: 76.55°C (169.79°F)	Actual air duct temperature sensor (for driver side) displayed	Open in the circuit: -12.7°C (9.14°F) Short in the circuit: 76.55°C (169.79°F)

HINT:

*1: for LHD

*2: for RHD

OK:

The display is as specified in the normal condition.

NG	Go to step 2

OK

REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

2.CHECK AIR DUCT TEMPERATURE SENSOR

a. for LHD

i. Remove the air duct temperature sensor LH (Click here).

b. for RHD

i. Remove the air duct temperature sensor RH (Click here).

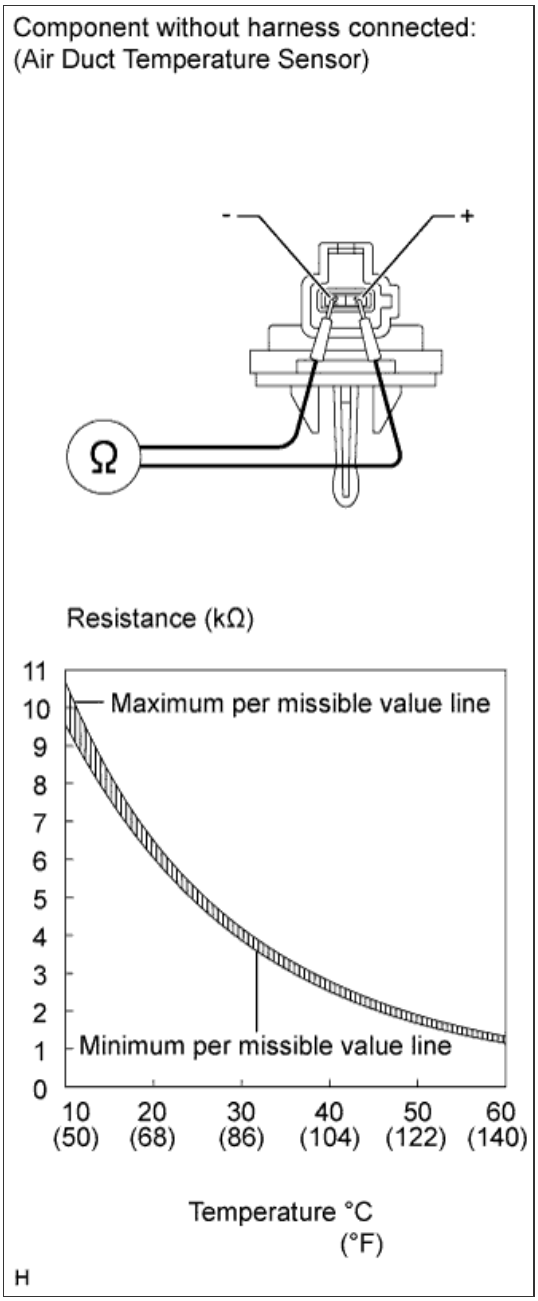
c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (+) - 2 (-)	at 10°C (50°F)	9.4 to 10.5 kΩ
	at 15°C (59°F)	7.5 to 8.3 kΩ
	at 20°C (68°F)	6.0 to 6.5 kΩ
	at 25°C (77°F)	4.5 to 5.2 kΩ
	at 30°C (86°F)	3.8 to 4.2 kΩ
	at 35°C (95°F)	3.1 to 3.4 kΩ
	at 40°C (104°F)	2.5 to 2.8 kΩ
	at 45°C (113°F)	2.0 to 2.3 kΩ
	at 50°C (122°F)	1.6 to 2.0 kΩ
	at 55°C (131°F)	1.3 to 1.6 kΩ
	at 60°C (140°F)	1.1 to 1.4 kΩ

NOTICE:

- **Touching the sensor even slightly may change the resistance value. Hold the connector of the sensor.**
- **When measuring the resistance, the sensor temperature must be the same as the ambient temperature.**



HINT:

As the temperature increases, the resistance decreases (see the graph).

If the resistance value is not as specified, replace the sensor.

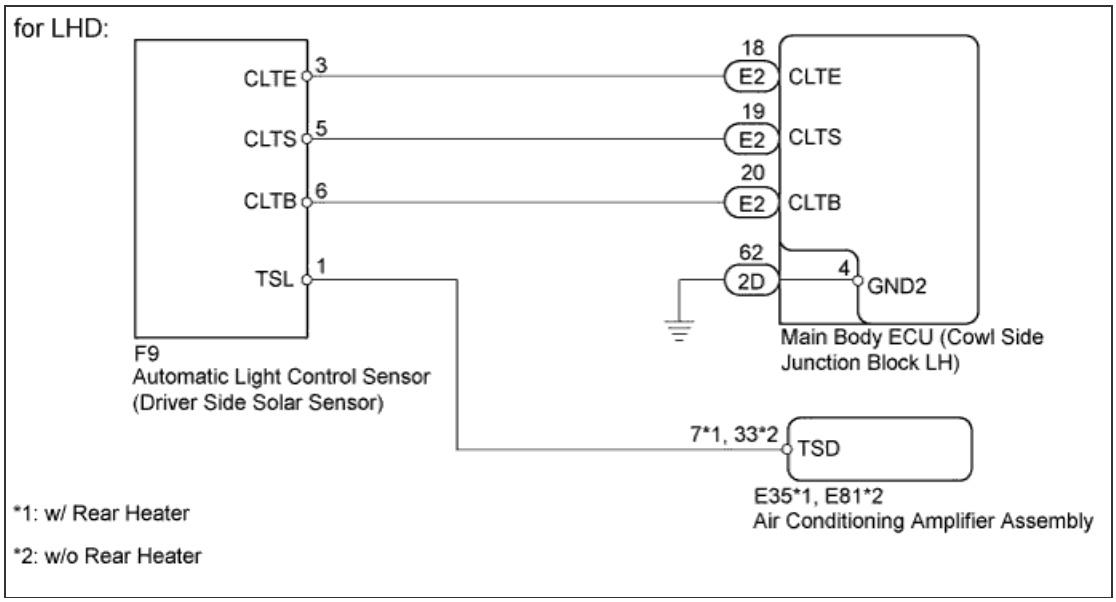
OK

REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

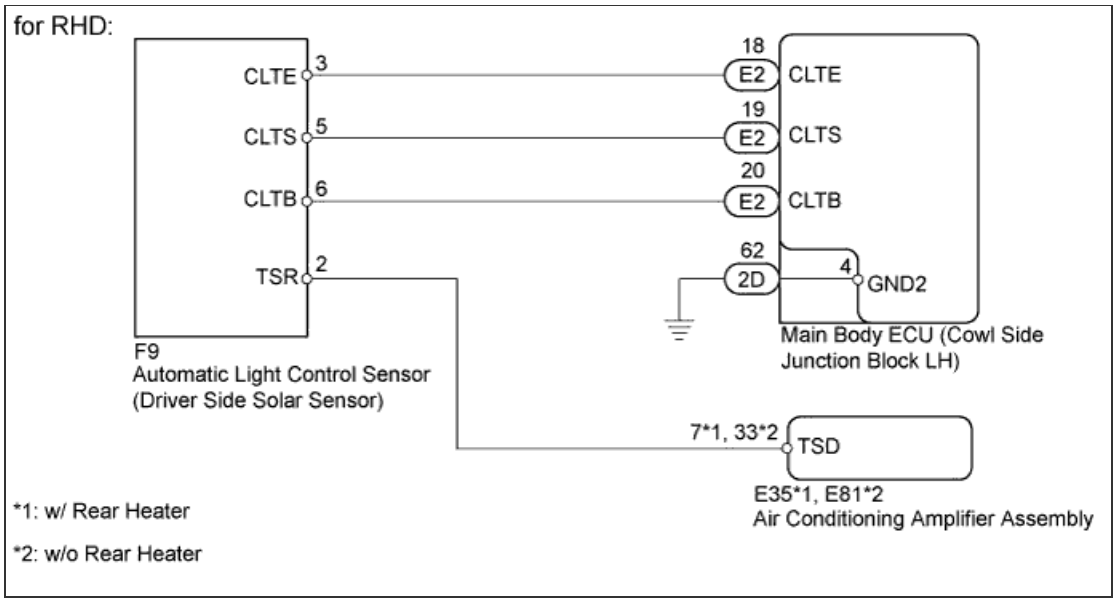
DTC B1424/24 Solar Sensor Circuit (Driver Side)

for Preparation Click here

DESCRIPTION



The automatic light control sensor (solar sensor), which is installed on the upper side of the instrument panel, detects sunlight and controls the air conditioning in auto mode. The output current from the solar sensor varies according to the amount of sunlight. When the sunlight increases, the output current increases. As the sunlight decreases, the output current decreases. The air conditioning amplifier assembly detects output current from the solar sensor.



DTC Code	DTC Detection Condition	Trouble Area
B1424/24	An open or short in the driver side solar sensor circuit.	• Automatic light control sensor (solar sensor) • Harness or connector between solar sensor and air conditioning amplifier assembly • Harness or connector between solar sensor and main body ECU (cowl side junction block LH) • Main body ECU (cowl side junction block LH) • Air conditioning amplifier assembly

HINT:

If DTC B1244 is output at the same time, troubleshoot DTC B1244 first.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.READ VALUE USING INTELLIGENT TESTER (DRIVER SIDE SOLAR SENSOR)

a. Use the Data List to check if the driver side solar sensor is functioning properly.

Air Conditioner

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Solar Sensor (D Side)	Driver side solar sensor / Min.: 0, Max.: 255	Driver side solar sensor voltage increases as brightness increases	Open in the circuit: 0. Short in the circuit: 255.

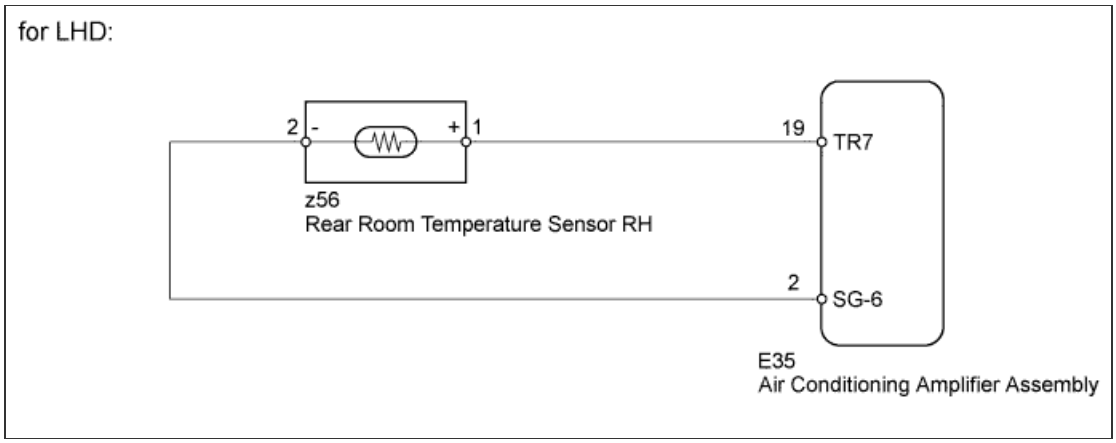
DTC B1468/68 Rear Passenger Side Room Temperature Sensor Circuit

for Preparation Click here

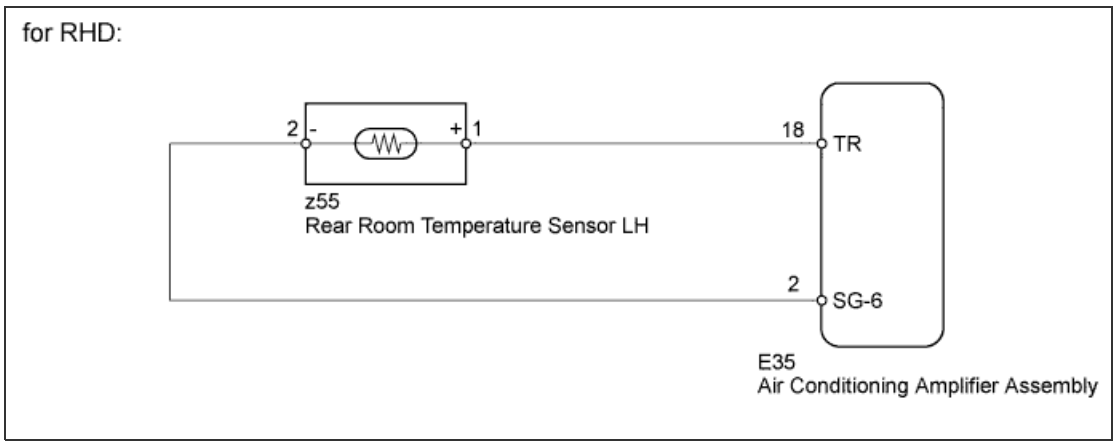
DESCRIPTION

The rear room temperature sensor RH*1 or LH*2 (for front passenger side) is installed in the rear quarter trim board RH*1 or LH*2 to detect the rear room temperature and control the heater and air conditioner "auto" mode. The resistance of the rear room temperature sensor RH*1 or LH*2 changes in accordance with the rear room temperature for RH*1 or LH*2 seat. As the temperature decreases, the resistance increases. As the temperature increases, the resistance decreases.

The air conditioning amplifier applies a voltage (5) to the rear room temperature sensor RH*1 or LH*2 and reads voltage changes as changes in the resistance of the rear room temperature sensor RH*1 or LH*2.



DTC Code	DTC Detection Condition	Trouble Area
B1468/68	An open or short in the rear room temperature sensor RH*1 or LH*2 circuit.	• Rear room temperature sensor RH*1 • Rear room temperature sensor LH*2 • Harness or connector between rear room temperature sensor RH and air conditioning amplifier assembly*1 • Harness or connector between rear room temperature sensor LH and air conditioning amplifier assembly*2 • Air conditioning amplifier assembly



HINT:

3.CHECK HARNESS AND CONNECTOR (REAR ROOM TEMPERATURE SENSOR - AIR CONDITIONING AMPLIFIER)

a. for LHD

i. Disconnect the z56 sensor connector.

ii. Disconnect the 5 amplifier connector.

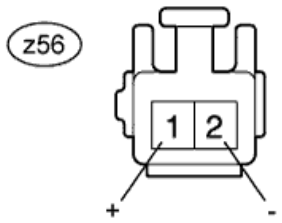
iii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z56-2 (-) - 5-2 (SG-6)	Always	Below 1 Ω
z56-1 (+) - 5-19 (TR7)		
5-2 (SG-6) - Body ground	Always	10 kΩ or higher
5-19 (TR7) - Body ground		

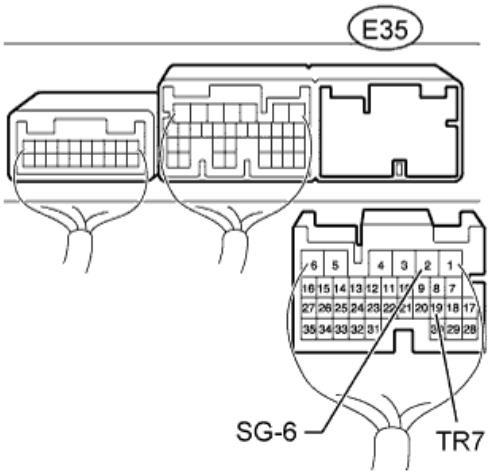
b. for RHD

i. Disconnect the z55 sensor connector.



ii. Disconnect the 5 amplifier connector.

iii. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
z55-2 (-) - 5-2 (SG-6)	Always	Below 1 Ω
z55-1 (+) - 5-18 (TR)		
5-2 (SG-6) - Body ground	Always	10 kΩ or higher
5-18 (TR) - Body ground

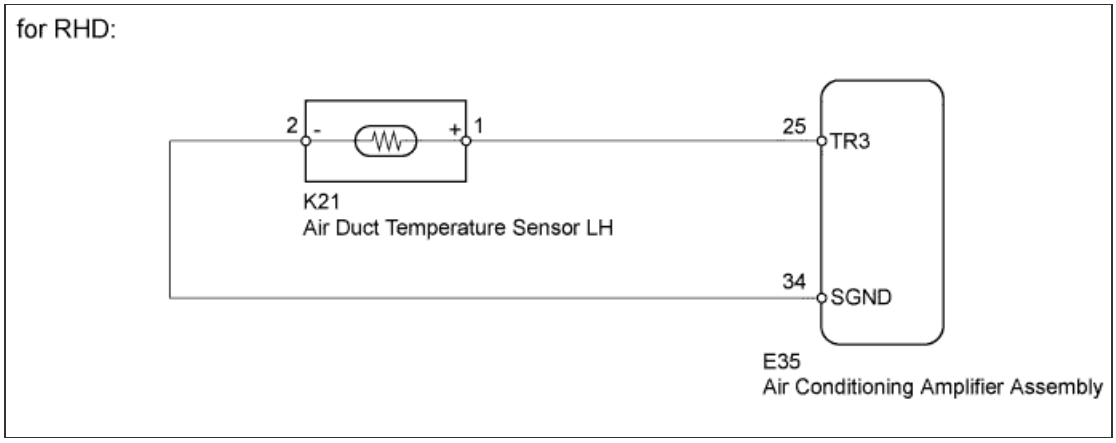
DTC B1429/29 Rear Air Foot Duct Sensor Circuit on Front Passenger Side

for Preparation Click here

DESCRIPTION

The air duct temperature sensor RH*1 or LH*2 (for front passenger side) detects the duct temperature and sends the appropriate signals to the air conditioning amplifier assembly.



DTC Code	DTC Detection Condition	Trouble Area
B1429/29	An open or short in the air duct temperature sensor RH*1 or LH*2 circuit.	• Air duct temperature sensor RH*1 • Air duct temperature sensor LH*2 • Harness or connector (air duct temperature sensor RH)*1 • Harness or connector (air duct temperature sensor LH)*2 • Air conditioning amplifier assembly

HINT:

*1: for LHD

*2: for RHD

WIRING DIAGRAM

INSPECTION PROCEDURE

1.READ VALUE USING INTELLIGENT TESTER (AIR DUCT TEMPERATURE SENSOR)

a. Use the Data List to check if the air duct temperature sensor RH*1 or LH*2 (for front passenger side) is functioning properly.

Air Conditioner

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note

Foot Duct Sensor (Rear P)	Min.: -12.7°C (9.14°F) Max.: 76.55°C (169.79°F)	Actual air duct temperature sensor (for passenger side) displayed	Open in the circuit: -12.7°C (9.14°F) Short in the circuit: 76.55°C (169.79°F)

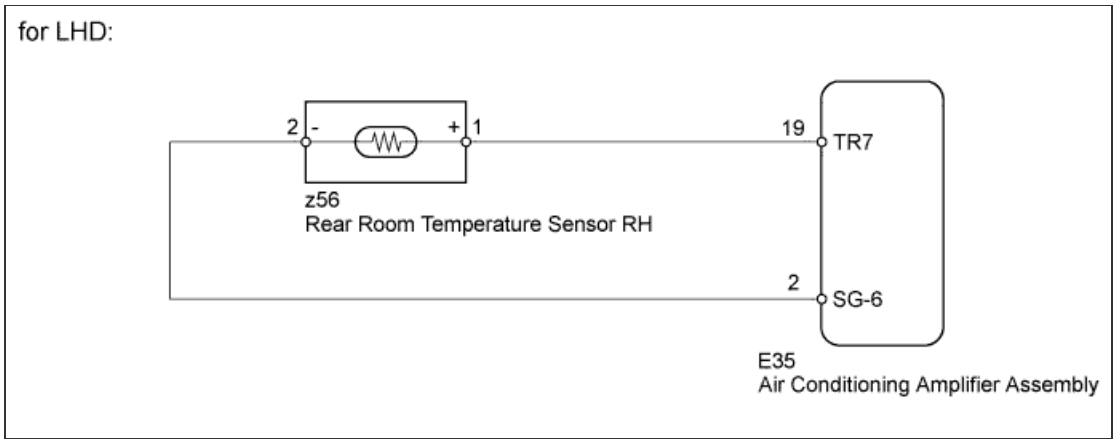
DTC B1468/68 Rear Passenger Side Room Temperature Sensor Circuit

for Preparation Click here

DESCRIPTION

The rear room temperature sensor RH*1 or LH*2 (for front passenger side) is installed in the rear quarter trim board RH*1 or LH*2 to detect the rear room temperature and control the heater and air conditioner "auto" mode. The resistance of the rear room temperature sensor RH*1 or LH*2 changes in accordance with the rear room temperature for RH*1 or LH*2 seat. As the temperature decreases, the resistance increases. As the temperature increases, the resistance decreases.

The air conditioning amplifier applies a voltage (5) to the rear room temperature sensor RH*1 or LH*2 and reads voltage changes as changes in the resistance of the rear room temperature sensor RH*1 or LH*2.



DTC Code	DTC Detection Condition	Trouble Area
B1468/68	An open or short in the rear room temperature sensor RH*1 or LH*2 circuit.	• Rear room temperature sensor RH*1 • Rear room temperature sensor LH*2 • Harness or connector between rear room temperature sensor RH and air conditioning amplifier assembly*1 • Harness or connector between rear room temperature sensor LH and air conditioning amplifier assembly*2 • Air conditioning amplifier assembly

HINT:

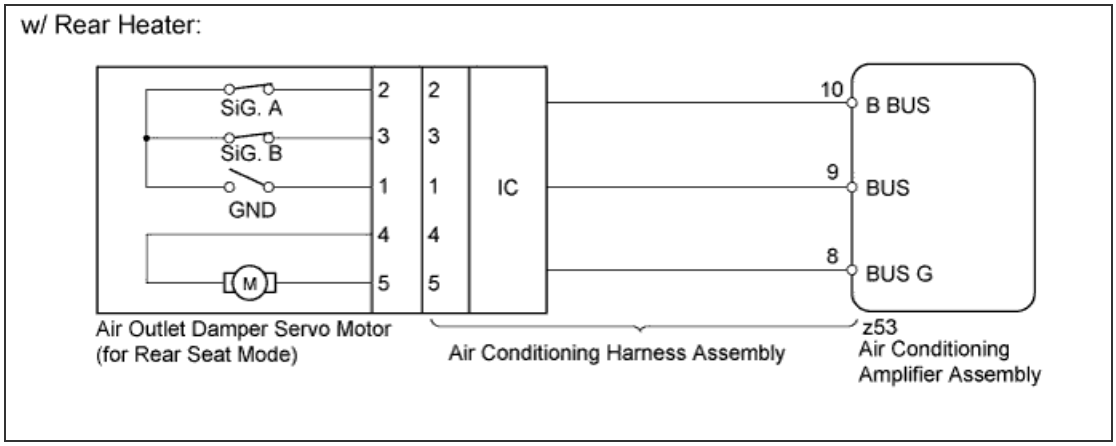
DTC B1486/86 Driver Side Air Outlet Damper Control Servo Motor Circuit

for Preparation Click here

DESCRIPTION



The air outlet damper servo motor (for rear seat mode) sends pulse signals to inform the air conditioning amplifier assembly of the damper position. The air conditioning amplifier assembly activates the motor (normal or reverse) based on the signals to move the air outlet damper to any position, which controls the air outlet changes.

HINT:

Confirm that no mechanical problem is present because this trouble code can be output when either a damper link or damper is mechanically locked.

DTC Code	DTC Detection Condition	Trouble Area
B1486/86	The air outlet damper position does not change even if the air conditioning amplifier assembly operates the air outlet damper servo motor.	• Air outlet damper servo motor (for rear seat mode) • Air conditioning harness assembly • Air conditioning amplifier assembly

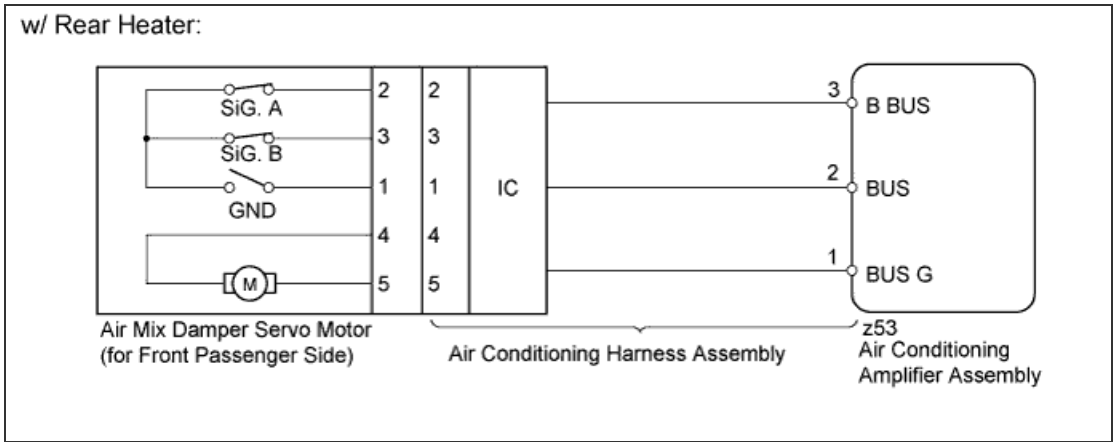
REPLACE AIR OUTLET DAMPER SERVO MOTOR (Click here)

DTC B1441/41 Air Mix Damper Control Servo Motor Circuit (Passenger Side)

for Preparation Click here

DESCRIPTION



The front air mix damper servo motor (for front passenger side) sends pulse signals to inform the air conditioning amplifier assembly of the damper position. The air conditioning amplifier assembly activates the motor (normal or reverse) based on the signals to move the front air mix damper (for front passenger side) to any position. As a result, the amount of air that has passed through the evaporator and is passing through the heater core is adjusted, and the temperature of the air blowing toward the front passenger side is controlled.

HINT:

Confirm that no mechanical problem is present because this trouble code can be output when either a damper link or damper is mechanically locked.

DTC Code	DTC Detection Condition	Trouble Area
B1441/41	The air mix damper position does not change even if the air conditioning amplifier assembly operates the air mix damper servo motor.	• Air mix damper servo motor (for front passenger side) • Air conditioning harness assembly • Air conditioning amplifier assembly

DTC B1488/88 Rear Air Mix Damper Control Servo Motor Circuit on Front Passenger Side

for Preparation Click here

DESCRIPTION

The rear air mix damper servo motor RH*1 or LH*2 sends pulse signals to indicate the damper position to the air conditioning amplifier assembly. The air conditioning amplifier assembly activates the motor (normal or reverse) based on these signals to move the rear air mix damper to the appropriate position. This adjusts the amount of air passing through the heater core after passing the evaporator and controls the temperature of the blown air.

HINT:

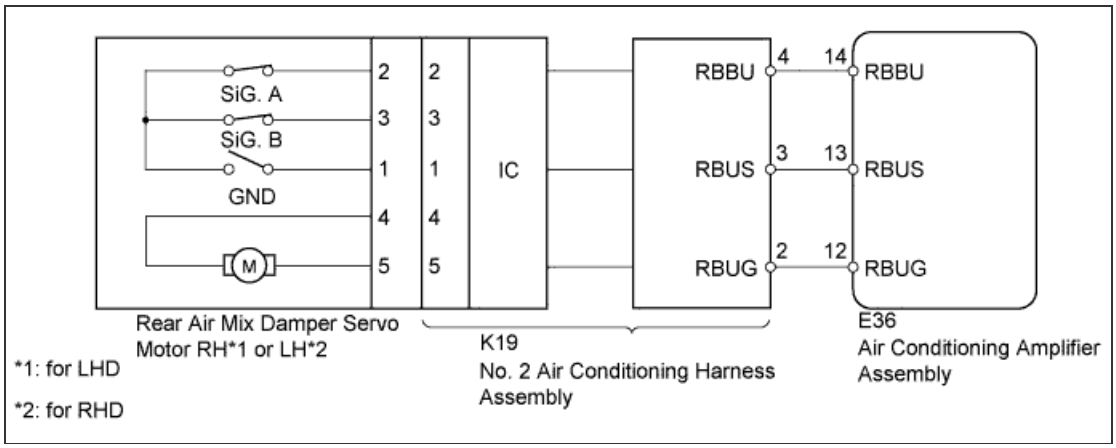
Confirm that no mechanical problem is present because this trouble code can be output when either a damper link or damper is mechanically locked.



DTC Code	DTC Detection Condition	Trouble Area
B1488/88	The rear air mix damper position does not change even if the air conditioning amplifier assembly operates the air mix damper servo motor.	• Rear air mix damper servo motor RH*1 • Rear air mix damper servo motor LH*2 • No. 2 air conditioning harness assembly • Harness or connector between No. 2 air conditioning harness assembly and air conditioning amplifier assembly • Air conditioning amplifier assembly

OK

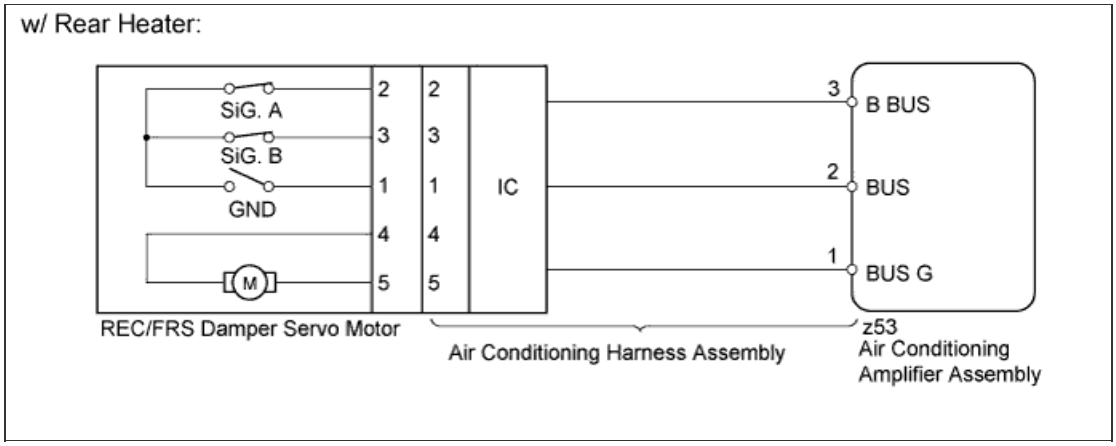
REPLACE REAR AIR MIX DAMPER SERVO MOTOR (Click here)

DTC B1442/42 Air Inlet Damper Control Servo Motor Circuit

for Preparation Click here

DESCRIPTION



The REC/FRS damper servo motor sends pulse signals to inform the air conditioning amplifier assembly of the damper position. The air conditioning amplifier assembly activates the motor (normal or reverse) based on the signals to move the air inlet damper to any position, which controls the intake air settings (fresh, fresh/recirculation and recirculation).

HINT:

Confirm that no mechanical problem is present because this trouble code can be output when either a damper link or damper is mechanically locked.

DTC Code	DTC Detection Condition	Trouble Area
B1442/42	The air inlet damper position does not change even if the air conditioning amplifier assembly operates the REC/FRS damper servo motor.	• REC/FRS damper servo motor • Air conditioning harness assembly • Air conditioning amplifier assembly

DTC B1488/88 Rear Air Mix Damper Control Servo Motor Circuit on Front Passenger Side

for Preparation Click here

DESCRIPTION

The rear air mix damper servo motor RH*1 or LH*2 sends pulse signals to indicate the damper position to the air conditioning amplifier assembly. The air conditioning amplifier assembly activates the motor (normal or reverse) based on these signals to move the rear air mix damper to the appropriate position. This adjusts the amount of air passing through the heater core after passing the evaporator and controls the temperature of the blown air.

HINT:

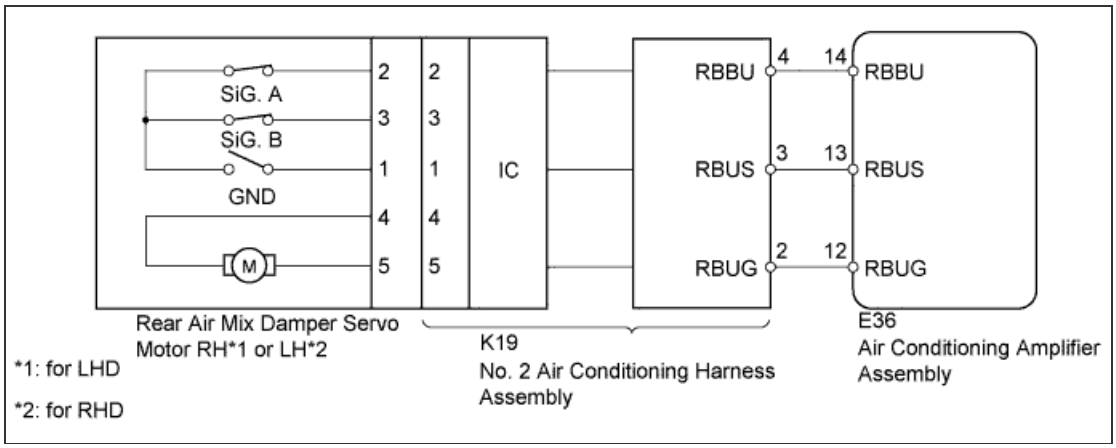
Confirm that no mechanical problem is present because this trouble code can be output when either a damper link or damper is mechanically locked.



DTC Code	DTC Detection Condition	Trouble Area
B1488/88	The rear air mix damper position does not change even if the air conditioning amplifier assembly operates the air mix damper servo motor.	• Rear air mix damper servo motor RH*1 • Rear air mix damper servo motor LH*2 • No. 2 air conditioning harness assembly • Harness or connector between No. 2 air conditioning harness assembly and air conditioning amplifier assembly • Air conditioning amplifier assembly

DESCRIPTION

This circuit* consists of the air conditioning control assembly and the air conditioning amplifier assembly. When the air conditioning control assembly is operated, signals are transmitted to the air conditioning amplifier assembly through the LIN communication system.
If the LIN communication system malfunctions, the air conditioning amplifier assembly does not operate even if the air conditioning control assembly is operated.

HINT:

*: w/o Multi-display

WIRING DIAGRAM

INSPECTION PROCEDURE

1.INSPECT FUSE (ECU-IG NO. 2)

a. Remove the ECU-IG NO. 2 fuse from the engine room relay block.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
ECU-IG NO. 2 fuse	Always	Below 1 Ω

NG → REPLACE FUSE

OK

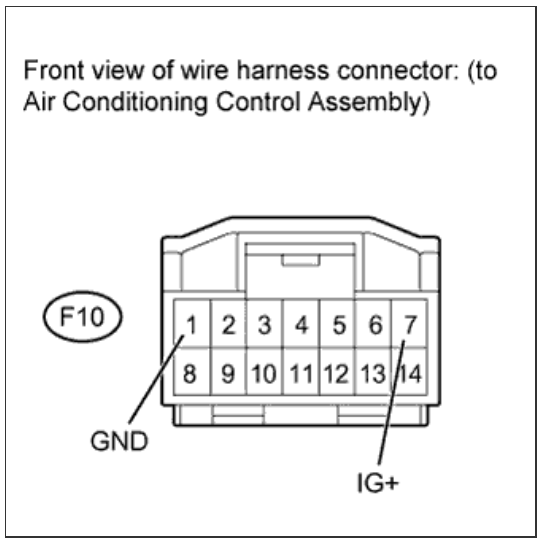
2.CHECK HARNESS AND CONNECTOR (AIR CONDITIONING CONTROL - BODY GROUND AND BATTERY)

a. Disconnect the F10 air conditioning control assembly connector.



b. Measure the resistance and voltage according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
F10-1 (GND) - Body ground	Always	Below 1 Ω

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
F10-1 (GND) - F10-7 (IG+)	Engine switch on (IG)	11 to 14 V

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

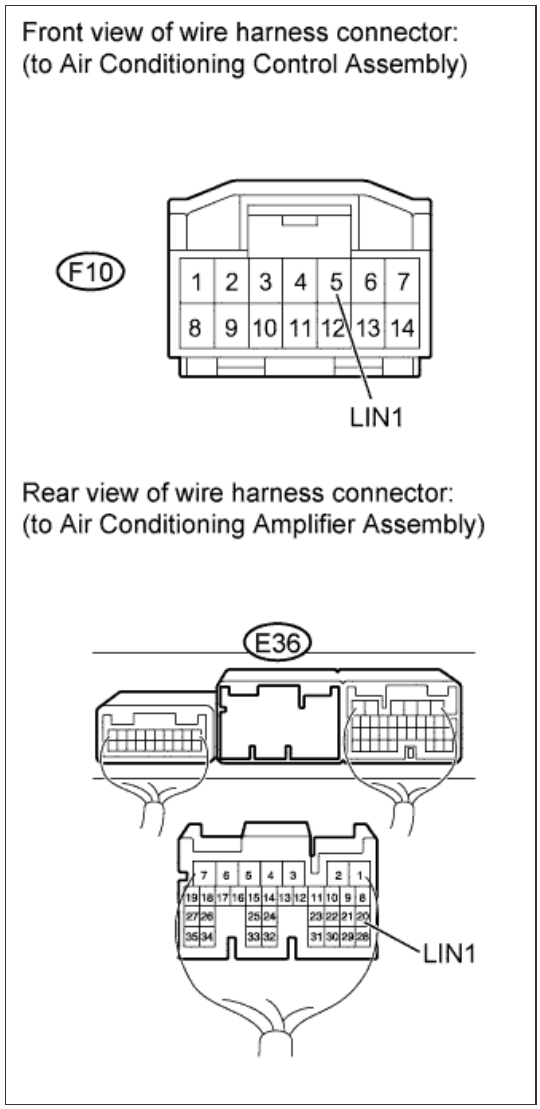
3.CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - AIR CONDITIONING CONTROL)

a. w/ Rear Heater



i. Disconnect the F10 air conditioning control assembly connector.

ii. Disconnect the E36 amplifier connector.

iii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
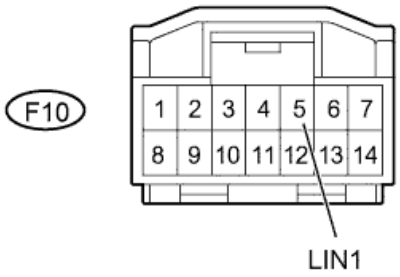
E36-20 (LIN1) - F10-5 (LIN1)	Always	Below 1 Ω
E36-20 (LIN1) - Body ground	Always	10 kΩ or higher

b. w/o Rear Heater

i. Disconnect the F10 air conditioning control assembly connector.



ii. Disconnect the E81 amplifier connector.

iii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E81-37 (LIN1) - F10-5 (LIN1)	Always	Below 1 Ω
E81-37 (LIN1) - Body ground	Always	10 kΩ or higher

Front view of wire harness connector:
(to Air Conditioning Control Assembly)

Rear view of wire harness connector:
(to Air Conditioning Amplifier Assembly)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

4.CHECK AIR CONDITIONING CONTROL ASSEMBLY (OPERATION)

a. Replace the air conditioning control assembly with a new or properly functioning one.

b. Operate the front air conditioning control to check that it functions properly.

OK:
Air conditioning control assembly function operates normally.

NG → REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

OK

REPLACE AIR CONDITIONING CONTROL ASSEMBLY (Click here)

for Preparation Click here

DESCRIPTION

This circuit* consists of the air conditioning control assembly and the air conditioning amplifier assembly. When the air conditioning control assembly is operated, signals are transmitted to the air conditioning amplifier assembly through the LIN communication system.
If the LIN communication system malfunctions, the air conditioning amplifier assembly does not operate even if the air conditioning control assembly is operated.

HINT:

*: w/o Multi-display

WIRING DIAGRAM

INSPECTION PROCEDURE

1.INSPECT FUSE (ECU-IG NO. 2)

a. Remove the ECU-IG NO. 2 fuse from the engine room relay block.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
ECU-IG NO. 2 fuse	Always	Below 1 Ω

NG → REPLACE FUSE

OK

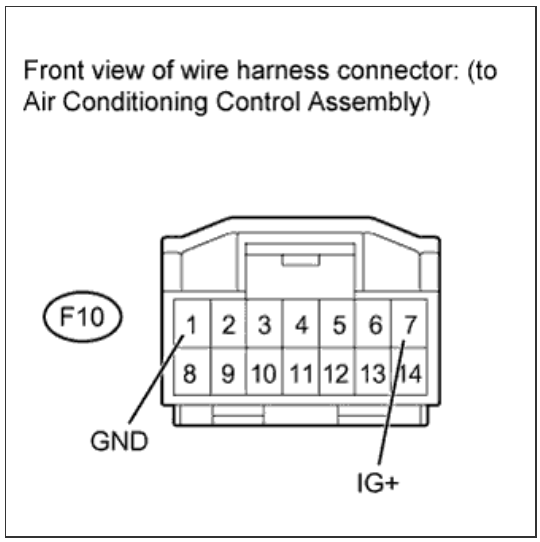
2.CHECK HARNESS AND CONNECTOR (AIR CONDITIONING CONTROL - BODY GROUND AND BATTERY)

a. Disconnect the F10 air conditioning control assembly connector.



b. Measure the resistance and voltage according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
F10-1 (GND) - Body ground	Always	Below 1 Ω

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
F10-1 (GND) - F10-7 (IG+)	Engine switch on (IG)	11 to 14 V

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

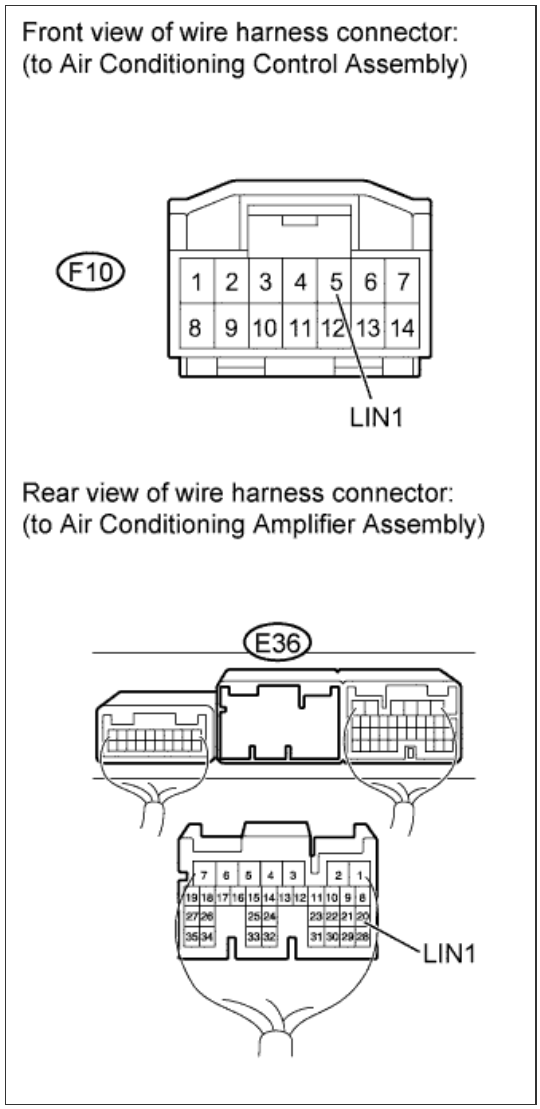
3.CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - AIR CONDITIONING CONTROL)

a. w/ Rear Heater



i. Disconnect the F10 air conditioning control assembly connector.

ii. Disconnect the E36 amplifier connector.

iii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
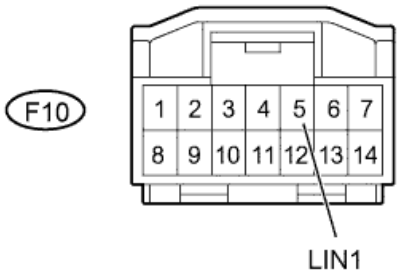
E36-20 (LIN1) - F10-5 (LIN1)	Always	Below 1 Ω
E36-20 (LIN1) - Body ground	Always	10 kΩ or higher

b. w/o Rear Heater

i. Disconnect the F10 air conditioning control assembly connector.



ii. Disconnect the E81 amplifier connector.

iii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E81-37 (LIN1) - F10-5 (LIN1)	Always	Below 1 Ω
E81-37 (LIN1) - Body ground	Always	10 kΩ or higher

Front view of wire harness connector:
(to Air Conditioning Control Assembly)

Rear view of wire harness connector:
(to Air Conditioning Amplifier Assembly)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

4.CHECK AIR CONDITIONING CONTROL ASSEMBLY (OPERATION)

a. Replace the air conditioning control assembly with a new or properly functioning one.

b. Operate the front air conditioning control to check that it functions properly.

OK:
Air conditioning control assembly function operates normally.

NG → REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

OK

REPLACE AIR CONDITIONING CONTROL ASSEMBLY (Click here)

for Preparation Click here

DESCRIPTION

The cooler expansion valve (cooler magnetic valve) is controlled by the air conditioning amplifier assembly (for cool box).

WIRING DIAGRAM

INSPECTION PROCEDURE

1.INSPECT FUSE (A/C IG)

a. Remove the A/C IG fuse from the cowl side junction block LH.

b. Measure the resistance according to the value(s) in the table below.

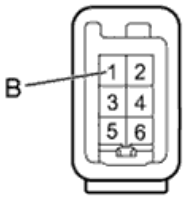
Standard Resistance:

Tester Connection	Condition	Specified Condition
A/C IG fuse	Always	Below 1 Ω

NG → REPLACE FUSE

OK

2.CHECK HARNESS AND CONNECTOR (NO. 1 COOLER WIRING HARNESS - BATTERY)



a. Disconnect the No. 1 cooler wiring harness sub-assembly connector.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

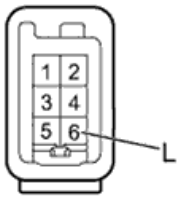
Tester Connection	Switch Condition	Specified Condition
1 (B) - Body ground	Engine switch off	Below 1 V
	Engine switch on (IG)	11 to 14 V

Front view of wire harness connector: (to No. 1 Cooler Wiring Harness Sub-assembly)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ↓

3.CHECK HARNESS AND CONNECTOR (NO. 1 COOLER WIRING HARNESS - BODY GROUND)



a. Disconnect the No. 1 cooler wiring harness sub-assembly connector.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
6 (L) - Body ground	Always	Below 1 Ω

Front view of wire harness connector: (to No. 1 Cooler Wiring Harness Sub-assembly)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK ↓

4.CHECK NO. 1 COOLER WIRING HARNESS SUB-ASSEMBLY (OPERATION)

a. Replace the No. 1 cooler wiring harness sub-assembly with a normal one and check that the condition returns to normal.

OK:
Same problem does not occur.

NG → Go to step 5

OK ↓

REPLACE NO. 1 COOLER WIRING HARNESS SUB-ASSEMBLY

5.CHECK COOLER MAGNETIC VALVE (OPERATION)

a. Replace the cooler magnetic valve (Click here).

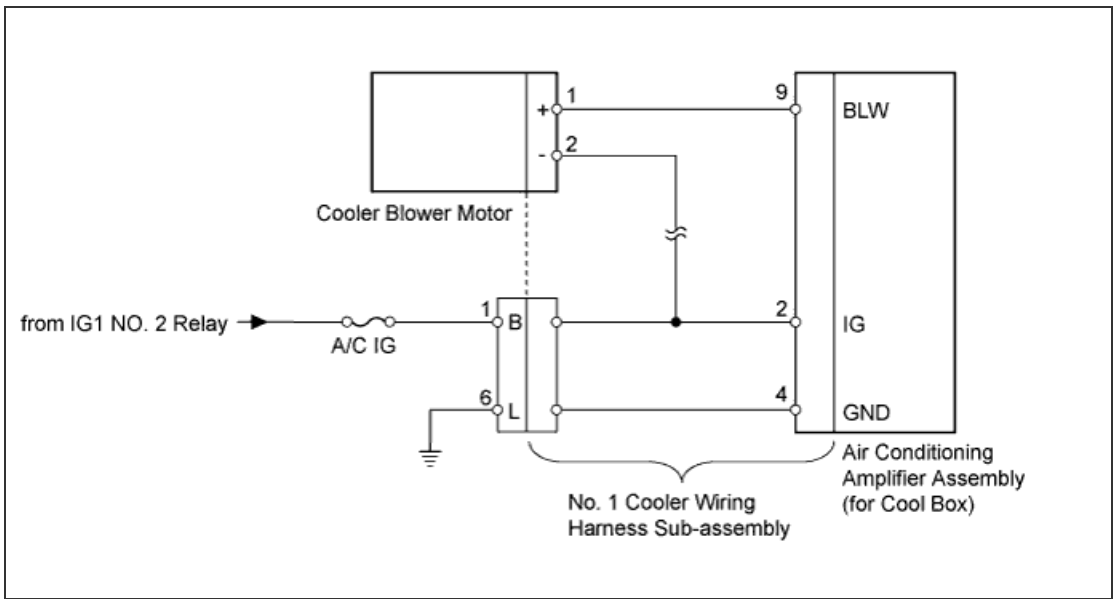
HINT:

Since the cooler magnetic valve cannot be inspected while it is removed from the vehicle, replace the cooler magnetic valve with a normal one and check that the condition returns to normal.

OK:

Same problem does not occur.

NG → REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (for Cool Box) (Click here)



OK → REPLACE COOLER MAGNETIC VALVE (Click here)

for Preparation Click here

DESCRIPTION

The cooler blower motor is operated by signals from the air conditioning amplifier assembly (for cool box).

WIRING DIAGRAM

INSPECTION PROCEDURE

1.INSPECT FUSE (A/C IG)

a. Remove the A/C IG fuse from the cowl side junction block LH.

b. Measure the resistance according to the value(s) in the table below.

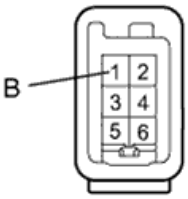
Standard Resistance:

Tester Connection	Condition	Specified Condition
A/C IG fuse	Always	Below 1 Ω

NG → REPLACE FUSE

OK

2.CHECK HARNESS AND CONNECTOR (NO. 1 COOLER WIRING HARNESS - BATTERY)



a. Disconnect the No. 1 cooler wiring harness sub-assembly connector.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

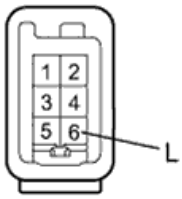
Tester Connection	Switch Condition	Specified Condition
1 (B) - Body ground	Engine switch off	Below 1 V
	Engine switch on (IG)	11 to 14 V

Front view of wire harness connector: (to No. 1 Cooler Wiring Harness Sub-assembly)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3.CHECK HARNESS AND CONNECTOR (NO. 1 COOLER WIRING HARNESS - BODY GROUND)



a. Disconnect the No. 1 cooler wiring harness sub-assembly connector.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
6 (L) - Body ground	Always	Below 1 Ω

Front view of wire harness connector: (to No. 1 Cooler Wiring Harness Sub-assembly)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

4.CHECK NO. 1 COOLER WIRING HARNESS SUB-ASSEMBLY (OPERATION)

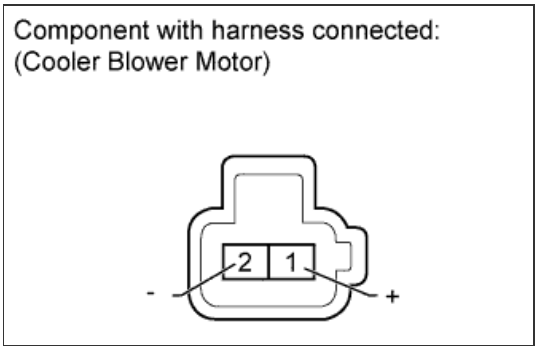
a. Replace the No. 1 cooler wiring harness sub-assembly with a normal one and check that the condition returns to normal.

OK:
Same problem does not occur.

NG → Go to step 5

OK

REPLACE NO. 1 COOLER WIRING HARNESS SUB-ASSEMBLY



5.INSPECT COOLER BLOWER MOTOR

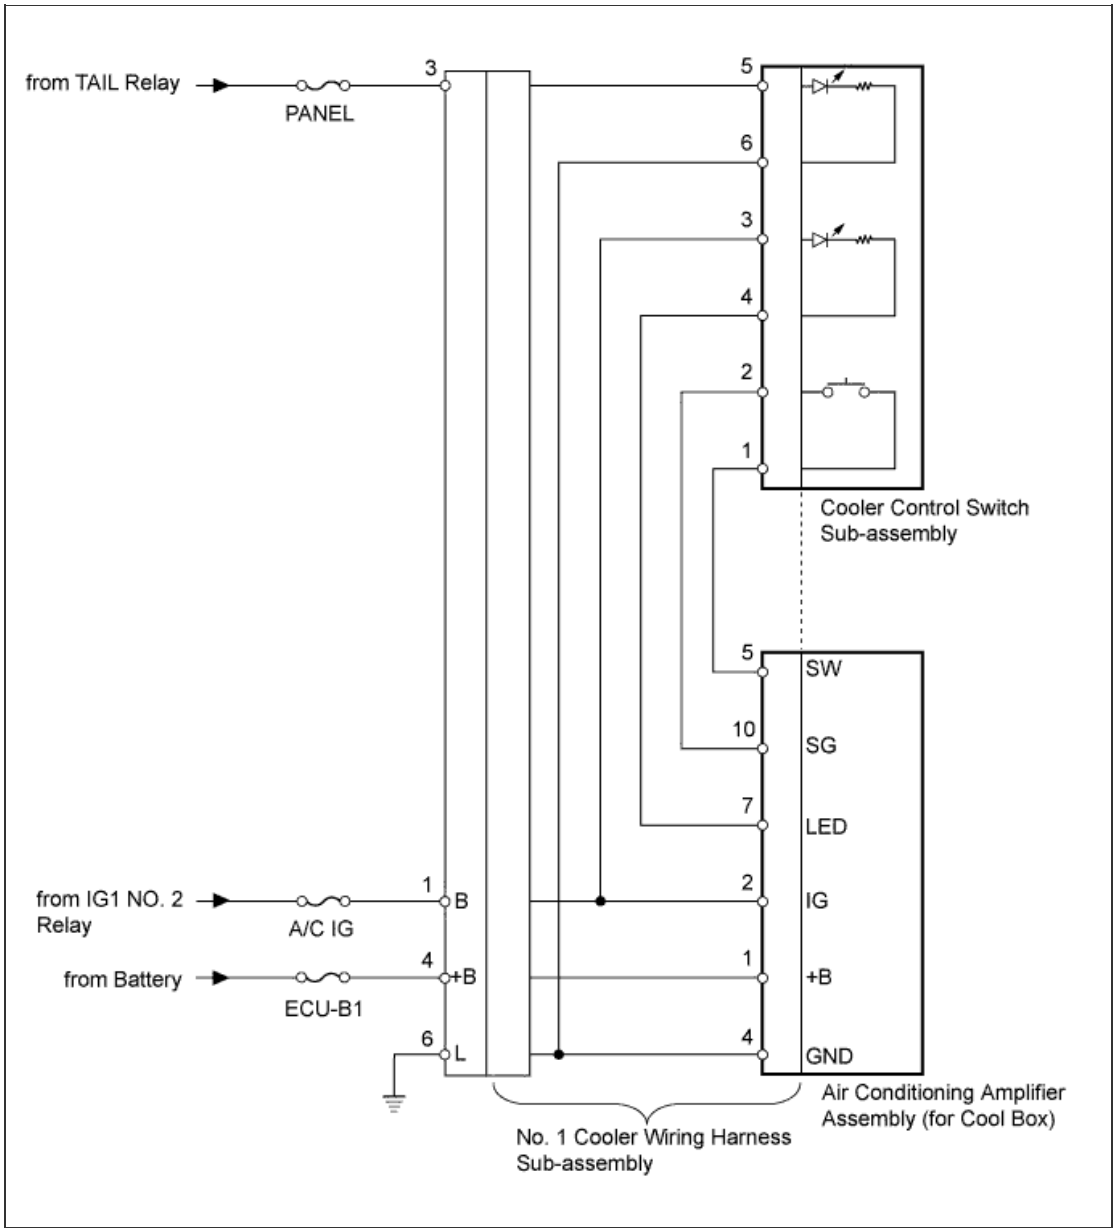
a. Remove the cooler blower motor (Click here).

b. Connect the positive (+) lead from the battery to terminal 1 and negative (-) to terminal 2, then check that the motor operates smoothly.

OK:

Cooler blower motor operates smoothl .

NG → REPLACE COOLER BLOWER MOTOR (Click here)



OK → REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (for Cool Box) (Click here)

for Preparation Click here

DESCRIPTION

The cooler control switch is the activation switch for the cooling box. If the cooling box does not activate when the cooler control switch is pushed, there may be a malfunction in the circuit shown below.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.INSPECT FUSE (PANEL, A/C IG, ECU-B1)

a. Remove the PANEL and A/C IG fuses from the cowl side junction block LH.

b. Remove the ECU-B1 fuse from the engine room relay block.

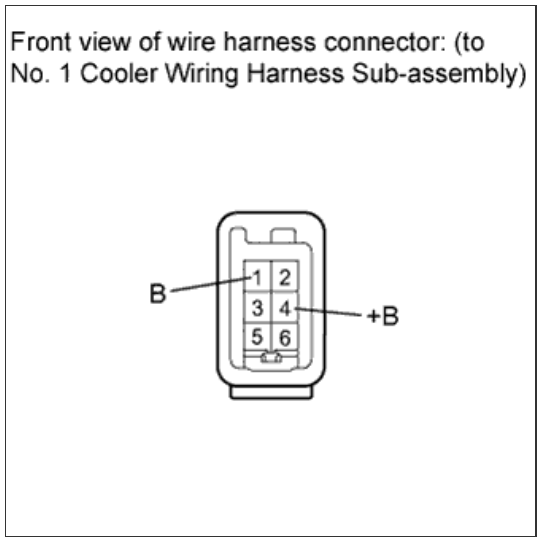
c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
PANEL fuse	Always	Below 1 Ω
ECU-B1 fuse	Always	Below 1 Ω
A/C IG fuse	Always	Below 1 Ω

NG → REPLACE FUSE

OK



2.CHECK HARNESS AND CONNECTOR (NO. 1 COOLER WIRING HARNESS - BATTERY)

a. Disconnect the No. 1 cooler wiring harness sub-assembly connector.

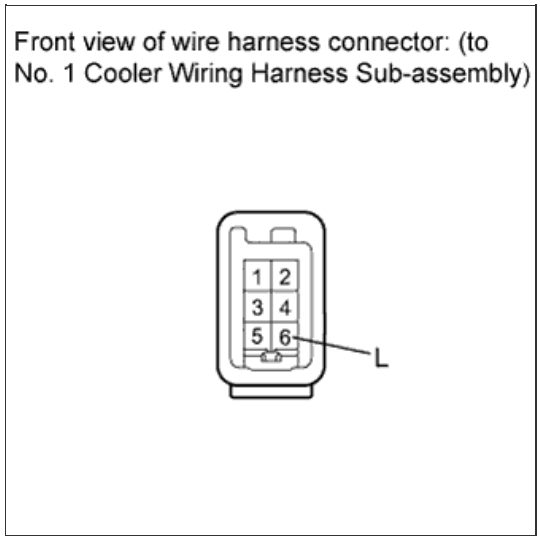
b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
4 (+B) - Body ground	Always	11 to 14 V
1 (B) - Body ground	Engine switch off	Below 1 V
	Engine switch on (IG)	11 to 14 V

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



3.CHECK HARNESS AND CONNECTOR (NO. 1 COOLER WIRING HARNESS - BODY GROUND)

a. Disconnect the No. 1 cooler wiring harness sub-assembly connector.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
6 (L) - Body ground	Always	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

4.CHECK NO. 1 COOLER WIRING HARNESS SUB-ASSEMBLY (OPERATION)

a. Replace the No. 1 cooler wiring harness sub-assembly with a normal one and check that the condition returns to normal.

OK:

Same problem does not occur.

NG → Go to step 5

OK

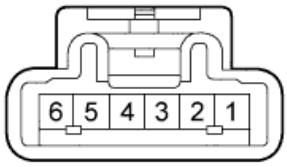
REPLACE NO. 1 COOLER WIRING HARNESS SUB-ASSEMBLY

5.INSPECT COOLER CONTROL SWITCH SUB-ASSEMBLY

a. Remove the cooler control switch sub-assembly (Click here).

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:



Tester Connection	Switch Condition	Specified Condition
1 - 2	On	Below 1 Ω
1 - 2	Off	10 kΩ or higher

c. Apply battery voltage to the cooler control switch connector and check that the cooler control switch illuminates.

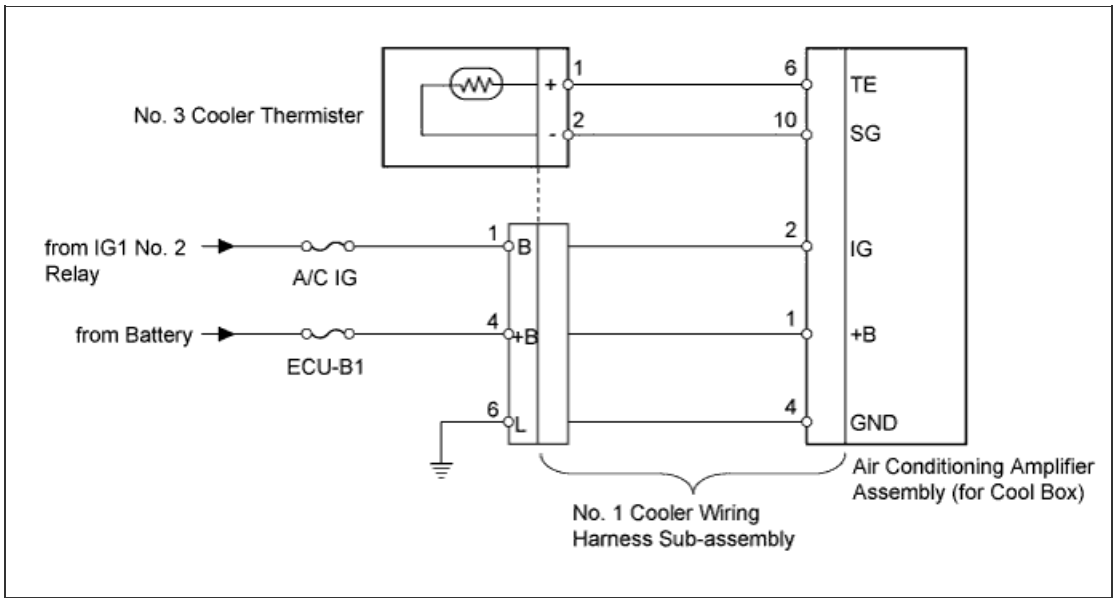
OK:

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 3 Battery negative (-) → Terminal 4	LED illuminates
Battery positive (+) → Terminal 5 Battery negative (-) → Terminal 6	LED illuminates

Component with harness connected:
(Cooler Control Switch Sub-assembly)

NG → REPLACE COOLER CONTROL SWITCH SUB-ASSEMBLY (Click here)

OK



REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (for Cool Box) (Click here)

for Preparation Click here

DESCRIPTION

The No. 3 cooler thermistor is installed on the evaporator in the cooling box unit to detect the cooled air temperature that has passed through the evaporator and control the cooling box. It sends appropriate signals to the air conditioning amplifier assembly (for cool box). The resistance of the No. 3 cooler thermistor changes in accordance with the cooled air temperature that has passed through the evaporator. As the temperature decreases, the resistance increases. As the temperature increases, the resistance decreases.
The air conditioning amplifier assembly (for cool box) applies voltage (12 V) to the No. 3 cooler thermistor and reads voltage changes as the resistance of the No. 3 cooler thermistor changes.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.INSPECT FUSE (A/C IG, ECU-B1)

a. Remove the A/C IG fuse from the cowl side junction block LH.

b. Remove the ECU-B1 fuse from the engine room relay block.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

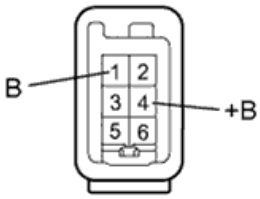
Tester Connection	Condition	Specified Condition
A/C IG fuse	Always	Below 1 Ω
ECU-B1 fuse	Always	Below 1 Ω

NG → REPLACE FUSE

OK

2.CHECK HARNESS AND CONNECTOR (NO. 1 COOLER WIRING HARNESS - BATTERY)

a. Disconnect the No. 1 cooler wiring harness sub-assembly connector.



b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition

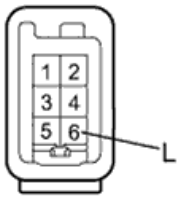
4 (+B) - Body ground	Always	11 to 14 V
1 (B) - Body ground	Engine switch off	Below 1 V
	Engine switch on (IG)	11 to 14 V

Front view of wire harness connector: (to No. 1 Cooler Wiring Harness Sub-assembly)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3.CHECK HARNESS AND CONNECTOR (NO. 1 COOLER WIRING HARNESS - BODY GROUND)



a. Disconnect the No. 1 cooler wiring harness sub-assembly connector.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
6 (L) - Body ground	Always	Below 1 Ω

Front view of wire harness connector: (to No. 1 Cooler Wiring Harness Sub-assembly)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

4.CHECK NO. 1 COOLER WIRING HARNESS SUB-ASSEMBLY (OPERATION)

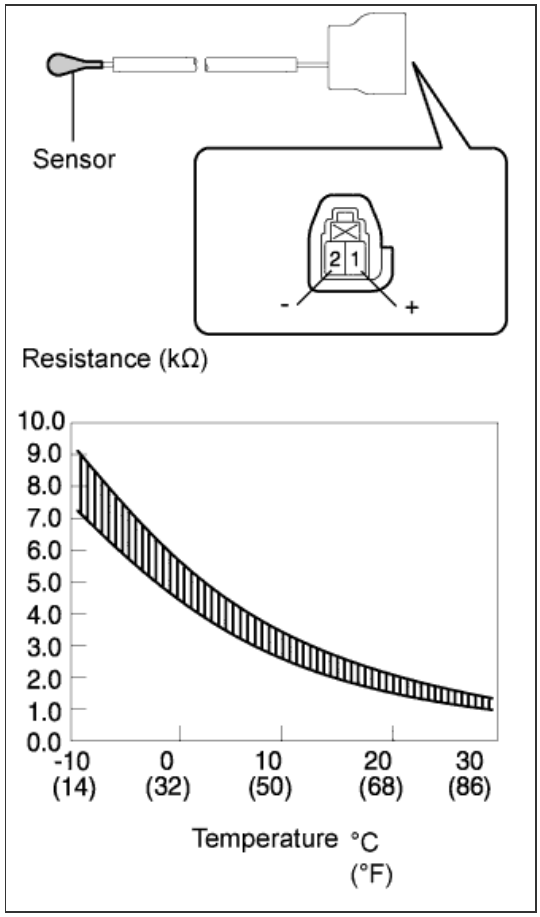
a. Replace the No. 1 cooler wiring harness sub-assembly with a normal one and check that the condition returns to normal.

OK:
Same problem does not occur.

NG → Go to step 5

OK

REPLACE NO. 1 COOLER WIRING HARNESS SUB-ASSEMBLY



5.CHECK NO. 3 COOLER THERMISTOR

a. Remove the No. 3 cooler thermistor (Click here).

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

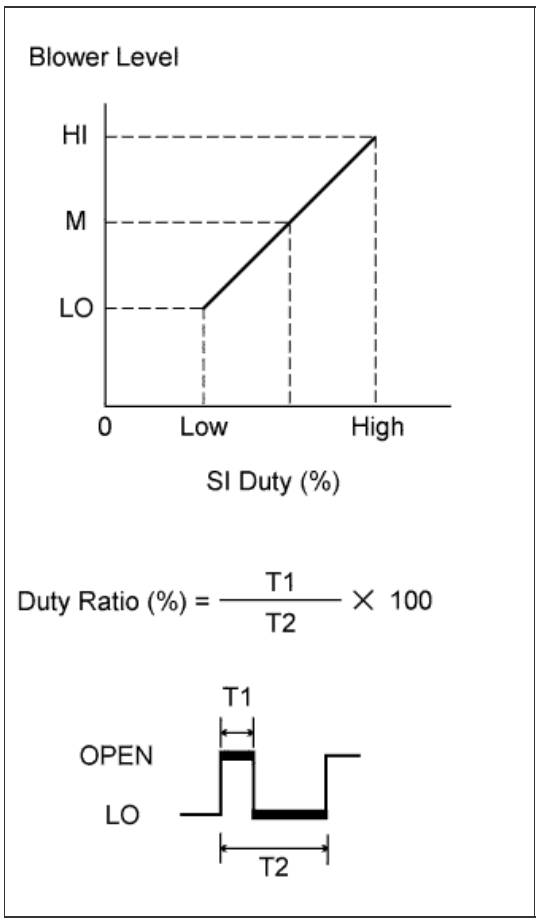
Tester Connection	Condition	Specified Condition
1 (+) - 2 (-)	-10°C (14°F)	7.30 to 9.10 kΩ
	-5°C (23°F)	5.65 to 6.95 kΩ
	0°C (32°F)	4.40 to 5.35 kΩ
	5°C (41°F)	3.40 to 4.15 kΩ
	10°C (50°F)	2.70 to 3.25 kΩ
	15°C (59°F)	2.14 to 2.58 kΩ
	20°C (68°F)	1.71 to 2.05 kΩ
	25°C (77°F)	1.38 to 1.64 kΩ
	30°C (86°F)	1.11 to 1.32 kΩ

NOTICE:

- **Even slightl touching the sensor ma hange the resistance value. Be sure to hold the connector of the sensor.**
- **When measuring, the sensor temperature must be the same as the ambient temperature.**

HINT:

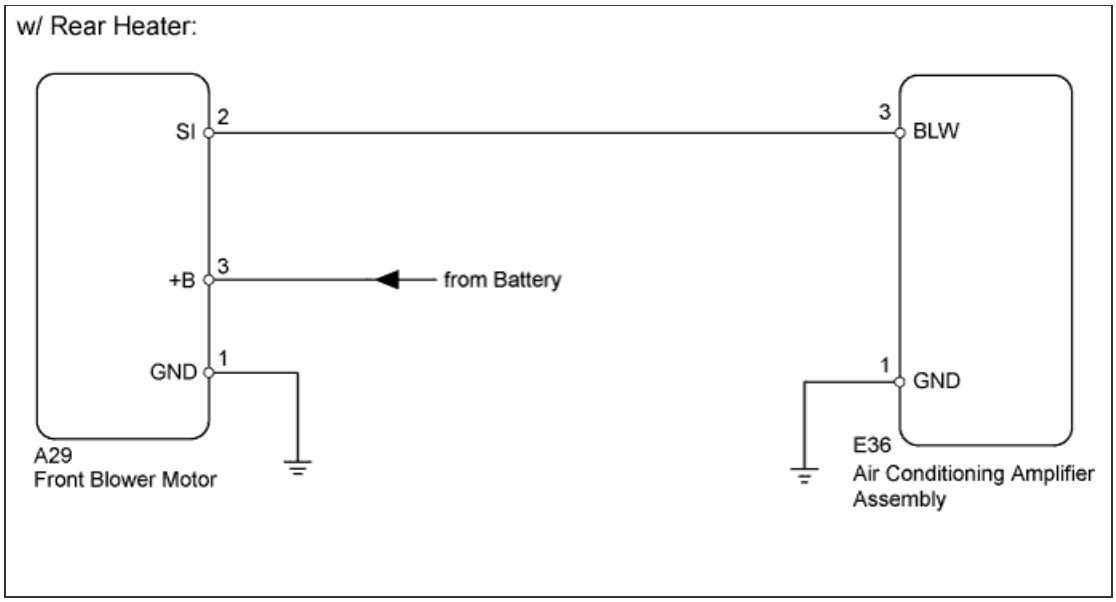
As the temperature increases, the resistance decreases (see the graph).



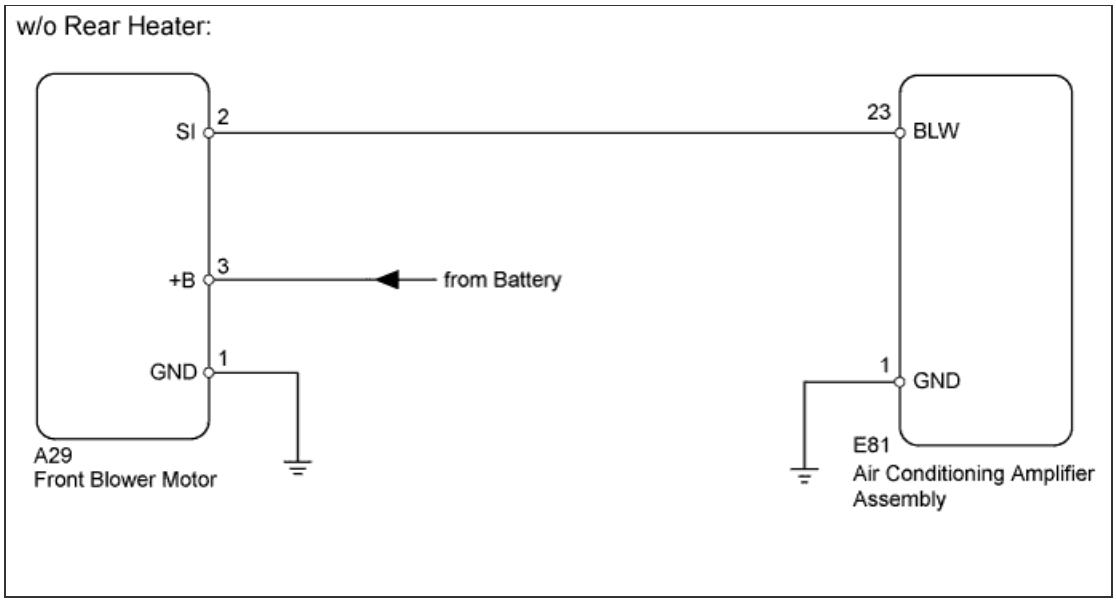
NG → REPLACE NO. 3 COOLER THERMISTOR (Click here)

OK

REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (for Cool Box) (Click here)



for Preparation Click here



DESCRIPTION

The blower motor is operated by signals from the air conditioning amplifier assembly. The blower motor speed signals are transmitted by changes in the duty ratio.
Duty Ratio:
The duty ratio is the ratio of the blower motor OPEN time (T1) to the total of the blower motor OPEN and LO time (T2).
The blower motor controller controls the blower motor speed.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.PERFORM ACTIVE TEST USING INTELLIGENT TESTER (FRONT BLOWER MOTOR)

a. Select the Active Test, use the intelligent tester to generate a control command, and then check that the front blower motor operates.

Air Conditioner

Tester Display	Test Part	Control Range	Diagnostic Note
Blower Motor	Front blower motor	Min.: 0, Max.: 31	-

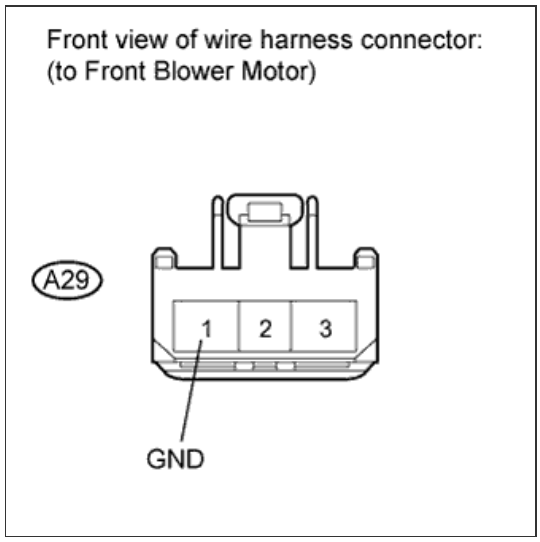
Result

Result	Proceed to
Front blower motor operates normally	A
Front blower motor does not operate	B
Front blower motor operates but does not change speed	C

B	Go to step 2
C	Go to step 6

A

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)



2.CHECK HARNESS AND CONNECTOR (FRONT BLOWER MOTOR - BODY GROUND)

a. Disconnect the A29 motor connector.

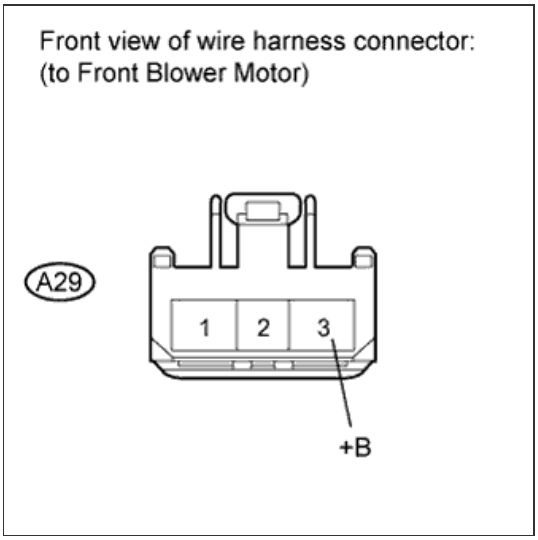
b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A29-1 (GND) - Body ground	Always	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



3.CHECK HARNESS AND CONNECTOR (FRONT BLOWER MOTOR - BATTERY)

a. Disconnect the A29 motor connector.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
A29-3 (+B) - Body ground	Always	11 to 14 V

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

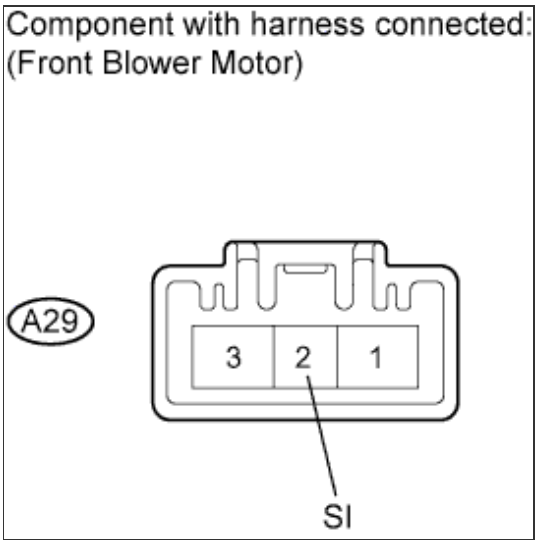
OK

4.CHECK FRONT BLOWER MOTOR (SI VOLTAGE)

a. Disconnect the E36*1 or E81*2 amplifier connector.

b. Reconnect the A29 motor connector.

c. Measure the voltage according to the value(s) in the table below.



HINT:

*1: for LHD

*2: for RHD

Standard Voltage:

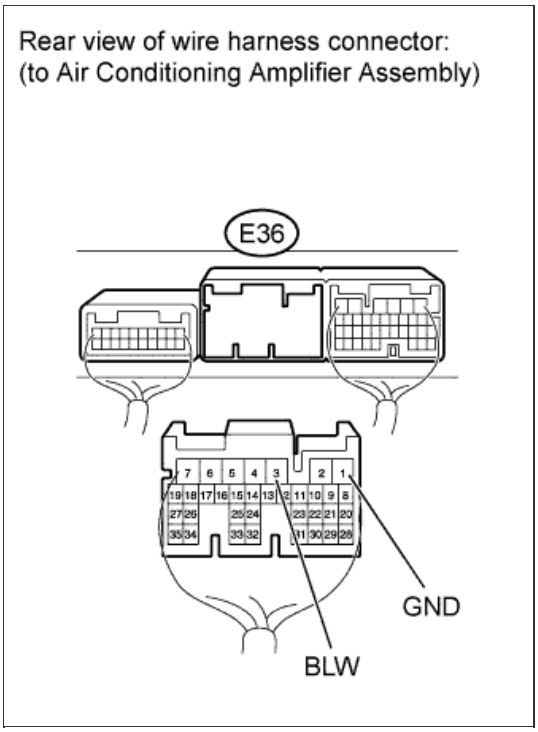
Tester Connection	Switch Condition	Specified Condition
A29-2 (S) - Body ground	Engine switch on (G)	4. to . V

NG → REPLACE FRONT BLOWER MOTOR (Click here)

OK

5.CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - FRONT BLOWER MOTOR)

a. w Rear Heater



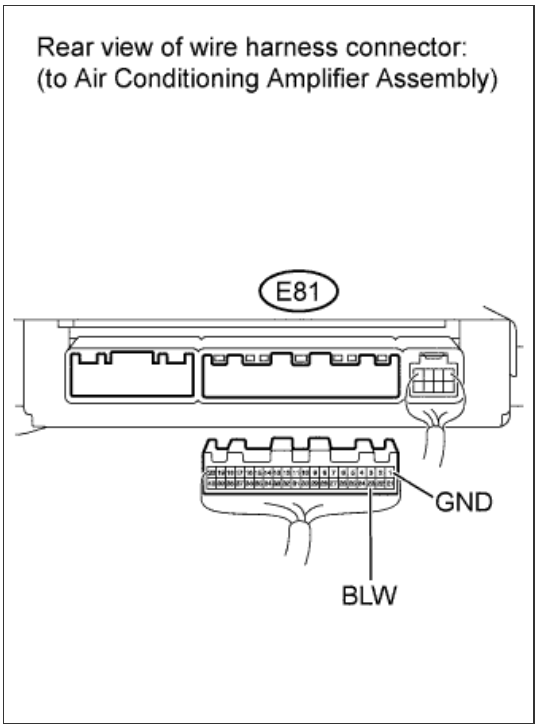
i. Disconnect the E36 amplifier connector.

ii. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
	Engine switch	

E36-3 (BLW) - E36-1 (GND)	on (G) Blower switch off	4. to . V



b. w o Rear Heater

i. Disconnect the E81 amplifier connector.

ii. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E81-23 (BLW) - E81-1 (GND)	Engine switch on (G) Blower switch off	4. to . V

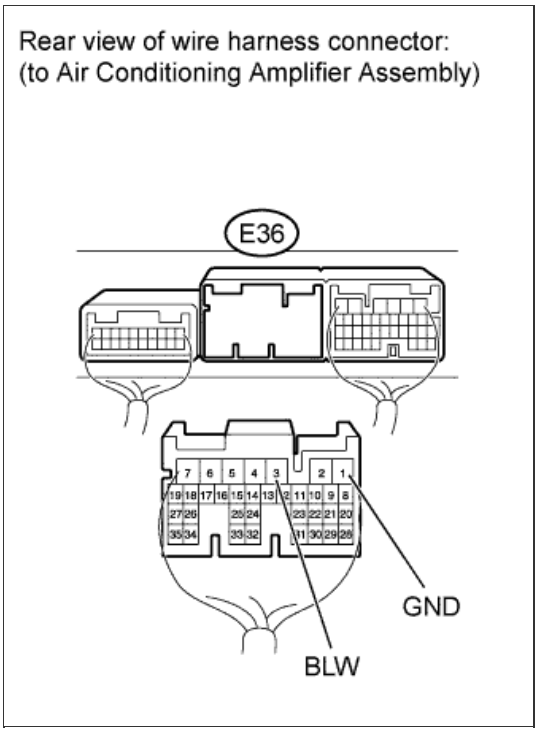
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

6.CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - FRONT BLOWER MOTOR)

a. w Rear Heater



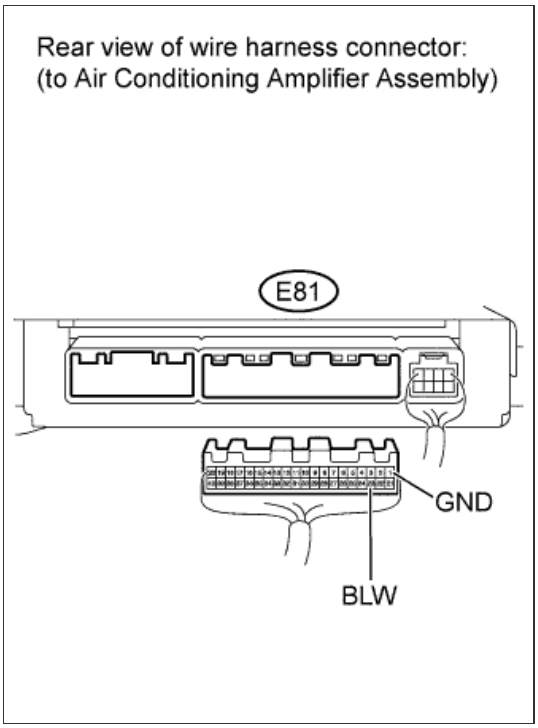
i. Disconnect the E36 amplifier connector.

ii. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester	Switch	Specified

Connection	Condition	Condition
E36-3 (BLW) - E36-1 (GND)	Engine switch on (G) Blower switch off	4. to . V



b. w o Rear Heater

i. Disconnect the E81 amplifier connector.

ii. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E81-23 (BLW) - E81-1 (GND)	Engine switch on (G) Blower switch off	4. to . V

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

7.CHECK AIR CONDITIONING AMPLIFIER ASSEMBLY (BLW SIGNAL)

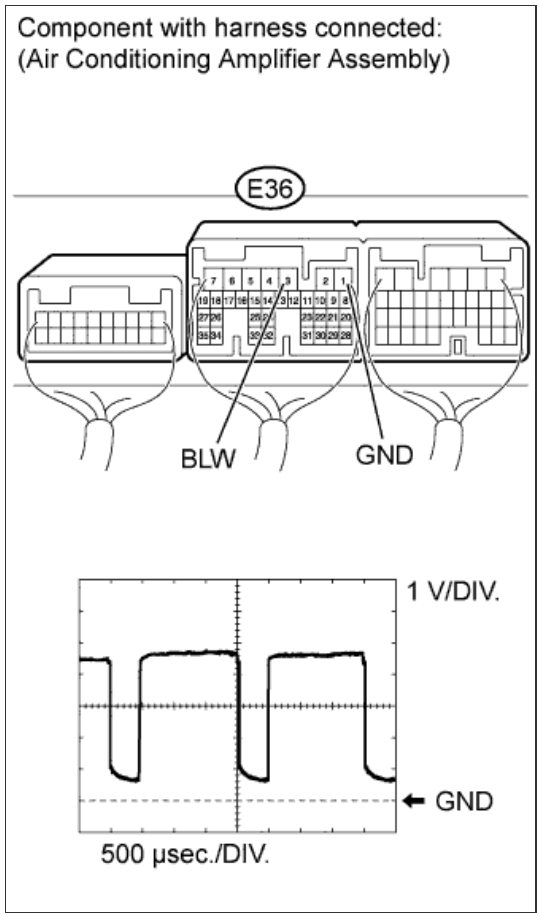
a. w Rear Heater

i. Remove the air conditioning amplifier assembly with its connectors still connected (Click here).

ii. sing an oscilloscope, check the waveform.

Measurement Condition

tem	Content
Terminal No. (Symbol)	E36-3 (BLW) - E36-1 (GND)



Tool Setting	1 V D V., 00 sec. D V.
Condition	Engine switch on (G) Blower switch: off → on

OK:

Waveform is as shown in the illustration.

HINT:

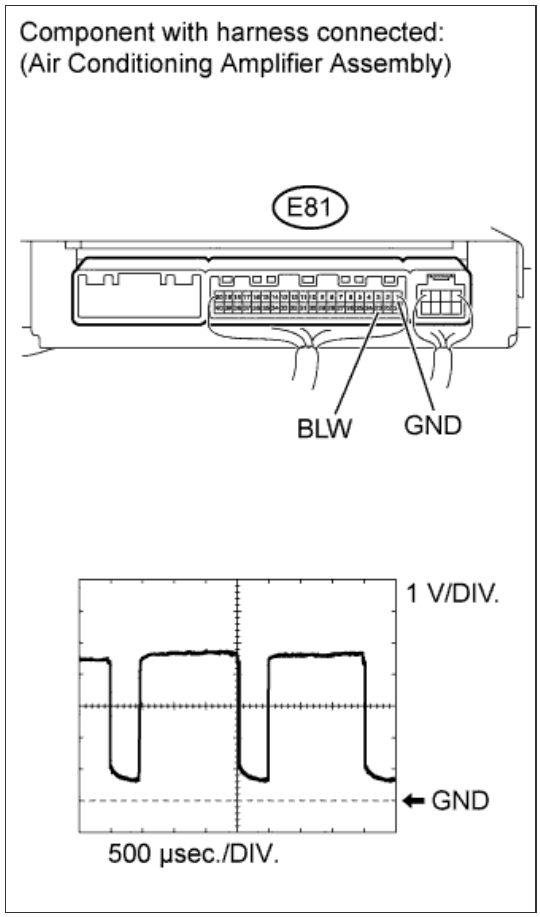
Waveform varies with the blower level.

b. w o Rear Heater

i. Remove the air conditioning amplifier assembly with its connectors still connected (Click here).

ii. sing an oscilloscope, check the waveform.

Measurement Condition



tem	Content
Terminal No. (Symbol)	E81-23 (BLW) - E81-1 (GND)

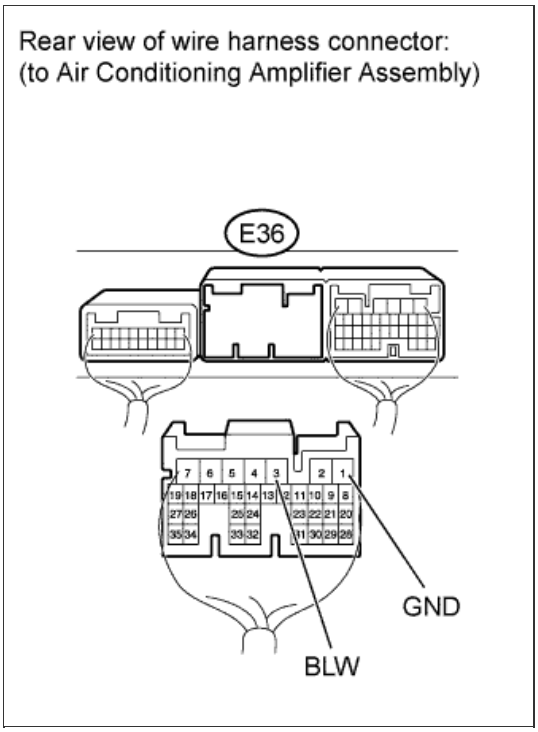
5.CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - FRONT BLOWER MOTOR)

a. w Rear Heater



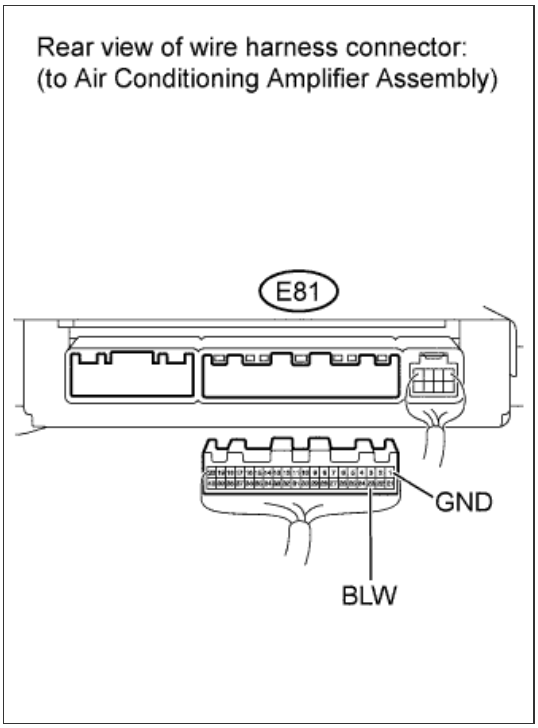
i. Disconnect the E36 amplifier connector.

ii. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
	Engine switch	

E36-3 (BLW) - E36-1 (GND)	on (G) Blower switch off	4. to . V



b. w o Rear Heater

i. Disconnect the E81 amplifier connector.

ii. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E81-23 (BLW) - E81-1 (GND)	Engine switch on (G) Blower switch off	4. to . V

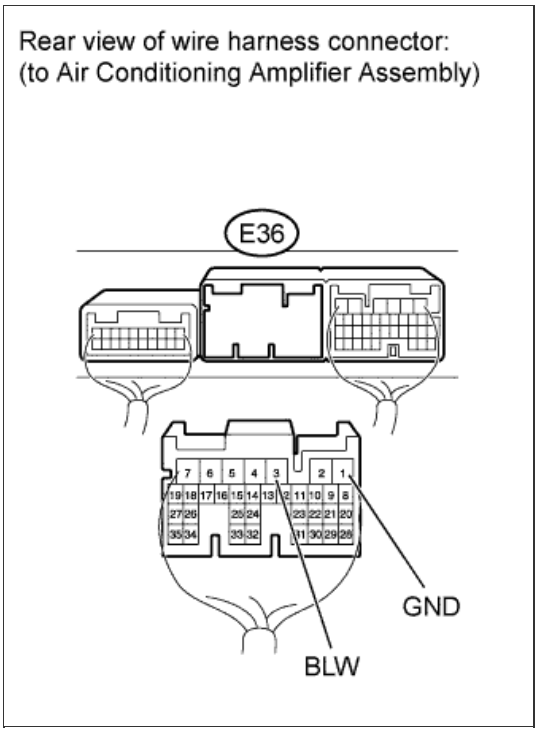
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

6.CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - FRONT BLOWER MOTOR)

a. w Rear Heater



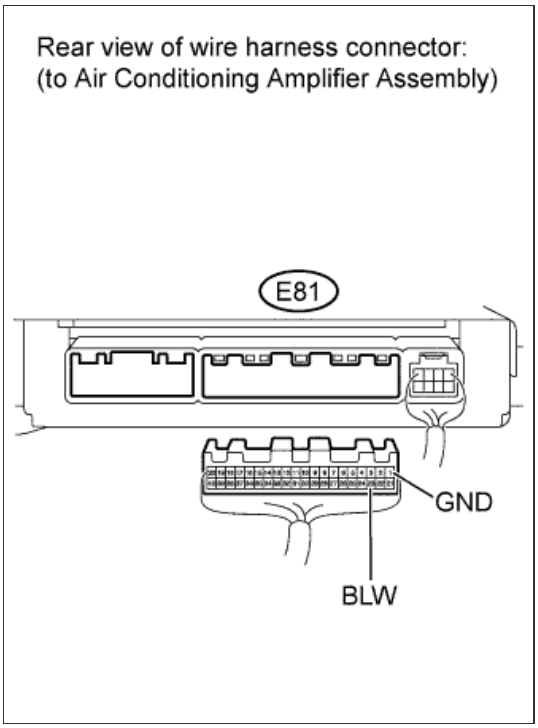
i. Disconnect the E36 amplifier connector.

ii. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester	Switch	Specified

Connection	Condition	Condition
E36-3 (BLW) - E36-1 (GND)	Engine switch on (G) Blower switch off	4. to . V



b. w o Rear Heater

i. Disconnect the E81 amplifier connector.

ii. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E81-23 (BLW) - E81-1 (GND)	Engine switch on (G) Blower switch off	4. to . V

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

7.CHECK AIR CONDITIONING AMPLIFIER ASSEMBLY (BLW SIGNAL)

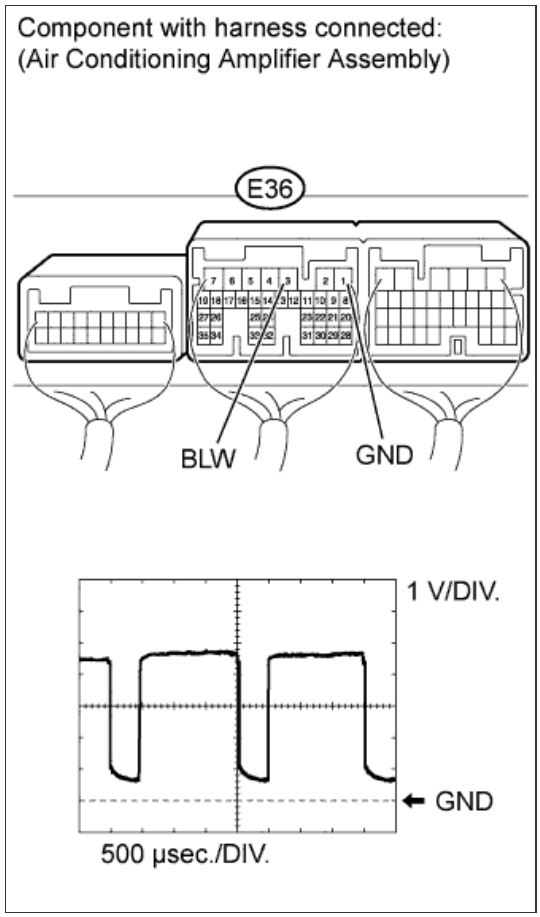
a. w Rear Heater

i. Remove the air conditioning amplifier assembly with its connectors still connected (Click here).

ii. sing an oscilloscope, check the waveform.

Measurement Condition

tem	Content
Terminal No. (Symbol)	E36-3 (BLW) - E36-1 (GND)



Tool Setting	1 V D V., 00 sec. D V.
Condition	Engine switch on (G) Blower switch: off → on

OK:

Waveform is as shown in the illustration.

HINT:

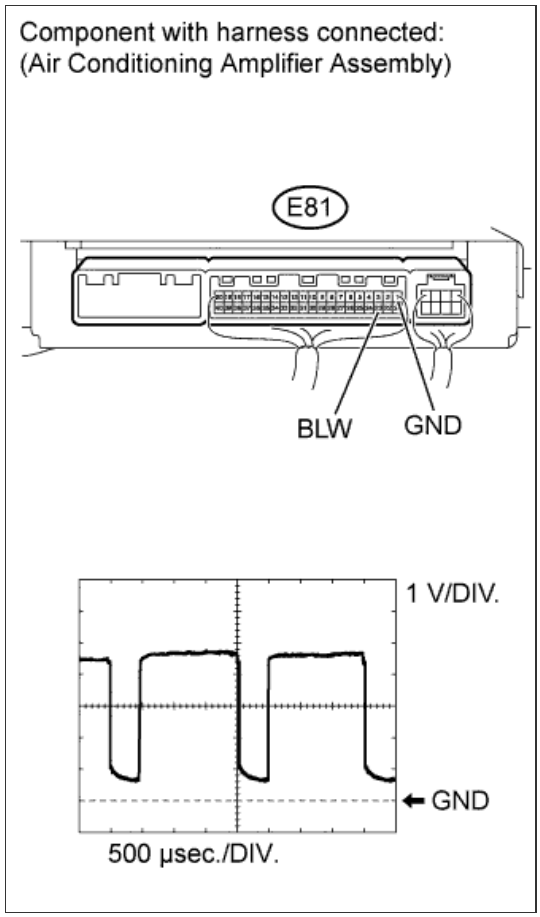
Waveform varies with the blower level.

b. w o Rear Heater

i. Remove the air conditioning amplifier assembly with its connectors still connected (Click here).

ii. sing an oscilloscope, check the waveform.

Measurement Condition



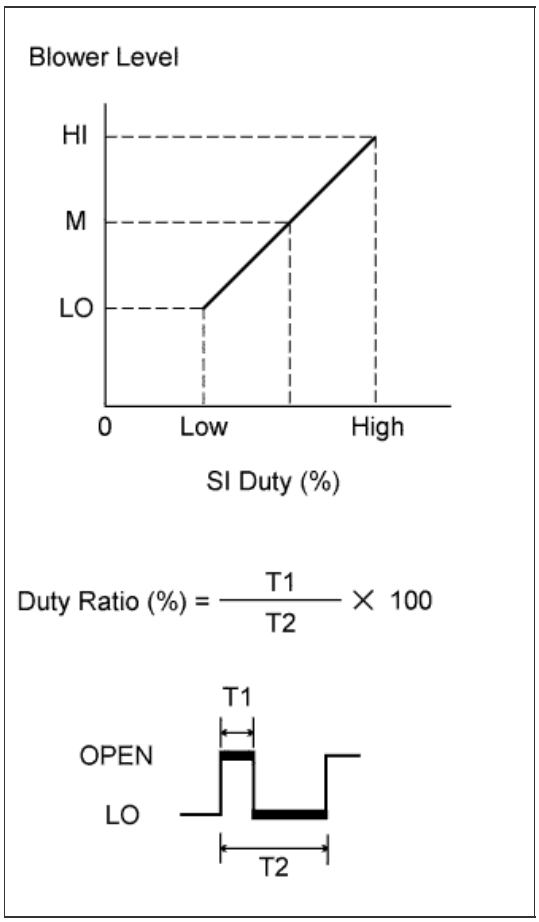
tem	Content
Terminal No. (Symbol)	E81-23 (BLW) - E81-1 (GND)
Tool Setting	1 V D V., 00 sec. D V.
Condition	Engine switch on (G) Blower switch: OFF → ON

OK:

Waveform is as shown in the illustration.

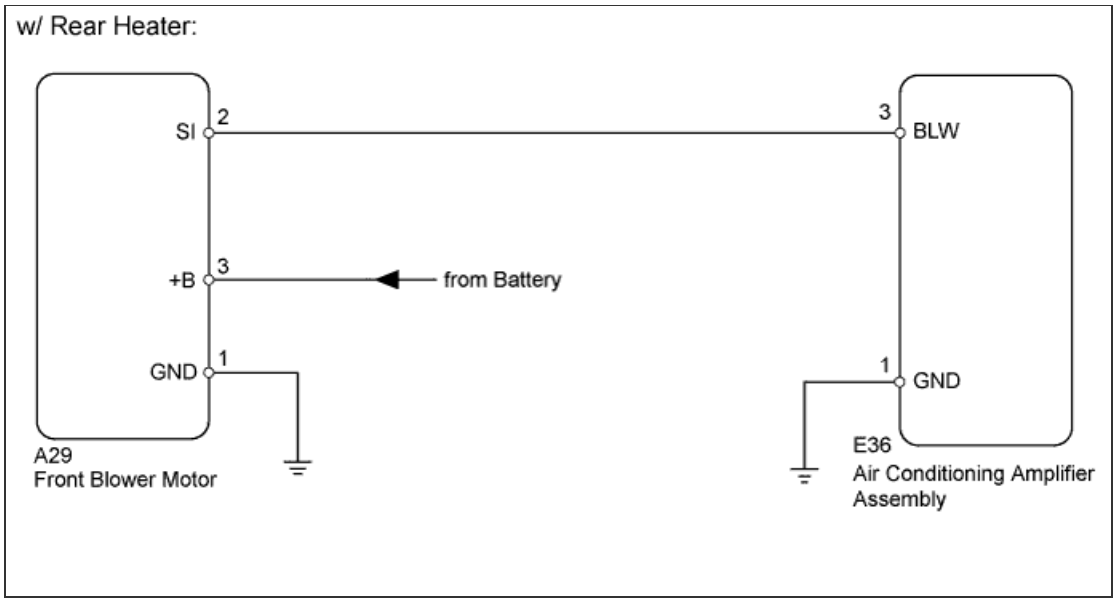
HINT:

Waveform varies with the blower level.

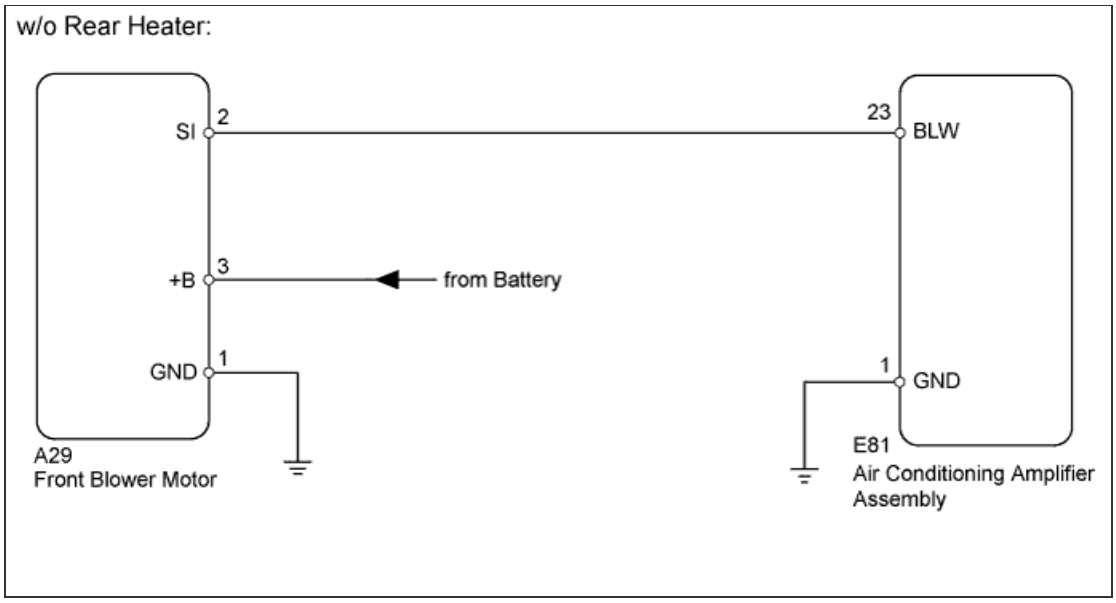


NG → REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

OK → REPLACE FRONT BLOWER MOTOR (Click here)



for Preparation Click here



DESCRIPTION

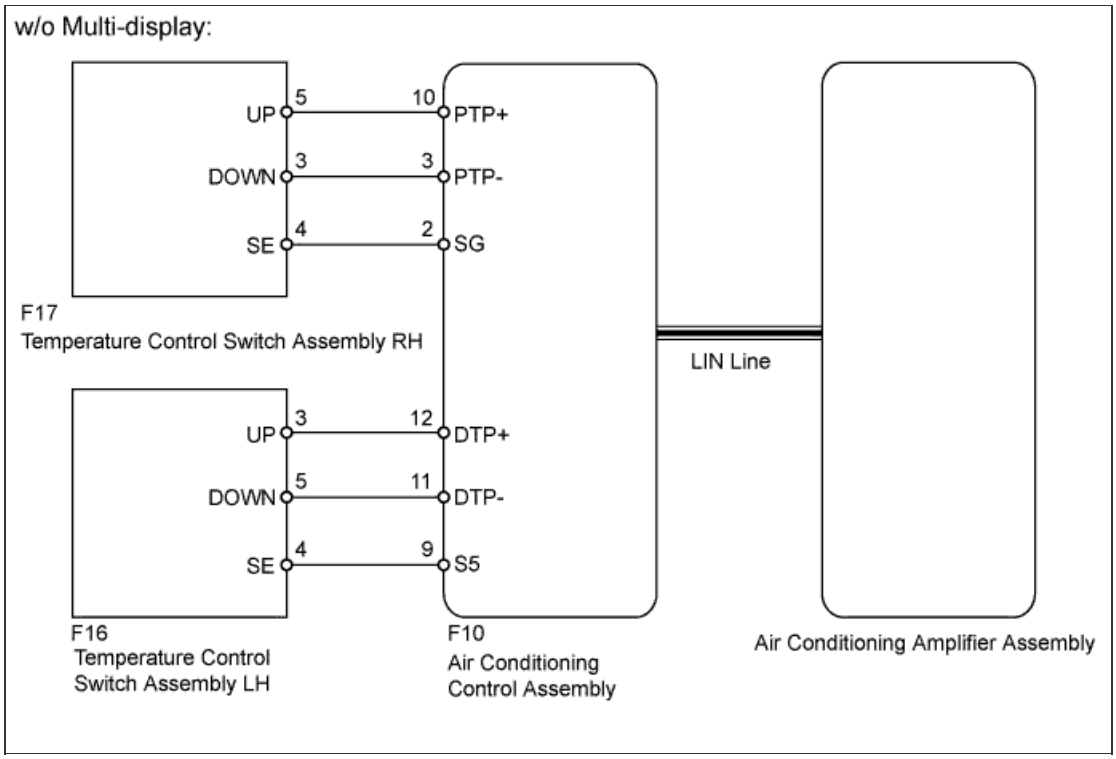
The temperature control switch assembly LH and RH sends the temperature up and down signal to the air conditioning amplifier assembly through the multi-display*1 or the air conditioning control assembly*2.



HINT:

*1: w/ Multi-display

*2: w/o Multi-display

WIRING DIAGRAM

INSPECTION PROCEDURE

1.CHECK VEHICLE TYPE

a. Check if the vehicle is equipped with the multi-display.

Result

Result	Proceed to
w/ Multi-display	A
w/o Multi-display	B

B → Go to step 8

A

2.CHECK CAN COMMUNICATION SYSTEM

a. Check the CAN communication system.

OK:

CAN communication system has no problem.

Result

Result	Proceed to
OK	A
NG (for LHD)	B
NG (for RHD)	C

B → GO TO CAN COMMUNICATION SYSTEM (Click here)

C → GO TO CAN COMMUNICATION SYSTEM (Click here)

A

3.CHECK OPERATION

a. Check that the temperature control switches operate.

Result

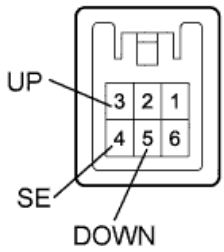
Result	Proceed to

Temperature control switch LH does not operate	A
Temperature control switch RH does not operate	B

B → Go to step 6

A

4.INSPECT TEMPERATURE CONTROL SWITCH ASSEMBLY LH



a. Remove the temperature control switch assembly LH (Click here).

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
3 (UP) - 4 (SE)	UP switch pressed	Below 1 Ω
	UP switch not pressed	10 kΩ or higher
5 (DOWN) - 4 (SE)	DOWN switch pressed	Below 1 Ω
	DOWN switch not pressed	10 kΩ or higher

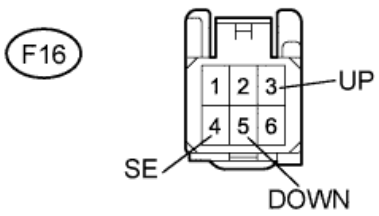
Component without harness connected:
(Temperature Control Switch Assembly LH)

NG → REPLACE TEMPERATURE CONTROL SWITCH ASSEMBLY LH (Click here)

OK

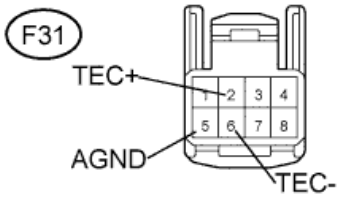
5.CHECK HARNESS AND CONNECTOR (TEMPERATURE CONTROL SWITCH LH - MULTI-DISPLAY)

a. Disconnect the F16 switch connector.



b. Disconnect the F31 display connector.

c. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
F16-3 (UP) - F31-2 (TEC+)	Always	Below 1 Ω
F16-5 (DOWN) - F31-6 (TEC-)	Always	Below 1 Ω
F16-4 (SE) - F31-5 (AGND)	Always	Below 1 Ω
F16-3 (UP) - Body ground	Always	10 kΩ or higher
F16-5 (DOWN) - Body ground	Always	10 kΩ or higher
F16-4 (SE) - Body ground	Always	10 kΩ or higher

Front view of wire harness connector: (to Temperature Control Switch Assembly LH)

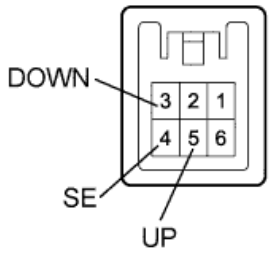
Front view of wire harness connector: (to Multi-display)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE MULTI-DISPLAY (Click here)

6.INSPECT TEMPERATURE CONTROL SWITCH ASSEMBLY RH



a. Remove the temperature control switch assembly RH (Click here).

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
5 (UP) - 4 (SE)	UP switch pressed	Below 1 Ω
	UP switch not pressed	10 kΩ or higher
3 (DOWN) - 4 (SE)	DOWN switch pressed	Below 1 Ω
	DOWN switch not pressed	10 kΩ or higher

Component without harness connected: (Temperature Control Switch Assembly RH)

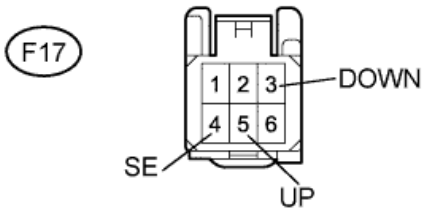
NG

REPLACE TEMPERATURE CONTROL SWITCH ASSEMBLY RH (Click here)

OK

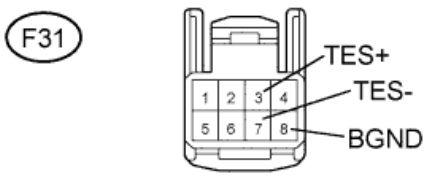
7.CHECK HARNESS AND CONNECTOR (TEMPERATURE CONTROL SWITCH RH - MULTI-DISPLAY)

a. Disconnect the F17 switch connector.



b. Disconnect the F31 display connector.

c. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
F17-5 (UP) - F31-3 (TES+)	Always	Below 1 Ω
F17-3 (DOWN) - F31-7 (TES-)	Always	Below 1 Ω
F17-4 (SE) - F31-8 (BGND)	Always	Below 1 Ω
F17-5 (UP) - Body ground	Always	10 kΩ or higher
F17-3 (DOWN) - Body ground	Always	10 kΩ or higher
F17-4 (SE) - Body ground	Always	10 kΩ or higher

Front view of wire harness connector: (to Temperature Control Switch Assembly RH)

Front view of wire harness connector: (to Multi-display)

NG

REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE MULTI-DISPLAY (Click here)

8.CHECK LIN COMMUNICATION SYSTEM

a. Check the L N communication system.

OK:
LIN communication system has no problem.

NG → GO TO LIN COMMUNICATION SYSTEM (Click here)

OK ↓

9.CHECK OPERATION

a. Check that the temperature control switches operate.

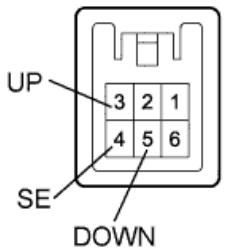
Result

Result	Proceed to
Temperature control switch LH does not operate	A
Temperature control switch RH does not operate	B

B → Go to step 12

A ↓

10.INSPECT TEMPERATURE CONTROL SWITCH ASSEMBLY LH



a. Remove the temperature control switch assembly LH (Click here).

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
3 (UP) - 4 (SE)	UP switch pressed	Below 1 Ω
	UP switch not pressed	10 kΩ or higher
5 (DOWN) - 4 (SE)	DOWN switch pressed	Below 1 Ω
	DOWN switch not pressed	10 kΩ or higher

Component without harness connected:
(Temperature Control Switch Assembly LH)

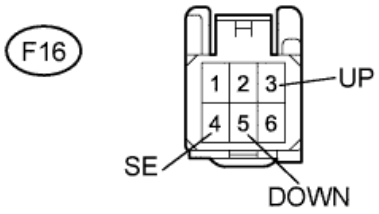
NG → REPLACE TEMPERATURE CONTROL SWITCH ASSEMBLY LH (Click here)

OK ↓

11.CHECK HARNESS AND CONNECTOR (TEMPERATURE CONTROL SWITCH LH - AIR CONDITIONING CONTROL)

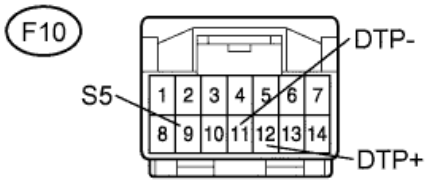
a. Disconnect the F16 switch connector.

b. Disconnect the F10 control connector.



c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:



Tester Connection	Condition	Specified Condition

F16-3 (UP) - F10-12 (DTP+)	Always	Below 1 Ω
F16-5 (DOWN) - F10-11 (DTP-)	Always	Below 1 Ω
F16-4 (SE) - F10-9 (S5)	Always	Below 1 Ω
F16-3 (UP) - Body ground	Always	10 kΩ or higher
F16-5 (DOWN) - Body ground	Always	10 kΩ or higher
F16-4 (SE) - Body ground	Always	10 kΩ or higher

Front view of wire harness connector: (to Temperature Control Switch Assembly LH)

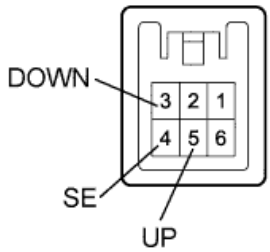
Front view of wire harness connector: (to Air Conditioning Control Assembly)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE AIR CONDITIONING CONTROL ASSEMBLY (Click here)

12.INSPECT TEMPERATURE CONTROL SWITCH ASSEMBLY RH



a. Remove the temperature control switch assembly RH (Click here).

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
5 (UP) - 4 (SE)	UP switch pressed	Below 1 Ω
	UP switch not pressed	10 kΩ or higher
3 (DOWN) - 4 (SE)	DOWN switch pressed	Below 1 Ω
	DOWN switch not pressed	10 kΩ or higher

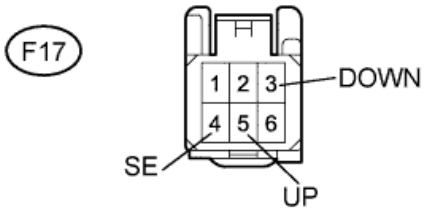
Component without harness connected: (Temperature Control Switch Assembly RH)

NG → REPLACE TEMPERATURE CONTROL SWITCH ASSEMBLY RH (Click here)

OK

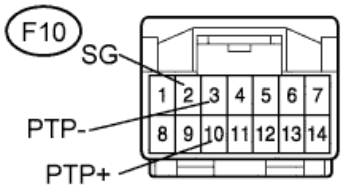
13.CHECK HARNESS AND CONNECTOR (TEMPERATURE CONTROL SWITCH RH - AIR CONDITIONING CONTROL)

a. Disconnect the F17 switch connector.



b. Disconnect the F10 control connector.

c. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
F1 -5 (UP) - F10-10 (PTP+)	Always	Below 1 Ω
F17-3 (DOWN) - F10-3 (PTP-)	Always	Below 1 Ω
F17-4 (SE) - F10-2 (SG)	Always	Below 1 Ω
F17-5 (UP) - Body ground	Always	10 kΩ or higher
F17-3 (DOWN) - Body ground	Always	10 kΩ or higher
F17-4 (SE) - Body ground	Always	10 kΩ or higher

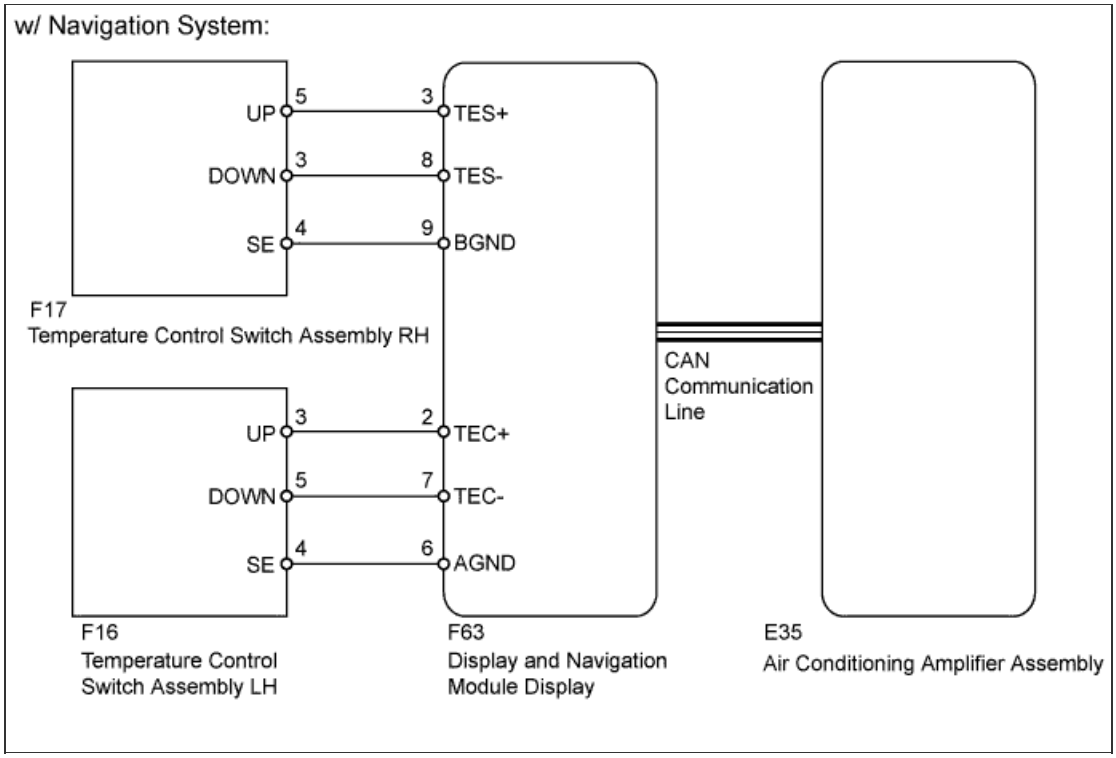
Front view of wire harness connector: (to Temperature Control Switch Assembly RH)

Front view of wire harness connector: (to Air Conditioning Control Assembly)

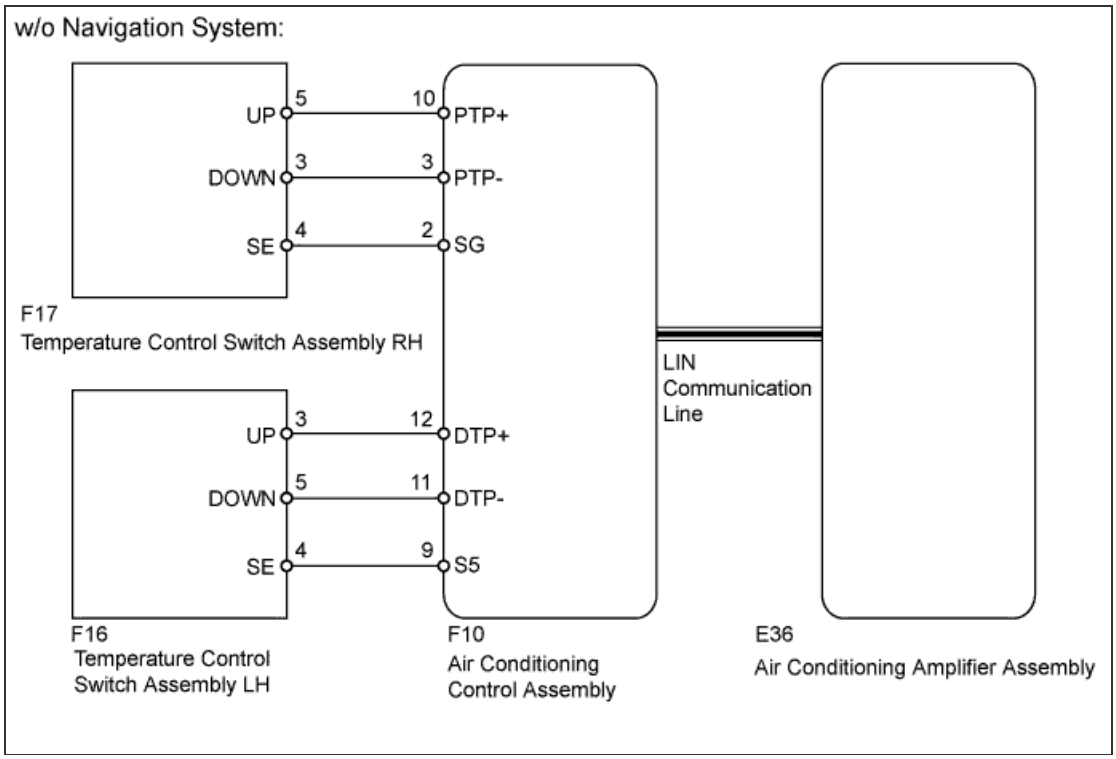
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE AIR CONDITIONING CONTROL ASSEMBLY (Click here)



for Preparation Click here



DESCRIPTION

The temperature control switch assembly LH and RH sends the temperature up and down signal to the air conditioning amplifier assembly through the display and navigation module display*1 or the air conditioning control assembly*2.

OK

REPLACE AIR CONDITIONING CONTROL ASSEMBLY (Click here)

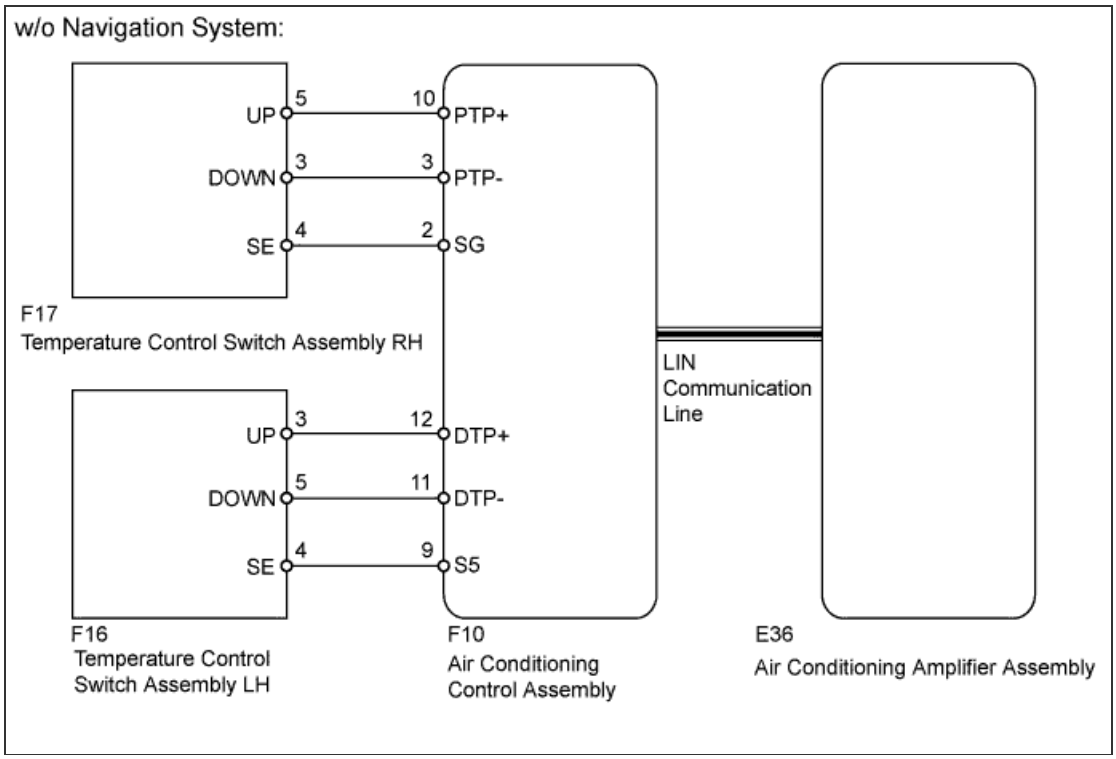
for Preparation Click here



DESCRIPTION

When the air conditioning amplifier assembly is turned on, a magnetic clutch on signal is sent from the MGC terminal of the air conditioning amplifier assembly. Then, the magnetic clutch relay turns on to operate the magnetic clutch.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.CHECK CAN COMMUNICATION SYSTEM

a. Check for CAN communication system DTCs related to the air conditioning system.

Result

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output (for LHD)	B
CAN DTC is output (for RHD)	C

B → GO TO CAN COMMUNICATION SYSTEM (Click here)

C → GO TO CAN COMMUNICATION SYSTEM (Click here)

A

2.READ VALUE USING INTELLIGENT TESTER (A/C SIGNAL)

a. Use the Data List to check if the A/C switch is functioning properly.

Engine

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
A/C Signal	A/C signal / ON or OFF	ON: A/C switch on OFF: A/C switch off	-

OK:

The display is as specified in the normal condition.

NG → Go to step 3

OK

REPLACE ECM (Click here)

3.INSPECT FUSE (A/C IG)

a. Remove the A/C IG fuse from the cowl side unction block LH.

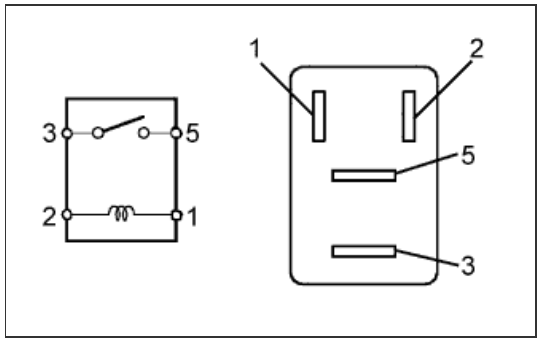
b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A/C IG fuse	Always	Below 1 Ω

NG → REPLACE FUSE (A/C IG)

OK



4.INSPECT MAGNETIC CLUTCH RELAY

a. Remove the magnetic clutch relay from the engine room relay block.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

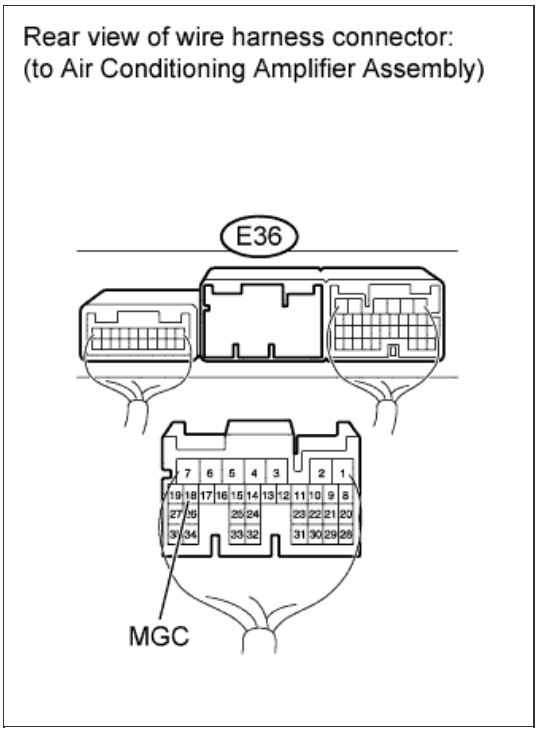
Tester Connection	Condition	Specified Condition
3 - 5	Voltage not applied to terminals 1 and 2	10 kΩ or higher
3 - 5	Voltage applied to terminals 1 and 2	Below 1 Ω

c. Install the magnetic clutch relay to the engine room relay block.

NG → REPLACE MAGNETIC CLUTCH RELAY

OK

5.CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - BATTERY)



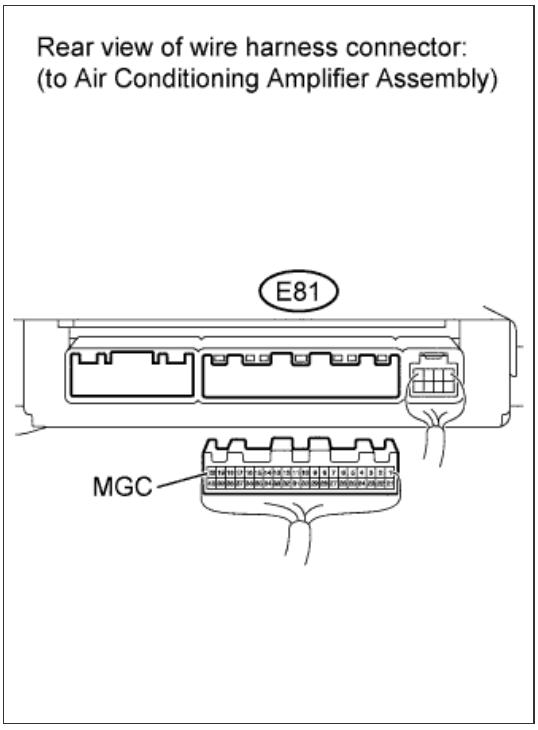
a. w/ Rear Heater

i. Disconnect the E36 amplifier connector.

ii. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E36-1 (MGC) - Body ground	Engine switch off	Below 1 V
E36-1 (MGC) - Body ground	Engine switch on (IG)	11 to 1 V



b. w/o Rear Heater

i. Disconnect the E 1 amplifier connector.

ii. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

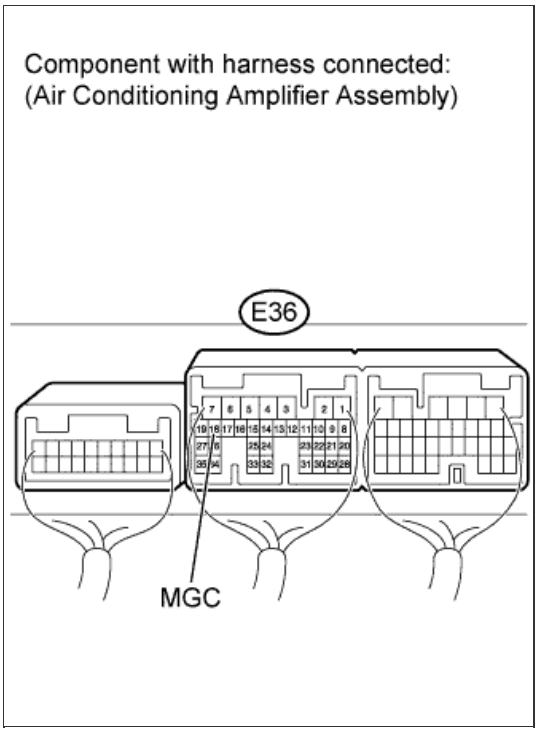
Tester Connection	Switch Condition	Specified Condition
E 1-20 (MGC) - Body ground	Engine switch off	Below 1 V
E 1-20 (MGC) - Body ground	Engine switch on (IG)	11 to 1 V

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

6.INSPECT AIR CONDITIONING AMPLIFIER ASSEMBLY

a. w/ Rear Heater



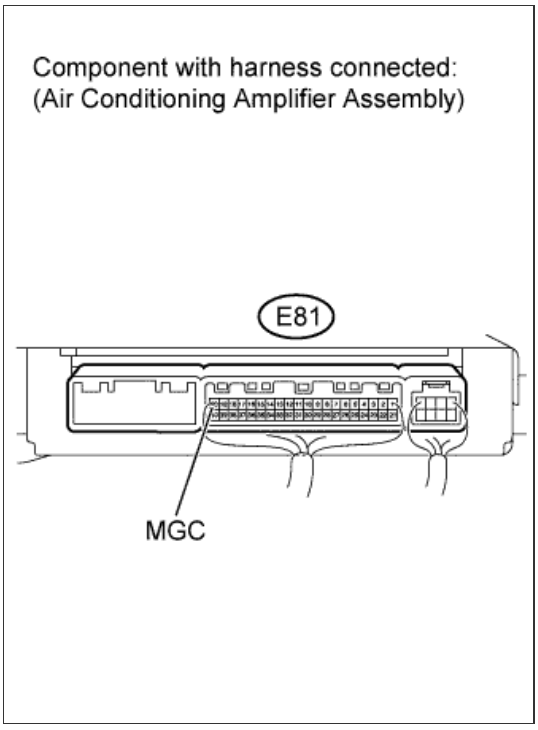
i. Reconnect the E36 amplifier connector.

ii. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition

E36-1 (MGC) - Body ground	Engine switch on (IG) A/C switch off	11 to 1 V
E36-1 (MGC) - Body ground	Engine switch on (IG) A/C switch on	Below 1 V



b. w/o Rear Heater

i. Reconnect the E 1 amplifier connector.

ii. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E 1-20 (MGC) - Body ground	Engine switch on (IG) A/C switch off	11 to 1 V
E 1-20 (MGC) - Body ground	Engine switch on (IG) A/C switch on	Below 1 V

NG → REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

OK

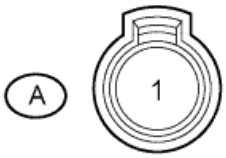
7.INSPECT COOLER COMPRESSOR ASSEMBLY

a. Disconnect the C30 compressor connector.

b. Disconnect the A magnetic clutch connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:



Tester Connection	Condition	Specified Condition

C30-3 (MG) - A-1	Always	Below 1 Ω
C30-3 (MG) - Body ground	Always	10 kΩ or higher

Component with harness connected:
(Cooler Compressor Assembly)

Front view of wire harness connector:
(to Magnetic Clutch)

NG → REPLACE COOLER COMPRESSOR ASSEMBLY (Click here)

OK

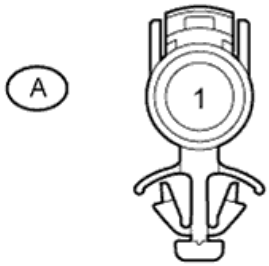
8.INSPECT MAGNETIC CLUTCH



a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A-1 - Body ground	20 C (6 F)	3. to 3. Ω

b. When connector terminal A-1 is connected to the positive ( ) battery terminal, check that the following occurs: 1) the operating sound of the magnetic clutch can be heard, and 2) the hub and rotor of the magnetic clutch lock.

Component without harness connected:
(Magnetic Clutch)

NG → REPLACE MAGNETIC CLUTCH

OK

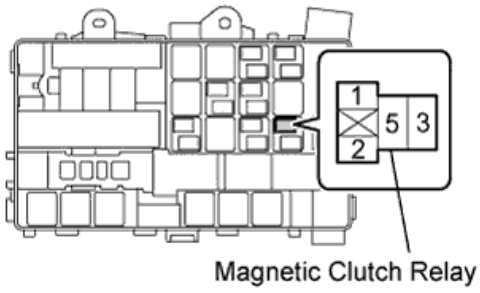
9.CHECK HARNESS AND CONNECTOR (ENGINE ROOM RELAY BLOCK - BATTERY)

a. Remove the magnetic clutch relay from the engine room relay block.



b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition

Relay block magnetic clutch relay terminal 5 - Body ground	Engine switch on (IG)	11 to 1 V
Relay block magnetic clutch relay terminal 1 - Body ground	Engine switch on (IG)	11 to 1 V

Engine Room Relay Block:

NG

REPAIR OR REPLACE HARNESS OR CONNECTOR (ENGINE ROOM RELAY BLOCK - BATTERY)

OK

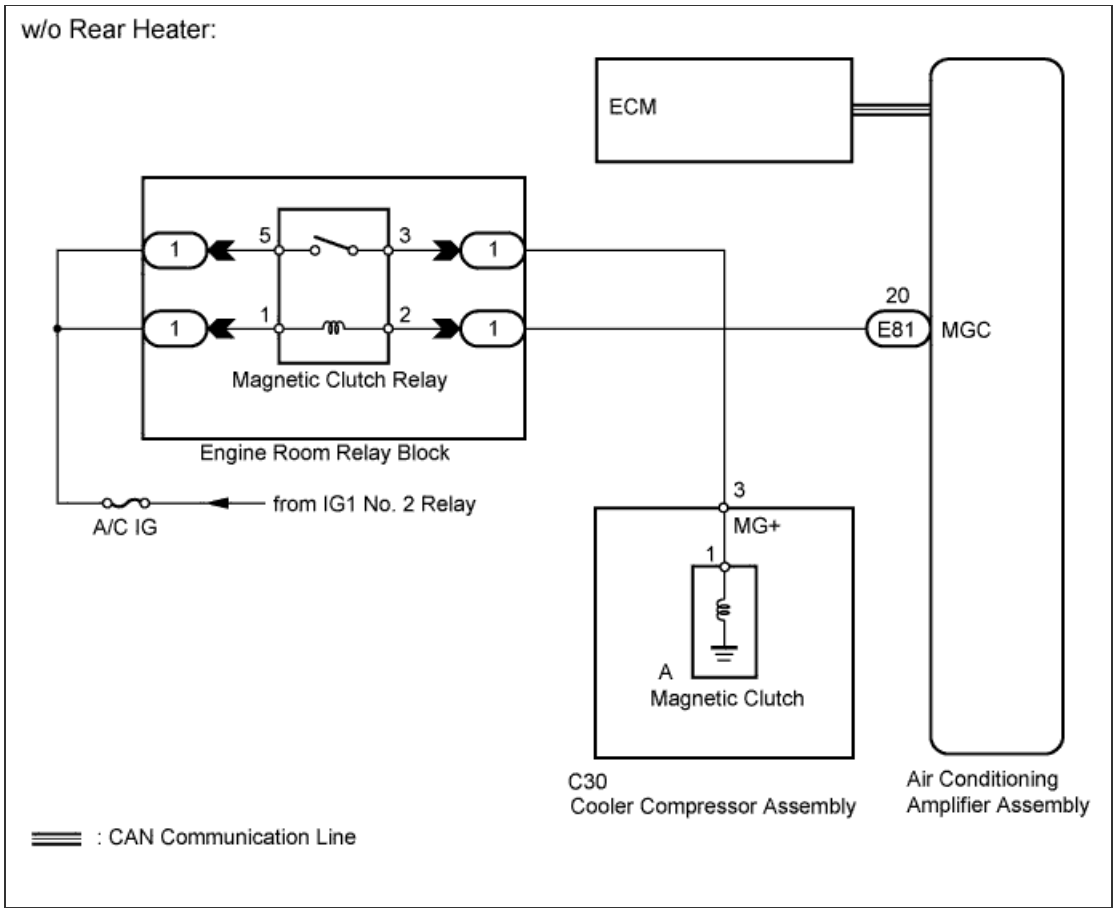
REPAIR OR REPLACE HARNESS OR CONNECTOR (ENGINE ROOM RELAY BLOCK - COOLER COMPRESSOR)



for Preparation Click here

DESCRIPTION

When the air conditioning amplifier assembly is turned on, a magnetic clutch on signal is sent from the MGC terminal of the air conditioning amplifier assembly. Then, the magnetic clutch relay turns on to operate the magnetic clutch.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.CHECK CAN COMMUNICATION SYSTEM

a. Check for CAN communication system DTCs related to the air conditioning system.

Result

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output (for LHD)	B
CAN DTC is output (for RHD)	C

B → GO TO CAN COMMUNICATION SYSTEM (Click here)

C → GO TO CAN COMMUNICATION SYSTEM (Click here)

A

2.READ VALUE USING INTELLIGENT TESTER (A/C SIGNAL)

a. Use the Data List to check if the A/C switch is functioning properly.

Engine

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
A/C Signal	A/C signal / ON or OFF	ON: A/C switch on OFF: A/C switch off	-

OK:

The display is as specified in the normal condition.

NG → Go to step 3

OK

REPLACE ECM (Click here)

3.INSPECT FUSE (A/C IG)

a. Remove the A/C IG fuse from the cowl side unction block LH.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A/C IG fuse	Always	Below 1 Ω

NG → REPLACE FUSE (A/C IG)

OK

4.INSPECT MAGNETIC CLUTCH RELAY

a. Remove the magnetic clutch relay from the engine room relay block.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 5	Voltage not applied to terminals 1 and 2	10 kΩ or higher
3 - 5	Voltage applied to terminals 1 and 2	Below 1 Ω

c. Install the magnetic clutch relay to the engine room relay block.

NG → REPLACE MAGNETIC CLUTCH RELAY

OK

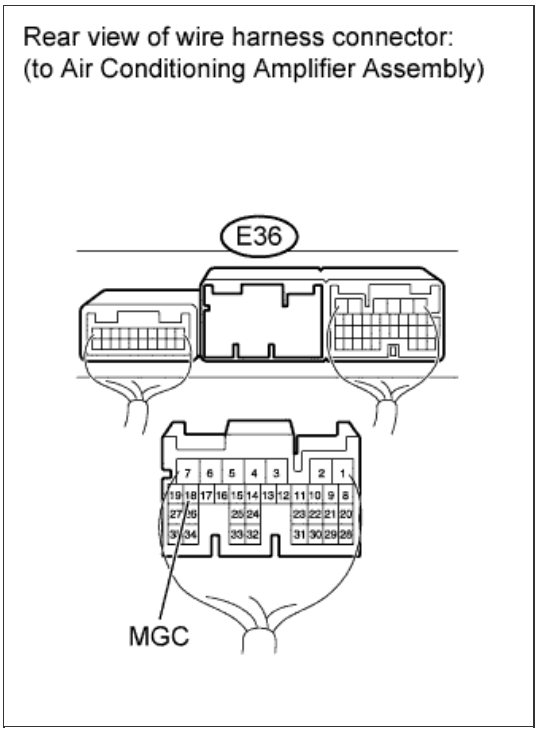
5.CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - BATTERY)



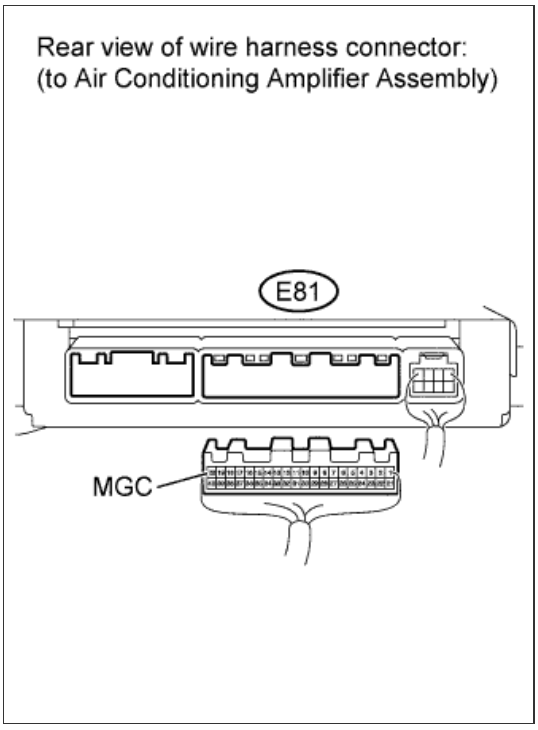
a. w/ Rear Heater

i. Disconnect the E36 amplifier connector.

ii. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E36-1 (MGC) - Body ground	Engine switch off	Below 1 V
E36-1 (MGC) - Body ground	Engine switch on (IG)	11 to 1 V



b. w/o Rear Heater

i. Disconnect the E 1 amplifier connector.

ii. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E 1-20 (MGC) - Body ground	Engine switch off	Below 1 V
E 1-20 (MGC) - Body ground	Engine switch on (IG)	11 to 1 V

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

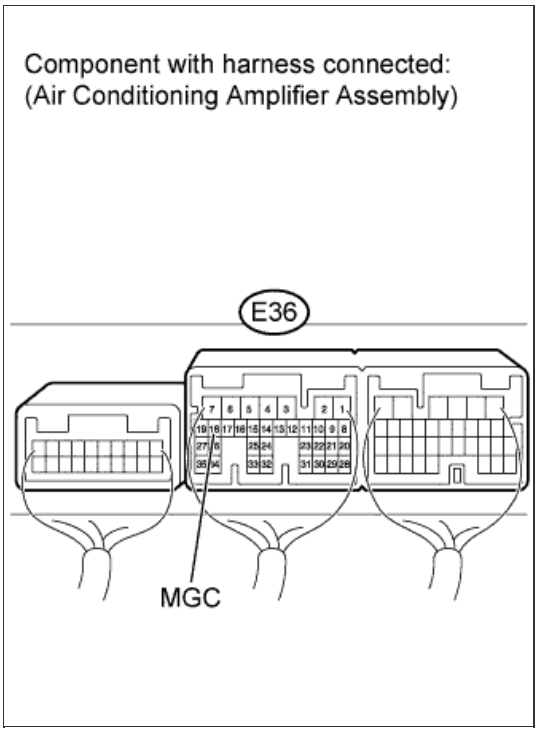
6.INSPECT AIR CONDITIONING AMPLIFIER ASSEMBLY

a. w/ Rear Heater



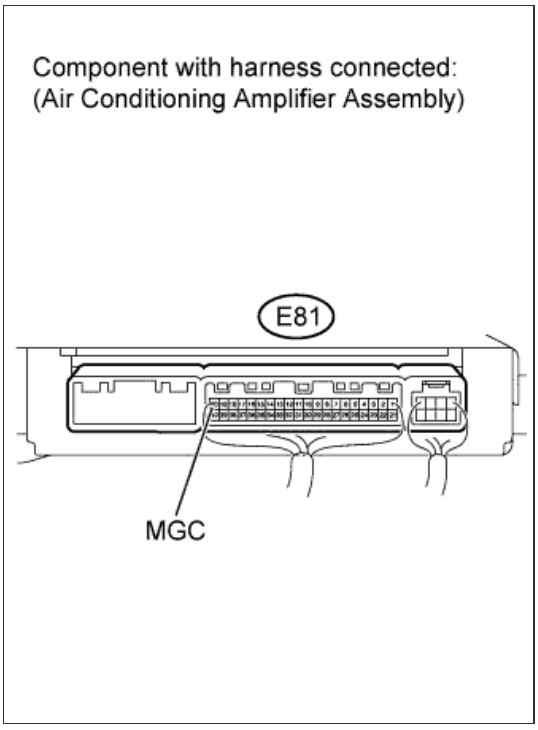
i. Reconnect the E36 amplifier connector.

ii. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition

E36-1 (MGC) - Body ground	Engine switch on (IG) A/C switch off	11 to 1 V
E36-1 (MGC) - Body ground	Engine switch on (IG) A/C switch on	Below 1 V



b. w/o Rear Heater

i. Reconnect the E 1 amplifier connector.

ii. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E 1-20 (MGC) - Body ground	Engine switch on (IG) A/C switch off	11 to 1 V
E 1-20 (MGC) - Body ground	Engine switch on (IG) A/C switch on	Below 1 V

NG → REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

OK

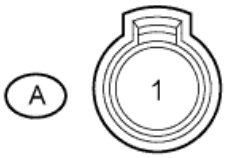
7.INSPECT COOLER COMPRESSOR ASSEMBLY

a. Disconnect the C30 compressor connector.

b. Disconnect the A magnetic clutch connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:



Tester Connection	Condition	Specified Condition

C30-3 (MG) - A-1	Always	Below 1 Ω
C30-3 (MG) - Body ground	Always	10 kΩ or higher

Component with harness connected:
(Cooler Compressor Assembly)

Front view of wire harness connector:
(to Magnetic Clutch)

NG → REPLACE COOLER COMPRESSOR ASSEMBLY (Click here)

OK

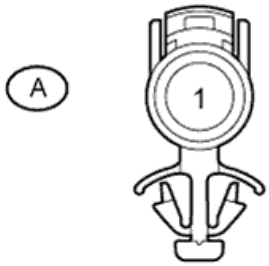
8.INSPECT MAGNETIC CLUTCH



a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A-1 - Body ground	20 C (6 F)	3. to 3. Ω

b. When connector terminal A-1 is connected to the positive ( ) battery terminal, check that the following occurs: 1) the operating sound of the magnetic clutch can be heard, and 2) the hub and rotor of the magnetic clutch lock.

Component without harness connected:
(Magnetic Clutch)

NG → REPLACE MAGNETIC CLUTCH

OK

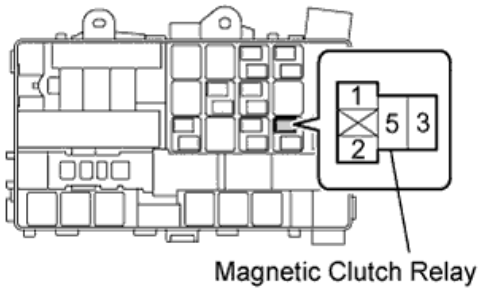
9.CHECK HARNESS AND CONNECTOR (ENGINE ROOM RELAY BLOCK - BATTERY)

a. Remove the magnetic clutch relay from the engine room relay block.



b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition

Relay block magnetic clutch relay terminal 5 - Body ground	Engine switch on (IG)	11 to 1 V
Relay block magnetic clutch relay terminal 1 - Body ground	Engine switch on (IG)	11 to 1 V

Engine Room Relay Block:

NG

REPAIR OR REPLACE HARNESS OR CONNECTOR (ENGINE ROOM RELAY BLOCK - BATTERY)

OK

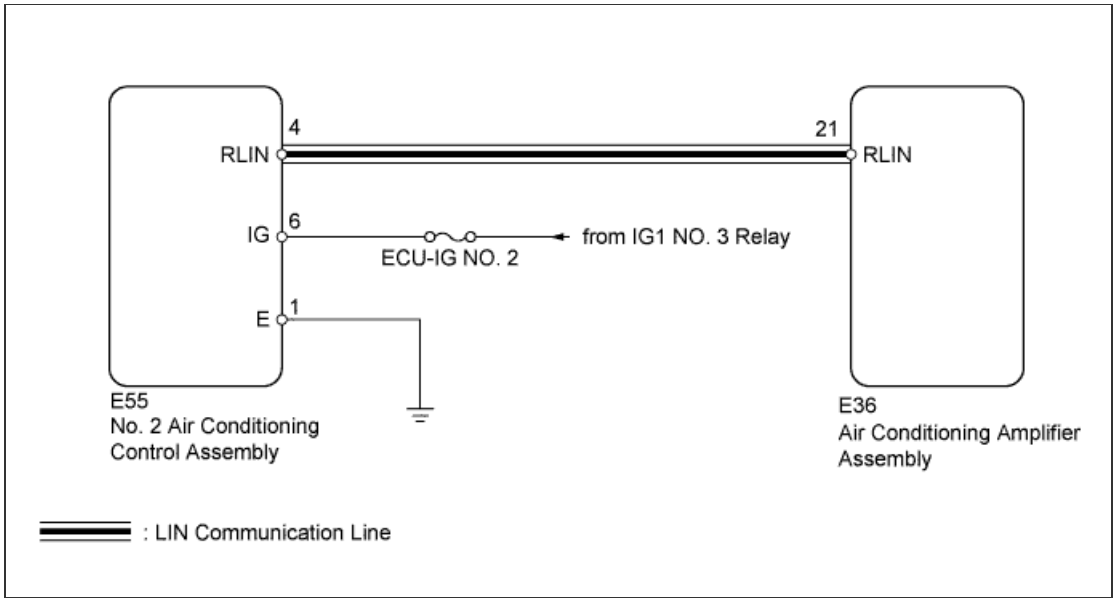
REPAIR OR REPLACE HARNESS OR CONNECTOR (ENGINE ROOM RELAY BLOCK - COOLER COMPRESSOR)

for Preparation Click here



DESCRIPTION

This circuit consists of the No. 2 air conditioning control assembly* and the air conditioning amplifier assembly. When the No. 2 air conditioning control assembly is operated, signals are transmitted to the air conditioning amplifier assembly through the LIN communication system.
If the LIN communication system malfunctions, the air conditioning amplifier assembly does not operate even if the No. 2 air conditioning control assembly is operated.

HINT:

*: w/ Rear Heater

WIRING DIAGRAM

INSPECTION PROCEDURE

1.INSPECT FUSE (ECU-IG NO. 2)

a. Remove the ECU-IG NO. 2 fuse from the cowl side junction block LH.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
ECU-IG NO. 2 fuse	Always	Below 1 Ω

NG → REPLACE FUSE

OK

2.CHECK HARNESS AND CONNECTOR (NO. 2 AIR CONDITIONING CONTROL - BODY GROUND AND BATTERY)

a. Disconnect the E55 No. 2 air conditioning control assembly connector.

b. Measure the resistance and voltage according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E55-1 (E) - Body ground	Always	Below 1 Ω

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E55-6 (IG) - Body ground	Engine switch on (IG)	11 to 14 V

Front view of wire harness connector: (to No. 2 Air Conditioning Control Assembly)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

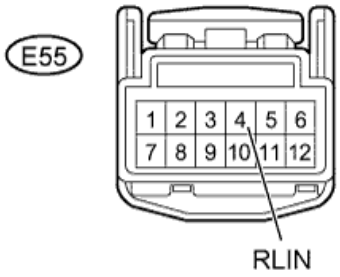
3.CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - NO. 2 AIR CONDITIONING CONTROL)

a. sconnect the E55 No. 2 air conditioning control assembly connector.



b. Disconnect the E36 amplifier connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E36-21 (RLIN) - E55-4 (RLIN)	Always	Below 1 Ω
E55-4 (RLIN) - Body ground	Always	10 kΩ or higher
E36-21 (RLIN) - Body ground		

Front view of wire harness connector: (to No. 2 Air Conditioning Control Assembly)

Rear view of wire harness connector: (to Air Conditioning Amplifier Assembly)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

4.CHECK NO. 2 AIR CONDITIONING CONTROL ASSEMBLY (OPERATION)

a. Replace the No. 2 air conditioning control assembly with a new or properly functioning one (Click here).

b. Operate the No. 2 air conditioning control assembly to check that it functions properly.

OK:

No. 2 air conditioning control assembly function operates normally.

NG → REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

OK → REPLACE NO. 2 AIR CONDITIONING CONTROL ASSEMBLY (Click here)

for Preparation Click here

WIRING DIAGRAM

INSPECTION PROCEDURE

1.INSPECT FUSE (ECU-IG NO. 2)

a. Remove the ECU-IG NO. 2 fuse from the cowl side junction block LH.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
ECU-IG NO. 2 fuse	Always	Below 1 Ω

NG → REPLACE FUSE

OK

2.CHECK HARNESS AND CONNECTOR (NO. 2 AIR CONDITIONING CONTROL - BODY GROUND AND BATTERY)

a. Disconnect the E55 No. 2 air conditioning control assembly connector.

b. Measure the resistance and voltage according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E55-1 (E) - Body ground	Always	Below 1 Ω

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E55-6 (IG) - Body ground	Engine switch on (IG)	11 to 14 V

Front view of wire harness connector: (to No. 2 Air Conditioning Control Assembly)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

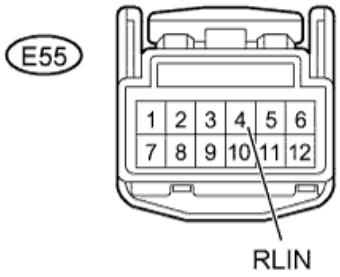
3.CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - NO. 2 AIR CONDITIONING CONTROL)

a. sconnect the E55 No. 2 air conditioning control assembly connector.



b. Disconnect the E36 amplifier connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E36-21 (RLIN) - E55-4 (RLIN)	Always	Below 1 Ω
E55-4 (RLIN) - Body ground	Always	10 kΩ or higher
E36-21 (RLIN) - Body ground		

Front view of wire harness connector: (to No. 2 Air Conditioning Control Assembly)

Rear view of wire harness connector: (to Air Conditioning Amplifier Assembly)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

4.CHECK NO. 2 AIR CONDITIONING CONTROL ASSEMBLY (OPERATION)

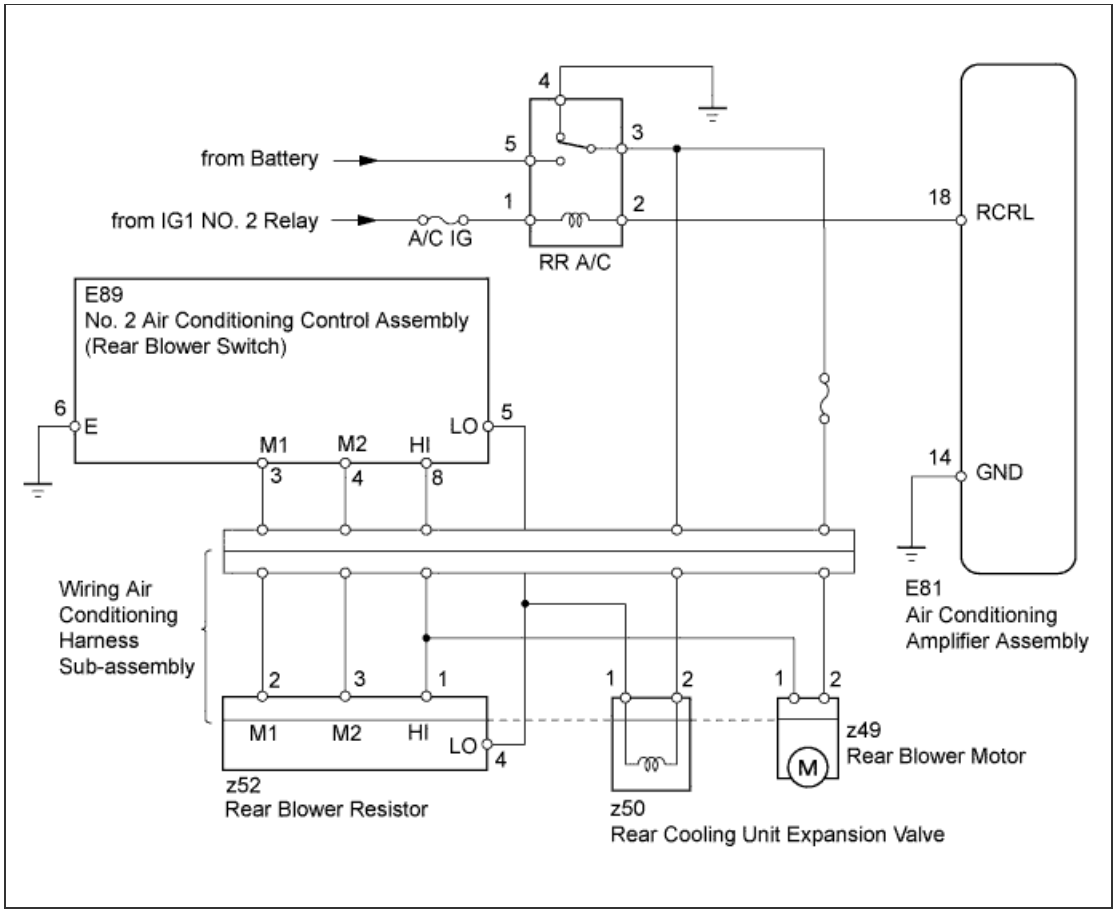
a. Replace the No. 2 air conditioning control assembly with a new or properly functioning one (Click here).

b. Operate the No. 2 air conditioning control assembly to check that it functions properly.

OK:

No. 2 air conditioning control assembly function operates normally.

NG → REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)



OK → REPLACE NO. 2 AIR CONDITIONING CONTROL ASSEMBLY (Click here)

for Preparation Click here

DESCRIPTION

When the No. 2 air conditioning control assembly (rear blower switch) is set to position LO or higher, the contact of the RR A/C relay is closed, current flows to the rear blower motor, and the rear blower motor operates. The rear blower motor speed can be changed by exchanging the ground and the rear blower resistor circuit with the No. 2 air conditioning control assembly (rear blower switch).

WIRING DIAGRAM

INSPECTION PROCEDURE

1.INSPECT FUSE (A/C IG, RR A/C NO.2)

a. Remove the A/C IG and RR A/C NO. 2 fuses from the cowl side junction block LH.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A/C IG fuse	Always	Below 1 Ω
RR A/C NO. 2 fuse	Always	Below 1 Ω

NG → REPLACE FUSE

OK

2.INSPECT RR A/C RELAY

a. Remove the RR A/C relay from the engine room relay block.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 4	Battery voltage is not applied between terminals 1 and 2	Below 1 Ω
3 - 5	Battery voltage is not applied between terminals 1 and 2	10 kΩ or higher
3 - 4	Battery voltage is applied to terminals 1 and 2	10 kΩ or higher
3 - 5	Battery voltage is applied to terminals 1 and 2	Below 1 Ω

NG → REPLACE RR A/C RELAY

OK

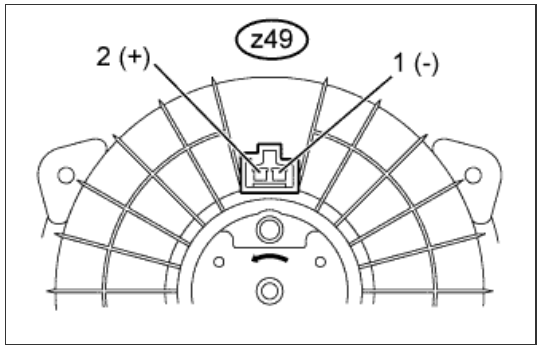
3.INSPECT REAR BLOWER MOTOR

a. Disconnect the z49 motor connector.



b. Connect the battery's positive (+) lead to terminal 2 and the negative (-) lead to terminal 1, then check that the rear blower motor operates smoothly.

OK:
The rear blower motor operates smoothly.

c. Measure the current according to the value(s) in the table below.

Standard Current:

Tester Connection	Condition	Specified Condition
z49-1 (-) - z49-2 (+)	Rear blower motor operates	1 to 3 A

NG → REPLACE REAR BLOWER MOTOR (Click here)

OK

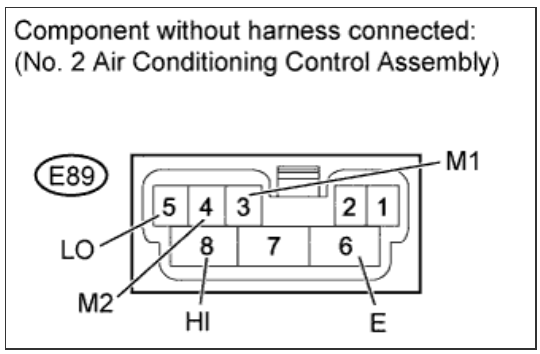
4.INSPECT NO. 2 AIR CONDITIONING CONTROL ASSEMBLY (REAR BLOWER SWITCH)



a. Remove the No. 2 air conditioning control assembly (Click here).

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
ALL - E89-6 (E)	OFF	10 kΩ or higher
E89-5 (LO) - E89-6 (E)	LO	Below 1 Ω
E89-3 (M1) - E89-6 (E)	M1	Below 1 Ω
E89-4 (M2) - E89-6 (E)	M2	Below 1 Ω
E89-8 (HI) - E89-6 (E)	HI	Below 1 Ω

Component without harness connected:
(No. 2 Air Conditioning Control Assembly)

NG → REPLACE NO. 2 AIR CONDITIONING CONTROL ASSEMBLY (Click here)

OK

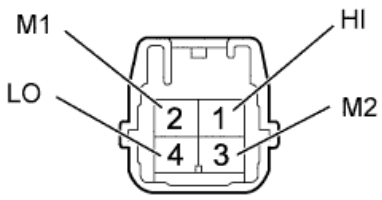
5.INSPECT REAR BLOWER RESISTOR



a. Remove the rear blower resistor (Click here).

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z52-1 (HI) - z52-2 (M1)	Always	1.32 to 1.52 Ω
z52-1 (HI) - z52-3 (M2)	Always	0.39 to 0.45 Ω
z52-1 (HI) - z52-4 (LO)	Always	2.24 to 2.4 Ω

Component without harness connected:
(Rear Blower Resistor)

NG → REPLACE REAR BLOWER RESISTOR (Click here)

OK

6.CHECK REAR COOLING UNIT EXPANSION VALVE (OPERATION)

a. Replace the rear cooling unit expansion valve (Click here).

HINT:

Since the rear cooling unit expansion valve cannot be inspected while it is removed from the vehicle, replace the rear cooling unit expansion valve with a normal one and check that the condition returns to normal.

OK:

Same problem does not occur.

NG → Go to step 7

OK

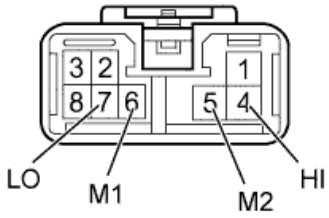
CHECK REAR COOLING UNIT EXPANSION VALVE (Click here)

7.CHECK HARNESS AND CONNECTOR (REAR BLOWER RESISTOR - WIRING AIR CONDITIONING HARNESS)

a. Disconnect the wiring air conditioning harness sub-assembly connector.



b. Disconnect the z52 rear blower resistor connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
6 (M1) - z52-2 (M1)	Always	Below 1 Ω
5 (M2) - z52-3 (M2)	Always	Below 1 Ω
4 (HI) - z52-1 (HI)	Always	Below 1 Ω
7 (LO) - z52-4 (LO)	Always	Below 1 Ω

Front view of wire harness connector:
(to Wiring Air Conditioning Harness Sub-assembly)

Front view of wire harness connector:
(to Rear Blower Resistor)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

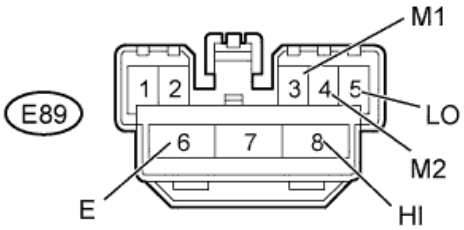
8.CHECK HARNESS AND CONNECTOR (REAR BLOWER SWITCH - WIRING AIR CONDITIONING HARNESS)

a. Disconnect the E89 No. 2 air conditioning control assembly connector.



b. Disconnect the Wiring air conditioning harness sub-assembly connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E89-3 (M1) - 6 (M1)	Always	Below 1 Ω
E89-4 (M2) - 5 (M2)	Always	Below 1 Ω
E89-8 (HI) - 4 (HI)	Always	Below 1 Ω
E89-5 (LO) - 7 (LO)	Always	Below 1 Ω
E89-6 (E) - Body ground	Always	Below 1 Ω

Front view of wire harness connector:
(to No. 2 Air Conditioning Control Assembly)

Front view of wire harness connector:
(to Wiring Air Conditioning Harness Sub-assembly)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

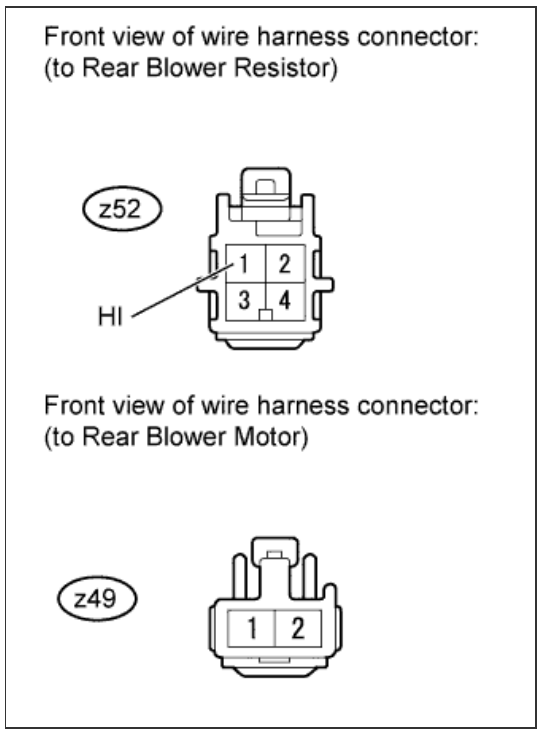
9.CHECK HARNESS AND CONNECTOR (REAR BLOWER RESISTOR - REAR BLOWER MOTOR)



a. Disconnect the z52 rear blower resistor connector.

b. Disconnect the z49 rear motor connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z52-1 (HI) - z49-1	Always	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

10.CHECK HARNESS AND CONNECTOR (REAR BLOWER MOTOR - BODY GROUND AND BATTERY)

a. Disconnect the z49 rear motor connector.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z49-2 - Body ground	Always	Below 1 Ω

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
z49-2 - Body ground	Engine switch on (IG) Heater control (blower switch) HI	11 to 14 V

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

11.CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - BATTERY AND BODY GROUND)

a. Disconnect the E81air conditioning amplifier connector.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E81-18 (RCRL) - Body ground	Engine switch on (IG) Heater control (blower switch): OFF	11 to 14 V
E81-18 (RCRL) - Body ground	Engine switch on (IG) Heater control (blower switch): ON	Below 1 V

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E81-14 (GND) - Body ground	Always	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

for Preparation Click here

DESCRIPTION

When the No. 2 air conditioning control assembly (rear blower switch) is set to position LO or higher, the contact of the RR A/C relay is closed, current flows to the rear blower motor, and the rear blower motor operates. The rear blower motor speed can be changed by exchanging the ground and the rear blower resistor circuit with the No. 2 air conditioning control assembly (rear blower switch).

WIRING DIAGRAM

INSPECTION PROCEDURE

1.INSPECT FUSE (A/C IG, RR A/C NO.2)

a. Remove the A/C IG and RR A/C NO. 2 fuses from the cowl side junction block LH.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A/C IG fuse	Always	Below 1 Ω
RR A/C NO. 2 fuse	Always	Below 1 Ω

NG → REPLACE FUSE

OK

2.INSPECT RR A/C RELAY

a. Remove the RR A/C relay from the engine room relay block.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 4	Battery voltage is not applied between terminals 1 and 2	Below 1 Ω
3 - 5	Battery voltage is not applied between terminals 1 and 2	10 kΩ or higher
3 - 4	Battery voltage is applied to terminals 1 and 2	10 kΩ or higher
3 - 5	Battery voltage is applied to terminals 1 and 2	Below 1 Ω

NG → REPLACE RR A/C RELAY

OK

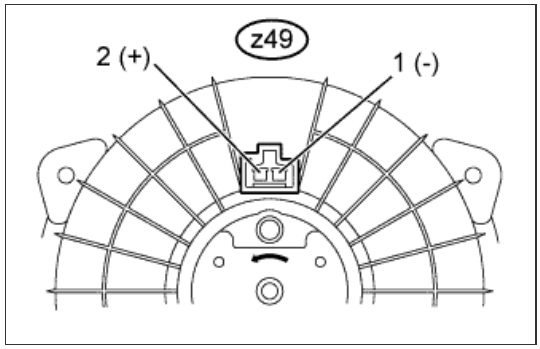
3.INSPECT REAR BLOWER MOTOR

a. Disconnect the z49 motor connector.



b. Connect the battery's positive (+) lead to terminal 2 and the negative (-) lead to terminal 1, then check that the rear blower motor operates smoothly.

OK:
The rear blower motor operates smoothly.

c. Measure the current according to the value(s) in the table below.

Standard Current:

Tester Connection	Condition	Specified Condition
z49-1 (-) - z49-2 (+)	Rear blower motor operates	1 to 3 A

NG → REPLACE REAR BLOWER MOTOR (Click here)

OK

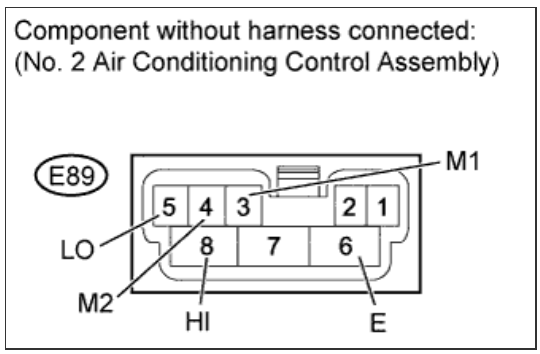
4.INSPECT NO. 2 AIR CONDITIONING CONTROL ASSEMBLY (REAR BLOWER SWITCH)



a. Remove the No. 2 air conditioning control assembly (Click here).

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
ALL - E89-6 (E)	OFF	10 kΩ or higher
E89-5 (LO) - E89-6 (E)	LO	Below 1 Ω
E89-3 (M1) - E89-6 (E)	M1	Below 1 Ω
E89-4 (M2) - E89-6 (E)	M2	Below 1 Ω
E89-8 (HI) - E89-6 (E)	HI	Below 1 Ω

Component without harness connected:
(No. 2 Air Conditioning Control Assembly)

NG → REPLACE NO. 2 AIR CONDITIONING CONTROL ASSEMBLY (Click here)

OK

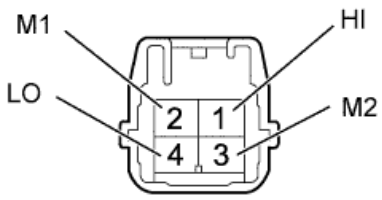
5.INSPECT REAR BLOWER RESISTOR



a. Remove the rear blower resistor (Click here).

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z52-1 (HI) - z52-2 (M1)	Always	1.32 to 1.52 Ω
z52-1 (HI) - z52-3 (M2)	Always	0.39 to 0.45 Ω
z52-1 (HI) - z52-4 (LO)	Always	2.24 to 2.4 Ω

Component without harness connected:
(Rear Blower Resistor)

NG → REPLACE REAR BLOWER RESISTOR (Click here)

OK

6.CHECK REAR COOLING UNIT EXPANSION VALVE (OPERATION)

a. Replace the rear cooling unit expansion valve (Click here).

HINT:

Since the rear cooling unit expansion valve cannot be inspected while it is removed from the vehicle, replace the rear cooling unit expansion valve with a normal one and check that the condition returns to normal.

OK:

Same problem does not occur.

NG → Go to step 7

OK

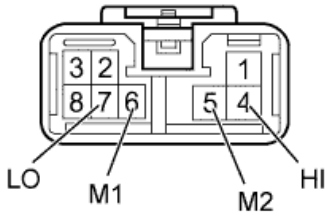
CHECK REAR COOLING UNIT EXPANSION VALVE (Click here)

7.CHECK HARNESS AND CONNECTOR (REAR BLOWER RESISTOR - WIRING AIR CONDITIONING HARNESS)

a. Disconnect the wiring air conditioning harness sub-assembly connector.



b. Disconnect the z52 rear blower resistor connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
6 (M1) - z52-2 (M1)	Always	Below 1 Ω
5 (M2) - z52-3 (M2)	Always	Below 1 Ω
4 (HI) - z52-1 (HI)	Always	Below 1 Ω
7 (LO) - z52-4 (LO)	Always	Below 1 Ω

Front view of wire harness connector:
(to Wiring Air Conditioning Harness Sub-assembly)

Front view of wire harness connector:
(to Rear Blower Resistor)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

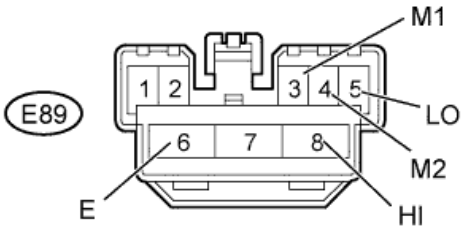
8.CHECK HARNESS AND CONNECTOR (REAR BLOWER SWITCH - WIRING AIR CONDITIONING HARNESS)

a. Disconnect the E89 No. 2 air conditioning control assembly connector.



b. Disconnect the Wiring air conditioning harness sub-assembly connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E89-3 (M1) - 6 (M1)	Always	Below 1 Ω
E89-4 (M2) - 5 (M2)	Always	Below 1 Ω
E89-8 (HI) - 4 (HI)	Always	Below 1 Ω
E89-5 (LO) - 7 (LO)	Always	Below 1 Ω
E89-6 (E) - Body ground	Always	Below 1 Ω

Front view of wire harness connector:
(to No. 2 Air Conditioning Control Assembly)

Front view of wire harness connector:
(to Wiring Air Conditioning Harness Sub-assembly)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

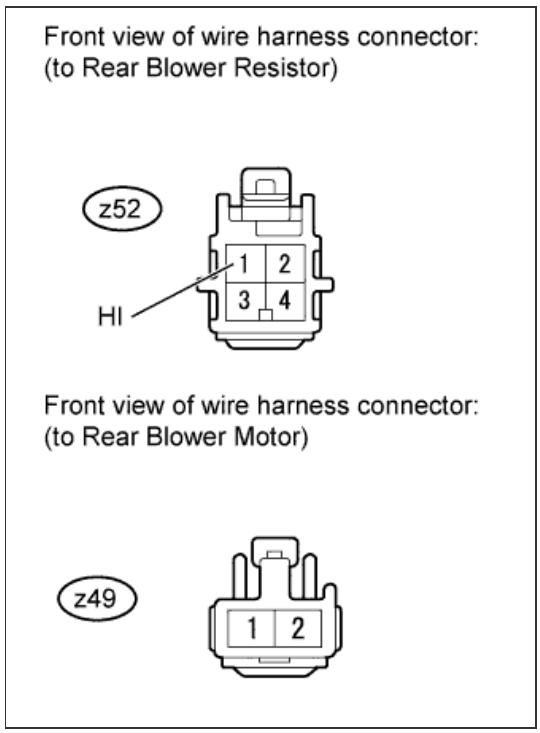
9.CHECK HARNESS AND CONNECTOR (REAR BLOWER RESISTOR - REAR BLOWER MOTOR)



a. Disconnect the z52 rear blower resistor connector.

b. Disconnect the z49 rear motor connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z52-1 (HI) - z49-1	Always	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

10.CHECK HARNESS AND CONNECTOR (REAR BLOWER MOTOR - BODY GROUND AND BATTERY)

a. Disconnect the z49 rear motor connector.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z49-2 - Body ground	Always	Below 1 Ω

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
z49-2 - Body ground	Engine switch on (IG) Heater control (blower switch) HI	11 to 14 V

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

11.CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - BATTERY AND BODY GROUND)

a. Disconnect the E81air conditioning amplifier connector.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E81-18 (RCRL) - Body ground	Engine switch on (IG) Heater control (blower switch): OFF	11 to 14 V
E81-18 (RCRL) - Body ground	Engine switch on (IG) Heater control (blower switch): ON	Below 1 V

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E81-14 (GND) - Body ground	Always	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

for Preparation Click here

DESCRIPTION

When the No. 2 air conditioning control assembly (rear blower switch) is set to position LO or higher, the contact of the RR A/C relay is closed, current flows to the rear blower motor, and the rear blower motor operates. The rear blower motor speed can be changed by exchanging the ground and the rear blower resistor circuit with the No. 2 air conditioning control assembly (rear blower switch).

WIRING DIAGRAM

INSPECTION PROCEDURE

1.INSPECT FUSE (A/C IG, RR A/C NO.2)

a. Remove the A/C IG and RR A/C NO. 2 fuses from the cowl side junction block LH.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A/C IG fuse	Always	Below 1 Ω
RR A/C NO. 2 fuse	Always	Below 1 Ω

NG → REPLACE FUSE

OK

2.INSPECT RR A/C RELAY

a. Remove the RR A/C relay from the engine room relay block.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 4	Battery voltage is not applied between terminals 1 and 2	Below 1 Ω
3 - 5	Battery voltage is not applied between terminals 1 and 2	10 kΩ or higher
3 - 4	Battery voltage is applied to terminals 1 and 2	10 kΩ or higher
3 - 5	Battery voltage is applied to terminals 1 and 2	Below 1 Ω

NG → REPLACE RR A/C RELAY

OK

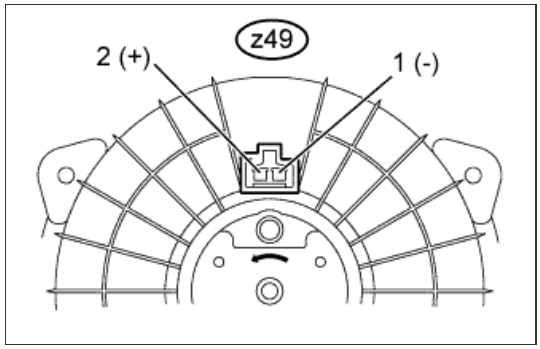
3.INSPECT REAR BLOWER MOTOR

a. Disconnect the z49 motor connector.



b. Connect the battery's positive (+) lead to terminal 2 and the negative (-) lead to terminal 1, then check that the rear blower motor operates smoothly.

OK:
The rear blower motor operates smoothly.

c. Measure the current according to the value(s) in the table below.

Standard Current:

Tester Connection	Condition	Specified Condition
z49-1 (-) - z49-2 (+)	Rear blower motor operates	1 to 3 A

NG → REPLACE REAR BLOWER MOTOR (Click here)

OK

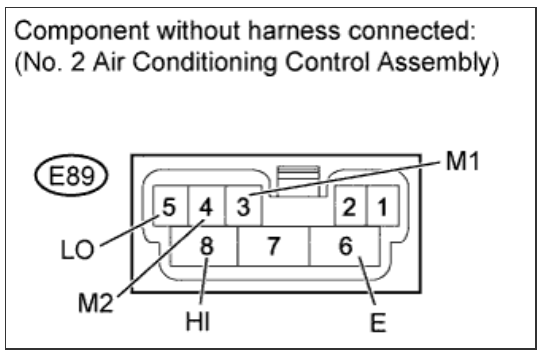
4.INSPECT NO. 2 AIR CONDITIONING CONTROL ASSEMBLY (REAR BLOWER SWITCH)



a. Remove the No. 2 air conditioning control assembly (Click here).

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
ALL - E89-6 (E)	OFF	10 kΩ or higher
E89-5 (LO) - E89-6 (E)	LO	Below 1 Ω
E89-3 (M1) - E89-6 (E)	M1	Below 1 Ω
E89-4 (M2) - E89-6 (E)	M2	Below 1 Ω
E89-8 (HI) - E89-6 (E)	HI	Below 1 Ω

Component without harness connected:
(No. 2 Air Conditioning Control Assembly)

NG → REPLACE NO. 2 AIR CONDITIONING CONTROL ASSEMBLY (Click here)

OK

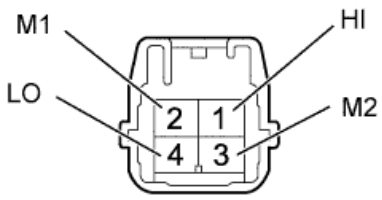
5.INSPECT REAR BLOWER RESISTOR



a. Remove the rear blower resistor (Click here).

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z52-1 (HI) - z52-2 (M1)	Always	1.32 to 1.52 Ω
z52-1 (HI) - z52-3 (M2)	Always	0.39 to 0.45 Ω
z52-1 (HI) - z52-4 (LO)	Always	2.24 to 2.4 Ω

Component without harness connected:
(Rear Blower Resistor)

NG → REPLACE REAR BLOWER RESISTOR (Click here)

OK

6.CHECK REAR COOLING UNIT EXPANSION VALVE (OPERATION)

a. Replace the rear cooling unit expansion valve (Click here).

HINT:

Since the rear cooling unit expansion valve cannot be inspected while it is removed from the vehicle, replace the rear cooling unit expansion valve with a normal one and check that the condition returns to normal.

OK:

Same problem does not occur.

NG → Go to step 7

OK

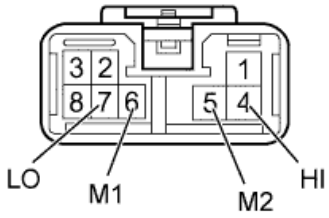
CHECK REAR COOLING UNIT EXPANSION VALVE (Click here)

7.CHECK HARNESS AND CONNECTOR (REAR BLOWER RESISTOR - WIRING AIR CONDITIONING HARNESS)

a. Disconnect the wiring air conditioning harness sub-assembly connector.



b. Disconnect the z52 rear blower resistor connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
6 (M1) - z52-2 (M1)	Always	Below 1 Ω
5 (M2) - z52-3 (M2)	Always	Below 1 Ω
4 (HI) - z52-1 (HI)	Always	Below 1 Ω
7 (LO) - z52-4 (LO)	Always	Below 1 Ω

Front view of wire harness connector:
(to Wiring Air Conditioning Harness Sub-assembly)

Front view of wire harness connector:
(to Rear Blower Resistor)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

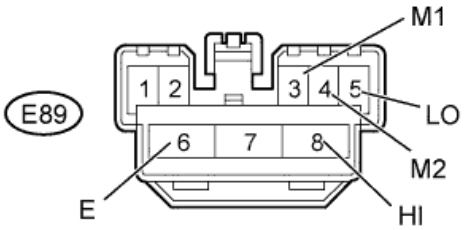
8.CHECK HARNESS AND CONNECTOR (REAR BLOWER SWITCH - WIRING AIR CONDITIONING HARNESS)

a. Disconnect the E89 No. 2 air conditioning control assembly connector.



b. Disconnect the Wiring air conditioning harness sub-assembly connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E89-3 (M1) - 6 (M1)	Always	Below 1 Ω
E89-4 (M2) - 5 (M2)	Always	Below 1 Ω
E89-8 (HI) - 4 (HI)	Always	Below 1 Ω
E89-5 (LO) - 7 (LO)	Always	Below 1 Ω
E89-6 (E) - Body ground	Always	Below 1 Ω

Front view of wire harness connector:
(to No. 2 Air Conditioning Control Assembly)

Front view of wire harness connector:
(to Wiring Air Conditioning Harness Sub-assembly)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

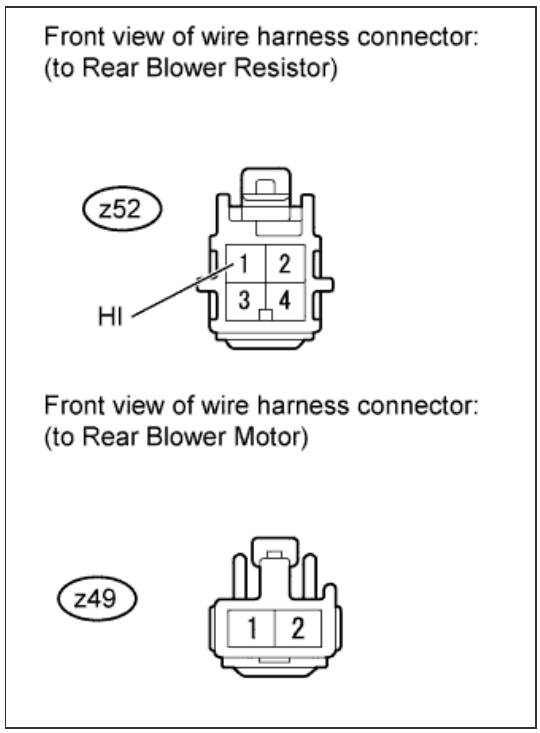
9.CHECK HARNESS AND CONNECTOR (REAR BLOWER RESISTOR - REAR BLOWER MOTOR)



a. Disconnect the z52 rear blower resistor connector.

b. Disconnect the z49 rear motor connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z52-1 (HI) - z49-1	Always	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

10.CHECK HARNESS AND CONNECTOR (REAR BLOWER MOTOR - BODY GROUND AND BATTERY)

a. Disconnect the z49 rear motor connector.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z49-2 - Body ground	Always	Below 1 Ω

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
z49-2 - Body ground	Engine switch on (IG) Heater control (blower switch) HI	11 to 14 V

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

11.CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - BATTERY AND BODY GROUND)

a. Disconnect the E81air conditioning amplifier connector.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E81-18 (RCRL) - Body ground	Engine switch on (IG) Heater control (blower switch): OFF	11 to 14 V
E81-18 (RCRL) - Body ground	Engine switch on (IG) Heater control (blower switch): ON	Below 1 V

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E81-14 (GND) - Body ground	Always	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

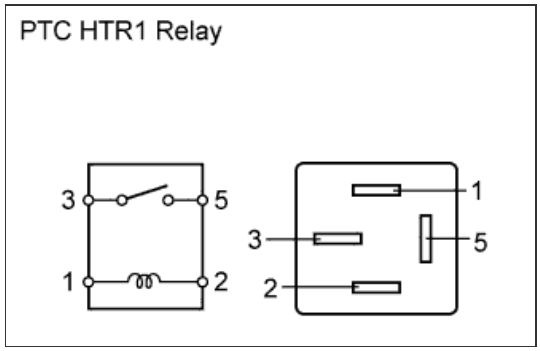
for Preparation Click here

DESCRIPTION

PTC heater relays are closed in accordance with signals from the air conditioning amplifier assembly and power is supplied to the quick heater assembly installed on the radiator heater unit.

WIRING DIAGRAM

INSPECTION PROCEDURE



1.INSPECT PTC HEATER RELAY (PTC HTR1)

a. Remove the PTC HTR1 relay from the engine room relay block.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 5	Battery voltage not applied between terminals 1 and 2	10 kΩ or higher
	Battery voltage applied to terminals 1 and 2	Below 1 Ω

NG → REPLACE PTC HEATER RELAY

OK

2.INSPECT PTC HEATER RELAY (PTC HTR2)

a. Remove the PTC HTR2 relay from the engine room relay block.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 5	Battery voltage not applied between terminals 1 and 2	10 kΩ or higher
	Battery voltage applied to terminals 1 and 2	Below 1 Ω

NG → REPLACE PTC HEATER RELAY

OK

3.INSPECT PTC HEATER RELAY (PTC HTR3)

a. Remove the PTC HTR3 relay from the engine room relay block.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 5	Battery voltage not applied between terminals 1 and 2	10 kΩ or higher
	Battery voltage applied to terminals 1 and 2	Below 1 Ω

NG → REPLACE PTC HEATER RELAY

OK

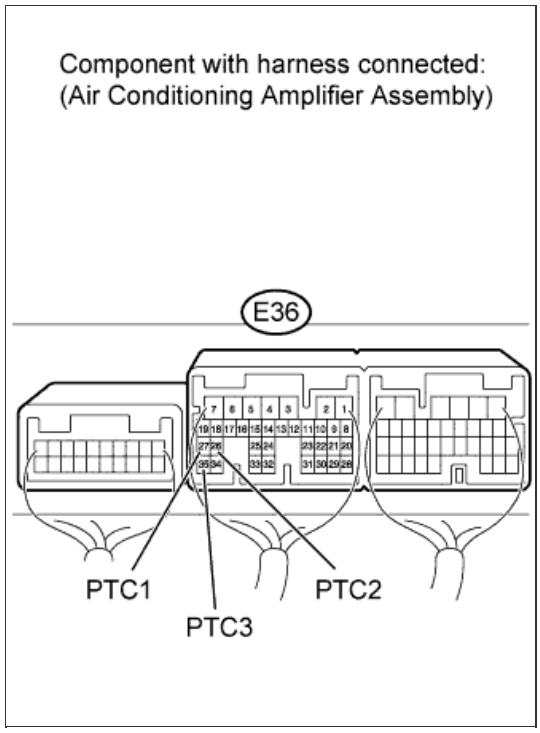
4.CHECK AIR CONDITIONING AMPLIFIER ASSEMBLY



a. w/ Rear Heater

i. Remove the air conditioning amplifier assembly with its connectors still connected (Click here).

ii. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
E36-27 (PTC1) - Body ground	Engine switch on (IG) Temperature setting: MAX HOT MODE switch: FOOT Engine coolant temperature: 55°C (131°F) or less Blower switch: off	11 to 14 V
E36-26 (PTC2) - Body ground		
E36-35 (PTC3) - Body ground		

b. w/o Rear Heater

i. Remove the air conditioning amplifier assembly with its connectors still connected (Click here).

ii. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
E 1-3 (PTC1) - Body ground	Engine switch on (I) Temperature setting: MA HOT MODE switch: FOOT Engine coolant temperature: 55°C (131°F) or less Blower switch: off	11 to 14 V
E 1-22 (PTC2) - Body ground		
E 1-4 (PTC3) - Body ground		

NG → Go to step 8

OK

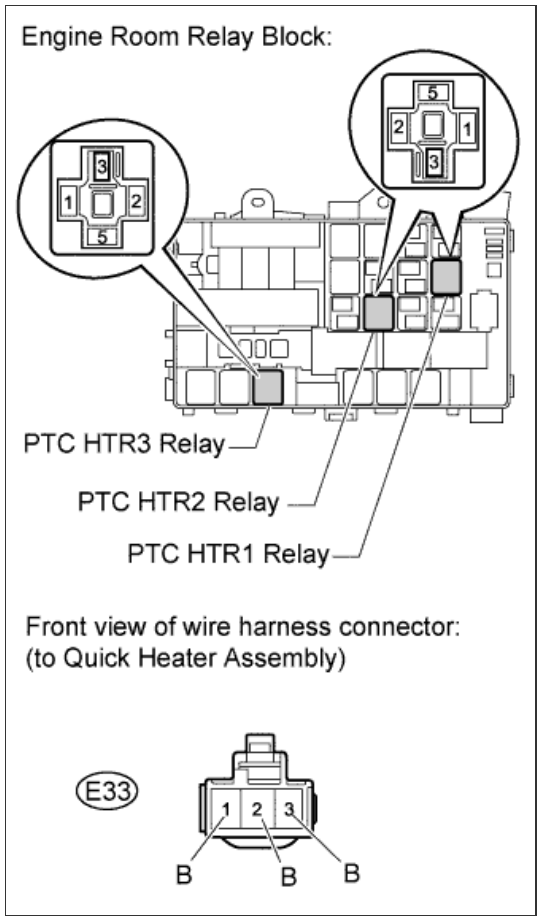
5.CHECK HARNESS AND CONNECTOR (PTC HEATER RELAY - QUICK HEATER)

a. Remove the quick heater relays from the engine room relay block.



b. Disconnect the E33 quick heater assembly connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
PTC HTR2 terminal 3 - E33-1 (B)	Always	Below 1 Ω
PTC HTR1 terminal 3 - E33-2		

(B)		
PTC HTR3 terminal 3 - E33-3 (B)		
PTC HTR2 terminal 3 - Body ground	Always	10 kΩ or higher
PTC HTR1 terminal 3 - Body ground		
PTC HTR3 terminal 3 - Body ground		

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

6.INSPECT QUICK HEATER ASSEMBLY

a. Disconnect the E33 and E34 quick heater connectors.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E33-1 (B) - E34-1 (E)	Always	Below 1 Ω
E33-2 (B) - E34-1 (E)		
E33-3 (B) - E34-2 (E)		

NG → REPLACE QUICK HEATER RELAY (Click here)

OK

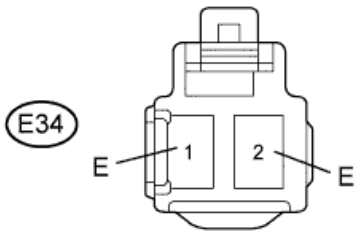
7.CHECK HARNESS AND CONNECTOR (QUICK HEATER - BODY GROUND)



a. Disconnect the E34 quick heater assembly connector.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E34-1 (E) - Body ground	Always	10 kΩ or higher
E34-2 (E) - Body ground		

Front view of wire harness connector: (to Quick Heater Assembly)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

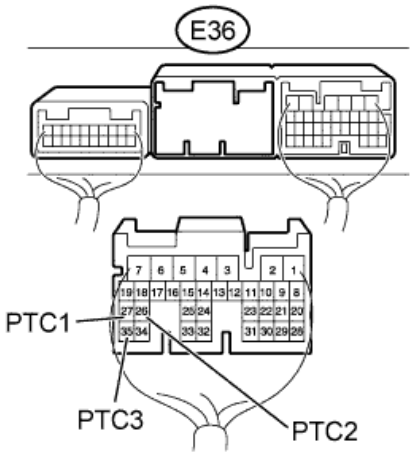
8.CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - PTC HTR RELAY)

a. w/ Rear Heater



i. Disconnect the E36 amplifier connector.

ii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
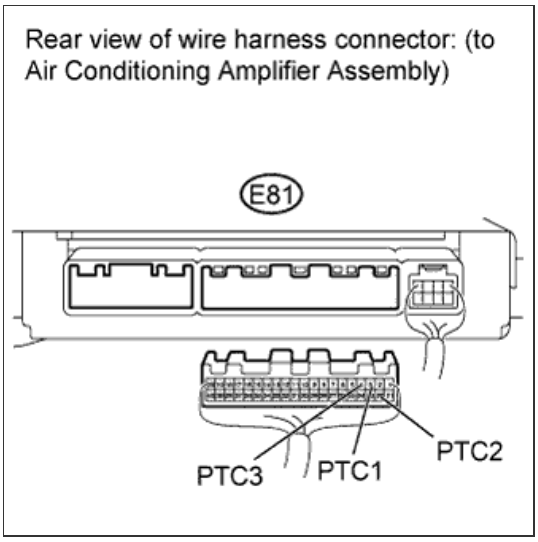
E36-27 (PTC1) - Body ground	Always	Below 1 Ω
E36-26 (PTC2) - Body ground		
E36-35 (PTC3) - Body ground		

Rear view of wire harness connector: (to Air Conditioning Amplifier Assembly)

b. w/o Rear Heater

i. Disconnect the E 1 amplifier connector.



ii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E 1-3 (PTC1) - Body ground	Always	Below 1 Ω
E 1-22 (PTC2) - Body ground		
E 1-4 (PTC3) - Body ground		

Result

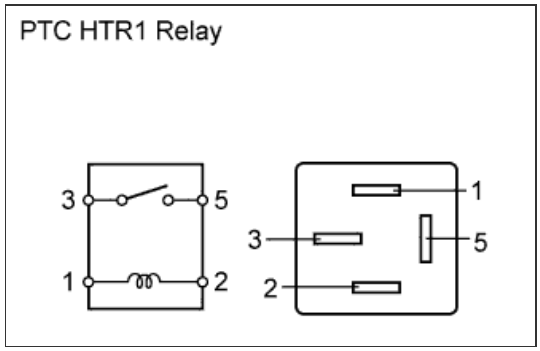
DESCRIPTION

PTC heater relays are closed in accordance with signals from the air conditioning amplifier assembly and power is supplied to the quick heater assembly installed on the radiator heater unit.

WIRING DIAGRAM

INSPECTION PROCEDURE



1.INSPECT PTC HEATER RELAY (PTC HTR1)

a. Remove the PTC HTR1 relay from the engine room relay block.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 5	Battery voltage not applied between terminals 1 and 2	10 kΩ or higher
	Battery voltage applied to terminals 1 and 2	Below 1 Ω

NG → REPLACE PTC HEATER RELAY

OK

2.INSPECT PTC HEATER RELAY (PTC HTR2)

a. Remove the PTC HTR2 relay from the engine room relay block.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 5	Battery voltage not applied between terminals 1 and 2	10 kΩ or higher
	Battery voltage applied to terminals 1 and 2	Below 1 Ω

NG → REPLACE PTC HEATER RELAY

OK

3.INSPECT PTC HEATER RELAY (PTC HTR3)

a. Remove the PTC HTR3 relay from the engine room relay block.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 5	Battery voltage not applied between terminals 1 and 2	10 kΩ or higher
	Battery voltage applied to terminals 1 and 2	Below 1 Ω

NG → REPLACE PTC HEATER RELAY

OK

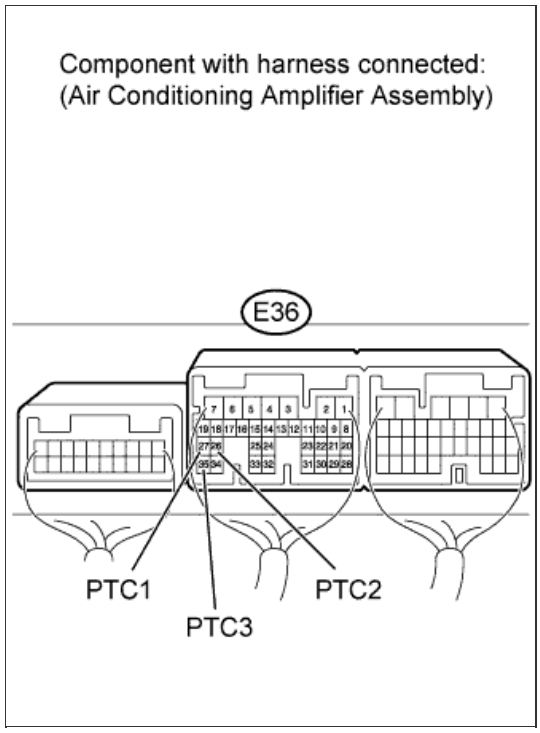
4.CHECK AIR CONDITIONING AMPLIFIER ASSEMBLY



a. w/ Rear Heater

i. Remove the air conditioning amplifier assembly with its connectors still connected (Click here).

ii. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
E36-27 (PTC1) - Body ground	Engine switch on (IG) Temperature setting: MAX HOT MODE switch: FOOT Engine coolant temperature: 55°C (131°F) or less Blower switch: off	11 to 14 V
E36-26 (PTC2) - Body ground		
E36-35 (PTC3) - Body ground		

b. w/o Rear Heater

i. Remove the air conditioning amplifier assembly with its connectors still connected (Click here).

ii. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
E 1-3 (PTC1) - Body ground	Engine switch on (I) Temperature setting: MA HOT MODE switch: FOOT Engine coolant temperature: 55°C (131°F) or less Blower switch: off	11 to 14 V
E 1-22 (PTC2) - Body ground		
E 1-4 (PTC3) - Body ground		

NG → Go to step 8

OK

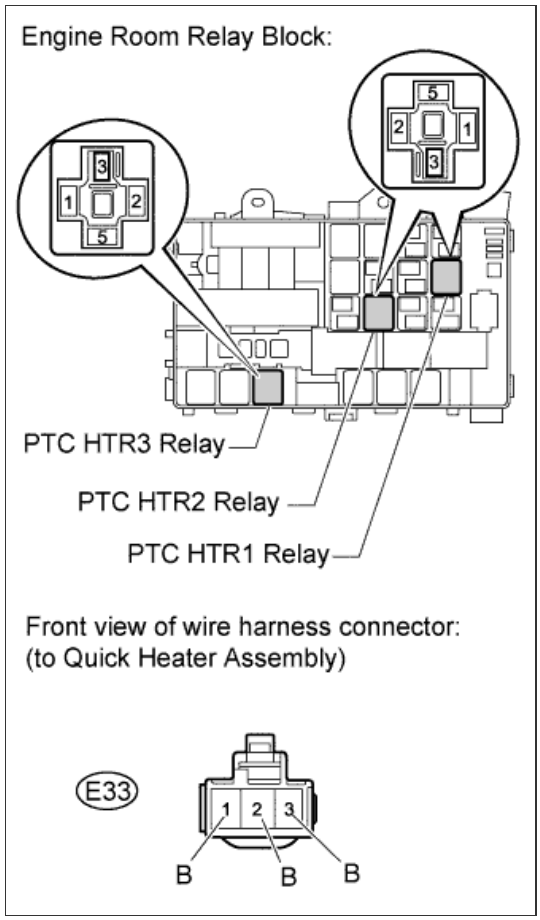
5.CHECK HARNESS AND CONNECTOR (PTC HEATER RELAY - QUICK HEATER)

a. Remove the quick heater relays from the engine room relay block.



b. Disconnect the E33 quick heater assembly connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
PTC HTR2 terminal 3 - E33-1 (B)	Always	Below 1 Ω
PTC HTR1 terminal 3 - E33-2		

(B)		
PTC HTR3 terminal 3 - E33-3 (B)		
PTC HTR2 terminal 3 - Body ground	Always	10 kΩ or higher
PTC HTR1 terminal 3 - Body ground		
PTC HTR3 terminal 3 - Body ground		

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

6.INSPECT QUICK HEATER ASSEMBLY

a. Disconnect the E33 and E34 quick heater connectors.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E33-1 (B) - E34-1 (E)	Always	Below 1 Ω
E33-2 (B) - E34-1 (E)		
E33-3 (B) - E34-2 (E)		

NG → REPLACE QUICK HEATER RELAY (Click here)

OK

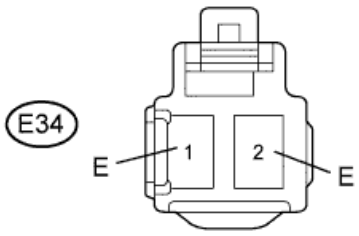
7.CHECK HARNESS AND CONNECTOR (QUICK HEATER - BODY GROUND)



a. Disconnect the E34 quick heater assembly connector.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E34-1 (E) - Body ground	Always	10 kΩ or higher
E34-2 (E) - Body ground		

Front view of wire harness connector: (to Quick Heater Assembly)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

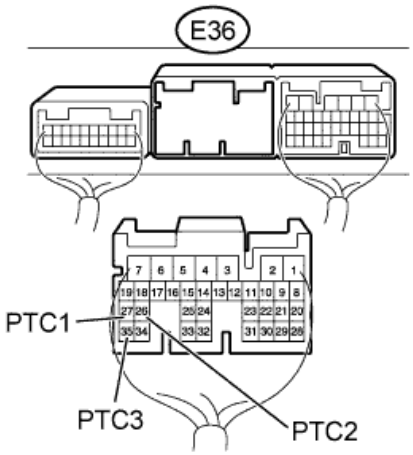
8.CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - PTC HTR RELAY)

a. w/ Rear Heater



i. Disconnect the E36 amplifier connector.

ii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
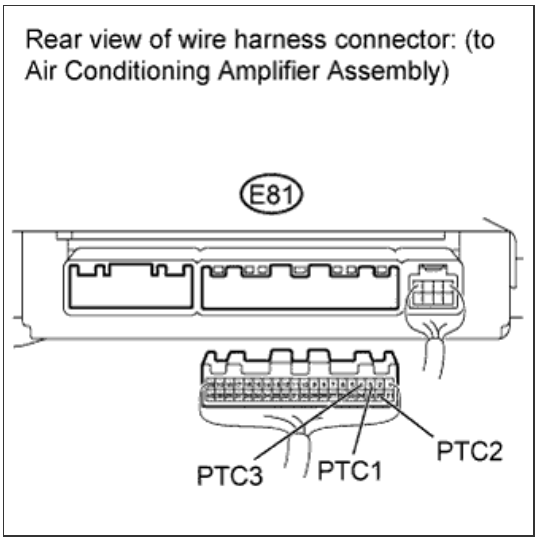
E36-27 (PTC1) - Body ground	Always	Below 1 Ω
E36-26 (PTC2) - Body ground		
E36-35 (PTC3) - Body ground		

Rear view of wire harness connector: (to Air Conditioning Amplifier Assembly)

b. w/o Rear Heater

i. Disconnect the E 1 amplifier connector.



ii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E 1-3 (PTC1) - Body ground	Always	Below 1 Ω
E 1-22 (PTC2) - Body ground		
E 1-4 (PTC3) - Body ground

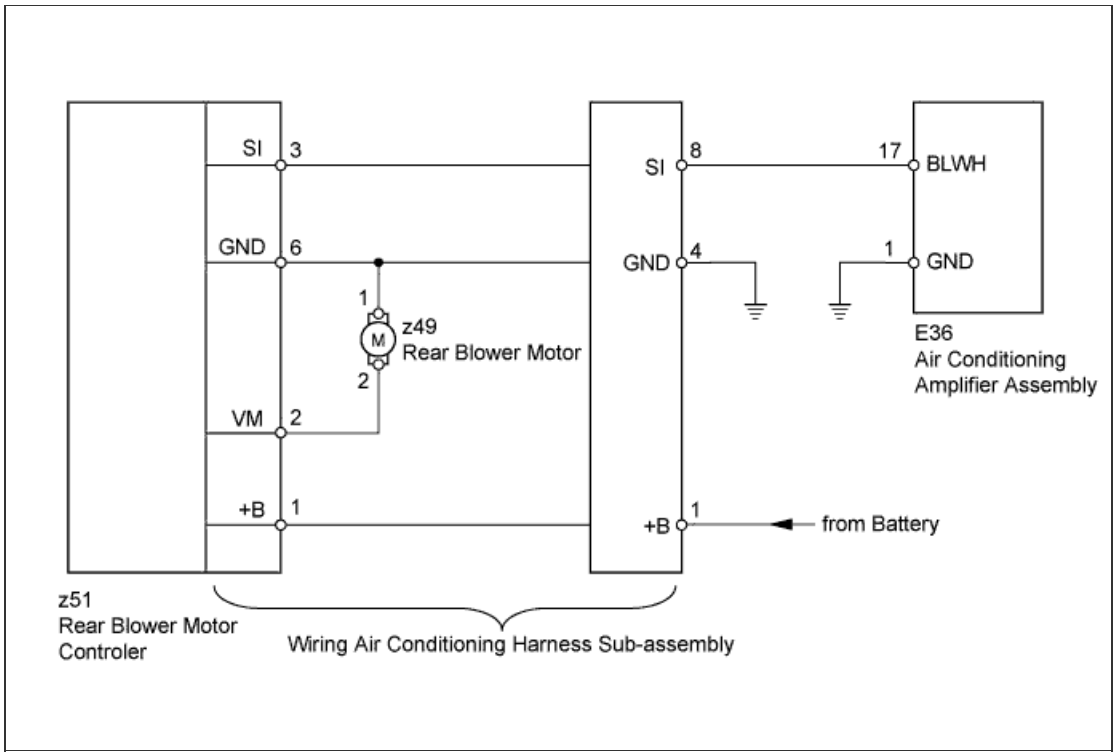
REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)



for Preparation Click here

DESCRIPTION

The rear blower motor (w/ rear heater) is operated by signals from the air conditioning amplifier assembly. The rear blower motor speed signals are transmitted by changes in the duty ratio.
Duty Ratio:
The duty ratio is the ratio of the rear blower motor OPEN time (T1) to the total of the rear blower motor OPEN and LO time (T2).
The rear blower motor controller controls the rear blower motor speed.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.PERFORM ACTIVE TEST USING INTELLIGENT TESTER (REAR BLOWER MOTOR)

a. elect the Active Test, use the intelligent tester to generate a control command, and then check that the rear blower motor operates.

Air Conditioner

Tester Display	Test Part	Control Range	Diagnostic Note
Rear Blower Motor	Rear blower motor	Min.: 0, Max.: 31	-

Result

Result	Proceed to
Rear blower motor operates normally	A
Rear blower motor does not operate	B
Rear blower motor operates but does not change speed	C

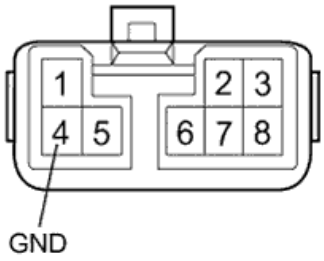
B → Go to step 2

C → Go to step 5

A

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

2.CHECK HARNESS AND CONNECTOR (WIRING AIR CONDITIONING HARNESS - BODY GROUND)



a. Disconnect the wiring air conditioning harness sub-assembly connector.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	pecified Condition
4 (GND) - Body ground	Always	Below 1 Ω

Front view of wire harness connector: (to Air Conditioning Wiring Harness Sub-assembly)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

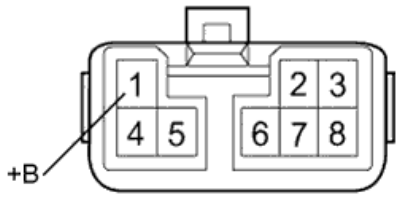
3.CHECK HARNESS AND CONNECTOR (WIRING AIR CONDITIONING HARNESS - BATTERY)



a. Disconnect the wiring air conditioning harness sub-assembly connector.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	pecified Condition
1 (+B) - Body ground	Always	11 to 14 V

Front view of wire harness connector: (to Air Conditioning Wiring Harness Sub-assembly)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

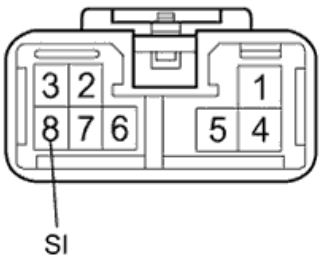
4.CHECK WIRING AIR CONDITIONING HARNESS SUB-ASSEMBLY (SI VOLTAGE)

a. Disconnect the E36 amplifier connector.



b. Reconnect the wiring air conditioning harness sub-assembly connector.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	witch Condition	pecified Condition
8 ( ) - Body ground	Engine switch on (IG)	4.5 to 5.5 V

Component with harness connected: (Air Conditioning Wiring Harness Sub-assembly)

NG → Go to step 7

OK

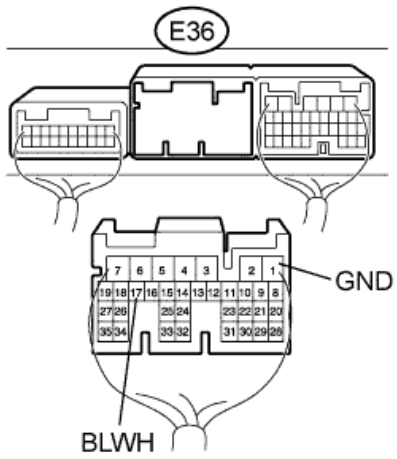
5.CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - WIRING AIR CONDITIONING HARNESS)



a. Disconnect the E36 amplifier connector.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	witch Condition	pecified Condition
E36-17 (BL) - E36-1 (GND)	Engine switch on (IG) Blower switch off	4.5 to 5.5 V

Rear view of wire harness connector: (to Air Conditioning Amplifier Assembly)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

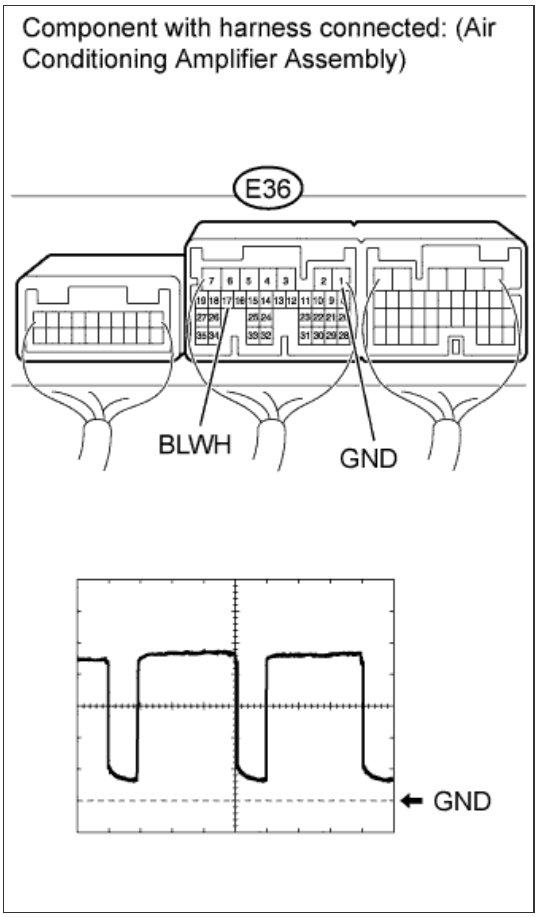
6.CHECK AIR CONDITIONING AMPLIFIER ASSEMBLY (BLWH SIGNAL)

a. Remove the air conditioning amplifier assembly with its connectors still connected (Click here).

b. Using an oscilloscope, check the waveform.

Measurement Condition



Item	Content
Terminal No.(ymbol)	E36-17 (BL) - E36-1 (GND)
Tool etting	1 V/DIV., 500 s/DIV.
Condition	Engine switch on (IG) Blower switch: off → on

OK:

Waveform is as shown in the illustration.

HINT:

aveform varies with the blower level.

NG → REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

OK ↓

7.CHECK WIRING AIR CONDITIONING HARNESS SUB-ASSEMBLY (OPERATION)

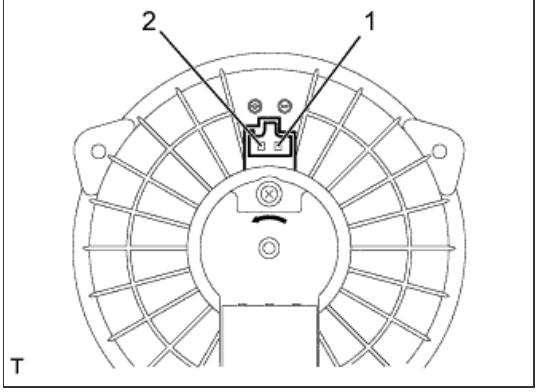
a. Replace the wiring air conditioning harness sub-assembly with a normal one and check that the condition returns to normal.

OK:
Same problem does not occur.

NG → Go to step 8

OK ↓

REPLACE WIRING AIR CONDITIONING HARNESS SUB-ASSEMBLY



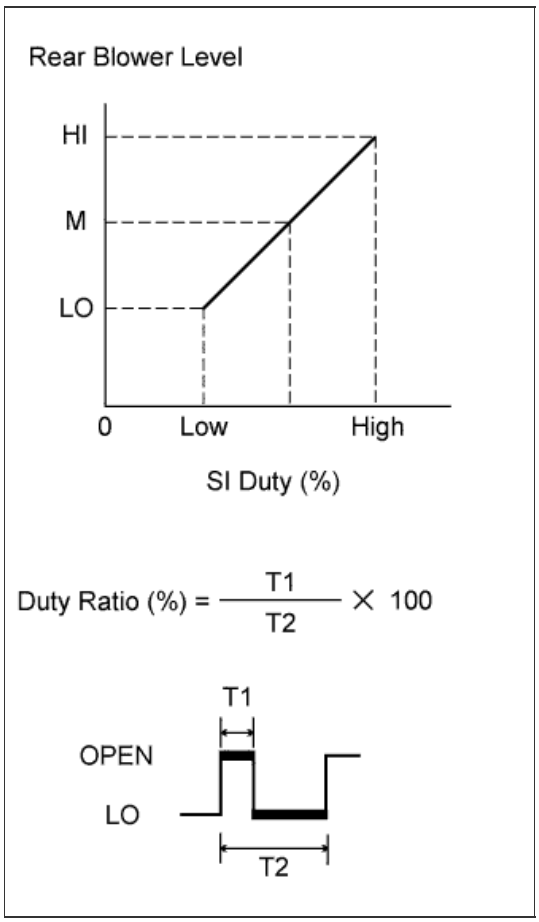
8.INSPECT REAR BLOWER MOTOR

a. Disconnect the 32 motor connector.

b. Connect the positive (+) lead of the battery to terminal 2 and the negative (-) lead to terminal 1, then check that the rear blower motor operates smoothly.

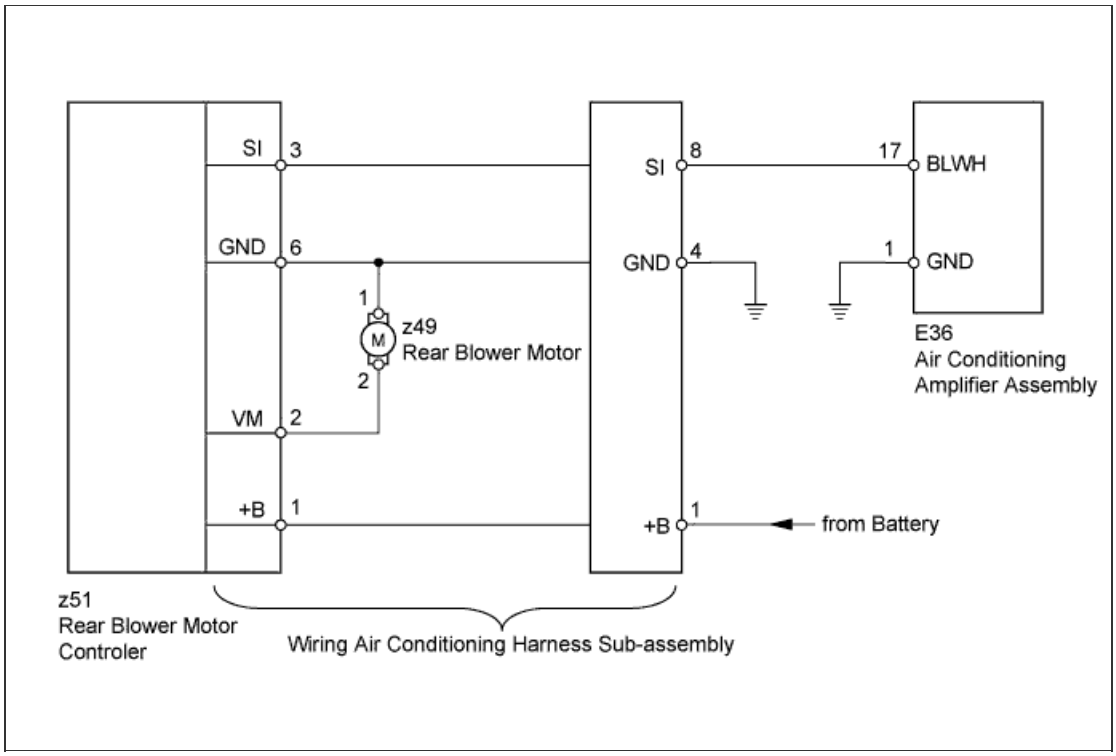
OK:
The rear blower motor operates smoothly.

Component without harness connected:
(Rear Blower Motor)



NG → REPLACE REAR BLOWER MOTOR (Click here)

OK → REPLACE REAR BLOWER MOTOR CONTROLLER (Click here)



for Preparation Click here

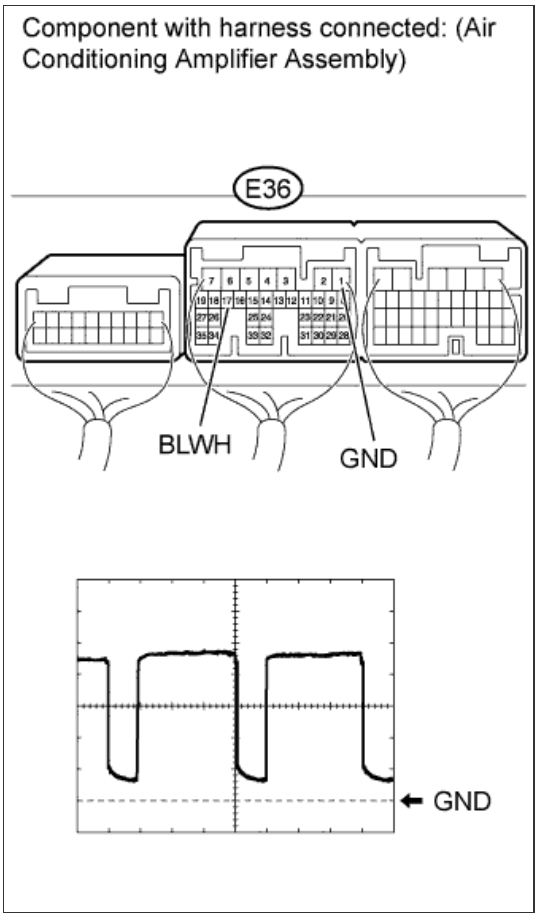
Measurement Condition



Item	Content
Terminal No.(ymbol)	E36-17 (BL) - E36-1 (GND)
Tool etting	1 V/DIV., 500 s/DIV.
Condition	Engine switch on (IG) Blower switch: off → on

OK:

Waveform is as shown in the illustration.

HINT:

aveform varies with the blower level.

NG → REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

OK ↓

7.CHECK WIRING AIR CONDITIONING HARNESS SUB-ASSEMBLY (OPERATION)

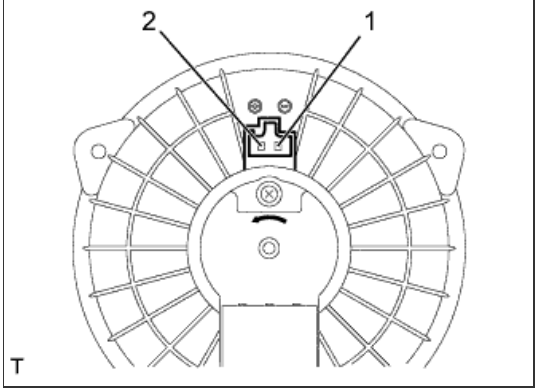
a. Replace the wiring air conditioning harness sub-assembly with a normal one and check that the condition returns to normal.

OK:
Same problem does not occur.

NG → Go to step 8

OK ↓

REPLACE WIRING AIR CONDITIONING HARNESS SUB-ASSEMBLY



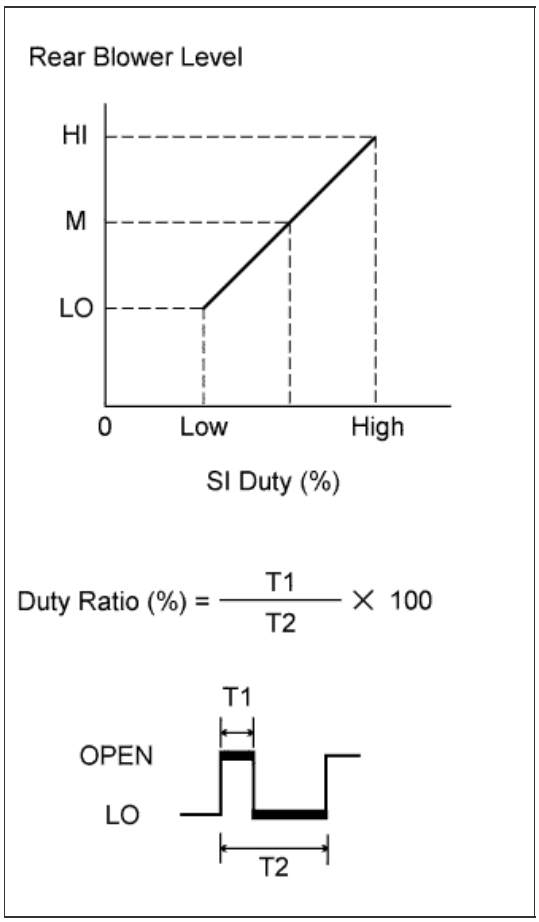
8.INSPECT REAR BLOWER MOTOR

a. Disconnect the 32 motor connector.

b. Connect the positive (+) lead of the battery to terminal 2 and the negative (-) lead to terminal 1, then check that the rear blower motor operates smoothly.

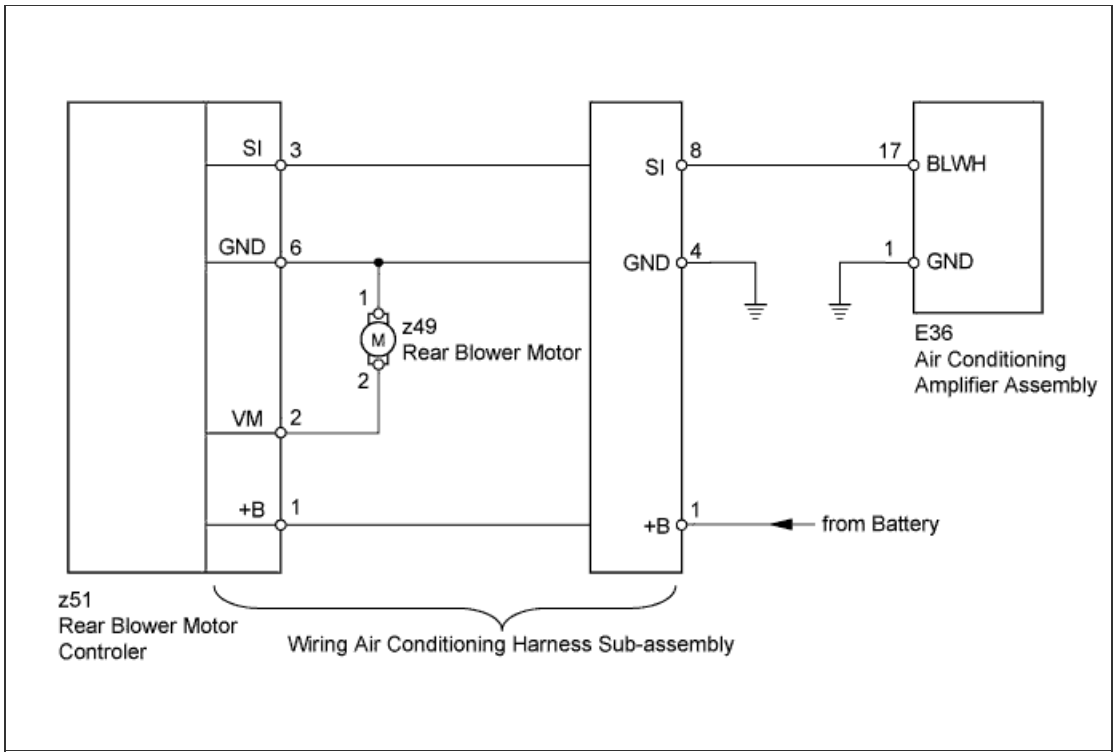
OK:
The rear blower motor operates smoothly.

Component without harness connected:
(Rear Blower Motor)



NG → REPLACE REAR BLOWER MOTOR (Click here)

OK → REPLACE REAR BLOWER MOTOR CONTROLLER (Click here)



for Preparation Click here

DESCRIPTION

The rear cooling unit expansion valve (rear magnetic valve) is controlled by the air conditioning amplifier assembly.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.PERFORM ACTIVE TEST USING INTELLIGENT TESTER (REAR A/C MAG VALVE)

a. Select the Active Test, use the intelligent tester to generate a control command, and then check that the rear cooling unit expansion valve operates.

OK:
Rear cooling unit expansion valve operates normally.

Air Conditioner

Tester Display	Test Part	Control Range	Diagnostic Note
Rear A/C Mag Valv	Rear cooling unit expansion valve	OFF or ON	-

NG → Go to step 2

OK

REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

2.INSPECT FUSE (A/C IG)

a. Remove the A/C IG fuse from the cowl side junction block LH.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A/C IG fuse	Always	Below 1 Ω

NG → REPLACE FUSE

OK

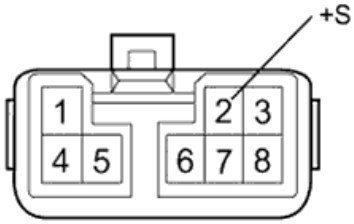
3.CHECK HARNESS AND CONNECTOR (WIRING AIR CONDITIONING HARNESS - BATTERY)



a. Disconnect the wiring air conditioning harness sub-assembly connector.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
2 (+S) - Body ground	Engine switch off	Below 1 V
	Engine switch on (IG)	11 to 14 V

Front view of wire harness connector: (to Air Conditioning Wiring Harness Sub-assembly)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

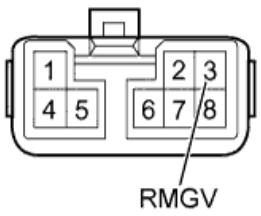
4.CHECK HARNESS AND CONNECTOR (WIRING AIR CONDITIONING HARNESS - AIR CONDITIONING AMPLIFIER)

a. Disconnect the wiring air conditioning harness sub-assembly connector.



b. Disconnect the E36 amplifier connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3 (RMGV) - E36-19 (RMGV)	Always	Below 1 Ω
3 (RMGV) - Body ground	Always	10 kΩ or higher
E36-19 (RMGV) - Body ground		

Front view of wire harness connector: (to Air Conditioning Wiring Harness Sub-assembly)

Rear view of wire harness connector: (to Air Conditioning Amplifier Assembly)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

5.CHECK REAR COOLING UNIT EXPANSION VALVE (OPERATION)

a. Replace the rear cooling unit expansion valve (Click here).

HINT:

Since the rear cooling unit expansion valve cannot be inspected while it is removed from the vehicle, replace the rear cooling unit expansion valve with a normal one and check that the condition returns to normal.

OK:

Same problem does not occur.

NG → Go to step 6

OK

REPLACE REAR COOLING UNIT EXPANSION VALVE (Click here)

6.CHECK WIRING AIR CONDITIONING HARNESS SUB-ASSEMBLY (OPERATION)

a. Replace the wiring air conditioning harness sub-assembly with a normal one and check that the condition returns to normal.

OK:

Same problem does not occur.

NG → REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

OK

REPLACE WIRING AIR CONDITIONING HARNESS SUB-ASSEMBLY

for Preparation Click here

DESCRIPTION

The rear cooling unit expansion valve (rear magnetic valve) is controlled by the air conditioning amplifier assembly.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.PERFORM ACTIVE TEST USING INTELLIGENT TESTER (REAR A/C MAG VALVE)

a. Select the Active Test, use the intelligent tester to generate a control command, and then check that the rear cooling unit expansion valve operates.

OK:
Rear cooling unit expansion valve operates normally.

Air Conditioner

Tester Display	Test Part	Control Range	Diagnostic Note
Rear A/C Mag Valv	Rear cooling unit expansion valve	OFF or ON	-

NG → Go to step 2

OK

REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

2.INSPECT FUSE (A/C IG)

a. Remove the A/C IG fuse from the cowl side junction block LH.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A/C IG fuse	Always	Below 1 Ω

NG → REPLACE FUSE

OK

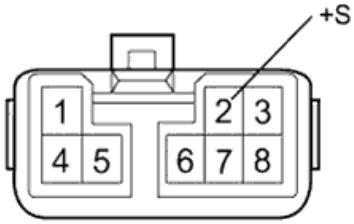
3.CHECK HARNESS AND CONNECTOR (WIRING AIR CONDITIONING HARNESS - BATTERY)



a. Disconnect the wiring air conditioning harness sub-assembly connector.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
2 (+S) - Body ground	Engine switch off	Below 1 V
	Engine switch on (IG)	11 to 14 V

Front view of wire harness connector: (to Air Conditioning Wiring Harness Sub-assembly)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

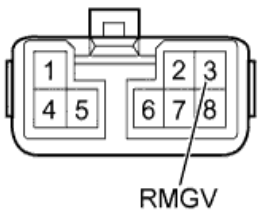
4.CHECK HARNESS AND CONNECTOR (WIRING AIR CONDITIONING HARNESS - AIR CONDITIONING AMPLIFIER)

a. Disconnect the wiring air conditioning harness sub-assembly connector.



b. Disconnect the E36 amplifier connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3 (RMGV) - E36-19 (RMGV)	Always	Below 1 Ω
3 (RMGV) - Body ground	Always	10 kΩ or higher
E36-19 (RMGV) - Body ground		

Front view of wire harness connector: (to Air Conditioning Wiring Harness Sub-assembly)

Rear view of wire harness connector: (to Air Conditioning Amplifier Assembly)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

5.CHECK REAR COOLING UNIT EXPANSION VALVE (OPERATION)

a. Replace the rear cooling unit expansion valve (Click here).

HINT:

Since the rear cooling unit expansion valve cannot be inspected while it is removed from the vehicle, replace the rear cooling unit expansion valve with a normal one and check that the condition returns to normal.

OK:

Same problem does not occur.

NG → Go to step 6

OK

REPLACE REAR COOLING UNIT EXPANSION VALVE (Click here)

6.CHECK WIRING AIR CONDITIONING HARNESS SUB-ASSEMBLY (OPERATION)

a. Replace the wiring air conditioning harness sub-assembly with a normal one and check that the condition returns to normal.

OK:

Same problem does not occur.

NG → REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

OK

REPLACE WIRING AIR CONDITIONING HARNESS SUB-ASSEMBLY

for Preparation Click here

DESCRIPTION

The main power source is supplied to the air conditioning amplifier assembly when the engine switch is on (IG). The power source is used for operating the air conditioning amplifier assembly and servo motor, etc.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Start the engine before inspection. Check the relay or battery if the entry and start system does not start.

1.INSPECT FUSE (ECU-IG NO. 2)

a. Remove the ECU-IG NO. 2 fuse from the cowl side junction block LH.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
ECU-IG NO. 2 fuse	Always	Below 1 Ω

NG → REPLACE FUSE

OK

2.CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - BATTERY AND BODY GROUND)

a. w/ Rear Heater

i. Disconnect the E35 and E36 amplifier connectors.

ii. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E36-5 (IG+) - Body ground	Engine switch off	Below 1 V
	Engine switch on (IG)	11 to 14 V

iii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E36-1 (GND) - Body ground	Always	Below 1 Ω
E36-2 (E1) - Body ground		
E35-6 (E2) - Body ground		

b. w/o Rear Heater

i. Disconnect the E81 amplifier connector.

ii. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E81-1 (IG+) - Body ground	Engine switch off	Below 1 V
	Engine switch on (IG)	11 to 14 V

iii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E81-14 (GND) - Body ground	Always	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK → REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

for Preparation Click here

DESCRIPTION

The main power source is supplied to the air conditioning amplifier assembly when the engine switch is on (IG). The power source is used for operating the air conditioning amplifier assembly and servo motor, etc.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

Start the engine before inspection. Check the relay or battery if the entry and start system does not start.

1.INSPECT FUSE (ECU-IG NO. 2)

a. Remove the ECU-IG NO. 2 fuse from the cowl side junction block LH.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
ECU-IG NO. 2 fuse	Always	Below 1 Ω

NG → REPLACE FUSE

OK

2.CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - BATTERY AND BODY GROUND)

a. w/ Rear Heater

i. Disconnect the E35 and E36 amplifier connectors.

ii. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E36-5 (IG+) - Body ground	Engine switch off	Below 1 V
	Engine switch on (IG)	11 to 14 V

iii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E36-1 (GND) - Body ground	Always	Below 1 Ω
E36-2 (E1) - Body ground		
E35-6 (E2) - Body ground		

b. w/o Rear Heater

i. Disconnect the E81 amplifier connector.

ii. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E81-1 (IG+) - Body ground	Engine switch off	Below 1 V
	Engine switch on (IG)	11 to 14 V

iii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E81-14 (GND) - Body ground	Always	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK → REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

for Preparation Click here

DESCRIPTION

The back-up power source circuit for the air conditioning amplifier assembly is shown below. Power is supplied even when turning the engine switch off and is used for diagnostic trouble code memory, etc.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.INSPECT FUSE (A/C)

a. Remove the A/C fuse from the cowl side junction block LH.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A/C fuse	Always	Below 1 Ω

NG → REPLACE FUSE

OK

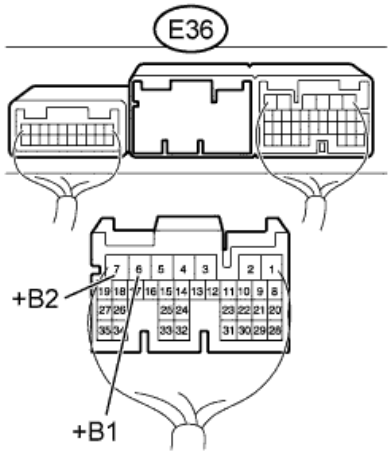
2.CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - BATTERY)

a. w/ Rear Heater



i. Disconnect the E36 amplifier connector.

ii. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
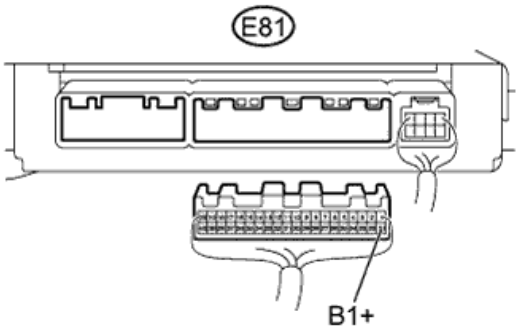
E36-6 (+B1) - Body ground	Always	11 to 14 V
E36-7 (+B2) - Body ground		

Rear view of wire harness connector: (to Air Conditioning Amplifier Assembly)

b. w/o Rear Heater



i. Disconnect the E81amplifier connector.

ii. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
E81-21 (+B1) - Body ground	Always	11 to 14 V

Rear view of wire harness connector: (to Air Conditioning Amplifier Assembly)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

for Preparation Click here

DESCRIPTION

The back-up power source circuit for the air conditioning amplifier assembly is shown below. Power is supplied even when turning the engine switch off and is used for diagnostic trouble code memory, etc.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.INSPECT FUSE (A/C)

a. Remove the A/C fuse from the cowl side junction block LH.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A/C fuse	Always	Below 1 Ω

NG → REPLACE FUSE

OK

2.CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - BATTERY)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE AIR CONDITIONING AMPLIFIER ASSEMBLY (Click here)

for Preparation Click here

1. INSPECT REFRIGERANT VOLUME

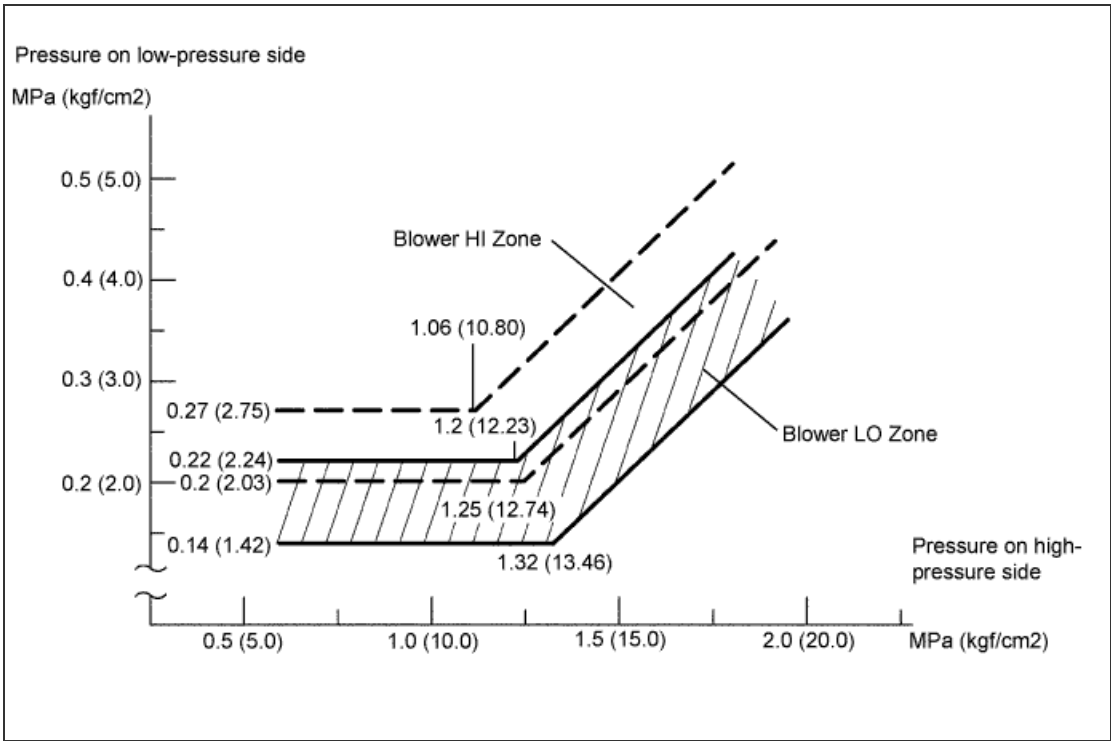
a. Check the sight glass on the liquid pipe A.
Test conditions:

- Temperature at the air inlet is 30 to 35°C (86 to 95°F).
- Engine is running at 1500 rpm.
- Blower speed control switch is at HI.
- A/C switch is on.
- Temperature control switch is at the MAX. COOL position.
- Doors are fully open.

Item	Symptom	Amount of Refrigerant	Corrective Procedures
1	Bubbles visible	Insufficient*	(1) Check for gas leakage and repair if necessary (2) Add refrigerant until bubbles disappear
2	No bubbles visible	Empty, insufficient or too much	Refer to items 3 and 4
3	No temperature difference between compressor inlet and outlet	Empty or nearly empty	(1) Check for gas leakage with halogen leak detector and repair if necessary (2) Add refrigerant until bubbles disappear
4	Considerable temperature difference between compressor inlet and outlet	Correct or too much	Refer to items 5 and 6
5	Immediately after A/C is off, refrigerant becomes clear	Too much	(1) Drain or discharge refrigerant (2) Bleed air and supply proper amount of purified refrigerant
6	Immediately after A/C is off, refrigerant foams and then becomes clear	Correct	-

HINT:

*: If the ambient temperature is higher than usual but cooling is sufficient, bubbles in the sight glass are permissible.

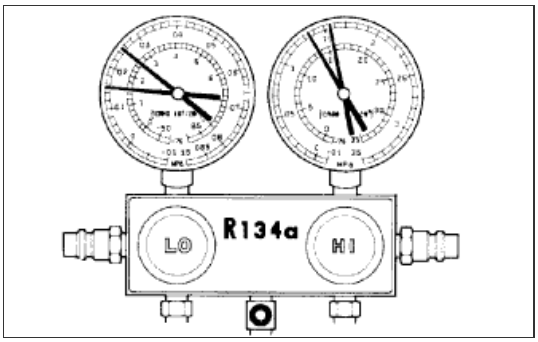


2. INSPECT REFRIGERANT PRESSURE WITH MANIFOLD GAUGE SET

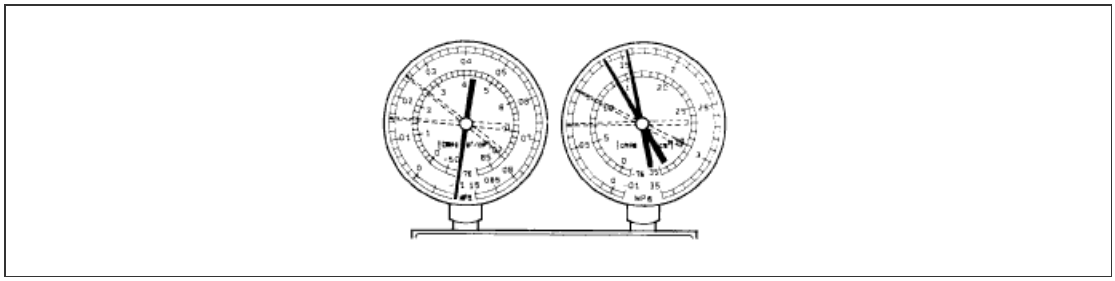
a. This method uses a manifold gauge set to locate problem areas. Read the manifold gauge pressure when these conditions are established.

Test conditions:

- Temperature at the air inlet with the switch set at RECIRC is 30 to 35°C (86 to 95°F).
- Engine is running at 1500 rpm.
- All doors are fully open.
- Blower speed control switch is at HI.
- A/C switch is on.



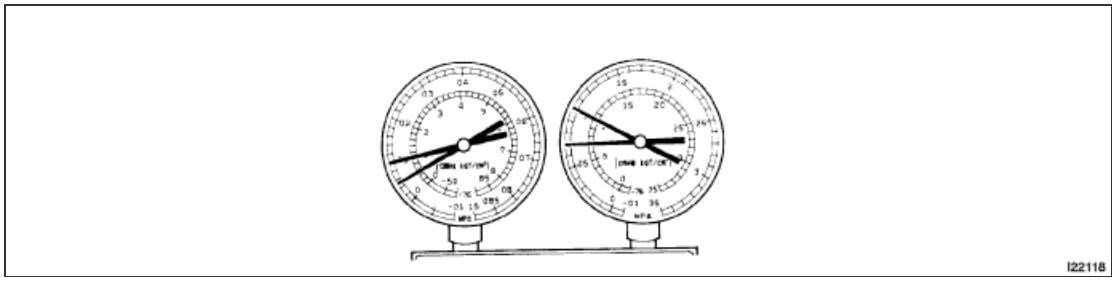
Gauge readings (Reference).



i. Normally functioning refrigeration system

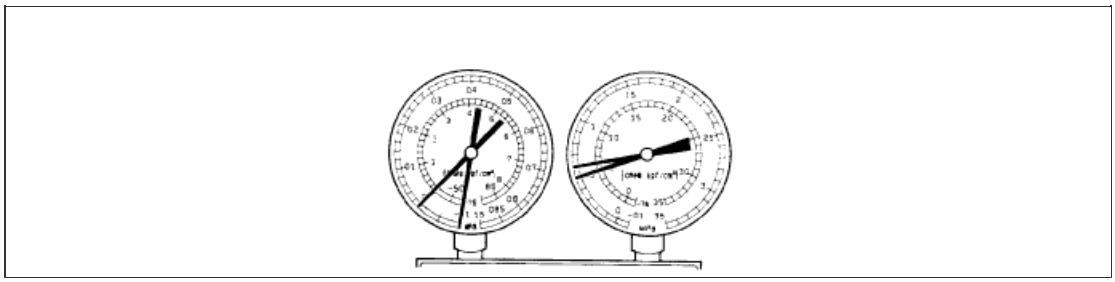
Gauge Reading:

Pressure Side	Refrigerant Volume
Low	0.15 to 0.25 MPa (1.5 to 2.5 kgf/cm^2)
High	1.37 to 1.57 MPa (14 to 16 kgf/cm^2)



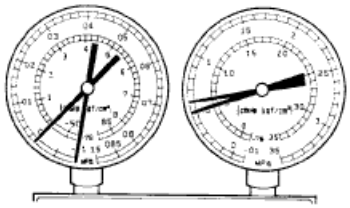
ii. The A/C system periodically changes between normal and improper function due to moisture in the refrigerant system.

Symptoms	Probable Cause	Diagnosis	Corrective Actions
During operation, pressure	Moisture in refrigeration system freezes at expansion valve orifice,	- Dryer is overly saturated - Moisture in refrigeration	1. Replace cooler dryer 2. Remove moisture from



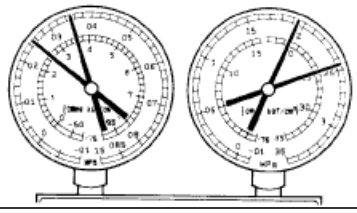
on low pressure side cycles between normal and vacuum	causing temporary stop of cycle. However, when melted, normal state is restored.	system freezes at expansion valve orifice and blocks refrigerant circulation	cycle by repeatedly evacuating air 3. Supply appropriate volume of new refrigerant

iii. The A/C system does not function effectively due to insufficient refrigerant.



Symptoms	Probable Cause	Diagnosis	Corrective Actions
- Pressure low on both low and high pressure sides - Cooling performance insufficient	Gas leakage from refrigeration system	- Insufficient refrigerant - Refrigerant leakage	1. Check for gas leakage and repair if necessary 2. Supply appropriate volume of new refrigerant 3. If indicated pressure value close to 0 when connected to gauge, create vacuum after inspecting and repairing the location of leakage

iv. The A/C system does not function effectively due to poor circulation of the refrigerant.

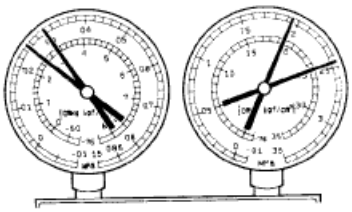


Symptoms	Probable Cause	Diagnosis	Corrective Actions
- Pressure low on both low and high pressure sides - Frost exists on piping from condenser to A/C unit	Refrigerant flow obstructed by dirt in condenser	Condenser clogged	Replace condenser

v. The A/C system does not function or functions intermittently because the refrigerant does not circulate.

Symptoms	Probable Cause	Diagnosis	Corrective Actions
- Vacuum indicated on low pressure side, and extremely low pressure indicated on high pressure side - Frost or condensation seen on piping on both sides of condenser or expansion valve	- Refrigerant flow obstructed by moisture or dirt in refrigeration system - Refrigerant flow obstructed by gas leakage from expansion valve	Refrigerant does not circulate	1. Check expansion valve refrigerant 2. Clean expansion valve by blowing air 3. Replace condenser 4. Evacuate air and charge appropriate volume of new refrigerant 5. For gas leakage from expansion valve, replace expansion valve

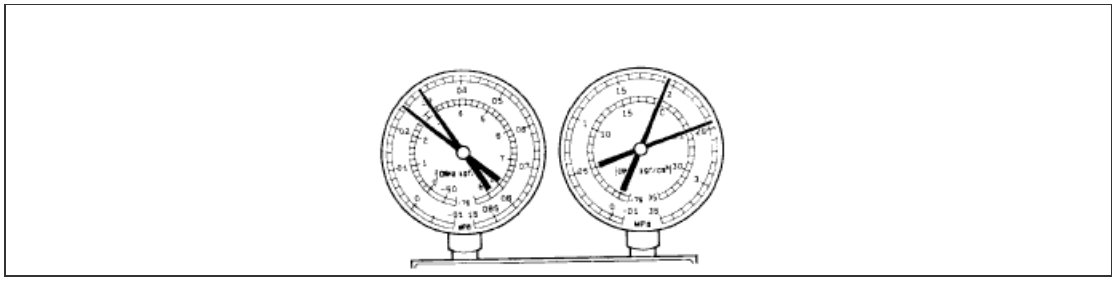
vi. The A/C system does not function effectively due to overcharged refrigerant or insufficient cooling of the condenser.



Symptoms	Probable Cause	Diagnosis	Corrective Actions
Pressure extremely high on both low and high-pressure sides	- Excessive refrigerant - Cooling performance of condenser insufficient	- Condenser is dirty - Condenser fan motor is malfunctioning - Excessive refrigerant	1. Clean condenser 2. Check condenser fan motor operation 3. If 1 and 2 normal, check the amount of refrigerant and supply appropriate volume of refrigerant

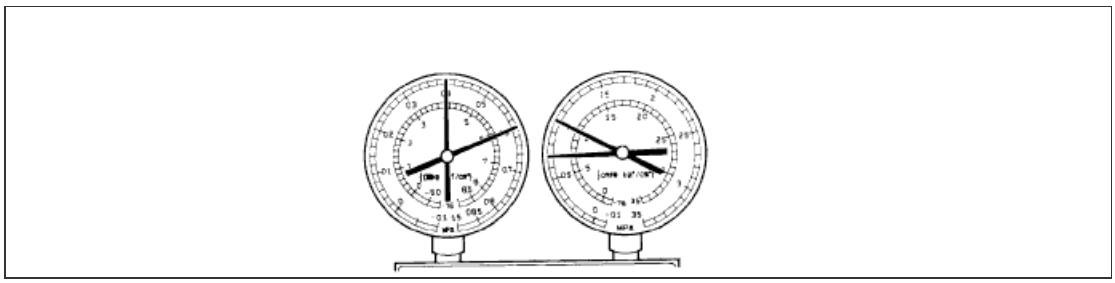
vii. The A/C system does not function due to air in the refrigeration system.

CAUTION:



The low-pressure piping may be very hot and cause serious burns.

HINT: These gauge indications occur when the refrigeration system opens and the refrigerant is charged without vacuum purging



Symptoms	Probable Cause	Diagnosis	Corrective Actions
- Pressure extremely high on both low and high-pressure sides - Low-pressure piping is too hot to touch	Air in refrigeration system	- Air in refrigeration system - Vacuum purging insufficient	1. Check if compressor oil is dirty or insufficient 2. Evacuate air and charge new refrigerant

viii. The A/C system does not function effectively due to an expansion valve malfunction.

Symptoms	Probable Cause	Diagnosis	Corrective Actions
- Pressure extremely high on both low and high-pressure sides - Frost or condensation on piping on low-pressure side	Problem with expansion valve	- Excessive refrigerant in low pressure piping - Expansion valve too wide open	Replace expansion valve

ix. The A/C system does not function due to a defective compressor.

Symptoms	Probable Cause	Diagnosis	Corrective Actions
- Pressure extremely high on both low and high-pressure sides - Pressure extremely low on high pressure side	Internal leakage in compressor	- Compression failure - Leakage from damaged valve or broken sliding parts	Repair or replace compressor

for Preparation Click here

1. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM

a. Start the engine.

b. Turn the A/C switch on.

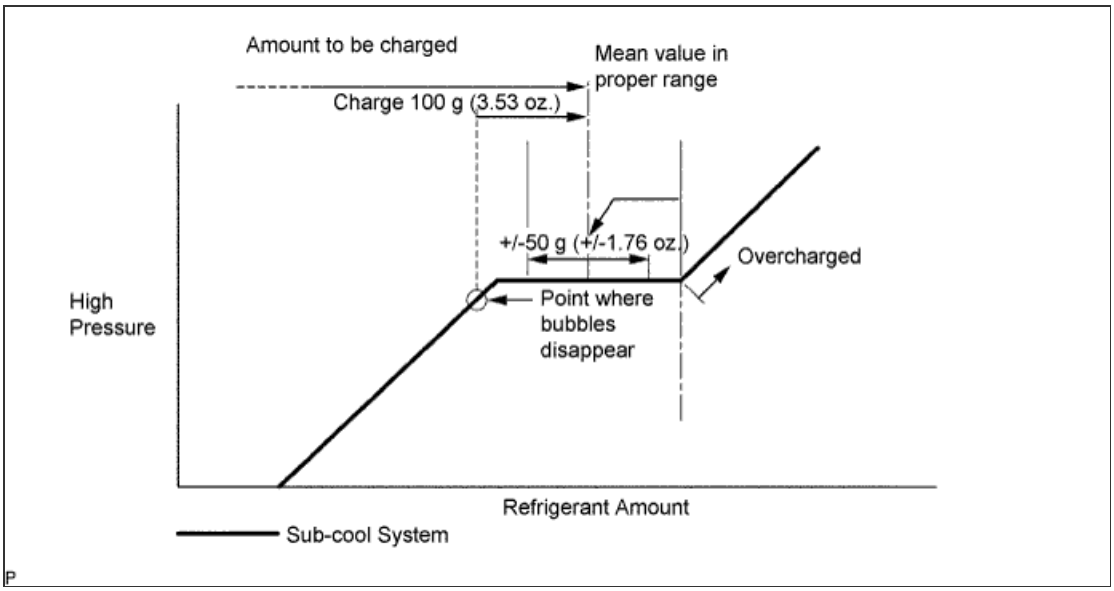
c. Operate the cooler compressor while the engine speed is approximately 1000 rpm for 5 to 6 minutes to circulate the refrigerant and collect the compressor oil remaining in each component into the cooler compressor.

d. Stop the engine.

e. Recover the refrigerant from the A/C system using a refrigerant recovery unit.

2. CHARGE REFRIGERANT

SST



09985-20010 (09985-02130, 09985-02150, 09985-02090, 09985-02110, 09985-02010, 09985-02050, 09985-02060, 09985-02070)

a. Perform vacuum purging using a vacuum pump.

b. Charge refrigerant HFC-134a (R134a).

Standard:

Condenser Core Thickness	Air Conditioning Type	Cool Box	Refrigerant Charging Amount
22 mm (0.866 in.)	w/o Rear Cooler	w/ Cool Box	870 +/-30 g (30.7 +/-1.1 oz.)
		w/o Cool Box	870 +/-30 g (30.7 +/-1.1 oz.)
	w/ Rear Cooler	w/ Cool Box	1010 +/-30 g (35.6 +/-1.1 oz.)
		w/o Cool Box	960 +/-30 g (33.9 +/-1.1 oz.)
16 mm (0.630 in.)	w/o Rear Cooler	w/ Cool Box	770 +/-30 g (27.2 +/-1.1 oz.)
		w/o Cool Box	770 +/-30 g (27.2 +/-1.1 oz.)
	w/ Rear Cooler	w/ Cool Box	970 +/-30 g (34.2 +/-1.1 oz.)
		w/o Cool Box	920 +/-30 g (32.5 +/-1.1 oz.)

NOTICE:

- **Do not operate the cooler compressor before charging refrigerant as the cooler compressor will not work properly**

without any refrigerant, and will overheat.

- **Approximately 200 g (7.05 oz.) of refrigerant may need to be charged after bubbles disappear. The refrigerant amount should be checked by measuring its quantity, and not with the sight glass.**

3. WARM UP ENGINE

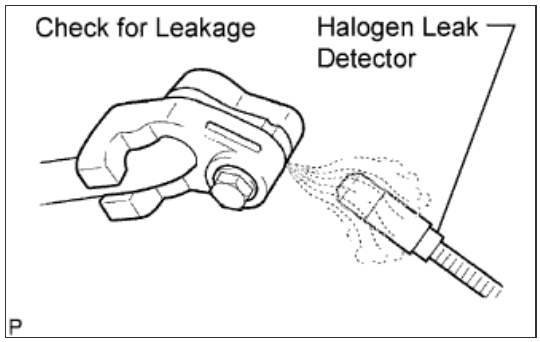
a. Warm up the engine at less than 1850 rpm for 2 minutes or more after charging the refrigerant.

NOTICE:

Be sure to warm up the compressor when turning the A/C switch is on after removing and installing the cooler refrigerant lines (including the compressor), to prevent damage to the compressor.

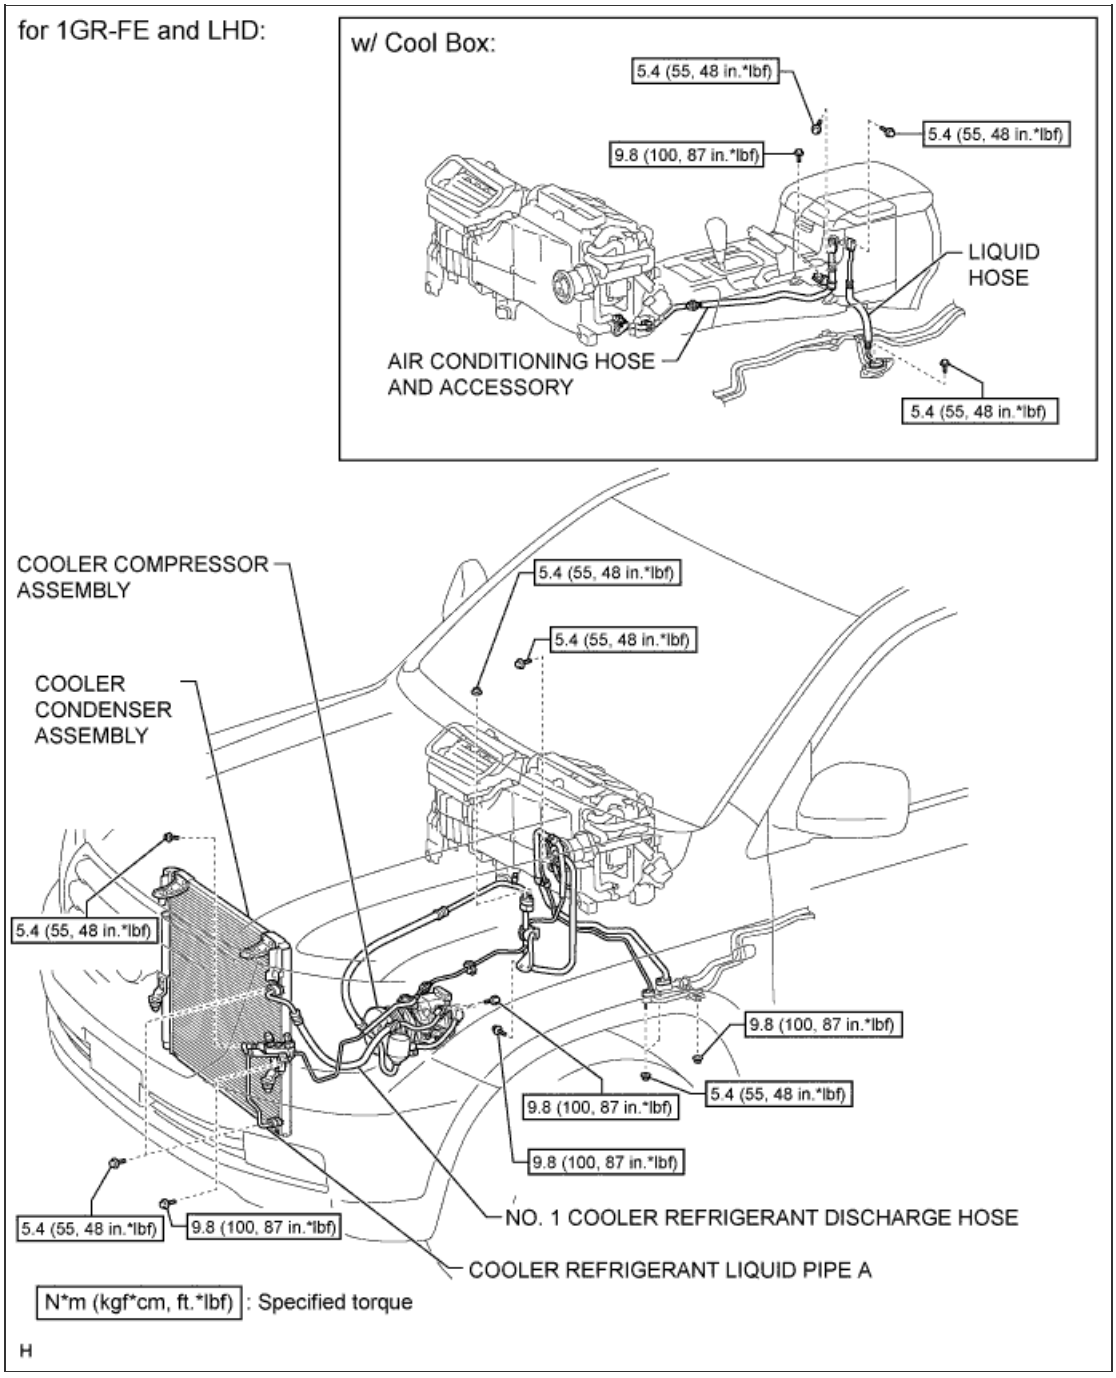
4. CHECK FOR REFRIGERANT GAS LEAK

a. After recharging the refrigerant gas, check for refrigerant gas leakage using a halogen leak detector.

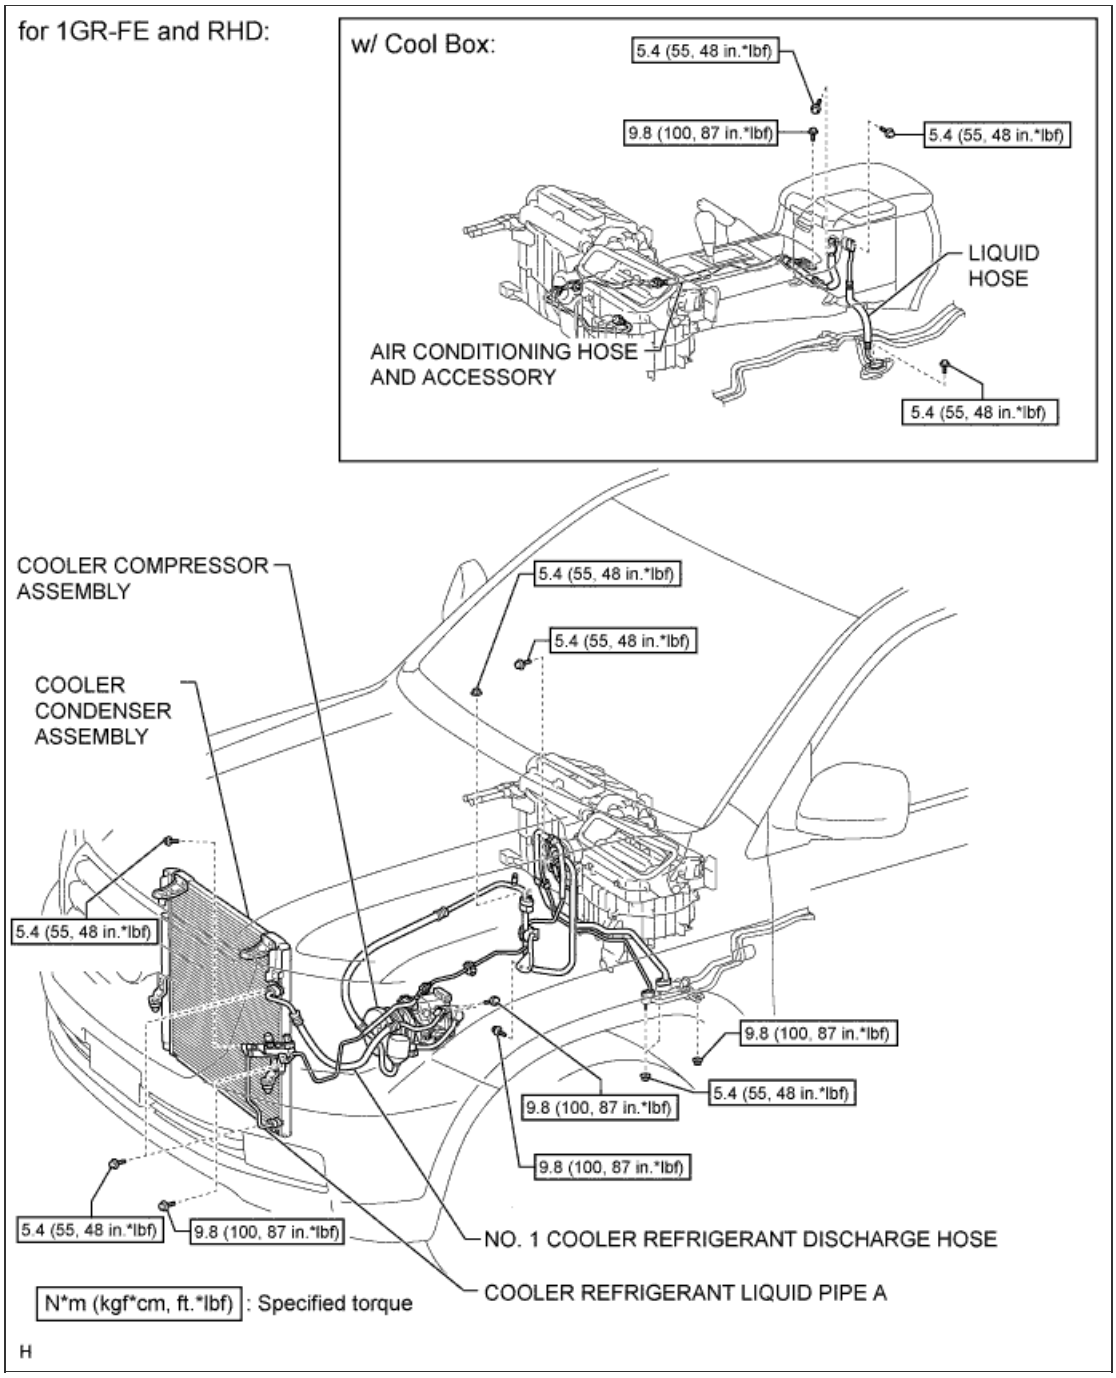


b. Perform the operation under these conditions:

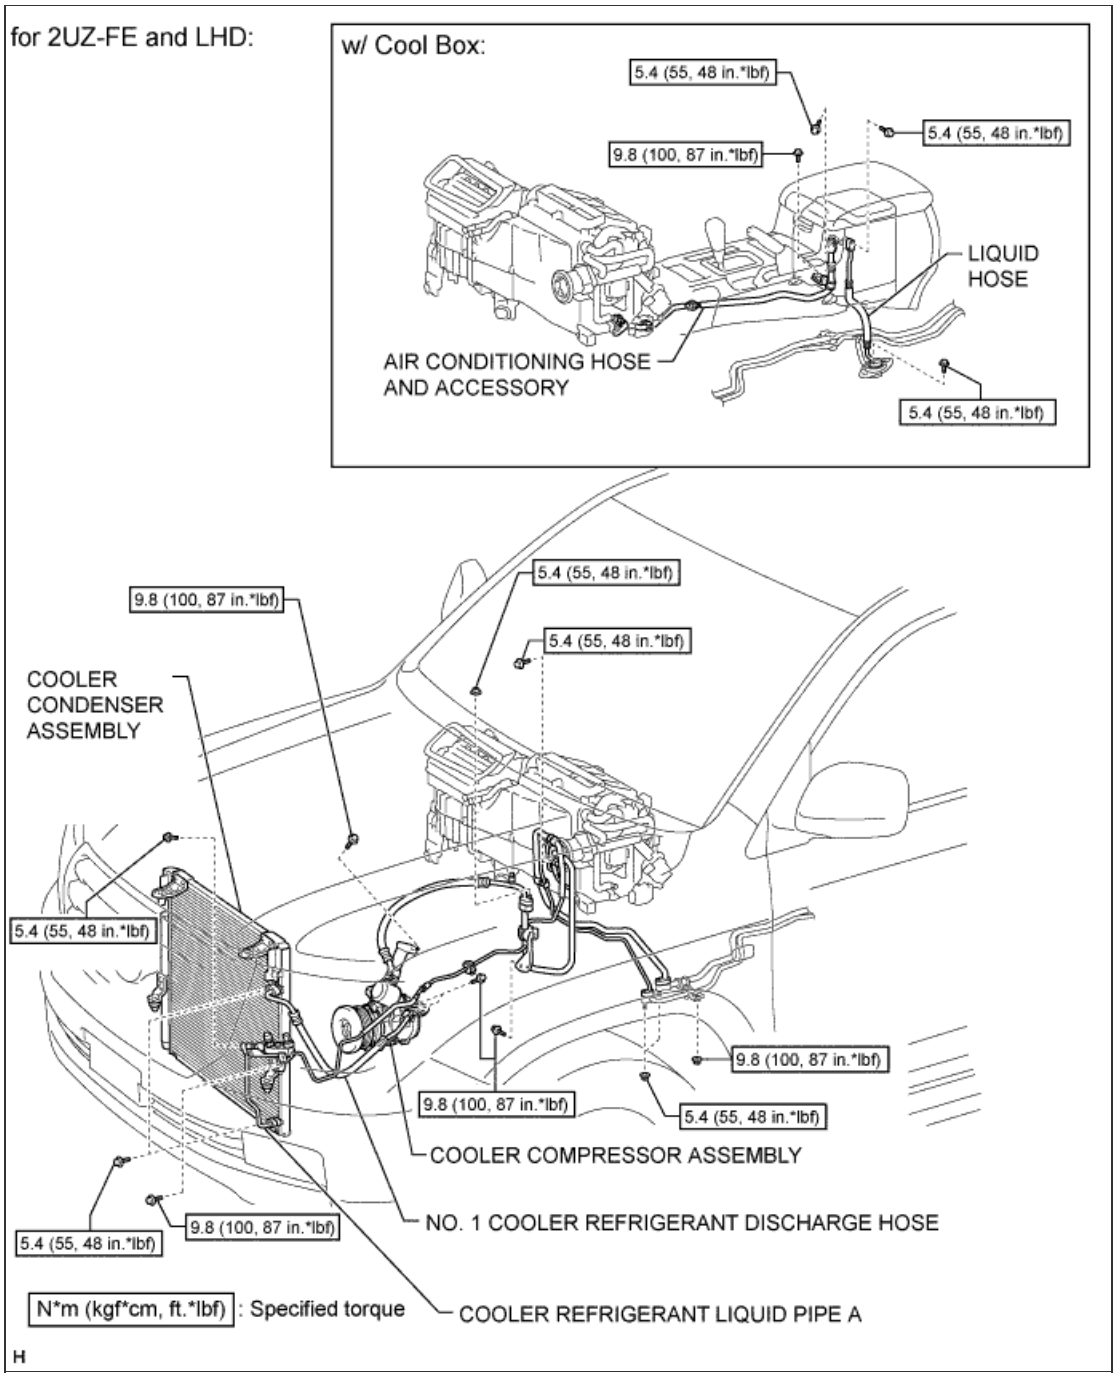
- Stop the engine.
- Secure good ventilation (the halogen leak detector may react to volatile gases other than refrigerant, such as evaporated gasoline or exhaust gas).
- Repeat the test 2 or 3 times.
- Make sure that some refrigerant remains in the refrigeration system. When compressor is off: approximately 392 to 588 kPa (4.0 to 6.0 kgf/cm^2, 57 to 85 psi).



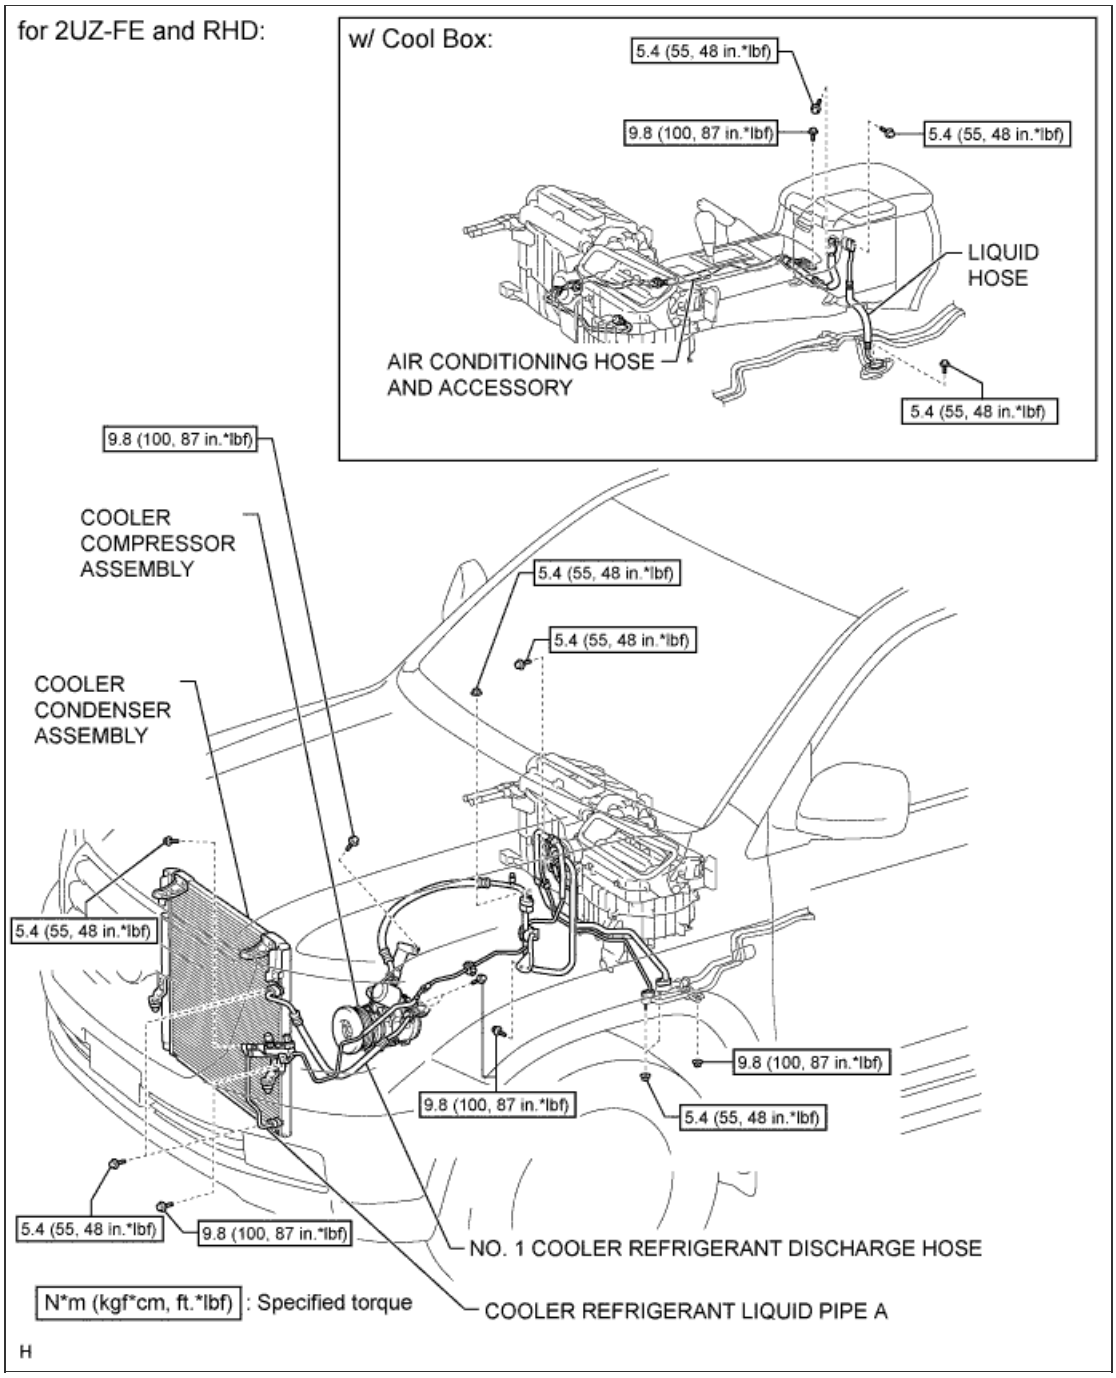
c. Using a halogen leak detector, check the refrigerant line for leakage.

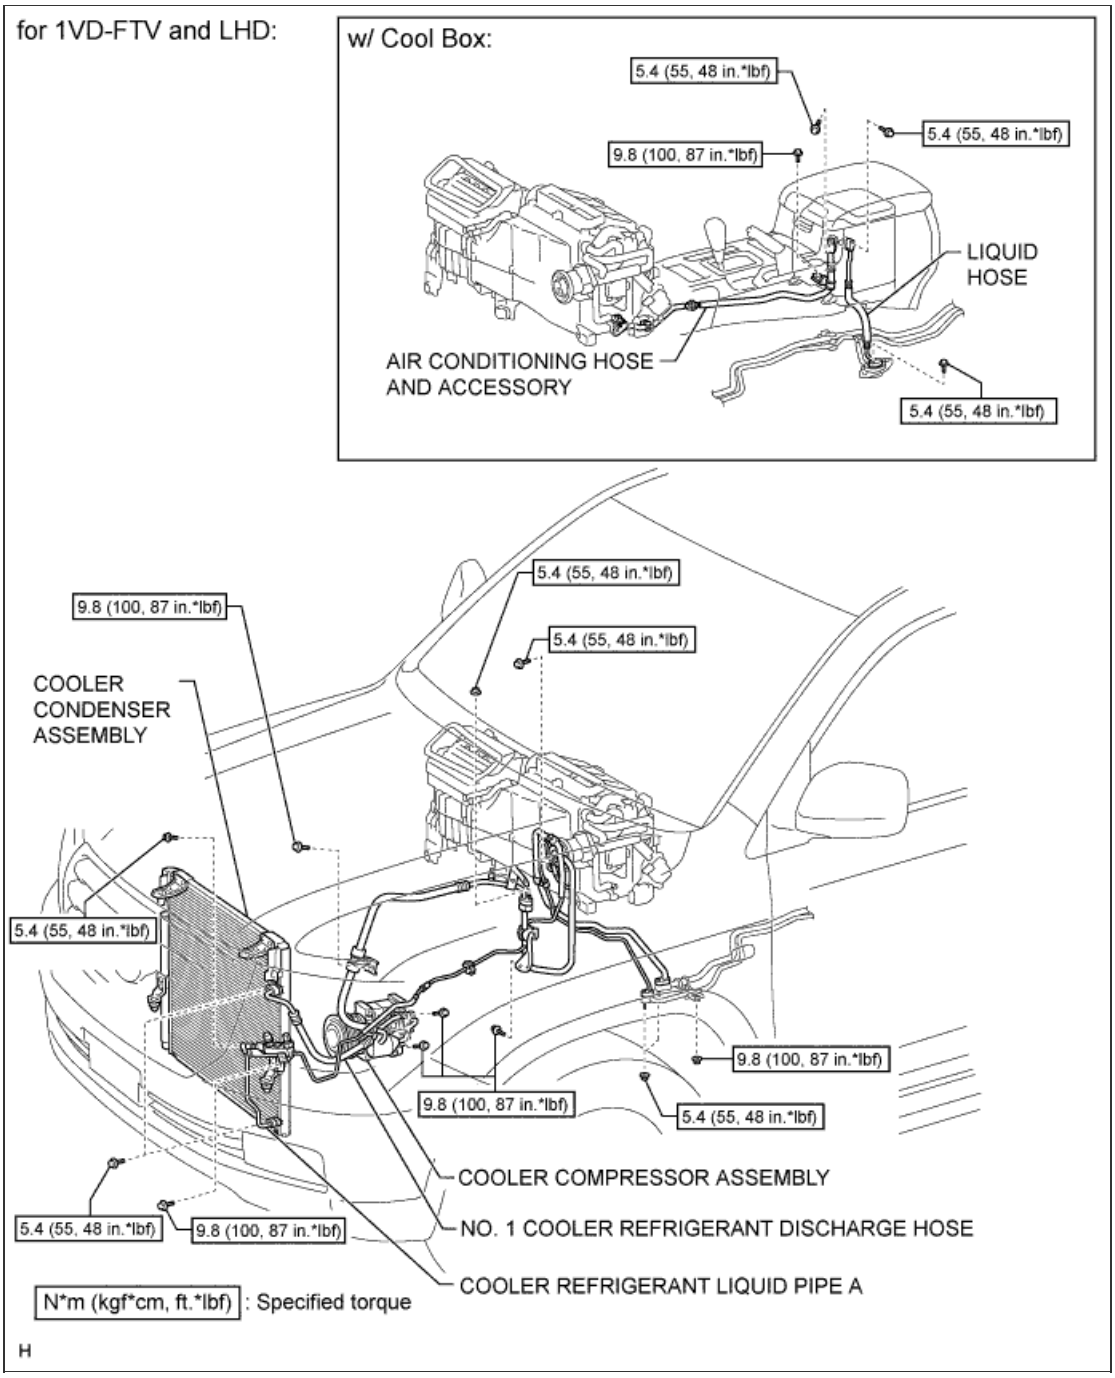


d. If a gas leak is not detected on the drain hose, remove the blower motor control (blower resistor) from the cooling unit. Insert the halogen leak detector sensor into the unit and perform the test.



e. Disconnect the connector and wait for approximately 20 minutes. Bring the halogen leak detector close to the pressure switch and perform the test.





for Preparation Click here

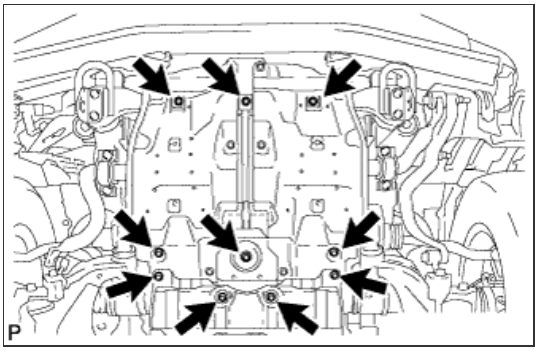
1. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. for Standard:
Remove the front fender splash shield (Click here).

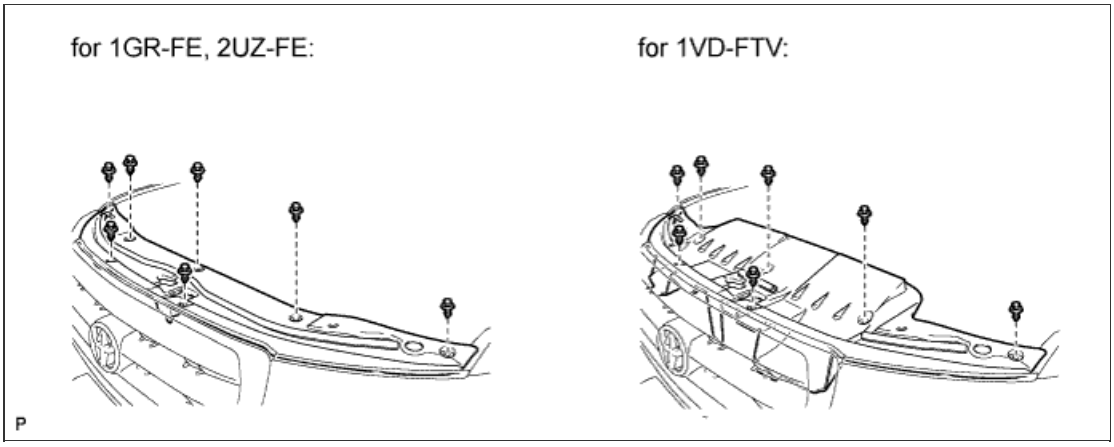
b. w/ Winch:
Remove the front fender splash shield (Click here).



2. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

a. for Standard:
Remove the front fender splash shield (Click here).

b. w/ Winch:
Remove the front fender splash shield (Click here).



3. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and No. 1 engine under cover.

4. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 7 clips and radiator support seal.

5. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM

a. Start the engine.

b. Turn the A/C switch on.

c. Operate the cooler compressor while the engine speed is approximately 1000 rpm for 5 to 6 minutes to circulate the refrigerant and collect the compressor oil remaining in each component into the cooler compressor.

d. Stop the engine.

e. Recover the refrigerant from the A/C system using a refrigerant recovery unit.

6. DRAIN ENGINE COOLANT

a. for 1VD-FTV:
Drain the engine coolant (Click here).

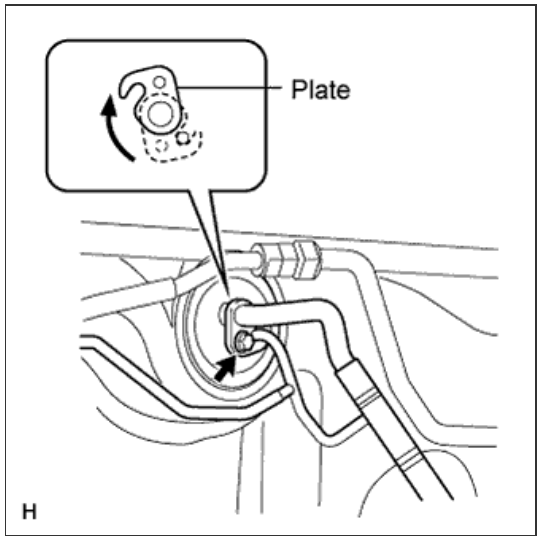
b. for 2UZ-FE:
Drain the engine coolant (Click here).

c. for 1GR-FE:
Drain the engine coolant (Click here).

7. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.



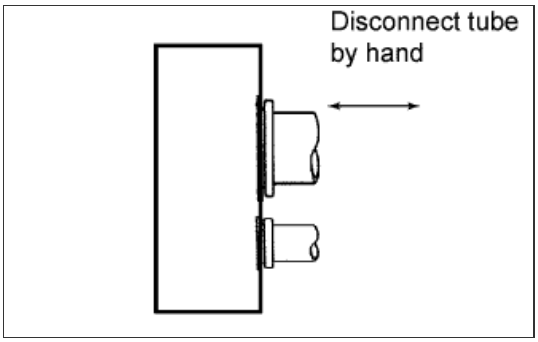
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

8. DISCONNECT AIR CONDITIONING TUBE ASSEMBLY

a. Remove the bolt.

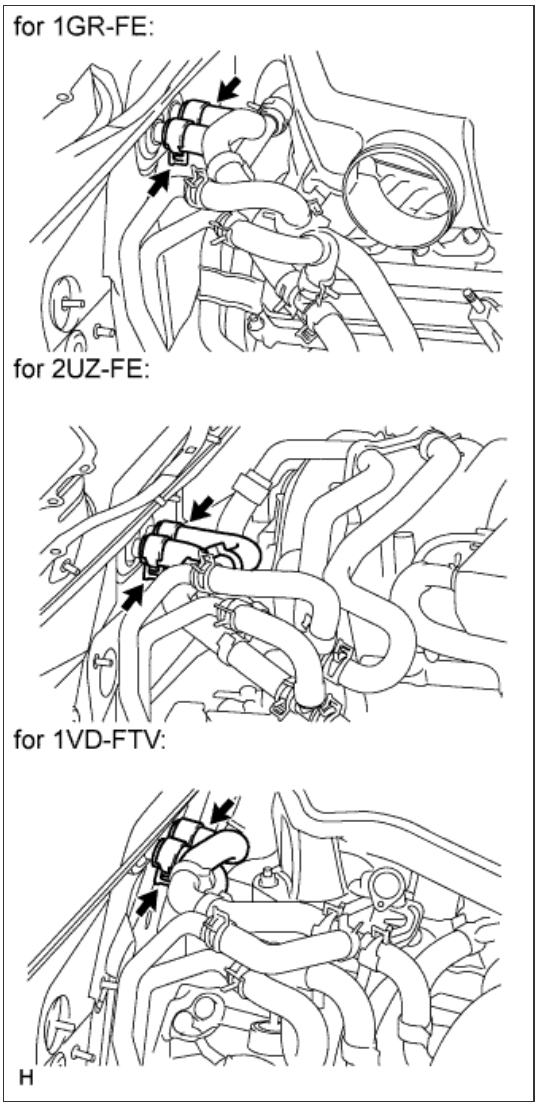
b. Detach the plate as shown in the illustration.



c. Disconnect the air conditioning tube assembly.

NOTICE:

- **Do not use a screwdriver or similar tool to disconnect the tube.**
- **Seal the openings of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering them.**



d. Remove the 2 O-rings from the air conditioning tube assembly.

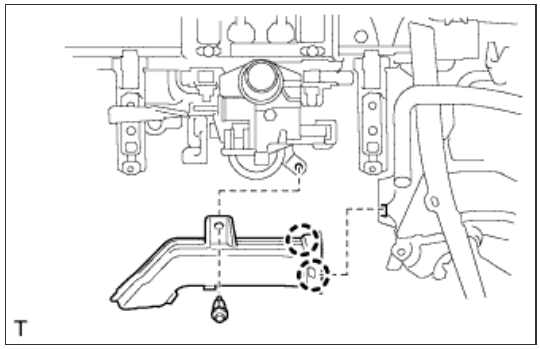
9. DISCONNECT HEATER WATER INLET HOSE AND HEATER WATER OUTLET HOSE

a. Using pliers, grip the claws of the clips and slide the 2 clips.

b. Disconnect the 2 heater water hoses.

10. REMOVE FRONT WIPER MOTOR AND BRACKET

a. Remove the front wiper motor and bracket (Click here).



11. REMOVE INSTRUMENT PANEL SUB-ASSEMBLY

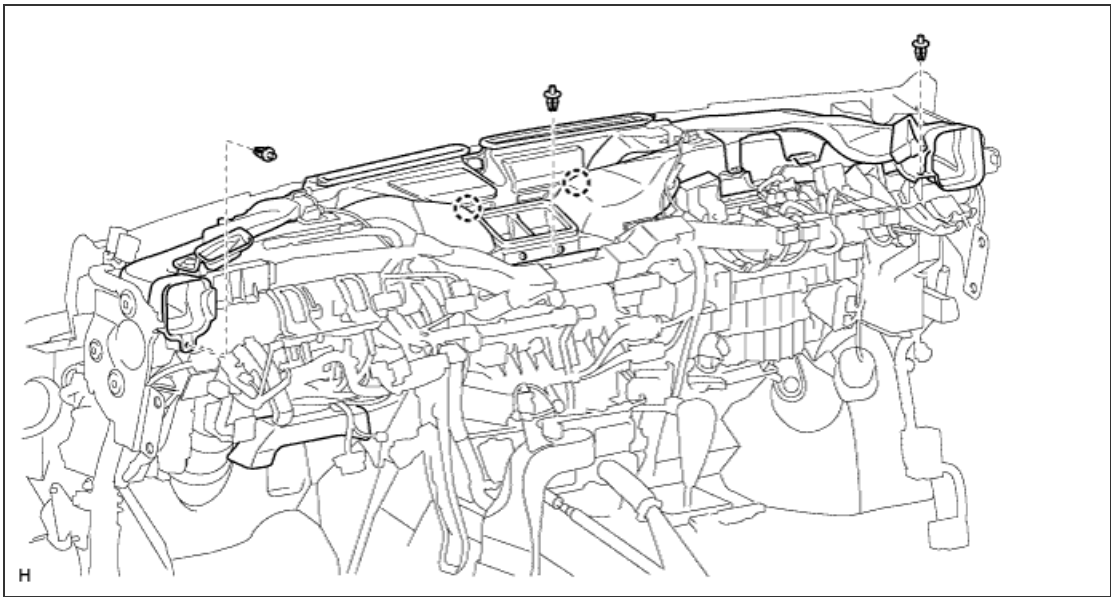
a. Remove the instrument panel (Click here).

12. REMOVE NO. 3 AIR DUCT SUB-ASSEMBLY

a. Remove the clip.

b. Detach the 2 claws and remove the duct.

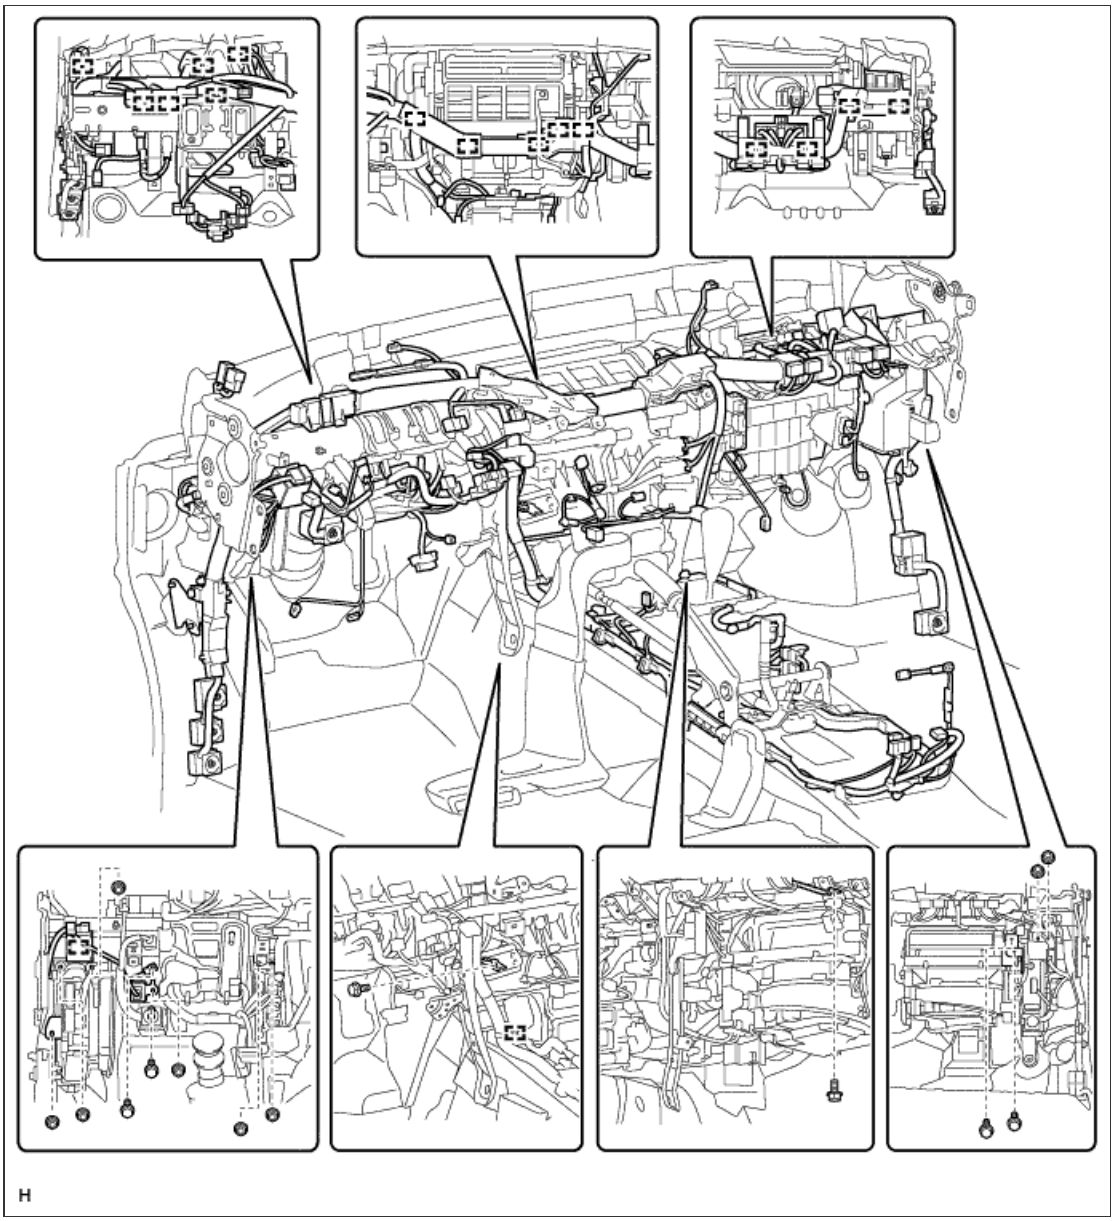
13. REMOVE STEERING COLUMN ASSEMBLY



a. for Power Tilt and Power Telescopic Steering Column:
Remove the steering column (Click here).

b. for Manual Tilt and Manual Telescopic Steering Column:
Remove the steering column (Click here).

14. REMOVE HEATER TO REGISTER DUCT ASSEMBLY



a. Remove the 3 clips.

b. Detach the 2 claws and remove the duct.

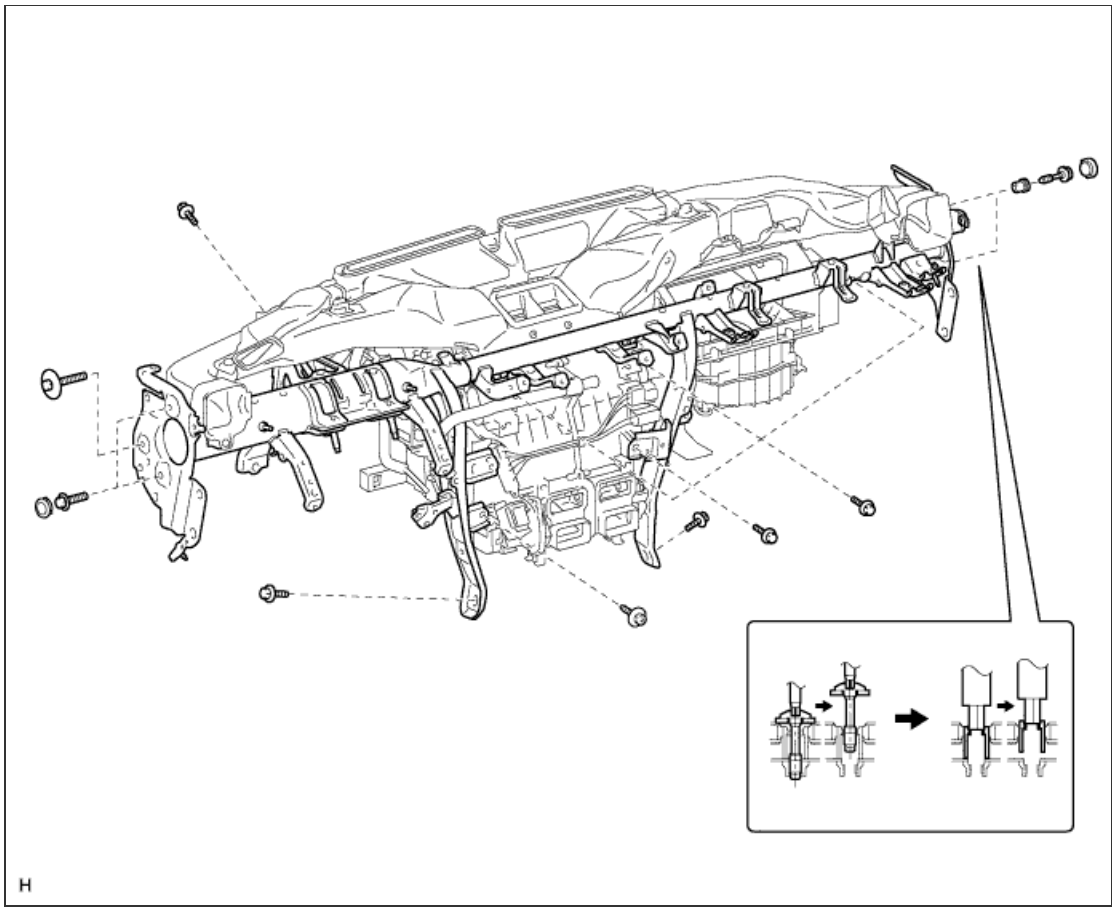
15. REMOVE INSTRUMENT PANEL REINFORCEMENT ASSEMBLY

a. Disconnect the clamps, connectors and wire harness.

b. Remove the instrument panel reinforcement.

i. for Driver Side:
Remove the 3 caps and 3 bolts.

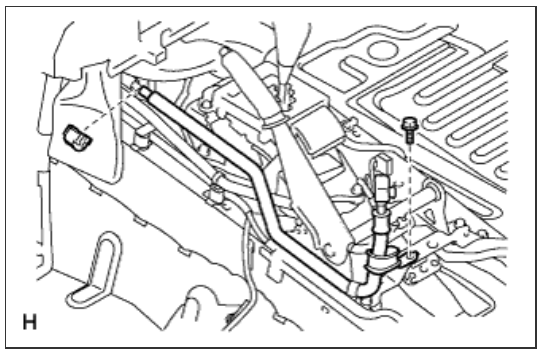
ii. for Passenger Side:
Remove the 2 caps.



iii. for Passenger Side:
Using a T40 "TORX" socket, remove the 2 "TORX" bolts.

HINT:

When removing the bolts, the collars may come off with the bolts.

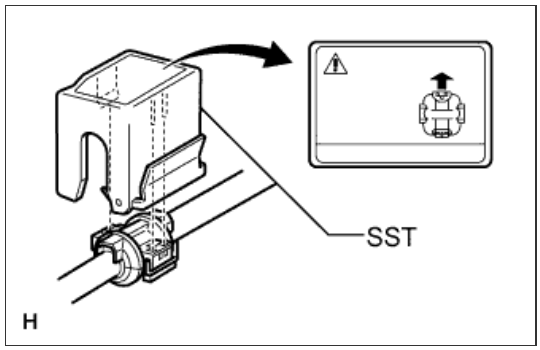


iv. for Passenger Side:
Using a 12 mm hexagon wrench, remove the 2 collars.

v. Remove the 7 bolts, screw and instrument panel reinforcement.

16. REMOVE AIR CONDITIONING HOSE AND ACCESSORY (w/ Cool Box)

a. Remove the bolt.



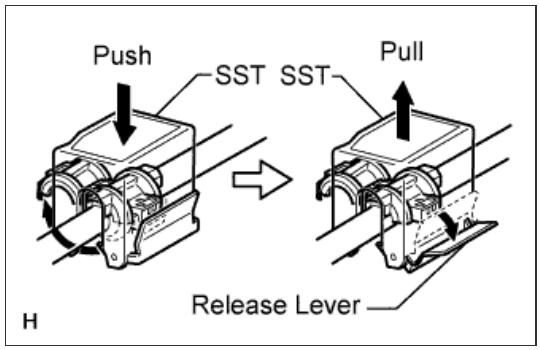
b. Using SST, remove the piping clamp.

SST
09870-00025

i. Attach SST to the piping clamp.

HINT:

Confirm the direction of the piping clamp claw and SST by referring to the illustration on the caution label.



ii. Push down SST and release the clamp lock.

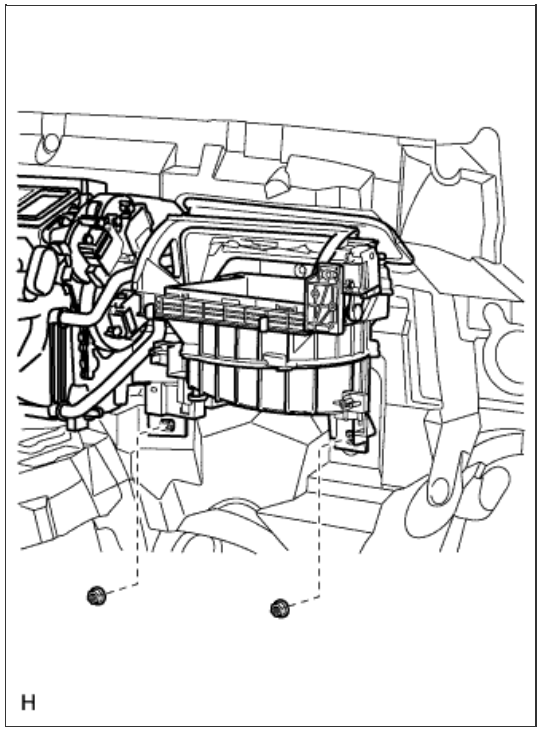
NOTICE:

Be careful not to deform the tubes when pushing SST.

iii. Pull SST slightly and push the release lever, then remove the piping clamp with SST.

iv. Remove the piping clamp from SST.

c. Disconnect the hose and accessory from the liquid tube to remove it.



NOTICE:

Cap the open fittings immediately to keep moisture or dirt out of the system.

d. Remove the 2 O-rings from the air conditioner hose and accessory.

17. REMOVE AIR CONDITIONING UNIT

a. Remove the 2 nuts and air conditioning unit.

for Preparation Click here

1. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. for Standard:
Remove the front fender splash shield (Click here).

b. w/ Winch:
Remove the front fender splash shield (Click here).

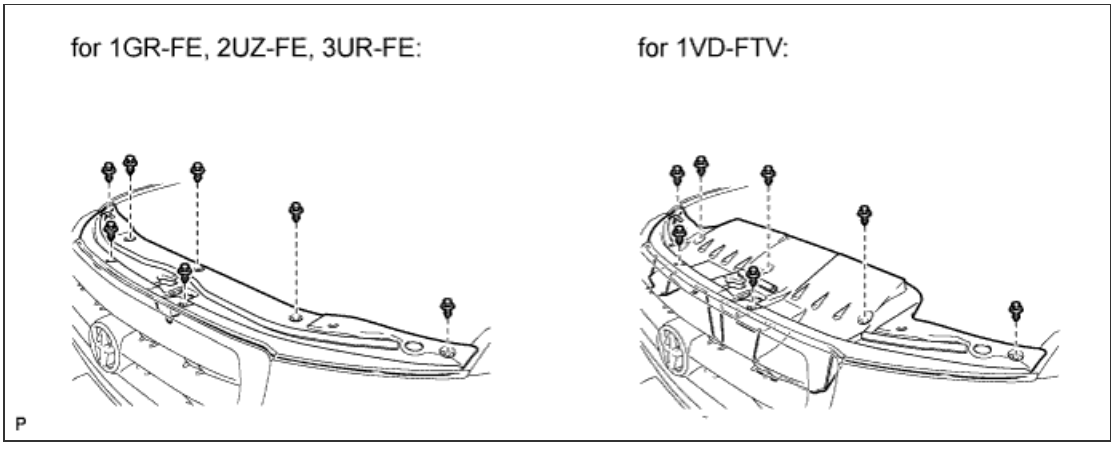
2. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

a. for Standard:
Remove the front fender splash shield (Click here).

b. w/ Winch:
Remove the front fender splash shield (Click here).

3. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. for 1VD-FTV:
Remove the No. 1 Engine under cover sub-assembly (Click here).



b. for 2UZ-FE:
Remove the No. 1 Engine under cover sub-assembly (Click here).

c. for 1GR-FE:
Remove the No. 1 Engine under cover sub-assembly (Click here).

d. for 3UR-FE:
Remove the No. 1 Engine under cover sub-assembly (Click here).

4. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 7 clips and radiator support seal.

5. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM

a. Start the engine.

b. Turn the A/C switch on.

c. Operate the cooler compressor while the engine speed is approximately 1000 rpm for 5 to 6 minutes to circulate the refrigerant and collect the compressor oil remaining in each component into the cooler compressor.

d. Stop the engine.

e. Recover the refrigerant from the A/C system using a refrigerant recovery unit.

6. DRAIN ENGINE COOLANT

a. for 1VD-FTV:
Drain the engine coolant (Click here).

b. for 2UZ-FE:
Drain the engine coolant (Click here).

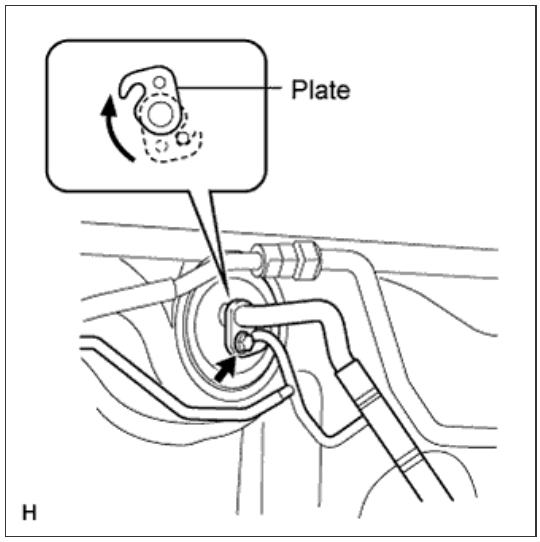
c. for 1GR-FE:
Drain the engine coolant (Click here).

d. for 3UR-FE:
Drain the engine coolant (Click here).

7. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.



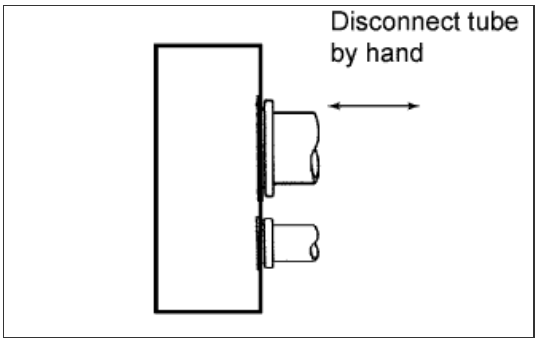
NOTICE:

When disconnecting the cable, some systems need to be initiali ed after the cable is reconnected (Click here).

8. DISCONNECT AIR CONDITIONING TUBE ASSEMBLY

a. Remove the bolt.

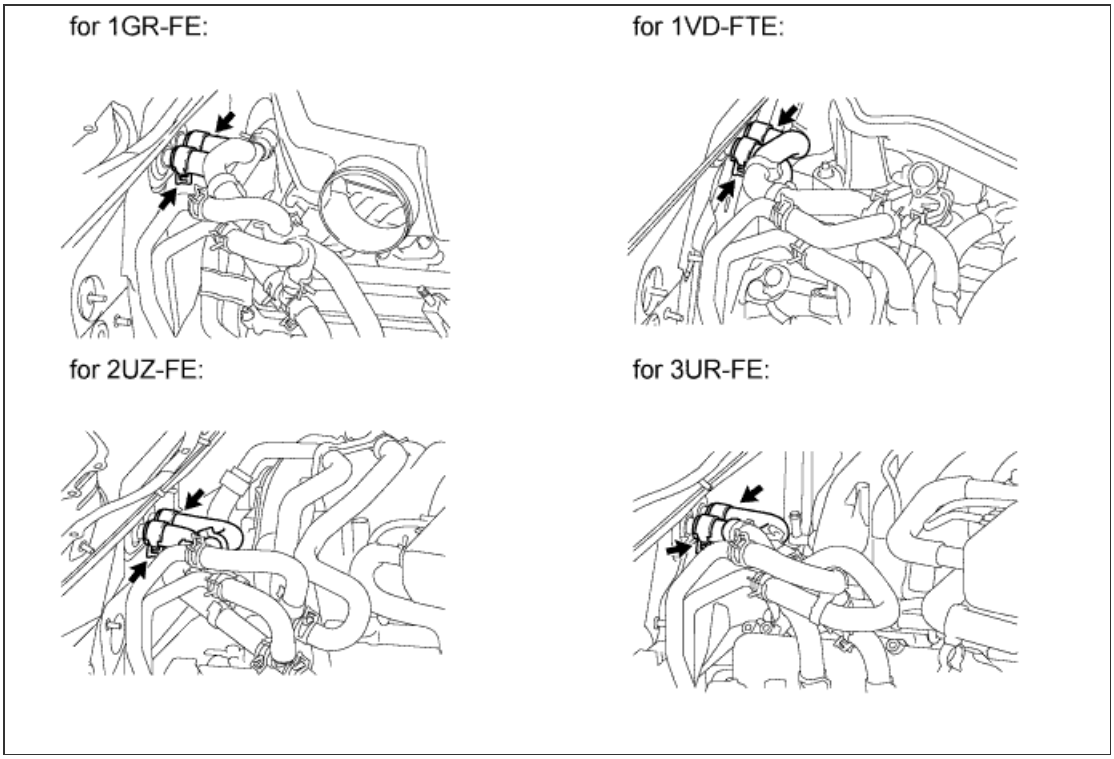
b. Detach the plate as shown in the illustration.



c. Disconnect the air conditioning tube assembly.

NOTICE:

- **Do not use a screwdriver or similar tool to disconnect the tube.**
- **Seal the openings of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering them.**



d. Remove the 2 O-rings from the air conditioning tube assembly.

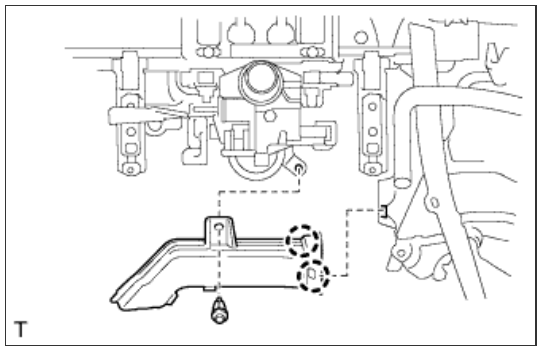
9. DISCONNECT HEATER WATER INLET HOSE AND HEATER WATER OUTLET HOSE

a. Using pliers, grip the claws of the clips and slide the 2 clips.

b. Disconnect the 2 heater water hoses.

10. REMOVE FRONT WIPER MOTOR AND BRACKET

a. Remove the front wiper motor and bracket (Click here).



11. REMOVE INSTRUMENT PANEL SUB-ASSEMBLY

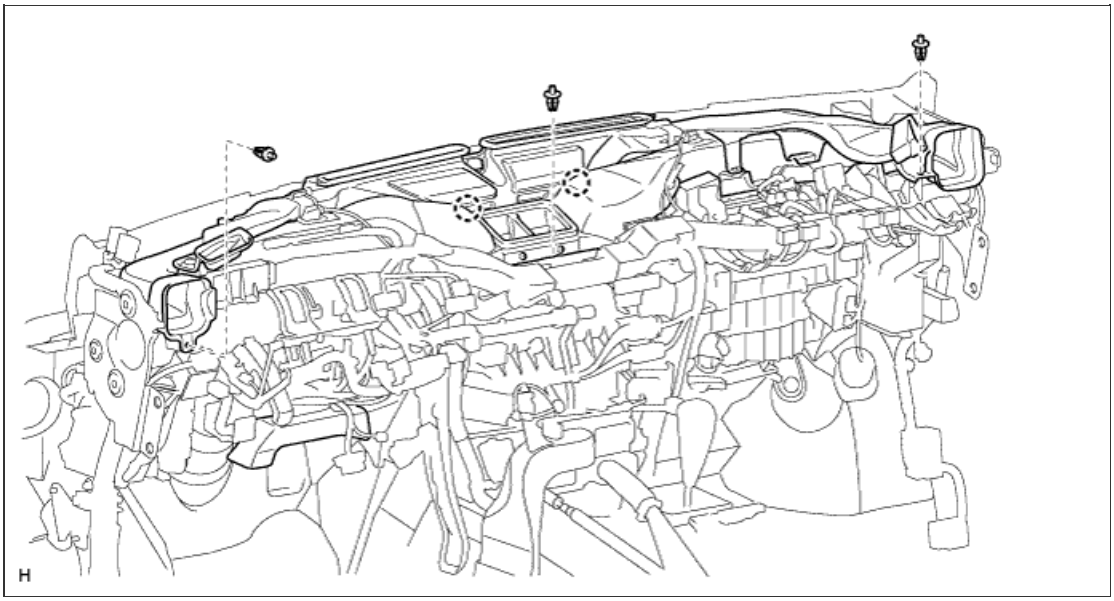
a. Remove the instrument panel (Click here).

12. REMOVE NO. 3 AIR DUCT SUB-ASSEMBLY

a. Remove the clip.

b. Detach the 2 claws and remove the duct.

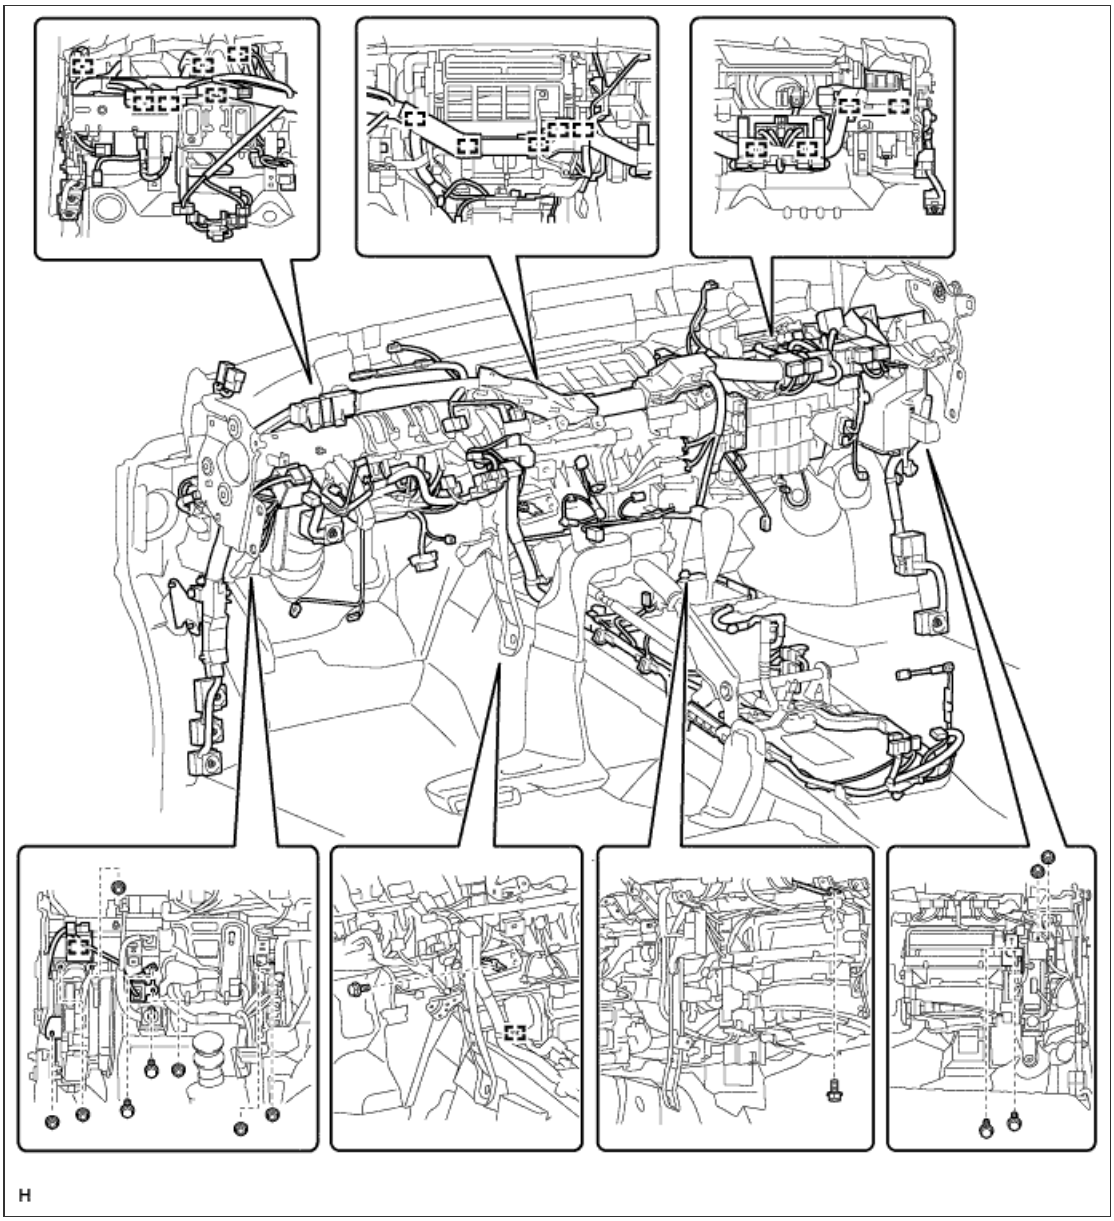
13. REMOVE STEERING COLUMN ASSEMBLY



a. for Power Tilt and Power Telescopic Steering Column:
Remove the steering column (Click here).

b. for Manual Tilt and Manual Telescopic Steering Column:
Remove the steering column (Click here).

14. REMOVE HEATER TO REGISTER DUCT ASSEMBLY



a. Remove the 3 clips.

b. Detach the 2 claws and remove the duct.

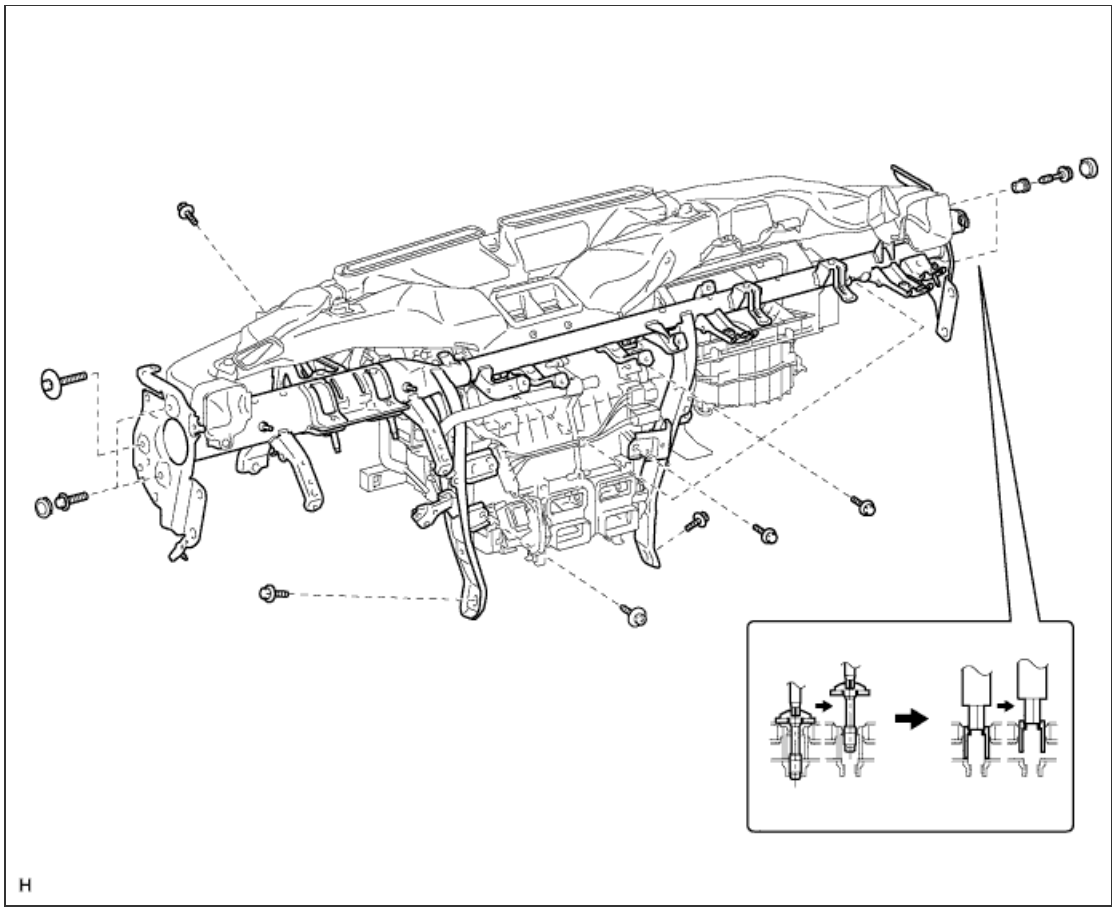
15. REMOVE INSTRUMENT PANEL REINFORCEMENT ASSEMBLY

a. Disconnect the clamps, connectors and wire harness.

b. Remove the instrument panel reinforcement.

i. for Driver Side:
Remove the 3 caps and 3 bolts.

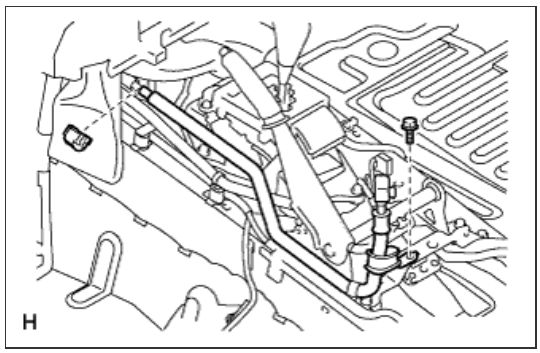
ii. for Passenger Side:
Remove the 2 caps.



iii. for Passenger Side:
Using a T40 "TORX" socket, remove the 2 "TORX" bolts.

HINT:

When removing the bolts, the collars may come off with the bolts.

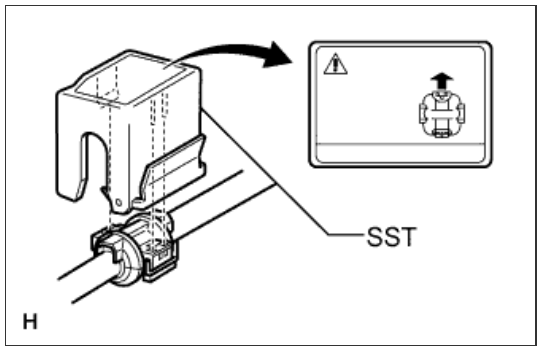


iv. for Passenger Side:
Using a 12 mm hexagon wrench, remove the 2 collars.

v. Remove the 7 bolts, screw and instrument panel reinforcement.

16. REMOVE AIR CONDITIONING HOSE AND ACCESSORY (w/ Cool Box)

a. Remove the bolt.



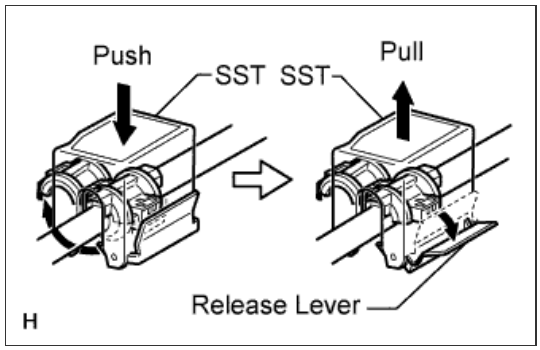
b. Using SST, remove the piping clamp.

SST
09870-00025

i. Attach SST to the piping clamp.

HINT:

Confirm the direction of the piping clamp claw and SST by referring to the illustration on the caution label.



ii. Push down SST and release the clamp lock.

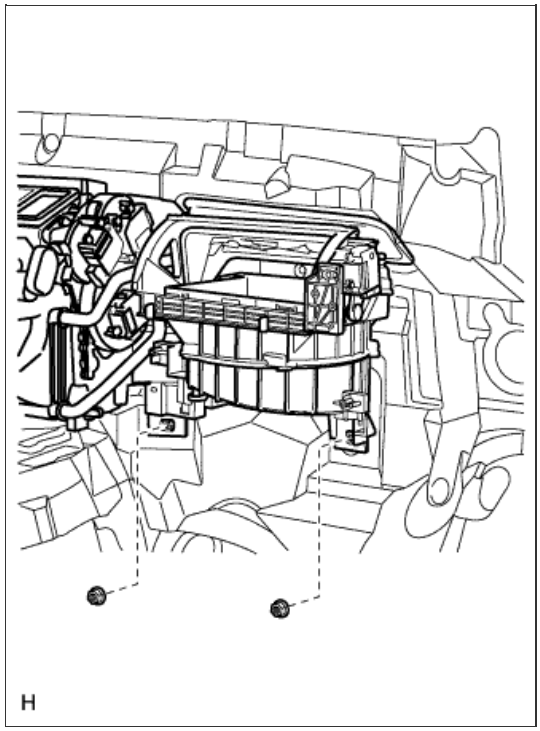
NOTICE:

Be careful not to deform the tubes when pushing SST.

iii. Pull SST slightly and push the release lever, then remove the piping clamp with SST.

iv. Remove the piping clamp from SST.

c. Disconnect the hose and accessory from the liquid tube to remove it.



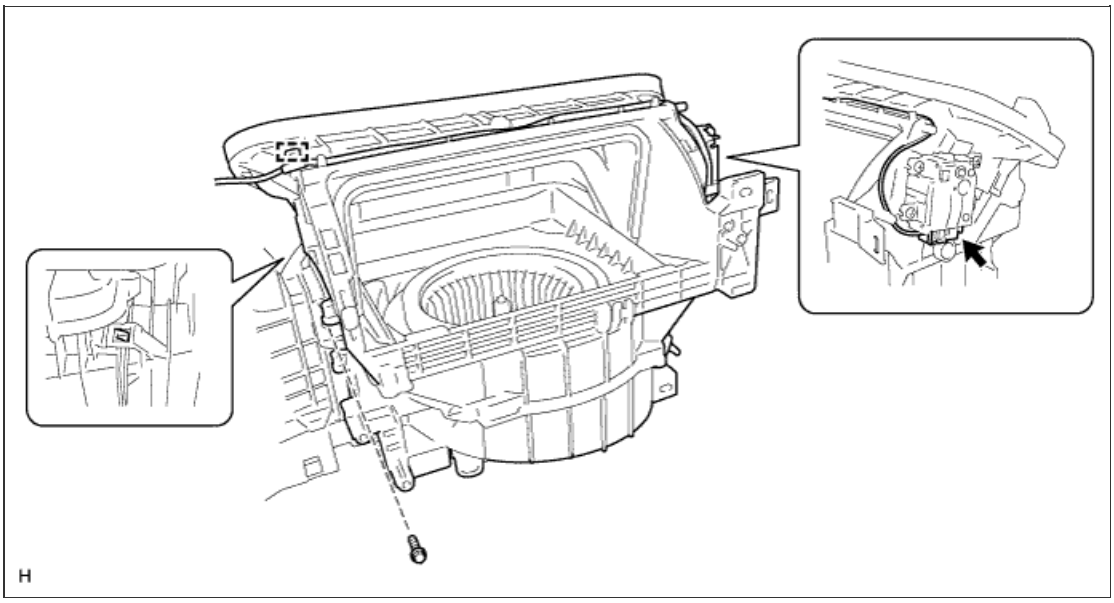
NOTICE:

Cap the open fittings immediately to keep moisture or dirt out of the system.

d. Remove the 2 O-rings from the air conditioner hose and accessory.

17. REMOVE AIR CONDITIONING UNIT

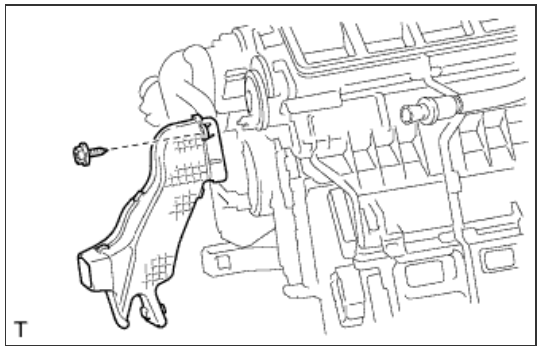
a. Remove the 2 nuts and air conditioning unit.



for Preparation Click here

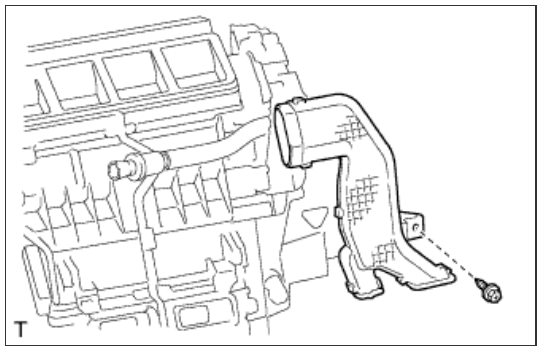
1. REMOVE BLOWER ASSEMBLY

a. Remove the screw.



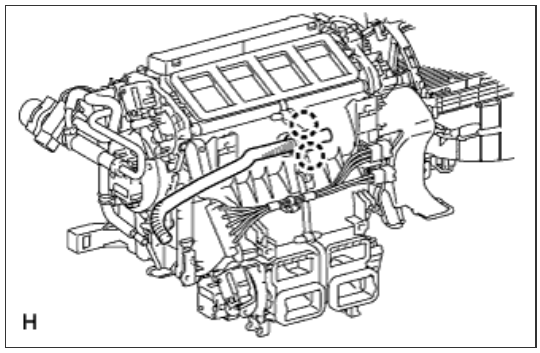
b. Disconnect the connector and clamp.

c. Detach the claw and remove the blower unit.



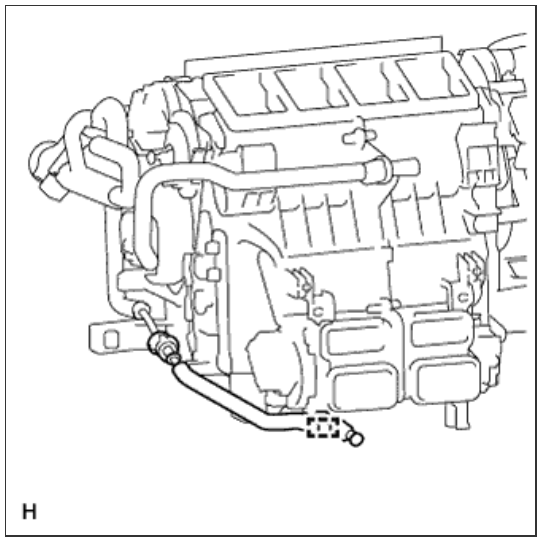
2. REMOVE NO. 4 AIR DUCT SUB-ASSEMBLY

a. Remove the screw and duct.



3. REMOVE NO. 5 AIR DUCT SUB-ASSEMBLY

a. Remove the screw and duct.

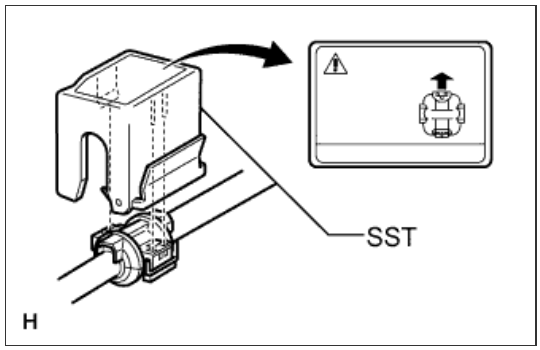


4. REMOVE ASPIRATOR

a. Detach the 2 claws and remove the aspirator.

5. REMOVE COOL BOX LIQUID TUBE (w/ Cool Box)

a. Detach the clamp.



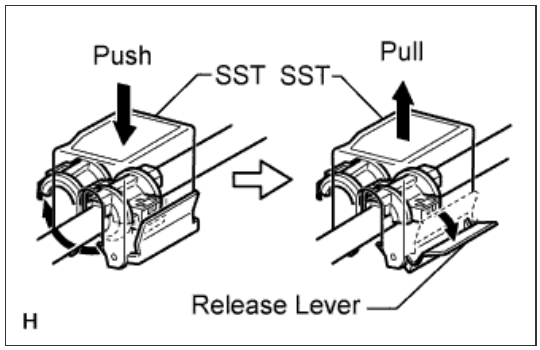
b. Using SST, remove the piping clamp.

SST
09870-00025

i. Attach SST to the piping clamp.

HINT:

Confirm the direction of the piping clamp claw and SST by referring to the illustration on the caution label.



ii. Push down SST and release the clamp lock.

NOTICE:

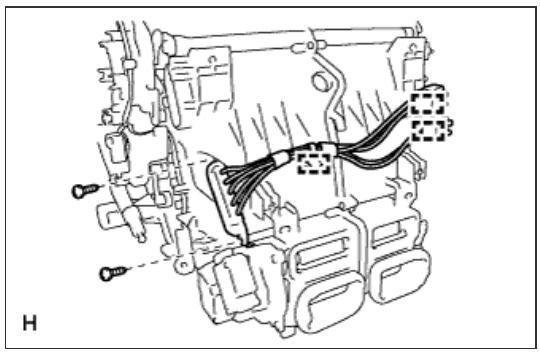
Be careful not to deform the tubes when pushing SST.

iii. Pull SST slightly and push the release lever, then remove the piping clamp with SST.

iv. Remove the piping clamp from SST.

c. Disconnect the tube.

NOTICE:

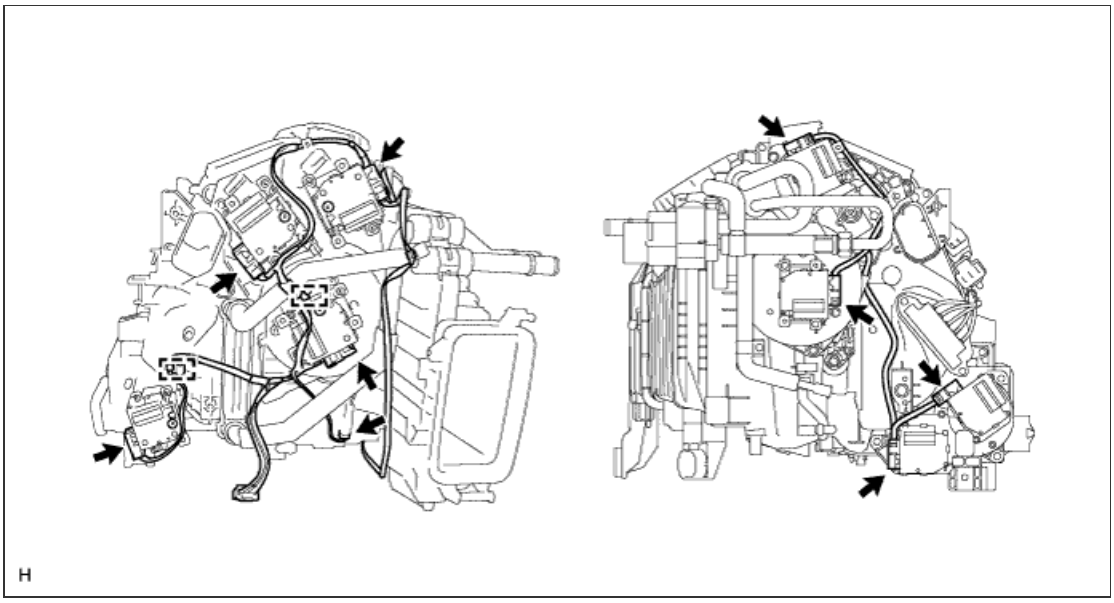


Cap the open fittings immediately to keep moisture or dirt out of the system.

d. Remove the 2 O-rings from the tube.

6. REMOVE QUICK HEATER ASSEMBLY (w/ PTC Heater)

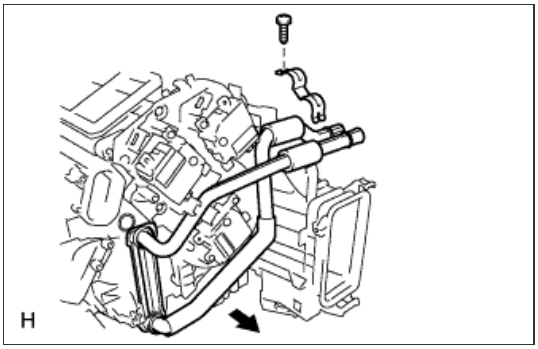
a. Detach the 3 clamps.



b. Remove the 2 screws and quick heater.

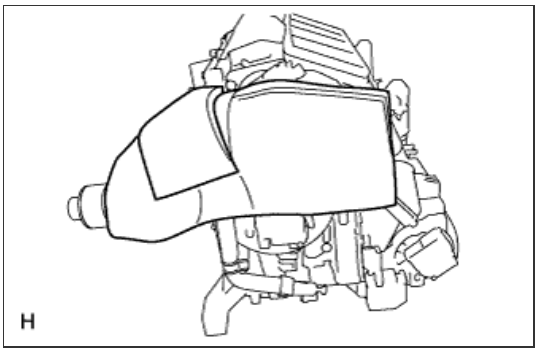
7. REMOVE AIR CONDITIONER HARNESS

a. Disconnect the connectors.



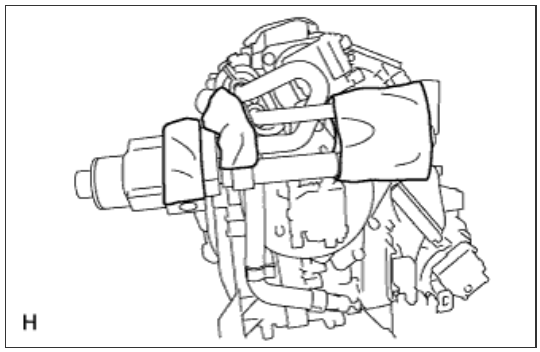
b. Detach the clamps and remove the harness.

8. REMOVE AIR CONDITIONING RADIATOR ASSEMBLY

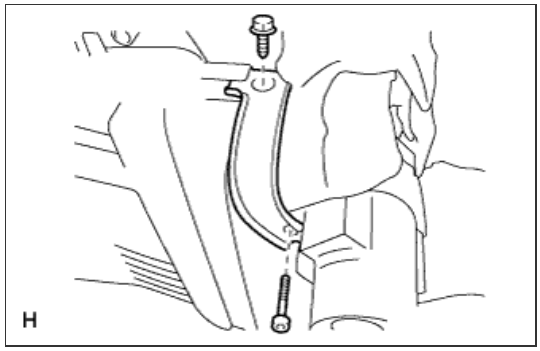


a. Remove the screw and radiator bracket.

b. Remove the radiator.

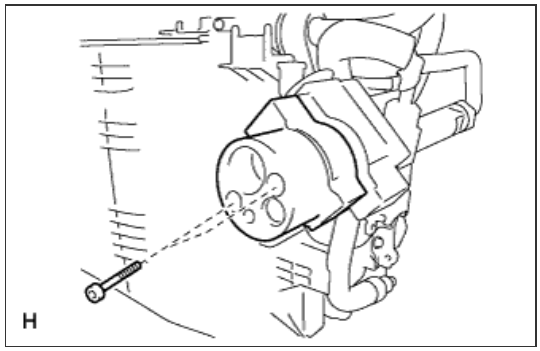


9. REMOVE COOLER EXPANSION VALVE (w/ Cool Box)



a. Remove the packing.

b. Remove the butyl tape.



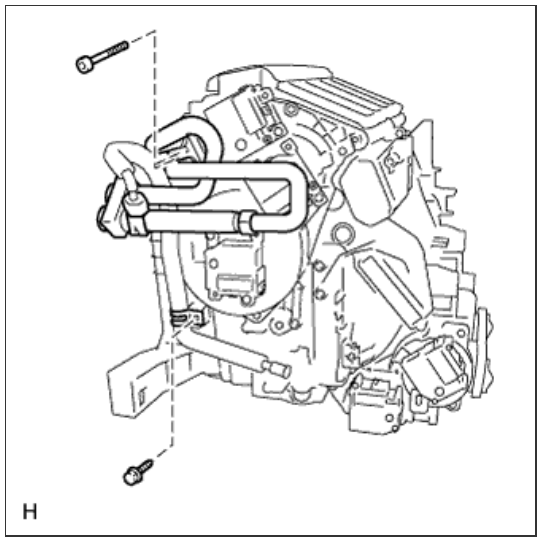
c. Using a 4 mm hexagon wrench, remove the hexagon bolt, screw and bracket.

d. Using a 4 mm hexagon wrench, remove the 2 hexagon bolts and No. 1 connector tube.

e. Remove the 2 O-rings from the No. 1 connector tube.

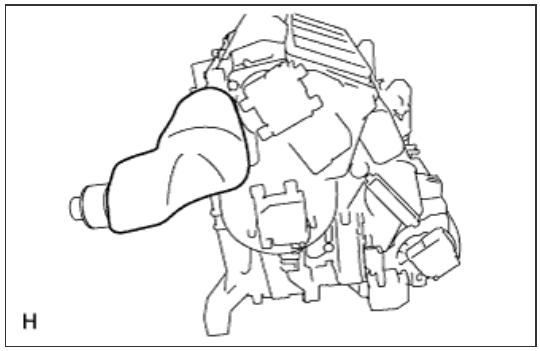
f. Using a 4 mm hexagon wrench, remove the 2 hexagon bolts, No. 2 connector tube, expansion valve and No. 3 connector tube.

g. Remove the 2 O-rings from the No. 2 connector tube.



10. REMOVE AIR CONDITIONER TUBE AND ACCESSORY ASSEMBLY (w/ Cool Box)

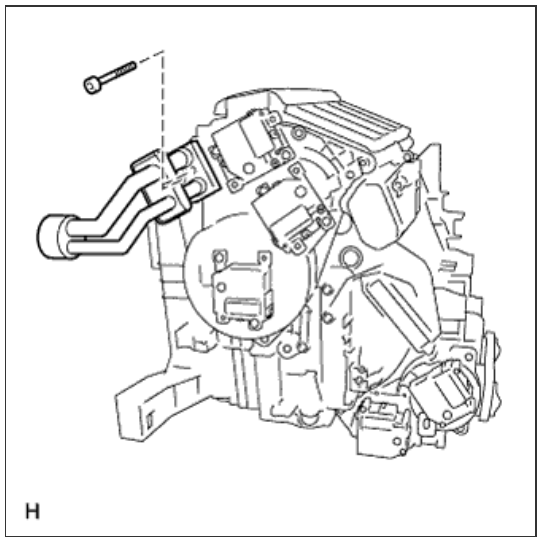
a. Remove the screw and bracket.



b. Using a 4 mm hexagon wrench, remove the 2 hexagon bolts and air conditioner tube and accessory assembly.

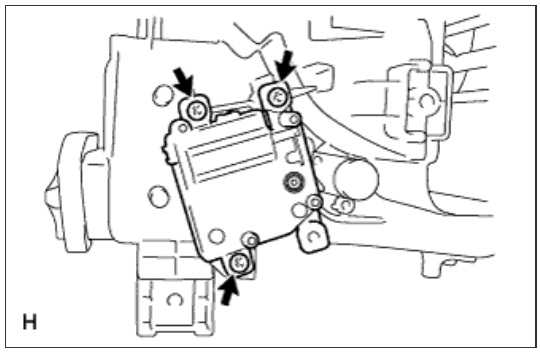
c. Remove the 2 O-rings from the air conditioner tube and accessory assembly.

11. REMOVE COOLER EXPANSION VALVE (w/o Cool Box)



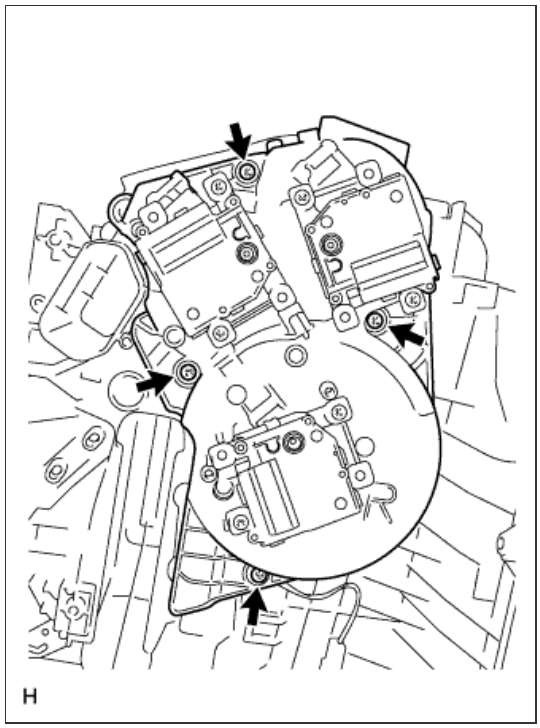
a. Remove the packing.

b. Using a 4 mm hexagon wrench, remove the 2 hexagon bolts, air conditioner tube and accessory assembly and expansion valve.



c. Remove the 2 O-rings from the air conditioner tube and accessory assembly.

d. Remove the 2 O-rings from the expansion valve.

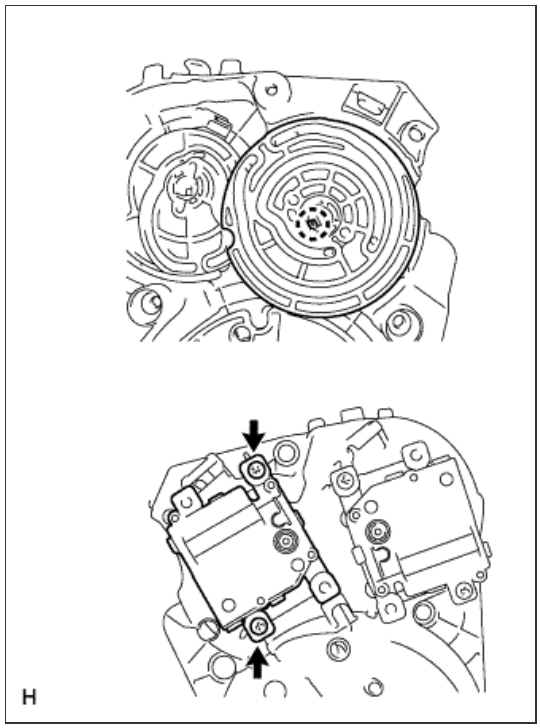


12. REMOVE REAR AIR MIX DAMPER CONTROL SERVO MOTOR RH (for 4 Zone Type)

a. Remove the 3 screws and servo motor.

13. REMOVE SERVO MOTOR

a. Remove the 4 screws and servo motor unit.



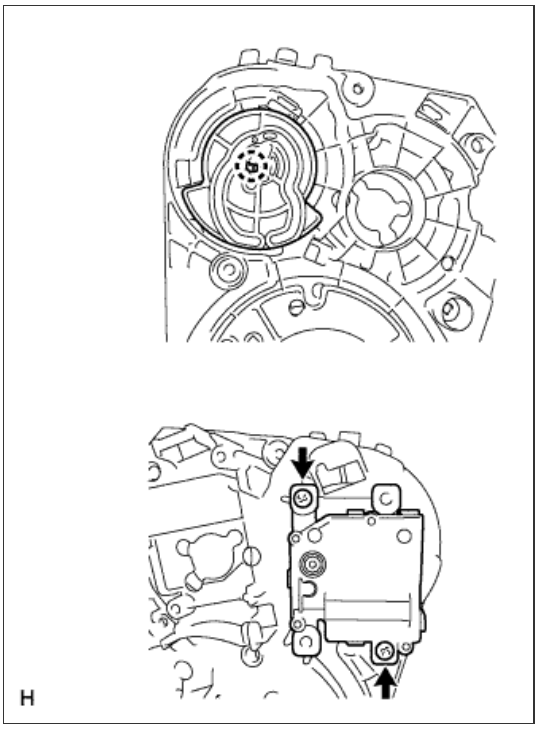
b. for 4 Zone Type:
Remove the front mode control servo motor RH.

i. Remove the 2 screws.

ii. Detach the claw and remove the plate and servo motor.

NOTICE:

Be careful not to damage the claw of the plate.



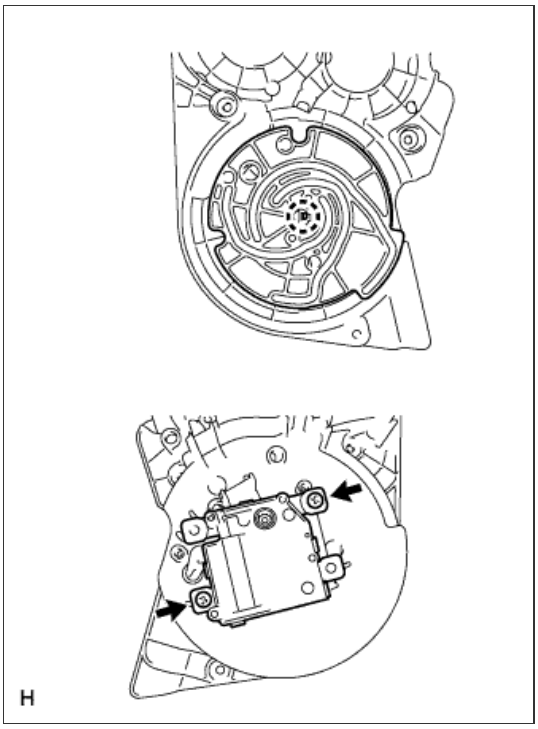
c. Remove the control bypass damper control servo motor.

i. Remove the 2 screws.

ii. Detach the claw and remove the plate and servo motor.

NOTICE:

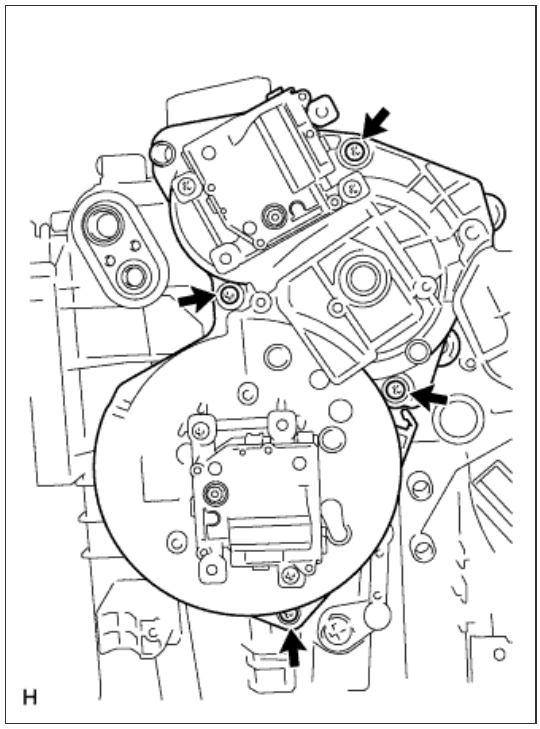
Be careful not to damage the claw of the plate.



d. Remove the front air mix damper control servo motor RH.

i. Remove the 2 screws.

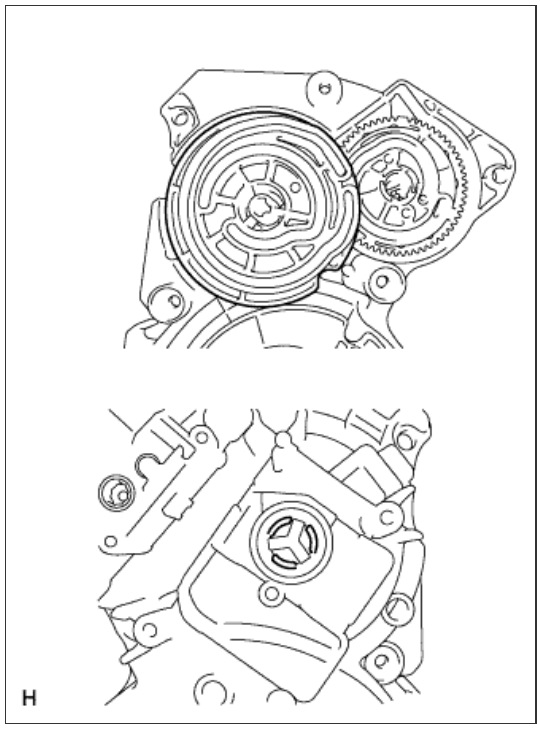
ii. Detach the claw and remove the plate and servo motor.



NOTICE:

Be careful not to damage the claw of the plate.

14. REMOVE SERVO MOTOR

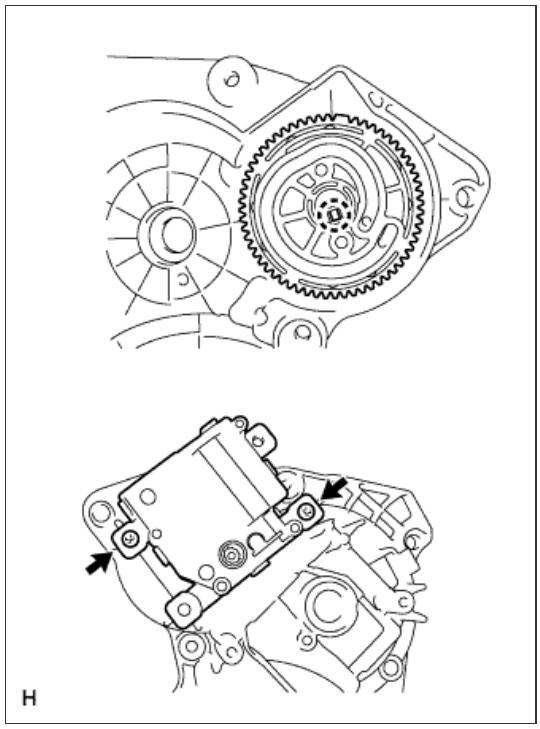


a. Remove the 4 screws and servo motor unit.

b. Detach the 3 claws and remove the plate.

NOTICE:

Be careful not to damage the claw of the plate.



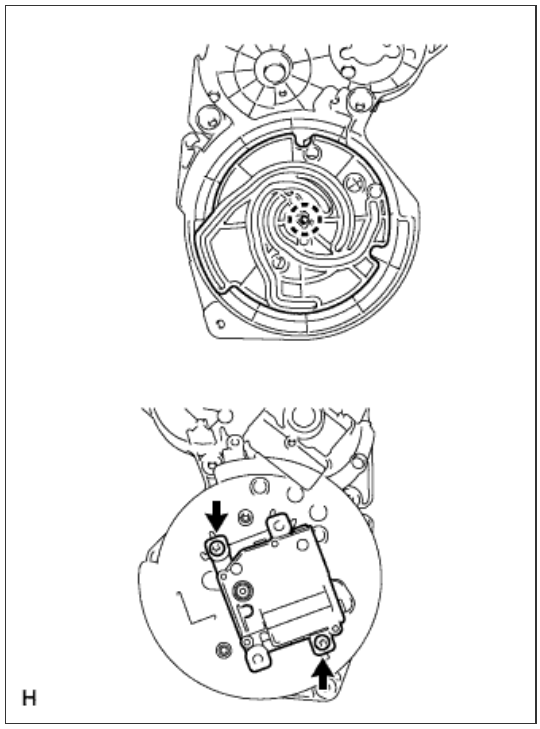
c. Remove the front mode control servo motor LH.

i. Remove the 2 screws.

ii. Detach the claw and remove the plate and servo motor.

NOTICE:

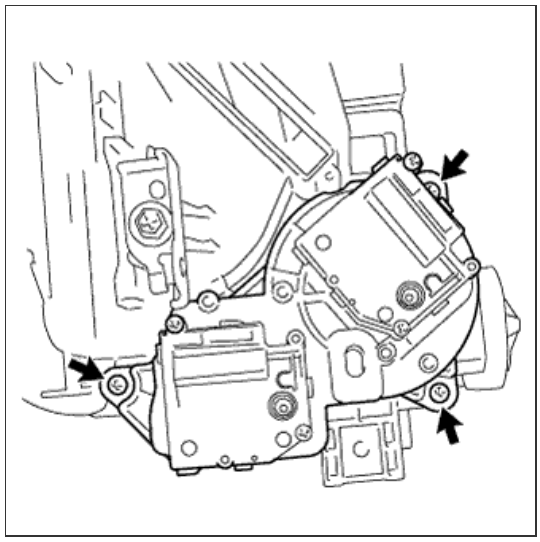
Be careful not to damage the claw of the plate.



d. Remove the front air mix damper control servo motor LH.

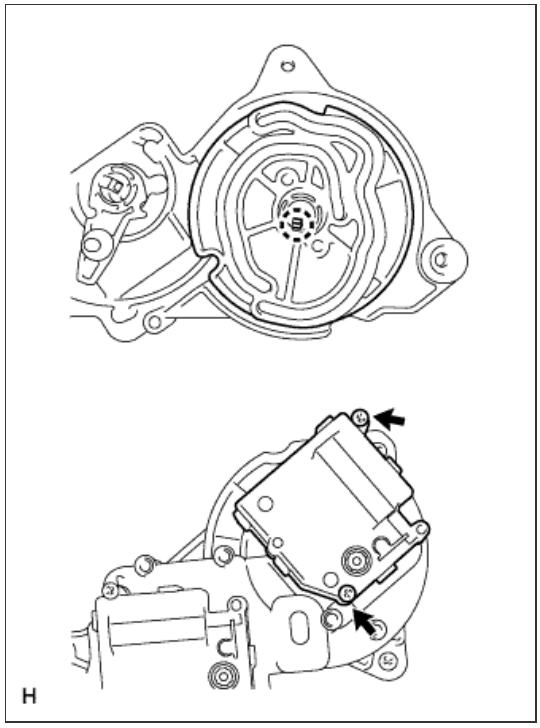
i. Remove the 2 screws.

ii. Detach the claw and remove the plate and servo motor.



NOTICE:

Be careful not to damage the claw of the plate.



15. REMOVE SERVO MOTOR

a. Remove the 3 screws and servo motor unit.

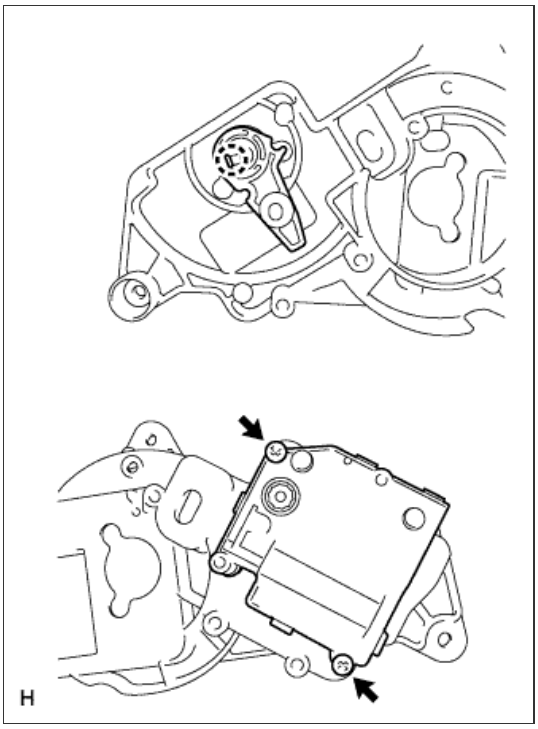
b. Remove the rear mode control servo motor.

i. Remove the 2 screws.

ii. Detach the claw and remove the plate and servo motor.

NOTICE:

Be careful not to damage the claw of the plate.



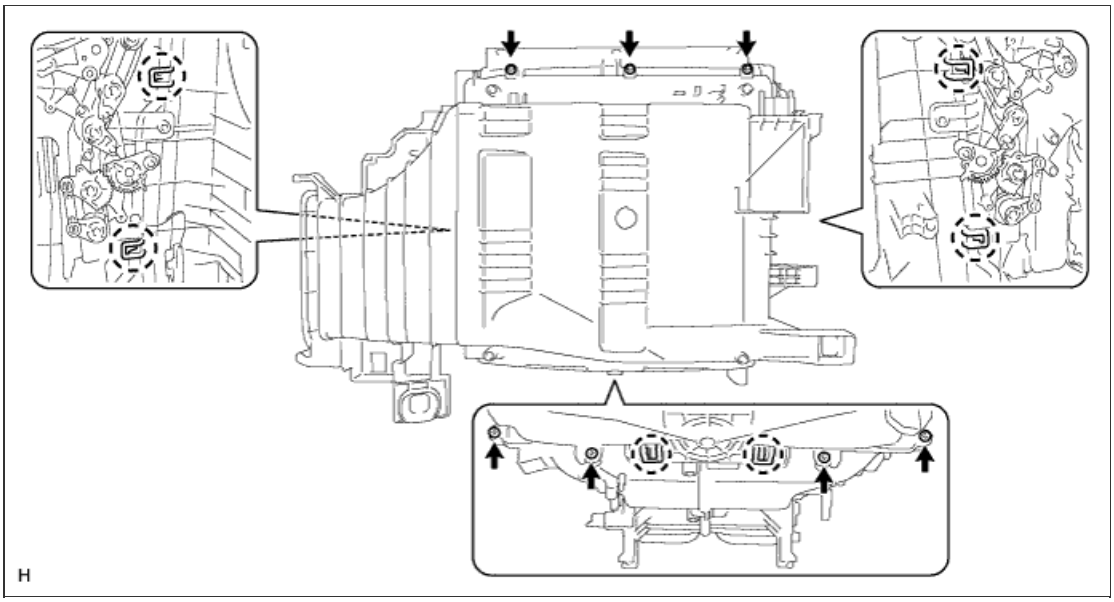
c. Remove the rear air mix damper control servo motor RH.

i. Remove the 2 screws.

ii. Detach the claw and remove the lever and servo motor.

NOTICE:

Be careful not to damage the claw of the lever.



16. REMOVE NO. 1 COOLER EVAPORATOR SUB-ASSEMBLY

a. Remove the 7 screws.

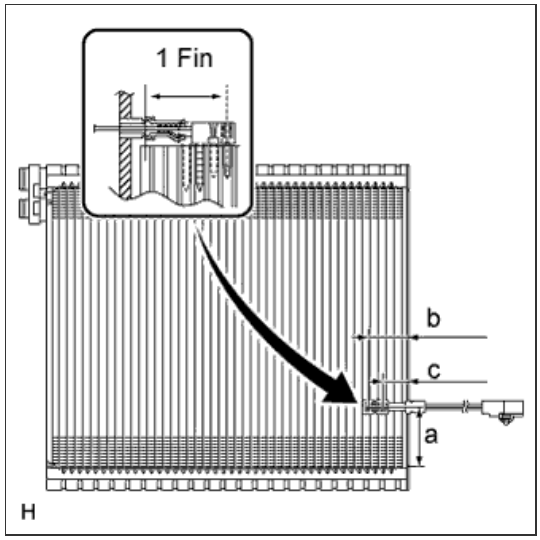
b. Detach the 6 claws and remove the unit case.

c. Remove the evaporator.

17. REMOVE FRONT EVAPORATOR TEMPERATURE SENSOR

for Preparation Click here

1. INSTALL FRONT EVAPORATOR TEMPERATURE SENSOR



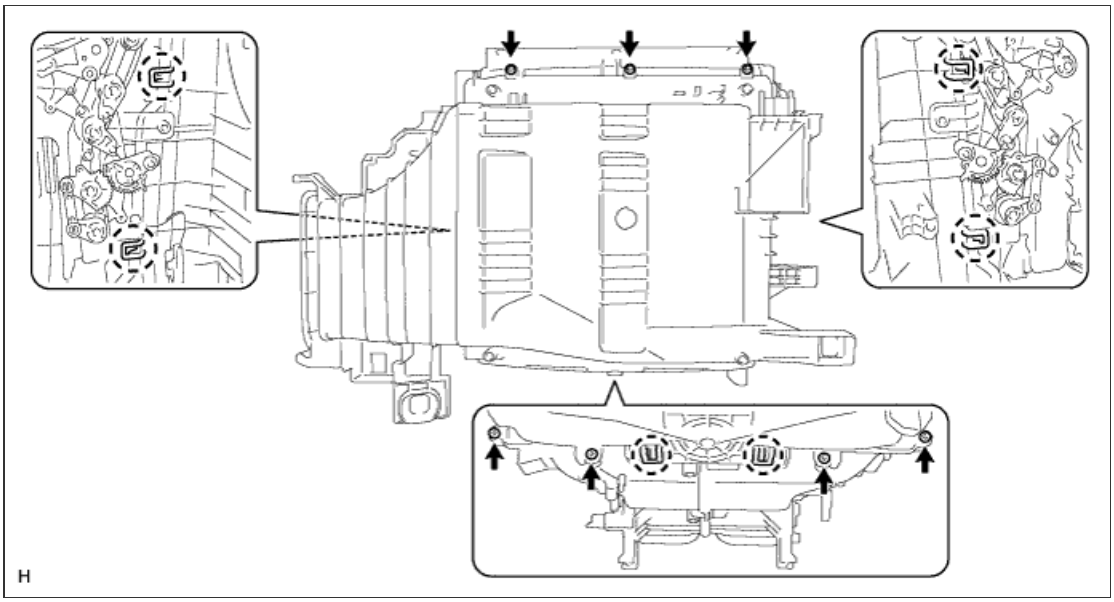
NOTICE:

If reusing the evaporator, do not insert the sensor into a location where the sensor was previously inserted.

a. Insert the sensor to a location that is 1 fin to the right or left of its previous location.

Standard Dimension:

Area	Specified Condition
a	50 mm (1.97 in.)
b	34.3 mm (1.35 in.)
c	20.9 mm (1.97 in.)

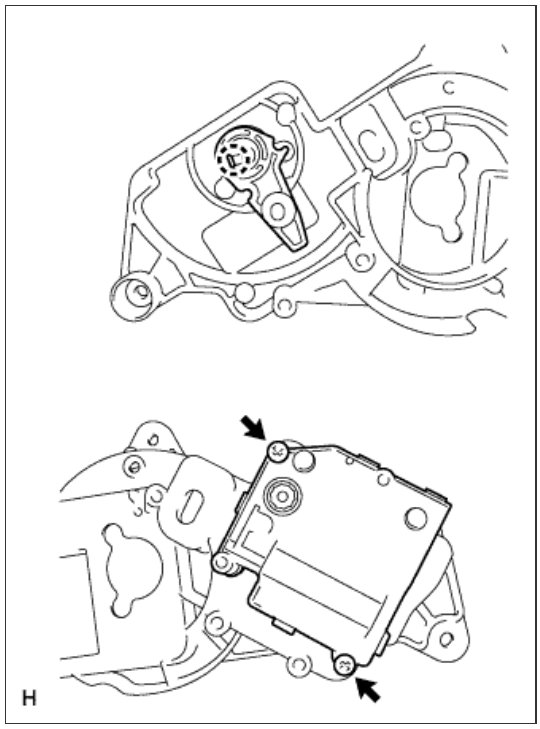


2. INSTALL NO. 1 COOLER EVAPORATOR SUB-ASSEMBLY

a. Install the evaporator.

b. Attach the 6 claws to install the unit case.

c. Install the 7 screws.

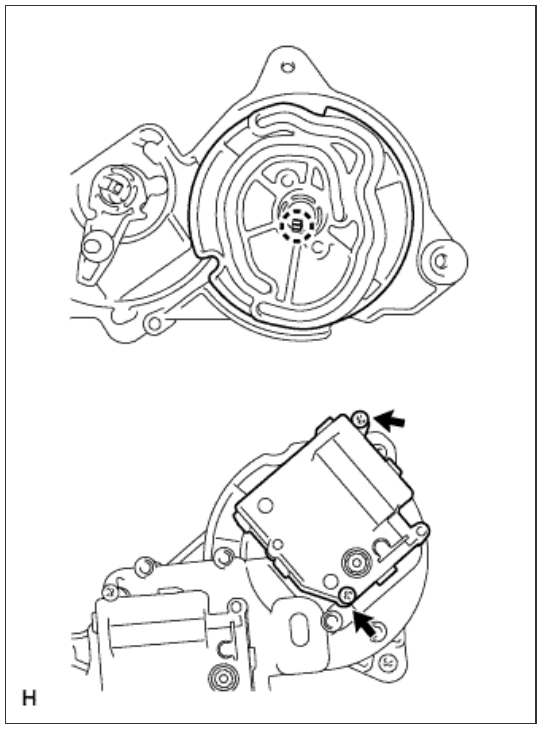


3. INSTALL SERVO MOTOR

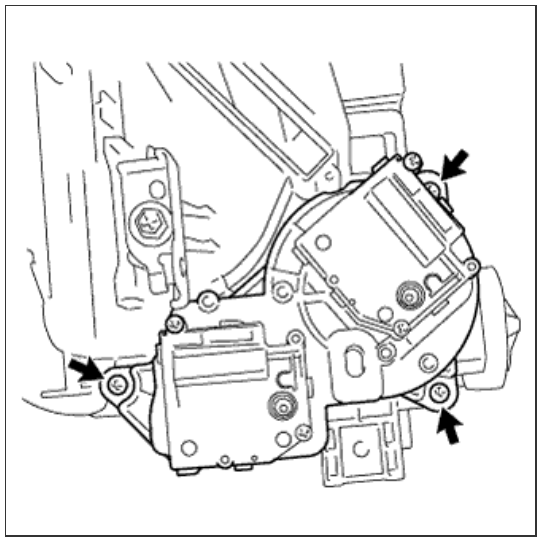
a. Install the rear air mix damper control servo motor RH.

i. Attach the claw to install the lever and servo motor.

ii. Install the 2 screws.



b. Install the rear mode control servo motor.

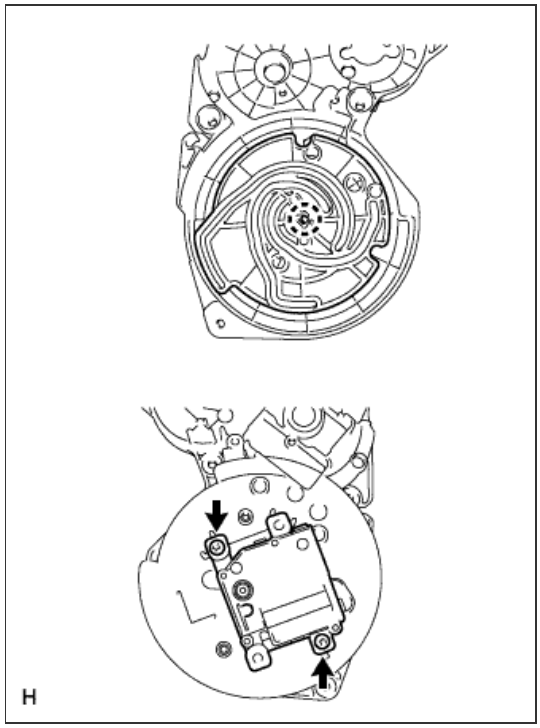


i. Attach the claw to install the plate and servo motor.

ii. Install the 2 screws.

c. Set the damper servo so that the cutout part engages with the tooth of the gear, and attach the claw to install the servo motor unit.

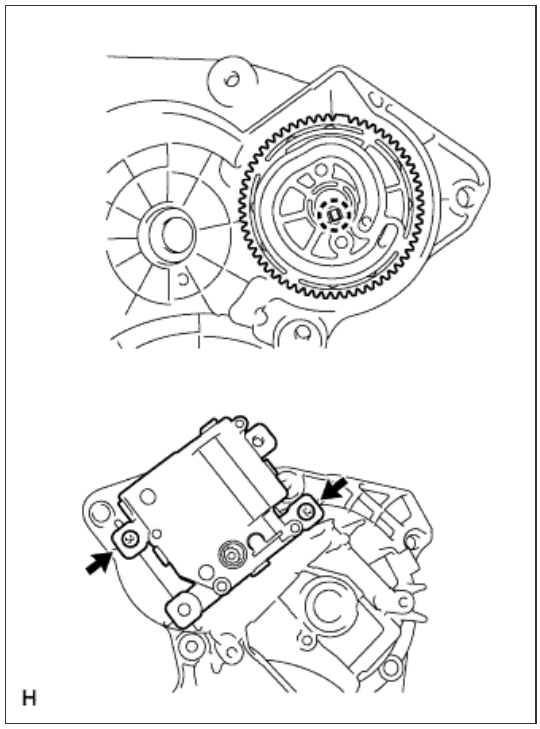
d. Install the 3 screws.



4. INSTALL SERVO MOTOR

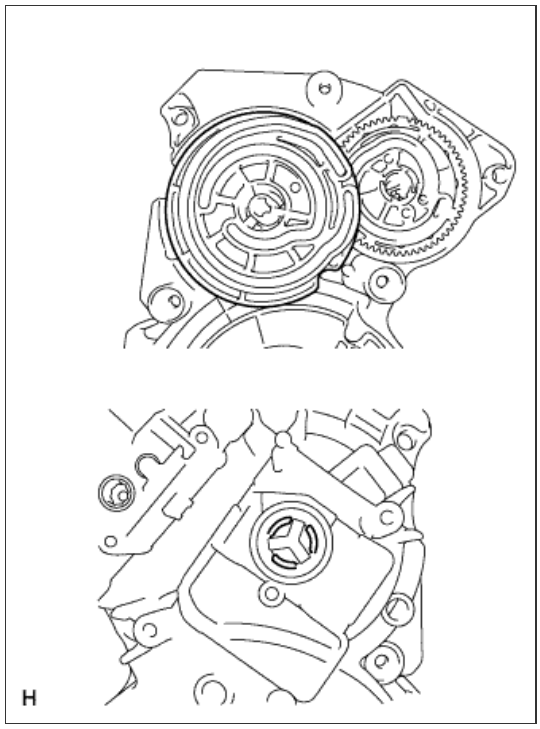
a. Install the front air mix damper control servo motor LH.

i. Attach the claw to install the plate and servo motor.



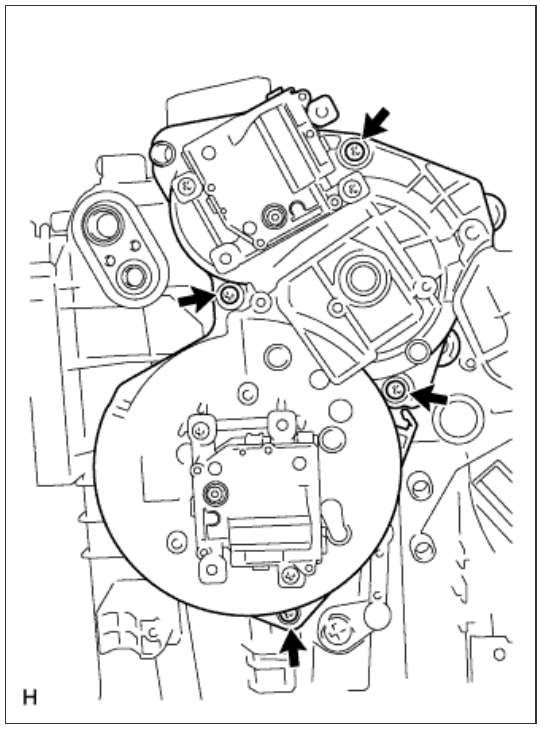
ii. Install the 2 screws.

b. Install the front mode control servo motor LH.



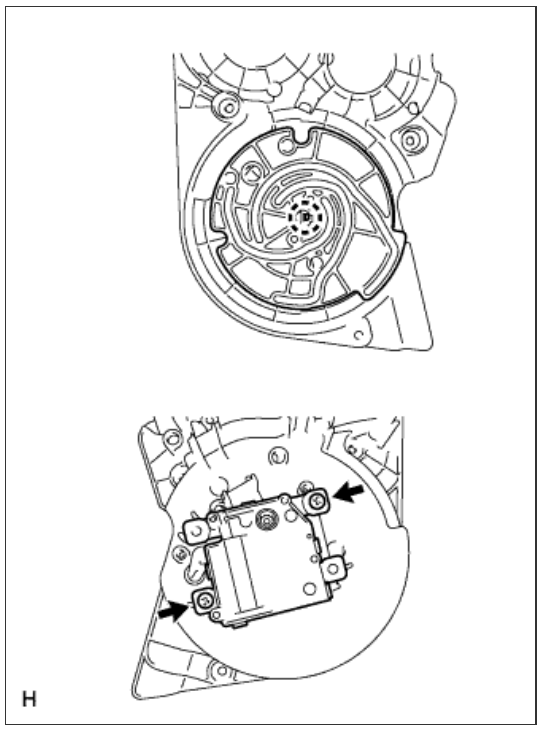
i. Attach the claw to install the plate and servo motor.

ii. Install the 2 screws.



c. Attach the 3 claws to install the plate.

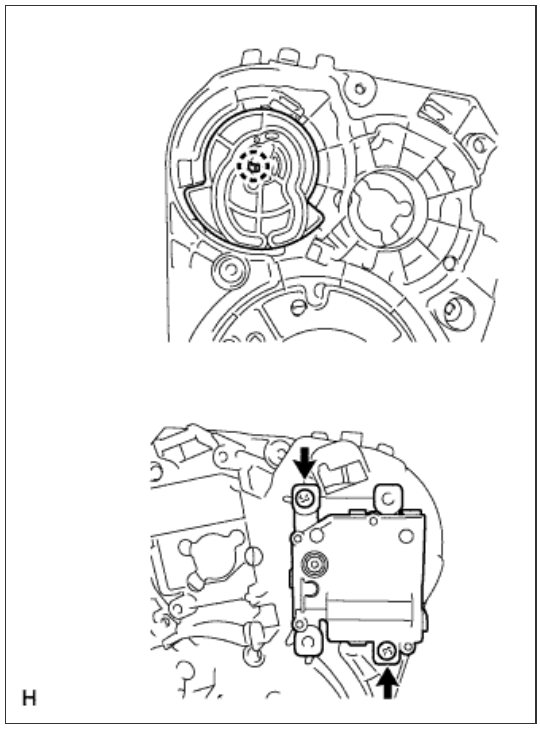
d. Set the damper servo so that the cutout part engages with the tooth of the gear, and attach the claw to install the servo motor unit.



e. Install the 4 screws.

5. INSTALL SERVO MOTOR

a. Install the front air mix damper control servo motor RH.



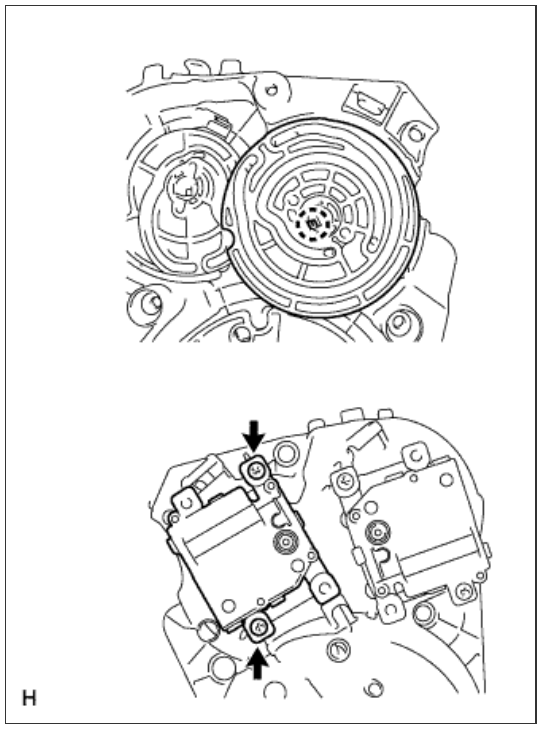
i. Attach the claw to install the plate and servo motor.

ii. Install the 2 screws.

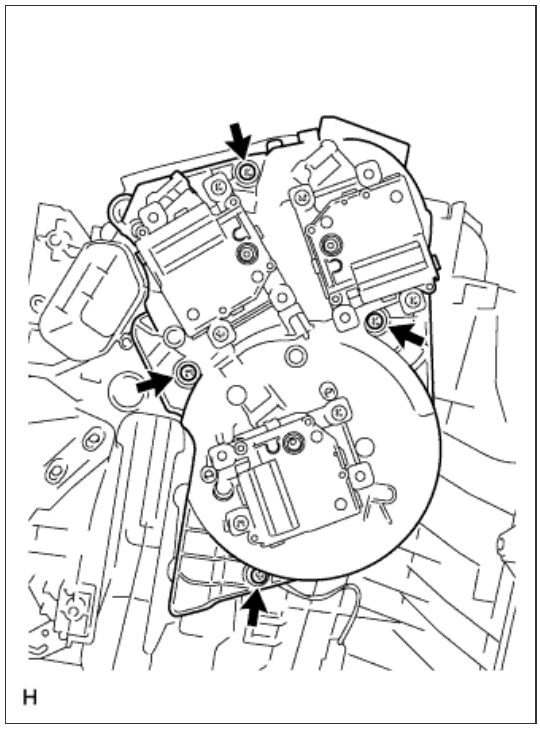
b. Install the control air bypass damper control servo motor.

i. Attach the claw to install the plate and servo motor.

ii. Install the 2 screws.



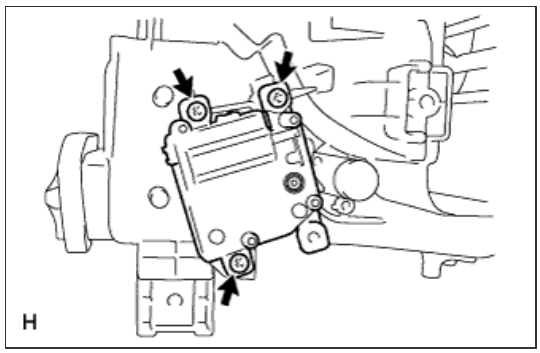
c. for 4 Zone Type:
Install the front mode control servo motor RH.



i. Attach the claw to install the plate and servo motor.

ii. Install the 2 screws.

d. Set the damper servo so that the cutout part engages with the tooth of the gear, and attach the claw to install the servo motor unit.



e. Install the 4 screws.

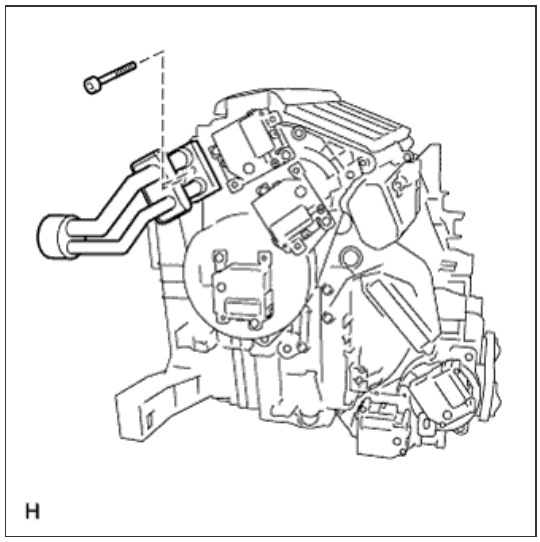
6. INSTALL REAR AIR MIX DAMPER CONTROL SERVO MOTOR RH (for 4 Zone Type)

a. Install the servo motor with the 3 screws.

7. INSTALL COOLER EXPANSION VALVE (w/o Cool Box)

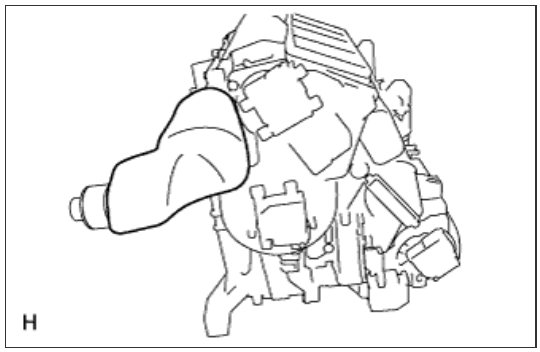
a. Sufficiently apply compressor oil to 4 new O-rings and the fitting surface of the hose joint.

Compressor oil:
ND-OIL 8 or e ivalent



b. Install the 2 O-rings to the cooler evaporator.

c. Install the 2 O-rings to the air conditioner tube and accessory assembly.



d. Install the cooler expansion valve and air conditioner tube and accessory assembly to the evaporator.

e. Using a 4 mm hexagon wrench, install the 2 bolts.

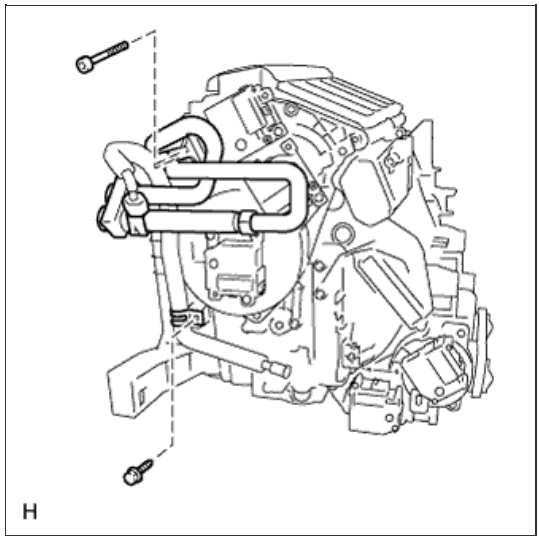
Tor e:
3.5 N*m 36 k f*cm 31 in.*lbf

f. Install new packing.

8. INSTALL AIR CONDITIONER TUBE AND ACCESSORY ASSEMBLY (w/ Cool Box)

a. Sufficiently apply compressor oil to 2 new O-rings and the fitting surface of the hose joint.

Compressor oil:
ND-OIL 8 or e ivalent



b. Install the 2 O-rings to the air conditioner tube and accessory assembly.

c. Install the air conditioner tube and accessory assembly to the evaporator.

d. Using a 4 mm hexagon wrench, install the 2 hexagon bolts.

Tor e:
3.5 N*m 36 k f*cm 31 in.*lbf

e. Install the bracket with the screw.

9. INSTALL COOLER EXPANSION VALVE (w/ Cool Box)

a. Sufficiently apply compressor oil to 2 new O-rings and the fitting surface of the hose joint.

Compressor oil:
ND-OIL 8 or e ivalent

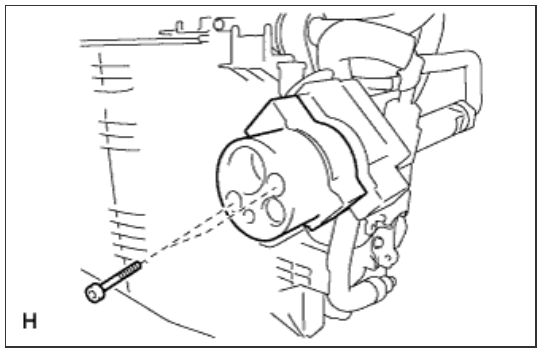
b. Install the 2 O-rings to the No. 2 connector tube.

c. Install the No. 2 connector tube, expansion valve and No. 3 connector tube.

d. Using a 4 mm hexagon wrench, install the 2 hexagon bolts.

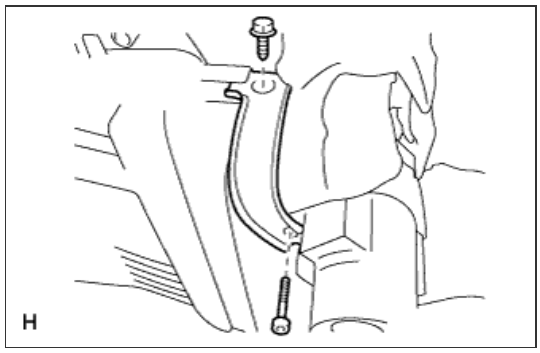
Tor e:
3.5 N*m 36 k f*cm 31 in.*lbf

e. Sufficiently apply compressor oil to 2 new O-rings and the fitting surface of the hose joint.



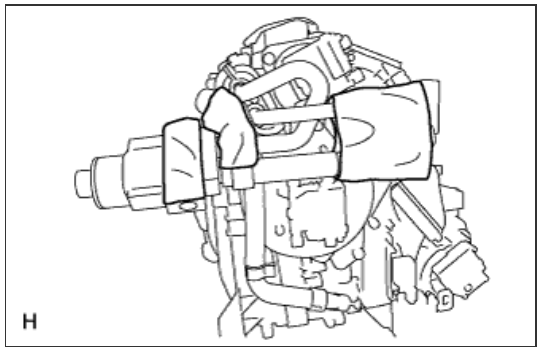
Compressor oil:
ND-OIL 8 or e ivalent

f. Install the 2 O-rings to the No. 1 connector tube.

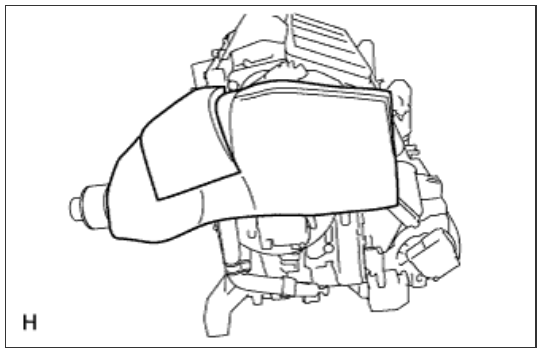


. Install the No. 1 connector tube.

h. Using a 4 mm hexagon wrench, install the 2 hexagon bolts.

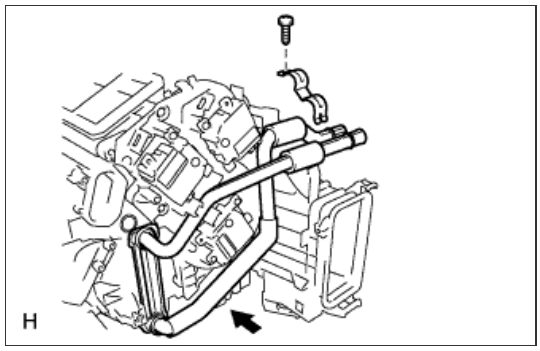


Tor e:
3.5 N*m 36 k f*cm 31 in.*lbf



i. Using a 4 mm hexagon wrench, install the bracket with the hexagon bolt and screw.

