B1837/58	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the curtain shield squib LH circuit for 0.5 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH) • Center airbag sensor assembly
B1838/58	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the curtain shield squib LH circuit for 0.5 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK CURTAIN SHIELD AIRBAG LH (CURTAIN SHIELD SQUIB LH)

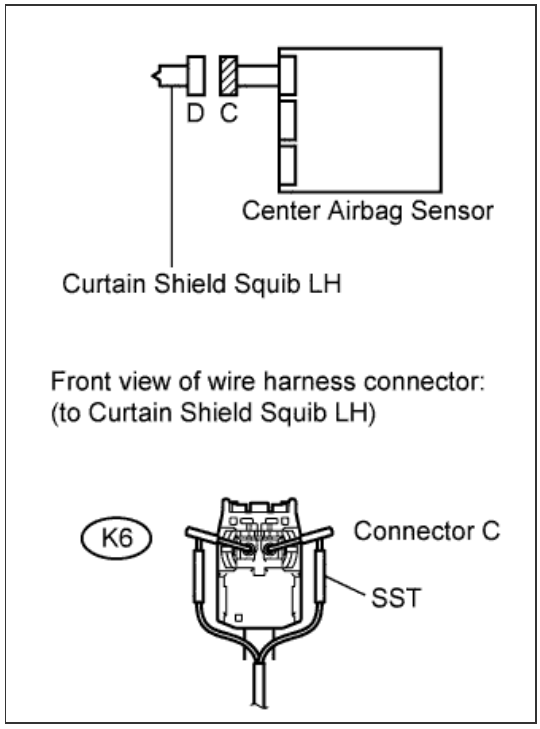
a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connectors from the curtain shield airbag LH.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:



Never connect the tester to the curtain shield airbag LH (curtain shield squib LH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1835, B1836, B1837 or B1838 is not output.

HINT:

Codes other than DTC B1835, B1836, B1837 and B1838 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK

REPLACE CURTAIN SHIELD AIRBAG ASSEMBLY LH (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the floor wire connectors (on the curtain shield airbag LH side) are not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE FLOOR WIRE

OK

3.CHECK FLOOR WIRE (CURTAIN SHIELD AIRBAG LH CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

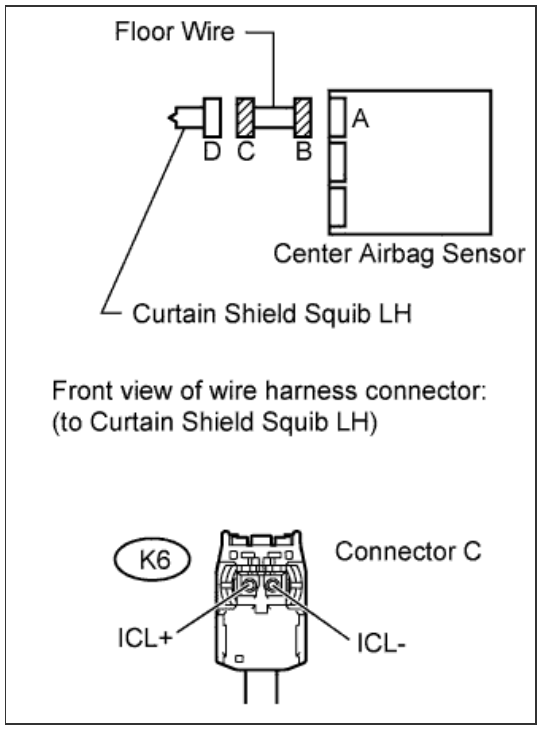
Tester Connection	Switch Condition	Specified Condition
K6-1 (ICL+) - Body ground	Engine switch on (IG)	Below 1 V
K6-2 (ICL-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:



Tester Connection	Condition	Specified Condition
K6-1 (ICL+) - K6-2 (ICL-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K6-1 (ICL+) - K6-2 (ICL-)	Always	1 MΩ or higher
K6-1 (ICL+) - Body ground	Always	1 MΩ or higher
K6-2 (ICL-) - Body	Always	1 MΩ or higher

ground		

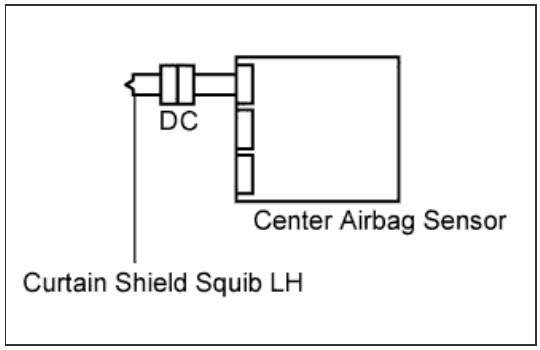
NG → REPLACE FLOOR WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the curtain shield airbag LH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.



c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1835, B1836, B1837 or B1838 is not output.

HINT:

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (**Click here**)

OK

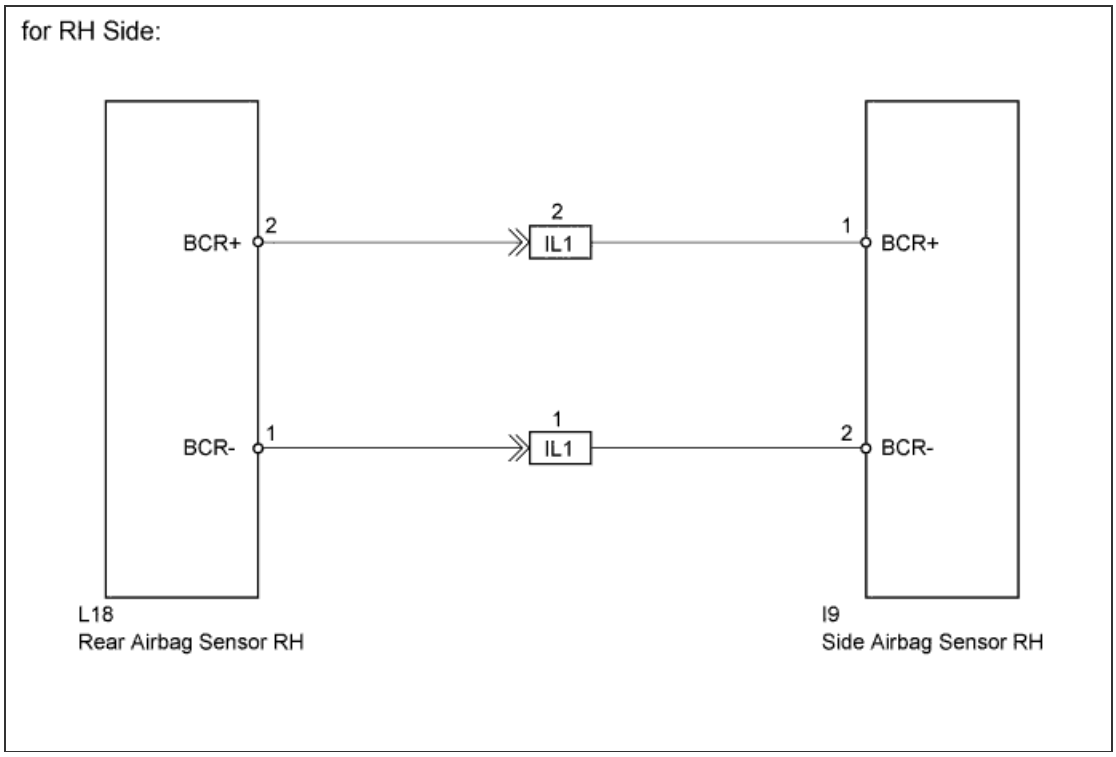
USE SIMULATION METHOD TO CHECK (**Click here**)

DTC B1630/23 Rear Airbag Sensor RH Circuit Malfunction

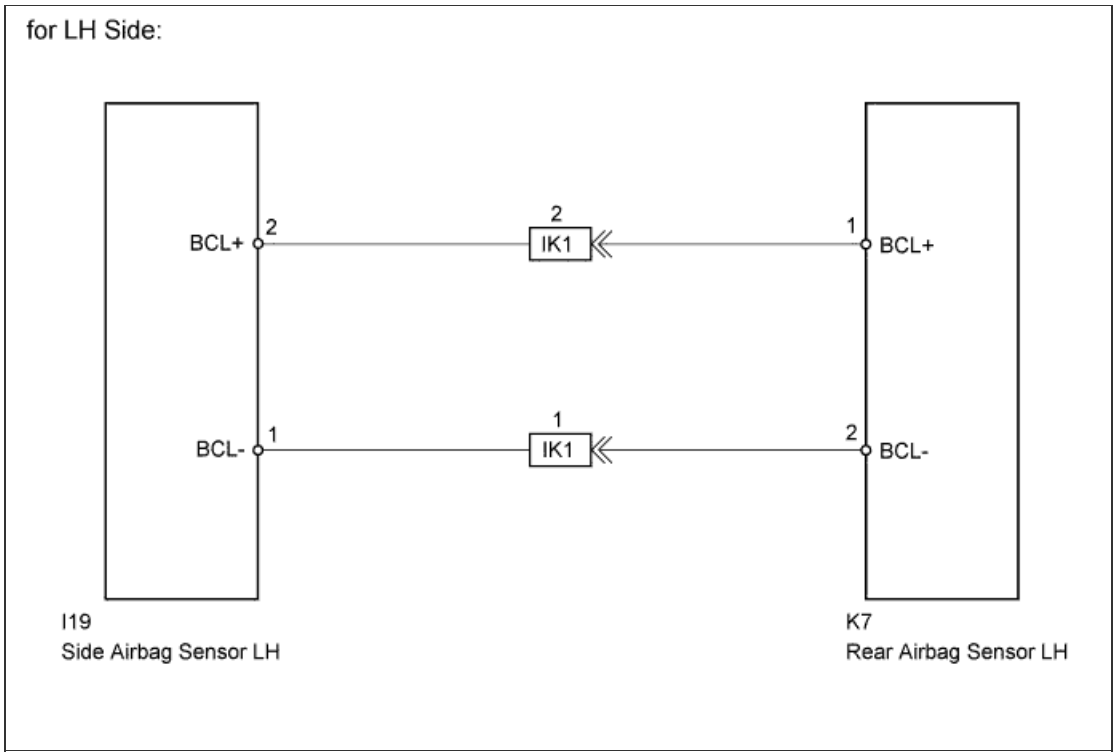
DTC B1695/16 Door Side Airbag Sensor LH Malfunction

for Preparation Click here

DESCRIPTION



HINT:



"Door side airbag sensor LH" refer to the side airbag sensor LH.

- The side airbag sensor LH or rear airbag sensor RH consists of the safing sensor, the diagnostic circuit, the lateral deceleration sensor, etc. If the center airbag sensor receives signals from the lateral deceleration sensor, it determines whether the SRS should be activated. DTC B1630/23 or B1695/16 is stored when a malfunction is detected in the side airbag sensor LH or rear airbag sensor RH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1630/23	When one of the following conditions is met: • A rear airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Rear airbag sensor RH • Center airbag sensor assembly
B1695/16	When one of the following conditions is met: • A side airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Side airbag sensor LH • Center airbag sensor assembly

DTC B1632/81 Lost Communication with Rear Airbag Sensor RH

DTC B1633/81 Rear Airbag Sensor Assembly RH Initialization Incomplete

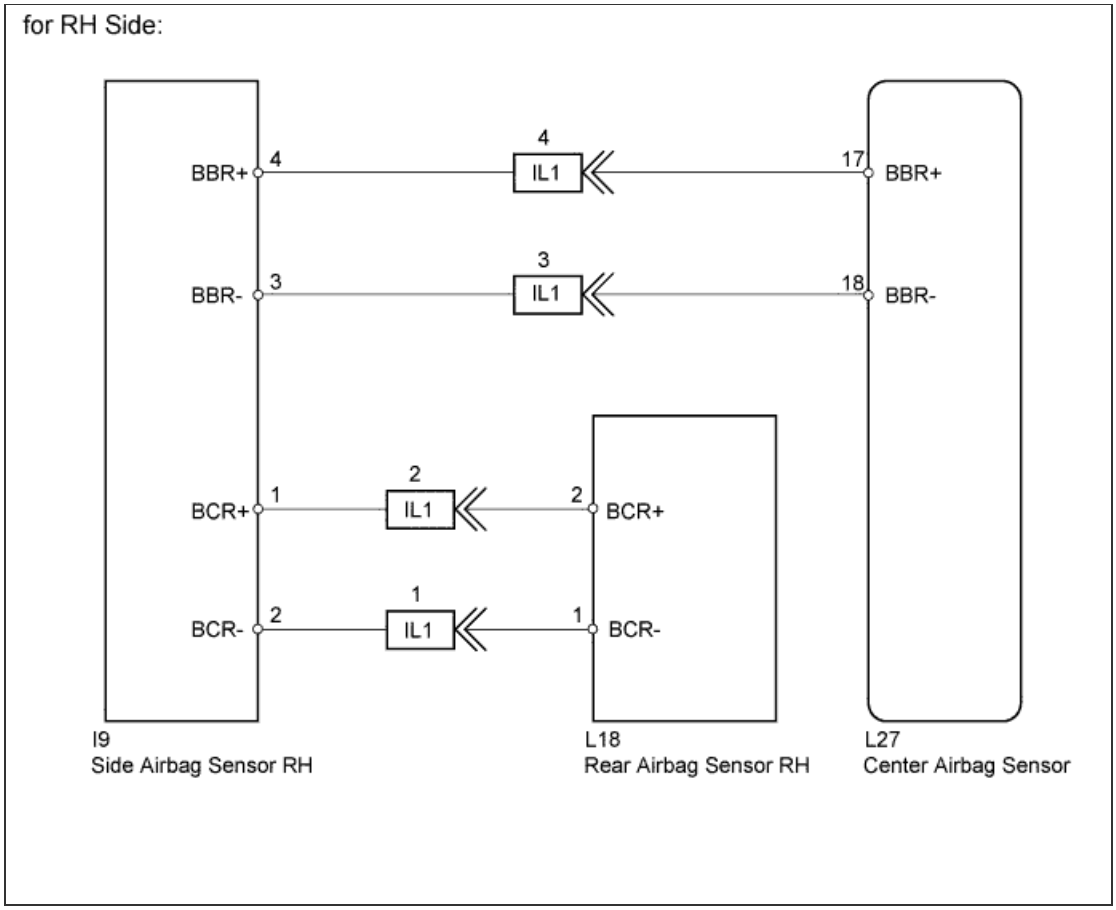
DTC B1697/82 Lost Communication with Door Side Airbag Sensor LH

DTC B1698/82 Door Side Airbag Sensor LH Initialization Incomplete

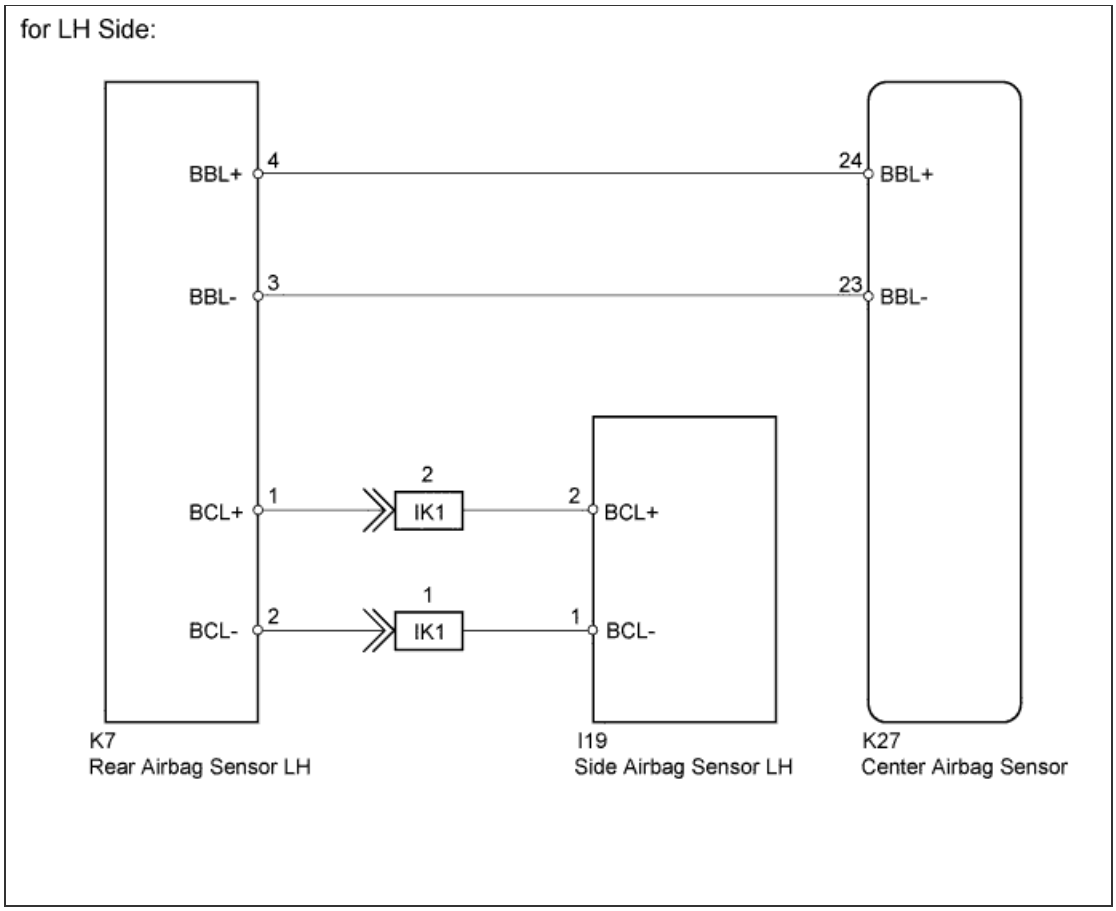
for Preparation Click here

DESCRIPTION

HINT:



"Door side airbag sensor LH" refer to the side airbag sensor LH.



- The circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH, rear seat side airbag LH or RH and curtain shield airbag LH or RH) is composed of the center airbag sensor, side airbag sensor LH or RH, and rear airbag sensor LH or RH.
  The side airbag sensor LH or RH and rear airbag sensor LH or RH detect impacts to the vehicle and send signals to the center airbag sensor to determine if the airbag should be deployed.
  DTC B1632/81 or B1697/82 is stored when a malfunction is detected in the circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH, rear seat side airbag LH or RH and curtain shield airbag LH or RH).

DTC Code	DTC Detection Condition	Trouble Area
B1632/81	hen one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A rear airbag sensor RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Front door wire RH • Side airbag sensor RH • Rear airbag sensor RH • Center airbag sensor assembly
B1633/81	hen one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A rear airbag sensor RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Front door wire RH • Side airbag sensor RH • Rear airbag sensor RH • Center airbag sensor assembly
B1697/82	hen one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH and curtain shield airbag LH) for 2 seconds. • A side airbag sensor LH malfunction.	• Floor wire • Front door wire LH • Side airbag sensor LH • Rear airbag sensor LH • Center airbag sensor assembly

	• A rear airbag sensor LH malfunction. • A center airbag sensor malfunction.	
B1698/82	hen one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH and curtain shield airbag LH) for 2 seconds. • A side airbag sensor LH malfunction. • A rear airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front door wire LH • Side airbag sensor LH • Rear airbag sensor LH • Center airbag sensor assembly

3.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor, rear airbag sensor RH and side airbag sensor RH.

b. Check that the connectors (on the center airbag sensor side, the rear airbag sensor RH side and side airbag sensor RH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

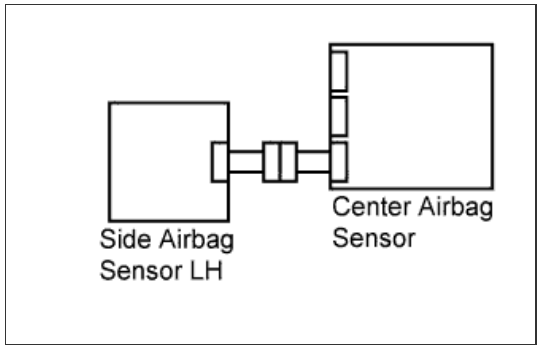
OK

4.CHECK SIDE AIRBAG SENSOR RH

a. Connect the connectors to the center airbag sensor.

b. Interchange the side airbag sensor LH with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.



d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

Result

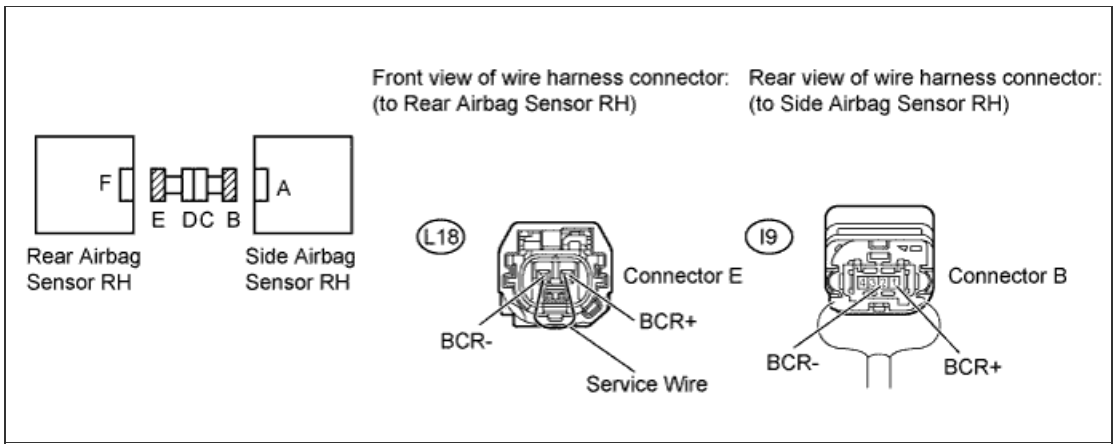
Result	Proceed to
DTC B1632, B1633, B1697 and B1698 are not output	A
DTC B1697 or B1698 is output	B
DTC B1632 or B1633 is output	C

HINT:

Codes other than DTC B1632, B1633, B1697 and B1698 may be output at this time, but they are not related to this check.

i. Turn the engine switch off.

j. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.



k. Return the side airbag sensor RH and LH to their original positions and connect the connectors to them.

A → USE SIMULATION METHOD TO CHECK (Click here)

B → REPLACE SIDE AIRBAG SENSOR RH (Click here)

C

5 CHECK REAR AIRBAG SENSOR RH CIRCUIT

a. Disconnect the connectors from the side airbag sensor RH and rear airbag sensor RH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	ngine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	ngine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. sing a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector .

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector .

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 7

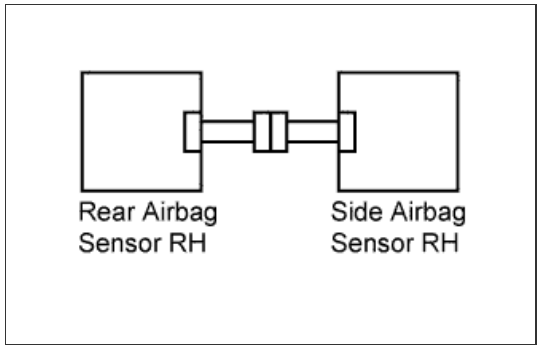
OK

6.CHECK REAR AIRBAG SENSOR RH

a. Connect the connectors to the center airbag sensor.

b. Temporarily replace the rear airbag sensor RH with a new one.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.



d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

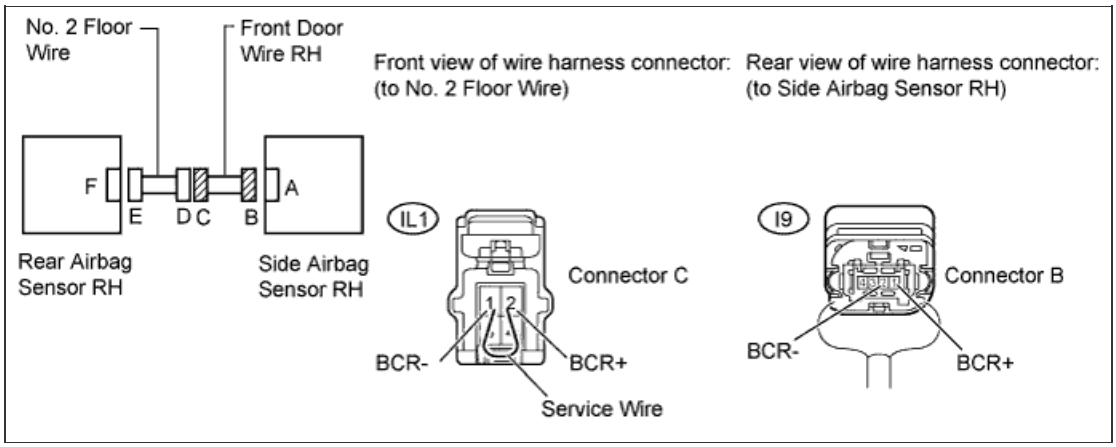
g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

OK:

DTC B1632 and B1633 is not output.

HINT:



Codes other than DTC B1632 and B1633 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

REPLACE REAR AIRBAG SENSOR RH (Click here)

7.CHECK FRONT DOOR WIRE RH (SIDE AIRBAG SENSOR RH - NO. 2 FLOOR WIRE)

a. Disconnect the front door wire RH connectors from the No. 2 floor wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	ngine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	ngine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. sing a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FRONT DOOR WIRE RH

OK

REPLACE NO. 2 FLOOR WIRE

8.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor, the side airbag sensor LH and rear airbag sensor LH.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

9.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor, side airbag sensor LH and rear airbag sensor LH.

b. Check that the connectors (on the center airbag sensor side, the rear airbag sensor LH side and side airbag sensor LH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

10.CHECK REAR AIRBAG SENSOR LH

a. Connect the connector to the center airbag sensor.

b. Temporarily replace the rear airbag sensor LH with a new one.

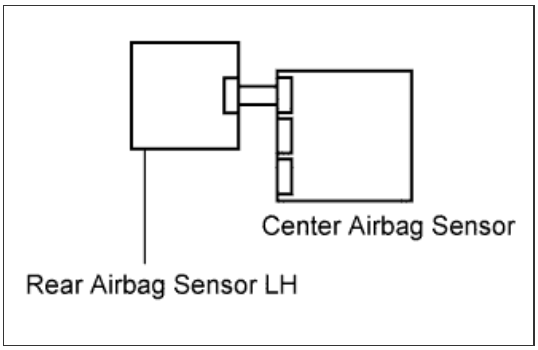
c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.



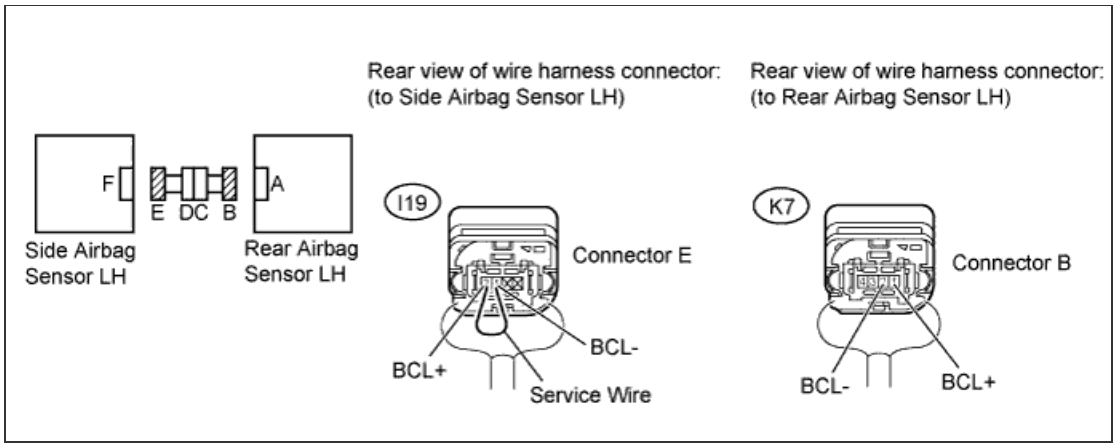
h. Check for DTCs (Click here).

OK:

DTC B1697 and B1698 are not output.

HINT:

Codes other than DTC B1697 and B1698 may be output at this time, but they are not related to this check.



NG → Go to step 11

OK

REPLACE REAR AIRBAG SENSOR LH (Click here)

11.CHECK SIDE AIRBAG SENSOR LH CIRCUIT

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connectors from the side airbag sensor LH and rear airbag sensor LH.

d. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

e. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified condition
1 (BCL+) - Body ground	ngine switch on (IG)	Below 1 V
2 (BCL-) - Body ground	ngine switch on (IG)	Below 1 V

f. Turn the engine switch off.

g. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

h. sing a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector .

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

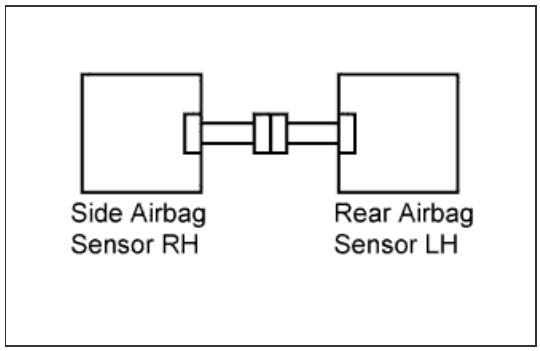
i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (BCL+) - 2 (BCL-)	Always	Below 1 Ω

j. Disconnect the service wire from connector .

k. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (BCL+) - Body ground	Always	1 MΩ or higher
2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → Go to step 13

OK

12.CHECK SIDE AIRBAG SENSOR LH

a. Connect the connectors to the rear airbag sensor LH.

b. Interchange the side airbag sensor LH with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1632, B1633, B1697 and B1698 are not output	A

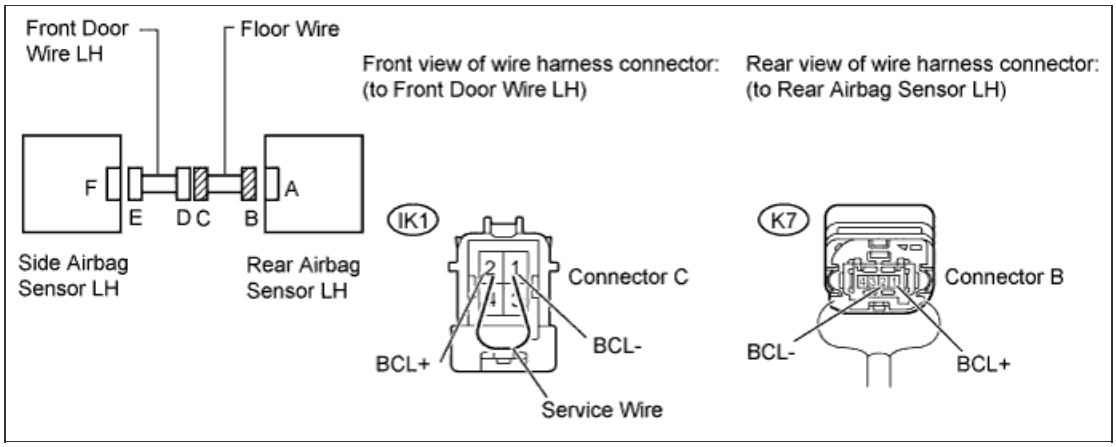
DTC B1697 or B1698 is output	C

i. Turn the engine switch off.

j. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

k. Return the side airbag sensor RH and LH to their original positions and connect the connectors to them.



A → USE SIMULATION METHOD TO CHECK (Click here)

B → REPLACE SIDE AIRBAG SENSOR LH (Click here)

C

REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

13.CHECK FLOOR WIRE (SIDE AIRBAG SENSOR LH - FRONT DOOR WIRE LH)

a. Disconnect the floor wire connector from the front door wire LH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
1 (BCL+) - Body ground	ngine switch on (IG)	Below 1 V
2 (BCL-) - Body ground	ngine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. sing a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (BCL+) - 2 (BCL-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (BCL+) - Body ground	Always	1 MΩ or higher
2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK

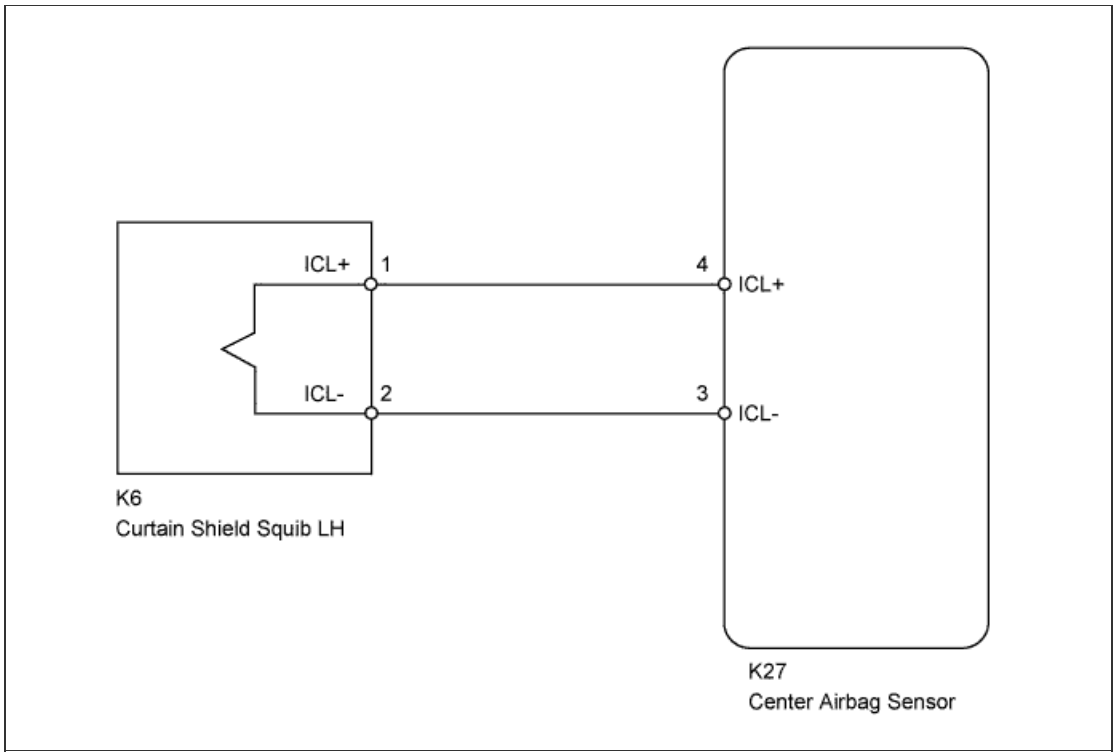
REPLACE FRONT DOOR WIRE LH

DTC B1835/58 Short in Curtain Shield Squib LH Circuit

DTC B1836/58 Open in Curtain Shield Squib LH Circuit

DTC B1837/58 Short to GND in Curtain Shield Squib LH Circuit

DTC B1838/58 Short to B+ in Curtain Shield Squib LH Circuit



for Preparation Click here

DESCRIPTION

The curtain shield squib LH circuit consists of the center airbag sensor and the curtain shield airbag LH.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the curtain shield squib LH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1835/58	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the curtain shield squib LH circuit during the primary check. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH) • Center airbag sensor assembly
B1836/58	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the curtain shield squib LH circuit for 2 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH) • Center airbag sensor assembly
B1837/58	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the curtain shield squib LH circuit for 0.5 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH) • Center airbag sensor assembly
B1838/58	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the curtain shield squib LH circuit for 0.5 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK CURTAIN SHIELD AIRBAG LH (CURTAIN SHIELD SQUIB LH)

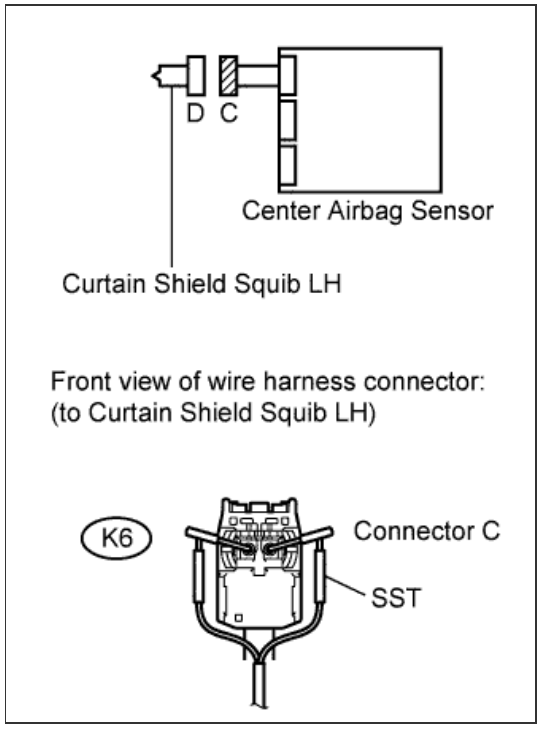
a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connectors from the curtain shield airbag LH.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:



Never connect the tester to the curtain shield airbag LH (curtain shield squib LH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1835, B1836, B1837 or B1838 is not output.

HINT:

Codes other than DTC B1835, B1836, B1837 and B1838 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK

REPLACE CURTAIN SHIELD AIRBAG ASSEMBLY LH (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the floor wire connectors (on the curtain shield airbag LH side) are not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE FLOOR WIRE

OK

3.CHECK FLOOR WIRE (CURTAIN SHIELD AIRBAG LH CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

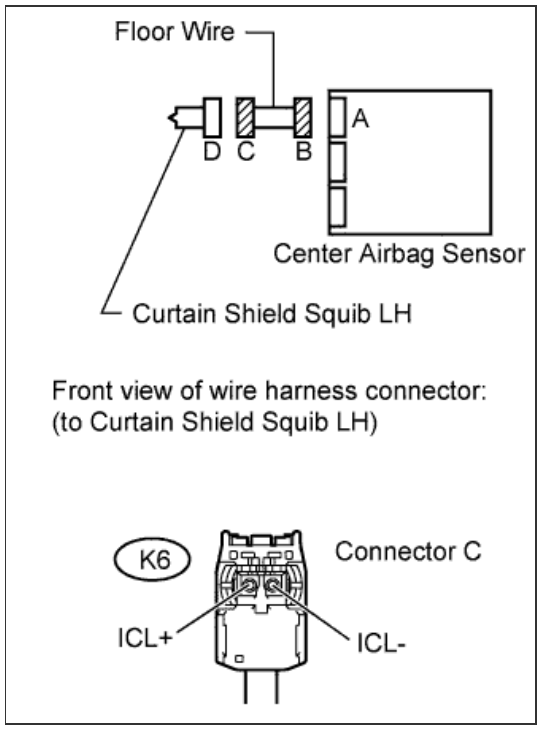
Tester Connection	Switch Condition	Specified Condition
K6-1 (ICL+) - Body ground	Engine switch on (IG)	Below 1 V
K6-2 (ICL-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:



Tester Connection	Condition	Specified Condition
K6-1 (ICL+) - K6-2 (ICL-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K6-1 (ICL+) - K6-2 (ICL-)	Always	1 MΩ or higher
K6-1 (ICL+) - Body ground	Always	1 MΩ or higher
K6-2 (ICL-) - Body	Always	1 MΩ or higher

ground		

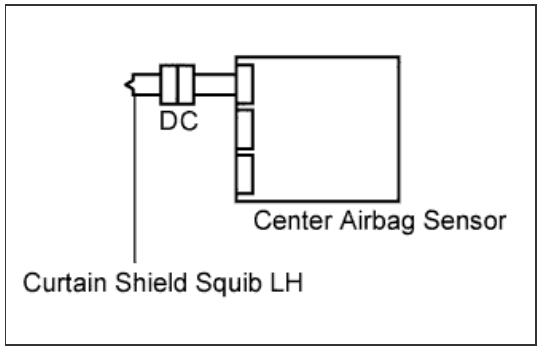
NG → REPLACE FLOOR WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the curtain shield airbag LH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.



c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1835, B1836, B1837 or B1838 is not output.

HINT:

Codes other than DTC B1835, B1836, B1837 and B1838 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (**Click here**)

OK

USE SIMULATION METHOD TO CHECK (**Click here**)

DTC B1632/81 Lost Communication with Rear Airbag Sensor RH

DTC B1633/81 Rear Airbag Sensor Assembly RH Initialization Incomplete

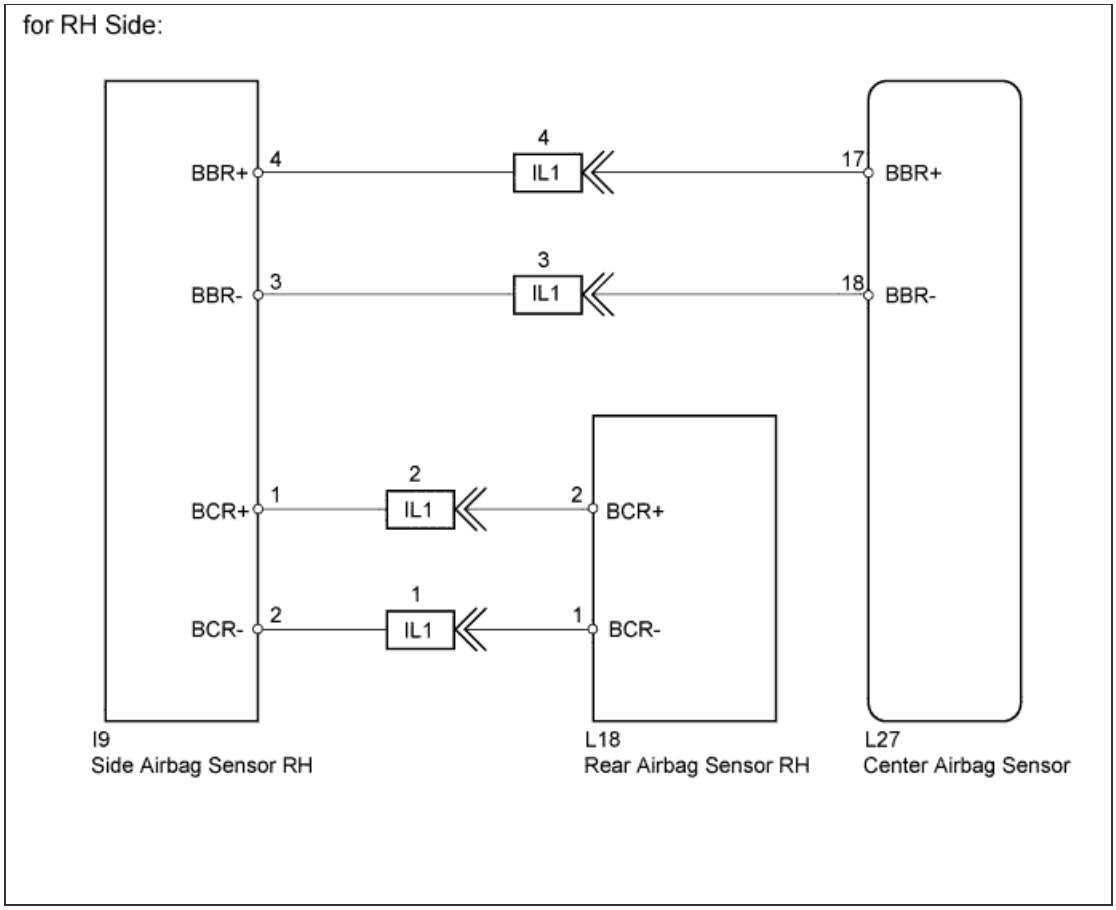
DTC B1697/82 Lost Communication with Door Side Airbag Sensor LH

DTC B1698/82 Door Side Airbag Sensor LH Initialization Incomplete

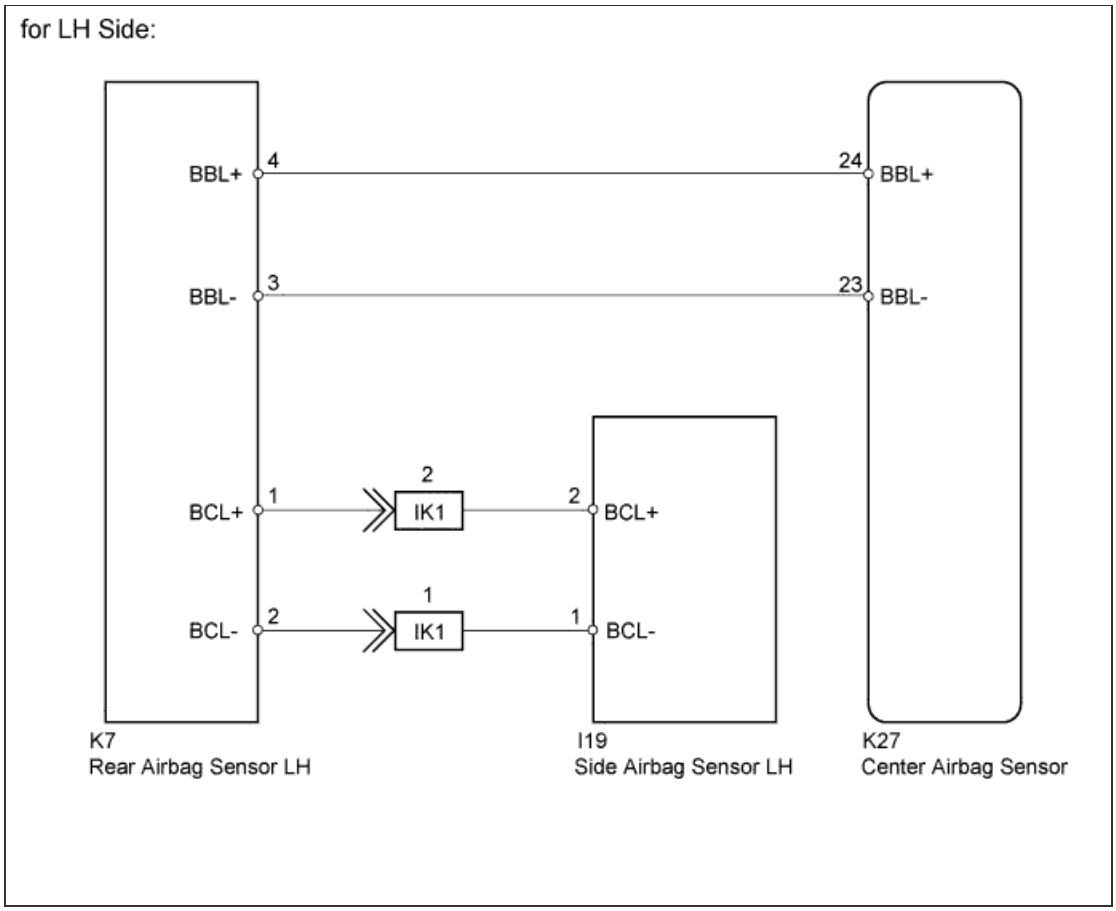
for Preparation Click here

DESCRIPTION

HINT:



"Door side airbag sensor LH" refer to the side airbag sensor LH.



- The circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH, rear seat side airbag LH or RH and curtain shield airbag LH or RH) is composed of the center airbag sensor, side airbag sensor LH or RH, and rear airbag sensor LH or RH.
  The side airbag sensor LH or RH and rear airbag sensor LH or RH detect impacts to the vehicle and send signals to the center airbag sensor to determine if the airbag should be deployed.
  DTC B1632/81 or B1697/82 is stored when a malfunction is detected in the circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH, rear seat side airbag LH or RH and curtain shield airbag LH or RH).

DTC Code	DTC Detection Condition	Trouble Area
B1632/81	hen one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A rear airbag sensor RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Front door wire RH • Side airbag sensor RH • Rear airbag sensor RH • Center airbag sensor assembly
B1633/81	hen one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A rear airbag sensor RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Front door wire RH • Side airbag sensor RH • Rear airbag sensor RH • Center airbag sensor assembly
B1697/82	hen one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH and curtain shield airbag LH) for 2 seconds. • A side airbag sensor LH malfunction.	• Floor wire • Front door wire LH • Side airbag sensor LH • Rear airbag sensor LH • Center airbag sensor assembly

	• A rear airbag sensor LH malfunction. • A center airbag sensor malfunction.	
B1698/82	hen one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH and curtain shield airbag LH) for 2 seconds. • A side airbag sensor LH malfunction. • A rear airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front door wire LH • Side airbag sensor LH • Rear airbag sensor LH • Center airbag sensor assembly

A	USE SIMULATION METHOD TO CHECK (Click here)
B	Go to step 8
C	

2.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor, the side airbag sensor RH and rear airbag sensor RH.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

3.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor, rear airbag sensor RH and side airbag sensor RH.

b. Check that the connectors (on the center airbag sensor side, the rear airbag sensor RH side and side airbag sensor RH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

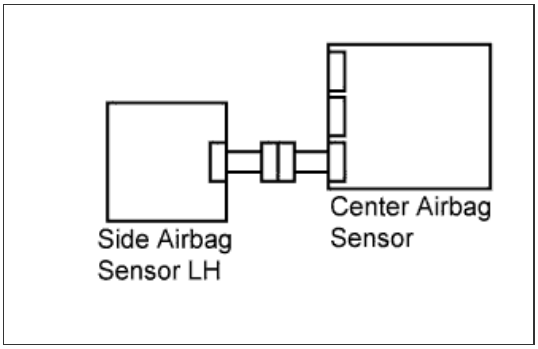
OK

4.CHECK SIDE AIRBAG SENSOR RH

a. Connect the connectors to the center airbag sensor.

b. Interchange the side airbag sensor LH with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.



d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

Result

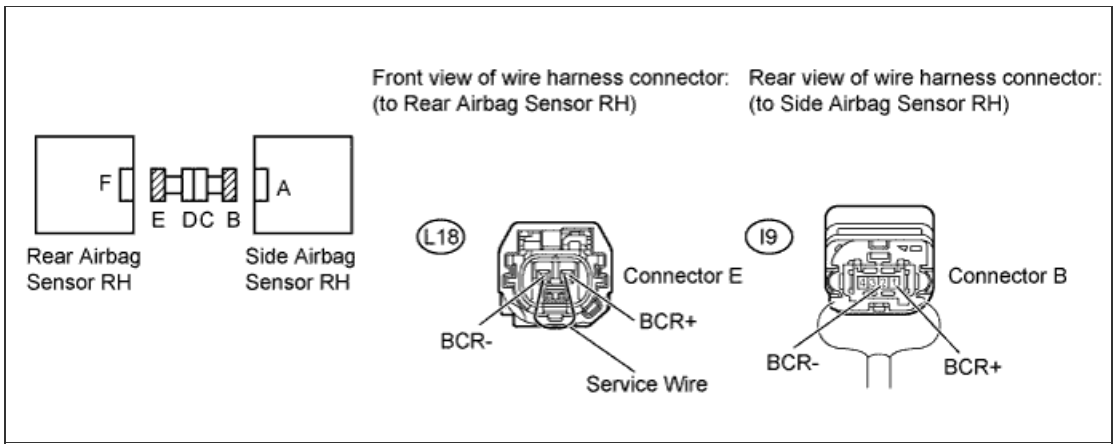
Result	Proceed to
DTC B1632, B1633, B1697 and B1698 are not output	A
DTC B1697 or B1698 is output	B
DTC B1632 or B1633 is output	C

HINT:

Codes other than DTC B1632, B1633, B1697 and B1698 may be output at this time, but they are not related to this check.

i. Turn the engine switch off.

j. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.



k. Return the side airbag sensor RH and LH to their original positions and connect the connectors to them.

A → USE SIMULATION METHOD TO CHECK (Click here)

B → REPLACE SIDE AIRBAG SENSOR RH (Click here)

C

5.CHECK REAR AIRBAG SENSOR RH CIRCUIT

a. Disconnect the connectors from the side airbag sensor RH and rear airbag sensor RH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	ngine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	ngine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. sing a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector .

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector .

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 7

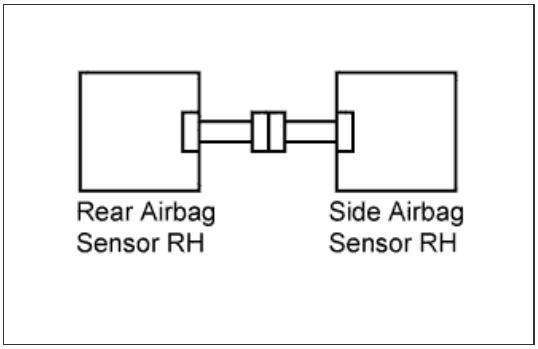
OK

6.CHECK REAR AIRBAG SENSOR RH

a. Connect the connectors to the center airbag sensor.

b. Temporarily replace the rear airbag sensor RH with a new one.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.



d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

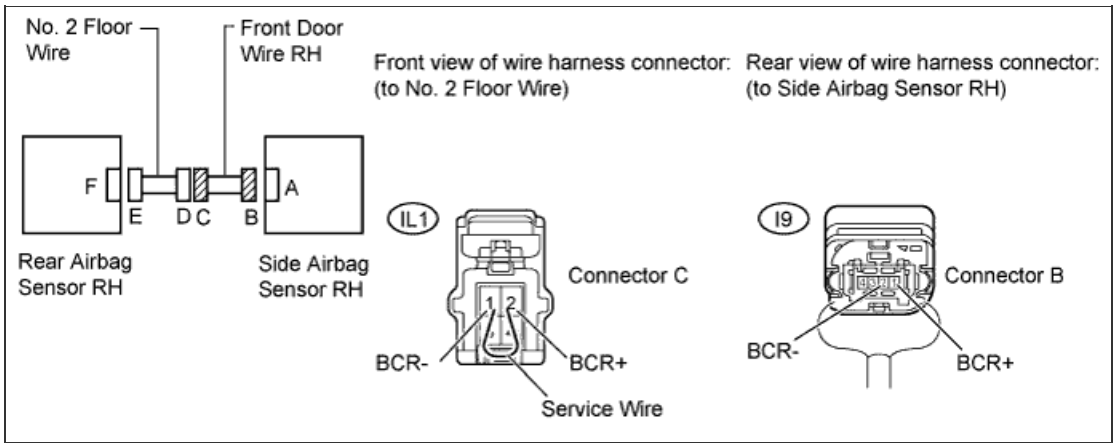
g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

OK:

DTC B1632 and B1633 is not output.

HINT:



Codes other than DTC B1632 and B1633 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

REPLACE REAR AIRBAG SENSOR RH (Click here)

7.CHECK FRONT DOOR WIRE RH (SIDE AIRBAG SENSOR RH - NO. 2 FLOOR WIRE)

a. Disconnect the front door wire RH connectors from the No. 2 floor wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	ngine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	ngine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. sing a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FRONT DOOR WIRE RH

OK

REPLACE NO. 2 FLOOR WIRE

8.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor, the side airbag sensor LH and rear airbag sensor LH.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

9.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor, side airbag sensor LH and rear airbag sensor LH.

b. Check that the connectors (on the center airbag sensor side, the rear airbag sensor LH side and side airbag sensor LH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

10.CHECK REAR AIRBAG SENSOR LH

a. Connect the connector to the center airbag sensor.

b. Temporarily replace the rear airbag sensor LH with a new one.

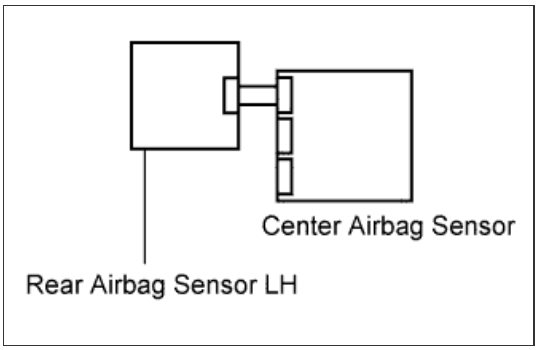
c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.



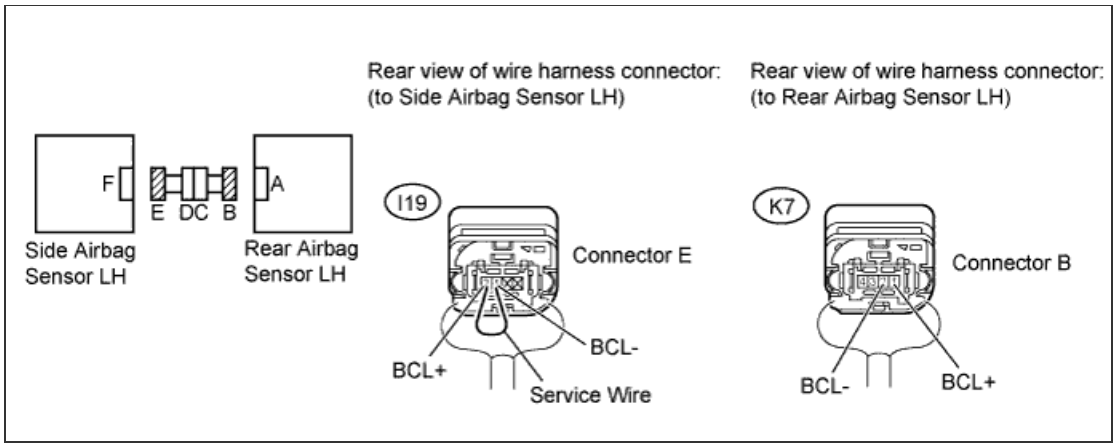
h. Check for DTCs (Click here).

OK:

DTC B1697 and B1698 are not output.

HINT:

Codes other than DTC B1697 and B1698 may be output at this time, but they are not related to this check.



NG → Go to step 11

OK

REPLACE REAR AIRBAG SENSOR LH (Click here)

11.CHECK SIDE AIRBAG SENSOR LH CIRCUIT

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connectors from the side airbag sensor LH and rear airbag sensor LH.

d. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

e. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified condition
1 (BCL+) - Body ground	ngine switch on (IG)	Below 1 V
2 (BCL-) - Body ground	ngine switch on (IG)	Below 1 V

f. Turn the engine switch off.

g. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

h. sing a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector .