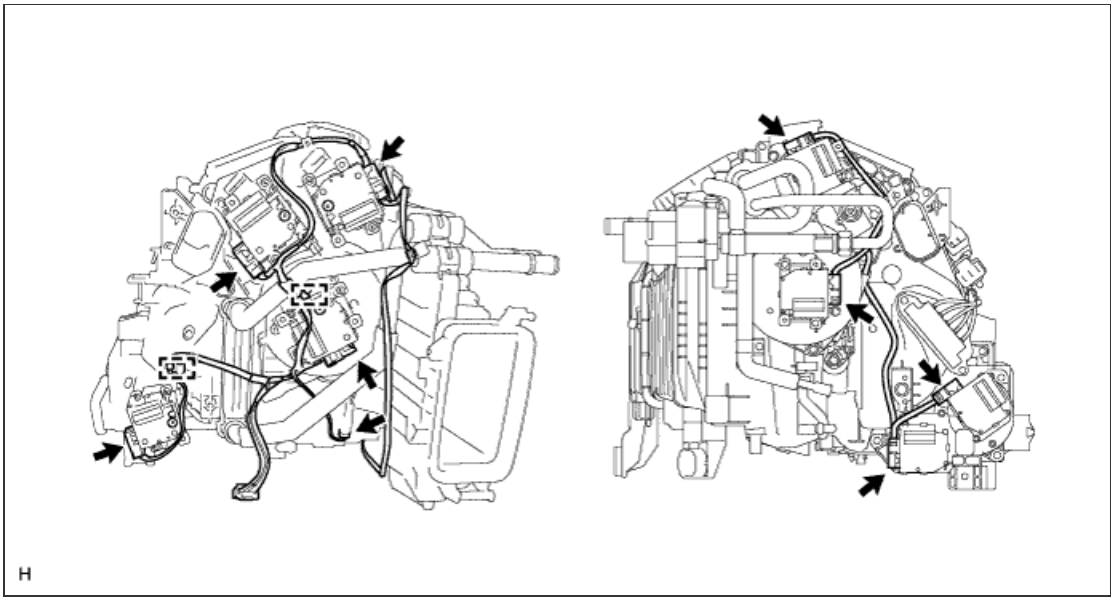
. Install new butyl tape.



k. Install new packing.

1 . INSTALL AIR CONDITIONING RADIATOR ASSEMBLY

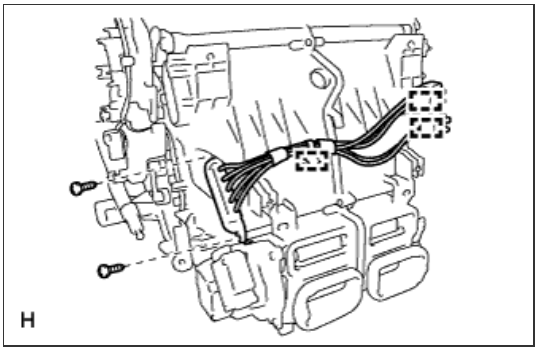
a. Install the radiator.



b. Install the bracket with the screw.

11. INSTALL AIR CONDITIONER HARNESS

a. Attach the clamps to install the harness.



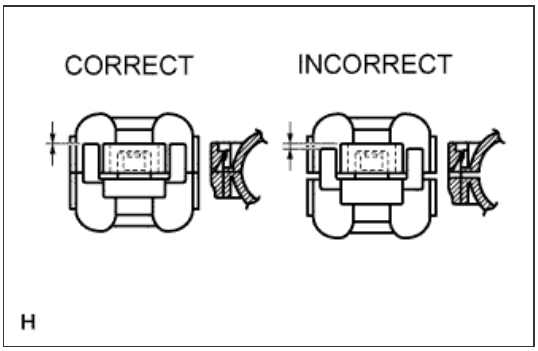
b. Connect the connectors.

12. INSTALL UIC HEATER ASSEMBLY (w/ PTC Heater)

a. Install the quick heater with the 2 screws.

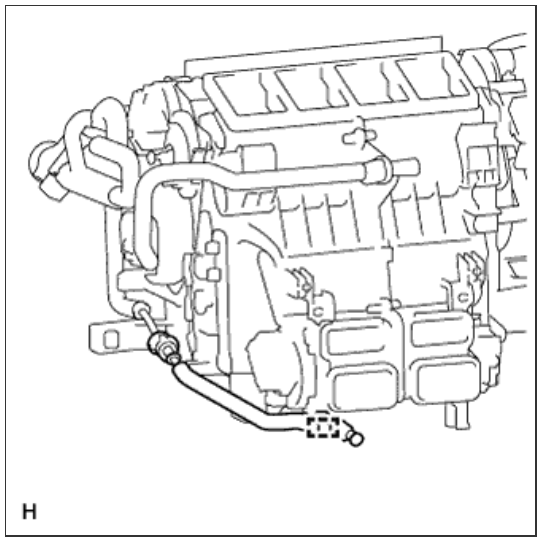
b. Attach the 3 clamps.

13. INSTALL COOL BOX LI UID TUBE (w/ Cool Box)



a. Lubricate 2 new O-rings with compressor oil and install them to the tube.

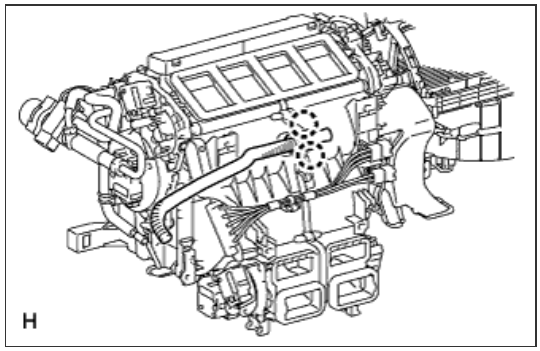
Compressor oil:
ND-OIL 8 or e ivalent



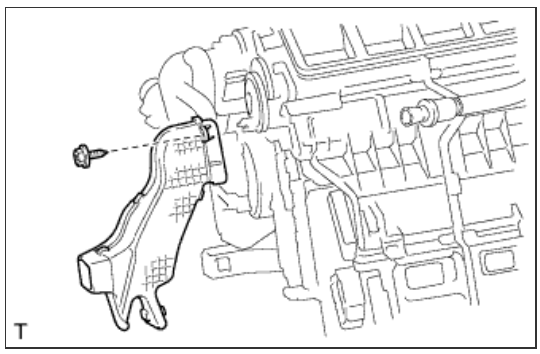
b. Connect the liquid tube with the piping clamp.

NOTICE:

After connection, check the claw engagement of the piping clamp.

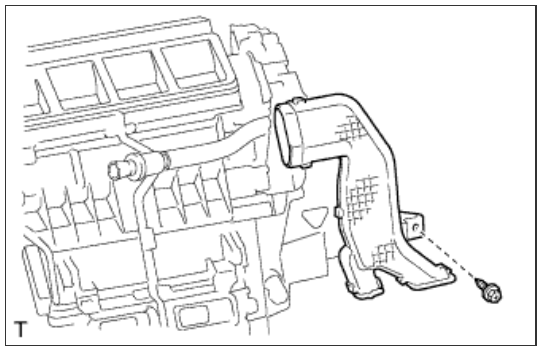


c. Attach the clamp.



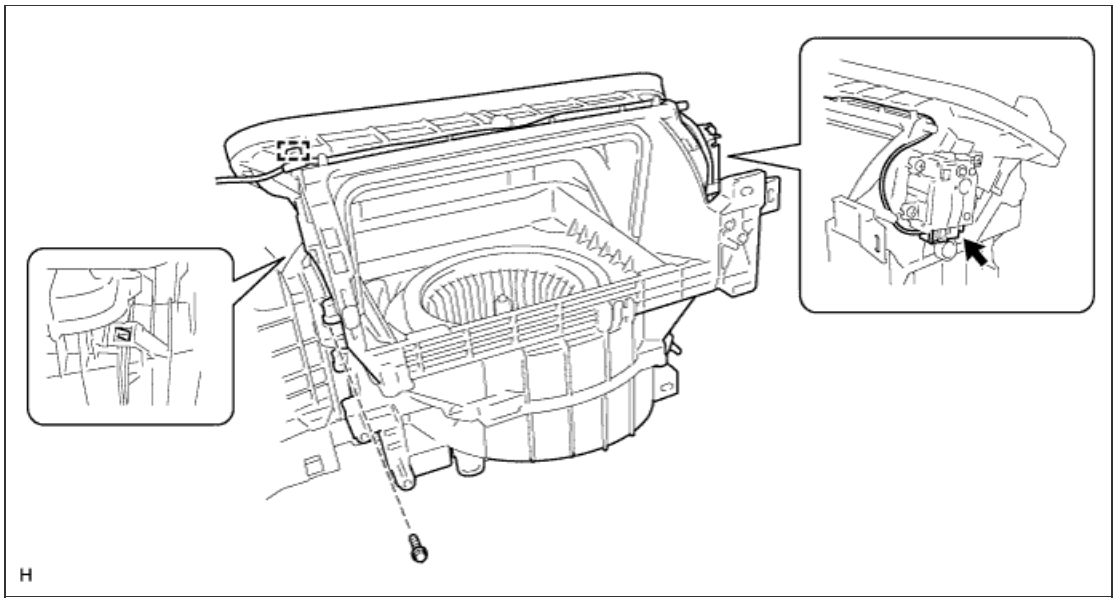
14. INSTALL ASPIRATOR

a. Attach the 2 claws to install the aspirator.



15. INSTALL NO. 4 AIR DUCT SUB-ASSEMBLY

a. Install the duct with the screw.



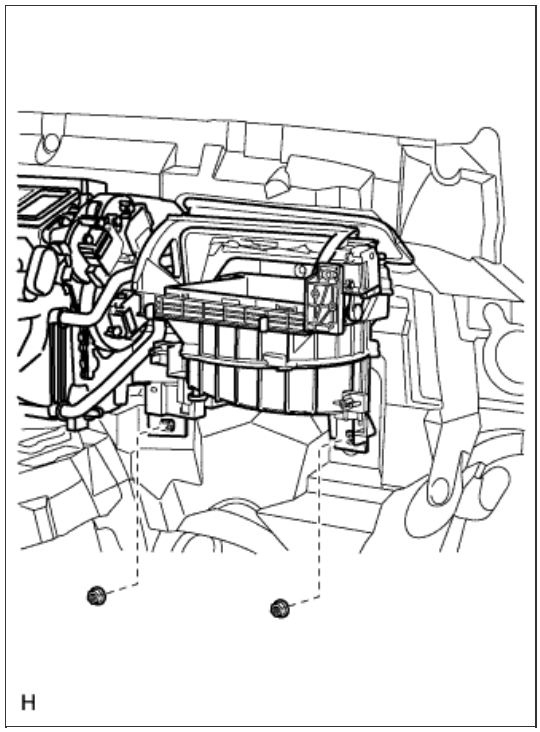
16. INSTALL NO. 5 AIR DUCT SUB-ASSEMBLY

a. Install the duct with the screw.

17. INSTALL BLO ER ASSEMBLY

a. Attach the claw to install the blower unit.

b. Connect the connector and clamp.

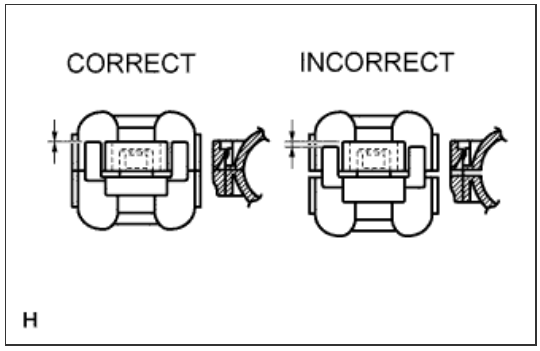


c. Install the screw.

for Preparation Click here

1. INSTALL AIR CONDITIONING UNIT ASSEMBLY

a. Install the air conditioning unit with the 2 nuts.

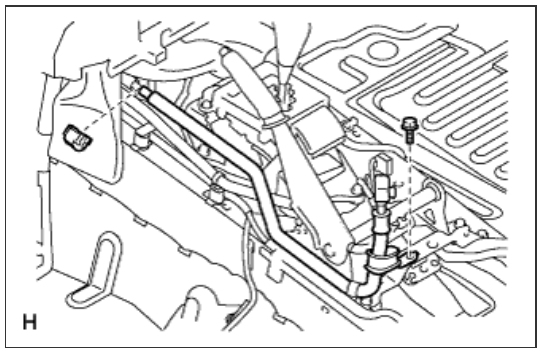


Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

2. INSTALL AIR CONDITIONING HOSE AND ACCESSORY (w/ Cool Box)

a. Lubricate 2 new O-rings with compressor oil and install them to the air conditioning hose and accessory.

Compressor oil:
ND-OIL 8 or equivalent



b. Install the air conditioning hose and accessory with the piping clamp.

NOTICE:

After connection, check the claw engagement of the piping clamp.

c. Install the bolt.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

. INSTALL INSTRUMENT PANEL REINFORCEMENT ASSEMBLY

a. Install the instrument panel reinforcement.

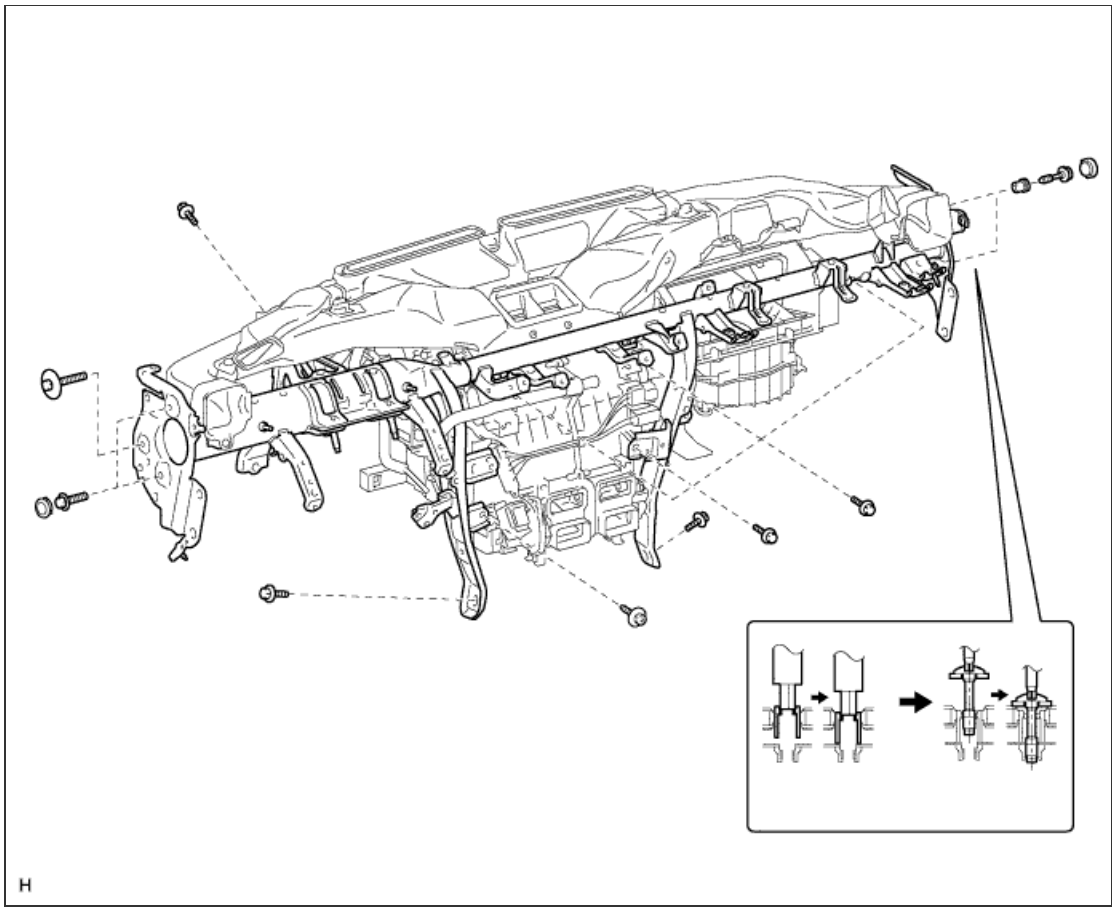
i. Install the instrument panel reinforcement with the 7 bolts and screw.

Torque:
for bolt:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }
for screw:
6.0 N*m{ 61 kgf*cm , 53 in.*lbf }

ii. for Passenger Side:
Using a 12 mm hexagon wrench, install the 2 collars.

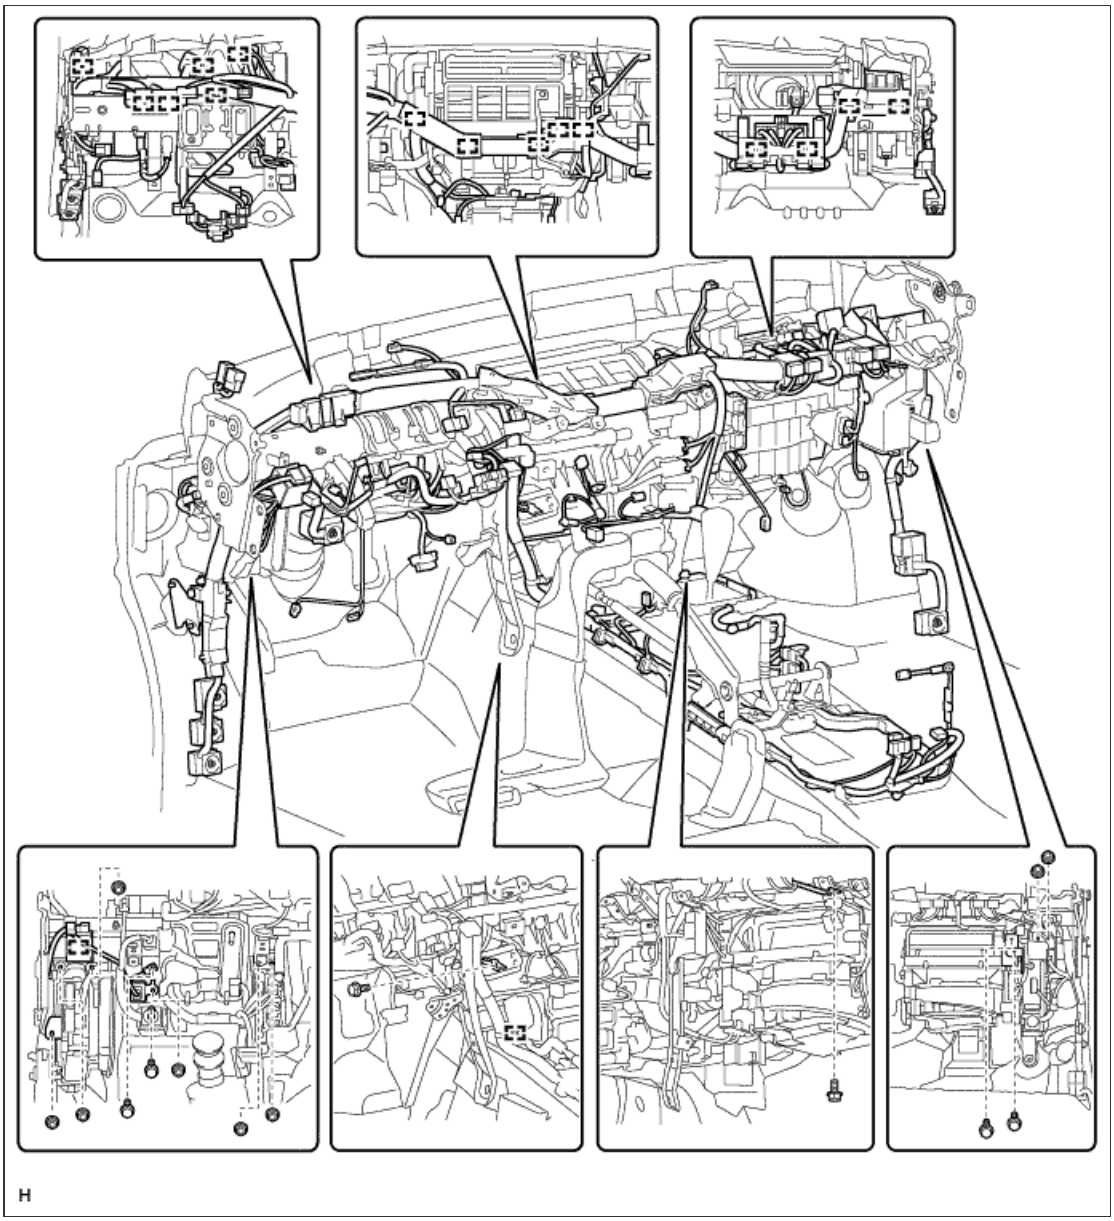
Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

iii. for Passenger Side:
Using a T40 "TORX" socket, install the 2 "TORX" bolts.



Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

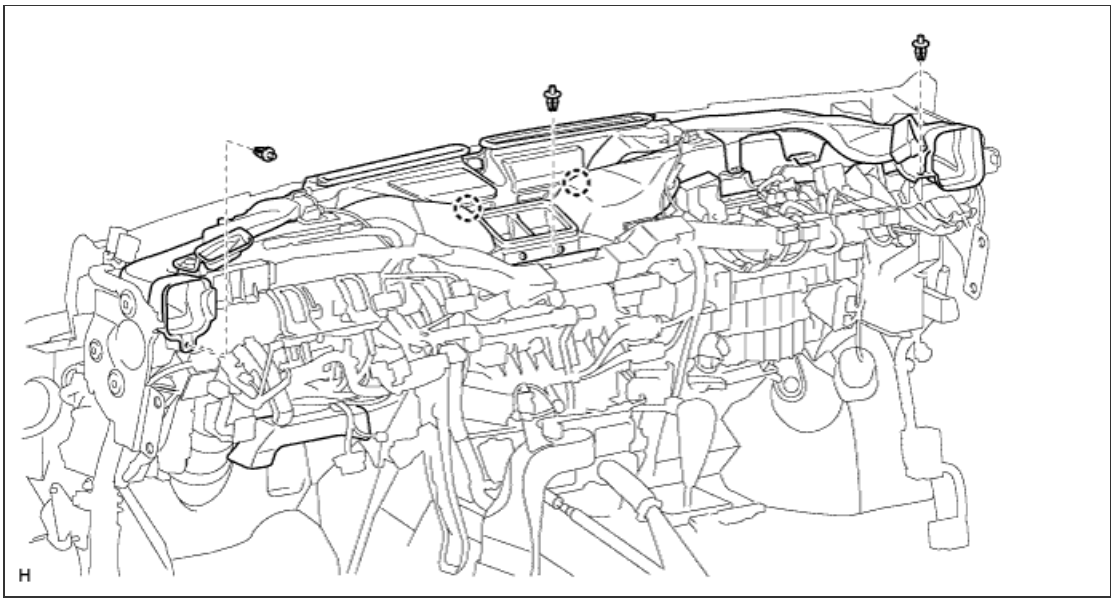
iv. for Passenger Side:
Install the 2 caps.



v. for Driver Side:
Install the 3 bolts.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

vi. for Driver Side:
Install the 3 caps.



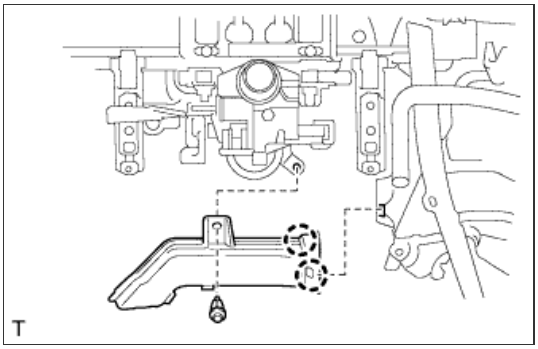
b. Attach the clamps and connectors to the wire harness.

4. INSTALL HEATER TO REGISTER DUCT ASSEMBLY

a. Attach the 2 claws to install the duct.

b. Install the 3 clips.

5. INSTALL STEERING COLUMN ASSEMBLY



a. for Power Tilt and Power Telescopic Steering Column:
Install the steering column (Click here).

b. for Manual Tilt and Manual Telescopic Steering Column:
Install the steering column (Click here).

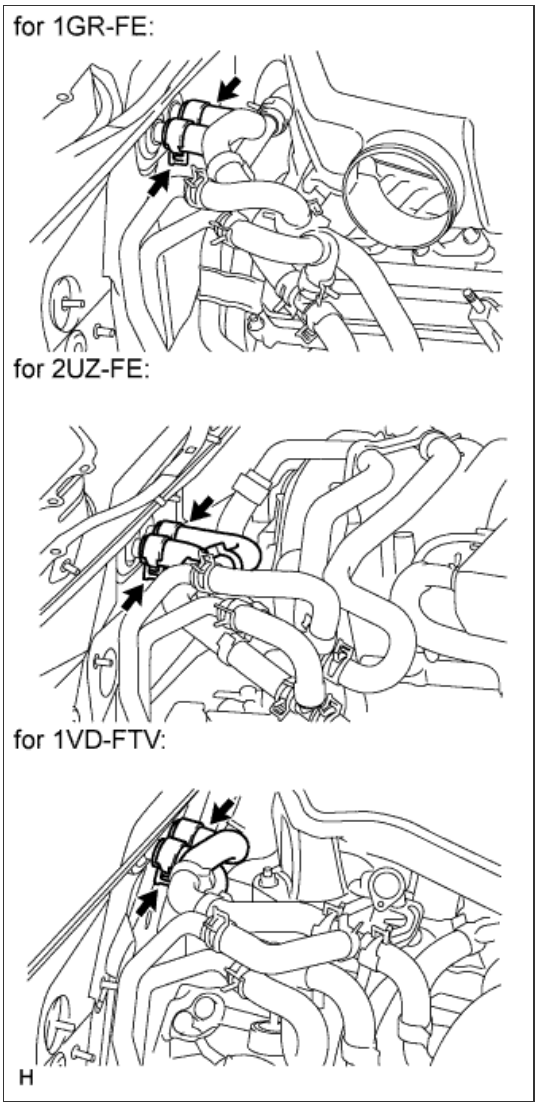
6. INSTALL NO. AIR DUCT SUB-ASSEMBLY

a. Attach the 2 claws to install the duct.

b. Install the clip.

7. INSTALL INSTRUMENT PANEL SUB-ASSEMBLY

a. Install the instrument panel (Click here).



8. INSTALL FRONT IPER MOTOR AND BRAC ET

a. Install the front wiper motor and bracket (Click here).

9. CONNECT HEATER ATER INLET HOSE AND HEATER ATER OUTLET HOSE

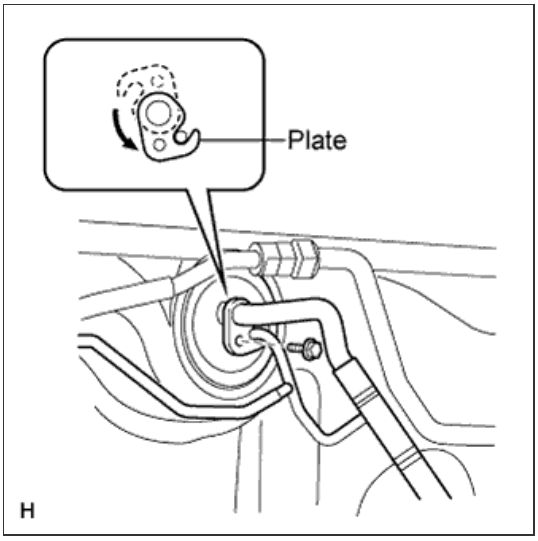
a. Connect the 2 heater water hoses.

b. Using pliers, grip the claws of the clips and slide the 2 clips.

10. CONNECT AIR CONDITIONING TUBE ASSEMBLY

a. Remove the attached vinyl tape from the tubes.

b. Sufficiently apply compressor oil to 2 new O-rings and the fitting surface of the air conditioning tube assembly.



Compressor oil:
ND-OIL 8 or equivalent

c. Install the 2 O-rings to the air conditioning tube assembly.

d. Connect the air conditioning tube assembly.

e. Attach the plate as shown in the illustration and install the bolt.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

11. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

12. CHEC SRS ARNING LIGHT

a. Check the SRS warning light (Click here).

1 . ADD ENGINE COOLANT

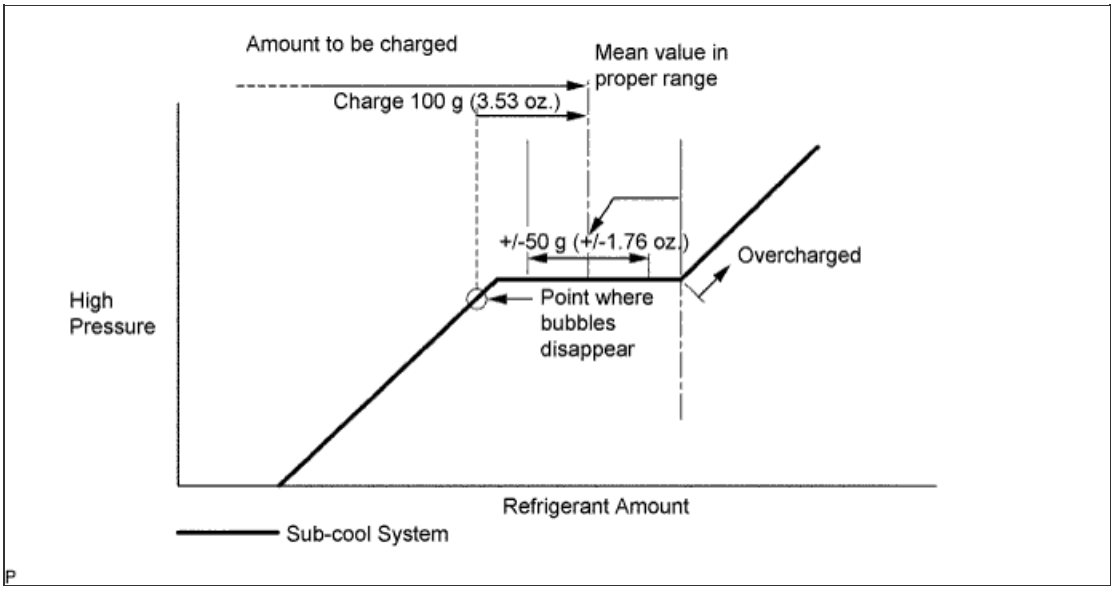
a. for 1VD-FTV:
Add engine coolant (Click here).

b. for 2UZ-FE:
Add engine coolant (Click here).

c. for 1GR-FE:
Add engine coolant (Click here).

14. CHARGE REFRIGERANT

SST



09985-20010 (09985-02130, 09985-02150, 09985-02090, 09985-02110, 09985-02010, 09985-02050, 09985-02060, 09985-02070)

a. Perform vacuum purging using a vacuum pump.

b. Charge refrigerant HFC-134a (R134a).

Standard:

Condenser Core Thickness	Air Conditioning Type	Cool Box	Refrigerant Charging Amount
22 mm (0.866 in.)	w/o Rear Cooler	w/ Cool Box	870 +/-30 g (30.7 +/-1.1 oz.)
		w/o Cool Box	870 +/-30 g (30.7 +/-1.1 oz.)
	w/ Rear Cooler	w/ Cool Box	1010 +/-30 g (35.6 +/-1.1 oz.)
		w/o Cool Box	960 +/-30 g (33.9 +/-1.1 oz.)
16 mm (0.630 in.)	w/o Rear Cooler	w/ Cool Box	770 +/-30 g (27.2 +/-1.1 oz.)
		w/o Cool Box	770 +/-30 g (27.2 +/-1.1 oz.)
	w/ Rear Cooler	w/ Cool Box	970 +/-30 g (34.2 +/-1.1 oz.)
		w/o Cool Box	920 +/-30 g (32.5 +/-1.1 oz.)

NOTICE:

- **Do not operate the cooler compressor before charging refrigerant as the cooler compressor will not work properly without any refrigerant, and will overheat.**

- **Approximatel 200 g (7.05 oz.) of refrigerant may need to be charged after bubbles disappear. The refrigerant amount should be checked by measuring its quantity, and not with the sight glass.**

15. WARM UP ENGINE

a. Warm up the engine at less than 1850 rpm for 2 minutes or more after charging the refrigerant.

NOTICE:

Be sure to warm up the compressor when turning the A/C switch is on after removing and installing the cooler refrigerant lines (including the compressor), to prevent damage to the compressor.

16. CHECK FOR ENGINE COOLANT LEAK

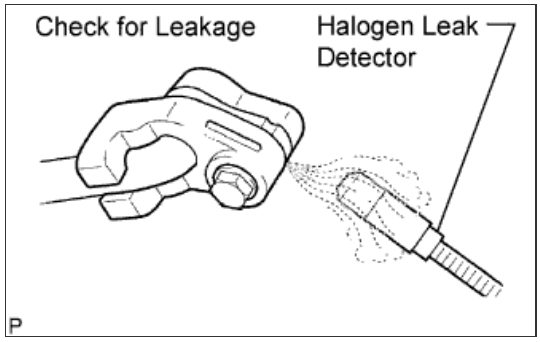
a. for 1VD-FTV:
Check for engine coolant leaks (Click here).

b. for 2UZ-FE:
Check for engine coolant leaks (Click here).

c. for 1GR-FE:
Check for engine coolant leaks (Click here).

17. CHECK FOR REFRIGERANT GAS LEAK

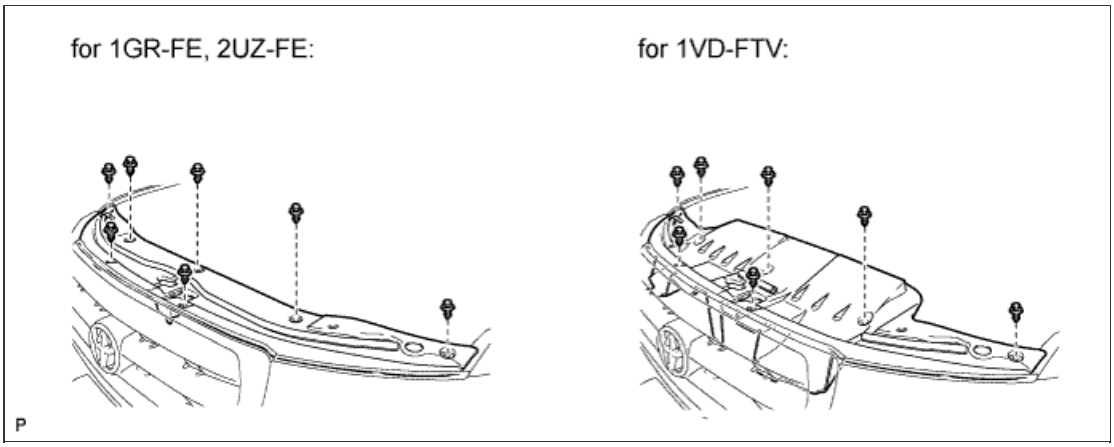
a. After recharging the refrigerant gas, check for refrigerant gas leakage using a halogen leak detector.



b. Perform the operation under these conditions:

- Stop the engine.
- Secure good ventilation (the halogen leak detector may react to volatile gases other than refrigerant, such as evaporated gasoline or exhaust gas).
- Repeat the test 2 or 3 times.
- Make sure that some refrigerant remains in the refrigeration system. When compressor is off: approximately 392 to 588 kPa (4.0 to 6.0 kgf/cm^2, 57 to 85 psi).

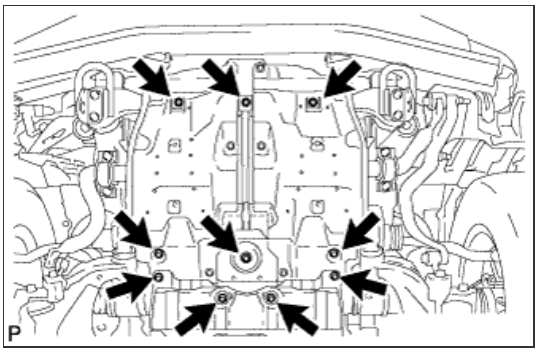
c. Using a halogen leak detector, check the refrigerant line for leakage.



d. If a gas leak is not detected on the drain hose, remove the blower motor control (blower resistor) from the cooling unit. Insert the halogen leak detector sensor into the unit and perform the test.

e. Disconnect the connector and wait for approximately 20 minutes. Bring the halogen leak detector close to the pressure switch and perform the test.

18. INSTALL UPPER RADIATOR SUPPORT SEAL



a. Install the radiator support seal with the 7 clips.

19. INSTALL NO. 1 ENGINE UNDER CO ER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

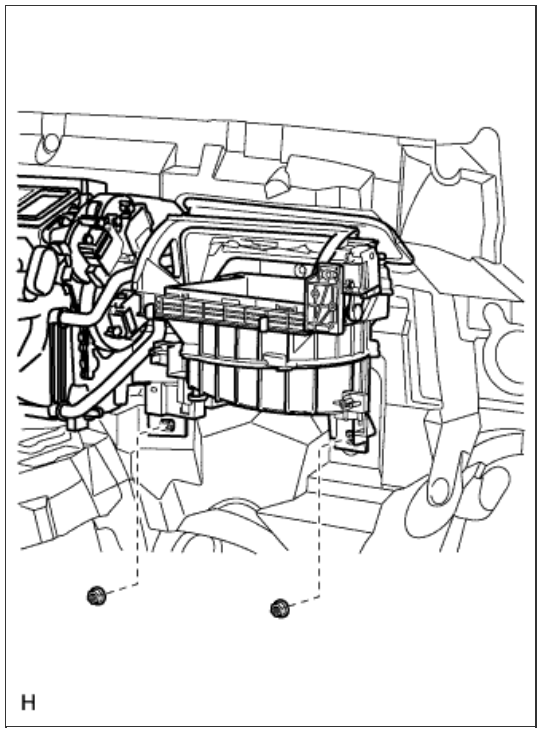
20. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. for Standard:
Install the front fender splash shield (Click here).

b. w/ Winch:
Install the front fender splash shield (Click here).

21. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

a. for Standard:
Install the front fender splash shield (Click here).

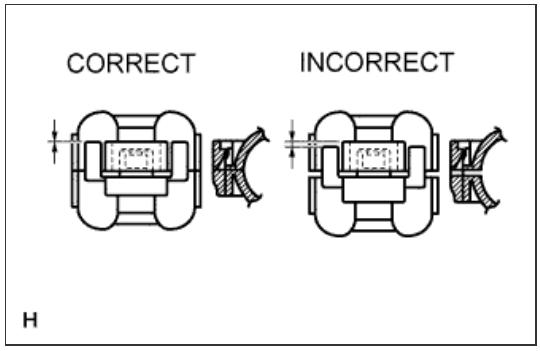


b. w/ Winch:
Install the front fender splash shield (Click here).

for Preparation Click here

1. INSTALL AIR CONDITIONING UNIT ASSEMBLY

a. Install the air conditioning unit with the 2 nuts.

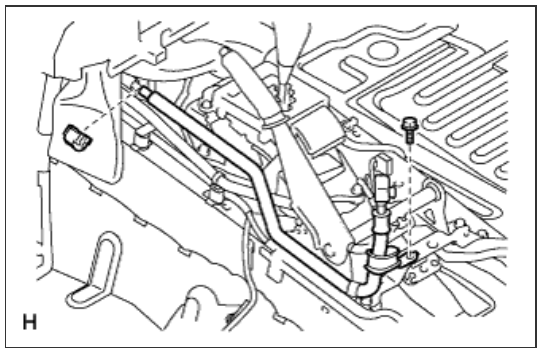


Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

2. INSTALL AIR CONDITIONING HOSE AND ACCESSORY (w/ Cool Box)

a. Lubricate 2 new O-rings with compressor oil and install them to the air conditioning hose and accessory.

Compressor oil:
ND-OIL 8 or equivalent



b. Install the air conditioning hose and accessory with the piping clamp.

NOTICE:

After connection, check the claw engagement of the piping clamp.

c. Install the bolt.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

. INSTALL INSTRUMENT PANEL REINFORCEMENT ASSEMBLY

a. Install the instrument panel reinforcement.

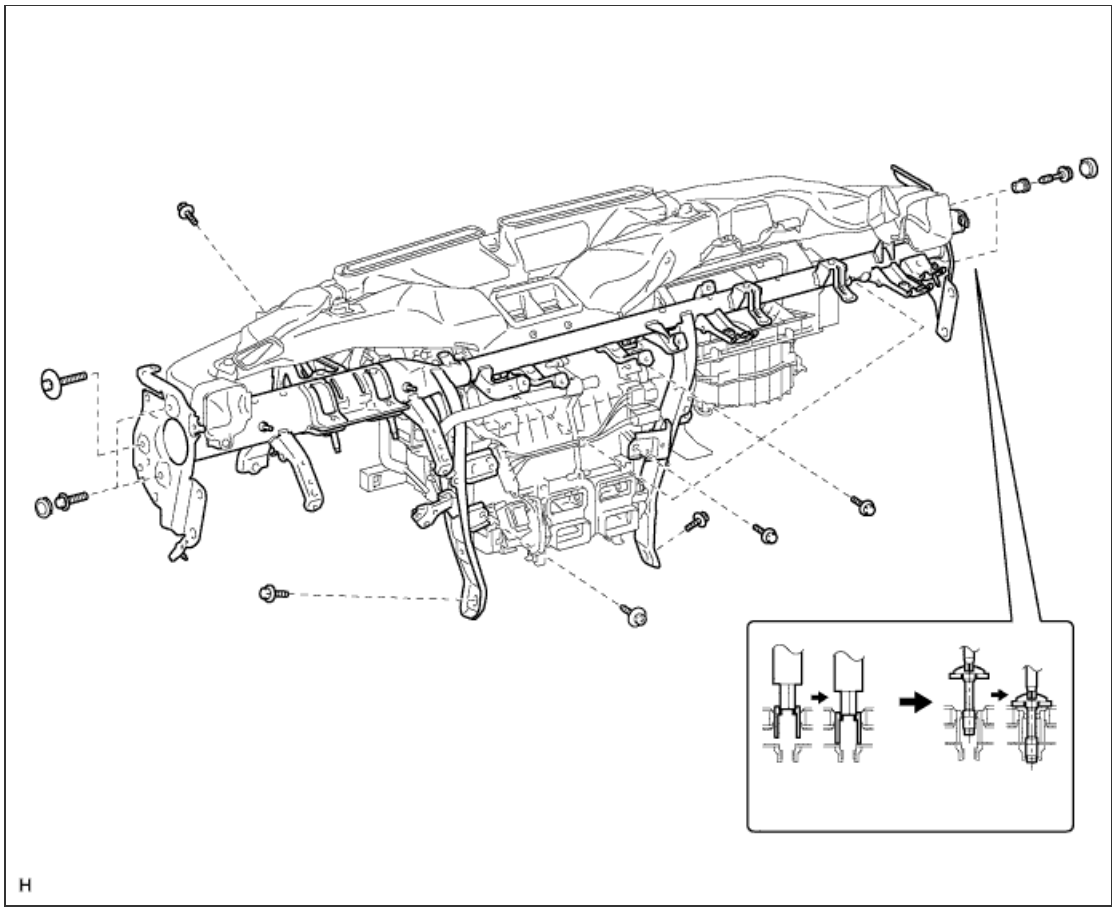
i. Install the instrument panel reinforcement with the 7 bolts and screw.

Torque:
for bolt:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }
for screw:
6.0 N*m{ 61 kgf*cm , 53 in.*lbf }

ii. for Passenger Side:
Using a 12 mm hexagon wrench, install the 2 collars.

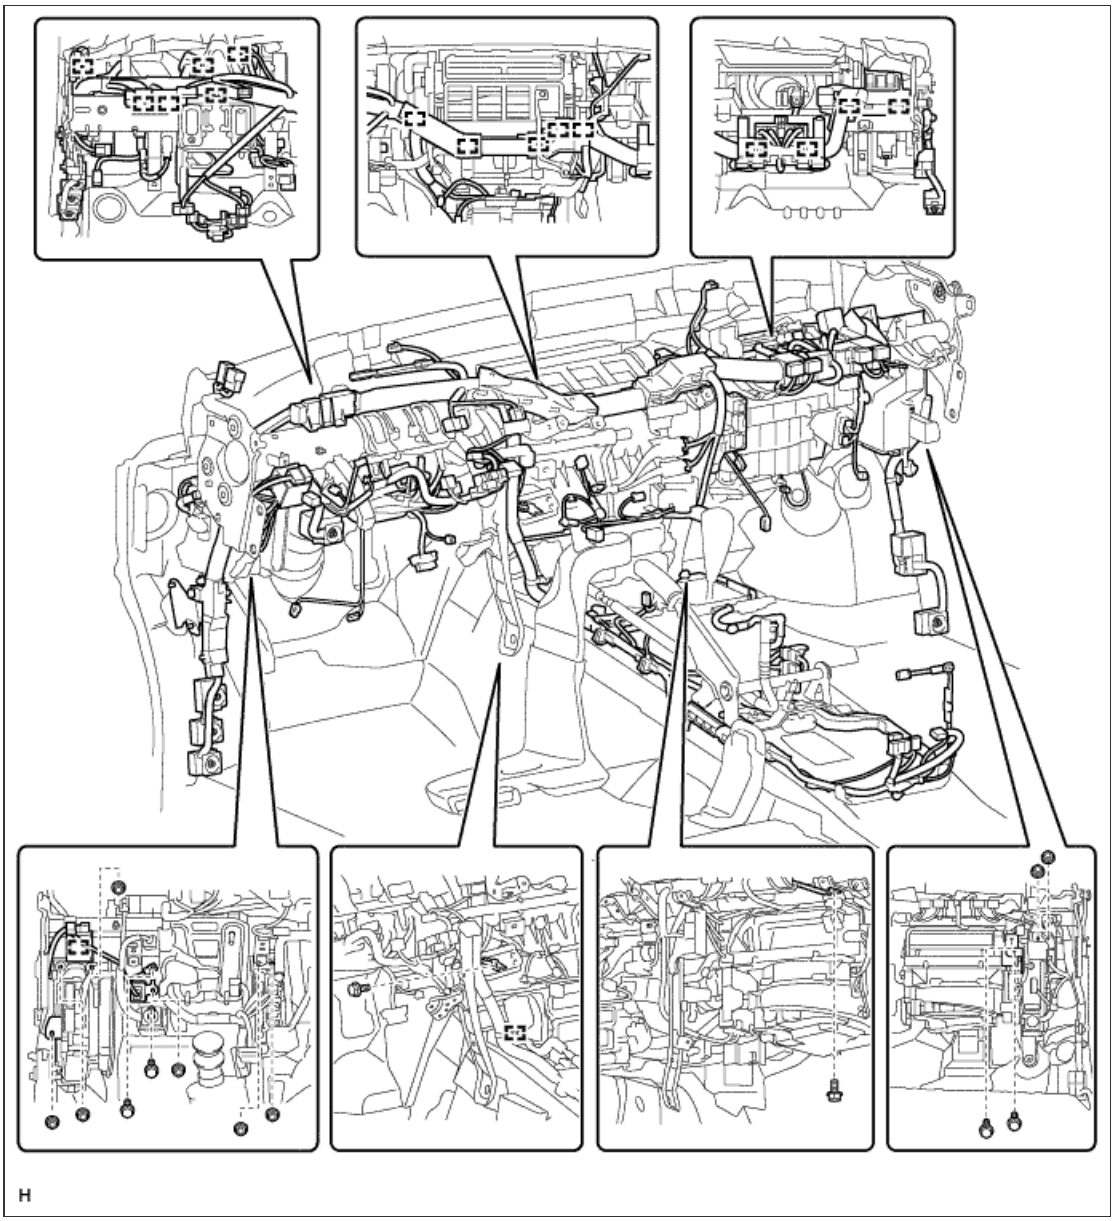
Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

iii. for Passenger Side:
Using a T40 "TORX" socket, install the 2 "TORX" bolts.



Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

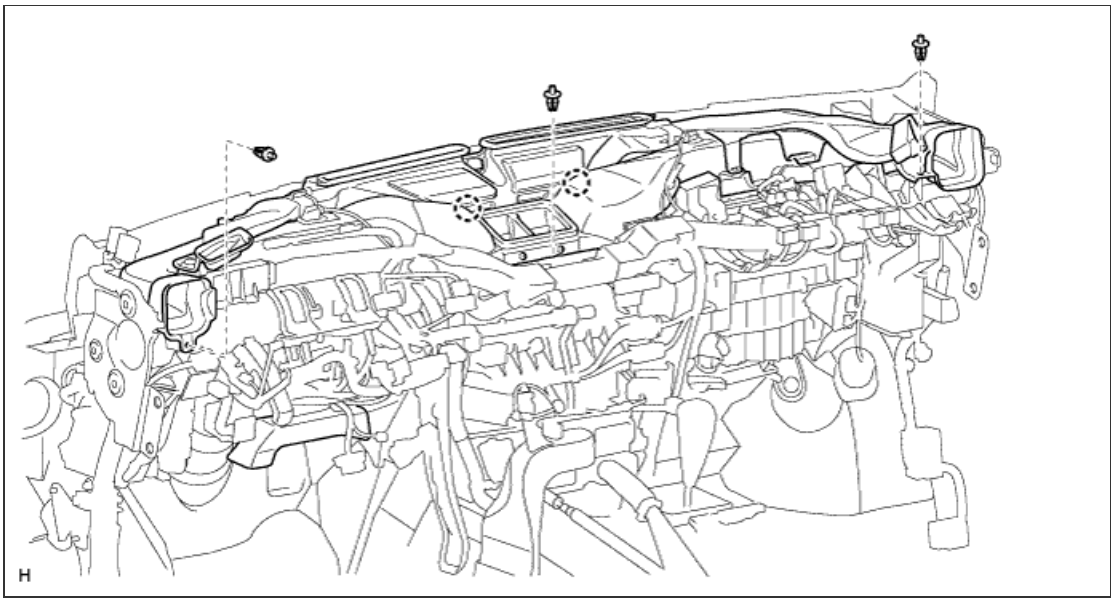
iv. for Passenger Side:
Install the 2 caps.



v. for Driver Side:
Install the 3 bolts.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

vi. for Driver Side:
Install the 3 caps.



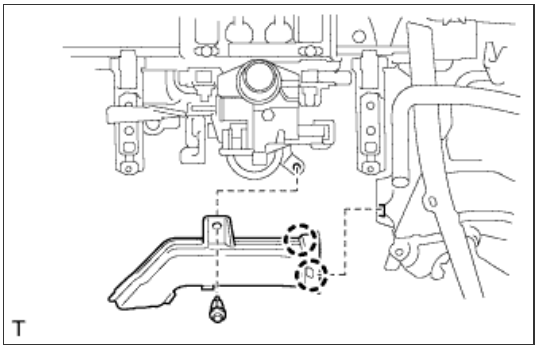
b. Attach the clamps and connectors to the wire harness.

4. INSTALL HEATER TO REGISTER DUCT ASSEMBLY

a. Attach the 2 claws to install the duct.

b. Install the 3 clips.

5. INSTALL STEERING COLUMN ASSEMBLY



a. for Power Tilt and Power Telescopic Steering Column:
Install the steering column (Click here).

b. for Manual Tilt and Manual Telescopic Steering Column:
Install the steering column (Click here).

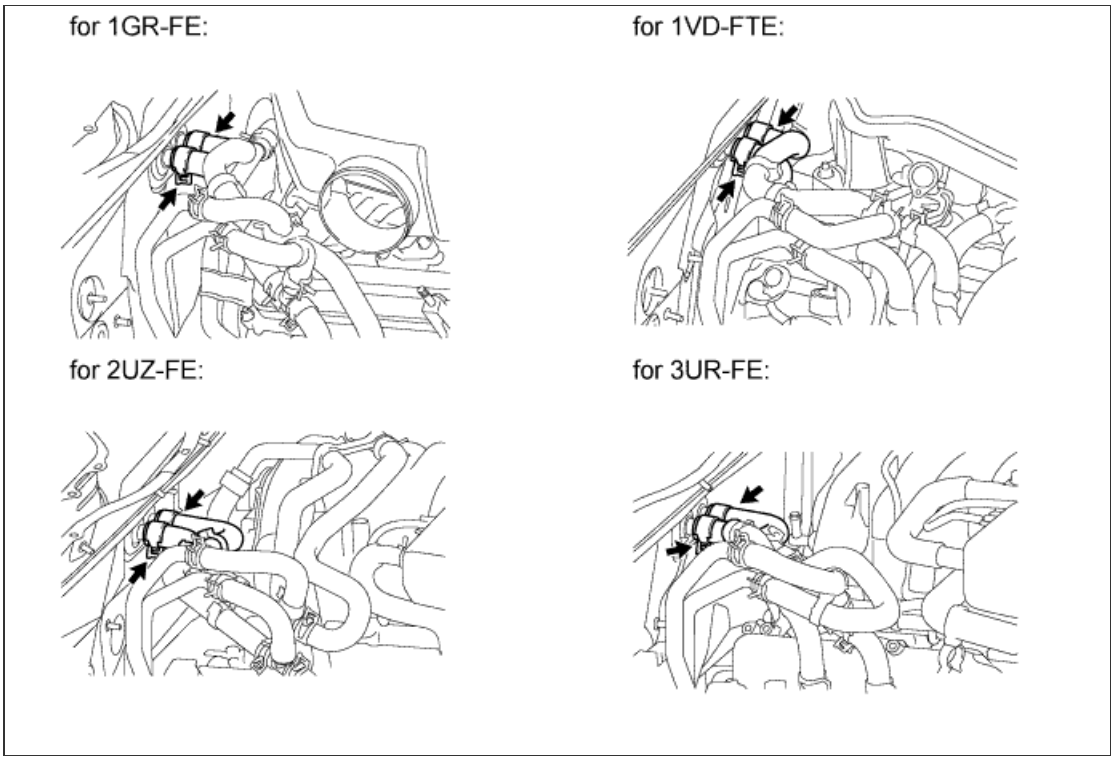
6. INSTALL NO. AIR DUCT SUB-ASSEMBLY

a. Attach the 2 claws to install the duct.

b. Install the clip.

7. INSTALL INSTRUMENT PANEL SUB-ASSEMBLY

a. Install the instrument panel (Click here).



8. INSTALL FRONT IPER MOTOR AND BRAC ET

a. Install the front wiper motor and bracket (Click here).

9. CONNECT HEATER ATER INLET HOSE AND HEATER ATER OUTLET HOSE

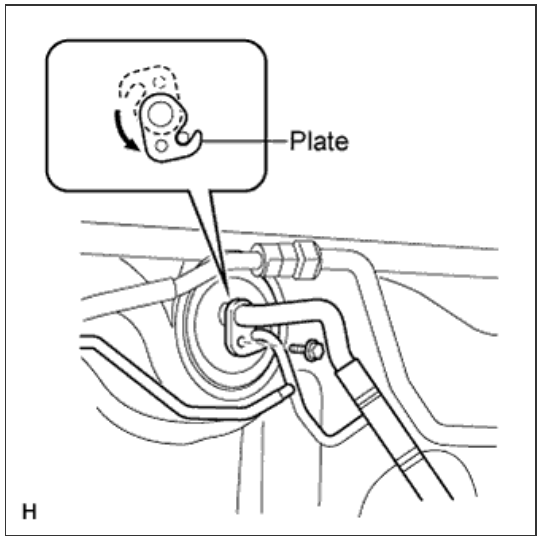
a. Connect the 2 heater water hoses.

b. Using pliers, grip the claws of the clips and slide the 2 clips.

10. CONNECT AIR CONDITIONING TUBE ASSEMBLY

a. Remove the attached vinyl tape from the tubes.

b. Sufficiently apply compressor oil to 2 new O-rings and the fitting surface of the air conditioning tube assembly.



Compressor oil:
ND-OIL 8 or equivalent

c. Install the 2 O-rings to the air conditioning tube assembly.

d. Connect the air conditioning tube assembly.

e. Attach the plate as shown in the illustration and install the bolt.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

11. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

12. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).

1 . ADD ENGINE COOLANT

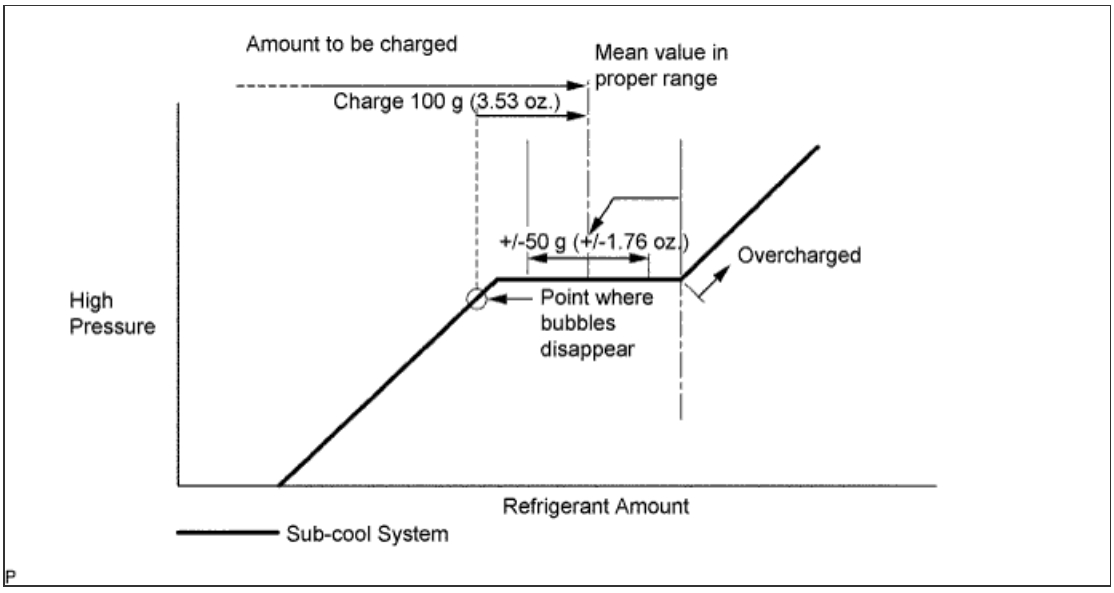
a. for 1VD-FTV:
Add engine coolant (Click here).

b. for 2UZ-FE:
Add engine coolant (Click here).

c. for 1GR-FE:
Add engine coolant (Click here).

. for 3UR-FE:
Add engine coolant (Click here).

14. CHARGE REFRIGERANT



SST
09985-20010 (09985-02130, 09985-02150, 09985-02090, 09985-02110, 09985-02010, 09985-02050, 09985-02060, 09985-02070)

a. Perform vacuum purging using a vacuum pump.

b. Charge refrigerant HFC-134a (R134a).

Standard:

Condenser Core Thickness	Air Conditioning Type	Cool Box	Refrigerant Charging Amount
22 mm (0.866 in.)	w/o Rear Cooler	w/ Cool Box	870 +/-30 g (30.7 +/-1.1 oz.)
		w/o Cool Box	870 +/-30 g (30.7 +/-1.1 oz.)
	w/ Rear Cooler	w/ Cool Box	1010 +/-30 g (35.6 +/-1.1 oz.)
		w/o Cool Box	960 +/-30 g (33.9 +/-1.1 oz.)
16 mm (0.630 in.)	w/o Rear Cooler	w/ Cool Box	770 +/-30 g (27.2 +/-1.1 oz.)
		w/o Cool Box	770 +/-30 g (27.2 +/-1.1 oz.)
	w/ Rear Cooler	w/ Cool Box	970 +/-30 g (34.2 +/-1.1 oz.)
		w/o Cool Box	920 +/-30 g (32.5 +/-1.1 oz.)

NOTICE:

- **Do not operate the cooler compressor before charging refrigerant as the cooler compressor will not work properly without any refrigerant, and will overheat.**
- **Approximately 200 g (7.05 oz.) of refrigerant may need to be charged after bubbles disappear. The refrigerant amount should be checked by measuring its quantity, and not with the sight glass.**

15. ARM UP ENGINE

a. Warm up the engine at less than 1850 rpm for 2 minutes or more after charging the refrigerant.

NOTICE:

Be sure to warm up the compressor when turning the A/C switch is on after removing and installing the cooler refrigerant lines (including the compressor), to prevent damage to the compressor.

16. CHEC FOR ENGINE COOLANT LEA

a. for 1VD-FTV:
Check for engine coolant leaks (Click here).

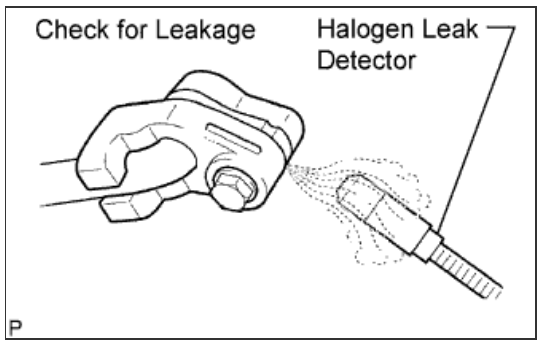
b. for 2UZ-FE:
Check for engine coolant leaks (Click here).

c. for 1GR-FE:
Check for engine coolant leaks (Click here).

. for 3UR-FE:
Check for engine coolant leaks (Click here).

17. CHEC FOR REFRIGERANT GAS LEA

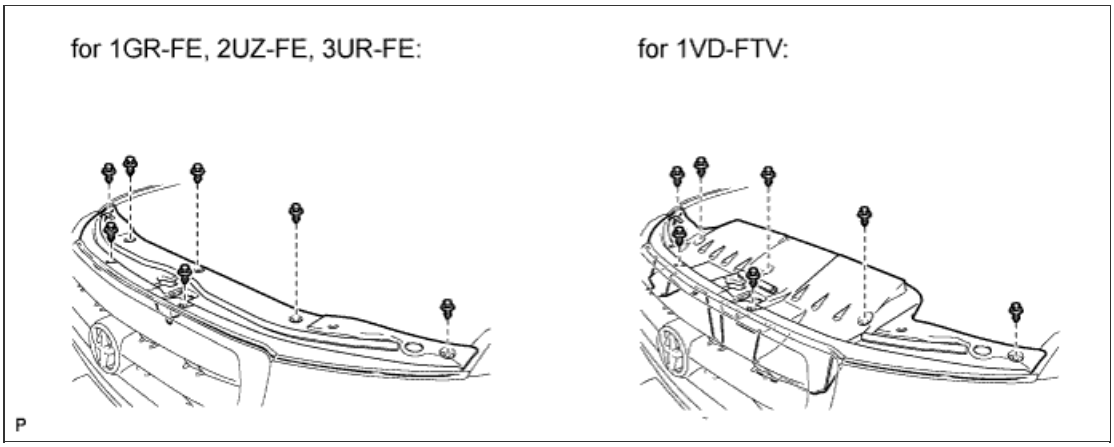
a. After recharging the refrigerant gas, check for refrigerant gas leakage using a halogen leak detector.



b. Perform the operation under these conditions:

- Stop the engine.
- Secure good ventilation (the halogen leak detector may react to volatile gases other than refrigerant, such as evaporated gasoline or exhaust gas).
- Repeat the test 2 or 3 times.
- Make sure that some refrigerant remains in the refrigeration system. When compressor is off: approximately 392 to 588 kPa (4.0 to 6.0 kgf/cm^2, 57 to 85 psi).

c. Using a halogen leak detector, check the refrigerant line for leakage.



. If a gas leak is not detected on the drain hose, remove the blower motor control (blower resistor) from the cooling unit. Insert the halogen leak detector sensor into the unit and perform the test.

e. Disconnect the connector and wait for approximately 20 minutes. Bring the halogen leak detector close to the pressure switch and perform the test.

18. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Remove the 7 clips and radiator support seal.

19. INSTALL NO. 1 ENGINE UNDER CO ER SUB-ASSEMBLY

a. for 1VD-FTV:
Install the No. 1 engine under cover sub-assembly (Click here).

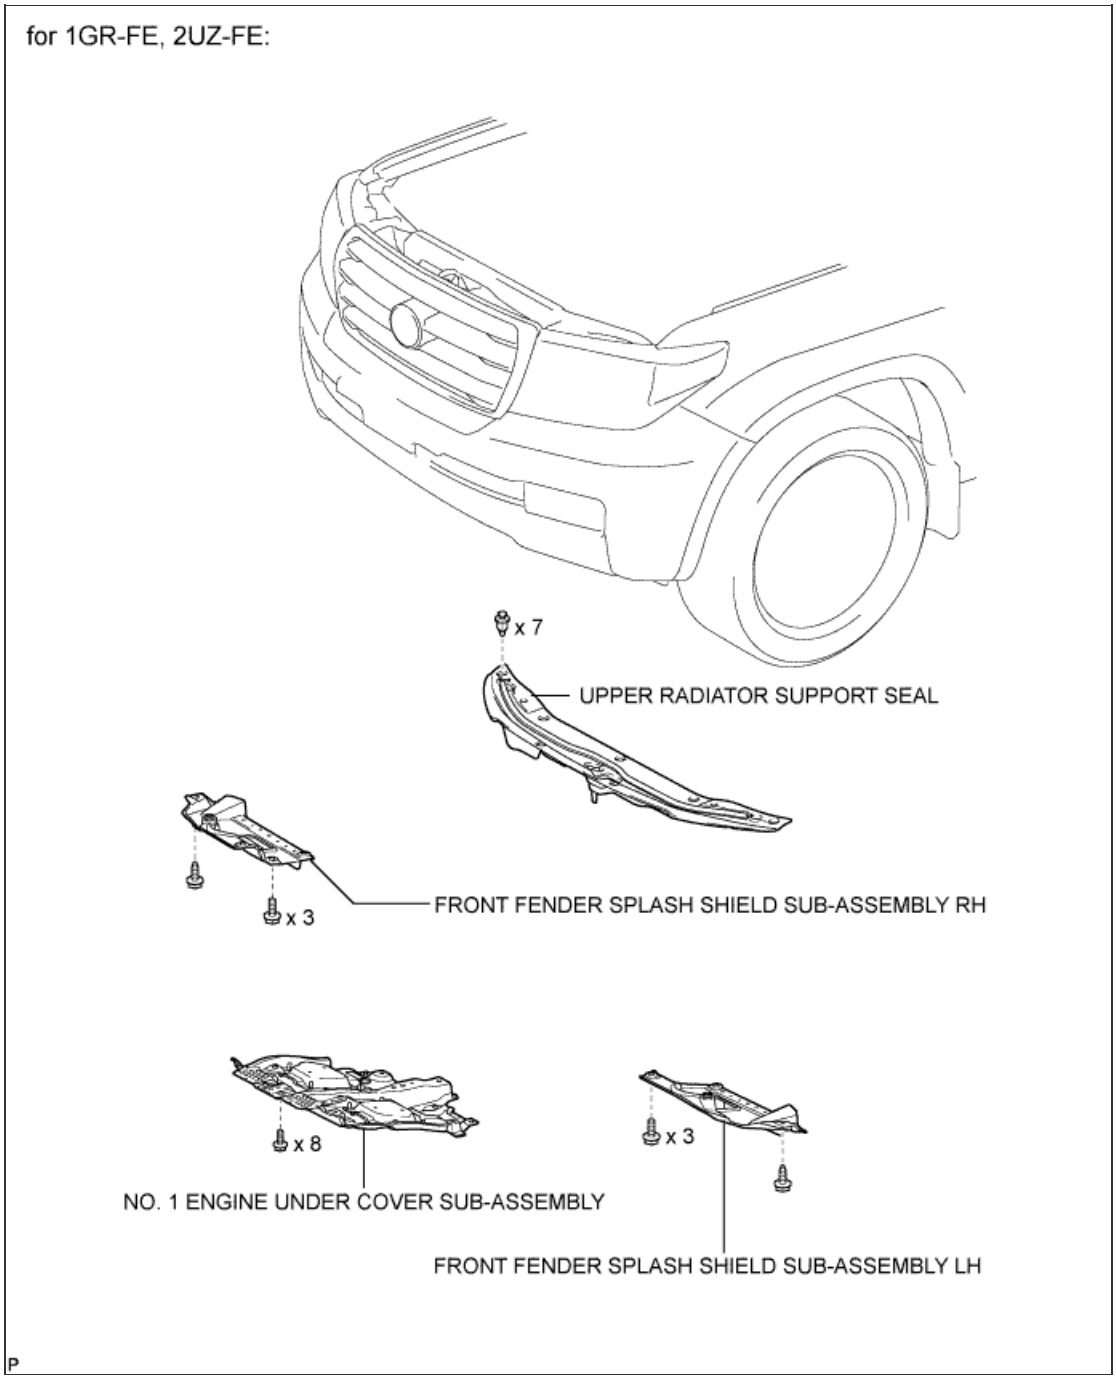
b. for 2UZ-FE:
Install the No. 1 engine under cover sub-assembly (Click here).

c. for 1GR-FE:
Install the No. 1 engine under cover sub-assembly (Click here).

. for 3UR-FE:
Install the No. 1 engine under cover sub-assembly (Click here).

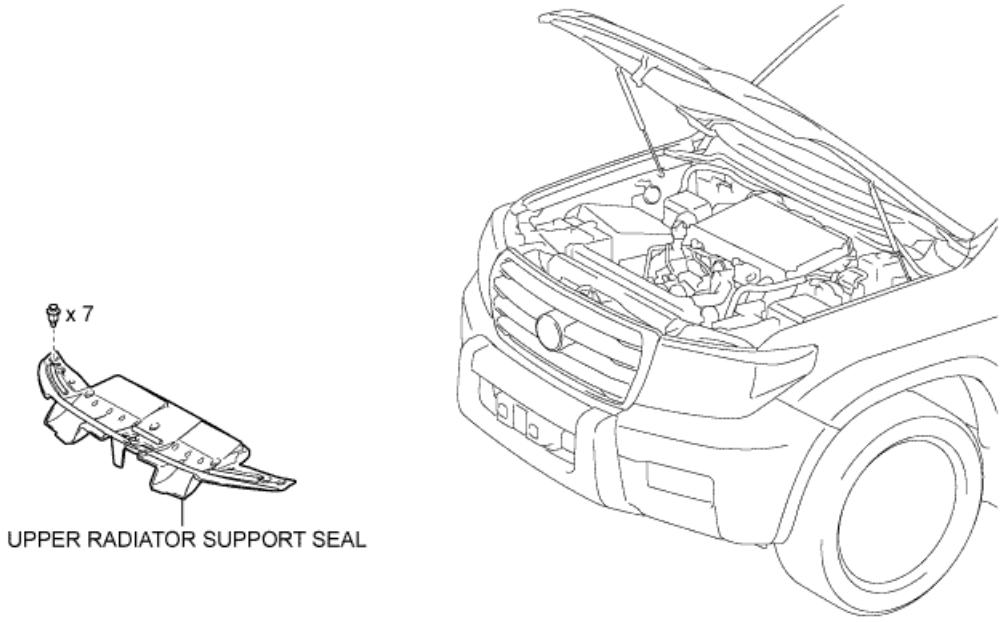
20. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. for Standard:
Install the front fender splash shield (Click here).



b. w/ Winch:
Install the front fender splash shield (Click here).

21. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH



a. for Standard:
Install the front fender splash shield (Click here).

for Preparation Click here

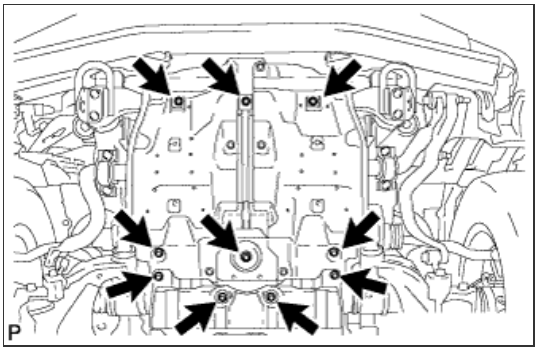
1. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. for Standard:
Remove the front fender splash shield (Click here).

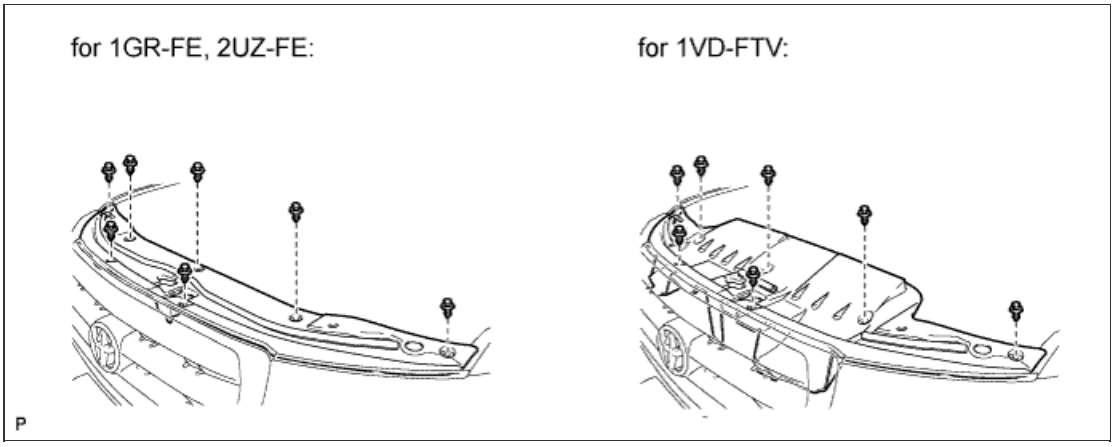
b. w/ Winch:
Remove the front fender splash shield (Click here).



2. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

a. for Standard:
Remove the front fender splash shield (Click here).

b. w/ Winch:
Remove the front fender splash shield (Click here).



3. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and No. 1 engine under cover.

4. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 7 clips and radiator support seal.

5. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM

a. Start the engine.

b. Turn the A/C switch on.

c. Operate the cooler compressor while the engine speed is approximately 1000 rpm for 5 to 6 minutes to circulate the refrigerant and collect the compressor oil remaining in each component into the cooler compressor.

d. Stop the engine.

e. Recover the refrigerant from the A/C system using a refrigerant recovery unit.

6. DRAIN ENGINE COOLANT

a. for 1VD-FTV:
Drain the engine coolant (Click here).

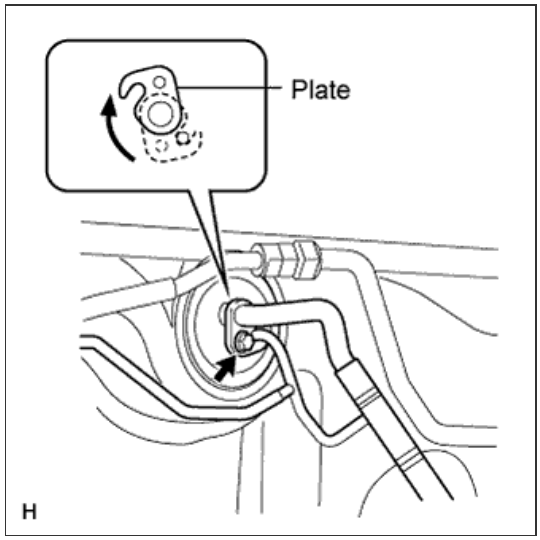
b. for 2UZ-FE:
Drain the engine coolant (Click here).

c. for 1GR-FE:
Drain the engine coolant (Click here).

7. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.



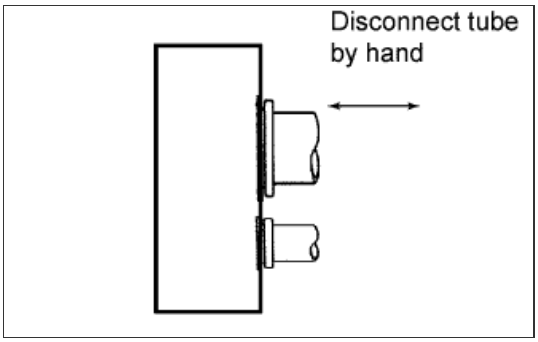
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

8. DISCONNECT AIR CONDITIONING TUBE ASSEMBLY

a. Remove the bolt.

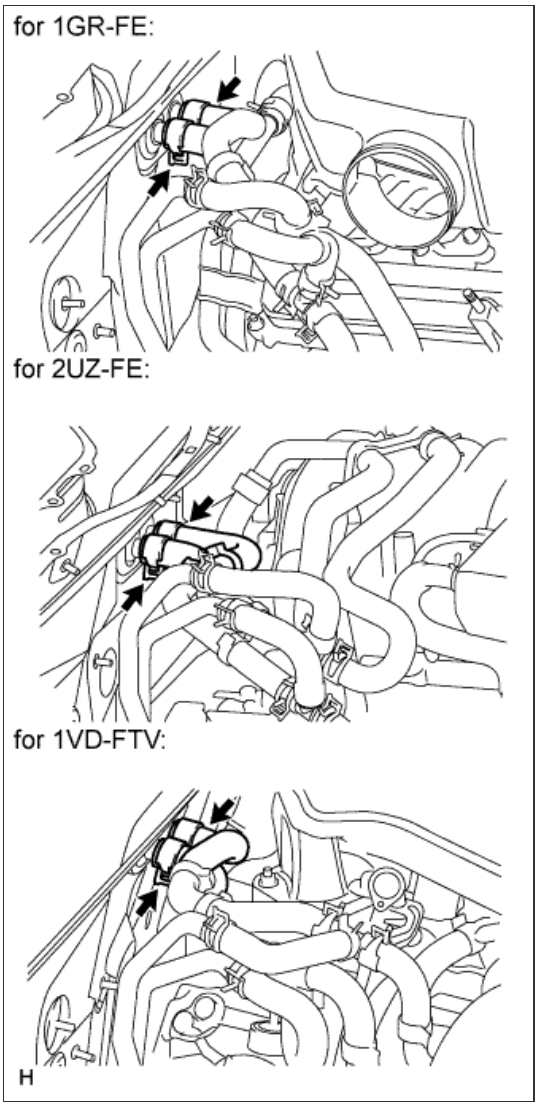
b. Detach the plate as shown in the illustration.



c. Disconnect the air conditioning tube assembly.

NOTICE:

- **Do not use a screwdriver or similar tool to disconnect the tube.**
- **Seal the openings of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering them.**



d. Remove the 2 O-rings from the air conditioning tube assembly.

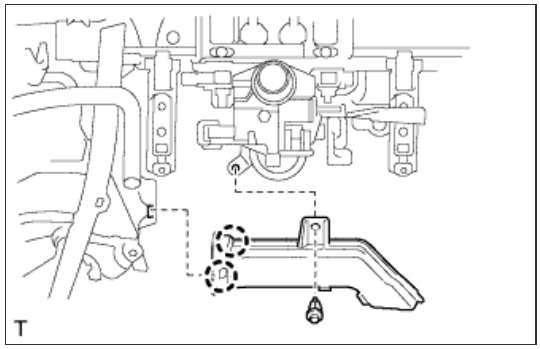
9. DISCONNECT HEATER ATER INLET HOSE AND HEATER ATER OUTLET HOSE

a. Using pliers, grip the claws of the clips and slide the 2 clips.

b. Disconnect the 2 heater water hoses.

1 . REMOVE FRONT IPER MOTOR AND BRACKET

a. Remove the front wiper motor and bracket (Click here).



11. REMOVE INSTRUMENT PANEL SUB-ASSEMBLY

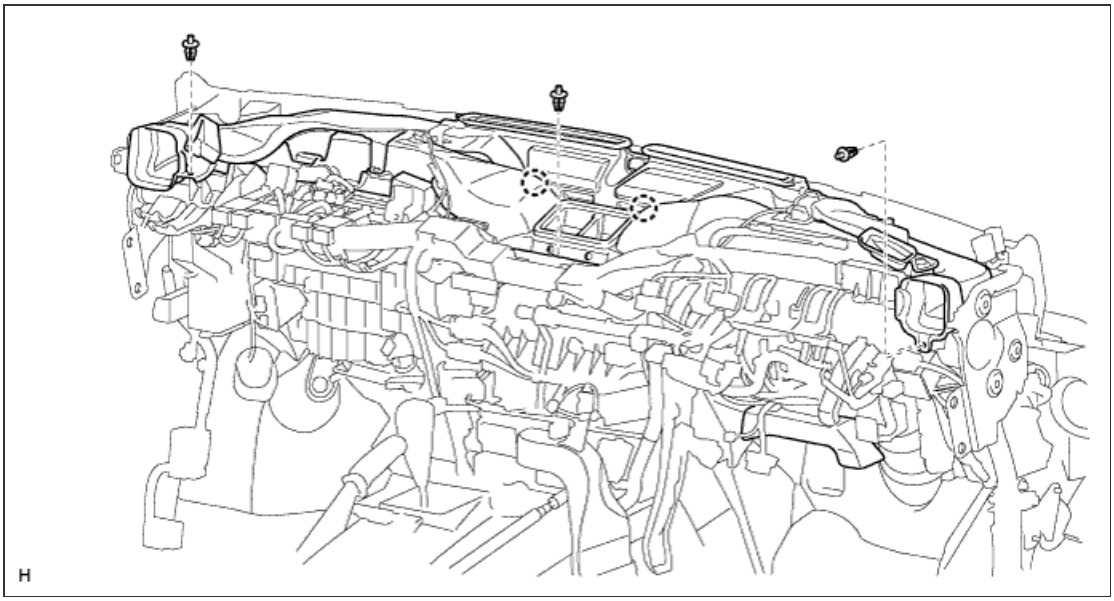
a. Remove the instrument panel (Click here).

12. REMOVE NO. 3 AIR DUCT SUB-ASSEMBLY

a. Remove the clip.

b. Detach the 2 claws and remove the duct.

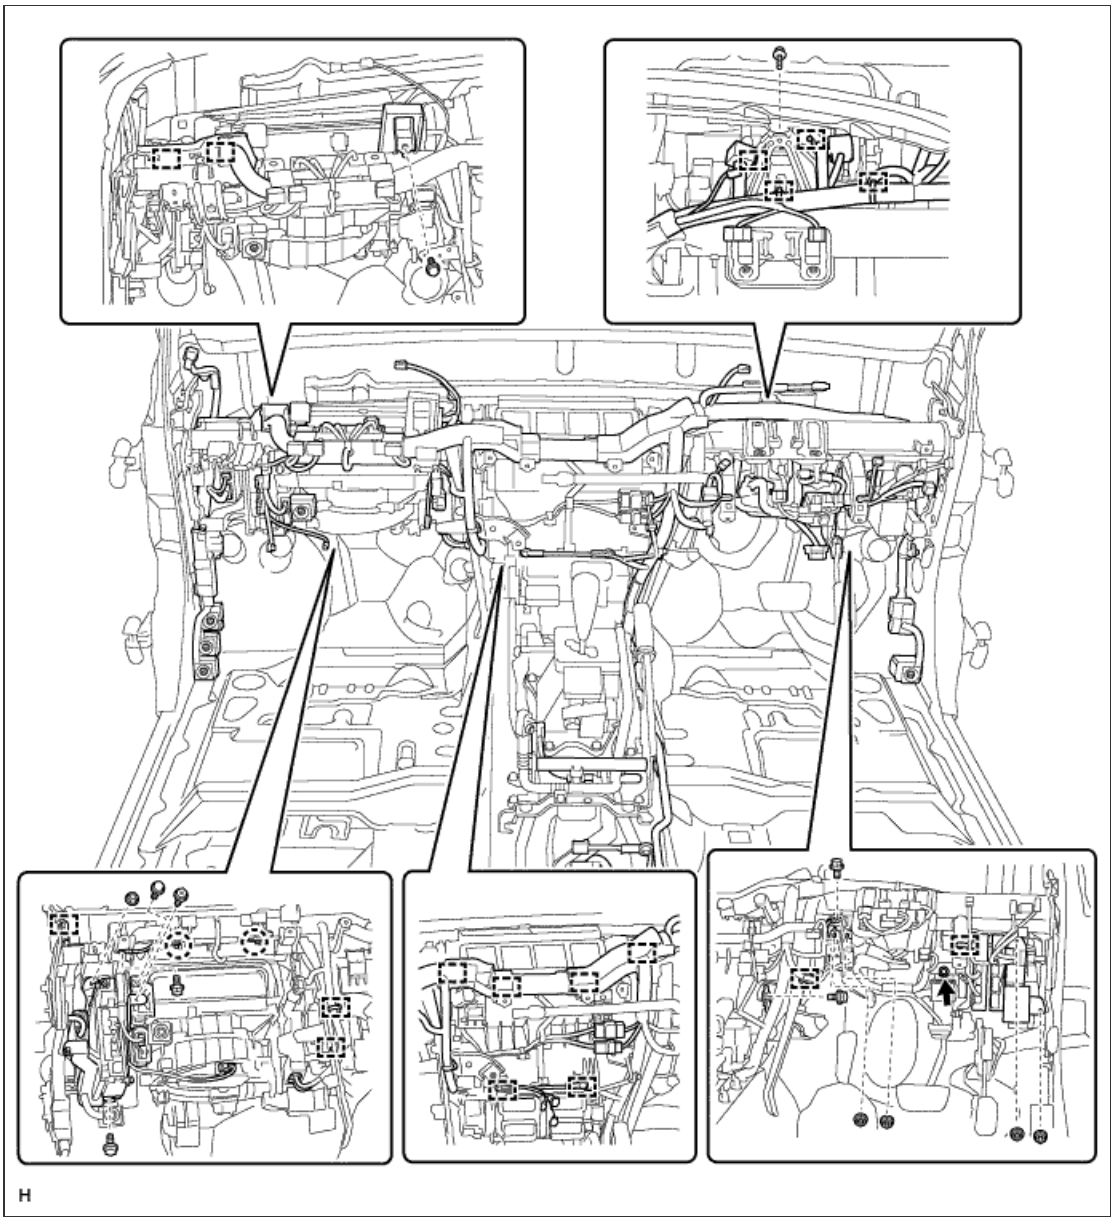
13. REMOVE STEERING COLUMN ASSEMBLY



a. for Power Tilt and Power Telescopic Steering Column:
Remove the steering column (Click here).

b. for Manual Tilt and Manual Telescopic Steering Column:
Remove the steering column (Click here).

14. REMOVE HEATER TO REGISTER DUCT ASSEMBLY



a. Remove the 3 clips.

b. Detach the 2 claws and remove the duct.

15. REMOVE INSTRUMENT PANEL REINFORCEMENT ASSEMBLY

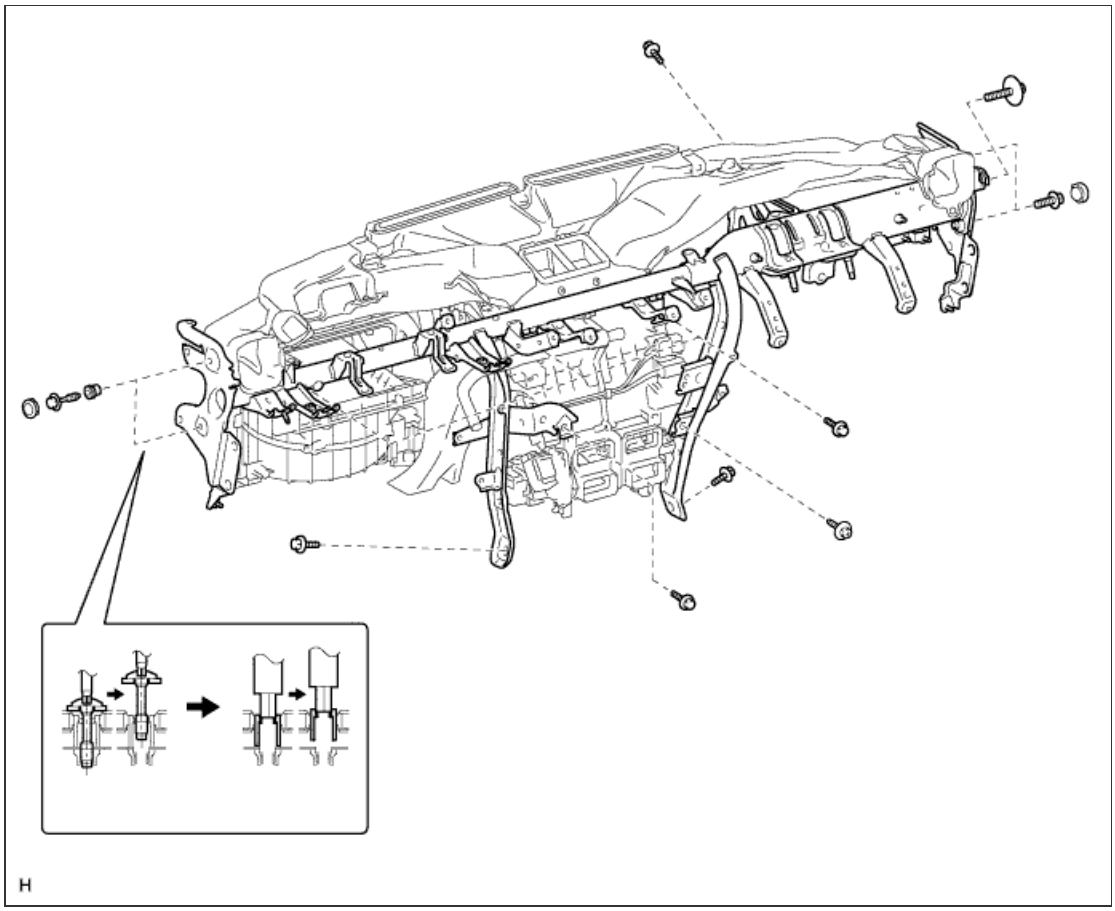
a. Disconnect the clamps, connectors and wire harness.

H

b. Remove the instrument panel reinforcement.

i. for Driver Side:
Remove the 3 caps and 3 bolts.

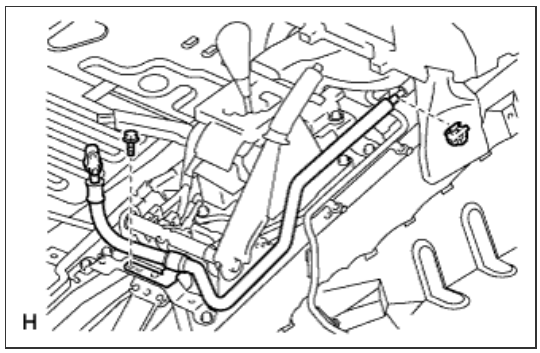
ii. for Passenger Side:
Remove the 2 caps.



iii. for Passenger Side:
Using a T40 "TORX" socket, remove the 2 "TORX" bolts.

HINT:

When removing the bolts, the collars may come off with the bolts.



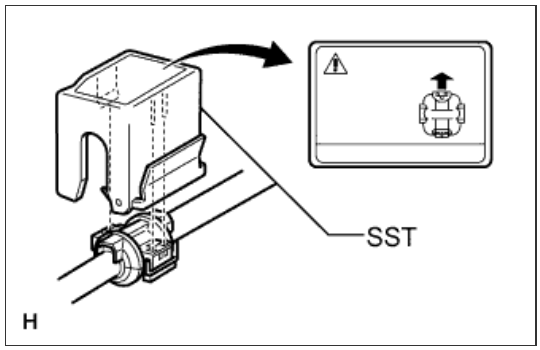
iv. for Passenger Side:
Using a 12 mm hexagon wrench, remove the 2 collars.

v. Remove the 7 bolts, screw and instrument panel reinforcement.

16. REMOVE AIR CONDITIONING HOSE AND ACCESSORY (w/ Cool Box)

a. Remove the bolt.

b. Using SST, remove the piping clamp.



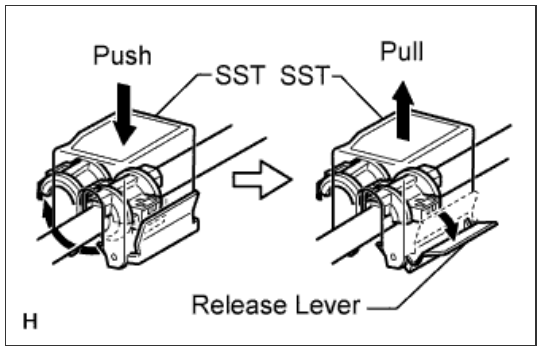
SST

87 -00025

i. Attach SST to the piping clamp.

HINT:

Confirm the direction of the piping clamp claw and SST by referring to the illustration on the caution label.



ii. Push down SST and release the clamp lock.

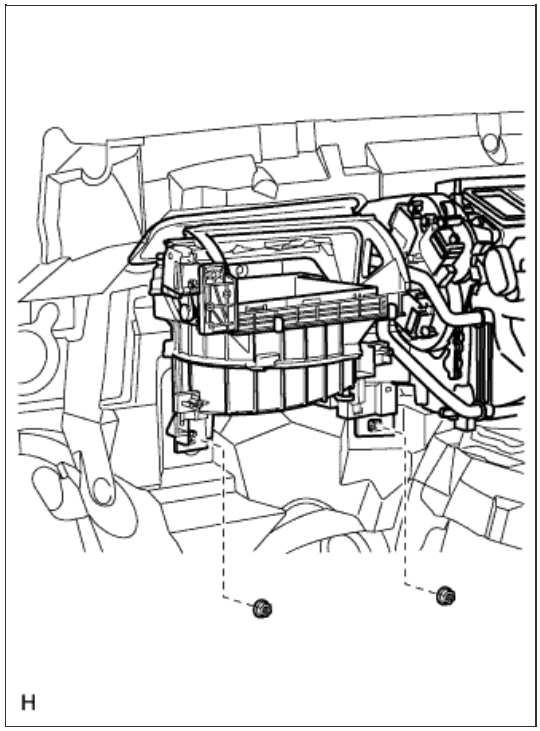
NOTICE:

Be careful not to deform the tubes when pushing SST.

iii. Pull SST slightly and push the release lever, then remove the piping clamp with SST.

iv. Remove the piping clamp from SST.

c. Disconnect the hose and accessory from the liquid tube to remove it.



NOTICE:

Cap the open fittings immediately to keep moisture or dirt out of the system.

d. Remove the 2 O-rings from the air conditioning hose and accessory.

17. REMOVE AIR CONDITIONING UNIT

a. Remove the 2 nuts and air conditioning unit.

for Preparation Click here

1. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. for Standard:
Remove the front fender splash shield (Click here).

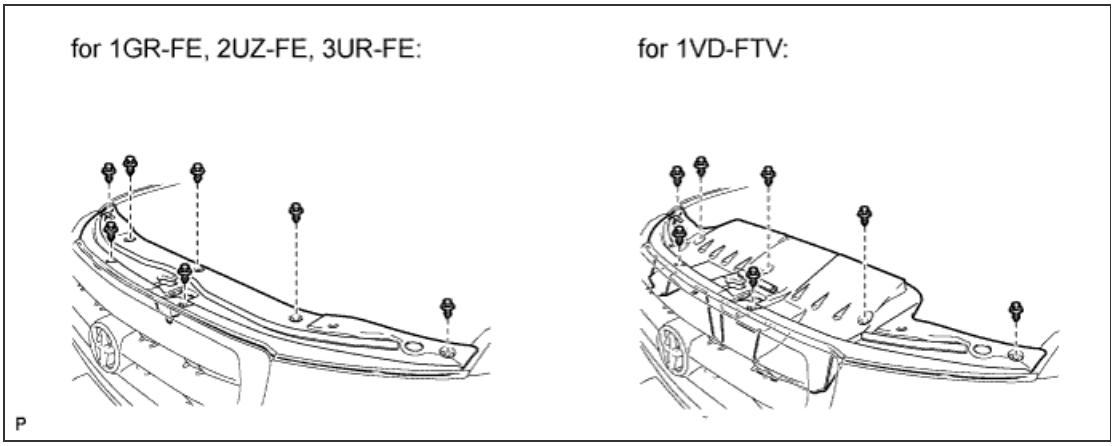
b. w/ Winch:
Remove the front fender splash shield (Click here).

2. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

a. for Standard:
Remove the front fender splash shield (Click here).

b. w/ Winch:
Remove the front fender splash shield (Click here).

3. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY



a. for 1VD-FTV:
Remove the No. 1 engine under cover sub-assembly (Click here).

b. for 2U FE:
Remove the No. 1 engine under cover sub-assembly (Click here).

c. for 1GR-FE:
Remove the No. 1 engine under cover sub-assembly (Click here).

4. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 7 clips and radiator support seal.

5. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM

a. Start the engine.

b. Turn the A/C switch on.

c. Operate the cooler compressor while the engine speed is approximately 1000 rpm for 5 to 6 minutes to circulate the refrigerant and collect the compressor oil remaining in each component into the cooler compressor.

d. Stop the engine.

e. Recover the refrigerant from the A/C system using a refrigerant recovery unit.

6. DRAIN ENGINE COOLANT

a. for 1VD-FTV:
Drain the engine coolant (Click here).

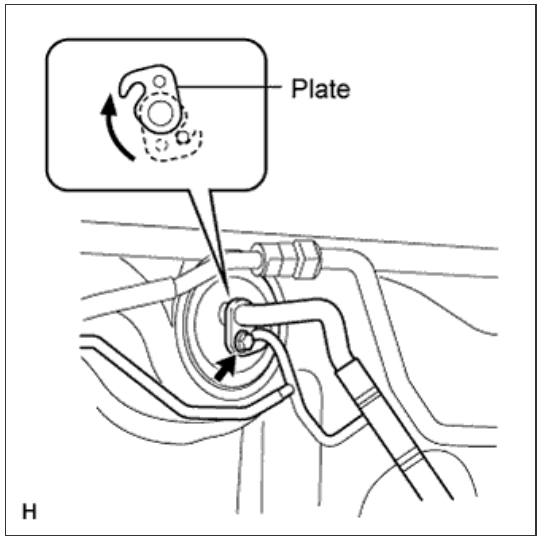
b. for 2UZ-FE:
Drain the engine coolant (Click here).

c. for 1GR-FE:
Drain the engine coolant (Click here).

7. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.



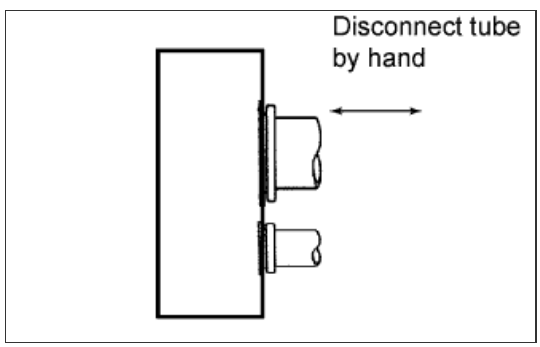
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

8. DISCONNECT AIR CONDITIONING TUBE ASSEMBLY

a. Remove the bolt.

b. Detach the plate as shown in the illustration.

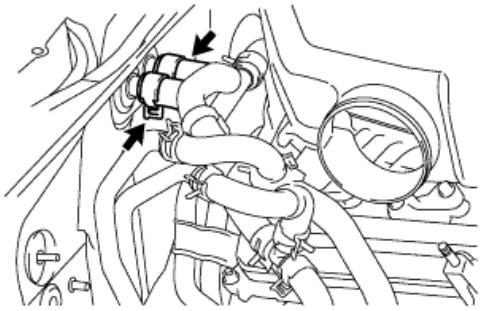


c. Disconnect the air conditioning tube assembly.

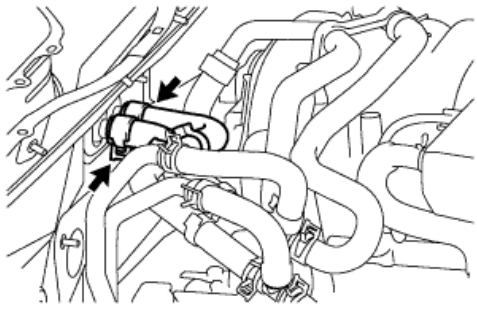
NOTICE:

- **Do not use a screwdriver or similar tool to disconnect the tube.**
- **Seal the openings of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering them.**

d. Remove the 2 O-rings from the air conditioning tube assembly.



9. DISCONNECT HEATER ATER INLET HOSE AND HEATER ATER OUTLET HOSE



a. Using pliers, grip the claws of the clips and slide the 2 clips.

b. Disconnect the 2 heater water hoses.

for 1GR-FE:

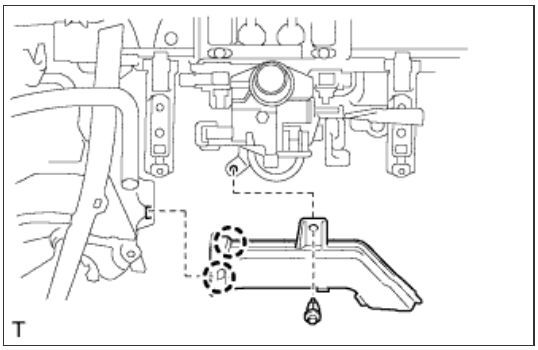
for 2UZ-FE:

for 1VD-FTV:

H

1 . REMOVE FRONT IPER MOTOR AND BRACKET

a. Remove the front wiper motor and bracket (Click here).



11. REMOVE INSTRUMENT PANEL SUB-ASSEMBLY

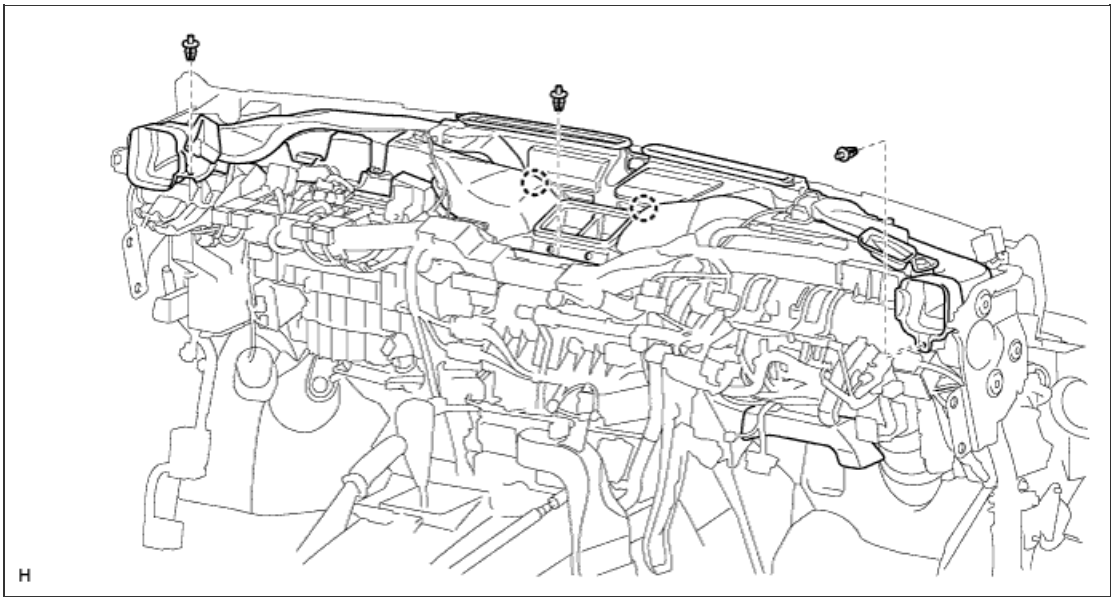
a. Remove the instrument panel (Click here).

12. REMOVE NO. 3 AIR DUCT SUB-ASSEMBLY

a. Remove the clip.

b. Detach the 2 claws and remove the duct.

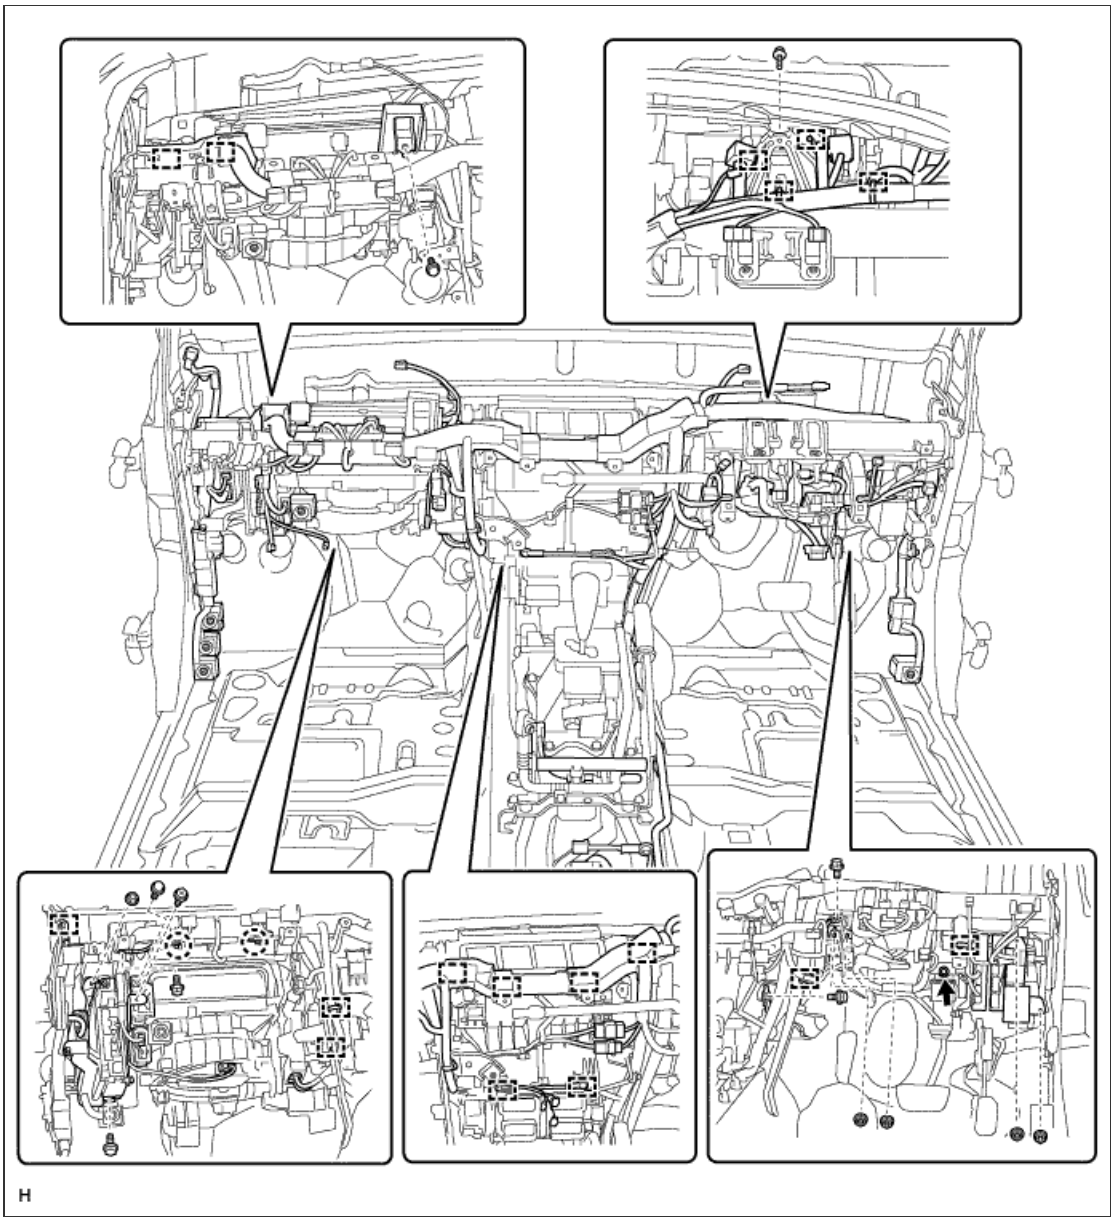
13. REMOVE STEERING COLUMN ASSEMBLY



a. for Power Tilt and Power Telescopic Steering Column:
Remove the steering column (Click here).

b. for Manual Tilt and Manual Telescopic Steering Column:
Remove the steering column (Click here).

14. REMOVE HEATER TO REGISTER DUCT ASSEMBLY



a. Remove the 3 clips.

b. Detach the 2 claws and remove the duct.

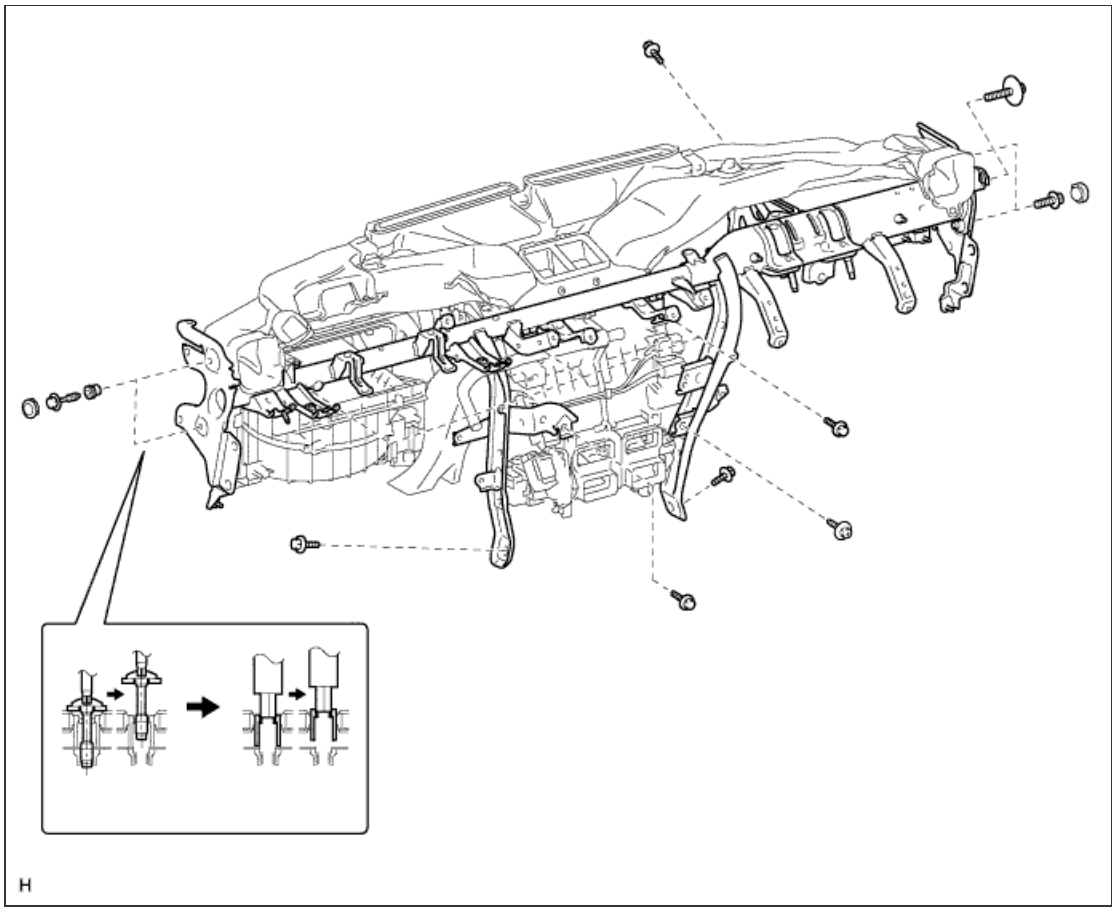
15. REMOVE INSTRUMENT PANEL REINFORCEMENT ASSEMBLY

a. Disconnect the clamps, connectors and wire harness.

b. Remove the instrument panel reinforcement.

i. for Driver Side:
Remove the 3 caps and 3 bolts.

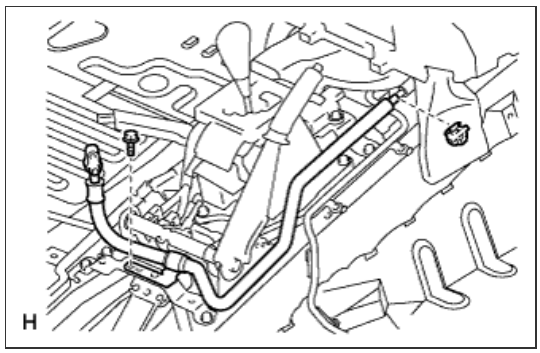
ii. for Passenger Side:
Remove the 2 caps.



iii. for Passenger Side:
Using a T40 "TORX" socket, remove the 2 "TORX" bolts.

HINT:

When removing the bolts, the collars may come off with the bolts.



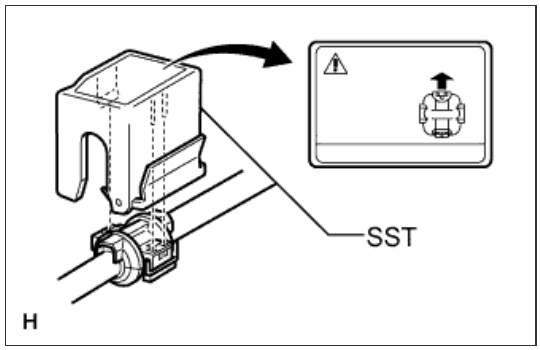
iv. for Passenger Side:
Using a 12 mm hexagon wrench, remove the 2 collars.

v. Remove the 7 bolts, screw and instrument panel reinforcement.

16. REMOVE AIR CONDITIONING HOSE AND ACCESSORY (w/ Cool Box)

a. Remove the bolt.

b. Using SST, remove the piping clamp.



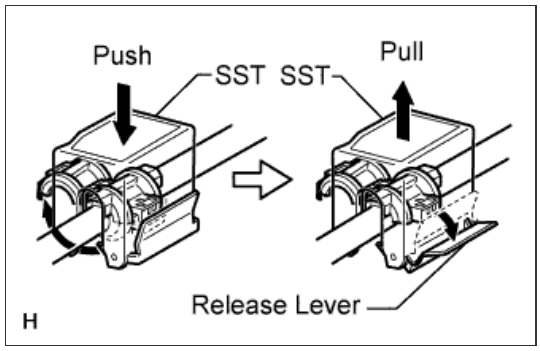
SST

87 -00025

i. Attach SST to the piping clamp.

HINT:

Confirm the direction of the piping clamp claw and SST by referring to the illustration on the caution label.



ii. Push down SST and release the clamp lock.

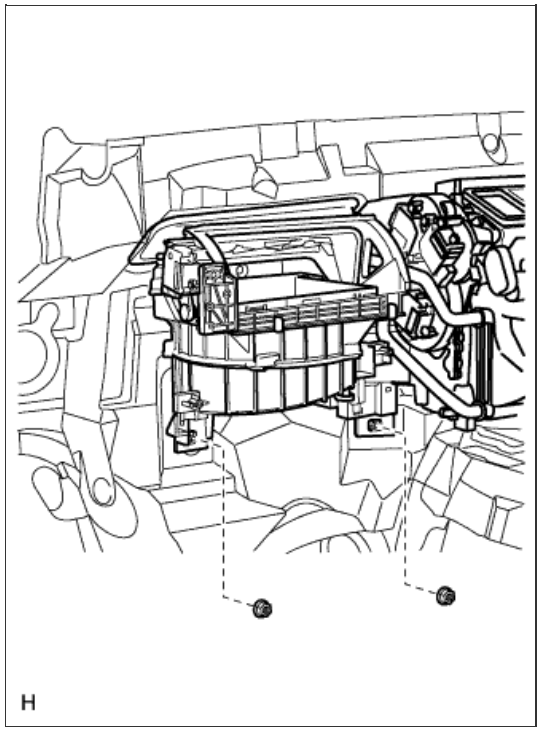
NOTICE:

Be careful not to deform the tubes when pushing SST.

iii. Pull SST slightly and push the release lever, then remove the piping clamp with SST.

iv. Remove the piping clamp from SST.

c. Disconnect the hose and accessory from the liquid tube to remove it.



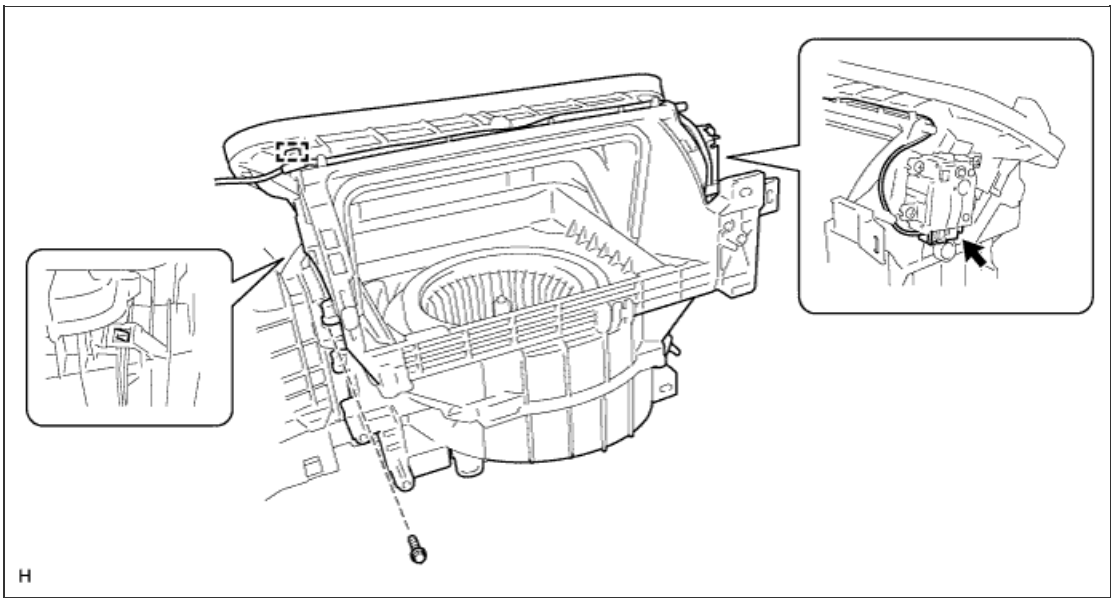
NOTICE:

Cap the open fittings immediately to keep moisture or dirt out of the system.

d. Remove the 2 O-rings from the air conditioning hose and accessory.

17. REMOVE AIR CONDITIONING UNIT

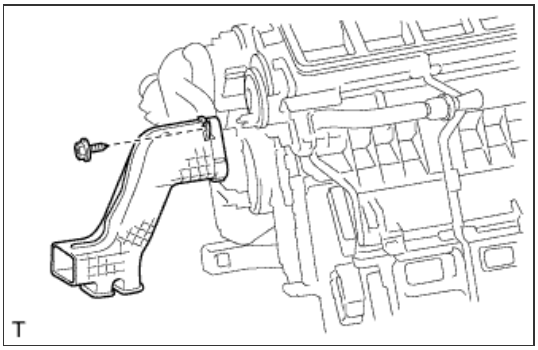
a. Remove the 2 nuts and air conditioning unit.



for Preparation Click here

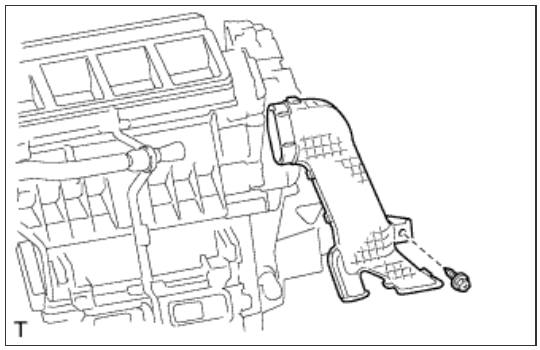
1. REMOVE BLOWER ASSEMBLY

a. Remove the screw.



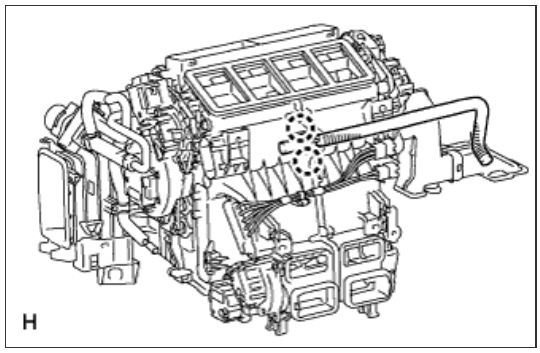
b. Disconnect the connector and clamp.

c. Detach the claw and remove the blower unit.



2. REMOVE NO. 4 AIR DUCT SUB-ASSEMBLY

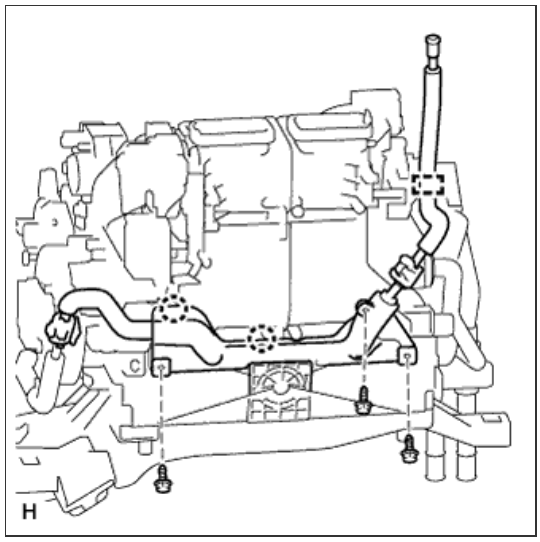
a. Remove the screw and duct.



3. REMOVE NO. 5 AIR DUCT SUB-ASSEMBLY

a. Remove the screw and duct.

4. REMOVE ASPIRATOR

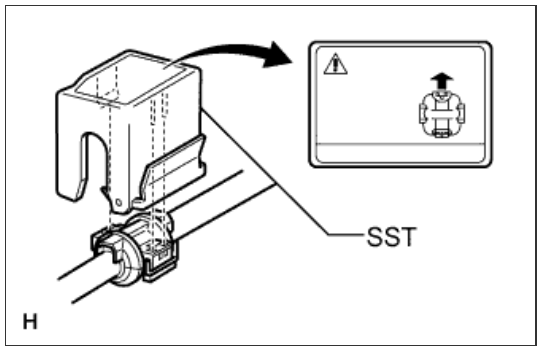


a. Detach the 2 claws and remove the aspirator.

5. REMOVE COOL BOX LIQUID TUBE (w/ Cool Box)

a. Remove the 3 screws.

b. Detach the 2 claws and remove the protective cover.



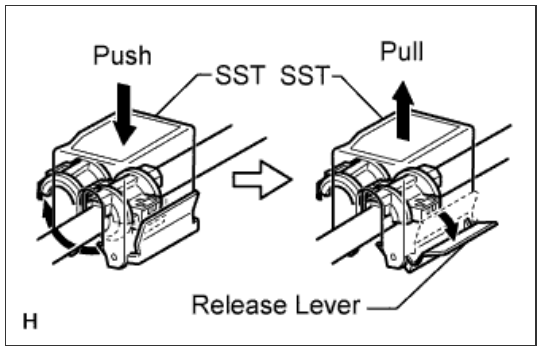
c. Using SST, remove the piping clamp.

SST
09870-00025

i. Attach SST to the piping clamp.

HINT:

Confirm the direction of the piping clamp claw and SST by referring to the illustration on the caution label.



ii. Push down SST and release the clamp lock.

NOTICE:

Be careful not to deform the tubes when pushing SST.

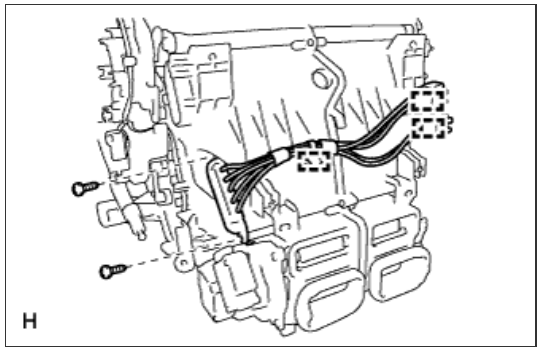
iii. Pull SST slightly and push the release lever, then remove the piping clamp with SST.

iv. Remove the piping clamp from SST.

d. Disconnect the tube.

NOTICE:

Cap the open fittings immediately to keep moisture or dirt out of the system.

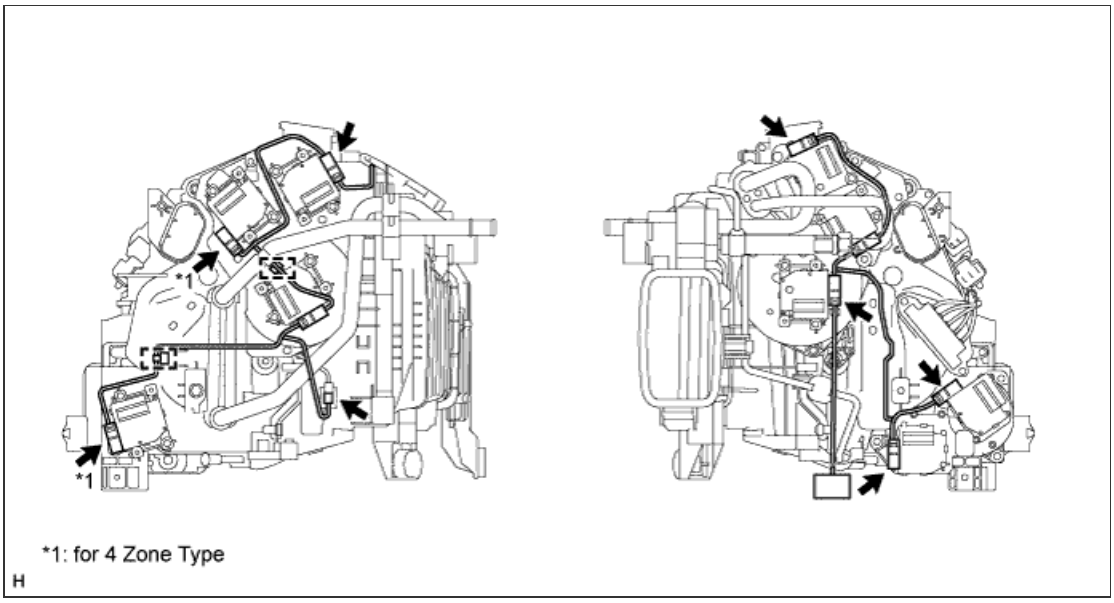


e. Detach the clamp and remove the liquid tube.

f. Remove the 2 O-rings from the liquid tube.

6. REMOVE QUICK HEATER ASSEMBLY (w/ PTC Heater)

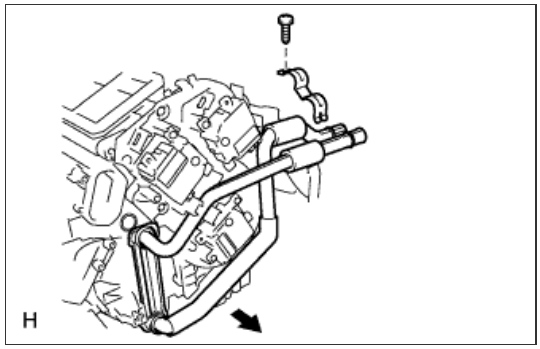
a. Detach the 3 clamps.



b. Remove the 2 screws and quick heater.

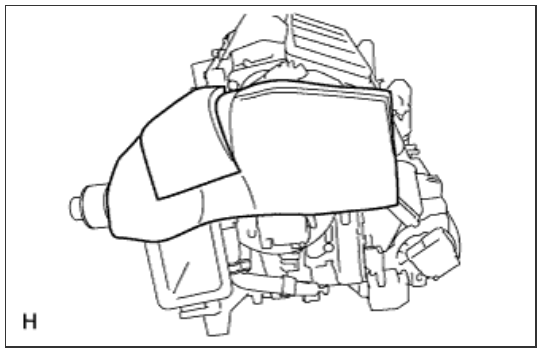
7. REMOVE AIR CONDITIONER HARNESS

a. Disconnect the connectors.



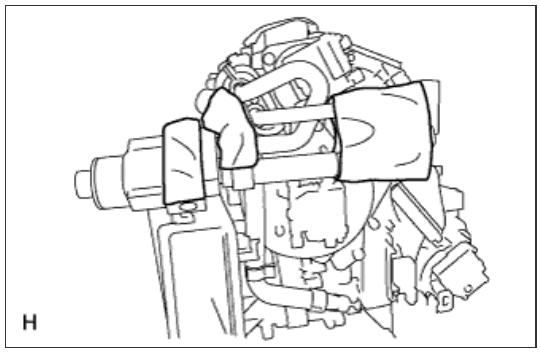
b. Detach the clamps and remove the harness.

8. REMOVE AIR CONDITIONING RADIATOR ASSEMBLY

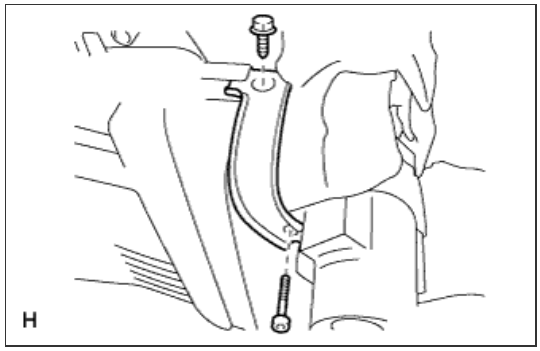


a. Remove the screw and radiator bracket.

b. Remove the radiator.

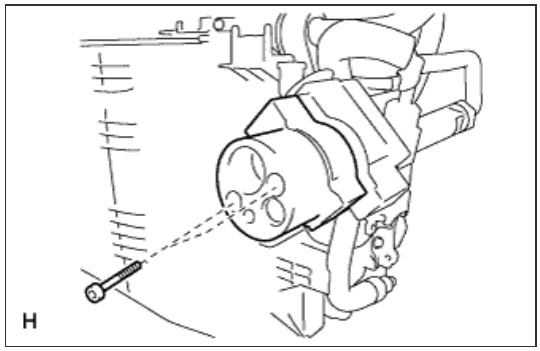


9. REMOVE COOLER EXPANSION VALVE (w/ Cool Box)



a. Remove the packing.

b. Remove the butyl tape.



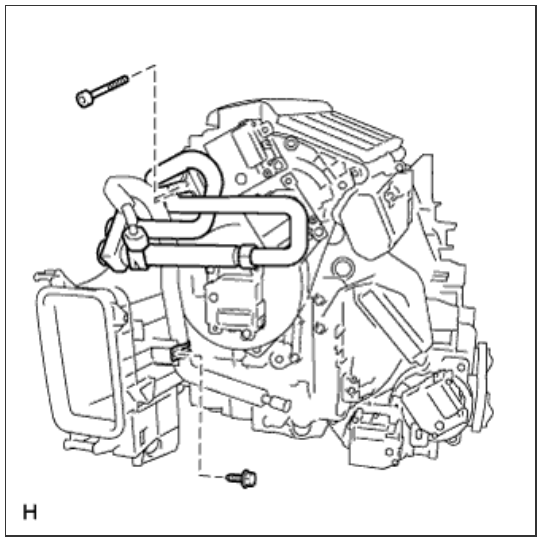
c. Using a 4 mm hexagon wrench, remove the hexagon bolt, screw and bracket.

d. Using a 4 mm hexagon wrench, remove the 2 hexagon bolts and No. 1 connector tube.

e. Remove the 2 O-rings from the No. 1 connector tube.

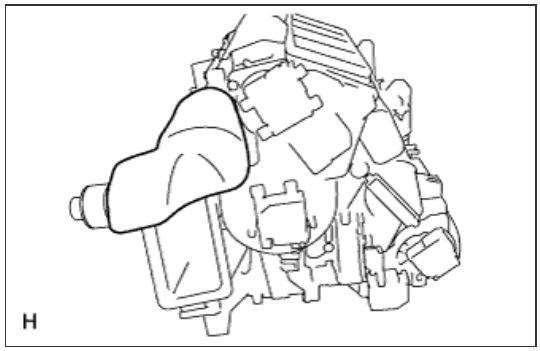
f. Using a 4 mm hexagon wrench, remove the 2 hexagon bolts, No. 2 connector tube, expansion valve and No. 3 connector tube.

g. Remove the 2 O-rings from the No. 2 connector tube.



10. REMOVE AIR CONDITIONER TUBE AND ACCESSORY ASSEMBLY (w/ Cool Box)

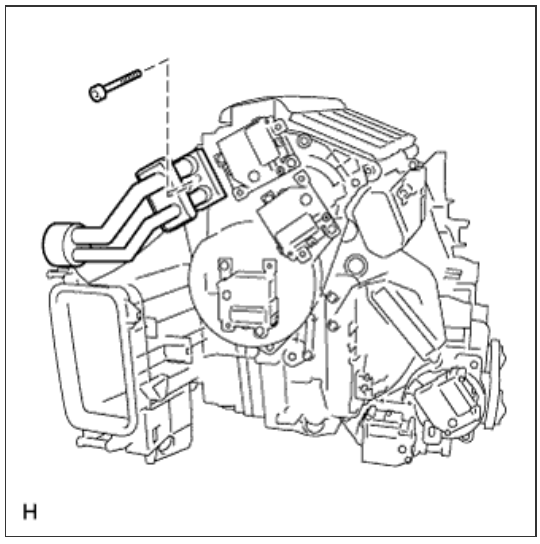
a. Remove the screw and bracket.



b. Using a 4 mm hexagon wrench, remove the 2 hexagon bolts and air conditioner tube and accessory assembly.

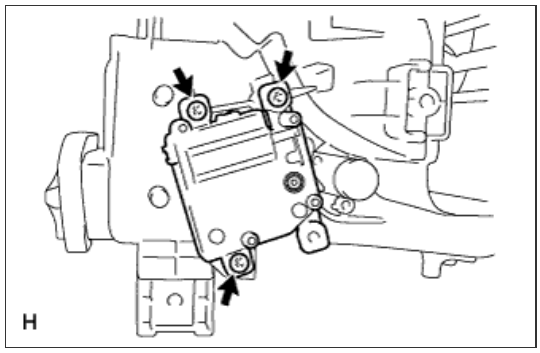
c. Remove the 2 O-rings from the air conditioner tube and accessory assembly.

11. REMOVE COOLER EXPANSION VALVE (w/o Cool Box)



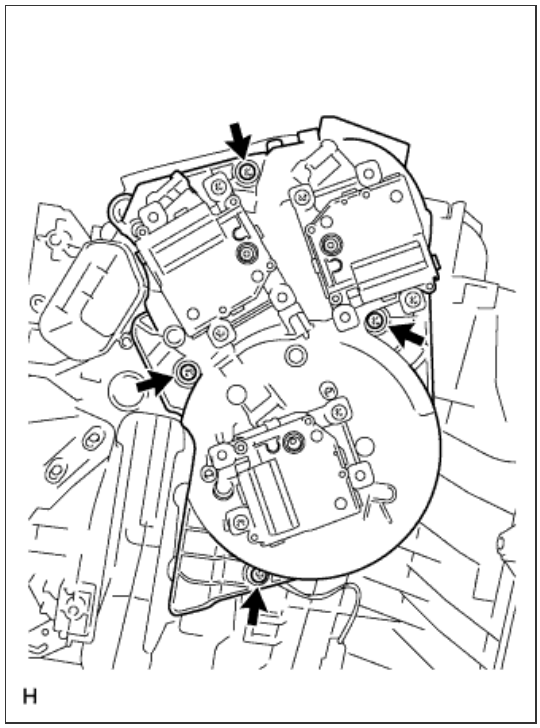
a. Remove the packing.

b. Using a 4 mm hexagon wrench, remove the 2 hexagon bolts, air conditioner tube and accessory assembly and expansion valve.



c. Remove the 2 O-rings from the air conditioner tube and accessory assembly.

d. Remove the 2 O-rings from the expansion valve.

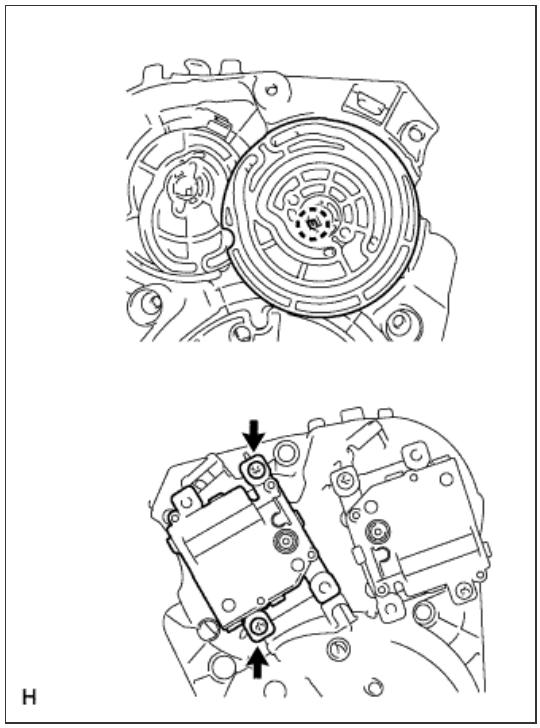


12. REMOVE REAR AIR MIX DAMPER CONTROL SERVO MOTOR RH (for 4 Zone Type)

a. Remove the 3 screws and servo motor.

13. REMOVE SERVO MOTOR

a. Remove the 4 screws and servo motor unit.



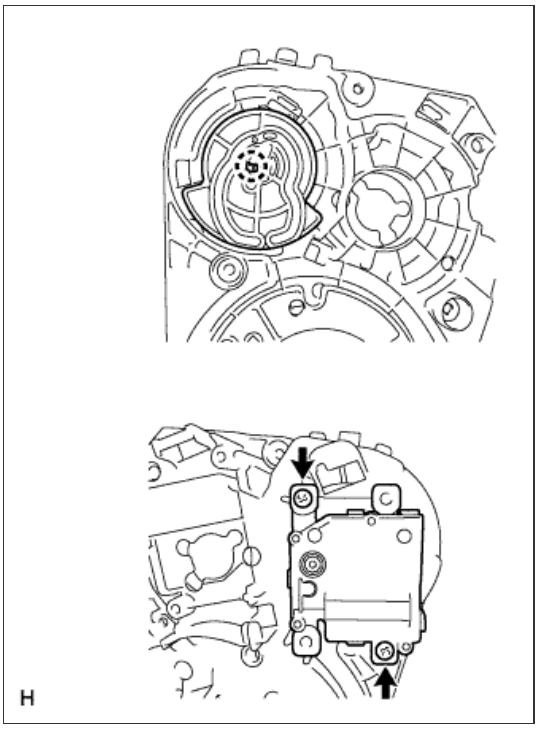
b. for 4 Zone Type:
Remove the front mode control servo motor RH.

i. Remove the 2 screws.

ii. Detach the claw and remove the plate and servo motor.

NOTICE:

Be careful not to damage the claw of the plate.



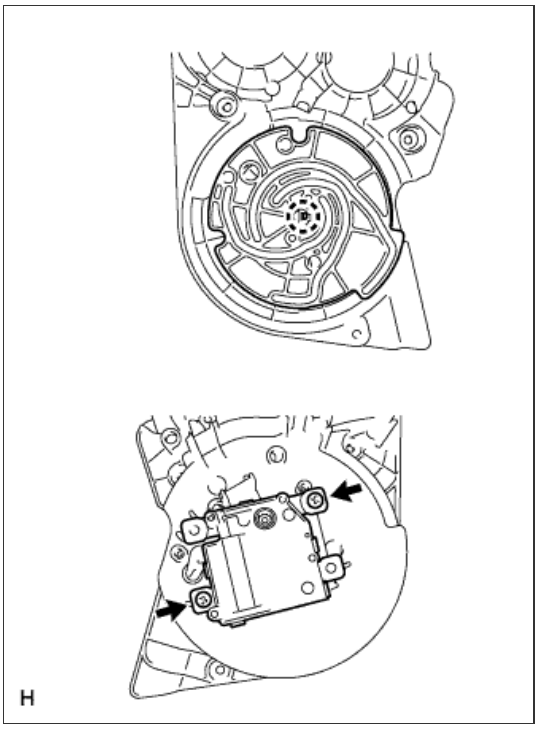
c. Remove the control air bypass damper control servo motor RH.

i. Remove the 2 screws.

ii. Detach the claw and remove the plate and servo motor.

NOTICE:

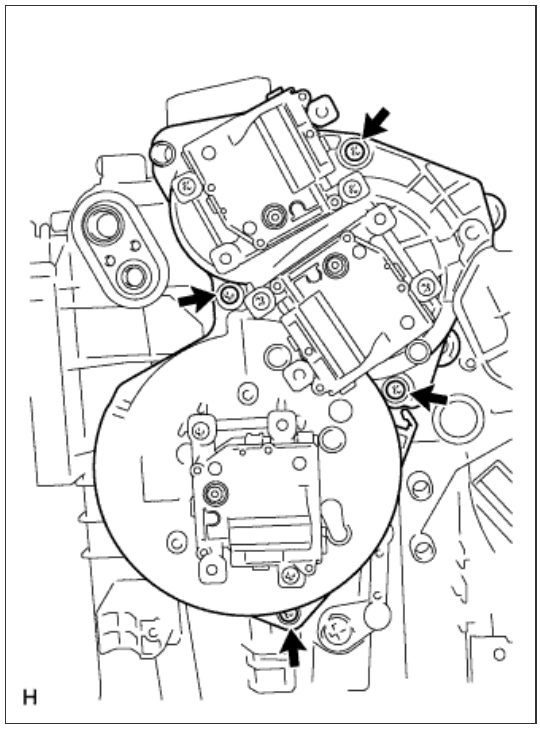
Be careful not to damage the claw of the plate.



d. Remove the front air mix damper control servo motor RH.

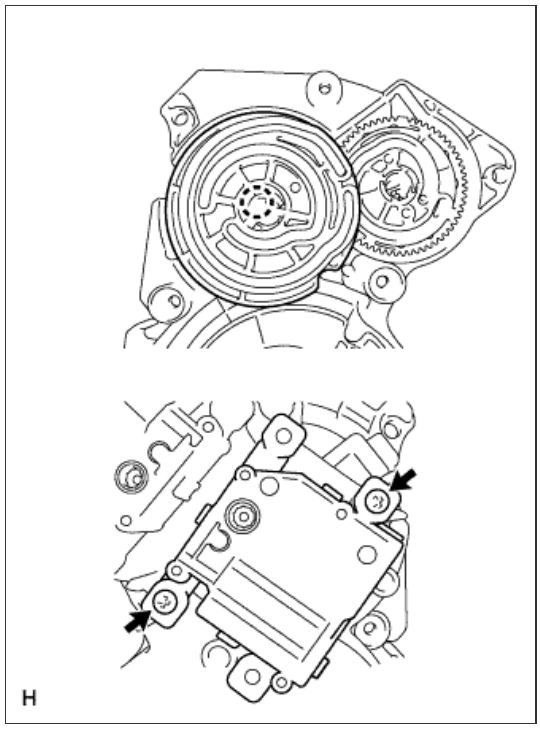
i. Remove the 2 screws.

ii. Detach the claw and remove the plate and servo motor.



NOTICE:

Be careful not to damage the claw of the plate.



14. REMOVE SERVO MOTOR

a. Remove the 4 screws and servo motor unit.

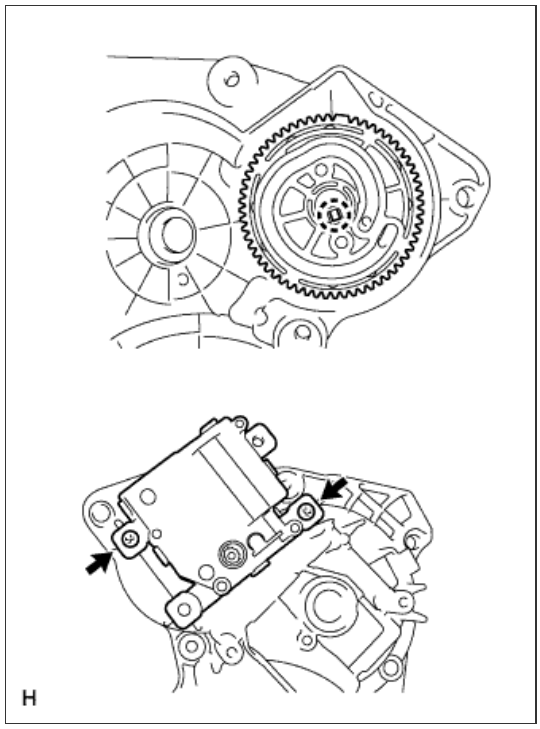
b. Remove the control air bypass damper control servo motor LH

i. Remove the 2 screws.

ii. Detach the claw and remove the plate.

NOTICE:

Be careful not to damage the claw of the plate.



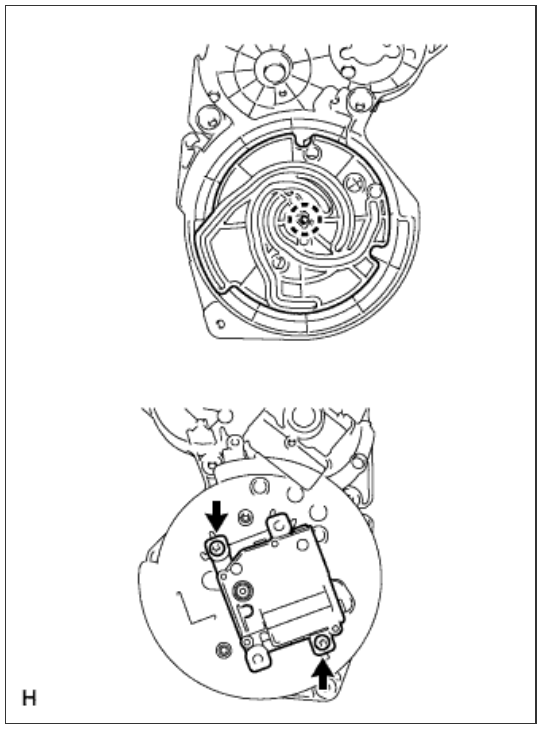
c. Remove the front mode control servo motor LH.

i. Remove the 2 screws.

ii. Detach the claw and remove the plate and servo motor.

NOTICE:

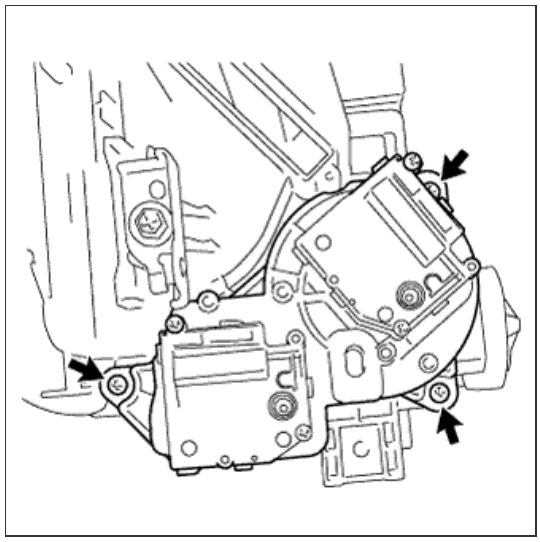
Be careful not to damage the claw of the plate.



d. Remove the front air mix damper control servo motor LH.

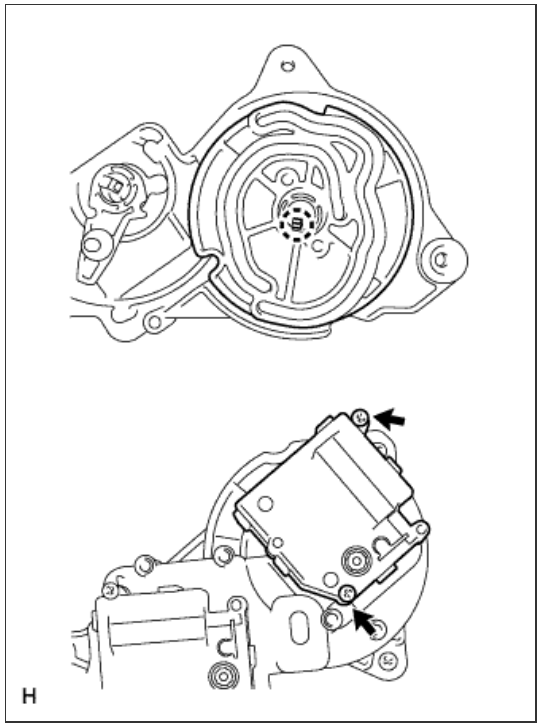
i. Remove the 2 screws.

ii. Detach the claw and remove the plate and servo motor.



NOTICE:

Be careful not to damage the claw of the plate.



15. REMOVE SERVO MOTOR

a. Remove the 3 screws and servo motor unit.

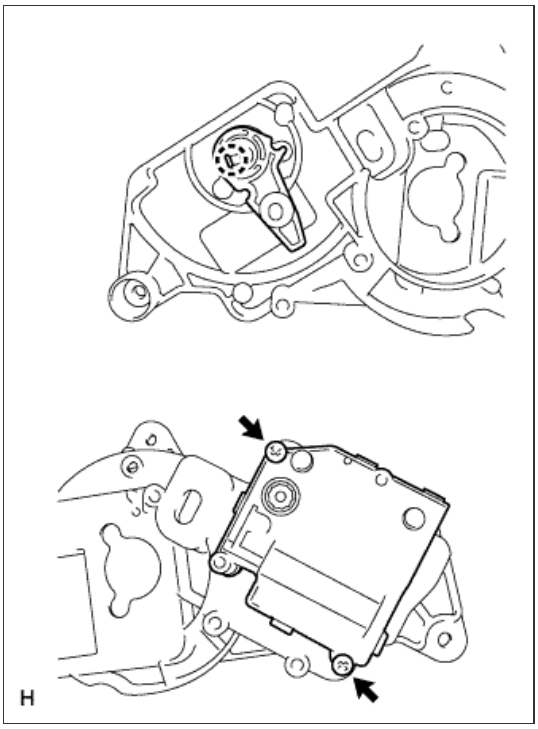
b. Remove the rear mode control servo motor.

i. Remove the 2 screws.

ii. Detach the claw and remove the plate and servo motor.

NOTICE:

Be careful not to damage the claw of the plate.



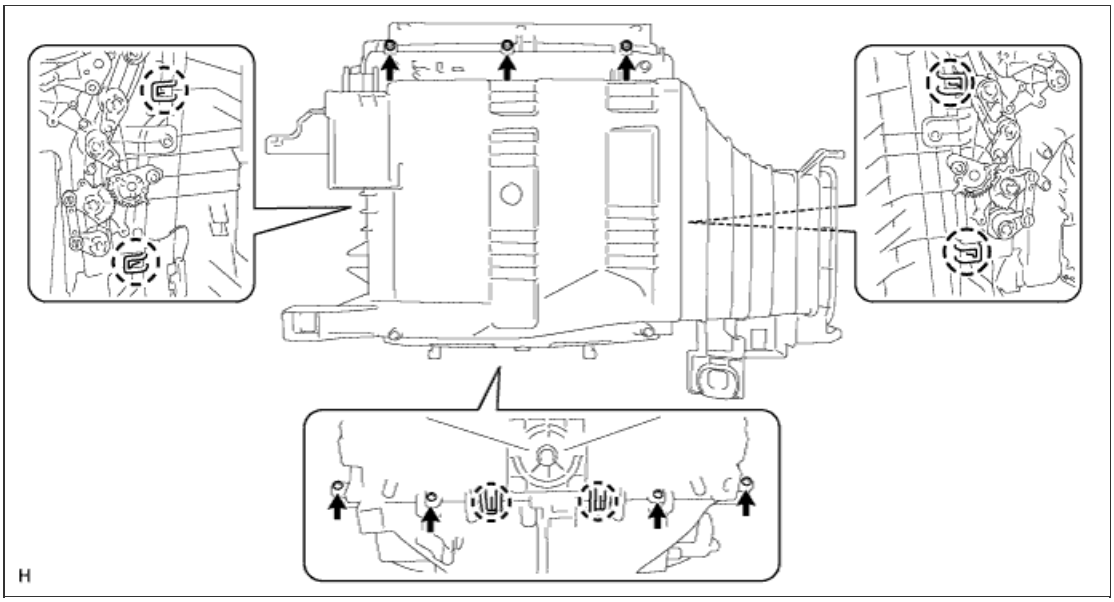
c. Remove the rear air mix damper control servo motor RH.

i. Remove the 2 screws.

ii. Detach the claw and remove the lever and servo motor.

NOTICE:

Be careful not to damage the claw of the lever.



16. REMOVE NO. 1 COOLER EVAPORATOR SUB-ASSEMBLY

a. Remove the 7 screws.

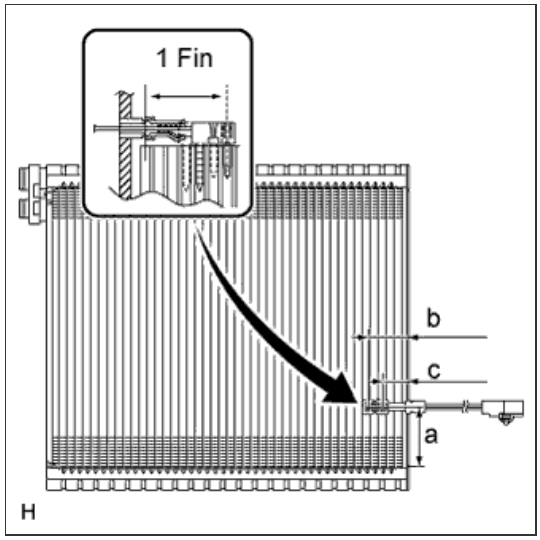
b. Detach the 6 claws and remove the unit case.

c. Remove the evaporator.

17. REMOVE FRONT EVAPORATOR TEMPERATURE SENSOR

for Preparation Click here

1. INSTALL FRONT EVAPORATOR TEMPERATURE SENSOR



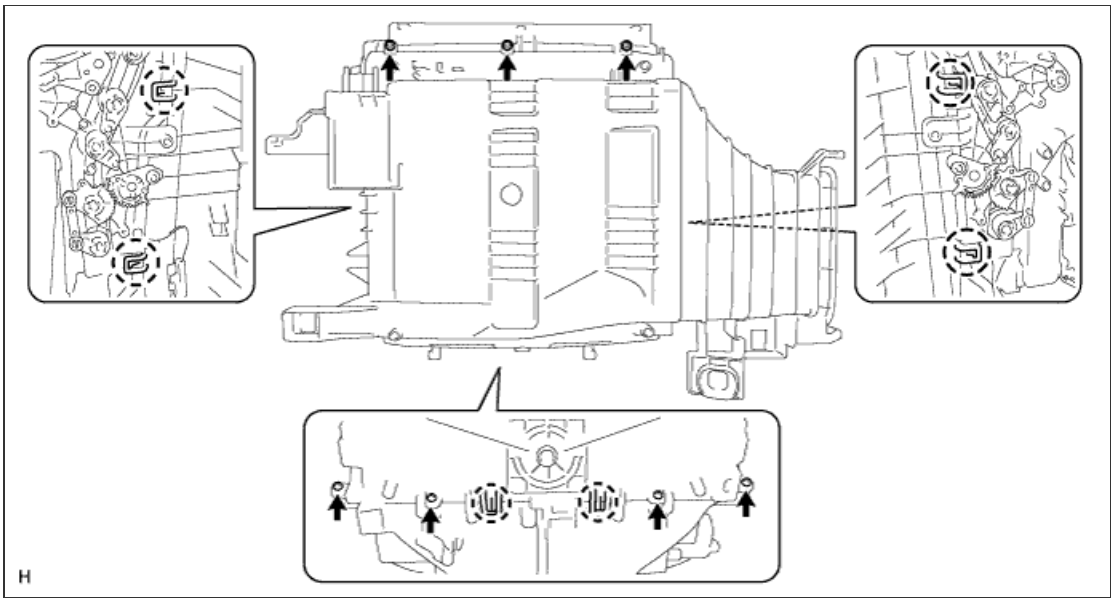
NOTICE:

If reusing the evaporator, do not insert the sensor into a location where the sensor was previously inserted.

a. Insert the sensor to a location that is 1 fin to the right or left of its previous location.

Standard Dimension:

Area	Specified Condition
a	50 mm (1.97 in.)
b	34.3 mm (1.35 in.)
c	20.9 mm (1.97 in.)

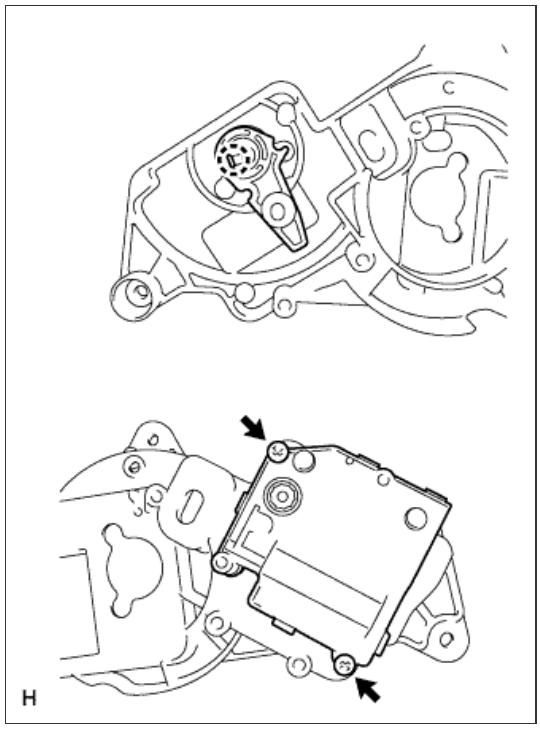


2. INSTALL NO. 1 COOLER EVAPORATOR SUB-ASSEMBLY

a. Install the evaporator.

b. Attach the 6 claws to install the unit case.

c. Install the 7 screws.

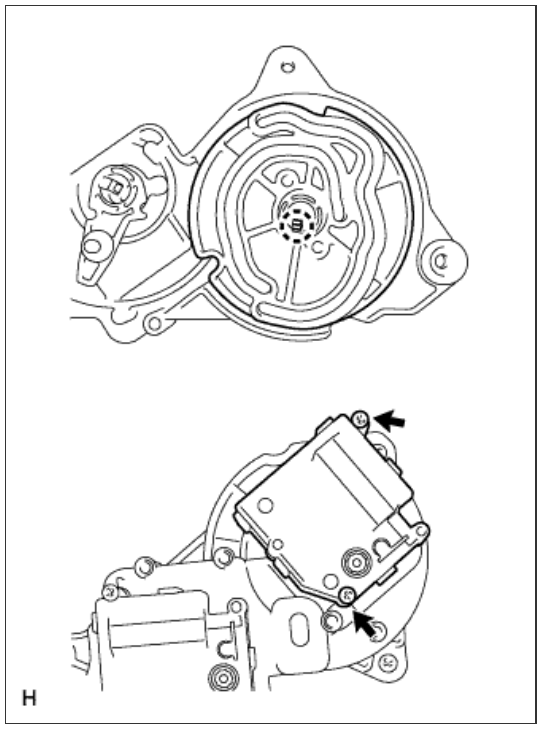


3. INSTALL SERVO MOTOR

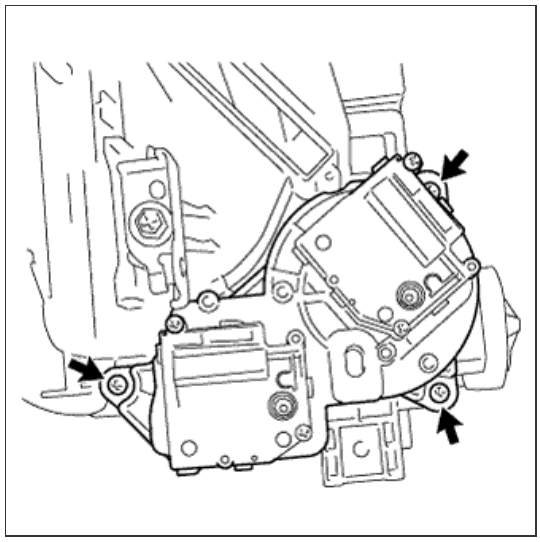
a. Install the rear air mix damper control servo motor RH.

i. Attach the claw to install the lever and servo motor.

ii. Install the 2 screws.



b. Install the rear mode control servo motor.

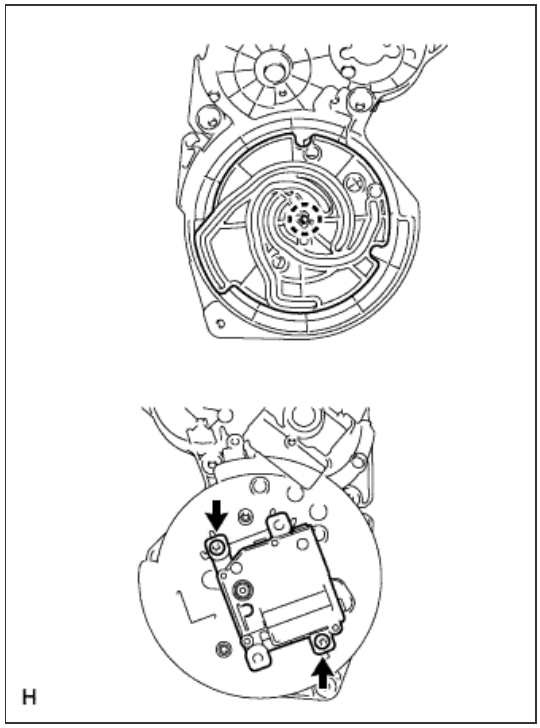


i. Attach the claw to install the plate and servo motor.

ii. Install the 2 screws.

c. Set the damper servo so that the cutout part engages with the tooth of the gear, and attach the claw to install the servo motor unit.

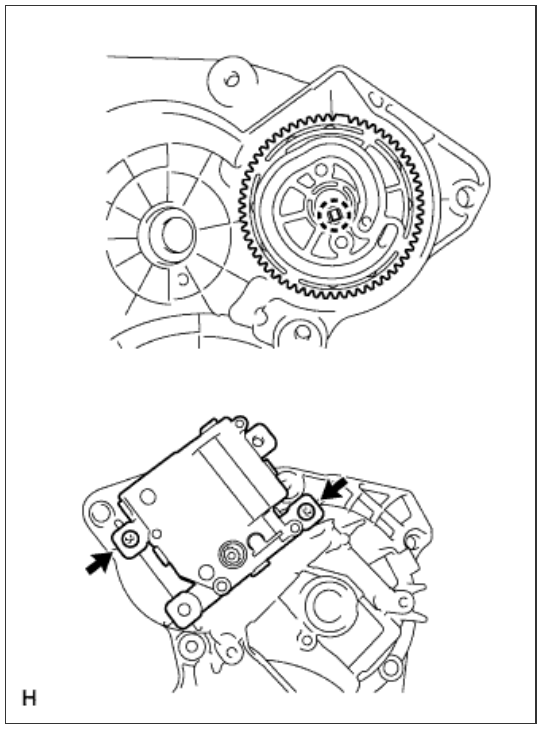
d. Install the 3 screws.



4. INSTALL SERVO MOTOR

a. Install the front air mix damper control servo motor LH.

i. Attach the claw to install the plate and servo motor.

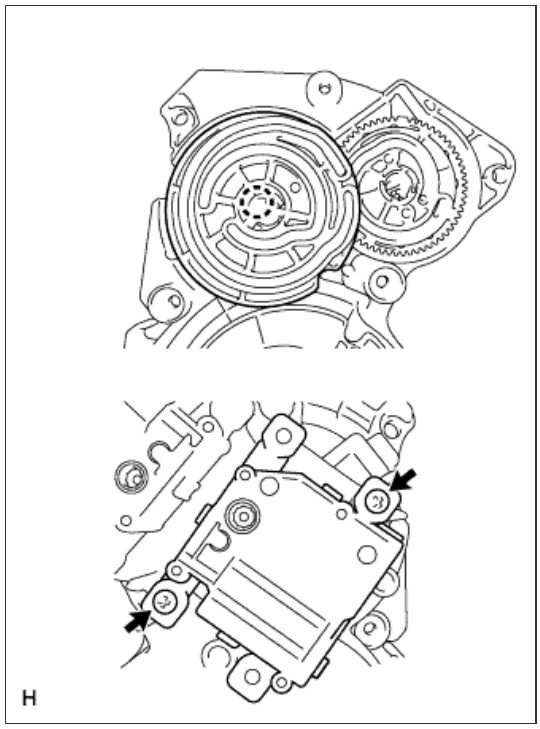


ii. Install the 2 screws.

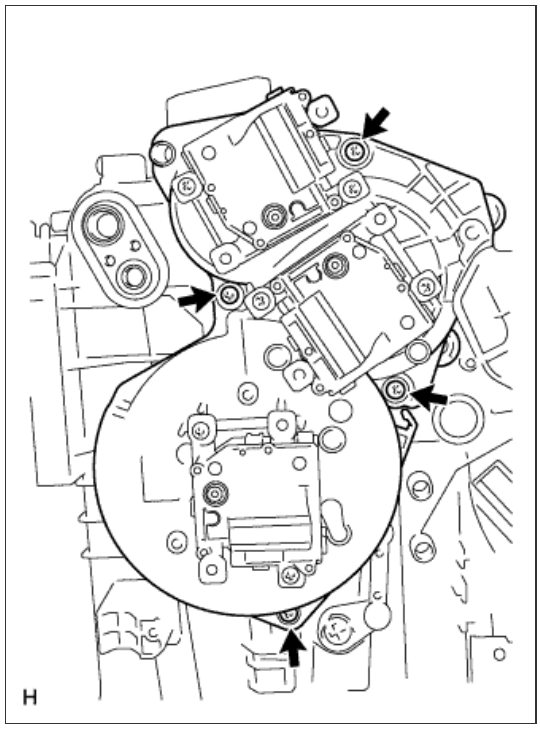
b. Install the front mode control servo motor LH.

i. Attach the claw to install the plate and servo motor.

ii. Install the 2 screws.



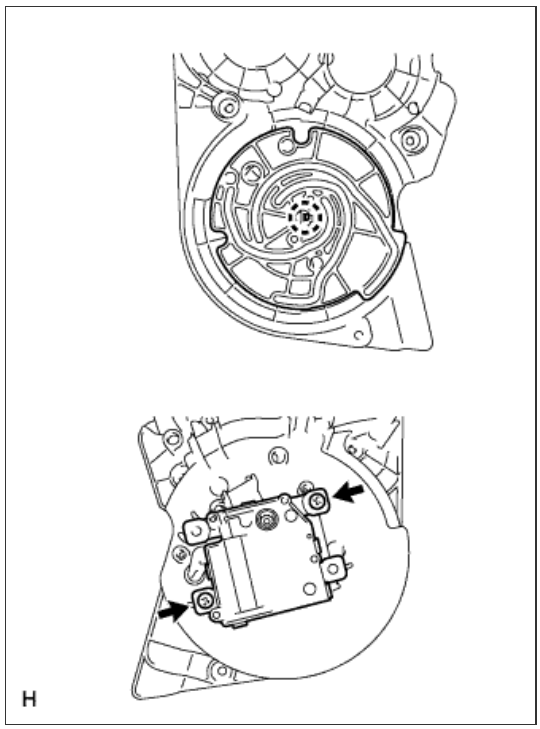
c. Install the control air bypass damper control servo motor LH.



i. Attach the claw to install the plate and servo motor.

ii. Install the 2 screws.

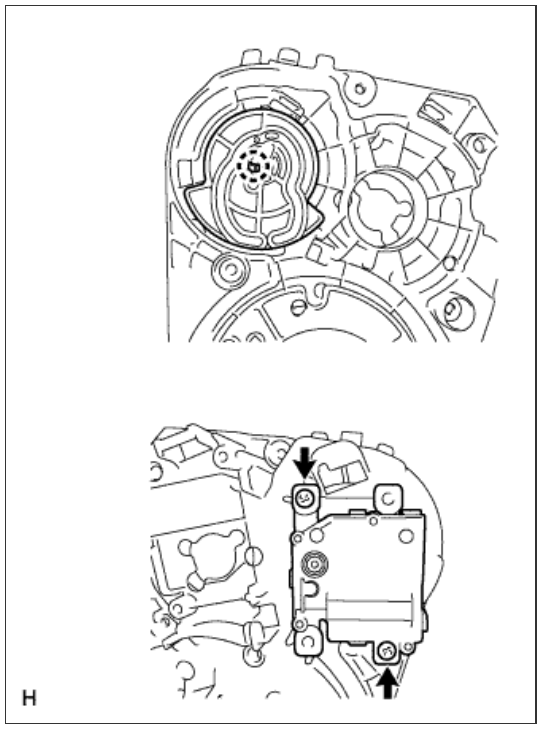
d. Set the damper servo so that the cutout part engages with the tooth of the gear, and attach the claw to install the servo motor unit.



e. Install the 4 screws.

5. INSTALL SERVO MOTOR

a. Install the front air mix damper control servo motor RH.



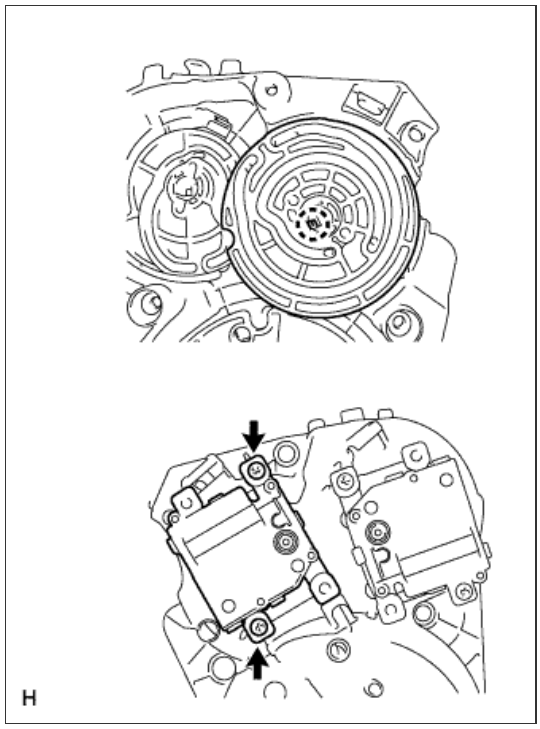
i. Attach the claw to install the plate and servo motor.

ii. Install the 2 screws.

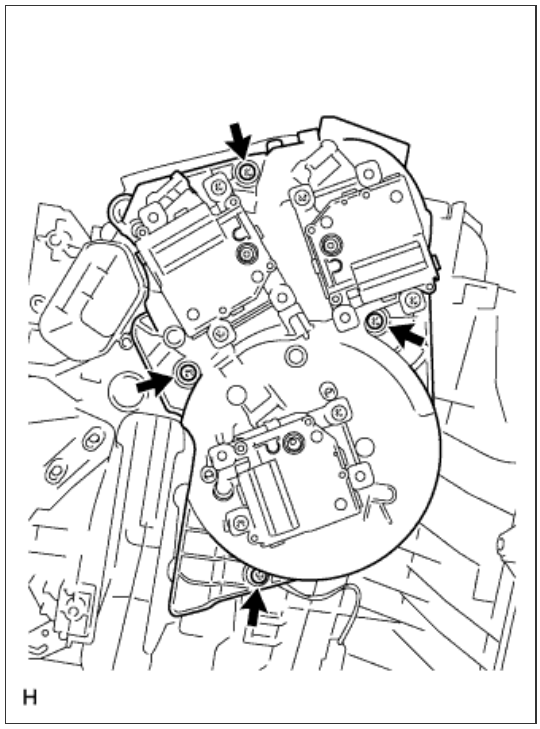
b. Install the control air bypass damper control servo motor RH.

i. Attach the claw to install the plate and servo motor.

ii. Install the 2 screws.



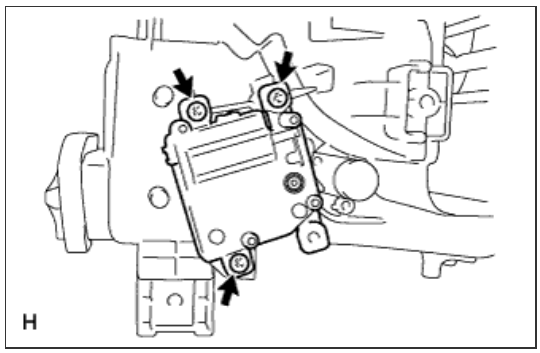
c. for 4 Zone Type:
Install the front mode control servo motor RH.



i. Attach the claw to install the plate and servo motor.

ii. Install the 2 screws.

d. Set the damper servo so that the cutout part engages with the tooth of the gear, and attach the claw to install the servo motor unit.



e. Install the 4 screws.

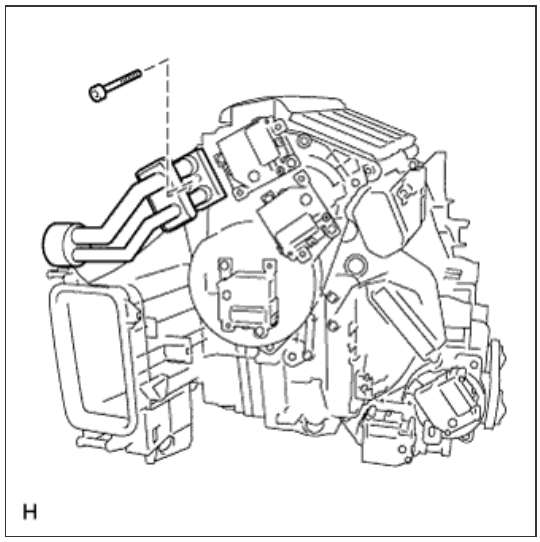
6. INSTALL REAR AIR MIX DAMPER CONTROL SERVO MOTOR RH (for 4 Zone Type)

a. Install the servo motor with the 3 screws.

7. INSTALL COOLER EXPANSION VALVE (w/o Cool Box)

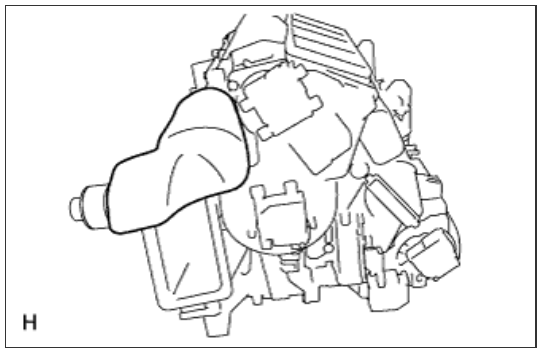
a. Sufficiently apply compressor oil to 4 new O-rings and the fitting surface of the hose joint.

Compressor oil:
ND-OIL 8 or e ivalent



b. Install 2 O-rings to the cooler evaporator.

c. Install 2 O-rings to the air conditioner tube and accessory assembly.



d. Install the cooler expansion valve and air conditioner tube and accessory assembly to the evaporator.

e. Using a 4 mm hexagon wrench, install the 2 bolts.

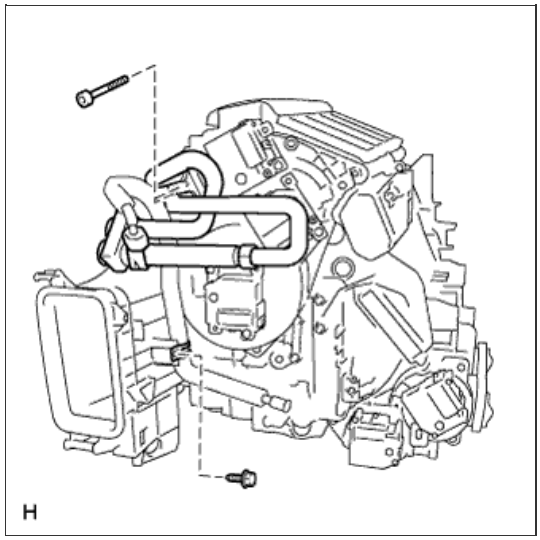
Tor e:
3.5 N*m 36 k f*cm 31 in.*lbf

f. Install new packing.

8. INSTALL AIR CONDITIONER TUBE AND ACCESSORY ASSEMBLY (w/ Cool Box)

a. Sufficiently apply compressor oil to 2 new O-rings and the fitting surface of the hose joint.

Compressor oil:
ND-OIL 8 or e ivalent



b. Install the 2 O-rings to the air conditioner tube and accessory assembly.

c. Install the air conditioner tube and accessory assembly to the evaporator.

d. Using a 4 mm hexagon wrench, install the 2 hexagon bolts.

Tor e:
3.5 N*m 36 k f*cm 31 in.*lbf

e. Install the bracket with the screw.

9. INSTALL COOLER EXPANSION VALVE (w/ Cool Box)

a. Sufficiently apply compressor oil to 2 new O-rings and the fitting surface of the hose joint.

Compressor oil:
ND-OIL 8 or e ivalent

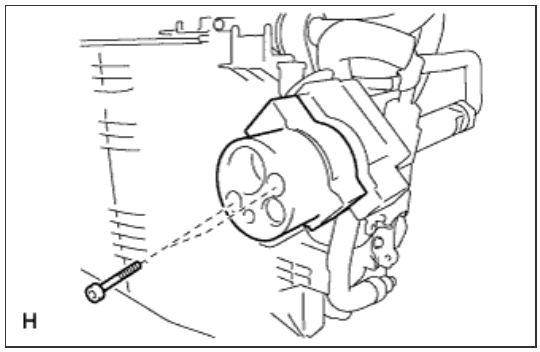
b. Install the 2 O-rings to the No. 2 connector tube.

c. Install the No. 2 connector tube, expansion valve and No. 3 connector tube.

d. Using a 4 mm hexagon wrench, install the 2 hexagon bolts.

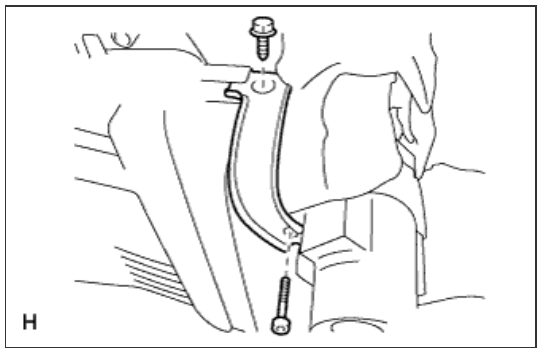
Tor e:
3.5 N*m 36 k f*cm 31 in.*lbf

e. Sufficiently apply compressor oil to 2 new O-rings and the fitting surface of the hose joint.



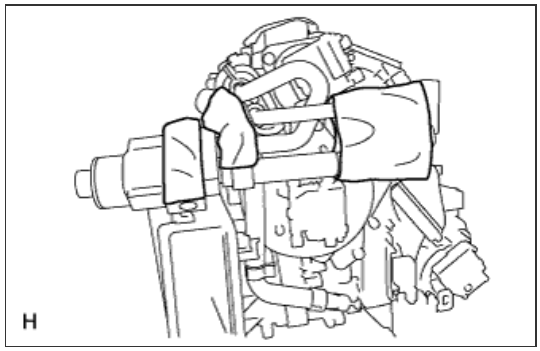
Compressor oil:
ND-OIL 8 or e ivalent

f. Install the 2 O-rings to the No. 1 connector tube.

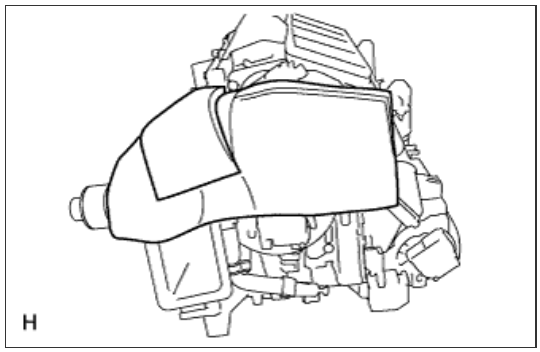


. Install the No. 1 connector tube.

h. Using a 4 mm hexagon wrench, install the 2 hexagon bolts.

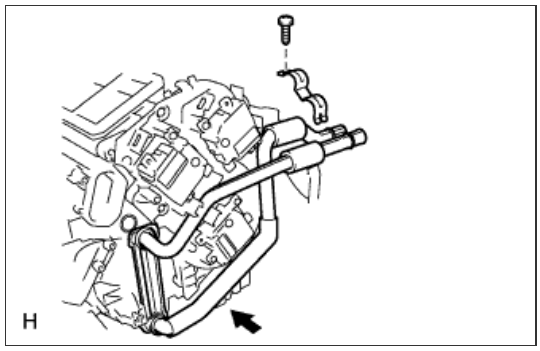


Tor e:
3.5 N*m 36 k f*cm 31 in.*lbf



i. Using a 4 mm hexagon wrench, install the bracket with the hexagon bolt and screw.

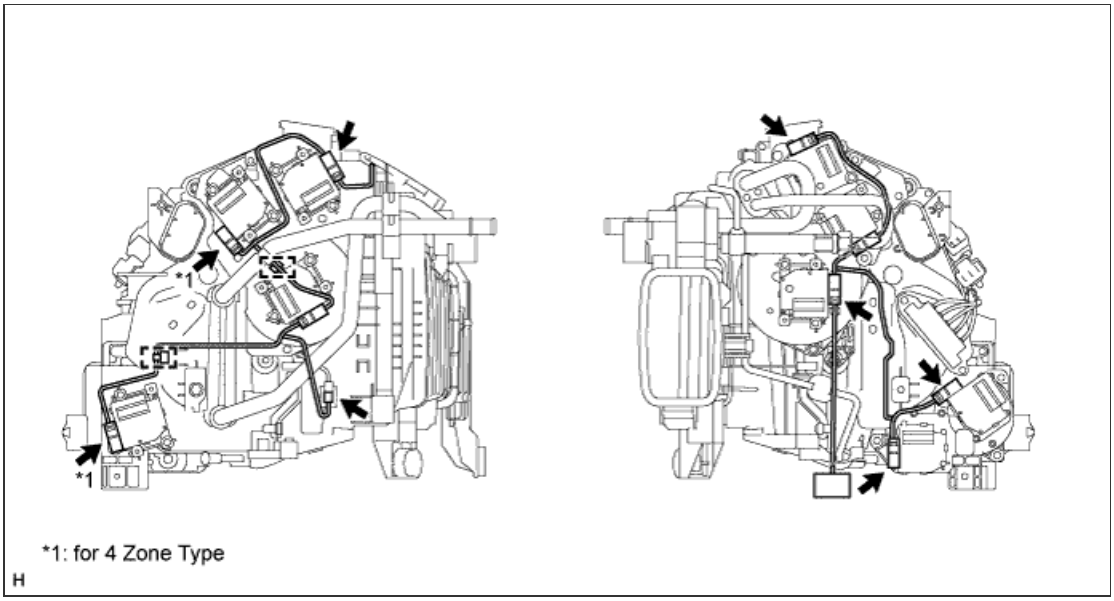
. Install new butyl tape.



k. Install new packing.

1 . INSTALL AIR CONDITIONING RADIATOR ASSEMBLY

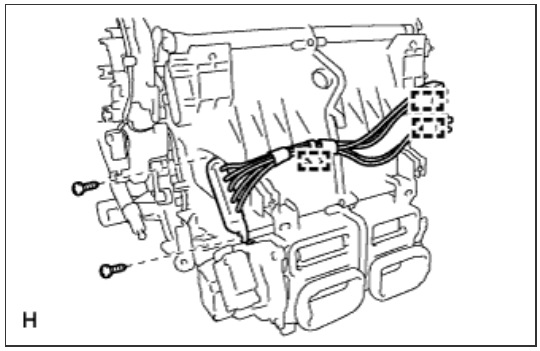
a. Install the radiator.



b. Install the bracket with the screw.

11. INSTALL AIR CONDITIONER HARNESS

a. Attach the clamps to install the harness.



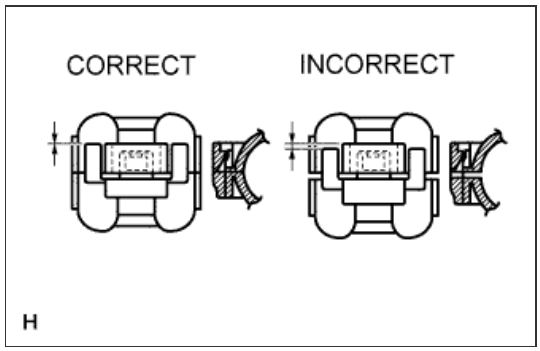
b. Connect the connectors.

12. INSTALL UIC HEATER ASSEMBLY (w/ PTC Heater)

a. Install the quick heater with the 2 screws.

b. Attach the 3 clamps.

13. INSTALL COOL BOX LI UID TUBE (w/ Cool Box)

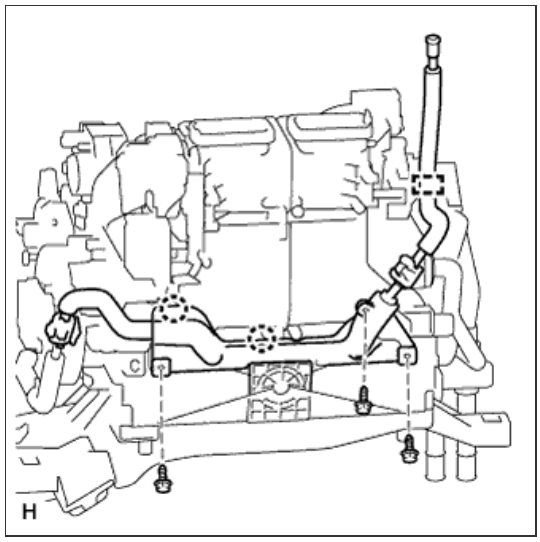


a. Lubricate 2 new O-rings with compressor oil and install them to the liquid tube.

Compressor oil:
ND-OIL 8 or e ivalent

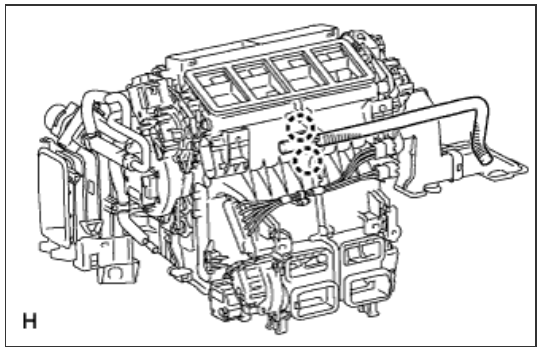
b. Connect the liquid tube with the piping clamp.

NOTICE:



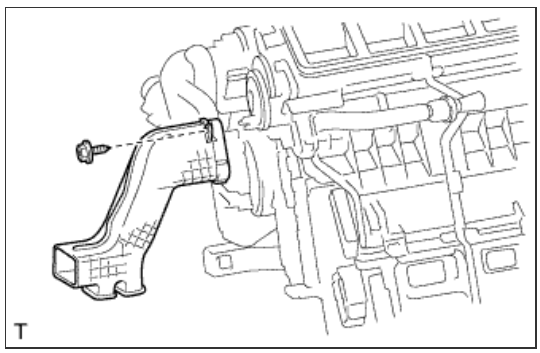
After connection, check the claw engagement of the piping clamp.

c. Attach the clamp.



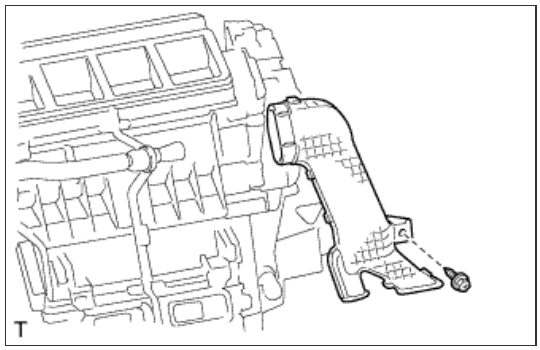
d. Attach the 2 claws to install the protective cover.

e. Install the 3 screws.



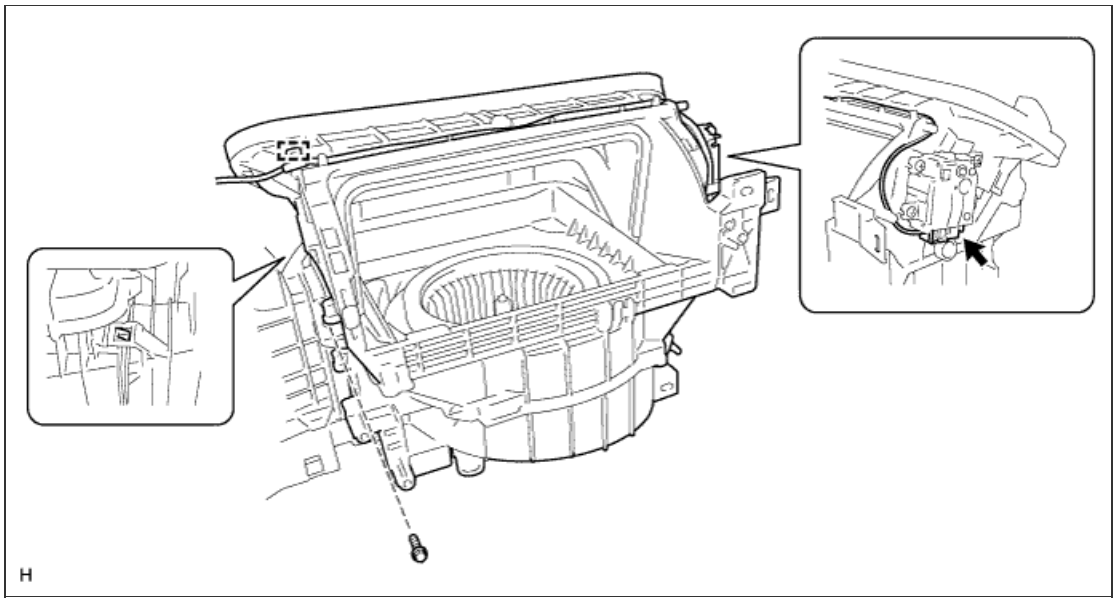
14. INSTALL ASPIRATOR

a. Attach the 2 claws to install the aspirator.



15. INSTALL NO. 4 AIR DUCT SUB-ASSEMBLY

a. Install the duct with the screw.



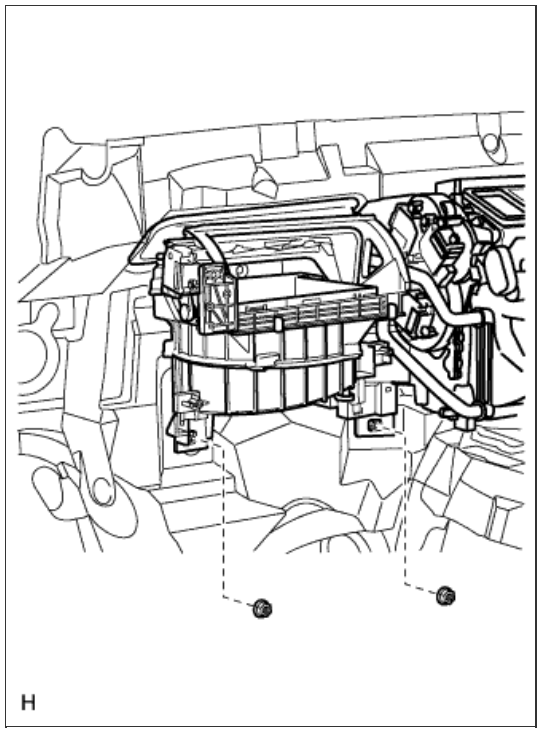
16. INSTALL NO. 5 AIR DUCT SUB-ASSEMBLY

a. Install the duct with the screw.

17. INSTALL BLO ER ASSEMBLY

a. Attach the claw to install the blower unit.

b. Connect the connector and clamp.

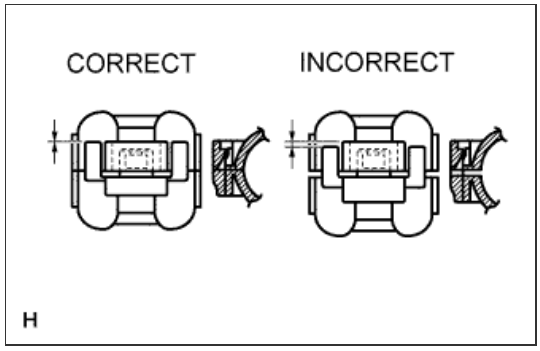


c. Install the screw.

for Preparation Click here

1. INSTALL AIR CONDITIONING UNIT ASSEMBLY

a. Install the air conditioning unit with the 2 nuts.

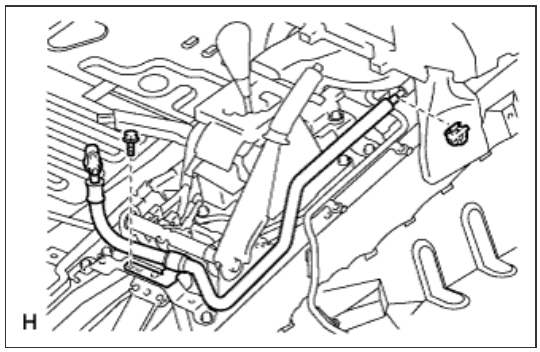


Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

2. INSTALL AIR CONDITIONING HOSE AND ACCESSORY (w/ Cool Box)

a. Lubricate 2 new O-rings with compressor oil and install them to the air conditioning hose and accessory.

Compressor oil:
ND-OIL 8 or equivalent



b. Install the air conditioning hose and accessory with the piping clamp.

NOTICE:

After connection, check the claw engagement of the piping clamp.

c. Install the bolt.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

3. INSTALL INSTRUMENT PANEL REINFORCEMENT ASSEMBLY

a. Install the instrument panel reinforcement.

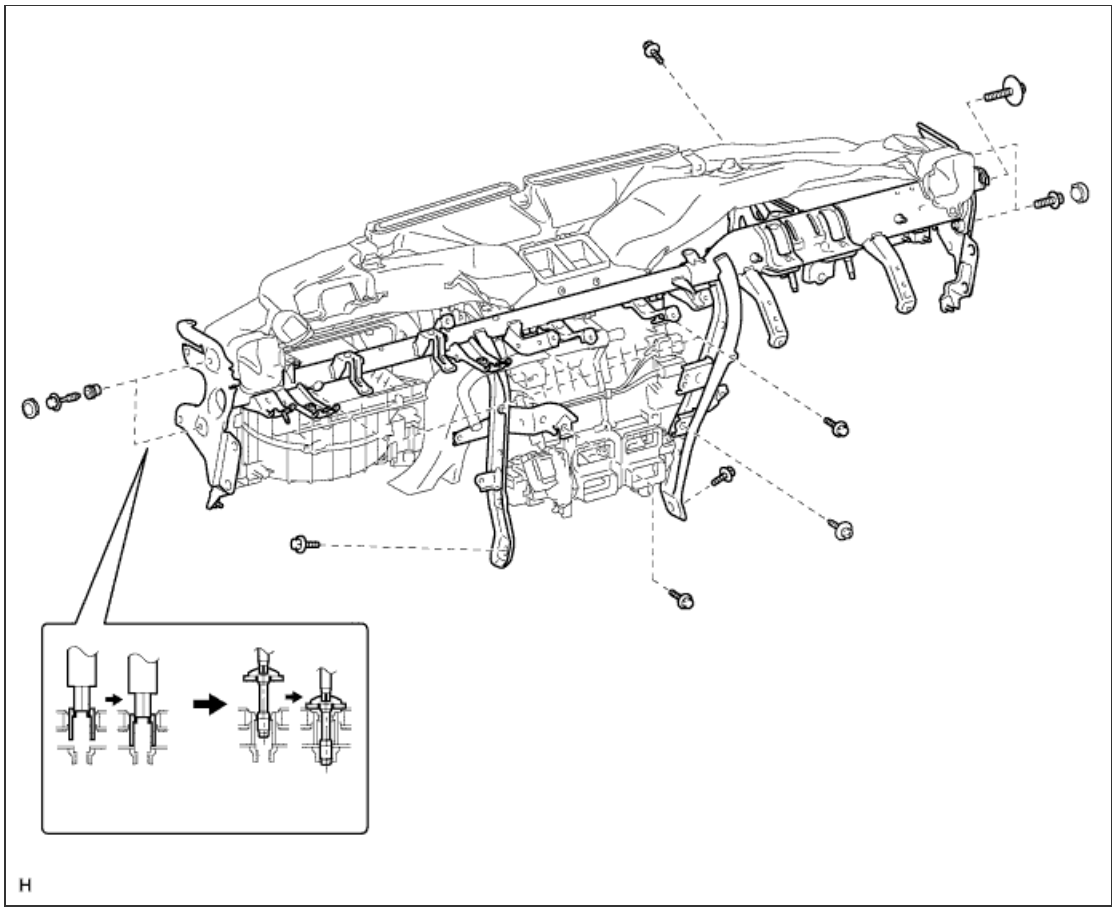
i. Install the instrument panel reinforcement with the 7 bolts and screw.

Torque:
for bolt:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }
for screw:
6.0 N*m{ 61 kgf*cm , 53 in.*lbf }

ii. for Passenger Side:
Using a 12 mm hexagon wrench, install the 2 collars.

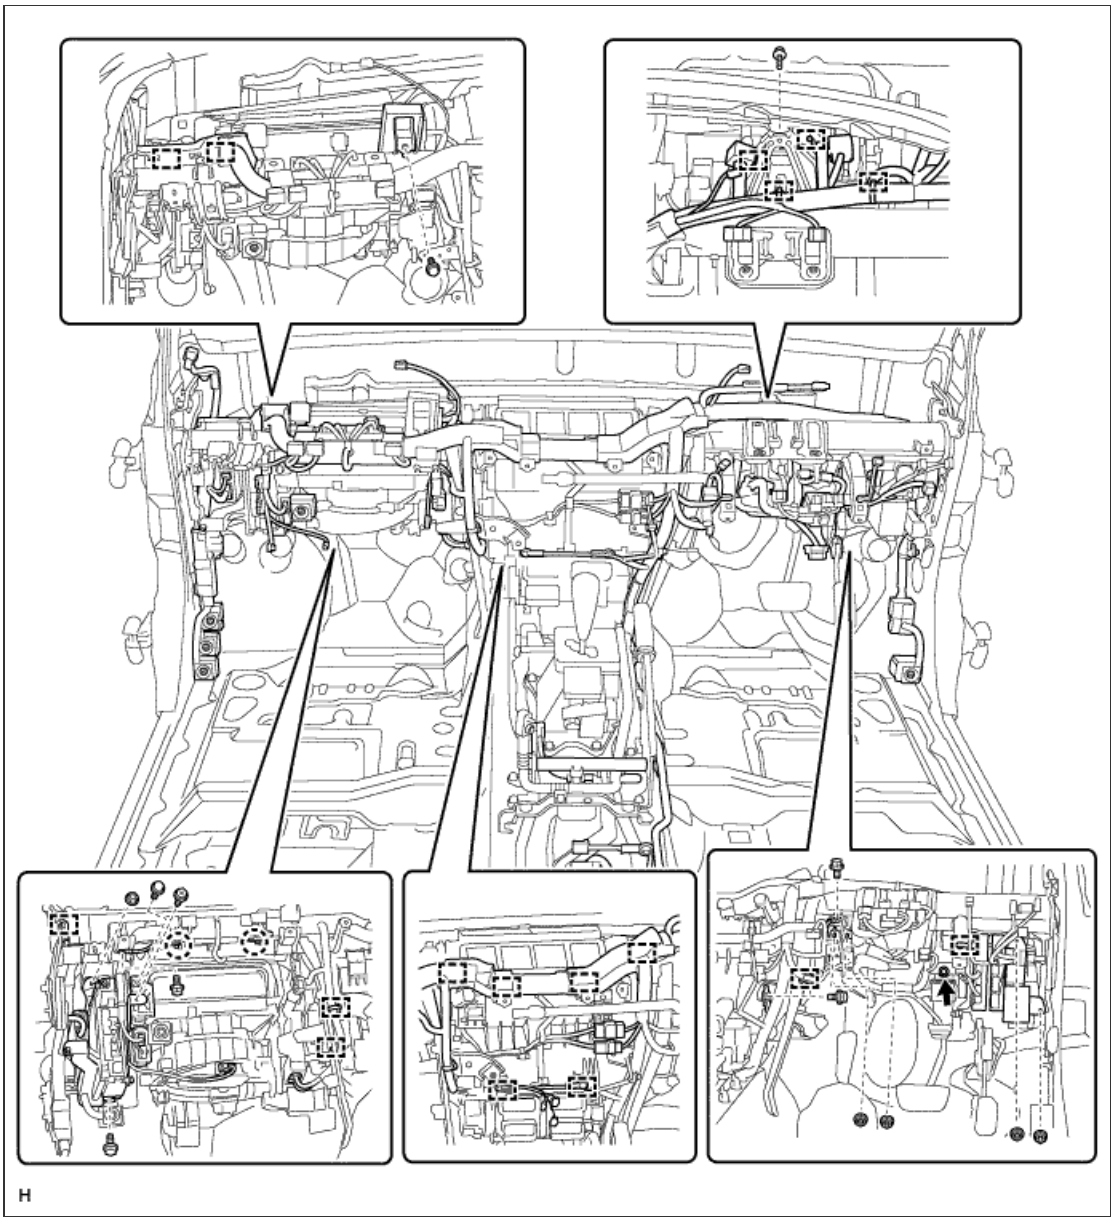
Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

iii. for Passenger Side:
Using a T40 "TORX" socket, install the 2 "TORX" bolts.



Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

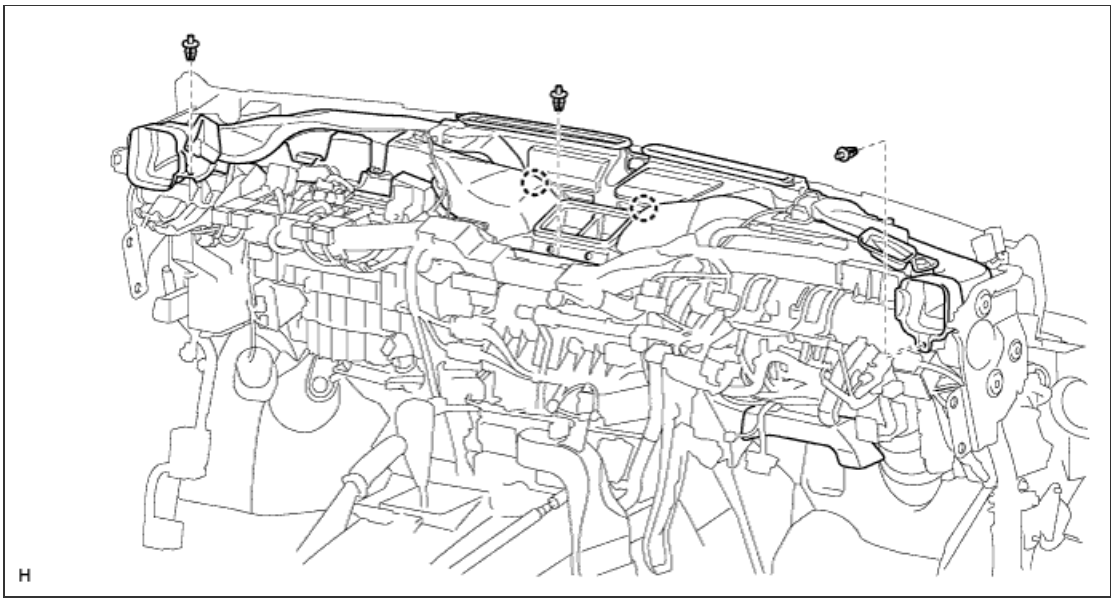
iv. for Passenger Side:
Install the 2 caps.



v. for Driver Side:
Install the 3 bolts.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

vi. for Driver Side:
Install the 3 caps.



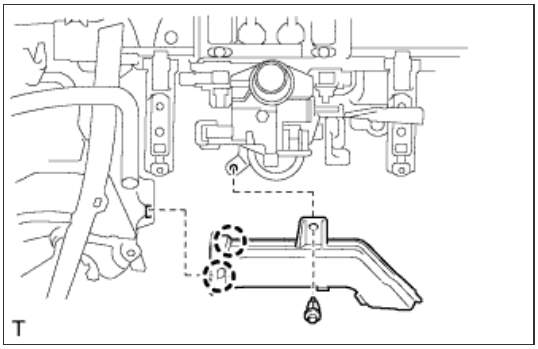
b. Attach the clamps and connectors to the wire harness.

4. INSTALL HEATER TO REGISTER DUCT ASSEMBLY

a. Attach the 2 claws to install the duct.

b. Install the 3 clips.

5. INSTALL STEERING COLUMN ASSEMBLY



a. for Power Tilt and Power Telescopic Steering Column:
Install the steering column (Click here).

b. for Manual Tilt and Manual Telescopic Steering Column:
Install the steering column (Click here).

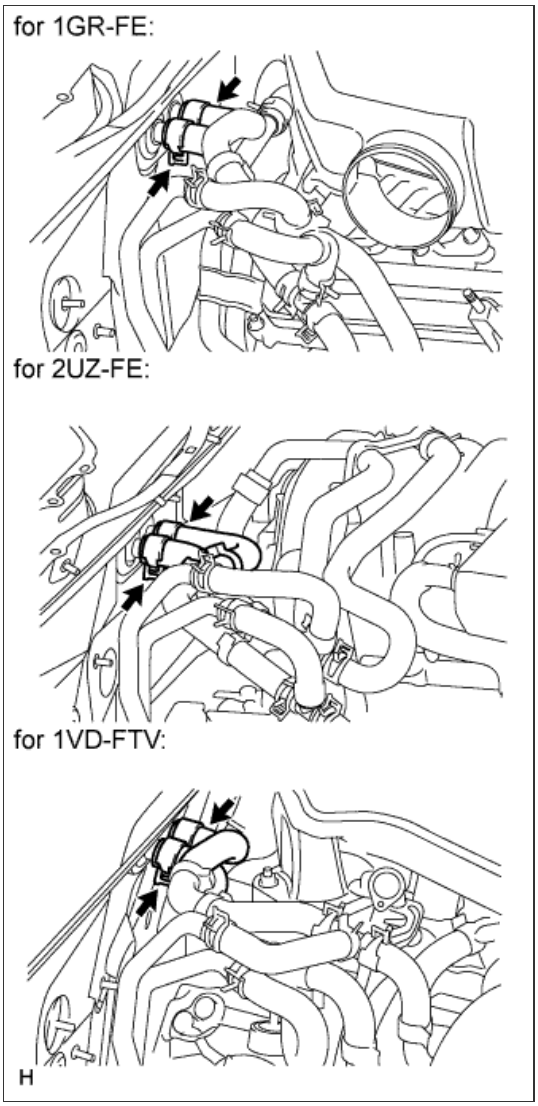
6. INSTALL NO. 3 AIR DUCT SUB-ASSEMBLY

a. Attach the 2 claws to install the duct.

b. Install the clip.

7. INSTALL INSTRUMENT PANEL SUB-ASSEMBLY

a. Install the instrument panel (Click here).



8. INSTALL FRONT IPER MOTOR AND BRAC E

a. Install the front wiper motor and bracket (Click here).

9. CONNECT HEATER ATER INLET HOSE AND HEATER ATER OUTLET HOSE

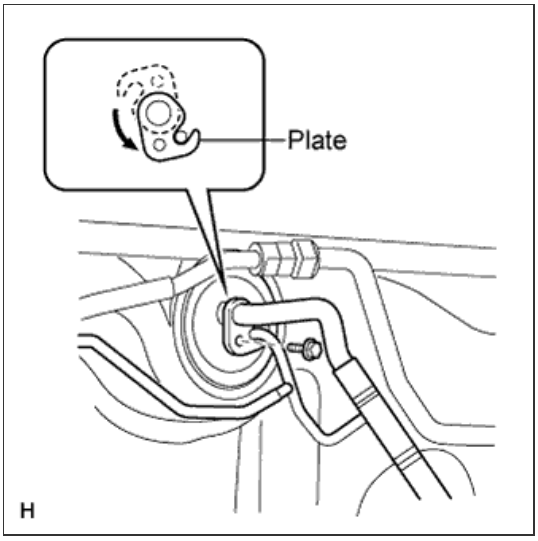
a. Connect the 2 heater water hoses.

b. Using pliers, grip the claws of the clips and slide the 2 clips.

10. CONNECT AIR CONDITIONING TUBE ASSEMBLY

a. Remove the attached vinyl tape from the tubes.

b. Sufficiently apply compressor oil to 2 new O-rings and the fitting surface of the air conditioning tube assembly.



Compressor oil:
ND-OIL 8 or equivalent

c. Install the 2 O-rings to the air conditioning tube assembly.

d. Connect the air conditioning tube assembly.

e. Attach the plate as shown in the illustration and install the bolt.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

11. CONNECT CABLE TO NEGATI BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

12. CHEC SRS ARNING LIGHT

a. Check the SRS warning light (Click here).

13. ADD ENGINE COOLANT

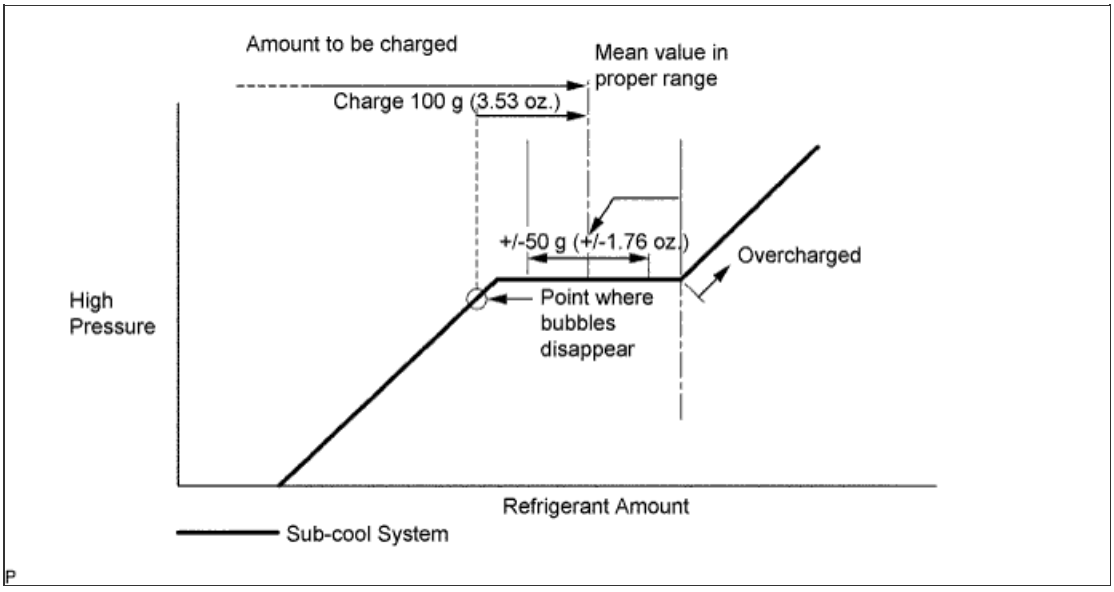
a. for 1VD-FTV:
Add engine coolant (Click here).

b. for 2UZ-FE:
Add engine coolant (Click here).

c. for 1GR-FE:
Add engine coolant (Click here).

14. CHARGE REFRIGERANT

SST



09985-20010 (09985-02130, 09985-02150, 09985-02090, 09985-02110, 09985-02010, 09985-02050, 09985-02060, 09985-02070)

a. Perform vacuum purging using a vacuum pump.

b. Charge refrigerant HFC-134a (R134a).

Stan ar :

Condenser Core Thickness	Air Conditioning Type	Cool Box	Refrigerant Charging Amount
22 mm (0.866 in.)	w/o Rear Cooler	w/ Cool Box	870 +/-30 g (30.7 +/-1.1 oz.)
		w/o Cool Box	870 +/-30 g (30.7 +/-1.1 oz.)
	w/ Rear Cooler	w/ Cool Box	1010 +/-30 g (35.6 +/-1.1 oz.)
		w/o Cool Box	960 +/-30 g (33.9 +/-1.1 oz.)
16 mm (0.630 in.)	w/o Rear Cooler	w/ Cool Box	770 +/-30 g (27.2 +/-1.1 oz.)
		w/o Cool Box	770 +/-30 g (27.2 +/-1.1 oz.)
	w/ Rear Cooler	w/ Cool Box	970 +/-30 g (34.2 +/-1.1 oz.)
		w/o Cool Box	920 +/-30 g (32.5 +/-1.1 oz.)

NOTICE:

- Do not operate the cooler compressor before charging refrigerant as the cooler compressor will not work properl without an refrigerant, an will overheat.

- **Approximatel 200 g (7.05 oz.) of refrigerant ma nee to be charge after bubbles isappear. The refrigerant amount shoul be checke b measuring its quantity, and not with the sight glass.**

15. WARM UP ENGINE

a. Warm up the engine at less than 1850 rpm for 2 minutes or more after charging the refrigerant.

NOTICE:

Be sure to warm up the compressor when turning the A/C switch is on after removing and installing the cooler refrigerant lines (including the compressor), to prevent damage to the compressor.

16. CHEC FOR ENGINE COOLANT LEA

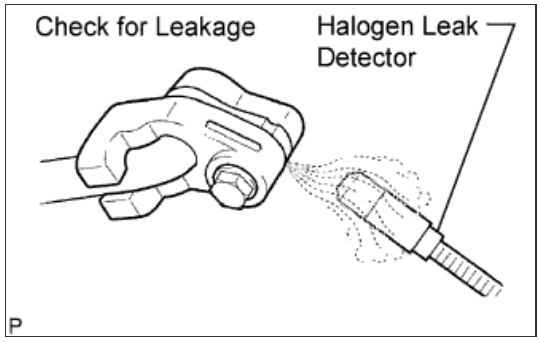
a. for 1VD-FTV:
Check for engine coolant leaks (Click here).

b. for 2UZ-FE:
Check for engine coolant leaks (Click here).

c. for 1GR-FE:
Check for engine coolant leaks (Click here).

17. CHEC FOR REFRIGERANT GAS LEA

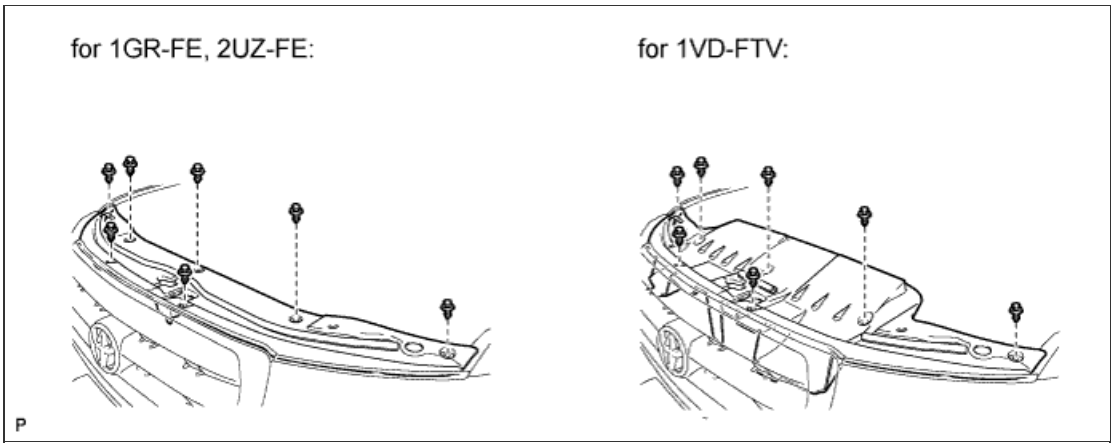
a. After recharging the refrigerant gas, check for refrigerant gas leakage using a halogen leak detector.



b. Perform the operation under these conditions:

- Stop the engine.
- Secure good ventilation (the halogen leak detector may react to volatile gases other than refrigerant, such as evaporated gasoline or exhaust gas).
- Repeat the test 2 or 3 times.
- Make sure that some refrigerant remains in the refrigeration system. When compressor is off: approximately 392 to 588 kPa (4.0 to 6.0 kgf/cm^2, 57 to 85 psi).

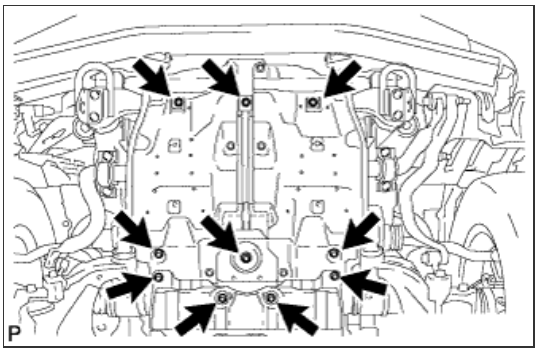
c. Using a halogen leak detector, check the refrigerant line for leakage.



. If a gas leak is not detected on the drain hose, remove the blower motor control (blower resistor) from the cooling unit. Insert the halogen leak detector sensor into the unit and perform the test.

e. Disconnect the connector and wait for approximately 20 minutes. Bring the halogen leak detector close to the pressure switch and perform the test.

18. INSTALL UPPER RADIATOR SUPPORT SEAL



a. Install the radiator support seal with the 7 clips.

19. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

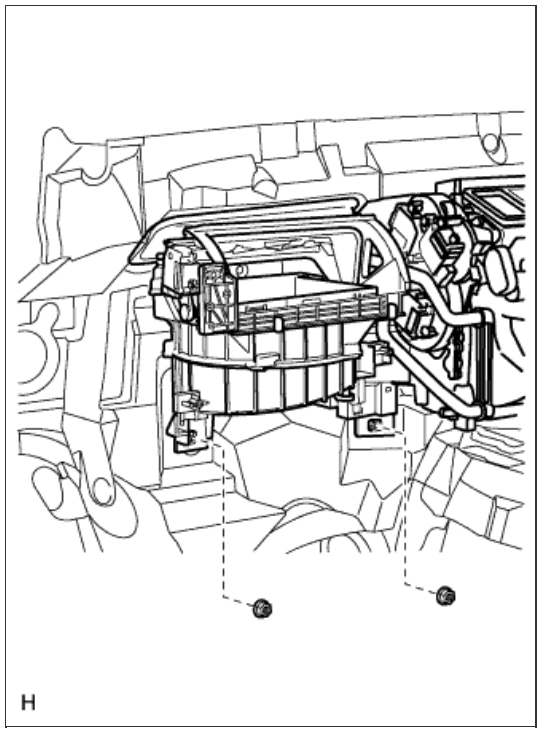
20. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. for Standard:
Install the front fender splash shield (Click here).

b. w/Winch:
Install the front fender splash shield (Click here).

21. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

a. for Standard:
Install the front fender splash shield (Click here).

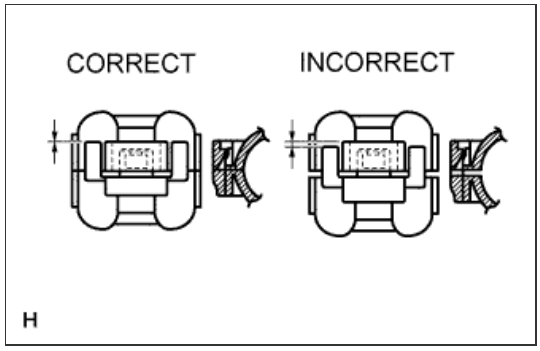


b. w/Winch:
Install the front fender splash shield (Click here).

for Preparation Click here

1. INSTALL AIR CONDITIONING UNIT ASSEMBLY

a. Install the air conditioning unit with the 2 nuts.

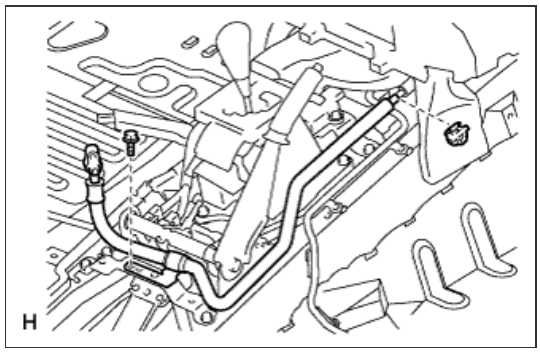


Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

2. INSTALL AIR CONDITIONING HOSE AND ACCESSORY (w/ Cool Box)

a. Lubricate 2 new O-rings with compressor oil and install them to the air conditioning hose and accessory.

Compressor oil:
ND-OIL 8 or equivalent



b. Install the air conditioning hose and accessory with the piping clamp.

NOTICE:

After connection, check the claw engagement of the piping clamp.

c. Install the bolt.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

3. INSTALL INSTRUMENT PANEL REINFORCEMENT ASSEMBLY

a. Install the instrument panel reinforcement.

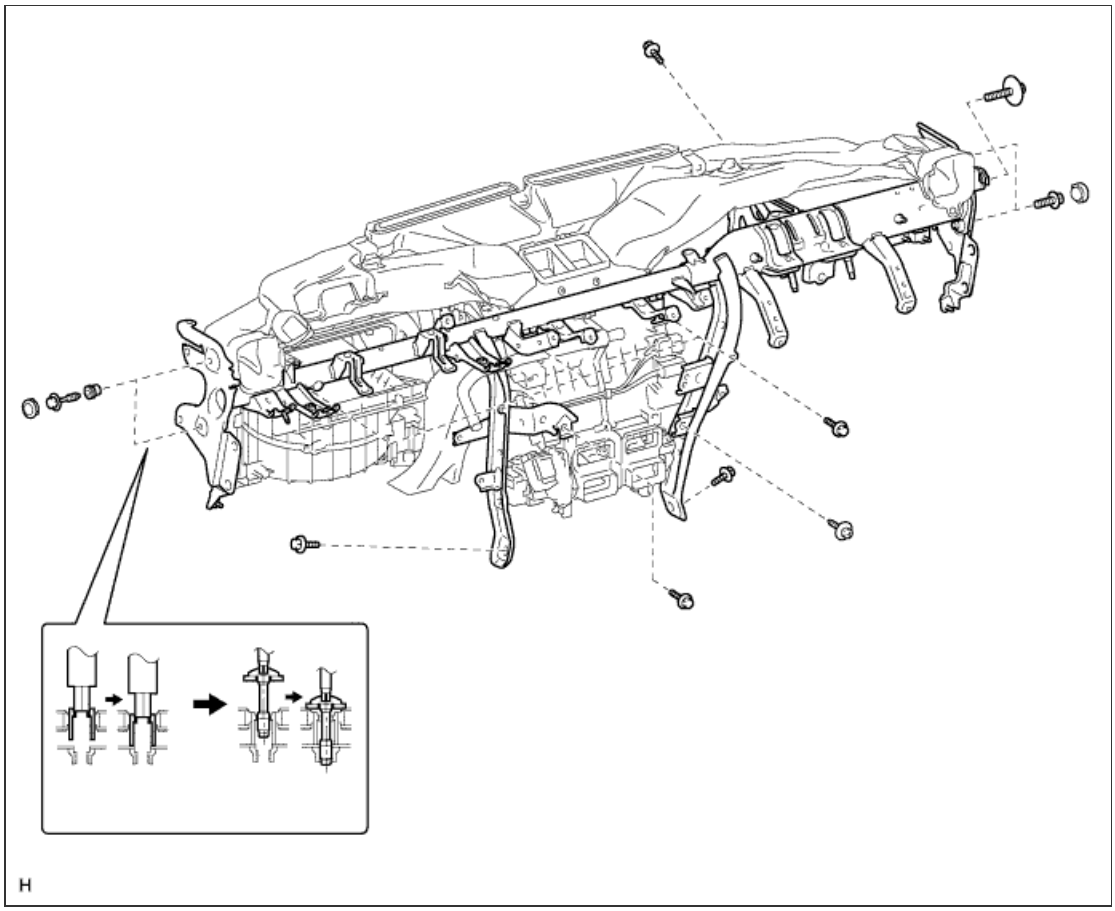
i. Install the instrument panel reinforcement with the 7 bolts and screw.

Torque:
for bolt:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }
for screw:
6.0 N*m{ 61 kgf*cm , 53 in.*lbf }

ii. for Passenger Side:
Using a 12 mm hexagon wrench, install the 2 collars.

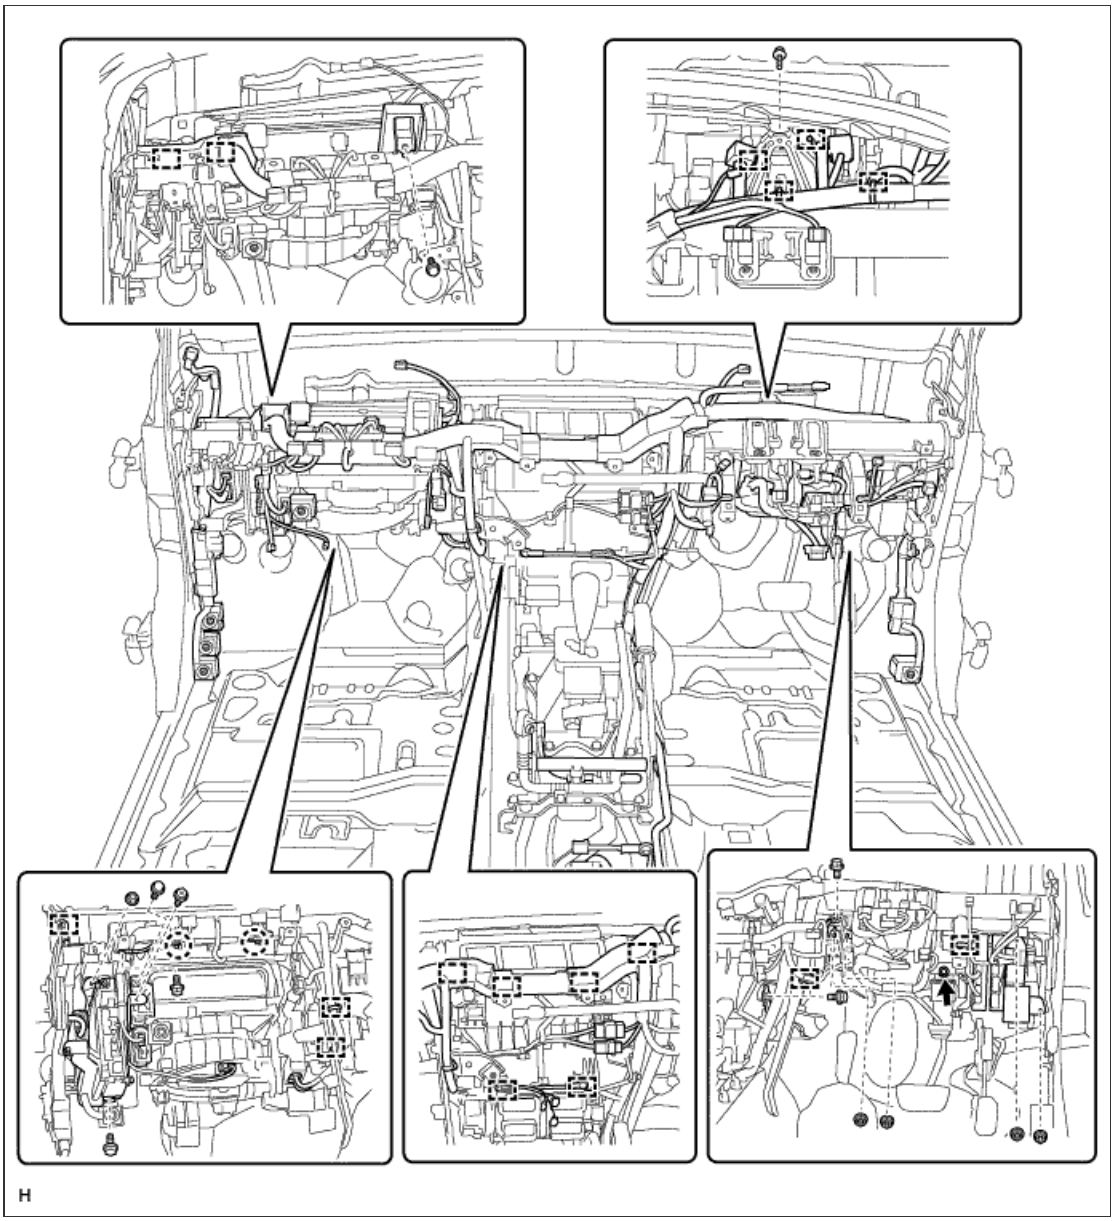
Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

iii. for Passenger Side:
Using a T40 "TORX" socket, install the 2 "TORX" bolts.



Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

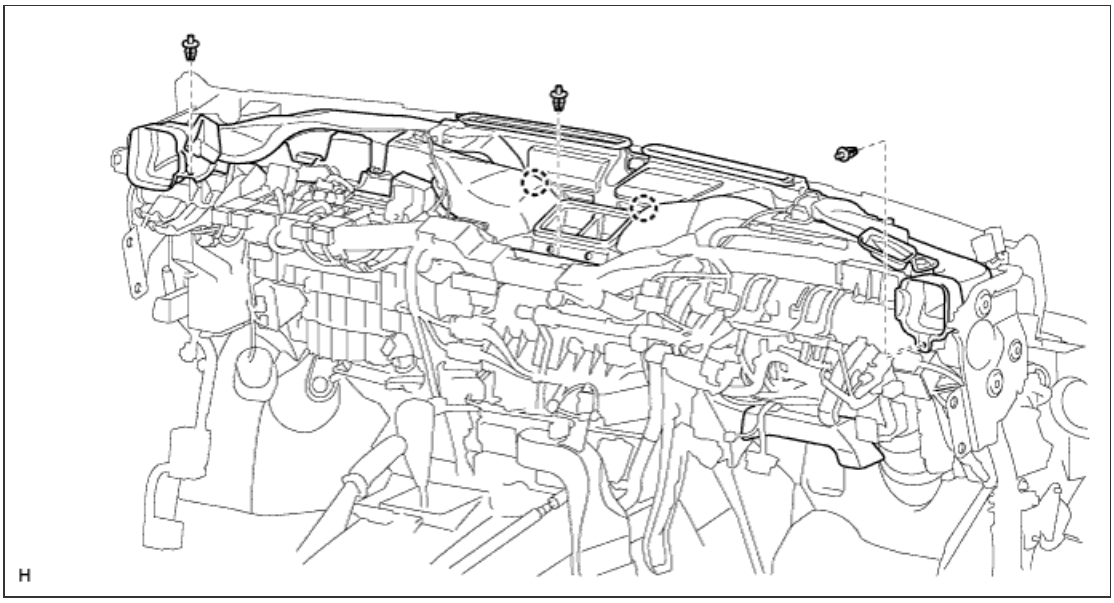
iv. for Passenger Side:
Install the 2 caps.



v. for Driver Side:
Install the 3 bolts.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

vi. for Driver Side:
Install the 3 caps.



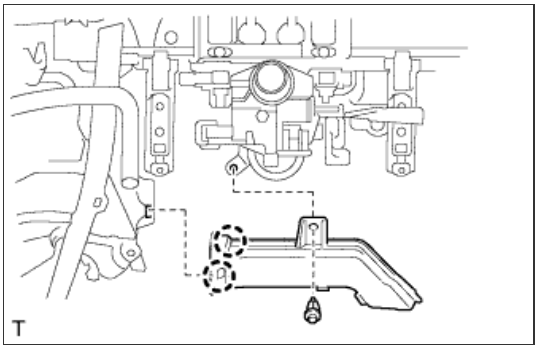
b. Attach the clamps and connectors to the wire harness.

4. INSTALL HEATER TO REGISTER DUCT ASSEMBLY

a. Attach the 2 claws to install the duct.

b. Install the 3 clips.

5. INSTALL STEERING COLUMN ASSEMBLY



a. for Power Tilt and Power Telescopic Steering Column:
Install the steering column (Click here).

b. for Manual Tilt and Manual Telescopic Steering Column:
Install the steering column (Click here).

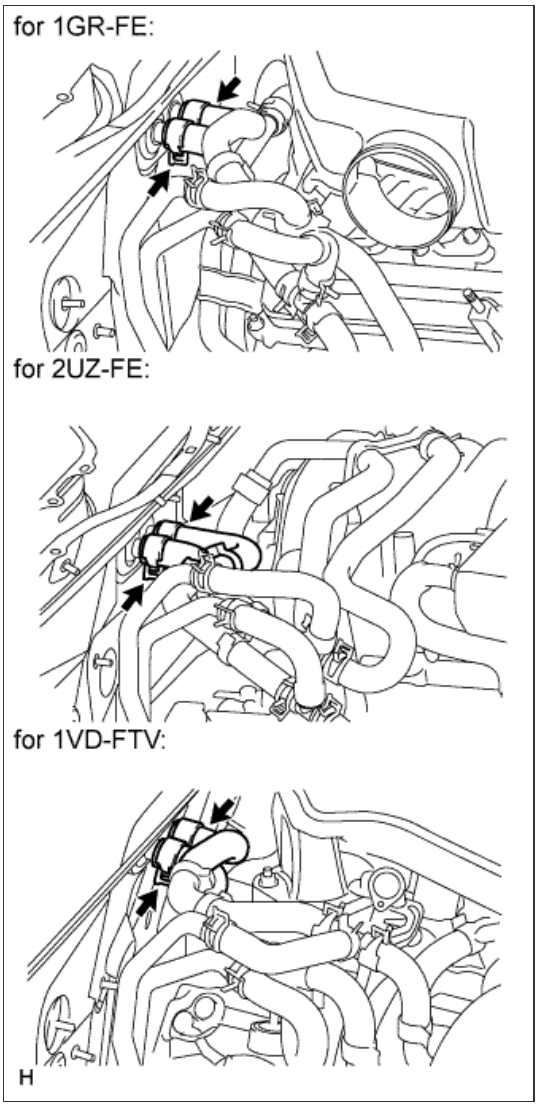
6. INSTALL NO. 3 AIR DUCT SUB-ASSEMBLY

a. Attach the 2 claws to install the duct.

b. Install the clip.

7. INSTALL INSTRUMENT PANEL SUB-ASSEMBLY

a. Install the instrument panel (Click here).



8. INSTALL FRONT IPER MOTOR AND BRAC E

a. Install the front wiper motor and bracket (Click here).

9. CONNECT HEATER ATER INLET HOSE AND HEATER ATER OUTLET HOSE

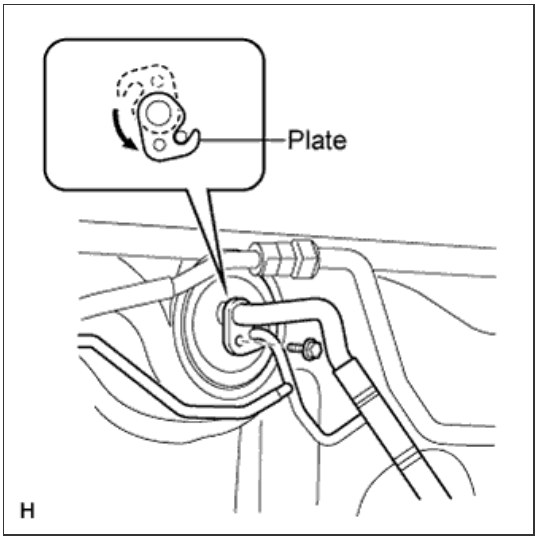
a. Connect the 2 heater water hoses.

b. Using pliers, grip the claws of the clips and slide the 2 clips.

10. CONNECT AIR CONDITIONING TUBE ASSEMBLY

a. Remove the attached vinyl tape from the tubes.

b. Sufficiently apply compressor oil to 2 new O-rings and the fitting surface of the air conditioning tube assembly.



Compressor oil:
ND-OIL 8 or equivalent

c. Install the 2 O-rings to the air conditioning tube assembly.

d. Connect the air conditioning tube assembly.

e. Attach the plate as shown in the illustration and install the bolt.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

11. CONNECT CABLE TO NEGATI BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

12. CHEC SRS ARNING LIGHT

a. Check the SRS warning light (Click here).

13. ADD ENGINE COOLANT

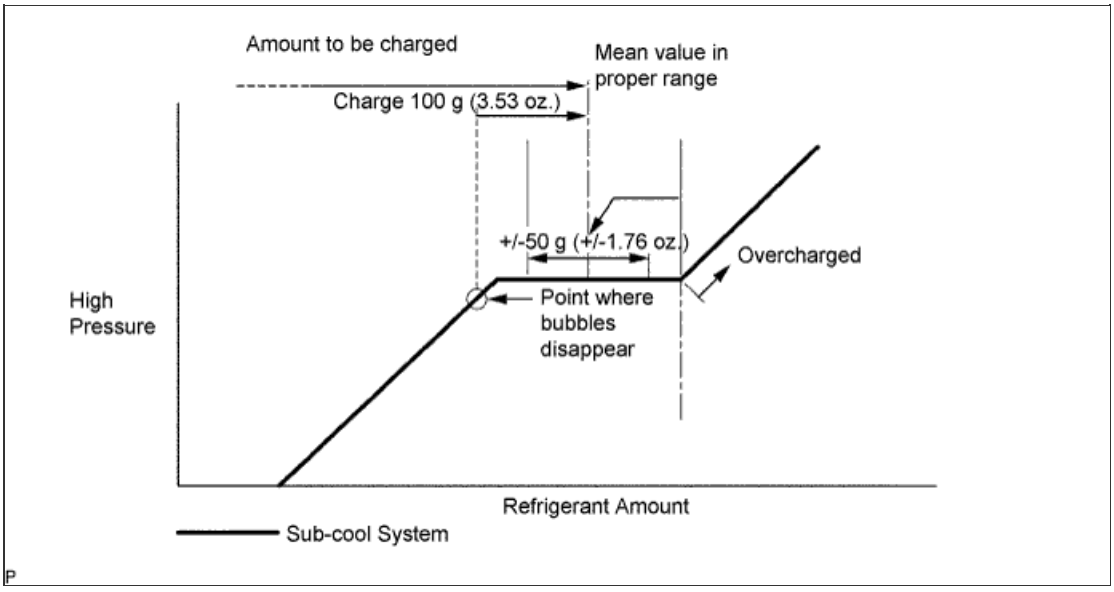
a. for 1VD-FTV:
Add engine coolant (Click here).

b. for 2UZ-FE:
Add engine coolant (Click here).

c. for 1GR-FE:
Add engine coolant (Click here).

14. CHARGE REFRIGERANT

SST



09985-20010 (09985-02130, 09985-02150, 09985-02090, 09985-02110, 09985-02010, 09985-02050, 09985-02060, 09985-02070)

a. Perform vacuum purging using a vacuum pump.

b. Charge refrigerant HFC-134a (R134a).

Stan ar :

Condenser Core Thickness	Air Conditioning Type	Cool Box	Refrigerant Charging Amount
22 mm (0.866 in.)	w/o Rear Cooler	w/ Cool Box	870 +/-30 g (30.7 +/-1.1 oz.)
		w/o Cool Box	870 +/-30 g (30.7 +/-1.1 oz.)
	w/ Rear Cooler	w/ Cool Box	1010 +/-30 g (35.6 +/-1.1 oz.)
		w/o Cool Box	960 +/-30 g (33.9 +/-1.1 oz.)
16 mm (0.630 in.)	w/o Rear Cooler	w/ Cool Box	770 +/-30 g (27.2 +/-1.1 oz.)
		w/o Cool Box	770 +/-30 g (27.2 +/-1.1 oz.)
	w/ Rear Cooler	w/ Cool Box	970 +/-30 g (34.2 +/-1.1 oz.)
		w/o Cool Box	920 +/-30 g (32.5 +/-1.1 oz.)

NOTICE:

- Do not operate the cooler compressor before charging refrigerant as the cooler compressor will not work properl without an refrigerant, an will overheat.

- **Approximatel 200 g (7.05 oz.) of refrigerant ma nee to be charge after bubbles isappear. The refrigerant amount shoul be checke b measuring its quantity, and not with the sight glass.**

15. WARM UP ENGINE

a. Warm up the engine at less than 1850 rpm for 2 minutes or more after charging the refrigerant.

NOTICE:

Be sure to warm up the compressor when turning the A/C switch is on after removing and installing the cooler refrigerant lines (including the compressor), to prevent damage to the compressor.

16. CHEC FOR ENGINE COOLANT LEA

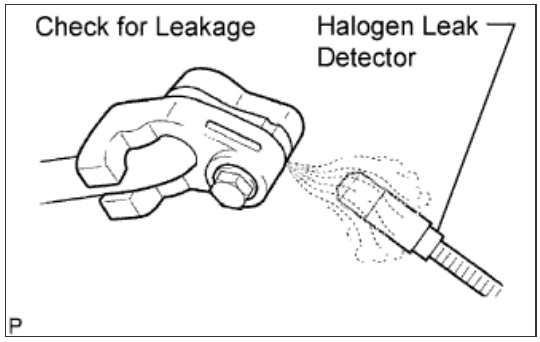
a. for 1VD-FTV:
Check for engine coolant leaks (Click here).

b. for 2UZ-FE:
Check for engine coolant leaks (Click here).

c. for 1GR-FE:
Check for engine coolant leaks (Click here).

17. CHEC FOR REFRIGERANT GAS LEA

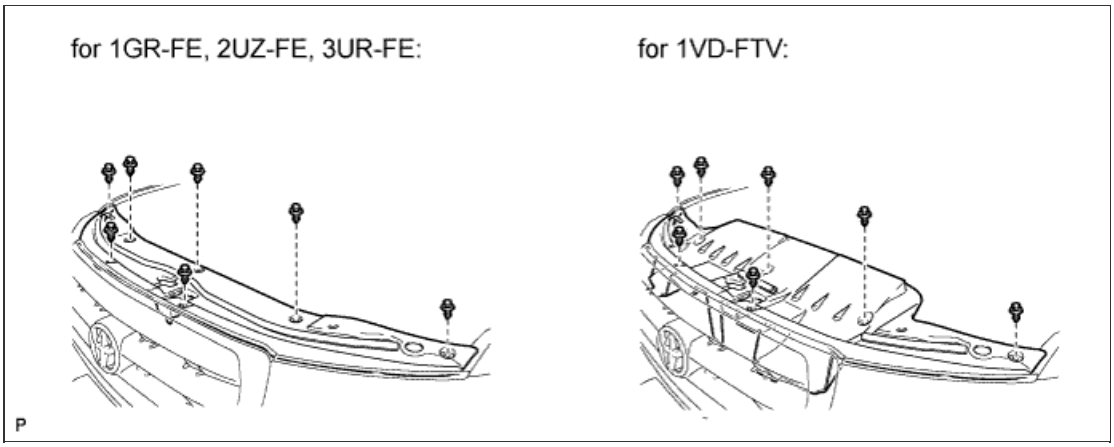
a. After recharging the refrigerant gas, check for refrigerant gas leakage using a halogen leak detector.



b. Perform the operation under these conditions:

- Stop the engine.
- Secure good ventilation (the halogen leak detector may react to volatile gases other than refrigerant, such as evaporated gasoline or exhaust gas).
- Repeat the test 2 or 3 times.
- Make sure that some refrigerant remains in the refrigeration system. When compressor is off: approximately 392 to 588 kPa (4.0 to 6.0 kgf/cm^2, 57 to 85 psi).

c. Using a halogen leak detector, check the refrigerant line for leakage.



. If a gas leak is not detected on the drain hose, remove the blower motor control (blower resistor) from the cooling unit. Insert the halogen leak detector sensor into the unit and perform the test.

e. Disconnect the connector and wait for approximately 20 minutes. Bring the halogen leak detector close to the pressure switch and perform the test.

18. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the radiator support seal with the 7 clips.

19. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

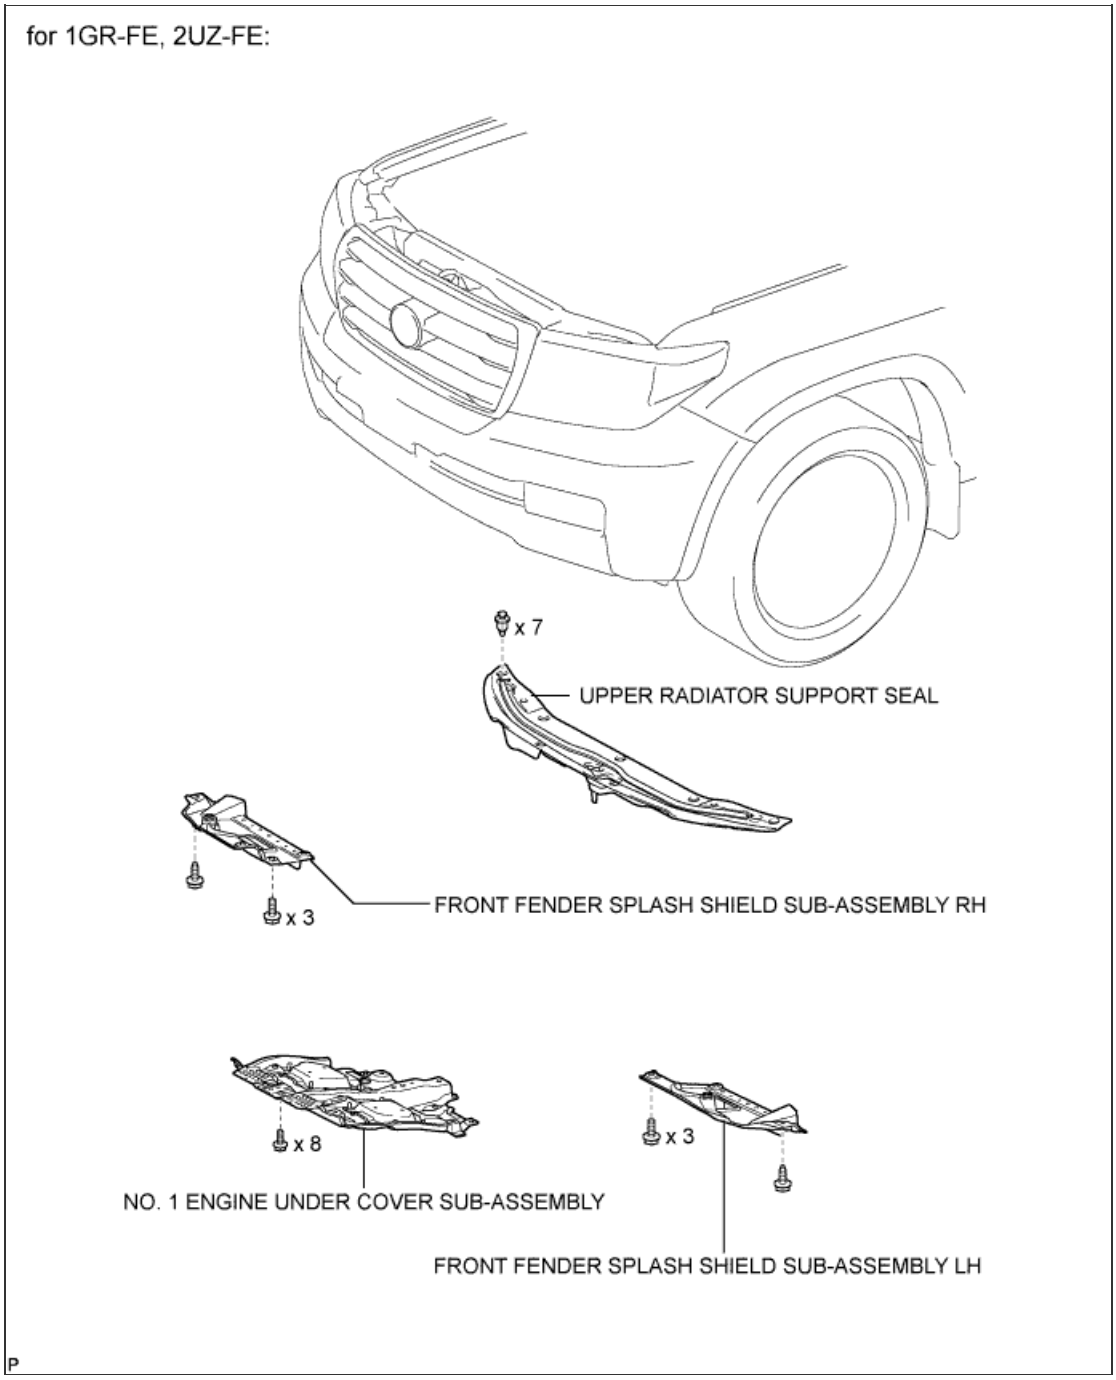
a. for 1VD-FTV:
Install the No. 1 engine under cover sub-assembly (Click here).

b. for 2UZ-FE:
Install the No. 1 engine under cover sub-assembly (Click here).

c. for 1GR-FE:
Install the No. 1 engine under cover sub-assembly (Click here).

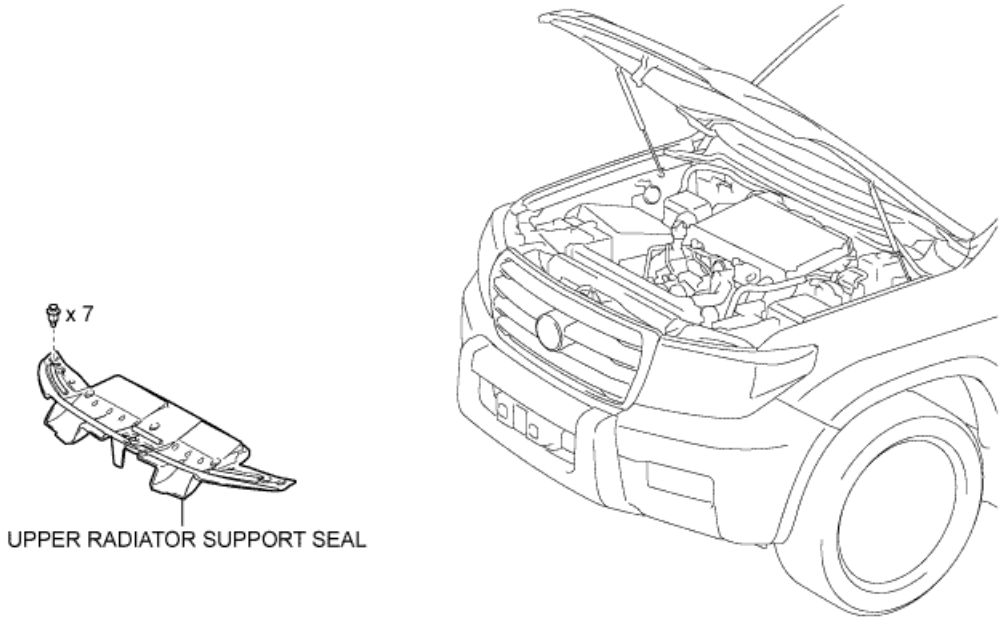
20. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. for Standard:
Install the front fender splash shield (Click here).

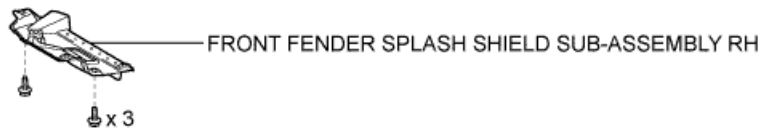


b. w/Winch:
Install the front fender splash shield (Click here).

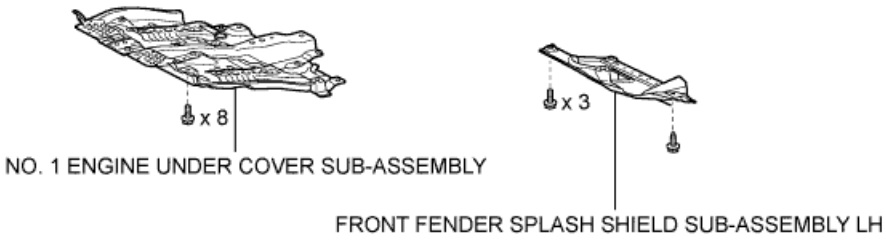
21. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH



a. for Standard:
Install the front fender splash shield (Click here).



b. w/Winch:
Install the front fender splash shield (Click here).



for Preparation Click here

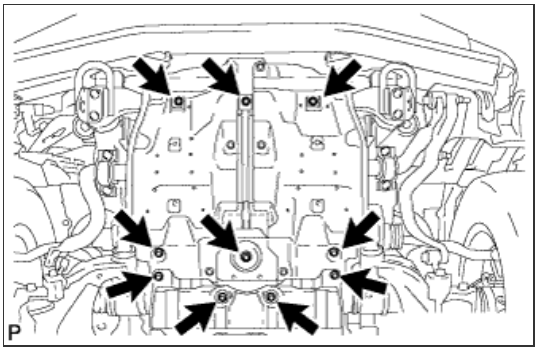
1. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. for Standard:
Remove the front fender splash shield (Click here).

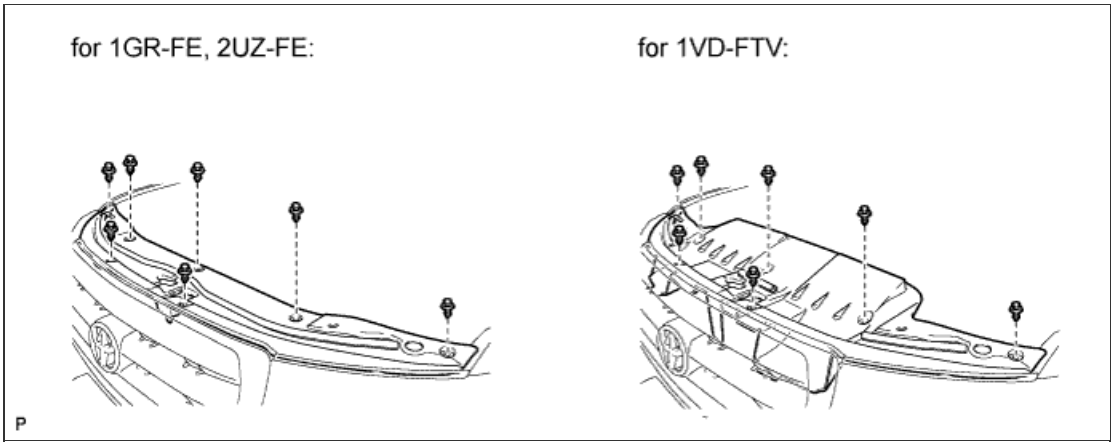
b. w/ Winch:
Remove the front fender splash shield (Click here).



2. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

a. for Standard:
Remove the front fender splash shield (Click here).

b. w/ Winch:
Remove the front fender splash shield (Click here).



3. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and No. 1 engine under cover.

4. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 7 clips and radiator support seal.

5. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM

a. Start the engine.

b. T rn the /C switch on.

c. Operate the cooler compressor while the engine speed is appro imatel 1000 rpm for to 6 min tes to circ late the refrigerant and collect the compressor oil remaining in each component into the cooler compressor.

d. Stop the engine.

e. Recover the refrigerant from the /C s stem sing a refrigerant recover nit.

6. DRAIN ENGINE COOLANT

a. for 1 :
Drain the engine coolant (Click here).

b. for 2UZ-FE:
Drain the engine coolant (Click here).

c. for 1GR-FE:
Drain the engine coolant (Click here).

7. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

8. REMOVE REAR FLOOR MAT REAR SUPPORT PLATE

a. w/ Sliding Roof:
Remove the floor mat rear support plate (Click here).

b. w/o Sliding Roof:
Remove the floor mat rear support plate (Click here).

9. REMOVE REAR DOOR SCUFF PLATE LH

a. w/ Sliding Roof:
Remove the rear door scuff plate (Click here).

b. w/o Sliding Roof:
Remove the rear door scuff plate (Click here).

10. REMOVE TONNEAU COVER ASSEMBLY (w/ Tonneau Cover)

11. REMOVE REAR SEAT COVER CAP (w/ Rear No. 2 Seat)

a. w/ Sliding Roof:
Remove the rear seat cover cap (Click here).

b. w/o Sliding Roof:
Remove the rear seat cover cap (Click here).

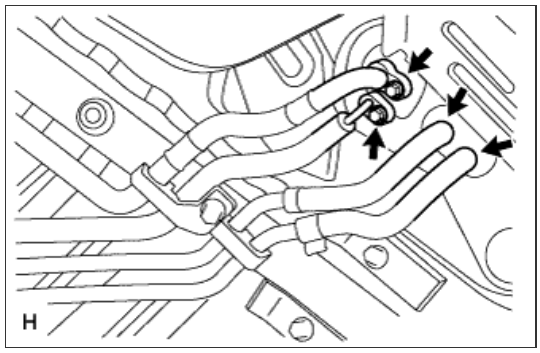
12. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY LH

a. w/ Sliding Roof:
Remove the front arter trim panel (Click here).

b. w/o Sliding Roof:
Remove the front arter trim panel (Click here).

13. DISCONNECT AIR CONDITIONER TUBE AND ACCESSORY ASSEMBLY

a. Using pliers grip the claws of the clips and slide the 2 clips.

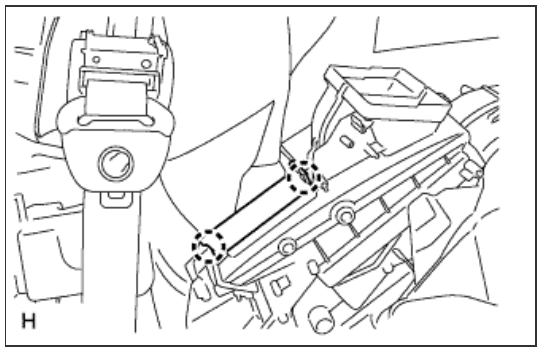


b. Disconnect the heater water inlet hose and heater water o tlet hose.

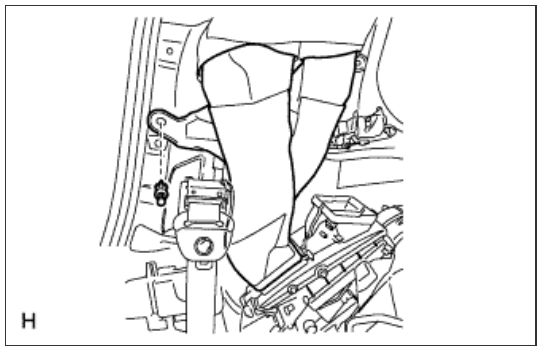
c. Remove the 2 bolts.

d. Disconnect the air conditioner t e and accessor assembl .

NOTICE:



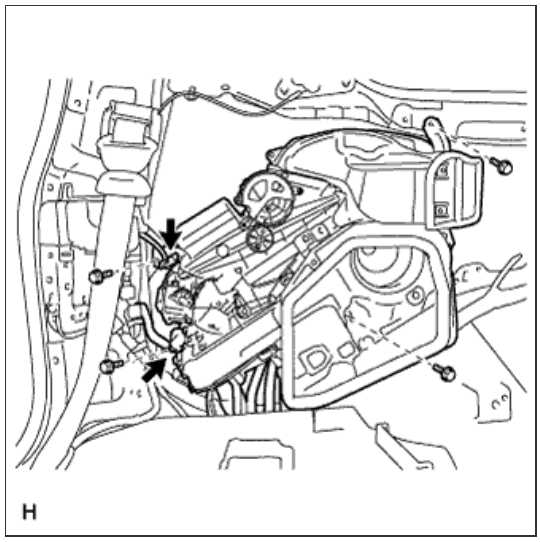
- **Do not use a screwdriver or similar tool to disconnect the tube.**
- **Seal the openings of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering them.**



e. Remove the 2 O rings from the air conditioner t e and accessor assembl .

14. REMOVE REAR ROOF NO. 1 AIR DUCT

a. Detach the 2 claws and remove the cooler plate.



b. Remove the clip and d ct.

15. REMOVE REAR COOLING UNIT ASSEMBLY

a. Disconnect the 2 connectors.

b. Remove the bolts and rear cooling nit.

H

for Preparation Click here

1. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. for Standard:
Remove the front fender splash shield (Click here).

b. w/ Winch:
Remove the front fender splash shield (Click here).

2. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

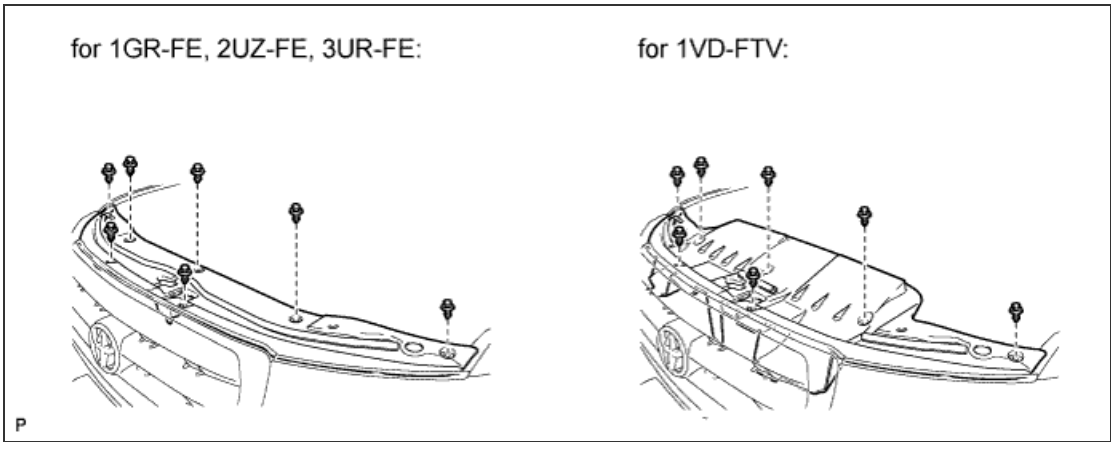
a. for Standard:
Remove the front fender splash shield (Click here).

b. w/ Winch:
Remove the front fender splash shield (Click here).

3. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. for 1 :
Remove the No. 1 en ine under cover sub-assembl (Click here).

b. for 2U :
Remove the No. 1 en ine under cover sub-assembl (Click here).



c. for 1 R- :

d. Remove the No. 1 en ine under cover sub-assembl (Click here).

e. for 3UR- :
Remove the No. 1 en ine under cover sub-assembl (Click here).

4. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 7 clips and radiator support seal.

5. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM

a. Start the en ine.

b. Turn the /C switch on.

c. Operate the cooler compressor while the en ine speed is approximatel 1000 rpm for to 6 minutes to circulate the refri erant and collect the compressor oil remainin in each component into the cooler compressor.

d. Stop the en ine.

e. Recover the refri erant from the /C s stem usin a refri erant recover unit.

6. DRAIN ENGINE COOLANT

a. for 1 :
Drain the en ine coolant (Click here).

b. for 2U :
Drain the en ine coolant (Click here).

c. for 1 R- :
Drain the en ine coolant (Click here).

d. for 3UR- :
Drain the en ine coolant (Click here).

7. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least seconds after disconnectin the cable from the ne ative (-) batter terminal to disable the SRS s stem.

NOTICE:

When disconnectin the cable, some s stems need to be initiali ed after the cable is reconnected (Click here).

8. REMOVE REAR FLOOR MAT REAR SUPPORT PLATE

a. w/ Slidin Roof:
Remove the floor mat rear support plate (Click here).

b. w/o Slidin Roof:
Remove the floor mat rear support plate (Click here).

9. REMOVE REAR DOOR SCUFF PLATE LH

a. w/ Slidin Roof:
Remove the rear door scuff plate (Click here).

b. w/o Slidin Roof:
Remove the rear door scuff plate (Click here).

10. REMOVE TONNEAU COVER ASSEMBLY (w/ Tonneau Cover)

a. Remove the tonneau cover.

11. REMOVE REAR SEAT COVER CAP (w/ Rear No. 2 Seat)

a. w/ Slidin Roof:
Remove the rear seat cover cap (Click here).

b. w/o Slidin Roof:
Remove the rear seat cover cap (Click here).

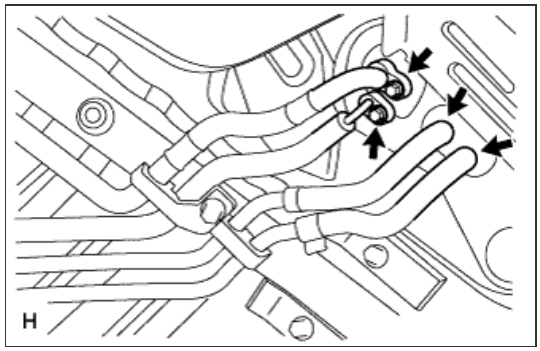
12. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY LH

a. w/ Slidin Roof:
Remove the front arter trim panel (Click here).

b. w/o Slidin Roof:
Remove the front arter trim panel (Click here).

13. DISCONNECT AIR CONDITIONER TUBE AND ACCESSORY ASSEMBLY

a. Usin pliers, rip the claws of the clips and slide the 2 clips.

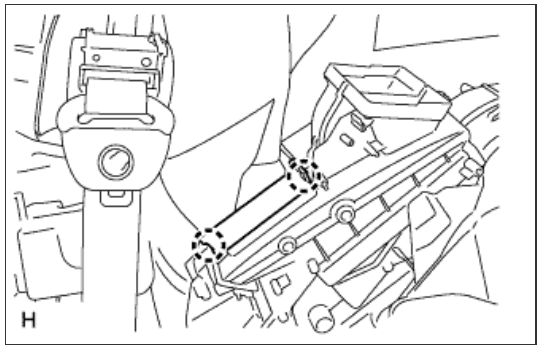


b. Disconnect the heater water inlet hose and heater water outlet hose.

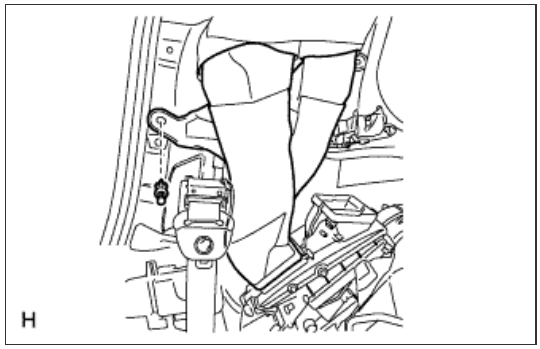
c. Remove the 2 bolts.

d. Disconnect the air conditioner tube and accessor assembl .

NOTICE:



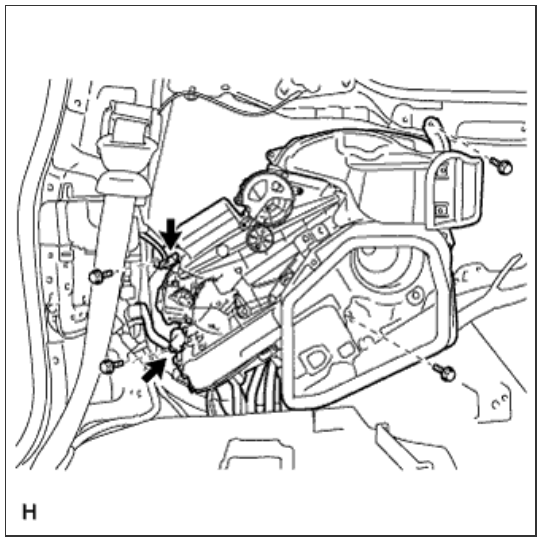
- **Do not use a screwdriver or similar tool to disconnect the tube.**
- **Seal the openings of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering them.**



e. Remove the 2 O-rin s from the air conditioner tube and accessor assembl .

14. REMOVE REAR ROOF NO. 1 AIR DUCT

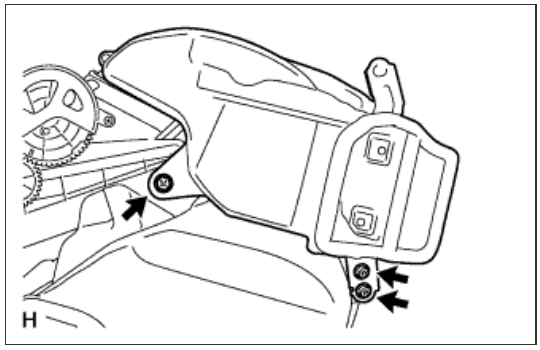
a. Detach the 2 claws and remove the cooler plate.



b. Remove the clip and duct.

15. REMOVE REAR COOLING UNIT ASSEMBLY

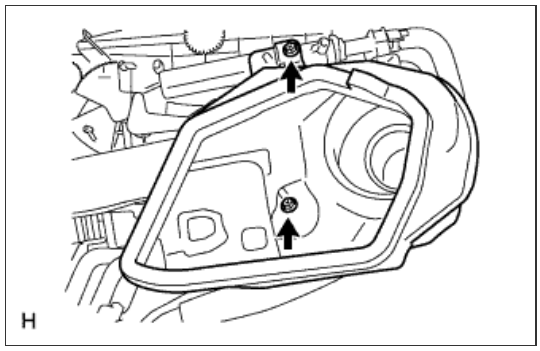
a. Disconnect the 2 connectors.



b. Remove the bolts and rear coolin unit.

H

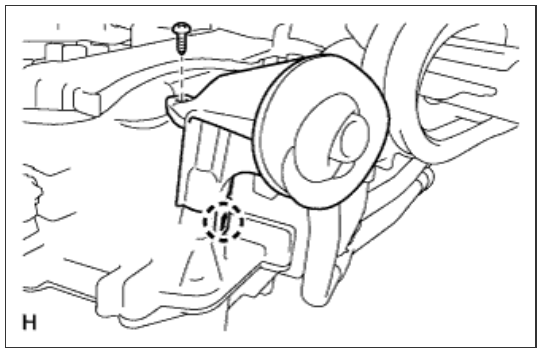
for Preparation Click here



1. REMOVE REAR SIDE NO. 2 AIR DUCT

a. Remove the 3 screws and duct.

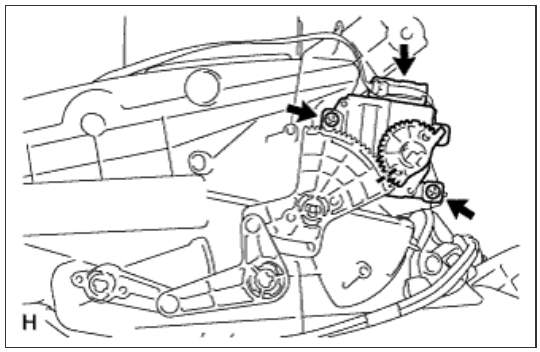
2. REMOVE REAR SIDE NO. 3 AIR DUCT



a. Remove the 2 screws and duct.

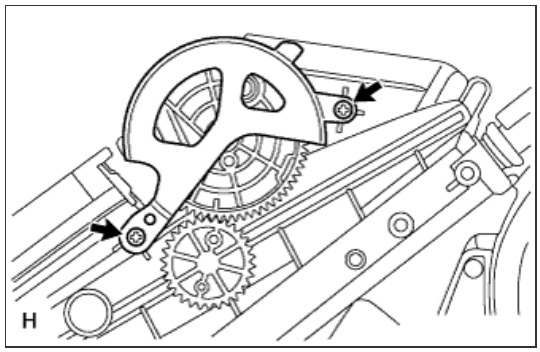
3. REMOVE DRAIN COOLER HOSE

a. Remove the screw.



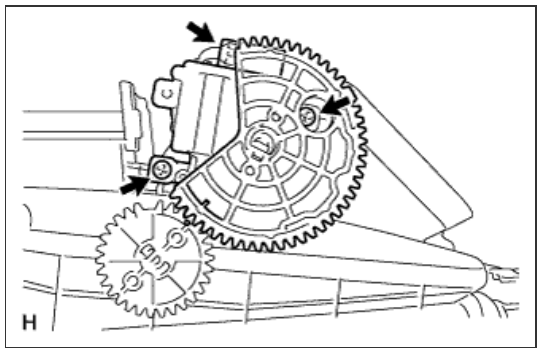
b. Detach the claw and remove the drain hose.

4. REMOVE REAR AIR MIX DAMPER SERVO SUB-ASSEMBLY



a. Disconnect the connector.

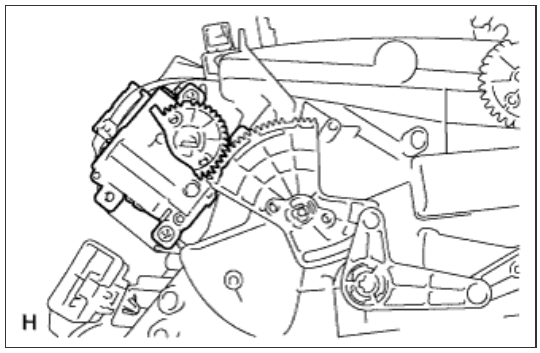
b. Remove the 2 screws and damper servo.



5. REMOVE REAR MODE DAMPER SERVO SUB-ASSEMBLY

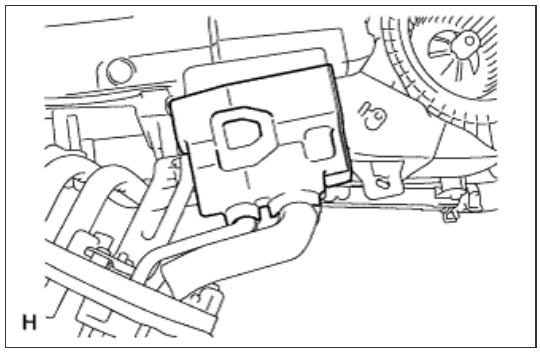
a. Remove the 2 screws and plate cover.

b. Disconnect the connector.



c. Remove the 2 screws and damper servo.

6. REMOVE NO. 2 AIR MIX DAMPER SERVO SUB-ASSEMBLY

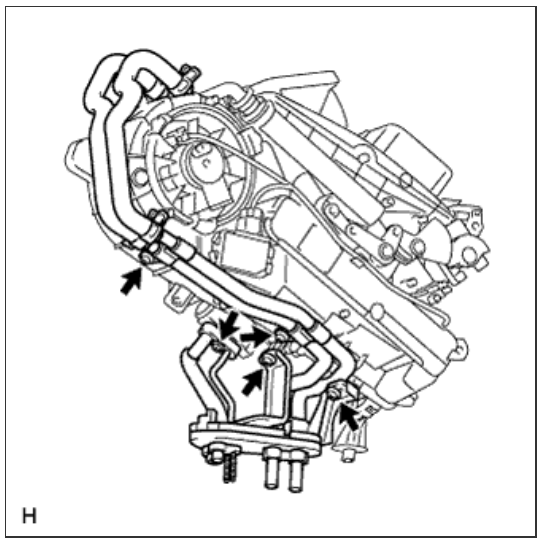


a. Disconnect the connector.

b. Remove the 2 screws and damper servo.

7. REMOVE AIR CONDITIONER ACCESSORY ASSEMBLY

a. Remove the packing.

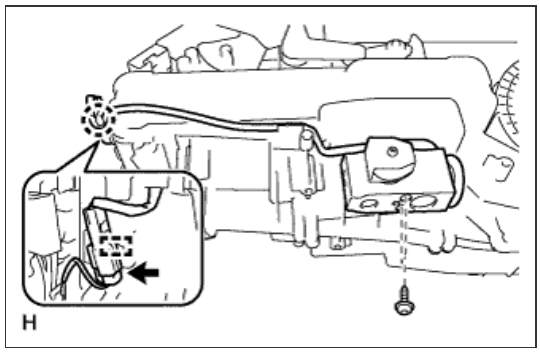


b. Remove the bolt and 4 screws.

c. Using pliers, grip the claws of the clips and slide the 2 clips.

d. Remove the air conditioner accessory assembly.

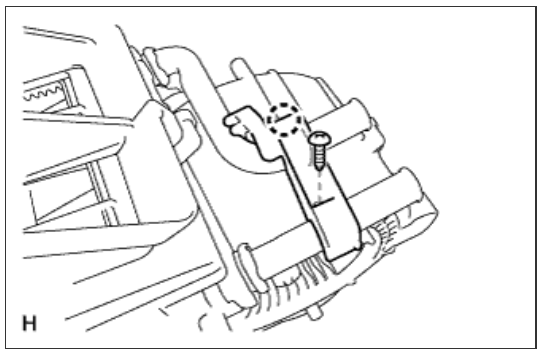
e. Remove the 2 rings from the air conditioner accessory assembly.



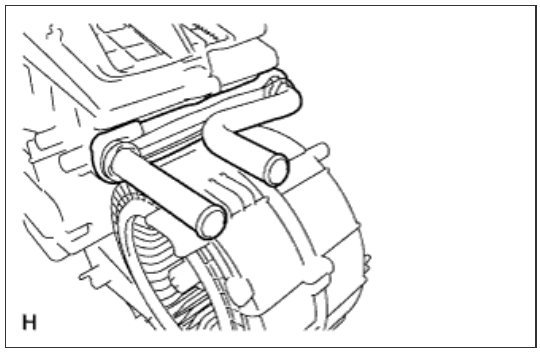
8. REMOVE REAR COOLING UNIT EXPANSION VALVE

a. Disconnect the connector.

b. Detach the clamp.



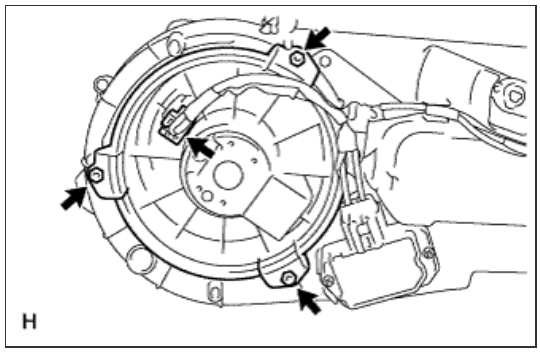
c. Using a 4 mm he agon wrench, remove the 2 he agon bolts and e pansion valve.



9. REMOVE HEATER RADIATOR UNIT SUB-ASSEMBLY

a. Remove the screw and detach the claw.

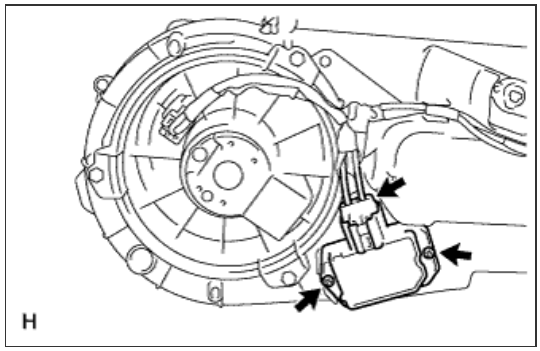
b. Remove the heater clamp.



c. Remove the heater radiator.

10. REMOVE REAR BLOWER MOTOR

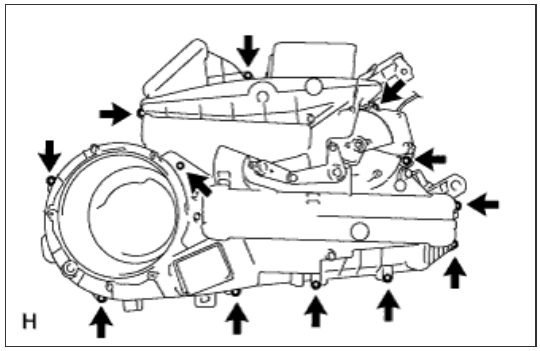
a. Disconnect the connector.



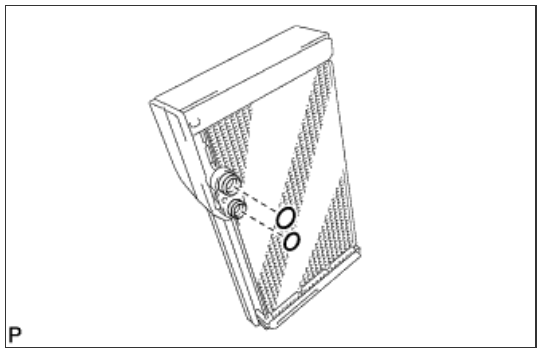
b. Remove the 3 screws and blower motor.

11. REMOVE BLOWER MOTOR CONTROLLER

a. Disconnect the connector.



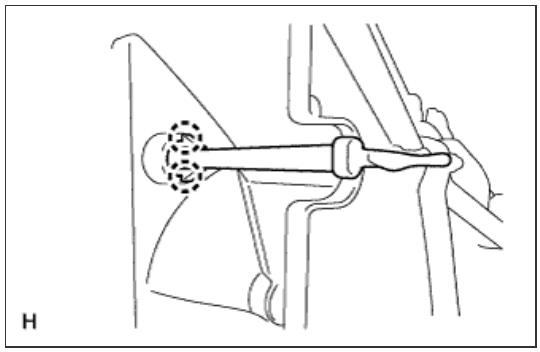
b. Remove the 2 screws and blower motor controler.



12. REMOVE EVAPORATOR SUB-ASSEMBLY

a. Remove the 12 screws and rear cooling unit case L .

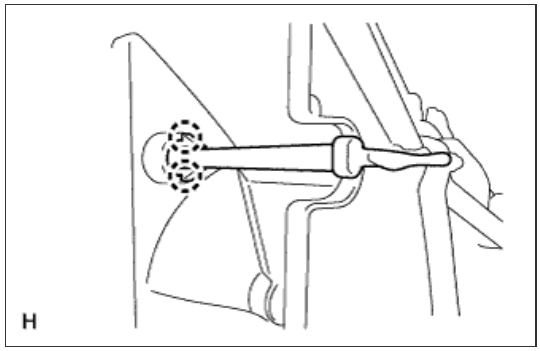
b. Remove the evaporator.



c. Remove the 2 rings from the evaporator.

13. REMOVE REAR EVAPORATOR TEMPERATURE SENSOR

a. Detach the 2 claws and remove the sensor.



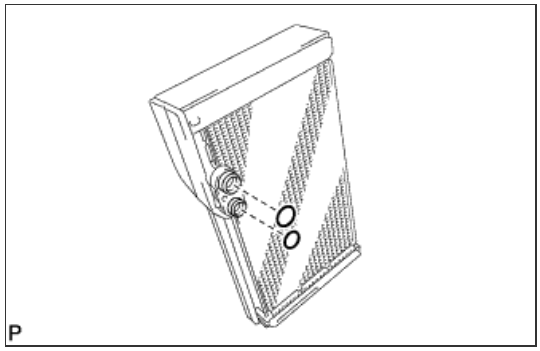
14. REMOVE WIRING AIR CONDITIONING HARNESS SUB-ASSEMBLY

for Preparation Click here

1. INSTALL WIRING AIR CONDITIONING HARNESS SUB-ASSEMBLY

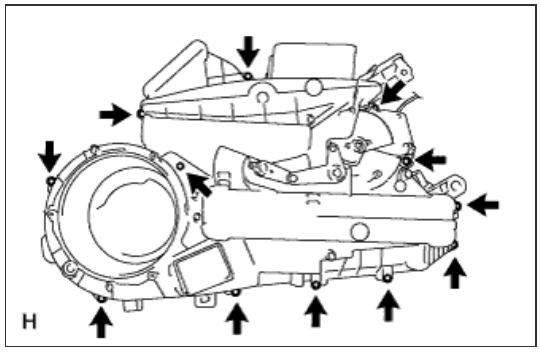
2. INSTALL REAR EVAPORATOR TEMPERATURE SENSOR

a. Attach the 2 claws to install the sensor.



3. INSTALL EVAPORATOR SUB-ASSEMBLY

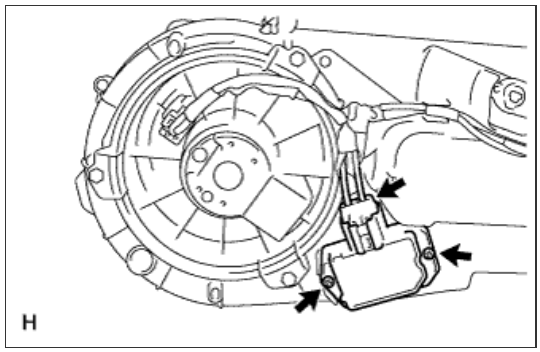
a. Sufficiently apply compressor oil to 2 new O-rings and the fitting surface of the hose joint.



Compressor oil:
ND-OIL 8 or equivalent

b. Install the 2 O-rings to the evaporator.

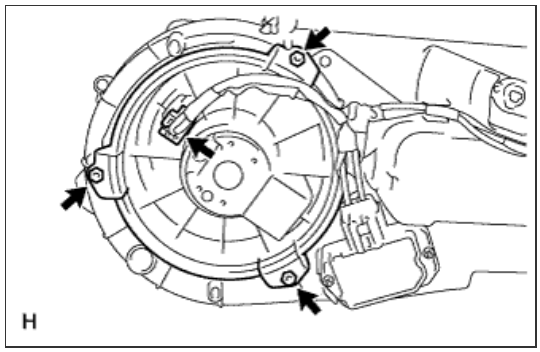
c. Install the evaporator.



d. Install the rear cooling unit case LH with the 12 screws.

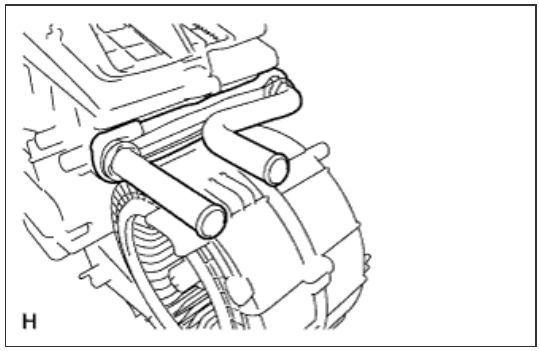
4. INSTALL BLOWER MOTOR CONTROLLER

a. Install the blower motor controller with the 2 screws.



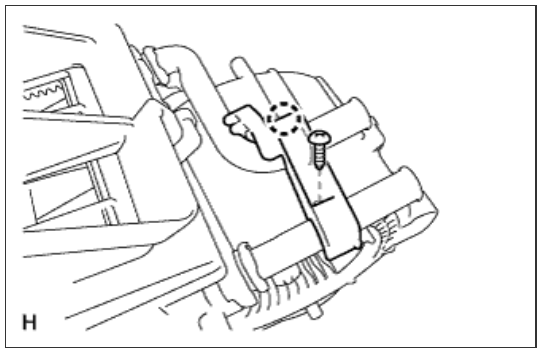
b. Connect the connector.

5. INSTALL REAR BLOWER MOTOR



a. Install the blower motor with the 3 screws.

b. Connect the connector.

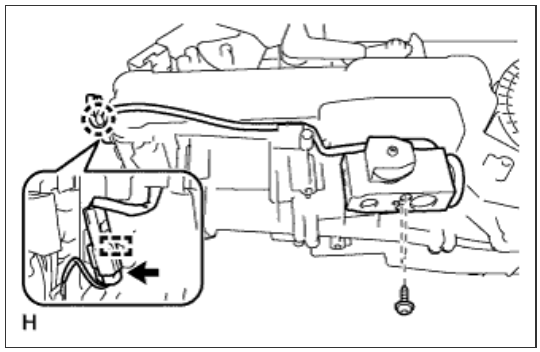


6. INSTALL HEATER RADIATOR UNIT SUB-ASSEMBLY

a. Install the radiator unit to the rear cooling unit.

b. Install the heater clamp with the screw and attach the claw.

7. INSTALL REAR COOLING UNIT EXPANSION VALVE



a. Using a 4 mm hexagon wrench, install the expansion valve with the 2 hexagon bolts.

Torque:

3.5 N*m{ 36 kgf*cm , 31 in.*lbf }

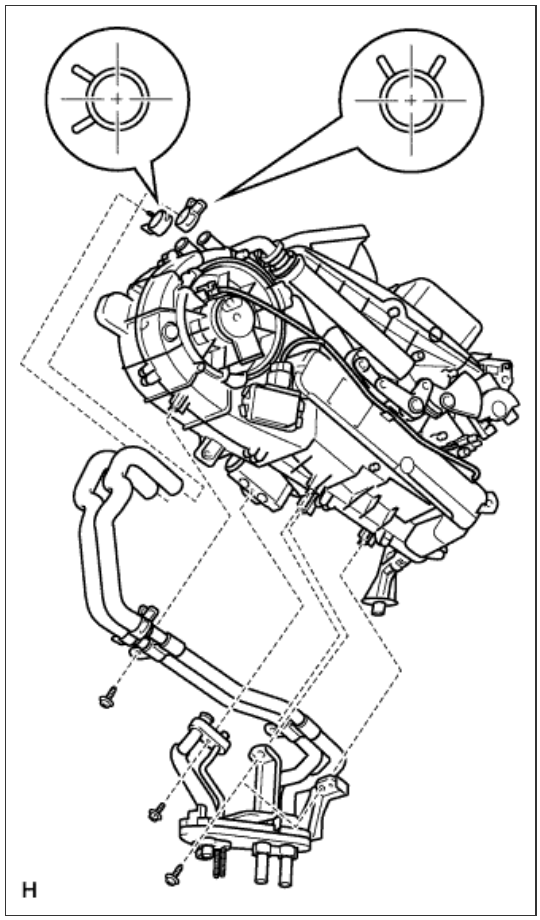
b. Attach the clamp.

c. Connect the connector.

8. INSTALL AIR CONDITIONER ACCESSORY ASSEMBLY

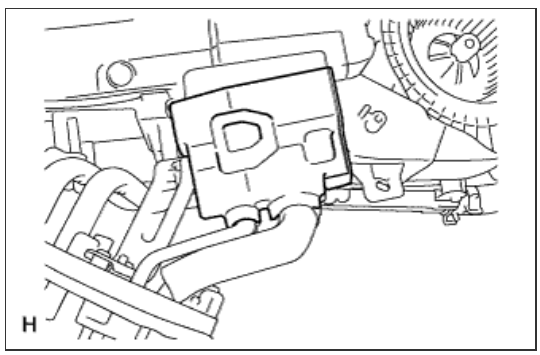
a. Sufficiently apply compressor oil to 2 new O-rings and the fitting surface of the hose joint.

Compressor oil:
ND-OIL 8 or equivalent



b. Install the 2 O-rings to the air conditioner accessory assembly.

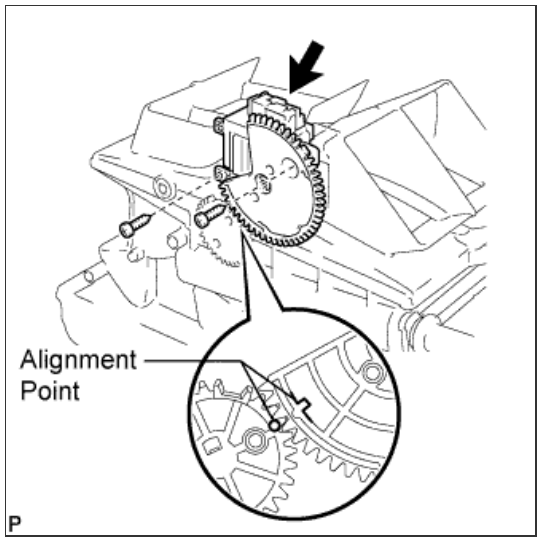
c. Install the air conditioning accessory assembly.



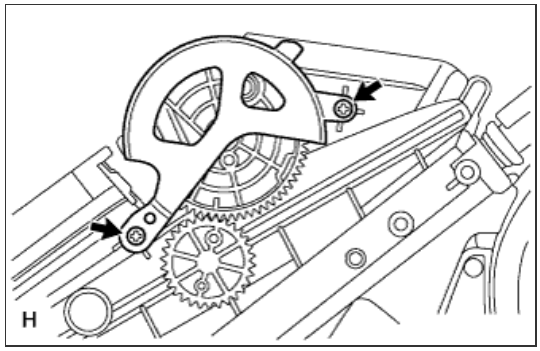
d. Using pliers, grip the claws of the clips and slide the 2 clips.

e. Install the bolt and 4 screws.

Torque:
5.4 N*m{ 55 kgf*cm , 48 in.*lbf }



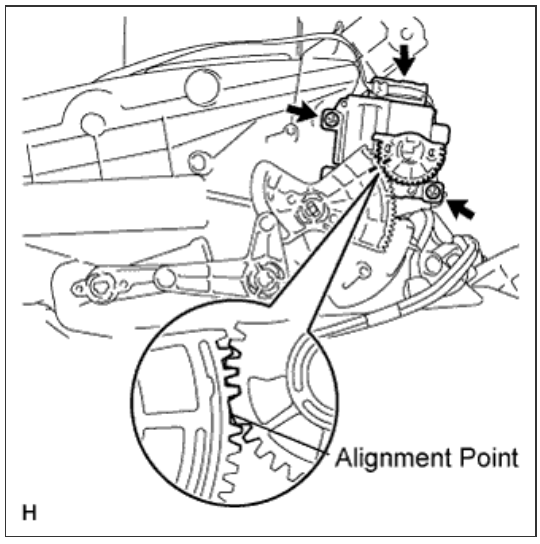
f. Install new packing as shown in the illustration.



9. INSTALL REAR MODE DAMPER SERVO SUB-ASSEMBLY

a. Align the damper servo as shown in the illustration, and install it with the 2 screws.

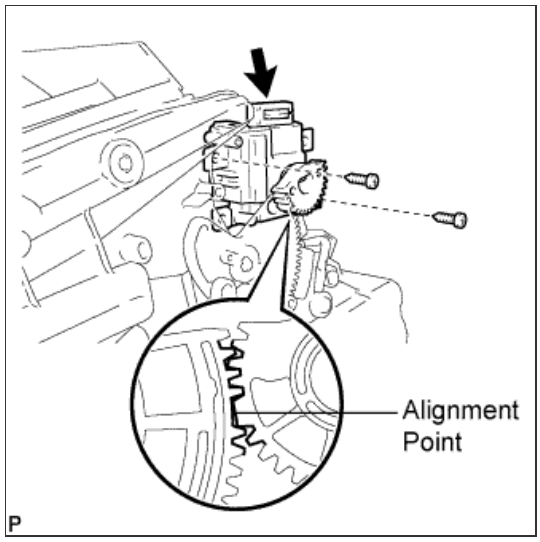
b. Connect the connector.



c. Install the plate cover with the 2 screws.

10. INSTALL NO. 2 AIR MIX DAMPER SERVO SUB-ASSEMBLY

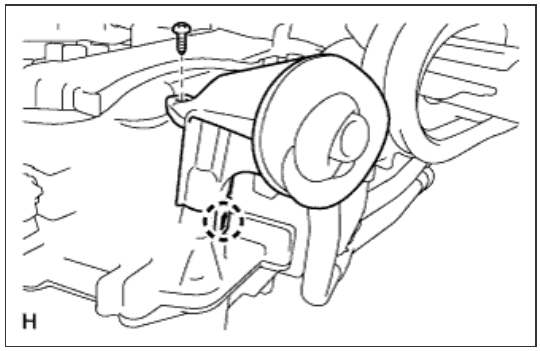
a. Align the damper servo as shown in the illustration, and install it with the 2 screws.



b. Connect the connector.

11. INSTALL REAR AIR MIX DAMPER SERVO SUB-ASSEMBLY

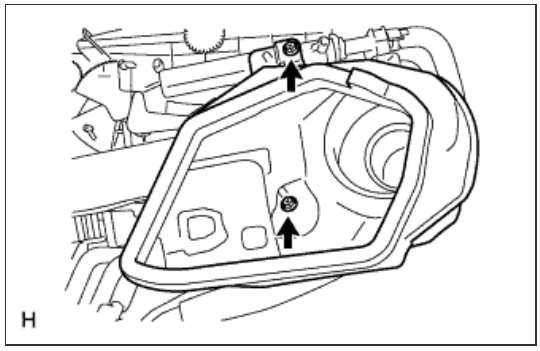
a. Align the damper servo as shown in the illustration, and install it with the 2 screws.



b. Connect the connector.

12. INSTALL DRAIN COOLER HOSE

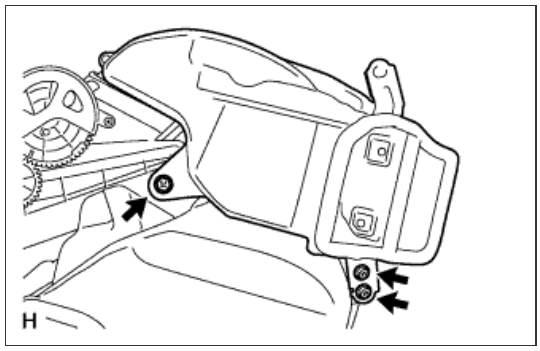
a. Attach the claw to install the drain hose.



b. Install the screw.

13. INSTALL REAR SIDE NO. 3 AIR DUCT

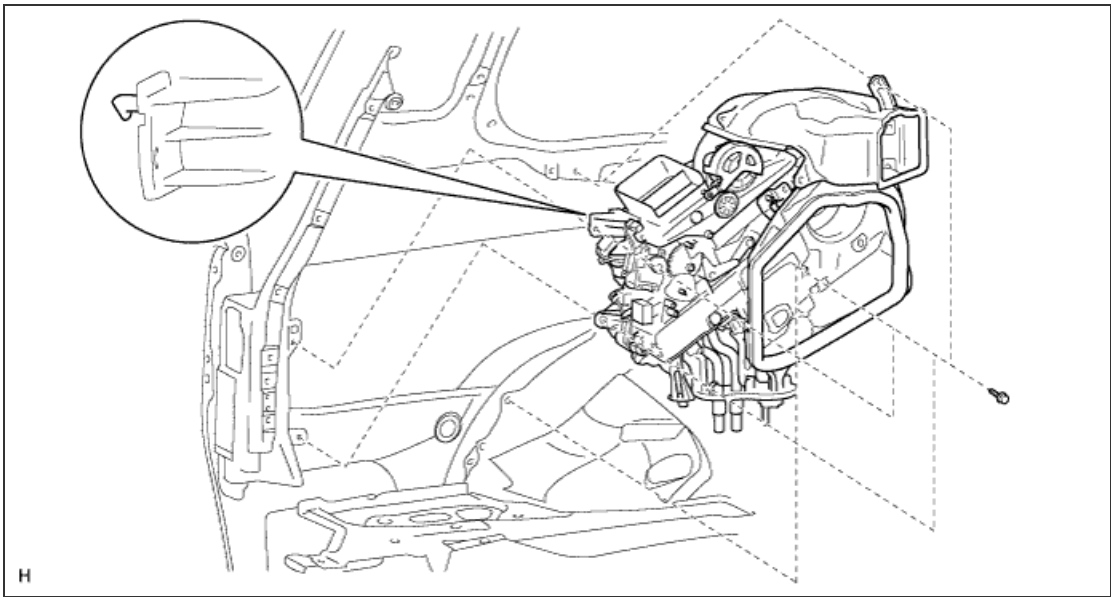
a. Install the duct with the 2 screws.



Torque:
5.4 N*m{ 55 kgf*cm , 48 in.*lbf }

14. INSTALL REAR SIDE NO. 2 AIR DUCT

a. Install the duct with the 3 screws.

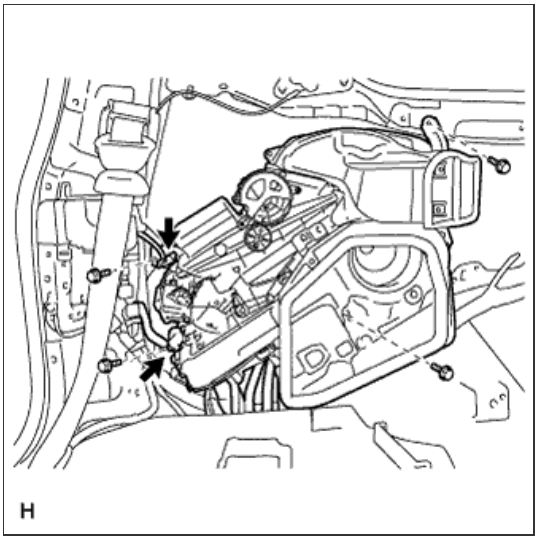


Torque:
5.4 N*m{ 55 kgf*cm , 48 in.*lbf }

H

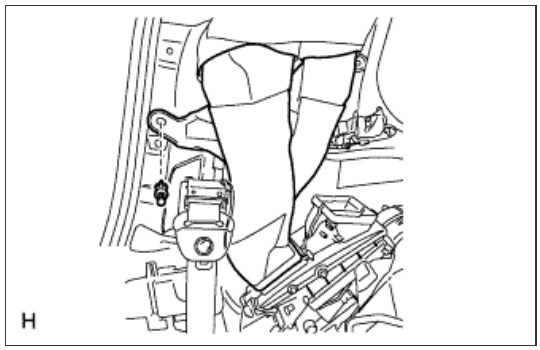
for Preparation Click here

1. INSTALL REAR COOLING UNIT ASSEMBLY



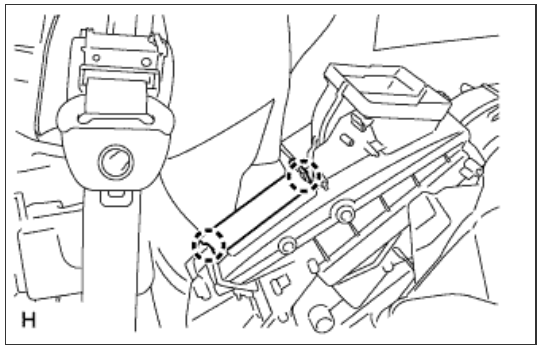
a. Install the rear cooling unit as shown in the illustration.

b. Install the 4 bolts.



Torque:
5.4 N*m{ 55 kgf*cm , 48 in.*lbf }

c. Connect the 2 connectors.



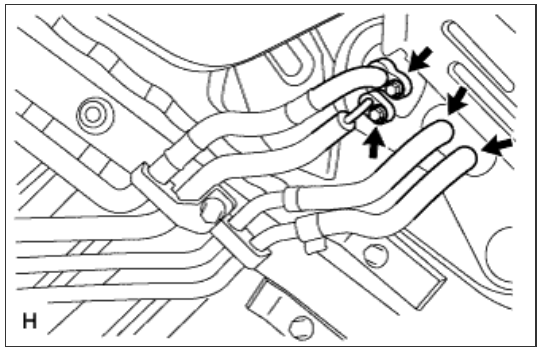
2. INSTALL REAR ROOF NO. 1 AIR DUCT

a. Install the duct with the clip.

b. Attach the 2 claws to install the cooler plate.

3. CONNECT AIR CONDITIONER TUBE AND ACCESSORY ASSEMBLY

a. Remove the attached vinyl tape from the pipe.



b. Sufficiently apply compressor oil to 2 new O-rings and the fitting surface of the air conditioner tube and accessory assembly.

c. Install 2 O-rings on the air conditioner tube and accessory assembly.

d. Connect the air conditioner tube and accessory assembly.

e. Install the 2 bolts.

Torque:
5.4 N*m{ 55 kgf*cm , 48 in.*lbf }

f. Connect the heater water inlet hose and heater water outlet hose.

g. Using pliers, grip the claws of the clip and slide the 2 clips.

4. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY LH

a. w/Sliding Roof:
Install the front quarter trim panel (Click here).

b. w/o Sliding Roof:
Install the front quarter trim panel (Click here).

5. INSTALL REAR SEAT COVER CAP (w/ Rear No. 2 Seat)

a. w/Sliding Roof:
Install the rear seat cover cap (Click here).

b. w/o Sliding Roof:
Install the rear seat cover cap (Click here).

6. INSTALL TONNEAU COVER ASSEMBLY (w/ Tonneau Cover)

7. INSTALL REAR DOOR SCUFF PLATE LH

a. w/Sliding Roof:
Install the rear door scuff plate (Click here).

b. w/o Sliding Roof:
Install the rear door scuff plate (Click here).

8. INSTALL REAR FLOOR MAT REAR SUPPORT PLATE

a. w/Sliding Roof:
Install the rear floor mat rear support plate (Click here).

b. w/o Sliding Roof:
Install the rear floor mat rear support plate (Click here)

9. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

10. ADD ENGINE COOLANT

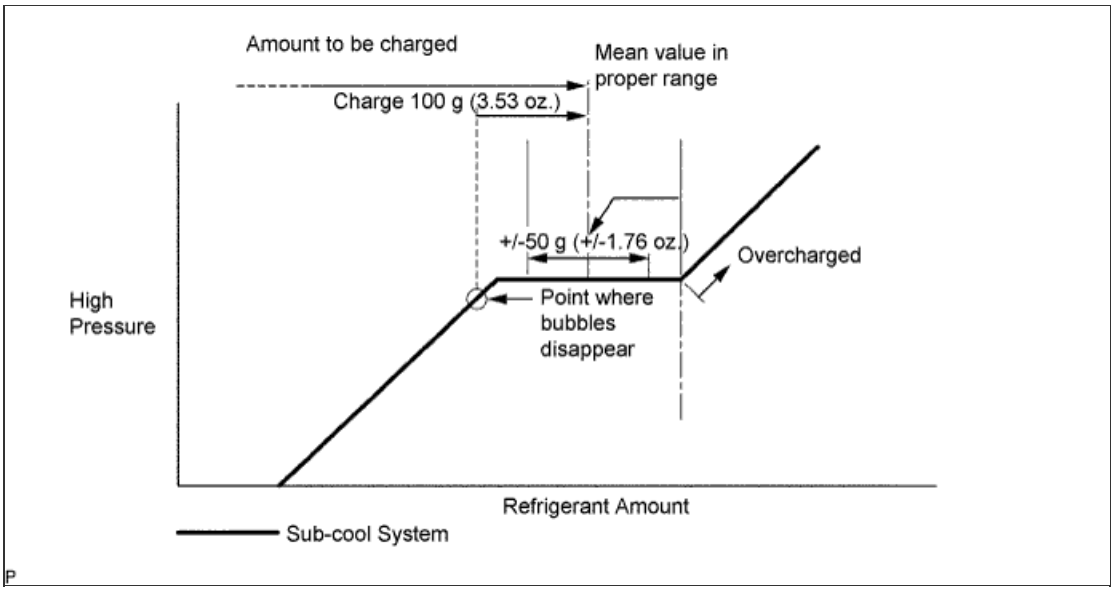
a. for 1VD-FTV:
Add engine coolant (Click here).

b. for 2UZ-FE:
Add engine coolant (Click here).

c. for 1GR-FE:
Add engine coolant (Click here).

11. CHARGE REFRIGERANT

SST



09985-20010 (09985-02130, 09985-02150, 09985-02090, 09985-02110, 09985-02010, 09985-02050, 09985-02060, 09985-02070)

a. Perform vacuum purging using a vacuum pump.

b. Charge refrigerant HFC-134a (R134a).

Standard:

Condenser Core Thickness	Air Conditioning Type	Cool ox	Refrigerant Charging Amount
22 mm (0.866 in.)	w/o Rear Cooler	w/ Cool ox	870 +/-30 g (30.7 +/-1.1 oz.)
		w/o Cool ox	870 +/-30 g (30.7 +/-1.1 oz.)
	w/ Rear Cooler	w/ Cool ox	1010 +/-30 g (35.6 +/-1.1 oz.)
		w/o Cool ox	960 +/-30 g (33.9 +/-1.1 oz.)
16 mm (0.630 in.)	w/o Rear Cooler	w/ Cool ox	770 +/-30 g (27.2 +/-1.1 oz.)
		w/o Cool ox	770 +/-30 g (27.2 +/-1.1 oz.)
	w/ Rear Cooler	w/ Cool ox	970 +/-30 g (34.2 +/-1.1 oz.)
		w/o Cool ox	920 +/-30 g (32.5 +/-1.1 oz.)

NOTICE:

- **Do not operate the cooler compressor before charging refrigerant as the cooler compressor will not work properl without an rigerant, and will overheat.**
- **Approximatel 200 g (7.05 o .) of refrigerant ma need to be charged after bubbles disappear. The refrigerant amount should be checked b measuring its quantit , and not with the sight glass.**

12. ARM I ENGINE

a. Warm up the engine at less than 1850 rpm for 2 minutes or more after charging the refrigerant.

NOTICE:

sure to warm up the compressor when turning the A/C switch is on after removing and installing the cooler refrigerant lines (including the compressor), to prevent damage to the compressor.

13. CHEC FOR ENGINE COOLANT LEA S

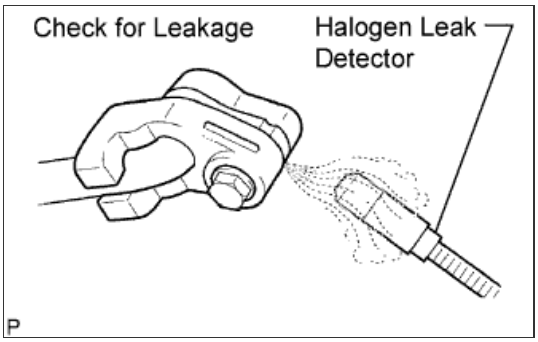
a. for 1VD-FTV:
Check for engine coolant leaks (Click here).

b. for 2UZ-FE:
Check for engine coolant leaks (Click here).

c. for 1GR-FE:
Check for engine coolant leaks (Click here).

14. CHEC FOR REFRIGERANT GAS LEA

a. After recharging the refrigerant gas, check for refrigerant gas leakage using a halogen leak detector.



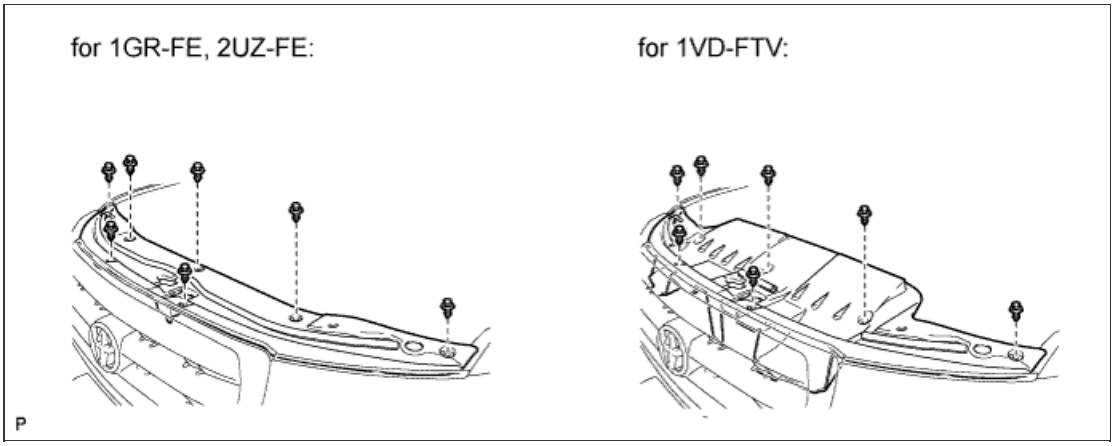
b. Perform the operation under these conditions:

- Stop the engine.
- Secure good ventilation (the halogen leak detector may react to volatile gases other than refrigerant, such as evaporated gasoline or exhaust gas).
- Repeat the test 2 or 3 times.
- ake sure that some refrigerant remains in the refrigeration system. When compressor is off: approximately 392 to 588 kPa (4.0 to 6.0 kgf/cm^2, 57 to 85 psi).

c. Using a halogen leak detector, check the refrigerant line for leakage.

d. If a gas leak is not detected on the drain hose, remove the blower motor control (blower resistor) from the cooling unit. Insert the halogen leak detector sensor into the unit and perform the test.

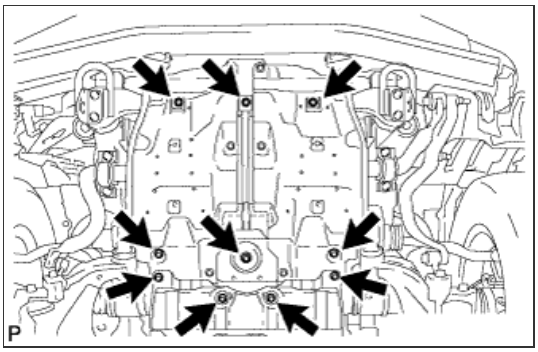
e. Disconnect the connector and wait for approximately 20 minutes. ring the halogen leak detector close to the pressure switch and perform the test.



15. CHEC SRS ARNIN IGHT

a. Check the SRS warning light (Click here).

16. INSTALL UPPER RADIATOR SUPPORT SEAL



a. Install the radiator support seal with the 7 clips.

17. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the o. 1 engine under cover with the 10 bolts.

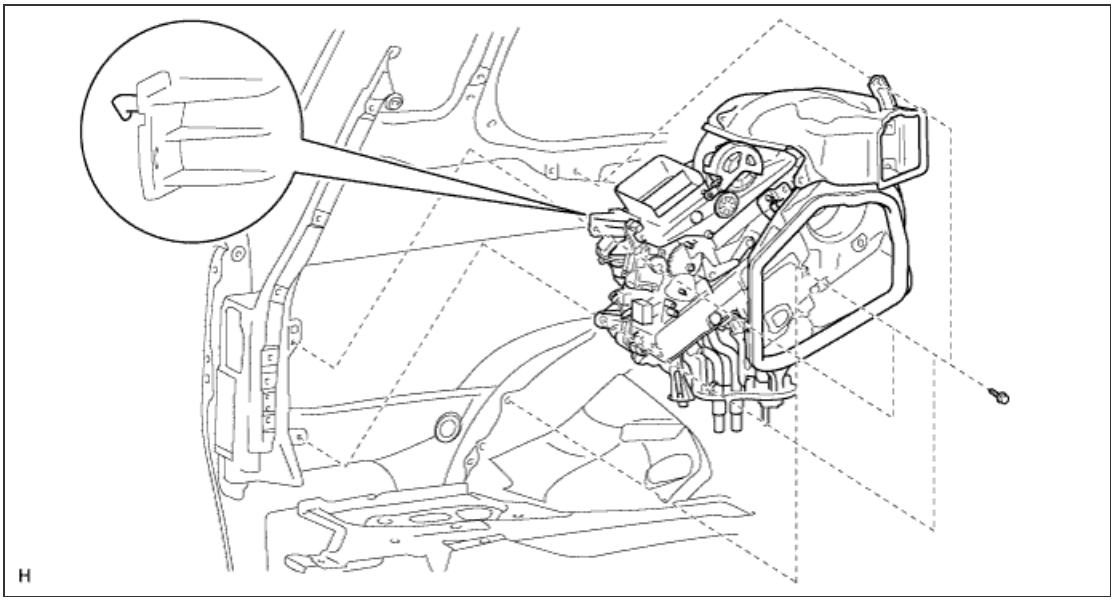
Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

18. INSTALL REAR FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. for Standard:
Install the front fender splash shield (Click here).

b. w/ Winch:
Install the front fender splash shield (Click here).

19. INSTALL REAR FENDER SPLASH SHIELD SUB-ASSEMBLY RH

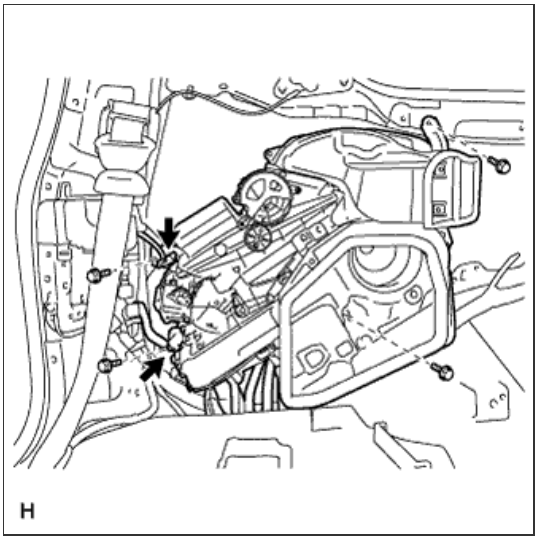


a. for Standard:
Install the front fender splash shield (Click here).

b. w/ Winch:
Install the front fender splash shield (Click here).

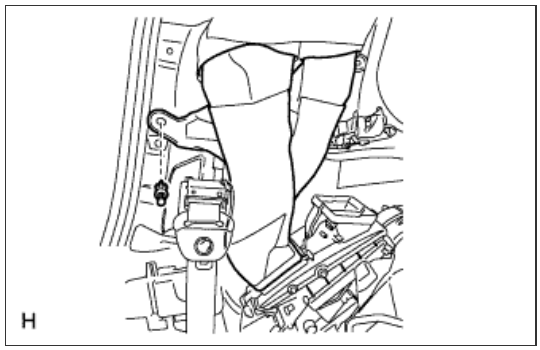
for Preparation Click here

1. INSTALL REAR COOLING UNIT ASSEMBLY



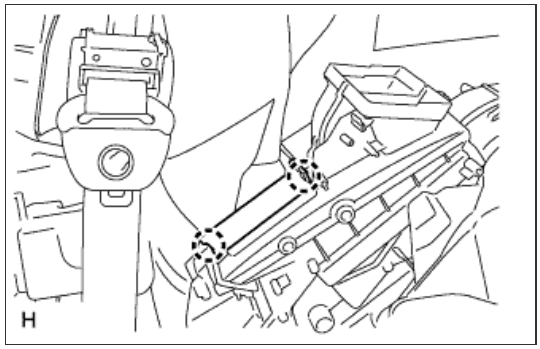
a. Install the rear cooling unit as shown in the illustration.

b. Install the 4 bolts.



Torque:
5.4 N*m{ 55 kgf*cm , 48 in.*lbf }

c. Connect the 2 connectors.



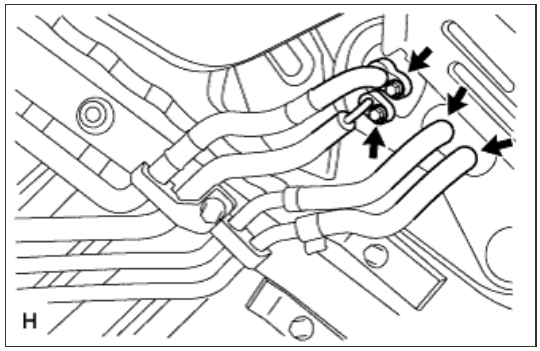
2. INSTALL REAR ROOF NO. 1 AIR DUCT

a. Install the duct with the clip.

b. Attach the 2 claws to install the cooler plate.

3. CONNECT AIR CONDITIONER TUBE AND ACCESSORY ASSEMBLY

a. Remove the attached vinyl tape from the pipe.



b. Sufficiently apply compressor oil to 2 new O-rings and the fitting surface of the air conditioner tube and accessory assembly.

c. Install 2 O-rings on the air conditioner tube and accessory assembly.

d. Connect the air conditioner tube and accessory assembly.

e. Install the 2 bolts.

Torque:
5.4 N*m{ 55 kgf*cm , 48 in.*lbf }

f. Connect the heater water inlet hose and heater water outlet hose.

g. Using pliers, grip the claws of the clip and slide the 2 clips.

4. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY LH

a. w/Sliding Roof:
Install the front quarter trim panel (Click here).

b. w/o Sliding Roof:
Install the front quarter trim panel (Click here).

5. INSTALL REAR SEAT COVER CAP (w/ Rear No. 2 Seat)

a. w/Sliding Roof:
Install the rear seat cover cap (Click here).

b. w/o Sliding Roof:
Install the rear seat cover cap (Click here).

6. INSTALL TONNEAU COVER ASSEMBLY (w/ Tonneau Cover)

a. Install the tonneau cover assembly.

7. INSTALL REAR DOOR SCUFF PLATE LH

a. w/Sliding Roof:
Install the rear door scuff plate (Click here).

b. w/o Sliding Roof:
Install the rear door scuff plate (Click here).

8. INSTALL REAR FLOOR MAT REAR SUPPORT PLATE

a. w/Sliding Roof:
Install the rear floor mat rear support plate (Click here).

b. w/o Sliding Roof:
Install the rear floor mat rear support plate (Click here)

9. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

10. ADD ENGINE COOLANT

a. for 1VD-FTV:
Add engine coolant (Click here).

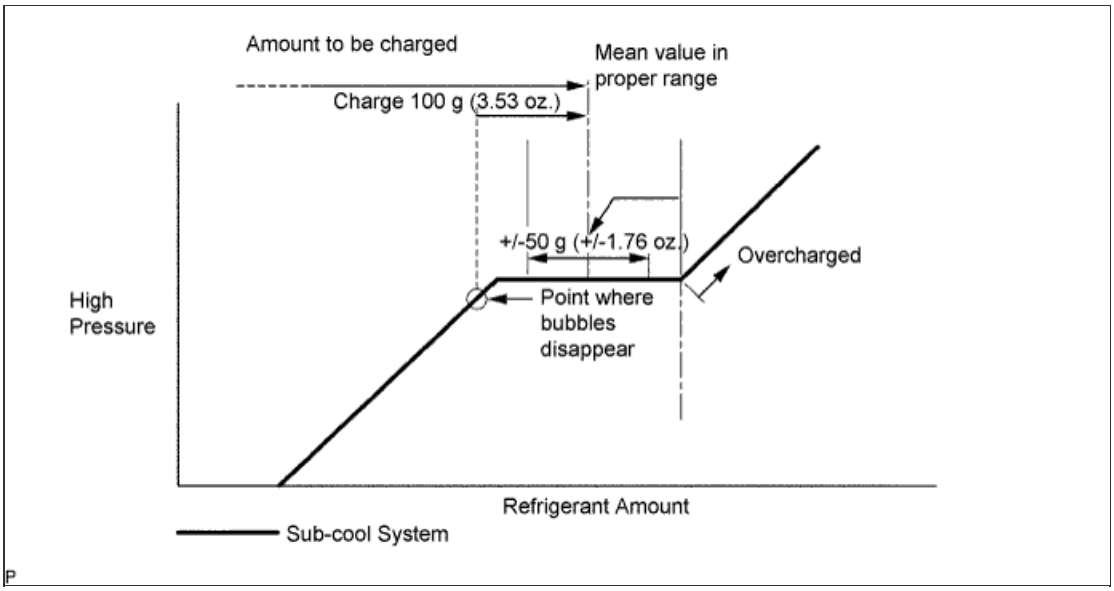
b. for 2UZ-FE:
Add engine coolant (Click here).

c. for 1GR-FE:
Add engine coolant (Click here).

d. for 3UR-FE:
Add engine coolant (Click here).

11. CHARGE REFRIGERANT

SST



09985-20010 (09985-02130, 09985-02150, 09985-02090, 09985-02110, 09985-02010, 09985-02050, 09985-02060, 09985-02070)

a. Perform vacuum purging using a vacuum pump.

b. Charge refrigerant HFC-134a (R134a).

Standard:

Condenser Core Thickness	Air Conditioning Type	Cool ox	Refrigerant Charging Amount
22 mm (0.866 in.)	w/o Rear Cooler	w/ Cool ox	870 +/-30 g (30.7 +/-1.1 oz.)
		w/o Cool ox	870 +/-30 g (30.7 +/-1.1 oz.)
	w/ Rear Cooler	w/ Cool ox	1010 +/-30 g (35.6 +/-1.1 oz.)
		w/o Cool ox	960 +/-30 g (33.9 +/-1.1 oz.)
16 mm (0.630 in.)	w/o Rear Cooler	w/ Cool ox	770 +/-30 g (27.2 +/-1.1 oz.)
		w/o Cool ox	770 +/-30 g (27.2 +/-1.1 oz.)
	w/ Rear Cooler	w/ Cool ox	970 +/-30 g (34.2 +/-1.1 oz.)
		w/o Cool ox	920 +/-30 g (32.5 +/-1.1 oz.)

NOTICE:

- **Do not operate the cooler compressor before charging refrigerant as the cooler compressor will not work properl without an rigerant, and will overheat.**
- **Approximatel 200 g (7.05 o .) of refrigerant ma need to be charged after bubbles disappear. The refrigerant amount should be checked b measuring its quantit , and not with the sight glass.**

12. ARM UP ENGINE

a. Warm up the engine at less than 1850 rpm for 2 minutes or more after charging the refrigerant.

NOTICE:

sure to warm up the compressor when turning the A/C switch is on after removing and installing the cooler refrigerant lines (including the compressor), to prevent damage to the compressor.

13. CHEC FOR ENGINE COOLANT LEA S

a. for 1VD-FTV:
Check for engine coolant leaks (Click here).

b. for 2UZ-FE:
Check for engine coolant leaks (Click here).

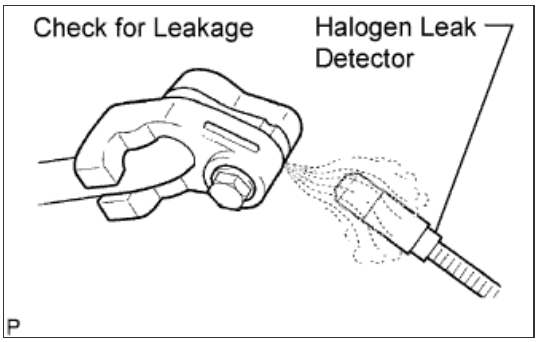
c. for 1GR-FE:
Check for engine coolant leaks (Click here).

d. for 3UR-FE:
Check for engine coolant leaks (Click here).

14. CHEC FOR REFRIGERANT GAS LEA

a. After recharging the refrigerant gas, check for refrigerant gas leakage using a halogen leak detector.

b. Perform the operation under these conditions:



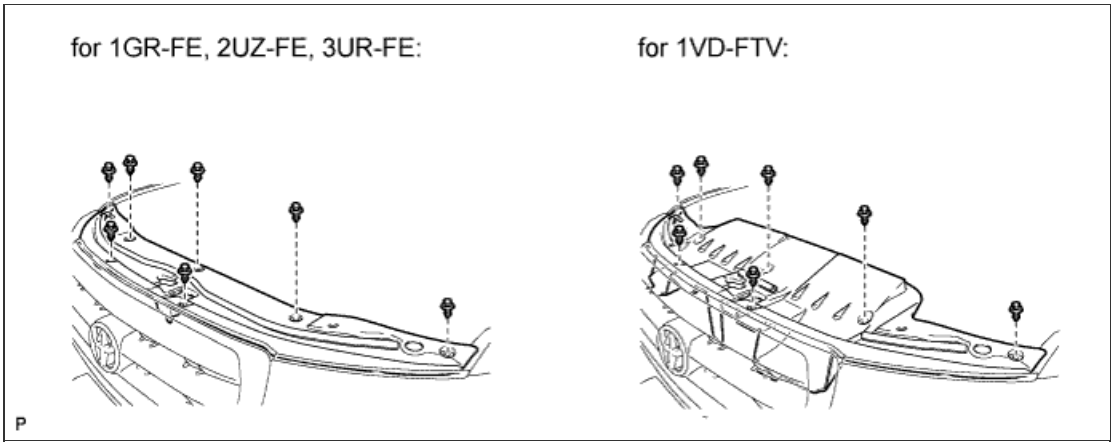
- Stop the engine.
- Secure good ventilation (the halogen leak detector may react to volatile gases other than refrigerant, such as evaporated gasoline or exhaust gas).
- Repeat the test 2 or 3 times.
- ake sure that some refrigerant remains in the refrigeration system. When compressor is off: approximately 392 to 588 kPa (4.0 to 6.0 kgf/cm^2, 57 to 85 psi).

c. Using a halogen leak detector, check the refrigerant line for leakage.

c. Using a halogen leak detector, check the refrigerant line for leakage.

d. If a gas leak is not detected on the drain hose, remove the blower motor control (blower resistor) from the cooling unit. Insert the halogen leak detector sensor into the unit and perform the test.

e. Disconnect the connector and wait for approximately 20 minutes. Bring the halogen leak detector close to the pressure switch and perform the test.



15. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).

16. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the radiator support seal with the 7 clips.

17. INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. for 1VD-FTV:
Install the No. 1 engine under cover sub-assembly (Click here).

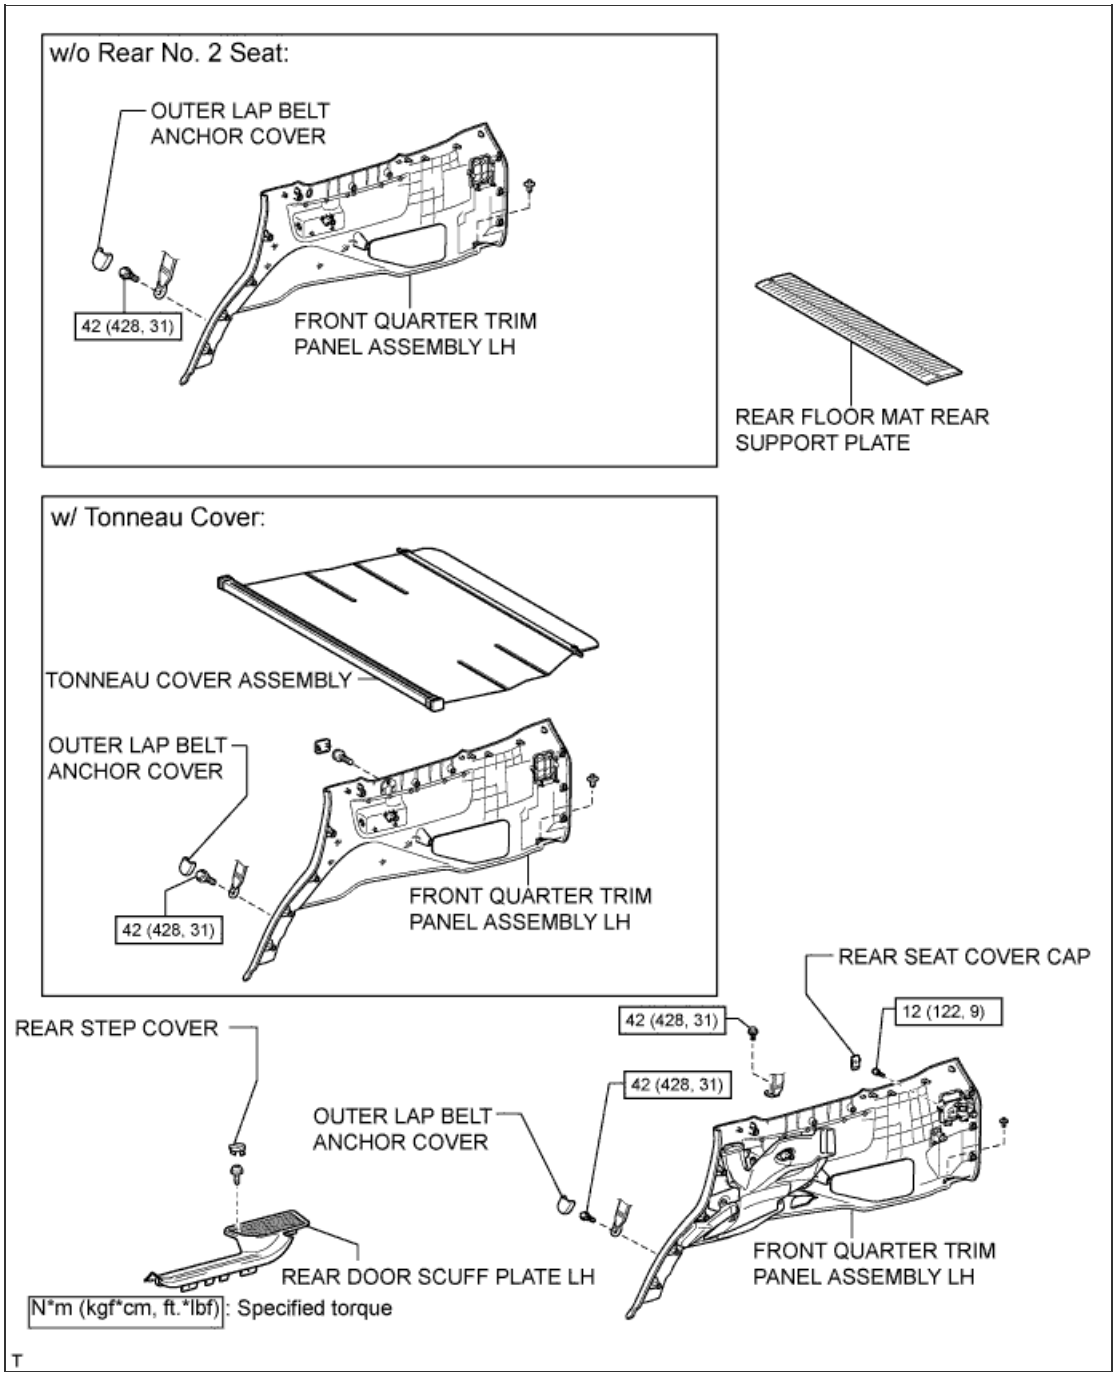
b. for 2UZ-FE:
Install the No. 1 engine under cover sub-assembly (Click here).

c. for 1GR-FE:
Install the No. 1 engine under cover sub-assembly (Click here).

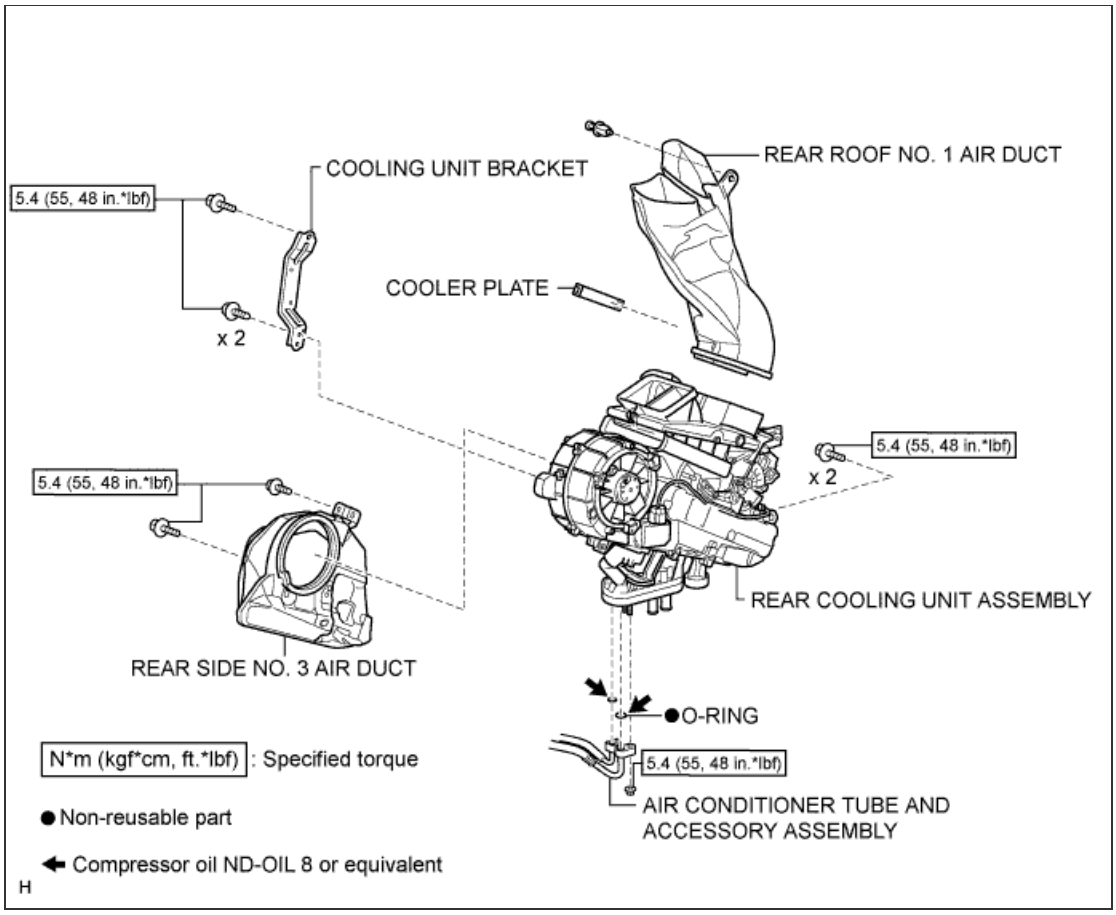
d. for 3UR-FE:
Install the No. 1 engine under cover sub-assembly (Click here).

18. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

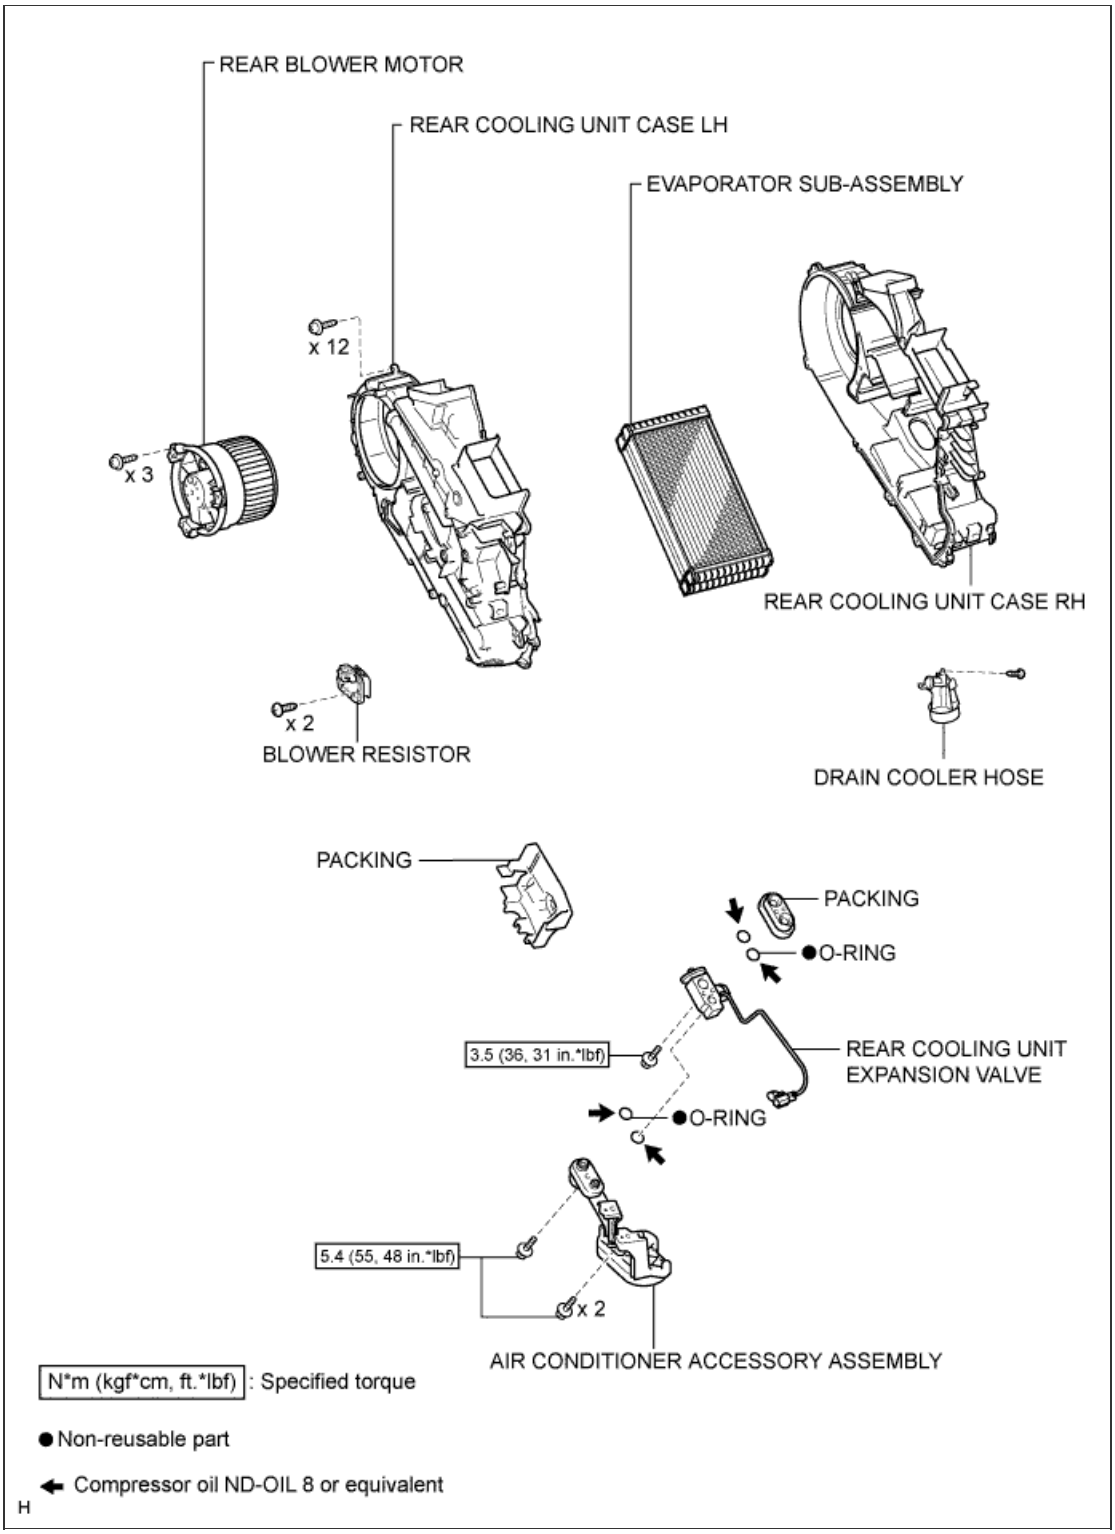
a. for Standard:
Install the front fender splash shield (Click here).



b. w/ Winch:
Install the front fender splash shield (Click here).



19. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH



a. for Standard:
Install the front fender splash shield (Click here).

b. w/ Winch:
Install the front fender splash shield (Click here).

for Preparation Click here

1. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 7 clips and radiator support seal.

2. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM

a. Start the engine.

b. Turn the A/C switch on.

c. Operate the cooler compressor while the engine speed is approximately 1000 rpm for 5 to 6 minutes to circulate the refrigerant and collect the compressor oil remaining in each component into the cooler compressor.

d. Stop the engine.

e. Recover the refrigerant from the A/C system using a refrigerant recovery unit.

3. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

4. REMOVE REAR FLOOR MAT REAR SUPPORT PLATE

a. w/ Sliding Roof:
Remove the rear floor mat rear support plate (Click here).

b. w/o Sliding Roof:
Remove the rear floor mat rear support plate (Click here).

5. REMOVE REAR DOOR SCUFF PLATE LH

a. w/ Sliding Roof:
Remove the rear door scuff plate (Click here).

b. w/o Sliding Roof:
Remove the rear door scuff plate (Click here).

6. REMOVE TONNEAU COVER ASSEMBLY (w/ Tonneau Cover)

7. REMOVE REAR SEAT COVER CAP (w/ Rear No. 2 Seat)

a. w/ Sliding Roof:
Remove the rear seat cover cap (Click here).

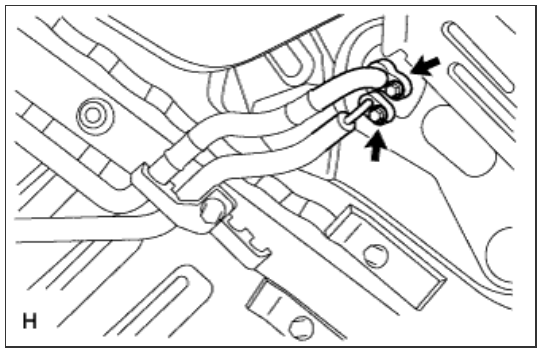
b. w/o Sliding Roof:
Remove the rear seat cover cap (Click here).

8. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY LH

a. w/ Sliding Roof:
Remove the front quarter trim panel (Click here).

b. w/o Sliding Roof:
Remove the front quarter trim panel (Click here).

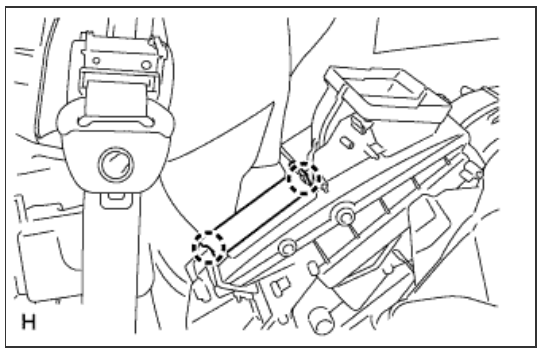
9. DISCONNECT AIR CONDITIONER TUBE AND ACCESSORY ASSEMBLY



a. Remove the 2 bolts.

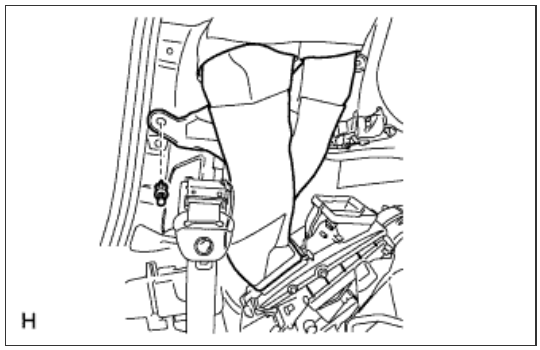
b. Disconnect the air conditioner tube and accessory assembly.

NOTICE:



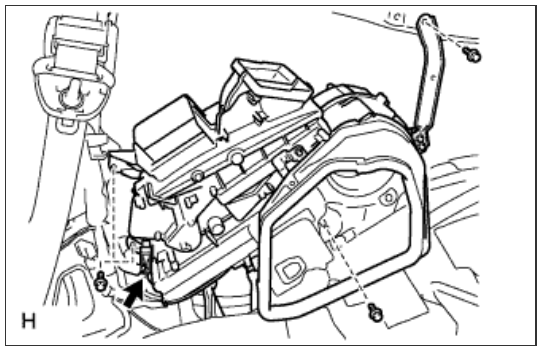
- **Do not use a screwdriver or similar tool to disconnect the tube.**
- **Seal the openings of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering them.**

c. Remove the 2 O-rings from the air conditioner tube and accessory assembly.



10. REMOVE REAR ROOF NO. 1 AIR DUCT

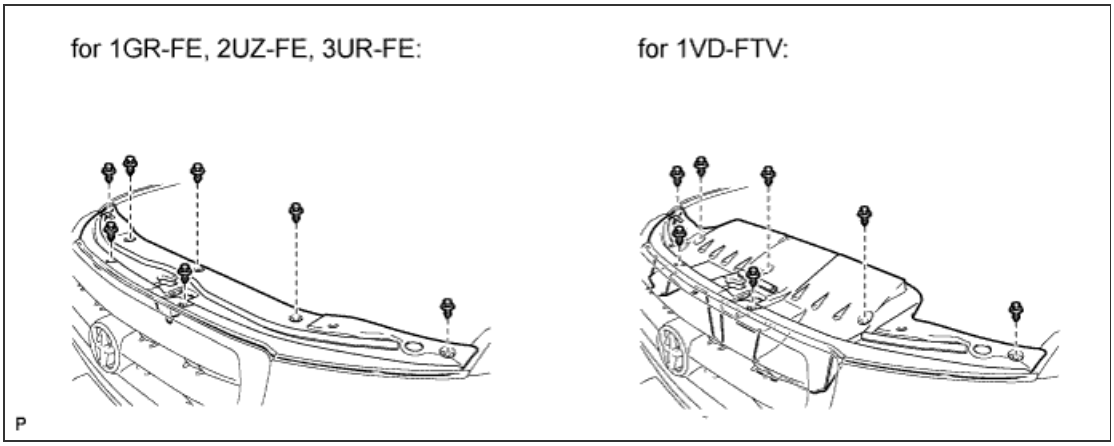
a. Detach the 2 claws and remove the cooler plate.



b. Remove the clip and duct.

11. REMOVE REAR COOLING UNIT ASSEMBLY

a. Disconnect the connector.



b. Remove the 4 bolts and rear cooling unit.

for Preparation Click here

1. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 7 clips and radiator support seal.

2. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM

a. Start the engine.

b. Turn the A/C switch on.

c. Operate the cooler compressor while the engine speed is approximately 1000 rpm for 5 to 6 minutes to circulate the refrigerant and collect the compressor oil remaining in each component into the cooler compressor.

d. Stop the engine.

e. Recover the refrigerant from the A/C system using a refrigerant recovery unit.

3. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

4. REMOVE REAR FLOOR MAT REAR SUPPORT PLATE

a. w/ Sliding Roof:
Remove the rear floor mat rear support plate (Click here).

b. w/o Sliding Roof:
Remove the rear floor mat rear support plate (Click here).

5. REMOVE REAR DOOR SCUFF PLATE LH

a. w/ Sliding Roof:
Remove the rear door scuff plate (Click here).

b. w/o Sliding Roof:
Remove the rear door scuff plate (Click here).

6. REMOVE TONNEAU COVER ASSEMBLY (w/ Tonneau Cover)

a. Remove the tonneau cover.

7. REMOVE REAR SEAT COVER CAP (w/ Rear No. 2 Seat)

a. w/ Sliding Roof:
Remove the rear seat cover cap (Click here).

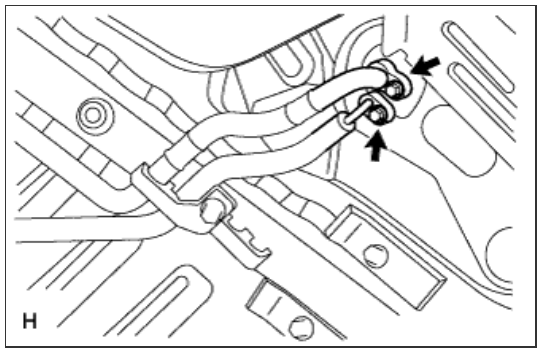
b. w/o Sliding Roof:
Remove the rear seat cover cap (Click here).

8. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY LH

a. w/ Sliding Roof:
Remove the front quarter trim panel (Click here).

b. w/o Sliding Roof:
Remove the front quarter trim panel (Click here).

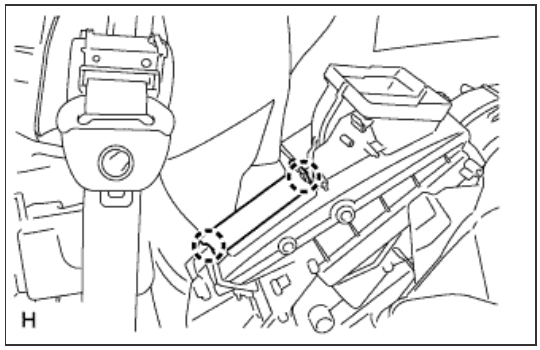
9. DISCONNECT AIR CONDITIONER TUBE AND ACCESSORY ASSEMBLY



a. Remove the 2 bolts.

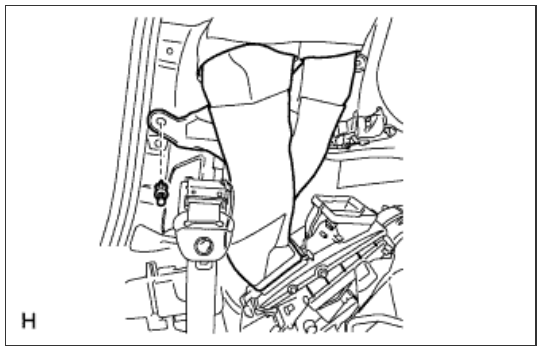
b. Disconnect the air conditioner tube and accessory assembly.

NOTICE:



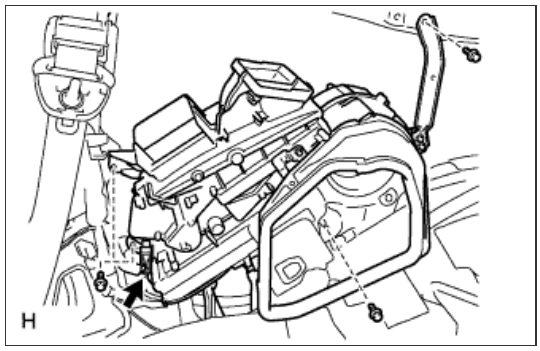
- **Do not use a screwdriver or similar tool to disconnect the tube.**
- **Seal the openings of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering them.**

c. Remove the 2 O-rings from the air conditioner tube and accessory assembly.



10. REMOVE REAR ROOF NO. 1 AIR DUCT

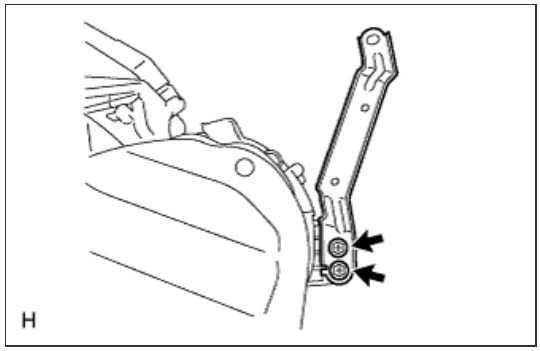
a. Detach the 2 claws and remove the cooler plate.



b. Remove the clip and duct.

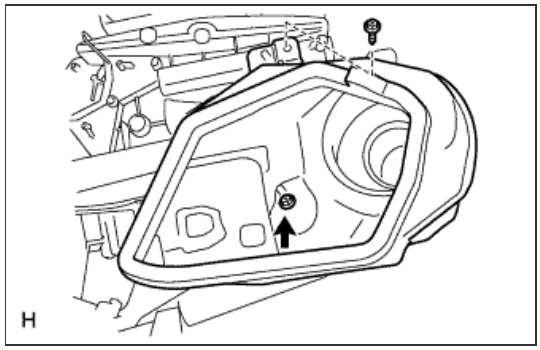
11. REMOVE REAR COOLING UNIT ASSEMBLY

a. Disconnect the connector.



b. Remove the 4 bolts and rear cooling unit.

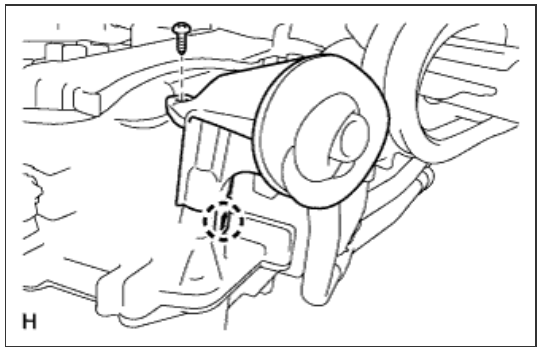
for Preparation Click here



1. REMOVE COOLING UNIT BRACKET

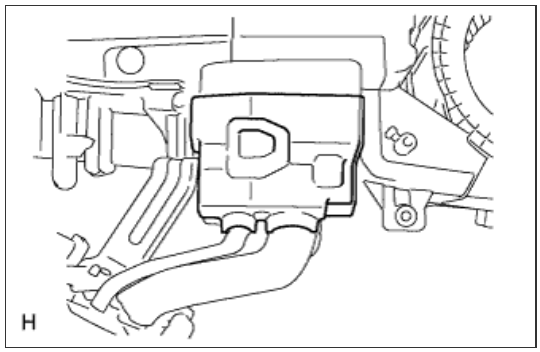
a. Remove the 2 screws and bracket.

2. REMOVE REAR SIDE NO. 3 AIR DUCT



a. Remove the 2 screws and duct.

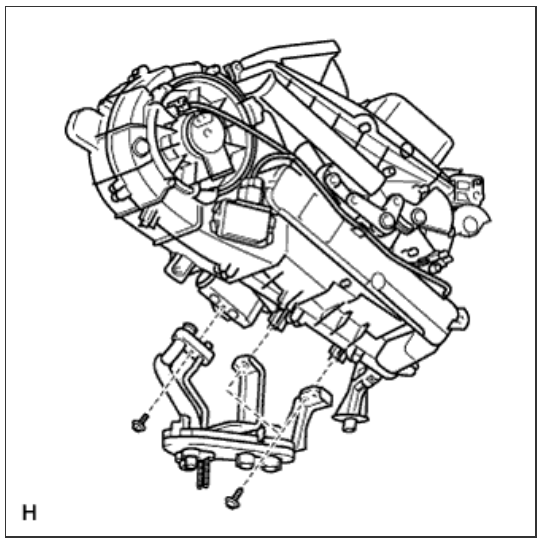
3. REMOVE DRAIN COOLER HOSE



a. Remove the screw.

b. Detach the claw and remove the drain hose.

4. REMOVE AIR CONDITIONER ACCESSORY ASSEMBLY

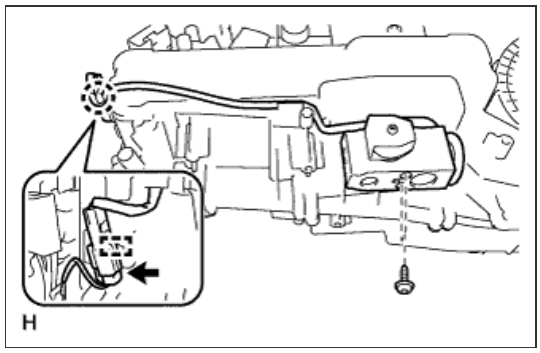


a. Remove the packing.

b. Remove the bolt and 2 screws.

c. Remove the air conditioner accessory assembly.

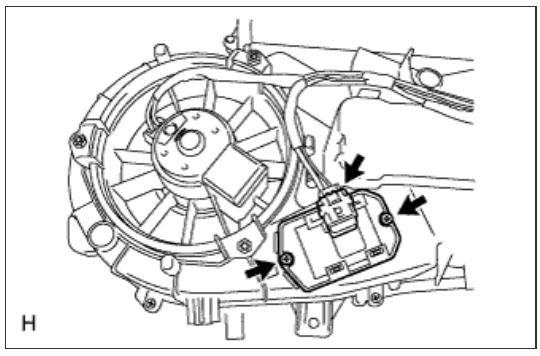
d. Remove the 2 O ings from the air conditioner accessory assembly.



5. REMOVE REAR COOLING UNIT EXPANSION VALVE

a. Disconnect the connector.

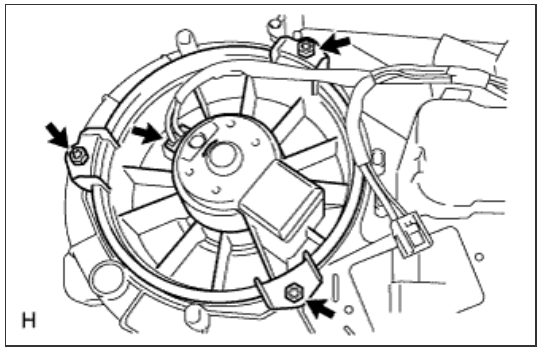
b. Detach the clamp.



c. Using a 4 mm hexagon wrench, remove the 2 hexagon bolts and expansion valve.

6. REMOVE BLOWER RESISTOR

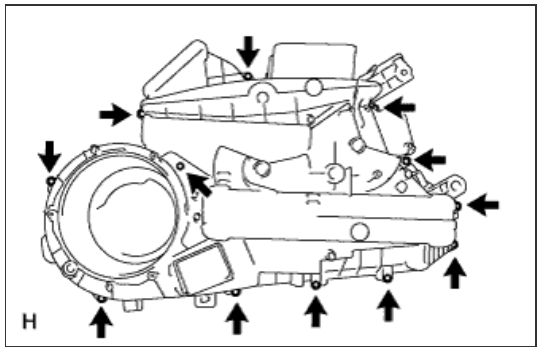
a. Disconnect the connector.



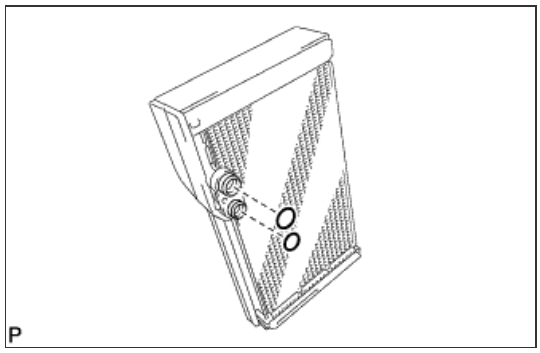
b. Remove the 2 screws and blower resistor.

7. REMOVE REAR BLOWER MOTOR

a. Disconnect the connector.



b. Remove the 3 screws and blower motor.



8. REMOVE EVAPORATOR SUB-ASSEMBLY

a. Remove the 12 screws and rear cooling unit case LH.

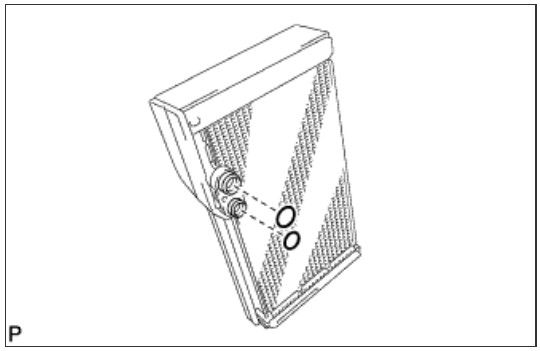
b. Remove the evaporator.

c. Remove the 2 O ings from the evaporator.

9. REMOVE WIRING AIR CONDITIONING HARNESS SUB-ASSEMBLY

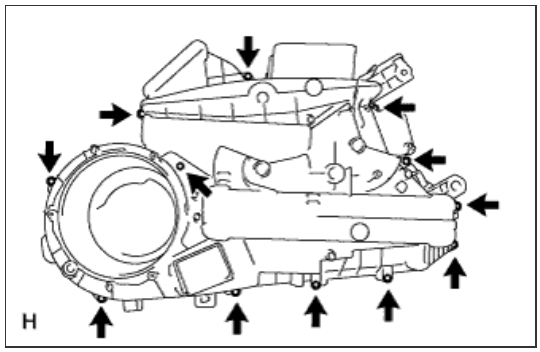
for Preparation Click here

1. INSTALL WIRING AIR CONDITIONING HARNESS SUB-ASSEMBLY



2. INSTALL EVAPORATOR SUB-ASSEMBLY

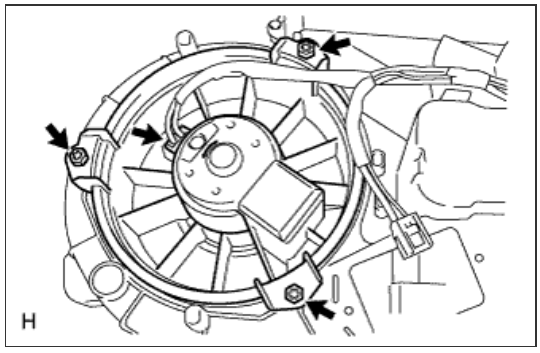
a. Sufficiently apply compressor oil to 2 new O-rings and the fitting surface of the hose joint.



Compressor oil:
ND-OIL 8 or equivalent

b. Install the 2 O-rings to the evaporator.

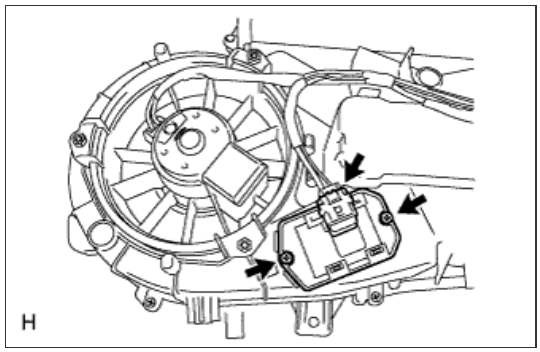
c. Install the evaporator.



d. Install the rear cooling unit case LH with the 12 screws.

3. INSTALL REAR BLOWER MOTOR

a. Install the blower motor with the 3 screws.

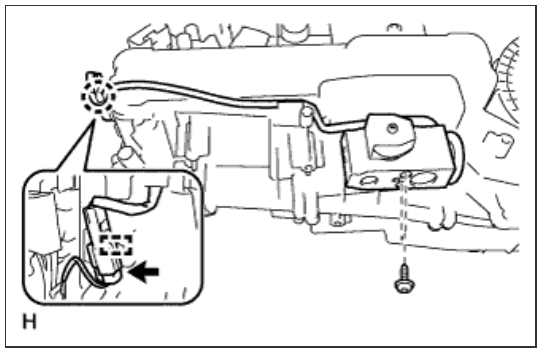


b. Connect the connector.

4. INSTALL BLOWER RESISTOR

a. Install the blower resistor with the 2 screws.

b. Connect the connector.



5. INSTALL REAR COOLING UNIT E PANSION VALVE

a. Using a 4 mm hexagon wrench, install the expansion valve with the 2 hexagon bolts.

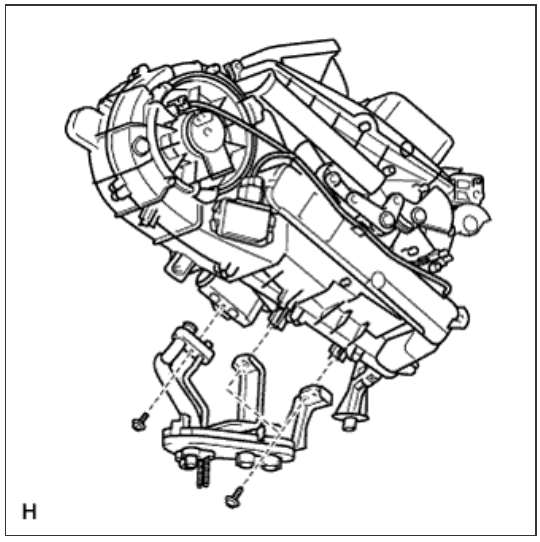
Torque:
3.5 N m 36 kgf cm , 31 in. lbf }

b. Attach the clamp.

c. Connect the connector.

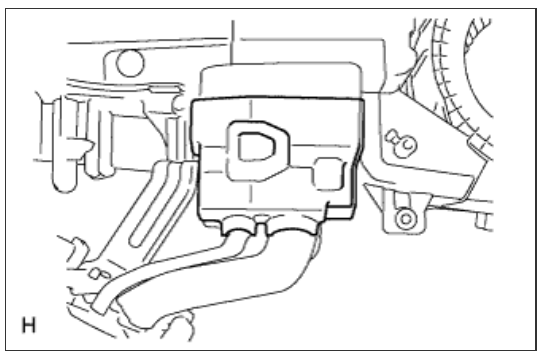
6. INSTALL AIR CONDITIONER ACCESSORY ASSEMBLY

a. Sufficiently apply compressor oil to 2 new O-rings and the fitting surface of the hose joint.



Compressor oil:
ND-OIL 8 or equivalent

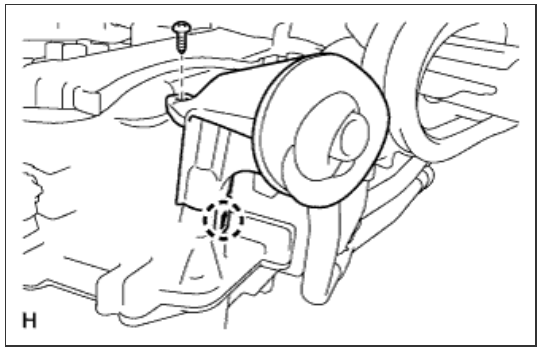
b. Install the 2 O-rings to the air conditioner accessory assembly.



c. Install the air conditioner accessory assembly.

d. Install the bolt and 2 screws.

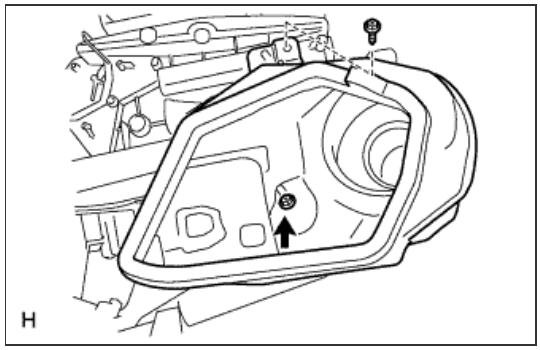
Torque:
5.4 N m k mf, 48 in. lbf }



e. Install new packing as shown in the illustration.

7. INSTALL DRAIN COOLER HOSE

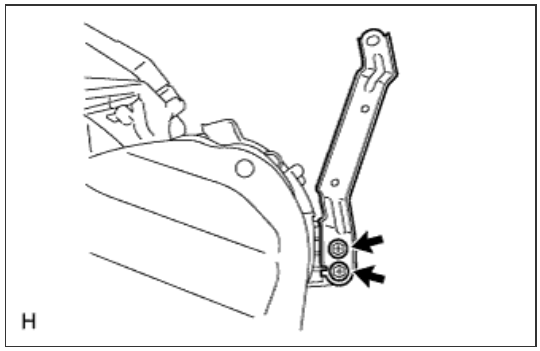
a. Attach the claw to install the drain hose.



b. Install the screw.

8. INSTALL REAR SIDE NO. 3 AIR DUCT

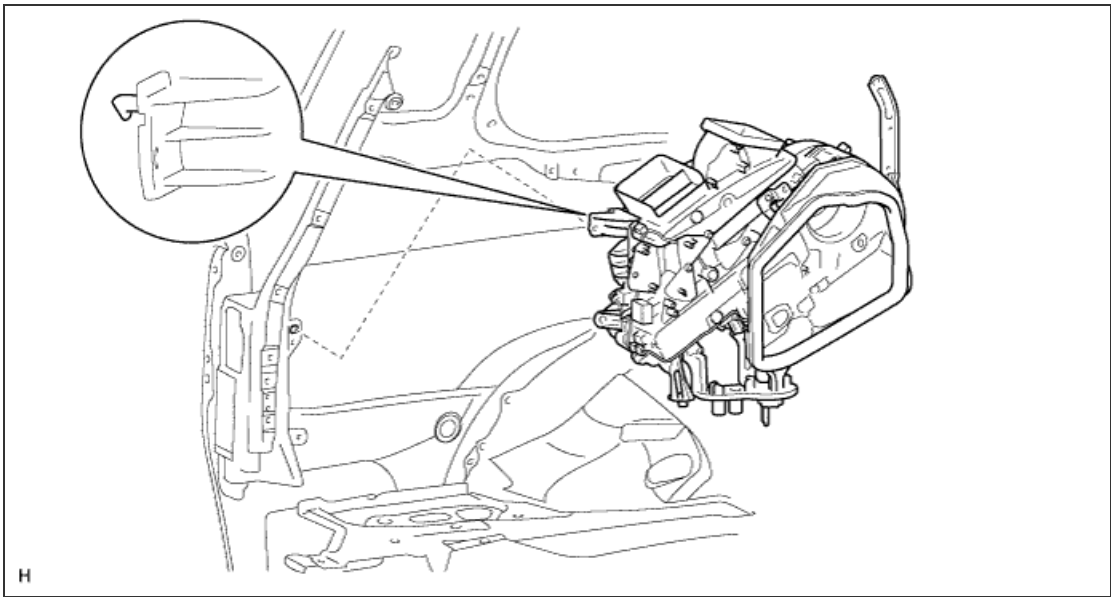
a. Install the duct with the 2 screws.



Torque:
5.4 N m k mf, 46 in. bf }

. INSTALL COOLING UNIT BRAC ET

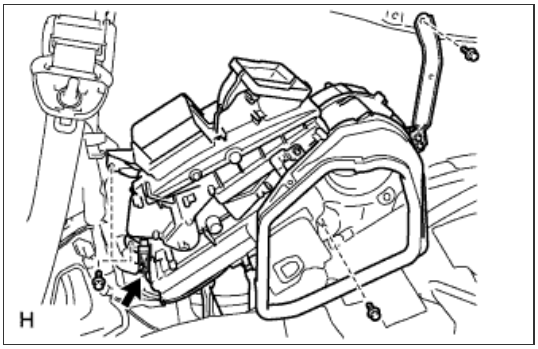
a. Install the bracket with the 2 screws.



Torque:
5.4 N m k mf, 46 in. bf }

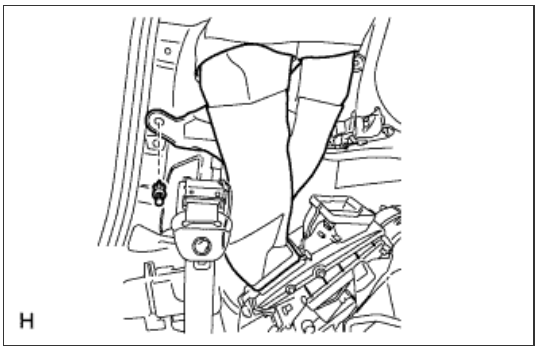
for Preparation Click here

1. INSTALL REAR COOLING UNIT ASSEMBLY



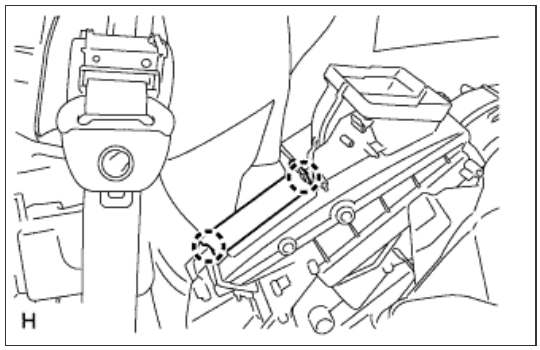
a. Install the rear cooling unit as shown in the illustration.

b. Install the 4 bolts.



Torque:
5.4 N*m{ 55 kgf*cm , 48 in.*lbf }

c. Connect the connector.



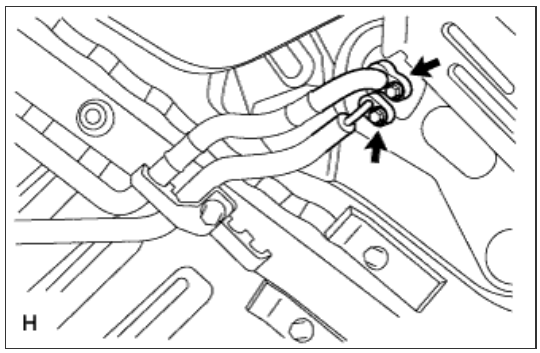
2. INSTALL REAR ROOF NO. 1 AIR DUCT

a. Install the duct with the clip.

b. Attach the 2 claws to install the cooler plate.

3. CONNECT AIR CONDITIONER TUBE AND ACCESSORY ASSEMBLY

a. Remove the attached vinyl tape from the pipe.



b. Sufficiently apply compressor oil to 2 new O-rings and the fitting surface of the air conditioner tube and accessory assembly.

c. Install the 2 O-rings to the air conditioner tube and accessory assembly.

. Connect the air conditioner tube and accessory assembly.

e. Install the 2 bolts.

Torque:
5.4 N*m{ 55 kgf*cm , 48 in.*lbf }

4. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY LH

a. w/ Sliding Roof:
Install the front quarter trim panel (Click here).

b. w/o Sliding Roof:
Install the front quarter trim panel (Click here).

5. INSTALL REAR SEAT CO ER CA R (w/ Rear No. 2 Seat)

a. w/ Sliding Roof:
Install the rear seat cover cap (Click here).

b. w/o Sliding Roof:
Install the rear seat cover cap (Click here).

6. INSTALL TONNEAU COVER ASSEMBLY (w/ Tonneau Co er)

. INSTALL REAR DOOR SCUFF PLATE LH

a. w/ Sliding Roof:
Install the rear door scuff plate (Click here).

b. w/o Sliding Roof:
Install the rear door scuff plate (Click here).

8. INSTALL REAR FLOOR MAT REAR SUPPORT PLATE

a. w/ Sliding Roof:
Install the rear floor mat rear support plate (Click here).

b. w/o Sliding Roof:
Install the rear floor mat rear support plate (Click here).

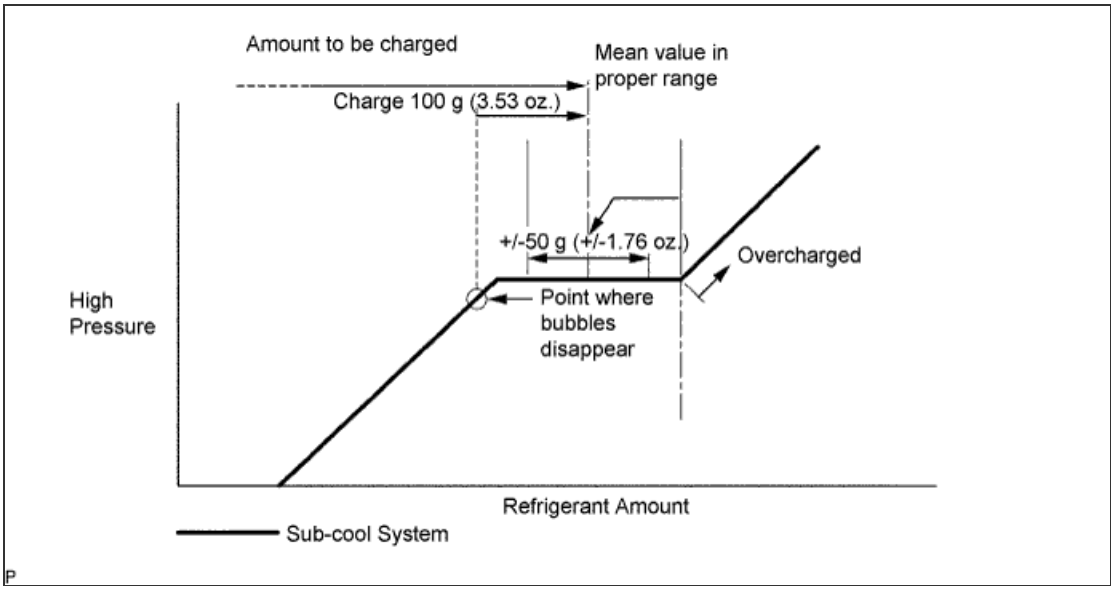
9. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

10. CHARGE REFRIGERANT

SST



09985-20010 (09985-02130, 09985-02150, 09985-02090, 09985-02110, 09985-02010, 09985-02050, 09985-02060, 09985-020)

a. Perform vacuum purging using a vacuum pump.

b. Charge refrigerant HFC-134a (R134a).

Stan ar:

Condenser Core Thickness	Air Conditioning Type	Cool Box	Refrigerant Charging Amount
22 mm (0.866 in.)	w/o Rear Cooler	w/ Cool Box	870 /-30 g (30.7 /-1.1 oz.)
		w/o Cool Box	870 /-30 g (30.7 /-1.1 oz.)
	w/ Rear Cooler	w/ Cool Box	1010 /-30 g (35.6 /-1.1 oz.)
		w/o Cool Box	960 /-30 g (33.9 /-1.1 oz.)
16 mm (0.630 in.)	w/o Rear Cooler	w/ Cool Box	770 /-30 g (27.2 /-1.1 oz.)
		w/o Cool Box	770 /-30 g (27.2 /-1.1 oz.)
	w/ Rear Cooler	w/ Cool Box	970 /-30 g (34.2 /-1.1 oz.)
		w/o Cool Box	920 /-30 g (32.5 /-1.1 oz.)

NOTICE:

- **Do not operate the cooler compre or before charging refrigerant a he cooler compre or will not work properl without an r frigerant, an will o erheat.**
- **Approximatel 200 g (.05 o .) of refrigerant ma nee to be charge fter bubble i ppear. The refrigerant amount houl be checke b mea uring it quantit , an not with the ight gla .**

11. AR M UP ENGINE

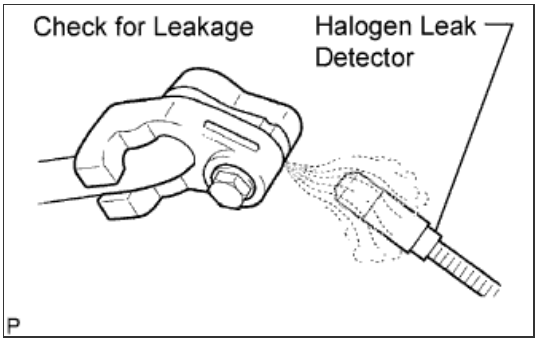
a. Warm up the engine at less than 1850 rpm for 2 minutes or more after charging the refrigerant.

NOTICE:

Be sure to warm up the compressor when turning the A/C switch is on after removing and installing the cooler refrigerant lines (including the compressor), to prevent damage to the compressor.

12. CHEC FOR REFRIGERANT GAS LEA

a. After recharging the refrigerant gas, check for refrigerant gas leakage using a halogen leak detector.



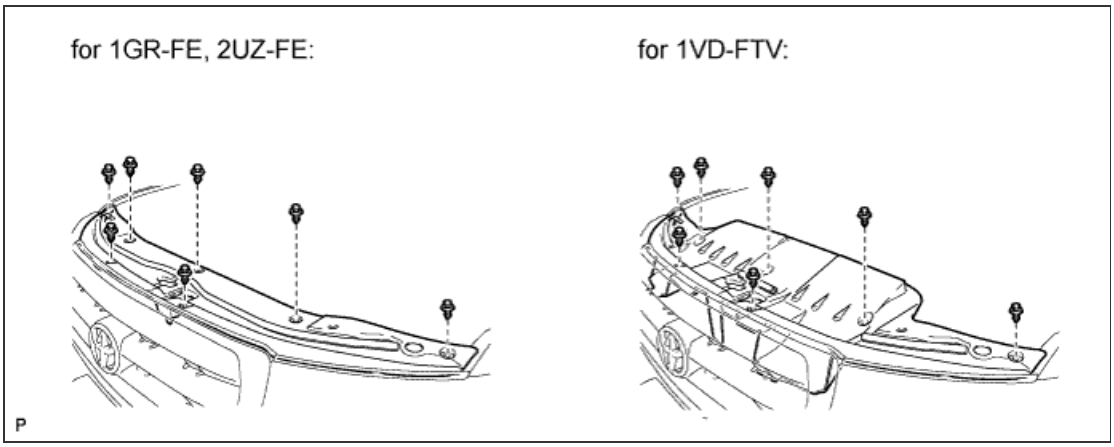
b. Perform the operation under these conditions:

- Stop the engine.
- Secure good ventilation (the halogen leak detector may react to volatile gases other than refrigerant, such as evaporated gasoline or exhaust gas).
- Repeat the test 2 or 3 times.
- Make sure that some refrigerant remains in the refrigeration system. When compressor is off: approximately 392 to 588 kPa (4.0 to 6.0 kgf/cm^2, 57 to 85 psi).

c. Using a halogen leak detector, check the refrigerant line for leakage.

. If a gas leak is not detected on the drain hose, remove the blower motor control (blower resistor) from the cooling unit. Insert the halogen leak detector sensor into the unit and perform the test.

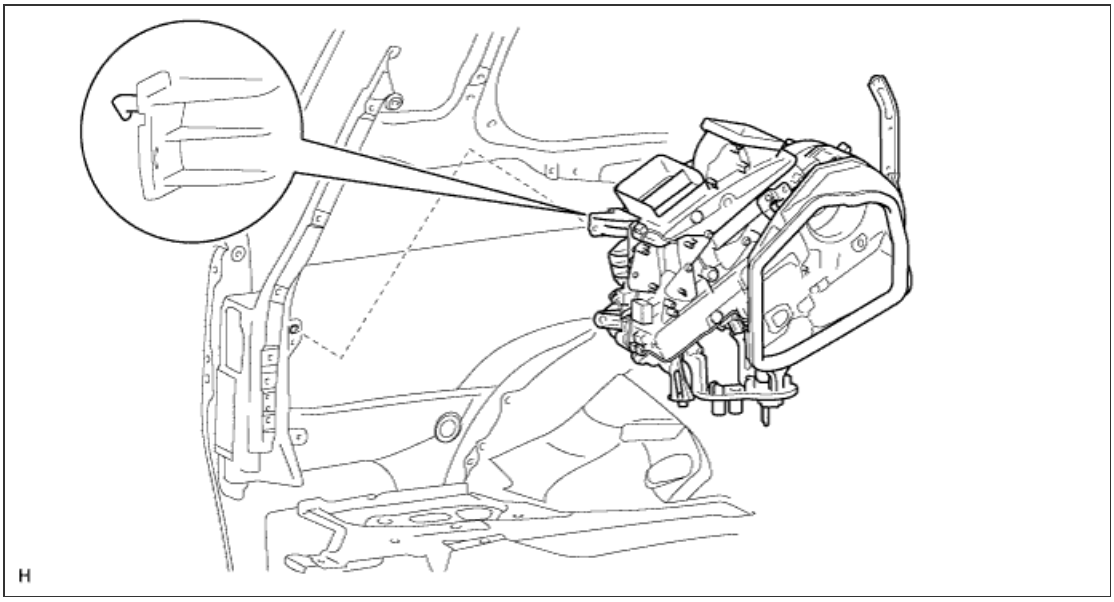
e. Disconnect the connector and wait for approximately 20 minutes. Bring the halogen leak detector close to the pressure switch and perform the test.



13. CHEC SRS ARNIN IGHT

a. Check the SRS warning light (Click here).

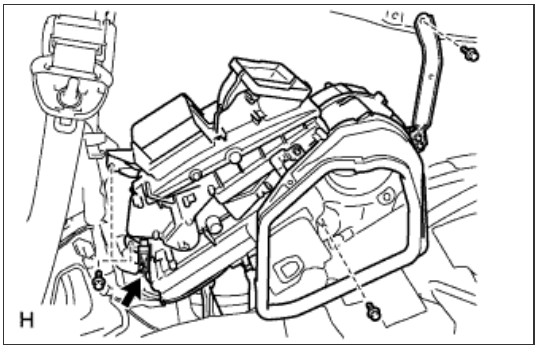
14. INSTALL UPPER RADIATOR SUPPORT SEAL



a. Install the radiator support seal with the 7 clips.

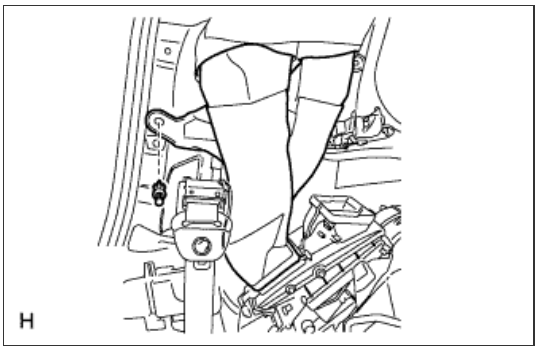
for Preparation Click here

1. INSTALL REAR COOLING UNIT ASSEMBLY



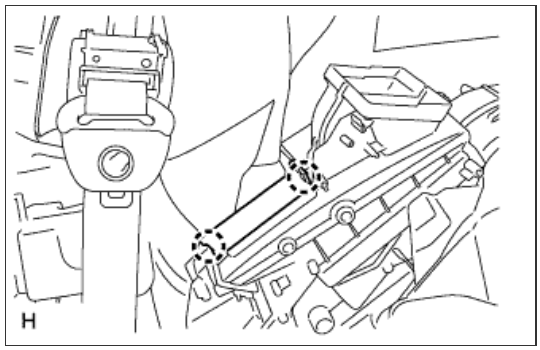
a. Install the rear cooling unit as shown in the illustration.

b. Install the 4 bolts.



Torque:
5.4 N*m{ 55 kgf*cm , 48 in.*lbf }

c. Connect the connector.



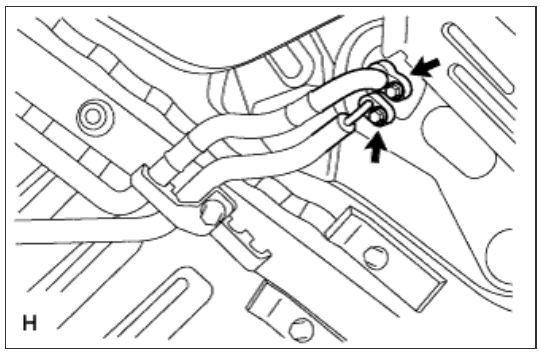
2. INSTALL REAR ROOF NO. 1 AIR DUCT

a. Install the duct with the clip.

b. Attach the 2 claws to install the cooler plate.

3. CONNECT AIR CONDITIONER TUBE AND ACCESSORY ASSEMBLY

a. Remove the attached vinyl tape from the pipe.



b. Sufficiently apply compressor oil to 2 new O-rings and the fitting surface of the air conditioner tube and accessory assembly.

c. Install the 2 O-rings to the air conditioner tube and accessory assembly.

. Connect the air conditioner tube and accessory assembly.

e. Install the 2 bolts.

Torque:
5.4 N*m{ 55 kgf*cm , 48 in.*lbf }

4. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY LH

a. w/ Sliding Roof:
Install the front quarter trim panel (Click here).

b. w/o Sliding Roof:
Install the front quarter trim panel (Click here).

5. INSTALL REAR SEAT CO ER CA R (w/ Rear No. 2 Seat)

a. w/ Sliding Roof:

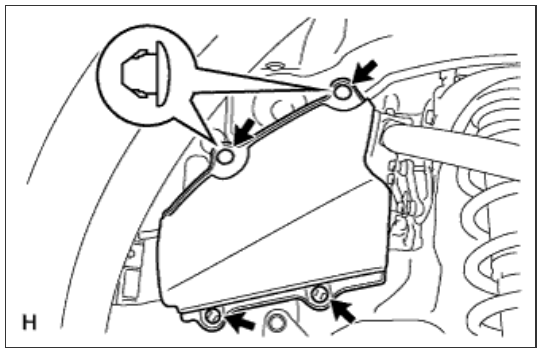
1. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 7 clips and radiator support seal.

2. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM

a. Start the engine.

b. Turn the A switch on.

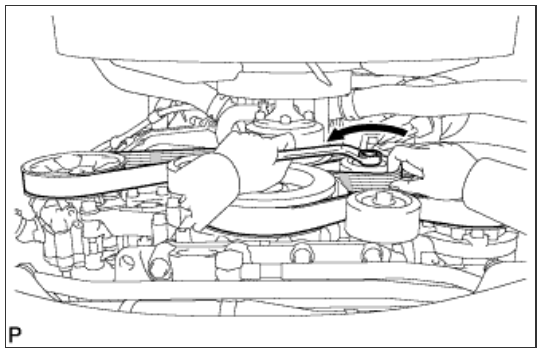


c. perate the cooler compressor while the engine speed is appro imatel rpm or 5 to 6 minutes to circulate the re rigerant and collect the compressor oil remaining in each component into the cooler compressor.

d. Stop the engine.

e. Recover the re rigerant rom the A s stem using a re rigerant recover unit.

3. REMOVE FRONT FENDER APRON SEAL LH

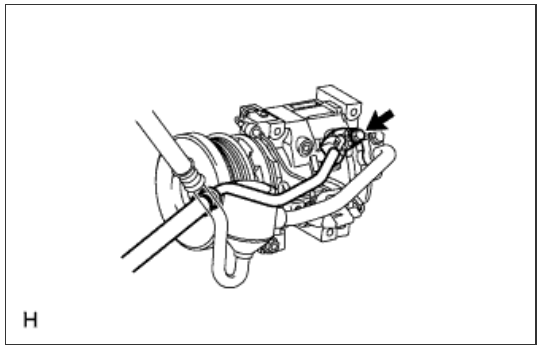


a. Remove the 4 clips and seal.

4. REMOVE FAN & GENERATOR V BELT

a. While releasing the belt tension b turning the belt tensioner counterclockwise.

remove the an and generator V belt rom the belt tensioner.



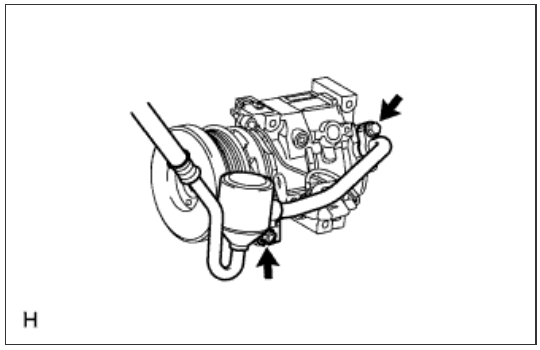
5. DISCONNECT NO. 1 COOLER REFRIGERANT DISCHARGE HOSE

a. Remove the bolt and disconnect the discharge hose rom the cooler compressor.

b. Remove the ring rom the discharge hose.

NOTICE:

Seal the openings o the disconnected parts using vin l tape to prevent moisture and oreign matter rom entering them.

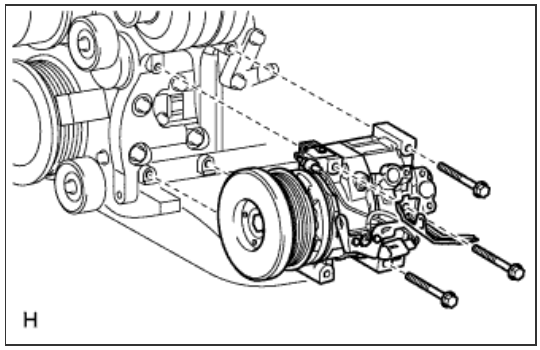


6. DISCONNECT SUCTION HOSE SUB-ASSEMBLY

a. Remove the olts and disconnect the suction hose rom the cooler compressor.

b. Remove the ring rom the suction hose.

NOTICE:

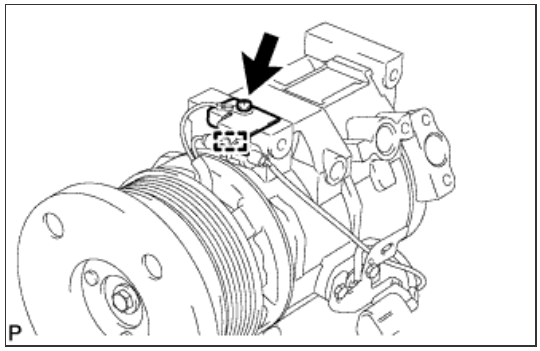


Seal the openings o the disconnected parts using vin l tape to prevent moisture and oreign matter rom entering them.

7. REMOVE COOLER COMPRESSOR ASSEMBLY

a. Disconnect the connector.

b. Remove the 3 bolts and cooler compressor.



for Preparation Click here

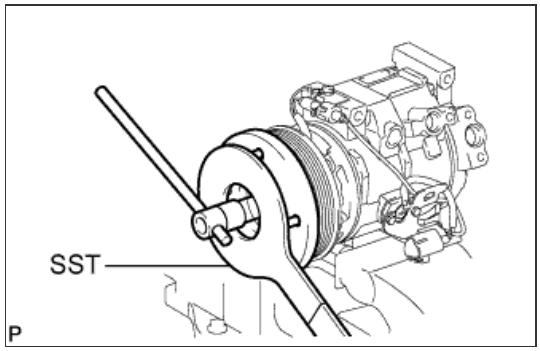
1. REMOVE COOLER BRACKET

a. Detach the clamp.

b. Remove the screw and the cooler bracket.

2. REMOVE MAGNET CLUTCH ASSEMBLY

a. Clamp the cooler compressor in a vise.



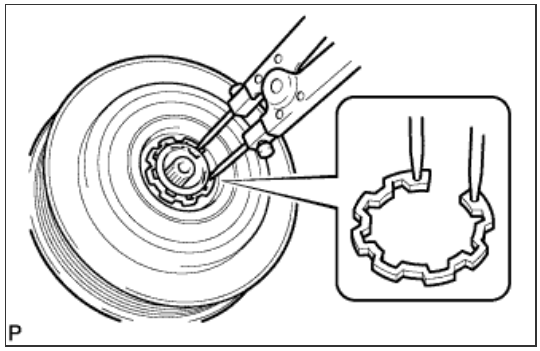
b. Using SST, hold the magnet clutch hub.

SST
09985-00270

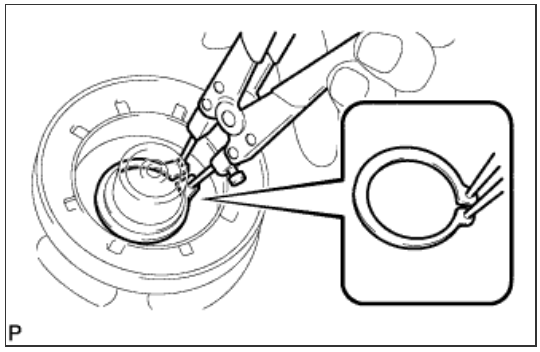
c. Remove the bolt, magnet clutch hub and magnet clutch washer(s).

HINT:

There is no set number of magnet clutch washers since they are used for adjusting.



d. Using a snap ring expander, remove the snap ring and the magnet clutch rotor.



NOTICE:

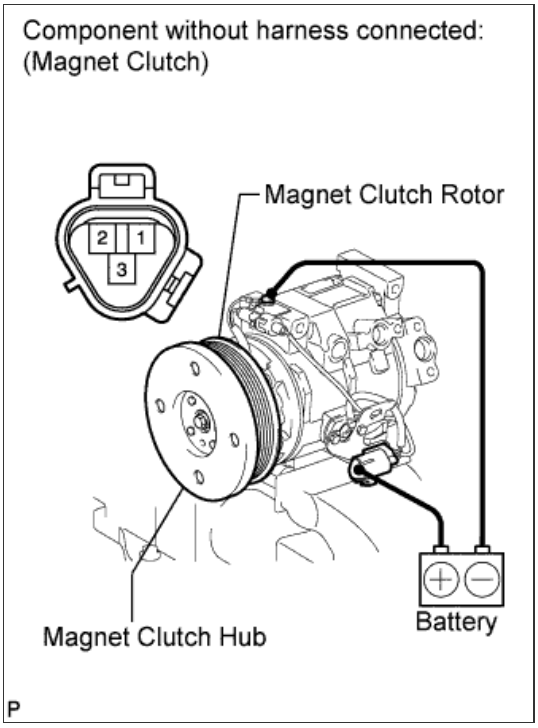
Do not damage the seal cover of the bearing when removing the snap ring.

e. Disconnect the connector.

f. Using a snap ring expander, remove the snap ring and magnet clutch stator.

for Preparation Click here

1. INSPECT MAGNET CLUTCH ASSEMBLY

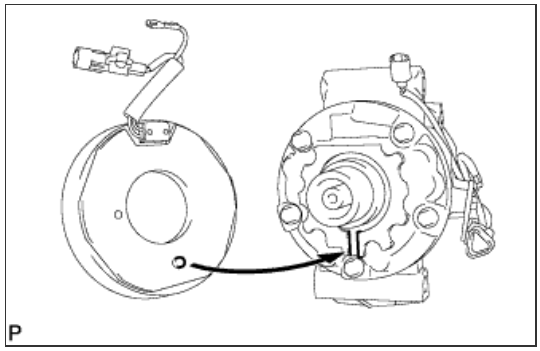


a. Check the magnet clutch operation.

i. Confirm that the magnet clutch hub and magnet clutch rotor lock when the battery po itive lead i onnected to terminal 3 of the magnet clutch and the negative lead i onnected to the ground wire.
If the operation i not a pecified eplace the magnet clutch a embly.