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

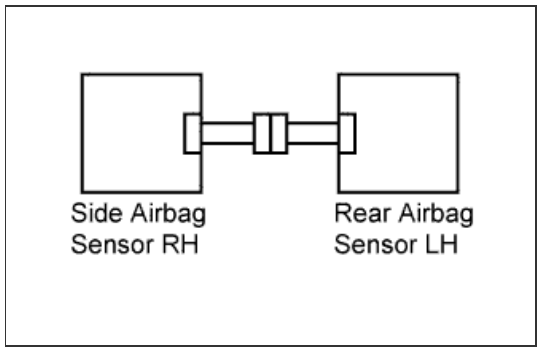
i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (BCL+) - 2 (BCL-)	Always	Below 1 Ω

j. Disconnect the service wire from connector .

k. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (BCL+) - Body ground	Always	1 MΩ or higher
2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → Go to step 13

OK

12.CHECK SIDE AIRBAG SENSOR LH

a. Connect the connectors to the rear airbag sensor LH.

b. Interchange the side airbag sensor LH with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1632, B1633, B1697 and B1698 are not output	A

DTC B1633/81 Rear Airbag Sensor Assembly RH Initialization Incomplete

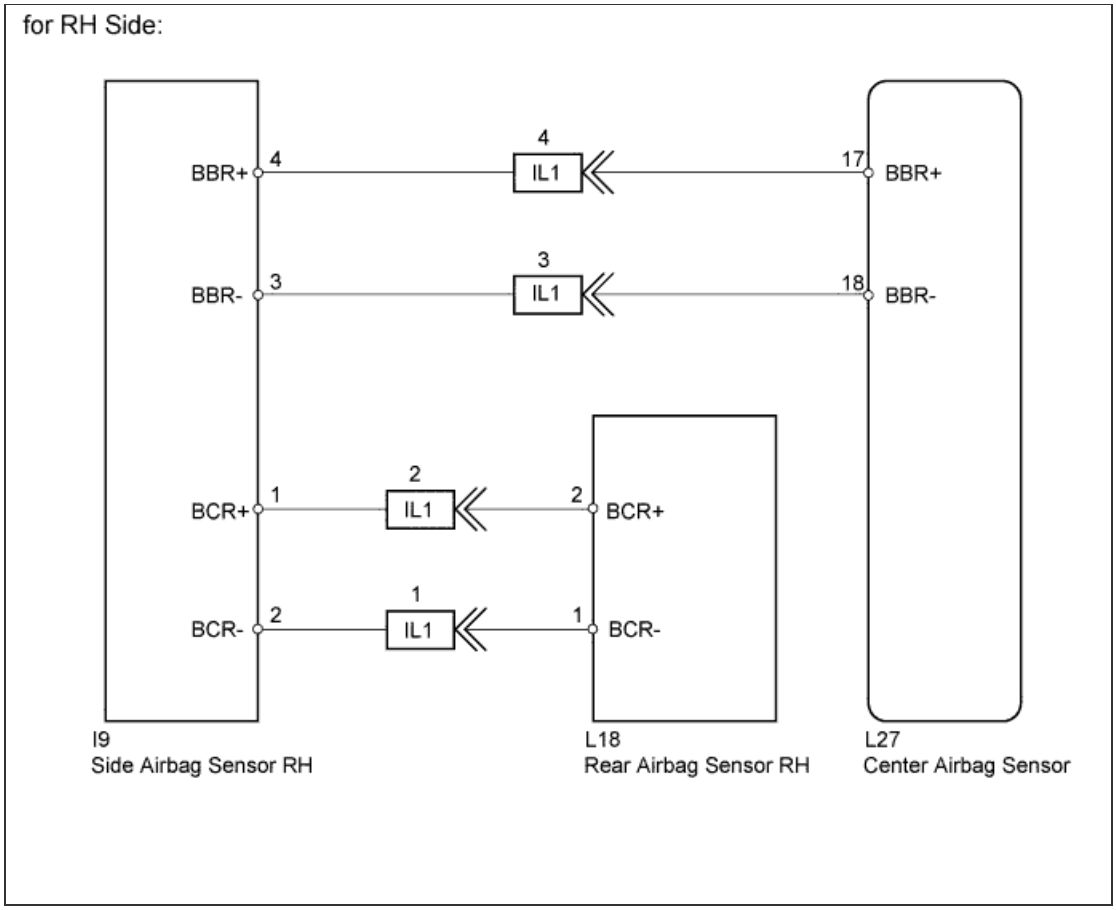
DTC B1697/82 Lost Communication with Door Side Airbag Sensor LH

DTC B1698/82 Door Side Airbag Sensor LH Initialization Incomplete

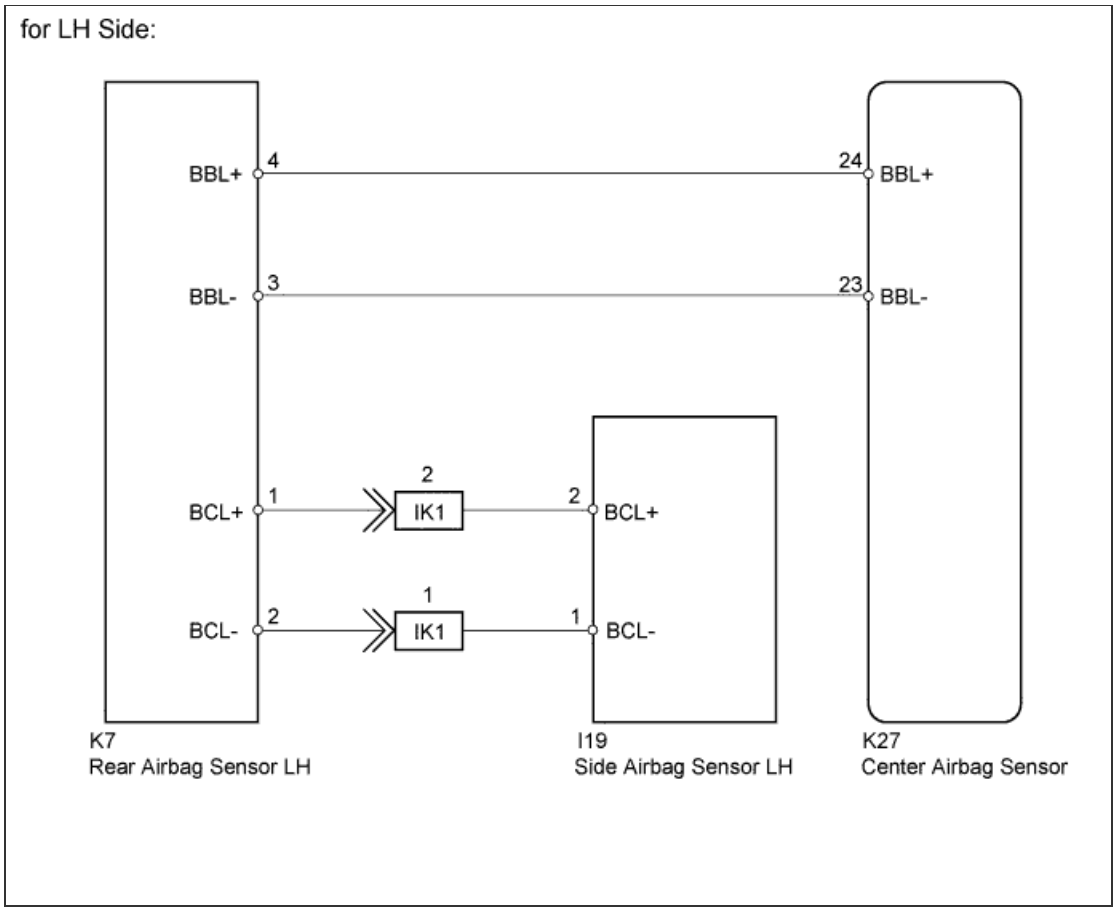
for Preparation Click here

DESCRIPTION

HINT:



"Door side airbag sensor LH" refer to the side airbag sensor LH.



- The circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH, rear seat side airbag LH or RH and curtain shield airbag LH or RH) is composed of the center airbag sensor, side airbag sensor LH or RH, and rear airbag sensor LH or RH.
  The side airbag sensor LH or RH and rear airbag sensor LH or RH detect impacts to the vehicle and send signals to the center airbag sensor to determine if the airbag should be deployed.
  DTC B1632/81 or B1697/82 is stored when a malfunction is detected in the circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH, rear seat side airbag LH or RH and curtain shield airbag LH or RH).

DTC Code	DTC Detection Condition	Trouble Area
B1632/81	hen one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A rear airbag sensor RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Front door wire RH • Side airbag sensor RH • Rear airbag sensor RH • Center airbag sensor assembly
B1633/81	hen one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A rear airbag sensor RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Front door wire RH • Side airbag sensor RH • Rear airbag sensor RH • Center airbag sensor assembly
B1697/82	hen one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH and curtain shield airbag LH) for 2 seconds. • A side airbag sensor LH malfunction.	• Floor wire • Front door wire LH • Side airbag sensor LH • Rear airbag sensor LH • Center airbag sensor assembly

	• A rear airbag sensor LH malfunction. • A center airbag sensor malfunction.	
B1698/82	hen one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH and curtain shield airbag LH) for 2 seconds. • A side airbag sensor LH malfunction. • A rear airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front door wire LH • Side airbag sensor LH • Rear airbag sensor LH • Center airbag sensor assembly

A	USE SIMULATION METHOD TO CHECK (Click here)
B	Go to step 8
C	

2.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor, the side airbag sensor RH and rear airbag sensor RH.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

3.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor, rear airbag sensor RH and side airbag sensor RH.

b. Check that the connectors (on the center airbag sensor side, the rear airbag sensor RH side and side airbag sensor RH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

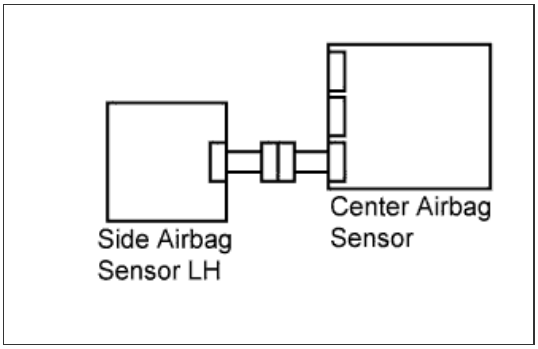
4.CHECK SIDE AIRBAG SENSOR RH

a. Connect the connectors to the center airbag sensor.

b. Interchange the side airbag sensor LH with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.



d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

Result

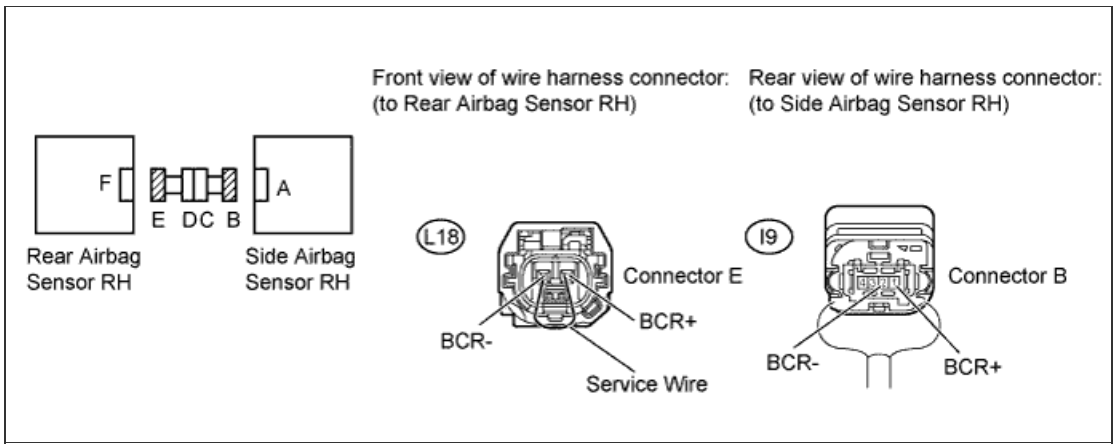
Result	Proceed to
DTC B1632, B1633, B1697 and B1698 are not output	A
DTC B1697 or B1698 is output	B
DTC B1632 or B1633 is output	C

HINT:

Codes other than DTC B1632, B1633, B1697 and B1698 may be output at this time, but they are not related to this check.

i. Turn the engine switch off.

j. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.



k. Return the side airbag sensor RH and LH to their original positions and connect the connectors to them.

A → USE SIMULATION METHOD TO CHECK (Click here)

B → REPLACE SIDE AIRBAG SENSOR RH (Click here)

C

5.CHECK REAR AIRBAG SENSOR RH CIRCUIT

a. Disconnect the connectors from the side airbag sensor RH and rear airbag sensor RH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	ngine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	ngine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. sing a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector .

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector .

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 7

OK

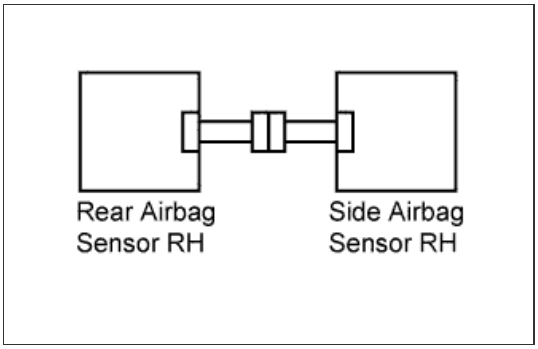
6.CHECK REAR AIRBAG SENSOR RH

a. Connect the connectors to the center airbag sensor.

b. Temporarily replace the rear airbag sensor RH with a new one.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.



d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

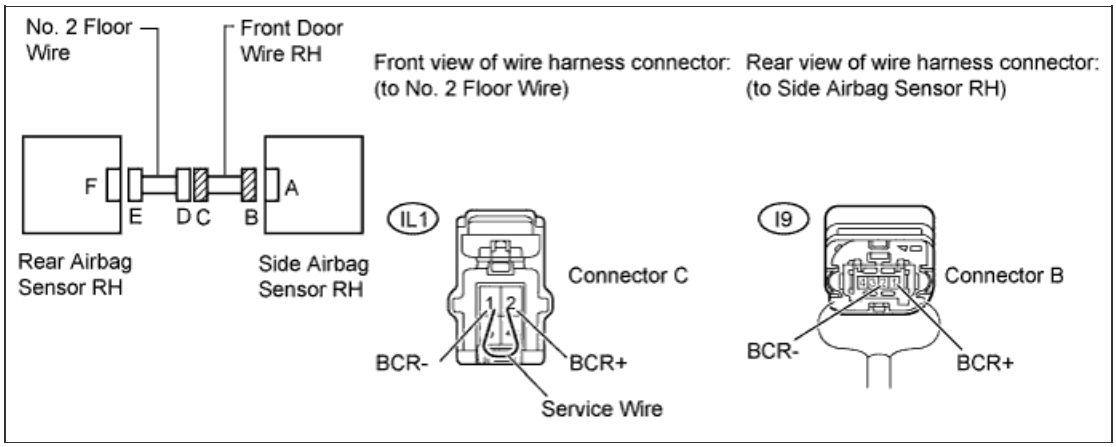
g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

OK:

DTC B1632 and B1633 is not output.

HINT:



Codes other than DTC B1632 and B1633 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

REPLACE REAR AIRBAG SENSOR RH (Click here)

7.CHECK FRONT DOOR WIRE RH (SIDE AIRBAG SENSOR RH - NO. 2 FLOOR WIRE)

a. Disconnect the front door wire RH connectors from the No. 2 floor wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	ngine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	ngine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. sing a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FRONT DOOR WIRE RH

OK

REPLACE NO. 2 FLOOR WIRE

8.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor, the side airbag sensor LH and rear airbag sensor LH.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

9.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor, side airbag sensor LH and rear airbag sensor LH.

b. Check that the connectors (on the center airbag sensor side, the rear airbag sensor LH side and side airbag sensor LH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

10.CHECK REAR AIRBAG SENSOR LH

a. Connect the connector to the center airbag sensor.

b. Temporarily replace the rear airbag sensor LH with a new one.

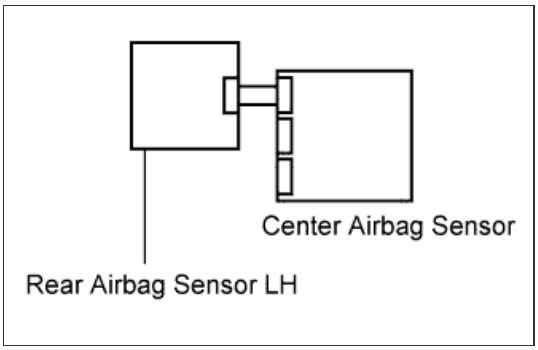
c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.



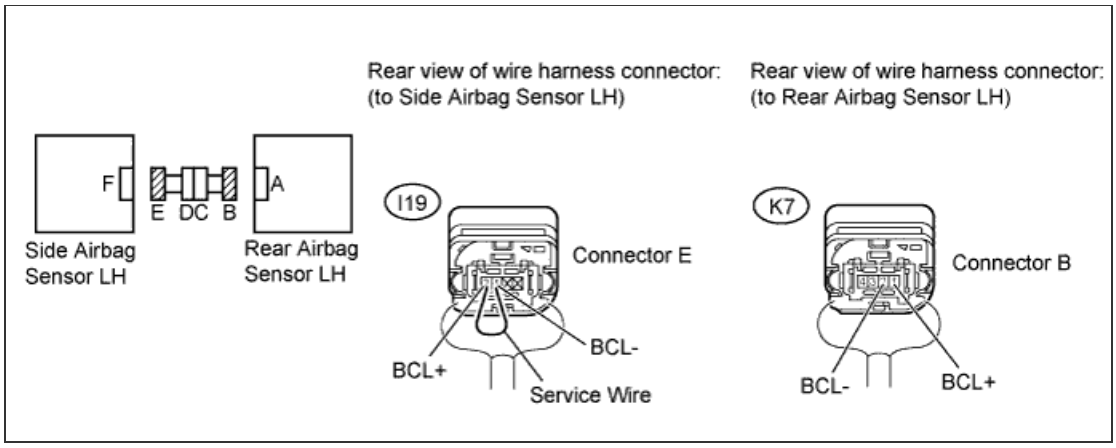
h. Check for DTCs (Click here).

OK:

DTC B1697 and B1698 are not output.

HINT:

Codes other than DTC B1697 and B1698 may be output at this time, but they are not related to this check.



NG → Go to step 11

OK

REPLACE REAR AIRBAG SENSOR LH (Click here)

11.CHECK SIDE AIRBAG SENSOR LH CIRCUIT

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connectors from the side airbag sensor LH and rear airbag sensor LH.

d. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

e. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified condition
1 (BCL+) - Body ground	ngine switch on (IG)	Below 1 V
2 (BCL-) - Body ground	ngine switch on (IG)	Below 1 V

f. Turn the engine switch off.

g. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

h. sing a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector .

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (BCL+) - 2 (BCL-)	Always	Below 1 Ω

j. Disconnect the service wire from connector .

k. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (BCL+) - Body ground	Always	1 MΩ or higher
2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → Go to step 13

OK

12.CHECK SIDE AIRBAG SENSOR LH

a. Connect the connectors to the rear airbag sensor LH.

b. Interchange the side airbag sensor LH with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

Tester Connection	Condition	Specified Condition
K6-1 (ICL+) - K6-2 (ICL-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K6-1 (ICL+) - K6-2 (ICL-)	Always	1 MΩ or higher
K6-1 (ICL+) - Body ground	Always	1 MΩ or higher
K6-2 (ICL-) - Body	Always	1 MΩ or higher

ground		

NG → REPLACE FLOOR WIRE

OK

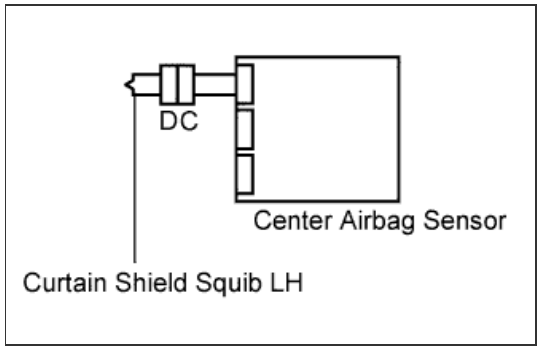
4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the curtain shield airbag LH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.



c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1835, B1836, B1837 or B1838 is not output.

HINT:

Codes other than DTC B1835, B1836, B1837 and B1838 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (**Click here**)

OK

DTC B1632/81 Lost Communication with Rear Airbag Sensor RH

DTC B1633/81 Rear Airbag Sensor Assembly RH Initialization Incomplete

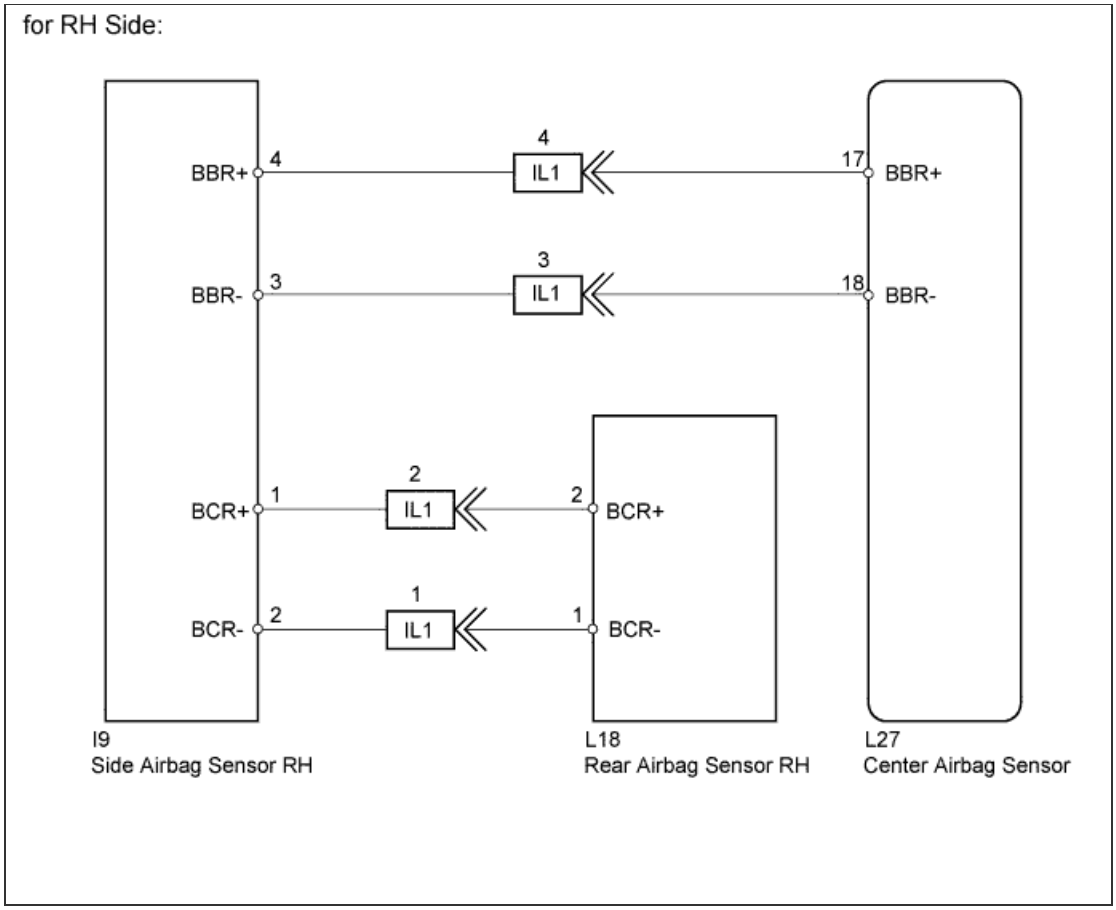
DTC B1697/82 Lost Communication with Door Side Airbag Sensor LH

DTC B1698/82 Door Side Airbag Sensor LH Initialization Incomplete

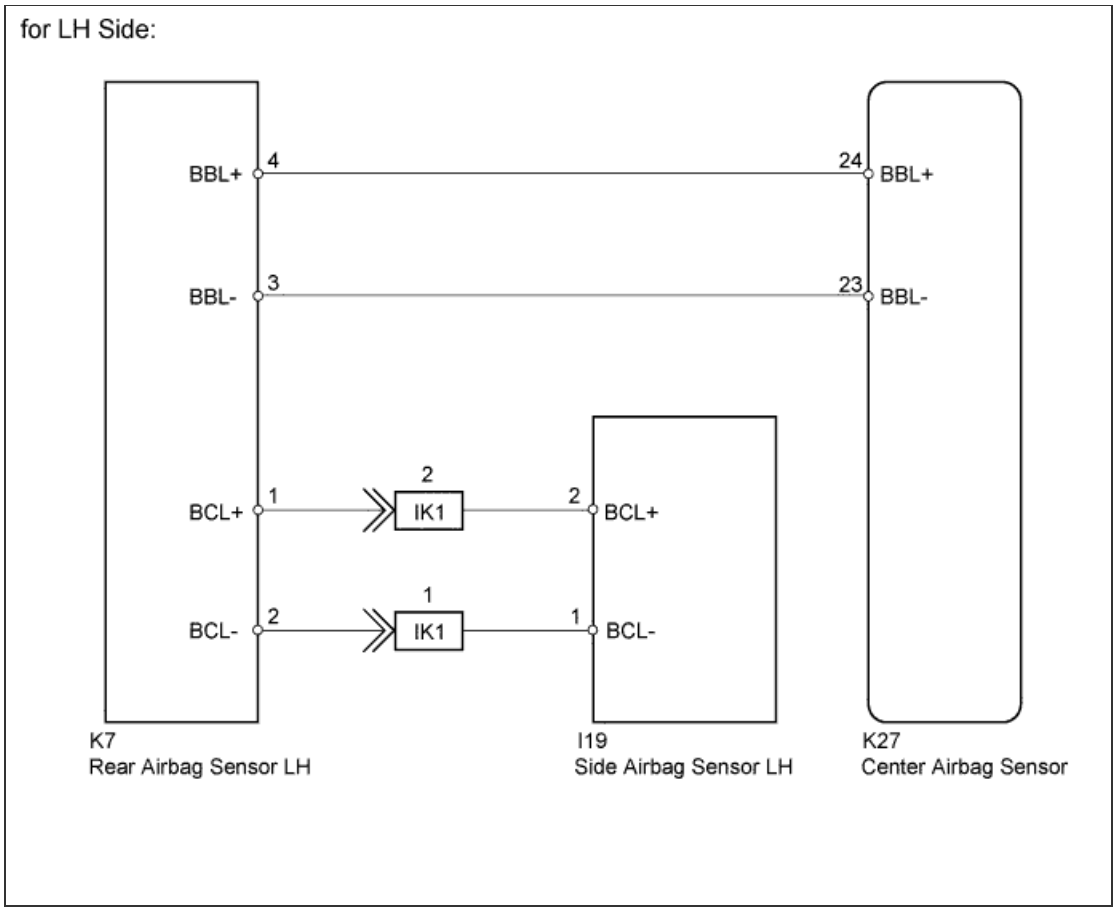
for Preparation Click here

DESCRIPTION

HINT:



"Door side airbag sensor LH" refer to the side airbag sensor LH.



- The circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH, rear seat side airbag LH or RH and curtain shield airbag LH or RH) is composed of the center airbag sensor, side airbag sensor LH or RH, and rear airbag sensor LH or RH.
  The side airbag sensor LH or RH and rear airbag sensor LH or RH detect impacts to the vehicle and send signals to the center airbag sensor to determine if the airbag should be deployed.
  DTC B1632/81 or B1697/82 is stored when a malfunction is detected in the circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH, rear seat side airbag LH or RH and curtain shield airbag LH or RH).

DTC Code	DTC Detection Condition	Trouble Area
B1632/81	hen one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A rear airbag sensor RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Front door wire RH • Side airbag sensor RH • Rear airbag sensor RH • Center airbag sensor assembly
B1633/81	hen one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A rear airbag sensor RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Front door wire RH • Side airbag sensor RH • Rear airbag sensor RH • Center airbag sensor assembly
B1697/82	hen one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH and curtain shield airbag LH) for 2 seconds. • A side airbag sensor LH malfunction.	• Floor wire • Front door wire LH • Side airbag sensor LH • Rear airbag sensor LH • Center airbag sensor assembly

	• A rear airbag sensor LH malfunction. • A center airbag sensor malfunction.	
B1698/82	hen one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH and curtain shield airbag LH) for 2 seconds. • A side airbag sensor LH malfunction. • A rear airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front door wire LH • Side airbag sensor LH • Rear airbag sensor LH • Center airbag sensor assembly

INSPECTION PROCEDURE

NOTICE:

hen disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK FOR DTC

a. Turn the engine switch on (IG), and wait for at least 60 seconds.

b. Clear the DTCs stored in the memory (Click here).

c. Turn the engine switch off.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1632, B1633, B1697 and B1698 are not output	A
DTC B1697 or B1698 is output	B
DTC B1632 or B1633 is output	C

HINT:

Codes other than DTC B1632, B1633, B1697 and B1698 may be output at this time, but they are not related to this check.

A	USE SIMULATION METHOD TO CHECK (Click here)
B	Go to step 8
C	

2.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor, the side airbag sensor RH and rear airbag sensor RH.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

3.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor, rear airbag sensor RH and side airbag sensor RH.

b. Check that the connectors (on the center airbag sensor side, the rear airbag sensor RH side and side airbag sensor RH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

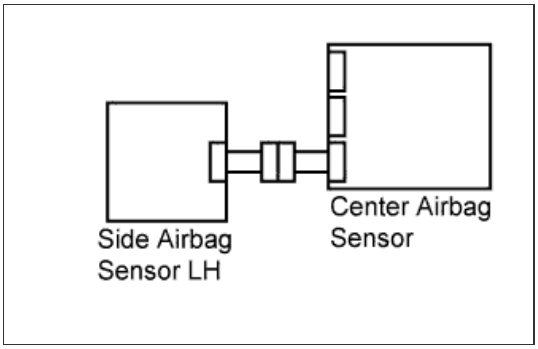
4.CHECK SIDE AIRBAG SENSOR RH

a. Connect the connectors to the center airbag sensor.

b. Interchange the side airbag sensor LH with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.



d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

Result

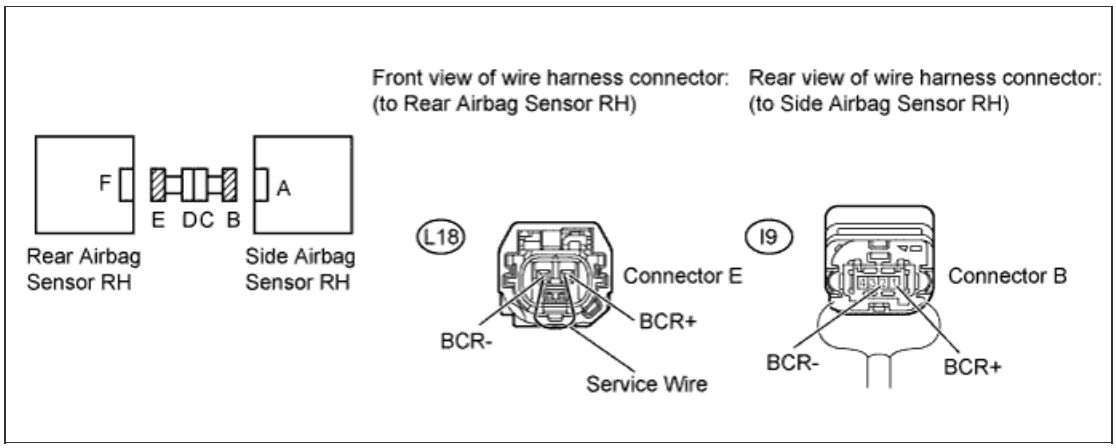
Result	Proceed to
DTC B1632, B1633, B1697 and B1698 are not output	A
DTC B1697 or B1698 is output	B
DTC B1632 or B1633 is output	C

HINT:

Codes other than DTC B1632, B1633, B1697 and B1698 may be output at this time, but they are not related to this check.

i. Turn the engine switch off.

j. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.



k. Return the side airbag sensor RH and LH to their original positions and connect the connectors to them.

A → USE SIMULATION METHOD TO CHECK (Click here)

B → REPLACE SIDE AIRBAG SENSOR RH (Click here)

C

5.CHECK REAR AIRBAG SENSOR RH CIRCUIT

a. Disconnect the connectors from the side airbag sensor RH and rear airbag sensor RH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	ngine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	ngine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. sing a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector .

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector .

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 7

OK

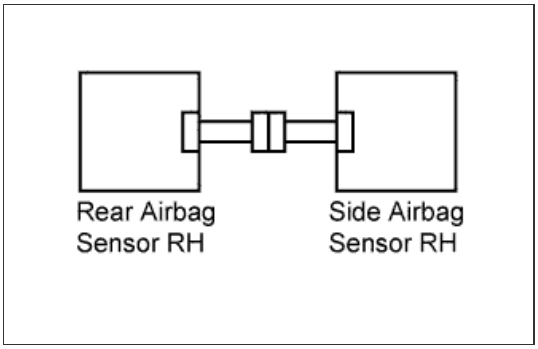
6.CHECK REAR AIRBAG SENSOR RH

a. Connect the connectors to the center airbag sensor.

b. Temporarily replace the rear airbag sensor RH with a new one.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.



d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

OK:

DTC B1632 and B1633 is not output.

HINT:

Codes other than DTC B1632 and B1633 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

REPLACE REAR AIRBAG SENSOR RH (Click here)

7.CHECK FRONT DOOR WIRE RH (SIDE AIRBAG SENSOR RH - NO. 2 FLOOR WIRE)

a. Disconnect the front door wire RH connectors from the No. 2 floor wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	ngine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	ngine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. sing a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FRONT DOOR WIRE RH

OK

REPLACE NO. 2 FLOOR WIRE

8.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor, the side airbag sensor LH and rear airbag sensor LH.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

9.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor, side airbag sensor LH and rear airbag sensor LH.

b. Check that the connectors (on the center airbag sensor side, the rear airbag sensor LH side and side airbag sensor LH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

10.CHECK REAR AIRBAG SENSOR LH

a. Connect the connector to the center airbag sensor.

b. Temporarily replace the rear airbag sensor LH with a new one.

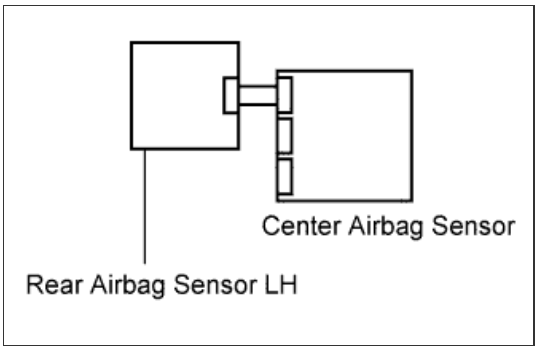
c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.



h. Check for DTCs (Click here).

OK:

DTC B1697 and B1698 are not output.

HINT:

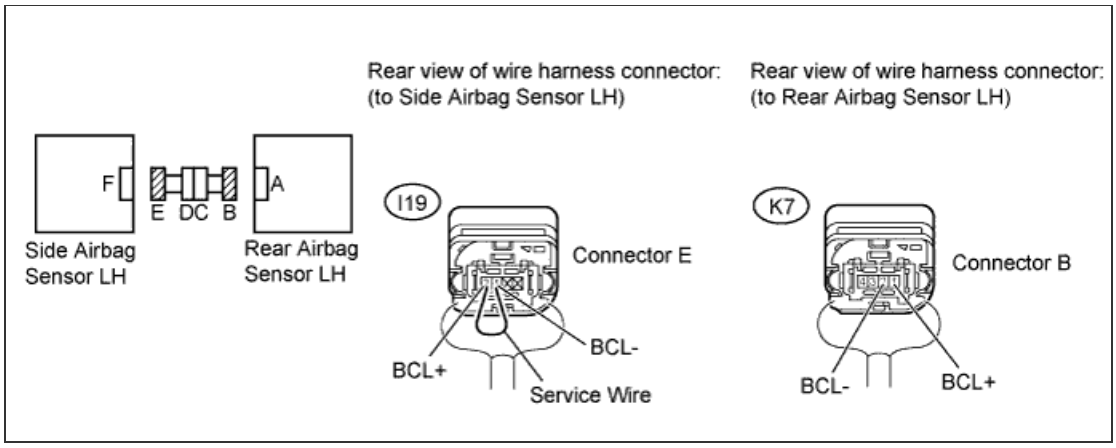
Codes other than DTC B1697 and B1698 may be output at this time, but they are not related to this check.



NG → Go to step 11

OK

REPLACE REAR AIRBAG SENSOR LH (Click here)

11.CHECK SIDE AIRBAG SENSOR LH CIRCUIT

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connectors from the side airbag sensor LH and rear airbag sensor LH.

d. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

e. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified condition
1 (BCL+) - Body ground	ngine switch on (IG)	Below 1 V
2 (BCL-) - Body ground	ngine switch on (IG)	Below 1 V

f. Turn the engine switch off.

g. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

h. sing a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector .

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (BCL+) - 2 (BCL-)	Always	Below 1 Ω

j. Disconnect the service wire from connector .

k. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (BCL+) - Body ground	Always	1 MΩ or higher
2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → Go to step 13

OK

12.CHECK SIDE AIRBAG SENSOR LH

a. Connect the connectors to the rear airbag sensor LH.

b. Interchange the side airbag sensor LH with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1632, B1633, B1697 and B1698 are not output	A

REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

13.CHECK FLOOR WIRE (SIDE AIRBAG SENSOR LH - FRONT DOOR WIRE LH)

a. Disconnect the floor wire connector from the front door wire LH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
1 (BCL+) - Body ground	ngine switch on (IG)	Below 1 V
2 (BCL-) - Body ground	ngine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. sing a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (BCL+) - 2 (BCL-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (BCL+) - Body ground	Always	1 MΩ or higher
2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK

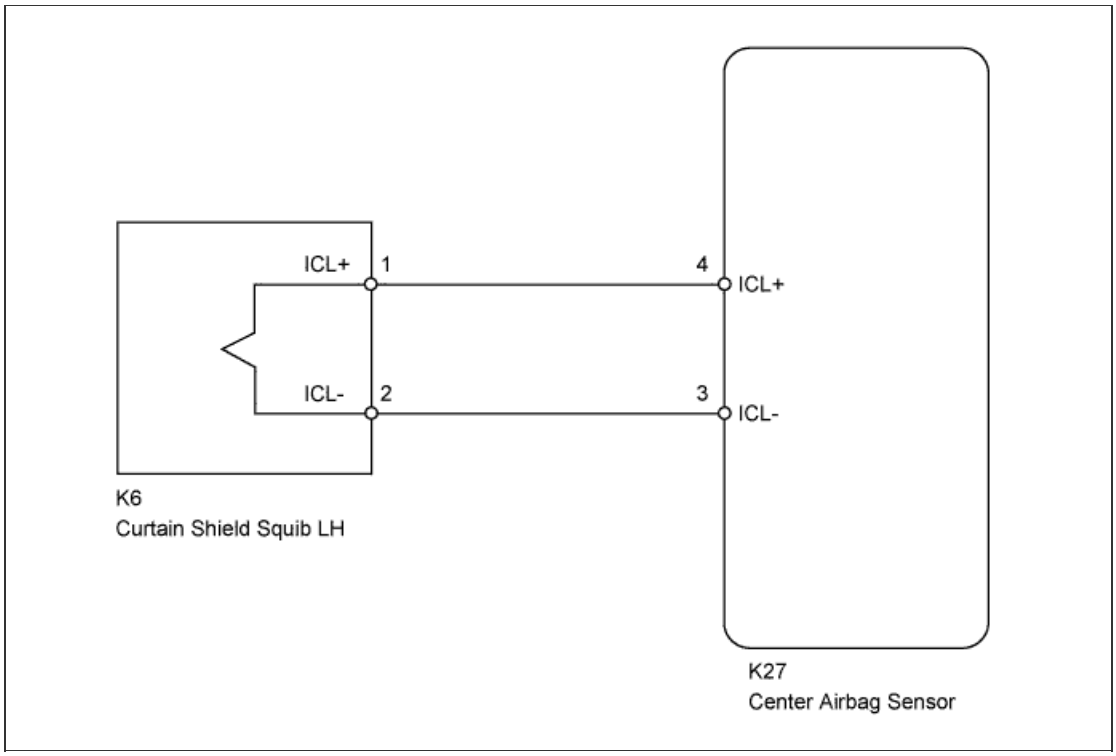
REPLACE FRONT DOOR WIRE LH

DTC B1835/58 Short in Curtain Shield Squib LH Circuit

DTC B1836/58 Open in Curtain Shield Squib LH Circuit

DTC B1837/58 Short to GND in Curtain Shield Squib LH Circuit

DTC B1838/58 Short to B+ in Curtain Shield Squib LH Circuit



for Preparation Click here

DESCRIPTION

The curtain shield squib LH circuit consists of the center airbag sensor and the curtain shield airbag LH.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the curtain shield squib LH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1835/58	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the curtain shield squib LH circuit during the primary check. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH) • Center airbag sensor assembly
B1836/58	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the curtain shield squib LH circuit for 2 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH) • Center airbag sensor assembly
B1837/58	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the curtain shield squib LH circuit for 0.5 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH) • Center airbag sensor assembly
B1838/58	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the curtain shield squib LH circuit for 0.5 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK CURTAIN SHIELD AIRBAG LH (CURTAIN SHIELD SQUIB LH)

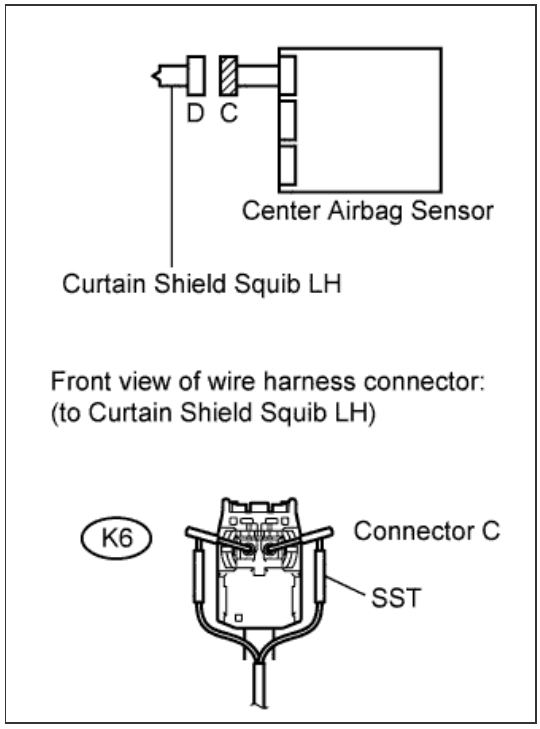
a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connectors from the curtain shield airbag LH.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:



Never connect the tester to the curtain shield airbag LH (curtain shield squib LH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1835, B1836, B1837 or B1838 is not output.

HINT:

Codes other than DTC B1835, B1836, B1837 and B1838 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK

REPLACE CURTAIN SHIELD AIRBAG ASSEMBLY LH (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the floor wire connectors (on the curtain shield airbag LH side) are not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE FLOOR WIRE

OK

3.CHECK FLOOR WIRE (CURTAIN SHIELD AIRBAG LH CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K6-1 (ICL+) - Body ground	Engine switch on (IG)	Below 1 V
K6-2 (ICL-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K6-1 (ICL+) - K6-2 (ICL-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

I9-2 (BCR-) - Body ground	ngine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. sing a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector .

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector .

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 7

OK

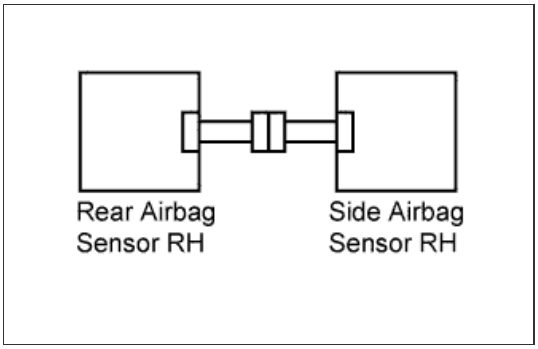
6.CHECK REAR AIRBAG SENSOR RH

a. Connect the connectors to the center airbag sensor.

b. Temporarily replace the rear airbag sensor RH with a new one.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.



d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

OK:

DTC B1632 and B1633 is not output.

HINT:

Codes other than DTC B1632 and B1633 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

REPLACE REAR AIRBAG SENSOR RH (Click here)

7.CHECK FRONT DOOR WIRE RH (SIDE AIRBAG SENSOR RH - NO. 2 FLOOR WIRE)

a. Disconnect the front door wire RH connectors from the No. 2 floor wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	ngine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	ngine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. sing a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FRONT DOOR WIRE RH

OK

REPLACE NO. 2 FLOOR WIRE

8.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor, the side airbag sensor LH and rear airbag sensor LH.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

9.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor, side airbag sensor LH and rear airbag sensor LH.

b. Check that the connectors (on the center airbag sensor side, the rear airbag sensor LH side and side airbag sensor LH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

10.CHECK REAR AIRBAG SENSOR LH

a. Connect the connector to the center airbag sensor.

b. Temporarily replace the rear airbag sensor LH with a new one.

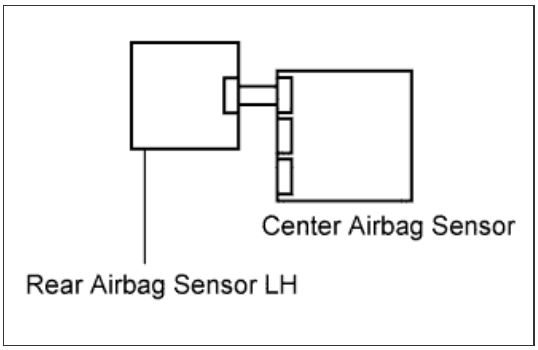
c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.



h. Check for DTCs (Click here).

OK:

DTC B1697 and B1698 are not output.

HINT:

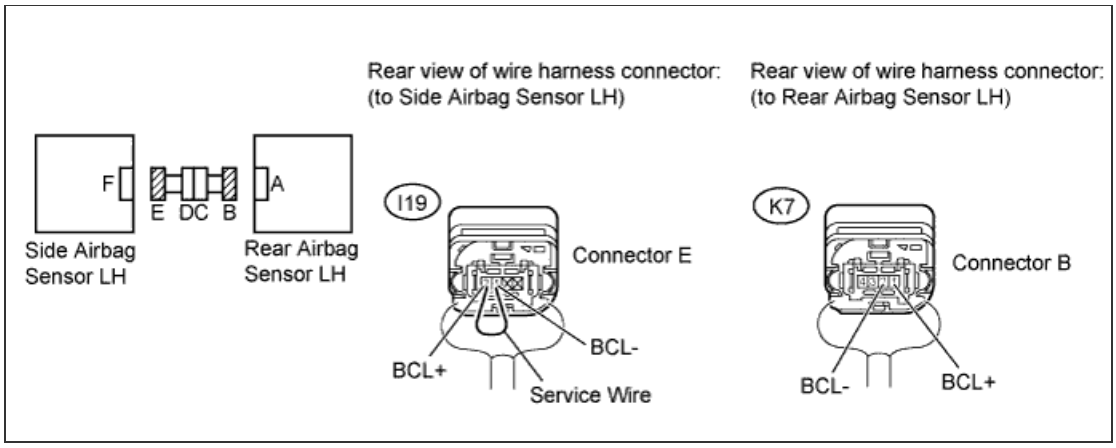
Codes other than DTC B1697 and B1698 may be output at this time, but they are not related to this check.



NG → Go to step 11

OK

REPLACE REAR AIRBAG SENSOR LH (Click here)

11.CHECK SIDE AIRBAG SENSOR LH CIRCUIT

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connectors from the side airbag sensor LH and rear airbag sensor LH.

d. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

e. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified condition
1 (BCL+) - Body ground	ngine switch on (IG)	Below 1 V
2 (BCL-) - Body ground	ngine switch on (IG)	Below 1 V

f. Turn the engine switch off.

g. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

h. sing a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector .

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (BCL+) - 2 (BCL-)	Always	Below 1 Ω

j. Disconnect the service wire from connector .

k. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (BCL+) - Body ground	Always	1 MΩ or higher
2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → Go to step 13

OK

12.CHECK SIDE AIRBAG SENSOR LH

a. Connect the connectors to the rear airbag sensor LH.

b. Interchange the side airbag sensor LH with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

Result

Result	Proceed to

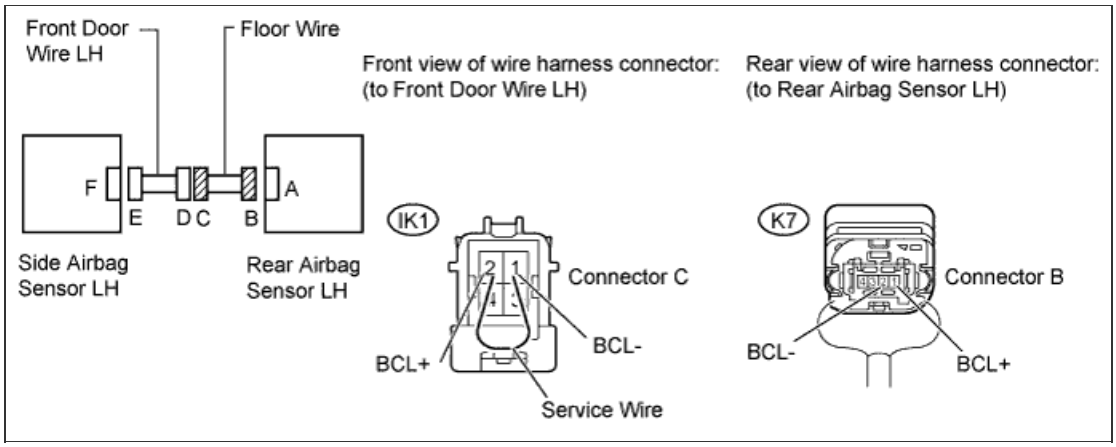
i. Turn the engine switch off.

j. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

k. Return the side airbag sensor RH and LH to their original positions and connect the connectors to them.



A → USE SIMULATION METHOD TO CHECK (Click here)

B → REPLACE SIDE AIRBAG SENSOR LH (Click here)

C

REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

13.CHECK FLOOR WIRE (SIDE AIRBAG SENSOR LH - FRONT DOOR WIRE LH)

a. Disconnect the floor wire connector from the front door wire LH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
1 (BCL+) - Body ground	ngine switch on (IG)	Below 1 V
2 (BCL-) - Body ground	ngine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. sing a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (BCL+) - 2 (BCL-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (BCL+) - Body ground	Always	1 MΩ or higher
2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK

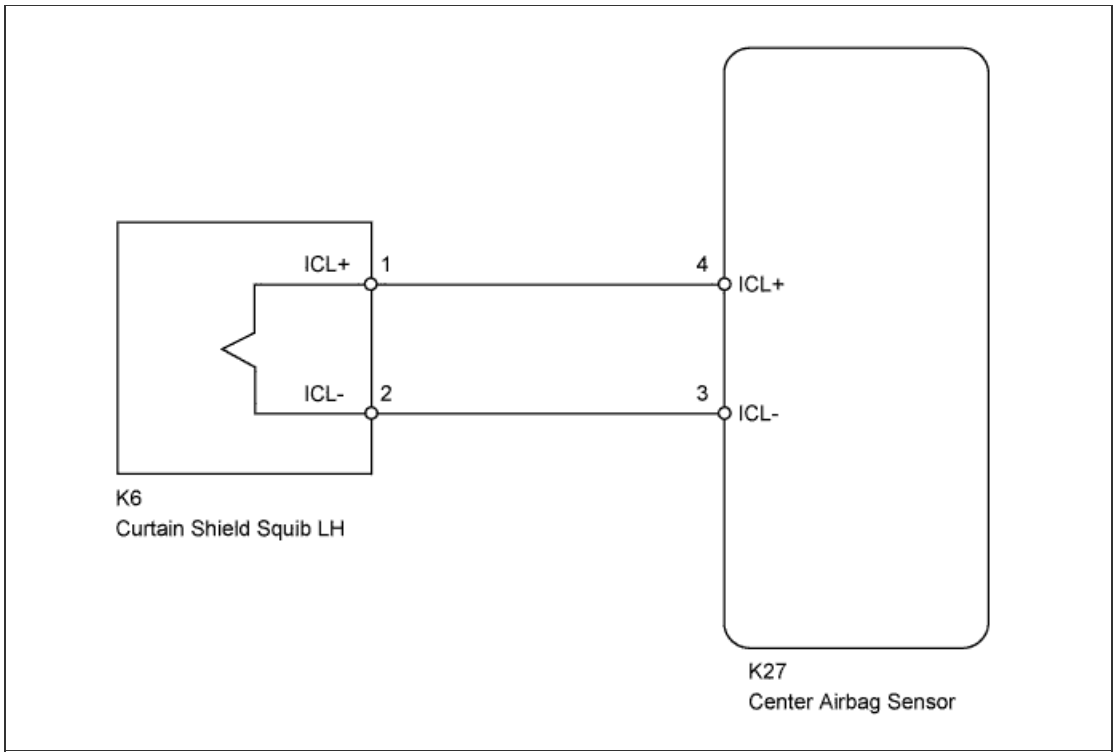
REPLACE FRONT DOOR WIRE LH

DTC B1835/58 Short in Curtain Shield Squib LH Circuit

DTC B1836/58 Open in Curtain Shield Squib LH Circuit

DTC B1837/58 Short to GND in Curtain Shield Squib LH Circuit

DTC B1838/58 Short to B+ in Curtain Shield Squib LH Circuit



for Preparation Click here

DESCRIPTION

The curtain shield squib LH circuit consists of the center airbag sensor and the curtain shield airbag LH.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the curtain shield squib LH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1835/58	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the curtain shield squib LH circuit during the primary check. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH) • Center airbag sensor assembly
B1836/58	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the curtain shield squib LH circuit for 2 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH) • Center airbag sensor assembly
B1837/58	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the curtain shield squib LH circuit for 0.5 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH) • Center airbag sensor assembly
B1838/58	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the curtain shield squib LH circuit for 0.5 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK CURTAIN SHIELD AIRBAG LH (CURTAIN SHIELD SQUIB LH)

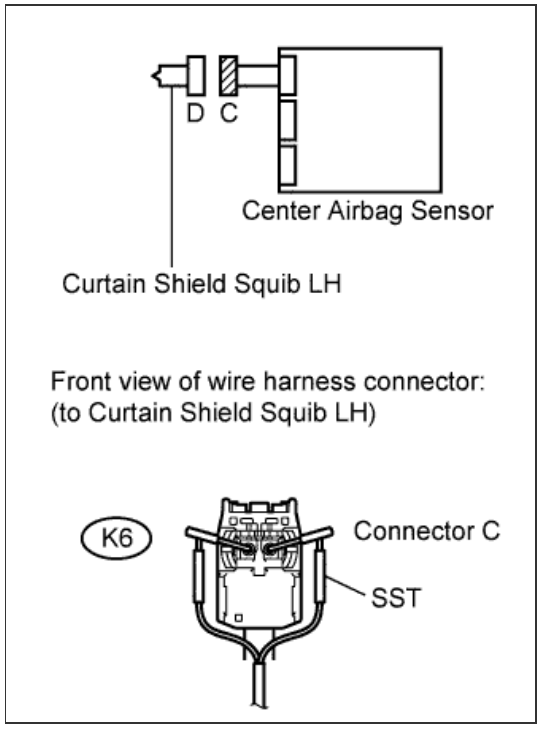
a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connectors from the curtain shield airbag LH.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:



Never connect the tester to the curtain shield airbag LH (curtain shield squib LH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1835, B1836, B1837 or B1838 is not output.

HINT:

Codes other than DTC B1835, B1836, B1837 and B1838 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK

REPLACE CURTAIN SHIELD AIRBAG ASSEMBLY LH (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the floor wire connectors (on the curtain shield airbag LH side) are not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE FLOOR WIRE

OK

3.CHECK FLOOR WIRE (CURTAIN SHIELD AIRBAG LH CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K6-1 (ICL+) - Body ground	Engine switch on (IG)	Below 1 V
K6-2 (ICL-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K6-1 (ICL+) - K6-2 (ICL-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K6-1 (ICL+) - K6-2 (ICL-)	Always	1 MΩ or higher
K6-1 (ICL+) - Body ground	Always	1 MΩ or higher
K6-2 (ICL-) - Body	Always	1 MΩ or higher

ground		

NG → REPLACE FLOOR WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the curtain shield airbag LH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1835, B1836, B1837 or B1838 is not output.

HINT:

Codes other than DTC B1835, B1836, B1837 and B1838 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (**Click here**)

OK

USE SIMULATION METHOD TO CHECK (**Click here**)

DTC B1632/81 Lost Communication with Rear Airbag Sensor RH

DTC B1633/81 Rear Airbag Sensor Assembly RH Initialization Incomplete

DTC B1697/82 Lost Communication with Door Side Airbag Sensor LH

DTC B1698/82 Door Side Airbag Sensor LH Initialization Incomplete

for Preparation Click here

DESCRIPTION

HINT:

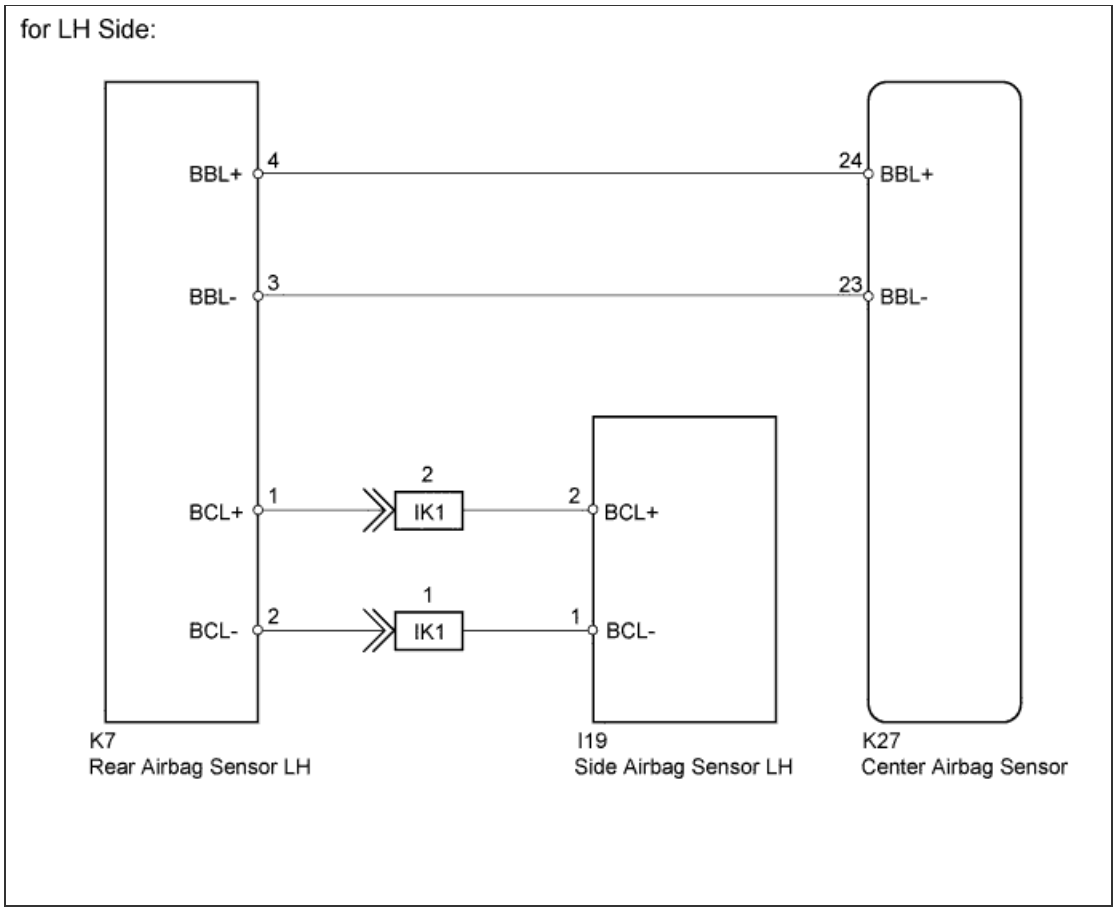
"Door side airbag sensor LH" refer to the side airbag sensor LH.



- The circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH, rear seat side airbag LH or RH and curtain shield airbag LH or RH) is composed of the center airbag sensor, side airbag sensor LH or RH, and rear airbag sensor LH or RH.
  The side airbag sensor LH or RH and rear airbag sensor LH or RH detect impacts to the vehicle and send signals to the center airbag sensor to determine if the airbag should be deployed.
  DTC B1632/81 or B1697/82 is stored when a malfunction is detected in the circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH, rear seat side airbag LH or RH and curtain shield airbag LH or RH).

DTC Code	DTC Detection Condition	Trouble Area
B1632/81	hen one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A rear airbag sensor RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Front door wire RH • Side airbag sensor RH • Rear airbag sensor RH • Center airbag sensor assembly
B1633/81	hen one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A rear airbag sensor RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Front door wire RH • Side airbag sensor RH • Rear airbag sensor RH • Center airbag sensor assembly
B1697/82	hen one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH and curtain shield airbag LH) for 2 seconds. • A side airbag sensor LH malfunction.	• Floor wire • Front door wire LH • Side airbag sensor LH • Rear airbag sensor LH • Center airbag sensor assembly

	• A rear airbag sensor LH malfunction. • A center airbag sensor malfunction.	
B1698/82	hen one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH and curtain shield airbag LH) for 2 seconds. • A side airbag sensor LH malfunction. • A rear airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front door wire LH • Side airbag sensor LH • Rear airbag sensor LH • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

hen disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK FOR DTC

a. Turn the engine switch on (IG), and wait for at least 60 seconds.

b. Clear the DTCs stored in the memory (Click here).

c. Turn the engine switch off.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Check for DTCs (Click here).