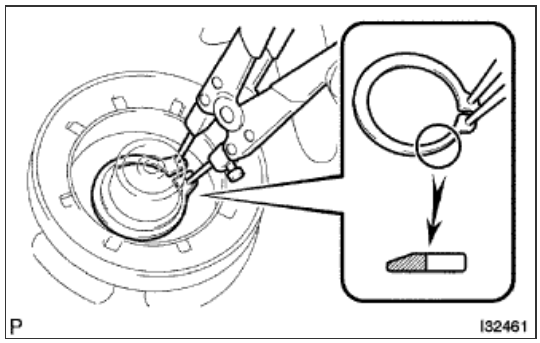
b. ea ure the re i tance.

c. ea ure the re i tance between terminal and .



Standard resistance:
65 to 125 Ω at 20°C (68°F)
If the resistance is not as specified, replace the cooler compressor assembly.

for Preparation Click here



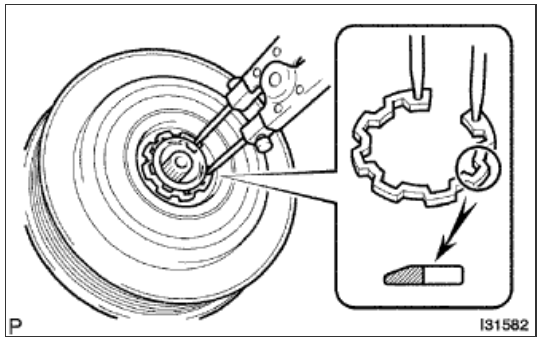
1. INSTALL MAGNET CLUTCH ASSEMBLY

a. Install the magnet clutch stator with the parts shown in the illustration matched.

b. Using a snap ring expander, install a new snap ring with the cham ered side acing up.

c. onnect the connector.

d. Using a snap ring expander, install the magnet clutch rotor and a new snap ring with the cham ered side acing up.



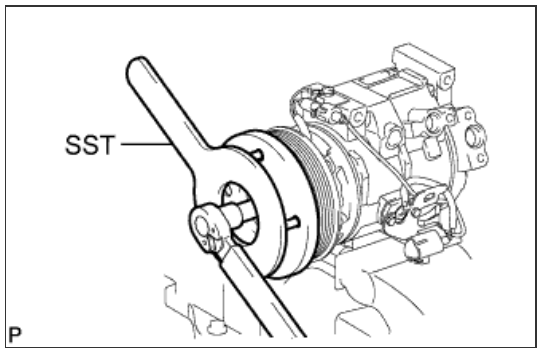
NOTICE:

Do not damage the seal cover o the bearing when installing the snap ring.

e. Install the compressor washer(s) and magnet clutch hub.

NOTICE:

Do not change the combination o the compressor washer(s) used be ore disassembly.

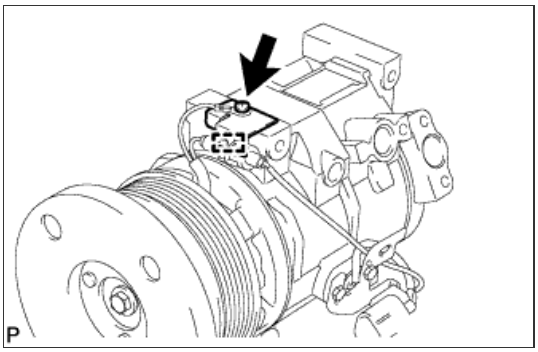


f. Using , hold the magnet clutch hub and install the bolt.

SST
09985-00270

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

NOTICE:



Make sure that there is no oreign matter or oil on the compressor sha t, bolt, and clutch hub.

2. INSTALL COOLER BRACKET

a. Install the cooler bracket with the screw.

b. Attach the clamp.

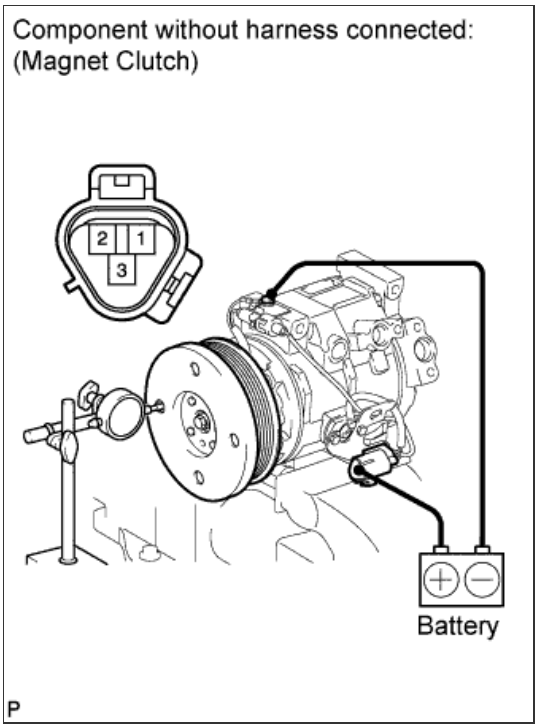
3. INSPECT MAGNET CLUTCH CLEARANCE

a. lamp the cooler compressor in a vise.

b. et the dial indicator to the magnet clutch hub.

c. onnect the battery positive lead to terminal o the magnet clutch connector and the negative lead to the ground wire. Turn the magnet clutch on and o and measure the clearance.

Standard clearance:
0.35 to 0.60 mm (0.014 to 0.024 in.)



I the measured value is not within the standard clearance, remove the magnet clutch hub and ad ust the clearance using compressor washers to obtain the standard clearance.

Compressor washer thickness:
0.1 mm (0.004 in.)
0.3 mm (0.012 in.)
0.5 mm (0.020 in.)

NOTICE:

Ad ustment should be per ormed with or ewer magnet clutch washers.

d. emove the cooler compressor rom the vise.

for Preparation Click here

1. ADJUST COMPRESSOR OIL

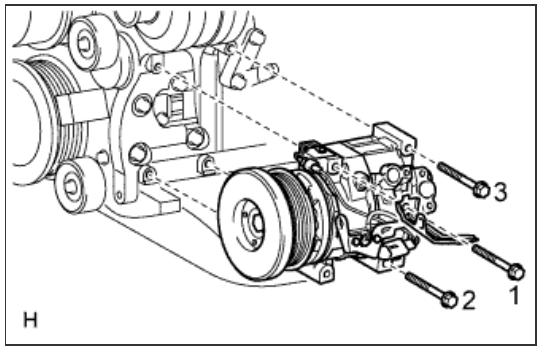
a. When replacing the compressor and magnetic clutch with a new one, gradually discharge the refrigerant gas from the service valve, and drain the following amount of oil from the new compressor and magnetic clutch before installation.

Standard:
GRJ200L-GNANKV, GNMNKV, GPANKV, GPMNKV:
(Oil capacity inside the new compressor and magnetic clutch: 140 + 15 cc (4.7 + 0.51 fl.oz.)) - (Remaining oil amount in the removed compressor and magnetic clutch) = (Oil amount to be removed from the new compressor when replacing)
Except GRJ200L-GNANKV, GNMNKV, GPANKV, GPMNKV:
(Oil capacity inside the new compressor and magnetic clutch: 135 + 15 cc (4.6 + 0.51 fl.oz.)) - (Remaining oil amount in the removed compressor and magnetic clutch) = (Oil amount to be removed from the new compressor when replacing)

NOTICE:

- **When checking the compressor oil level, follow the A/C system precautions.**
- **If a new compressor and magnetic clutch is installed without removing some oil remaining in the pipes of the vehicle, the oil amount will be too large. This prevents heat exchange in the refrigerant cycle and causes refrigerant failure.**
- **If the volume of oil remaining in the removed compressor and magnetic clutch is too small, check for oil leakage.**
- **Be sure to use ND-OIL 8 or equivalent for compressor oil.**

2. INSTALL COOLER COMPRESSOR ASSEMBLY



a. Install the cooler compressor with the 3 bolts.

Torque:
24.5 N*m{ 250 kgf*cm , 18 ft.*lbf }

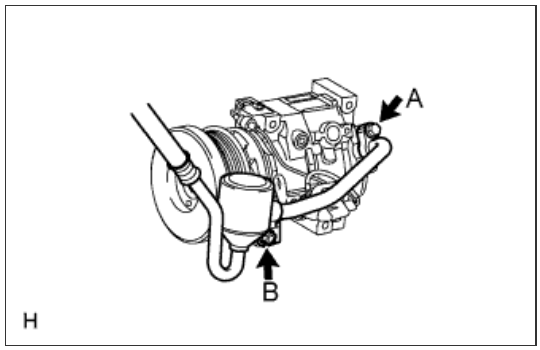
HINT:

Tighten the bolts in the order shown in the illustration.

b. Connect the connector.

3. CONNECT SUCTION HOSE SUB-ASSEMBLY

a. Remove the attached vinyl tape from the hose.



b. Sufficiently apply compressor oil to a new O-ring and the fitting surface of the cooler compressor.

Compressor oil:
ND-OIL 8 or equivalent

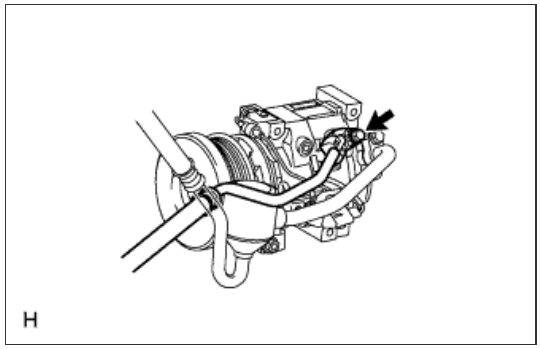
c. Install the O-ring to the suction hose.

d. Connect the suction hose to the cooler compressor with the 2 bolts.

Torque:
for bolt A:
9.8 N*m{ 100 kgf*cm , 87 ft.*lbf }
for bolt B:
24.5 N*m{ 250 kgf*cm , 18 ft.*lbf }

4. CONNECT NO. 1 COOLER REFRIGERANT DISCHARGE HOSE

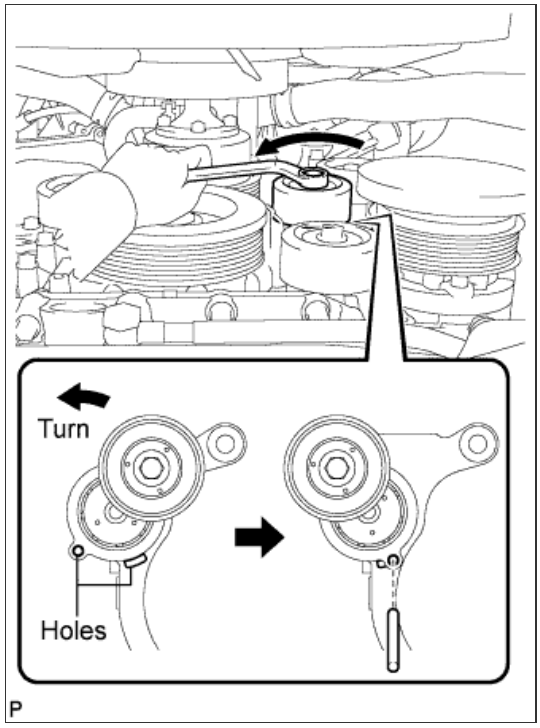
a. Remove the attached vinyl tape from the hose.



b. Sufficiently apply compressor oil to a new O-ring and the fitting surface of the cooler compressor.

Compressor oil:
ND-OIL 8 or equivalent

c. Install the O-ring to the cooler refrigerant discharge hose.

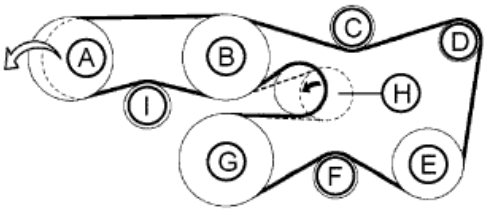


d. Connect the cooler refrigerant discharge hose to the cooler compressor with the bolt.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

5. INSTALL FAN & GENERATOR V BELT

a. While turning the belt tensioner counterclockwise, align the holes, and then insert a bar of φ6 mm (0.236 in.) into the holes to fix the belt tensioner in place.



b. Install the fan and generator V belt.

HINT:

If it is hard to install the fan and generator V belt, perform the following procedures.

1. **Put the fan and generator V belt on all parts except the vane pump, as shown in the illustration.**
2. **While releasing the belt tension by turning the belt tensioner counterclockwise, put the fan and generator V belt on the vane pump.**

c. While turning the belt tensioner counterclockwise, remove the bar.

A: Vane Pump

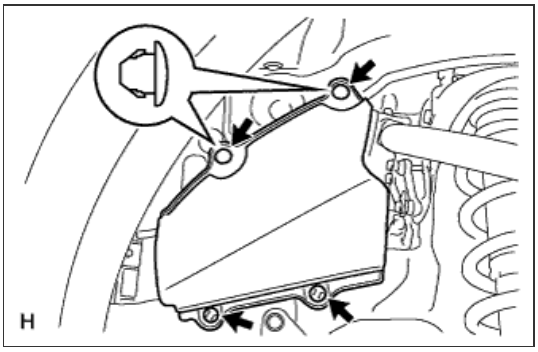
B: Water Pump

C: No. 2 Idler

D: Generator

E: Cooler Compressor

F: No. 1 Idler



G: Crankshaft

H: V-Ribbed Belt Tensioner

I: No. 2 Idler

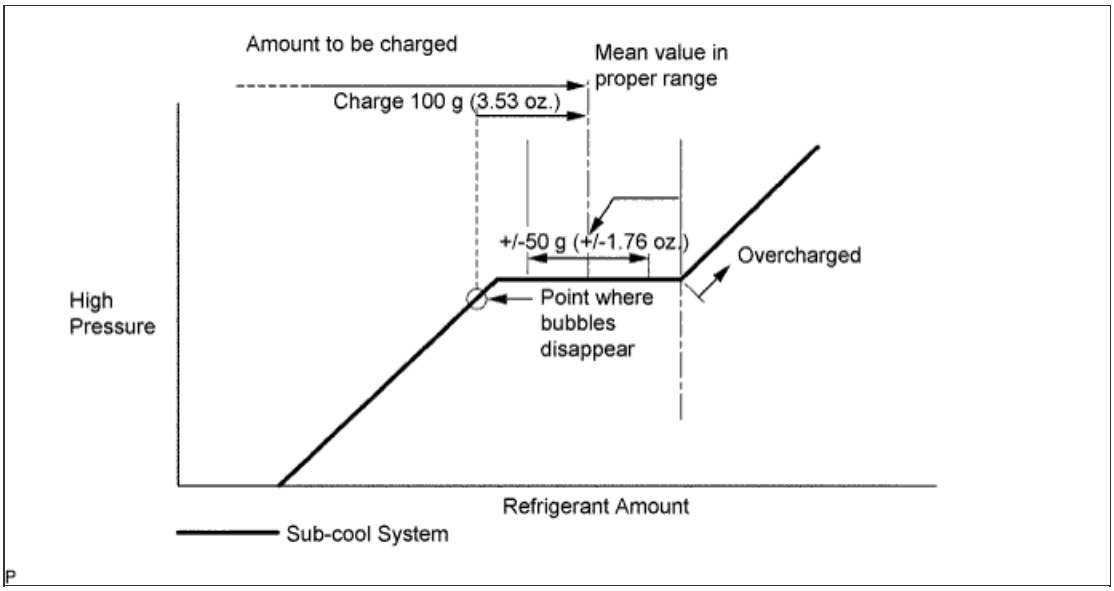
6. INSTALL FRONT FENDER APRON SEAL LH

a. Install the seal with the 4 clips.

7. CHARGE REFRIGERANT

SST

09985-20010 (09985-02130, 09985-02150, 09985-02090, 09985-02110, 09985-02010, 09985-02050, 09985-02060, 09985-02070)



a. Perform vacuum purging using a vacuum pump.

b. Charge refrigerant HFC-134a (R134a).

Standard:

Condenser Core Thickness	Air Conditioning Type	Cool Box	Refrigerant Charging Amount
22 mm (0.866 in.)	w/o Rear Cooler	w/ Cool Box	870 +/-30 g (30.7 +/-1.1 oz.)
		w/o Cool Box	870 +/-30 g (30.7 +/-1.1 oz.)
	w/ Rear Cooler	w/ Cool Box	1010 +/-30 g (35.6 +/-1.1 oz.)
		w/o Cool Box	960 +/-30 g (33.9 +/-1.1 oz.)
		w/ Cool Box	770 +/-30 g (27.2 +/-1.1 oz.)

16 mm (0.630 in.)	w/o Rear Cooler	w/o Cool Box	770 +/-30 g (27.2 +/-1.1 oz.)
	w/ Rear Cooler	w/ Cool Box	970 +/-30 g (34.2 +/-1.1 oz.)
		w/o Cool Box	920 +/-30 g (32.5 +/-1.1 oz.)

NOTICE:

- **Do not operate the cooler compressor before charging refrigerant as the cooler compressor will not work properly without any refrigerant, and will overheat.**
- **Approximately 200 g (7.05 oz.) of refrigerant may need to be charged after bubbles disappear. The refrigerant amount should be checked by measuring its quantity, and not with the sight glass.**

8. WARM UP ENGINE

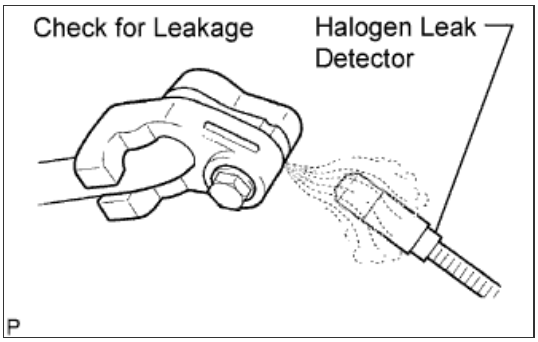
a. Warm up the engine at less than 1850 rpm for 2 minutes or more after charging the refrigerant.

NOTICE:

Be sure to warm up the compressor when turning the A/C switch is on after removing and installing the cooler refrigerant lines (including the compressor), to prevent damage to the compressor.

9. CHECK FOR REFRIGERANT GAS LEAK

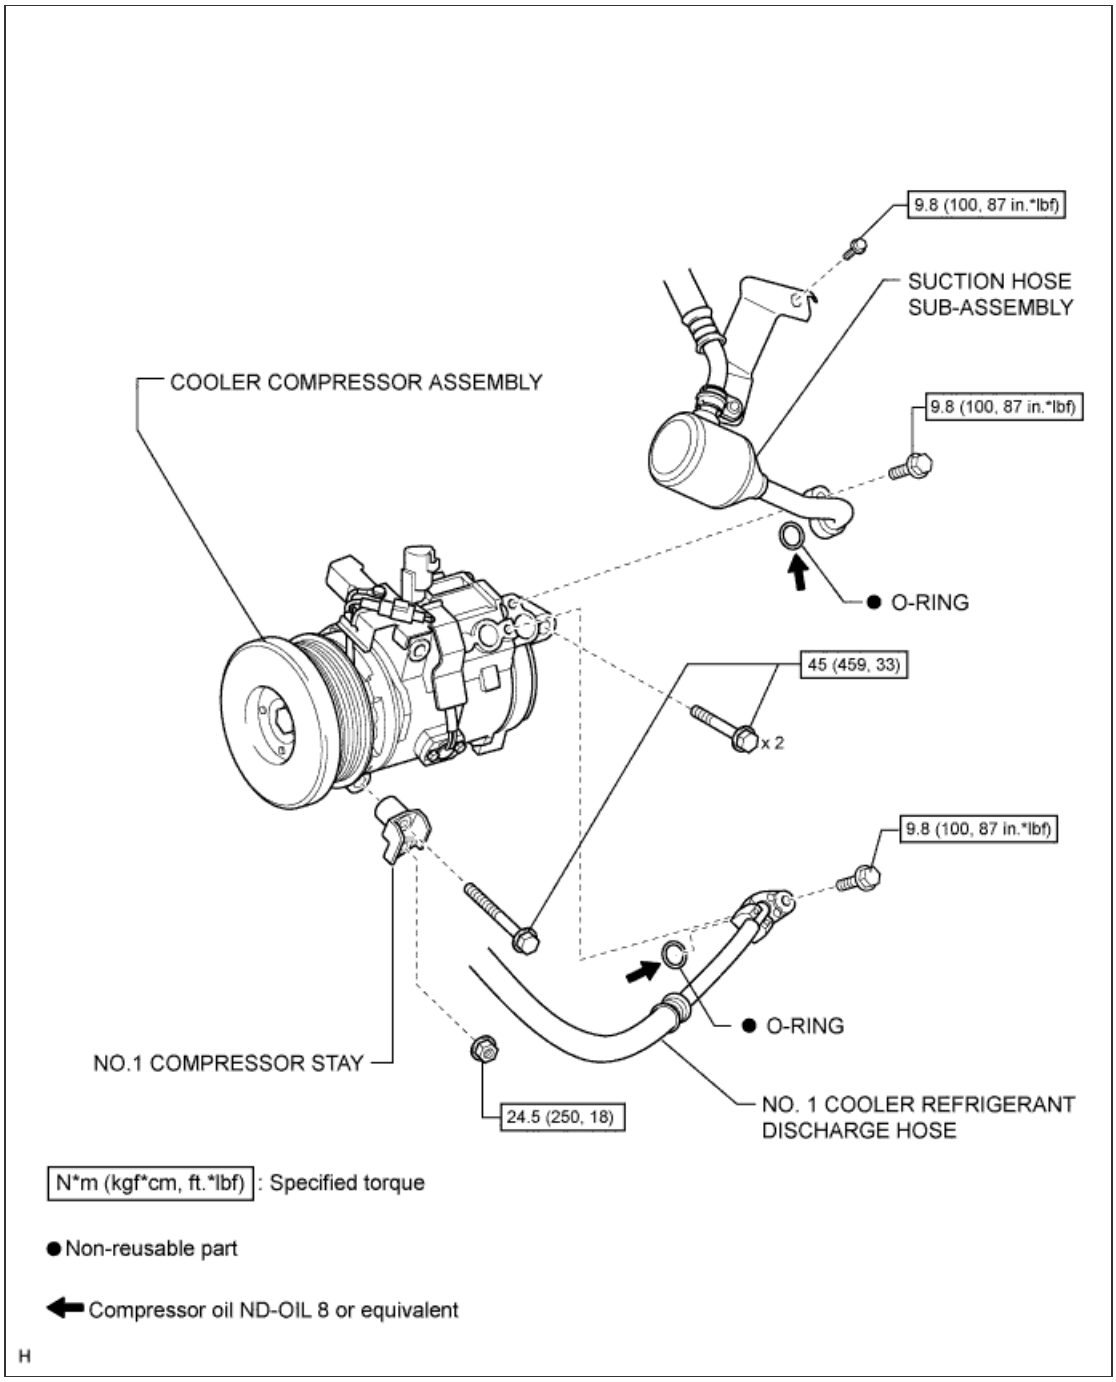
a. After recharging the refrigerant gas, check for refrigerant gas leakage using a halogen leak detector.



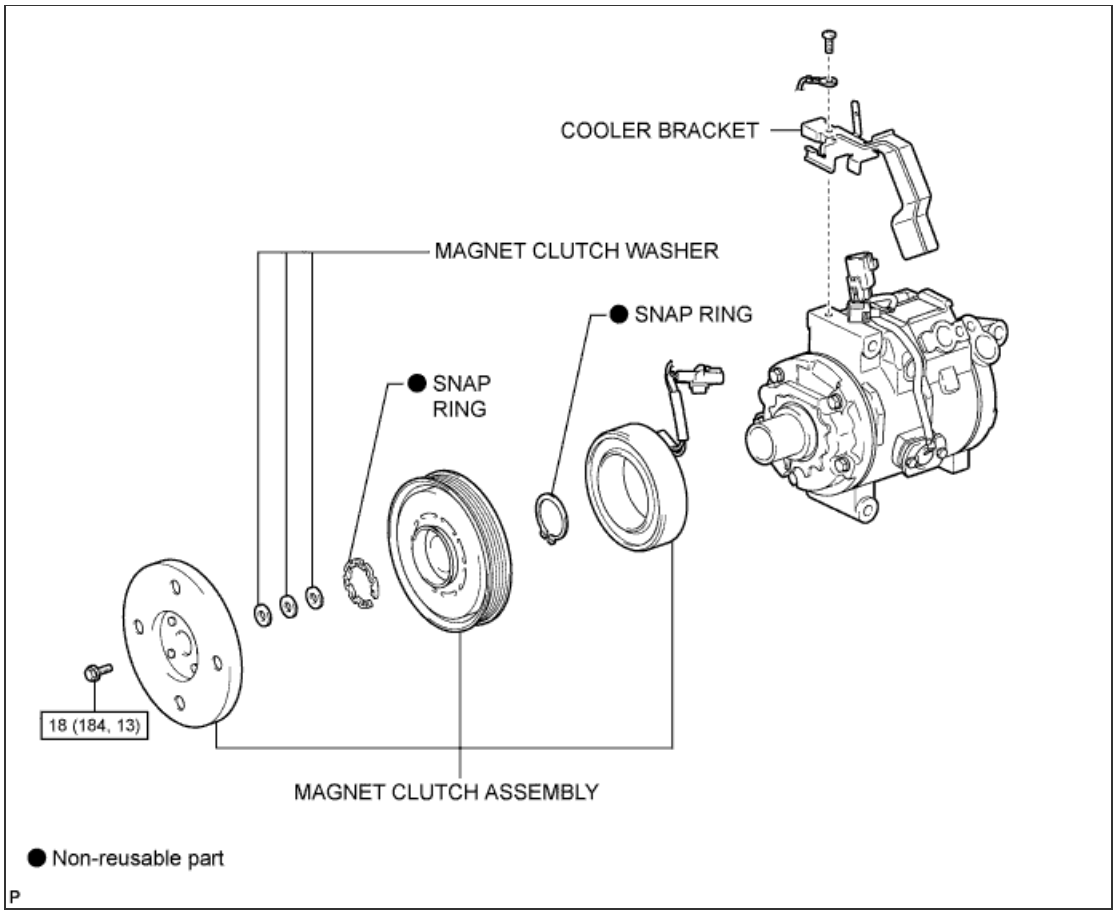
b. Perform the operation under these conditions:

- Stop the engine.
- Secure good ventilation (the halogen leak detector may react to volatile gases other than refrigerant, such as evaporated gasoline or exhaust gas).
- Repeat the test 2 or 3 times.
- Make sure that some refrigerant remains in the refrigeration system. When compressor is off: approximately 392 to 588 kPa (4.0 to 6.0 kgf/cm^2, 57 to 85 psi).

c. Using a halogen leak detector, check the refrigerant line for leakage.



d. If a gas leak is not detected on the drain hose, remove the blower motor control (blower resistor) from the cooling unit. Insert the halogen leak detector sensor into the unit and perform the test.



e. Disconnect the connector and wait for approximately 20 minutes. Bring the halogen leak detector close to the pressure switch and perform the test.

10. INSTALL UPPER RADIATOR SUPPORT SEAL

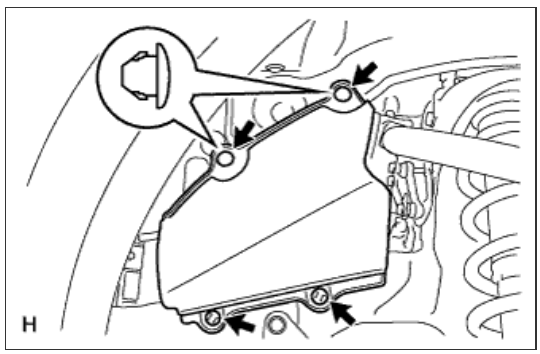
1. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 7 clips and radiator support seal.

2. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM

a. Start the engine.

b. Turn the A switch on.



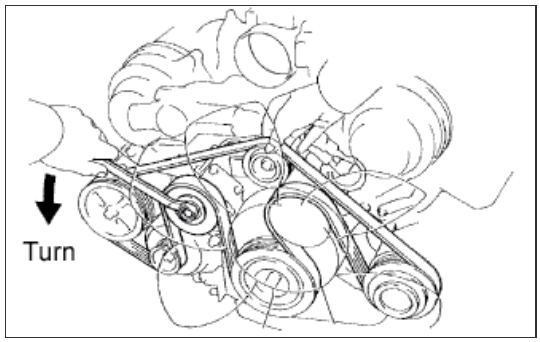
c. perate the cooler compressor while the engine speed is appro imatel rpm or 5 to 6 minutes to circulate the re rigerant and collect the compressor oil remaining in each component into the cooler compressor.

d. Stop the engine.

e. Recover the re rigerant rom the A s stem using a re rigerant recover unit.

3. REMOVE FRONT FENDER APRON SEAL LH

a. Remove the 4 clips and seal.



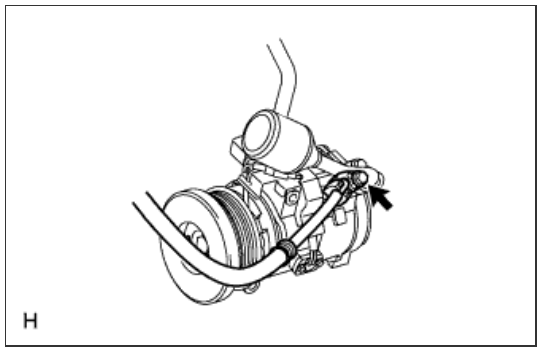
4. REMOVE FAN & GENERATOR V BELT

a. Loosen the belt tension b turning the belt tensioner counterclockwise, and then

remove the an and generator V belt.

HINT:

The pulle olt or the belt tensioner has le t-hand thread.



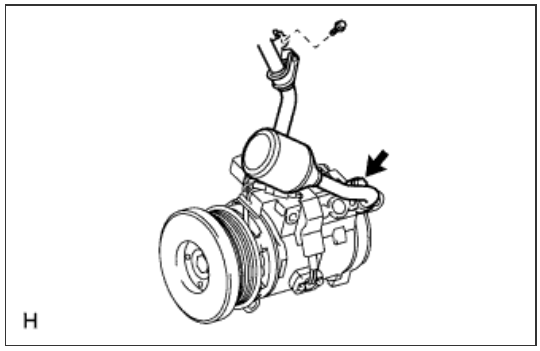
5. DISCONNECT NO. 1 COOLER REFRIGERANT DISCHARGE HOSE

a. Remove the bolt and disconnect the discharge hose rom the cooler compressor.

b. Remove the ring rom the discharge hose.

NOTICE:

Seal the openings o the disconnected parts using vin l tape to prevent moisture and oreign matter rom entering them.

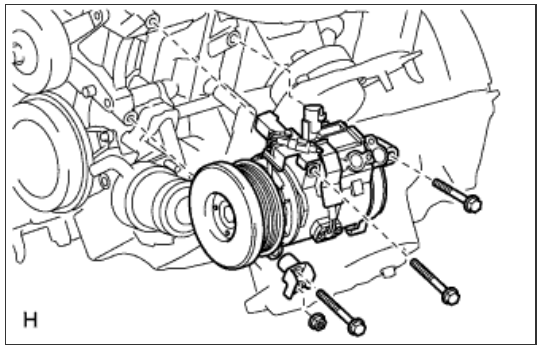


6. DISCONNECT SUCTION HOSE SUB-ASSEMBLY

a. Remove the olts and disconnect the suction hose rom the cooler compressor.

b. Remove the ring rom the suction hose.

NOTICE:

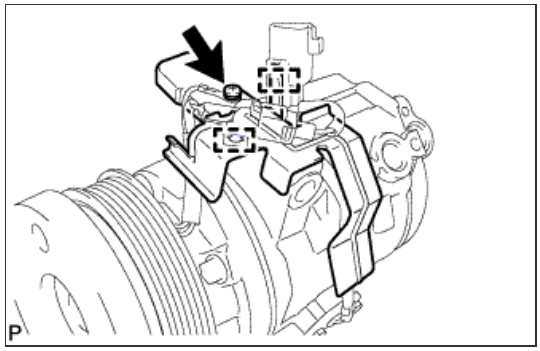


Seal the openings o the disconnected parts using vin l tape to prevent moisture and oreign matter rom entering them.

7. REMOVE COOLER COMPRESSOR ASSEMBLY

a. Disconnect the connector.

b. Remove the 3 bolts, nut, cooler compressor and No. 1 compressor sta .



for Preparation Click here

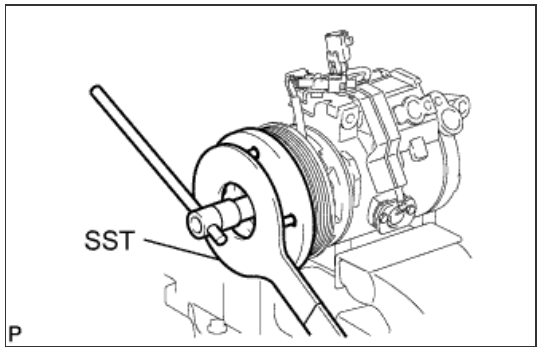
1. REMOVE COOLER BRACKET

a. Detach the 2 clamps.

b. Remove the screw and the cooler bracket.

2. REMOVE MAGNET CLUTCH ASSEMBLY

a. Clamp the cooler compressor in a vise.



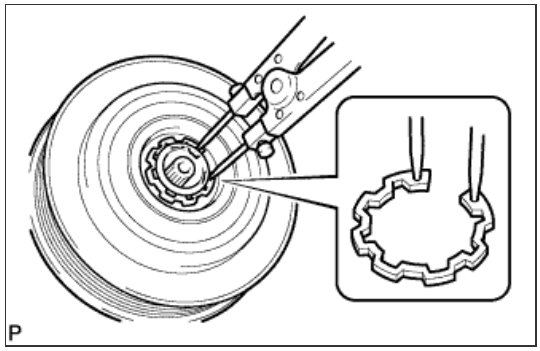
b. Using SST, hold the magnet clutch hub.

SST
09985-00270

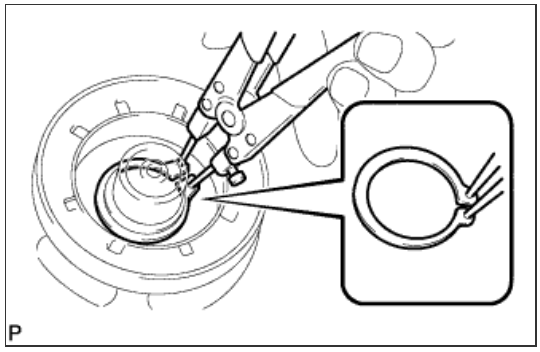
c. Remove the bolt, magnet clutch hub and magnet clutch washer(s).

HINT:

There is no set number of magnet clutch washers since they are used for adjusting.



d. Using a snap ring expander, remove the snap ring and the magnet clutch rotor.



NOTICE:

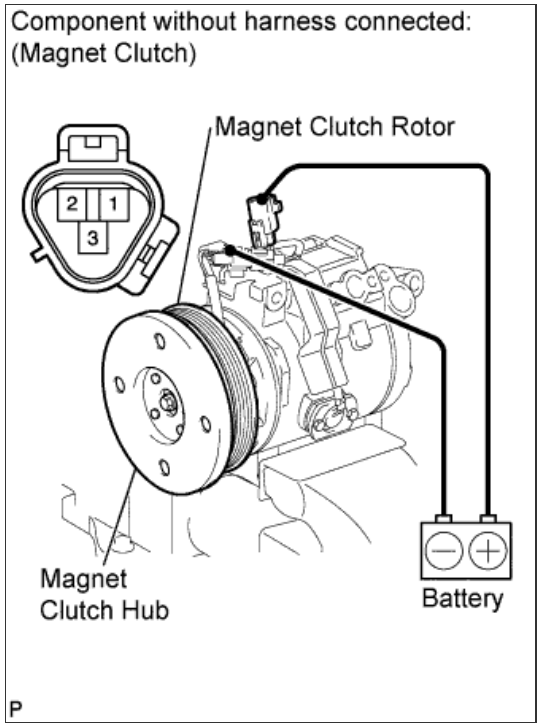
Do not damage the seal cover of the bearing when removing the snap ring.

e. Disconnect the connector.

f. Using a snap ring expander, remove the snap ring and magnet clutch stator.

for Preparation Click here

1. INSPECT MAGNET CLUTCH ASSEMBLY

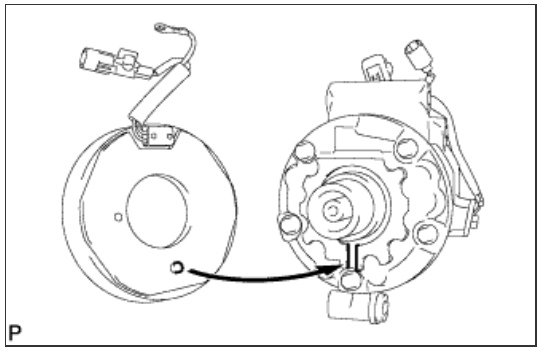


a. Check the magnet clutch operation.

i. Confirm that the magnet clutch hub and magnet clutch rotor lock when the battery positive lead is connected to terminal 3 of the magnet clutch, and the negative lead is connected to the ground wire.
If the operation is not as specified, replace the magnet clutch assembly.

b. Measure the resistance.

c. Measure the resistance between terminals 1 and 2.



Standard resistance:
65 to 125 Ω at 20°C (68°F)
If the resistance is not as specified, replace the cooler compressor assembly.

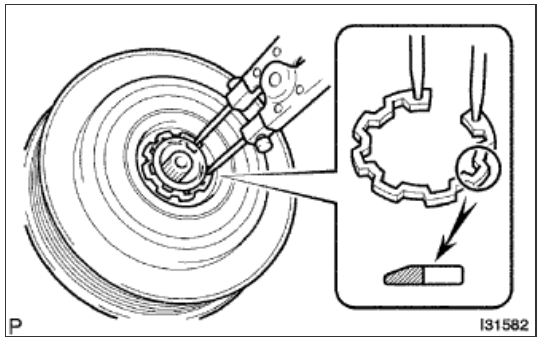
1. INSTALL MAGNET CLUTCH ASSEMBLY

a. Install the magnet clutch stator with the parts shown in the illustration matched.

b. Using a snap ring expander, install a new snap ring with the chamfered side facing up.

c. Connect the connector.

d. Using a snap ring expander, install the magnet clutch rotor and a new snap ring with the chamfered side facing up.



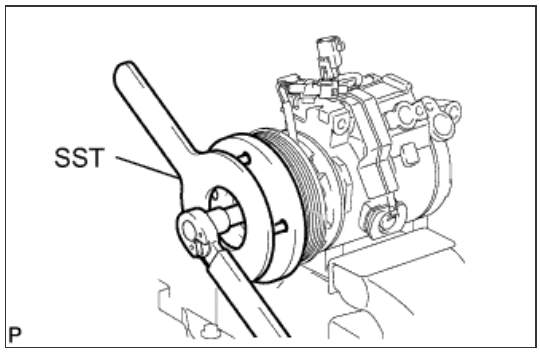
NOTICE:

Do not damage the seal cover of the bearing when installing the snap ring.

e. Install the compressor washer(s) and magnet clutch hub.

NOTICE:

Do not change the combination of the compressor washer(s) used before disassembly.

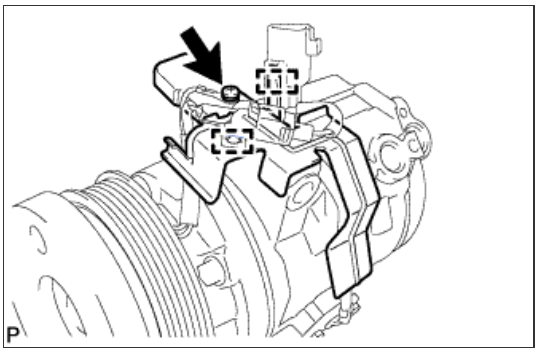


f. Using SST, hold the magnet clutch hub and install the bolt.

SST
09985-00270

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

NOTICE:



Make sure that there is no foreign matter or oil on the compressor shaft, bolt, and clutch hub.

2. INSTALL COOLER BRACKET

a. Install the cooler bracket with the screw.

b. Attach the 2 clamps.

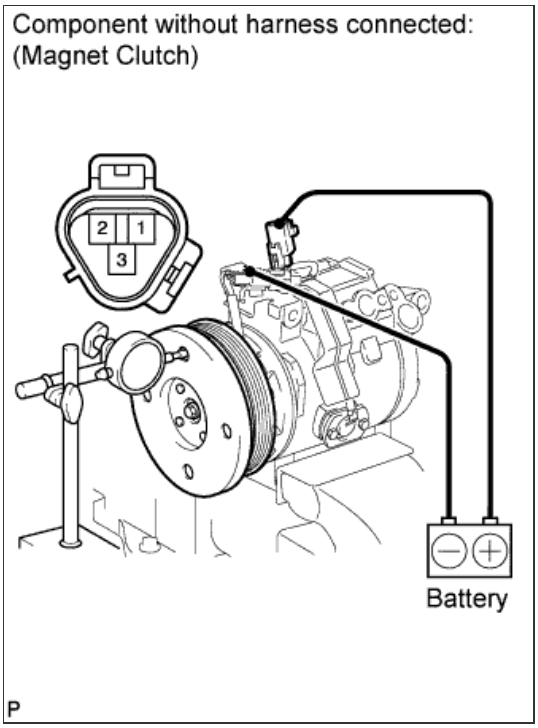
3. INSPECT MAGNET CLUTCH CLEARANCE

a. Clamp the cooler compressor in a vise.

b. Set the dial indicator to the magnet clutch hub.

c. Connect the battery positive lead to terminal 3 of the magnet clutch connector and the negative lead to the ground wire. Turn the magnet clutch on and off and measure the clearance.

Standard clearance:
0.35 to 0.60 mm (0.014 to 0.024 in.)



If the measured value is not within the standard clearance, remove the magnet clutch hub and ad ust the clearance using compressor washers to obtain the standard clearance.

Compre or a her thickne :
0.1 mm (0.004 in.)
0.3 mm (0.012 in.)
0.5 mm (0.020 in.)

NOTICE:

Ad ustment should be performed with 3 or fewer magnet clutch washers.

d. Remove the cooler compressor from the vise.

for Preparation Click here

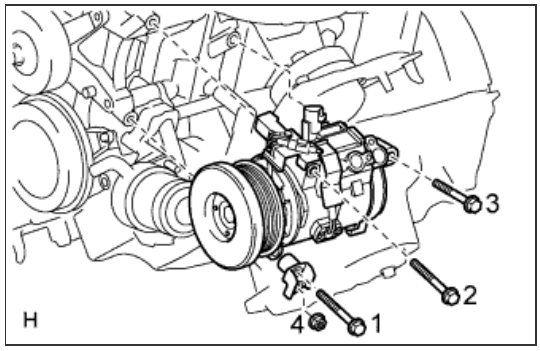
1. ADJUST COMPRESSOR OIL

a. When replacing the compressor and magnetic clutch with a new one, gradually discharge the refrigerant gas from the service valve, and drain the following amount of oil from the new compressor and magnetic clutch before installation.

Standard:
UZJ200L-GNAEKV, GNANKV:
(Oil capacity inside the new compressor and magnetic clutch: 140 + 15 cc (4.7 + 0.51 fl.oz.)) - (Remaining oil amount in the removed compressor and magnetic clutch) = (Oil amount to be removed from the new compressor when replacing)
Except UZJ200L-GNAEKV, GNANKV:
(Oil capacity inside the new compressor and magnetic clutch: 135 + 15 cc (4.6 + 0.51 fl.oz.)) - (Remaining oil amount in the removed compressor and magnetic clutch) = (Oil amount to be removed from the new compressor when replacing)

NOTICE:

- **When checking the compressor oil level, follow the A/C system precautions.**
- **If a new compressor and magnetic clutch is installed without removing some oil remaining in the pipes of the vehicle, the oil amount will be too large. This prevents heat exchange in the refrigerant cycle and causes refrigerant failure.**
- **If the volume of oil remaining in the removed compressor and magnetic clutch is too small, check for oil leakage.**
- **Be sure to use ND-OIL 8 or equivalent for compressor oil.**



2. INSTALL COOLER COMPRESSOR ASSEMBLY

a. Install the cooler compressor and No. 1 compressor stay with the 3 bolts and nut.

Torque:
for nut:
24.5 N*m{ 250 kgf*cm , 18 ft.*lbf }
for bolt:
45 N*m{ 459 kgf*cm , 33 ft.*lbf }

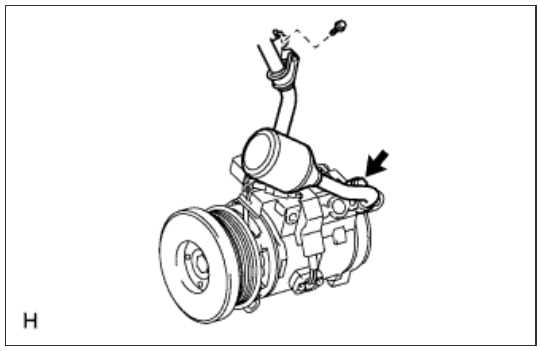
HINT:

Tighten the bolts and nut in the order shown in the illustration.

b. Connect the connector.

3. CONNECT SUCTION HOSE SUB-ASSEMBLY

a. Remove the attached vinyl tape from the hose.



b. Sufficiently apply compressor oil to a new O-ring and the fitting surface of the cooler compressor.

Compressor oil:
ND-OIL 8 or equivalent

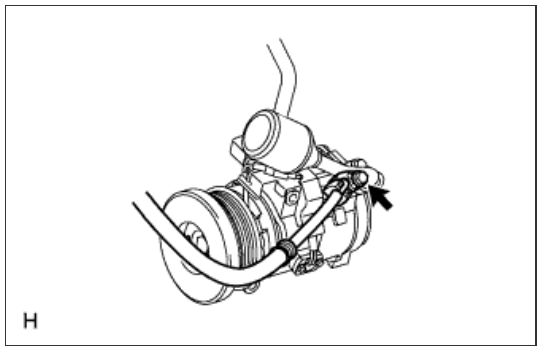
c. Install the O-ring to the suction hose.

d. Connect the suction hose to the cooler compressor with the 2 bolts.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

4. CONNECT NO. 1 COOLER REFRIGERANT DISCHARGE HOSE

a. Remove the attached vinyl tape from the hose.



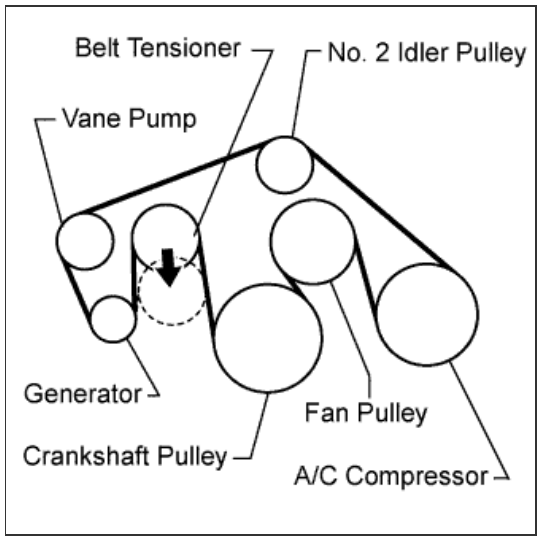
b. Sufficiently apply compressor oil to a new O-ring and the fitting surface of the cooler compressor.

Compressor oil:
ND-OIL 8 or equivalent

c. Install the O-ring to the discharge hose.

d. Connect the discharge hose to the cooler compressor with the bolt.

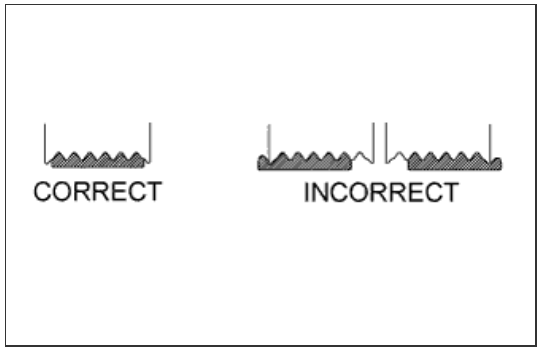
Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }



5. INSTALL FAN & GENERATOR V BELT

a. Set the V belt onto every part except the belt tensioner, as shown in the illustration.

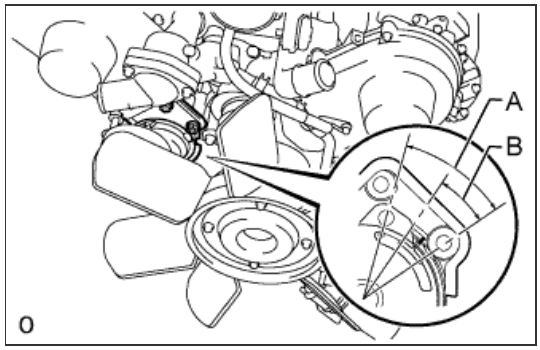
b. Loosen the V belt by turning the belt tensioner counterclockwise.



c. Set the V belt to the belt tensioner.

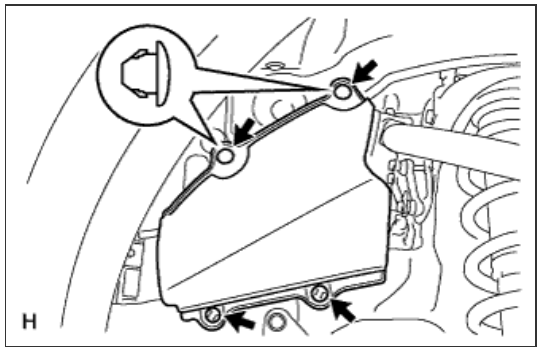
d. Check that the belt fits properly in the ribbed grooves.

HINT:



Make sure to check by hand that the belt has not slipped out of the grooves on the bottom of the pulley.

e. Check that the arrow on the belt tensioner is within area "A".
If the arrow is outside area "A", replace the fan and generator V belt.



HINT:

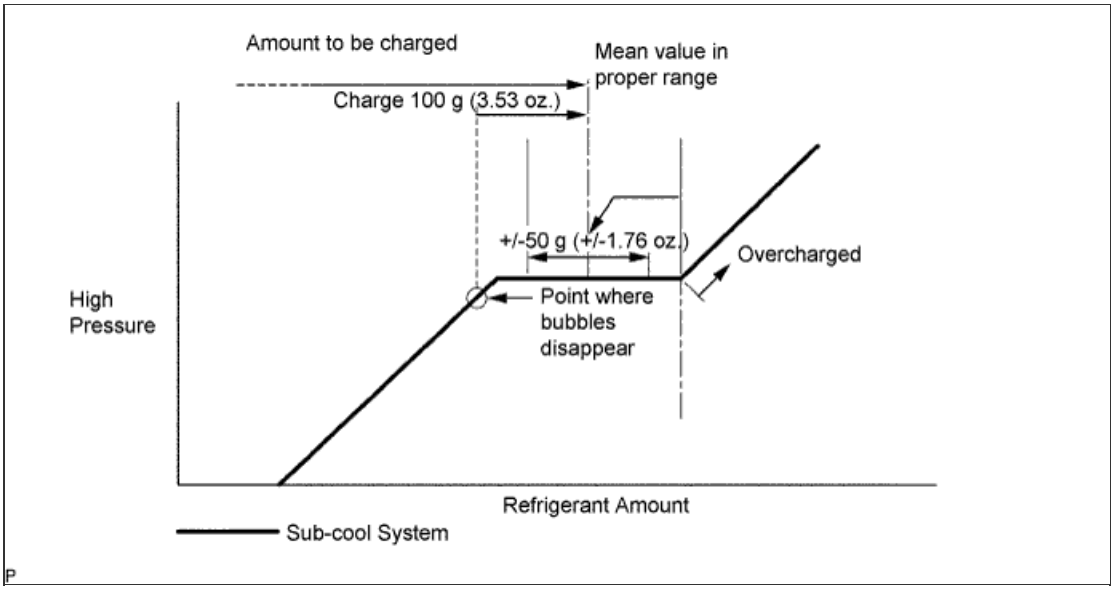
When a new belt is installed, the arrow should be within area "B". If not, the fan and generator V belt is not installed correctly.

6. INSTALL FRONT FENDER APRON SEAL LH

a. Install the seal with the 4 clips.

7. CHARGE REFRIGERANT

SST



09985-20010 (09985-02130, 09985-02150, 09985-02090, 09985-02110, 09985-02010, 09985-02050, 09985-02060, 09985-02070)

a. Perform vacuum purging using a vacuum pump.

b. Charge refrigerant HFC-134a (R134a).

Standard:

Condenser Core Thickness	Air Conditioning Type	Cool Box	Refrigerant Charging Amount
22 mm (0.866 in.)	w/o Rear Cooler	w/ Cool Box	870 +/-30 g (30.7 +/-1.1 oz.)
		w/o Cool Box	870 +/-30 g (30.7 +/-1.1 oz.)
	w/ Rear Cooler	w/ Cool Box	1010 +/-30 g (35.6 +/-1.1 oz.)
		w/o Cool Box	960 +/-30 g (33.9 +/-1.1 oz.)
16 mm (0.630 in.)	w/o Rear Cooler	w/ Cool Box	770 +/-30 g (27.2 +/-1.1 oz.)
		w/o Cool Box	770 +/-30 g (27.2 +/-1.1 oz.)
	w/ Rear Cooler	w/ Cool Box	970 +/-30 g (34.2 +/-1.1 oz.)
		w/o Cool Box	920 +/-30 g (32.5 +/-1.1 oz.)

NOTICE:

- **Do not operate the cooler compressor before charging refrigerant as the cooler compressor will not work properly without any refrigerant, and will overheat.**
- **Approximately 200 g (7.05 oz.) of refrigerant may need to be charged after bubbles disappear. The refrigerant amount should be checked by measuring its quantity, and not with the sight glass.**

8. WARM UP ENGINE

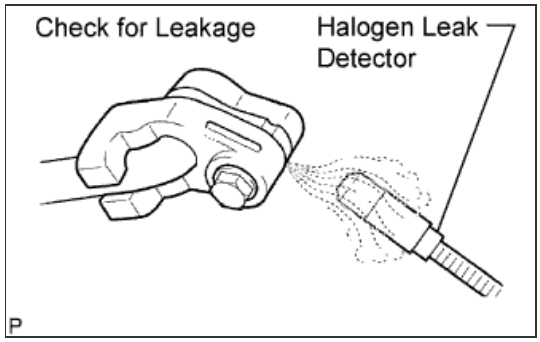
a. Warm up the engine at less than 1850 rpm for 2 minutes or more after charging the refrigerant.

NOTICE:

Be sure to warm up the compressor when turning the A/C switch is on after removing and installing the cooler refrigerant lines (including the compressor), to prevent damage to the compressor.

9. CHECK FOR REFRIGERANT GAS LEAK

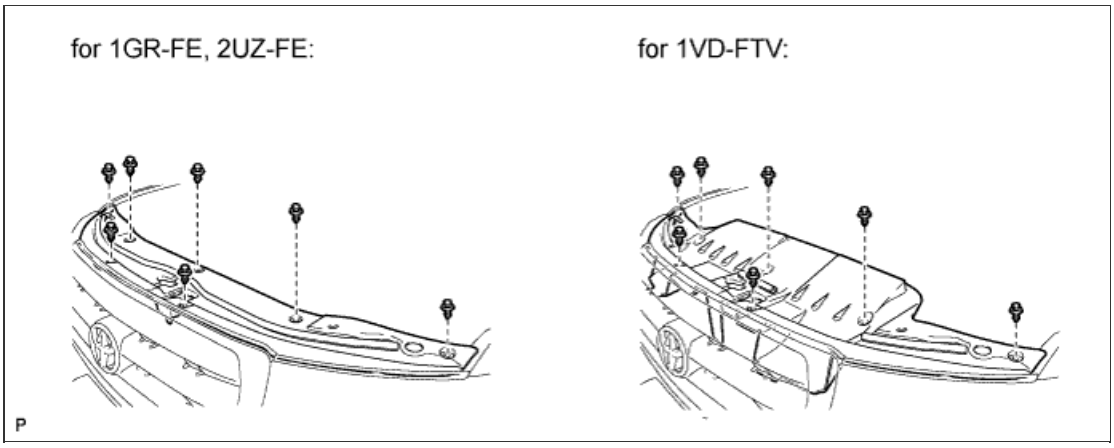
a. After recharging the refrigerant gas, check for refrigerant gas leakage using a halogen leak detector.



b. Perform the operation under these conditions

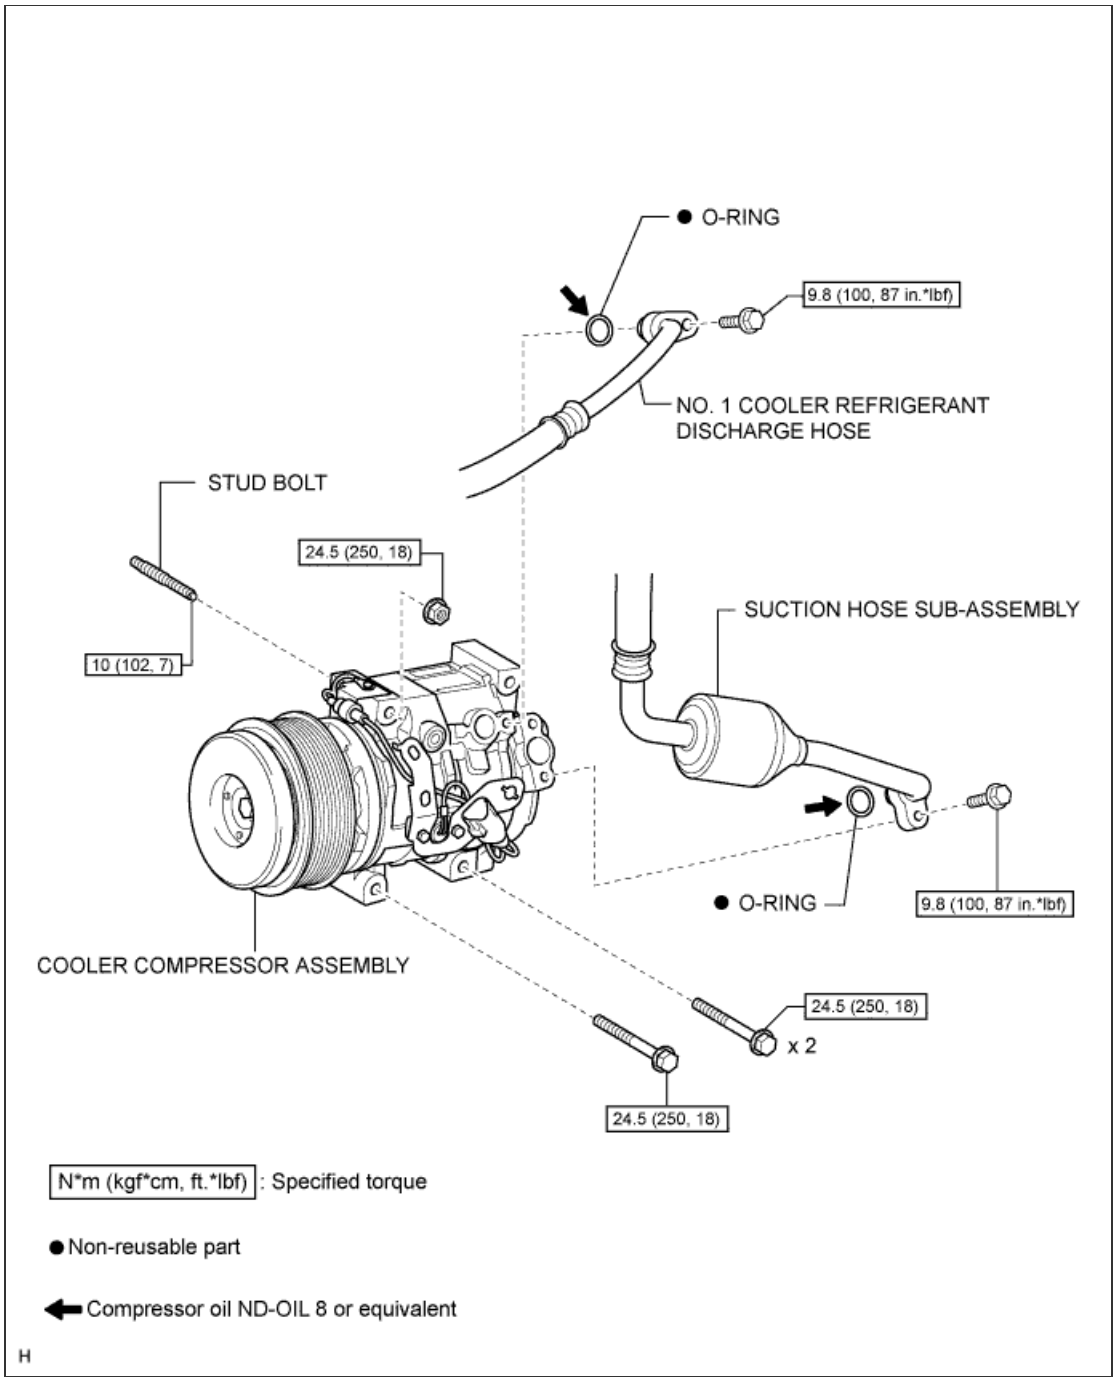
- Stop the engine.
- Secure good ventilation (the halogen leak detector may react to volatile gases other than refrigerant, such as evaporated gasoline or exhaust gas).
- Repeat the test 2 or 3 times.
- Make sure that some refrigerant remains in the refrigeration system. When compressor is off approximately 392 to 588 kPa (4.0 to 6.0 kgf/cm^2, 57 to 85 psi).

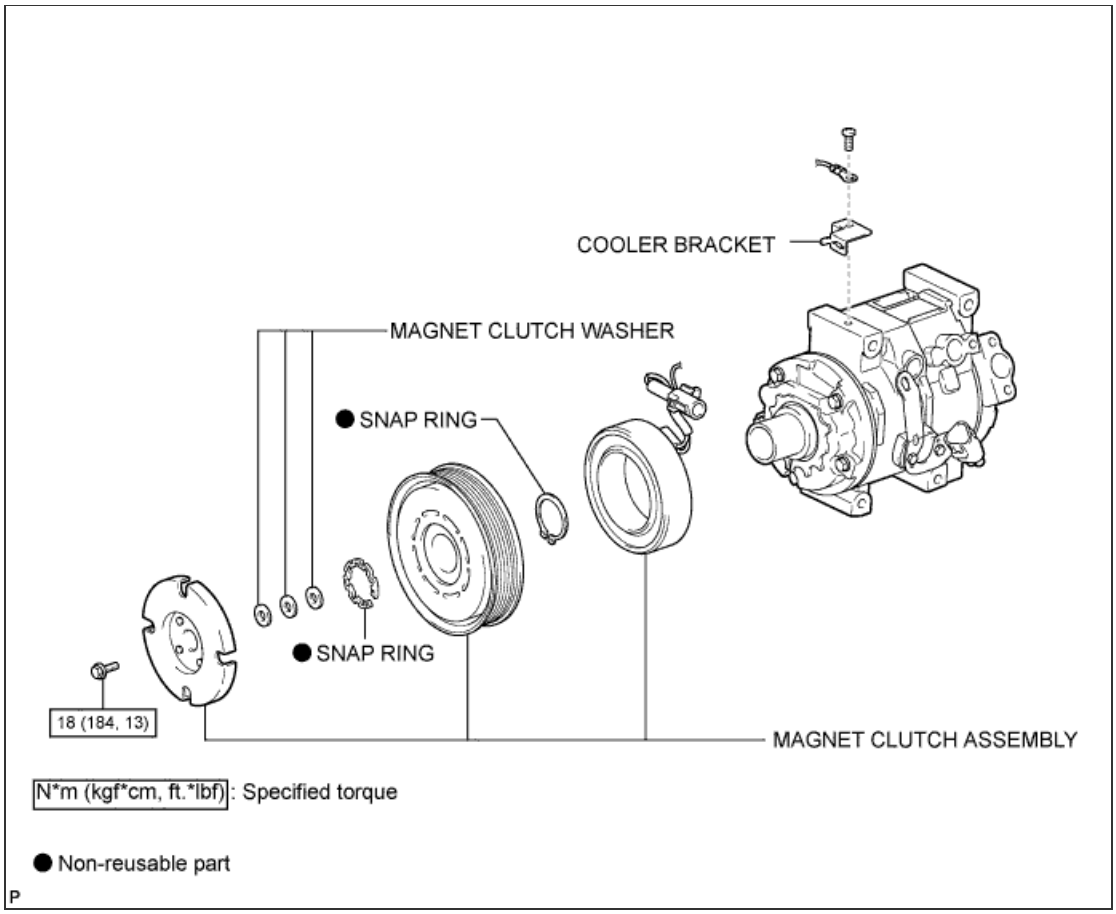
c. Using a halogen leak detector, check the refrigerant line for leakage.



d. If a gas leak is not detected on the drain hose, remove the blower motor control (blower resistor) from the cooling unit. Insert the halogen leak detector sensor into the unit and perform the test.

e. isconnect the connector and wait for approximately 20 minutes. Bring the halogen leak detector close to the pressure switch and perform the test.





10. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the radiator support seal with the 7 clips.

1. ADJUST COMPRESSOR OIL

a. When replacing the compressor and magnetic clutch with a new one, gradually discharge the refrigerant gas from the service valve, and drain the following amount of oil from the new compressor and magnetic clutch before installation.

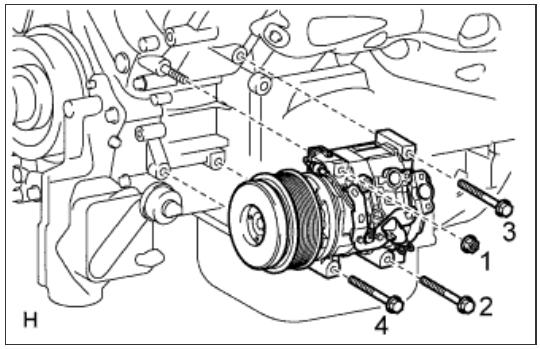
Standard:
(Oil capacity inside the new compressor and magnetic clutch: 135 + 15 cc (4.6 + 0.51 fl.oz.)) - (Remaining oil amount in the removed compressor and magnetic clutch) = (Oil amount to be removed from the new compressor when replacing)

NOTICE:

- **When checking the compressor oil level, follow the A/C system precautions.**
- **If a new compressor and magnetic clutch is installed without removing some oil remaining in the pipes of the vehicle, the oil amount will be too large. This prevents heat exchange in the refrigerant cycle and causes refrigerant failure.**
- **If the volume of oil remaining in the removed compressor and magnetic clutch is too small, check for oil leakage.**
- **Be sure to use ND-OIL 8 or equivalent compressor oil.**

2. INSTALL COOLER COMPRESSOR ASSEMBLY

a. Install the cooler compressor and stud bolt.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

b. Install the 3 bolts and nut.

Torque:
24.5 N*m{ 250 kgf*cm , 18 ft.*lbf }

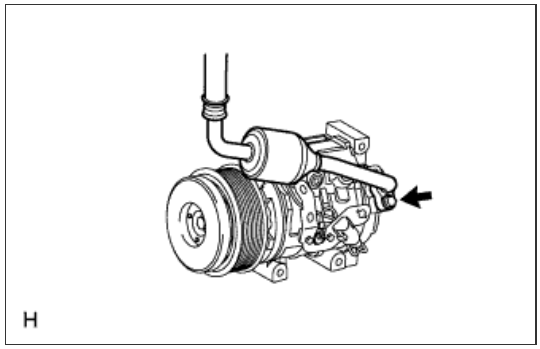
HINT:

Tighten the bolts and nut in the order shown in the illustration.

c. Connect the connector.

3. CONNECT SUCTION HOSE SUB-ASSEMBLY

a. Remove the attached vinyl tape from the suction hose.



b. Sufficiently apply compressor oil to a new O-ring and the fitting surface of the cooler compressor.

Compressor oil:
ND-OIL 8 or equivalent

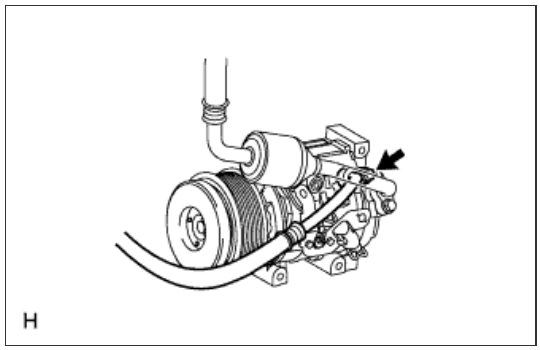
c. Install the O-ring to the suction hose.

d. Connect the suction hose to the cooler compressor with the bolt.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

4. CONNECT NO. 1 COOLER REFRIGERANT DISCHARGE HOSE

a. Remove the attached vinyl tape from the cooler refrigerant discharge hose.



b. Sufficiently apply compressor oil to a new O-ring and the fitting surface of the cooler compressor.

Compressor oil:
ND-OIL 8 or equivalent

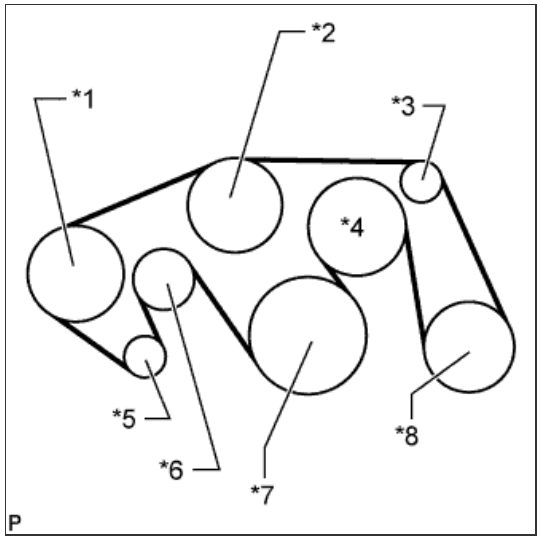
c. Install the O-ring to the discharge hose.

d. Connect the discharge hose to the cooler compressor with the bolt.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

5. INSTALL FAN & GENERATOR V BELT

a. Set the V belt onto every part.



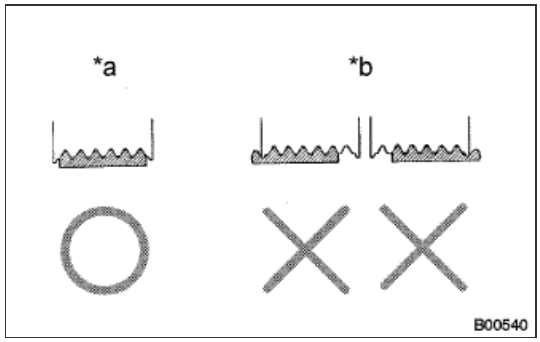
b. While turning the belt tensioner counterclockwise, remove the bar.

Text in Illustration

*1	Vane Pump
*2	Water Pump
*3	No. 1 Idler
*4	Fan
*5	Generator
*6	Belt Tensioner
*7	Crankshaft
*8	Cooler Compressor

NOTICE:

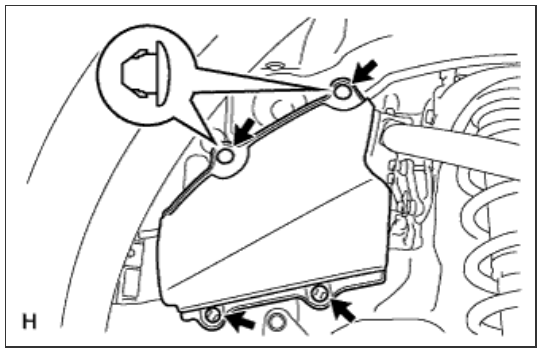
Make sure that the V belt is properly set to each pulley.



c. After installing the belt, check that it fits properly in the ribbed grooves.

Text in Illustration

*a	CORRECT
*b	INCORRECT



HINT:

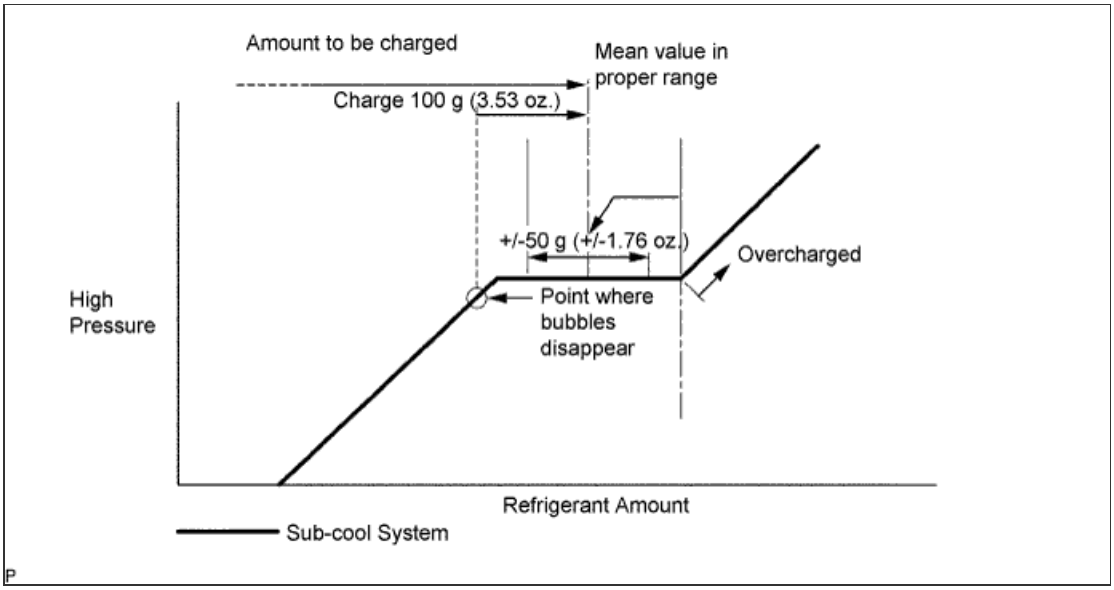
Make sure to check by hand that the belt has not slipped out of the grooves on the bottom of the pulley.

6. INSTALL FRONT FENDER APRON SEAL LH

a. Install the seal with the 4 clips.

7. CHARGE REFRIGERANT

SST



09985-20010 (09985-02130, 09985-02150, 09985-02090, 09985-02110, 09985-02010, 09985-02050, 09985-02060, 09985-02070)

a. Perform vacuum purging using a vacuum pump.

b. Charge refrigerant HFC-134a (R134a).

Standard:

Condenser Core Thickness	Air Conditioning Type	Cool Box	Refrigerant Charging Amount
22 mm (0.866 in.)	w o Rear Cooler	w Cool Box	870 + -30 g (30.7 + -1.1 oz.)
		w o Cool Box	870 + -30 g (30.7 + -1.1 oz.)
	w Rear Cooler	w Cool Box	1010 + -30 g (35.6 + -1.1 oz.)
		w o Cool Box	960 + -30 g (33.9 + -1.1 oz.)
16 mm (0.630 in.)	w o Rear Cooler	w Cool Box	770 + -30 g (27.2 + -1.1 oz.)
		w o Cool Box	770 + -30 g (27.2 + -1.1 oz.)
	w Rear Cooler	w Cool Box	970 + -30 g (34.2 + -1.1 oz.)
		w o Cool Box	920 + -30 g (32.5 + -1.1 oz.)

NOTICE:

- **Do not operate the cooler compressor before charging refrigerant as the cooler compressor will not work properly without any refrigerant, and will overheat.**
- **Approximately 200 g (7.05 oz.) of refrigerant may need to be charged after bubbles disappear. The refrigerant amount should be checked by measuring its quantity, and not with the sight glass.**

8. WARM UP ENGINE

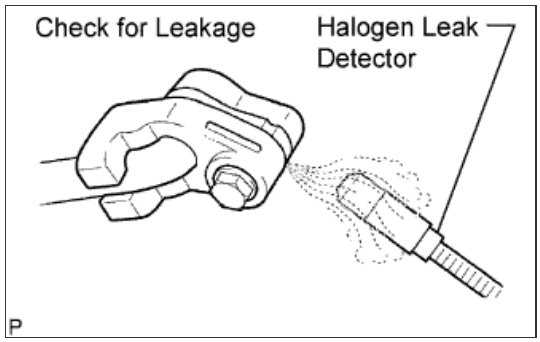
a. Warm up the engine at less than 1850 rpm for 2 minutes or more after charging the refrigerant.

NOTICE:

Be sure to warm up the compressor when turning the A C switch is on after removing and installing the cooler refrigerant lines (including the compressor), to prevent damage to the compressor.

9. CHECK FOR REFRIGERANT GAS LEAK

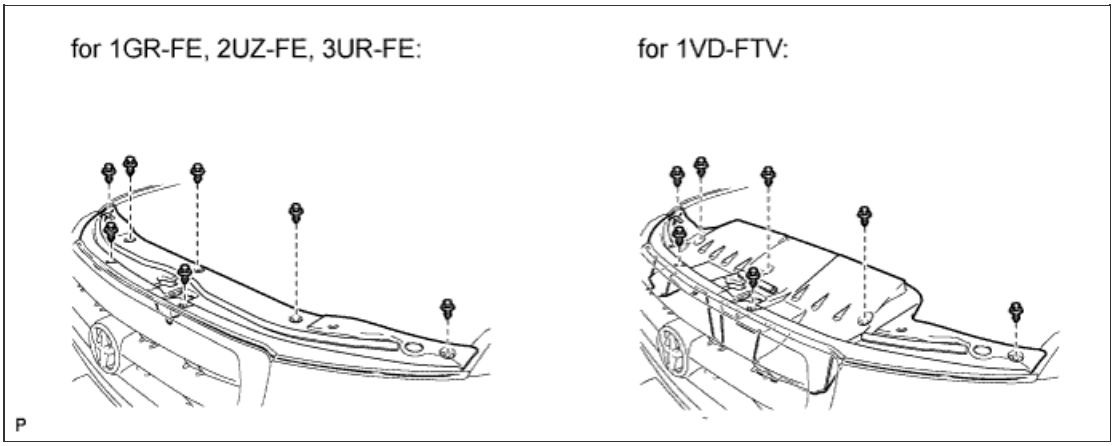
a. After recharging the refrigerant gas, check for refrigerant gas leakage using a halogen leak detector.



b. Perform the operation under these conditions:

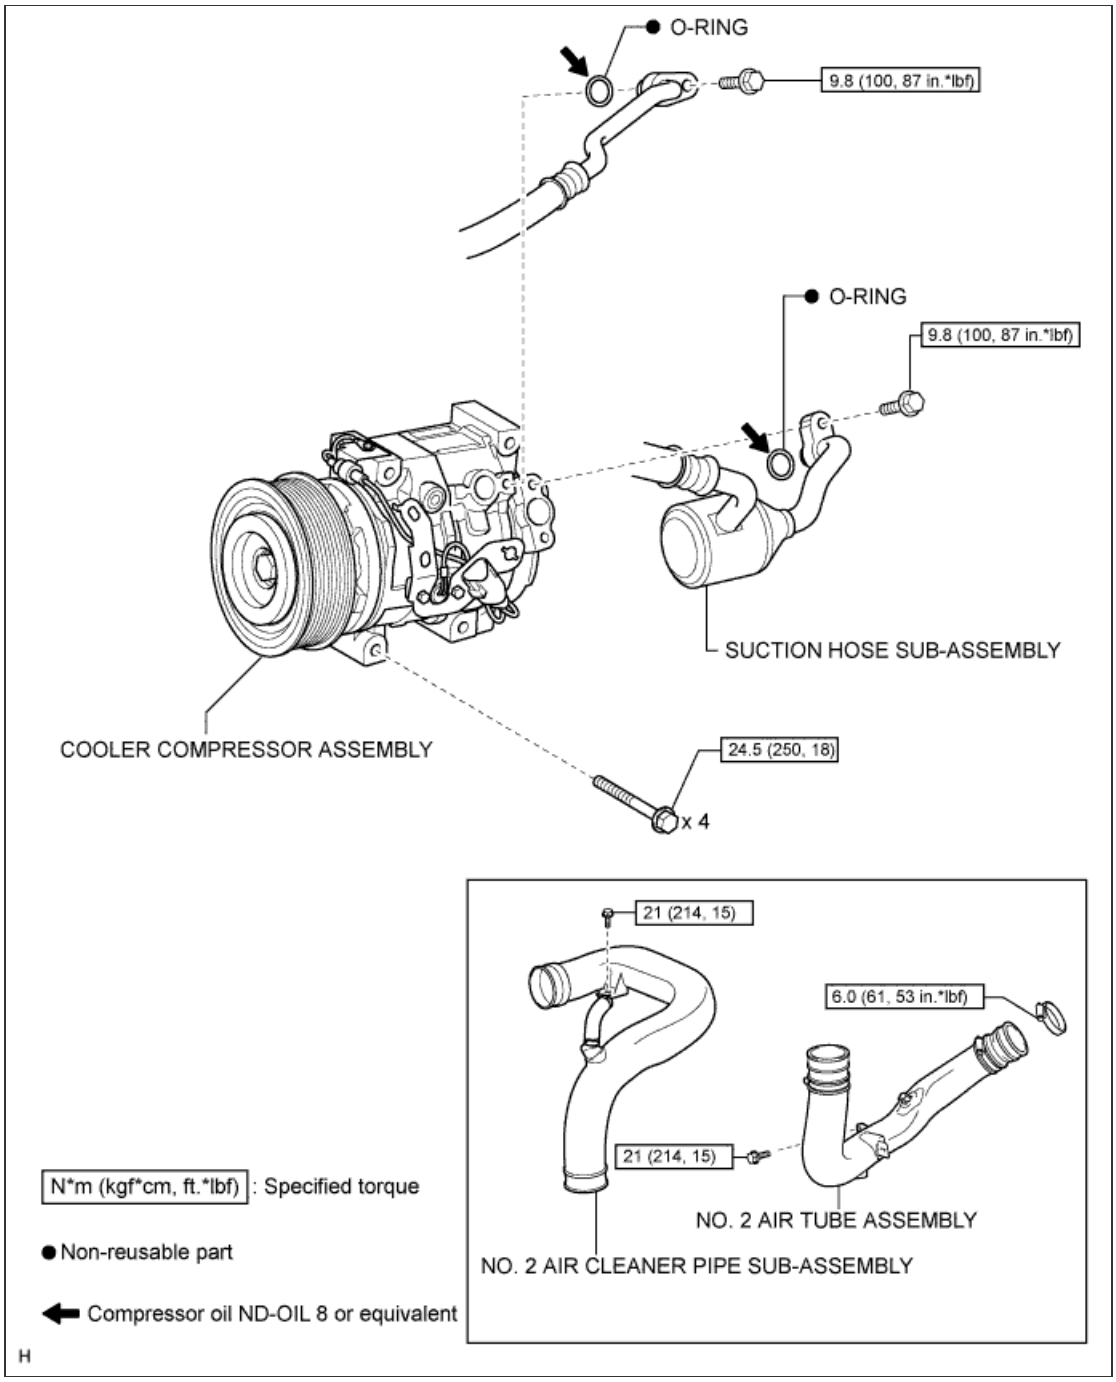
- Stop the engine.
- Secure good ventilation (the halogen leak detector may react to volatile gases other than refrigerant, such as evaporated gasoline or exhaust gas).
- Repeat the test 2 or 3 times.
- Make sure that some refrigerant remains in the refrigeration system. When compressor is off: approximately 392 to 588 kPa (4.0 to 6.0 kgf/cm^2, 57 to 85 psi).

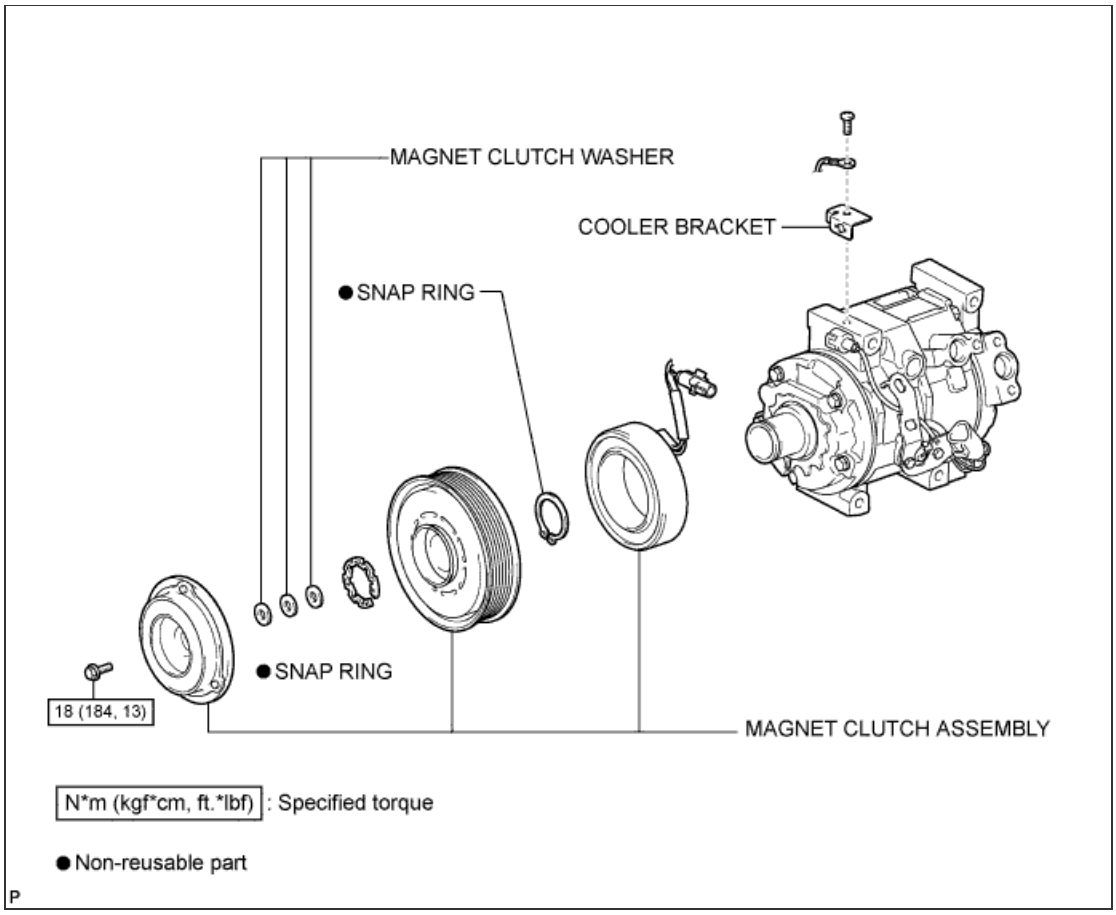
c. Using a halogen leak detector, check the refrigerant line for leakage.



d. If a gas leak is not detected on the drain hose, remove the blower motor control (blower resistor) from the cooling unit. Insert the halogen leak detector sensor into the unit and perform the test.

e. Disconnect the connector and wait for approximately 20 minutes. Bring the halogen leak detector close to the pressure switch and perform the test.





10. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the radiator support seal with the 7 clips.

P

for Preparation Click here

1. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM

a. Start the engine.

b. Turn the A/C switch on.

c. Operate the cooler compressor while the engine speed is approximately 1000 rpm for 5 to 6 minutes to circulate the refrigerant and collect the compressor oil remaining in each component into the cooler compressor.

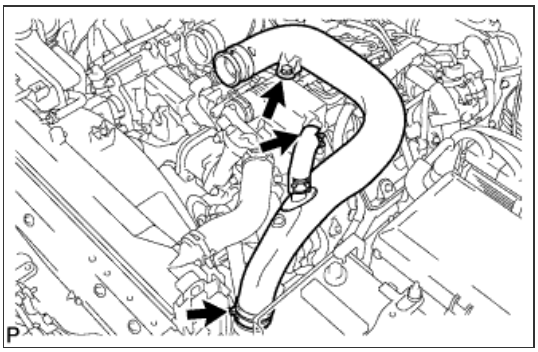
d. Stop the engine.

e. Recover the refrigerant from the A/C system using a refrigerant recovery unit.

2. REMOVE RADIATOR ASSEMBLY

a. Remove the radiator assembly (Click here).

3. REMOVE INTERCOOLER ASSEMBLY

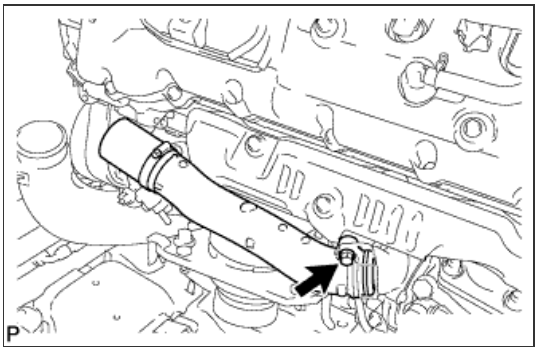


a. Remove the intercooler assembly (Click here).

4. REMOVE NO. 2 AIR CLEANER PIPE SUB-ASSEMBLY

a. Disconnect the ventilation hose from the oil separator.

b. Loosen the hose clamp.

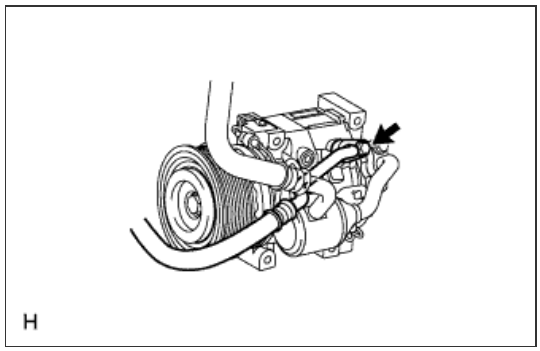


c. Remove the bolt and No. 2 air cleaner pipe.

5. REMOVE NO. 2 AIR TUBE ASSEMBLY

a. Remove the bolt and No. 2 air tube.

b. Remove the O-ring.



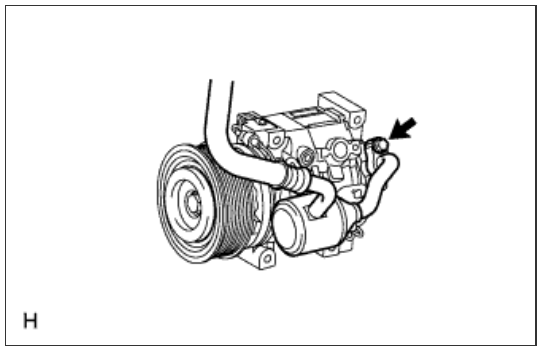
6. DISCONNECT NO. 1 COOLER REFRIGERANT DISCHARGE HOSE

a. Remove the bolt and disconnect the discharge hose from the cooler compressor.

b. Remove the O-ring from the discharge hose.

NOTICE:

Seal the openings of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering them.

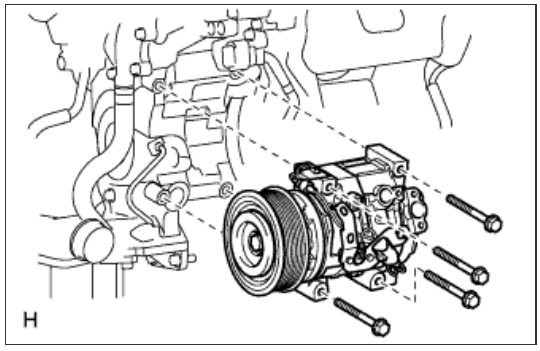


7. DISCONNECT SUCTION HOSE SUB-ASSEMBLY

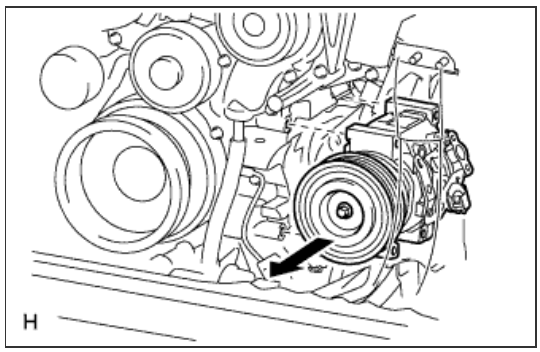
a. Remove the bolt and disconnect the suction hose from the cooler compressor.

b. Remove the O-ring from the suction hose.

NOTICE:



Seal the openings of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering them.

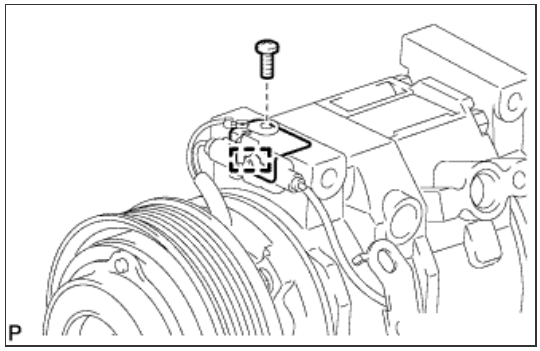


8. REMOVE COOLER COMPRESSOR ASSEMBLY

a. Disconnect the connector.

b. Remove the 4 bolts.

c. Remove the cooler compressor as shown in the illustration.



for Preparation Click here

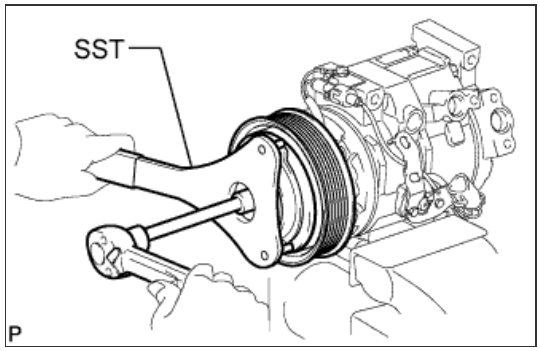
1. REMOVE COOLER BRACKET

a. Detach the clamp.

b. Remove the screw and the cooler bracket.

2. REMOVE MAGNET CLUTCH ASSEMBLY

SST
09985-00260



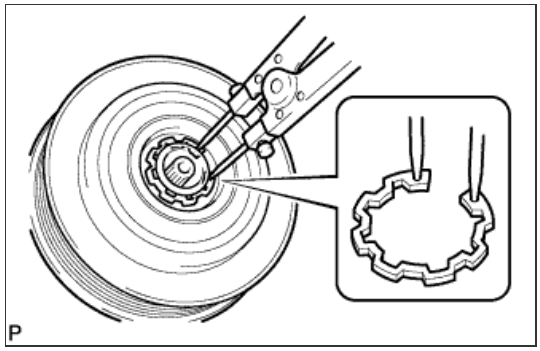
a. Clamp the cooler compressor in a vise.

b. Using SST, hold the magnet clutch hub.

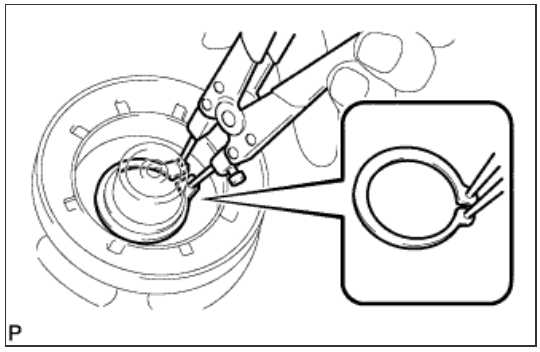
c. Remove the bolt, magnet clutch hub and magnet clutch washer(s).

HINT:

There is no set number of magnet clutch washers since they are used for adjusting.



d. Using a snap ring expander, remove the snap ring and the magnet clutch rotor.



NOTICE:

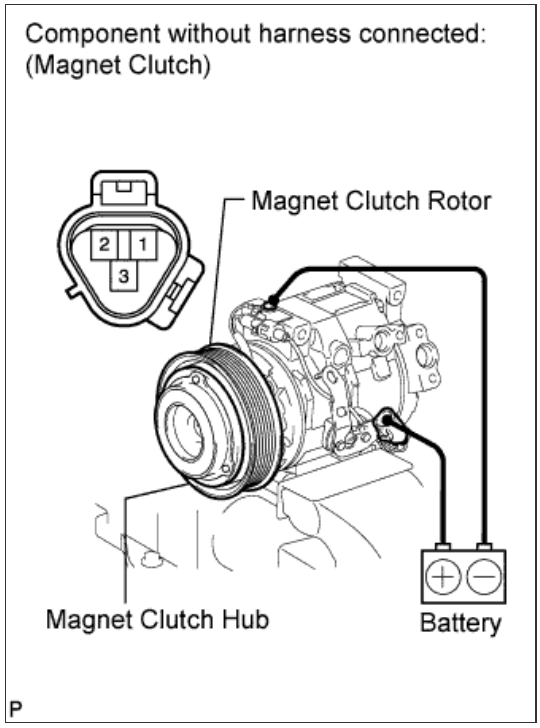
Do not damage the seal cover of the bearing when removing the snap ring.

e. Disconnect the connector.

f. Using a snap ring expander, remove the snap ring and magnet clutch stator.

for Preparation Click here

1. INSPECT MAGNET CLUTCH ASSEMBLY

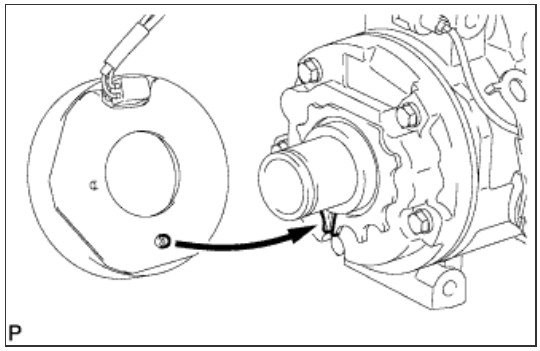


a. Check the magnet clutch operation.

i. Confirm that the magnet clutch hub and magnet clutch rotor lock when the battery positive lead is connected to terminal 3 of the magnet clutch, and the negative lead is connected to the ground wire.
If the operation is not as specified, replace the magnet clutch assembly.

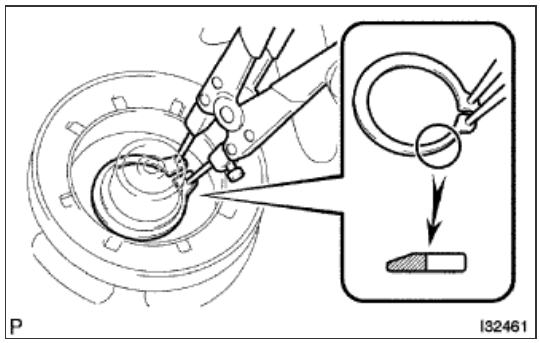
b. Measure the resistance.

c. Measure the resistance between terminals 1 and 2.



Standard resistance:
65 to 125 Ω at 20°C (68°F)
If the resistance is not as specified, replace the cooler compressor assembly.

for Preparation Click here



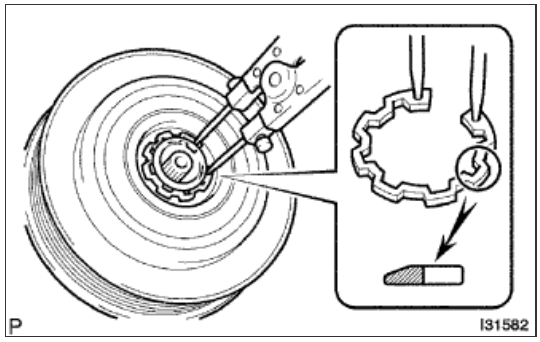
1. INSTALL MAGNET CLUTCH ASSEMBLY

a. Install the magnet clutch stator with the parts shown in the illustration matched.

b. Using a snap ring expander, install a new snap ring with the chamfered side facing up.

c. Connect the connector.

d. Using a snap ring expander, install the magnet clutch rotor and a new snap ring with the chamfered side facing up.



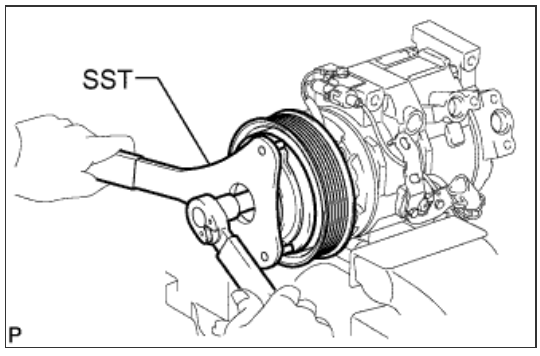
NOTICE:

Do not damage the seal cover of the bearing when installing the snap ring.

e. Install the compressor washer(s) and magnet clutch hub.

NOTICE:

Do not change the combination of the compressor washer(s) used before disassembly.

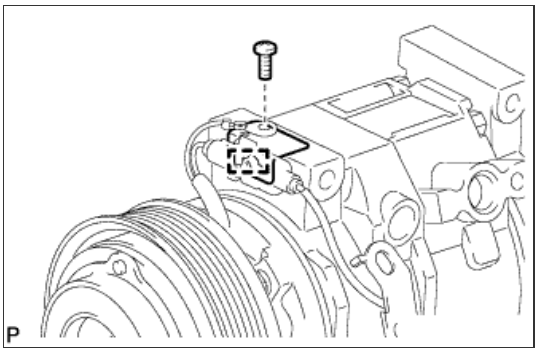


f. Using SST, hold the magnet clutch hub and install the bolt.

SST
09985-00260

Torque:
18 N 18 kgf cm , 13 ft. lbf }

NOTICE:



Make sure that there is no foreign matter or oil on the compressor shaft, bolt, and clutch hub.

2. INSTALL COOLER BRACKET

a. Install the cooler bracket with the screw.

b. Attach the clamp.

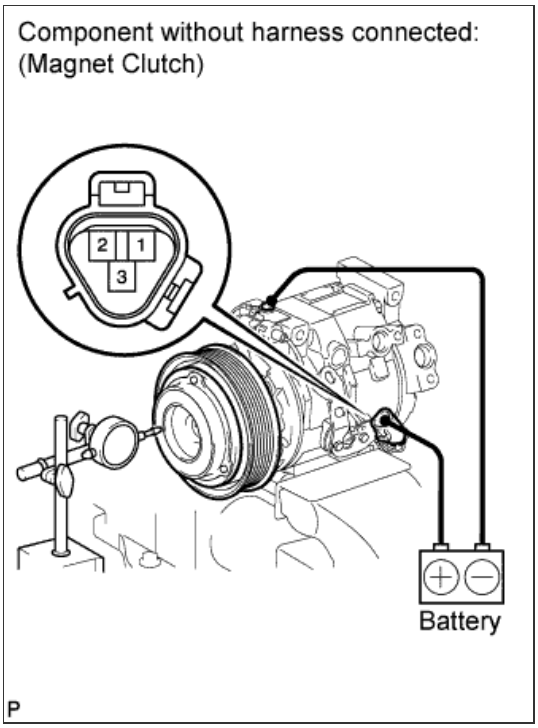
3. INSPECT MAGNET CLUTCH CLEARANCE

a. Clamp the cooler compressor in a vise.

b. Set the dial indicator to the magnet clutch hub.

c. Connect the battery positive lead to terminal 3 of the magnet clutch connector and the negative lead to the ground wire. Turn the magnet clutch on and off and measure the clearance.

Standard clearance:
0. 5 to 0.60 mm (0.01 to 0.02 in.)



If the measured value is not within the standard clearance, remove the magnet clutch hub and adjust the clearance using compressor washers to obtain the standard clearance.

Compressor washer thickness:
0.1 mm (0.00 in.)
0. mm (0.012 in.)
0.5 mm (0.020 in.)

NOTICE:

Adjustment should be performed with 3 or fewer magnet clutch washers.

d. Remove the cooler compressor from the vise.

for Preparation Click here

1. ADJUST COMPRESSOR OIL

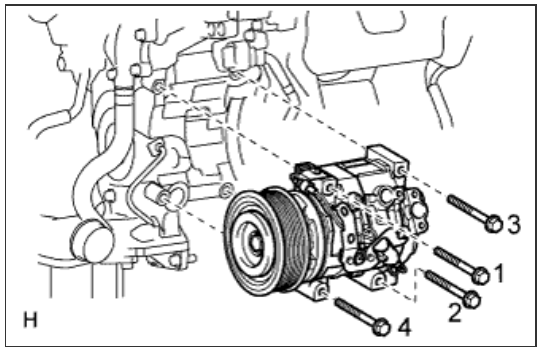
a. When replacing the compressor and magnetic clutch with a new one, gradually discharge the refrigerant gas from the service valve, and drain the following amount of oil from the new compressor and magnetic clutch before installation.

Standard:
VDJ200L-GNMNZV, GNTNZV, GPMNZV:
(Oil capacity inside the new compressor and magnetic clutch: 140 + 15 cc (4.7 + 0.51 fl.oz.)) - (Remaining oil amount in the removed compressor and magnetic clutch) = (Oil amount to be removed from the new compressor when replacing)
Except VDJ200L-GNMNZV, GNTNZV, GPMNZV:
(Oil capacity inside the new compressor and magnetic clutch: 135 + 15 cc (4.6 + 0.51 fl.oz.)) - (Remaining oil amount in the removed compressor and magnetic clutch) = (Oil amount to be removed from the new compressor when replacing)

NOTICE:

- **When checking the compressor oil level, follow the A/C system precautions.**
- **If a new compressor and magnetic clutch is installed without removing some oil remaining in the pipes of the vehicle, the oil amount will be too large. This prevents heat exchange in the refrigerant cycle and causes refrigerant failure.**
- **If the volume of oil remaining in the removed compressor and magnetic clutch is too small, check for oil leakage.**
- **Be sure to use ND-OIL 8 or equivalent for compressor oil.**

2. INSTALL COOLER COMPRESSOR ASSEMBLY



a. Install the cooler compressor with the 4 bolts.

Torque:
24.5 N*m{ 250 kgf*cm , 18 ft.*lbf }

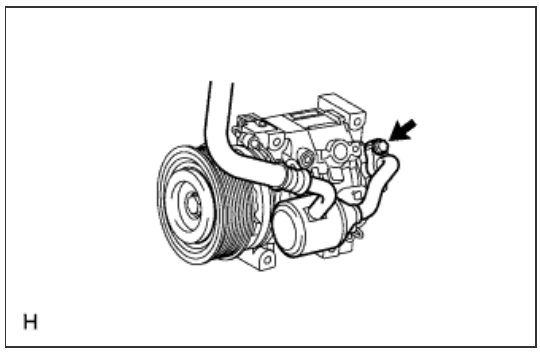
HINT:

Tighten the bolts in the order shown in the illustration.

b. Connect the connector.

3. CONNECT SUCTION HOSE SUB-ASSEMBLY

a. Remove the attached vinyl tape from the cooler refrigerant suction hose.



b. Sufficiently apply compressor oil to a new O-ring and the fitting surface of the cooler compressor.

Compressor oil:
ND-OIL 8 or equivalent

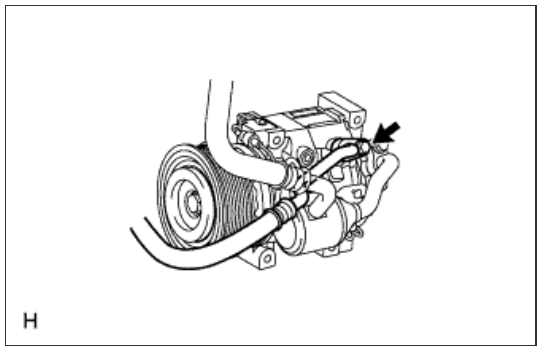
c. Install the O-ring to the suction hose.

d. Connect the suction hose to the cooler compressor with the bolt.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

4. CONNECT NO. 1 COOLER REFRIGERANT DISCHARGE HOSE

a. Remove the attached vinyl tape from the discharge hose.



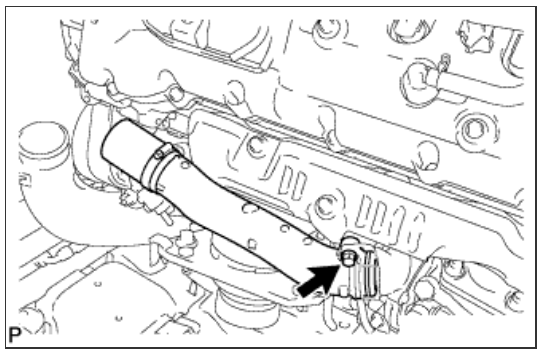
.Sufficiently apply compressor oil to a new O-ring and the fitting surface of the cooler compressor.

Compressor oil:
ND-OIL 8 or e ivalent

c. Install the O-ring to the discharge hose.

d. Connect the discharge hose to the cooler compressor with the bolt.

Tor e:
. N m 100 kgf cm , 87 in. l f



5. INSTALL NO. 2 AIR TU EASSEM L

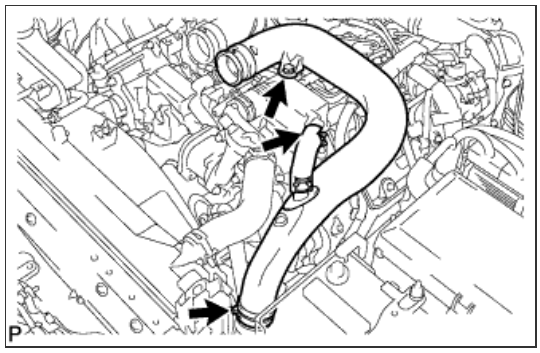
a. Apply a light coat of washer fluid to a new O-ring, and install it to the No. 2 air tube.

.Install the No. 2 air tube with the bolt.

Tor ue:
21 N m 214 kgf cm , 15 ft. l f

.NSTALL NO. 2 AIR CLEANER PIPE SU ASSEM L

a. Connect the No. 2 air cleaner pipe to the No. 2 intake air connector pipe.



.Connect the ventilation hose to the oil separator.

c. Install the pipe with the bolt.

Tor ue:
21 N m 214 kgf cm , 15 ft. l f

d. Tighten the hose clamp.

Tor ue:
6.3 N m 64 kgf cm , 56 in. l f

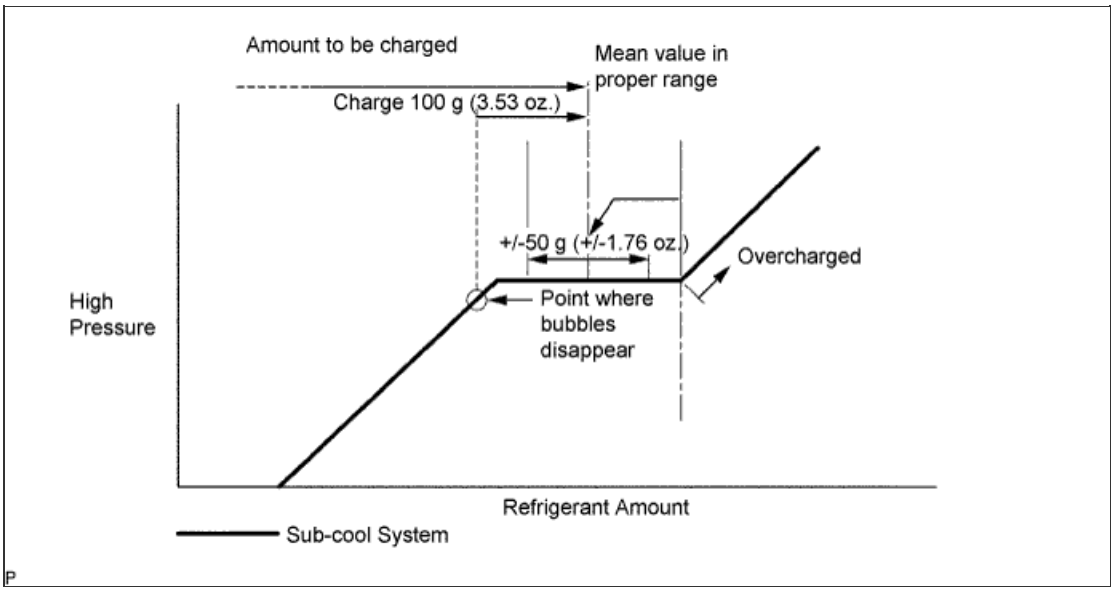
.NSTALL INTERCOOLER ASSEM L

a. Install the intercooler assembly (Click here).

8. INSTALL RADIATOR ASSEM L

a. Install the radiator assembly (Click here).

. C ARGE REFRIGERANT



SST
0 5-20010 (0 5-021 0, 0 5-02150, 0 5-020 0, 0 5-02110, 0 5-02010, 0 5-02050, 0 5-02060, 0 5-02070)

a. Perform vacuum purging using a vacuum pump.

.Charge refrigerant HFC-134a (R134a).

Standard:

Condenser Core Thickness	Air Conditioning Type	Cool Box	Refrigerant Charging Amount
22 mm (0.866 in.)	w/o Rear Cooler	w/ Cool Box	870 +/-30 g (30.7 +/-1.1 oz.)
		w/o Cool Box	870 +/-30 g (30.7 +/-1.1 oz.)
	w/ Rear Cooler	w/ Cool Box	1010 +/-30 g (35.6 +/-1.1 oz.)
		w/o Cool Box	960 +/-30 g (33.9 +/-1.1 oz.)
16 mm (0.630 in.)	w/o Rear Cooler	w/ Cool Box	770 +/-30 g (27.2 +/-1.1 oz.)
		w/o Cool Box	770 +/-30 g (27.2 +/-1.1 oz.)
	w/ Rear Cooler	w/ Cool Box	970 +/-30 g (34.2 +/-1.1 oz.)
		w/o Cool Box	920 +/-30 g (32.5 +/-1.1 oz.)

NOTICE:

- **Do not operate the cooler compressor efore charging refrigerant as the cooler compressor will not work properly without any refrigerant, and will overheat.**
- **Approximately 200 g (7.05 oz.) of refrigerant may need to e charged after u es disappear. The refrigerant amount should e checked y measuring its uantity, and not with the sight glass.**

10. WARM UP ENGINE

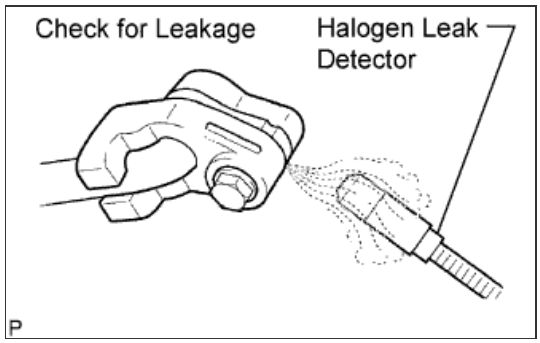
a. Warm up the engine at less than 1850 rpm for 2 minutes or more after charging the refrigerant.

NOTICE:

Be sure to warm up the compressor when turning the A/C switch is on after removing and installing the cooler refrigerant lines (including the compressor), to prevent damage to the compressor.

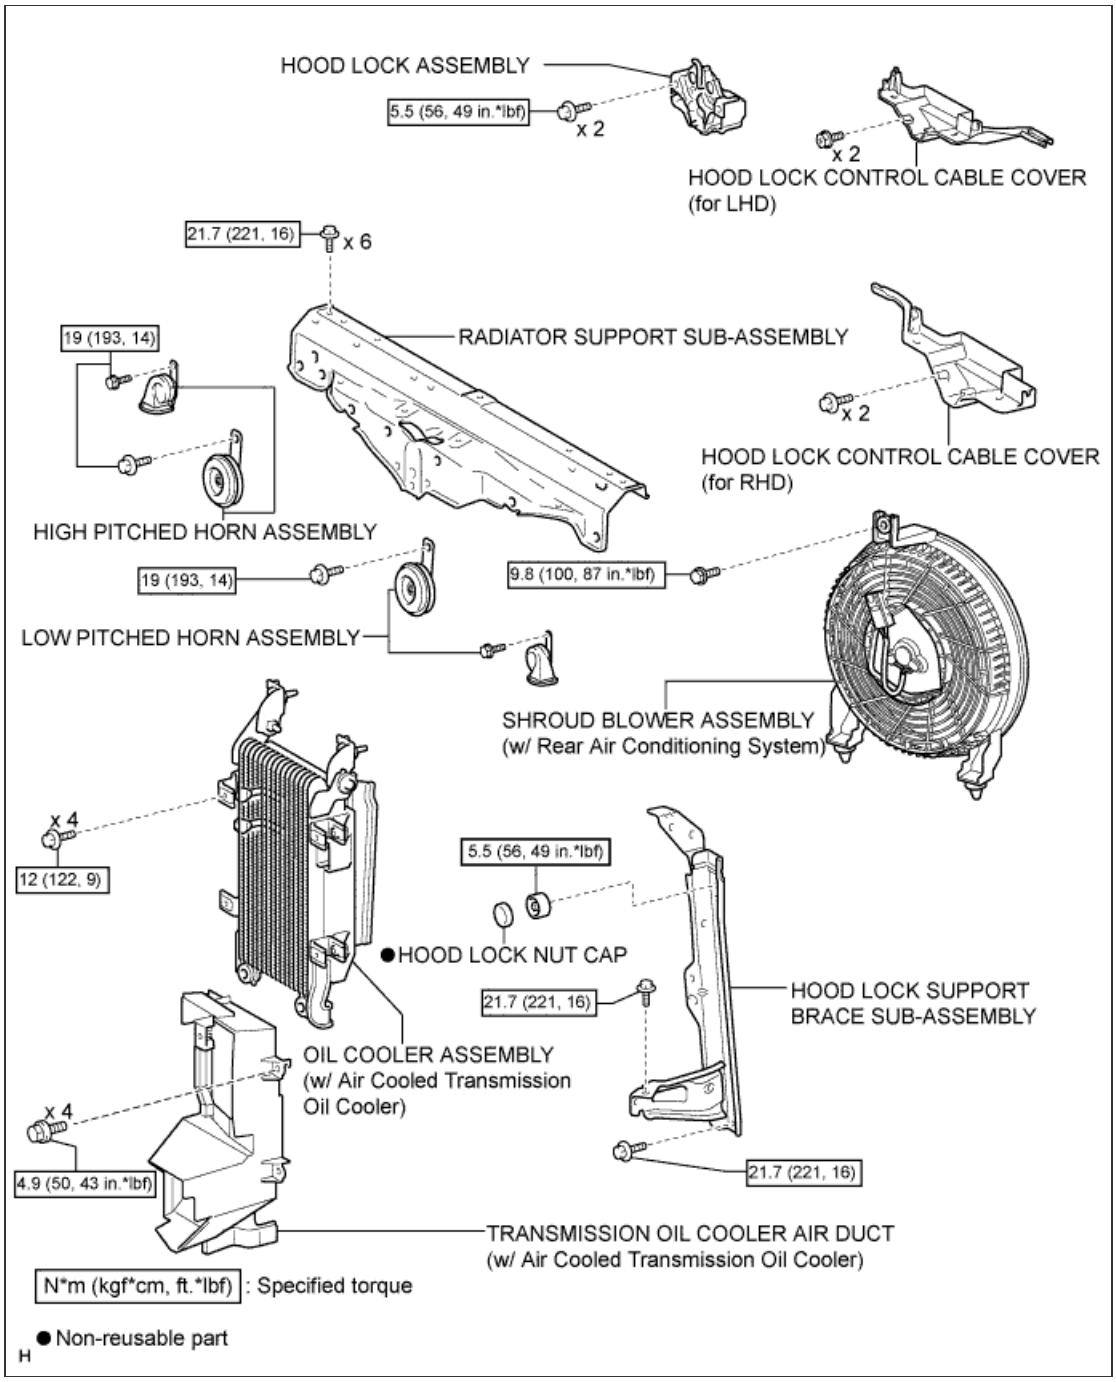
11. C EC FOR REFRIGERANT GAS LEAK

a. After recharging the refrigerant gas, check for refrigerant gas leakage using a halogen leak detector.

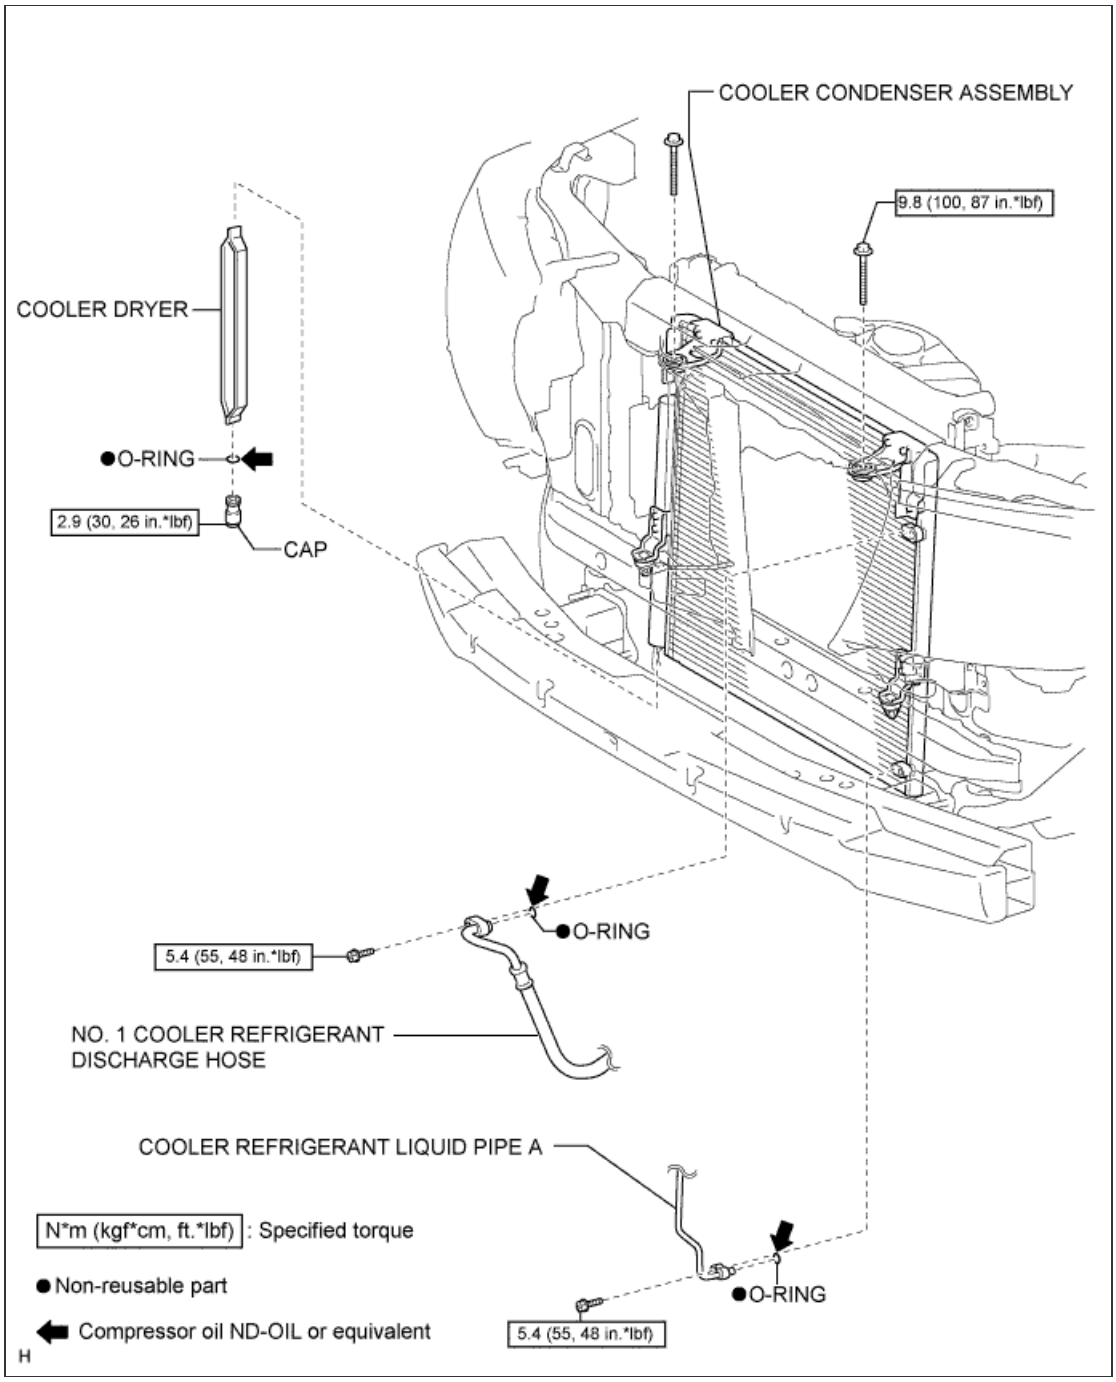


.Perform the operation under these conditions:

- Stop the engine.
- Secure good ventilation (the halogen leak detector may react to volatile gases other than refrigerant, such as evaporated gasoline or exhaust gas).
- Repeat the test 2 or 3 times.
- Make sure that some refrigerant remains in the refrigeration system. When compressor is off: approximately 392 to 588 kPa (4.0 to 6.0 kgf/cm^2, 57 to 85 psi).



c. Using a halogen leak detector, check the refrigerant line for leakage.



d. If a gas leak is not detected on the drain hose, remove the blower motor control (blower resistor) from the cooling unit. Insert the halogen leak detector sensor into the unit and perform the test.

e. Disconnect the connector and wait for approximately 20 minutes. Bring the halogen leak detector close to the pressure switch and perform the test.

1. INSPECT COOLER CONDENSER ASSEMBLY

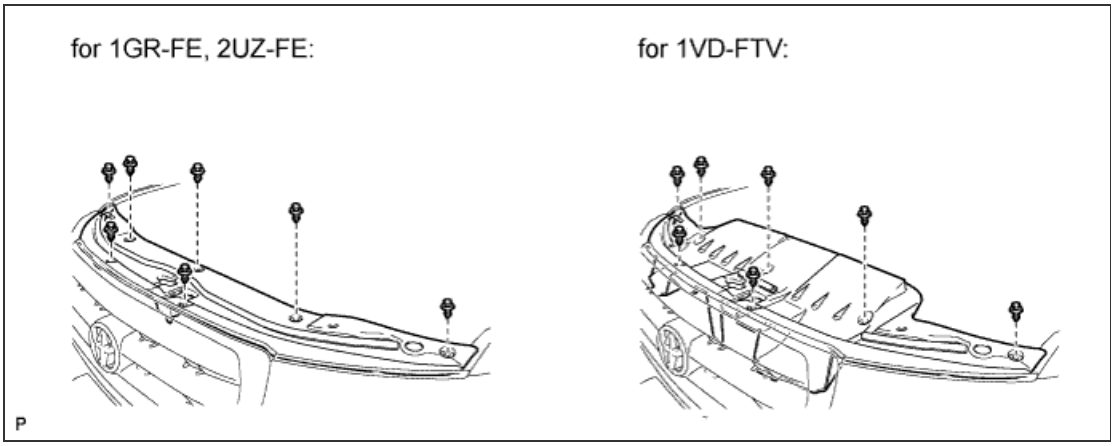
a. If the fins of the cooler condenser are dirty, clean them with water. Dry the fins with compressed air.

NOTICE:

Do not damage the fins of the condenser.

b. If a fin of the cooler condenser is bent, straighten it using a screwdriver or pliers.

2. CHECK CONDENSER FOR LEAKAGE OF REFRIGERANT



a. Using a halogen leak detector, check the pipe joints for gas leakage.

b. If gas leakage is detected in a joint, check the torque of the joint.

for Preparation Click here

1. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 7 clips and radiator support seal.

2. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM

a. Start the engine.

b. Turn the A/C switch on.

c. Operate the cooler compressor while the engine speed is approximately 1000 rpm for 5 to 6 minutes to circulate the refrigerant and collect the compressor oil remaining in each component into the cooler compressor.

d. Stop the engine.

e. Recover the refrigerant from the A/C system using a refrigerant recovery unit.

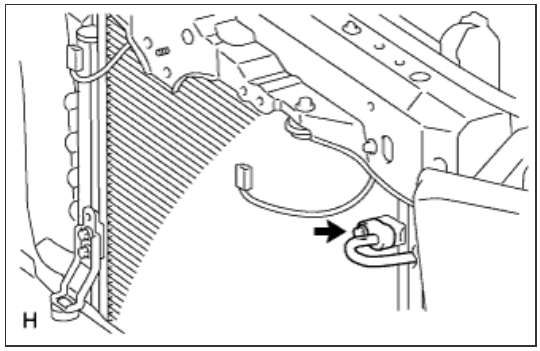
3. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).



4. REMOVE FRONT BUMPER COVER

a. for Standard:
Remove the front bumper cover (Click here).

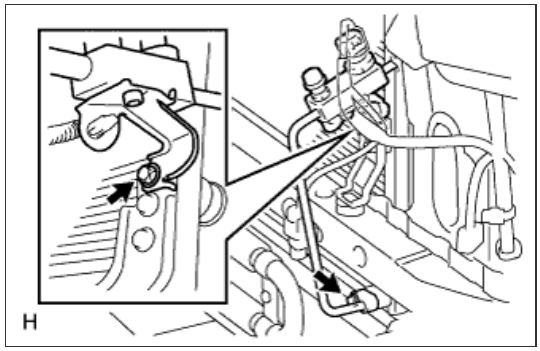
b. w/ Winch:
Remove the front bumper cover (Click here).

5. DISCONNECT NO. 1 COOLER REFRIGERANT DISCHARGE HOSE

a. Remove the bolt and disconnect the discharge hose from the cooler condenser.

NOTICE:

- **When removing the bolt, do not allow any tools to contact the pipe.**
- **When removing the bolt, hold a part of the pipe near the connector.**



b. Remove O-ring from the discharge hose.

NOTICE:

Seal the openings of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering them.

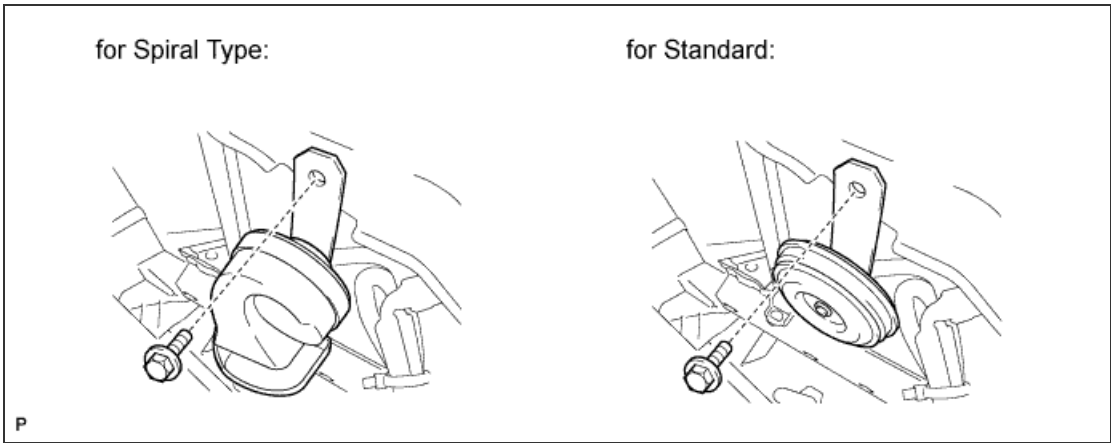
6. DISCONNECT COOLER REFRIGERANT LIQUID PIPE A

a. Remove the 2 bolts and disconnect the liquid pipe A from the cooler condenser.

NOTICE:

- **When removing the bolt, do not allow any tools to contact the pipe.**
- **When removing the bolt, hold a part of the pipe near the connector.**

b. Remove O-ring from the liquid pipe A.

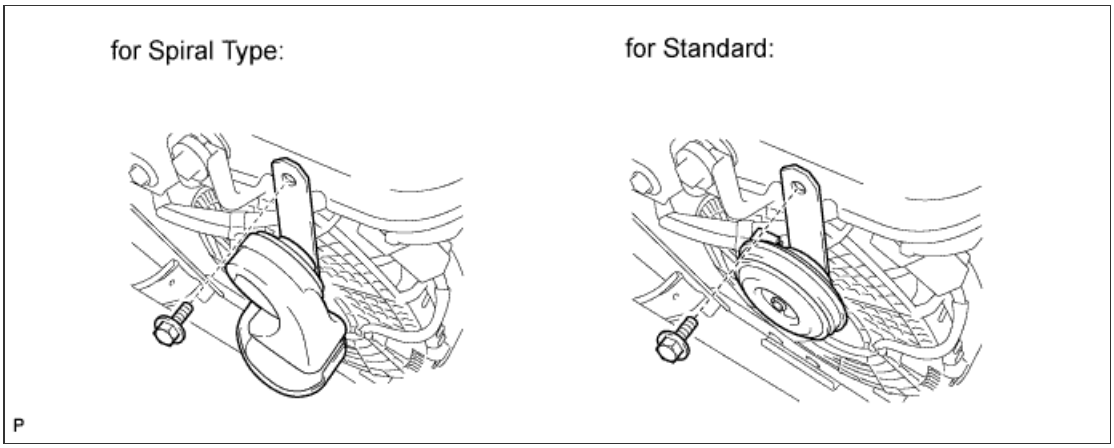


NOTICE:

Seal the openings of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering them.

7. REMOVE HIGH PITCHED HORN ASSEMBLY

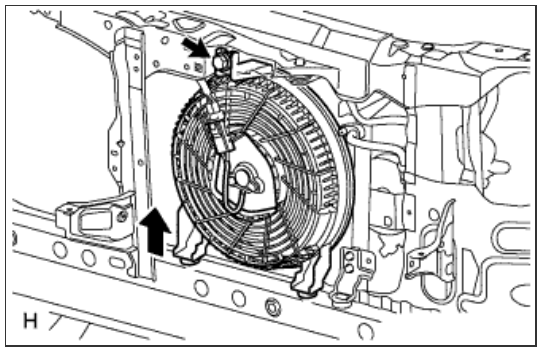
a. Remove the bolt and horn.



b. Disconnect the horn connector.

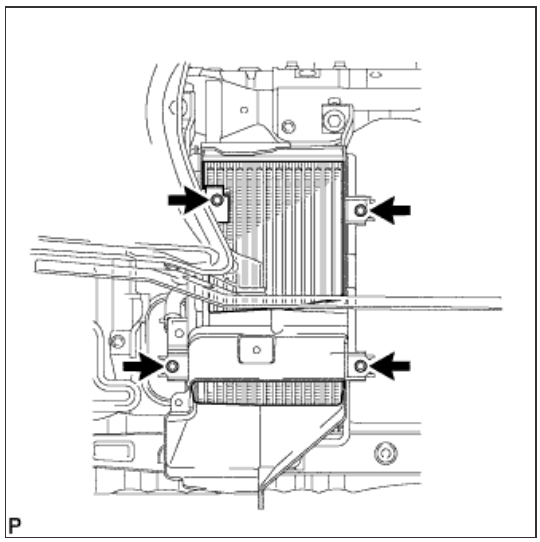
8. REMOVE LOW PITCHED HORN ASSEMBLY

a. Remove the bolt and horn.



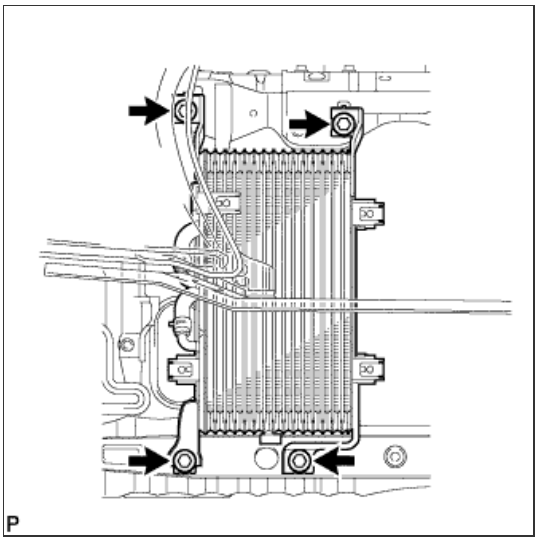
b. Disconnect the horn connector.

9. REMOVE SHROUD BLOWER ASSEMBLY (w/ Rear Air Conditioning System)



a. Disconnect the connector.

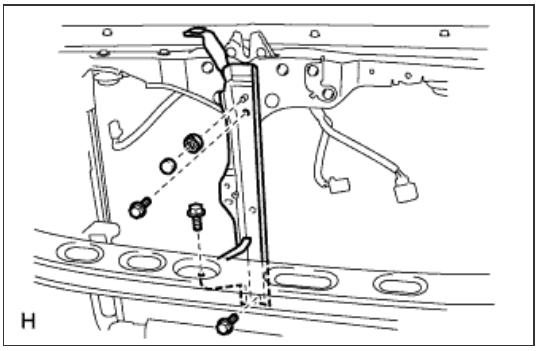
b. Remove the bolt and shroud blower as shown in the illustration.



10. REMOVE TRANSMISSION OIL COOLER AIR DUCT (w/ Air Cooled Transmission Oil Cooler)

a. Remove the 4 bolts and transmission oil cooler air duct.

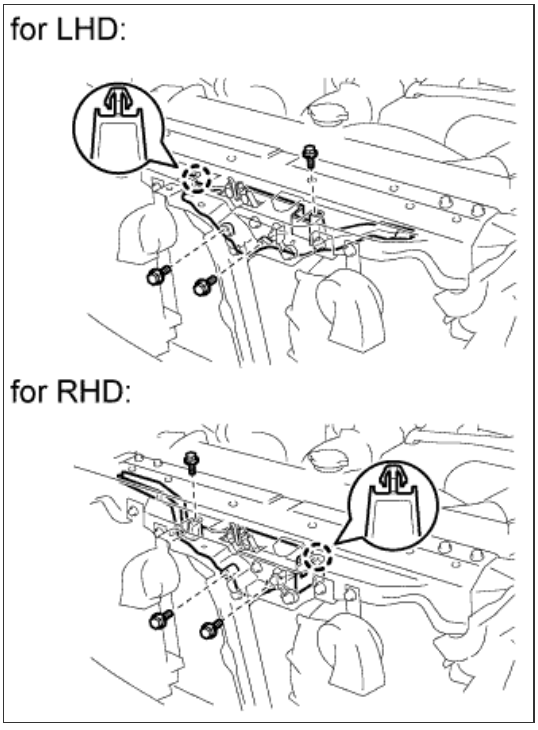
11. REMOVE OIL COOLER ASSEMBLY (w/ Air Cooled Transmission Oil Cooler)



a. Remove the 4 bolts and oil cooler.

12. REMOVE HOOD LOCK SUPPORT BRACE SUB-ASSEMBLY

a. Remove the hood lock nut cap.

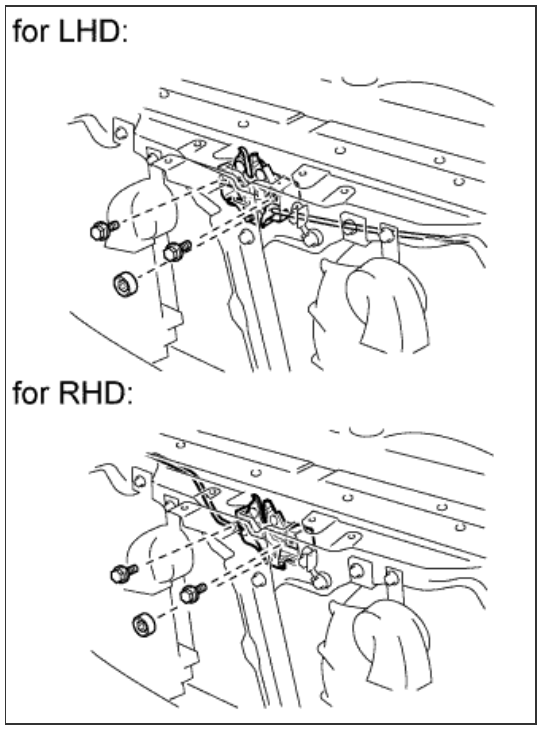


b. Remove the 3 bolts, nut and brace.

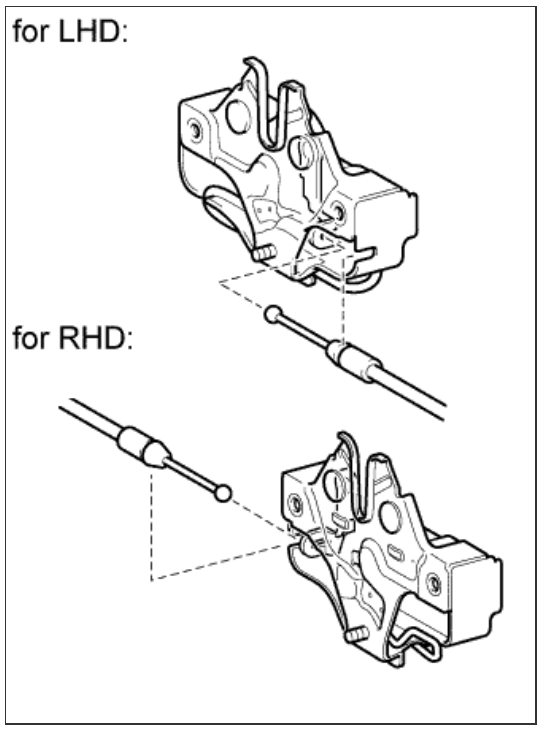
13. REMOVE HOOD LOCK CONTROL CABLE COVER

a. Remove the 3 screws.

b. Detach the claw and remove the cable cover.



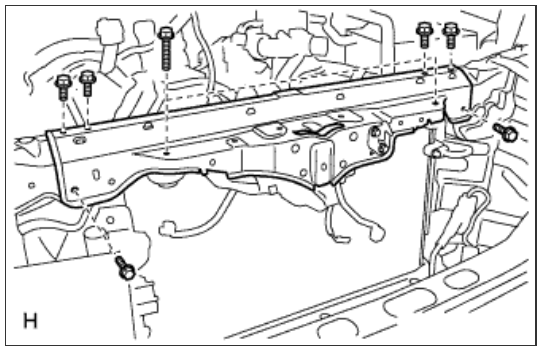
14. REMOVE HOOD LOCK ASSEMBLY



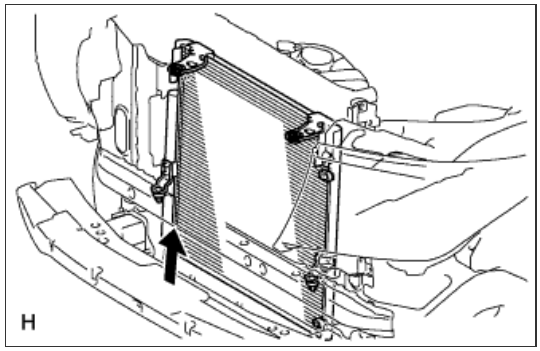
a. Remove the 2 bolts and nut.

b. Remove the hood lock.

c. Disconnect the connector.

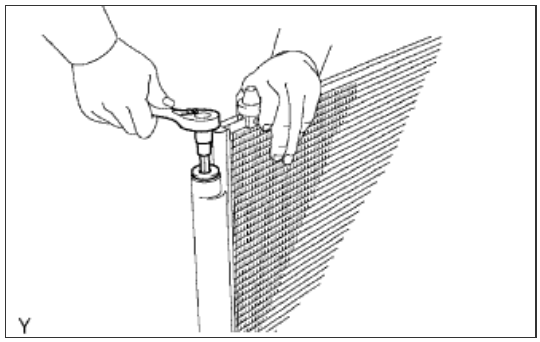


d. Disconnect the hood lock control cable.



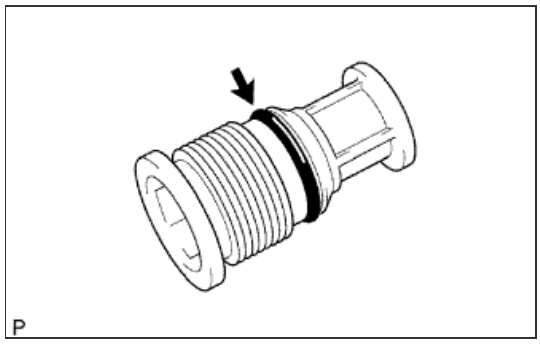
15. REMOVE RADIATOR SUPPORT SUB-ASSEMBLY

a. Remove the 8 bolts and radiator support.

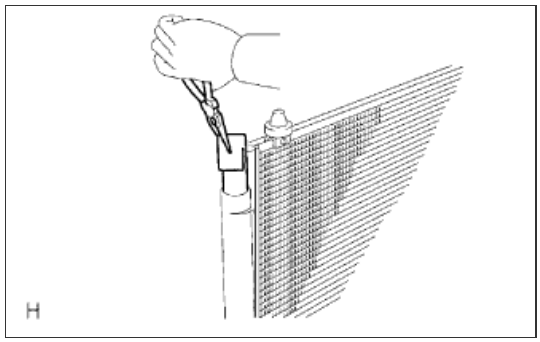


16. REMOVE COOLER CONDENSER ASSEMBLY

a. Remove the cooler condenser as shown in the illustration.

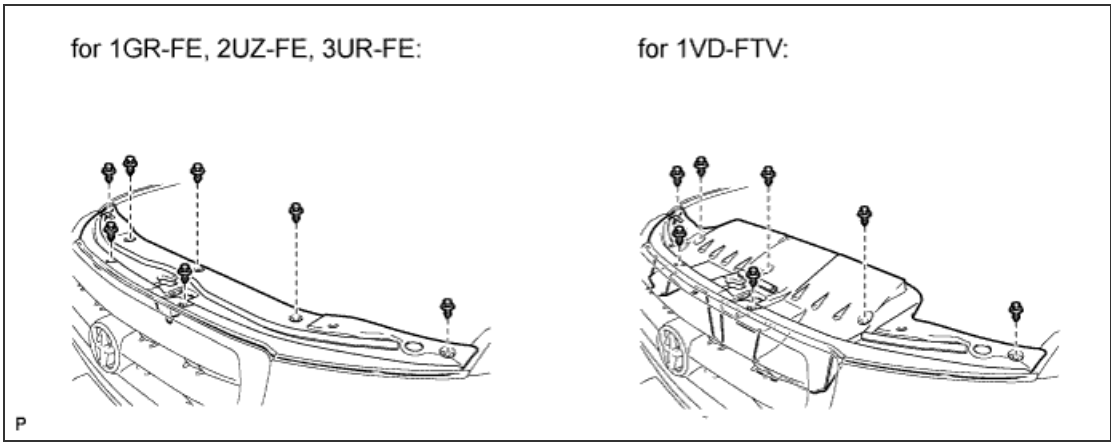


17. REMOVE COOLER DRYER



a. Using a 14 mm socket hexagon wrench, remove the cap from the modulator.

b. Remove O-ring from the cap.



c. Using pliers, remove the cooler dryer.

for Preparation Click here

1. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 7 clips and radiator support seal.

2. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM

a. Start the engine.

b. Turn the A/C switch on.

c. Operate the cooler compressor while the engine speed is approximately 1000 rpm for 5 to 6 minutes to circulate the refrigerant and collect the compressor oil remaining in each component into the cooler compressor.

d. Stop the engine.

e. Recover the refrigerant from the A/C system using a refrigerant recovery unit.

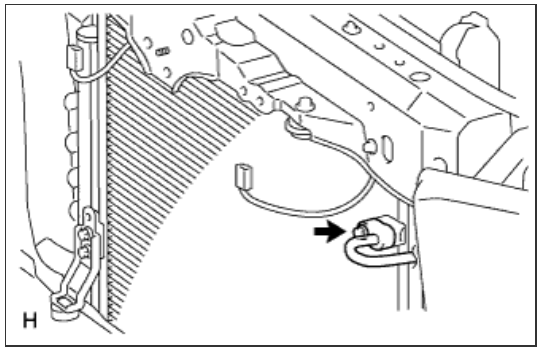
3. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).



4. REMOVE FRONT BUMPER COVER

a. for Standard:
Remove the front bumper cover (Click here).

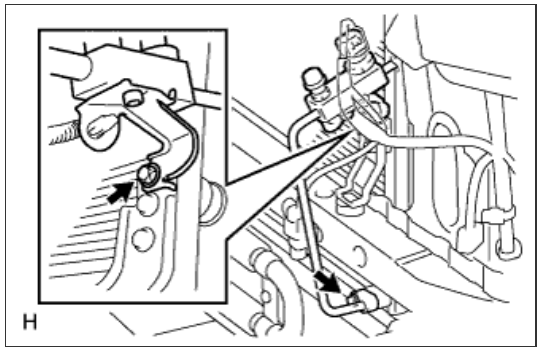
b. w/ Winch:
Remove the front bumper cover (Click here).

5. DISCONNECT NO. 1 COOLER REFRIGERANT DISCHARGE HOSE

a. Remove the bolt and disconnect the discharge hose from the cooler condenser.

NOTICE:

- **When removing the bolt, do not allow any tools to contact the pipe.**
- **When removing the bolt, hold a part of the pipe near the connector.**



b. Remove O-ring from the discharge hose.

NOTICE:

Seal the openings of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering them.

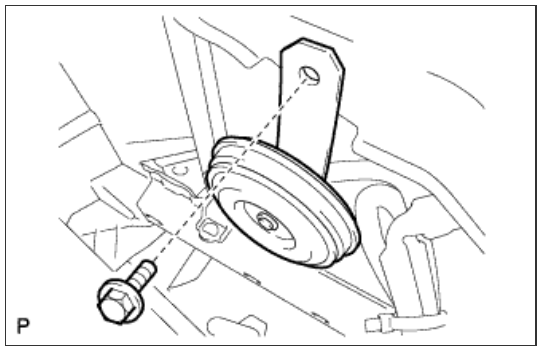
6. DISCONNECT COOLER REFRIGERANT LIQUID PIPE A

a. Remove the 2 bolts and disconnect the liquid pipe A from the cooler condenser.

NOTICE:

- **When removing the bolt, do not allow any tools to contact the pipe.**
- **When removing the bolt, hold a part of the pipe near the connector.**

b. Remove O-ring from the liquid pipe A.

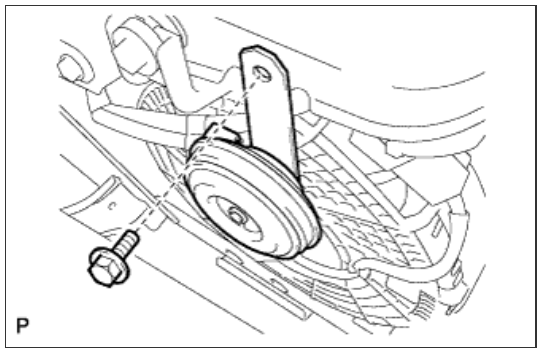


NOTICE:

Seal the openings of the disconnected parts using vinyl tape to prevent moisture and foreign matter from entering them.

7. REMOVE HIGH PITCHED HORN ASSEMBLY

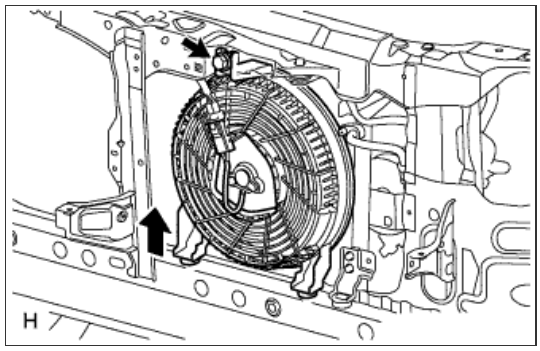
a. Remove the bolt and horn.



b. Disconnect the horn connector.

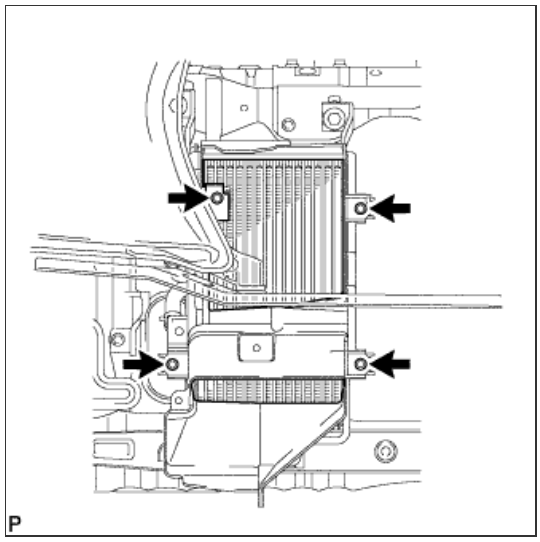
8. REMOVE LOW PITCHED HORN ASSEMBLY

a. Remove the bolt and horn.



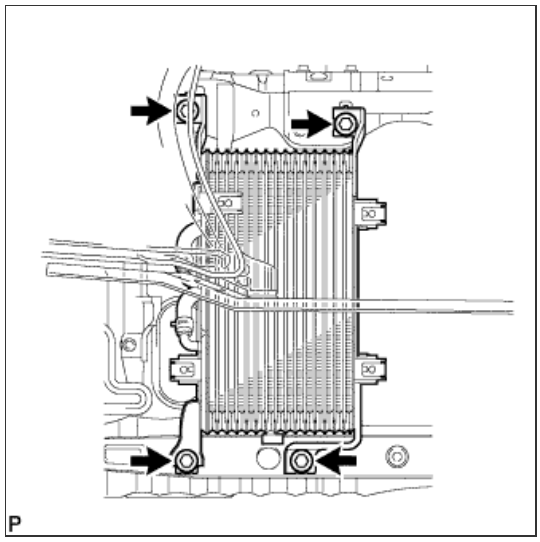
b. Disconnect the horn connector.

9. REMOVE SHROUD BLOWER ASSEMBLY (w/ Rear Air Conditioning System)



a. Disconnect the connector.

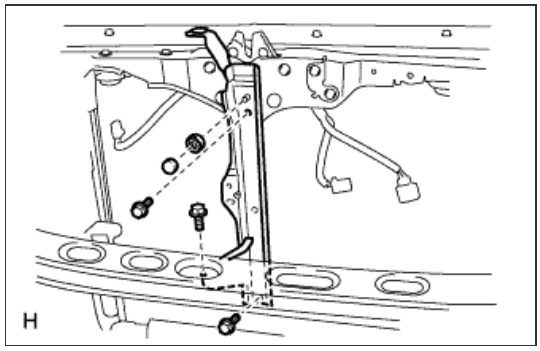
b. Remove the bolt and shroud blower as shown in the illustration.



10. REMOVE TRANSMISSION OIL COOLER AIR DUCT (w/ Air Cooled Transmission Oil Cooler)

a. Remove the 4 bolts and transmission oil cooler air duct.

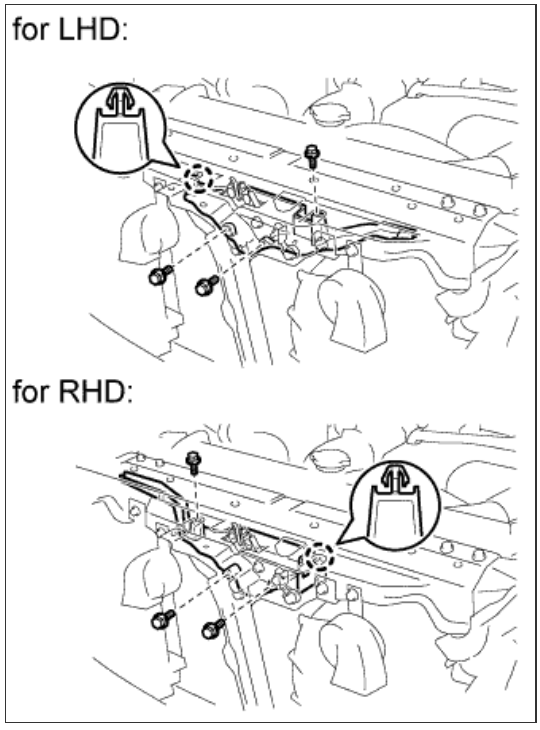
11. REMOVE OIL COOLER ASSEMBLY (w/ Air Cooled Transmission Oil Cooler)



a. Remove the 4 bolts and oil cooler.

12. REMOVE HOOD LOCK SUPPORT BRACE SUB-ASSEMBLY

a. Remove the hood lock nut cap.

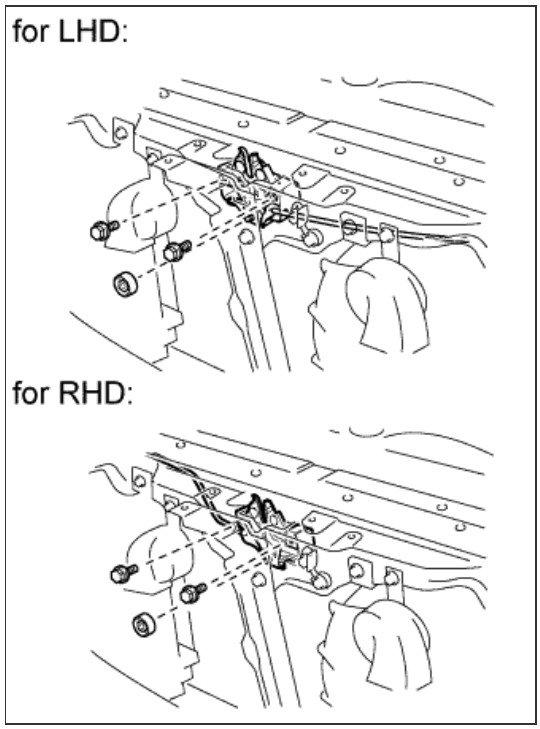


b. Remove the 3 bolts, nut and brace.

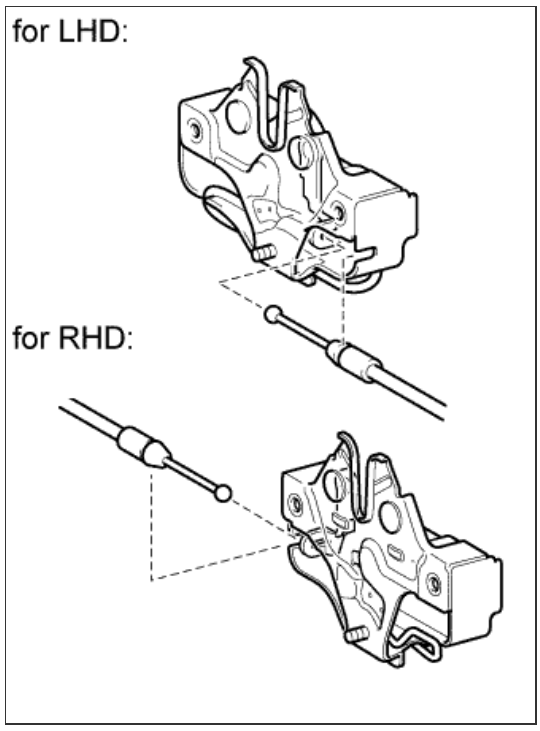
13. REMOVE HOOD LOCK CONTROL CABLE COVER

a. Remove the 3 screws.

b. Detach the claw and remove the cable cover.



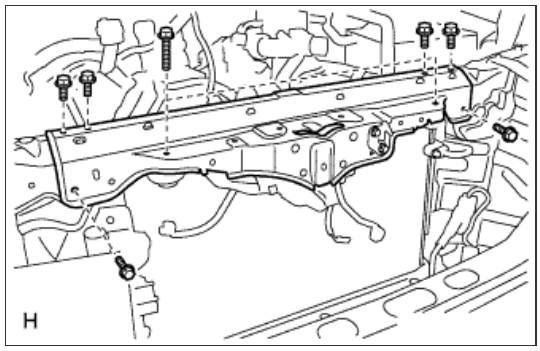
14. REMOVE HOOD LOCK ASSEMBLY



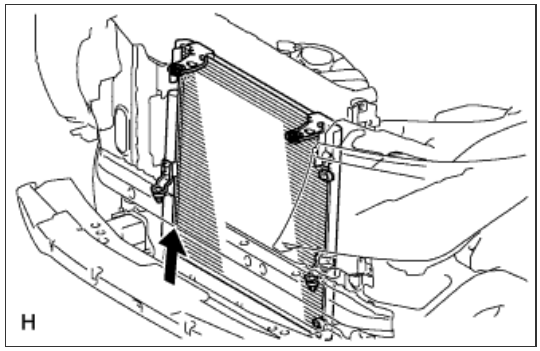
a. Remove the 2 bolts and nut.

b. Remove the hood lock.

c. Disconnect the connector.

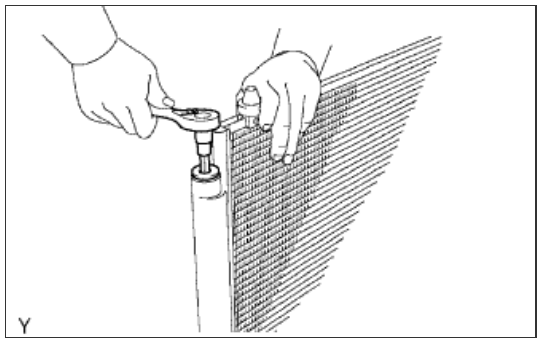


d. Disconnect the hood lock control cable.



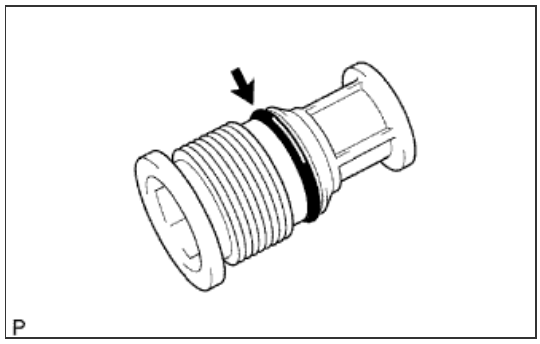
15. REMOVE RADIATOR SUPPORT SUB-ASSEMBLY

a. Remove the 8 bolts and radiator support.

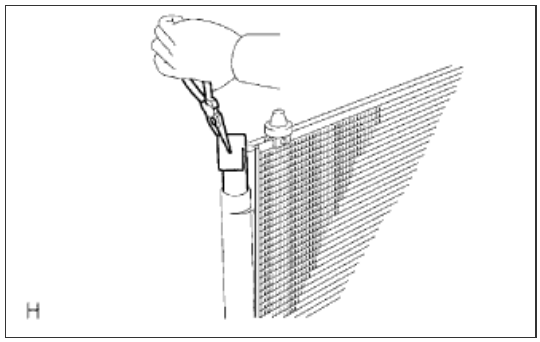


16. REMOVE COOLER CONDENSER ASSEMBLY

a. Remove the cooler condenser as shown in the illustration.

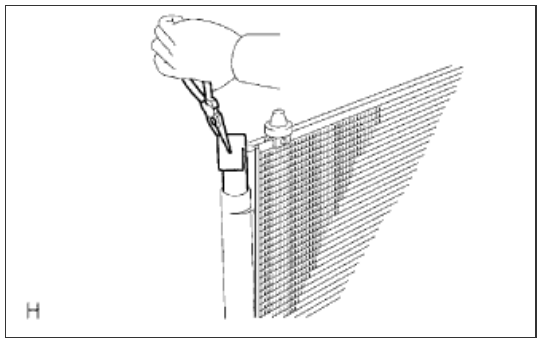


17. REMOVE COOLER DRYER



a. Using a 14 mm socket hexagon wrench, remove the cap from the modulator.

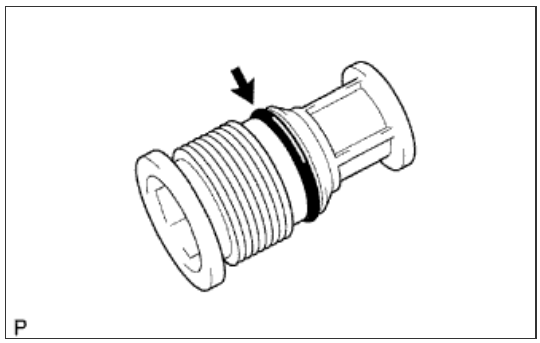
b. Remove O-ring from the cap.



c. Using pliers, remove the cooler dryer.

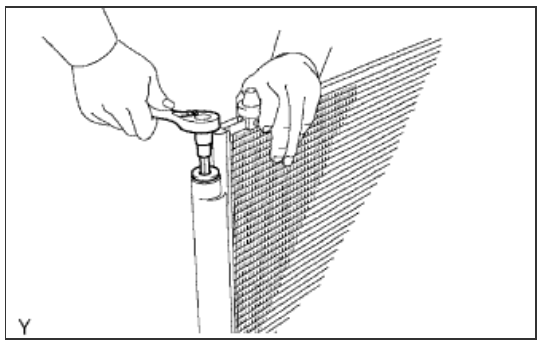
for Preparation [Click here]

1. INSTALL COOLER DRYER



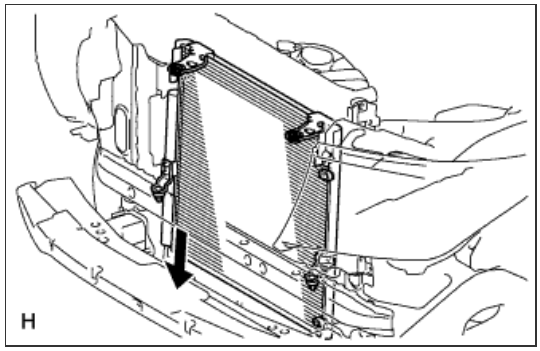
a. Using pliers, install the cooler dryer.

b. Apply a sufficient amount of compressor oil to the contact surfaces of a new O-ring and the cap.



Compressor oil:
ND-OIL 8 or equivalent

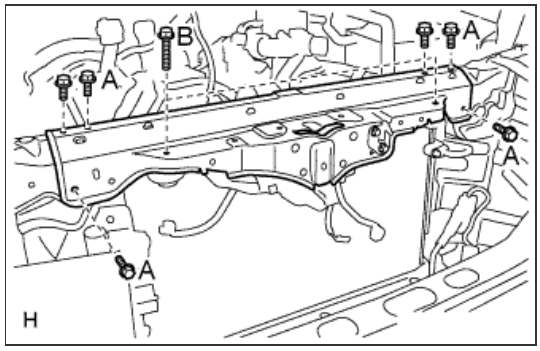
c. Install O-ring to the cap.



d. Using a 14 mm socket hexagon wrench, install the cap to the modulator.

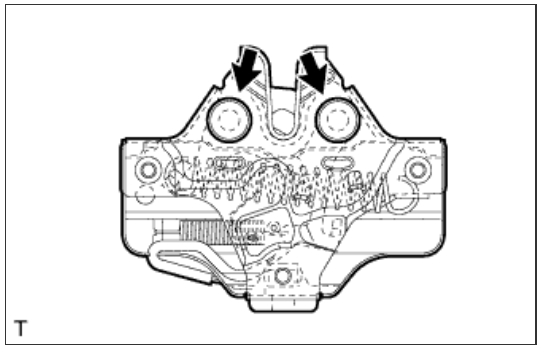
Torque:
2.9 N*m{ 30 kgf*cm , 26 in.*lbf }

2. INSTALL COOLER CONDENSER ASSEMBLY



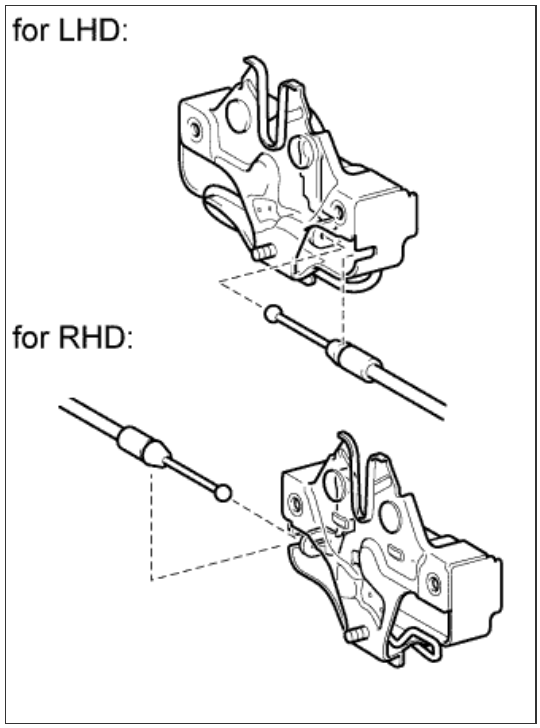
a. Install the cooler condenser as shown in the illustration.

3. INSTALL RADIATOR SUPPORT SUB-ASSEMBLY



a. Install the radiator support with the 8 bolts.

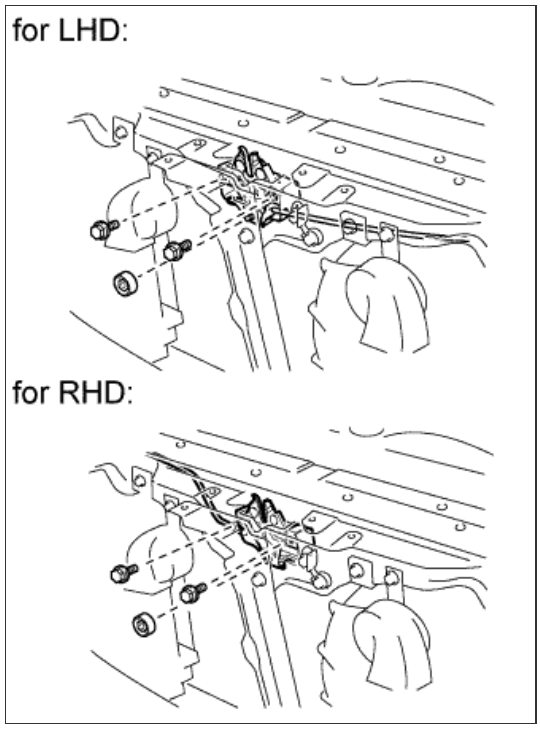
Torque:
21.7 N*m{ 221 kgf*cm , 16 ft.*lbf } for bolt A
9.8 N*m{ 100 kgf*cm , 7 ft.*lbf } for bolt B



4. INSTALL HOOD LOCK ASSEMBLY

a. Apply MP grease to the sliding areas of the lock.

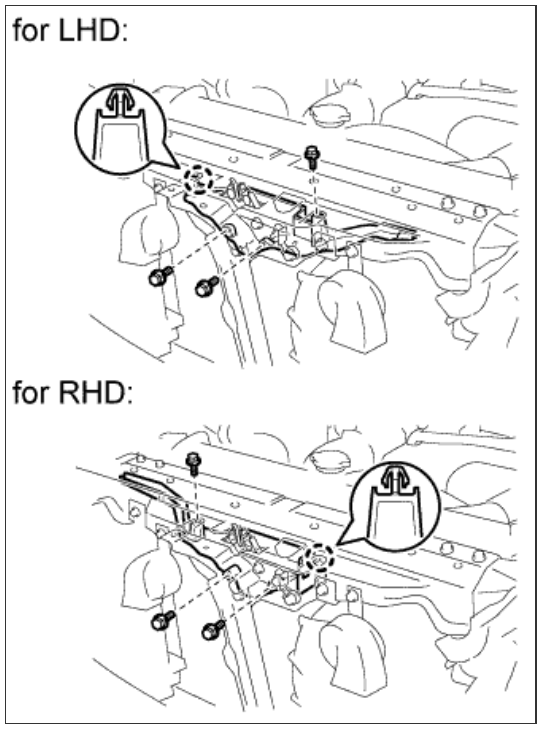
b. Connect the hood lock control cable.



c. Install the hood lock.

d. Install the 2 bolts and nut.

Torque:
5.5 N*m{ 56 kgf*cm , 49 in.*lbf }

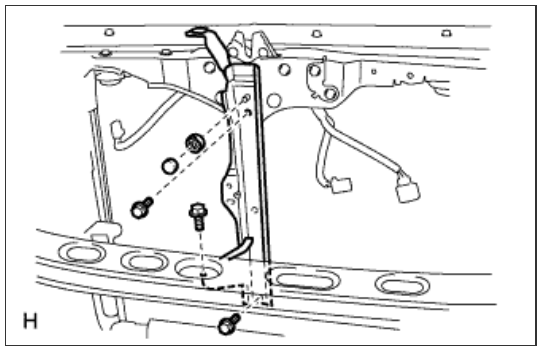


e. Connect the connector.

5. INSTALL HOOD LOCK CONTROL CABLE COVER

a. Attach the claw to install the cable cover.

b. Install the 3 screws.



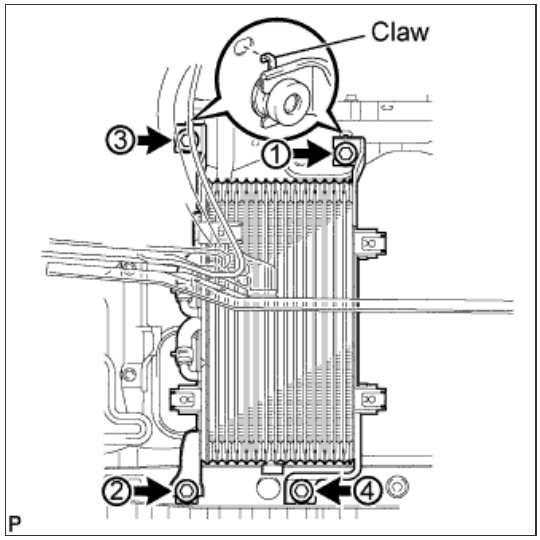
6. INSTALL HOOD LOCK SUPPORT BRACE SUB-ASSEMBLY

a. Install the brace with the 3 bolts and nut.

Torque:
21.7 N*m{ 221 kgf*cm , 16 ft.*lbf } for bolt
5.5 N*m{ 56 kgf*cm , 49 in.*lbf } for nut

b. Install the hood lock nut cap.

7. INSTALL OIL COOLER ASSEMBLY Air Cooled Transmission Oil Cooler

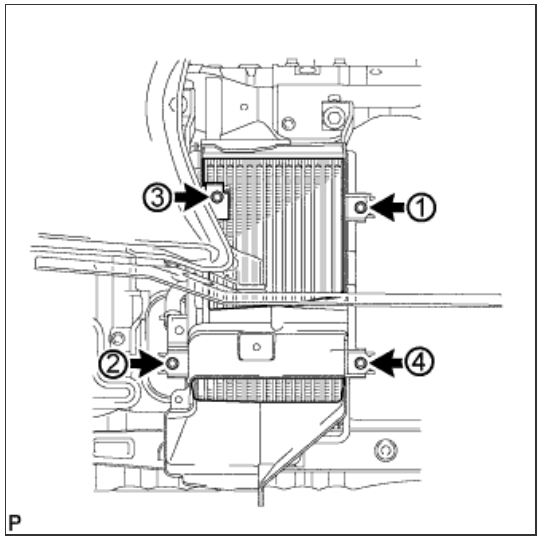


a. Temporarily install the oil cooler to the radiator support.

NOTICE:

Securely attach the 2 claws of the oil cooler into the hole of the radiator support.

b. Install the 4 bolts in the sequence shown in the illustration.

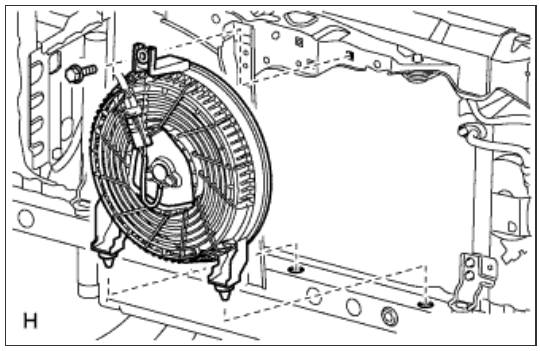


Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

8. INSTALL TRANSMISSION OIL COOLER AIR DUCT Air Cooled Transmission Oil Cooler

a. Install the oil cooler air duct with the 4 bolts in the sequence shown in the illustration.

Torque:
4.9 N*m{ 50 kgf*cm , 43 in.*lbf }

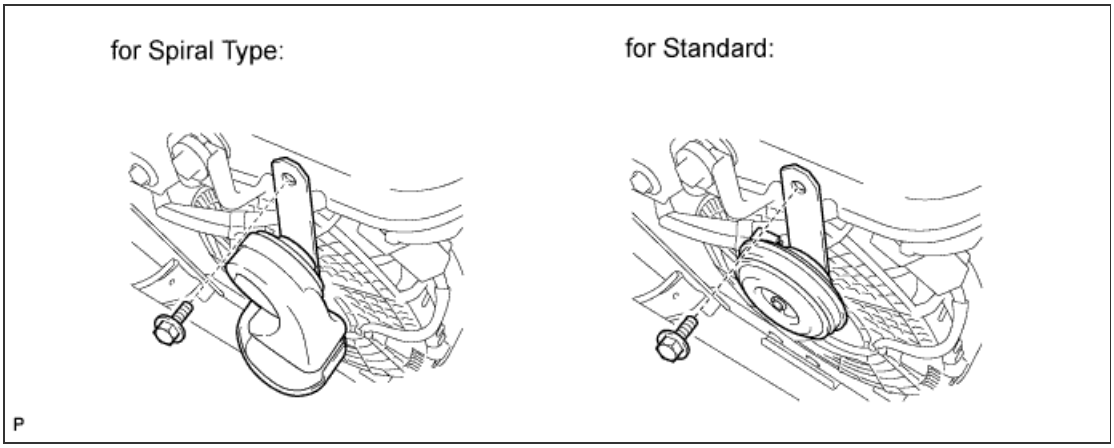


9. INSTALL SHROUD BLOWER ASSEMBLY (w/ Rear Air Conditioning System)

a. Install the shroud blower with the bolt.

Torque:
9.8 N*m{ 100 kgf*cm , 7 ft.*lbf }

b. Connect the connector.

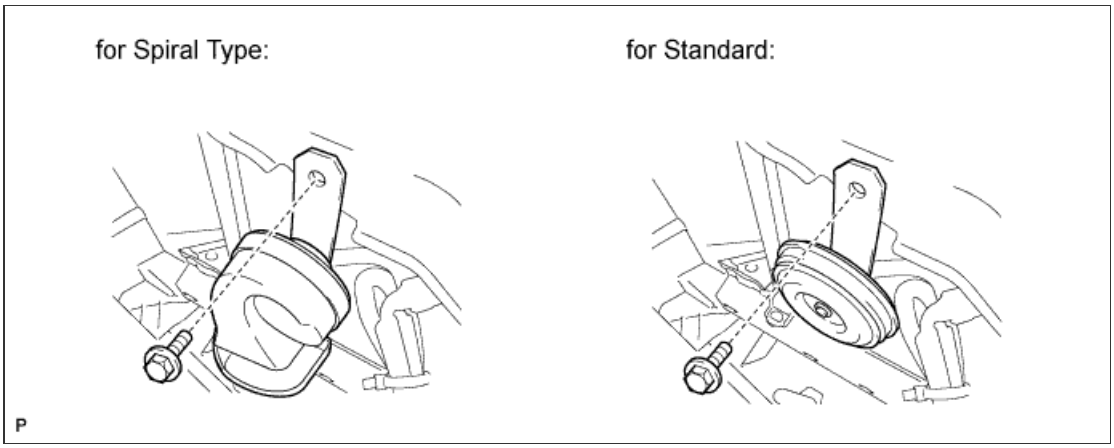


10. INSTALL LOW PITCHED HORN ASSEMBLY

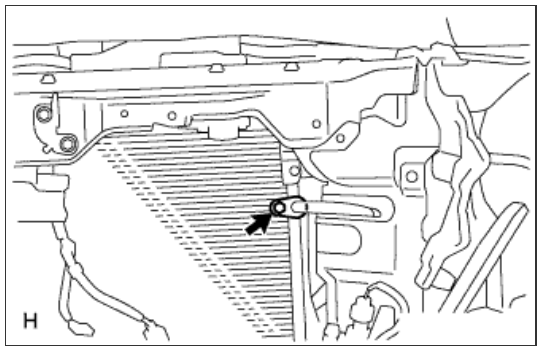
a. Connect the horn connector.

b. Install the horn with the bolt.

Torque:
19 N*m{ 194 kgf*cm , 14 ft.*lbf }



11. INSTALL HIGH PITCHED HORN ASSEMBLY



a. Connect the horn connector.

b. Install the horn with the bolt.

Torque:
19 N*m{ 194 kgf*cm , 14 ft.*lbf }

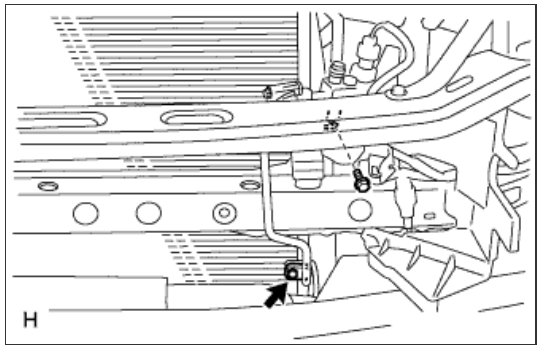
12. CONNECT COOLER RE RIGERANT LI UID PIPE A

a. Remove the attached vinyl tape from the hose and the connecting part of the cooler condenser.

b. Sufficiently apply compressor oil to a new O-ring and the fitting surface of the pipe joint.

Compressor oil:
ND-OIL 8 or equivalent

c. Install O-ring on the liquid pipe A.



d. Connect the liquid pipe A to the cooler condenser with the bolt.

Torque:
5.4 N*m{ 55 kgf*cm , 48 in.*lbf }

NOTICE:

- **When tightening the bolt, do not allow any tools to contact the pipe.**
- **When tightening the bolt, hold a part of the pipe near the connector.**

13. CONNECT NO. 1 COOLER REFRIGERANT DISCHARGE HOSE

a. Remove the attached vinyl tape from the pipe and the connecting part of the cooler condenser.

b. Sufficiently apply compressor oil to a new O-ring and the fitting surface of the hose joint.

Compressor oil:
ND-OIL 8 or equivalent

c. Install O-ring on the discharge hose.

d. Connect the discharge hose to the cooler condenser with the 2 bolts.

Torque:
5.4 N*m{ 55 kgf*cm , 48 in.*lbf }

NOTICE:

- **When tightening the bolts, do not allow any tools to contact the pipe.**
- **When tightening the bolts, hold a part of the pipe near the connector.**

14. INSTALL FRONT BUMPER COVER

a. for Standard:

Install the front bumper cover (Click here).

b. w/ Winch:
Install the front bumper cover (Click here).

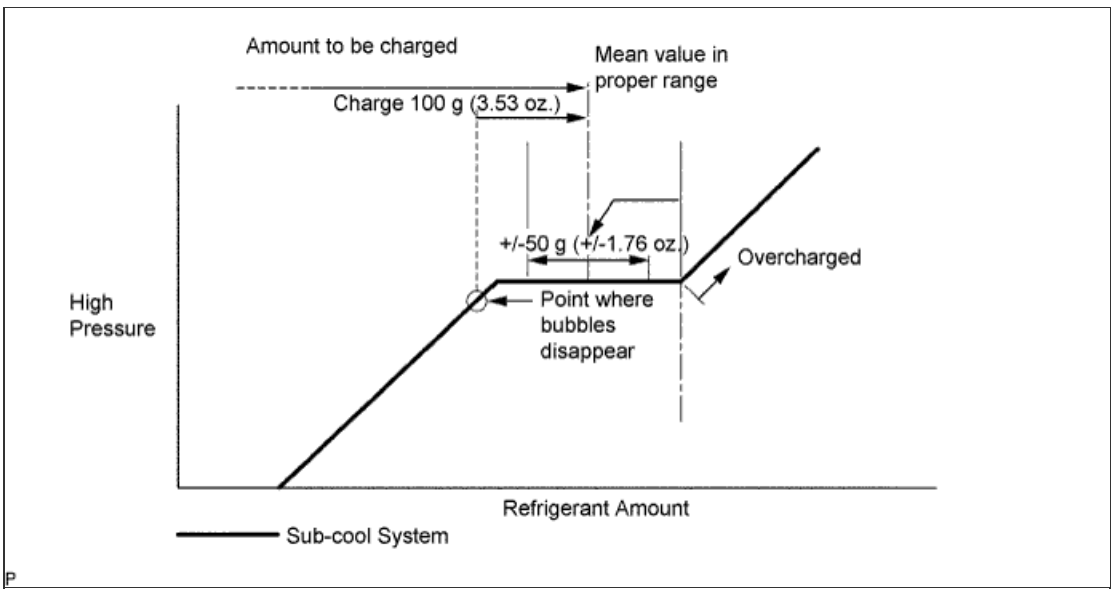
15. CONNECT CABLE TO NE ATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

16. C ARGE RE RIGERANT

SST



09985-20010 (09985-02130, 09985-02150, 09985-02090, 09985-02110, 09985-02010, 09985-02050, 09985-02060, 09985-02070)

a. Perform vacuum purging using a vacuum pump.

b. Charge refrigerant HFC-134a (R134a).

Standard:

Condenser Core Thickness	Air Conditioning Type	Cool Box	Refrigerant Charging Amount
22 mm (0.866 in.)	w/o Rear Cooler	w/ Cool Box	870 +/-30 g (30.7 +/-1.1 oz.)
		w/o Cool Box	870 +/-30 g (30.7 +/-1.1 oz.)
	w/ Rear Cooler	w/ Cool Box	1010 +/-30 g (35.6 +/-1.1 oz.)
		w/o Cool Box	960 +/-30 g (33.9 +/-1.1 oz.)
16 mm (0.630 in.)	w/o Rear Cooler	w/ Cool Box	770 +/-30 g (27.2 +/-1.1 oz.)
		w/o Cool Box	770 +/-30 g (27.2 +/-1.1 oz.)
	w/ Rear Cooler	w/ Cool Box	970 +/-30 g (34.2 +/-1.1 oz.)
		w/o Cool Box	920 +/-30 g (32.5 +/-1.1 oz.)

NOTICE:

- **Do not operate the cooler compressor before charging refrigerant as the cooler compressor will not work properly without any refrigerant, and will overheat.**
- **Approximately 200 g (7.05 oz.) of refrigerant may need to be charged after bubbles disappear. The refrigerant amount should be checked by measuring its quantity, and not with the sight glass.**

17. WARM UP ENGINE

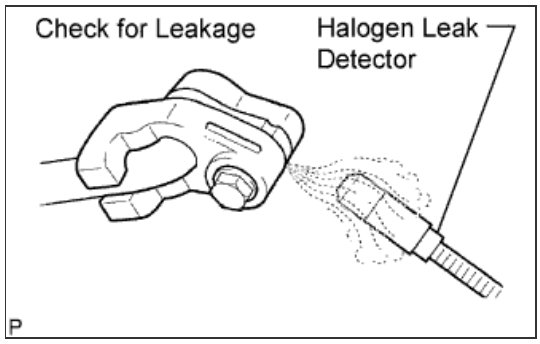
a. Warm up the engine at less than 1850 rpm for 2 minutes or more after charging the refrigerant.

NOTICE:

Be sure to warm up the compressor when turning the A/C switch is on after removing and installing the cooler refrigerant lines (including the compressor), to prevent damage to the compressor.

18. CHECK FOR REFRIGERANT GAS LEAK

a. After recharging the refrigerant gas, check for refrigerant gas leakage using a halogen leak detector.



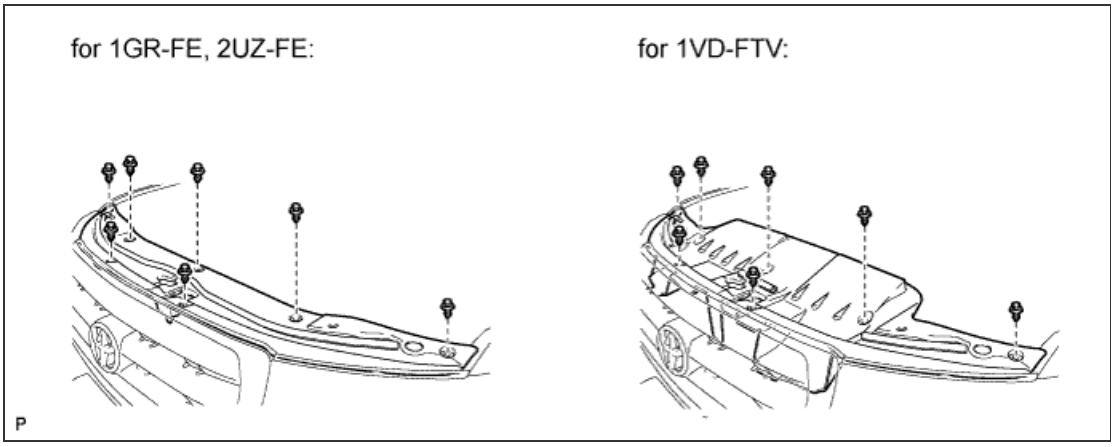
b. Perform the operation under these conditions:

- Stop the engine.
- Secure good ventilation (the halogen leak detector may react to volatile gases other than refrigerant, such as evaporated gasoline or exhaust gas).
- Repeat the test 2 or 3 times.
- Make sure that some refrigerant remains in the refrigeration system. When compressor is off: approximately 392 to 588 kPa (4.0 to 6.0 kgf/cm^2, 57 to 85 psi).

c. Using a halogen leak detector, check the refrigerant line for leakage.

d. If a gas leak is not detected on the drain hose, remove the blower motor control (blower resistor) from the cooling unit. Insert the halogen leak detector sensor into the unit and perform the test.

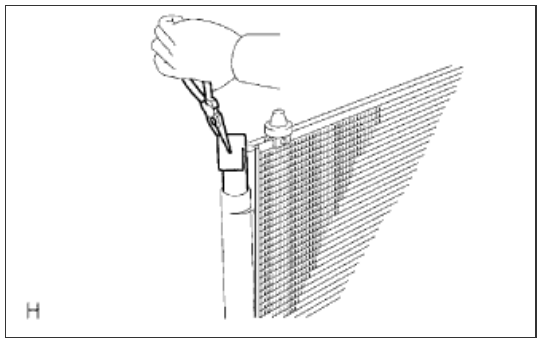
e. Disconnect the connector and wait for approximately 20 minutes. Bring the halogen leak detector close to the pressure switch and perform the test.



19. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).

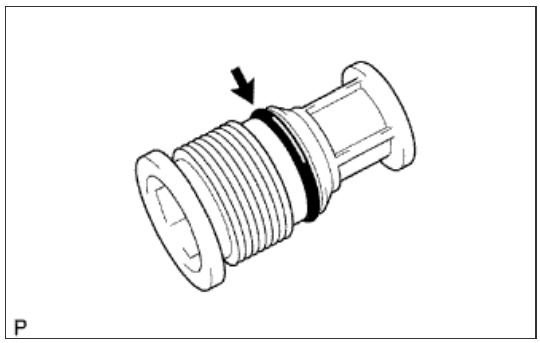
20. INSTALL UPPER RADIATOR SUPPORT SEAL



a. Install the radiator support seal with the 7 clips.

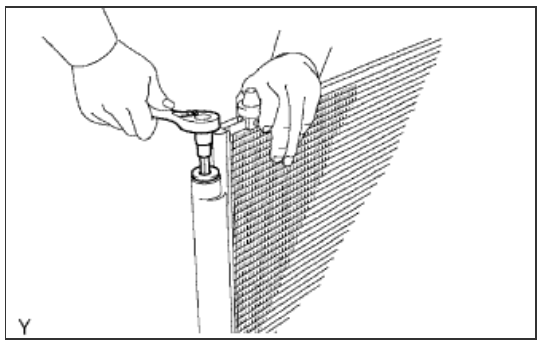
for Preparation [Click here]

1. INSTALL COOLER DRYER



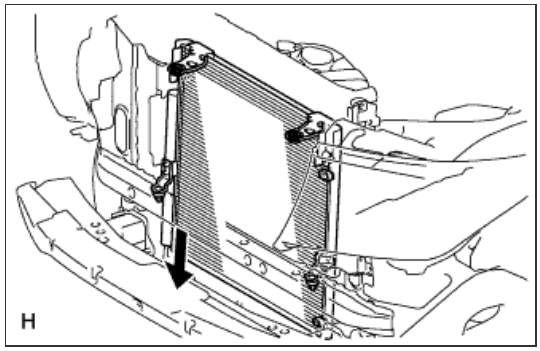
a. Using pliers, install the cooler dryer.

b. Apply a sufficient amount of compressor oil to the contact surfaces of a new O-ring and the cap.



Compressor oil:
ND-OIL 8 or equivalent

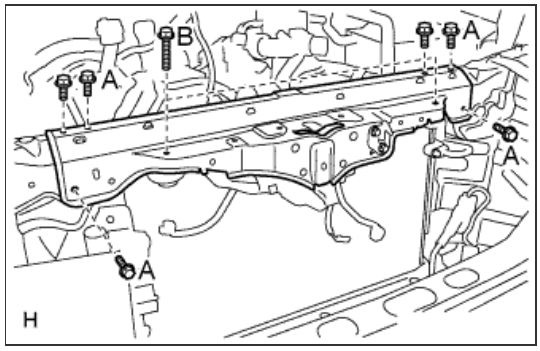
c. Install O-ring to the cap.



d. Using a 14 mm socket hexagon wrench, install the cap to the modulator.

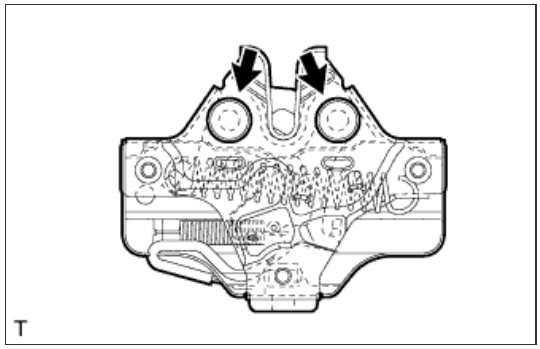
Torque:
2.9 N*m{ 30 kgf*cm , 26 in.*lbf }

2. INSTALL COOLER CONDENSER ASSEMBLY



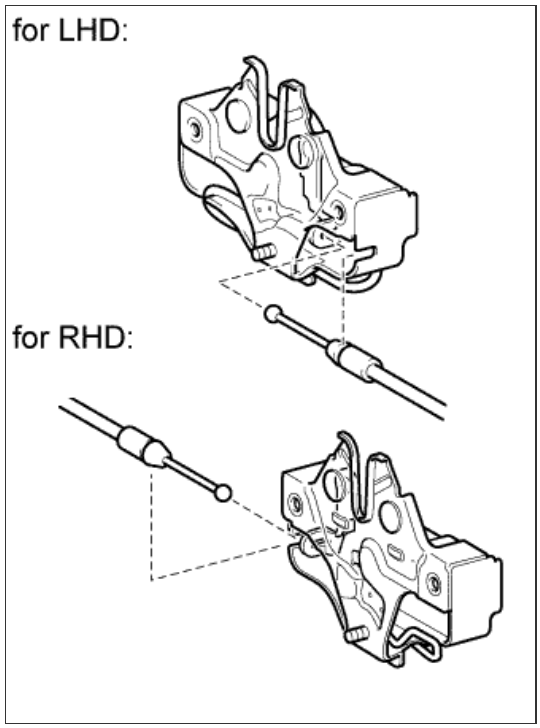
a. Install the cooler condenser as shown in the illustration.

3. INSTALL RADIATOR SUPPORT SUB-ASSEMBLY



a. Install the radiator support with the 8 bolts.

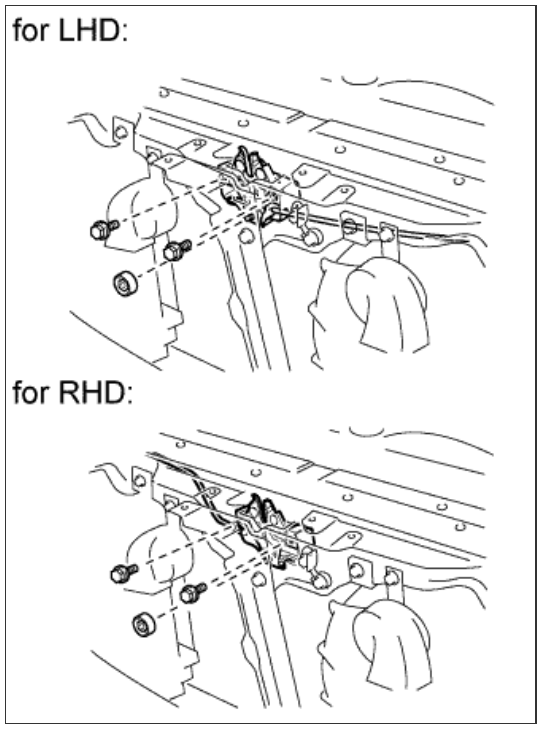
Torque:
21.7 N*m{ 221 kgf*cm , 16 ft.*lbf } for bolt A
9.8 N*m{ 100 kgf*cm , 7 ft.*lbf } for bolt B



4. INSTALL HOOD LOCK ASSEMBLY

a. Apply MP grease to the sliding areas of the lock.

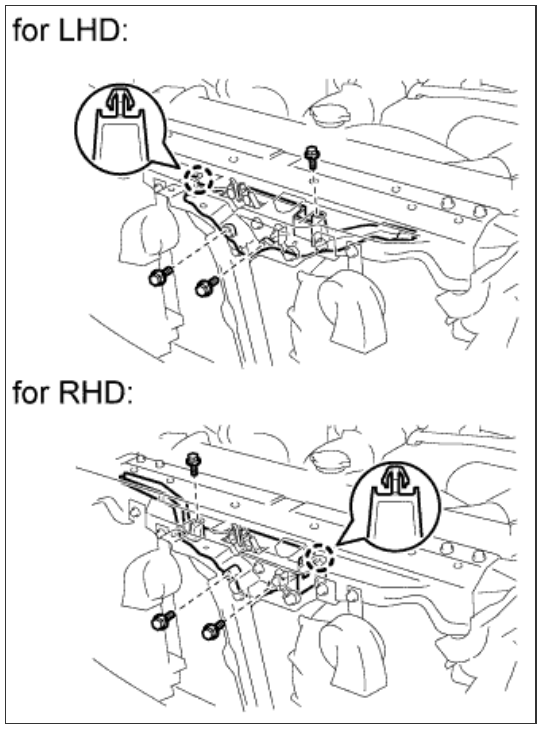
b. Connect the hood lock control cable.



c. Install the hood lock.

d. Install the 2 bolts and nut.

Torque:
5.5 N*m{ 56 kgf*cm , 49 in.*lbf }

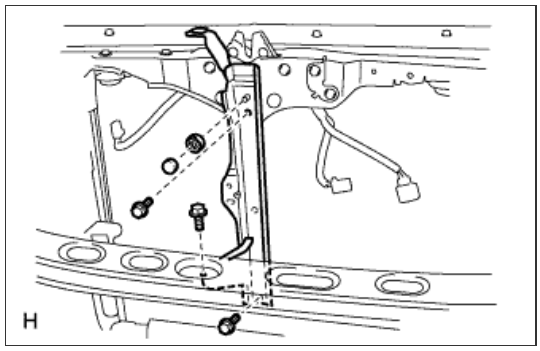


e. Connect the connector.

5. INSTALL HOOD LOCK CONTROL CABLE COVER

a. Attach the claw to install the cable cover.

b. Install the 3 screws.



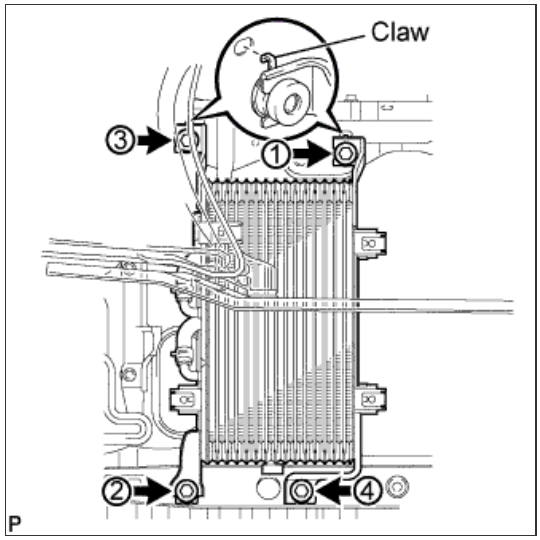
6. INSTALL HOOD LOCK SUPPORT BRACE SUB-ASSEMBLY

a. Install the brace with the 3 bolts and nut.

Torque:
21.7 N*m{ 221 kgf*cm , 16 ft.*lbf } for bolt
5.5 N*m{ 56 kgf*cm , 49 in.*lbf } for nut

b. Install the hood lock nut cap.

7. INSTALL OIL COOLER ASSEMBLY Air Cooled Transmission Oil Cooler

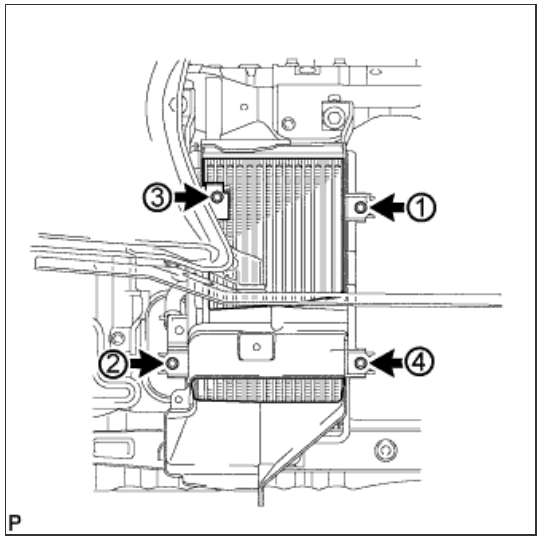


a. Temporarily install the oil cooler to the radiator support.

NOTICE:

Securely attach the 2 claws of the oil cooler into the hole of the radiator support.

b. Install the 4 bolts in the sequence shown in the illustration.

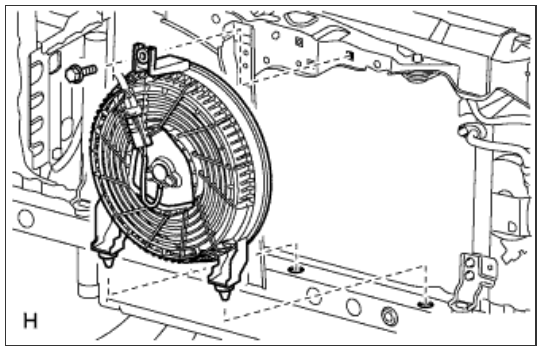


Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

8. INSTALL TRANSMISSION OIL COOLER AIR DUCT Air Cooled Transmission Oil Cooler

a. Install the oil cooler air duct with the 4 bolts in the sequence shown in the illustration.

Torque:
4.9 N*m{ 50 kgf*cm , 43 in.*lbf }

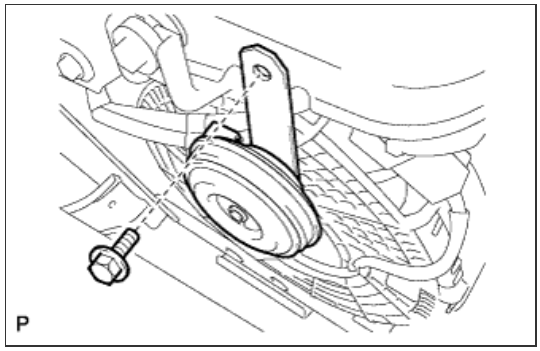


9. INSTALL SHROUD BLOWER ASSEMBLY (w/ Rear Air Conditioning System)

a. Install the shroud blower with the bolt.

Torque:
9.8 N*m{ 100 kgf*cm , 7 ft.*lbf }

b. Connect the connector.

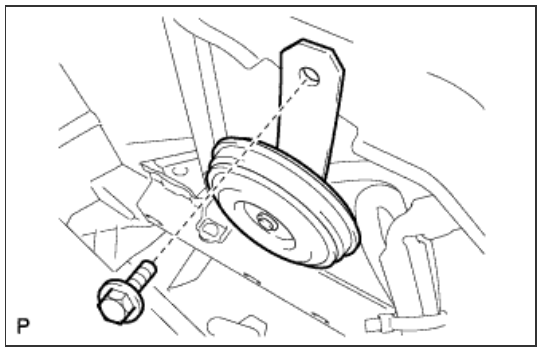


10. INSTALL LOW PITCHED HORN ASSEMBLY

a. Connect the horn connector.

b. Install the horn with the bolt.

Torque:
19 N*m{ 194 kgf*cm , 14 ft.*lbf }



11. INSTALL HIGH PITCHED HORN ASSEMBLY

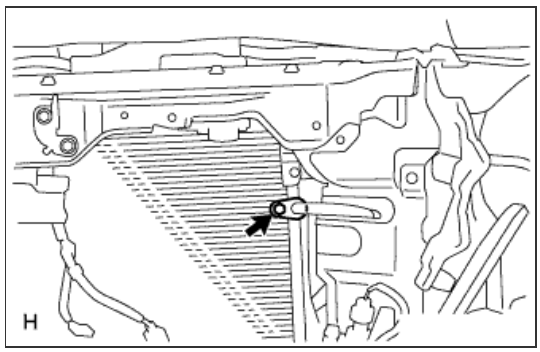
a. Connect the horn connector.

b. Install the horn with the bolt.

Torque:
19 N*m{ 194 kgf*cm , 14 ft.*lbf }

12. CONNECT COOLER REFRIGERANT LIQUID PIPE A

a. Remove the attached vinyl tape from the hose and the connecting part of the cooler condenser.

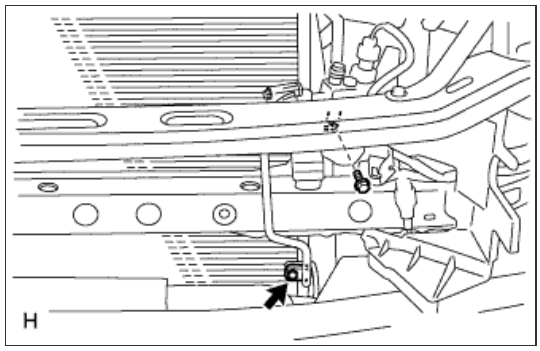


b. Sufficiently apply compressor oil to a new O-ring and the fitting surface of the pipe joint.

Compressor oil:
ND-OIL 8 or equivalent

c. Install O-ring on the liquid pipe A.

d. Connect the liquid pipe A to the cooler condenser with the bolt.



Torque:
5.4 N*m{ 55 kgf*cm , 48 in.*lbf }

NOTICE:

- **hen tightening the bolt, do not allow an tools to contact the pipe.**
- **hen tightening the bolt, hold a part of the pipe near the connector.**

13. CONNECT NO. 1 COOLER RE IGERANT DISC ARGE SE

a. Remove the attached vinyl tape from the pipe and the connecting part of the cooler condenser.

b. Sufficiently apply compressor oil to a new O-ring and the fitting surface of the hose joint.

Compressor oil:
ND-OIL 8 or equivalent

c. Install O-ring on the discharge hose.

d. Connect the discharge hose to the cooler condenser with the 2 bolts.

Torque:
5.4 N*m{ 55 kgf*cm , 48 in.*lbf }

NOTICE:

- **When tightening the bolts, do not allow any tools to contact the pipe.**
- **When tightening the bolts, hold a part of the pipe near the connector.**

14. INSTALL FRONT BUMPER COVER

a. for Standard:
Install the front bumper cover (Click here).

b. w/ Winch:
Install the front bumper cover (Click here).

15. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

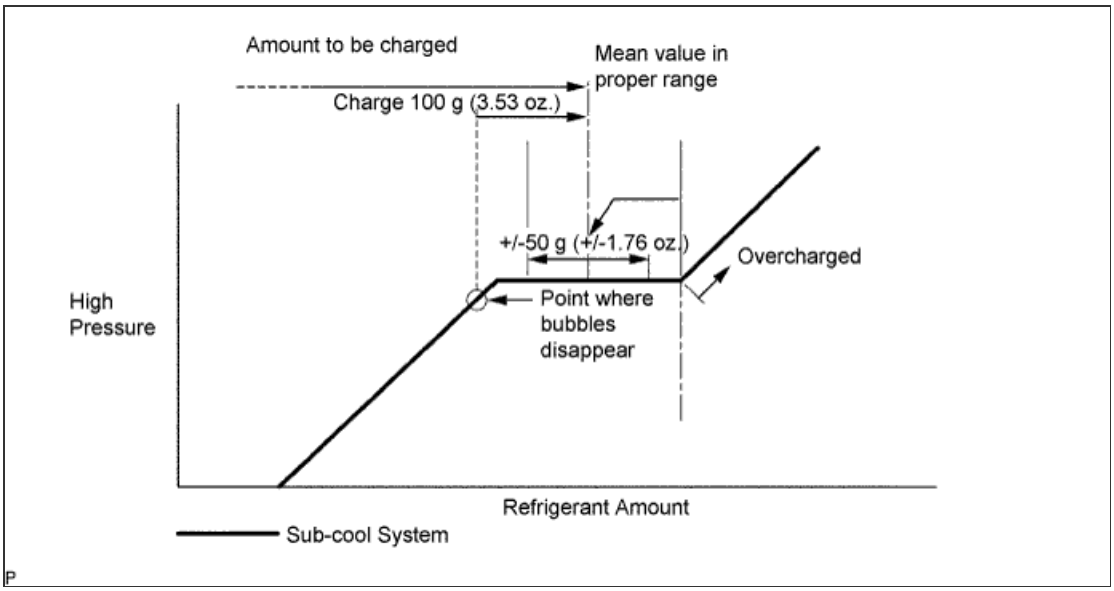
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

16. CHARGE REFRIGERANT

SST

09985-20010 (09985-02130, 09985-02150, 09985-02090, 09985-02110, 09985-02010, 09985-02050, 09985-02060, 09985-02070)



a. Perform vacuum purging using a vacuum pump.

b. Charge refrigerant HFC-134a (R134a).

Standard:

Condenser Core Thickness	Air Conditioning Type	Cool Box	Refrigerant Charging Amount
22 mm (0.866 in.)	w/o Rear Cooler	w/ Cool Box	870 +/-30 g (30.7 +/-1.1 oz.)
		w/o Cool Box	870 +/-30 g (30.7 +/-1.1 oz.)
	w/ Rear Cooler	w/ Cool Box	1010 +/-30 g (35.6 +/-1.1 oz.)
		w/o Cool Box	960 +/-30 g (33.9 +/-1.1 oz.)
16 mm (0.630 in.)	w/o Rear Cooler	w/ Cool Box	770 +/-30 g (27.2 +/-1.1 oz.)
		w/o Cool Box	770 +/-30 g (27.2 +/-1.1 oz.)
		w/ Cool Box	970 +/-30 g (34.2 +/-1.1 oz.)

	w/ Rear Cooler	w/o Cool Box	920 +/-30 g (32.5 +/-1.1 oz.)

NOTICE:

- **Do not operate the cooler compressor before charging refrigerant as the cooler compressor will not work properl without an refrigerant, and will overheat.**
- **Appro imatel 200 g (7.05 oz.) of refrigerant may need to be charged after bubbles disappear. The refrigerant amount should be checked by measuring its quantity, and not with the sight glass.**

17. WARM UP ENGINE

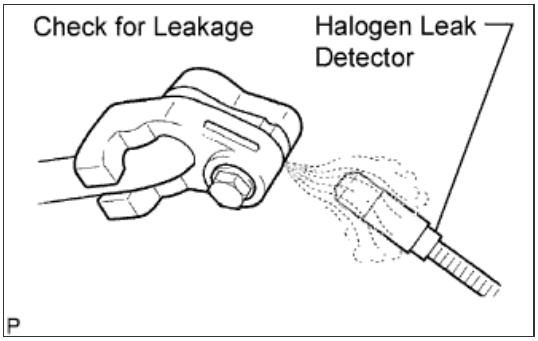
a. Warm up the engine at less than 1850 rpm for 2 minutes or more after charging the refrigerant.

NOTICE:

Be sure to warm up the compressor when turning the A/C switch is on after removing and installing the cooler refrigerant lines (including the compressor), to prevent damage to the compressor.

18. CHECK FOR REFRIGERANT GAS LEAK

a. After recharging the refrigerant gas, check for refrigerant gas leakage using a halogen leak detector.



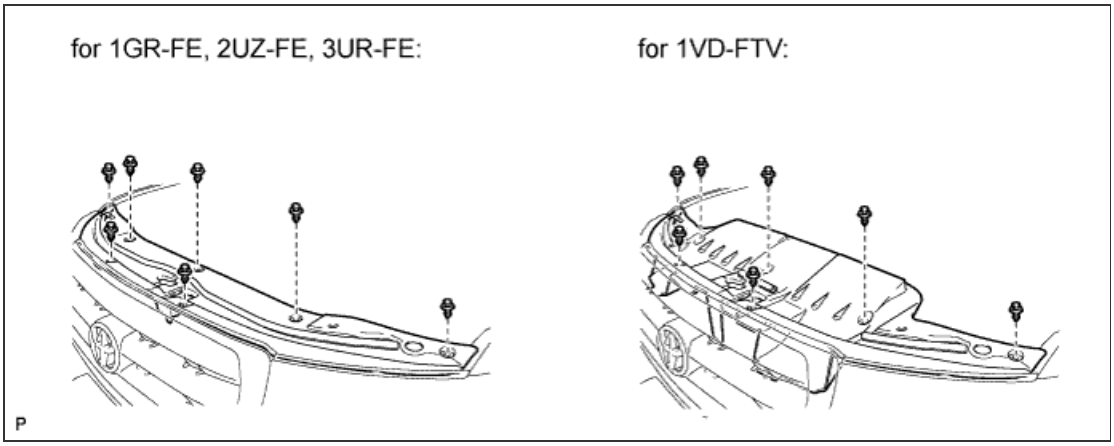
b. Perform the operation under these conditions:

- Stop the engine.
- Secure good ventilation (the halogen leak detector may react to volatile gases other than refrigerant, such as evaporated gasoline or exhaust gas).
- Repeat the test 2 or 3 times.
- Make sure that some refrigerant remains in the refrigeration system. When compressor is off: approximately 392 to 588 kPa (4.0 to 6.0 kgf/cm^2, 57 to 85 psi).

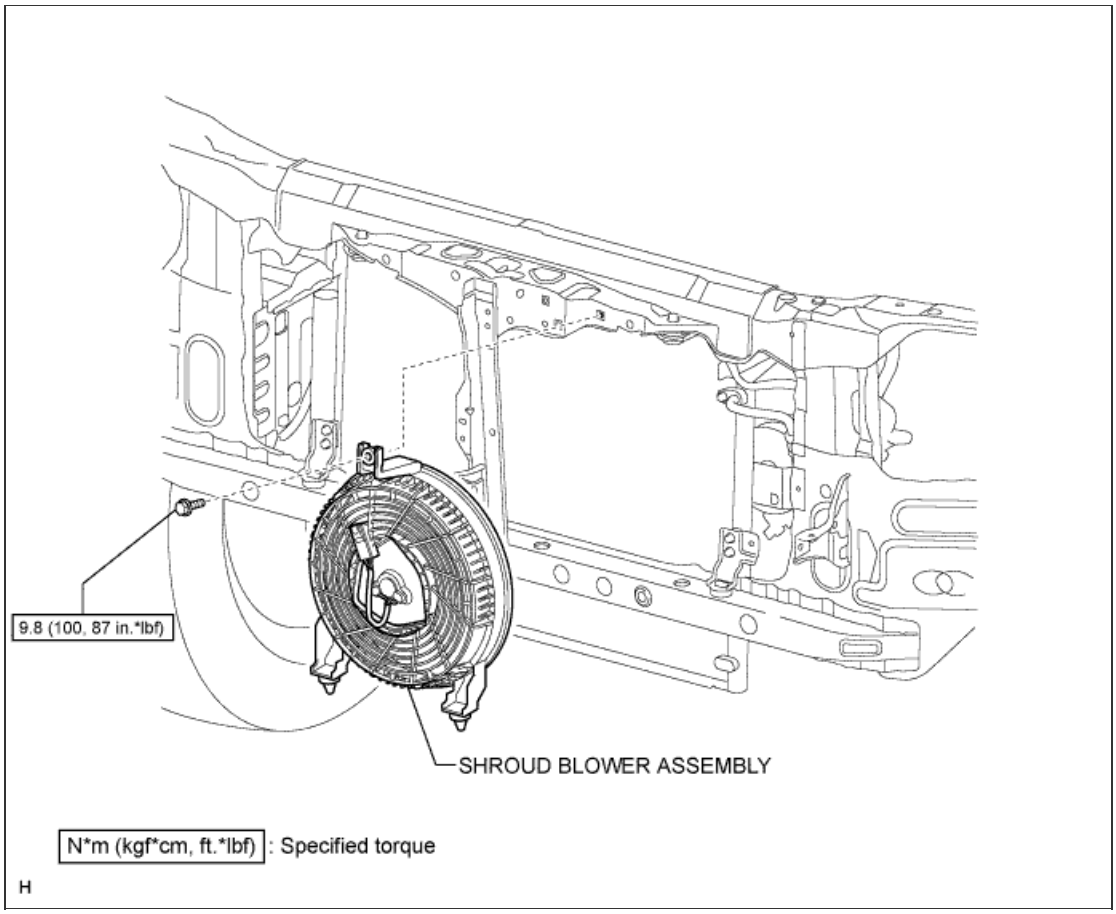
c. Using a halogen leak detector, check the refrigerant line for leakage.

d. If a gas leak is not detected on the drain hose, remove the blower motor control (blower resistor) from the cooling unit. Insert the halogen leak detector sensor into the unit and perform the test.

e. Disconnect the connector and wait for approximately 20 minutes. Bring the halogen leak detector close to the pressure switch and perform the test.



19. CHECK SRS WARNING LIGHT



a. Check the SRS warning light (Click here).

20. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the radiator support seal with the 7 clips.

for Preparation Click here

CONDENSER FAN > REMOVAL

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

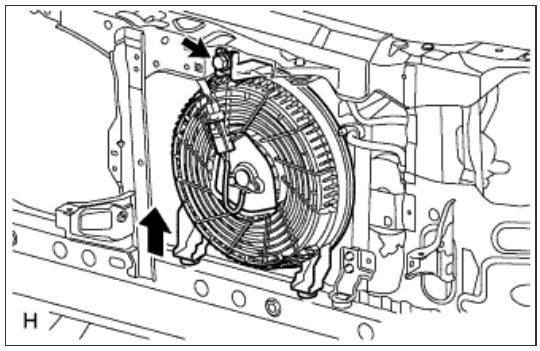
CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE FRONT BUMPER COVER



a. for Standard:
Remove the front bumper cover (Click here).

b. w/ Winch:
Remove the front bumper cover (Click here).

. REMOVE SHROUD BLOWER ASSEMBLY

a. Disconnect the connector.

b. Remove the bolt and shroud blower as shown in the illustration.

CONDENSER FAN > REMOVAL

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

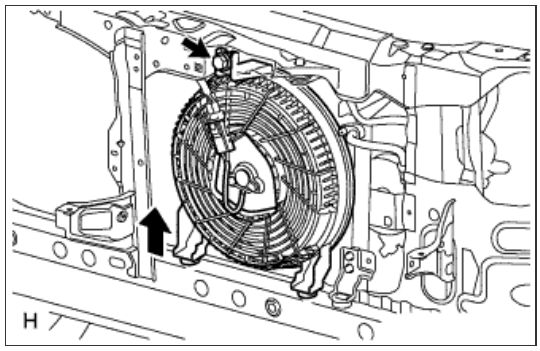
CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE FRONT BUMPER COVER



a. for Standard:
Remove the front bumper cover (Click here).

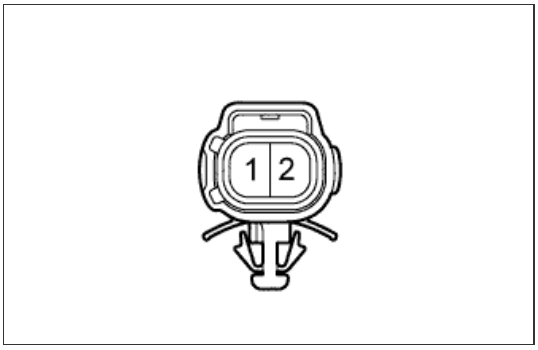
b. w/ Winch:
Remove the front bumper cover (Click here).

. REMOVE SHROUD BLOWER ASSEMBLY

a. Disconnect the connector.

b. Remove the bolt and shroud blower as shown in the illustration.

for Preparation Click here



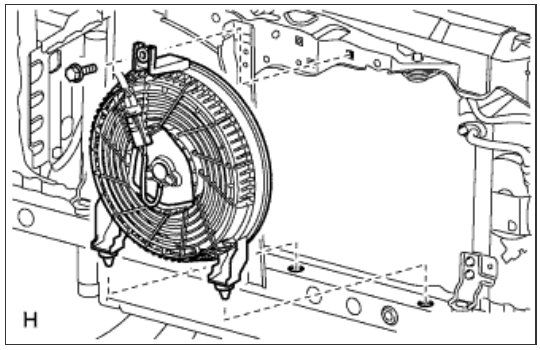
1. INSPECT SHROUD BLOWER ASSEMBLY

a. Apply battery voltage and check operation of the horn, as shown in the table.

OK:

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Motor operates smoothly

If the result is not as specified, replace the shroud blower assembly.



for Preparation Click here

1. INSTALL SHROUD BLOWER ASSEMBLY

a. Install the shroud blower with the bolt.

Torque:
9.8 N*m{ 100 kgf*cm , 7 ft.*lbf }

b. Connect the connector.

2. INSTALL FRONT BUMPER COVER

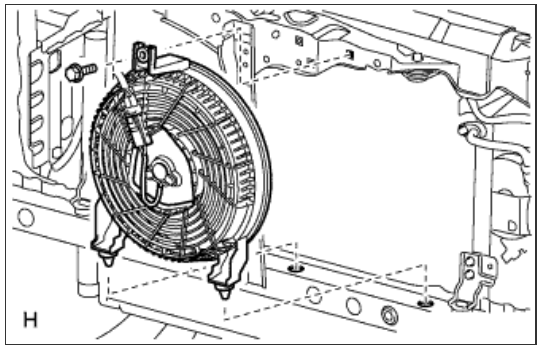
a. for Standard:
Install the front bumper cover (Click here).

b. w/ Winch:
Install the front bumper cover (Click here).

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).



for Preparation Click here

1. INSTALL SHROUD BLOWER ASSEMBLY

a. Install the shroud blower with the bolt.

Torque:
9.8 N*m{ 100 kgf*cm , 7 ft.*lbf }

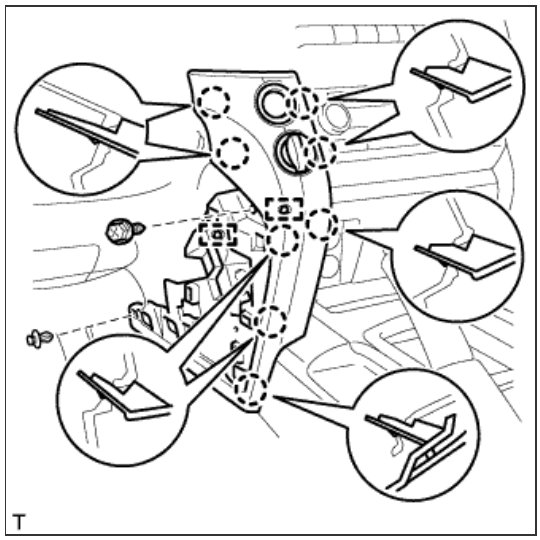
HINT:

- **Use the same procedures for the LHD vehicle and RHD vehicle.**
- **The procedures listed below are for the LHD vehicle.**

1. REMOVE NO. 2 INSTRUMENT PANEL FINISH PANEL CUSHION

a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 7 claws and remove the panel cushion.

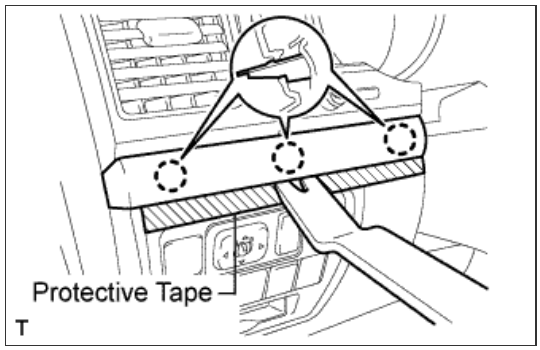


2. REMOVE LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

a. Remove the clip.

b. Remove the screw.

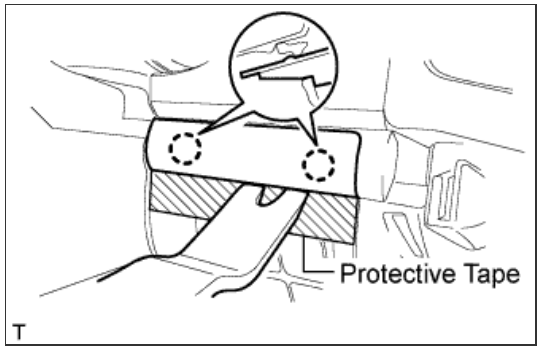
c. Detach the 8 claws.



d. Remove the panel pad and disconnect the connectors and 2 clamps.

3. REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Place protective tape as shown in the illustration.

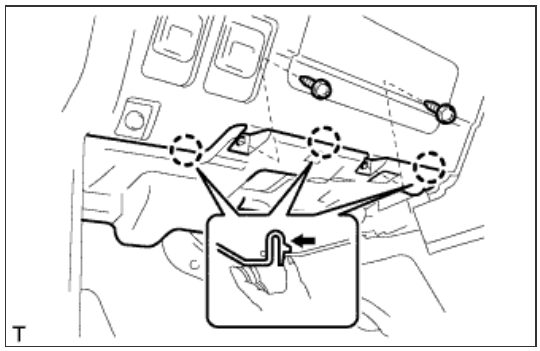


b. Using a moulding remover, detach the 3 claws and remove the panel garnish.

4. REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Place protective tape as shown in the illustration.

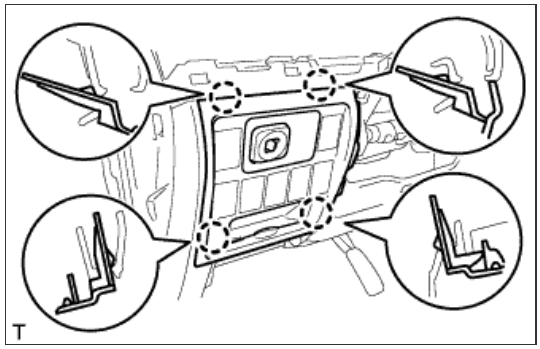
b. Using a moulding remover, detach the 2 claws and remove the panel garnish.



5. REMOVE NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Floor Under Cover)

a. Remove the 2 screws.

b. Detach the 3 claws.

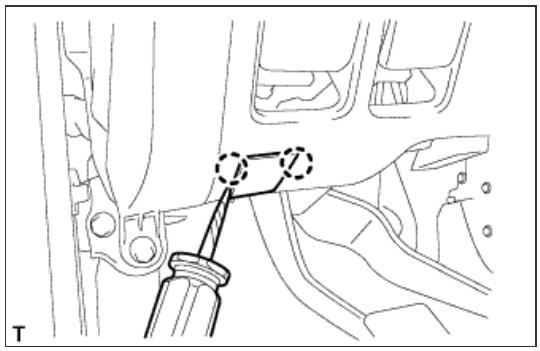


c. Remove the under cover and disconnect the connectors.

6. REMOVE NO. 1 SWITCH HOLE BASE

a. Detach the 4 claws.

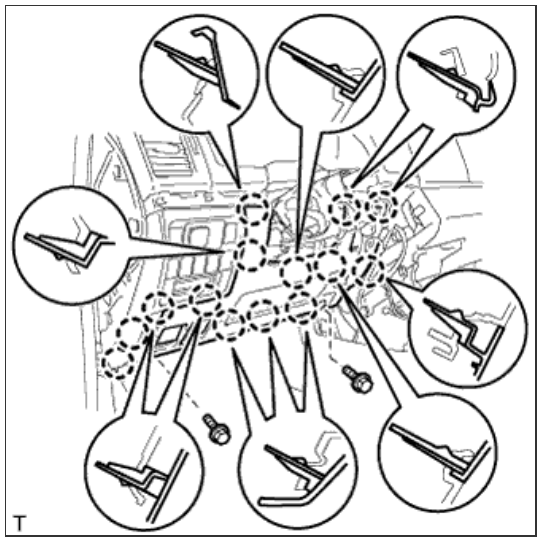
b. Remove the switch hole base and then disconnect the connectors.



7. REMOVE LOWER NO. 1 INSTRUMENT PANEL FINISH PANEL

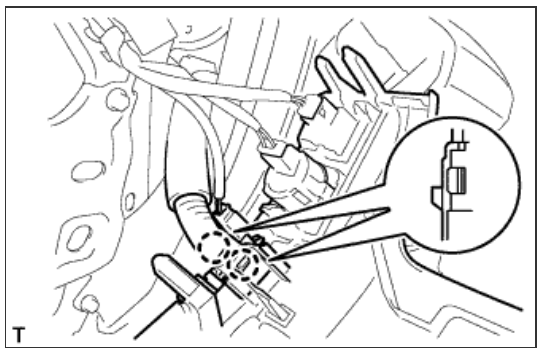
a. Using a screwdriver, detach the 2 claws.

HINT:



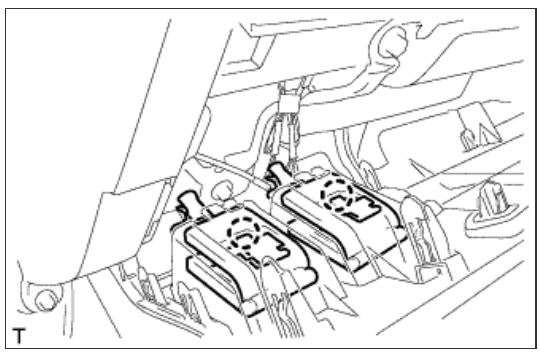
Tape the screwdriver tip before use.

b. Open the hole cover.



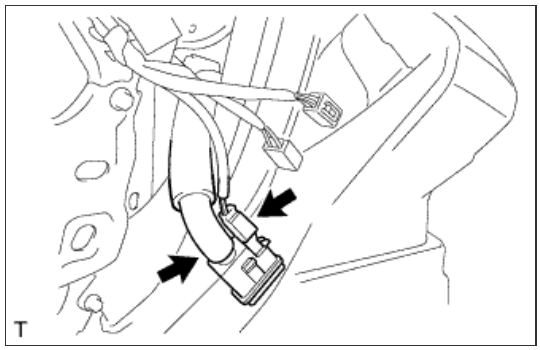
c. Remove the 2 bolts.

d. Detach the 14 claws.



e. Detach the 2 claws and remove the sensor.

f. Detach the 2 claws and disconnect the 2 control cables.



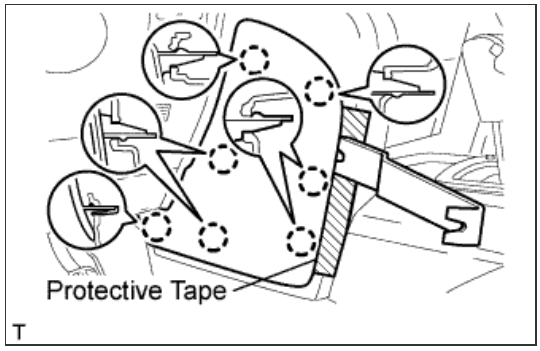
g. Remove the finish panel and then disconnect the connectors.

8. REMOVE ROOM TEMPERATURE SENSOR

a. Disconnect the connector.

b. Disconnect the hose and remove the sensor.

for Preparation Click here



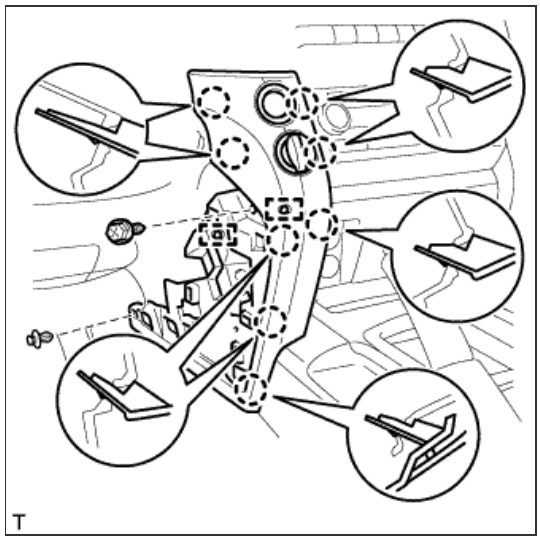
HINT:

- **Use the same procedures for the LHD vehicle and RHD vehicle.**
- **The procedures listed below are for the LHD vehicle.**

1. REMOVE NO. 2 INSTRUMENT PANEL FINISH PANEL CUSHION

a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 7 claws and remove the panel cushion.

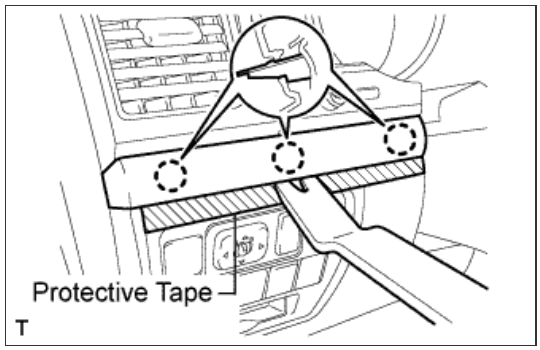


2. REMOVE LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

a. Remove the clip.

b. Remove the screw.

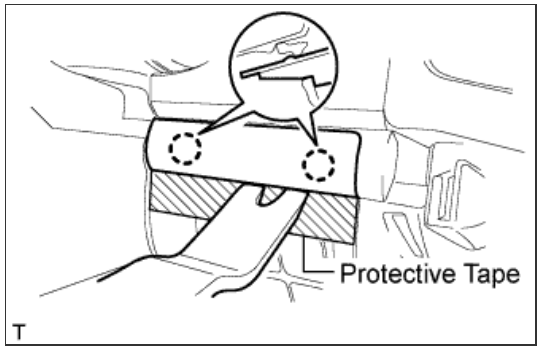
c. Detach the 8 claws.



d. Remove the panel pad and disconnect the connectors and 2 clamps.

3. REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Place protective tape as shown in the illustration.

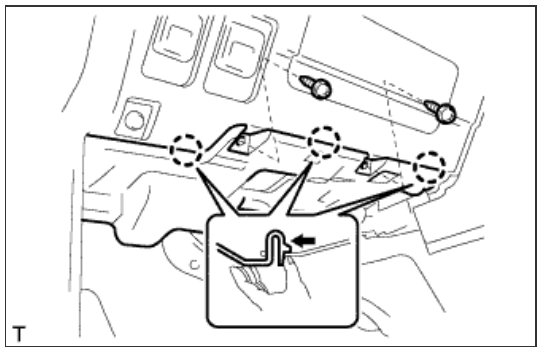


b. Using a moulding remover, detach the 3 claws and remove the panel garnish.

4. REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Place protective tape as shown in the illustration.

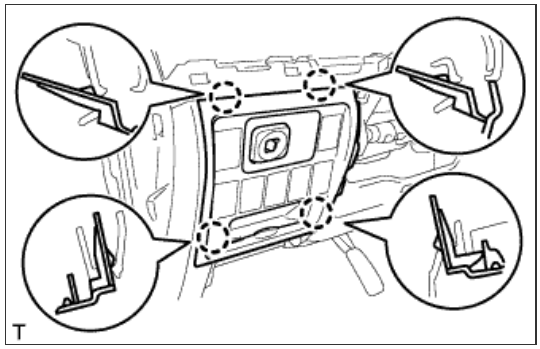
b. Using a moulding remover, detach the 2 claws and remove the panel garnish.



5. REMOVE NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Floor Under Cover)

a. Remove the 2 screws.

b. Detach the 3 claws.

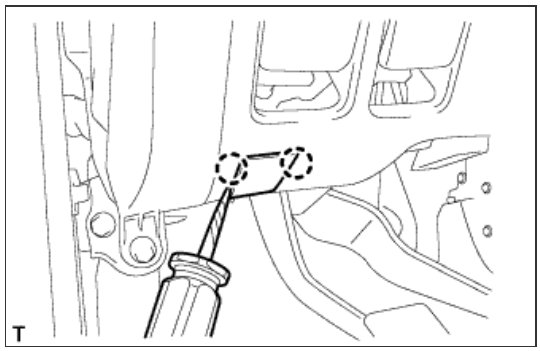


c. Remove the under cover and disconnect the connectors.

6. REMOVE NO. 1 SWITCH HOLE BASE

a. Detach the 4 claws.

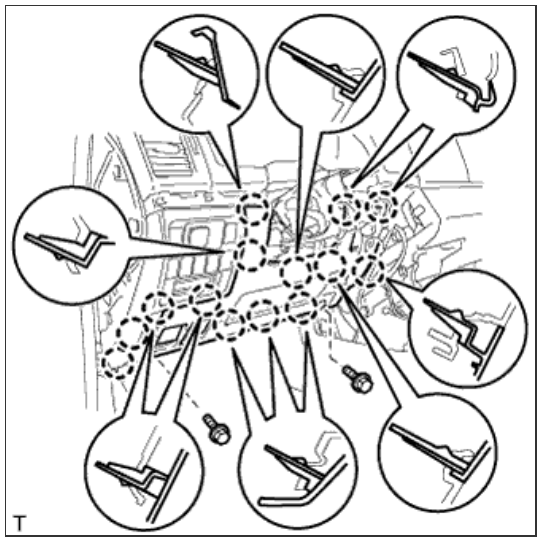
b. Remove the switch hole base and then disconnect the connectors.



7. REMOVE LOWER NO. 1 INSTRUMENT PANEL FINISH PANEL

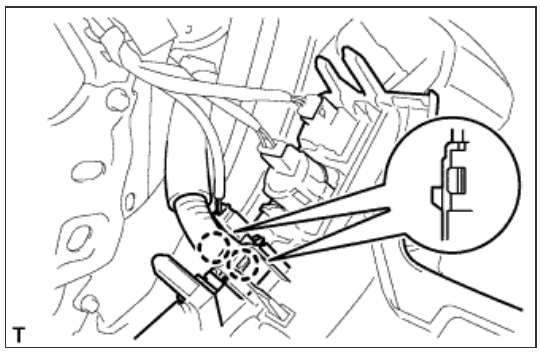
a. Using a screwdriver, detach the 2 claws.

HINT:



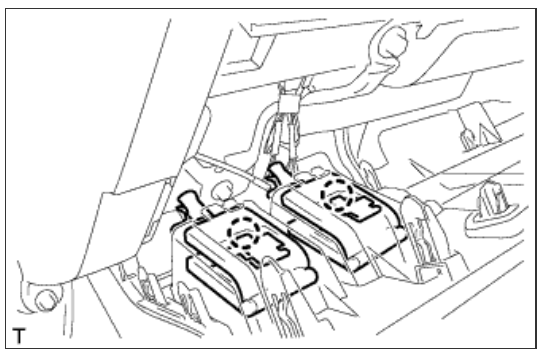
Tape the screwdriver tip before use.

b. Open the hole cover.



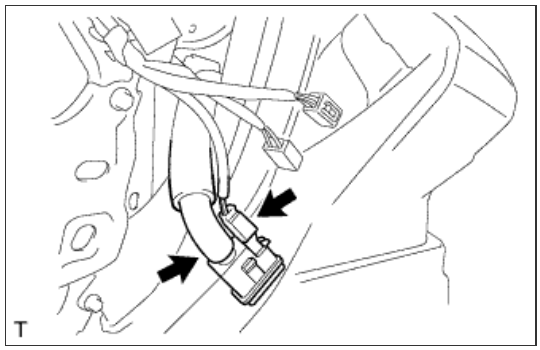
c. Remove the 2 bolts.

d. Detach the 14 claws.



e. Detach the 2 claws and remove the sensor.

f. Detach the 2 claws and disconnect the 2 control cables.



g. Remove the finish panel and then disconnect the connectors.

8. REMOVE ROOM TEMPERATURE SENSOR

a. Disconnect the connector.

b. Disconnect the hose and remove the sensor.

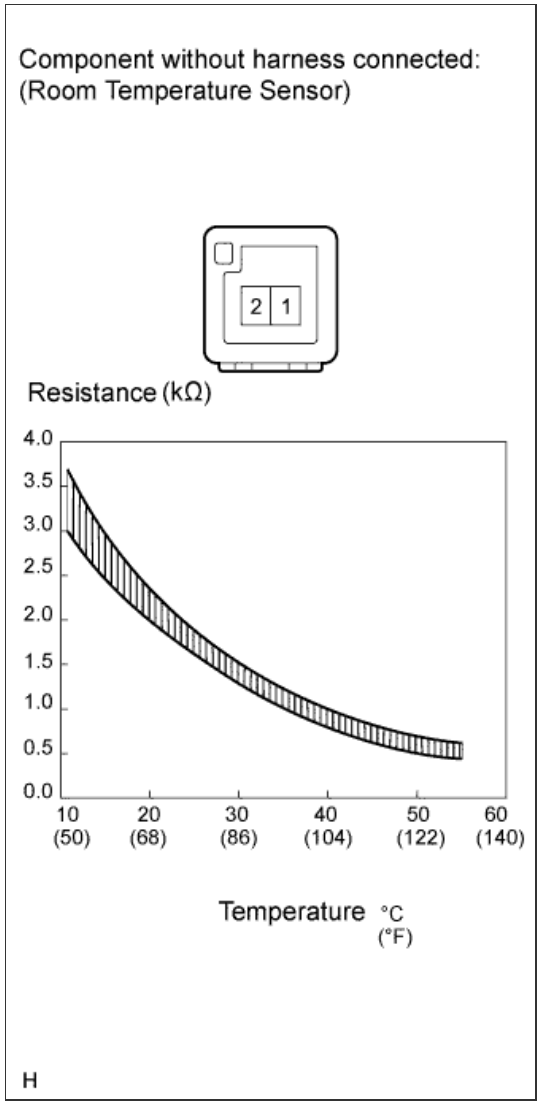
for Preparation Click here

1. INSPECT ROOM TEMPERATURE SENSOR

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	10°C (50°F)	3.00 to 3.73 kΩ
1 - 2	15°C (59°F)	2.45 to 2.88 kΩ
1 - 2	20°C (68°F)	1.95 to 2.30 kΩ
1 - 2	25°C (77°F)	1.60 to 1.80 kΩ
1 - 2	30°C (86°F)	1.28 to 1.47 kΩ
1 - 2	35°C (95°F)	1.00 to 1.22 kΩ
1 - 2	40°C (104°F)	0.80 to 1.00 kΩ
1 - 2	45°C (113°F)	0.65 to 0.85 kΩ
1 - 2	50°C (122°F)	0.50 to 0.70 kΩ
1 - 2	55°C (131°F)	0.44 to 0.60 kΩ
1 - 2	60°C (140°F)	0.36 to 0.50 kΩ



If the result is not as specified, replace the room temperature sensor.

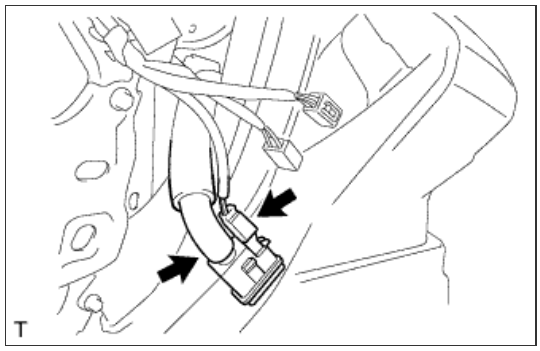
NOTICE:

- **Touching the sensor even slightly may change the resistance value. Hold the connector of the sensor.**
- **When measuring the resistance, the sensor temperature must be the same as the ambient temperature.**

HINT:

As the temperature increases, the resistance decreases (See the graph).

for Preparation Click here



HINT:

FRONT EVAPORATOR TEMPERATURE SENSOR (for LHD) > REMOVAL

for Preparation Click here

1. REMOVE AIR CONDITIONING UNIT ASSEMBLY

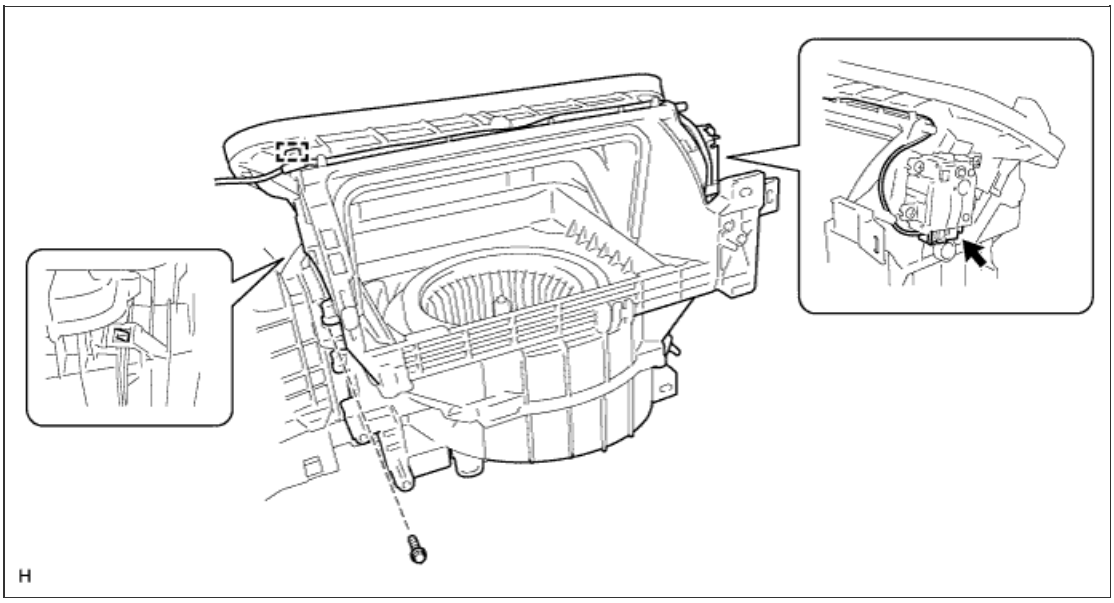
a. Remove the air conditioning unit assembly (Click here).

FRONT EVAPORATOR TEMPERATURE SENSOR (for LHD) > REMOVAL

for Preparation Click here

1. REMOVE AIR CONDITIONING UNIT

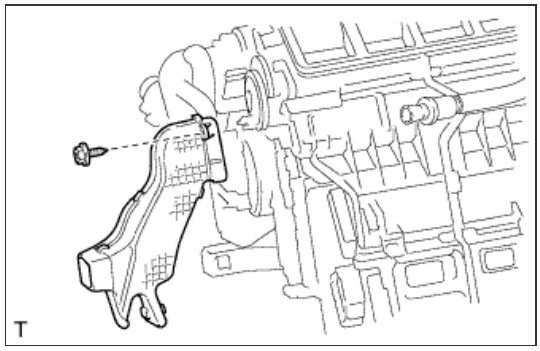
a. Remove the air conditioning unit (Click here).



for Preparation Click here

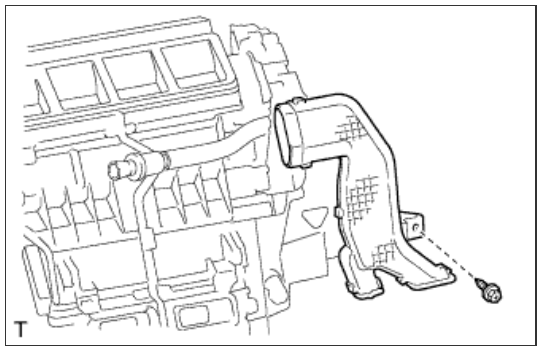
1. REMOVE BLOWER ASSEMBLY

a. Remove the screw.



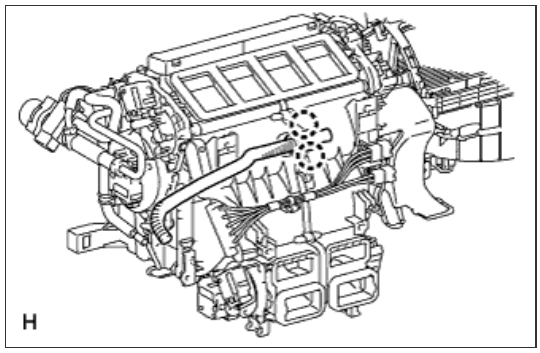
b. Disconnect the connector and clamp.

c. Detach the claw and remove the blower unit.



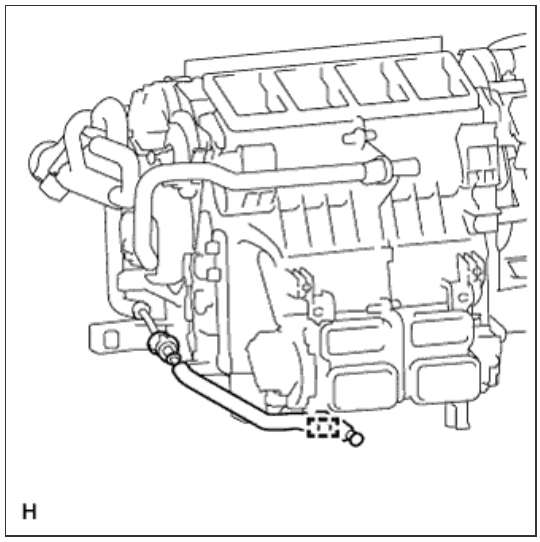
2. REMOVE NO. 4 AIR DUCT SUB-ASSEMBLY

a. Remove the screw and duct.



3. REMOVE NO. 5 AIR DUCT SUB-ASSEMBLY

a. Remove the screw and duct.

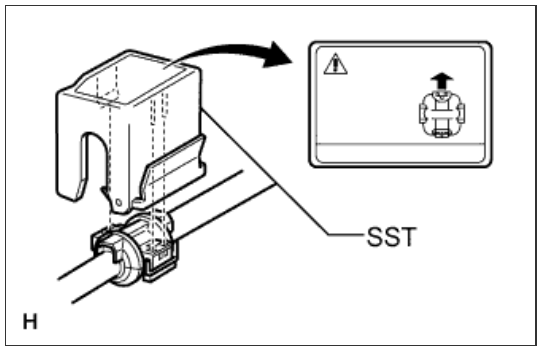


4. REMOVE ASPIRATOR

a. Detach the 2 claws and remove the aspirator.

5. REMOVE COOL BOX LIQUID TUBE (w/ Cool Box)

a. Detach the clamp.



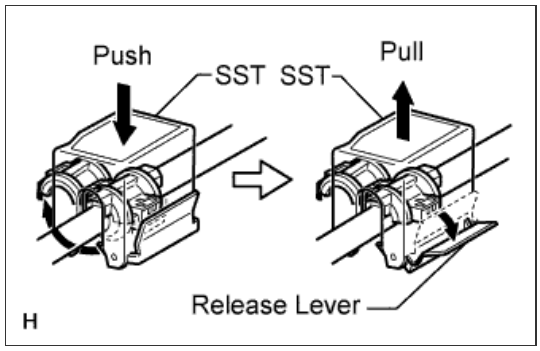
b. Using SST, remove the piping clamp.

SST
09870-00025

i. Attach SST to the piping clamp.

HINT:

Confirm the direction of the piping clamp claw and SST by referring to the illustration on the caution label.



ii. Push down SST and release the clamp lock.

NOTICE:

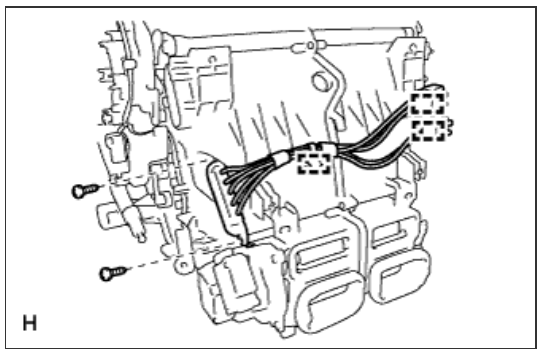
Be careful not to deform the tubes when pushing SST.

iii. Pull SST slightly and push the release lever, then remove the piping clamp with SST.

iv. Remove the piping clamp from SST.

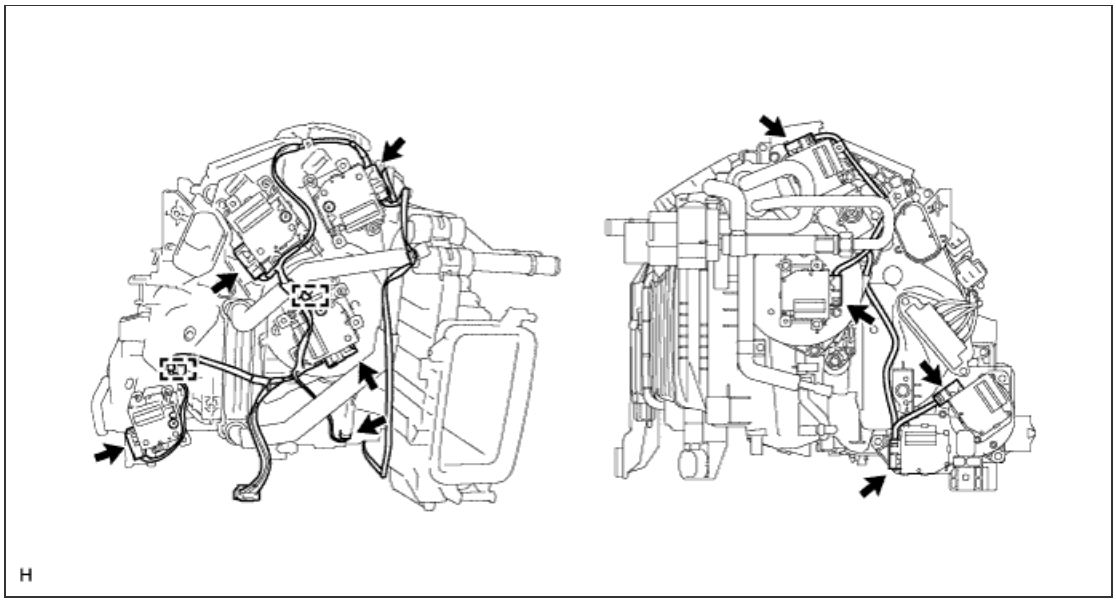
c. Disconnect the tube.

NOTICE:



Cap the open fittings immediately to keep moisture or dirt out of the system.

d. Remove the 2 O-rings from the liquid tube.

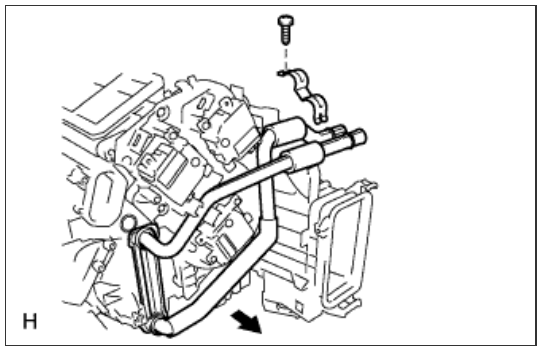


6. REMOVE QUICK HEATER ASSEMBLY (w/ PTC Heater)

a. Detach the 3 clamps.

b. Remove the 2 screws and quick heater.

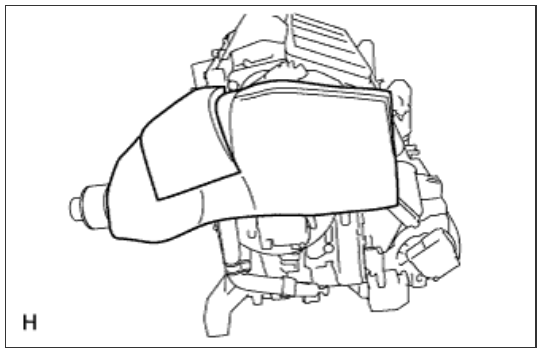
7. REMOVE AIR CONDITIONER HARNESS



a. Disconnect the connectors.

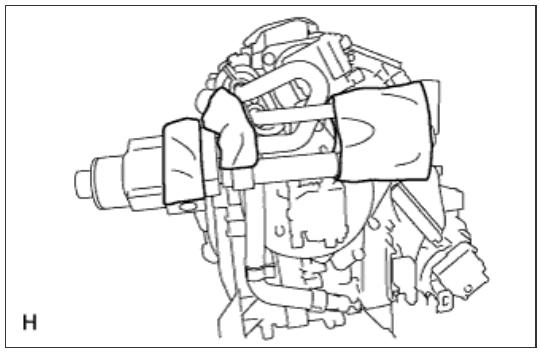
b. Detach the clamps and remove the harness.

8. REMOVE AIR CONDITIONING RADIATOR ASSEMBLY

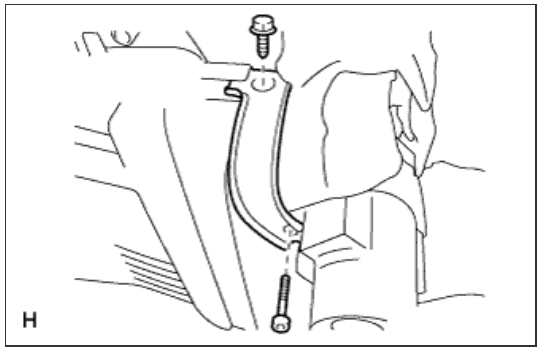


a. Remove the screw and radiator bracket.

b. Remove the radiator.

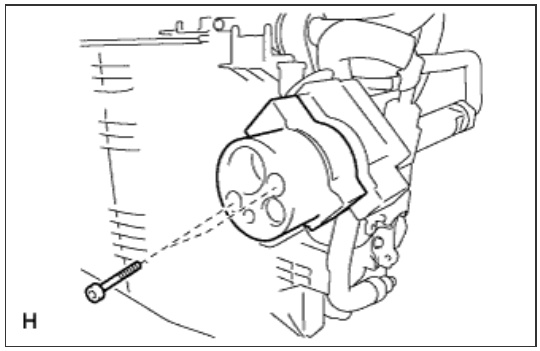


9. REMOVE COOLER EXPANSION VALVE (w/ Cool Box)



a. Remove the packing.

b. Remove the butyl tape.



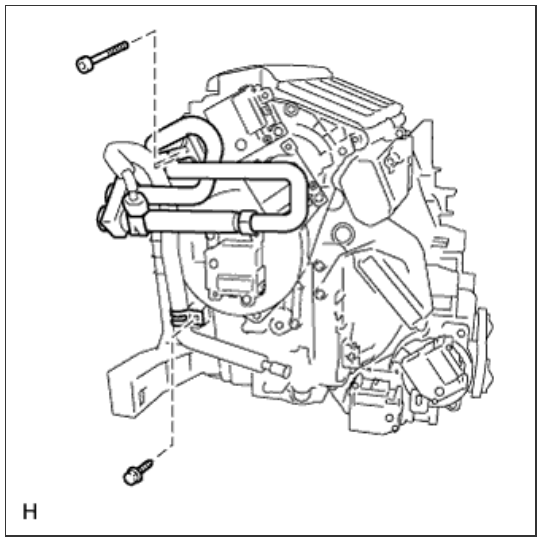
c. Using a 4 mm hexagon wrench, remove the hexagon bolt, screw and bracket.

d. Using a 4 mm hexagon wrench, remove the 2 hexagon bolts and No. 1 connector tube.

e. Remove the 2 O-rings from the No. 1 connector tube.

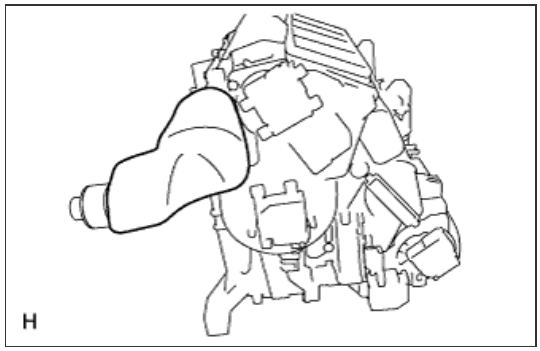
f. Using a 4 mm hexagon wrench, remove the 2 hexagon bolts, No. 2 connector tube, expansion valve and No. 3 connector tube.

g. Remove the 2 O-rings from the No. 2 connector tube.



10. REMOVE AIR CONDITIONER TUBE AND ACCESSORY ASSEMBLY (w/ Cool Box)

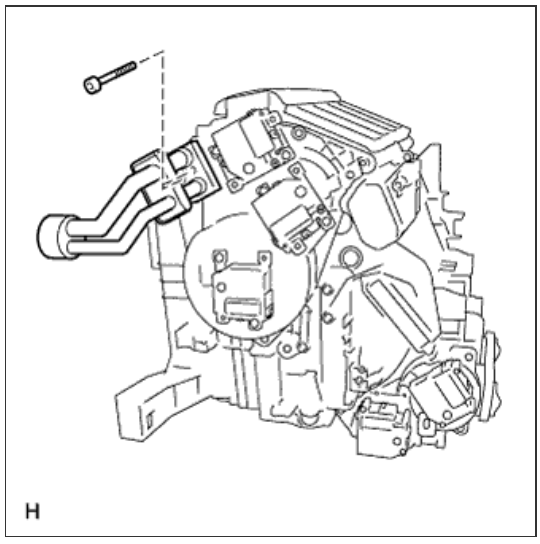
a. Remove the screw and bracket.



b. Using a 4 mm hexagon wrench, remove the 2 hexagon bolts and air conditioner tube and accessory assembly.

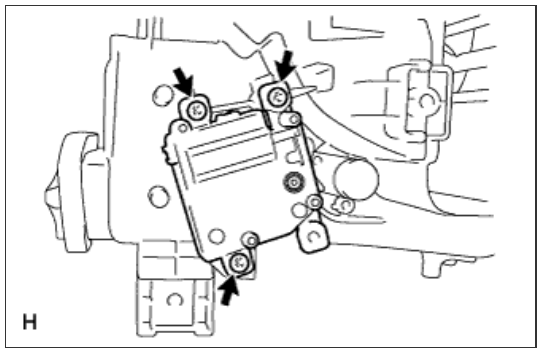
c. Remove the 2 O-rings from the air conditioner tube and accessory assembly.

11. REMOVE COOLER EXPANSION VALVE (w/o Cool Box)



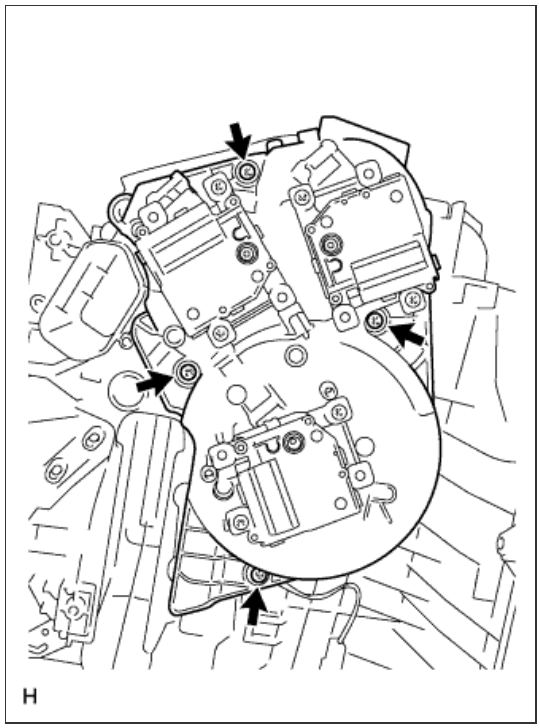
a. Remove the packing.

b. Using a 4 mm hexagon wrench, remove the 2 hexagon bolts, air conditioner tube and accessory assembly and expansion valve.



c. Remove the 2 O-rings from the air conditioner tube and accessory assembly.

d. Remove the 2 O-rings from the expansion valve.

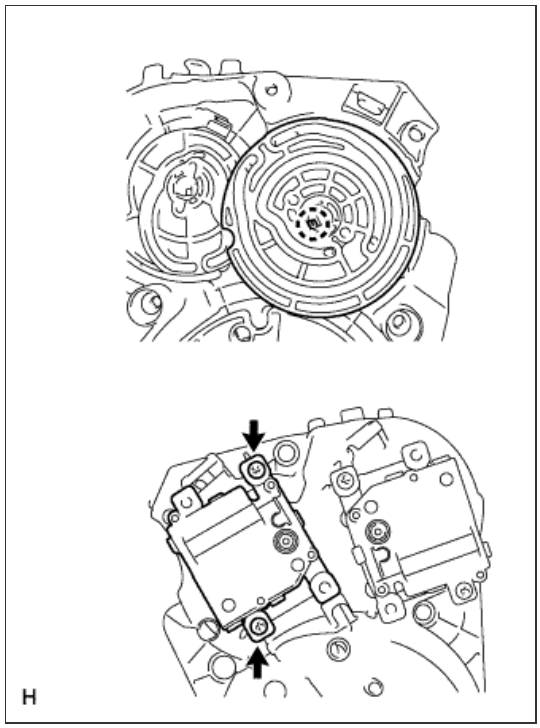


12. REMOVE REAR AIR MIX DAMPER CONTROL SERVO MOTOR RH (for 4 Zone Type)

a. Remove the 3 screws and servo motor.

13. REMOVE SERVO MOTOR

a. Remove the 4 screws and servo motor unit.



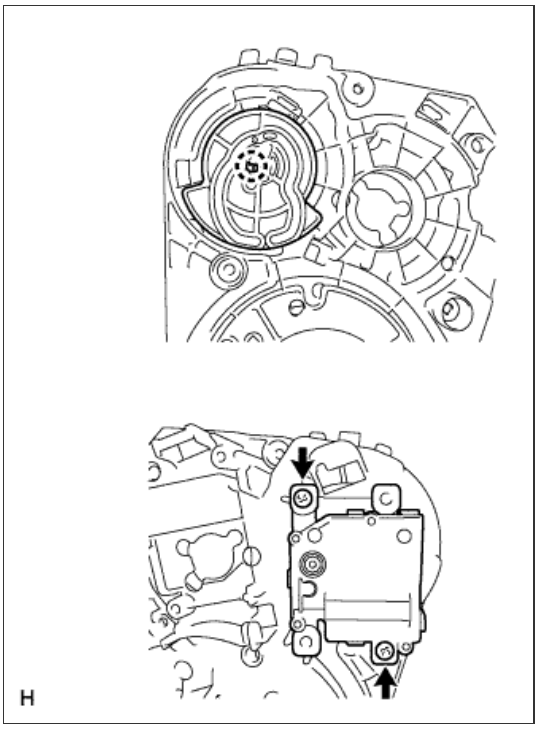
b. for 4 Zone Type:
Remove the front mode control servo motor RH.

i. Remove the 2 screws.

ii. Detach the claw and remove the plate and servo motor.

NOTICE:

Be careful not to damage the claw of the plate.



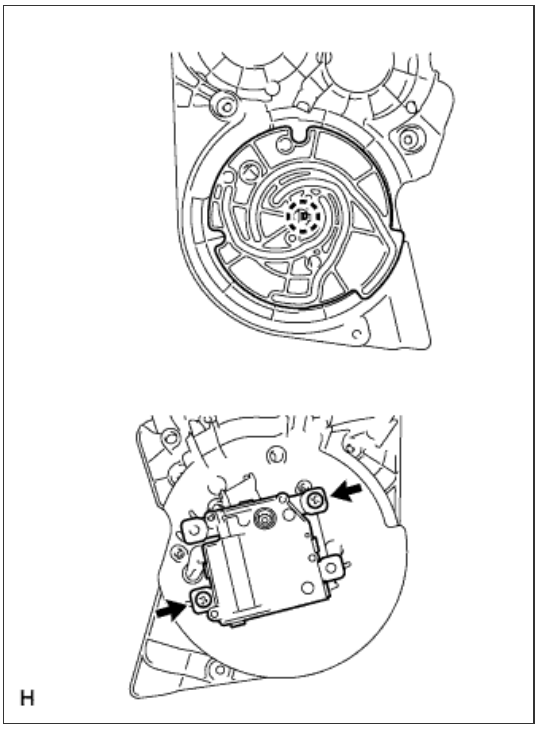
c. Remove the control bypass damper control servo motor.

i. Remove the 2 screws.

ii. Detach the claw and remove the plate and servo motor.

NOTICE:

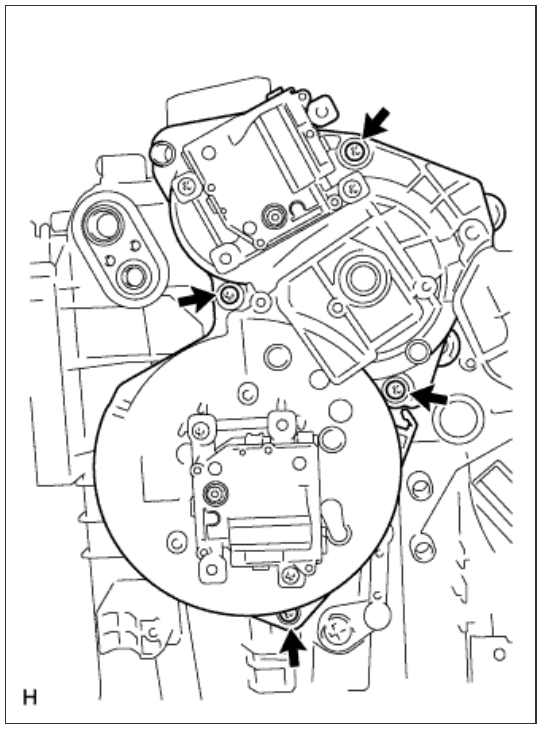
Be careful not to damage the claw of the plate.



d. Remove the front air mix damper control servo motor RH.

i. Remove the 2 screws.

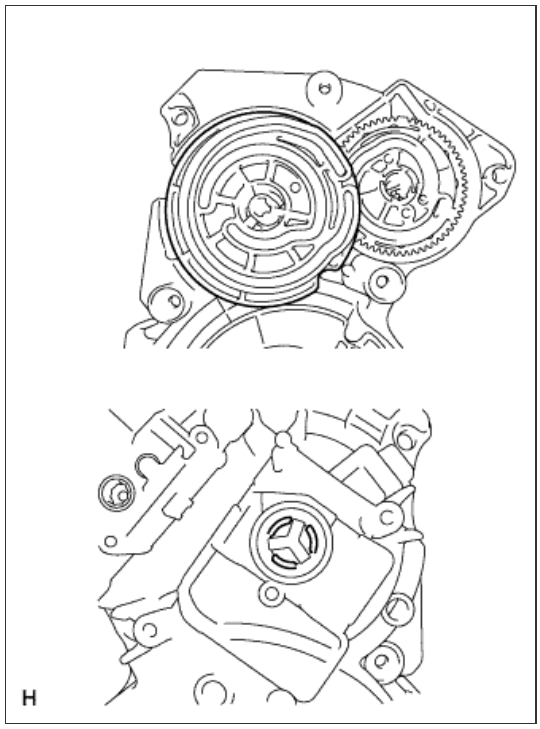
ii. Detach the claw and remove the plate and servo motor.



NOTICE:

Be careful not to damage the claw of the plate.

14. REMOVE SERVO MOTOR

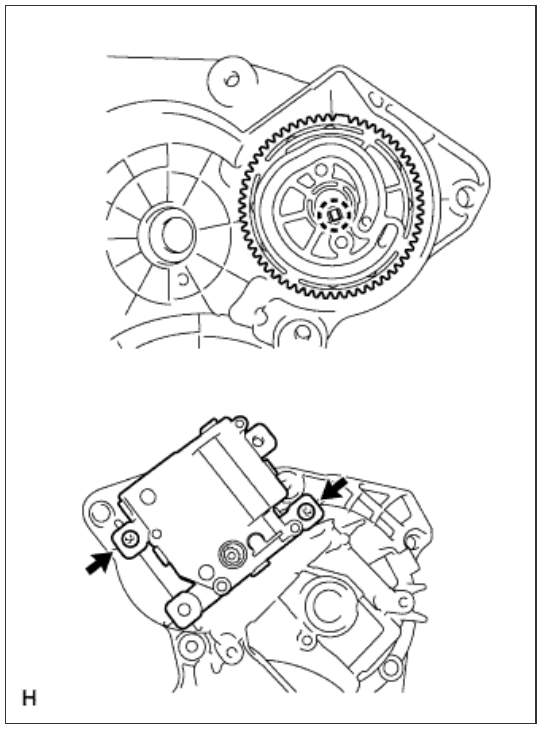


a. Remove the 4 screws and servo motor unit.

b. Detach the 3 claws and remove the plate.

NOTICE:

Be careful not to damage the claw of the plate.



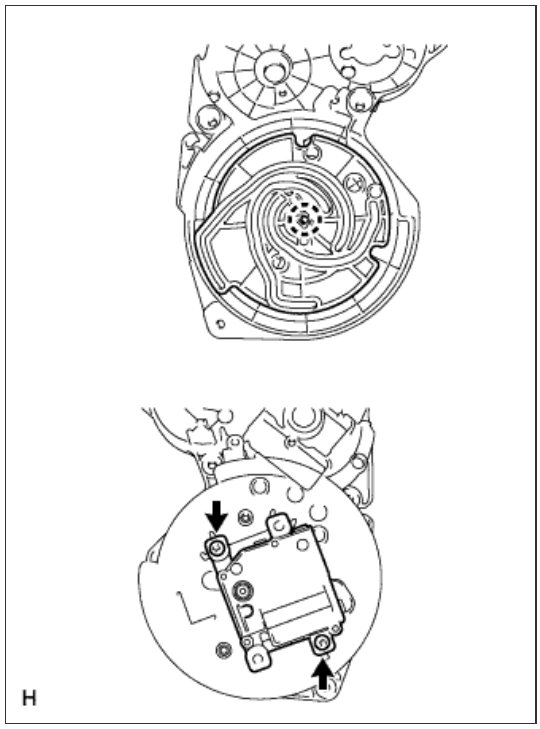
c. Remove the front mode control servo motor LH.

i. Remove the 2 screws.

ii. Detach the claw and remove the plate and servo motor.

NOTICE:

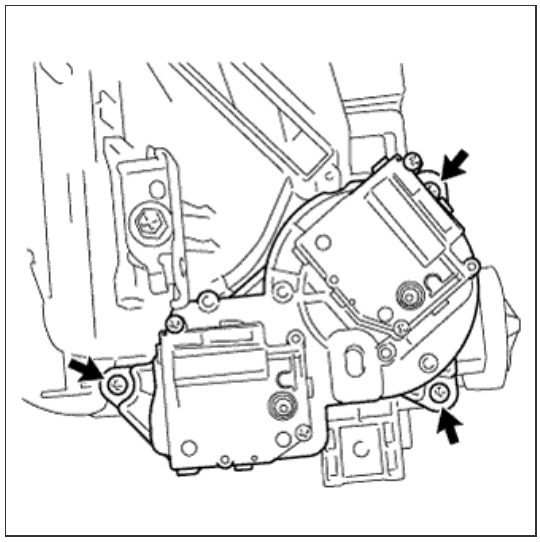
Be careful not to damage the claw of the plate.



d. Remove the front air mix damper control servo motor LH.

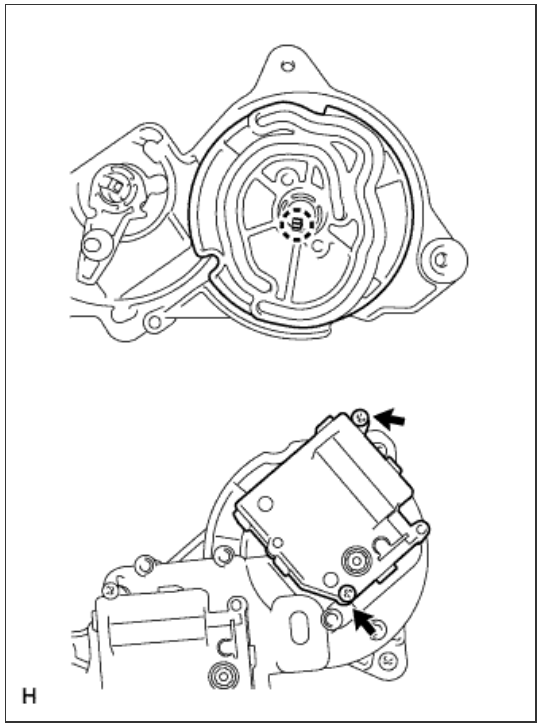
i. Remove the 2 screws.

ii. Detach the claw and remove the plate and servo motor.



NOTICE:

Be careful not to damage the claw of the plate.



15. REMOVE SERVO MOTOR

a. Remove the 3 screws and servo motor unit.

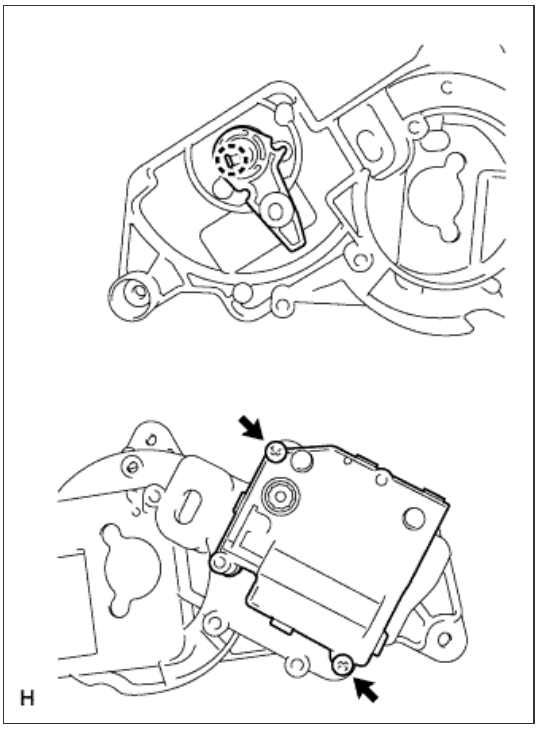
b. Remove the rear mode control servo motor.

i. Remove the 2 screws.

ii. Detach the claw and remove the plate and servo motor.

NOTICE:

Be careful not to damage the claw of the plate.



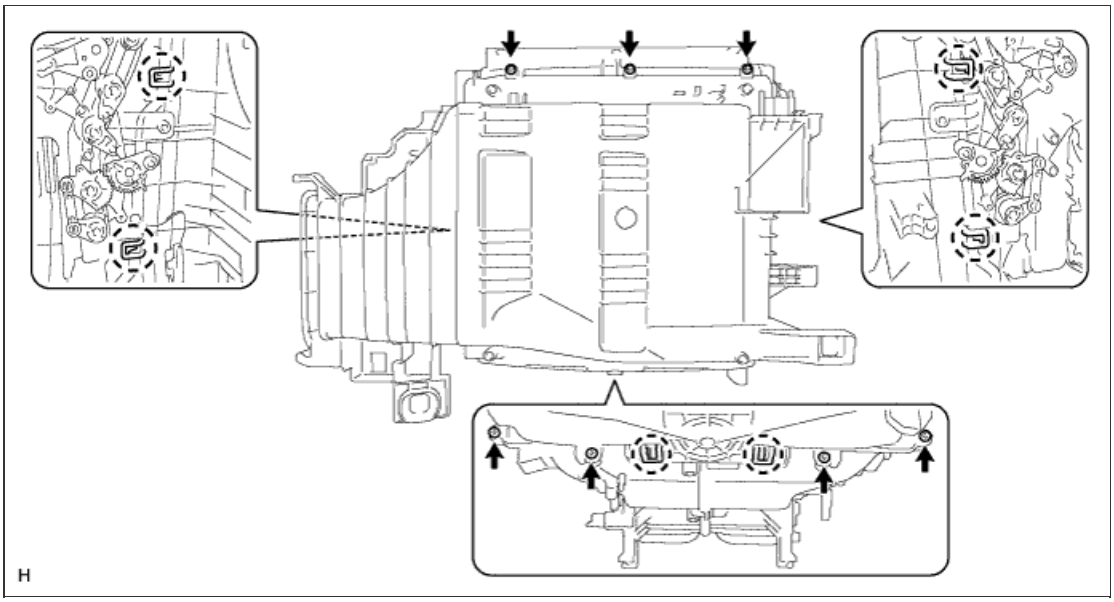
c. Remove the rear air mix damper control servo motor RH.

i. Remove the 2 screws.

ii. Detach the claw and remove the lever and servo motor.

NOTICE:

Be careful not to damage the claw of the lever.



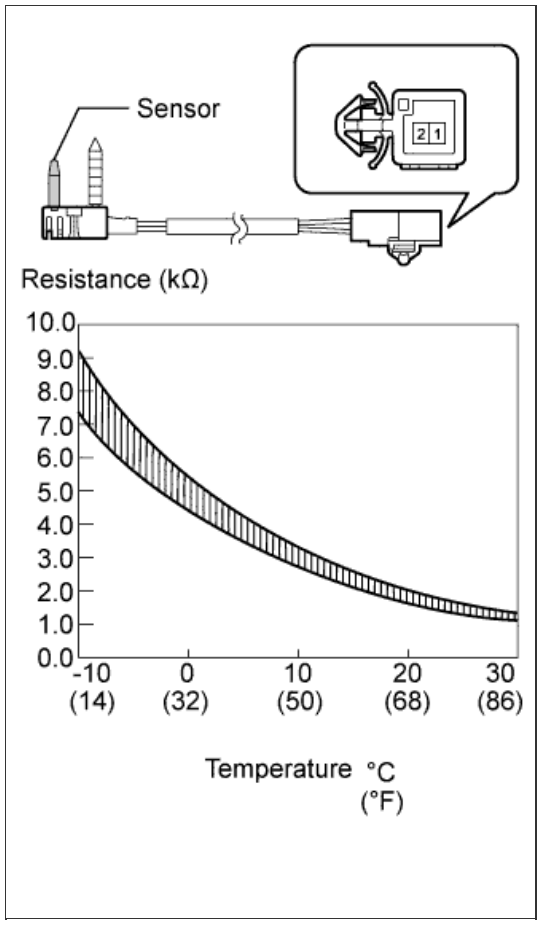
16. REMOVE NO. 1 COOLER EVAPORATOR SUB-ASSEMBLY

a. Remove the 7 screws.

b. Detach the 6 claws and remove the unit case.

c. Remove the evaporator.

17. REMOVE FRONT EVAPORATOR TEMPERATURE SENSOR



for Preparation Click here

1. INSPECT FRONT EVAPORATOR TEMPERATURE SENSOR

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	-10°C (14°F)	7.30 to 9.10 kΩ
1 - 2	-5°C (23°F)	5.65 to 6.95 kΩ
1 - 2	0°C (32°F)	4.40 to 5.35 kΩ
1 - 2	5°C (41°F)	3.40 to 4.15 kΩ
1 - 2	10°C (50°F)	2.70 to 3.25 kΩ
1 - 2	15°C (59°F)	2.14 to 2.58 kΩ
1 - 2	20°C (68°F)	1.71 to 2.05 kΩ
1 - 2	25°C (77°F)	1.38 to 1.64 kΩ
1 - 2	30°C (86°F)	1.11 to 1.32 kΩ

If the result is not as specified, replace the front evaporator temperature sensor.

NOTICE:

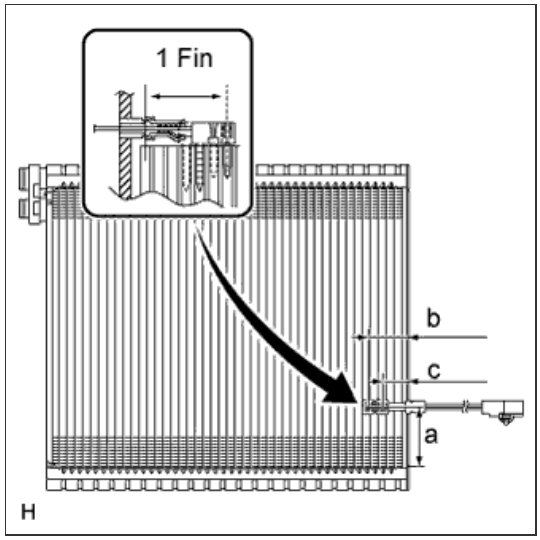
- **Even slightly touching the sensor may change the resistance value. Be sure to hold the connector of the sensor.**
- **When measuring, the sensor temperature must be almost the same as the ambient temperature.**

HINT:

As the temperature increases, the resistance decreases (see the graph).

for Preparation Click here

1. INSTALL FRONT EVAPORATOR TEMPERATURE SENSOR



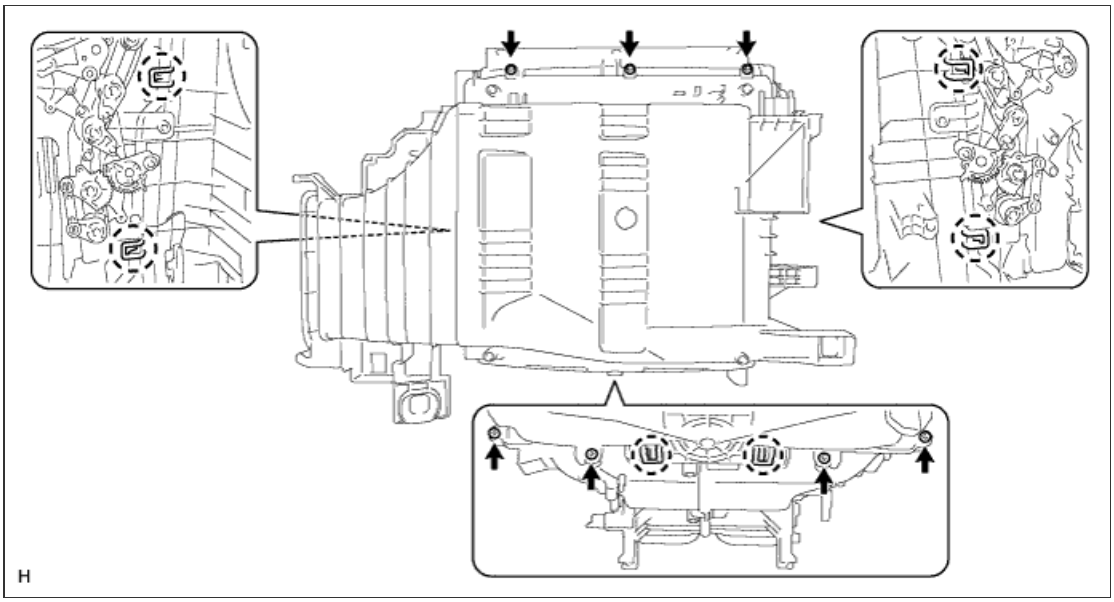
NOTICE:

If reusing the evaporator, do not insert the sensor into a location where the sensor was previously inserted.

a. Insert the sensor to a location that is 1 fin to the right or left of its previous location.

Standard Dimension:

Area	Specified Condition
a	50 mm (1.97 in.)
b	34.3 mm (1.35 in.)
c	20.9 mm (1.97 in.)

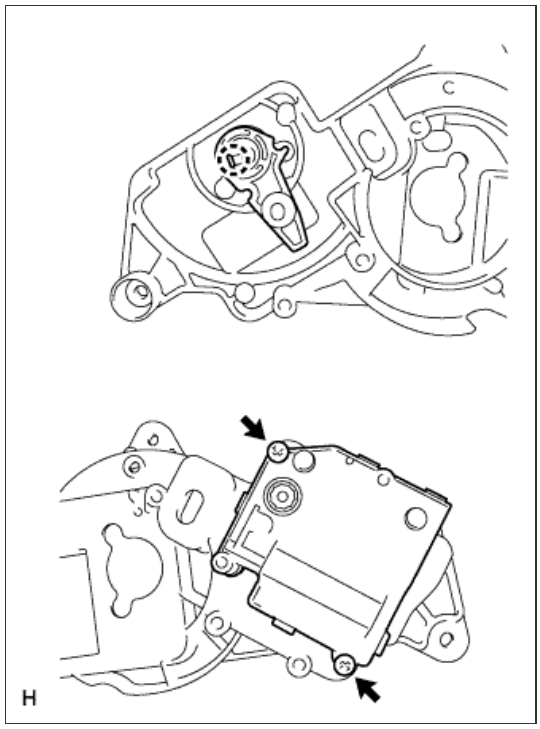


2. INSTALL NO. 1 COOLER EVAPORATOR SUB-ASSEMBLY

a. Install the evaporator.

b. Attach the 6 claws to install the unit case.

c. Install the 7 screws.

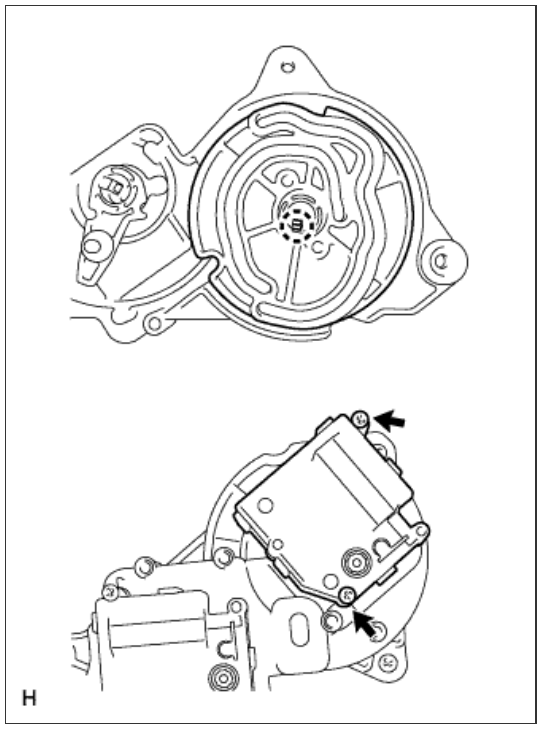


3. INSTALL SERVO MOTOR

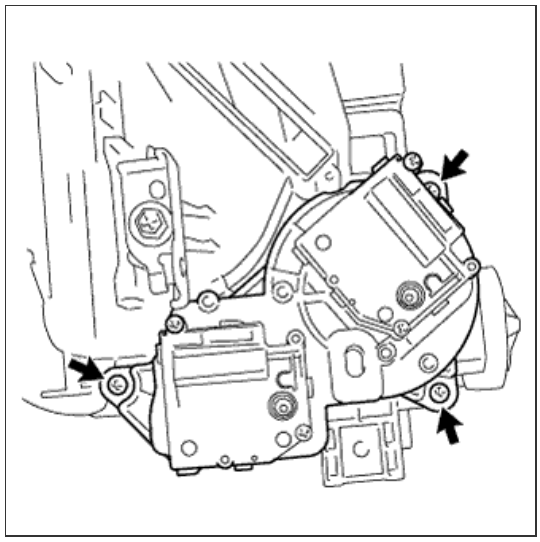
a. Install the rear air mix damper control servo motor RH.

i. Attach the claw to install the lever and servo motor.

ii. Install the 2 screws.



b. Install the rear mode control servo motor.

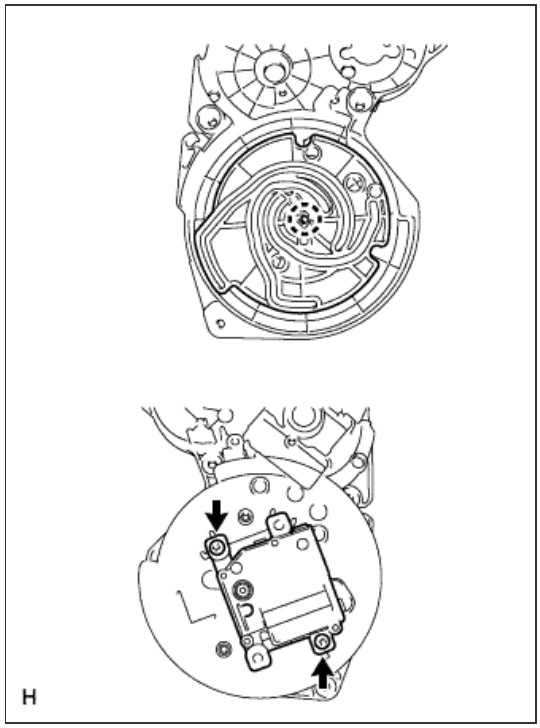


i. Attach the claw to install the plate and servo motor.

ii. Install the 2 screws.

c. Set the damper servo so that the cutout part engages with the tooth of the gear, and attach the claw to install the servo motor unit.

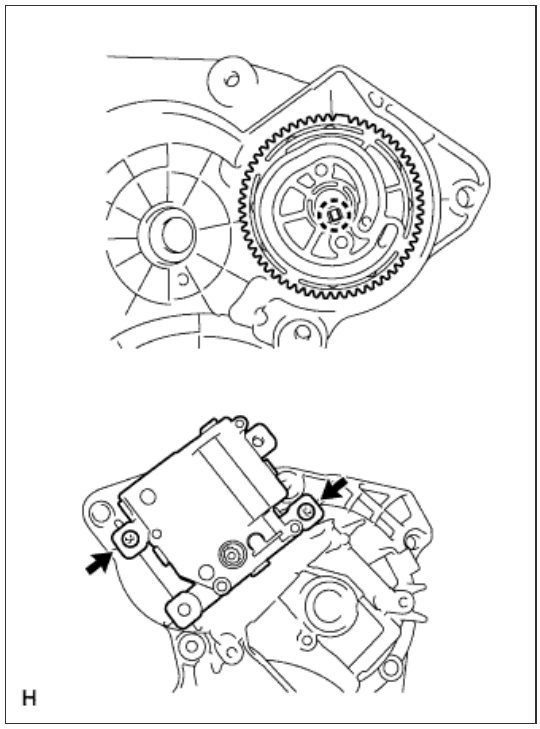
d. Install the 3 screws.



4. INSTALL SERVO MOTOR

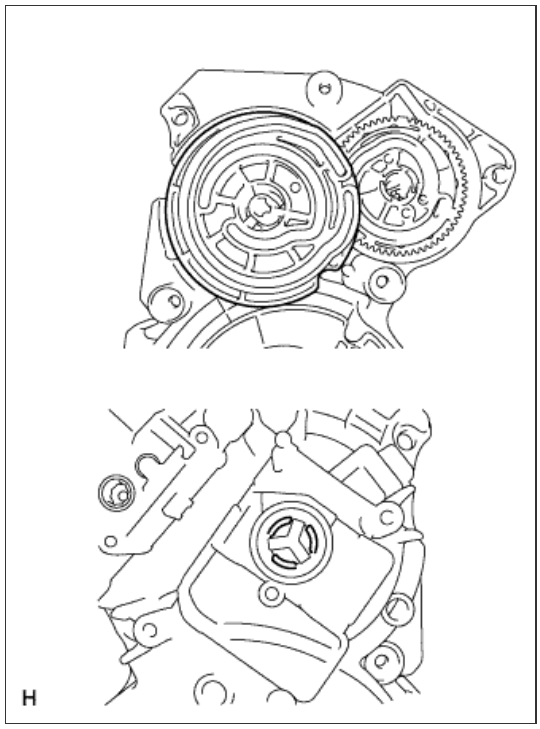
a. Install the front air mix damper control servo motor LH.

i. Attach the claw to install the plate and servo motor.



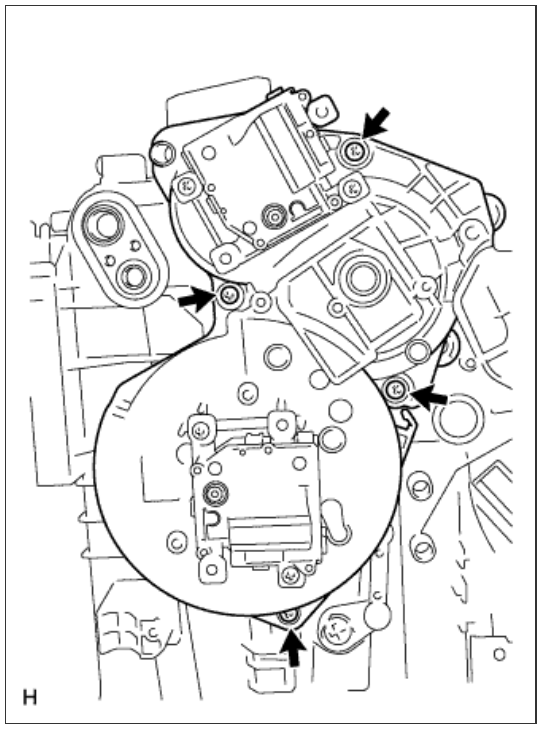
ii. Install the 2 screws.

b. Install the front mode control servo motor LH.



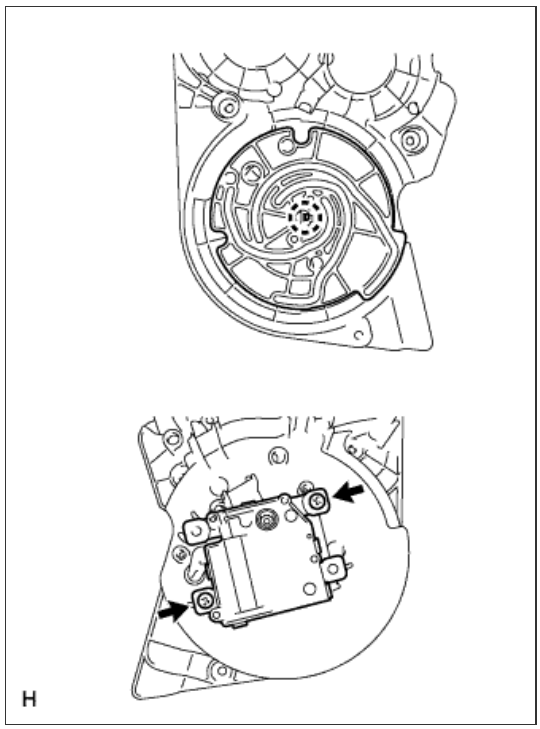
i. Attach the claw to install the plate and servo motor.

ii. Install the 2 screws.



c. Attach the 3 claws to install the plate.

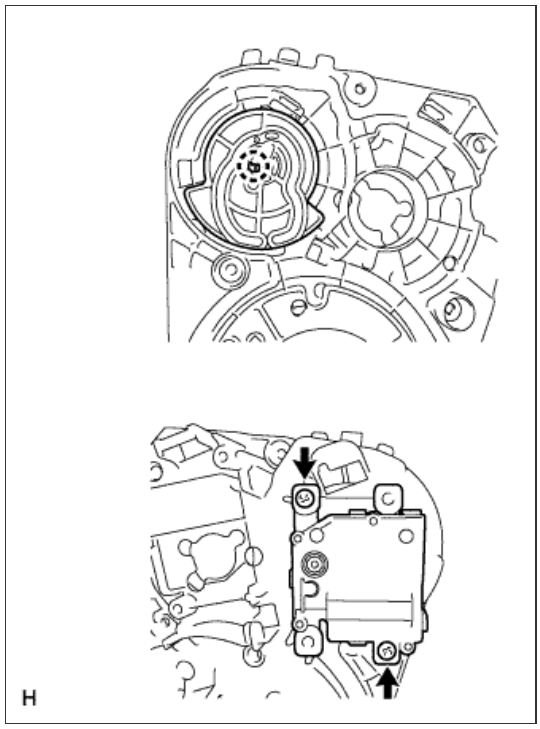
d. Set the damper servo so that the cutout part engages with the tooth of the gear, and attach the claw to install the servo motor unit.



e. Install the 4 screws.

5. INSTALL SERVO MOTOR

a. Install the front air mix damper control servo motor RH.



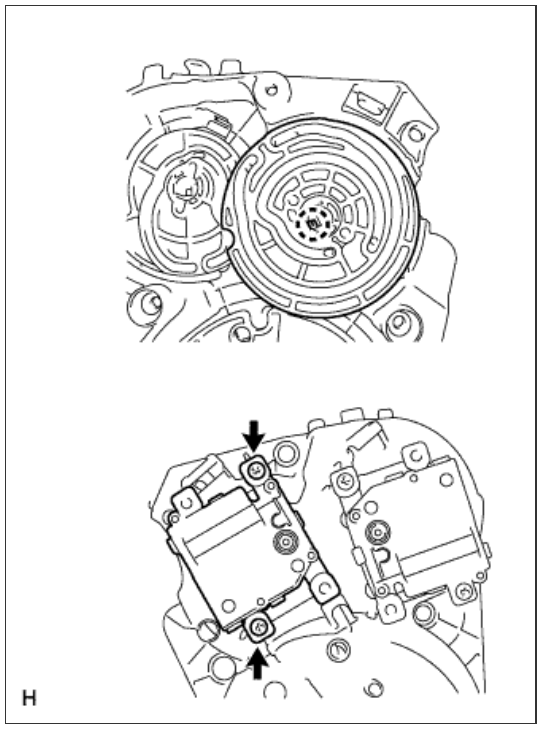
i. Attach the claw to install the plate and servo motor.

ii. Install the 2 screws.

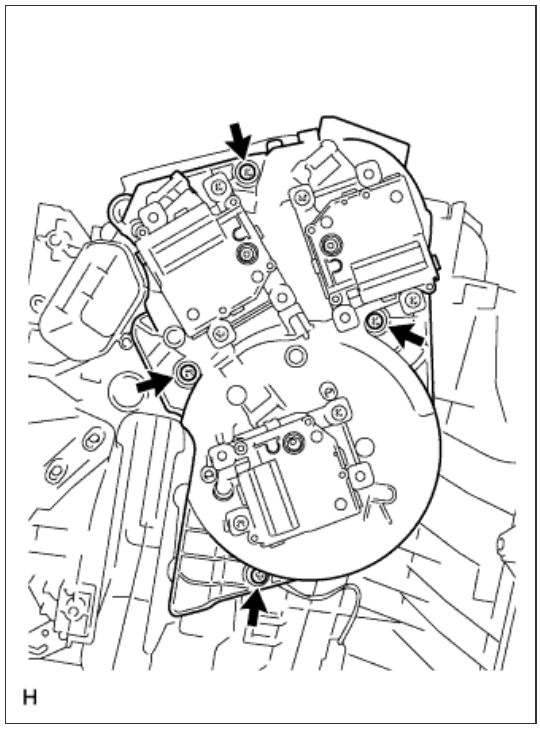
b. Install the control air bypass damper control servo motor.

i. Attach the claw to install the plate and servo motor.

ii. Install the 2 screws.



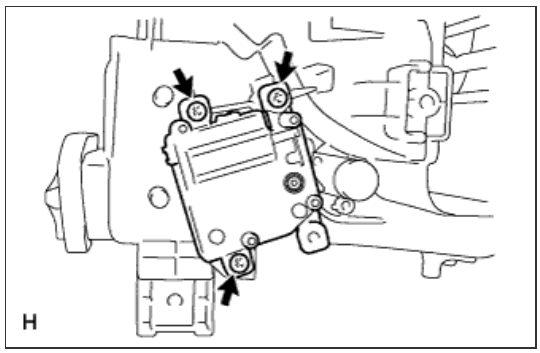
c. for 4 Zone Type:
Install the front mode control servo motor RH.



i. Attach the claw to install the plate and servo motor.

ii. Install the 2 screws.

d. Set the damper servo so that the cutout part engages with the tooth of the gear, and attach the claw to install the servo motor unit.



e. Install the 4 screws.

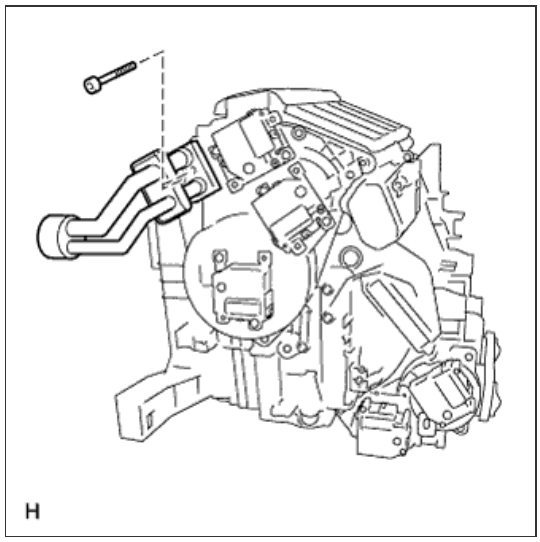
6. INSTALL REAR AIR MIX DAMPER CONTROL SERVO MOTOR RH (for 4 Zone Type)

a. Install the servo motor with the 3 screws.

7. INSTALL COOLER EXPANSION VALVE (w/o Cool Box)

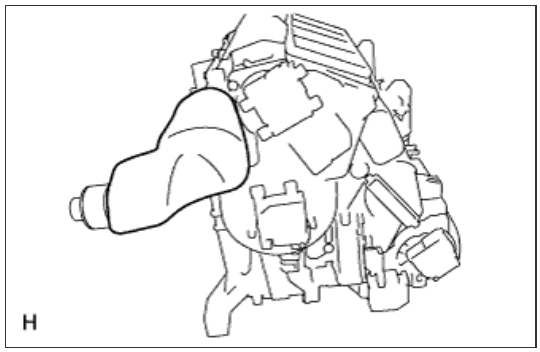
a. Sufficiently apply compressor oil to 4 new O-rings and the fitting surface of the hose joint.

Compressor oil:
ND-OIL 8 or eq i alent



b. Install the 2 O-rings to the cooler evaporator.

c. Install the 2 O-rings to the air conditioner tube and accessory assembly.



d. Install the cooler expansion valve and air conditioner tube and accessory assembly to the evaporator.

e. Using a 4 mm hexagon wrench, install the 2 bolts.

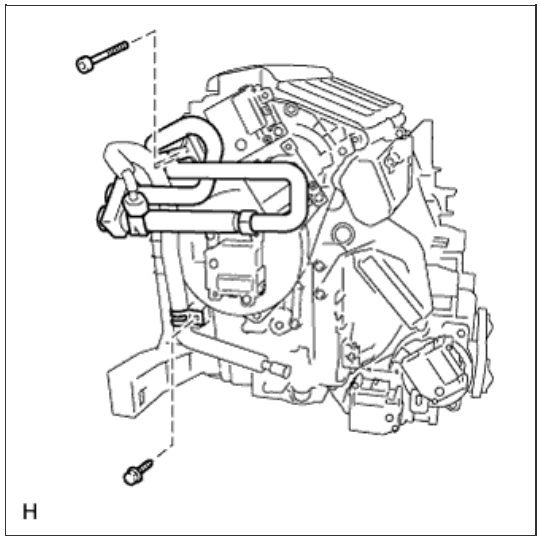
Torq e:
3.5 N m 36 kgf cm 31 in. lbf

f. Install new packing.

8. INSTALL AIR CONDITIONER TUBE AND ACCESSORY ASSEMBLY (w/ Cool Box)

a. Sufficiently apply compressor oil to 2 new O-rings and the fitting surface of the hose joint.

Compressor oil:
ND-OIL 8 or eq i alent



b. Install the 2 O-rings to the air conditioner tube and accessory assembly.

c. Install the air conditioner tube and accessory assembly to the evaporator.

d. Using a 4 mm hexagon wrench, install the 2 hexagon bolts.

Torq e:
3.5 N m 36 kgf cm 31 in. lbf

e. Install the bracket with the screw.

9. INSTALL COOLER EXPANSION VALVE (w/ Cool Box)

a. Sufficiently apply compressor oil to 2 new O-rings and the fitting surface of the hose joint.

Compressor oil:
ND-OIL 8 or eq i alent

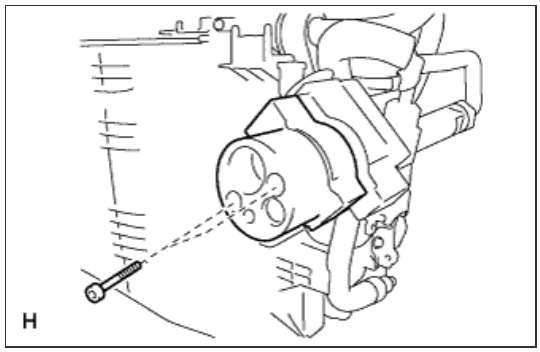
b. Install the 2 O-rings to the No. 2 connector tube.

c. Install the No. 2 connector tube, expansion valve and No. 3 connector tube.

d. Using a 4 mm hexagon wrench, install the 2 hexagon bolts.

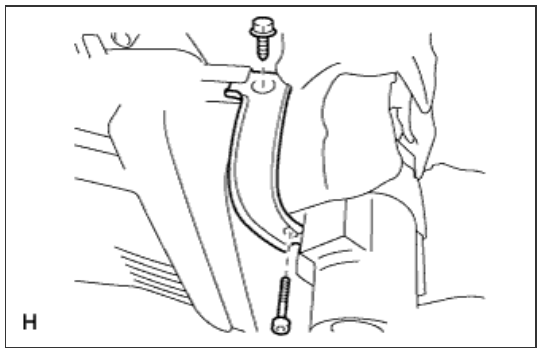
Torq e:
3.5 N m 36 kgf cm 31 in. lbf

e. Sufficiently apply compressor oil to 2 new O-rings and the fitting surface of the hose joint.



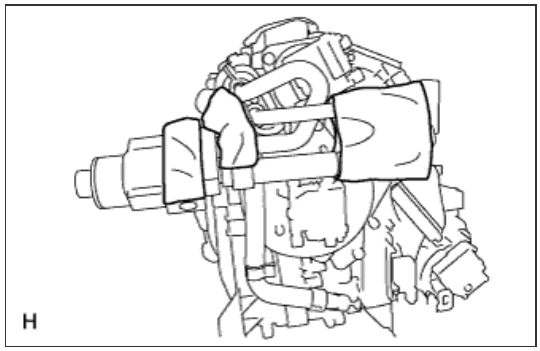
Compressor oil:
ND-OIL 8 or eq i alent

f. Install the 2 O-rings to the No. 1 connector tube.

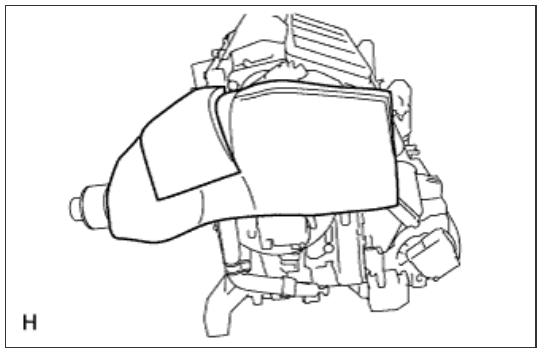


g. Install the No. 1 connector tube.

h. Using a 4 mm hexagon wrench, install the 2 hexagon bolts.

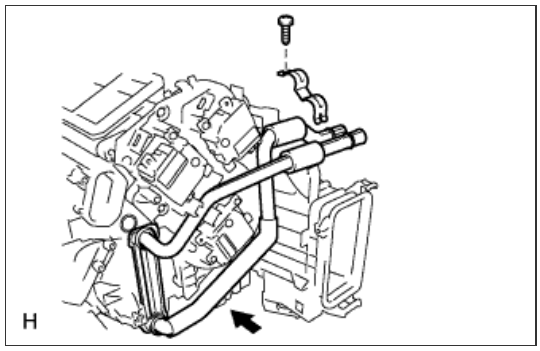


Torq e:
3.5 N m 36 kgf cm 31 in. lbf



i. Using a 4 mm hexagon wrench, install the bracket with the hexagon bolt and screw.

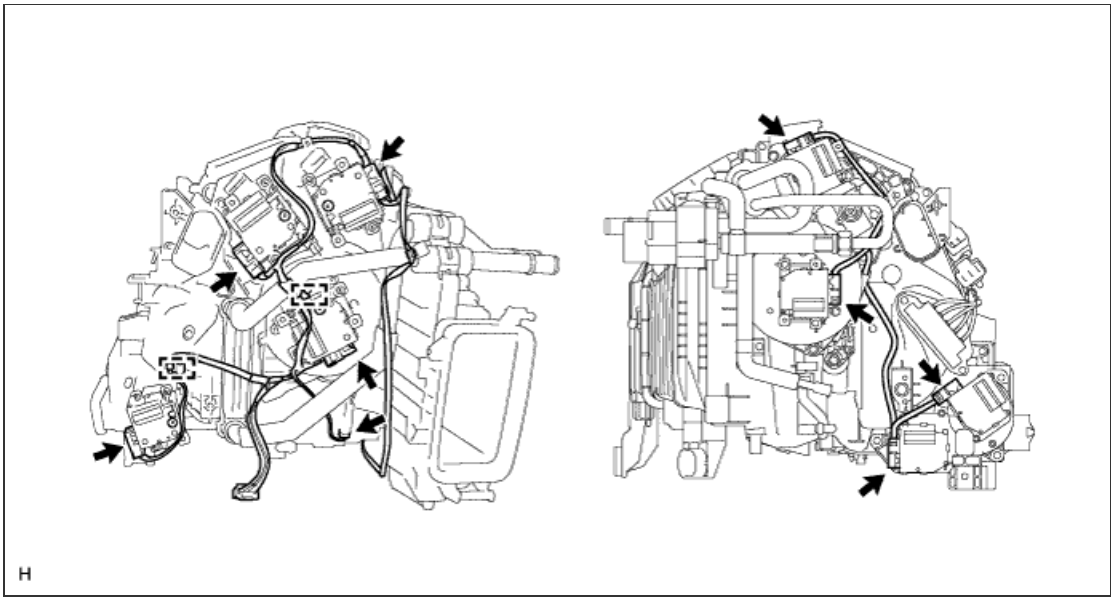
. Install new butyl tape.



k. Install new packing.

10. INSTALL AIR CONDITIONIN RADIATOR ASSEMBLY

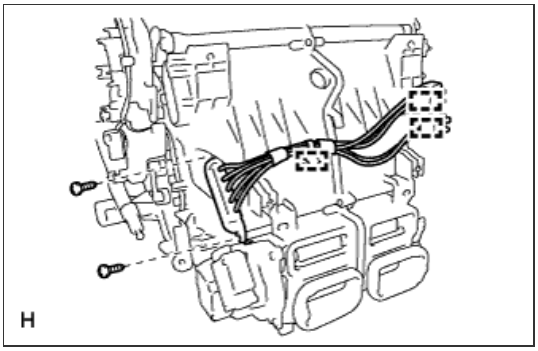
a. Install the radiator.



b. Install the bracket with the screw.

11. INSTALL AIR CONDITIONER HARNESS

a. Attach the clamps to install the harness.



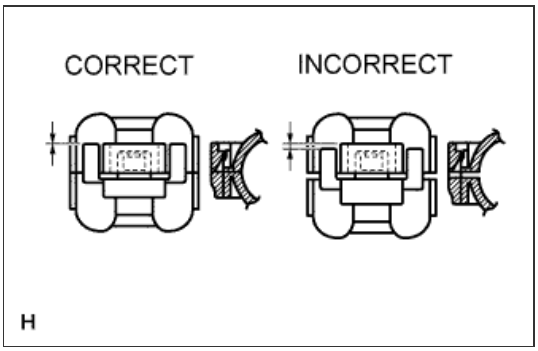
b. Connect the connectors.

12. INSTALL UIC HEATER ASSEMBLY (w/ PTC Heater)

a. Install the quick heater with the 2 screws.

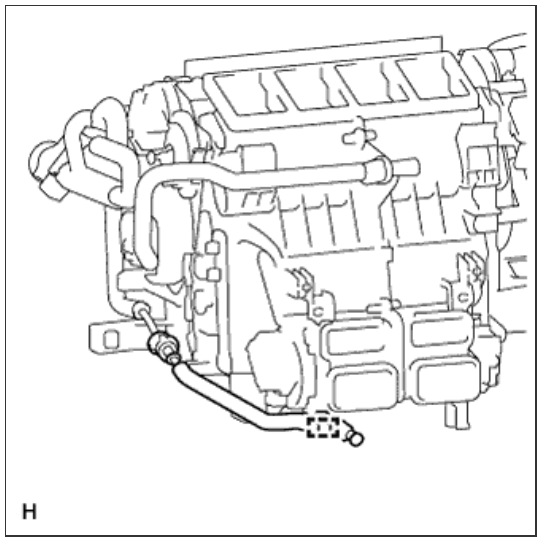
b. Attach the 3 clamps.

13. INSTALL COOL BOX LI UID TUBE (w/ Cool Box)



a. Lubricate 2 new O-rings with compressor oil and install them to the liquid tube.

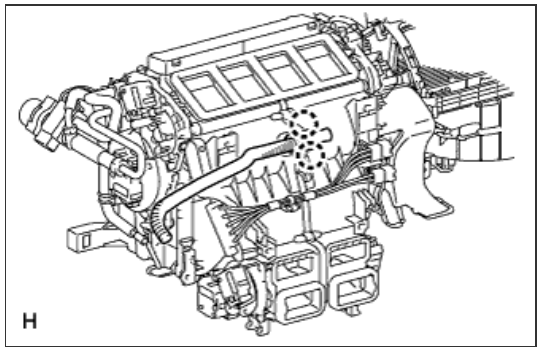
Compressor oil:
ND-OIL 8 or eq i alent



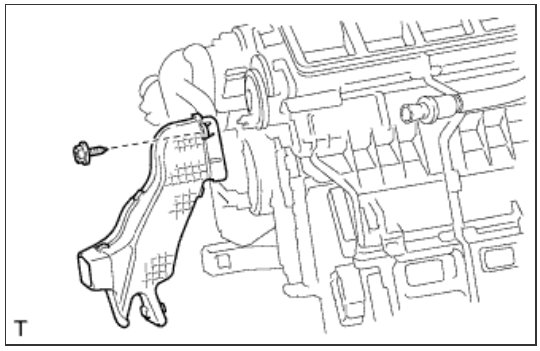
b. Connect the liquid tube with the piping clamp.

NOTICE:

After connection, check the claw engagement of the piping clamp.

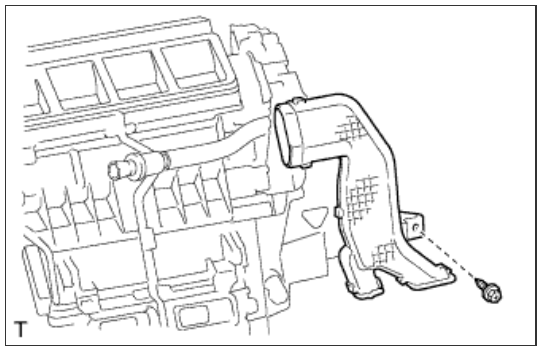


c. Attach the clamp.



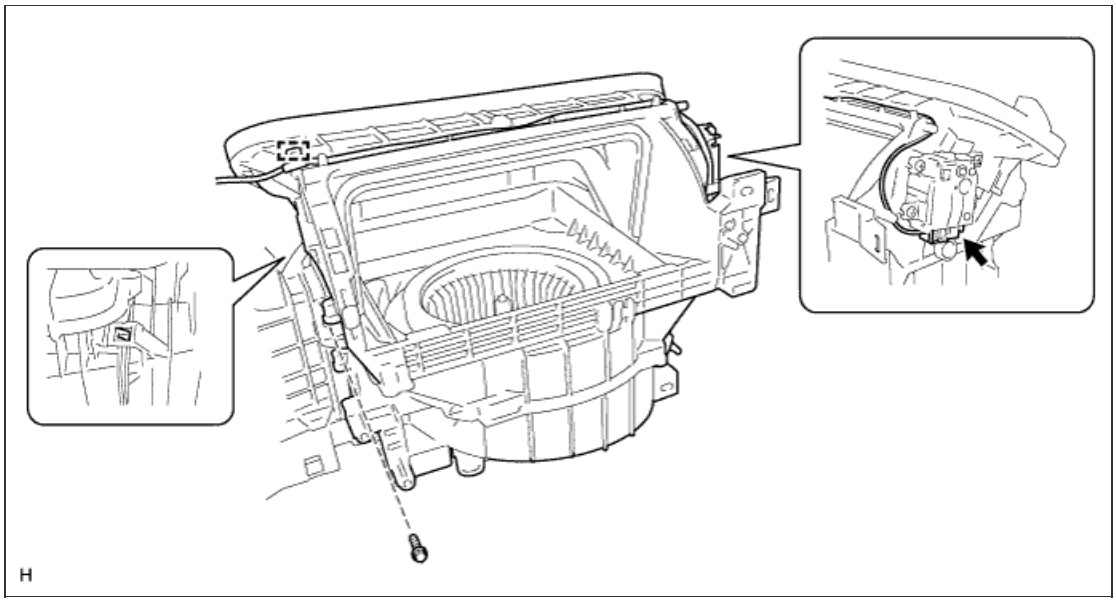
14. INSTALL ASPIRATOR

a. Attach the 2 claws to install the aspirator.



15. INSTALL NO. 4 AIR DUCT SUB-ASSEMBLY

a. Install the duct with the screw.



16. INSTALL NO. 5 AIR DUCT SUB-ASSEMBLY

a. Install the duct with the screw.

17. INSTALL BLO ER ASSEMBLY

a. Attach the claw to install the blower unit.

b. Connect the connector and clamp.

c. Install the screw.

1. REMOVE AIR CONDITIONING UNIT

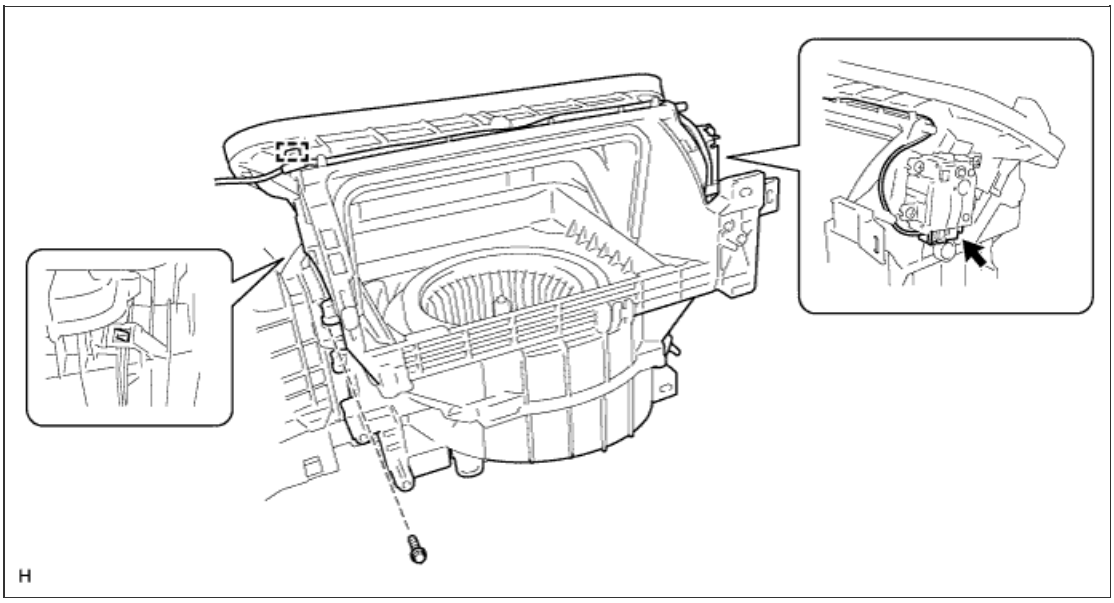
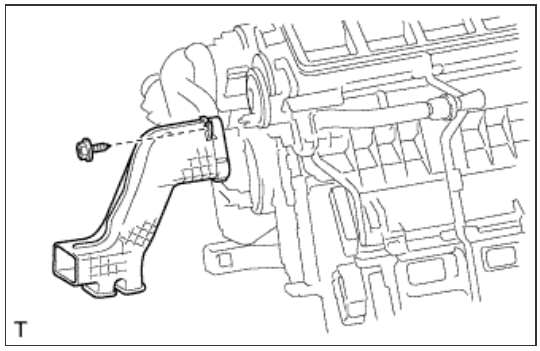
a. Remove the air conditioning unit (Click here).



for Preparation Click here

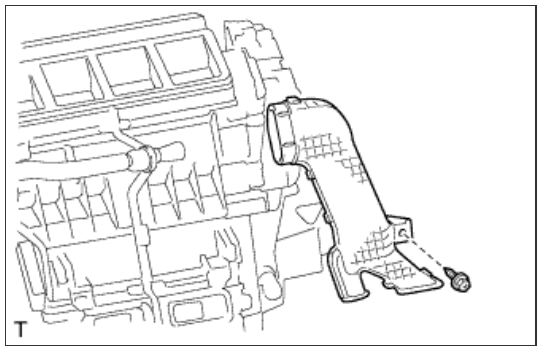
1. REMOVE BLOWER ASSEMBLY

a. Remove the screw.



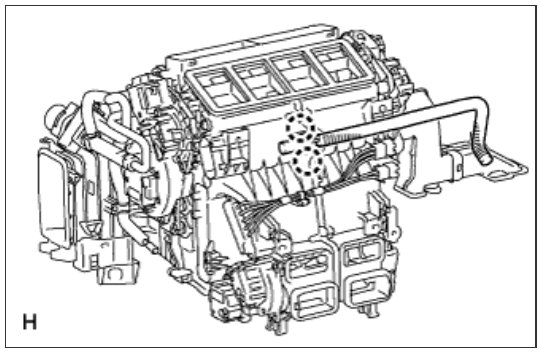
b. Disconnect the connector and clamp.

c. Detach the claw and remove the blower unit.



2. REMOVE NO. 4 AIR DUCT SUB-ASSEMBLY

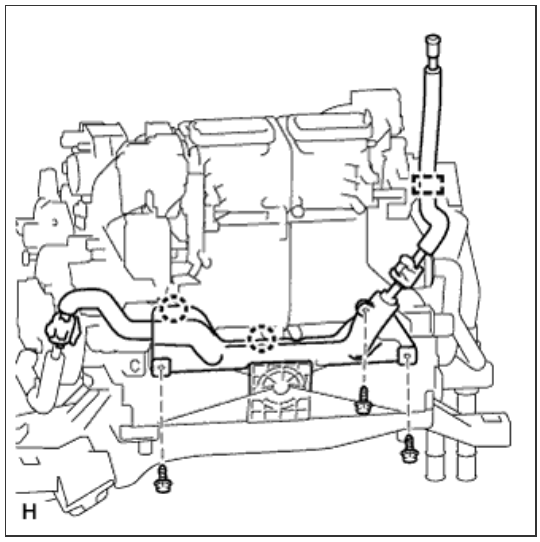
a. Remove the screw and duct.



3. REMOVE NO. 5 AIR DUCT SUB-ASSEMBLY

a. Remove the screw and duct.

4. REMOVE ASPIRATOR

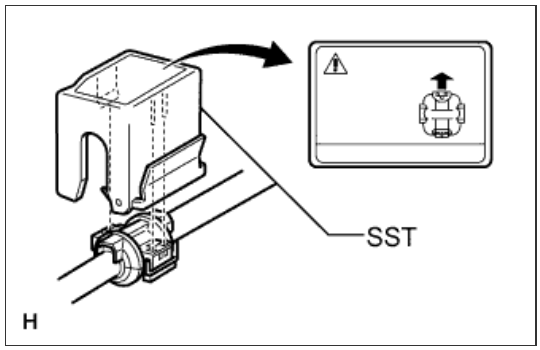


a. Detach the 2 claws and remove the aspirator.

5. REMOVE COOL BOX LIQUID TUBE (w/ Cool Box)

a. Remove the 3 screws.

b. Detach the 2 claws and remove the protective cover.



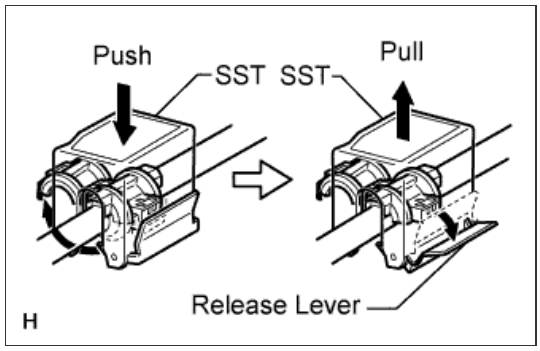
c. Using SST, remove the piping clamp.

SST
09870-00025

i. Attach SST to the piping clamp.

HINT:

Confirm the direction of the piping clamp claw and SST by referring to the illustration on the caution label.



ii. Push down SST and release the clamp lock.

NOTICE:

Be careful not to deform the tubes when pushing SST.

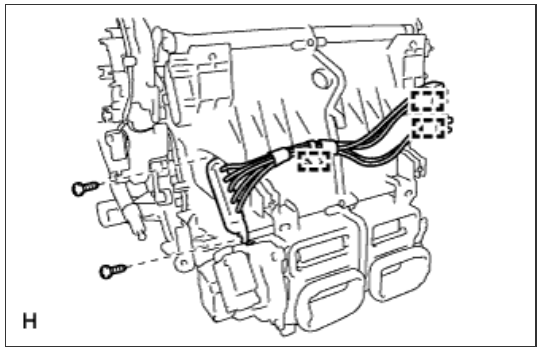
iii. Pull SST slightly and push the release lever, then remove the piping clamp with SST.

iv. Remove the piping clamp from SST.

d. Disconnect the tube.

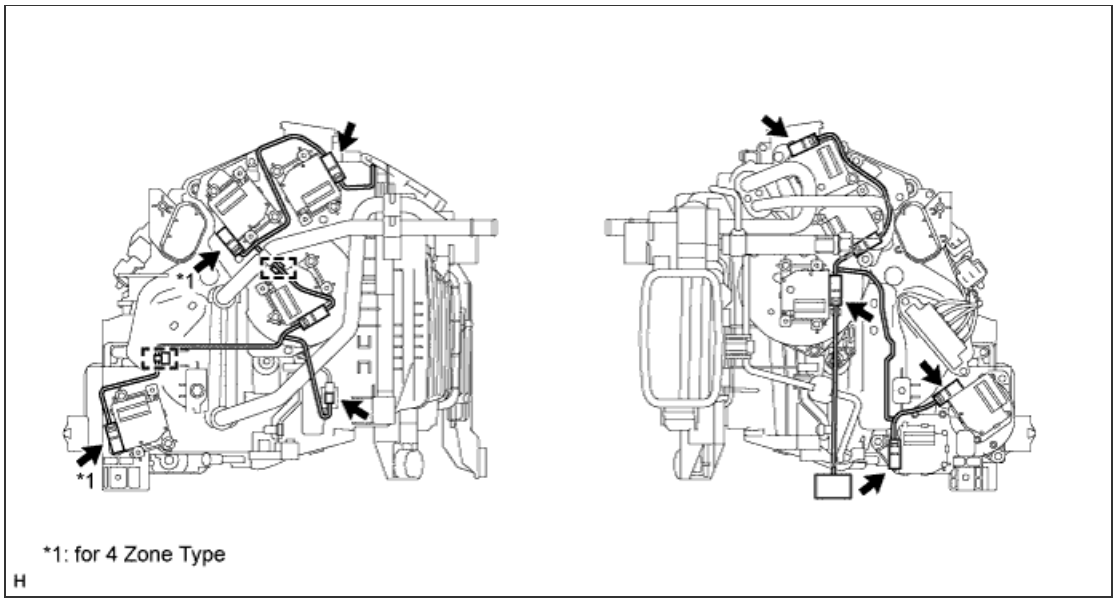
NOTICE:

Cap the open fittings immediately to keep moisture or dirt out of the system.



e. Detach the clamp and remove the liquid tube.

f. Remove the 2 O-rings from the liquid tube.

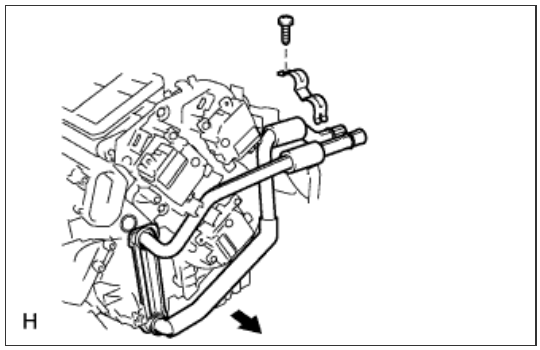


6. REMOVE QUICK HEATER ASSEMBLY (w/ PTC Heater)

a. Detach the 3 clamps.

b. Remove the 2 screws and quick heater.

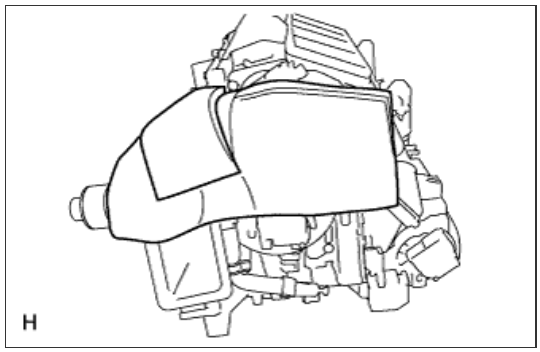
7. REMOVE AIR CONDITIONER HARNESS



a. Disconnect the connectors.

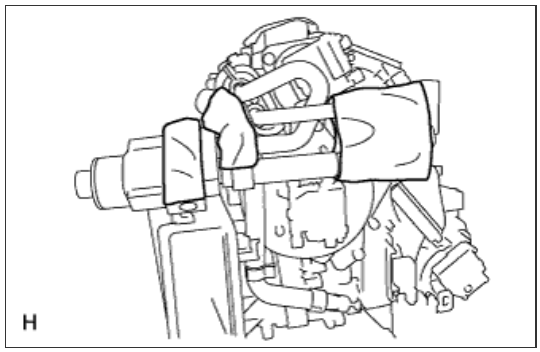
b. Detach the clamps and remove the harness.

8. REMOVE AIR CONDITIONING RADIATOR ASSEMBLY

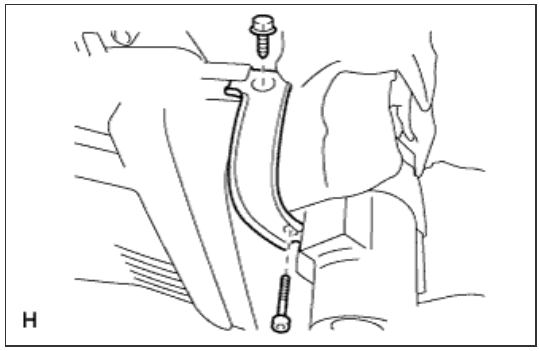


a. Remove the screw and radiator bracket.

b. Remove the radiator.

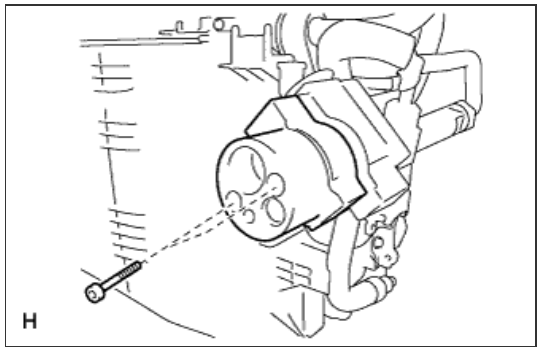


9. REMOVE COOLER EXPANSION VALVE (w/ Cool Box)



a. Remove the packing.

b. Remove the butyl tape.



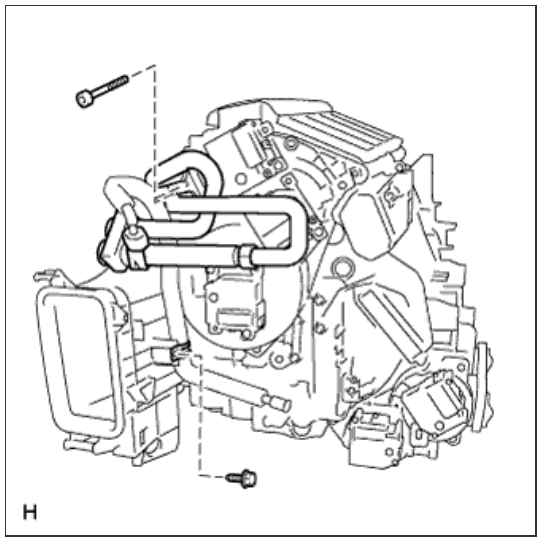
c. Using a 4 mm hexagon wrench, remove the hexagon bolt, screw and bracket.

d. Using a 4 mm hexagon wrench, remove the 2 hexagon bolts and No. 1 connector tube.

e. Remove the 2 O-rings from the No. 1 connector tube.

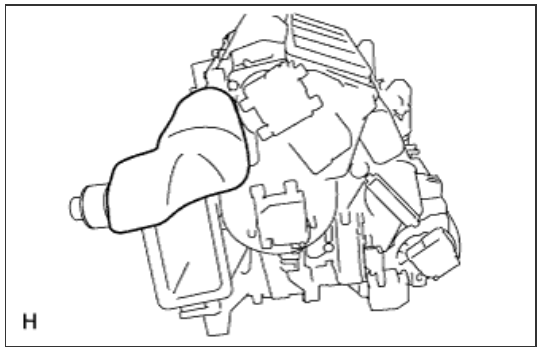
f. Using a 4 mm hexagon wrench, remove the 2 hexagon bolts, No. 2 connector tube, expansion valve and No. 3 connector tube.

g. Remove the 2 O-rings from the No. 2 connector tube.



10. REMOVE AIR CONDITIONER TUBE AND ACCESSORY ASSEMBLY (w/ Cool Box)

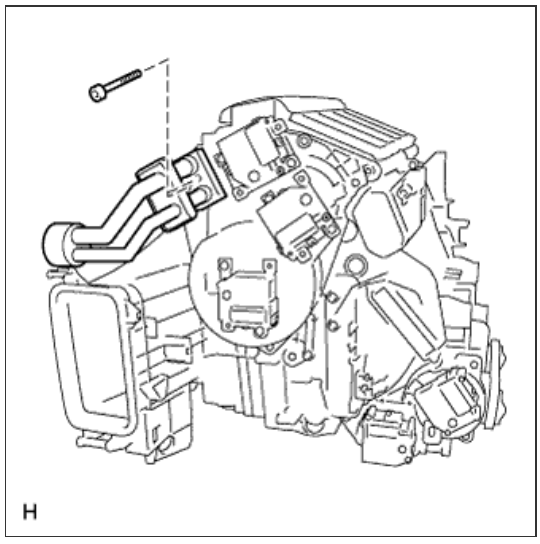
a. Remove the screw and bracket.



b. Using a 4 mm hexagon wrench, remove the 2 hexagon bolts and air conditioner tube and accessory assembly.

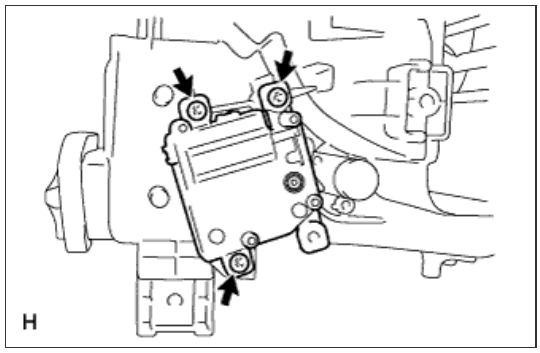
c. Remove the 2 O-rings from the air conditioner tube and accessory assembly.

11. REMOVE COOLER EXPANSION VALVE (w/o Cool Box)



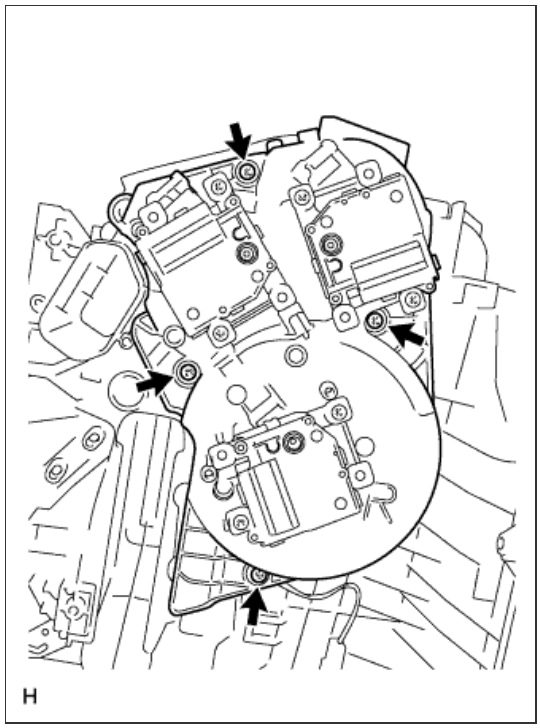
a. Remove the packing.

b. Using a 4 mm hexagon wrench, remove the 2 hexagon bolts, air conditioner tube and accessory assembly and expansion valve.



c. Remove the 2 O-rings from the air conditioner tube and accessory assembly.

d. Remove the 2 O-rings from the expansion valve.

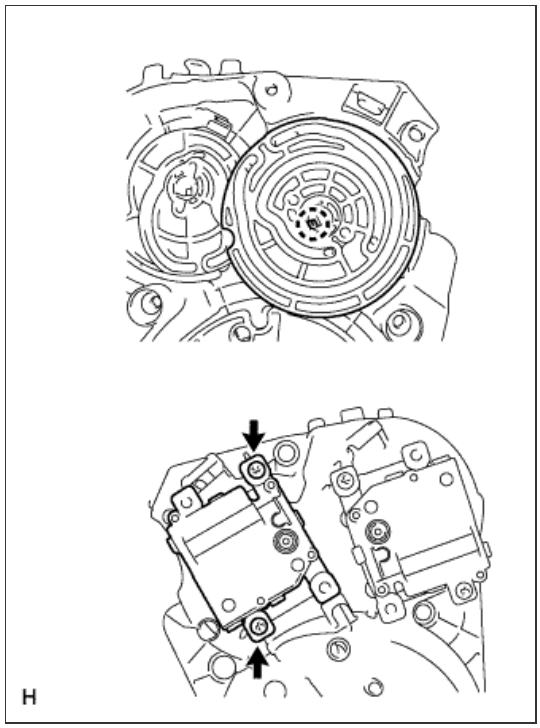


12. REMOVE REAR AIR MIX DAMPER CONTROL SERVO MOTOR RH (for 4 Zone Type)

a. Remove the 3 screws and servo motor.

13. REMOVE SERVO MOTOR

a. Remove the 4 screws and servo motor unit.



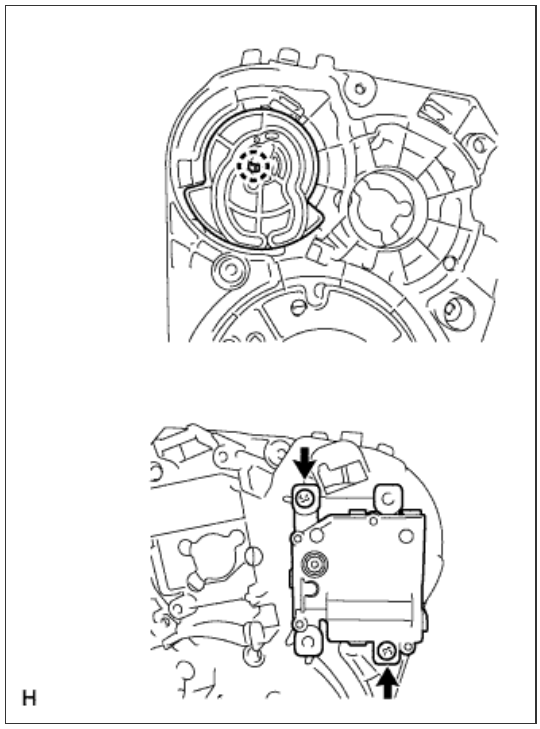
b. for 4 Zone Type:
Remove the front mode control servo motor RH.

i. Remove the 2 screws.

ii. Detach the claw and remove the plate and servo motor.

NOTICE:

Be careful not to damage the claw of the plate.



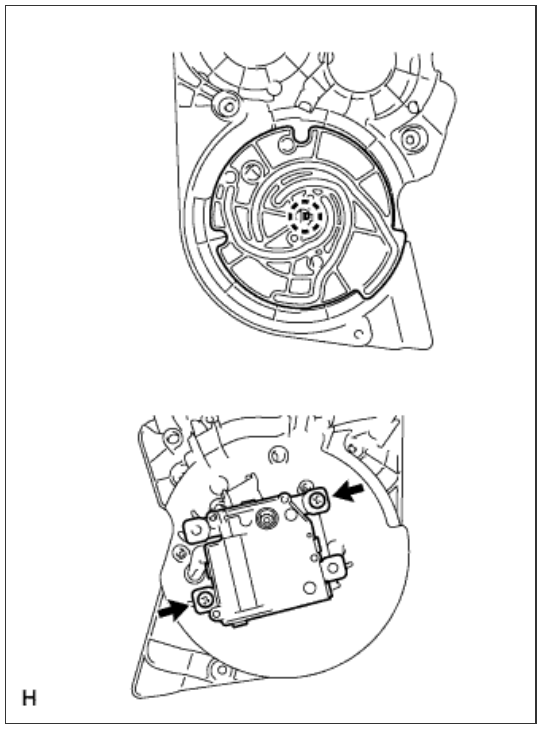
c. Remove the control air bypass damper control servo motor RH.

i. Remove the 2 screws.

ii. Detach the claw and remove the plate and servo motor.

NOTICE:

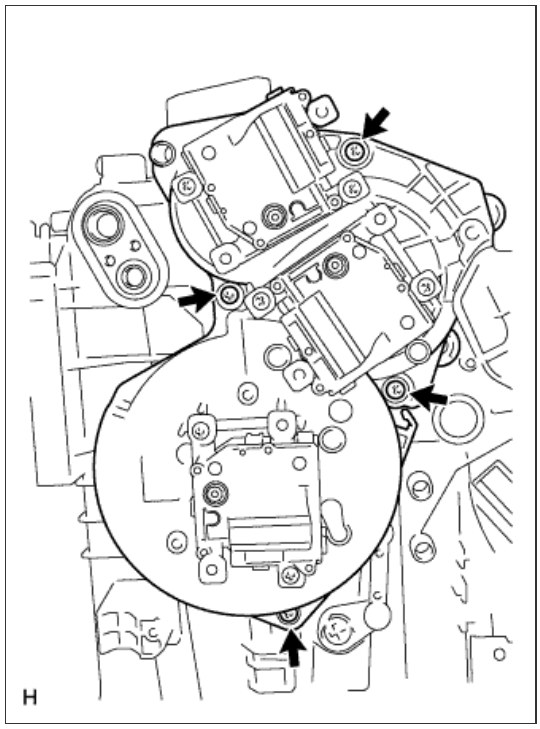
Be careful not to damage the claw of the plate.



d. Remove the front air mix damper control servo motor RH.

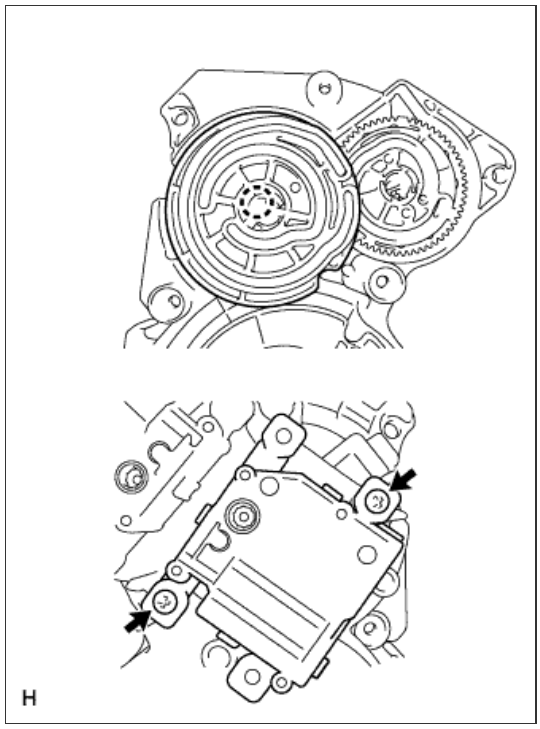
i. Remove the 2 screws.

ii. Detach the claw and remove the plate and servo motor.



NOTICE:

Be careful not to damage the claw of the plate.



14. REMOVE SERVO MOTOR

a. Remove the 4 screws and servo motor unit.

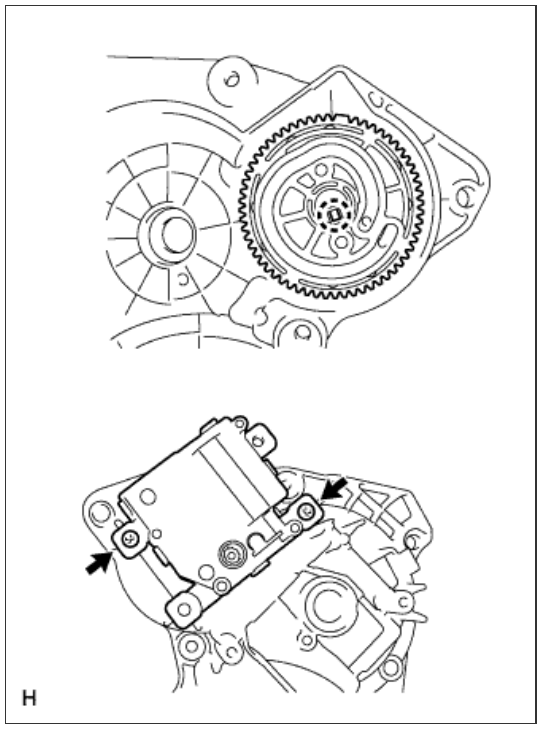
b. Remove the control air bypass damper control servo motor LH.

i. Remove the 2 screws.

ii. Detach the claw and remove the plate and servo motor.

NOTICE:

Be careful not to damage the claw of the plate.



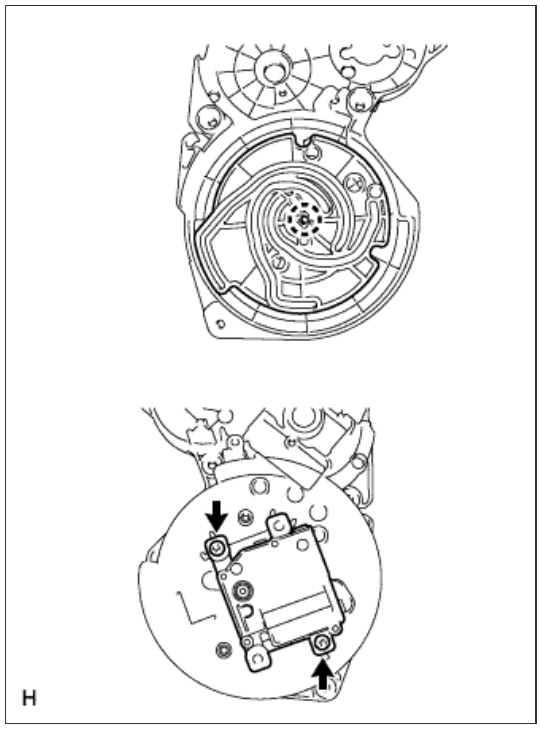
c. Remove the front mode control servo motor LH.

i. Remove the 2 screws.

ii. Detach the claw and remove the plate and servo motor.

NOTICE:

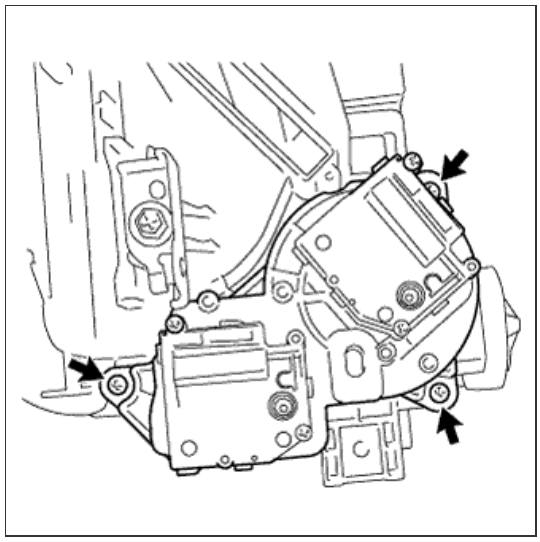
Be careful not to damage the claw of the plate.



d. Remove the front air mix damper control servo motor LH.

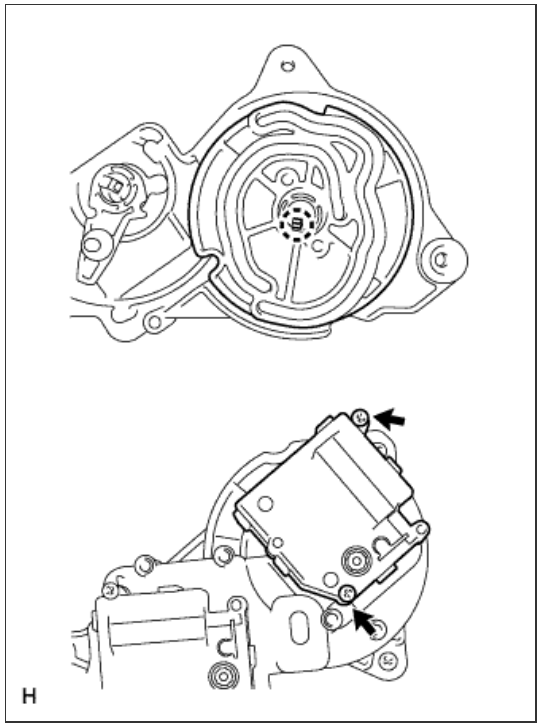
i. Remove the 2 screws.

ii. Detach the claw and remove the plate and servo motor.



NOTICE:

Be careful not to damage the claw of the plate.



15. REMOVE SERVO MOTOR

a. Remove the 3 screws and servo motor unit.

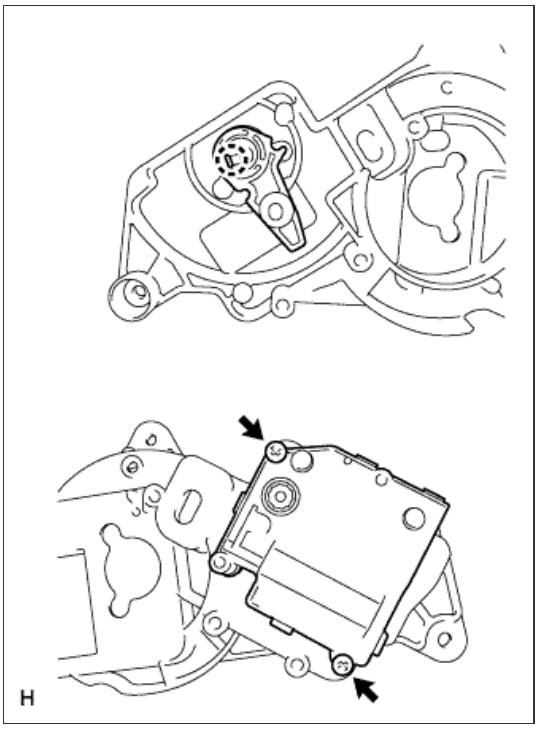
b. Remove the rear mode control servo motor.

i. Remove the 2 screws.

ii. Detach the claw and remove the plate and servo motor.

NOTICE:

Be careful not to damage the claw of the plate.



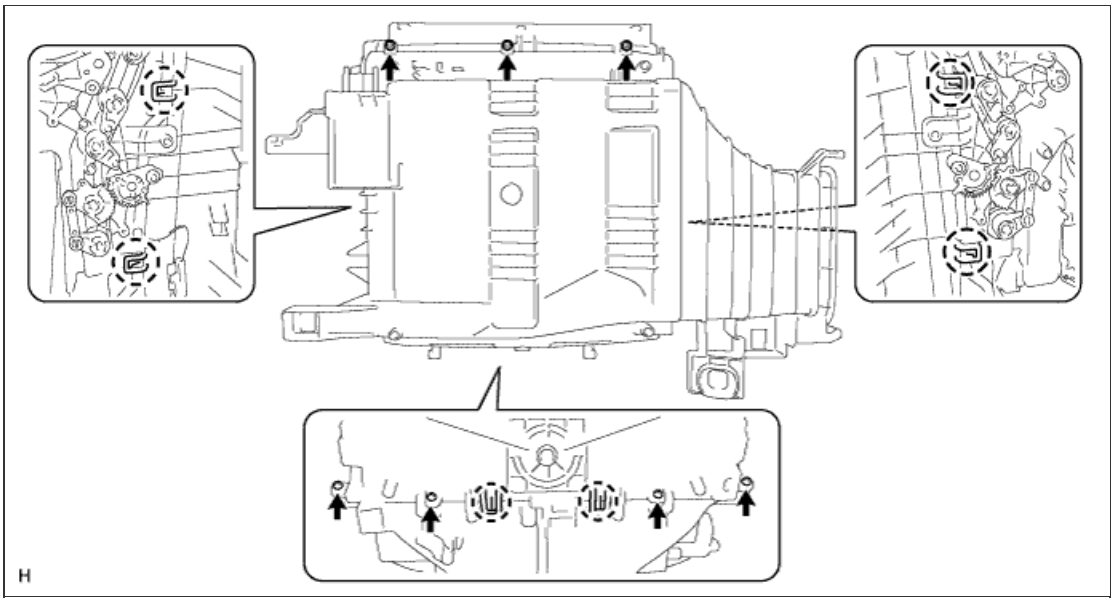
c. Remove the rear air mix damper control servo motor RH.

i. Remove the 2 screws.

ii. Detach the claw and remove the lever and servo motor.

NOTICE:

Be careful not to damage the claw of the lever.



16. REMOVE NO. 1 COOLER EVAPORATOR SUB-ASSEMBLY

a. Remove the 7 screws.

b. Detach the 6 claws and remove the unit case.

c. Remove the evaporator.

17. REMOVE FRONT EVAPORATOR TEMPERATURE SENSOR

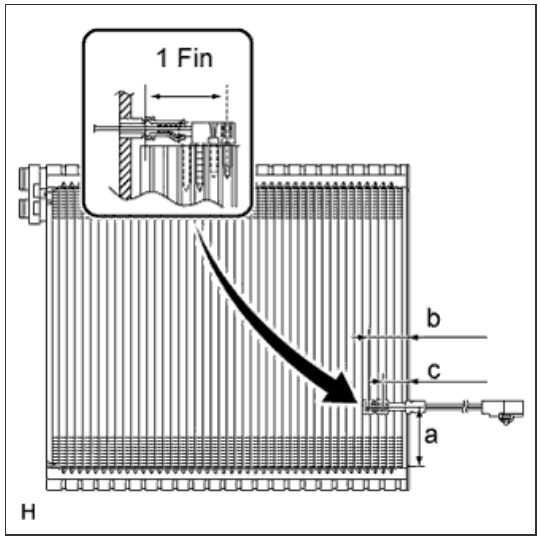
1. INSTALL FRONT EVAPORATOR TEMPERATURE SENSOR



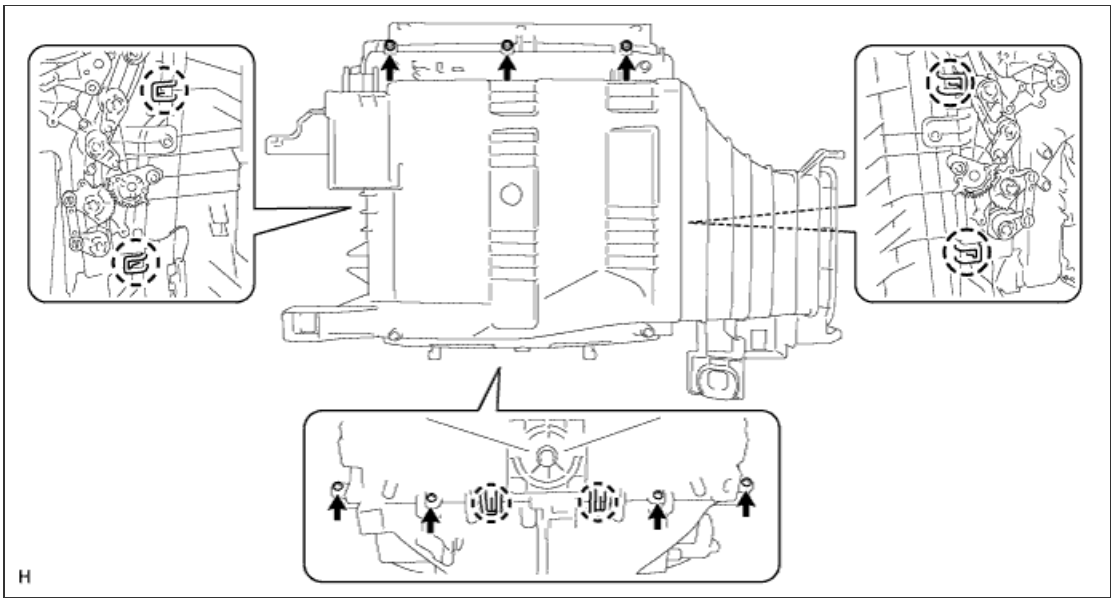
NOTICE:

If reusing the evaporator, do not insert the sensor into a location where the sensor was previously inserted.

a. Insert the sensor to a location that is 1 fin to the right or left of its previous location.

Standard Dimension:

Area	Specified Condition
a	50 mm (1.97 in.)
b	34.3 mm (1.35 in.)
c	20.9 mm (1.97 in.)

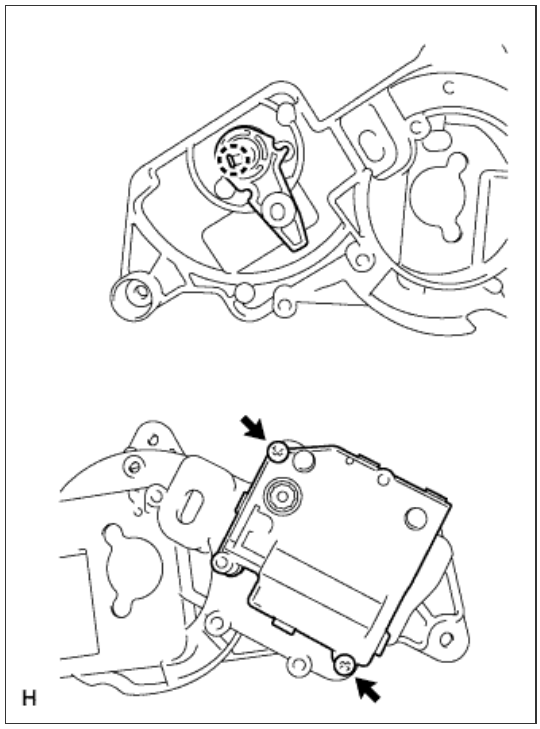


2. INSTALL NO. 1 COOLER EVAPORATOR SUB-ASSEMBLY

a. Install the evaporator.

b. Attach the 6 claws to install the unit case.

c. Install the 7 screws.

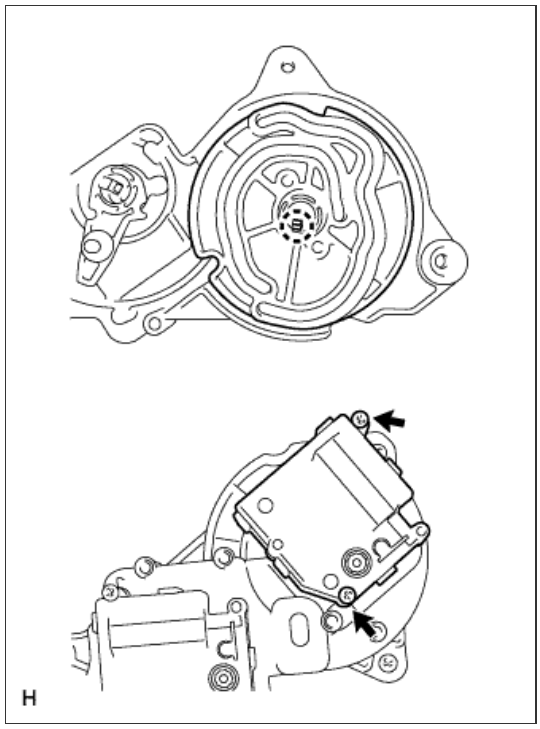


3. INSTALL SERVO MOTOR

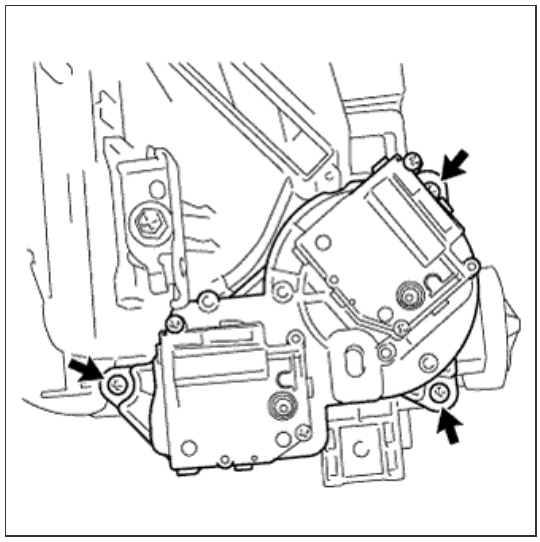
a. Install the rear air mix damper control servo motor RH.

i. Attach the claw to install the lever and servo motor.

ii. Install the 2 screws.



b. Install the rear mode control servo motor.

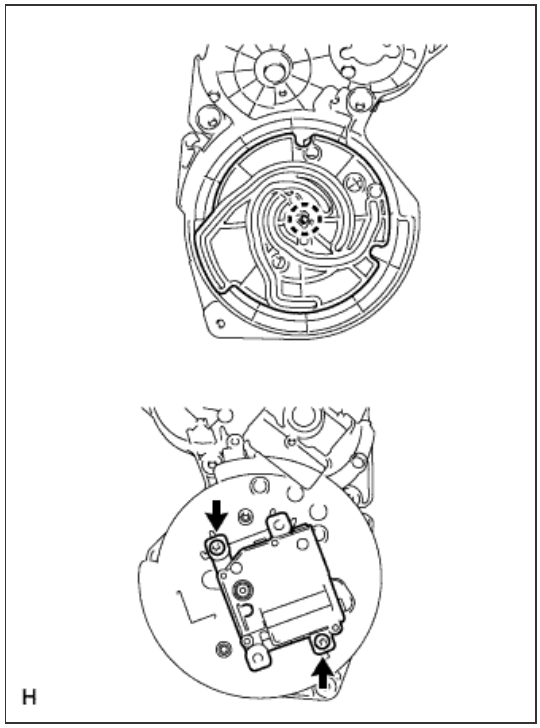


i. Attach the claw to install the plate and servo motor.

ii. Install the 2 screws.

c. Set the damper servo so that the cutout part engages with the tooth of the gear, and attach the claw to install the servo motor unit.

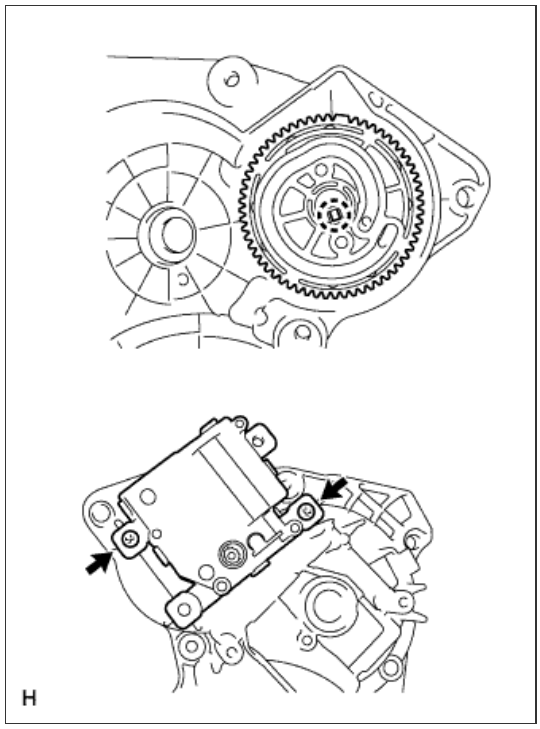
d. Install the 3 screws.



4. INSTALL SERVO MOTOR

a. Install the front air mix damper control servo motor LH.

i. Attach the claw to install the plate and servo motor.

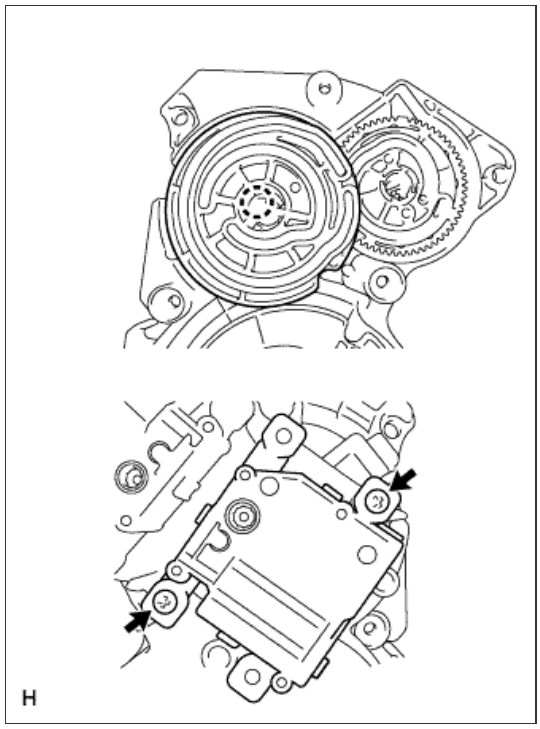


ii. Install the 2 screws.

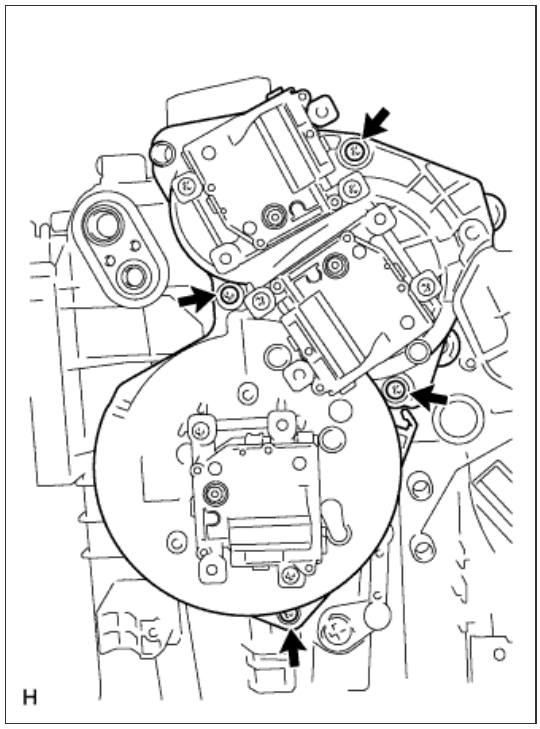
b. Install the front mode control servo motor LH.

i. Attach the claw to install the plate and servo motor.

ii. Install the 2 screws.



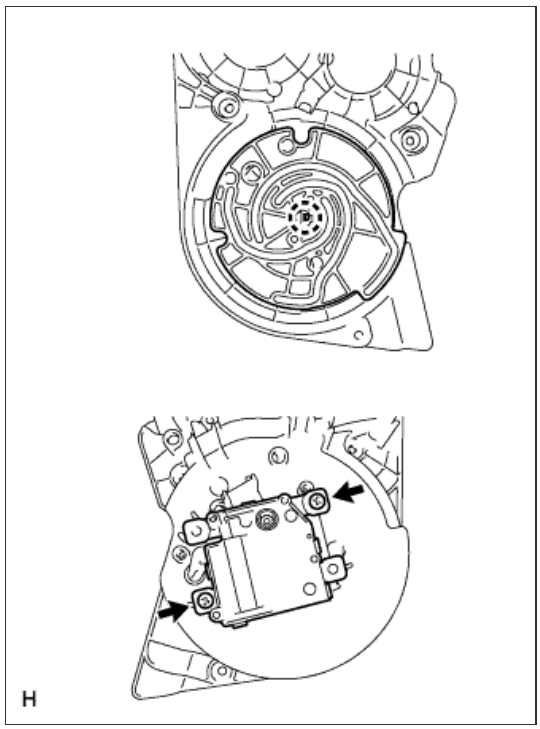
c. Install the control air bypass damper control servo motor LH.



i. Attach the claw to install the plate and servo motor.

ii. Install the 2 screws.

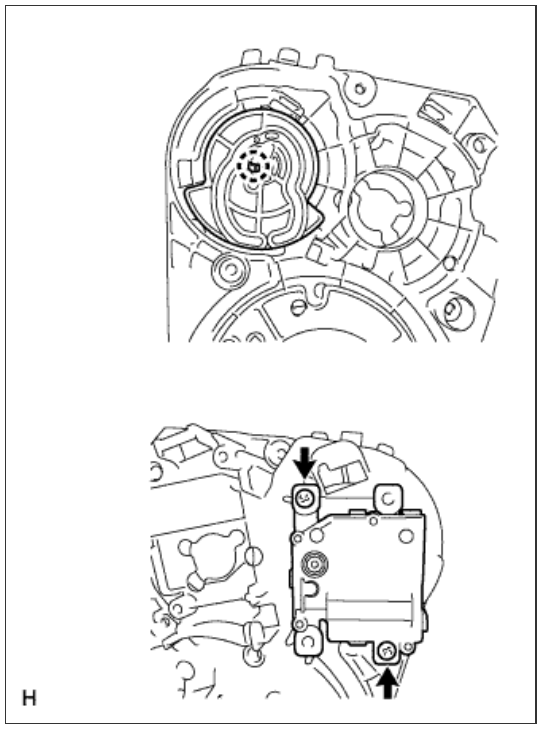
d. Set the damper servo so that the cutout part engages with the tooth of the gear, and attach the claw to install the servo motor unit.



e. Install the 4 screws.

5. INSTALL SERVO MOTOR

a. Install the front air mix damper control servo motor RH.



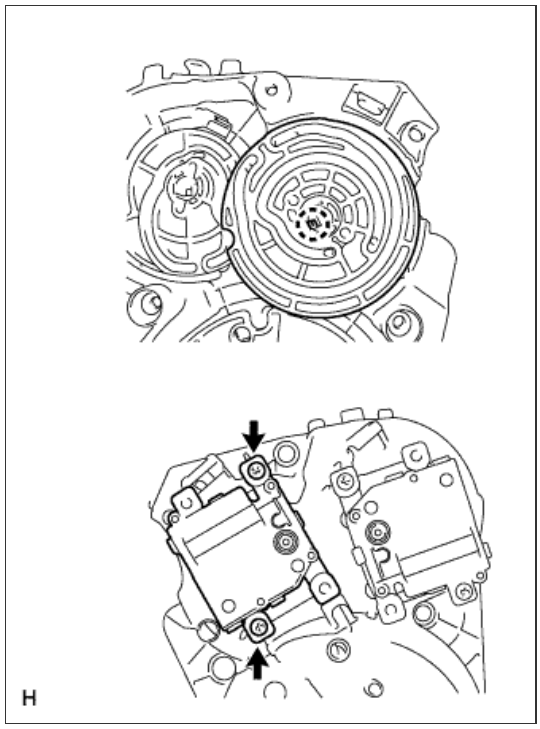
i. Attach the claw to install the plate and servo motor.

ii. Install the 2 screws.

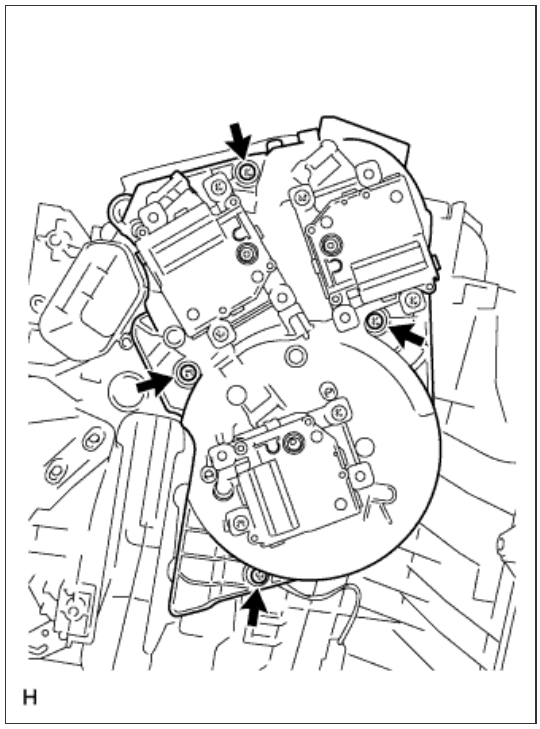
b. Install the control air bypass damper control servo motor RH.

i. Attach the claw to install the plate and servo motor.

ii. Install the 2 screws.



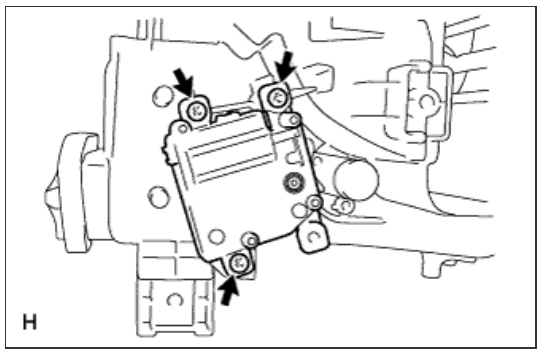
c. for 4 Zone Type:
Install the front mode control servo motor RH.



i. Attach the claw to install the plate and servo motor.

ii. Install the 2 screws.

d. Set the damper servo so that the cutout part engages with the tooth of the gear, and attach the claw to install the servo motor unit.



e. Install the 4 screws.

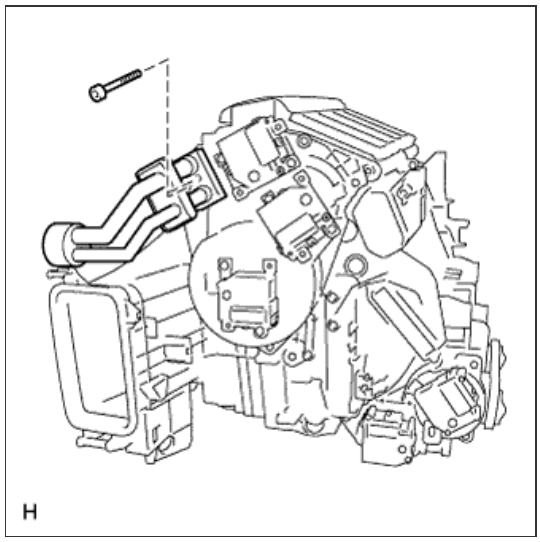
6. INSTALL REAR AIR MIX DAMPER CONTROL SERVO MOTOR RH (for 4 Zone Type)

a. Install the servo motor with the 3 screws.

7. INSTALL COOLER EXPANSION VALVE (w/o Cool Box)

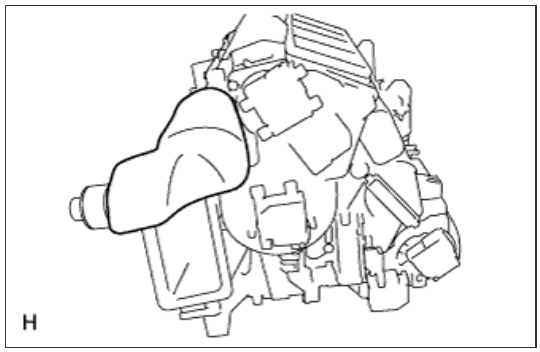
a. Sufficiently apply compressor oil to 4 new O-rings and the fitting surface of the hose joint.

Compressor oil:
ND-OIL 8 or eq i alent



b. Install the 2 O-rings to the cooler evaporator.

c. Install the 2 O-rings to the air conditioner tube and accessory assembly.



d. Install the cooler expansion valve and air conditioner tube and accessory assembly to the evaporator.

e. Using a 4 mm hexagon wrench, install the 2 bolts.

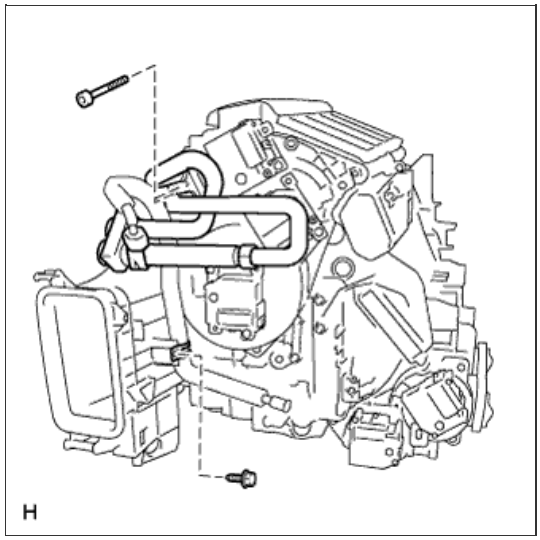
Torq e:
3.5 N m 36 kgf cm 31 in. lbf

f. Install new packing.

8. INSTALL AIR CONDITIONER TUBE AND ACCESSORY ASSEMBLY (w/ Cool Box)

a. Sufficiently apply compressor oil to 2 new O-rings and the fitting surface of the hose joint.

Compressor oil:
ND-OIL 8 or eq i alent



b. Install the 2 O-rings to the air conditioner tube and accessory assembly.

c. Install the air conditioner tube and accessory assembly to the evaporator.

d. Using a 4 mm hexagon wrench, install the 2 hexagon bolts.

Torq e:
3.5 N m 36 kgf cm 31 in. lbf

e. Install the bracket with the screw.

9. INSTALL COOLER EXPANSION VALVE (w/ Cool Box)

a. Sufficiently apply compressor oil to 2 new O-rings and the fitting surface of the hose joint.

Compressor oil:
ND-OIL 8 or eq i alent

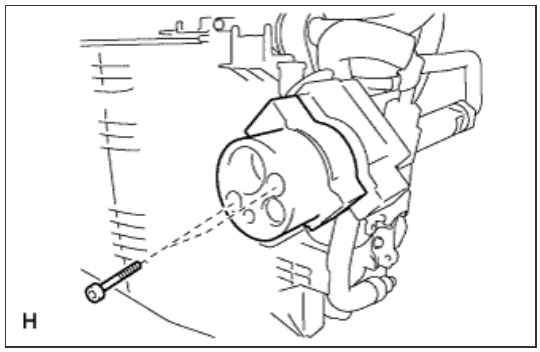
b. Install the 2 O-rings to the No. 2 connector tube.

c. Install the No. 2 connector tube, expansion valve and No. 3 connector tube.

d. Using a 4 mm hexagon wrench, install the 2 hexagon bolts.

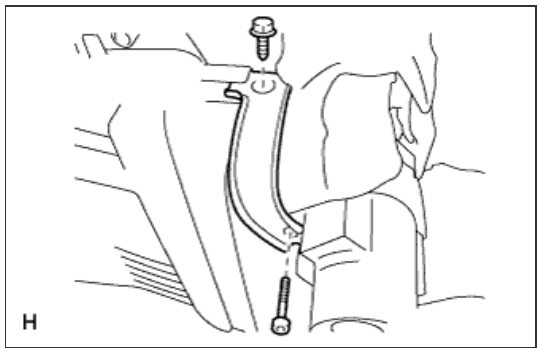
Torq e:
3.5 N m 36 kgf cm 31 in. lbf

e. Sufficiently apply compressor oil to 2 new O-rings and the fitting surface of the hose joint.



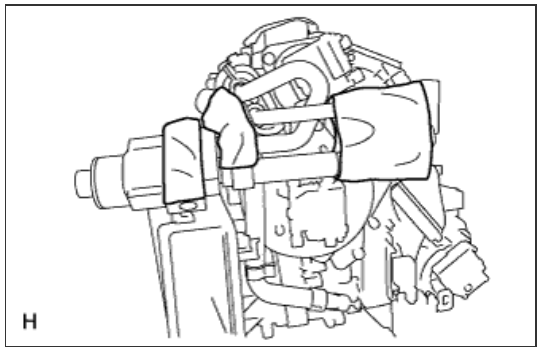
Compressor oil:
ND-OIL 8 or eq i alent

f. Install the 2 O-rings to the No. 1 connector tube.

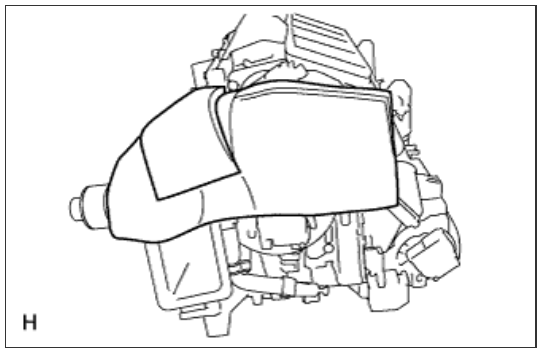


g. Install the No. 1 connector tube.

h. Using a 4 mm hexagon wrench, install the 2 hexagon bolts.

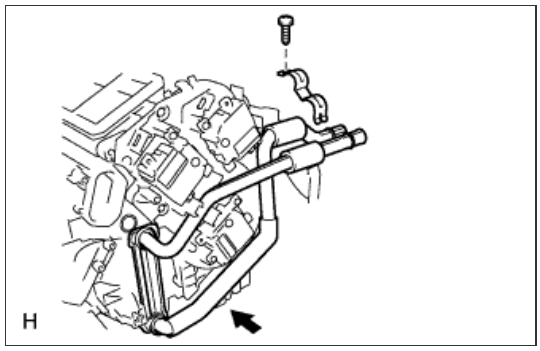


Torq e:
3.5 N m 36 kgf cm 31 in. lbf



i. Using a 4 mm hexagon wrench, install the bracket with the hexagon bolt and screw.

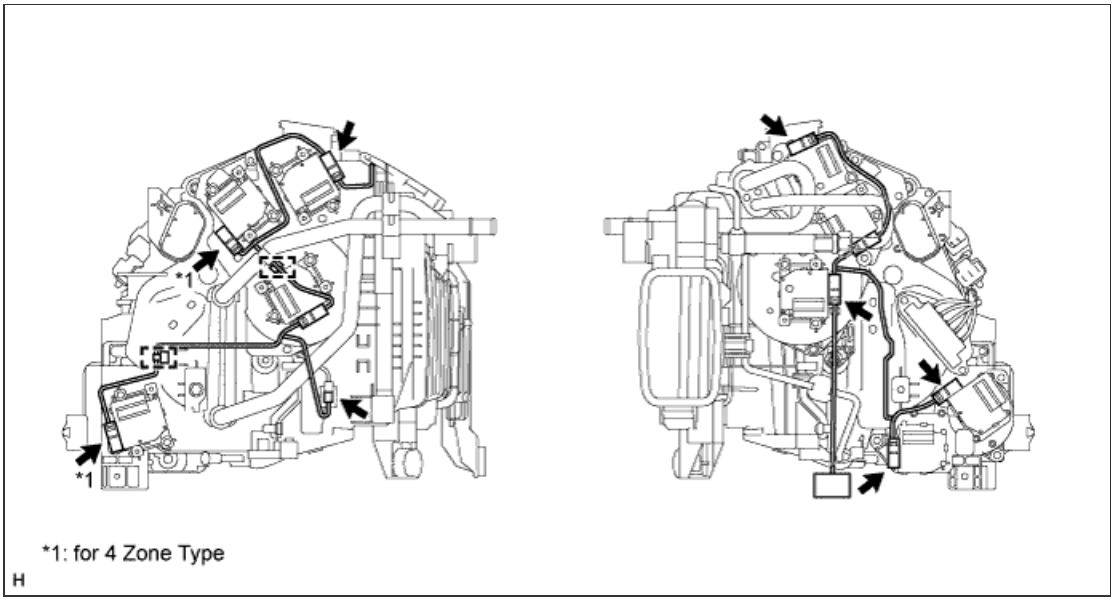
. Install new butyl tape.



k. Install new packing.

10. INSTALL AIR CONDITIONIN RADIATOR ASSEMBLY

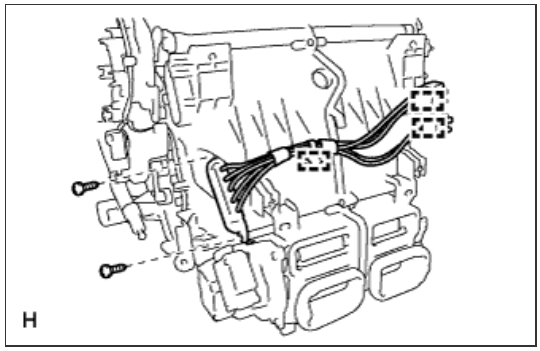
a. Install the radiator.



b. Install the bracket with the screw.

11. INSTALL AIR CONDITIONER HARNESS

a. Attach the clamps to install the harness.



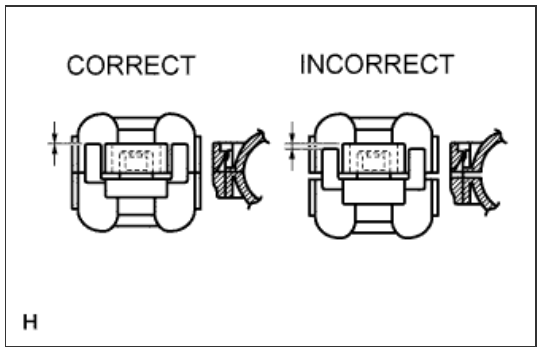
b. Connect the connectors.

12. INSTALL UIC HEATER ASSEMBLY (w/ PTC Heater)

a. Install the quick heater with the 2 screws.

b. Attach the 3 clamps.

13. INSTALL COOL BOX LI UID TUBE (w/ Cool Box)

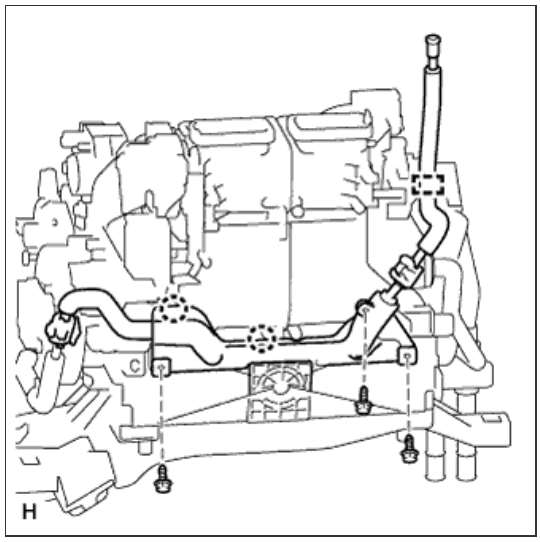


a. Lubricate 2 new O-rings with compressor oil and install them to the liquid tube.

Compressor oil:
ND-OIL 8 or eq i alent

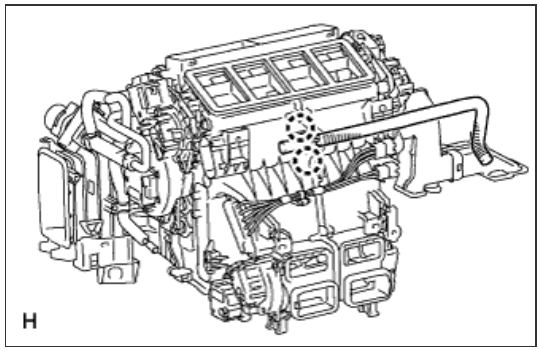
b. Connect the liquid tube with the piping clamp.

NOTICE:



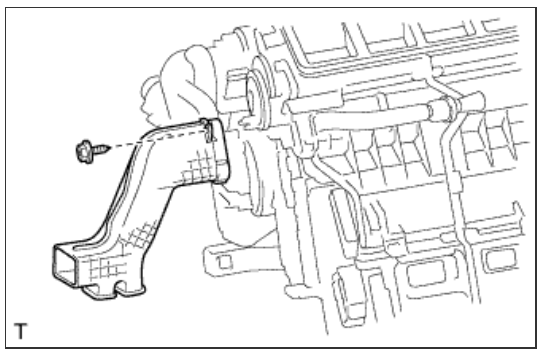
After connection, check the claw engagement of the piping clamp.

c. Attach the clamp.



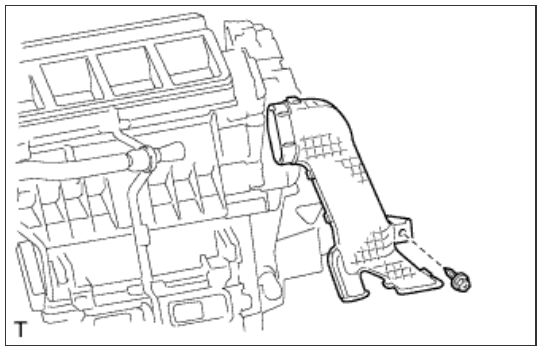
d. Attach the 2 claws to install the protective cover.

e. Install the 3 screws.



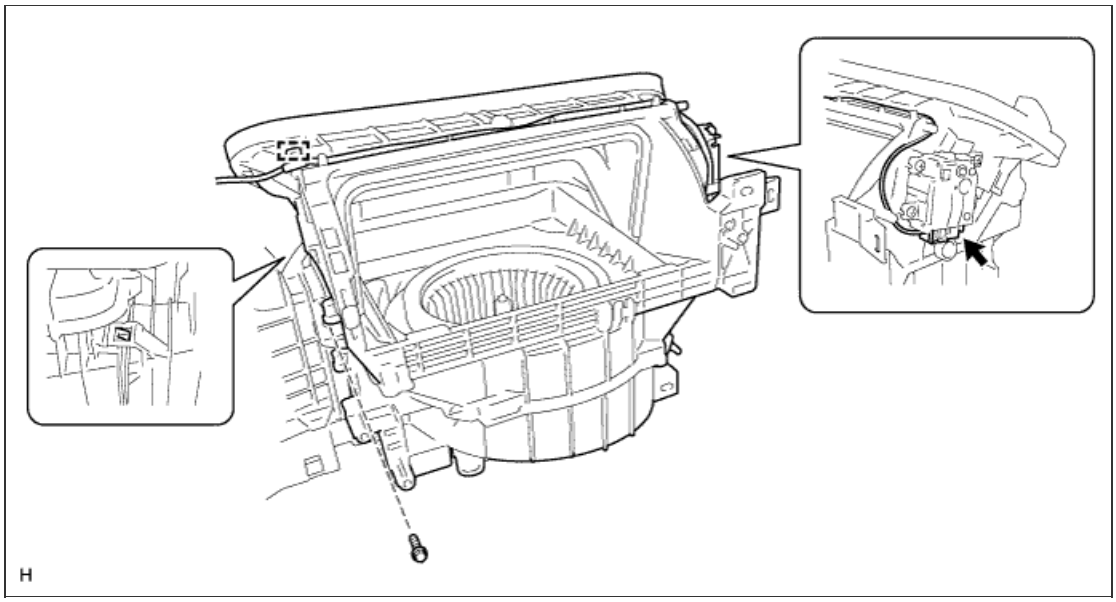
14. INSTALL ASPIRATOR

a. Attach the 2 claws to install the aspirator.



15. INSTALL NO. 4 AIR DUCT SUB-ASSEMBLY

a. Install the duct with the screw.



16. INSTALL NO. 5 AIR DUCT SUB-ASSEMBLY

a. Install the duct with the screw.

17. INSTALL BLO ER ASSEMBLY

a. Attach the claw to install the blower unit.

b. Connect the connector and clamp.

c. Install the screw.

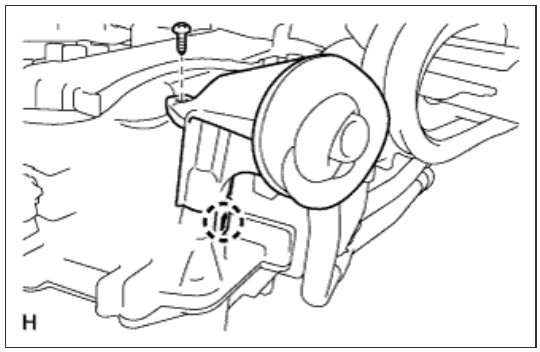
1. REMOVE REAR SIDE NO. 2 AIR DUCT

a. Remove the 3 screws and duct.

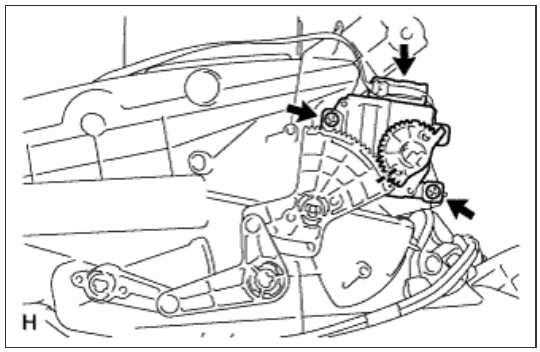
2. REMOVE REAR SIDE NO. 3 AIR DUCT



a. Remove the 2 screws and duct.