Result	Proceed to
DTC B1632, B1633, B1697 and B1698 are not output	A
DTC B1697 or B1698 is output	B
DTC B1632 or B1633 is output	C

HINT:

Codes other than DTC B1632, B1633, B1697 and B1698 may be output at this time, but they are not related to this check.

A	USE SIMULATION METHOD TO CHECK (Click here)
B	Go to step 8
C	

2.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor, the side airbag sensor RH and rear airbag sensor RH.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

3.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor, rear airbag sensor RH and side airbag sensor RH.

b. Check that the connectors (on the center airbag sensor side, the rear airbag sensor RH side and side airbag sensor RH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

4.CHECK SIDE AIRBAG SENSOR RH

a. Connect the connectors to the center airbag sensor.

b. Interchange the side airbag sensor LH with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1632, B1633, B1697 and B1698 are not output	A
DTC B1697 or B1698 is output	B
DTC B1632 or B1633 is output	C

HINT:

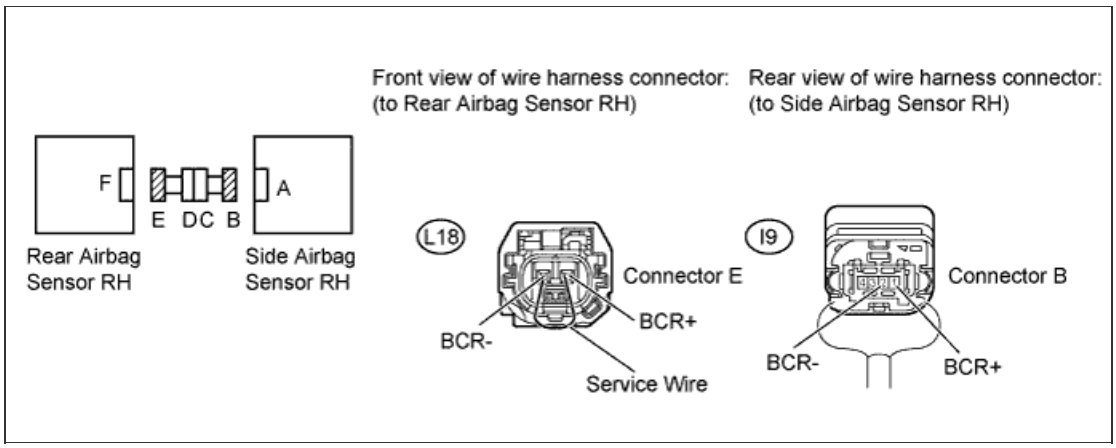
Codes other than DTC B1632, B1633, B1697 and B1698 may be output at this time, but they are not related to this check.

i. Turn the engine switch off.

j. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.



k. Return the side airbag sensor RH and LH to their original positions and connect the connectors to them.

A → USE SIMULATION METHOD TO CHECK (Click here)

B → REPLACE SIDE AIRBAG SENSOR RH (Click here)

C

5.CHECK REAR AIRBAG SENSOR RH CIRCUIT

a. Disconnect the connectors from the side airbag sensor RH and rear airbag sensor RH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	ngine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	ngine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. sing a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector .

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector .

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 7

OK

6.CHECK REAR AIRBAG SENSOR RH

a. Connect the connectors to the center airbag sensor.

b. Temporarily replace the rear airbag sensor RH with a new one.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

OK:

DTC B1632 and B1633 is not output.

HINT:

Codes other than DTC B1632 and B1633 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

REPLACE REAR AIRBAG SENSOR RH (Click here)

7.CHECK FRONT DOOR WIRE RH (SIDE AIRBAG SENSOR RH - NO. 2 FLOOR WIRE)

a. Disconnect the front door wire RH connectors from the No. 2 floor wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	ngine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	ngine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. sing a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FRONT DOOR WIRE RH

OK

REPLACE NO. 2 FLOOR WIRE

8.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor, the side airbag sensor LH and rear airbag sensor LH.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

9.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor, side airbag sensor LH and rear airbag sensor LH.

b. Check that the connectors (on the center airbag sensor side, the rear airbag sensor LH side and side airbag sensor LH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

10.CHECK REAR AIRBAG SENSOR LH

a. Connect the connector to the center airbag sensor.

b. Temporarily replace the rear airbag sensor LH with a new one.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

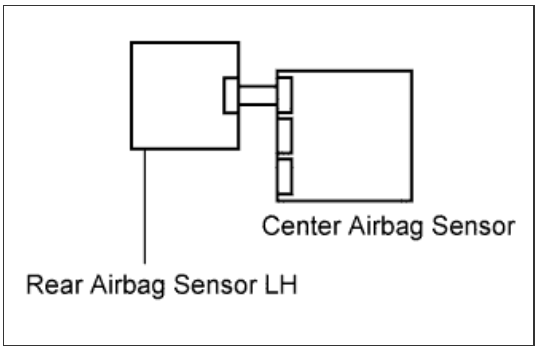
g. Turn the engine switch on (IG), and wait for at least 60 seconds.



h. Check for DTCs (Click here).

OK:

DTC B1697 and B1698 are not output.

HINT:

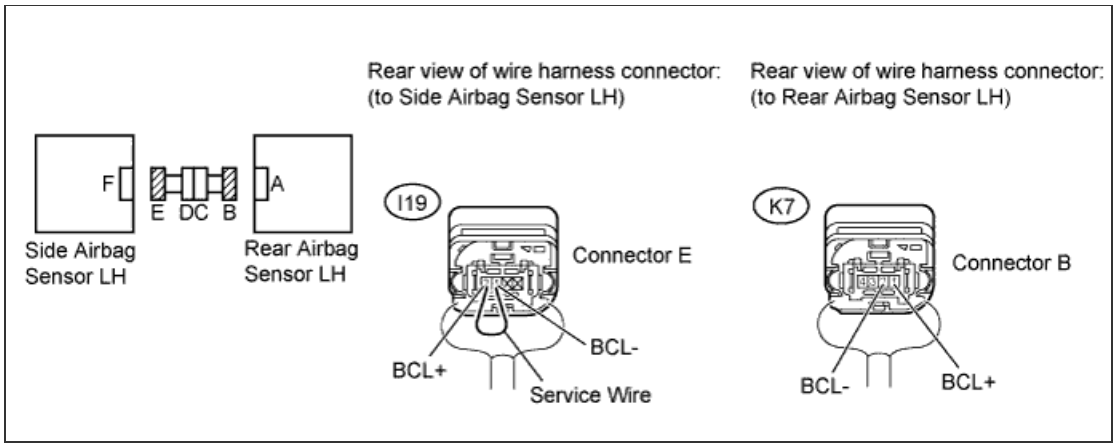
Codes other than DTC B1697 and B1698 may be output at this time, but they are not related to this check.



NG → Go to step 11

OK

REPLACE REAR AIRBAG SENSOR LH (Click here)

11.CHECK SIDE AIRBAG SENSOR LH CIRCUIT

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connectors from the side airbag sensor LH and rear airbag sensor LH.

d. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

e. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified condition
1 (BCL+) - Body ground	ngine switch on (IG)	Below 1 V
2 (BCL-) - Body ground	ngine switch on (IG)	Below 1 V

f. Turn the engine switch off.

g. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

h. sing a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector .

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (BCL+) - 2 (BCL-)	Always	Below 1 Ω

j. Disconnect the service wire from connector .

k. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (BCL+) - Body ground	Always	1 MΩ or higher
2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → Go to step 13

OK

12.CHECK SIDE AIRBAG SENSOR LH

a. Connect the connectors to the rear airbag sensor LH.

b. Interchange the side airbag sensor LH with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1632, B1633, B1697 and B1698 are not output	A

C

REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

13.CHECK FLOOR WIRE (SIDE AIRBAG SENSOR LH - FRONT DOOR WIRE LH)

a. Disconnect the floor wire connector from the front door wire LH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
1 (BCL+) - Body ground	ngine switch on (IG)	Below 1 V
2 (BCL-) - Body ground	ngine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. sing a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (BCL+) - 2 (BCL-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (BCL+) - Body ground	Always	1 MΩ or higher
2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK

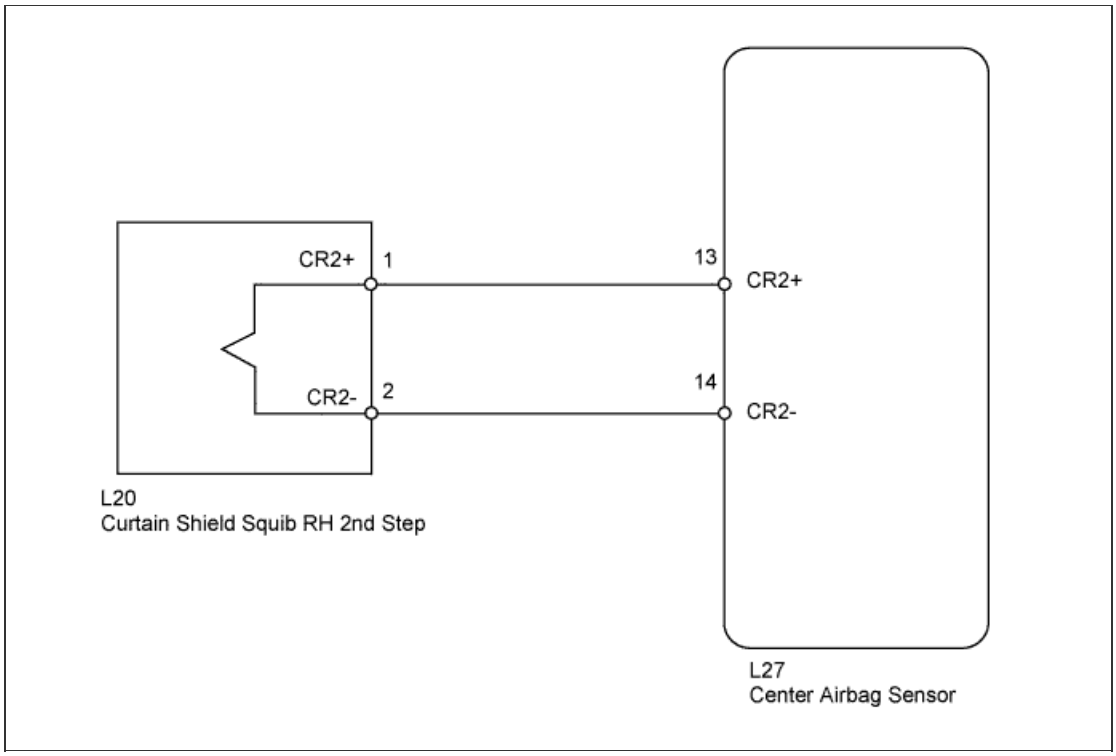
REPLACE FRONT DOOR WIRE LH

DTC B1840/59 Short in Curtain Shield Squib RH 2nd Step Circuit

DTC B1841/59 Open in Curtain Shield Squib RH 2nd Step Circuit

DTC B1842/59 Short to GND in Curtain Shield Squib RH 2nd Step Circuit

DTC B1843/59 Short to B+ in Curtain Shield Squib RH 2nd Step Circuit



for Preparation Click here

DESCRIPTION

The curtain shield squib RH 2nd step circuit consists of the center airbag sensor and the curtain shield airbag RH.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the curtain shield squib RH 2nd step circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1840/59	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the curtain shield squib RH 2nd step circuit during the primary check. • A curtain shield squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Curtain shield airbag assembly RH (Curtain shield squib RH 2nd step) • Center airbag sensor assembly
B1841/59	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the curtain shield squib RH 2nd step circuit for 2 seconds. • A curtain shield squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Curtain shield airbag assembly RH (Curtain shield squib RH 2nd step) • Center airbag sensor assembly
B1842/59	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the curtain shield squib RH 2nd step circuit for 0.5 seconds. • A curtain shield squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Curtain shield airbag assembly RH (Curtain shield squib RH 2nd step) • Center airbag sensor assembly
B1843/59	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the curtain shield squib RH 2nd step circuit for 0.5 seconds. • A curtain shield squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Curtain shield airbag assembly RH (Curtain shield squib RH 2nd step) • Center airbag sensor assembly

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK CURTAIN SHIELD AIRBAG RH (CURTAIN SHIELD SQUIB RH 2ND STEP)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

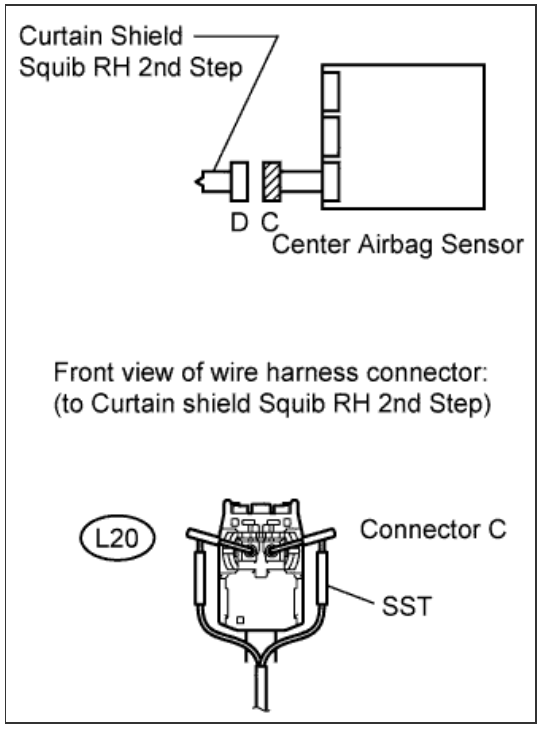
c. Disconnect the connector from the curtain shield squib RH 2nd step.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:



Never connect the tester to the curtain shield airbag RH (curtain shield squib RH 2nd step) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1840, B1841, B1842 or B1843 is not output.

HINT:

Codes other than DTC B1840, B1841, B1842 and B1843 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK

REPLACE CURTAIN SHIELD AIRBAG ASSEMBLY RH (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the No. 2 floor wire connector (on the curtain shield squib RH 2nd step side) is not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE NO. 2 FLOOR WIRE

OK

3.CHECK NO. 2 FLOOR WIRE (CURTAIN SHIELD AIRBAG RH 2ND STEP CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
L20-1 (CR2+) - Body ground	Engine switch on (IG)	Below 1 V
L20-2 (CR2-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L20-1 (CR2+) - L20-2 (CR2-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L20-1 (CR2+) - L20-2 (CR2-)	Always	1 MΩ or higher
L20-1 (CR2+) - Body ground	Always	1 MΩ or higher
L20-2 (CR2-) -	Always	1 MΩ or higher

Body ground		

NG → REPLACE NO. 2 FLOOR WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the curtain shield squib RH 2nd step and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1840, B1841, B1842 or B1843 is not output.

DTC B1632/81 Lost Communication with Rear Airbag Sensor RH

DTC B1633/81 Rear Airbag Sensor Assembly RH Initialization Incomplete

DTC B1697/82 Lost Communication with Door Side Airbag Sensor LH

DTC B1698/82 Door Side Airbag Sensor LH Initialization Incomplete

for Preparation Click here

DESCRIPTION

HINT:

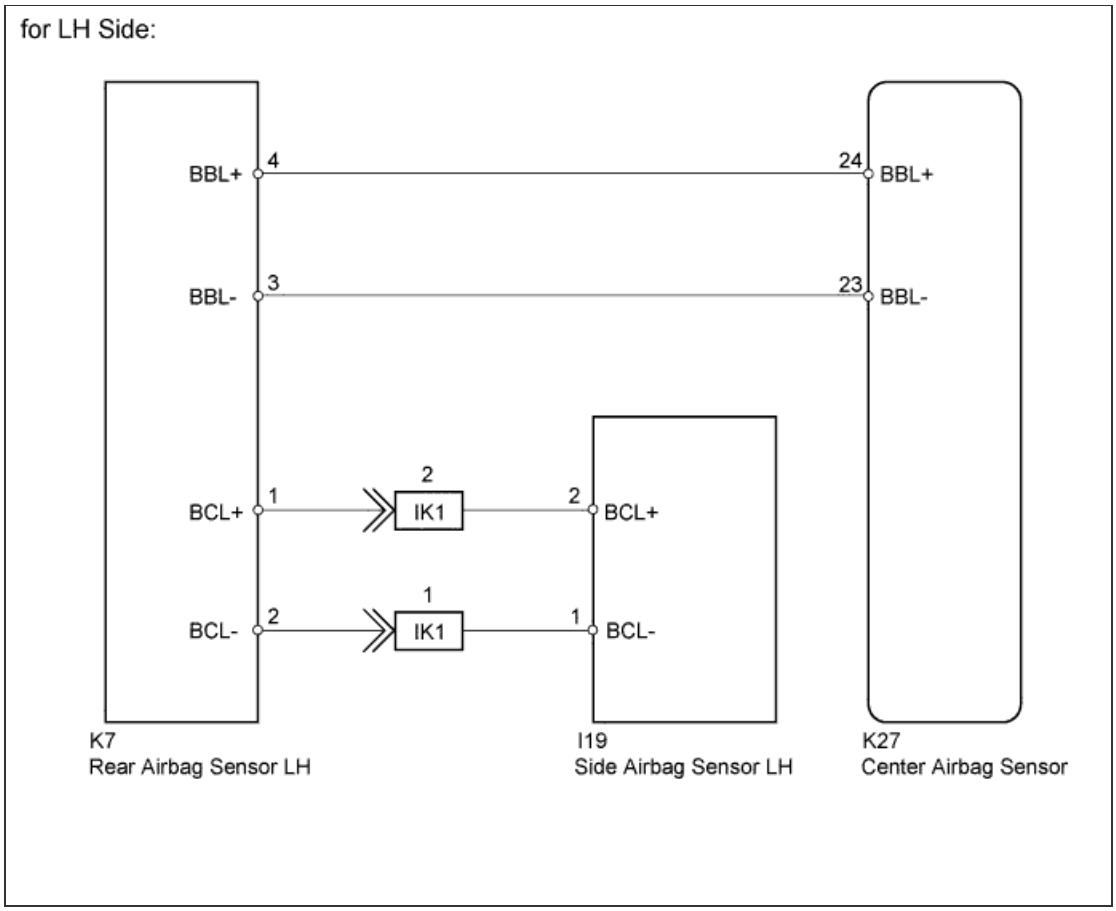
"Door side airbag sensor LH" refer to the side airbag sensor LH.



- The circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH, rear seat side airbag LH or RH and curtain shield airbag LH or RH) is composed of the center airbag sensor, side airbag sensor LH or RH, and rear airbag sensor LH or RH.
  The side airbag sensor LH or RH and rear airbag sensor LH or RH detect impacts to the vehicle and send signals to the center airbag sensor to determine if the airbag should be deployed.
  DTC B1632/81 or B1697/82 is stored when a malfunction is detected in the circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH, rear seat side airbag LH or RH and curtain shield airbag LH or RH).

DTC Code	DTC Detection Condition	Trouble Area
B1632/81	hen one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A rear airbag sensor RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Front door wire RH • Side airbag sensor RH • Rear airbag sensor RH • Center airbag sensor assembly
B1633/81	hen one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A rear airbag sensor RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Front door wire RH • Side airbag sensor RH • Rear airbag sensor RH • Center airbag sensor assembly
B1697/82	hen one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH and curtain shield airbag LH) for 2 seconds. • A side airbag sensor LH malfunction.	• Floor wire • Front door wire LH • Side airbag sensor LH • Rear airbag sensor LH • Center airbag sensor assembly

	• A rear airbag sensor LH malfunction. • A center airbag sensor malfunction.	
B1698/82	hen one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH and curtain shield airbag LH) for 2 seconds. • A side airbag sensor LH malfunction. • A rear airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front door wire LH • Side airbag sensor LH • Rear airbag sensor LH • Center airbag sensor assembly

DTC B1632 or B1633 is output	C

HINT:

Codes other than DTC B1632, B1633, B1697 and B1698 may be output at this time, but they are not related to this check.

A	USE SIMULATION METHOD TO CHECK (Click here)
B	Go to step 8
C	

2.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor, the side airbag sensor RH and rear airbag sensor RH.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

3.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor, rear airbag sensor RH and side airbag sensor RH.

b. Check that the connectors (on the center airbag sensor side, the rear airbag sensor RH side and side airbag sensor RH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

4.CHECK SIDE AIRBAG SENSOR RH

a. Connect the connectors to the center airbag sensor.

b. Interchange the side airbag sensor LH with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1632, B1633, B1697 and B1698 are not output	A
DTC B1697 or B1698 is output	B
DTC B1632 or B1633 is output	C

HINT:

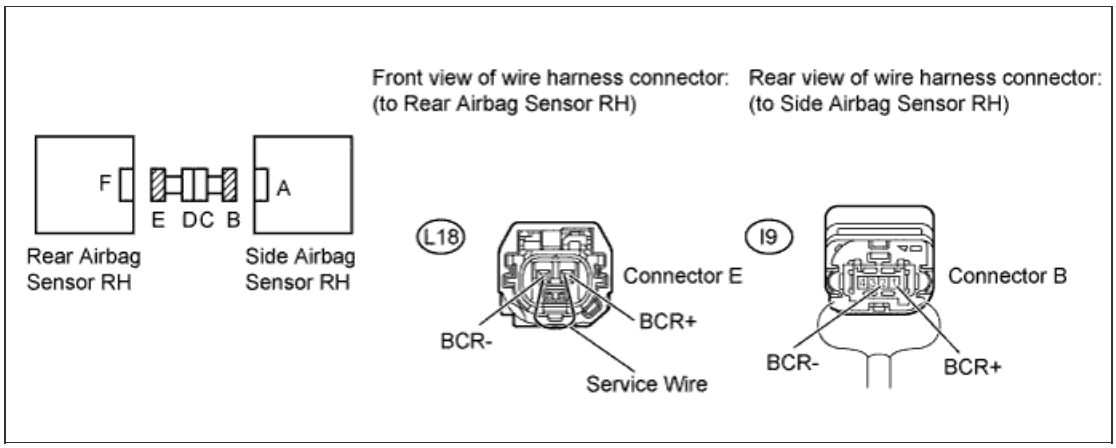
Codes other than DTC B1632, B1633, B1697 and B1698 may be output at this time, but they are not related to this check.

i. Turn the engine switch off.

j. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.



k. Return the side airbag sensor RH and LH to their original positions and connect the connectors to them.

A → USE SIMULATION METHOD TO CHECK (Click here)

B → REPLACE SIDE AIRBAG SENSOR RH (Click here)

C

5.CHECK REAR AIRBAG SENSOR RH CIRCUIT

a. Disconnect the connectors from the side airbag sensor RH and rear airbag sensor RH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. sing a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector E.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector E.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 7

OK

6.CHECK REAR AIRBAG SENSOR RH

a. Connect the connectors to the center airbag sensor.

b. Temporarily replace the rear airbag sensor RH with a new one.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

OK:

DTC B1632 and B1633 is not output.

HINT:

Codes other than DTC B1632 and B1633 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

REPLACE REAR AIRBAG SENSOR RH (Click here)

7.CHECK FRONT DOOR WIRE RH (SIDE AIRBAG SENSOR RH - NO. 2 FLOOR WIRE)

a. Disconnect the front door wire RH connectors from the No. 2 floor wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. sing a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FRONT DOOR WIRE RH

OK

REPLACE NO. 2 FLOOR WIRE

8.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor, the side airbag sensor LH and rear airbag sensor LH.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

9.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor, side airbag sensor LH and rear airbag sensor LH.

b. Check that the connectors (on the center airbag sensor side, the rear airbag sensor LH side and side airbag sensor LH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

10.CHECK REAR AIRBAG SENSOR LH

a. Connect the connector to the center airbag sensor.

b. Temporarily replace the rear airbag sensor LH with a new one.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

OK:

DTC B1697 and B1698 are not output.

HINT:

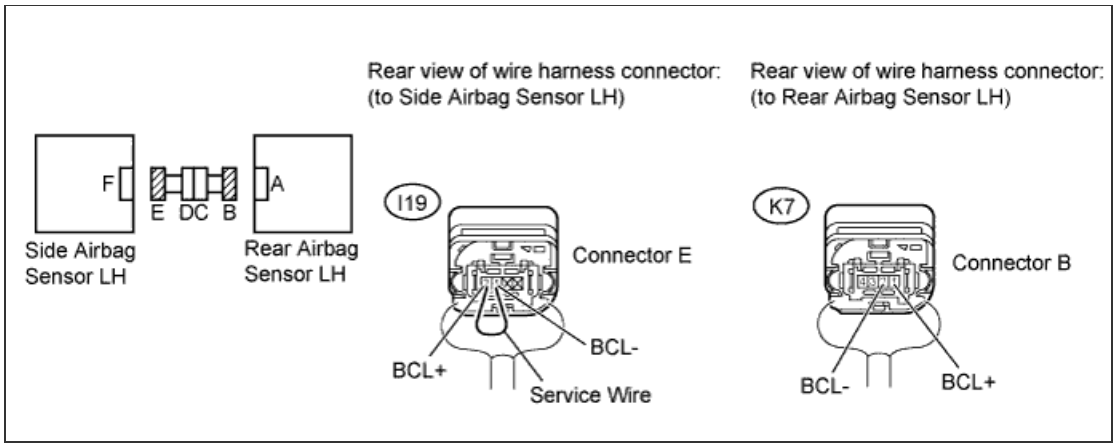
Codes other than DTC B1697 and B1698 may be output at this time, but they are not related to this check.



NG → Go to step 11

OK

REPLACE REAR AIRBAG SENSOR LH (Click here)

11.CHECK SIDE AIRBAG SENSOR LH CIRCUIT

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connectors from the side airbag sensor LH and rear airbag sensor LH.

d. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

e. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified condition
1 (BCL+) - Body ground	Engine switch on (IG)	Below 1 V
2 (BCL-) - Body ground	Engine switch on (IG)	Below 1 V

f. Turn the engine switch off.

g. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

h. sing a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector E.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (BCL+) - 2 (BCL-)	Always	Below 1 Ω

j. Disconnect the service wire from connector E.

k. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (BCL+) - Body ground	Always	1 MΩ or higher
2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → Go to step 13

OK

12.CHECK SIDE AIRBAG SENSOR LH

a. Connect the connectors to the rear airbag sensor LH.

b. Interchange the side airbag sensor LH with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1632, B1633, B1697 and B1698 are not output	A
DTC B1632 or B1633 is output	B

DTC B1632/81 Lost Communication with Rear Airbag Sensor RH

DTC B1633/81 Rear Airbag Sensor Assembly RH Initialization Incomplete

DTC B1697/82 Lost Communication with Door Side Airbag Sensor LH

DTC B1698/82 Door Side Airbag Sensor LH Initialization Incomplete

for Preparation Click here

DESCRIPTION

HINT:

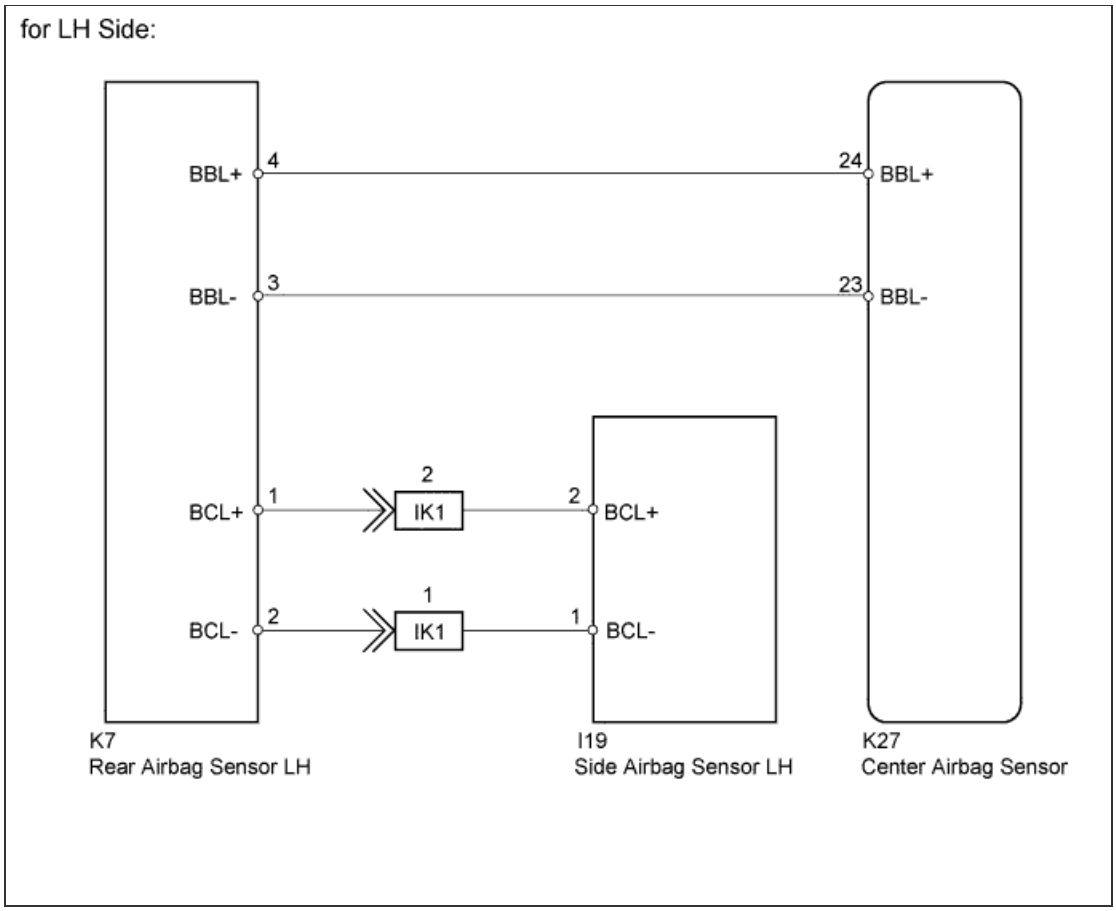
"Door side airbag sensor LH" refer to the side airbag sensor LH.



- The circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH, rear seat side airbag LH or RH and curtain shield airbag LH or RH) is composed of the center airbag sensor, side airbag sensor LH or RH, and rear airbag sensor LH or RH.
  The side airbag sensor LH or RH and rear airbag sensor LH or RH detect impacts to the vehicle and send signals to the center airbag sensor to determine if the airbag should be deployed.
  DTC B1632/81 or B1697/82 is stored when a malfunction is detected in the circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH, rear seat side airbag LH or RH and curtain shield airbag LH or RH).

DTC Code	DTC Detection Condition	Trouble Area
B1632/81	hen one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A rear airbag sensor RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Front door wire RH • Side airbag sensor RH • Rear airbag sensor RH • Center airbag sensor assembly
B1633/81	hen one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A rear airbag sensor RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Front door wire RH • Side airbag sensor RH • Rear airbag sensor RH • Center airbag sensor assembly
B1697/82	hen one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH and curtain shield airbag LH) for 2 seconds. • A side airbag sensor LH malfunction.	• Floor wire • Front door wire LH • Side airbag sensor LH • Rear airbag sensor LH • Center airbag sensor assembly

	• A rear airbag sensor LH malfunction. • A center airbag sensor malfunction.	
B1698/82	hen one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH and curtain shield airbag LH) for 2 seconds. • A side airbag sensor LH malfunction. • A rear airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front door wire LH • Side airbag sensor LH • Rear airbag sensor LH • Center airbag sensor assembly

INSPECTION PROCEDURE

NOTICE:

hen disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK FOR DTC

a. Turn the engine switch on (IG), and wait for at least 60 seconds.

b. Clear the DTCs stored in the memory (Click here).

c. Turn the engine switch off.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1632, B1633, B1697 and B1698 are not output	A
DTC B1697 or B1698 is output	B
DTC B1632 or B1633 is output	C

HINT:

Codes other than DTC B1632, B1633, B1697 and B1698 may be output at this time, but they are not related to this check.

A	USE SIMULATION METHOD TO CHECK (Click here)
B	Go to step 8
C	

2.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor, the side airbag sensor RH and rear airbag sensor RH.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

3.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor, rear airbag sensor RH and side airbag sensor RH.

b. Check that the connectors (on the center airbag sensor side, the rear airbag sensor RH side and side airbag sensor RH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

4.CHECK SIDE AIRBAG SENSOR RH

a. Connect the connectors to the center airbag sensor.

b. Interchange the side airbag sensor LH with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1632, B1633, B1697 and B1698 are not output	A
DTC B1697 or B1698 is output	B
DTC B1632 or B1633 is output	C

HINT:

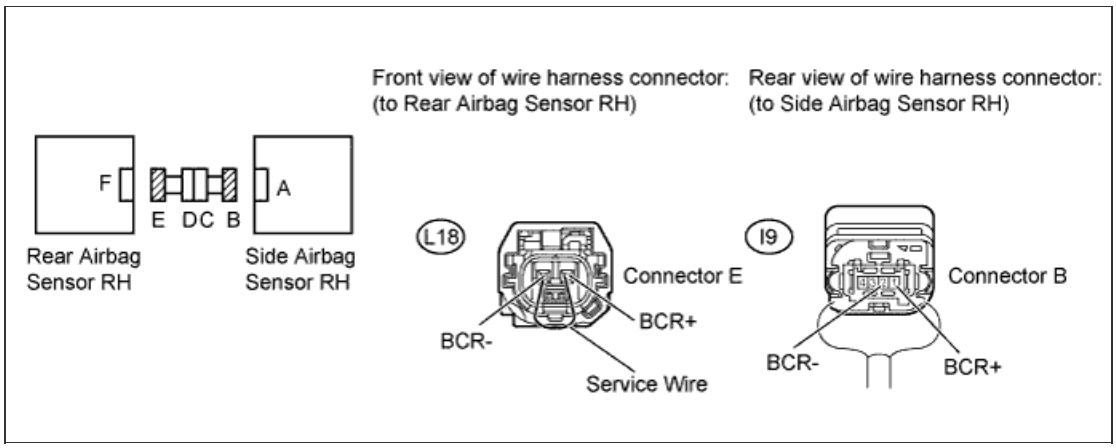
Codes other than DTC B1632, B1633, B1697 and B1698 may be output at this time, but they are not related to this check.

i. Turn the engine switch off.

j. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.



k. Return the side airbag sensor RH and LH to their original positions and connect the connectors to them.

A → USE SIMULATION METHOD TO CHECK (Click here)

B → REPLACE SIDE AIRBAG SENSOR RH (Click here)

C

5.CHECK REAR AIRBAG SENSOR RH CIRCUIT

a. Disconnect the connectors from the side airbag sensor RH and rear airbag sensor RH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. sing a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector E.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector E.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 7

OK

6.CHECK REAR AIRBAG SENSOR RH

a. Connect the connectors to the center airbag sensor.

b. Temporarily replace the rear airbag sensor RH with a new one.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

OK:

DTC B1632 and B1633 is not output.

HINT:

Codes other than DTC B1632 and B1633 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

REPLACE REAR AIRBAG SENSOR RH (Click here)

7.CHECK FRONT DOOR WIRE RH (SIDE AIRBAG SENSOR RH - NO. 2 FLOOR WIRE)

a. Disconnect the front door wire RH connectors from the No. 2 floor wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. sing a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FRONT DOOR WIRE RH

OK

REPLACE NO. 2 FLOOR WIRE

8.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor, the side airbag sensor LH and rear airbag sensor LH.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

9.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor, side airbag sensor LH and rear airbag sensor LH.

b. Check that the connectors (on the center airbag sensor side, the rear airbag sensor LH side and side airbag sensor LH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

10.CHECK REAR AIRBAG SENSOR LH

a. Connect the connector to the center airbag sensor.

b. Temporarily replace the rear airbag sensor LH with a new one.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

OK:

DTC B1697 and B1698 are not output.

HINT:

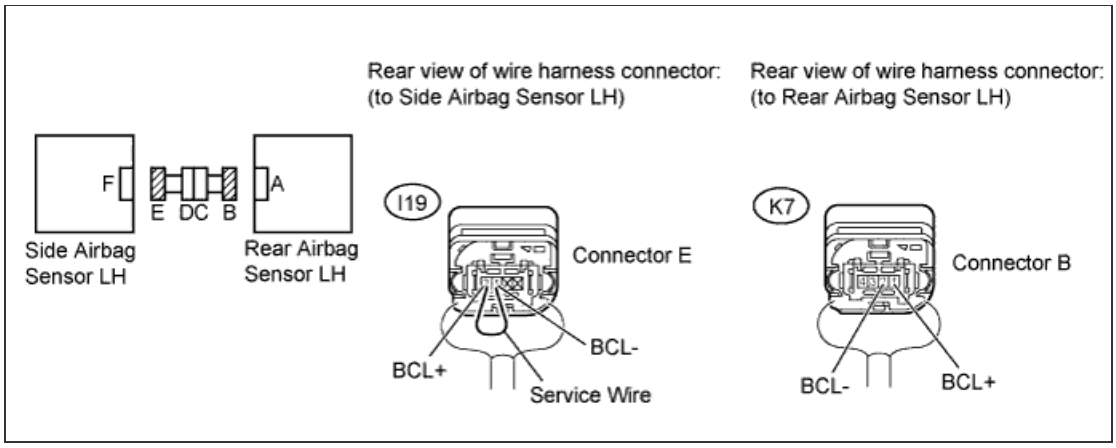
Codes other than DTC B1697 and B1698 may be output at this time, but they are not related to this check.



NG → Go to step 11

OK

REPLACE REAR AIRBAG SENSOR LH (Click here)

11.CHECK SIDE AIRBAG SENSOR LH CIRCUIT

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connectors from the side airbag sensor LH and rear airbag sensor LH.

d. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

e. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified condition
1 (BCL+) - Body ground	Engine switch on (IG)	Below 1 V
2 (BCL-) - Body ground	Engine switch on (IG)	Below 1 V

f. Turn the engine switch off.

g. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

h. sing a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector E.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (BCL+) - 2 (BCL-)	Always	Below 1 Ω

j. Disconnect the service wire from connector E.

k. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (BCL+) - Body ground	Always	1 MΩ or higher
2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → Go to step 13

OK

12.CHECK SIDE AIRBAG SENSOR LH

a. Connect the connectors to the rear airbag sensor LH.

b. Interchange the side airbag sensor LH with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

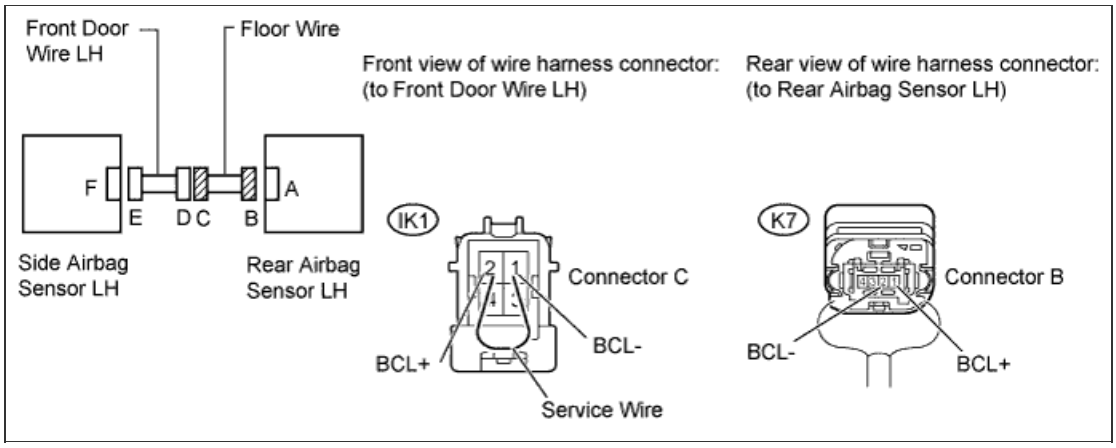
Result

Result	Proceed to
DTC B1632, B1633, B1697 and B1698 are not output	A
DTC B1632 or B1633 is output	B
DTC B1697 or B1698 is output	C

i. Turn the engine switch off.

j. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

k. Return the side airbag sensor RH and LH to their original positions and connect the connectors to them.



A → USE SIMULATION METHOD TO CHECK (Click here)

B → REPLACE SIDE AIRBAG SENSOR LH (Click here)

C

REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

13.CHECK FLOOR WIRE (SIDE AIRBAG SENSOR LH - FRONT DOOR WIRE LH)

a. Disconnect the floor wire connector from the front door wire LH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
1 (BCL+) - Body ground	Engine switch on (IG)	Below 1 V
2 (BCL-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. sing a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (BCL+) - 2 (BCL-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (BCL+) - Body ground	Always	1 MΩ or higher
2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

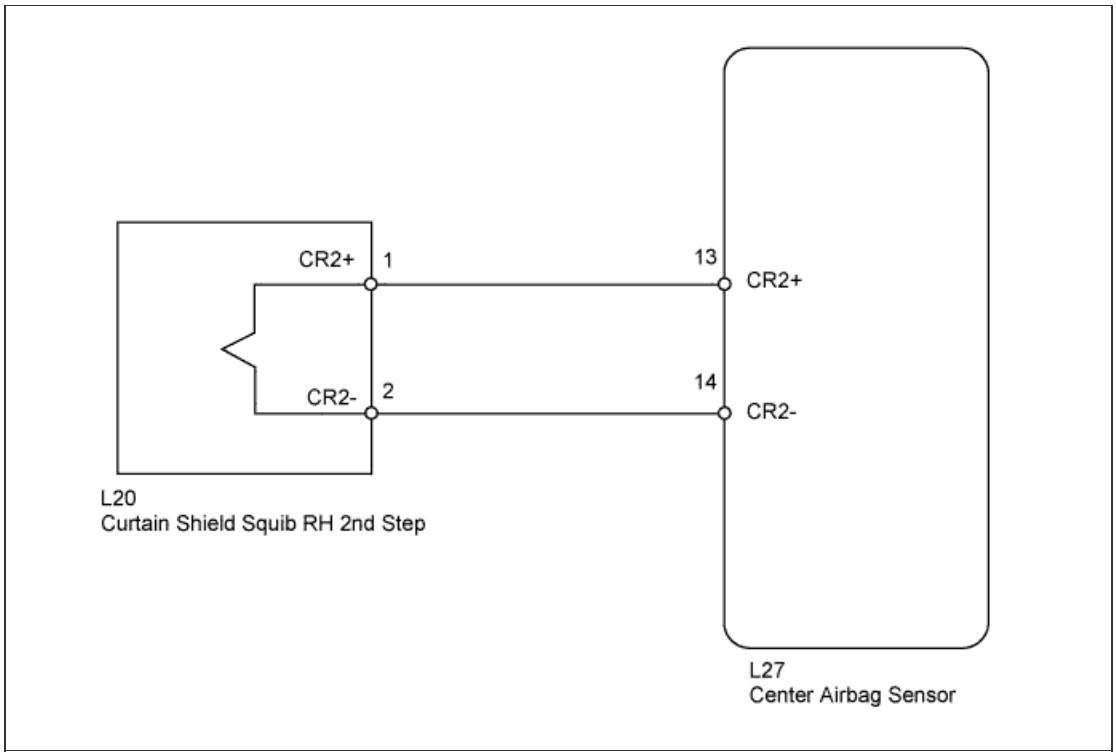
OK → REPLACE FRONT DOOR WIRE LH

DTC B1840/59 Short in Curtain Shield Squib RH 2nd Step Circuit

DTC B1841/59 Open in Curtain Shield Squib RH 2nd Step Circuit

DTC B1842/59 Short to GND in Curtain Shield Squib RH 2nd Step Circuit

DTC B1843/59 Short to B+ in Curtain Shield Squib RH 2nd Step Circuit



for Preparation Click here

DESCRIPTION

The curtain shield squib RH 2nd step circuit consists of the center airbag sensor and the curtain shield airbag RH.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the curtain shield squib RH 2nd step circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1840/59	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the curtain shield squib RH 2nd step circuit during the primary check. • A curtain shield squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Curtain shield airbag assembly RH (Curtain shield squib RH 2nd step) • Center airbag sensor assembly
B1841/59	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the curtain shield squib RH 2nd step circuit for 2 seconds. • A curtain shield squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Curtain shield airbag assembly RH (Curtain shield squib RH 2nd step) • Center airbag sensor assembly
B1842/59	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the curtain shield squib RH 2nd step circuit for 0.5 seconds. • A curtain shield squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Curtain shield airbag assembly RH (Curtain shield squib RH 2nd step) • Center airbag sensor assembly
B1843/59	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the curtain shield squib RH 2nd step circuit for 0.5 seconds. • A curtain shield squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Curtain shield airbag assembly RH (Curtain shield squib RH 2nd step) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK CURTAIN SHIELD AIRBAG RH (CURTAIN SHIELD SQUIB RH 2ND STEP)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

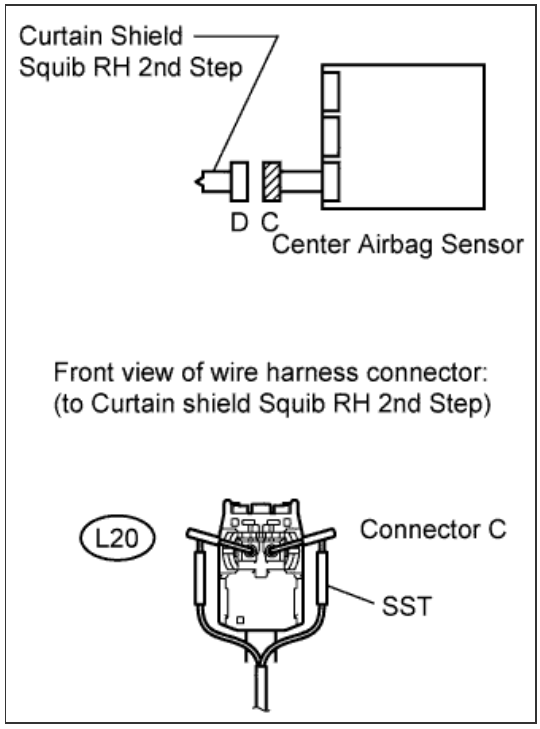
c. Disconnect the connector from the curtain shield squib RH 2nd step.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:



Never connect the tester to the curtain shield airbag RH (curtain shield squib RH 2nd step) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1840, B1841, B1842 or B1843 is not output.

HINT:

Codes other than DTC B1840, B1841, B1842 and B1843 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK

REPLACE CURTAIN SHIELD AIRBAG ASSEMBLY RH (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the No. 2 floor wire connector (on the curtain shield squib RH 2nd step side) is not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE NO. 2 FLOOR WIRE

OK

3.CHECK NO. 2 FLOOR WIRE (CURTAIN SHIELD AIRBAG RH 2ND STEP CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
L20-1 (CR2+) - Body ground	Engine switch on (IG)	Below 1 V
L20-2 (CR2-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L20-1 (CR2+) - L20-2 (CR2-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L20-1 (CR2+) - L20-2 (CR2-)	Always	1 MΩ or higher
L20-1 (CR2+) - Body ground	Always	1 MΩ or higher
L20-2 (CR2-) -	Always	1 MΩ or higher

Body ground		

NG → REPLACE NO. 2 FLOOR WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the curtain shield squib RH 2nd step and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1840, B1841, B1842 or B1843 is not output.

DTC B1635/24 Rear Airbag Sensor LH Circuit Malfunction

DTC B1637/82 Lost Communication with Rear Airbag Sensor LH

DTC B1690/15 Door Side Airbag Sensor RH Malfunction

DTC B1692/81 Lost Communication with Door Side Airbag Sensor RH

for Preparation Click here

DESCRIPTION

HINT:

"Door side airbag sensor RH" refer to the side airbag sensor RH.

- For DTC B1690 and B1635:
  The rear airbag sensor LH and side airbag sensor RH consists of the safing sensor, the diagnostic circuit, the lateral deceleration sensor, etc.
  If the center airbag sensor receives signals from the lateral deceleration sensor, it determines whether the SRS should be activated.
  DTC B1690/15 or B1635/24 is stored when a malfunction is detected in the rear airbag sensor LH or side airbag sensor RH circuit.
- For DTC B1692 and B1637:
  The circuit for the side collision sensor RH or LH (to determine deployment of the front seat airbag RH or LH, rear seat side airbag RH or LH and curtain shield airbag RH or LH) is composed of the center airbag sensor, side airbag sensor RH or LH, and rear airbag sensor RH or LH.
  The side airbag sensor RH or LH, and rear airbag sensor RH or LH detect impacts to the vehicle and send signals to the center airbag sensor to determine if the airbag should be deployed.
  DTC B1692 or B1637 is stored when a malfunction is detected in the circuit for the side collision sensor RH or LH (to determine deployment of the front seat airbag RH or LH, rear seat side airbag RH or LH, and curtain shield airbag RH or LH).

DTC Code	DTC Detection Condition	Trouble Area
B1635/24	When one of the following conditions is met: • A side airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Rear airbag sensor LH • Center airbag sensor assembly
B1637/82	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH, rear seat side airbag LH and curtain shield airbag LH) for 2 seconds. • A side airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Rear airbag sensor LH • Center airbag sensor assembly
B1690/15	When one of the following conditions is met: • A side airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Side airbag sensor RH • Center airbag sensor assembly
B1692/81	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH, rear seat side airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Side airbag sensor RH • Center airbag sensor assembly

DESCRIPTION

The curtain shield squib RH 2nd step circuit consists of the center airbag sensor and the curtain shield airbag RH.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the curtain shield squib RH 2nd step circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1840/59	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the curtain shield squib RH 2nd step circuit during the primary check. • A curtain shield squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Curtain shield airbag assembly RH (Curtain shield squib RH 2nd step) • Center airbag sensor assembly
B1841/59	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the curtain shield squib RH 2nd step circuit for 2 seconds. • A curtain shield squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Curtain shield airbag assembly RH (Curtain shield squib RH 2nd step) • Center airbag sensor assembly
B1842/59	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the curtain shield squib RH 2nd step circuit for 0.5 seconds. • A curtain shield squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Curtain shield airbag assembly RH (Curtain shield squib RH 2nd step) • Center airbag sensor assembly
B1843/59	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the curtain shield squib RH 2nd step circuit for 0.5 seconds. • A curtain shield squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Curtain shield airbag assembly RH (Curtain shield squib RH 2nd step) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK CURTAIN SHIELD AIRBAG RH (CURTAIN SHIELD SQUIB RH 2ND STEP)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

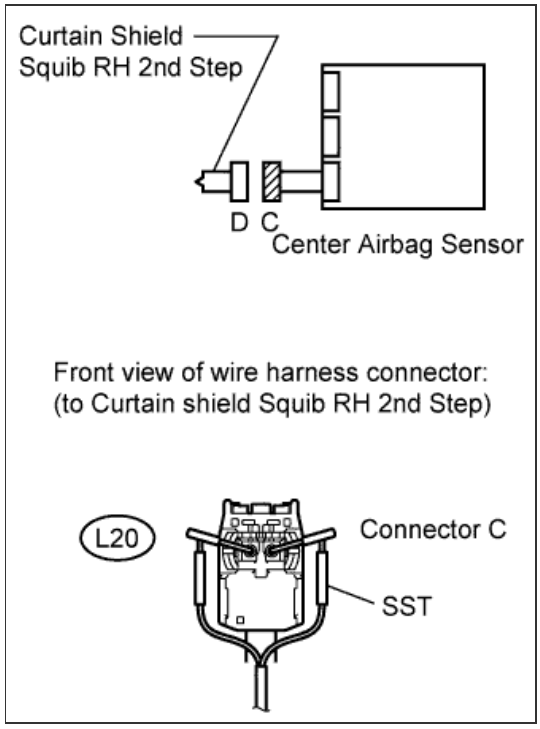
c. Disconnect the connector from the curtain shield squib RH 2nd step.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:



Never connect the tester to the curtain shield airbag RH (curtain shield squib RH 2nd step) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1840, B1841, B1842 or B1843 is not output.

HINT:

Codes other than DTC B1840, B1841, B1842 and B1843 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK

REPLACE CURTAIN SHIELD AIRBAG ASSEMBLY RH (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the No. 2 floor wire connector (on the curtain shield squib RH 2nd step side) is not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE NO. 2 FLOOR WIRE

OK

3.CHECK NO. 2 FLOOR WIRE (CURTAIN SHIELD AIRBAG RH 2ND STEP CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
L20-1 (CR2+) - Body ground	Engine switch on (IG)	Below 1 V
L20-2 (CR2-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L20-1 (CR2+) - L20-2 (CR2-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L20-1 (CR2+) - L20-2 (CR2-)	Always	1 MΩ or higher
L20-1 (CR2+) - Body ground	Always	1 MΩ or higher
L20-2 (CR2-) -	Always	1 MΩ or higher

Body ground		

NG → REPLACE NO. 2 FLOOR WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the curtain shield squib RH 2nd step and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1840, B1841, B1842 or B1843 is not output.

HINT:

Codes other than DTC B1840, B1841, B1842 and B1843 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (**Click here**)

OK

USE SIMULATION METHOD TO CHECK (**Click here**)

DTC B1635/24 Rear Airbag Sensor LH Circuit Malfunction

DTC B1637/82 Lost Communication with Rear Airbag Sensor LH

DTC B1690/15 Door Side Airbag Sensor RH Malfunction

DTC B1692/81 Lost Communication with Door Side Airbag Sensor RH

for Preparation Click here

DESCRIPTION

HINT:

"Door side airbag sensor RH" refer to the side airbag sensor RH.

- For DTC B1690 and B1635:
  The rear airbag sensor LH and side airbag sensor RH consists of the safing sensor, the diagnostic circuit, the lateral deceleration sensor, etc.
  If the center airbag sensor receives signals from the lateral deceleration sensor, it determines whether the SRS should be activated.
  DTC B1690/15 or B1635/24 is stored when a malfunction is detected in the rear airbag sensor LH or side airbag sensor RH circuit.
- For DTC B1692 and B1637:
  The circuit for the side collision sensor RH or LH (to determine deployment of the front seat airbag RH or LH, rear seat side airbag RH or LH and curtain shield airbag RH or LH) is composed of the center airbag sensor, side airbag sensor RH or LH, and rear airbag sensor RH or LH.
  The side airbag sensor RH or LH, and rear airbag sensor RH or LH detect impacts to the vehicle and send signals to the center airbag sensor to determine if the airbag should be deployed.
  DTC B1692 or B1637 is stored when a malfunction is detected in the circuit for the side collision sensor RH or LH (to determine deployment of the front seat airbag RH or LH, rear seat side airbag RH or LH, and curtain shield airbag RH or LH).

DTC Code	DTC Detection Condition	Trouble Area
B1635/24	When one of the following conditions is met: • A side airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Rear airbag sensor LH • Center airbag sensor assembly
B1637/82	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH, rear seat side airbag LH and curtain shield airbag LH) for 2 seconds. • A side airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Rear airbag sensor LH • Center airbag sensor assembly
B1690/15	When one of the following conditions is met: • A side airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Side airbag sensor RH • Center airbag sensor assembly
B1692/81	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH, rear seat side airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Side airbag sensor RH • Center airbag sensor assembly

3.CHECK NO. 2 FLOOR WIRE (CURTAIN SHIELD AIRBAG RH 2ND STEP CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
L20-1 (CR2+) - Body ground	Engine switch on (IG)	Below 1 V
L20-2 (CR2-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L20-1 (CR2+) - L20-2 (CR2-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L20-1 (CR2+) - L20-2 (CR2-)	Always	1 MΩ or higher
L20-1 (CR2+) - Body ground	Always	1 MΩ or higher
L20-2 (CR2-) -	Always	1 MΩ or higher

Body ground		

NG → REPLACE NO. 2 FLOOR WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the curtain shield squib RH 2nd step and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1840, B1841, B1842 or B1843 is not output.

HINT:

Codes other than DTC B1840, B1841, B1842 and B1843 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (**Click here**)

DTC B1635/24 Rear Airbag Sensor LH Circuit Malfunction

DTC B1637/82 Lost Communication with Rear Airbag Sensor LH

DTC B1690/15 Door Side Airbag Sensor RH Malfunction

DTC B1692/81 Lost Communication with Door Side Airbag Sensor RH

for Preparation Click here

DESCRIPTION

HINT:

"Door side airbag sensor RH" refer to the side airbag sensor RH.

- For DTC B1690 and B1635:
  The rear airbag sensor LH and side airbag sensor RH consists of the safing sensor, the diagnostic circuit, the lateral deceleration sensor, etc.
  If the center airbag sensor receives signals from the lateral deceleration sensor, it determines whether the SRS should be activated.
  DTC B1690/15 or B1635/24 is stored when a malfunction is detected in the rear airbag sensor LH or side airbag sensor RH circuit.
- For DTC B1692 and B1637:
  The circuit for the side collision sensor RH or LH (to determine deployment of the front seat airbag RH or LH, rear seat side airbag RH or LH and curtain shield airbag RH or LH) is composed of the center airbag sensor, side airbag sensor RH or LH, and rear airbag sensor RH or LH.
  The side airbag sensor RH or LH, and rear airbag sensor RH or LH detect impacts to the vehicle and send signals to the center airbag sensor to determine if the airbag should be deployed.
  DTC B1692 or B1637 is stored when a malfunction is detected in the circuit for the side collision sensor RH or LH (to determine deployment of the front seat airbag RH or LH, rear seat side airbag RH or LH, and curtain shield airbag RH or LH).