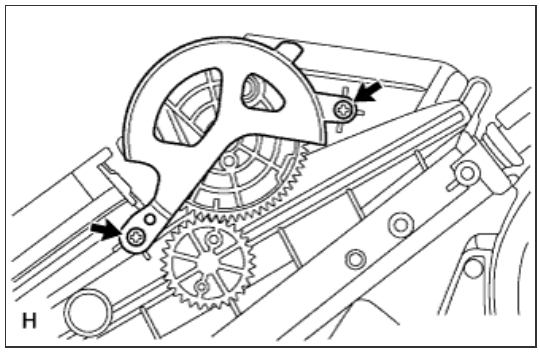
3. REMOVE DRAIN COOLER HOSE

a. Remove the screw.



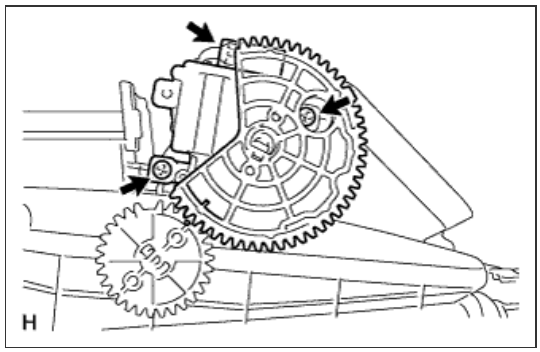
b. Detach the claw and remove the drain hose.

4. REMOVE REAR AIR MIX DAMPER SERVO SUB-ASSEMBLY



a. Disconnect the connector.

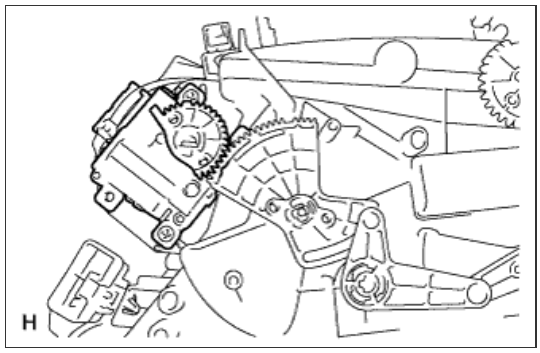
b. Remove the 2 screws and damper servo.



5. REMOVE REAR MODE DAMPER SERVO SUB-ASSEMBLY

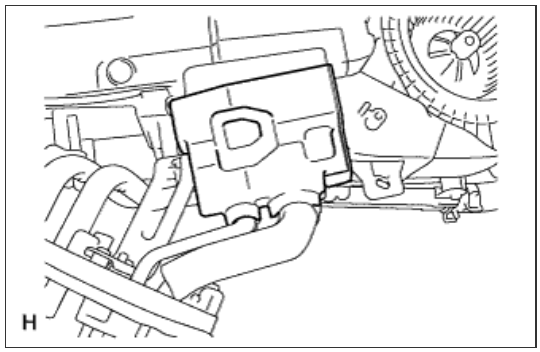
a. Remove the 2 screws and plate cover.

b. Disconnect the connector.



c. Remove the 2 screws and damper servo.

6. REMOVE NO. 2 AIR MIX DAMPER SERVO SUB-ASSEMBLY

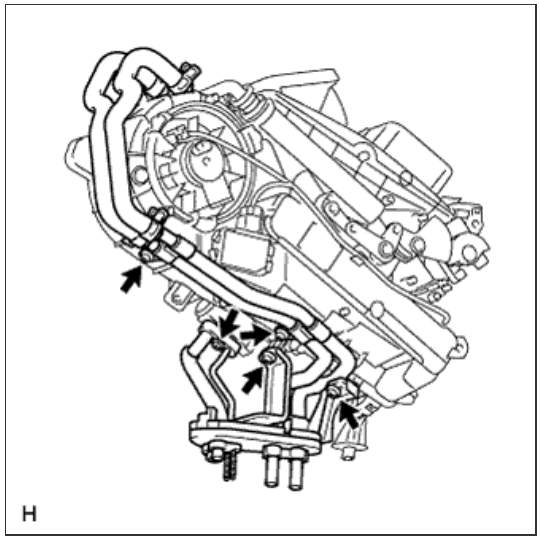


a. Disconnect the connector.

b. Remove the 2 screws and damper servo.

7. REMOVE AIR CONDITIONER ACCESSORY ASSEMBLY

a. Remove the packing.

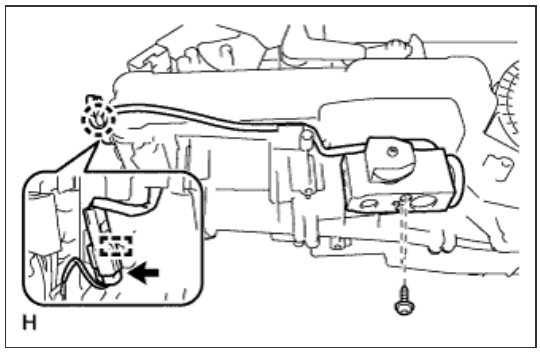


b. Remove the bolt and 4 screws.

c. Using pliers, grip the claws of the clips and slide the 2 clips.

d. Remove the air conditioner accessory assembly.

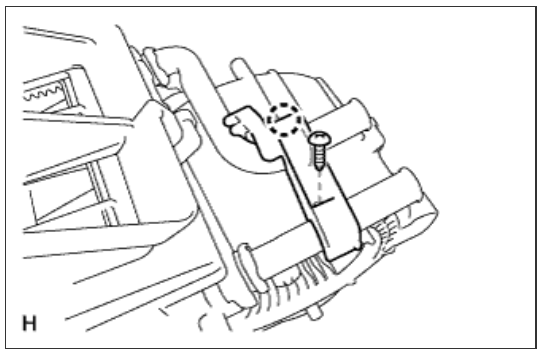
e. Remove the 2 O-rings from the air conditioner accessory assembly.



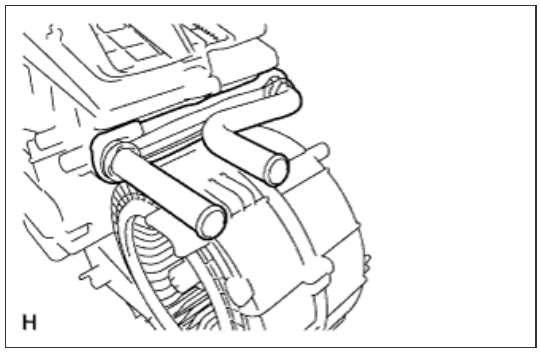
8. REMOVE REAR COOLING UNIT EXPANSION VALVE

a. Disconnect the connector.

b. Detach the clamp.



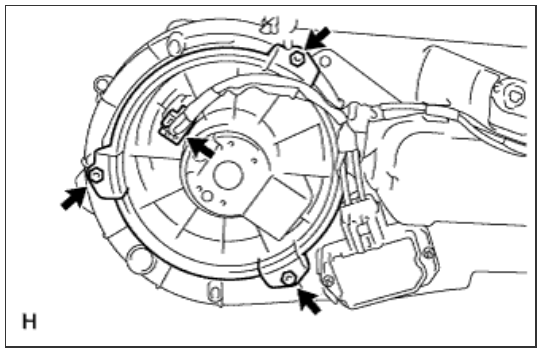
c. Using a 4 mm hexagon wrench, remove the 2 hexagon bolts and expansion valve.



9. REMOVE HEATER RADIATOR UNIT SUB-ASSEMBLY

a. Remove the screw and detach the claw.

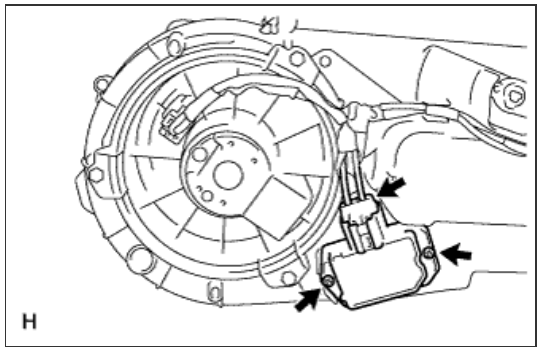
b. Remove the heater clamp.



c. Remove the heater radiator.

10. REMOVE REAR BLOWER MOTOR

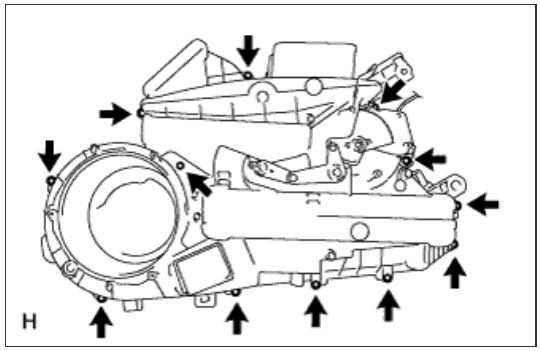
a. Disconnect the connector.



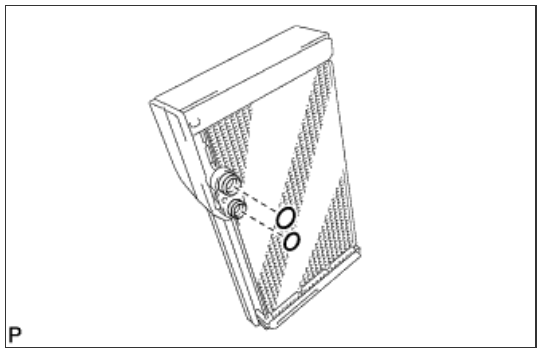
b. Remove the 3 screws and blower motor.

11. REMOVE BLOWER MOTOR CONTROLLER

a. Disconnect the connector.



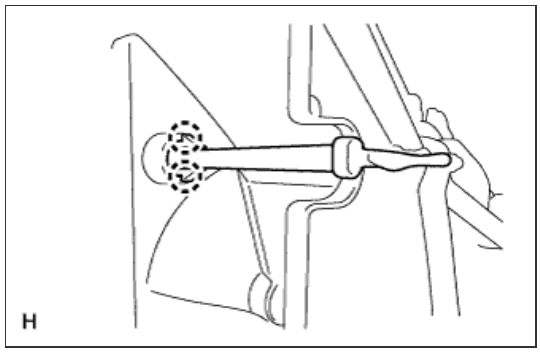
b. Remove the 2 screws and blower motor controller.



12. REMOVE EVAPORATOR SUB-ASSEMBLY

a. Remove the 12 screws and rear cooling unit case LH.

b. Remove the evaporator.



c. Remove the 2 O-rings from the evaporator.

13. REMOVE REAR EVAPORATOR TEMPERATURE SENSOR

a. Detach the 2 claws and remove the sensor.

14. REMOVE WIRING AIR CONDITIONING HARNESS SUB-ASSEMBLY

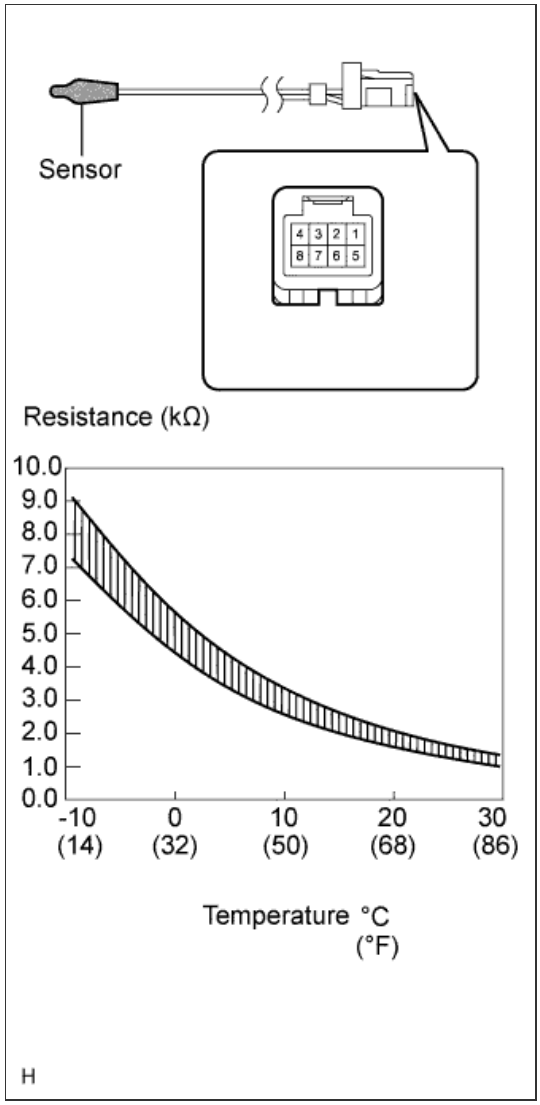
for Preparation Click here

1. INSPECT REAR EVAPORATOR TEMPERATURE SENSOR

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
8 - 7	-10°C (14°F)	7.30 to 9.10 kΩ
8 - 7	-5°C (23°F)	5.65 to 6.95 kΩ
8 - 7	0°C (32°F)	4.40 to 5.35 kΩ
8 - 7	5°C (41°F)	3.40 to 4.15 kΩ
8 - 7	10°C (50°F)	2.70 to 3.25 kΩ
8 - 7	15°C (59°F)	2.14 to 2.58 kΩ
8 - 7	20°C (68°F)	1.71 to 2.05 kΩ
8 - 7	25°C (77°F)	1.38 to 1.64 kΩ
8 - 7	30°C (86°F)	1.11 to 1.32 kΩ



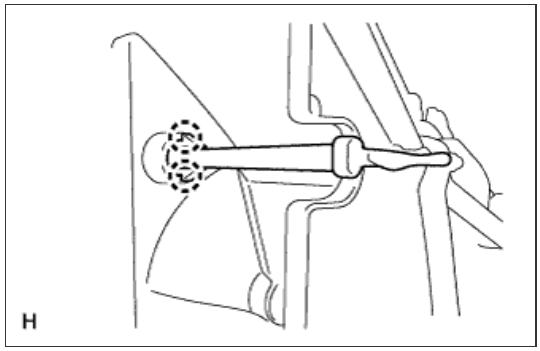
If the result is not as specified, replace the rear evaporator temperature sensor.

NOTICE:

- **Even slightly touching the sensor may change the resistance value. Be sure to hold the connector of the sensor.**
- **When measuring the sensor temperature must be the same as the ambient temperature.**

HINT:

As the temperature increases, the resistance decreases (see the graph).

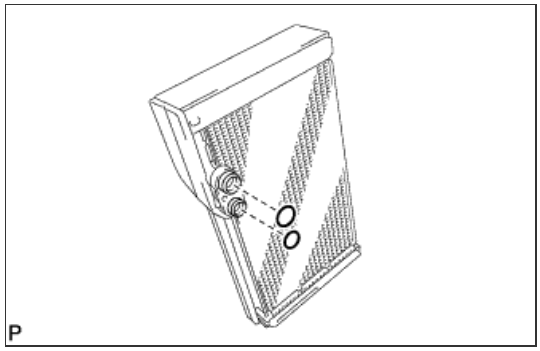


for Preparation Click here

1. INSTALL WIRING AIR CONDITIONING HARNESS SUB-ASSEMBLY

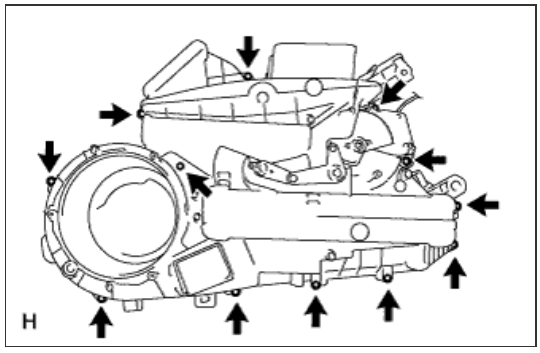
2. INSTALL REAR EVAPORATOR TEMPERATURE SENSOR

a. Attach the 2 claws to install the sensor.



3. INSTALL EVAPORATOR SUB-ASSEMBLY

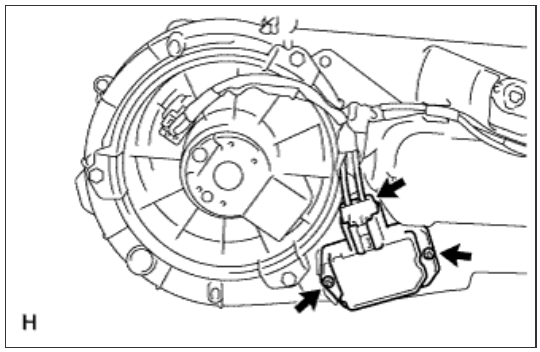
a. Sufficiently apply compressor oil to 2 new O-rings and the fitting surface of the hose joint.



Compressor oil:
ND-OIL 8 or equivalent

b. Install the 2 O-rings to the evaporator.

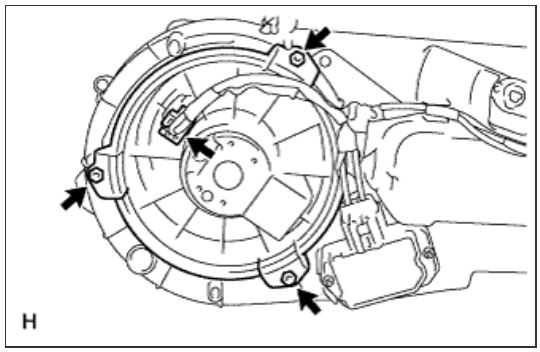
c. Install the evaporator.



d. Install the rear cooling unit case LH with the 12 screws.

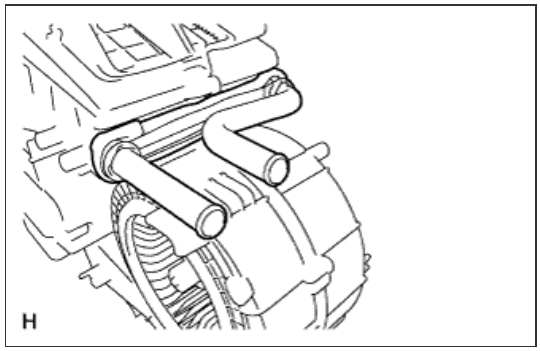
4. INSTALL BLOWER MOTOR CONTROLLER

a. Install the blower motor controller with the 2 screws.



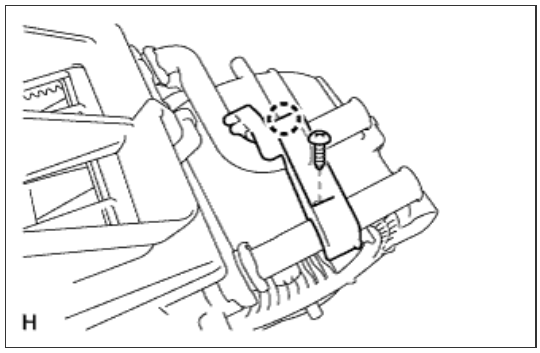
b. Connect the connector.

5. INSTALL REAR BLOWER MOTOR



a. Install the blower motor with the 3 screws.

b. Connect the connector.

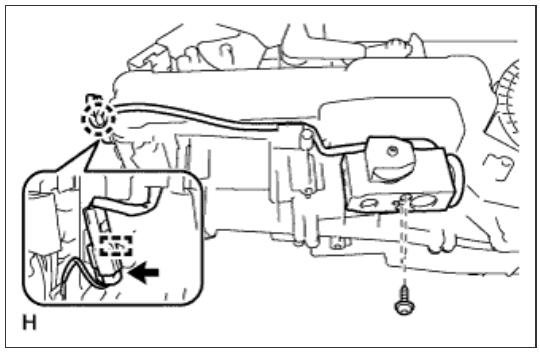


6. INSTALL HEATER RADIATOR UNIT SUB-ASSEMBLY

a. Install the radiator unit to the rear cooling unit.

b. Install the heater clamp with the screw and attach the claw.

7. INSTALL REAR COOLING UNIT EXPANSION VALVE



a. Using a 4 mm hexagon wrench, install the expansion valve with the 2 hexagon bolts.

Torque:

3.5 N*m{ 36 kgf*cm , 31 in.*lbf }

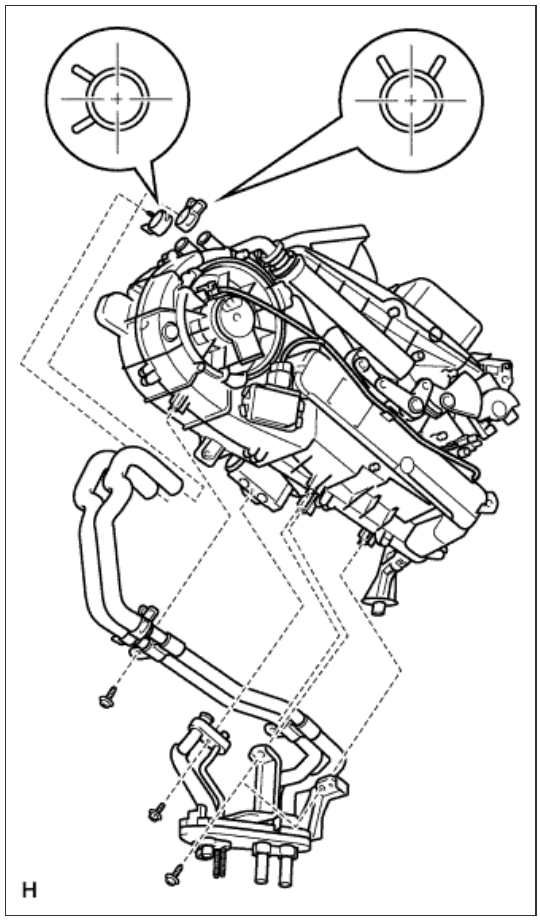
b. Attach the clamp.

c. Connect the connector.

8. INSTALL AIR CONDITIONER ACCESSORY ASSEMBLY

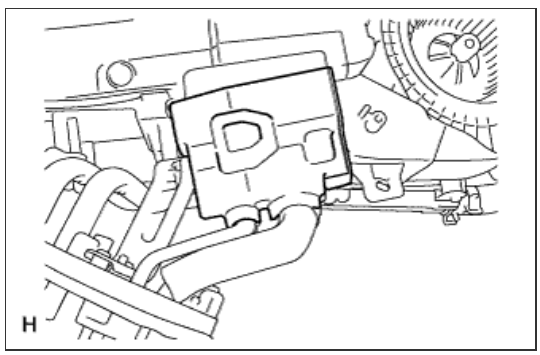
a. Sufficiently apply compressor oil to 2 new O-rings and the fitting surface of the hose joint.

Compressor oil:
ND-OIL 8 or equivalent



b. Install the 2 O-rings to the air conditioner accessory assembly.

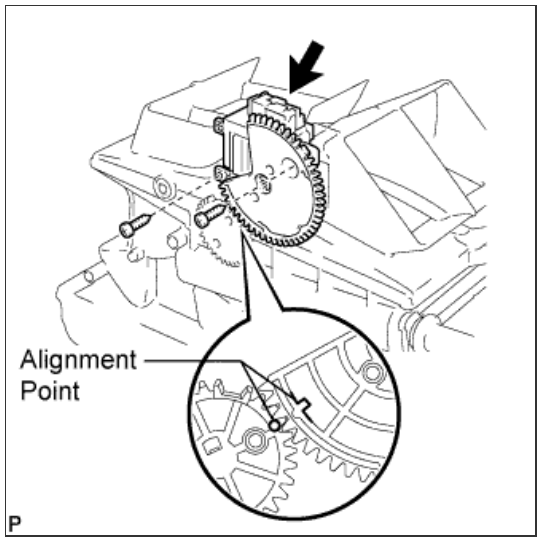
c. Install the air conditioner accessory assembly.



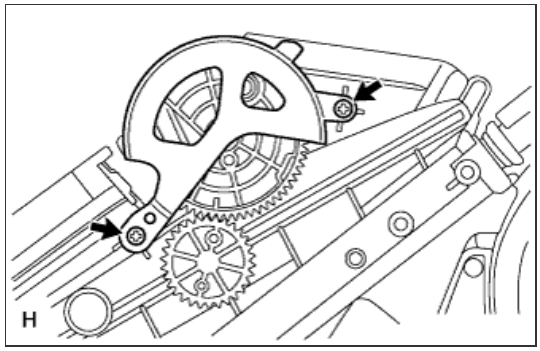
d. Using pliers, grip the claws of the clips and slide the 2 clips.

e. Install the bolt and 4 screws.

Torque:
5.4 N*m{ 55 kgf*cm , 48 in.*lbf }



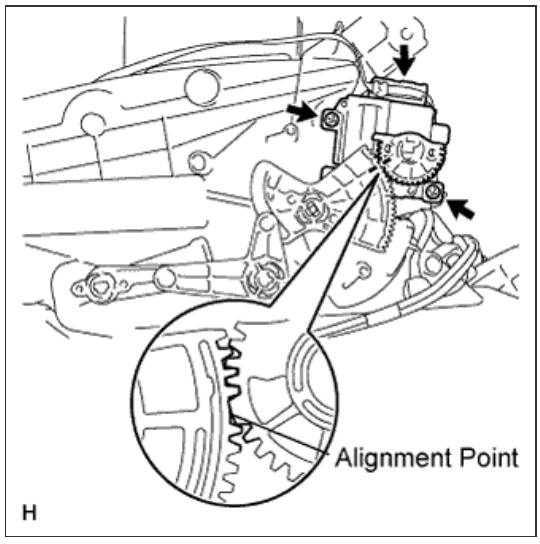
f. Install new packing as shown in the illustration.



9. INSTALL REAR MODE DAMPER SERVO SUB-ASSEMBLY

a. Align the damper servo as shown in the illustration, and install it with the 2 screws.

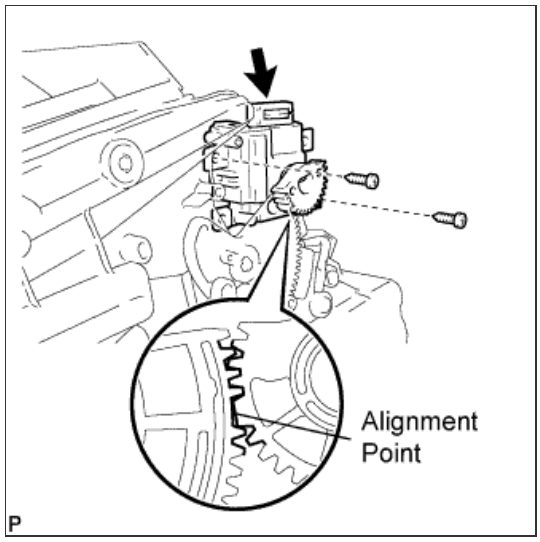
b. Connect the connector.



c. Install the plate cover with the 2 screws.

10. INSTALL NO. 2 AIR MIX DAMPER SERVO SUB-ASSEMBLY

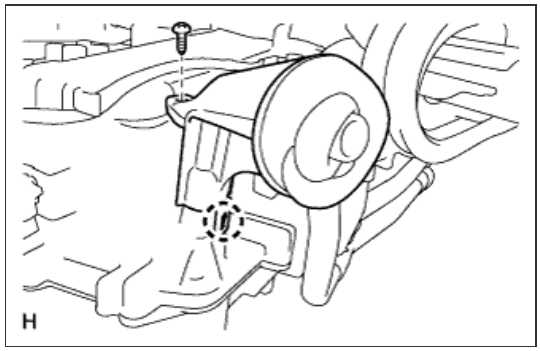
a. Align the damper servo as shown in the illustration, and install it with the 2 screws.



b. Connect the connector.

11. INSTALL REAR AIR MIX DAMPER SERVO SUB-ASSEMBLY

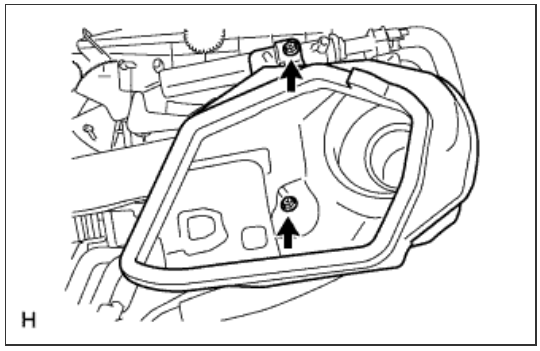
a. Align the damper servo as shown in the illustration, and install it with the 2 screws.



b. Connect the connector.

12. INSTALL DRAIN COOLER HOSE

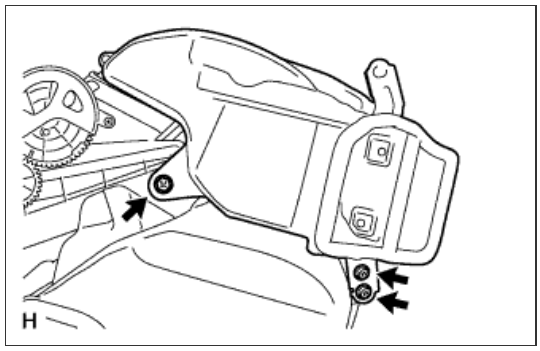
a. Attach the claw to install the drain hose.



b. Install the screw.

13. INSTALL REAR SIDE NO. 3 AIR DUCT

a. Install the duct with the 2 screws.



Torque:
5.4 N*m{ 55 kgf*cm , 48 in.*lbf }

14. INSTALL REAR SIDE NO. 2 AIR DUCT

a. Install the duct with the 3 screws.

Torque:
5.4 N*m{ 55 kgf*cm , 48 in.*lbf }

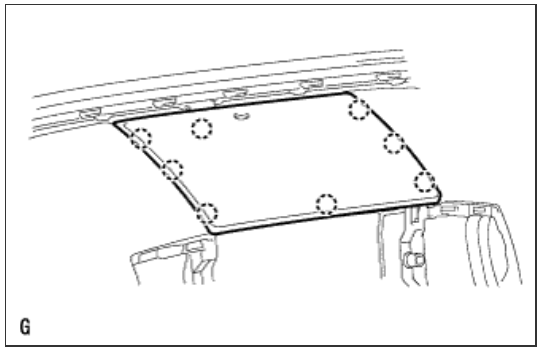
1. REMOVE NO. 1 SPEAKER OPENING COVER ASSEMBLY

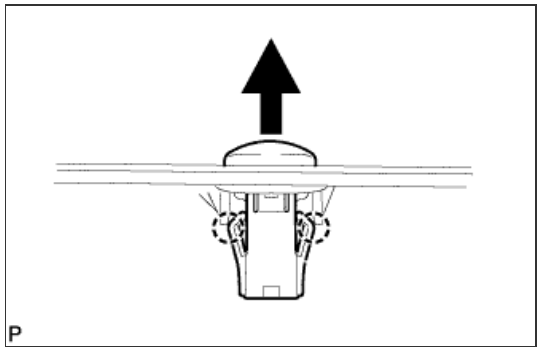
a. Detach the 8 claws and remove the opening cover.

2. REMOVE AUTOMATIC LIGHT CONTROL SENSOR (SOLAR SENSOR)



a. Detach the 2 claws and remove the sensor.

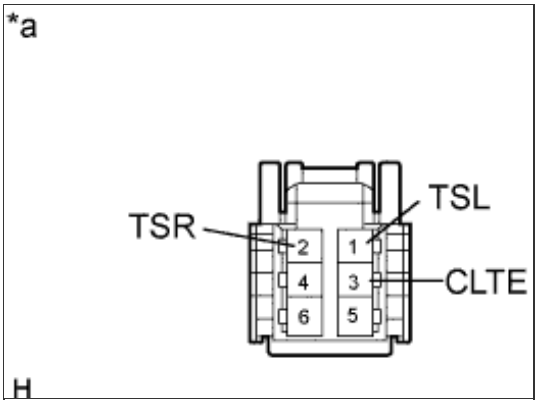
for Preparation Click here



1. REMOVE NO. 1 SPEAKER OPENING COVER ASSEMBLY

a. Detach the 8 claws and remove the opening cover.

2. REMOVE AUTOMATIC LIGHT CONTROL SENSOR (SOLAR SENSOR)



a. Detach the 2 claws and remove the sensor.

for Preparation Click here

1. INSPECT AUTOMATIC LIGHT CONTROL SENSOR (SOLAR SENSOR)

a. Connect the battery positive (+) lead to terminal 6 and the negative (-) lead to terminal 3, then measure the according to the value(s) in the table below.

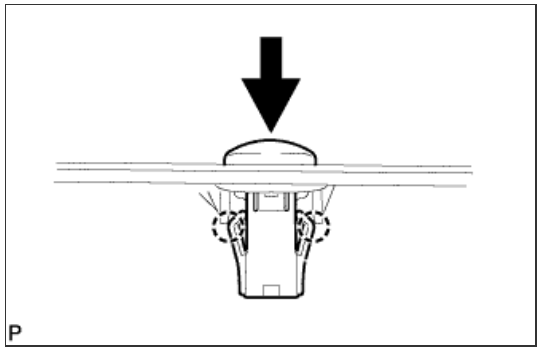
Standard Voltage:

Tester Connection	Condition	Specified Condition
1 (TSL) - 3 (CLTE)	Sensor subject to electric light	0.5 V to 3.0 V
1 (TSL) - 3 (CLTE)	Sensor covered with a cloth	0.5 V or less
2 (TSR) - 3 (CLTE)	Sensor subject to electric light	0.5 V to 3.0 V
2 (TSR) - 3 (CLTE)	Sensor covered with a cloth	0.8 V or less

If the result is not as specified, replace the automatic light control sensor (solar sensor).

NOTICE:

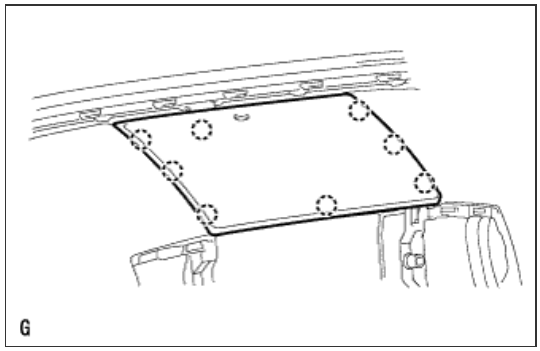
The connection procedure for using a digital tester such as a TOYOTA electrical tester is shown above.



HINT:

- **As the inspection light is moved away from the sensor, the voltage increases.**
- **Use an incandescent lamp for inspection. Bring it within 30 cm (11.8 in.) of the A/C solar sensor.**

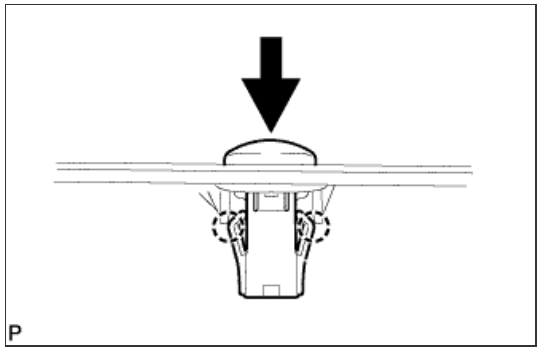
for Preparation Click here



1. INSTALL AUTOMATIC LIGHT CONTROL SENSOR (SOLAR SENSOR)

a. Attach the 2 claws to install the sensor.

2. INSTALL NO. 1 SPEAKER OPENING COVER ASSEMBLY



a. Attach the 8 claws to install the opening cover.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE REAR NO. 1 SEAT ASSEMBLY LH

a. for 60/40 Split Seat Type 40 Side:
Remove the rear No. 1 seat assembly (Click here).

b. for 60/40 Split Seat Type 60 Side:
Remove the rear No. 1 seat assembly (Click here).

3. REMOVE REAR NO. 1 SEAT ASSEMBLY RH

a. for 60/40 Split Seat Type 40 Side:
Remove the rear No. 1 seat assembly (Click here).

b. for 60/40 Split Seat Type 60 Side:
Remove the rear No. 1 seat assembly (Click here).

4. REMOVE REAR NO. 2 SEAT ASSEMBLY LH

a. for Face to Face Seat Type:
Remove the rear No. 2 seat assembly (Click here).

b. except Face to Face Seat Type:
Remove the rear No. 2 seat assembly (Click here).

5. REMOVE REAR NO. 2 SEAT ASSEMBLY RH

a. for Face to Face Seat Type:
Remove the rear No. 2 seat assembly (Click here).

b. except Face to Face Seat Type:
Remove the rear No. 2 seat assembly (Click here).

6. REMOVE REAR DOOR SCUFF PLATE LH

a. w/ Sliding Roof:
Remove the rear door sc ff plate (Click here).

b. w/o Sliding Roof:
Remove the rear door sc ff plate (Click here).

7. REMOVE REAR DOOR SCUFF PLATE RH

a. w/ Sliding Roof:
Remove the rear door sc ff plate (Click here).

b. w/o Sliding Roof:
Remove the rear door sc ff plate (Click here).

8. REMOVE REAR FLOOR MAT REAR SUPPORT PLATE

a. w/ Sliding Roof:
Remove the rear floor mat rear s rt plate (Click here).

b. w/o Sliding Roof:
Remove the rear floor mat rear s rt plate (Click here).

9. REMOVE TONNEAU COVER ASSEMBLY (w/ Tonneau Cover)

10. REMOVE REAR SEAT COVER CAP (w/ Rear No. 2 Seat)

a. w/ Sliding Roof:
Remove the rear seat cover cap (Click here).

b. w/o Sliding Roof:
Remove the rear seat cover cap (Click here).

11. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY LH

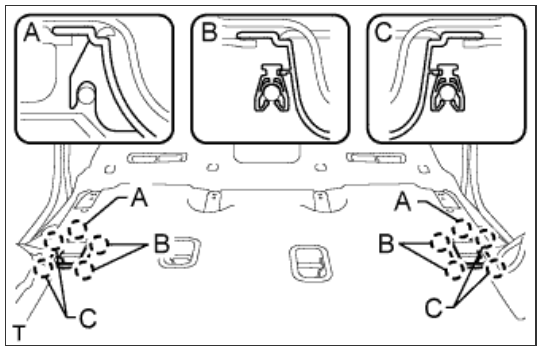
a. w/ Sliding Roof:
Remove the front q arter trim panel (Click here).

b. w/o Sliding Roof:
Remove the front q arter trim panel (Click here).

12. REMOVE REAR SEAT COVER CAP (w/ Rear No. 2 Seat)

a. w/ Sliding Roof:
Remove the rear seat cover cap (Click here).

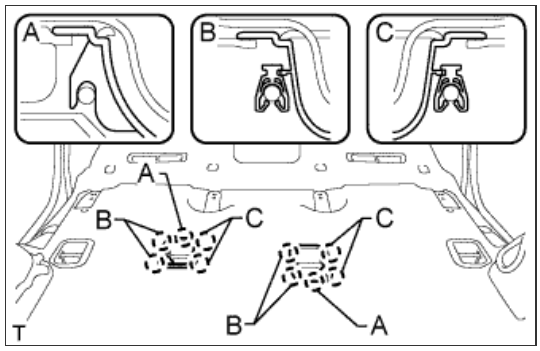
b. w/o Sliding Roof:
Remove the rear seat cover cap (Click here).



13. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY RH

a. w/ Sliding Roof:
Remove the front q arter trim panel (Click here).

b. w/o Sliding Roof:
Remove the front q arter trim panel (Click here).

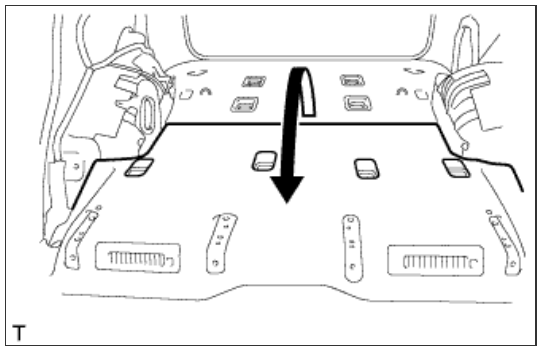


14. REMOVE REAR NO. 1 SEAT PROTECTOR

a. Detach the 10 claws and remove the 2 seat protectors.

15. REMOVE REAR NO. 2 SEAT PROTECTOR

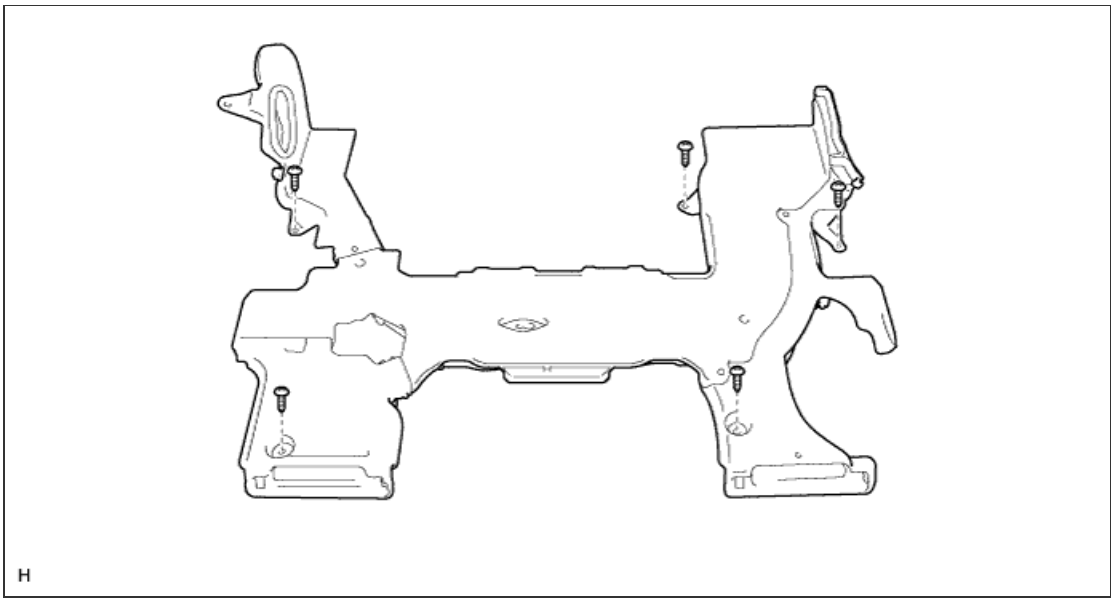
a. Detach the 10 claws and remove the 2 seat protectors.



16. REMOVE FRONT FLOOR CARPET ASSEMBLY

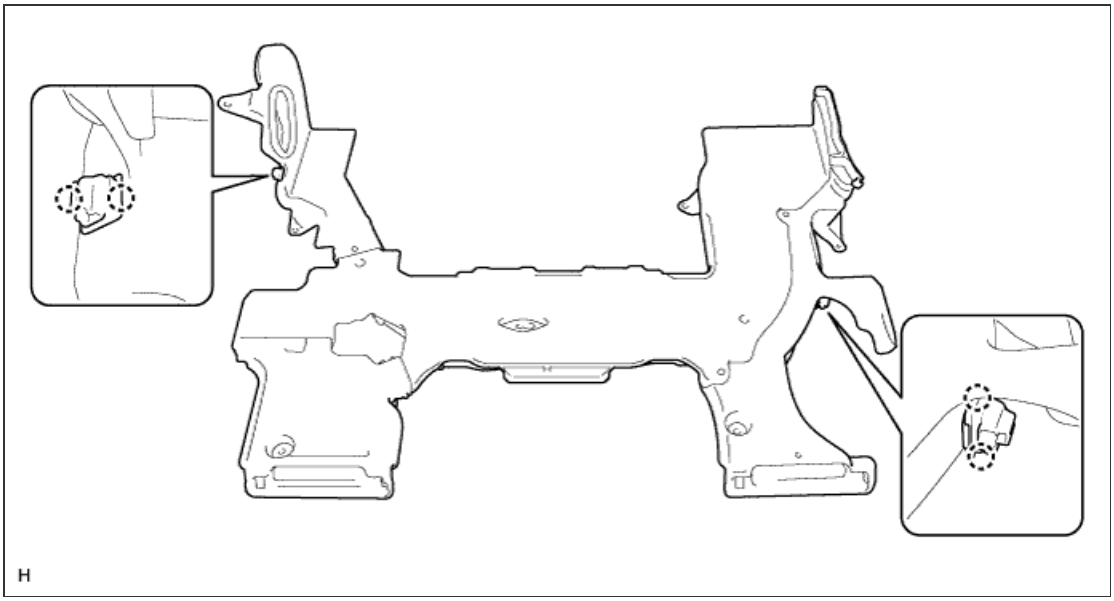
a. Fold back the floor carpet.

HINT:



Fold back the carpet ntil it is possible to remove the rear No. 6 air d ct.

17. REMOVE REAR NO. 6 AIR DUCT



a. Disconnect the 2 connectors.

b. Remove the 5 screws and d ct.

18. REMOVE DUCT TEMPERATURE SENSOR

a. Detach the 4 claws and remove the 2 sensors.

DUCT TEMPERATURE SENSOR (w/ Heater) > REMOVAL

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

b. w/o Sliding Roof:
Remove the rear door sc ff plate (Click here).

8. REMOVE REAR FLOOR MAT REAR SUPPORT PLATE

a. w/ Sliding Roof:
Remove the rear floor mat rear s rt plate (Click here).

b. w/o Sliding Roof:
Remove the rear floor mat rear s rt plate (Click here).

9. REMOVE TONNEAU COVER ASSEMBLY (w/ Tonneau Cover)

a. Remove the tonnea cover.

10. REMOVE REAR SEAT COVER CAP (w/ Rear No. 2 Seat)

a. w/ Sliding Roof:
Remove the rear seat cover cap (Click here).

b. w/o Sliding Roof:
Remove the rear seat cover cap (Click here).

11. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY LH

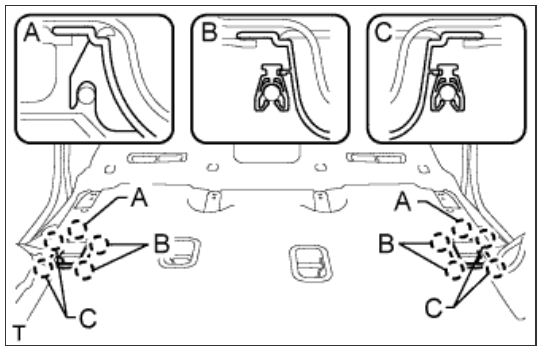
a. w/ Sliding Roof:
Remove the front q arter trim panel (Click here).

b. w/o Sliding Roof:
Remove the front q arter trim panel (Click here).

12. REMOVE REAR SEAT COVER CAP (w/ Rear No. 2 Seat)

a. w/ Sliding Roof:
Remove the rear seat cover cap (Click here).

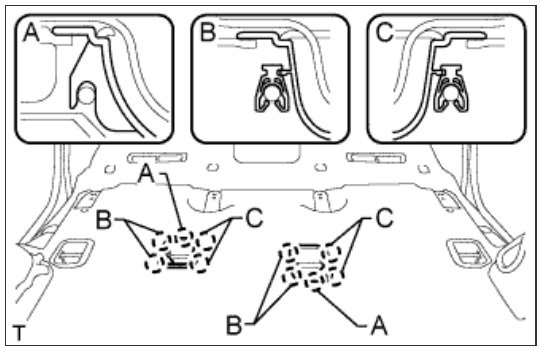
b. w/o Sliding Roof:
Remove the rear seat cover cap (Click here).



13. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY RH

a. w/ Sliding Roof:
Remove the front q arter trim panel (Click here).

b. w/o Sliding Roof:
Remove the front q arter trim panel (Click here).

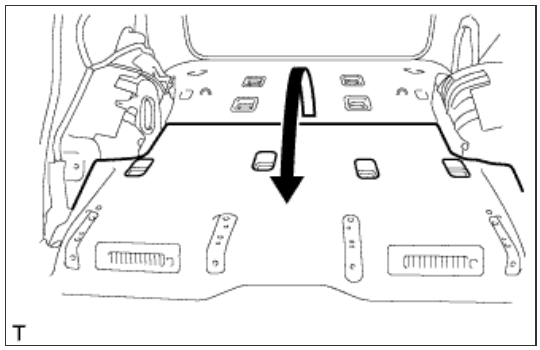


14. REMOVE REAR NO. 1 SEAT PROTECTOR

a. Detach the 10 claws and remove the 2 seat protectors.

15. REMOVE REAR NO. 2 SEAT PROTECTOR

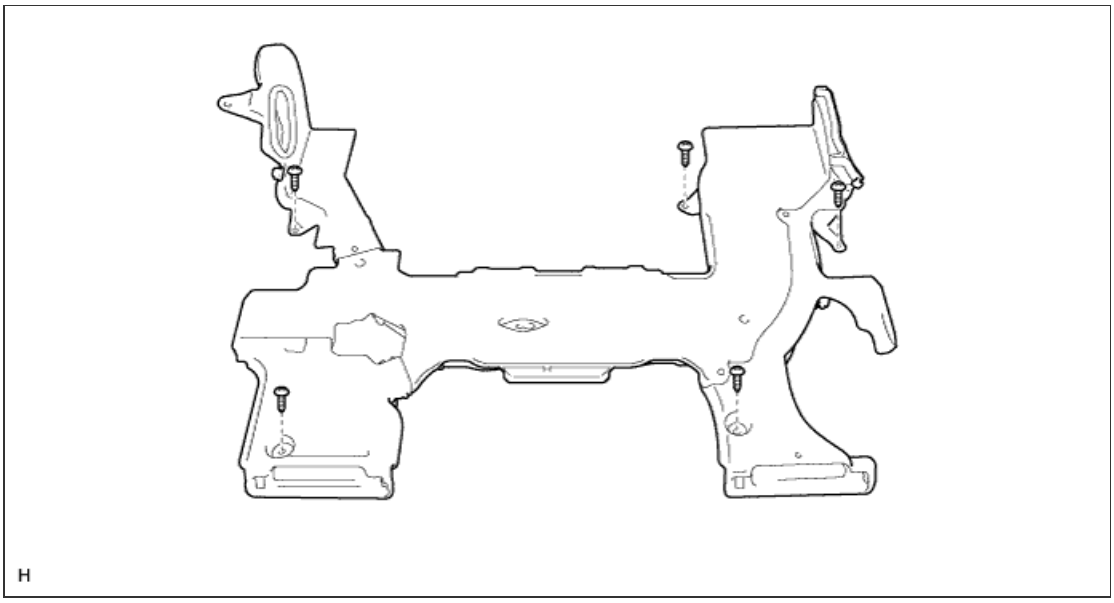
a. Detach the 10 claws and remove the 2 seat protectors.



16. REMOVE FRONT FLOOR CARPET ASSEMBLY

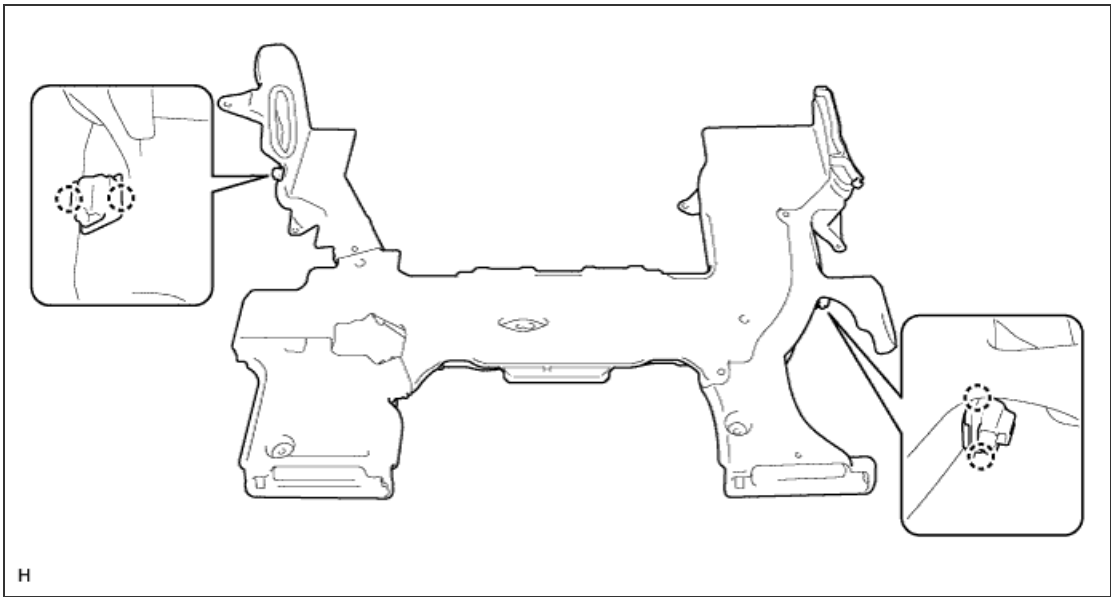
a. Fold back the floor carpet.

HINT:



Fold back the carpet ntil it is possible to remove the rear No. 6 air d ct.

17. REMOVE REAR NO. 6 AIR DUCT



a. Disconnect the 2 connectors.

b. Remove the 5 screws and d ct.

18. REMOVE DUCT TEMPERATURE SENSOR

a. Detach the 4 claws and remove the 2 sensors.

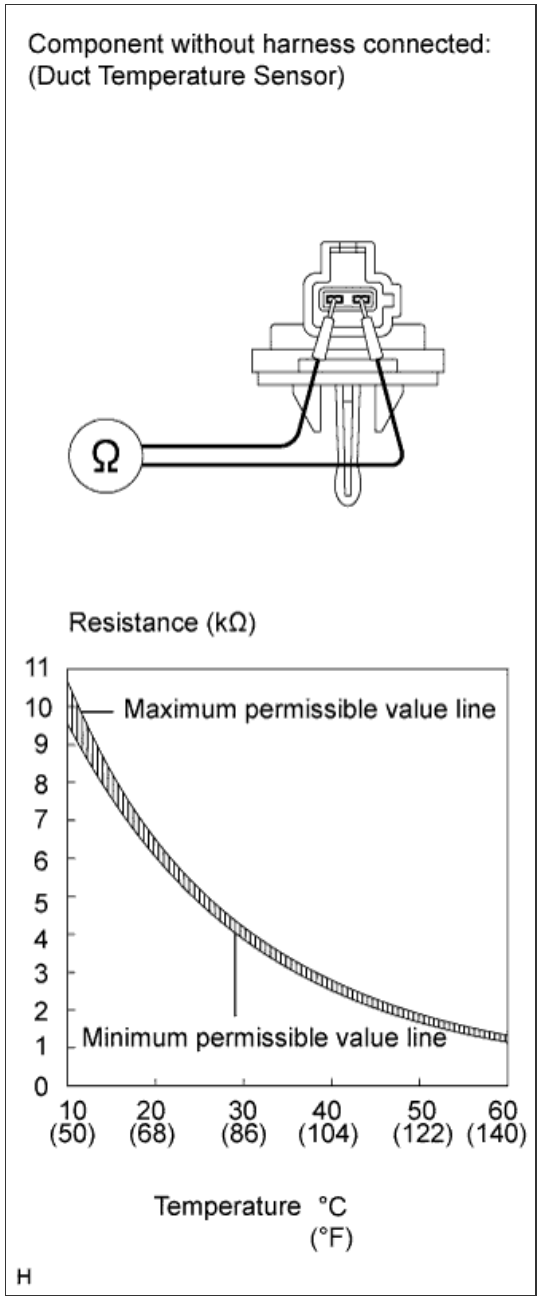
for Preparation Click here

1. INSPECT DUCT TEMPERATURE SENSOR

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	at 10 (50)	to 10.5 kΩ
1 - 2	at 15 (5)	7.5 to 8.3 kΩ
1 - 2	at 20 (68)	6.0 to 6.5 kΩ
1 - 2	at 25 (77)	4.8 to 5.2 kΩ
1 - 2	at 30 (86)	3.8 to 4.2 kΩ
1 - 2	at 35 ( )	3.1 to 3.4 kΩ
1 - 2	at 40 (104)	2.5 to 2.8 kΩ
1 - 2	at 45 (113)	2.0 to 2.3 kΩ
1 - 2	at 50 (122)	1.6 to 2.0 kΩ
1 - 2	at 55 (131)	1.3 to 1.6 kΩ
1 - 2	at 60 (140)	1.1 to 1.4 kΩ

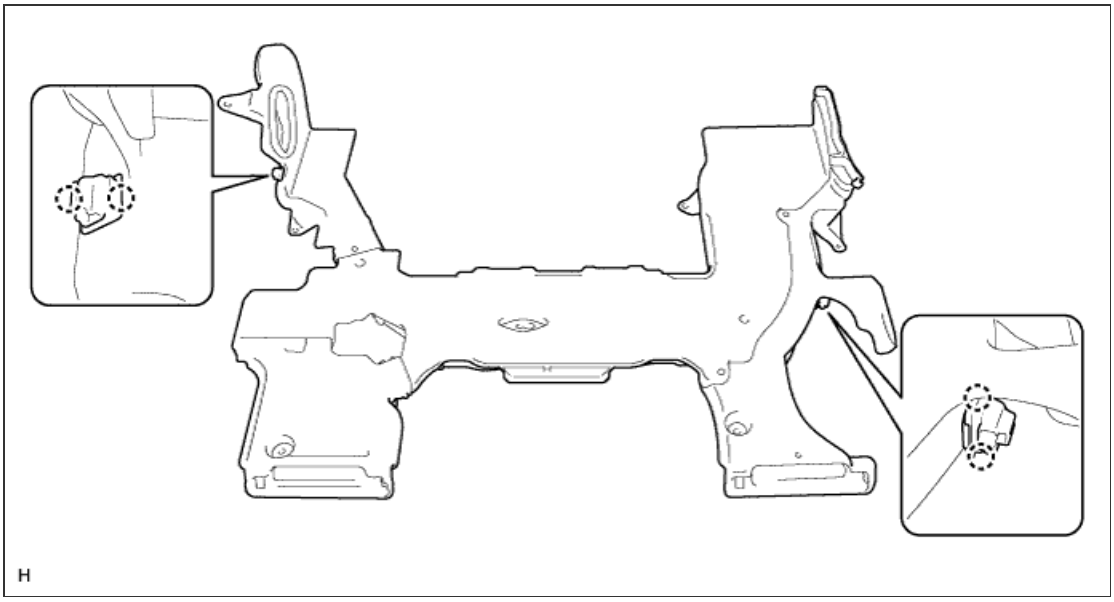


If the result is not as specified, replace the duct te erature sensor.

NOTICE:

- **Touching the sensor even slightly may change the resistance value. Hold the connector of the sensor.**
- **When measuring the resistance, the sensor temperature must be the same as the ambient temperature.**

HINT:



As the te erature increases, the resistance decreases (See the graph).

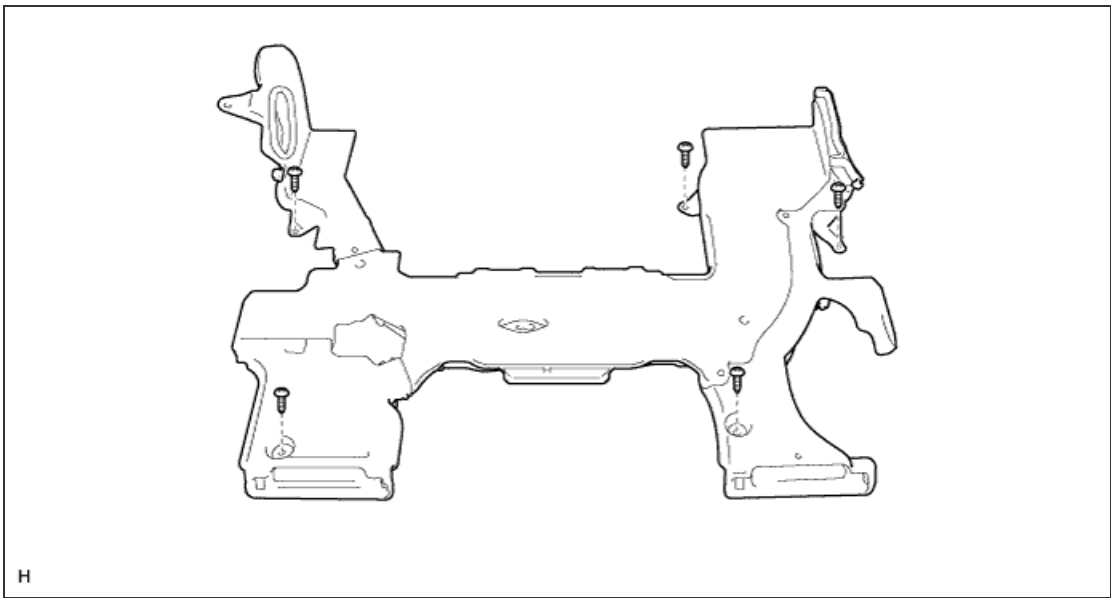
1. INSTALL DUCT TEMPERATURE SENSOR

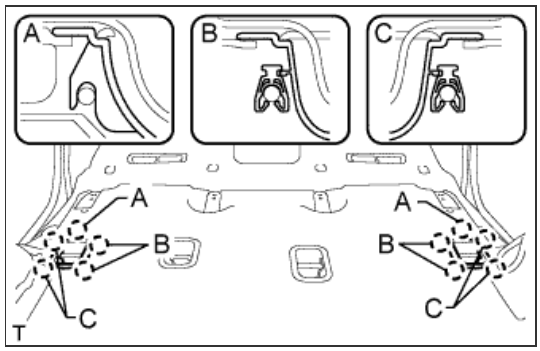


a. Attach the 4 claws to install the 2 sensors.

2. INSTALL REAR NO. 6 AIR DUCT

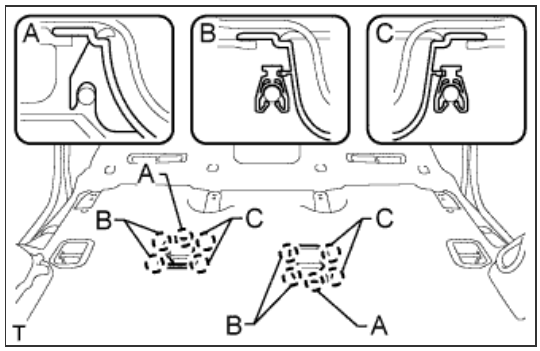
a. Install the duct with the 5 screws.

b. Connect the 2 connectors.



3. INSTALL FRONT FLOOR CARPET ASSEMBLY

a. Install the floor carpet.



4. INSTALL REAR NO. 1 SEAT PROTECTOR

a. Attach the 10 claws to install the 2 seat protectors.

5. INSTALL REAR NO. 2 SEAT PROTECTOR

a. Attach the 10 claws to install the 2 seat protectors.

6. INSTALL REAR SEAT COVER CAP (w/ Rear No. 2 Seat)

a. w/ Sliding Roof:
Install the rear seat cover cap (Click here).

b. w/o Sliding Roof:
Install the rear seat cover cap (Click here).

7. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY LH

a. w/ Sliding Roof:
Install the front quarter trim panel (Click here).

b. w/o Sliding Roof:
Install the front quarter trim panel (Click here).

8. INSTALL REAR SEAT COVER CAP (w/ Rear No. 2 Seat)

a. w/ Sliding Roof:
Install the rear seat cover cap (Click here).

b. w/o Sliding Roof:
Install the rear seat cover cap (Click here).

9. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY RH

a. w/ Sliding Roof:
Install the front quarter trim panel (Click here).

b. w/o Sliding Roof:
Install the front quarter trim panel (Click here).

10. INSTALL TONNEAU COVER ASSEMBLY (w/ Tonneau Cover)

a. Install the tonneau cover assembly.

11. INSTALL REAR FLOOR MAT REAR SUPPORT PLATE

a. w/ Sliding Roof:
Install the rear floor mat rear support plate (Click here).

b. w/o Sliding Roof:
Install the rear floor mat rear support plate (Click here).

12. INSTALL REAR DOOR SCUFF PLATE LH

a. w/ Sliding Roof:
Install the rear door scuff plate (Click here).

b. w/o Sliding Roof:
Install the rear door scuff plate (Click here).

13. INSTALL REAR DOOR SCUFF PLATE RH

a. w/ Sliding Roof:
Install the rear door scuff plate (Click here).

b. w/o Sliding Roof:
Install the rear door scuff plate (Click here).

14. INSTALL REAR NO. 2 SEAT ASSEMBLY LH

a. for Face to Face Seat Type:
Install the rear No. 2 seat assembly (Click here).

b. except Face to Face Seat Type:
Install the rear No. 2 seat assembly (Click here).

15. INSTALL REAR NO. 2 SEAT ASSEMBLY RH

a. for Face to Face Seat Type:
Install the rear No. 2 seat assembly (Click here).

b. except Face to Face Seat Type:
Install the rear No. 2 seat assembly (Click here).

16. INSTALL REAR NO. 1 SEAT ASSEMBLY LH

a. for 4 lit eat de: e 4 i
Install the rear No. 1 seat assembly (Click here).

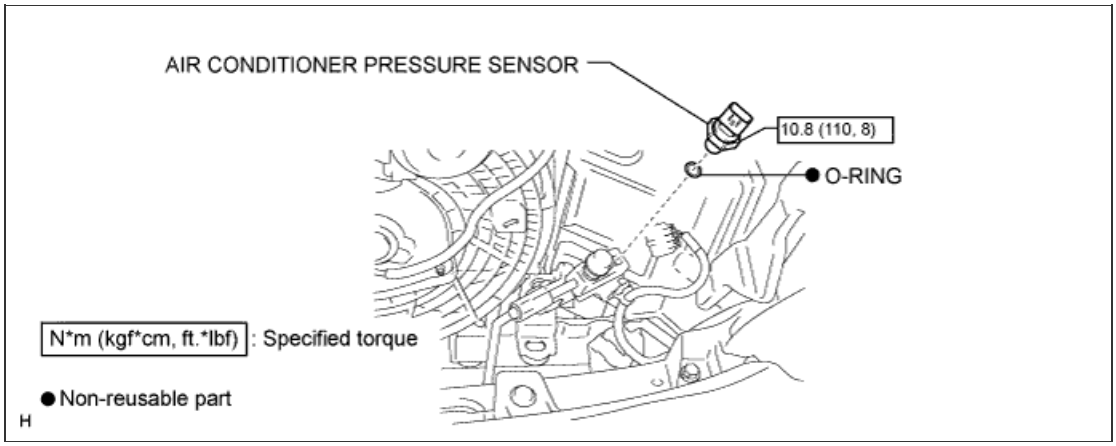
b. for 4 lit eat de: e i
Install the rear No. 1 seat assembly (Click here).

17. INSTALL REAR NO. 1 SEAT ASSEMBLY RH

a. for 4 lit eat de: e 4 i
Install the rear No. 1 seat assembly (Click here).

b. for 4 lit eat de: e i
Install the rear No. 1 seat assembly (Click here).

18. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



NOTICE:

herdisconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

19. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).

for Preparation Click here

AIR CONDITIONING PRESSURE SENSOR > REMOVAL

for Preparation Click here

1. REMOVE FRONT BUMPER COVER

a. for Standard:
Remove the front bumper cover (Click here).

b. w/ Winch:
Remove the front bumper cover (Click here).

2. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM

a. Start the engine.

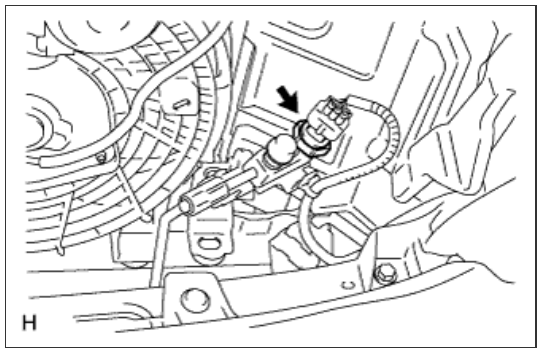
b. Turn the A/C tch on.

c. Operate the cooler compre or while the engine ped i appro mately 1000 rpm for 5 to 6 minute to circulate the refrigerant and collect the compre or oil remaining in each component into the cooler compre or.

d. Stop the engine.

e. Recover the refrigerant from the A/C tem u ng a refrigerant recovery unit.

3. REMOVE AIR CONDITIONER PRESSURE SENSOR



a. Di connect the connector.

b. Remove the pre ure en or.

c. Remove O-ring from the pre ure en or.

NOTICE:

Seal the opening of the di connected part u ng vinyl tape to prevent moi ture and foreign matter from entering them.

AIR CONDITIONING PRESSURE SENSOR > REMOVAL

for Preparation Click here

1. REMOVE FRONT BUMPER COVER

a. for Standard:
Remove the front bumper cover (Click here).

b. w/ Winch:
Remove the front bumper cover (Click here).

2. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM

a. Start the engine.

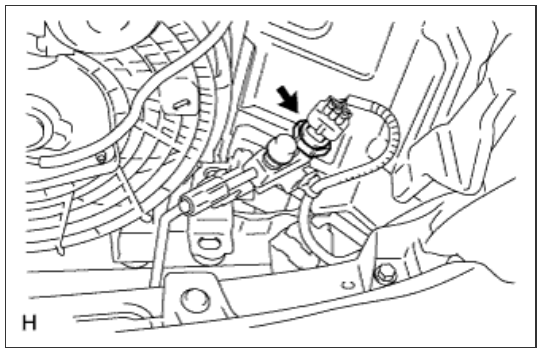
b. Turn the A/C tch on.

c. Operate the cooler compre or while the engine ped i appro mately 1000 rpm for 5 to 6 minute to circulate the refrigerant and collect the compre or oil remaining in each component into the cooler compre or.

d. Stop the engine.

e. Recover the refrigerant from the A/C tem u ng a refrigerant recovery unit.

3. REMOVE AIR CONDITIONER PRESSURE SENSOR



a. Di connect the connector.

b. Remove the pre ure en or.

c. Remove O-ring from the pre ure en or.

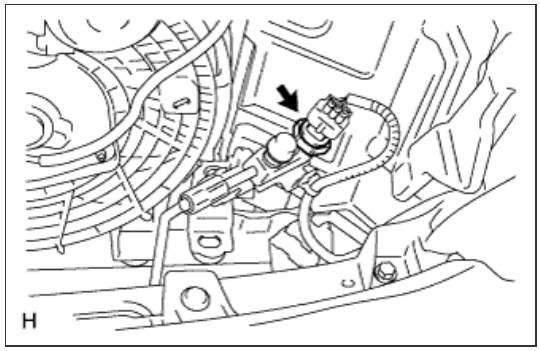
NOTICE:

Seal the opening of the di connected part u ng vinyl tape to prevent moi ture and foreign matter from entering them.

for Preparation Click here

1. INSTALL AIR CONDITIONER PRESSURE SENSOR

a. Sufficiently apply compressor oil to a new O-ring and t e fitting surface of t e pressure sensor.



Compressor oil:
ND-OIL 8 or equivalent

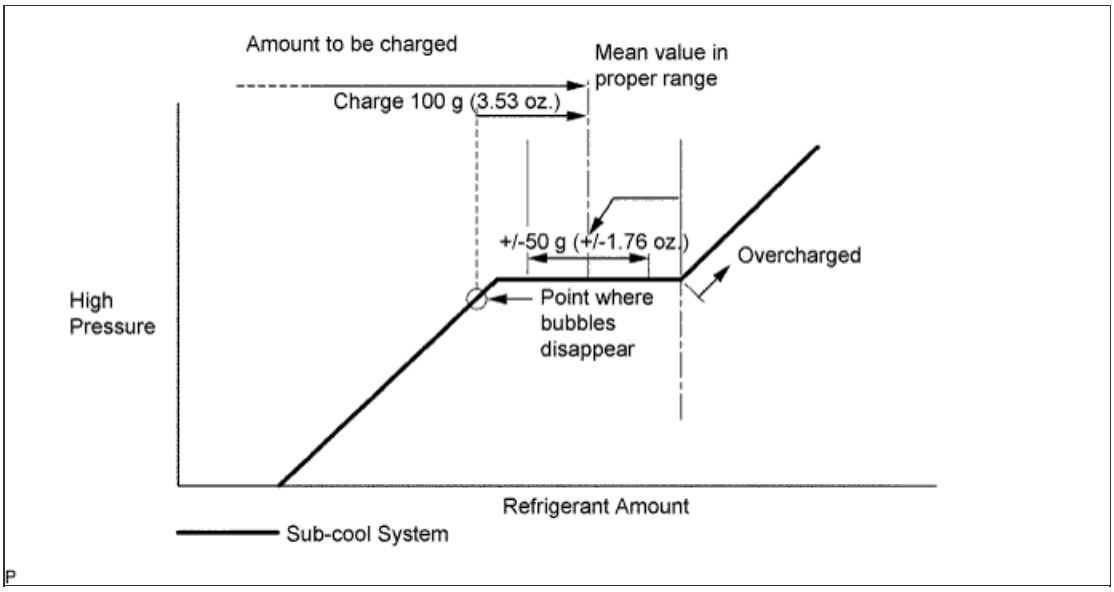
b. Install O-ring on t e pressure switc

c. nstall t e pressure sensor.

Torque:
10.8 N*m{ 110 kgf*cm , 8 ft.*lbf }

d. Connect t e connector.

2. CHARGE REFRIGERANT



SST
09985-20010 (09985-02130, 09985-02150, 09985-02090, 09985-02110, 09985-02010, 09985-02050, 09985-02060, 09985-02070)

a. Perform vacuum purging using a vacuum pump.

b. C arge refrigerant H -134a (R134a).

Standard:

Condenser Core T ickness	Air Conditioning Type	Cool Box	Refrigerant C arging Amount
22 mm (0.866 in.)	w/o Rear Cooler	w/ Cool Box	870 +/-30 g (30.7 +/-1.1 oz.)
		w/o Cool Box	870 +/-30 g (30.7 +/-1.1 oz.)
	w/ Rear Cooler	w/ Cool Box	1010 +/-30 g (35.6 +/-1.1 oz.)
		w/o Cool Box	960 +/-30 g (33.9 +/-1.1 oz.)
16 mm (0.630 in.)	w/o Rear Cooler	w/ Cool Box	770 +/-30 g (27.2 +/-1.1 oz.)
		w/o Cool Box	770 +/-30 g (27.2 +/-1.1 oz.)
	w/ Rear Cooler	w/ Cool Box	970 +/-30 g (34.2 +/-1.1 oz.)
		w/o Cool Box	920 +/-30 g (32.5 +/-1.1 oz.)

NOTICE:

- **Do not operate the cooler compressor before charging refrigerant as the cooler compressor ill not ork properly ithout any refrigerant, and ill overheat.**
- **Approximately 200 g (7.05 oz.) of refrigerant may need to be charged after bubbles disappear. The refrigerant amount should be checked by measuring its quantity, and not ith the sight glass.**

3. WAR UP ENGINE

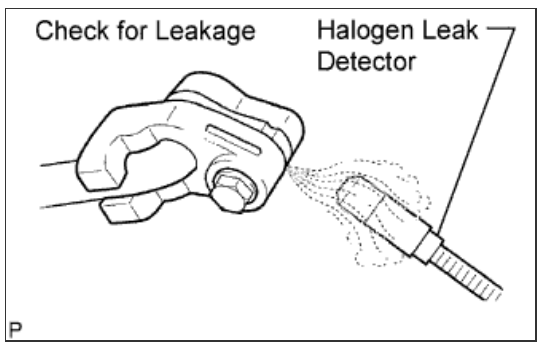
a. Warm up t e engine at less t an 1850 rpm for 2 minutes or more after c arging t e refrigerant.

NOTICE:

Be sure to warm up t e compressor w en turning t e A/C switc is on after removing and installing t e cooler refrigerant lines (including t e compressor), to prevent damage to t e compressor.

4. CHEC REFRIGERANT GAS LEA

a. After rec arging t e refrigerant gas, c eck for refrigerant gas leakage using a alogen leak detector.



b. Perform t e operation under t ese conditions:

- Stop t e engine.
- Secure good ventilation (t e alogen leak detector may react to volatile gases ot er t an refrigerant, suc as evaporated gasoline or ex aust gas).
- Repeat t e test 2 or 3 times.
- Make sure t at some refrigerant remains in t e refrigeration system. W en compressor is off: approximately 392 to 588 kPa (4.0 to 6.0 kgf/cm^2, 57 to 85 psi).

c. Using a alogen leak detector, c eck t e refrigerant line for leakage.

d. If a gas leak is not detected on t e drain ose, remove t e blower motor control (blower resistor) from t e cooling unit. Insert t e alogen leak detector sensor into t e unit and perform t e test.

e. Disconnect t e connector and wait for approximately 20 minutes. Bring t e alogen leak detector close to t e pressure switc and perform t e test.

5. INSTALL FRONT U PER CO ER

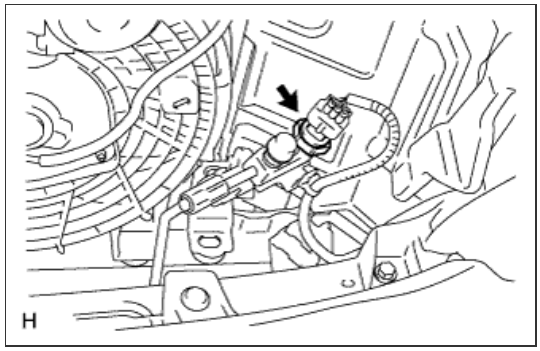
a. for Standard:
Install t e front bumper cover (Click ere).

b. w/ Winc
nstall t e front bumper cover (Click ere).

for Preparation Click here

1. INSTALL AIR CONDITIONER PRESSURE SENSOR

a. Sufficiently apply compressor oil to a new O-ring and t e fitting surface of t e pressure sensor.



Compressor oil:
ND-OIL 8 or equivalent

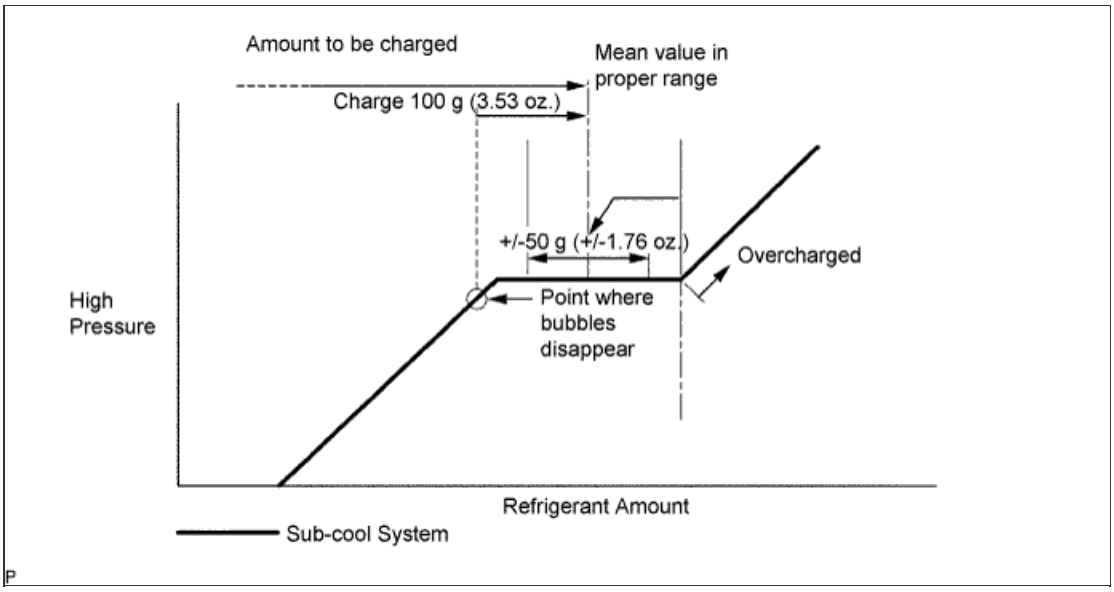
b. Install O-ring on t e pressure switc

c. nstall t e pressure sensor.

Torque:
10.8 N*m{ 110 kgf*cm , 8 ft.*lbf }

d. Connect t e connector.

2. CHARGE REFRIGERANT



SST
09985-20010 (09985-02130, 09985-02150, 09985-02090, 09985-02110, 09985-02010, 09985-02050, 09985-02060, 09985-02070)

a. Perform vacuum purging using a vacuum pump.

b. C arge refrigerant H -134a (R134a).

Standard:

Condenser Core T ickness	Air Conditioning Type	Cool Box	Refrigerant C arging Amount
22 mm (0.866 in.)	w/o Rear Cooler	w/ Cool Box	870 +/-30 g (30.7 +/-1.1 oz.)
		w/o Cool Box	870 +/-30 g (30.7 +/-1.1 oz.)
	w/ Rear Cooler	w/ Cool Box	1010 +/-30 g (35.6 +/-1.1 oz.)
		w/o Cool Box	960 +/-30 g (33.9 +/-1.1 oz.)
16 mm (0.630 in.)	w/o Rear Cooler	w/ Cool Box	770 +/-30 g (27.2 +/-1.1 oz.)
		w/o Cool Box	770 +/-30 g (27.2 +/-1.1 oz.)
	w/ Rear Cooler	w/ Cool Box	970 +/-30 g (34.2 +/-1.1 oz.)
		w/o Cool Box	920 +/-30 g (32.5 +/-1.1 oz.)

NOTICE:

- **Do not operate the cooler compressor before charging refrigerant as the cooler compressor ill not ork properly ithout any refrigerant, and ill overheat.**
- **Approximately 200 g (7.05 oz.) of refrigerant may need to be charged after bubbles disappear. The refrigerant amount should be checked by measuring its quantity, and not ith the sight glass.**

3. WAR UP ENGINE

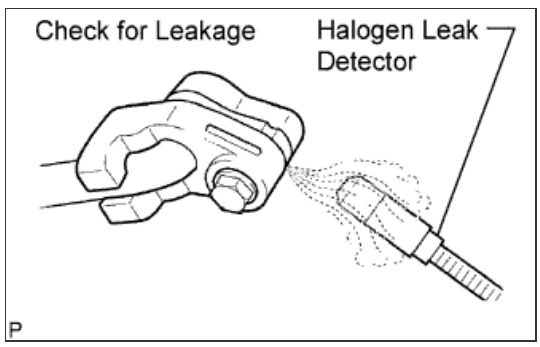
a. Warm up t e engine at less t an 1850 rpm for 2 minutes or more after c arging t e refrigerant.

NOTICE:

Be sure to warm up t e compressor w en turning t e A/C switc is on after removing and installing t e cooler refrigerant lines (including t e compressor), to prevent damage to t e compressor.

4. CHEC REFRIGERANT GAS LEA

a. After rec arging t e refrigerant gas, c eck for refrigerant gas leakage using a alogen leak detector.



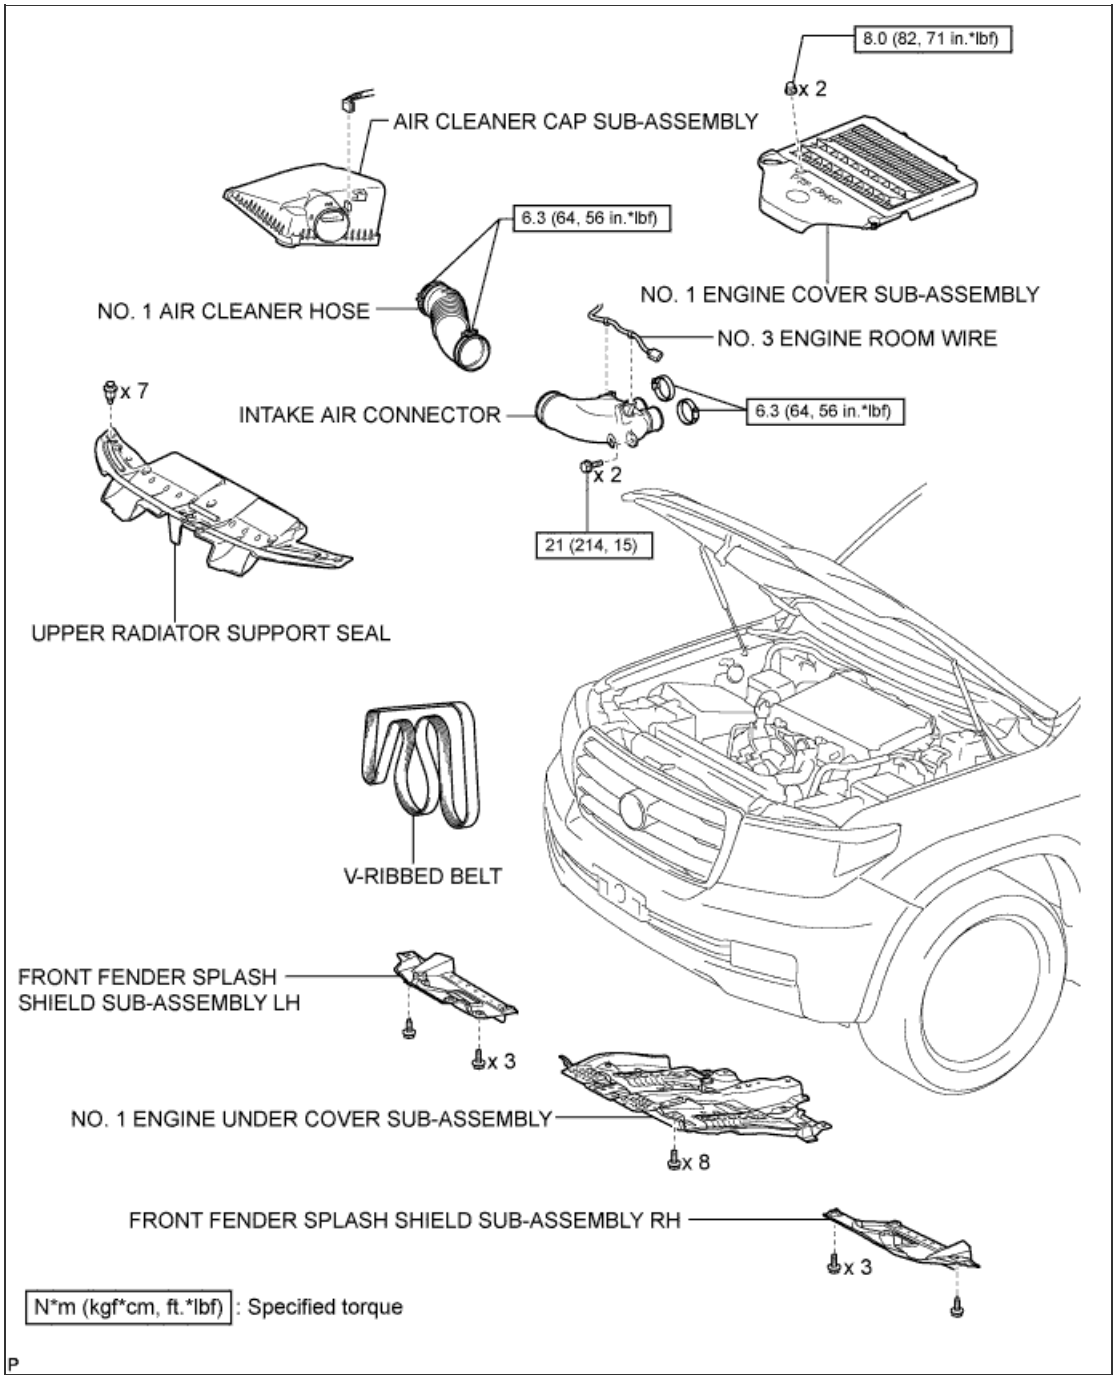
b. Perform t e operation under t ese conditions:

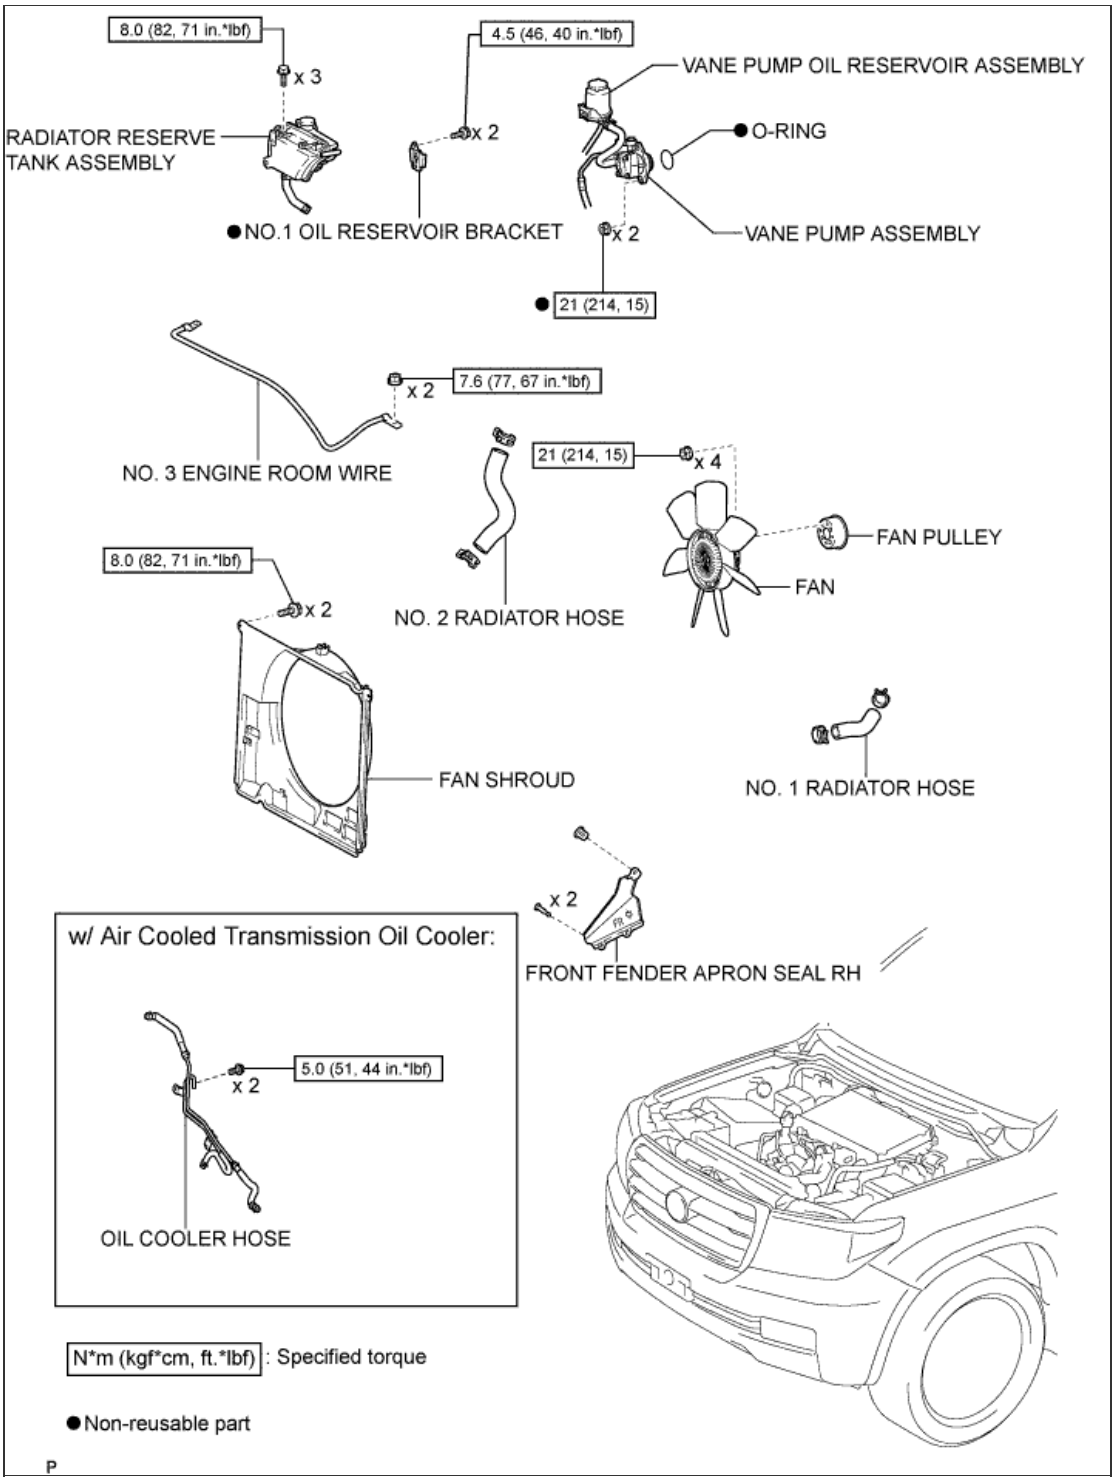
- Stop t e engine.
- Secure good ventilation (t e alogen leak detector may react to volatile gases ot er t an refrigerant, suc as evaporated gasoline or ex aust gas).
- Repeat t e test 2 or 3 times.
- Make sure t at some refrigerant remains in t e refrigeration system. W en compressor is off: approximately 392 to 588 kPa (4.0 to 6.0 kgf/cm^2, 57 to 85 psi).

c. Using a alogen leak detector, c eck t e refrigerant line for leakage.

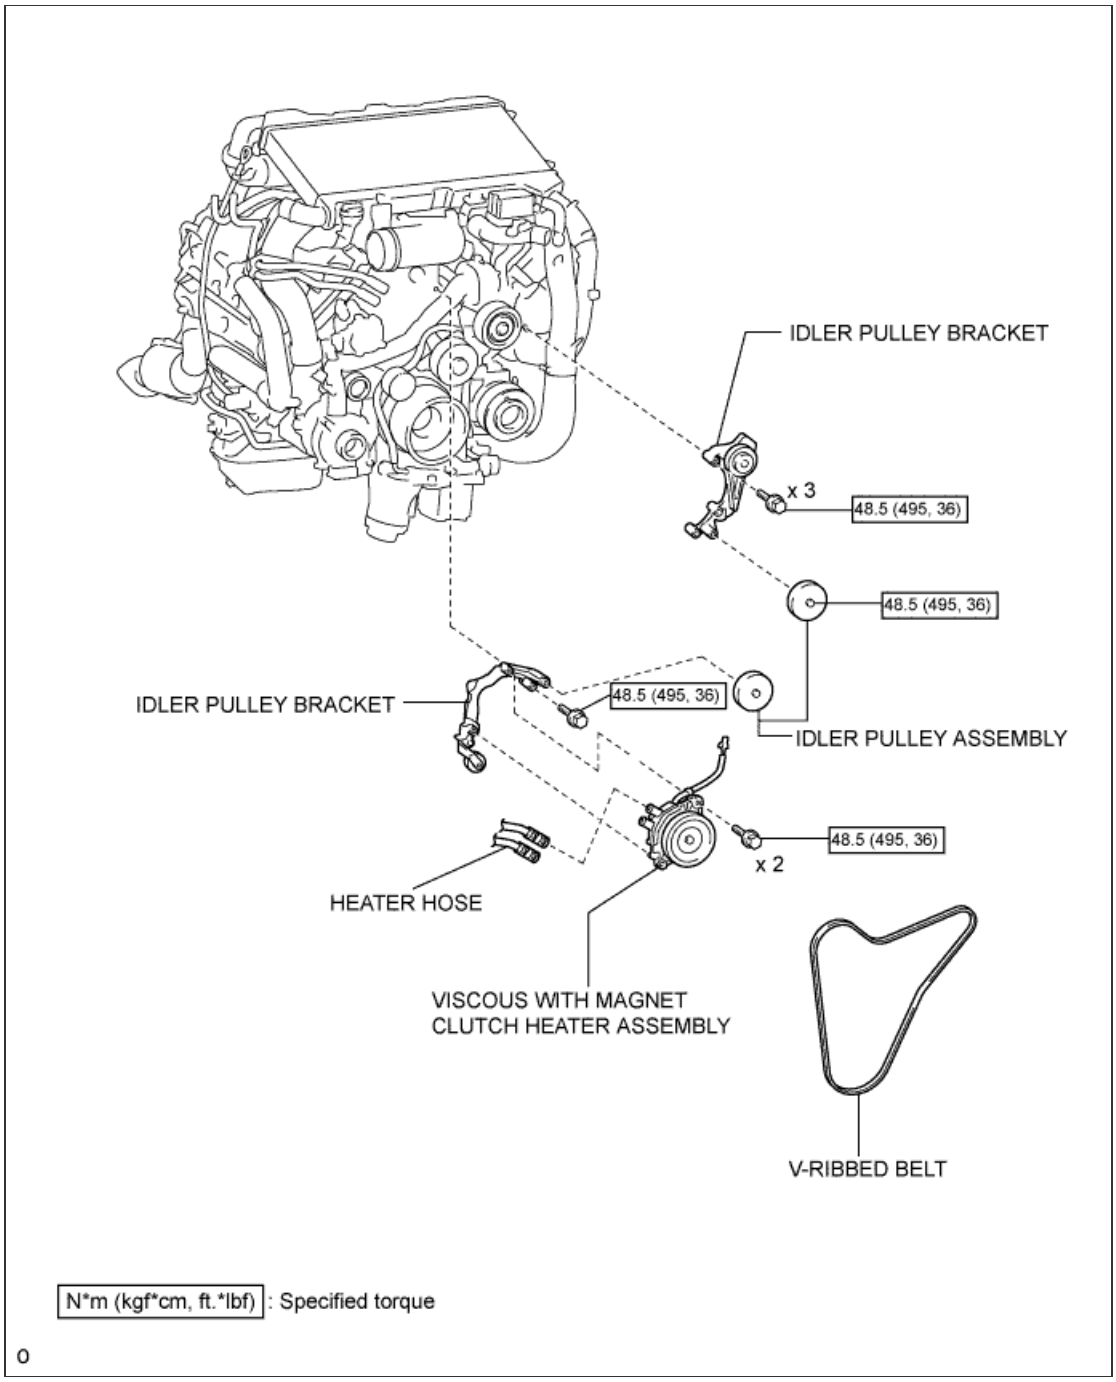
d. If a gas leak is not detected on t e drain ose, remove t e blower motor control (blower resistor) from t e cooling unit. Insert t e alogen leak detector sensor into t e unit and perform t e test.

e. Disconnect t e connector and wait for approximately 20 minutes. Bring t e alogen leak detector close to t e pressure switc and perform t e test.





5. INSTALL FRONT U PER CO ER



a. for Standard:
Install t e front bumper cover (Click ere).

b. w/ Winc
nstall t e front bumper cover (Click ere).

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

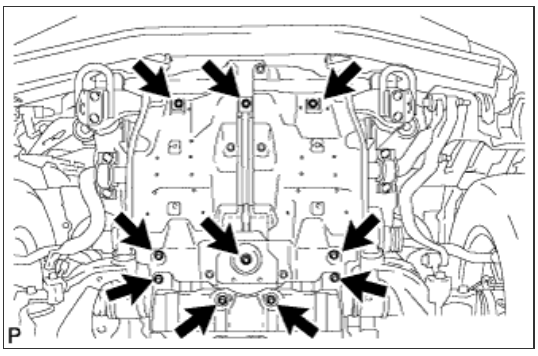
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. for Standard:
Remove the front fender splash shield (Click here).

b. w/ Winch:
Remove the front fender splash shield (Click here).



3. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

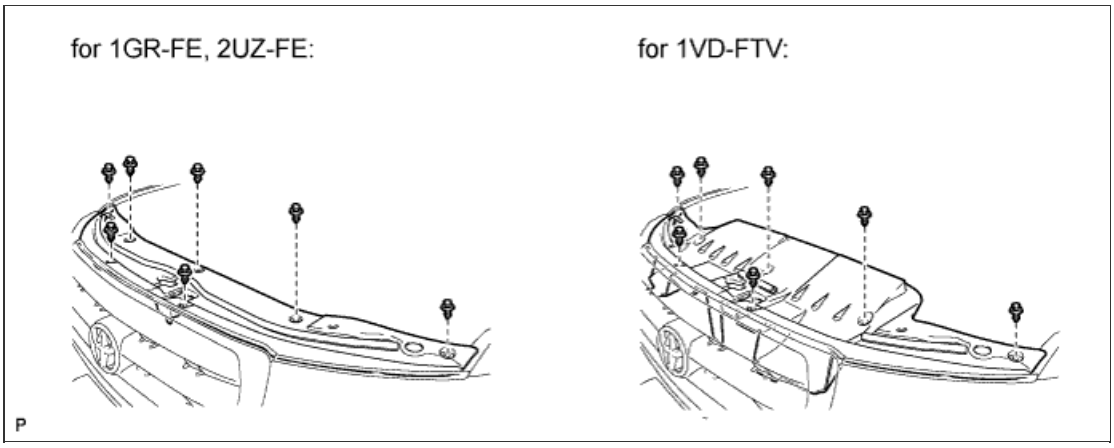
a. for Standard:
Remove the front fender splash shield (Click here).

b. w/ Winch:
Remove the front fender splash shield (Click here).

4. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and No. 1 engine under cover.

5. DRAIN ENGINE COOLANT

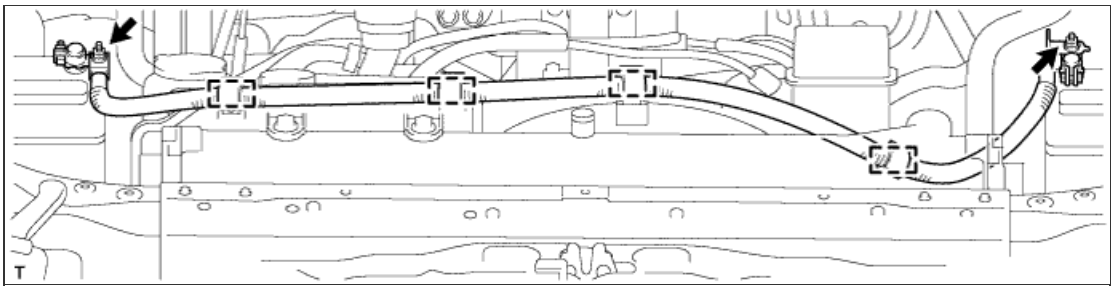


a. for 1
rain engine coolant (Click here).

b. for 2U
rain engine coolant (Click here).

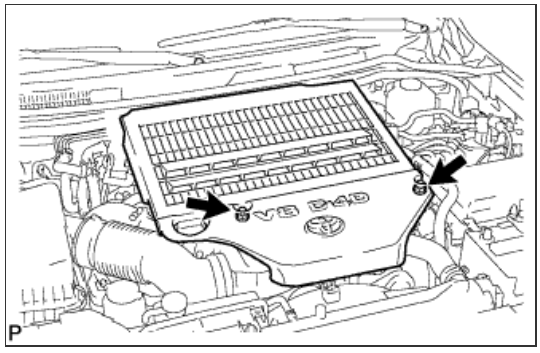
c. for 1GR-FE:
Drain engine coolant (Click here).

6. REMOVE UPPER RADIATOR SUPPORT SEAL



a. Remove the 7 clips and radiator support seal.

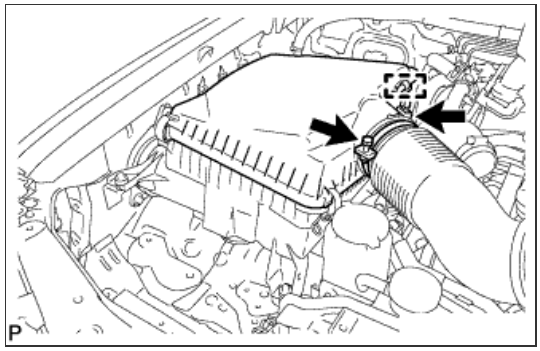
7. REMOVE NO. 3 ENGINE ROOM WIRE



a. Disconnect the 4 wire harness clamps.

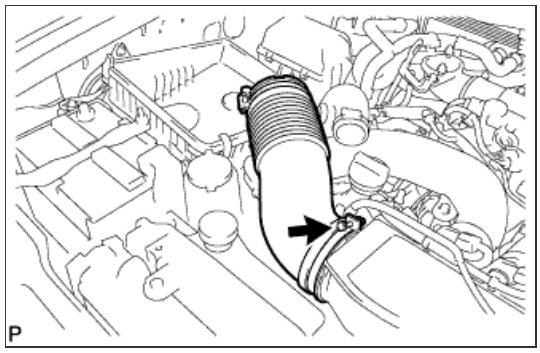
b. Remove the 2 nuts and No. 3 engine room wire.

8. REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY



a. Remove the 2 nuts and No. 1 engine cover.

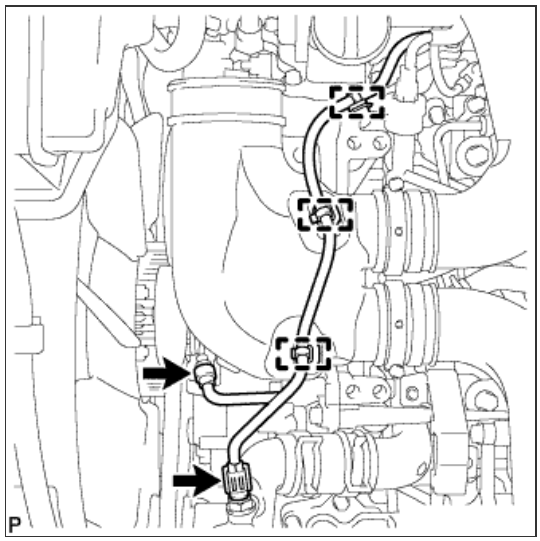
9. REMOVE AIR CLEANER CAP SUB-ASSEMBLY



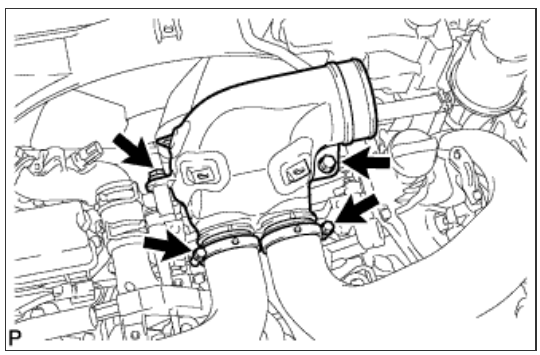
a. oosen the hose clamp and disconnect the connector.

b. Using a clip remover, detach the 3 clamps and remove the air cleaner cap.

10. REMOVE NO. 1 AIR CLEANER HOSE



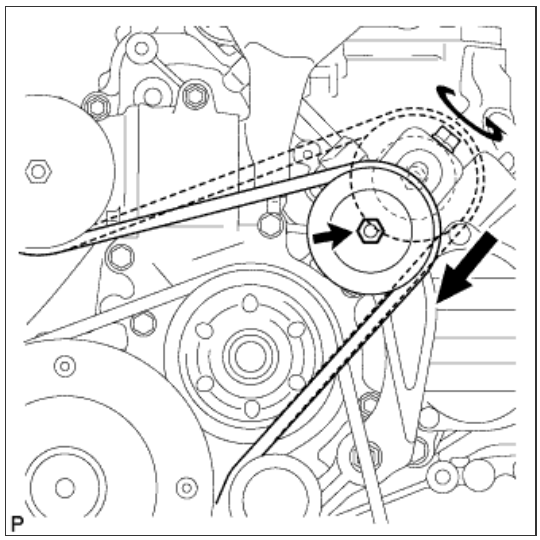
a. oosen the hose clamp and remove the No. 1 air cleaner hose.



11. REMOVE INTAKE AIR CONNECTOR

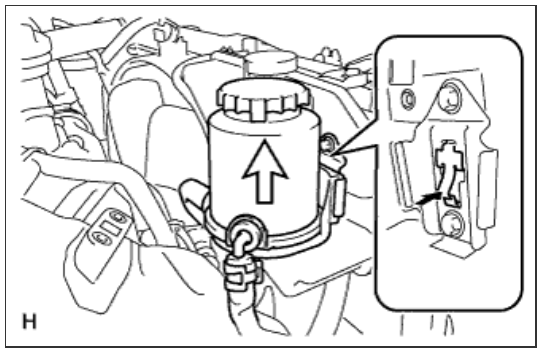
a. Disconnect the 2 connectors from the viscous heater and water temperature sensor.

b. Using a clip remover, detach the 3 wire harness clamps.



c. oosen the 2 hose clamps and remove the 2 bolts and intake air connector.

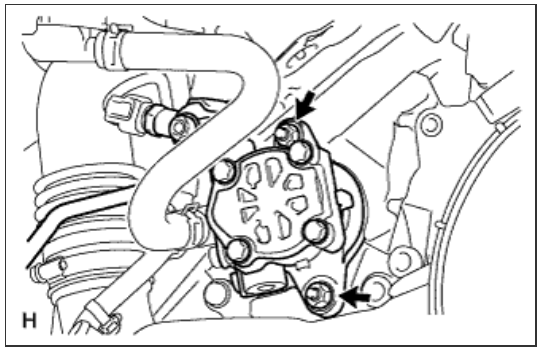
12. REMOVE V-RIBBED BELT



a. oosen the lock nut and turn the bolt counterclockwise.

b. Remove the ribbed belt.

13. REMOVE VANE PUMP OIL RESERVOIR ASSEMBLY

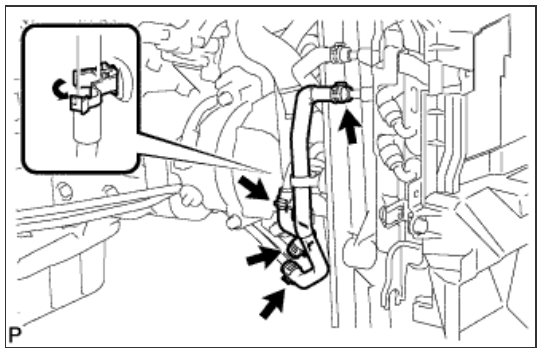


a. Insert a screwdriver between the reservoir and oil reservoir bracket, push the claw, and then disconnect the reservoir by pulling it upwards.

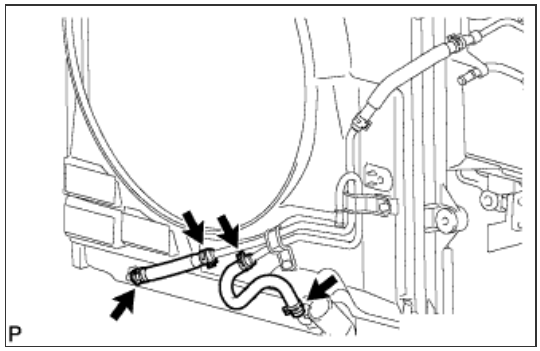
14. REMOVE VANE PUMP ASSEMBLY

a. Remove the 2 nuts and vane pump.

b. Remove the O-ring from the vane pump.

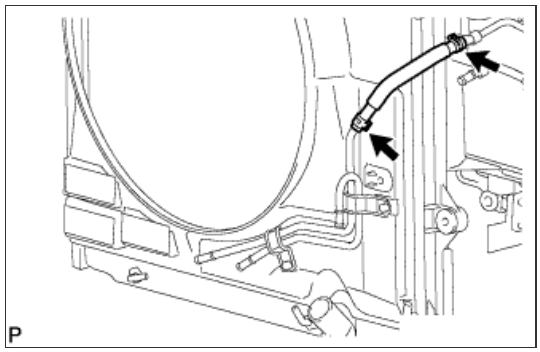


15. REMOVE NO. 1 RADIATOR HOSE

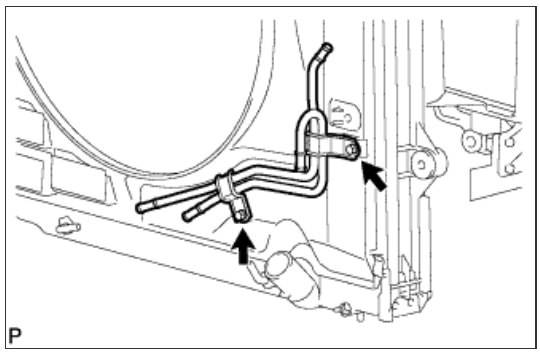


16. REMOVE NO. 2 RADIATOR HOSE

17. REMOVE OIL COOLER HOSE (w/ Air Cooled Transmission Oil Cooler)

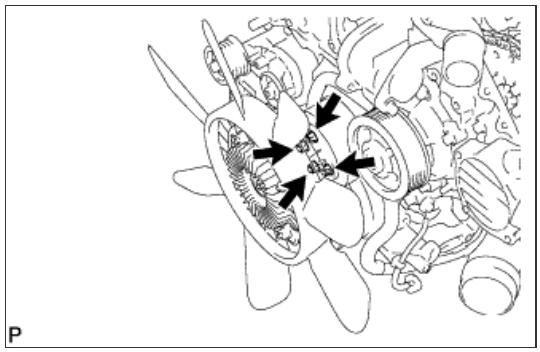


a. Disconnect the inlet and outlet No. 1 oil cooler hose.

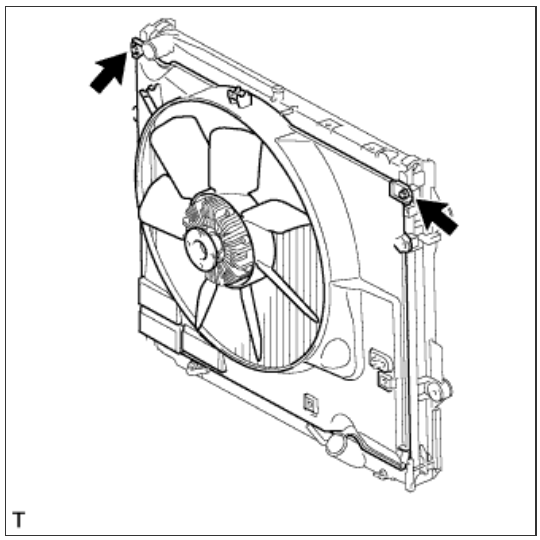


b. Disconnect the inlet No. 2 and No. 3 oil cooler hoses.

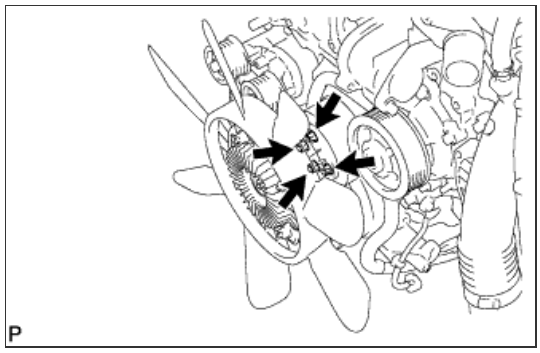
c. Disconnect the inlet No. 4 oil cooler hose.



d. Remove the 2 bolts and transmission oil cooler tube.

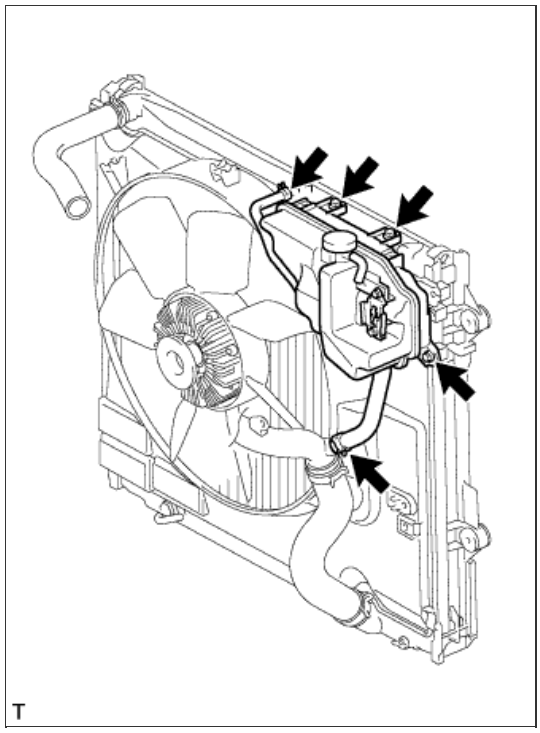


18. REMOVE FAN SHROUD WITH FAN



a. oosen the 4 nuts holding the fluid coupling fan.

b. Remove the 2 bolts holding the fan shroud.

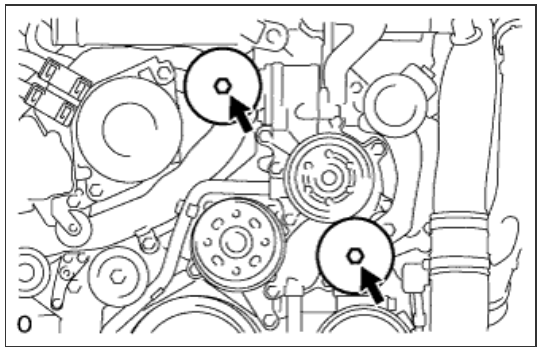


c. Remove the 4 nuts of the fluid coupling fan, and then remove the shroud together with the fluid coupling fan.

19. REMOVE RADIATOR RESERVE TANK ASSEMBLY

a. Disconnect the 2 hoses.

b. Remove the 3 bolts and radiator reservoir.

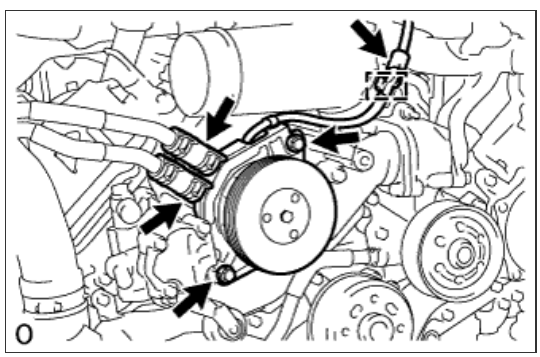


20. REMOVE RADIATOR ASSEMBLY

a. Remove the radiator assembly (Click here).

21. REMOVE IDLER PULLEY ASSEMBLY

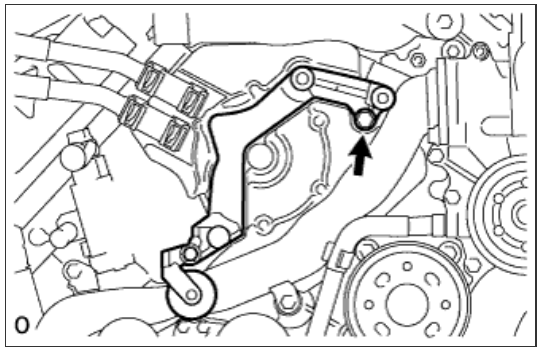
a. Remove the 2 bolts and 2 idler pulleys.



22. REMOVE VISCOUS WITH MAGNET CLUTCH HEATER ASSEMBLY

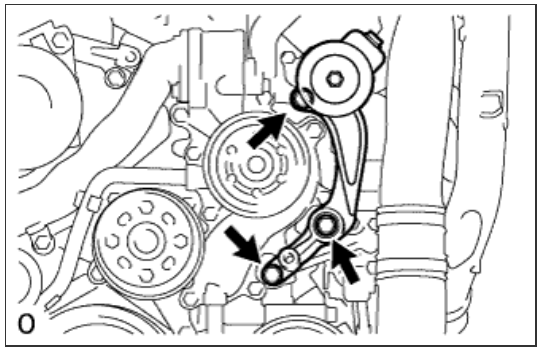
a. Disconnect the connector and detach the clamp.

b. Using pliers, grip the claws of the clips and slide the 2 clips.



c. Disconnect the 2 heater hoses.

d. Remove the 2 bolts and heater assembly.



23. REMOVE IDLER PULLEY BRACKET

a. Remove the bolt and bracket.

24. REMOVE IDLER PULLEY BRACKET (for Belt Tension Side)

a. Remove the 3 bolts and bracket.

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

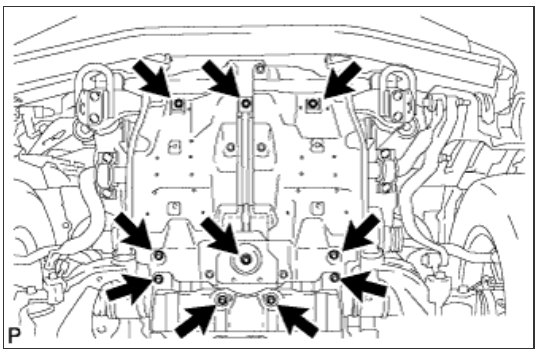
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. for Standard:
Remove the front fender splash shield (Click here).

b. w/ Winch:
Remove the front fender splash shield (Click here).



3. REMOVE FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

a. for Standard:
Remove the front fender splash shield (Click here).

b. w/ Winch:
Remove the front fender splash shield (Click here).

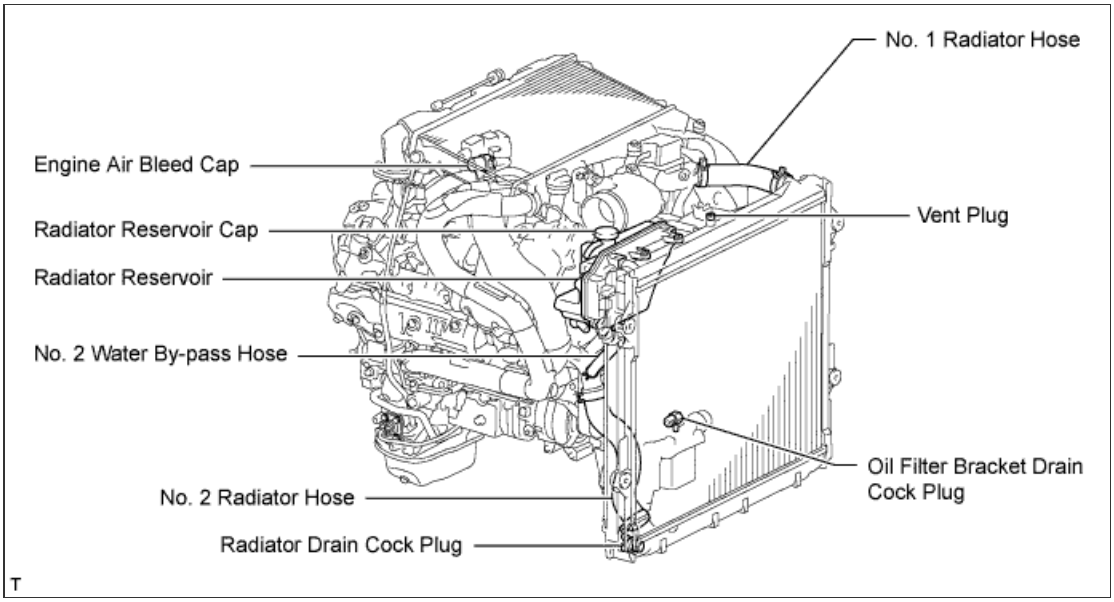
4. REMOVE NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Remove the 10 bolts and under cover.

5. DRAIN ENGINE COOLANT

CAUTION:

Do not remove the radiator reservoir cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

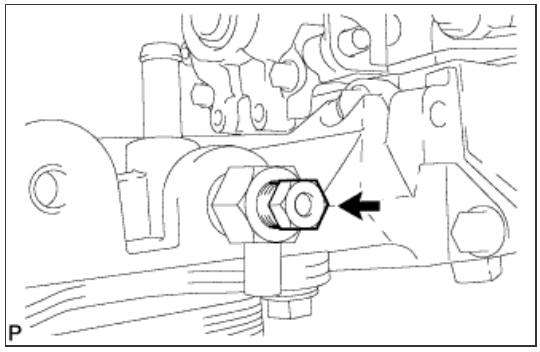


HINT:

Collect the coolant in a container and dispose of it according to the regulations in your area.

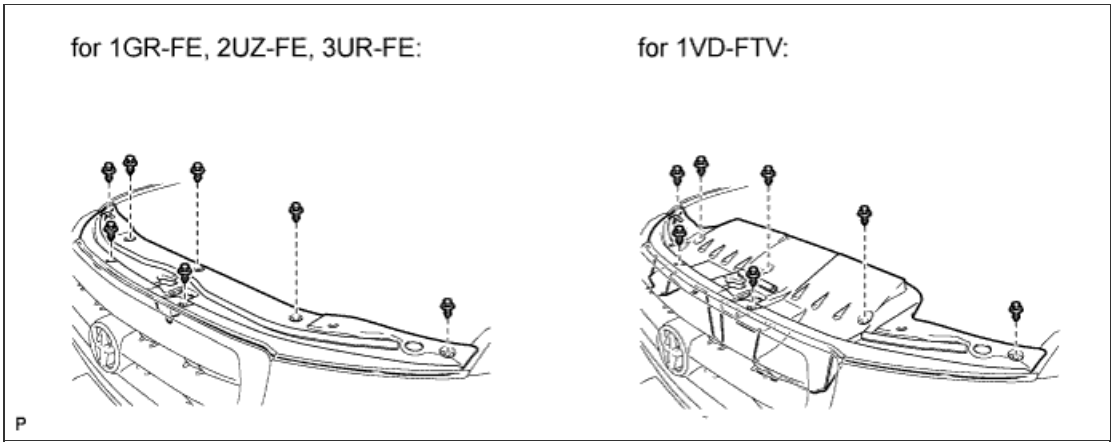
a. Loosen the radiator drain cock plug.

b. Remove the radiator reservoir cap to drain the coolant in the radiator.



c. Loosen the oil filter bracket drain cock plug to drain the coolant in the engine.

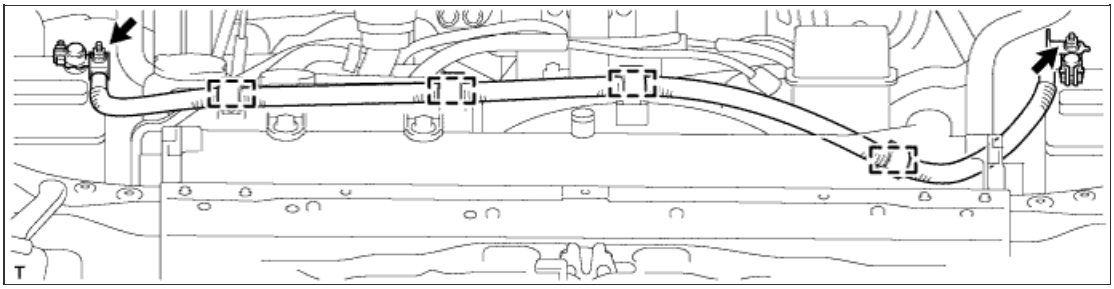
d. Tighten the radiator drain cock plug by hand.



e. Tighten the oil filter bracket drain cock plug.

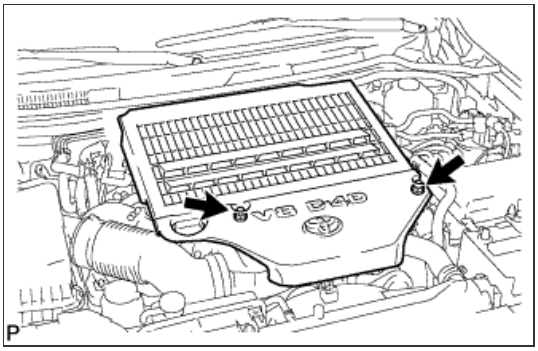
Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }

6. REMOVE UPPER RADIATOR SUPPORT SEAL



a. Remove the clips and radiator support seal.

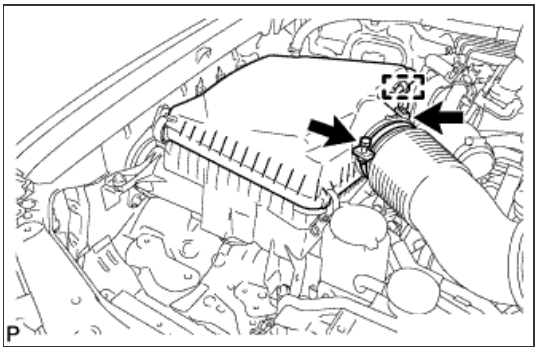
7. REMOVE NO. 3 ENGINE ROOM WIRE



a. Disconnect the 4 wire harness clamps.

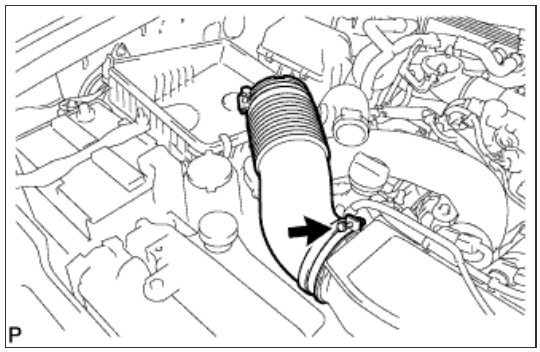
b. Remove the 2 nuts and No. 3 engine room wire.

. REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY



a. Remove the 2 nuts and No. 1 engine cover.

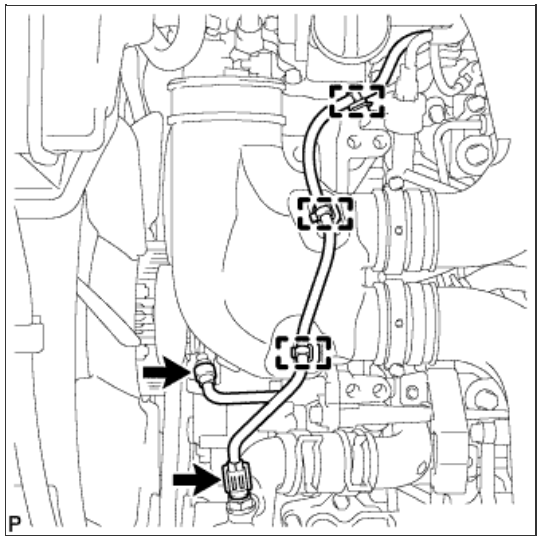
. REMOVE AIR CLEANER CAP SUB-ASSEMBLY



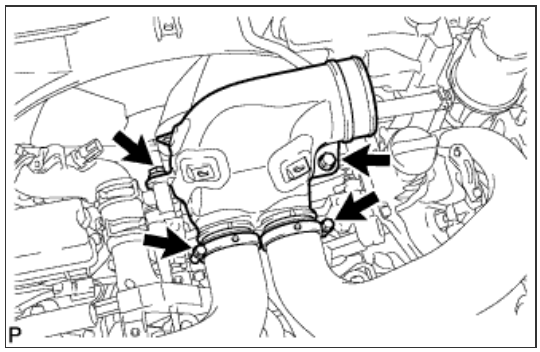
a. Loosen the hose clamp and disconnect the connector.

b. Using a clip remover, detach the 3 clamps and remove the air cleaner cap.

10. REMOVE NO. 1 AIR CLEANER HOSE



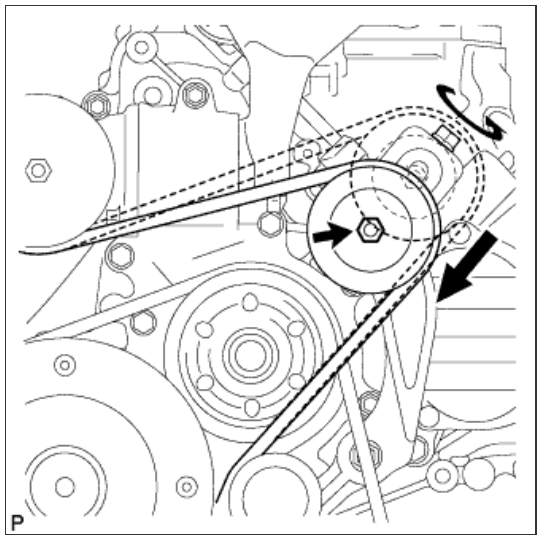
a. Loosen the hose clamp and remove the No. 1 air cleaner hose.



11. REMOVE INTAKE AIR CONNECTOR

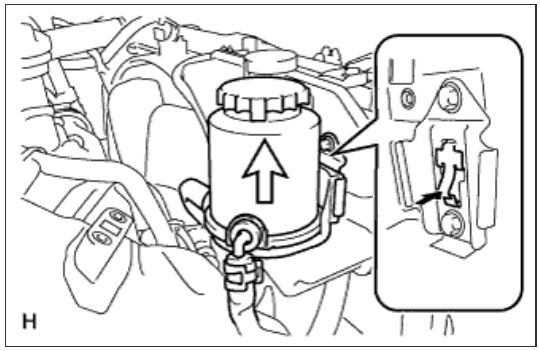
a. Disconnect the 2 connectors from the viscous heater and water temperature sensor.

b. Using a clip remover, detach the 3 wire harness clamps.



c. Loosen the 2 hose clamps and remove the 2 bolts and intake air connector.

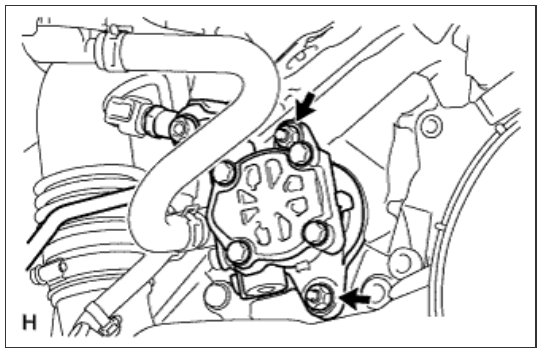
12. REMOVE V-RIBBED BELT



a. Loosen the lock nut and turn the bolt counterclockwise.

b. Remove the V-ribbed belt.

13. REMOVE VANE PUMP OIL RESERVOIR ASSEMBLY

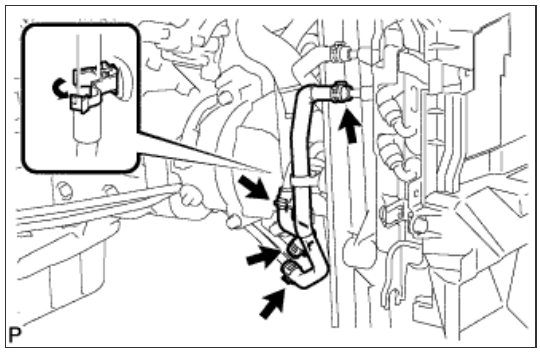


a. Insert a screwdriver between the reservoir and oil reservoir bracket, push the claw, and then disconnect the reservoir by pulling it upwards.

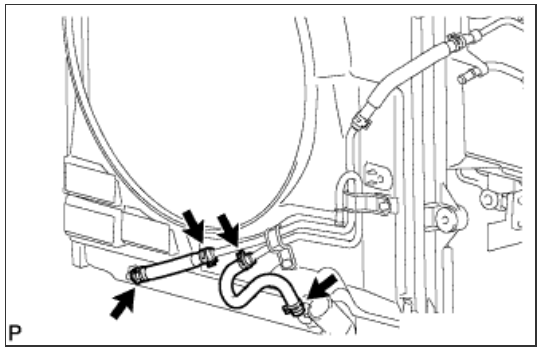
14. REMOVE VANE PUMP ASSEMBLY

a. Remove the 2 nuts and vane pump.

b. Remove the O-ring from the vane pump.

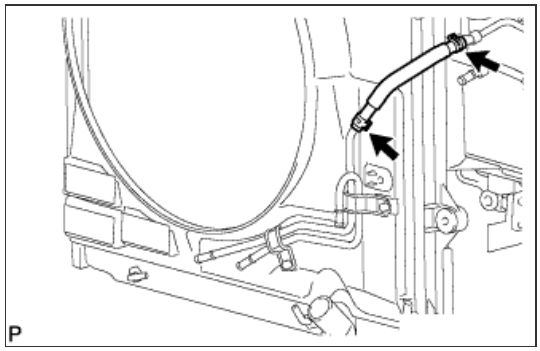


15. REMOVE NO. 1 RADIATOR HOSE

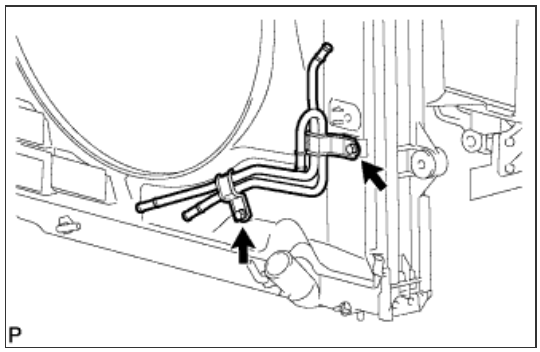


1 . REMOVE NO. 2 RADIATOR HOSE

1 . REMOVE OIL COOLER HOSE (w/ Air Cooled Transmission Oil Cooler)

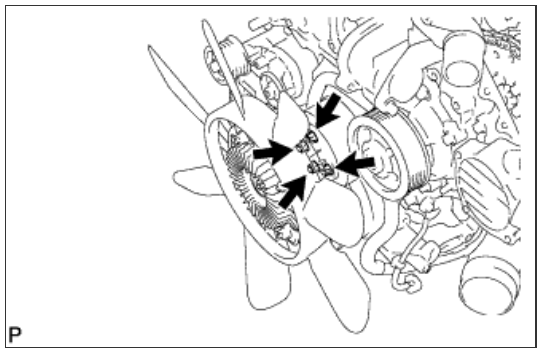


a. Disconnect the inlet and outlet No. 1 oil cooler hose.

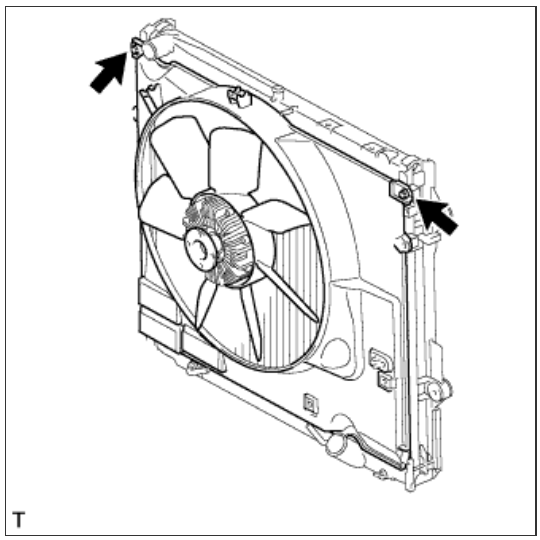


b. Disconnect the inlet No. 2 and No. 3 oil cooler hoses.

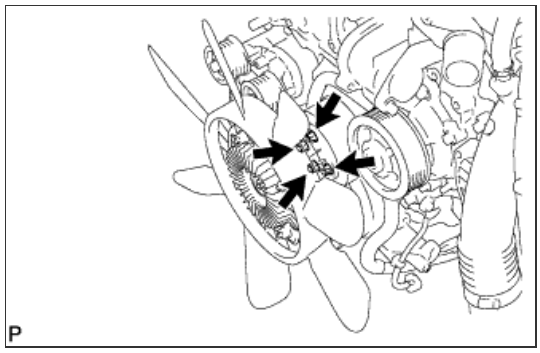
c. Disconnect the inlet No. 4 oil cooler hose.



d. Remove the 2 bolts and transmission oil cooler tube.

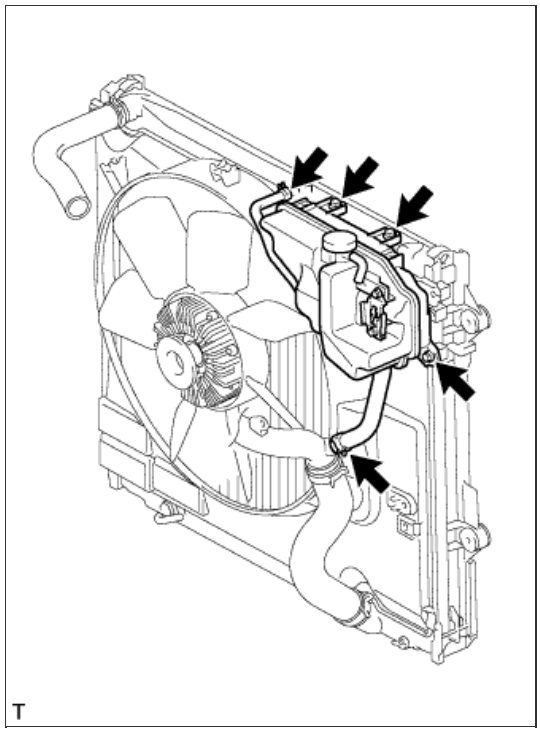


18. REMOVE FAN SHROUD WITH FAN



a. Loosen the 4 nuts holding the fluid coupling fan.

b. Remove the 2 bolts holding the fan shroud.

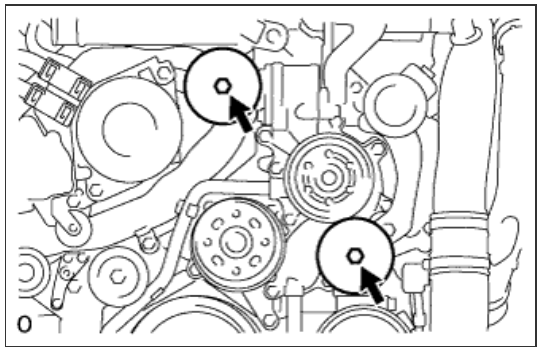


c. Remove the 4 nuts of the fluid coupling fan, and then remove the shroud together with the fluid coupling fan.

19. REMOVE RADIATOR RESERVE TAN ASSEMBLY

a. Disconnect the 2 hoses.

b. Remove the 3 bolts and radiator reservoir.

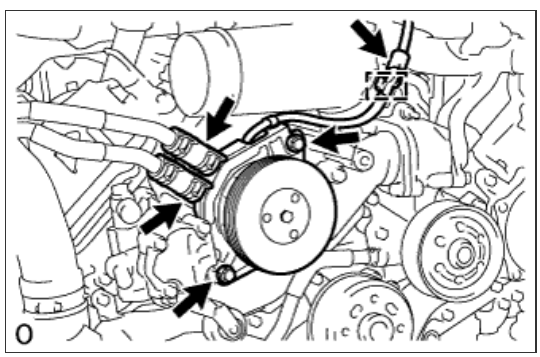


20. REMOVE RADIATOR ASSEMBLY

a. Remove the radiator assembly (Click here).

21. REMOVE IDLER PULLEY ASSEMBLY

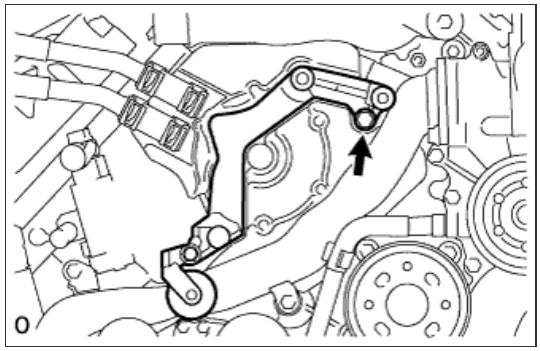
a. Remove the 2 bolts and 2 idler pulleys.



22. REMOVE VISCOUS WITH MAGNET CLUTCH HEATER ASSEMBLY

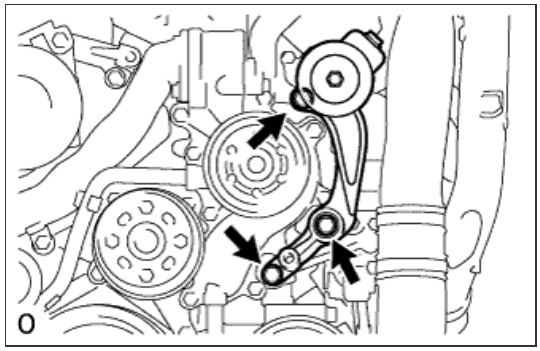
a. Disconnect the connector and detach the clamp.

b. Using pliers, grip the claws of the clips and slide the 2 clips.



c. Disconnect the 2 heater hoses.

d. Remove the 2 bolts and heater assembly.

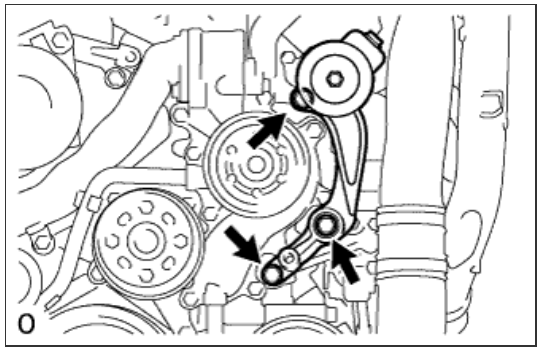


23. REMOVE IDLER PULLEY BRAC E

a. Remove the bolt and bracket.

24. REMOVE IDLER PULLEY BRAC E (for Belt Tension Side)

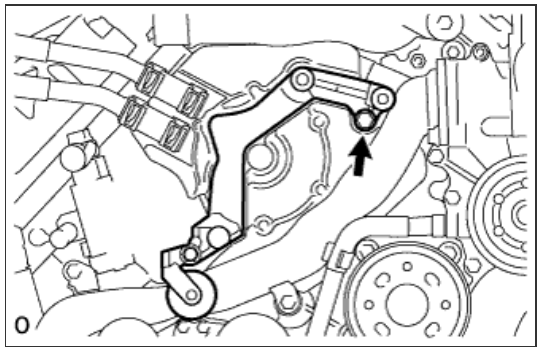
a. Remove the 3 bolts and bracket.



for Preparation Click here

1. INSTALL IDLER PULLEY BRACKET (w/ Belt Tension Side)

a. Install the bracket with the 3 bolts.



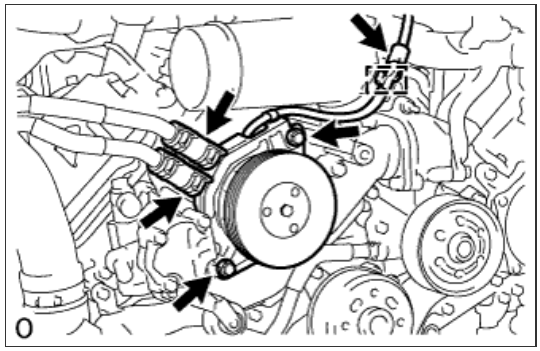
Torque:
48.5 N*m{ 495 kgf*cm , 36 ft.*lbf }

2. INSTALL IDLER PULLEY BRACKET

a. Install the bracket with the bolt.

Torque:
48.5 N*m{ 495 kgf*cm , 36 ft.*lbf }

3. INSTALL VISCOUS WITH MAGNET CLUTCH HEATER ASSEMBLY

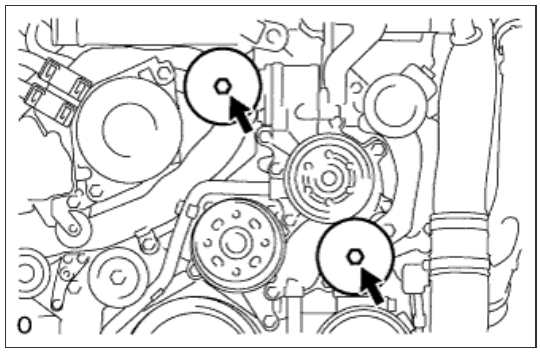


a. Install the heater assembly with the 2 bolts.

Torque:
48.5 N*m{ 495 kgf*cm , 36 ft.*lbf }

b. Connect the 2 heater hoses.

c. Using pliers, grip the claws of the clips and slide the 2 clips.



d. Connect the connector and attach the clamp.

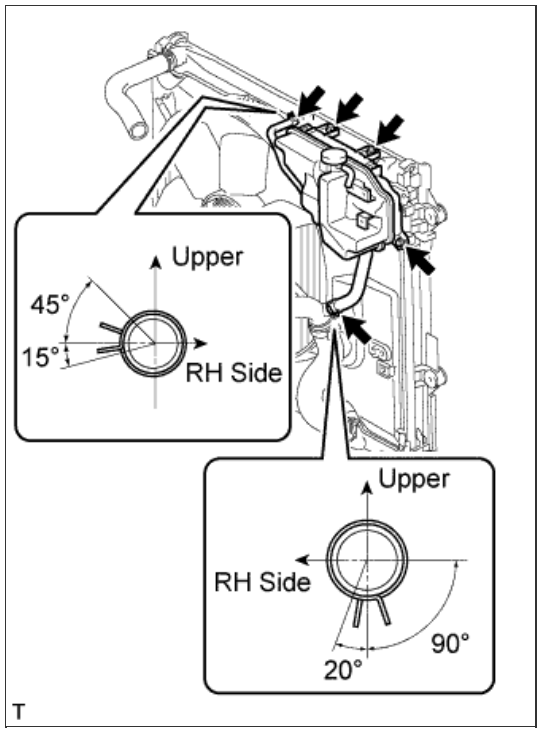
4. INSTALL IDLER PULLEY ASSEMBLY

a. Install the 2 idler pulleys with the 2 bolts.

Torque:
48.5 N*m{ 495 kgf*cm , 36 ft.*lbf }

5. INSTALL RADIATOR ASSEMBLY

a. Install the radiator assembly (Click here).



6. INSTALL RADIATOR RESERVE TANK ASSEMBLY

a. Install the radiator reservoir with the 3 bolts.

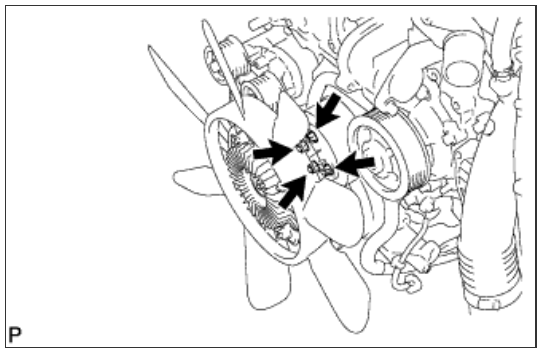
b. Connect the 2 hoses to the upper radiator tank and water inlet.

HINT:

Make sure the directions of the hose clamps are as shown in the illustration.

7. INSTALL FAN SHROUD WITH FAN

a. Install the shroud together with the fluid coupling fan between the radiator and engine components.

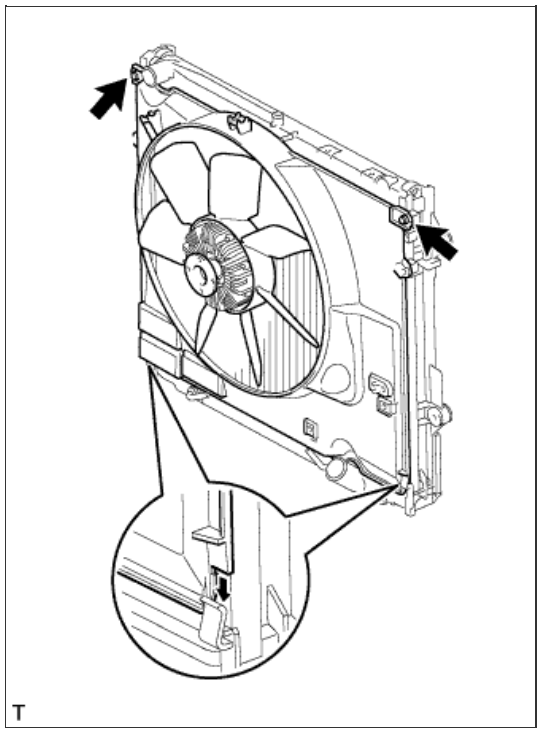


NOTICE:

Be careful not to damage the radiator core.

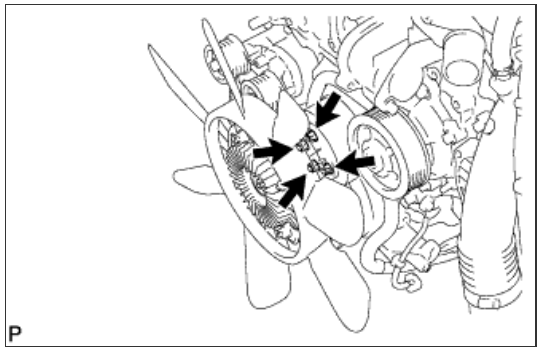
b. Temporarily install the fluid coupling fan to the fan bracket with the 4 nuts.

HINT:



Tighten the nuts as much as possible by hand.

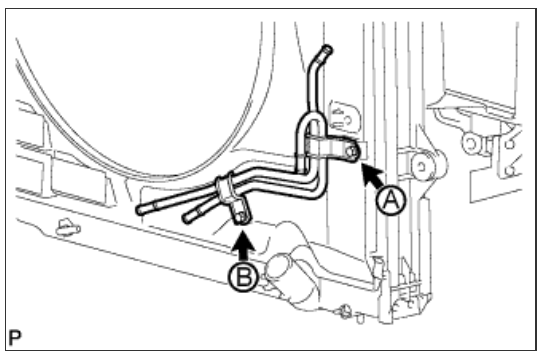
c. Attach the shroud claws to the radiator.



d. Install the shroud with the 2 bolts.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

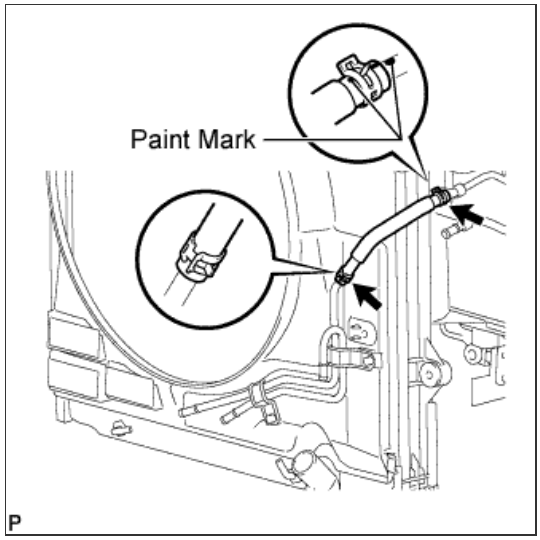
e. Tighten the 4 nuts of the fluid coupling fan.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

8. INSTALL OIL COOLER HOSE (w/ Air Cooled Transmission Oil Cooler)

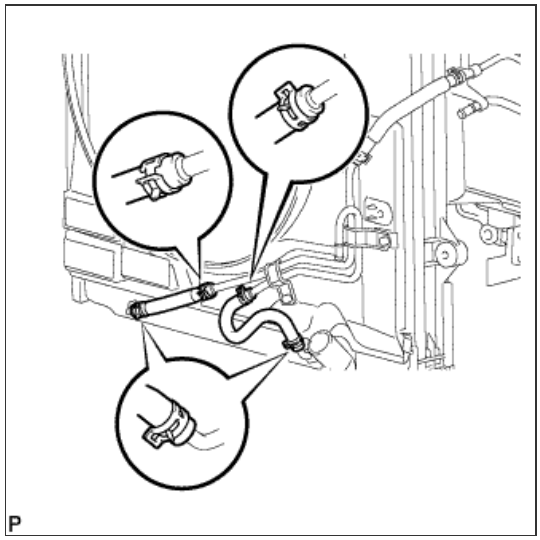
a. Temporarily install the oil cooler tube to the fan shroud with the bolt labeled A. Install the bolt labeled B. Then tighten the bolt labeled A to the specified torque.



Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

.Connect the inlet No. 4 oil cooler hose as shown in the illustration.

NOTICE:

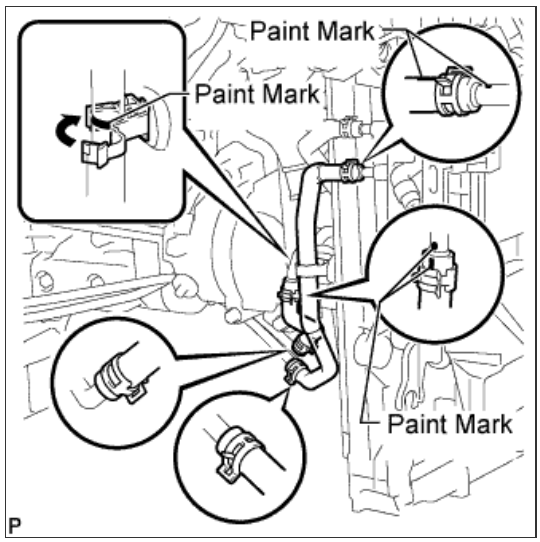


Make sure the pinching portion of each clip is facing the direction shown in the illustration.

c. Connect the inlet No. 2 and No. 3 oil cooler hoses as shown in the illustration.

NOTICE:

Make sure the pinching portion of each clip is facing the direction shown in the illustration.



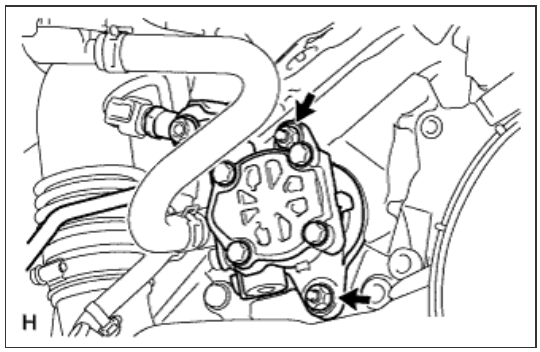
d. Connect the inlet and outlet No. 1 oil cooler hoses as shown in the illustration.

NOTICE:

Make sure the pinching portion of each clip is facing the direction shown in the illustration.

e. Pass the hose through the flexible hose clamp and close the clamp shown in the illustration.

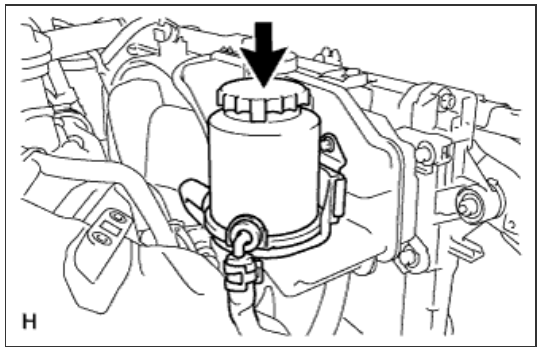
9. INSTALL NO. 2 RADIATOR HOSE



10. INSTALL NO. 1 RADIATOR HOSE

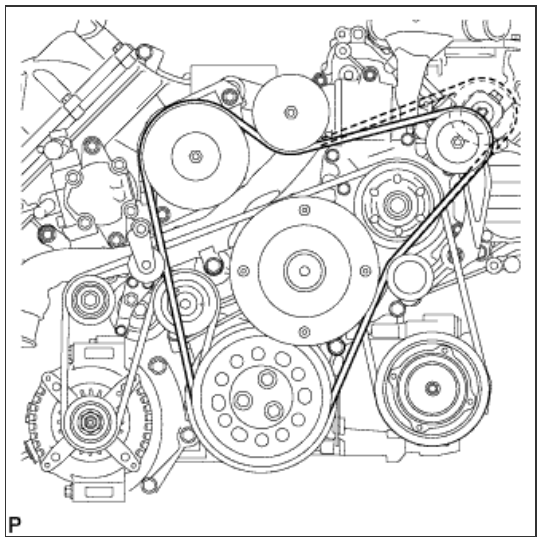
11. INSTALL VANE PUMP ASSEMBLY

a. Apply a light coat of engine oil to a new O-ring, and install it to the vane pump.



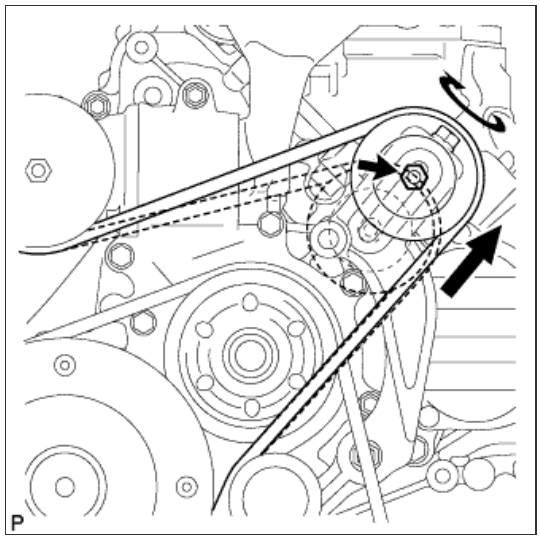
.Install the vane pump with 2 new nuts.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }



12. INSTALL VANE PUMP OIL RESERVOIR ASSEMBLY

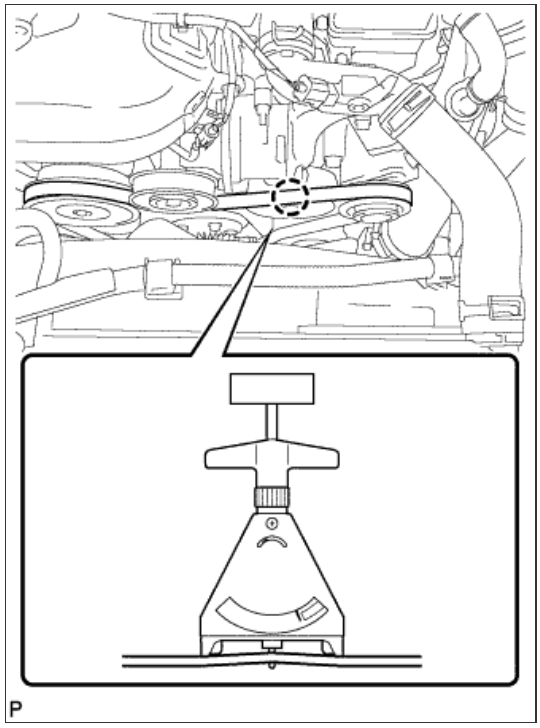
a. Install the vane pump oil reservoir to the bracket.



13. INSTALL V-RIBBED BELT

a. Install the V-ribbed belt as shown in the illustration.

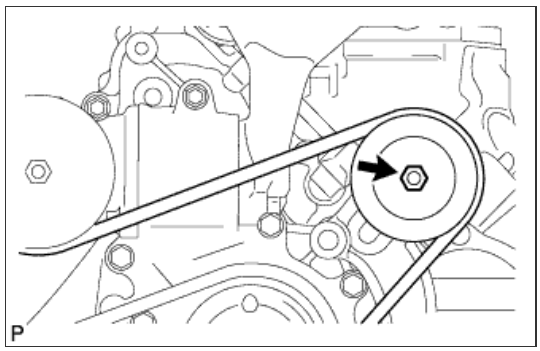
b. Temporarily install the lock nut, and turn the bolt clockwise.



c. Using a belt tension gauge, ad st belt tension.

Standard Belt Tension:

Item	Specified Condition
New belt	400 to 650 N (41 to 66 kgf, 89.9 to 146.1 lbf)
Used belt	300 to 500 N (31 to 51 kgf, 67.4 to 112.4 lbf)

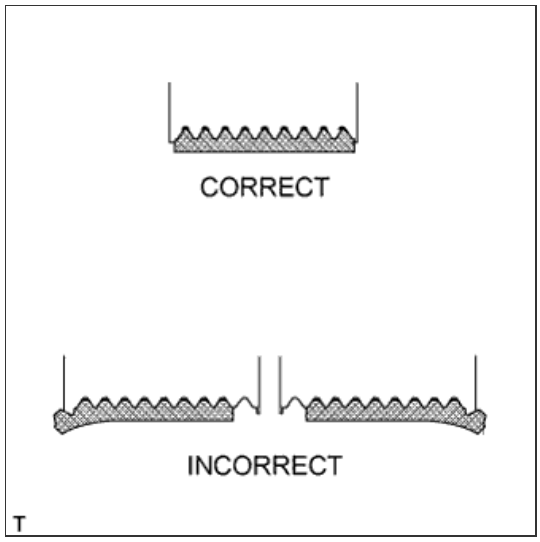


HINT:

- **A "new belt" is a belt which has been used for less than 5 minutes on a running engine.**
- **A "used belt" is a belt which has been used on a running engine for 5 minutes or more.**
- **After installing a new belt, run the engine for approximately 5 minutes and then recheck the tension.**

d. Tighten the nut.

Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }



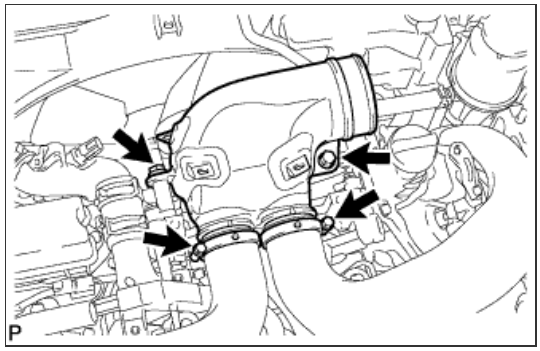
e. Check that the belt fits properly in the ribbed grooves.

HINT:

Check with your hand to confirm that the belt has not slipped out of the groove on the bottom of the pulley.

If it has slipped out, replace the V-ribbed belt. Install a new V-ribbed belt.

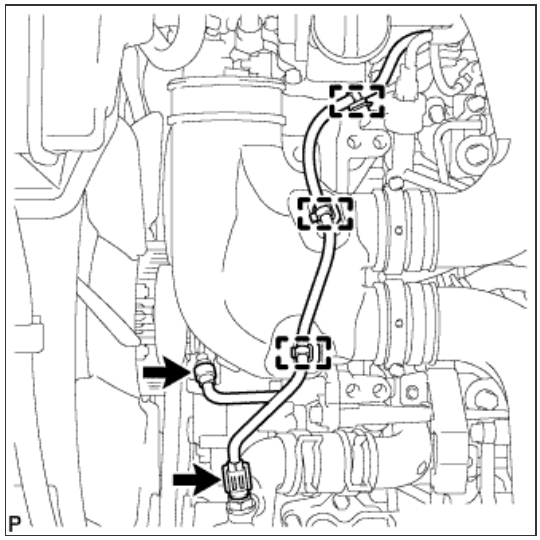
14. INSTALL INTAKE AIR CONNECTOR



a. Connect the intake air connector to the No. 1 and No. 2 air cleaner pipes.

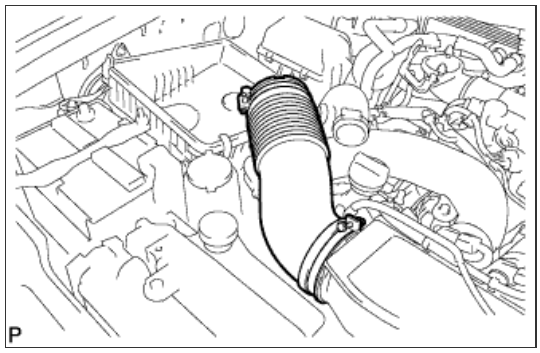
b. Install the connector with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



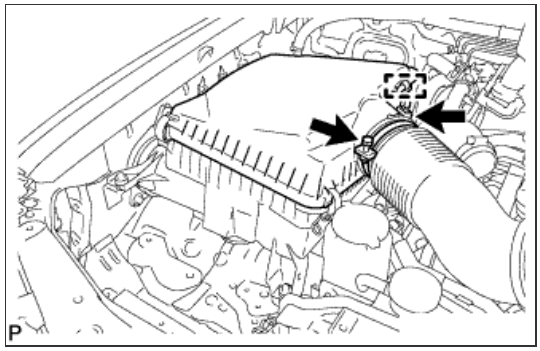
c. Tighten the 2 hose clamps.

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }



d. Attach the 3 wire harness clamps.

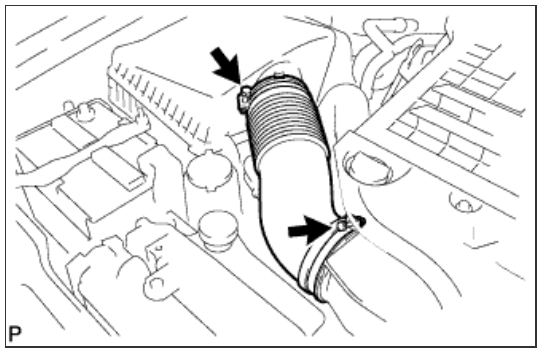
e. Connect the 2 connectors to the water temperature sensor and viscous heater.



15. TEMPORARILY INSTALL NO. 1 AIR CLEANER HOSE

a. Temporarily install the air cleaner hose to the intake air connector.

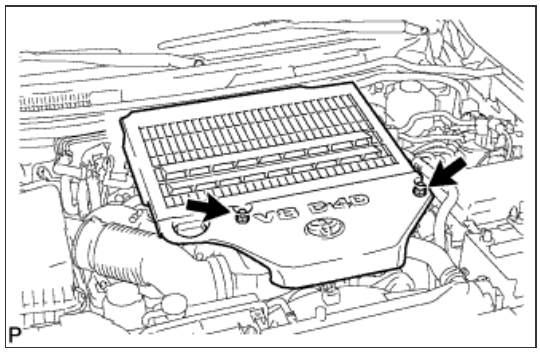
16. INSTALL AIR CLEANER CAP SUB-ASSEMBLY



a. Align the protrusion of the air cleaner cap and concave portion of the air cleaner hose.

b. Connect the air cleaner cap to the air cleaner hose, and install the air cleaner cap with the 3 clamps.

c. Tighten the 2 hose clamps and connect the connector.

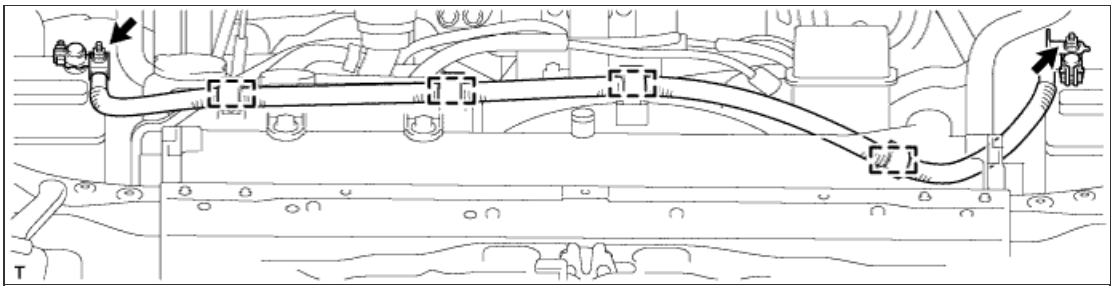


Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

17. INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY

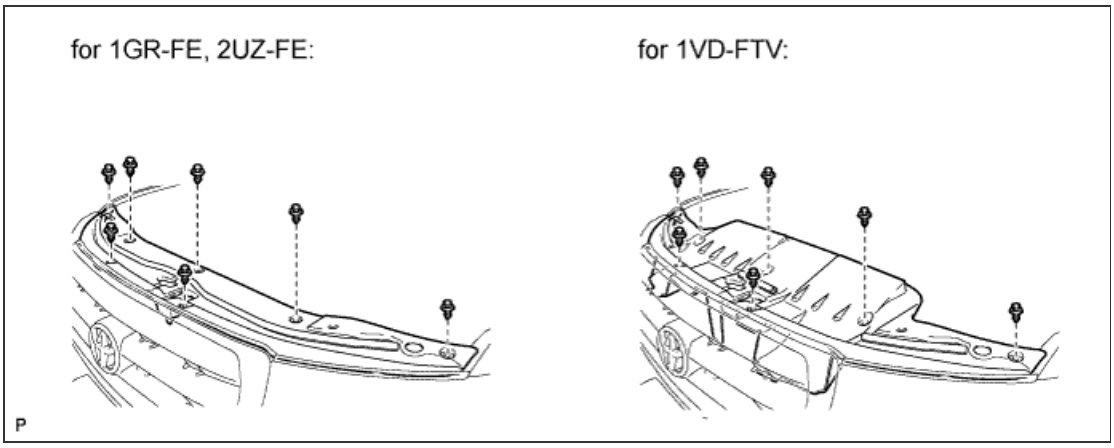
a. Install the engine cover with the 2 nuts.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



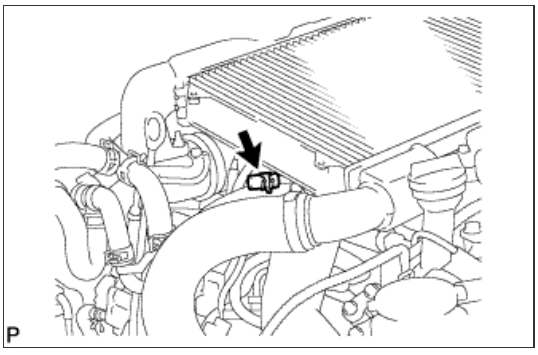
18. INSTALL NO. 3 ENGINE ROOM WIRE

a. Install the No. 3 engine room wire to the main battery and sub-battery positive terminals with the 2 nuts.



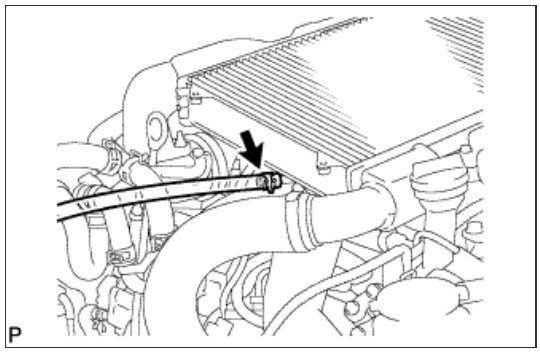
Torque:
7.6 N*m{ 77 kgf*cm , 67 in.*lbf }

.Connect the No. 3 engine room wire with the 4 clamps.

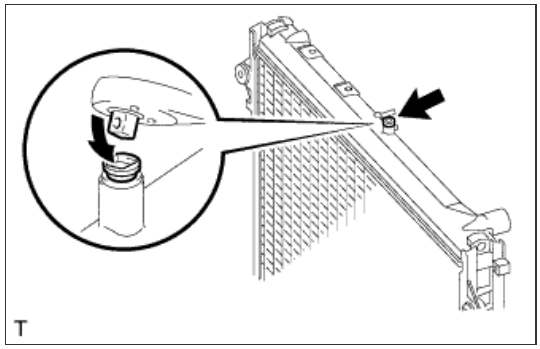


19. INSTALL UPPER RADIATOR SUPPORT SEAL

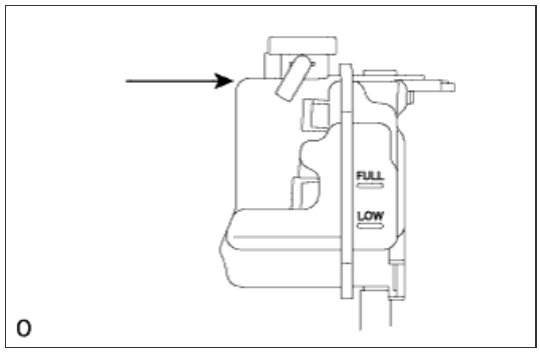
a. Install the radiator support seal with the 7 clips.



20. ADD ENGINE COOLANT



a. emove the engine air bleed cap.



b. Connect a clear hose to the engine air bleed pipe.

c. Using a wrench, remove the vent plug.

d. Fill the radiator with TO SLLC to the radiator reservoir filler neck.

HINT:

Pour TO SLLC until it spills out of the engine air bleed pipe.

Standard Capacity (for Automatic Transmission):

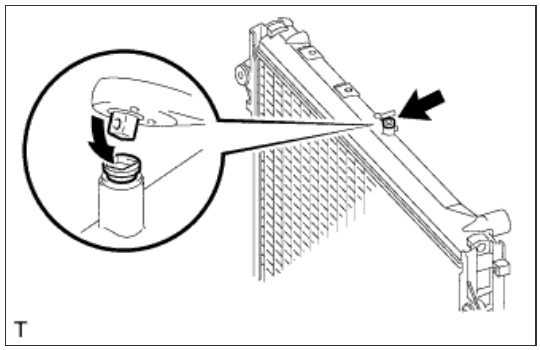
Item	Specified Condition
Front heater only	14.8 liters (15.6 US qts, 13.0 Imp. qts)
Front heater and rear heater	17.6 liters (18.6 US qts, 15.5 Imp. qts)
Front heater with viscous heater	15.2 liters (16.1 US qts, 13.4 Imp. qts)
Front heater and rear heater with viscous heater	18.0 liters (19.0 US qts, 15.4 Imp. qts)

Standard capacity (for Manual Transmission):
15.4 liters (16.3 US qts, 13.5 Imp. qts)

NOTICE:

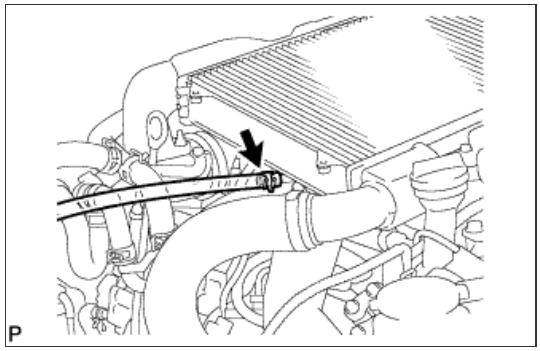
Do not substitute plain water for engine coolant.

HINT:



TO vehicles are filled with TO SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TO SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

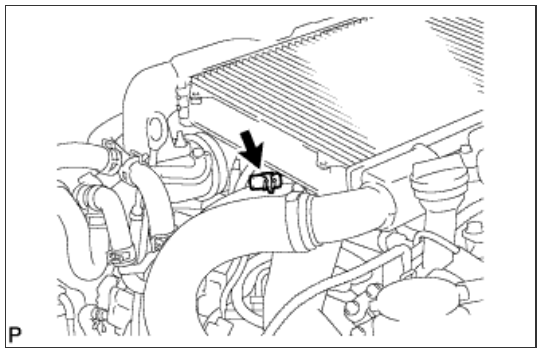
e. Install the vent plug.



Torque:
2.0 N*m{ 20 kgf*cm , 18 in.*lbf }

NOTICE:

Do not tighten the plug to 5.0 N*m (51 kgf*cm, 44 in.*lbf) or more, as the plug will be damaged.



f. Disconnect the clear hose from the engine air bleed pipe.

g. Install the engine air bleed cap when coolant comes out.

h. Install the radiator reservoir cap.

i. Start the engine.

NOTICE:

Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the FULL line.

.Maintain an engine speed of 3000 rpm for approximately 10 minutes so that the thermostat opens and air bleeding is performed.

CAUTION:

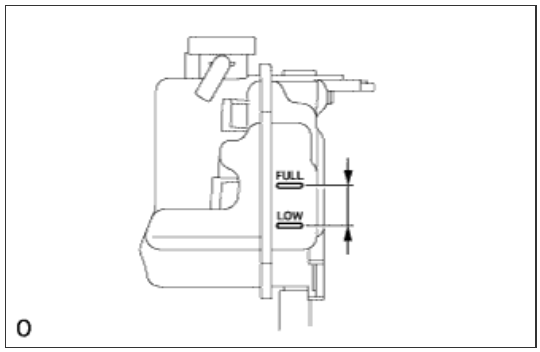
When pressing the radiator hoses:

- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the radiator fan**

NOTICE:

- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**

HINT:

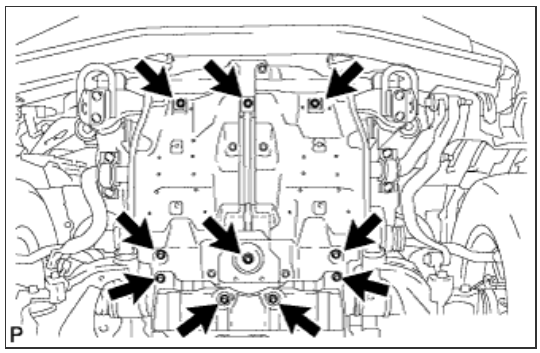


The thermostat opening timing can be confirmed by pressing the No. 2 radiator hose by hand, and checking when the engine coolant starts to flow inside the hose.

k. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

Do not remove the radiator reservoir cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.



l. Check that the coolant level is between the FULL and LO lines.
If the coolant level is above the FULL line, drain coolant so that the coolant level is between the FULL and LO lines.

1INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the No. 1 engine under cover with the 10 bolts.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

22. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. for Standard
Install the front fender splash shield (Click here).

b. w inch
Install the front fender splash shield (Click here).

23. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

a. for Standard
Install the front fender splash shield (Click here).

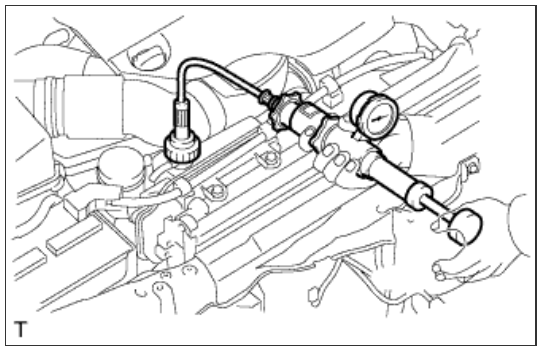
b. w inch
Install the front fender splash shield (Click here).

24. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

hø disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

25. CHECK FOR ENGINE COOLANT LEAKS



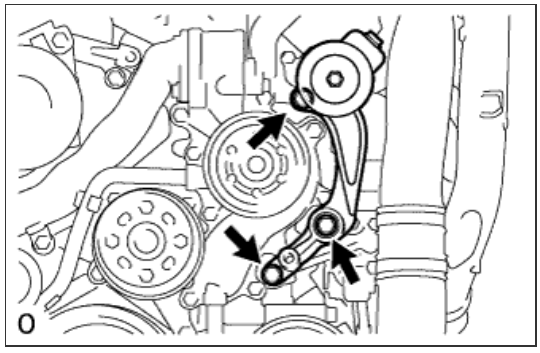
CAUTION:

Do not remove the radiator reservoir cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.

a. Fill the radiator with coolant and attach a radiator cap tester to the radiator reservoir.

. arm up the engine.

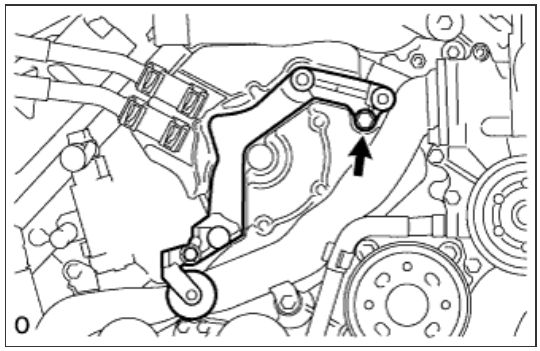
c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf cm^2, 17.8 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks.
If no external leaks are found, check the cylinder block and cylinder head.



for Preparation Click here

1. INSTALL IDLER PULLEY BRACKET (w/ Belt Tension Side)

a. Install the bracket with the 3 bolts.



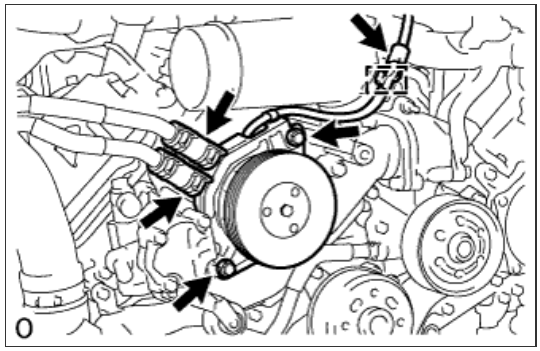
Torque:
48.5 N*m{ 495 kgf*cm , 36 ft.*lbf }

2. INSTALL IDLER PULLEY BRACKET

a. Install the bracket with the bolt.

Torque:
48.5 N*m{ 495 kgf*cm , 36 ft.*lbf }

3. INSTALL VISCOUS WITH MAGNET CLUTCH HEATER ASSEMBLY

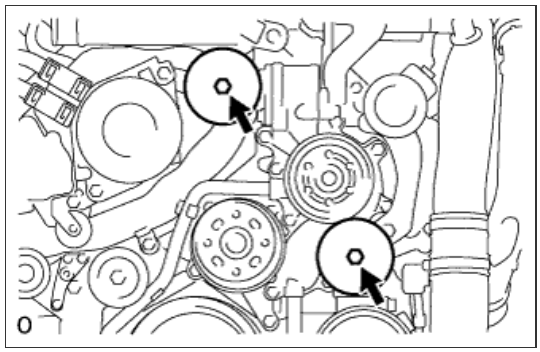


a. Install the heater assembly with the 2 bolts.

Torque:
48.5 N*m{ 495 kgf*cm , 36 ft.*lbf }

b. Connect the 2 heater hoses.

c. Using pliers, grip the claws of the clips and slide the 2 clips.



d. Connect the connector and attach the clamp.

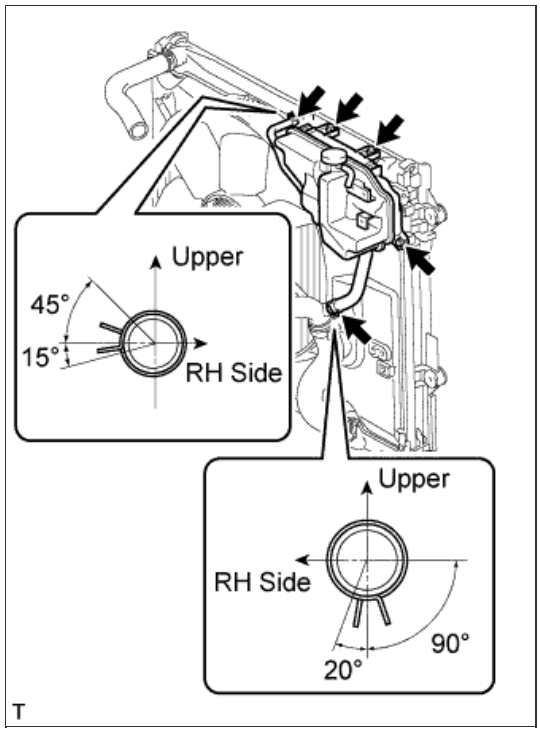
4. INSTALL IDLER PULLEY ASSEMBLY

a. Install the 2 idler pulleys with the 2 bolts.

Torque:
48.5 N*m{ 495 kgf*cm , 36 ft.*lbf }

5. INSTALL RADIATOR ASSEMBLY

a. Install the radiator assembly (Click here).



6. INSTALL RADIATOR RESERVE TANK ASSEMBLY

a. Install the radiator reservoir with the 3 bolts.

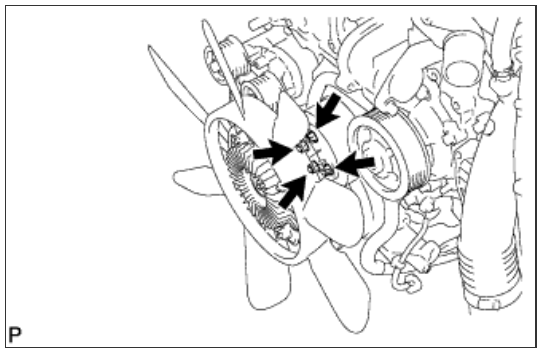
b. Connect the 2 hoses to the upper radiator tank and water inlet.

HINT:

Make sure the directions of the hose clamps are as shown in the illustration.

7. INSTALL FAN SHROUD WITH FAN

a. Install the shroud together with the fluid coupling fan between the radiator and engine components.

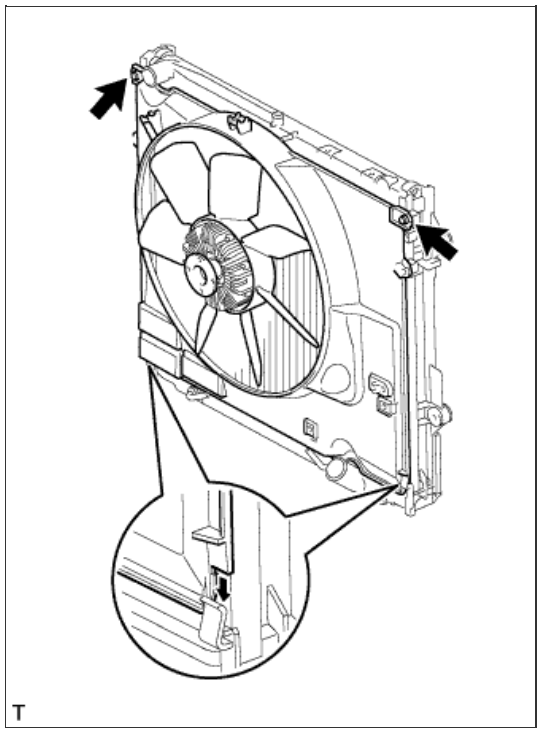


NOTICE:

Be careful not to damage the radiator core.

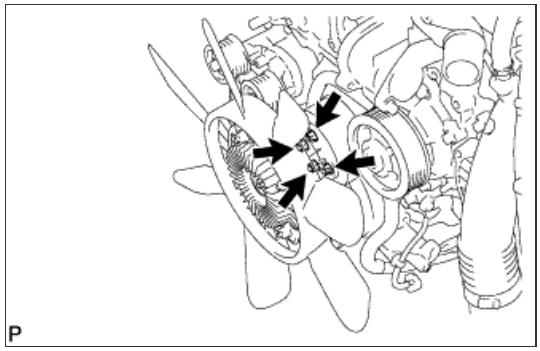
b. Temporarily install the fluid coupling fan to the fan bracket with the 4 nuts.

HINT:



Tighten the nuts as much as possible by hand.

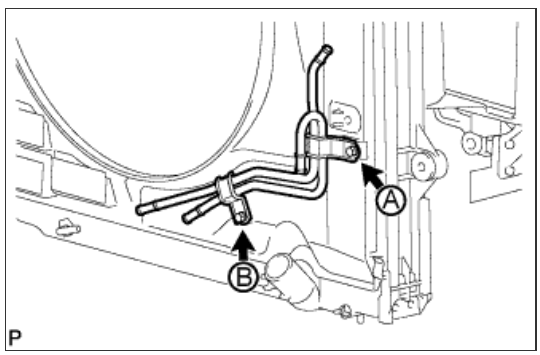
c. Attach the shroud claws to the radiator.



d. Install the shroud with the 2 bolts.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }

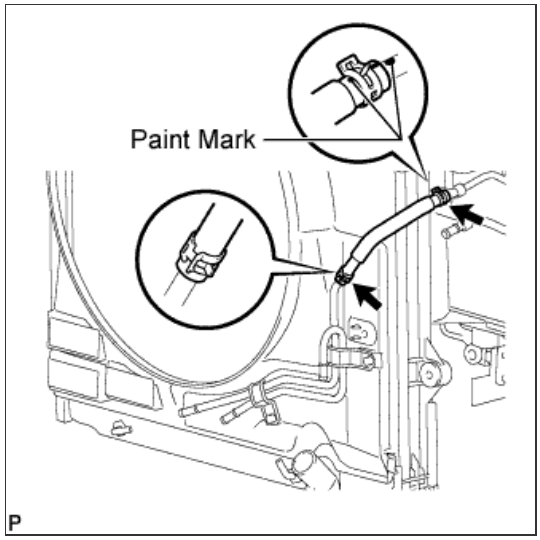
e. Tighten the 4 nuts of the fluid coupling fan.



Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }

8. INSTALL OIL COOLER HOSE (w/ Air Cooled Transmission Oil Cooler)

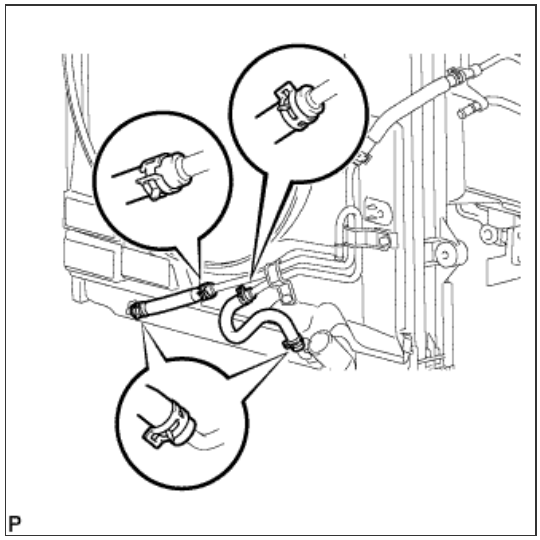
a. Temporarily install the oil cooler tube to the fan shroud with the bolt labeled A. Install the bolt labeled B. Then tighten the bolt labeled A to the specified torque.



Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

.Connect the inlet No. 4 oil cooler hose as shown in the illustration.

NOTICE:

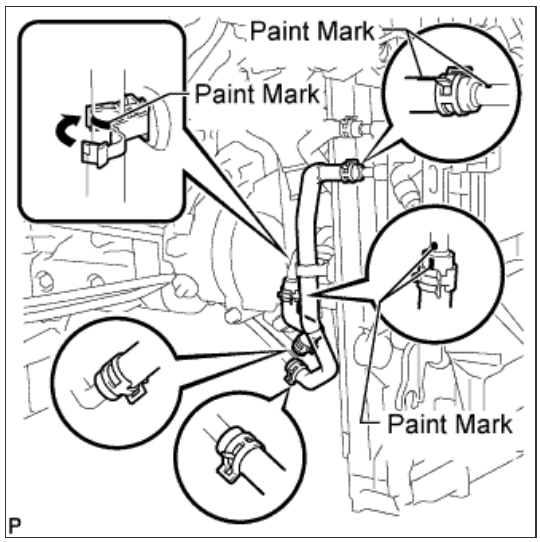


Make sure the pinching portion of each clip is facing the direction shown in the illustration.

c. Connect the inlet No. 2 and No. 3 oil cooler hoses as shown in the illustration.

NOTICE:

Make sure the pinching portion of each clip is facing the direction shown in the illustration.



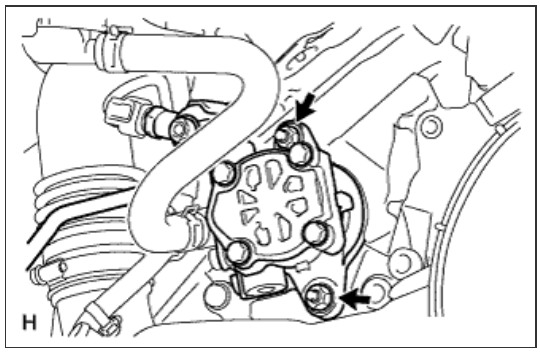
d. Connect the inlet and outlet No. 1 oil cooler hoses as shown in the illustration.

NOTICE:

Make sure the pinching portion of each clip is facing the direction shown in the illustration.

e. Pass the hose through the flexible hose clamp and close the clamp shown in the illustration.

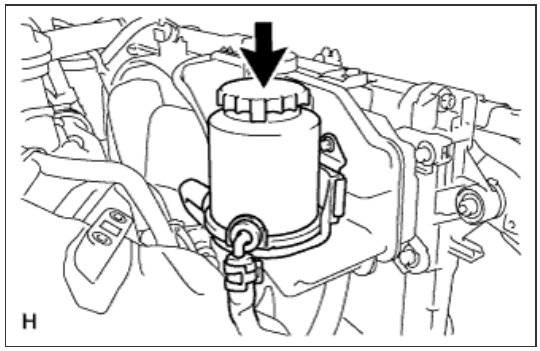
9. INSTALL NO. 2 RADIATOR HOSE



10. INSTALL NO. 1 RADIATOR HOSE

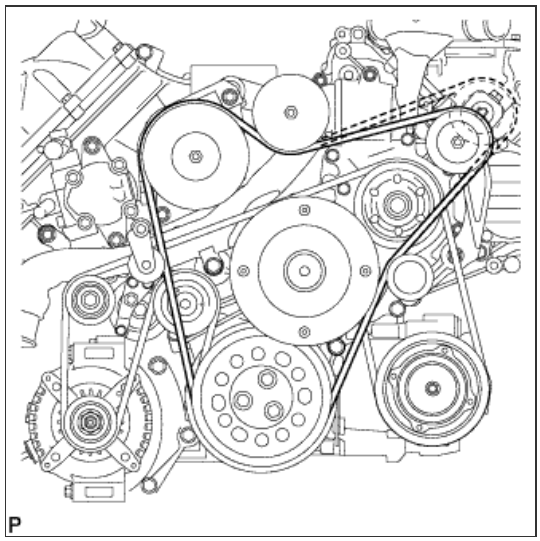
11. INSTALL VANE PUMP ASSEMBLY

a. Apply a light coat of engine oil to a new O-ring, and install it to the vane pump.



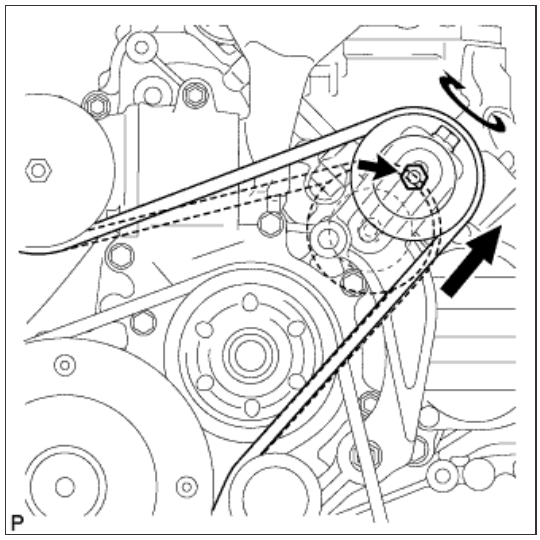
.Install the vane pump with 2 new nuts.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }



12. INSTALL VANE PUMP OIL RESERVOIR ASSEMBLY

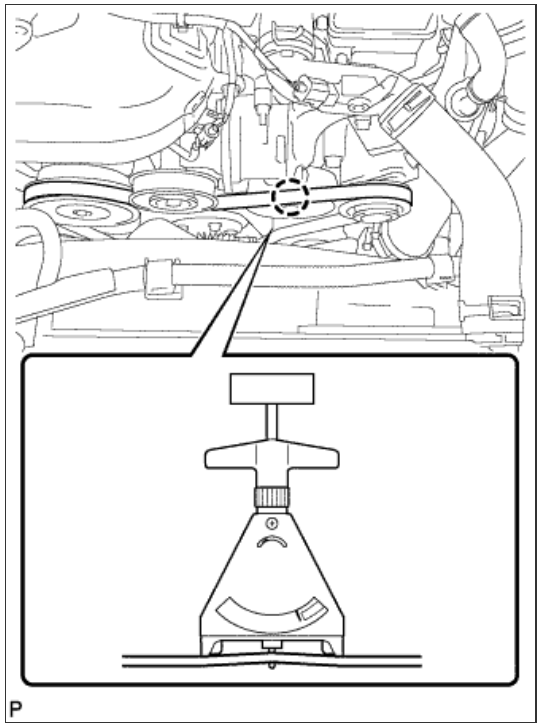
a. Install the vane pump oil reservoir to the bracket.



13. INSTALL V-RIBBED BELT

a. Install the V-ribbed belt as shown in the illustration.

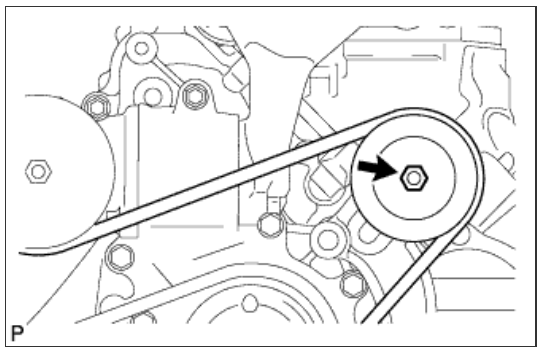
b. Temporarily install the lock nut, and turn the bolt clockwise.



c. Using a belt tension gauge, ad ust belt tension.

Standard Belt Tension:

Item	Specified Condition
New belt	400 to 650 N (41 to 66 kgf, 89.9 to 146.1 lbf)
Used belt	300 to 500 N (31 to 51 kgf, 67.4 to 112.4 lbf)

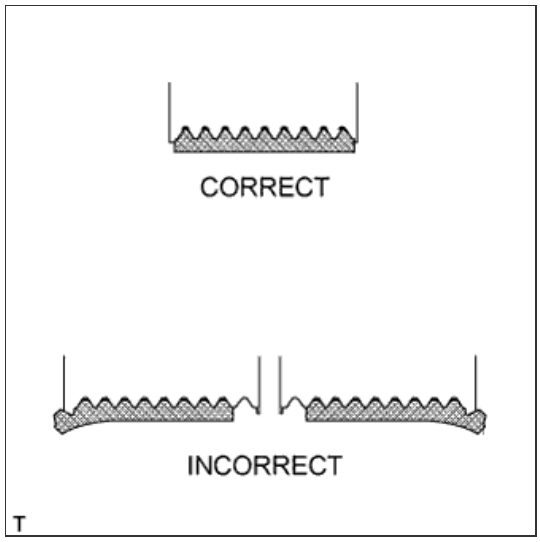


HINT:

- **A "new belt" is a belt which has been used for less than 5 minutes on a running engine.**
- **A "used belt" is a belt which has been used on a running engine for 5 minutes or more.**
- **After installing a new belt, run the engine for approximately 5 minutes and then recheck the tension.**

d. Tighten the nut.

Torque:
40 N*m{ 408 kgf*cm , 30 ft.*lbf }



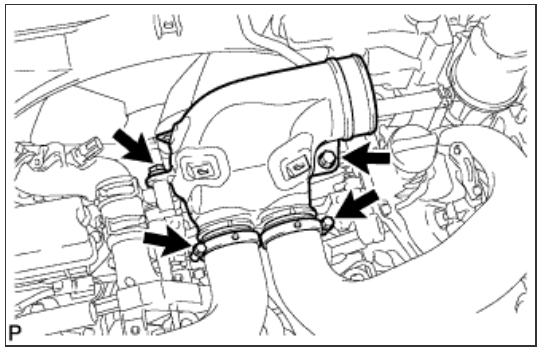
e. Check that the belt fits properly in the ribbed grooves.

HINT:

Check with your hand to confirm that the belt has not slipped out of the groove on the bottom of the pulley.

If it has slipped out, replace the V-ribbed belt. Install a new V-ribbed belt.

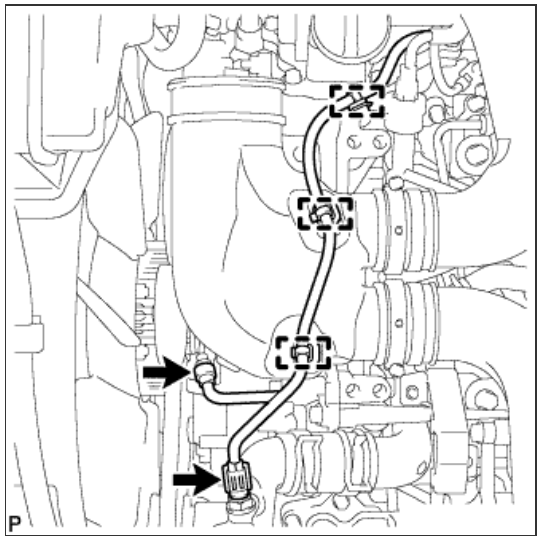
14. INSTALL INTAKE AIR CONNECTOR



a. Connect the intake air connector to the No. 1 and No. 2 air cleaner pipes.

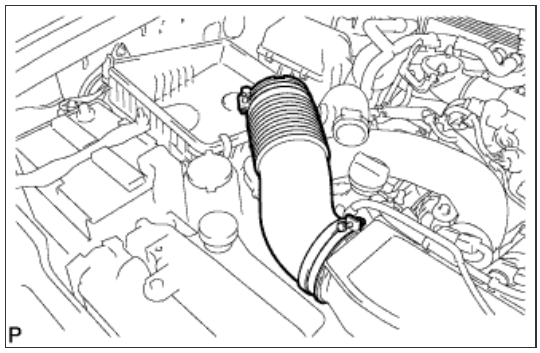
b. Install the connector with the 2 bolts.

Torque:
21 N*m{ 214 kgf*cm , 15 ft.*lbf }



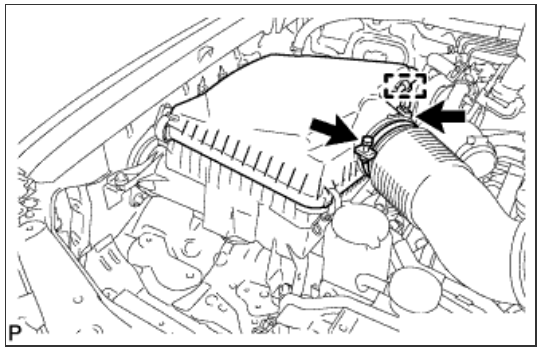
c. Tighten the 2 hose clamps.

Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }



d. Attach the 3 wire harness clamps.

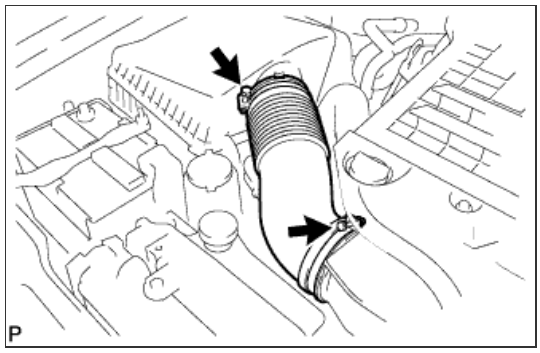
e. Connect the 2 connectors to the water temperature sensor and viscous heater.



15. TEMPORARILY INSTALL NO. 1 AIR CLEANER HOSE

a. Temporarily install the air cleaner hose to the intake air connector.

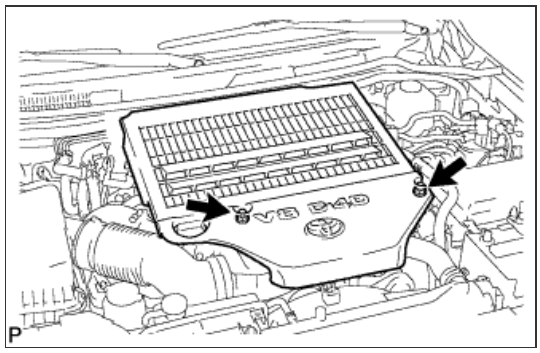
16. INSTALL AIR CLEANER CAP SUB-ASSEMBLY



a. Align the protrusion of the air cleaner cap and concave portion of the air cleaner hose.

b. Connect the air cleaner cap to the air cleaner hose, and install the air cleaner cap with the 3 clamps.

c. Tighten the 2 hose clamps and connect the connector.

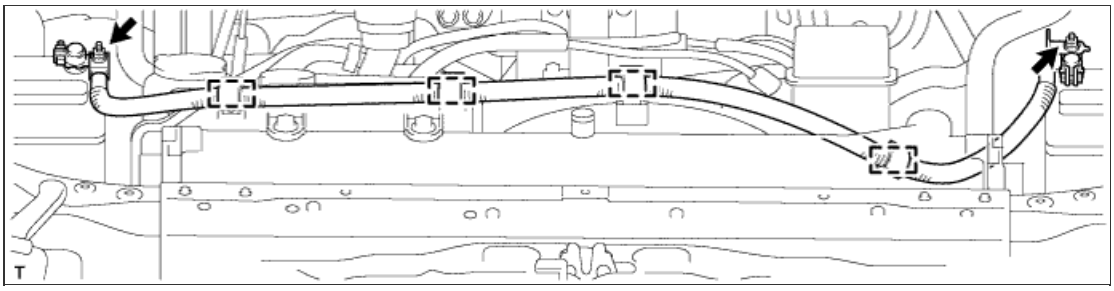


Torque:
6.3 N*m{ 64 kgf*cm , 56 in.*lbf }

17. INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY

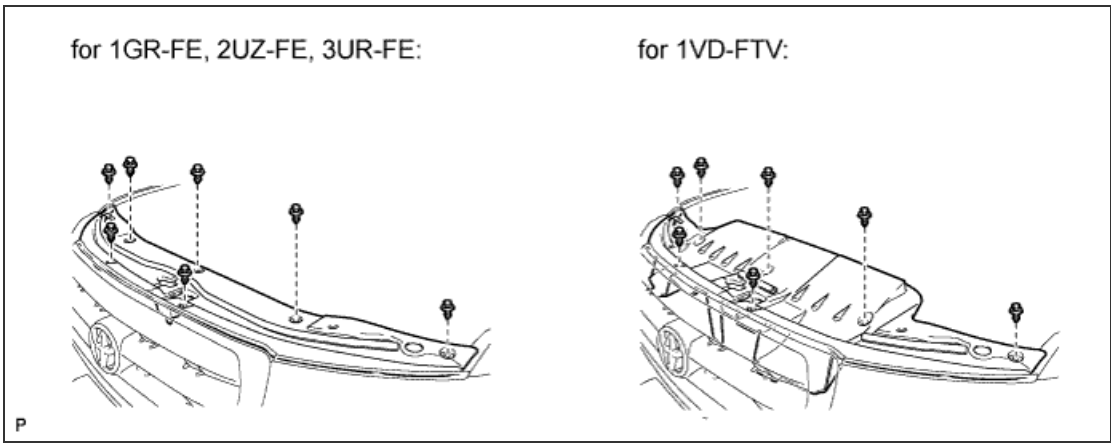
a. Install the engine cover with the 2 nuts.

Torque:
8.0 N*m{ 82 kgf*cm , 71 in.*lbf }



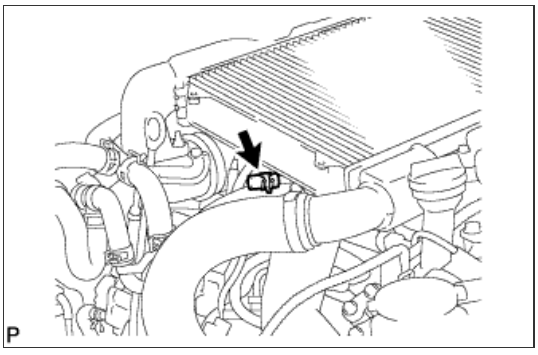
18. INSTALL NO. 3 ENGINE ROOM WIRE

a. Install the No. 3 engine room wire to the main battery and sub-battery positive terminals with the 2 nuts.



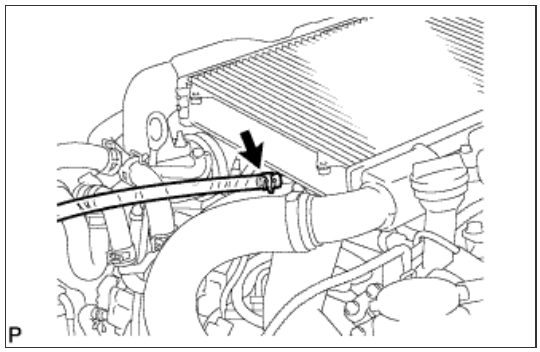
Torque:
7.6 N*m{ 77 kgf*cm , 67 in.*lbf }

.Connect the No. 3 engine room wire with the 4 clamps.

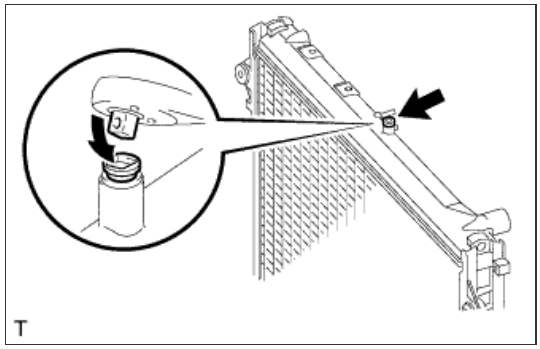


19. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the radiator support seal with the 7 clips.



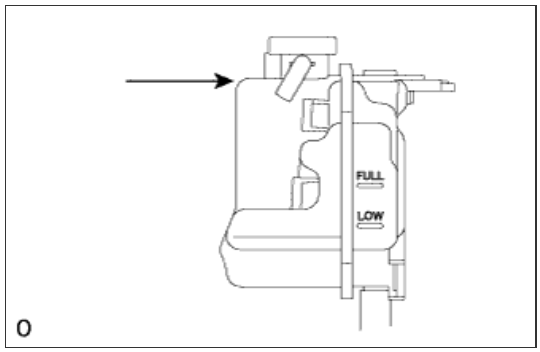
20. ADD ENGINE COOLANT



a. Remove the engine air bleed cap.

b. Connect a clear hose to the engine air bleed pipe.

c. Using a wrench, remove the vent plug.



d. Fill the radiator with TOYOTA SLLC to the radiator reservoir filler neck.

HINT:

Pour TOYOTA SLLC until it spills out of the engine air bleed pipe.

Standard Capacity (for Automatic Transmission):

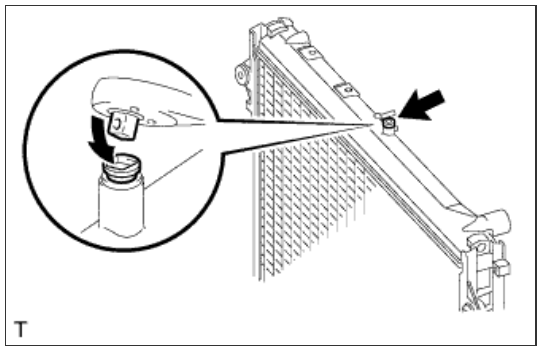
Item	Specified Condition
Front heater only	14.8 liters (15.6 US qts, 13.0 Imp. qts)
Front heater and rear heater	17.6 liters (18.6 US qts, 15.5 Imp. qts)
Front heater with viscous heater	15.2 liters (16.1 US qts, 13.4 Imp. qts)
Front heater and rear heater with viscous heater	18.0 liters (19.0 US qts, 15.4 Imp. qts)

Standard capacity (for Manual Transmission):
15.4 liters (16.3 US qts, 13.5 Imp. qts)

NOTICE:

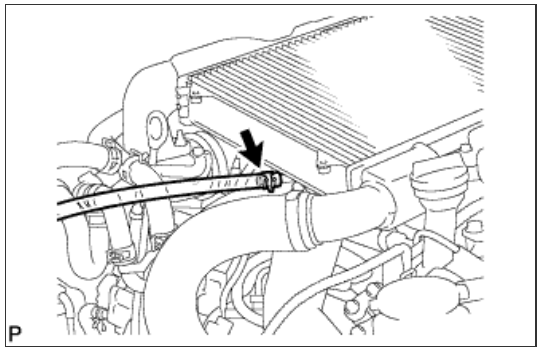
Do not substitute plain water for engine coolant.

HINT:



TOYOTA vehicles are filled with TOYOTA SLLC at the factory. In order to avoid damage to the engine cooling system and other technical problems, only use TOYOTA SLLC or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, non-borate coolant with long-life hybrid organic acid technology (coolant with long-life hybrid organic acid technology consists of a combination of low phosphates and organic acids).

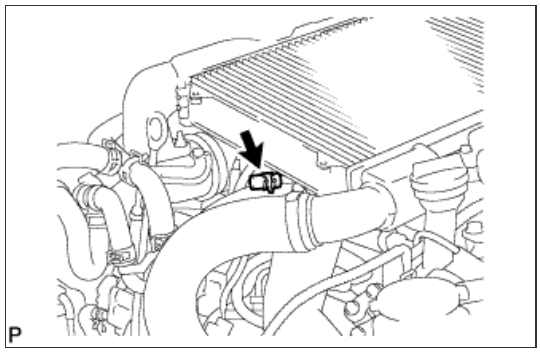
e. Install the vent plug.



Torque:
2.0 N*m{ 20 kgf*cm , 18 in.*lbf }

NOTICE:

Do not tighten the plug to 5.0 N*m (51 kgf*cm, 44 in.*lbf) or more, as the plug will be damaged.



f. Disconnect the clear hose from the engine air bleed pipe.

g. Install the engine air bleed cap when coolant comes out.

h. Install the radiator reservoir cap.

i. Start the engine.

NOTICE:

Immediately after starting the engine, if the radiator reservoir does not have any coolant, perform the following 1) stop the engine, 2) wait until the coolant has cooled down, and 3) add coolant until the coolant is filled to the FULL line.

.Maintain an engine speed of 3000 rpm for approximately 10 minutes so that the thermostat opens and air bleeding is performed.

CAUTION:

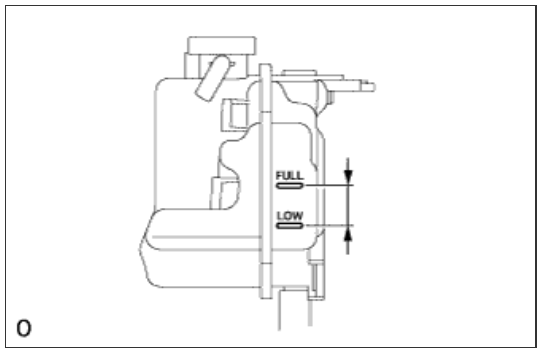
When pressing the radiator hoses:

- **Wear protective gloves.**
- **Be careful as the radiator hoses are hot.**
- **Keep your hands away from the radiator fan**

NOTICE:

- **Pay attention to the needle of the water temperature meter. Make sure that the needle does not show an abnormally high temperature.**
- **If there is not enough coolant, the engine may burn out or overheat.**

HINT:

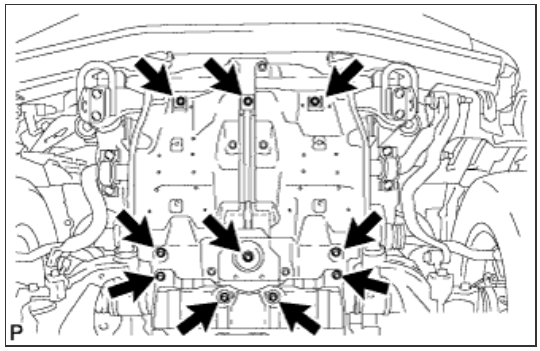


The thermostat opening timing can be confirmed by pressing the No. 2 radiator hose by hand, and checking when the engine coolant starts to flow inside the hose.

k. Stop the engine, and wait until the engine coolant cools down to ambient temperature.

CAUTION:

Do not remove the radiator reservoir cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.



l. Check that the coolant level is between the FULL and LO ines.
If the coolant level is above the FULL line, drain coolant so that the coolant level is between the FULL and LO ines.

1INSTALL NO. 1 ENGINE UNDER COVER SUB-ASSEMBLY

a. Install the engine under cover with the 10 bolts.

Torque:
29 N*m{ 296 kgf*cm , 21 ft.*lbf }

22. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. for Standard
Install the front fender splash shield (Click here).

b. w inch
Install the front fender splash shield (Click here).

23. INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY RH

a. for Standard
Install the front fender splash shield (Click here).

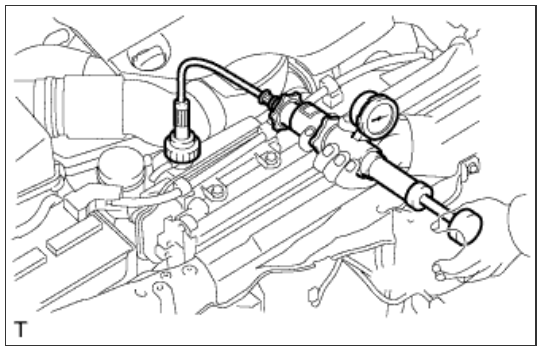
b. w inch
Install the front fender splash shield (Click here).

24. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

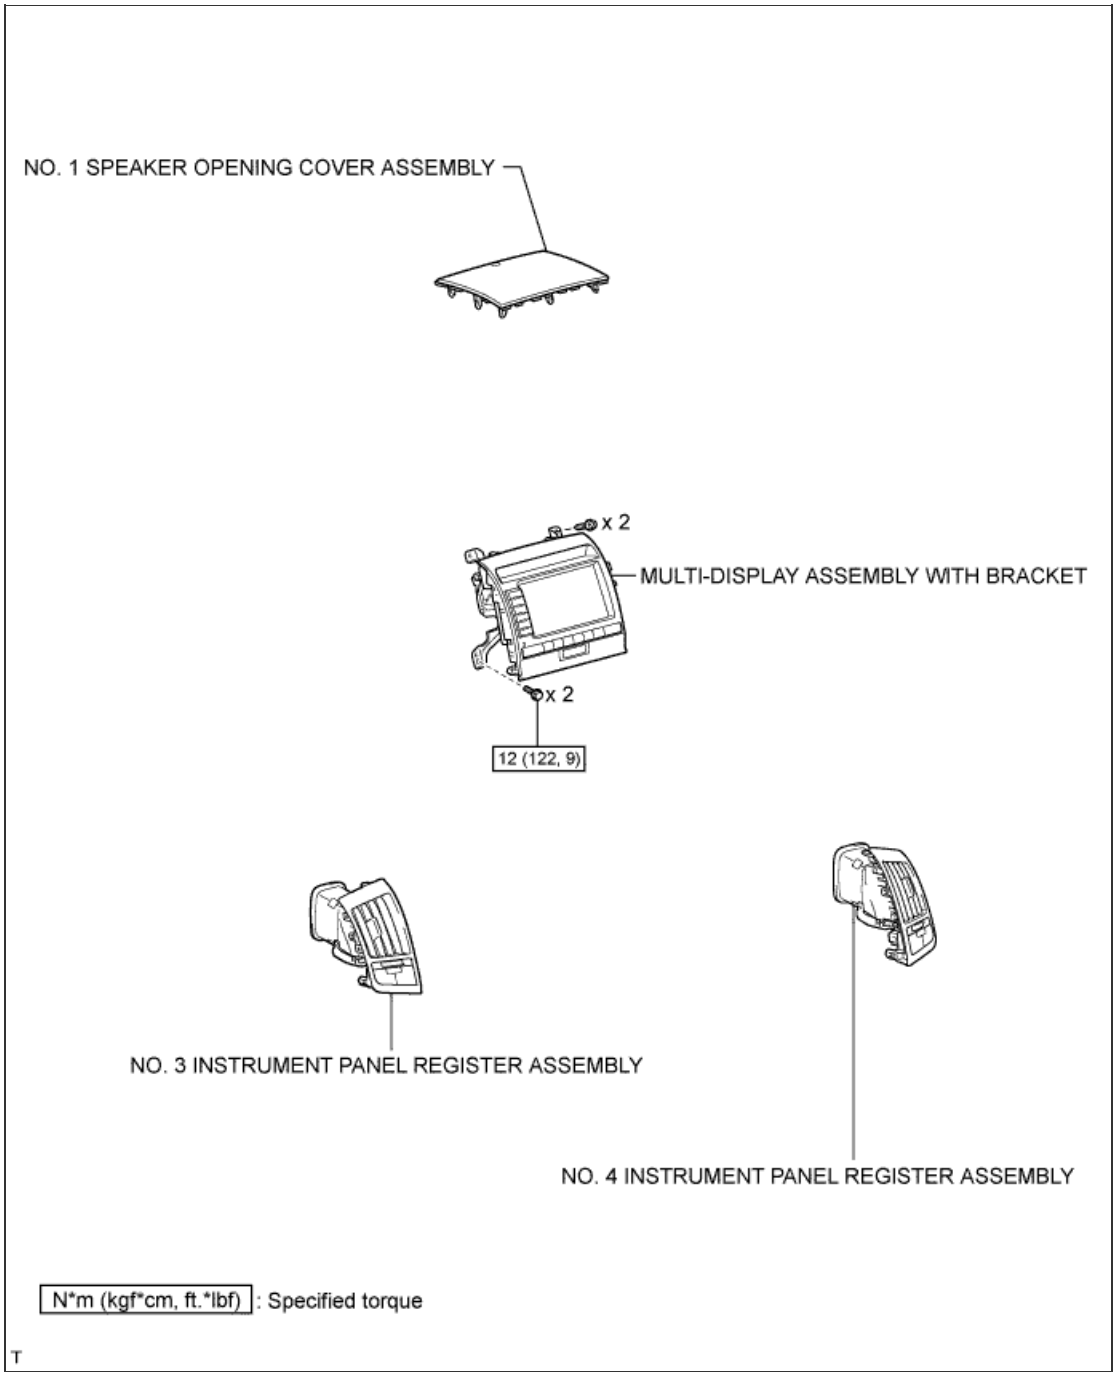
herdisconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

25. CHECK FOR ENGINE COOLANT LEAKS



CAUTION:

Do not remove the radiator reservoir cap while the engine and radiator are still hot. Pressurized, hot engine coolant and steam may be released and cause serious burns.



a. Fill the radiator with coolant and attach a radiator cap tester to the radiator reservoir.

. arm up the engine.

c. Using the radiator cap tester, increase the pressure inside the radiator to 123 kPa (1.3 kgf cm^2, 17.8 psi), and check that the pressure does not drop.
If the pressure drops, check the hoses, radiator and water pump for leaks.
If no external leaks are found, check the cylinder block and cylinder head.

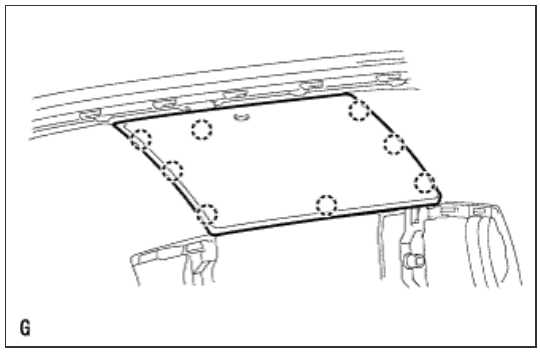
HINT:

- **Use the same procedures for the LHD vehicle and RHD vehicle.**
- **The procedures listed below are for the LHD vehicle.**

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:



Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE NO. 1 SPEAKER OPENING COVER ASSEMBLY

a. Detach the 8 claws and remove the opening cover.

3. REMOVE NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY

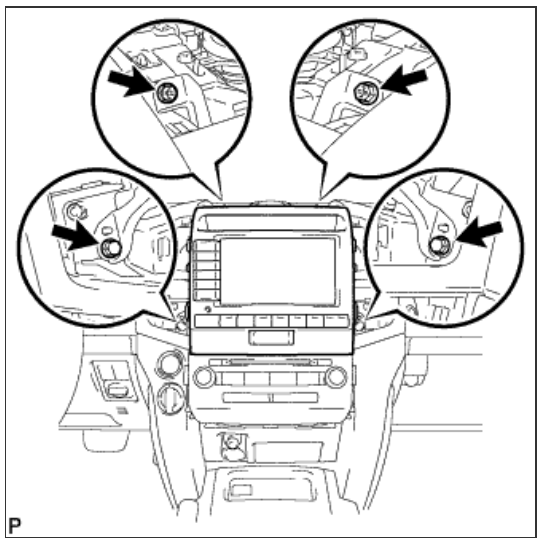
a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 6 claws.

c. Remove the register and then disconnect the connector.

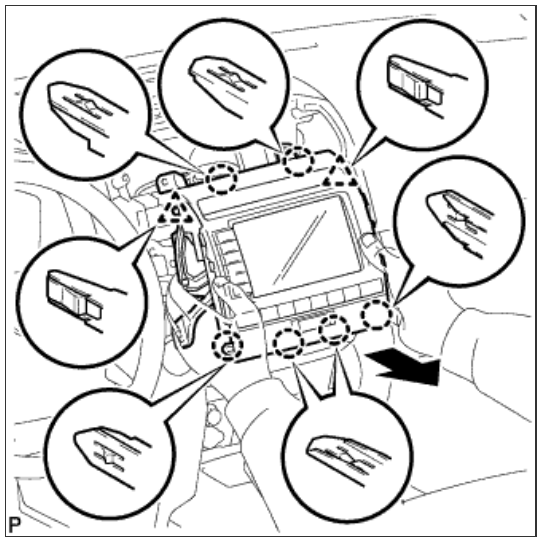
4. REMOVE NO. 4 INSTRUMENT PANEL REGISTER ASSEMBLY

a. Place protective tape as shown in the illustration.



b. Using a moulding remover, detach the 6 claws.

c. Remove the register and then disconnect the connector.



5. REMOVE MULTI-DISPLAY ASSEMBLY WITH BRACKET

a. Remove the 4 bolts.

b. Pull the radio receiver to detach the 8 claws on the backside of the radio receiver.

c. Disconnect the connectors and remove the radio receiver.

1.PRECAUTIONS FOR REPLACEMENT

NOTICE:

When replacing electronic parts, if there is a possibility that your body may contact a circuit board, etc., observe all precautions to prevent damage to the system by electrostatic discharge (ESD).

a. Procedures where static electricity countermeasures are necessary:

   i. Center cluster module circuit replacement.

   ii. Internal wiring connection/disconnection, inspection and replacement.

b. General precautions:

   i. Before performing any procedures, touch an unpainted metal part or ground bolt of the vehicle to discharge any static electricity.

   ii. To prevent damage to electrical equipment, disconnect the battery power supply before removing or installing electrical equipment.

   iii. Never touch the electronic parts of a circuit board or the pins of an integrated circuit.

   iv. When performing procedures, do not allow clothing to come near or contact parts.

- **Use the same procedures for the LHD vehicle and RHD vehicle.**
- **The procedures listed below are for the LHD vehicle.**

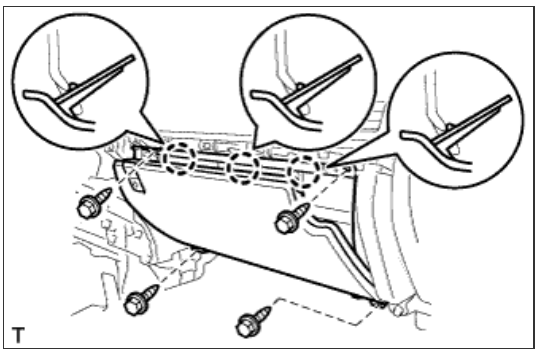
1. INSTALL AIR CONDITIONER AMPLIFIER ASSEMBLY

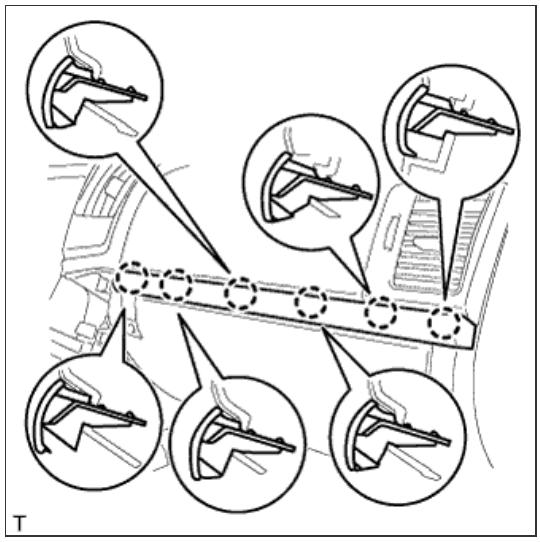
a. Install the amplifier with the screw.

b. Connect the connector.



2. INSTALL LOWER NO. 2 INSTRUMENT PANEL FINISH PANEL

a. Connect the connector.



b. Attach the 3 claws to install the finish panel.

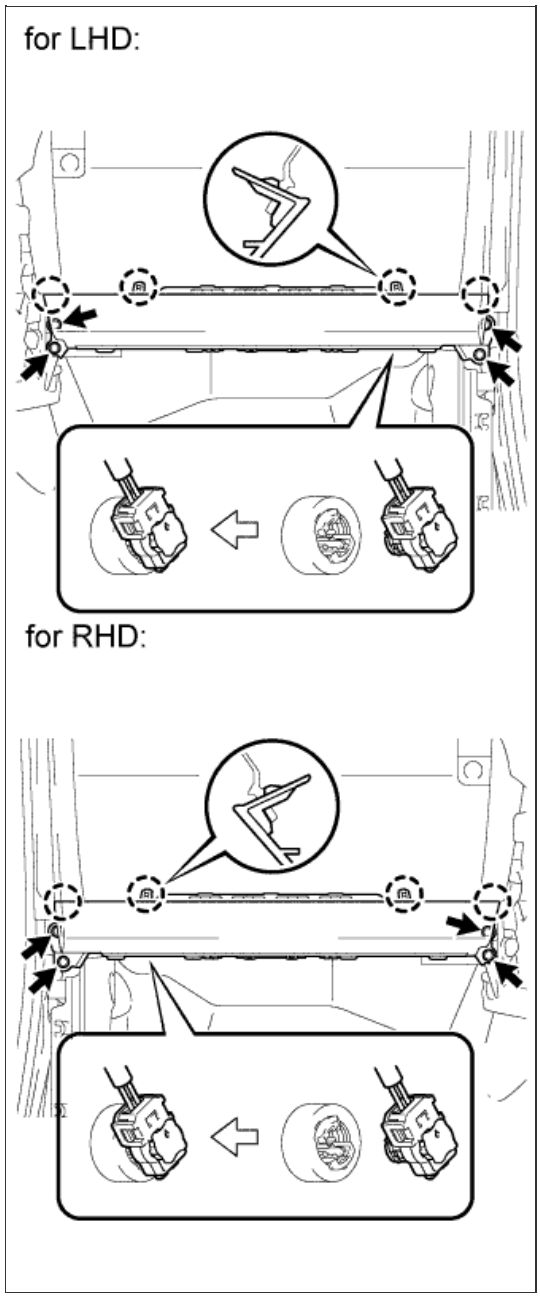
c. Install the 4 bolts.

3. INSTALL NO. 3 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Attach the 6 claws to install the panel garnish.

4. INSTALL FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (w/ Passenger Side Knee Airbag)

a. Connect the connector.

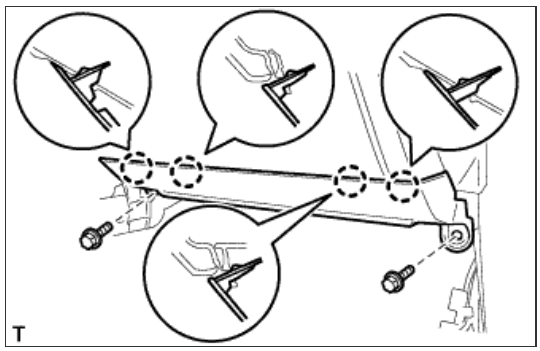


NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

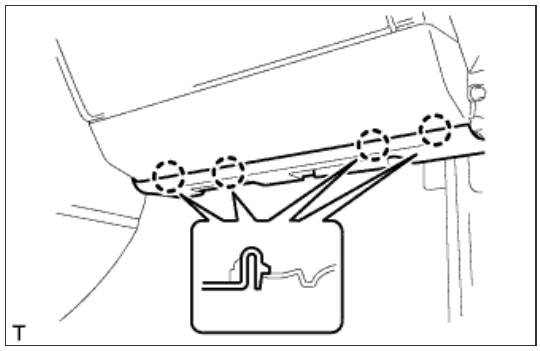
b. Attach the 4 claws to install the front passenger side knee airbag.

c. Install the 4 bolts.



Tor ue:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

5. INSTALL LOWER INSTRUMENT PANEL (w/o Passenger Side Knee Airbag)

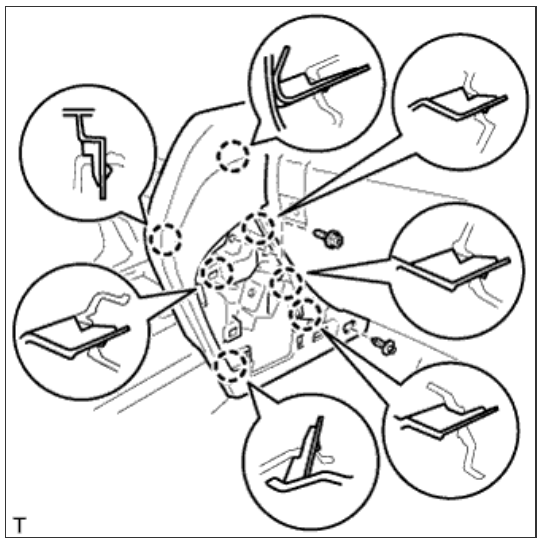


a. Attach the 4 claws to install the instrument panel.

b. Install the 2 bolts.

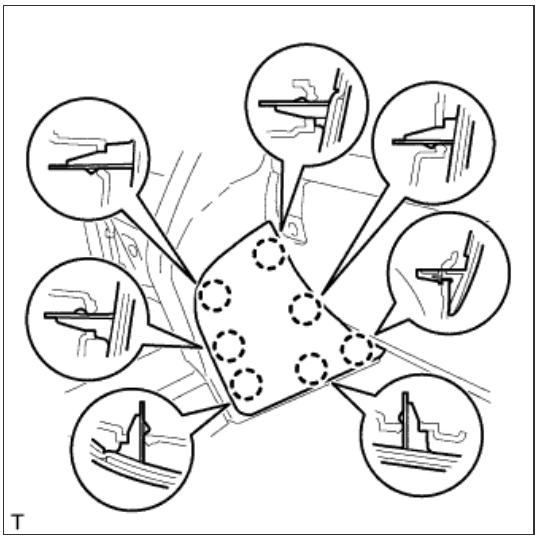
6. INSTALL NO. 2 INSTRUMENT PANEL UNDER CO ERSUB-ASSEMBLY (w/ Floor Under Cover)

a. Attach the 4 claws to install the under cover.



7. INSTALL LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY RH

a. Attach the 7 claws to install the panel pad.



b. Install the screw.

c. Install the clip.

8. INSTALL NO. 1 INSTRUMENT PANEL FINISH CUSHION

a. Attach the 7 claws to install the panel cushion.

9. INSTALL FRONT DOOR SCUFF PLATE RH

a. w/ Sliding Roof:
Remove the front door scuff plate (Click here).

b. w/o Sliding Roof:
Remove the front door scuff plate (Click here).

10. CONNECT CABLE TO NEGATI E BATTERY TERMINAL (w/ Passenger Side Knee Airbag)

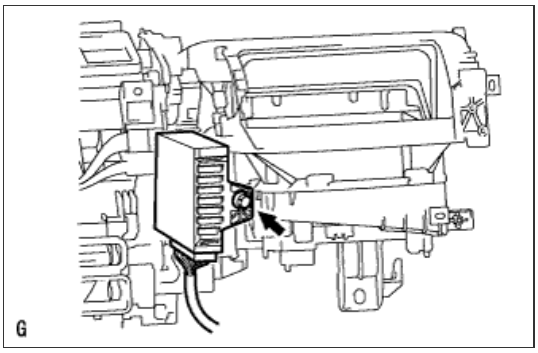
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

11. CHECK SRS WARNING LIGHT (w/ Passenger Side Knee Airbag)

a. Check the SRS warning light (Click here).

for Preparation Click here



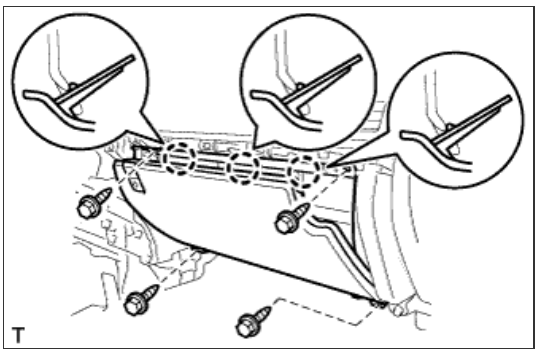
HINT:

- **Use the same procedures for the LHD vehicle and RHD vehicle.**
- **The procedures listed below are for the LHD vehicle.**

1. INSTALL AIR CONDITIONER AMPLIFIER ASSEMBLY

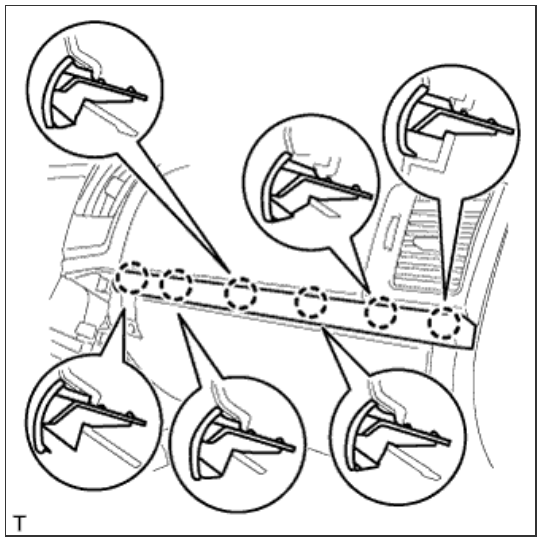
a. Install the amplifier with the screw.

b. Connect the connector.



2. INSTALL LOWER NO. 2 INSTRUMENT PANEL FINISH PANEL

a. Connect the connector.



b. Attach the 3 claws to install the finish panel.

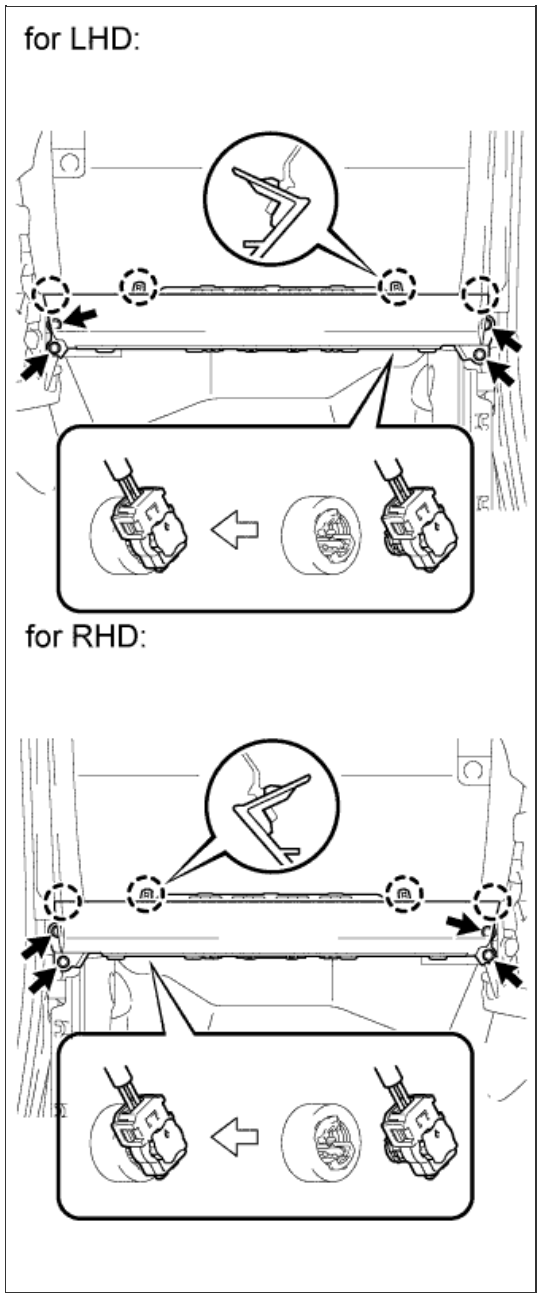
c. Install the 4 bolts.

3. INSTALL NO. 3 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Attach the 6 claws to install the panel garnish.

4. INSTALL FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (w/ Passenger Side Knee Airbag)

a. Connect the connector.

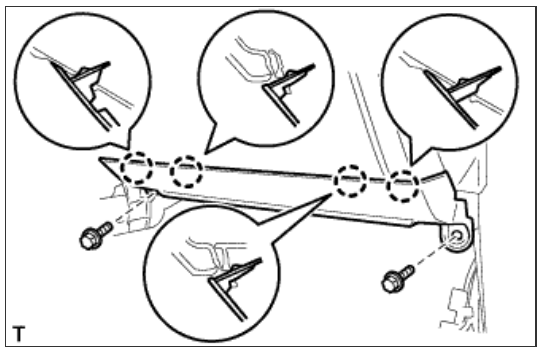


NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

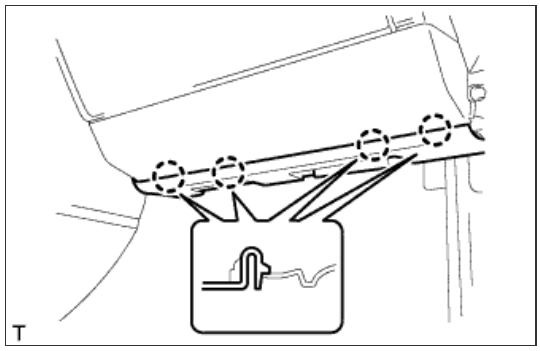
b. Attach the 4 claws to install the front passenger side knee airbag.

c. Install the 4 bolts.



Tor ue:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

5. INSTALL LOWER INSTRUMENT PANEL (w/o Passenger Side Knee Airbag)

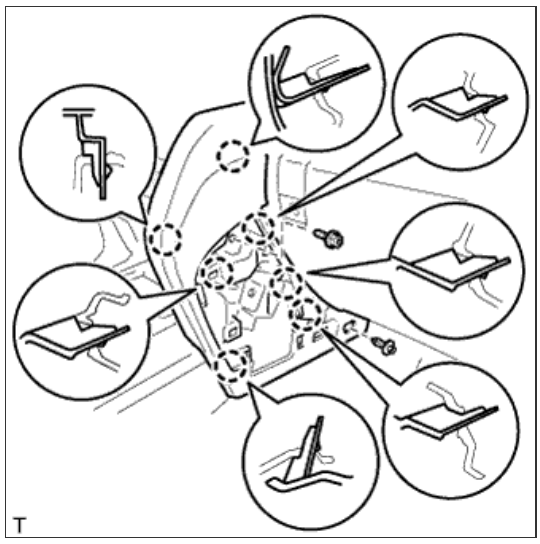


a. Attach the 4 claws to install the instrument panel.

b. Install the 2 bolts.

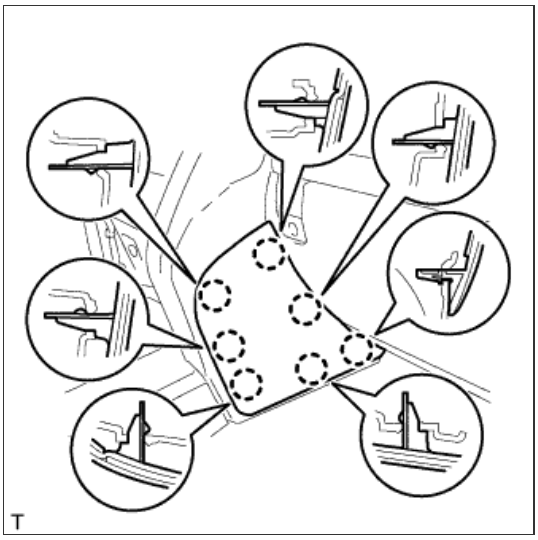
6. INSTALL NO. 2 INSTRUMENT PANEL UNDER CO ERSUB-ASSEMBLY (w/ Floor Under Cover)

a. Attach the 4 claws to install the under cover.



7. INSTALL LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY RH

a. Attach the 7 claws to install the panel pad.



b. Install the screw.

c. Install the clip.

8. INSTALL NO. 1 INSTRUMENT PANEL FINISH CUSHION

a. Attach the 7 claws to install the panel cushion.

9. INSTALL FRONT DOOR SCUFF PLATE RH

a. w/ Sliding Roof:
Remove the front door scuff plate (Click here).

b. w/o Sliding Roof:
Remove the front door scuff plate (Click here).

10. CONNECT CABLE TO NEGATI E BATTERY TERMINAL (w/ Passenger Side Knee Airbag)

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

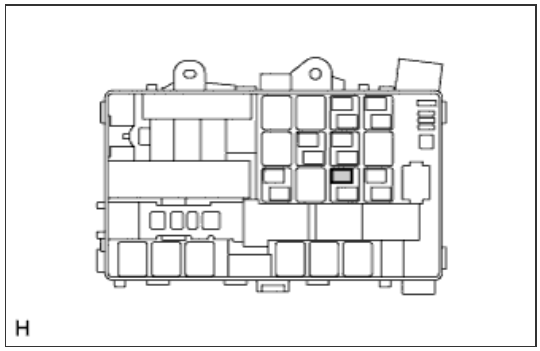
11. CHECK SRS WARNING LIGHT (w/ Passenger Side Knee Airbag)

a. Check the SRS warning light (Click here).

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:



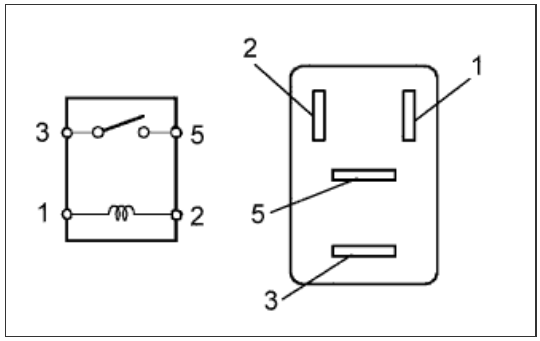
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE VISCOUS HEATER RELAY

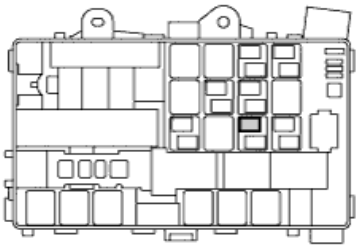
a. Remove the viscous heater relay from the engine room relay block.



3. INSPECT VISCOUS HEATER RELAY

a. Measure the resistance of the viscous heater relay.

Standard Resistance:



Tester Connection	Condition	Specified Condition
3 - 5	Battery voltage not applied between terminals 1 and 2	10 kΩ or higher
	Battery voltage applied to terminal 1 and 2	Below 1 Ω

If the result is not as specified, replace the relay.

4. INSTALL VISCOUS HEATER RELAY

a. Install the viscous heater relay to the engine room relay block.

H

5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

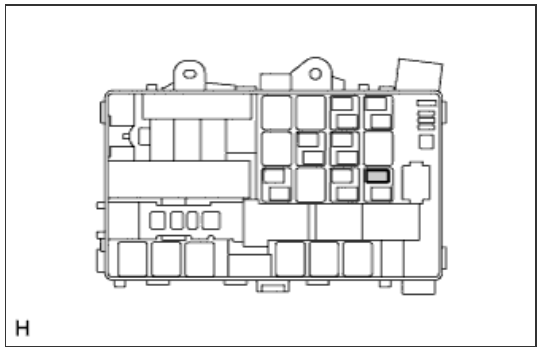
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:



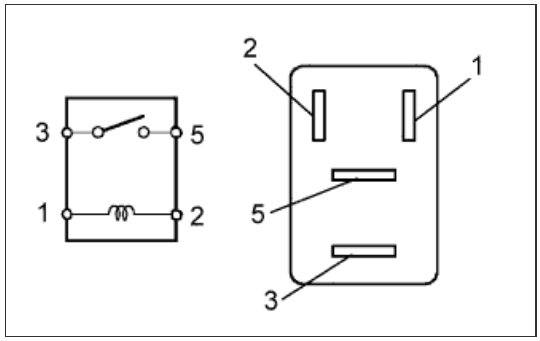
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE MAGNET CLUTCH RELAY

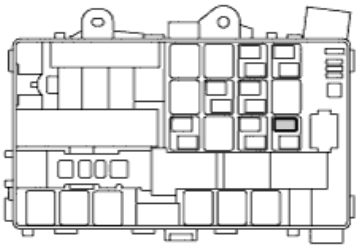
a. Remove the magnet clutch relay from the engine room relay block.



3. INSPECT MAGNET CLUTCH RELAY

a. Measure the resistance of the magnet clutch relay.

Standard Resistance:



Tester Connection	Condition	Specified Condition
3 - 5	Battery voltage not applied between terminals 1 and 2	10 kΩ or higher
	Battery voltage applied to terminal 1 and 2	Below 1 Ω

If the result is not as specified, replace the relay.

4. INSTALL MAGNET CLUTCH RELAY

a. Install the magnet clutch relay to the engine room relay block.

H

5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

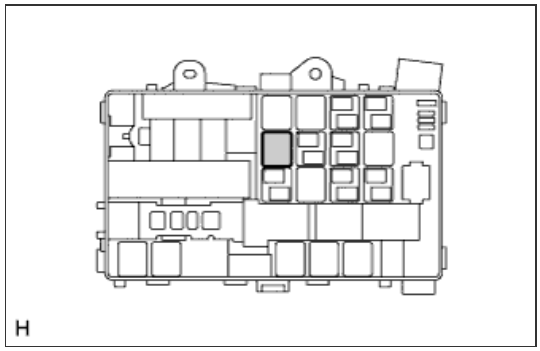
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:



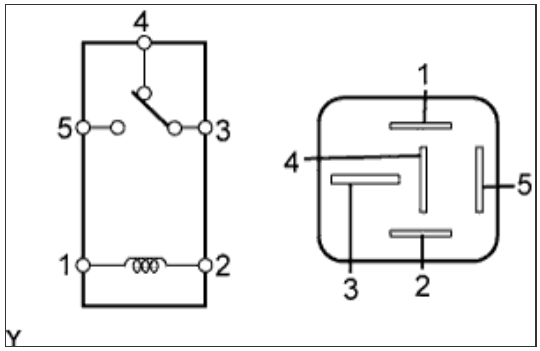
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

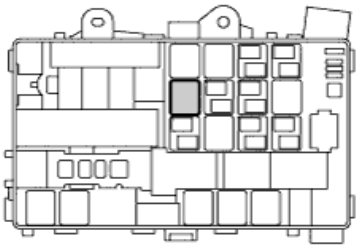
2. REMOVE REAR COOLER RELAY

a. Remove the rear cooler relay from the engine room relay block.



3. INSPECT REAR COOLER RELAY

a. Measure the resistance of the relay.



Standard Resistance:

Tester Connection	Specified Condition
3 - 4	Below 1 Ω
3 - 5	10 kΩ or higher
3 - 4	10 kΩ or higher (Battery voltage is applied to terminals 1 and 2)
3 - 5	Below 1 Ω (Battery voltage is applied to terminals 1 and 2)

4. INSTALL REAR COOLER RELAY

a. Install the rear cooler relay to the engine room relay block.

H

5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

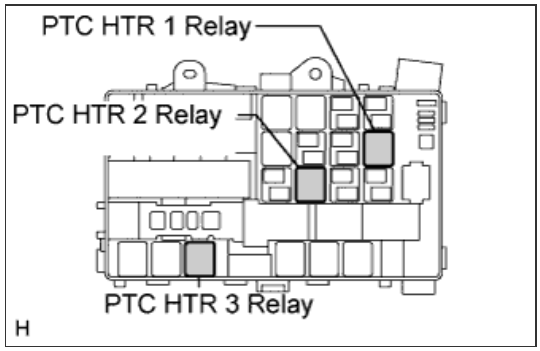
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:



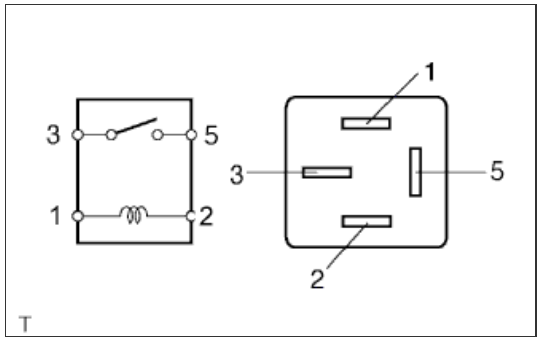
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE PTC HEATER RELAY (PTC HTR 1, PTC HTR 2, PTC HTR 3)

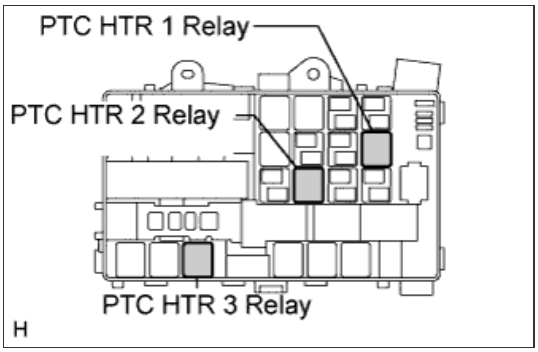
a. Remove the 3 PTC heater relays from the engine room relay block.



3. INSPECT PTC HEATER RELAY (PTC HTR 1, PTC HTR 2, PTC HTR 3)

a. Measure the resistance of the relay.

Standard Resistance:



Tester Connection	Condition	Specified Condition
3 - 5	Battery voltage not applied between terminals 1 and 2	10 kΩ or higher
	Battery voltage applied to terminal 1 and 2	Below 1 Ω

If the result is not as specified, replace the relay.

4. INSTALL PTC HEATER RELAY (PTC HTR 1, PTC HTR 2, PTC HTR 3)

a. Install the 3 PTC heater relays to the engine room relay block.

5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

for Preparation Click here

1.PRECAUTIONS FOR REPLACEMENT

NOTICE:

When replacing electronic parts, if there is a possibility that your body may contact a circuit board, etc., observe all precautions to prevent damage to the system by electrostatic discharge (ESD).

a. Procedures where static electricity countermeasures are necessary:

   i. Integration board sub-assembly replacement.

   ii. Internal wiring connection/disconnection, inspection and replacement.

b. General precautions:

   i. Before performing any procedures, touch an unpainted metal part or ground bolt of the vehicle to discharge any static electricity.

   ii. To prevent damage to electrical equipment, disconnect the battery power supply before removing or installing electrical equipment.

   iii. Never touch the electronic parts of a circuit board or the pins of an integrated circuit.

   iv. When performing procedures, do not allow clothing to come near or contact parts.

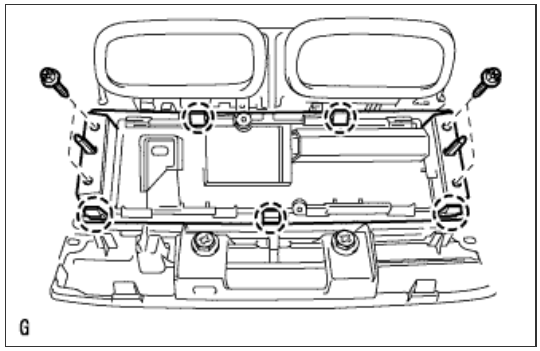
1. REMOVE CONSOLE REAR END PANEL SUB-ASSEMBLY

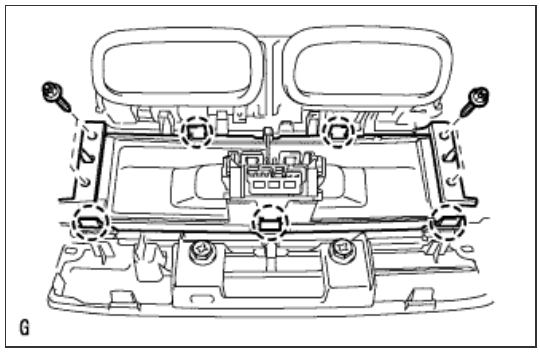


a. w/o Cool Box:
Remove the console rear end panel (Click here).

b. w/o Cool Box:
Remove the console rear end panel (Click here).

2. REMOVE NO. 2 AIR CONDITIONING CONTROL ASSEMBLY (w/ Rear Air Conditioning System)

a. Remove the 4 screws.

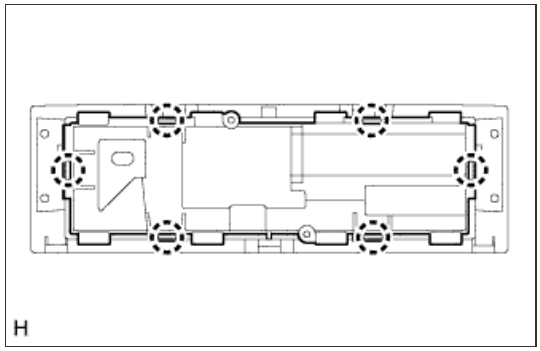


b. Detach the 5 claws and remove the air conditioning control.

3. REMOVE AIR CONDITIONING CONTROL ASSEMBLY (w/o Rear Air Conditioning System)

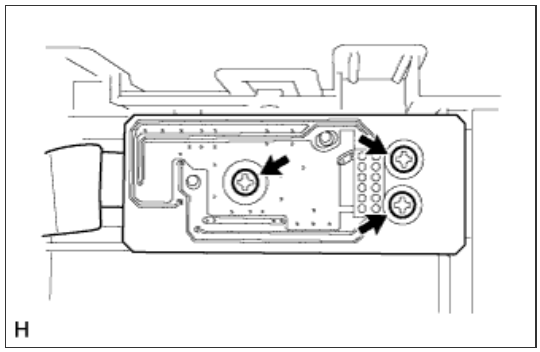
a. Remove the 4 screws.

b. Detach the 5 claws and remove the air conditioning control.



for Preparation Click here

1. REMOVE LOWER HEATER CONTROL BASE

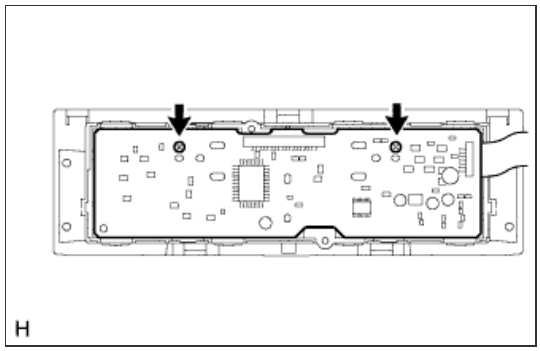


NOTICE:

As the electronic parts of the circuit board may be damaged by static electricity, do not touch the electronic parts of the circuit board or the soldered areas with bare hands.

a. Detach the 6 claws.

b. Remove the 3 screws and lower heater control base.

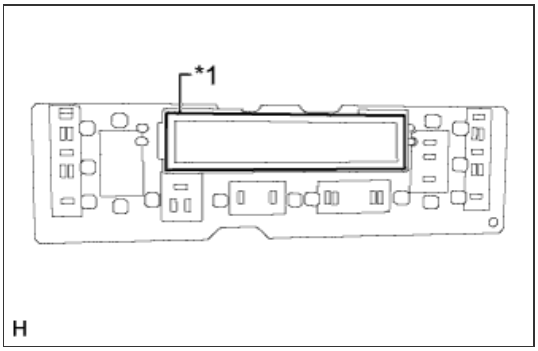


2. REMOVE CENTER CLUSTER MODULE CIRCUIT

NOTICE:

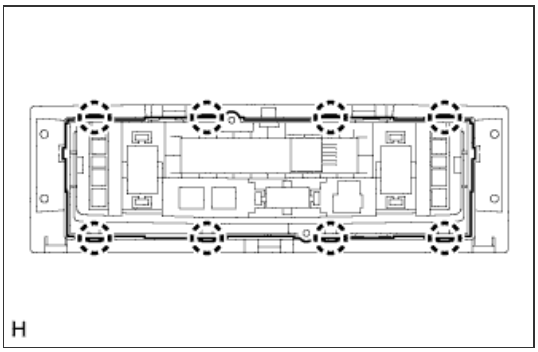
As the electronic parts of the circuit board may be damaged by static electricity, do not touch the electronic parts of the circuit board or the soldered areas with bare hands.

a. Remove the 2 screws and center cluster module circuit.



3. REMOVE HEATER CONTROL GUARD

a. Remove the heater control guard.

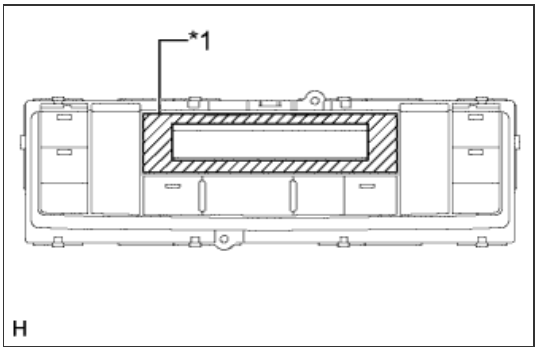


Text in Illustration

*1	Heater Control Guard

4. REMOVE HEATER CONTROL KNOB

a. Detach the 8 claws and remove the heater control knob.



5. REMOVE CENTER CLUSTER MODULE LENS

a. Remove the double-sided tape and center cluster module lens.

Text in Illustration

*1	Double-sided Tape

for Preparation Click here

1. INSTALL CENTER CLUSTER MODULE LENS

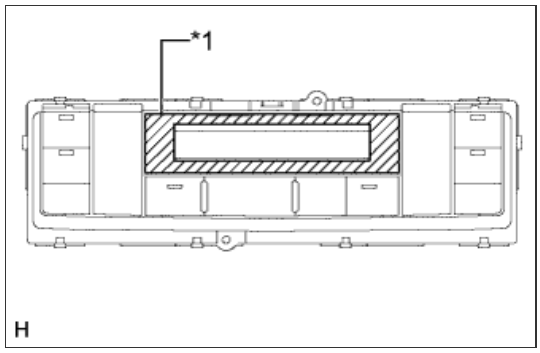
a. Remove the double-sided tape from the control knob sub-assembly.

Text in Illustration

*1	Double-sided Tape

b. Wipe off any tape adhesive residue with cleaner.

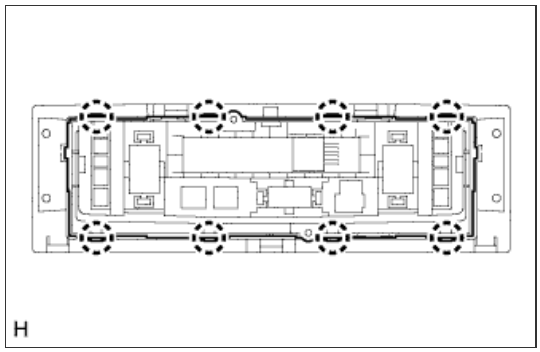
c. Remove the peeling paper from a new center cluster module lens.



HINT:

After removing the peeling paper, keep the exposed adhesive free from foreign matter.

d. Install the center cluster module lens.

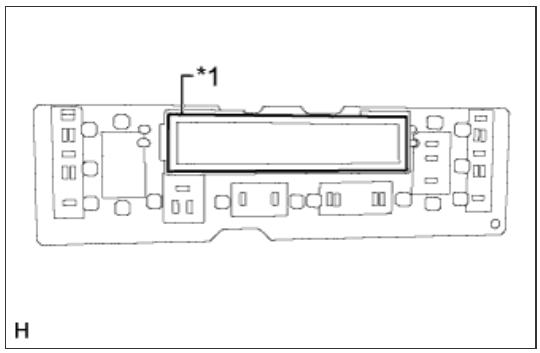


NOTICE:

Do not reuse the center cluster module lens after removing it.

2. INSTALL HEATER CONTROL KNOB

a. Attach the 8 claws to install the heater control knob.

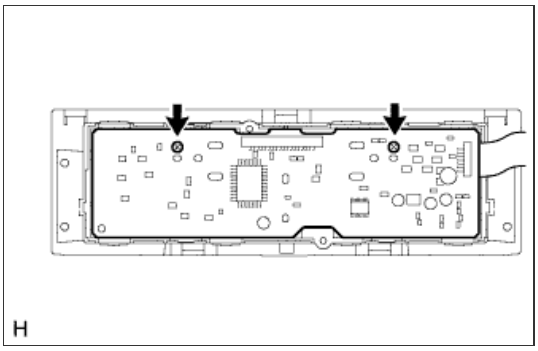


3. INSTALL HEATER CONTROL GUARD

a. Install a new heater control guard.

Text in Illustration

*1	Heater Control Guard

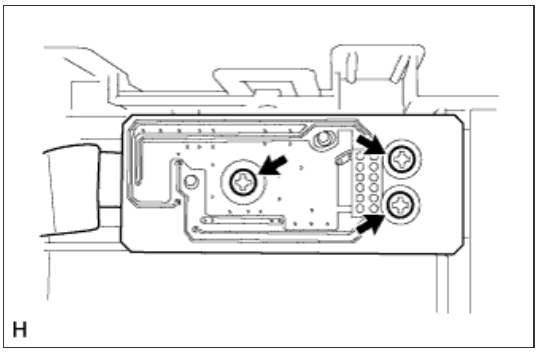


4. INSTALL CENTER CLUSTER MODULE CIRCUIT

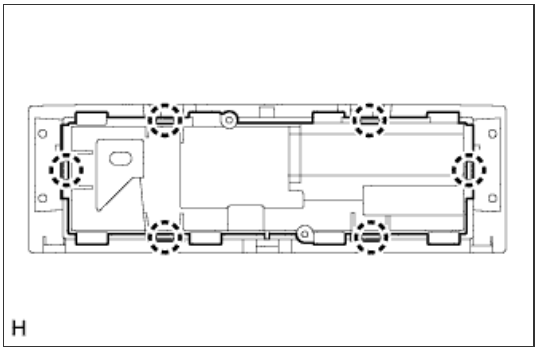
NOTICE:

As the electronic parts of the circuit board may be damaged by static electricity, do not touch the electronic parts of the circuit board or the soldered areas with bare hands.

a. Install the center cluster module circuit with the 2 screws.



5. INSTALL LOWER HEATER CONTROL BASE

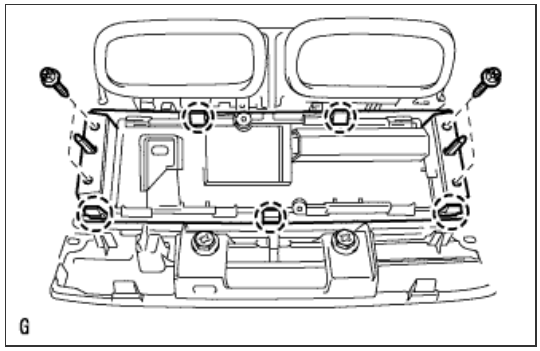


NOTICE:

As the electronic parts of the circuit board may be damaged by static electricity, do not touch the electronic parts of the circuit board or the soldered areas with bare hands.

a. Install the 3 screws.

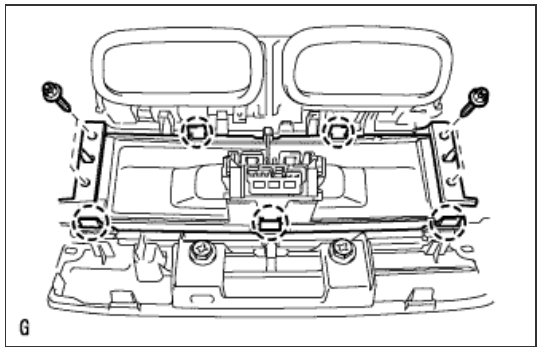
b. Attach the 6 claws to install the lower heater control base.



for Preparation Click here

1. INSTALL NO. 2 AIR CONDITIONING CONTROL ASSEMBLY (w/ Rear Air Conditioning System)

a. Attach the 5 claws to install the air conditioning control.

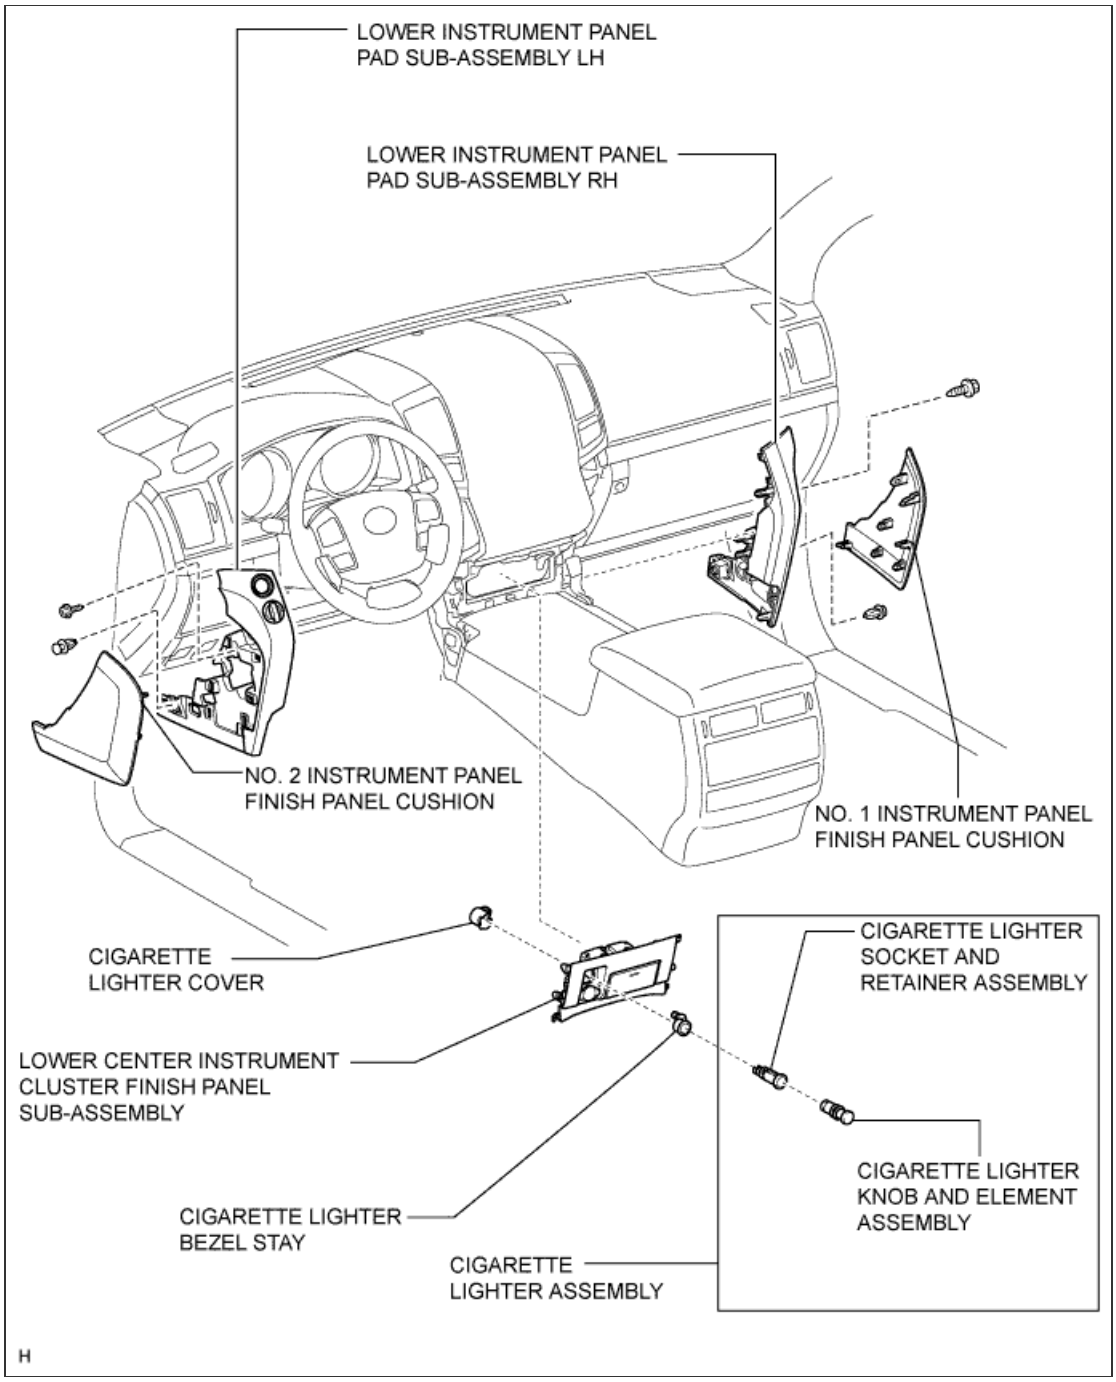


b. Install the 4 screws.

2. INSTALL AIR CONDITIONING CONTROL ASSEMBLY (w/o Rear Air Conditioning System)

a. Attach the 5 claws to install the air conditioning control.

b. Install the 4 screws.



3. INSTALL CONSOLE REAR END PANEL SUB-ASSEMBLY

a. w/o Cool Box:
Install the console rear end panel (Click here).

b. w/o Cool Box:
Install the console rear end panel (Click here).

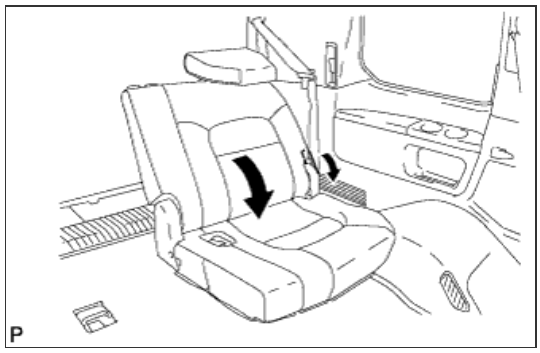
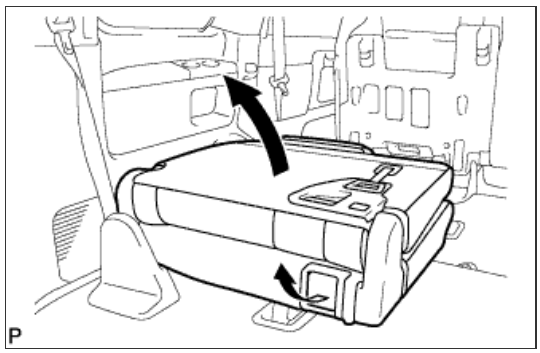
1. REMOVE TONNEAU COVER ASSEMBLY (w/ Tonneau Cover)

a. Remove the tonneau cover.



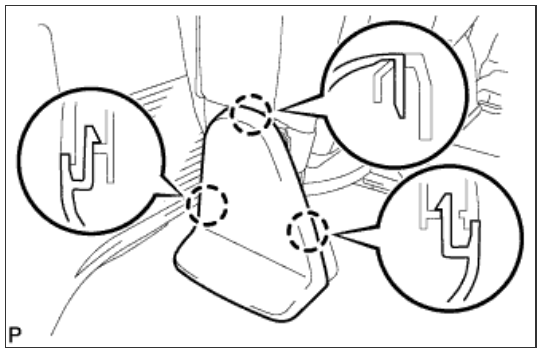
2. REMOVE REAR NO. 2 SEAT HEADREST ASSEMBLY LH (w/ Rear Center Seat Headrest)

3. REMOVE REAR SEAT CUSHION HINGE COVER LH (except Face to Face Seat Type)



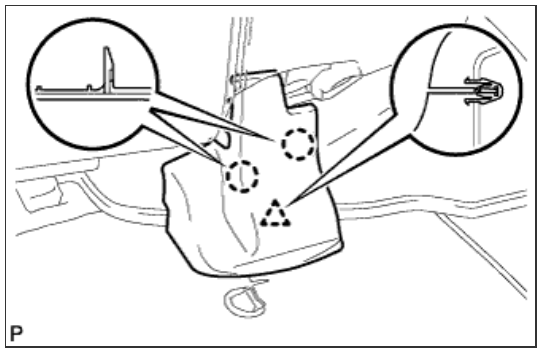
a. Operate the rear seat headrest handle and lower the headrest.

b. Operate the reclining adjuster release handle and fold down the seat.



c. Operate the seat cushion lock release lever and move the seat to the storage position.

d. Using a screwdriver, detach the 3 claws and remove the cover.

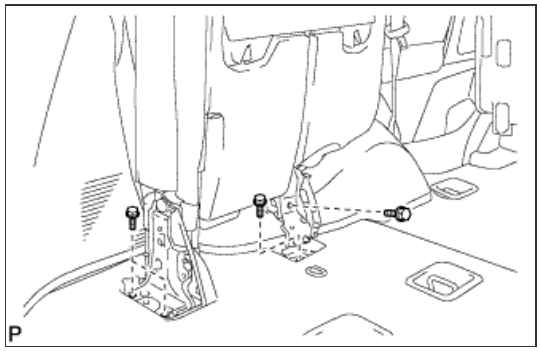


HINT:

Tape the screwdriver tip before use.

4. REMOVE REAR NO. 2 SEAT HINGE COVER LH (except Face to Face Seat Type)

a. Detach the 2 claws and clip, and then remove the cover.

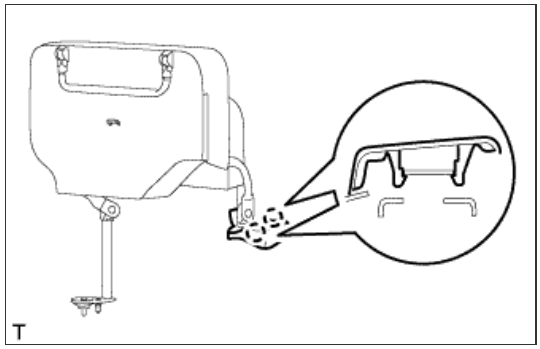


5. REMOVE REAR NO. 2 SEAT ASSEMBLY (except Face to Face Seat Type)

a. Remove the bolts and seat assembly.

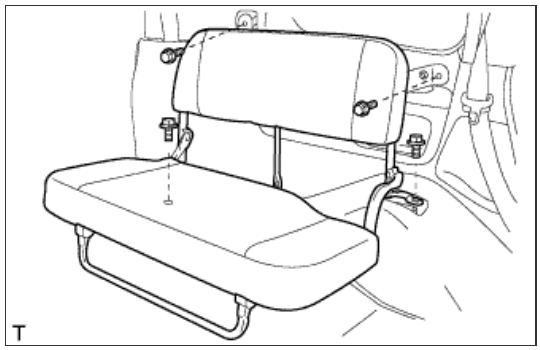
NOTICE:

Be careful not to damage the vehicle body.



6. REMOVE REAR SIDE SEAT LEG PROTECTOR LH (for Face to Face Seat Type)

a. Using a screwdriver, detach the 2 claws and remove the protector.

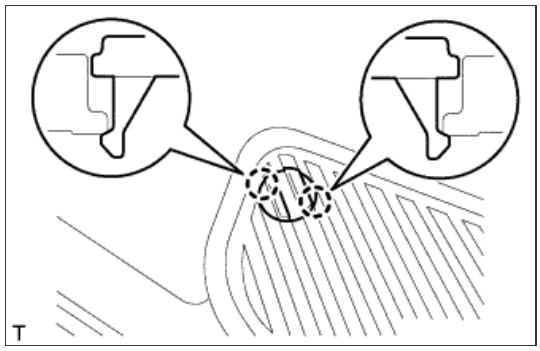


HINT:

Tape the screwdriver tip before use.

7. REMOVE REAR NO. 2 SEAT ASSEMBLY (for Face to Face Seat Type)

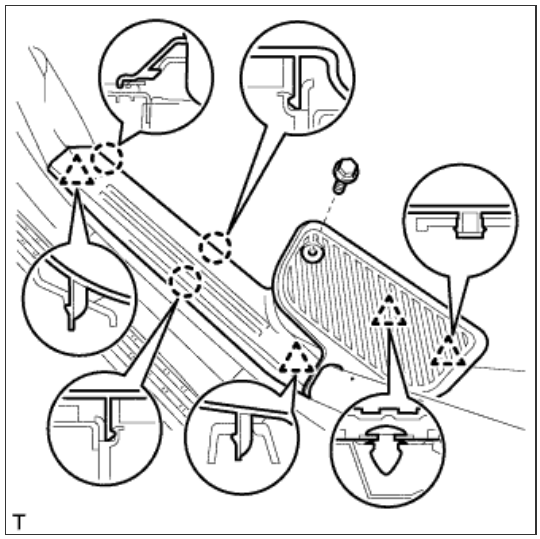
a. Remove the bolts and rear No. 2 seat.



. REMOVE REAR STEP COVER

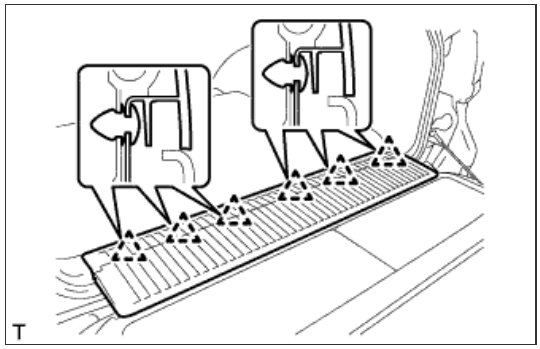
HINT:

Use the same procedure to remove the step cover on the other side.



a. Detach the 2 claws and remove the step cover.

9. REMOVE REAR DOOR SCUFF PLATE LH

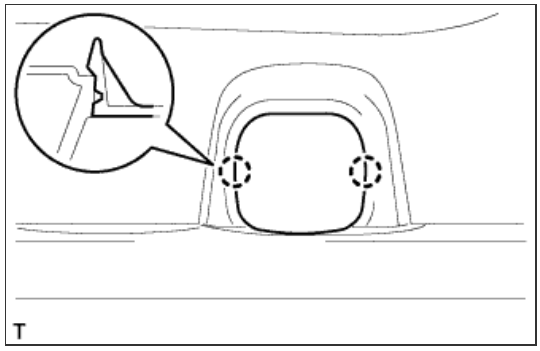


a. Remove the screw.

b. Detach the 3 claws and clips, and remove the scuff plate.

10. REMOVE REAR FLOOR MAT REAR SUPPORT PLATE

a. Detach the 6 clips and remove the support plate.



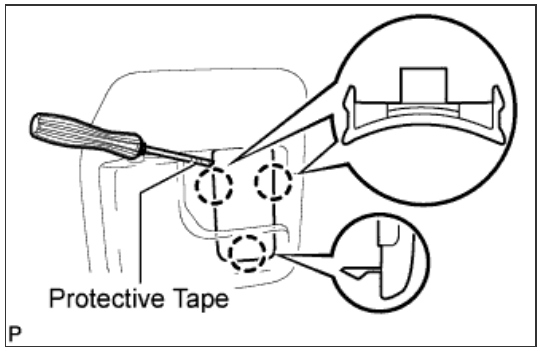
11. REMOVE NO. 1 TONNEAU COVER HOLDER CAP (w/ Tonneau Cover)

HINT:

Use the same procedure to remove the tonneau cover holder cap on the other side.

a. Detach the 2 claws and remove the tonneau cover holder cap.

12. REMOVE REAR SEAT COVER CAP RH (except Face to Face Seat Type)

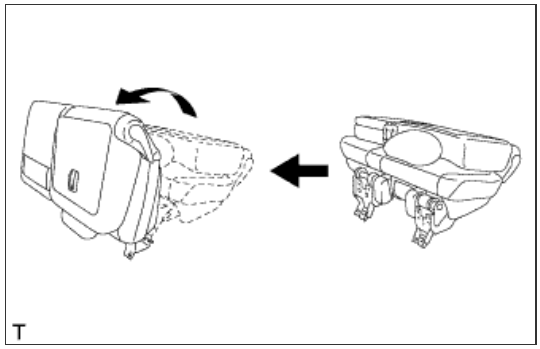


HINT:

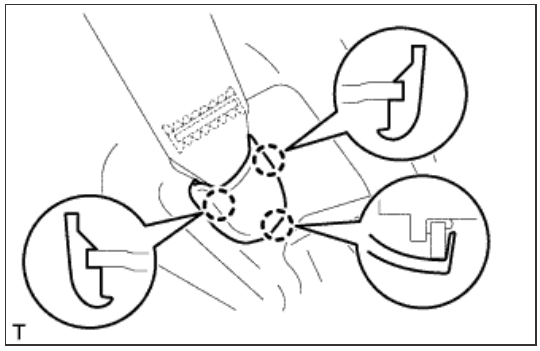
Use the same procedure to remove the rear seat cover cap on the other side.

a. Using a screwdriver, detach the 3 claws and remove the rear seat cover cap.

HINT:

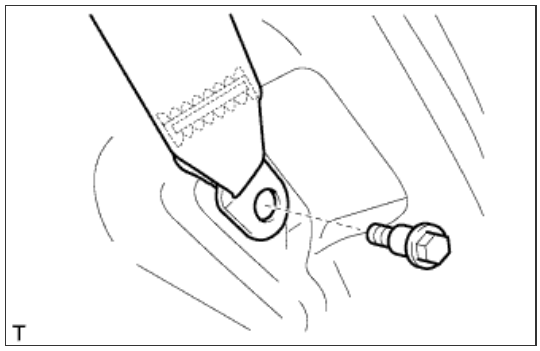


Tape the screwdriver tip before use.

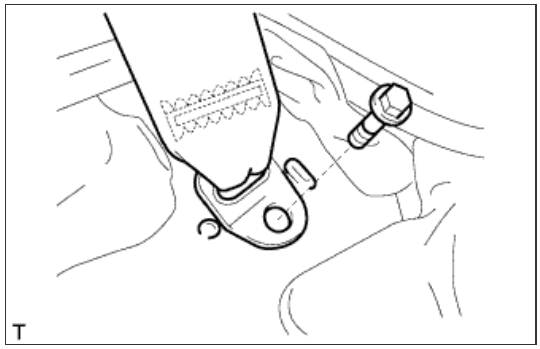


13. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY LH

HINT:



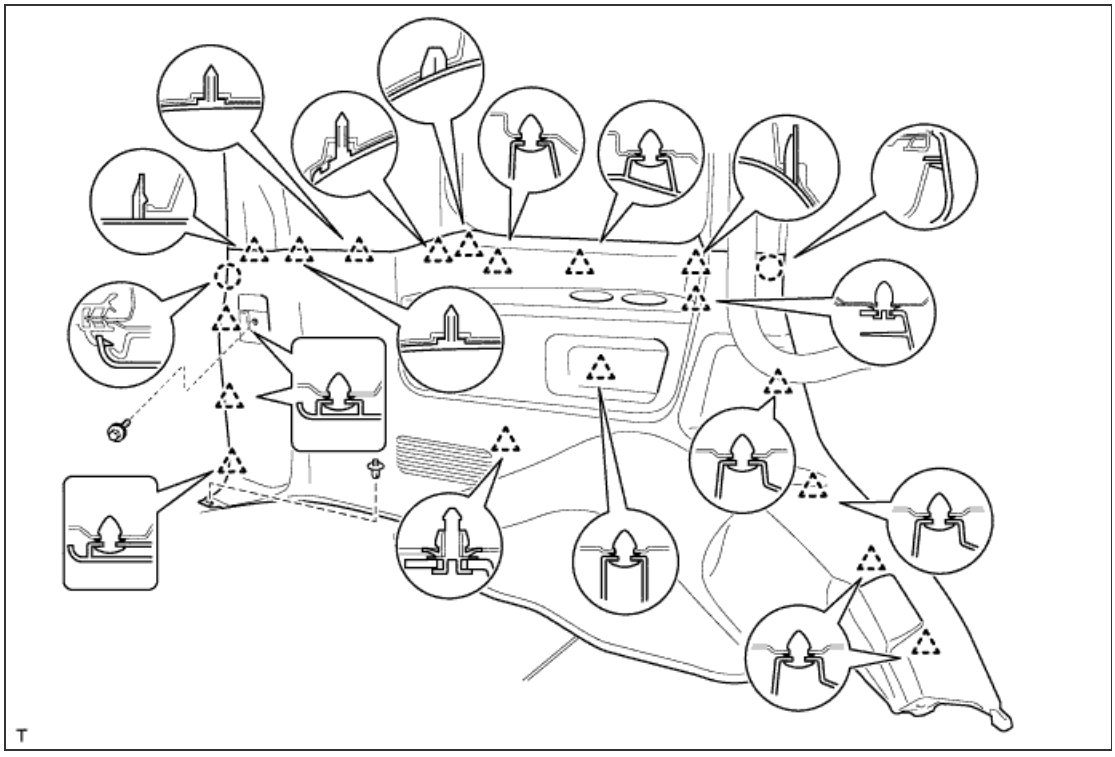
When removing the front quarter trim panel, operate the reclining adjuster release handle and move the No. 1 rear seat to the position shown in the illustration.



a. Detach the 3 claws and remove the cover.

b. Remove the bolt and rear No. 1 seat belt anchor.

c. w Rear No. 2 Seat, e cept Face to Face Seat Type
Remove the bolt and rear No. 2 seat belt anchor.

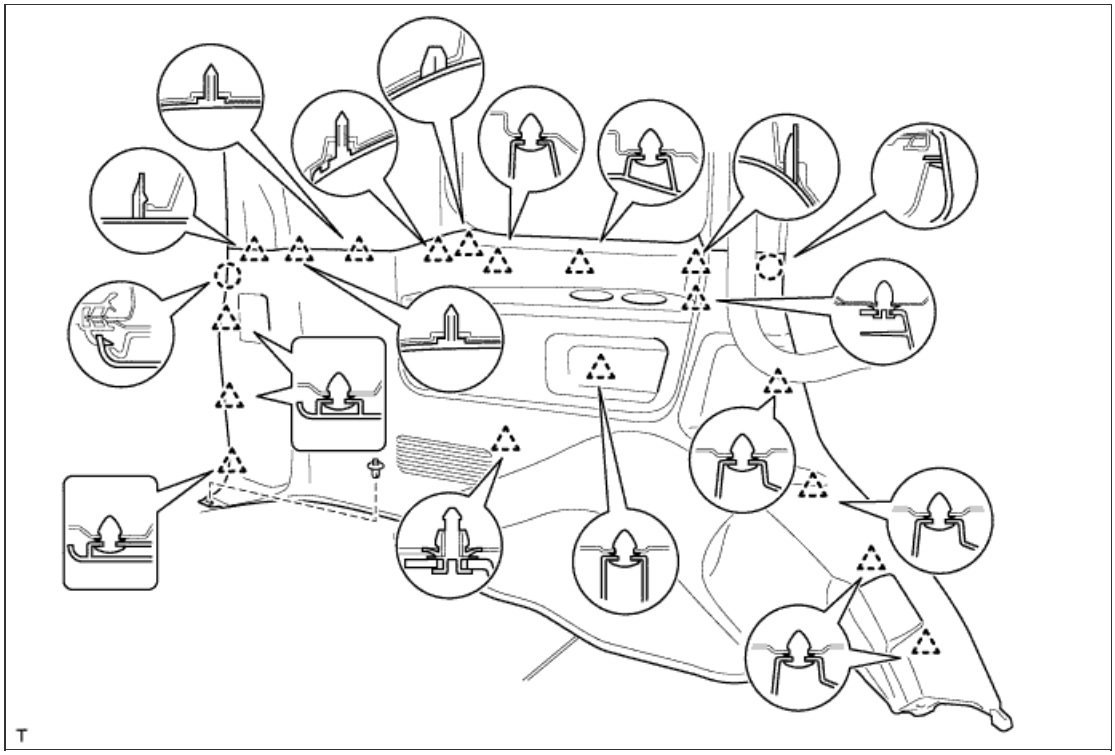


d. w Rear No. 2 Seat, e cept Face to Face Seat Type

i. Remove the clip and bolt.

ii. Detach the 18 clips and 2 claws.

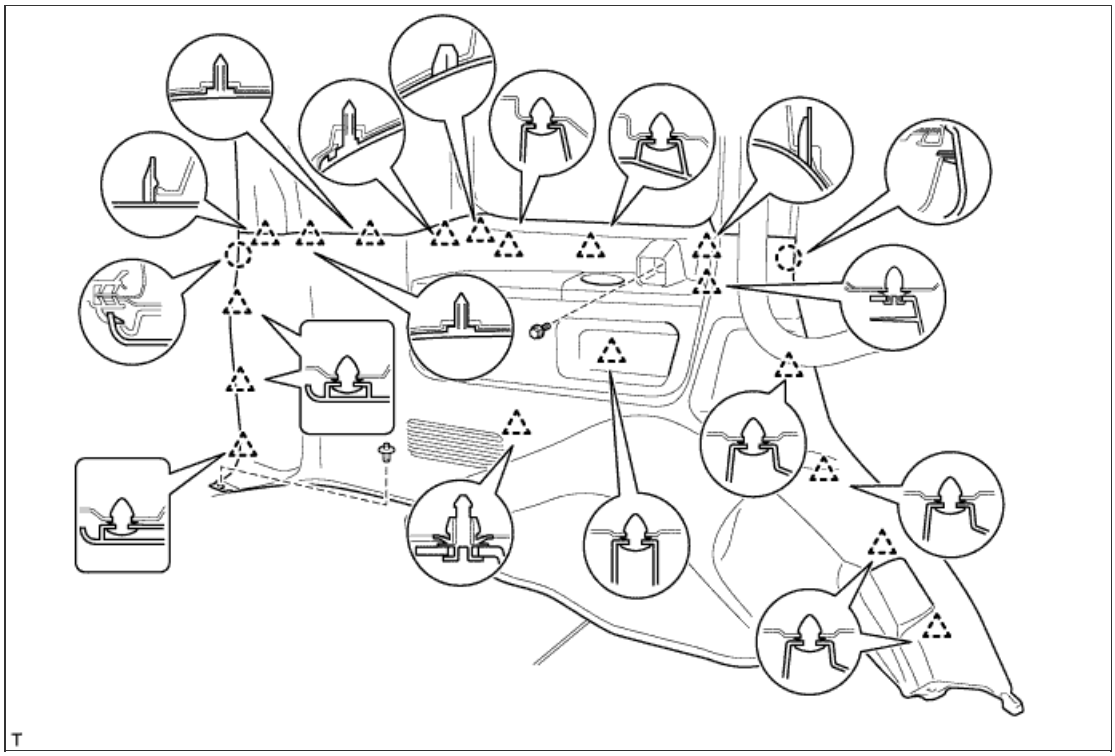
iii. w o Rear Air onditioning System
isconnect the rear seat lock control lever cable and then remove the quarter trim panel.



iv. w Rear Air onditioning System
isconnect the thermistor connector and rear seat lock control lever cable, and then remove the quarter trim panel.

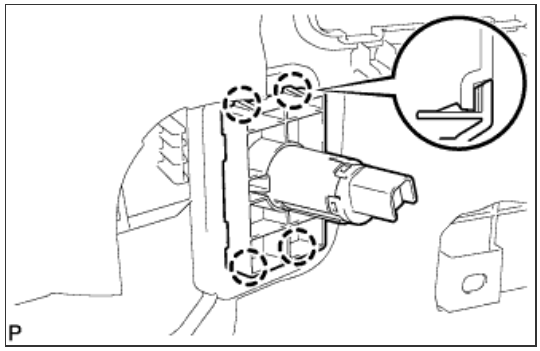
e. w o Rear No. 2 Seat or w Rear No. 2 Seat, for Face to Face Seat Type

i. Remove the clip.



ii. Detach the 18 clips and 2 claws, and remove the quarter trim panel.

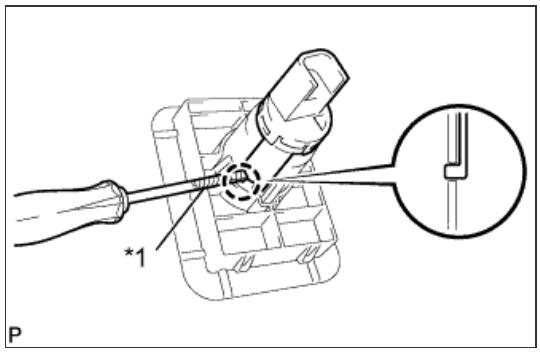
f. w Tonneau over



i. Remove the screw and clip.

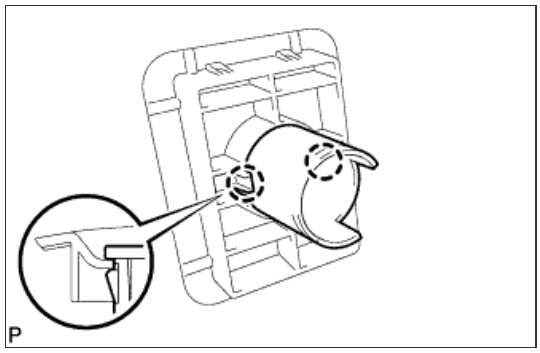
ii. Detach the 18 clips and 2 claws, and remove the quarter trim panel.

14. REMOVE POWER OUTLET SOCKET ASSEMBLY



a. Disengage the claws and remove the power outlet socket bezel.

b. Using a screwdriver with its tip wrapped in protective tape, disengage the claw and remove the power outlet socket assembly.



Text in Illustration

	rotective Tape

15. REMOVE POWER OUTLET SOCKET COVER

a. Disengage the 2 claws and remove the power outlet socket cover.

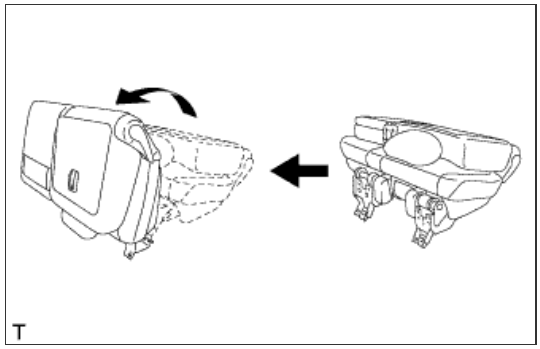
P

for Preparation Click here

1. INSTALL POWER OUTLET SOCKET COVER

a. Engage the 2 claws and install the power outlet socket cover.

2. INSTALL POWER OUTLET SOCKET ASSEMBLY



a. Engage the claw and install the power outlet socket assembly.

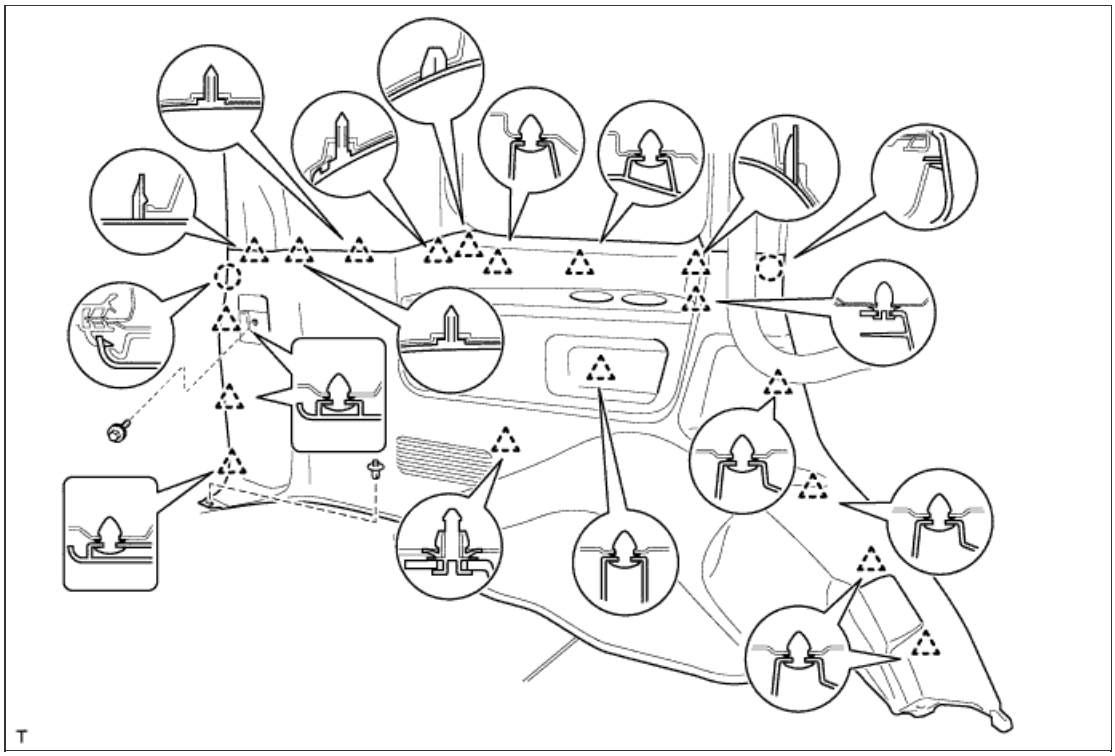
b. Engage the 4 claws and install the power outlet socket bezel.

3. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY LH

HINT:

When installing the front quarter trim panel, operate the reclining adjuster release handle and move the No. 1 rear seat to the position shown in the illustration.

a. w/ Rear No. 2 Seat, except Face to Face Seat Type:

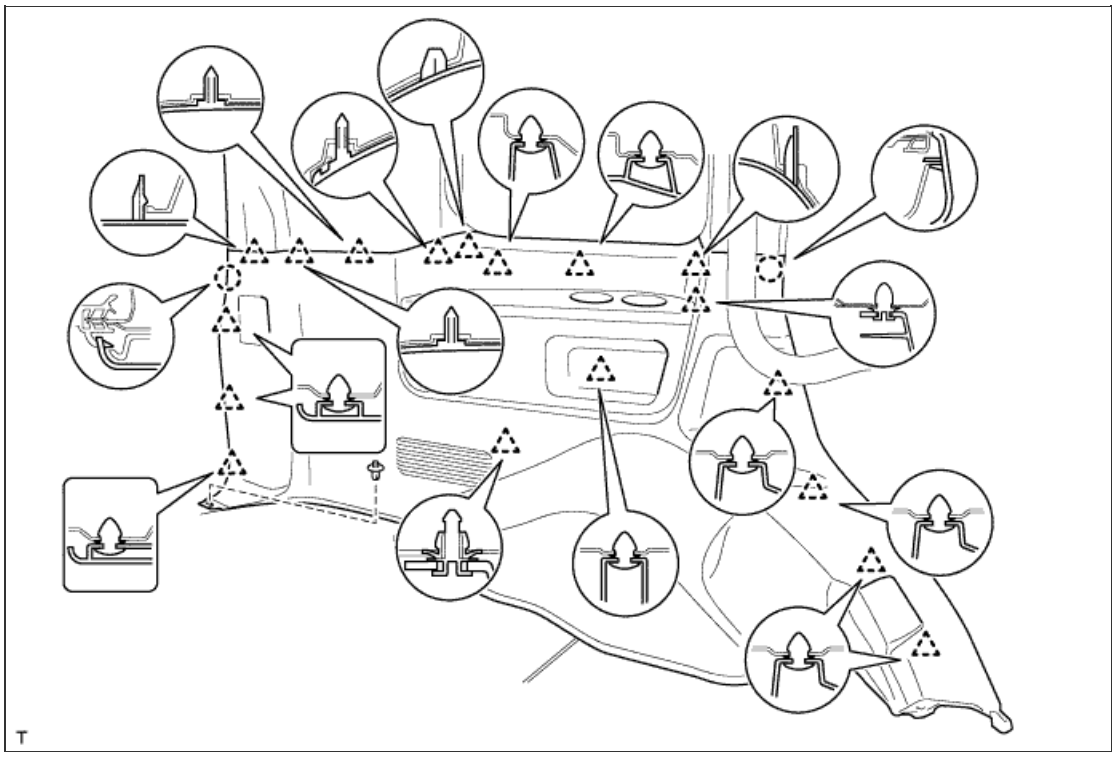


i. w/o Rear Air Conditioning System:
Connect the rear seat lock control lever cable.

ii. w/ Rear Air Conditioning System:
Connect the thermistor connector and rear seat lock control lever cable.

iii. Attach the 18 clips and 2 claws to install the quarter trim panel.

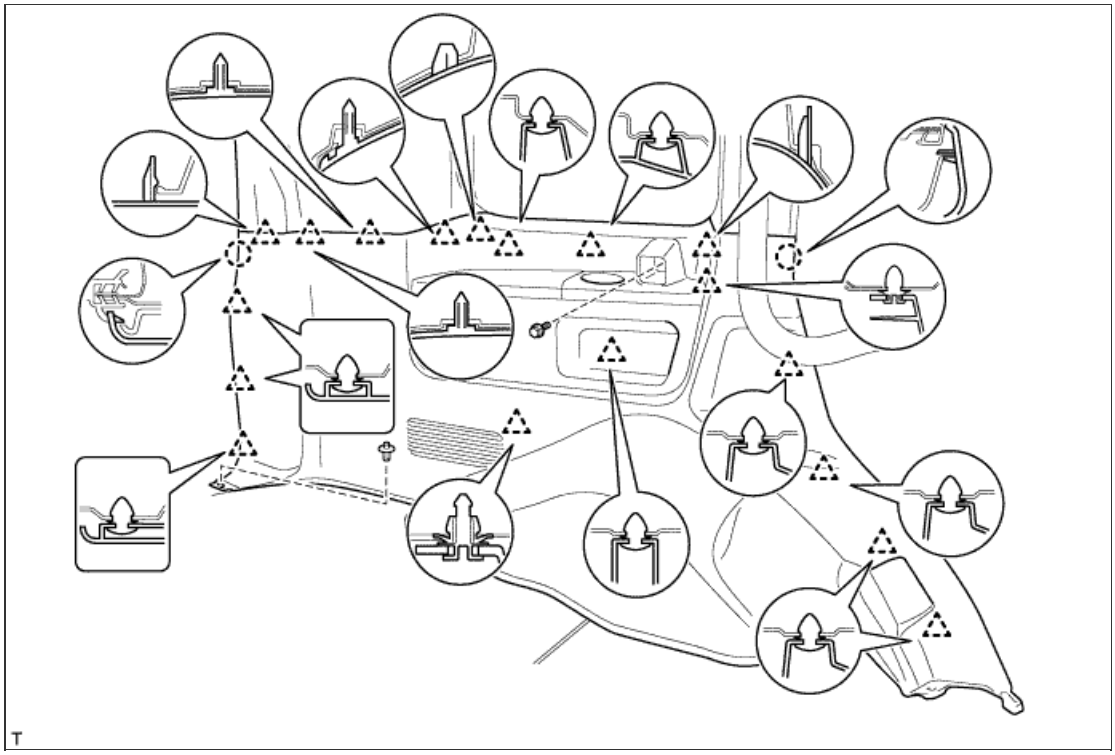
iv. Install the clip and bolt.



Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

b. w/o ear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat Type:

i. Attach the 18 clips and 2 claws to install the quarter trim panel.

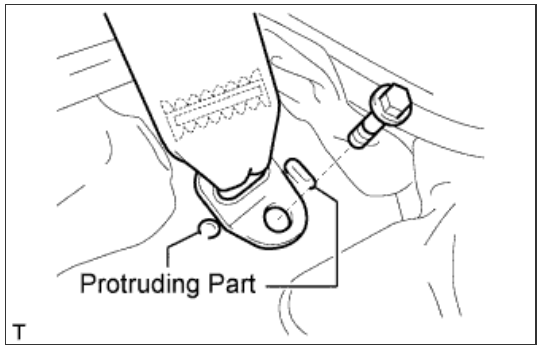


ii. Install the clip.

c. w/ Tonneau Cover:

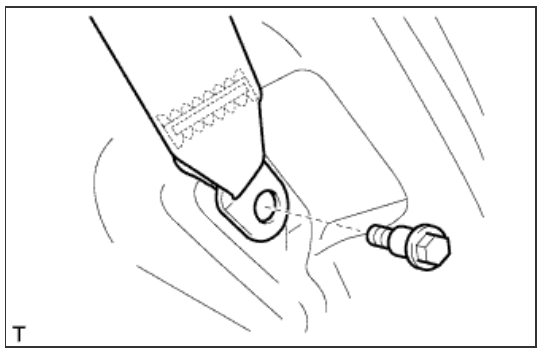
i. Attach the 18 clips and 2 claws to install the quarter trim panel.

ii. Install the screw and clip.



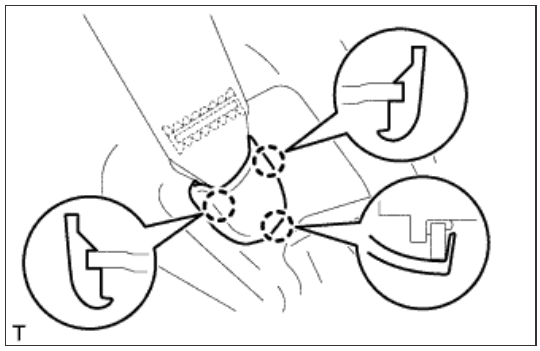
d. w/ Rear No. 2 Seat, except Face to Face Seat Type:
Install the rear No. 2 seat belt anchor with the bolt.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }



NOTICE:

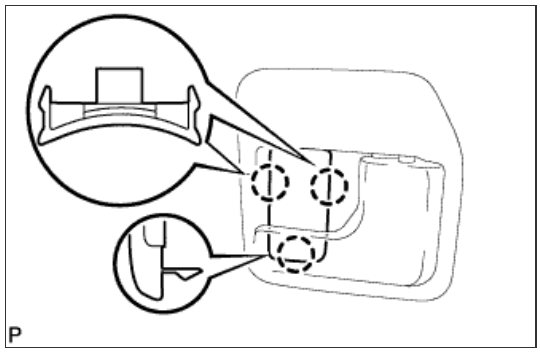
Do not overlap the anchor part of the seat belt and protruding parts of the vehicle body.



e. Install the rear No. 1 seat belt anchor with the bolt.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }

f. Attach the 3 claws to install the cover.

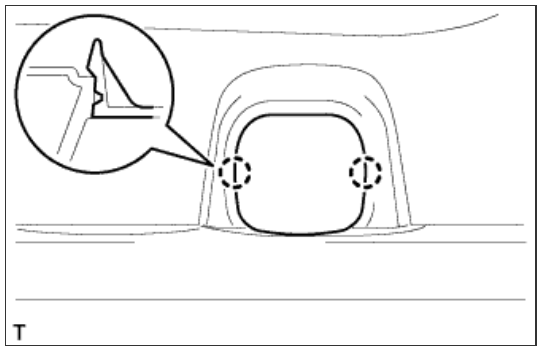


4. INSTALL REAR SEAT COVER CAP RH (except Face to Face Seat Type)

HINT:

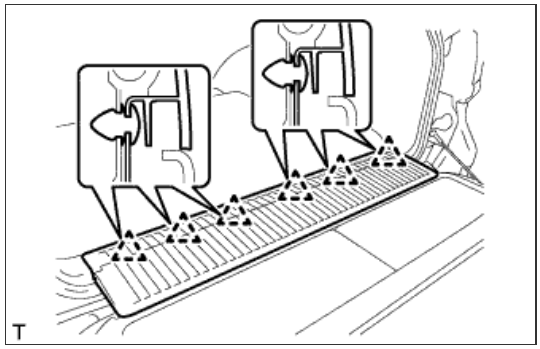
Use the same procedure to install the rear seat cover cap on the other side.

a. Attach the 3 claws to install the rear seat cover cap.



5. INSTALL NO. 1 TONNEAU COVER HOLDER CAP (w/ Tonneau Cover)

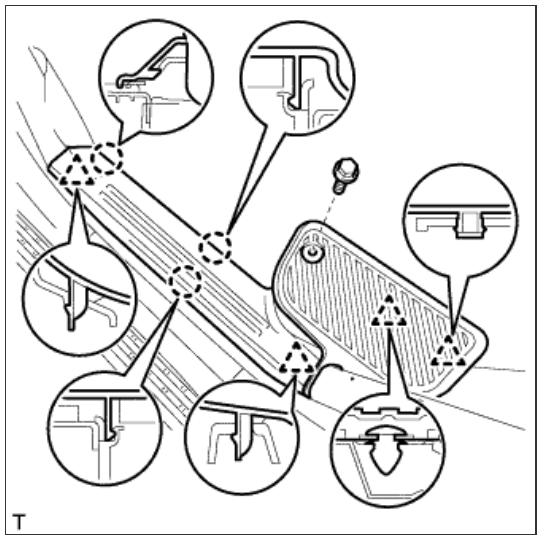
HINT:



Use the same procedure to install the tonneau cover holder cap on the other side.

a. Attach the 2 claws to install the tonneau cover holder cap.

6. INSTALL REAR FLOOR MAT REAR SUPPORT PLATE

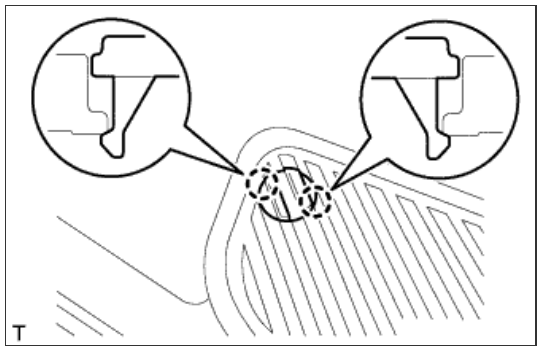


a. Attach the 6 clips to install the support plate.

7. INSTALL REAR DOOR SCUFF PLATE LH

a. Attach the 3 claws and 4 clips to install the scuff plate.

b. Install the screw.



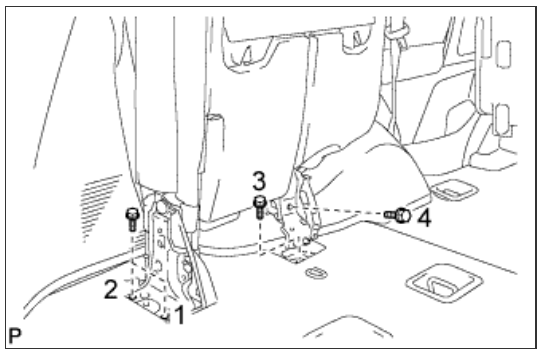
8. INSTALL REAR STEP COVER

HINT:

Use the same procedure to install the step cover on the other side.

a. Attach the 2 claws to install the step cover.

9. INSTALL REAR NO. 2 SEAT ASSEMBLY (except Face to Face Seat Type)



a. Temporarily install the seat assembly with the 4 bolts.

NOTICE:

Be careful not to damage the vehicle body.

b. Tighten the bolts in the order shown in the illustration.

Torque:
37 N*m{ 377 kgf*cm , 27 ft.*lbf }

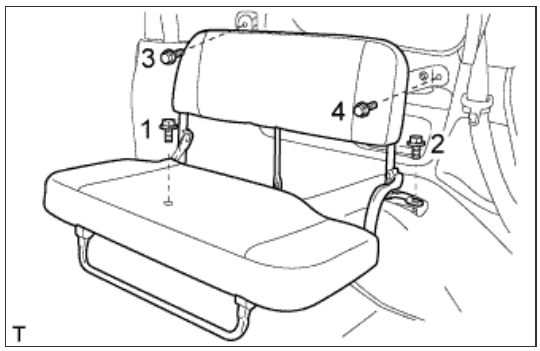
10. INSTALL REAR NO. 2 SEAT HINGE COVER LH (except Face to Face Seat Type)

a. Attach the clip and 2 claws to install the cover.

11. INSTALL REAR SEAT CUSHION HINGE COVER LH (except Face to Face Seat Type)

a. Attach the 3 claws to install the cover.

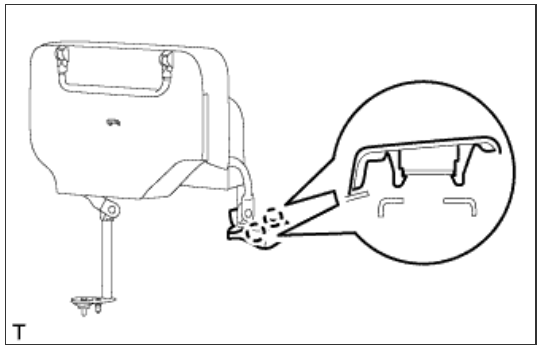
b. Return the seat to the upright position.



12. INSTALL REAR NO. 2 SEAT HEADREST ASSEMBLY LH (w/ Rear Center Seat Headrest)

13. INSTALL REAR NO. 2 SEAT ASSEMBLY (for Face to Face Seat Type)

a. Temporarily install the rear No. 2 seat with the 4 bolts.



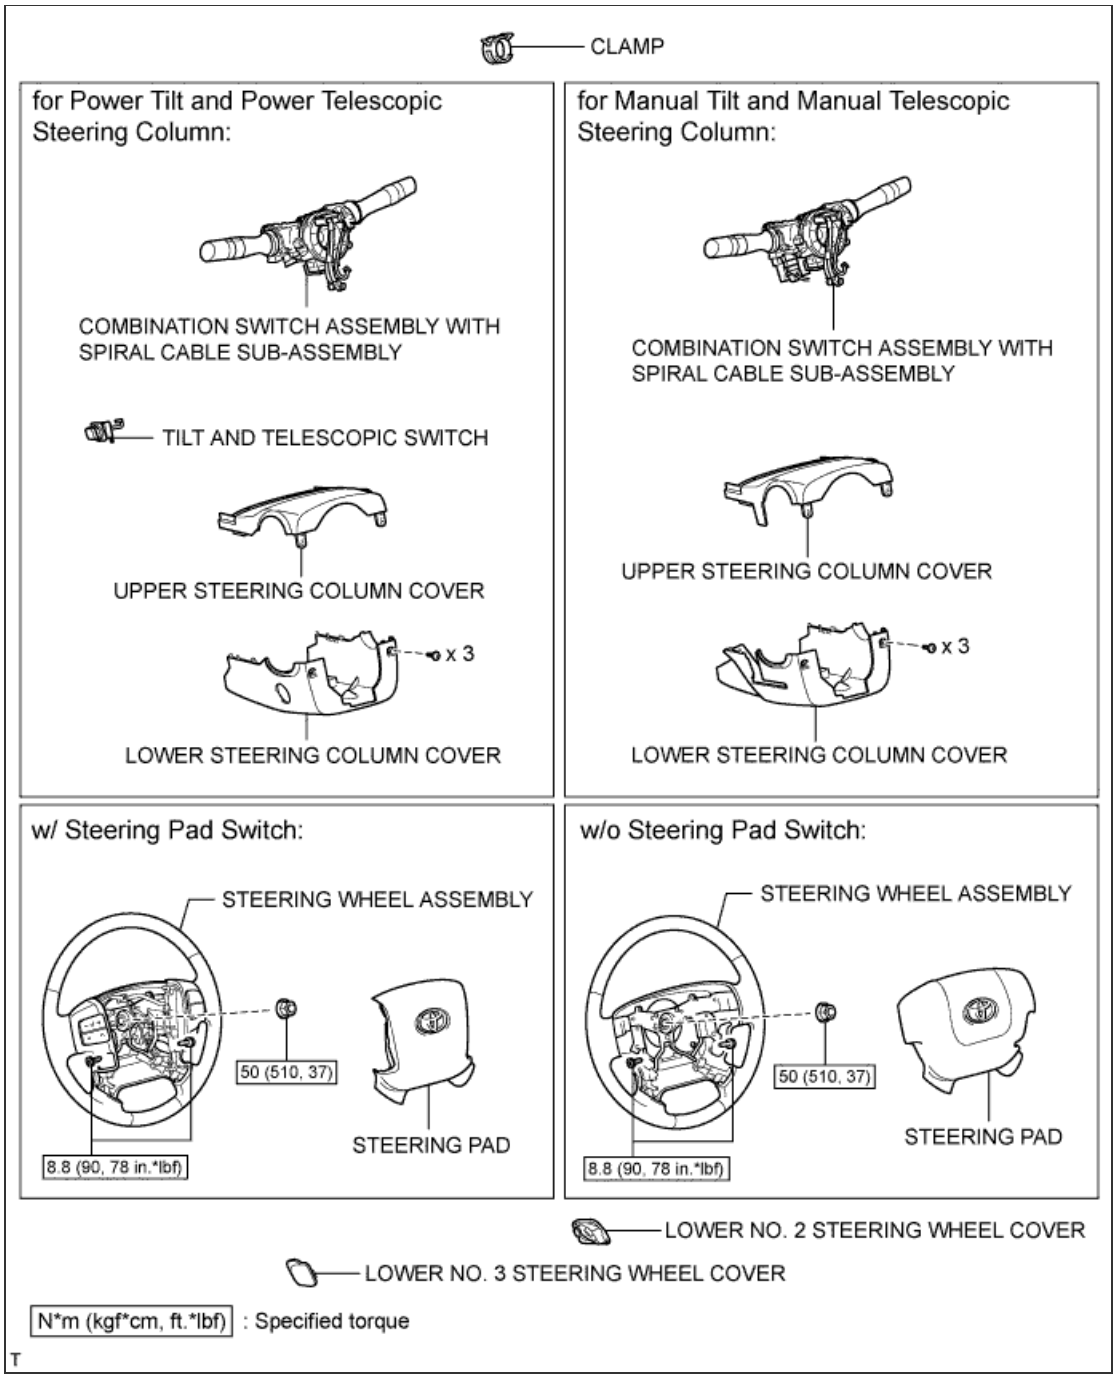
b. Tighten the bolts in the order shown in the illustration.

Torque:
37 N*m{ 377 kgf*cm , 27 ft.*lbf }

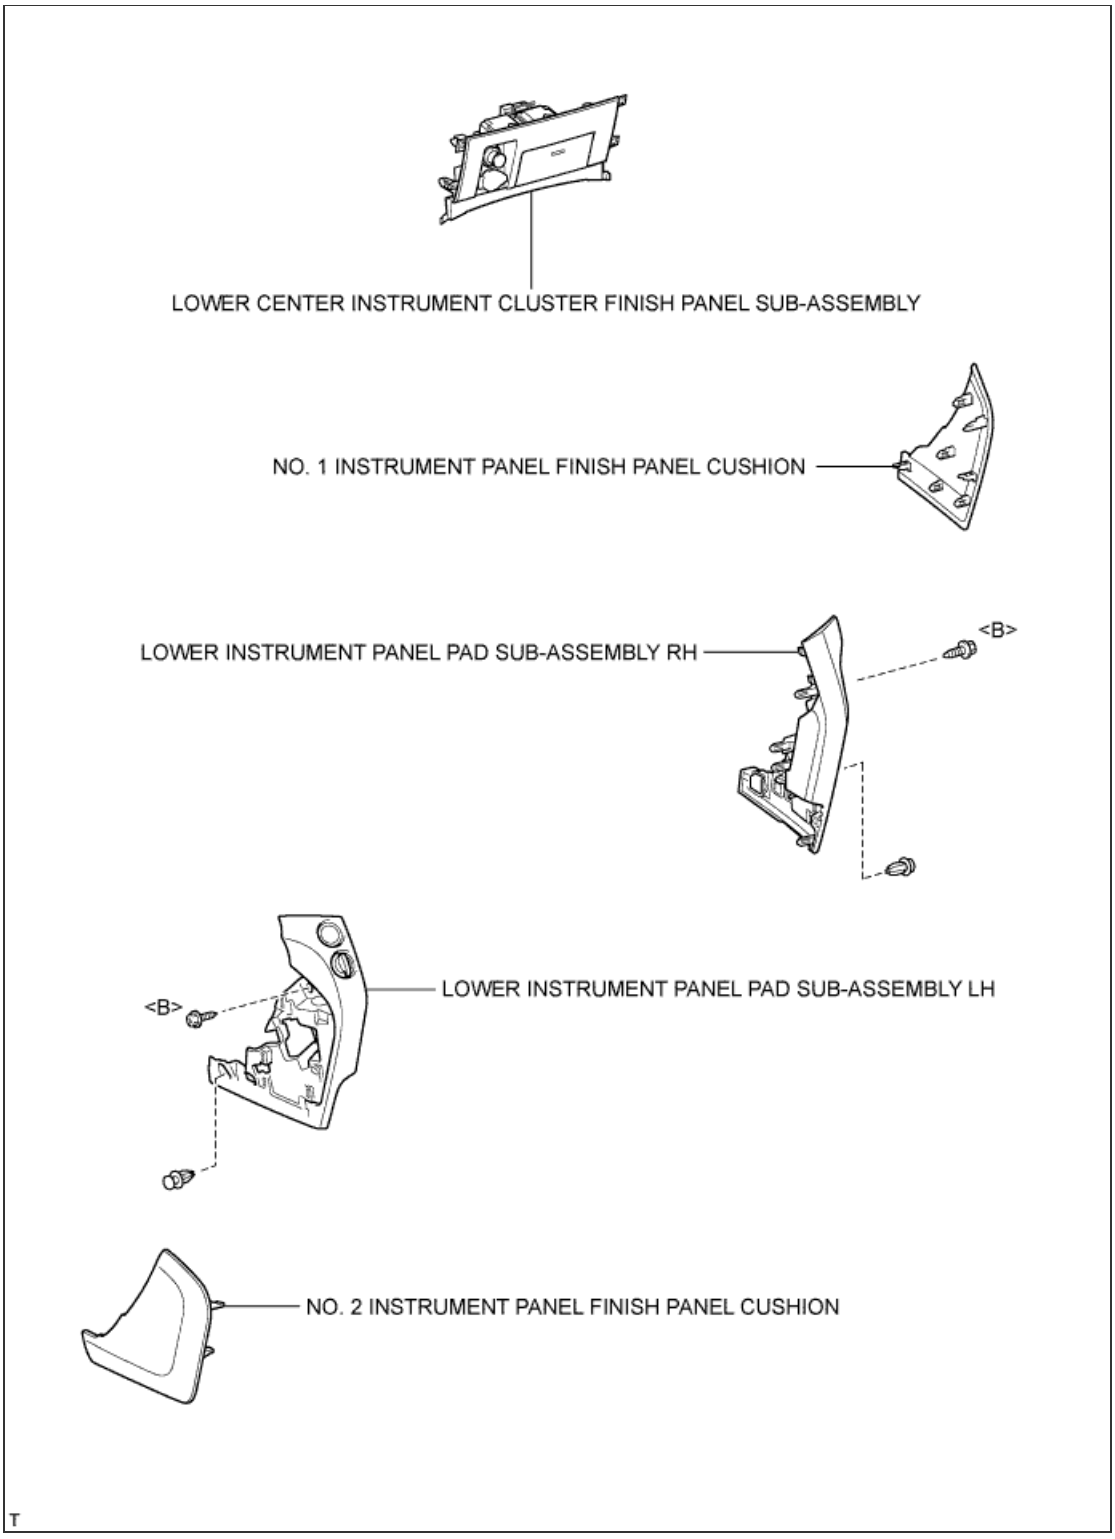
14. INSTALL REAR SIDE SEAT LEG PROTECTOR LH (for Face to Face Seat Type)

a. Attach the 2 claws to install the protector.

15. INSTALL TONNEAU COVER ASSEMBLY (w/ Tonneau Cover)



a. Install the tonneau cover assembly.



for Preparation Click here

1. TABLE OF BOLT, SCREW AND NUT

HINT:

All bolts, screws and nuts relevant to installing and removing the instrument panel are shown along with their alphabet code in the table below.

mm (in.) (L = Length)

Code	Shape	Code	Shape	Code	Shape
<A>	 φ 6 (0.236) L=16 (0.630)	<B>	 φ 5 (0.197) L=18 (0.709)	<C>	 φ 6 (0.236) L=22 (0.866)
<D>	 φ 5 (0.197) L=15 (0.59)	<E>	 φ 6 (0.236)	<F>	 φ 8 (0.315) L=20 (0.787)

2. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM (w/ Cool Box)

a. Start the engine.

b. Turn the A/C switch on.

c. Operate the cooler compressor while the engine speed is approximately 1000 rpm for 5 to 6 minutes to circulate the refrigerant and collect the compressor oil remaining in each component into the cooler compressor.

d. Stop the engine.

e. Recover the refrigerant from the A/C system using a refrigerant recovery unit.

3. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

a. for Power Tilt and Power Telescopic:

i. Disable the Autoaway/Return function by changing the customize parameter (Click here).

NOTICE:

Record the current customize parameter setting (whether the Autoaway/Return function is enabled or disabled) in order to restore the current setting after finishing the operation.

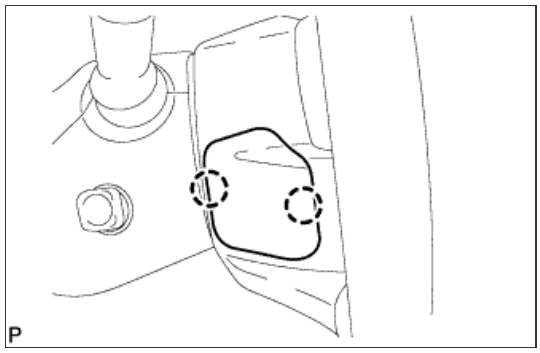
HINT:

Performing the above operation causes the Autoaway/Return function to be disabled when the engine switch is turned off.

ii. Turn the engine switch on (IG). Operate the tilt and telescopic switch to fully extend and lower the steering column.

b. Turn the engine switch off and disconnect the cable from the negative (-) battery terminal.

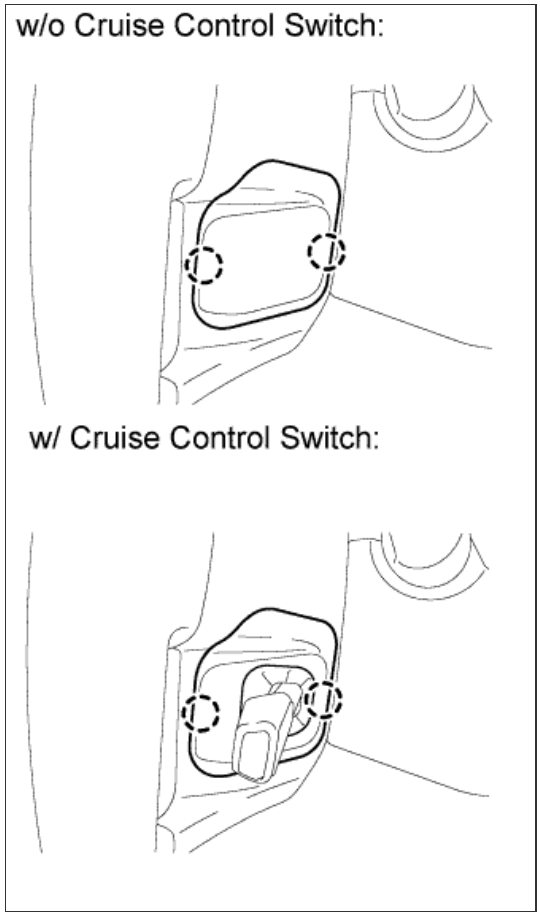
CAUTION:



Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

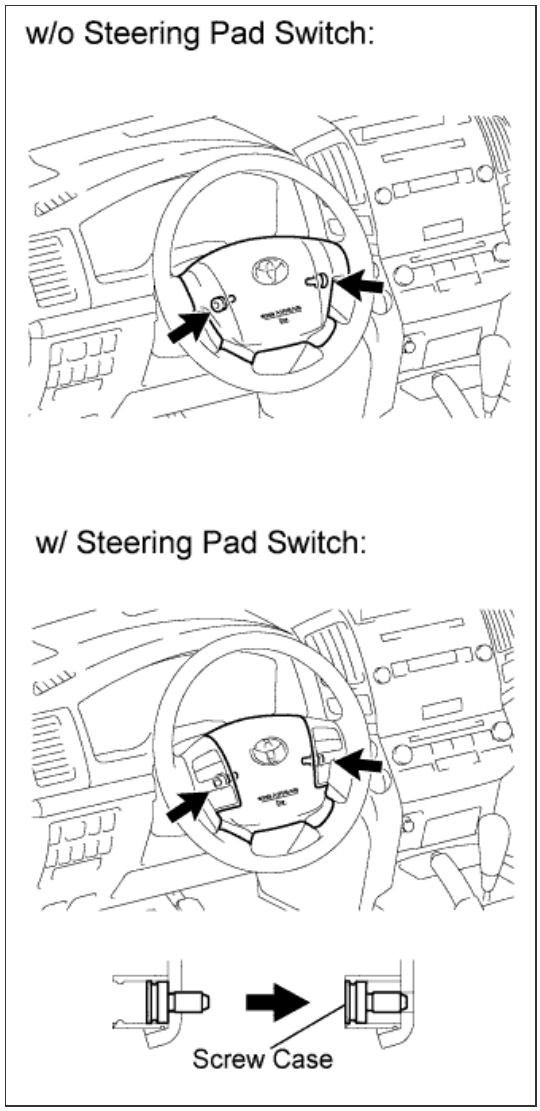
When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).



4. REMOVE LOWER NO. 3 STEERING WHEEL COVER

a. Detach the 2 claws and remove the steering wheel cover.

5. REMOVE LOWER NO. 2 STEERING WHEEL COVER



a. Detach the 2 claws and remove the steering wheel cover.

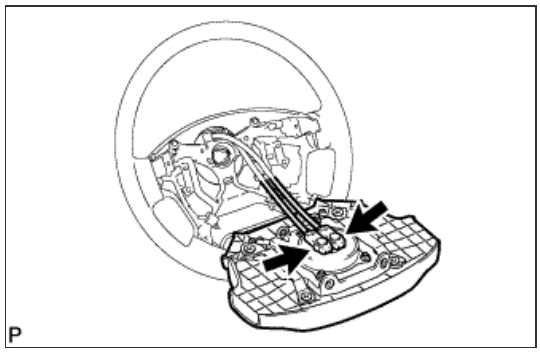
6. REMOVE STEERING PAD

a. Using a T30 "TORX" socket wrench, loosen the 2 screws until the groove along

the screw circumference catches on the screw case.

b. Pull out the steering pad from the steering wheel, as shown in the illustration. Then support the steering pad with one hand.

NOTICE:



When removing the steering pad, do not pull the airbag wire harness.

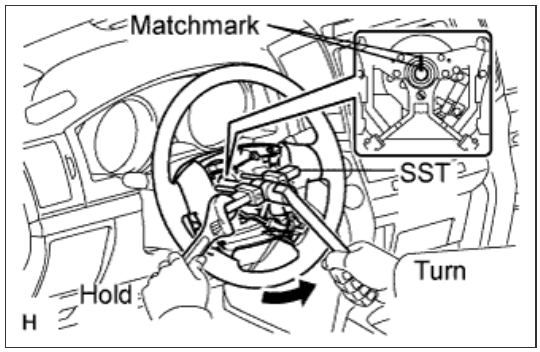
c. Disconnect the horn connector.

d. Disconnect the 2 connectors and remove the steering pad.

NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

7. REMOVE STEERING WHEEL ASSEMBLY



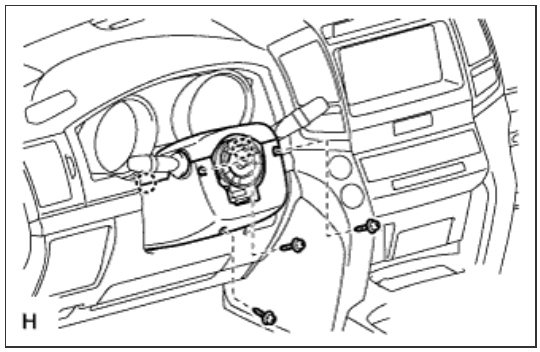
a. Remove the steering wheel set nut.

b. Put matchmarks on the steering wheel and main shaft.

c. Using SST, remove the steering wheel assembly.

SST

09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05011)



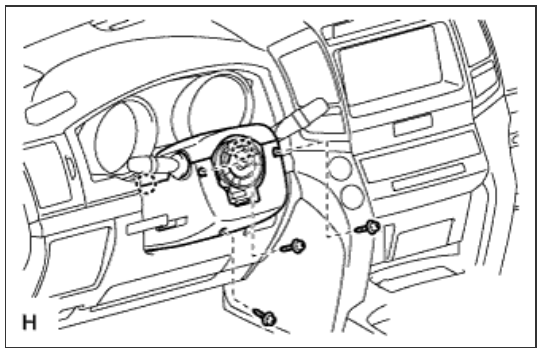
8. REMOVE LOWER STEERING COLUMN COVER (for Power Tilt and Power Telescopic Steering Column)

a. Remove the 3 screws.

b. Detach the 2 claws to remove the lower steering column cover.

NOTICE:

Do not damage the tilt and telescopic switch.

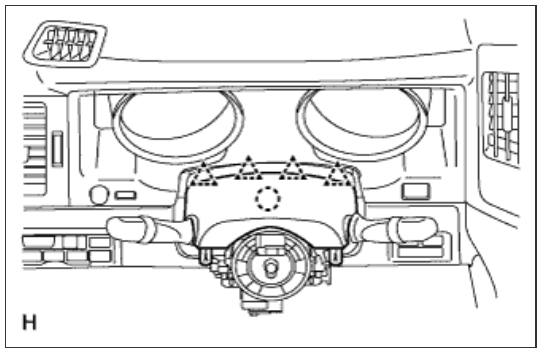


9. REMOVE LOWER STEERING COLUMN COVER (for Manual Tilt and Manual Telescopic Steering Column)

a. Remove the 3 screws.

b. Detach the 2 claws to remove the lower steering column cover.

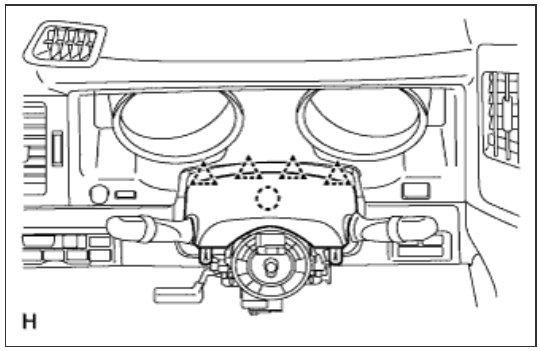
NOTICE:



Do not damage the tilt and telescopic switch.

10. REMOVE UPPER STEERING COLUMN COVER (for Power Tilt and Power Telescopic Steering Column)

a. Detach the 4 clips.



b. Detach the claw to remove the upper steering column cover.

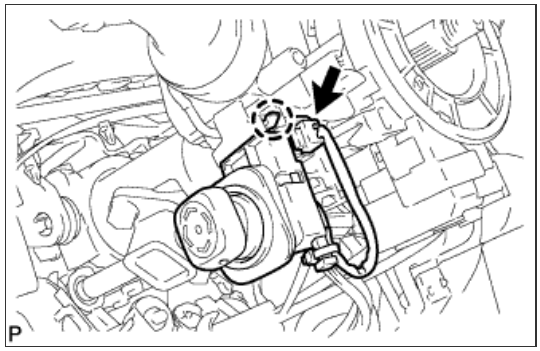
11. REMOVE UPPER STEERING COLUMN COVER (for Manual Tilt and Manual Telescopic Steering Column)

a. Detach the 4 clips.

b. Detach the claw to remove the upper steering column cover.

12. REMOVE TILT AND TELESCOPIC SWITCH (for Power Tilt and Power Telescopic Steering Column)

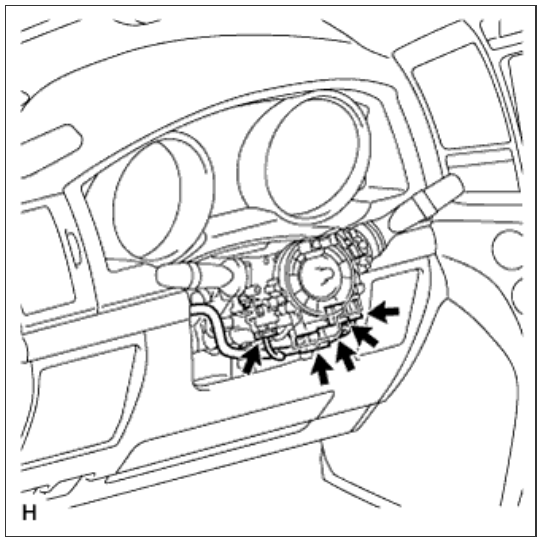
a. Disconnect the switch connector.



b. Using a screwdriver, detach the claw and pull out the switch.

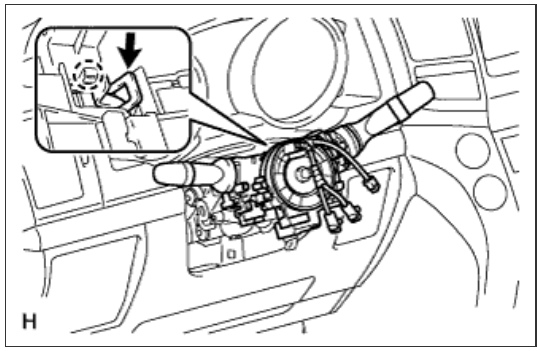
NOTICE:

Pushing on the claw too hard will break the claw.



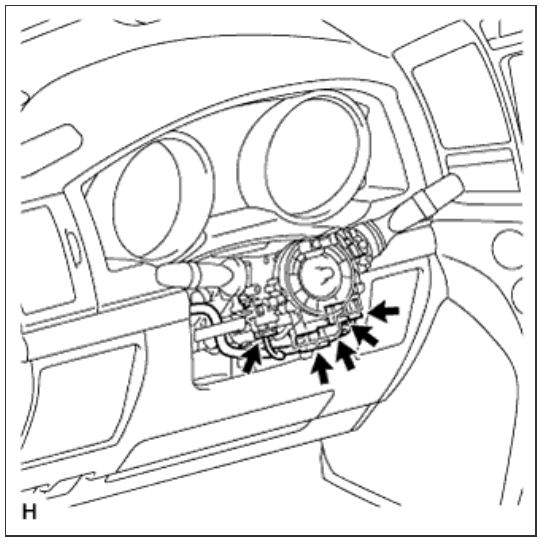
HINT:

Tape the screwdriver tip before use.

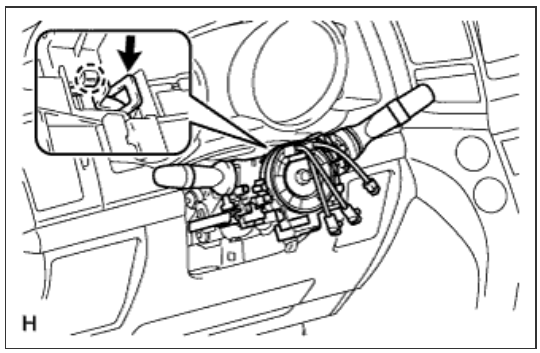


13. REMOVE COMBINATION SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (for Power Tilt and Power Telescopic Steering Column)

a. Disconnect the 5 connectors from the turn signal switch with spiral cable.



b. Using pliers, grip the claws of the clamp and remove the turn signal switch with spiral cable from the steering column.



14. REMOVE COMBINATION SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (for Manual Tilt and Manual Telescopic Steering Column)

a. Disconnect the 5 connectors from the combination switch with spiral cable.

b. Using pliers, grip the claws of the clamp and remove the combination switch with spiral cable from the steering column.

15. REMOVE FRONT SEAT ASSEMBLY LH (for Power Seat)

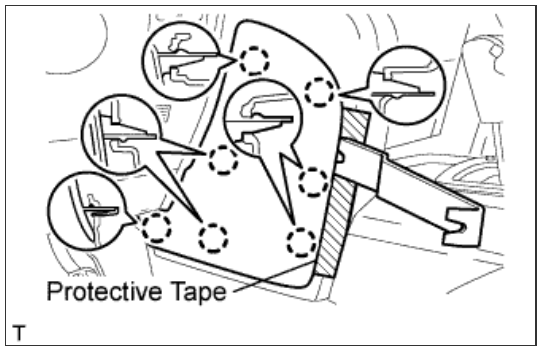
a. Remove the front seat assembly LH (Click here).

16. REMOVE FRONT SEAT ASSEMBLY LH (for Manual Seat)

a. Remove the front seat assembly LH (Click here).

17. REMOVE FRONT SEAT ASSEMBLY RH (for Power Seat)

a. Remove the front seat assembly RH (Click here).



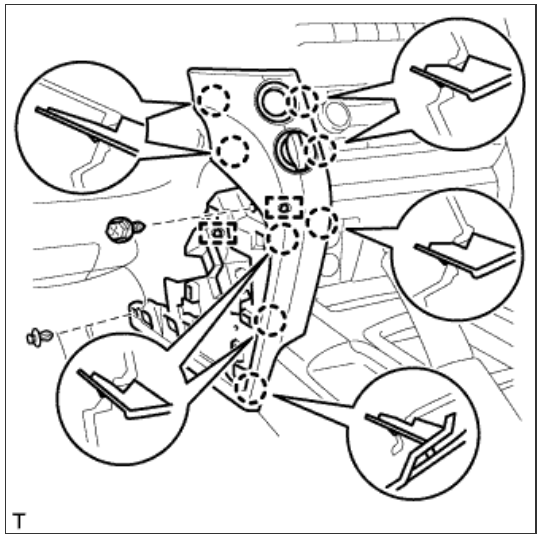
18. REMOVE FRONT SEAT ASSEMBLY RH (for Manual Seat)

a. Remove the front seat assembly RH (Click here).

19. REMOVE NO. 2 INSTRUMENT PANEL FINISH PANEL CUSHION

a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 7 claws and remove the panel cushion.



20. REMOVE LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

a. Remove the clip.

b. Remove the screw.

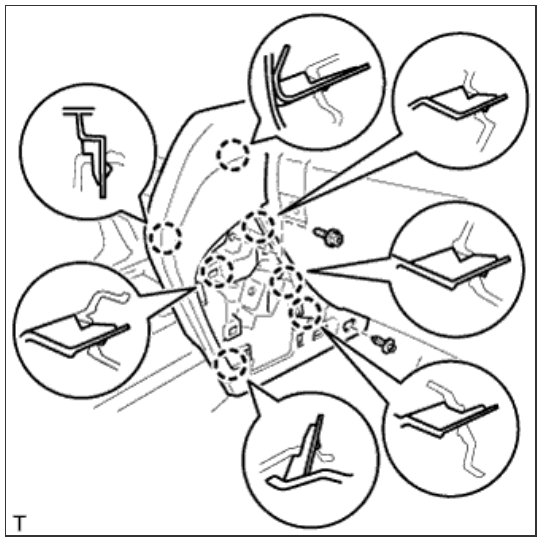
c. Detach the 8 claws.

d. Remove the panel pad and disconnect the connectors and 2 clamps.

21. REMOVE NO. 1 INSTRUMENT PANEL FINISH PANEL CUSHION

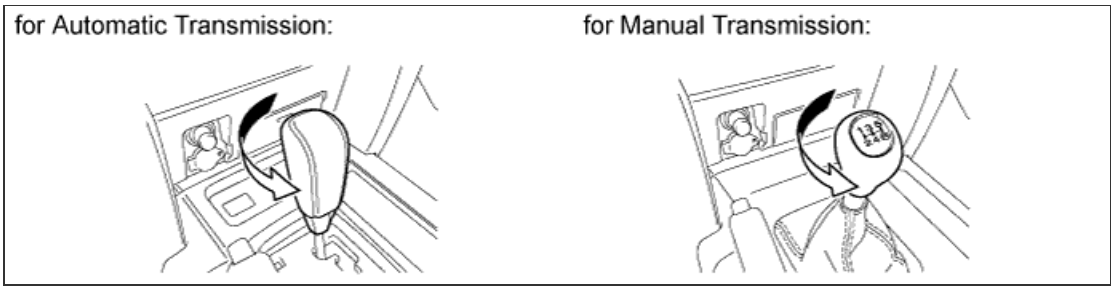
a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 7 claws and remove the panel cushion.



22. REMOVE LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY RH

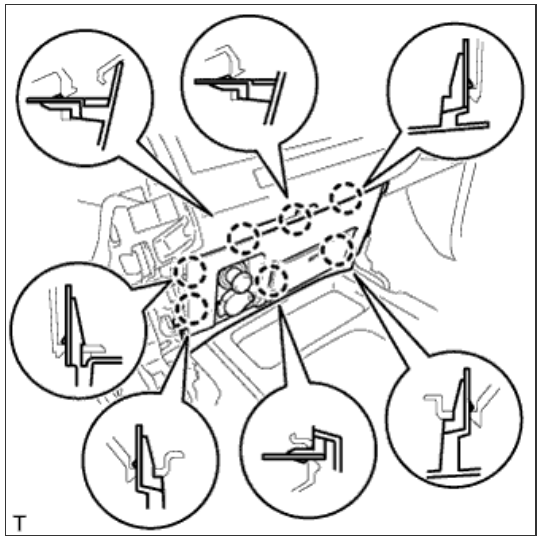
a. Remove the clip.



b. Remove the screw.

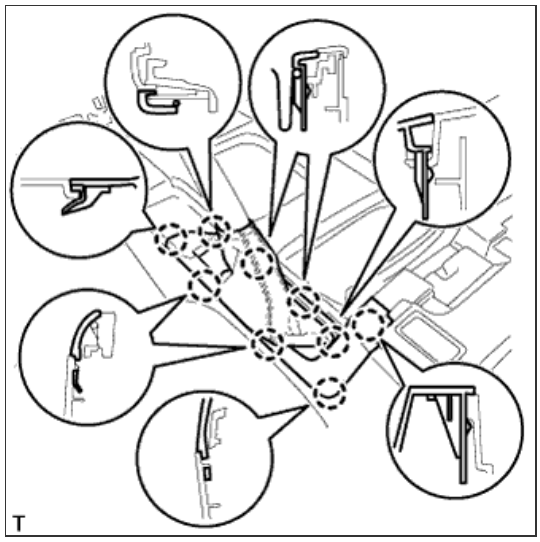
c. Detach the 7 claws and remove the panel.

23. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY



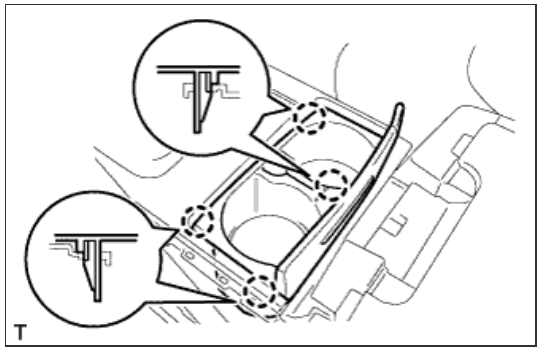
a. Twist the shift lever knob in the direction indicated by the arrow and remove it.

24. REMOVE LOWER CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY



a. Detach the 7 claws.

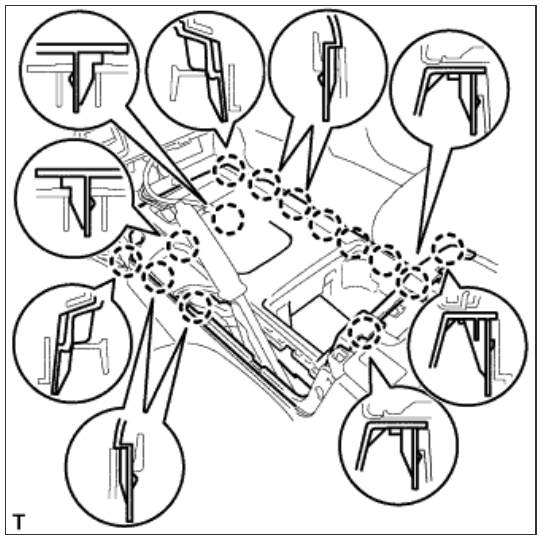
b. Disconnect the connectors and remove the panel.



25. REMOVE REAR UPPER CONSOLE PANEL SUB-ASSEMBLY

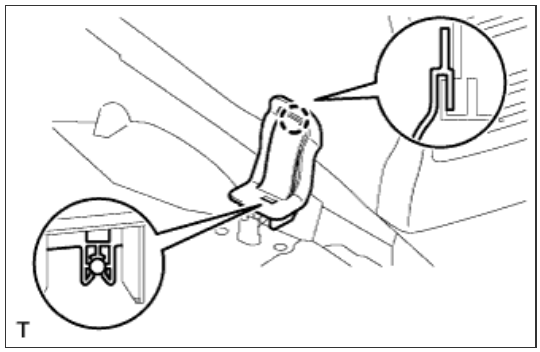
a. Detach the 9 claws and remove the panel.

26. REMOVE CONSOLE CUP HOLDER BOX SUB-ASSEMBLY



a. Detach the 4 claws and remove the box.

27. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY

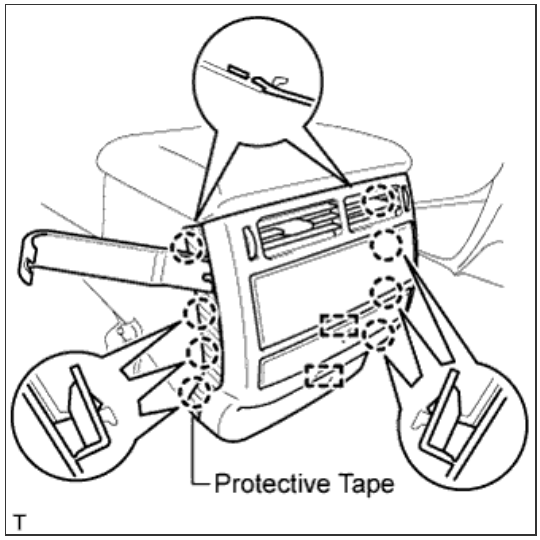


a. Detach the 14 claws.

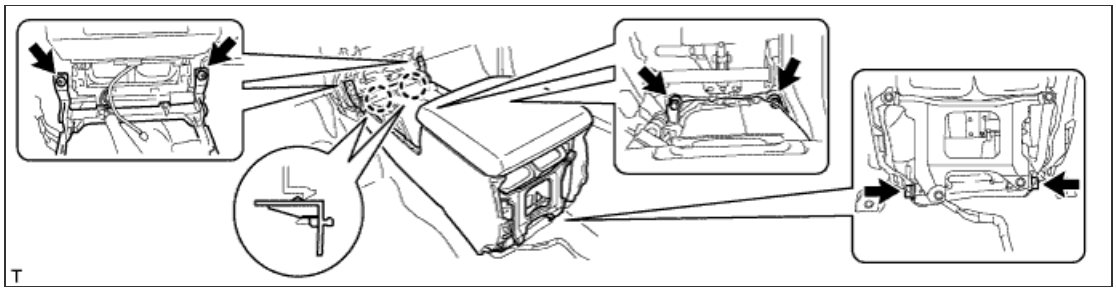
b. Disconnect the connectors and remove the console panel.

28. REMOVE NO. 1 COOLER COVER (w/ Cool Box)

a. Detach the clamp on the lower part of the cooler cover, and then pull the cooler cover upward to remove it.



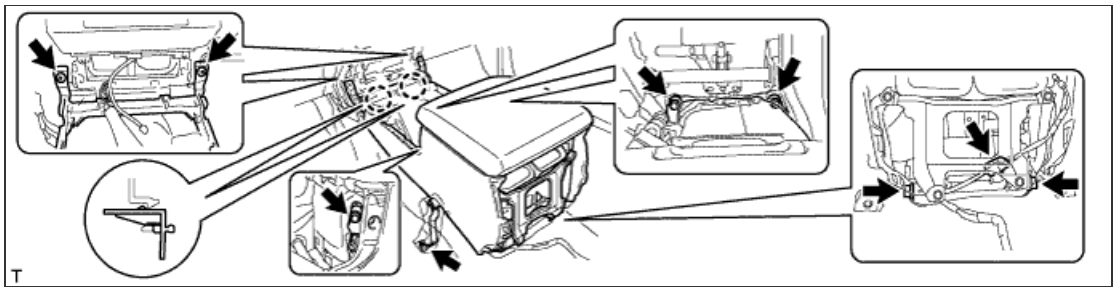
29. REMOVE REAR CONSOLE END PANEL SUB-ASSEMBLY



a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 8 claws.

c. Remove the end panel and disconnect the connectors and 2 clamps.



30. REMOVE REAR CONSOLE BOX SUB-ASSEMBLY (w/o Cool Box)

a. Remove the 4 bolts and 2 screws.

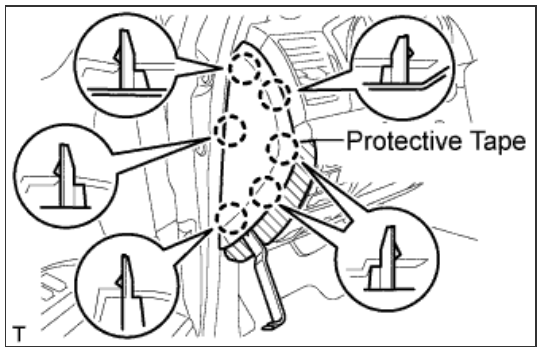
b. Detach the 2 claws and remove the console box.

31. REMOVE COOLING BOX ASSEMBLY (w/ Cool Box)

a. Remove the 4 bolts and 2 screws.

b. Remove the 2 bolts and disconnect the 2 cooler pipes.

c. Remove the 2 O-rings from the cooler pipes.

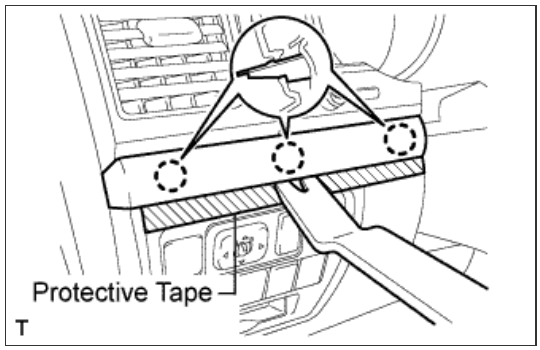


d. Disconnect the connector.

e. Detach the 2 claws and remove the cooling box.

32. REMOVE INSTRUMENT SIDE PANEL LH

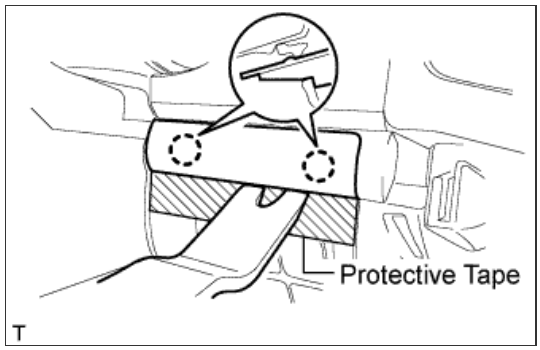
a. Place protective tape as shown in the illustration.



b. Using a moulding remover, detach the 6 claws and remove the side panel.

33. REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH

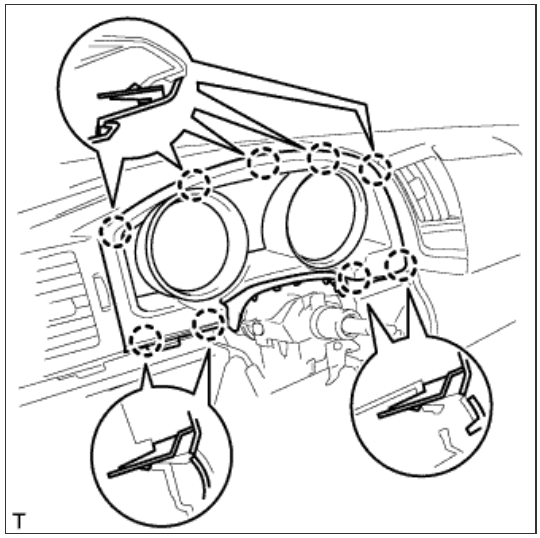
a. Place protective tape as shown in the illustration.



b. Using a moulding remover, detach the 3 claws and remove the panel garnish.

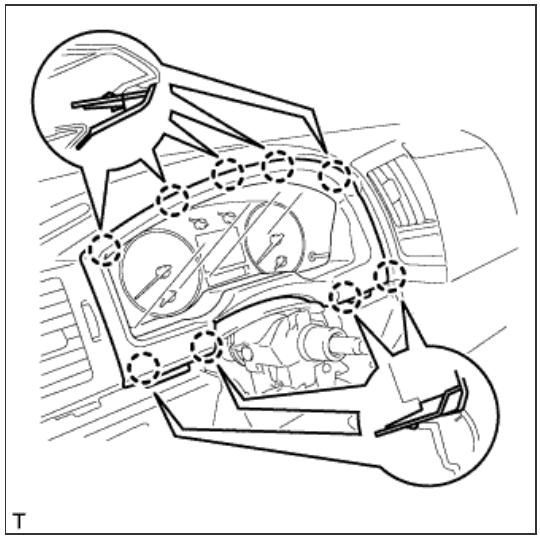
34. REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Place protective tape as shown in the illustration.



b. Using a moulding remover, detach the 2 claws and remove the panel garnish.

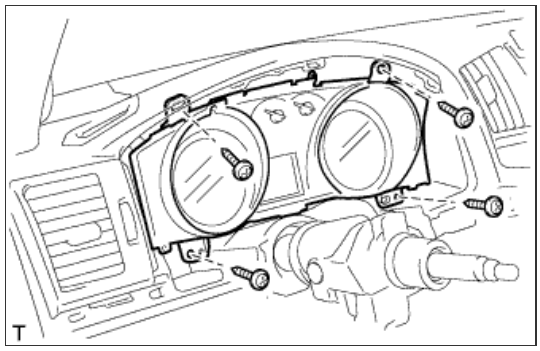
35. REMOVE INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (w/ Multi-information Display)



a. Detach the 9 claws.

b. Remove the finish panel and then disconnect the connector.

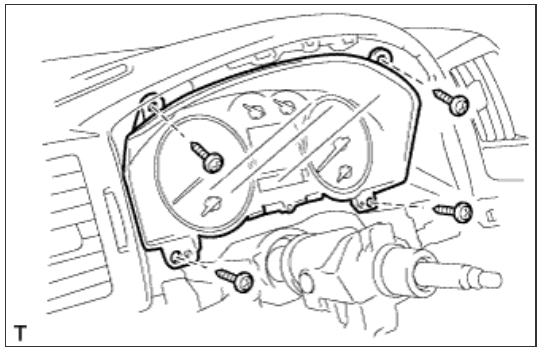
36. REMOVE INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (w/o Multi-information Display)



a. Detach the 9 claws remove the finish panel.

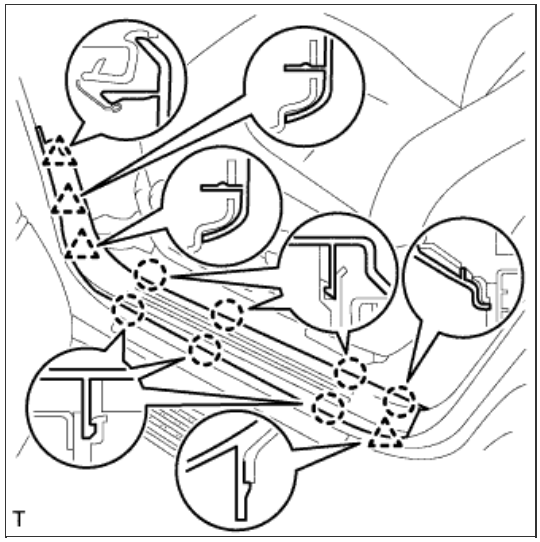
37. REMOVE COMBINATION METER ASSEMBLY (w/ Multi-information Display)

a. Remove the 4 screws.



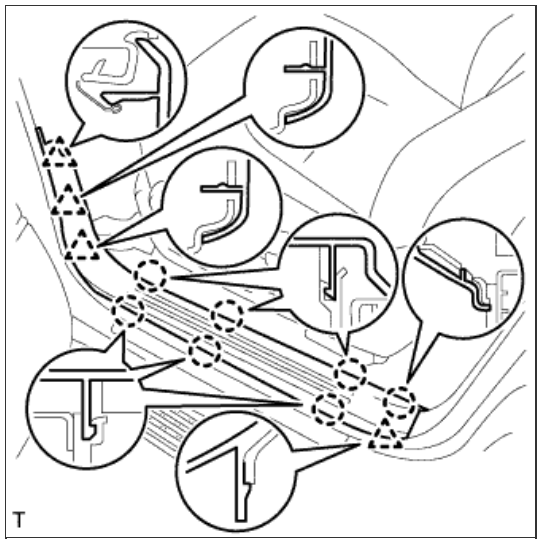
b. Disconnect the connectors and remove the combination meter.

38. REMOVE COMBINATION METER ASSEMBLY (w/o Multi-information Display)



a. Remove the 4 screws.

b. Disconnect the connectors and remove the combination meter.

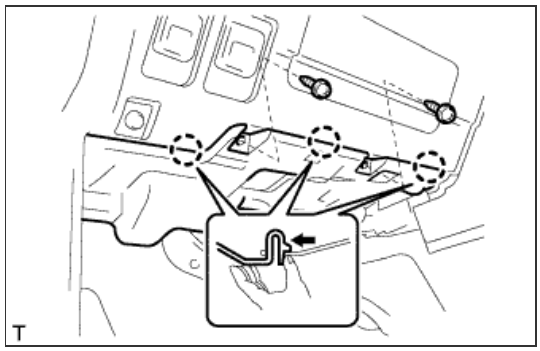


39. REMOVE FRONT DOOR SCUFF PLATE LH (w/o Sliding Roof)

a. Detach the 7 claws and 4 clips, and remove the scuff plate.

40. REMOVE FRONT DOOR SCUFF PLATE LH (w/ Sliding Roof)

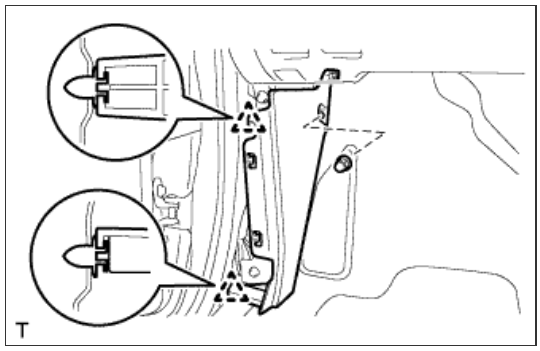
a. Detach the 7 claws and 4 clips, and remove the scuff plate.



41. REMOVE NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Floor Under Cover)

a. Remove the 2 screws.

b. Detach the 3 claws.

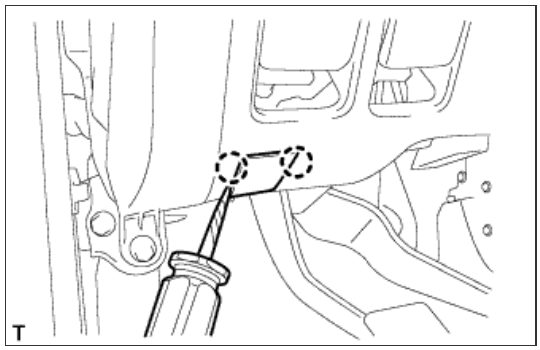


c. Remove the under cover and disconnect the connectors.

42. REMOVE COWL SIDE TRIM BOARD LH

a. Remove the cap nut.

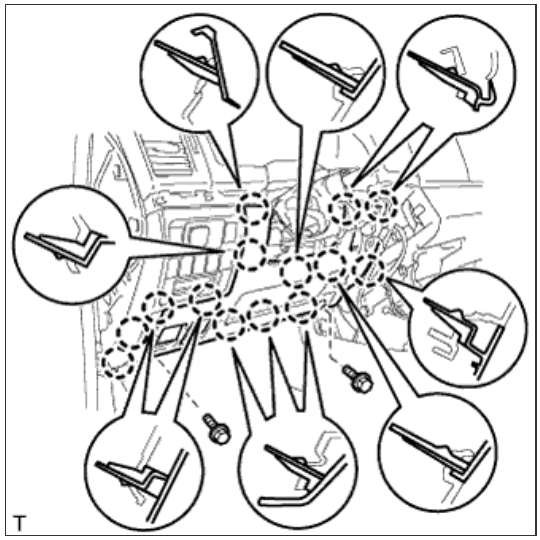
b. Detach the 2 clips and remove the trim board.



43. REMOVE LOWER NO. 1 INSTRUMENT PANEL FINISH PANEL

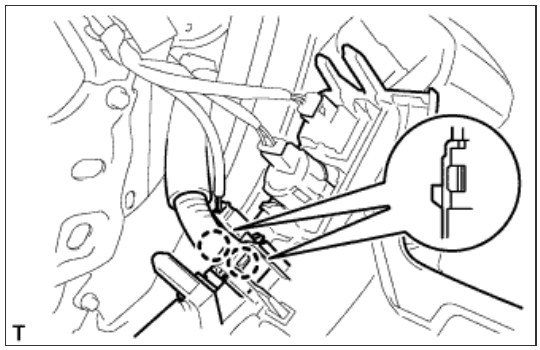
a. Using a screwdriver, detach the 2 claws.

HINT:



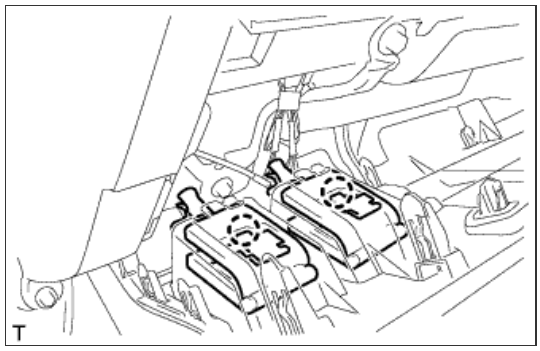
Tape the screwdriver tip before use.

b. Open the hole cover.



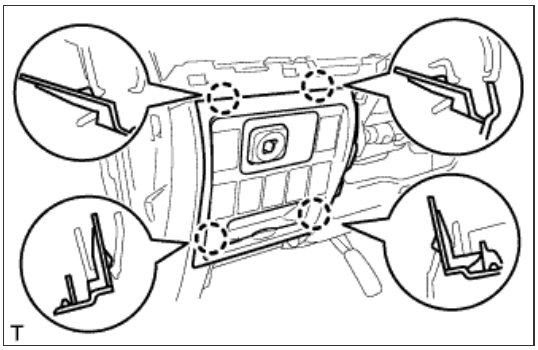
c. Remove the 2 bolts.

d. Detach the 14 claws.



e. Detach the 2 claws and remove the sensor.

f. Detach the 2 claws and disconnect the 2 control cables.

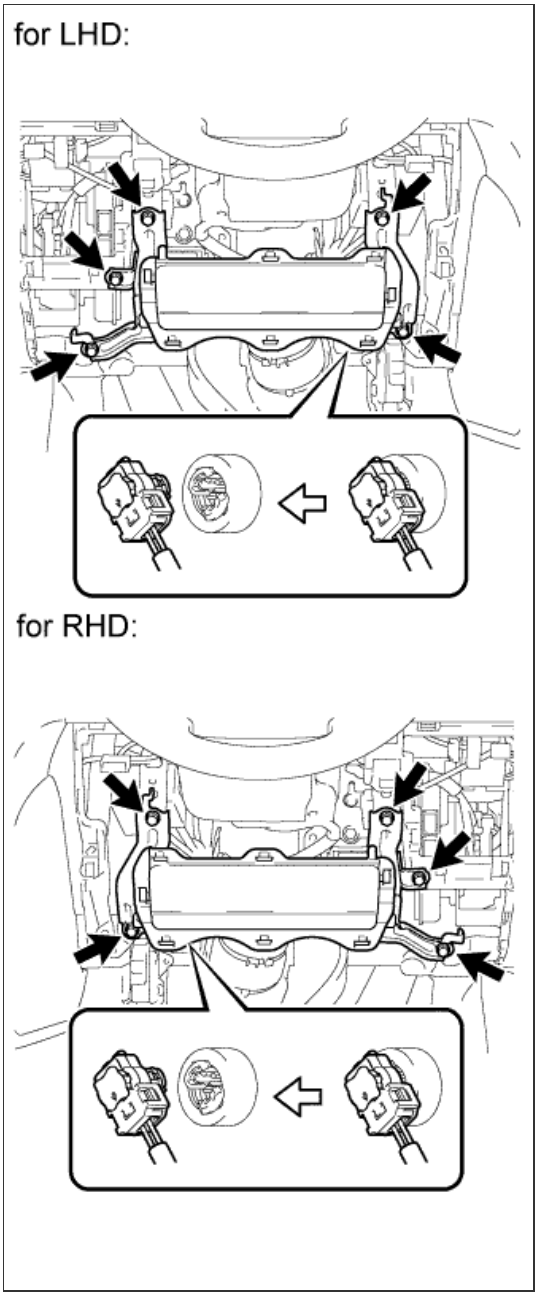


g. Remove the finish panel and then disconnect the connectors.

44. REMOVE NO. 1 SWITCH HOLE BASE

a. Detach the 4 claws.

b. Remove the switch hole base and then disconnect the connectors.

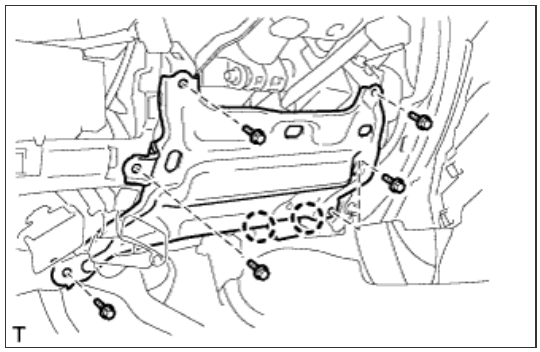


45. REMOVE DRIVER SIDE KNEE AIRBAG ASSEMBLY (w/ Driver Side Knee Airbag)

a. Remove the 5 bolts and driver side knee airbag.

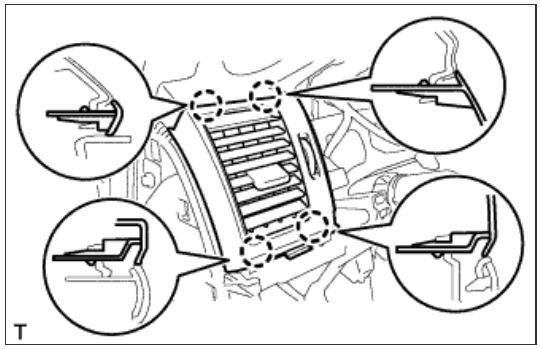
b. Disconnect the connector.

NOTICE:



When handling the airbag connector, take care not to damage the airbag wire harness.

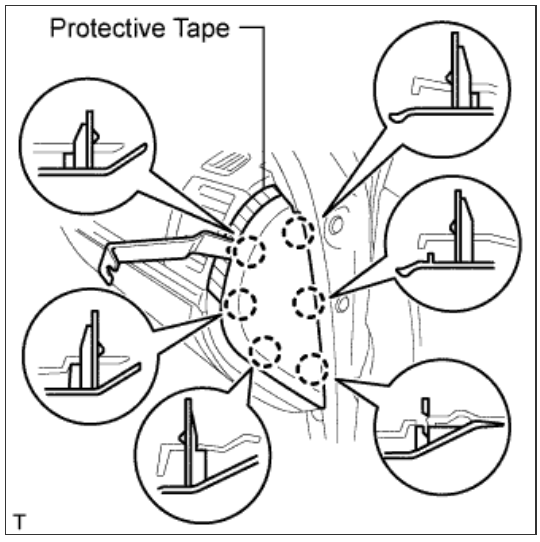
46. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (w/o Driver Side Knee Airbag)



a. Detach the 2 claws and disconnect the DLC3.

b. Remove the 5 bolts and instrument panel.

47. REMOVE NO. 1 INSTRUMENT PANEL REGISTER ASSEMBLY

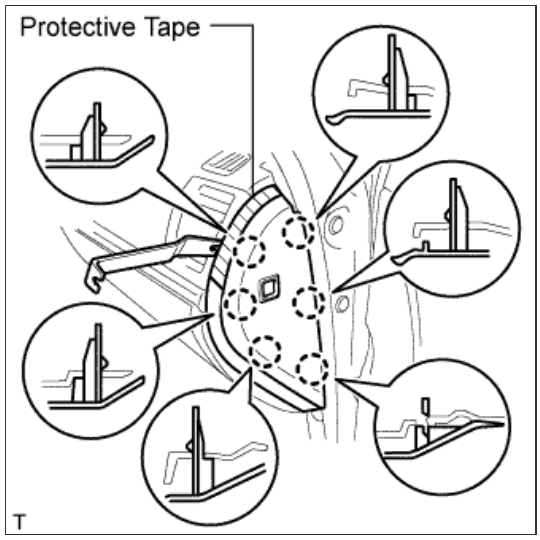


a. Detach the 4 claws and remove the register.

48. REMOVE INSTRUMENT SIDE PANEL RH (w/o Airbag Cut Off Switch)

a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 6 claws and remove the side panel.



49. REMOVE INSTRUMENT SIDE PANEL RH (w/ Airbag Cut Off Switch)

a. Place protective tape as shown in the illustration.

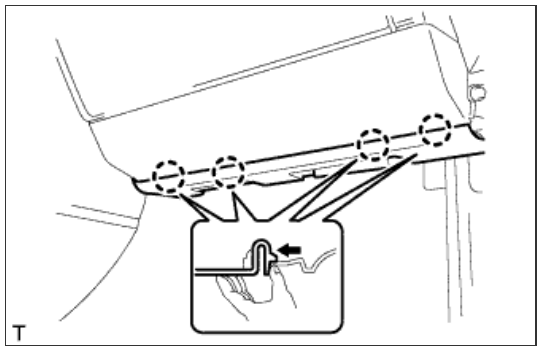
b. Using a moulding remover, detach the 6 claws.

c. Remove the side panel and disconnect the connector.

50. REMOVE FRONT DOOR SCUFF PLATE RH (w/o Sliding Roof)

HINT:

Use the same procedures described for the LH side.

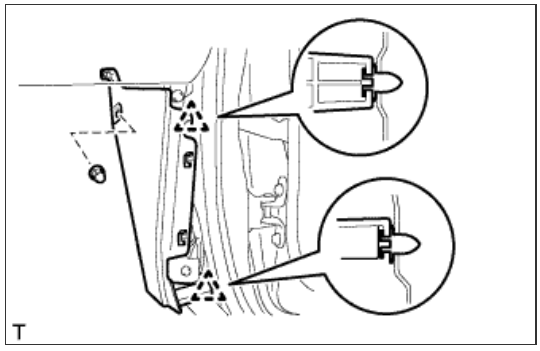


51. REMOVE FRONT DOOR SCUFF PLATE RH (w/ Sliding Roof)

HINT:

Use the same procedures described for the LH side.

52. REMOVE NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Floor Under Cover)



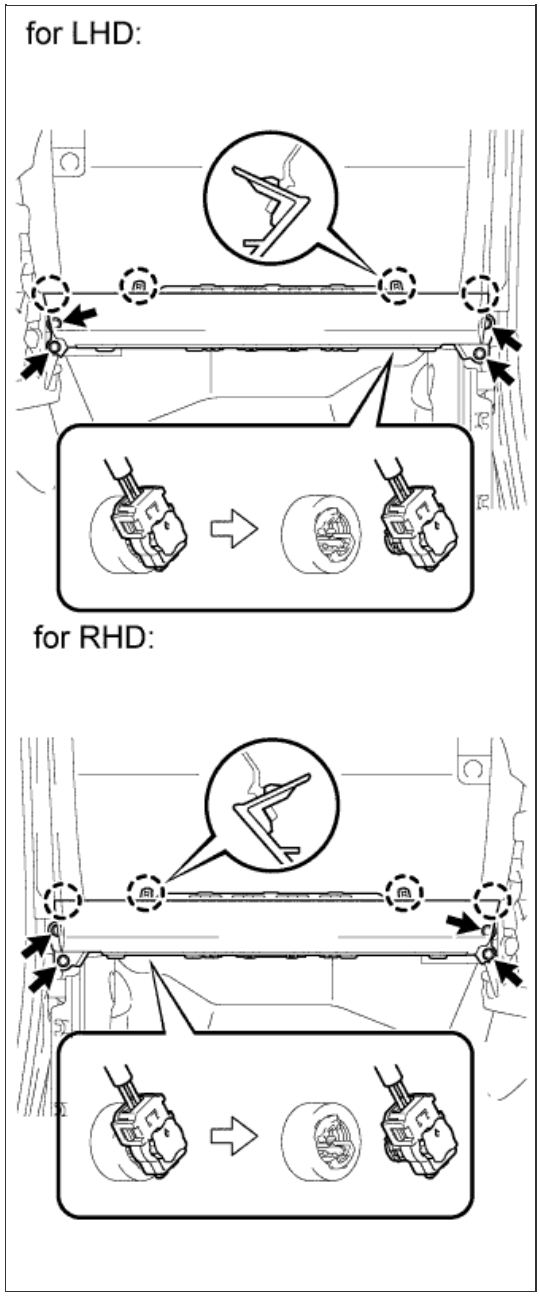
a. Detach the 4 claws and remove the under cover.

53. REMOVE COWL SIDE TRIM BOARD RH

a. Remove the cap nut.

b. Detach the 2 clips and remove the trim board.

54. REMOVE FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (w/ Passenger Side Knee Airbag)

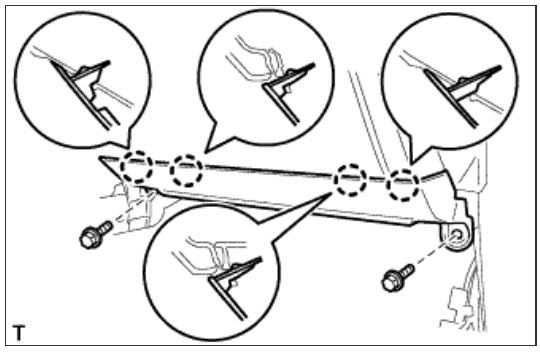


a. Remove the 4 bolts.

b. Detach the 4 claws and remove the front passenger side knee airbag.

c. Disconnect the connector.

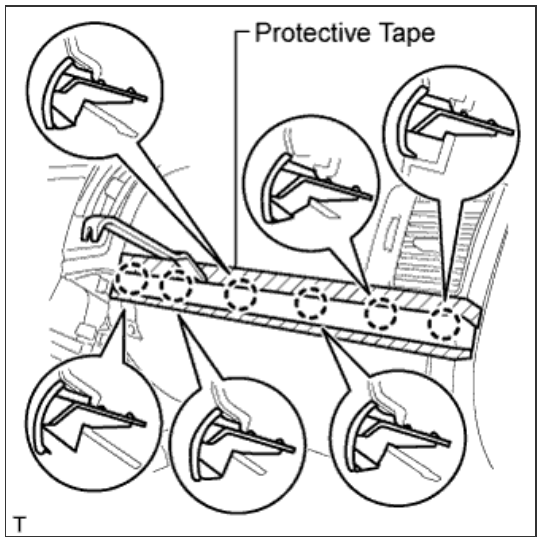
NOTICE:



When handling the airbag connector, take care not to damage the airbag wire harness.

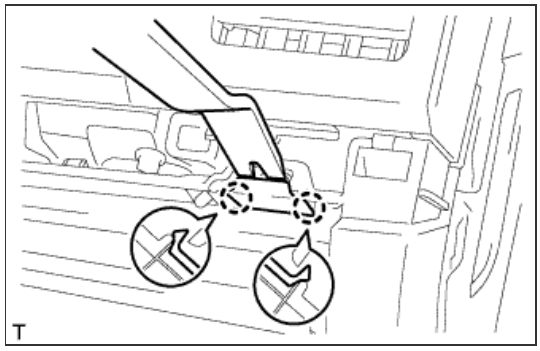
55. REMOVE LOWER INSTRUMENT PANEL (w/o Passenger Side Knee Airbag)

a. Remove the 2 bolts.



b. Detach the 4 claws and remove the instrument panel.

56. REMOVE NO. 3 INSTRUMENT CLUSTER FINISH PANEL GARNISH

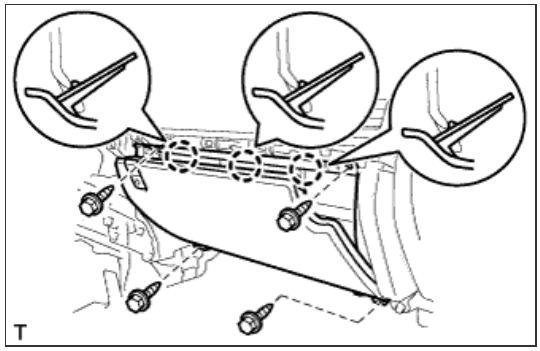


a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 6 claws and remove the panel garnish.

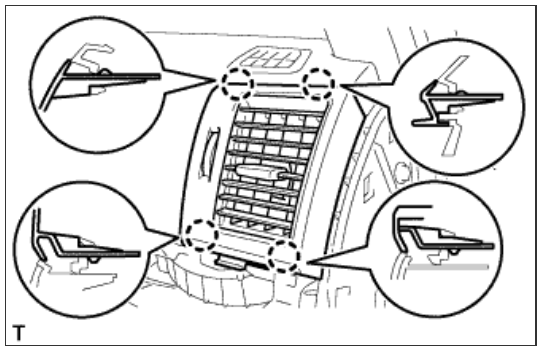
57. REMOVE INSTRUMENT PANEL BOX DOOR KNOB

a. Using a moulding remover, detach the 2 claws and remove the knob.



58. REMOVE LOWER NO. 2 INSTRUMENT PANEL FINISH PANEL

a. Remove the 4 bolts.

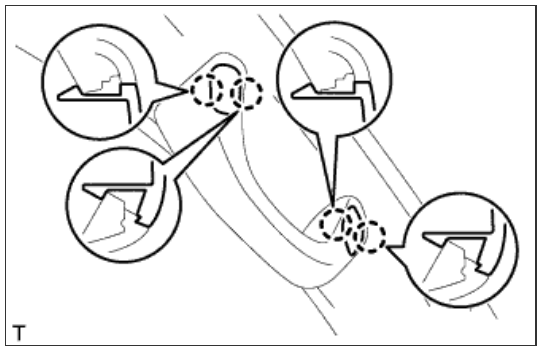


b. Detach the 3 claws.

c. Remove the finish panel and then disconnect the connector.

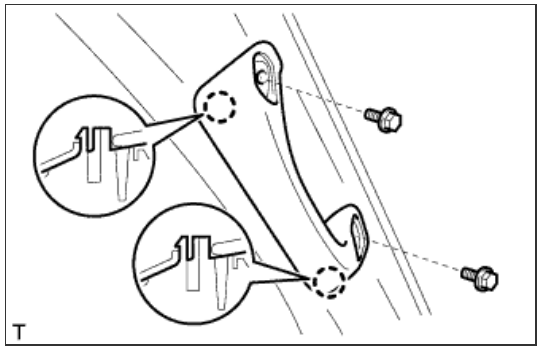
59. REMOVE NO. 2 INSTRUMENT PANEL REGISTER ASSEMBLY

a. Detach the 4 claws and remove the register.



60. REMOVE FRONT ASSIST GRIP SUB-ASSEMBLY (w/o Sliding Roof)

HINT:

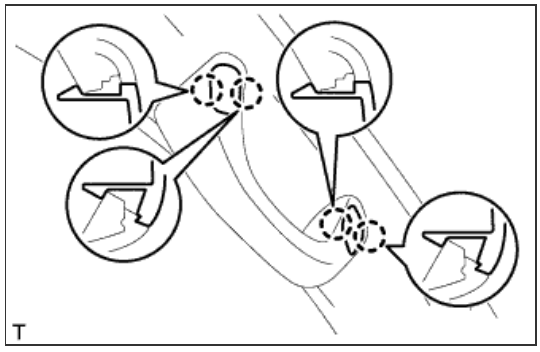


Use the same procedure to remove the front assist grip on the other side.

a. Detach the 4 claws and remove the 2 assist grip plugs.

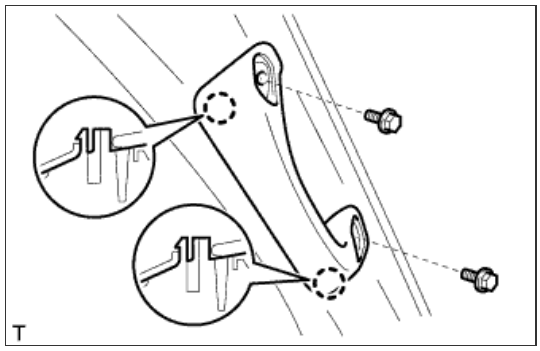
b. Remove the 2 bolts.

c. Detach the 2 claws and remove the front assist grip.



61. REMOVE FRONT ASSIST GRIP SUB-ASSEMBLY (w/ Sliding Roof)

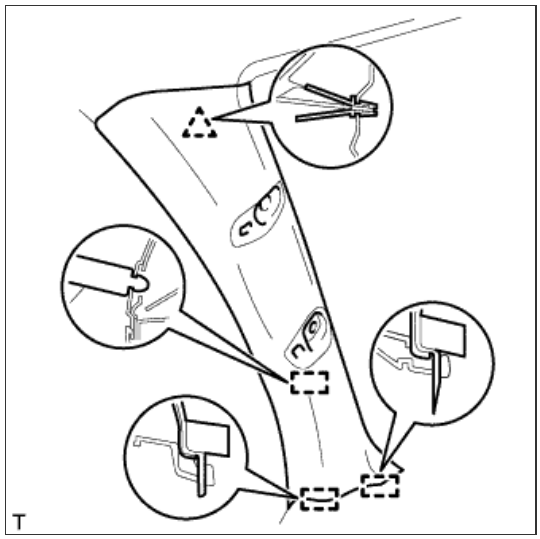
HINT:



Use the same procedure to remove the front assist grip on the other side.

a. Detach the 4 claws and remove the 2 assist grip plugs.

b. Remove the 2 bolts.

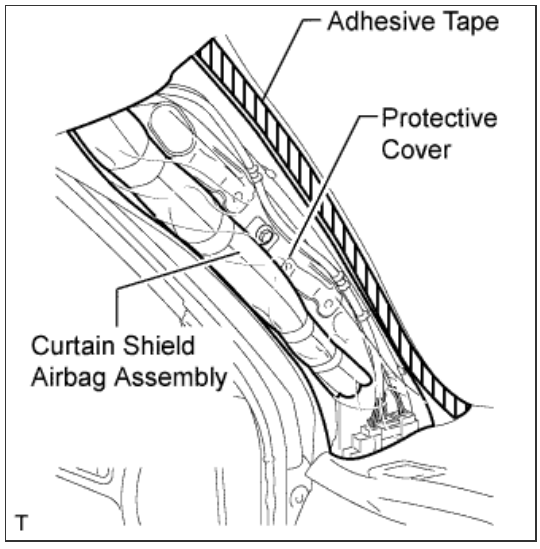


c. Detach the 2 claws and remove the front assist grip.

62. REMOVE FRONT PILLAR GARNISH LH (w/o Sliding Roof)

a. Detach the clip and 3 guides, and remove the front pillar garnish.

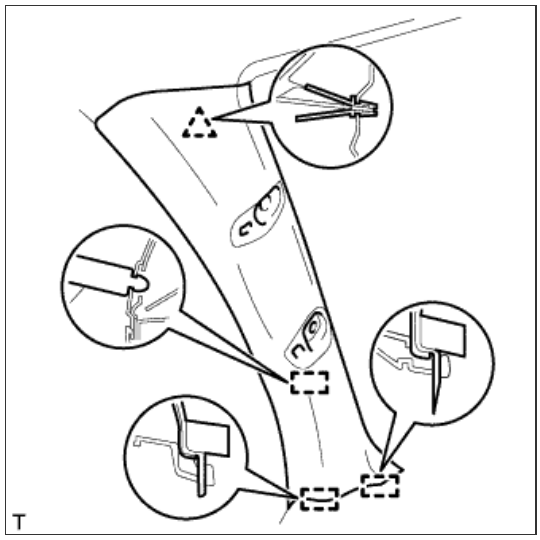
b. for 9 Speakers:
Disconnect the speaker connector and then remove the front pillar garnish.



c. Protect the curtain shield airbag.

i. Thoroughly cover the airbag with a cloth or nylon sheet and fix the ends of the cover with adhesive tape, as shown in the illustration.

NOTICE:

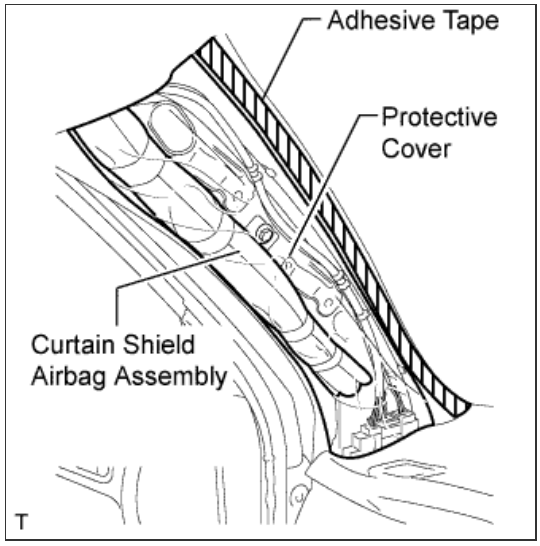


Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish is removed.

63. REMOVE FRONT PILLAR GARNISH LH (w/ Sliding Roof)

a. Detach the clip 3 guides, and remove the front pillar garnish.

b. for 9 Speakers:
Disconnect the speaker connector and then remove the front pillar garnish.



c. Protect the curtain shield airbag.

i. Thoroughly cover the airbag with a cloth or nylon sheet and fix the ends of the cover with adhesive tape, as shown in the illustration.

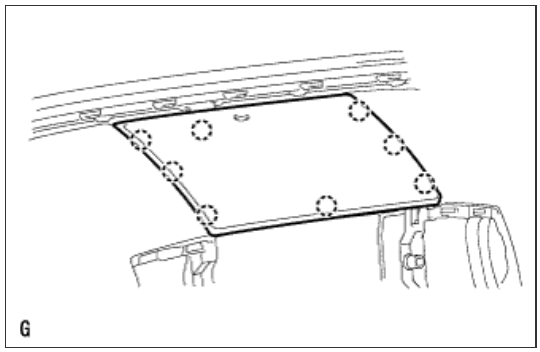
NOTICE:

Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish is removed.

64. REMOVE FRONT PILLAR GARNISH RH (w/o Sliding Roof)

HINT:

Use the same procedures described for the LH side.



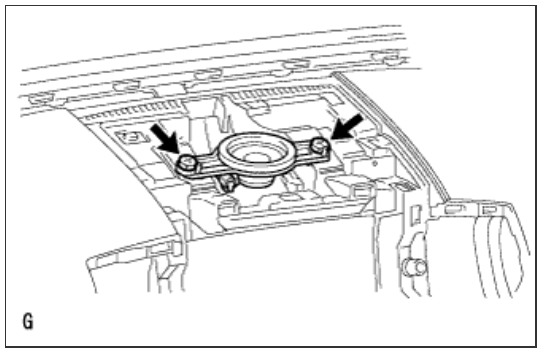
65. REMOVE FRONT PILLAR GARNISH RH (w/ Sliding Roof)

HINT:

Use the same procedures described for the LH side.