DTC Code	DTC Detection Condition	Trouble Area
B1635/24	When one of the following conditions is met: • A side airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Rear airbag sensor LH • Center airbag sensor assembly
B1637/82	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH, rear seat side airbag LH and curtain shield airbag LH) for 2 seconds. • A side airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Rear airbag sensor LH • Center airbag sensor assembly
B1690/15	When one of the following conditions is met: • A side airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Side airbag sensor RH • Center airbag sensor assembly
B1692/81	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH, rear seat side airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Side airbag sensor RH • Center airbag sensor assembly

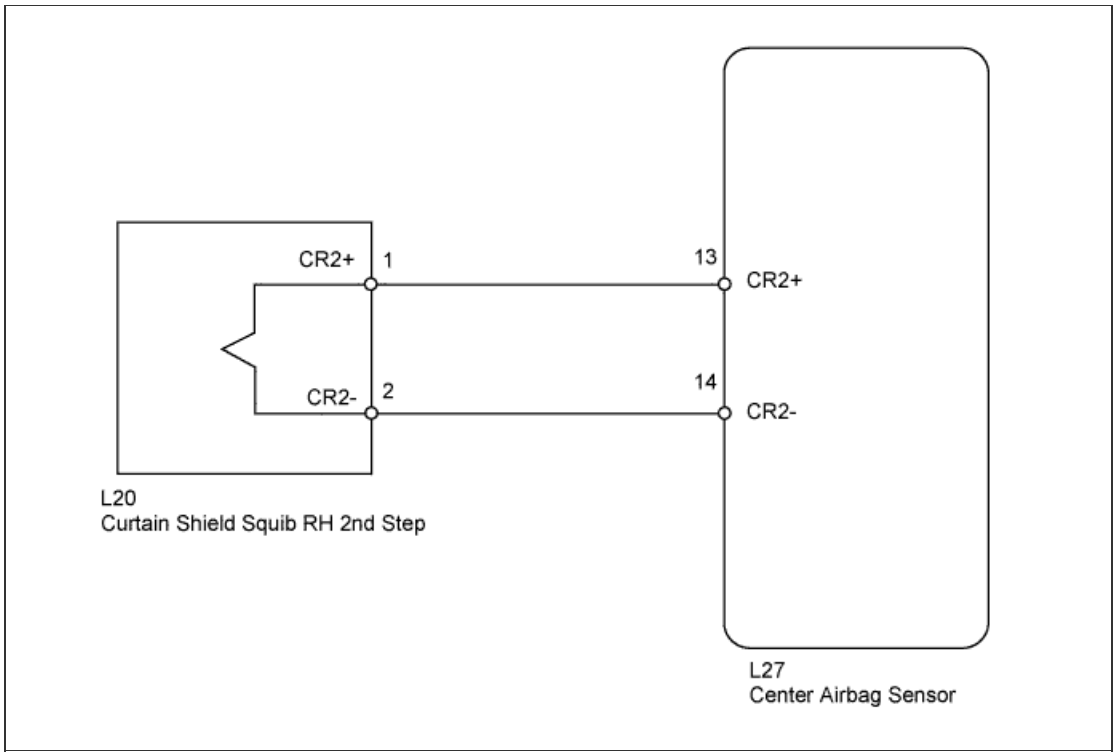
DTC B1840/59 Short in Curtain Shield Squib RH 2nd Step Circuit

DTC B1841/59 Open in Curtain Shield Squib RH 2nd Step Circuit

DTC B1842/59 Short to GND in Curtain Shield Squib RH 2nd Step Circuit

DTC B1843/59 Short to B+ in Curtain Shield Squib RH 2nd Step Circuit



for Preparation Click here

DESCRIPTION

The curtain shield squib RH 2nd step circuit consists of the center airbag sensor and the curtain shield airbag RH.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the curtain shield squib RH 2nd step circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1840/59	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the curtain shield squib RH 2nd step circuit during the primary check. • A curtain shield squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Curtain shield airbag assembly RH (Curtain shield squib RH 2nd step) • Center airbag sensor assembly
B1841/59	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the curtain shield squib RH 2nd step circuit for 2 seconds. • A curtain shield squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Curtain shield airbag assembly RH (Curtain shield squib RH 2nd step) • Center airbag sensor assembly
B1842/59	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the curtain shield squib RH 2nd step circuit for 0.5 seconds. • A curtain shield squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Curtain shield airbag assembly RH (Curtain shield squib RH 2nd step) • Center airbag sensor assembly
B1843/59	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the curtain shield squib RH 2nd step circuit for 0.5 seconds. • A curtain shield squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Curtain shield airbag assembly RH (Curtain shield squib RH 2nd step) • Center airbag sensor assembly

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK CURTAIN SHIELD AIRBAG RH (CURTAIN SHIELD SQUIB RH 2ND STEP)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

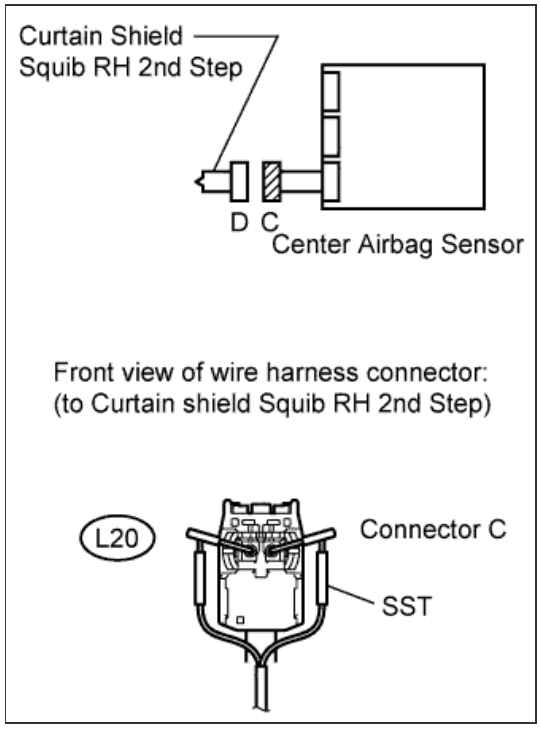
c. Disconnect the connector from the curtain shield squib RH 2nd step.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:



Never connect the tester to the curtain shield airbag RH (curtain shield squib RH 2nd step) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

REPLACE CURTAIN SHIELD AIRBAG ASSEMBLY RH (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the No. 2 floor wire connector (on the curtain shield squib RH 2nd step side) is not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE NO. 2 FLOOR WIRE

OK

3.CHECK NO. 2 FLOOR WIRE (CURTAIN SHIELD AIRBAG RH 2ND STEP CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
L20-1 (CR2+) - Body ground	Engine switch on (IG)	Below 1 V
L20-2 (CR2-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L20-1 (CR2+) - L20-2 (CR2-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L20-1 (CR2+) - L20-2 (CR2-)	Always	1 MΩ or higher
L20-1 (CR2+) - Body ground	Always	1 MΩ or higher
L20-2 (CR2-) -	Always	1 MΩ or higher

Body ground

DTC B1635/24 Rear Airbag Sensor LH Circuit Malfunction

DTC B1637/82 Lost Communication with Rear Airbag Sensor LH

DTC B1690/15 Door Side Airbag Sensor RH Malfunction

DTC B1692/81 Lost Communication with Door Side Airbag Sensor RH

for Preparation Click here

DESCRIPTION

HINT:

"Door side airbag sensor RH" refer to the side airbag sensor RH.

- For DTC B1690 and B1635:
  The rear airbag sensor LH and side airbag sensor RH consists of the safing sensor, the diagnostic circuit, the lateral deceleration sensor, etc.
  If the center airbag sensor receives signals from the lateral deceleration sensor, it determines whether the SRS should be activated.
  DTC B1690/15 or B1635/24 is stored when a malfunction is detected in the rear airbag sensor LH or side airbag sensor RH circuit.
- For DTC B1692 and B1637:
  The circuit for the side collision sensor RH or LH (to determine deployment of the front seat airbag RH or LH, rear seat side airbag RH or LH and curtain shield airbag RH or LH) is composed of the center airbag sensor, side airbag sensor RH or LH, and rear airbag sensor RH or LH.
  The side airbag sensor RH or LH, and rear airbag sensor RH or LH detect impacts to the vehicle and send signals to the center airbag sensor to determine if the airbag should be deployed.
  DTC B1692 or B1637 is stored when a malfunction is detected in the circuit for the side collision sensor RH or LH (to determine deployment of the front seat airbag RH or LH, rear seat side airbag RH or LH, and curtain shield airbag RH or LH).

DTC Code	DTC Detection Condition	Trouble Area
B1635/24	When one of the following conditions is met: • A side airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Rear airbag sensor LH • Center airbag sensor assembly
B1637/82	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH, rear seat side airbag LH and curtain shield airbag LH) for 2 seconds. • A side airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Rear airbag sensor LH • Center airbag sensor assembly
B1690/15	When one of the following conditions is met: • A side airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Side airbag sensor RH • Center airbag sensor assembly
B1692/81	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH, rear seat side airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Side airbag sensor RH • Center airbag sensor assembly

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK FOR DTC

a. Turn the engine switch on (IG), and wait for at least 60 seconds.

b. Clear the DTCs stored in the memory (Click here).

c. Turn the engine switch off.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1635, B1637, B1690 and B1692 are not output	A
DTC B1635 or B1637 is output	B
DTC B1690 or B1692 is output	C

HINT:

Codes other than DTC B1635, B1637, B1690 and B1692 may be output at this time, but they are not related to this check.

A → USE SIMULATION METHOD TO CHECK (Click here)

B → Go to step 3

C

2.CHECK SIDE AIRBAG SENSOR RH

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Interchange the side airbag sensor RH with LH and connect the connectors to them.

d. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

e. Turn the engine switch on (IG), and wait for at least 60 seconds.

f. Clear the DTCs stored in the memory (Click here).

g. Turn the engine switch off.

h. Turn the engine switch on (IG), wait for at least 60 seconds.

i. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1695, B1697, B1690 and B1692 are not output	A
DTC B1695 or B1697 is output	B
DTC B1690 or B1692 is output	C

HINT:

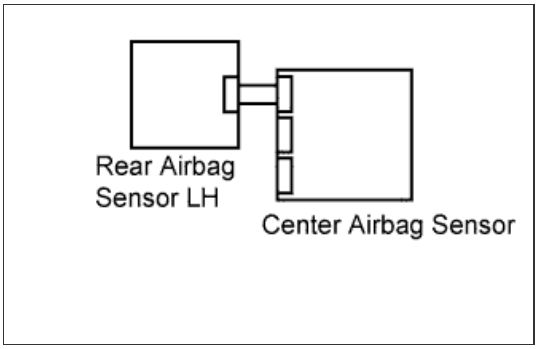
Codes other than DTC B1690, B1692, B1695 and B1697 may be output at this time, but they are not related to this check.

j. Turn the engine switch off.

k. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

l. Return the side airbag sensor RH and LH to their original positions and connect the connectors to them.



A → USE SIMULATION METHOD TO CHECK (Click here)

B → REPLACE SIDE AIRBAG SENSOR RH (Click here)

C

REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

3.CHECK REAR AIRBAG SENSOR LH

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Temporarily replace the rear airbag sensor LH with a new one.

d. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

e. Turn the engine switch on (IG), and wait for at least 60 seconds.

f. Clear the DTCs stored in the memory (Click here).

g. Turn the engine switch off.

h. Turn the engine switch on (IG), wait for at least 60 seconds.

i. Check for DTCs (Click here).

OK:
DTC B1635 and B1637 are not output.

HINT:

Codes other than DTC B1635 and B1637 may be output at this time, but they are not related to this check.

j. Turn the engine switch off.

k. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

l. Return the side airbag sensor RH and LH to their original positions and connect the connectors to them.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

REPLACE REAR AIRBAG SENSOR LH (Click here)

DTC B1845/61 Short in Curtain Shield Squib LH 2nd Step Circuit

DTC B1846/61 Open in Curtain Shield Squib LH 2nd Step Circuit

DTC B1847/61 Short to GND in Curtain Shield Squib LH 2nd Step Circuit

DTC B1848/61 Short to B+ in Curtain Shield Squib LH 2nd Step Circuit

for Preparation Click here

DESCRIPTION

The curtain shield squib LH 2nd step circuit consists of the center airbag sensor and the curtain shield airbag LH.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the curtain shield squib LH 2nd step circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1845/61	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the curtain shield squib LH 2nd step circuit during the primary check. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH 2nd step) • Center airbag sensor assembly
B1846/61	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the curtain shield squib LH 2nd step circuit for 2 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH 2nd step) • Center airbag sensor assembly
B1847/61	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the curtain shield squib LH 2nd step circuit for 0.5 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH 2nd step) • Center airbag sensor assembly
B1848/61	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the curtain shield squib LH 2nd step circuit for 0.5 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH 2nd step) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK CURTAIN SHIELD AIRBAG LH (CURTAIN SHIELD SQUIB LH 2ND STEP)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

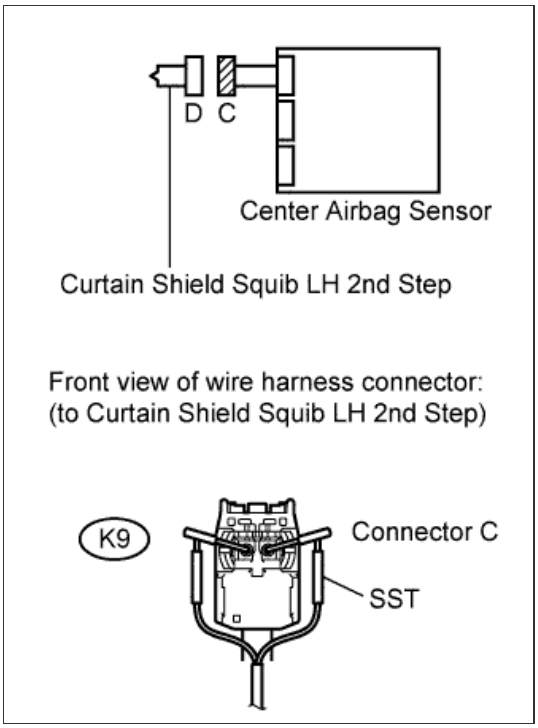
c. Disconnect the connectors from the curtain shield squib LH 2nd step.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.



CAUTION:

Never connect the tester to the curtain shield airbag LH (curtain shield squib LH 2nd step) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST
09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1845, B1846, B1847 or B1848 is not output.

HINT:

Codes other than DTC B1845, B1846, B1847 and B1848 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK

REPLACE CURTAIN SHIELD AIRBAG ASSEMBLY LH (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the floor wire connectors (on the curtain shield squib LH 2nd step side) are not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE FLOOR WIRE

OK

3.CHECK FLOOR WIRE (CURTAIN SHIELD SQUIB LH 2ND STEP CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K9-1 (CL2+) - Body ground	Engine switch on (IG)	Below 1 V
K9-2 (CL2-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K9-1 (CL2+) - K9-2 (CL2-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K9-1 (CL2+) - K9-2 (CL2-)	Always	1 MΩ or higher
K9-1 (CL2+) - Body ground	Always	1 MΩ or higher
K9-2 (CL2-) - Body	Always	1 MΩ or higher

ground		

NG → REPLACE FLOOR WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the curtain shield squib LH 2nd step and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1845, B1846, B1847 or B1848 is not output.

HINT:

Codes other than DTC B1845, B1846, B1847 and B1848 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (**Click here**)

OK

USE SIMULATION METHOD TO CHECK (**Click here**)

DTC B1635/24 Rear Airbag Sensor LH Circuit Malfunction

DTC B1637/82 Lost Communication with Rear Airbag Sensor LH

DTC B1690/15 Door Side Airbag Sensor RH Malfunction

DTC B1692/81 Lost Communication with Door Side Airbag Sensor RH

for Preparation Click here

DESCRIPTION

HINT:

"Door side airbag sensor RH" refer to the side airbag sensor RH.

- For DTC B1690 and B1635:
  The rear airbag sensor LH and side airbag sensor RH consists of the safing sensor, the diagnostic circuit, the lateral deceleration sensor, etc.
  If the center airbag sensor receives signals from the lateral deceleration sensor, it determines whether the SRS should be activated.
  DTC B1690/15 or B1635/24 is stored when a malfunction is detected in the rear airbag sensor LH or side airbag sensor RH circuit.
- For DTC B1692 and B1637:
  The circuit for the side collision sensor RH or LH (to determine deployment of the front seat airbag RH or LH, rear seat side airbag RH or LH and curtain shield airbag RH or LH) is composed of the center airbag sensor, side airbag sensor RH or LH, and rear airbag sensor RH or LH.
  The side airbag sensor RH or LH, and rear airbag sensor RH or LH detect impacts to the vehicle and send signals to the center airbag sensor to determine if the airbag should be deployed.
  DTC B1692 or B1637 is stored when a malfunction is detected in the circuit for the side collision sensor RH or LH (to determine deployment of the front seat airbag RH or LH, rear seat side airbag RH or LH, and curtain shield airbag RH or LH).

DTC Code	DTC Detection Condition	Trouble Area
B1635/24	When one of the following conditions is met: • A side airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Rear airbag sensor LH • Center airbag sensor assembly
B1637/82	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH, rear seat side airbag LH and curtain shield airbag LH) for 2 seconds. • A side airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Rear airbag sensor LH • Center airbag sensor assembly
B1690/15	When one of the following conditions is met: • A side airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Side airbag sensor RH • Center airbag sensor assembly
B1692/81	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH, rear seat side airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Side airbag sensor RH • Center airbag sensor assembly

DTC B1635/24 Rear Airbag Sensor LH Circuit Malfunction

DTC B1637/82 Lost Communication with Rear Airbag Sensor LH

DTC B1690/15 Door Side Airbag Sensor RH Malfunction

DTC B1692/81 Lost Communication with Door Side Airbag Sensor RH

for Preparation Click here

DESCRIPTION

HINT:

"Door side airbag sensor RH" refer to the side airbag sensor RH.

- For DTC B1690 and B1635:
  The rear airbag sensor LH and side airbag sensor RH consists of the safing sensor, the diagnostic circuit, the lateral deceleration sensor, etc.
  If the center airbag sensor receives signals from the lateral deceleration sensor, it determines whether the SRS should be activated.
  DTC B1690/15 or B1635/24 is stored when a malfunction is detected in the rear airbag sensor LH or side airbag sensor RH circuit.
- For DTC B1692 and B1637:
  The circuit for the side collision sensor RH or LH (to determine deployment of the front seat airbag RH or LH, rear seat side airbag RH or LH and curtain shield airbag RH or LH) is composed of the center airbag sensor, side airbag sensor RH or LH, and rear airbag sensor RH or LH.
  The side airbag sensor RH or LH, and rear airbag sensor RH or LH detect impacts to the vehicle and send signals to the center airbag sensor to determine if the airbag should be deployed.
  DTC B1692 or B1637 is stored when a malfunction is detected in the circuit for the side collision sensor RH or LH (to determine deployment of the front seat airbag RH or LH, rear seat side airbag RH or LH, and curtain shield airbag RH or LH).

DTC Code	DTC Detection Condition	Trouble Area
B1635/24	When one of the following conditions is met: • A side airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Rear airbag sensor LH • Center airbag sensor assembly
B1637/82	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH, rear seat side airbag LH and curtain shield airbag LH) for 2 seconds. • A side airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Rear airbag sensor LH • Center airbag sensor assembly
B1690/15	When one of the following conditions is met: • A side airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Side airbag sensor RH • Center airbag sensor assembly
B1692/81	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH, rear seat side airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Side airbag sensor RH • Center airbag sensor assembly

i. Check for DTCs (Click here).

OK:
DTC B1635 and B1637 are not output.

HINT:

Codes other than DTC B1635 and B1637 may be output at this time, but they are not related to this check.

j. Turn the engine switch off.

k. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

l. Return the side airbag sensor RH and LH to their original positions and connect the connectors to them.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

REPLACE REAR AIRBAG SENSOR LH (Click here)

DTC B1845/61 Short in Curtain Shield Squib LH 2nd Step Circuit

DTC B1846/61 Open in Curtain Shield Squib LH 2nd Step Circuit

DTC B1847/61 Short to GND in Curtain Shield Squib LH 2nd Step Circuit

DTC B1848/61 Short to B+ in Curtain Shield Squib LH 2nd Step Circuit

for Preparation Click here

DESCRIPTION

The curtain shield squib LH 2nd step circuit consists of the center airbag sensor and the curtain shield airbag LH.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the curtain shield squib LH 2nd step circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1845/61	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the curtain shield squib LH 2nd step circuit during the primary check. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH 2nd step) • Center airbag sensor assembly
B1846/61	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the curtain shield squib LH 2nd step circuit for 2 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH 2nd step) • Center airbag sensor assembly
B1847/61	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the curtain shield squib LH 2nd step circuit for 0.5 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH 2nd step) • Center airbag sensor assembly
B1848/61	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the curtain shield squib LH 2nd step circuit for 0.5 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH 2nd step) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK CURTAIN SHIELD AIRBAG LH (CURTAIN SHIELD SQUIB LH 2ND STEP)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

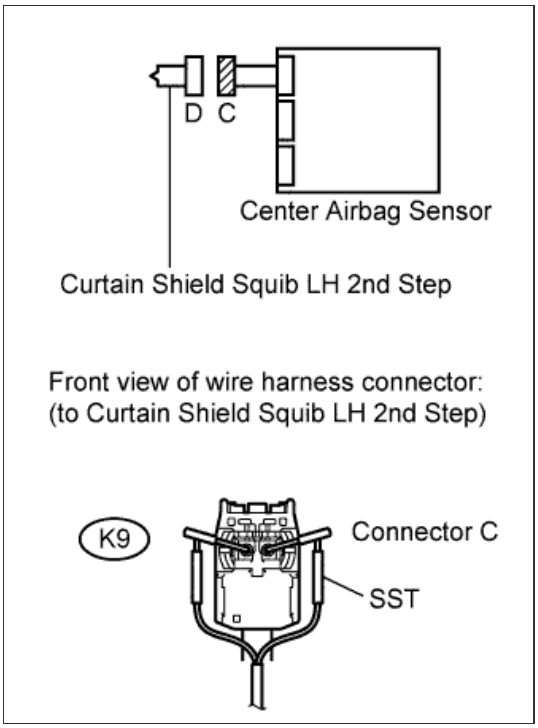
c. Disconnect the connectors from the curtain shield squib LH 2nd step.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.



CAUTION:

Never connect the tester to the curtain shield airbag LH (curtain shield squib LH 2nd step) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST
09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1845, B1846, B1847 or B1848 is not output.

HINT:

Codes other than DTC B1845, B1846, B1847 and B1848 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK

REPLACE CURTAIN SHIELD AIRBAG ASSEMBLY LH (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the floor wire connectors (on the curtain shield squib LH 2nd step side) are not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE FLOOR WIRE

OK

3.CHECK FLOOR WIRE (CURTAIN SHIELD SQUIB LH 2ND STEP CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K9-1 (CL2+) - Body ground	Engine switch on (IG)	Below 1 V
K9-2 (CL2-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K9-1 (CL2+) - K9-2 (CL2-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K9-1 (CL2+) - K9-2 (CL2-)	Always	1 MΩ or higher
K9-1 (CL2+) - Body ground	Always	1 MΩ or higher
K9-2 (CL2-) - Body	Always	1 MΩ or higher

ground		

NG → REPLACE FLOOR WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the curtain shield squib LH 2nd step and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1845, B1846, B1847 or B1848 is not output.

HINT:

Codes other than DTC B1845, B1846, B1847 and B1848 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (**Click here**)

OK

USE SIMULATION METHOD TO CHECK (**Click here**)

DTC B1638/82 Rear Airbag Sensor Assembly LH Initialization Incomplete

DTC B1643/81 Side Satellite Sensor Bus RH Initialization Incomplete

DTC B1648/82 Side Satellite Sensor Bus LH Initialization Incomplete

DTC B1693/81 Door Side Airbag Sensor RH Initialization Incomplete

for Preparation Click here

DESCRIPTION

HINT:

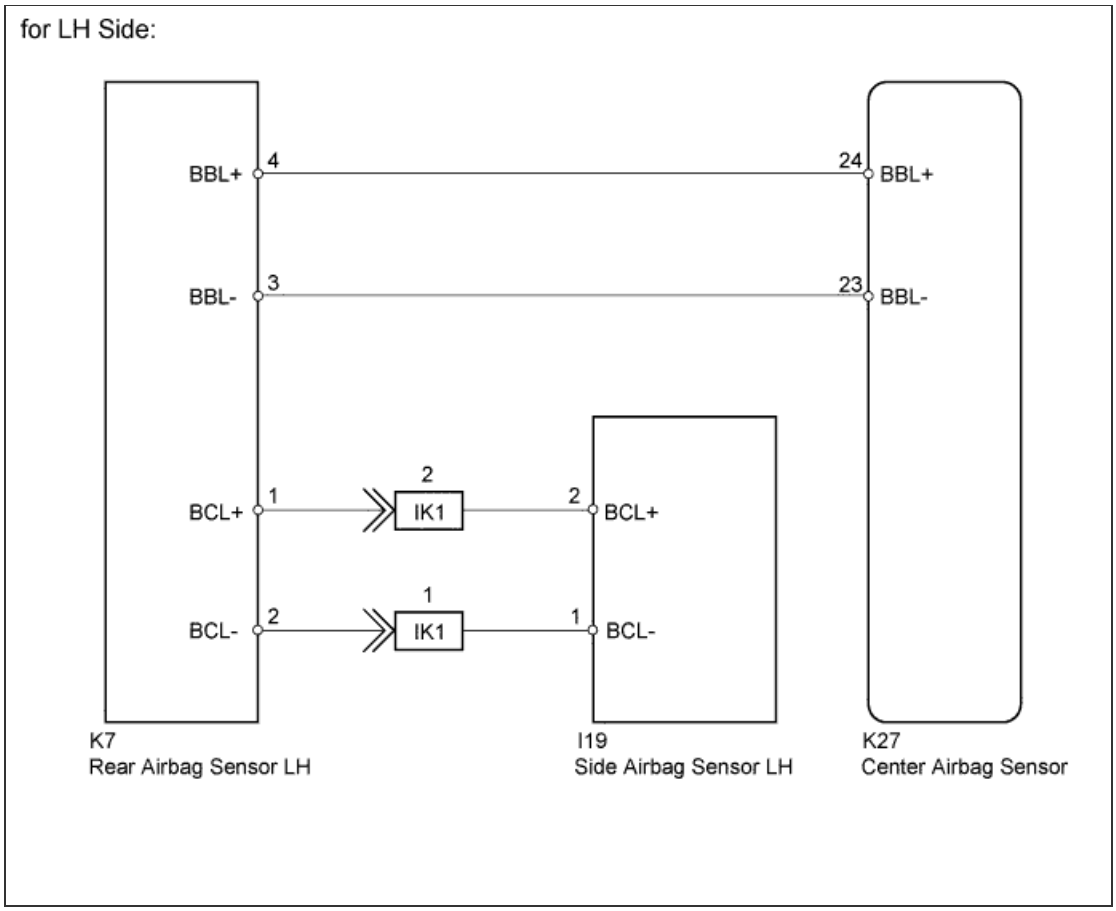
"Door side airbag sensor RH" refer to the side airbag sensor RH.



- The circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH, rear seat side airbag LH or RH and curtain shield airbag LH or RH) is composed of the center airbag sensor, side airbag sensor LH or RH, and rear airbag sensor LH or RH.
  The side airbag sensor LH or RH and rear airbag sensor LH or RH detect impacts to the vehicle and send signals to the center airbag sensor to determine if the airbag should be deployed.
  DTC B1693/81 or B1648/82 is stored when a malfunction is detected in the circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH and curtain shield airbag LH or RH).
  DTC B1643/81 or B1638/82 is stored when a malfunction is detected in the circuit for the rear collision sensor LH or RH (to determine deployment of the rear seat side airbag LH or RH and curtain shield airbag LH or RH).

DTC Code	DTC Detection Condition	Trouble Area
B1638/82	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the rear collision sensor LH (to determine deployment of the rear side seat airbag LH and curtain shield airbag LH) for 2 seconds. • A rear airbag sensor LH malfunction. • A side airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear airbag sensor LH • Side airbag sensor LH • Center airbag sensor assembly
B1643/81	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the rear collision sensor RH (to determine deployment of the rear seat side airbag RH and curtain shield airbag RH) for 2 seconds. • A rear airbag sensor RH malfunction. • A side airbag sensor RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear airbag sensor RH • Side airbag sensor RH • Center airbag sensor assembly
B1648/82	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH and curtain shield airbag LH) for 2 seconds.	• No. 2 floor wire • Front door wire LH • Side airbag sensor LH • Rear airbag sensor LH • Center airbag sensor assembly

	• A side airbag sensor LH malfunction. • A rear airbag sensor LH malfunction. • A center airbag sensor malfunction.	
B1693/81	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A rear airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front door wire RH • Side airbag sensor RH • Rear airbag sensor RH • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK PAST DTC

a. Turn the engine switch on (IG), and wait for at least 60 seconds.

b. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1637 or B1692 is output	A
DTC B1632 or B1697 is output	B
DTC B1632, B1637, B1692 and B1697 are not output	C

A → GO TO DTC B1637 (Click here)

B → GO TO DTC B1632 (Click here)

C

2.CHECK FOR DTC

a. Turn the engine switch off.

HINT:

If a communication error occurs, DTCs for both the LH and RH sides will be stored simultaneously. The malfunctioning area can be identified by turning the engine switch off and then on (IG) again.

b. Turn the engine switch on (IG), and wait for at least 60 seconds.

c. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1638, B1643, B1648 and B1693 are not output	A
DTC B1638 or B1648 is output	B
DTC B1643 or B1693 is output	C

HINT:

Codes other than DTC B1638, B1643,B1648 and B1693 may be output at this time, but they are not related to this check.

A → USE SIMULATION METHOD TO CHECK (Click here)

B → Go to step 13

C

3.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and side airbag sensor RH.

OK:

The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

4.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and side airbag sensor RH.

b. Check that the connectors (on the center airbag sensor side and side airbag sensor RH side) are not damaged.

OK:

The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

5.CHECK SIDE AIRBAG SENSOR RH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-4 (BBR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-3 (BBR-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 17 (BBR+) and 18 (BBR-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-4 (BBR+) - I9-3 (BBR-)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-4 (BBR+) - I9-3 (BBR-)	Always	1 MΩ or higher
I9-4 (BBR+) - Body ground	Always	1 MΩ or higher
I9-3 (BBR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 11

OK

6.CHECK CONNECTION OF CONNECTORS

a. Check that the connector is properly connected to the rear airbag sensor RH.

OK:
The connector is properly connected.

NG → CONNECT CONNECTOR PROPERLY

OK

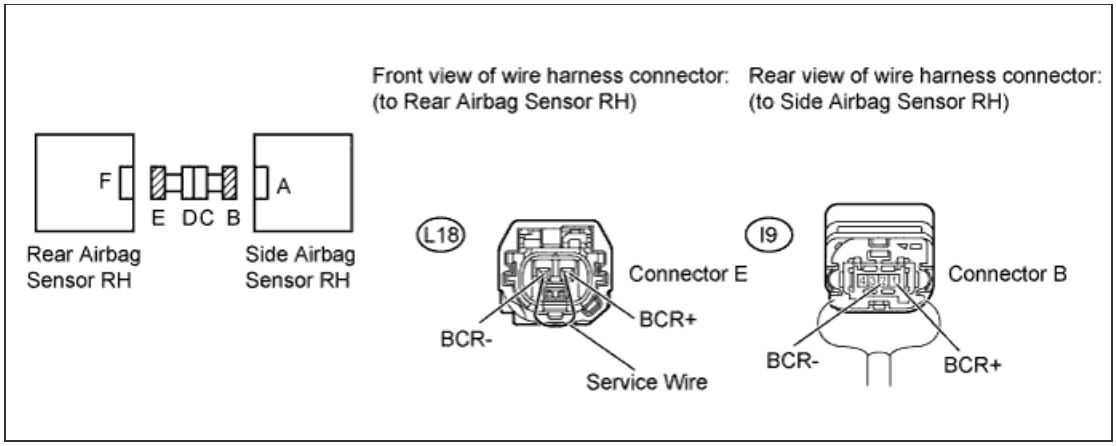
7.CHECK CONNECTORS

a. Disconnect the connectors from the side airbag sensor RH and rear airbag sensor RH.



b. Check that the connector (on the rear airbag sensor RH side) is not damaged.

OK:
The connector is not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

8.CHECK REAR AIRBAG SENSOR RH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector E.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

g. Disconnect the service wire from connector E.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 12

OK

9.CHECK SIDE AIRBAG SENSOR RH

a. Connect the connector to the center airbag sensor.

b. Interchange the side airbag sensor LH with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1643, B1693 and B1698 are not output	A
DTC B1698 is output	B
DTC B1643 and B1693 are output	C

HINT:

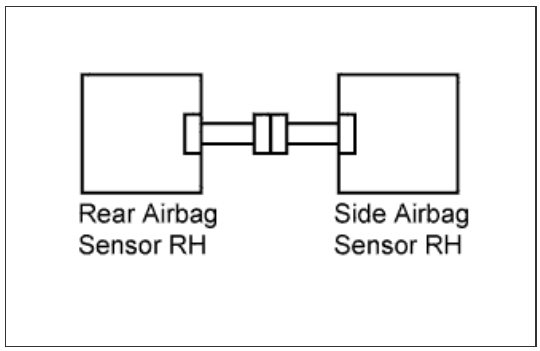
Codes other than DTC B1643,B1693 and B1698 may be output at this time, but they are not related to this check.

i. Turn the engine switch off.

j. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.



k. Return the side airbag sensor LH and RH to their original positions and connect the connectors to them.