66. REMOVE NO. 1 SPEAKER OPENING COVER ASSEMBLY

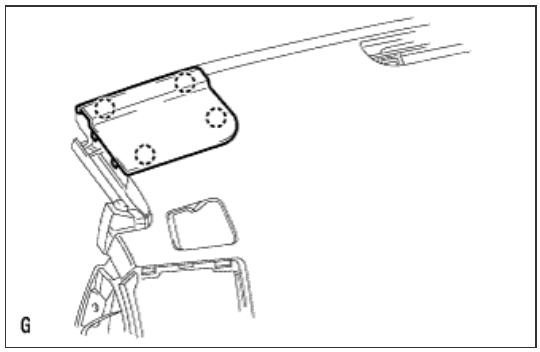
a. Detach the 8 claws and remove the opening cover.



67. REMOVE FRONT NO. 4 SPEAKER ASSEMBLY

a. Remove the 2 bolts.

b. Remove the speaker and then disconnect the speaker connector.



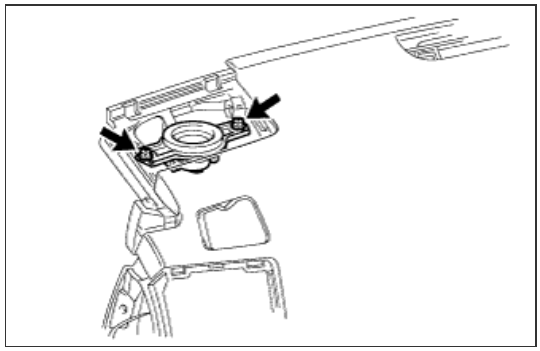
NOTICE:

Do not touch the cone part of the speaker.

68. REMOVE NO. 1 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY

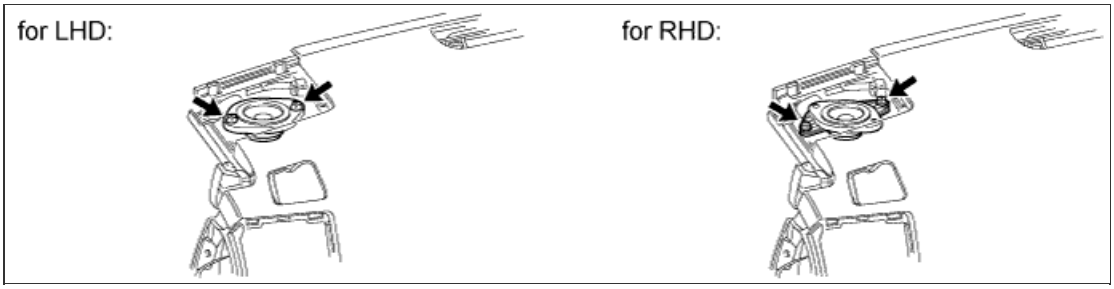
a. Detach the 4 claws and remove the speaker panel.

69. REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (LH Side)



a. for 9 Speakers Models:

i. Remove the 2 bolts.



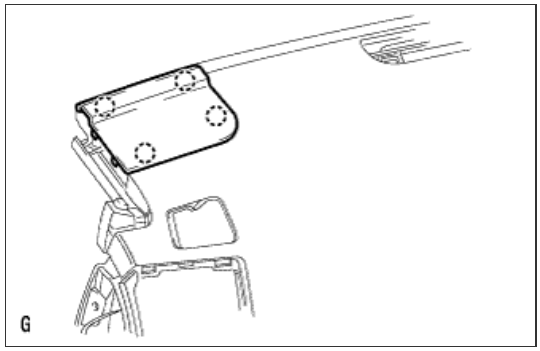
ii. Remove the speaker and then disconnect the speaker connector.

NOTICE:

Do not touch the cone part of the speaker.

b. except 9 Speakers Models:

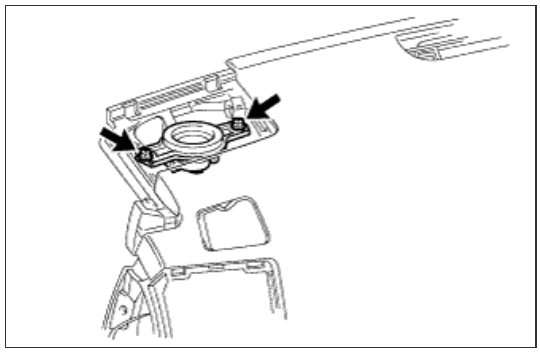
i. Remove the 2 bolts.



ii. Remove the speaker and then disconnect the speaker connector.

NOTICE:

Do not touch the cone part of the speaker.

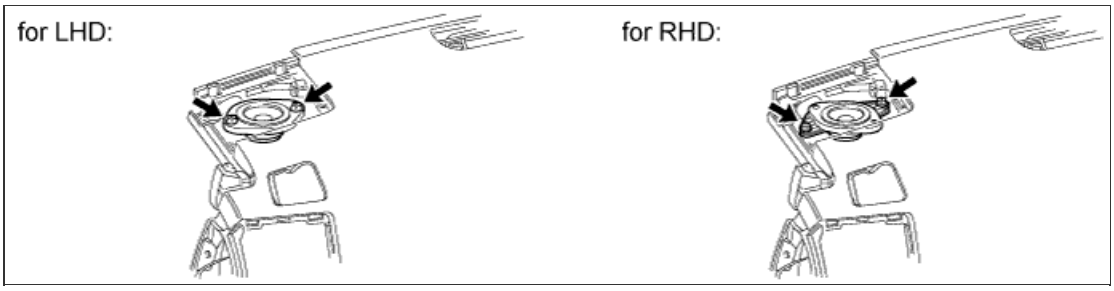


70. REMOVE NO. 2 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY

a. Detach the 4 claws and remove the speaker panel.

71. REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (RH Side)

a. for 9 Speakers Models:



i. Remove the 2 bolts.

ii. Remove the speaker and then disconnect the speaker connector.

NOTICE:

Do not touch the cone part of the speaker.

b. except 9 Speakers Models:

i. Remove the 2 bolts.

ii. Remove the speaker and then disconnect the speaker connector.

NOTICE:

Do not touch the cone part of the speaker.

72. REMOVE NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY

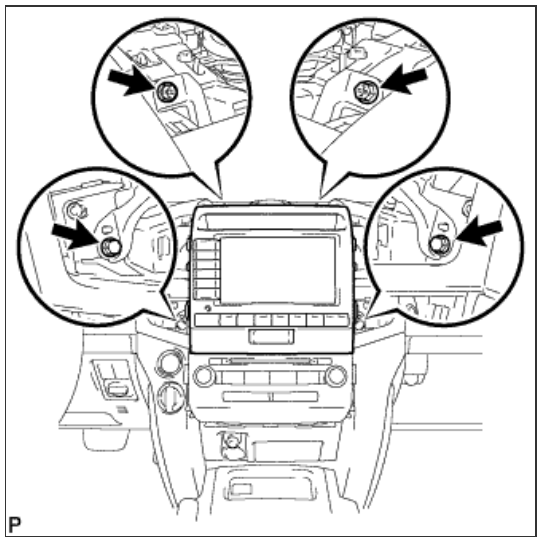
a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 6 claws.

c. Remove the register and then disconnect the connector.

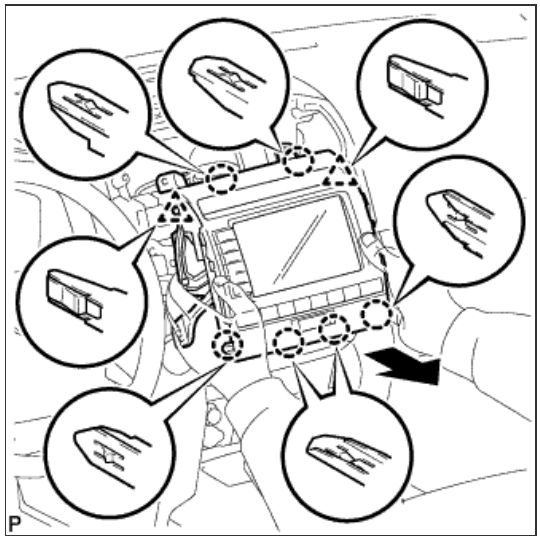
73. REMOVE NO. 4 INSTRUMENT PANEL REGISTER ASSEMBLY

a. Place protective tape as shown in the illustration.



b. Using a moulding remover, detach the 6 claws.

c. Remove the register and then disconnect the connector.

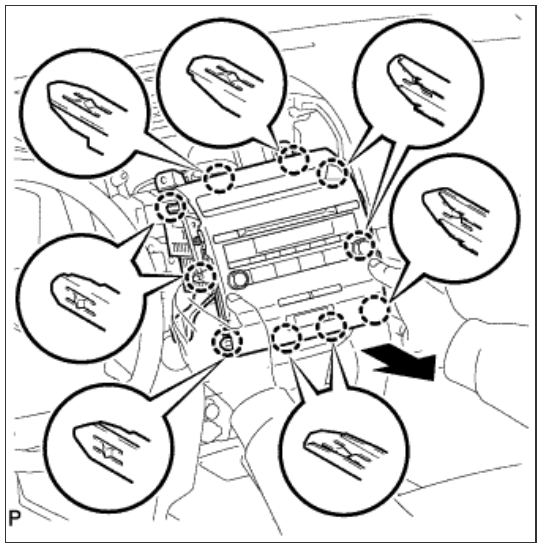


74. REMOVE MULTI-DISPLAY ASSEMBLY WITH BRACKET (w/ Multi-display)

a. Remove the 2 screws and 2 bolts.

b. Pull the radio receiver to detach the 2 clips and 6 claws on the backside of the display.

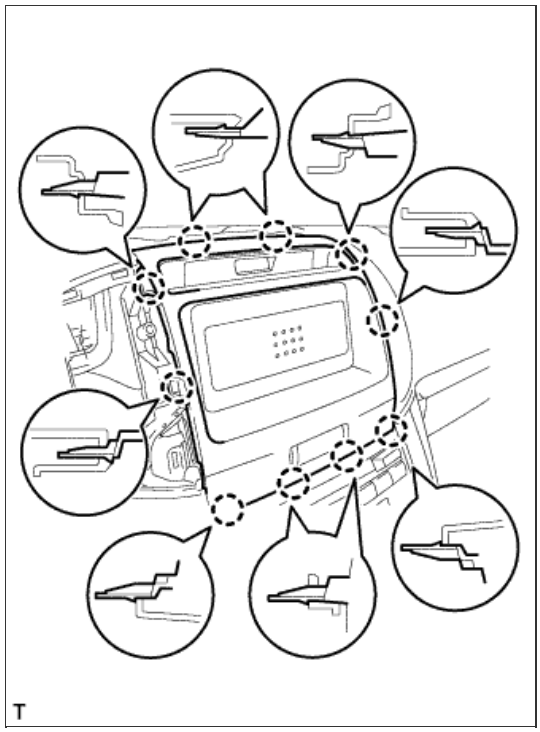
c. Disconnect the connectors and remove the display.



75. REMOVE RADIO RECEIVER ASSEMBLY WITH BRACKET (w/o Multi-display)

a. Remove the 2 screws and 2 bolts.

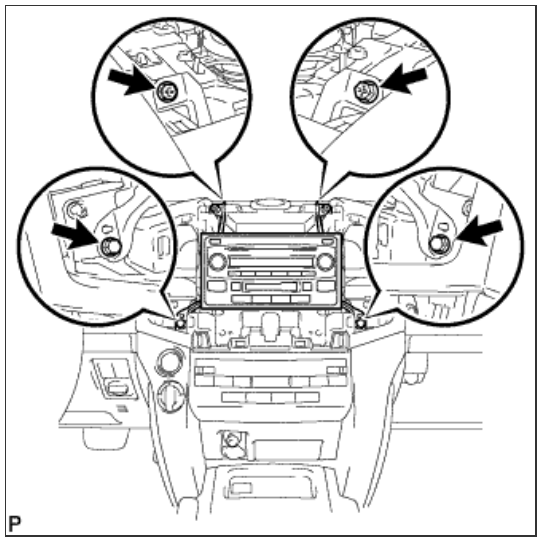
b. Pull the radio receiver to detach the 10 claws on the backside of the radio receiver.



c. Disconnect the connectors and remove the radio receiver.

76. REMOVE NO. 1 CENTER INSTRUMENT CLUSTER FINISH PANEL

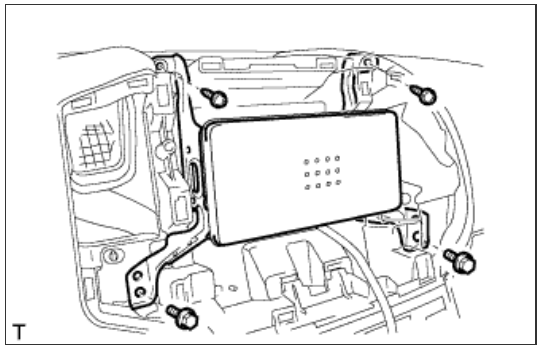
a. Detach the 10 claws.



b. Remove the finish panel and then disconnect the connectors.

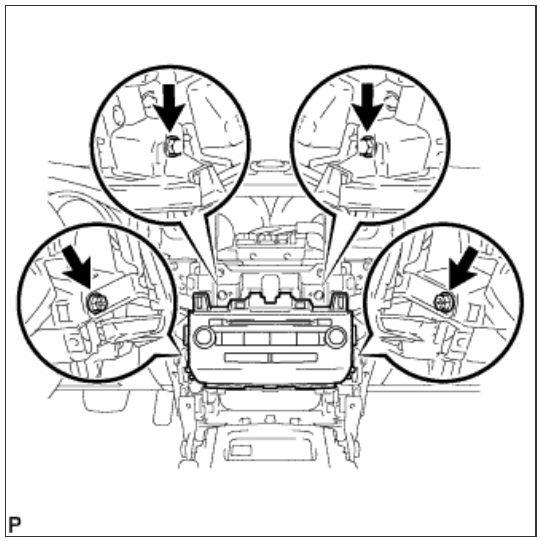
77. REMOVE RADIO RECEIVER ASSEMBLY WITH BRACKET (w/ Cassette Tape Player)

a. Remove the 2 screws and 2 bolts.



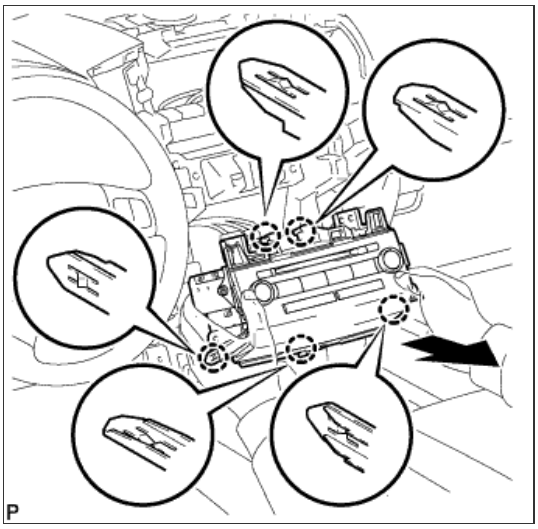
b. Disconnect the connectors and remove the radio receiver.

78. REMOVE RADIO TUNER OPENING COVER WITH BRACKET (w/o Radio Receiver)



a. Remove the 2 bolts.

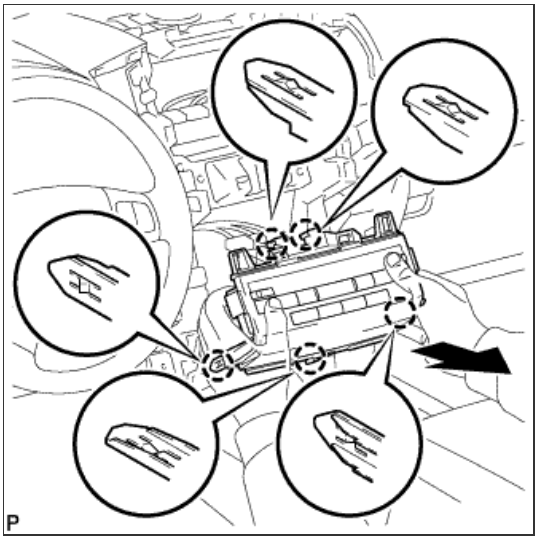
b. Remove the 2 screws and opening cover with bracket.



79. REMOVE RADIO RECEIVER ASSEMBLY WITH BRACKET (w/ Multi-display)

a. Remove the 2 screws and 2 bolts.

b. Pull the radio receiver to detach the 5 claws on the backside of the radio receiver.

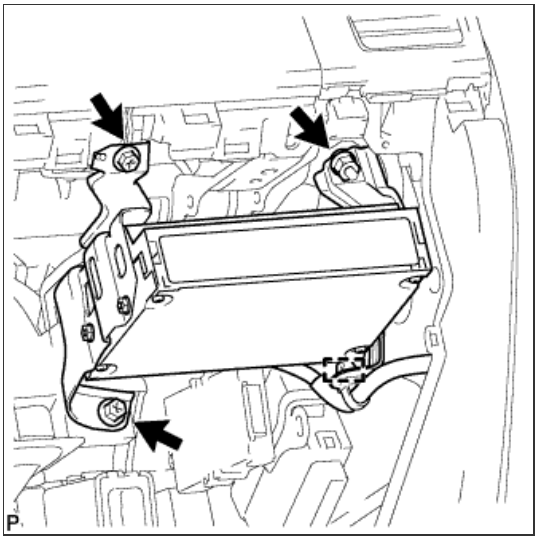


c. Disconnect the connectors and remove the radio receiver.

80. REMOVE AIR CONDITIONING CONTROL ASSEMBLY

a. Pull the radio receiver to detach the 5 claws on the backside of the radio receiver.

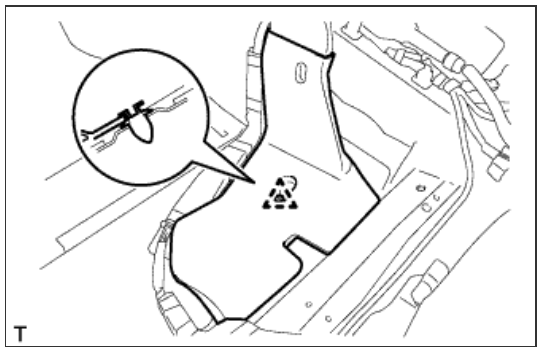
b. Disconnect the connectors and remove the radio receiver.



81. REMOVE NAVIGATION MODULE BOARD WITH DISC PLAYER BRACKET (w/ Multi-display)

a. Detach the clamp.

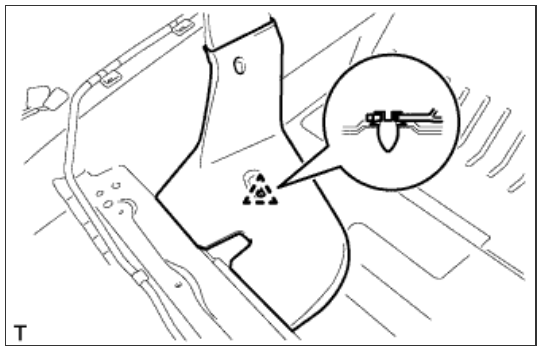
b. Remove the 2 screws and nut.



c. Disconnect the navigation module board connectors and remove the navigation module board with disc player bracket.

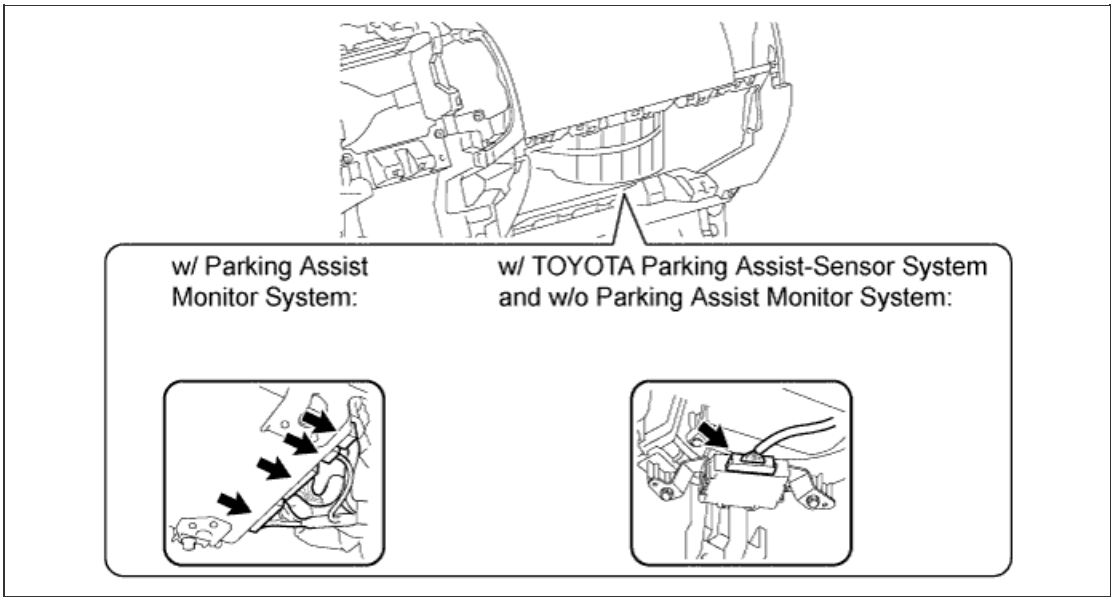
82. REMOVE REAR NO. 2 AIR DUCT

a. Fold back the front floor carpet.



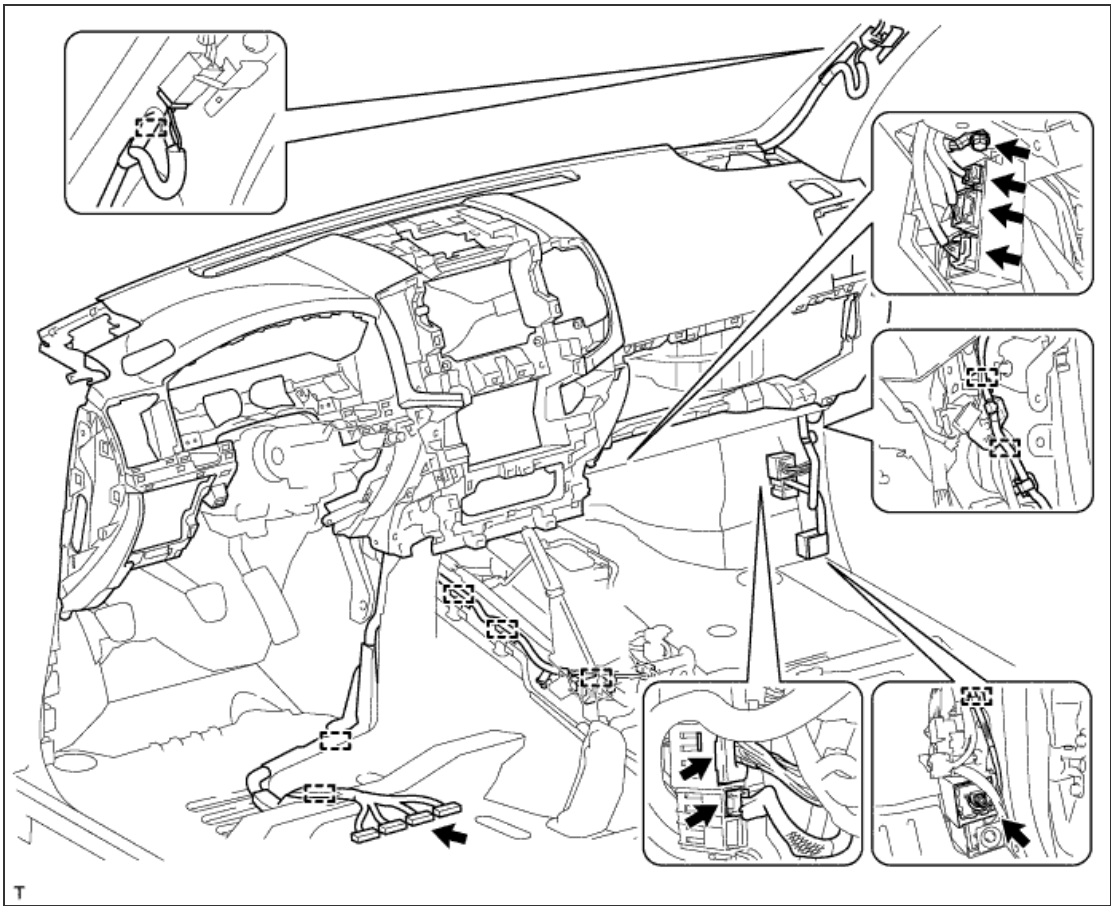
b. Detach the clip and remove the air duct.

83. REMOVE REAR NO. 4 AIR DUCT



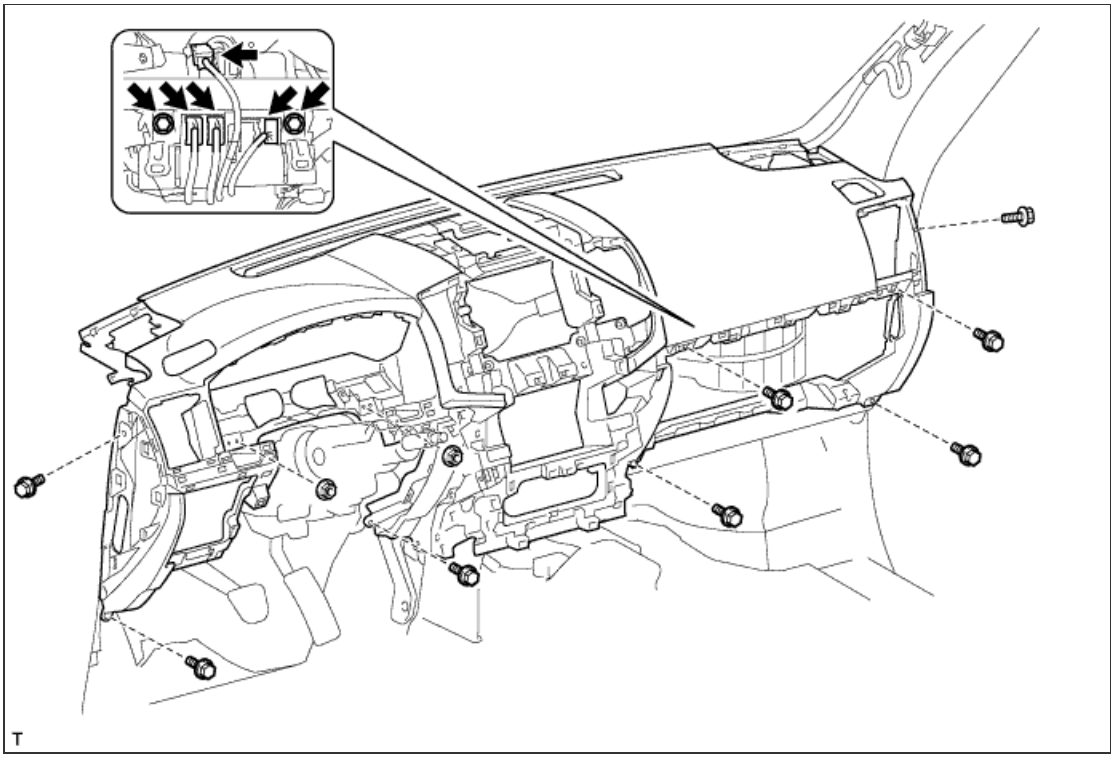
a. Fold back the front floor carpet.

b. Detach the clip and remove the air duct.



84. REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY (for LHD)

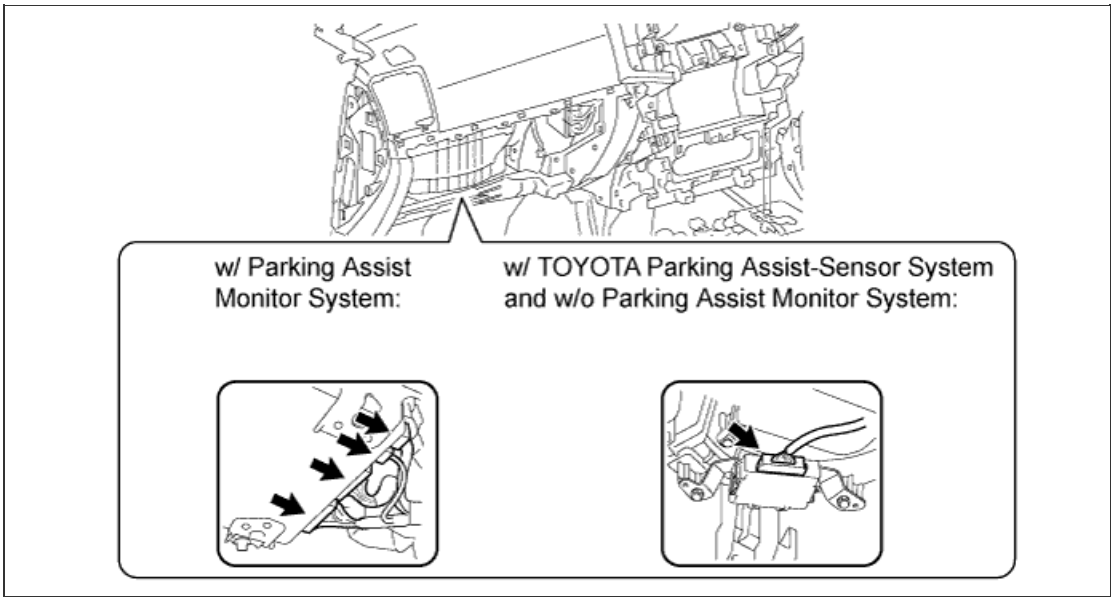
a. Disconnect the connector.



b. Disconnect the connectors and clamps.

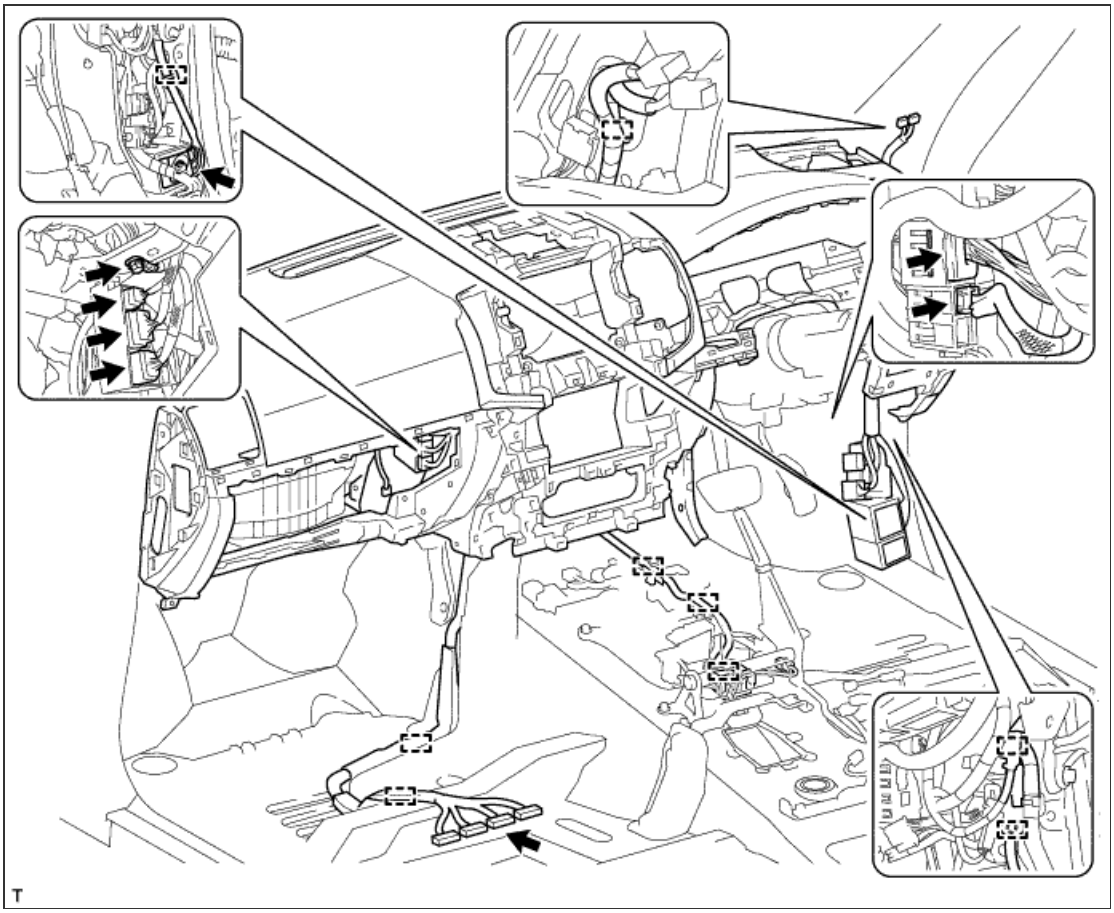
c. Remove the bolt and disconnect the wire harness.

d. Remove the 2 passenger airbag bolts.



e. Disconnect the connectors.

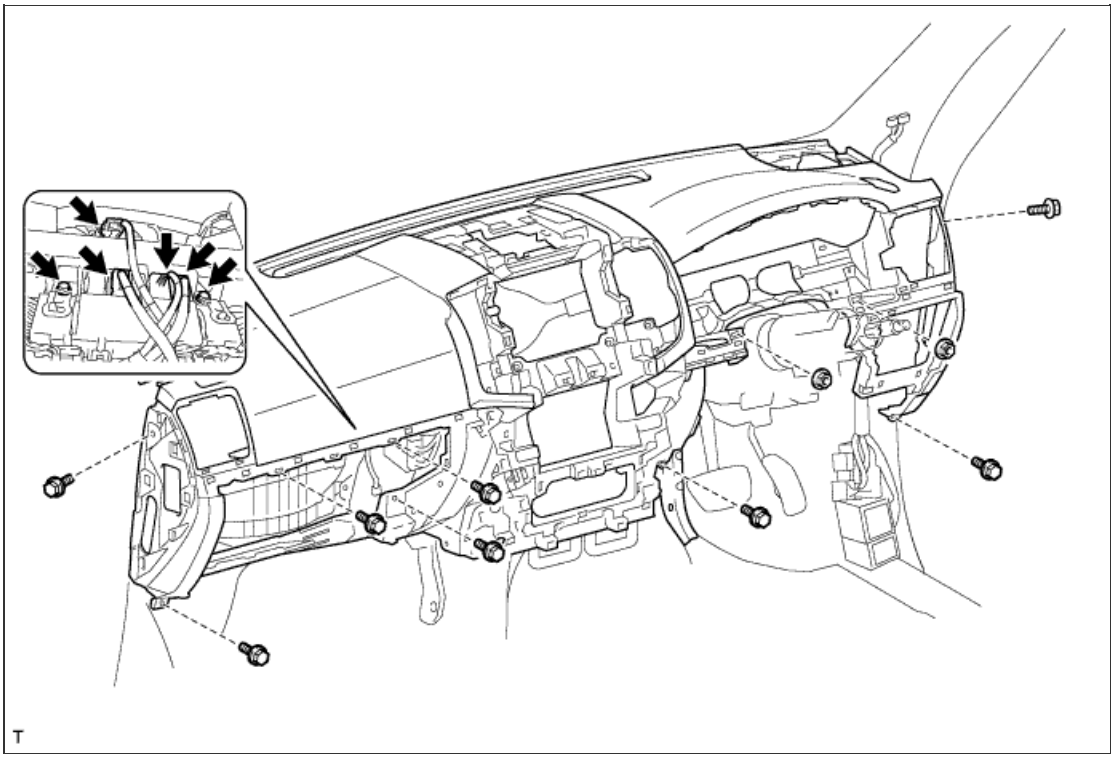
f. Remove the 8 bolts.



g. Remove the 2 nuts and safety pad.

85. REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY (for RHD)

a. Disconnect the connector.



b. Disconnect the connectors and clamps.

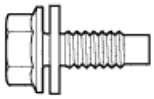
c. Remove the bolt and disconnect the wire harness.

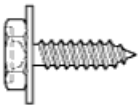
d. Remove the 2 passenger airbag bolts.

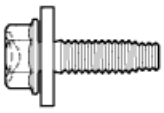
e. Disconnect the connectors.

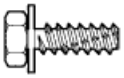
f. Remove the 8 bolts.

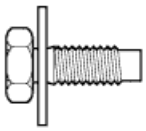
g. Remove the 2 nuts and safety pad.











for Preparation Click here

1. TABLE OF BOLT, SCREW AND NUT

HINT:

All bolts, screws and nuts relevant to installing and removing the instrument panel are shown along with their alphabet code in the table below.

mm (in.) (L = Length)

Code	Shape	Code	Shape	Code	Shape
<A>	 φ 6 (0.236) L=16 (0.630)	<B>	 φ 5 (0.197) L=18 (0.709)	<C>	 φ 6 (0.236) L=22 (0.866)
<D>	 φ 5 (0.197) L=15 (0.59)	<E>	 φ 6 (0.236)	<F>	 φ 8 (0.315) L=20 (0.787)

2. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM (w/ Cool Box)

a. Start the engine.

b. Turn the A/C switch on.

c. Operate the cooler compressor while the engine speed is approximately 1000 rpm for 5 to 6 minutes to circulate the refrigerant and collect the compressor oil remaining in each component into the cooler compressor.

d. Stop the engine.

e. Recover the refrigerant from the A/C system using a refrigerant recovery unit.

3. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

a. for Power Tilt and Power Telescopic:

i. Disable the Autoaway/Return function by changing the customize parameter (Click here).

NOTICE:

Record the current customize parameter setting (whether the Autoaway/Return function is enabled or disabled) in order to restore the current setting after finishing the operation.

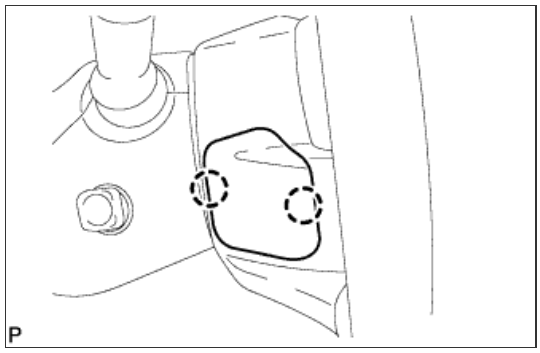
HINT:

Performing the above operation causes the Autoaway/Return function to be disabled when the engine switch is turned off.

ii. Turn the engine switch on (IG). Operate the tilt and telescopic switch to fully extend and lower the steering column.

b. Turn the engine switch off and disconnect the cable from the negative (-) battery terminal.

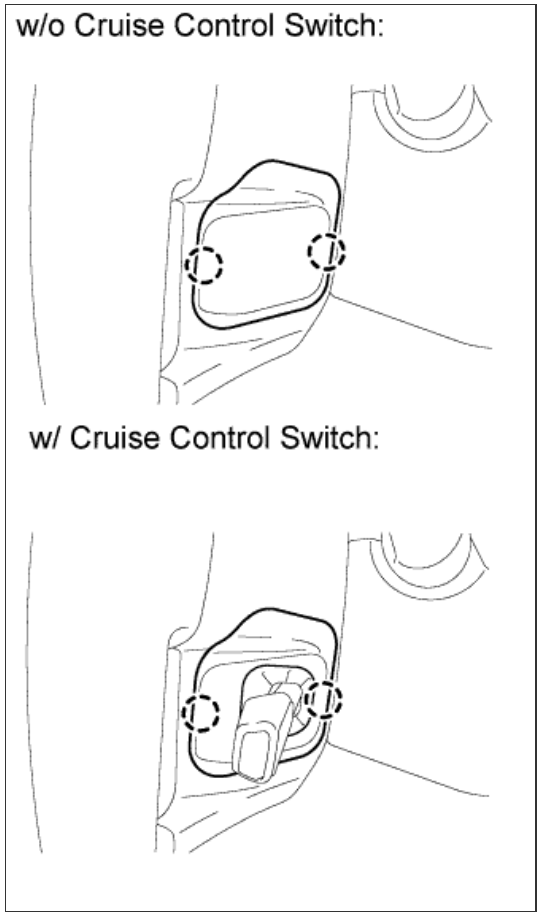
CAUTION:



Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

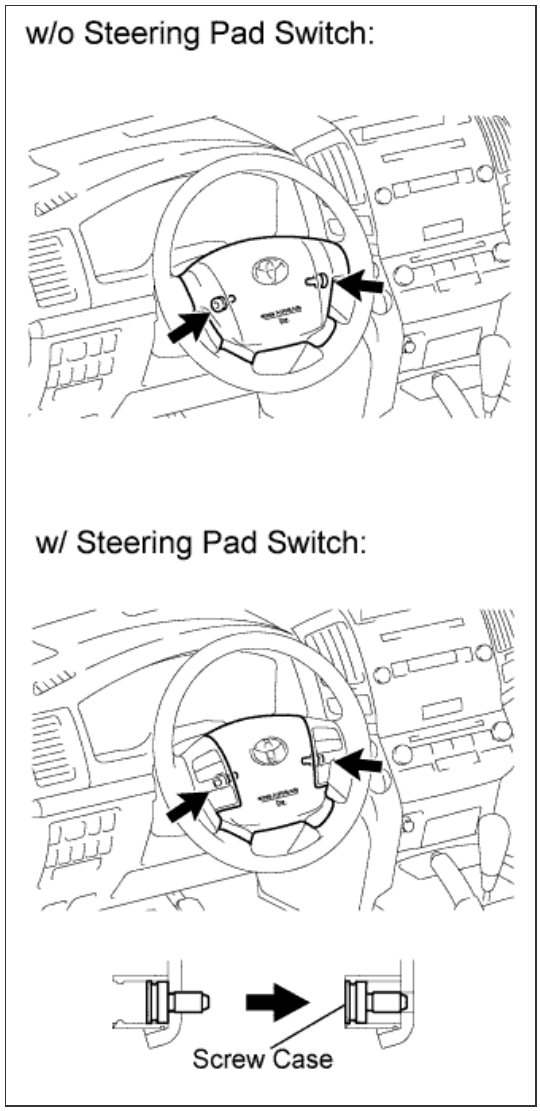
When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).



4. REMOVE LOWER NO. 3 STEERING WHEEL COVER

a. Detach the 2 claws and remove the steering wheel cover.

5. REMOVE LOWER NO. 2 STEERING WHEEL COVER



a. Detach the 2 claws and remove the steering wheel cover.

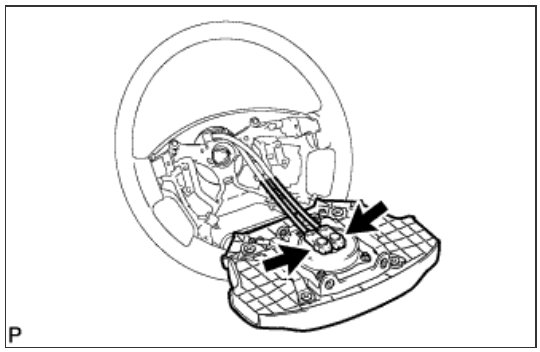
6. REMOVE STEERING PAD

a. Using a T30 "TORX" socket wrench, loosen the 2 screws until the groove along

the screw circumference catches on the screw case.

b. Pull out the steering pad from the steering wheel, as shown in the illustration. Then support the steering pad with one hand.

NOTICE:



When removing the steering pad, do not pull the airbag wire harness.

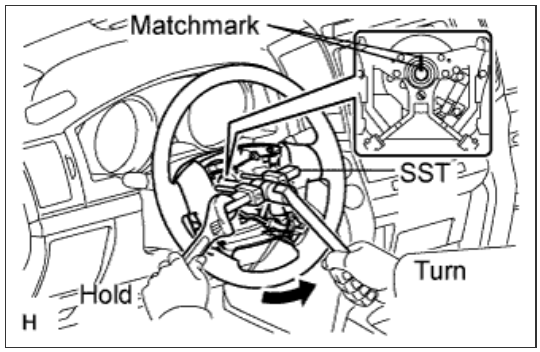
c. Disconnect the horn connector.

d. Disconnect the 2 connectors and remove the steering pad.

NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

7. REMOVE STEERING WHEEL ASSEMBLY



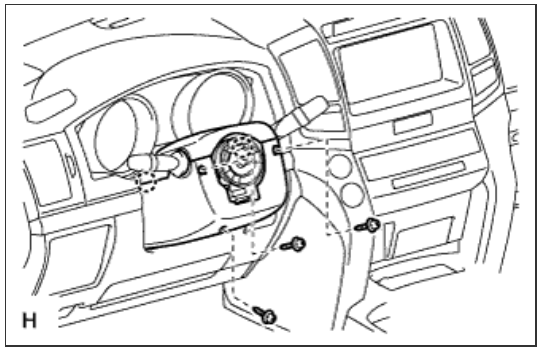
a. Remove the steering wheel set nut.

b. Put matchmarks on the steering wheel and main shaft.

c. Using SST, remove the steering wheel assembly.

SST

09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05011)



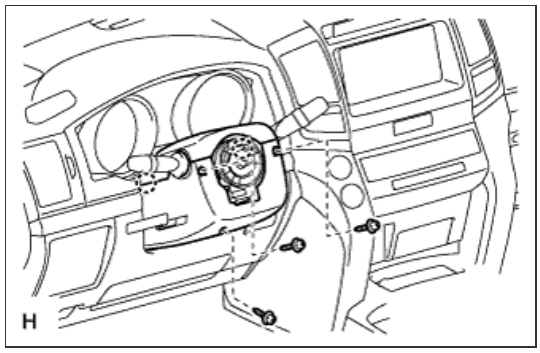
8. REMOVE LOWER STEERING COLUMN COVER (for Power Tilt and Power Telescopic Steering Column)

a. Remove the 3 screws.

b. Detach the 2 claws to remove the lower steering column cover.

NOTICE:

Do not damage the tilt and telescopic switch.

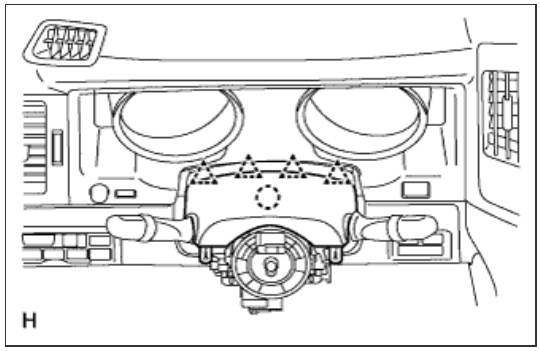


9. REMOVE LOWER STEERING COLUMN COVER (for Manual Tilt and Manual Telescopic Steering Column)

a. Remove the 3 screws.

b. Detach the 2 claws to remove the lower steering column cover.

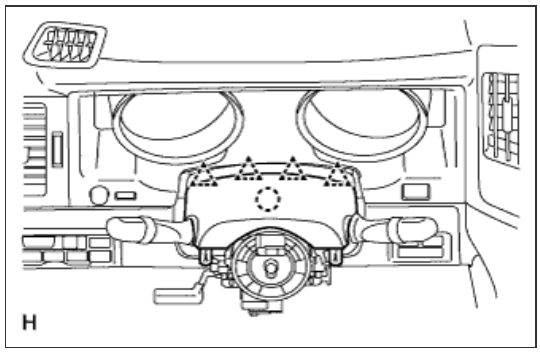
NOTICE:



Do not damage the tilt and telescopic switch.

10. REMOVE UPPER STEERING COLUMN COVER (for Power Tilt and Power Telescopic Steering Column)

a. Detach the 4 clips.



b. Detach the claw to remove the upper steering column cover.

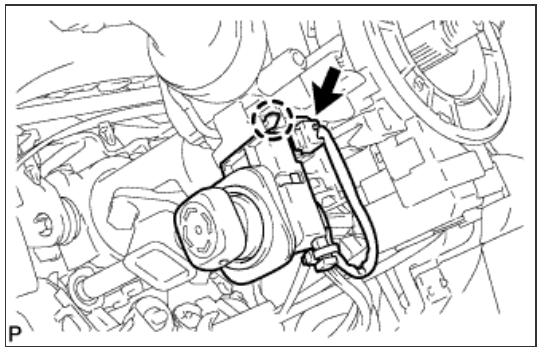
11. REMOVE UPPER STEERING COLUMN COVER (for Manual Tilt and Manual Telescopic Steering Column)

a. Detach the 4 clips.

b. Detach the claw to remove the upper steering column cover.

12. REMOVE TILT AND TELESCOPIC SWITCH (for Power Tilt and Power Telescopic Steering Column)

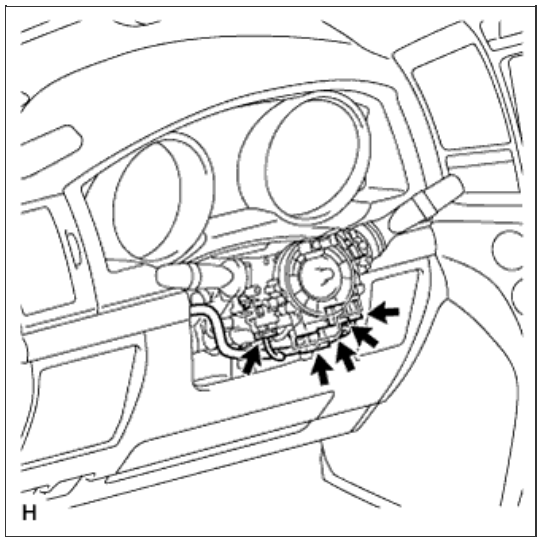
a. Disconnect the switch connector.



b. Using a screwdriver, detach the claw and pull out the switch.

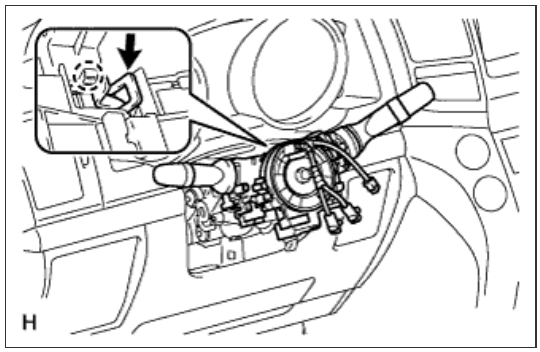
NOTICE:

Pushing on the claw too hard will break the claw.



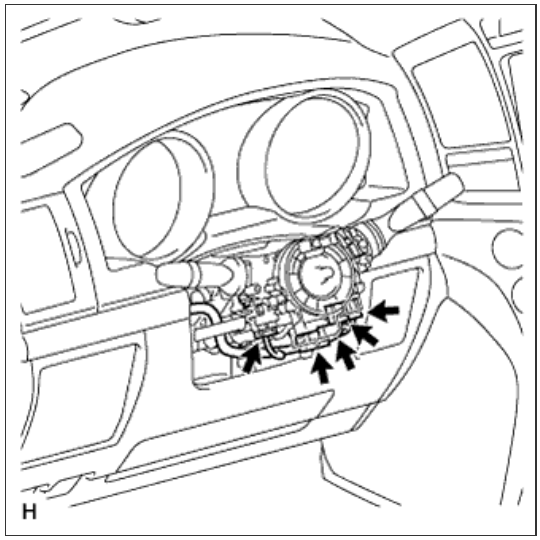
HINT:

Tape the screwdriver tip before use.

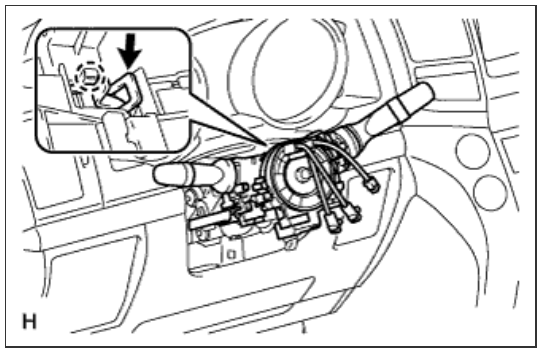


13. REMOVE COMBINATION SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (for Power Tilt and Power Telescopic Steering Column)

a. Disconnect the 5 connectors from the turn signal switch with spiral cable.



b. Using pliers, grip the claws of the clamp and remove the turn signal switch with spiral cable from the steering column.



14. REMOVE COMBINATION SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (for Manual Tilt and Manual Telescopic Steering Column)

a. Disconnect the 5 connectors from the combination switch with spiral cable.

b. Using pliers, grip the claws of the clamp and remove the combination switch with spiral cable from the steering column.

15. REMOVE FRONT SEAT ASSEMBLY LH (for Power Seat)

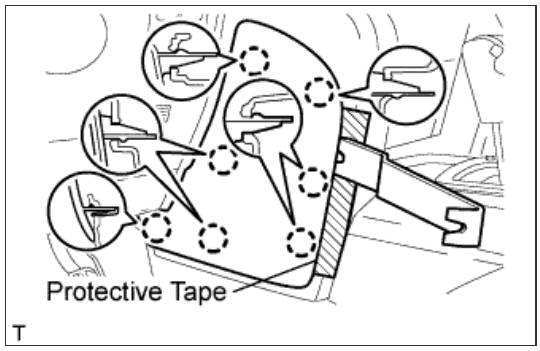
a. Remove the front seat assembly LH (Click here).

16. REMOVE FRONT SEAT ASSEMBLY LH (for Manual Seat)

a. Remove the front seat assembly LH (Click here).

17. REMOVE FRONT SEAT ASSEMBLY RH (for Power Seat)

a. Remove the front seat assembly RH (Click here).



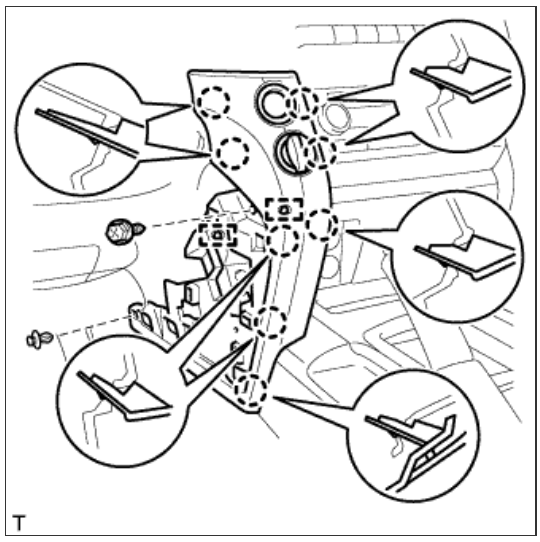
18. REMOVE FRONT SEAT ASSEMBLY RH (for Manual Seat)

a. Remove the front seat assembly RH (Click here).

19. REMOVE NO. 2 INSTRUMENT PANEL FINISH PANEL CUSHION

a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 7 claws and remove the panel cushion.



20. REMOVE LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

a. Remove the clip.

b. Remove the screw.

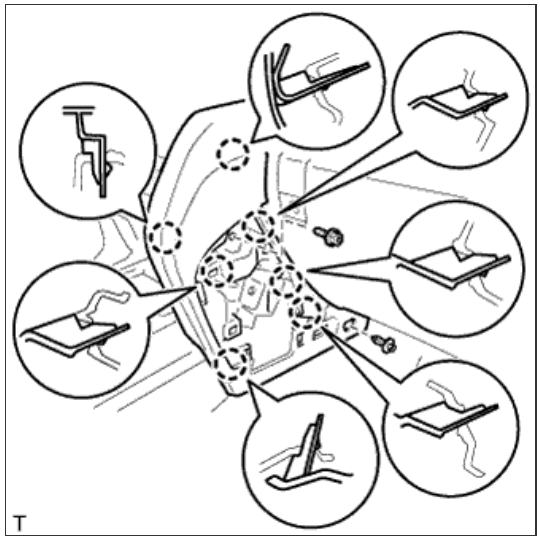
c. Detach the 8 claws.

d. Remove the panel pad and disconnect the connectors and 2 clamps.

21. REMOVE NO. 1 INSTRUMENT PANEL FINISH PANEL CUSHION

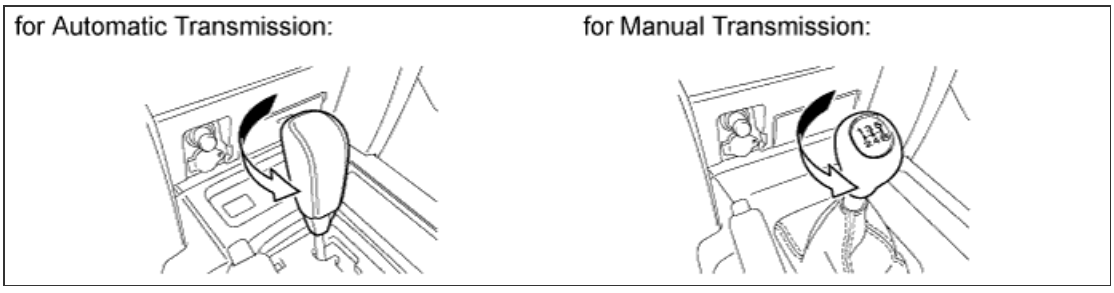
a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 7 claws and remove the panel cushion.



22. REMOVE LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY RH

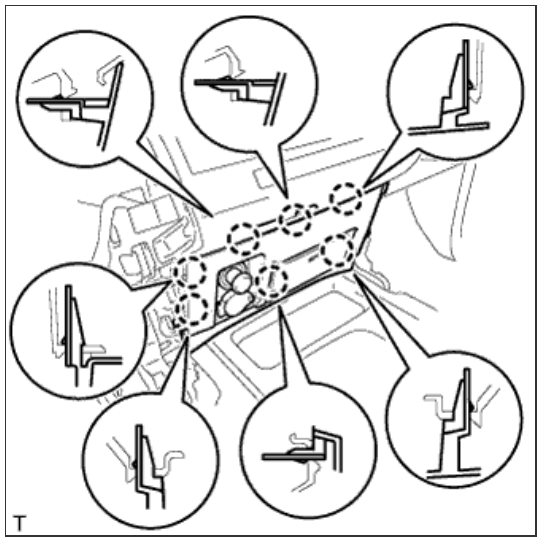
a. Remove the clip.



b. Remove the screw.

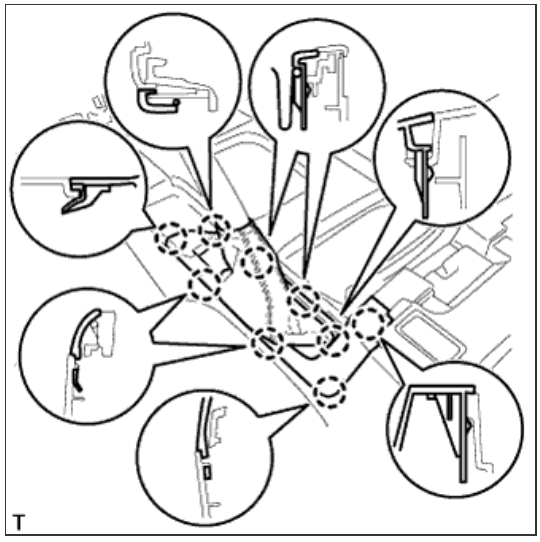
c. Detach the 7 claws and remove the panel.

23. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY



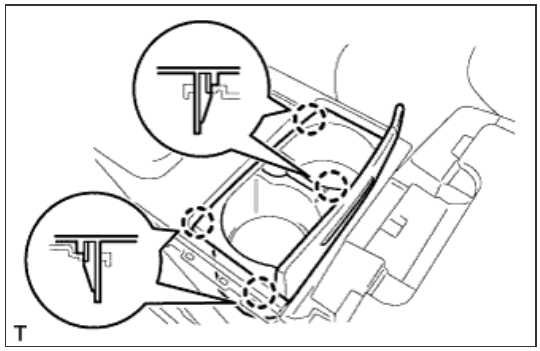
a. Twist the shift lever knob in the direction indicated by the arrow and remove it.

24. REMOVE LOWER CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY



a. Detach the 7 claws.

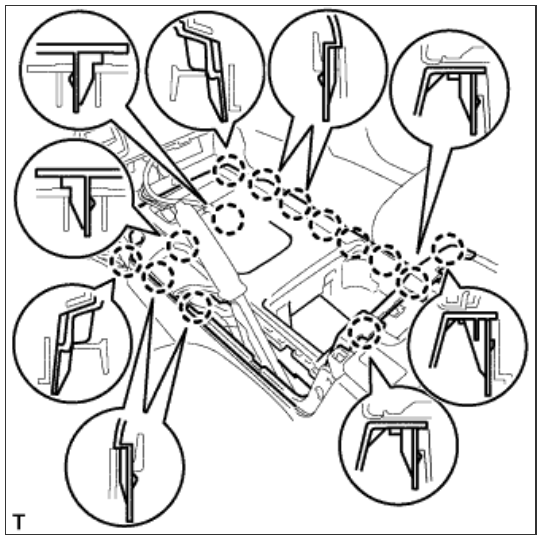
b. Disconnect the connectors and remove the panel.



25. REMOVE REAR UPPER CONSOLE PANEL SUB-ASSEMBLY

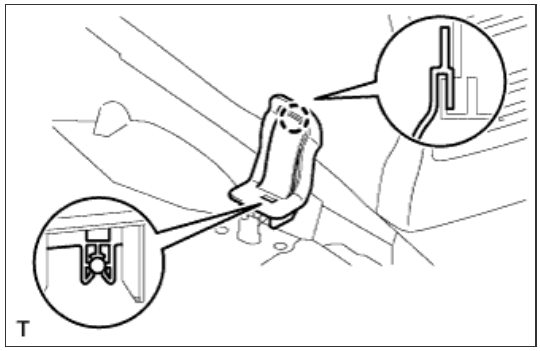
a. Detach the 9 claws and remove the panel.

26. REMOVE CONSOLE CUP HOLDER BOX SUB-ASSEMBLY



a. Detach the 4 claws and remove the box.

27. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY

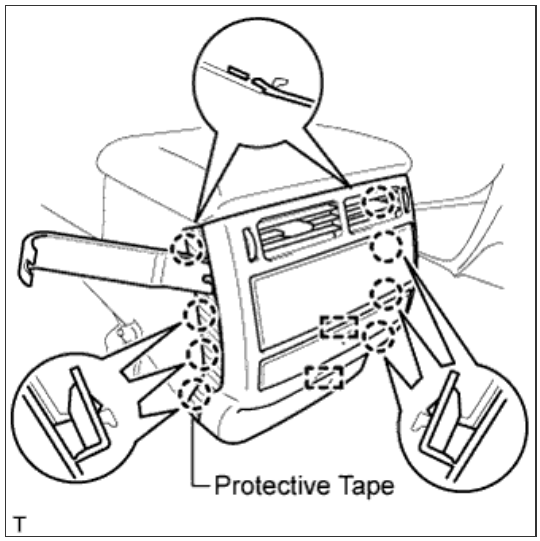


a. Detach the 14 claws.

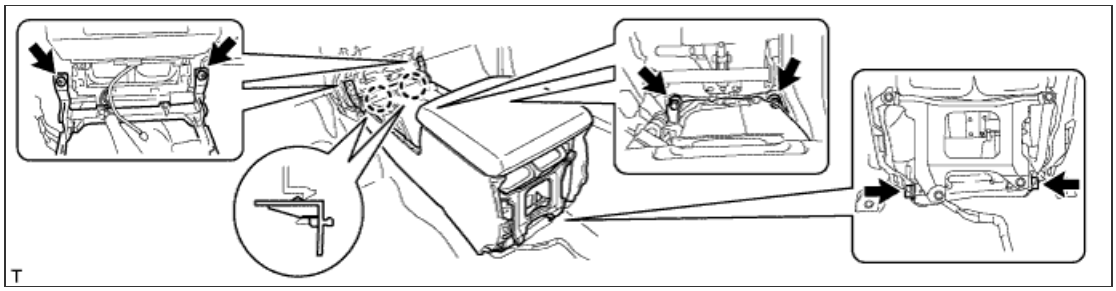
b. Disconnect the connectors and remove the console panel.

28. REMOVE NO. 1 COOLER COVER (w/ Cool Box)

a. Detach the clamp on the lower part of the cooler cover, and then pull the cooler cover upward to remove it.



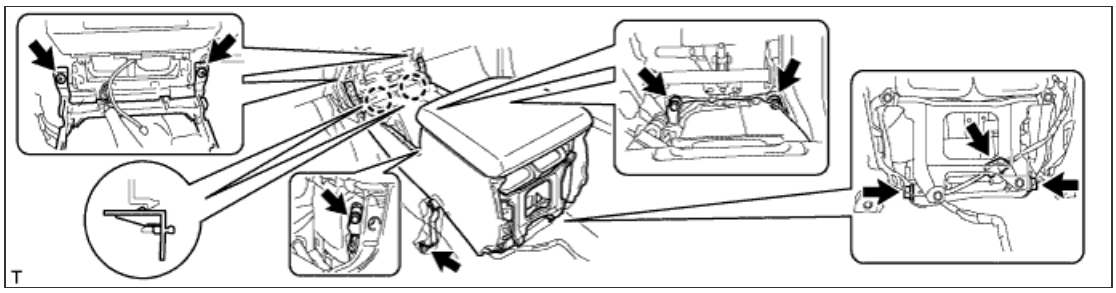
29. REMOVE REAR CONSOLE END PANEL SUB-ASSEMBLY



a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 8 claws.

c. Remove the end panel and disconnect the connectors and 2 clamps.



30. REMOVE REAR CONSOLE BOX SUB-ASSEMBLY (w/o Cool Box)

a. Remove the 4 bolts and 2 screws.

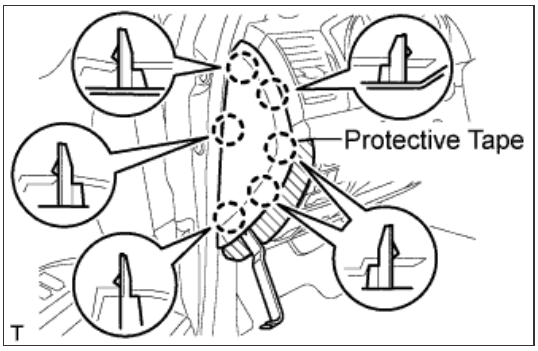
b. Detach the 2 claws and remove the console box.

31. REMOVE COOLING BOX ASSEMBLY (w/ Cool Box)

a. Remove the 4 bolts and 2 screws.

b. Remove the 2 bolts and disconnect the 2 cooler pipes.

c. Remove the 2 O-rings from the cooler pipes.

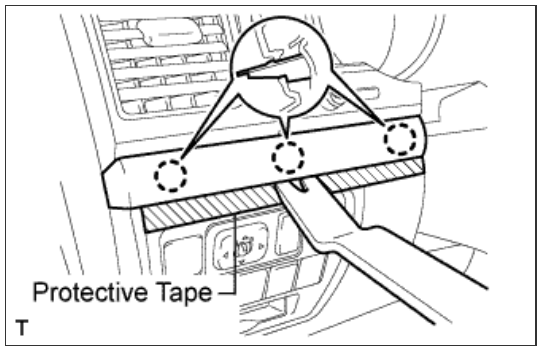


d. Disconnect the connector.

e. Detach the 2 claws and remove the cooling box.

32. REMOVE INSTRUMENT SIDE PANEL LH

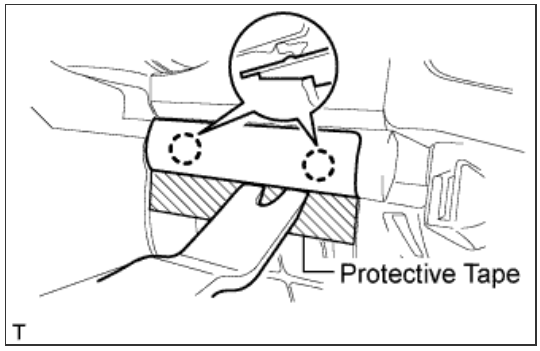
a. Place protective tape as shown in the illustration.



b. Using a moulding remover, detach the 6 claws and remove the side panel.

33. REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH

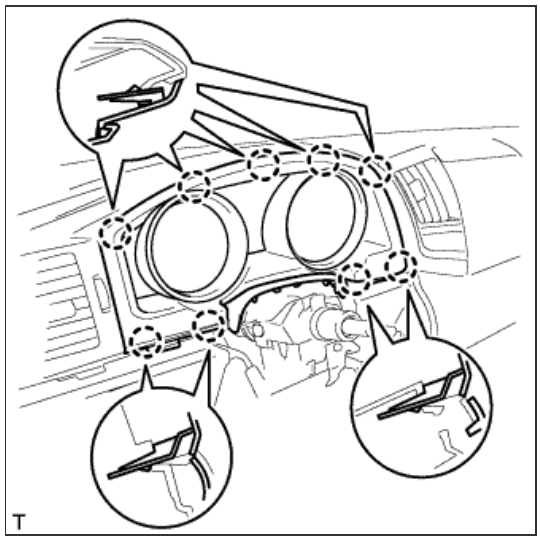
a. Place protective tape as shown in the illustration.



b. Using a moulding remover, detach the 3 claws and remove the panel garnish.

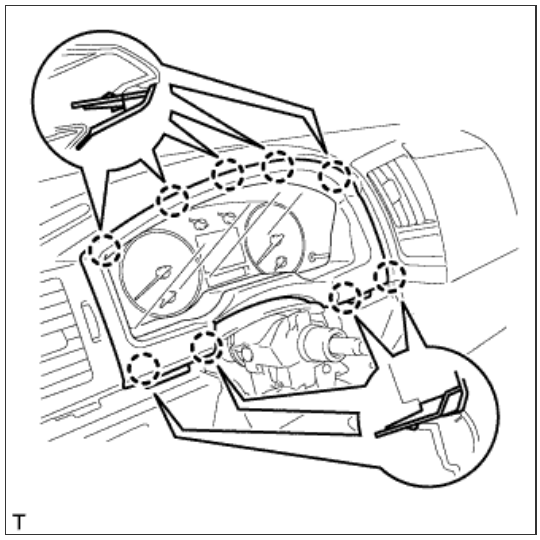
34. REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Place protective tape as shown in the illustration.



b. Using a moulding remover, detach the 2 claws and remove the panel garnish.

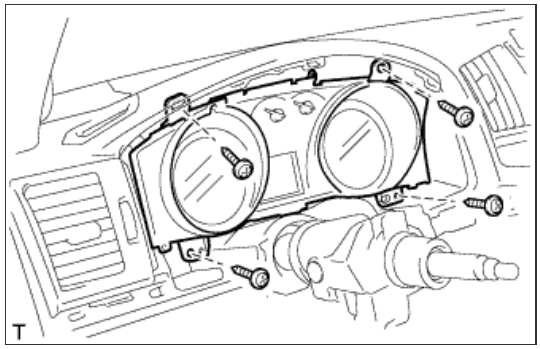
35. REMOVE INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (w/ Multi-information Display)



a. Detach the 9 claws.

b. Remove the finish panel and then disconnect the connector.

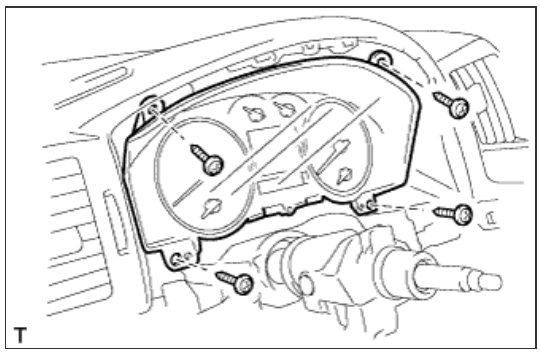
36. REMOVE INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (w/o Multi-information Display)



a. Detach the 9 claws remove the finish panel.

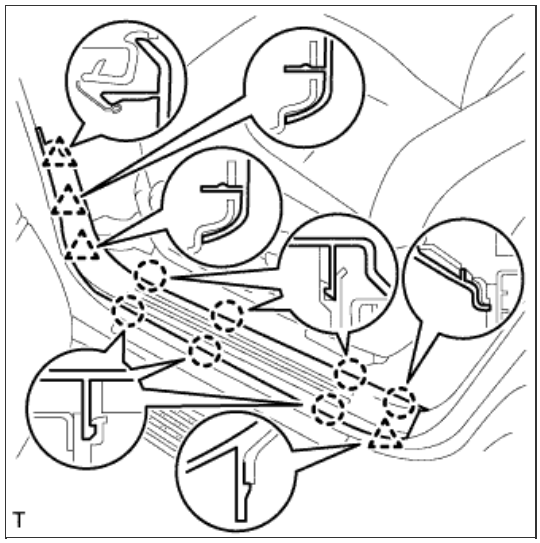
37. REMOVE COMBINATION METER ASSEMBLY (w/ Multi-information Display)

a. Remove the 4 screws.



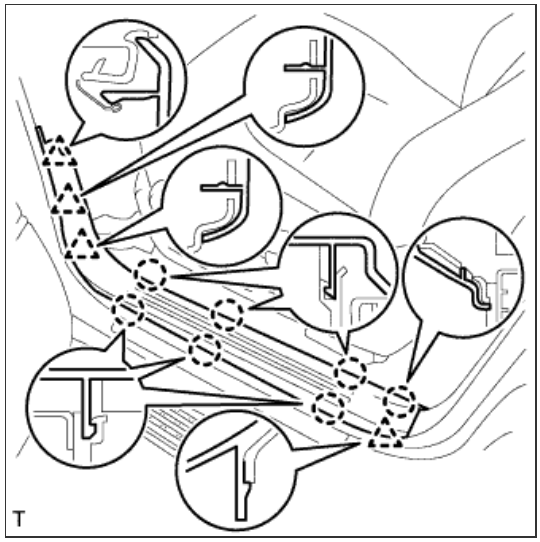
b. Disconnect the connectors and remove the combination meter.

38. REMOVE COMBINATION METER ASSEMBLY (w/o Multi-information Display)



a. Remove the 4 screws.

b. Disconnect the connectors and remove the combination meter.

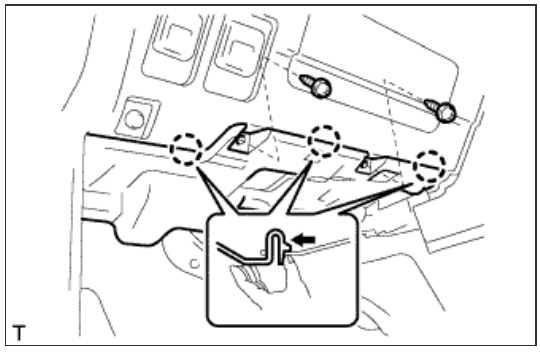


39. REMOVE FRONT DOOR SCUFF PLATE LH (w/o Sliding Roof)

a. Detach the 7 claws and 4 clips, and remove the scuff plate.

40. REMOVE FRONT DOOR SCUFF PLATE LH (w/ Sliding Roof)

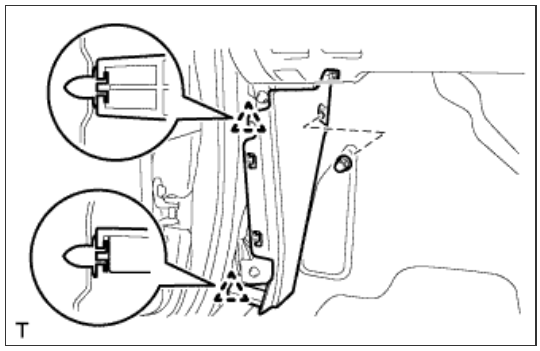
a. Detach the 7 claws and 4 clips, and remove the scuff plate.



41. REMOVE NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Floor Under Cover)

a. Remove the 2 screws.

b. Detach the 3 claws.

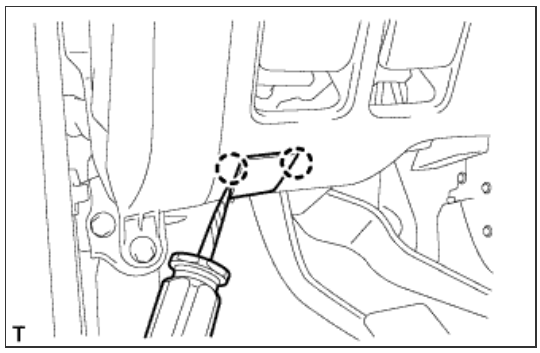


c. Remove the under cover and disconnect the connectors.

42. REMOVE COWL SIDE TRIM BOARD LH

a. Remove the cap nut.

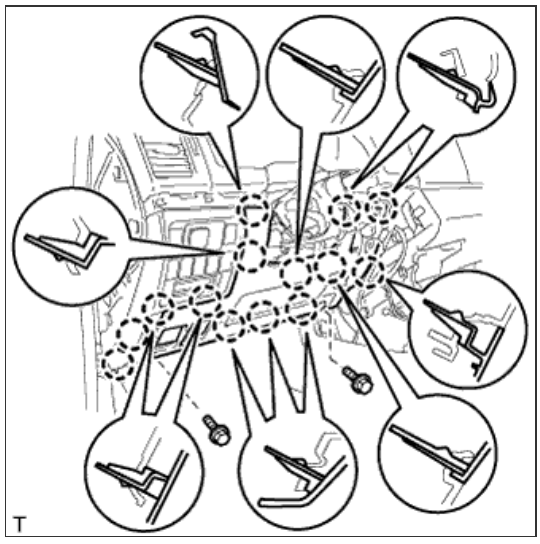
b. Detach the 2 clips and remove the trim board.



43. REMOVE LOWER NO. 1 INSTRUMENT PANEL FINISH PANEL

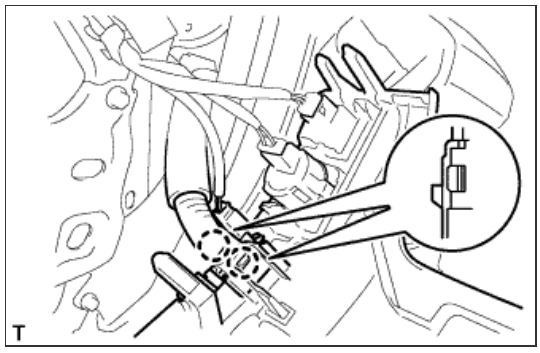
a. Using a screwdriver, detach the 2 claws.

HINT:



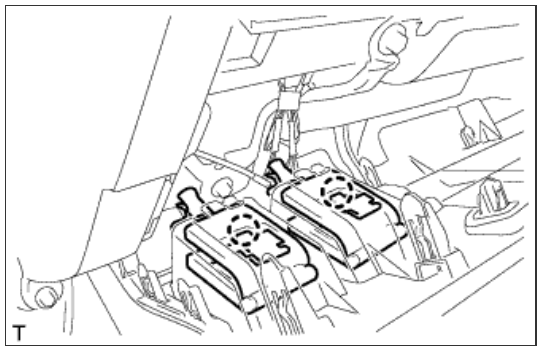
Tape the screwdriver tip before use.

b. Open the hole cover.



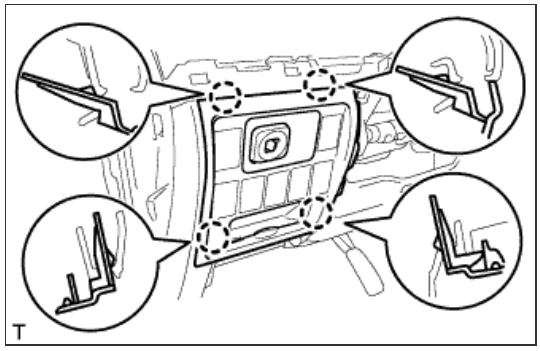
c. Remove the 2 bolts.

d. Detach the 14 claws.



e. Detach the 2 claws and remove the sensor.

f. Detach the 2 claws and disconnect the 2 control cables.

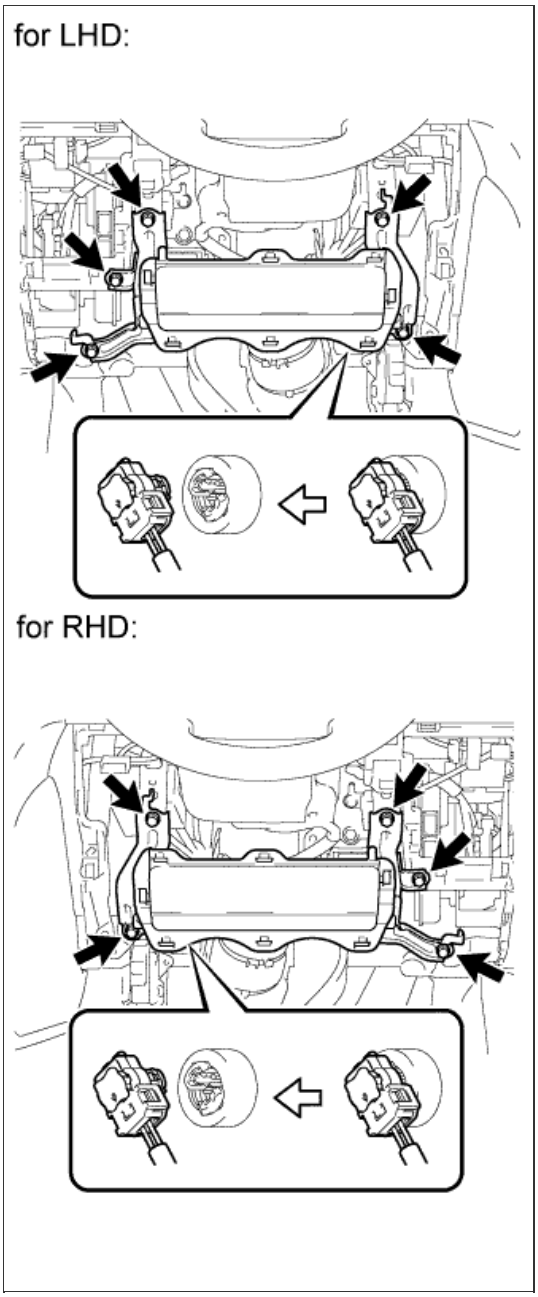


g. Remove the finish panel and then disconnect the connectors.

44. REMOVE NO. 1 SWITCH HOLE BASE

a. Detach the 4 claws.

b. Remove the switch hole base and then disconnect the connectors.

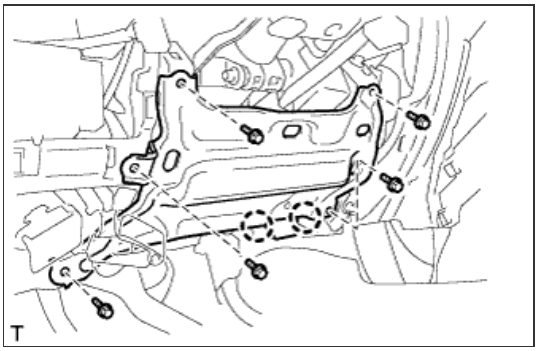


45. REMOVE DRIVER SIDE KNEE AIRBAG ASSEMBLY (w/ Driver Side Knee Airbag)

a. Remove the 5 bolts and driver side knee airbag.

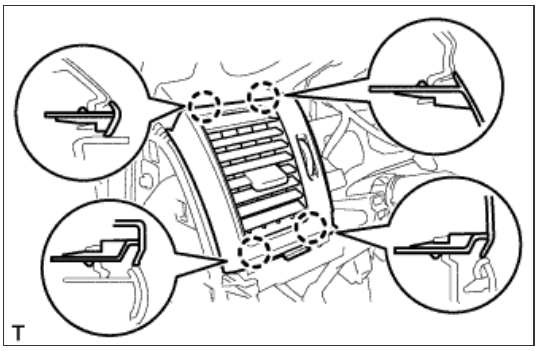
b. Disconnect the connector.

NOTICE:



When handling the airbag connector, take care not to damage the airbag wire harness.

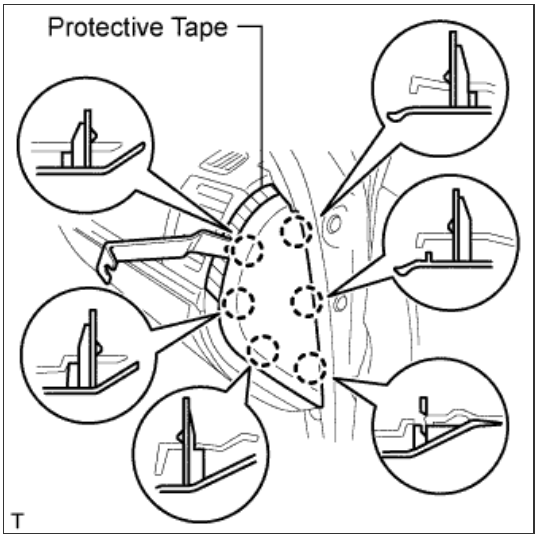
46. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (w/o Driver Side Knee Airbag)



a. Detach the 2 claws and disconnect the DLC3.

b. Remove the 5 bolts and instrument panel.

47. REMOVE NO. 1 INSTRUMENT PANEL REGISTER ASSEMBLY

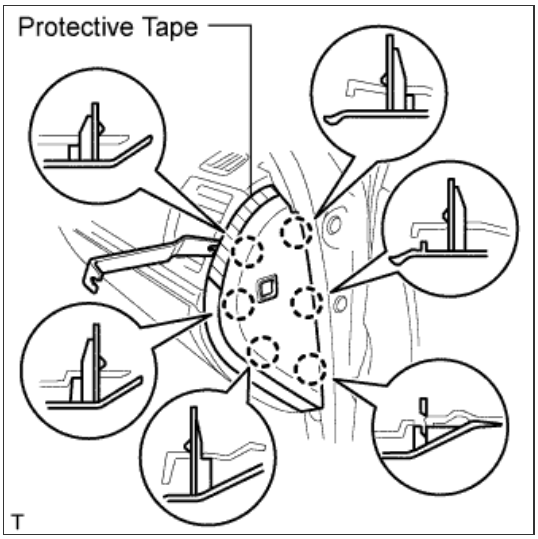


a. Detach the 4 claws and remove the register.

48. REMOVE INSTRUMENT SIDE PANEL RH (w/o Airbag Cut Off Switch)

a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 6 claws and remove the side panel.



49. REMOVE INSTRUMENT SIDE PANEL RH (w/ Airbag Cut Off Switch)

a. Place protective tape as shown in the illustration.

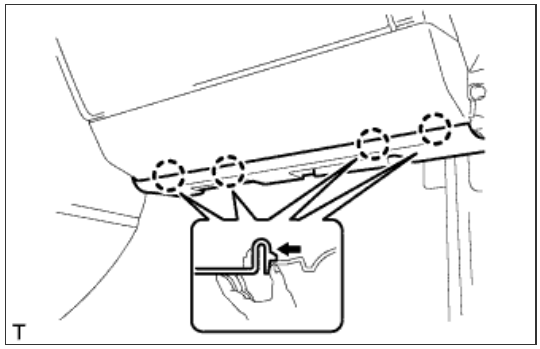
b. Using a moulding remover, detach the 6 claws.

c. Remove the side panel and disconnect the connector.

50. REMOVE FRONT DOOR SCUFF PLATE RH (w/o Sliding Roof)

HINT:

Use the same procedures described for the LH side.

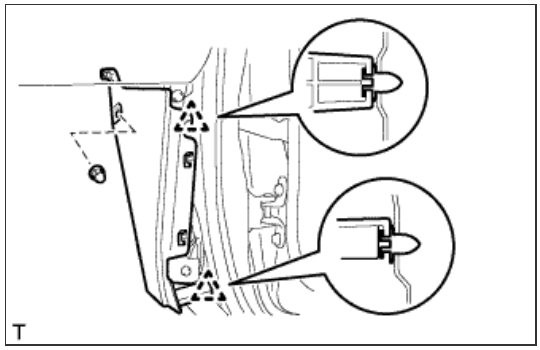


51. REMOVE FRONT DOOR SCUFF PLATE RH (w/ Sliding Roof)

HINT:

Use the same procedures described for the LH side.

52. REMOVE NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Floor Under Cover)



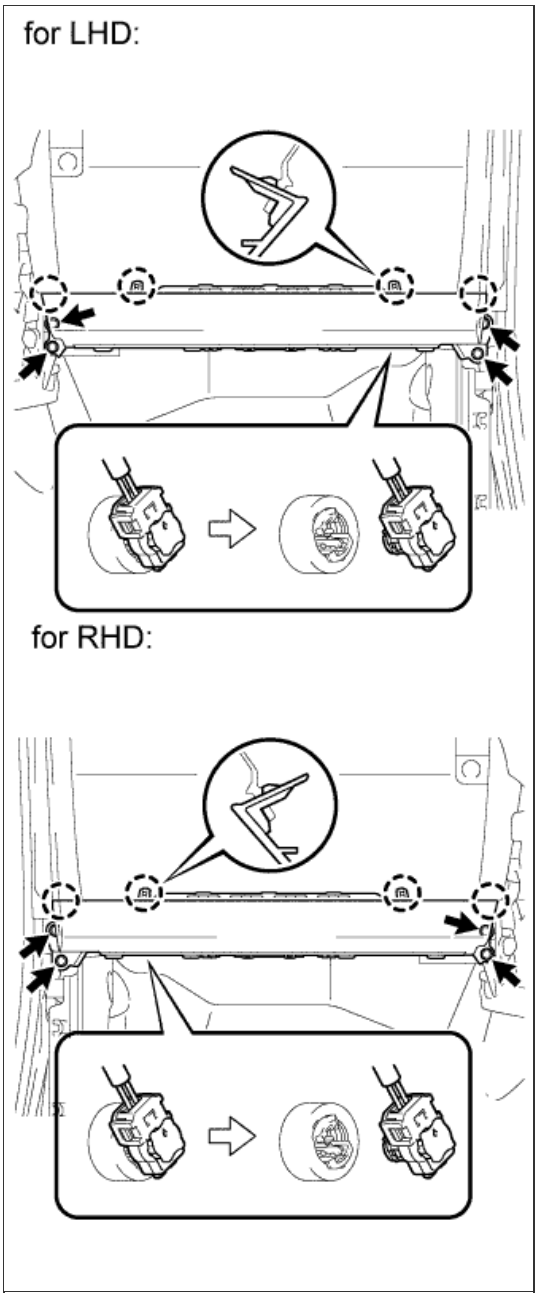
a. Detach the 4 claws and remove the under cover.

53. REMOVE COWL SIDE TRIM BOARD RH

a. Remove the cap nut.

b. Detach the 2 clips and remove the trim board.

54. REMOVE FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (w/ Passenger Side Knee Airbag)

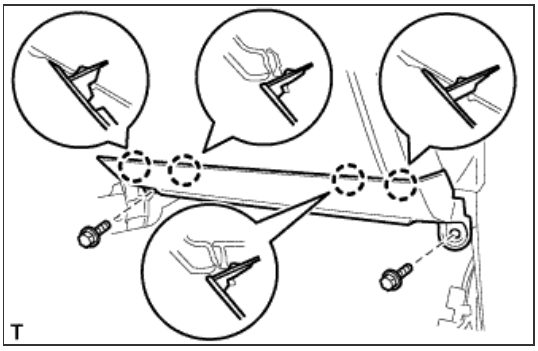


a. Remove the 4 bolts.

b. Detach the 4 claws and remove the front passenger side knee airbag.

c. Disconnect the connector.

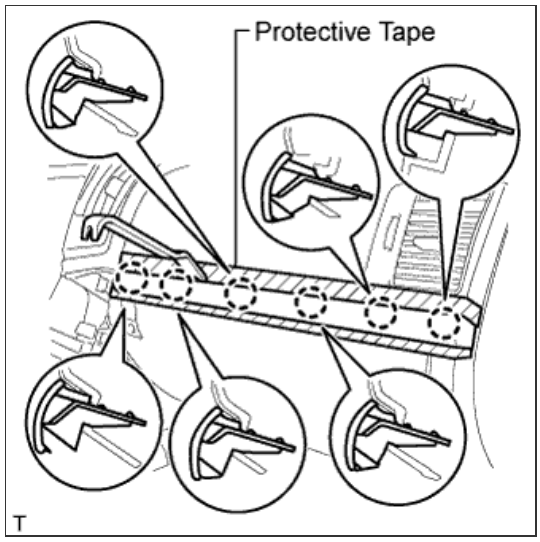
NOTICE:



When handling the airbag connector, take care not to damage the airbag wire harness.

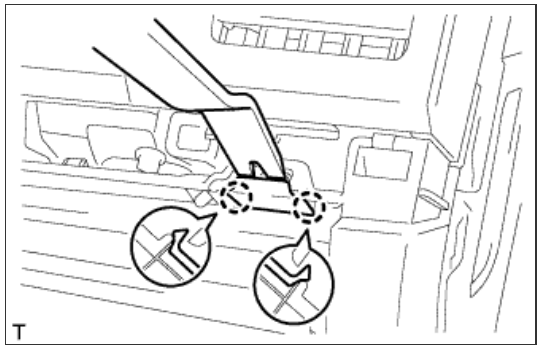
55. REMOVE LOWER INSTRUMENT PANEL (w/o Passenger Side Knee Airbag)

a. Remove the 2 bolts.



b. Detach the 4 claws and remove the instrument panel.

56. REMOVE NO. 3 INSTRUMENT CLUSTER FINISH PANEL GARNISH

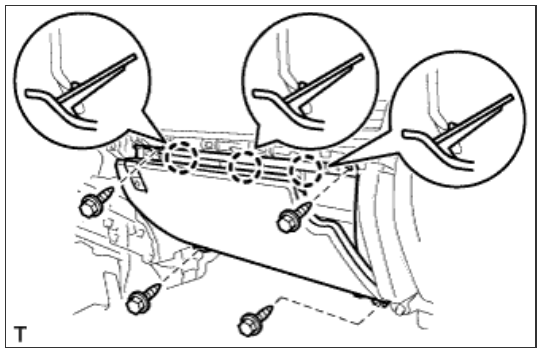


a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 6 claws and remove the panel garnish.

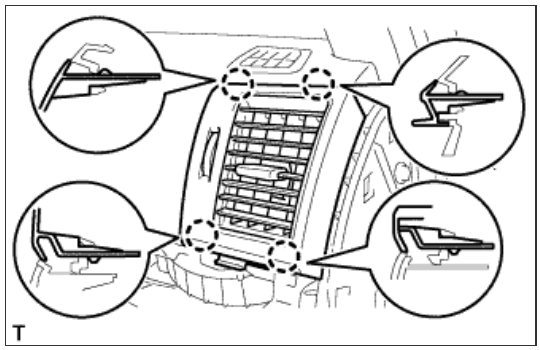
57. REMOVE INSTRUMENT PANEL BOX DOOR KNOB

a. Using a moulding remover, detach the 2 claws and remove the knob.



58. REMOVE LOWER NO. 2 INSTRUMENT PANEL FINISH PANEL

a. Remove the 4 bolts.

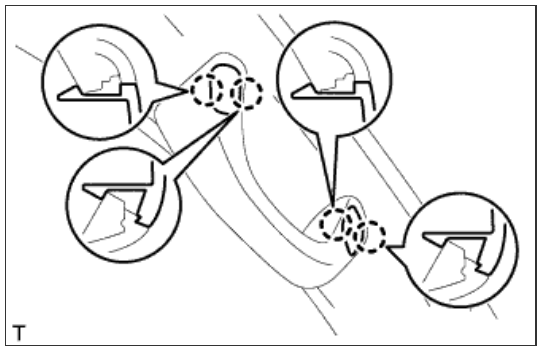


b. Detach the 3 claws.

c. Remove the finish panel and then disconnect the connector.

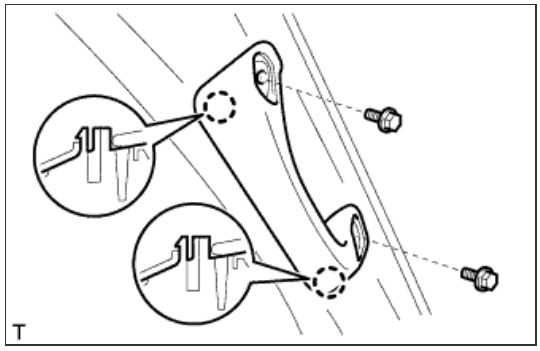
59. REMOVE NO. 2 INSTRUMENT PANEL REGISTER ASSEMBLY

a. Detach the 4 claws and remove the register.



60. REMOVE FRONT ASSIST GRIP SUB-ASSEMBLY (w/o Sliding Roof)

HINT:

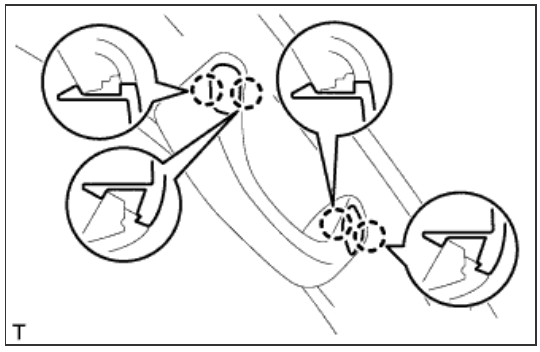


Use the same procedure to remove the front assist grip on the other side.

a. Detach the 4 claws and remove the 2 assist grip plugs.

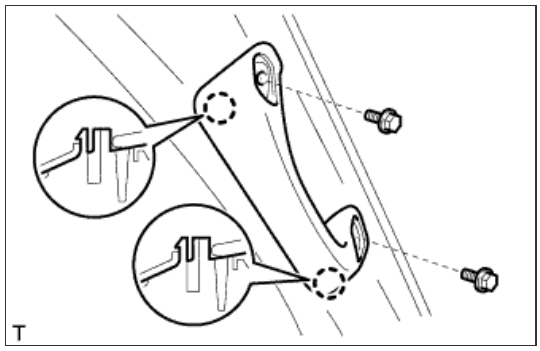
b. Remove the 2 bolts.

c. Detach the 2 claws and remove the front assist grip.



61. REMOVE FRONT ASSIST GRIP SUB-ASSEMBLY (w/ Sliding Roof)

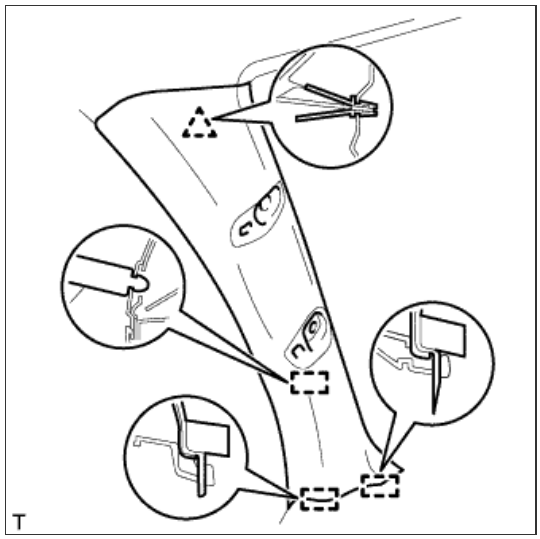
HINT:



Use the same procedure to remove the front assist grip on the other side.

a. Detach the 4 claws and remove the 2 assist grip plugs.

b. Remove the 2 bolts.

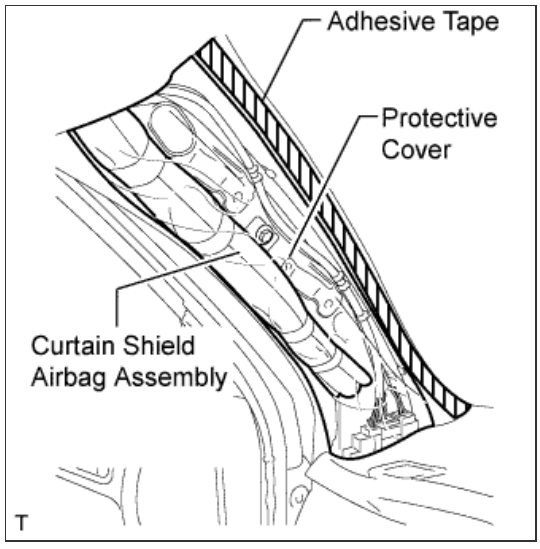


c. Detach the 2 claws and remove the front assist grip.

62. REMOVE FRONT PILLAR GARNISH LH (w/o Sliding Roof)

a. Detach the clip and 3 guides, and remove the front pillar garnish.

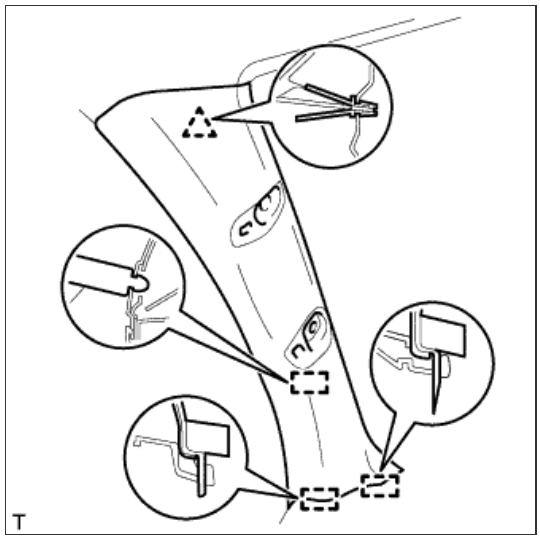
b. for 9, 14 Speakers:
Disconnect the speaker connector and then remove the front pillar garnish.



c. Protect the curtain shield airbag.

i. Thoroughly cover the airbag with a cloth or nylon sheet and fix the ends of the cover with adhesive tape, as shown in the illustration.

NOTICE:

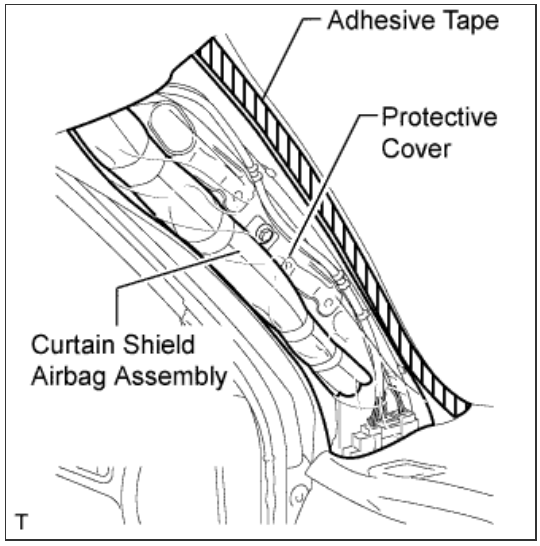


Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish is removed.

63. REMOVE FRONT PILLAR GARNISH LH (w/ Sliding Roof)

a. Detach the clip 3 guides, and remove the front pillar garnish.

b. for 9, 14 Speakers:
Disconnect the speaker connector and then remove the front pillar garnish.



c. Protect the curtain shield airbag.

i. Thoroughly cover the airbag with a cloth or nylon sheet and fix the ends of the cover with adhesive tape, as shown in the illustration.

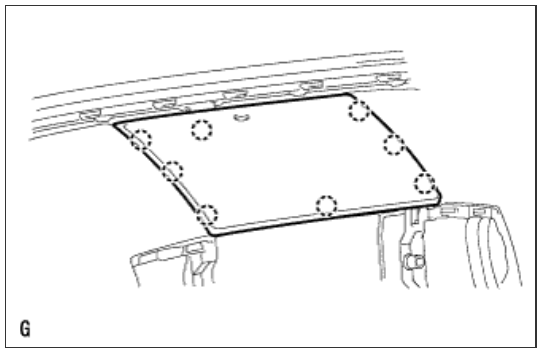
NOTICE:

Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish is removed.

64. REMOVE FRONT PILLAR GARNISH RH (w/o Sliding Roof)

HINT:

Use the same procedures described for the LH side.



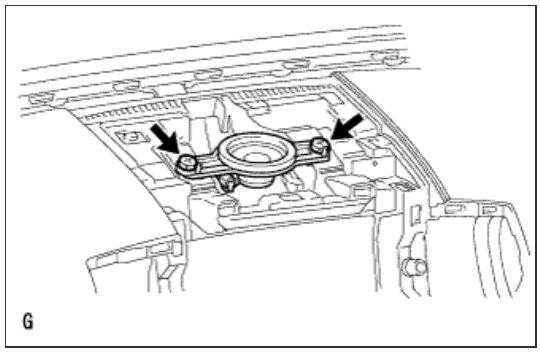
65. REMOVE FRONT PILLAR GARNISH RH (w/ Sliding Roof)

HINT:

Use the same procedures described for the LH side.

66. REMOVE NO. 1 SPEAKER OPENING COVER ASSEMBLY

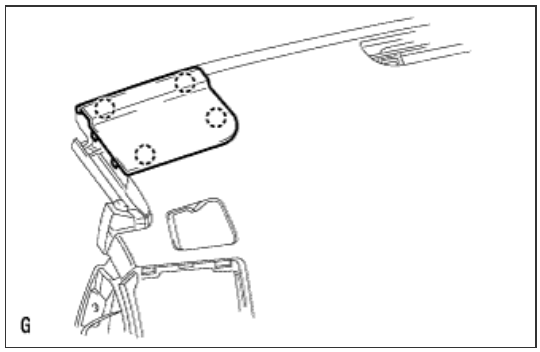
a. Detach the 8 claws and remove the opening cover.



67. REMOVE FRONT NO. 4 SPEAKER ASSEMBLY

a. Remove the 2 bolts.

b. Remove the speaker and then disconnect the speaker connector.



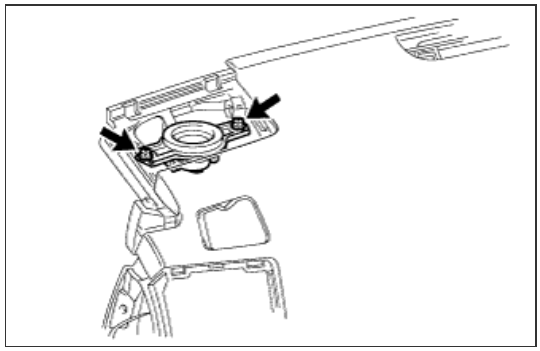
NOTICE:

Do not touch the cone part of the speaker.

68. REMOVE NO. 1 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY

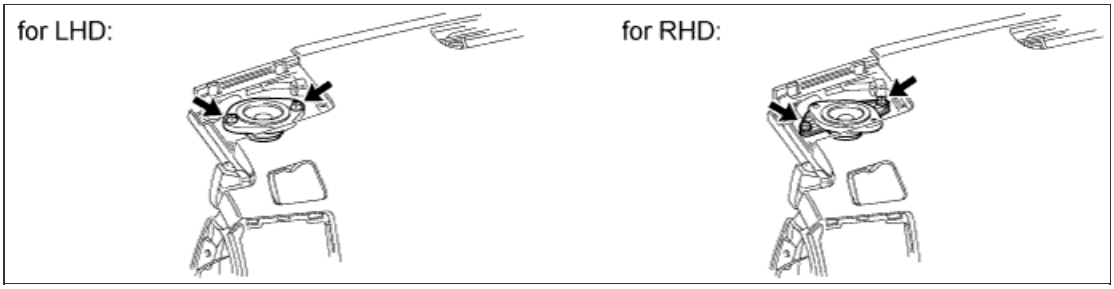
a. Detach the 4 claws and remove the speaker panel.

69. REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (LH Side)



a. for 9 Speakers Models:

i. Remove the 2 bolts.



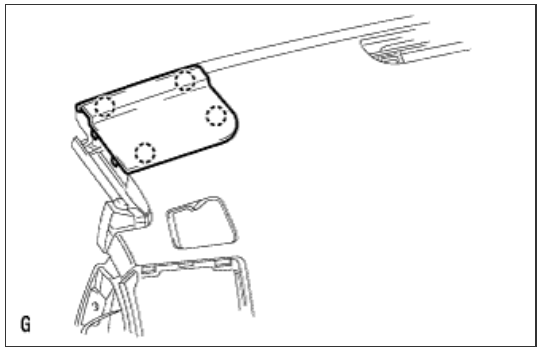
ii. Remove the speaker and then disconnect the speaker connector.

NOTICE:

Do not touch the cone part of the speaker.

b. except 9 Speakers Models:

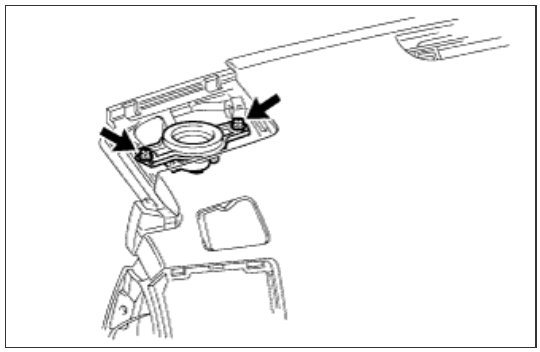
i. Remove the 2 bolts.



ii. Remove the speaker and then disconnect the speaker connector.

NOTICE:

Do not touch the cone part of the speaker.

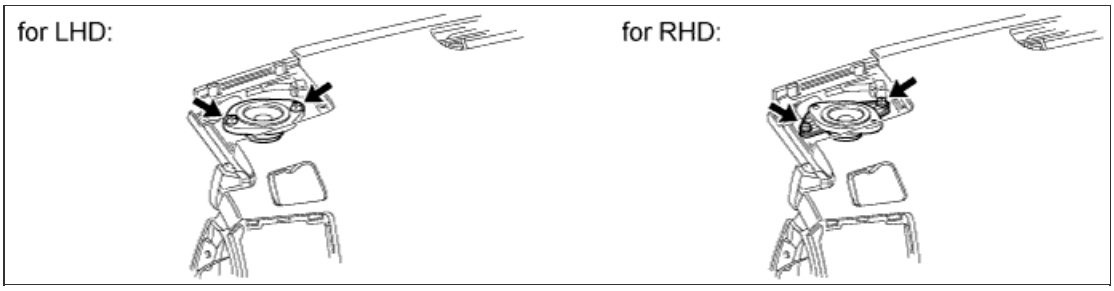


70. REMOVE NO. 2 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY

a. Detach the 4 claws and remove the speaker panel.

71. REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (RH Side)

a. for 9 Speakers Models:



i. Remove the 2 bolts.

ii. Remove the speaker and then disconnect the speaker connector.

NOTICE:

Do not touch the cone part of the speaker.

b. except 9 Speakers Models:

i. Remove the 2 bolts.

ii. Remove the speaker and then disconnect the speaker connector.

NOTICE:

Do not touch the cone part of the speaker.

72. REMOVE NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY

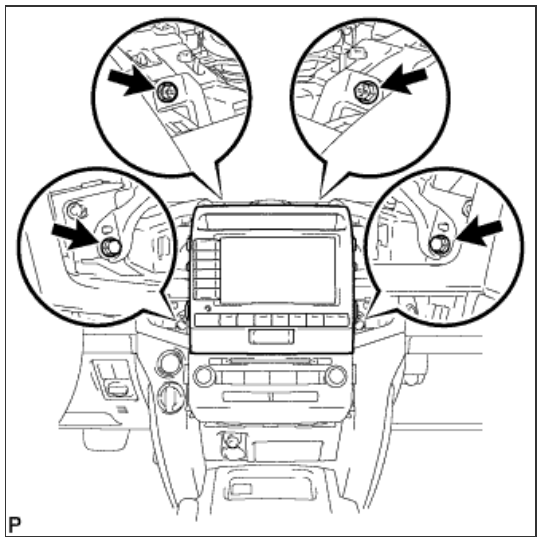
a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 6 claws.

c. Remove the register and then disconnect the connector.

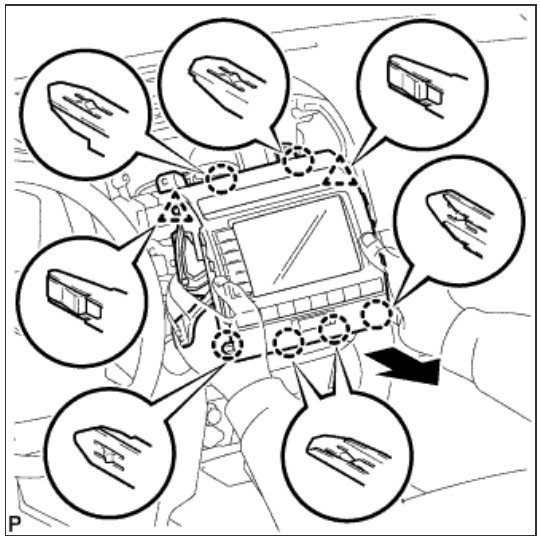
73. REMOVE NO. 4 INSTRUMENT PANEL REGISTER ASSEMBLY

a. Place protective tape as shown in the illustration.



b. Using a moulding remover, detach the 6 claws.

c. Remove the register and then disconnect the connector.

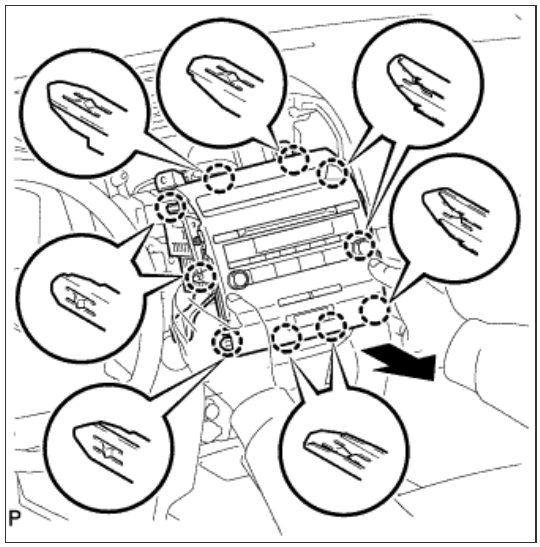


74. REMOVE MULTI-DISPLAY ASSEMBLY WITH BRACKET (w/ Multi-display)

a. Remove the 2 screws and 2 bolts.

b. Pull the radio receiver to detach the 2 clips and 6 claws on the backside of the display.

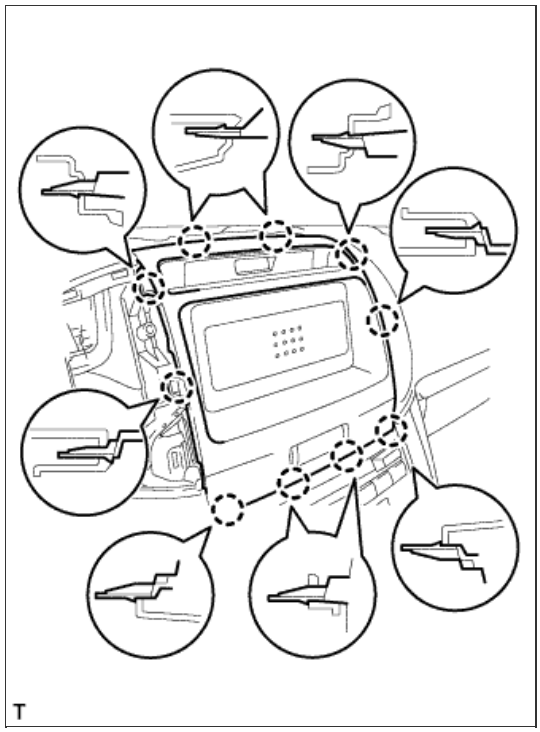
c. Disconnect the connectors and remove the display.



75. REMOVE RADIO RECEIVER ASSEMBLY WITH BRACKET (w/o Multi-display)

a. Remove the 2 screws and 2 bolts.

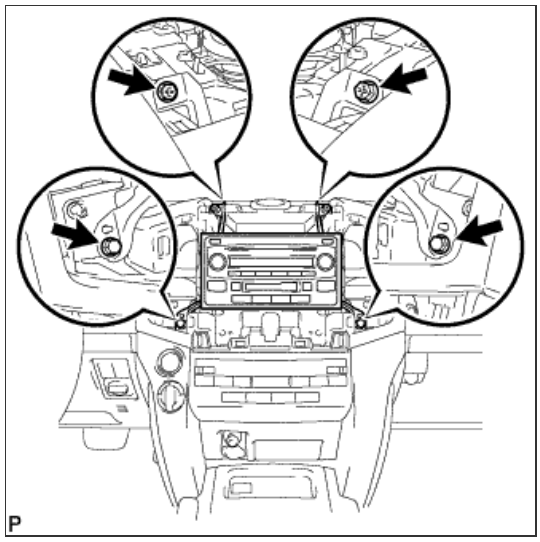
b. Pull the radio receiver to detach the 10 claws on the backside of the radio receiver.



c. Disconnect the connectors and remove the radio receiver.

76. REMOVE NO. 1 CENTER INSTRUMENT CLUSTER FINISH PANEL

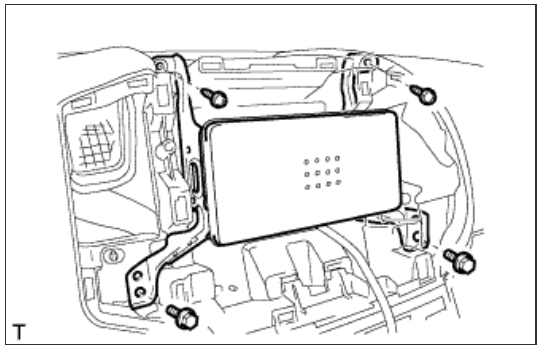
a. Detach the 10 claws.



b. Remove the finish panel and then disconnect the connectors.

77. REMOVE RADIO RECEIVER ASSEMBLY WITH BRACKET (w/ Cassette Tape Player)

a. Remove the 2 screws and 2 bolts.

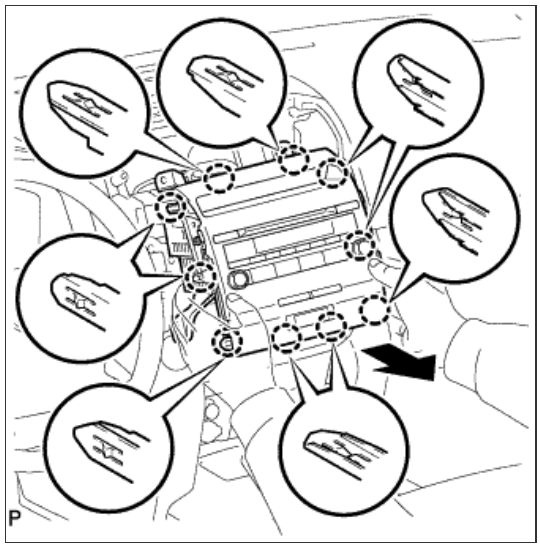


b. Disconnect the connectors and remove the radio receiver.

78. REMOVE RADIO TUNER OPENING COVER WITH BRACKET (w/o Radio Receiver)

a. Remove the 2 bolts.

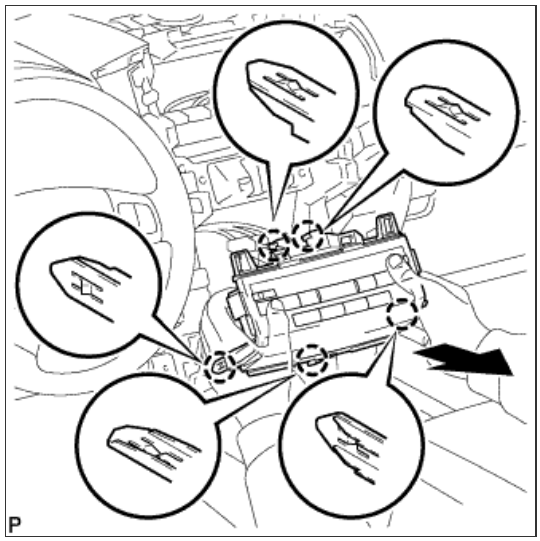
b. Remove the 2 screws and opening cover with bracket.



79. REMOVE RADIO RECEIVER ASSEMBLY WITH BRACKET (w/ Multi-display)

a. Remove the 2 screws and 2 bolts.

b. Pull the radio receiver to detach the 10 claws on the backside of the radio receiver.

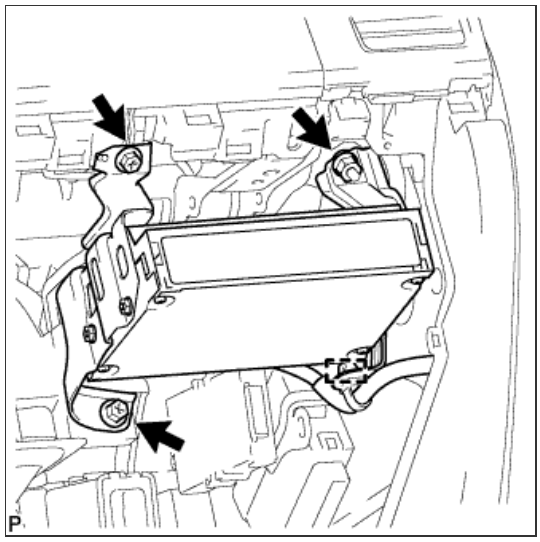


c. Disconnect the connectors and remove the radio receiver.

80. REMOVE AIR CONDITIONING CONTROL ASSEMBLY

a. Pull the radio receiver to detach the 5 claws on the backside of the radio receiver.

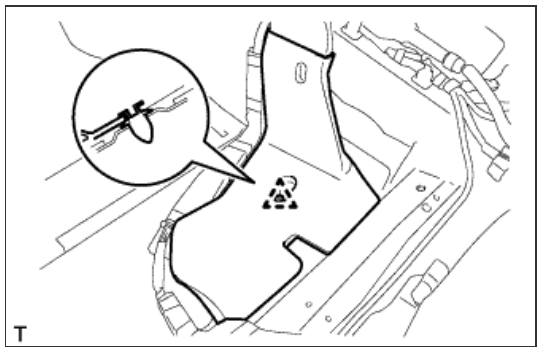
b. Disconnect the connectors and remove the radio receiver.



81. REMOVE NAVIGATION MODULE BOARD WITH DISC PLAYER BRACKET (w/ Multi-display)

a. Detach the clamp.

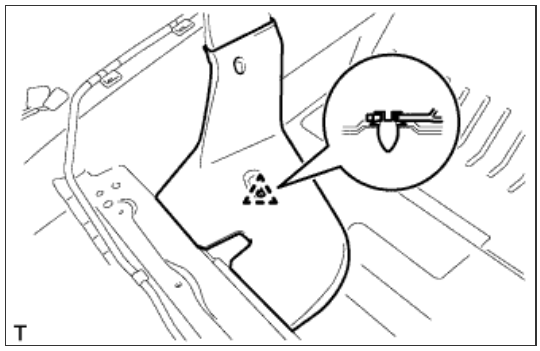
b. Remove the 2 screws and nut.



c. Disconnect the navigation module board connectors and remove the navigation module board with disc player bracket.

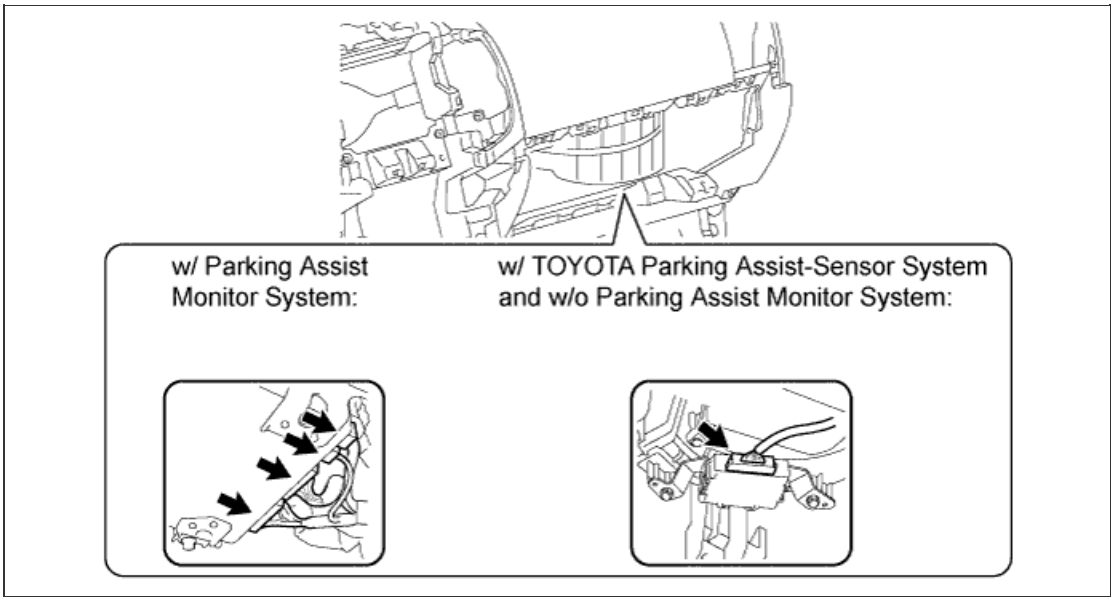
82. REMOVE REAR NO. 2 AIR DUCT

a. Fold back the front floor carpet.



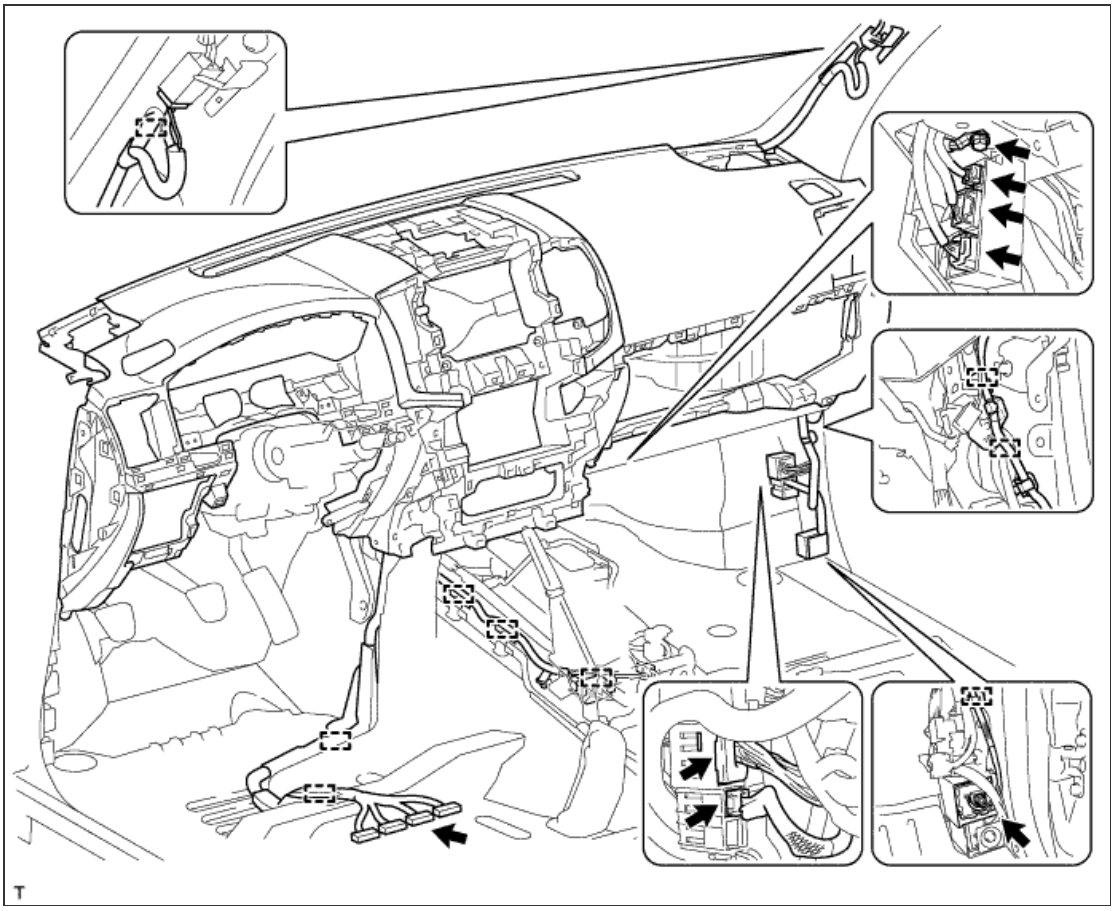
b. Detach the clip and remove the air duct.

83. REMOVE REAR NO. 4 AIR DUCT



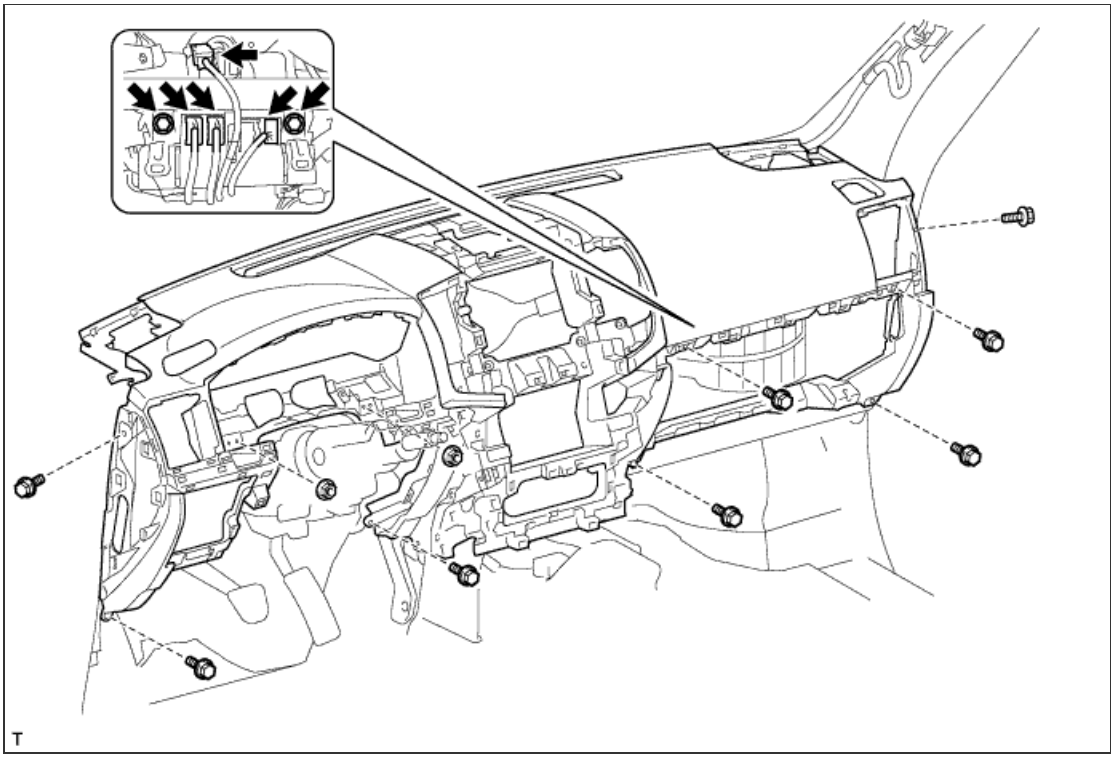
a. Fold back the front floor carpet.

b. Detach the clip and remove the air duct.



84. REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY (for LHD)

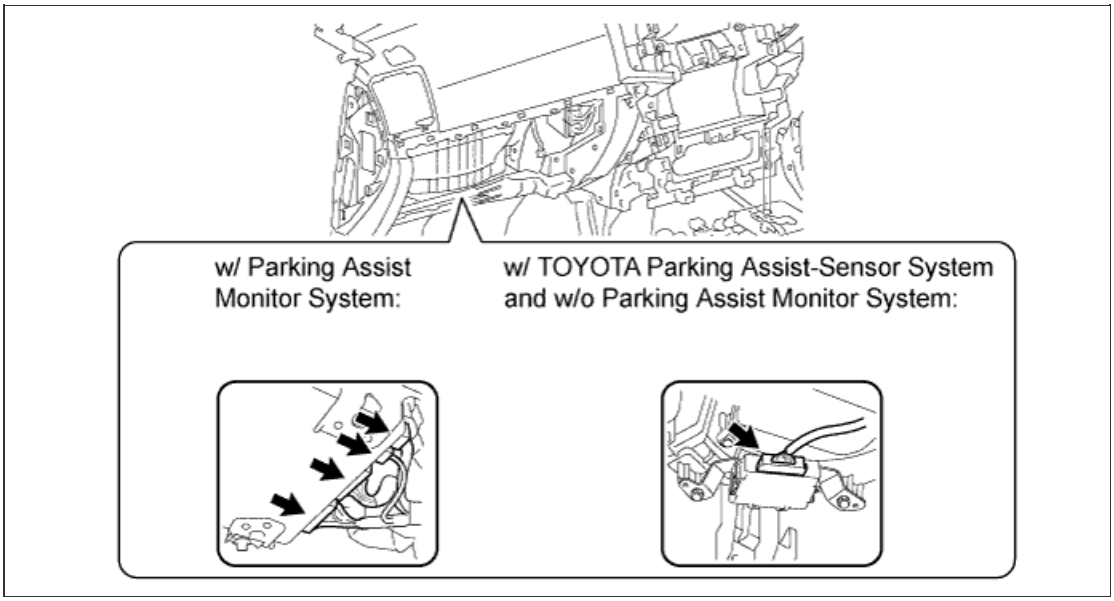
a. Disconnect the connector.



b. Disconnect the connectors and clamps.

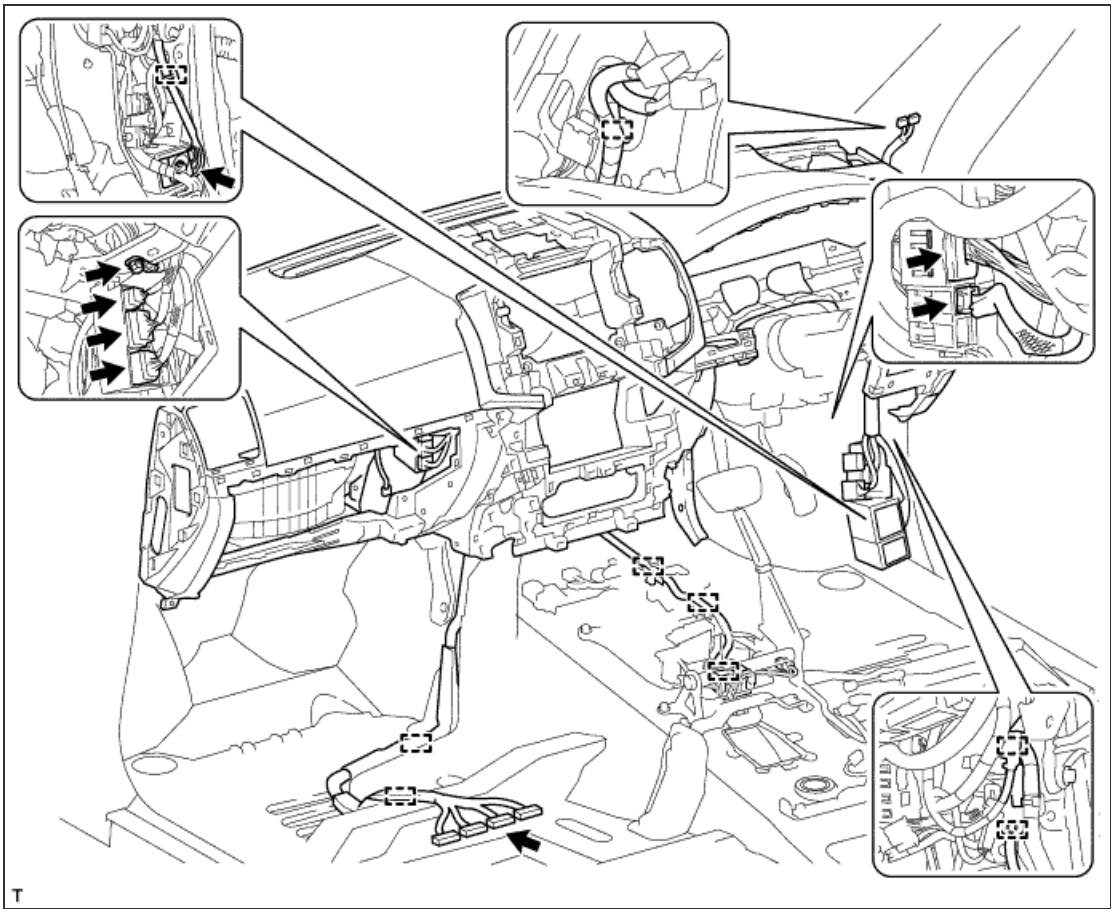
c. Remove the bolt and disconnect the wire harness.

d. Remove the 2 passenger airbag bolts.



e. Disconnect the connectors.

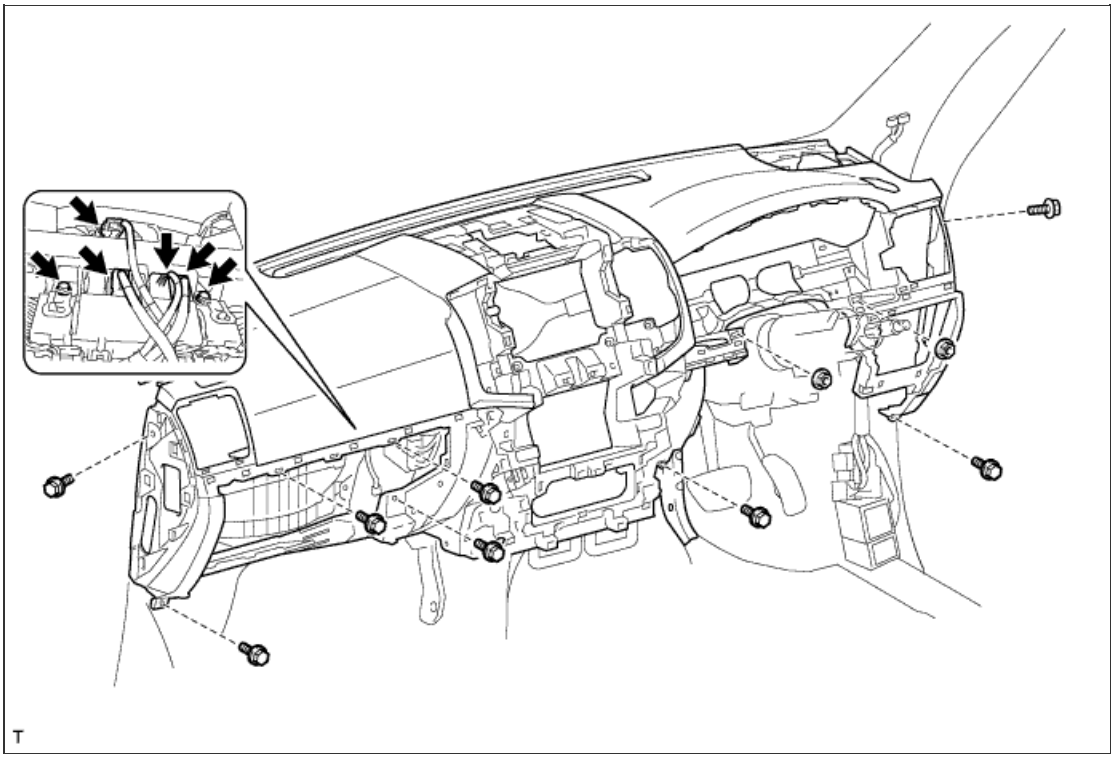
f. Remove the 8 bolts.



g. Remove the 2 nuts and safety pad.

85. REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY (for RHD)

a. Disconnect the connector.

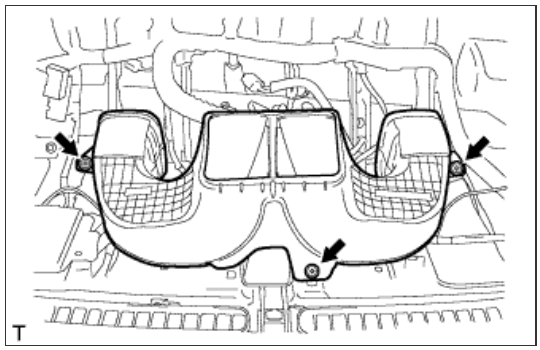


b. Disconnect the connectors and clamps.

c. Remove the bolt and disconnect the wire harness.

d. Remove the 2 passenger airbag bolts.

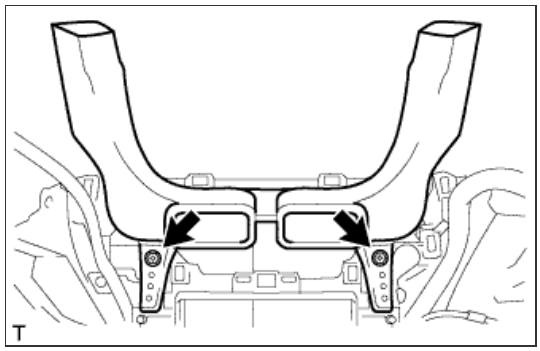
e. Disconnect the connectors.



f. Remove the 8 bolts.

g. Remove the 2 nuts and safety pad.

for Preparation Click here

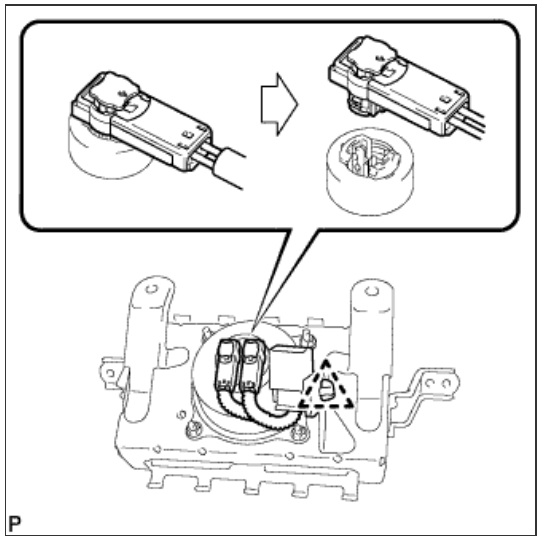


1. REMOVE CENTER HEATER TO REGISTER DUCT

a. Remove the 3 screws and duct.

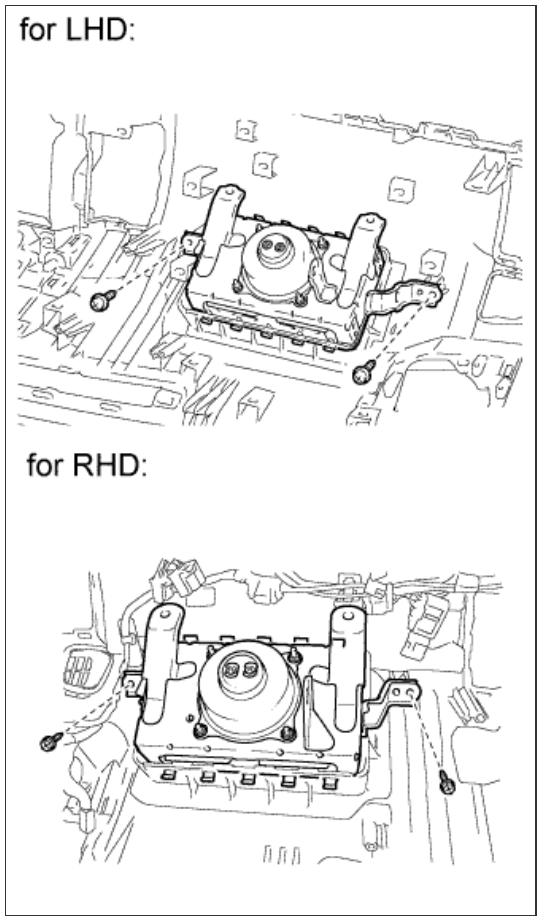
2. REMOVE REAR NO. 1 AIR DUCT

a. Remove the 2 screws and duct.



3. REMOVE FRONT PASSENGER AIRBAG ASSEMBLY

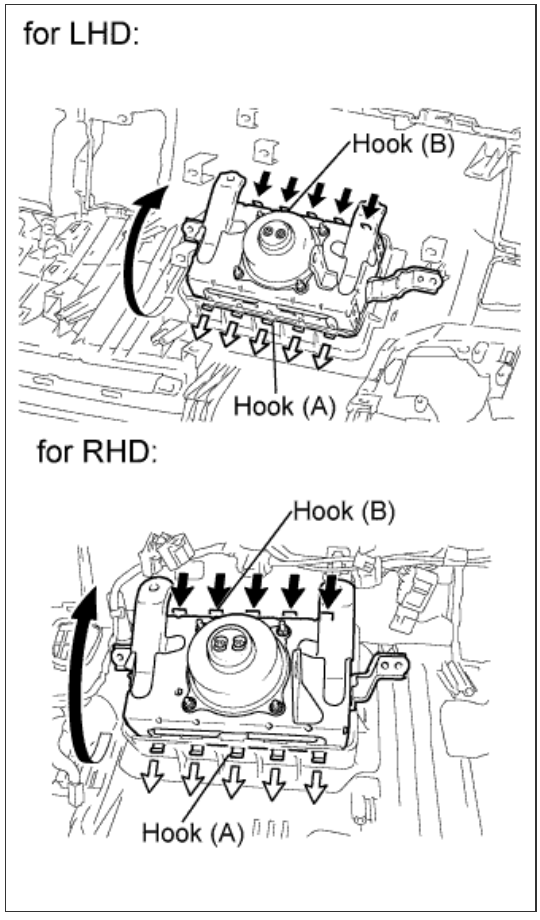
a. Detach the claw and remove the wire.



b. Disconnect the 2 connectors and remove the instrument panel wire from the front passenger airbag.

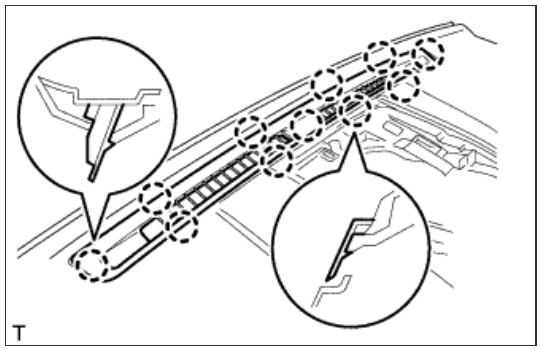
NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.



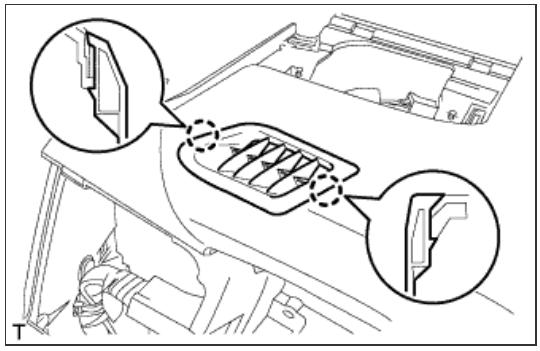
c. Remove the 2 screws.

d. Detach the 5 hooks (A).



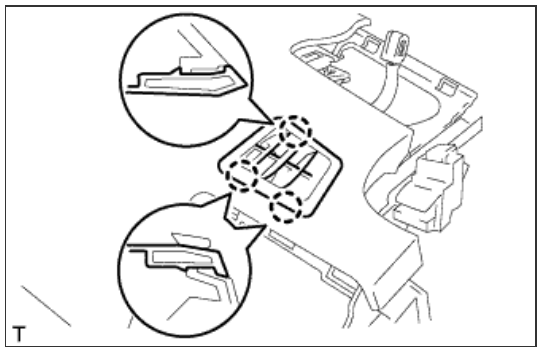
e. Detach the 5 hooks (B) and remove the front passenger airbag from the instrument panel.

4. REMOVE DEFROSTER NOZZLE ASSEMBLY



a. Detach the 11 claws and remove the nozzle.

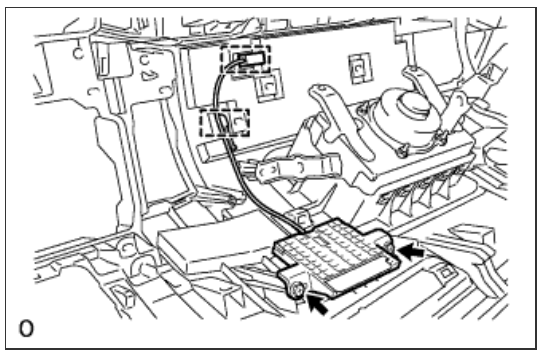
a. Detach the 11 claws and remove the nozzle.



5. REMOVE NO. 1 SIDE DEFROSTER NOZZLE

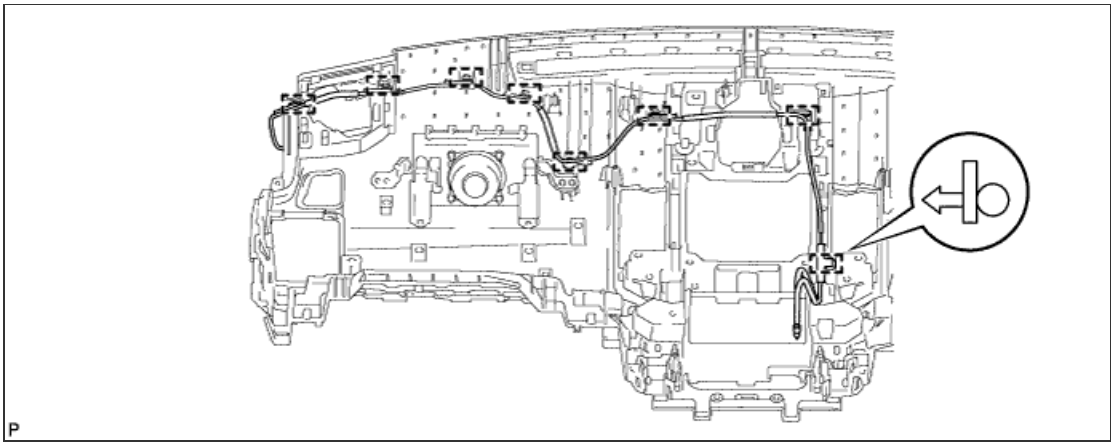
a. Detach the 2 claws and remove the nozzle.

6. REMOVE NO. 2 SIDE DEFROSTER NOZZLE



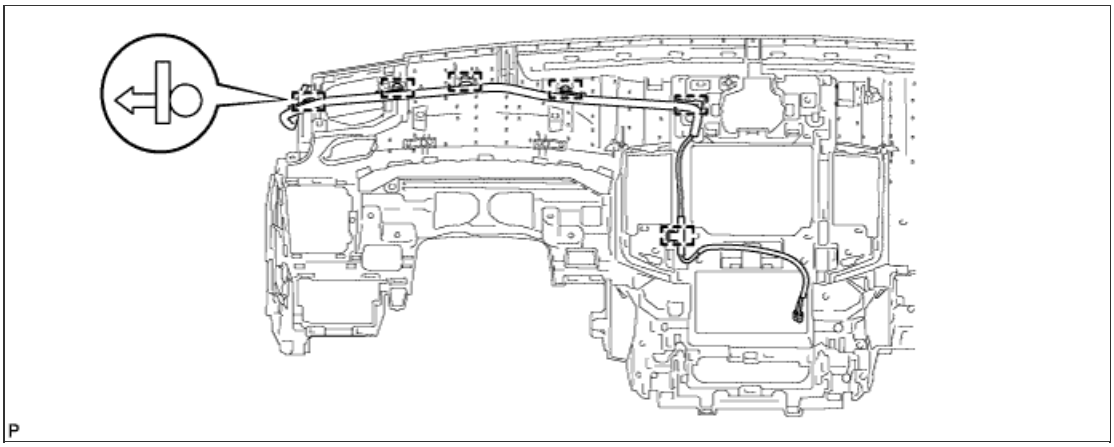
a. Detach the 3 claws and remove the nozzle.

7. REMOVE NAVIGATION ANTENNA ASSEMBLY (w/ Multi-display)



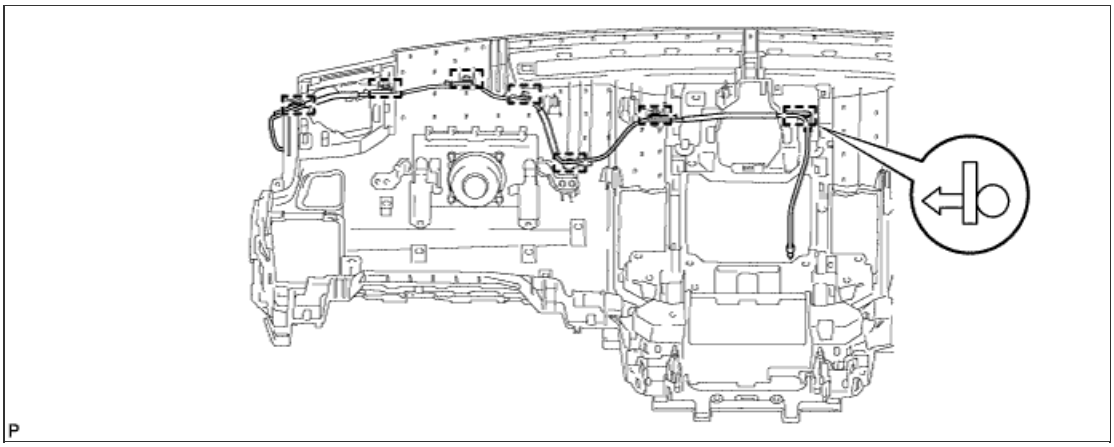
a. Detach the 2 clamps.

b. Remove the 2 screws and antenna.

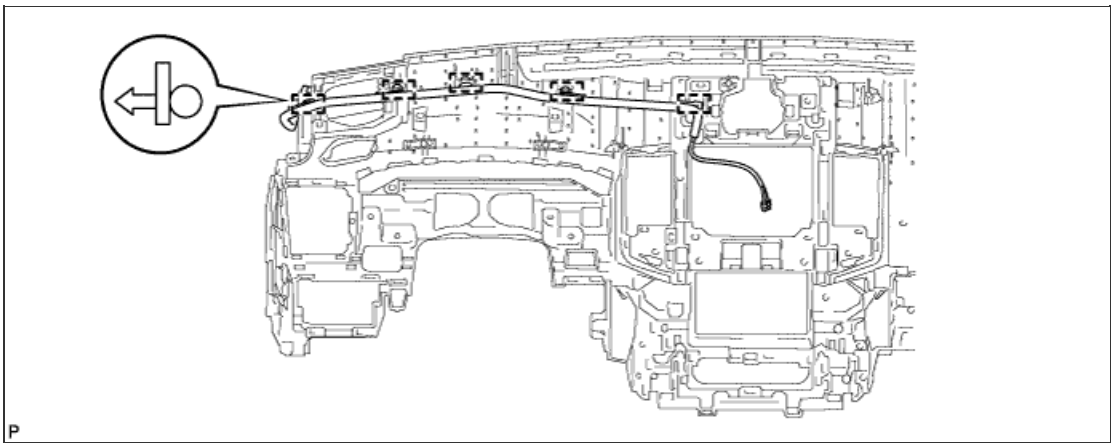


8. REMOVE ANTENNA CORD SUB-ASSEMBLY (w/ Multi-display)

a. for LHD:
Detach the 8 clamps and remove the antenna cord.

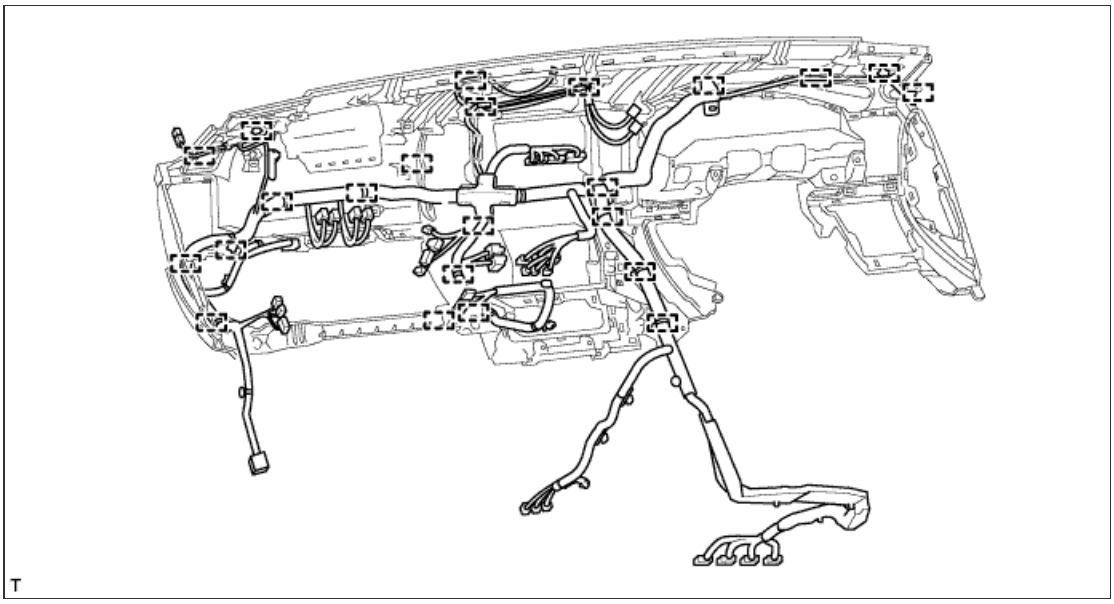


b. for RHD:
Detach the 6 clamps and remove the antenna cord.

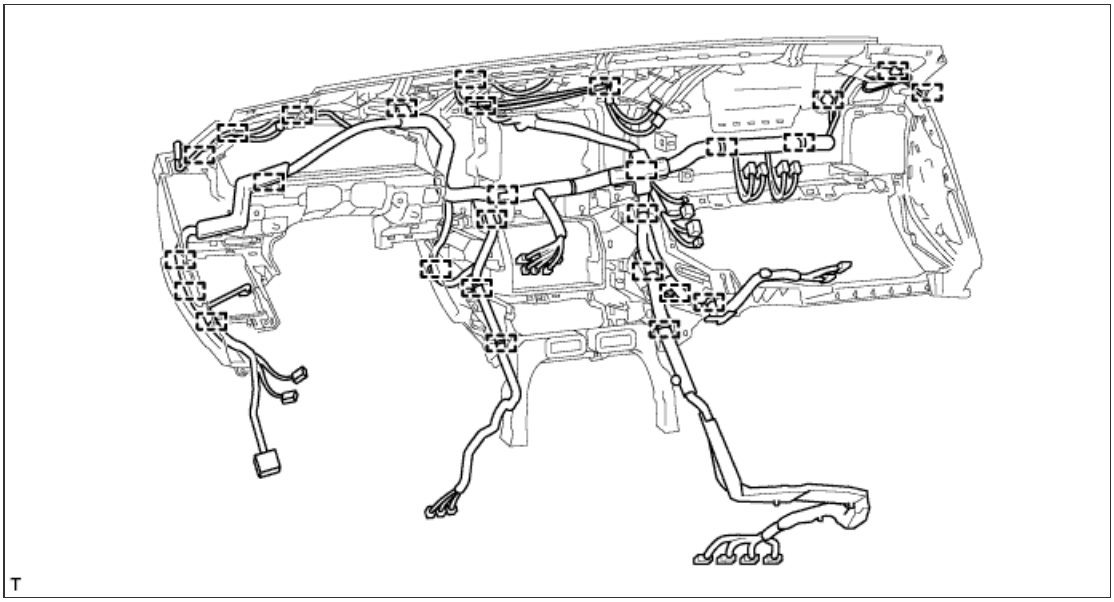


9. REMOVE ANTENNA CORD SUB-ASSEMBLY (w/o Multi-display)

a. for LHD:
Detach the 7 clamps and remove the antenna cord.



b. for RHD:
Detach the 5 clamps and remove the antenna cord.

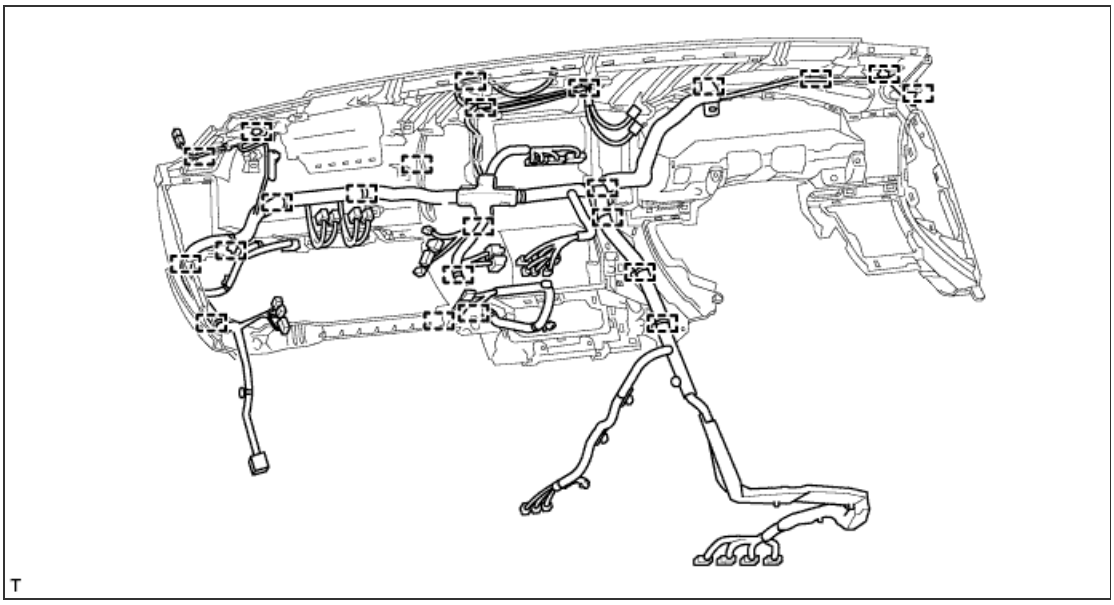


10. REMOVE NO. 2 INSTRUMENT PANEL WIRE (for LHD)

a. Detach the wire from the clamps and remove the wire from the instrument panel.

11. REMOVE NO. 2 INSTRUMENT PANEL WIRE (for RHD)

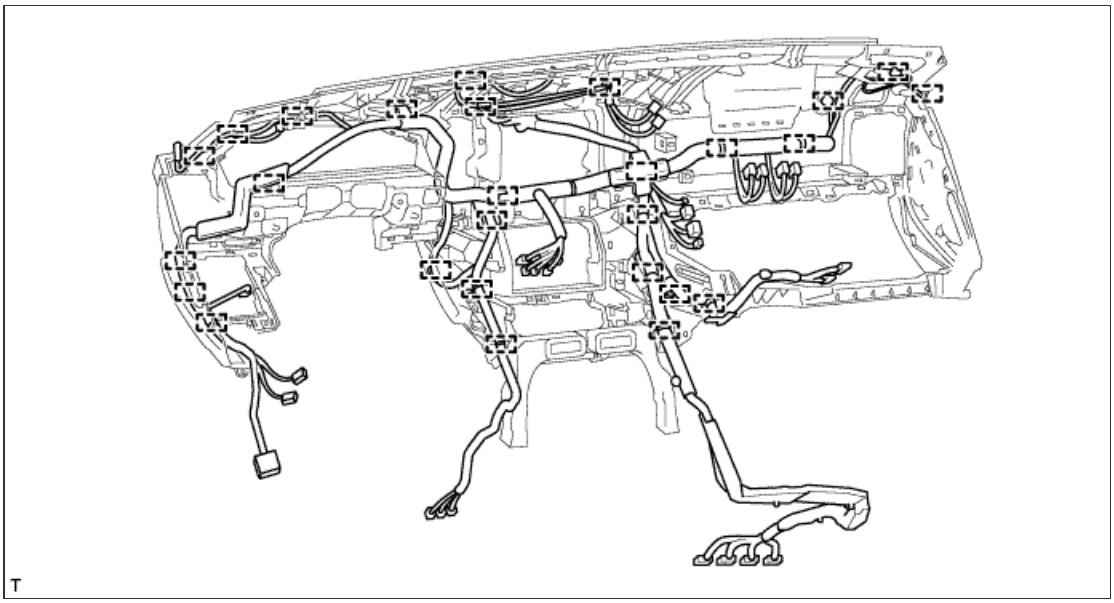
a. Detach the wire from the clamps and remove the wire from the instrument panel.



for Preparation Click here

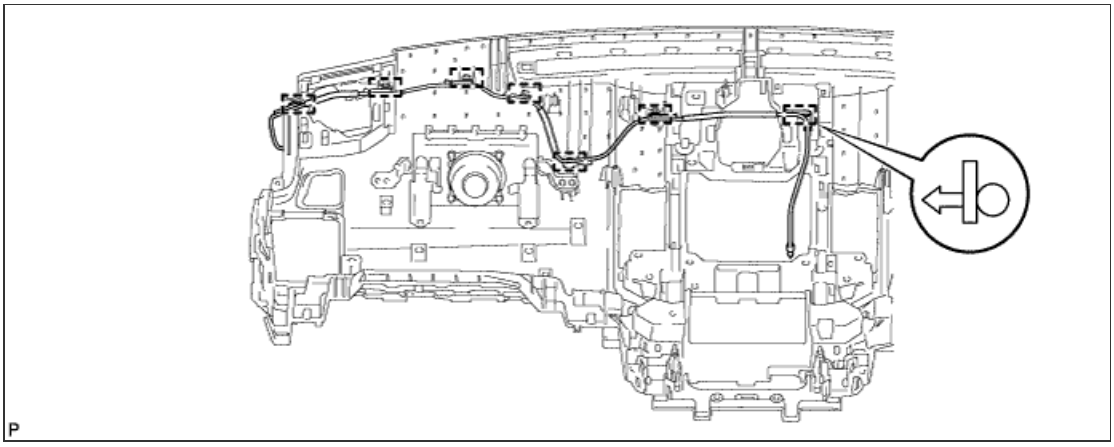
HINT:

A bolt without a torque specification is shown in the standard bolt chart (Click here).



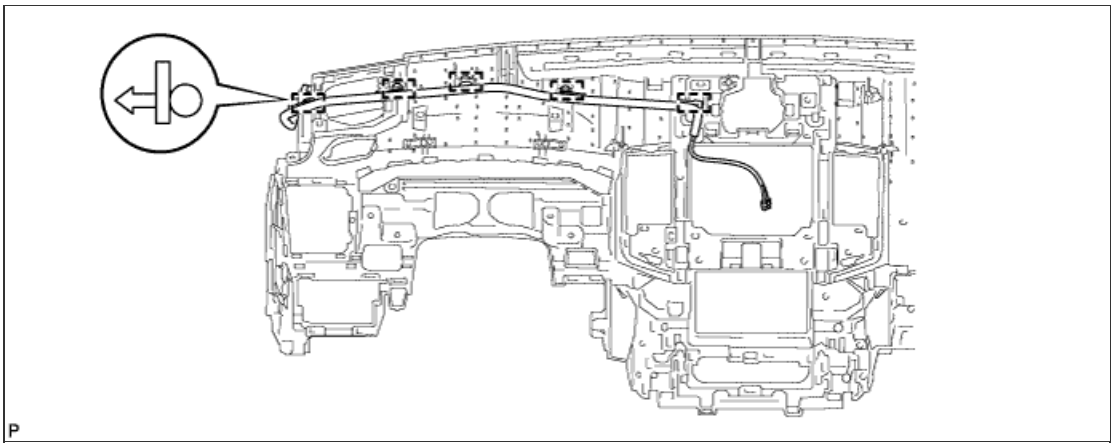
1. INSTALL NO. 2 INSTRUMENT PANEL WIRE (for LHD)

a. Attach the wire to the clamps to install the wire to the instrument panel.



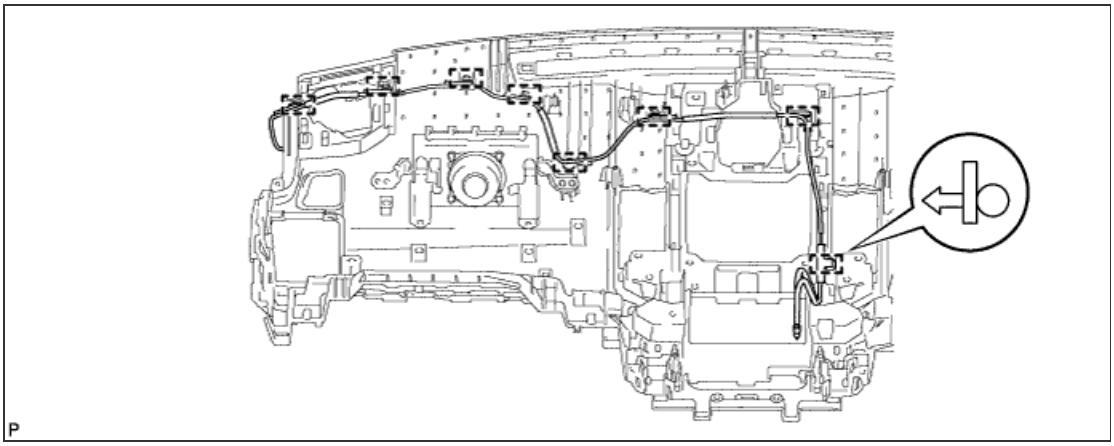
2. INSTALL NO. 2 INSTRUMENT PANEL WIRE (for RHD)

a. Attach the wire to the clamps to install the wire to the instrument panel.

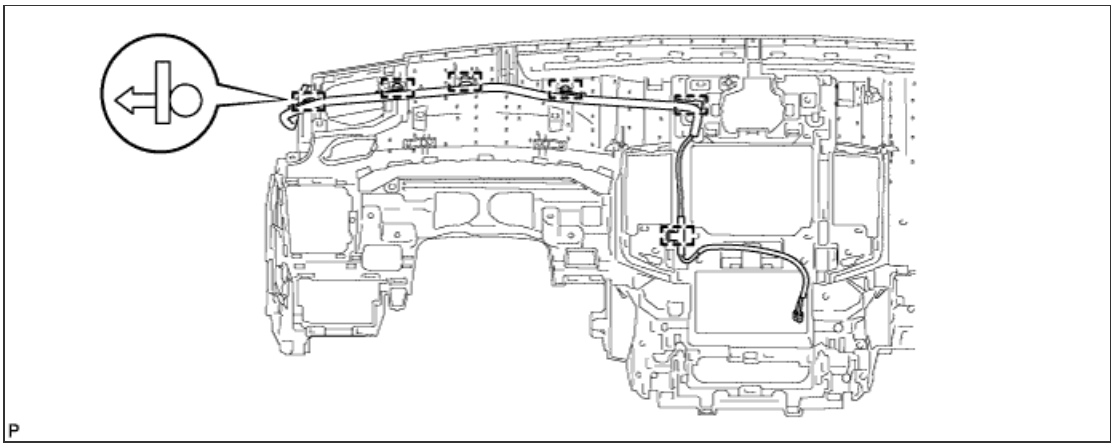


3. INSTALL ANTENNA CORD SUB-ASSEMBLY (w/o Multi-display)

a. for LHD:
Attach the 7 clamps to install the antenna cord.

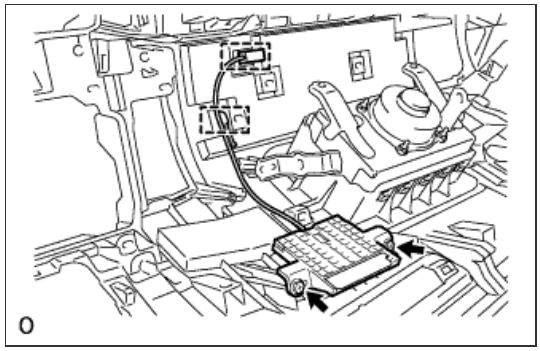


b. for RHD:
Attach the 5 clamps to install the antenna cord.



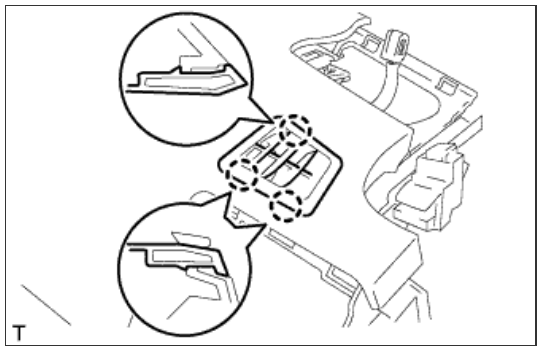
4. INSTALL ANTENNA CORD SUB-ASSEMBLY (w/ Multi-display)

a. for LHD:
Attach the 8 clamps to install the antenna cord.



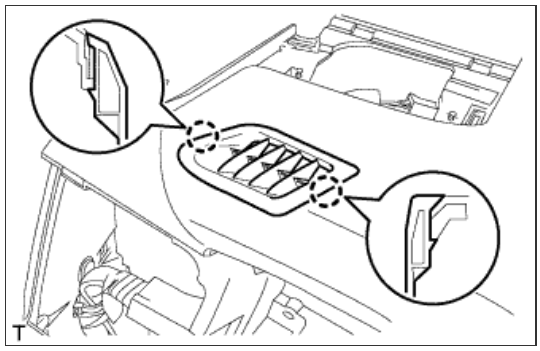
b. for RHD:
Attach the 6 clamps to install the antenna cord.

5. INSTALL NAVIGATION ANTENNA ASSEMBLY (w/ Multi-display)



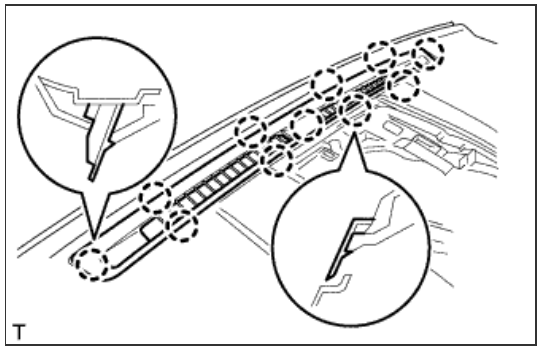
a. Install the antenna with the 2 screws.

b. Attach the 2 clamps.



6. INSTALL NO. 2 SIDE DEFROSTER NOZZLE

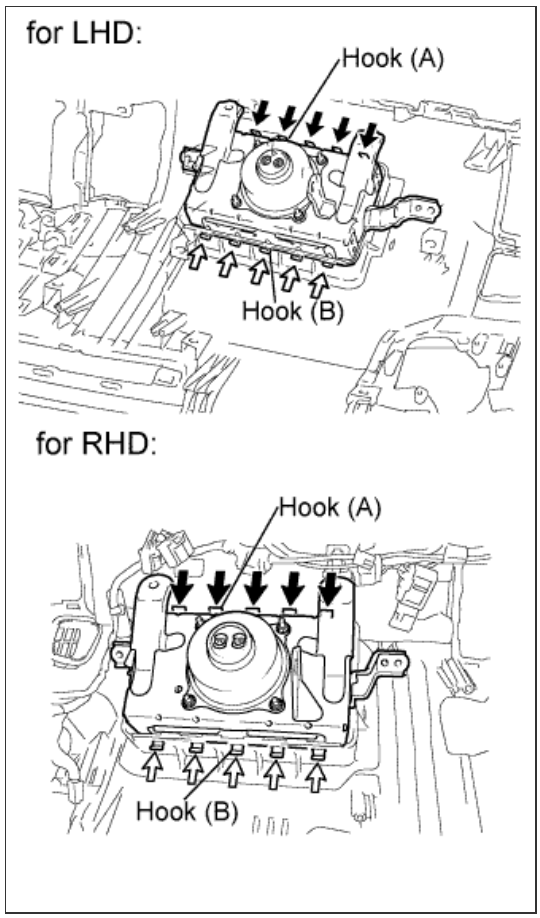
a. Attach the 3 claws to install the nozzle.



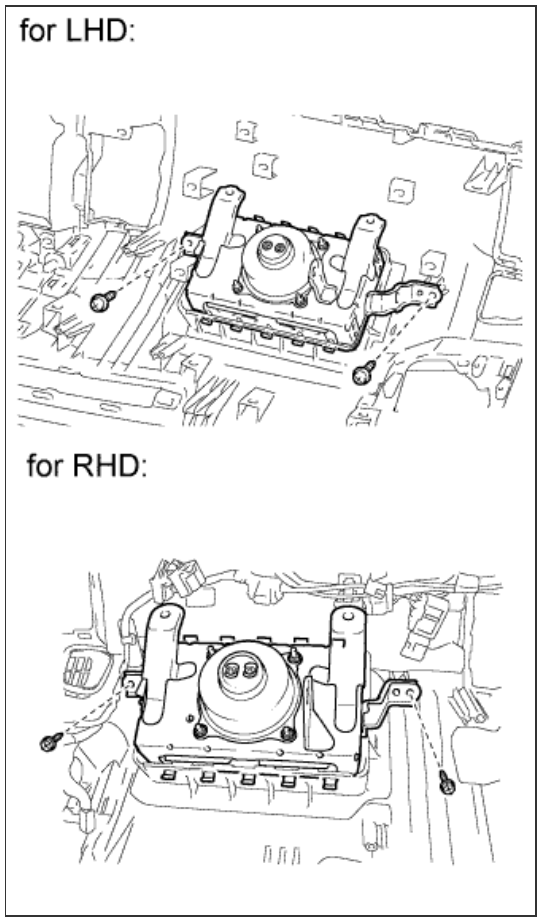
7. INSTALL NO. 1 SIDE DEFROSTER NOZZLE

a. Attach the 2 claws to install the nozzle.

8. INSTALL DEFROSTER NOZZLE ASSEMBLY



a. Attach the 11 claws to install the nozzle.

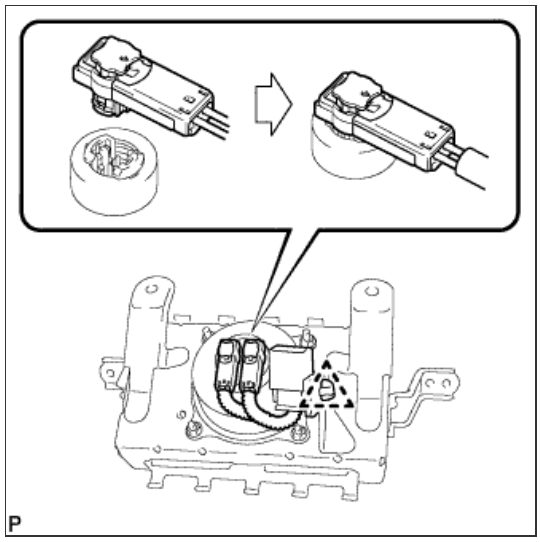


9. INSTALL FRONT PASSENGER AIRBAG ASSEMBLY

a. Attach the 5 hooks (A).

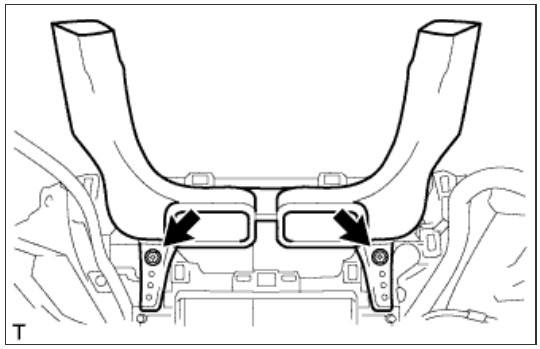
b. Attach the 5 hooks (B) to install the front passen er airba on the instrument panel.

c. Install the 2 screws.



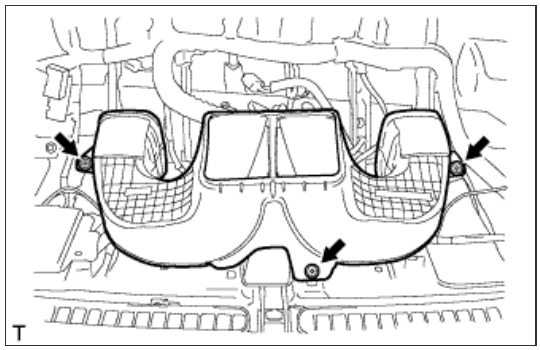
d. Connect the 2 connectors and install the instrument panel wire assembl to the front passen er airba .

NOTICE:



When handlin the airba connector, take care not to dama e the airba wire harness.

e. Attach the claw and install the wire.

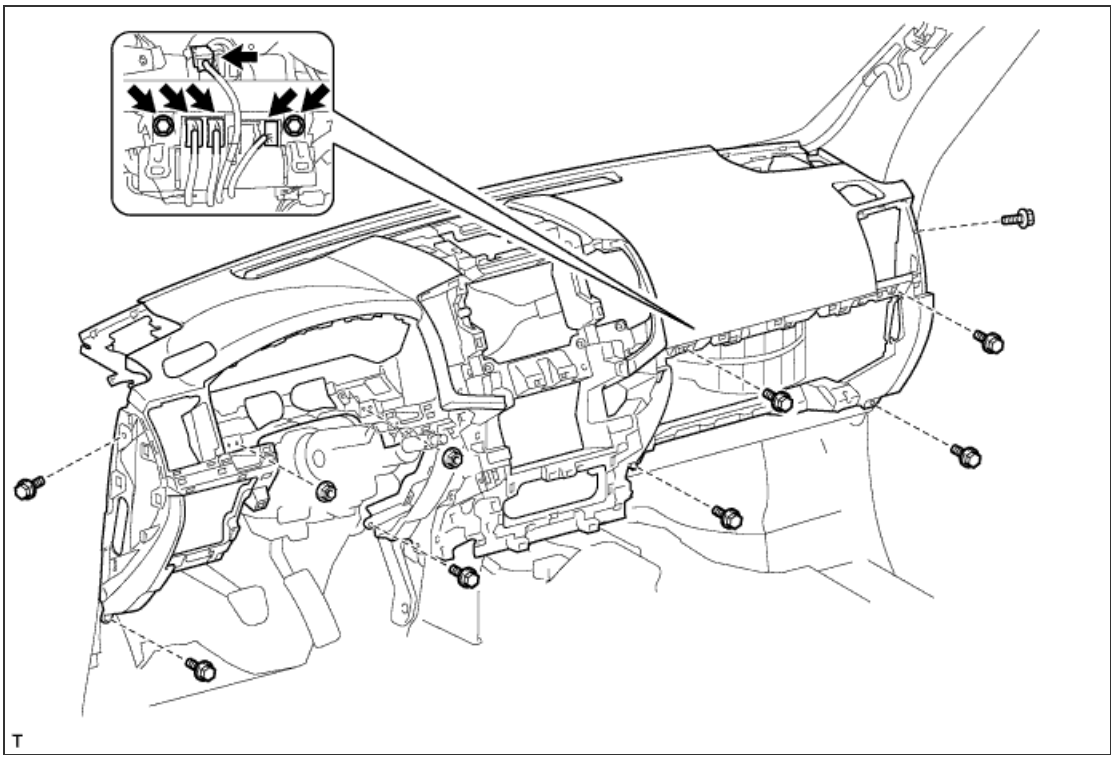


10. INSTALL REAR NO. 1 AIR DUCT

a. Install the duct with the 2 screws.

11. INSTALL CENTER HEATER TO REGISTER DUCT

a. Install the duct with the 3 screws.

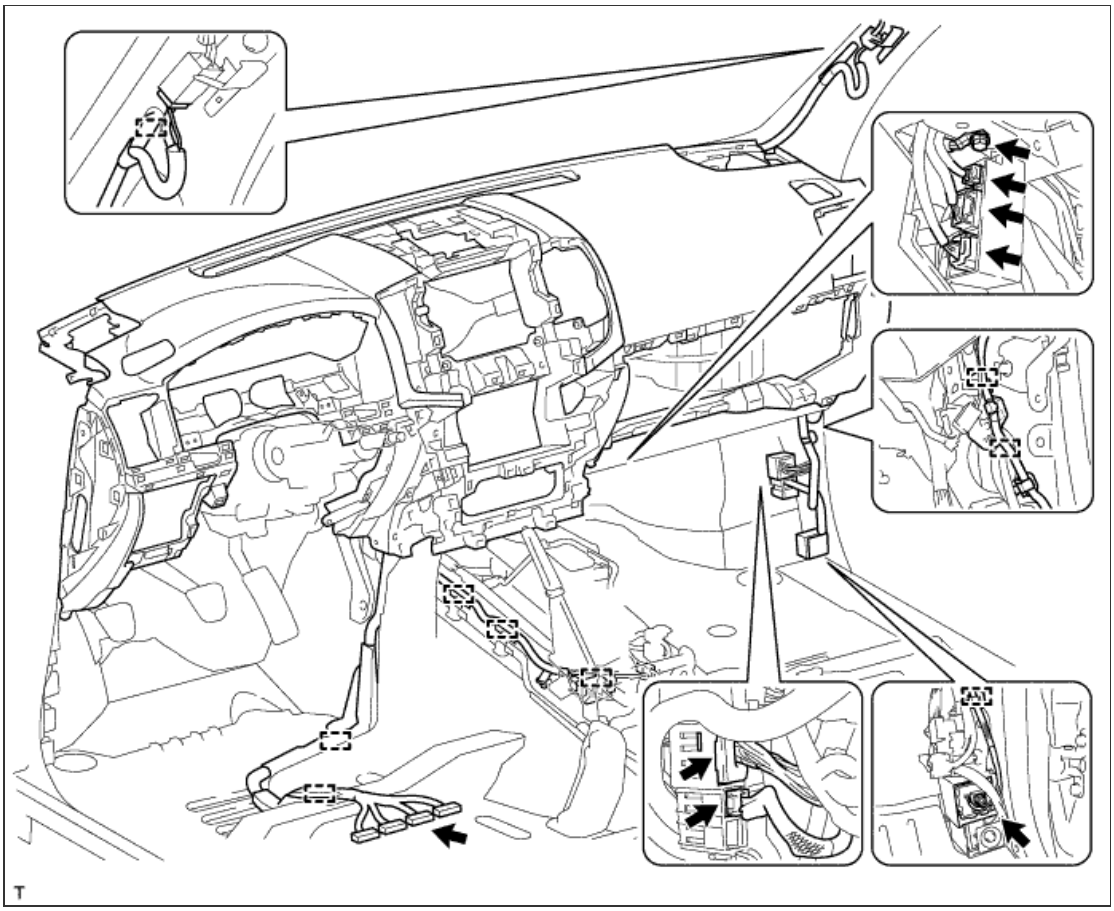


for Preparation Click here

HINT:

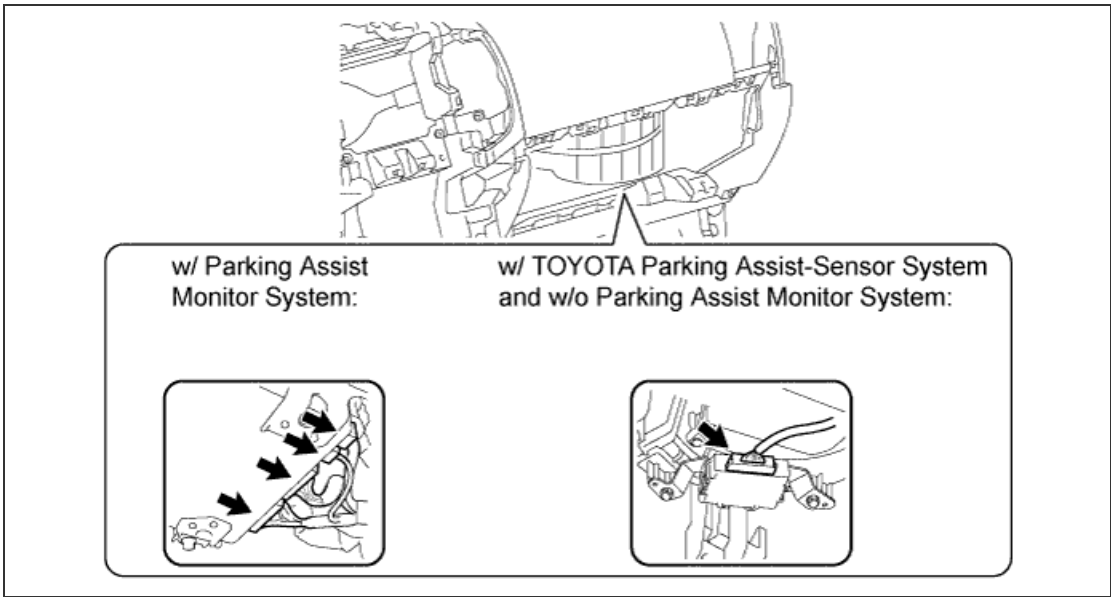
A bolt without a torque specification is shown in the standard bolt chart (Click here).

1. INSTALL INSTRUMENT PANEL SAFETY PAD ASSEMBLY (for LHD)



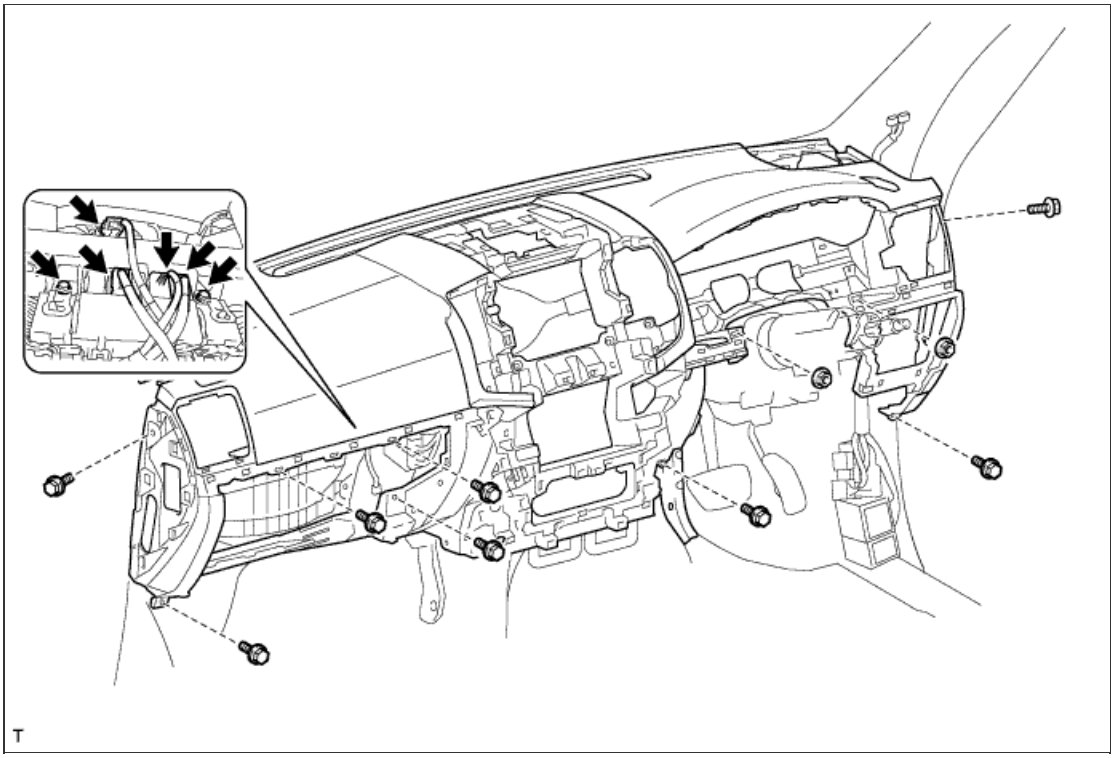
a. Install the safety pad with the 8 bolts and 2 nuts.

b. Install the 2 passenger airbag bolts.



Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

c. Connect the wire harness with the bolt.

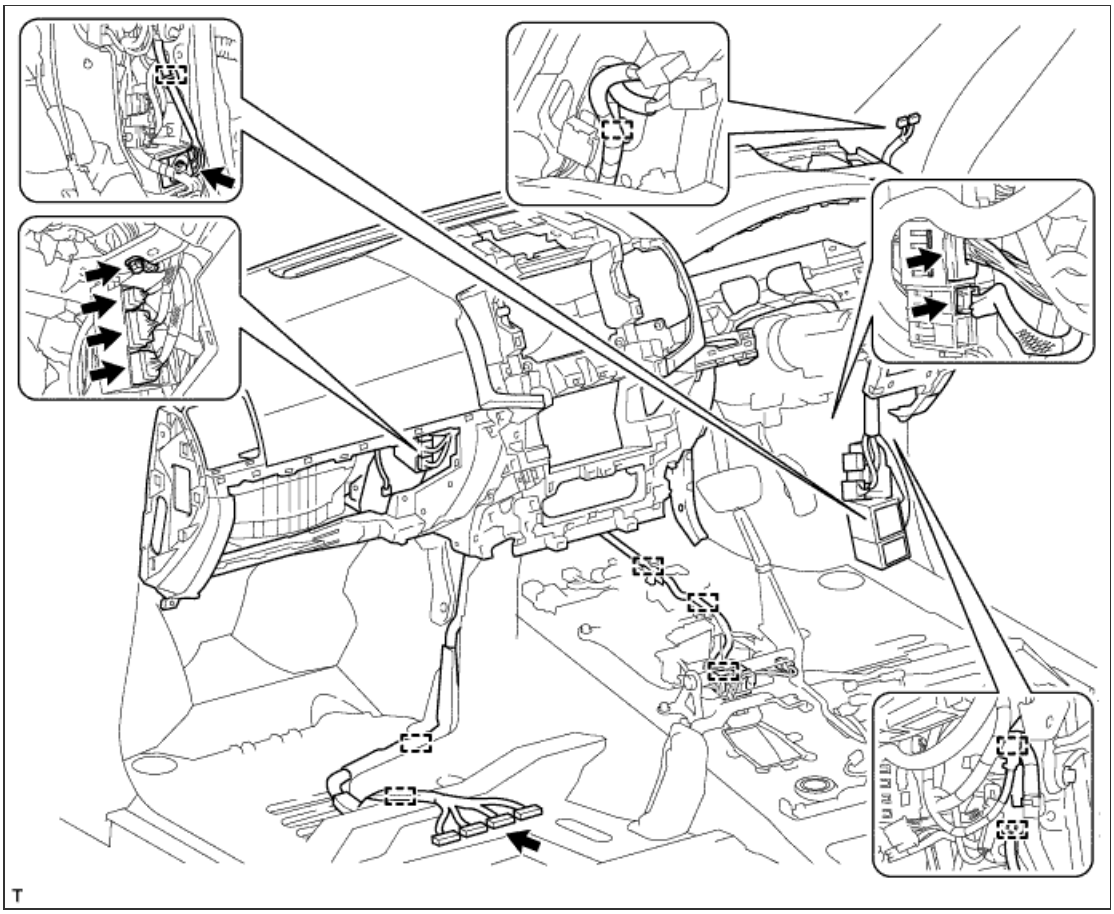


d. Connect the connectors and clamps.

e. Connect the connectors.

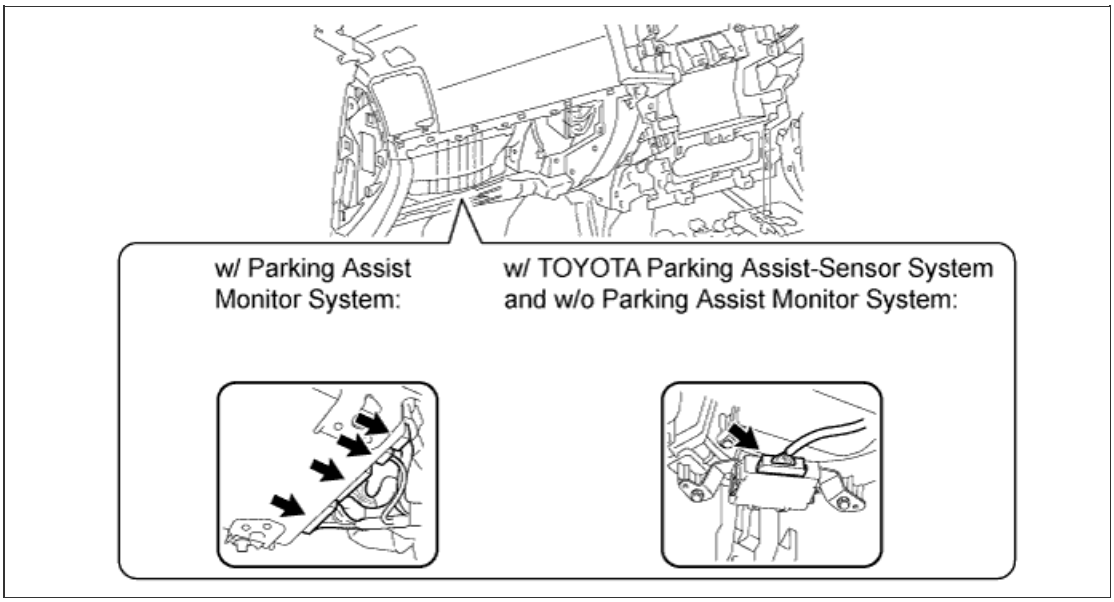
2. INSTALL INSTRUMENT PANEL SAFETY PAD ASSEMBLY (for RHD)

a. Install the safety pad with the 8 bolts and 2 nuts.



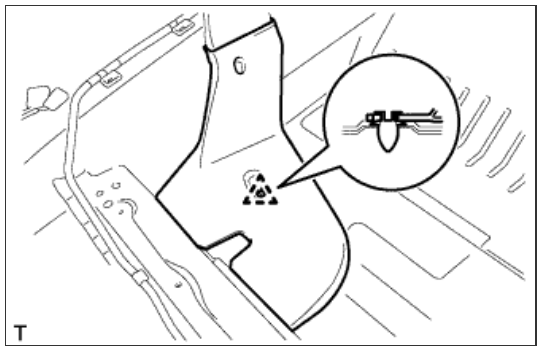
b. Connect the connectors.

c. Install the 2 passenger airbag bolts.



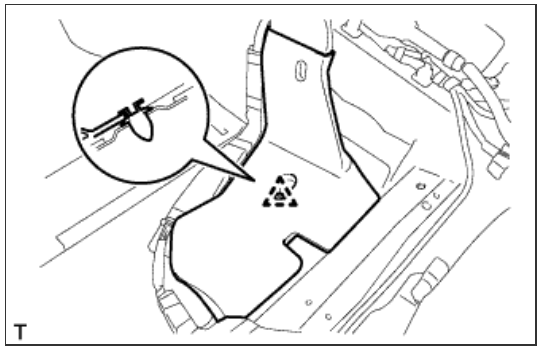
Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

d. Connect the wire harness with the bolt.



e. Connect the connectors and clamps.

f. Connect the connectors.

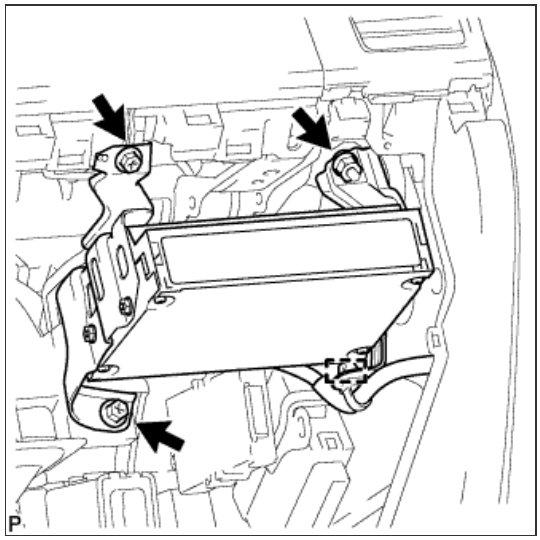


3. INSTALL REAR NO. 4 AIR DUCT

a. Attach the clip to install the air duct.

4. INSTALL REAR NO. 2 AIR DUCT

a. Attach the clip to install the air duct.



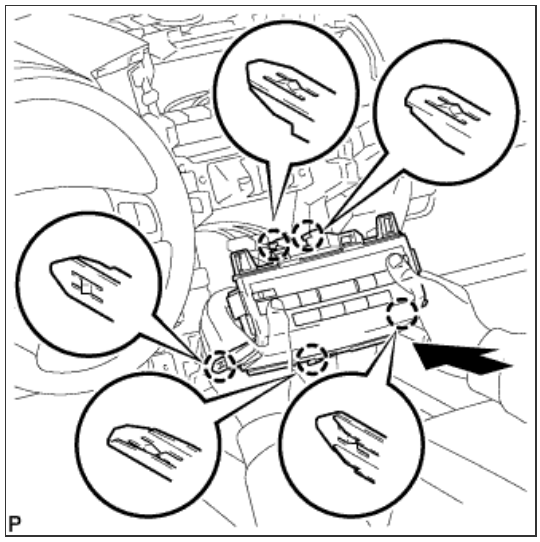
5. INSTALL NAVIGATION MODULE BOARD WITH DISC PLAYER BRACKET (w/ Multi-display)

a. Connect the navigation module board connectors.

b. Install the navigation module board with disc player bracket with the nut and 2 screws.

Torque:
Nut:
12 N*m{ 122 kgf*cm , 8 ft.*lbf }

c. Attach the clamp.



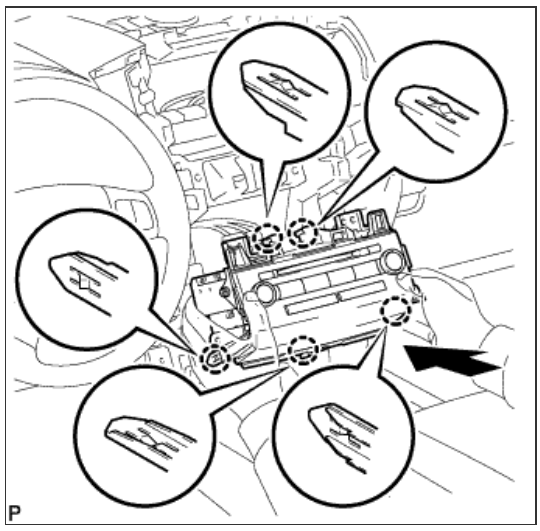
6. INSTALL AIR CONDITIONING CONTROL ASSEMBLY

a. Connect the connectors.

b. Insert the radio receiver and attach the 5 claws on its backside.

NOTICE:

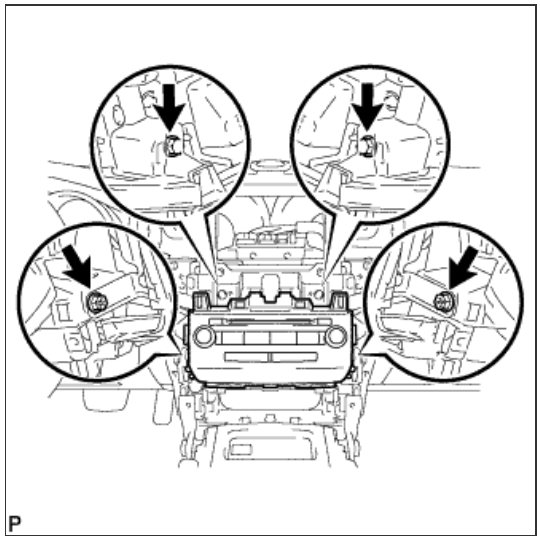
When inserting the radio receiver, do not press the knobs on it.



7. INSTALL RADIO RECEIVER ASSEMBLY WITH BRACKET (w/ Multi-display)

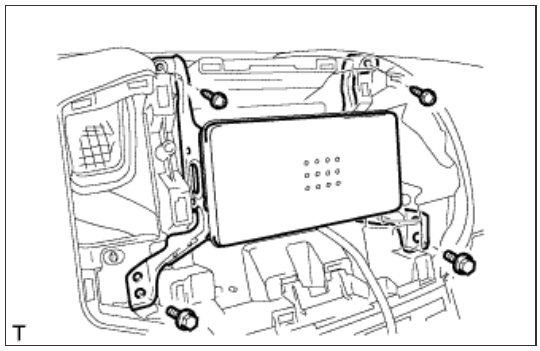
a. Connect the connectors.

b. Insert the radio receiver to attach the 5 claws on its backside.



NOTICE:

When inserting the radio receiver, do not press the knobs on it.

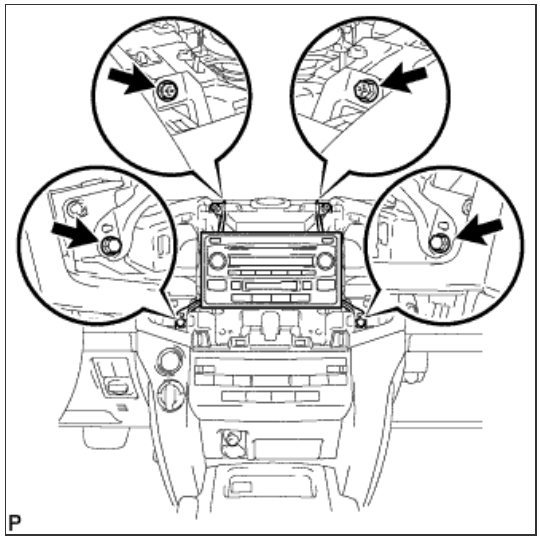


c. Install the radio receiver with the 2 screws and 2 bolts.

Torque:
Bolt:
12 N*m{ 122 kgf*cm , 8 ft.*lbf }

8. INSTALL RADIO TUNER OPENING COVER WITH BRACKET (w/o Radio Receiver)

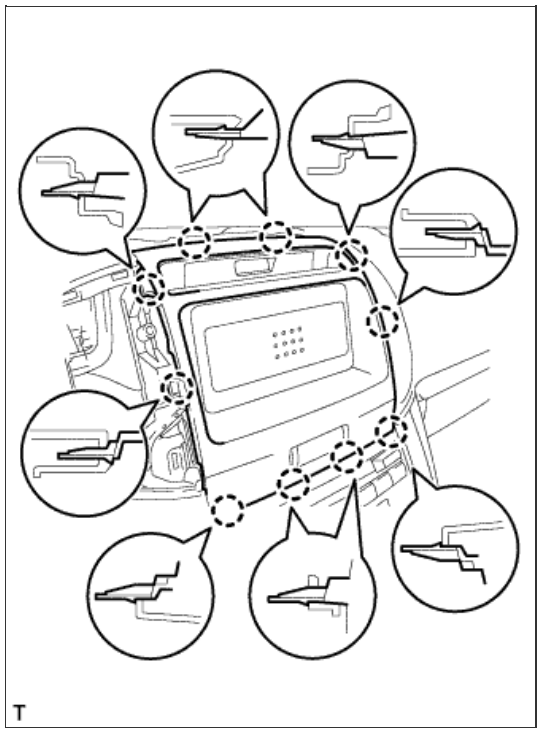
a. Install the opening cover with the 2 bolts and 2 screws.



9. INSTALL RADIO RECEIVER ASSEMBLY WITH BRACKET (w/ Cassette Tape Player)

a. Connect the connectors.

b. Install the radio receiver with the 2 screws and 2 bolts.

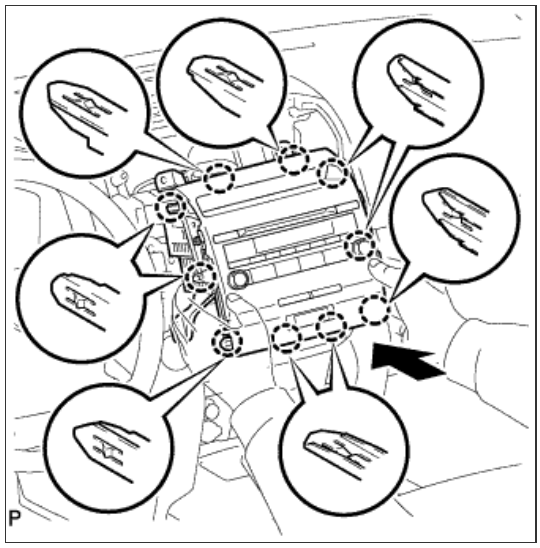


Torque:
Bolt:
12 N*m{ 122 kgf*cm , 8 ft.*lbf }

10. INSTALL NO. 1 CENTER INSTRUMENT CLUSTER FINISH PANEL

a. Connect the connector.

b. Attach the 10 claws to install the finish panel.



11. INSTALL RADIO RECEIVER ASSEMBLY WITH BRACKET (w/o Multi-display)

a. Connect the connectors.

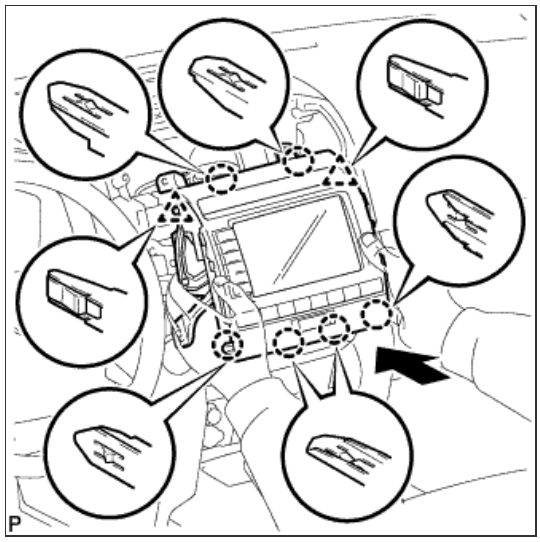
b. Insert the radio receiver to attach the 10 claws on its backside.

NOTICE:

When inserting the radio receiver, do not press the knobs on it.

c. Install the radio receiver with the 2 screws and 2 bolts.

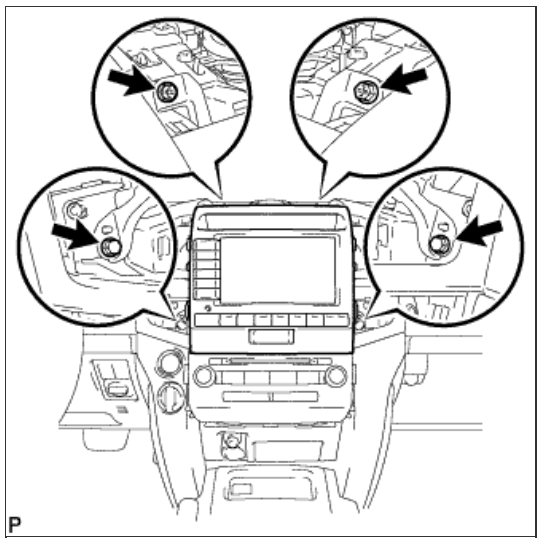
Torque:
Bolt:
12 N*m{ 122 kgf*cm , 8 ft.*lbf }



12. INSTALL MULTI-DISPLAY ASSEMBLY WITH BRACKET (w/ Multi-display)

a. Connect the connectors.

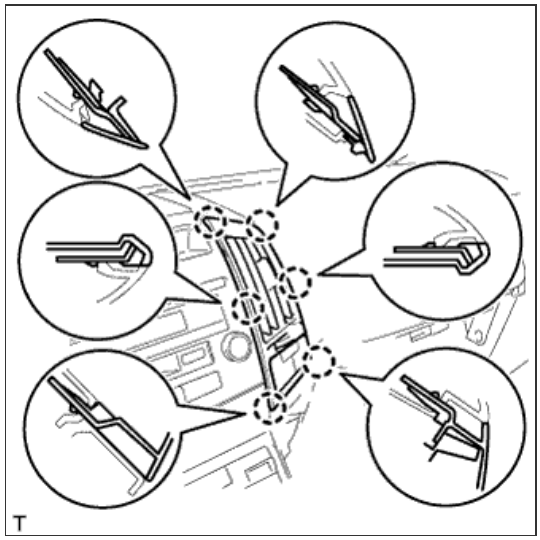
b. Insert the display and attach the 2 clips and 6 claws on its backside.



NOTICE:

When inserting the display, do not press the knobs on it.

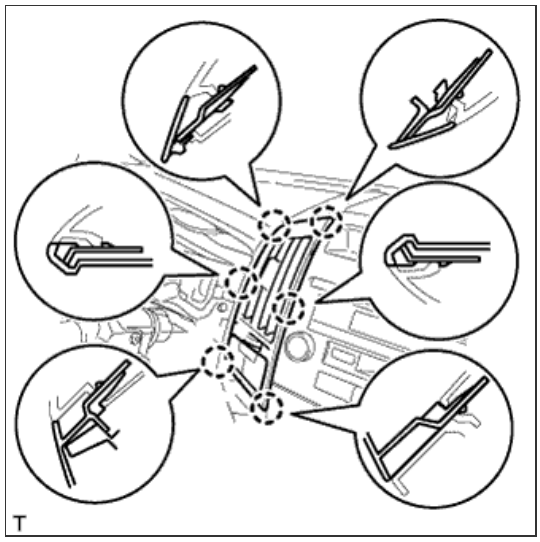
c. Install the display with the 2 screws and 2 bolts.



Torque:
Bolt:
12 N*m{ 122 kgf*cm , 8 ft.*lbf }

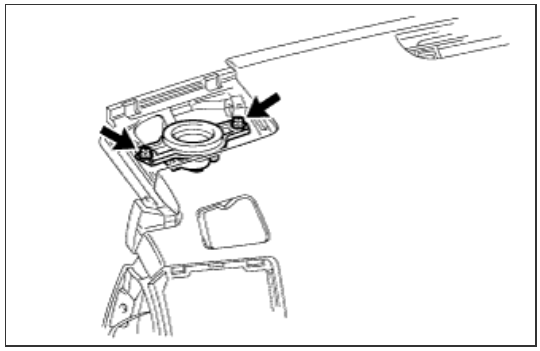
13. INSTALL NO. 4 INSTRUMENT PANEL REGISTER ASSEMBLY

a. Connect the connector.



b. Attach the 6 claws to install the register.

14. INSTALL NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY



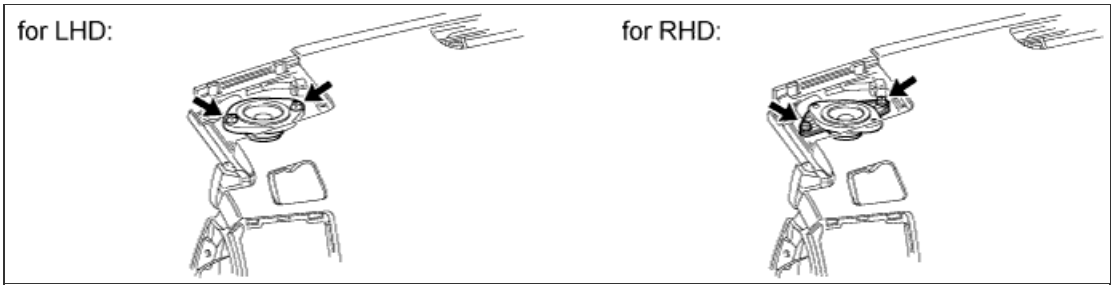
a. Connect the connector.

b. Attach the 6 claws to install the register.

15. INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (RH Side)

a. for 9 Speakers Models:

i. Connect the connector.



ii. Temporarily install the speaker by aligning the positioning pins of the speaker with the instrument panel.

iii. Install the speaker with the 2 bolts.

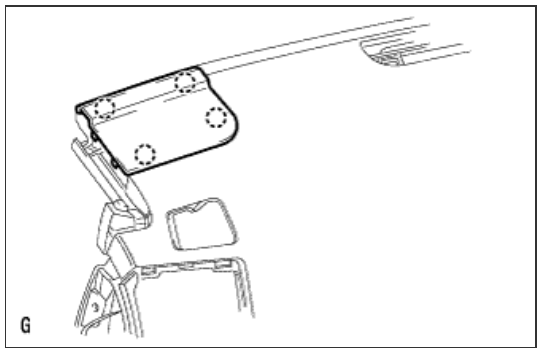
NOTICE:

- **Do not touch the cone part of the speaker.**
- **When installing the speaker to the instrument panel be careful that the wires do not get caught between the parts.**

b. except 9 Speakers Models:

i. Connect the connector.

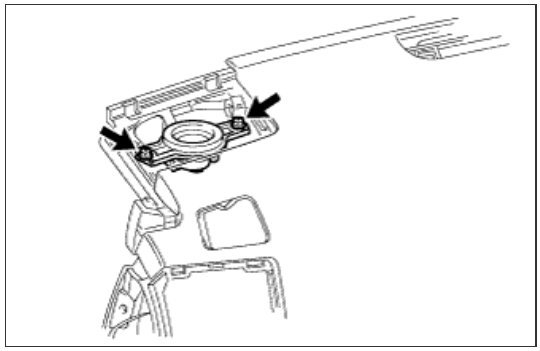
ii. Temporarily install the speaker by aligning the positioning pins of the speaker with the instrument panel.



iii. Install the speaker with the 2 bolts.

NOTICE:

- **Do not touch the cone part of the speaker.**
- **When installing the speaker to the instrument panel be careful that the wires do not get caught between the parts.**



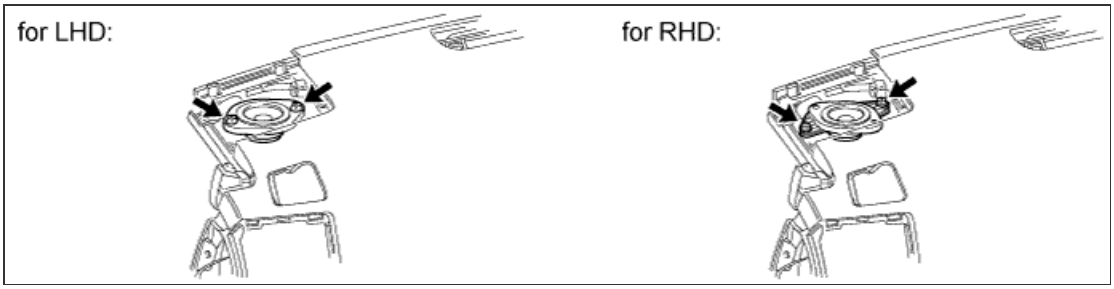
16. INSTALL NO. 2 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY

a. Attach the claws to install the panel.

17. INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (LH Side)

a. for 9 Speakers Models:

i. Connect the connector.



ii. Temporarily install the speaker by aligning the positioning pins of the speaker with the instrument panel.

iii. Install the speaker with the 2 bolts.

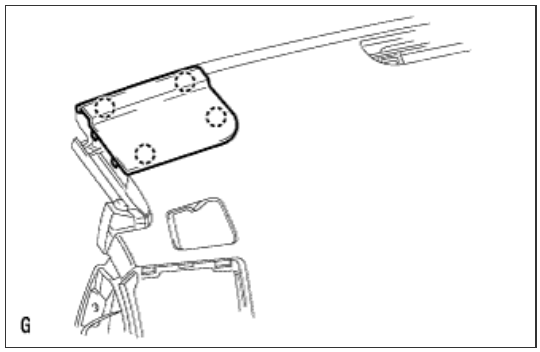
NOTICE:

- **Do not touch the cone part of the speaker.**
- **When installing the speaker to the instrument panel be careful that the wires do not get caught between the parts.**

b. except 9 Speakers Models:

i. Connect the connector.

ii. Temporarily install the speaker by aligning the positioning pins of the speaker with the instrument panel.



iii. Install the speaker with the 2 bolts.

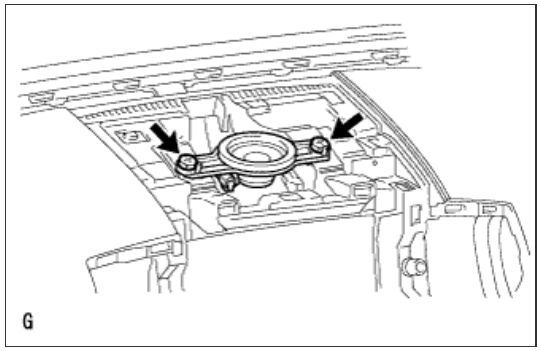
NOTICE:

- **Do not touch the cone part of the speaker.**
- **When installing the speaker to the instrument panel be careful that the wires do not get caught between the parts.**

18. INSTALL NO. 1 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY

a. Attach the claws to install the panel.

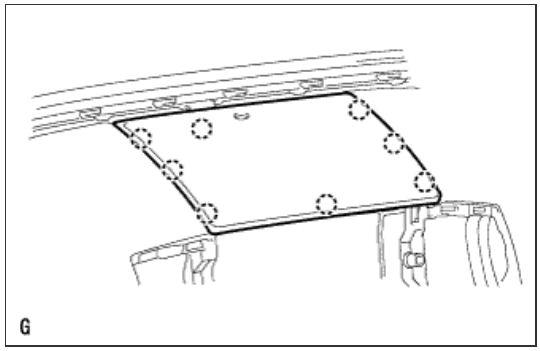
19. INSTALL FRONT NO. 4 SPEAKER ASSEMBLY



a. Connect the speaker connector.

b. Temporarily install the speaker by aligning the positioning pins of the speaker with the instrument panel.

c. Install the speaker with the 2 bolts.



NOTICE:

- **Do not touch the cone part of the speaker.**
- **When installing the speaker to the instrument panel be careful that the wires do not get caught between the parts.**

20. INSTALL NO. 1 SPEAKER OPENING COVER ASSEMBLY

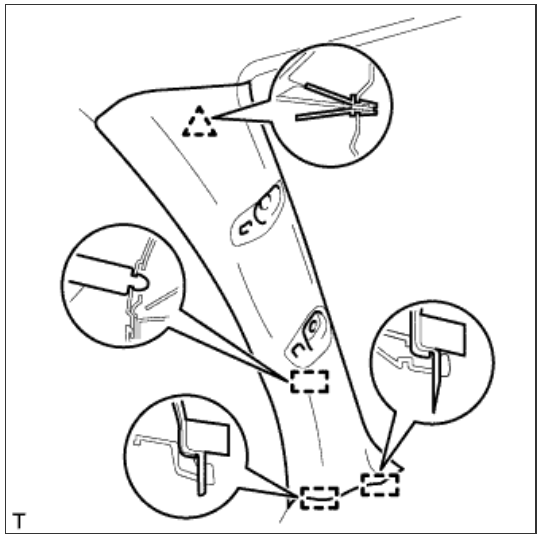
a. Attach the 8 claws to install the opening cover.

21. INSTALL FRONT PILLAR GARNISH RH (w/ Sliding Roof)

HINT:

Use the same procedures described for the LH side.

22. INSTALL FRONT PILLAR GARNISH RH (w/o Sliding Roof)

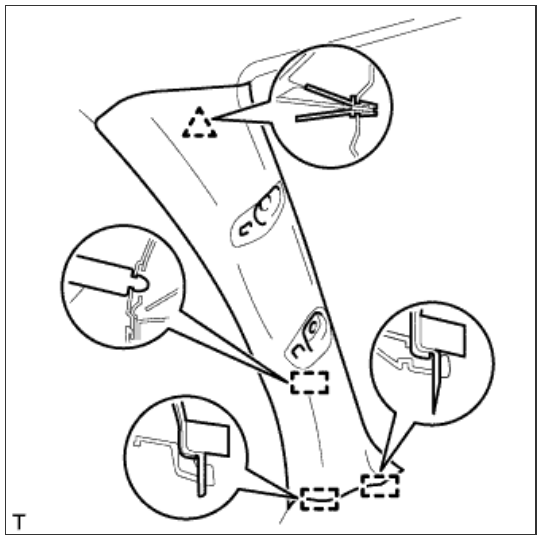


HINT:

Use the same procedures described for the LH side.

23. INSTALL FRONT PILLAR GARNISH LH (w/ Sliding Roof)

a. for 9 Speakers:
Connect the speaker connector.

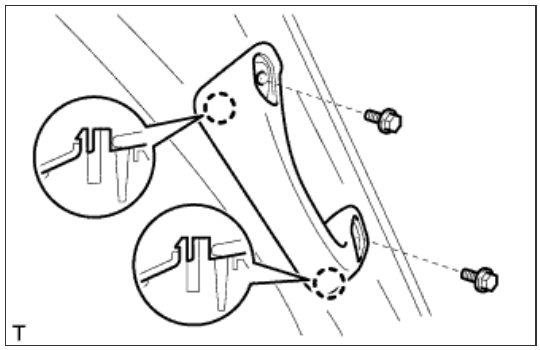


b. Attach the clip and 3 guides to install the front pillar garnish.

24. INSTALL FRONT PILLAR GARNISH LH (w/o Sliding Roof)

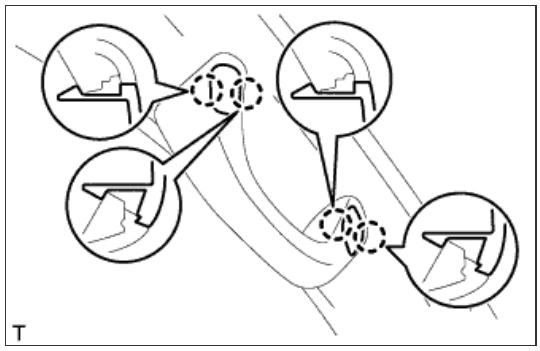
a. for 9 Speakers:
Connect the speaker connector.

b. Attach the clip and 3 guides to install the front pillar garnish.



25. INSTALL FRONT ASSIST GRIP SUB-ASSEMBLY (w/ Sliding Roof)

HINT:

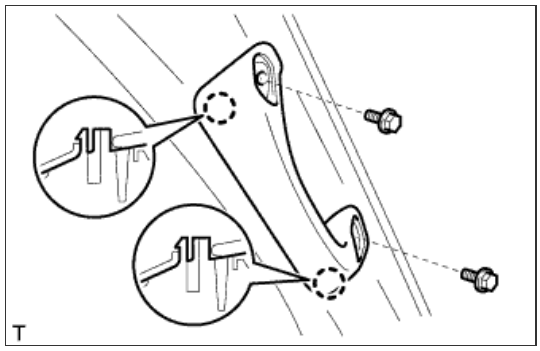


Use the same procedure to install the front assist grip on the other side.

a. Attach the 2 claws to install the front assist grip.

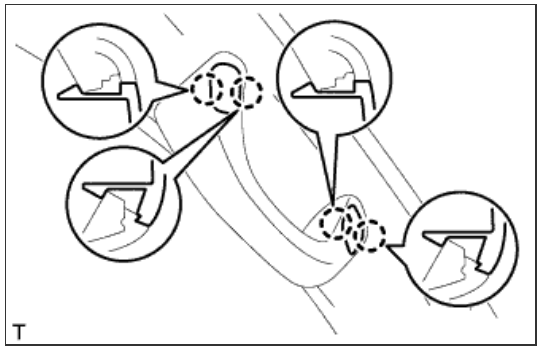
b. Install the 2 bolts.

c. Attach the claws to install the 2 assist grip plugs.



26. INSTALL FRONT ASSIST GRIP SUB-ASSEMBLY (w/o Sliding Roof)

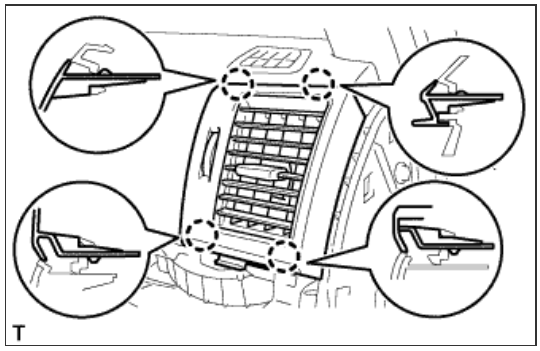
HINT:



Use the same procedure to install the front assist grip on the other side.

a. Attach the 2 claws to install the front assist grip.

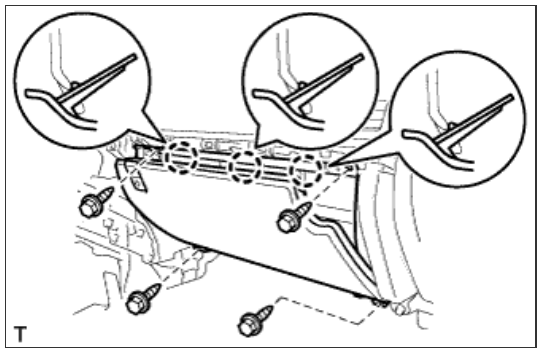
b. Install the 2 bolts.



c. Attach the claws to install the 2 assist grip plugs.

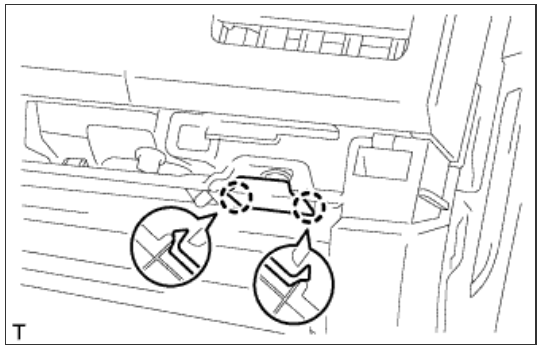
27. INSTALL NO. 2 INSTRUMENT PANEL REGISTER ASSEMBLY

a. Attach the claws to install the register.



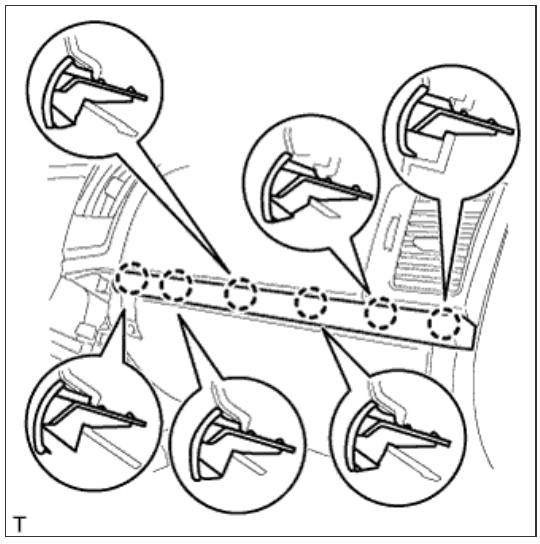
28. INSTALL LOWER NO. 2 INSTRUMENT PANEL FINISH PANEL

a. Connect the connector.



b. Attach the 3 claws to install the finish panel.

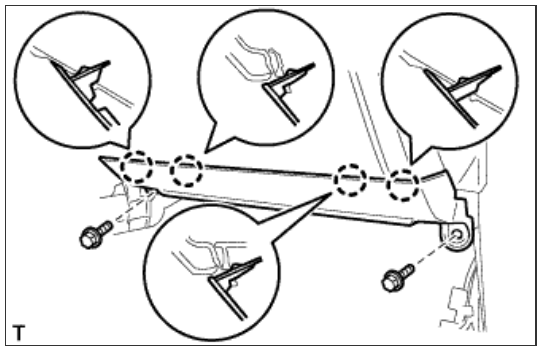
c. Install the bolts.



29. INSTALL INSTRUMENT PANEL BOX DOOR KNOB

a. Attach the 2 claws to install the knob.

30. INSTALL NO. 3 INSTRUMENT CLUSTER FINISH PANEL GARNISH



a. Attach the 6 claws to install the panel garnish.

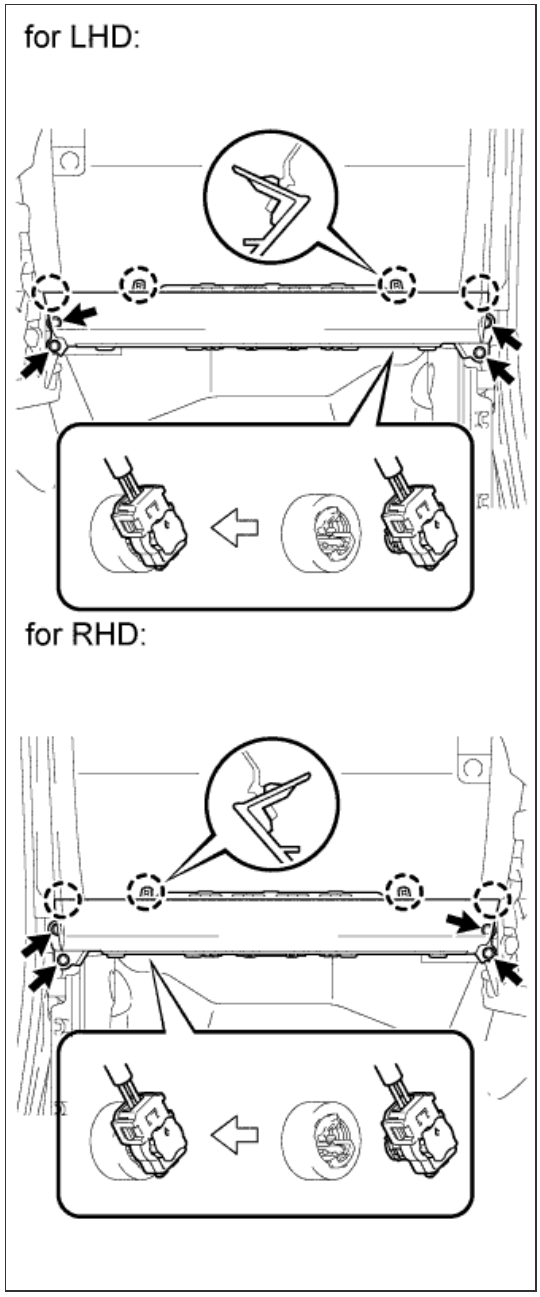
31. INSTALL LOWER INSTRUMENT PANEL (w/o Passenger Side Knee Airbag)

a. Attach the claws to install the instrument panel.

b. Install the 2 bolts.

32. INSTALL FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (w/ Passenger Side Knee Airbag)

a. Connect the connector.

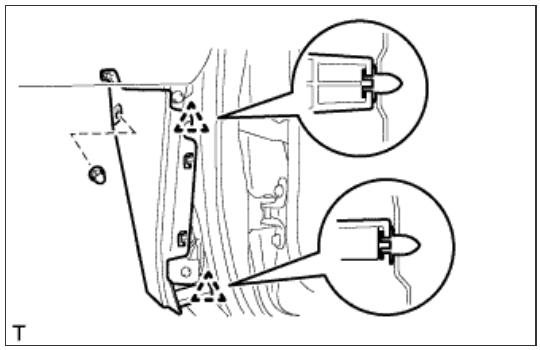


NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

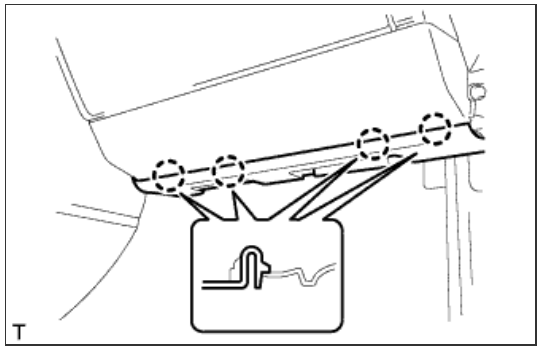
b. Attach the claws to install the front passenger side knee airbag.

c. Install the bolts.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

33. INSTALL COWL SIDE TRIM BOARD RH



a. Attach the 2 clips to install the trim board.

b. Install the cap nut.

34. INSTALL NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Floor Under Cover)

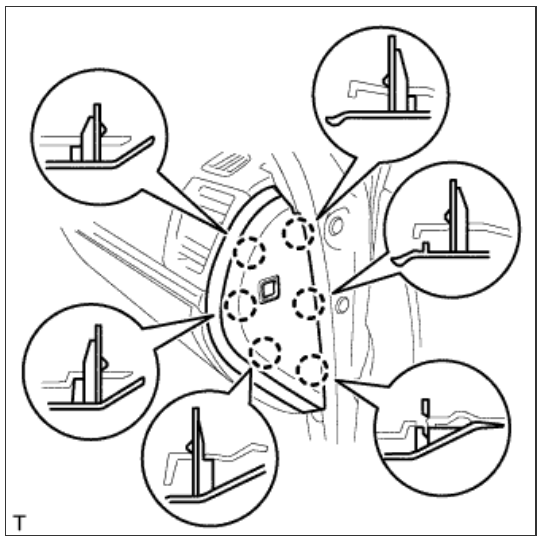
a. Attach the claws to install the under cover.

35. INSTALL FRONT DOOR SCUFF PLATE RH (w/ Sliding Roof)

HINT:

Use the same procedures described for the LH side.

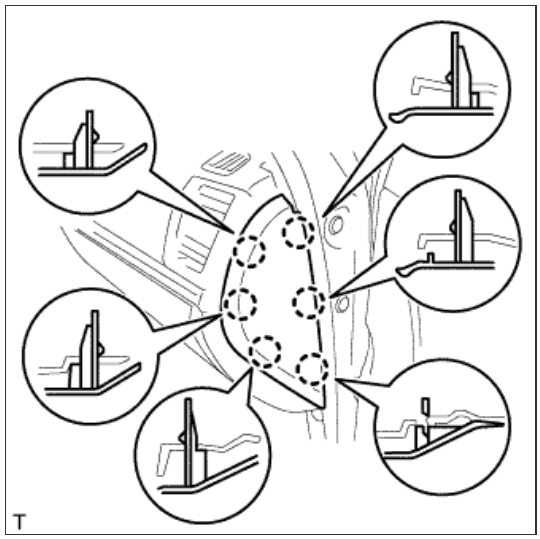
36. INSTALL FRONT DOOR SCUFF PLATE RH (w/o Sliding Roof)



HINT:

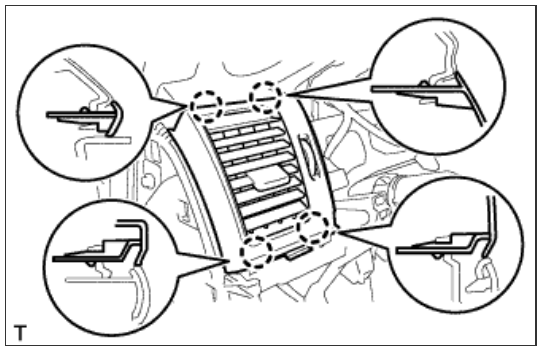
Use the same procedures described for the LH side.

37. INSTALL INSTRUMENT SIDE PANEL RH (w/ Airbag Cut Off Switch)



a. Connect the connector.

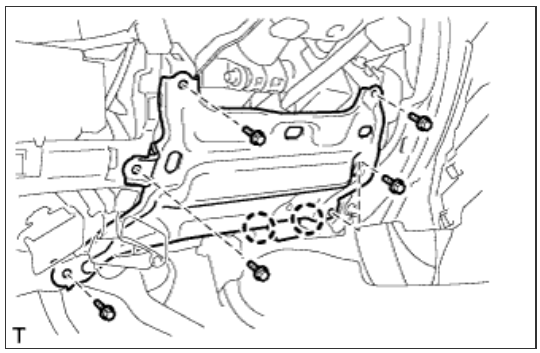
b. Attach the 6 claws to install the side panel.



38. INSTALL INSTRUMENT SIDE PANEL RH (w/o Airbag Cut Off Switch)

a. Attach the 6 claws to install the side panel.

39. INSTALL NO. 1 INSTRUMENT PANEL REGISTER ASSEMBLY



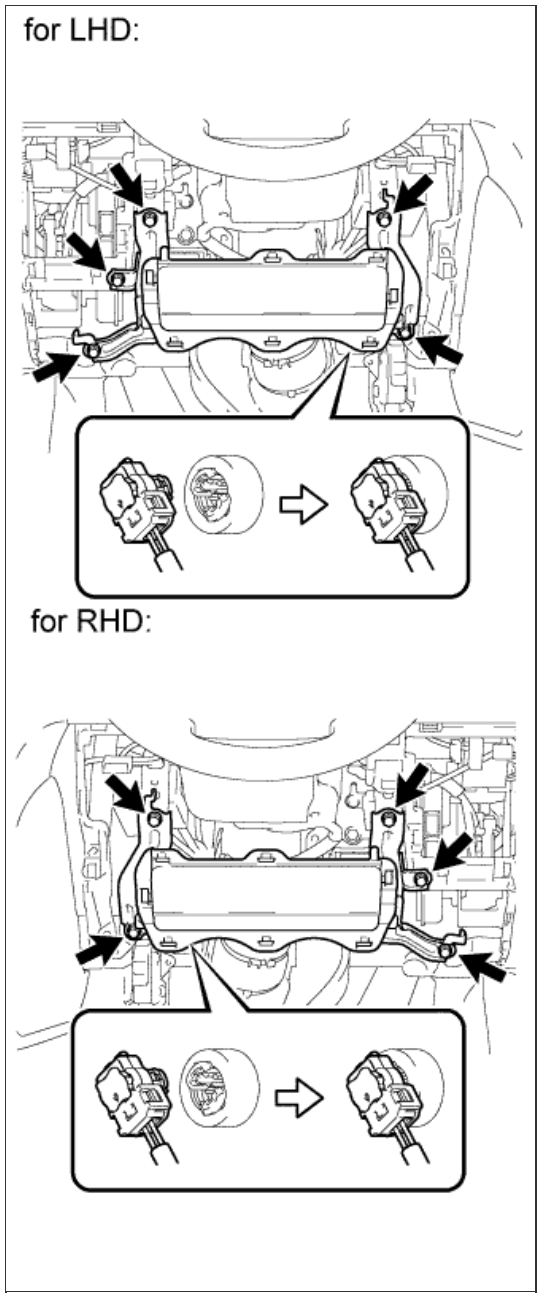
a. Attach the claws to install the register.

40. INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (w/o Driver Side Knee Airbag)

a. Attach the claws and connect the DLC3.

b. Install the instrument panel with the 5 bolts.

41. INSTALL DRIVER SIDE KNEE AIRBAG ASSEMBLY (w/ Driver Side Knee Airbag)

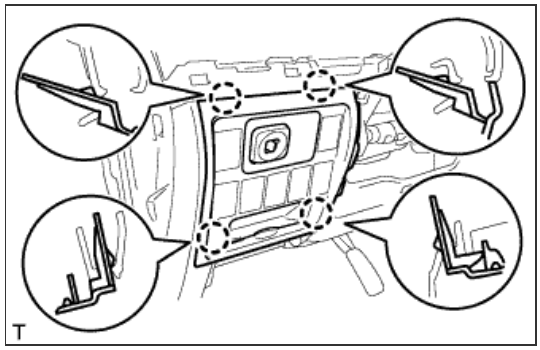


a. Connect the connector.

NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

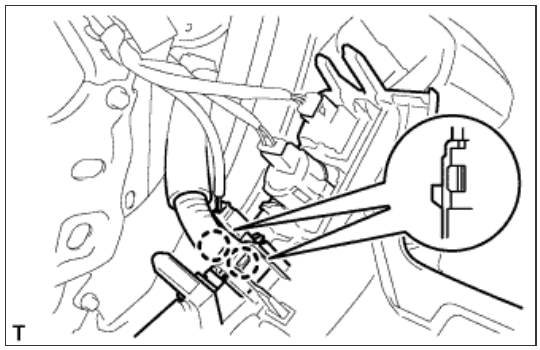
b. Install the driver side knee airbag with the 5 bolts.



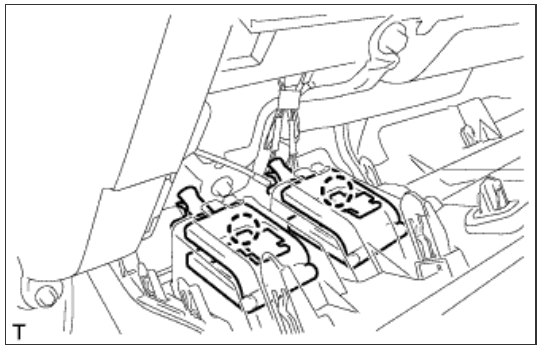
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

42. INSTALL NO. 1 SWITCH HOLE BASE

a. Connect the connectors.



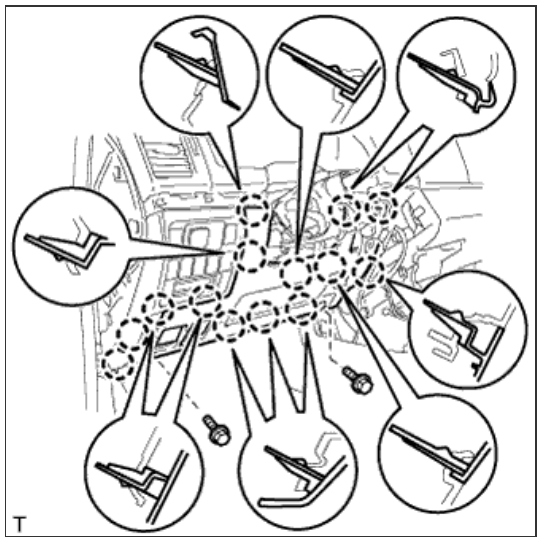
b. Attach the claws to install the switch hole base.



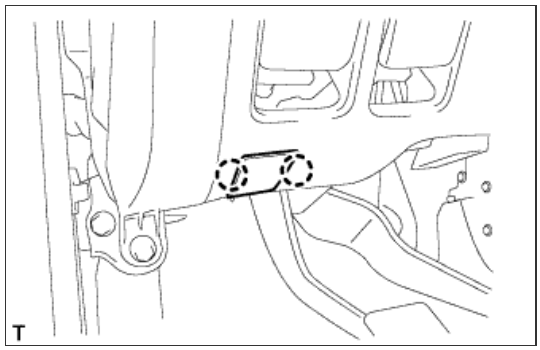
43. INSTALL LOWER NO. 1 INSTRUMENT PANEL FINISH PANEL

a. Connect the connectors.

b. Attach the 2 claws to install the sensor.

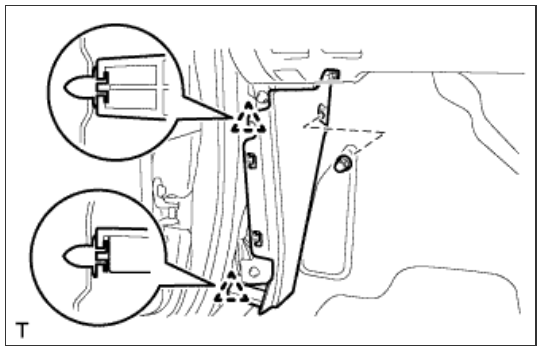


c. Attach the 2 claws to connect the 2 control cables.



d. Attach the 1 claws to install the finish panel.

e. Install the 2 bolts.

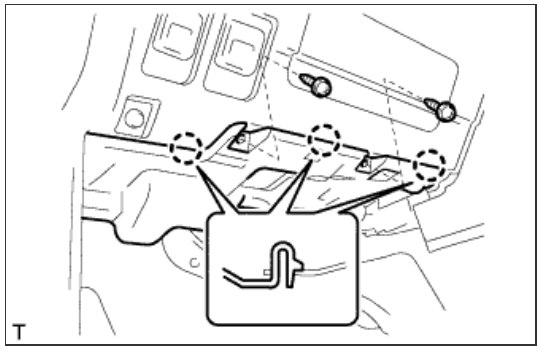


f. Attach the 2 claws to close the hole cover.

44. INSTALL COWL SIDE TRIM BOARD LH

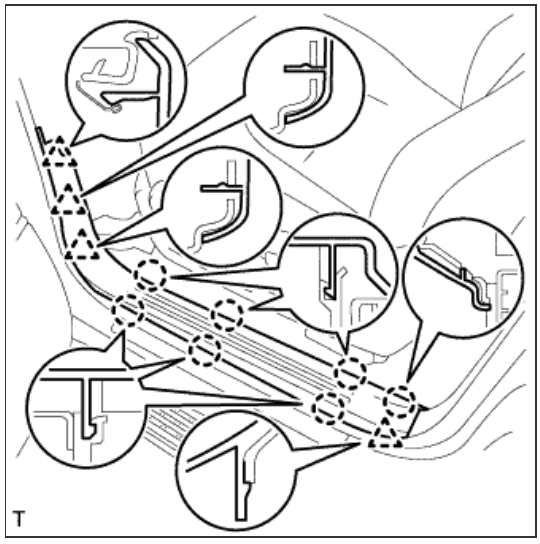
a. Attach the 2 clips to install the trim board.

b. Install the cap nut.



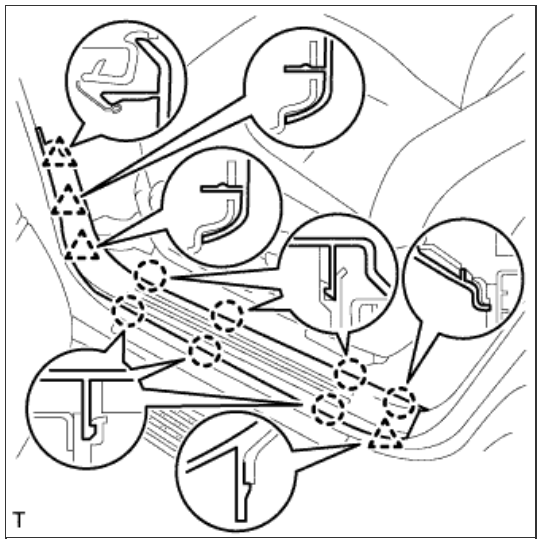
45. INSTALL NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Floor Under Cover)

a. Connect the connectors.



b. Attach the 3 claws to install the under cover.

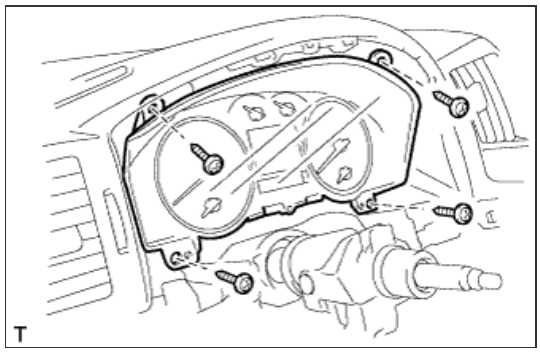
c. Install the 2 screws.



46. INSTALL FRONT DOOR SCUFF PLATE LH (w/ Sliding Roof)

a. Attach the 7 claws and clips to install the scuff plate.

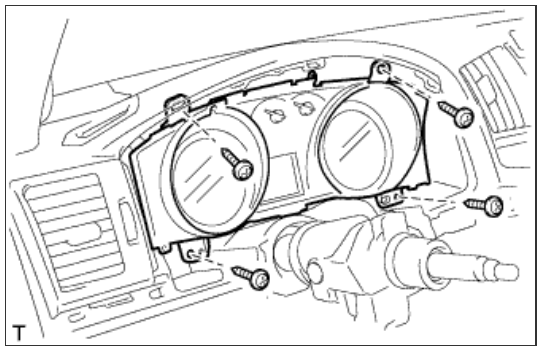
47. INSTALL FRONT DOOR SCUFF PLATE LH (w/o Sliding Roof)



a. Attach the 7 claws and clips to install the scuff plate.

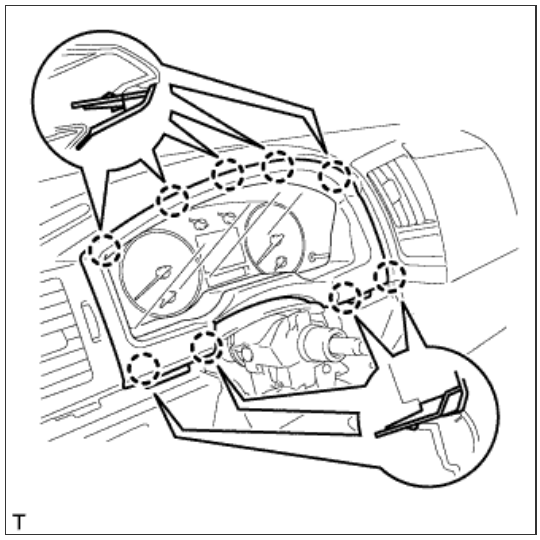
48. INSTALL COMBINATION METER ASSEMBLY (w/o Multi-information Display)

a. Connect the connectors.



b. Install the combination meter with the screws.

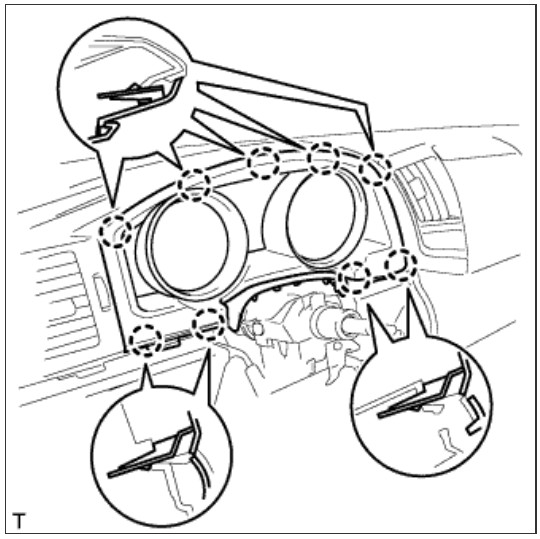
49. INSTALL COMBINATION METER ASSEMBLY (w/ Multi-information Display)



a. Connect the connectors.

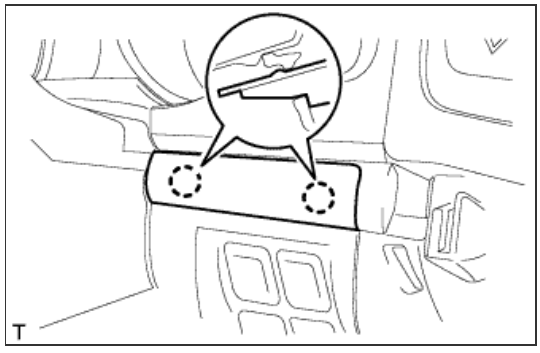
b. Install the combination meter with the screws.

50. INSTALL INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (w/o Multi-information Display)



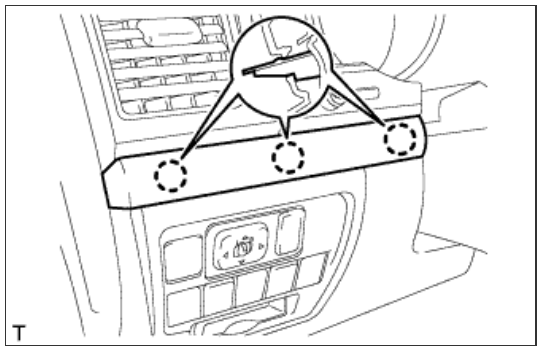
a. Attach the 9 claws to install the finish panel.

51. INSTALL INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (w/ Multi-information Display)



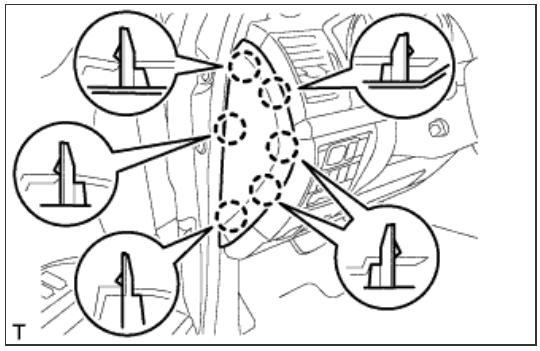
a. Connect the connector.

b. Attach the 9 claws to install the finish panel.



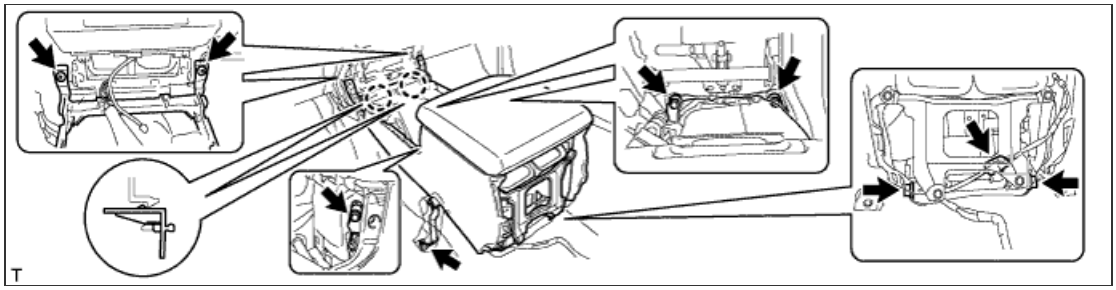
52. INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Attach the 2 claws to install the panel garnish.



53. INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Attach the 3 claws to install the panel garnish.



54. INSTALL INSTRUMENT SIDE PANEL LH

a. Attach the 6 claws to install the side panel.

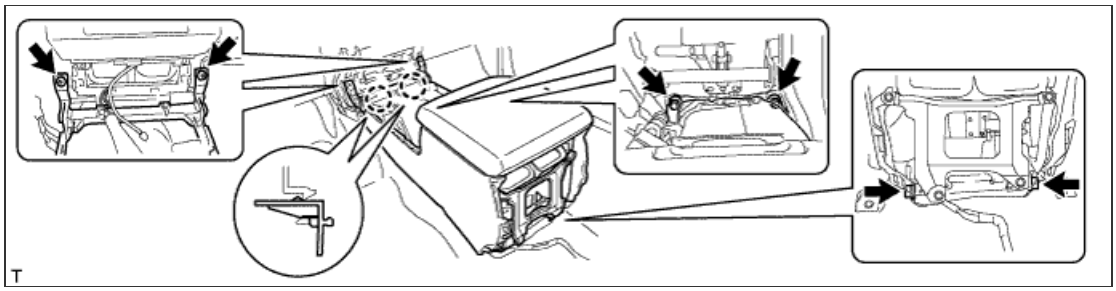
55. INSTALL COOLING BOX ASSEMBLY (w/ Cool Box)

a. Attach the 2 claws.

b. Connect the connector.

c. Sufficiently apply compressor oil to 2 new O-rings.

Compressor oil:
ND-OIL 8 or equivalent



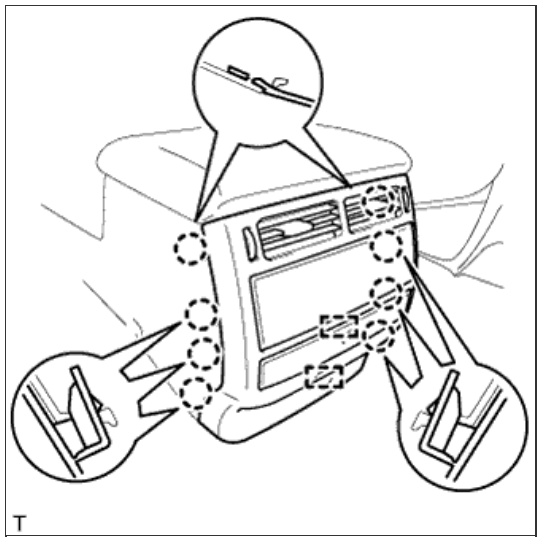
d. Install the 2 O-rings on the 2 cooler pipes.

e. Connect the 2 cooler pipes with the 2 bolts.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

f. Install the cooling box with the bolts and 2 screws.

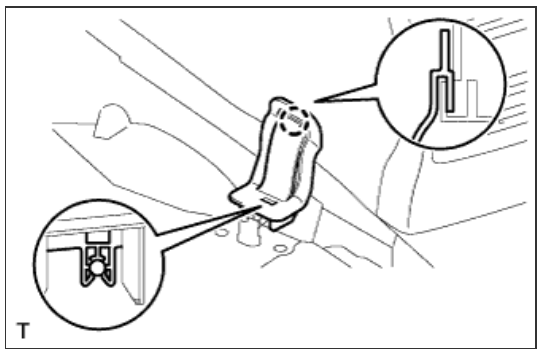
56. INSTALL REAR CONSOLE BOX SUB-ASSEMBLY (w/o Cool Box)



a. Attach the 2 claws.

b. Install the console box with the bolts and 2 screws.

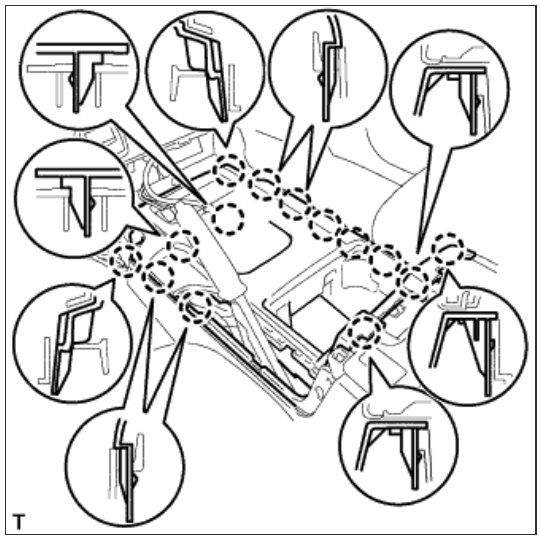
57. INSTALL REAR CONSOLE END PANEL SUB-ASSEMBLY



a. Connect the connectors and 2 clamps.

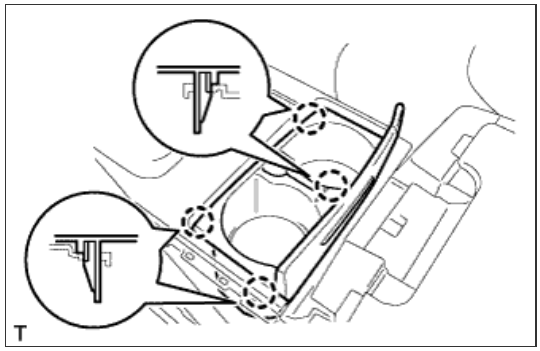
b. Attach the 8 claws to install the end panel.

58. INSTALL NO. 1 COOLER COVER (w/ Cool Box)



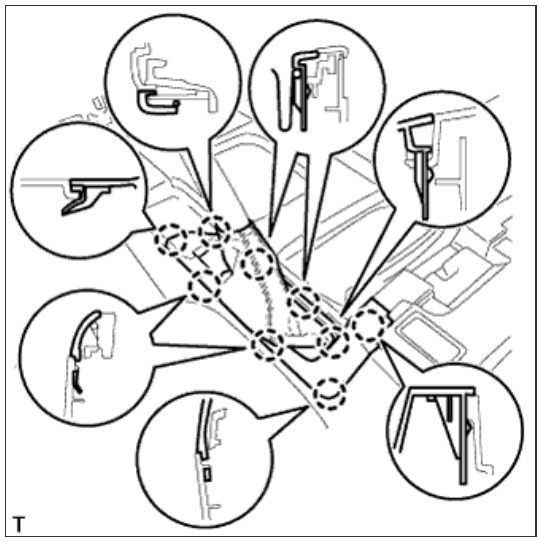
a. Attach the claw on the upper part of the cooler cover, and then attach the clamp on the lower part of the cooler cover to install it.

59. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY



a. Connect the connectors.

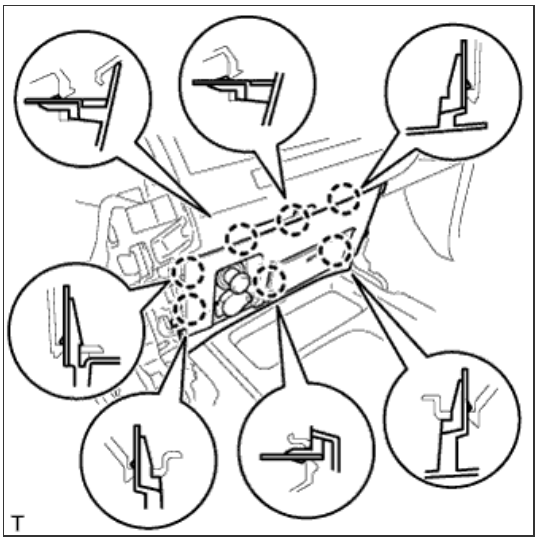
b. Attach the 1 claws to install the console panel.



60. INSTALL CONSOLE CUP HOLDER BOX SUB-ASSEMBLY

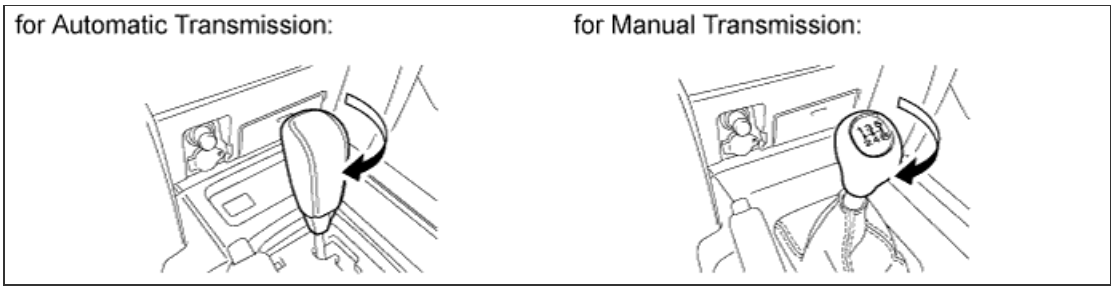
a. Attach the claws to install the box.

61. INSTALL REAR UPPER CONSOLE PANEL SUB-ASSEMBLY



a. Attach the 9 claws to install the panel.

62. INSTALL LOWER CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY

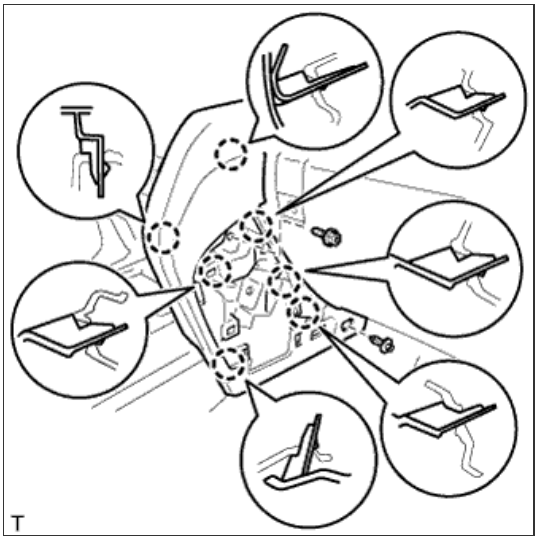


a. Connect the connectors.

b. Attach the 7 claws to install the panel.

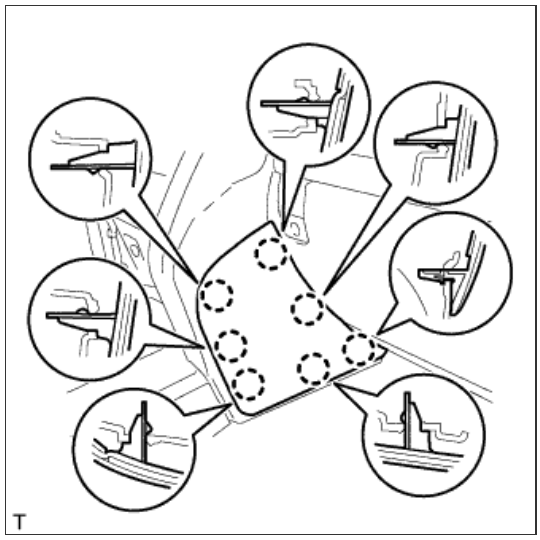
63. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY

a. Install the shift lever knob and twist it in the direction indicated by the arrow.



64. INSTALL LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY RH

a. Attach the 7 claws to install the panel pad.

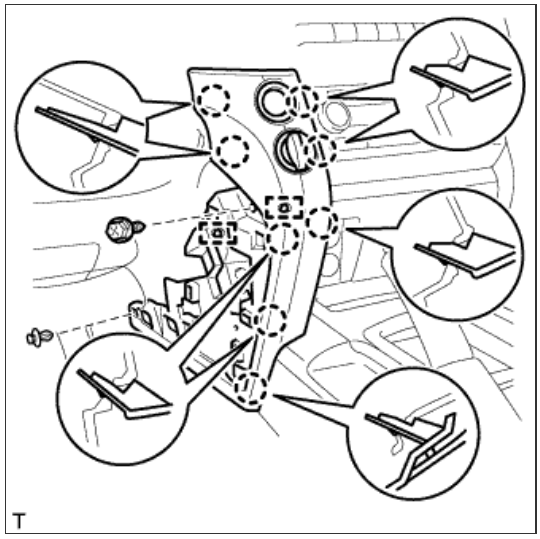


b. Install the screw.

c. Install the clip.

65. INSTALL NO. 1 INSTRUMENT PANEL FINISH PANEL CUSHION

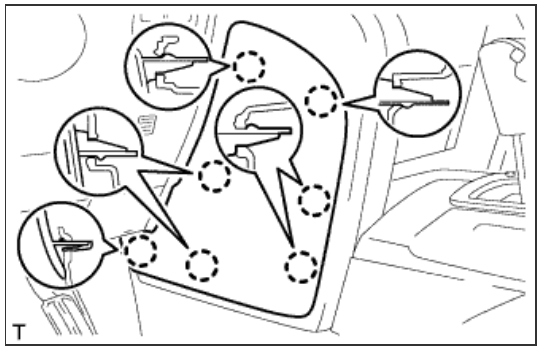
a. Attach the 7 claws to install the panel cushion.



66. INSTALL LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

a. Connect the connectors and 2 clamps.

b. Attach the 8 claws to install the panel pad.



c. Install the screw.

d. Install the clip.

67. INSTALL NO. 2 INSTRUMENT PANEL FINISH PANEL CUSHION

a. Attach the 7 claws to install the panel cushion.

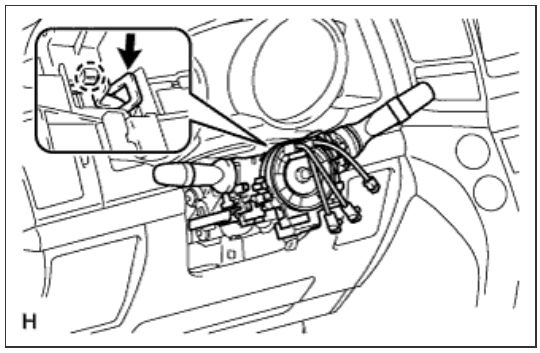
68. INSTALL FRONT SEAT ASSEMBLY RH (for Manual Seat)

a. Install the front seat assembly (Click here).

69. INSTALL FRONT SEAT ASSEMBLY RH (for Power Seat)

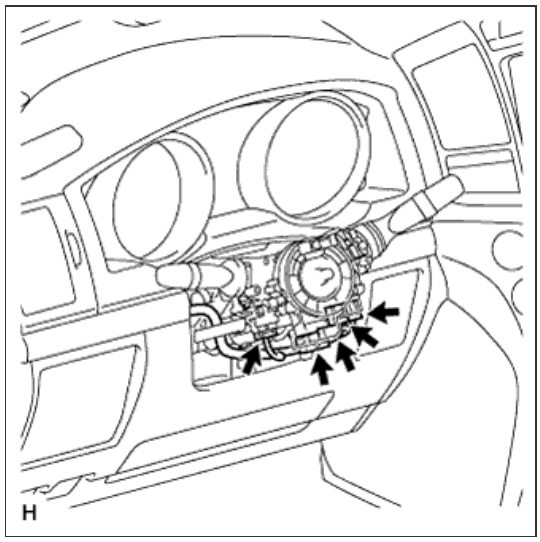
a. Install the front seat assembly (Click here).

70. INSTALL FRONT SEAT ASSEMBLY LH (for Manual Seat)



a. Install the front seat assembly LH (Click here).

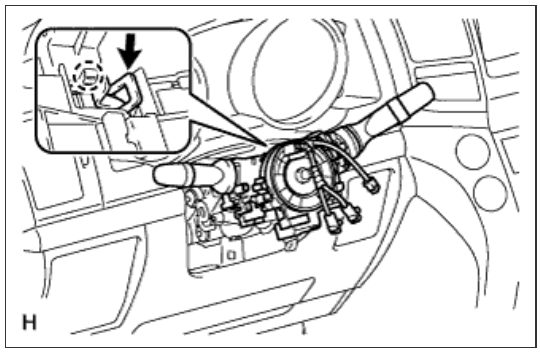
71. INSTALL FRONT SEAT ASSEMBLY LH (for Power Seat)



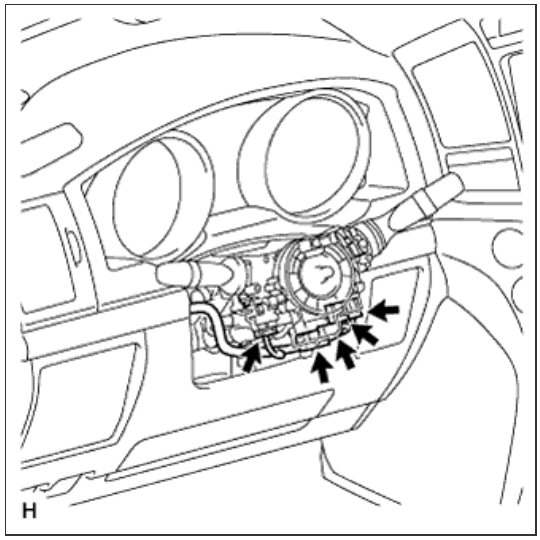
a. Install the front seat assembly LH (Click here).

72. INSTALL COMBINATION SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (for Manual Tilt and Manual Telescopic Steering Column)

a. Using pliers, grip the claws of the clamp and install the combination switch assembly with spiral cable sub-assembly to the steering column assembly with the clamp.

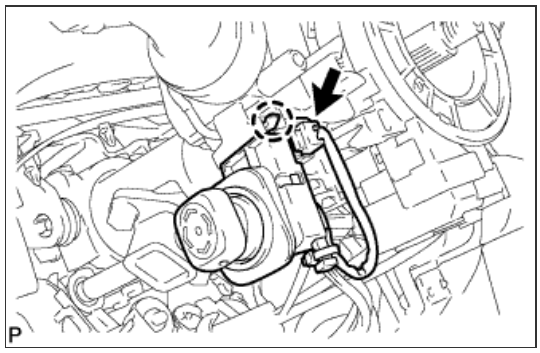


b. Connect the 5 connectors to the combination switch with spiral cable.



73. INSTALL COMBINATION SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (for Power Tilt and Power Telescopic Steering Column)

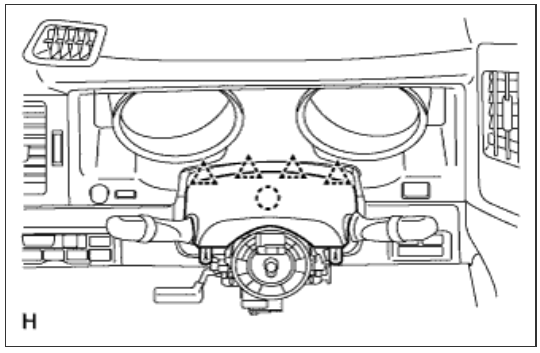
a. Using pliers, grip the claws of the clamp and install the turn signal switch assembly with spiral cable sub-assembly to the steering column assembly with the clamp.



b. Connect the 5 connectors to the turn signal switch with spiral cable.

74. INSTALL TILT AND TELESCOPIC SWITCH (for Power Tilt and Power Telescopic Steering Column)

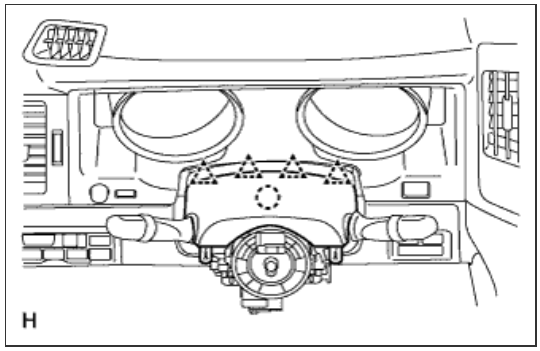
a. Attach the claw to install the switch.



b. Connect the switch connector.

75. INSTALL UPPER STEERING COLUMN COVER (for Manual Tilt and Manual Telescopic Steering Column)

a. Attach the claw to install the upper steering column cover.



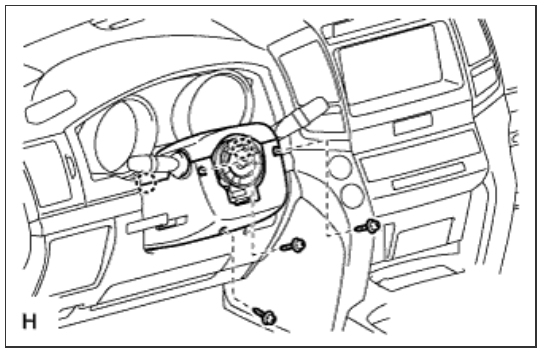
b. Attach the clips to install the upper steering column cover onto the instrument cluster finish panel.

76. INSTALL UPPER STEERING COLUMN COVER (for Power Tilt and Power Telescopic Steering Column)

a. Attach the claw to install the upper steering column cover.

b. Attach the clips to install the upper steering column cover onto the instrument cluster finish panel.

77. INSTALL LOWER STEERING COLUMN COVER (for Manual Tilt and Manual Telescopic Steering Column)



a. Attach the 2 claws to install the lower steering column cover.

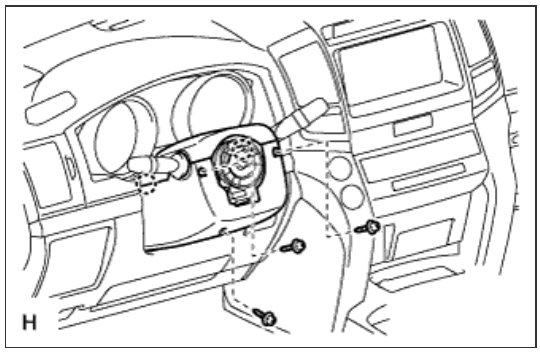
NOTICE:

Do not damage the tilt and telescopic switch.

b. Install the 3 screws.

Torque:
2.0 N*m{ 20 kgf*cm , 18 in.*lbf }

78. INSTALL LOWER STEERING COLUMN COVER (for Power Tilt and Power Telescopic Steering Column)



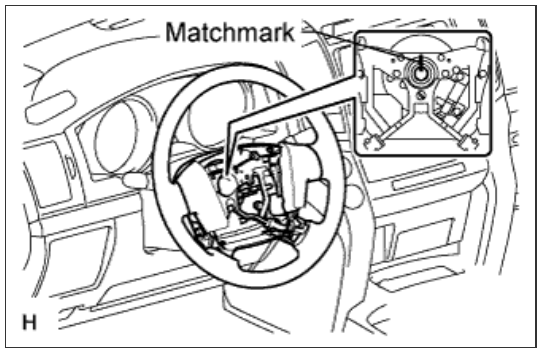
a. Attach the 2 claws to install the lower steering column cover.

NOTICE:

Do not damage the tilt and telescopic switch.

b. Install the 3 screws.

Torque:
1.5 N*m{ 15 kgf*cm , 13 in.*lbf }



79. INSTALL STEERING WHEEL ASSEMBLY

a. Align the matchmarks on the steering wheel assembly and steering main shaft assembly.

b. Install the steering wheel assembly set nut.

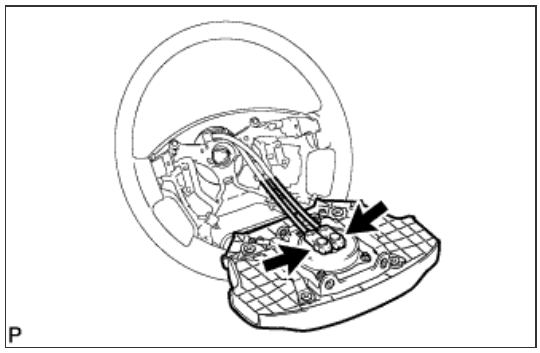
Torque:
50 N*m{ 510 kgf*cm , 37 ft.*lbf }

80. INSTALL STEERING PAD

a. Support the steering pad with one hand.

b. Connect the 2 connectors to the steering pad.

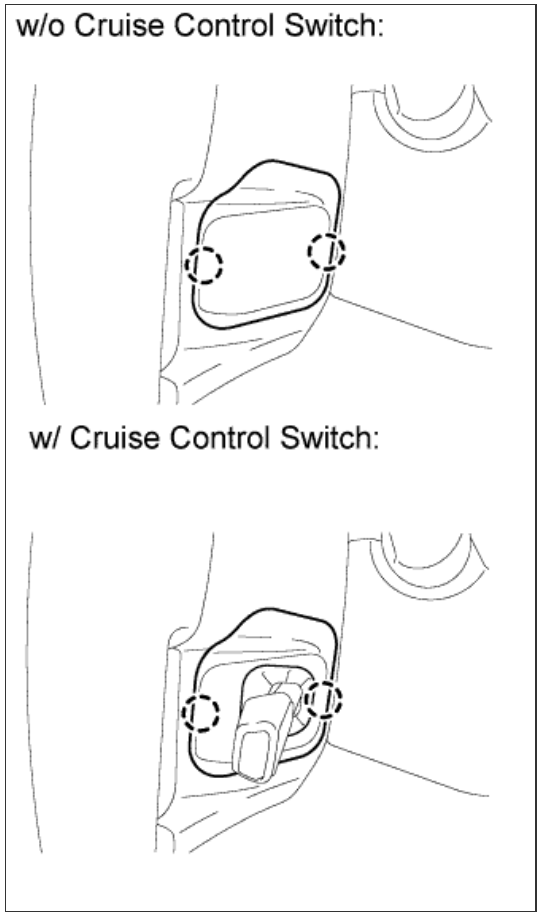
NOTICE:



When handling the airbag connector, take care not to damage the airbag wire harness.

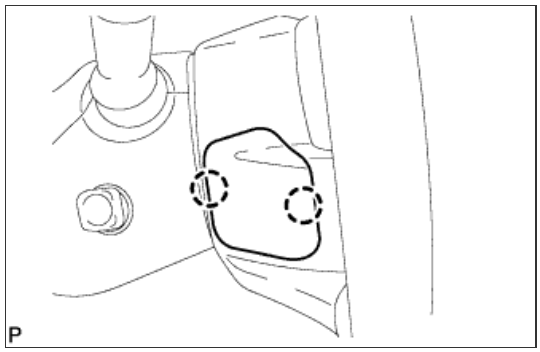
c. Connect the horn connector.

d. Confirm that the circumference groove of the screw fits in the screw case, and place the steering pad onto the steering wheel.



e. Using a T30 socket wrench, tighten the 2 screws.

Torque:
8.8 N*m{ 90 kgf*cm , 78 in.*lbf }



81. INSTALL LOWER NO. 2 STEERING WHEEL COVER

a. Attach the 2 claws to install the cover.

82. INSTALL LOWER NO. 3 STEERING WHEEL COVER

a. Attach the 2 claws to install the cover.

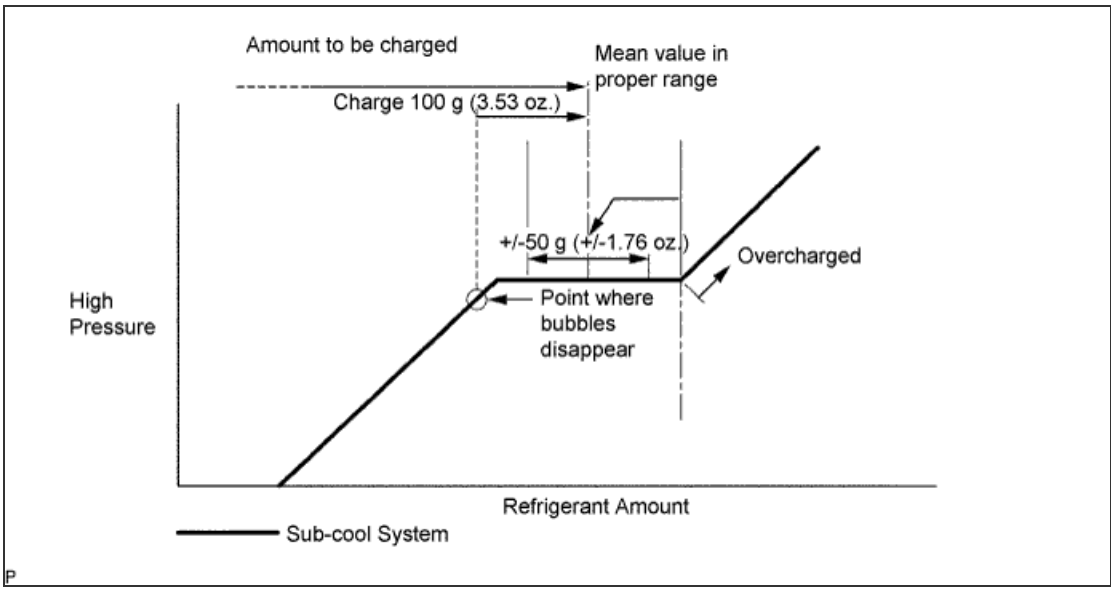
83. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

- **Reset the Autoaway/Return function setting to the previous condition by changing the customize parameter (Click here).**
- **When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).**

84. CHARGE REFRIGERANT (w/ Cool Box)

SST



09985-20010 (09985-02130, 09985-02150, 09985-02090, 09985-02110, 09985-02010, 09985-02050, 09985-02060, 09985-02070)

a. Perform vacuum purging using a vacuum pump.

b. Charge refrigerant HFC-13 a (13 a).

Standard:

Condenser Core Thickness	Air Conditioning Type	Cool Box	efrigerant Charging Amount
22 mm (0.866 in.)	w/o ear Cooler	w/ Cool Box	870 +/-30 g (30.7 +/-1.1 oz.)
		w/o Cool Box	870 +/-30 g (30.7 +/-1.1 oz.)
	w/ ear Cooler	w/ Cool Box	1010 +/-30 g (35.6 +/-1.1 oz.)
		w/o Cool Box	960 +/-30 g (33.9 +/-1.1 oz.)
16 mm (0.630 in.)	w/o ear Cooler	w/ Cool Box	770 +/-30 g (27.2 +/-1.1 oz.)
		w/o Cool Box	770 +/-30 g (27.2 +/-1.1 oz.)
	w/ ear Cooler	w/ Cool Box	970 +/-30 g (3 .2 +/-1.1 oz.)
		w/o Cool Box	920 +/-30 g (32.5 +/-1.1 oz.)

NOTICE:

- **Do not operate the cooler compressor before charging refrigerant as the cooler compressor will not work properly without any refrigerant, and will overheat.**
- **Approximately 200 g (7.05 oz.) of refrigerant may need to be charged after bubbles disappear. The refrigerant amount should be checked by measuring its quantity, and not with the sight glass.**

85. WARM UP ENGINE (w/ Cool Box)

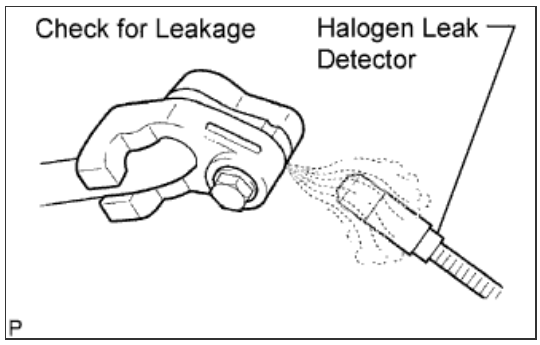
a. Warm up the engine at less than 1850 rpm for 2 minutes or more after charging the refrigerant.

NOTICE:

Be sure to warm up the compressor when turning the A/C switch is on after removing and installing the cooler refrigerant lines (including the compressor), to prevent damage to the compressor.

86. CHECK FOR REFRIGERANT GAS LEAK (w/ Cool Box)

a. After recharging the refrigerant gas, check for refrigerant gas leakage using a halogen leak detector.



b. Perform the operation under these conditions:

- Stop the engine.
- Secure good ventilation (the halogen leak detector may react to volatile gases other than refrigerant, such as evaporated gasoline or exhaust gas).
- epeat the test 2 or 3 times.
- Make sure that some refrigerant remains in the refrigeration system. When compressor is off: approximately 392 to 588 kPa (.0 to 6.0 kgf/cm^2, 57 to 85 psi).

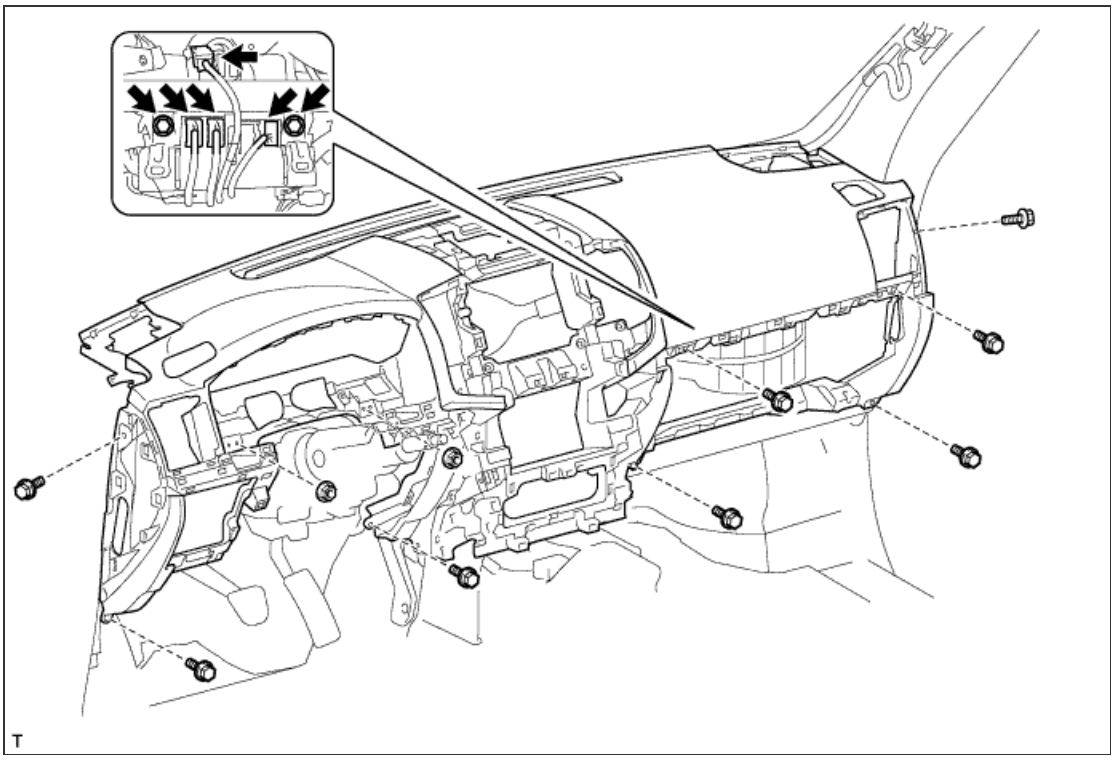
c. Using a halogen leak detector, check the refrigerant line for leakage.

d. If a gas leak is not detected on the drain hose, remove the blower motor control (blower resistor) from the cooling unit. Insert the halogen leak detector sensor into the unit and perform the test.

e. Disconnect the connector and wait for approximately 20 minutes. Bring the halogen leak detector close to the pressure switch and perform the test.

87. CHECK SRS WARNING LIGHT

a. Check the S Swarning light (Click here).

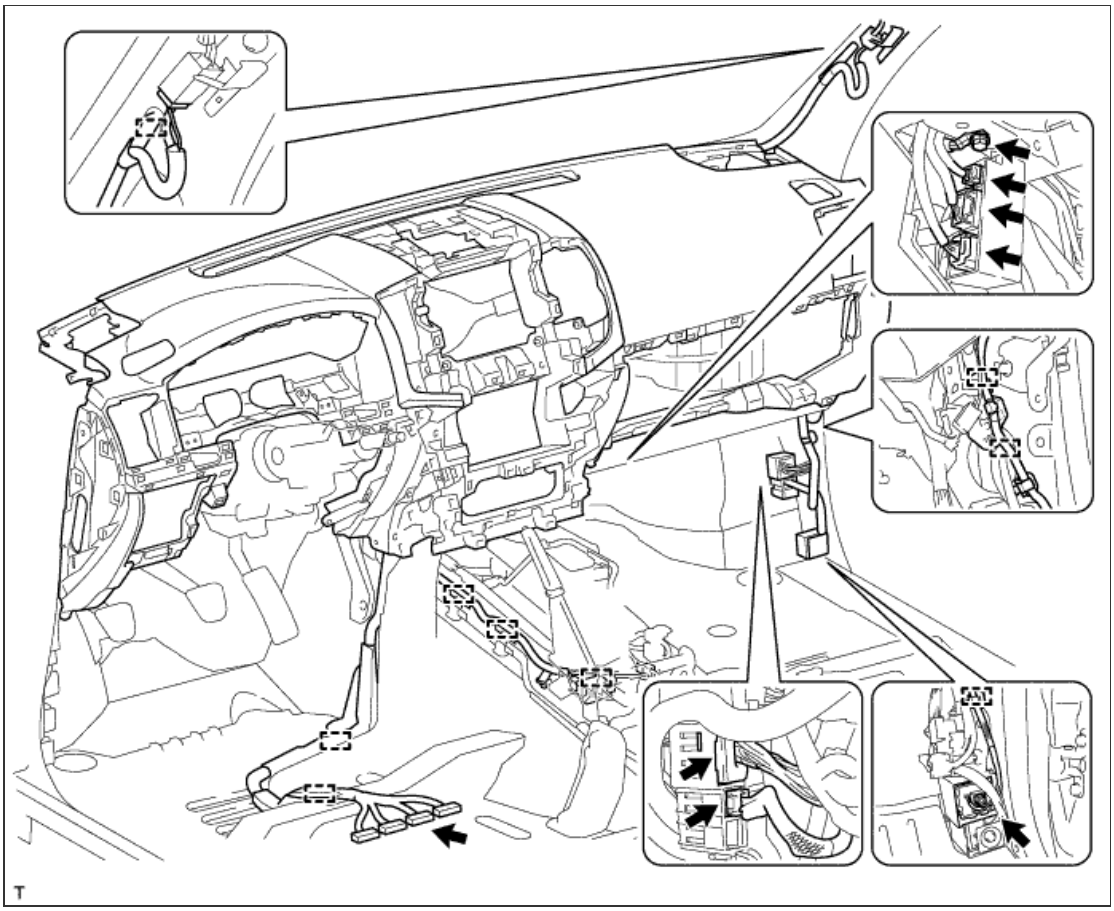


for Preparation Click here

HINT:

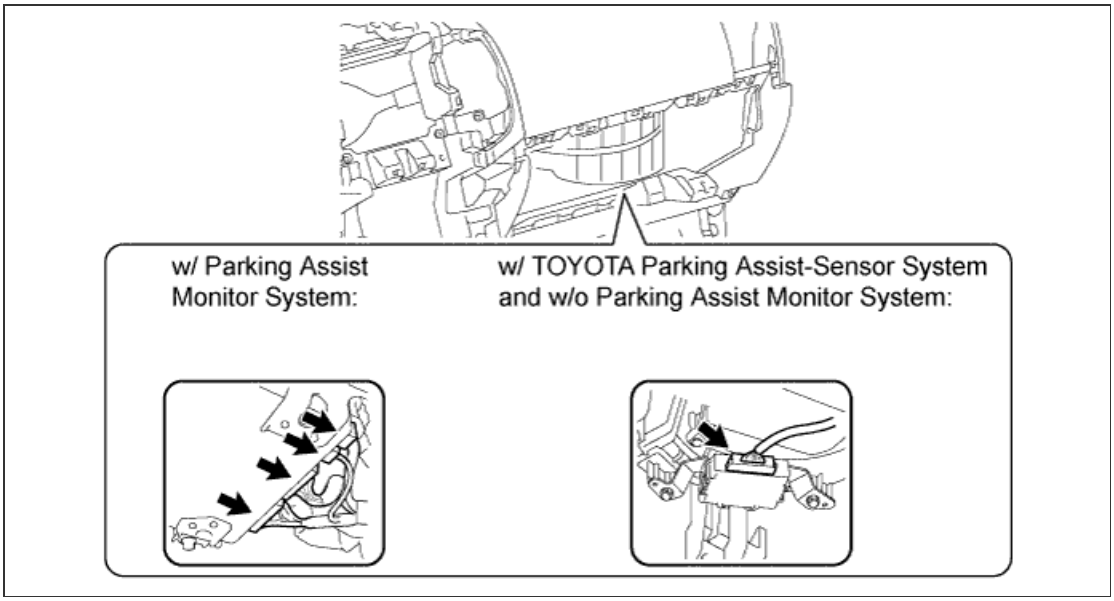
A bolt without a torque specification is shown in the standard bolt chart (Click here).

1. INSTALL INSTRUMENT PANEL SAFETY PAD ASSEMBLY (for LHD)



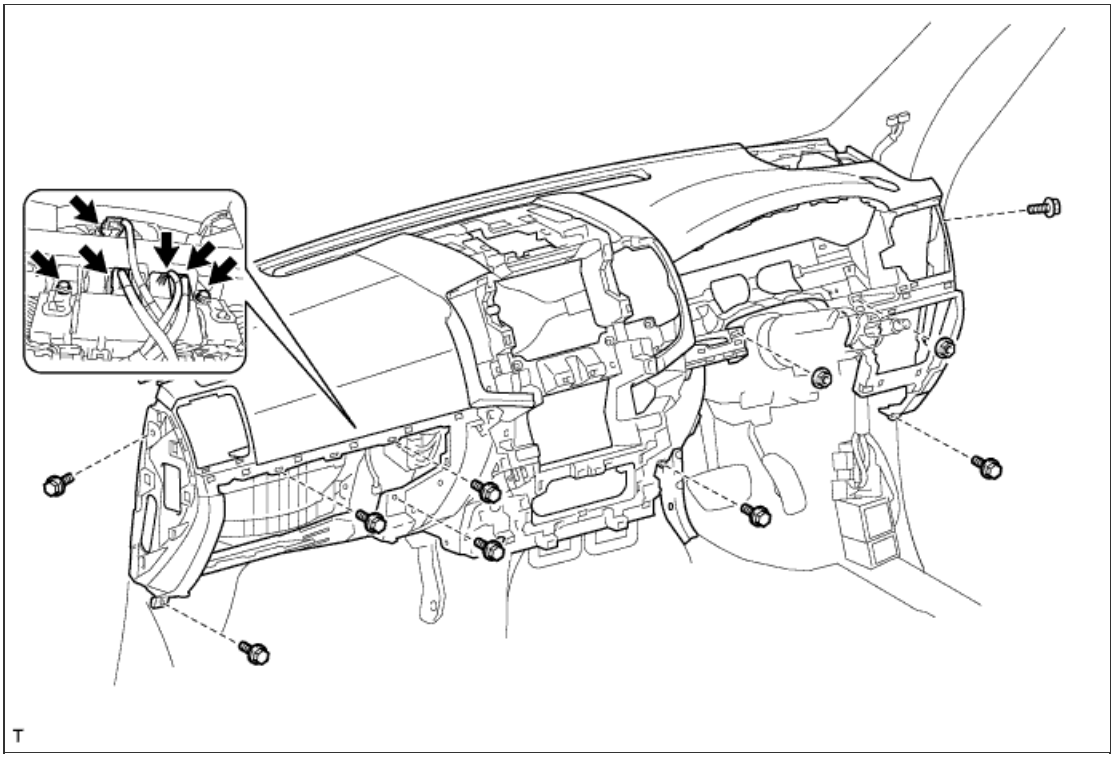
a. Install the safety pad with the 8 bolts and 2 nuts.

b. Install the 2 passenger airbag bolts.



Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

c. Connect the wire harness with the bolt.

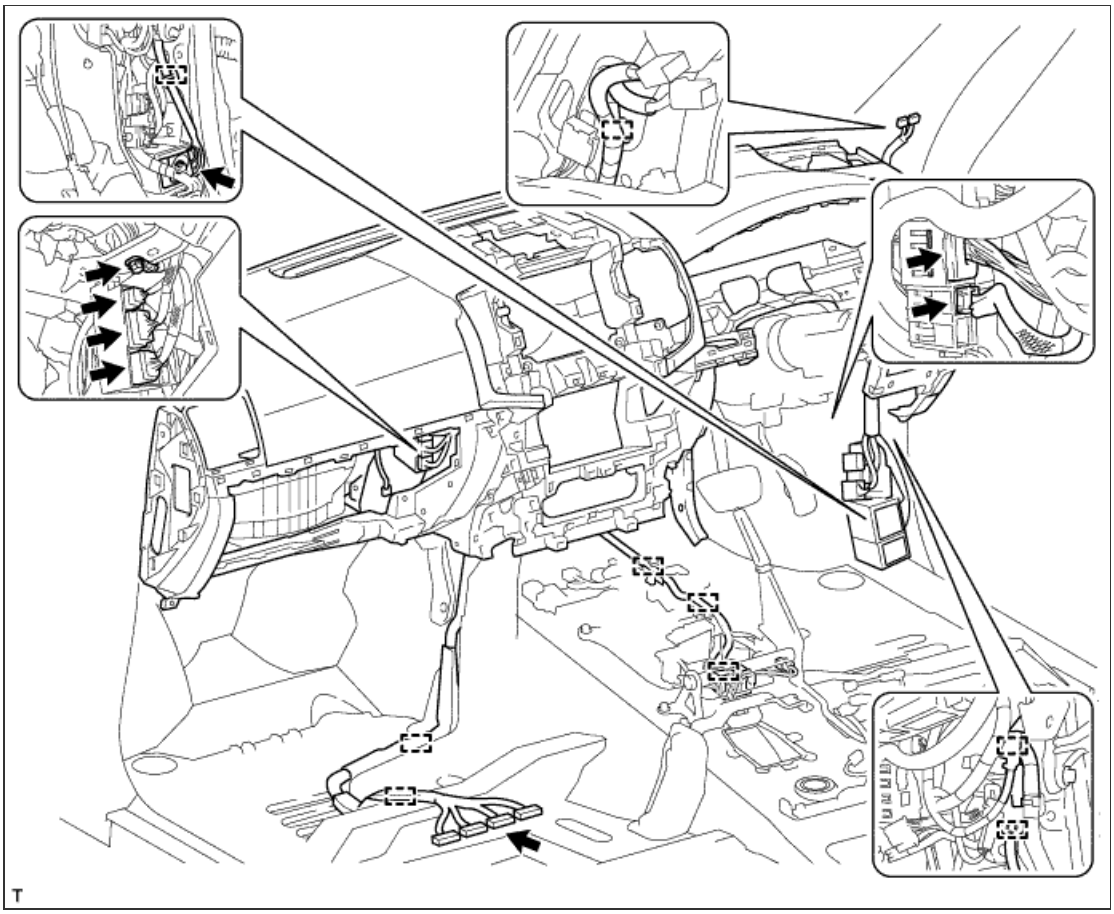


d. Connect the connectors and clamps.

e. Connect the connectors.

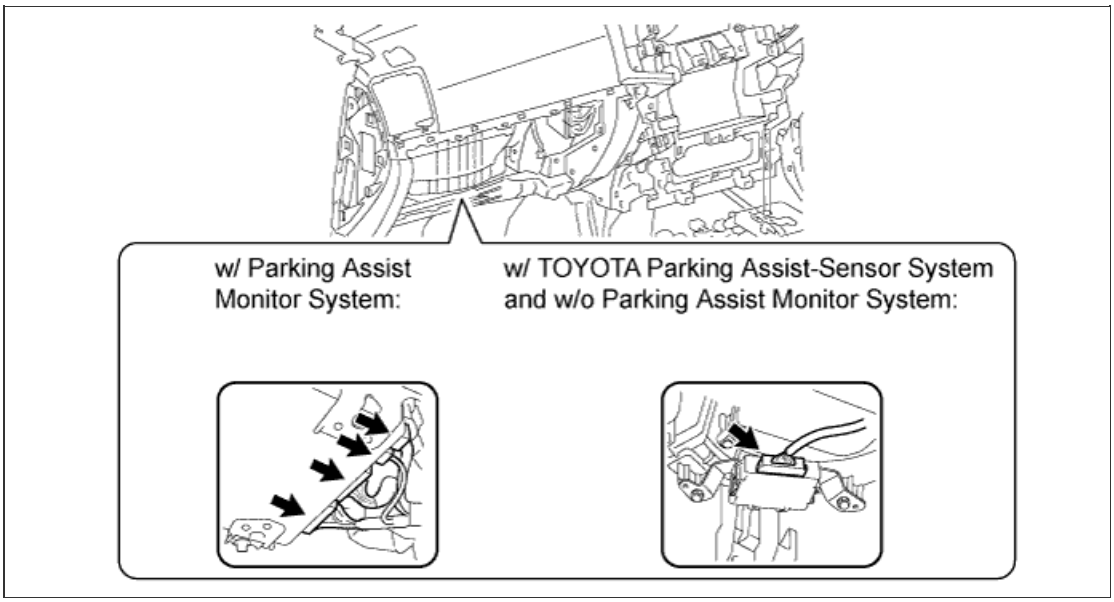
2. INSTALL INSTRUMENT PANEL SAFETY PAD ASSEMBLY (for RHD)

a. Install the safety pad with the 8 bolts and 2 nuts.



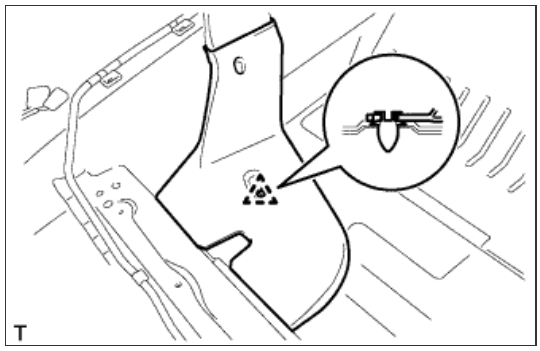
b. Connect the connectors.

c. Install the 2 passenger airbag bolts.



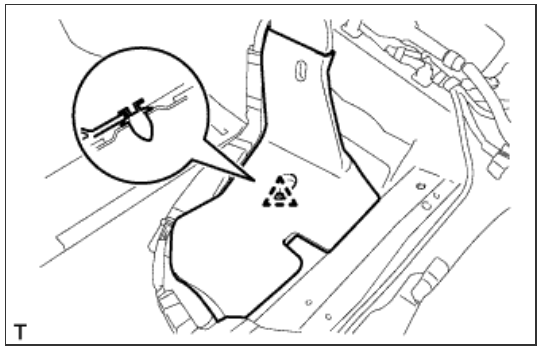
Torque:
20 N*m{ 204 kgf*cm , 15 ft.*lbf }

d. Connect the wire harness with the bolt.



e. Connect the connectors and clamps.

f. Connect the connectors.

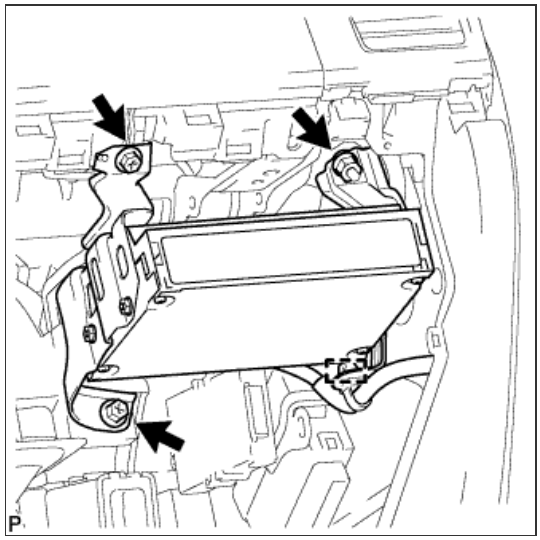


3. INSTALL REAR NO. 4 AIR DUCT

a. Attach the clip to install the air duct.

4. INSTALL REAR NO. 2 AIR DUCT

a. Attach the clip to install the air duct.



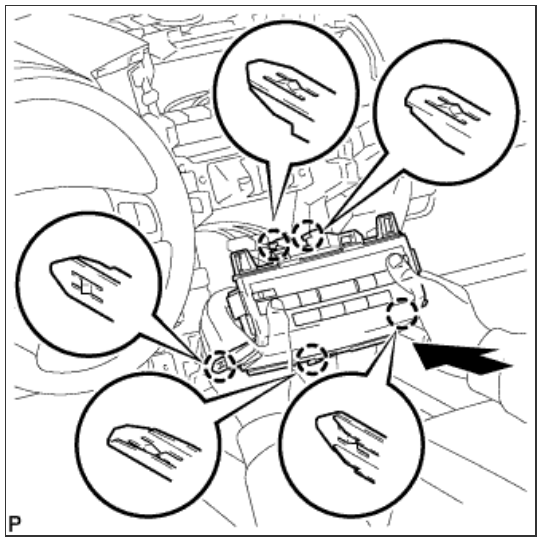
5. INSTALL NAVIGATION MODULE BOARD WITH DISC PLAYER BRACKET (w/ Multi-display)

a. Connect the navigation module board connectors.

b. Install the navigation module board with disc player bracket with the nut and 2 screws.

Torque:
Nut:
12 N*m{ 122 kgf*cm , 8 ft.*lbf }

c. Attach the clamp.



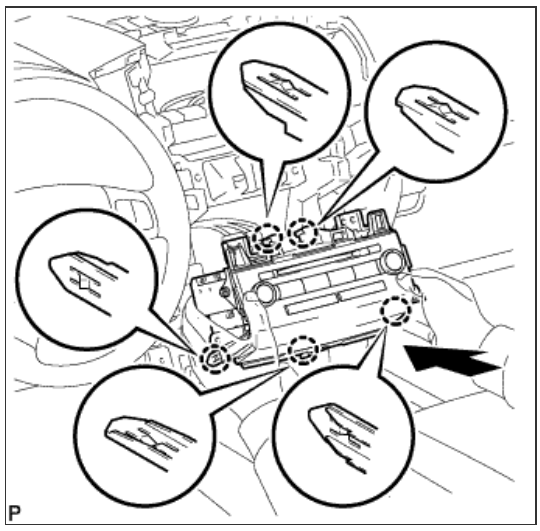
6. INSTALL AIR CONDITIONING CONTROL ASSEMBLY

a. Connect the connectors.

b. Insert the radio receiver and attach the 5 claws on its backside.

NOTICE:

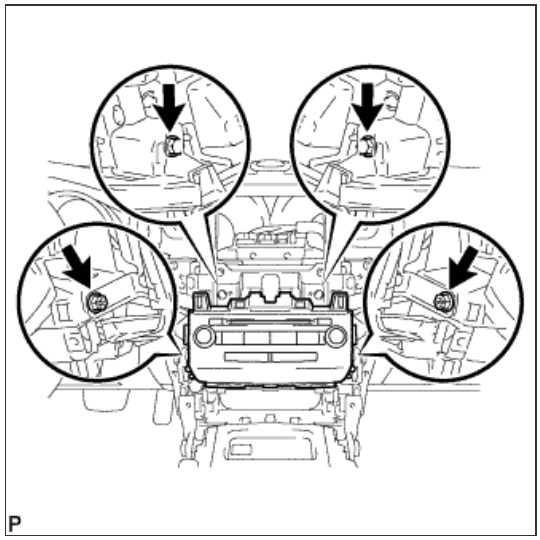
When inserting the radio receiver, do not press the knobs on it.



7. INSTALL RADIO RECEIVER ASSEMBLY WITH BRACKET (w/ Multi-display)

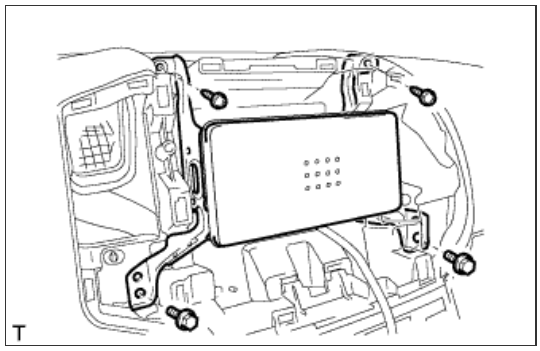
a. Connect the connectors.

b. Insert the radio receiver to attach the 5 claws on its backside.



NOTICE:

When inserting the radio receiver, do not press the knobs on it.

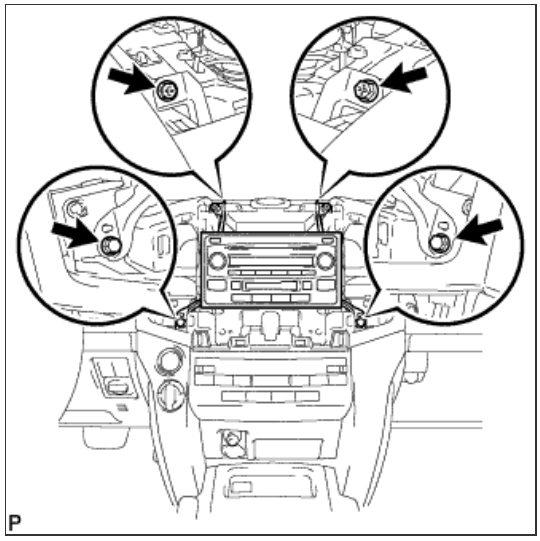


c. Install the radio receiver with the 2 screws and 2 bolts.

Torque:
Bolt:
12 N*m{ 122 kgf*cm , 8 ft.*lbf }

8. INSTALL RADIO TUNER OPENING COVER WITH BRACKET (w/o Radio Receiver)

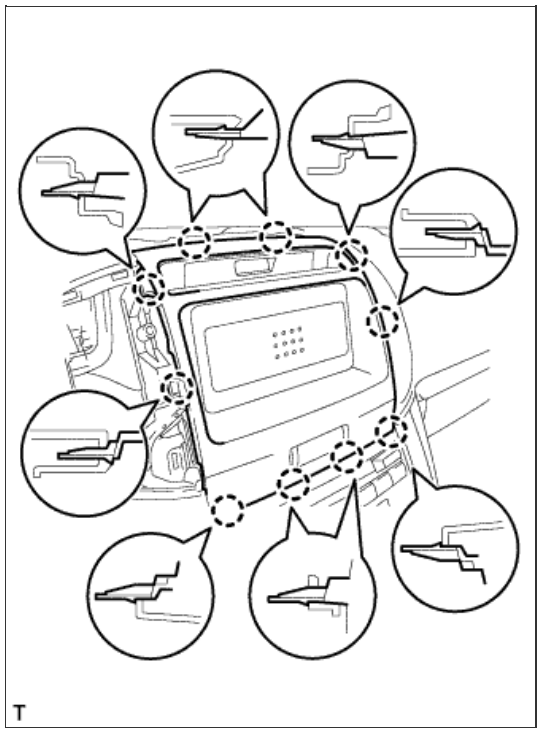
a. Install the opening cover with the 2 bolts and 2 screws.



9. INSTALL RADIO RECEIVER ASSEMBLY WITH BRACKET (w/ Cassette Tape Player)

a. Connect the connectors.

b. Install the radio receiver with the 2 screws and 2 bolts.

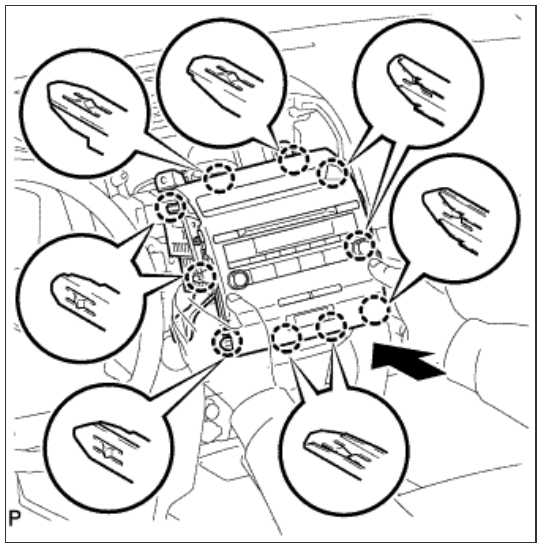


Torque:
Bolt:
12 N*m{ 122 kgf*cm , 8 ft.*lbf }

10. INSTALL NO. 1 CENTER INSTRUMENT CLUSTER FINISH PANEL

a. Connect the connector.

b. Attach the 10 claws to install the finish panel.



11. INSTALL RADIO RECEIVER ASSEMBLY WITH BRACKET (w/o Multi-display)

a. Connect the connectors.

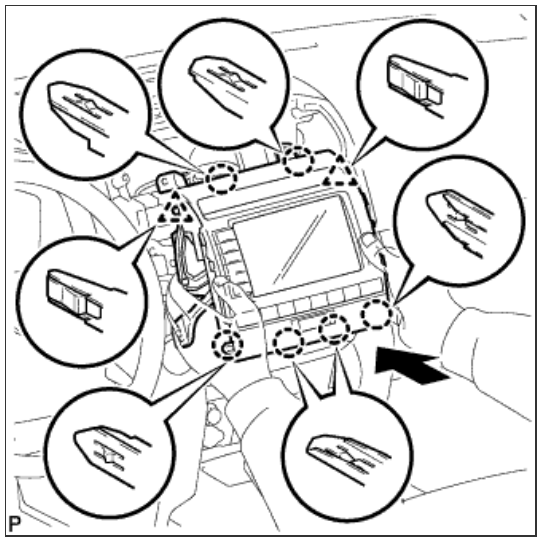
b. Insert the radio receiver to attach the 10 claws on its backside.

NOTICE:

When inserting the radio receiver, do not press the knobs on it.

c. Install the radio receiver with the 2 screws and 2 bolts.

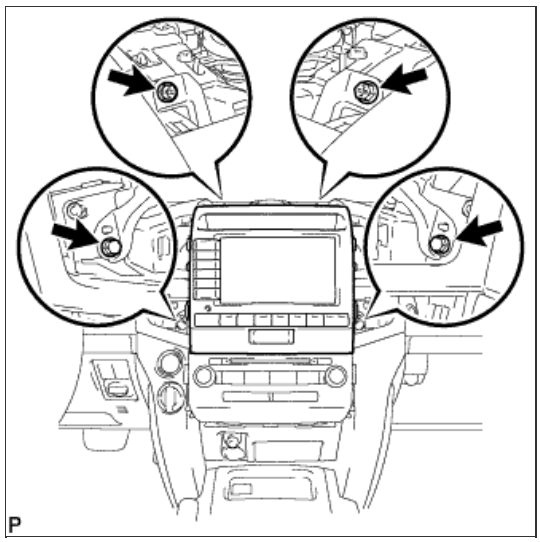
Torque:
Bolt:
12 N*m{ 122 kgf*cm , 8 ft.*lbf }



12. INSTALL MULTI-DISPLAY ASSEMBLY WITH BRACKET (w/ Multi-display)

a. Connect the connectors.

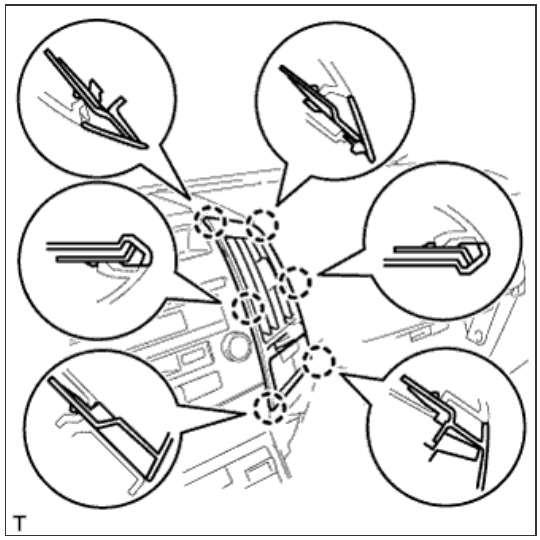
b. Insert the display and attach the 2 clips and 6 claws on its backside.



NOTICE:

When inserting the display, do not press the knobs on it.

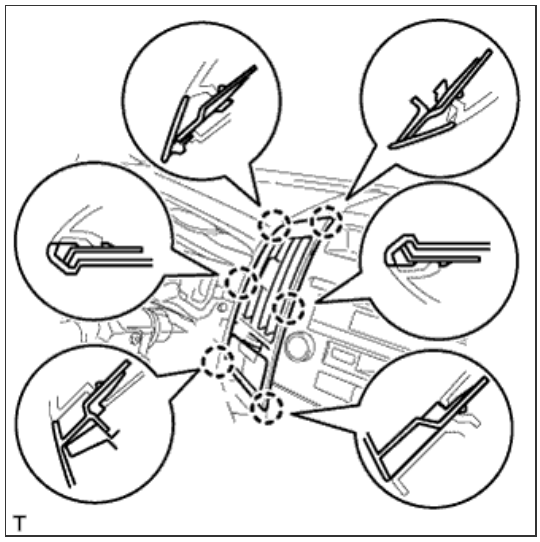
c. Install the display with the 2 screws and 2 bolts.



Torque:
Bolt:
12 N*m{ 122 kgf*cm , 8 ft.*lbf }

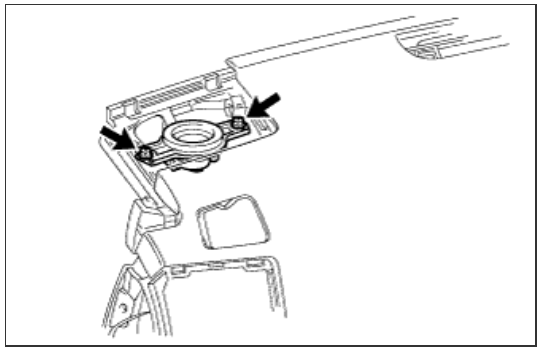
13. INSTALL NO. 4 INSTRUMENT PANEL REGISTER ASSEMBLY

a. Connect the connector.



b. Attach the 6 claws to install the register.

14. INSTALL NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY



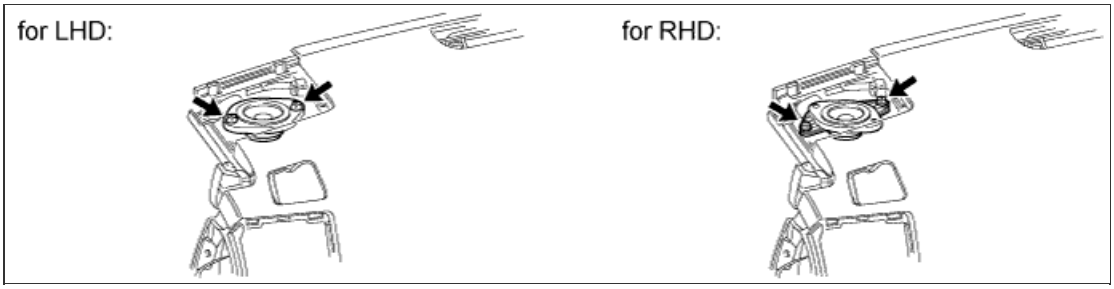
a. Connect the connector.

b. Attach the 6 claws to install the register.

15. INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (RH Side)

a. for 9 Speakers Models:

i. Connect the connector.



ii. Temporarily install the speaker by aligning the positioning pins of the speaker with the instrument panel.

iii. Install the speaker with the 2 bolts.

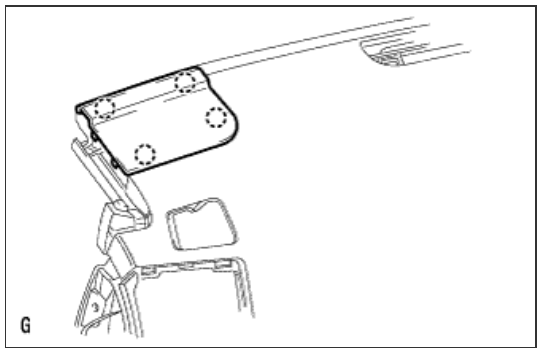
NOTICE:

- **Do not touch the cone part of the speaker.**
- **When installing the speaker to the instrument panel be careful that the wires do not get caught between the parts.**

b. except 9 Speakers Models:

i. Connect the connector.

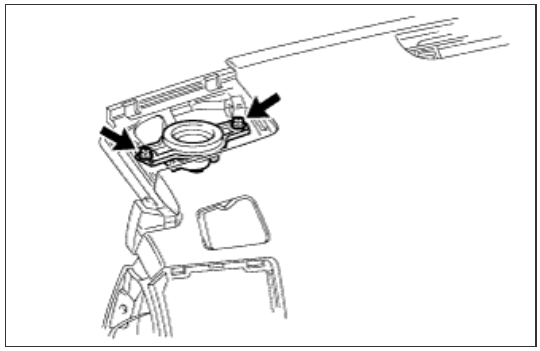
ii. Temporarily install the speaker by aligning the positioning pins of the speaker with the instrument panel.



iii. Install the speaker with the 2 bolts.

NOTICE:

- **Do not touch the cone part of the speaker.**
- **When installing the speaker to the instrument panel be careful that the wires do not get caught between the parts.**



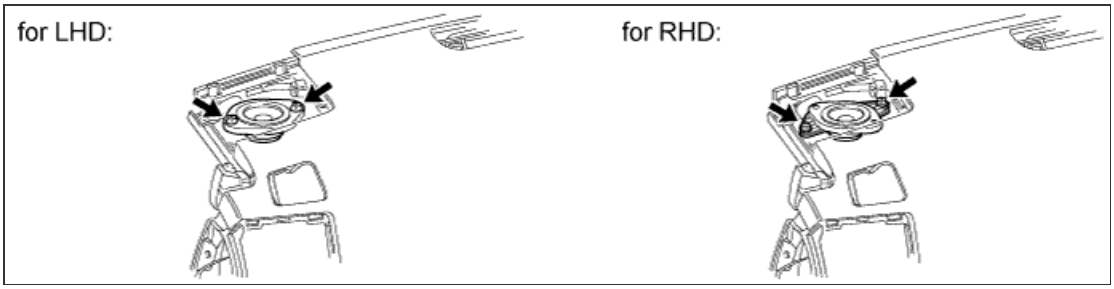
16. INSTALL NO. 2 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY

a. Attach the claws to install the panel.

17. INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (LH Side)

a. for 9 Speakers Models:

i. Connect the connector.



ii. Temporarily install the speaker by aligning the positioning pins of the speaker with the instrument panel.

iii. Install the speaker with the 2 bolts.

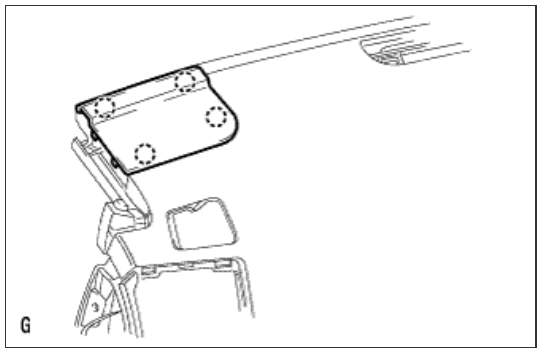
NOTICE:

- **Do not touch the cone part of the speaker.**
- **When installing the speaker to the instrument panel be careful that the wires do not get caught between the parts.**

b. except 9 Speakers Models:

i. Connect the connector.

ii. Temporarily install the speaker by aligning the positioning pins of the speaker with the instrument panel.



iii. Install the speaker with the 2 bolts.

NOTICE:

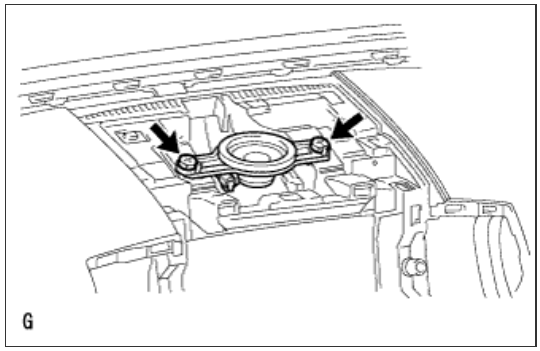
- **Do not touch the cone part of the speaker.**
- **When installing the speaker to the instrument panel be careful that the wires do not get caught between the parts.**

18. INSTALL NO. 1 INSTRUMENT PANEL SPEAKER PANEL SUB-ASSEMBLY

a. Attach the claws to install the panel.

19. INSTALL FRONT NO. 4 SPEAKER ASSEMBLY



a. Connect the speaker connector.

b. Temporarily install the speaker by aligning the positioning pins of the speaker with the instrument panel.

c. Install the speaker with the 2 bolts.

NOTICE:

- **Do not touch the cone part of the speaker.**
- **When installing the speaker to the instrument panel be careful that the wires do not get caught between the parts.**

20. INSTALL NO. 1 SPEAKER OPENING COVER ASSEMBLY

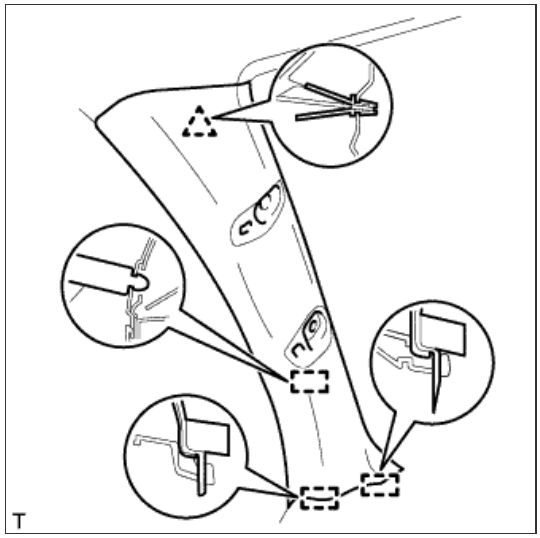
a. Attach the 8 claws to install the opening cover.

21. INSTALL FRONT PILLAR GARNISH RH (w/ Sliding Roof)

HINT:

Use the same procedures described for the LH side.

22. INSTALL FRONT PILLAR GARNISH RH (w/o Sliding Roof)

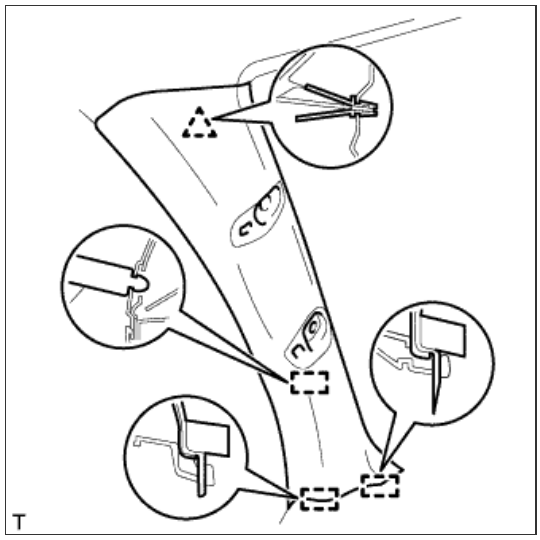


HINT:

Use the same procedures described for the LH side.

23. INSTALL FRONT PILLAR GARNISH LH (w/ Sliding Roof)

a. for 9, 1 Speakers:
Connect the speaker connector.

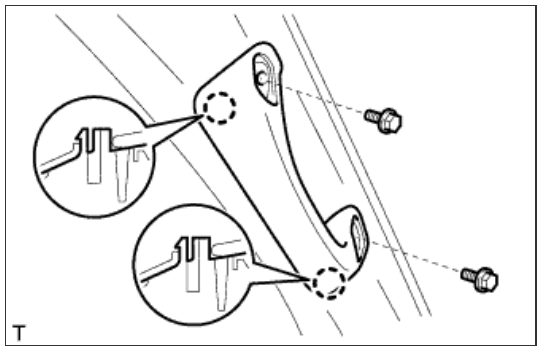


b. Attach the clip and 3 guides to install the front pillar garnish.

24. INSTALL FRONT PILLAR GARNISH LH (w/o Sliding Roof)

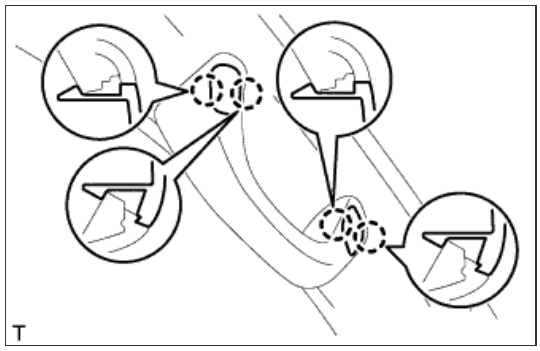
a. for 9, 1 Speakers:
Connect the speaker connector.

b. Attach the clip and 3 guides to install the front pillar garnish.



25. INSTALL FRONT ASSIST GRIP SUB-ASSEMBLY (w/ Sliding Roof)

HINT:

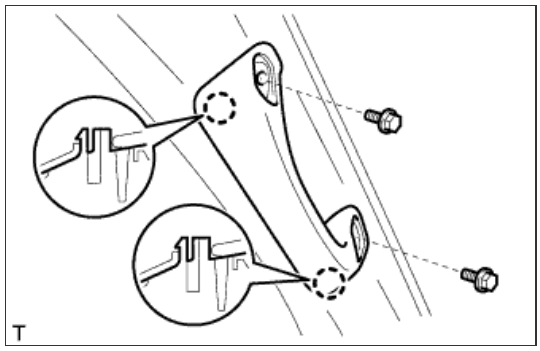


Use the same procedure to install the front assist grip on the other side.

a. Attach the 2 claws to install the front assist grip.

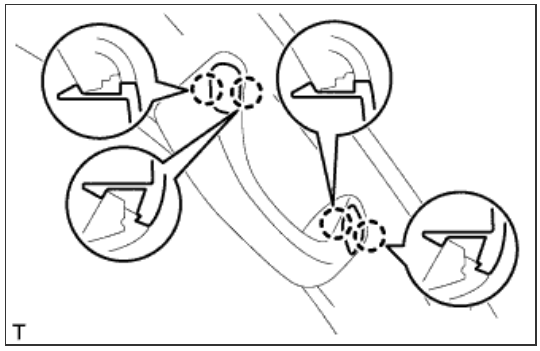
b. Install the 2 bolts.

c. Attach the claws to install the 2 assist grip plugs.



26. INSTALL FRONT ASSIST GRIP SUB-ASSEMBLY (w/o Sliding Roof)

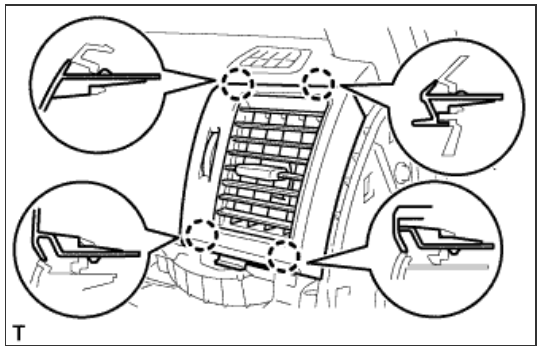
HINT:



Use the same procedure to install the front assist grip on the other side.

a. Attach the 2 claws to install the front assist grip.

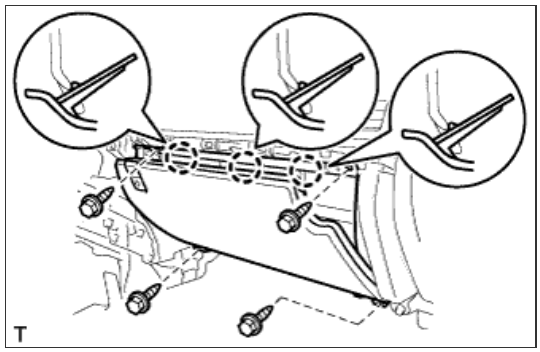
b. Install the 2 bolts.



c. Attach the claws to install the 2 assist grip plugs.

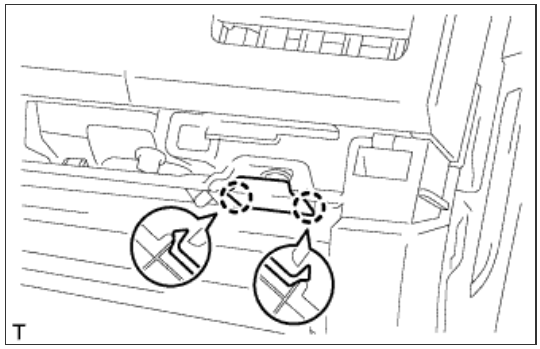
27. INSTALL NO. 2 INSTRUMENT PANEL REGISTER ASSEMBLY

a. Attach the claws to install the register.



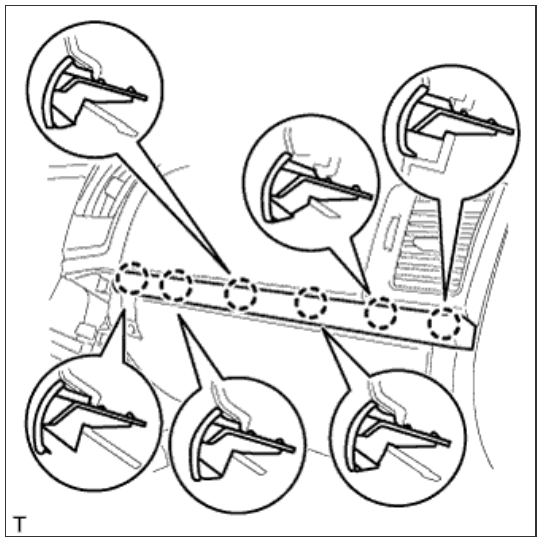
28. INSTALL LOWER NO. 2 INSTRUMENT PANEL FINISH PANEL

a. Connect the connector.



b. Attach the 3 claws to install the finish panel.

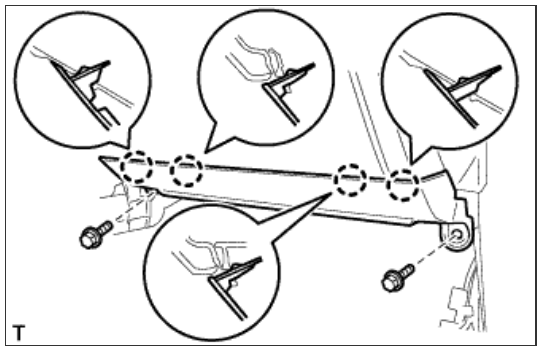
c. Install the bolts.



29. INSTALL INSTRUMENT PANEL BOX DOOR KNOB

a. Attach the 2 claws to install the knob.

30. INSTALL NO. 3 INSTRUMENT CLUSTER FINISH PANEL GARNISH



a. Attach the 6 claws to install the panel garnish.

31. INSTALL LOWER INSTRUMENT PANEL (w/o Passenger Side Knee Airbag)

a. Attach the claws to install the instrument panel.

b. Install the 2 bolts.

32. INSTALL FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (w/ Passenger Side Knee Airbag)

a. Connect the connector.

NOTICE:

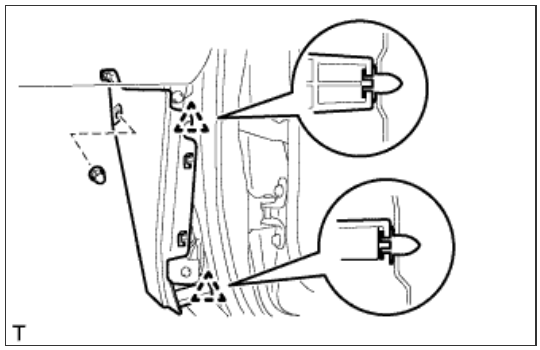
When handling the airbag connector, take care not to damage the airbag wire harness.

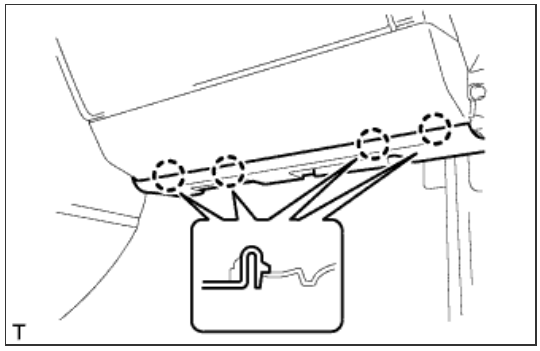
b. Attach the claws to install the front passenger side knee airbag.

c. Install the bolts.



Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

33. INSTALL COWL SIDE TRIM BOARD RH



a. Attach the 2 clips to install the trim board.

b. Install the cap nut.

34. INSTALL NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Floor Under Cover)

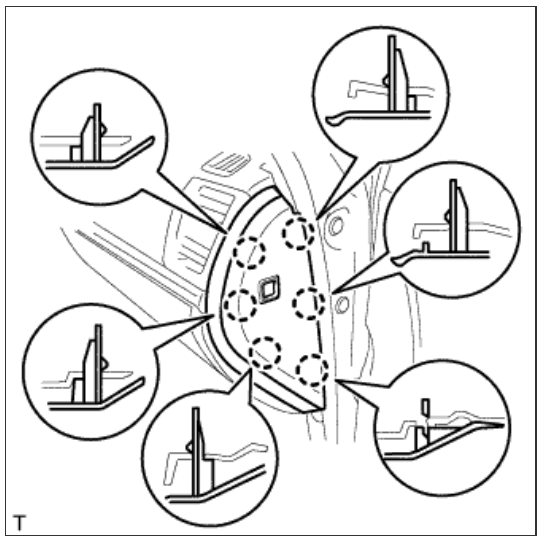
a. Attach the claws to install the under cover.

35. INSTALL FRONT DOOR SCUFF PLATE RH (w/ Sliding Roof)

HINT:

Use the same procedures described for the LH side.

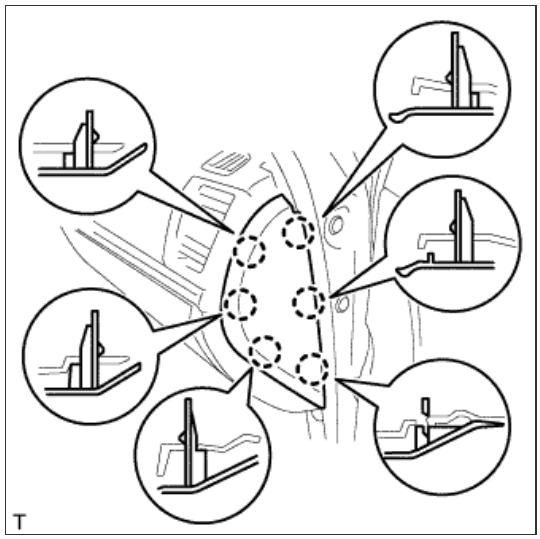
36. INSTALL FRONT DOOR SCUFF PLATE RH (w/o Sliding Roof)



HINT:

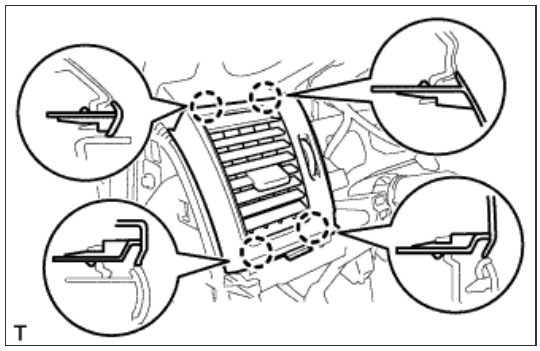
Use the same procedures described for the LH side.

37. INSTALL INSTRUMENT SIDE PANEL RH (w/ Airbag Cut Off Switch)



a. Connect the connector.

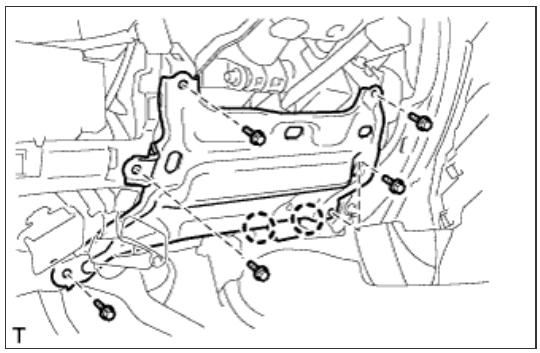
b. Attach the 6 claws to install the side panel.



38. INSTALL INSTRUMENT SIDE PANEL RH (w/o Airbag Cut Off Switch)

a. Attach the 6 claws to install the side panel.

39. INSTALL NO. 1 INSTRUMENT PANEL REGISTER ASSEMBLY



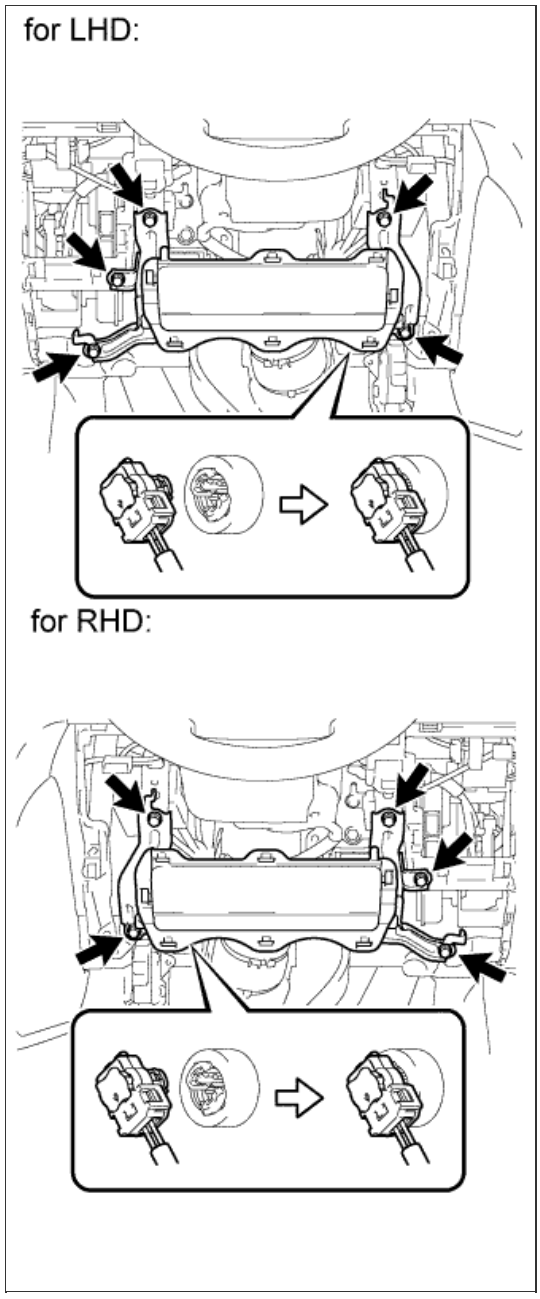
a. Attach the claws to install the register.

40. INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (w/o Driver Side Knee Airbag)

a. Attach the claws and connect the DLC3.

b. Install the instrument panel with the 5 bolts.

41. INSTALL DRIVER SIDE KNEE AIRBAG ASSEMBLY (w/ Driver Side Knee Airbag)



a. Connect the connector.

NOTICE:

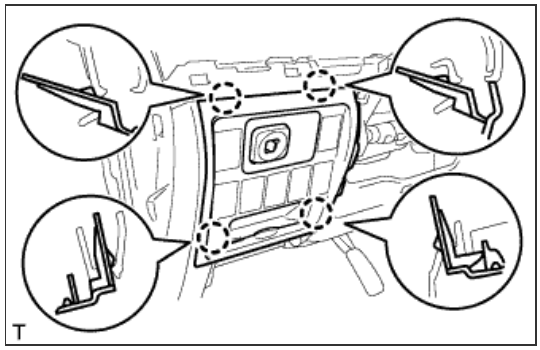
When handling the airbag connector, take care not to damage the airbag wire harness.

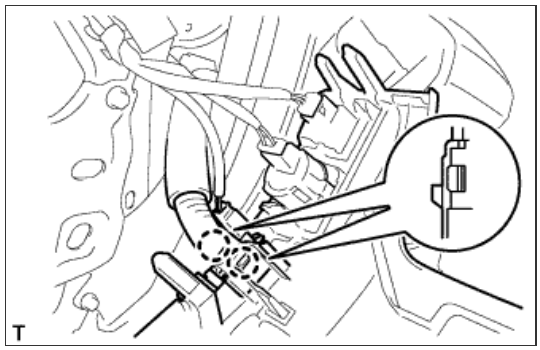
b. Install the driver side knee airbag with the 5 bolts.



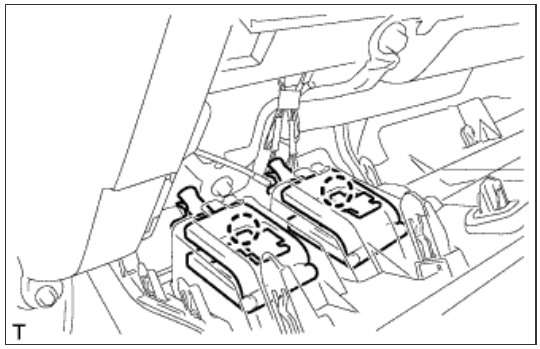
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

42. INSTALL NO. 1 SWITCH HOLE BASE

a. Connect the connectors.



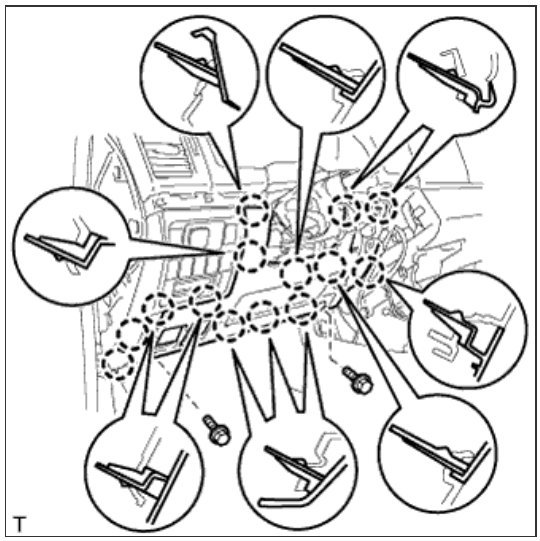
b. Attach the claws to install the switch hole base.



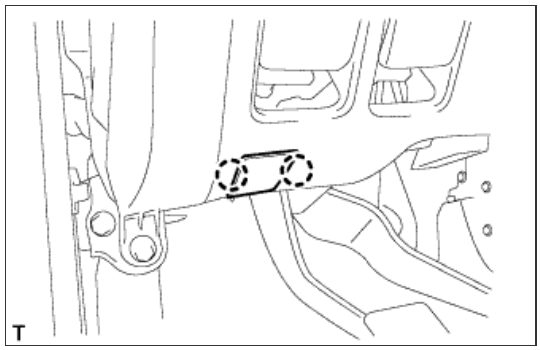
43. INSTALL LOWER NO. 1 INSTRUMENT PANEL FINISH PANEL

a. Connect the connectors.

b. Attach the 2 claws to install the sensor.

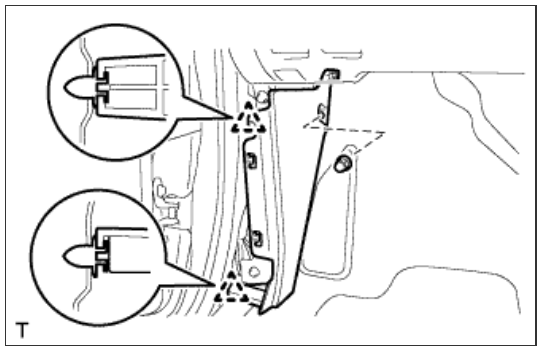


c. Attach the 2 claws to connect the 2 control cables.



d. Attach the 1 claws to install the finish panel.

e. Install the 2 bolts.

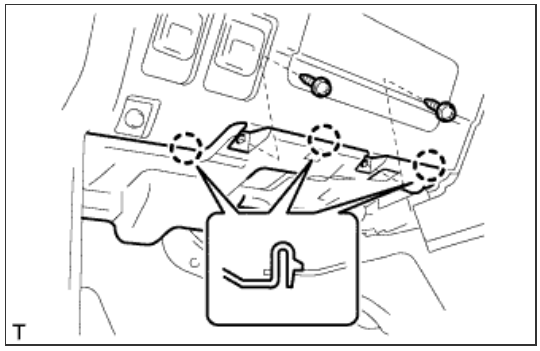


f. Attach the 2 claws to close the hole cover.

44. INSTALL COWL SIDE TRIM BOARD LH

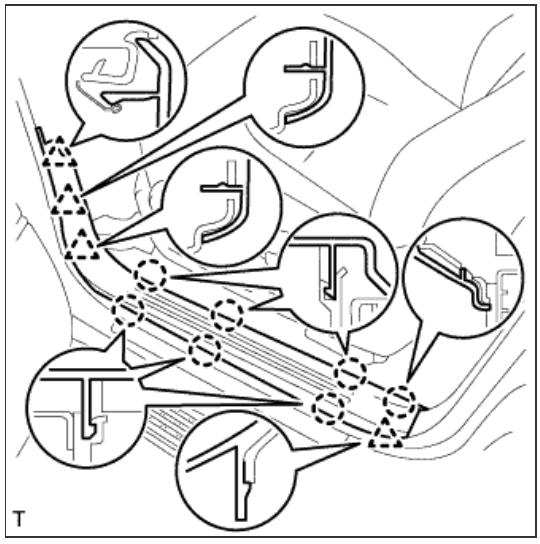
a. Attach the 2 clips to install the trim board.

b. Install the cap nut.



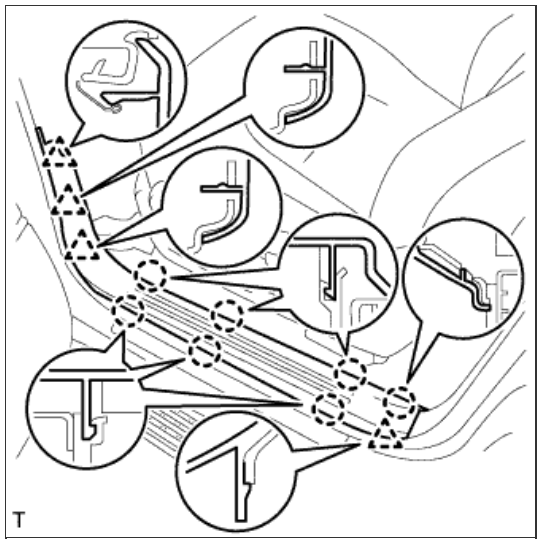
45. INSTALL NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Floor Under Cover)

a. Connect the connectors.



b. Attach the 3 claws to install the under cover.

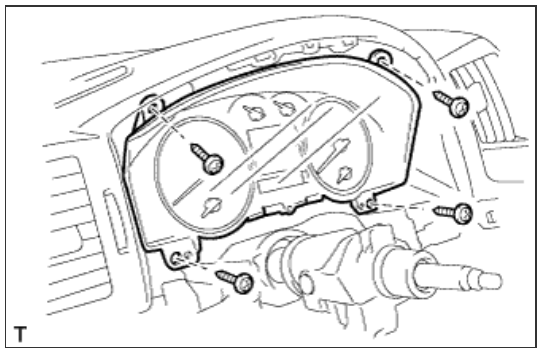
c. Install the 2 screws.



46. INSTALL FRONT DOOR SCUFF PLATE LH (w/ Sliding Roof)

a. Attach the 7 claws and clips to install the scuff plate.

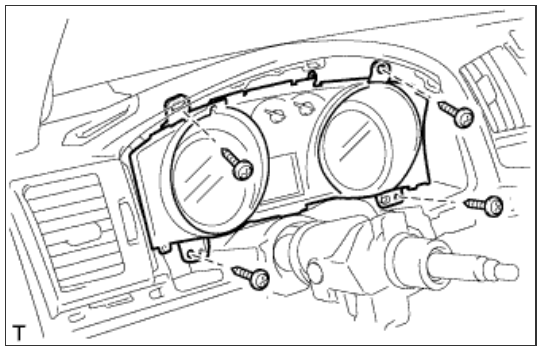
47. INSTALL FRONT DOOR SCUFF PLATE LH (w/o Sliding Roof)



a. Attach the 7 claws and clips to install the scuff plate.

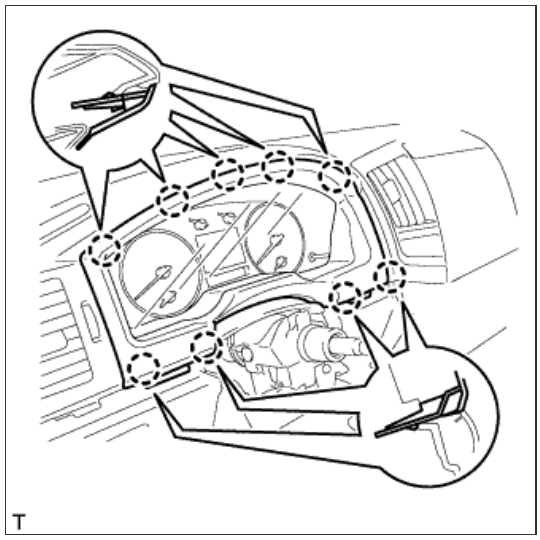
48. INSTALL COMBINATION METER ASSEMBLY (w/o Multi-information Display)

a. Connect the connectors.



b. Install the combination meter with the screws.

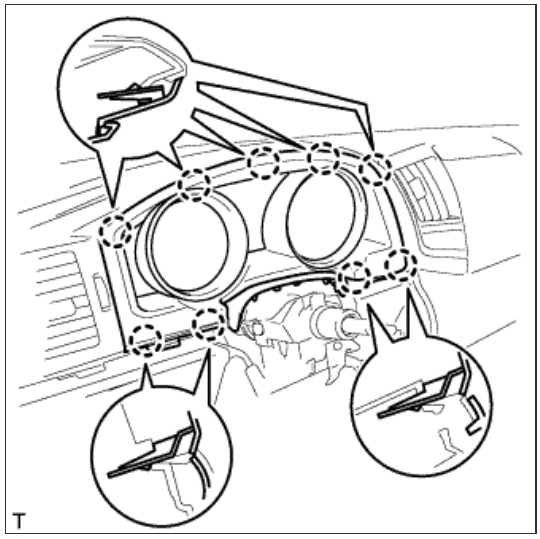
49. INSTALL COMBINATION METER ASSEMBLY (w/ Multi-information Display)



a. Connect the connectors.

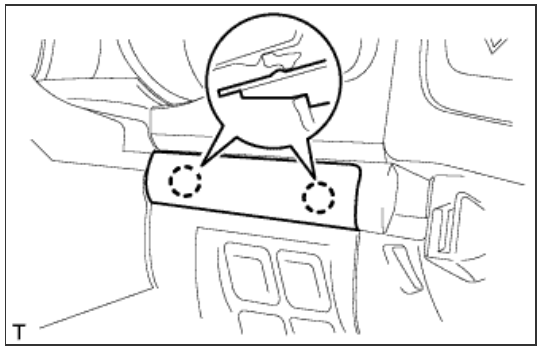
b. Install the combination meter with the screws.

50. INSTALL INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (w/o Multi-information Display)



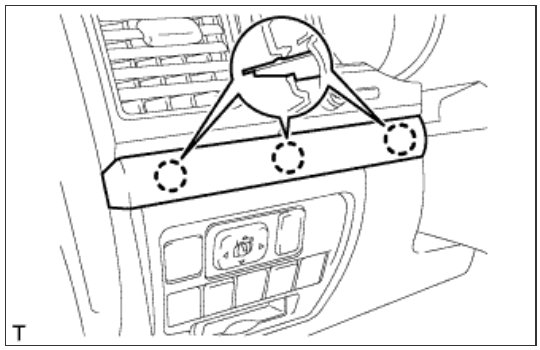
a. Attach the 9 claws to install the finish panel.

51. INSTALL INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY (w/ Multi-information Display)



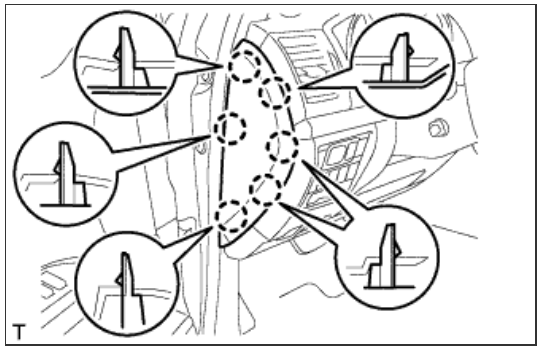
a. Connect the connector.

b. Attach the 9 claws to install the finish panel.



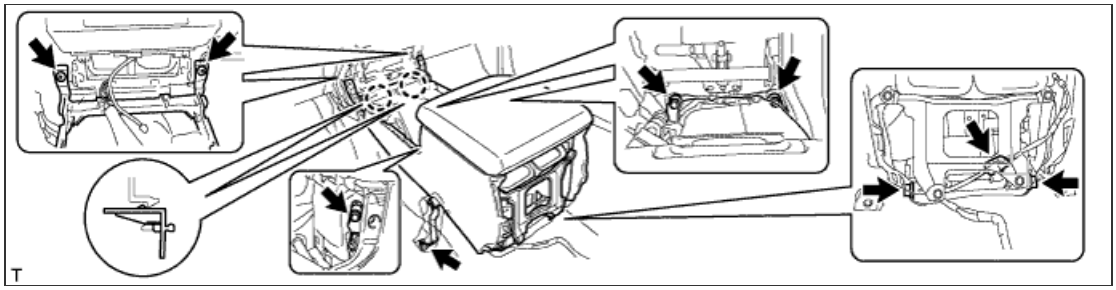
52. INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Attach the 2 claws to install the panel garnish.



53. INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Attach the 3 claws to install the panel garnish.



54. INSTALL INSTRUMENT SIDE PANEL LH

a. Attach the 6 claws to install the side panel.

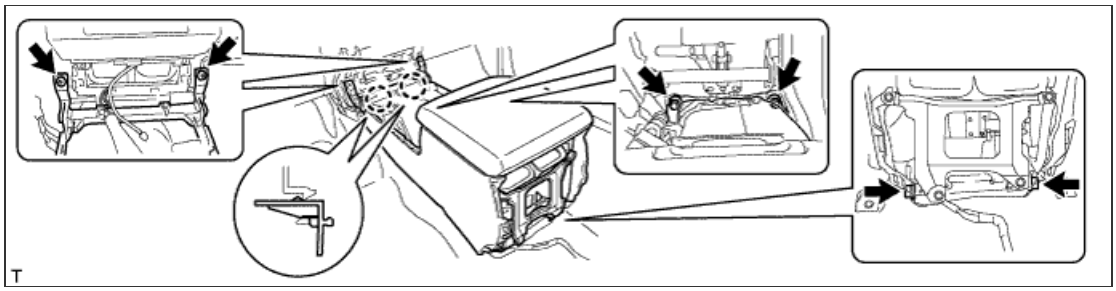
55. INSTALL COOLING BOX ASSEMBLY (w/ Cool Box)

a. Attach the 2 claws.

b. Connect the connector.

c. Sufficiently apply compressor oil to 2 new O-rings.

Compressor oil:
ND-OIL 8 or equivalent



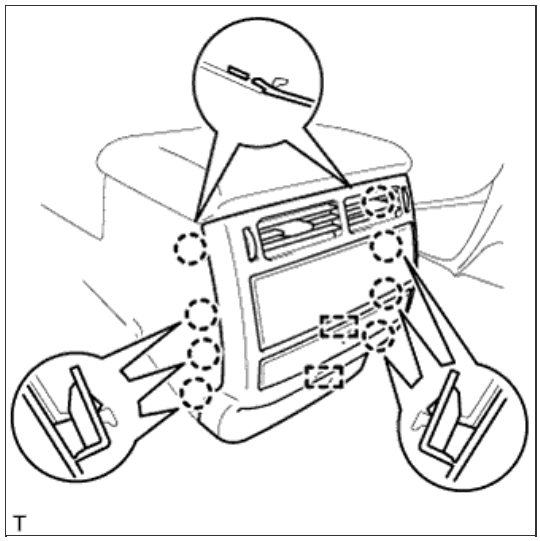
d. Install the 2 O-rings on the 2 cooler pipes.

e. Connect the 2 cooler pipes with the 2 bolts.

Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

f. Install the cooling box with the bolts and 2 screws.

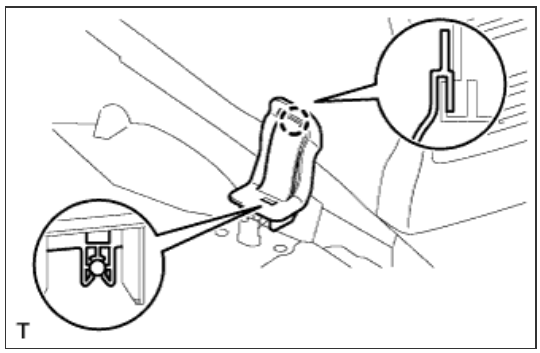
56. INSTALL REAR CONSOLE BOX SUB-ASSEMBLY (w/o Cool Box)



a. Attach the 2 claws.

b. Install the console box with the bolts and 2 screws.

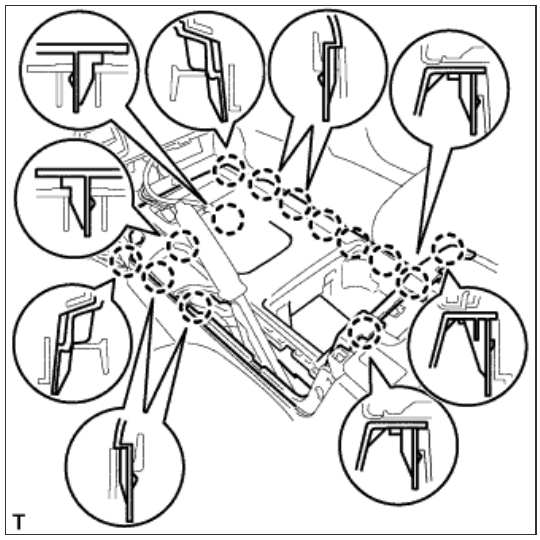
57. INSTALL REAR CONSOLE END PANEL SUB-ASSEMBLY



a. Connect the connectors and 2 clamps.

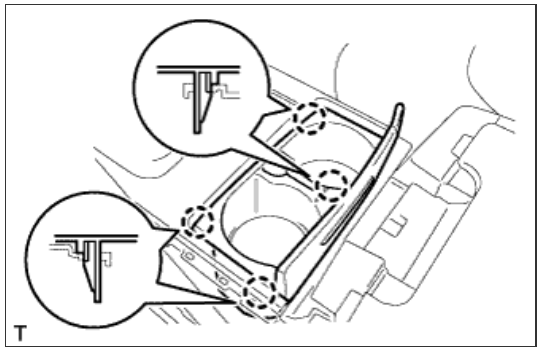
b. Attach the 8 claws to install the end panel.

58. INSTALL NO. 1 COOLER COVER (w/ Cool Box)



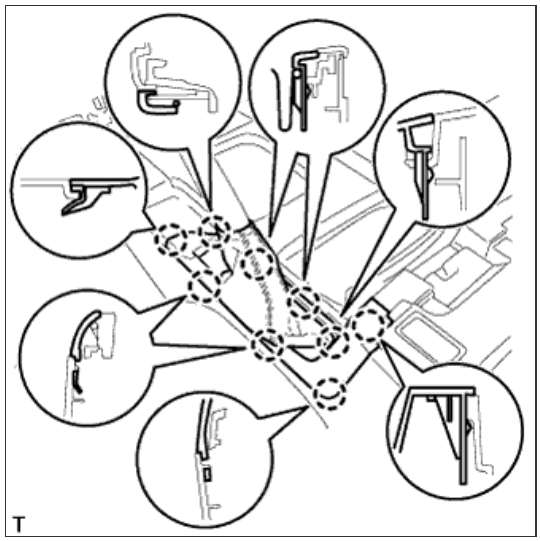
a. Attach the claw on the upper part of the cooler cover, and then attach the clamp on the lower part of the cooler cover to install it.

59. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY



a. Connect the connectors.

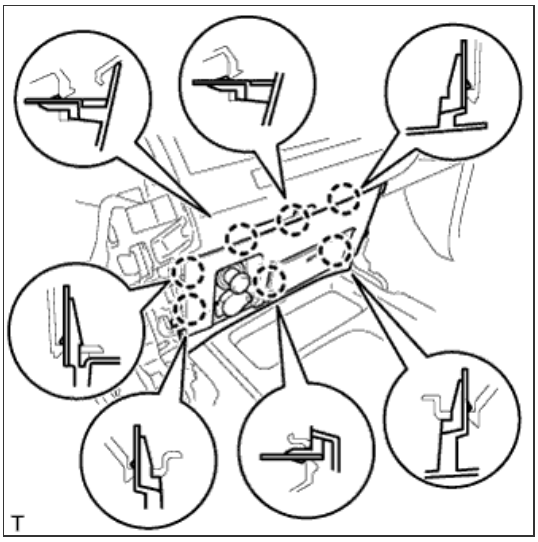
b. Attach the 1 claws to install the console panel.



60. INSTALL CONSOLE CUP HOLDER BOX SUB-ASSEMBLY

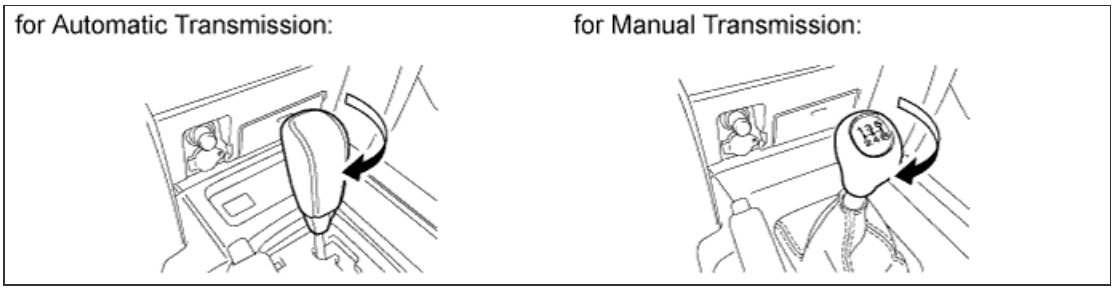
a. Attach the claws to install the box.

61. INSTALL REAR UPPER CONSOLE PANEL SUB-ASSEMBLY



a. Attach the 9 claws to install the panel.

62. INSTALL LOWER CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY

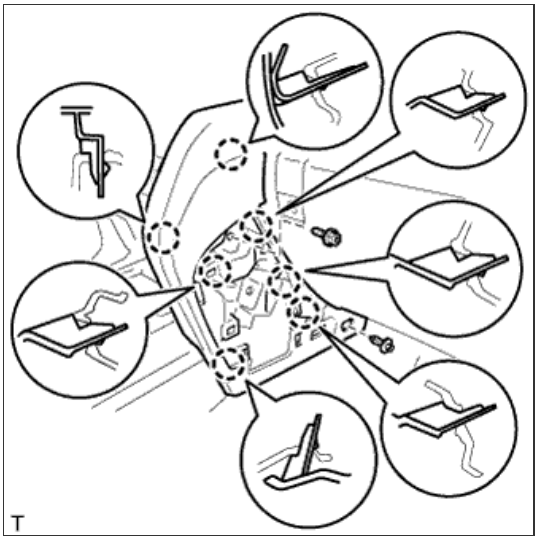


a. Connect the connectors.

b. Attach the 7 claws to install the panel.

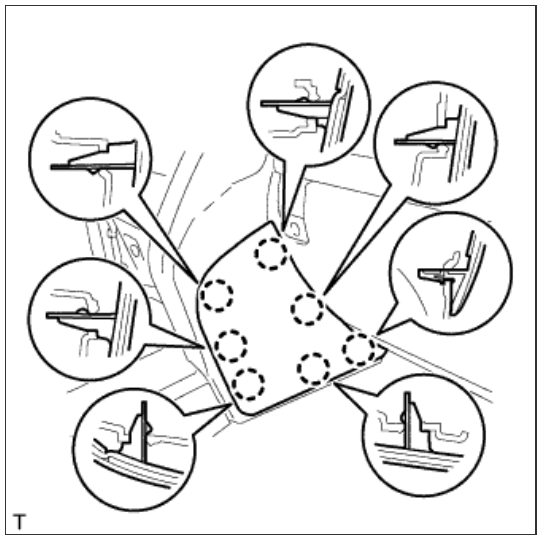
63. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY

a. Install the shift lever knob and twist it in the direction indicated by the arrow.



64. INSTALL LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY RH

a. Attach the 7 claws to install the panel pad.

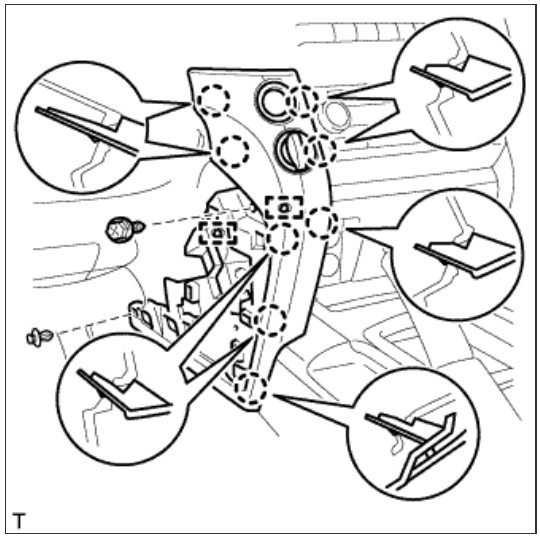


b. Install the screw.

c. Install the clip.

65. INSTALL NO. 1 INSTRUMENT PANEL FINISH PANEL CUSHION

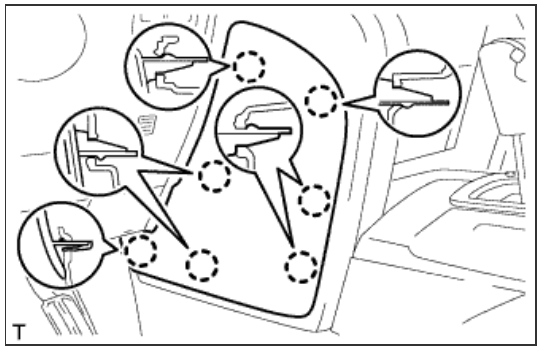
a. Attach the 7 claws to install the panel cushion.



66. INSTALL LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

a. Connect the connectors and 2 clamps.

b. Attach the 8 claws to install the panel pad.



c. Install the screw.

d. Install the clip.

67. INSTALL NO. 2 INSTRUMENT PANEL FINISH PANEL CUSHION

a. Attach the 7 claws to install the panel cushion.

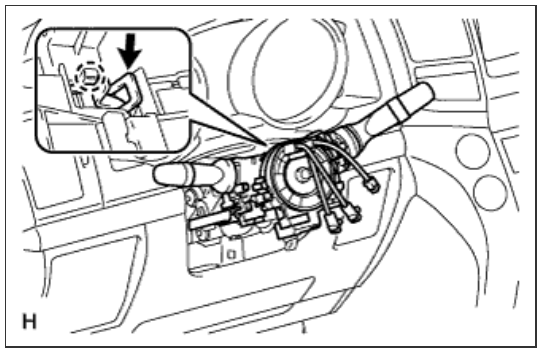
68. INSTALL FRONT SEAT ASSEMBLY RH (for Manual Seat)

a. Install the front seat assembly (Click here).

69. INSTALL FRONT SEAT ASSEMBLY RH (for Power Seat)

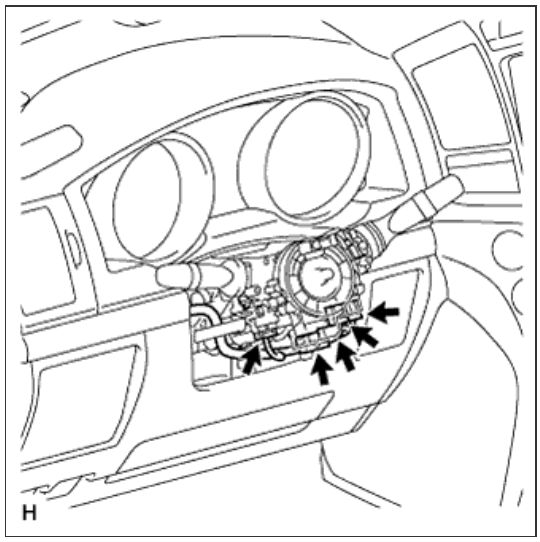
a. Install the front seat assembly (Click here).

70. INSTALL FRONT SEAT ASSEMBLY LH (for Manual Seat)



a. Install the front seat assembly LH (Click here).

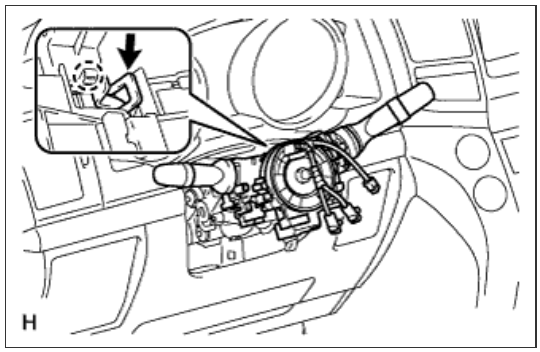
71. INSTALL FRONT SEAT ASSEMBLY LH (for Power Seat)



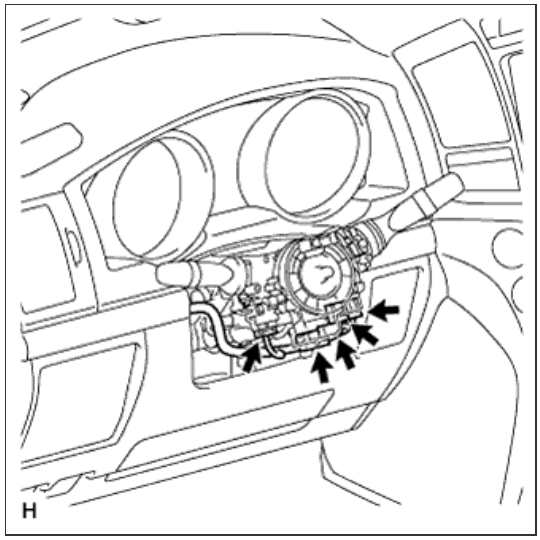
a. Install the front seat assembly LH (Click here).

72. INSTALL COMBINATION SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (for Manual Tilt and Manual Telescopic Steering Column)

a. Using pliers, grip the claws of the clamp and install the combination switch assembly with spiral cable sub-assembly to the steering column assembly with the clamp.

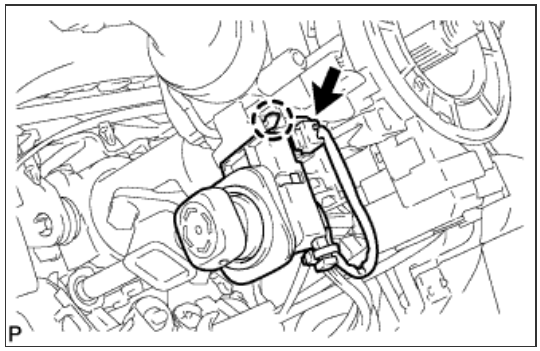


b. Connect the 5 connectors to the combination switch with spiral cable.



73. INSTALL COMBINATION SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (for Power Tilt and Power Telescopic Steering Column)

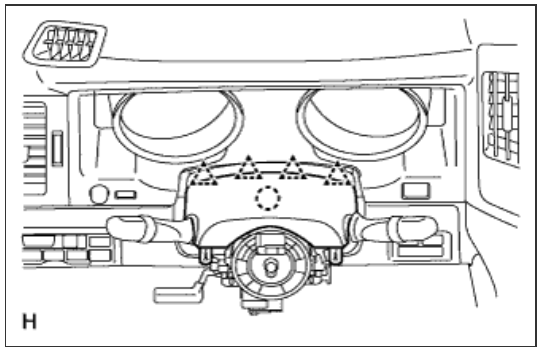
a. Using pliers, grip the claws of the clamp and install the turn signal switch assembly with spiral cable sub-assembly to the steering column assembly with the clamp.



b. Connect the 5 connectors to the turn signal switch with spiral cable.

74. INSTALL TILT AND TELESCOPIC SWITCH (for Power Tilt and Power Telescopic Steering Column)

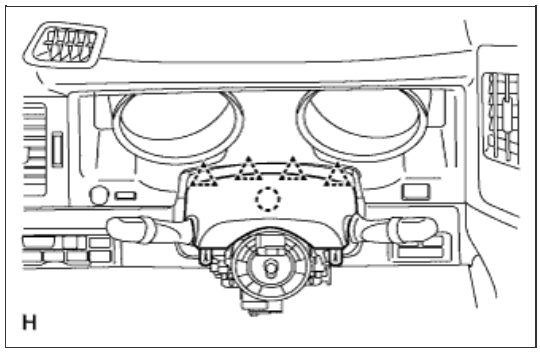
a. Attach the claw to install the switch.



b. Connect the switch connector.

75. INSTALL UPPER STEERING COLUMN COVER (for Manual Tilt and Manual Telescopic Steering Column)

a. Attach the claw to install the upper steering column cover.



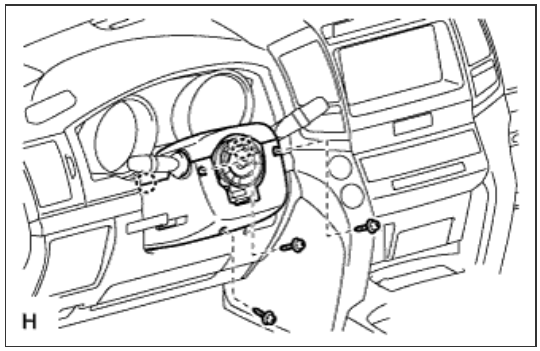
b. Attach the clips to install the upper steering column cover onto the instrument cluster finish panel.

76. INSTALL UPPER STEERING COLUMN COVER (for Power Tilt and Power Telescopic Steering Column)

a. Attach the claw to install the upper steering column cover.

b. Attach the clips to install the upper steering column cover onto the instrument cluster finish panel.

77. INSTALL LOWER STEERING COLUMN COVER (for Manual Tilt and Manual Telescopic Steering Column)



a. Attach the 2 claws to install the lower steering column cover.

NOTICE:

Do not damage the tilt and telescopic switch.

b. Install the 3 screws.

Torque:
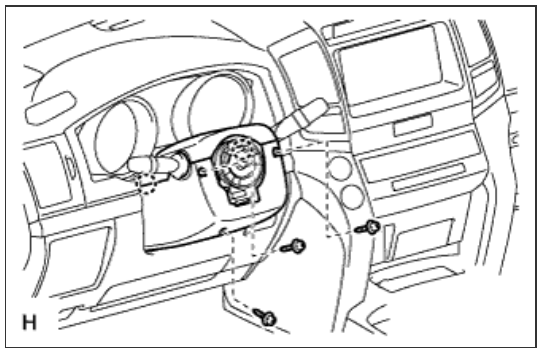
2.0 N*m{ 20 kgf*cm , 18 in.*lbf }

78. INSTALL LOWER STEERING COLUMN COVER (for Power Tilt and Power Telescopic Steering Column)



a. Attach the 2 claws to install the lower steering column cover.

NOTICE:

Do not damage the tilt and telescopic switch.

b. Install the 3 screws.

Torque:
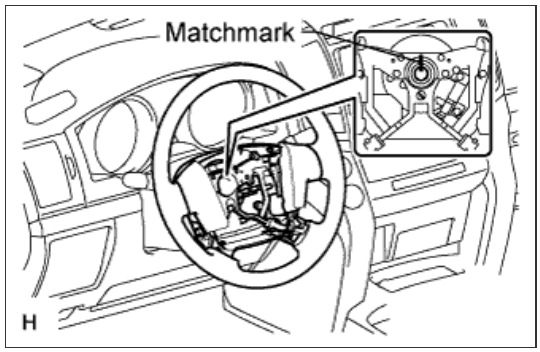
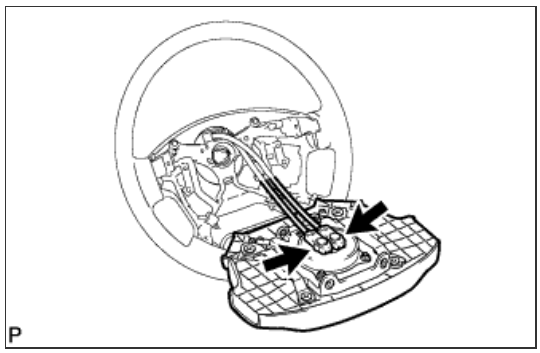
1.5 N*m{ 15 kgf*cm , 13 in.*lbf }



79. INSTALL STEERING WHEEL ASSEMBLY



a. Align the matchmarks on the steering wheel assembly and steering main shaft assembly.

b. Install the steering wheel assembly set nut.

Torque:
50 N*m{ 510 kgf*cm , 37 ft.*lbf }

80. INSTALL STEERING PAD

a. Support the steering pad with one hand.

b. Connect the 2 connectors to the steering pad.

NOTICE:

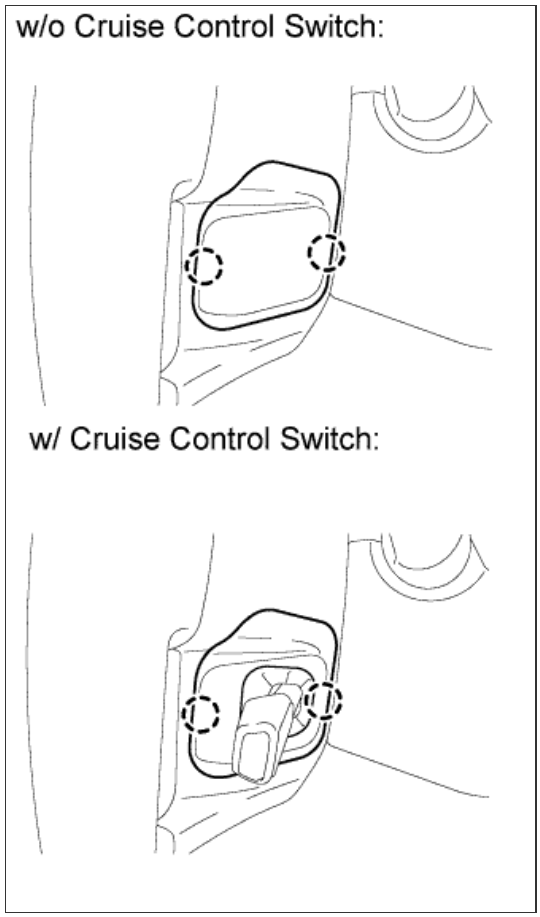
When handling the airbag connector, take care not to damage the airbag wire harness.

c. Connect the horn connector.



d. Confirm that the circumference groove of the screw fits in the screw case, and place the steering pad onto the steering wheel.

e. Using a T30 socket wrench, tighten the 2 screws.

Torque:
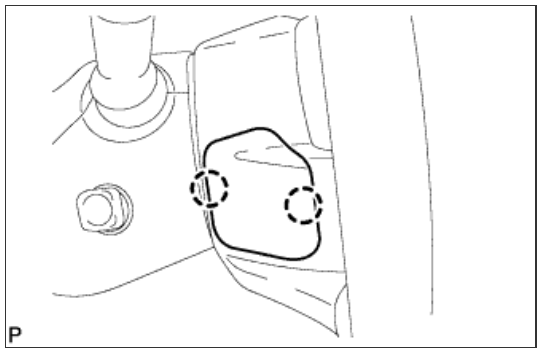
8.8 N*m{ 90 kgf*cm , 78 in.*lbf }



81. INSTALL LOWER NO. 2 STEERING WHEEL COVER

a. Attach the 2 claws to install the cover.

82. INSTALL LOWER NO. 3 STEERING WHEEL COVER

a. Attach the 2 claws to install the cover.

83. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

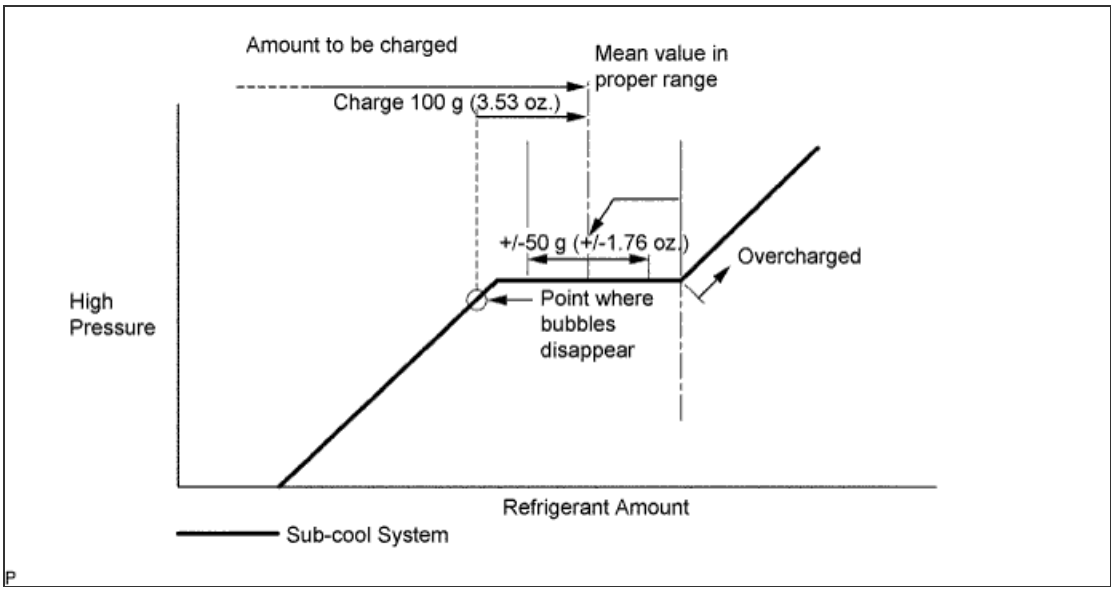
- **Reset the Autoaway/Return function setting to the previous condition by changing the customize parameter (Click here).**
- **When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).**

84. CHARGE REFRIGERANT (w/ Cool Box)

SST



09985-20010 (09985-02130, 09985-02150, 09985-02090, 09985-02110, 09985-02010, 09985-02050, 09985-02060, 09985-02070)

a. Perform vacuum purging using a vacuum pump.

b. Charge refrigerant HFC-13 a (13 a).

Standard:

Condenser Core Thickness	Air Conditioning Type	Cool Box	efrigerant Charging Amount
22 mm (0.866 in.)	w/o ear Cooler	w/ Cool Box	870 +/-30 g (30.7 +/-1.1 oz.)
		w/o Cool Box	870 +/-30 g (30.7 +/-1.1 oz.)
	w/ ear Cooler	w/ Cool Box	1010 +/-30 g (35.6 +/-1.1 oz.)
		w/o Cool Box	960 +/-30 g (33.9 +/-1.1 oz.)
16 mm (0.630 in.)	w/o ear Cooler	w/ Cool Box	770 +/-30 g (27.2 +/-1.1 oz.)
		w/o Cool Box	770 +/-30 g (27.2 +/-1.1 oz.)
	w/ ear Cooler	w/ Cool Box	970 +/-30 g (3 .2 +/-1.1 oz.)
		w/o Cool Box	920 +/-30 g (32.5 +/-1.1 oz.)

NOTICE:

- **Do not operate the cooler compressor before charging refrigerant as the cooler compressor will not work properly without any refrigerant, and will overheat.**
- **Approximately 200 g (7.05 oz.) of refrigerant may need to be charged after bubbles disappear. The refrigerant amount should be checked by measuring its quantity, and not with the sight glass.**

85. WARM UP ENGINE (w/ Cool Box)

a. Warm up the engine at less than 1850 rpm for 2 minutes or more after charging the refrigerant.

NOTICE:

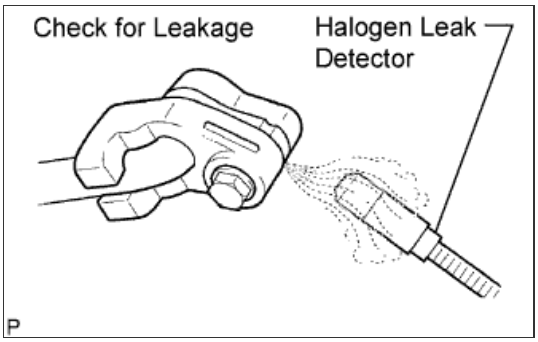
Be sure to warm up the compressor when turning the A/C switch is on after removing and installing the cooler refrigerant lines (including the compressor), to prevent damage to the compressor.

86. CHECK FOR REFRIGERANT GAS LEAK (w/ Cool Box)

a. After recharging the refrigerant gas, check for refrigerant gas leakage using a halogen leak detector.

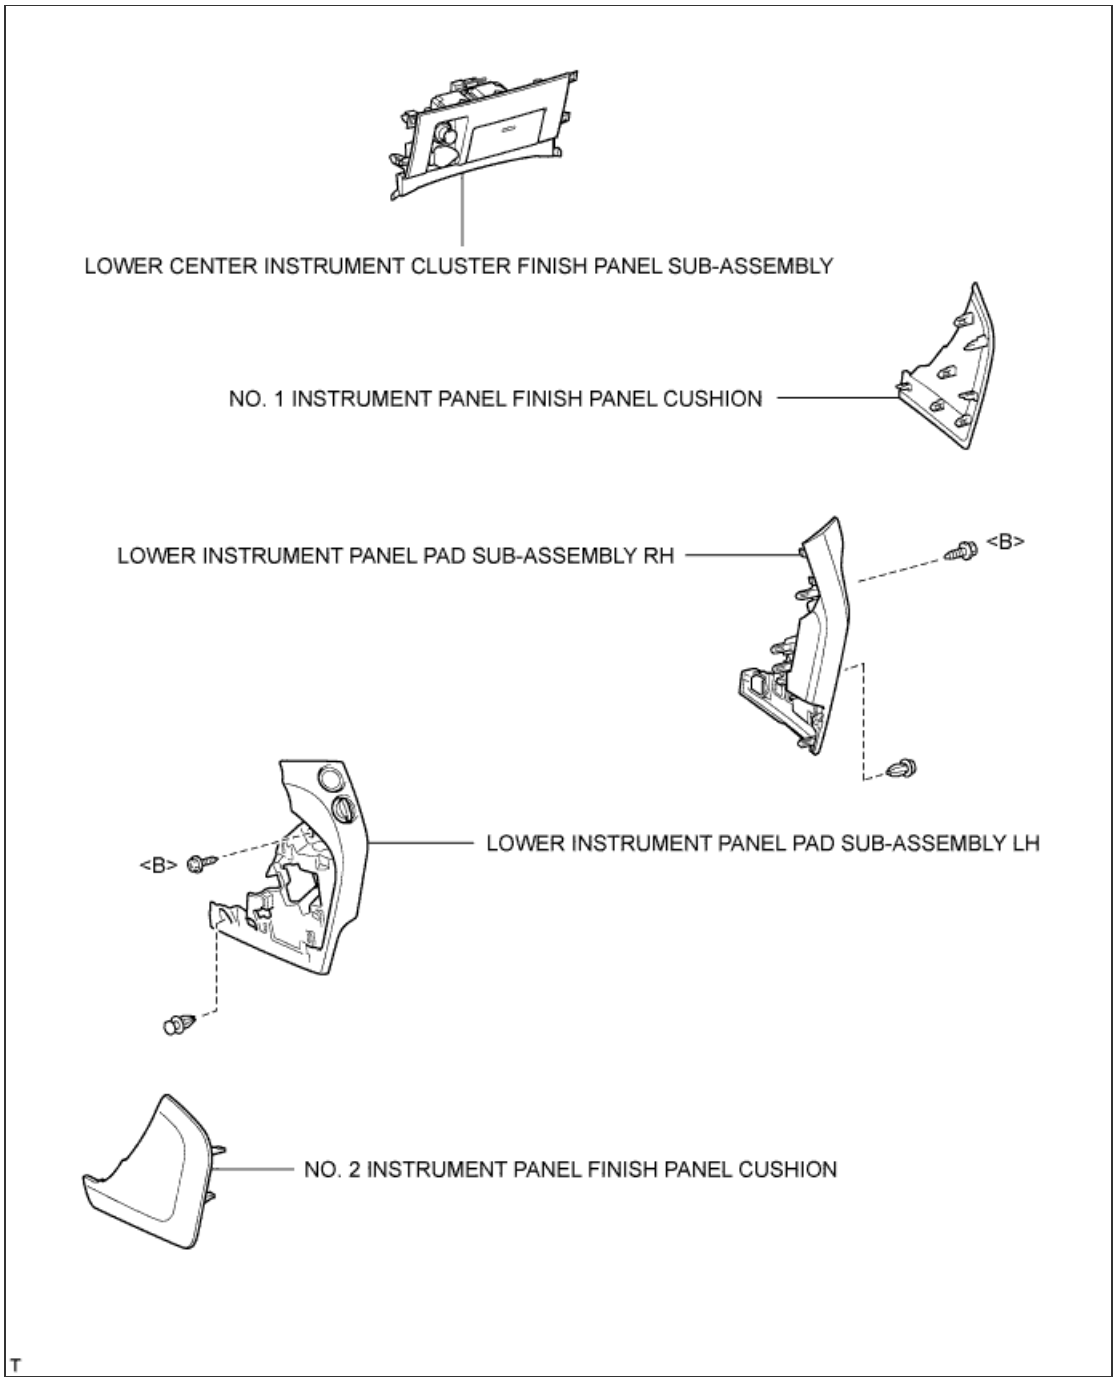


b. Perform the operation under these conditions:

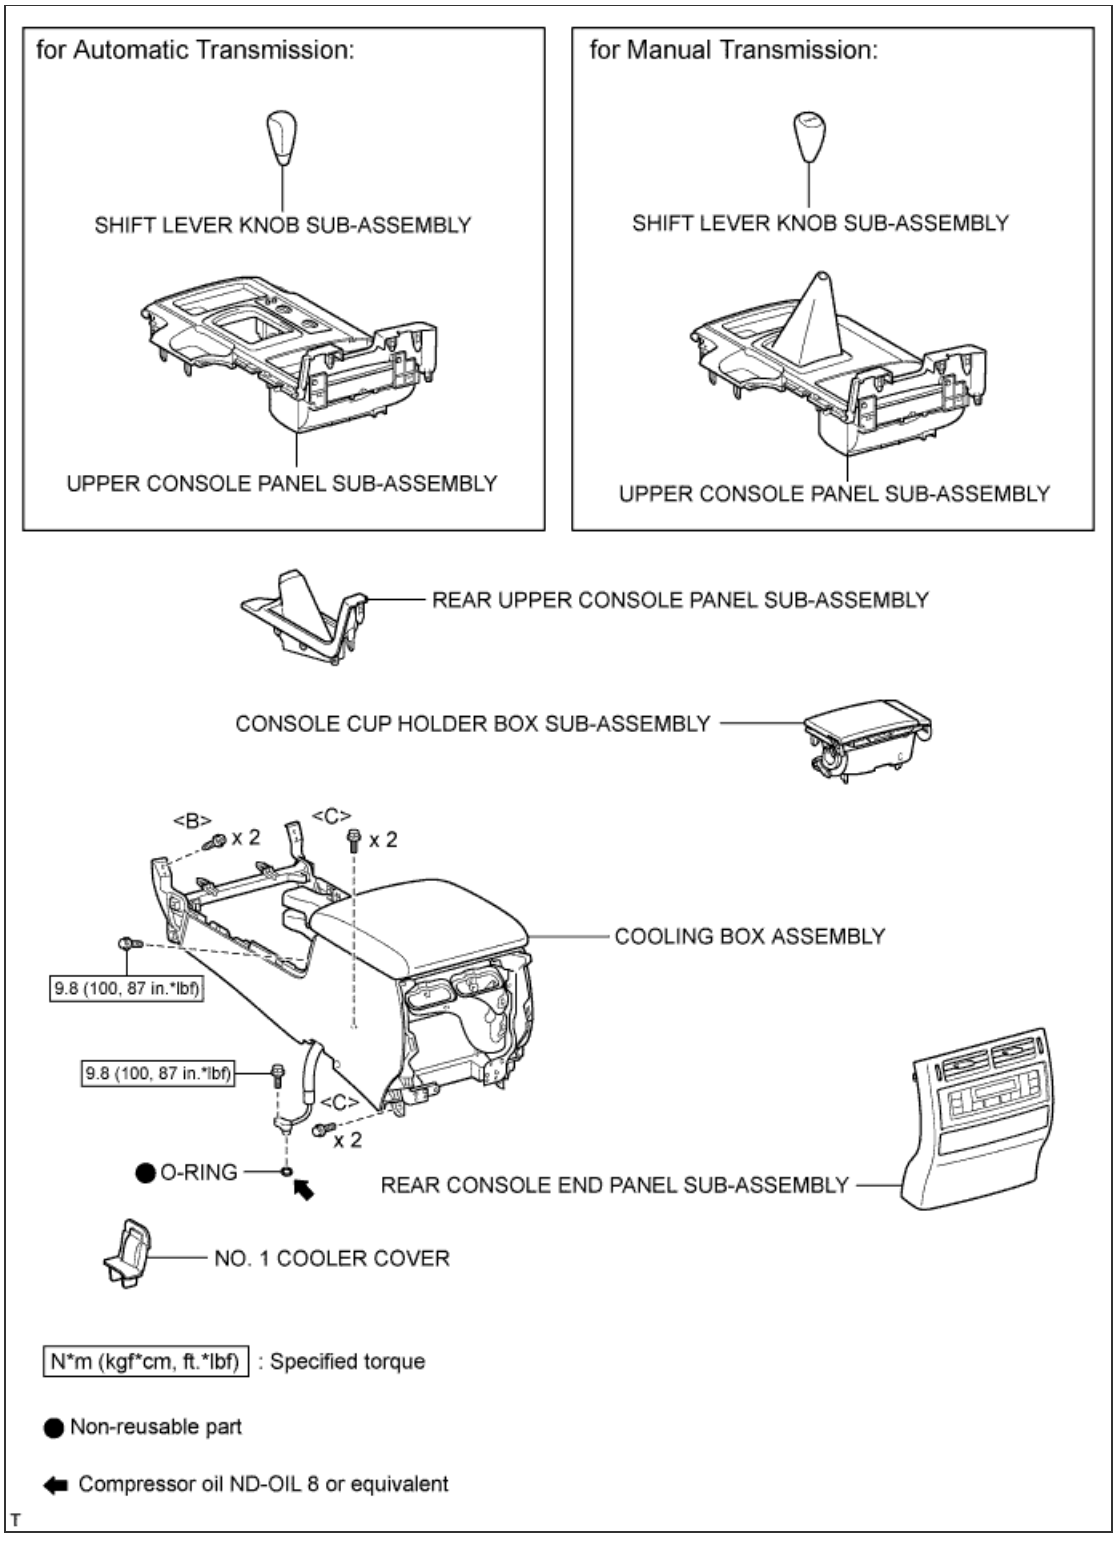
- Stop the engine.
- Secure good ventilation (the halogen leak detector may react to volatile gases other than refrigerant, such as evaporated gasoline or exhaust gas).
- epeat the test 2 or 3 times.
- Make sure that some refrigerant remains in the refrigeration system. When compressor is off: approximately 392 to 588 kPa (.0 to 6.0 kgf/cm^2, 57 to 85 psi).

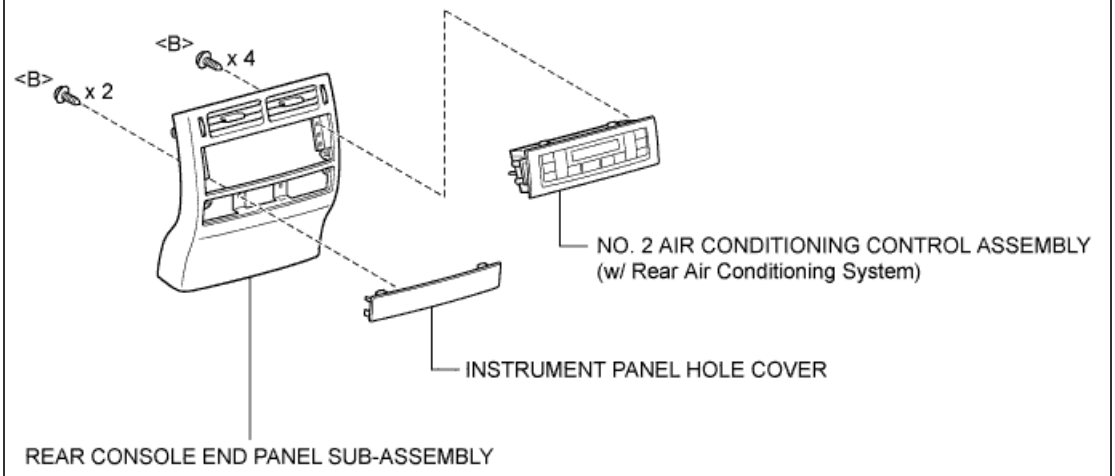
c. Using a halogen leak detector, check the refrigerant line for leakage.

d. If a gas leak is not detected on the drain hose, remove the blower motor control (blower resistor) from the cooling unit. Insert the halogen leak detector sensor into the unit and perform the test.

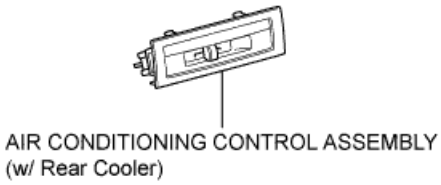


e. Disconnect the connector and wait for approximately 20 minutes. Bring the halogen leak detector close to the pressure switch and perform the test.





87. CHECK SRS WARNING LIGHT



a. Check the S Swarning light (Click here).

for Preparation Click here

1. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM

a. Start the engine.

b. Turn the A/C switch on.

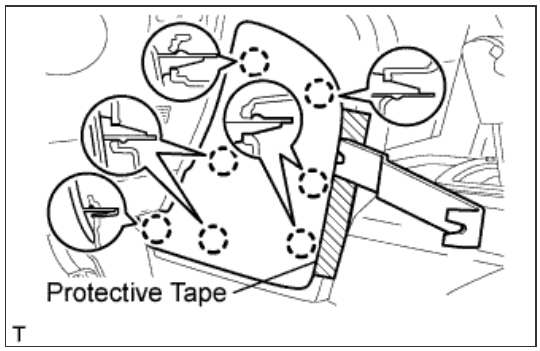
c. Operate the cooler compressor while the engine speed is approximately 1000 rpm for 5 to 6 minutes to circulate the refrigerant and collect the compressor oil remaining in each component into the cooler compressor.

d. Stop the engine.

e. Recover the refrigerant from the A/C system using a refrigerant recovery unit.

2. REMOVE FRONT SEAT ASSEMBLY LH (for Power Seat)

a. Remove the front seat assembly LH (Click here).



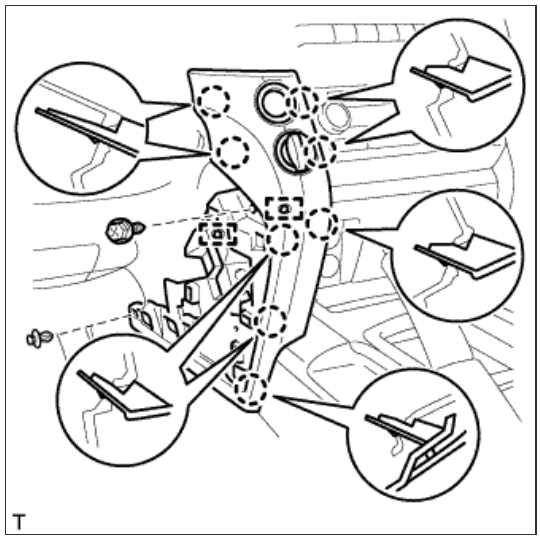
3. REMOVE FRONT SEAT ASSEMBLY LH (for Manual Seat)

a. Remove the front seat assembly LH (Click here).

4. REMOVE NO. 2 INSTRUMENT PANEL FINISH PANEL CUSHION

a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 7 claws and remove the panel cushion.



5. REMOVE LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

a. Remove the clip.

b. Remove the screw.

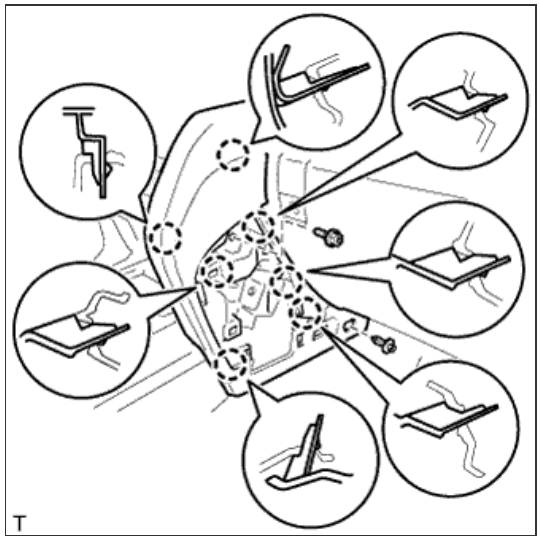
c. Detach the 8 claws.

d. Remove the panel pad and disconnect the connectors and 2 clamps.

6. REMOVE NO. 1 INSTRUMENT PANEL FINISH CUSHION

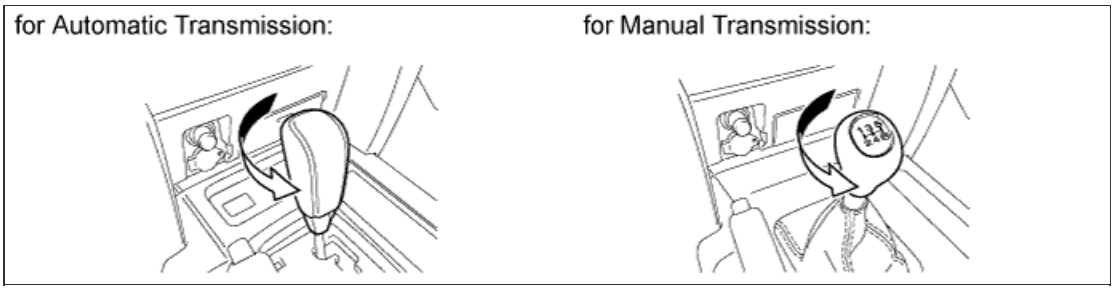
a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 7 claws and remove the panel cushion.



7. REMOVE LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY RH

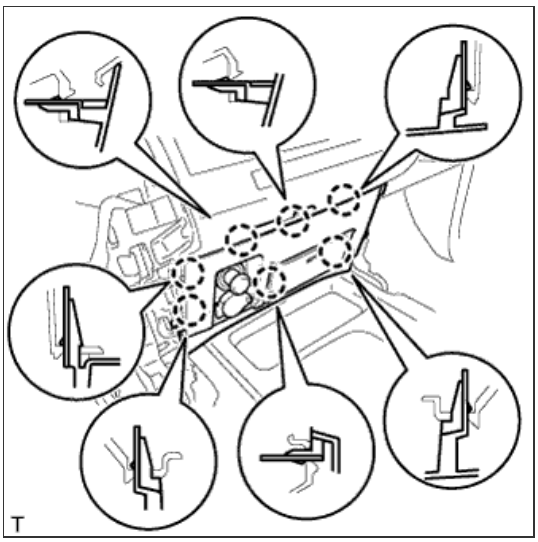
a. Remove the clip.



b. Remove the screw.

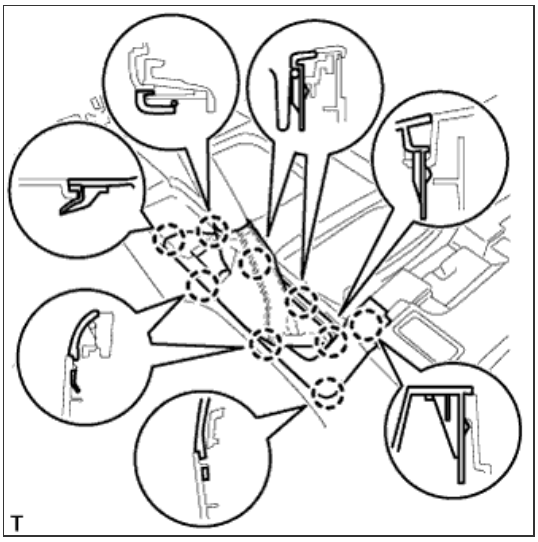
c. Detach the 7 claws and remove the panel.

8. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY



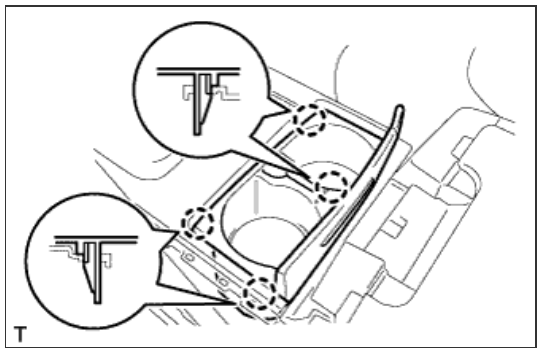
a. Twist the shift lever knob in the direction indicated by the arrow and remove it.

9. REMOVE LOWER CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY



a. Detach the 7 claws.

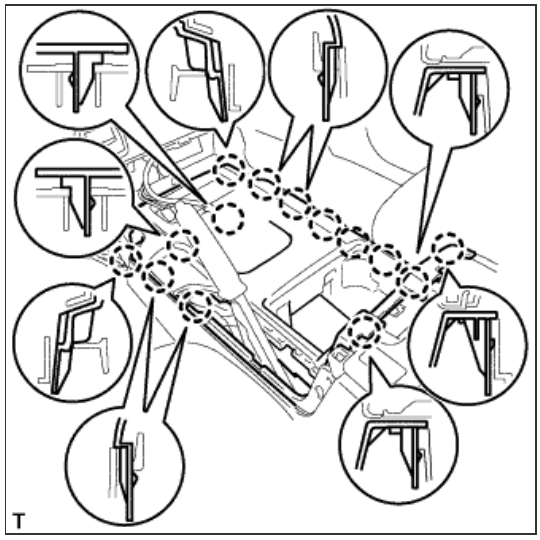
b. Disconnect the connectors and remove the panel.



10. REMOVE REAR UPPER CONSOLE PANEL SUB-ASSEMBLY

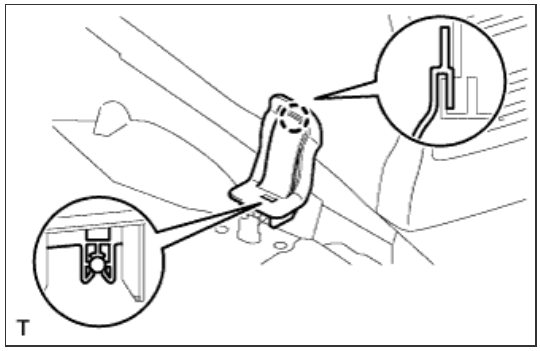
a. Detach the 9 claws and remove the panel.

11. REMOVE CONSOLE CUP HOLDER BOX SUB-ASSEMBLY



a. Detach the 4 claws and remove the box.

12. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY

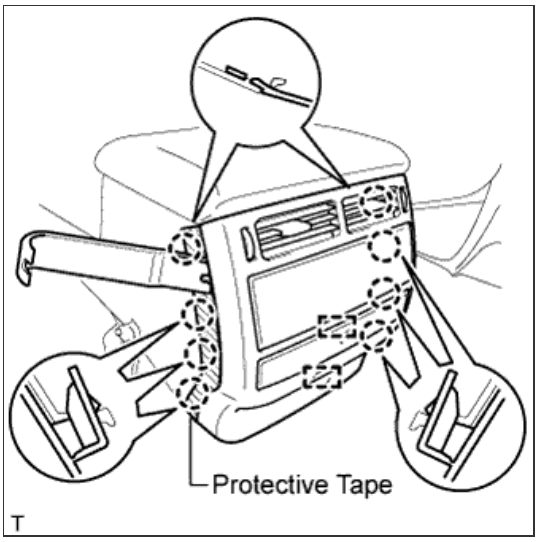


a. Detach the 14 claws.

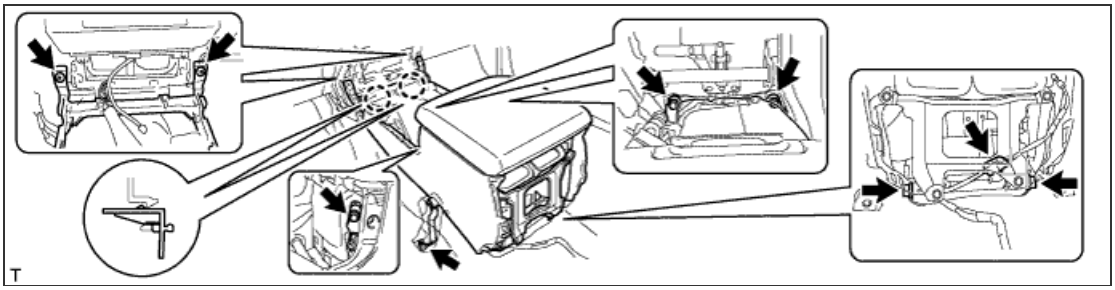
b. Disconnect the connectors and remove the console panel.

13. REMOVE NO. 1 COOLER COVER

a. Detach the clamp on the lower part of the cooler cover, and then pull the cooler cover upward to remove it.



14. REMOVE REAR CONSOLE END PANEL SUB-ASSEMBLY



a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 8 claws.

c. Remove the end panel and disconnect the connectors and 2 clamps.

15. REMOVE COOLING BOX ASSEMBLY

a. Remove the 4 bolts and 2 screws.

b. Remove the 2 bolts and disconnect the 2 cooler pipes.

c. Remove the 2 O-rings from the cooler pipes.

d. Disconnect the connector.

e. Detach the 2 claws and remove the cooling box.

for Preparation Click here

1. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM

a. Start the engine.

b. Turn the A/C switch on.

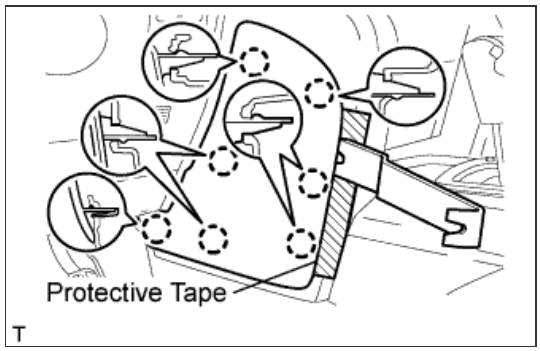
c. Operate the cooler compressor while the engine speed is approximately 1000 rpm for 5 to 6 minutes to circulate the refrigerant and collect the compressor oil remaining in each component into the cooler compressor.

d. Stop the engine.

e. Recover the refrigerant from the A/C system using a refrigerant recovery unit.

2. REMOVE FRONT SEAT ASSEMBLY LH (for Power Seat)

a. Remove the front seat assembly LH (Click here).



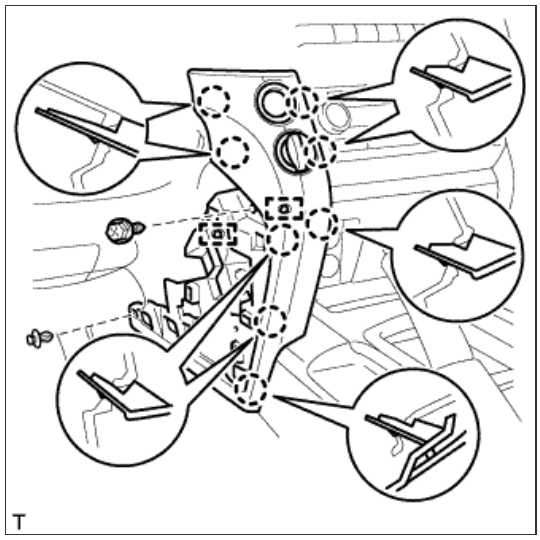
3. REMOVE FRONT SEAT ASSEMBLY LH (for Manual Seat)

a. Remove the front seat assembly LH (Click here).

4. REMOVE NO. 2 INSTRUMENT PANEL FINISH PANEL CUSHION

a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 7 claws and remove the panel cushion.



5. REMOVE LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

a. Remove the clip.

b. Remove the screw.

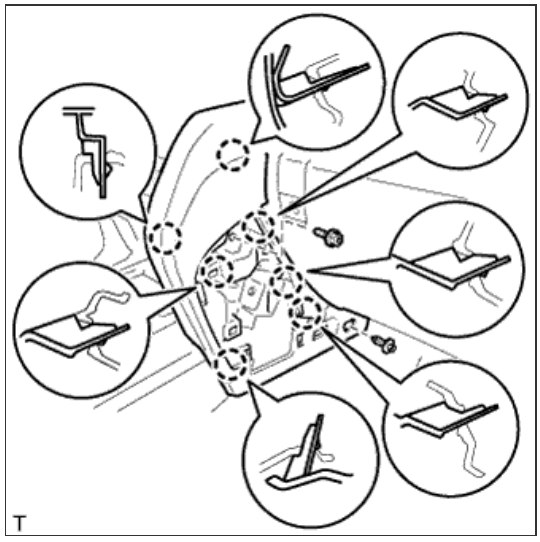
c. Detach the 8 claws.

d. Remove the panel pad and disconnect the connectors and 2 clamps.

6. REMOVE NO. 1 INSTRUMENT PANEL FINISH CUSHION

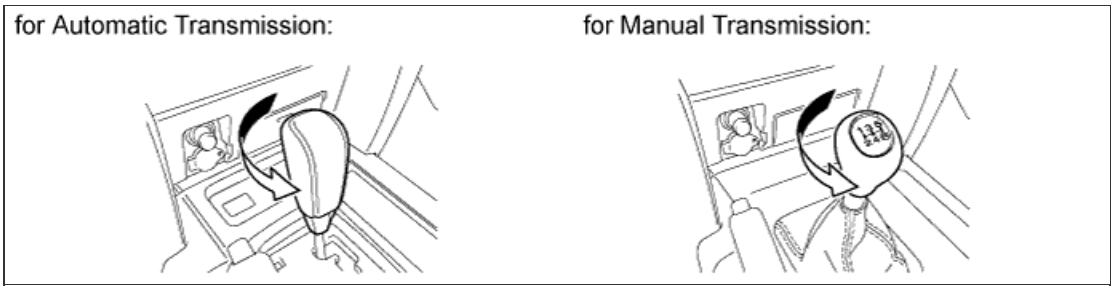
a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 7 claws and remove the panel cushion.



7. REMOVE LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY RH

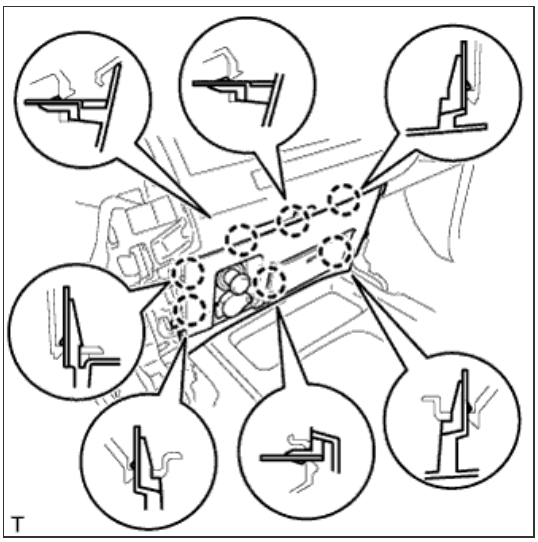
a. Remove the clip.



b. Remove the screw.

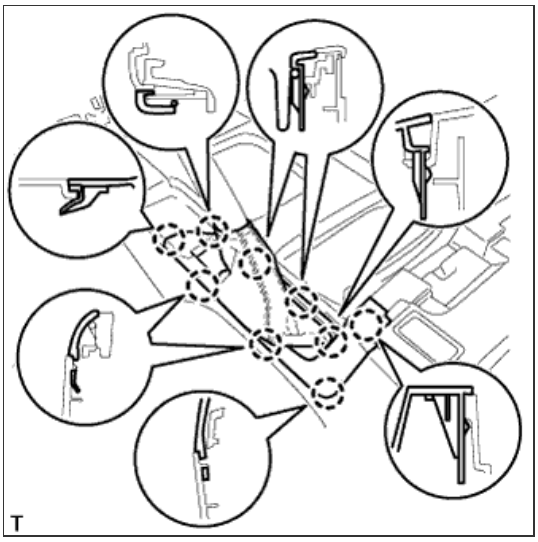
c. Detach the 7 claws and remove the panel.

8. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY



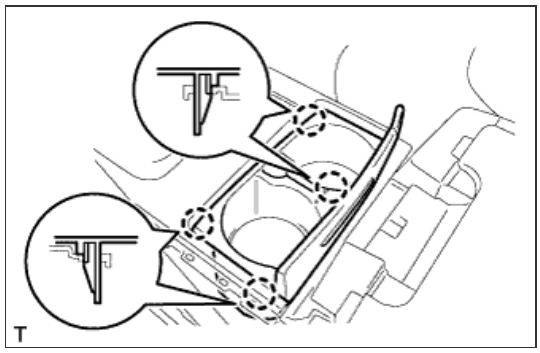
a. Twist the shift lever knob in the direction indicated by the arrow and remove it.

9. REMOVE LOWER CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY



a. Detach the 7 claws.

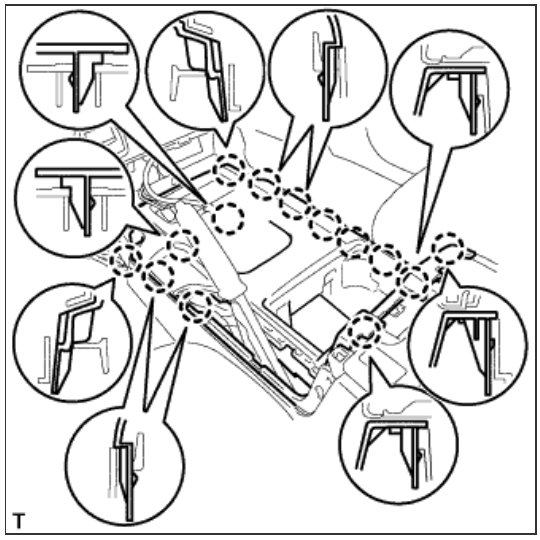
b. Disconnect the connectors and remove the panel.



10. REMOVE REAR UPPER CONSOLE PANEL SUB-ASSEMBLY

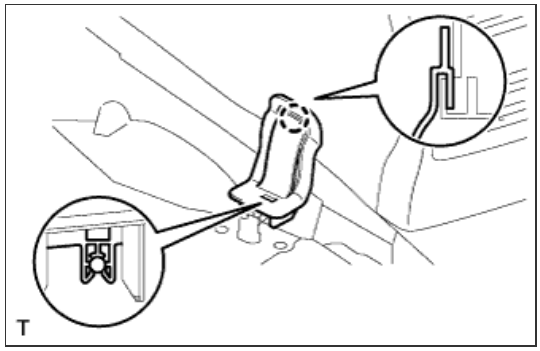
a. Detach the 9 claws and remove the panel.

11. REMOVE CONSOLE CUP HOLDER BOX SUB-ASSEMBLY



a. Detach the 4 claws and remove the box.

12. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY

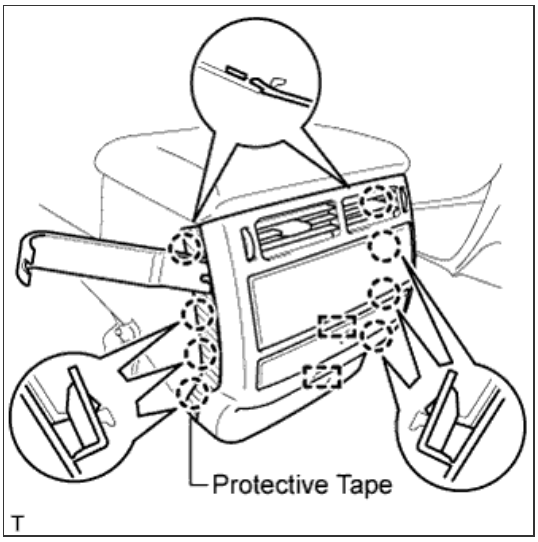


a. Detach the 14 claws.

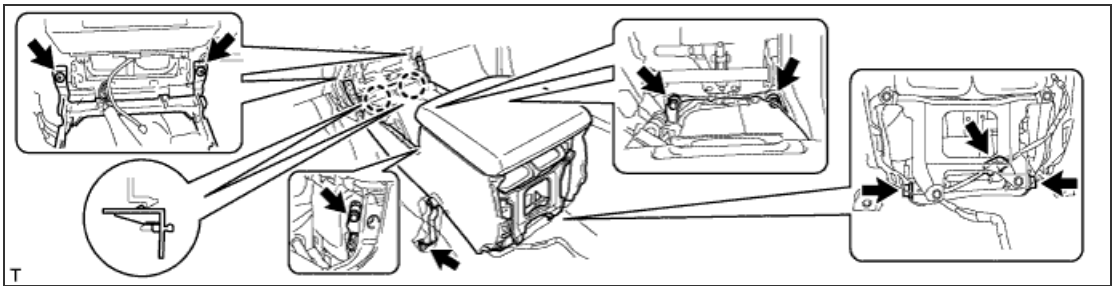
b. Disconnect the connectors and remove the console panel.

13. REMOVE NO. 1 COOLER COVER

a. Detach the clamp on the lower part of the cooler cover, and then pull the cooler cover upward to remove it.



14. REMOVE REAR CONSOLE END PANEL SUB-ASSEMBLY



a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 8 claws.

c. Remove the end panel and disconnect the connectors and 2 clamps.

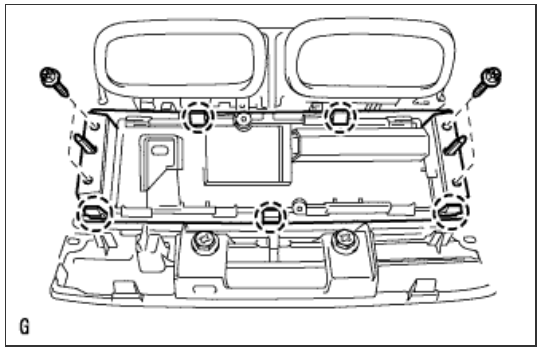
15. REMOVE COOLING BOX ASSEMBLY

a. Remove the 4 bolts and 2 screws.

b. Remove the 2 bolts and disconnect the 2 cooler pipes.

c. Remove the 2 O-rings from the cooler pipes.

d. Disconnect the connector.

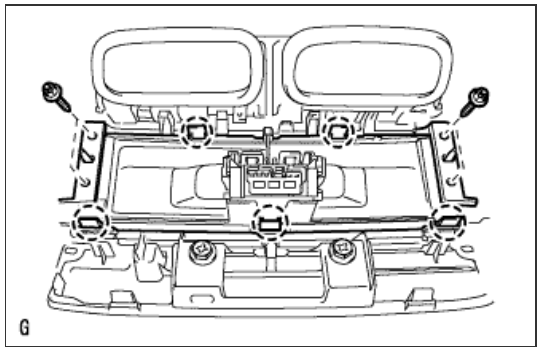


e. Detach the 2 claws and remove the cooling box.

for Preparation Click here

1. REMOVE NO. 2 AIR CONDITIONING CONTROL ASSEMBLY (w/ Rear Air Conditioning System)

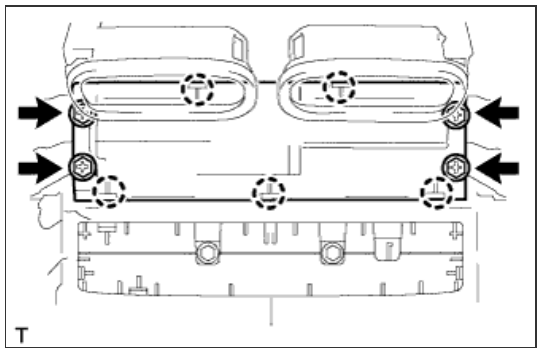
a. Remove the 4 screws.



b. Detach the 5 claws and remove the air conditioning control.

2. REMOVE AIR CONDITIONING CONTROL ASSEMBLY (w/ Rear Cooler)

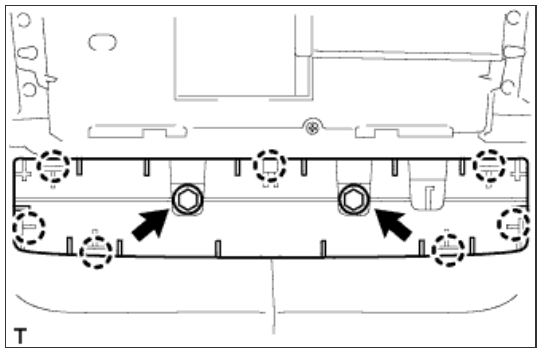
a. Remove the 4 screws.



b. Detach the 5 claws and remove the air conditioning control.

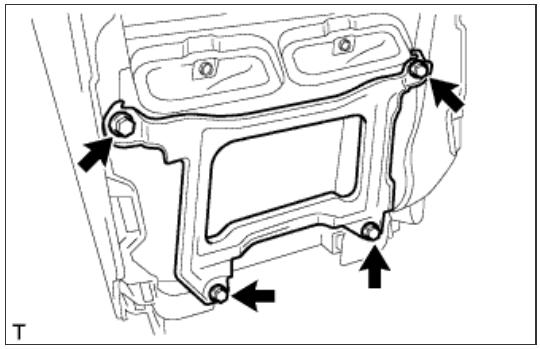
3. REMOVE REAR COOLER SWITCH HOLE COVER (w/o Rear Cooler)

a. Remove the 4 screws.



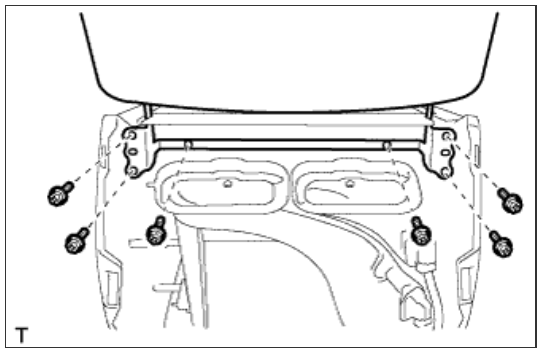
b. Detach the 5 claws and remove the hole cover.

4. REMOVE INSTRUMENT PANEL HOLE COVER



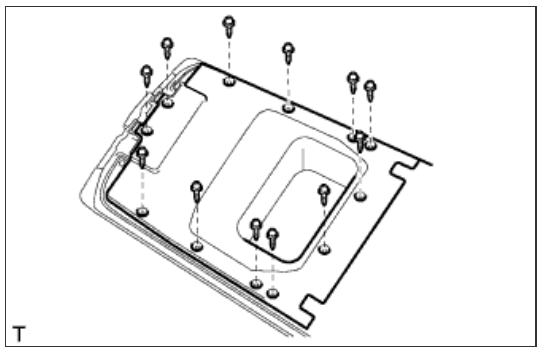
a. Remove the 2 screws.

b. Detach the 7 claws and remove the hole cover.



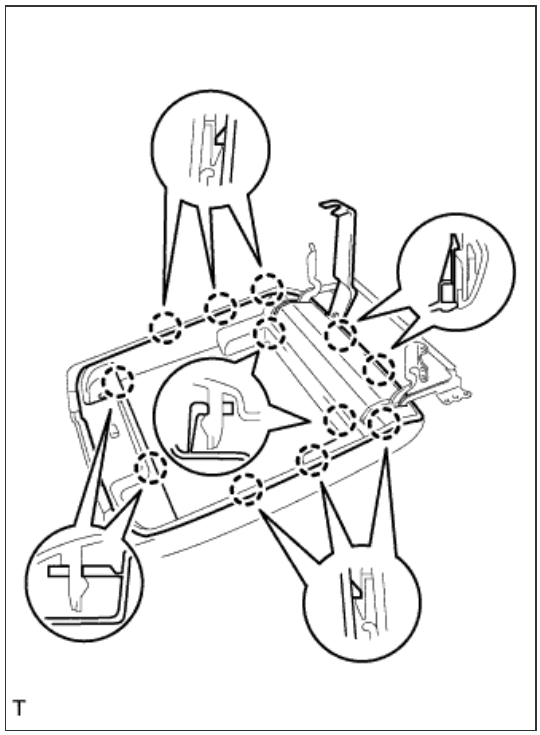
5. REMOVE REAR CONSOLE BOX MOUNTING BRACKET

a. Remove the 4 screws and bracket.



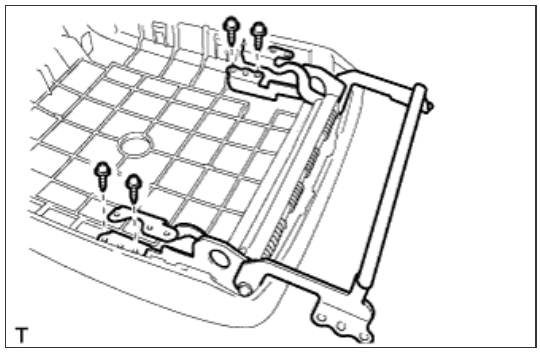
6. REMOVE CONSOLE COMPARTMENT DOOR SUB-ASSEMBLY

a. Remove the 6 screws and door.



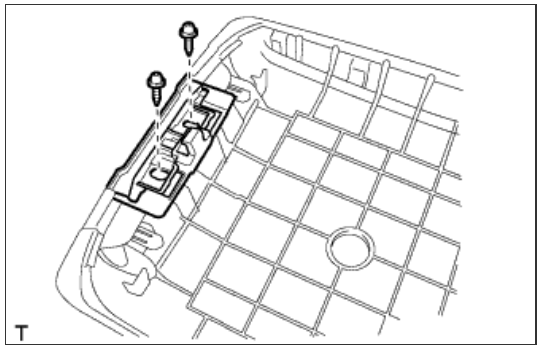
7. REMOVE CONSOLE COMPARTMENT DOOR LOCK SUB-ASSEMBLY

a. Remove the 12 screws, lower box and door lock.



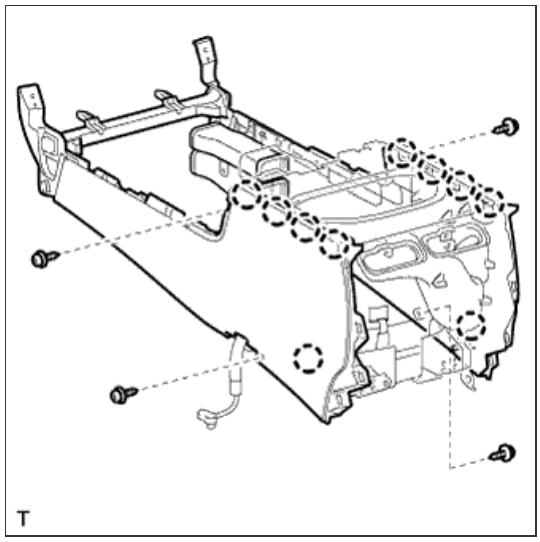
8. REMOVE CONSOLE COMPARTMENT DOOR HINGE SUB-ASSEMBLY

a. Using a moulding remover, detach the 12 claws and remove the inner door.



b. Remove the 4 screws and door hinge.

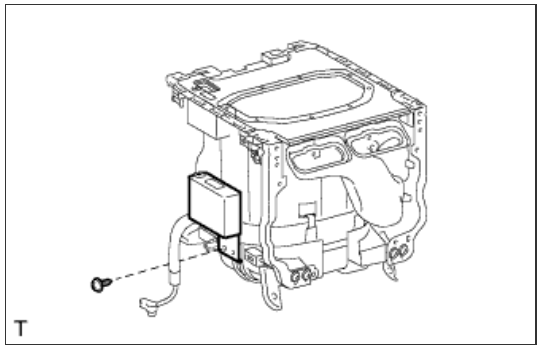
9. REMOVE CONSOLE COMPARTMENT DOOR LOCK



a. Remove the 2 screws and door lock.

10. REMOVE COOLING BOX ASSEMBLY

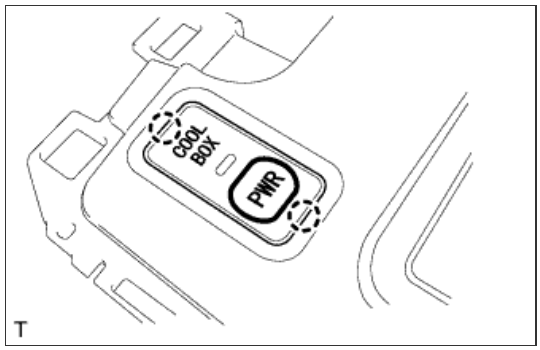
a. Remove the 4 screws.



b. Detach the 10 claws and remove the cooling box.

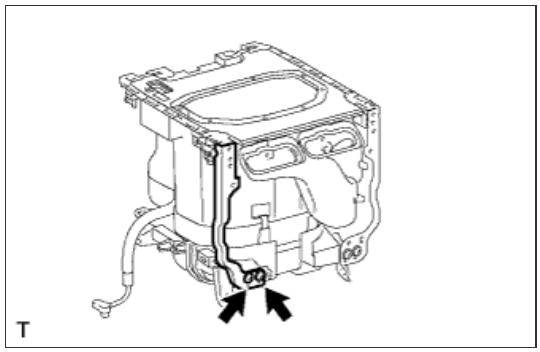
11. REMOVE AIR CONDITIONING AMPLIFIER ASSEMBLY

a. Disconnect the connector.



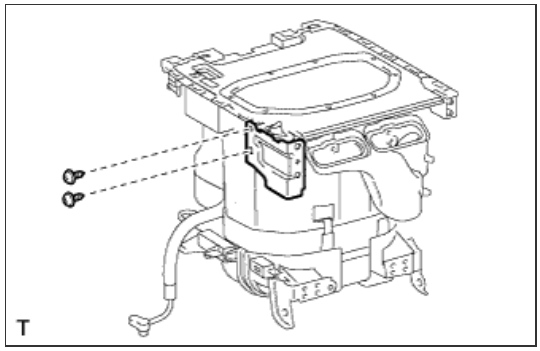
b. Remove the screw and amplifier.

12. REMOVE COOLER CONTROL SWITCH SUB-ASSEMBLY



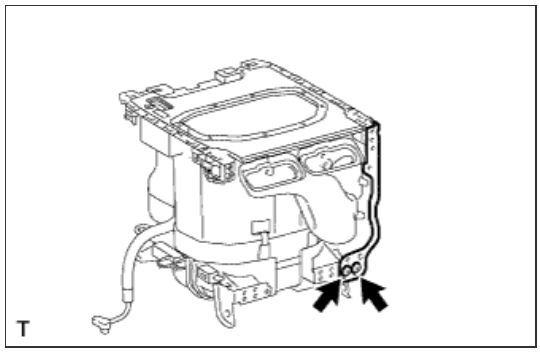
a. Detach the 2 claws.

b. Disconnect the connector and remove the switch.

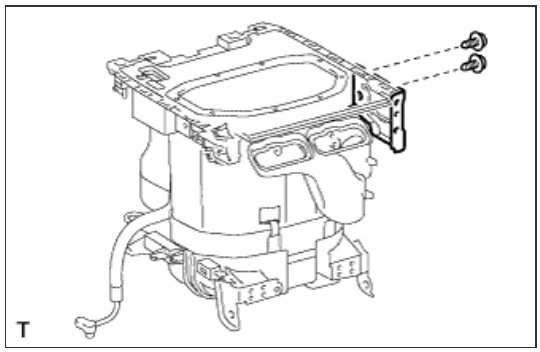


13. REMOVE NO. 2 COOLING BOX BRACKET

a. Remove the 2 screws and mounting bracket.

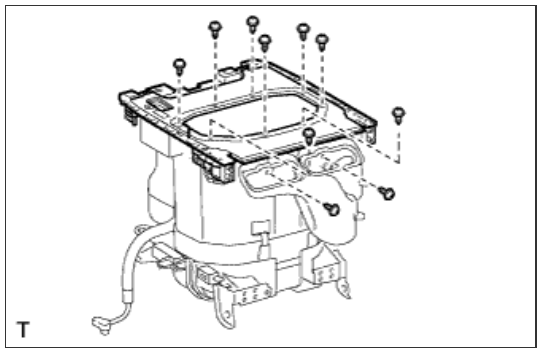


b. Remove the 2 screws and bracket.

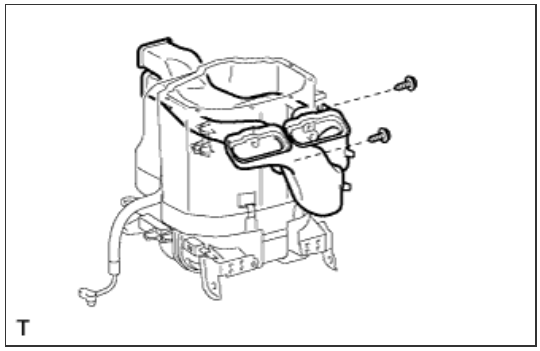


14. REMOVE COOLING BOX BRACKET

a. Remove the 2 screws and mounting bracket.



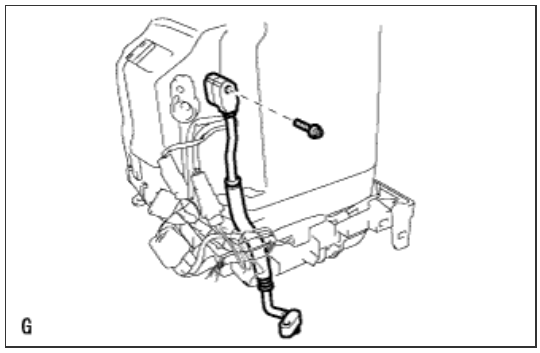
b. Remove the 2 screws and bracket.



15. REMOVE COOLING BOX BASE

a. Remove the 10 screws and cooling box base.

16. REMOVE COOLING UNIT CASE SUB-ASSEMBLY

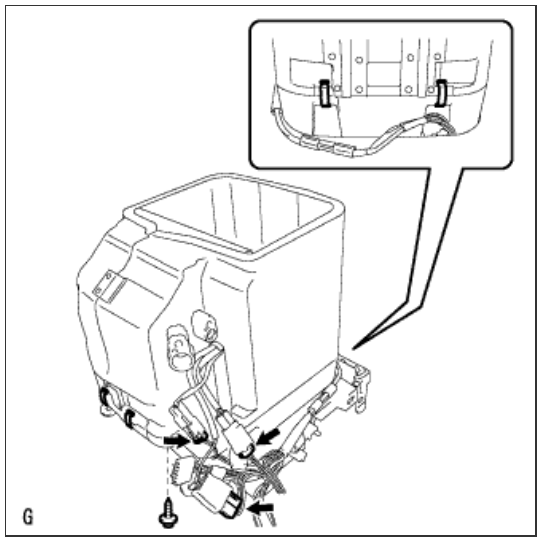


a. Remove the 2 screws and air duct from the case.

17. REMOVE LI UID HOSE

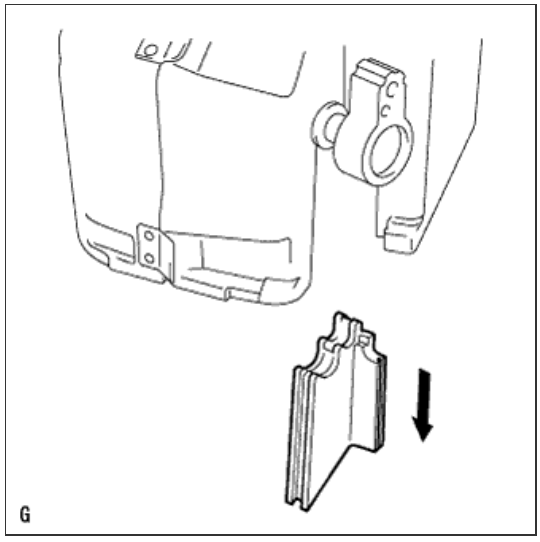
a. Remove the bolt and liquid hose.

b. Remove the O-ring from the liquid hose.



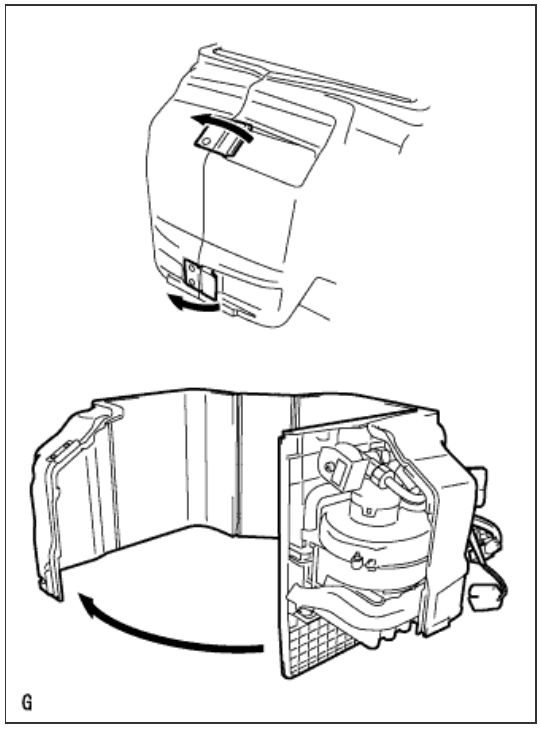
18. REMOVE LOWER COOLING UNIT CASE SUB-ASSEMBLY

a. Remove the screw.



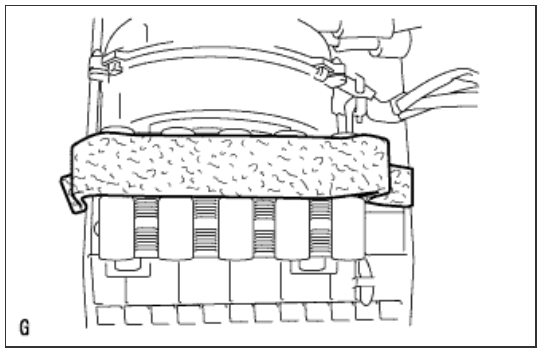
b. Disconnect the 3 connectors.

c. Remove the 4 holding springs and lower cooling unit case.

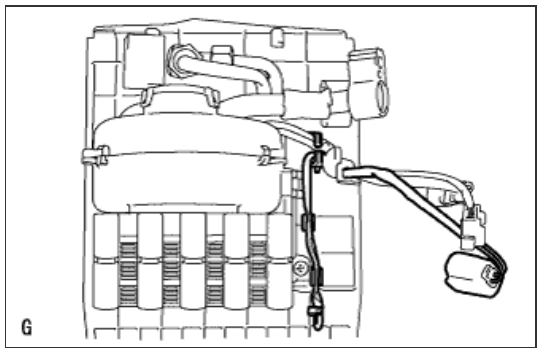


19. REMOVE UPPER COOLING UNIT CASE

a. Remove the cooling unit case.

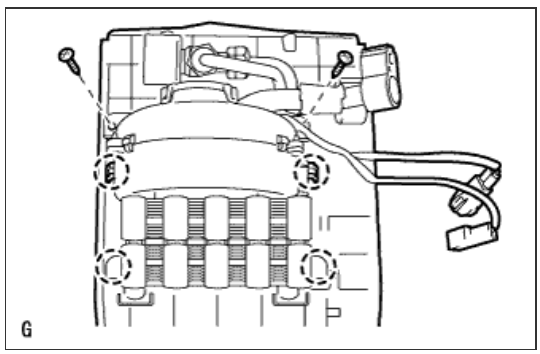


b. Detach the 2 hooks and open the case, as shown in the illustration.



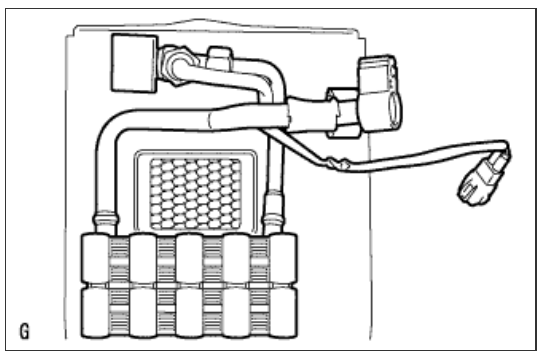
20. REMOVE NO. 3 COOLER THERMISTOR

a. Remove the cool box insulator.



b. Remove the thermistor.

21. REMOVE NO. 1 COOLER BLOWER MOTOR SUB-ASSEMBLY



a. Remove the 2 screws.

b. Detach the 4 claws and remove the blower motor.

22. REMOVE NO. 2 COOLER EVAPORATOR SUB-ASSEMBLY

a. Remove the evaporator.

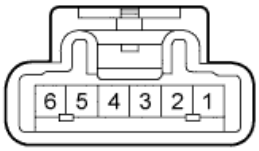
for Preparation Click here

1. INSPECT COOLER CONTROL SWITCH SUB-ASSEMBLY

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
1 - 2	On	Below 1 Ω
1 - 2	Off	10 kΩ or higher



b. Apply battery voltage to the cooler control switch connector and check that the indicator illuminates.

OK:

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 3 Battery negative (-) → Terminal 4	indicator illuminates

If the result is not as specified, replace the cooler control switch.

Component without harness connected:
(Cooler Control Switch)

2. INSPECT NO. 1 COOLER BLOWER MOTOR SUB-ASSEMBLY

a. Apply battery voltage to the blower motor connector and check the operation of the blower motor.

OK:

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Motor operates smoothly

If the result is not as specified, replace the blower motor.

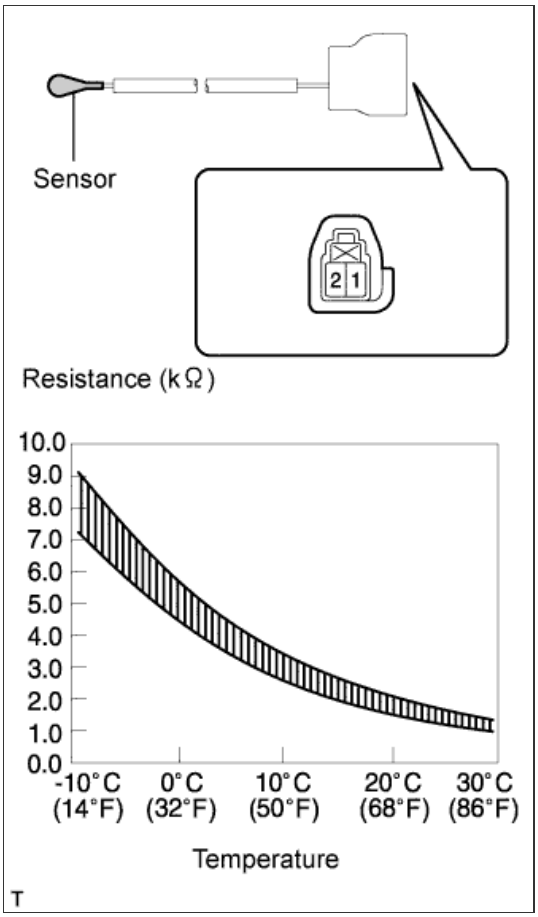
Component without harness connected:
(No. 1 Cooler Blower Motor)

3. INSPECT NO. 3 COOLER THERMISTOR

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	-10 C (14)	7.40 to 9.20 kΩ
1 - 2	-5 C (23)	5.65 to 7.00 kΩ
1 - 2	0 C (32)	4.35 to 5.40 kΩ
1 - 2	5 C (41)	3.40 to 4.20 kΩ
1 - 2	10 C (50)	2.68 to 3.30 kΩ
1 - 2	15 C (59)	2.10 to 2.60 kΩ
1 - 2	20 C (68)	1.66 to 2.10 kΩ

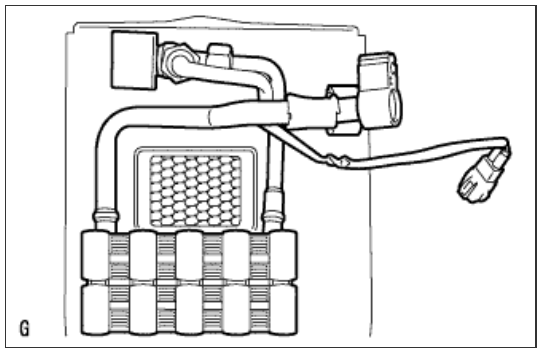


1 - 2	25°C (77°F)	1.32 to 1.66 kΩ
	30°C (86°F)	1.05 to 1.35 kΩ

NOTICE:

- **Even slightly touching the sensor may change the resistance value. Be sure to hold the connector of the sensor.**
- **When measuring, the sensor temperature must be the same as the ambient temperature.**

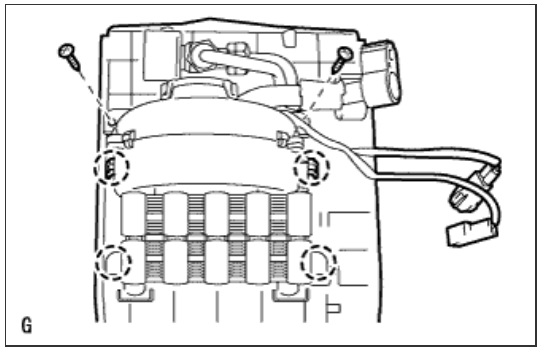
HINT:



- **As the temperature increases, the resistance decreases (see the graph).**
- **If the result is not as specified, replace the cooler thermistor.**

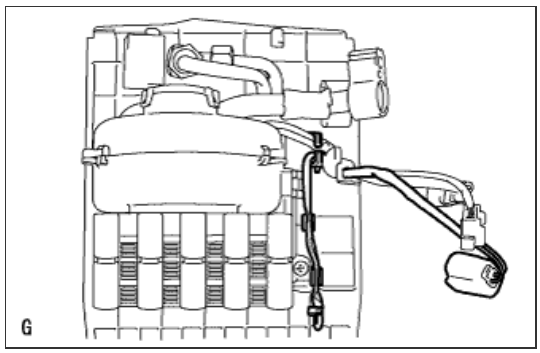
for Preparation Click here

1. INSTALL NO. 2 COOLER EVAPORATOR SUB-ASSEMBLY



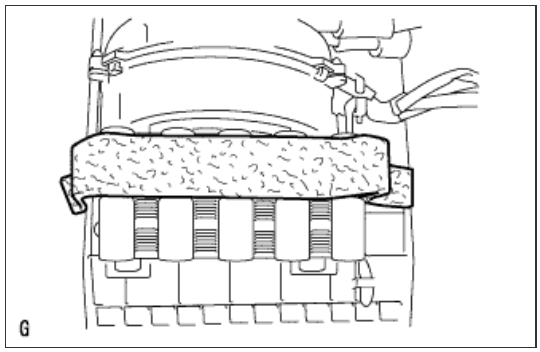
a. Install the evaporator.

2. INSTALL NO. 1 COOLER BLOWER MOTOR SUB-ASSEMBLY



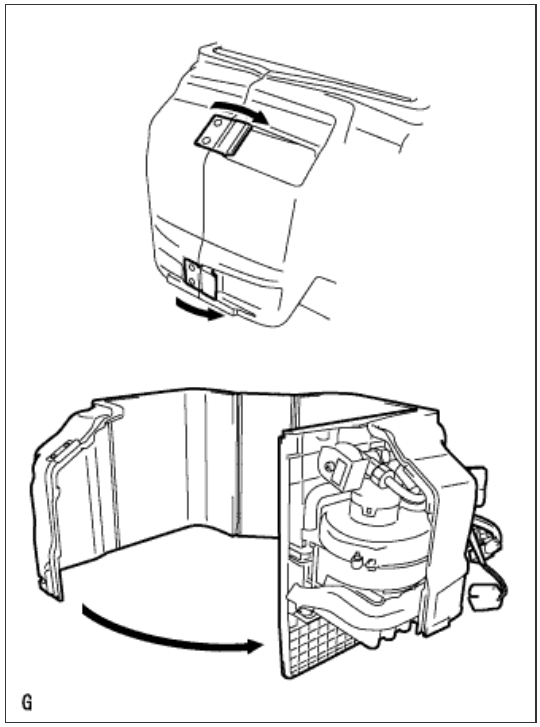
a. Attach the 4 claws to install the blower motor.

b. Install the 2 screws.

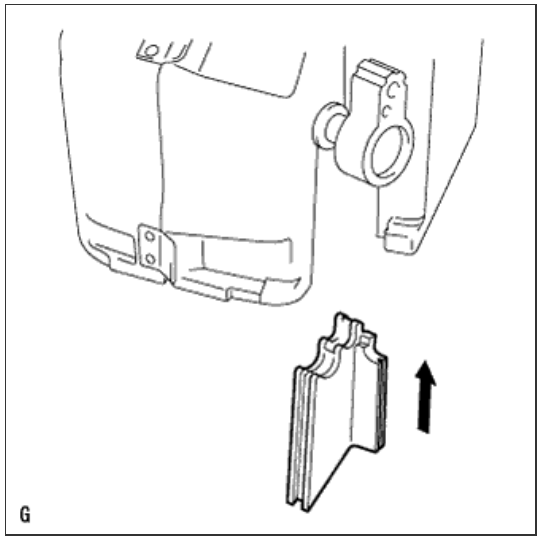


3. INSTALL NO. 3 COOLER THERMISTOR

a. Install the thermistor.



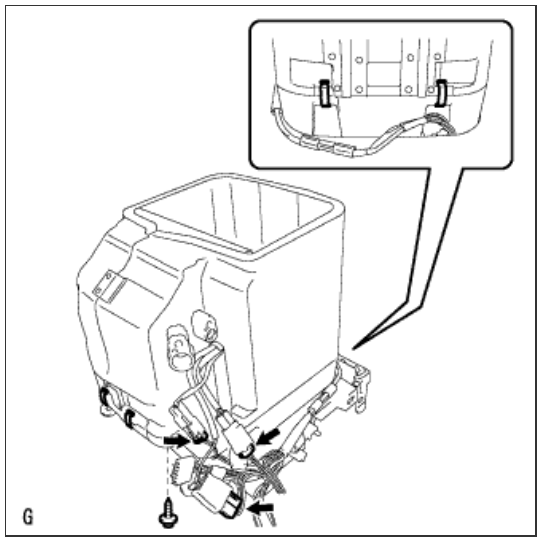
b. Install a new cool box insulator, as shown in the illustration.



4. INSTALL UPPER COOLING UNIT CASE

a. Attach the 2 hooks and close the case, as shown in the illustration.

b. Install the cooling unit case.



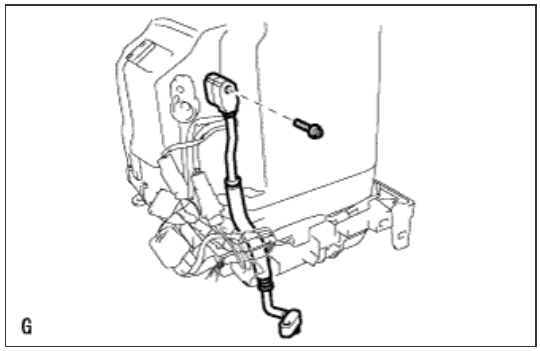
5. INSTALL LOWER COOLING UNIT CASE SUB-ASSEMBLY

a. Install the lower cooling unit case with the 4 holding springs.

b. Connect the 3 connectors.

c. Install the screw.

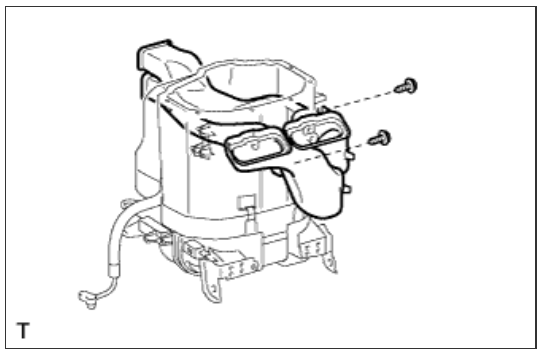
6. INSTALL LIQUID HOSE



a. Sufficiently apply compressor oil to a new O-ring and the fitting surface of the cooler evaporator.

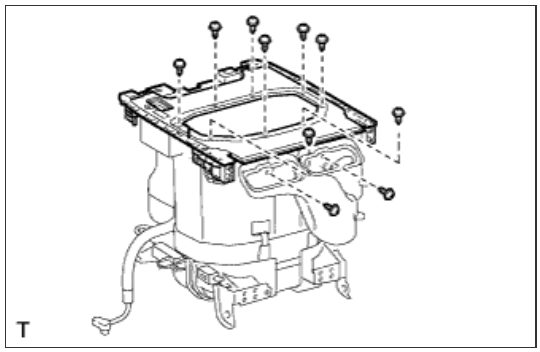
Compressor oil:
ND-OIL 8 or equivalent

b. Install the O-ring on the liquid hose.



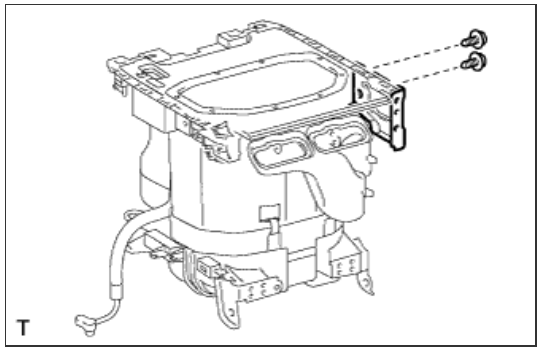
c. Install the liquid hose to the evaporator with the bolt.

Torque:
5.4 N m 55 kgf cm , 48 in. lbf



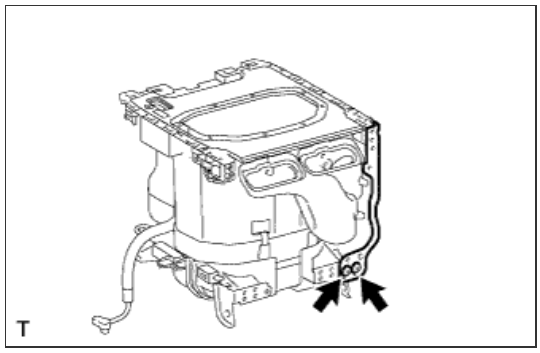
. INSTALL COOLING UNIT CASE SUB-ASSEMBLY

a. Install the air duct to the case with the 2 screws.



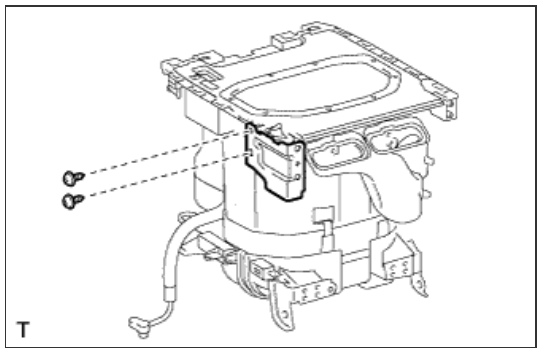
8. INSTALL COOLING BOX BASE

a. Install the cooling box base with the 10 screws.

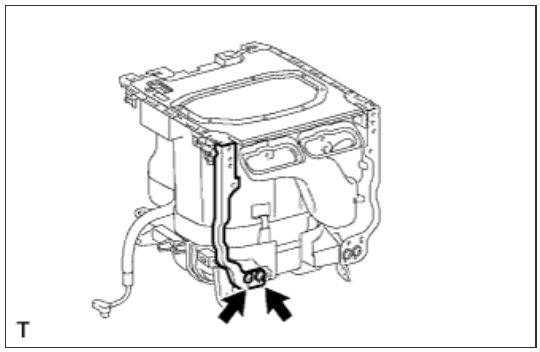


9. INSTALL COOLING BOX BRACKET

a. Install the bracket with the 2 screws.

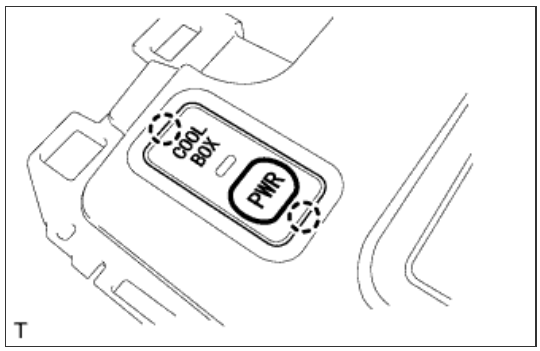


b. Install the mounting bracket with the 2 screws.



10. INSTALL NO. 2 COOLING BOX BRACKET

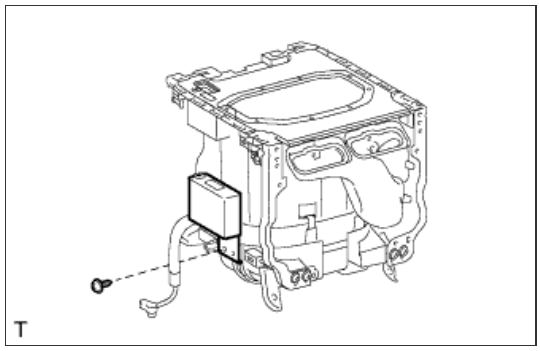
a. Install the bracket with the 2 screws.



b. Install the mounting bracket with the 2 screws.

11. INSTALL COOLER CONTROL SWITCH SUB-ASSEMBLY

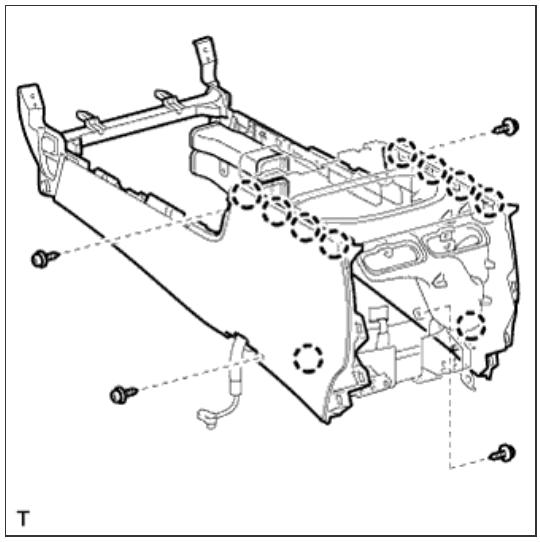
a. Connect the connector.



b. Attach the 2 claws to install the switch.

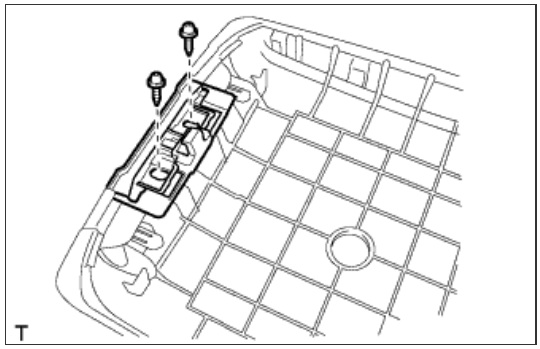
12. INSTALL AIR CONDITIONING AMPLIFIER ASSEMBLY

a. Install the amplifier with the screw.



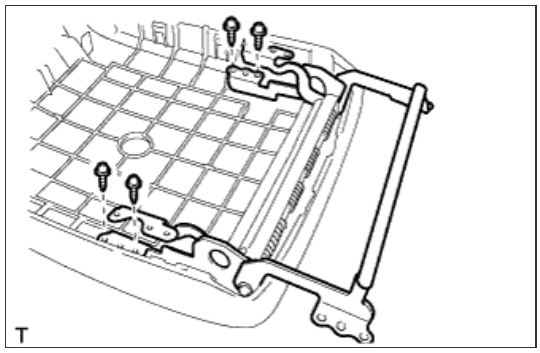
b. Connect the connector.

13. INSTALL COOLING BOX ASSEMBLY



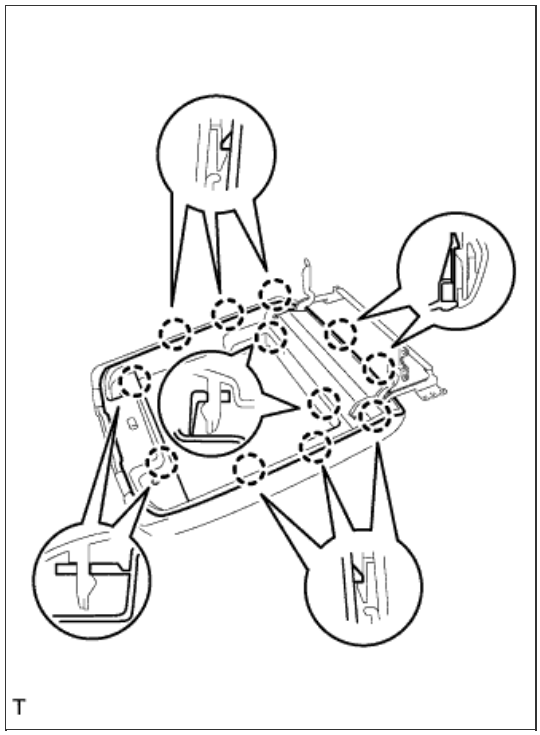
a. Attach the 10 claws to install the cooling box.

b. Install the 4 screws.



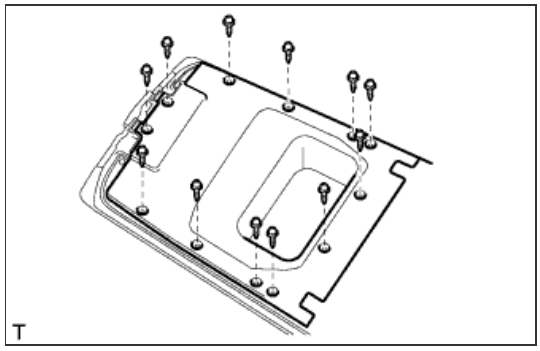
14. INSTALL CONSOLE COMPARTMENT DOOR LOCK

a. Install the door lock with the 2 screws.

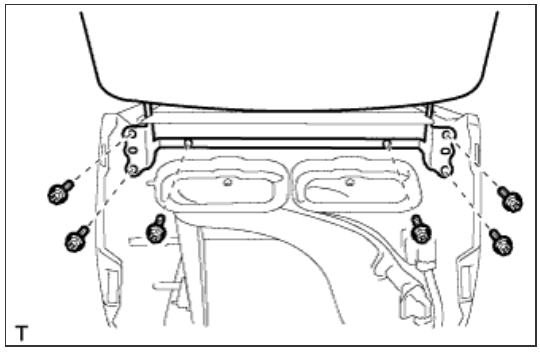


15. INSTALL CONSOLE COMPARTMENT DOOR HINGE SUB-ASSEMBLY

a. Install the door hinge with the 4 screws.

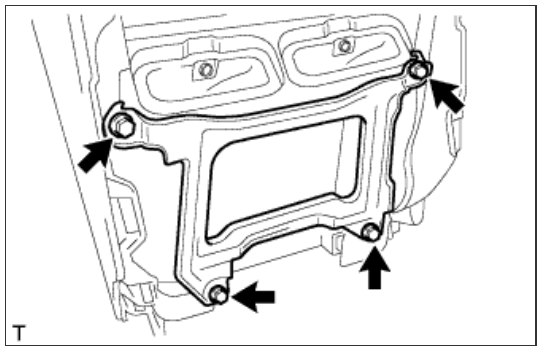


b. Attach the 12 claws to install the inner door.



16. INSTALL CONSOLE COMPARTMENT DOOR LOCK SUB-ASSEMBLY

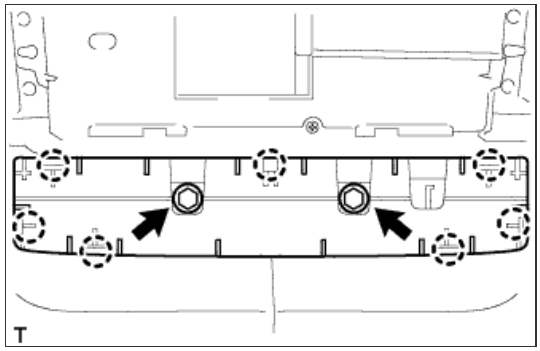
a. Install the door lock. Then install the lower box with the 12 screws.



17. INSTALL CONSOLE COMPARTMENT DOOR SUB-ASSEMBLY

a. Install the door with the 6 screws.

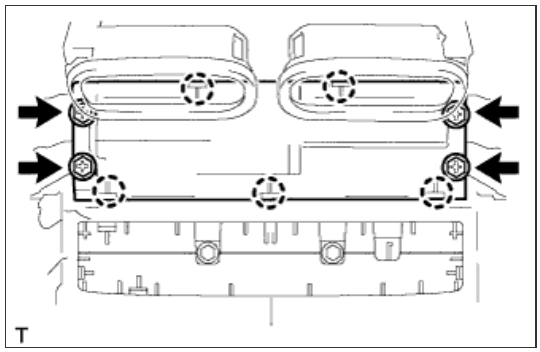
18. INSTALL REAR CONSOLE BOX MOUNTING BRACKET



a. Install the bracket with the 4 bolts.

19. INSTALL INSTRUMENT PANEL HOLE COVER

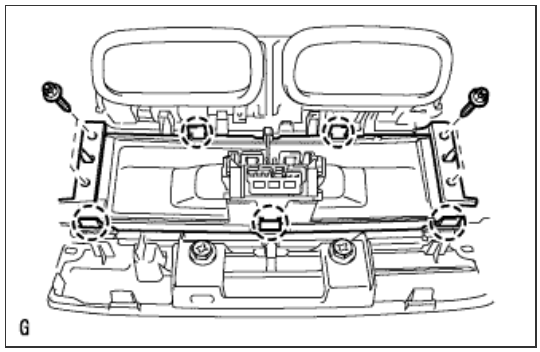
a. Attach the 7 claws to install the hole cover.



b. Install the 2 screws.

20. INSTALL REAR COOLER SWITCH HOLE COVER (w/o Rear Cooler)

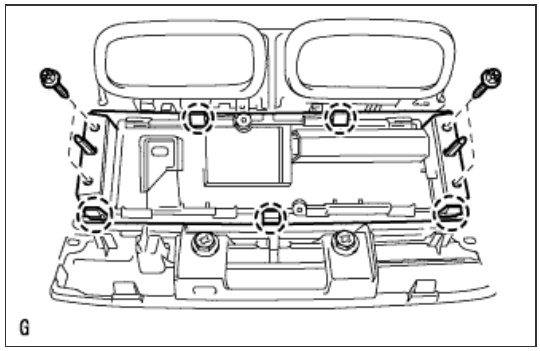
a. Attach the 5 claws.



b. Install the hole cover with the 4 screws.

21. INSTALL AIR CONDITIONING CONTROL ASSEMBLY (w/ Rear Cooler)

a. Attach the 5 claws to install the air conditioning control.

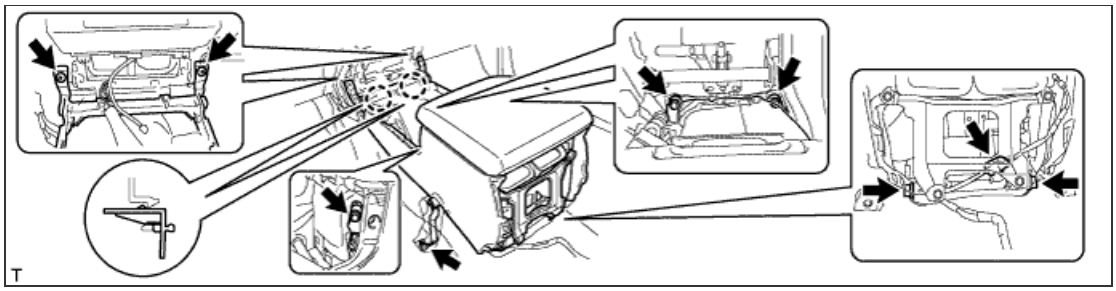


b. Install the 4 screws.

22. INSTALL NO. 2 AIR CONDITIONING CONTROL ASSEMBLY (w/ Rear Air Con itioning S stem)

a. Attach the 5 claws to install the air conditioning control.

b. Install the 4 screws.



for Preparation Click here

HINT:

A bolt without a torque specification is shown in the standard bolt chart (Click here).

1. INSTALL COOLING BOX ASSEMBLY

a. Attach the 2 claws.

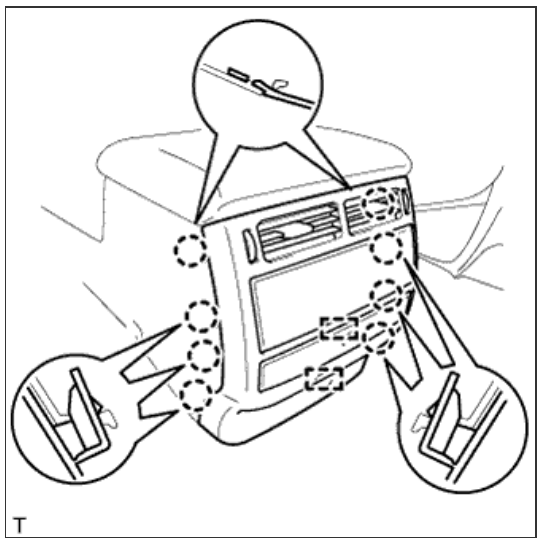
b. Connect the connector.

c. Sufficiently apply compressor oil to 2 new O-rings.

Compressor oil:
ND-OIL 8 or equivalent

d. Install the 2 O-rings on the 2 cooler pipes.

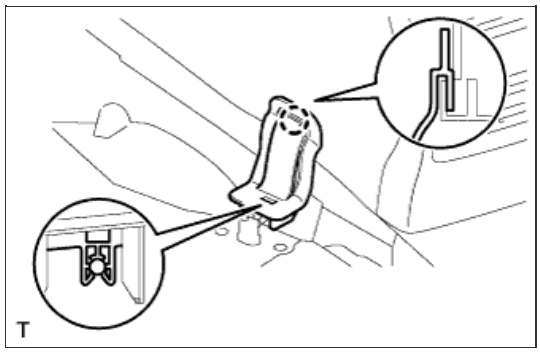
e. Connect the 2 cooler pipes with the 2 bolts.



Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

f. Install the cooling box with the 4 bolts and 2 screws.

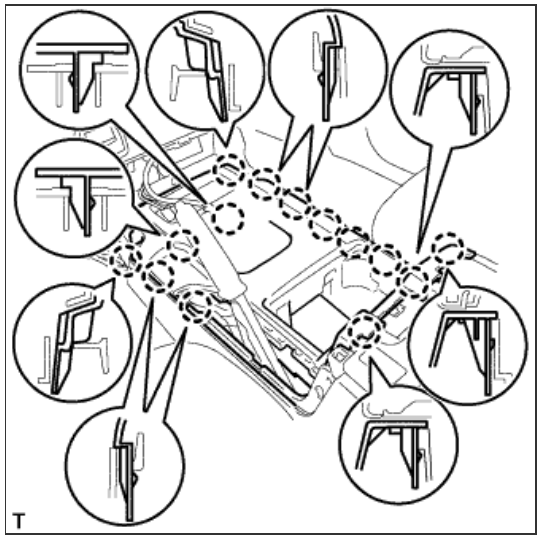
2. INSTALL REAR CONSOLE END PANEL SUB-ASSEMBLY



a. Connect the connectors and 2 clamps.

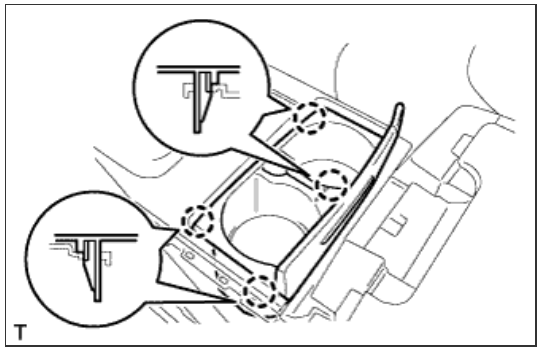
b. Attach the 8 claws to install the end panel.

3. INSTALL NO. 1 COOLER COVER



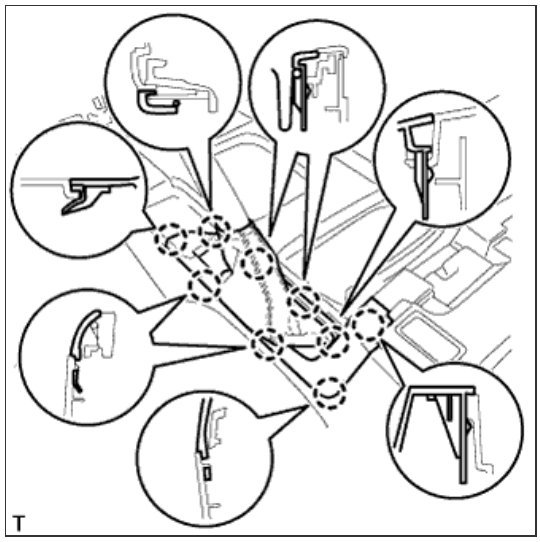
a. Attach the claw on the upper part of the cooler cover, and then attach the clamp on the lower part of the cooler cover to install it.

4. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY



a. Connect the connectors.

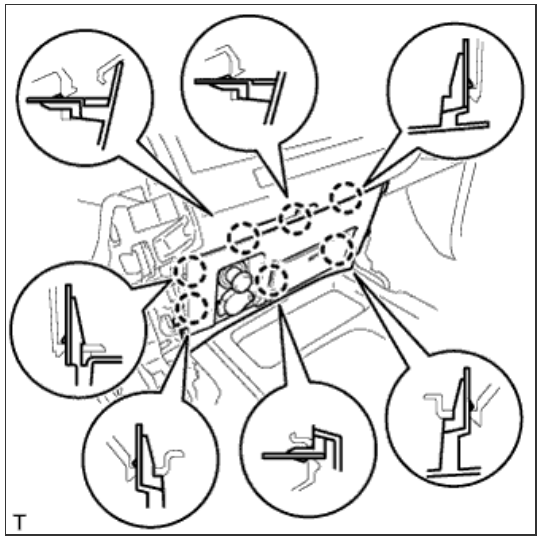
b. Attach the 14 claws to install the console panel.



5. INSTALL CONSOLE CUP HOLDER BOX SUB-ASSEMBLY

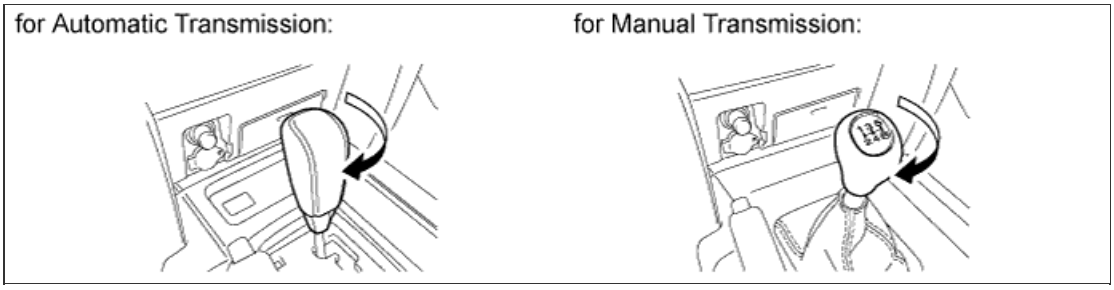
a. Attach the 4 claws to install the box.

6. INSTALL REAR UPPER CONSOLE PANEL SUB-ASSEMBLY



a. Attach the 9 claws to install the panel.

7. INSTALL LOWER CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY

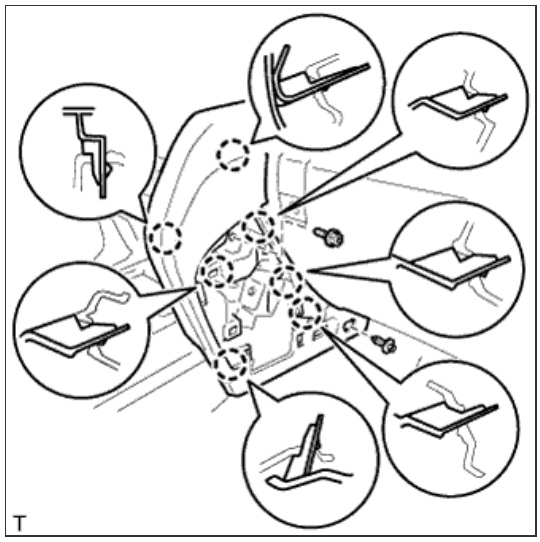


a. Connect the connectors.

b. Attach the 7 claws to install the panel.

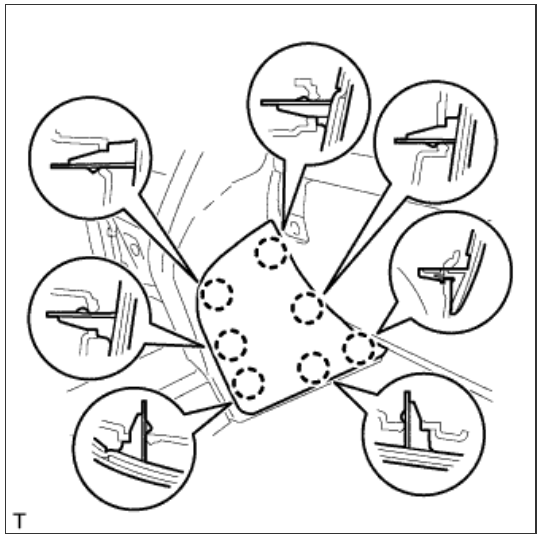
8. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY

a. Install the shift lever knob and twist it in the direction indicated by the arrow.



9. INSTALL LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY RH

a. Attach the 7 claws to install the panel pad.

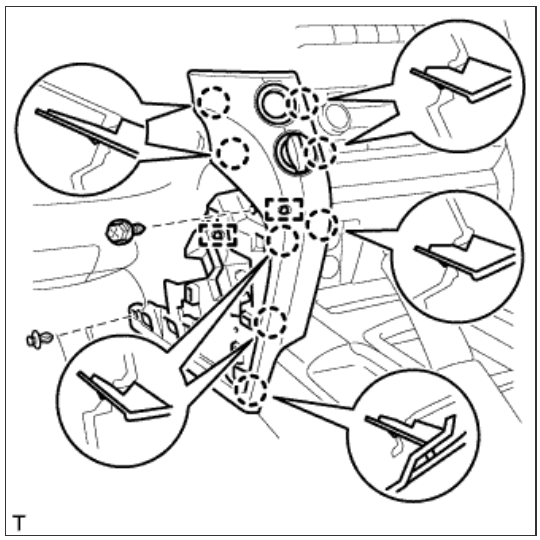


b. Install the screw.

c. Install the clip.

10. INSTALL NO. 1 INSTRUMENT PANEL FINISH CUSHION

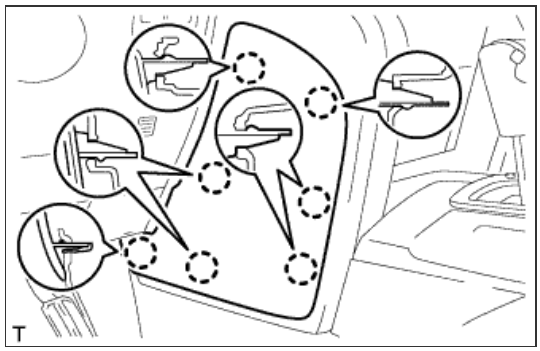
a. Attach the 7 claws to install the panel cushion.



11. INSTALL LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

a. Connect the connectors and 2 clamps.

b. Attach the 8 claws to install the panel pad.



c. Install the screw.

d. Install the clip.

12. INSTALL NO. 2 INSTRUMENT PANEL FINISH PANEL CUSHION

a. Attach the 7 claws to install the panel cushion.

13. INSTALL FRONT SEAT ASSEMBLY LH (for Manual Seat)

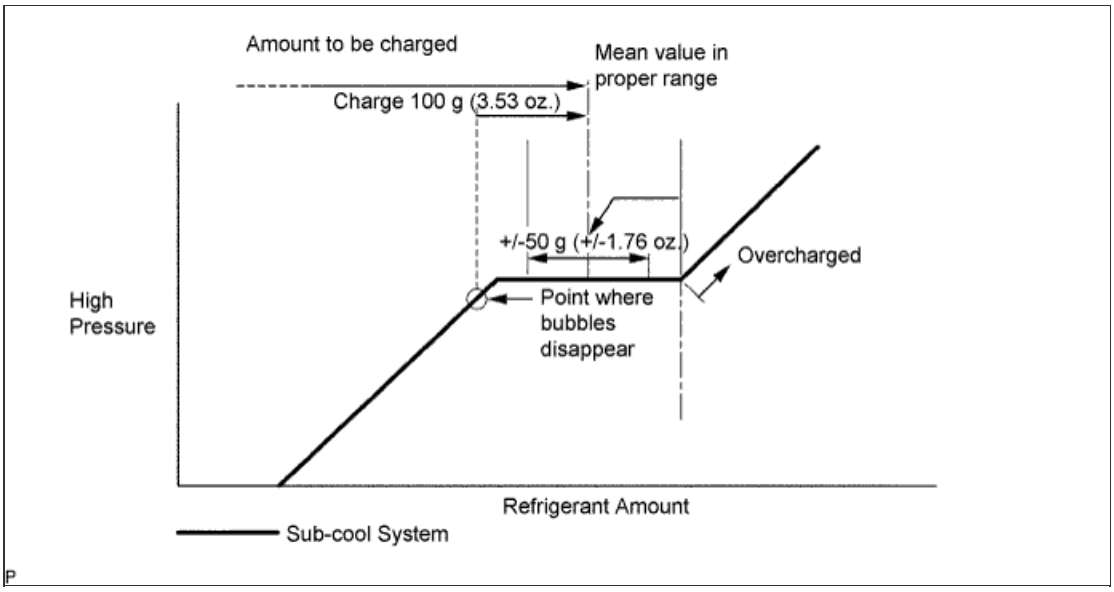
a. Install the front seat assembly LH (Click here).

14. INSTALL FRONT SEAT ASSEMBLY LH (for Power Seat)

a. Install the front seat assembly LH (Click here).

15. CHARGE REFRIGERANT

SST



09985-20010 (09985-02130, 09985-02150, 09985-02090, 09985-02110, 09985-02010, 09985-02050, 09985-02060, 09985-02070)

a. Perform vacuum purging using a vacuum pump.

b. Charge refrigerant HFC-134a (134a).

Standard:

Condenser Core hickness	Air Conditioning ype	Cool Box	efrigerant Charging Amount
22 mm (0.8 in.)	w/o ear Cooler	w/ Cool Box	870 -30 g (30.7 -1.1 oz.)
		w/o Cool Box	870 -30 g (30.7 -1.1 oz.)
	w/ ear Cooler	w/ Cool Box	1010 -30 g (35.6 -1.1 oz.)
		w/o Cool Box	960 -30 g (33.9 -1.1 oz.)
16 mm (0.630 in.)	w/o ear Cooler	w/ Cool Box	770 -30 g (27.2 -1.1 oz.)
		w/o Cool Box	770 -30 g (27.2 -1.1 oz.)
	w/ ear Cooler	w/ Cool Box	970 -30 g (34.2 -1.1 oz.)
		w/o Cool Box	920 -30 g (32.5 -1.1 oz.)

NOTICE:

- **Do not operate the cooler compressor before charging refrigerant as the cooler compressor will not work properly without any refrigerant, and will overheat.**
- **Approximately 200 g (7.05 oz.) of refrigerant may need to be charged after bubbles disappear. The refrigerant amount should be checked by measuring its quantity, and not with the sight glass.**

16. WARM UP ENGINE

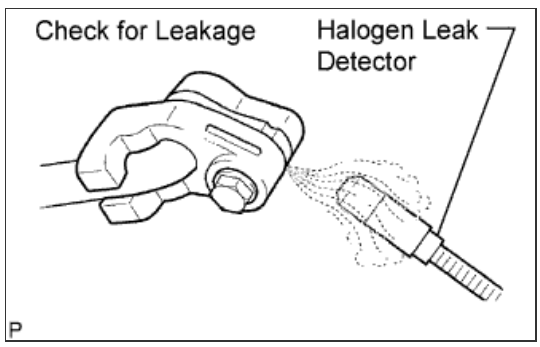
a. arm up the engine at less than 1850 rpm for 2 minutes or more after charging the refrigerant.

NOTICE:

Be sure to warm up the compressor when turning the A/C switch is on after removing and installing the cooler refrigerant lines (including the compressor), to prevent damage to the compressor.

17. CHECK FOR REFRIGERANT GAS LEAK

a. After recharging the refrigerant gas, check for refrigerant gas leakage using a halogen leak detector.



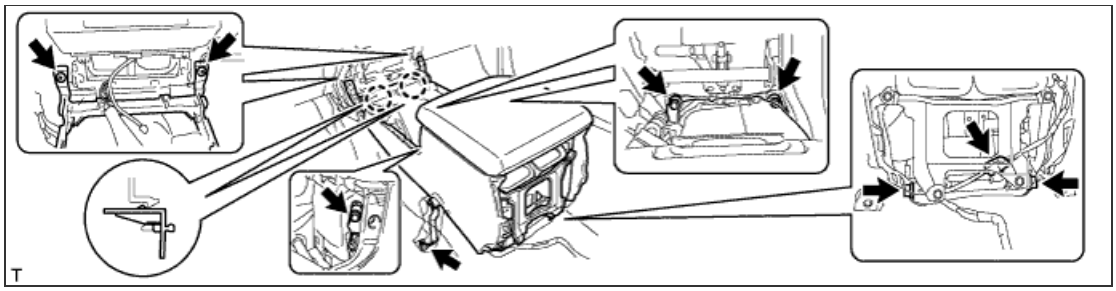
b. Perform the operation under these conditions:

- Stop the engine.
- Secure good ventilation (the halogen leak detector may react to volatile gases other than refrigerant, such as evaporated gasoline or exhaust gas).
- epeat the test 2 or 3 times.
- ake sure that some refrigerant remains in the refrigeration system. hen compressor is off: approximately 392 to 588 kPa (4.0 to 6.0 kgf/cm^2, 57 to 85 psi).

c. Using a halogen leak detector, check the refrigerant line for leakage.

d. If a gas leak is not detected on the drain hose, remove the blower motor control (blower resistor) from the cooling unit. Insert the halogen leak detector sensor into the unit and perform the test.

e. Disconnect the connector and wait for approximately 20 minutes. Bring the halogen leak detector close to the pressure switch and perform the test.



for Preparation Click here

HINT:

A bolt without a torque specification is shown in the standard bolt chart (Click here).

1. INSTALL COOLING BOX ASSEMBLY

a. Attach the 2 claws.

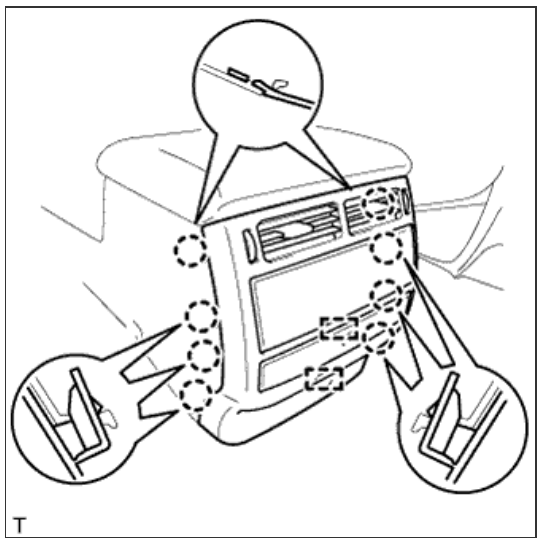
b. Connect the connector.

c. Sufficiently apply compressor oil to 2 new O-rings.

Compressor oil:
ND-OIL 8 or equivalent

d. Install the 2 O-rings on the 2 cooler pipes.

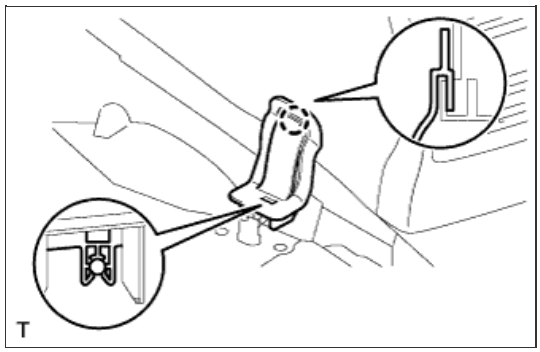
e. Connect the 2 cooler pipes with the 2 bolts.



Torque:
9.8 N*m{ 100 kgf*cm , 87 in.*lbf }

f. Install the cooling box with the 4 bolts and 2 screws.

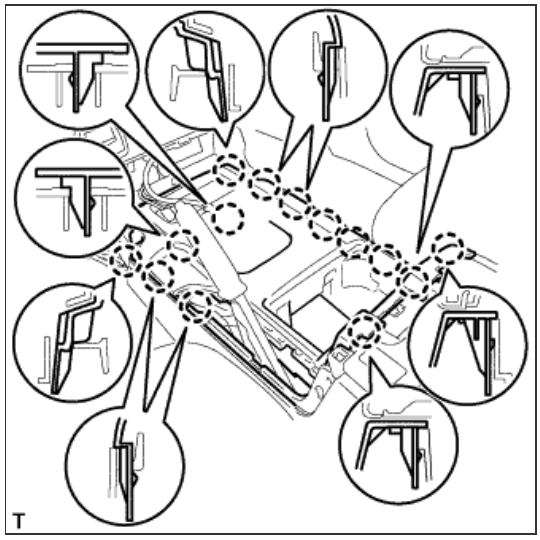
2. INSTALL REAR CONSOLE END PANEL SUB-ASSEMBLY



a. Connect the connectors and 2 clamps.

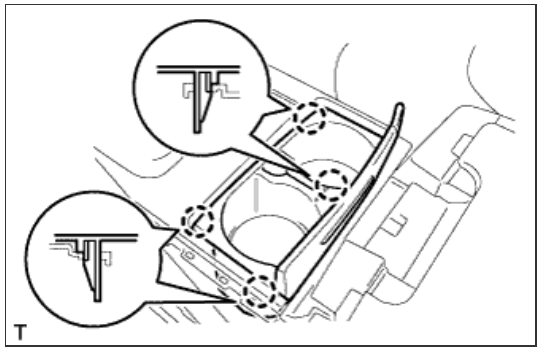
b. Attach the 8 claws to install the end panel.

3. INSTALL NO. 1 COOLER COVER



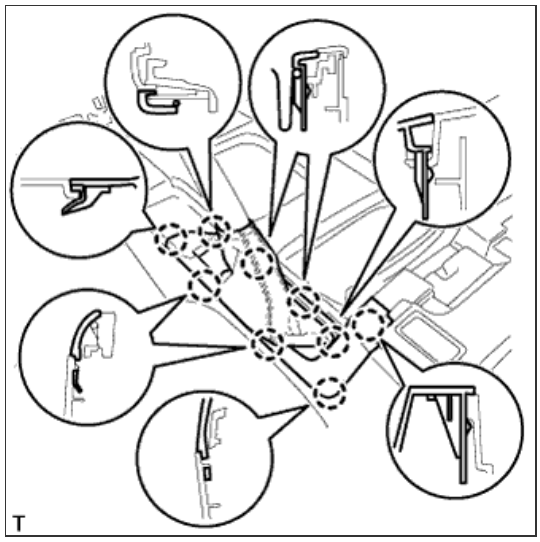
a. Attach the claw on the upper part of the cooler cover, and then attach the clamp on the lower part of the cooler cover to install it.

4. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY



a. Connect the connectors.

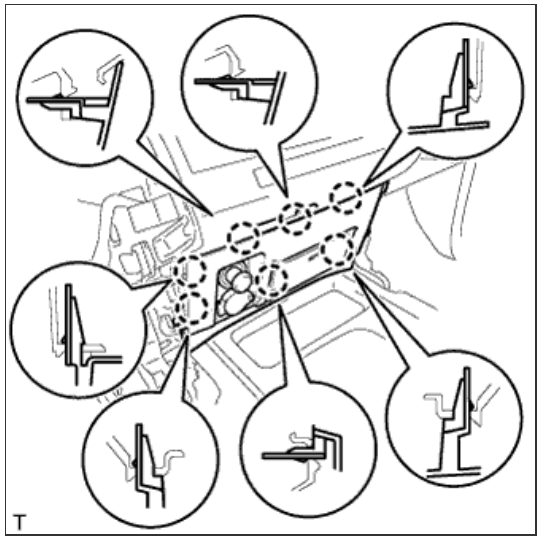
b. Attach the 14 claws to install the console panel.



5. INSTALL CONSOLE CUP HOLDER BOX SUB-ASSEMBLY

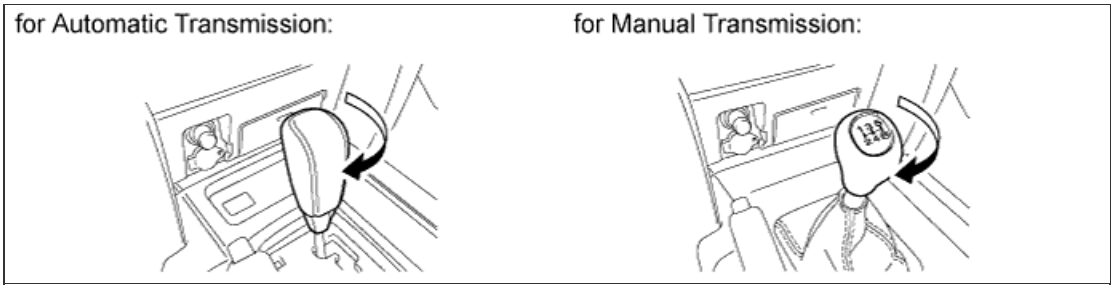
a. Attach the 4 claws to install the box.

6. INSTALL REAR UPPER CONSOLE PANEL SUB-ASSEMBLY



a. Attach the 9 claws to install the panel.

7. INSTALL LOWER CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY

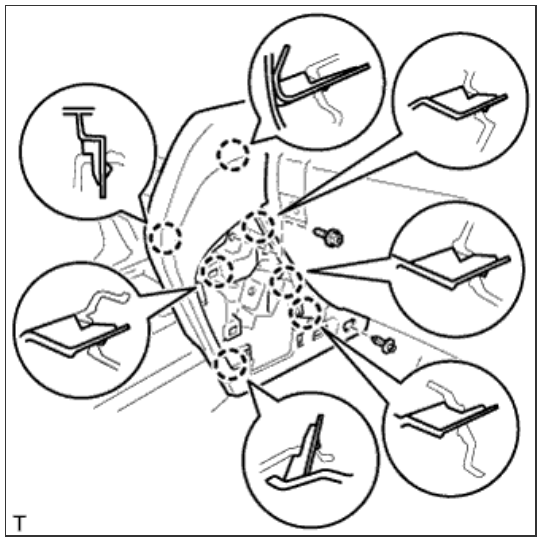


a. Connect the connectors.

b. Attach the 7 claws to install the panel.

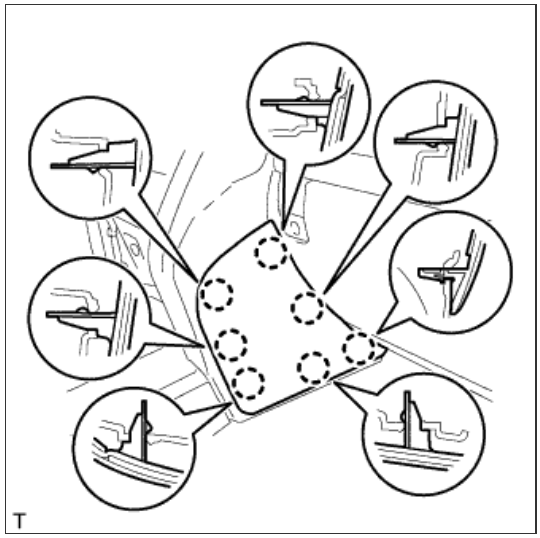
8. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY

a. Install the shift lever knob and twist it in the direction indicated by the arrow.



9. INSTALL LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY RH

a. Attach the 7 claws to install the panel pad.

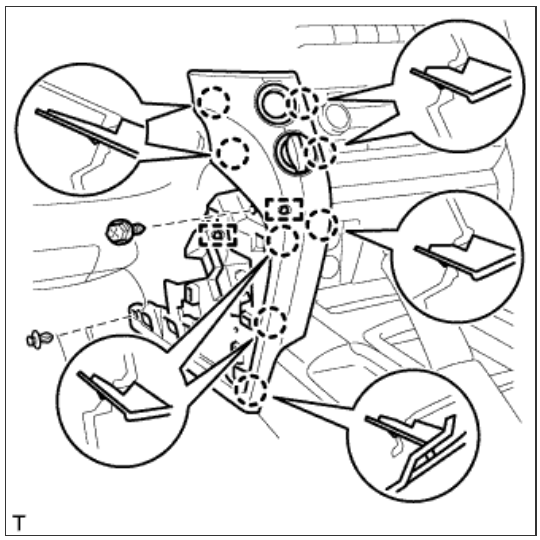


b. Install the screw.

c. Install the clip.

10. INSTALL NO. 1 INSTRUMENT PANEL FINISH CUSHION

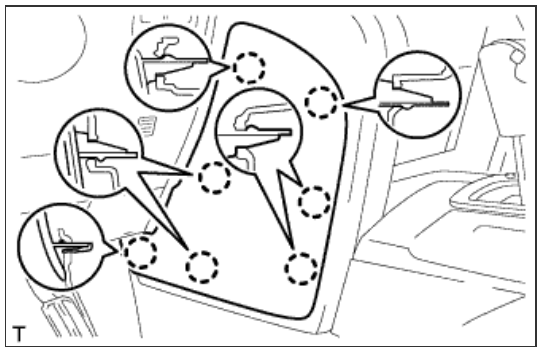
a. Attach the 7 claws to install the panel cushion.



11. INSTALL LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

a. Connect the connectors and 2 clamps.

b. Attach the 8 claws to install the panel pad.



c. Install the screw.

d. Install the clip.

12. INSTALL NO. 2 INSTRUMENT PANEL FINISH PANEL CUSHION

a. Attach the 7 claws to install the panel cushion.

13. INSTALL FRONT SEAT ASSEMBLY LH (for Manual Seat)

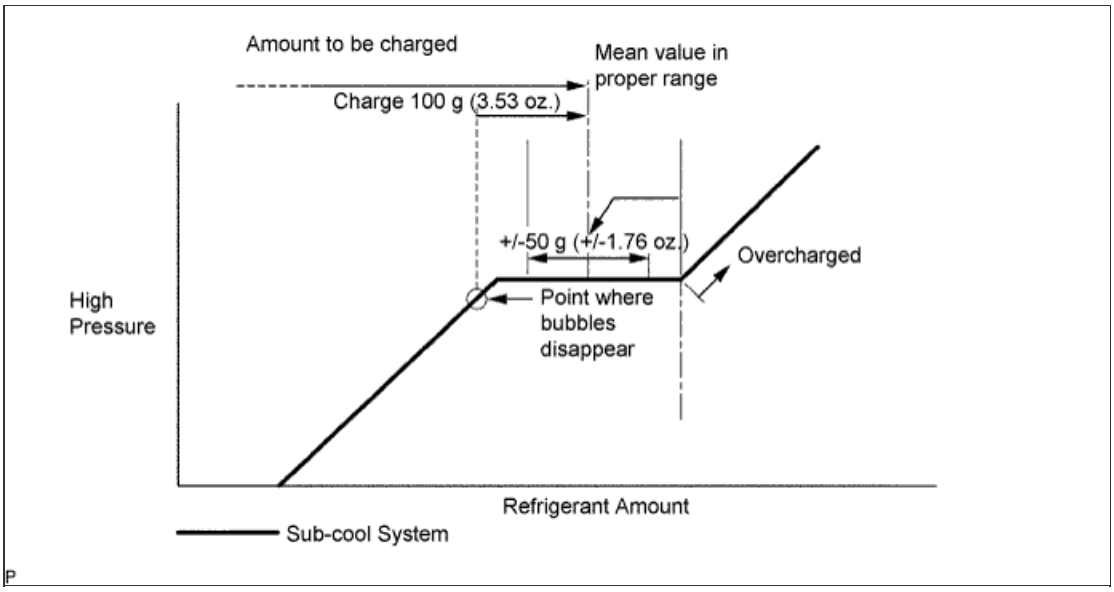
a. Install the front seat assembly LH (Click here).

14. INSTALL FRONT SEAT ASSEMBLY LH (for Power Seat)

a. Install the front seat assembly LH (Click here).

15. CHARGE REFRIGERANT

SST



09985-20010 (09985-02130, 09985-02150, 09985-02090, 09985-02110, 09985-02010, 09985-02050, 09985-02060, 09985-02070)

a. Perform vacuum purging using a vacuum pump.

b. Charge refrigerant HFC-134a (134a).

Standard:

Condenser Core hickness	Air Conditioning ype	Cool Box	efrigerant Charging Amount
22 mm (0.866 in.)	w/o ear Cooler	w/ Cool Box	870 -30 g (30.7 -1.1 oz.)

for Preparation Click here

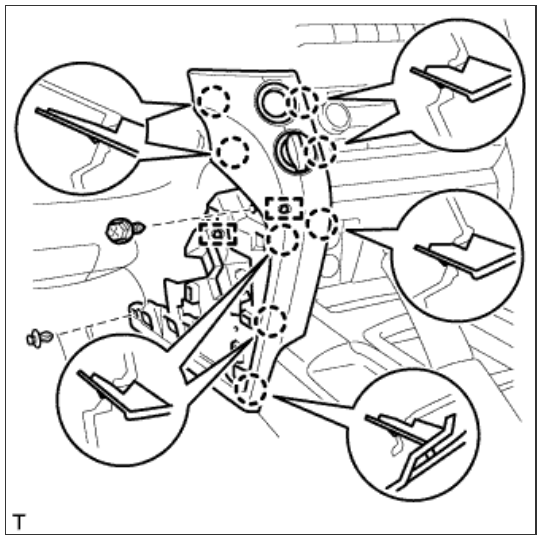
1. REMOVE NO. 2 INSTRUMENT PANEL FINISH PANEL CUSHION

a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 7 claws and remove the panel cushion.



2. REMOVE LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

a. Remove the clip.

b. Remove the screw.

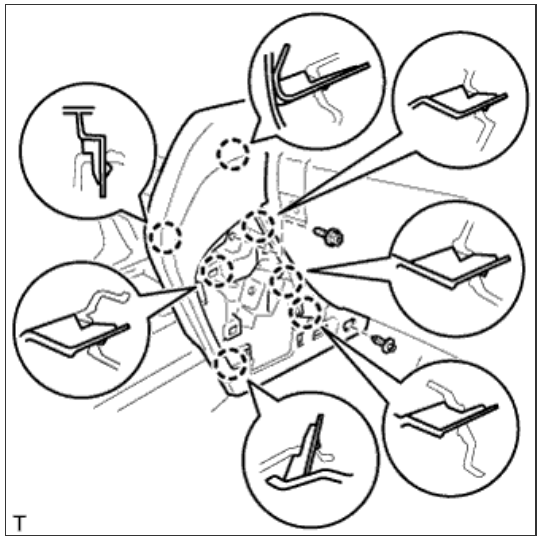
c. Detach the 8 claws.

d. Remove the panel pad and disconnect the connectors and 2 clamps.

3. REMOVE NO. 1 INSTRUMENT PANEL FINISH PANEL CUSHION

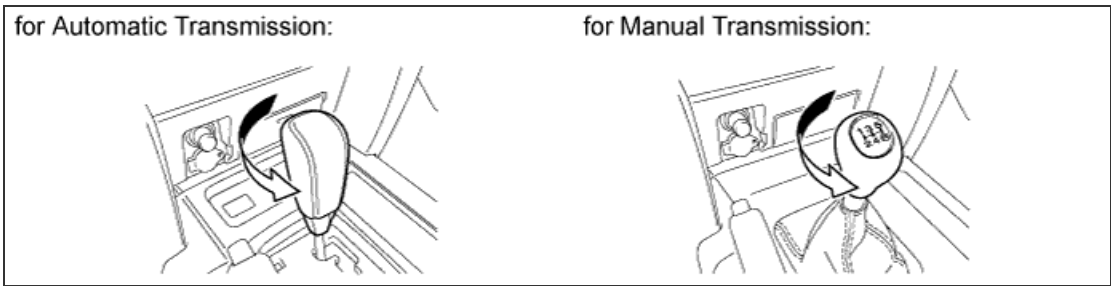
a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 7 claws and remove the panel cushion.



4. REMOVE LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY RH

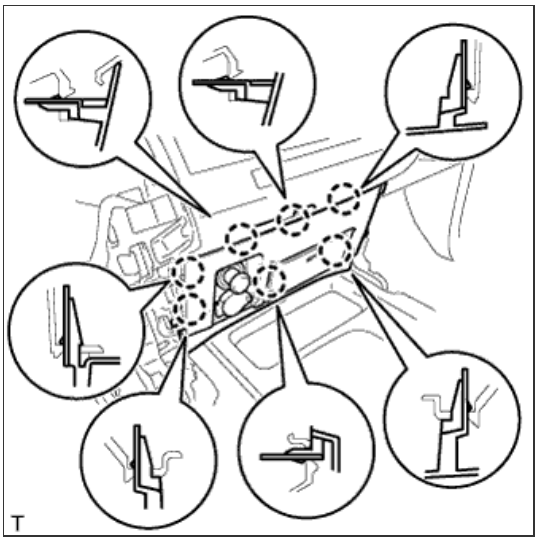
a. Remove the clip.



b. Remove the screw.

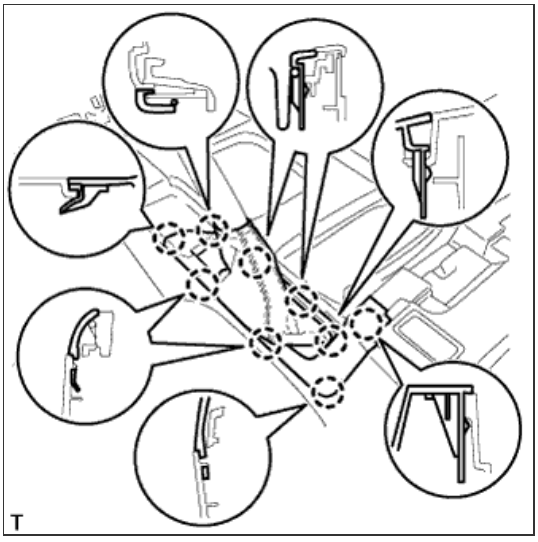
c. Detach the 7 claws and remove the panel.

5. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY



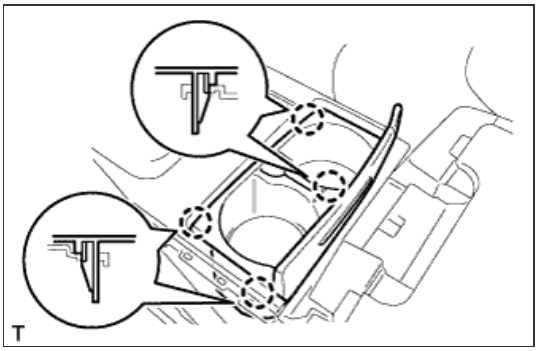
a. Twist the shift lever knob in the direction indicated by the arrow and remove it.

6. REMOVE LOWER CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY



a. Detach the 7 claws.

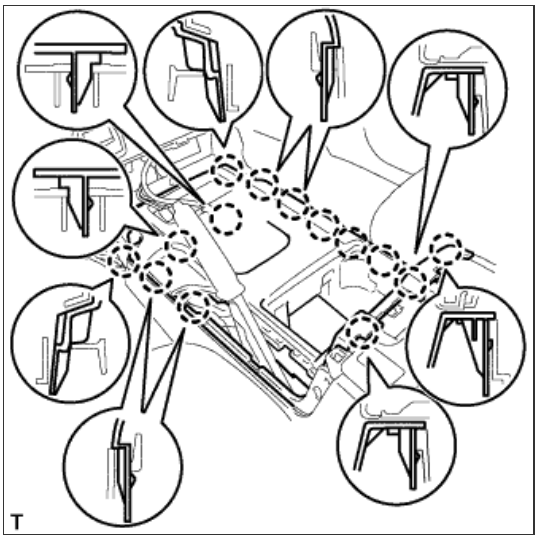
b. Disconnect the connectors and remove the panel.



7. REMOVE REAR UPPER CONSOLE PANEL SUB-ASSEMBLY

a. Detach the 9 claws and remove the panel.

8. REMOVE CONSOLE CUP HOLDER BOX SUB-ASSEMBLY

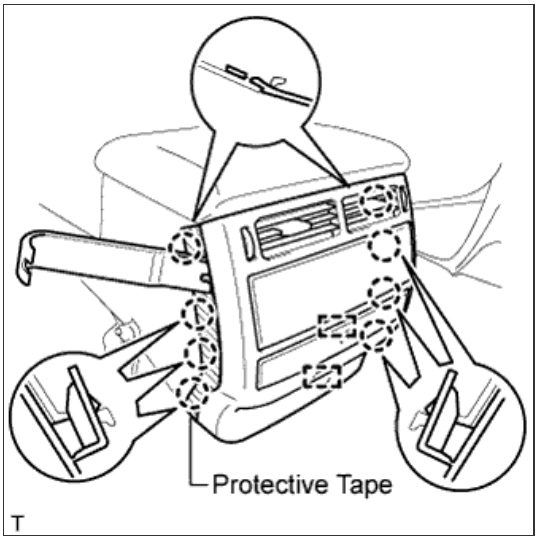


a. Detach the 4 claws and remove the box.

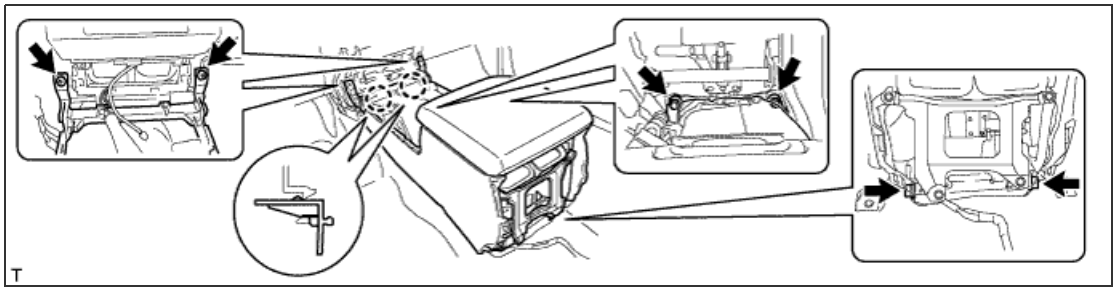
9. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY

a. Detach the 14 claws.

b. Disconnect the connectors and remove the console panel.



10. REMOVE REAR CONSOLE END PANEL SUB-ASSEMBLY



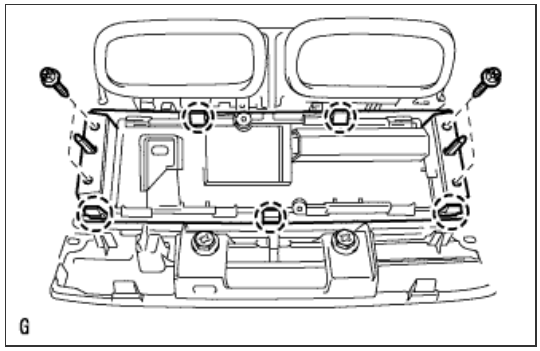
a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 8 claws.

c. Remove the end panel and disconnect the connectors and 2 clamps.

11. REMOVE REAR CONSOLE BOX SUB-ASSEMBLY

a. Remove the 4 bolts and 2 screws.

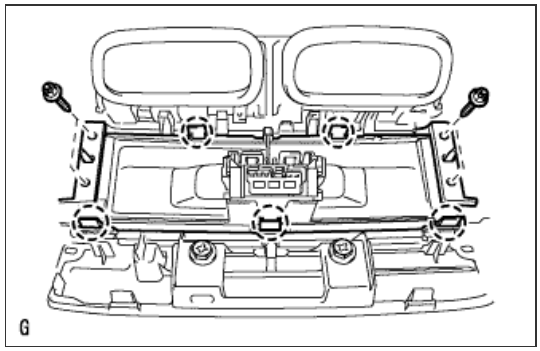


b. Detach the 2 claws and remove the console box.

for Preparation Click here

1. REMOVE NO. 2 AIR CONDITIONING CONTROL ASSEMBLY (w/ Rear Air Conditioning System)

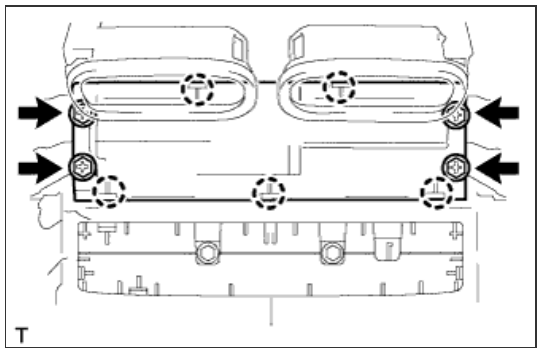
a. Remove the 4 screws.



b. Detach the 5 claws and remove the air conditioning control.

2. REMOVE AIR CONDITIONING CONTROL ASSEMBLY (w/ Rear Cooler)

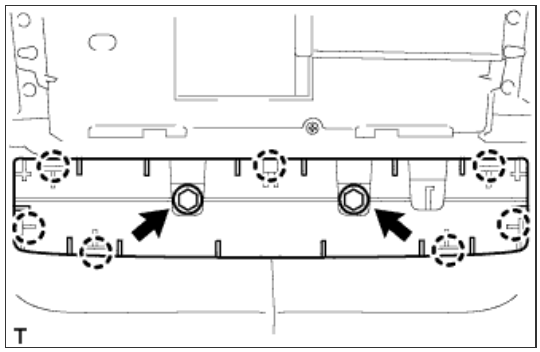
a. Remove the 4 screws.



b. Detach the 5 claws and remove the air conditioning control.

3. REMOVE REAR COOLER SWITCH HOLE COVER (w/o Rear Cooler)

a. Remove the 4 screws.

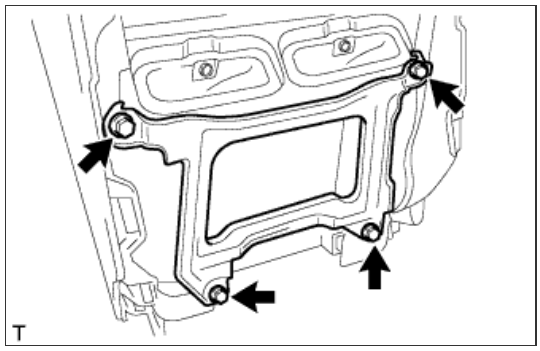


b. Detach the 5 claws and remove the hole cover.

4. REMOVE INSTRUMENT PANEL HOLE COVER

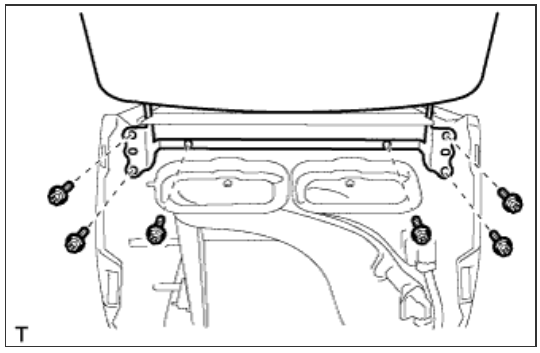
a. Remove the 2 screws.

b. Detach the 7 claws and remove the hole cover.



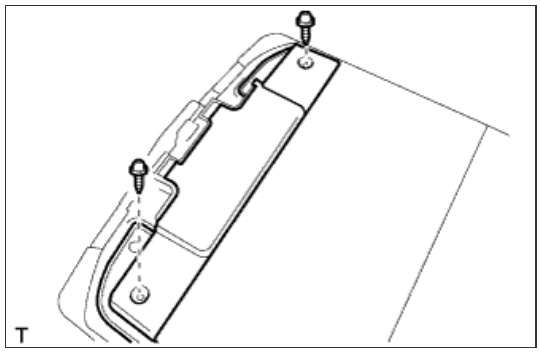
5. REMOVE CONSOLE BOX POCKET

a. Remove the box pocket.



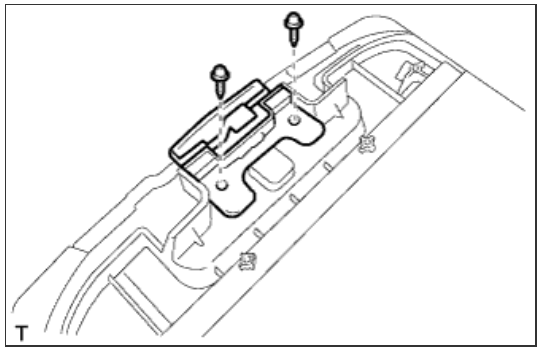
6. REMOVE REAR CONSOLE BOX MOUNTING BRACKET

a. Remove the 4 screws and bracket.



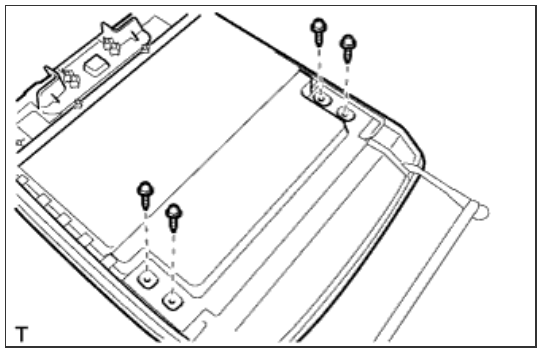
7. REMOVE CONSOLE COMPARTMENT DOOR SUB-ASSEMBLY

a. Remove the 6 screws and door.

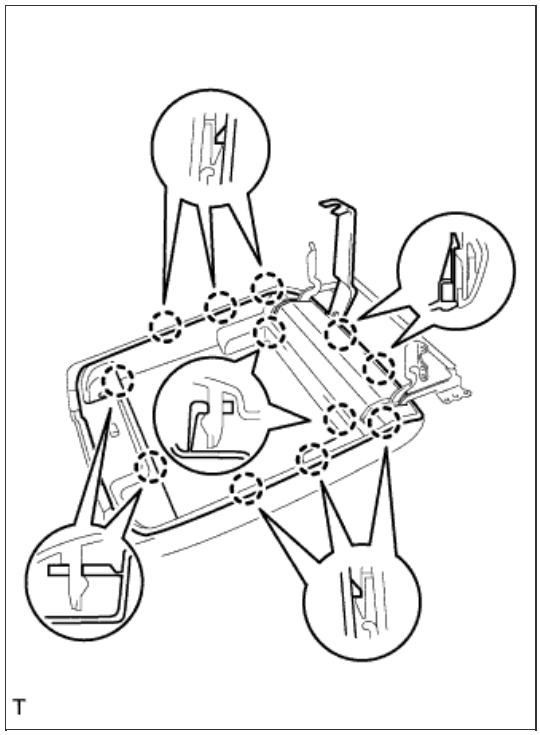


8. REMOVE CONSOLE COMPARTMENT DOOR LOCK SUB-ASSEMBLY

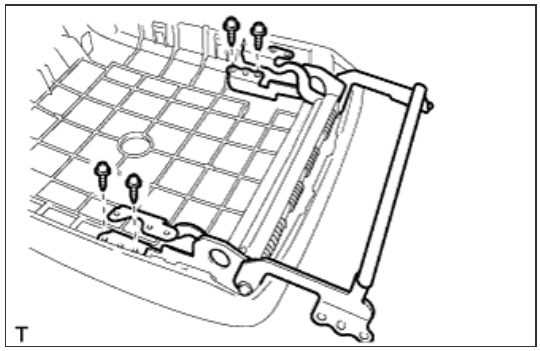
a. Remove the 2 screws and lower box.



b. Remove the 2 screws and door lock.

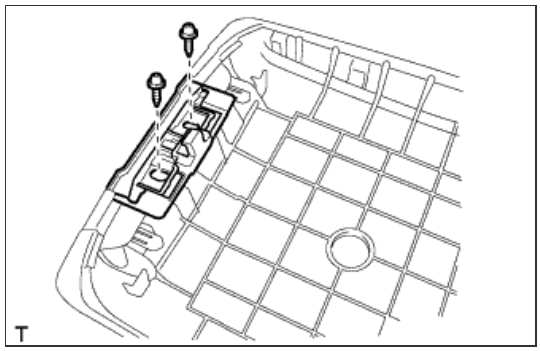


9. REMOVE CONSOLE COMPARTMENT DOOR HINGE SUB-ASSEMBLY



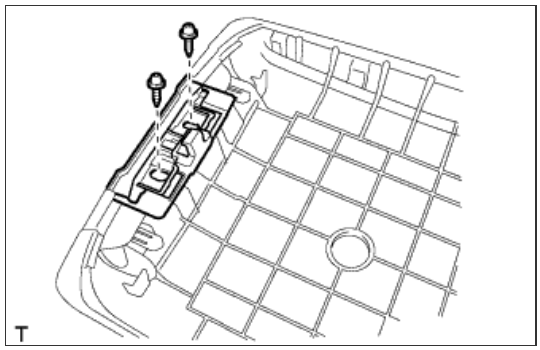
a. Remove the 4 screws and upper box.

b. Using a moulding remover, detach the 12 claws and remove the inner door.



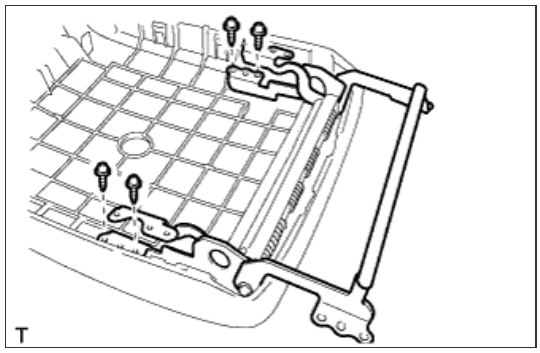
c. Remove the 4 screws and door hinge.

10. REMOVE CONSOLE COMPARTMENT DOOR LOCK



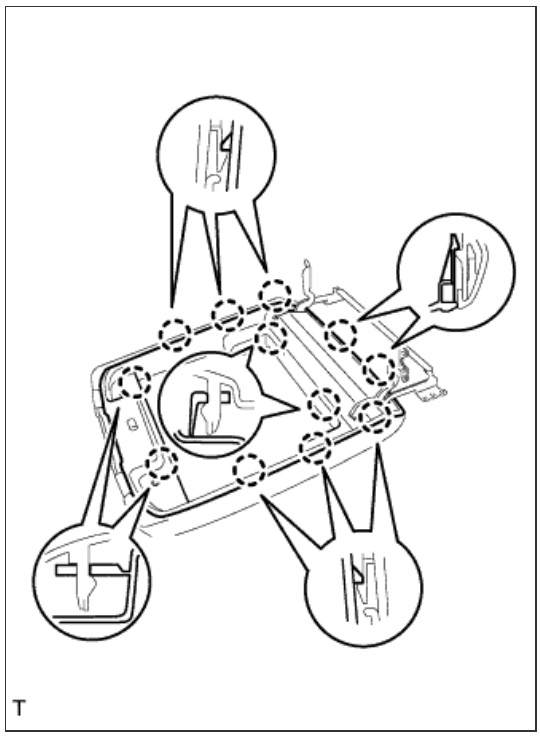
a. Remove the 2 screws and door lock.

for Preparation Click here

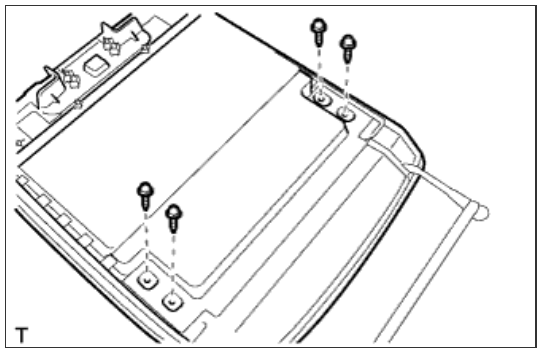


1. INSTALL CONSOLE COMPARTMENT DOOR LOCK

a. Install the door lock with the 2 screws.

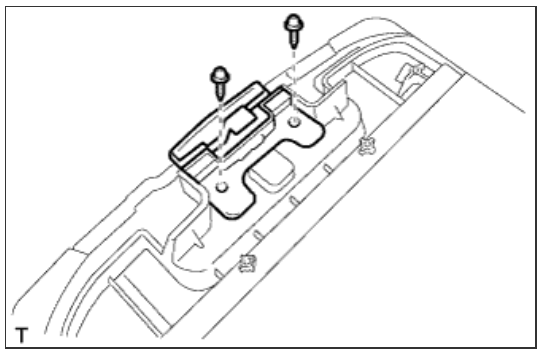


2. INSTALL CONSOLE COMPARTMENT DOOR HINGE SUB-ASSEMBLY

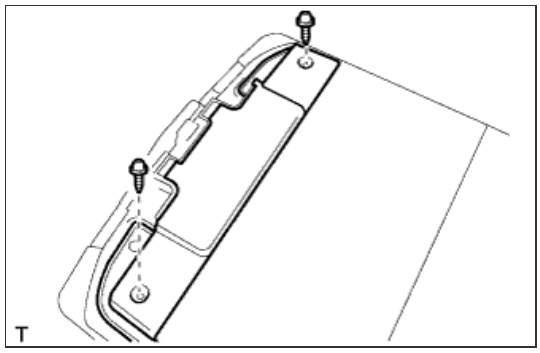


a. Install the door hinge with the 4 screws.

b. Attach the 12 claws to install the inner door.

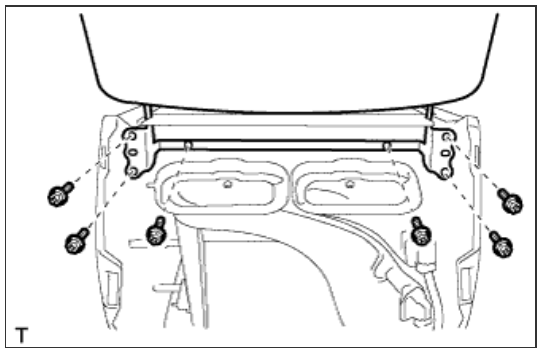


c. Install the upper box with the 4 screws.

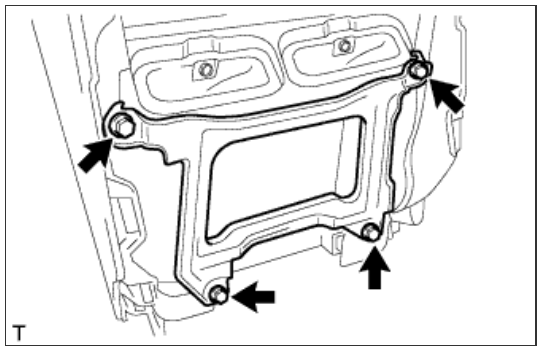


3. INSTALL CONSOLE COMPARTMENT DOOR LOCK SUB-ASSEMBLY

a. Install the door lock with the 2 screws.



b. Install the lower box with the 2 screws.

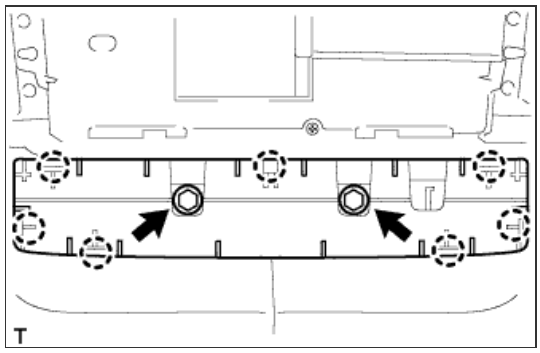


4. INSTALL CONSOLE COMPARTMENT DOOR SUB-ASSEMBLY

a. Install the door with the 6 screws.

5. INSTALL REAR CONSOLE BOX MOUNTING BRACKET

a. Install the bracket with the 4 bolts.

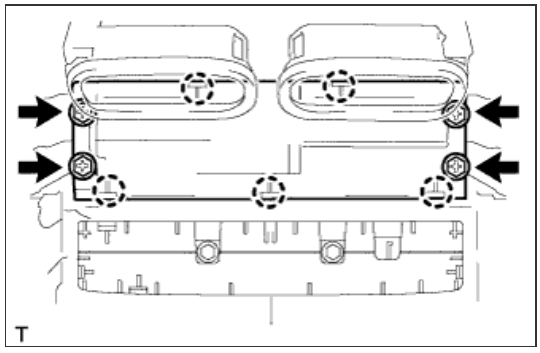


6. INSTALL CONSOLE BOX POCKET

a. Install the box pocket.

7. INSTALL INSTRUMENT PANEL HOLE COVER

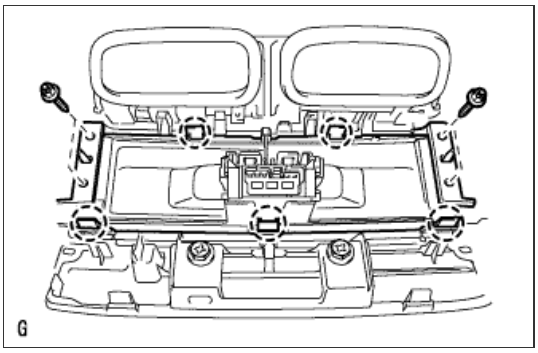
a. Attach the 7 claws to install the hole cover.



b. Install the 2 screws.

8. INSTALL REAR COOLER SWITCH HOLE COVER (w/o Rear Cooler)

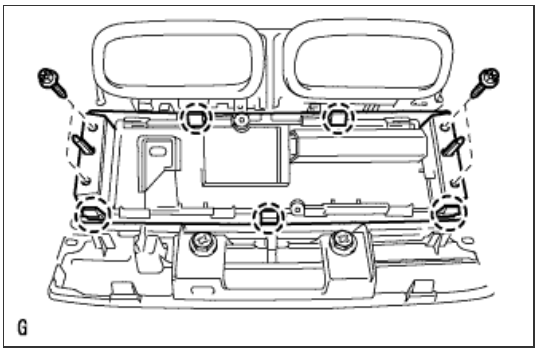
a. Attach the 5 claws to install the hole cover.



b. Install the 4 screws.

9. INSTALL AIR CONDITIONING CONTROL ASSEMBLY (w/ Rear Cooler)

a. Attach the 5 claws to install the air conditioning control.

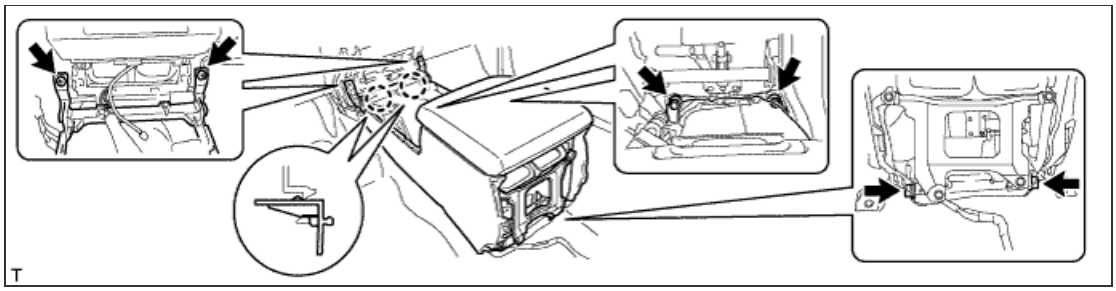


b. Install the 4 screws.

10. INSTALL NO. 2 AIR CONDITIONING CONTROL ASSEMBLY (w/ Rear Air Conditioning System)

a. Attach the 5 claws to install the air conditioning control.

b. Install the 4 screws.

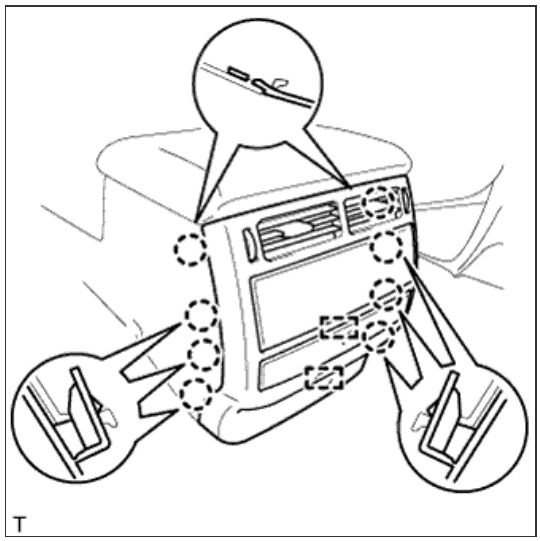


for Preparation Click here

HINT:

A bolt without a torque specification is shown in the standard bolt chart (Click here).

1. INSTALL REAR CONSOLE BOX SUB-ASSEMBLY

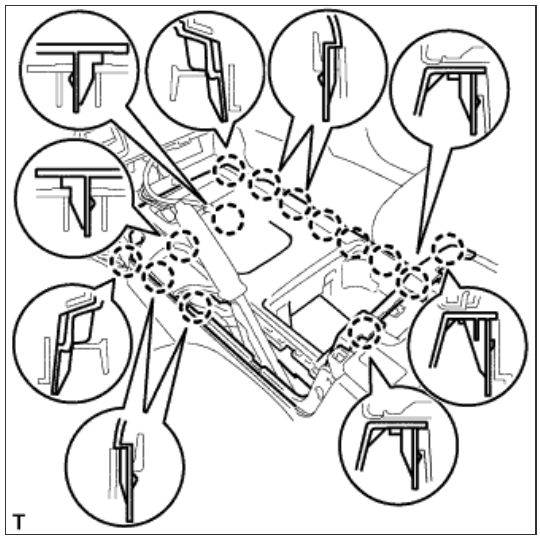


a. Attach the 2 claws.

b. Install the console box with the 4 bolts and 2 screws.

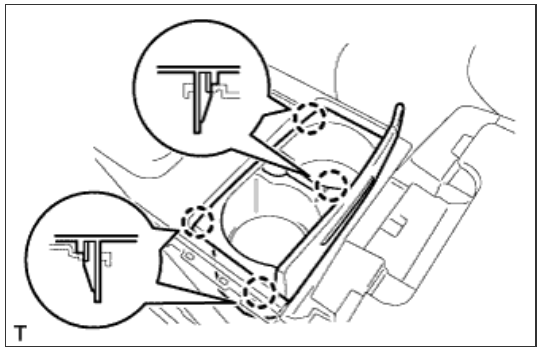
2. INSTALL REAR CONSOLE END PANEL SUB-ASSEMBLY

a. Connect the connectors and 2 clamps.



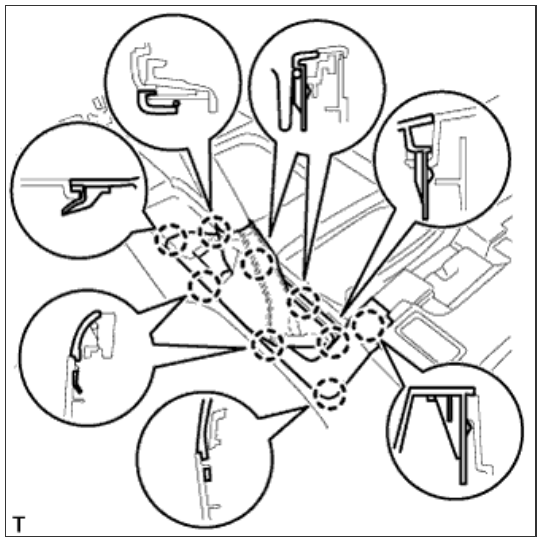
b. Attach the 8 claws to install the end panel.

3. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY



a. Connect the connectors.

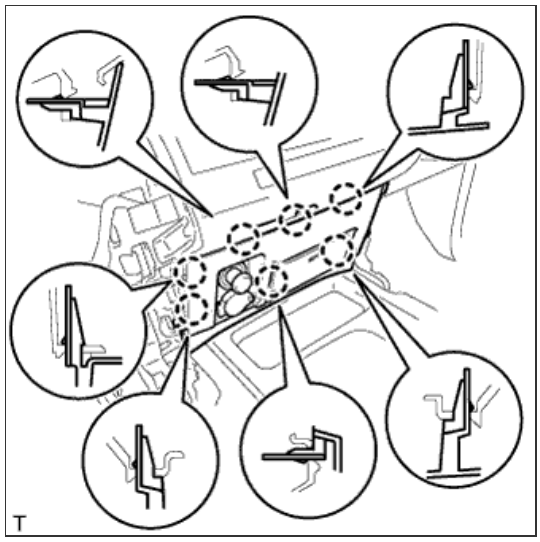
b. Attach the 14 claws to install the console panel.



4. INSTALL CONSOLE CUP HOLDER BOX SUB-ASSEMBLY

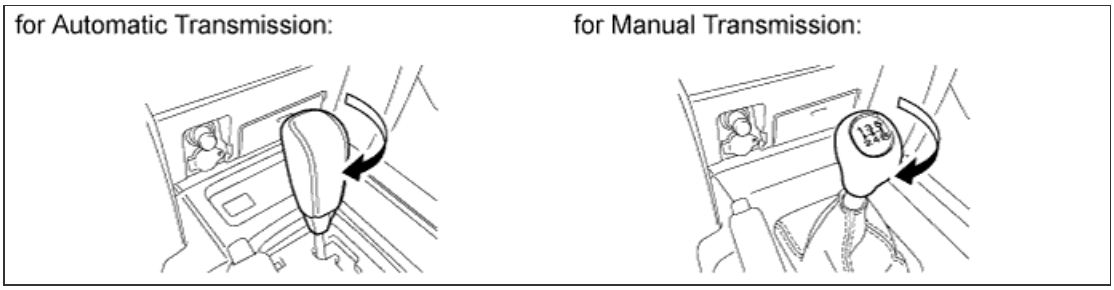
a. Attach the 4 claws to install the box.

5. INSTALL REAR UPPER CONSOLE PANEL SUB-ASSEMBLY



a. Attach the 9 claws to install the panel.

6. INSTALL LOWER CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY

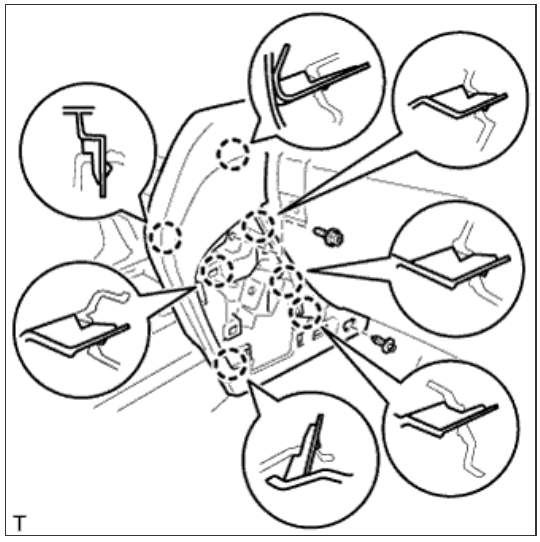


a. Connect the connectors.

b. Attach the 7 claws to install the panel.

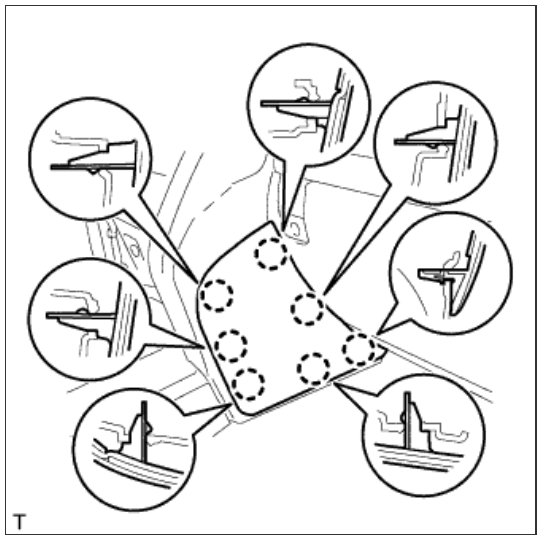
7. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY

a. Install the shift lever knob and twist it in the direction indicated by the arrow.



8. INSTALL LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY RH

a. Attach the 7 claws to install the panel pad.

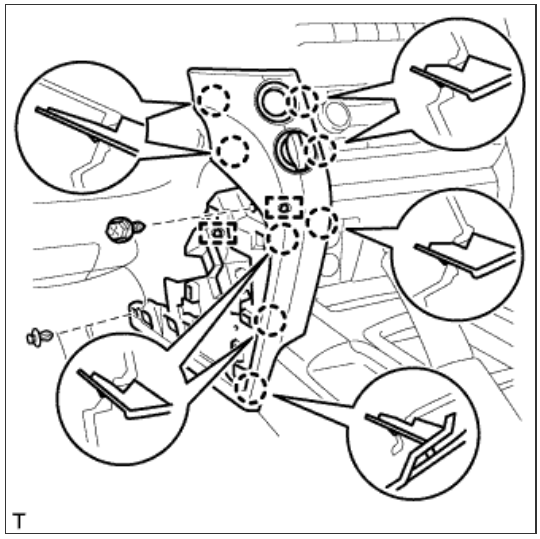


b. Install the screw.

c. Install the clip.

9. INSTALL NO. 1 INSTRUMENT PANEL FINISH PANEL CUSHION

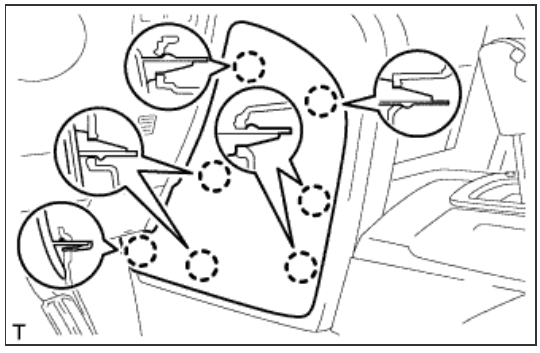
a. Attach the 7 claws to install the panel cushion.



10. INSTALL LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

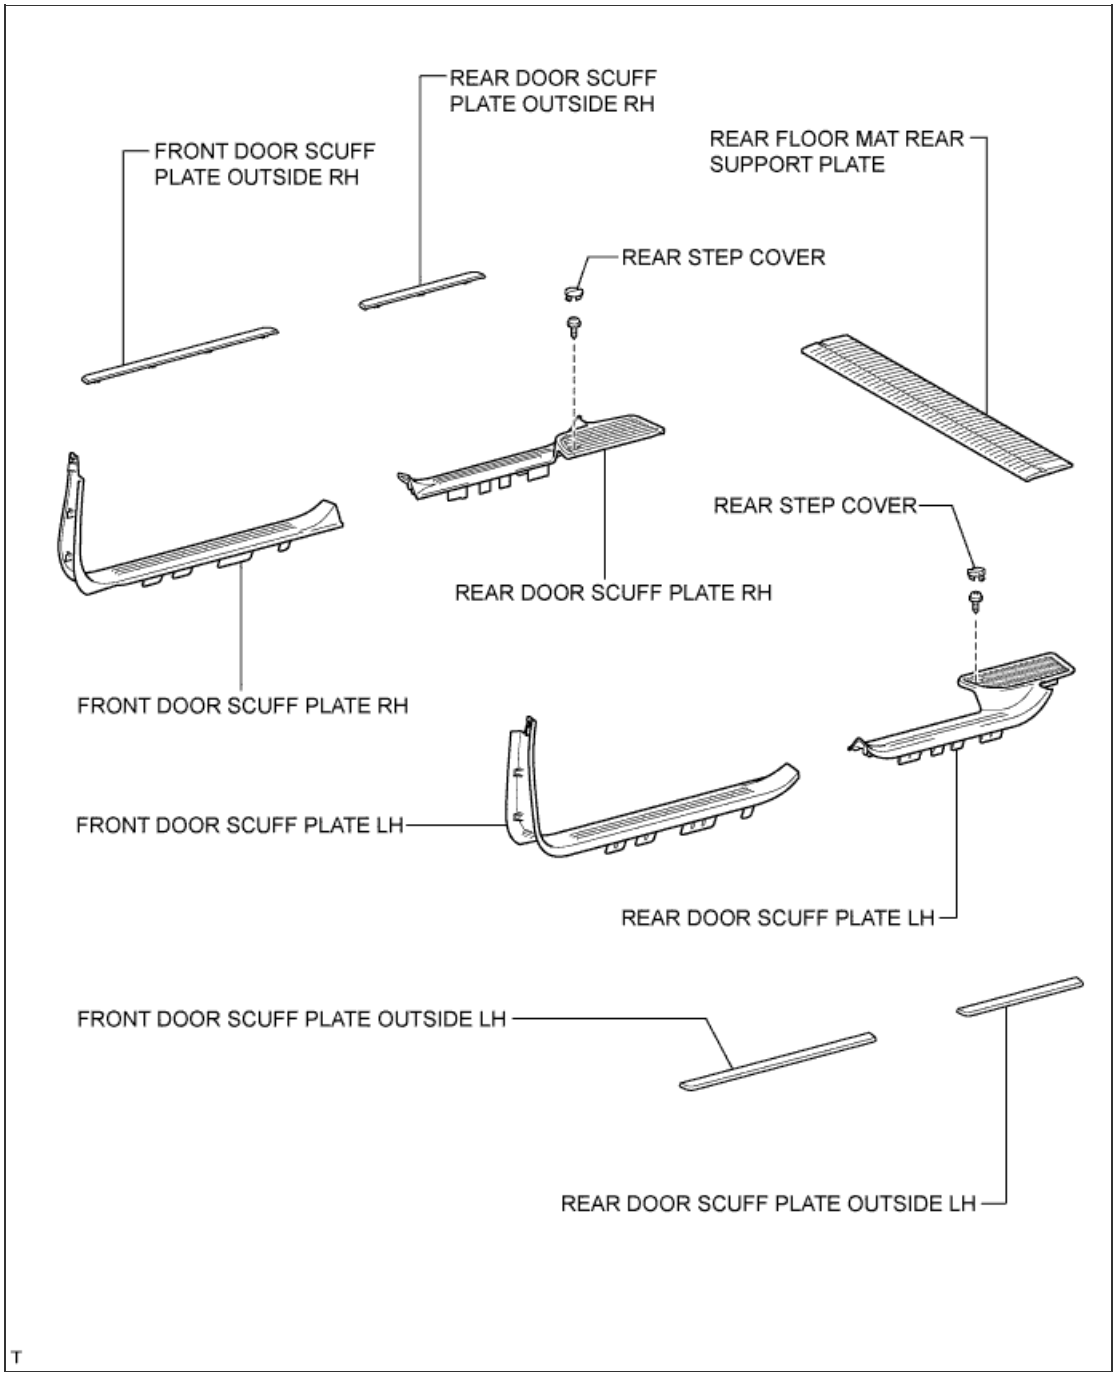
a. Connect the connectors and 2 clamps.

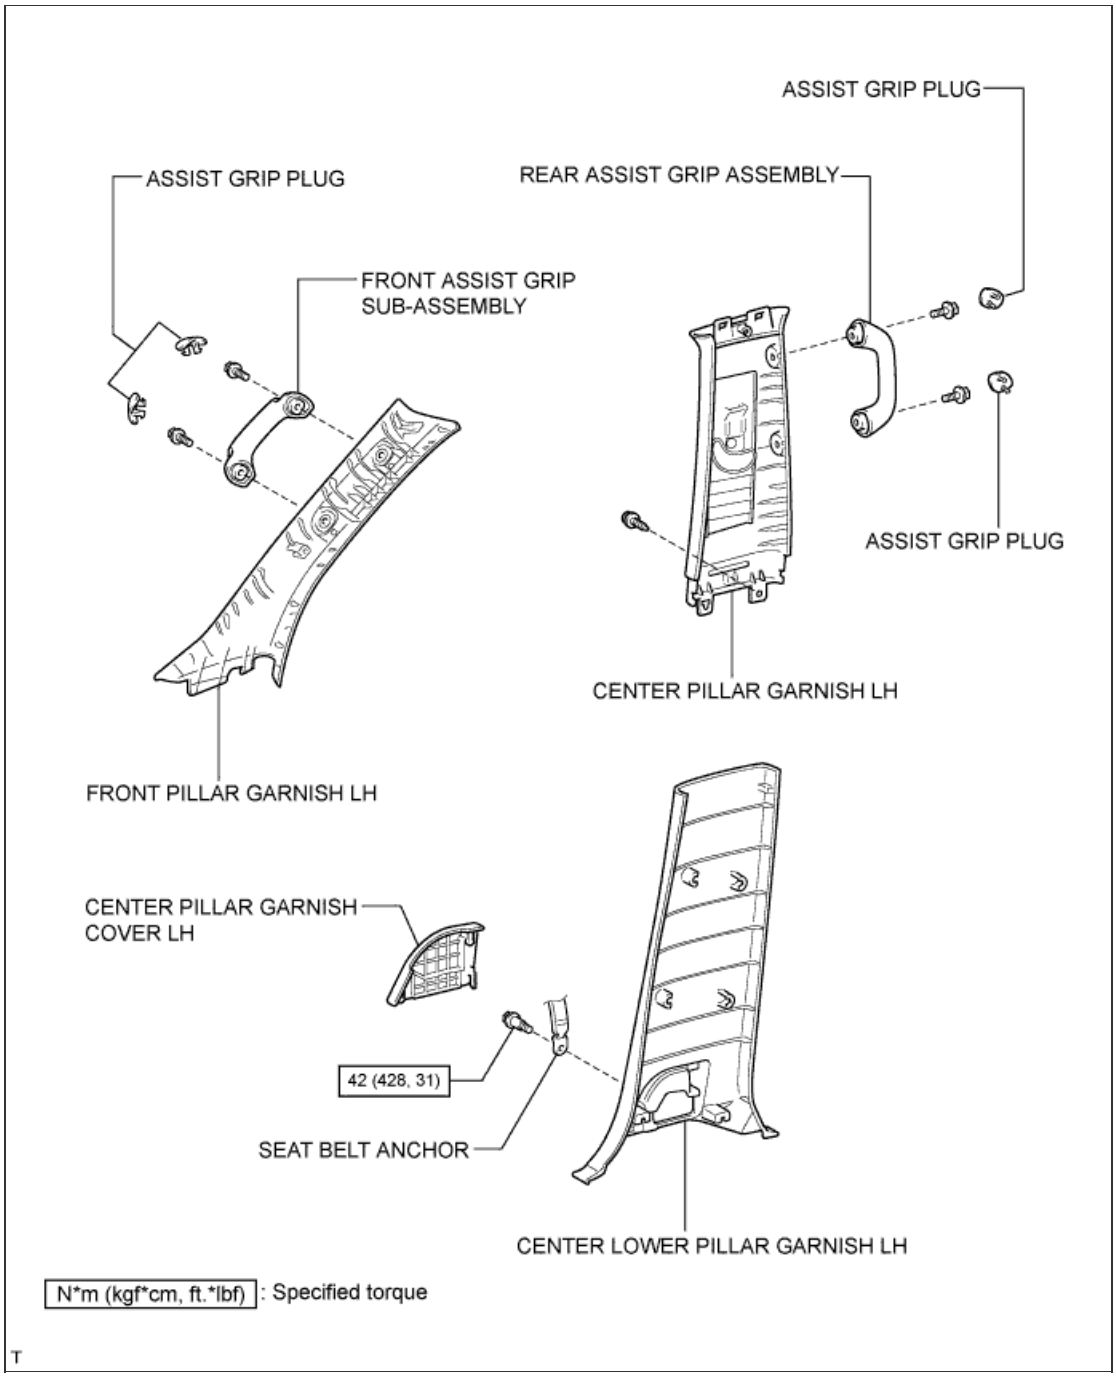
b. Attach the 8 claws to install the panel pad.



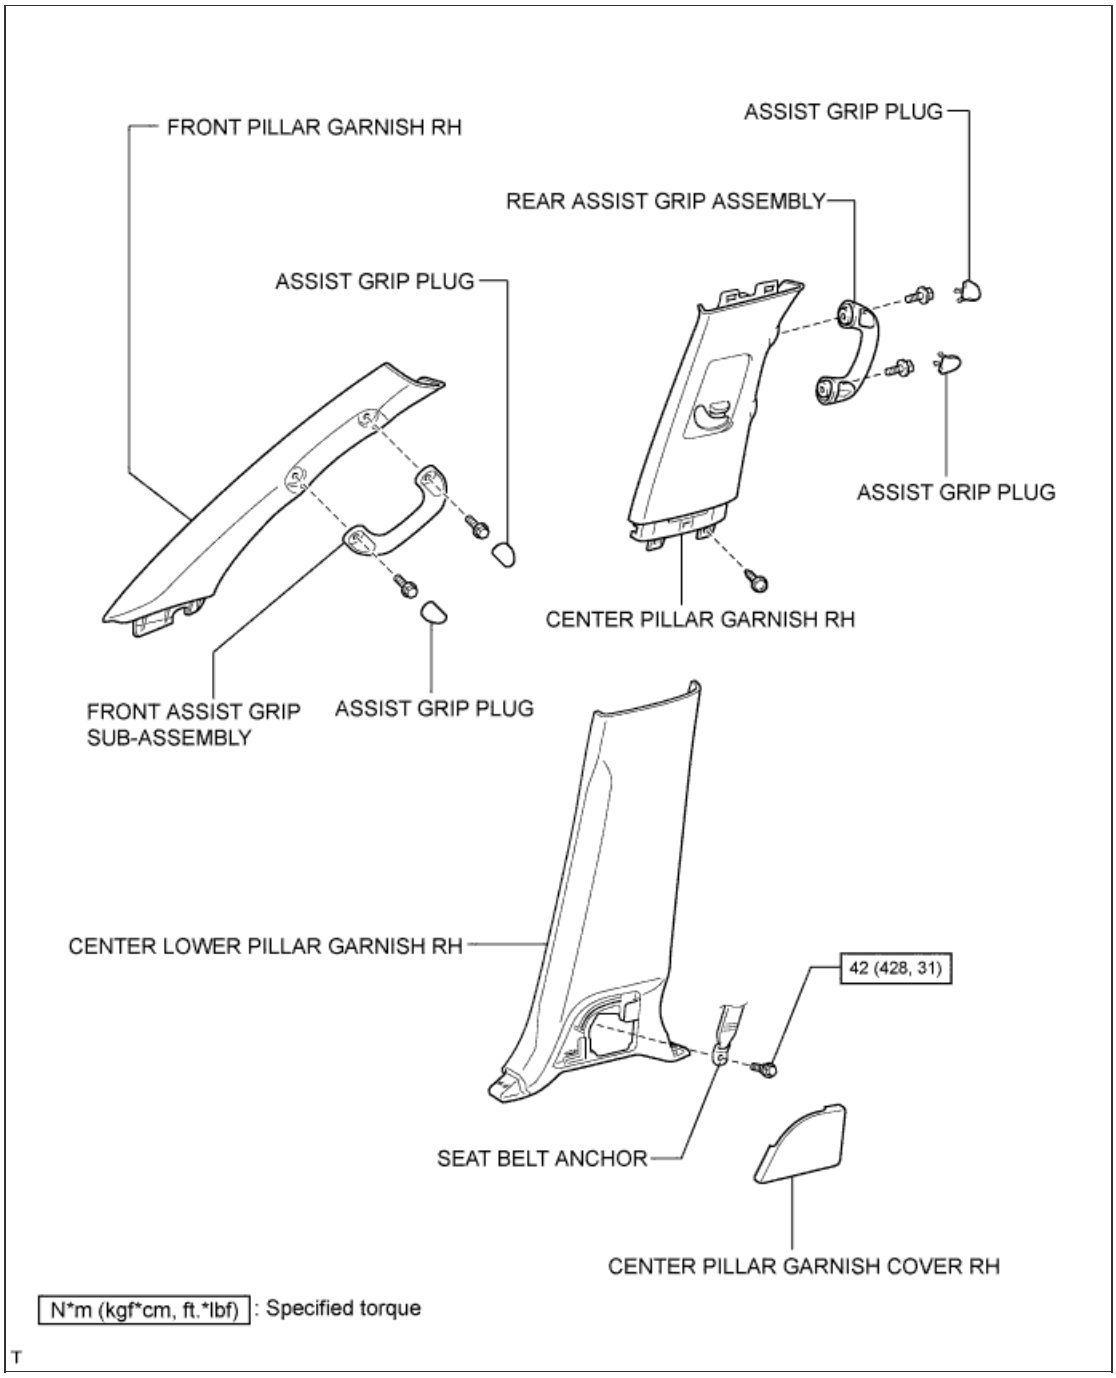
c. Install the screw.

d. Install the clip.





11. INSTALL NO. 2 INSTRUMENT PANEL FINISH PANEL CUSHION



a. Attach the 7 claws to install the panel cushion.

ANTENNA CORD SUB-ASSEMBLY
P

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE REAR NO. 2 SEAT ASSEMBLY LH (except Face to Face Seat Type)

a. Remove the rear No. 2 seat assembly LH (Click here).

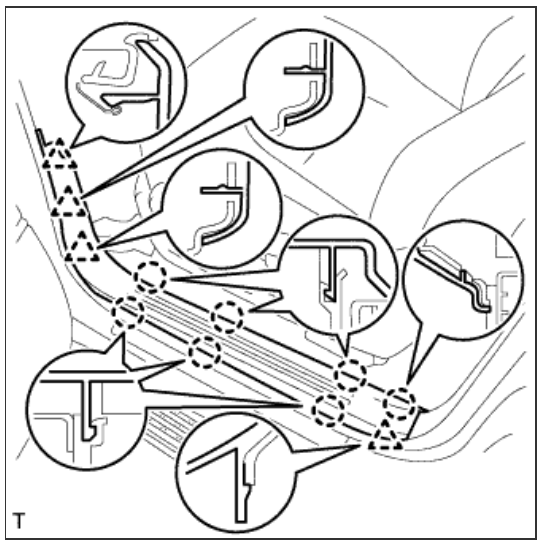
3. REMOVE REAR NO. 2 SEAT ASSEMBLY RH (except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

4. REMOVE REAR NO. 2 SEAT ASSEMBLY LH (for Face to Face Seat Type)

a. Remove the rear No. 2 seat assembly LH (Click here).



5. REMOVE REAR NO. 2 SEAT ASSEMBLY RH (for Face to Face Seat Type)

HINT:

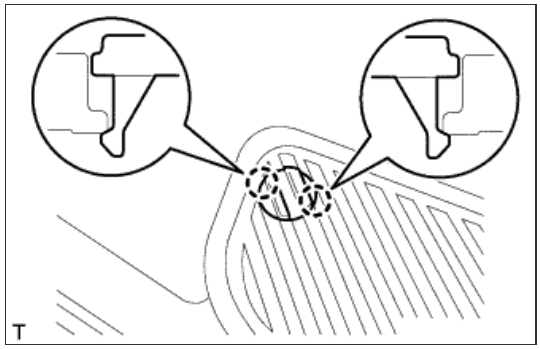
Use the same procedures described for the LH side.

6. REMOVE FRONT DOOR SCUFF PLATE LH

a. Detach the 7 claws and 4 clips, and remove the scuff plate.

7. REMOVE FRONT DOOR SCUFF PLATE RH

HINT:

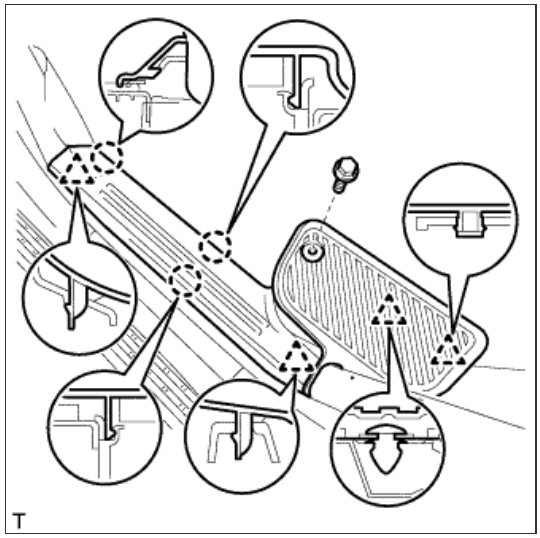


Use the same procedures described for the LH side.

8. REMOVE REAR STEP COVER

HINT:

Use the same procedure to remove the step cover on the other side.

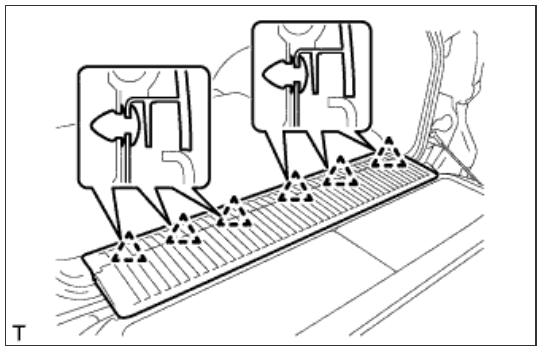


a. Detach the 2 claws and remove the step cover.

9. REMOVE REAR DOOR SCUFF PLATE LH

a. Remove the screw.

b. Detach the 3 claws and 4 clips, and remove the scuff plate.



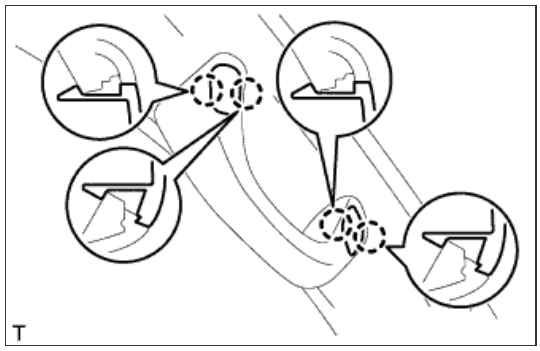
10. REMOVE REAR DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

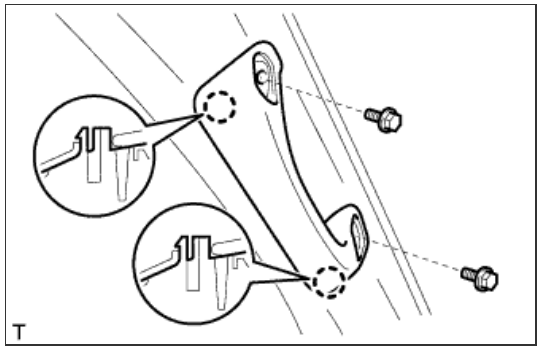
11. REMOVE REAR FLOOR MAT REAR SUPPORT PLATE

a. Detach the 6 clips and remove the support plate.



12. REMOVE FRONT ASSIST GRIP SUB-ASSEMBLY

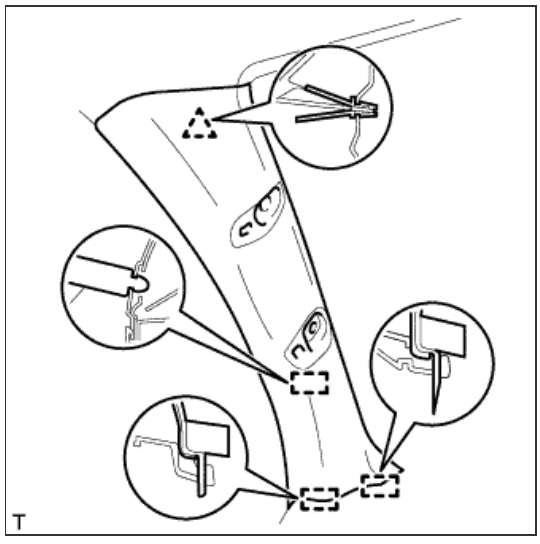
HINT:



Use the same procedure to remove the front assist grip on the other side.

a. Detach the 4 claws and remove the 2 assist grip plugs.

b. Remove the 2 bolts.

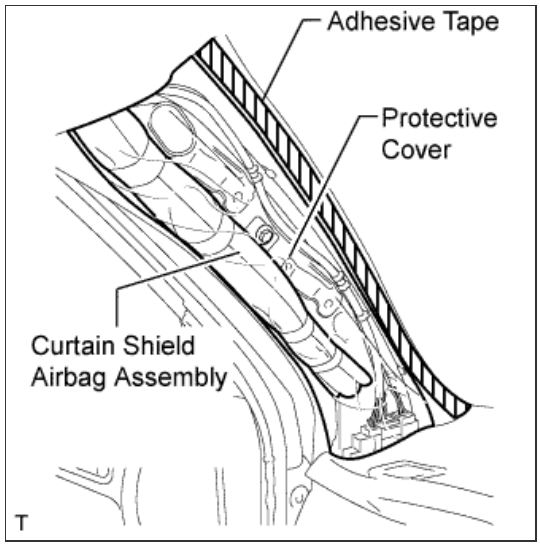


c. Detach the 2 claws and remove the front assist grip.

13. REMOVE FRONT PILLAR GARNISH LH

a. Detach the clip 3 guides, and remove the front pillar garnish.

b. for 9 Speakers:
Disconnect the speaker connector and then remove the front pillar garnish.



c. Protect the curtain shield airbag.

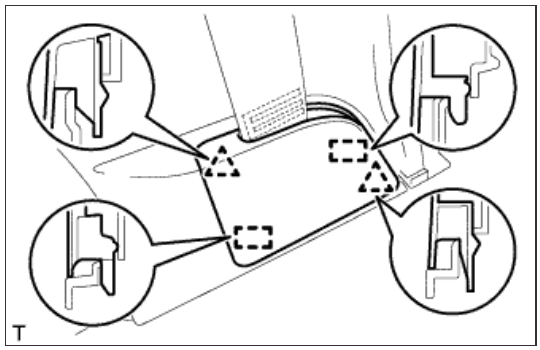
i. horoughly cover the airbag with a cloth or nylon sheet and fix the ends of the cover with adhesive tape, as shown in the illustration.

NOTICE:

Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish is removed.

14. REMOVE FRONT PILLAR GARNISH RH

HINT:



Use the same procedures described for the LH side.

15. REMOVE CENTER PILLAR GARNISH COVER LH

HINT:

- **for Manual Seat:**
  When removing the center pillar garnish cover, move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  When removing the center pillar garnish cover, connect the cable to the negative (-) battery terminal and operate the power seat switch to move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  After moving the front seat, disconnect the cable from the negative (-) battery terminal.

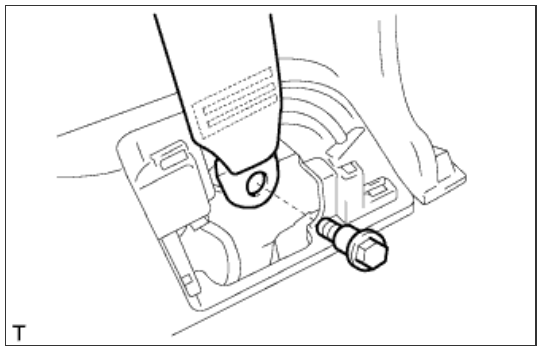
a. Detach the 2 clips and 2 guides, and remove the cover.

16. REMOVE CENTER PILLAR GARNISH COVER RH

HINT:

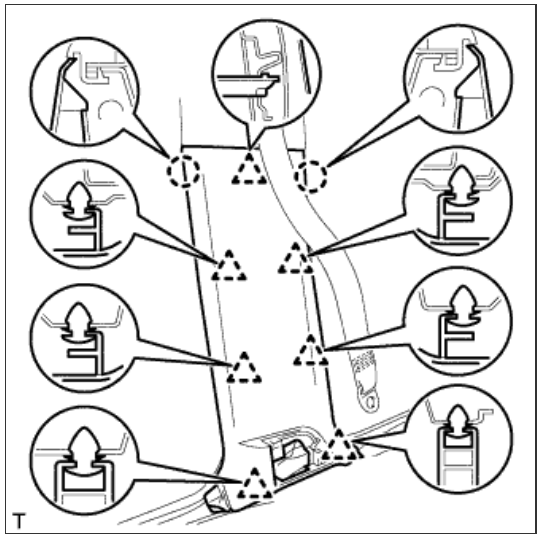
Use the same procedures described for the LH side.

17. REMOVE CENTER LOWER PILLAR GARNISH LH



HINT:

- **for Manual Seat:**
  When removing the center lower pillar garnish, move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  When removing the center lower pillar garnish, connect the cable to the negative (-) battery terminal and operate the power seat



switch to move the front seat and seatback to the foremost upright position.

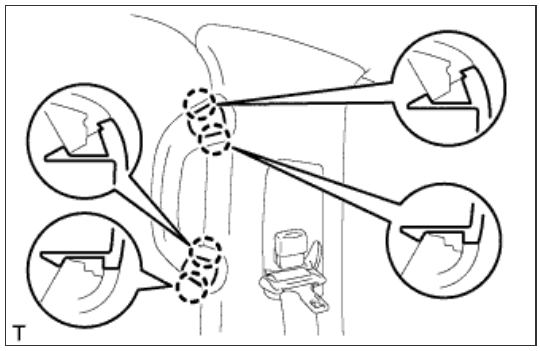
- **for Power Seat:**
  After moving the front seat, disconnect the cable from the negative (-) battery terminal.

a. Remove the bolt and seat belt anchor.

b. Detach the 2 claws and 7 clips, and remove the center lower pillar garnish.

18. REMOVE CENTER LOWER PILLAR GARNISH RH

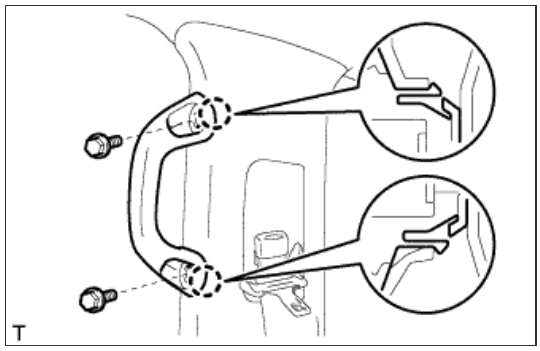
HINT:



Use the same procedures described for the LH side.

19. REMOVE REAR ASSIST GRIP ASSEMBLY

HINT:

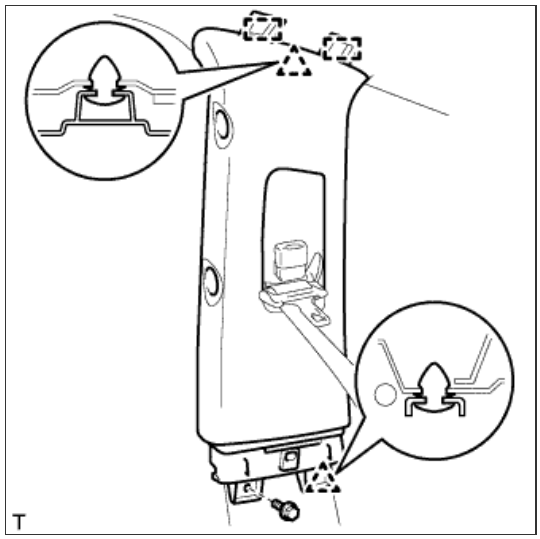


Use the same procedure to remove the rear assist grip on the other side.

a. Detach the 4 claws and remove the 2 assist grip plugs.

b. Remove the 2 bolts.

c. Detach the 2 claws and remove the rear assist grip.



20. REMOVE CENTER PILLAR GARNISH LH

a. Remove the bolt.

b. Detach the 2 clips and 2 guides.

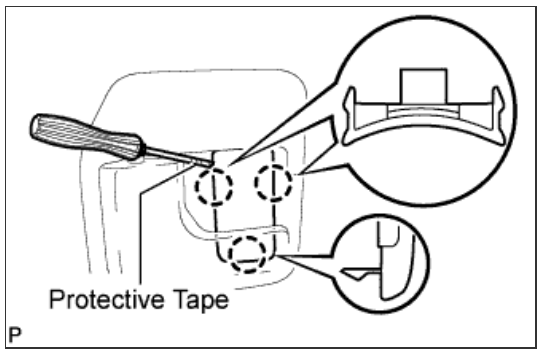
c. Pass the seat belt anchor through the center pillar garnish, and remove the center pillar garnish.

21. REMOVE CENTER PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

22. REMOVE REAR SEAT COVER CAP (w/ Rear No. 2 Seat, except Face to Face Seat Type)

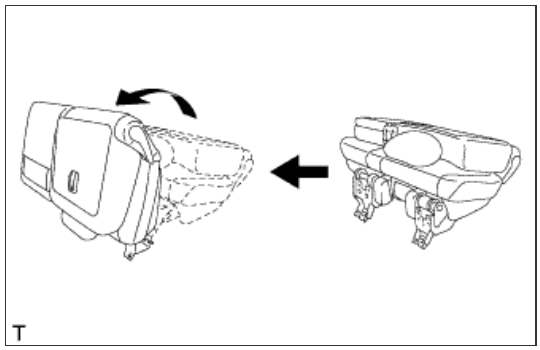


HINT:

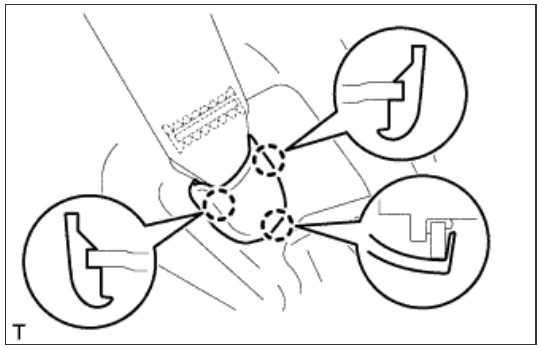
Use the same procedure to remove the rear seat cover cap on the other side.

a. Using a screwdriver, detach the 3 claws and remove the rear seat cover cap.

HINT:

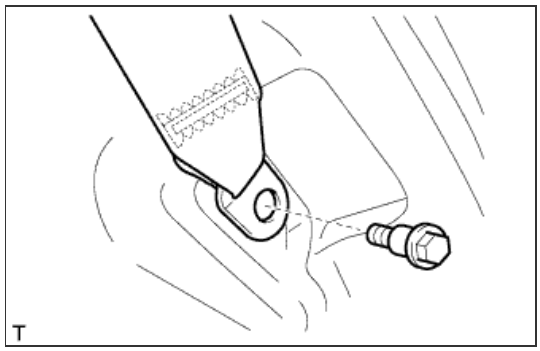


ape the screwdriver tip before use.

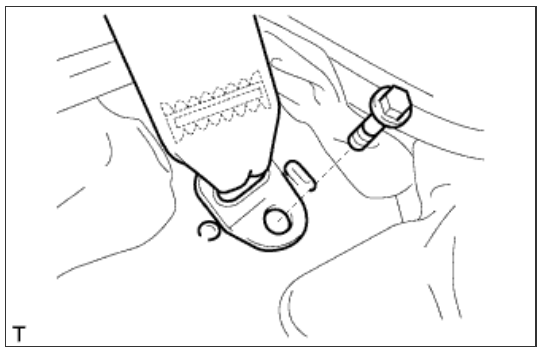


23. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY LH

HINT:



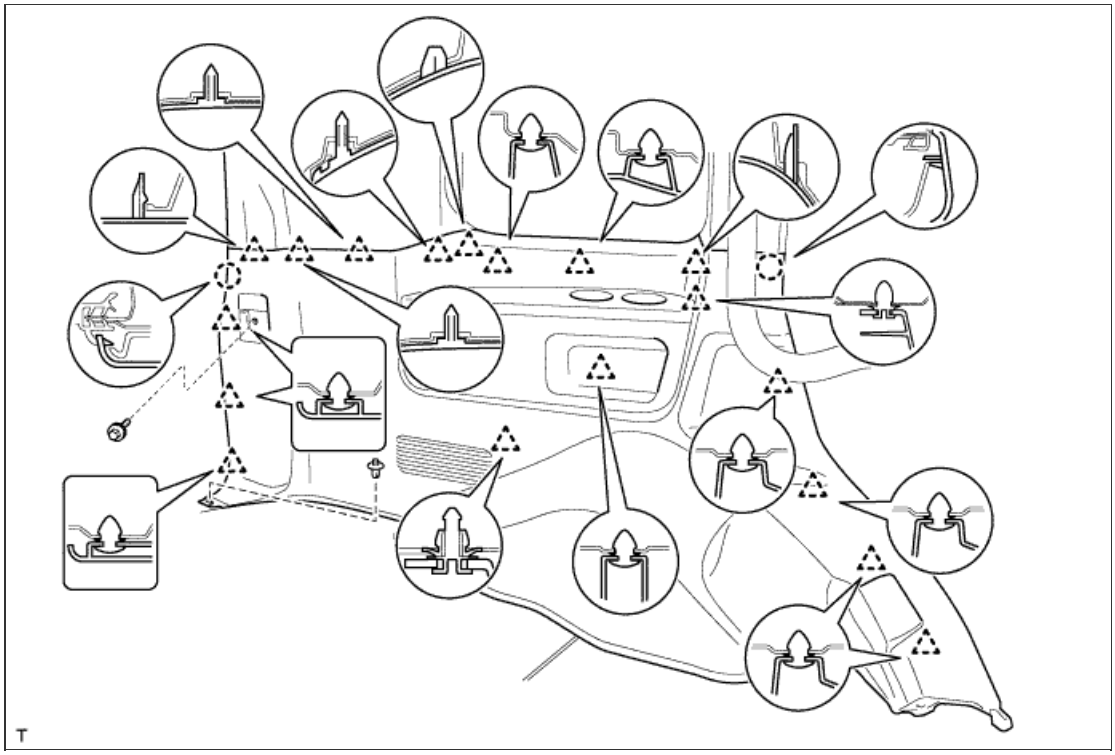
When removing the front arter trim panel, operate the reclining ad ster release handle and move the No. 1 rear seat to the position shown in the illustration.



a. Detach the 3 claws and remove the cover.

b. Remove the bolt and rear No. 1 seat belt anchor.

c. w/ Rear No. 2 Seat, except Face to Face Seat ype:
Remove the bolt and rear No. 2 seat belt anchor.

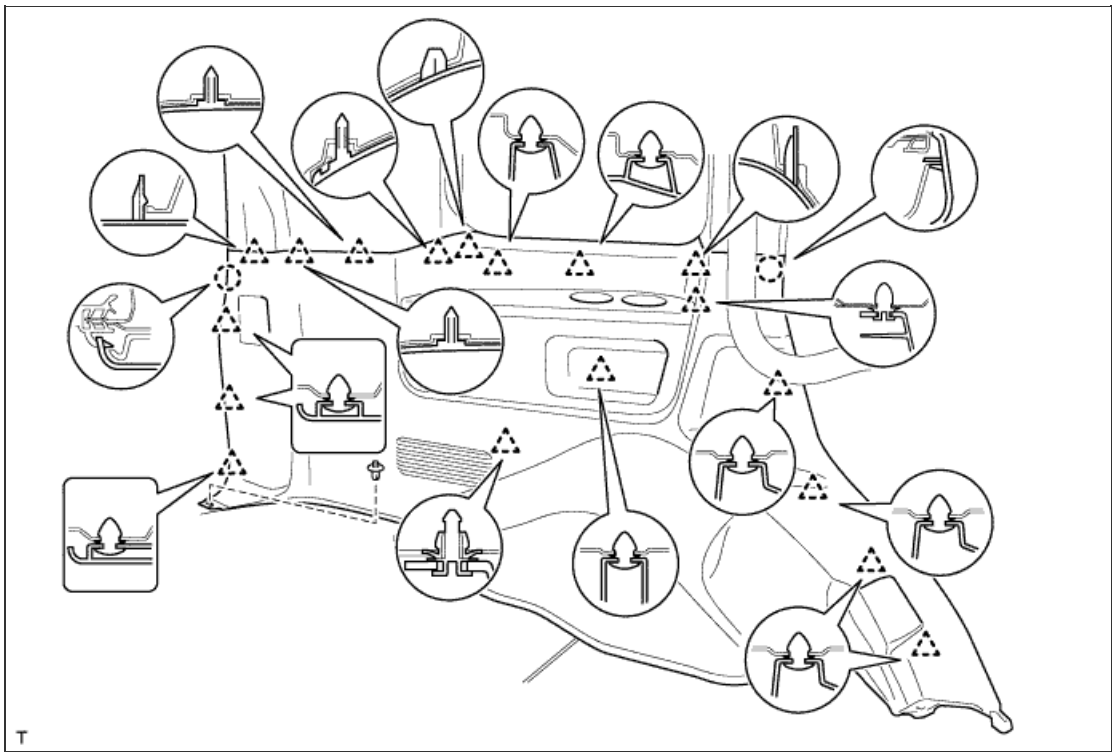


d. w/ Rear No. 2 Seat, except Face to Face Seat ype:

i. Remove the clip and bolt.

ii. Detach the 18 clips and 2 claws.

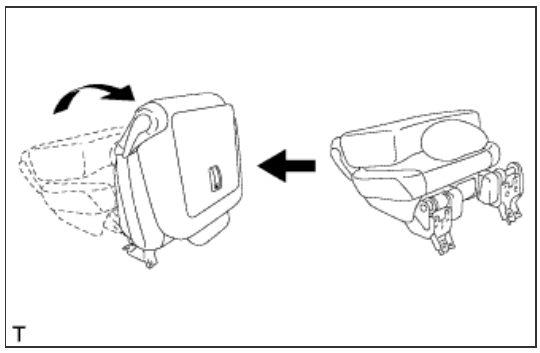
iii. w/o Rear Air Conditioning System:
Disconnect the rear seat lock control lever cable and then remove the arter trim panel.



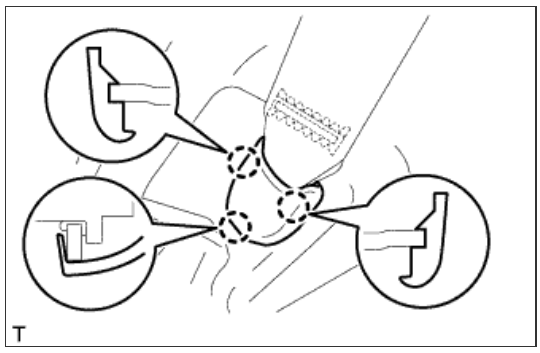
iv. w/ Rear Air Conditioning System:
Disconnect the thermistor connector and rear seat lock control lever cable, and then remove the arter trim panel.

e. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat ype:

i. Remove the clip.

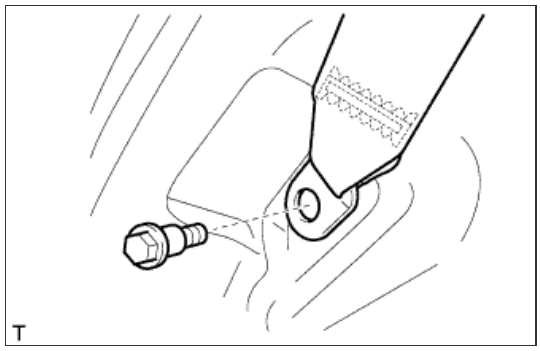


ii. Detach the 18 clips and 2 claws, and remove the arter trim panel.

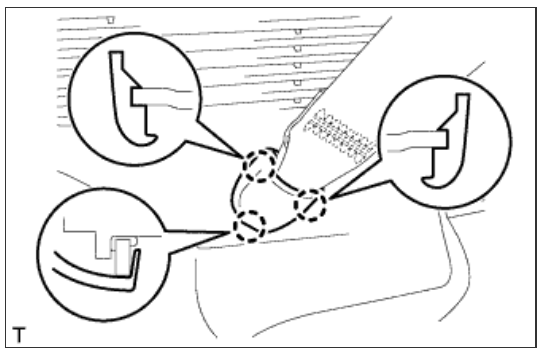


24. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY RH

HINT:

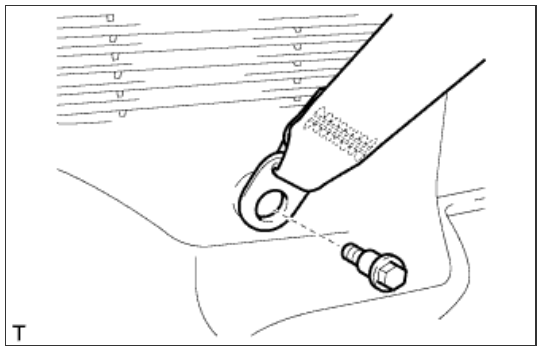


When removing the front arter trim panel, operate the reclining ad ster release handle and move the No. 1 rear seat to the position shown in the illustration.



a. Detach the 3 claws and remove the cover.

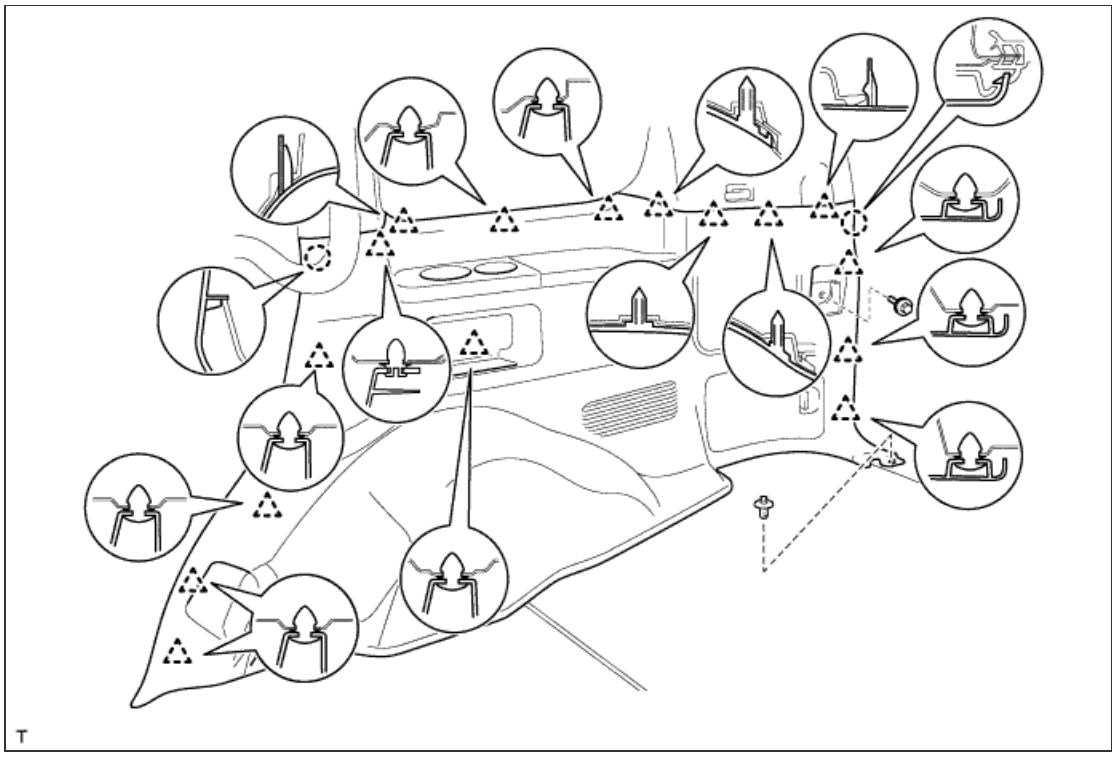
b. Remove the bolt and rear No. 1 seat belt anchor.



c. w/ Rear No. 2 Seat, except Face to Face Seat ype:

i. Detach the 3 claws and remove the cover.

ii. Remove the bolt and rear No. 2 seat belt anchor.

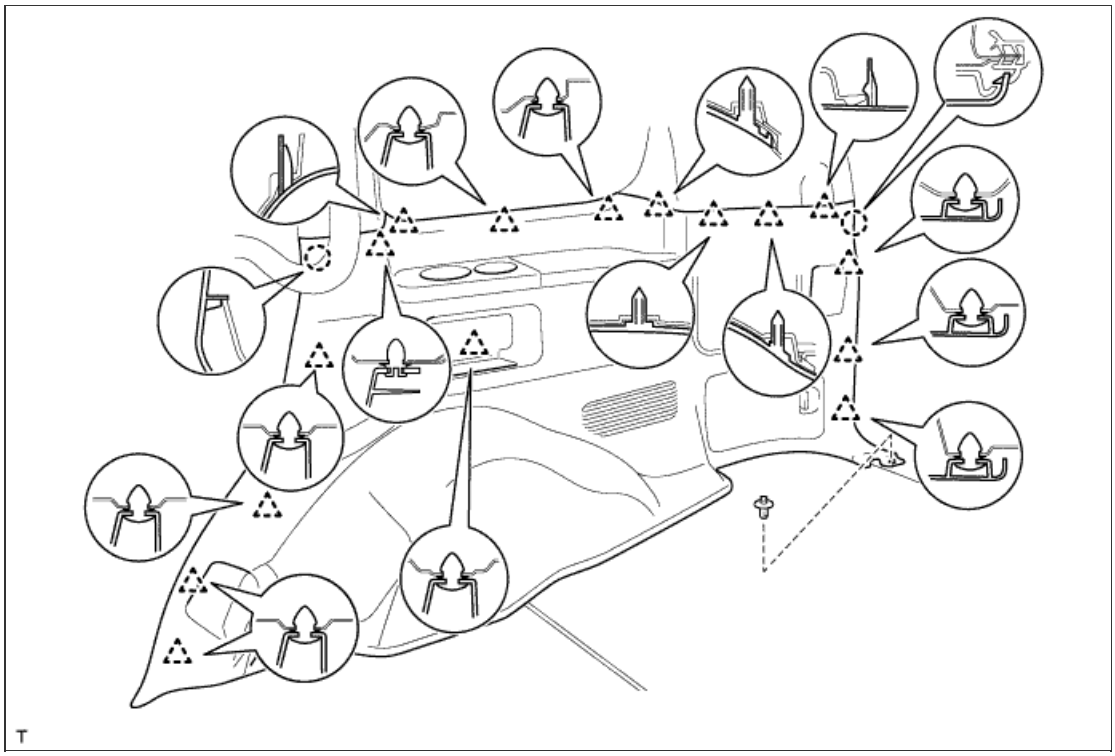


d. w/ Rear No. 2 Seat, except Face to Face Seat ype:

i. Remove the clip and bolt.

ii. Detach the 16 clips and 2 claws.

iii. w/o Rear Air Conditioning System:
Disconnect the rear seat lock control lever cable and then remove the arter trim panel.

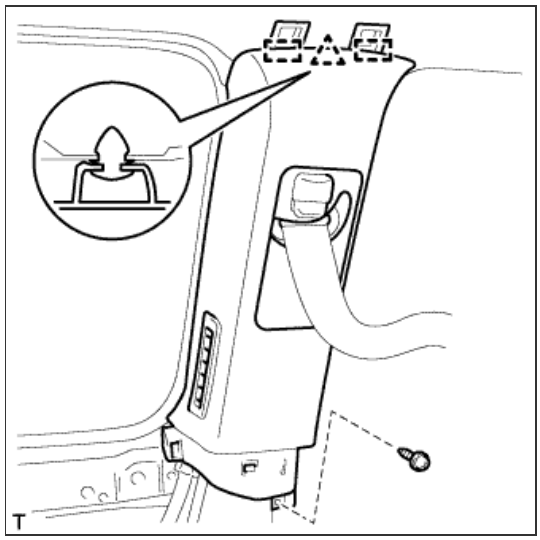


iv. w/ Rear Air Conditioning System:
Disconnect the thermistor connector and rear seat lock control lever cable, and then remove the arter trim panel.

e. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat ype:

i. Remove the clip.

ii. Detach the 16 clips and 2 claws, and remove the arter trim panel.



25. REMOVE REAR FRONT QUARTER TRIM GARNISH LH

a. Remove the screw.

b. Detach the clip and 2 guides.

c. Pass the seat belt anchor through the arter trim garnish, and remove the arter trim garnish.

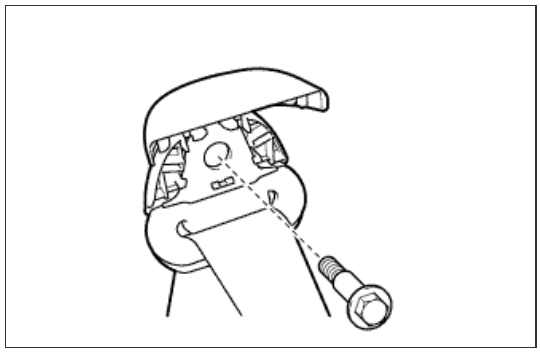
26. REMOVE REAR FRONT QUARTER TRIM GARNISH RH

HINT:

Use the same procedures described for the LH side.

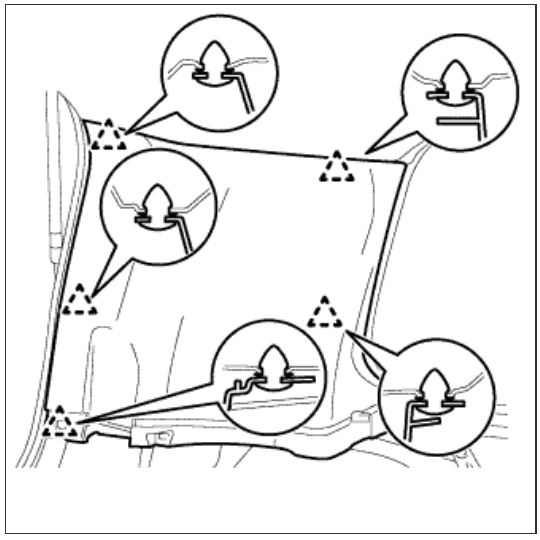
27. REMOVE REAR UPPER PILLAR GARNISH LH

a. w/ Rear No. 2 Seat, except Face to Face Seat ype



i. Using a screwdriver, detach the 2 claws and open the seat belt shoulder anchor cover.

HINT:



ape the screwdriver tip before use.

ii. Remove the bolt and seat belt shoulder anchor.

b. Detach the 5 clips and remove the rear upper pillar garnish.

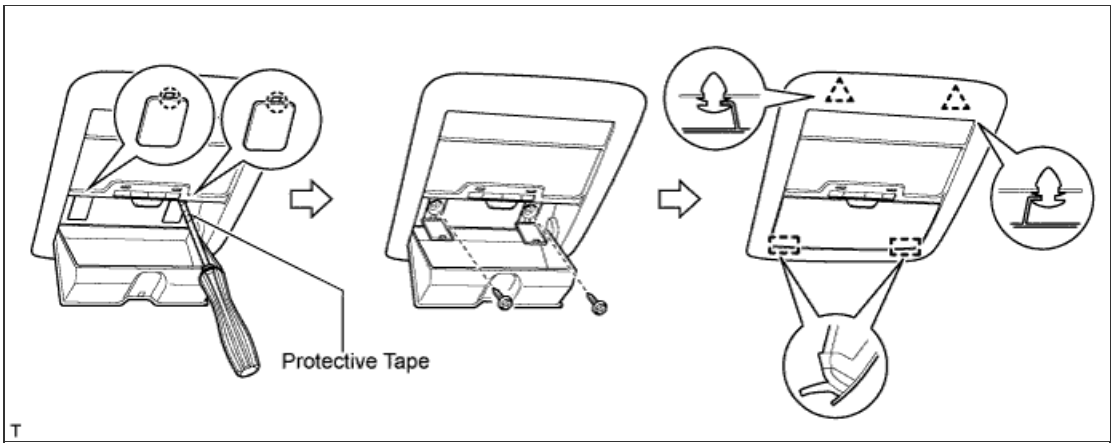
28. REMOVE REAR UPPER PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

29. REMOVE MAP LIGHT ASSEMBLY

a. Using a screwdriver, detach the 2 claws and open the 2 covers.

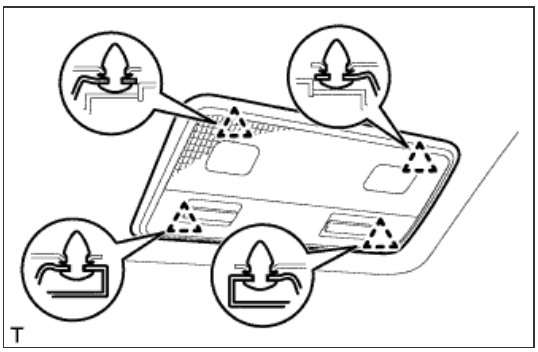


HINT:

ape the screwdriver tip before use.

b. Remove the 2 screws.

c. Detach the 2 clips and 2 guides.

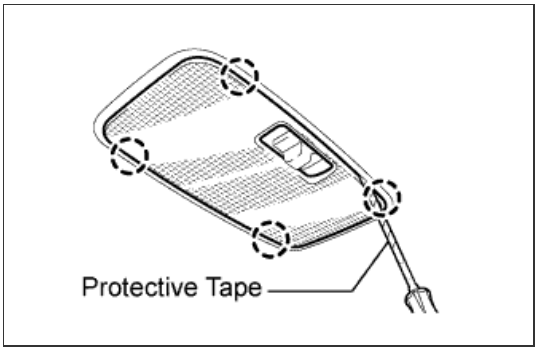


d. Disconnect the connector and then remove the map light.

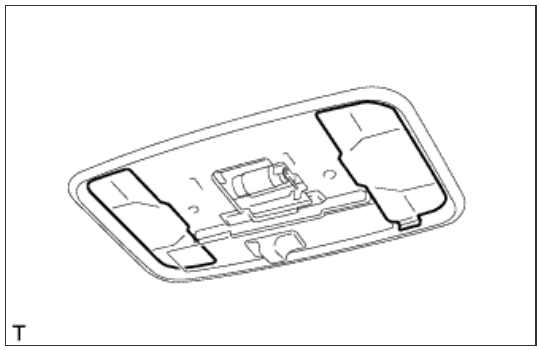
30. REMOVE NO. 1 ROOM LIGHT ASSEMBLY

a. Detach the 4 clips.

b. Disconnect the connector and then remove the room light.



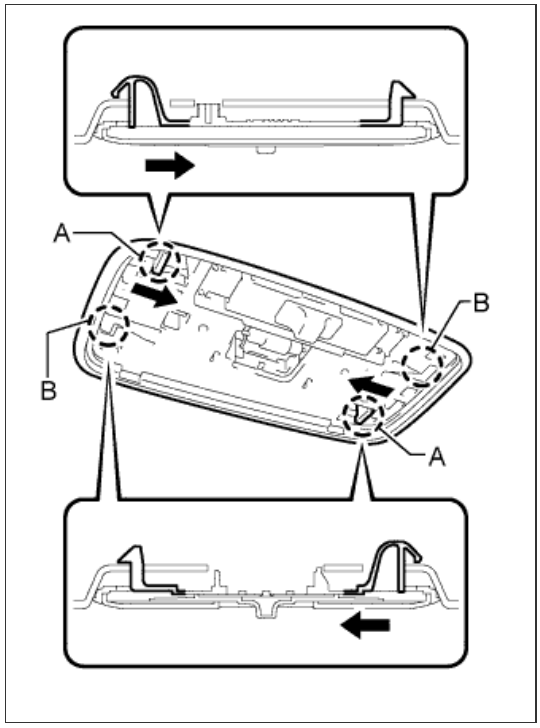
31. REMOVE NO. 2 ROOM LIGHT ASSEMBLY



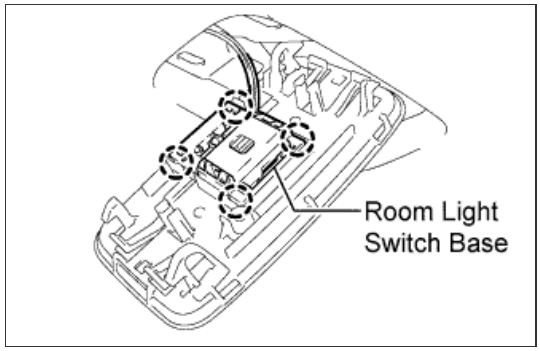
a. Using a screwdriver, detach the 4 claws and remove the room light lens.

HINT:

ape the screwdriver tip before use.



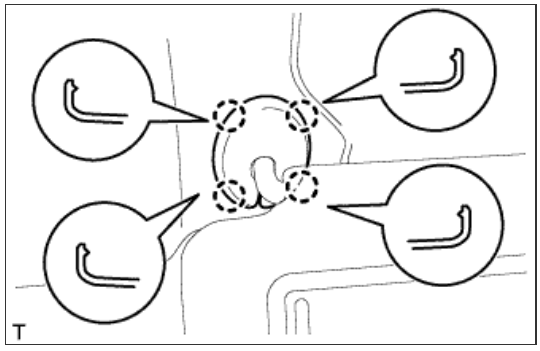
b. Remove the 2 covers.



c. Using a screwdriver, push the 2 levers in the direction of the arrows in the illustration, and detach the 2 claws labeled A.

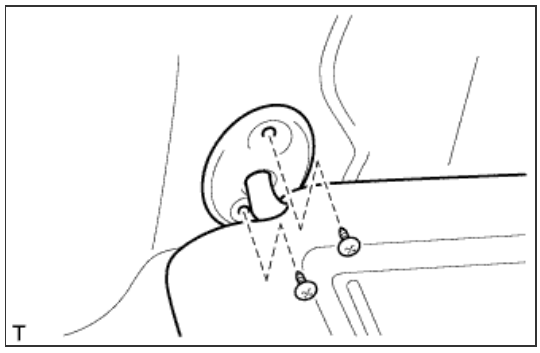
d. Detach the 2 claws labeled .

e. Detach the 4 claws and remove the room light from the room light switch base.



32. REMOVE VISOR BRACKET COVER

HINT:



Use the same procedure to remove the visor bracket cover on the other side.

a. Detach the 4 claws and remove the visor bracket cover.

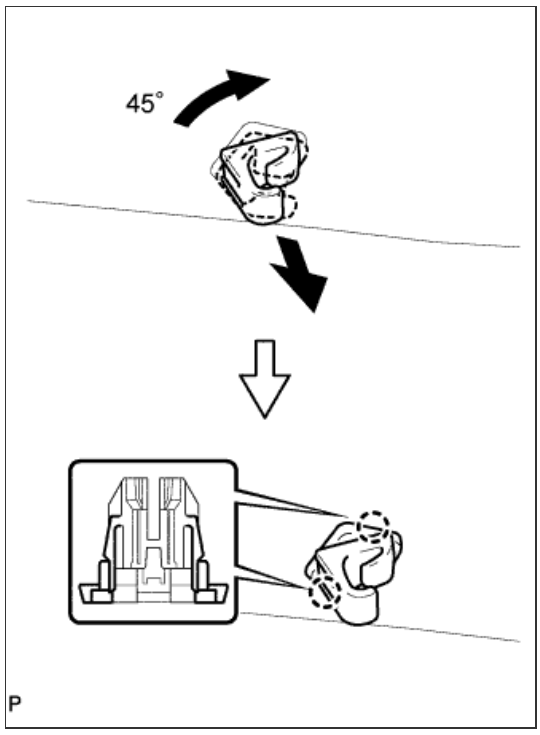
33. REMOVE VISOR ASSEMBLY LH

a. Remove the 2 screws and visor.

34. REMOVE VISOR ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.



35. REMOVE VISOR HOLDER

HINT:

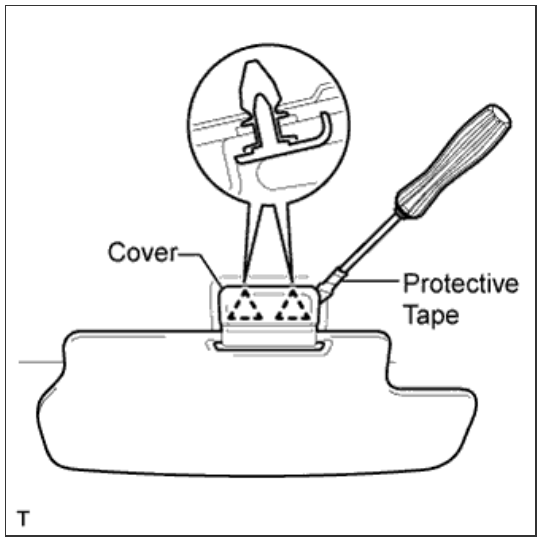
Use the same procedure to remove the visor holder on the other side.

a. rn the visor holder approximately 45° and pull it out as shown in the illustration.

b. Detach the 2 claws and remove the visor holder.



36. REMOVE CENTER VISOR ASSEMBLY LH (w/ Sub Visor)

a. Using a screwdriver, pry off the cover to detach the 2 clips and remove the center visor.

HINT:

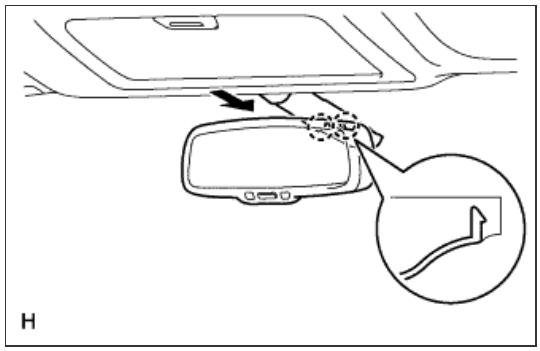
ape the screwdriver tip before use.



37. REMOVE CENTER VISOR ASSEMBLY RH (w/ Sub Visor)

HINT:

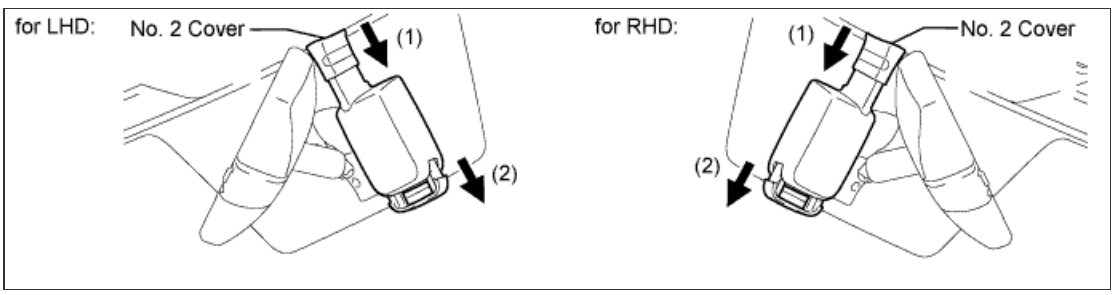
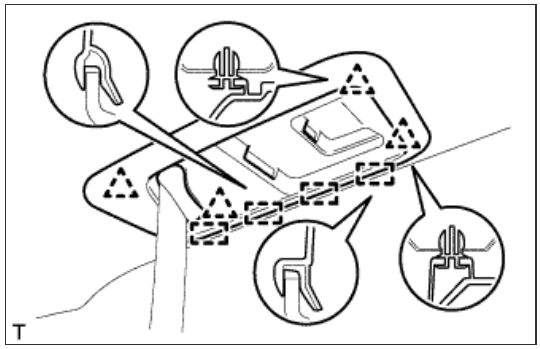
Use the same procedures described for the LH side.



38. REMOVE INNER REAR VIEW MIRROR STAY HOLDER COVER (w/ EC Mirror)

a. Detach the 2 claws and remove the cover as shown in the illustration.

39. REMOVE RAIN SENSOR COVER (w/ Rain Sensor)



a. Slide the No. 2 cover in the direction of the arrow labeled (1).

b. Pull the stopper in the direction of the arrow labeled (2) to remove the No. 2 cover.

40. REMOVE SEAT BELT ANCHOR COVER (for 3 Person Seat Type Rear No. 2 Seat)

a. Detach the 4 clips and 4 guides, and remove the seat belt anchor cover.

41. REMOVE ASSIST GRIP ASSEMBLY

HINT:

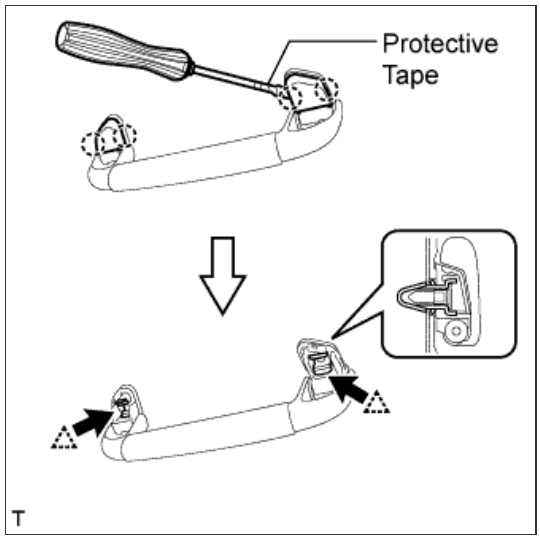
Use the same procedure to remove the assist grip on the other side.



a. Using a screwdriver, detach the 4 claws and remove the 2 assist grip covers.

HINT:

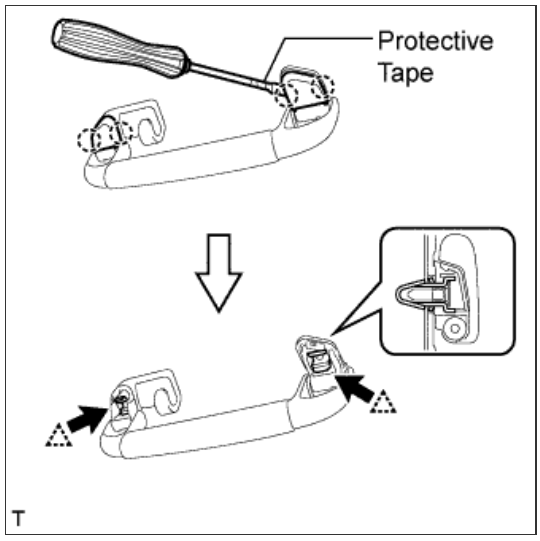
ape the screwdriver tip before use.

b. Detach the 2 clips and remove the assist grip.

c. Remove the 2 clips from the vehicle body.

42. REMOVE NO. 2 ASSIST GRIP ASSEMBLY LH

a. w/ Rear No. 2 Seat, except Face to Face Seat ype or w/o Rear No. 2 Seat:
Remove the No. 2 assist grip assembly.



i. Using a screwdriver, detach the 4 claws and remove the 2 assist grip covers.

HINT:

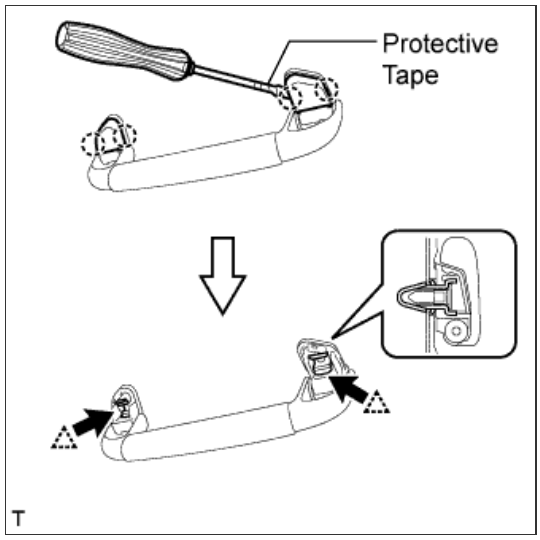
ape the screwdriver tip before use.

ii. Detach the 2 clips and remove the assist grip.

iii. Remove the 2 clips from the vehicle body.

b. w/ Rear No. 2 Seat, for Face to Face Seat ype:
Remove the No. 2 assist grip assembly.



i. Using a screwdriver, detach the 4 claws and remove the 2 assist grip covers.

HINT:

ape the screwdriver tip before use.

ii. Detach the 2 clips and remove the assist grip.

iii. Remove the 2 clips from the vehicle body.

43. REMOVE NO. 2 ASSIST GRIP ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

44. REMOVE 3RD SEAT ASSIST GRIP ASSEMBLY (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

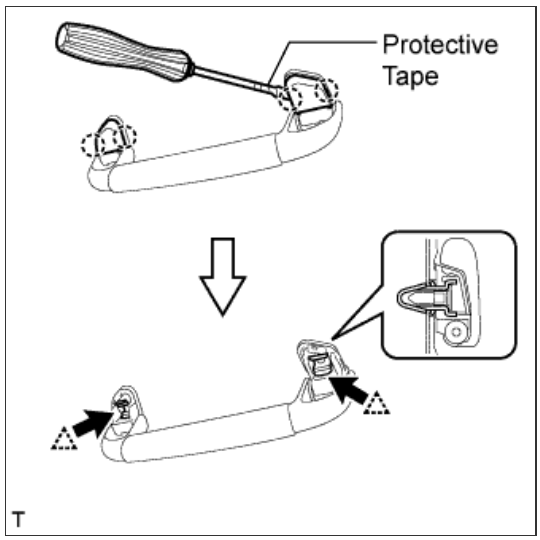
Use the same procedure to remove the 3rd seat assist grip on the other side.



a. Using a screwdriver, detach the 4 claws and remove the 2 assist grip covers.

HINT:

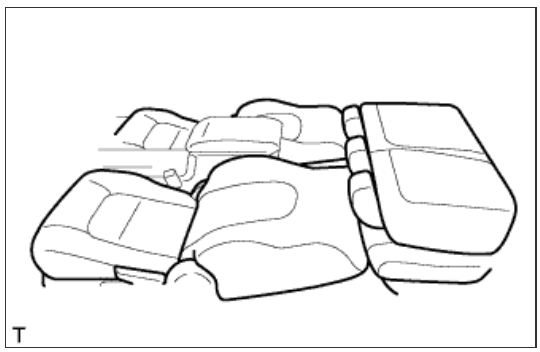
ape the screwdriver tip before use.

b. Detach the 2 clips and remove the assist grip.



c. Remove the 2 clips from the vehicle body.

45. REMOVE ROOF HEADLINING ASSEMBLY

HINT:

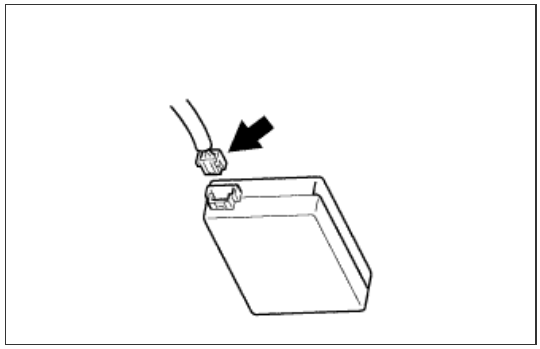
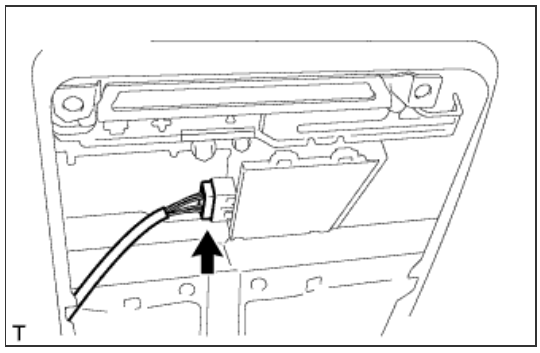
- **for Manual Seat:**
  When removing the roof headlining, move the front seat and rear No. 1 seat to the position shown in the illustration.
- **for Power Seat:**
  When removing the roof headlining, connect the cable to the negative (-) battery terminal and move the front seat and No. 1 rear seat to the position shown in the illustration.
- **for Power Seat:**
  After moving the seats, disconnect the cable from the negative (-) battery terminal.

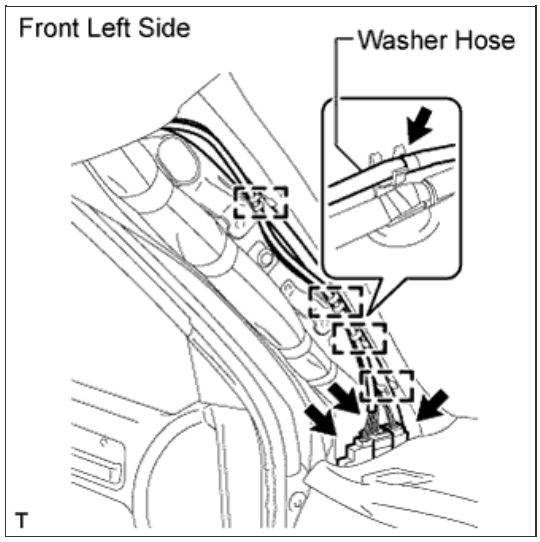


a. w/ EC Mirror

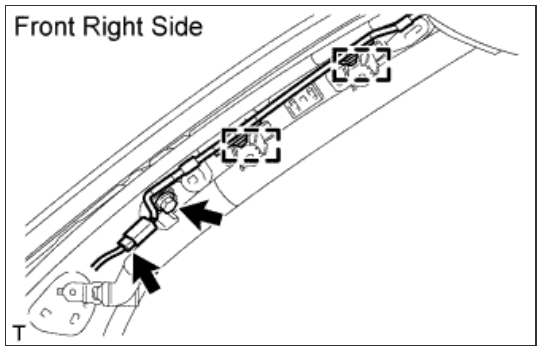


a. w/ EC Mirror:
Disconnect the inner mirror connector.

b. w/ Rain Sensor:
Disconnect the rain sensor connector.

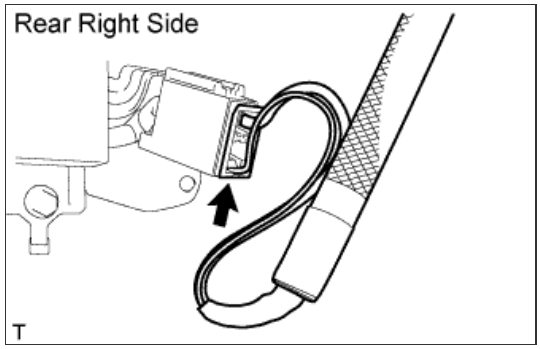


c. Disconnect the drive gear connector.

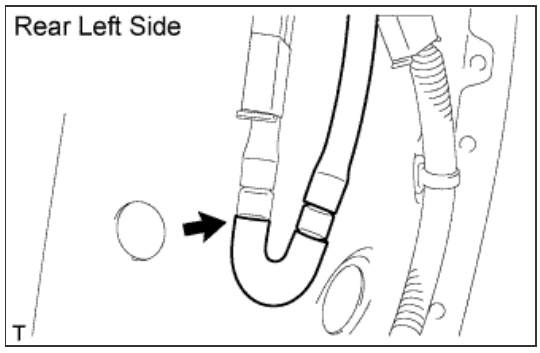


d. Disconnect the 3 roof wire connectors and washer hose.

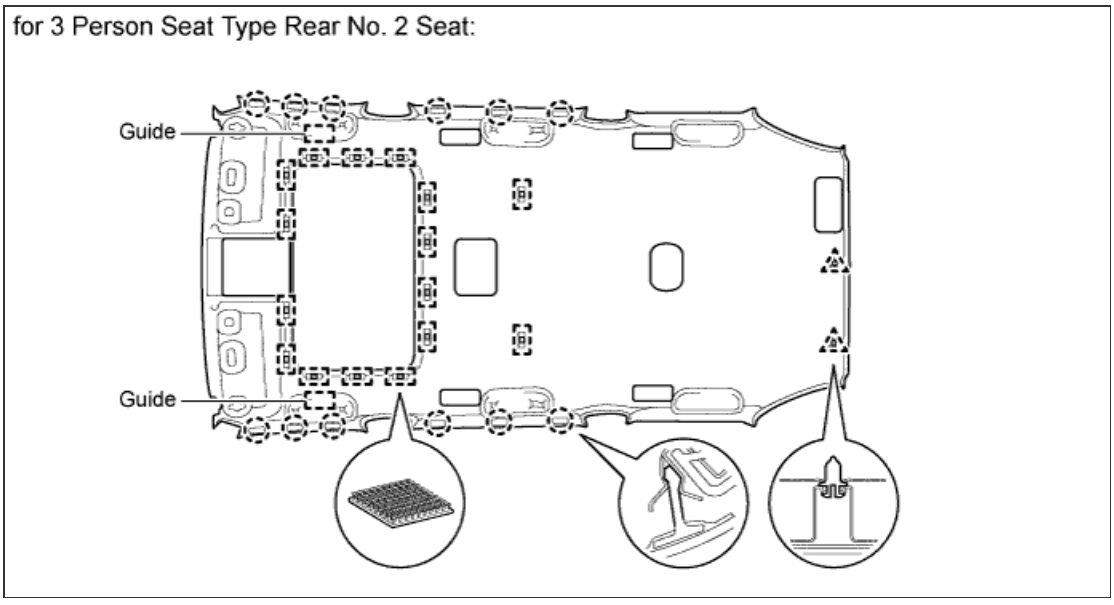
e. Detach the 4 clamps.



f. Remove the bolt.

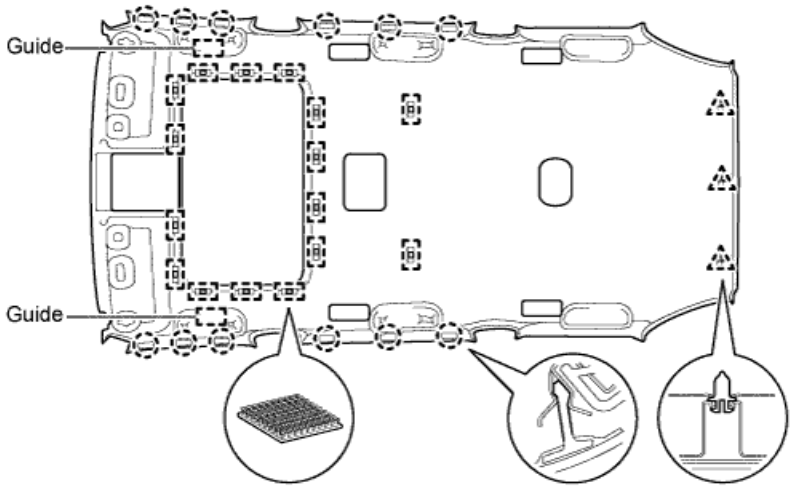


g. Disconnect the antenna cord connector and detach the 2 clamps.



h. Disconnect the antenna cord connector.

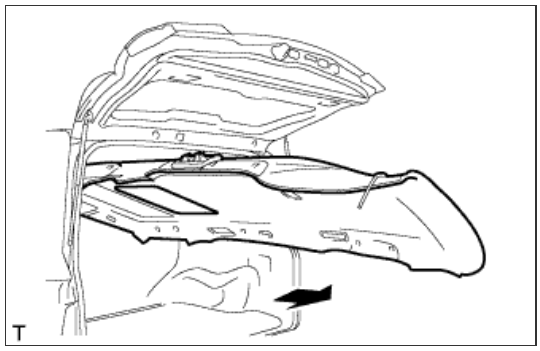
i. Disconnect the washer hose.



j. for 3 Person Seat ype Rear No. 2 Seat:
Detach the 12 claws, 2 clips, 2 guides and 16 fasteners.

k. except 3 Person Seat ype Rear No. 2 Seat:

k. except 3 Person Seat Type Rear No. 2 Seat:
Detach the 12 claws, 3 clips, 2 guides and 16 fasteners.

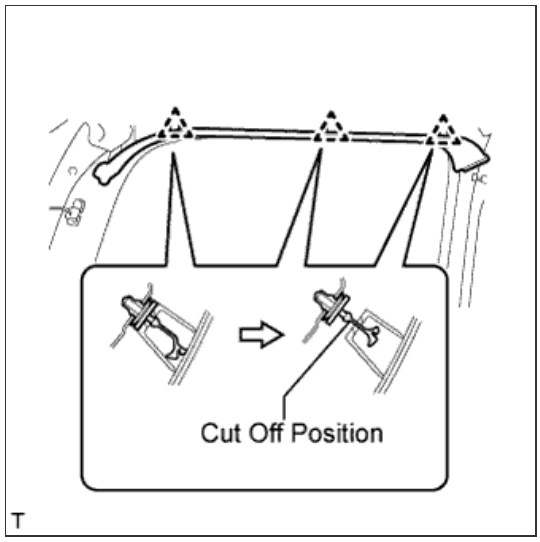


except 3 Person Seat Type Rear No. 2 Seat:

l. Remove the headlining from the rear of the vehicle as shown in the illustration.

NOTICE:

e careful not to damage the roof headlining when taking it out.

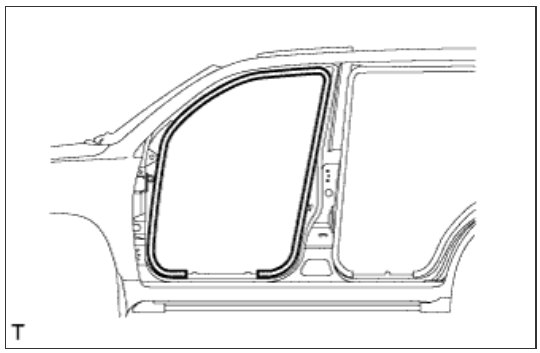


46. REMOVE FRONT ROOF SIDE RAIL GARNISH LH

a. Detach the 3 clips.

b. Cut off the 3 clips and remove the roof side rail garnish.

c. Remove 3 clips from the vehicle body.



47. REMOVE FRONT ROOF SIDE RAIL GARNISH RH

HINT:

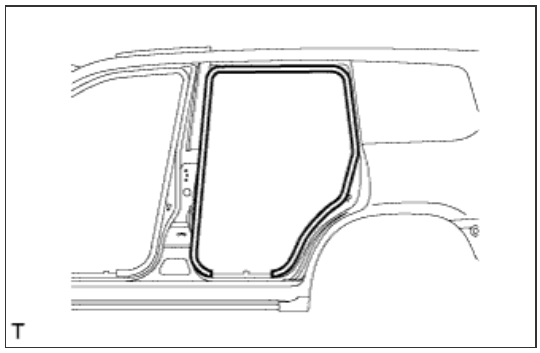
Use the same procedures described for the LH side.

48. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH

a. Remove the front door opening trim weatherstrip.



49. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH

HINT:

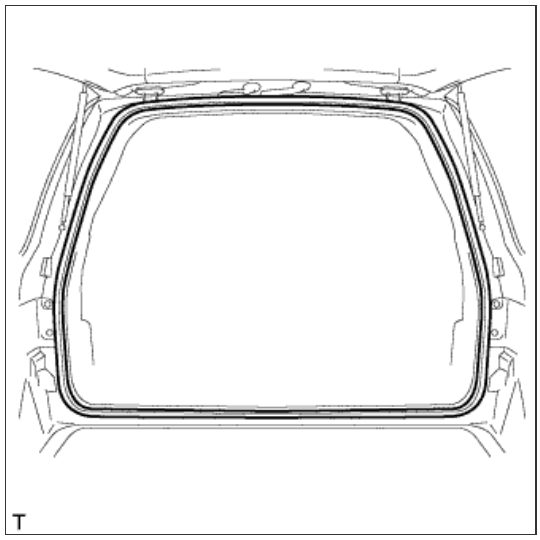
Use the same procedures described for the LH side.

50. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH

a. Remove the rear door opening trim weatherstrip.



51. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH

HINT:

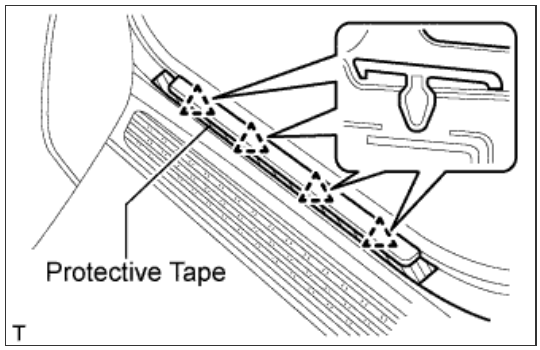
Use the same procedures described for the LH side.

52. REMOVE BACK DOOR WEATHERSTRIP



a. Remove the back door weatherstrip.

53. REMOVE FRONT DOOR SCUFF PLATE OUTSIDE LH

a. Put protective tape around the front door scuff plate outside.

b. Detach the 4 clips and remove the front door scuff plate outside.

54. REMOVE FRONT DOOR SCUFF PLATE RH

HINT:

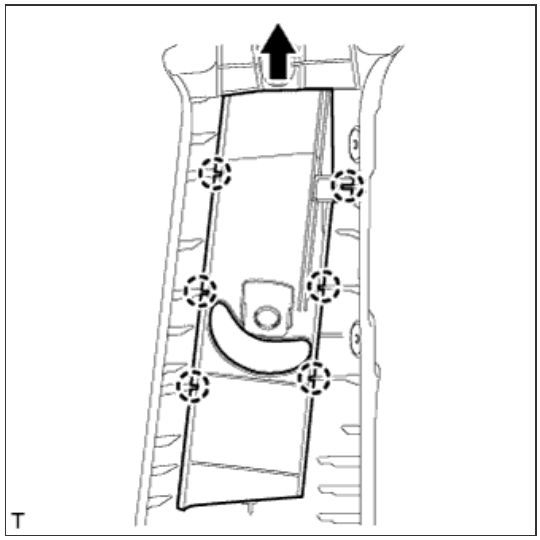
Use the same procedures described for the LH side.

55. REMOVE REAR DOOR SCUFF PLATE OUTSIDE LH

a. Put protective tape around the rear door scuff plate outside.

b. Detach the 3 clips and remove the rear door scuff plate outside.



56. REMOVE REAR DOOR SCUFF PLATE OUTSIDE RH

HINT:

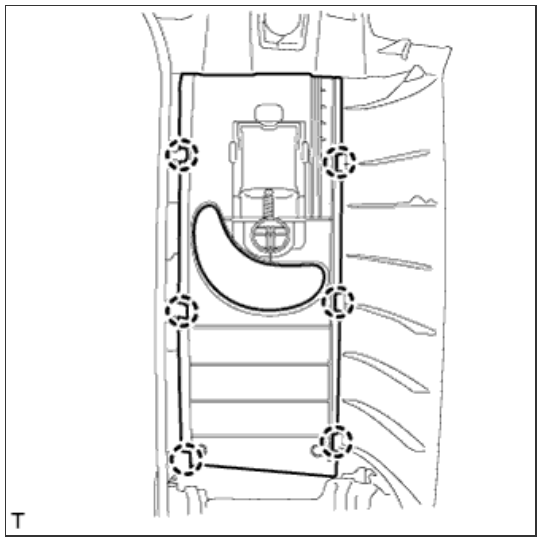
Use the same procedures described for the LH side.

57. REMOVE FRONT SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY LH

a. Detach the 6 claws of the plate, and slide the plate in the direction of the arrow to remove it.



58. REMOVE FRONT SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY RH

HINT:

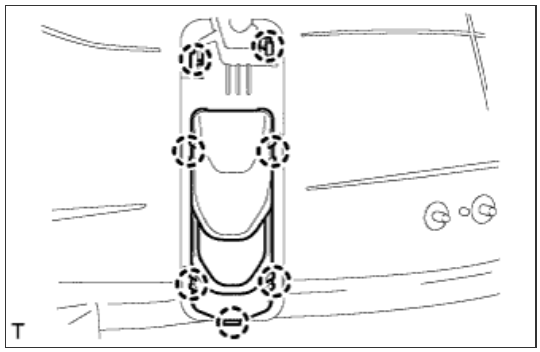
Use the same procedures described for the LH side.

59. REMOVE REAR SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY LH

a. Detach the 6 claws and remove the plate.



60. REMOVE REAR SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

61. REMOVE ROOF SIDE INNER GARNISH COVER LH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Detach the 7 claws and remove the cover.

62. REMOVE ROOF SIDE INNER GARNISH COVER RH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

63. REMOVE REAR SEAT SHOULDER BELT HANGER (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

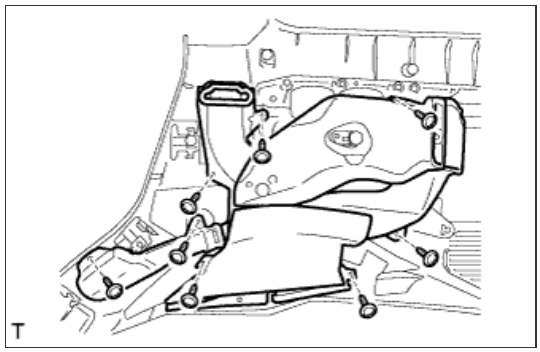
Use the same procedure to remove the hanger on the other side.

a. Remove the 2 spring nuts and hanger.

64. REMOVE REAR NO. 2 SEAT SHOULDER BELT HANGER LH

a. Remove the 2 spring nuts and hanger.



65. REMOVE REAR NO. 2 SEAT SHOULDER BELT HANGER RH

HINT:

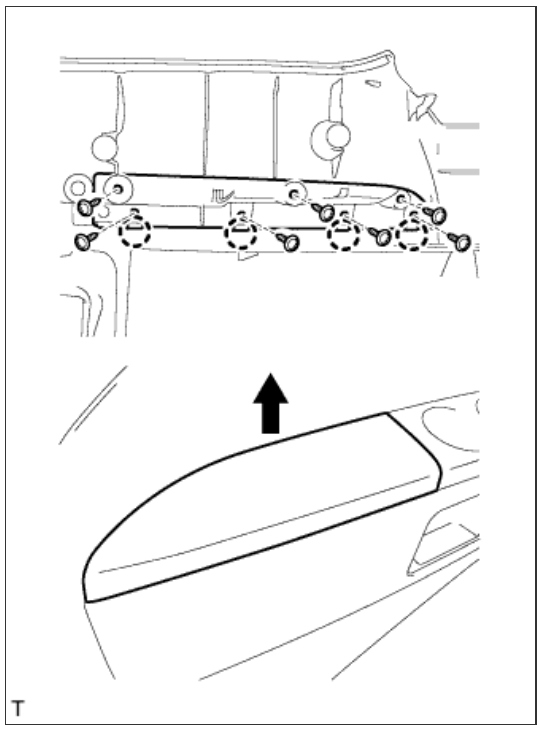
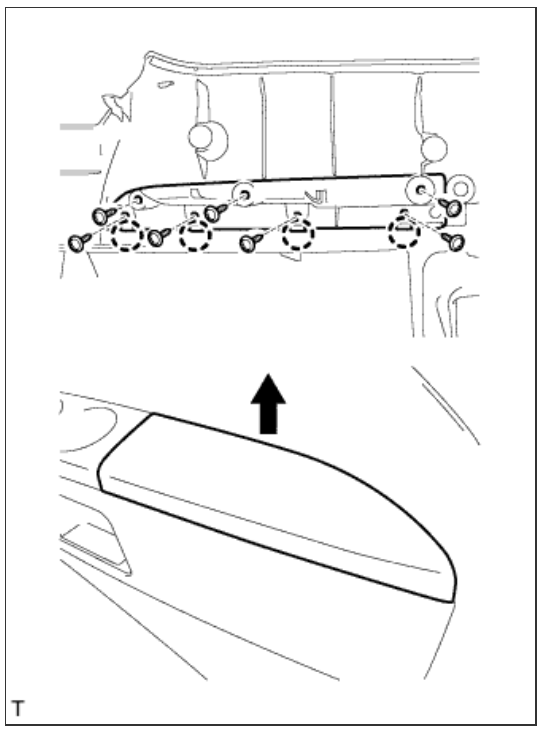
Use the same procedures described for the LH side.



66. REMOVE QUARTER TRIM COVER SUB-ASSEMBLY LH

a. w/ Rear Heater:
Remove the 8 screws and duct.

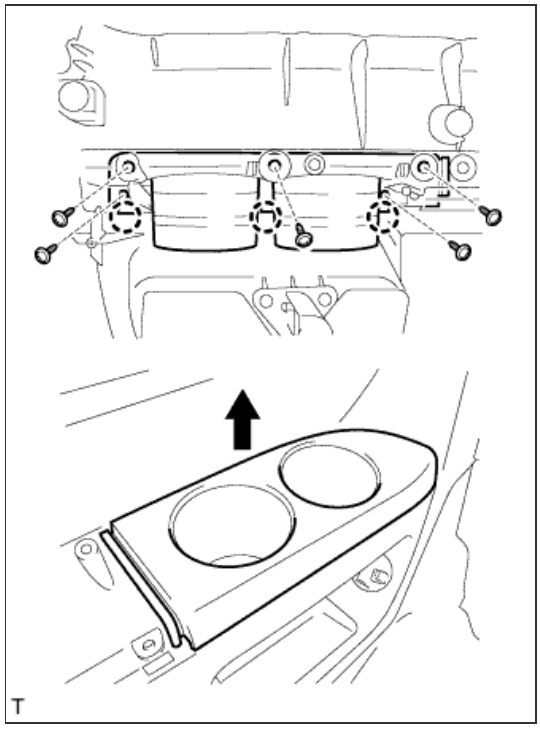
b. Remove the 7 screws.



c. Detach the 4 claws and remove the arter trim cover.

67. REMOVE QUARTER TRIM COVER SUB-ASSEMBLY RH

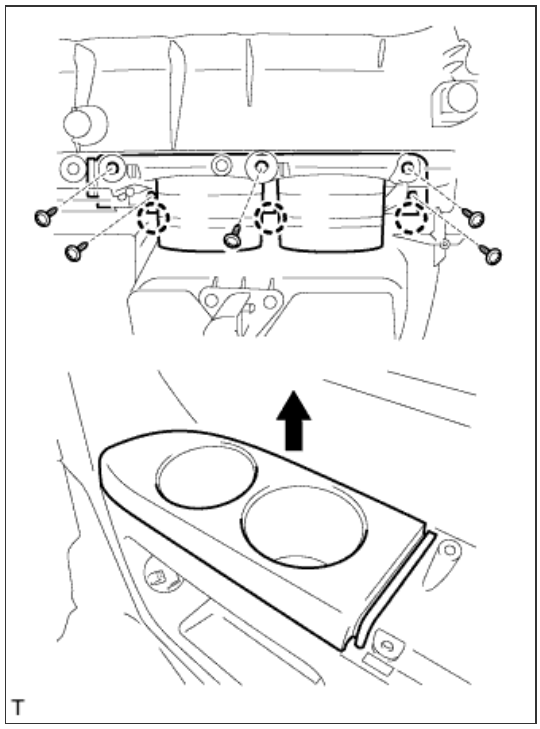
a. Remove the 7 screws.



b. Detach the 4 claws and remove the arter trim cover.

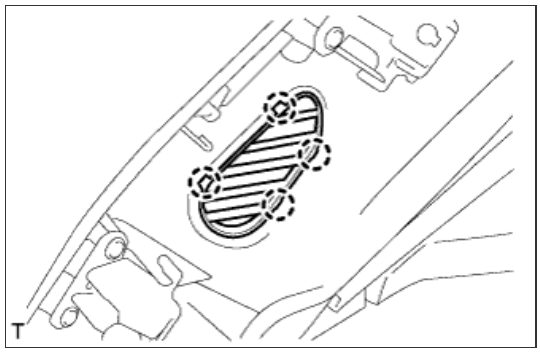
68. REMOVE NO. 2 CUP HOLDER

a. Remove the 5 screws.



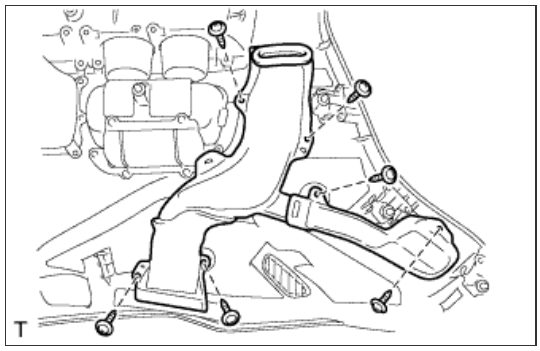
b. Detach the 3 claws and remove the cup holder.

69. REMOVE NO. 1 CUP HOLDER



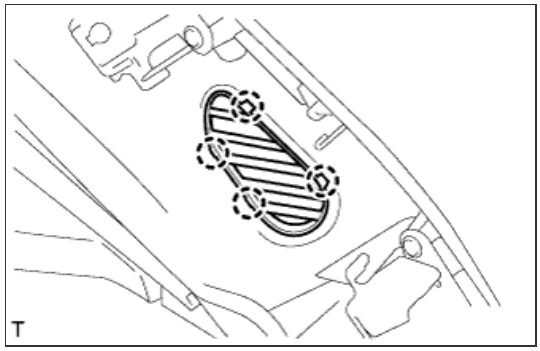
a. Remove the 5 screws.

b. Detach the 3 claws and remove the cup holder.



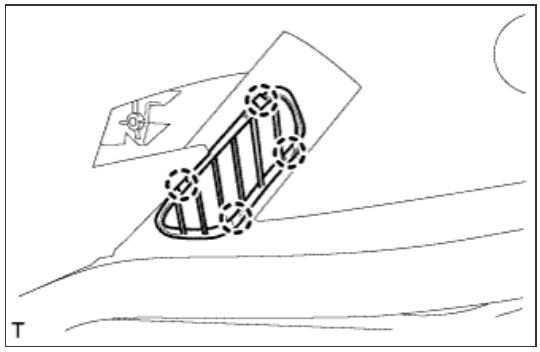
70. REMOVE NO. 1 SIDE TRIM BASE COVER LH (w/ Rear Heater)

a. Detach the 4 claws and remove the cover.



71. REMOVE NO. 1 SIDE TRIM BASE COVER RH (w/ Rear Heater)

a. Remove the 6 screws and duct.



b. Detach the 4 claws and remove the cover.

72. REMOVE NO. 2 SIDE TRIM BASE COVER LH (w/ Rear Heater)

a. Detach the 4 claws and remove the cover.

73. REMOVE NO. 2 SIDE TRIM BASE COVER RH (w/ Rear Heater)

HINT:

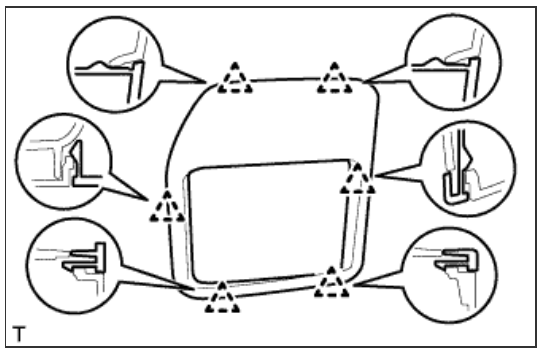
Use the same procedures described for the LH side.

74. REMOVE REAR SEAT LOCK CONTROL LEVER SUB-ASSEMBLY LH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Detach the 4 claws and remove the seat lock control lever.



75. REMOVE REAR SEAT LOCK CONTROL LEVER SUB-ASSEMBLY RH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

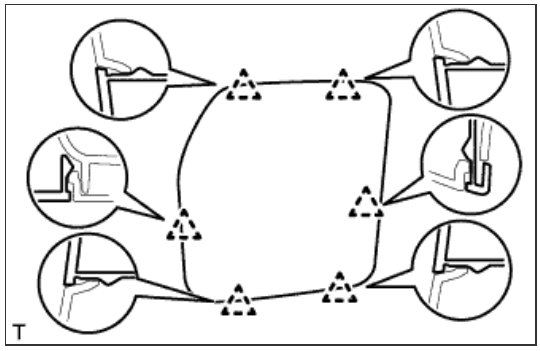
Use the same procedures described for the LH side.

76. REMOVE REAR NO. 2 SEAT COVER BEZEL (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Detach the 6 clips and remove the rear No. 2 seat cover bezel.



77. REMOVE REAR NO. 1 SEAT COVER BEZEL (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the rear No. 2 seat cover bezel.

78. REMOVE QUARTER TRIM COVER LH (w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat Type)

a. Detach the 6 clips and remove the arter trim cover.

79. REMOVE QUARTER TRIM COVER RH (w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

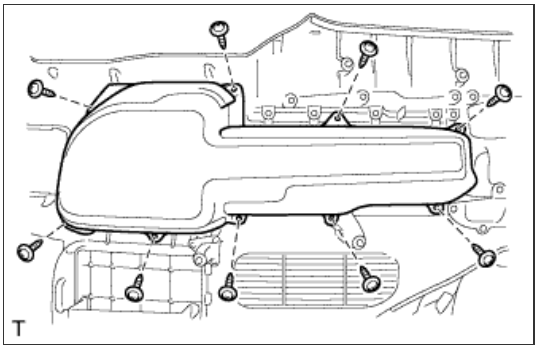
80. REMOVE QUARTER TRIM LID SUB-ASSEMBLY RH



a. Remove the arter trim lid.

81. REMOVE SIDE TRIM BOX COVER

a. Remove the side trim box cover.

82. REMOVE SIDE TRIM BOX

a. Remove the 9 screws and side trim box.

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE REAR NO. 2 SEAT ASSEMBLY LH (except Face to Face Seat Type)

a. Remove the rear No. 2 seat assembly LH (Click here).

3. REMOVE REAR NO. 2 SEAT ASSEMBLY RH (except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

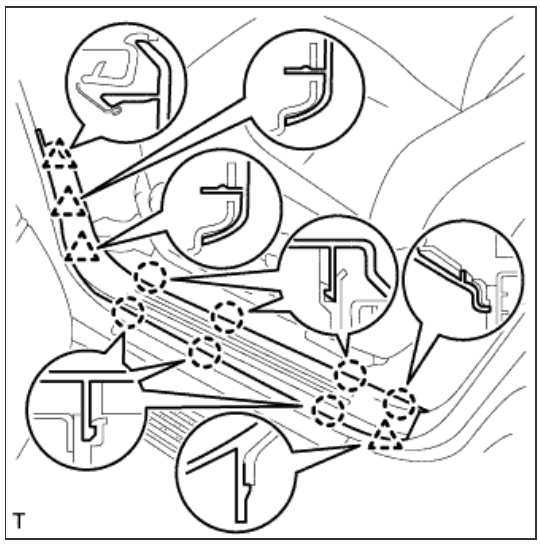
4. REMOVE REAR NO. 2 SEAT ASSEMBLY LH (for Face to Face Seat Type)

a. Remove the rear No. 2 seat assembly LH (Click here).



5. REMOVE REAR NO. 2 SEAT ASSEMBLY RH (for Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

6. REMOVE FRONT DOOR SCUFF PLATE LH

a. Detach the 7 claws and 4 clips, and remove the scuff plate.

7. REMOVE FRONT DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

8. REMOVE REAR STEP COVER

HINT:

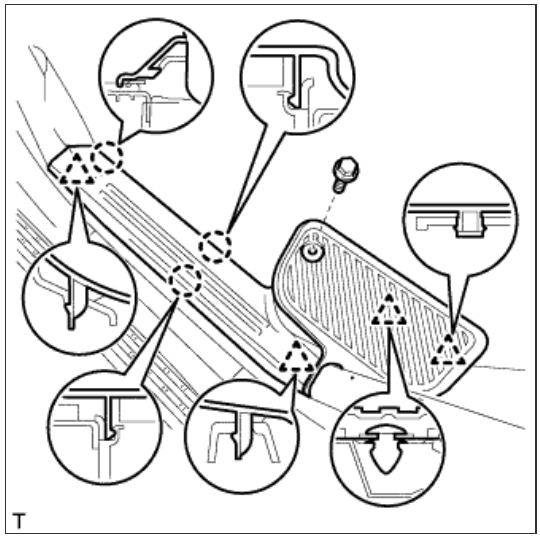
Use the same procedure to remove the step cover on the other side.

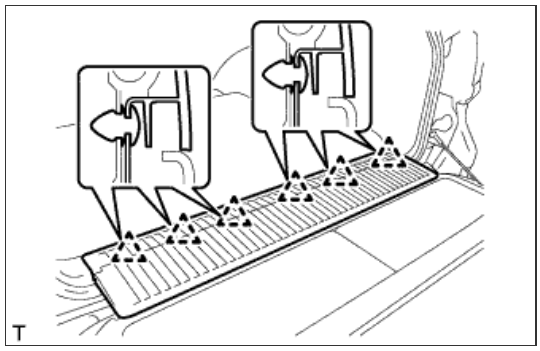


a. Detach the 2 claws and remove the step cover.

9. REMOVE REAR DOOR SCUFF PLATE LH

a. Remove the screw.

b. Detach the 3 claws and 4 clips, and remove the scuff plate.



10. REMOVE REAR DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

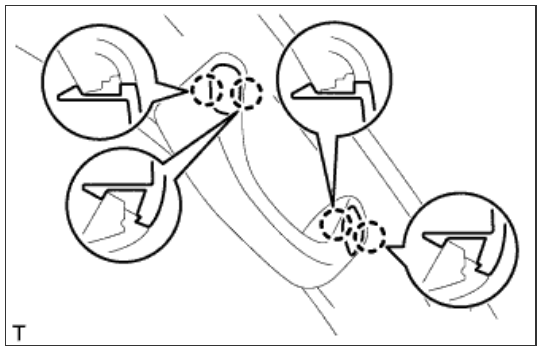
11. REMOVE REAR FLOOR MAT REAR SUPPORT PLATE

a. Detach the 6 clips and remove the support plate.



12. REMOVE FRONT ASSIST GRIP SUB-ASSEMBLY

HINT:

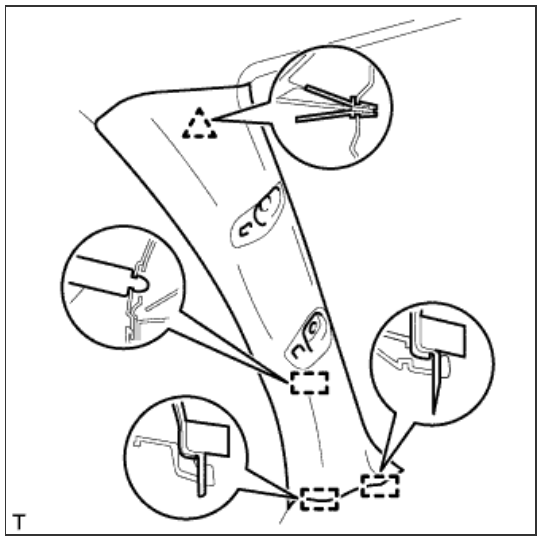
Use the same procedure to remove the front assist grip on the other side.

a. Detach the 4 claws and remove the 2 assist grip plugs.

b. Remove the 2 bolts.

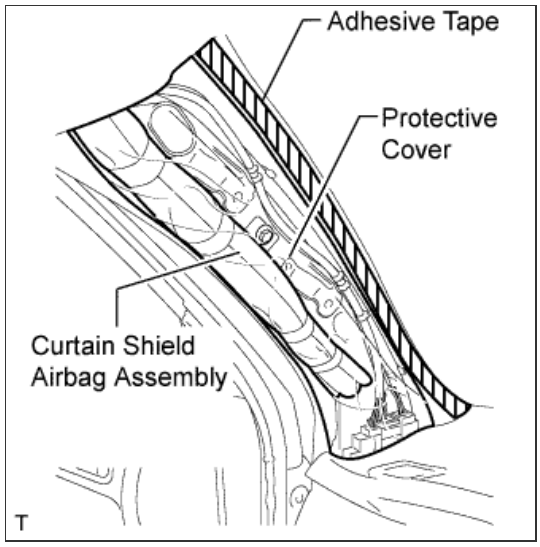


c. Detach the 2 claws and remove the front assist grip.

13. REMOVE FRONT PILLAR GARNISH LH

a. Detach the clip 3 guides, and remove the front pillar garnish.

b. for 9, 14 Speakers:
Disconnect the speaker connector and then remove the front pillar garnish.



c. Protect the curtain shield airbag.

i. horoughly cover the airbag with a cloth or nylon sheet and fix the ends of the cover with adhesive tape, as shown in the illustration.

NOTICE:

Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish is removed.

14. REMOVE FRONT PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

15. REMOVE CENTER PILLAR GARNISH COVER LH

HINT:

- **for Manual Seat:**
  When removing the center pillar garnish cover, move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  When removing the center pillar garnish cover, connect the cable to the negative (-) battery terminal and operate the power seat switch to move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  After moving the front seat, disconnect the cable from the negative (-) battery terminal.

a. Detach the 2 clips and 2 guides, and remove the cover.

16. REMOVE CENTER PILLAR GARNISH COVER RH

HINT:

Use the same procedures described for the LH side.

17. REMOVE CENTER LOWER PILLAR GARNISH LH

HINT:

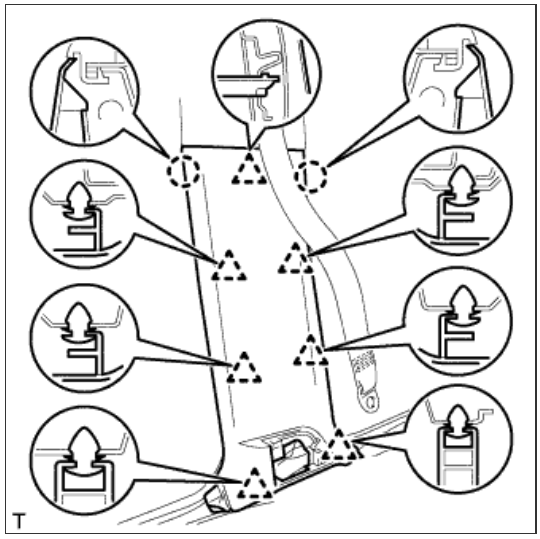
- **for Manual Seat:**
  When removing the center lower pillar garnish, move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  When removing the center lower pillar garnish, connect the cable to the negative (-) battery terminal and operate the power seat



switch to move the front seat and seatback to the foremost upright position.

- **for Power Seat:**
  After moving the front seat, disconnect the cable from the negative (-) battery terminal.

a. Remove the bolt and seat belt anchor.

b. Detach the 2 claws and 7 clips, and remove the center lower pillar garnish.

18. REMOVE CENTER LOWER PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

19. REMOVE REAR ASSIST GRIP ASSEMBLY

HINT:

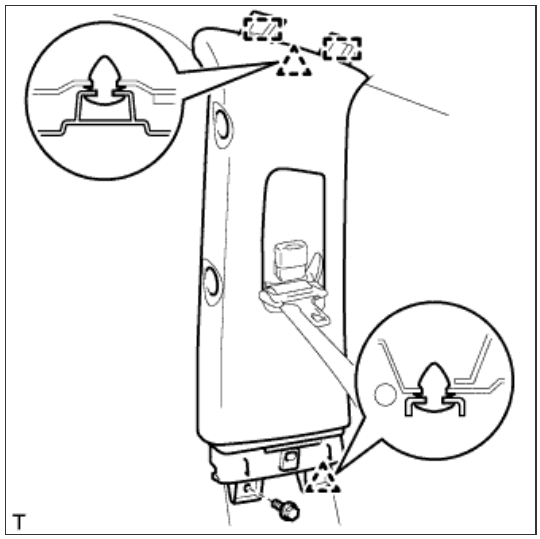
Use the same procedure to remove the rear assist grip on the other side.

a. Detach the 4 claws and remove the 2 assist grip plugs.

b. Remove the 2 bolts.

c. Detach the 2 claws and remove the rear assist grip.



20. REMOVE CENTER PILLAR GARNISH LH

a. Remove the bolt.

b. Detach the 2 clips and 2 guides.

c. Pass the seat belt anchor through the center pillar garnish, and remove the center pillar garnish.

21. REMOVE CENTER PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

22. REMOVE REAR SEAT COVER CAP (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedure to remove the rear seat cover cap on the other side.

a. Using a screwdriver, detach the 3 claws and remove the rear seat cover cap.

HINT:

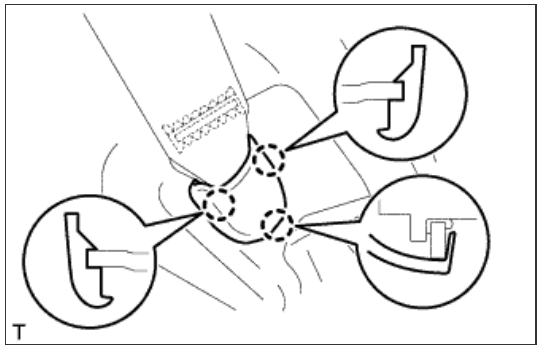
ape the screwdriver tip before use.



23. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY LH

HINT:

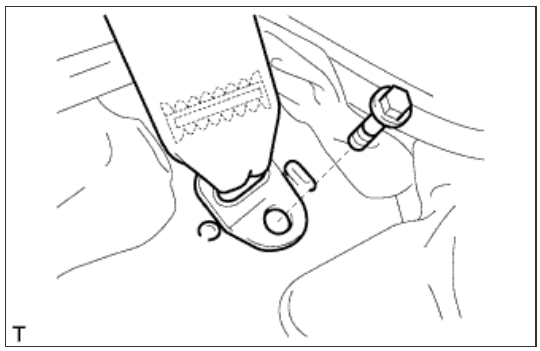
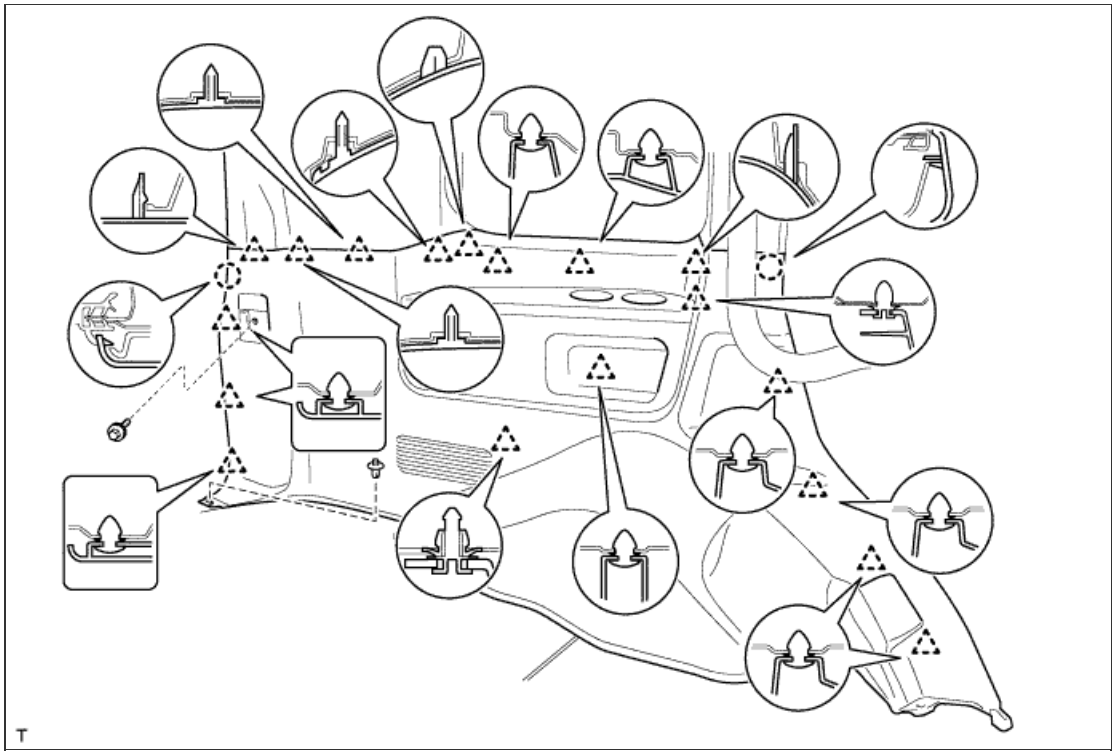
When removing the front arter trim panel, operate the reclining adjuster release handle and move the No. 1 rear seat to the position shown in the illustration.



a. Detach the 3 claws and remove the cover.

b. Remove the bolt and rear No. 1 seat belt anchor.

c. w/ Rear No. 2 Seat, except Face to Face Seat ype:
Remove the bolt and rear No. 2 seat belt anchor.

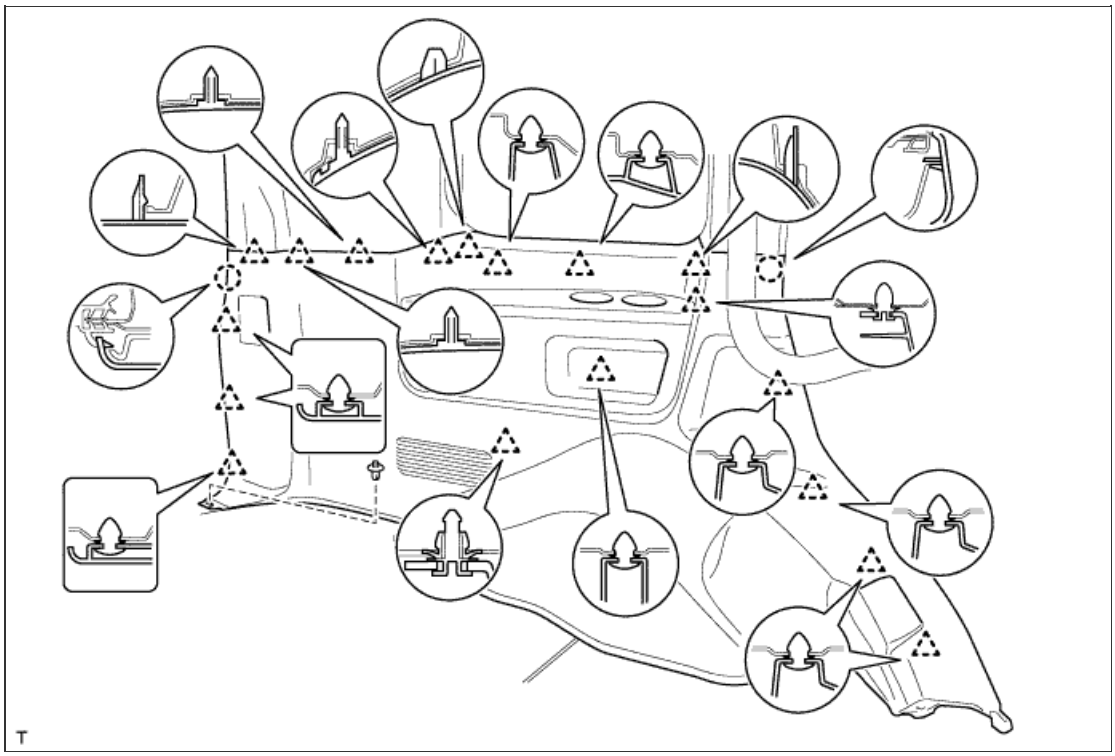


d. w/ Rear No. 2 Seat, except Face to Face Seat ype:

i. Remove the clip and bolt.

ii. Detach the 18 clips and 2 claws.

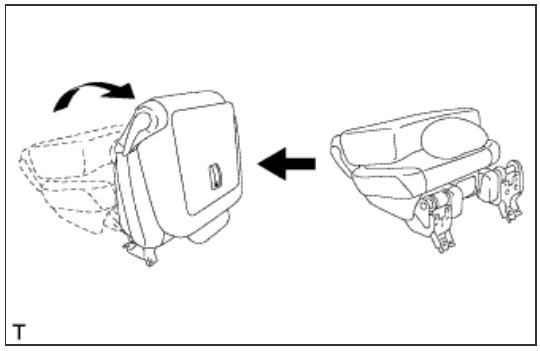
iii. w/o Rear Air Conditioning System:
Disconnect the rear seat lock control lever cable and then remove the arter trim panel.



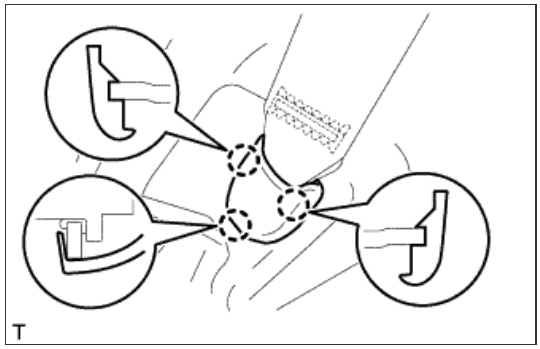
iv. w/ Rear Air Conditioning System:
Disconnect the thermistor connector and rear seat lock control lever cable, and then remove the arter trim panel.

e. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat ype:

i. Remove the clip.



ii. Detach the 18 clips and 2 claws, and remove the arter trim panel.



24. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY RH

HINT:

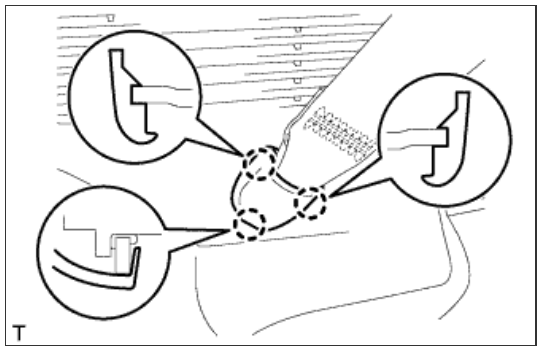
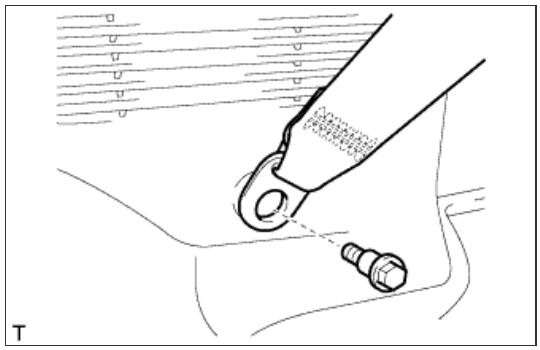
When removing the front arter trim panel, operate the reclining adjuster release handle and move the No. 1 rear seat to the position shown in the illustration.



a. Detach the 3 claws and remove the cover.

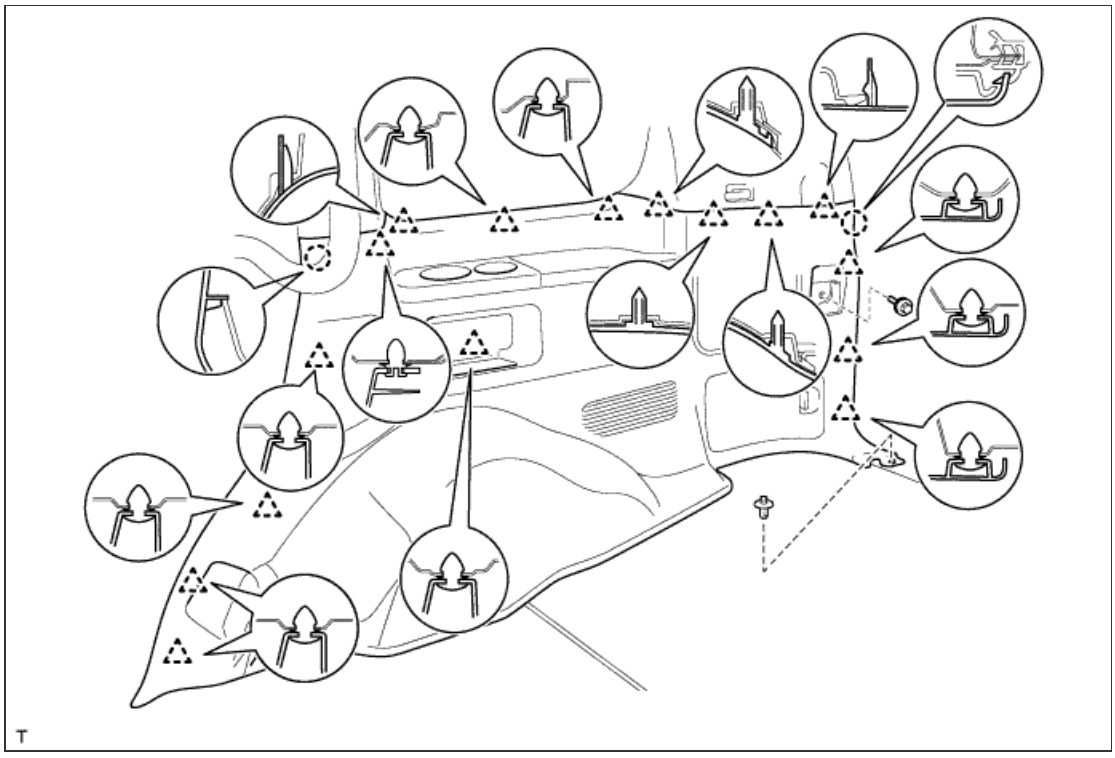
b. Remove the bolt and rear No. 1 seat belt anchor.



c. w/ Rear No. 2 Seat, except Face to Face Seat ype:

i. Detach the 3 claws and remove the cover.

ii. Remove the bolt and rear No. 2 seat belt anchor.

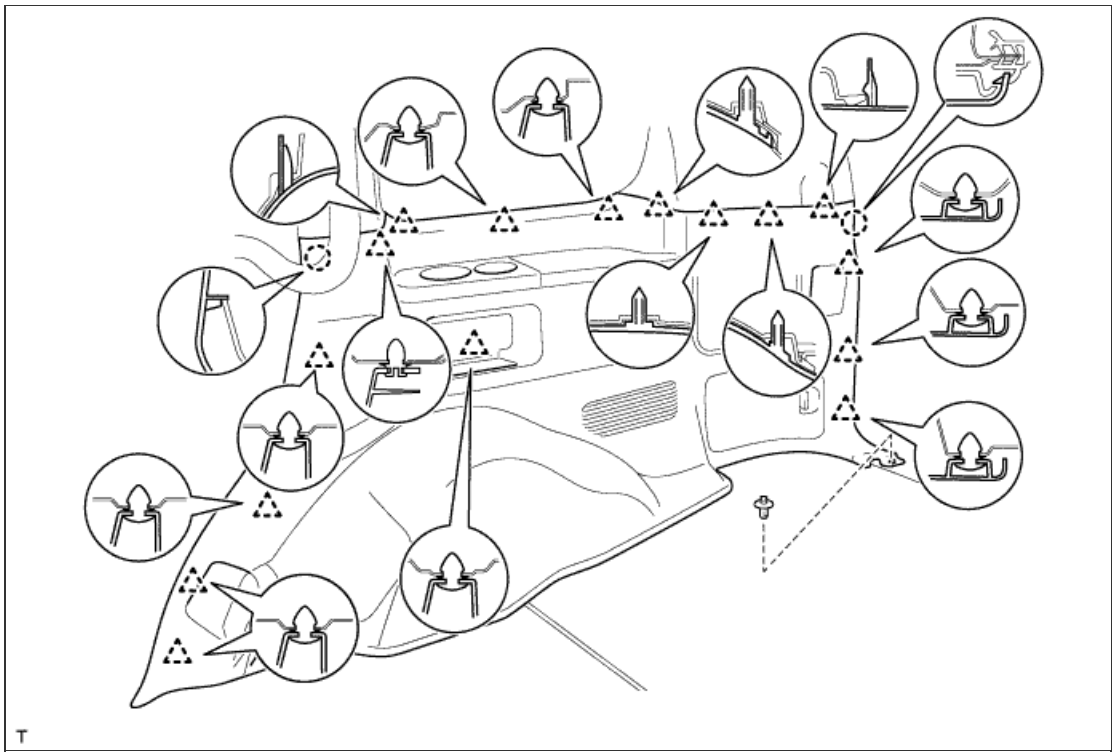


d. w/ Rear No. 2 Seat, except Face to Face Seat ype:

i. Remove the clip and bolt.

ii. Detach the 16 clips and 2 claws.

iii. w/o Rear Air Conditioning System:
Disconnect the rear seat lock control lever cable and then remove the arter trim panel.

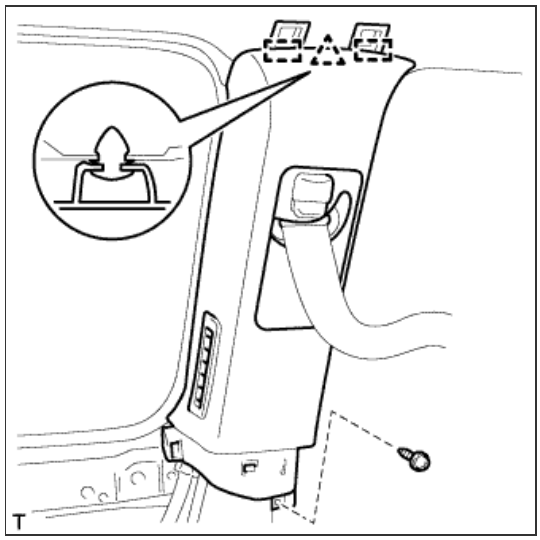


iv. w/ Rear Air Conditioning System:
Disconnect the thermistor connector and rear seat lock control lever cable, and then remove the arter trim panel.

e. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat ype:

i. Remove the clip.

ii. Detach the 16 clips and 2 claws, and remove the arter trim panel.



25. REMOVE REAR FRONT QUARTER TRIM GARNISH LH

a. Remove the screw.

b. Detach the clip and 2 guides.

c. Pass the seat belt anchor through the arter trim garnish, and remove the arter trim garnish.

26. REMOVE REAR FRONT QUARTER TRIM GARNISH RH

HINT:

Use the same procedures described for the LH side.

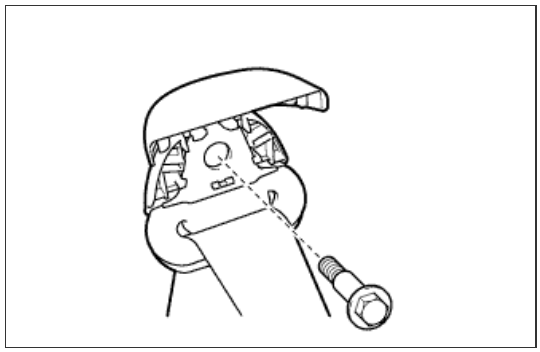
27. REMOVE REAR UPPER PILLAR GARNISH LH

a. w/ Rear No. 2 Seat, except Face to Face Seat ype



i. Using a screwdriver, detach the 2 claws and open the seat belt shoulder anchor cover.

HINT:

ape the screwdriver tip before use.

ii. Remove the bolt and seat belt shoulder anchor.

b. Detach the 5 clips and remove the rear upper pillar garnish.

28. REMOVE REAR UPPER PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

29. REMOVE MAP LIGHT ASSEMBLY

a. Using a screwdriver, detach the 2 claws and open the 2 covers.

HINT:

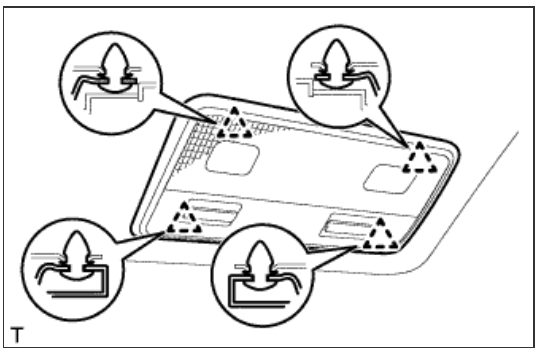
ape the screwdriver tip before use.

b. Remove the 2 screws.

c. Detach the 2 clips and 2 guides.

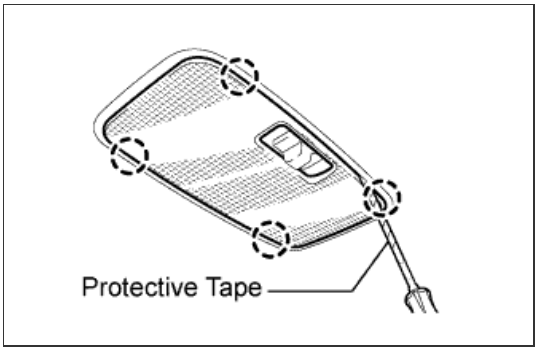


d. Disconnect the connector and then remove the map light.

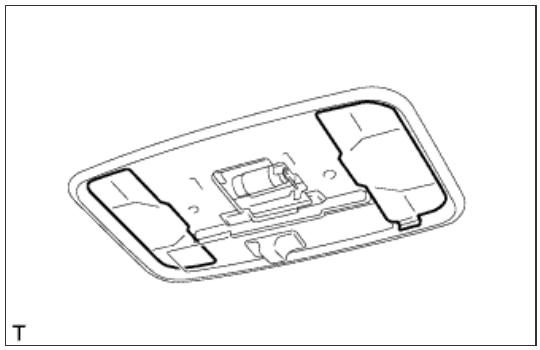
30. REMOVE NO. 1 ROOM LIGHT ASSEMBLY

a. Detach the 4 clips.

b. Disconnect the connector and then remove the room light.



31. REMOVE NO. 2 ROOM LIGHT ASSEMBLY



a. Using a screwdriver, detach the 4 claws and remove the room light lens.

HINT:

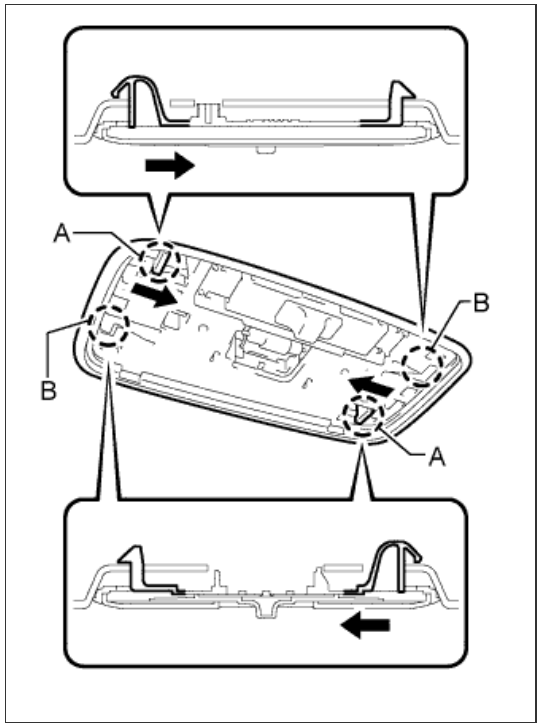
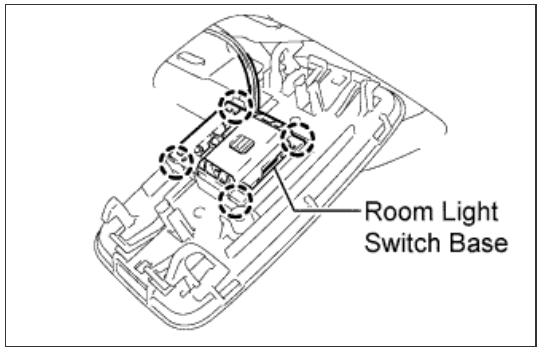
ape the screwdriver tip before use.



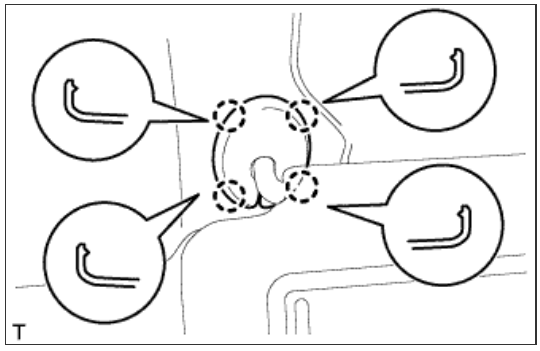
b. Remove the 2 covers.



c. Using a screwdriver, push the 2 levers in the direction of the arrows in the illustration, and detach the 2 claws labeled A.

d. Detach the 2 claws labeled .

e. Detach the 4 claws and remove the room light from the room light switch base.



32. REMOVE VISOR BRACKET COVER

HINT:

Use the same procedure to remove the visor bracket cover on the other side.

a. Detach the 4 claws and remove the visor bracket cover.

33. REMOVE VISOR ASSEMBLY LH

a. Remove the 2 screws and visor.

34. REMOVE VISOR ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

35. REMOVE VISOR HOLDER

HINT:

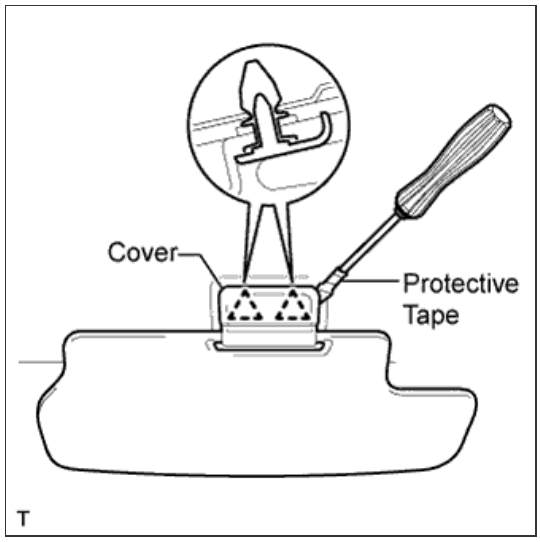
Use the same procedure to remove the visor holder on the other side.

a. rn the visor holder approximately 45° and pull it out as shown in the illustration.

b. Detach the 2 claws and remove the visor holder.



36. REMOVE CENTER VISOR ASSEMBLY LH (w/ Sub Visor)

a. Using a screwdriver, pry off the cover to detach the 2 clips and remove the center visor.

HINT:

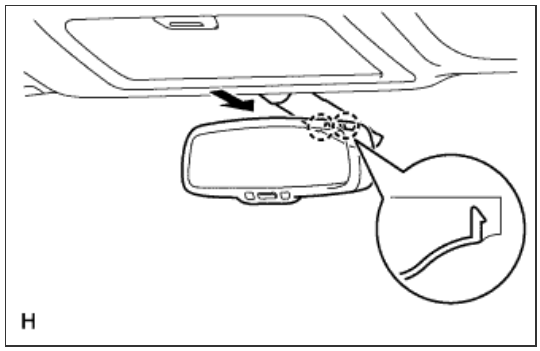
ape the screwdriver tip before use.



37. REMOVE CENTER VISOR ASSEMBLY RH (w/ Sub Visor)

HINT:

Use the same procedures described for the LH side.

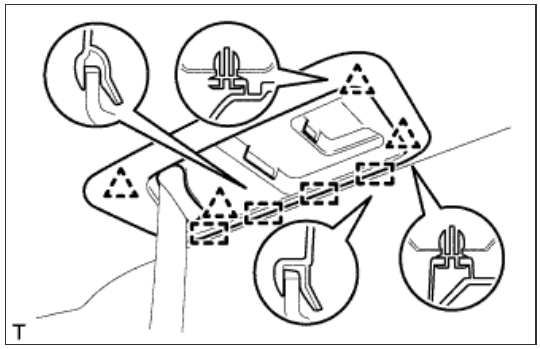
38. REMOVE INNER REAR VIEW MIRROR STAY HOLDER COVER (w/ EC Mirror)

a. Detach the 2 claws and remove the cover as shown in the illustration.

39. REMOVE RAIN SENSOR COVER (w/ Rain Sensor)



a. Slide the No. 2 cover in the direction of the arrow labeled (1).

b. Pull the stopper in the direction of the arrow labeled (2) to remove the No. 2 cover.

40. REMOVE SEAT BELT ANCHOR COVER (for 3 Person Seat Type Rear No. 2 Seat)

a. Detach the 4 clips and 4 guides, and remove the seat belt anchor cover.

41. REMOVE ASSIST GRIP ASSEMBLY

HINT:

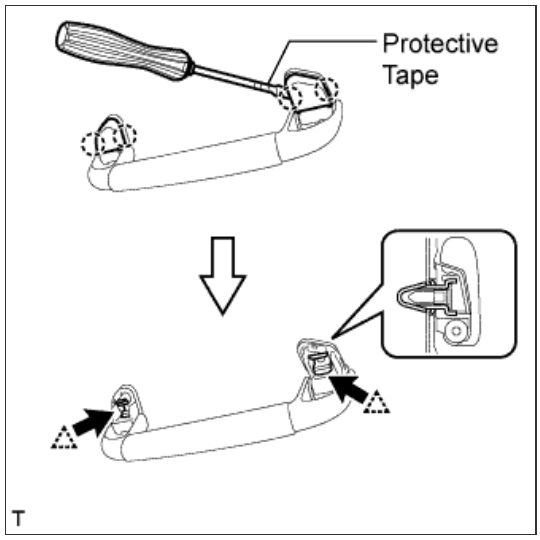
Use the same procedure to remove the assist grip on the other side.



a. Using a screwdriver, detach the 4 claws and remove the 2 assist grip covers.

HINT:

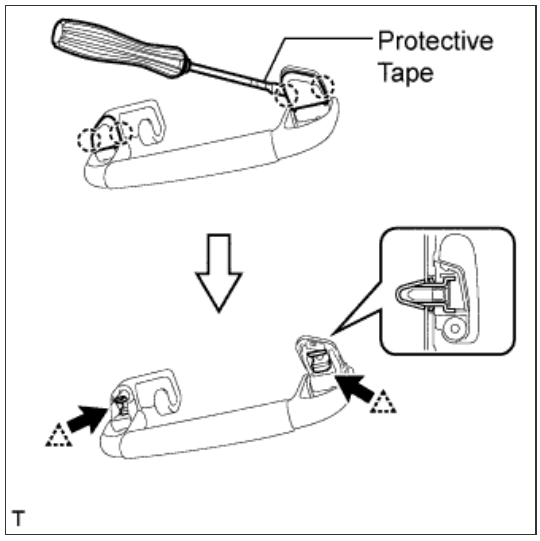
ape the screwdriver tip before use.

b. Detach the 2 clips and remove the assist grip.

c. Remove the 2 clips from the vehicle body.

42. REMOVE NO. 2 ASSIST GRIP ASSEMBLY LH

a. w/ Rear No. 2 Seat, except Face to Face Seat ype or w/o Rear No. 2 Seat:
Remove the No. 2 assist grip assembly.



i. Using a screwdriver, detach the 4 claws and remove the 2 assist grip covers.

HINT:

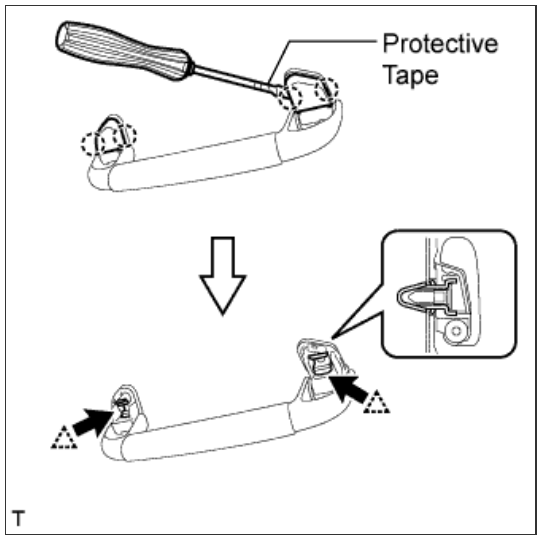
ape the screwdriver tip before use.

ii. Detach the 2 clips and remove the assist grip.

iii. Remove the 2 clips from the vehicle body.

b. w/ Rear No. 2 Seat, for Face to Face Seat ype:
Remove the No. 2 assist grip assembly.



i. Using a screwdriver, detach the 4 claws and remove the 2 assist grip covers.

HINT:

ape the screwdriver tip before use.

ii. Detach the 2 clips and remove the assist grip.

iii. Remove the 2 clips from the vehicle body.

43. REMOVE NO. 2 ASSIST GRIP ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

44. REMOVE 3RD SEAT ASSIST GRIP ASSEMBLY (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

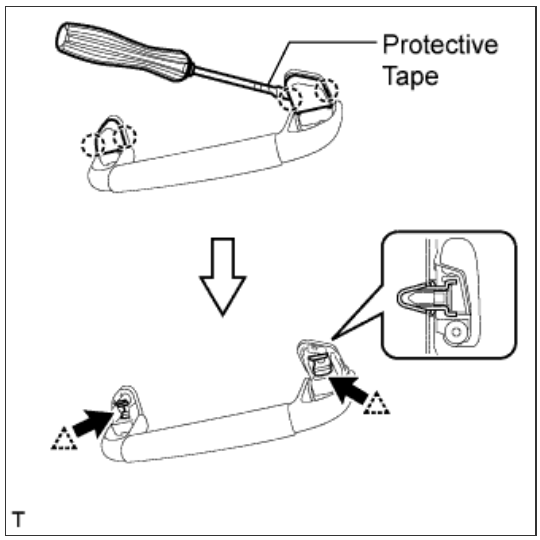
Use the same procedure to remove the 3rd seat assist grip on the other side.



a. Using a screwdriver, detach the 4 claws and remove the 2 assist grip covers.

HINT:

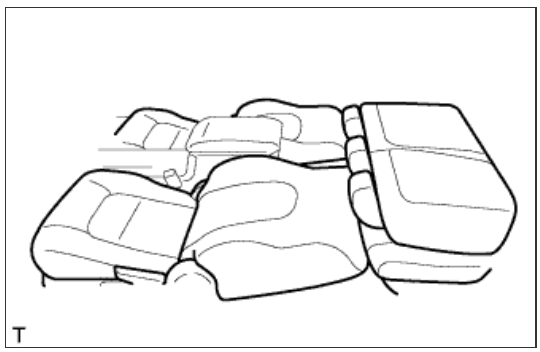
ape the screwdriver tip before use.

b. Detach the 2 clips and remove the assist grip.



c. Remove the 2 clips from the vehicle body.

45. REMOVE ROOF HEADLINING ASSEMBLY

HINT:

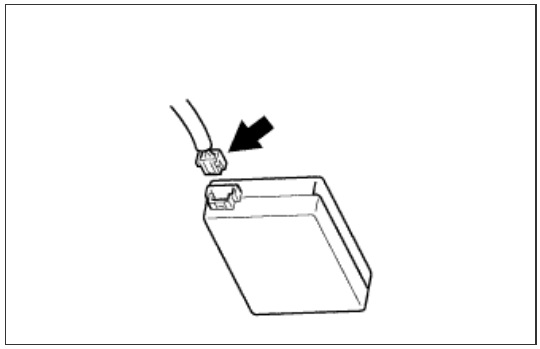
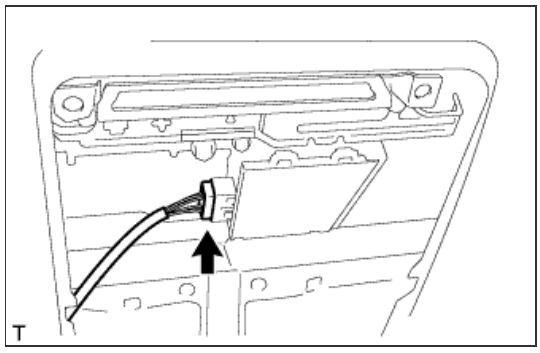
- **for Manual Seat:**
  When removing the roof headlining, move the front seat and rear No. 1 seat to the position shown in the illustration.
- **for Power Seat:**
  When removing the roof headlining, connect the cable to the negative (-) battery terminal and move the front seat and No. 1 rear seat to the position shown in the illustration.
- **for Power Seat:**
  After moving the seats, disconnect the cable from the negative (-) battery terminal.

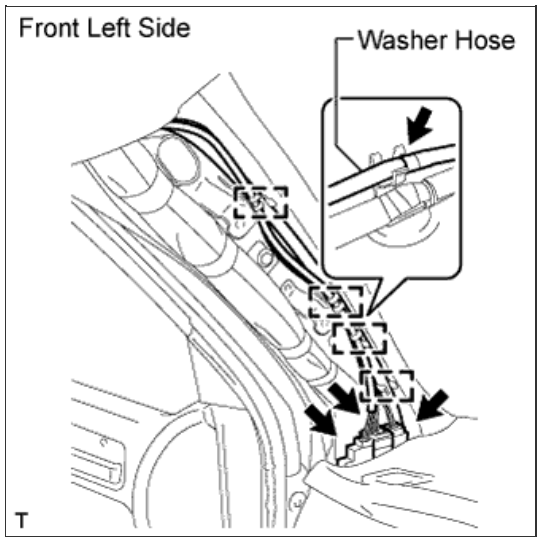


a. w/ EC Mirror

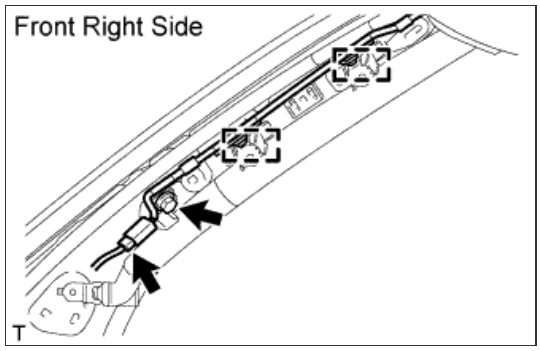


a. w/ EC Mirror:
Disconnect the inner mirror connector.

b. w/ Rain Sensor:
Disconnect the rain sensor connector.

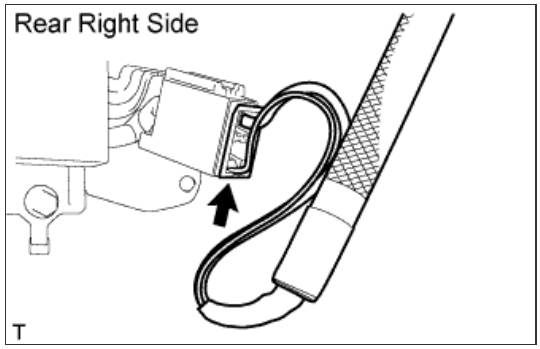


c. Disconnect the drive gear connector.

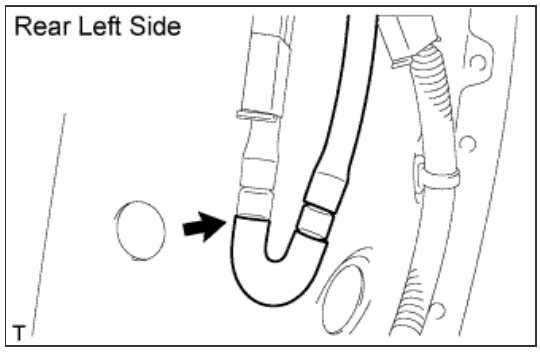


d. Disconnect the 3 roof wire connectors and washer hose.

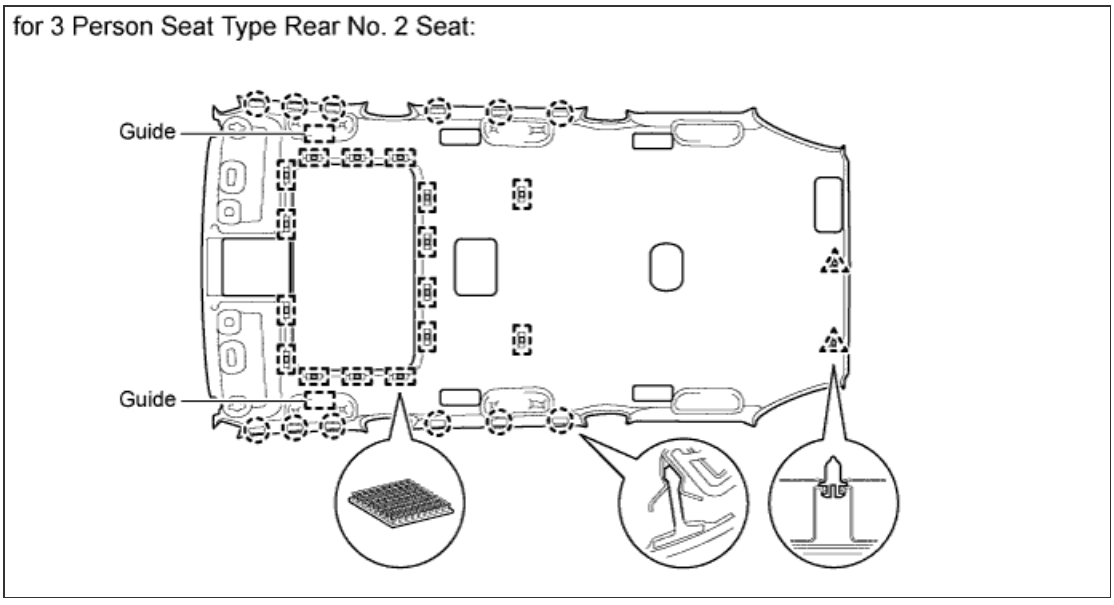
e. Detach the 4 clamps.



f. Remove the bolt.

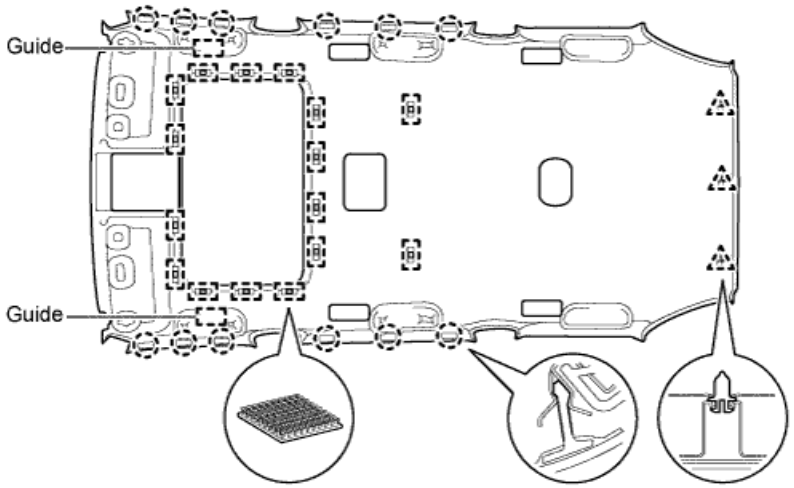


g. Disconnect the antenna cord connector and detach the 2 clamps.



h. Disconnect the antenna cord connector.

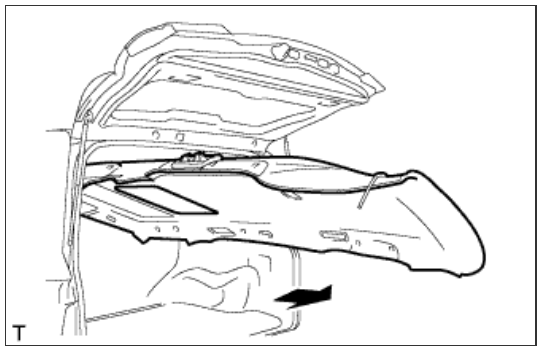
i. Disconnect the washer hose.



j. for 3 Person Seat ype Rear No. 2 Seat:
Detach the 12 claws, 2 clips, 2 guides and 16 fasteners.

k. except 3 Person Seat ype Rear No. 2 Seat:

k. except 3 Person Seat Type Rear No. 2 Seat:
Detach the 12 claws, 3 clips, 2 guides and 16 fasteners.

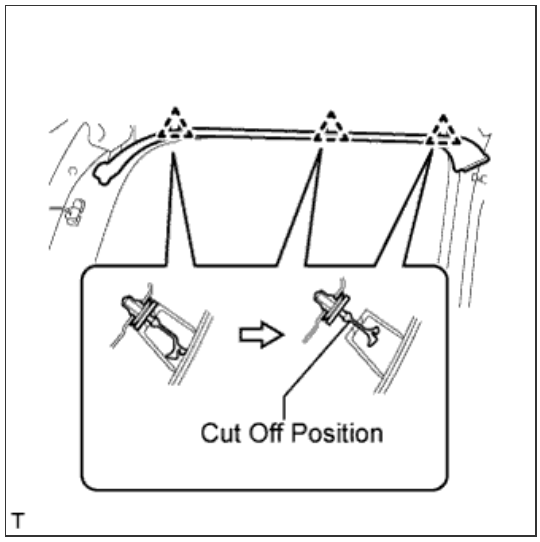


except 3 Person Seat Type Rear No. 2 Seat:

l. Remove the headlining from the rear of the vehicle as shown in the illustration.

NOTICE:

e careful not to damage the roof headlining when taking it out.

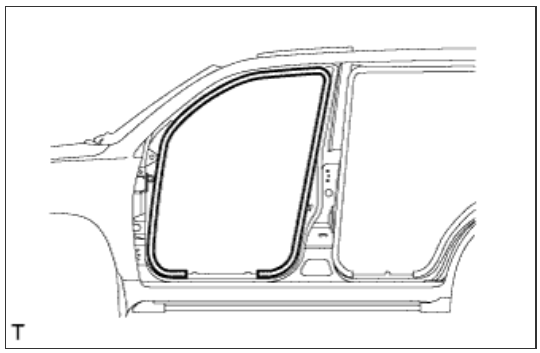


46. REMOVE FRONT ROOF SIDE RAIL GARNISH LH

a. Detach the 3 clips.

b. Cut off the 3 clips and remove the roof side rail garnish.

c. Remove 3 clips from the vehicle body.



47. REMOVE FRONT ROOF SIDE RAIL GARNISH RH

HINT:

Use the same procedures described for the LH side.

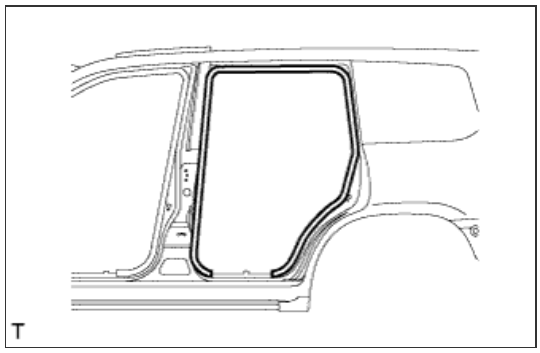
48. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH

a. Remove the front door opening trim weatherstrip.



49. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH

HINT:

Use the same procedures described for the LH side.

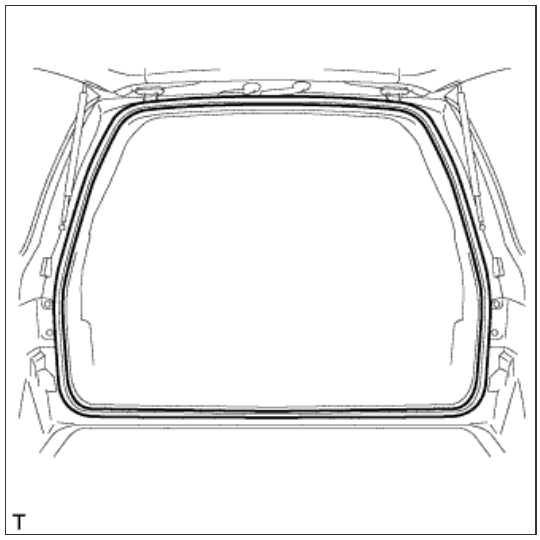
50. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH

a. Remove the rear door opening trim weatherstrip.



51. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH

HINT:

Use the same procedures described for the LH side.

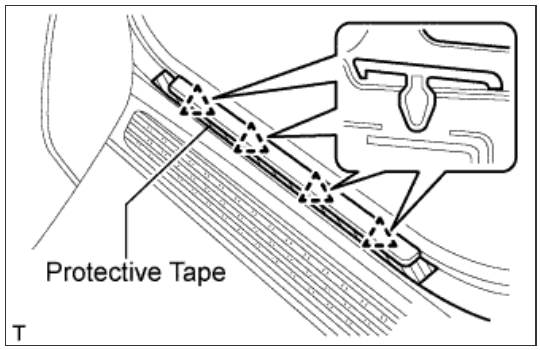
52. REMOVE BACK DOOR WEATHERSTRIP



a. Remove the back door weatherstrip.

53. REMOVE FRONT DOOR SCUFF PLATE OUTSIDE LH

a. Put protective tape around the front door scuff plate outside.

b. Detach the 4 clips and remove the front door scuff plate outside.

54. REMOVE FRONT DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

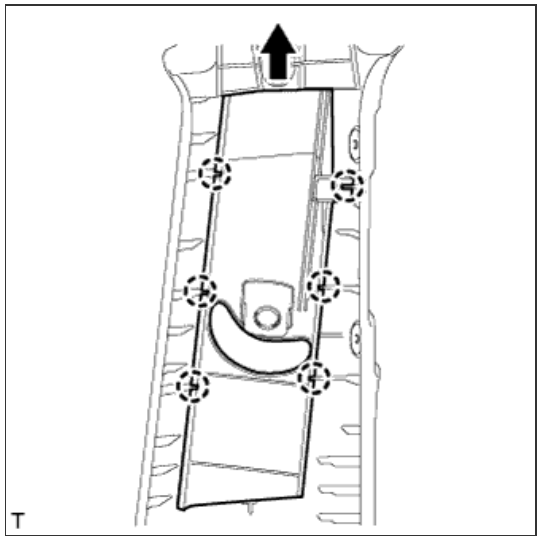
55. REMOVE REAR DOOR SCUFF PLATE OUTSIDE LH

a. Put protective tape around the rear door scuff plate outside.

b. Detach the 3 clips and remove the rear door scuff plate outside.



56. REMOVE REAR DOOR SCUFF PLATE OUTSIDE RH

HINT:

Use the same procedures described for the LH side.

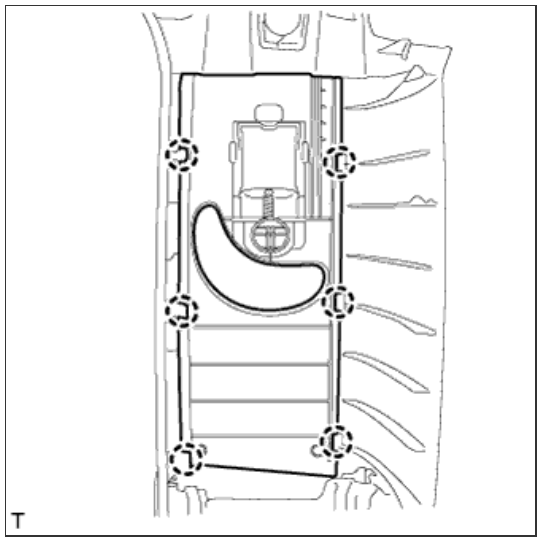
57. REMOVE FRONT SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY LH

a. Detach the 6 claws of the plate, and slide the plate in the direction of the arrow to remove it.



58. REMOVE FRONT SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

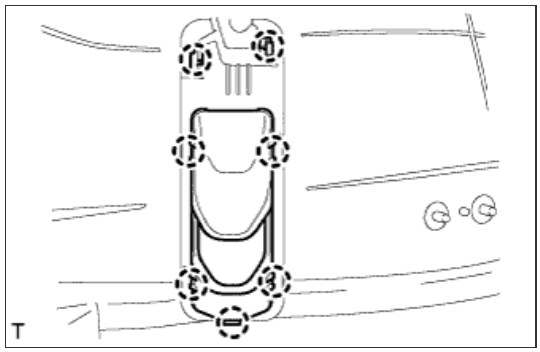
59. REMOVE REAR SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY LH

a. Detach the 6 claws and remove the plate.



60. REMOVE REAR SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

61. REMOVE ROOF SIDE INNER GARNISH COVER LH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Detach the 7 claws and remove the cover.

62. REMOVE ROOF SIDE INNER GARNISH COVER RH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

63. REMOVE REAR SEAT SHOULDER BELT HANGER (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

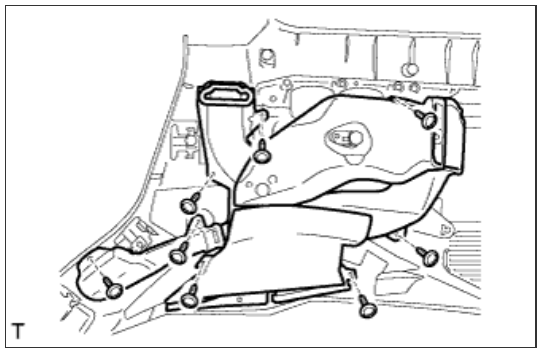
Use the same procedure to remove the hanger on the other side.

a. Remove the 2 spring nuts and hanger.

64. REMOVE REAR NO. 2 SEAT SHOULDER BELT HANGER LH

a. Remove the 2 spring nuts and hanger.



65. REMOVE REAR NO. 2 SEAT SHOULDER BELT HANGER RH

HINT:

Use the same procedures described for the LH side.

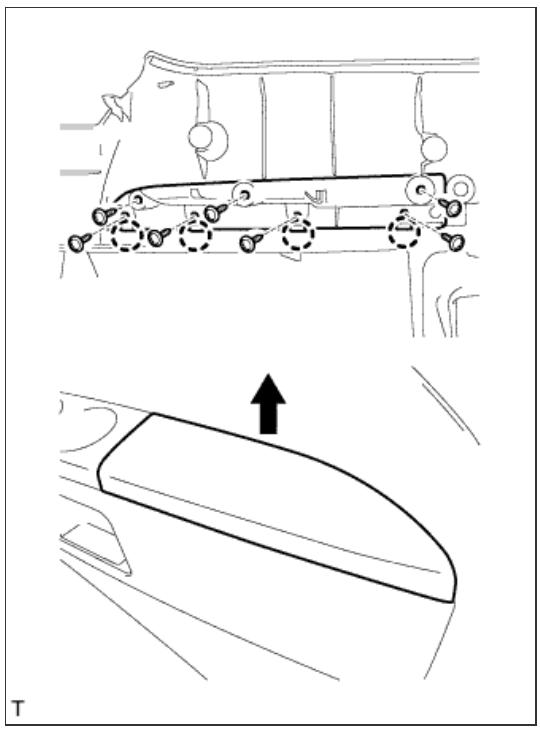
66. REMOVE QUARTER TRIM COVER SUB-ASSEMBLY LH

a. w/ Rear Heater:
Remove the 8 screws and duct.

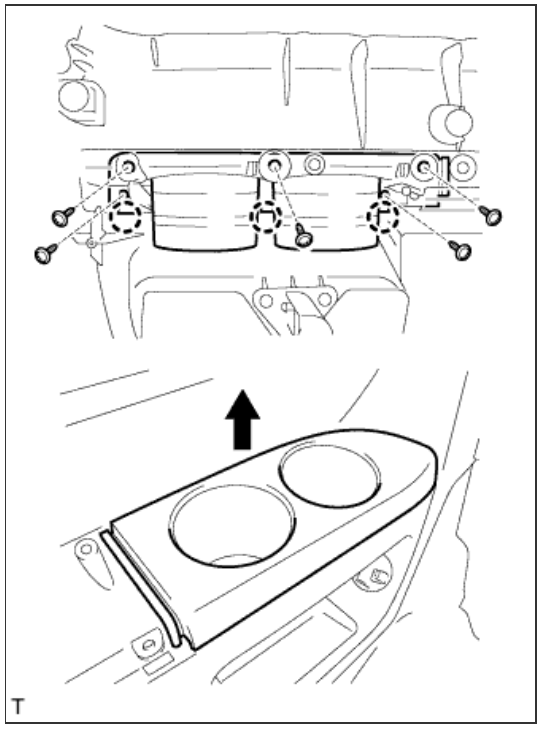
b. Remove the 7 screws.



c. Detach the 4 claws and remove the arter trim cover.

67. REMOVE QUARTER TRIM COVER SUB-ASSEMBLY RH

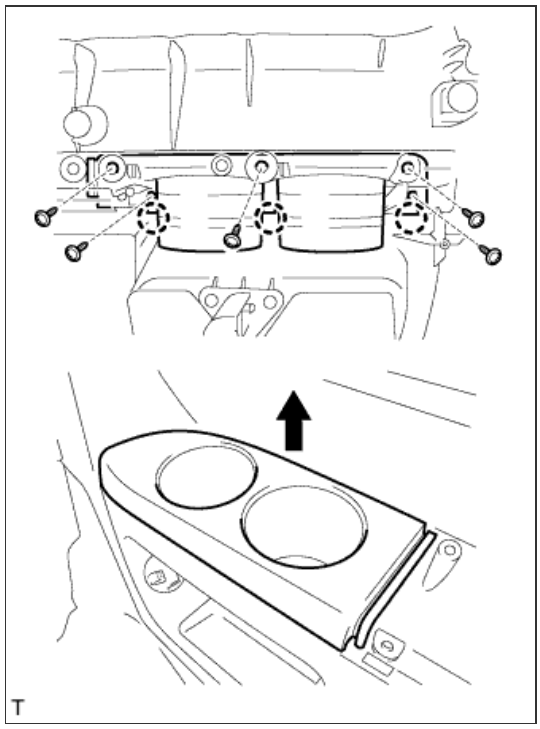
a. Remove the 7 screws.



b. Detach the 4 claws and remove the arter trim cover.

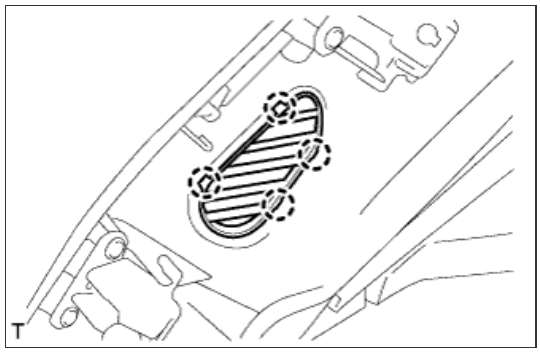
68. REMOVE NO. 2 CUP HOLDER

a. Remove the 5 screws.



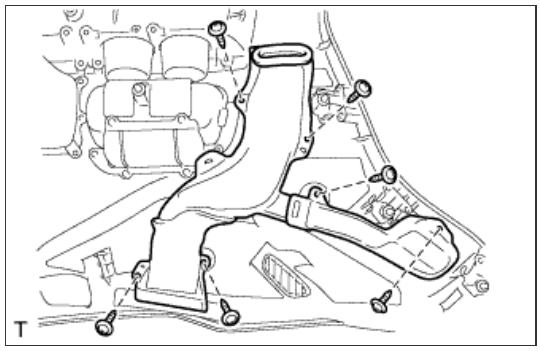
b. Detach the 3 claws and remove the cup holder.

69. REMOVE NO. 1 CUP HOLDER



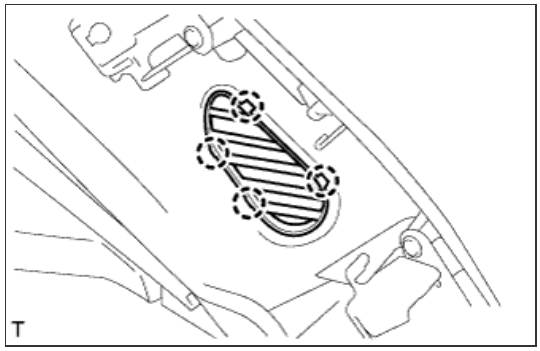
a. Remove the 5 screws.

b. Detach the 3 claws and remove the cup holder.



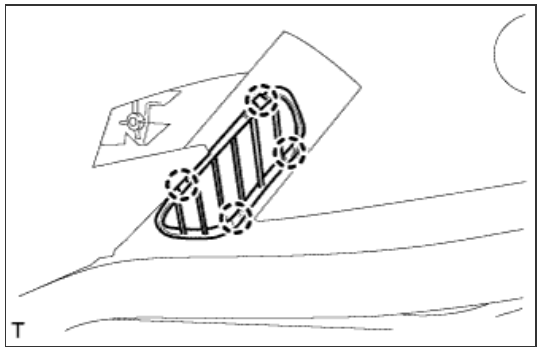
70. REMOVE NO. 1 SIDE TRIM BASE COVER LH (w/ Rear Heater)

a. Detach the 4 claws and remove the cover.



71. REMOVE NO. 1 SIDE TRIM BASE COVER RH (w/ Rear Heater)

a. Remove the 6 screws and duct.



b. Detach the 4 claws and remove the cover.

72. REMOVE NO. 2 SIDE TRIM BASE COVER LH (w/ Rear Heater)

a. Detach the 4 claws and remove the cover.

73. REMOVE NO. 2 SIDE TRIM BASE COVER RH (w/ Rear Heater)

HINT:

Use the same procedures described for the LH side.

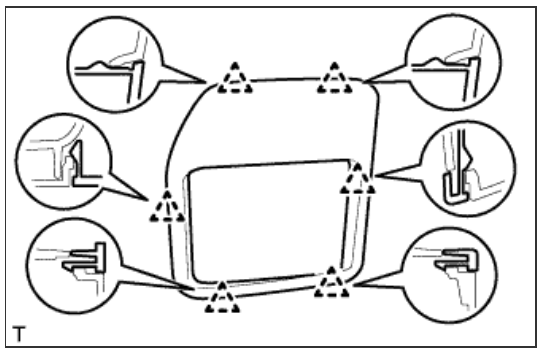
74. REMOVE REAR SEAT LOCK CONTROL LEVER SUB-ASSEMBLY LH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Detach the 4 claws and remove the seat lock control lever.



75. REMOVE REAR SEAT LOCK CONTROL LEVER SUB-ASSEMBLY RH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

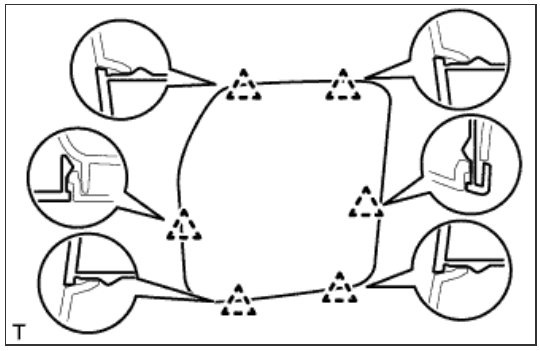
76. REMOVE REAR NO. 2 SEAT COVER BEZEL (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Detach the 6 clips and remove the rear No. 2 seat cover bezel.



77. REMOVE REAR NO. 1 SEAT COVER BEZEL (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the rear No. 2 seat cover bezel.

78. REMOVE QUARTER TRIM COVER LH (w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat Type)

a. Detach the 6 clips and remove the arter trim cover.

79. REMOVE QUARTER TRIM COVER RH (w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

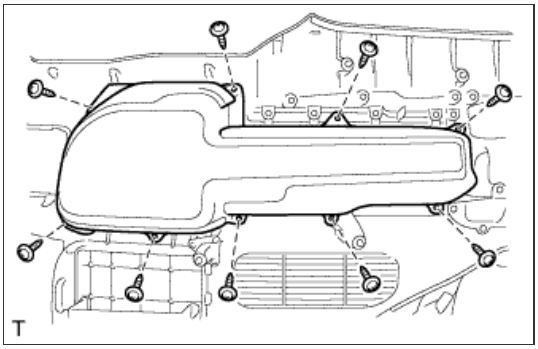
80. REMOVE QUARTER TRIM LID SUB-ASSEMBLY RH



a. Remove the arter trim lid.

81. REMOVE SIDE TRIM BOX COVER

a. Remove the side trim box cover.

82. REMOVE SIDE TRIM BOX

a. Remove the 9 screws and side trim box.

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE REAR NO. 2 SEAT ASSEMBLY LH (except Face to Face Seat Type)

a. Remove the rear No. 2 seat assembly LH (Click here).

3. REMOVE REAR NO. 2 SEAT ASSEMBLY RH (except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

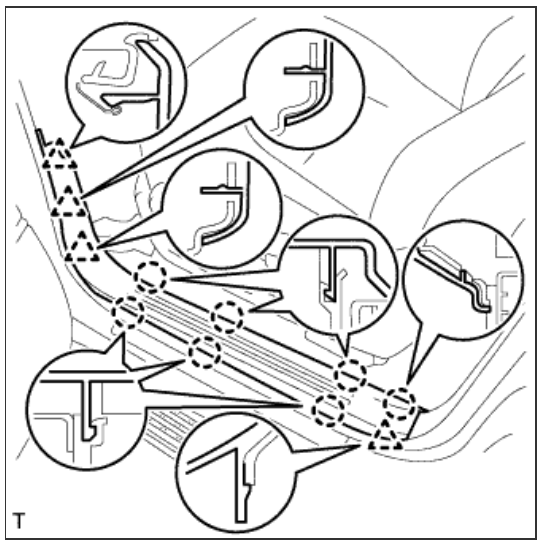
4. REMOVE REAR NO. 2 SEAT ASSEMBLY LH (for Face to Face Seat Type)

a. Remove the rear No. 2 seat assembly LH (Click here).



5. REMOVE REAR NO. 2 SEAT ASSEMBLY RH (for Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

6. REMOVE FRONT DOOR SCUFF PLATE LH

a. Detach the 7 claws and 4 clips, and remove the scuff plate.

7. REMOVE FRONT DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

8. REMOVE REAR STEP COVER

HINT:

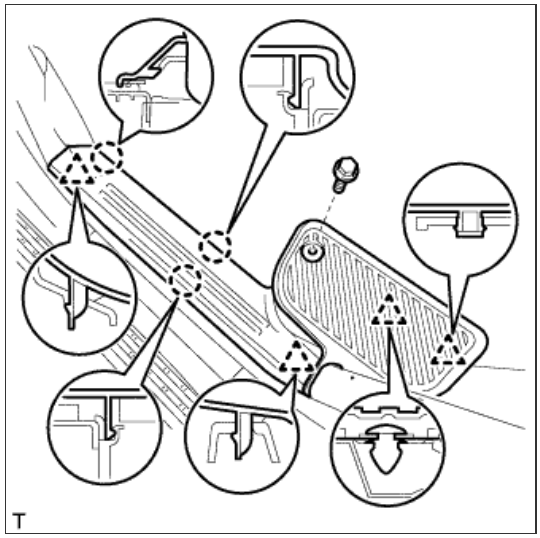
Use the same procedure to remove the step cover on the other side.

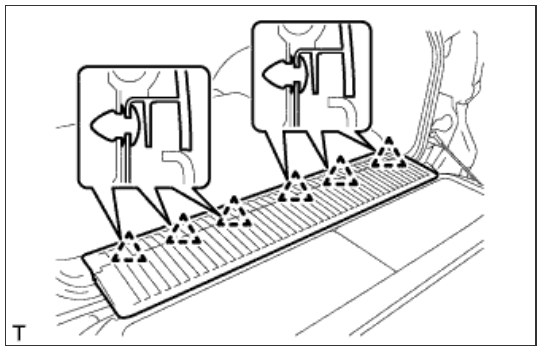


a. Detach the 2 claws and remove the step cover.

9. REMOVE REAR DOOR SCUFF PLATE LH

a. Remove the screw.

b. Detach the 3 claws and 4 clips, and remove the scuff plate.



10. REMOVE REAR DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

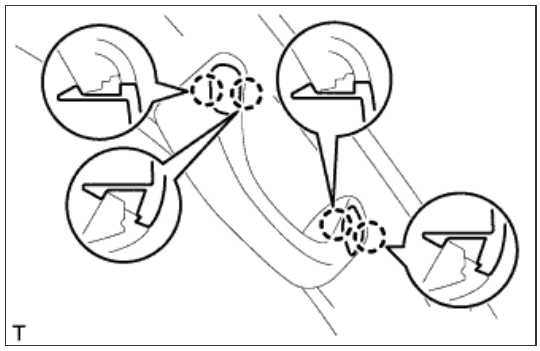
11. REMOVE REAR FLOOR MAT REAR SUPPORT PLATE

a. Detach the 6 clips and remove the support plate.



12. REMOVE FRONT ASSIST GRIP SUB-ASSEMBLY

HINT:

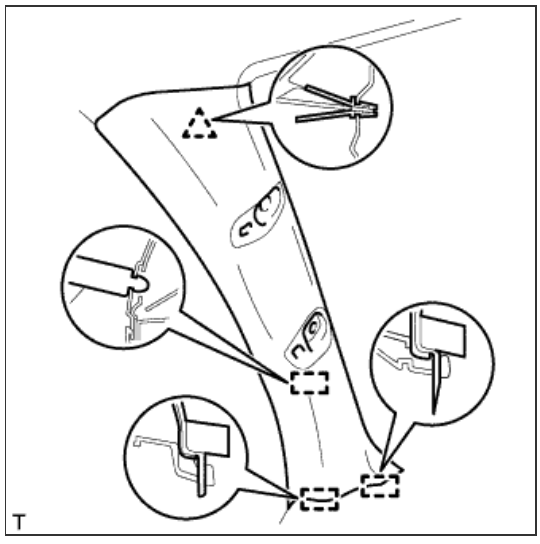
Use the same procedure to remove the front assist grip on the other side.

a. Detach the 4 claws and remove the 2 assist grip plugs.

b. Remove the 2 bolts.

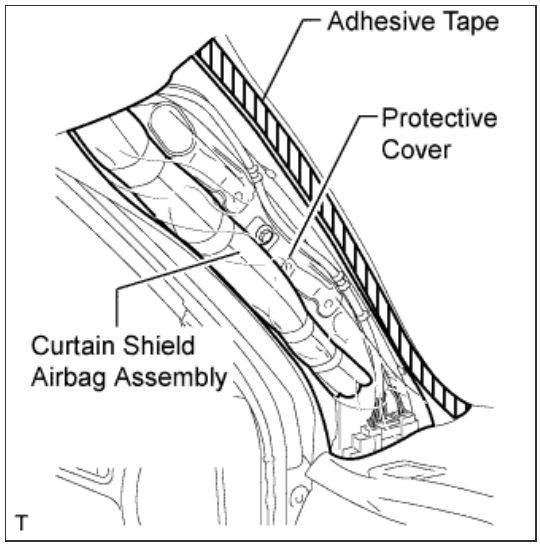


c. Detach the 2 claws and remove the front assist grip.

13. REMOVE FRONT PILLAR GARNISH LH

a. Detach the clip 3 guides, and remove the front pillar garnish.

b. for 9, 14 Speakers:
Disconnect the speaker connector and then remove the front pillar garnish.



c. Protect the curtain shield airbag.

i. horoughly cover the airbag with a cloth or nylon sheet and fix the ends of the cover with adhesive tape, as shown in the illustration.

NOTICE:

Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish is removed.

14. REMOVE FRONT PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

15. REMOVE CENTER PILLAR GARNISH COVER LH

HINT:

- **for Manual Seat:**
  When removing the center pillar garnish cover, move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  When removing the center pillar garnish cover, connect the cable to the negative (-) battery terminal and operate the power seat switch to move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  After moving the front seat, disconnect the cable from the negative (-) battery terminal.

a. Detach the 2 clips and 2 guides, and remove the cover.

16. REMOVE CENTER PILLAR GARNISH COVER RH

HINT:

Use the same procedures described for the LH side.

17. REMOVE CENTER LOWER PILLAR GARNISH LH

HINT:

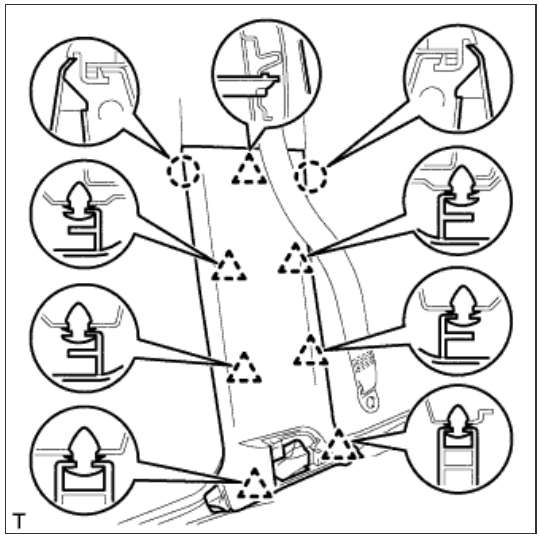
- **for Manual Seat:**
  When removing the center lower pillar garnish, move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  When removing the center lower pillar garnish, connect the cable to the negative (-) battery terminal and operate the power seat



switch to move the front seat and seatback to the foremost upright position.

- **for Power Seat:**
  After moving the front seat, disconnect the cable from the negative (-) battery terminal.

a. Remove the bolt and seat belt anchor.

b. Detach the 2 claws and 7 clips, and remove the center lower pillar garnish.

18. REMOVE CENTER LOWER PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

19. REMOVE REAR ASSIST GRIP ASSEMBLY

HINT:

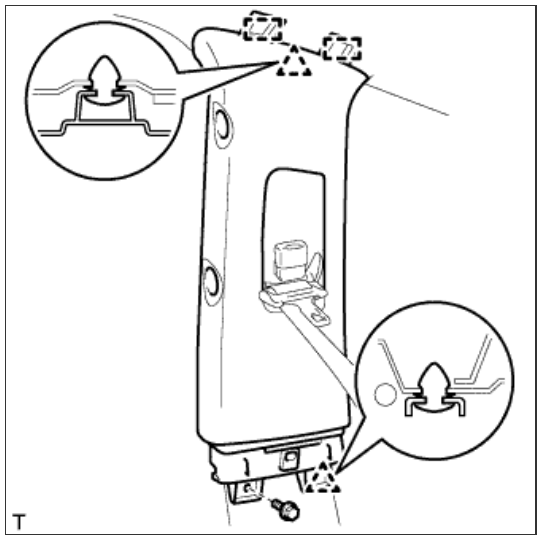
Use the same procedure to remove the rear assist grip on the other side.

a. Detach the 4 claws and remove the 2 assist grip plugs.

b. Remove the 2 bolts.

c. Detach the 2 claws and remove the rear assist grip.



20. REMOVE CENTER PILLAR GARNISH LH

a. Remove the bolt.

b. Detach the 2 clips and 2 guides.

c. Pass the seat belt anchor through the center pillar garnish, and remove the center pillar garnish.

21. REMOVE CENTER PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

22. REMOVE REAR SEAT COVER CAP (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedure to remove the rear seat cover cap on the other side.

a. Using a screwdriver, detach the 3 claws and remove the rear seat cover cap.

HINT:

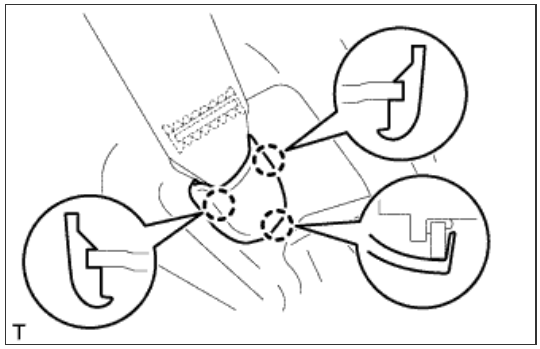
ape the screwdriver tip before use.



23. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY LH

HINT:

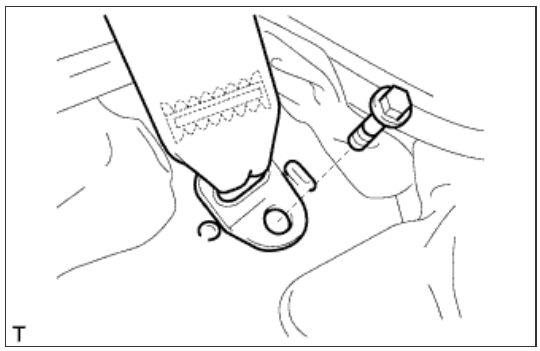
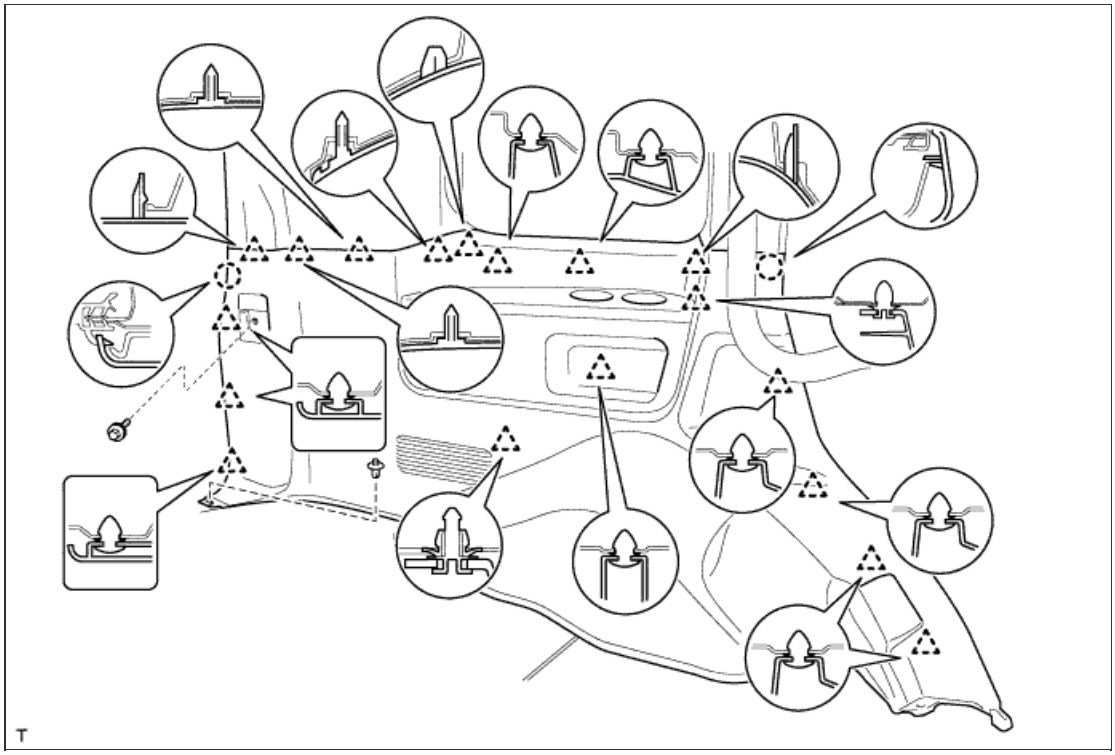
When removing the front arter trim panel, operate the reclining adjuster release handle and move the No. 1 rear seat to the position shown in the illustration.



a. Detach the 3 claws and remove the cover.

b. Remove the bolt and rear No. 1 seat belt anchor.

c. w/ Rear No. 2 Seat, except Face to Face Seat ype:
Remove the bolt and rear No. 2 seat belt anchor.

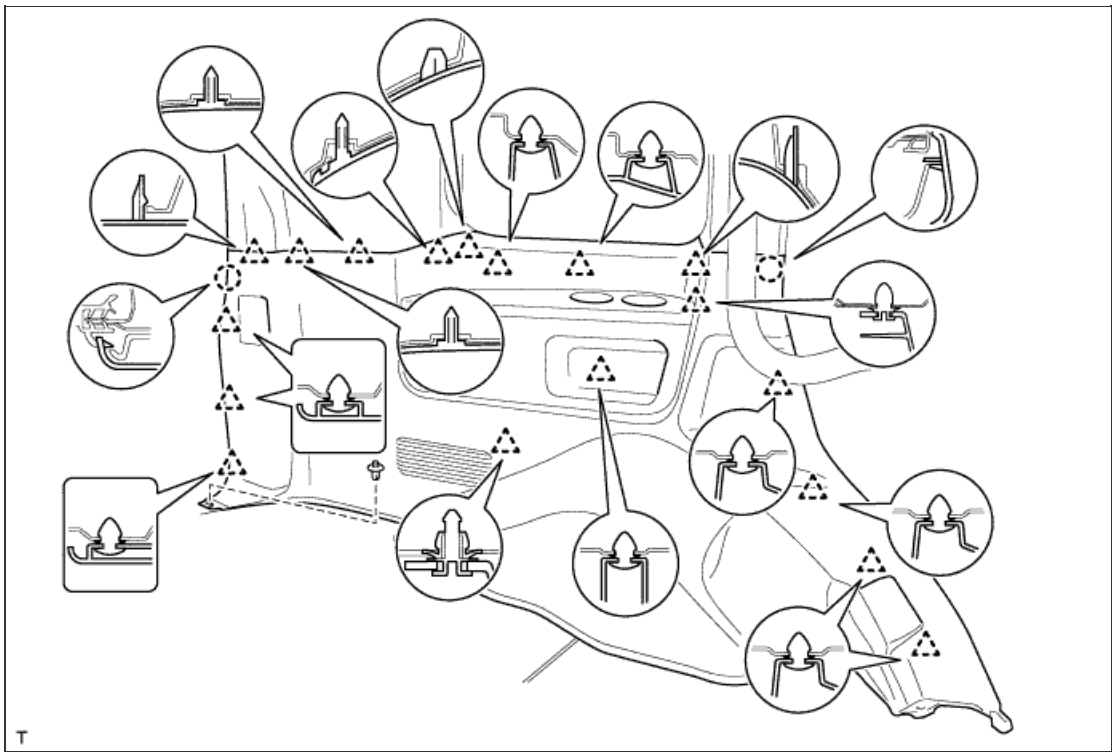


d. w/ Rear No. 2 Seat, except Face to Face Seat ype:

i. Remove the clip and bolt.

ii. Detach the 18 clips and 2 claws.

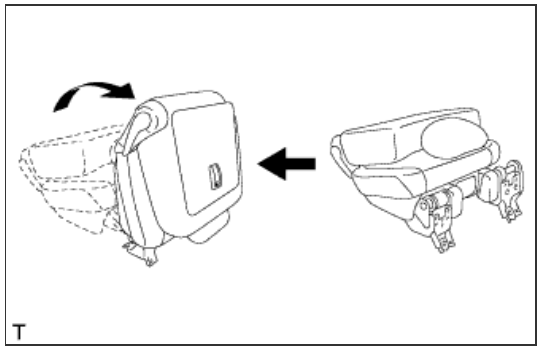
iii. w/o Rear Air Conditioning System:
Disconnect the rear seat lock control lever cable and then remove the arter trim panel.



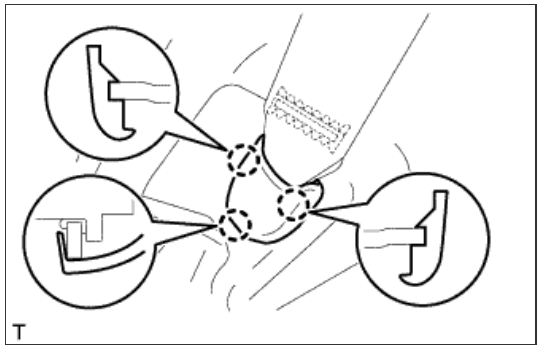
iv. w/ Rear Air Conditioning System:
Disconnect the thermistor connector and rear seat lock control lever cable, and then remove the arter trim panel.

e. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat ype:

i. Remove the clip.



ii. Detach the 18 clips and 2 claws, and remove the arter trim panel.



24. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY RH

HINT:

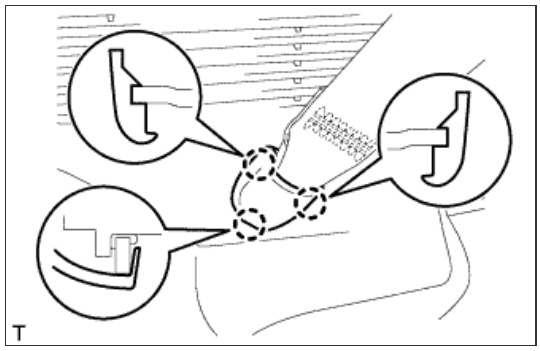
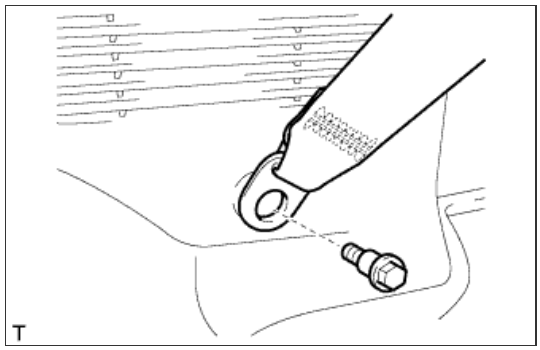
When removing the front arter trim panel, operate the reclining adjuster release handle and move the No. 1 rear seat to the position shown in the illustration.



a. Detach the 3 claws and remove the cover.

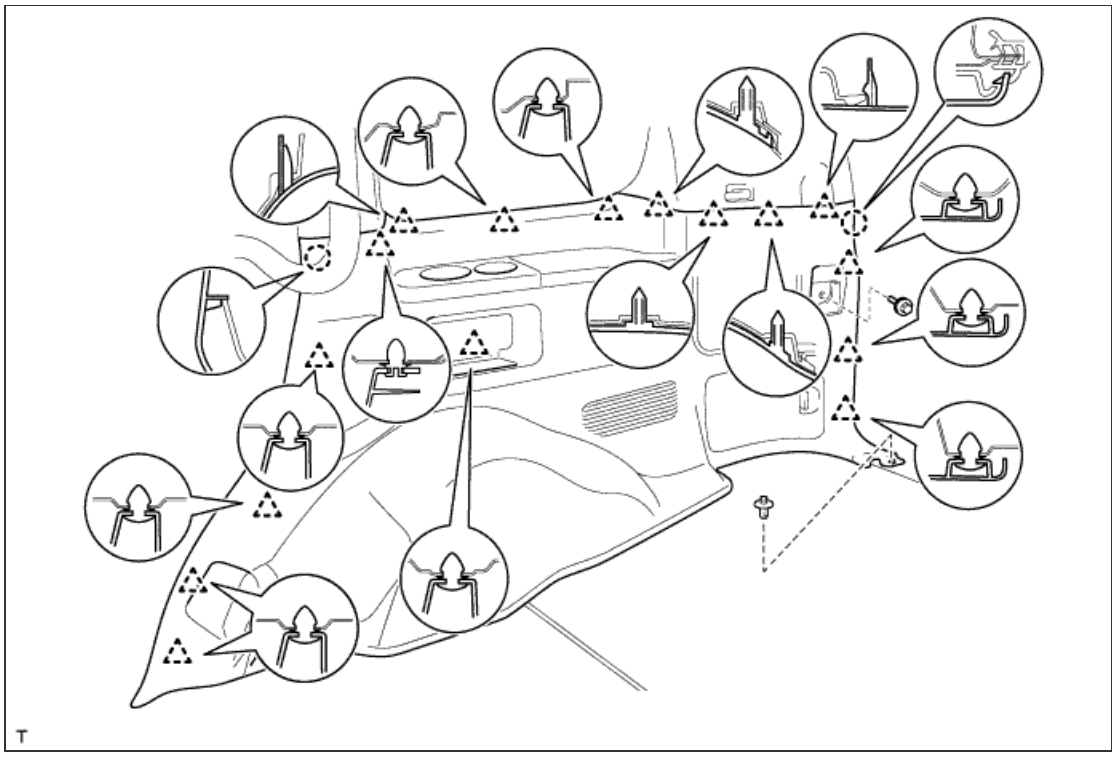
b. Remove the bolt and rear No. 1 seat belt anchor.



c. w/ Rear No. 2 Seat, except Face to Face Seat ype:

i. Detach the 3 claws and remove the cover.

ii. Remove the bolt and rear No. 2 seat belt anchor.

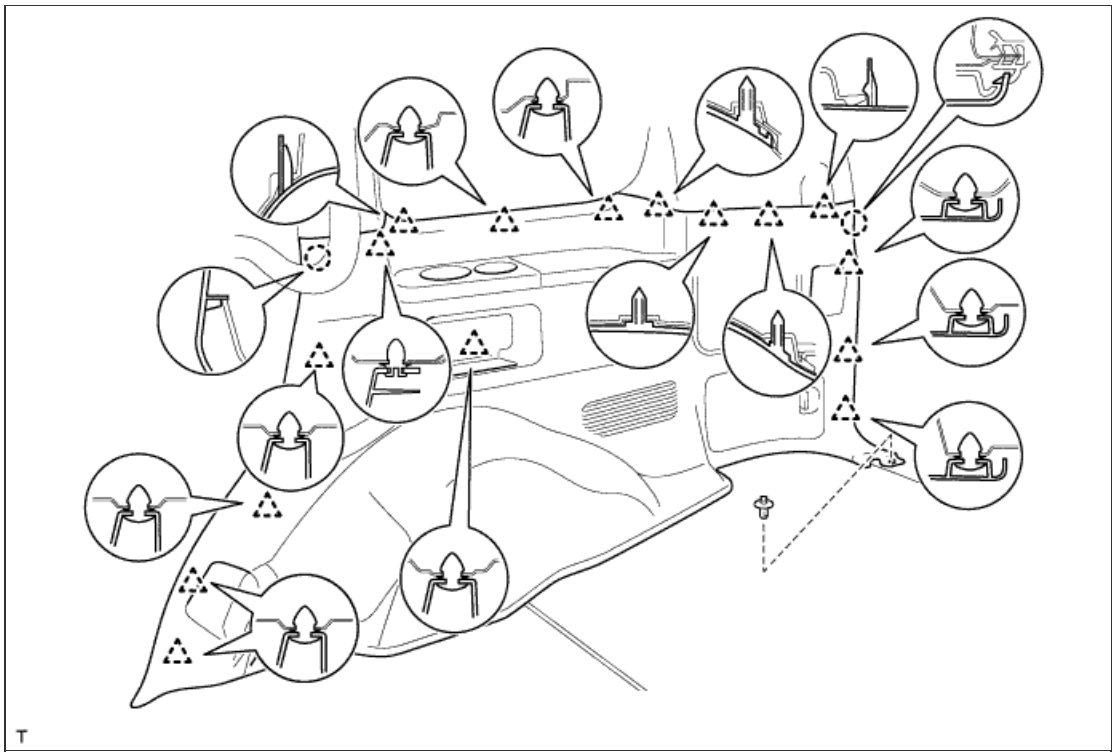


d. w/ Rear No. 2 Seat, except Face to Face Seat ype:

i. Remove the clip and bolt.

ii. Detach the 16 clips and 2 claws.

iii. w/o Rear Air Conditioning System:
Disconnect the rear seat lock control lever cable and then remove the arter trim panel.

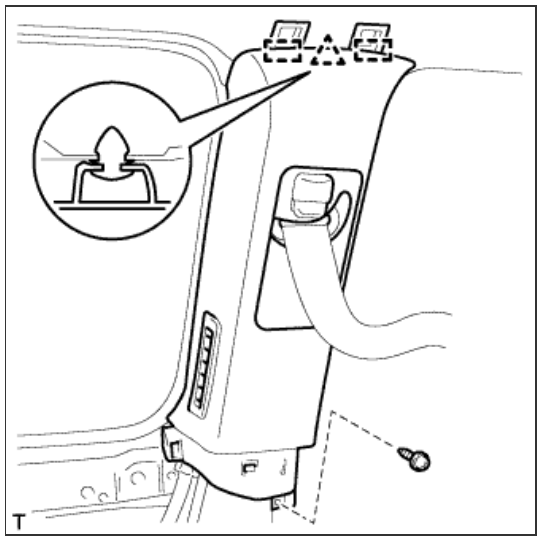


iv. w/ Rear Air Conditioning System:
Disconnect the thermistor connector and rear seat lock control lever cable, and then remove the arter trim panel.

e. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat ype:

i. Remove the clip.

ii. Detach the 16 clips and 2 claws, and remove the arter trim panel.



25. REMOVE REAR FRONT QUARTER TRIM GARNISH LH

a. Remove the screw.

b. Detach the clip and 2 guides.

c. Pass the seat belt anchor through the arter trim garnish, and remove the arter trim garnish.

26. REMOVE REAR FRONT QUARTER TRIM GARNISH RH

HINT:

Use the same procedures described for the LH side.

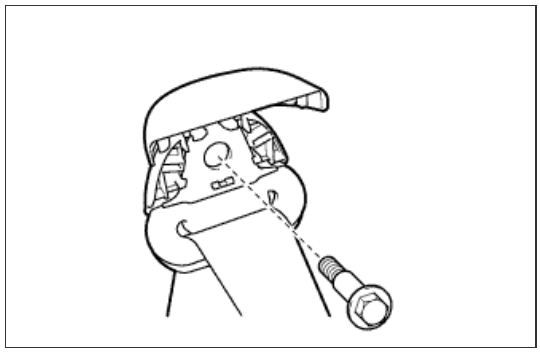
27. REMOVE REAR UPPER PILLAR GARNISH LH

a. w/ Rear No. 2 Seat, except Face to Face Seat ype



i. Using a screwdriver, detach the 2 claws and open the seat belt shoulder anchor cover.

HINT:

ape the screwdriver tip before use.

ii. Remove the bolt and seat belt shoulder anchor.

b. Detach the 5 clips and remove the rear upper pillar garnish.

28. REMOVE REAR UPPER PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

29. REMOVE MAP LIGHT ASSEMBLY

a. Using a screwdriver, detach the 2 claws and open the 2 covers.

HINT:

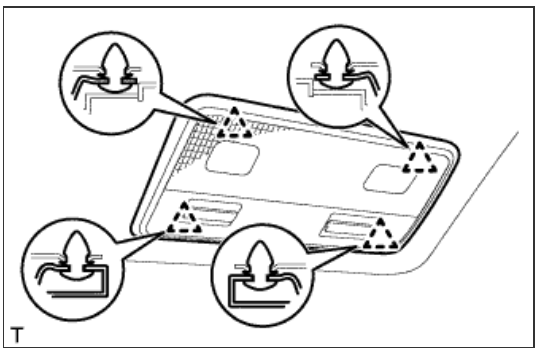
ape the screwdriver tip before use.

b. Remove the 2 screws.

c. Detach the 2 clips and 2 guides.

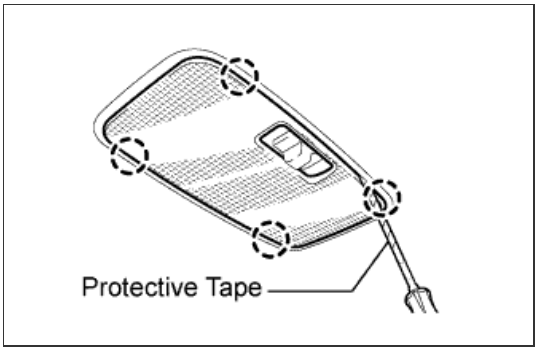


d. Disconnect the connector and then remove the map light.

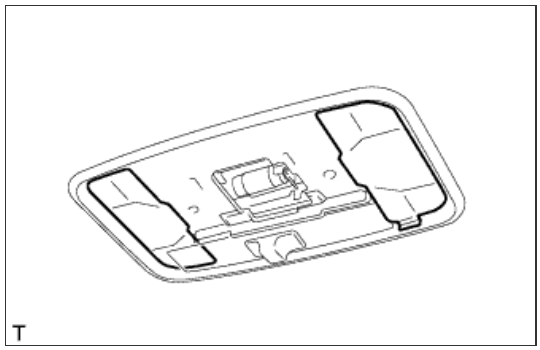
30. REMOVE NO. 1 ROOM LIGHT ASSEMBLY

a. Detach the 4 clips.

b. Disconnect the connector and then remove the room light.



31. REMOVE NO. 2 ROOM LIGHT ASSEMBLY



a. Using a screwdriver, detach the 4 claws and remove the room light lens.

HINT:

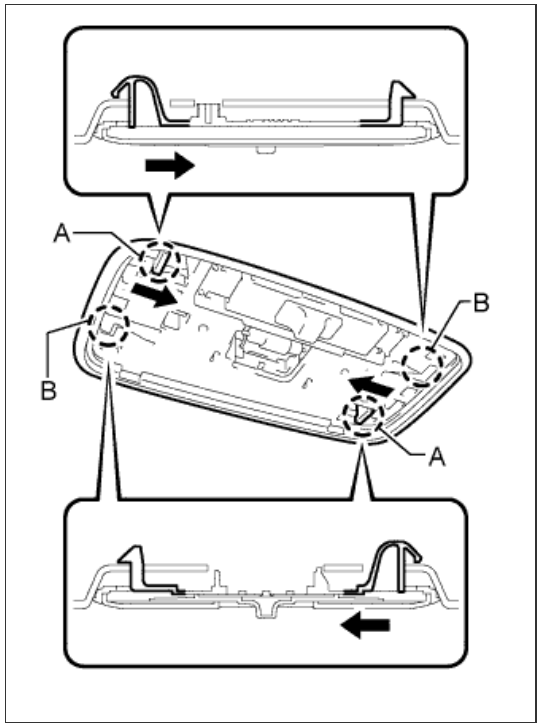
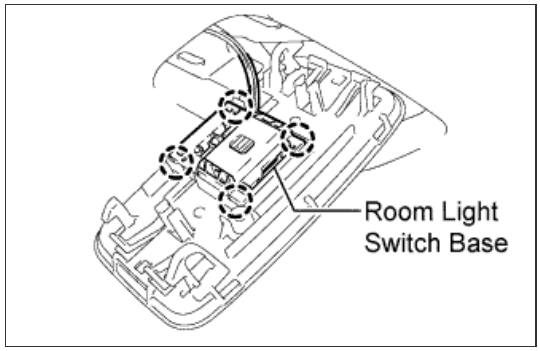
ape the screwdriver tip before use.



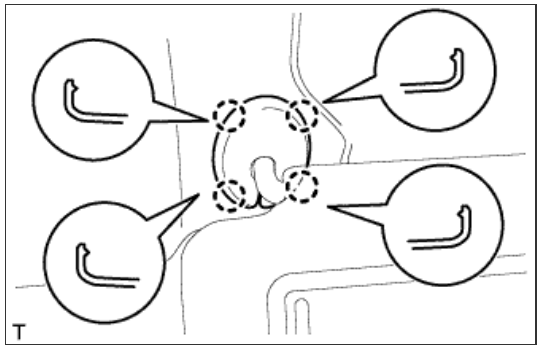
b. Remove the 2 covers.



c. Using a screwdriver, push the 2 levers in the direction of the arrows in the illustration, and detach the 2 claws labeled A.

d. Detach the 2 claws labeled .

e. Detach the 4 claws and remove the room light from the room light switch base.



32. REMOVE VISOR BRACKET COVER

HINT:

Use the same procedure to remove the visor bracket cover on the other side.

a. Detach the 4 claws and remove the visor bracket cover.

33. REMOVE VISOR ASSEMBLY LH

a. Remove the 2 screws and visor.

34. REMOVE VISOR ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

35. REMOVE VISOR HOLDER

HINT:

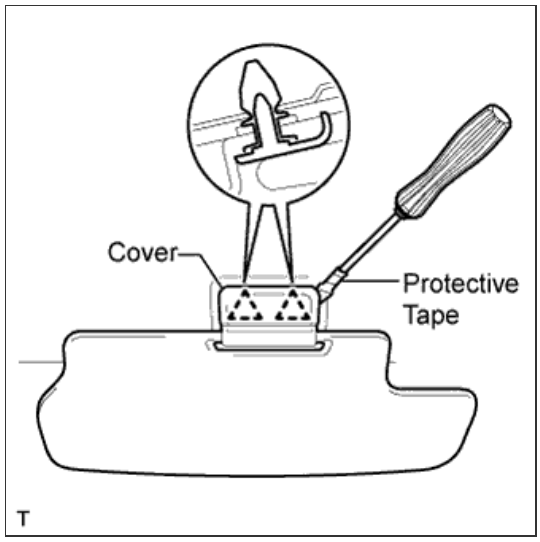
Use the same procedure to remove the visor holder on the other side.

a. rn the visor holder approximately 45° and pull it out as shown in the illustration.

b. Detach the 2 claws and remove the visor holder.



36. REMOVE CENTER VISOR ASSEMBLY LH (w/ Sub Visor)

a. Using a screwdriver, pry off the cover to detach the 2 clips and remove the center visor.

HINT:

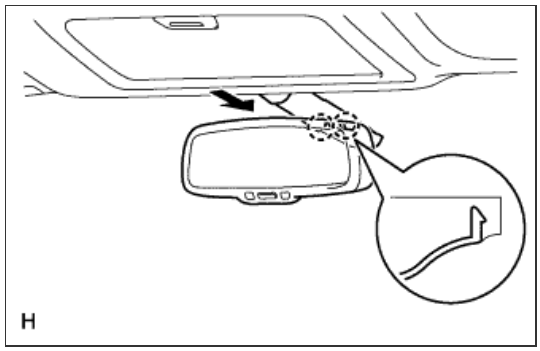
ape the screwdriver tip before use.



37. REMOVE CENTER VISOR ASSEMBLY RH (w/ Sub Visor)

HINT:

Use the same procedures described for the LH side.

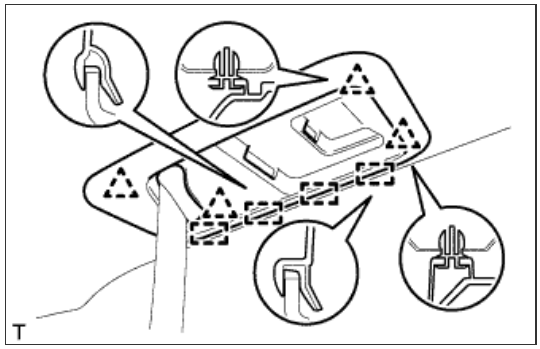
38. REMOVE INNER REAR VIEW MIRROR STAY HOLDER COVER (w/ EC Mirror)

a. Detach the 2 claws and remove the cover as shown in the illustration.

39. REMOVE RAIN SENSOR COVER (w/ Rain Sensor)



a. Slide the No. 2 cover in the direction of the arrow labeled (1).

b. Pull the stopper in the direction of the arrow labeled (2) to remove the No. 2 cover.

40. REMOVE SEAT BELT ANCHOR COVER (for 3 Person Seat Type Rear No. 2 Seat)

a. Detach the 4 clips and 4 guides, and remove the seat belt anchor cover.

41. REMOVE ASSIST GRIP ASSEMBLY

HINT:

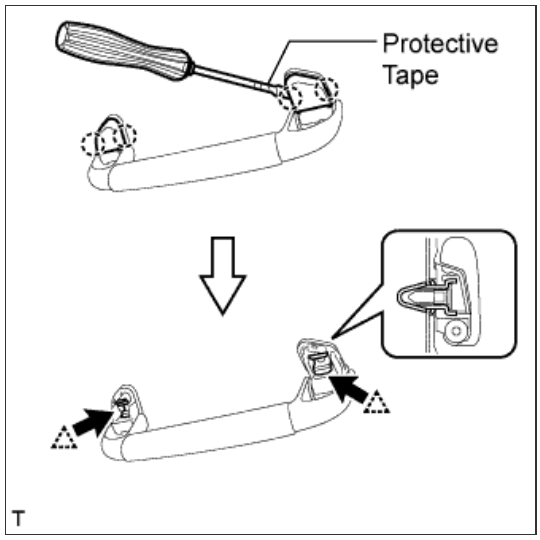
Use the same procedure to remove the assist grip on the other side.



a. Using a screwdriver, detach the 4 claws and remove the 2 assist grip covers.

HINT:

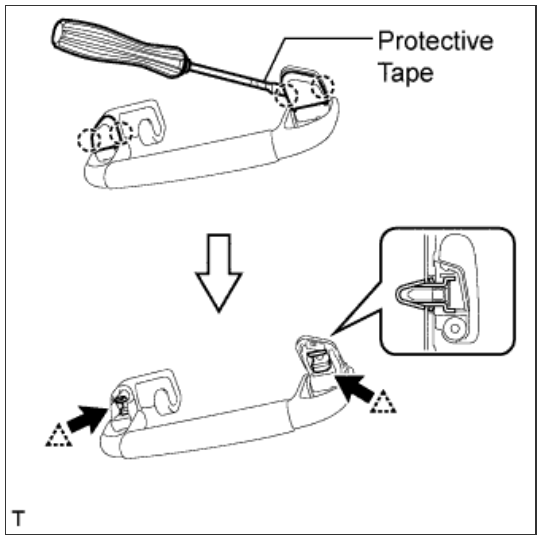
ape the screwdriver tip before use.

b. Detach the 2 clips and remove the assist grip.

c. Remove the 2 clips from the vehicle body.

42. REMOVE NO. 2 ASSIST GRIP ASSEMBLY LH

a. w/ Rear No. 2 Seat, except Face to Face Seat ype or w/o Rear No. 2 Seat:
Remove the No. 2 assist grip assembly.



i. Using a screwdriver, detach the 4 claws and remove the 2 assist grip covers.

HINT:

ape the screwdriver tip before use.

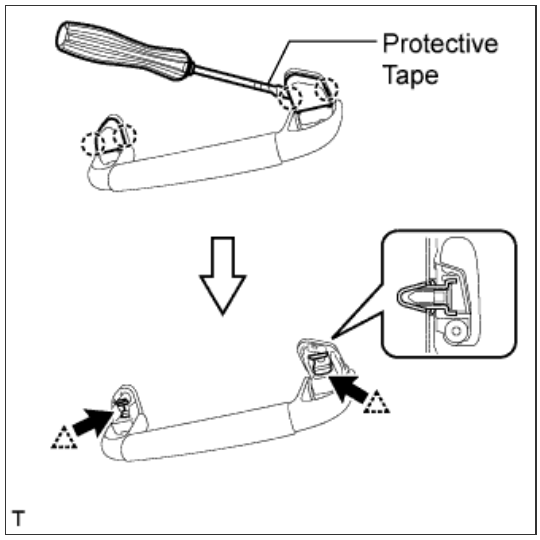
ii. Detach the 2 clips and remove the assist grip.

iii. Remove the 2 clips from the vehicle body.

b. w/ Rear No. 2 Seat, for Face to Face Seat ype:
Remove the No. 2 assist grip assembly.



i. Using a screwdriver, detach the 4 claws and remove the 2 assist grip covers.

HINT:

ape the screwdriver tip before use.

ii. Detach the 2 clips and remove the assist grip.

iii. Remove the 2 clips from the vehicle body.

43. REMOVE NO. 2 ASSIST GRIP ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

44. REMOVE 3RD SEAT ASSIST GRIP ASSEMBLY (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

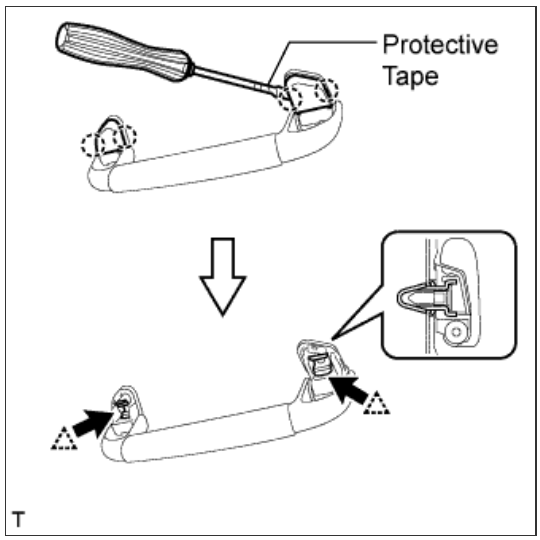
Use the same procedure to remove the 3rd seat assist grip on the other side.



a. Using a screwdriver, detach the 4 claws and remove the 2 assist grip covers.

HINT:

ape the screwdriver tip before use.

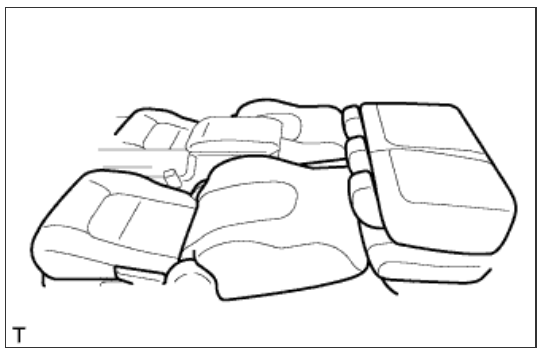
b. Detach the 2 clips and remove the assist grip.



c. Remove the 2 clips from the vehicle body.

45. REMOVE ROOF HEADLINING ASSEMBLY

HINT:

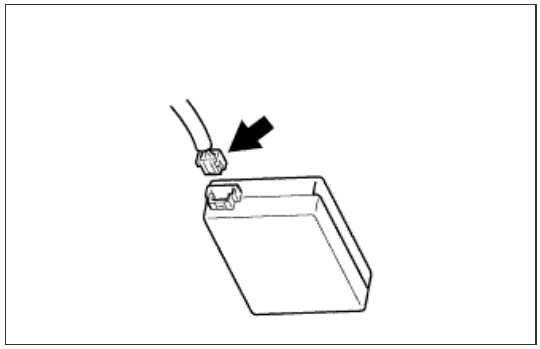
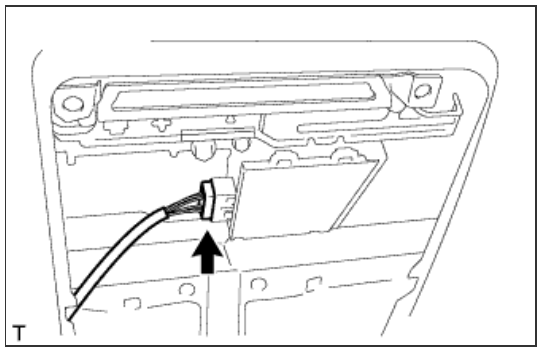
- **for Manual Seat:**
  When removing the roof headlining, move the front seat and rear No. 1 seat to the position shown in the illustration.
- **for Power Seat:**
  When removing the roof headlining, connect the cable to the negative (-) battery terminal and move the front seat and No. 1 rear seat to the position shown in the illustration.
- **for Power Seat:**
  After moving the seats, disconnect the cable from the negative (-) battery terminal.

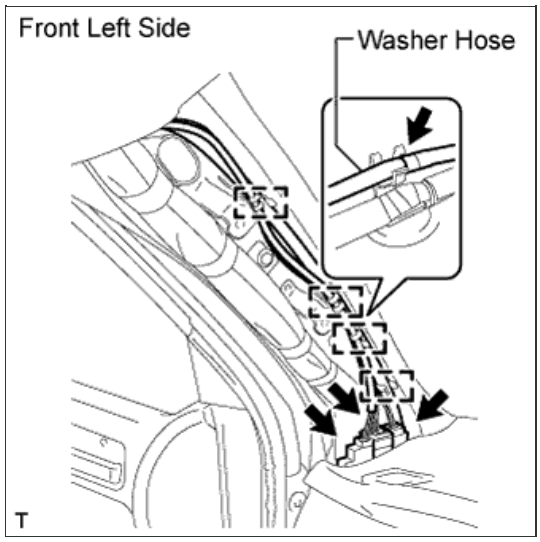


a. w/ EC Mirror

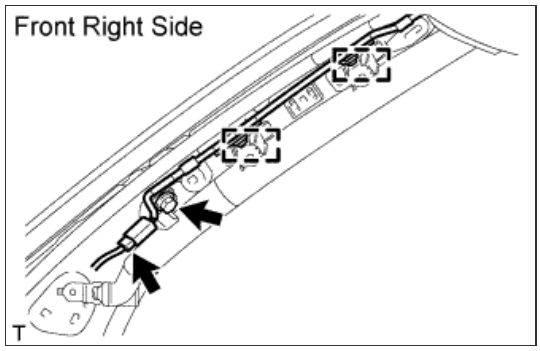


a. w/ EC Mirror:
Disconnect the inner mirror connector.

b. w/ Rain Sensor:
Disconnect the rain sensor connector.

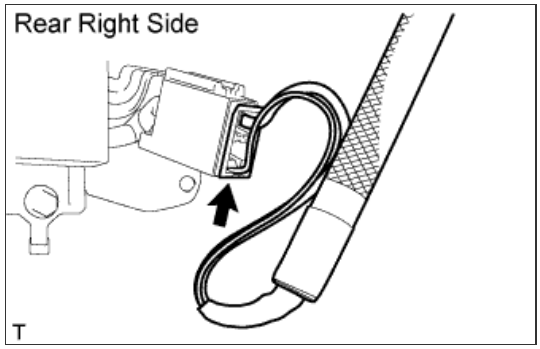


c. Disconnect the drive gear connector.

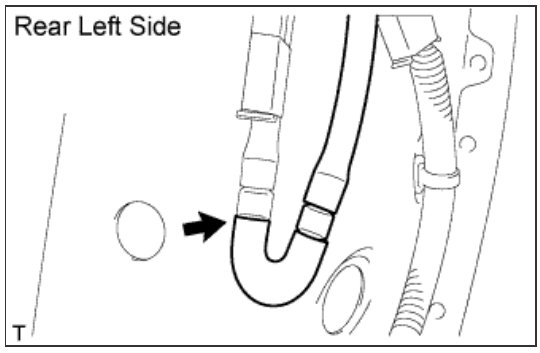


d. Disconnect the 3 roof wire connectors and washer hose.

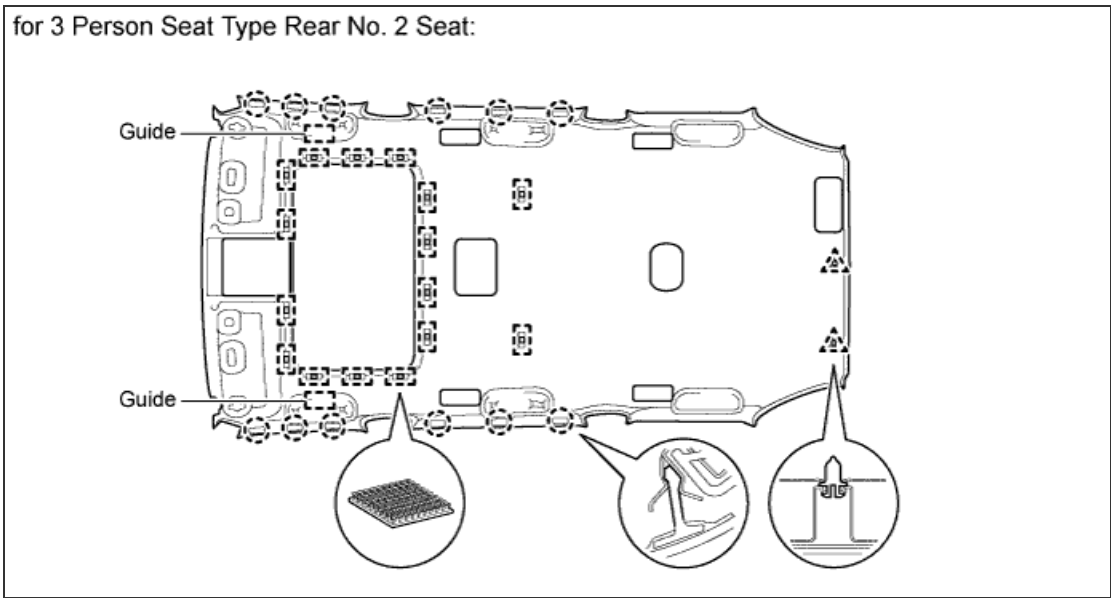
e. Detach the 4 clamps.



f. Remove the bolt.

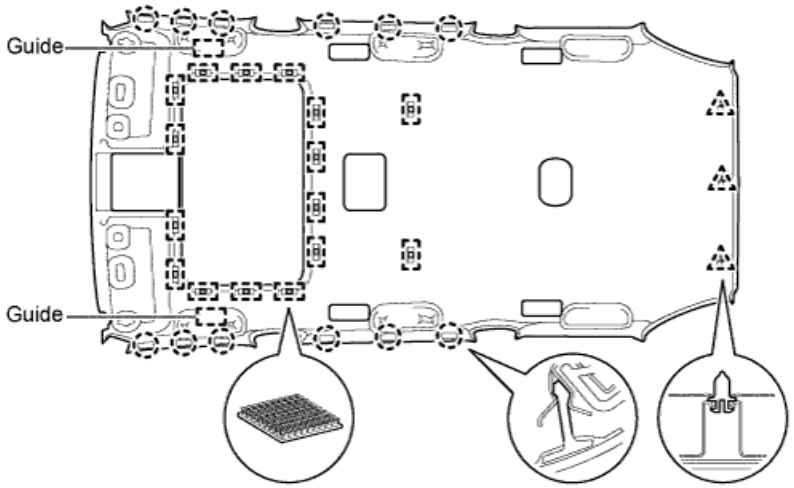


g. Disconnect the antenna cord connector and detach the 2 clamps.



h. Disconnect the antenna cord connector.

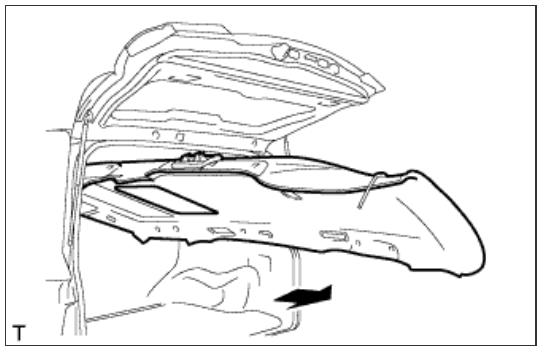
i. Disconnect the washer hose.



j. for 3 Person Seat ype Rear No. 2 Seat:
Detach the 12 claws, 2 clips, 2 guides and 16 fasteners.

k. except 3 Person Seat ype Rear No. 2 Seat:

k. except 3 Person Seat Type Rear No. 2 Seat:
Detach the 12 claws, 3 clips, 2 guides and 16 fasteners.

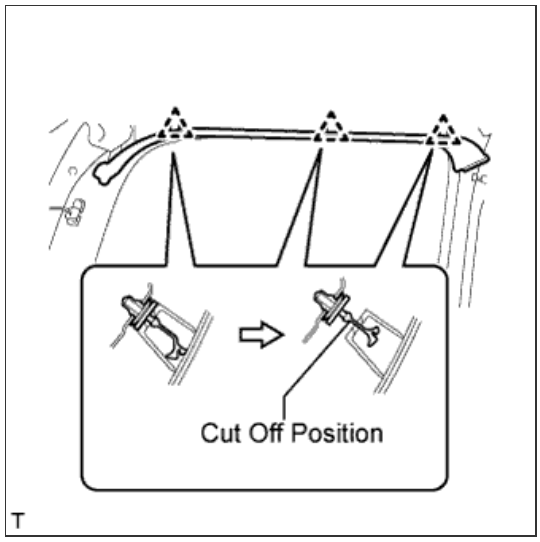


except 3 Person Seat Type Rear No. 2 Seat:

l. Remove the headlining from the rear of the vehicle as shown in the illustration.

NOTICE:

e careful not to damage the roof headlining when taking it out.

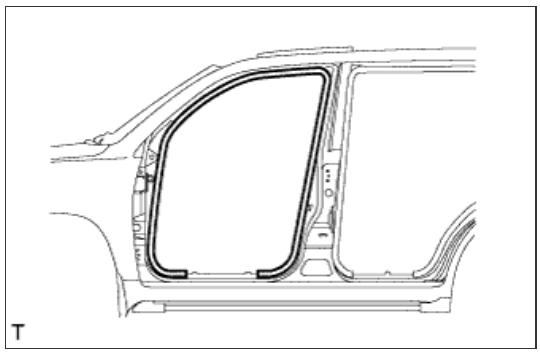


46. REMOVE FRONT ROOF SIDE RAIL GARNISH LH

a. Detach the 3 clips.

b. Cut off the 3 clips and remove the roof side rail garnish.

c. Remove 3 clips from the vehicle body.



47. REMOVE FRONT ROOF SIDE RAIL GARNISH RH

HINT:

Use the same procedures described for the LH side.

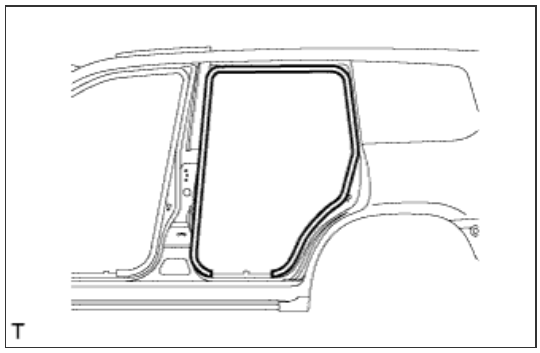
48. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH

a. Remove the front door opening trim weatherstrip.



49. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH

HINT:

Use the same procedures described for the LH side.

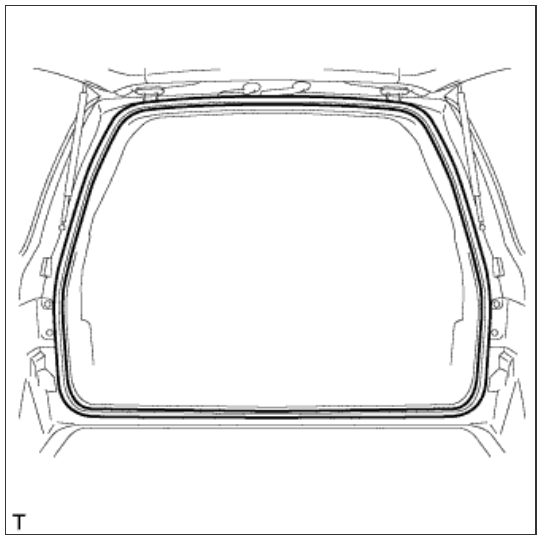
50. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH

a. Remove the rear door opening trim weatherstrip.



51. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH

HINT:

Use the same procedures described for the LH side.

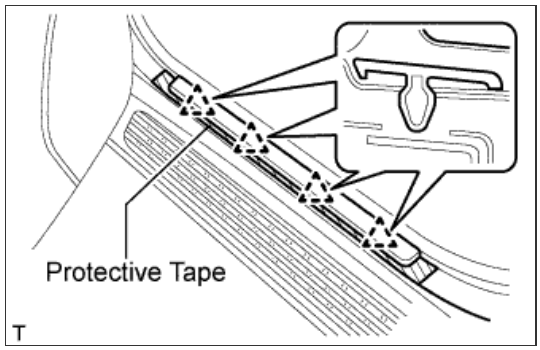
52. REMOVE BACK DOOR WEATHERSTRIP



a. Remove the back door weatherstrip.

53. REMOVE FRONT DOOR SCUFF PLATE OUTSIDE LH

a. Put protective tape around the front door scuff plate outside.

b. Detach the 4 clips and remove the front door scuff plate outside.

54. REMOVE FRONT DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

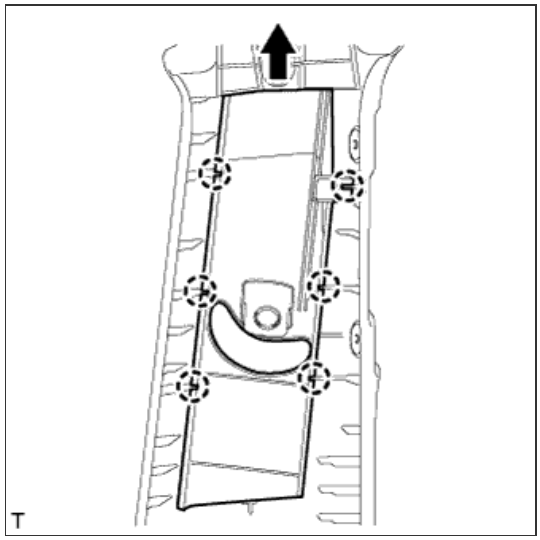
55. REMOVE REAR DOOR SCUFF PLATE OUTSIDE LH

a. Put protective tape around the rear door scuff plate outside.

b. Detach the 3 clips and remove the rear door scuff plate outside.



56. REMOVE REAR DOOR SCUFF PLATE OUTSIDE RH

HINT:

Use the same procedures described for the LH side.

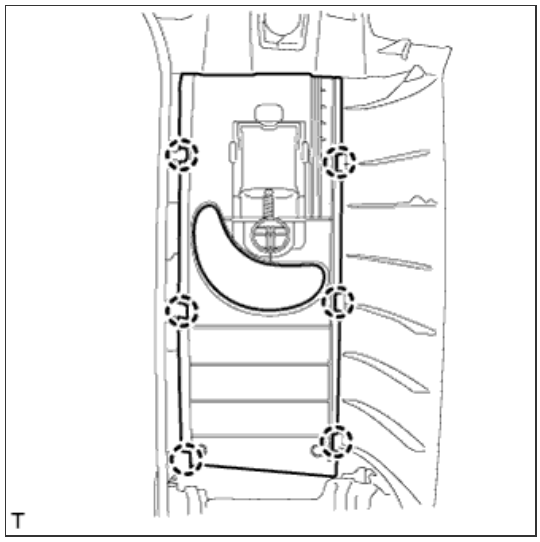
57. REMOVE FRONT SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY LH

a. Detach the 6 claws of the plate, and slide the plate in the direction of the arrow to remove it.



58. REMOVE FRONT SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

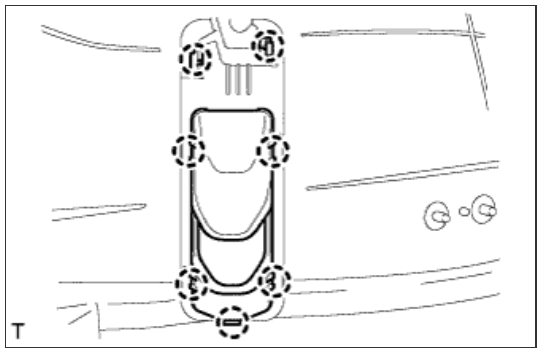
59. REMOVE REAR SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY LH

a. Detach the 6 claws and remove the plate.



60. REMOVE REAR SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

61. REMOVE ROOF SIDE INNER GARNISH COVER LH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Detach the 7 claws and remove the cover.

62. REMOVE ROOF SIDE INNER GARNISH COVER RH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

63. REMOVE REAR SEAT SHOULDER BELT HANGER (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

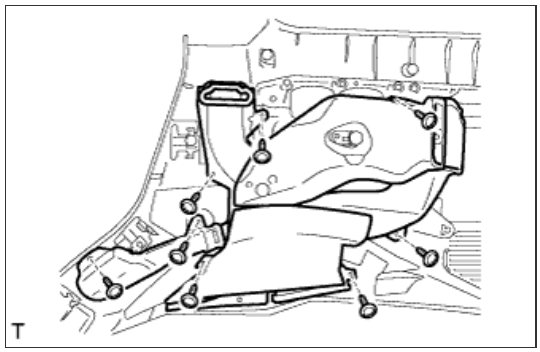
Use the same procedure to remove the hanger on the other side.

a. Remove the 2 spring nuts and hanger.

64. REMOVE REAR NO. 2 SEAT SHOULDER BELT HANGER LH

a. Remove the 2 spring nuts and hanger.



65. REMOVE REAR NO. 2 SEAT SHOULDER BELT HANGER RH

HINT:

Use the same procedures described for the LH side.

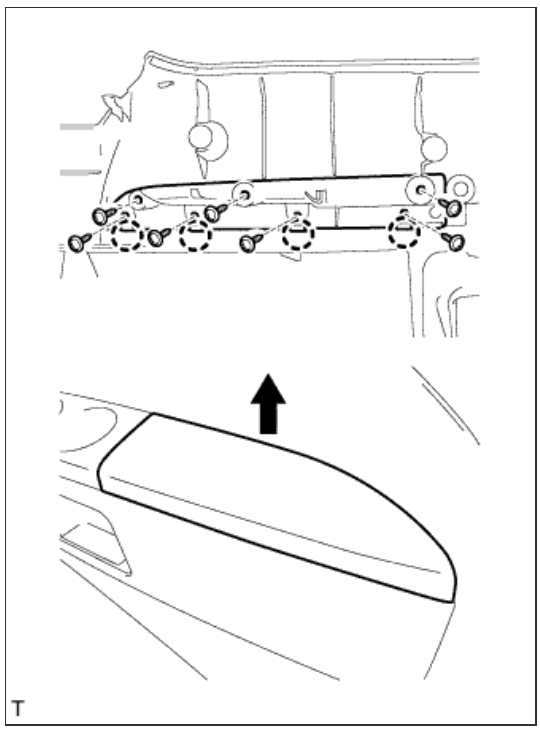
66. REMOVE QUARTER TRIM COVER SUB-ASSEMBLY LH

a. w/ Rear Heater:
Remove the 8 screws and duct.

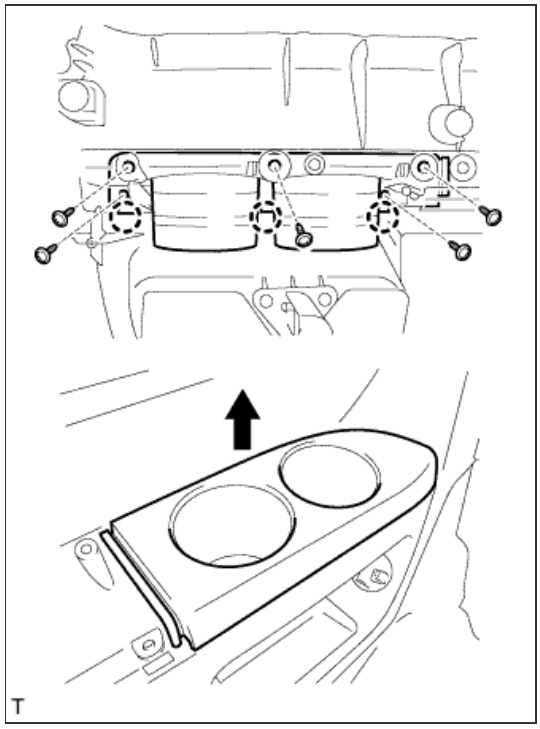
b. Remove the 7 screws.



c. Detach the 4 claws and remove the arter trim cover.

67. REMOVE QUARTER TRIM COVER SUB-ASSEMBLY RH

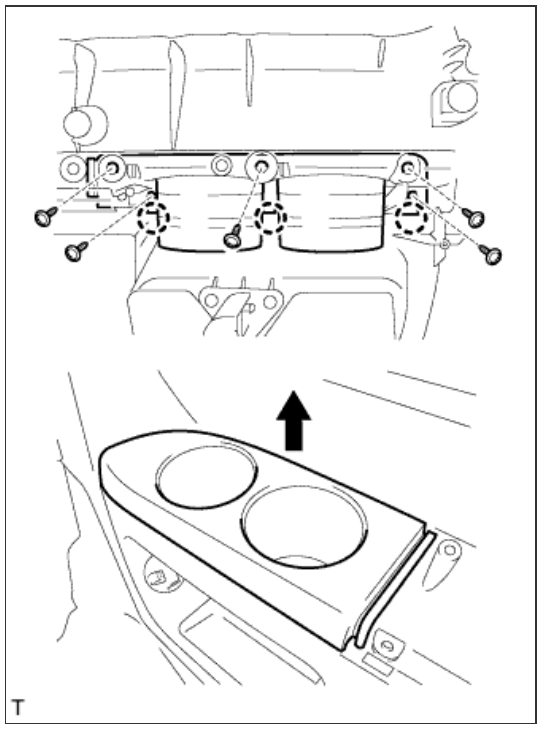
a. Remove the 7 screws.



b. Detach the 4 claws and remove the arter trim cover.

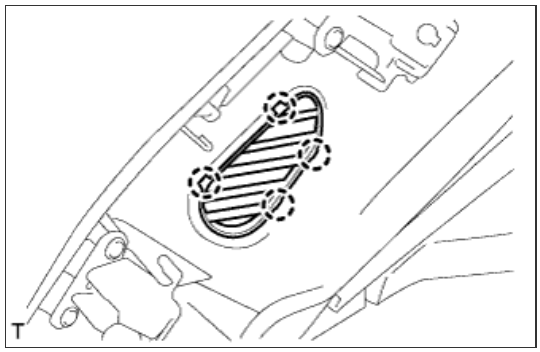
68. REMOVE NO. 2 CUP HOLDER

a. Remove the 5 screws.



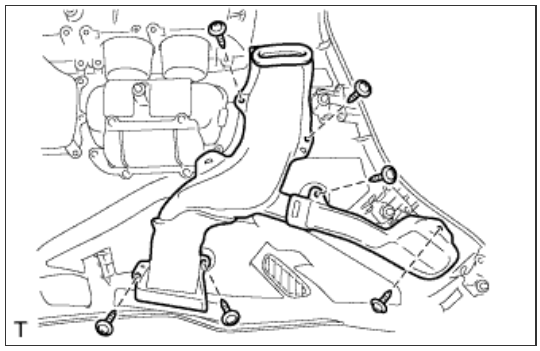
b. Detach the 3 claws and remove the cup holder.

69. REMOVE NO. 1 CUP HOLDER



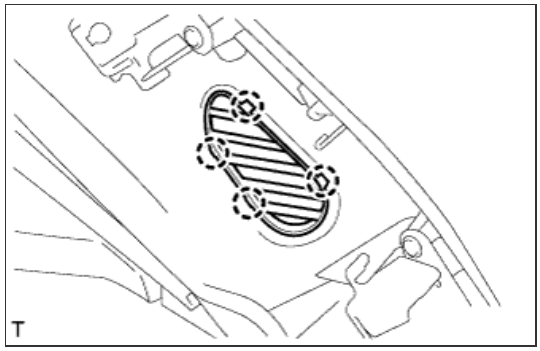
a. Remove the 5 screws.

b. Detach the 3 claws and remove the cup holder.



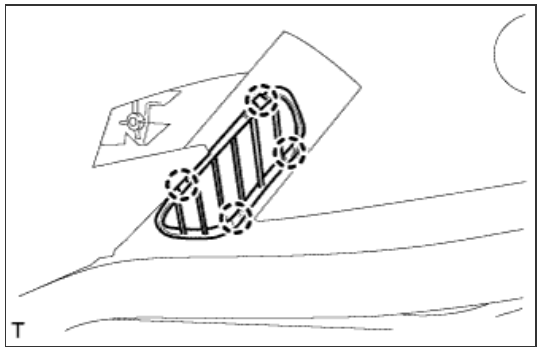
70. REMOVE NO. 1 SIDE TRIM BASE COVER LH (w/ Rear Heater)

a. Detach the 4 claws and remove the cover.



71. REMOVE NO. 1 SIDE TRIM BASE COVER RH (w/ Rear Heater)

a. Remove the 6 screws and duct.



b. Detach the 4 claws and remove the cover.

72. REMOVE NO. 2 SIDE TRIM BASE COVER LH (w/ Rear Heater)

a. Detach the 4 claws and remove the cover.

73. REMOVE NO. 2 SIDE TRIM BASE COVER RH (w/ Rear Heater)

HINT:

Use the same procedures described for the LH side.

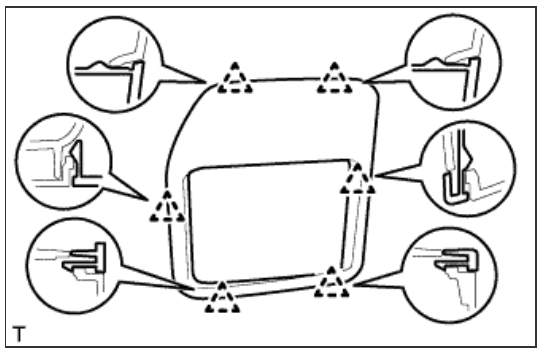
74. REMOVE REAR SEAT LOCK CONTROL LEVER SUB-ASSEMBLY LH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Detach the 4 claws and remove the seat lock control lever.



75. REMOVE REAR SEAT LOCK CONTROL LEVER SUB-ASSEMBLY RH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

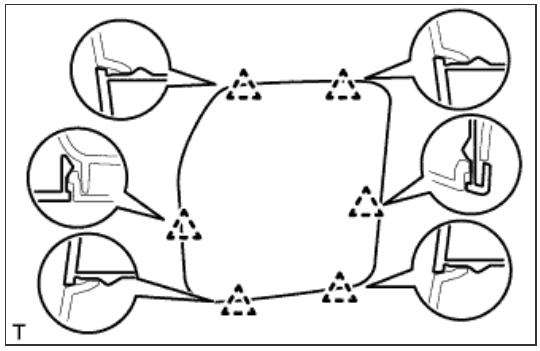
76. REMOVE REAR NO. 2 SEAT COVER BEZEL (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Detach the 6 clips and remove the rear No. 2 seat cover bezel.



77. REMOVE REAR NO. 1 SEAT COVER BEZEL (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the rear No. 2 seat cover bezel.

78. REMOVE QUARTER TRIM COVER LH (w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat Type)

a. Detach the 6 clips and remove the arter trim cover.

79. REMOVE QUARTER TRIM COVER RH (w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

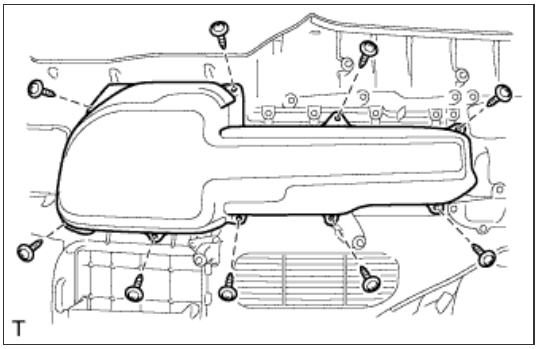
80. REMOVE QUARTER TRIM LID SUB-ASSEMBLY RH



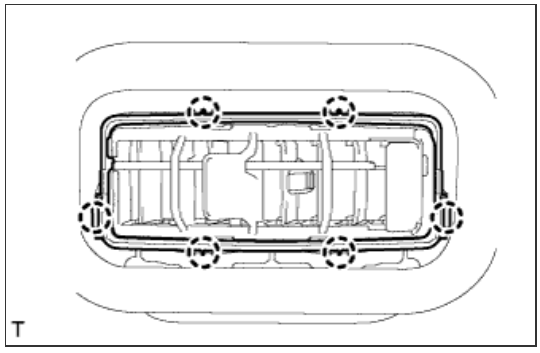
a. Remove the arter trim lid.

81. REMOVE SIDE TRIM BOX COVER

a. Remove the side trim box cover.

82. REMOVE SIDE TRIM BOX

a. Remove the 9 screws and side trim box.



for Preparation Click here

1. REMOVE NO. 2 AIR OUTLET GRILLE ASSEMBLY (w/ Rear Air Conditioning System)

HINT:

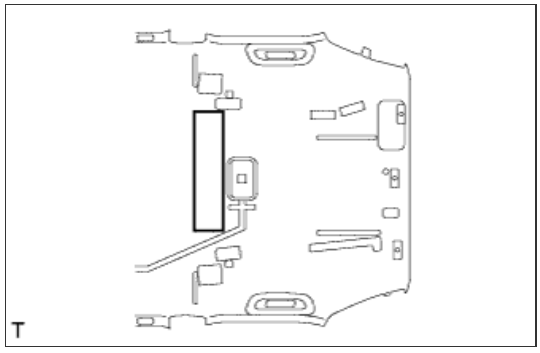
Use the same procedures to remove the air outlet grille on the other side.

a. Detach 6 claws and remove the air outlet grille.



2. REMOVE NO. 1 AIR OUTLET GRILLE ASSEMBLY (w/ Rear Air Conditioning System)

HINT:

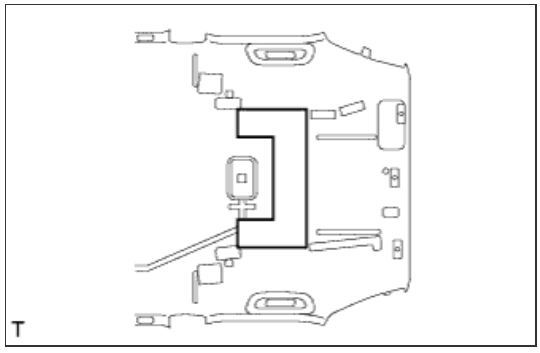
Use the same procedures described for the No. 2 air outlet grille.

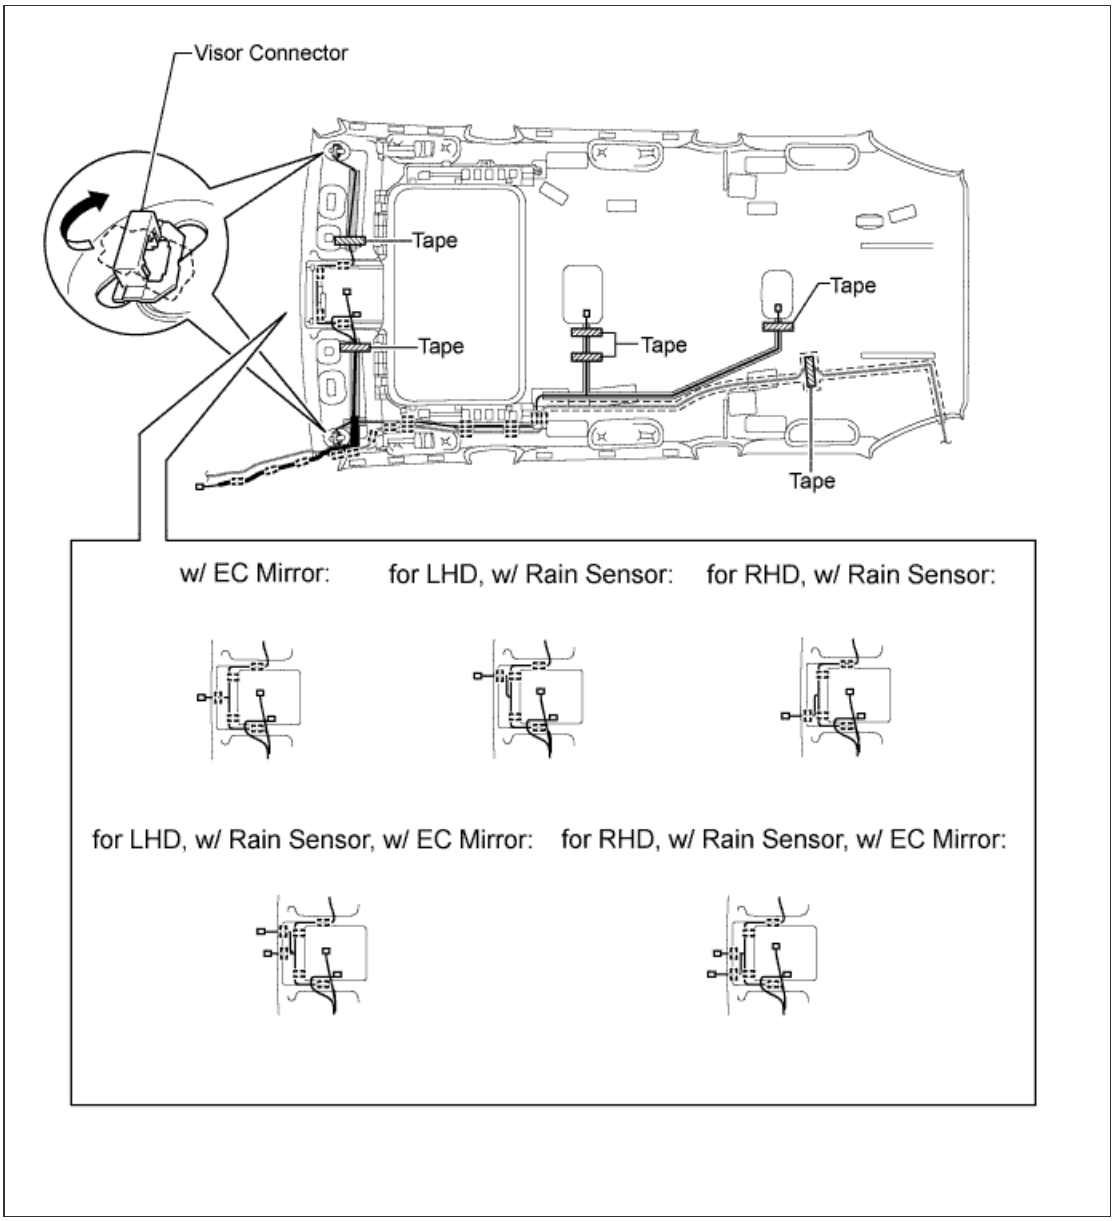


3. REMOVE NO. 1 ROOF SILENCER PAD

a. Remove the roof silencer pad.

4. REMOVE NO. 4 ROOF SILENCER PAD

a. Remove the roof silencer pad.

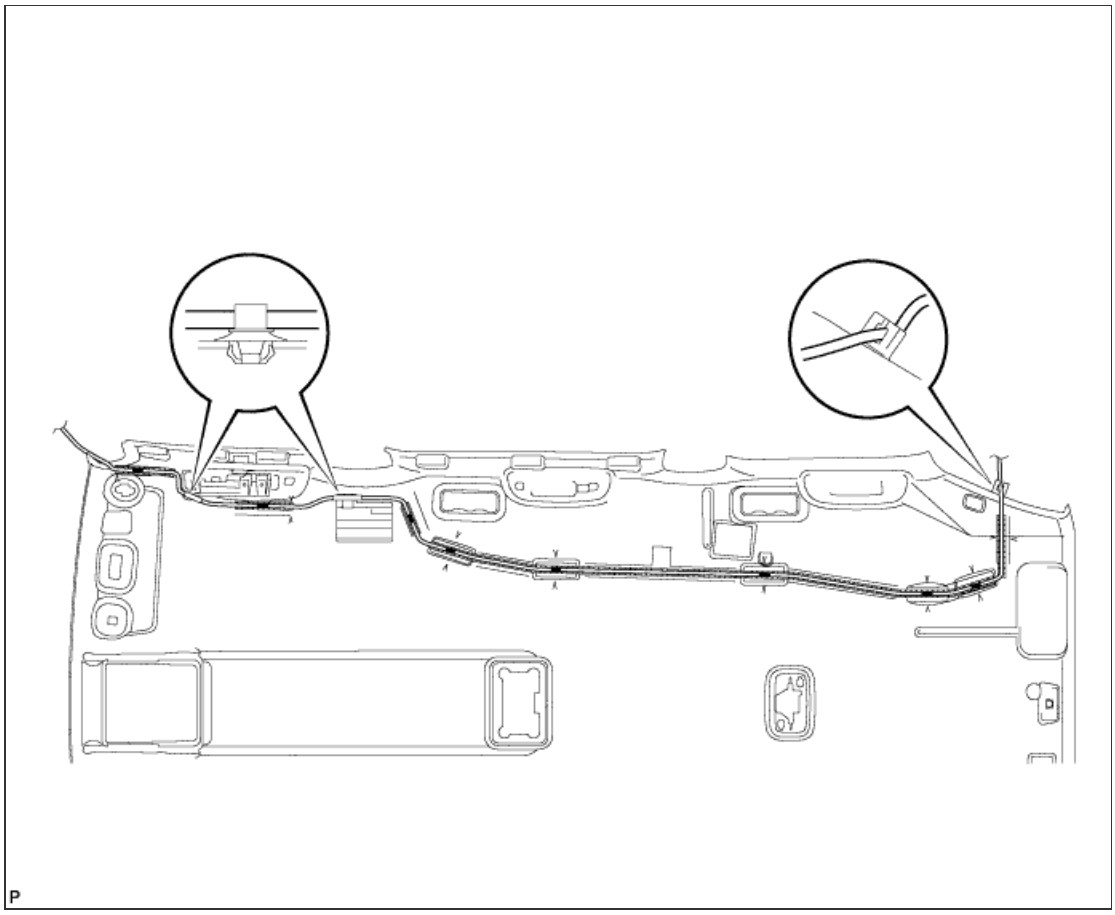


5. REMOVE NO. 1 ROOF WIRE

a. Turn the visor connectors approximately 90 clockwise and remove them from the roof headlining.

b. Remove the 6 pieces of tape from the roof headlining.

c. Detach each clamp, and remove the roof wire and washer hose.

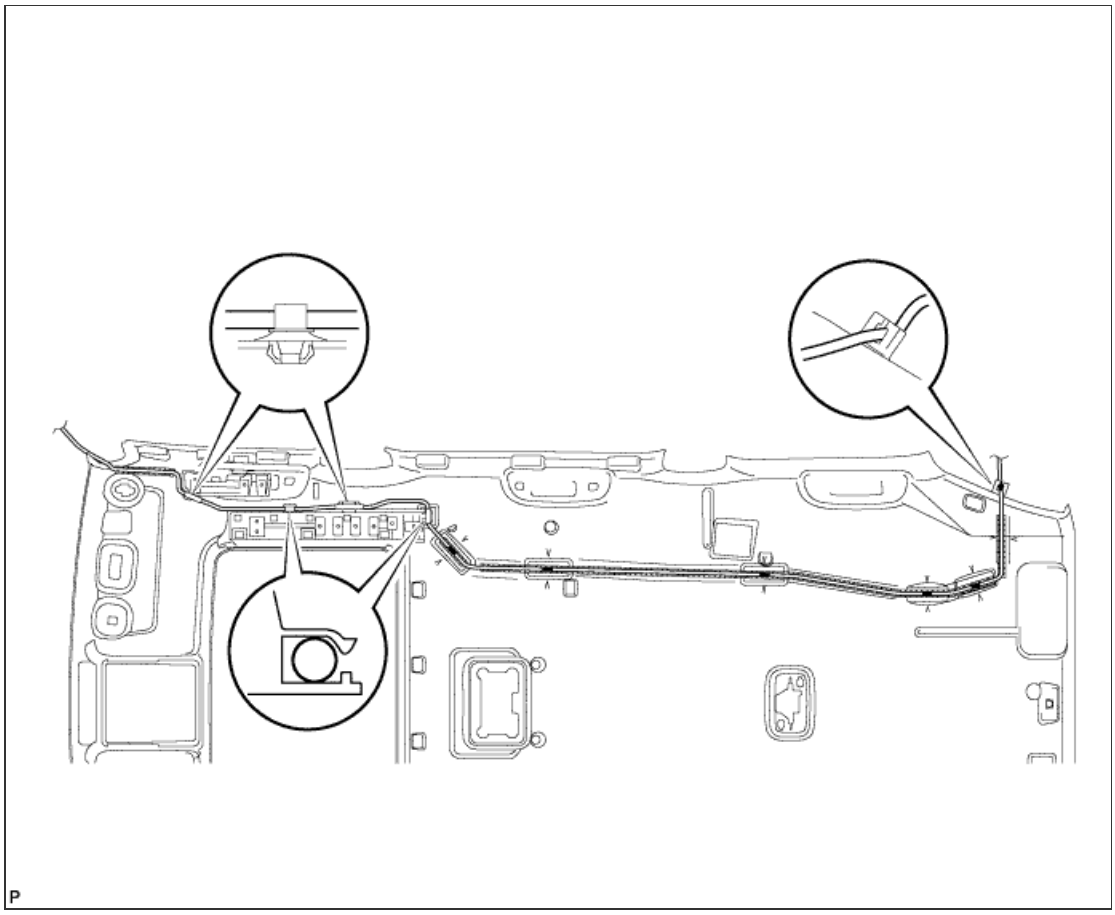


d. Remove the double-sided tape remaining on the headlining.

6. REMOVE ANTENNA CORD SUB-ASSEMBLY

a. w/o Sliding Roof:

i. Detach the 2 clamps and remove the antenna from the notch on the rear of the roof headlining.



ii. Remove the antenna cord from the roof headlining.

iii. Remove the double-sided tape from the roof headlining.

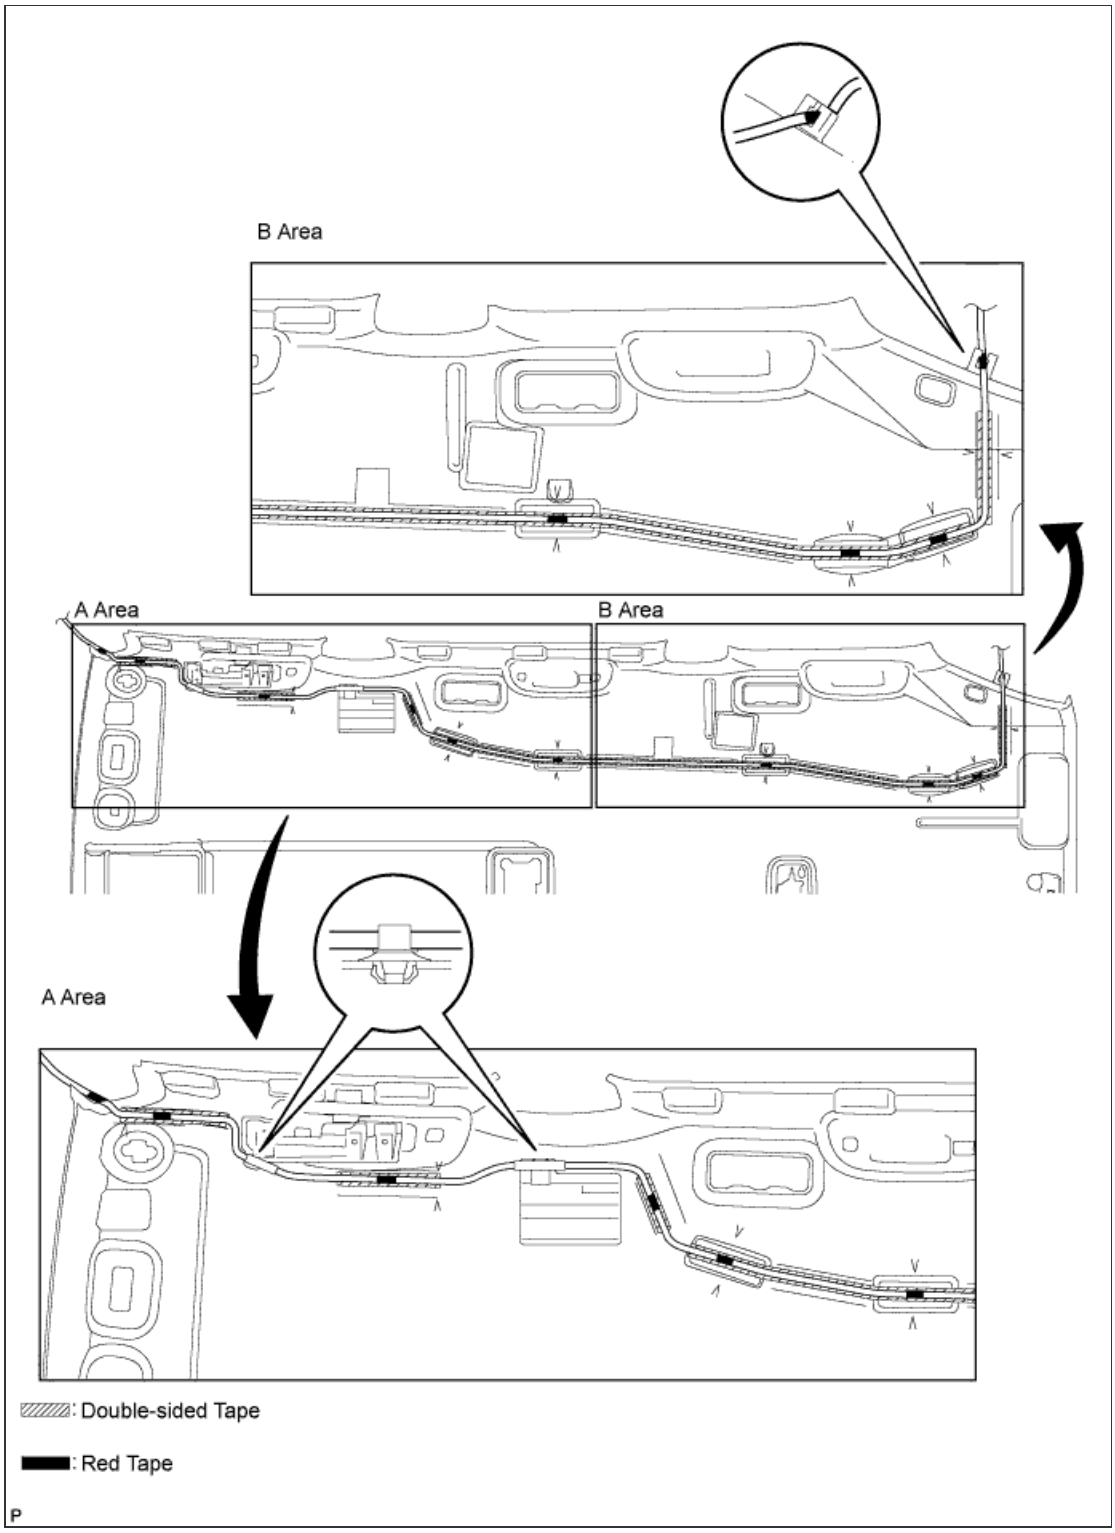
b. w/ Sliding Roof:

i. Detach the 4 clamps and remove the antenna from the notch on the rear of the roof headlining.

ii. Remove the antenna cord from the roof headlining.

iii. Remove the double-sided tape from the roof headlining.

for Preparation Click here



1. INSTALL ANTENNA CORD SUB-ASSEMBLY

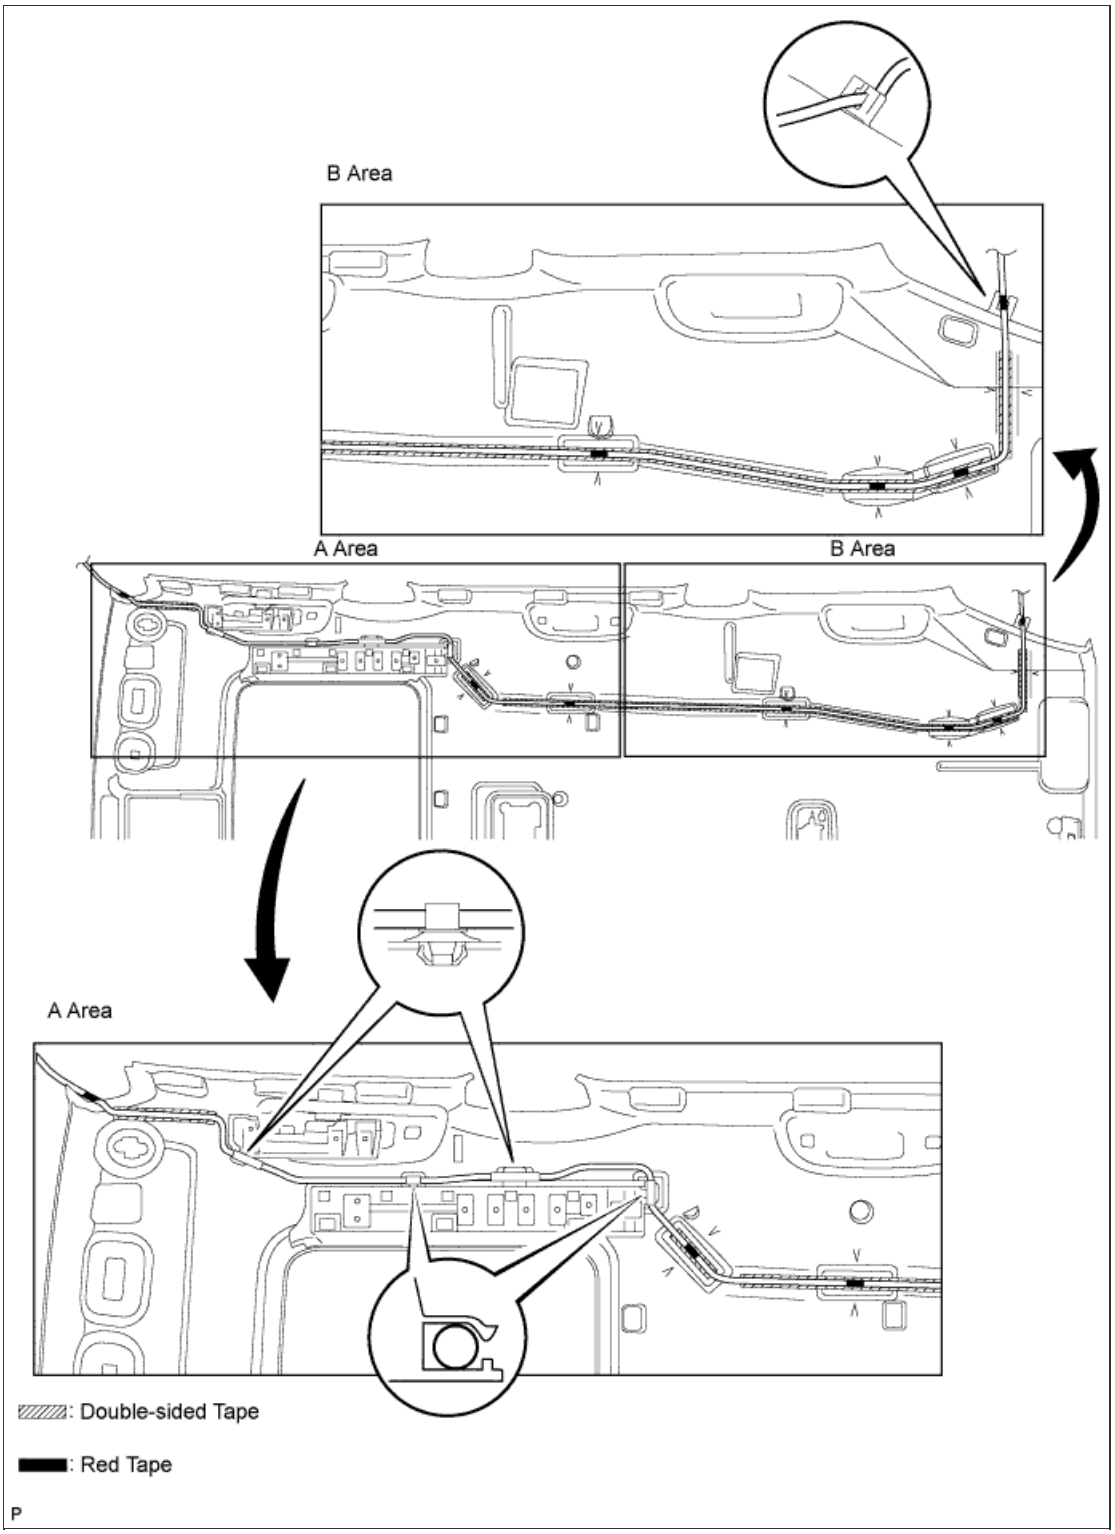
a. w/o Sliding Roof:

i. Apply new double-sided tape as shown in the illustration.

HINT:

Attach double-sided tape to the hatched areas shown in the illustration below.

ii. Align the red tape wound around the antenna cord with the V markings on the roof headlining and the notch at the rear of the headlining, and attach the antenna cord to the double-sided tape.



iii. Attach the 2 clamps and fit the antenna into the notch.

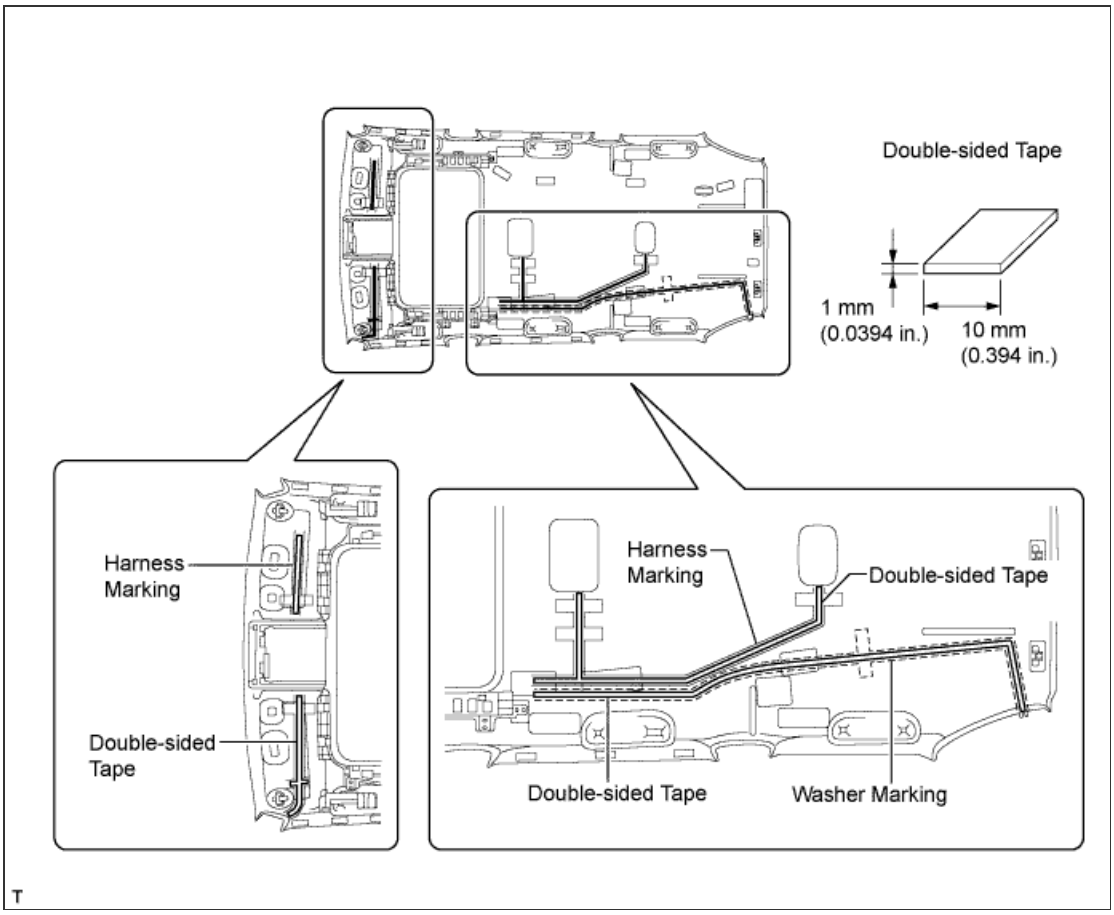
b. w/ Sliding Roof:

i. Apply new double-sided tape as shown in the illustration.

HINT:

Attach double-sided tape to the hatched areas shown in the illustration below.

ii. Align the red tape wound around the antenna cord with the V markings on the roof headlining and the notch at the rear of the headlining, and attach the antenna cord to the double-sided tape.



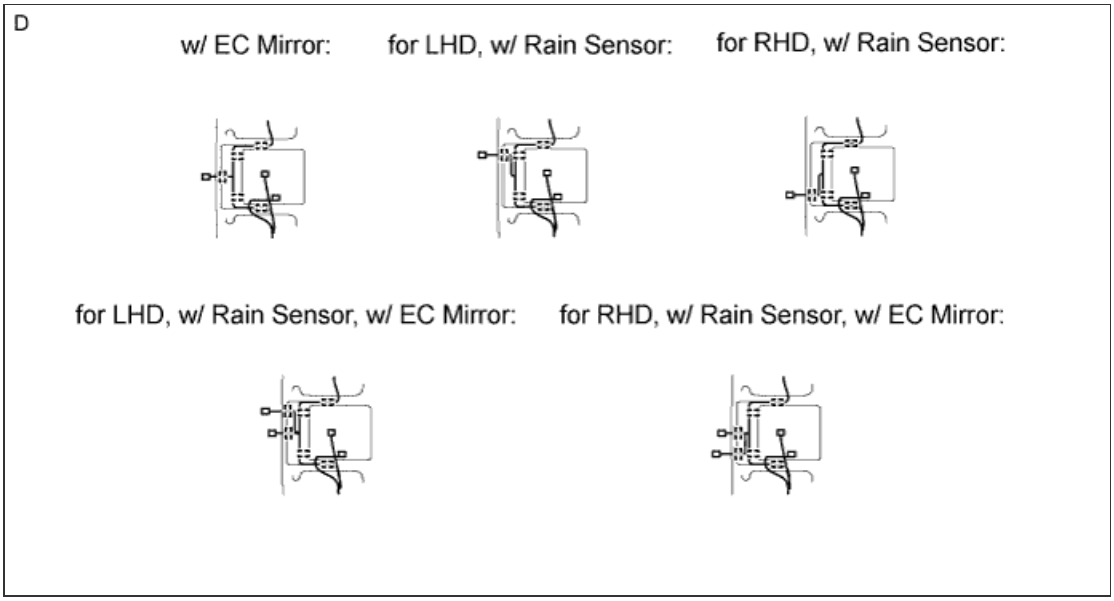
iii. Attach the 4 clamps and fit the antenna into the notch.

2. INSTALL NO. 1 ROOF WIRE

a. Place double-sided tape along the center of the harness marking and washer marking.

HINT:

ake sure that the double-sided tape is not peeling off or misaligned.



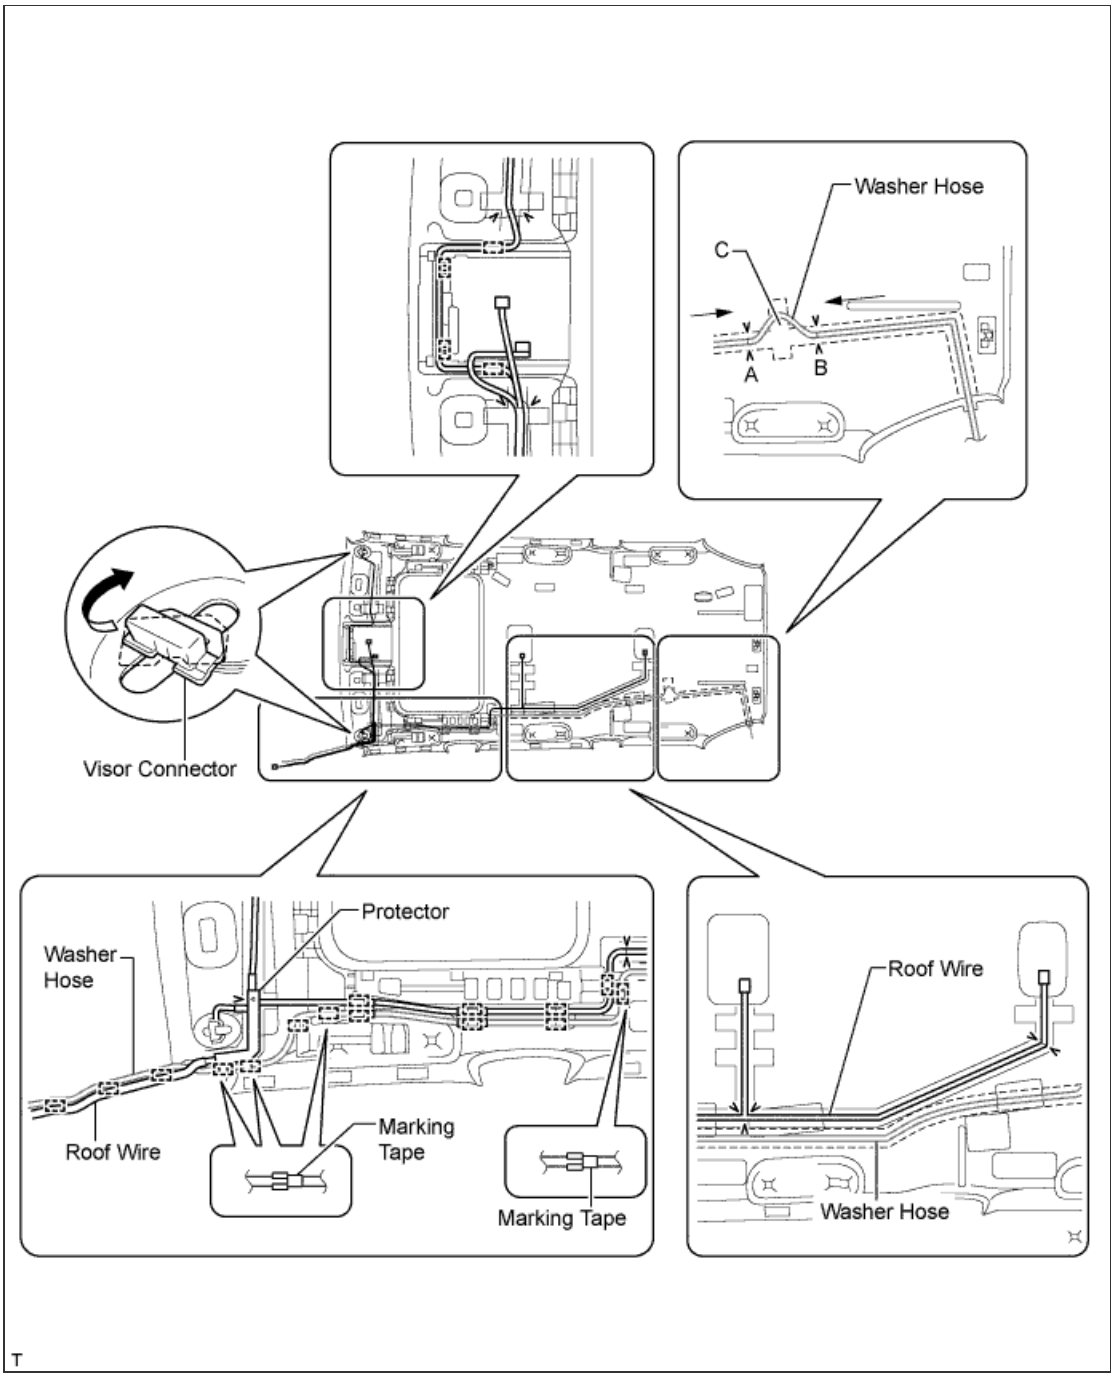
b. Remove the peeling paper from the double-sided tape while not touching the adhesive side.

c. Align the triangle mark of the roof wire protector with the V mark of the headlining as shown in the illustration, and then attach the roof wire protector.

d. Attach each clamp as shown in the illustration.

HINT:

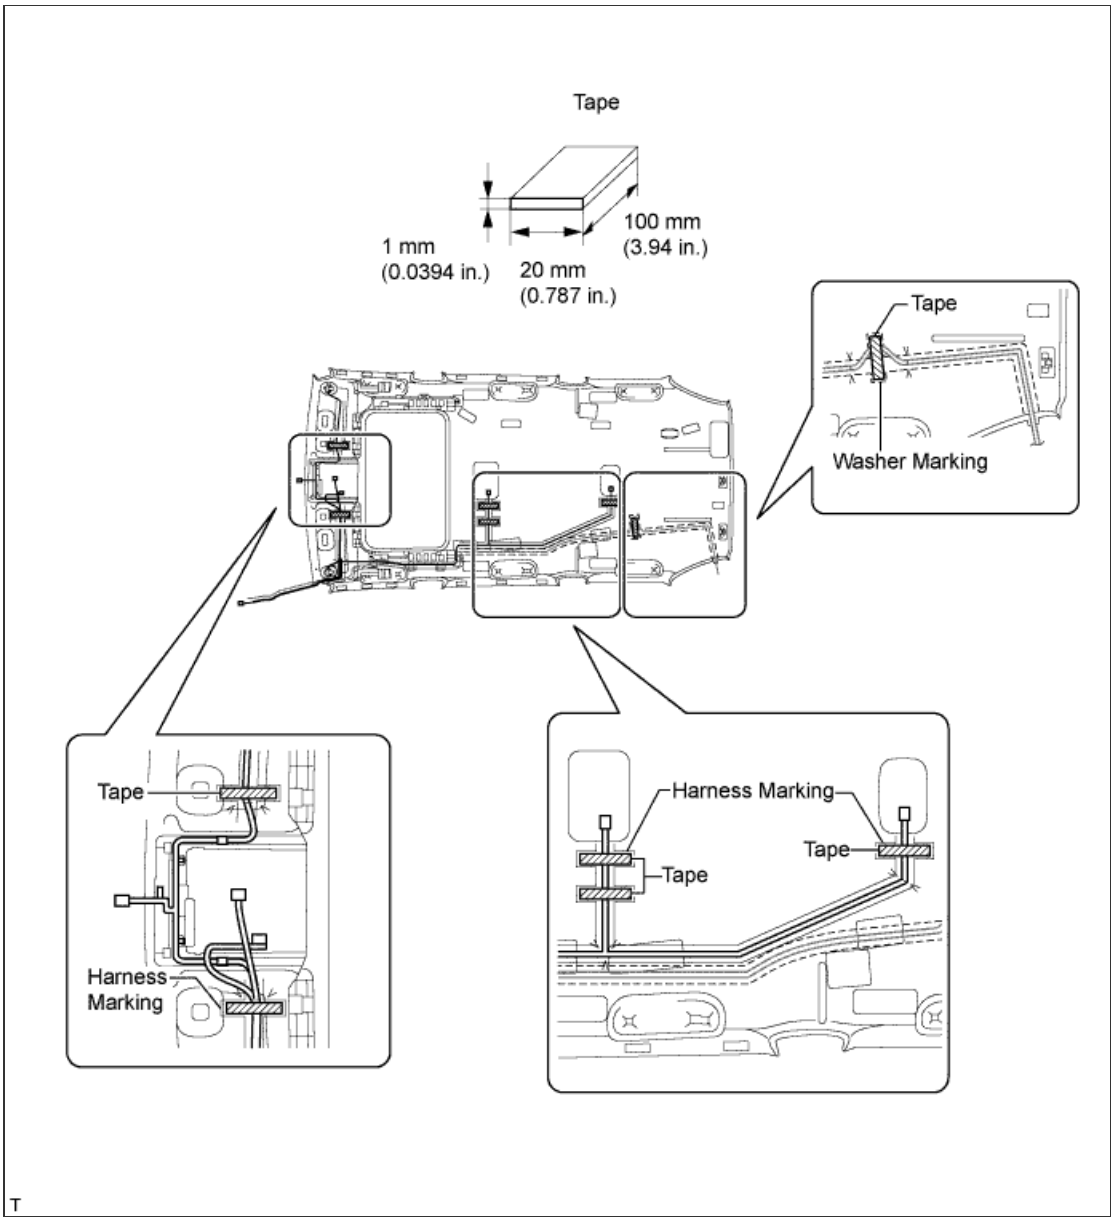
The positions of the clamps at the front of the roof headlining are shown in illustration D.



e. Align the roof wire and washer hose with the V marks of the headlining as shown in the illustration, and attach them to the headlining.

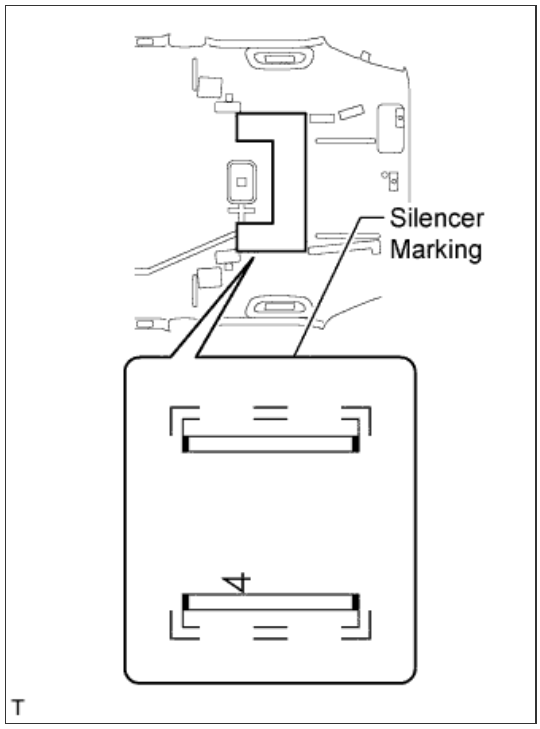
HINT:

- **Attach the washer hose from the front to the point labeled A, and attach the washer hose from the rear to the point labeled B as shown in the illustration.**
- **Attach the extra length of the washer hose to the part labeled C in the illustration.**



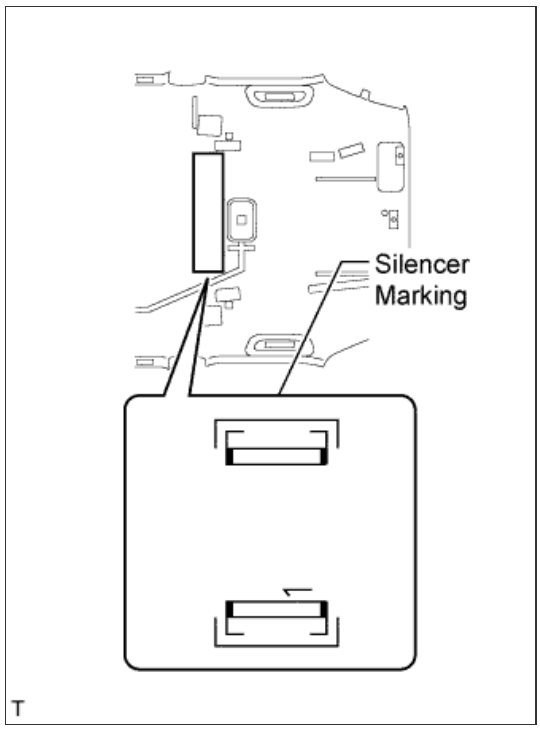
f. Turn the visor connectors approximately 90 clockwise to install them to the roof headlining.

g. Place tape at the wire harness marking and washer marking locations as shown in the illustration to fix the roof wire and washer hose in place.



HINT:

Apply sufficient pressure when placing tape.

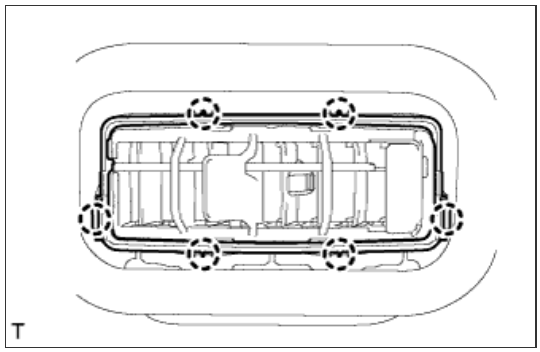


3. INSTALL NO. 4 ROOF SILENCER PAD

a. Align the silencer marking on the roof headlining with the roof silencer pad and install the pad using double-sided tape as shown in the illustration.

4. INSTALL NO. 1 ROOF SILENCER PAD

a. Align the silencer marking on the roof headlining with the roof silencer pad and install the pad using double-sided tape as shown in the illustration.



5. INSTALL NO. 2 AIR OUTLET GRILLE ASSEMBLY (w/ Rear Air Conditioning System)

HINT:

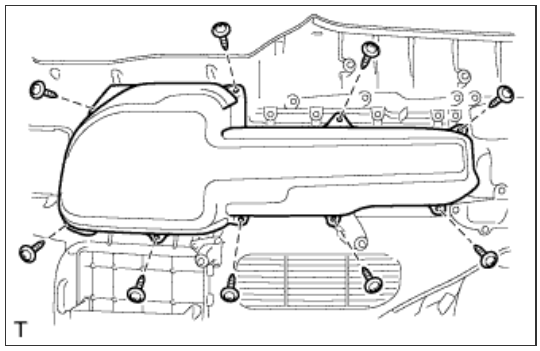
Use the same procedures to install the air outlet grille on the other side.

a. Attach the claws to install the air outlet grille.

6. INSTALL NO. 1 AIR OUTLET GRILLE ASSEMBLY (w/ Rear Air Conditioning System)

HINT:

Use the same procedures described for the No. 2 air outlet grille.



for Preparation Click here

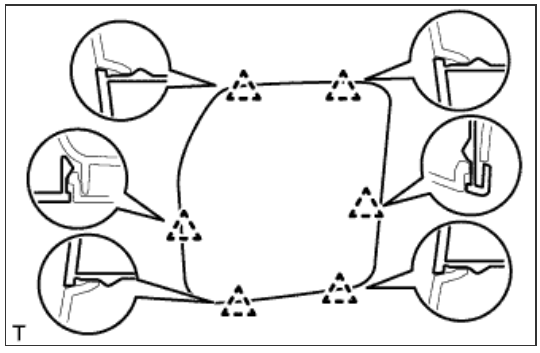
HINT:

A bolt without a torque specification is shown in the standard bolt chart (Click here).

1. INSTALL SIDE TRIM BOX

a. Install the side trim box with the 9 screws.

2. INSTALL SIDE TRIM BOX COVER



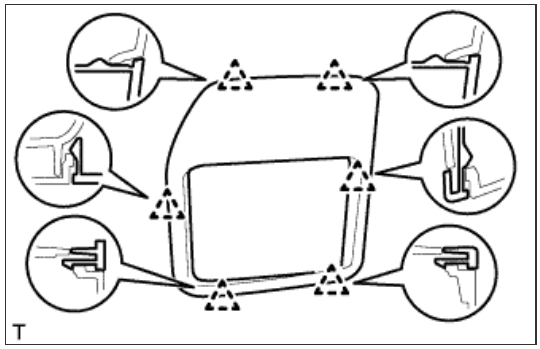
a. Install the side trim box cover.

3. INSTALL QUARTER TRIM LID SUB-ASSEMBLY RH

a. Install the quarter trim lid.

4. INSTALL QUARTER TRIM COVER LH (w/o Rear No. 2 Seat, w/ Rear No. 2 Seat for Face to Face Seat Type)

a. Attach the 6 clips to install the quarter trim cover.



5. INSTALL QUARTER TRIM COVER RH (w/o Rear No. 2 Seat, w/ Rear No. 2 Seat for Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

6. INSTALL REAR NO. 2 SEAT COVER BEZEL (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Attach the 6 clips to install the rear No. 2 seat cover be el.

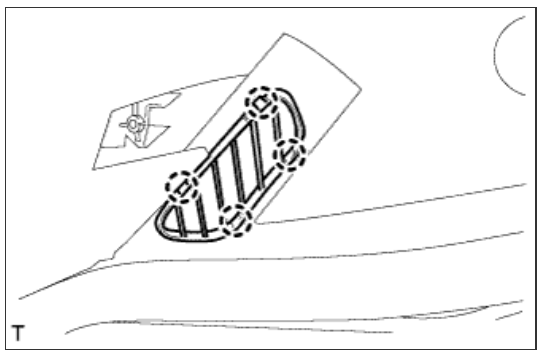
7. INSTALL REAR NO. 1 SEAT COVER BEZEL (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the rear No. 2 seat cover be el.

8. INSTALL REAR SEAT LOCK CONTROL LEVER SUB-ASSEMBLY LH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Attach the claws to install the seat lock controlever.



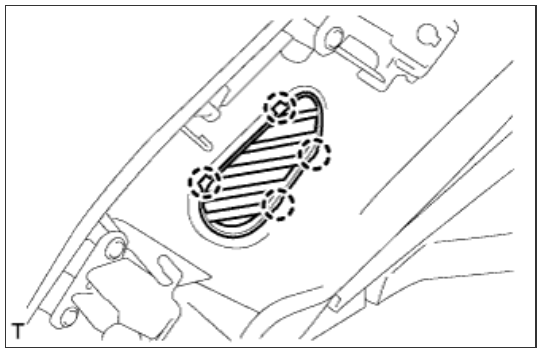
9. INSTALL REAR SEAT LOCK CONTROL LEVER SUB-ASSEMBLY RH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

10. INSTALL NO. 2 SIDE TRIM BASE COVER LH (w/ Rear Heater)

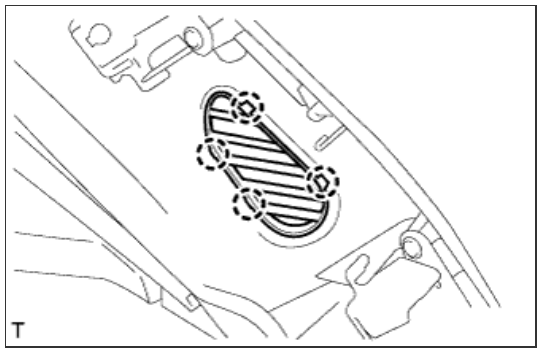
a. Attach the 4 claws to install the cover.



11. INSTALL NO. 2 SIDE TRIM BASE COVER RH (w/ Rear Heater)

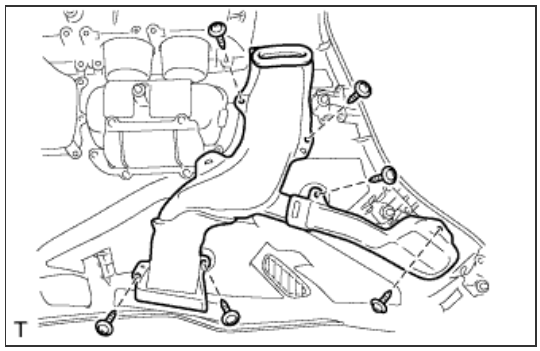
HINT:

Use the same procedures described for the LH side.



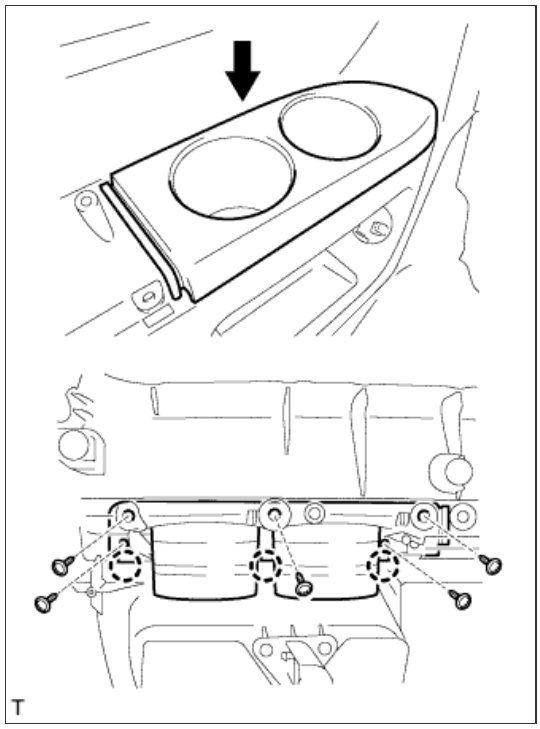
12. INSTALL NO. 1 SIDE TRIM BASE COVER LH (w/ Rear Heater)

a. Attach the 4 claws to install the cover.



13. INSTALL NO. 1 SIDE TRIM BASE COVER RH (w/ Rear Heater)

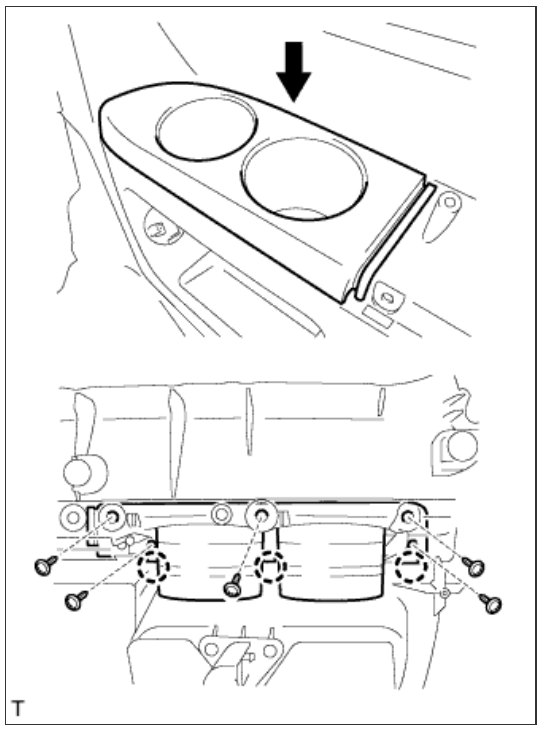
a. Attach the 4 claws to install the cover.



b. Install the duct with the 6 screws.

14. INSTALL NO. 2 CUP HOLDER

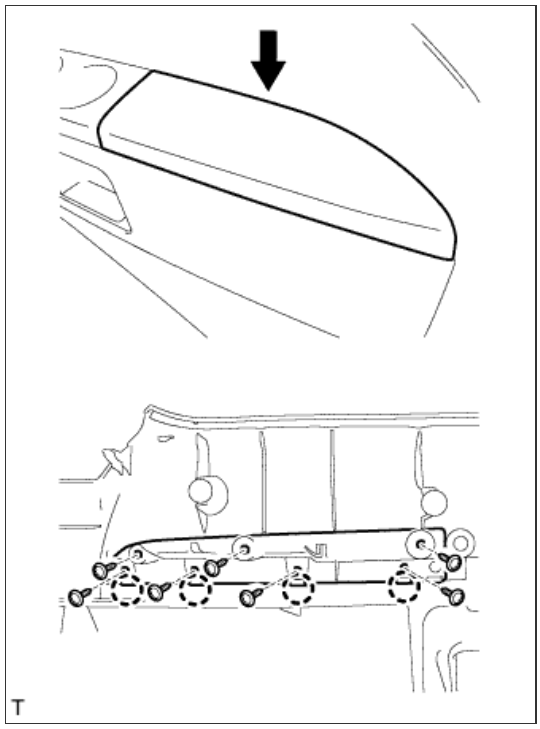
a. Attach the 3 claws to install the cup holder.



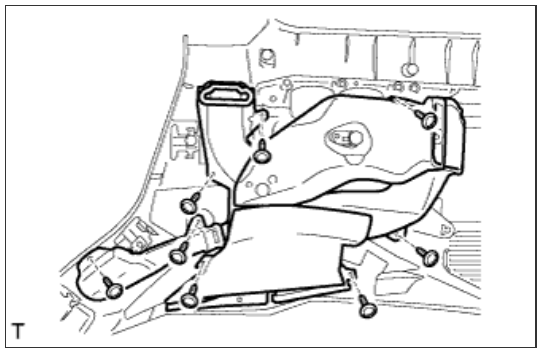
b. Install the 5 screws.

15. INSTALL NO. 1 CUP HOLDER

a. Attach the 3 claws to install the cup holder.



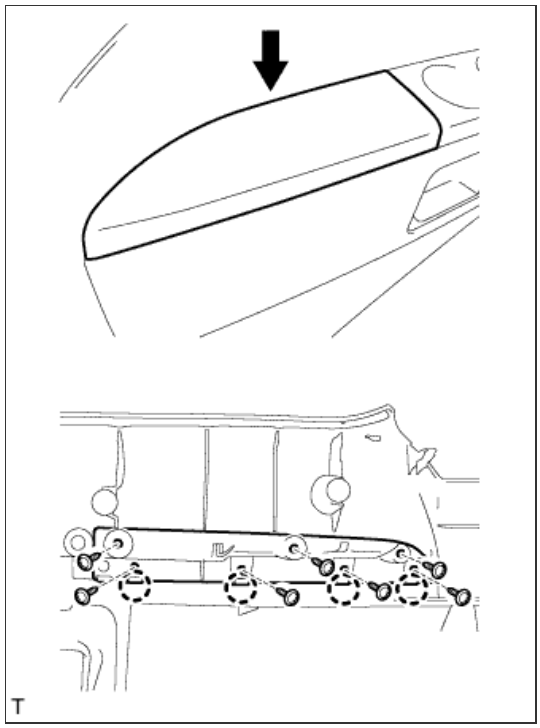
b. Install the 5 screws.



16. INSTALL QUARTER TRIM COVER SUB-ASSEMBLY LH

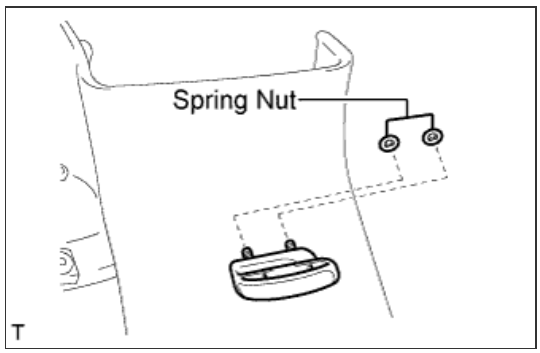
a. Attach the 4 claws to install the quarter trim cover.

b. Install the 7 screws.



c. w/ Rear Heater:
Install the duct with the 8 screws.

17. INSTALL QUARTER TRIM COVER SUB-ASSEMBLY RH



a. Attach the 4 claws to install the quarter trim cover.

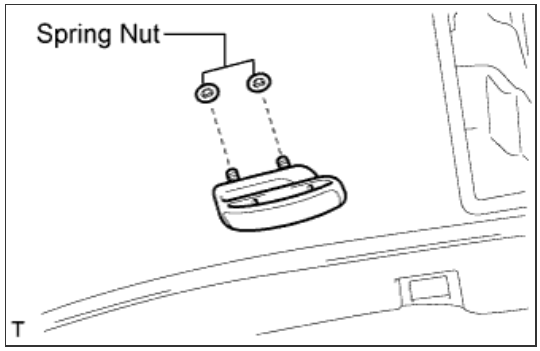
b. Install the 7 screws.

18. INSTALL REAR NO. 2 SEAT SHOULDER BELT HANGER LH

a. Install the han er with 2 new sprin nuts.

19. INSTALL REAR NO. 2 SEAT SHOULDER BELT HANGER RH

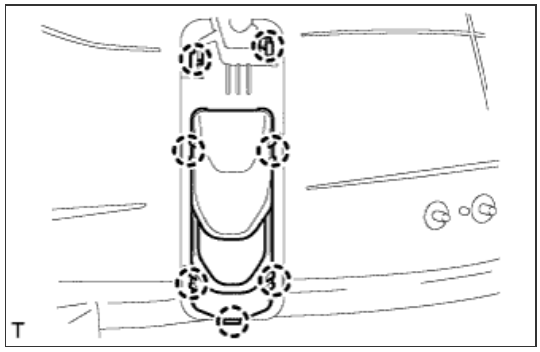
HINT:



Use the same procedures described for the LH side.

20. INSTALL REAR SEAT SHOULDER BELT HANGER (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

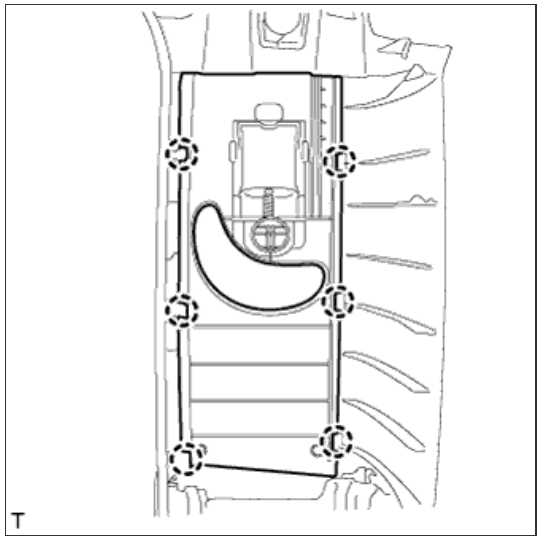


Use the same procedure to install the han er on the other side.

a. Install the han er with 2 new sprin nuts.

21. INSTALL ROOF SIDE INNER GARNISH COVER LH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Attach the claws to install the cover.



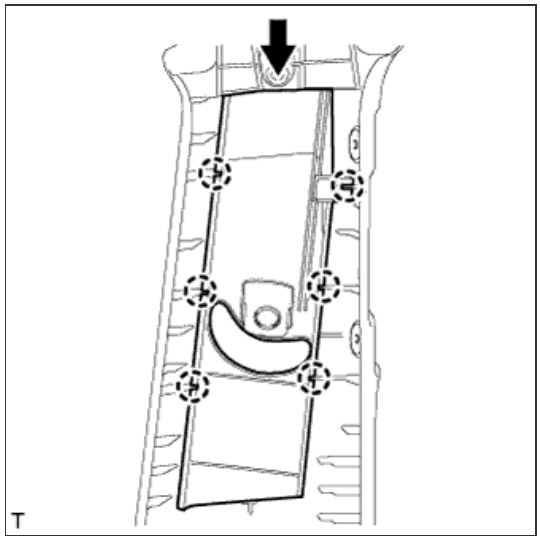
22. INSTALL ROOF SIDE INNER GARNISH COVER RH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

23. INSTALL REAR SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY LH

a. Attach the 6 claws to install the plate.



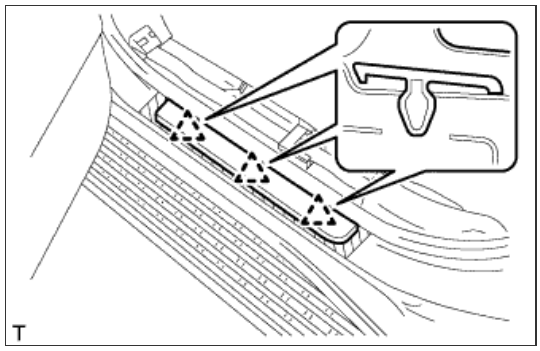
24. INSTALL REAR SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

25. INSTALL FRONT SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY LH

a. Slide the plate in the direction shown in the illustration and attach the 6 claws to install the plate.



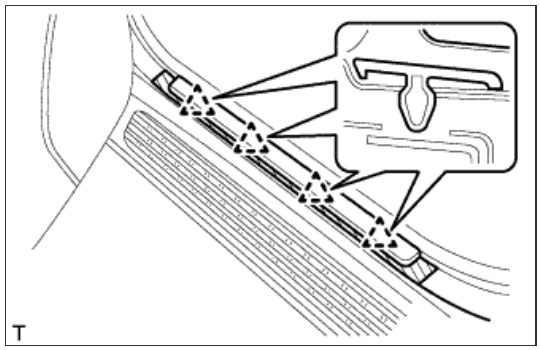
26. INSTALL FRONT SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

27. INSTALL REAR DOOR SCUFF PLATE OUTSIDE LH

a. Attach the 3 clips to install the rear door scuff plate outside.



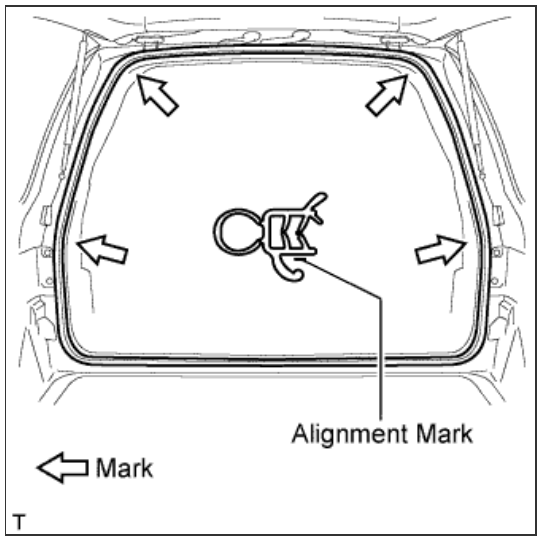
28. INSTALL REAR DOOR SCUFF PLATE OUTSIDE RH

HINT:

Use the same procedures described for the LH side.

29. INSTALL FRONT DOOR SCUFF PLATE OUTSIDE LH

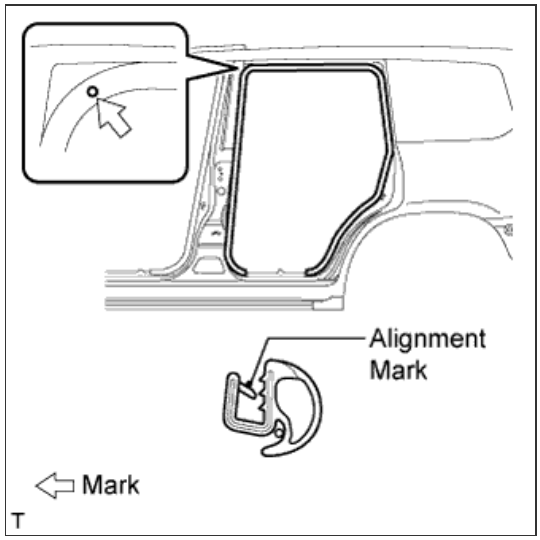
a. Attach the 4 clips to install the front door scuff plate outside.



30. INSTALL FRONT DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

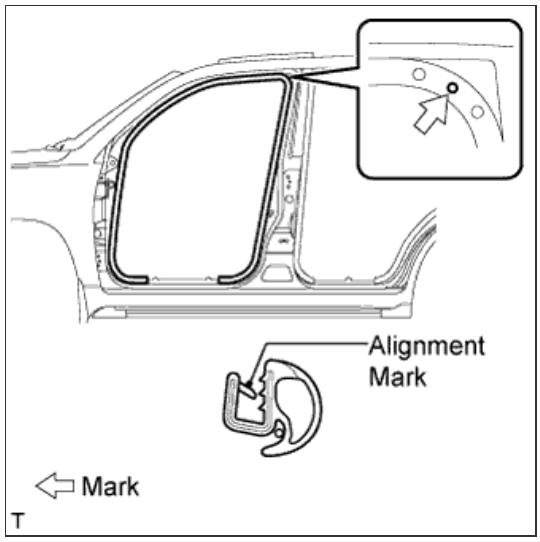


31. INSTALL BACK DOOR WEATHERSTRIP

a. Install the back door weatherstrip as shown in the illustration.

32. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH

a. Install the rear door openin trim weatherstrip as shown in the illustration.



33. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH

HINT:

Use the same procedures described for the LH side.

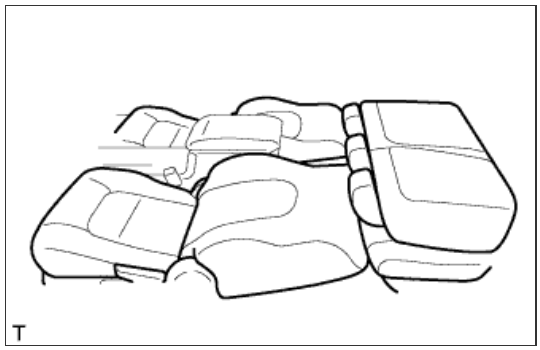
34. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH

a. Install the front door openin trim weatherstrip as shown in the illustration.

35. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH

HINT:

Use the same procedures described for the LH side.

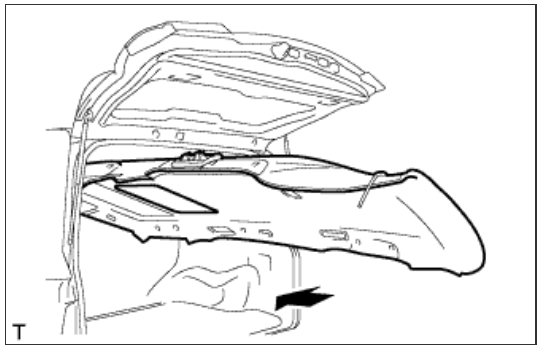


36. INSTALL ROOF HEADLINING ASSEMBLY

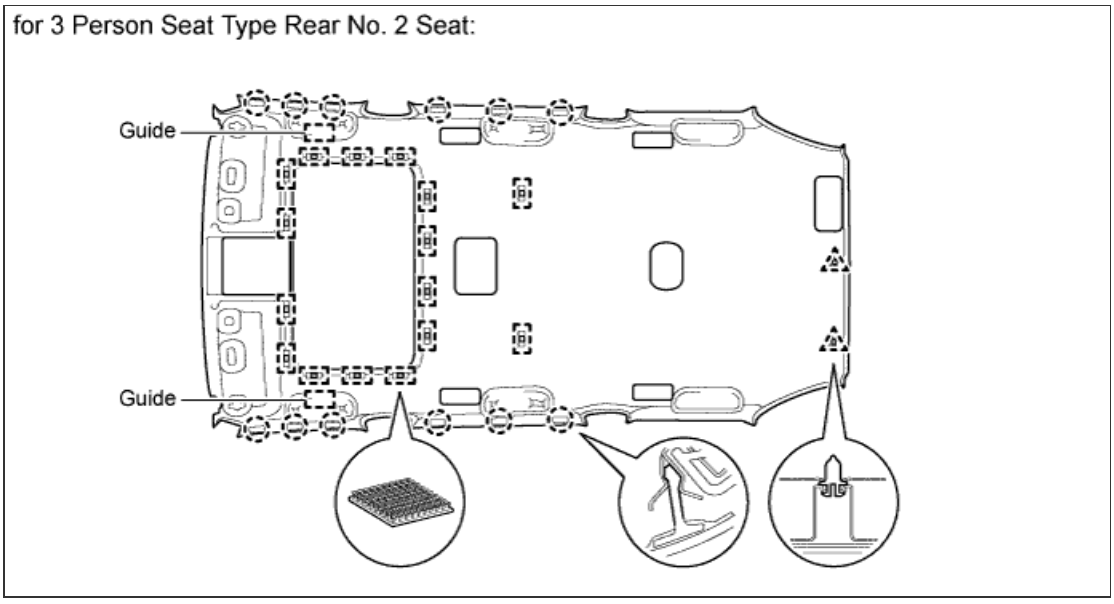
HINT:

- **for Manual Seat:**

hen in talling the roof headlining, move the front seat and rear No. 1 seat to the position shown in the illustration.



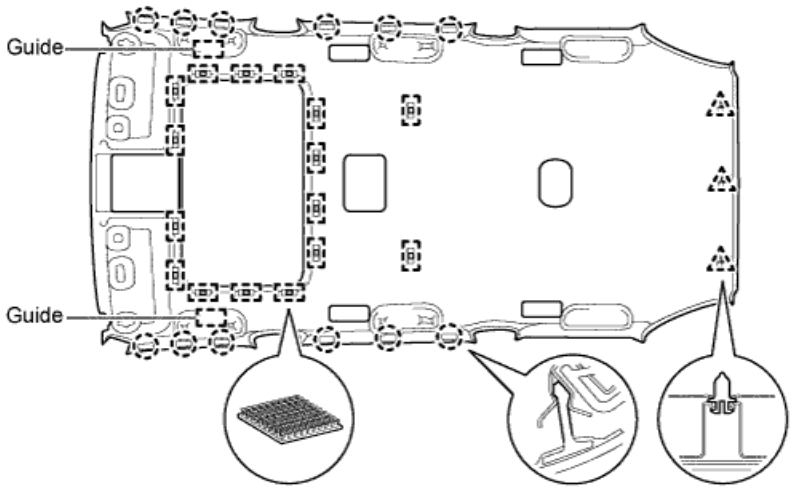
- **for Power Seat:**
  When installing the roof headlining, connect the cable to the negative (-) battery terminal and move the front seat and No. 1 rear seat to the position shown in the illustration.
- **for Power Seat:**
  After moving the seats, disconnect the cable from the negative (-) battery terminal.



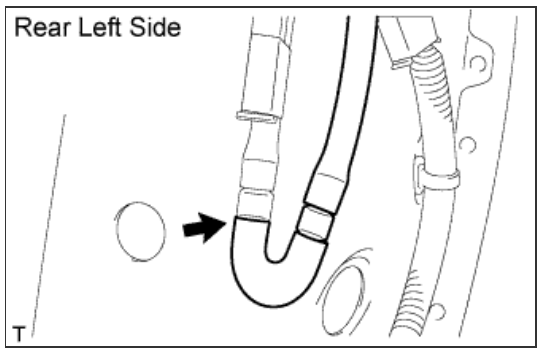
a. Place the headlinin in the cabin fro the rear of the vehicle as shown in the illustration.

NOTICE:

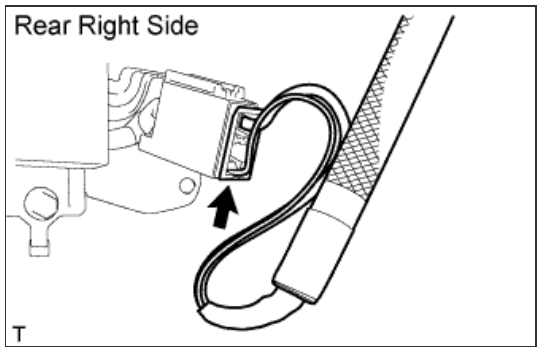
Be careful not to dama e the roof headlinin when placin it in the cabin



b. for erson eat pe No. 2 Seat:
Attach the 12 claws 2 clips 2 uides and 6 fasteners to install the headlinin .

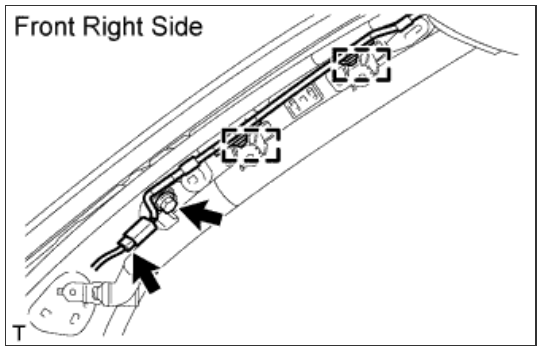


c. except erson eat pe No. 2 Seat:
Attach the 12 claws clip 2 uides and 6 fasteners to install the headlinin .

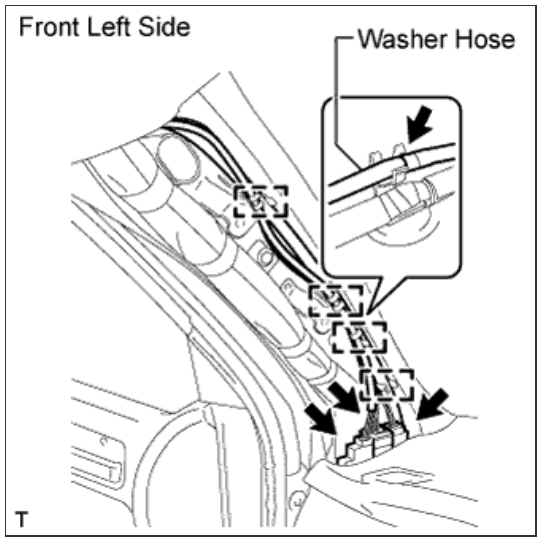


except 3 Person Seat Type Rear No. 2 Seat:

d. Connect the washer hose.

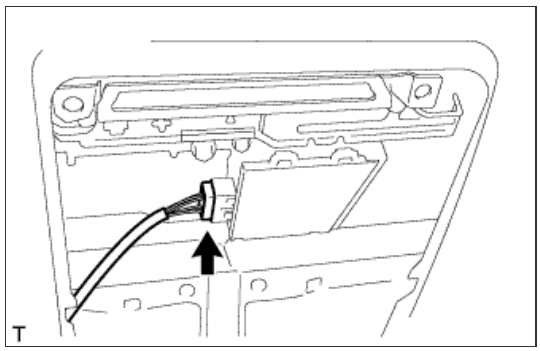


e. Connect the antenna cord connector.

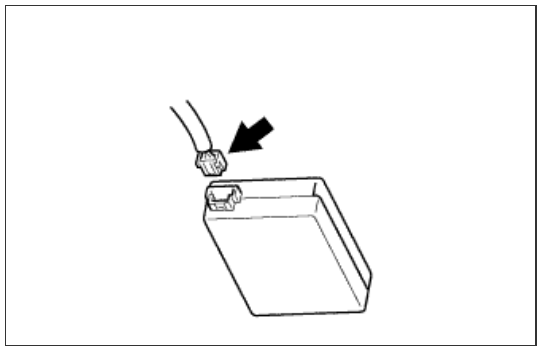


f. Connect the antenna cord connector and attach the 2 clamps.

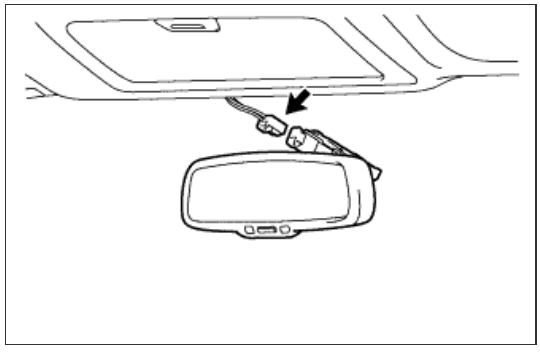
g. Install the bolt.



h. Connect the 3 roof wire connectors and washer hose.

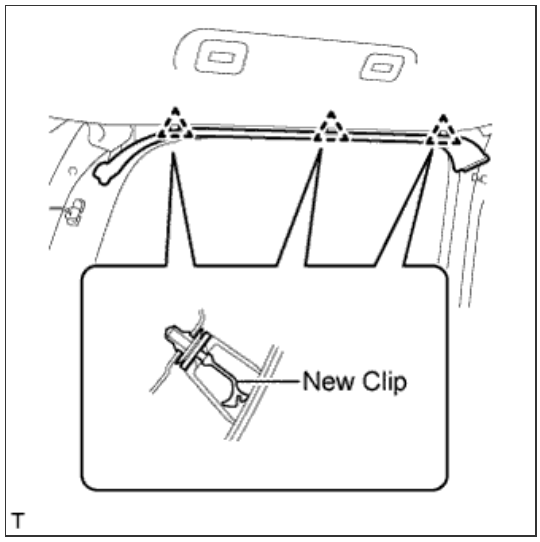


i. Attach the 4 clamps.



. Connect the drive ear connector.

k. w ain ensor
isconnect the rain sensor connector.



l. w C irror
Connect the inner mirror connector.

37. INSTALL FRONT ROOF SIDE RAIL GARNISH LH

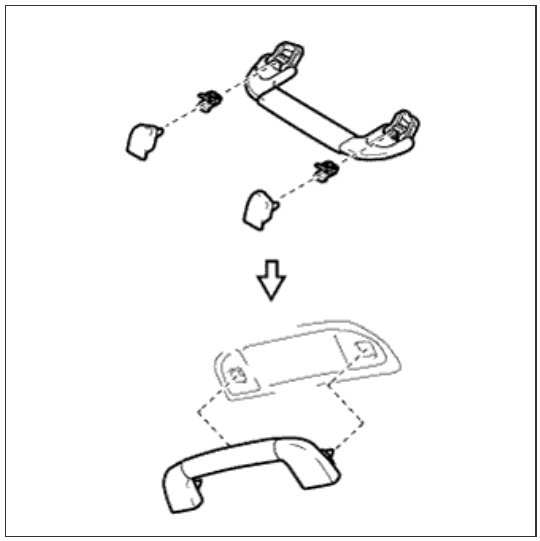
a. Install 3 new clips to the roof side rail arnish.

b. Attach the clips to install the roof side rail rnish.

38. INSTALL FRONT ROOF SIDE RAIL GARNISH RH

HINT:

Use the same procedures described for the LH side.



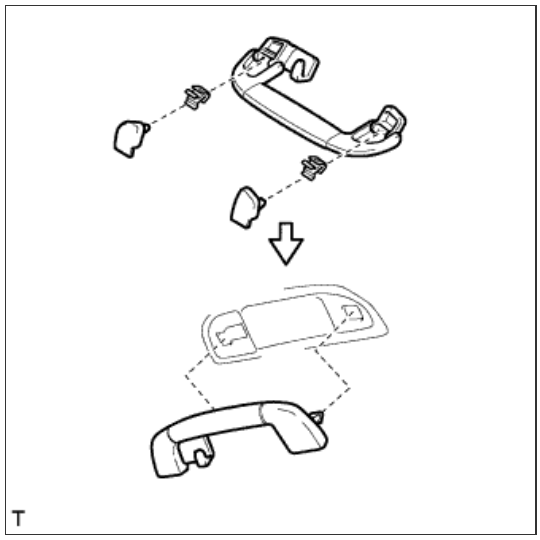
39. INSTALL 3RD SEAT ASSIST GRIP ASSEMBLY (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedure to install the 3rd seat assist rip on the other side.

a. Assemble the assist rip2 clips and 2 covers as shown in the illustration.

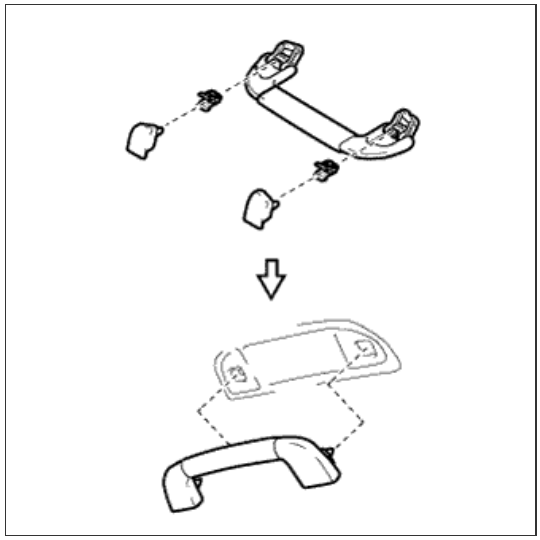
b. Install the assist rip.



40. INSTALL NO. 2 ASSIST GRIP ASSEMBLY LH

a. w eat No. 2 Seat except ace to ace eat pe or w No. 2 Seat: Install the No. 2 assist rip assembl .

i. Assemble the assist rip2 clips and 2 covers as shown in the illustration.



ii. Install the assist rip.

. w/ Rear No. 2 Seat for ace to ace eat pe
Install the No. 2 assist rip assembl .

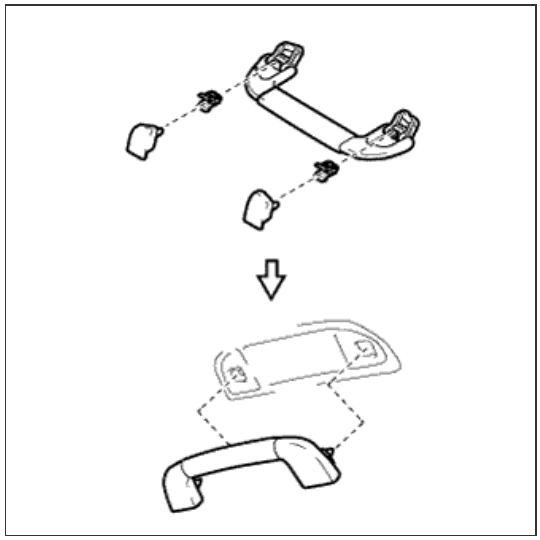
i. Assemble the assist rip2 clips and 2 covers as shown in the illustration.

ii. Install the assist rip.

41. INSTALL NO. 2 ASSIST GRIP ASSEMBLY RH

HINT:

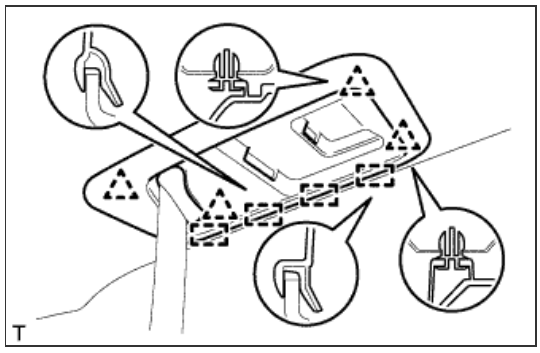
Use the same procedures described for the LH side.



42. INSTALL ASSIST GRIP ASSEMBLY

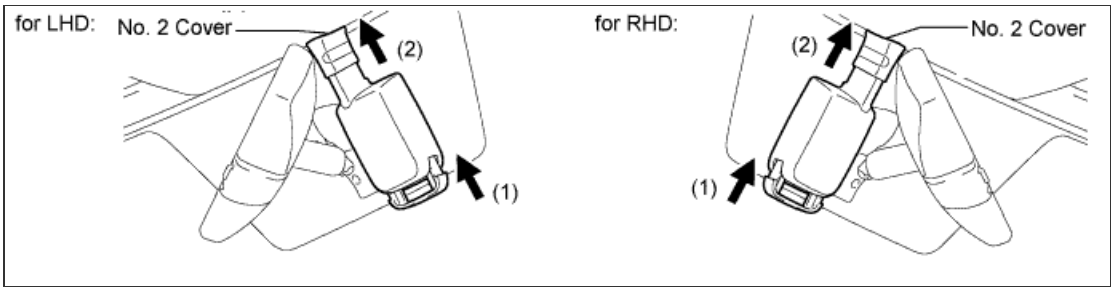
HINT:

Use the same procedure to install the assist rip on the other side.



a. Assemble the assist rip2 clips and 2 covers as shown in the illustration.

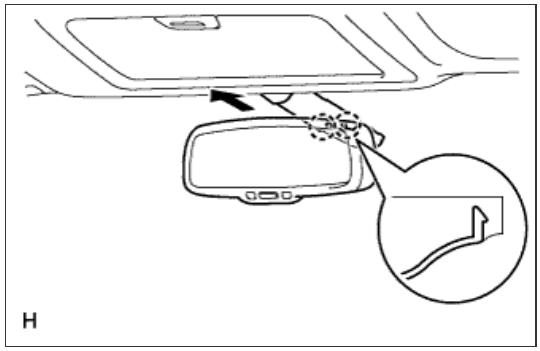
b. Install the assist rip.



43. INSTALL SEAT BELT ANCHOR COVER (for 3 Person Seat Type Rear No. 2 Seat)

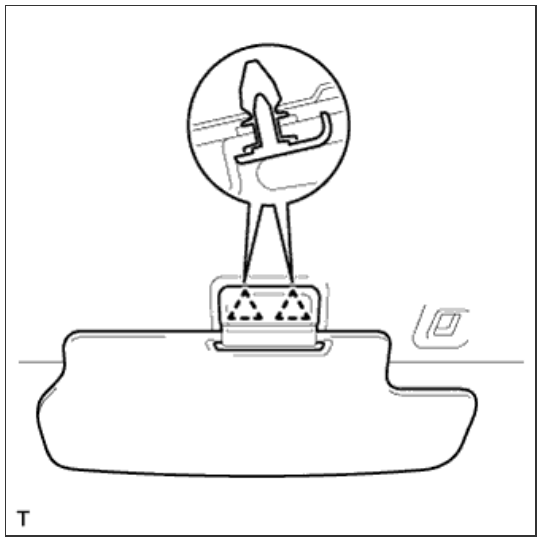
a. Attach the 4 uides and clips to install the seat belt anchoover.

44. INSTALL RAIN SENSOR COVER (w/ Rain Sensor)



a. Push in the stopper in the direction of the arrow labeled (1) to install the rain sensor cover.

b. Slide the No. 2 cover in the direction of the arrow labeled (2) to fix it in place.



45. INSTALL INNER REAR VIEW MIRROR STAY HOLDER COVER (w/ EC Mirror)

a. Attach the 2 claws to install the cover.

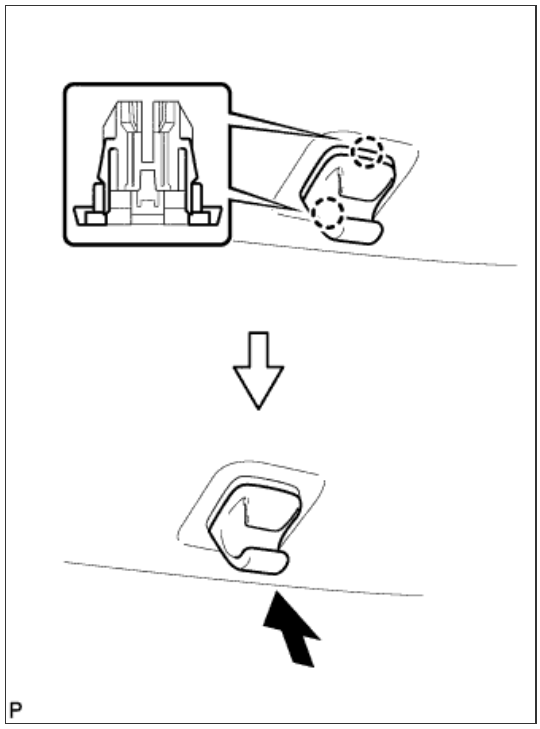
46. INSTALL CENTER VISOR ASSEMBLY LH (w/ Sub Visor)

a. Attach the 2 clips to install the center visor.

47. INSTALL CENTER VISOR ASSEMBLY RH (w/ Sub Visor)

HINT:

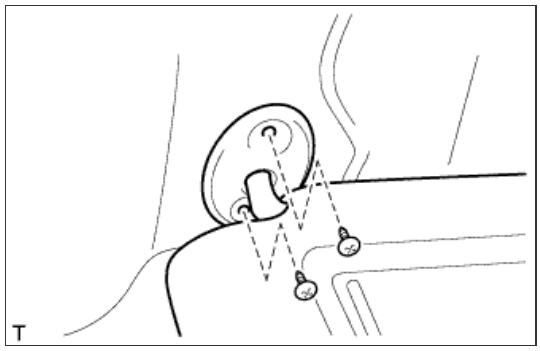
Use the same procedures described for the LH side.



48. INSTALL VISOR HOLDER

HINT:

Use the same procedures to install the visor holder on the other side.



a. Attach the 2 claws.

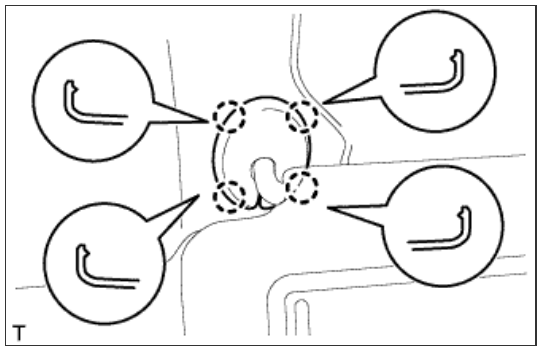
b. Push the visor holder in to install it.

49. INSTALL VISOR ASSEMBLY LH

a. Install the visor with the 2 screws.

50. INSTALL VISOR ASSEMBLY RH

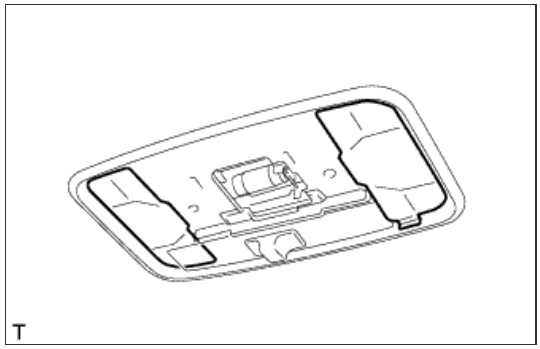
HINT:



Use the same procedures described for the LH side.

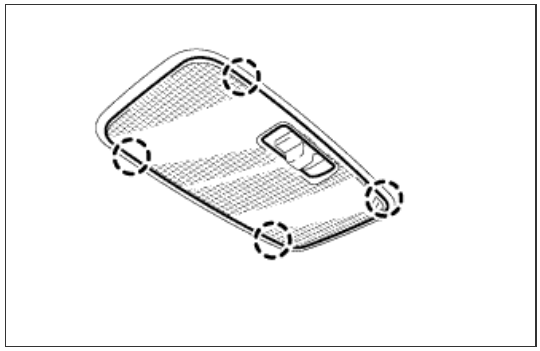
51. INSTALL VISOR BRACKET COVER

HINT:

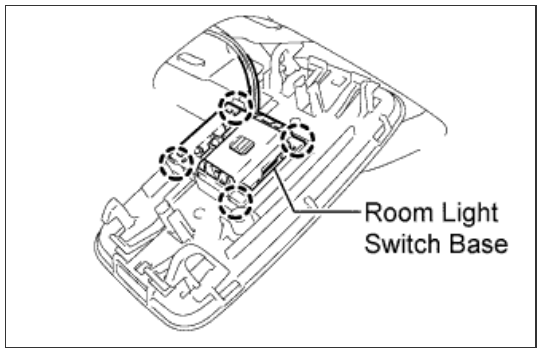


Use the same procedure to install the visor bracket cover on the other side.

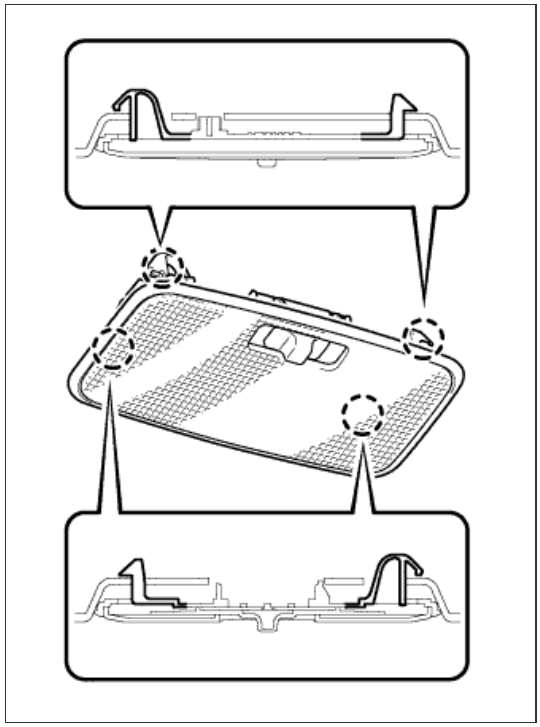
a. Attach the 4 claws to install the visor bracket cover.



52. INSTALL NO. 2 ROOM LIGHT ASSEMBLY

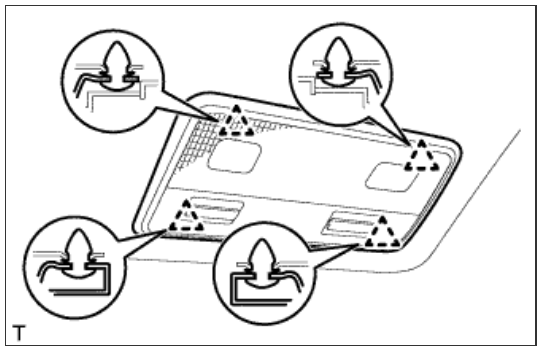


a. Install the 2 covers.



b. Attach the 4 claws to install the room li ht lens.

c. Attach the 4 claws to install the room li ht to the roo n li ht switch base.

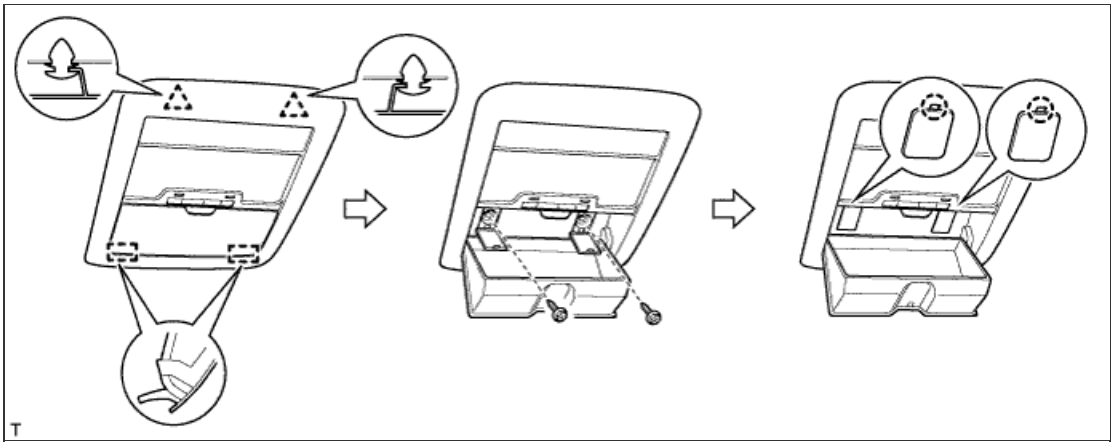


d. Attach the claws to install the roo n li ht.

53. INSTALL NO. 1 ROOM LIGHT ASSEMBLY

a. Connect the connector.

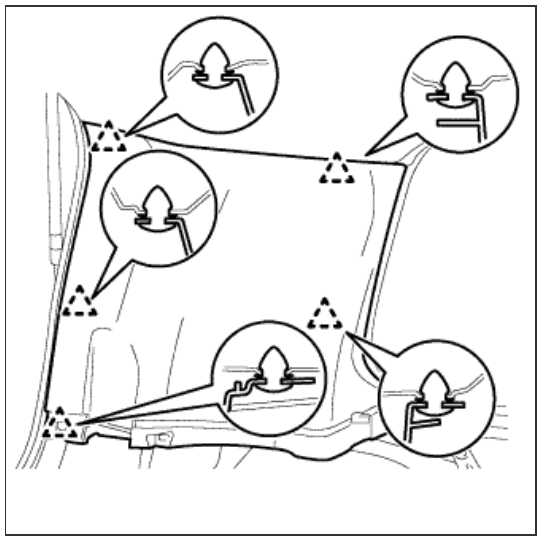
b. Attach the clips to install the roo n li ht.



54. INSTALL MAP LIGHT ASSEMBLY

a. Connect the connector.

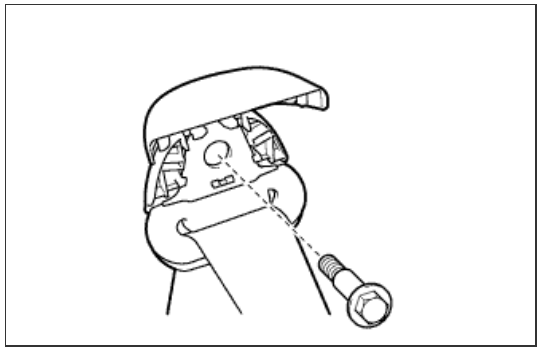
b. Attach the 2 clips and 2 uides to install the map li ht.



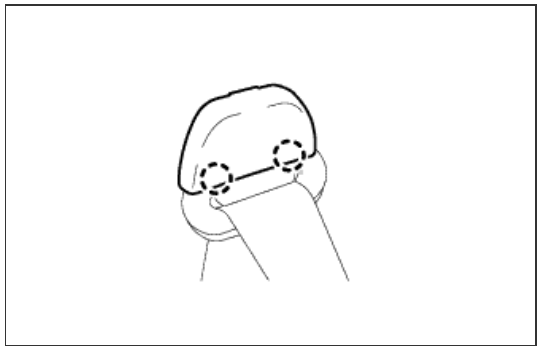
c. Install the 2 screws.

d. Attach the 2 claws to close the 2 covers.

55. INSTALL REAR UPPER PILLAR GARNISH LH



a. Attach the 5 clips to install the rear upper pillar arnish.



b. w e No. 2 Seat except ace to ace eat pe

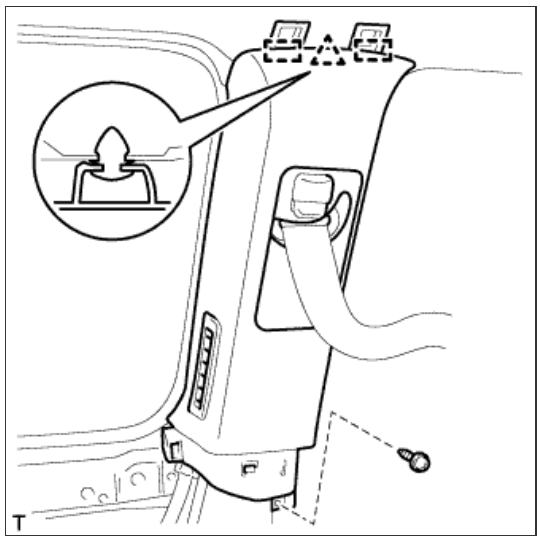
i. Install the seat belt shoulder anchor with the bolt.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }

ii. Attach the 2 claws to close the seat belt shoulder anchor cover.

56. INSTALL REAR UPPER PILLAR GARNISH RH

HINT:



Use the same procedures described for the LH side.

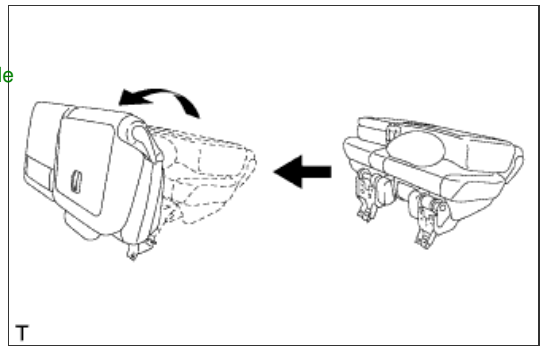
57. INSTALL REAR FRONT QUARTER TRIM GARNISH LH

a. Pass the seat belt anchor throu h the quarter trim arnish.

b. Attach the clip and 2 uides to install the quarter trim arnish.

c. Install the screw.

58. INSTALL REAR FRONT QUARTER TRIM GARNISH RH



HINT:

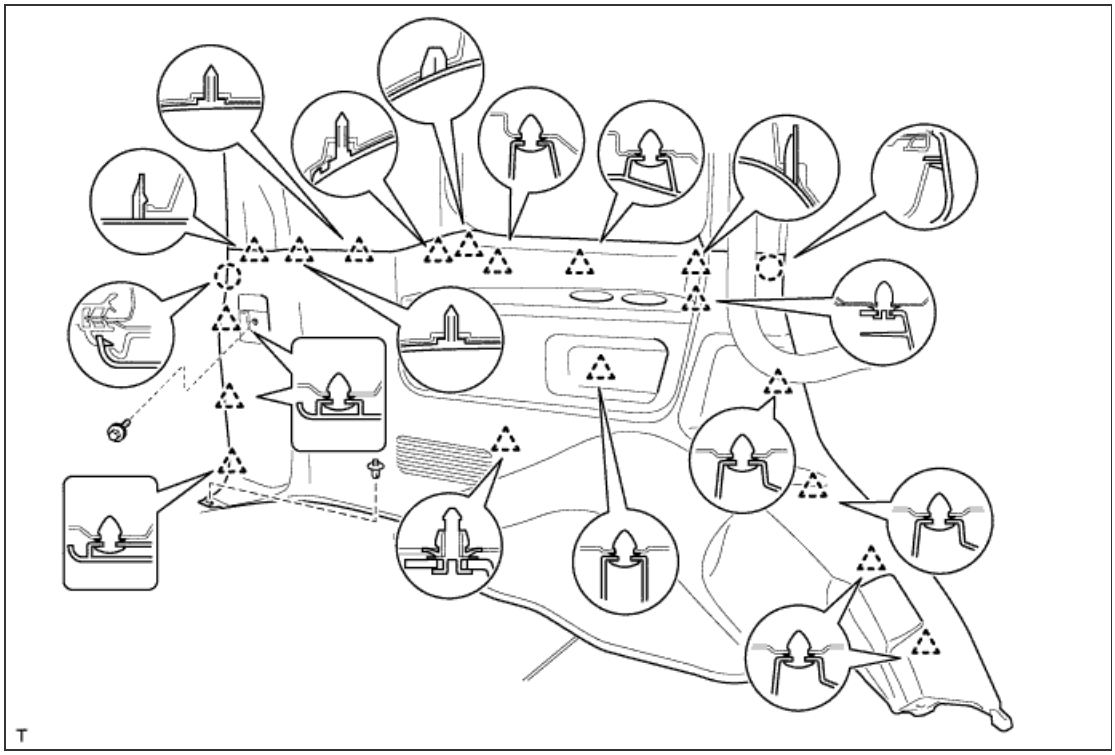
Use the same procedures described for the LH side.

59. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY LH

HINT:

hen installin the front quarterrimpanel operate the reclinin ad uster release handle and move the No. 1 rear seat to the position shown in the illustration.

a. w/ Rear No. 2 Seat except ace to ace eat pe

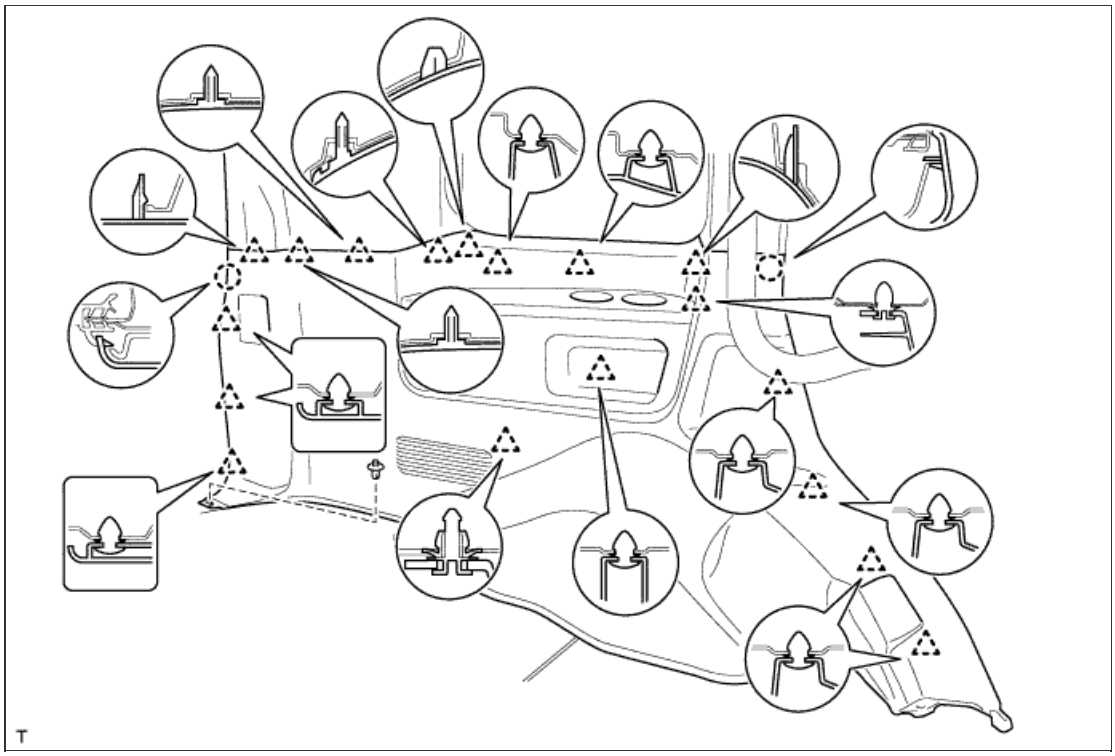


i. w o ear Air Conditionin m: ste
Connect the rear seat lock control lever cable.

ii. w/ Rear Air Conditionin nste
Connect the thermistor connector and rear seat lock control lever cable.

iii. Attach the 18 clips and 2 claws to install the quarter trim panel.

i . Install the clip and bolt.

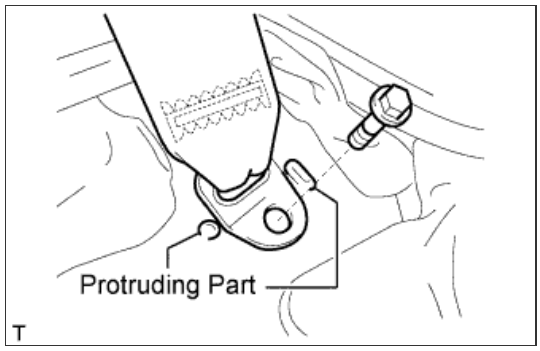


Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

b. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat for ace to ace eat pe

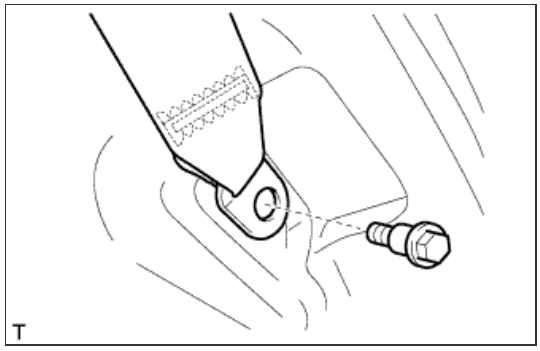
i. Attach the clips and 2 claws to install the quarter trim panel.

ii. Install the clip.



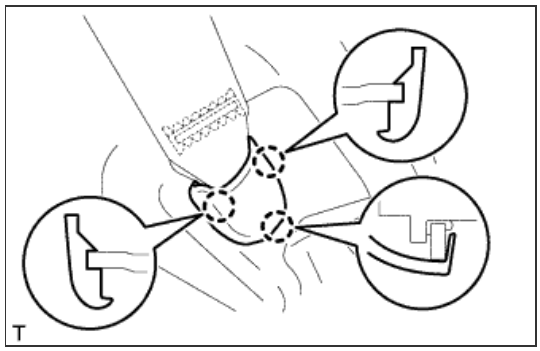
c. w/ Rear No. 2 Seat except ace to ace eat pe
Install the rear No. 2 seat belt anchor with the bolt.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }



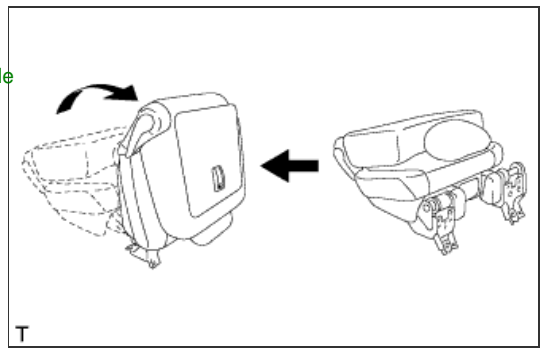
NOTICE:

Do not overlap the anchor part of the seat belt and protrudin parts of the vehicle bod .



d. Install the rear No. 1 seat belt anchor with the bolt.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }



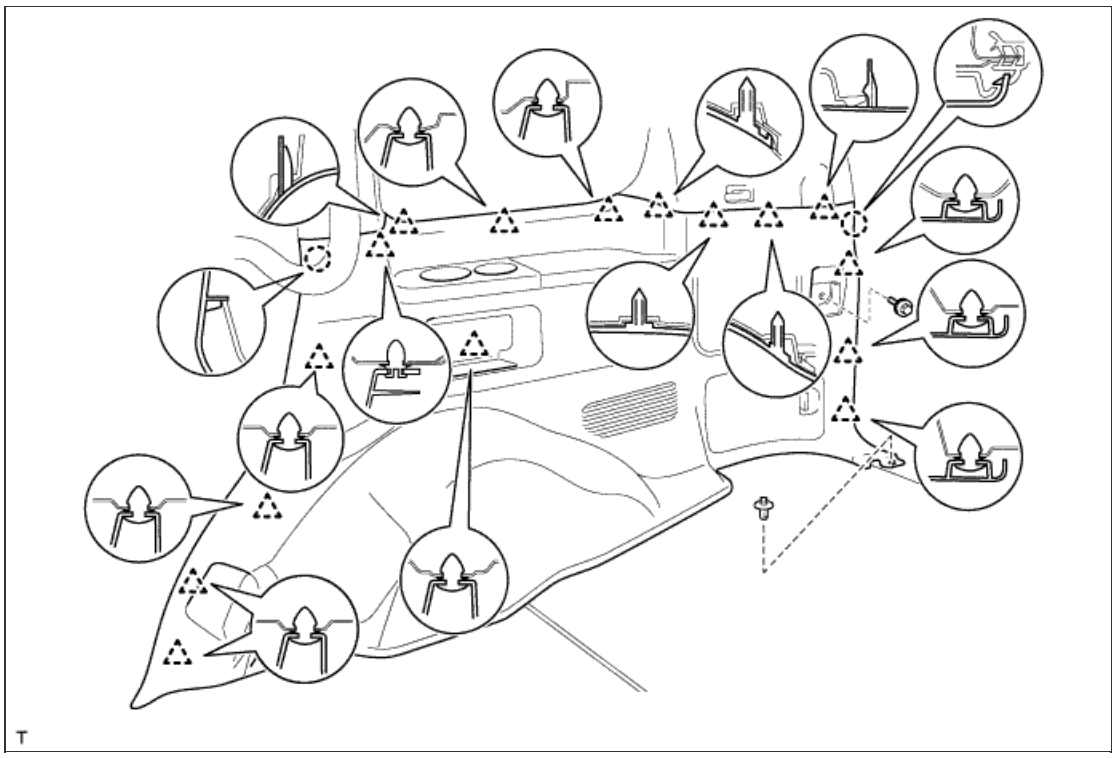
e. Attach the 3 claws to install the cover.

60. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY RH

HINT:

hen installin the front quarterrimpanel operate the reclinin ad uster release handle and move the No. 1 rear seat to the position shown in the illustration.

a. w/ Rear No. 2 Seat except ace to ace eat pe

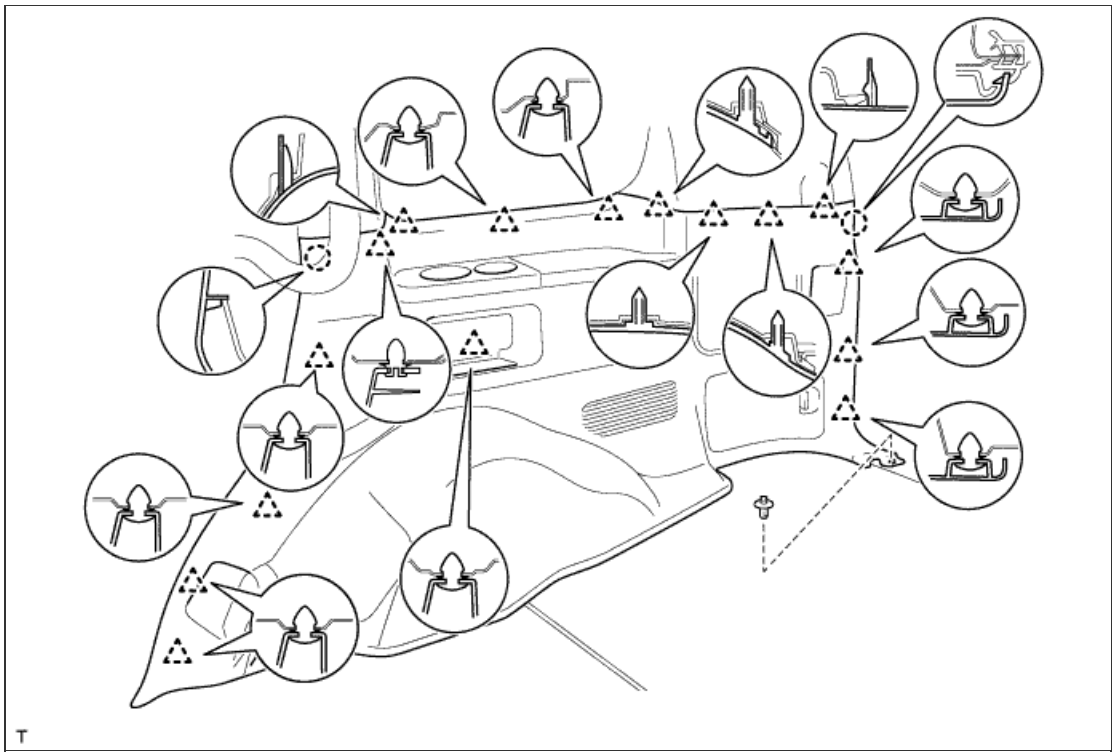


i. w o ear Air Conditionin m: ste
Connect the rear seat lock control lever cable.

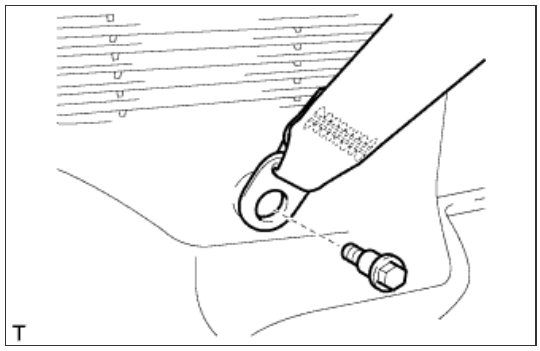
ii. w/ Rear Air Conditionin nste
Connect the thermistor connector and rear seat lock control lever cable.

iii. Attach the 16 clips and 2 claws to install the quarter trim panel.

iv. Install the clip and bolt.



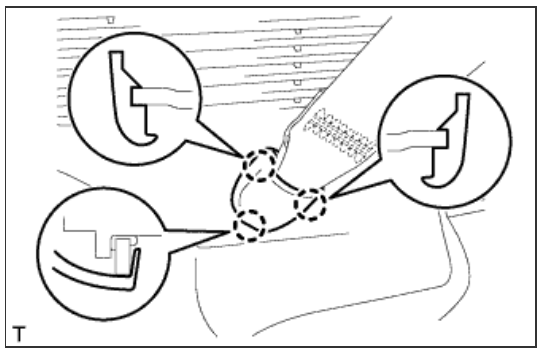
Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }



b. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat for ace to ace eat pe

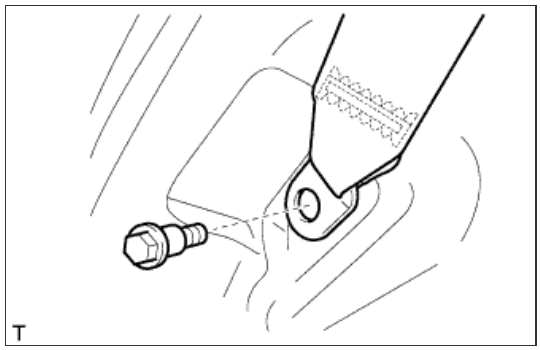
i. Attach the 6 clips and 2 claws to install the quarter trim panel.

ii. Install the clip.

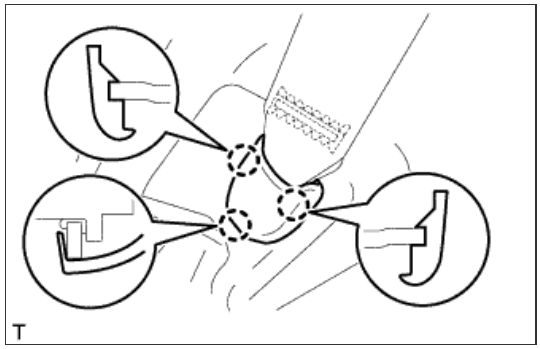


c. w/ Rear No. 2 Seat except ace to ace eat pe

i. Install the rear No. 2 seat belt anchor with the bolt.



Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }

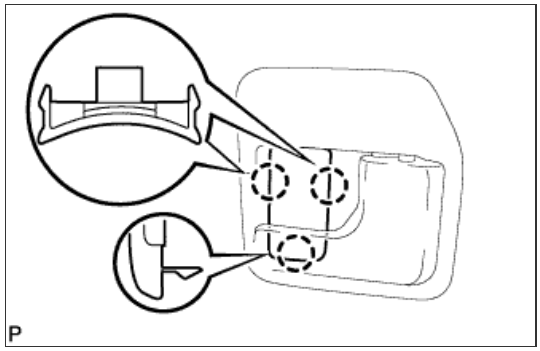


ii. Attach the 3 claws to install the cover.

d. Install the rear No. 1 seat belt anchor with the bolt.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }

e. Attach the 3 claws to install the cover.

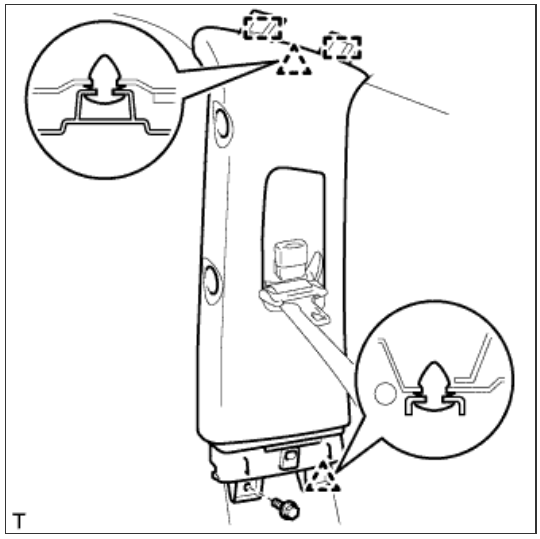


61. INSTALL REAR SEAT COVER CAP (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedure to install the rear seat cover cap on the other side.

a. Attach the 3 claws to install the rear seat cover cap.



62. INSTALL CENTER PILLAR GARNISH LH

a. Pass the seat belt anchor throu h the center pillar arnish.

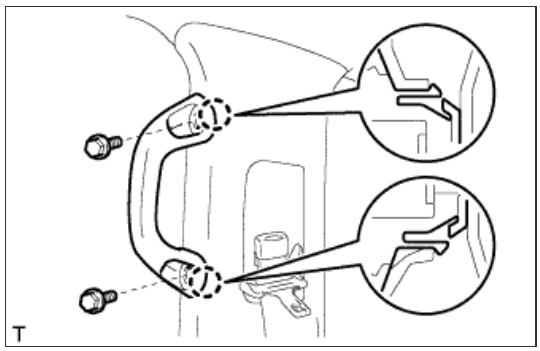
b. Attach the 2 clips and 2 uides to install the center pillar arnish.

c. Install the bolt.

63. INSTALL CENTER PILLAR GARNISH RH

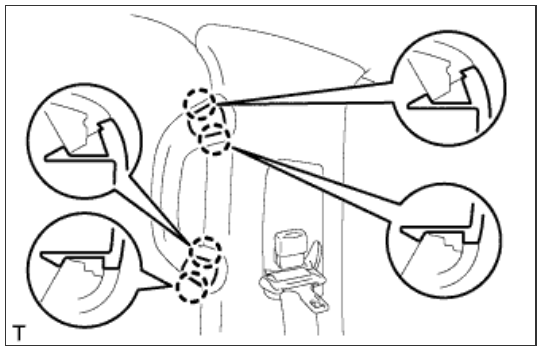
HINT:

Use the same procedures described for the LH side.



64. INSTALL REAR ASSIST GRIP ASSEMBLY

HINT:

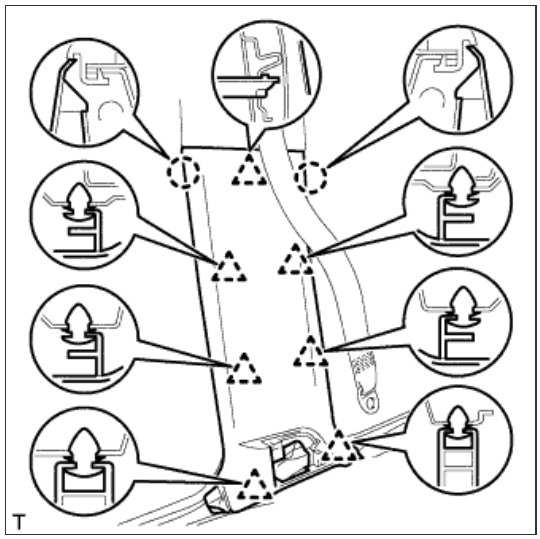


Use the same procedure to install the rear assist rip on the other side.

a. Attach the 2 claws to install the rear assist rip.

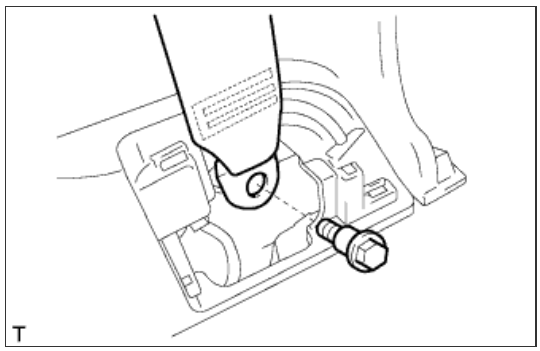
b. Install the 2 bolts.

c. Attach the 4 claws to install the 2 assist rip plu s.



65. INSTALL CENTER LOWER PILLAR GARNISH LH

HINT:



- **for Manual Seat:**
  When installing the center lower pillar garnish, move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  When installing the center lower pillar garnish, connect the cable to the negative (-) battery terminal and operate the power seat switch to move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  After moving the front seat, disconnect the cable from the negative (-) battery terminal.

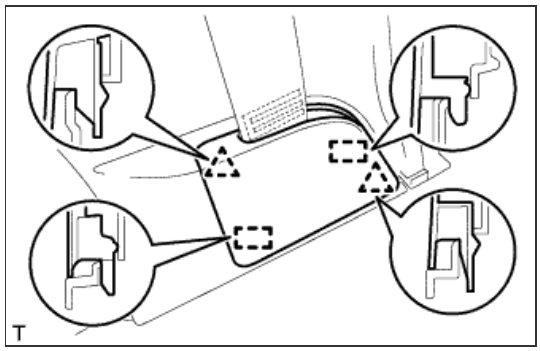
a. Attach the 2 claws and 7 clips to install the center lower pillar arnish.

. Install the seat belt anchor with the bolt.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }

66. INSTALL CENTER LOWER PILLAR GARNISH RH

HINT:



Use the same procedures described for the LH side.

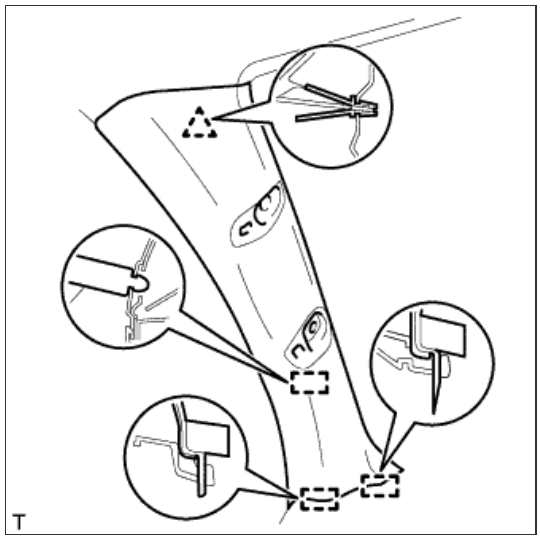
67. INSTALL CENTER PILLAR GARNISH COVER LH

HINT:

- **for Manual Seat:**
  When installing the center pillar garnish cover, move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  When installing the center pillar garnish cover, connect the cable to the negative (-) battery terminal and operate the power seat switch to move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  After moving the front seat, disconnect the cable from the negative (-) battery terminal.

a. Attach the 2 clips and 2 guides to install the cover.

68. INSTALL CENTER PILLAR GARNISH COVER RH



HINT:

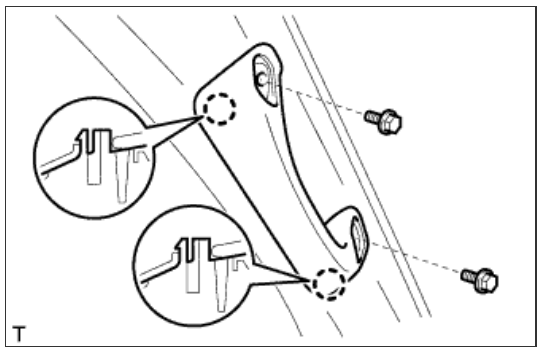
Use the same procedures described for the LH side.

69. INSTALL FRONT PILLAR GARNISH LH

a. for 9 Speakers:
Connect the speaker connector.

b. Attach the clip and 3 guides to install the front pillar garnish.

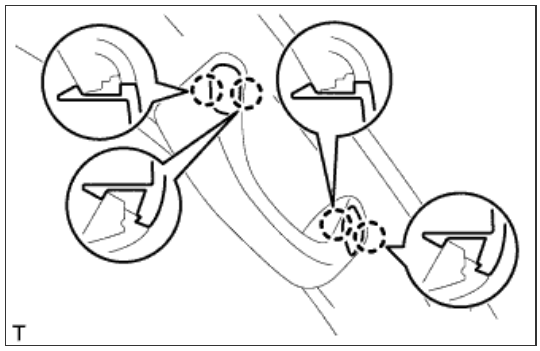
70. INSTALL FRONT PILLAR GARNISH RH



HINT:

Use the same procedures described for the LH side.

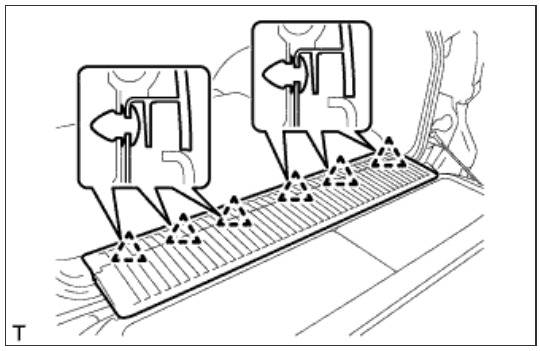
71. INSTALL FRONT ASSIST GRIP SUB-ASSEMBLY



HINT:

Use the same procedure to install the front assist rip on the other side.

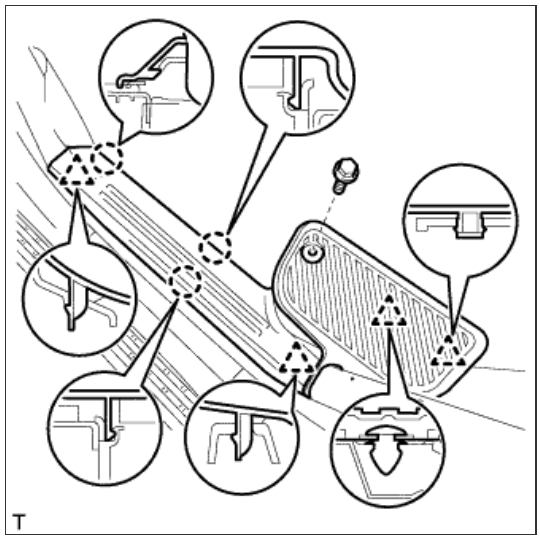
a. Attach the 2 claws to install the front assist rip.



b. Install the 2 bolts.

c. Attach the 4 claws to install the 2 assist rip plu s.

72. INSTALL REAR FLOOR MAT REAR SUPPORT PLATE



a. Attach the 6 clips to install the support plate.

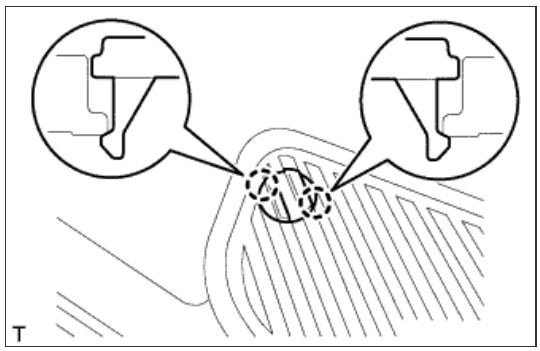
73. INSTALL REAR DOOR SCUFF PLATE LH

a. Attach the 3 claws and 4 clips to install the scuff plate.

b. Install the screw.

74. INSTALL REAR DOOR SCUFF PLATE RH

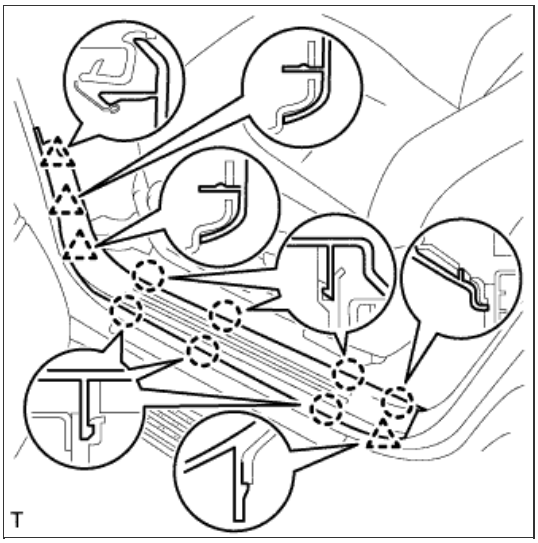
HINT:



Use the same procedures described for the LH side.

75. INSTALL REAR STEP COVER

HINT:



Use the same procedure to install the step cover on the other side.

a. Attach the 2 claws to install the step cover.

76. INSTALL FRONT DOOR SCUFF PLATE LH

a. Attach the 7 claws and 4 clips to install the scuff plate.

77. INSTALL FRONT DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

78. INSTALL REAR NO. 2 SEAT ASSEMBLY LH (except Face to Face Seat Type)

a. Install the rear No. 2 seat assembl LH (Click here).

79. INSTALL REAR NO. 2 SEAT ASSEMBLY RH (except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

80. INSTALL REAR NO. 2 SEAT ASSEMBLY LH (for Face to Face Seat Type)

a. Install the rear No. 2 seat assembl LH (Click here).

81. INSTALL REAR NO. 2 SEAT ASSEMBLY RH (for Face to Face Seat Type)

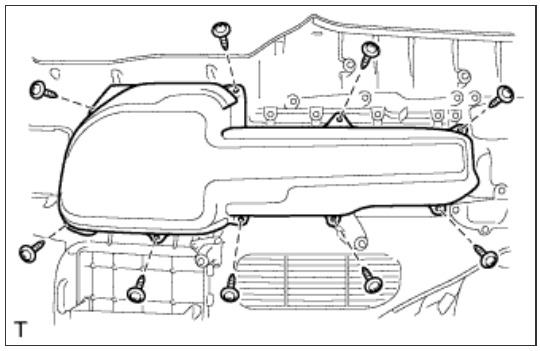
HINT:

Use the same procedures described for the LH side.

82. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

hen disconnectin the cable mes sts need to be initiali ed after the cable is reconnected (Click here).



for Preparation Click here

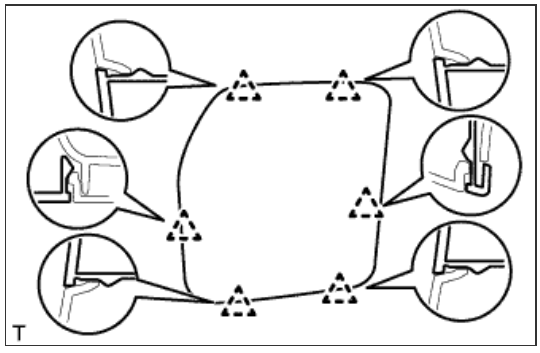
HINT:

A bolt without a torque specification is shown in the standard bolt chart (Click here).

1. INSTALL SIDE TRIM BOX

a. Install the side trim box with the 9 screws.

2. INSTALL SIDE TRIM BOX COVER



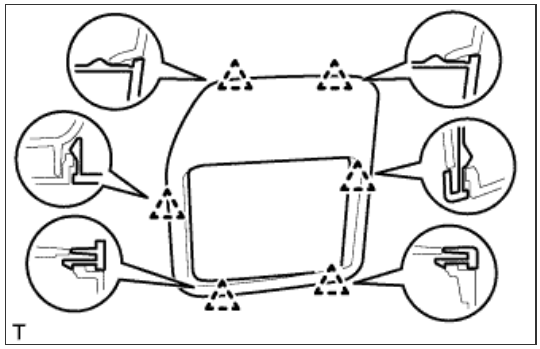
a. Install the side trim box cover.

3. INSTALL QUARTER TRIM LID SUB-ASSEMBLY RH

a. Install the quarter trim lid.

4. INSTALL QUARTER TRIM COVER LH (w/o Rear No. 2 Seat, w/ Rear No. 2 Seat for Face to Face Seat Type)

a. Attach the 6 clips to install the quarter trim cover.



5. INSTALL QUARTER TRIM COVER RH (w/o Rear No. 2 Seat, w/ Rear No. 2 Seat for Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

6. INSTALL REAR NO. 2 SEAT COVER BEZEL (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Attach the 6 clips to install the rear No. 2 seat cover bezel.

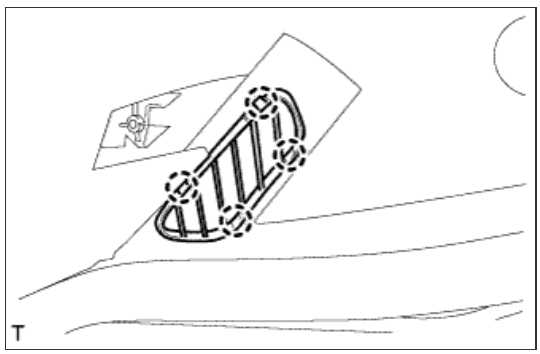
7. INSTALL REAR NO. 1 SEAT COVER BEZEL (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the rear No. 2 seat cover bezel.

8. INSTALL REAR SEAT LOCK CONTROL LEVER SUB-ASSEMBLY LH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Attach the 4 claws to install the seat lock control lever.



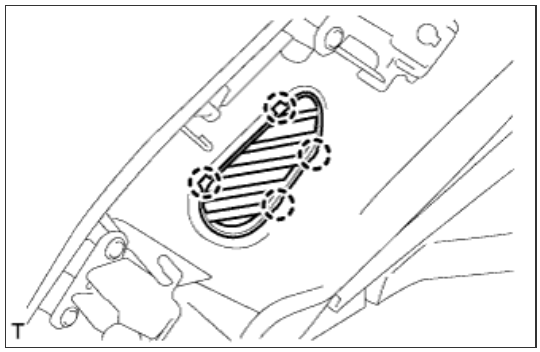
9. INSTALL REAR SEAT LOCK CONTROL LEVER SUB-ASSEMBLY RH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

10. INSTALL NO. 2 SIDE TRIM BASE COVER LH (w/ Rear Heater)

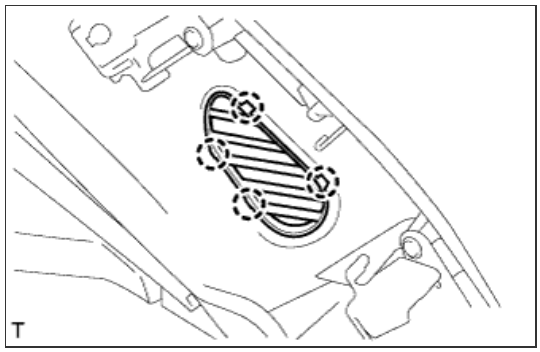
a. Attach the 4 claws to install the cover.



11. INSTALL NO. 2 SIDE TRIM BASE COVER RH (w/ Rear Heater)

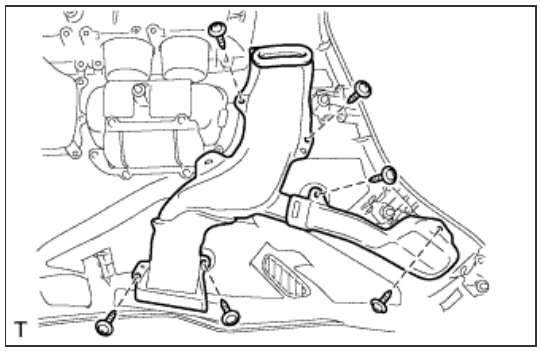
HINT:

Use the same procedures described for the LH side.



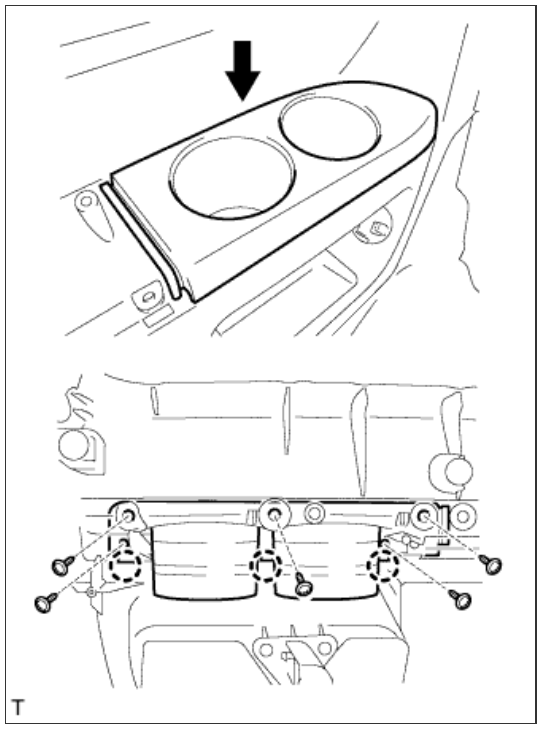
12. INSTALL NO. 1 SIDE TRIM BASE COVER LH (w/ Rear Heater)

a. Attach the 4 claws to install the cover.



13. INSTALL NO. 1 SIDE TRIM BASE COVER RH (w/ Rear Heater)

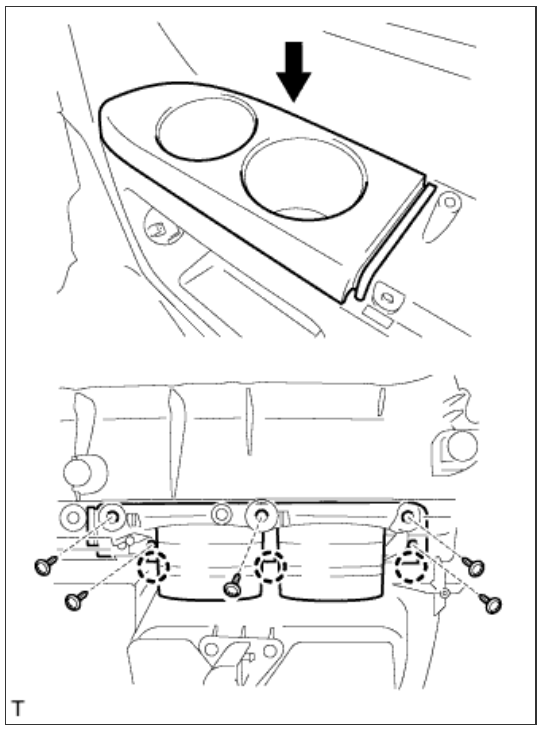
a. Attach the 4 claws to install the cover.



b. Install the duct with the 6 screws.

14. INSTALL NO. 2 CUP HOLDER

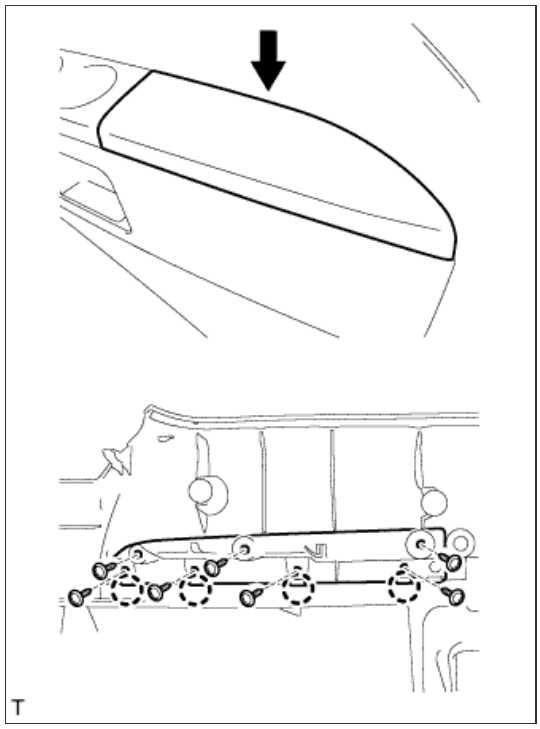
a. Attach the 3 claws to install the cup holder.



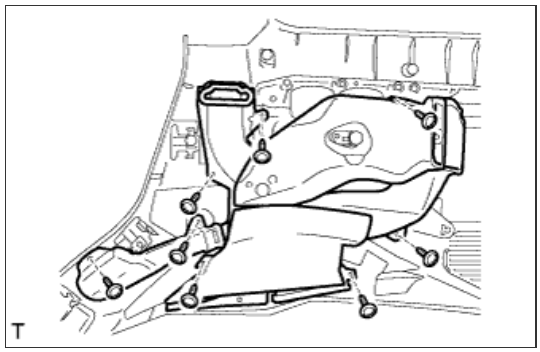
b. Install the 5 screws.

15. INSTALL NO. 1 CUP HOLDER

a. Attach the 3 claws to install the cup holder.



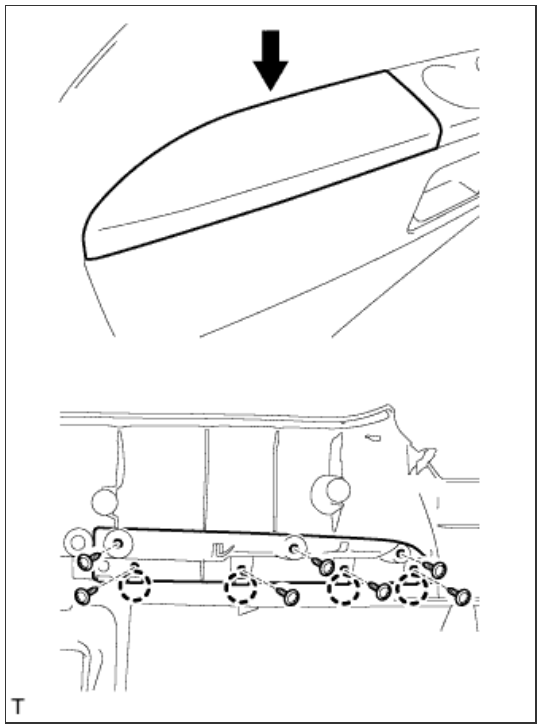
b. Install the 5 screws.



16. INSTALL QUARTER TRIM COVER SUB-ASSEMBLY LH

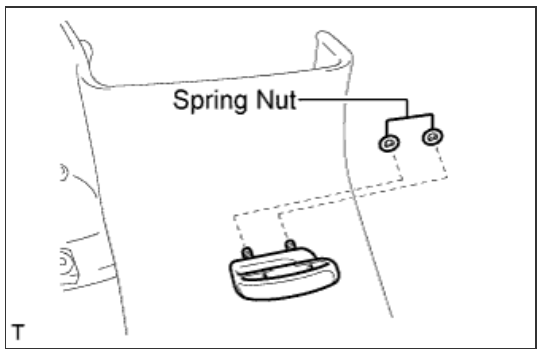
a. Attach the 4 claws to install the quarter trim cover.

b. Install the 7 screws.



c. w/ Rear Heater:
Install the duct with the 8 screws.

17. INSTALL QUARTER TRIM COVER SUB-ASSEMBLY RH



a. Attach the 4 claws to install the quarter trim cover.

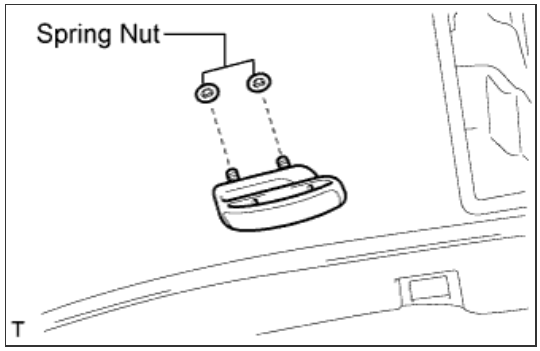
b. Install the 7 screws.

18. INSTALL REAR NO. 2 SEAT SHOULDER BELT HANGER LH

a. Install the han er with 2 new sprin nuts.

19. INSTALL REAR NO. 2 SEAT SHOULDER BELT HANGER RH

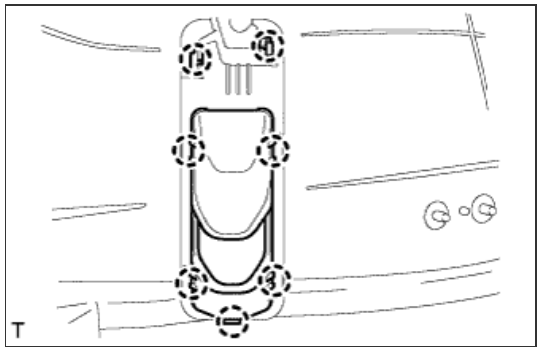
HINT:



Use the same procedures described for the LH side.

20. INSTALL REAR SEAT SHOULDER BELT HANGER (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

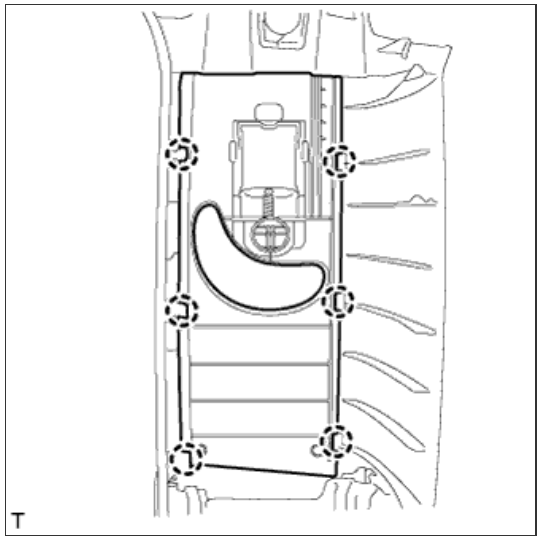


Use the same procedure to install the han er on the other side.

a. Install the han er with 2 new sprin nuts.

21. INSTALL ROOF SIDE INNER GARNISH COVER LH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Attach the 7 claws to install the cover.



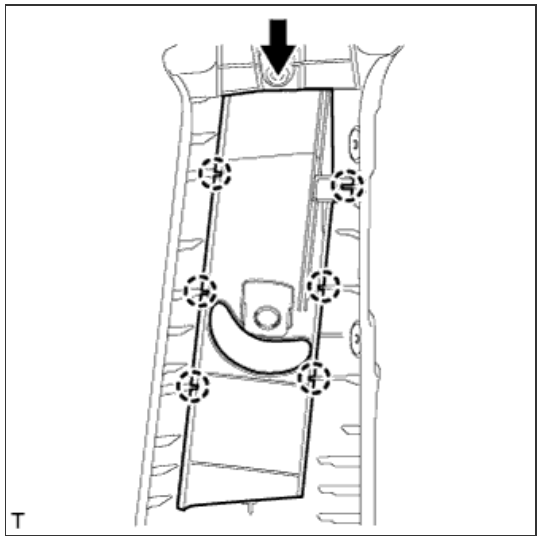
22. INSTALL ROOF SIDE INNER GARNISH COVER RH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

23. INSTALL REAR SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY LH

a. Attach the 6 claws to install the plate.



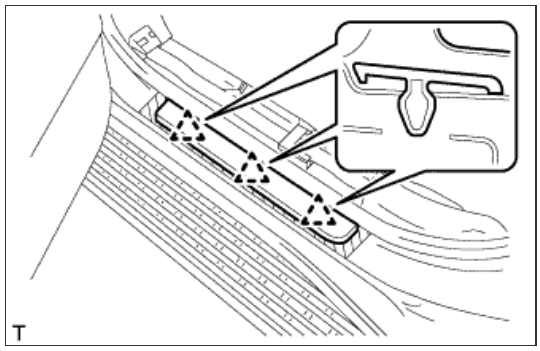
24. INSTALL REAR SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

25. INSTALL FRONT SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY LH

a. Slide the plate in the direction shown in the illustration and attach the 6 claws to install the plate.



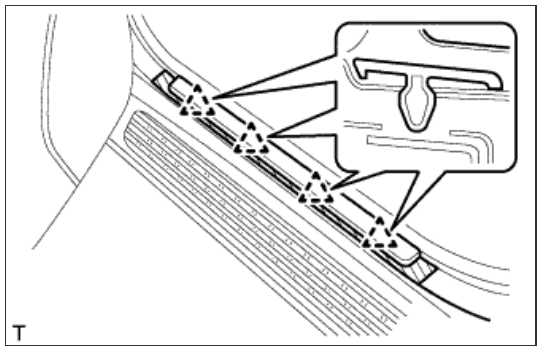
26. INSTALL FRONT SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

27. INSTALL REAR DOOR SCUFF PLATE OUTSIDE LH

a. Attach the 3 clips to install the rear door scuff plate outside.



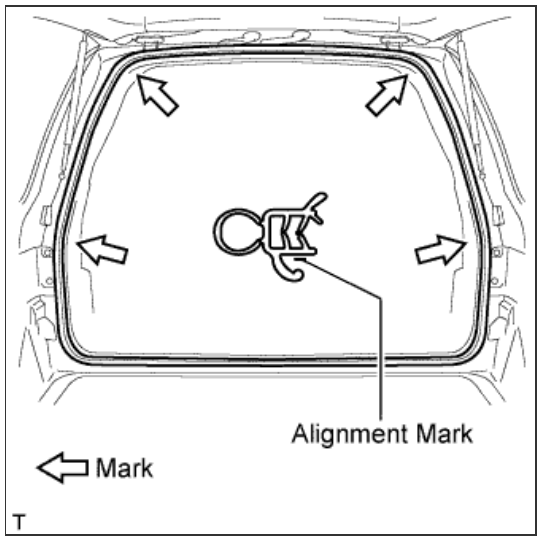
28. INSTALL REAR DOOR SCUFF PLATE OUTSIDE RH

HINT:

Use the same procedures described for the LH side.

29. INSTALL FRONT DOOR SCUFF PLATE OUTSIDE LH

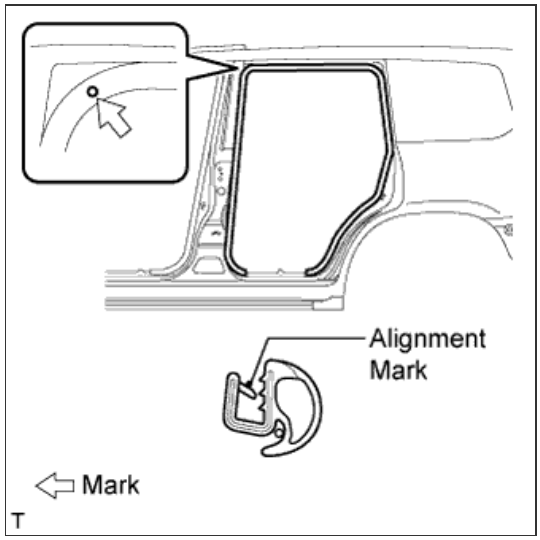
a. Attach the 4 clips to install the front door scuff plate outside.



30. INSTALL FRONT DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

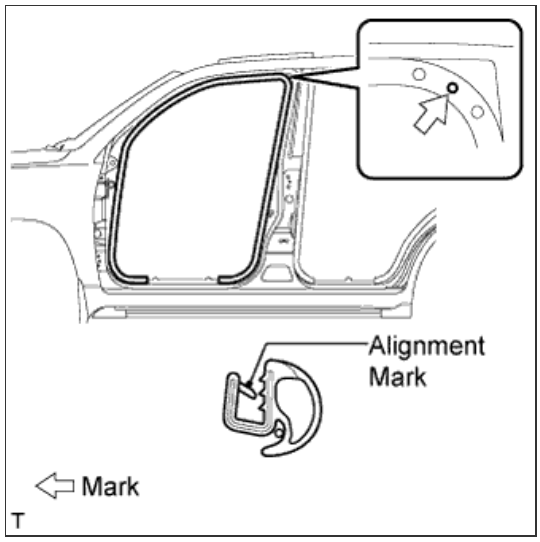


31. INSTALL BACK DOOR WEATHERSTRIP

a. Install the back door weatherstrip as shown in the illustration.

32. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH

a. Install the rear door openin trim weatherstrip as shown in the illustration.



33. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH

HINT:

Use the same procedures described for the LH side.

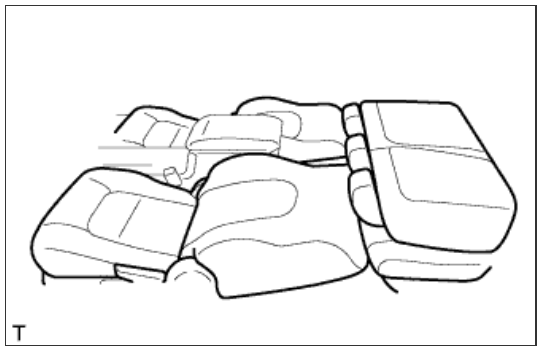
34. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH

a. Install the front door openin trim weatherstrip as shown in the illustration.

35. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH

HINT:

Use the same procedures described for the LH side.

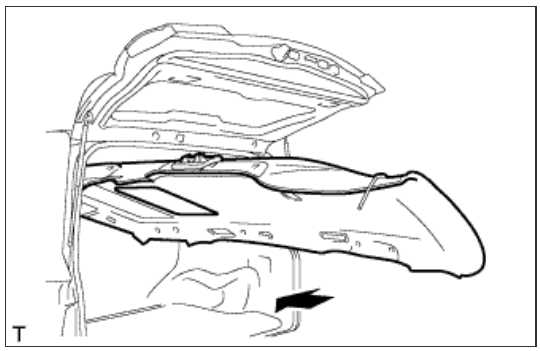


36. INSTALL ROOF HEADLINING ASSEMBLY

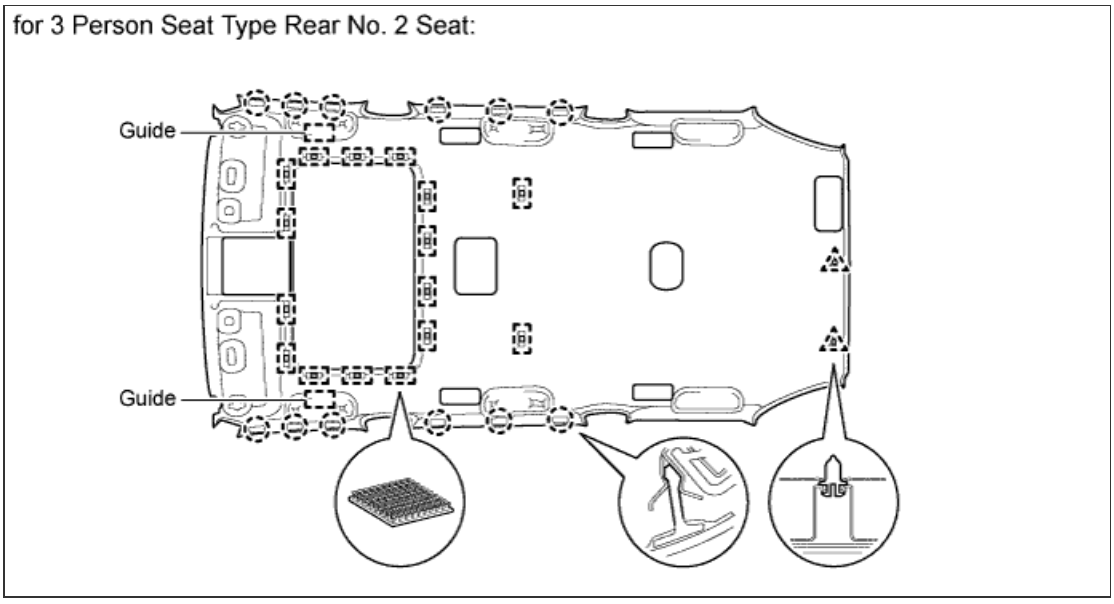
HINT:

- **for Manual Seat:**

hen in talling the roof headlining, move the front seat and rear No. 1 seat to the position shown in the illustration.



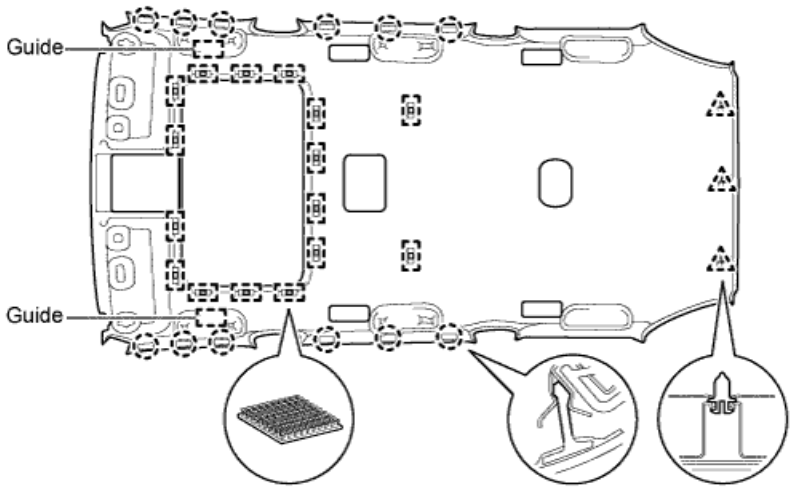
- **for Power Seat:**
  When installing the roof headlining, connect the cable to the negative (-) battery terminal and move the front seat and No. 1 rear seat to the position shown in the illustration.
- **for Power Seat:**
  After moving the seats, disconnect the cable from the negative (-) battery terminal.



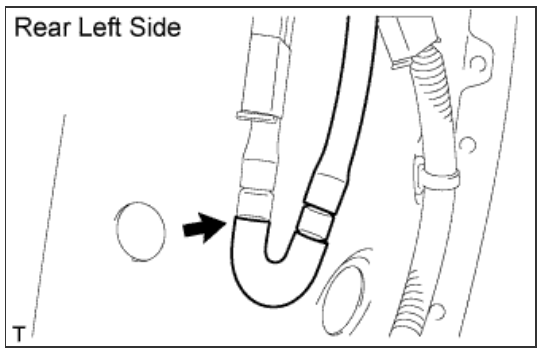
a. Place the headlinin in the cabin from the rear of the vehicle as shown in the illustration.

NOTICE:

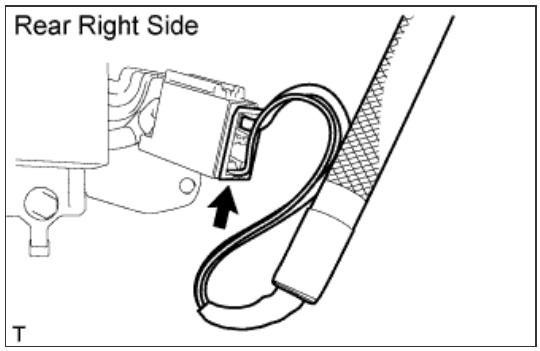
Be careful not to dama e the roof headlinin when placin it in the cabin.



b. for 3 Person Seat pe Rear No. 2 Seat:
Attach the 12 claws 2 clips 2 uides and 16 fasteners to install the headlinin .

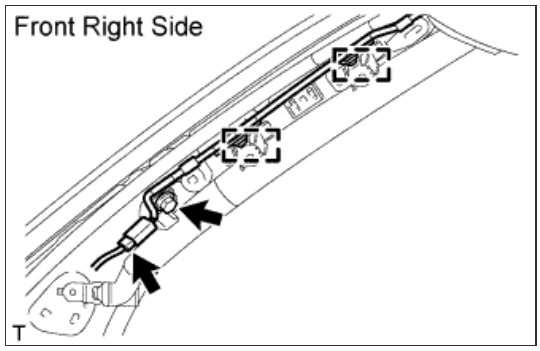


c. except 3 Person Seat pe Rear No. 2 Seat:
Attach the 12 claws 3 clips 2 uides and 16 fasteners to install the headlinin .

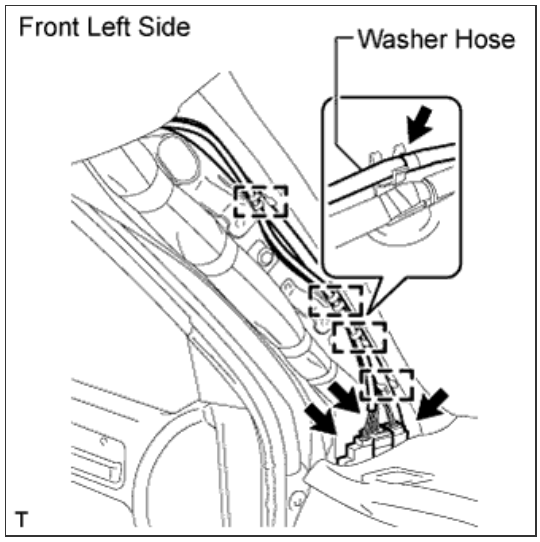


except 3 Person Seat Type Rear No. 2 Seat:

d. Connect the washer hose.

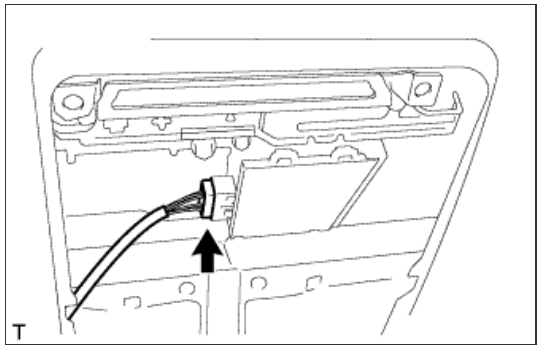


e. Connect the antenna cord connector.

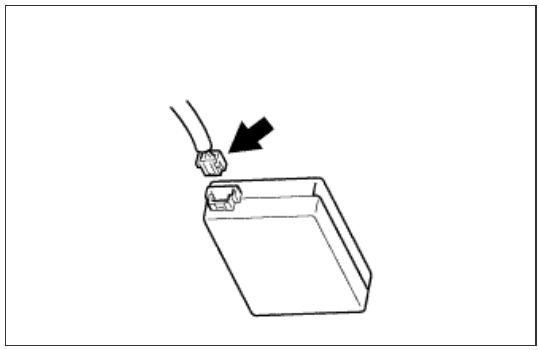


f. Connect the antenna cord connector and attach the 2 clamps.

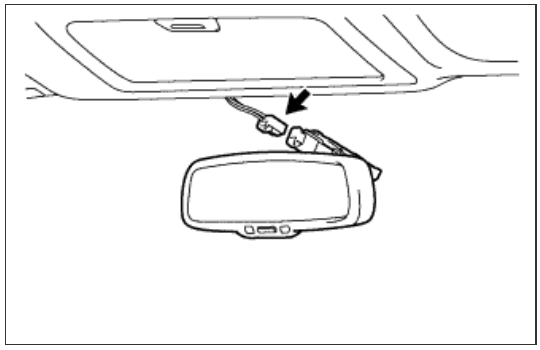
g. Install the bolt.



h. Connect the 3 roof wire connectors and washer hose.

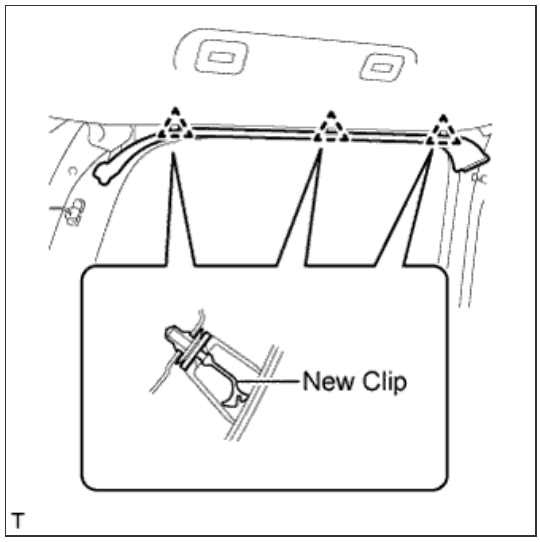


i. Attach the 4 clamps.



. Connect the drive ear connector.

k. w/ Rain Sensor:
Disconnect the rain sensor connector.



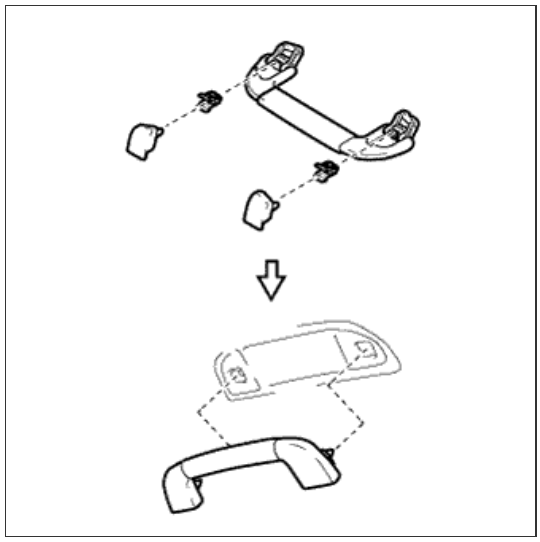
l. w/ C Mirror:
Connect the inner mirror connector.

37. INSTALL FRONT ROOF SIDE RAIL GARNISH LH

a. Install 3 new clips to the roof side rail arnish.

b. Attach the 3 clips to install the roof side rail arnish.

38. INSTALL FRONT ROOF SIDE RAIL GARNISH RH



HINT:

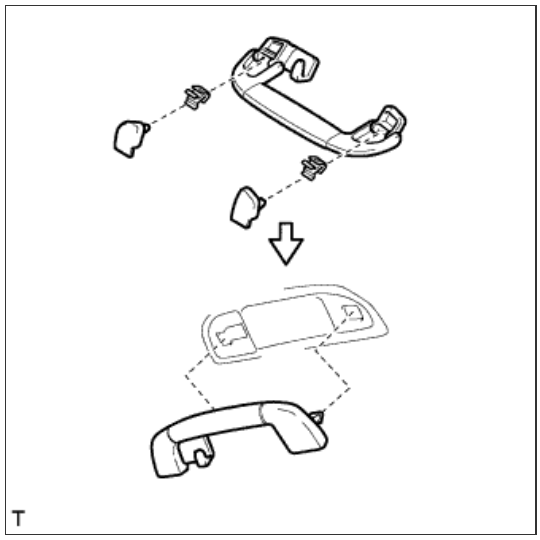
Use the same procedures described for the LH side.

39. INSTALL 3RD SEAT ASSIST GRIP ASSEMBLY (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedure to install the 3rd seat assist rip on the other side.

a. Assemble the assist rip 2 clips and 2 covers as shown in the illustration.

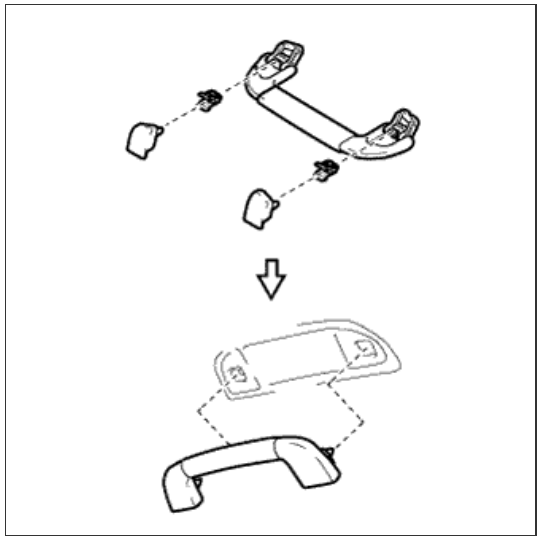


b. Install the assist rip.

40. INSTALL NO. 2 ASSIST GRIP ASSEMBLY LH

a. w/ Rear No. 2 Seat except ace to ace Seat pe or w/o Rear No. 2 Seat:
Install the No. 2 assist rip assembl .

i. Assemble the assist rip 2 clips and 2 covers as shown in the illustration.



ii. Install the assist rip.

. w/ Rear No. 2 Seat for ace to ace Seat pe:
Install the No. 2 assist rip assembl .

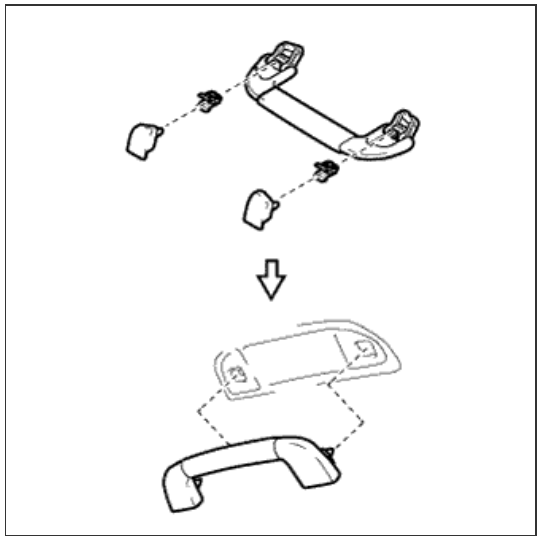
i. Assemble the assist rip 2 clips and 2 covers as shown in the illustration.

ii. Install the assist rip.

41. INSTALL NO. 2 ASSIST GRIP ASSEMBLY RH

HINT:

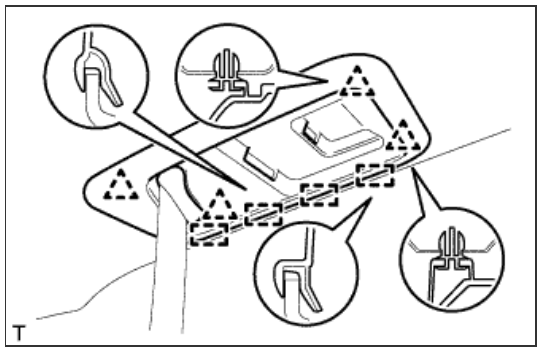
Use the same procedures described for the LH side.



42. INSTALL ASSIST GRIP ASSEMBLY

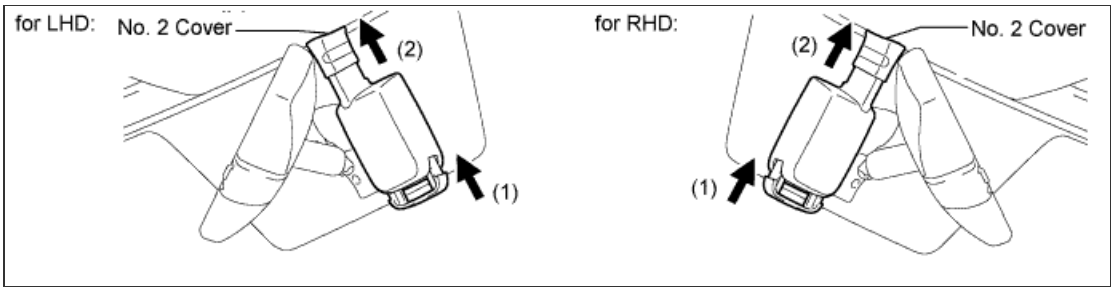
HINT:

Use the same procedure to install the assist rip on the other side.



a. Assemble the assist rip 2 clips and 2 covers as shown in the illustration.

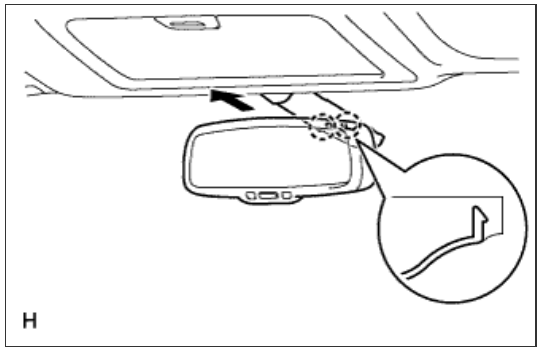
b. Install the assist rip.



43. INSTALL SEAT BELT ANCHOR COVER (for 3 Person Seat Type Rear No. 2 Seat)

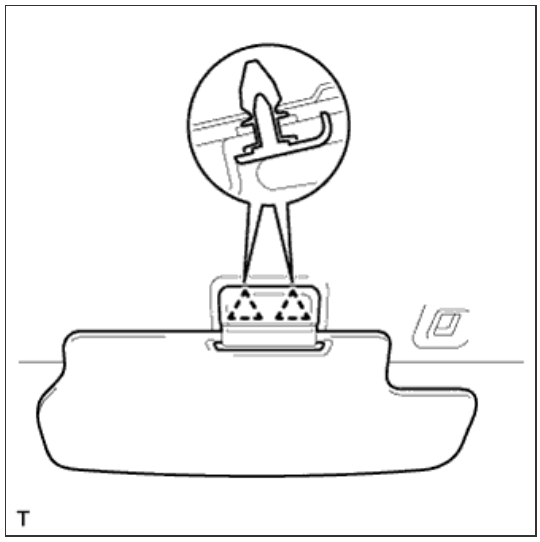
a. Attach the 4 guides and 4 clips to install the seat belt anchor cover.

44. INSTALL RAIN SENSOR COVER (w/ Rain Sensor)



a. Push in the stopper in the direction of the arrow labeled (1) to install the rain sensor cover.

b. Slide the No. 2 cover in the direction of the arrow labeled (2) to fix it in place.



45. INSTALL INNER REAR VIEW MIRROR STAY HOLDER COVER (w/ EC Mirror)

a. Attach the 2 claws to install the cover.

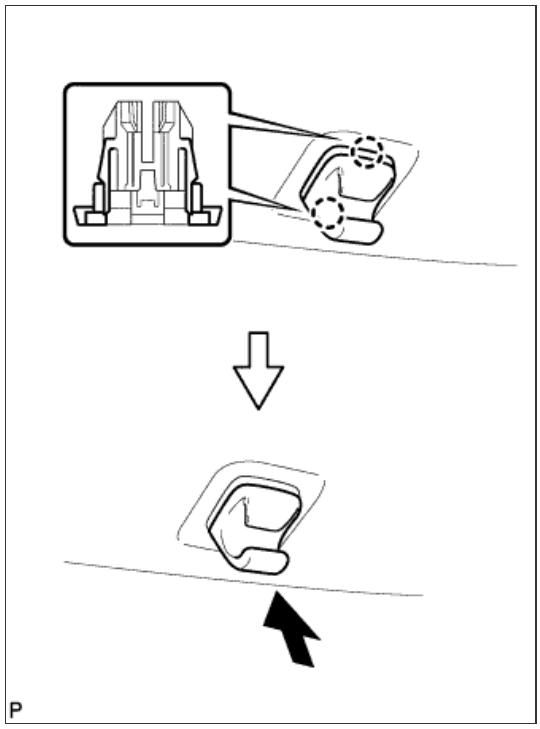
46. INSTALL CENTER VISOR ASSEMBLY LH (w/ Sub Visor)

a. Attach the 2 clips to install the center visor.

47. INSTALL CENTER VISOR ASSEMBLY RH (w/ Sub Visor)

HINT:

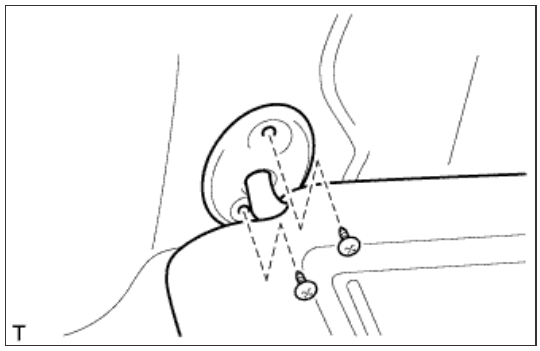
Use the same procedures described for the LH side.



48. INSTALL VISOR HOLDER

HINT:

Use the same procedures to install the visor holder on the other side.



a. Attach the 2 claws.

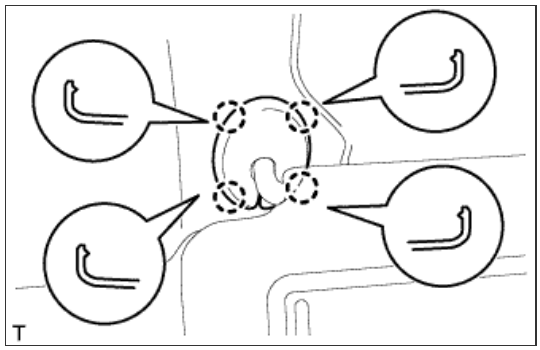
b. Push the visor holder in to install it.

49. INSTALL VISOR ASSEMBLY LH

a. Install the visor with the 2 screws.

50. INSTALL VISOR ASSEMBLY RH

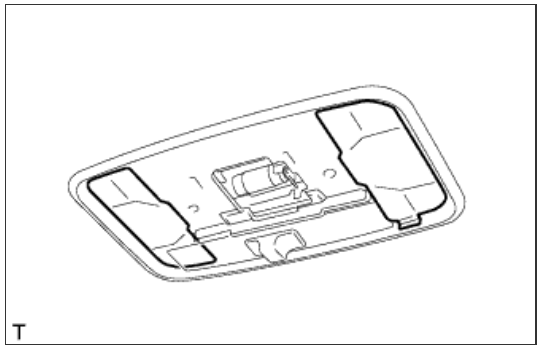
HINT:



Use the same procedures described for the LH side.

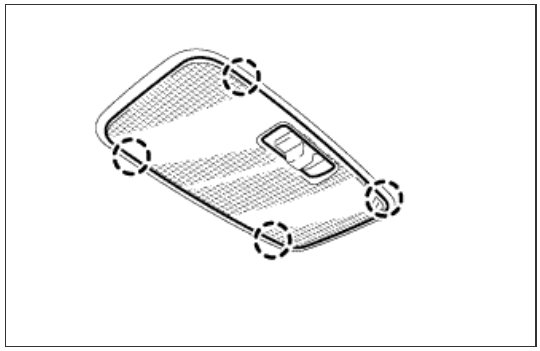
51. INSTALL VISOR BRACKET COVER

HINT:

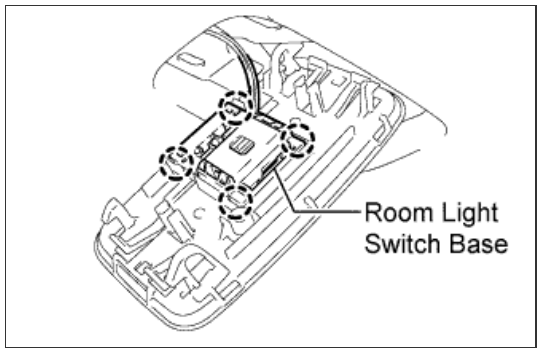


Use the same procedure to install the visor bracket cover on the other side.

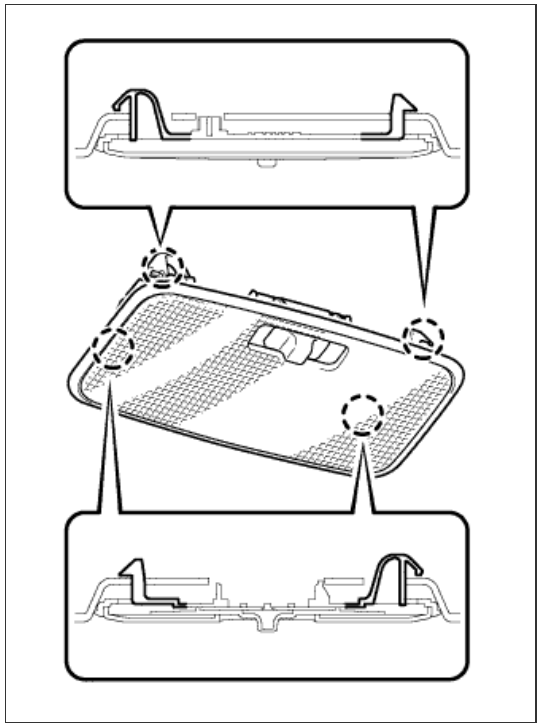
a. Attach the 4 claws to install the visor bracket cover.



52. INSTALL NO. 2 ROOM LIGHT ASSEMBLY

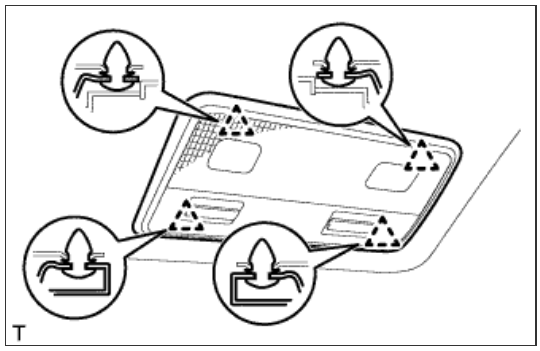


a. Install the 2 covers.



b. Attach the 4 claws to install the room li ht lens.

c. Attach the 4 claws to install the room li ht to the room li ht switch base.

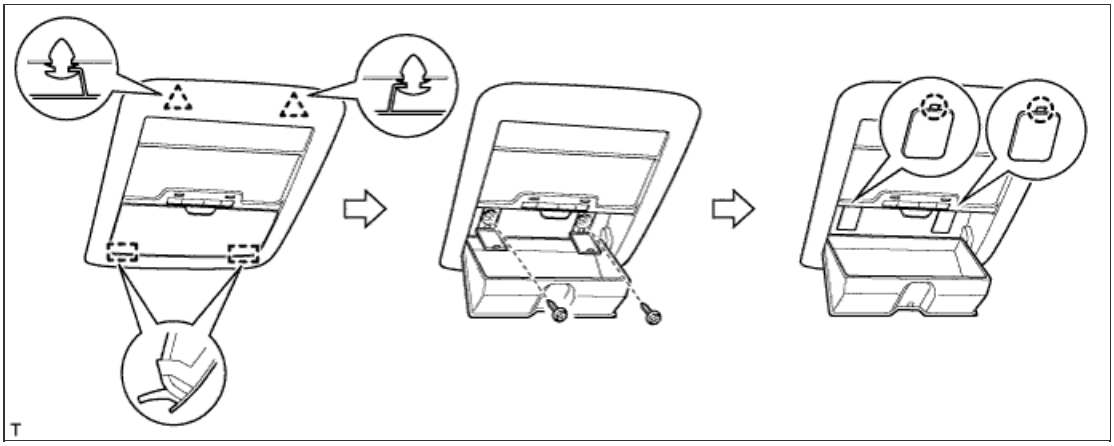


d. Attach the 4 claws to install the room li ht.

53. INSTALL NO. 1 ROOM LIGHT ASSEMBLY

a. Connect the connector.

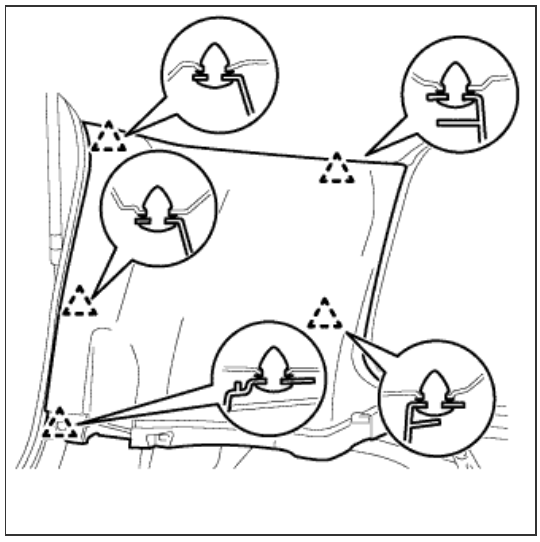
b. Attach the 4 clips to install the room li ht.



54. INSTALL MAP LIGHT ASSEMBLY

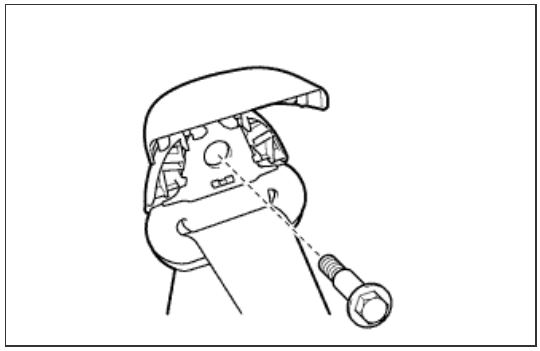
a. Connect the connector.

b. Attach the 2 clips and 2 uides to install the map li ht.



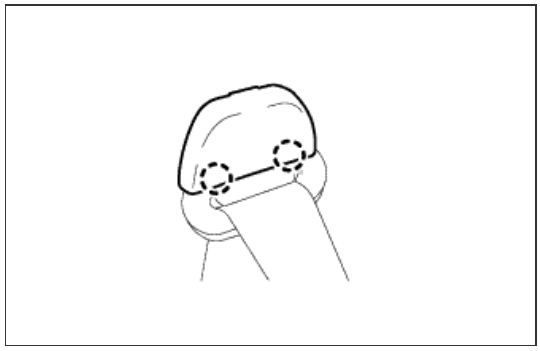
c. Install the 2 screws.

d. Attach the 2 claws to close the 2 covers.



55. INSTALL REAR UPPER PILLAR GARNISH LH

a. Attach the 5 clips to install the rear upper pillar arnish.



b. w/ Rear No. 2 Seat except ace to ace Seat pe:

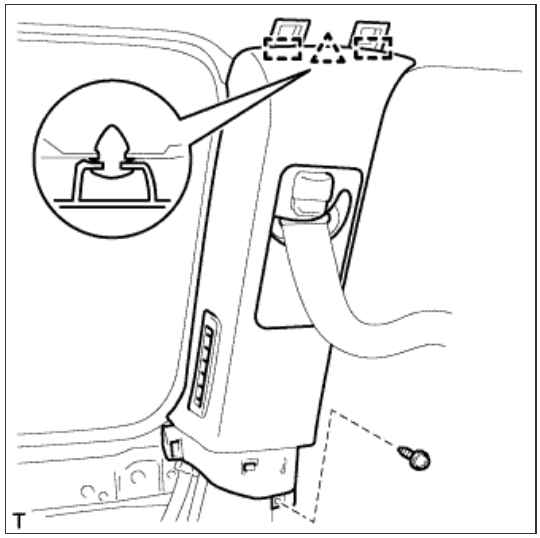
i. Install the seat belt shoulder anchor with the bolt.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }

ii. Attach the 2 claws to close the seat belt shoulder anchor cover.

56. INSTALL REAR UPPER PILLAR GARNISH RH

HINT:



Use the same procedures described for the LH side.

57. INSTALL REAR FRONT QUARTER TRIM GARNISH LH

a. Pass the seat belt anchor throu h the quarter trim arnish.

b. Attach the clip and 2 uides to install the quarter trim arnish.

c. Install the screw.

58. INSTALL REAR FRONT QUARTER TRIM GARNISH RH

HINT:

Use the same procedures described for the LH side.

59. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY LH

HINT:

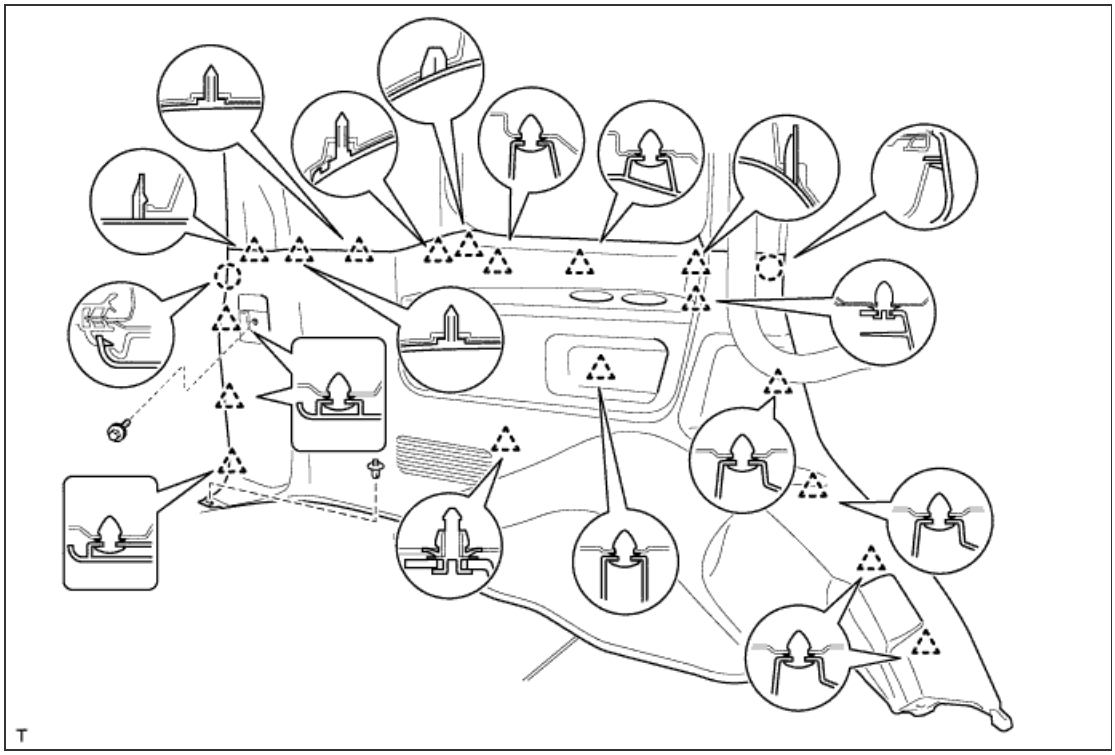
hen installin the front quarter trim panel operate the reclinin adjuster release handle and move the No. 1 rear seat to the position shown in the illustration.

a. w/ Rear No. 2 Seat except ace to ace Seat pe:

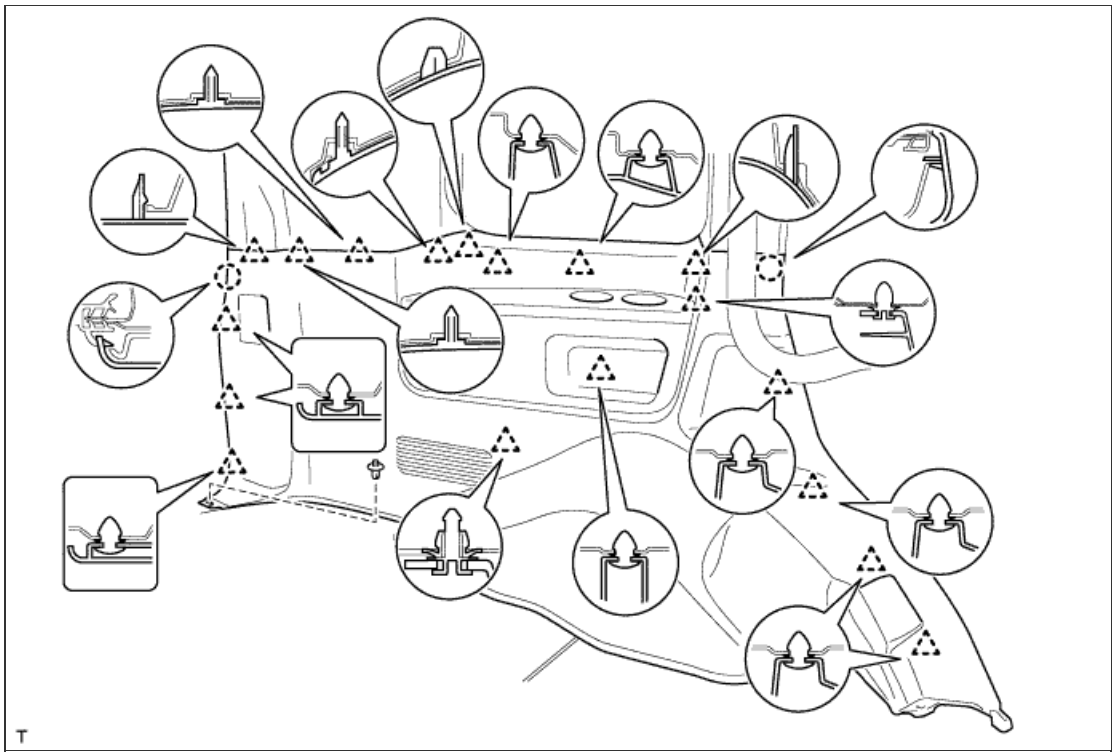


i. w/o Rear Air Conditionin S stem:
Connect the rear seat lock control lever cable.

ii. w/ Rear Air Conditionin S stem:
Connect the thermistor connector and rear seat lock control lever cable.

iii. Attach the 18 clips and 2 claws to install the quarter trim panel.

i . Install the clip and bolt.

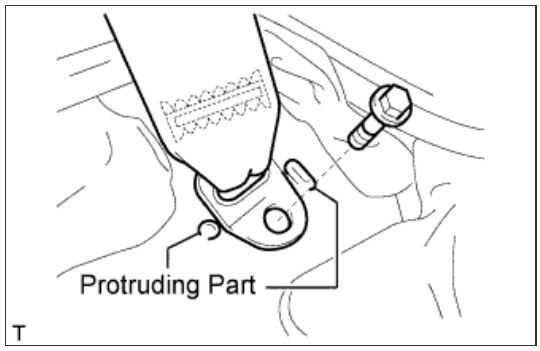


Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

b. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat for ace to ace Seat pe:

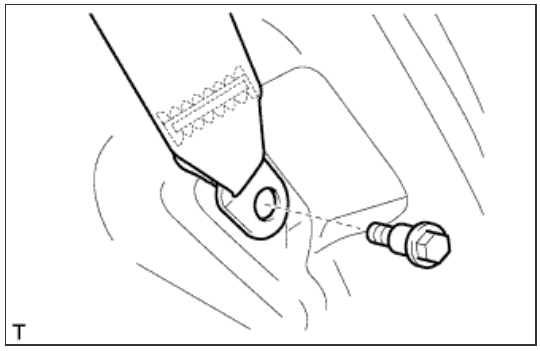
i. Attach the 18 clips and 2 claws to install the quarter trim panel.

ii. Install the clip.



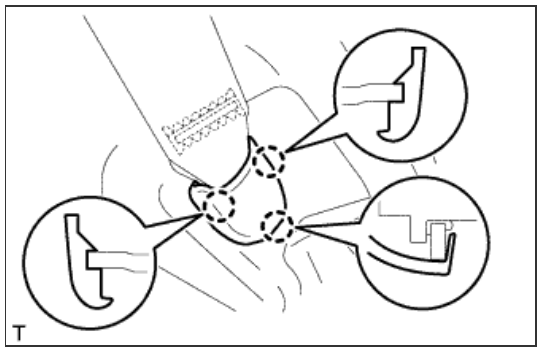
c. w/ Rear No. 2 Seat except ace to ace Seat pe:
Install the rear No. 2 seat belt anchor with the bolt.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }



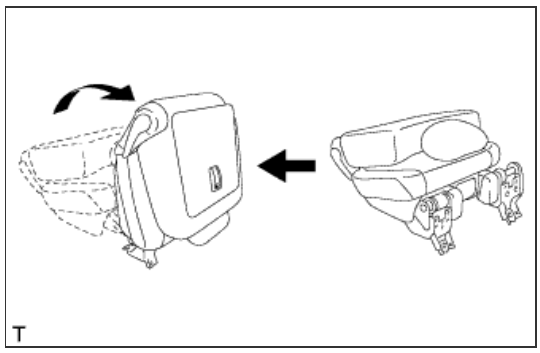
NOTICE:

Do not overlap the anchor part of the seat belt and protrudin parts of the vehicle bod .



d. Install the rear No. 1 seat belt anchor with the bolt.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }



e. Attach the 3 claws to install the cover.

60. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY RH

HINT:

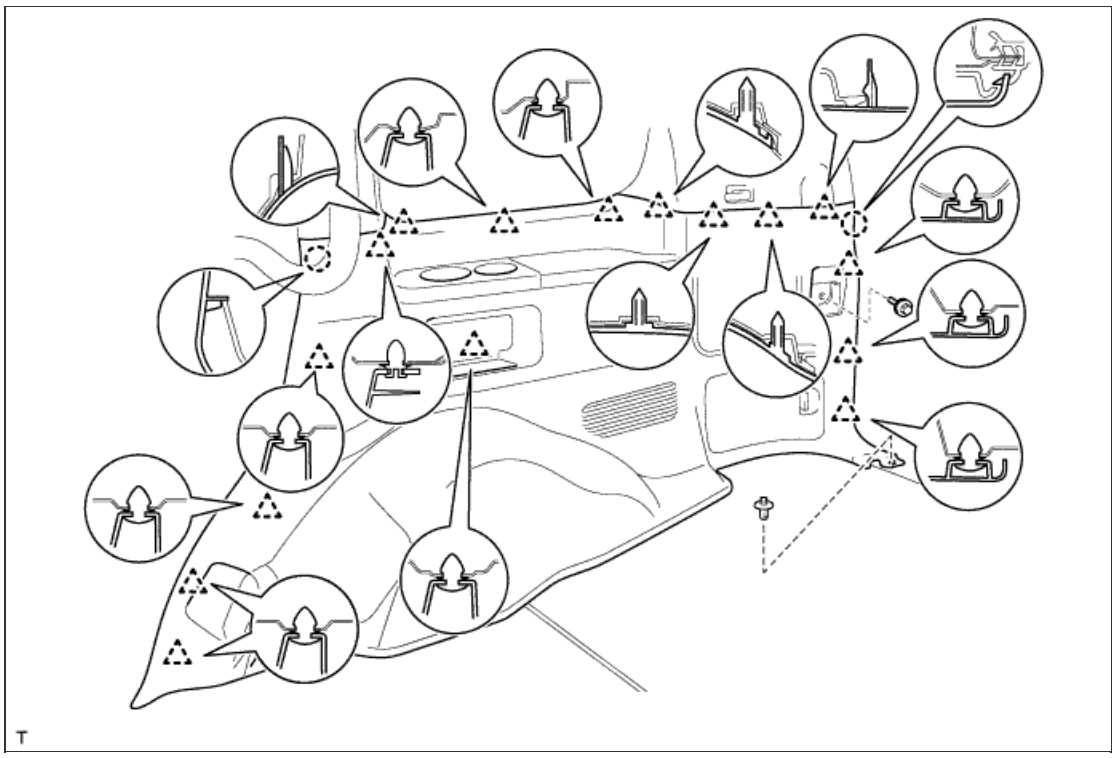
hen installin the front quarter trim panel operate the reclinin adjuster release handle and move the No. 1 rear seat to the position shown in the illustration.

a. w/ Rear No. 2 Seat except ace to ace Seat pe:

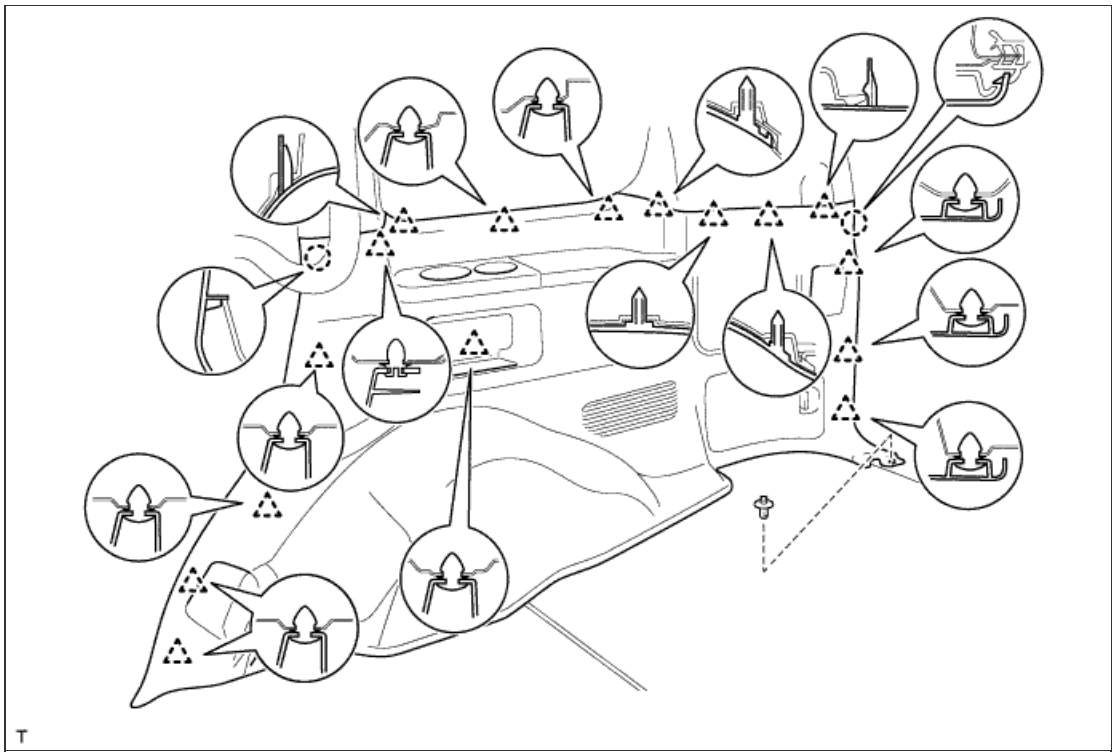


i. w/o Rear Air Conditionin S stem:
Connect the rear seat lock control lever cable.

ii. w/ Rear Air Conditionin S stem:
Connect the thermistor connector and rear seat lock control lever cable.

iii. Attach the 16 clips and 2 claws to install the quarter trim panel.

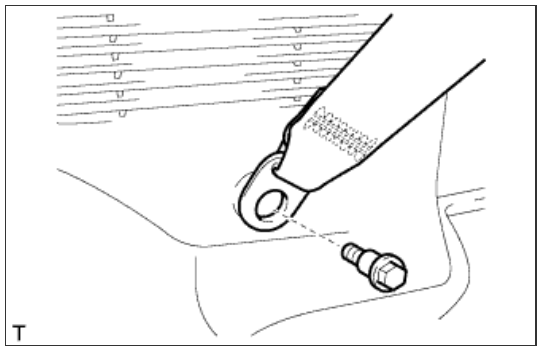
iv. Install the clip and bolt.



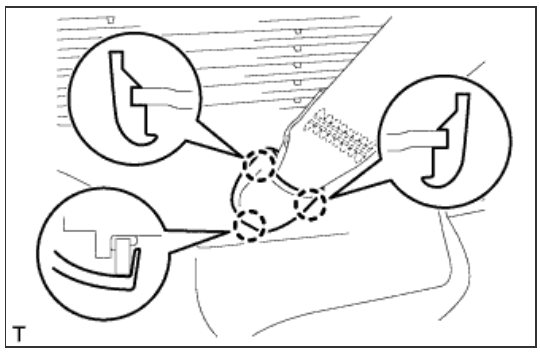
Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

b. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat for ace to ace Seat pe:

i. Attach the 16 clips and 2 claws to install the quarter trim panel.



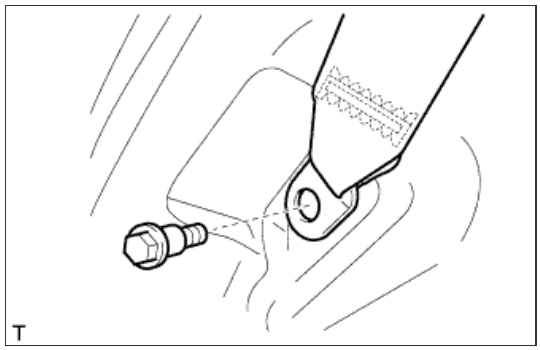
ii. Install the clip.



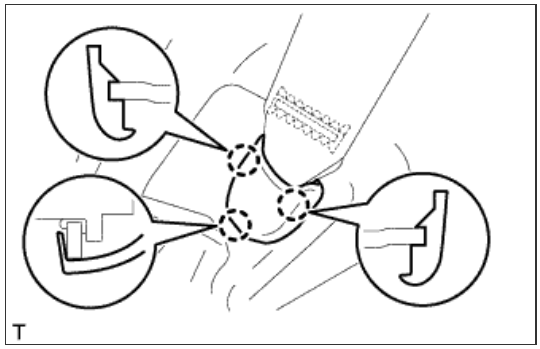
c. w/ Rear No. 2 Seat except ace to ace Seat pe:

i. Install the rear No. 2 seat belt anchor with the bolt.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }



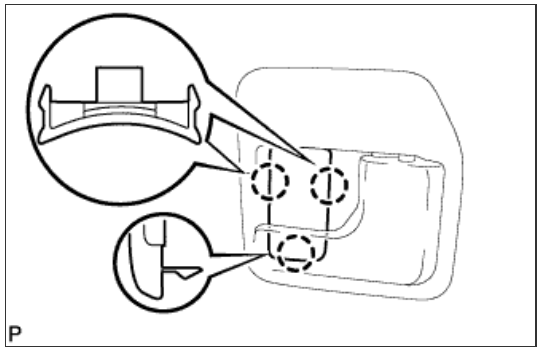
ii. Attach the 3 claws to install the cover.



d. Install the rear No. 1 seat belt anchor with the bolt.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }

e. Attach the 3 claws to install the cover.



61. INSTALL REAR SEAT COVER CAP (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

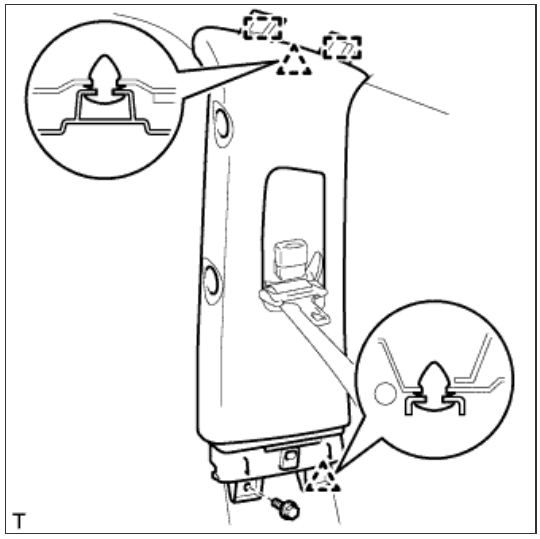
Use the same procedure to install the rear seat cover cap on the other side.

a. Attach the 3 claws to install the rear seat cover cap.



62. INSTALL CENTER PILLAR GARNISH LH

a. Pass the seat belt anchor throu h the center pillar arnish.

b. Attach the 2 clips and 2 uides to install the center pillar arnish.

c. Install the bolt.

63. INSTALL CENTER PILLAR GARNISH RH

HINT:

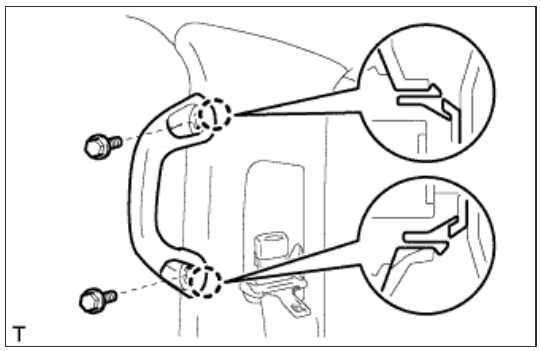
Use the same procedures described for the LH side.



64. INSTALL REAR ASSIST GRIP ASSEMBLY

HINT:

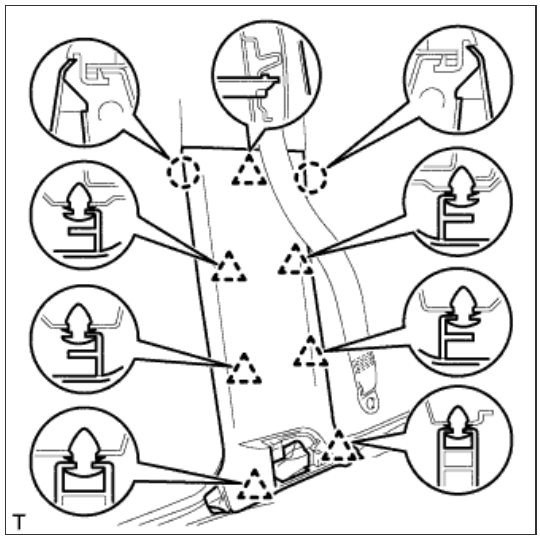
Use the same procedure to install the rear assist rip on the other side.

a. Attach the 2 claws to install the rear assist rip.

b. Install the 2 bolts.

c. Attach the 4 claws to install the 2 assist rip plu s.



65. INSTALL CENTER LOWER PILLAR GARNISH LH

HINT:

- **for Manual Seat:**
  When installing the center lower pillar garnish, move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  When installing the center lower pillar garnish, connect the cable to the negative (-) battery terminal and operate the power seat switch to move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  After moving the front seat, disconnect the cable from the negative (-) battery terminal.

a. Attach the 2 claws and 7 clips to install the center lower pillar arnish.

. Install the seat belt anchor with the bolt.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }

66. INSTALL CENTER LOWER PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

67. INSTALL CENTER PILLAR GARNISH COVER LH

HINT:

- **for Manual Seat:**
  When installing the center pillar garnish cover, move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  When installing the center pillar garnish cover, connect the cable to the negative (-) battery terminal and operate the power seat switch to move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  After moving the front seat, disconnect the cable from the negative (-) battery terminal.

a. Attach the 2 clips and 2 guides to install the cover.

68. INSTALL CENTER PILLAR GARNISH COVER RH

HINT:

Use the same procedures described for the LH side.

69. INSTALL FRONT PILLAR GARNISH LH

a. for 9 14 Speakers:
Connect the speaker connector.

b. Attach the clip and 3 guides to install the front pillar garnish.

70. INSTALL FRONT PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

71. INSTALL FRONT ASSIST GRIP SUB-ASSEMBLY

HINT:

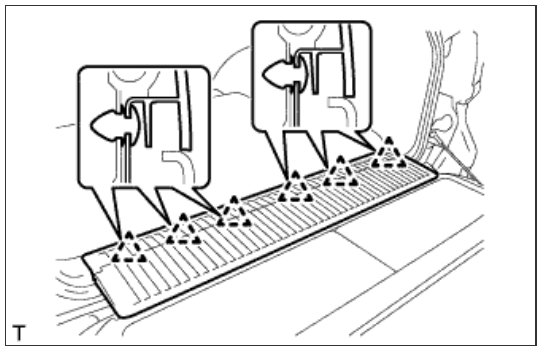
Use the same procedure to install the front assist rip on the other side.

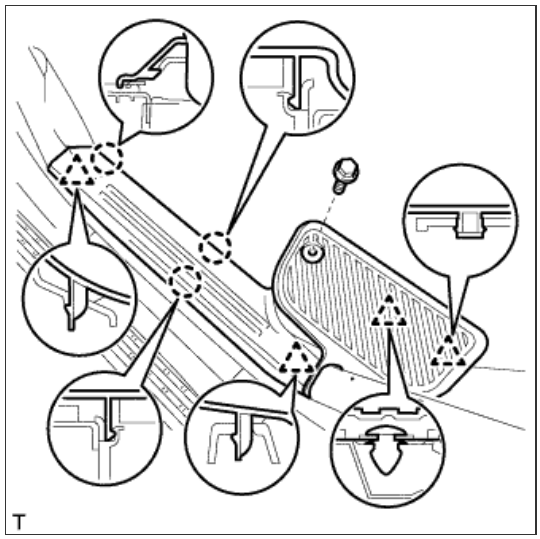
a. Attach the 2 claws to install the front assist rip.



b. Install the 2 bolts.

c. Attach the 4 claws to install the 2 assist rip plu s.

72. INSTALL REAR FLOOR MAT REAR SUPPORT PLATE



a. Attach the 6 clips to install the support plate.

73. INSTALL REAR DOOR SCUFF PLATE LH

a. Attach the 3 claws and 4 clips to install the scuff plate.

b. Install the screw.

74. INSTALL REAR DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

75. INSTALL REAR STEP COVER

HINT:

Use the same procedure to install the step cover on the other side.

a. Attach the 2 claws to install the step cover.

76. INSTALL FRONT DOOR SCUFF PLATE LH

a. Attach the 7 claws and 4 clips to install the scuff plate.

77. INSTALL FRONT DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

78. INSTALL REAR NO. 2 SEAT ASSEMBLY LH (except Face to Face Seat Type)

a. Install the rear No. 2 seat assembl LH (Click here).

79. INSTALL REAR NO. 2 SEAT ASSEMBLY RH (except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

80. INSTALL REAR NO. 2 SEAT ASSEMBLY LH (for Face to Face Seat Type)

a. Install the rear No. 2 seat assembl LH (Click here).

81. INSTALL REAR NO. 2 SEAT ASSEMBLY RH (for Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

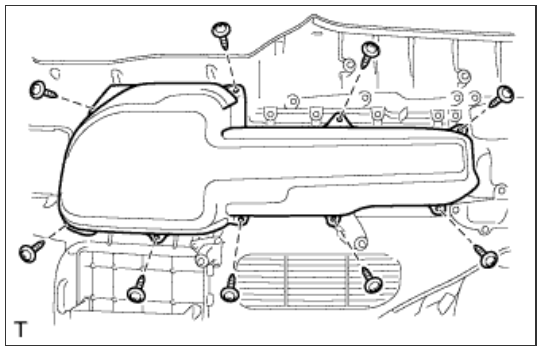
82. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

hen disconnectin the cable some s stems need to be initialized after the cable is reconnected (Click here).



for Preparation Click here

HINT:

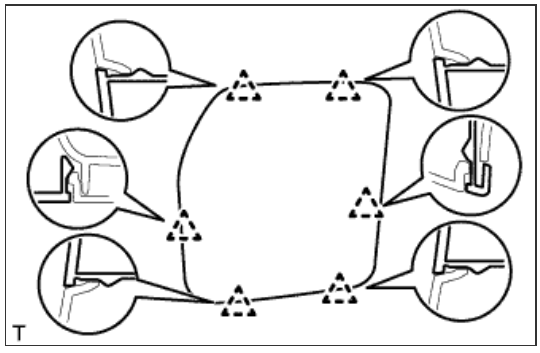
A bolt without a torque specification is shown in the standard bolt chart (Click here).

1. INSTALL SIDE TRIM BOX

a. Install the side trim box with the 9 screws.

2. INSTALL SIDE TRIM BOX COVER



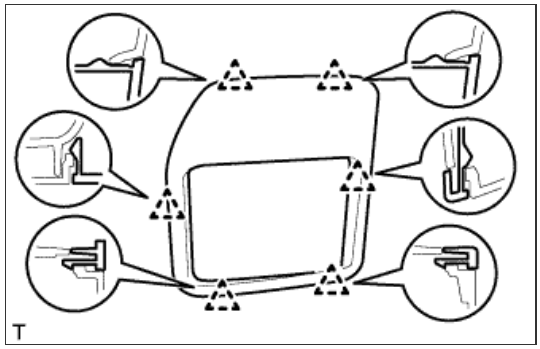
a. Install the side trim box cover.

3. INSTALL QUARTER TRIM LID SUB-ASSEMBLY RH

a. Install the quarter trim lid.

4. INSTALL QUARTER TRIM COVER LH (w/o Rear No. 2 Seat, w/ Rear No. 2 Seat for Face to Face Seat Type)

a. Attach the 6 clips to install the quarter trim cover.



5. INSTALL QUARTER TRIM COVER RH (w/o Rear No. 2 Seat, w/ Rear No. 2 Seat for Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

6. INSTALL REAR NO. 2 SEAT COVER BEZEL (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Attach the 6 clips to install the rear No. 2 seat cover bezel.

7. INSTALL REAR NO. 1 SEAT COVER BEZEL (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

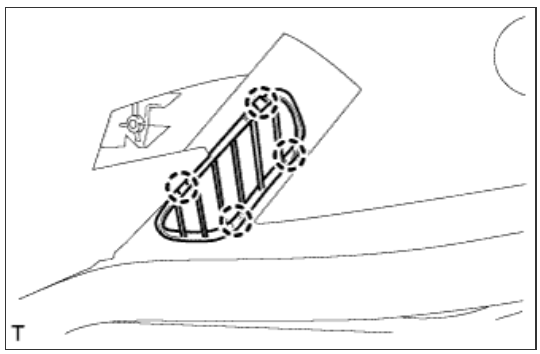
Use the same procedures described for the rear No. 2 seat cover bezel.

8. INSTALL REAR SEAT LOCK CONTROL LEVER SUB-ASSEMBLY LH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Attach the 4 claws to install the seat lock control lever.



9. INSTALL REAR SEAT LOCK CONTROL LEVER SUB-ASSEMBLY RH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

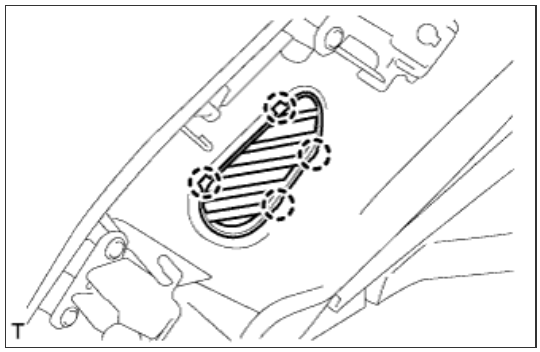
10. INSTALL NO. 2 SIDE TRIM BASE COVER LH (w/ Rear Heater)

a. Attach the 4 claws to install the cover.



11. INSTALL NO. 2 SIDE TRIM BASE COVER RH (w/ Rear Heater)

HINT:

Use the same procedures described for the LH side.

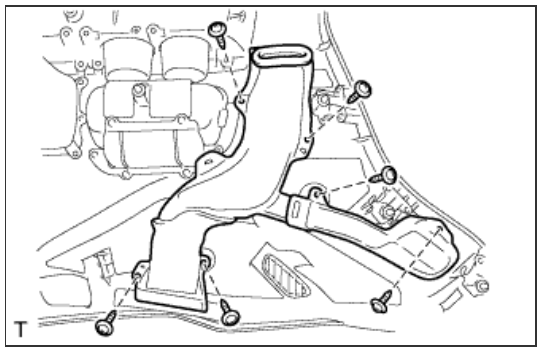
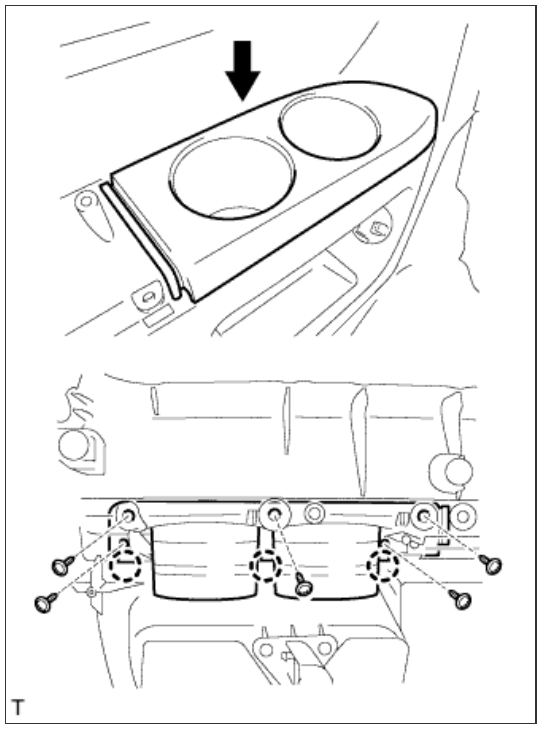
12. INSTALL NO. 1 SIDE TRIM BASE COVER LH (w/ Rear Heater)

a. Attach the 4 claws to install the cover.



13. INSTALL NO. 1 SIDE TRIM BASE COVER RH (w/ Rear Heater)

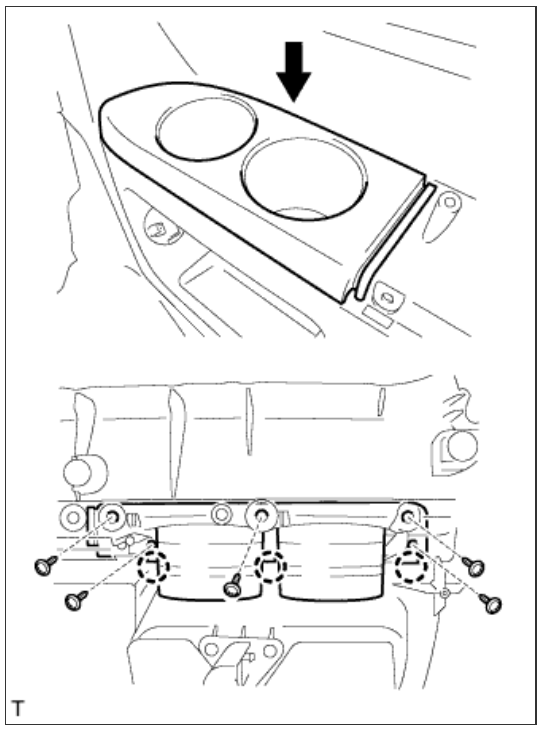
a. Attach the 4 claws to install the cover.



b. Install the duct with the 6 screws.

14. INSTALL NO. 2 CUP HOLDER

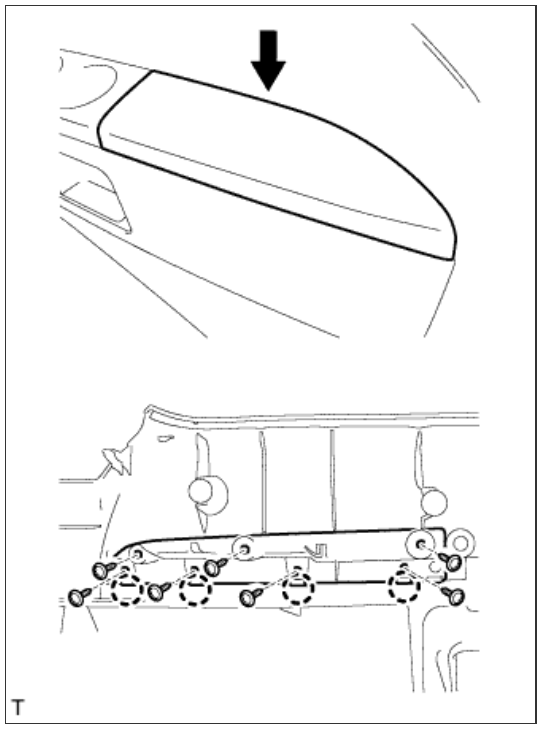
a. Attach the 3 claws to install the cup holder.



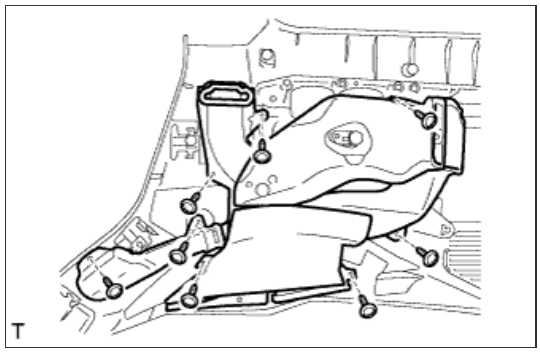
b. Install the 5 screws.

15. INSTALL NO. 1 CUP HOLDER

a. Attach the 3 claws to install the cup holder.



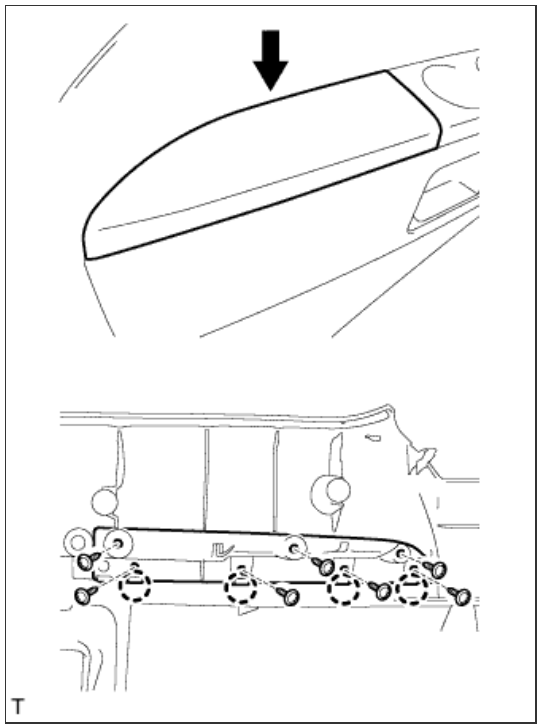
b. Install the 5 screws.



16. INSTALL QUARTER TRIM COVER SUB-ASSEMBLY LH

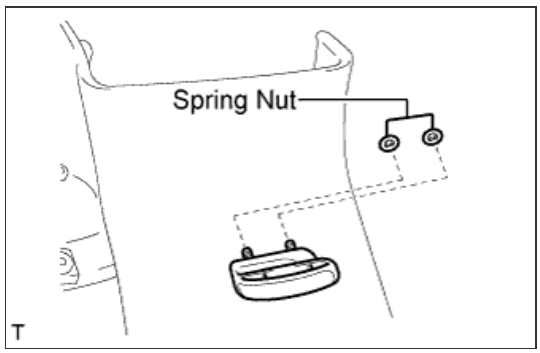
a. Attach the 4 claws to install the quarter trim cover.

b. Install the 7 screws.



c. w/ Rear Heater:
Install the duct with the 8 screws.

17. INSTALL QUARTER TRIM COVER SUB-ASSEMBLY RH



a. Attach the 4 claws to install the quarter trim cover.

b. Install the 7 screws.

18. INSTALL REAR NO. 2 SEAT SHOULDER BELT HANGER LH

a. Install the han er with 2 new sprin nuts.

19. INSTALL REAR NO. 2 SEAT SHOULDER BELT HANGER RH

HINT:

Use the same procedures described for the LH side.

20. INSTALL REAR SEAT SHOULDER BELT HANGER (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

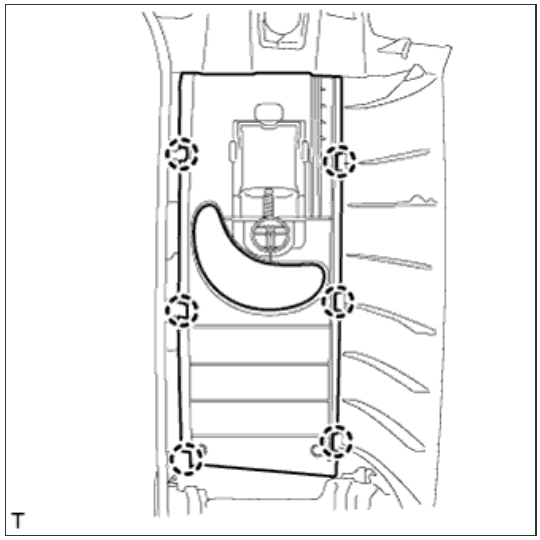
Use the same procedure to install the han er on the other side.

a. Install the han er with 2 new sprin nuts.

21. INSTALL ROOF SIDE INNER GARNISH COVER LH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Attach the 7 claws to install the cover.



22. INSTALL ROOF SIDE INNER GARNISH COVER RH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

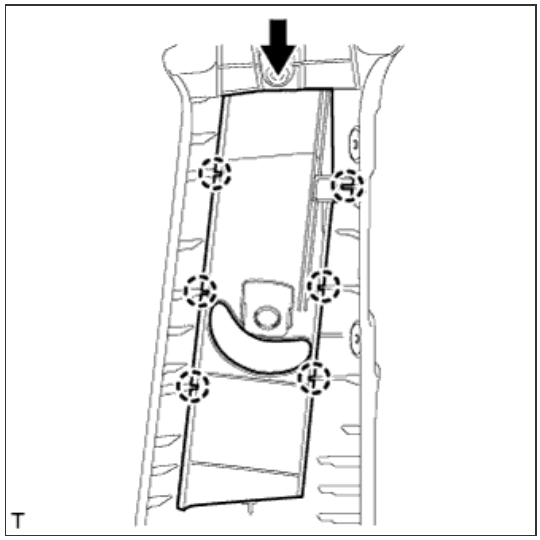
23. INSTALL REAR SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY LH

a. Attach the 6 claws to install the plate.



24. INSTALL REAR SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

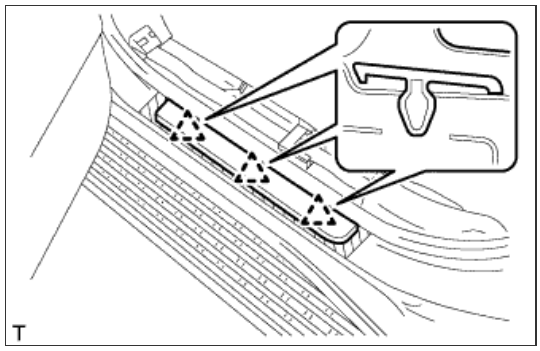
25. INSTALL FRONT SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY LH

a. Slide the plate in the direction shown in the illustration and attach the 6 claws to install the plate.



26. INSTALL FRONT SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

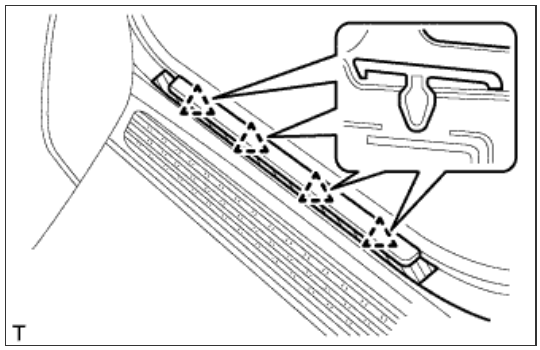
27. INSTALL REAR DOOR SCUFF PLATE OUTSIDE LH

a. Attach the 3 clips to install the rear door scuff plate outside.



28. INSTALL REAR DOOR SCUFF PLATE OUTSIDE RH

HINT:

Use the same procedures described for the LH side.

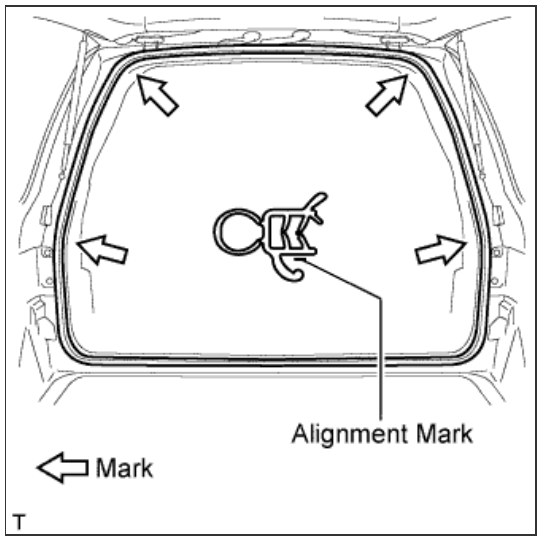
29. INSTALL FRONT DOOR SCUFF PLATE OUTSIDE LH

a. Attach the 4 clips to install the front door scuff plate outside.



30. INSTALL FRONT DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

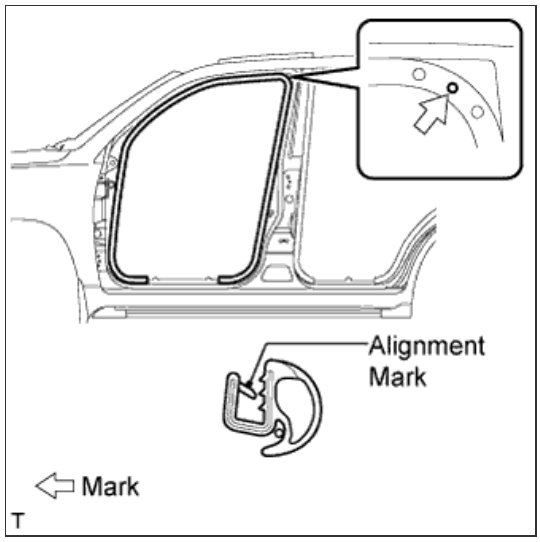
31. INSTALL BACK DOOR WEATHERSTRIP

a. Install the back door weatherstrip as shown in the illustration.

32. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH

a. Install the rear door openin trim weatherstrip as shown in the illustration.



33. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH

HINT:

Use the same procedures described for the LH side.

34. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH

a. Install the front door openin trim weatherstrip as shown in the illustration.

35. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH

HINT:

Use the same procedures described for the LH side.

36. INSTALL ROOF HEADLINING ASSEMBLY

HINT:

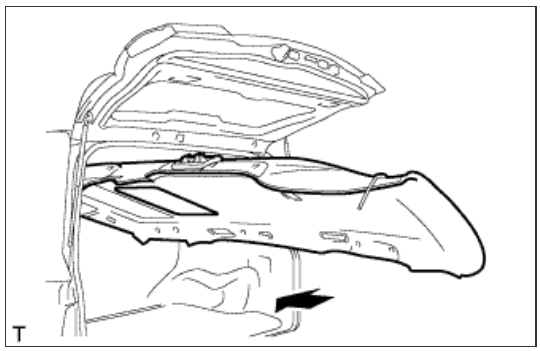
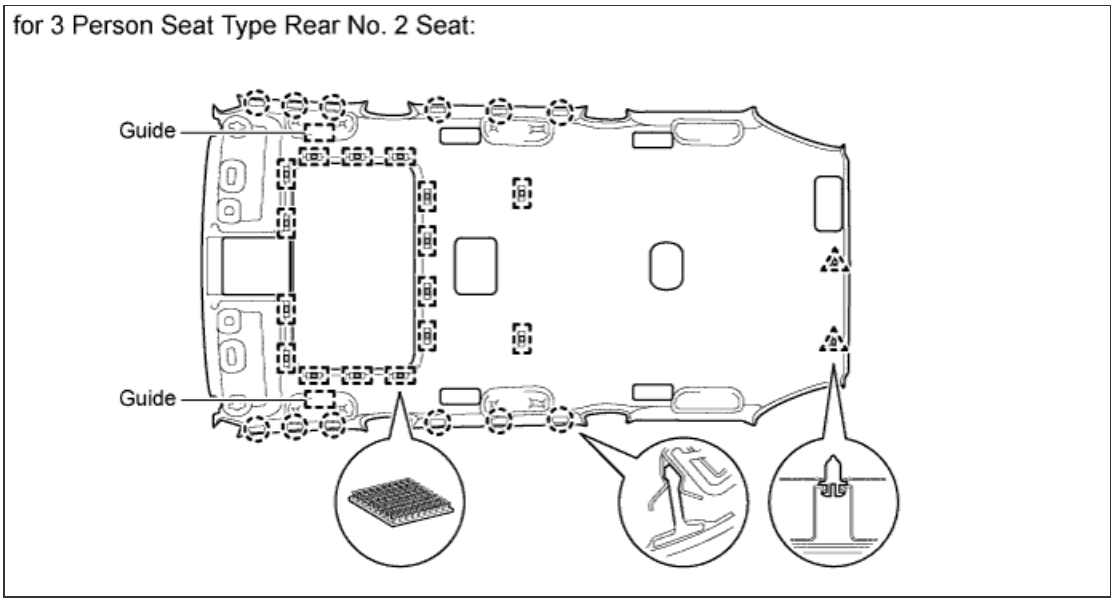
- **for Manual Seat:**

hen in talling the roof headlining, move the front seat and rear No. 1 seat to the position shown in the illustration.



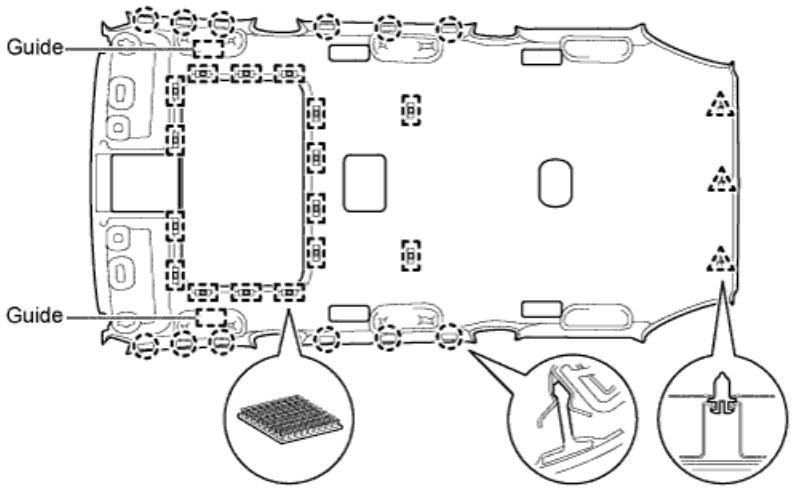
- **for Power Seat:**
  When installing the roof headlining, connect the cable to the negative (-) battery terminal and move the front seat and No. 1 rear seat to the position shown in the illustration.
- **for Power Seat:**
  After moving the seats, disconnect the cable from the negative (-) battery terminal.



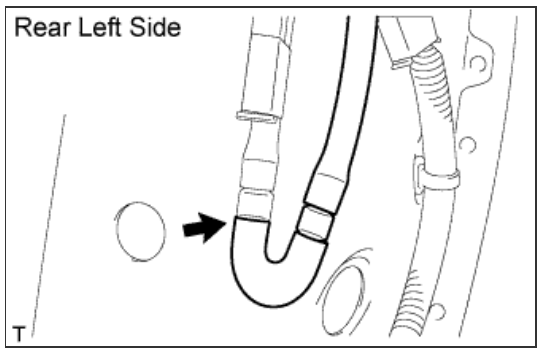
a. Place the headlinin in the cabin from the rear of the vehicle as shown in the illustration.

NOTICE:

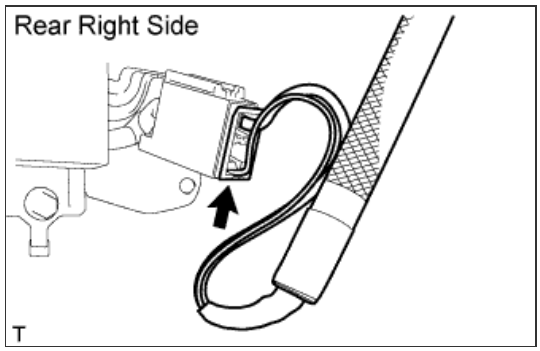
Be careful not to dama e the roof headlinin when placin it in the cabin.



b. for 3 Person Seat pe Rear No. 2 Seat:
Attach the 12 claws 2 clips 2 uides and 16 fasteners to install the headlinin .

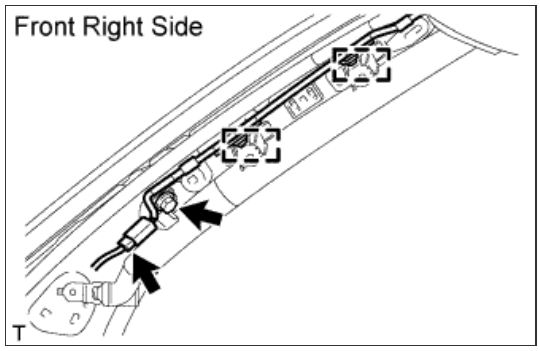


c. except 3 Person Seat pe Rear No. 2 Seat:
Attach the 12 claws 3 clips 2 uides and 16 fasteners to install the headlinin .

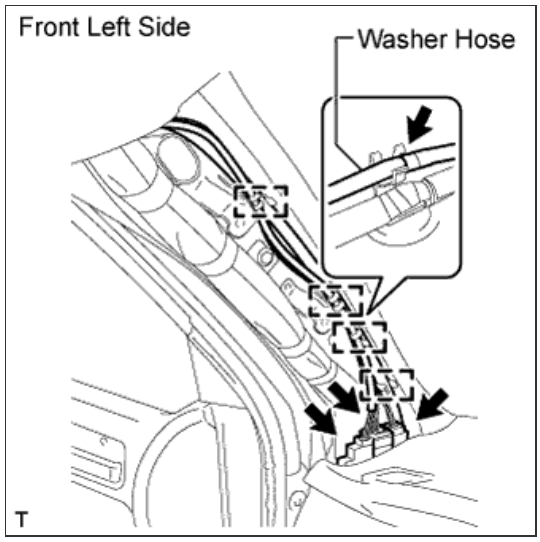


except 3 Person Seat Type Rear No. 2 Seat:

d. Connect the washer hose.

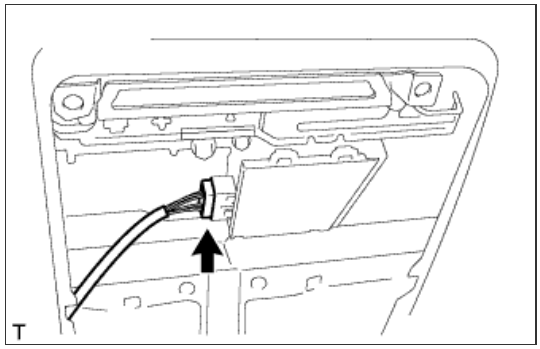


e. Connect the antenna cord connector.

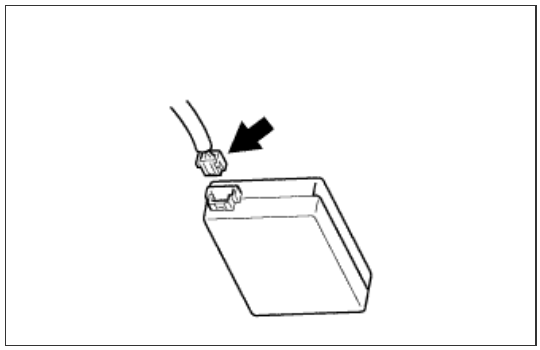


f. Connect the antenna cord connector and attach the 2 clamps.

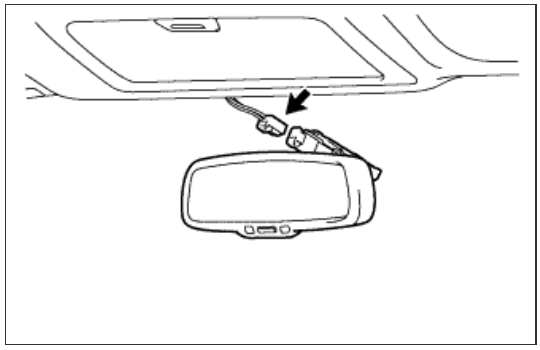
g. Install the bolt.



h. Connect the 3 roof wire connectors and washer hose.

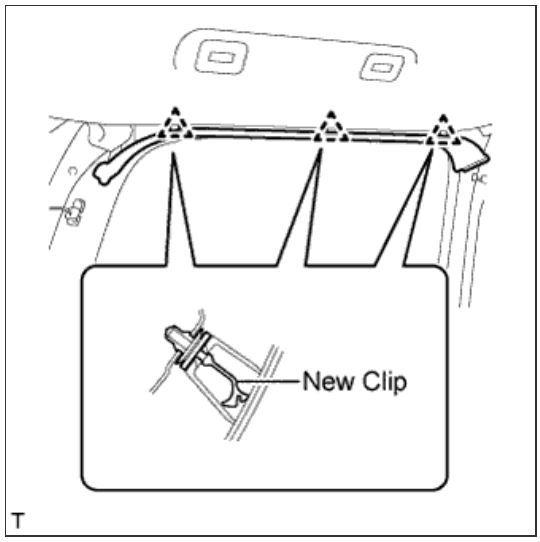


i. Attach the 4 clamps.



. Connect the drive ear connector.

k. w/ Rain Sensor:
Disconnect the rain sensor connector.



l. w/ C Mirror:
Connect the inner mirror connector.

37. INSTALL FRONT ROOF SIDE RAIL GARNISH LH

a. Install 3 new clips to the roof side rail arnish.

b. Attach the 3 clips to install the roof side rail arnish.

38. INSTALL FRONT ROOF SIDE RAIL GARNISH RH

HINT:

Use the same procedures described for the LH side.

39. INSTALL 3RD SEAT ASSIST GRIP ASSEMBLY (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

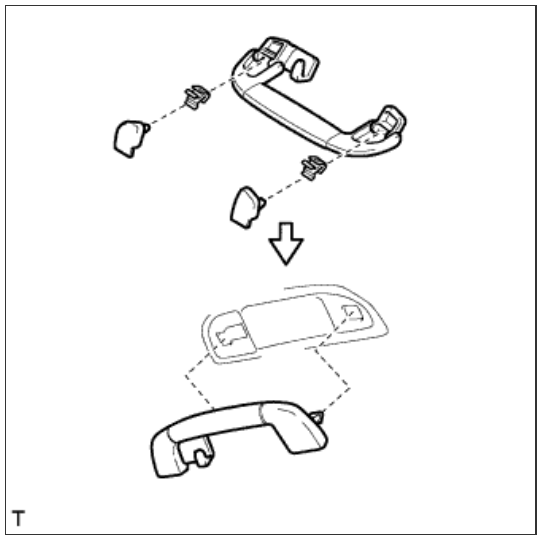
Use the same procedure to install the 3rd seat assist rip on the other side.

a. Assemble the assist rip 2 clips and 2 covers as shown in the illustration.

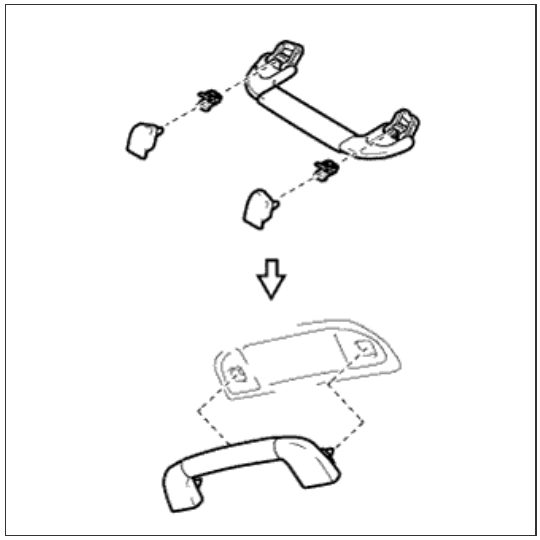


b. Install the assist rip.

40. INSTALL NO. 2 ASSIST GRIP ASSEMBLY LH

a. w/ Rear No. 2 Seat except ace to ace Seat pe or w/o Rear No. 2 Seat:
Install the No. 2 assist rip assembl .

i. Assemble the assist rip 2 clips and 2 covers as shown in the illustration.



ii. Install the assist rip.

. w/ Rear No. 2 Seat for ace to ace Seat pe:
Install the No. 2 assist rip assembl .

i. Assemble the assist rip 2 clips and 2 covers as shown in the illustration.

ii. Install the assist rip.

41. INSTALL NO. 2 ASSIST GRIP ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

42. INSTALL ASSIST GRIP ASSEMBLY

HINT:

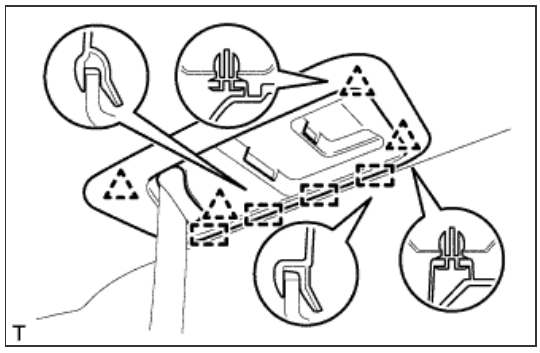
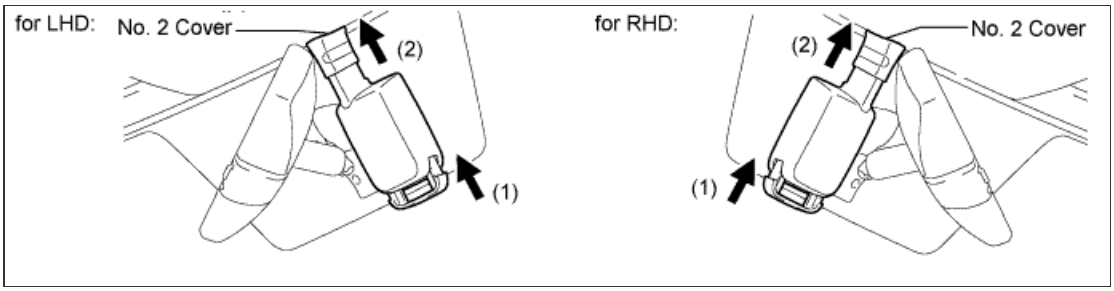
Use the same procedure to install the assist rip on the other side.



a. Assemble the assist rip 2 clips and 2 covers as shown in the illustration.

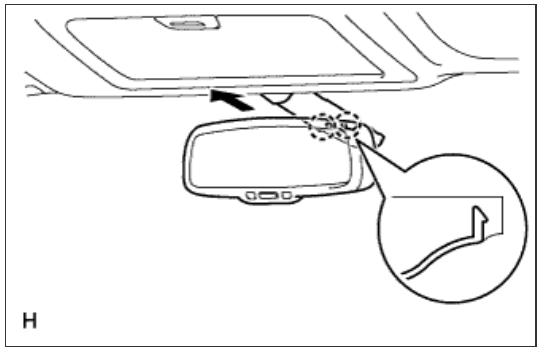
b. Install the assist rip.



43. INSTALL SEAT BELT ANCHOR COVER (for 3 Person Seat Type Rear No. 2 Seat)

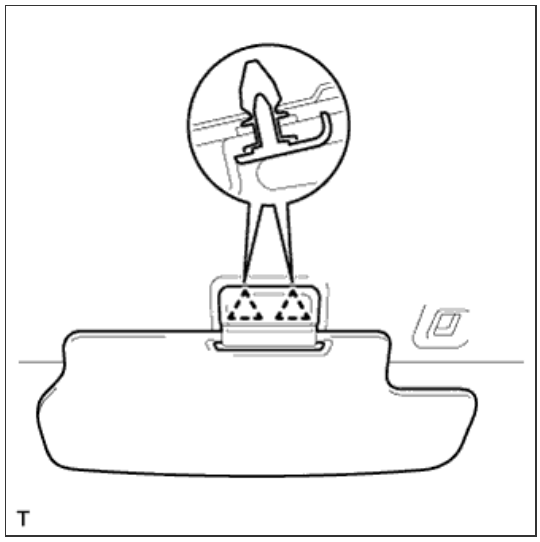
a. Attach the 4 guides and 4 clips to install the seat belt anchor cover.

44. INSTALL RAIN SENSOR COVER (w/ Rain Sensor)



a. Push in the stopper in the direction of the arrow labeled (1) to install the rain sensor cover.

b. Slide the No. 2 cover in the direction of the arrow labeled (2) to fix it in place.



45. INSTALL INNER REAR VIEW MIRROR STAY HOLDER COVER (w/ EC Mirror)

a. Attach the 2 claws to install the cover.

46. INSTALL CENTER VISOR ASSEMBLY LH (w/ Sub Visor)

a. Attach the 2 clips to install the center visor.

47. INSTALL CENTER VISOR ASSEMBLY RH (w/ Sub Visor)

HINT:

Use the same procedures described for the LH side.

48. INSTALL VISOR HOLDER

HINT:

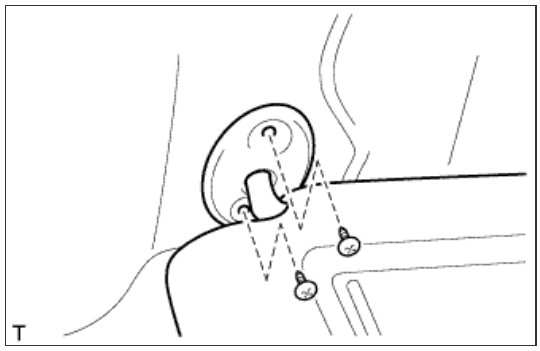
Use the same procedures to install the visor holder on the other side.



a. Attach the 2 claws.

b. Push the visor holder in to install it.

49. INSTALL VISOR ASSEMBLY LH

a. Install the visor with the 2 screws.

50. INSTALL VISOR ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

51. INSTALL VISOR BRACKET COVER

HINT:

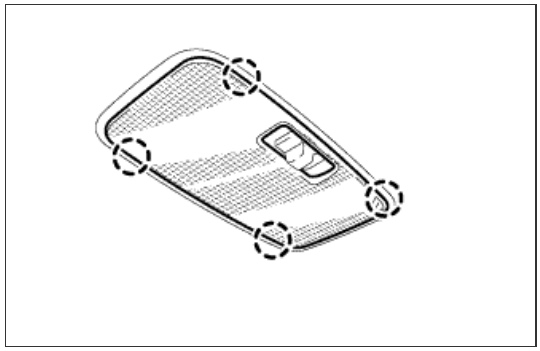
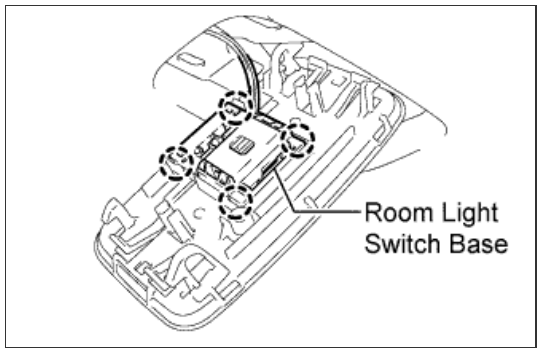
Use the same procedure to install the visor bracket cover on the other side.

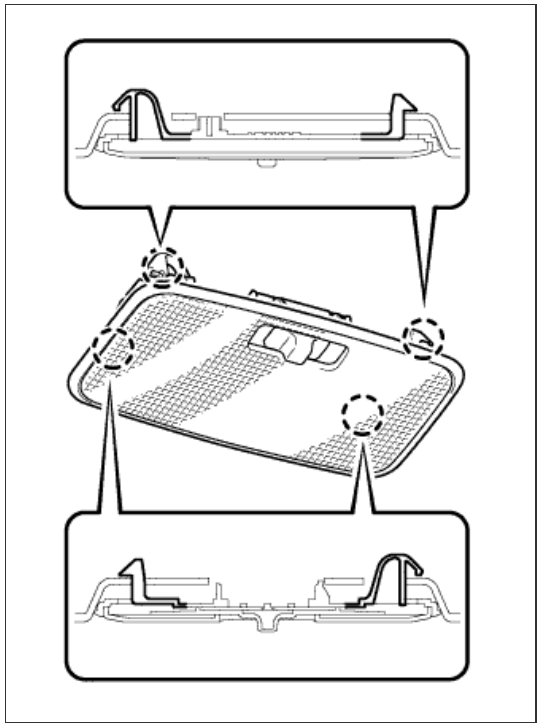
a. Attach the 4 claws to install the visor bracket cover.



52. INSTALL NO. 2 ROOM LIGHT ASSEMBLY

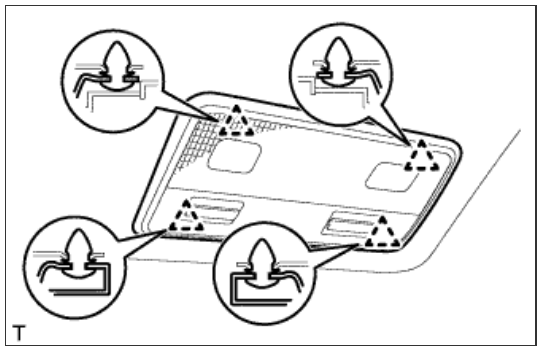


a. Install the 2 covers.



b. Attach the 4 claws to install the room li ht lens.

c. Attach the 4 claws to install the room li ht to the room li ht switch base.

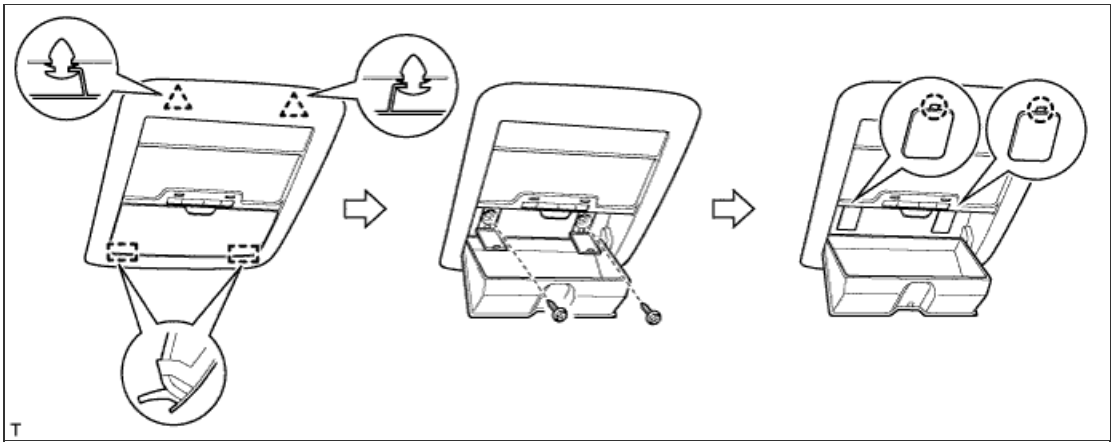


d. Attach the 4 claws to install the room li ht.

53. INSTALL NO. 1 ROOM LIGHT ASSEMBLY

a. Connect the connector.

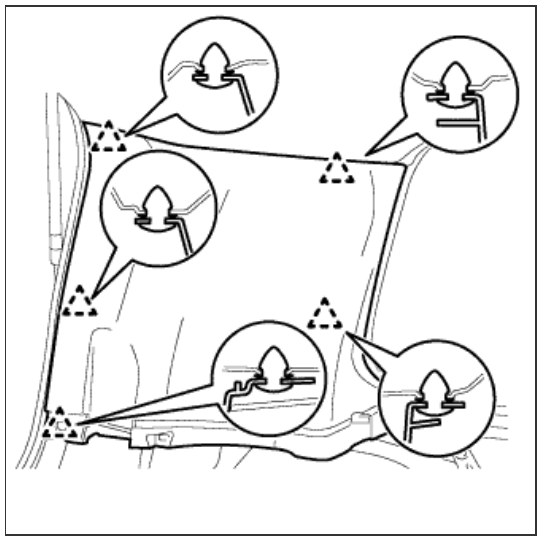
b. Attach the 4 clips to install the room li ht.



54. INSTALL MAP LIGHT ASSEMBLY

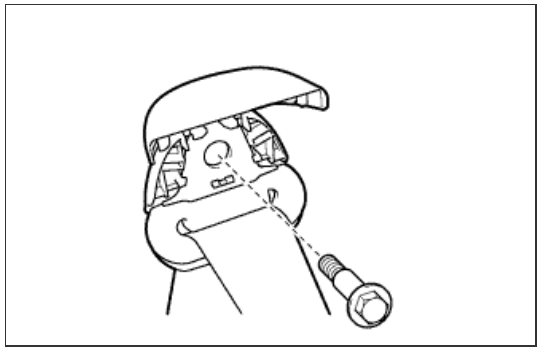
a. Connect the connector.

b. Attach the 2 clips and 2 uides to install the map li ht.



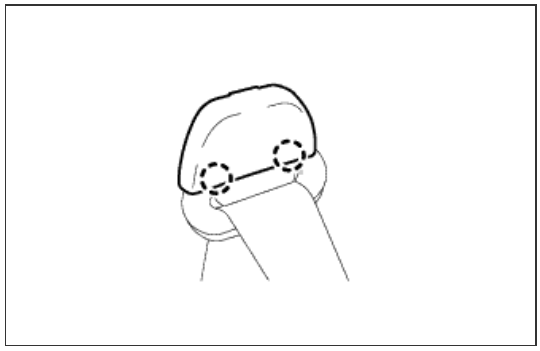
c. Install the 2 screws.

d. Attach the 2 claws to close the 2 covers.



55. INSTALL REAR UPPER PILLAR GARNISH LH

a. Attach the 5 clips to install the rear upper pillar arnish.



b. w/ Rear No. 2 Seat except ace to ace Seat pe:

i. Install the seat belt shoulder anchor with the bolt.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }

ii. Attach the 2 claws to close the seat belt shoulder anchor cover.

56. INSTALL REAR UPPER PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

57. INSTALL REAR FRONT QUARTER TRIM GARNISH LH

a. Pass the seat belt anchor throu h the quarter trim arnish.

b. Attach the clip and 2 uides to install the quarter trim arnish.

c. Install the screw.

58. INSTALL REAR FRONT QUARTER TRIM GARNISH RH

HINT:

Use the same procedures described for the LH side.

59. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY LH

HINT:

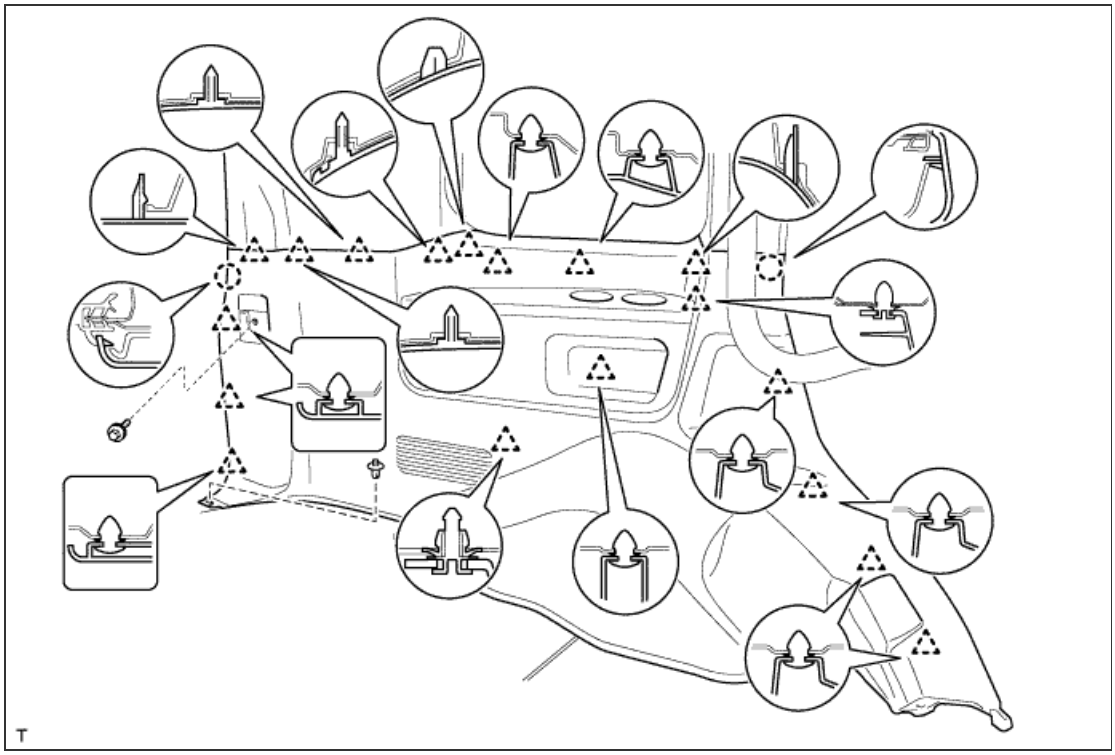
hen installin the front quarter trim panel operate the reclinin adjuster release handle and move the No. 1 rear seat to the position shown in the illustration.

a. w/ Rear No. 2 Seat except ace to ace Seat pe:

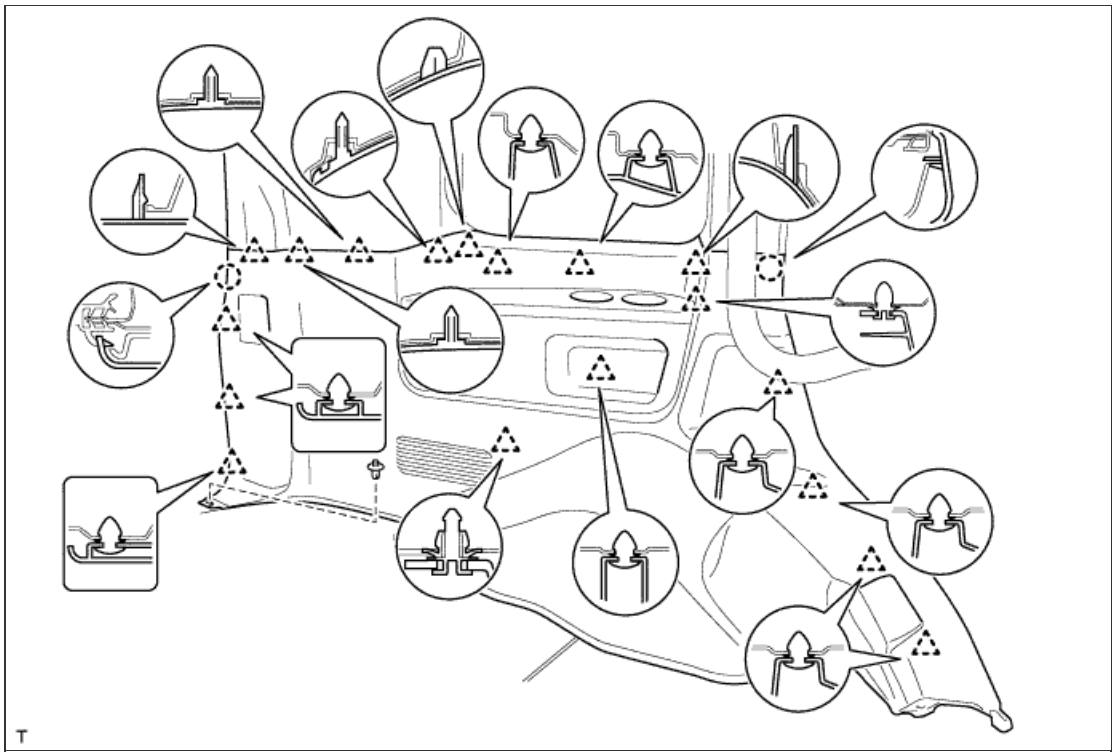


i. w/o Rear Air Conditionin S stem:
Connect the rear seat lock control lever cable.

ii. w/ Rear Air Conditionin S stem:
Connect the thermistor connector and rear seat lock control lever cable.

iii. Attach the 18 clips and 2 claws to install the quarter trim panel.

i . Install the clip and bolt.

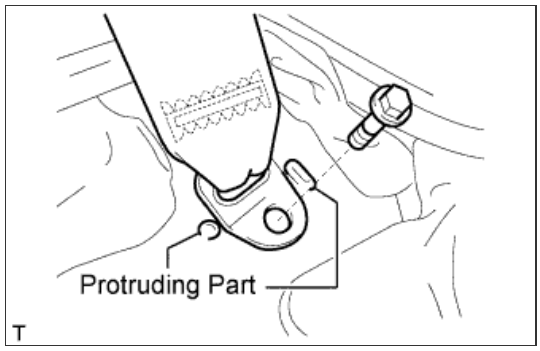


Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

b. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat for ace to ace Seat pe:

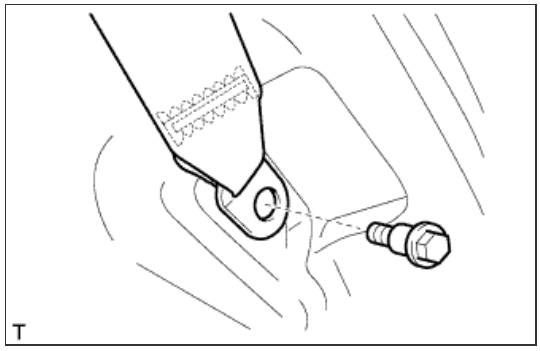
i. Attach the 18 clips and 2 claws to install the quarter trim panel.

ii. Install the clip.



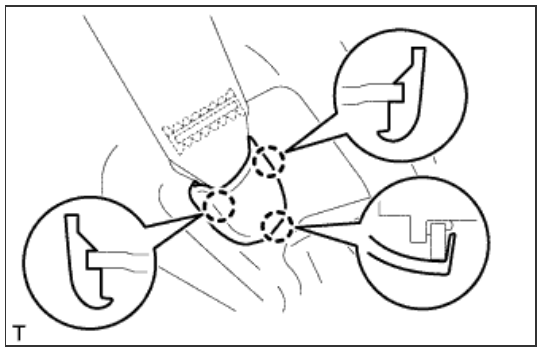
c. w/ Rear No. 2 Seat except ace to ace Seat pe:
Install the rear No. 2 seat belt anchor with the bolt.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }



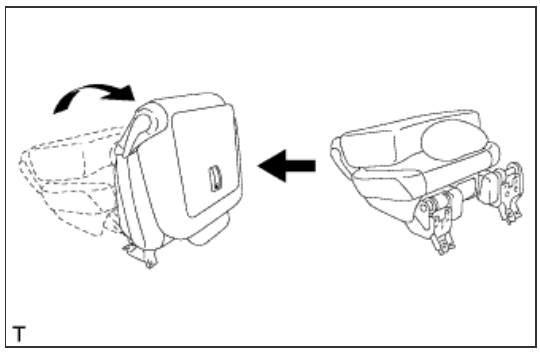
NOTICE:

Do not overlap the anchor part of the seat belt and protrudin parts of the vehicle bod .



d. Install the rear No. 1 seat belt anchor with the bolt.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }



e. Attach the 3 claws to install the cover.

60. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY RH

HINT:

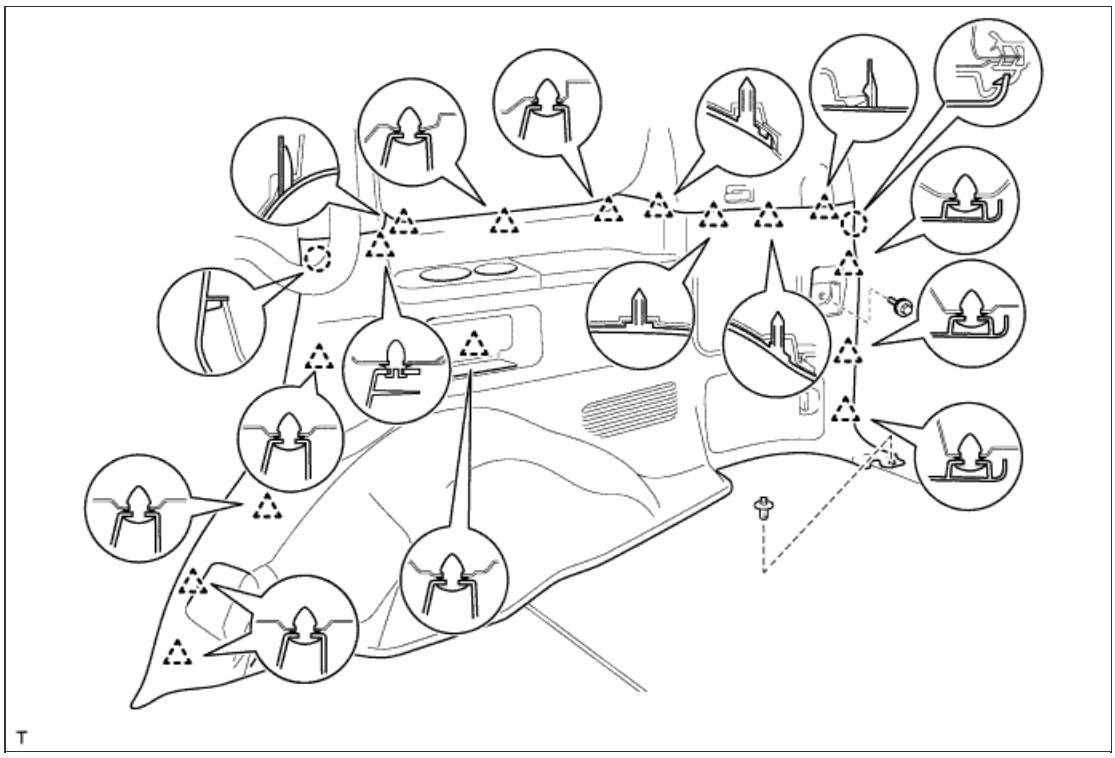
hen installin the front quarter trim panel operate the reclinin adjuster release handle and move the No. 1 rear seat to the position shown in the illustration.

a. w/ Rear No. 2 Seat except ace to ace Seat pe:

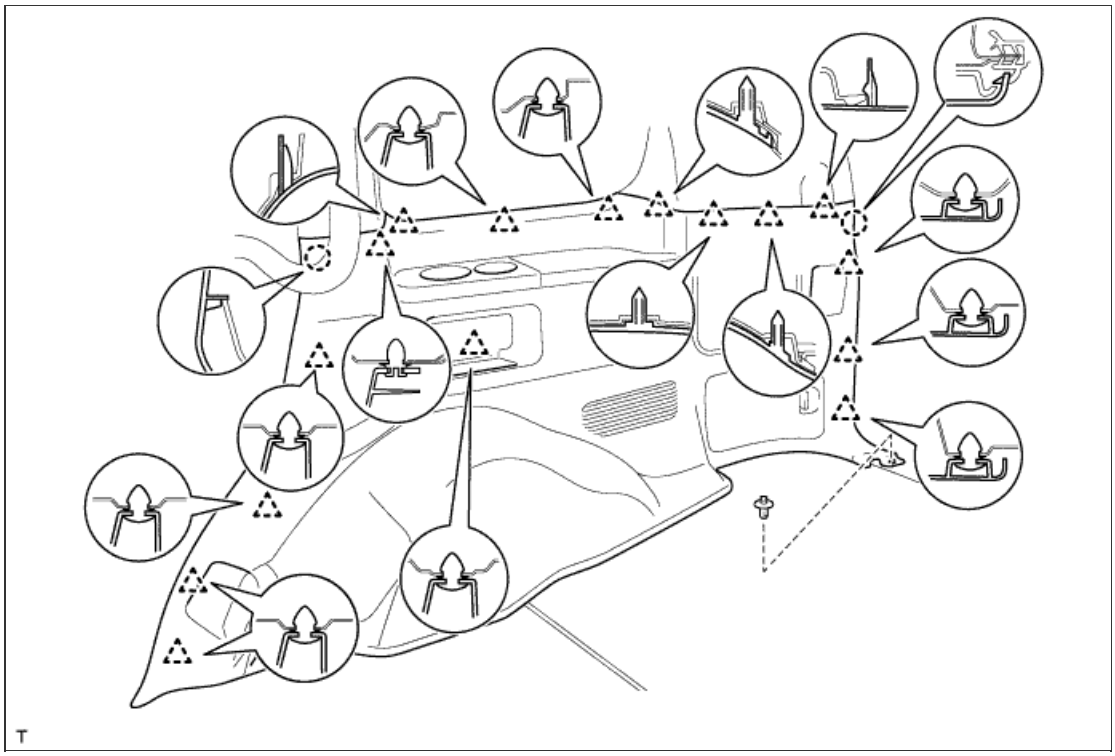


i. w/o Rear Air Conditionin S stem:
Connect the rear seat lock control lever cable.

ii. w/ Rear Air Conditionin S stem:
Connect the thermistor connector and rear seat lock control lever cable.

iii. Attach the 16 clips and 2 claws to install the quarter trim panel.

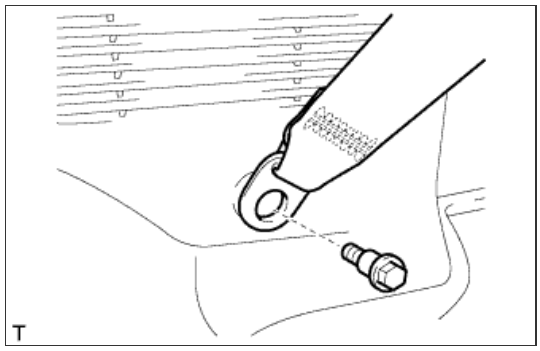
iv. Install the clip and bolt.



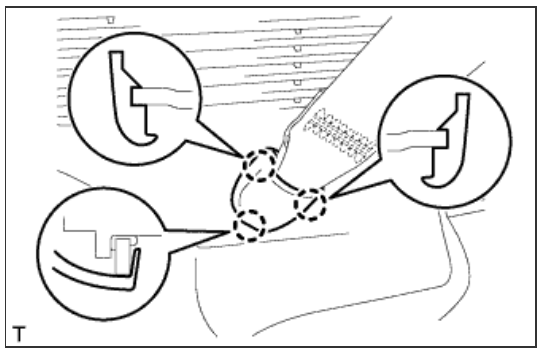
Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

b. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat for ace to ace Seat pe:

i. Attach the 16 clips and 2 claws to install the quarter trim panel.



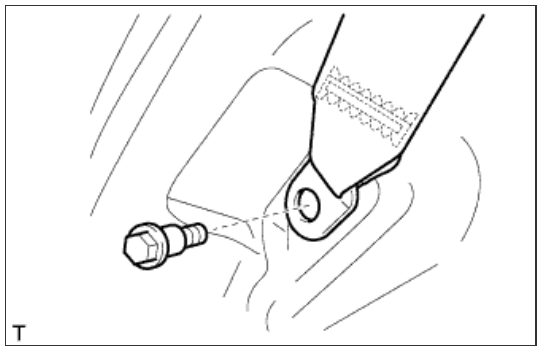
ii. Install the clip.



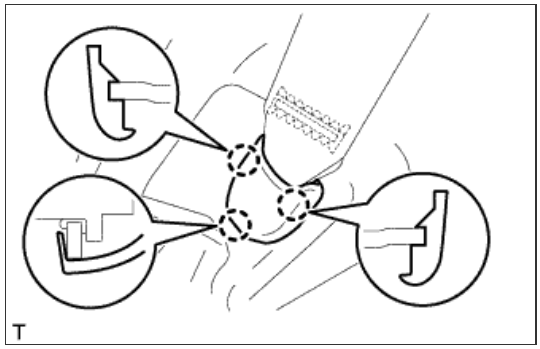
c. w/ Rear No. 2 Seat except ace to ace Seat pe:

i. Install the rear No. 2 seat belt anchor with the bolt.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }



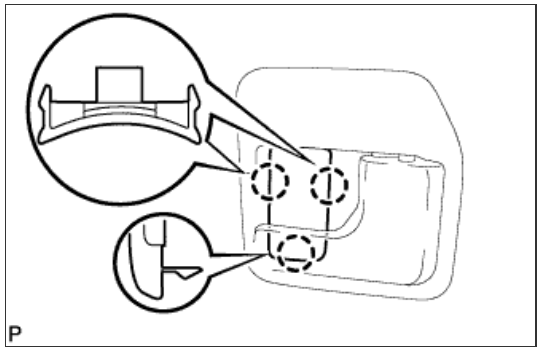
ii. Attach the 3 claws to install the cover.



d. Install the rear No. 1 seat belt anchor with the bolt.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }

e. Attach the 3 claws to install the cover.



61. INSTALL REAR SEAT COVER CAP (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

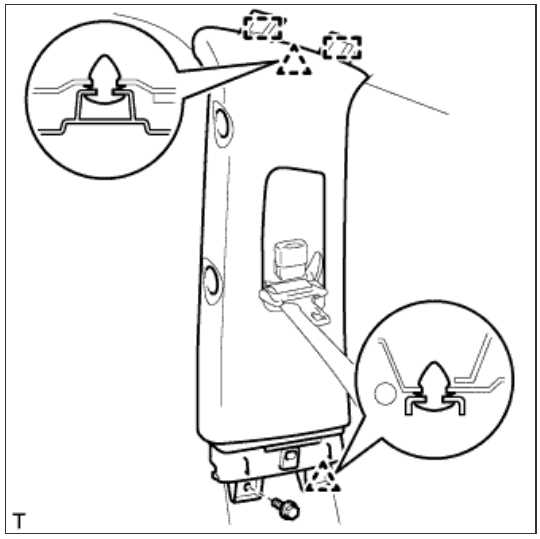
Use the same procedure to install the rear seat cover cap on the other side.

a. Attach the 3 claws to install the rear seat cover cap.



62. INSTALL CENTER PILLAR GARNISH LH

a. Pass the seat belt anchor throu h the center pillar arnish.

b. Attach the 2 clips and 2 uides to install the center pillar arnish.

c. Install the bolt.

63. INSTALL CENTER PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

64. INSTALL REAR ASSIST GRIP ASSEMBLY

HINT:

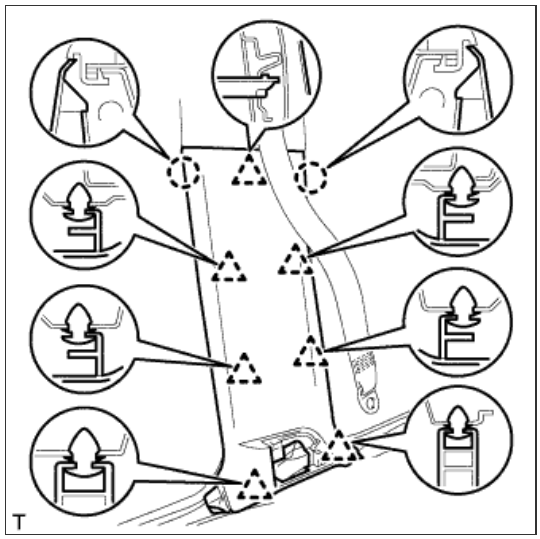
Use the same procedure to install the rear assist rip on the other side.

a. Attach the 2 claws to install the rear assist rip.

b. Install the 2 bolts.

c. Attach the 4 claws to install the 2 assist rip plu s.



65. INSTALL CENTER LOWER PILLAR GARNISH LH

HINT:

- **for Manual Seat:**
  When installing the center lower pillar garnish, move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  When installing the center lower pillar garnish, connect the cable to the negative (-) battery terminal and operate the power seat switch to move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  After moving the front seat, disconnect the cable from the negative (-) battery terminal.

a. Attach the 2 claws and 7 clips to install the center lower pillar arnish.

. Install the seat belt anchor with the bolt.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }

66. INSTALL CENTER LOWER PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

67. INSTALL CENTER PILLAR GARNISH COVER LH

HINT:

- **for Manual Seat:**
  When installing the center pillar garnish cover, move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  When installing the center pillar garnish cover, connect the cable to the negative (-) battery terminal and operate the power seat switch to move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  After moving the front seat, disconnect the cable from the negative (-) battery terminal.

a. Attach the 2 clips and 2 guides to install the cover.

68. INSTALL CENTER PILLAR GARNISH COVER RH

HINT:

Use the same procedures described for the LH side.

69. INSTALL FRONT PILLAR GARNISH LH

a. for 9 14 Speakers:
Connect the speaker connector.

b. Attach the clip and 3 guides to install the front pillar garnish.

70. INSTALL FRONT PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

71. INSTALL FRONT ASSIST GRIP SUB-ASSEMBLY

HINT:

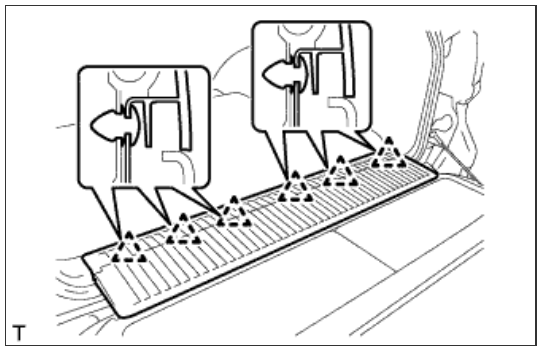
Use the same procedure to install the front assist rip on the other side.

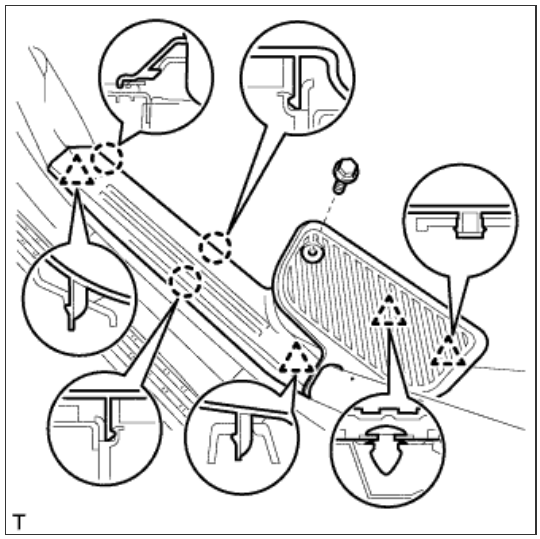
a. Attach the 2 claws to install the front assist rip.



b. Install the 2 bolts.

c. Attach the 4 claws to install the 2 assist rip plu s.

72. INSTALL REAR FLOOR MAT REAR SUPPORT PLATE



a. Attach the 6 clips to install the support plate.

73. INSTALL REAR DOOR SCUFF PLATE LH

a. Attach the 3 claws and 4 clips to install the scuff plate.

b. Install the screw.

74. INSTALL REAR DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

75. INSTALL REAR STEP COVER

HINT:

Use the same procedure to install the step cover on the other side.

a. Attach the 2 claws to install the step cover.

76. INSTALL FRONT DOOR SCUFF PLATE LH

a. Attach the 7 claws and 4 clips to install the scuff plate.

77. INSTALL FRONT DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

78. INSTALL REAR NO. 2 SEAT ASSEMBLY LH (except Face to Face Seat Type)

a. Install the rear No. 2 seat assembl LH (Click here).

79. INSTALL REAR NO. 2 SEAT ASSEMBLY RH (except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

80. INSTALL REAR NO. 2 SEAT ASSEMBLY LH (for Face to Face Seat Type)

a. Install the rear No. 2 seat assembl LH (Click here).

81. INSTALL REAR NO. 2 SEAT ASSEMBLY RH (for Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

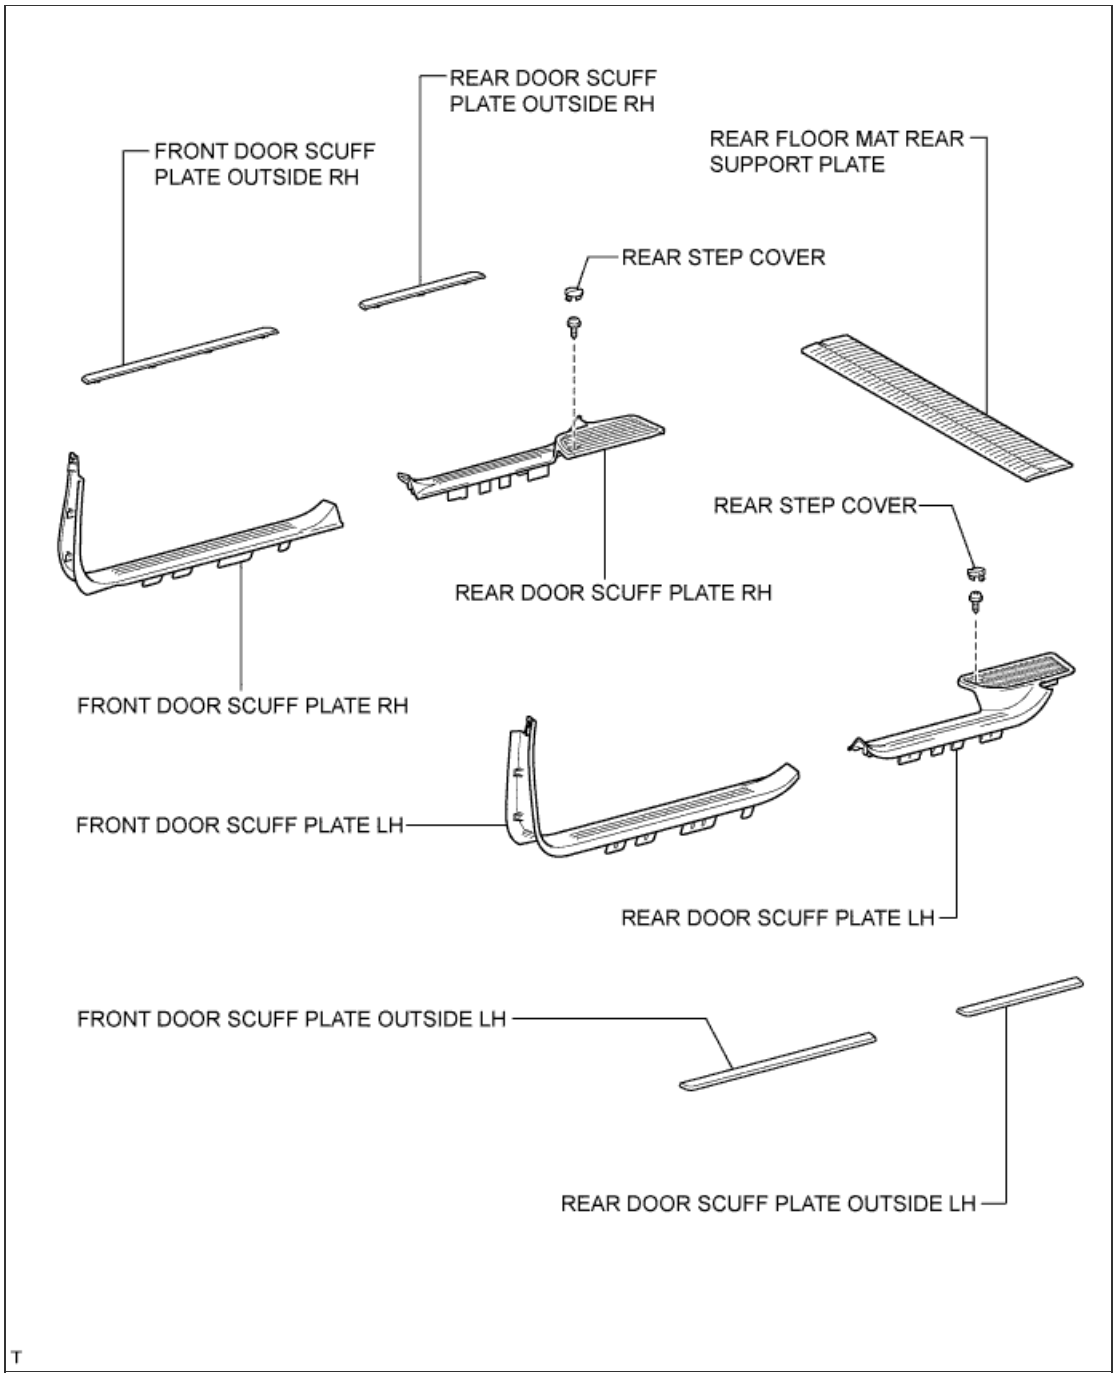
82. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:



hen disconnectin the cable some s stems need to be initialized after the cable is reconnected (Click here).

ANTENNA CORD SUB-ASSEMBLY
P

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE TONNEAU COVER ASSEMBLY (w/ Tonneau Cover)

a. Remove the tonneau cover.

3. REMOVE REAR NO. 2 SEAT ASSEMBLY LH (except Face to Face Seat Type)

a. Remove the rear No. 2 seat assembly LH (Click here).

4. REMOVE REAR NO. 2 SEAT ASSEMBLY RH (except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

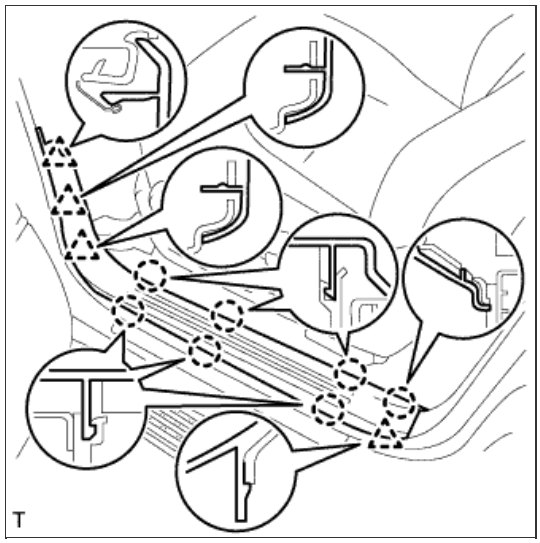
5. REMOVE REAR NO. 2 SEAT ASSEMBLY LH (for Face to Face Seat Type)

a. Remove the rear No. 2 seat assembly LH (Click here).



6. REMOVE REAR NO. 2 SEAT ASSEMBLY RH (for Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

7. REMOVE FRONT DOOR SCUFF PLATE LH

a. Detach the 7 claws and 4 clips, and remove the scuff plate.

8. REMOVE FRONT DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

9. REMOVE REAR STEP COVER

HINT:

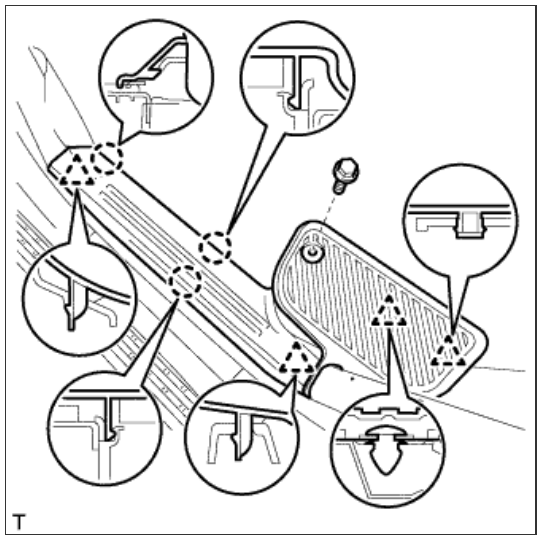
Use the same procedure to remove the step cover on the other side.

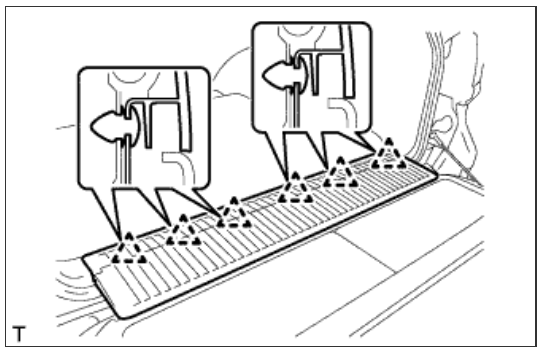


a. Detach the 2 claws and remove the step cover.

10. REMOVE REAR DOOR SCUFF PLATE LH

a. Remove the screw.

b. Detach the 3 claws and 4 clips, and remove the scuff plate.



11. REMOVE REAR DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

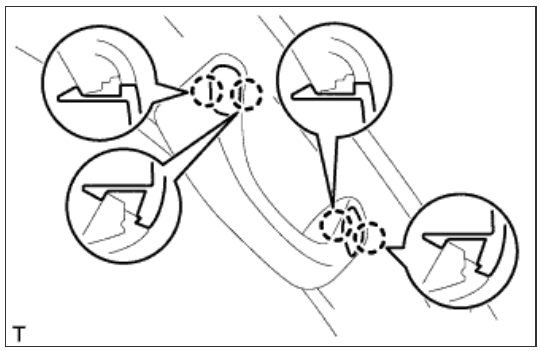
12. REMOVE REAR FLOOR MAT REAR SUPPORT PLATE

a. Detach the 6 clips and remove the support plate.



13. REMOVE FRONT ASSIST GRIP SUB-ASSEMBLY

HINT:

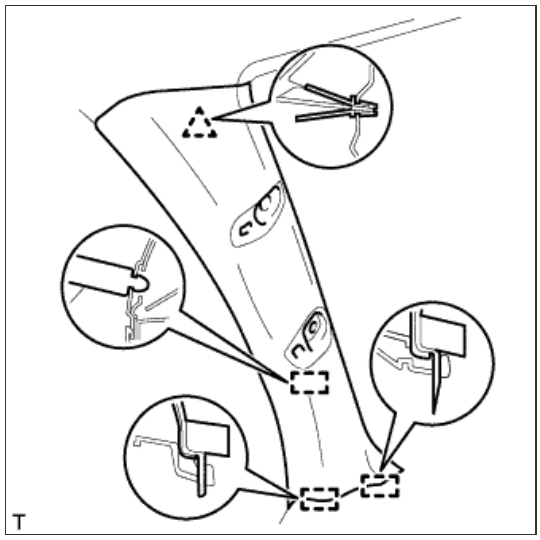
Use the same procedure to remove the front assist grip on the other side.

a. Detach the 4 claws and remove the 2 assist grip plugs.

b. Remove the 2 bolts.

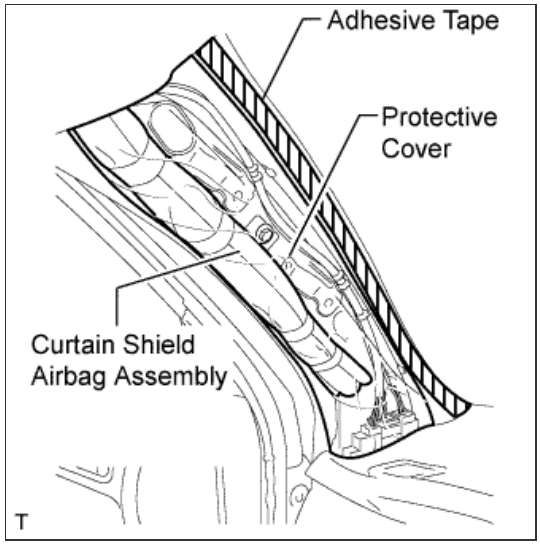


c. Detach the 2 claws and remove the front assist grip.

14. REMOVE FRONT PILLAR GARNISH LH

a. Detach the clip and 3 guides, and remove the front pillar garnish.

b. for 9 Speakers:
Disconnect the speaker connector and then remove the front pillar garnish.



c. Protect the curtain shield airbag.

i. horoughly cover the airbag with a cloth or nylon sheet and fix the ends of the cover with adhesive tape, as shown in the illustration.

NOTICE:

Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish is removed.

15. REMOVE FRONT PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

16. REMOVE CENTER PILLAR GARNISH COVER LH

HINT:

- **for Manual Seat:**
  hen removing the center pillar garnish cover, move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  hen removing the center pillar garnish cover, connect the cable to the negative (-) battery terminal and operate the power seat switch to move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  After moving the front seat, disconnect the cable from the negative (-) battery terminal.

a. Detach the 2 clips and 2 guides, and remove the cover.

17. REMOVE CENTER PILLAR GARNISH COVER RH

HINT:

Use the same procedures described for the LH side.

18. REMOVE CENTER LO ER PILLAR GARNISH LH

HINT:

- **for Manual Seat:**
  hen removing the center lower pillar garnish, move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  hen removing the center lower pillar garnish, connect the cable to the negative (-) battery terminal and operate the power seat switch to move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  After moving the front seat, disconnect the cable from the negative (-) battery terminal.

a. Remove the bolt and seat belt anchor.

b. Detach the 2 claws and 7 clips, and remove the center lower pillar garnish.

19. REMOVE CENTER LO ER PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

20. REMOVE REAR ASSIST GRIP ASSEMBLY

HINT:

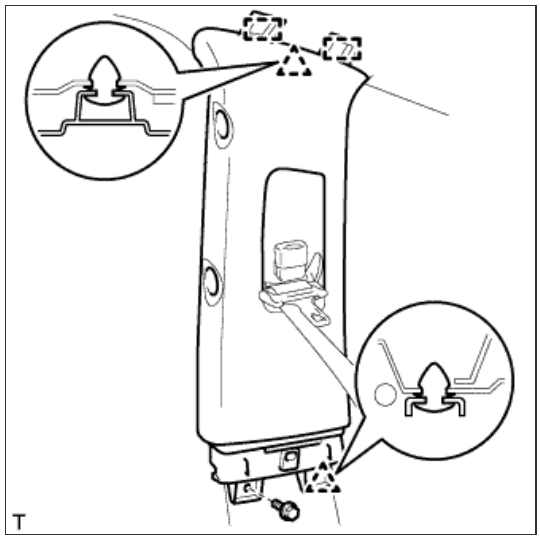
Use the same procedure to remove the rear assist grip on the other side.

a. Detach the 4 claws and remove the 2 assist grip plugs.

b. Remove the 2 bolts.

c. Detach the 2 claws and remove the rear assist grip.



21. REMOVE CENTER PILLAR GARNISH LH

a. Remove the bolt.

b. Detach the 2 clips and 2 guides.

c. Pass the seat belt anchor through the center pillar garnish, and remove the center pillar garnish.

22. REMOVE CENTER PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

23. REMOVE NO. 1 TONNEAU COVER HOLDER CAP (w/ Tonneau Cover)

HINT:

Use the same procedure to remove the tonneau cover holder cap on the other side.

a. Detach the 2 claws and remove the tonneau cover holder cap.

24. REMOVE REAR SEAT COVER CAP (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedure to remove the rear seat cover cap on the other side.

a. Using a screwdriver, detach the 3 claws and remove the rear seat cover cap.

HINT:

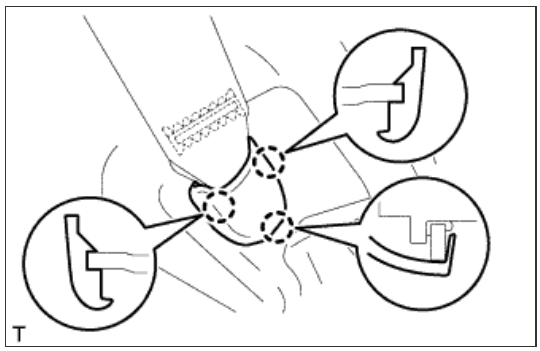
ape the screwdriver tip before use.



25. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY LH

HINT:

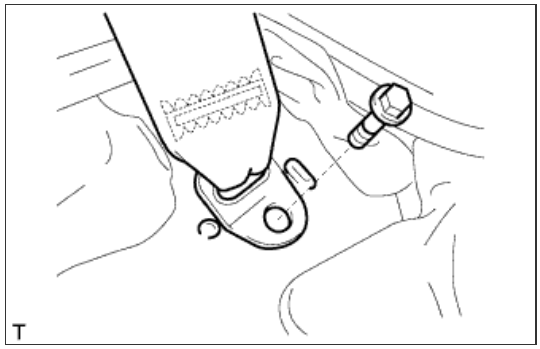
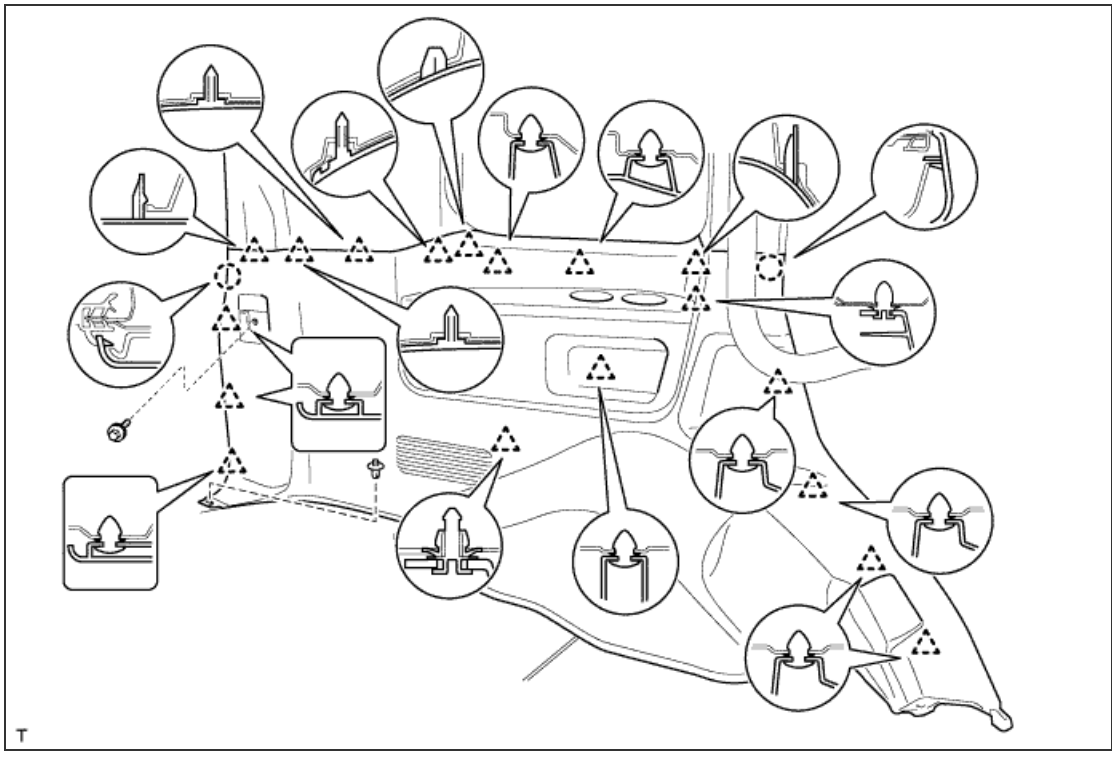
When removing the front uarter trim panel, operate the reclining ad uster release handle and move the No. 1 rear seat to the position shown in the illustration.



a. Detach the 3 claws and remove the cover.

b. Remove the bolt and rear No. 1 seat belt anchor.

c. w/ Rear No. 2 Seat, except Face to Face Seat ype:
Remove the bolt and rear No. 2 seat belt anchor.

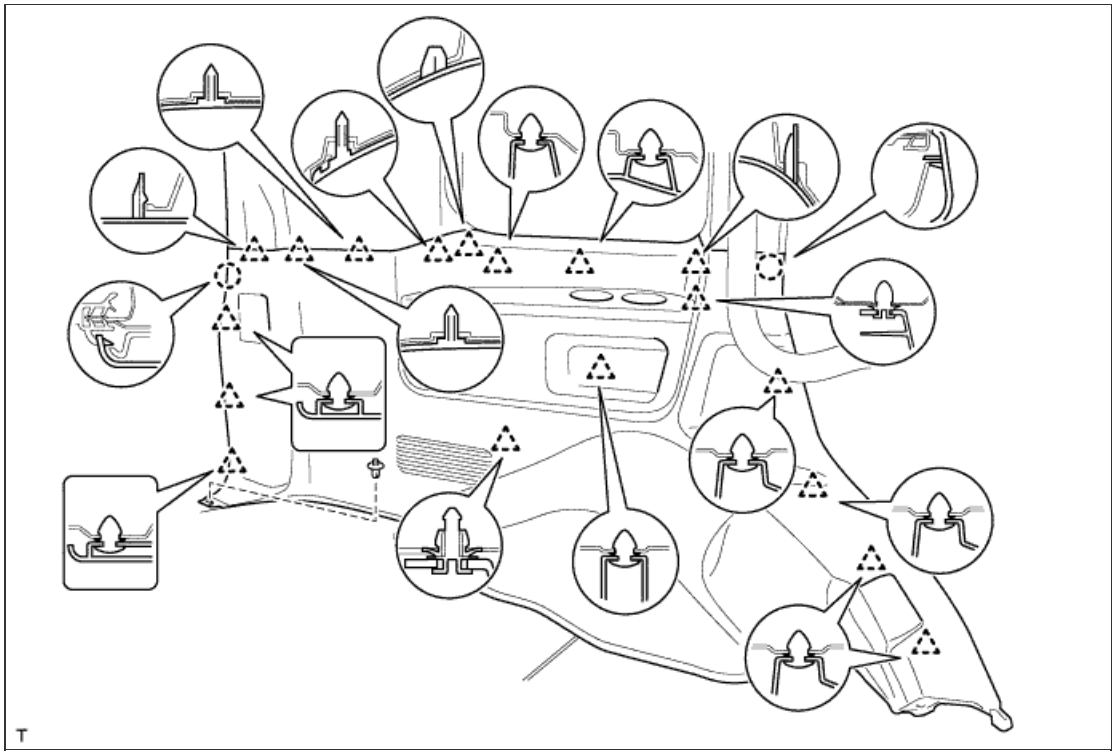


d. w/ Rear No. 2 Seat, except Face to Face Seat ype:

i. Remove the clip and bolt.

ii. Detach the 18 clips and 2 claws.

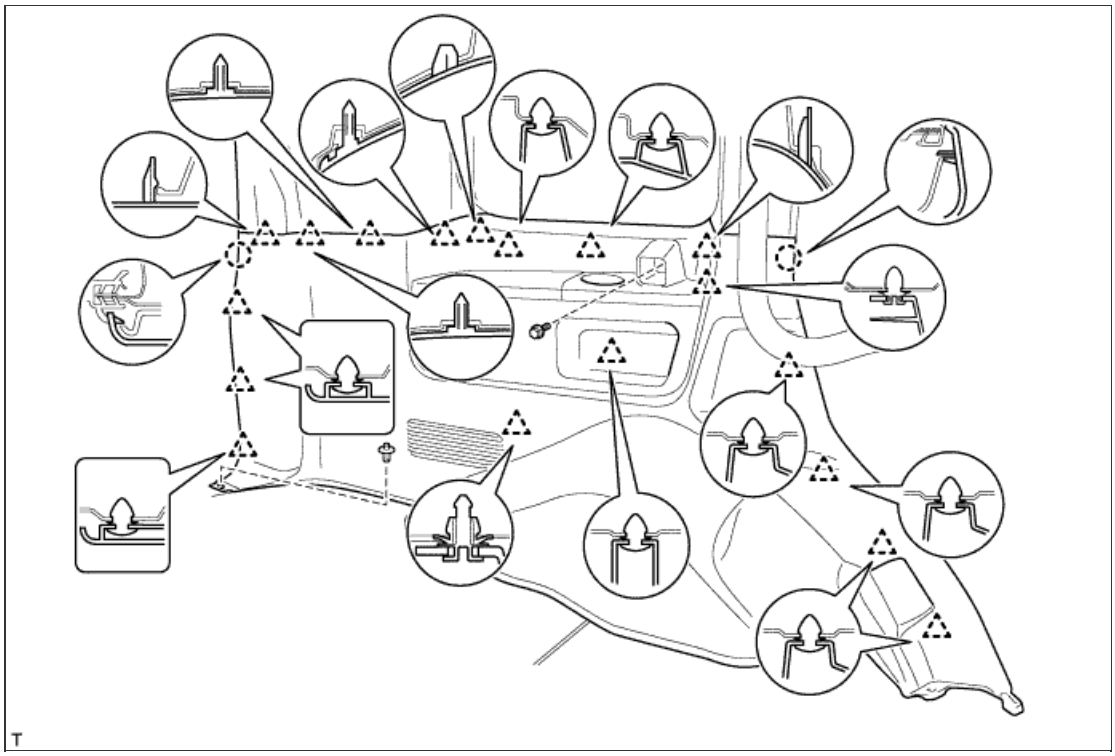
iii. w/o Rear Air Conditioning System:
Disconnect the rear seat lock control lever cable and then remove the uarter trim panel.



iv. w/ Rear Air Conditioning System:
Disconnect the thermistor connector and rear seat lock control lever cable, and then remove the uarter trim panel.

e. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat ype:

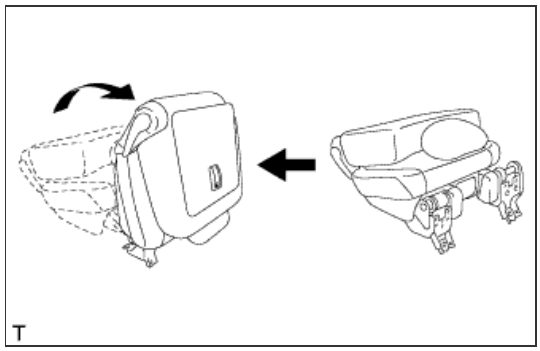
i. Remove the clip.



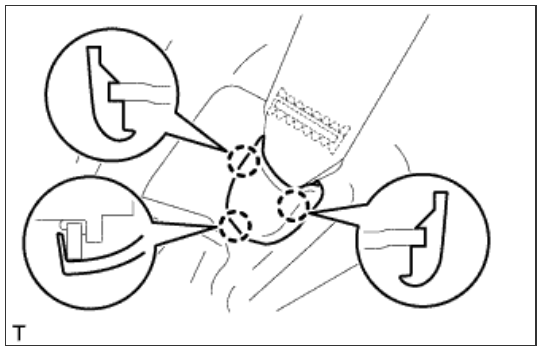
ii. Detach the 18 clips and 2 claws, and remove the uarter trim panel.

f. w/ onneau Cover:

i. Remove the screw and clip.



ii. Detach the 18 clips and 2 claws, and remove the uarter trim panel.



26. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY RH

HINT:

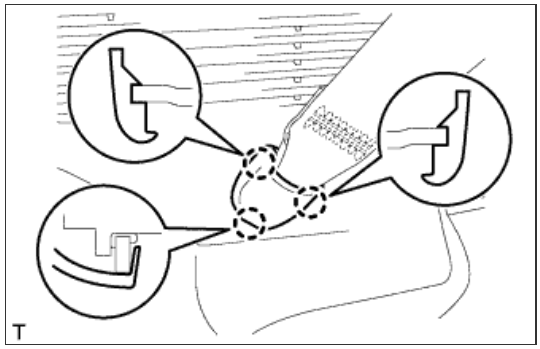
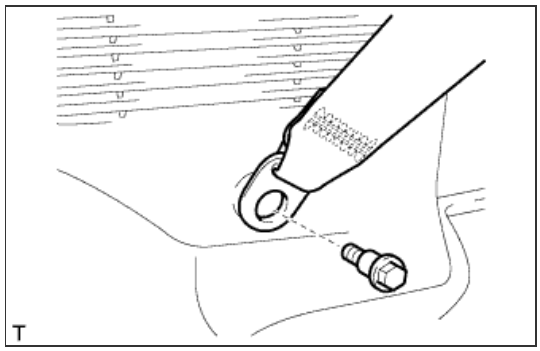
When removing the front uarter trim panel, operate the reclining ad uster release handle and move the No. 1 rear seat to the position shown in the illustration.

a. Detach the 3 claws and remove the cover.



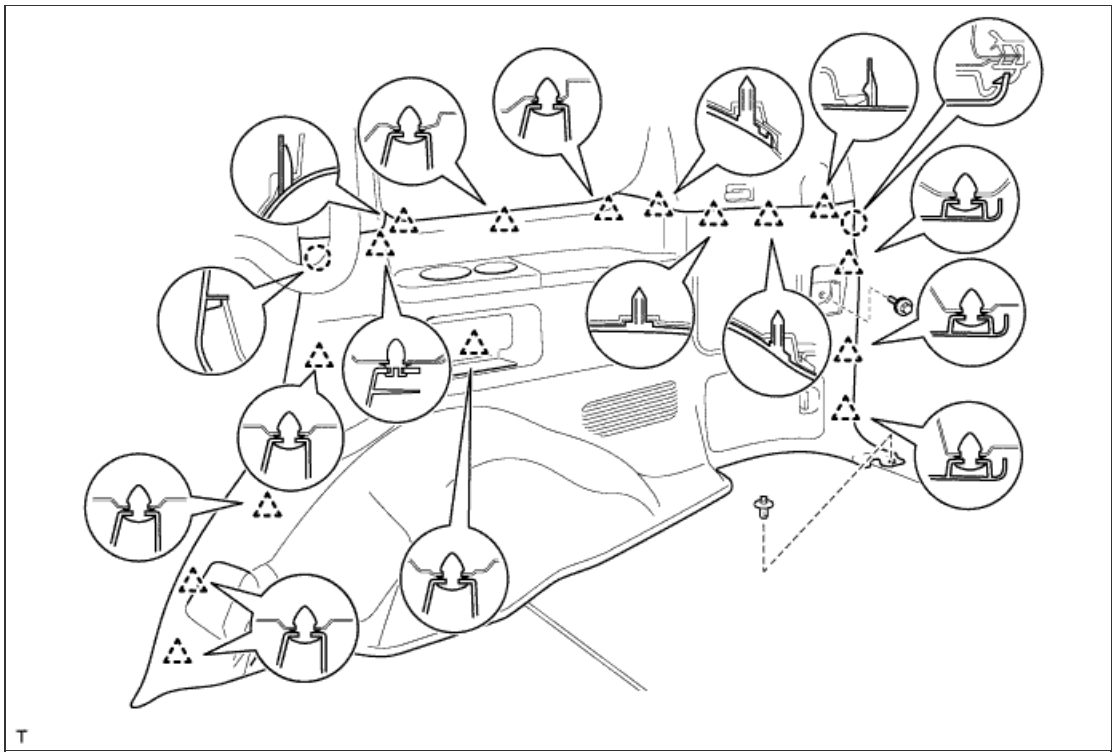
b. Remove the bolt and rear No. 1 seat belt anchor.



c. w/ Rear No. 2 Seat, except Face to Face Seat ype:

i. Detach the 3 claws and remove the cover.

ii. Remove the bolt and rear No. 2 seat belt anchor.

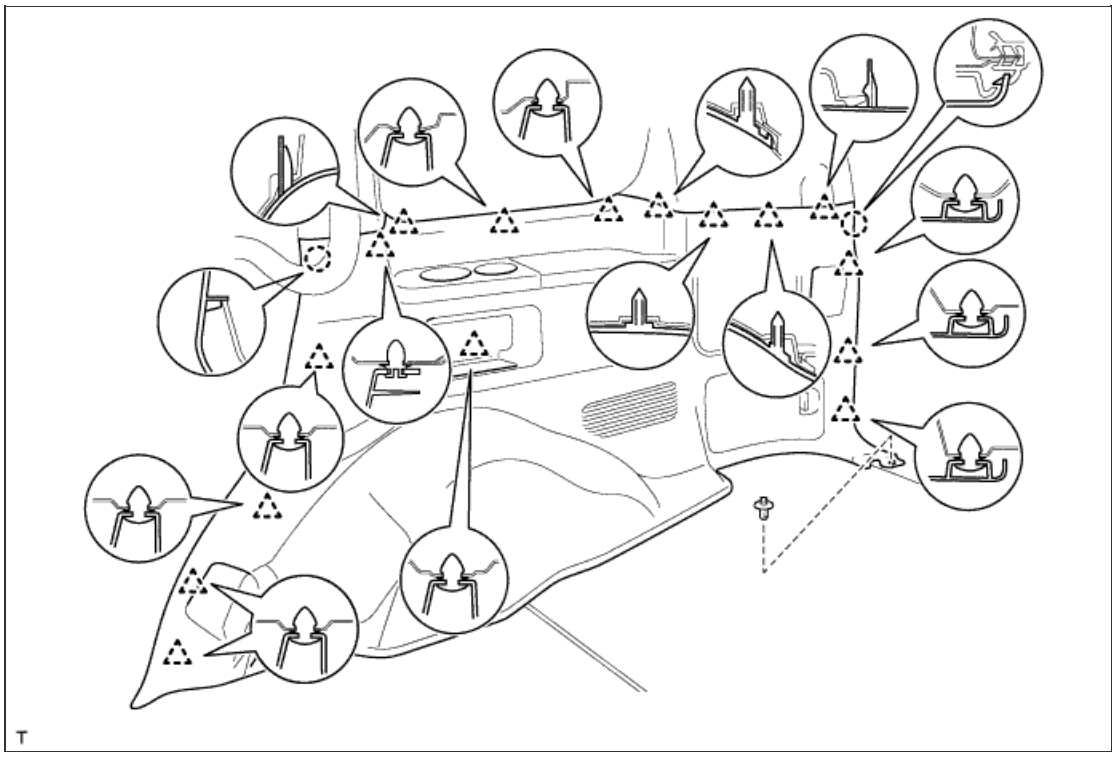


d. w/ Rear No. 2 Seat, except Face to Face Seat ype:

i. Remove the clip and bolt.

ii. Detach the 16 clips and 2 claws.

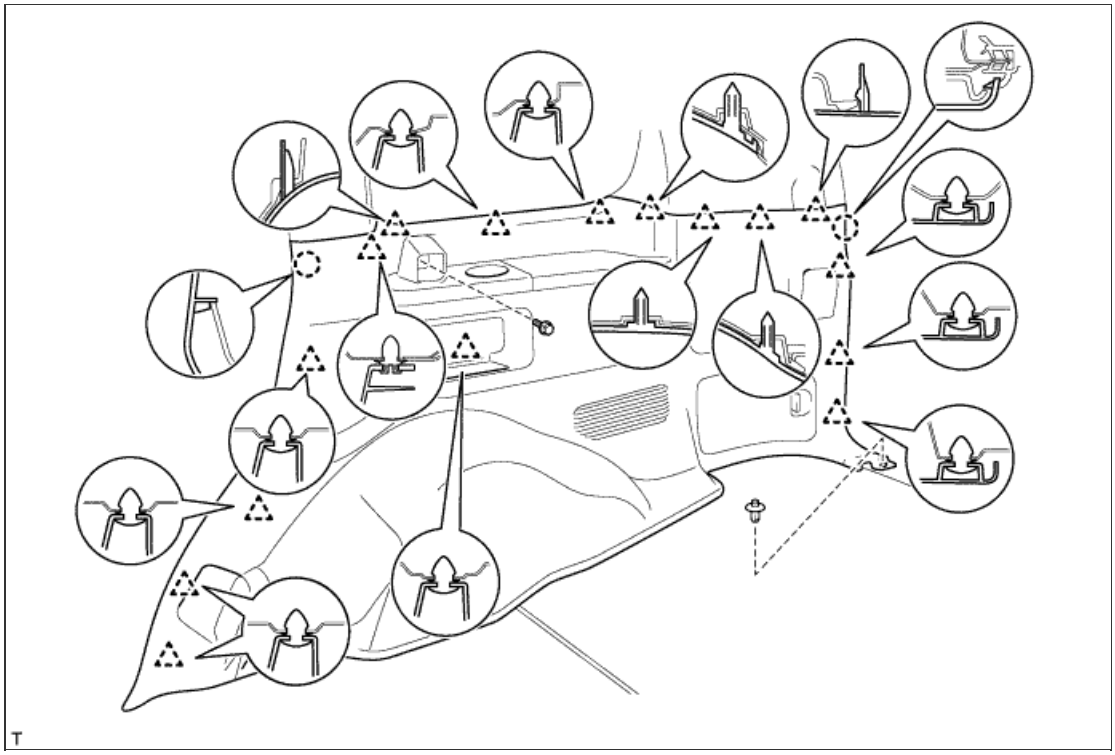
iii. w/o Rear Air Conditioning System:
Disconnect the rear seat lock control lever cable and then remove the uarter trim panel.



iv. w/ Rear Air Conditioning System:
Disconnect the thermistor connector and rear seat lock control lever cable, and then remove the uarter trim panel.

e. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat ype:

i. Remove the clip.

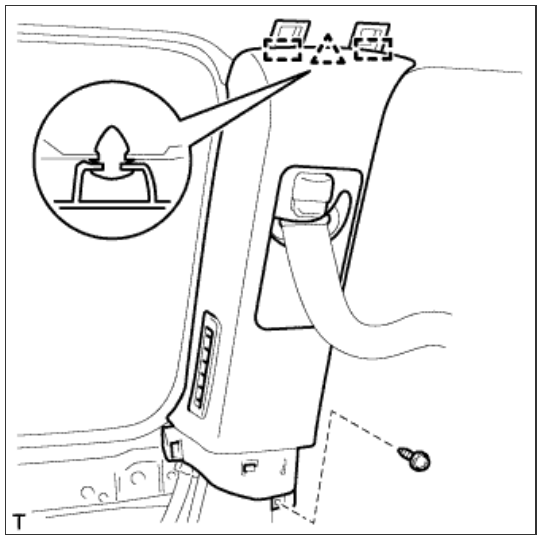


ii. Detach the 16 clips and 2 claws, and remove the uarter trim panel.

f. w/ onneau Cover:

i. Remove the screw and clip.

ii. Detach the 16 clips and 2 claws, and remove the uarter trim panel.



27. REMOVE REAR FRONT QUARTER TRIM GARNISH LH

a. Remove the screw.

b. Detach the clip and 2 guides.

c. Pass the seat belt anchor through the uarter trim garnish, and remove the uarter trim garnish.

28. REMOVE REAR FRONT QUARTER TRIM GARNISH RH

HINT:

Use the same procedures described for the LH side.

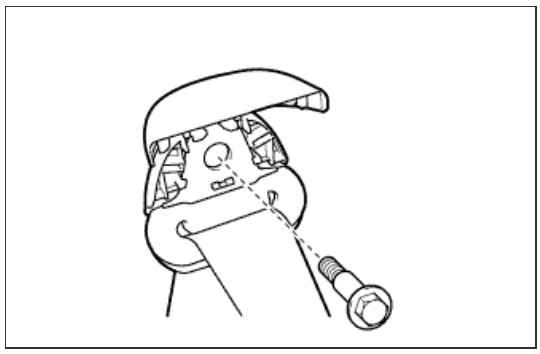
29. REMOVE REAR UPPER PILLAR GARNISH LH

a. w/ Rear No. 2 Seat, except Face to Face Seat ype:



i. Using a screwdriver, detach the 2 claws and open the seat belt shoulder anchor cover.

HINT:

ape the screwdriver tip before use.

ii. Remove the bolt and seat belt shoulder anchor.

b. Detach the 5 clips and remove the rear upper pillar garnish.

30. REMOVE REAR UPPER PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

31. REMOVE MAP LIGHT ASSEMBLY (w/ Map Light)

a. Using a screwdriver, detach the 2 claws and open the 2 covers.

HINT:

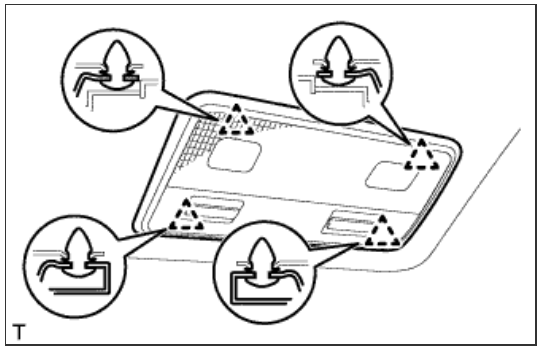
ape the screwdriver tip before use.

b. Remove the 2 screws.

c. Detach the 2 clips and 2 guides.

d. Disconnect the connector and then remove the map light.

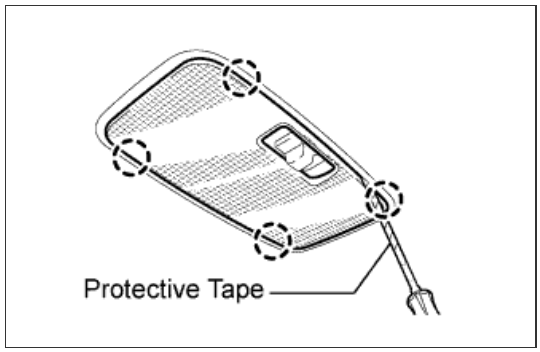


32. REMOVE NO. 1 ROOM LIGHT ASSEMBLY

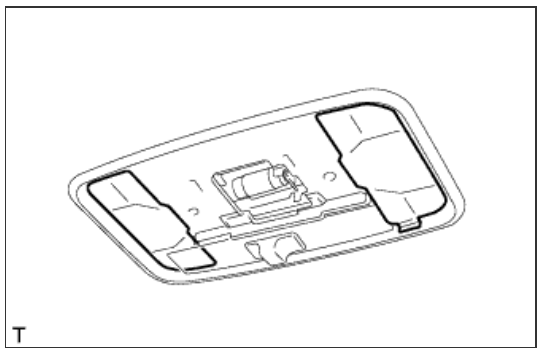
a. w/ ap Light:
Remove the No. 1 room light assembly.

i. Detach the 4 clips.

ii. Disconnect the connector and then remove the room light.



b. w/o ap Light:
Remove the No. 1 room light assembly.



i. Using a screwdriver, detach the 4 claws and remove the room light lens.

HINT:

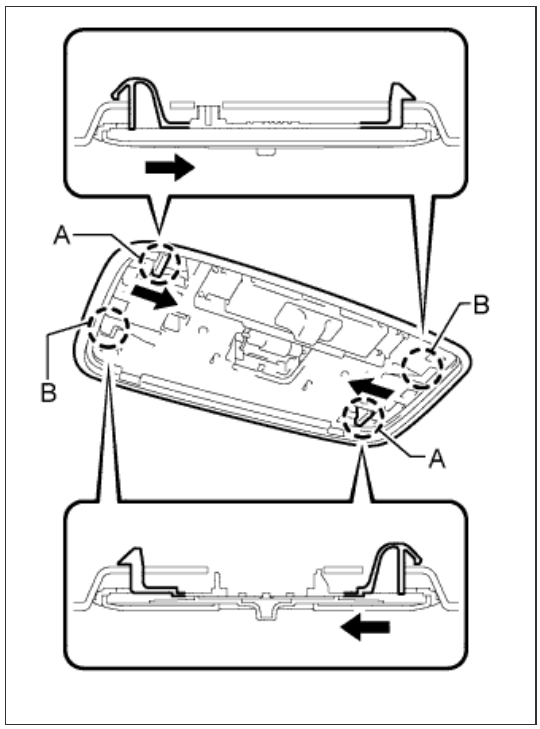
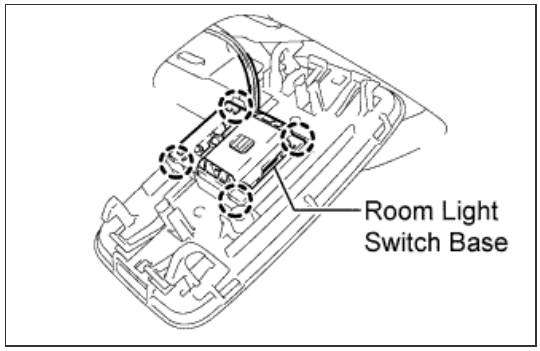
ape the screwdriver tip before use.



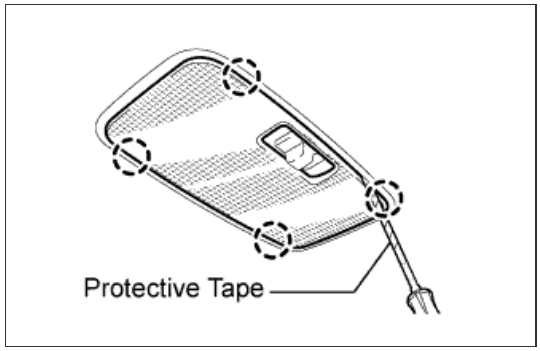
ii. Remove the 2 covers.



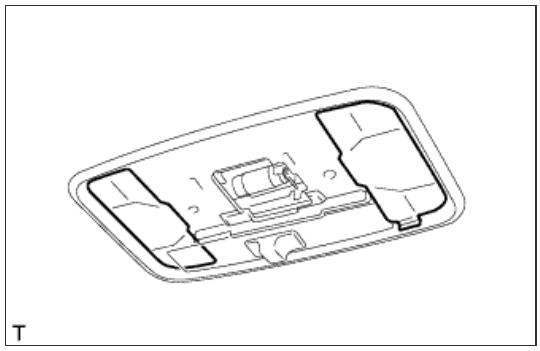
iii. Using a screwdriver, push the 2 levers in the direction of the arrows in the illustration, and detach the 2 claws labeled A.

iv. Detach the 2 claws labeled B.

v. Detach the 4 claws and remove the room light from the room light switch base.



33. REMOVE NO. 2 ROOM LIGHT ASSEMBLY



a. Using a screwdriver, detach the 4 claws and remove the room light lens.

HINT:

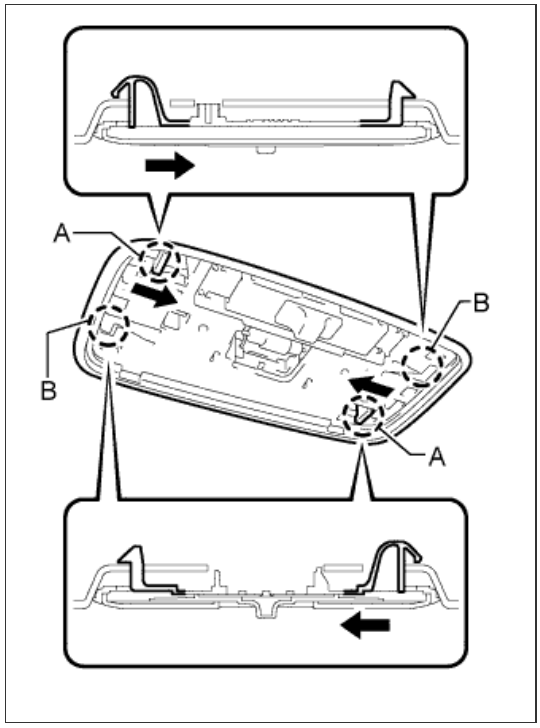
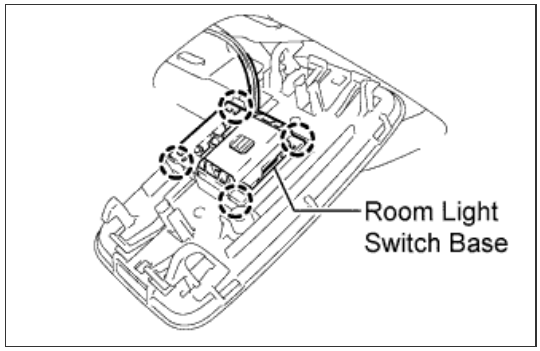
ape the screwdriver tip before use.



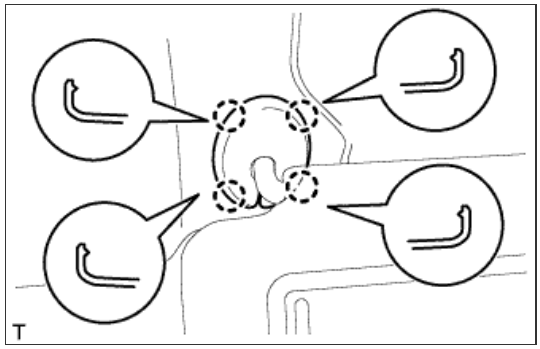
b. Remove the 2 covers.



c. Using a screwdriver, push the 2 levers in the direction of the arrows in the illustration, and detach the 2 claws labeled A.

d. Detach the 2 claws labeled B.

e. Detach the 4 claws and remove the room light from the room light switch base.



34. REMOVE VISOR BRACKET COVER

HINT:

Use the same procedure to remove the visor bracket cover on the other side.

a. Detach the 4 claws and remove the visor bracket cover.

35. REMOVE VISOR ASSEMBLY LH

a. Remove the 2 screws and visor.

36. REMOVE VISOR ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

37. REMOVE VISOR HOLDER

HINT:

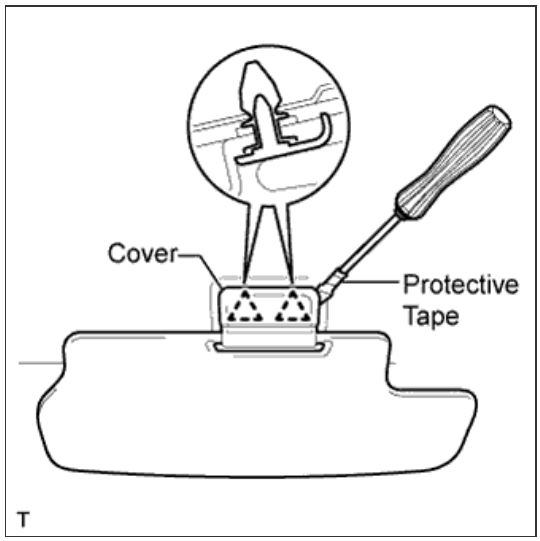
Use the same procedure to remove the visor holder on the other side.

a. urn the visor holder approximately 45° and pull it out as shown in the illustration.

b. Detach the 2 claws and remove the visor holder.



38. REMOVE CENTER VISOR ASSEMBLY LH (w/ Sub Visor)

a. Using a screwdriver, pry off the cover to detach the 2 clips and remove the center visor.

HINT:

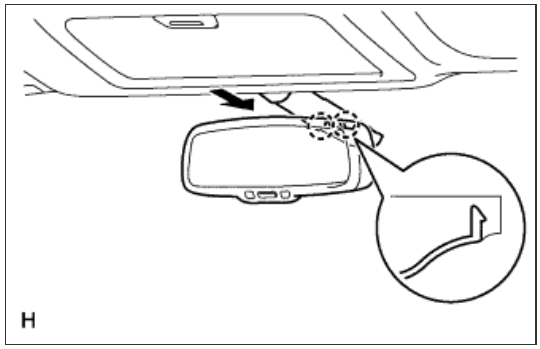
ape the screwdriver tip before use.



39. REMOVE CENTER VISOR ASSEMBLY RH (w/ Sub Visor)

HINT:

Use the same procedures described for the LH side.

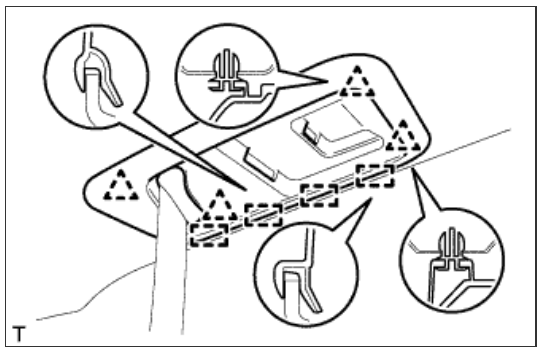
40. REMOVE INNER REAR VIE MIRROR STAY HOLDER COVER (w/ EC Mirror)

a. Detach the 2 claws and remove the cover as shown in the illustration.

41. REMOVE RAIN SENSOR COVER (w/ Rain Sensor)



a. Slide the No. 2 cover in the direction of the arrow labeled (1).

b. Pull the stopper in the direction of the arrow labeled (2) to remove the No. 2 cover.

42. REMOVE SEAT BELT ANCHOR COVER (for 3 Person Seat Type Rear No. 2 Seat)

a. Detach the 4 clips and 4 guides, and remove the seat belt anchor cover.

43. REMOVE ASSIST GRIP ASSEMBLY

HINT:

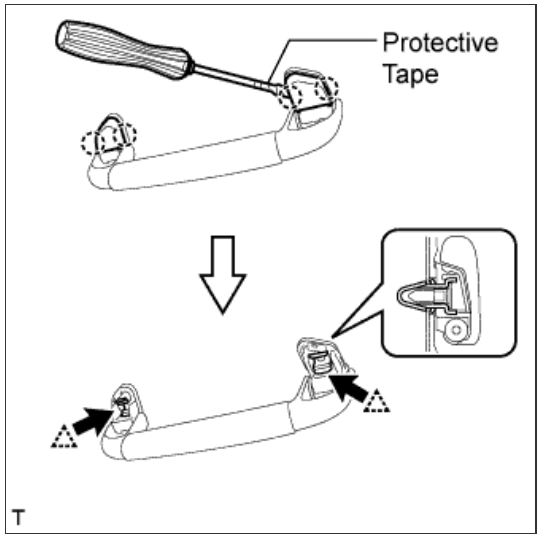
Use the same procedure to remove the assist grip on the other side.



a. Using a screwdriver, detach the 4 claws and remove the 2 assist grip covers.

HINT:

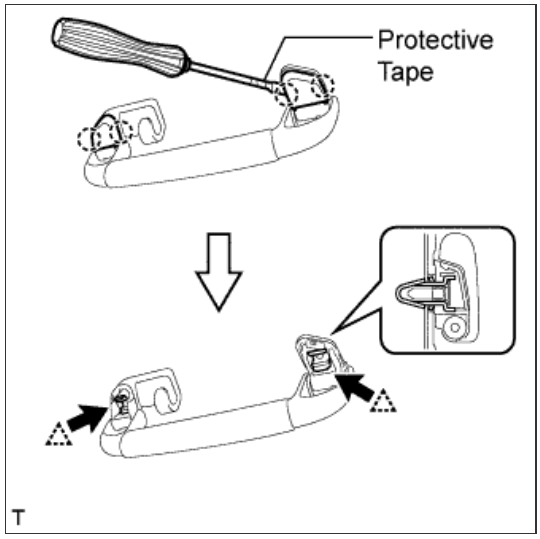
ape the screwdriver tip before use.

b. Detach the 2 clips and remove the assist grip.

c. Remove the 2 clips from the vehicle body.

44. REMOVE NO. 2 ASSIST GRIP ASSEMBLY LH

a. w/ Rear No. 2 Seat, except Face to Face Seat ype or w/o Rear No. 2 Seat:
Remove the No. 2 assist grip assembly.



i. Using a screwdriver, detach the 4 claws and remove the 2 assist grip covers.

HINT:

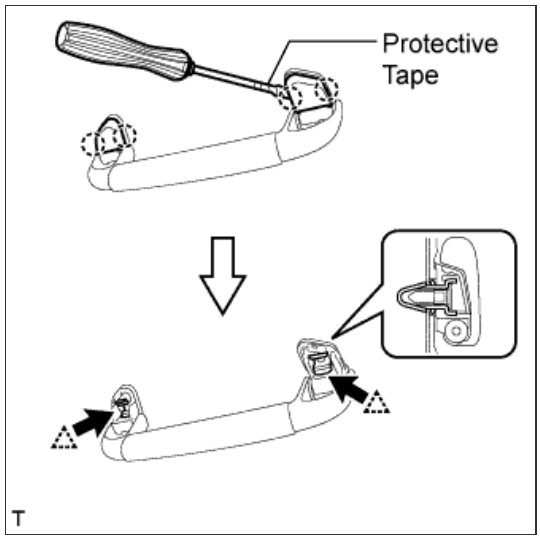
ape the screwdriver tip before use.

ii. Detach the 2 clips and remove the assist grip.

iii. Remove the 2 clips from the vehicle body.

b. w/ Rear No. 2 Seat, for Face to Face Seat ype:
Remove the No. 2 assist grip assembly.



i. Using a screwdriver, detach the 4 claws and remove the 2 assist grip covers.

HINT:

ape the screwdriver tip before use.

ii. Detach the 2 clips and remove the assist grip.

iii. Remove the 2 clips from the vehicle body.

45. REMOVE NO. 2 ASSIST GRIP ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

46. REMOVE 3RD SEAT ASSIST GRIP ASSEMBLY (w/ Rear No. 2 Seat except Face to Face Seat Type)

HINT:

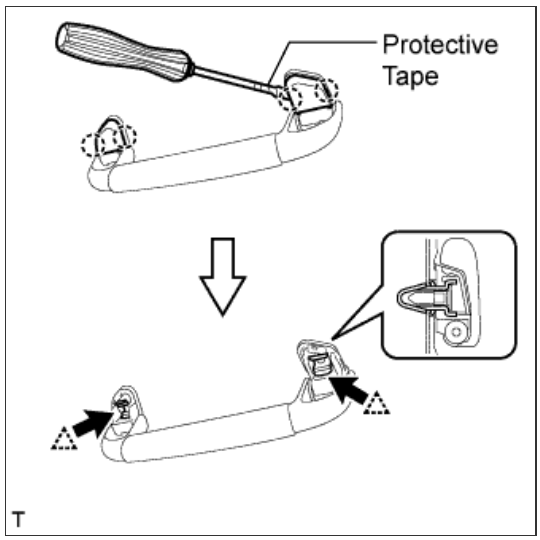
Use the same procedure to remove the 3rd seat assist grip on the other side.



a. Using a screwdriver, detach the 4 claws and remove the 2 assist grip covers.

HINT:

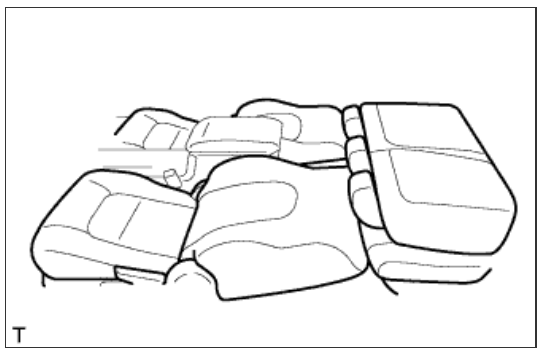
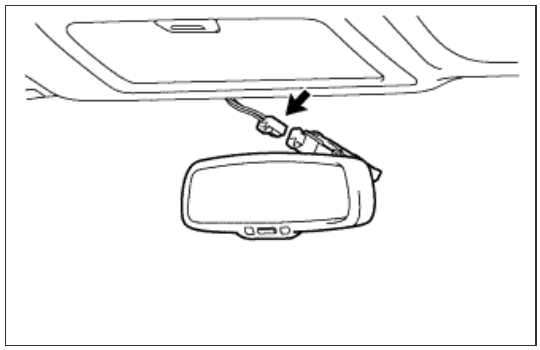
ape the screwdriver tip before use.

b. Detach the 2 clips and remove the assist grip.



c. Remove the 2 clips from the vehicle body.



47. REMOVE ROOF HEADLINING ASSEMBLY

HINT:

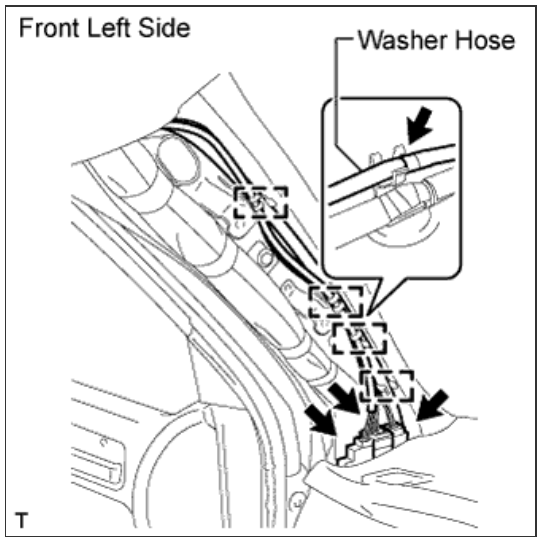
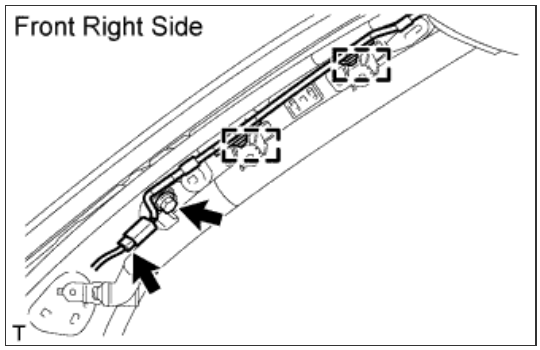
- **for Manual Seat:**
  hen removing the roof headlining, move the front seat and rear No. 1 seat to the position shown in the illustration.
- **for Power Seat:**
  hen removing the roof headlining, connect the cable to the negative (-) battery terminal and move the front seat and No. 1 rear seat to the position shown in the illustration.
- **for Power Seat:**
  After moving the seats, disconnect the cable from the negative (-) battery terminal.

a. w/ EC Mirror:
Disconnect the inner mirror connector.



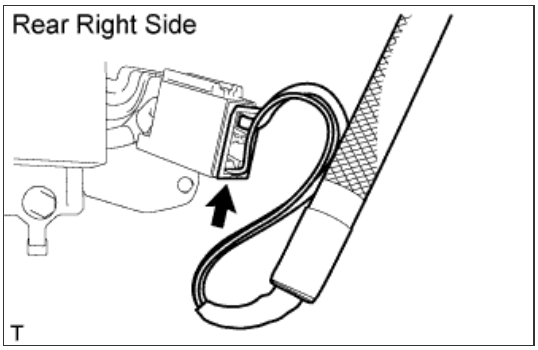
b. w/ Rain Sensor:
Disconnect the rain sensor connector.

c. Disconnect the 3 roof wire connectors.

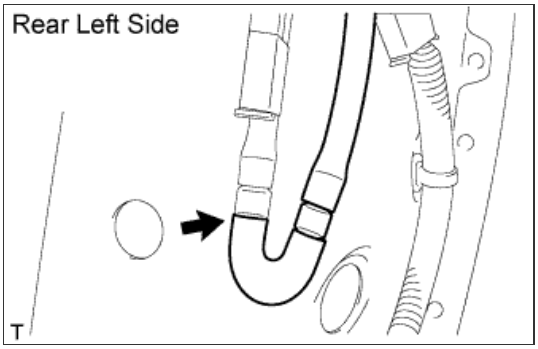


i. w/ Rear Wiper:
Disconnect the washer hose.

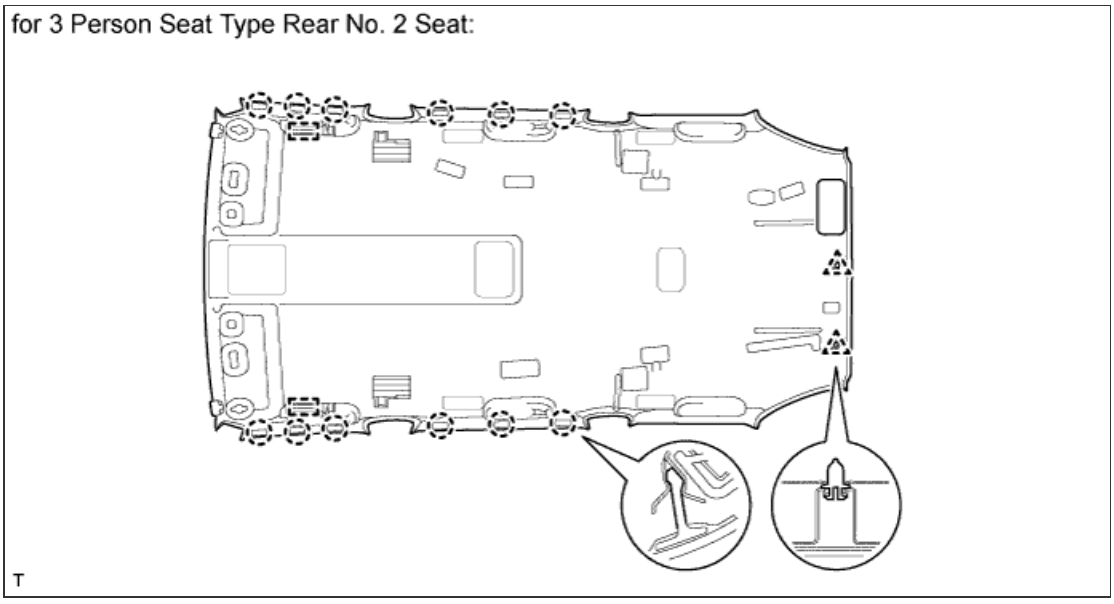
d. Detach the 4 clamps.



e. Remove the bolt.

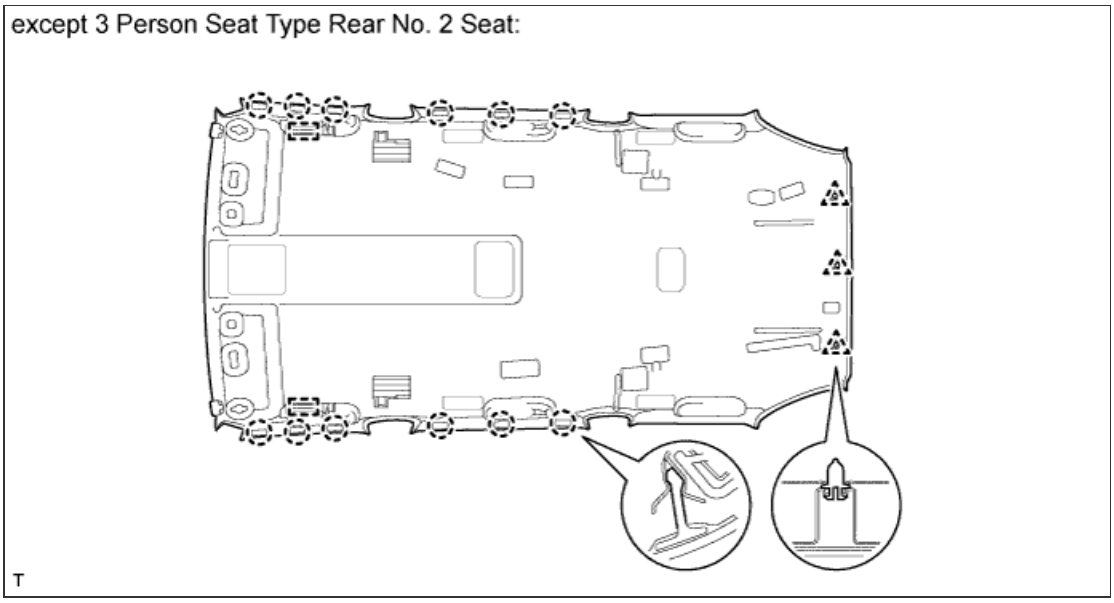


f. Disconnect the antenna cord connector and detach the 2 clamps.

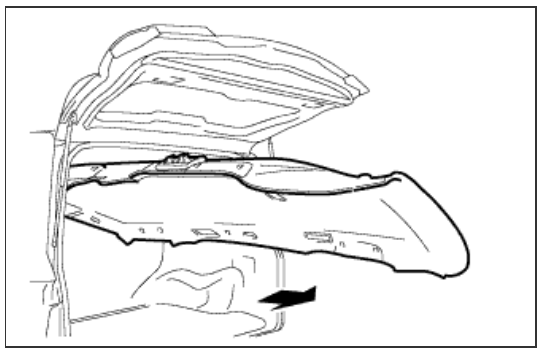


g. Disconnect the antenna cord connector.

h. w/ Rear Wiper:
Disconnect the washer hose.



i. for 3 Person Seat ype Rear No. 2 Seat:
Detach the 12 claws, 2 clips and 2 guides.



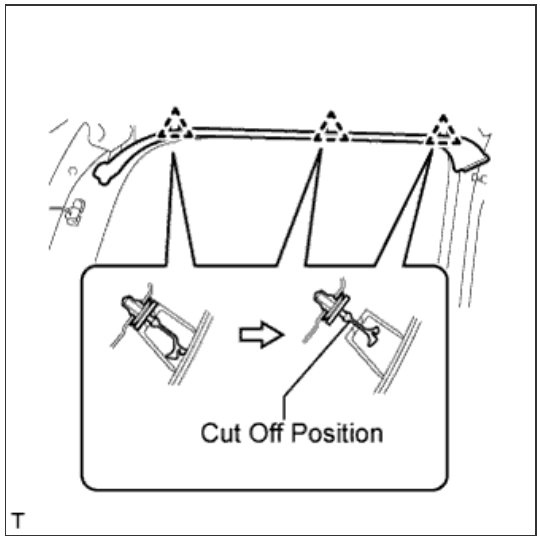
j. except 3 Person Seat ype Rear No. 2 Seat:
Detach the 12 claws, 3 clips and 2 guides.

except 3 Person Seat Type Rear No. 2 Seat:

T

k. Remove the headlining from the rear of the vehicle as shown in the illustration.

NOTICE:



Be careful not to damage the roof headlining when taking it out.

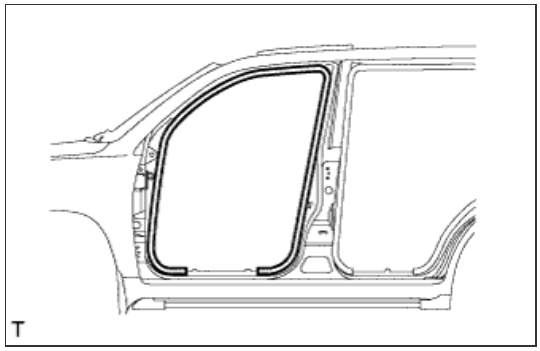
48. REMOVE FRONT ROOF SIDE RAIL GARNISH LH

a. Detach the 3 clips.

b. Cut off the 3 clips and remove the roof side rail garnish.

c. Remove 3 clips from the vehicle body.

T



49. REMOVE FRONT ROOF SIDE RAIL GARNISH RH

HINT:

Use the same procedures described for the LH side.

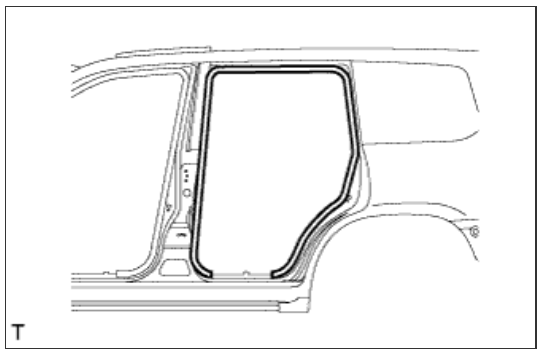
50. REMOVE FRONT DOOR OPENING TRIM EATHERSTRIP LH

a. Remove the front door opening trim weatherstrip.



51. REMOVE FRONT DOOR OPENING TRIM EATHERSTRIP RH

HINT:

Use the same procedures described for the LH side.

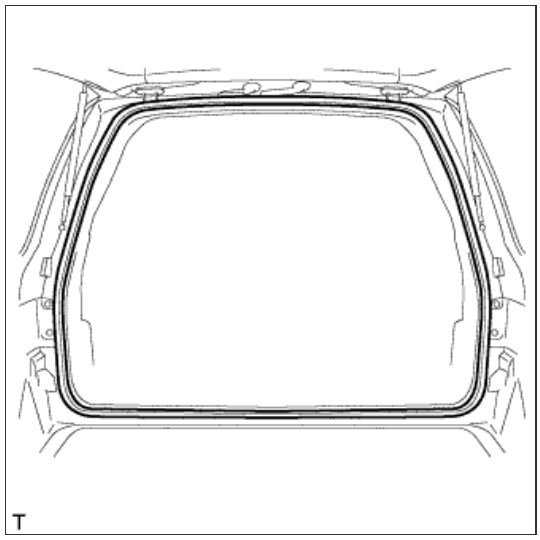
52. REMOVE REAR DOOR OPENING TRIM EATHERSTRIP LH

a. Remove the rear door opening trim weatherstrip.



53. REMOVE REAR DOOR OPENING TRIM EATHERSTRIP RH

HINT:

Use the same procedures described for the LH side.

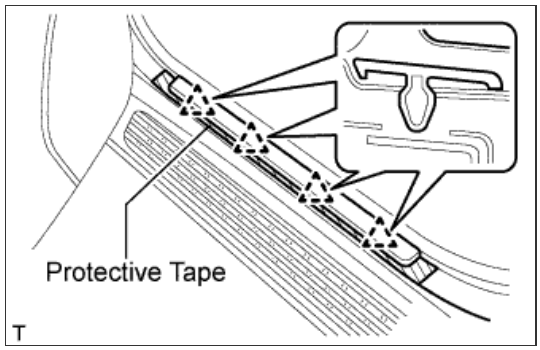
54. REMOVE BACK DOOR EATHERSTRIP



a. Remove the back door weatherstrip.

55. REMOVE FRONT DOOR SCUFF PLATE OUTSIDE LH

a. Put protective tape around the front door scuff plate outside.

b. Detach the 4 clips and remove the front door scuff plate outside.

56. REMOVE FRONT DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

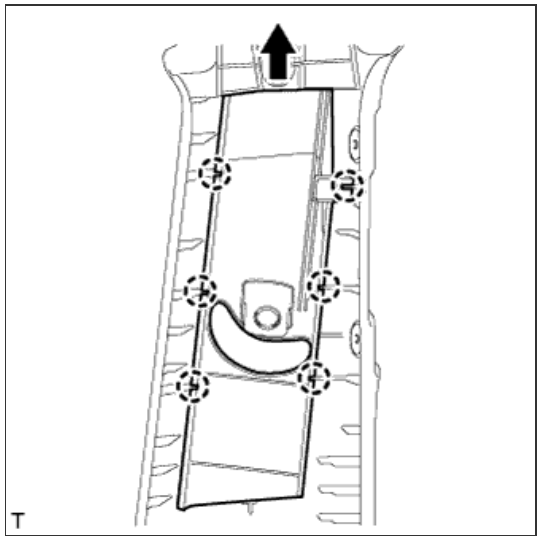
57. REMOVE REAR DOOR SCUFF PLATE OUTSIDE LH

a. Put protective tape around the rear door scuff plate outside.

b. Detach the 3 clips and remove the rear door scuff plate outside.



58. REMOVE REAR DOOR SCUFF PLATE OUTSIDE RH

HINT:

Use the same procedures described for the LH side.

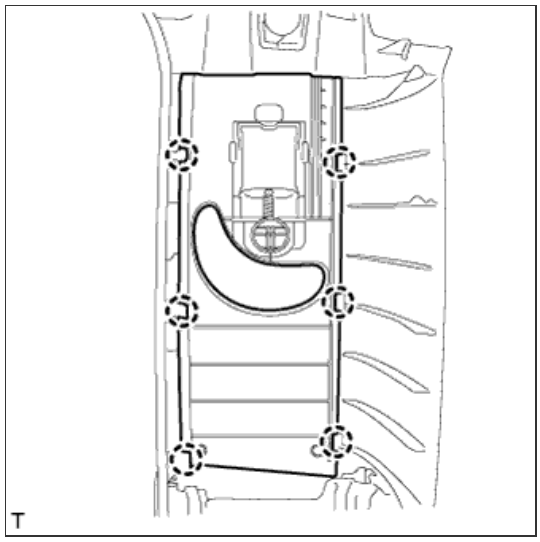
59. REMOVE FRONT SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY LH

a. Detach the 6 claws of the plate, and slide the plate in the direction of the arrow to remove it.



60. REMOVE FRONT SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

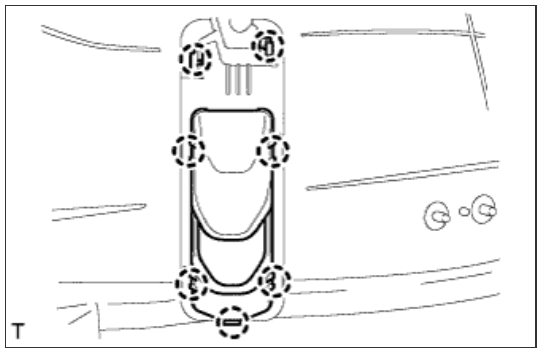
61. REMOVE REAR SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY LH

a. Detach the 6 claws and remove the plate.



62. REMOVE REAR SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

63. REMOVE ROOF SIDE INNER GARNISH COVER LH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Detach the 7 claws and remove the cover.

64. REMOVE ROOF SIDE INNER GARNISH COVER RH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

65. REMOVE REAR SEAT SHOULDER BELT HANGER (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

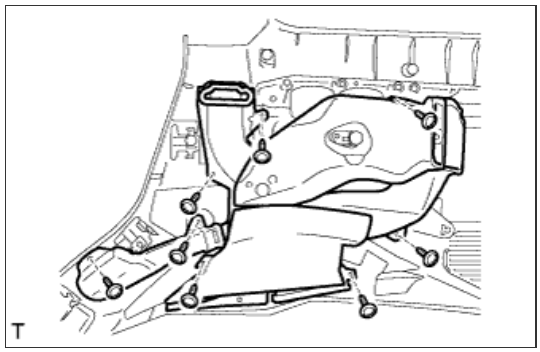
Use the same procedure to remove the hanger on the other side.

a. Remove the 2 spring nuts and hanger.

66. REMOVE REAR NO. 2 SEAT SHOULDER BELT HANGER LH

a. Remove the 2 spring nuts and hanger.



67. REMOVE REAR NO. 2 SEAT SHOULDER BELT HANGER RH

HINT:

Use the same procedures described for the LH side.

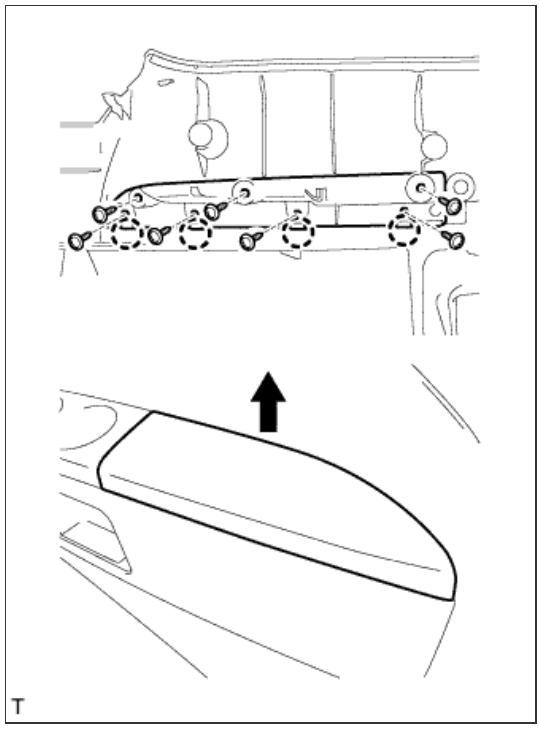
68. REMOVE QUARTER TRIM COVER SUB-ASSEMBLY LH

a. w/ Rear Heater:
Remove the 8 screws and duct.

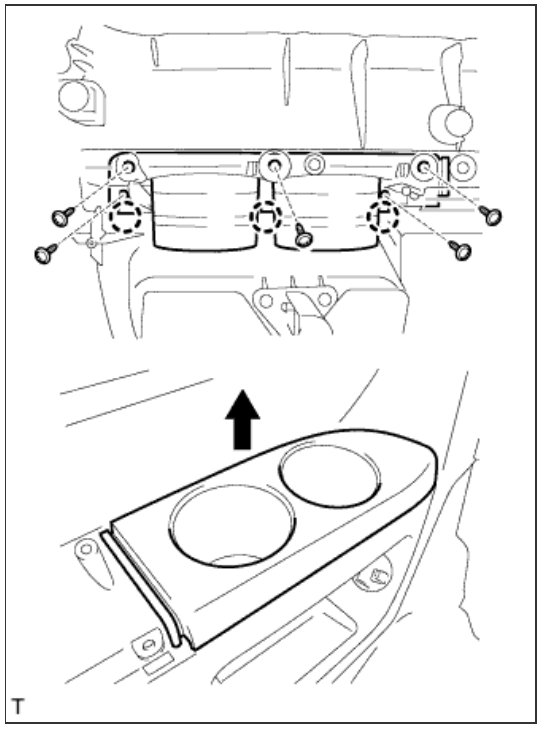
b. Remove the 7 screws.



c. Detach the 4 claws and remove the uarter trim cover.

69. REMOVE QUARTER TRIM COVER SUB-ASSEMBLY RH

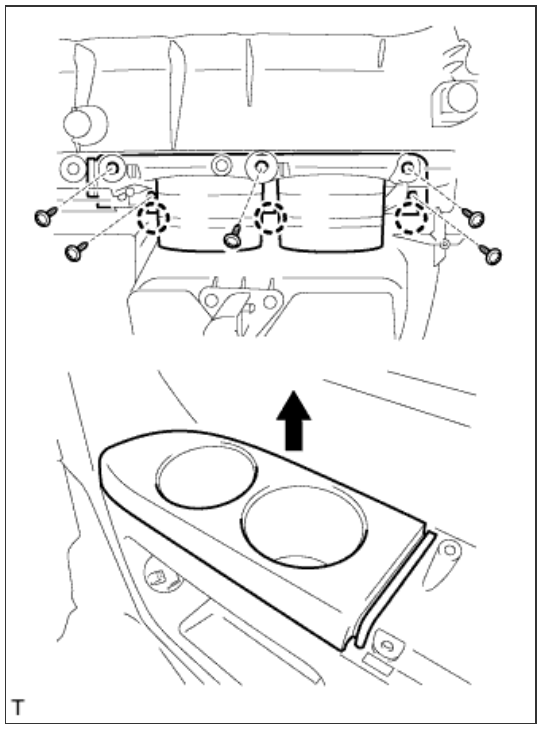
a. Remove the 7 screws.



b. Detach the 4 claws and remove the uarter trim cover.

70. REMOVE NO. 2 CUP HOLDER

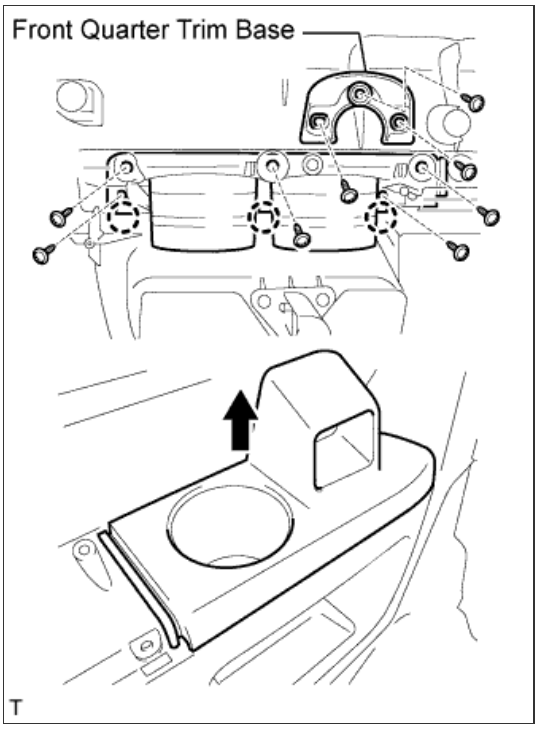
a. Remove the 5 screws.



b. Detach the 3 claws and remove the cup holder.

71. REMOVE NO. 1 CUP HOLDER

a. Remove the 5 screws.

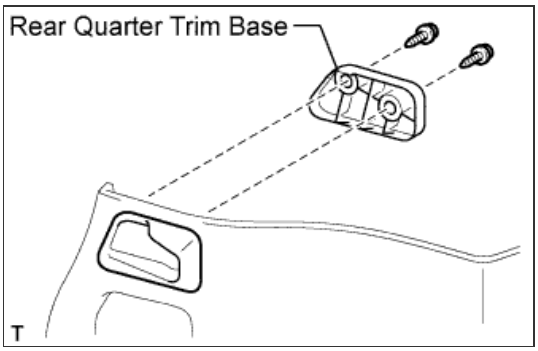


b. Detach the 3 claws and remove the cup holder.

72. REMOVE TONNEAU COVER HOLDER BRACKET LH (w/ Tonneau Cover)

a. Remove the 8 screws.

b. Detach the 3 claws and remove the tonneau cover holder bracket and front uarter trim base.



73. REMOVE TONNEAU COVER HOLDER BRACKET RH (w/ Tonneau Cover)

HINT:

Use the same procedures described for the LH side.

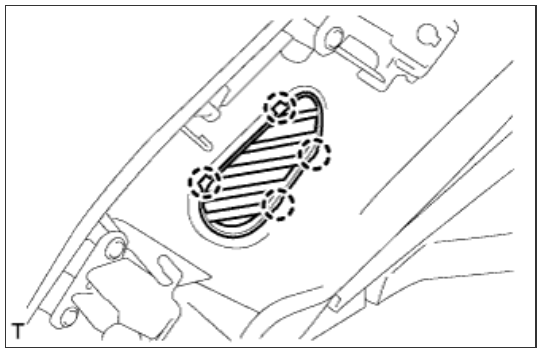
74. REMOVE TONNEAU COVER HANGER LH (w/ Tonneau Cover)

a. Remove the 2 screws, tonneau cover hanger and rear uarter trim base.



75. REMOVE TONNEAU COVER HANGER RH (w/ Tonneau Cover)

HINT:

Use the same procedures described for the LH side.

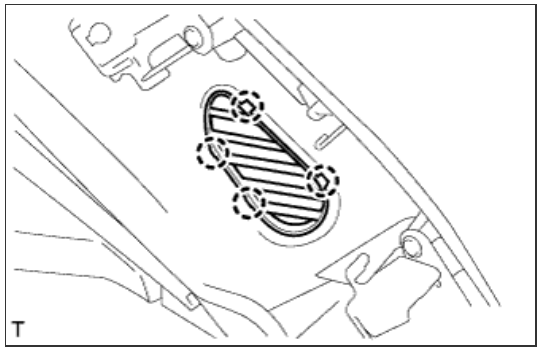
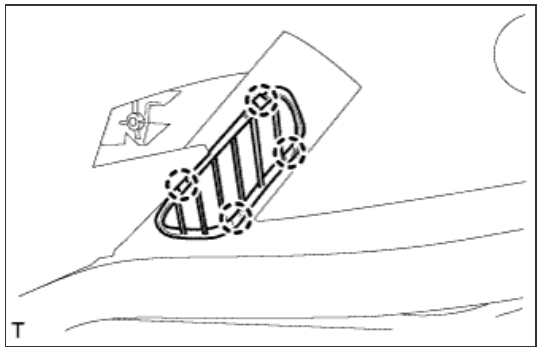
76. REMOVE NO. 1 SIDE TRIM BASE COVER LH (w/ Rear Heater)

a. Detach the 4 claws and remove the cover.



77. REMOVE NO. 1 SIDE TRIM BASE COVER RH (w/ Rear Heater)

a. Remove the 6 screws and duct.



b. Detach the 4 claws and remove the cover.

78. REMOVE NO. 2 SIDE TRIM BASE COVER LH (w/ Rear Heater)

a. Detach the 4 claws and remove the cover.

79. REMOVE NO. 2 SIDE TRIM BASE COVER RH (w/ Rear Heater)

HINT:

Use the same procedures described for the LH side.

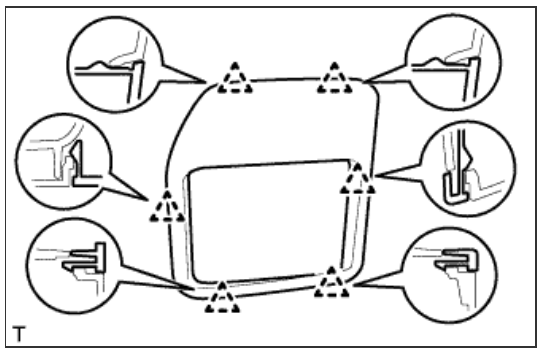
80. REMOVE REAR SEAT LOCK CONTROL LEVER SUB-ASSEMBLY LH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Detach the 4 claws and remove the seat lock control lever.



81. REMOVE REAR SEAT LOCK CONTROL LEVER SUB-ASSEMBLY RH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

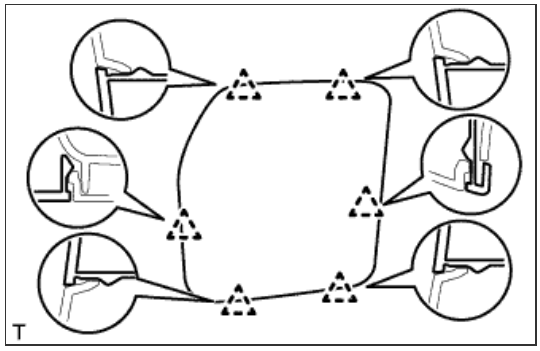
82. REMOVE REAR NO. 2 SEAT COVER BEZEL (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Detach the 6 clips and remove the rear No. 2 seat cover bezel.



83. REMOVE REAR NO. 1 SEAT COVER BEZEL (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the rear No. 2 seat cover bezel.

84. REMOVE QUARTER TRIM COVER LH (w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat Type)

a. Detach the 6 clips and remove the uarter trim cover.

85. REMOVE QUARTER TRIM COVER RH (w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

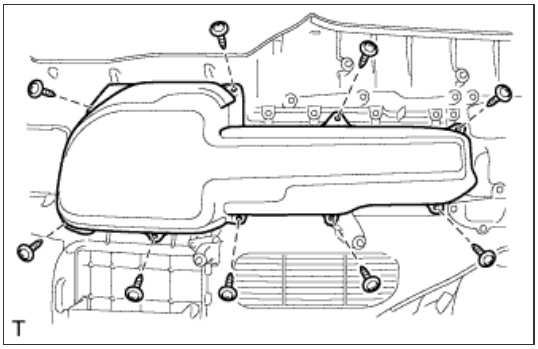
86. REMOVE QUARTER TRIM LID SUB-ASSEMBLY RH



a. Remove the uarter trim lid.

87. REMOVE SIDE TRIM BOX COVER

a. Remove the side trim box cover.

88. REMOVE SIDE TRIM BOX

a. Remove the 9 screws and side trim box.

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE TONNEAU COVER ASSEMBLY (w/ Tonneau Cover)

a. Remove the tonneau cover.

3. REMOVE REAR NO. 2 SEAT ASSEMBLY LH (except Face to Face Seat Type)

a. Remove the rear No. 2 seat assembly LH (Click here).

4. REMOVE REAR NO. 2 SEAT ASSEMBLY RH (except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

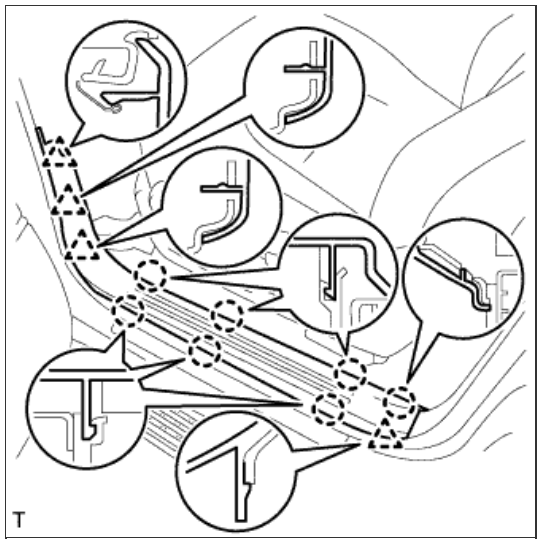
5. REMOVE REAR NO. 2 SEAT ASSEMBLY LH (for Face to Face Seat Type)

a. Remove the rear No. 2 seat assembly LH (Click here).



6. REMOVE REAR NO. 2 SEAT ASSEMBLY RH (for Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

7. REMOVE FRONT DOOR SCUFF PLATE LH

a. Detach the 7 claws and 4 clips, and remove the scuff plate.

8. REMOVE FRONT DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

9. REMOVE REAR STEP COVER

HINT:

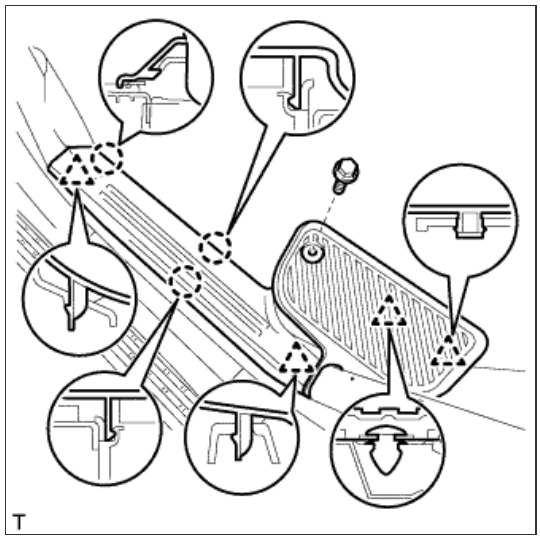
Use the same procedure to remove the step cover on the other side.

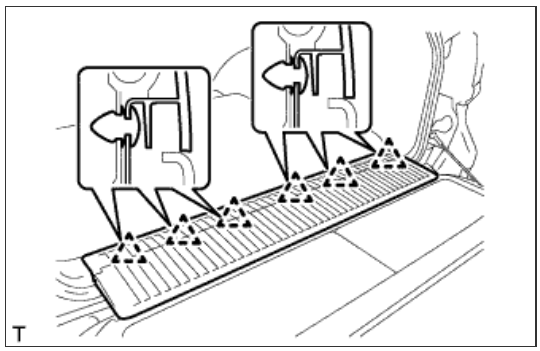


a. Detach the 2 claws and remove the step cover.

10. REMOVE REAR DOOR SCUFF PLATE LH

a. Remove the screw.

b. Detach the 3 claws and 4 clips, and remove the scuff plate.



11. REMOVE REAR DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

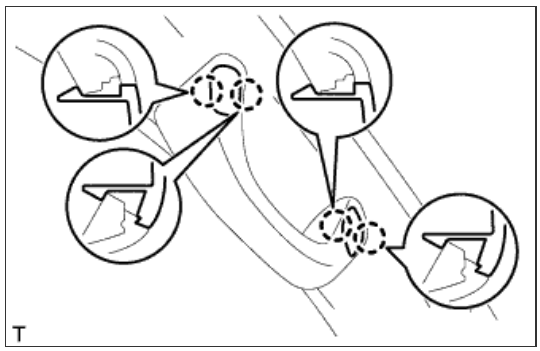
12. REMOVE REAR FLOOR MAT REAR SUPPORT PLATE

a. Detach the 6 clips and remove the support plate.



13. REMOVE FRONT ASSIST GRIP SUB-ASSEMBLY

HINT:

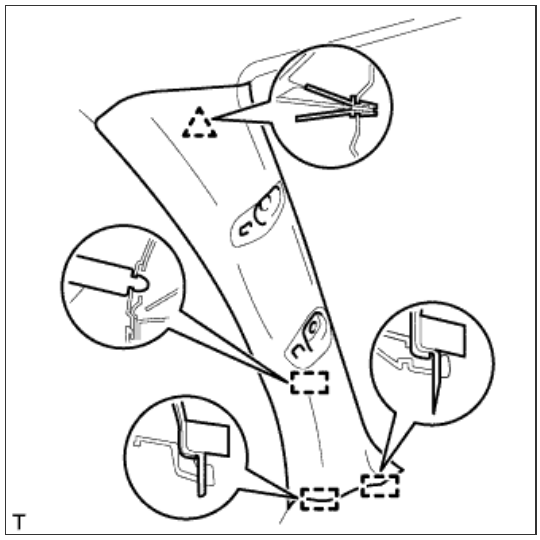
Use the same procedure to remove the front assist grip on the other side.

a. Detach the 4 claws and remove the 2 assist grip plugs.

b. Remove the 2 bolts.

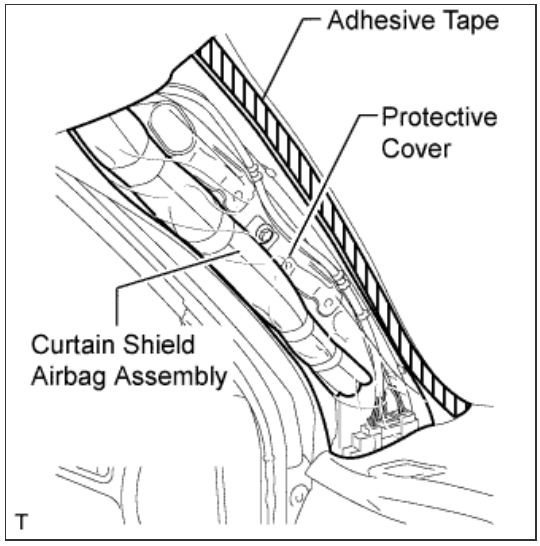


c. Detach the 2 claws and remove the front assist grip.

14. REMOVE FRONT PILLAR GARNISH LH

a. Detach the clip and 3 guides, and remove the front pillar garnish.

b. for 9, 14 Speakers:
Disconnect the speaker connector and then remove the front pillar garnish.



c. Protect the curtain shield airbag.

i. horoughly cover the airbag with a cloth or nylon sheet and fix the ends of the cover with adhesive tape, as shown in the illustration.

NOTICE:

Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish is removed.

15. REMOVE FRONT PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

16. REMOVE CENTER PILLAR GARNISH COVER LH

HINT:

- **for Manual Seat:**
  hen removing the center pillar garnish cover, move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  hen removing the center pillar garnish cover, connect the cable to the negative (-) battery terminal and operate the power seat switch to move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  After moving the front seat, disconnect the cable from the negative (-) battery terminal.

a. Detach the 2 clips and 2 guides, and remove the cover.

17. REMOVE CENTER PILLAR GARNISH COVER RH

HINT:

Use the same procedures described for the LH side.

18. REMOVE CENTER LO ER PILLAR GARNISH LH

HINT:

- **for Manual Seat:**
  hen removing the center lower pillar garnish, move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  hen removing the center lower pillar garnish, connect the cable to the negative (-) battery terminal and operate the power seat switch to move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  After moving the front seat, disconnect the cable from the negative (-) battery terminal.

a. Remove the bolt and seat belt anchor.

b. Detach the 2 claws and 7 clips, and remove the center lower pillar garnish.

19. REMOVE CENTER LO ER PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

20. REMOVE REAR ASSIST GRIP ASSEMBLY

HINT:

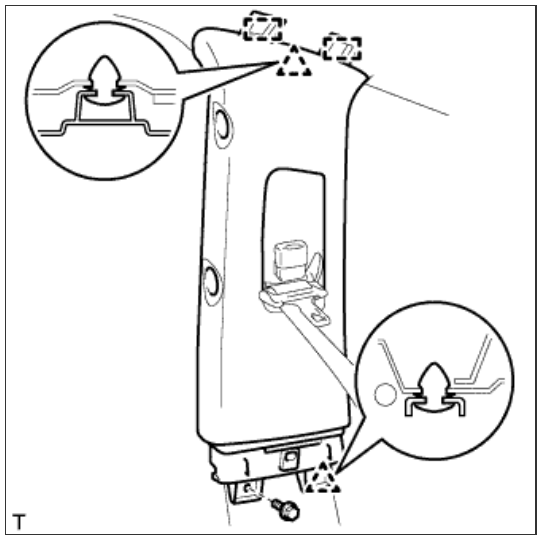
Use the same procedure to remove the rear assist grip on the other side.

a. Detach the 4 claws and remove the 2 assist grip plugs.

b. Remove the 2 bolts.

c. Detach the 2 claws and remove the rear assist grip.



21. REMOVE CENTER PILLAR GARNISH LH

a. Remove the bolt.

b. Detach the 2 clips and 2 guides.

c. Pass the seat belt anchor through the center pillar garnish, and remove the center pillar garnish.

22. REMOVE CENTER PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

23. REMOVE NO. 1 TONNEAU COVER HOLDER CAP (w/ Tonneau Cover)

HINT:

Use the same procedure to remove the tonneau cover holder cap on the other side.

a. Detach the 2 claws and remove the tonneau cover holder cap.

24. REMOVE REAR SEAT COVER CAP (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedure to remove the rear seat cover cap on the other side.

a. Using a screwdriver, detach the 3 claws and remove the rear seat cover cap.

HINT:

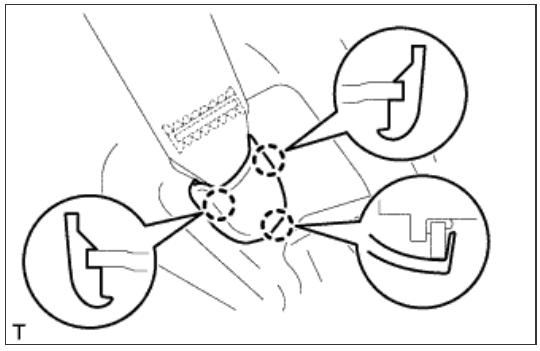
ape the screwdriver tip before use.



25. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY LH

HINT:

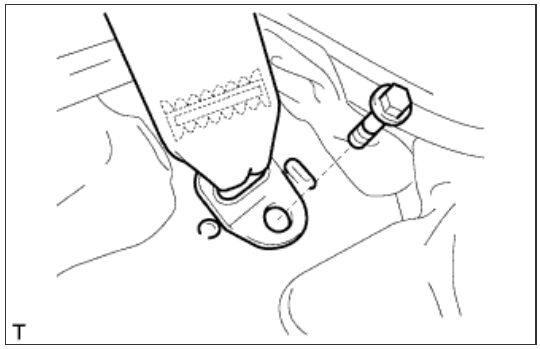
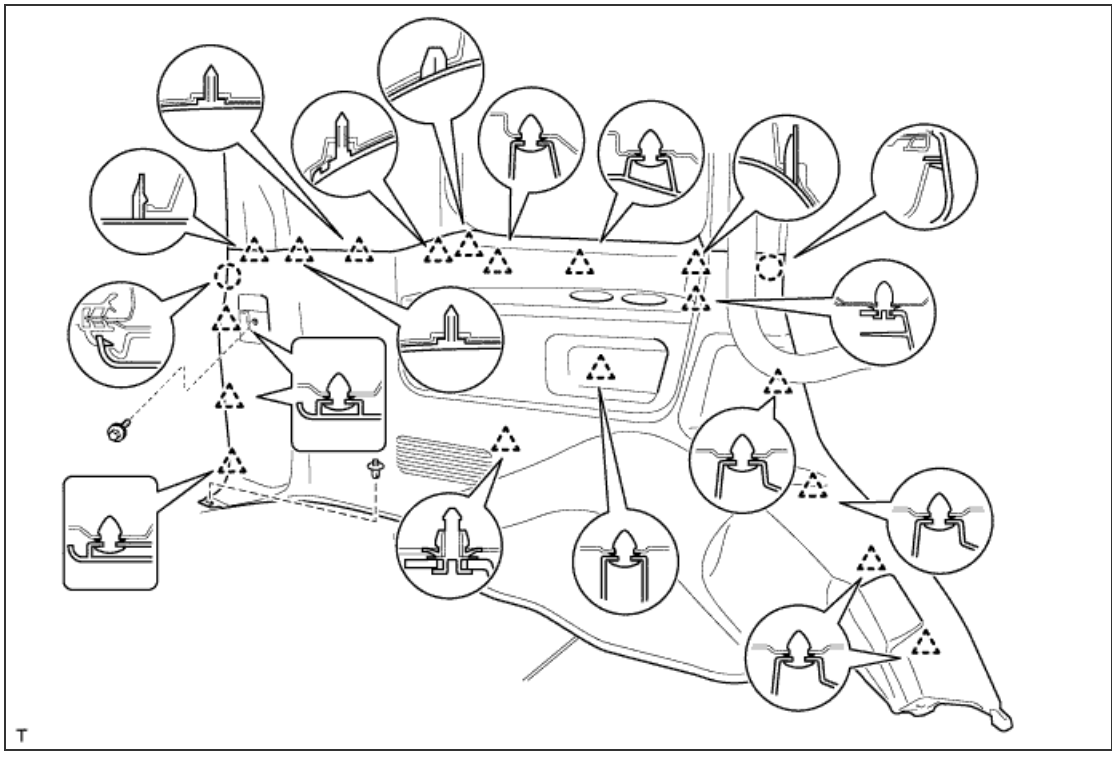
When removing the front uarter trim panel, operate the reclining adjuster release handle and move the No. 1 rear seat to the position shown in the illustration.



a. Detach the 3 claws and remove the cover.

b. Remove the bolt and rear No. 1 seat belt anchor.

c. w/ Rear No. 2 Seat, except Face to Face Seat ype:
Remove the bolt and rear No. 2 seat belt anchor.

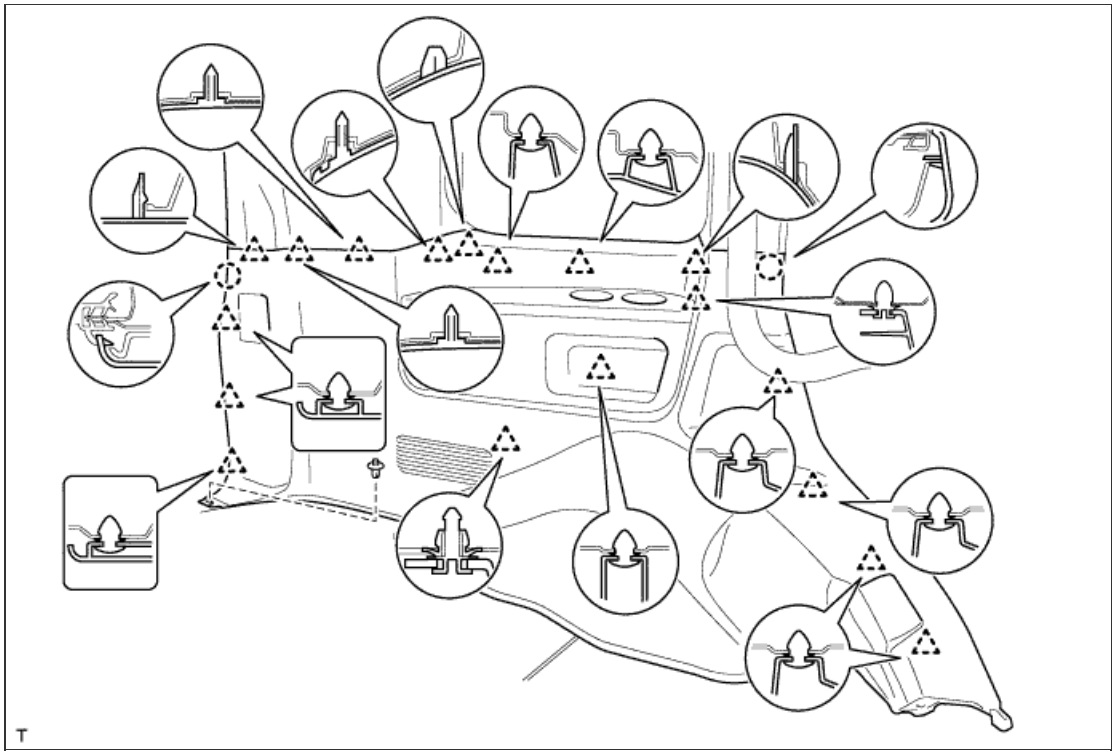


d. w/ Rear No. 2 Seat, except Face to Face Seat ype:

i. Remove the clip and bolt.

ii. Detach the 18 clips and 2 claws.

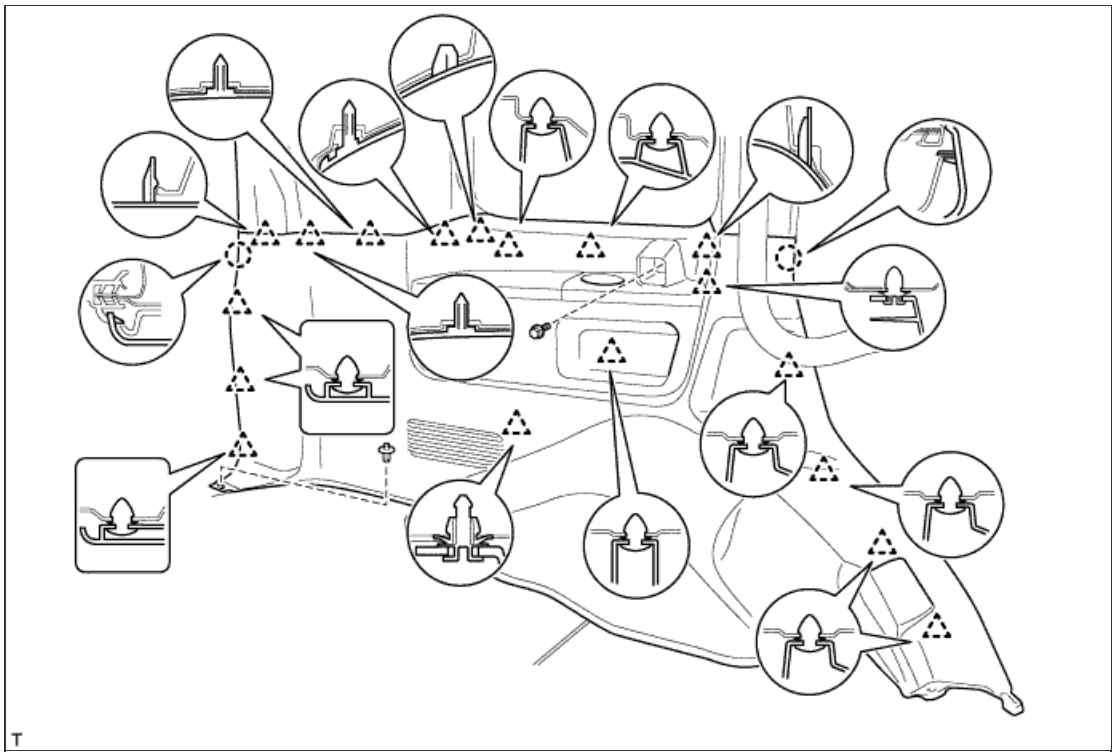
iii. w/o Rear Air Conditioning System:
Disconnect the rear seat lock control lever cable and then remove the uarter trim panel.



iv. w/ Rear Air Conditioning System:
Disconnect the thermistor connector and rear seat lock control lever cable, and then remove the uarter trim panel.

e. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat ype:

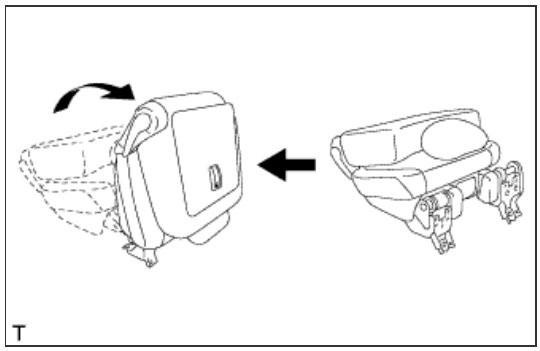
i. Remove the clip.



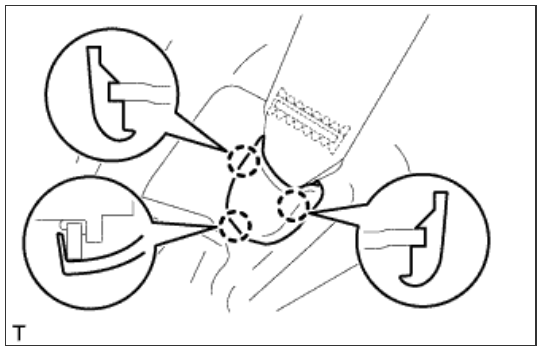
ii. Detach the 18 clips and 2 claws, and remove the uarter trim panel.

f. w/ onneau Cover:

i. Remove the screw and clip.



ii. Detach the 18 clips and 2 claws, and remove the uarter trim panel.



26. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY RH

HINT:

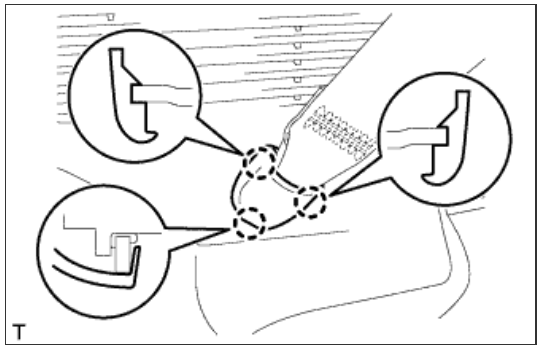
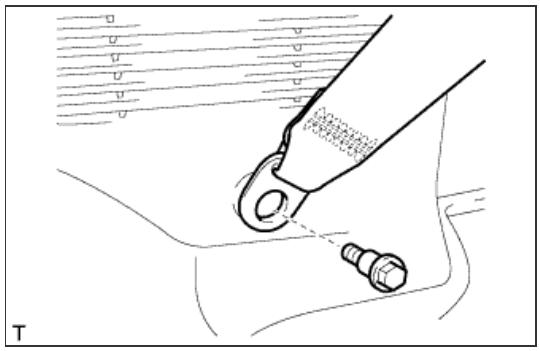
When removing the front uarter trim panel, operate the reclining adjuster release handle and move the No. 1 rear seat to the position shown in the illustration.

a. Detach the 3 claws and remove the cover.



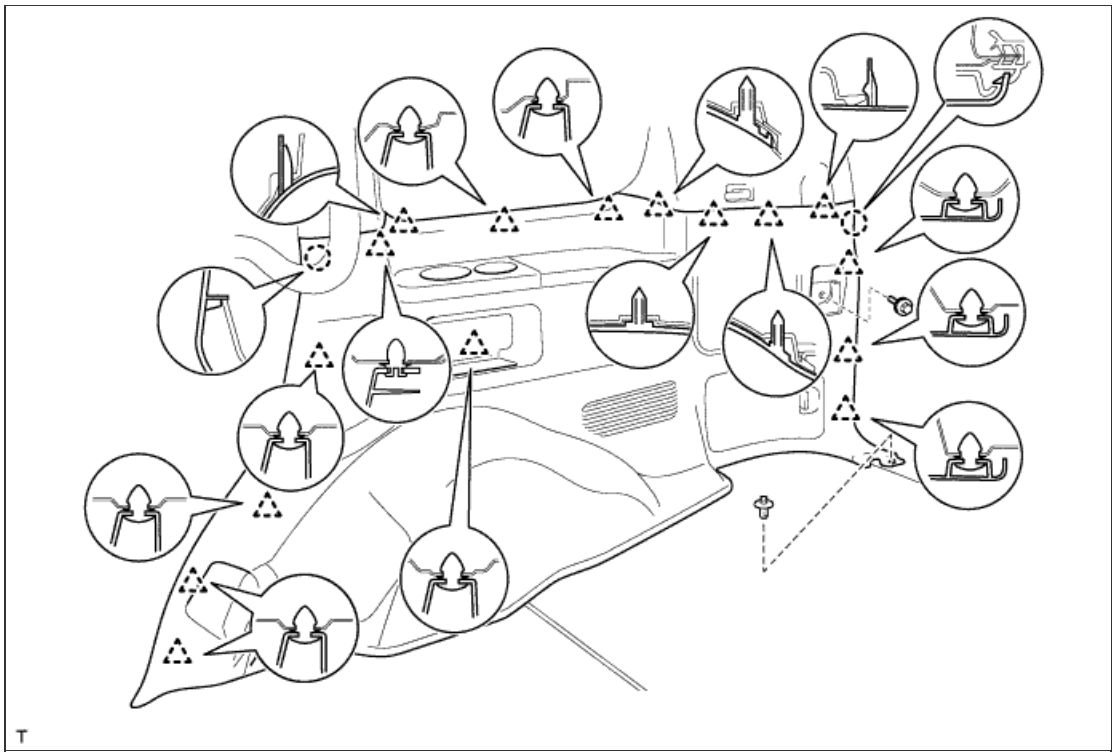
b. Remove the bolt and rear No. 1 seat belt anchor.



c. w/ Rear No. 2 Seat, except Face to Face Seat ype:

i. Detach the 3 claws and remove the cover.

ii. Remove the bolt and rear No. 2 seat belt anchor.

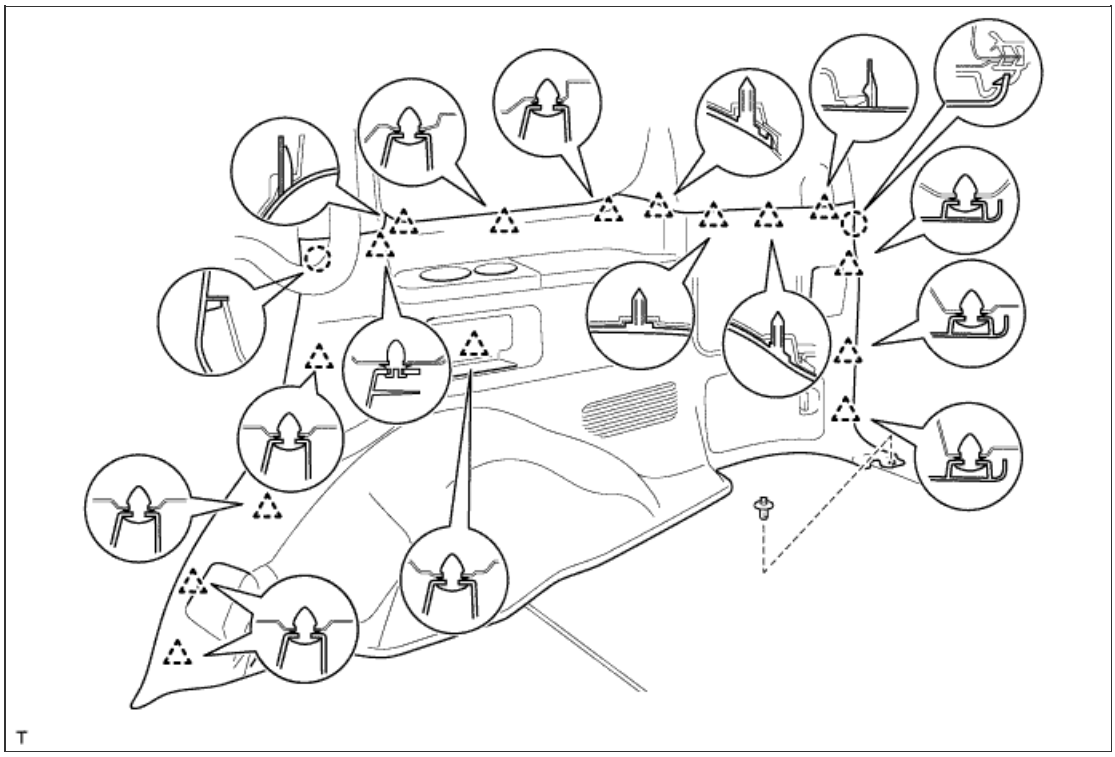


d. w/ Rear No. 2 Seat, except Face to Face Seat ype:

i. Remove the clip and bolt.

ii. Detach the 16 clips and 2 claws.

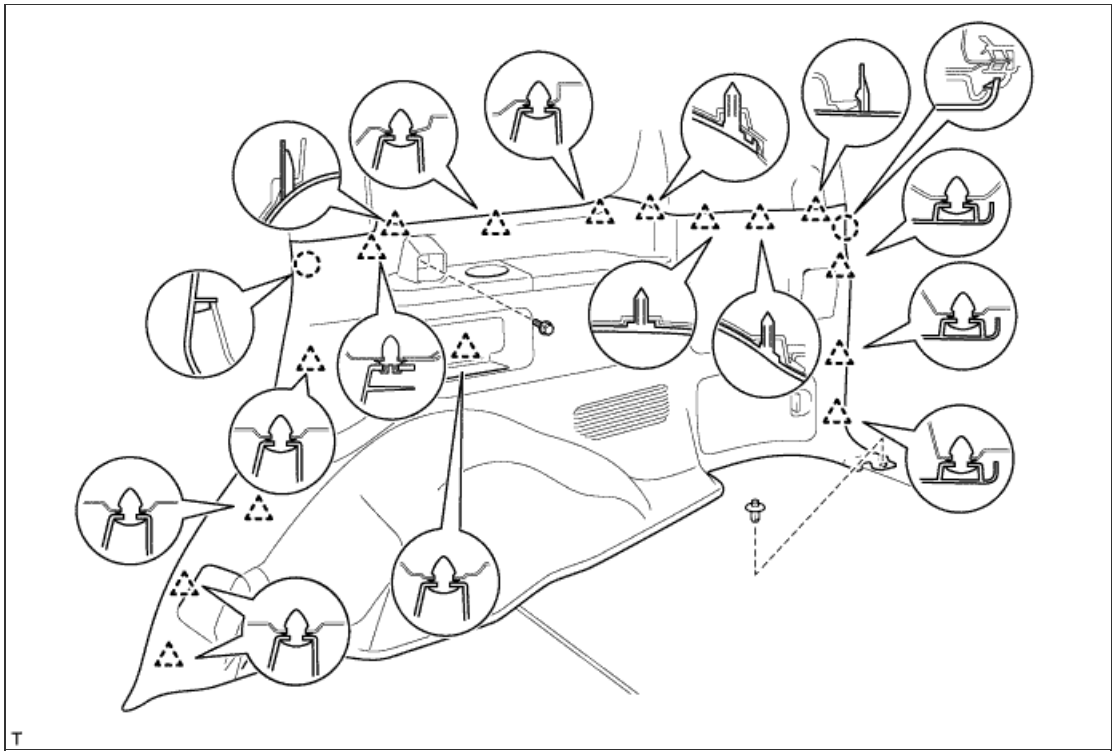
iii. w/o Rear Air Conditioning System:
Disconnect the rear seat lock control lever cable and then remove the uarter trim panel.



iv. w/ Rear Air Conditioning System:
Disconnect the thermistor connector and rear seat lock control lever cable, and then remove the uarter trim panel.

e. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat ype:

i. Remove the clip.

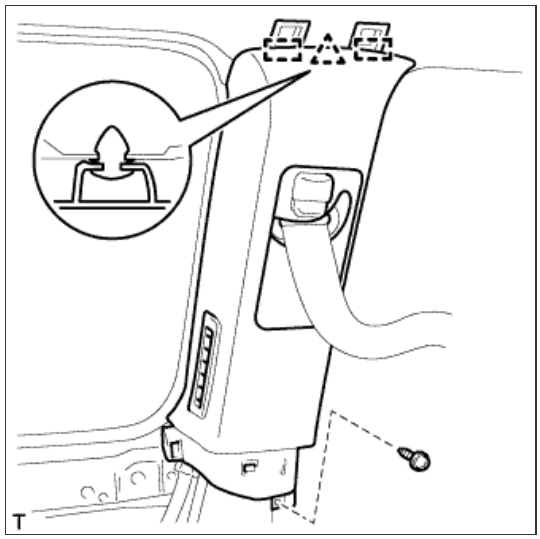


ii. Detach the 16 clips and 2 claws, and remove the uarter trim panel.

f. w/ onneau Cover:

i. Remove the screw and clip.

ii. Detach the 16 clips and 2 claws, and remove the uarter trim panel.



27. REMOVE REAR FRONT QUARTER TRIM GARNISH LH

a. Remove the screw.

b. Detach the clip and 2 guides.

c. Pass the seat belt anchor through the uarter trim garnish, and remove the uarter trim garnish.

28. REMOVE REAR FRONT QUARTER TRIM GARNISH RH

HINT:

Use the same procedures described for the LH side.

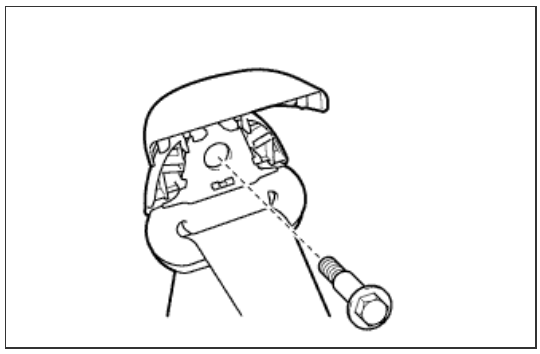
29. REMOVE REAR UPPER PILLAR GARNISH LH

a. w/ Rear No. 2 Seat, except Face to Face Seat ype:



i. Using a screwdriver, detach the 2 claws and open the seat belt shoulder anchor cover.

HINT:

ape the screwdriver tip before use.

ii. Remove the bolt and seat belt shoulder anchor.

b. Detach the 5 clips and remove the rear upper pillar garnish.

30. REMOVE REAR UPPER PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

31. REMOVE MAP LIGHT ASSEMBLY (w/ Map Light)

a. Using a screwdriver, detach the 2 claws and open the 2 covers.

HINT:

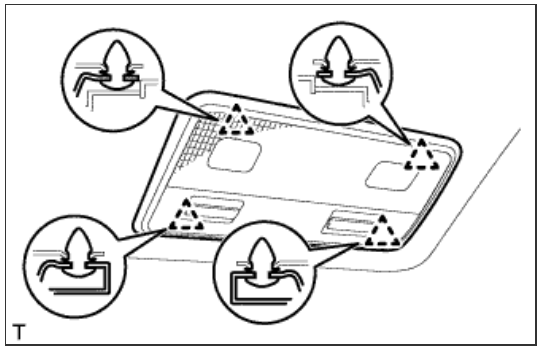
ape the screwdriver tip before use.

b. Remove the 2 screws.

c. Detach the 2 clips and 2 guides.

d. Disconnect the connector and then remove the map light.

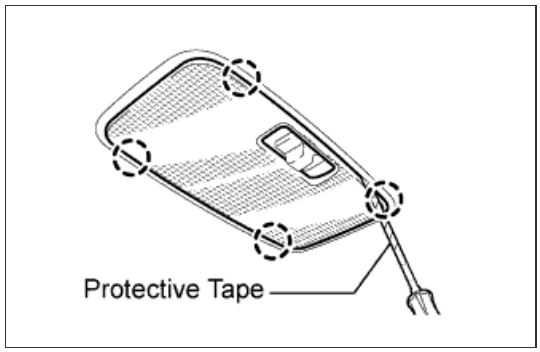


32. REMOVE NO. 1 ROOM LIGHT ASSEMBLY

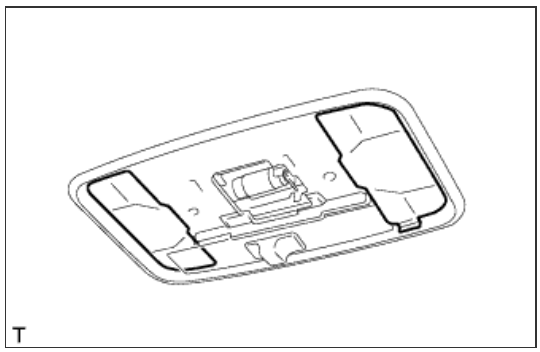
a. w/ ap Light:
Remove the No. 1 room light assembly.

i. Detach the 4 clips.

ii. Disconnect the connector and then remove the room light.



b. w/o ap Light:
Remove the No. 1 room light assembly.



i. Using a screwdriver, detach the 4 claws and remove the room light lens.

HINT:

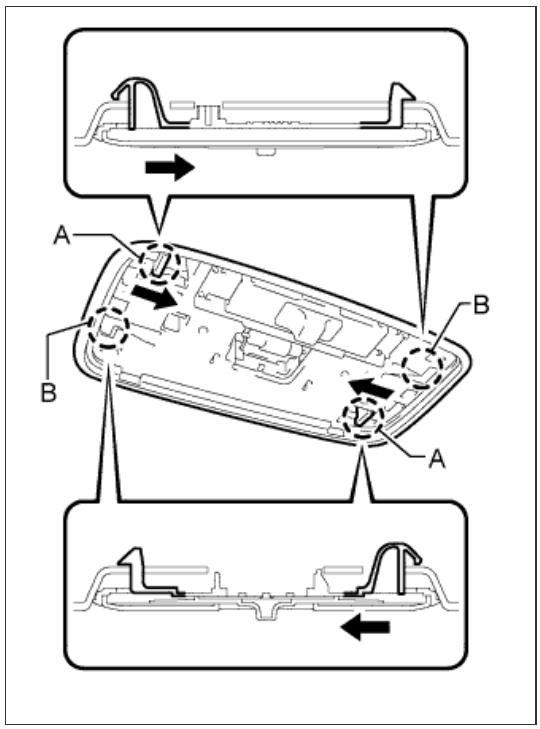
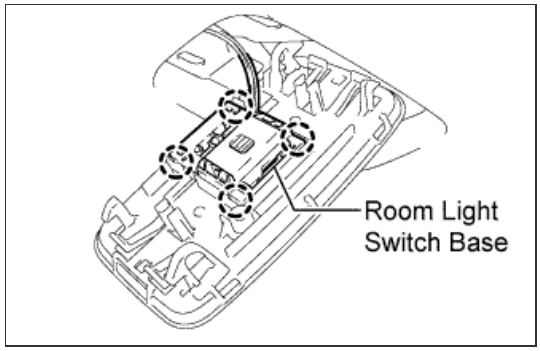
ape the screwdriver tip before use.



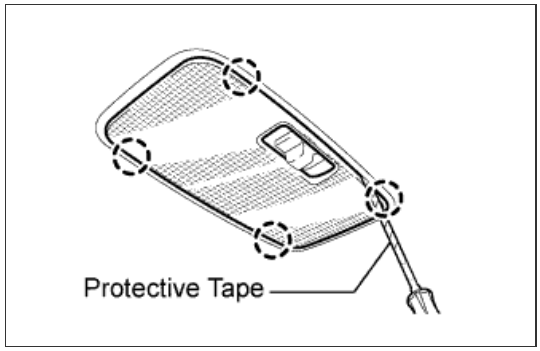
ii. Remove the 2 covers.



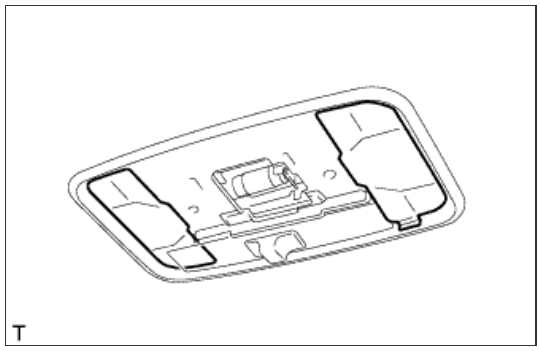
iii. Using a screwdriver, push the 2 levers in the direction of the arrows in the illustration, and detach the 2 claws labeled A.

iv. Detach the 2 claws labeled B.

v. Detach the 4 claws and remove the room light from the room light switch base.



33. REMOVE NO. 2 ROOM LIGHT ASSEMBLY



a. Using a screwdriver, detach the 4 claws and remove the room light lens.

HINT:

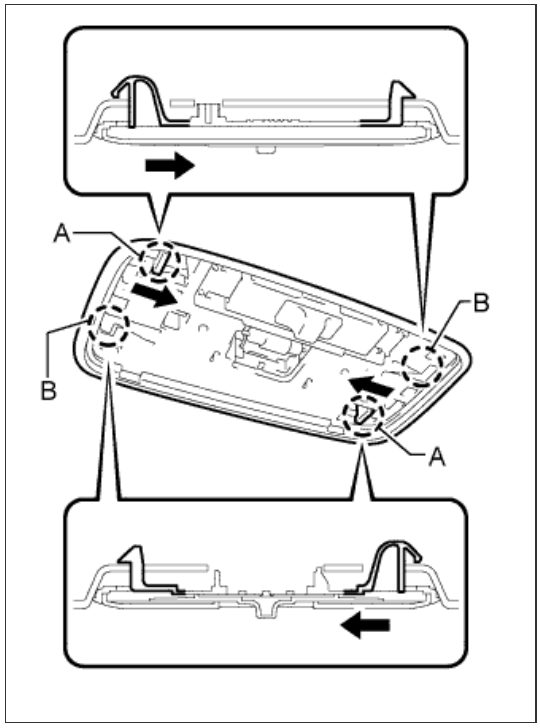
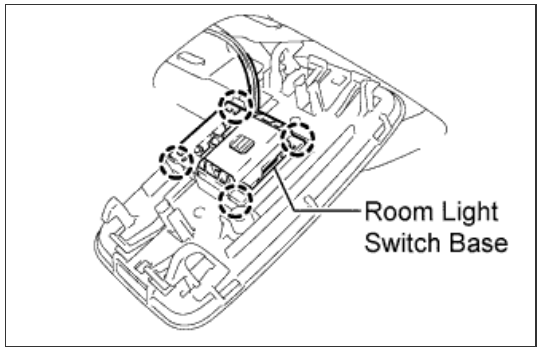
ape the screwdriver tip before use.



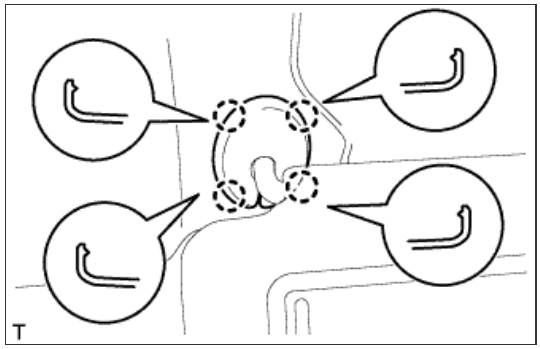
b. Remove the 2 covers.



c. Using a screwdriver, push the 2 levers in the direction of the arrows in the illustration, and detach the 2 claws labeled A.

d. Detach the 2 claws labeled B.

e. Detach the 4 claws and remove the room light from the room light switch base.



34. REMOVE VISOR BRACKET COVER

HINT:

Use the same procedure to remove the visor bracket cover on the other side.

a. Detach the 4 claws and remove the visor bracket cover.

35. REMOVE VISOR ASSEMBLY LH

a. Remove the 2 screws and visor.

36. REMOVE VISOR ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

37. REMOVE VISOR HOLDER

HINT:

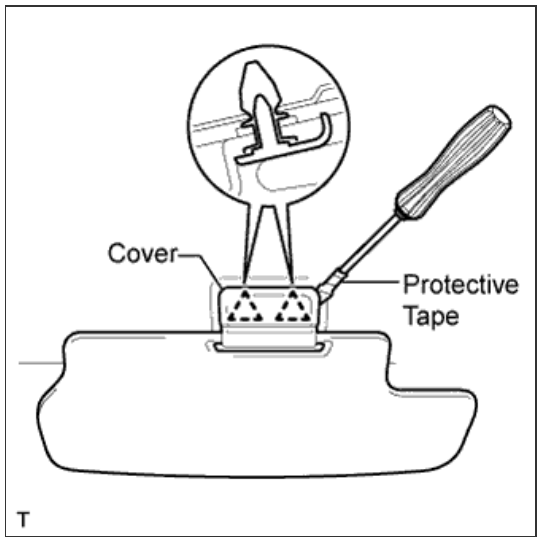
Use the same procedure to remove the visor holder on the other side.

a. urn the visor holder approximately 45° and pull it out as shown in the illustration.

b. Detach the 2 claws and remove the visor holder.



38. REMOVE CENTER VISOR ASSEMBLY LH (w/ Sub Visor)

a. Using a screwdriver, pry off the cover to detach the 2 clips and remove the center visor.

HINT:

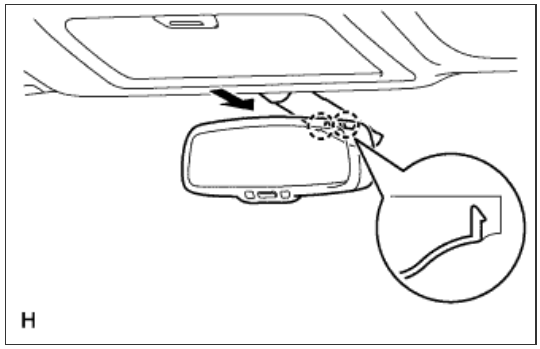
ape the screwdriver tip before use.



39. REMOVE CENTER VISOR ASSEMBLY RH (w/ Sub Visor)

HINT:

Use the same procedures described for the LH side.

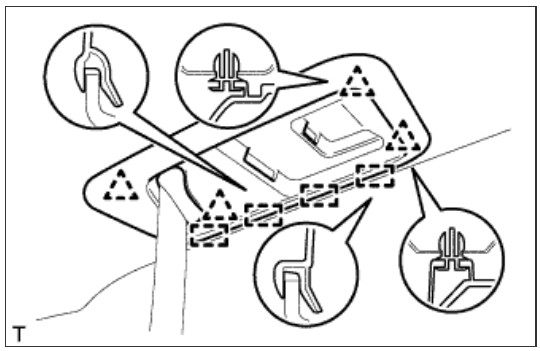
40. REMOVE INNER REAR VIE MIRROR STAY HOLDER COVER (w/ EC Mirror)

a. Detach the 2 claws and remove the cover as shown in the illustration.

41. REMOVE RAIN SENSOR COVER (w/ Rain Sensor)



a. Slide the No. 2 cover in the direction of the arrow labeled (1).

b. Pull the stopper in the direction of the arrow labeled (2) to remove the No. 2 cover.

42. REMOVE SEAT BELT ANCHOR COVER (for 3 Person Seat Type Rear No. 2 Seat)

a. Detach the 4 clips and 4 guides, and remove the seat belt anchor cover.

43. REMOVE ASSIST GRIP ASSEMBLY

HINT:

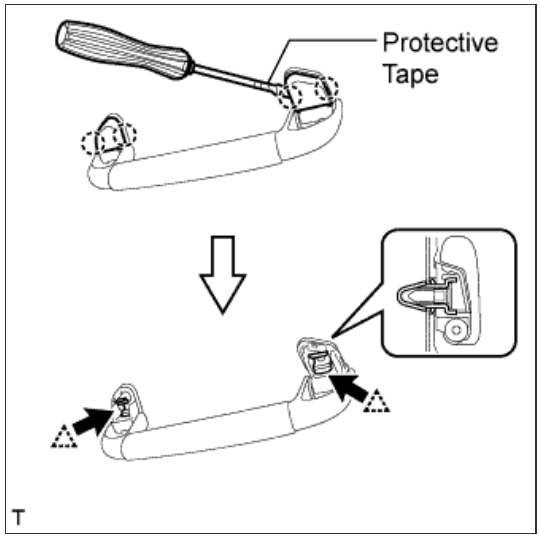
Use the same procedure to remove the assist grip on the other side.



a. Using a screwdriver, detach the 4 claws and remove the 2 assist grip covers.

HINT:

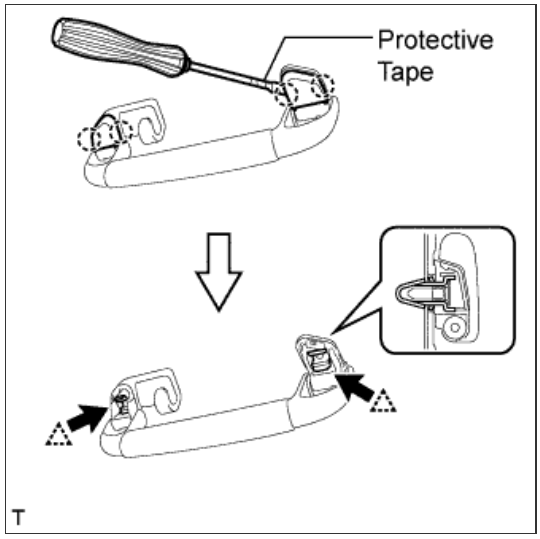
ape the screwdriver tip before use.

b. Detach the 2 clips and remove the assist grip.

c. Remove the 2 clips from the vehicle body.

44. REMOVE NO. 2 ASSIST GRIP ASSEMBLY LH

a. w/ Rear No. 2 Seat, except Face to Face Seat ype or w/o Rear No. 2 Seat:
Remove the No. 2 assist grip assembly.



i. Using a screwdriver, detach the 4 claws and remove the 2 assist grip covers.

HINT:

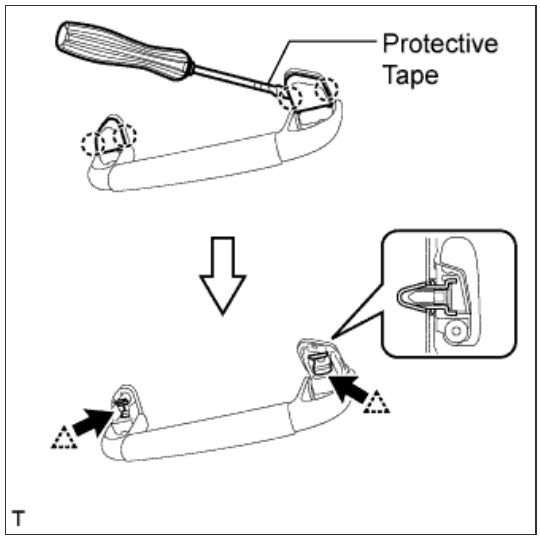
ape the screwdriver tip before use.

ii. Detach the 2 clips and remove the assist grip.

iii. Remove the 2 clips from the vehicle body.

b. w/ Rear No. 2 Seat, for Face to Face Seat ype:
Remove the No. 2 assist grip assembly.



i. Using a screwdriver, detach the 4 claws and remove the 2 assist grip covers.

HINT:

ape the screwdriver tip before use.

ii. Detach the 2 clips and remove the assist grip.

iii. Remove the 2 clips from the vehicle body.

45. REMOVE NO. 2 ASSIST GRIP ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

46. REMOVE 3RD SEAT ASSIST GRIP ASSEMBLY (w/ Rear No. 2 Seat except Face to Face Seat Type)

HINT:

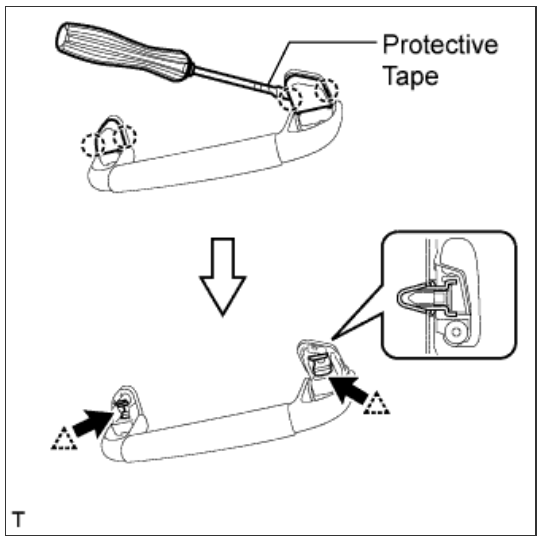
Use the same procedure to remove the 3rd seat assist grip on the other side.



a. Using a screwdriver, detach the 4 claws and remove the 2 assist grip covers.

HINT:

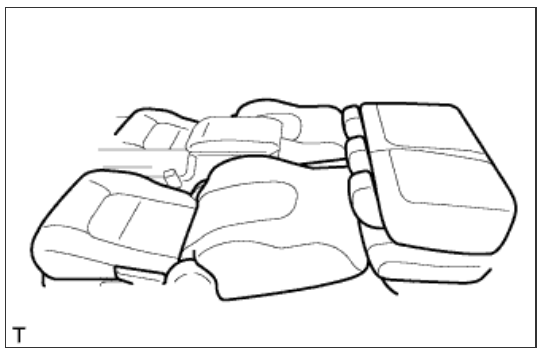
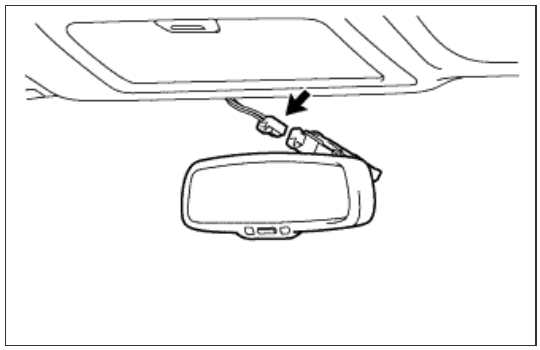
ape the screwdriver tip before use.

b. Detach the 2 clips and remove the assist grip.



c. Remove the 2 clips from the vehicle body.



47. REMOVE ROOF HEADLINING ASSEMBLY

HINT:

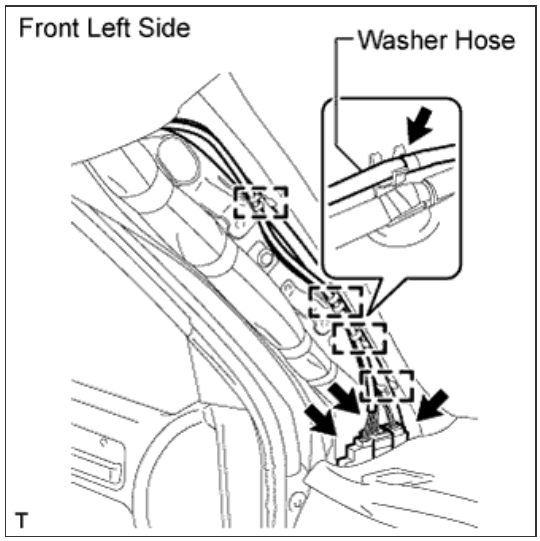
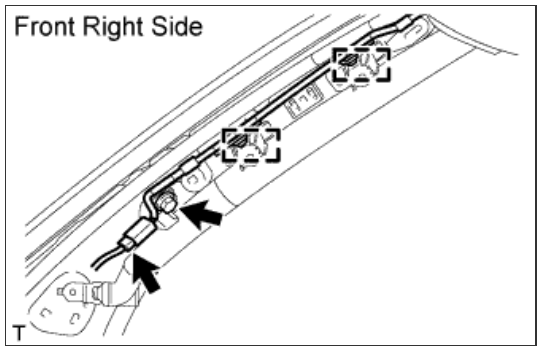
- **for Manual Seat:**
  hen removing the roof headlining, move the front seat and rear No. 1 seat to the position shown in the illustration.
- **for Power Seat:**
  hen removing the roof headlining, connect the cable to the negative (-) battery terminal and move the front seat and No. 1 rear seat to the position shown in the illustration.
- **for Power Seat:**
  After moving the seats, disconnect the cable from the negative (-) battery terminal.

a. w/ EC Mirror:
Disconnect the inner mirror connector.



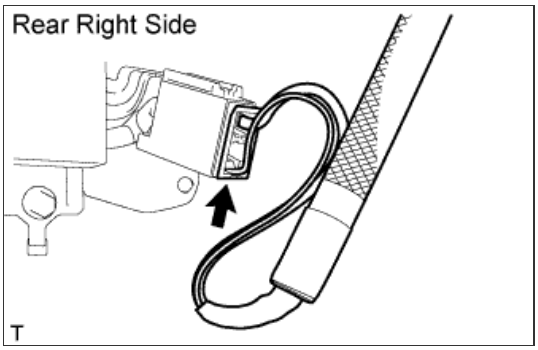
b. w/ Rain Sensor:
Disconnect the rain sensor connector.

c. Disconnect the 3 roof wire connectors.

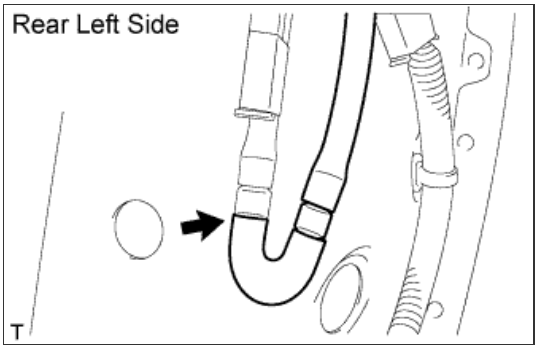


i. w/ Rear Wiper:
Disconnect the washer hose.

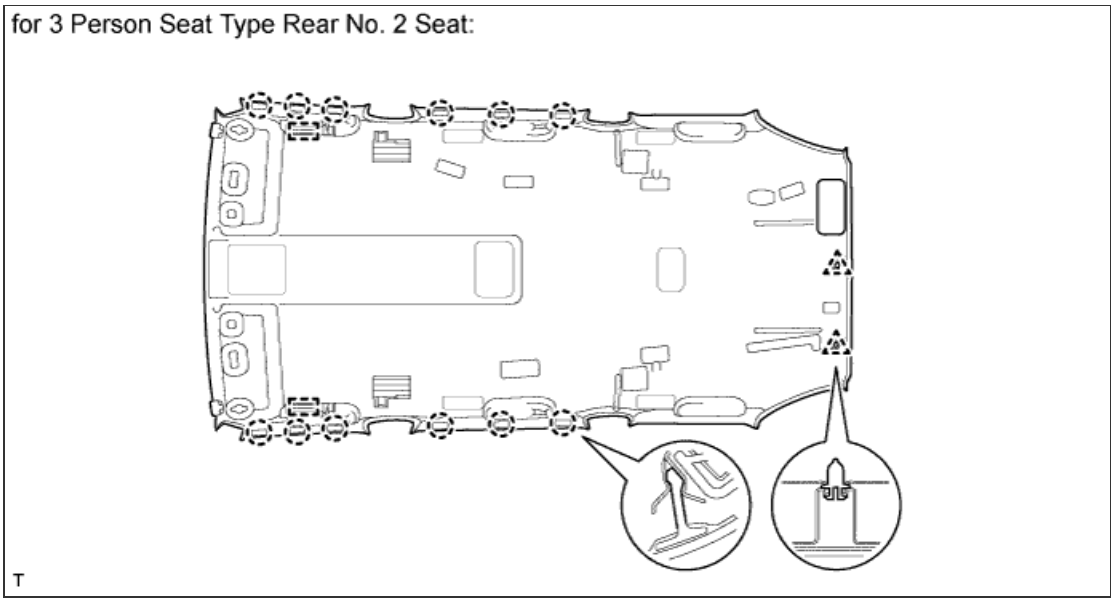
d. Detach the 4 clamps.



e. Remove the bolt.

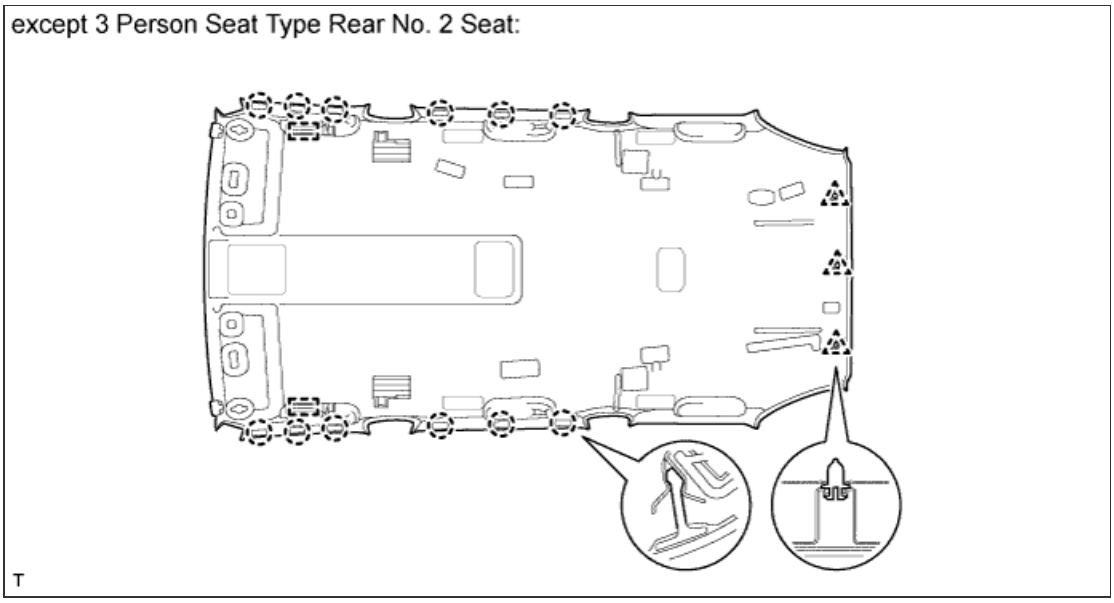


f. Disconnect the antenna cord connector and detach the 2 clamps.

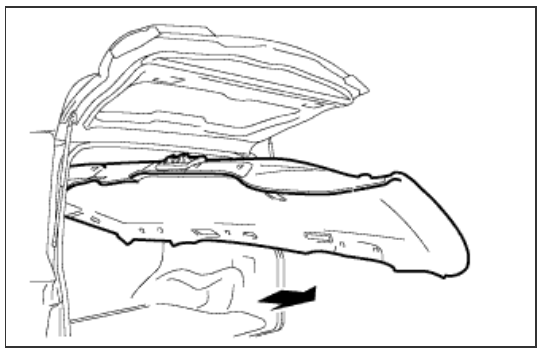


g. Disconnect the antenna cord connector.

h. w/ Rear Wiper:
Disconnect the washer hose.



i. for 3 Person Seat ype Rear No. 2 Seat:
Detach the 12 claws, 2 clips and 2 guides.



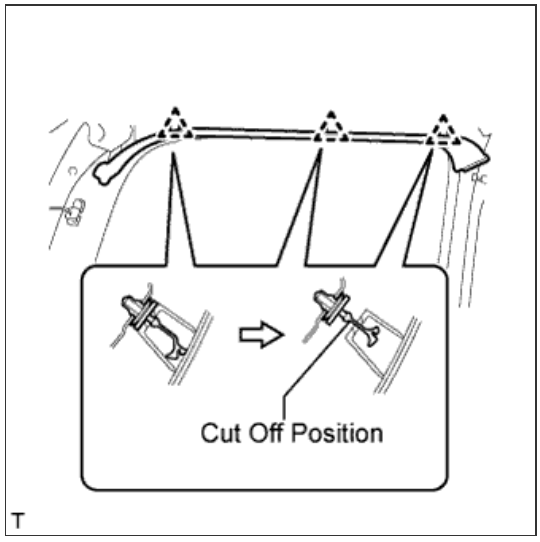
j. except 3 Person Seat ype Rear No. 2 Seat:
Detach the 12 claws, 3 clips and 2 guides.

except 3 Person Seat Type Rear No. 2 Seat:

T

k. Remove the headlining from the rear of the vehicle as shown in the illustration.

NOTICE:



Be careful not to damage the roof headlining when taking it out.

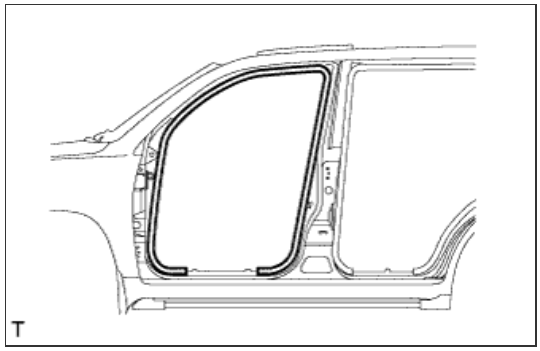
48. REMOVE FRONT ROOF SIDE RAIL GARNISH LH

a. Detach the 3 clips.

b. Cut off the 3 clips and remove the roof side rail garnish.

c. Remove 3 clips from the vehicle body.

T



49. REMOVE FRONT ROOF SIDE RAIL GARNISH RH

HINT:

Use the same procedures described for the LH side.

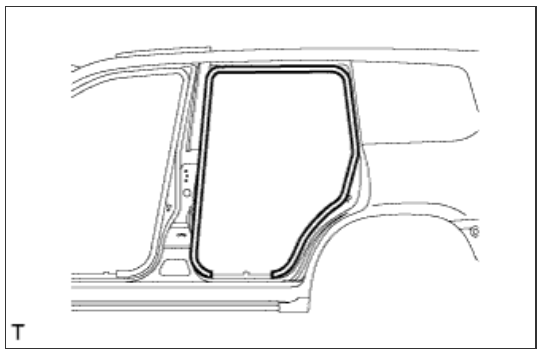
50. REMOVE FRONT DOOR OPENING TRIM EATHERSTRIP LH

a. Remove the front door opening trim weatherstrip.



51. REMOVE FRONT DOOR OPENING TRIM EATHERSTRIP RH

HINT:

Use the same procedures described for the LH side.

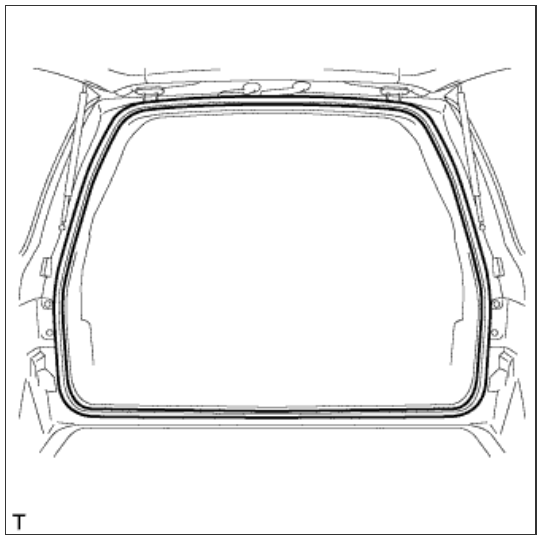
52. REMOVE REAR DOOR OPENING TRIM EATHERSTRIP LH

a. Remove the rear door opening trim weatherstrip.



53. REMOVE REAR DOOR OPENING TRIM EATHERSTRIP RH

HINT:

Use the same procedures described for the LH side.

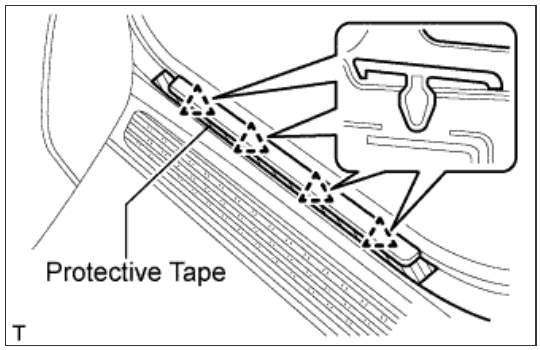
54. REMOVE BACK DOOR EATHERSTRIP



a. Remove the back door weatherstrip.

55. REMOVE FRONT DOOR SCUFF PLATE OUTSIDE LH

a. Put protective tape around the front door scuff plate outside.

b. Detach the 4 clips and remove the front door scuff plate outside.

56. REMOVE FRONT DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

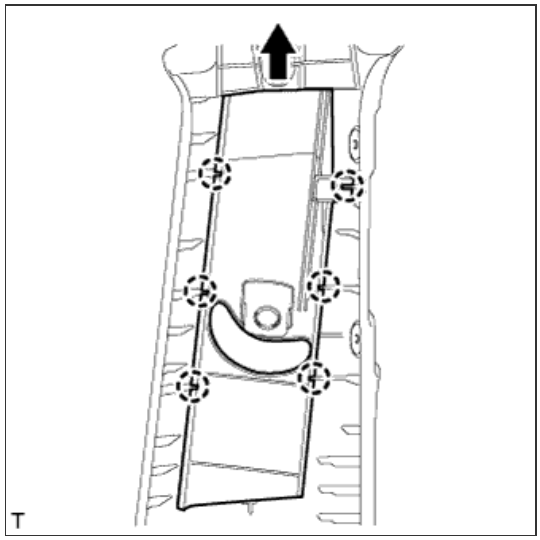
57. REMOVE REAR DOOR SCUFF PLATE OUTSIDE LH

a. Put protective tape around the rear door scuff plate outside.

b. Detach the 3 clips and remove the rear door scuff plate outside.



58. REMOVE REAR DOOR SCUFF PLATE OUTSIDE RH

HINT:

Use the same procedures described for the LH side.

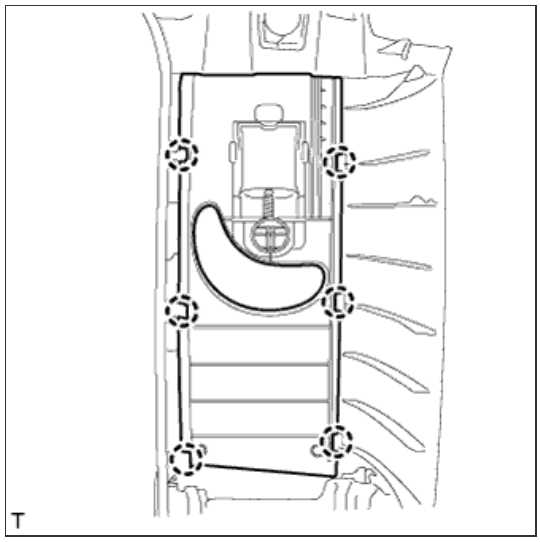
59. REMOVE FRONT SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY LH

a. Detach the 6 claws of the plate, and slide the plate in the direction of the arrow to remove it.



60. REMOVE FRONT SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

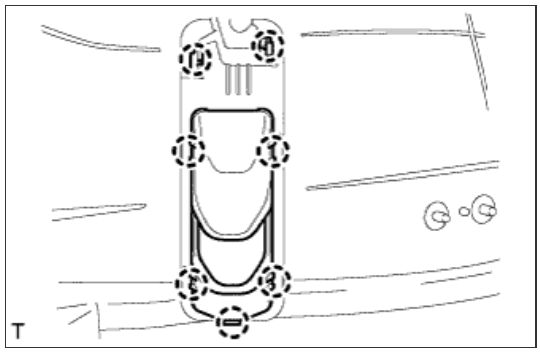
61. REMOVE REAR SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY LH

a. Detach the 6 claws and remove the plate.



62. REMOVE REAR SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

63. REMOVE ROOF SIDE INNER GARNISH COVER LH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Detach the 7 claws and remove the cover.

64. REMOVE ROOF SIDE INNER GARNISH COVER RH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

65. REMOVE REAR SEAT SHOULDER BELT HANGER (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

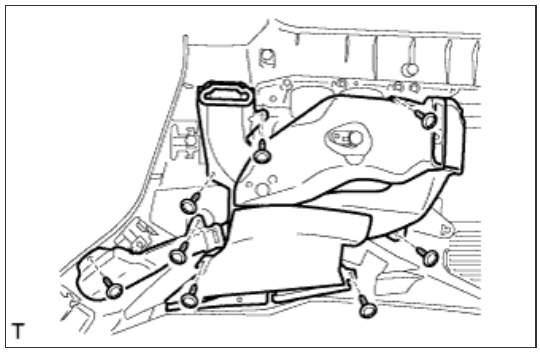
Use the same procedure to remove the hanger on the other side.

a. Remove the 2 spring nuts and hanger.

66. REMOVE REAR NO. 2 SEAT SHOULDER BELT HANGER LH

a. Remove the 2 spring nuts and hanger.



67. REMOVE REAR NO. 2 SEAT SHOULDER BELT HANGER RH

HINT:

Use the same procedures described for the LH side.

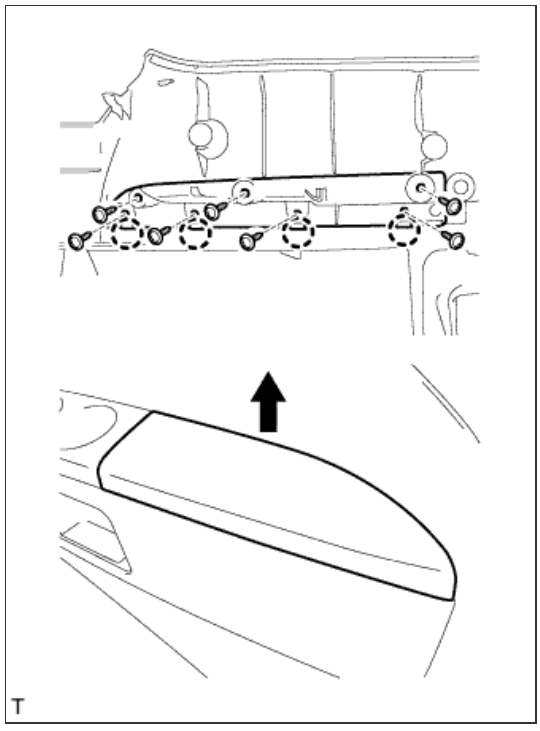
68. REMOVE QUARTER TRIM COVER SUB-ASSEMBLY LH

a. w/ Rear Heater:
Remove the 8 screws and duct.

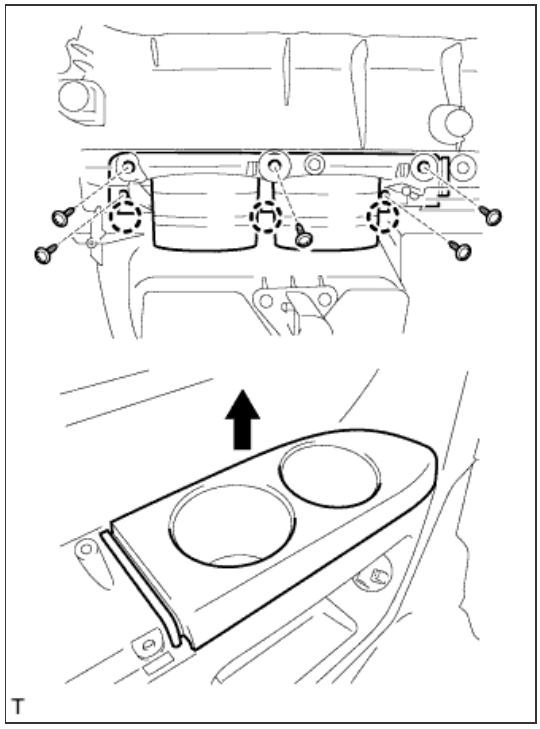
b. Remove the 7 screws.



c. Detach the 4 claws and remove the uarter trim cover.

69. REMOVE QUARTER TRIM COVER SUB-ASSEMBLY RH

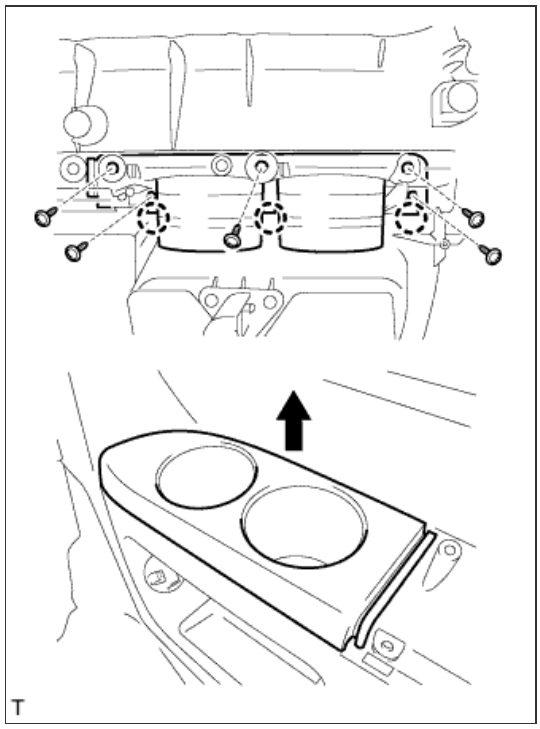
a. Remove the 7 screws.



b. Detach the 4 claws and remove the uarter trim cover.

70. REMOVE NO. 2 CUP HOLDER

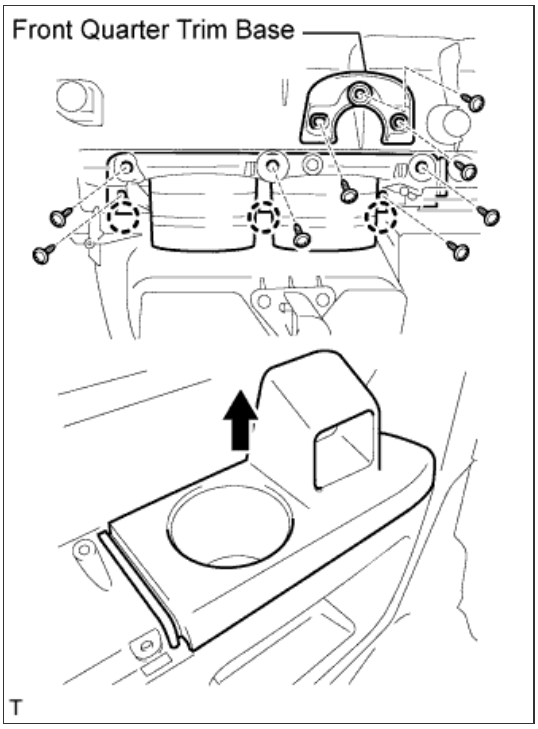
a. Remove the 5 screws.



b. Detach the 3 claws and remove the cup holder.

71. REMOVE NO. 1 CUP HOLDER

a. Remove the 5 screws.

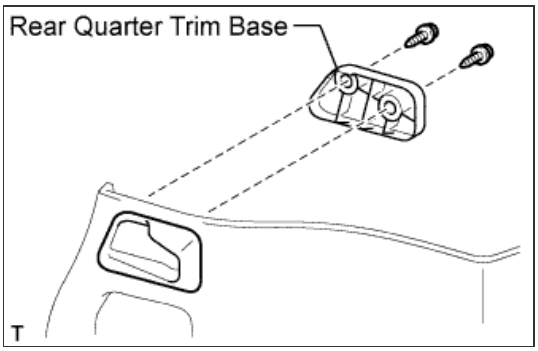


b. Detach the 3 claws and remove the cup holder.

72. REMOVE TONNEAU COVER HOLDER BRACKET LH (w/ Tonneau Cover)

a. Remove the 8 screws.

b. Detach the 3 claws and remove the tonneau cover holder bracket and front uarter trim base.



73. REMOVE TONNEAU COVER HOLDER BRACKET RH (w/ Tonneau Cover)

HINT:

Use the same procedures described for the LH side.

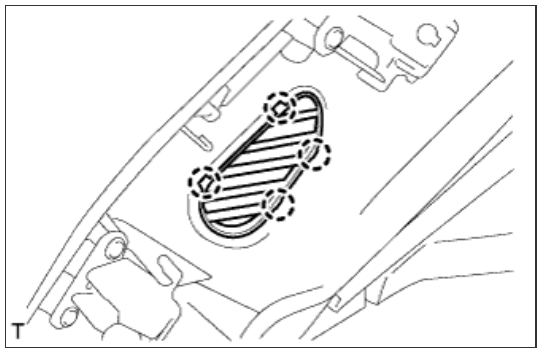
74. REMOVE TONNEAU COVER HANGER LH (w/ Tonneau Cover)

a. Remove the 2 screws, tonneau cover hanger and rear uarter trim base.



75. REMOVE TONNEAU COVER HANGER RH (w/ Tonneau Cover)

HINT:

Use the same procedures described for the LH side.

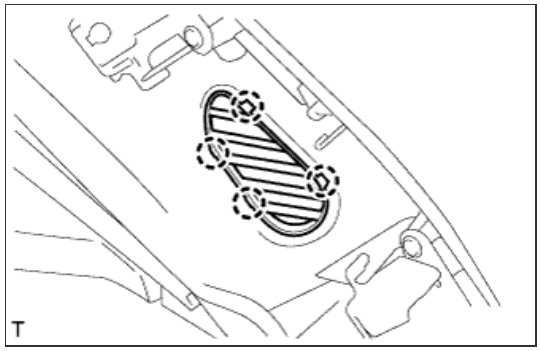
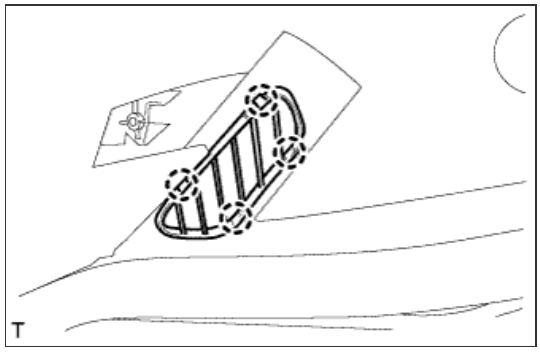
76. REMOVE NO. 1 SIDE TRIM BASE COVER LH (w/ Rear Heater)

a. Detach the 4 claws and remove the cover.



77. REMOVE NO. 1 SIDE TRIM BASE COVER RH (w/ Rear Heater)

a. Remove the 6 screws and duct.



b. Detach the 4 claws and remove the cover.

78. REMOVE NO. 2 SIDE TRIM BASE COVER LH (w/ Rear Heater)

a. Detach the 4 claws and remove the cover.

79. REMOVE NO. 2 SIDE TRIM BASE COVER RH (w/ Rear Heater)

HINT:

Use the same procedures described for the LH side.

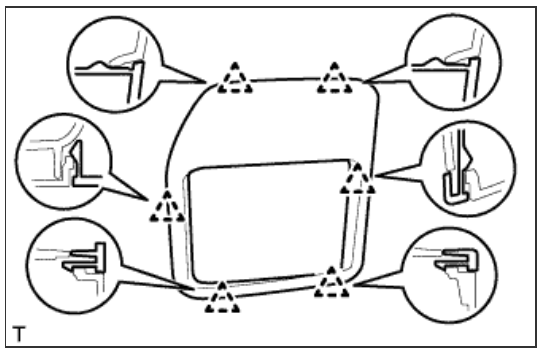
80. REMOVE REAR SEAT LOCK CONTROL LEVER SUB-ASSEMBLY LH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Detach the 4 claws and remove the seat lock control lever.



81. REMOVE REAR SEAT LOCK CONTROL LEVER SUB-ASSEMBLY RH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

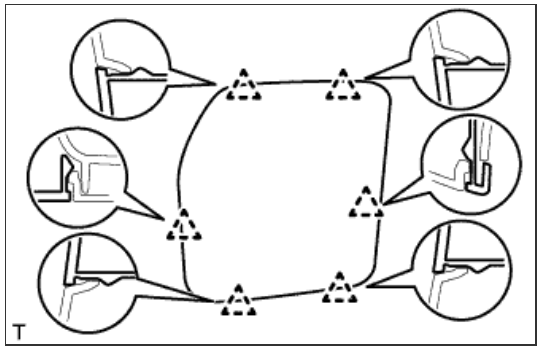
82. REMOVE REAR NO. 2 SEAT COVER BEZEL (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Detach the 6 clips and remove the rear No. 2 seat cover bezel.



83. REMOVE REAR NO. 1 SEAT COVER BEZEL (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the rear No. 2 seat cover bezel.

84. REMOVE QUARTER TRIM COVER LH (w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat Type)

a. Detach the 6 clips and remove the uarter trim cover.

85. REMOVE QUARTER TRIM COVER RH (w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

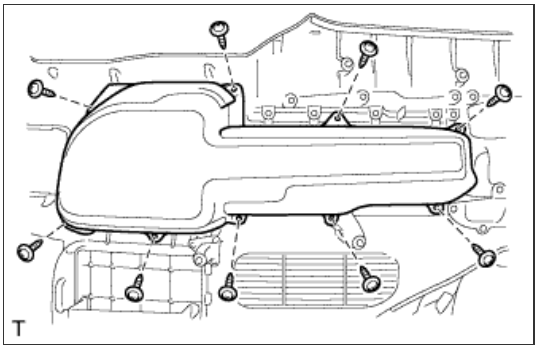
86. REMOVE QUARTER TRIM LID SUB-ASSEMBLY RH



a. Remove the uarter trim lid.

87. REMOVE SIDE TRIM BOX COVER

a. Remove the side trim box cover.

88. REMOVE SIDE TRIM BOX

a. Remove the 9 screws and side trim box.

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE TONNEAU COVER ASSEMBLY (w/ Tonneau Cover)

a. Remove the tonneau cover.

3. REMOVE REAR NO. 2 SEAT ASSEMBLY LH (except Face to Face Seat Type)

a. Remove the rear No. 2 seat assembly LH (Click here).

4. REMOVE REAR NO. 2 SEAT ASSEMBLY RH (except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

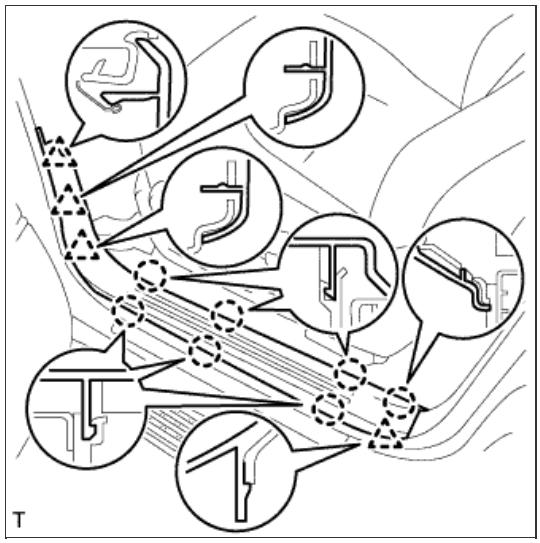
5. REMOVE REAR NO. 2 SEAT ASSEMBLY LH (for Face to Face Seat Type)

a. Remove the rear No. 2 seat assembly LH (Click here).



6. REMOVE REAR NO. 2 SEAT ASSEMBLY RH (for Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

7. REMOVE FRONT DOOR SCUFF PLATE LH

a. Detach the 7 claws and 4 clips, and remove the scuff plate.

8. REMOVE FRONT DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

9. REMOVE REAR STEP COVER

HINT:

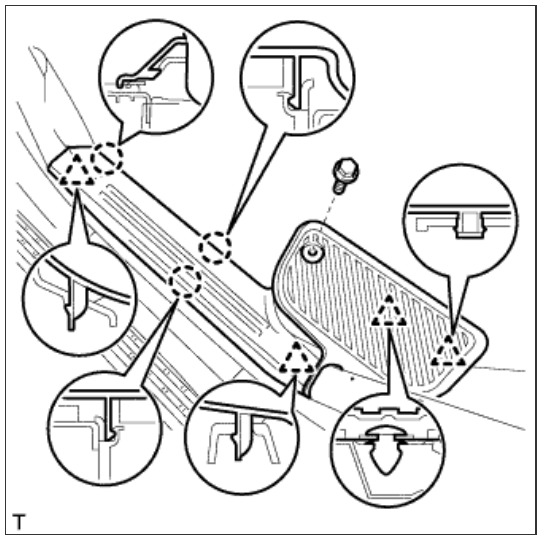
Use the same procedure to remove the step cover on the other side.

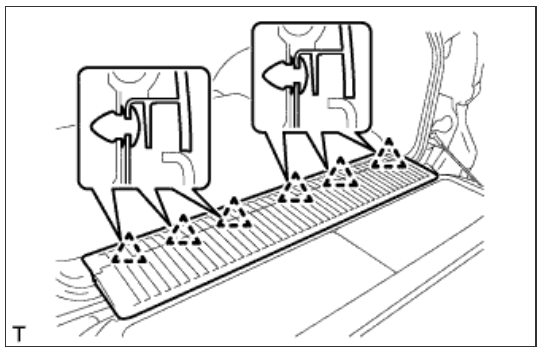


a. Detach the 2 claws and remove the step cover.

10. REMOVE REAR DOOR SCUFF PLATE LH

a. Remove the screw.

b. Detach the 3 claws and 4 clips, and remove the scuff plate.



11. REMOVE REAR DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

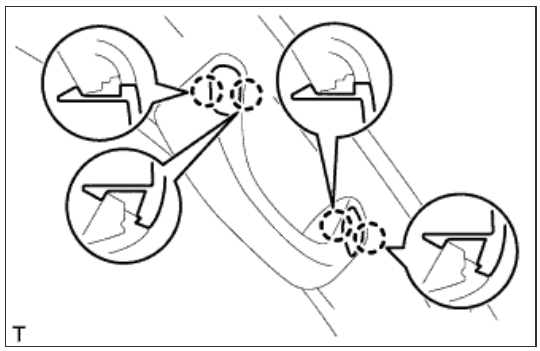
12. REMOVE REAR FLOOR MAT REAR SUPPORT PLATE

a. Detach the 6 clips and remove the support plate.



13. REMOVE FRONT ASSIST GRIP SUB-ASSEMBLY

HINT:

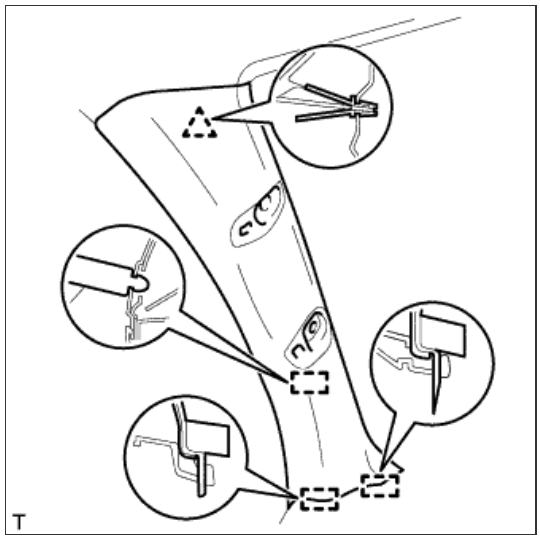
Use the same procedure to remove the front assist grip on the other side.

a. Detach the 4 claws and remove the 2 assist grip plugs.

b. Remove the 2 bolts.

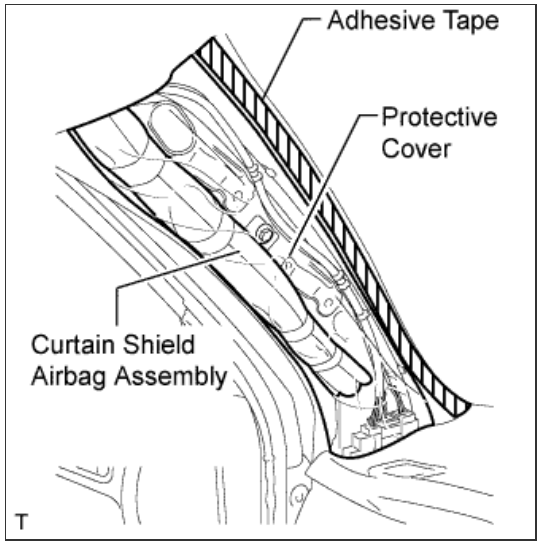


c. Detach the 2 claws and remove the front assist grip.

14. REMOVE FRONT PILLAR GARNISH LH

a. Detach the clip and 3 guides, and remove the front pillar garnish.

b. for 9, 14 Speakers:
Disconnect the speaker connector and then remove the front pillar garnish.



c. Protect the curtain shield airbag.

i. horoughly cover the airbag with a cloth or nylon sheet and fix the ends of the cover with adhesive tape, as shown in the illustration.

NOTICE:

Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish is removed.

15. REMOVE FRONT PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

16. REMOVE CENTER PILLAR GARNISH COVER LH

HINT:

- **for Manual Seat:**
  hen removing the center pillar garnish cover, move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  hen removing the center pillar garnish cover, connect the cable to the negative (-) battery terminal and operate the power seat switch to move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  After moving the front seat, disconnect the cable from the negative (-) battery terminal.

a. Detach the 2 clips and 2 guides, and remove the cover.

17. REMOVE CENTER PILLAR GARNISH COVER RH

HINT:

Use the same procedures described for the LH side.

18. REMOVE CENTER LO ER PILLAR GARNISH LH

HINT:

- **for Manual Seat:**
  hen removing the center lower pillar garnish, move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  hen removing the center lower pillar garnish, connect the cable to the negative (-) battery terminal and operate the power seat switch to move the front seat and seatback to the foremost upright position.
- **for Power Seat:**
  After moving the front seat, disconnect the cable from the negative (-) battery terminal.

a. Remove the bolt and seat belt anchor.

b. Detach the 2 claws and 7 clips, and remove the center lower pillar garnish.

19. REMOVE CENTER LO ER PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

20. REMOVE REAR ASSIST GRIP ASSEMBLY

HINT:

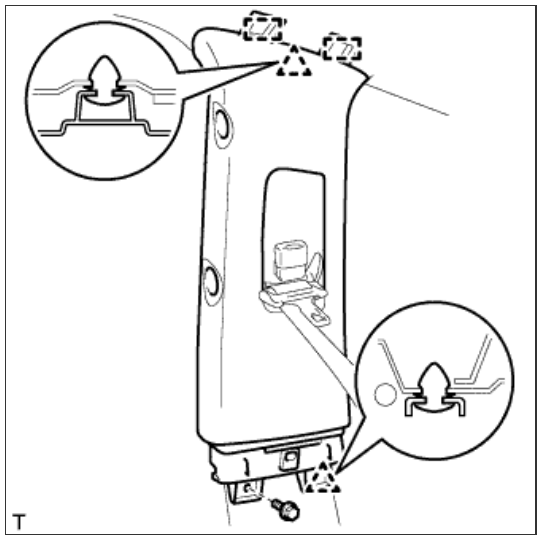
Use the same procedure to remove the rear assist grip on the other side.

a. Detach the 4 claws and remove the 2 assist grip plugs.

b. Remove the 2 bolts.

c. Detach the 2 claws and remove the rear assist grip.



21. REMOVE CENTER PILLAR GARNISH LH

a. Remove the bolt.

b. Detach the 2 clips and 2 guides.

c. Pass the seat belt anchor through the center pillar garnish, and remove the center pillar garnish.

22. REMOVE CENTER PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

23. REMOVE NO. 1 TONNEAU COVER HOLDER CAP (w/ Tonneau Cover)

HINT:

Use the same procedure to remove the tonneau cover holder cap on the other side.

a. Detach the 2 claws and remove the tonneau cover holder cap.

24. REMOVE REAR SEAT COVER CAP (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedure to remove the rear seat cover cap on the other side.

a. Using a screwdriver, detach the 3 claws and remove the rear seat cover cap.

HINT:

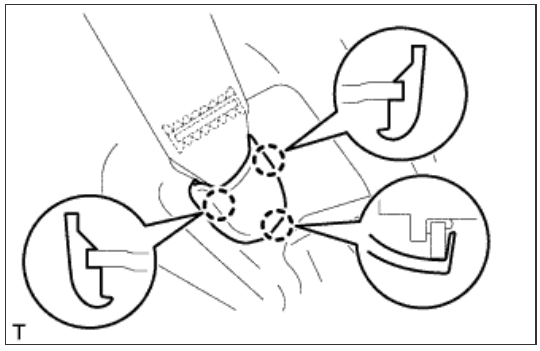
ape the screwdriver tip before use.



25. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY LH

HINT:

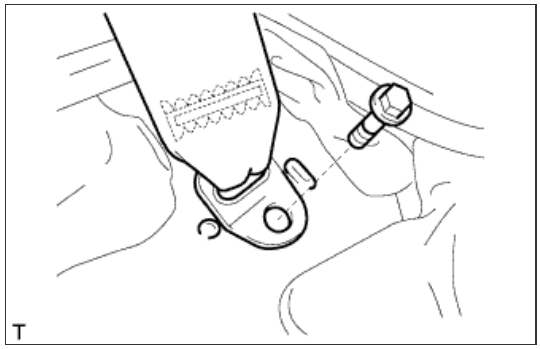
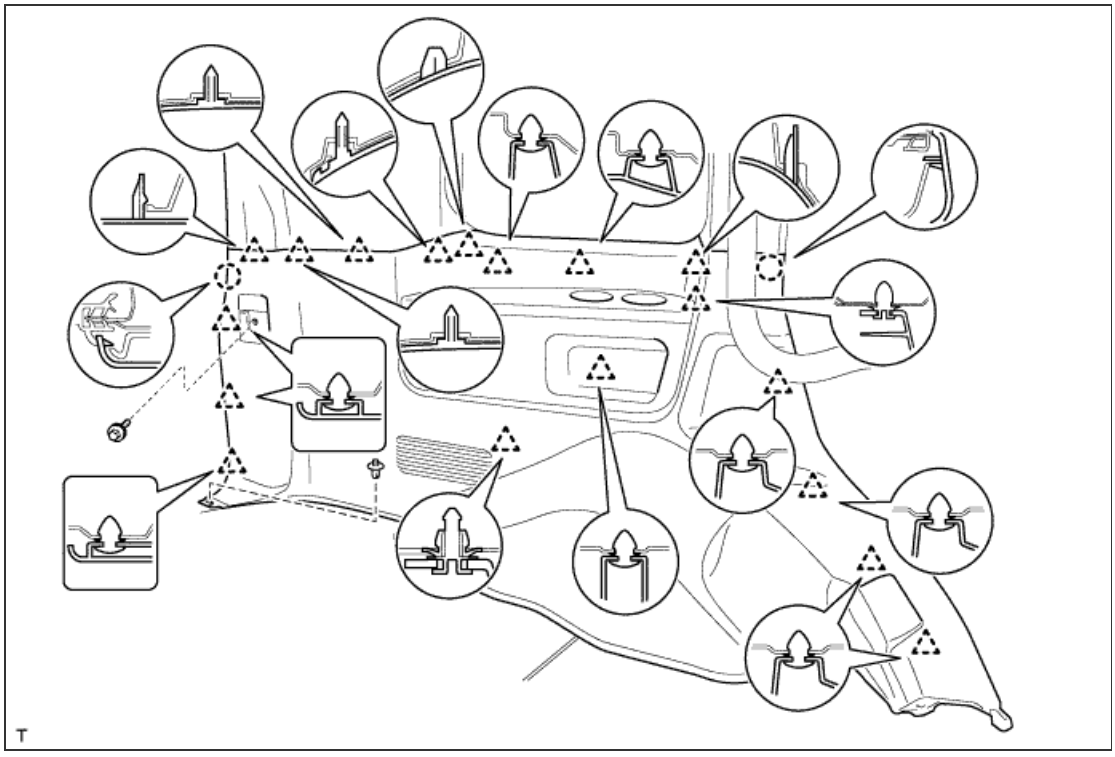
When removing the front uarter trim panel, operate the reclining adjuster release handle and move the No. 1 rear seat to the position shown in the illustration.



a. Detach the 3 claws and remove the cover.

b. Remove the bolt and rear No. 1 seat belt anchor.

c. w/ Rear No. 2 Seat, except Face to Face Seat ype:
Remove the bolt and rear No. 2 seat belt anchor.

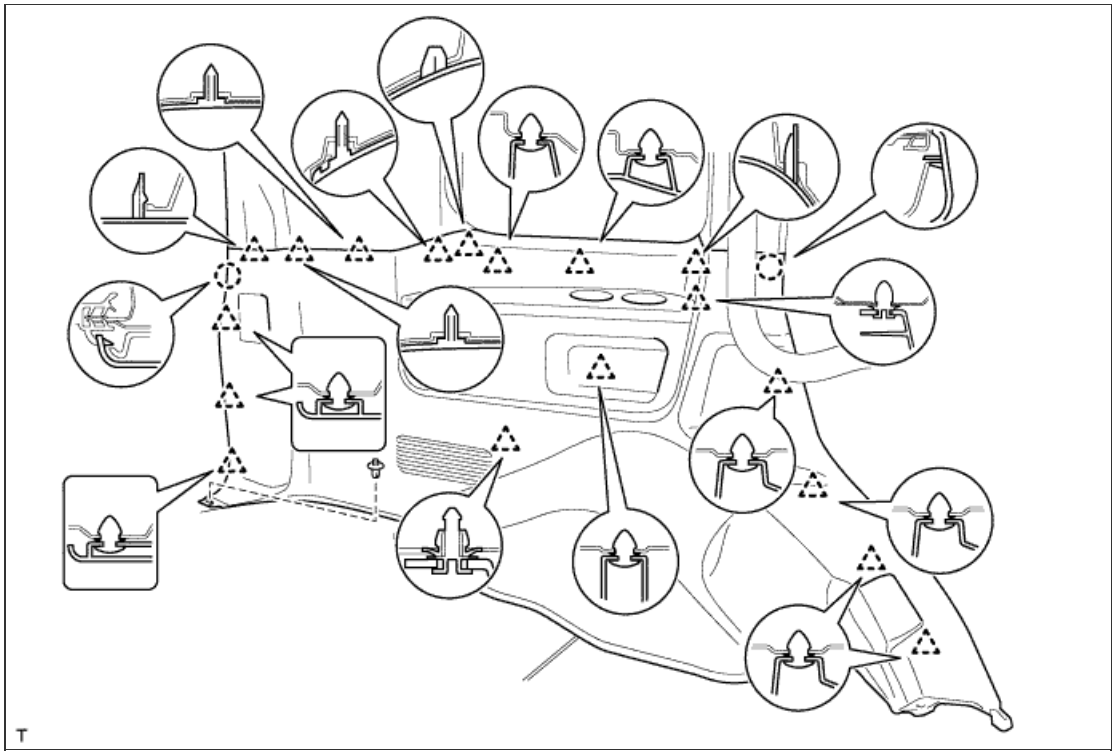


d. w/ Rear No. 2 Seat, except Face to Face Seat ype:

i. Remove the clip and bolt.

ii. Detach the 18 clips and 2 claws.

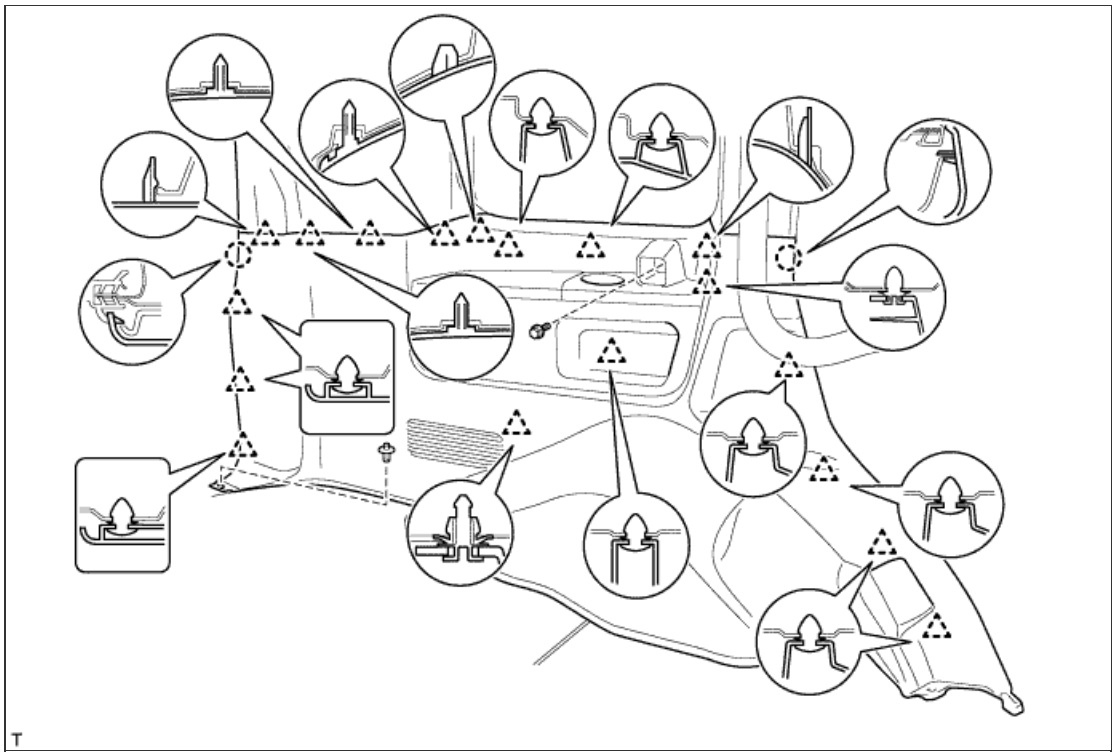
iii. w/o Rear Air Conditioning System:
Disconnect the rear seat lock control lever cable and then remove the uarter trim panel.



iv. w/ Rear Air Conditioning System:
Disconnect the thermistor connector and rear seat lock control lever cable, and then remove the uarter trim panel.

e. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat ype:

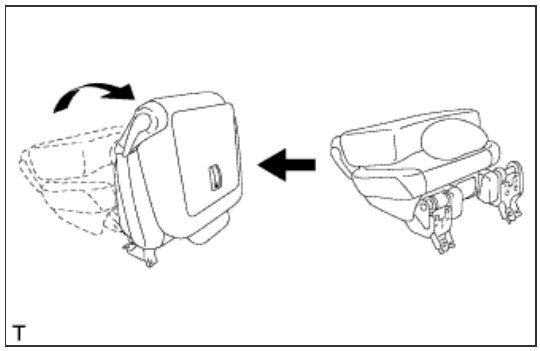
i. Remove the clip.



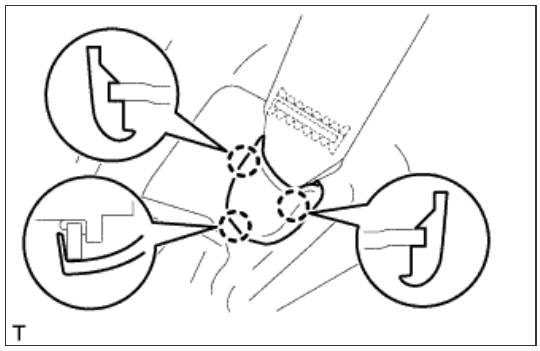
ii. Detach the 18 clips and 2 claws, and remove the uarter trim panel.

f. w/ onneau Cover:

i. Remove the screw and clip.



ii. Detach the 18 clips and 2 claws, and remove the uarter trim panel.



26. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY RH

HINT:

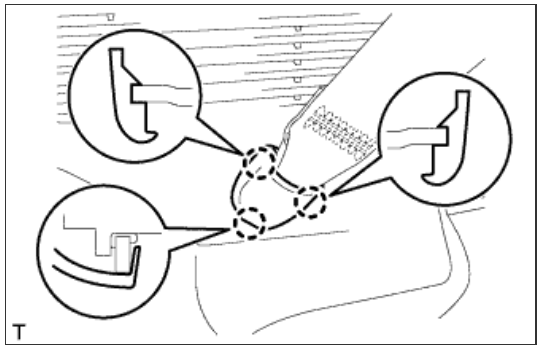
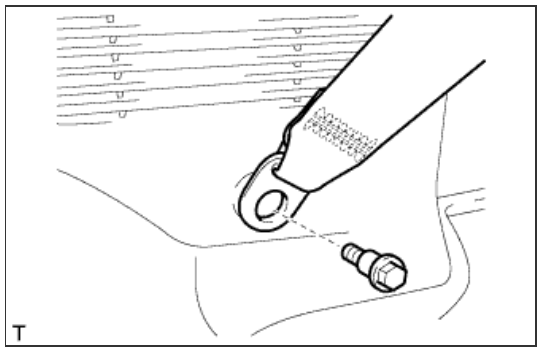
When removing the front uarter trim panel, operate the reclining adjuster release handle and move the No. 1 rear seat to the position shown in the illustration.

a. Detach the 3 claws and remove the cover.



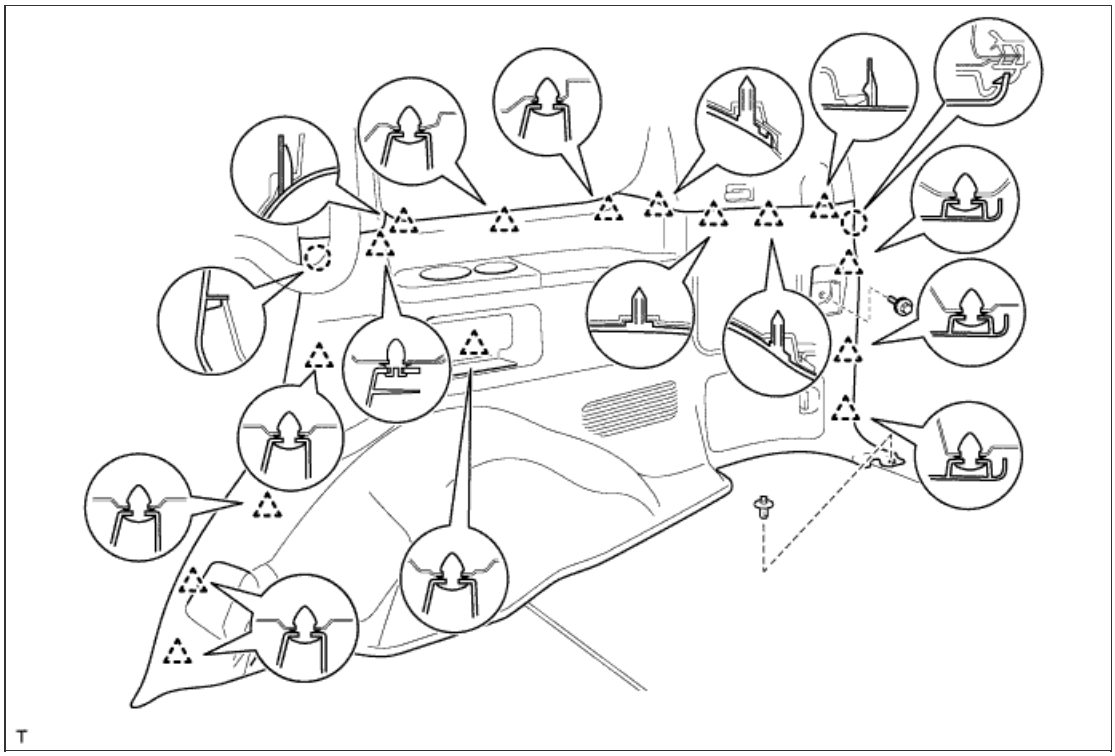
b. Remove the bolt and rear No. 1 seat belt anchor.



c. w/ Rear No. 2 Seat, except Face to Face Seat ype:

i. Detach the 3 claws and remove the cover.

ii. Remove the bolt and rear No. 2 seat belt anchor.

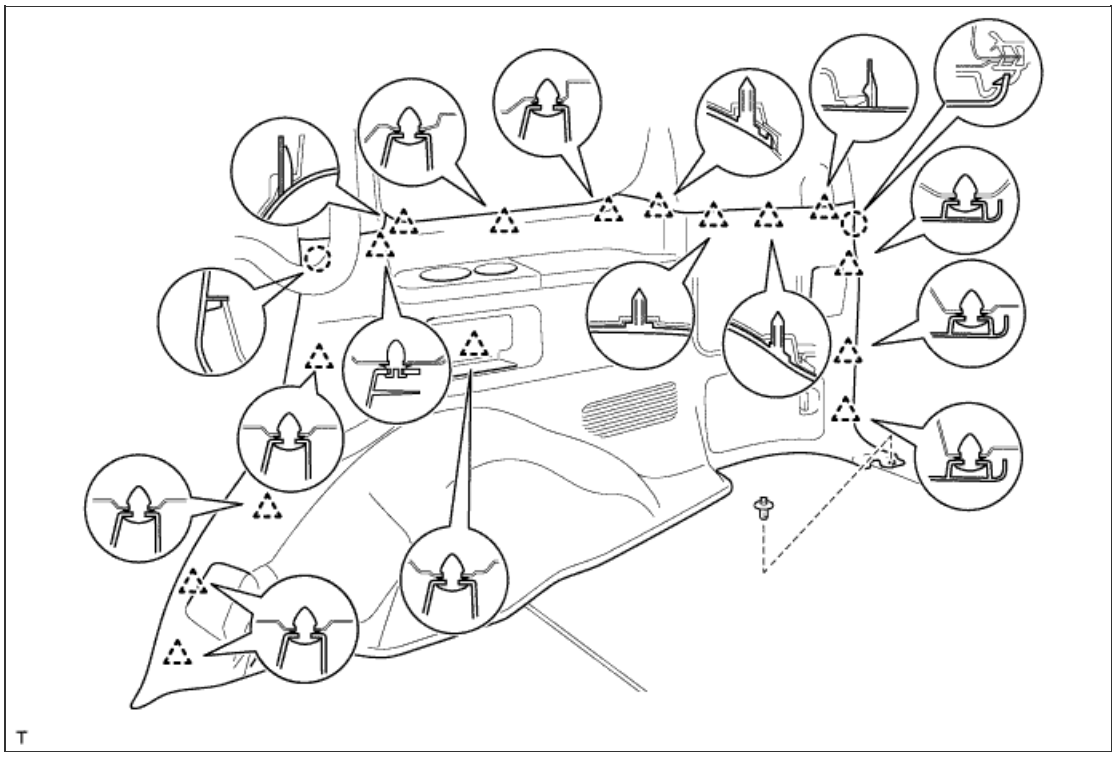


d. w/ Rear No. 2 Seat, except Face to Face Seat ype:

i. Remove the clip and bolt.

ii. Detach the 16 clips and 2 claws.

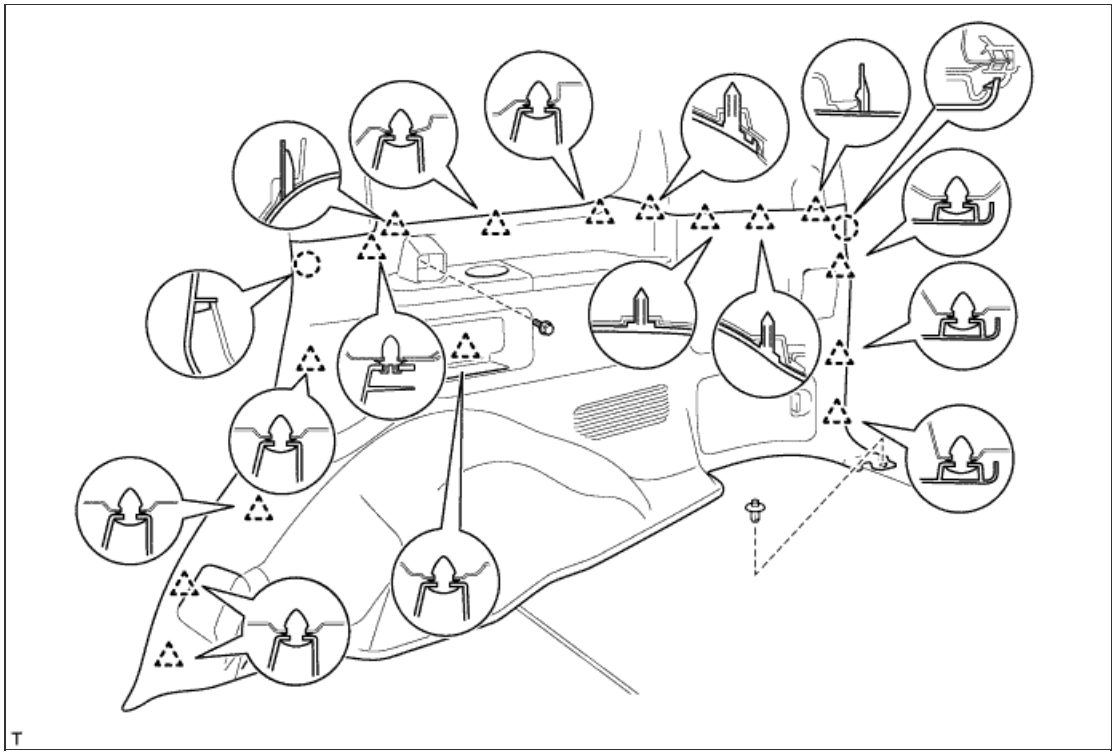
iii. w/o Rear Air Conditioning System:
Disconnect the rear seat lock control lever cable and then remove the uarter trim panel.



iv. w/ Rear Air Conditioning System:
Disconnect the thermistor connector and rear seat lock control lever cable, and then remove the uarter trim panel.

e. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat ype:

i. Remove the clip.

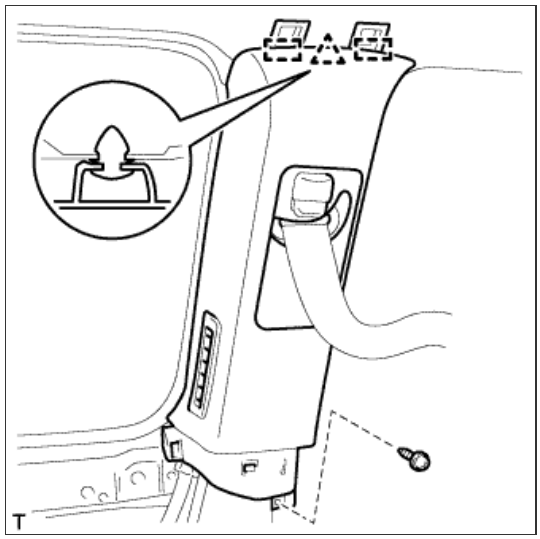


ii. Detach the 16 clips and 2 claws, and remove the uarter trim panel.

f. w/ onneau Cover:

i. Remove the screw and clip.

ii. Detach the 16 clips and 2 claws, and remove the uarter trim panel.



27. REMOVE REAR FRONT QUARTER TRIM GARNISH LH

a. Remove the screw.

b. Detach the clip and 2 guides.

c. Pass the seat belt anchor through the uarter trim garnish, and remove the uarter trim garnish.

28. REMOVE REAR FRONT QUARTER TRIM GARNISH RH

HINT:

Use the same procedures described for the LH side.

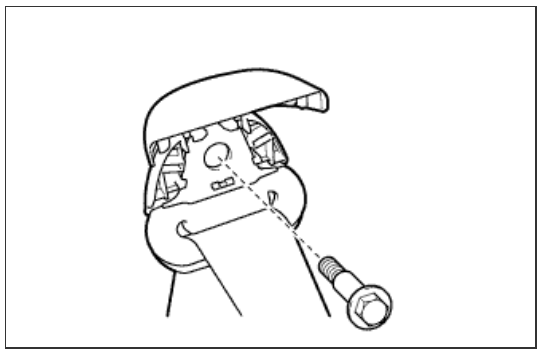
29. REMOVE REAR UPPER PILLAR GARNISH LH

a. w/ Rear No. 2 Seat, except Face to Face Seat ype:



i. Using a screwdriver, detach the 2 claws and open the seat belt shoulder anchor cover.

HINT:

ape the screwdriver tip before use.

ii. Remove the bolt and seat belt shoulder anchor.

b. Detach the 5 clips and remove the rear upper pillar garnish.

30. REMOVE REAR UPPER PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

31. REMOVE MAP LIGHT ASSEMBLY (w/ Map Light)

a. Using a screwdriver, detach the 2 claws and open the 2 covers.

HINT:

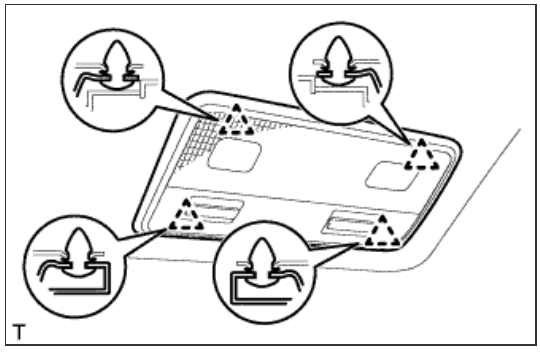
ape the screwdriver tip before use.

b. Remove the 2 screws.

c. Detach the 2 clips and 2 guides.

d. Disconnect the connector and then remove the map light.

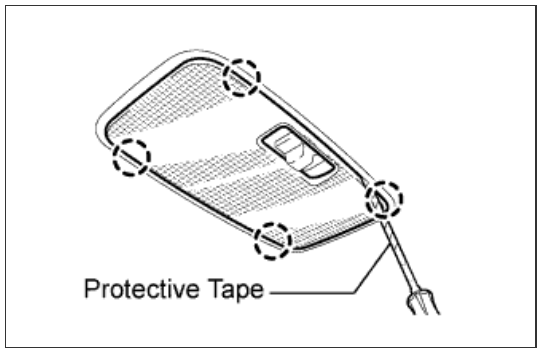


32. REMOVE NO. 1 ROOM LIGHT ASSEMBLY

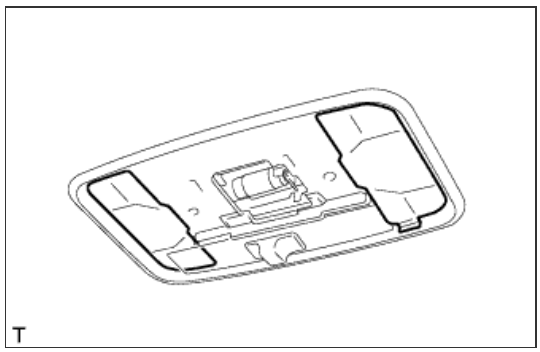
a. w/ ap Light:
Remove the No. 1 room light assembly.

i. Detach the 4 clips.

ii. Disconnect the connector and then remove the room light.



b. w/o ap Light:
Remove the No. 1 room light assembly.



i. Using a screwdriver, detach the 4 claws and remove the room light lens.

HINT:

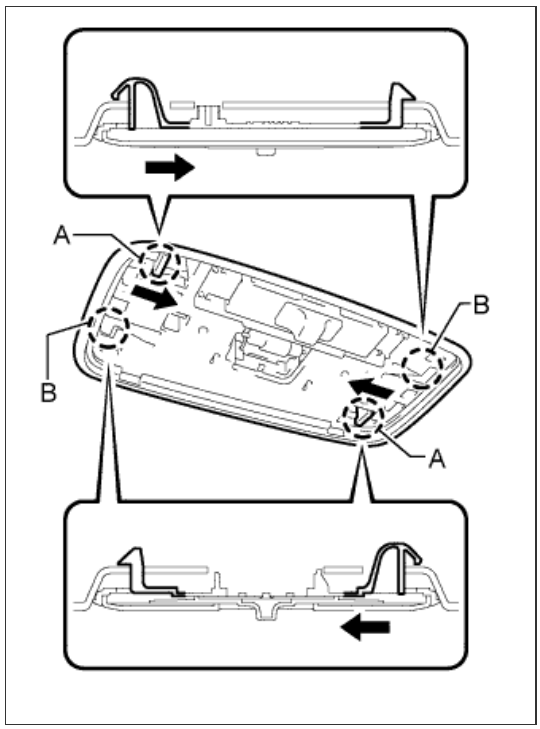
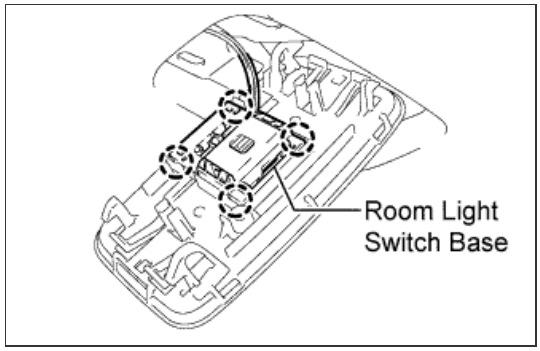
ape the screwdriver tip before use.



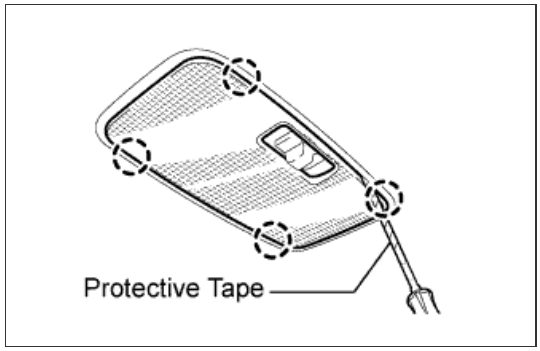
ii. Remove the 2 covers.



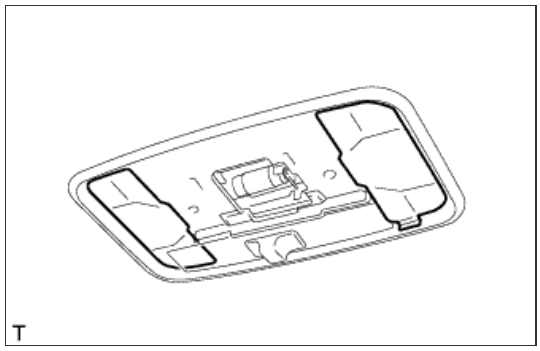
iii. Using a screwdriver, push the 2 levers in the direction of the arrows in the illustration, and detach the 2 claws labeled A.

iv. Detach the 2 claws labeled B.

v. Detach the 4 claws and remove the room light from the room light switch base.



33. REMOVE NO. 2 ROOM LIGHT ASSEMBLY



a. Using a screwdriver, detach the 4 claws and remove the room light lens.

HINT:

ape the screwdriver tip before use.

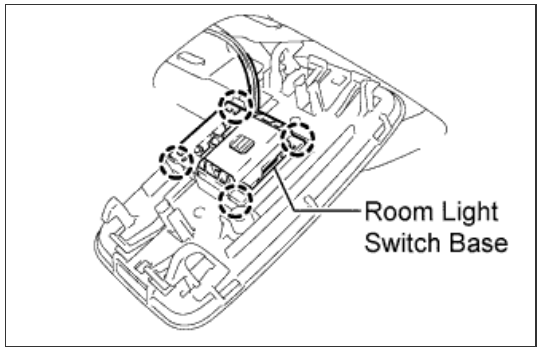
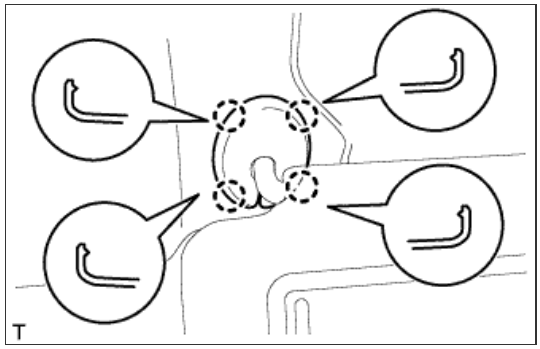
b. Remove the 2 covers.



c. Using a screwdriver, push the 2 levers in the direction of the arrows in the illustration, and detach the 2 claws labeled A.

d. Detach the 2 claws labeled B.

e. Detach the 4 claws and remove the room light from the room light switch base.



34. REMOVE VISOR BRACKET COVER

HINT:

Use the same procedure to remove the visor bracket cover on the other side.

a. Detach the 4 claws and remove the visor bracket cover.

35. REMOVE VISOR ASSEMBLY LH

a. Remove the 2 screws and visor.

36. REMOVE VISOR ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

37. REMOVE VISOR HOLDER

HINT:

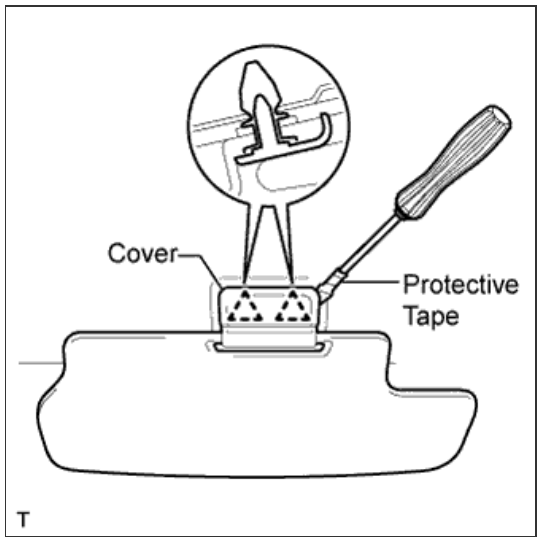
Use the same procedure to remove the visor holder on the other side.

a. urn the visor holder approximately 45° and pull it out as shown in the illustration.

b. Detach the 2 claws and remove the visor holder.



38. REMOVE CENTER VISOR ASSEMBLY LH (w/ Sub Visor)

a. Using a screwdriver, pry off the cover to detach the 2 clips and remove the center visor.

HINT:

ape the screwdriver tip before use.

39. REMOVE CENTER VISOR ASSEMBLY RH (w/ Sub Visor)

HINT:

Use the same procedures described for the LH side.

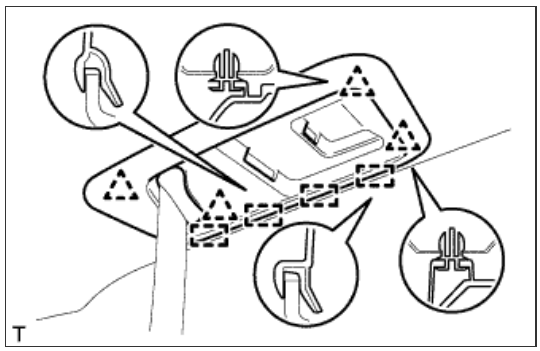
40. REMOVE INNER REAR VIE MIRROR STAY HOLDER COVER (w/ EC Mirror)

a. Detach the 2 claws and remove the cover as shown in the illustration.

41. REMOVE RAIN SENSOR COVER (w/ Rain Sensor)



a. Slide the No. 2 cover in the direction of the arrow labeled (1).

b. Pull the stopper in the direction of the arrow labeled (2) to remove the No. 2 cover.

42. REMOVE SEAT BELT ANCHOR COVER (for 3 Person Seat Type Rear No. 2 Seat)

a. Detach the 4 clips and 4 guides, and remove the seat belt anchor cover.

43. REMOVE ASSIST GRIP ASSEMBLY

HINT:

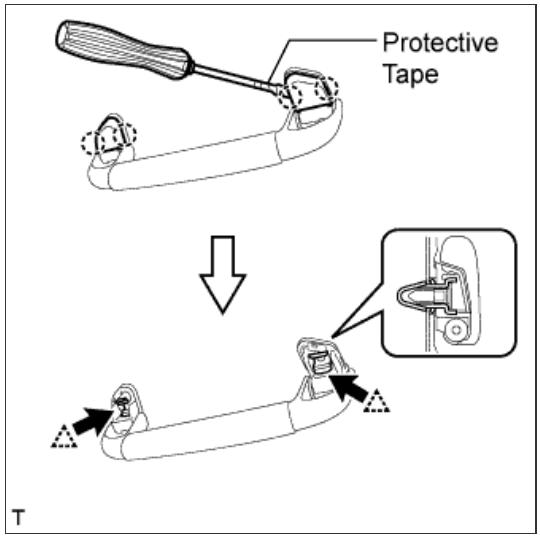
Use the same procedure to remove the assist grip on the other side.



a. Using a screwdriver, detach the 4 claws and remove the 2 assist grip covers.

HINT:

ape the screwdriver tip before use.

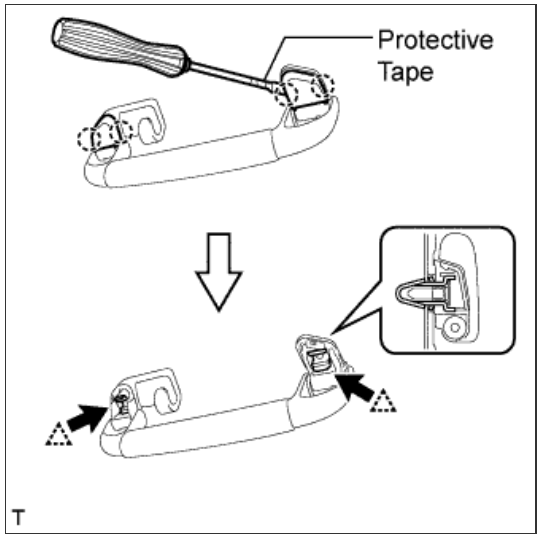
b. Detach the 2 clips and remove the assist grip.

c. Remove the 2 clips from the vehicle body.

44. REMOVE NO. 2 ASSIST GRIP ASSEMBLY LH

a. w/ Rear No. 2 Seat, except Face to Face Seat ype or w/o Rear No. 2 Seat:
Remove the No. 2 assist grip assembly.



i. Using a screwdriver, detach the 4 claws and remove the 2 assist grip covers.

HINT:

ape the screwdriver tip before use.

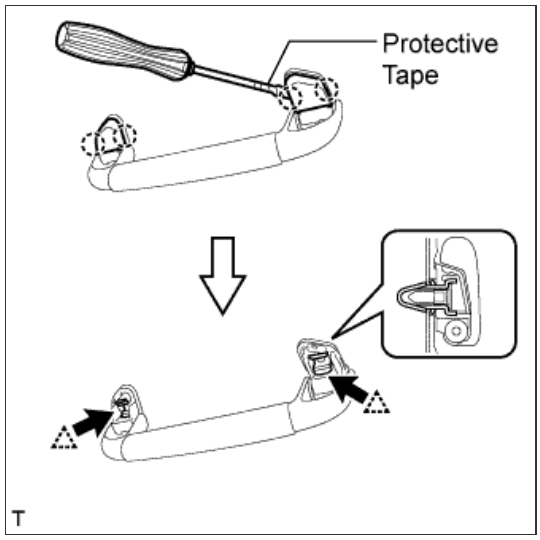
ii. Detach the 2 clips and remove the assist grip.

iii. Remove the 2 clips from the vehicle body.

b. w/ Rear No. 2 Seat, for Face to Face Seat ype:
Remove the No. 2 assist grip assembly.



i. Using a screwdriver, detach the 4 claws and remove the 2 assist grip covers.

HINT:

ape the screwdriver tip before use.

ii. Detach the 2 clips and remove the assist grip.

iii. Remove the 2 clips from the vehicle body.

45. REMOVE NO. 2 ASSIST GRIP ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

46. REMOVE 3RD SEAT ASSIST GRIP ASSEMBLY (w/ Rear No. 2 Seat except Face to Face Seat Type)

HINT:

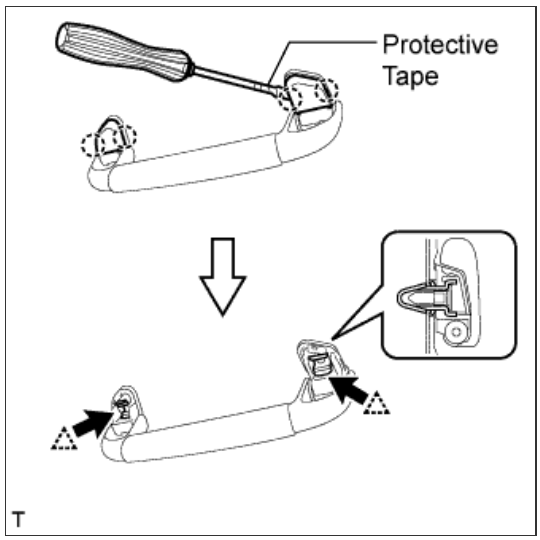
Use the same procedure to remove the 3rd seat assist grip on the other side.



a. Using a screwdriver, detach the 4 claws and remove the 2 assist grip covers.

HINT:

ape the screwdriver tip before use.

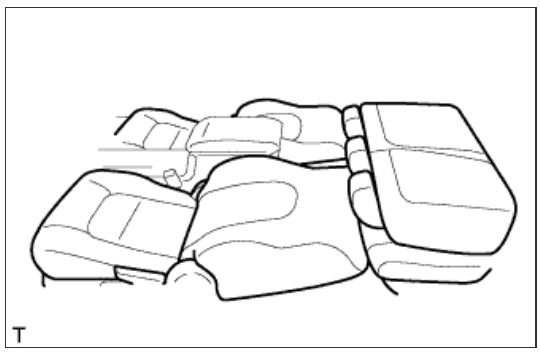
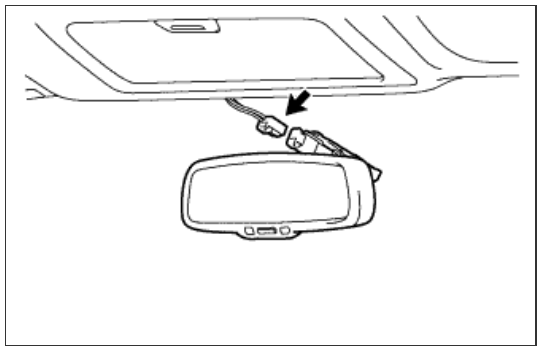
b. Detach the 2 clips and remove the assist grip.



c. Remove the 2 clips from the vehicle body.



47. REMOVE ROOF HEADLINING ASSEMBLY

HINT:

- **for Manual Seat:**
  hen removing the roof headlining, move the front seat and rear No. 1 seat to the position shown in the illustration.
- **for Power Seat:**
  hen removing the roof headlining, connect the cable to the negative (-) battery terminal and move the front seat and No. 1 rear seat to the position shown in the illustration.
- **for Power Seat:**
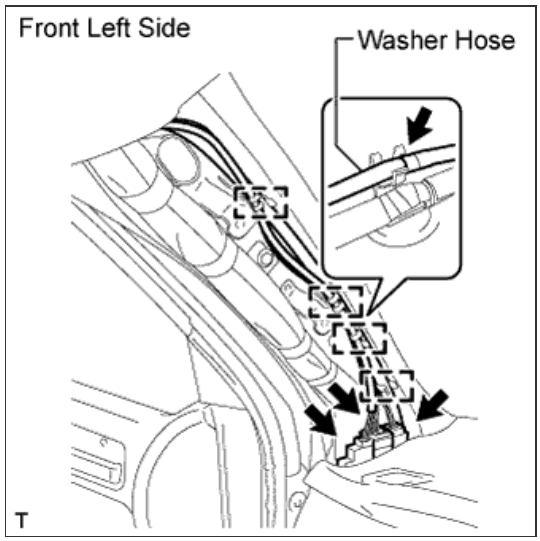
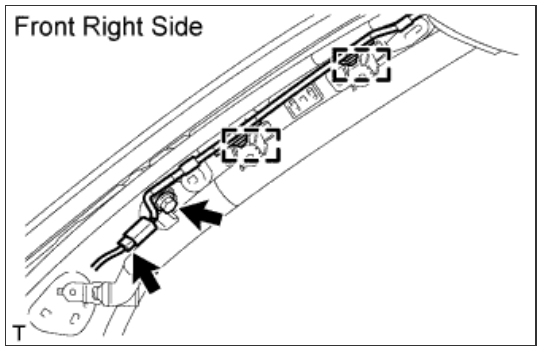
  After moving the seats, disconnect the cable from the negative (-) battery terminal.

a. w/ EC Mirror:
Disconnect the inner mirror connector.



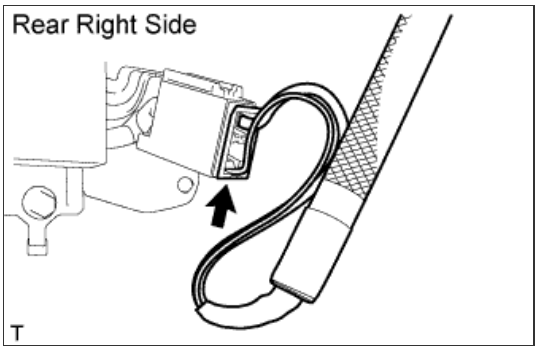
b. w/ Rain Sensor:
Disconnect the rain sensor connector.

c. Disconnect the 3 roof wire connectors.

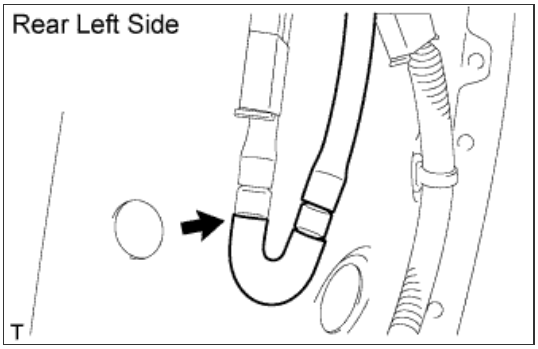


i. w/ Rear Wiper:
Disconnect the washer hose.

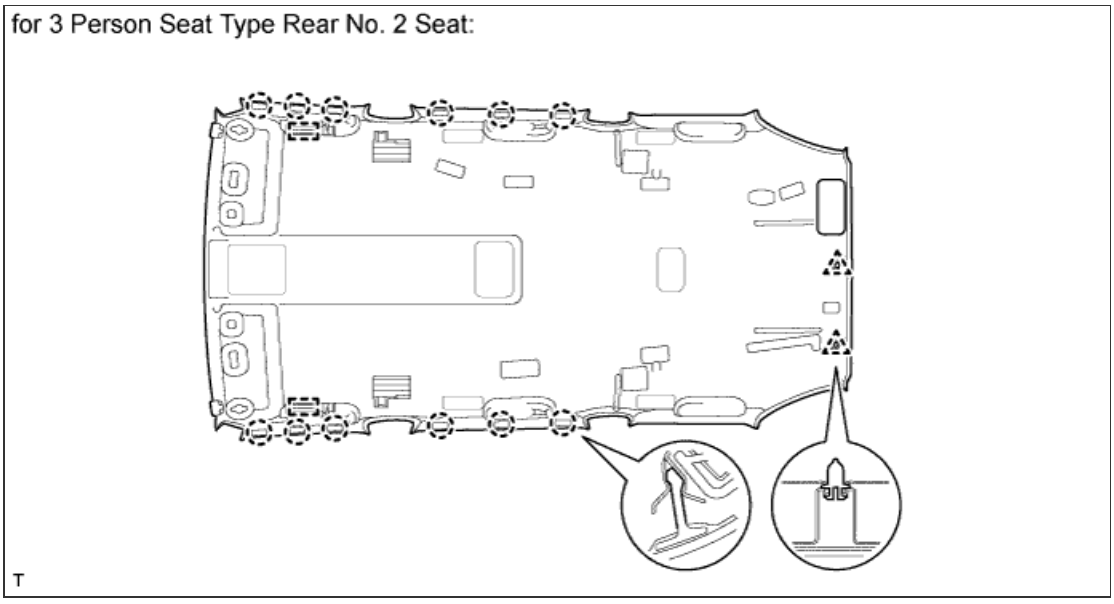
d. Detach the 4 clamps.



e. Remove the bolt.

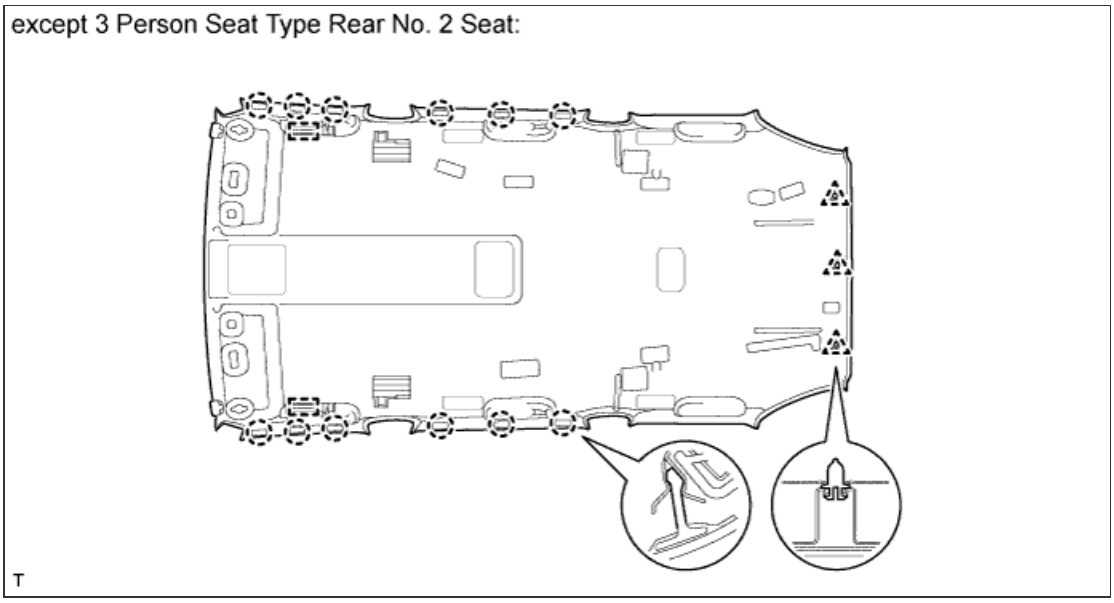


f. Disconnect the antenna cord connector and detach the 2 clamps.

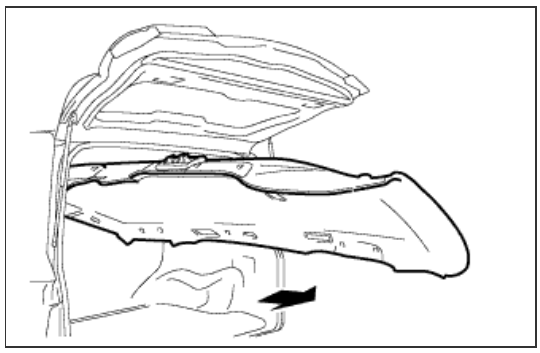


g. Disconnect the antenna cord connector.

h. w/ Rear Wiper:
Disconnect the washer hose.



i. for 3 Person Seat ype Rear No. 2 Seat:
Detach the 12 claws, 2 clips and 2 guides.



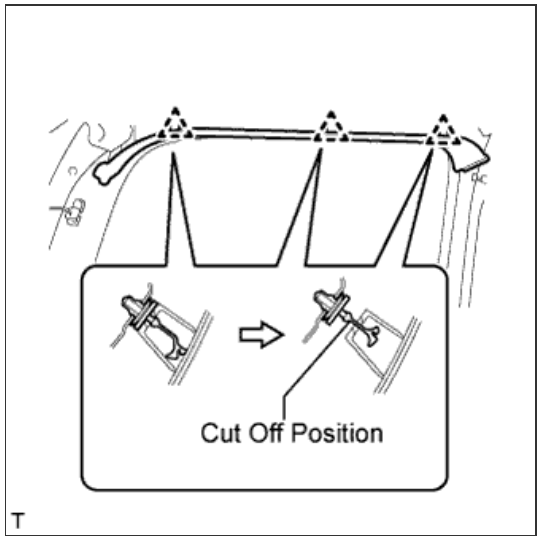
j. except 3 Person Seat ype Rear No. 2 Seat:
Detach the 12 claws, 3 clips and 2 guides.

except 3 Person Seat Type Rear No. 2 Seat:

T

k. Remove the headlining from the rear of the vehicle as shown in the illustration.

NOTICE:



Be careful not to damage the roof headlining when taking it out.

48. REMOVE FRONT ROOF SIDE RAIL GARNISH LH

a. Detach the 3 clips.

b. Cut off the 3 clips and remove the roof side rail garnish.

c. Remove 3 clips from the vehicle body.

T

49. REMOVE FRONT ROOF SIDE RAIL GARNISH RH

HINT:

Use the same procedures described for the LH side.

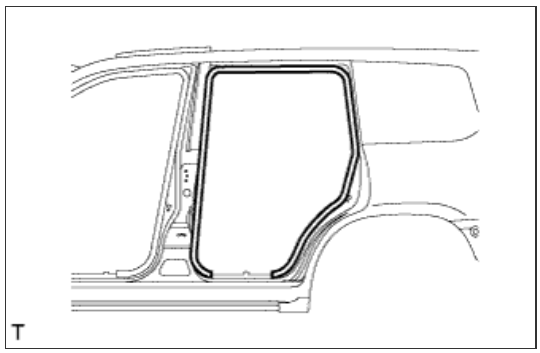
50. REMOVE FRONT DOOR OPENING TRIM EATHERSTRIP LH

a. Remove the front door opening trim weatherstrip.



51. REMOVE FRONT DOOR OPENING TRIM EATHERSTRIP RH

HINT:

Use the same procedures described for the LH side.

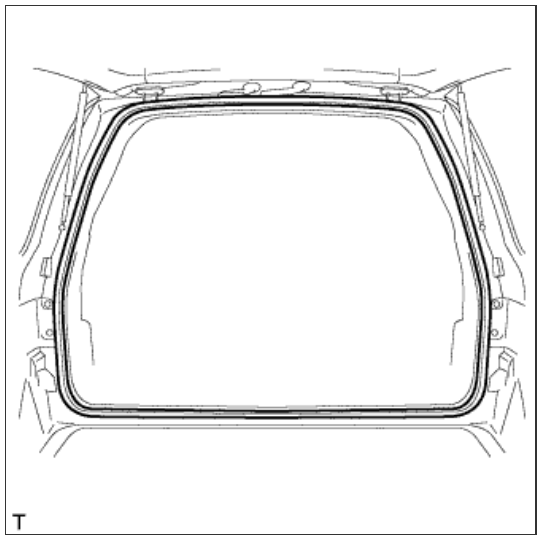
52. REMOVE REAR DOOR OPENING TRIM EATHERSTRIP LH

a. Remove the rear door opening trim weatherstrip.



53. REMOVE REAR DOOR OPENING TRIM EATHERSTRIP RH

HINT:

Use the same procedures described for the LH side.

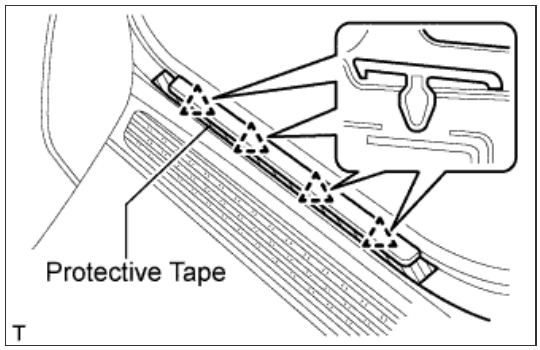
54. REMOVE BACK DOOR EATHERSTRIP



a. Remove the back door weatherstrip.

55. REMOVE FRONT DOOR SCUFF PLATE OUTSIDE LH

a. Put protective tape around the front door scuff plate outside.

b. Detach the 4 clips and remove the front door scuff plate outside.

56. REMOVE FRONT DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

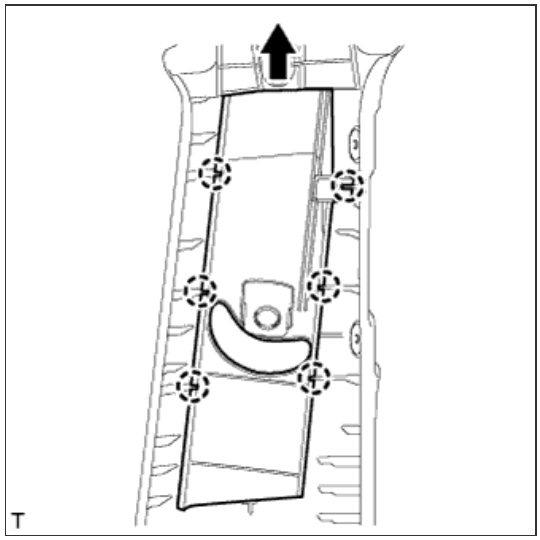
57. REMOVE REAR DOOR SCUFF PLATE OUTSIDE LH

a. Put protective tape around the rear door scuff plate outside.

b. Detach the 3 clips and remove the rear door scuff plate outside.



58. REMOVE REAR DOOR SCUFF PLATE OUTSIDE RH

HINT:

Use the same procedures described for the LH side.

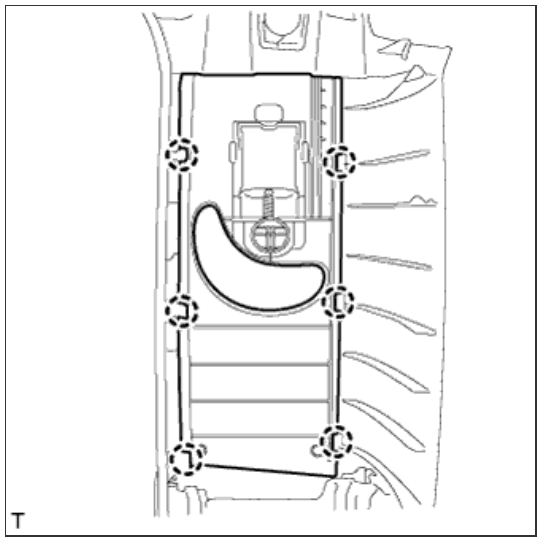
59. REMOVE FRONT SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY LH

a. Detach the 6 claws of the plate, and slide the plate in the direction of the arrow to remove it.



60. REMOVE FRONT SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

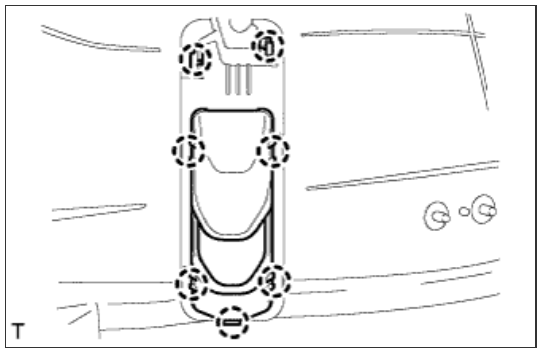
61. REMOVE REAR SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY LH

a. Detach the 6 claws and remove the plate.



62. REMOVE REAR SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

63. REMOVE ROOF SIDE INNER GARNISH COVER LH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Detach the 7 claws and remove the cover.

64. REMOVE ROOF SIDE INNER GARNISH COVER RH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

65. REMOVE REAR SEAT SHOULDER BELT HANGER (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

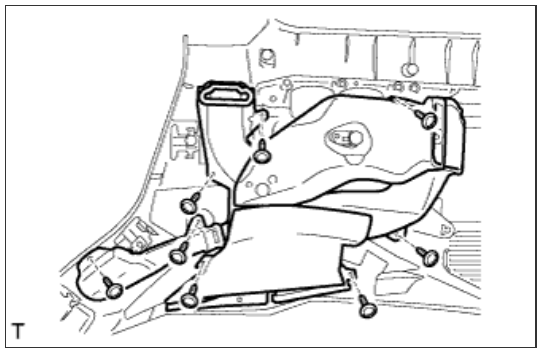
Use the same procedure to remove the hanger on the other side.

a. Remove the 2 spring nuts and hanger.

66. REMOVE REAR NO. 2 SEAT SHOULDER BELT HANGER LH

a. Remove the 2 spring nuts and hanger.



67. REMOVE REAR NO. 2 SEAT SHOULDER BELT HANGER RH

HINT:

Use the same procedures described for the LH side.

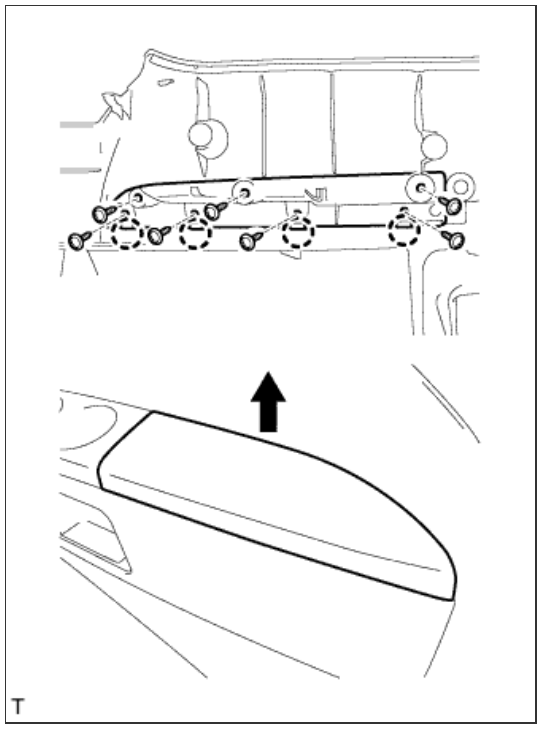
68. REMOVE QUARTER TRIM COVER SUB-ASSEMBLY LH

a. w/ Rear Heater:
Remove the 8 screws and duct.

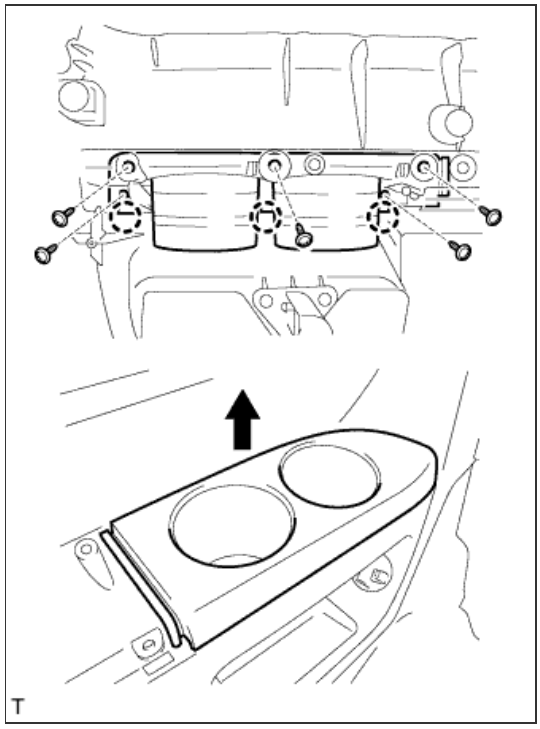
b. Remove the 7 screws.



c. Detach the 4 claws and remove the uarter trim cover.

69. REMOVE QUARTER TRIM COVER SUB-ASSEMBLY RH

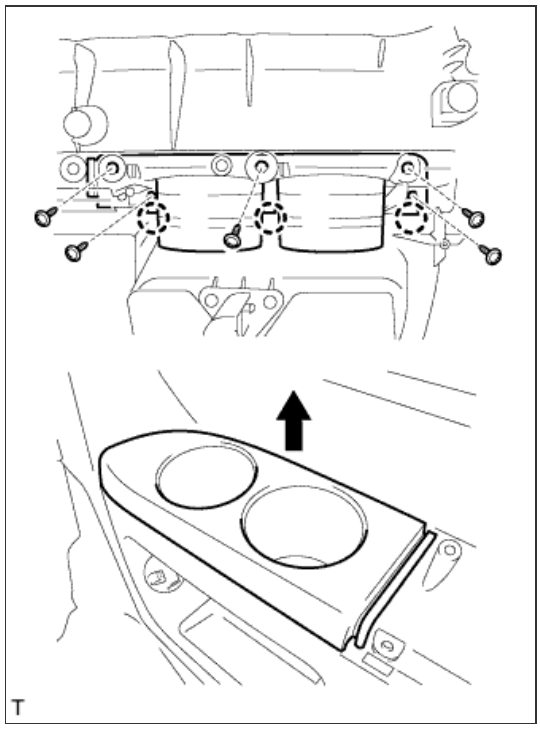
a. Remove the 7 screws.



b. Detach the 4 claws and remove the uarter trim cover.

70. REMOVE NO. 2 CUP HOLDER

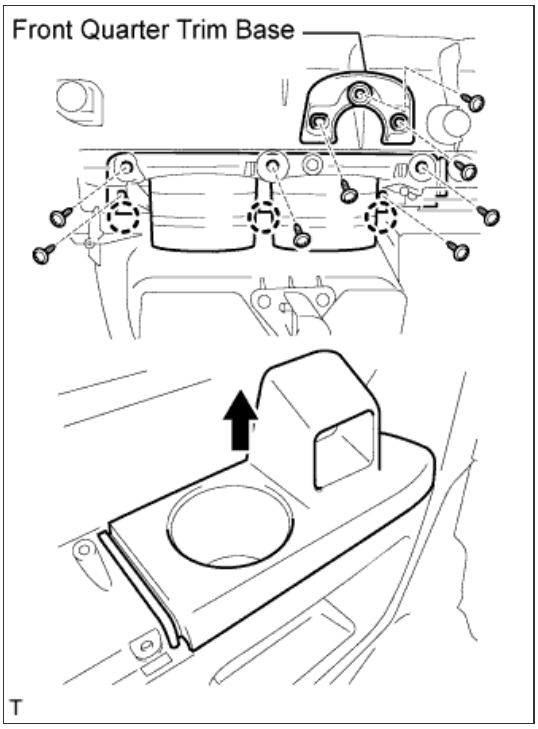
a. Remove the 5 screws.



b. Detach the 3 claws and remove the cup holder.

71. REMOVE NO. 1 CUP HOLDER

a. Remove the 5 screws.

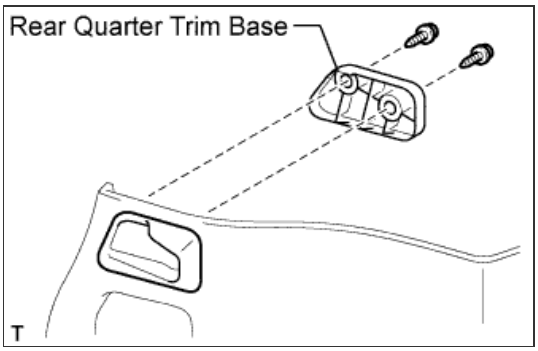


b. Detach the 3 claws and remove the cup holder.

72. REMOVE TONNEAU COVER HOLDER BRACKET LH (w/ Tonneau Cover)

a. Remove the 8 screws.

b. Detach the 3 claws and remove the tonneau cover holder bracket and front uarter trim base.



73. REMOVE TONNEAU COVER HOLDER BRACKET RH (w/ Tonneau Cover)

HINT:

Use the same procedures described for the LH side.

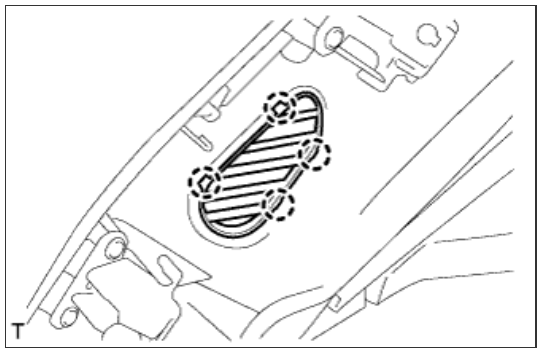
74. REMOVE TONNEAU COVER HANGER LH (w/ Tonneau Cover)

a. Remove the 2 screws, tonneau cover hanger and rear uarter trim base.



75. REMOVE TONNEAU COVER HANGER RH (w/ Tonneau Cover)

HINT:

Use the same procedures described for the LH side.

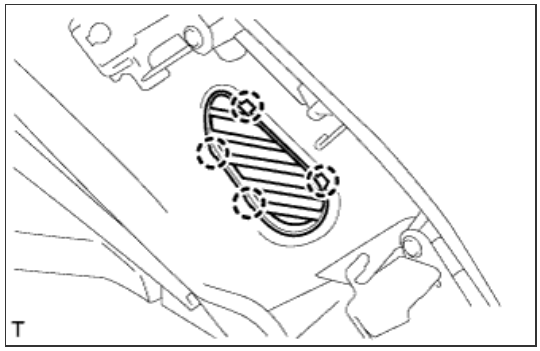
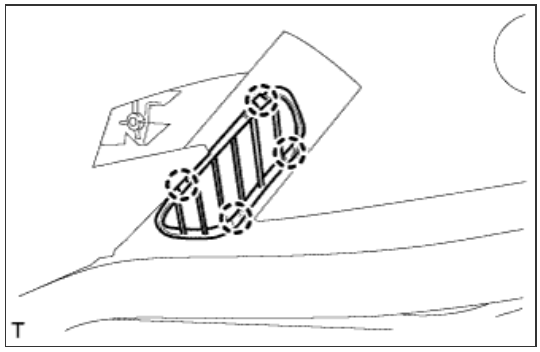
76. REMOVE NO. 1 SIDE TRIM BASE COVER LH (w/ Rear Heater)

a. Detach the 4 claws and remove the cover.



77. REMOVE NO. 1 SIDE TRIM BASE COVER RH (w/ Rear Heater)

a. Remove the 6 screws and duct.



b. Detach the 4 claws and remove the cover.

78. REMOVE NO. 2 SIDE TRIM BASE COVER LH (w/ Rear Heater)

a. Detach the 4 claws and remove the cover.

79. REMOVE NO. 2 SIDE TRIM BASE COVER RH (w/ Rear Heater)

HINT:

Use the same procedures described for the LH side.

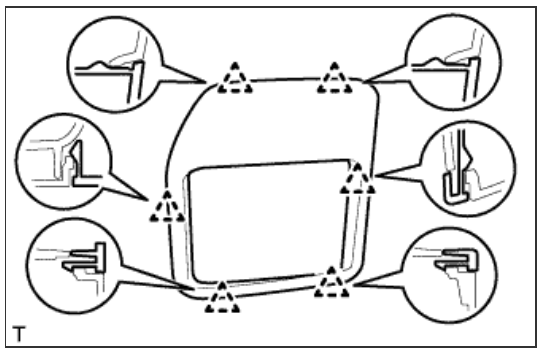
80. REMOVE REAR SEAT LOCK CONTROL LEVER SUB-ASSEMBLY LH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Detach the 4 claws and remove the seat lock control lever.



81. REMOVE REAR SEAT LOCK CONTROL LEVER SUB-ASSEMBLY RH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

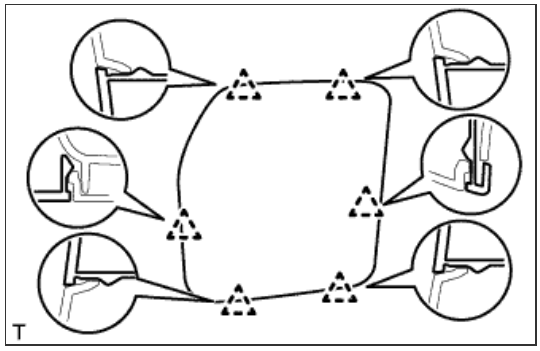
82. REMOVE REAR NO. 2 SEAT COVER BEZEL (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Detach the 6 clips and remove the rear No. 2 seat cover bezel.



83. REMOVE REAR NO. 1 SEAT COVER BEZEL (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the rear No. 2 seat cover bezel.

84. REMOVE QUARTER TRIM COVER LH (w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat Type)

a. Detach the 6 clips and remove the uarter trim cover.

85. REMOVE QUARTER TRIM COVER RH (w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

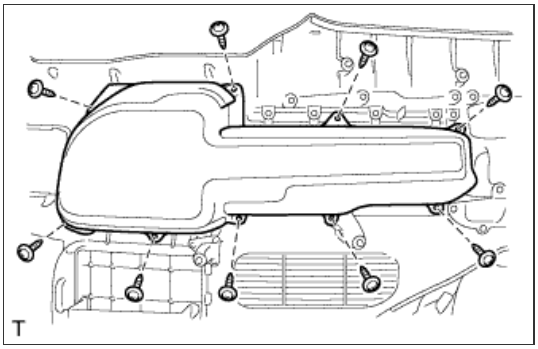
86. REMOVE QUARTER TRIM LID SUB-ASSEMBLY RH



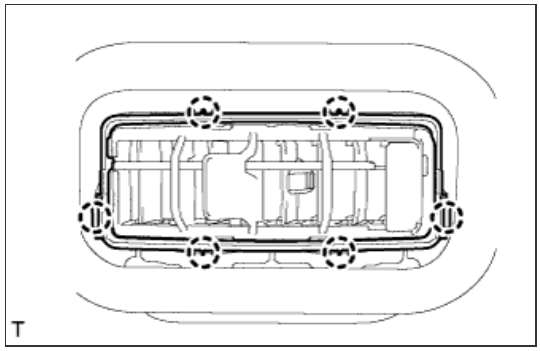
a. Remove the uarter trim lid.

87. REMOVE SIDE TRIM BOX COVER

a. Remove the side trim box cover.

88. REMOVE SIDE TRIM BOX

a. Remove the 9 screws and side trim box.



for Preparation Click here

1. REMOVE NO. 2 AIR OUTLET GRILLE ASSEMBLY (w/ Rear Air Conditioning System)

HINT:

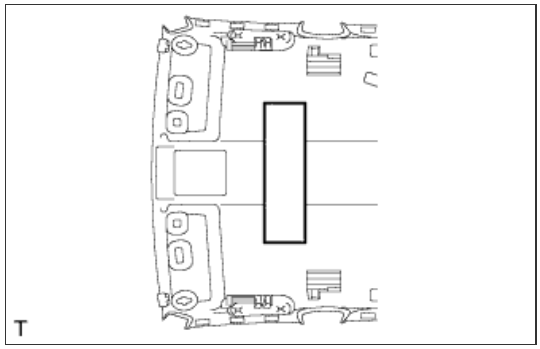
Use the same procedures to remove the air outlet grille on the other side.

a. Detach 6 claws and remove the air outlet grille.



2. REMOVE NO. 1 AIR OUTLET GRILLE ASSEMBLY (w/ Rear Air Conditioning System)

HINT:

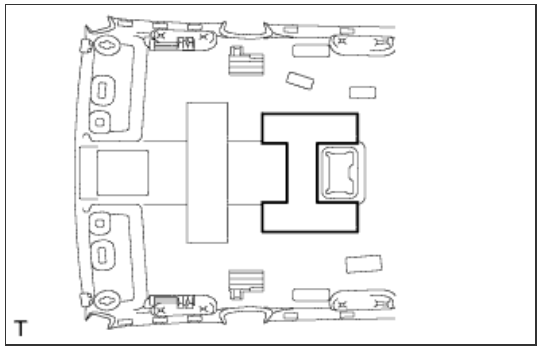
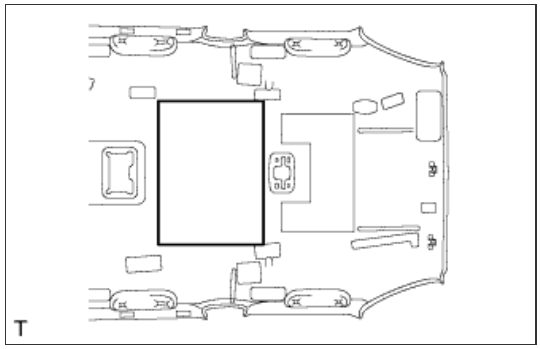
Use the same procedures described for the No. 2 air outlet grille.



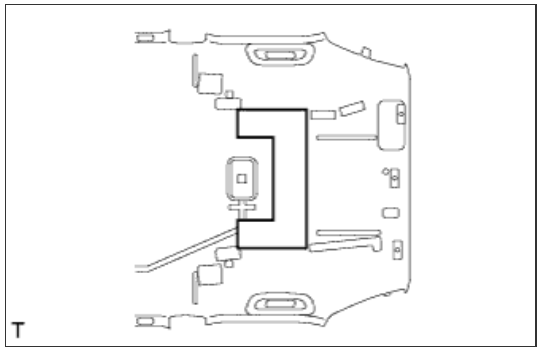
3. REMOVE NO. 1 ROOF SILENCER PAD

a. Remove the roof silencer pad.



4. REMOVE NO. 2 ROOF SILENCER PAD

a. Remove the roof silencer pad.

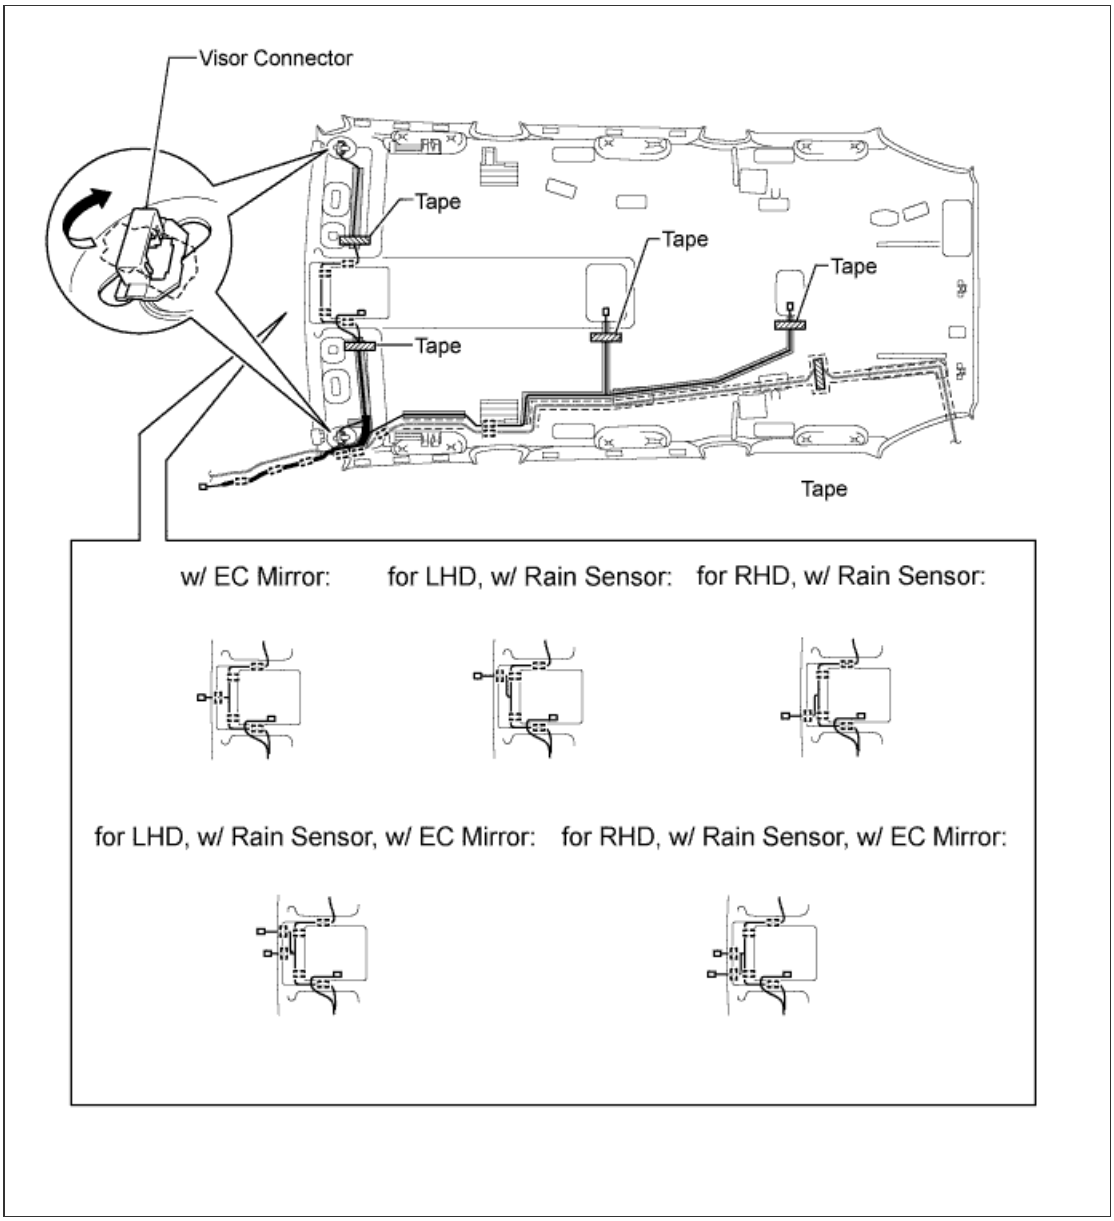


5. REMOVE NO. 3 ROOF SILENCER PAD

a. Remove the roof silencer pad.

6. REMOVE NO. 4 ROOF SILENCER PAD

a. Remove the roof silencer pad.

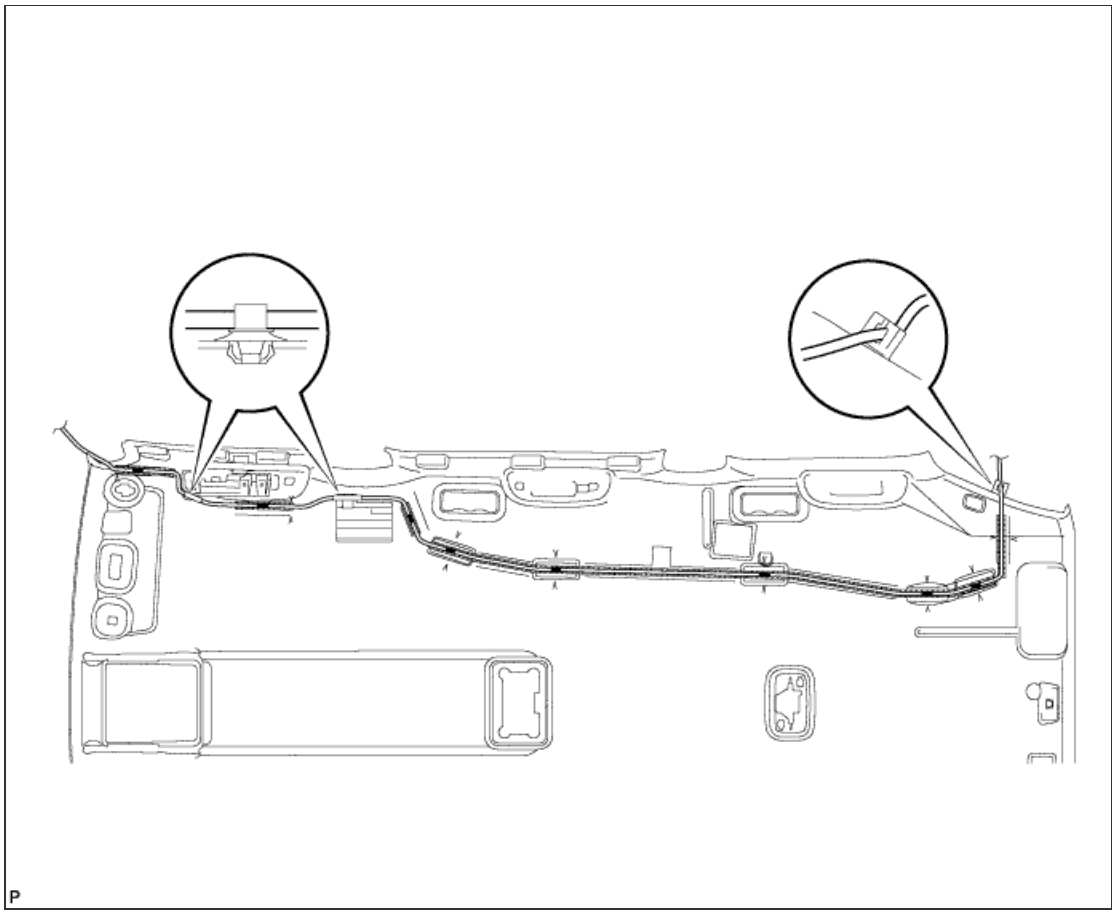


7. REMOVE NO. 1 ROOF WIRE

a. Turn the visor connectors approximately 90 clockwise and remove them from the roof headlining.

b. Remove the 6 pieces of tape from the roof headlining.

c. Detach each clamp, and remove the roof wire and washer hose.

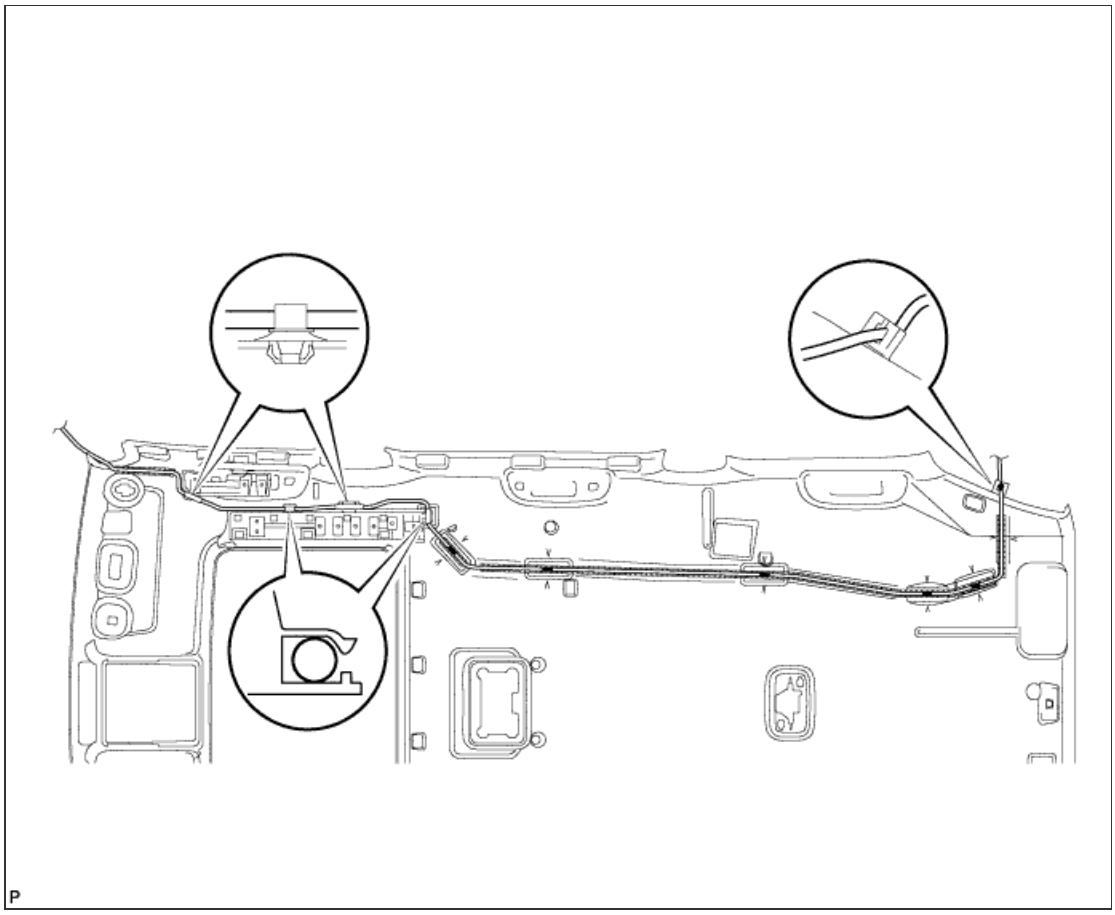


d. Remove the double-sided tape remaining on the headlining.

8. REMOVE ANTENNA CORD SUB-ASSEMBLY

a. w/o Sliding Roof:

i. Detach the 2 clamps and remove the antenna from the notch on the rear of the roof headlining.



ii. Remove the antenna cord from the roof headlining.

iii. Remove the double-sided tape from the roof headlining.

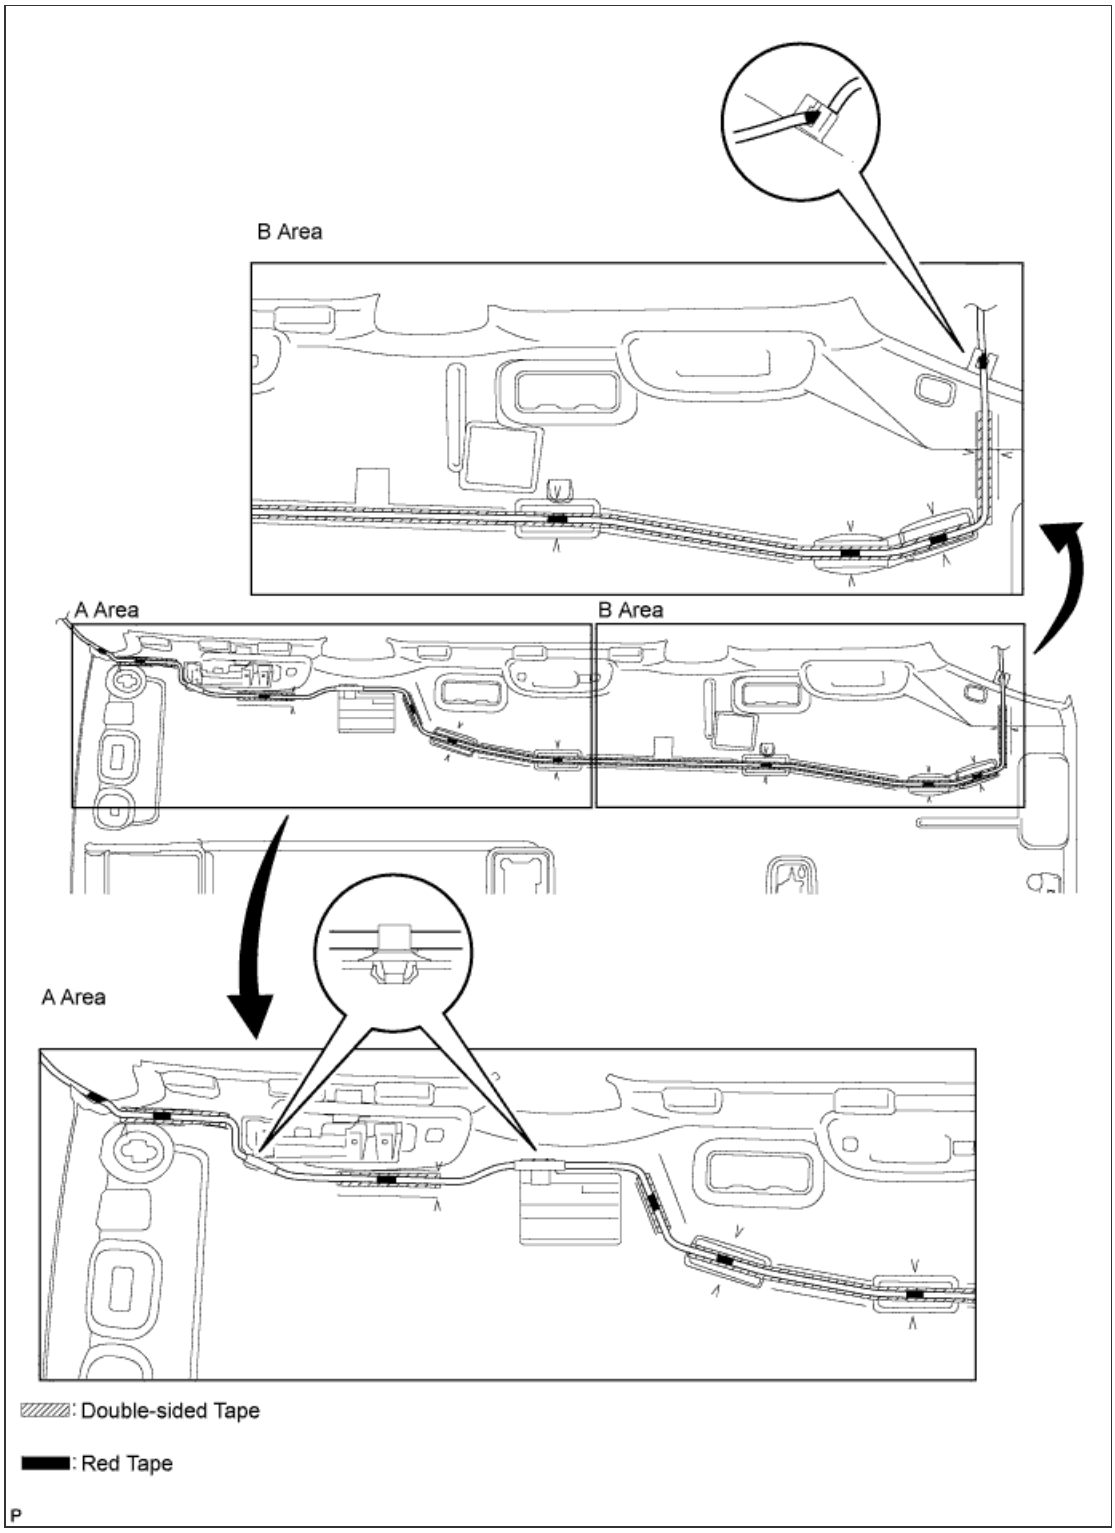
b. w/ Sliding Roof:

i. Detach the 4 clamps and remove the antenna from the notch on the rear of the roof headlining.

ii. Remove the antenna cord from the roof headlining.

iii. Remove the double-sided tape from the roof headlining.

for Preparation Click here



1. INSTALL ANTENNA CORD SUB-ASSEMBLY

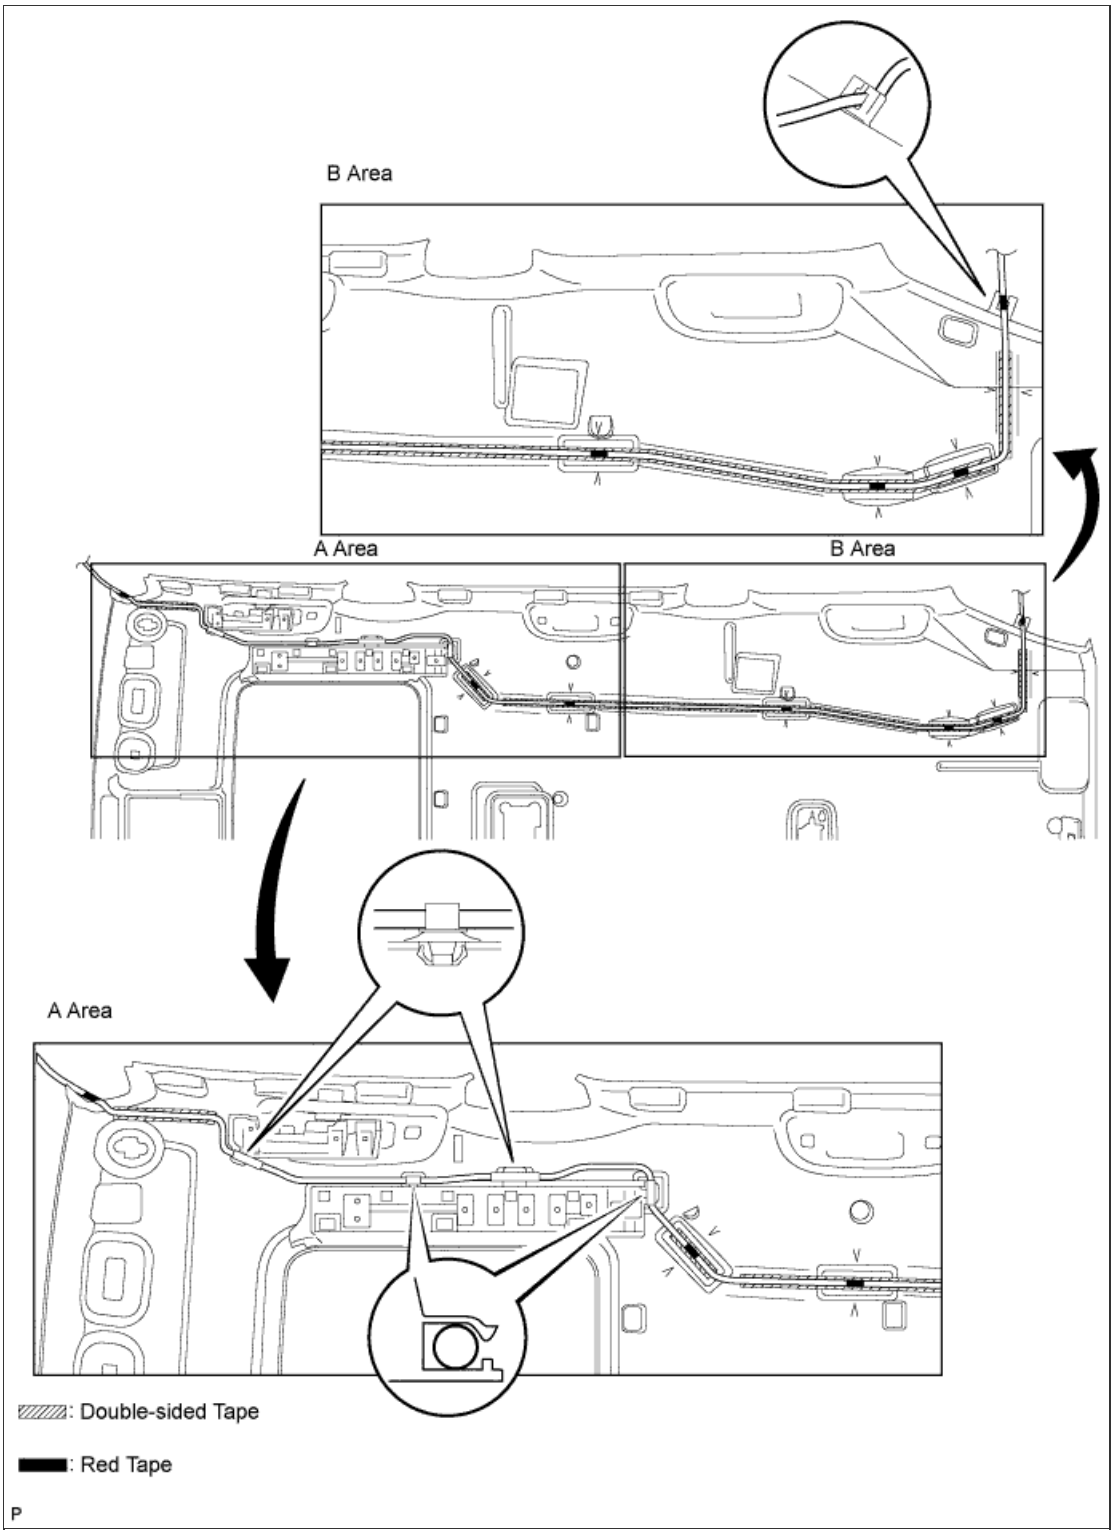
a. w/o Sliding Roof:

i. Apply new double-sided tape as shown in the illustration.

HINT:

Attach double-sided tape to the hatched areas shown in the illustration below.

ii. Align the red tape wound around the antenna cord with the V markings on the roof headlining and the notch at the rear of the headlining, and attach the antenna cord to the double-sided tape.



iii. Attach the 2 clamps and fit the antenna into the notch.

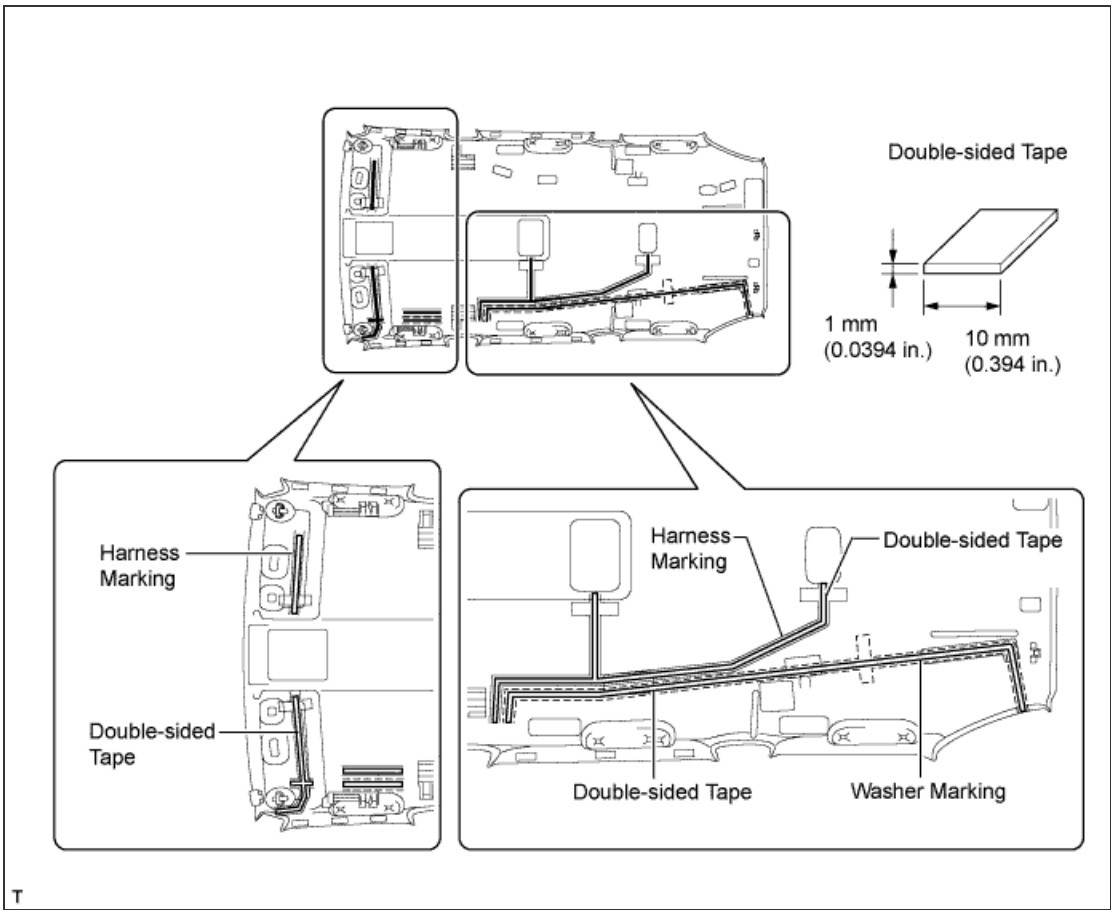
b. w/ Sliding Roof:

i. Apply new double-sided tape as shown in the illustration.

HINT:

Attach double-sided tape to the hatched areas shown in the illustration below.

ii. Align the red tape wound around the antenna cord with the V markings on the roof headlining and the notch at the rear of the headlining, and attach the antenna cord to the double-sided tape.



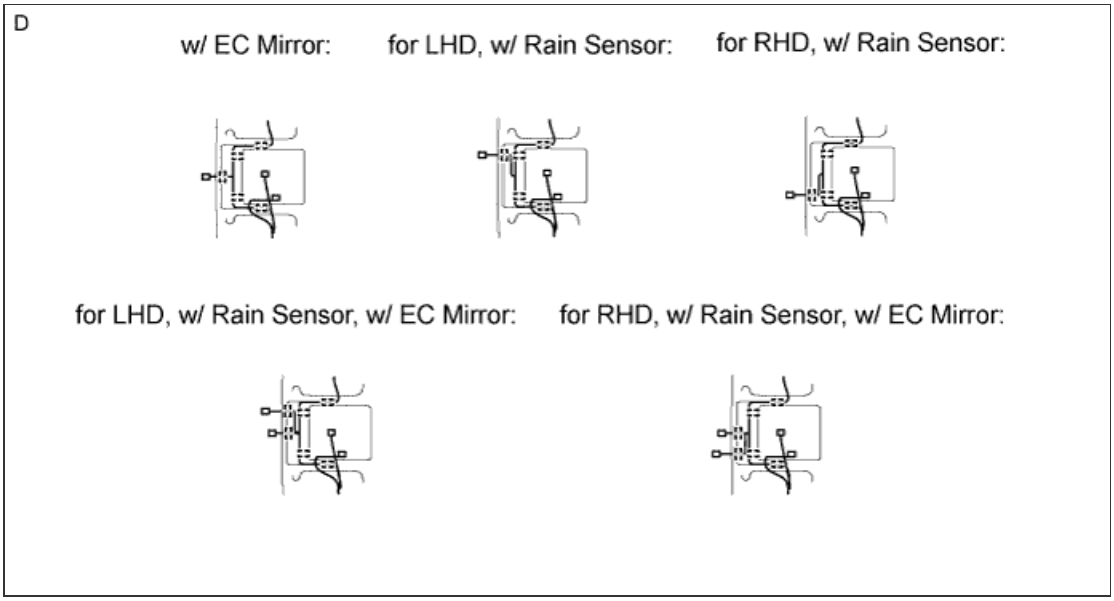
iii. Attach the 4 clamps and fit the antenna into the notch.

2. INSTALL NO. 1 ROOF WIRE

a. Place double-sided tape along the center of the harness marking and washer marking.

HINT:

ake sure that the double-sided tape is not peeling off or misaligned.



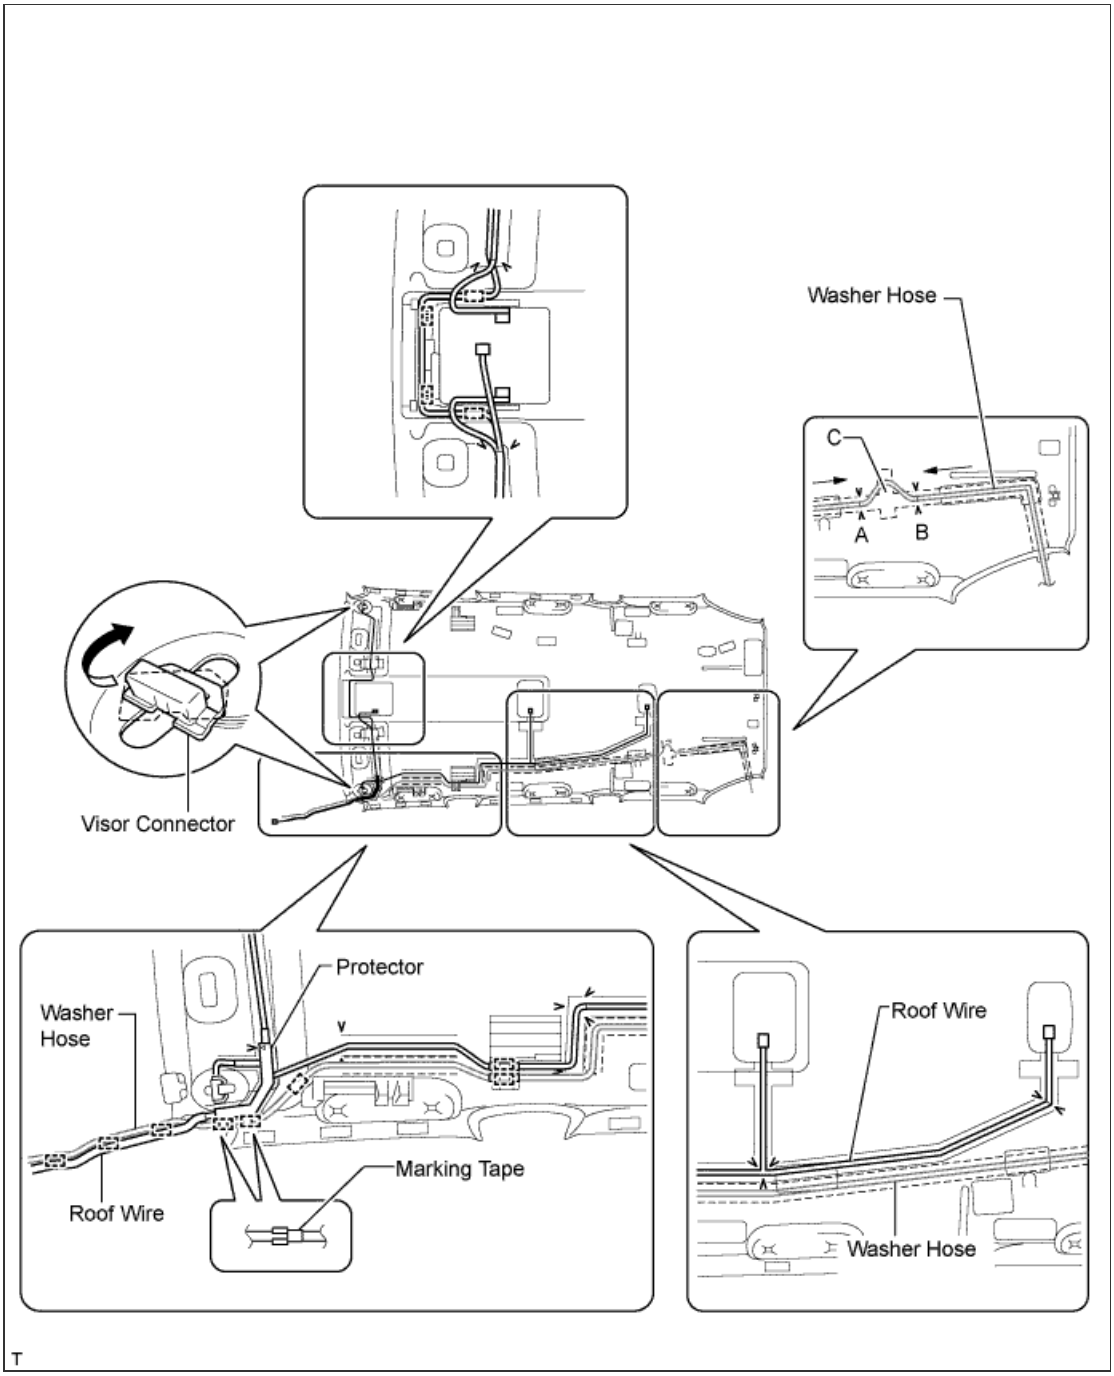
b. Remove the peeling paper from the double-sided tape while not touching the adhesive side.

c. Align the triangle mark of the roof wire protector with the V mark of the headlining as shown in the illustration, and then attach the roof wire protector.

d. Attach each clamp as shown in the illustration.

HINT:

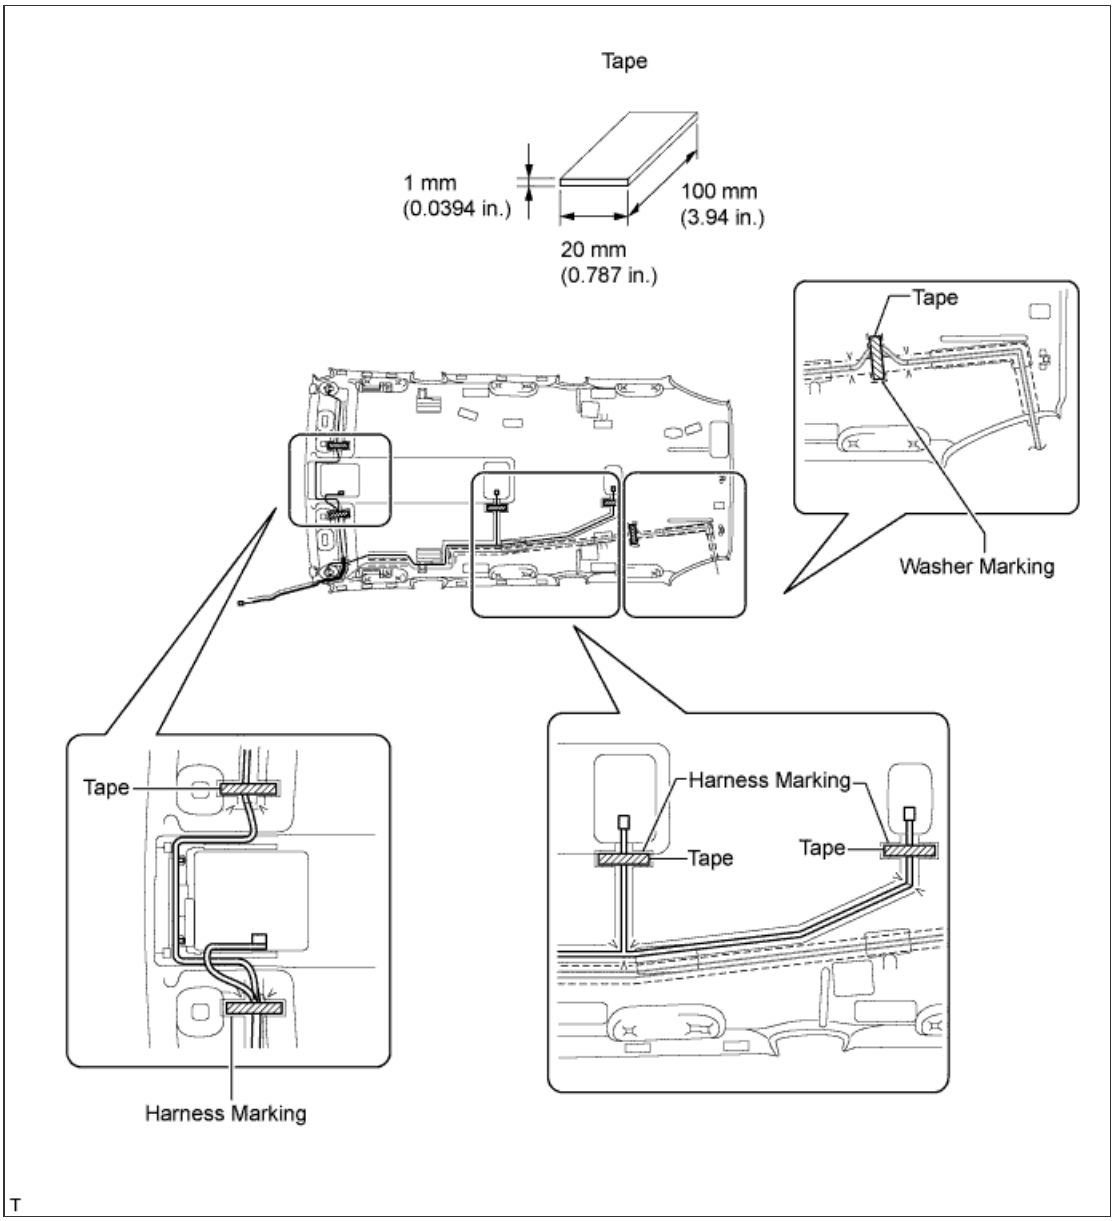
The positions of the clamps at the front of the roof headlining are shown in illustration D.



e. Align the roof wire and washer hose with the V marks of the headlining as shown in the illustration, and attach them to the headlining.

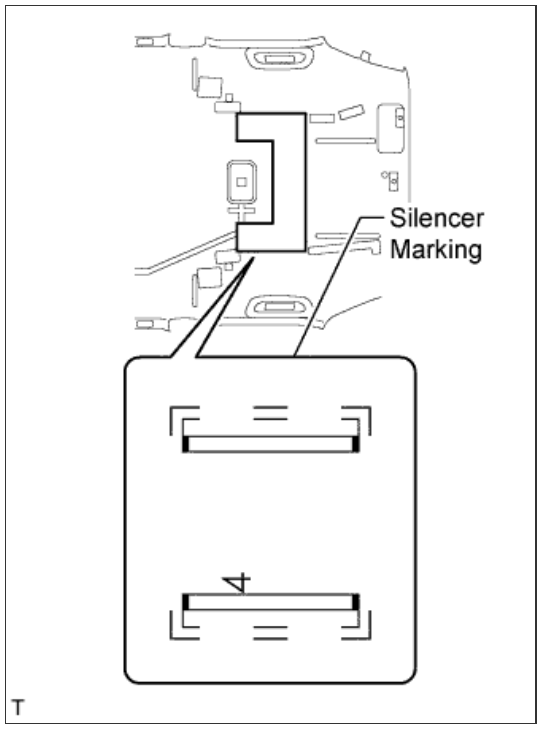
HINT:

- **Attach the washer hose from the front to the point labeled A, and attach the washer hose from the rear to the point labeled B as shown in the illustration.**
- **Attach the extra length of the washer hose to the part labeled C in the illustration.**



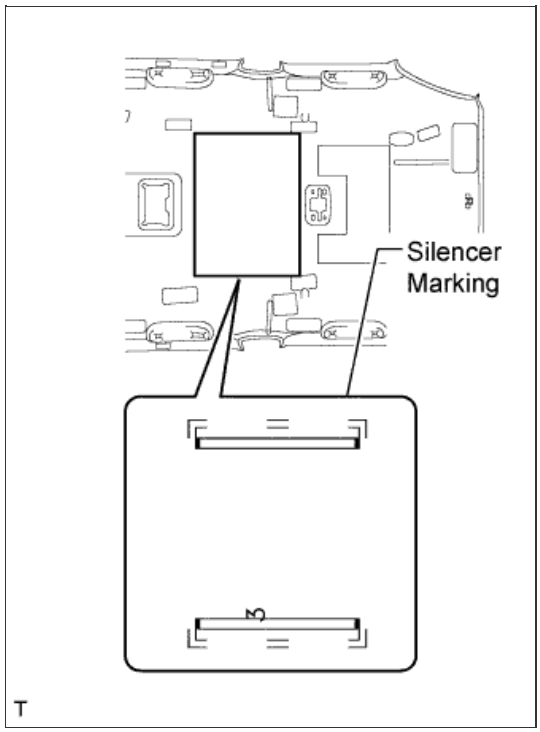
f. Turn the visor connectors approximately 90 clockwise to install them to the roof headlining.

g. Place tape at the wire harness marking and washer marking locations as shown in the illustration to fix the roof wire and washer hose in place.



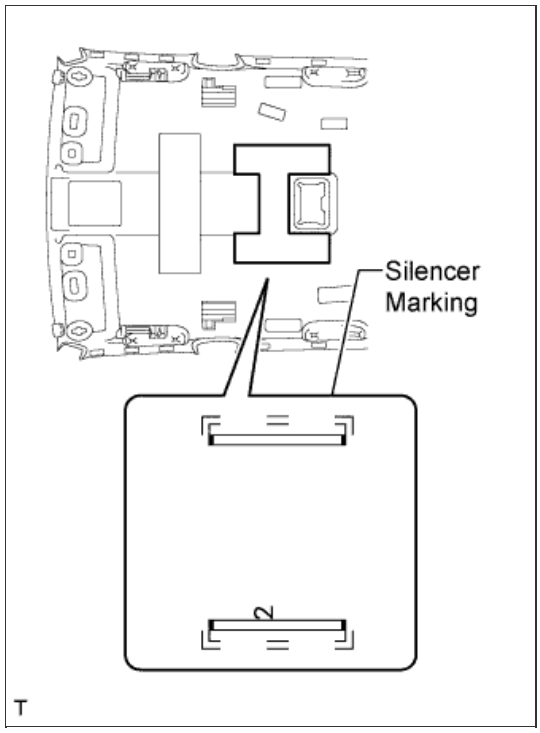
HINT:

Apply sufficient pressure when placing tape.



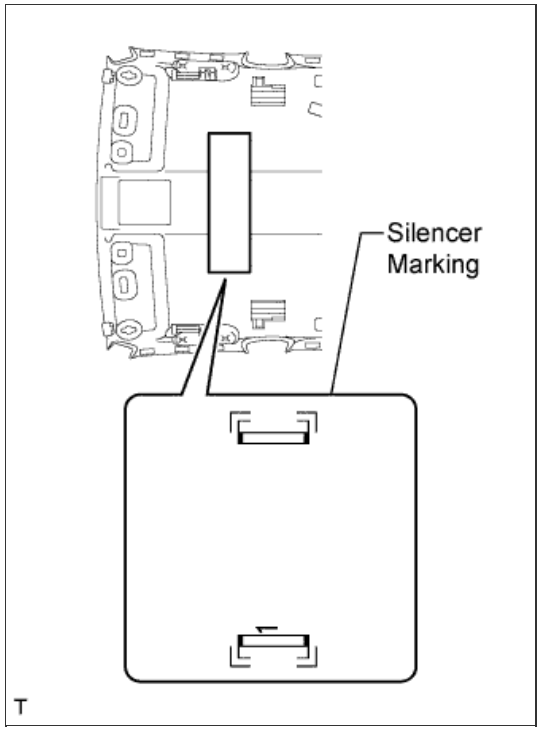
3. INSTALL NO. 4 ROOF SILENCER PAD

a. Align the silencer marking on the roof headlining with the roof silencer pad and install the pad using double-sided tape as shown in the illustration.



4. INSTALL NO. 3 ROOF SILENCER PAD

a. Align the silencer marking on the roof headlining with the roof silencer pad and install the pad using double-sided tape as shown in the illustration.

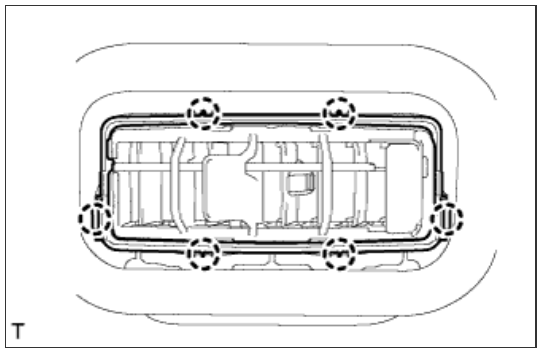


5. INSTALL NO. 2 ROOF SILENCER PAD

a. Align the silencer marking on the roof headlining with the roof silencer pad and install the pad using double-sided tape as shown in the illustration.

6. INSTALL NO. 1 ROOF SILENCER PAD

a. Align the silencer marking on the roof headlining with the roof silencer pad and install the pad using double-sided tape as shown in the illustration.



7. INSTALL NO. 2 AIR OUTLET GRILLE ASSEMBLY (w/ Rear Air Conditioning System)

HINT:

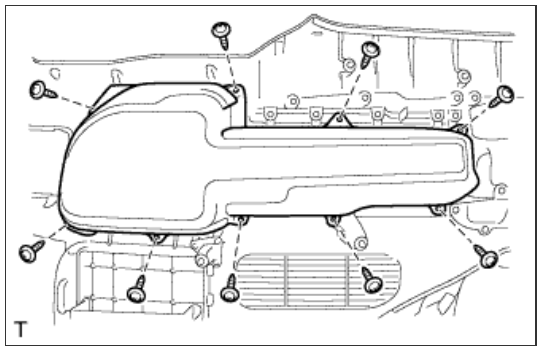
Use the same procedures to install the air outlet grille on the other side.

a. Attach the claws to install the air outlet grille.

8. INSTALL NO. 1 AIR OUTLET GRILLE ASSEMBLY (w/ Rear Air Conditioning System)

HINT:

Use the same procedures described for the No. 2 air outlet grille.



for Preparation Click here

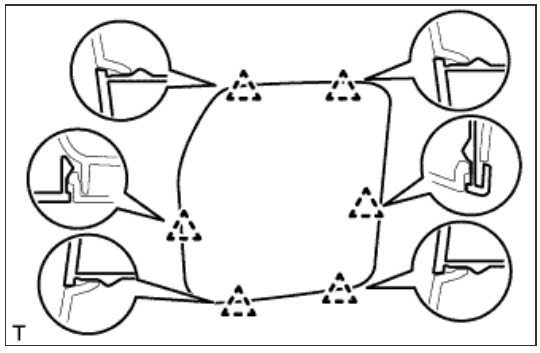
HINT:

A bolt without a torque specification is shown in the standard bolt chart (Click here).

1. INSTALL SIDE TRIM BOX

a. Install the side trim box with the 9 screws.

2. INSTALL SIDE TRIM BOX COVER



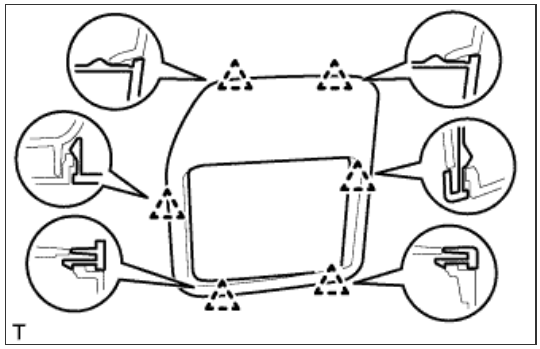
a. Install the side trim box cover.

3. INSTALL QUARTER TRIM LID SUB-ASSEMBLY RH

a. Install the quarter trim lid.

4. INSTALL QUARTER TRIM COVER LH (w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat Type)

a. Attach the 6 clips to install the quarter trim cover.



5. INSTALL QUARTER TRIM COVER RH (w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

6. INSTALL REAR NO. 2 SEAT COVER BEZEL (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Attach the 6 clips to install the rear No. 2 seat cover bezel.

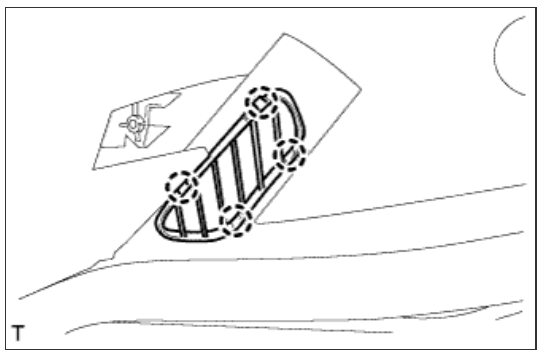
7. INSTALL REAR NO. 1 SEAT COVER BEZEL (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the rear No. 2 seat cover bezel.

8. INSTALL REAR SEAT LOCK CONTROL LEVER SUB-ASSEMBLY LH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Attach the 4 claws to install the seat lock control lever.



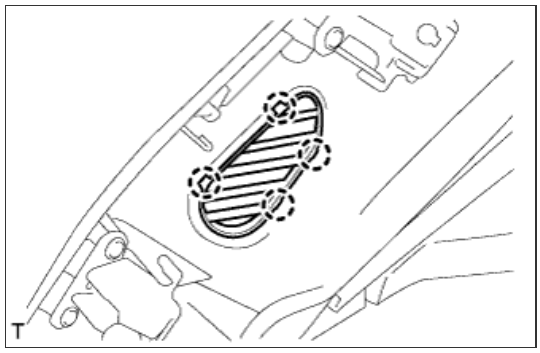
9. INSTALL REAR SEAT LOCK CONTROL LEVER SUB-ASSEMBLY RH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

10. INSTALL NO. 2 SIDE TRIM BASE COVER LH (w/ Rear Heater)

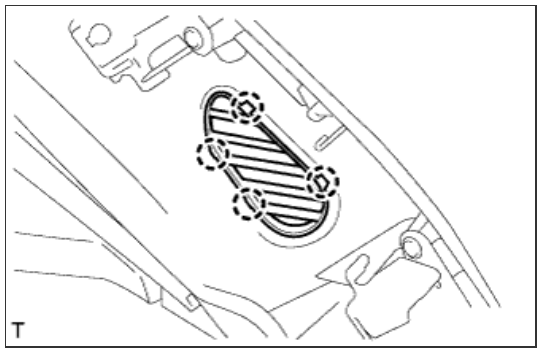
a. Attach the 4 claws to install the cover.



11. INSTALL NO. 2 SIDE TRIM BASE COVER RH (w/ Rear Heater)

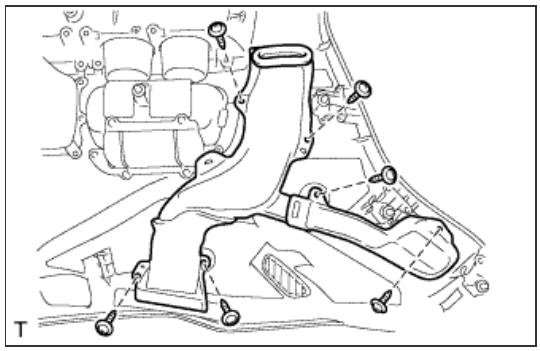
HINT:

Use the same procedures described for the LH side.



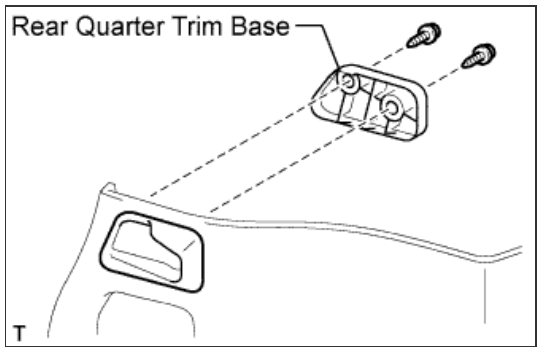
12. INSTALL NO. 1 SIDE TRIM BASE COVER LH (w/ Rear Heater)

a. Attach the 4 claws to install the cover.



13. INSTALL NO. 1 SIDE TRIM BASE COVER RH (w/ Rear Heater)

a. Attach the 4 claws to install the cover.

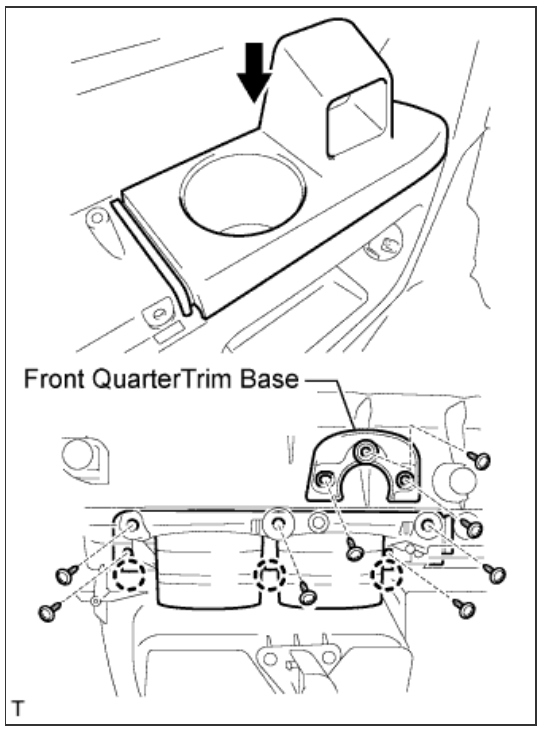


b. Install the duct with the 6 screws.

14. INSTALL TONNEAU COVER HANGER LH (w/ Tonnea Cover)

a. Install the tonneau cover hanger and rear quarter trim base with the 2 screws.

15. INSTALL TONNEAU COVER HANGER RH (w/ Tonnea Cover)



HINT:

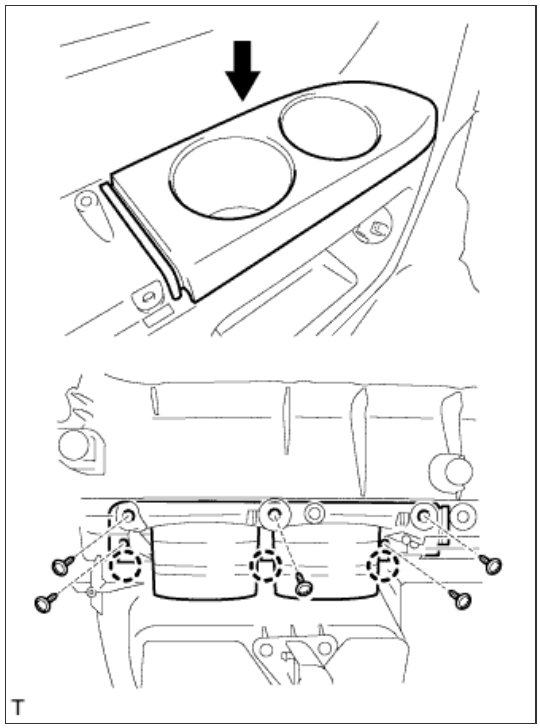
Use the same procedures described for the LH side.

16. INSTALL TONNEAU COVER HOLDER BRACKET LH (w/ Tonnea Cover)

a. Attach the 3 claws to install the tonneau cover holder bracket.

. Install the front quarter trim base with the 3 screws and then install the remaining 5 screws.

17. INSTALL TONNEAU COVER HOLDER BRACKET RH (w/ Tonnea Cover)

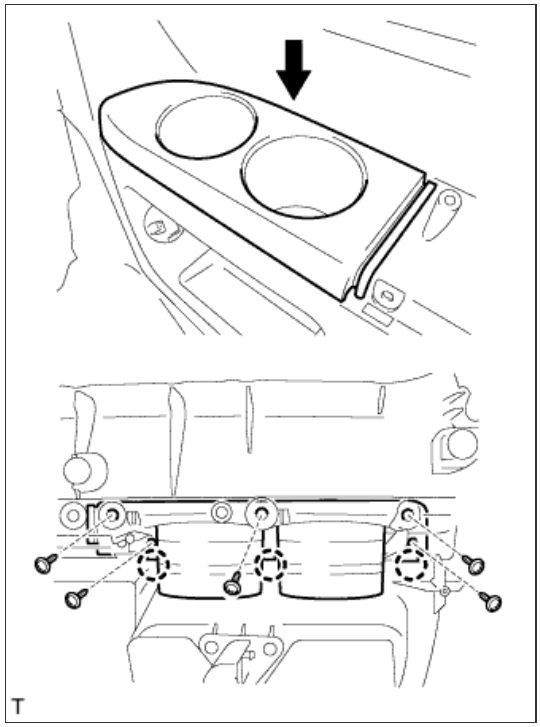


HINT:

Use the same procedures described for the LH side.

18. INSTALL NO. 2 CUP HOLDER

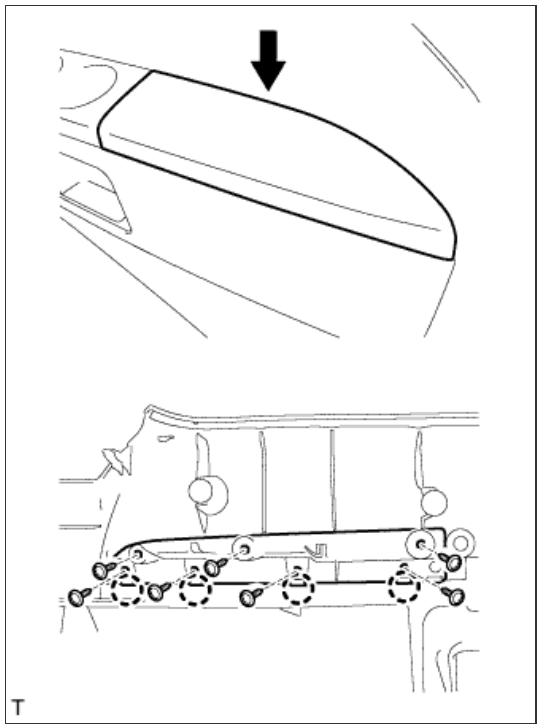
a. Attach the 3 claws to install the cup holder.



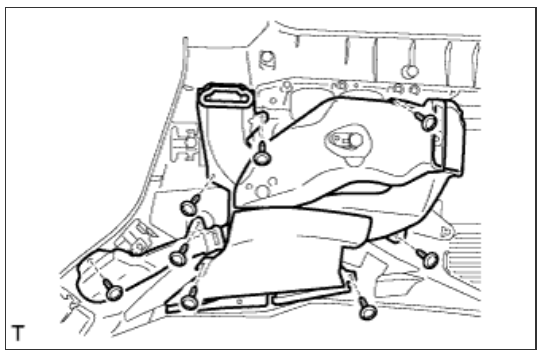
b. Install the 5 screws.

19. INSTALL NO. 1 CUP HOLDER

a. Attach the 3 claws to install the cup holder.



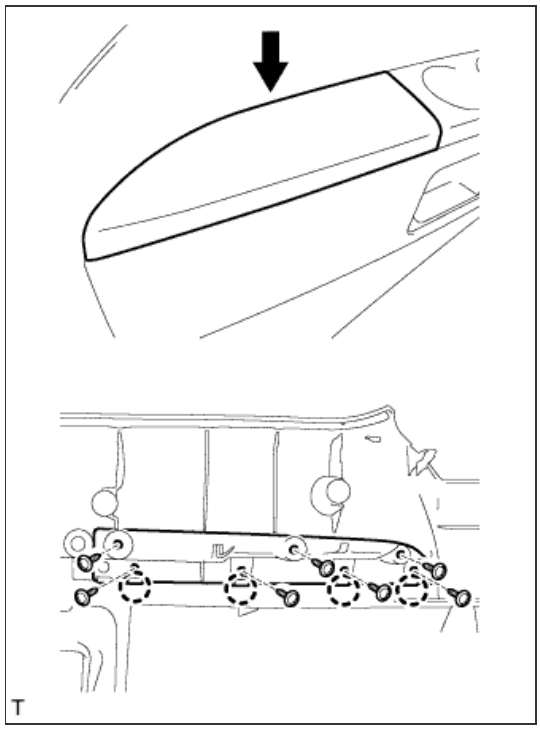
. Install the 5 screws.



20. INSTALL QUARTER TRIM COVER SUB-ASSEMBLY LH

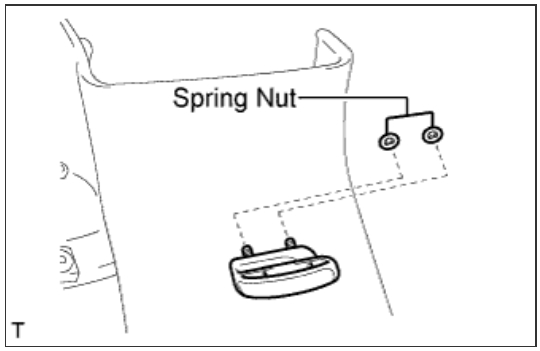
a. Attach the 4 claws to install the quarter trim cover.

b. Install the 7 screws.



c. w/ Rear Heater:
Install the duct with the 8 screws.

21. INSTALL QUARTER TRIM COVER SUB-ASSEMBLY RH



a. Attach the 4 claws to install the quarter trim cover.

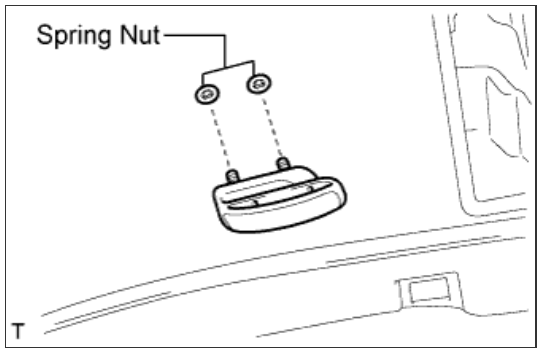
b. Install the 7 screws.

22. INSTALL REAR NO. 2 SEAT SHOULDER BELT HANGER LH

a. Install the hanger with 2 new spring nuts.

23. INSTALL REAR NO. 2 SEAT SHOULDER BELT HANGER RH

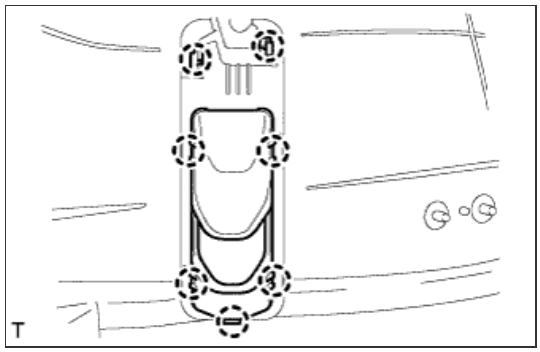
HINT:



Use the same procedures described for the LH side.

24. INSTALL REAR SEAT SHOULDER BELT HANGER (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

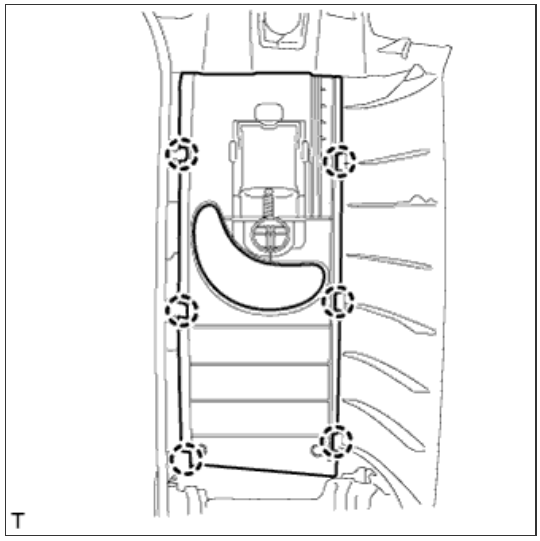


Use the same procedure to install the hanger on the other side.

a. Install the hanger with 2 new spring nuts.

25. INSTALL ROOF SIDE INNER GARNISH COVER LH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Attach the 7 claws to install the cover.



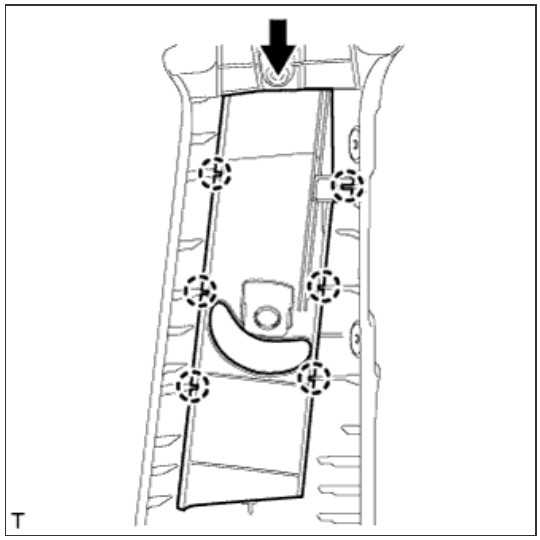
26. INSTALL ROOF SIDE INNER GARNISH COVER RH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

27. INSTALL REAR SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY LH

a. Attach the 6 claws to install the plate.



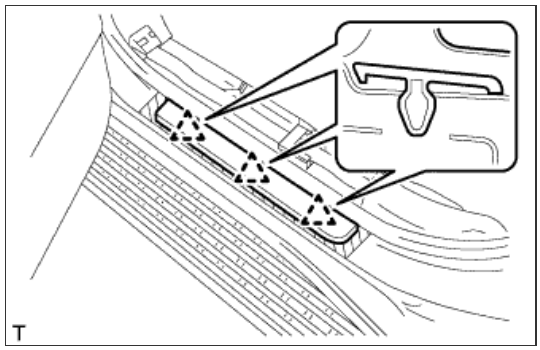
28. INSTALL REAR SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

29. INSTALL FRONT SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY LH

a. Slide the plate in the direction shown in the illustration and attach the 6 claws to install the plate.



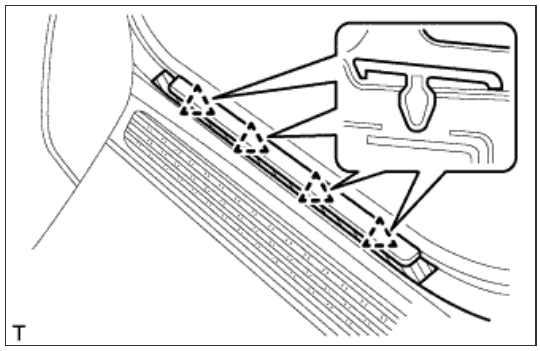
30. INSTALL FRONT SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

31. INSTALL REAR DOOR SCUFF PLATE OUTSIDE LH

a. Attach the 3 clips to install the rear door scuff plate outside.



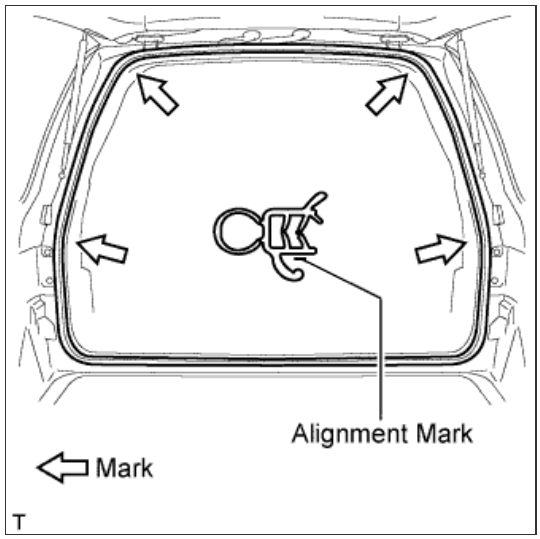
32. INSTALL REAR DOOR SCUFF PLATE OUTSIDE RH

HINT:

Use the same procedures described for the LH side.

33. INSTALL FRONT DOOR SCUFF PLATE OUTSIDE LH

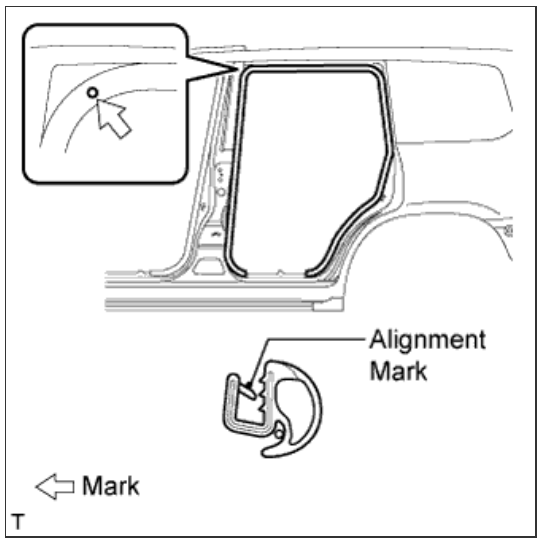
a. Attach the 4 clips to install the front door scuff plate outside.



34. INSTALL FRONT DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

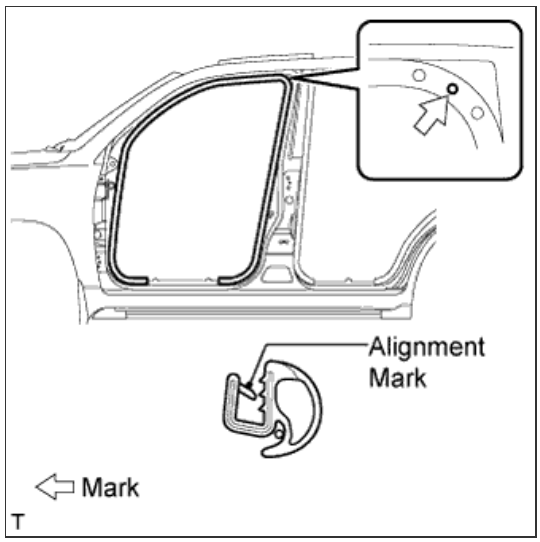


35. INSTALL BACK DOOR EATHERSTRIP

a. Install the back door weatherstrip as shown in the illustration.

36. INSTALL REAR DOOR OPENING TRIM EATHERSTRIP LH

a. Install the rear door opening trim weatherstrip as shown in the illustration.



37. INSTALL REAR DOOR OPENING TRIM EATHERSTRIP RH

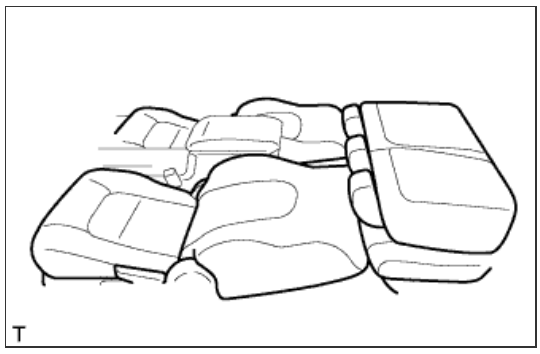
HINT:

Use the same procedures described for the LH side.

38. INSTALL FRONT DOOR OPENING TRIM EATHERSTRIP LH

a. Install the front door opening trim weatherstrip as shown in the illustration.

39. INSTALL FRONT DOOR OPENING TRIM EATHERSTRIP RH



HINT:

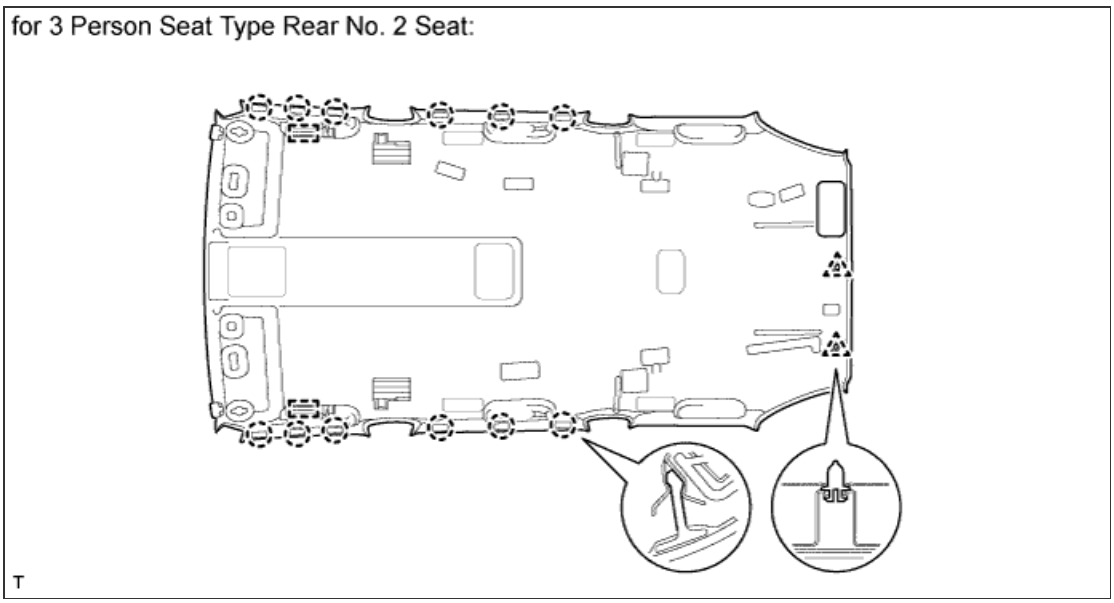
Use the same procedures described for the LH side.

40. INSTALL ROOF HEADLINING ASSEMBLY

HINT:

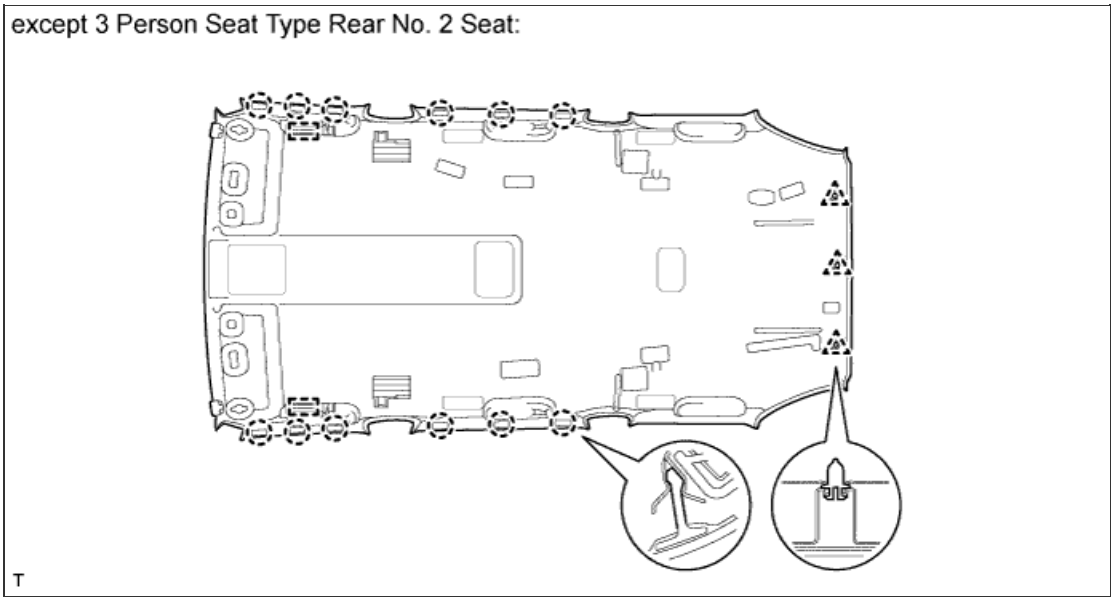
- **for Man al Seat:**
  hen in talling the roof headlining, oe the front eat and rear No. 1 eat to the po tion hown in the ill tration.
- **for Power Seat:**
  hen in talling the roof headlining, connect the cable to the negative (-) attery ter ial and oe the front eat and No. 1 rear eat to the po tion hown in the ill tration.
- **for Power Seat:**
  After o in the eat , di connect the cable fro the negative (-) attery ter ial.

a. Place the headlining in the cabin from the rear of the vehicle as shown in the illustration.

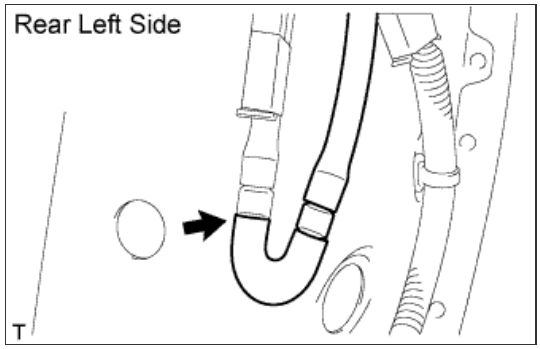


NOTICE:

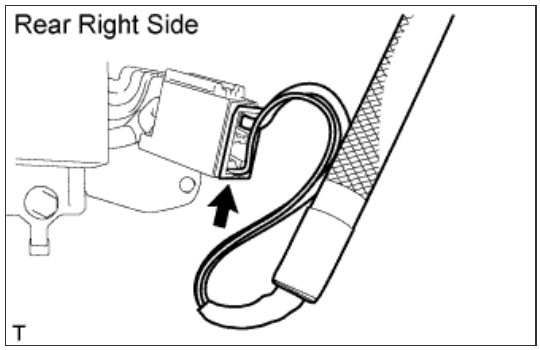
Be careful not to damage the roof headlining when placing it in the cabin.



b. for 3 Person Seat no Rear No. 2 Seat:

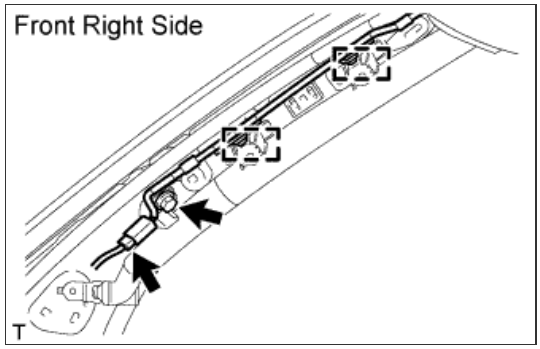


b. for 3 Person Seat Type Rear No. 2 Seat:
Attach the 2 guides, 12 claws and 2 clips to install the headlining.

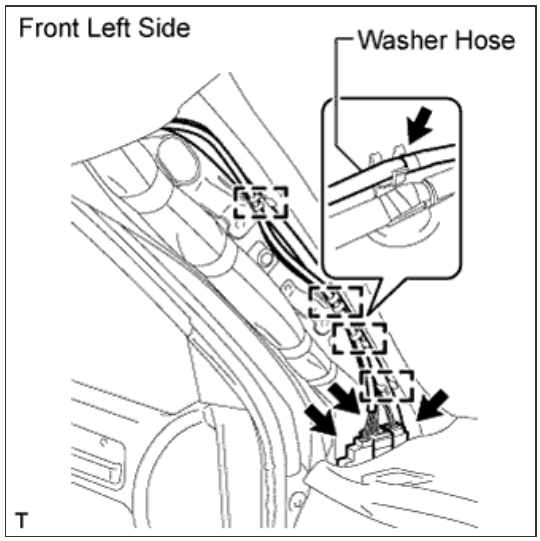


c. except 3 Person Seat Type Rear No. 2 Seat:
Attach the 2 guides, 12 claws and 3 clips to install the headlining.

d. w/ Rear Wiper:
Connect the washer hose.

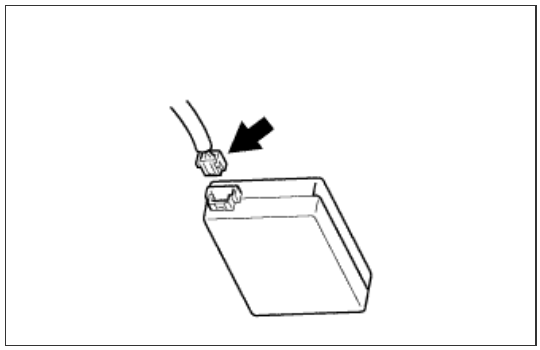


e. Connect the antenna cord connector.

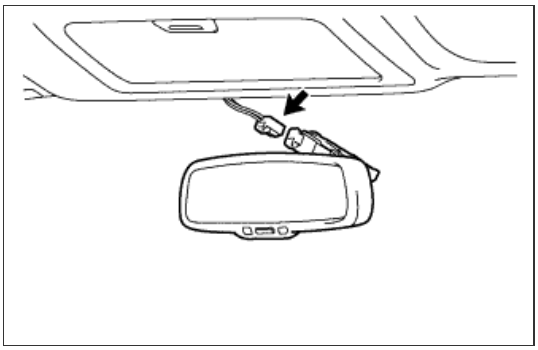


f. Connect the antenna cord connector and attach the 2 clamps.

g. Install the bolt.

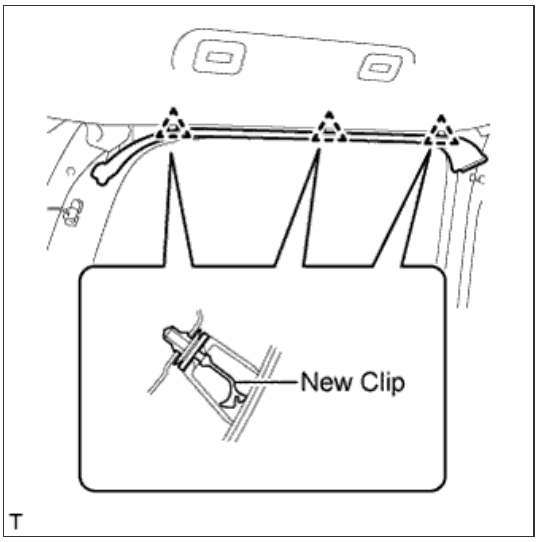


h. Connect the 3 roof wire connectors and 4 clamps.



i. w/ Rear Wiper:
Connect the washer hose.

. w/ Rain Sensor:
Connect the rain sensor connector.



k. w/ C Mirror:
Connect the inner mirror connector.

41. INSTALL FRONT ROOF SIDE RAIL GARNISH LH

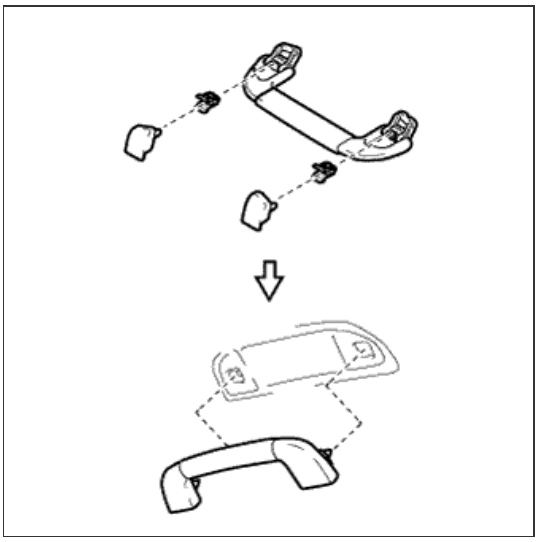
a. Install 3 new clips to the roof side rail garnish.

. Attach the 3 clips to install the roof side rail garnish.

42. INSTALL FRONT ROOF SIDE RAIL GARNISH RH

HINT:

Use the same procedures described for the LH side.



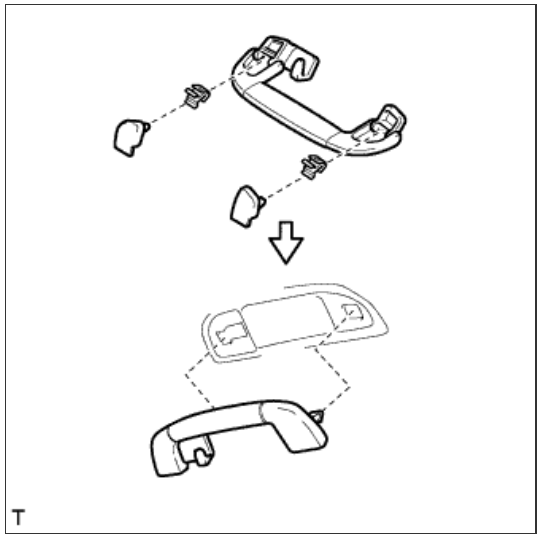
43. INSTALL 3RD SEAT ASSIST GRIP ASSEMBLY (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedure to install the 3rd seat assist grip on the other side.

a. Assemble the assist grip, 2 clips and 2 covers as shown in the illustration.

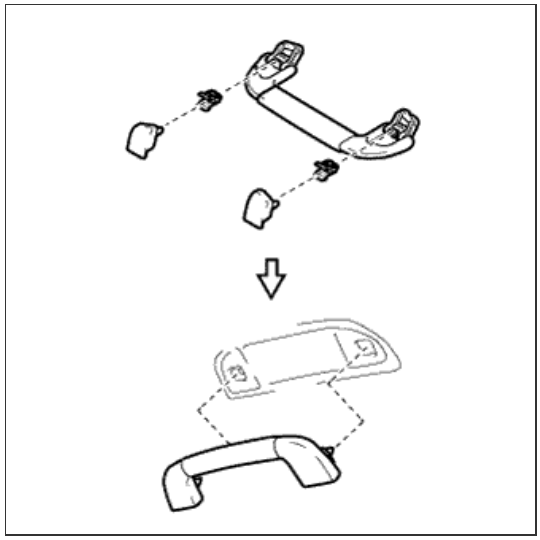
b. Install the assist grip.



44. INSTALL NO. 2 ASSIST GRIP ASSEMBLY LH

a. w/ Rear No. 2 Seat, except ace to ace Seat pe or w/o Rear No. 2 Seat:
Install the No. 2 assist grip assembl .

i. Assemble the assist grip, 2 clips and 2 covers as shown in the illustration.



ii. Install the assist grip.

. w/ Rear No. 2 Seat, for ace to ace Seat pe:
Install the No. 2 assist grip assembl .

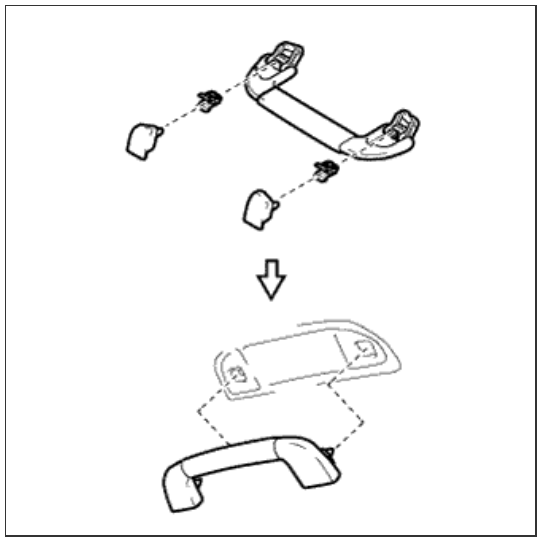
i. Assemble the assist grip, 2 clips and 2 covers as shown in the illustration.

ii. Install the assist grip.

45. INSTALL NO. 2 ASSIST GRIP ASSEMBLY RH

HINT:

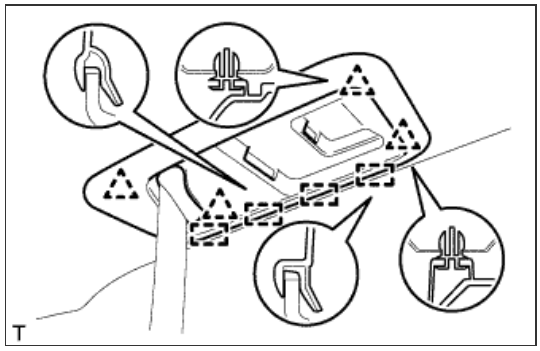
Use the same procedures described for the LH side.



46. INSTALL ASSIST GRIP ASSEMBLY

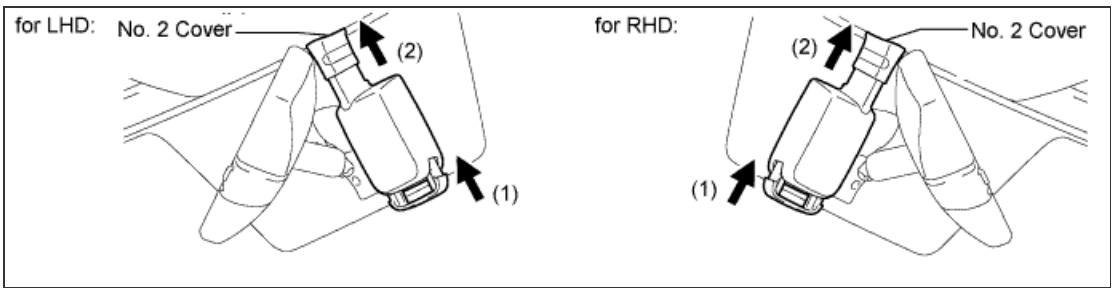
HINT:

Use the same procedure to install the assist grip on the other side.



a. Assemble the assist grip, 2 clips and 2 covers as shown in the illustration.

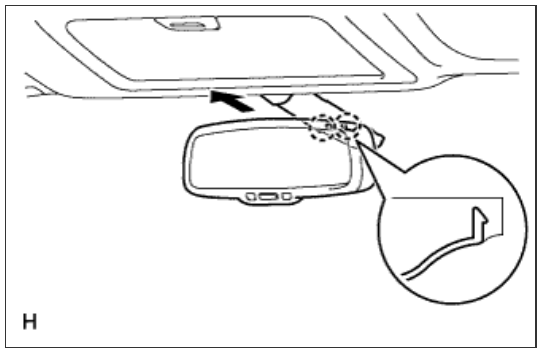
b. Install the assist grip.



47. INSTALL SEAT BELT ANCHOR COVER (for 3 Per on Seat Type Rear No. 2 Seat)

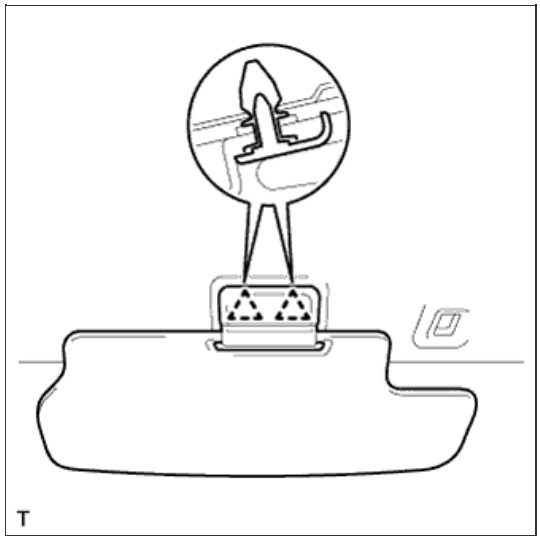
a. Attach the 4 guides and 4 clips to install the seat belt anchor cover.

48. INSTALL RAIN SENSOR COVER (w/ Rain Sen o)



a. Push in the stopper in the direction of the arrow labeled (1) to install the rain sensor cover.

. Slide the No. 2 cover in the direction of the arrow labeled (2) to fix it in place.



49. INSTALL INNER REAR VIE MIRROR STAY HOLDER COVER (w/ EC Mirror)

a. Attach the 2 claws to install the cover.

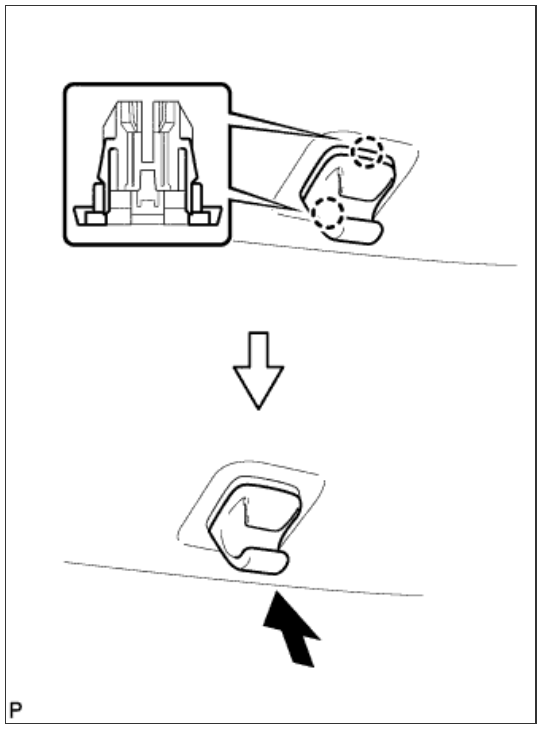
50. INSTALL CENTER VISOR ASSEMBLY LH (w/ S Vi o)

a. Attach the 2 clips to install the center visor.

51. INSTALL CENTER VISOR ASSEMBLY RH (w/ S Vi o)

HINT:

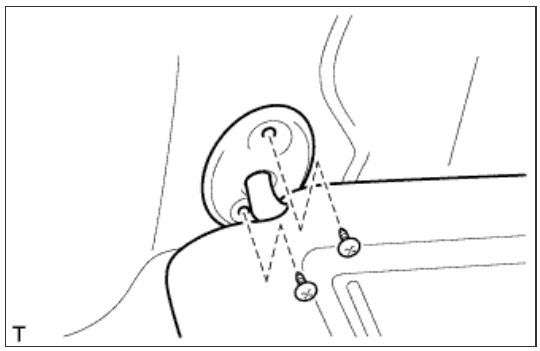
Use the same procedures described for the LH side.



52. INSTALL VISOR HOLDER

HINT:

Use the same procedures to install the visor holder on the other side.



a. Attach the 2 claws.

b. Push the visor holder in to install it.

53. INSTALL VISOR ASSEMBLY LH

a. Install the visor with the 2 screws.

54. INSTALL VISOR ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

55. INSTALL VISOR BRACKET COVER

HINT:

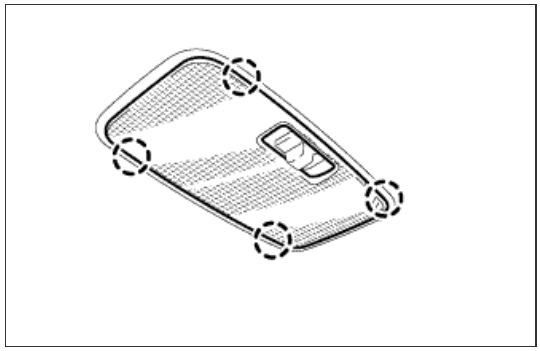
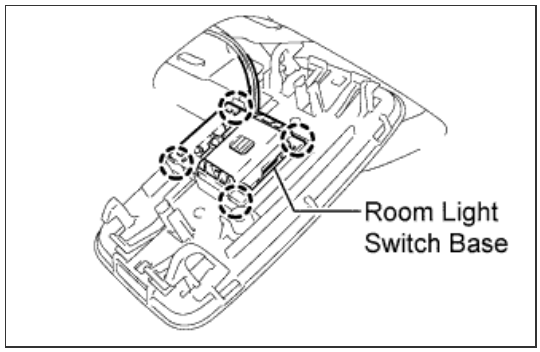
Use the same procedure to install the visor bracket cover on the other side.

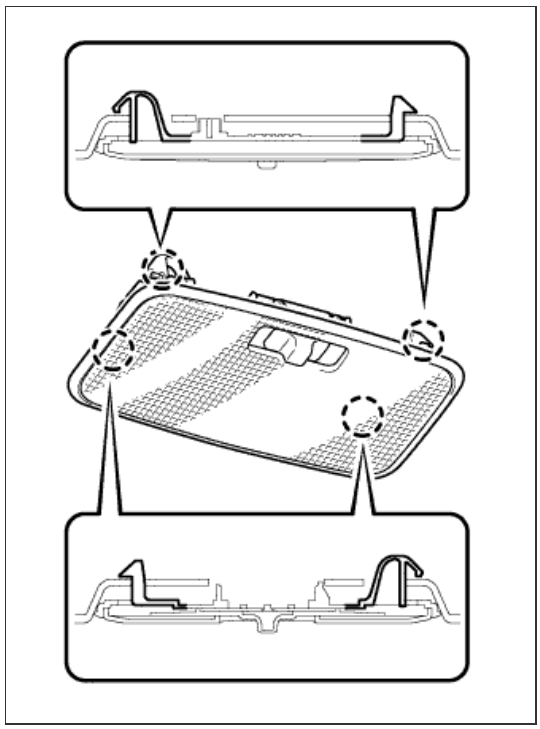
a. Attach the 4 claws to install the visor bracket cover.



56. INSTALL NO. 2 ROOM LIGHT ASSEMBLY

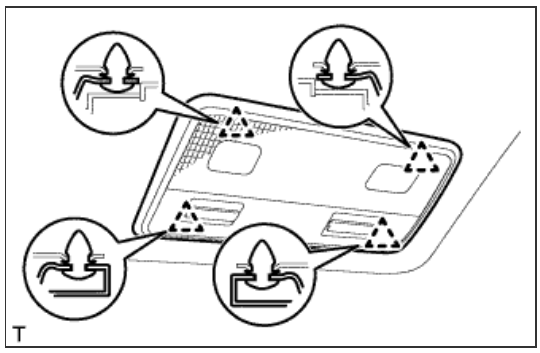


a. Install the 2 covers.



. Attach the 4 claws to install the room light lens.

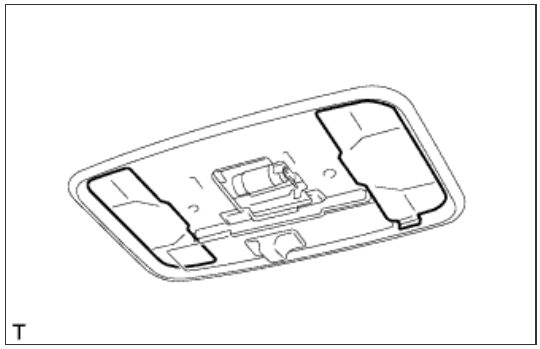
c. Attach the 4 claws to install the room light to the room light switch base.



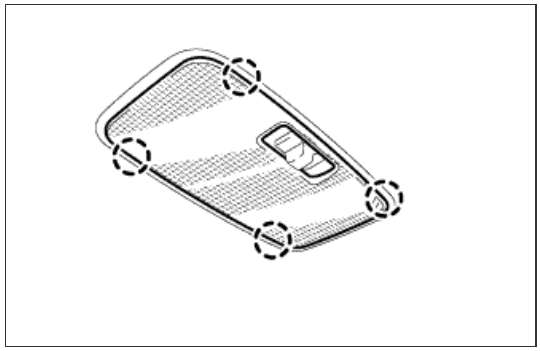
d. Attach the 4 claws to install the room light.

57. INSTALL NO. 1 ROOM LIGHT ASSEMBLY

a. w/ Map Light:
Install the No. 1 room light assembl .

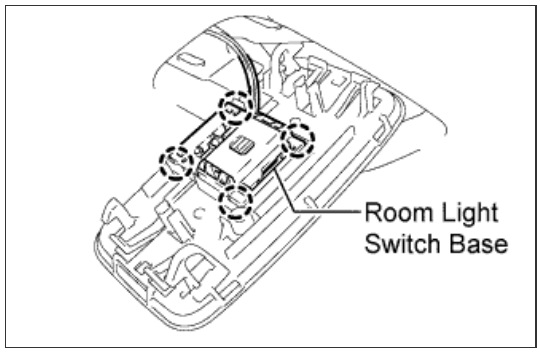


i. Connect the connector.

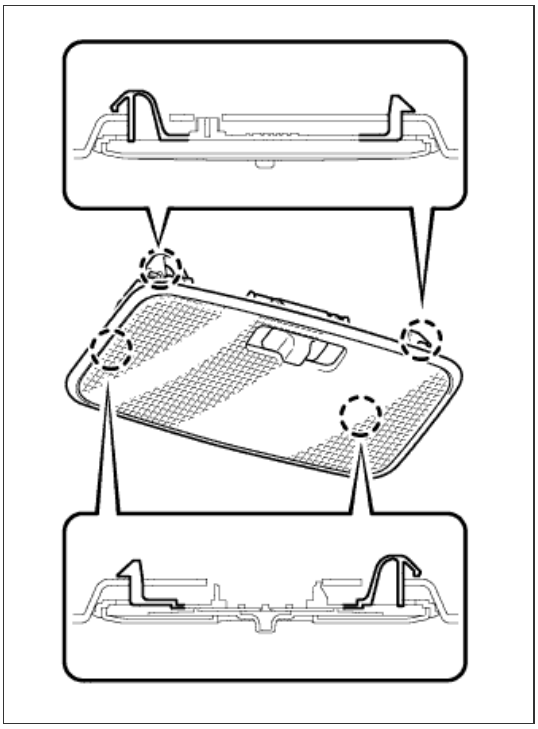


ii. Attach the 4 clips to install the room light.

. w/o Map Light:
Install the No. 1 room light assembl .



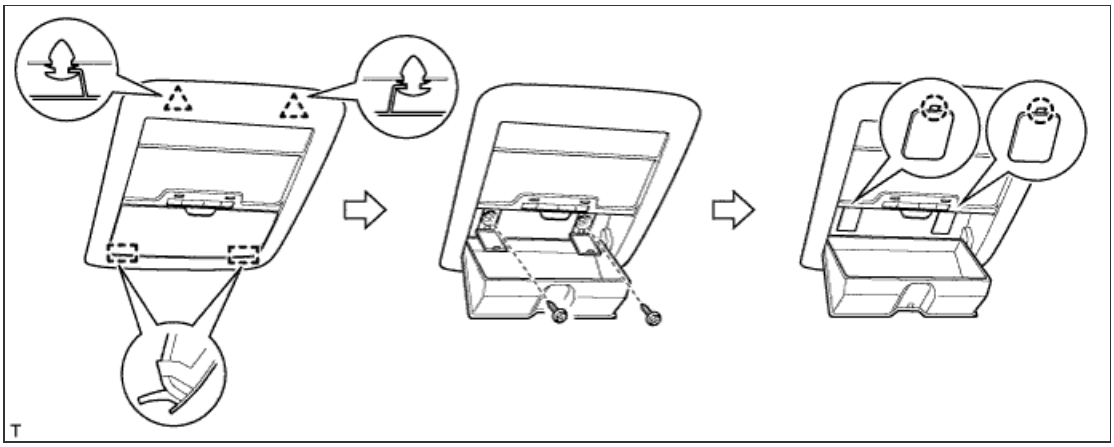
i. Install the 2 covers.



ii. Attach the 4 claws to install the room light lens.

iii. Attach the 4 claws to install the room light to the room light switch base.

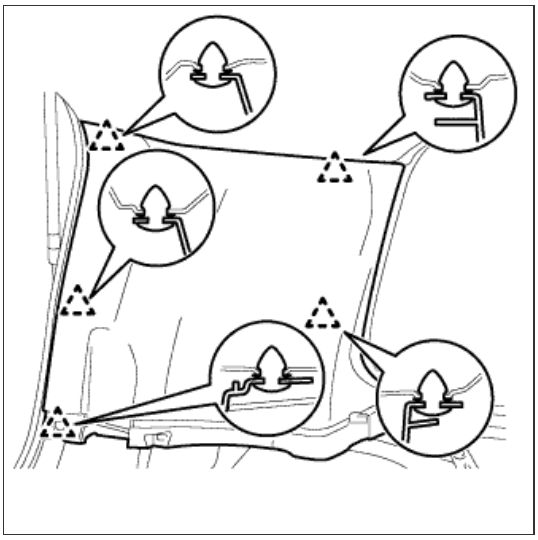
iv. Attach the 4 claws to install the room light.



58. INSTALL MAP LIGHT ASSEMBLY (w/ Map Light)

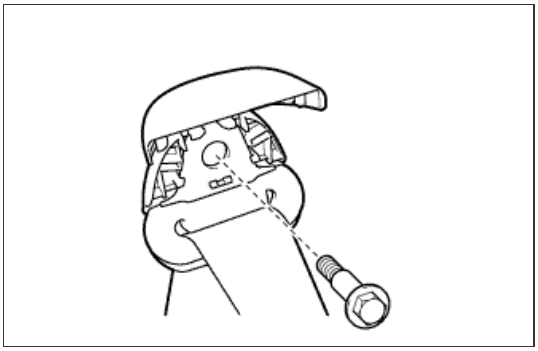
a. Connect the connector.

b. Attach the 2 clips and 2 guides to install the map light.



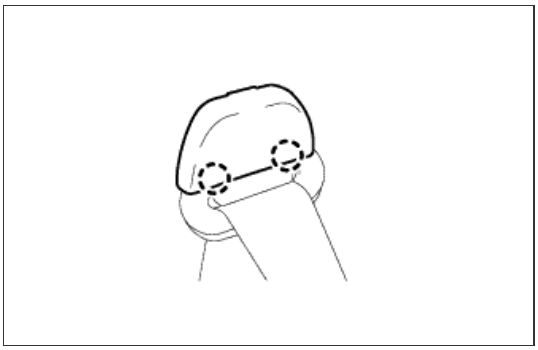
c. Install the 2 screws.

d. Attach the 2 claws to close the 2 covers.



59. INSTALL REAR UPPER PILLAR GARNISH LH

a. Attach the 5 clips to install the rear upper pillar garnish.



. w/ Rear No. 2 Seat, except ace to ace Seat pe:

i. Install the seat belt shoulder anchor with the bolt.

Tor e:
42 N 428 kgf c , 31 ft.*l f

ii. Attach the 2 claws to close the seat belt shoulder anchor cover.

60. INSTALL REAR UPPER PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

61. INSTALL REAR FRONT QUARTER TRIM GARNISH LH

a. Pass the seat belt anchor through the quarter trim garnish.

. Attach the clip and 2 guides to install the quarter trim garnish.

c. Install the screw.

62. INSTALL REAR FRONT QUARTER TRIM GARNISH RH

HINT:

Use the same procedures described for the LH side.

63. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY LH

HINT:

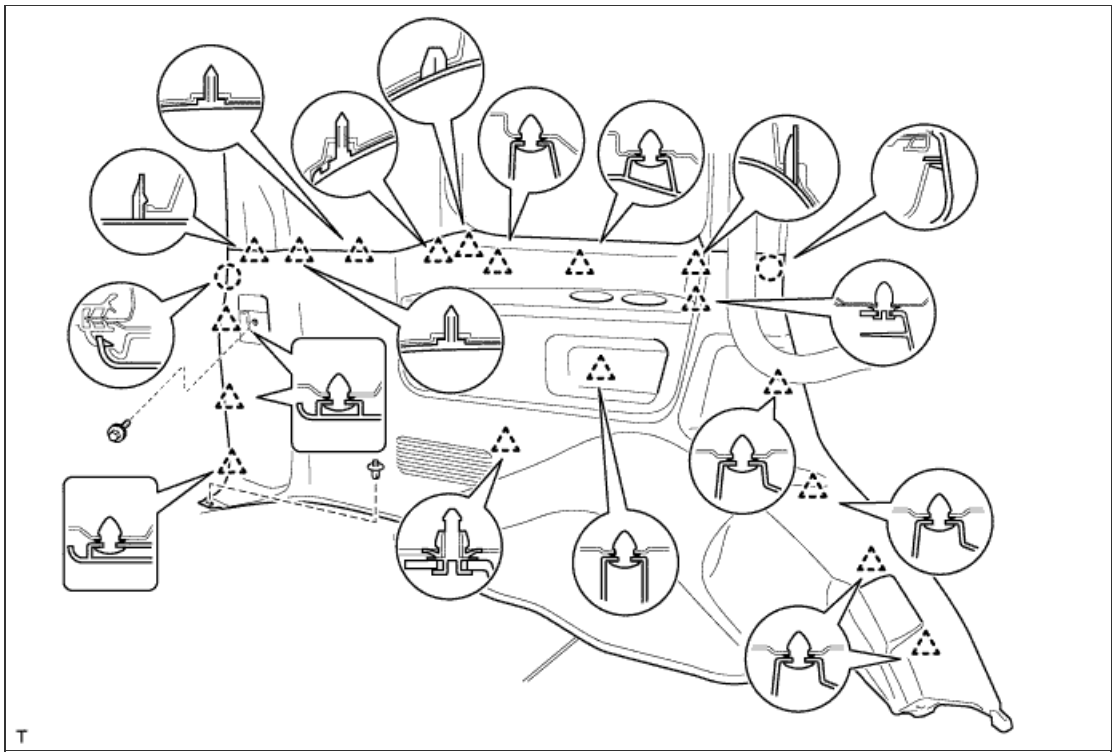
When installing the front quarter trim panel, operate the reclining ad uster release handle and move the No. 1 rear seat to the position shown in the illustration.

a. w/ Rear No. 2 Seat, except ace to ace Seat pe:

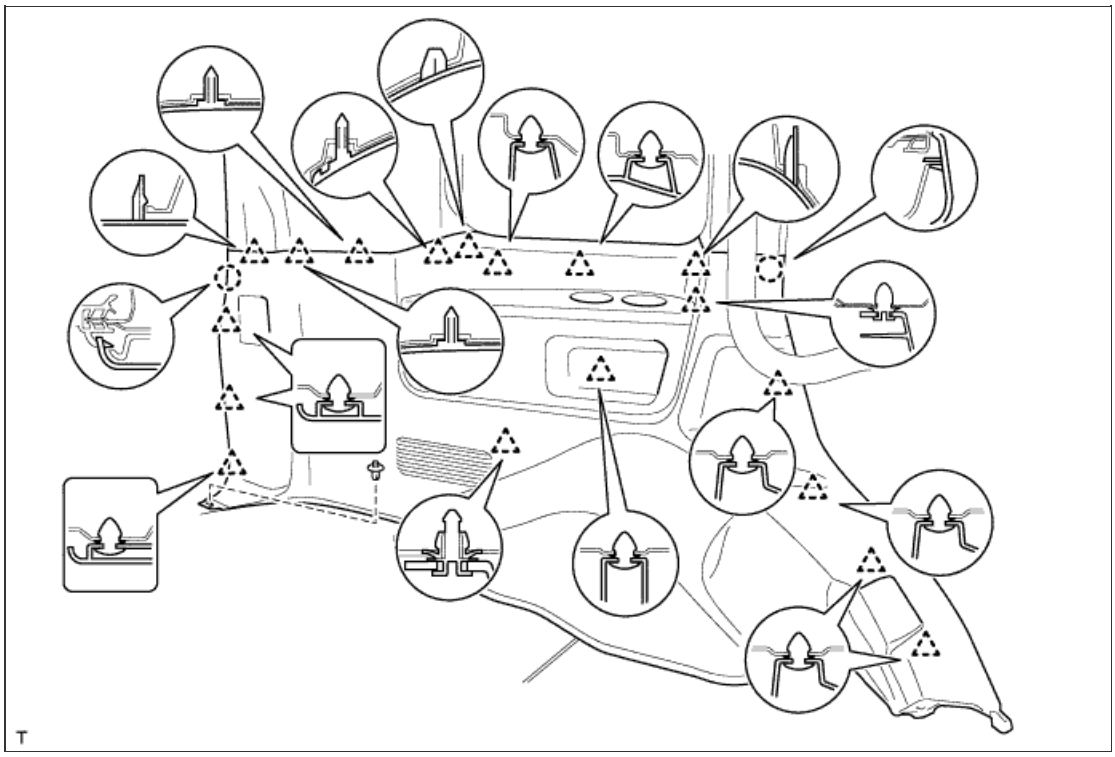


i. w/o Rear Air Conditioning S stem:
Connect the rear seat lock control lever cable.

ii. w/ Rear Air Conditioning S stem:
Connect the thermistor connector and rear seat lock control lever cable.

iii. Attach the 18 clips and 2 claws to install the quarter trim panel.

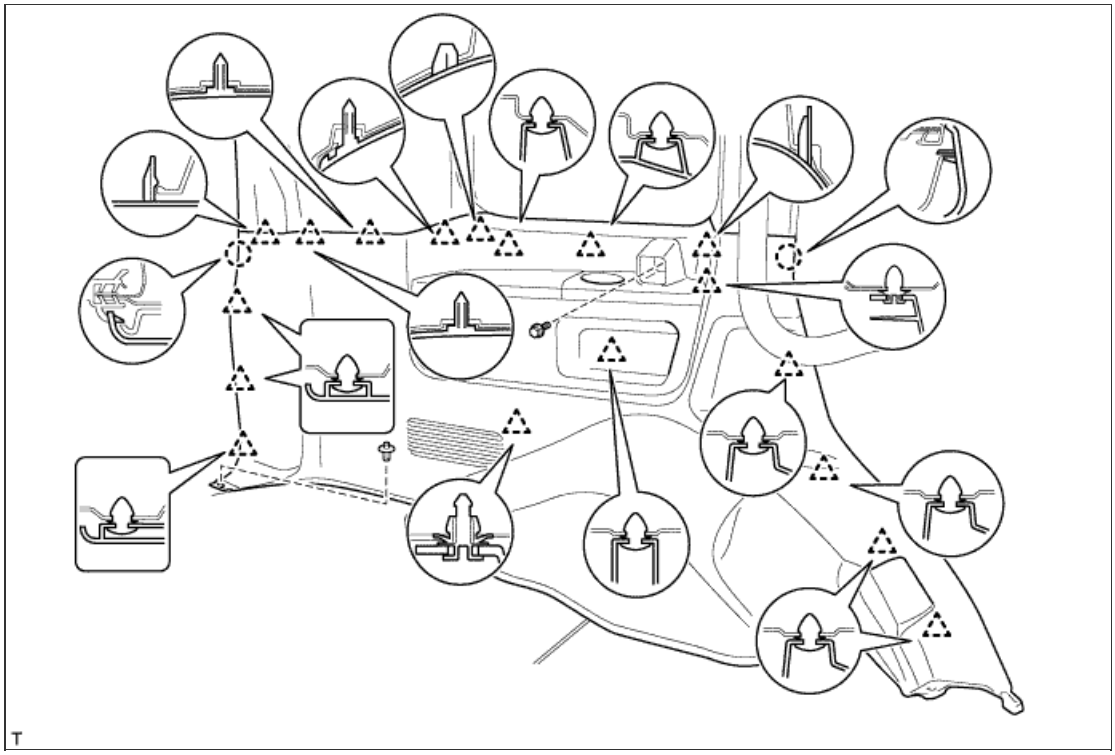
iv. Install the clip and bolt.



Tor e:
12 N 122 kgf c , 9 ft.*l f

. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for ace to ace Seat pe:

i. Attach the 18 clips and 2 claws to install the quarter trim panel.

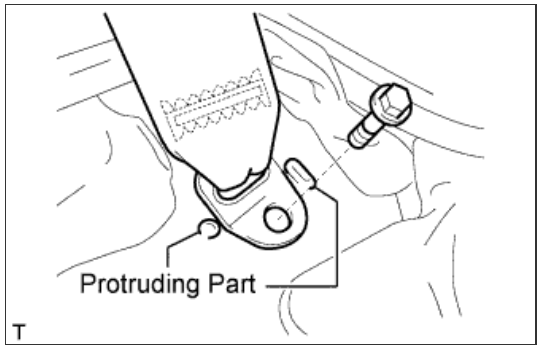


ii. Install the clip.

c. w/ onneau Cover:

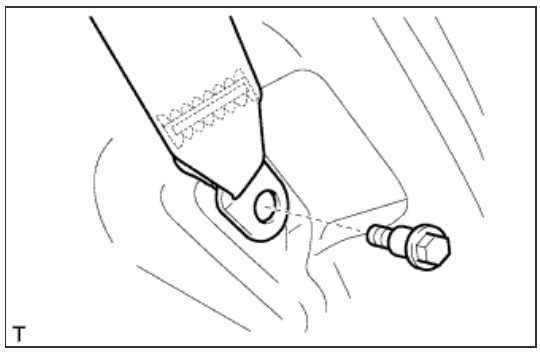
i. Attach the 18 clips and 2 claws to install the quarter trim panel.

ii. Install the screw and clip.



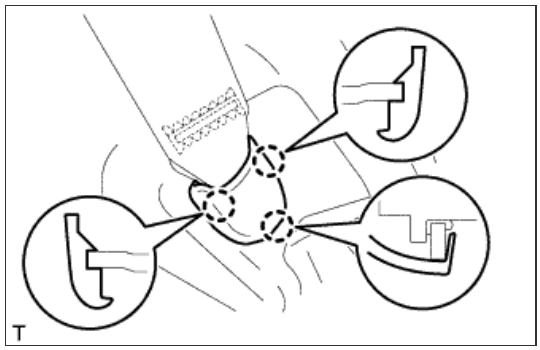
d. w/ Rear No. 2 Seat, except ace to ace Seat pe:
Install the rear No. 2 seat belt anchor with the bolt.

Tor e:
42 N 428 kgf c , 31 ft.*l f



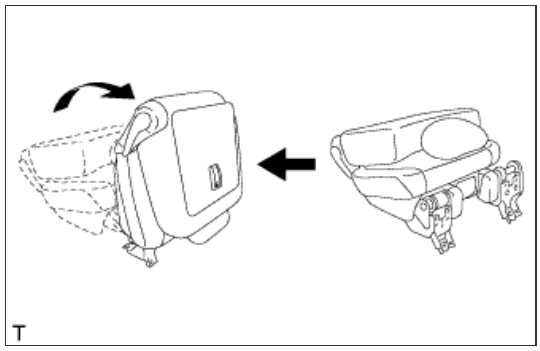
NOTICE:

Do not overlap the anchor part of the seat belt and protruding parts of the vehicle bod .



e. Install the rear No. 1 seat belt anchor with the bolt.

Tor e:
42 N 428 kgf c , 31 ft.*l f



f. Attach the 3 claws to install the cover.

64. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY RH

HINT:

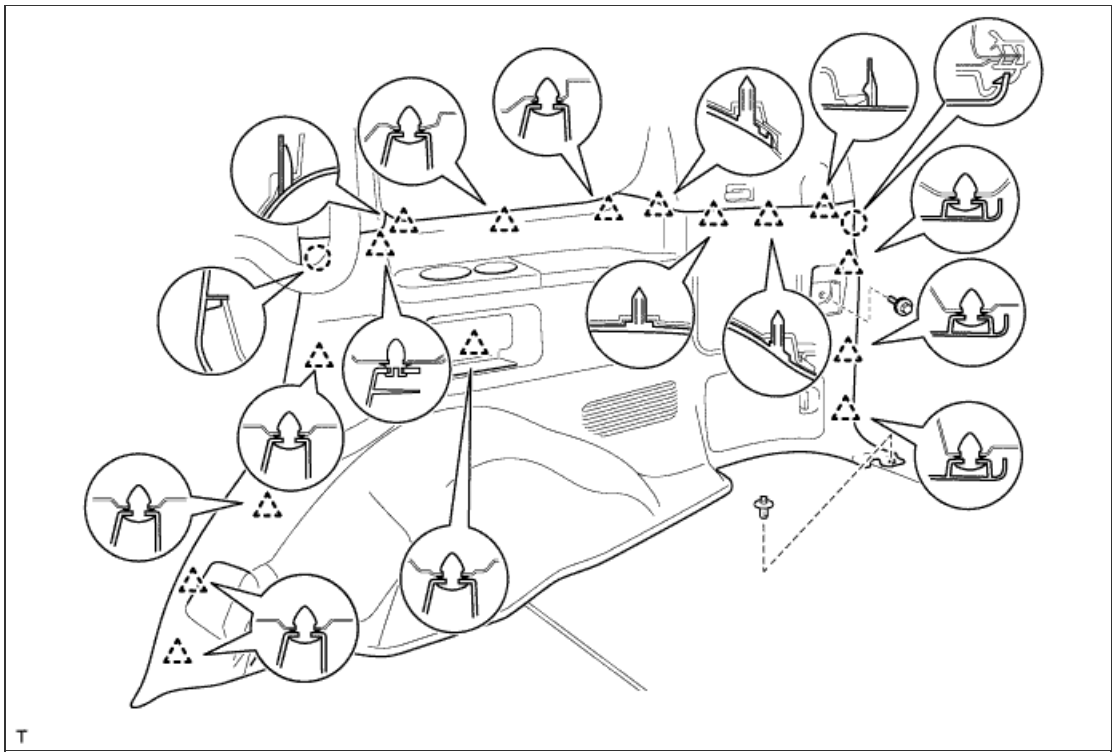
When installing the front quarter trim panel, operate the reclining ad uster release handle and move the No. 1 rear seat to the position shown in the illustration.

a. w/ Rear No. 2 Seat, except ace to ace Seat pe:

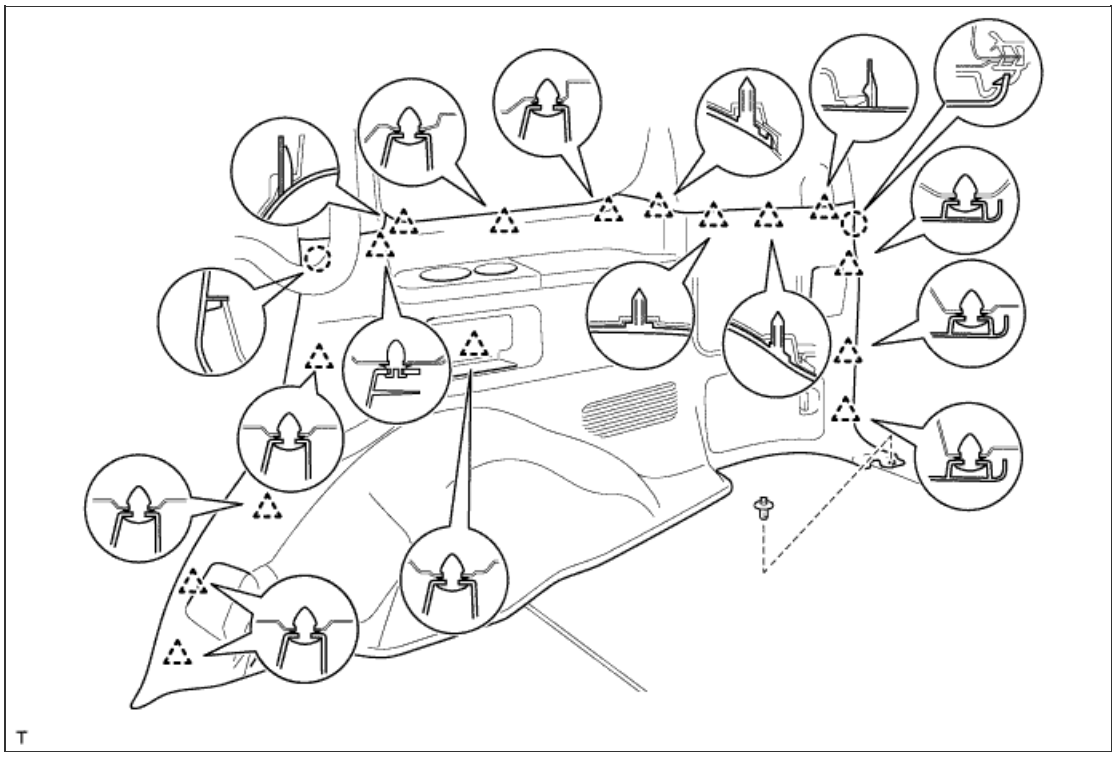


i. w/o Rear Air Conditioning S stem:
Connect the rear seat lock control lever cable.

ii. w/ Rear Air Conditioning S stem:
Connect the thermistor connector and rear seat lock control lever cable.

iii. Attach the 16 clips and 2 claws to install the quarter trim panel.

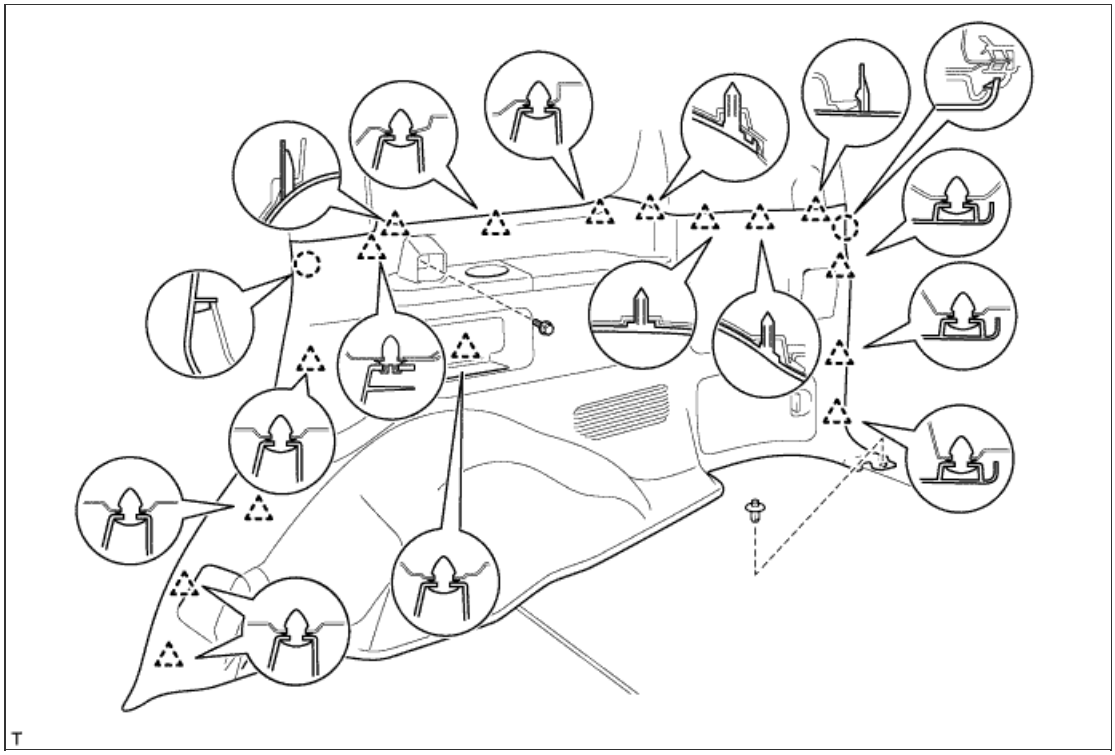
iv. Install the clip and bolt.



Tor e:
12 N 122 kgf c , 9 ft.*l f

. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for ace to ace Seat pe:

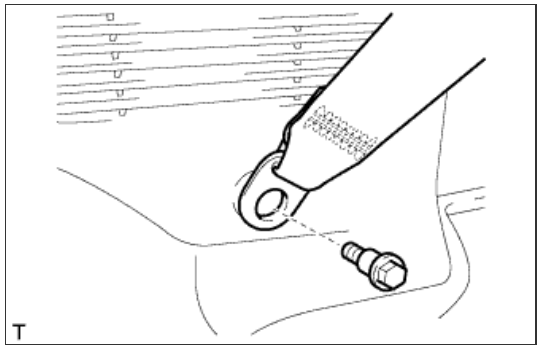
i. Attach the 16 clips and 2 claws to install the quarter trim panel.



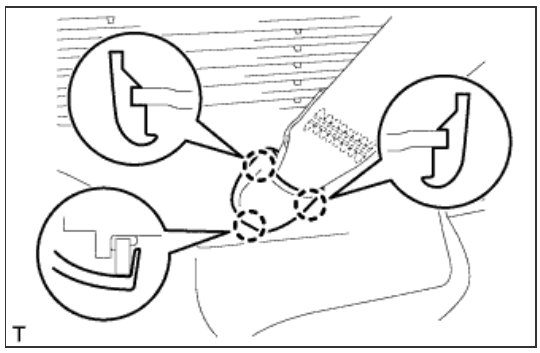
ii. Install the clip.

c. w/ onneau Cover:

i. Attach the 16 clips and 2 claws to install the quarter trim panel.



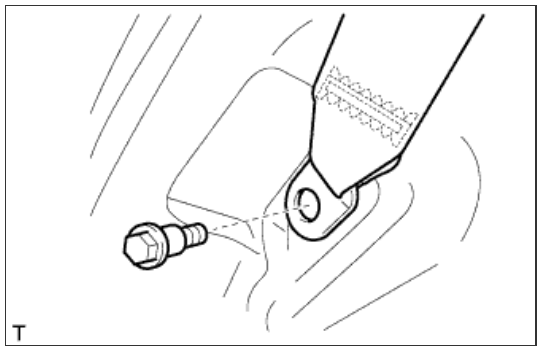
ii. Install the screw and clip.



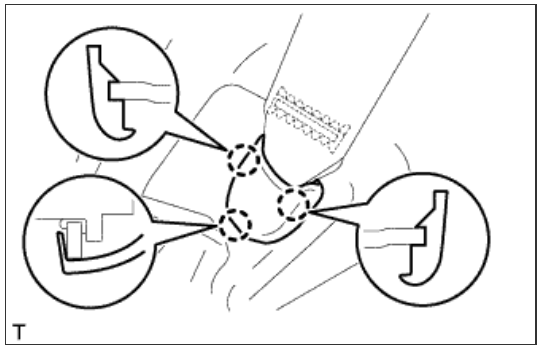
d. w/ Rear No. 2 Seat, except ace to ace Seat pe:

i. Install the rear No. 2 seat belt anchor with the bolt.

Tor e:
42 N 428 kgf c , 31 ft.*l f



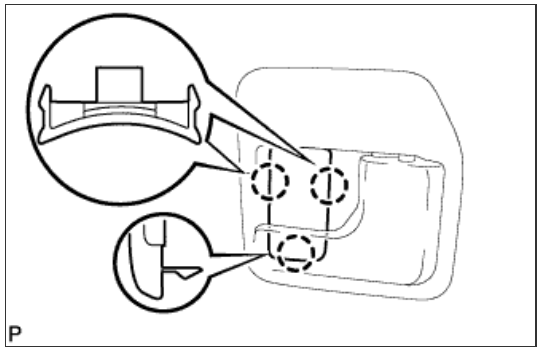
ii. Attach the 3 claws to install the cover.



e. Install the rear No. 1 seat belt anchor with the bolt.

Tor e:
42 N 428 kgf c , 31 ft.*l f

f. Attach the 3 claws to install the cover.



65. INSTALL REAR SEAT COVER CAP (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

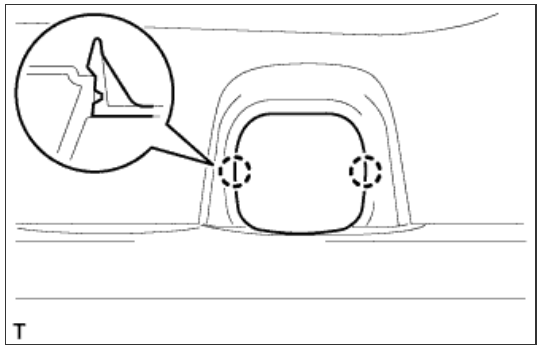
Use the same procedure to install the rear seat cover cap on the other side.

a. Attach the 3 claws to install the rear seat cover cap.



66. INSTALL NO. 1 TONNEAU COVER HOLDER CAP (w/ Tonnea Cover)

HINT:

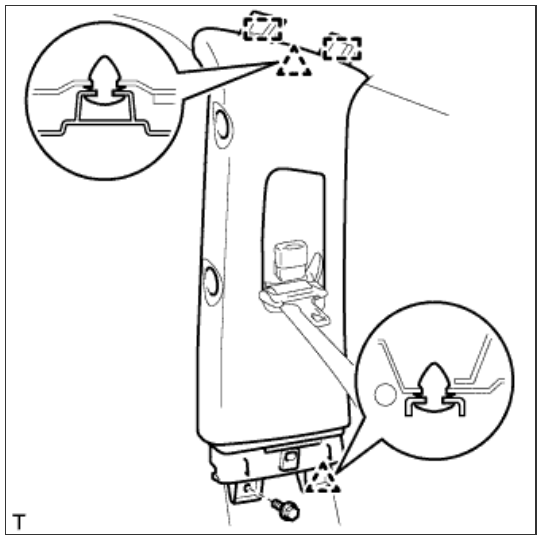
Use the same procedure to install the tonneau cover holder cap on the other side.

a. Attach the 2 claws to install the tonneau cover holder cap.



67. INSTALL CENTER PILLAR GARNISH LH

a. Pass the seat belt anchor through the center pillar garnish.

. Attach the 2 clips and 2 guides to install the center pillar garnish.

c. Install the bolt.

68. INSTALL CENTER PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

69. INSTALL REAR ASSIST GRIP ASSEMBLY

HINT:

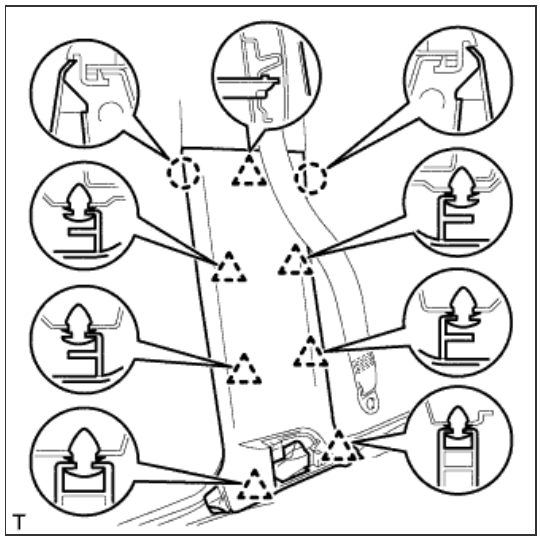
Use the same procedure to install the rear assist grip on the other side.

a. Attach the 2 claws to install the rear assist grip.

b. Install the 2 bolts.



c. Attach the 4 claws to install the 2 assist grip plugs.

70. INSTALL CENTER LO EPILLAR GARNISH LH

HINT:

- **for Man al Seat:**
  hen in talling the center lower pillar garni h, oe the front eat and eatback to the fore ot pright po tion.
- **for Power Seat:**
  hen in talling the center lower pillar garni h, connect the cable to the negative (-) attery ter inal and operate the power eat wi ch to oe the front eat and eatback to the fore ot pright po tion.
- **for Power Seat:**
  After o in the front eat, di connect the cable fro the negative (-) attery ter inal.

a. Attach the 2 claws and 7 clips to install the center lower pillar garnish.

. Install the seat belt anchor with the bolt.

Tor e:
42 N 428 kgf c , 31 ft.*l f

71. INSTALL CENTER LO ERPILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

72. INSTALL CENTER PILLAR GARNISH COVER LH

HINT:

- **for Man al Seat:**
  hen in talling the center pillar garni h cover, oe the front eat and eatback to the fore ot pright po tion.
- **for Power Seat:**
  hen in talling the center pillar garni h cover, connect the cable to the negative (-) attery ter ial and operate the power eat wtch to oe the front eat and eatback to the fore ot pright po tion.
- **for Power Seat:**
  After o in the front eat, di connect the cable fro the negative (-) attery ter ial.

a. Attach the 2 clips and 2 guides to install the cover.

73. INSTALL CENTER PILLAR GARNISH COVER RH

HINT:

Use the same procedures described for the LH side.

74. INSTALL FRONT PILLAR GARNISH LH

a. for 9 Speakers:
Connect the speaker connector.

. Attach the clip and 3 guides to install the front pillar garnish.

75. INSTALL FRONT PILLAR GARNISH RH

HINT:

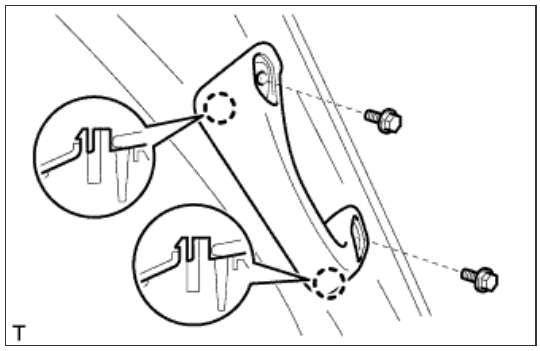
Use the same procedures described for the LH side.



76. INSTALL FRONT ASSIST GRIP SUB-ASSEMBLY

HINT:

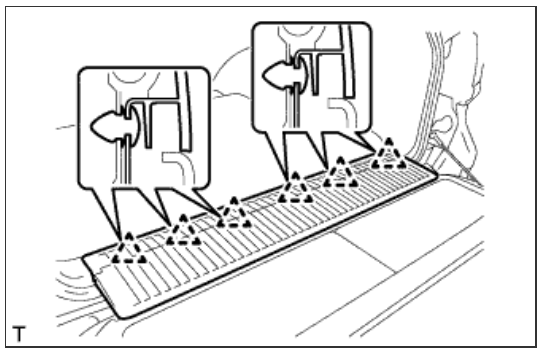
Use the same procedure to install the front assist grip on the other side.

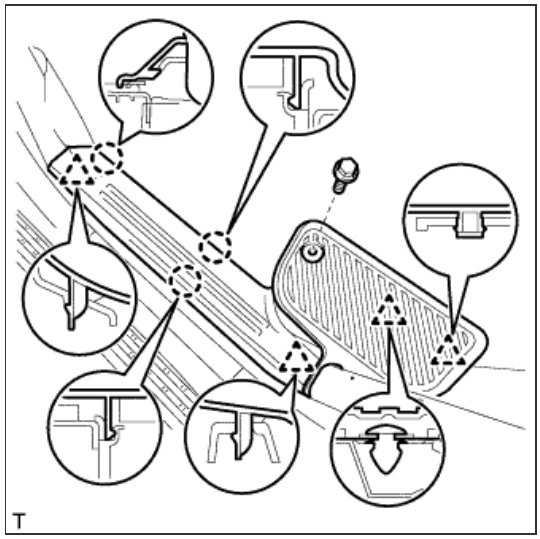
a. Attach the 2 claws to install the front assist grip.

b. Install the 2 bolts.



c. Attach the 4 claws to install the 2 assist grip plugs.

77. INSTALL REAR FLOOR MAT REAR SUPPORT PLATE



a. Attach the 6 clips to install the support plate.

78. INSTALL REAR DOOR SCUFF PLATE LH

a. Attach the 3 claws and 4 clips to install the scuff plate.

b. Install the screw.

79. INSTALL REAR DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

80. INSTALL REAR STEP COVER

HINT:

Use the same procedure to install the step cover on the other side.

a. Attach the 2 claws to install the step cover.

81. INSTALL FRONT DOOR SCUFF PLATE LH

a. Attach the 7 claws and 4 clips to install the scuff plate.

82. INSTALL FRONT DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

83. INSTALL REAR NO. 2 SEAT ASSEMBLY LH (except Face to Face Seat Type)

a. Install the rear No. 2 seat assembl LH (Click here).

84. INSTALL REAR NO. 2 SEAT ASSEMBLY RH (except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

85. INSTALL REAR NO. 2 SEAT ASSEMBLY LH (for Face to Face Seat Type)

a. Install the rear No. 2 seat assembl LH (Click here).

86. INSTALL REAR NO. 2 SEAT ASSEMBLY RH (for Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

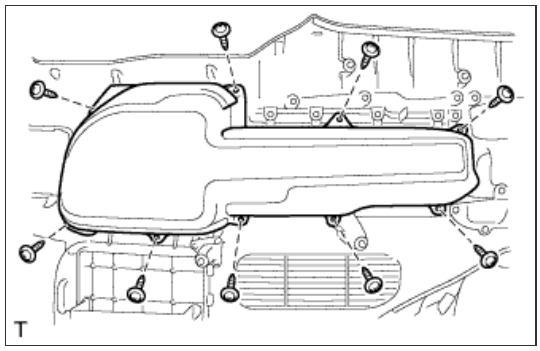
87. INSTALL TONNEAU COVER ASSEMBLY (w/ Tonnea Cover)

a. Install the tonneau cover assembl .

88. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some s stems need to be initialized after the cable is reconnected (Click here).



for Preparation Click here

HINT:

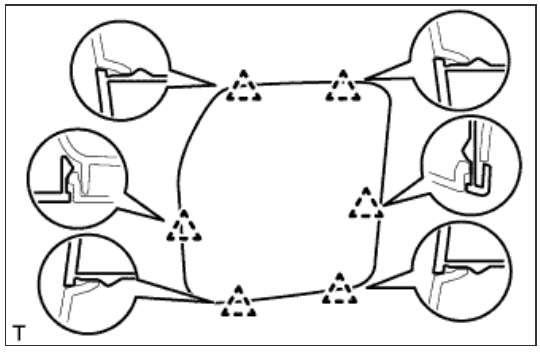
A bolt without a torque specification is shown in the standard bolt chart (Click here).

1. INSTALL SIDE TRIM BOX

a. Install the side trim box with the 9 screws.

2. INSTALL SIDE TRIM BOX COVER



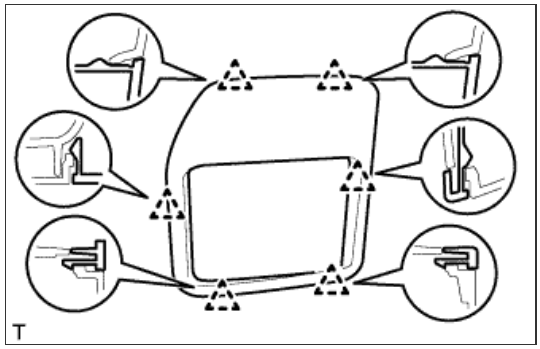
a. Install the side trim box cover.

3. INSTALL QUARTER TRIM LID SUB-ASSEMBLY RH

a. Install the quarter trim lid.

4. INSTALL QUARTER TRIM COVER LH (w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat Type)

a. Attach the 6 clips to install the quarter trim cover.



5. INSTALL QUARTER TRIM COVER RH (w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

6. INSTALL REAR NO. 2 SEAT COVER BEZEL (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Attach the 6 clips to install the rear No. 2 seat cover bezel.

7. INSTALL REAR NO. 1 SEAT COVER BEZEL (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

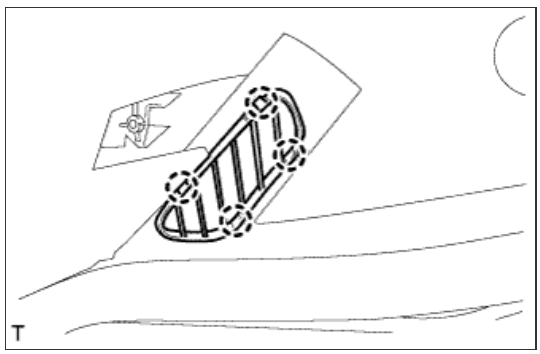
Use the same procedures described for the rear No. 2 seat cover bezel.

8. INSTALL REAR SEAT LOCK CONTROL LEVER SUB-ASSEMBLY LH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Attach the 4 claws to install the seat lock control lever.



9. INSTALL REAR SEAT LOCK CONTROL LEVER SUB-ASSEMBLY RH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

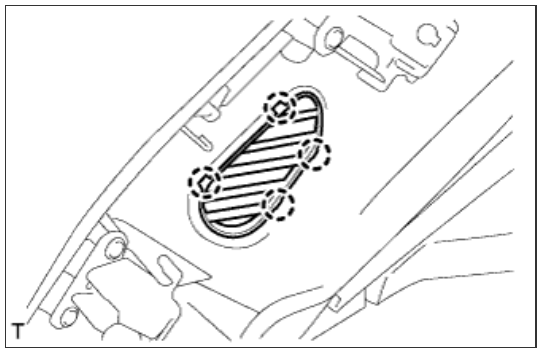
10. INSTALL NO. 2 SIDE TRIM BASE COVER LH (w/ Rear Heater)

a. Attach the 4 claws to install the cover.



11. INSTALL NO. 2 SIDE TRIM BASE COVER RH (w/ Rear Heater)

HINT:

Use the same procedures described for the LH side.

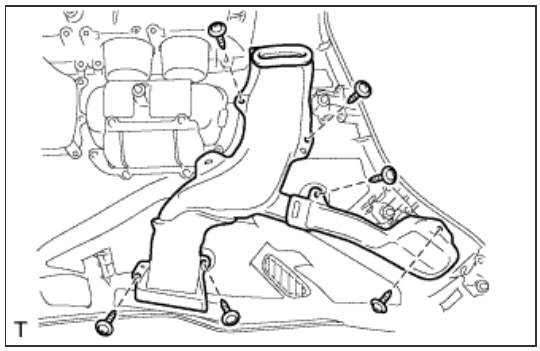
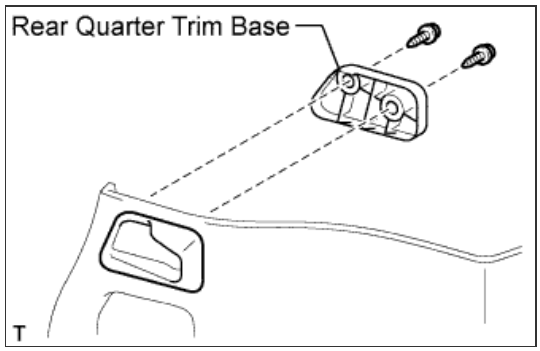
12. INSTALL NO. 1 SIDE TRIM BASE COVER LH (w/ Rear Heater)

a. Attach the 4 claws to install the cover.



13. INSTALL NO. 1 SIDE TRIM BASE COVER RH (w/ Rear Heater)

a. Attach the 4 claws to install the cover.



b. Install the duct with the 6 screws.

14. INSTALL TONNEAU COVER HANGER LH (w/ Tonnea Cover)

a. Install the tonneau cover hanger and rear quarter trim base with the 2 screws.

15. INSTALL TONNEAU COVER HANGER RH (w/ Tonnea Cover)

HINT:

Use the same procedures described for the LH side.

16. INSTALL TONNEAU COVER HOLDER BRACKET LH (w/ Tonnea Cover)

a. Attach the 3 claws to install the tonneau cover holder bracket.

. Install the front quarter trim base with the 3 screws and then install the remaining 5 screws.

17. INSTALL TONNEAU COVER HOLDER BRACKET RH (w/ Tonnea Cover)

HINT:

Use the same procedures described for the LH side.

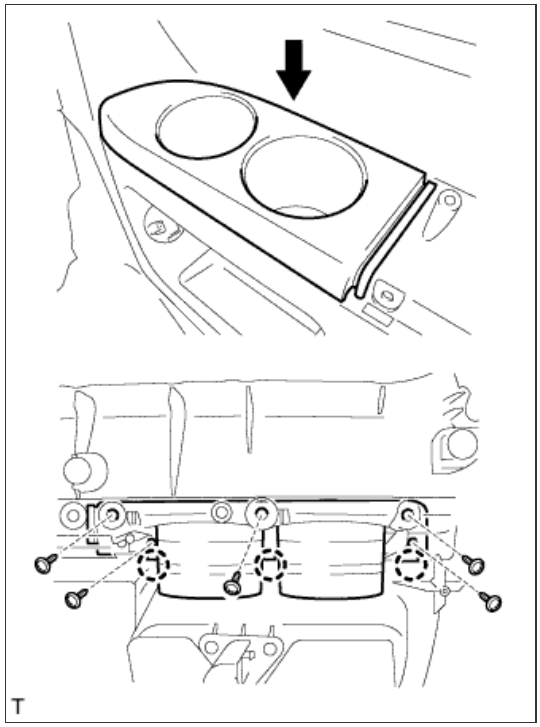
18. INSTALL NO. 2 CUP HOLDER

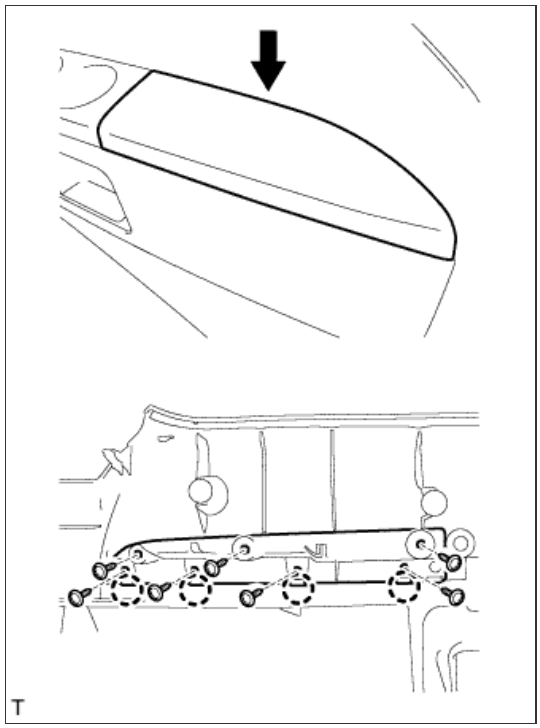
a. Attach the 3 claws to install the cup holder.



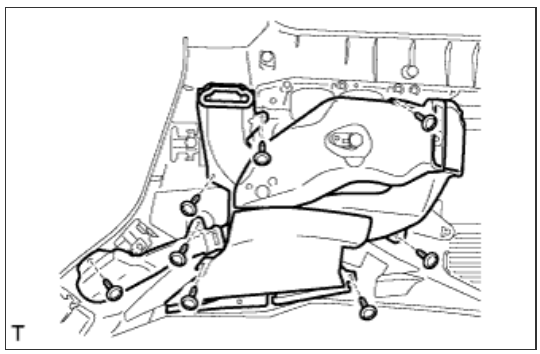
b. Install the 5 screws.

19. INSTALL NO. 1 CUP HOLDER

a. Attach the 3 claws to install the cup holder.



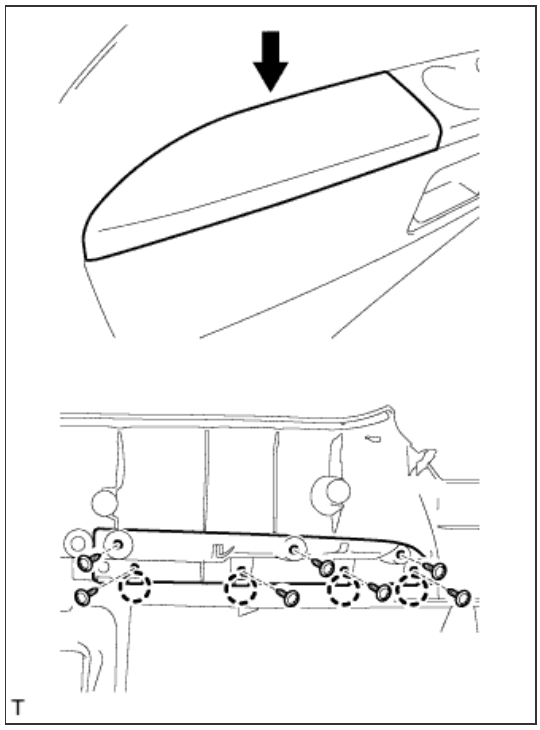
. Install the 5 screws.



20. INSTALL QUARTER TRIM COVER SUB-ASSEMBLY LH

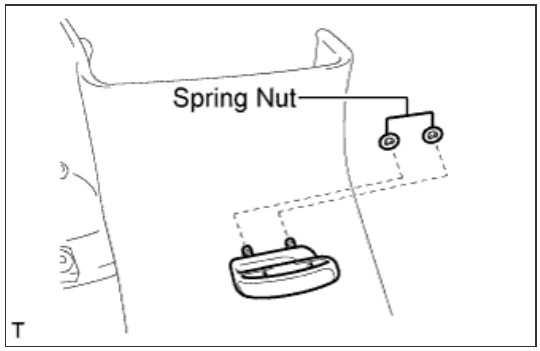
a. Attach the 4 claws to install the quarter trim cover.

b. Install the 7 screws.



c. w/ Rear Heater:
Install the duct with the 8 screws.

21. INSTALL QUARTER TRIM COVER SUB-ASSEMBLY RH



a. Attach the 4 claws to install the quarter trim cover.

b. Install the 7 screws.

22. INSTALL REAR NO. 2 SEAT SHOULDER BELT HANGER LH

a. Install the hanger with 2 new spring nuts.

23. INSTALL REAR NO. 2 SEAT SHOULDER BELT HANGER RH

HINT:

Use the same procedures described for the LH side.

24. INSTALL REAR SEAT SHOULDER BELT HANGER (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

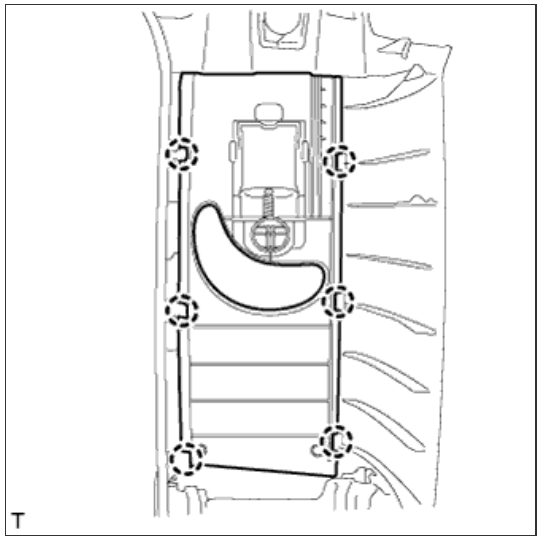
Use the same procedure to install the hanger on the other side.

a. Install the hanger with 2 new spring nuts.

25. INSTALL ROOF SIDE INNER GARNISH COVER LH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Attach the 7 claws to install the cover.



26. INSTALL ROOF SIDE INNER GARNISH COVER RH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

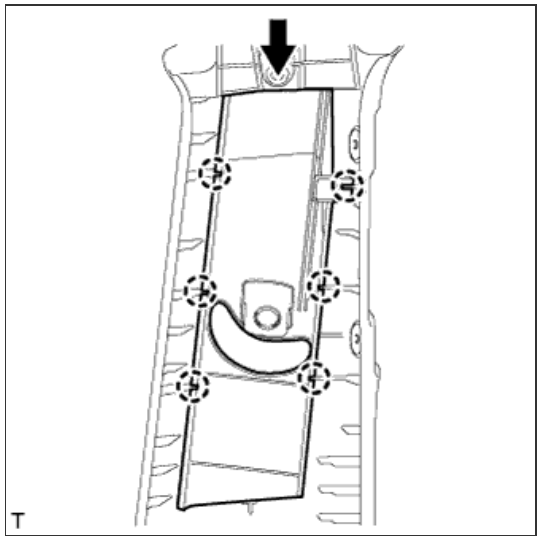
27. INSTALL REAR SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY LH

a. Attach the 6 claws to install the plate.



28. INSTALL REAR SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

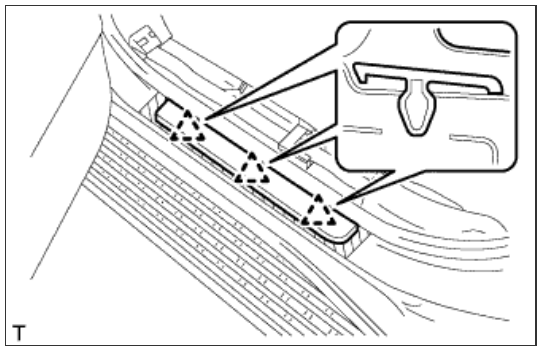
29. INSTALL FRONT SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY LH

a. Slide the plate in the direction shown in the illustration and attach the 6 claws to install the plate.



30. INSTALL FRONT SHOULDER BELT ANCHOR PLATE SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

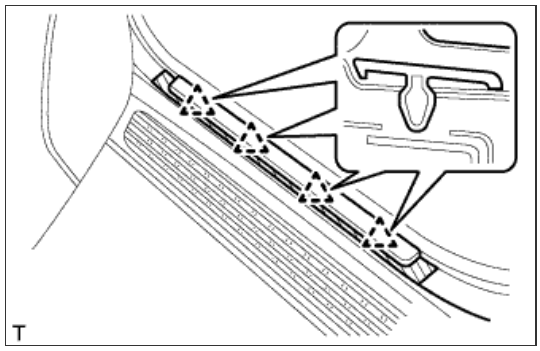
31. INSTALL REAR DOOR SCUFF PLATE OUTSIDE LH

a. Attach the 3 clips to install the rear door scuff plate outside.



32. INSTALL REAR DOOR SCUFF PLATE OUTSIDE RH

HINT:

Use the same procedures described for the LH side.

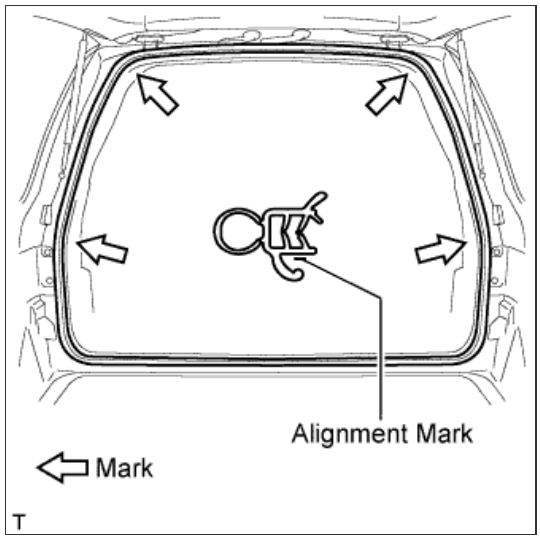
33. INSTALL FRONT DOOR SCUFF PLATE OUTSIDE LH

a. Attach the 4 clips to install the front door scuff plate outside.



34. INSTALL FRONT DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

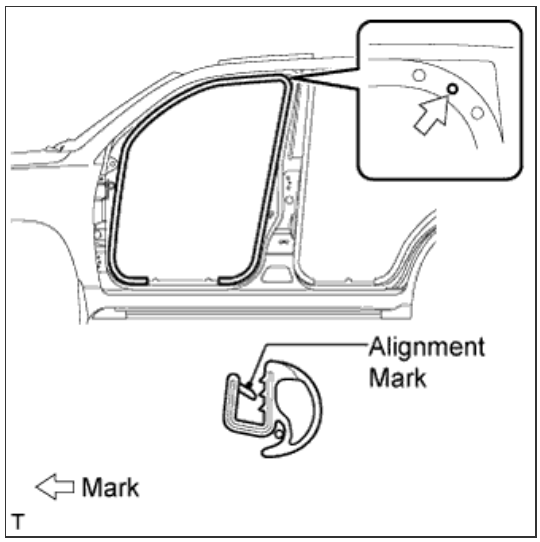
35. INSTALL BACK DOOR EATHERSTRIP

a. Install the back door weatherstrip as shown in the illustration.

36. INSTALL REAR DOOR OPENING TRIM EATHERSTRIP LH

a. Install the rear door opening trim weatherstrip as shown in the illustration.



37. INSTALL REAR DOOR OPENING TRIM EATHERSTRIP RH

HINT:

Use the same procedures described for the LH side.

38. INSTALL FRONT DOOR OPENING TRIM EATHERSTRIP LH

a. Install the front door opening trim weatherstrip as shown in the illustration.

39. INSTALL FRONT DOOR OPENING TRIM EATHERSTRIP RH

HINT:

Use the same procedures described for the LH side.

40. INSTALL ROOF HEADLINING ASSEMBLY

HINT:

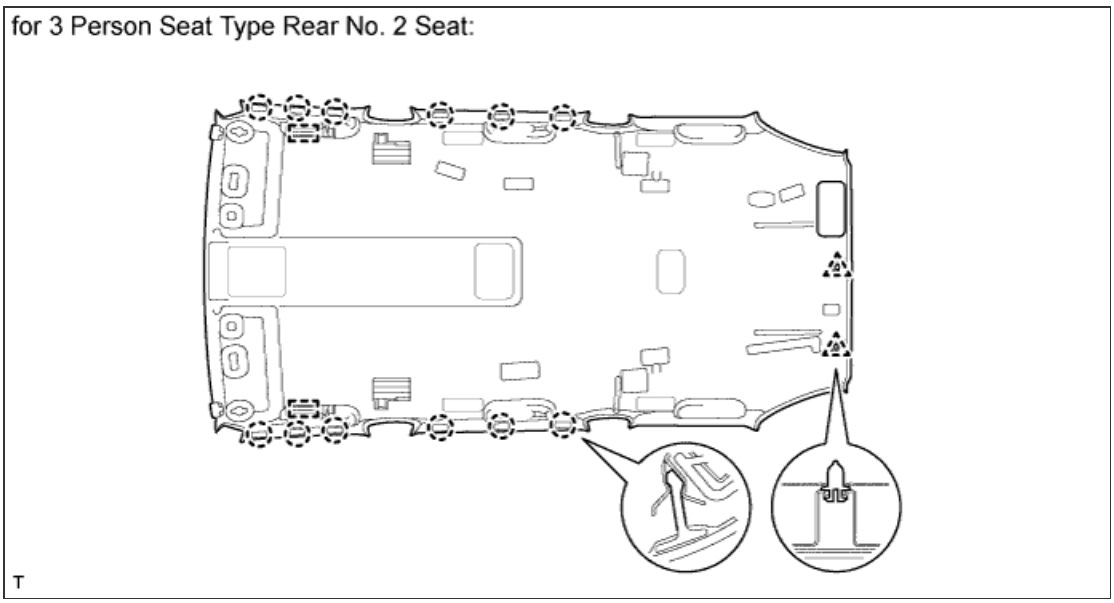
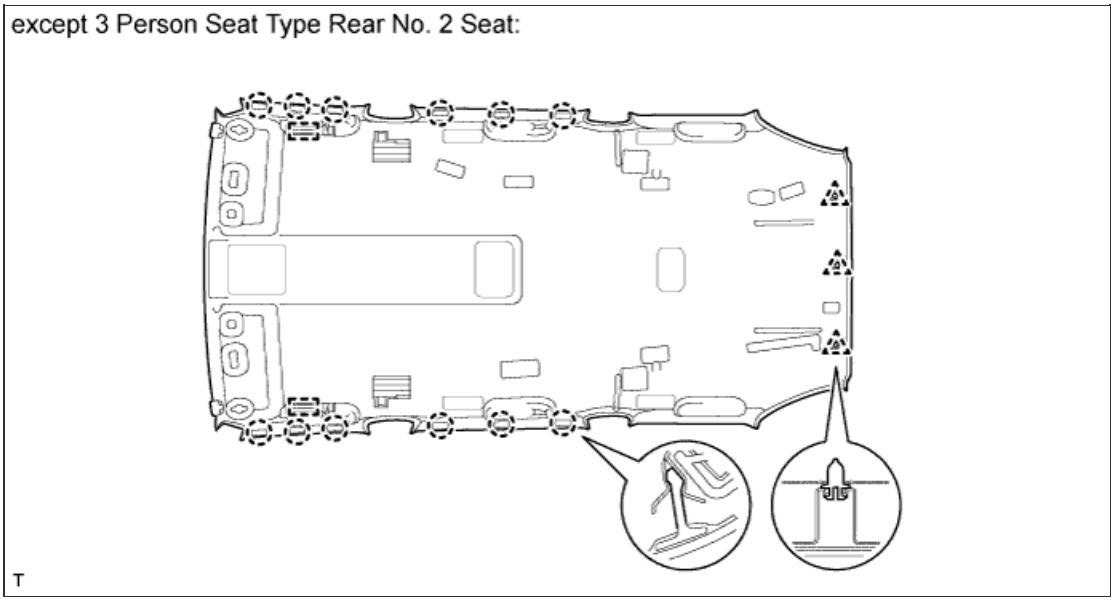
- **for Man al Seat:**
  hen in talling the roof headlining, oe the front eat and rear No. 1 eat to the po tion hown in the ill tration.
- **for Power Seat:**
  hen in talling the roof headlining, connect the cable to the negative (-) attery ter ial and oe the front eat and No. 1 rear eat to the po tion hown in the ill tration.
- **for Power Seat:**
  After o in the eat , di connect the cable fro the negative (-) attery ter ial.

a. Place the headlining in the cabin from the rear of the vehicle as shown in the illustration.

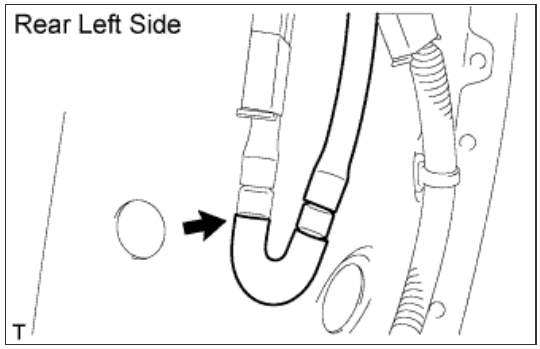


NOTICE:

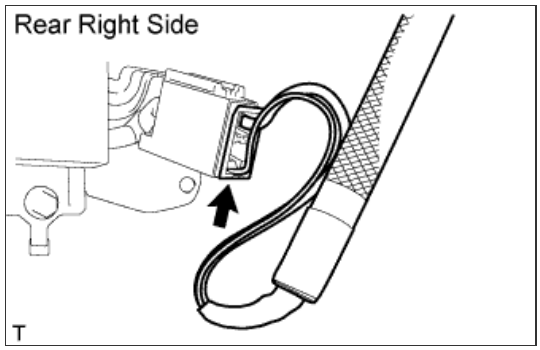
Be careful not to damage the roof headlining when placing it in the cabin.



b. for 3 Person Seat no Rear No. 2 Seat:

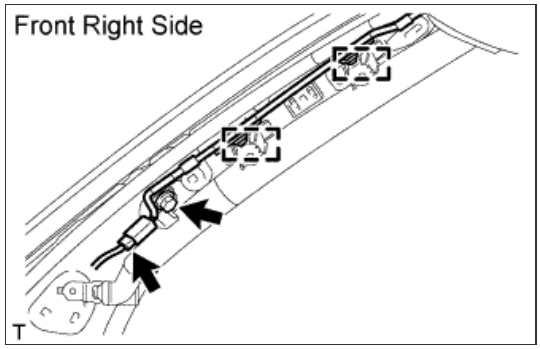


b. for 3 Person Seat Type Rear No. 2 Seat:
Attach the 2 guides, 12 claws and 2 clips to install the headlining.

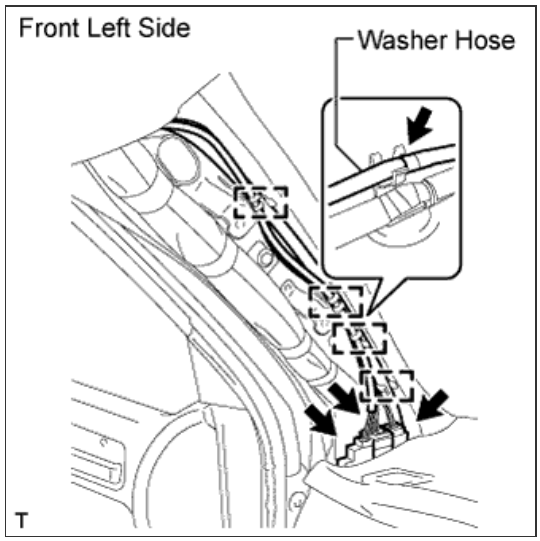


c. except 3 Person Seat Type Rear No. 2 Seat:
Attach the 2 guides, 12 claws and 3 clips to install the headlining.

d. w/ Rear Wiper:
Connect the washer hose.

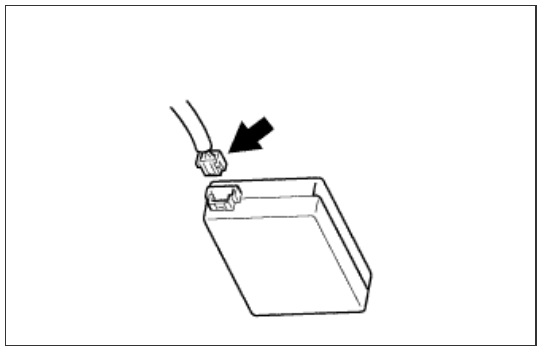


e. Connect the antenna cord connector.

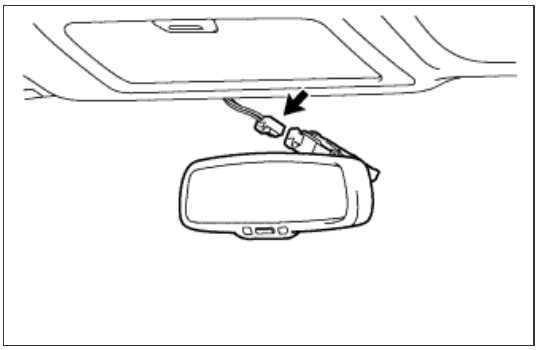


f. Connect the antenna cord connector and attach the 2 clamps.

g. Install the bolt.

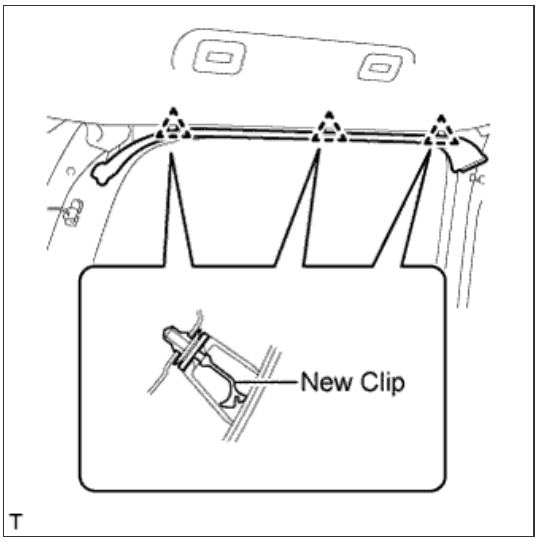


h. Connect the 3 roof wire connectors and 4 clamps.



i. w/ Rear Wiper:
Connect the washer hose.

. w/ Rain Sensor:
Connect the rain sensor connector.



k. w/ C Mirror:
Connect the inner mirror connector.

41. INSTALL FRONT ROOF SIDE RAIL GARNISH LH

a. Install 3 new clips to the roof side rail garnish.

. Attach the 3 clips to install the roof side rail garnish.

42. INSTALL FRONT ROOF SIDE RAIL GARNISH RH

HINT:

Use the same procedures described for the LH side.

43. INSTALL 3RD SEAT ASSIST GRIP ASSEMBLY (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

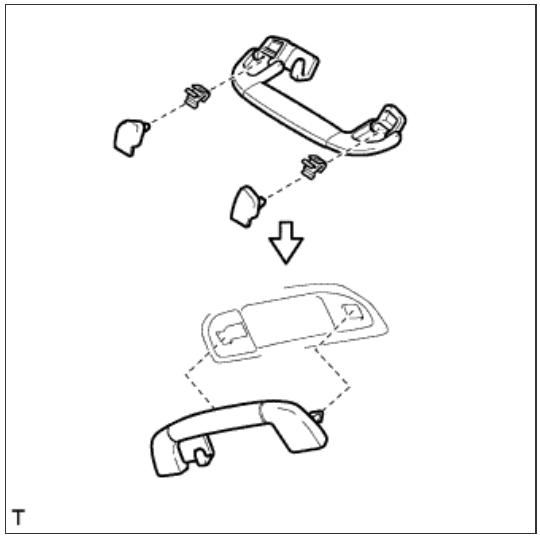
Use the same procedure to install the 3rd seat assist grip on the other side.

a. Assemble the assist grip, 2 clips and 2 covers as shown in the illustration.

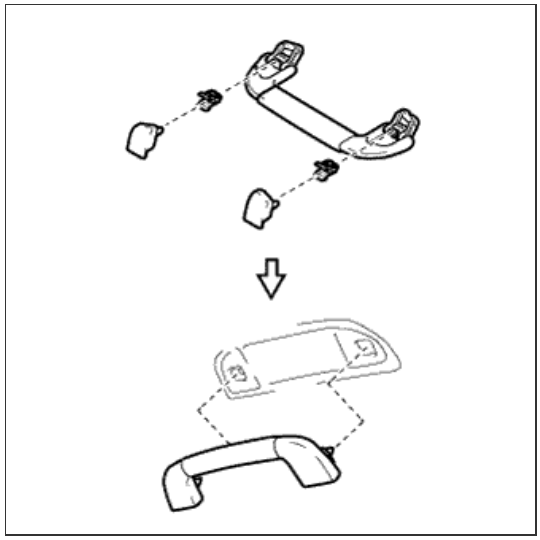
b. Install the assist grip.



44. INSTALL NO. 2 ASSIST GRIP ASSEMBLY LH

a. w/ Rear No. 2 Seat, except ace to ace Seat pe or w/o Rear No. 2 Seat:
Install the No. 2 assist grip assembl .

i. Assemble the assist grip, 2 clips and 2 covers as shown in the illustration.



ii. Install the assist grip.

. w/ Rear No. 2 Seat, for ace to ace Seat pe:
Install the No. 2 assist grip assembl .

i. Assemble the assist grip, 2 clips and 2 covers as shown in the illustration.

ii. Install the assist grip.

45. INSTALL NO. 2 ASSIST GRIP ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

46. INSTALL ASSIST GRIP ASSEMBLY

HINT:

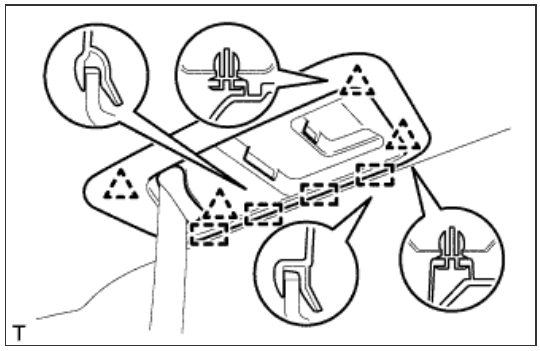
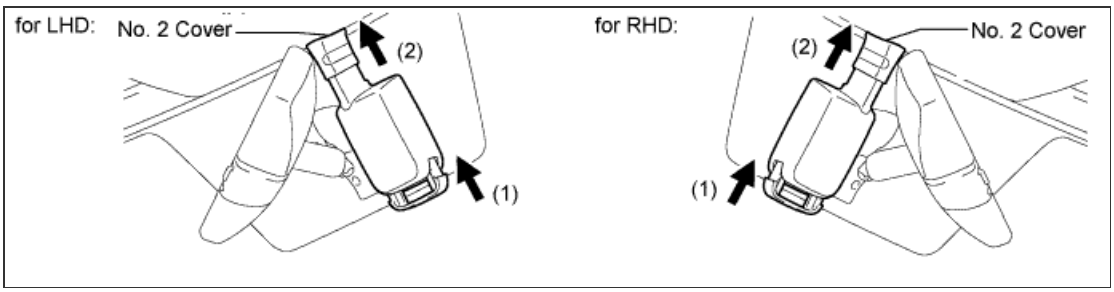
Use the same procedure to install the assist grip on the other side.



a. Assemble the assist grip, 2 clips and 2 covers as shown in the illustration.

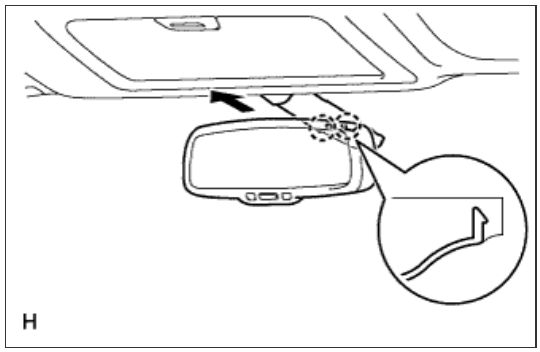
b. Install the assist grip.



47. INSTALL SEAT BELT ANCHOR COVER (for 3 Per on Seat Type Rear No. 2 Seat)

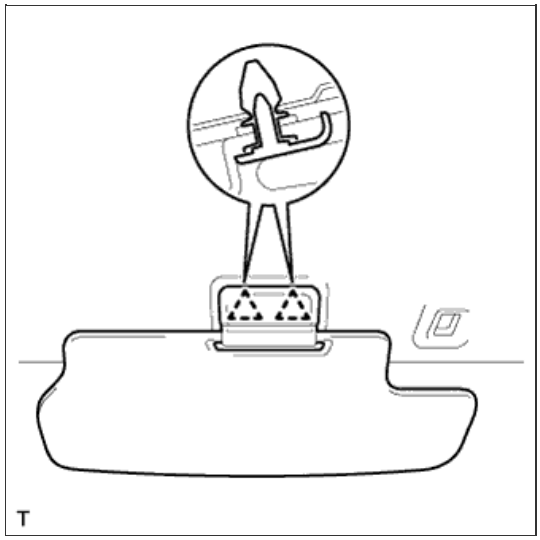
a. Attach the 4 guides and 4 clips to install the seat belt anchor cover.

48. INSTALL RAIN SENSOR COVER (w/ Rain Sen o)



a. Push in the stopper in the direction of the arrow labeled (1) to install the rain sensor cover.

. Slide the No. 2 cover in the direction of the arrow labeled (2) to fix it in place.



49. INSTALL INNER REAR VIE MIRROR STAY HOLDER COVER (w/ EC Mirror)

a. Attach the 2 claws to install the cover.

50. INSTALL CENTER VISOR ASSEMBLY LH (w/ S Vi o)

a. Attach the 2 clips to install the center visor.

51. INSTALL CENTER VISOR ASSEMBLY RH (w/ S Vi o)

HINT:

Use the same procedures described for the LH side.

52. INSTALL VISOR HOLDER

HINT:

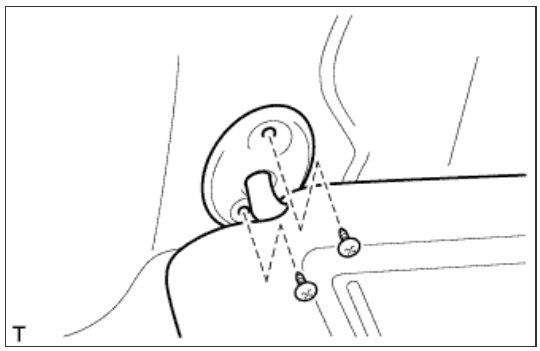
Use the same procedures to install the visor holder on the other side.



a. Attach the 2 claws.

b. Push the visor holder in to install it.

53. INSTALL VISOR ASSEMBLY LH

a. Install the visor with the 2 screws.

54. INSTALL VISOR ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

55. INSTALL VISOR BRACKET COVER

HINT:

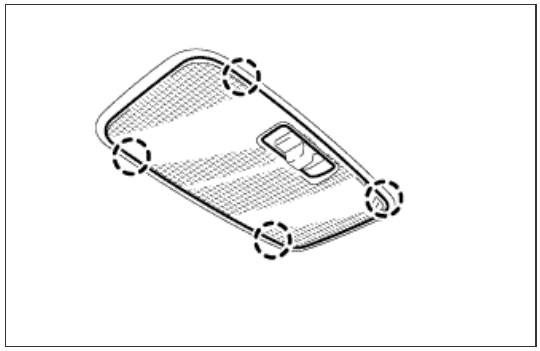
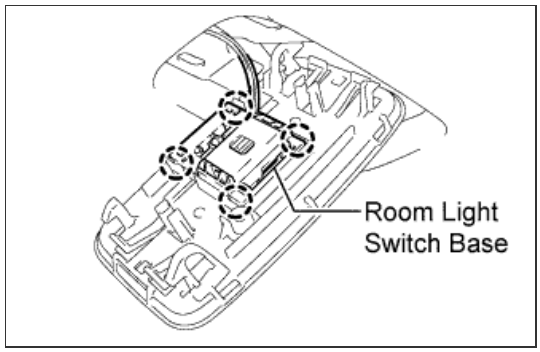
Use the same procedure to install the visor bracket cover on the other side.

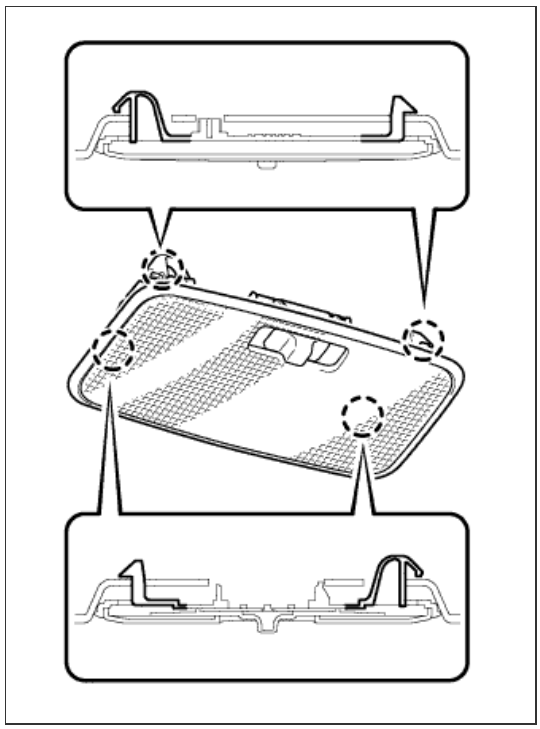
a. Attach the 4 claws to install the visor bracket cover.



56. INSTALL NO. 2 ROOM LIGHT ASSEMBLY

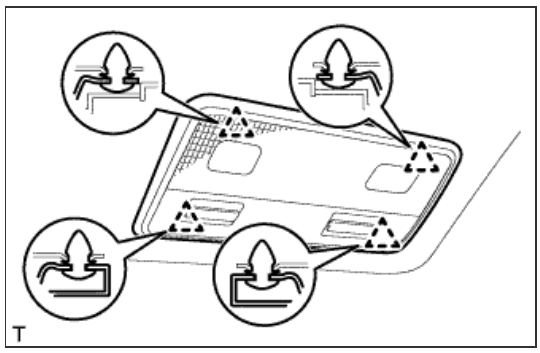


a. Install the 2 covers.



. Attach the 4 claws to install the room light lens.

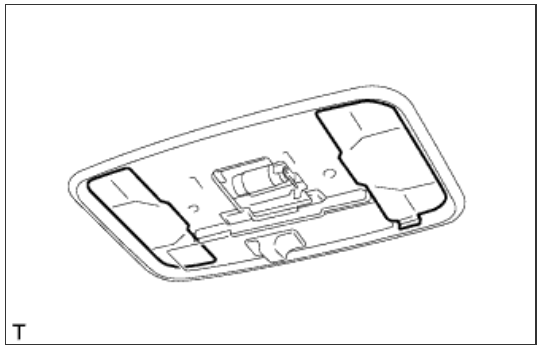
c. Attach the 4 claws to install the room light to the room light switch base.



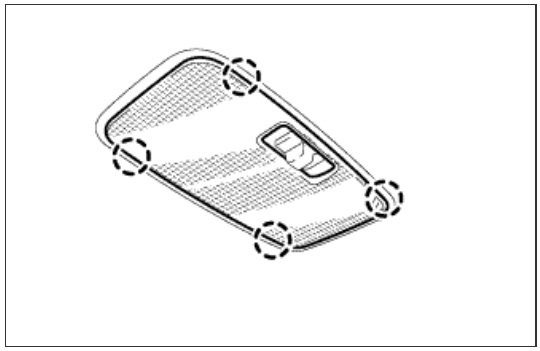
d. Attach the 4 claws to install the room light.

57. INSTALL NO. 1 ROOM LIGHT ASSEMBLY

a. w/ Map Light:
Install the No. 1 room light assembl .

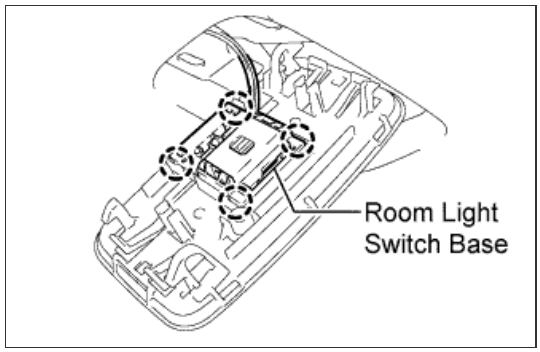


i. Connect the connector.

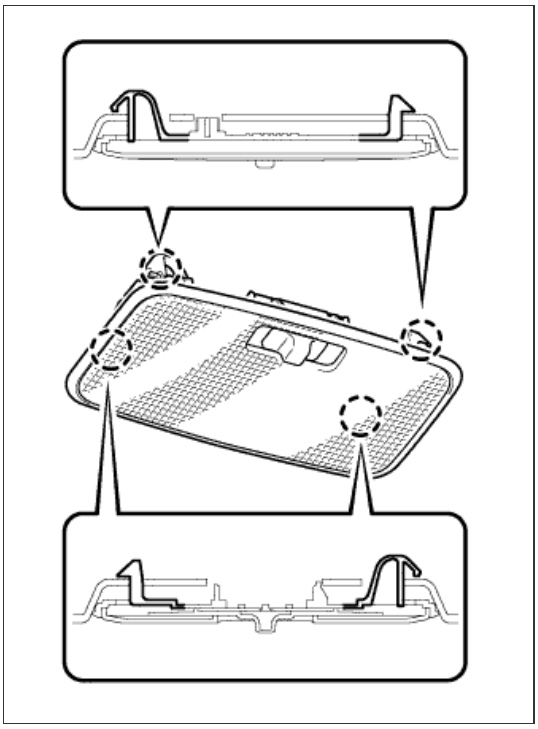


ii. Attach the 4 clips to install the room light.

. w/o Map Light:
Install the No. 1 room light assembl .



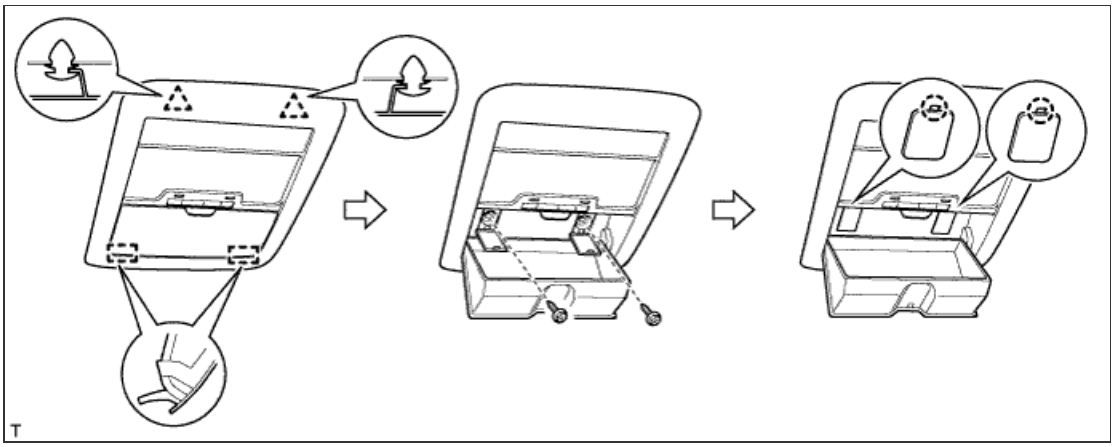
i. Install the 2 covers.



ii. Attach the 4 claws to install the room light lens.

iii. Attach the 4 claws to install the room light to the room light switch base.

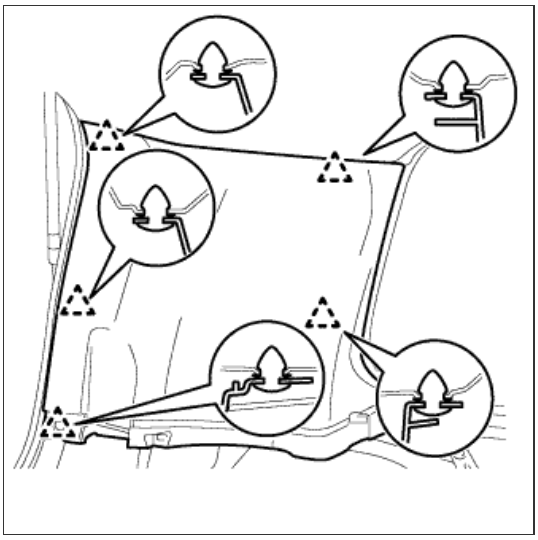
iv. Attach the 4 claws to install the room light.



58. INSTALL MAP LIGHT ASSEMBLY (w/ Map Light)

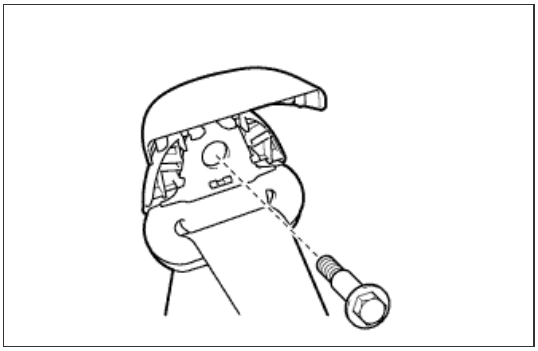
a. Connect the connector.

b. Attach the 2 clips and 2 guides to install the map light.



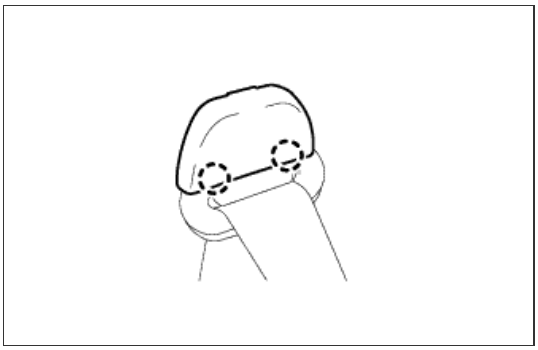
c. Install the 2 screws.

d. Attach the 2 claws to close the 2 covers.



59. INSTALL REAR UPPER PILLAR GARNISH LH

a. Attach the 5 clips to install the rear upper pillar garnish.



. w/ Rear No. 2 Seat, except ace to ace Seat pe:

i. Install the seat belt shoulder anchor with the bolt.

Tor e:
42 N 428 kgf c , 31 ft.*l f

ii. Attach the 2 claws to close the seat belt shoulder anchor cover.

60. INSTALL REAR UPPER PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

61. INSTALL REAR FRONT QUARTER TRIM GARNISH LH

a. Pass the seat belt anchor through the quarter trim garnish.

. Attach the clip and 2 guides to install the quarter trim garnish.

c. Install the screw.

62. INSTALL REAR FRONT QUARTER TRIM GARNISH RH

HINT:

Use the same procedures described for the LH side.

63. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY LH

HINT:

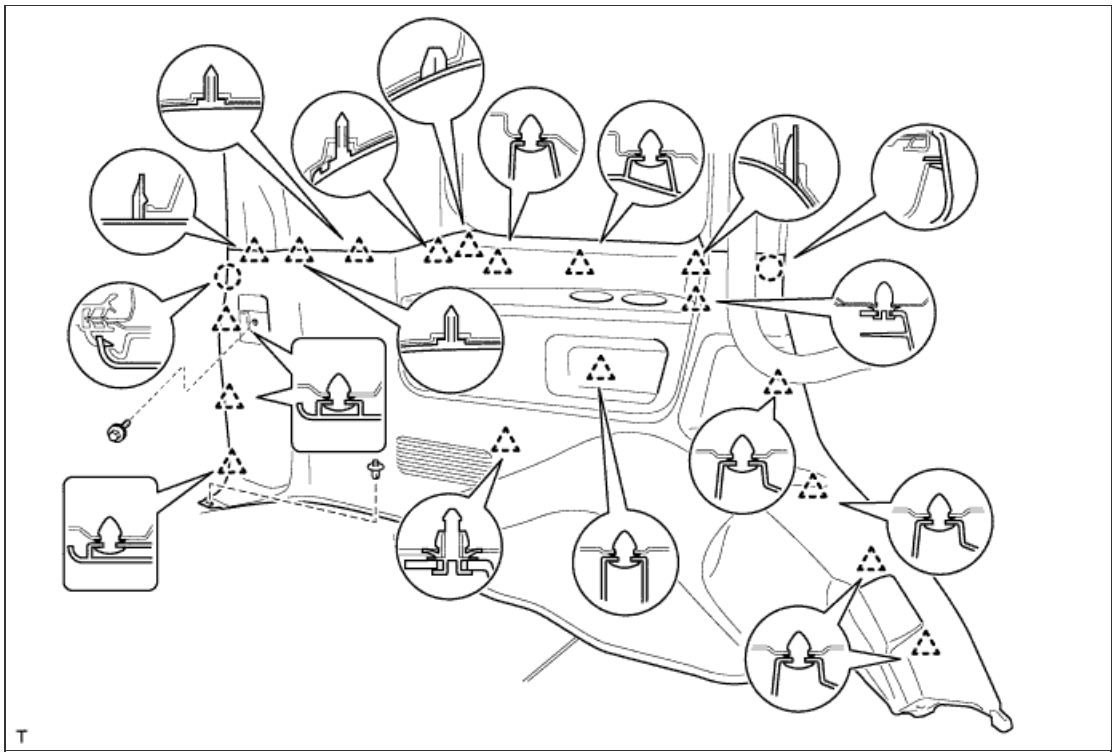
When installing the front quarter trim panel, operate the reclining ad uster release handle and move the No. 1 rear seat to the position shown in the illustration.

a. w/ Rear No. 2 Seat, except ace to ace Seat pe:

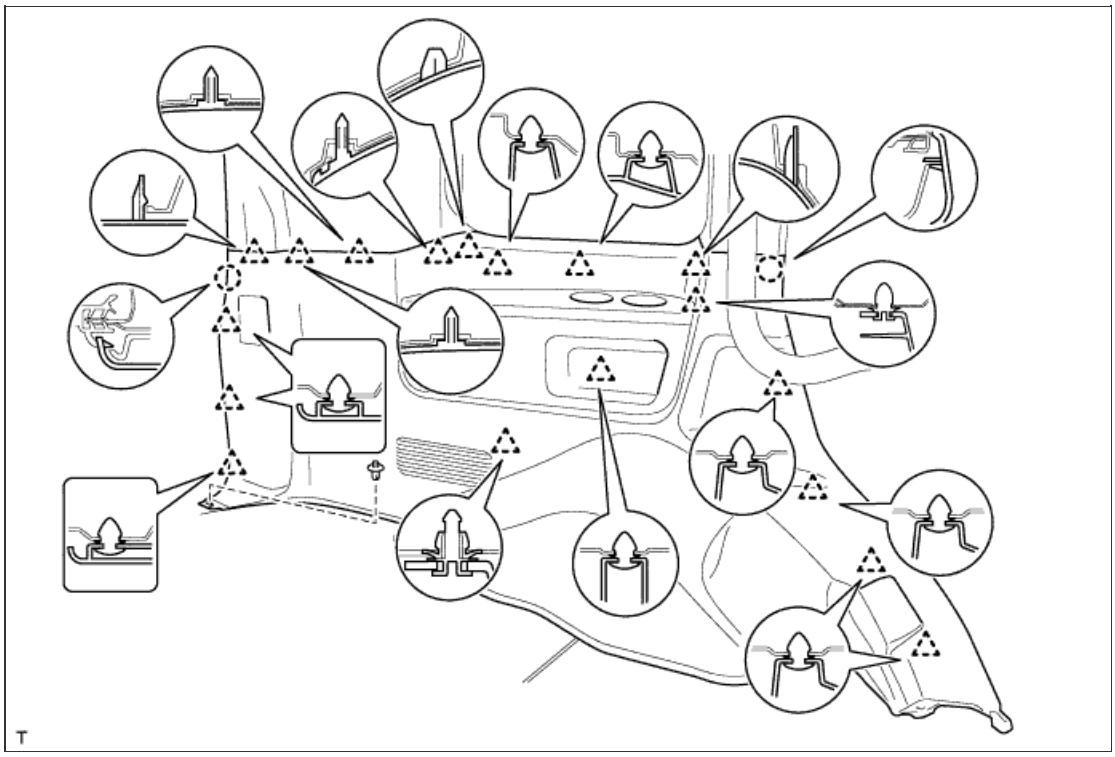


i. w/o Rear Air Conditioning S stem:
Connect the rear seat lock control lever cable.

ii. w/ Rear Air Conditioning S stem:
Connect the thermistor connector and rear seat lock control lever cable.

iii. Attach the 18 clips and 2 claws to install the quarter trim panel.

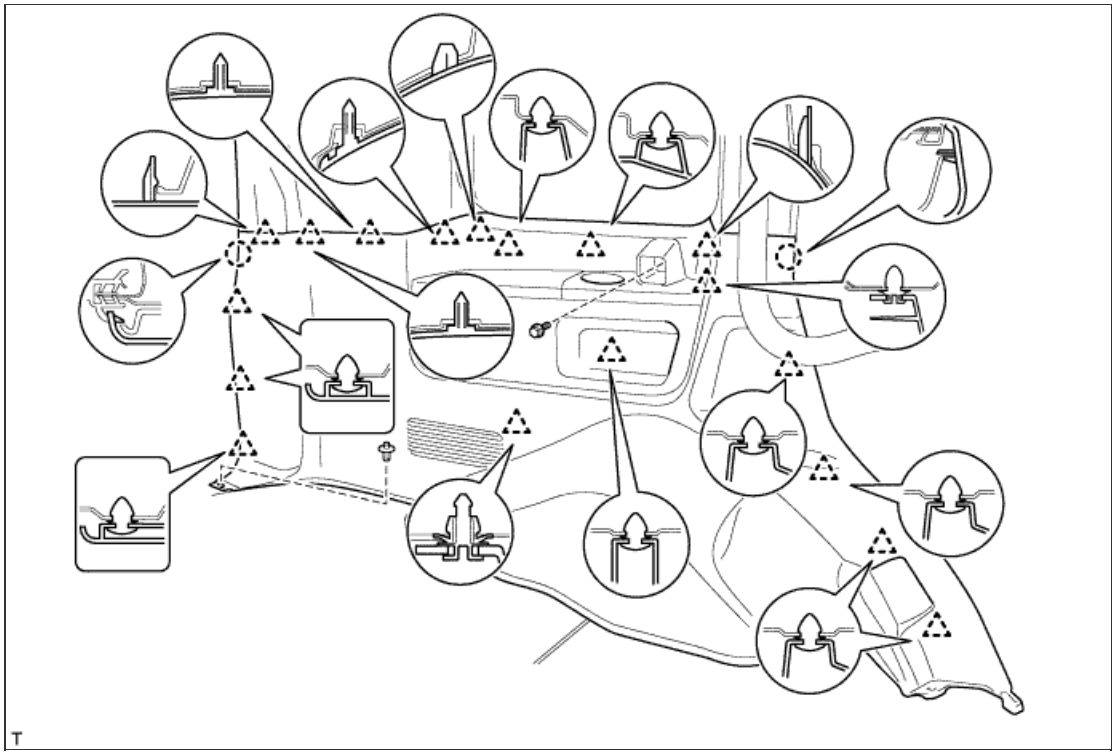
iv. Install the clip and bolt.



Tor e:
12 N 122 kgf c , 9 ft.*l f

. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for ace to ace Seat pe:

i. Attach the 18 clips and 2 claws to install the quarter trim panel.

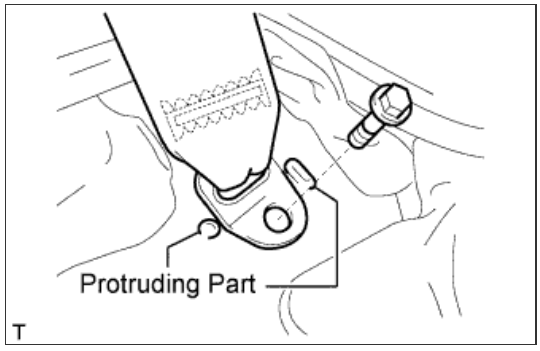


ii. Install the clip.

c. w/ onneau Cover:

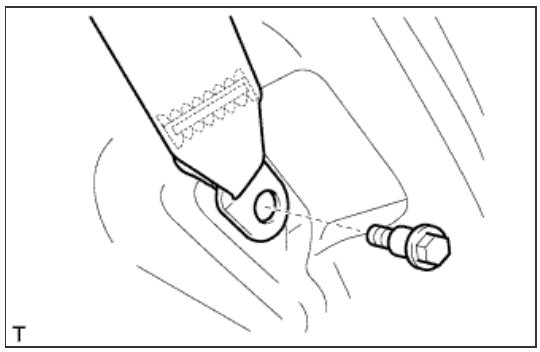
i. Attach the 18 clips and 2 claws to install the quarter trim panel.

ii. Install the screw and clip.



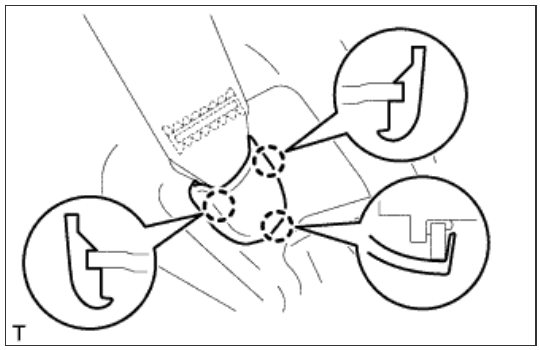
d. w/ Rear No. 2 Seat, except ace to ace Seat pe:
Install the rear No. 2 seat belt anchor with the bolt.

Tor e:
42 N 428 kgf c , 31 ft.*l f



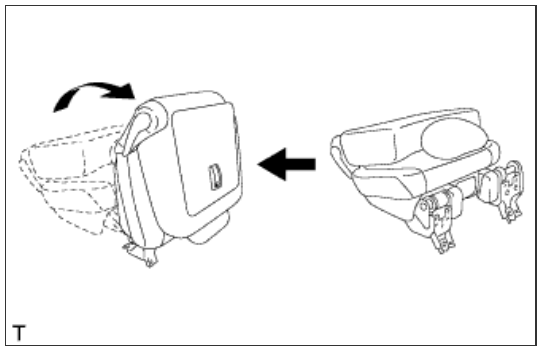
NOTICE:

Do not overlap the anchor part of the seat belt and protruding parts of the vehicle bod .



e. Install the rear No. 1 seat belt anchor with the bolt.

Tor e:
42 N 428 kgf c , 31 ft.*l f



f. Attach the 3 claws to install the cover.

64. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY RH

HINT:

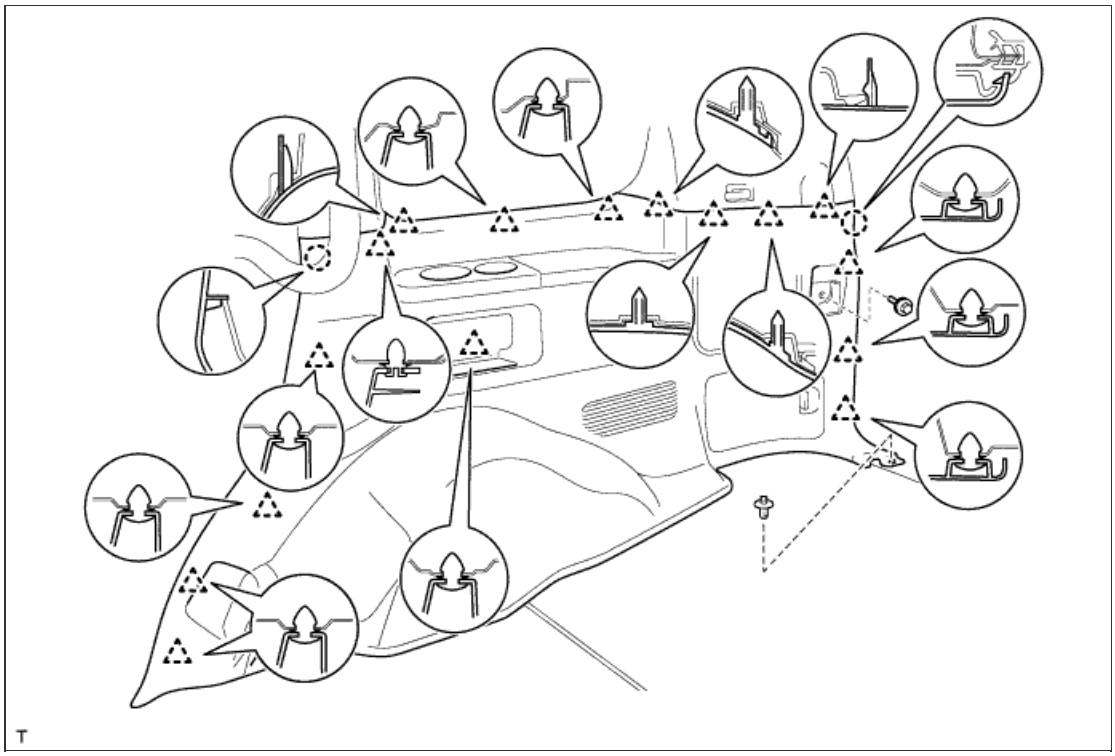
When installing the front quarter trim panel, operate the reclining ad uster release handle and move the No. 1 rear seat to the position shown in the illustration.

a. w/ Rear No. 2 Seat, except ace to ace Seat pe:

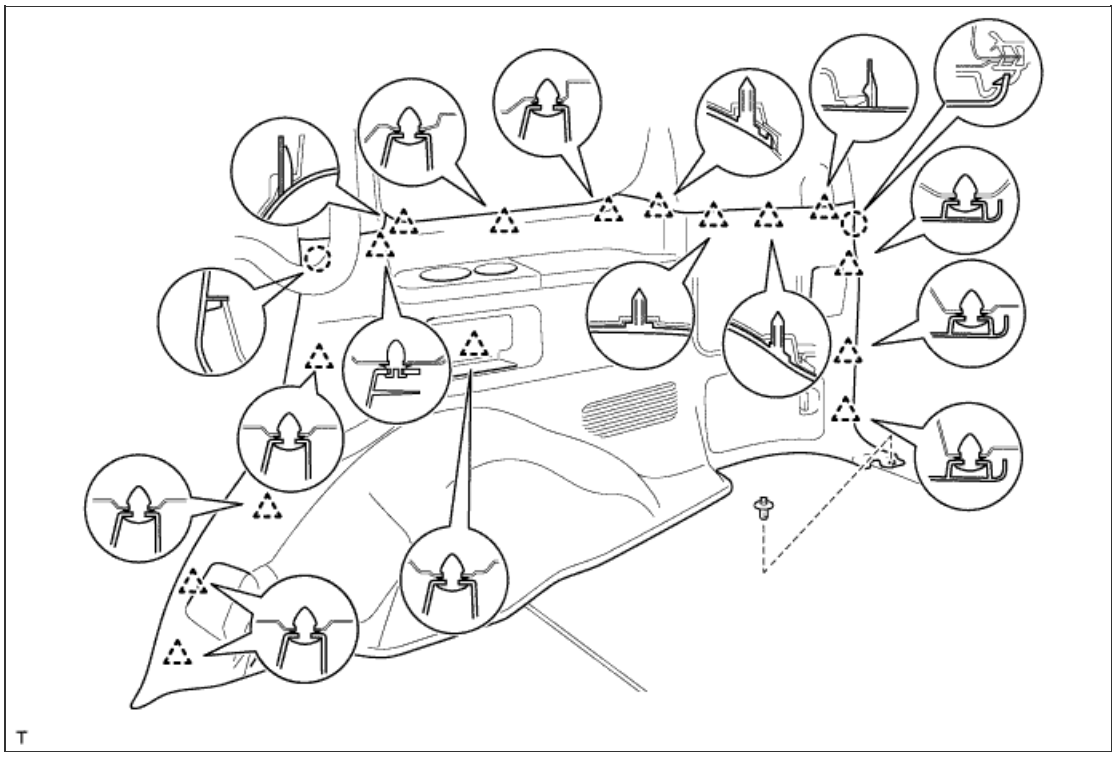


i. w/o Rear Air Conditioning S stem:
Connect the rear seat lock control lever cable.

ii. w/ Rear Air Conditioning S stem:
Connect the thermistor connector and rear seat lock control lever cable.

iii. Attach the 16 clips and 2 claws to install the quarter trim panel.

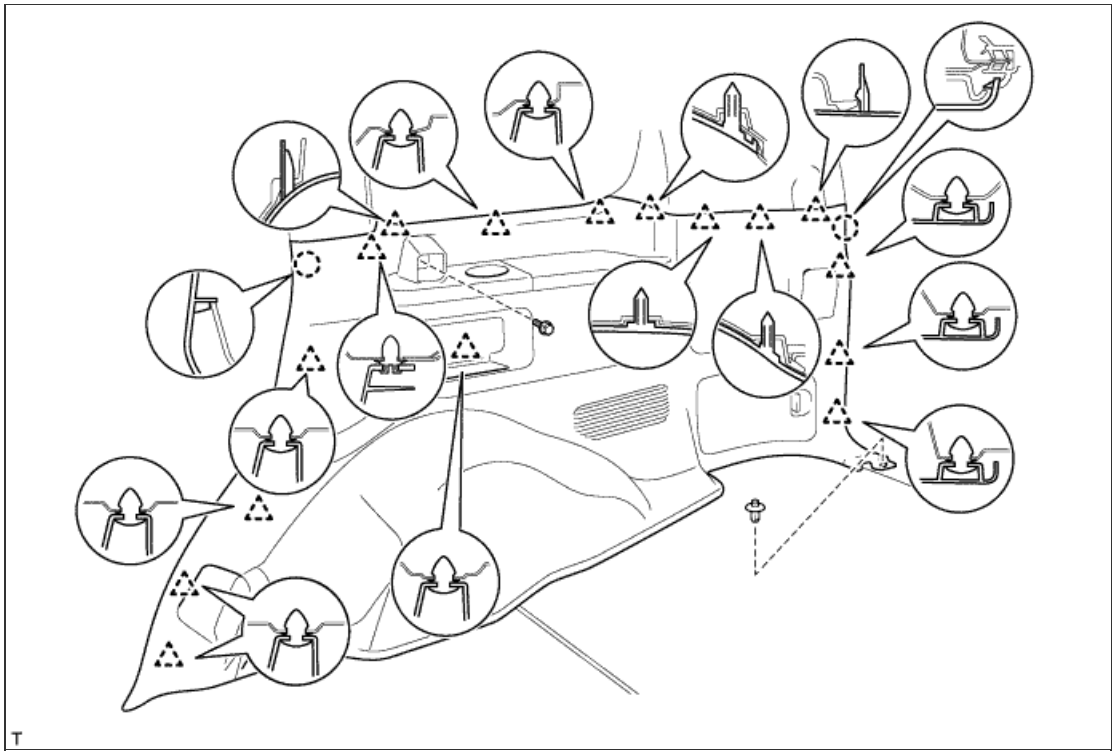
iv. Install the clip and bolt.



Tor e:
12 N 122 kgf c , 9 ft.*l f

. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for ace to ace Seat pe:

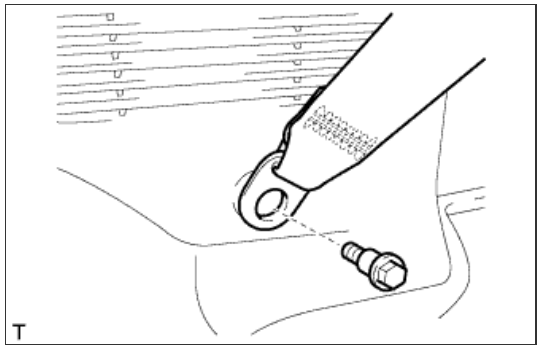
i. Attach the 16 clips and 2 claws to install the quarter trim panel.



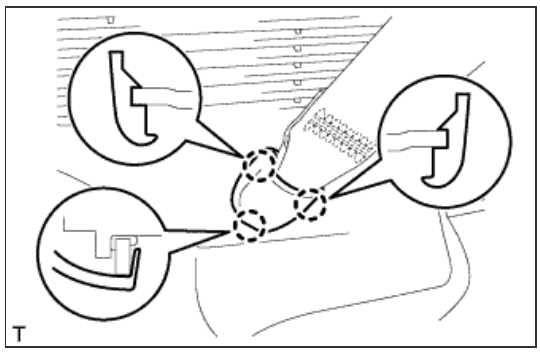
ii. Install the clip.

c. w/ onneau Cover:

i. Attach the 16 clips and 2 claws to install the quarter trim panel.



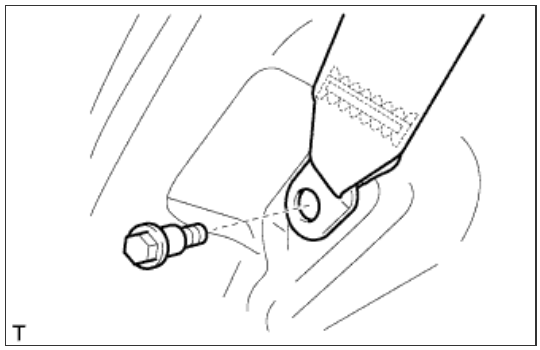
ii. Install the screw and clip.



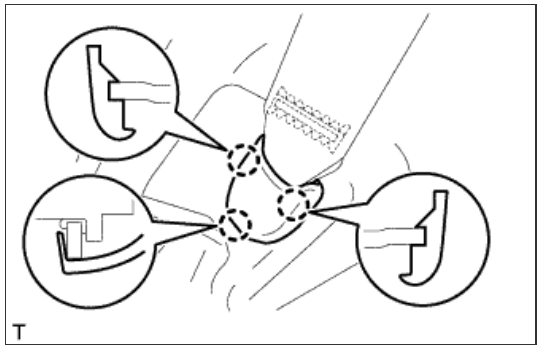
d. w/ Rear No. 2 Seat, except ace to ace Seat pe:

i. Install the rear No. 2 seat belt anchor with the bolt.

Tor e:
42 N 428 kgf c , 31 ft.*l f



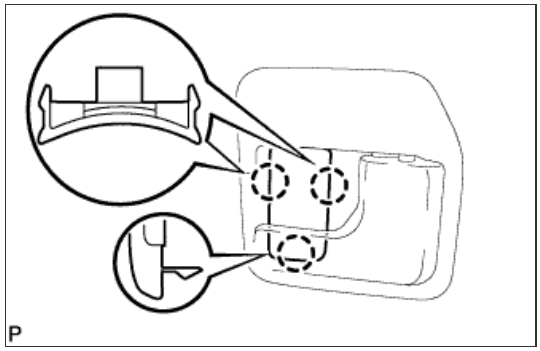
ii. Attach the 3 claws to install the cover.



e. Install the rear No. 1 seat belt anchor with the bolt.

Tor e:
42 N 428 kgf c , 31 ft.*l f

f. Attach the 3 claws to install the cover.



65. INSTALL REAR SEAT COVER CAP (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

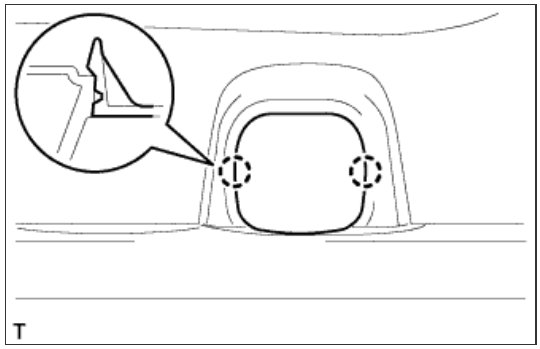
Use the same procedure to install the rear seat cover cap on the other side.

a. Attach the 3 claws to install the rear seat cover cap.



66. INSTALL NO. 1 TONNEAU COVER HOLDER CAP (w/ Tonnea Cover)

HINT:

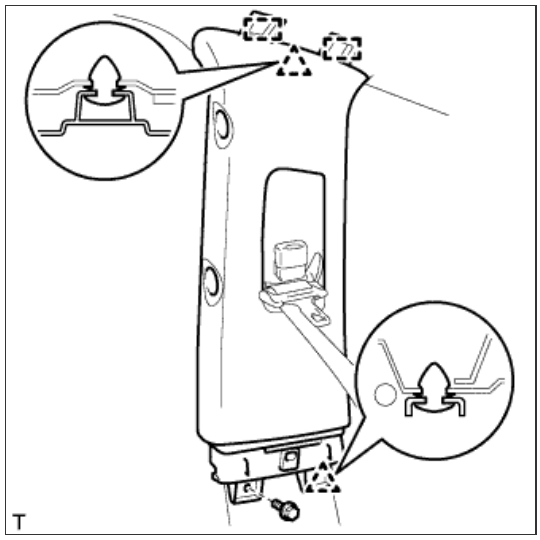
Use the same procedure to install the tonneau cover holder cap on the other side.

a. Attach the 2 claws to install the tonneau cover holder cap.



67. INSTALL CENTER PILLAR GARNISH LH

a. Pass the seat belt anchor through the center pillar garnish.

. Attach the 2 clips and 2 guides to install the center pillar garnish.

c. Install the bolt.

68. INSTALL CENTER PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

69. INSTALL REAR ASSIST GRIP ASSEMBLY

HINT:

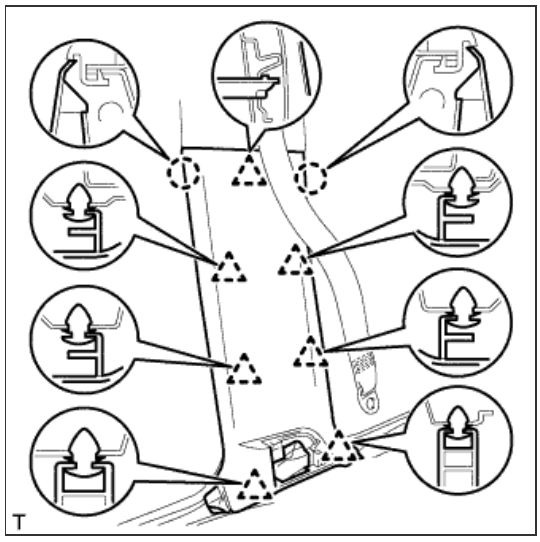
Use the same procedure to install the rear assist grip on the other side.

a. Attach the 2 claws to install the rear assist grip.

b. Install the 2 bolts.



c. Attach the 4 claws to install the 2 assist grip plugs.

70. INSTALL CENTER LO EPILLAR GARNISH LH

HINT:

- **for Man al Seat:**
  hen in talling the center lower pillar garni h, oe the front eat and eatback to the fore ot pright po tion.
- **for Power Seat:**
  hen in talling the center lower pillar garni h, connect the cable to the negative (-) attery ter inal and operate the power eat wi ch to oe the front eat and eatback to the fore ot pright po tion.
- **for Power Seat:**
  After o in the front eat, di connect the cable fro the negative (-) attery ter inal.

a. Attach the 2 claws and 7 clips to install the center lower pillar garnish.

. Install the seat belt anchor with the bolt.

Tor e:
42 N 428 kgf c , 31 ft.*l f

71. INSTALL CENTER LO ERPILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

72. INSTALL CENTER PILLAR GARNISH COVER LH

HINT:

- **for Man al Seat:**
  hen in talling the center pillar garni h cover, oe the front eat and eatback to the fore ot pright po tion.
- **for Power Seat:**
  hen in talling the center pillar garni h cover, connect the cable to the negative (-) attery ter ial and operate the power eat wtch to oe the front eat and eatback to the fore ot pright po tion.
- **for Power Seat:**
  After o in the front eat, di connect the cable fro the negative (-) attery ter ial.

a. Attach the 2 clips and 2 guides to install the cover.

73. INSTALL CENTER PILLAR GARNISH COVER RH

HINT:

Use the same procedures described for the LH side.

74. INSTALL FRONT PILLAR GARNISH LH

a. for 9, 14 Speakers:
Connect the speaker connector.

. Attach the clip and 3 guides to install the front pillar garnish.

75. INSTALL FRONT PILLAR GARNISH RH

HINT:

Use the same procedures described for the LH side.

76. INSTALL FRONT ASSIST GRIP SUB-ASSEMBLY

HINT:

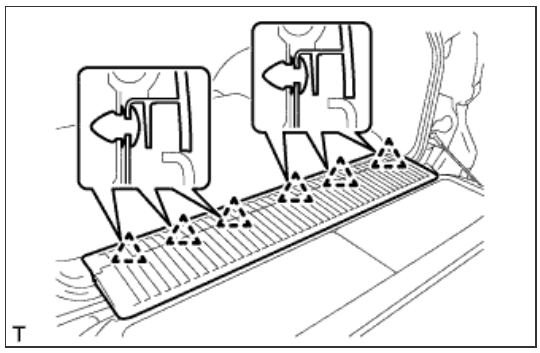
Use the same procedure to install the front assist grip on the other side.

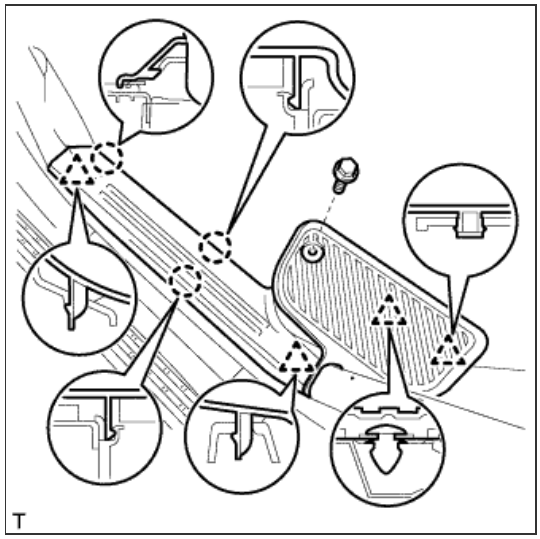
a. Attach the 2 claws to install the front assist grip.

b. Install the 2 bolts.



c. Attach the 4 claws to install the 2 assist grip plugs.

77. INSTALL REAR FLOOR MAT REAR SUPPORT PLATE



a. Attach the 6 clips to install the support plate.

78. INSTALL REAR DOOR SCUFF PLATE LH

a. Attach the 3 claws and 4 clips to install the scuff plate.

b. Install the screw.

79. INSTALL REAR DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

80. INSTALL REAR STEP COVER

HINT:

Use the same procedure to install the step cover on the other side.

a. Attach the 2 claws to install the step cover.

81. INSTALL FRONT DOOR SCUFF PLATE LH

a. Attach the 7 claws and 4 clips to install the scuff plate.

82. INSTALL FRONT DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

83. INSTALL REAR NO. 2 SEAT ASSEMBLY LH (except Face to Face Seat Type)

a. Install the rear No. 2 seat assembl LH (Click here).

84. INSTALL REAR NO. 2 SEAT ASSEMBLY RH (except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

85. INSTALL REAR NO. 2 SEAT ASSEMBLY LH (for Face to Face Seat Type)

a. Install the rear No. 2 seat assembl LH (Click here).

86. INSTALL REAR NO. 2 SEAT ASSEMBLY RH (for Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

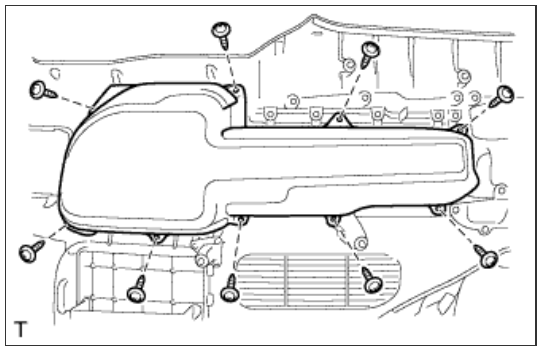
87. INSTALL TONNEAU COVER ASSEMBLY (w/ Tonnea Cover)

a. Install the tonneau cover assembl .

88. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some s stems need to be initialized after the cable is reconnected (Click here).



for Preparation Click here

HINT:

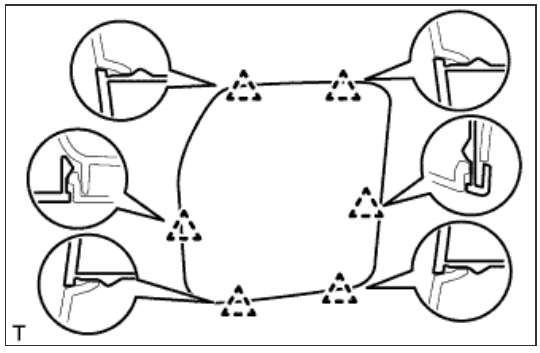
A bolt without a torque specification is shown in the standard bolt chart (Click here).

1. INSTALL SIDE TRIM BOX

a. Install the side trim box with the 9 screws.

2. INSTALL SIDE TRIM BOX COVER



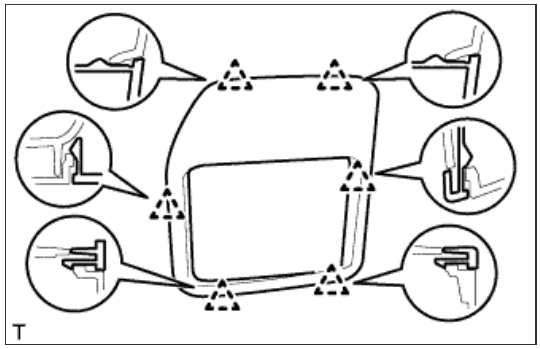
a. Install the side trim box cover.

3. INSTALL QUARTER TRIM LID SUB-ASSEMBLY RH

a. Install the quarter trim lid.

4. INSTALL QUARTER TRIM COVER LH (w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat Type)

a. Attach the 6 clips to install the quarter trim cover.



5. INSTALL QUARTER TRIM COVER RH (w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

6. INSTALL REAR NO. 2 SEAT COVER BEZEL (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Attach the 6 clips to install the rear No. 2 seat cover bezel.

7. INSTALL REAR NO. 1 SEAT COVER BEZEL (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

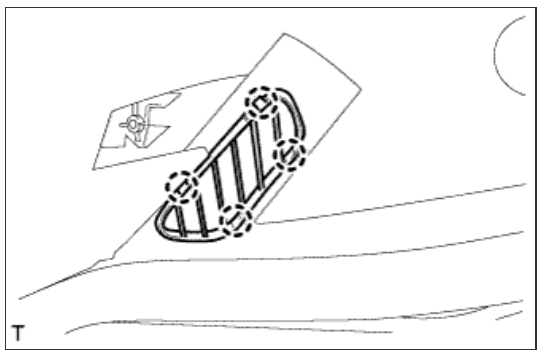
Use the same procedures described for the rear No. 2 seat cover bezel.

8. INSTALL REAR SEAT LOCK CONTROL LEVER SUB-ASSEMBLY LH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Attach the 4 claws to install the seat lock control lever.



9. INSTALL REAR SEAT LOCK CONTROL LEVER SUB-ASSEMBLY RH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedures described for the LH side.

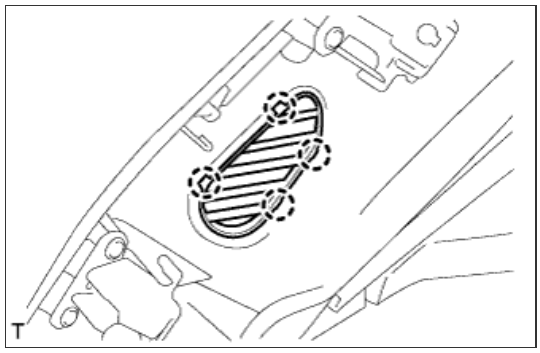
10. INSTALL NO. 2 SIDE TRIM BASE COVER LH (w/ Rear Heater)

a. Attach the 4 claws to install the cover.



11. INSTALL NO. 2 SIDE TRIM BASE COVER RH (w/ Rear Heater)

HINT:

Use the same procedures described for the LH side.

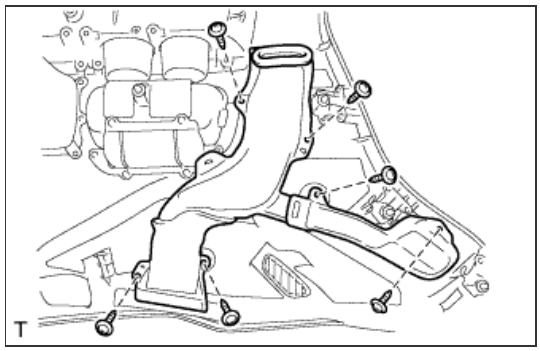
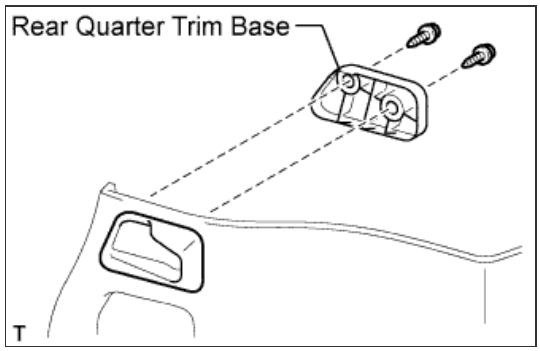
12. INSTALL NO. 1 SIDE TRIM BASE COVER LH (w/ Rear Heater)

a. Attach the 4 claws to install the cover.



13. INSTALL NO. 1 SIDE TRIM BASE COVER RH (w/ Rear Heater)

a. Attach the 4 claws to install the cover.



b. Install the duct with the 6 screws.

14. INSTALL TONNEAU COVER HANGER LH (w/ Tonnea Cover)

a. Install the tonneau cover hanger and rear quarter trim base with the 2 screws.

15. INSTALL TONNEAU COVER HANGER RH (w/ Tonnea Cover)

HINT:

Use the same procedures described for the LH side.

16. INSTALL TONNEAU COVER HOLDER BRACKET LH (w/ Tonnea Cover)

a. Attach the 3 claws to install the tonneau cover holder bracket.

. Install the front quarter trim base with the 3 screws and then install the remaining 5 screws.

17. INSTALL TONNEAU COVER HOLDER BRACKET RH (w/ Tonnea Cover)

HINT:

Use the same procedures described for the LH side.

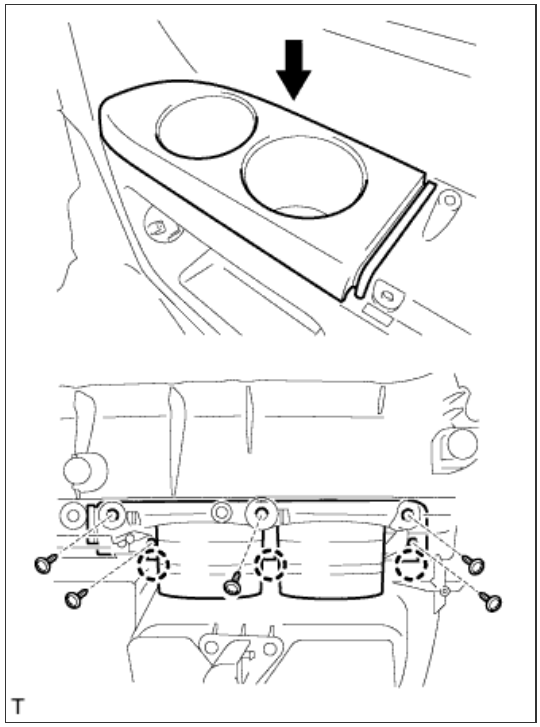
18. INSTALL NO. 2 CUP HOLDER

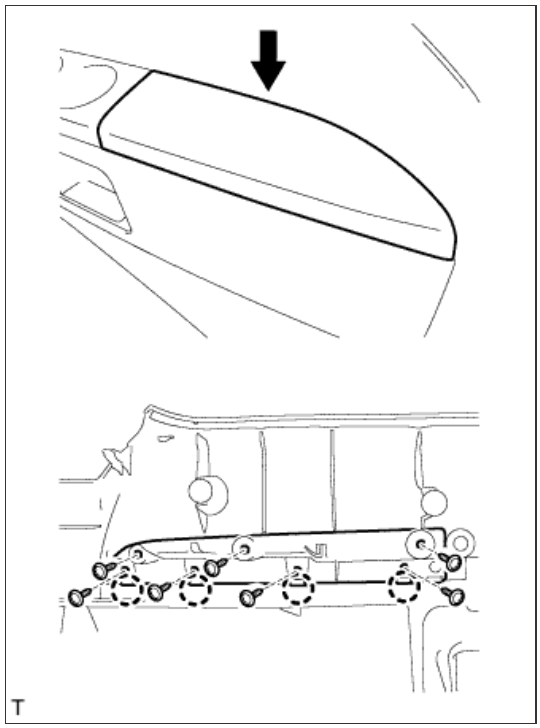
a. Attach the 3 claws to install the cup holder.



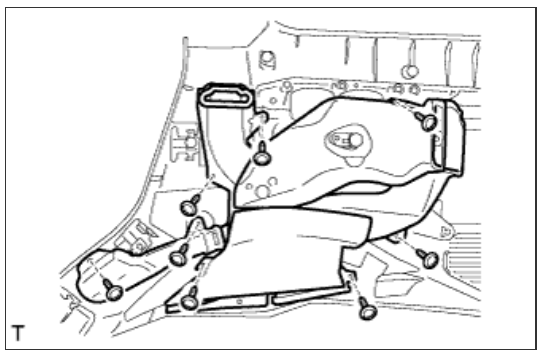
b. Install the 5 screws.

19. INSTALL NO. 1 CUP HOLDER

a. Attach the 3 claws to install the cup holder.



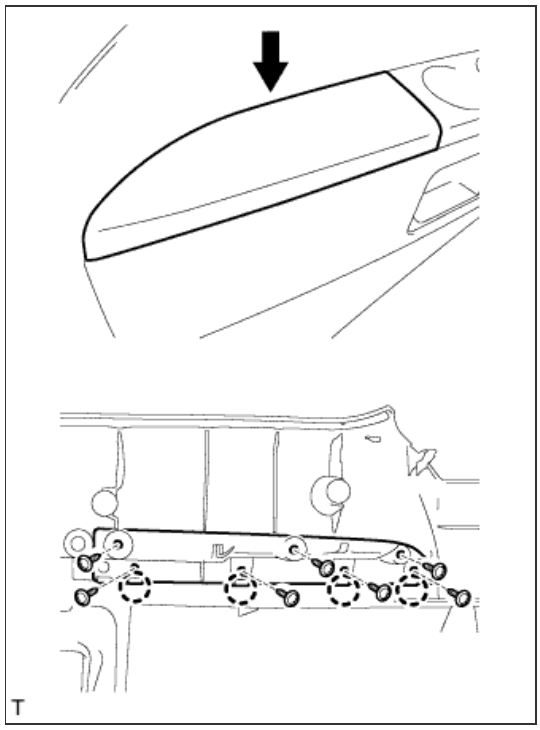
. Install the 5 screws.



20. INSTALL QUARTER TRIM COVER SUB-ASSEMBLY LH

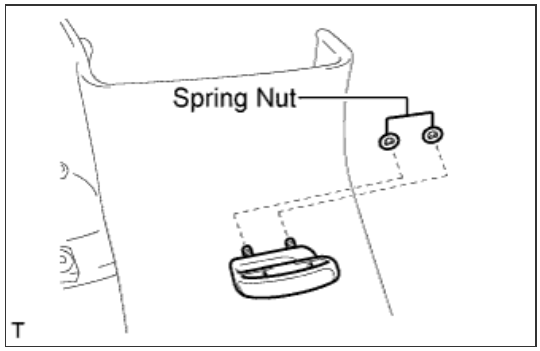
a. Attach the 4 claws to install the quarter trim cover.

b. Install the 7 screws.



c. w/ Rear Heater:
Install the duct with the 8 screws.

21. INSTALL QUARTER TRIM COVER SUB-ASSEMBLY RH



a. Attach the 4 claws to install the quarter trim cover.

b. Install the 7 screws.

22. INSTALL REAR NO. 2 SEAT SHOULDER BELT HANGER LH

a. Install the hanger with 2 new spring nuts.

23. INSTALL REAR NO. 2 SEAT SHOULDER BELT HANGER RH

HINT:

Use the same procedures described for the LH side.

24. INSTALL REAR SEAT SHOULDER BELT HANGER (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

Use the same procedure to install the hanger on the other side.

a. Install the hanger with 2 new spring nuts.

25. INSTALL ROOF SIDE INNER GARNISH COVER LH (w/ Rear No. 2 Seat, except Face to Face Seat Type)

a. Attach the 7 claws to install the cover.