A → USE SIMULATION METHOD TO CHECK (Click here)

B → REPLACE SIDE AIRBAG SENSOR RH (Click here)

C

10.CHECK REAR AIRBAG SENSOR RH

a. Temporarily replace the rear airbag sensor RH with a new one.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1643 or B1693 is not output.

HINT:

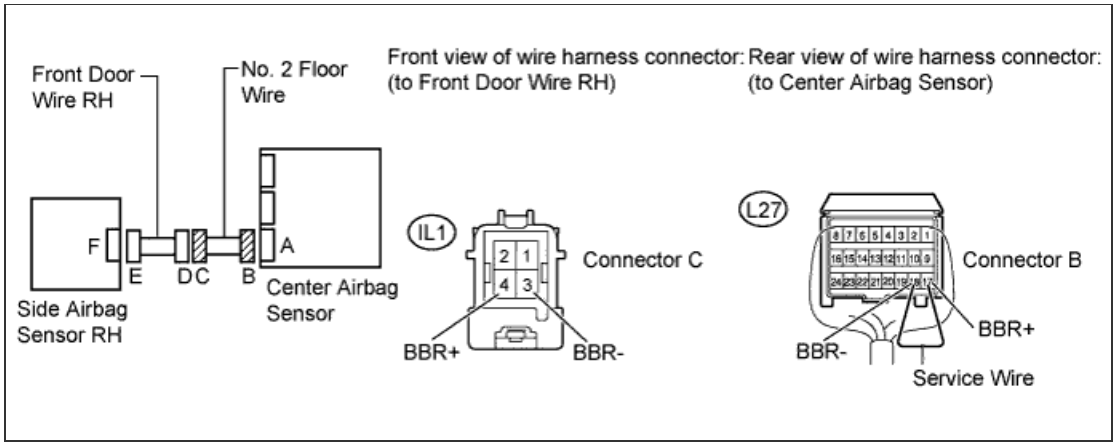
Codes other than DTC B1643 and B1693 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.



i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

REPLACE REAR AIRBAG SENSOR RH (Click here)

11.CHECK NO. 2 FLOOR WIRE (CENTER AIRBAG SENSOR - FRONT DOOR WIRE RH)

a. Disconnect the No. 2 floor wire from the front door wire RH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
IL1-4 (BBR+) - Body ground	Engine switch on (IG)	Below 1 V
IL1-3 (BBR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 17 (BBR+) and 18 (BBR-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
IL1-4 (BBR+) - IL1-3 (BBR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector B.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
IL1-4 (BBR+) - IL1-3 (BBR-)	Always	1 MΩ or higher
IL1-4 (BBR+) - Body ground	Always	1 MΩ or higher
IL1-3 (BBR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK → REPLACE FRONT DOOR WIRE RH

12.CHECK FRONT DOOR WIRE RH (SIDE AIRBAG SENSOR RH - NO. 2 FLOOR WIRE)

a. Disconnect the front door wire RH from the No. 2 floor wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FRONT DOOR WIRE RH

OK

REPLACE NO. 2 FLOOR WIRE

13.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and rear airbag sensor LH.

OK:

The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

14.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and rear airbag sensor LH.

b. Check that the connectors (on the center airbag sensor side and rear airbag sensor LH side) are not damaged.

OK:

The connectors are not deformed or damaged.

NG → REPLACE FLOOR WIRE

OK

15.CHECK FLOOR WIRE (CENTER AIRBAG SENSOR - REAR AIRBAG SENSOR LH)

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-4 (BBL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-3 (BBL-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 24 (BBL+) and 23 (BBL-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

		Specified

Tester Connection	Condition	Condition
K7-4 (BBL+) - K7-3 (BBL-)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-4 (BBL+) - K7-3 (BBL-)	Always	1 MΩ or higher
K7-4 (BBL+) - Body ground	Always	1 MΩ or higher
K7-3 (BBL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK

16.CHECK CONNECTION OF CONNECTOR

a. Check that the connector is properly connected to the side airbag sensor LH.

OK:
The connector is properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

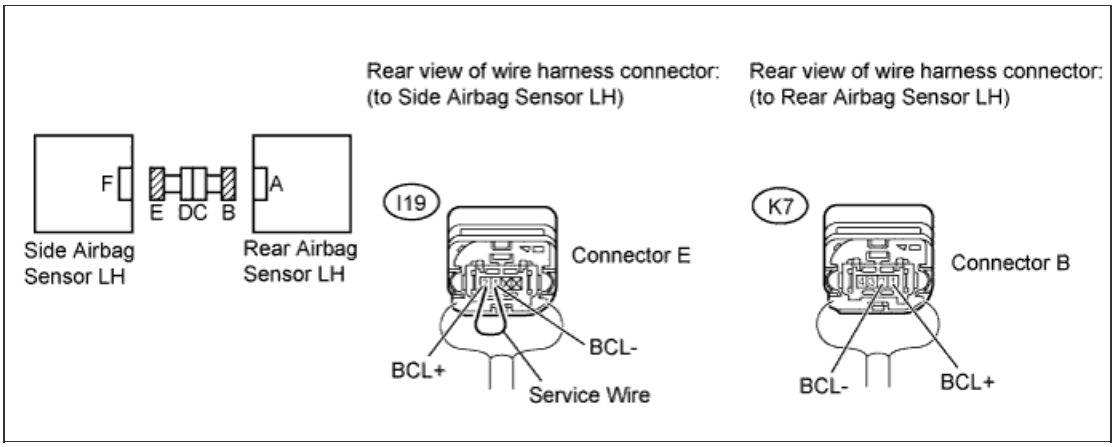
17.CHECK CONNECTORS

a. Disconnect the connectors from the rear airbag sensor LH and side airbag sensor LH.



b. Check that the connector (on the side airbag sensor LH side) is not damaged.

OK:
The connector is not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

18.CHECK SIDE AIRBAG SENSOR LH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-1 (BCL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-2 (BCL-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector E.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	Below 1 Ω

g. Disconnect the service wire from connector E.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	1 MΩ or higher
K7-1 (BCL+) - Body ground	Always	1 MΩ or higher
K7-2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → Go to step 21

OK

19.CHECK REAR AIRBAG SENSOR LH

a. Temporarily replace the side airbag sensor LH with a new one.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:
DTC B1638 or B1648 is not output.

HINT:

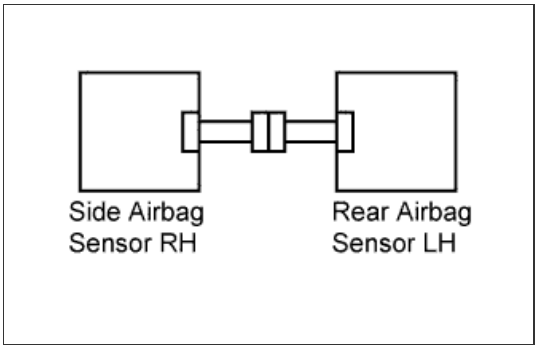
Codes other than DTC B1638 and B1648 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.



i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

NG → Go to step 20

OK

REPLACE REAR AIRBAG SENSOR LH (Click here)

20.CHECK SIDE AIRBAG SENSOR LH

a. Interchange the side airbag sensor RH with LH and connect the connectors to them.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 90 seconds.

g. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1638 or B1648 is output	A
DTC B1633 is output	B
DTC B1633, B1638 and B1648 are not output	C

HINT:

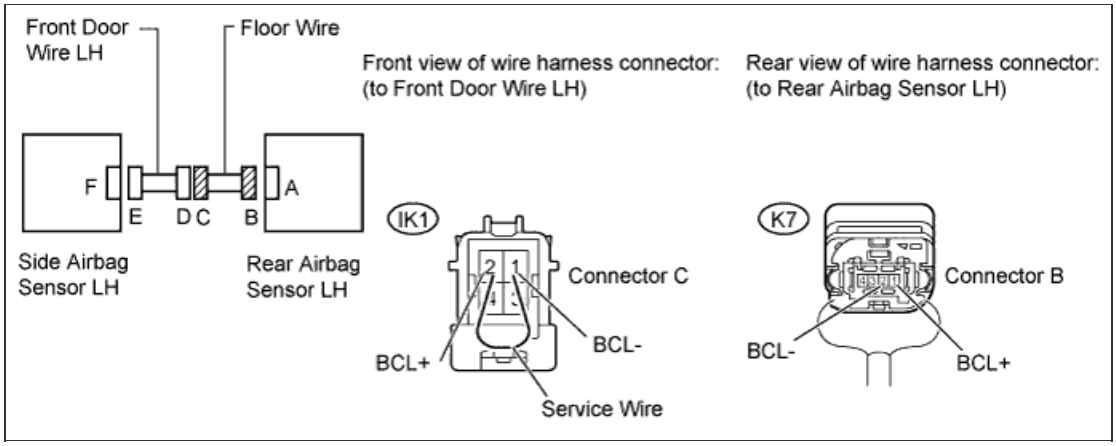
Codes other than DTC B1633, B1638 and B1648 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.

i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

j. Return the side airbag sensor RH and LH to their original positions and connect the connectors to them.



A → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

B → REPLACE SIDE AIRBAG SENSOR LH (Click here)

C

USE SIMULATION METHOD TO CHECK (Click here)

21.CHECK FLOOR WIRE (REAR AIRBAG SENSOR LH - FRONT DOOR WIRE LH)

a. Disconnect the floor wire from the front door wire LH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-1 (BCL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-2 (BCL-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	1 MΩ or higher
K7-1 (BCL+) - Body ground	Always	1 MΩ or higher
K7-2 (BCL-) - Body ground	Always	1 MΩ or higher

OK → REPLACE FRONT DOOR WIRE LH

DTC B1845/61 Short in Curtain Shield Squib LH 2nd Step Circuit

DTC B1846/61 Open in Curtain Shield Squib LH 2nd Step Circuit

DTC B1847/61 Short to GND in Curtain Shield Squib LH 2nd Step Circuit

DTC B1848/61 Short to B+ in Curtain Shield Squib LH 2nd Step Circuit

for Preparation Click here

DESCRIPTION

The curtain shield squib LH 2nd step circuit consists of the center airbag sensor and the curtain shield airbag LH.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the curtain shield squib LH 2nd step circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1845/61	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the curtain shield squib LH 2nd step circuit during the primary check. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH 2nd step) • Center airbag sensor assembly
B1846/61	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the curtain shield squib LH 2nd step circuit for 2 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH 2nd step) • Center airbag sensor assembly
B1847/61	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the curtain shield squib LH 2nd step circuit for 0.5 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH 2nd step) • Center airbag sensor assembly
B1848/61	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the curtain shield squib LH 2nd step circuit for 0.5 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH 2nd step) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK CURTAIN SHIELD AIRBAG LH (CURTAIN SHIELD SQUIB LH 2ND STEP)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

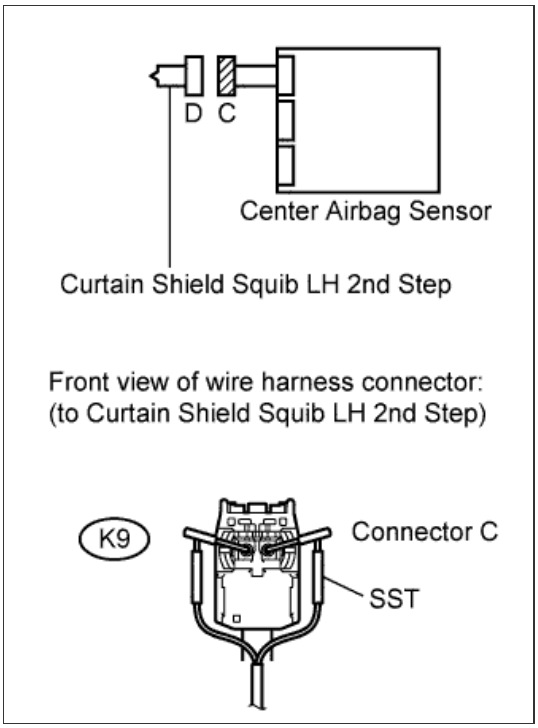
c. Disconnect the connectors from the curtain shield squib LH 2nd step.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.



CAUTION:

Never connect the tester to the curtain shield airbag LH (curtain shield squib LH 2nd step) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST
09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1845, B1846, B1847 or B1848 is not output.

HINT:

Codes other than DTC B1845, B1846, B1847 and B1848 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK

REPLACE CURTAIN SHIELD AIRBAG ASSEMBLY LH (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the floor wire connectors (on the curtain shield squib LH 2nd step side) are not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE FLOOR WIRE

OK

3.CHECK FLOOR WIRE (CURTAIN SHIELD SQUIB LH 2ND STEP CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K9-1 (CL2+) - Body ground	Engine switch on (IG)	Below 1 V
K9-2 (CL2-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K9-1 (CL2+) - K9-2 (CL2-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K9-1 (CL2+) - K9-2 (CL2-)	Always	1 MΩ or higher
K9-1 (CL2+) - Body ground	Always	1 MΩ or higher
K9-2 (CL2-) - Body	Always	1 MΩ or higher

ground		

NG → REPLACE FLOOR WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the curtain shield squib LH 2nd step and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1845, B1846, B1847 or B1848 is not output.

HINT:

Codes other than DTC B1845, B1846, B1847 and B1848 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (**Click here**)

OK

USE SIMULATION METHOD TO CHECK (**Click here**)

DTC B1638/82 Rear Airbag Sensor Assembly LH Initialization Incomplete

DTC B1643/81 Side Satellite Sensor Bus RH Initialization Incomplete

DTC B1648/82 Side Satellite Sensor Bus LH Initialization Incomplete

DTC B1693/81 Door Side Airbag Sensor RH Initialization Incomplete

for Preparation Click here

DESCRIPTION

HINT:

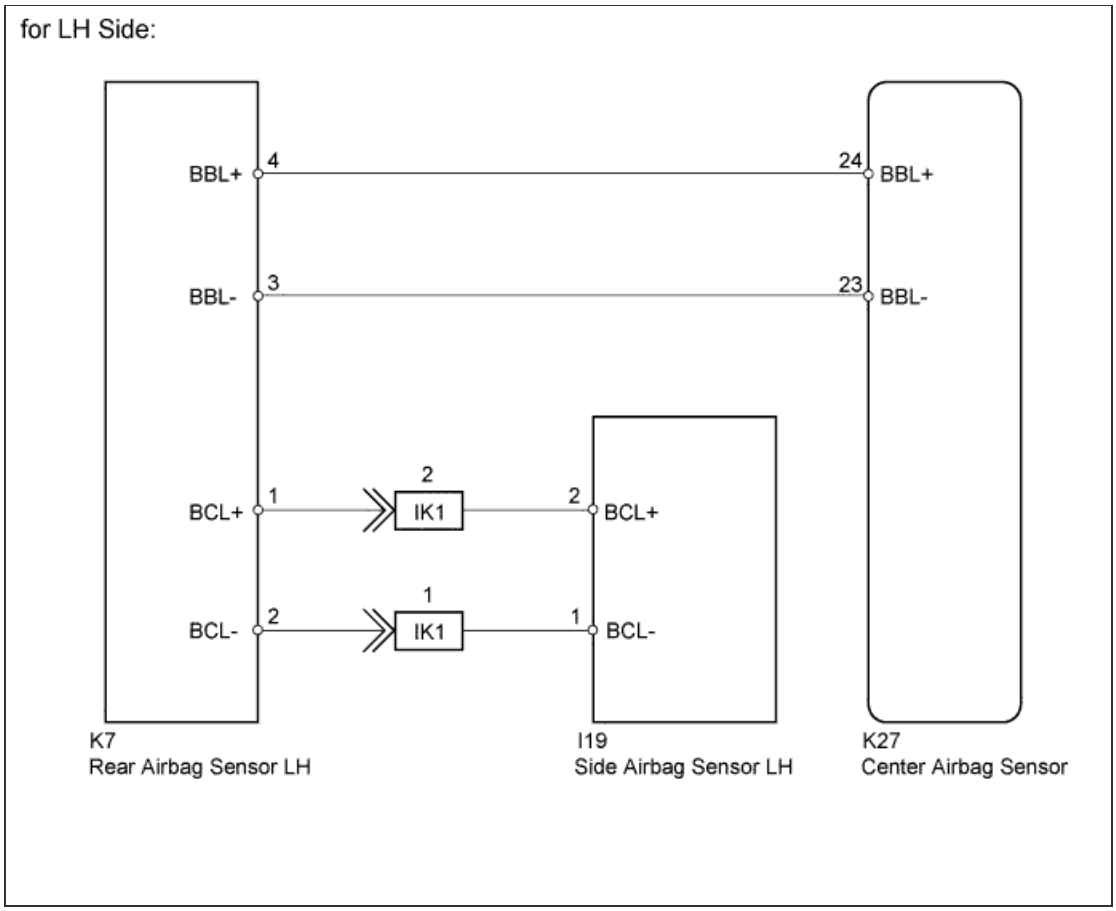
"Door side airbag sensor RH" refer to the side airbag sensor RH.



- The circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH, rear seat side airbag LH or RH and curtain shield airbag LH or RH) is composed of the center airbag sensor, side airbag sensor LH or RH, and rear airbag sensor LH or RH.
  The side airbag sensor LH or RH and rear airbag sensor LH or RH detect impacts to the vehicle and send signals to the center airbag sensor to determine if the airbag should be deployed.
  DTC B1693/81 or B1648/82 is stored when a malfunction is detected in the circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH and curtain shield airbag LH or RH).
  DTC B1643/81 or B1638/82 is stored when a malfunction is detected in the circuit for the rear collision sensor LH or RH (to determine deployment of the rear seat side airbag LH or RH and curtain shield airbag LH or RH).

DTC Code	DTC Detection Condition	Trouble Area
B1638/82	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the rear collision sensor LH (to determine deployment of the rear side seat airbag LH and curtain shield airbag LH) for 2 seconds. • A rear airbag sensor LH malfunction. • A side airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear airbag sensor LH • Side airbag sensor LH • Center airbag sensor assembly
B1643/81	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the rear collision sensor RH (to determine deployment of the rear seat side airbag RH and curtain shield airbag RH) for 2 seconds. • A rear airbag sensor RH malfunction. • A side airbag sensor RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear airbag sensor RH • Side airbag sensor RH • Center airbag sensor assembly
B1648/82	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH and curtain shield airbag LH) for 2 seconds.	• No. 2 floor wire • Front door wire LH • Side airbag sensor LH • Rear airbag sensor LH • Center airbag sensor assembly

	• A side airbag sensor LH malfunction. • A rear airbag sensor LH malfunction. • A center airbag sensor malfunction.	
B1693/81	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A rear airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front door wire RH • Side airbag sensor RH • Rear airbag sensor RH • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK PAST DTC

a. Turn the engine switch on (IG), and wait for at least 60 seconds.

b. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1637 or B1692 is output	A
DTC B1632 or B1697 is output	B
DTC B1632, B1637, B1692 and B1697 are not output	C

A → GO TO DTC B1637 (Click here)

B → GO TO DTC B1632 (Click here)

C

2.CHECK FOR DTC

a. Turn the engine switch off.

HINT:

If a communication error occurs, DTCs for both the LH and RH sides will be stored simultaneously. The malfunctioning area can be identified by turning the engine switch off and then on (IG) again.

b. Turn the engine switch on (IG), and wait for at least 60 seconds.

c. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1638, B1643, B1648 and B1693 are not output	A
DTC B1638 or B1648 is output	B
DTC B1643 or B1693 is output	C

HINT:

Codes other than DTC B1638, B1643,B1648 and B1693 may be output at this time, but they are not related to this check.

A → USE SIMULATION METHOD TO CHECK (Click here)

B → Go to step 13

C

3.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and side airbag sensor RH.

OK:

The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

4.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and side airbag sensor RH.

b. Check that the connectors (on the center airbag sensor side and side airbag sensor RH side) are not damaged.

OK:

The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

5.CHECK SIDE AIRBAG SENSOR RH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-4 (BBR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-3 (BBR-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 17 (BBR+) and 18 (BBR-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-4 (BBR+) - I9-3 (BBR-)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-4 (BBR+) - I9-3 (BBR-)	Always	1 MΩ or higher
I9-4 (BBR+) - Body ground	Always	1 MΩ or higher
I9-3 (BBR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 11

OK

6.CHECK CONNECTION OF CONNECTORS

a. Check that the connector is properly connected to the rear airbag sensor RH.

OK:
The connector is properly connected.

NG → CONNECT CONNECTOR PROPERLY

OK

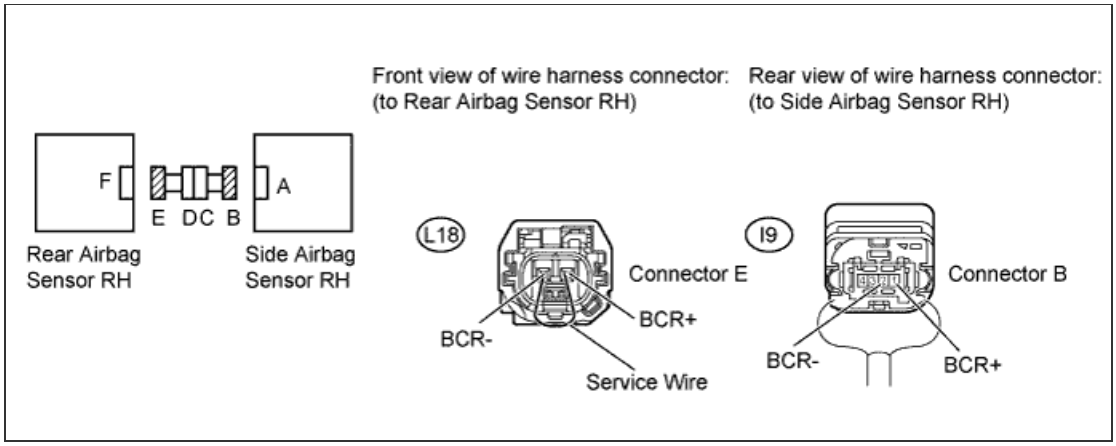
7.CHECK CONNECTORS

a. Disconnect the connectors from the side airbag sensor RH and rear airbag sensor RH.



b. Check that the connector (on the rear airbag sensor RH side) is not damaged.

OK:
The connector is not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

8.CHECK REAR AIRBAG SENSOR RH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector E.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

g. Disconnect the service wire from connector E.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 12

OK

9.CHECK SIDE AIRBAG SENSOR RH

a. Connect the connector to the center airbag sensor.

b. Interchange the side airbag sensor LH with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1643, B1693 and B1698 are not output	A
DTC B1698 is output	B
DTC B1643 and B1693 are output	C

HINT:

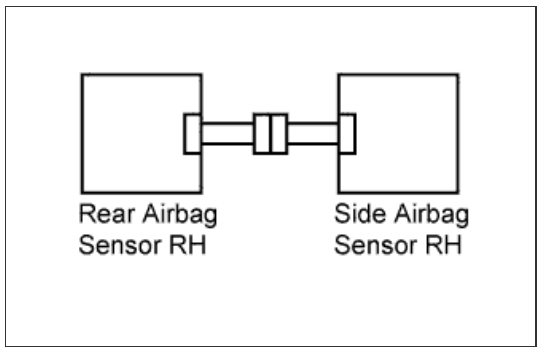
Codes other than DTC B1643,B1693 and B1698 may be output at this time, but they are not related to this check.

i. Turn the engine switch off.

j. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.



k. Return the side airbag sensor LH and RH to their original positions and connect the connectors to them.

A → USE SIMULATION METHOD TO CHECK (Click here)

B → REPLACE SIDE AIRBAG SENSOR RH (Click here)

C

10.CHECK REAR AIRBAG SENSOR RH

a. Temporarily replace the rear airbag sensor RH with a new one.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1643 or B1693 is not output.

HINT:

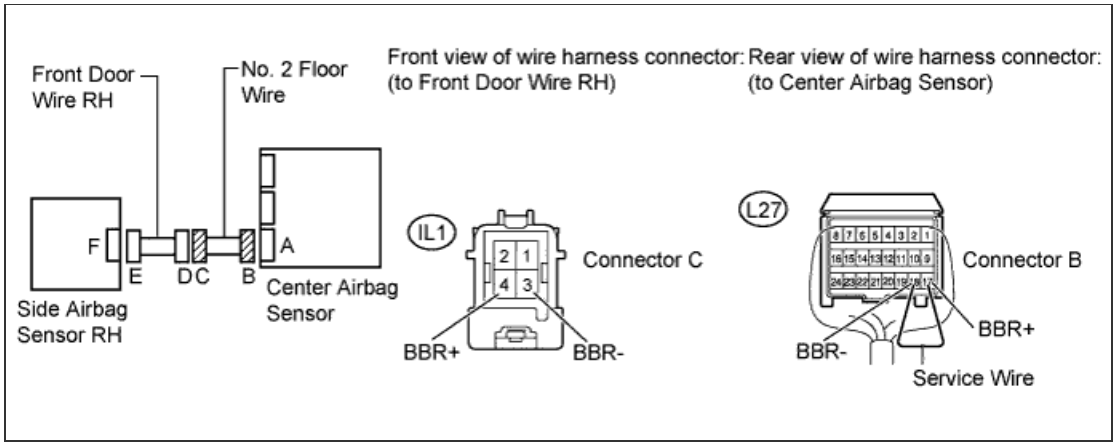
Codes other than DTC B1643 and B1693 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.



i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

REPLACE REAR AIRBAG SENSOR RH (Click here)

11.CHECK NO. 2 FLOOR WIRE (CENTER AIRBAG SENSOR - FRONT DOOR WIRE RH)

a. Disconnect the No. 2 floor wire from the front door wire RH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
IL1-4 (BBR+) - Body ground	Engine switch on (IG)	Below 1 V
IL1-3 (BBR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 17 (BBR+) and 18 (BBR-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
IL1-4 (BBR+) - IL1-3 (BBR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector B.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
IL1-4 (BBR+) - IL1-3 (BBR-)	Always	1 MΩ or higher
IL1-4 (BBR+) - Body ground	Always	1 MΩ or higher
IL1-3 (BBR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK → REPLACE FRONT DOOR WIRE RH

12.CHECK FRONT DOOR WIRE RH (SIDE AIRBAG SENSOR RH - NO. 2 FLOOR WIRE)

a. Disconnect the front door wire RH from the No. 2 floor wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FRONT DOOR WIRE RH

OK

REPLACE NO. 2 FLOOR WIRE

13.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and rear airbag sensor LH.

OK:

The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

14.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and rear airbag sensor LH.

b. Check that the connectors (on the center airbag sensor side and rear airbag sensor LH side) are not damaged.

OK:

The connectors are not deformed or damaged.

NG → REPLACE FLOOR WIRE

OK

15.CHECK FLOOR WIRE (CENTER AIRBAG SENSOR - REAR AIRBAG SENSOR LH)

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-4 (BBL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-3 (BBL-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 24 (BBL+) and 23 (BBL-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

		Specified

Tester Connection	Condition	Condition
K7-4 (BBL+) - K7-3 (BBL-)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-4 (BBL+) - K7-3 (BBL-)	Always	1 MΩ or higher
K7-4 (BBL+) - Body ground	Always	1 MΩ or higher
K7-3 (BBL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK

16.CHECK CONNECTION OF CONNECTOR

a. Check that the connector is properly connected to the side airbag sensor LH.

OK:
The connector is properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

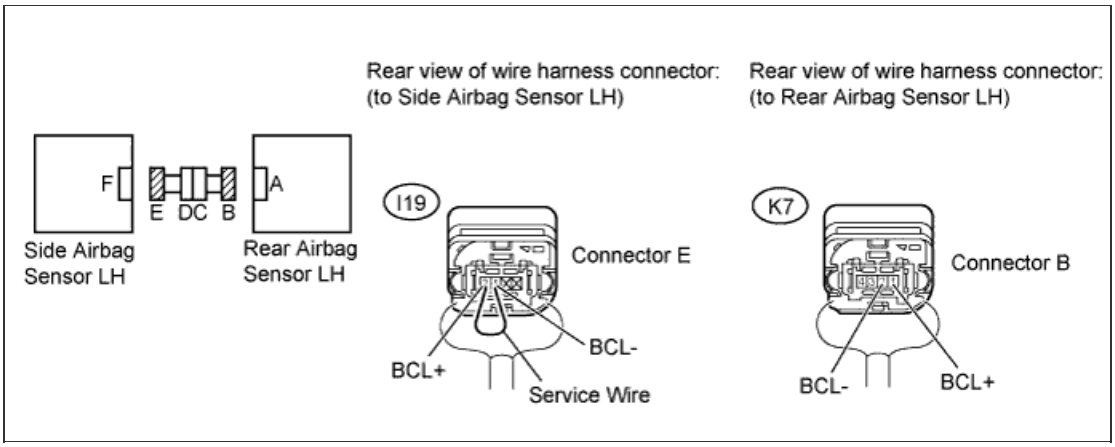
17.CHECK CONNECTORS

a. Disconnect the connectors from the rear airbag sensor LH and side airbag sensor LH.



b. Check that the connector (on the side airbag sensor LH side) is not damaged.

OK:
The connector is not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

18.CHECK SIDE AIRBAG SENSOR LH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-1 (BCL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-2 (BCL-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector E.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	Below 1 Ω

g. Disconnect the service wire from connector E.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	1 MΩ or higher
K7-1 (BCL+) - Body ground	Always	1 MΩ or higher
K7-2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → Go to step 21

OK

19.CHECK REAR AIRBAG SENSOR LH

a. Temporarily replace the side airbag sensor LH with a new one.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:
DTC B1638 or B1648 is not output.

HINT:

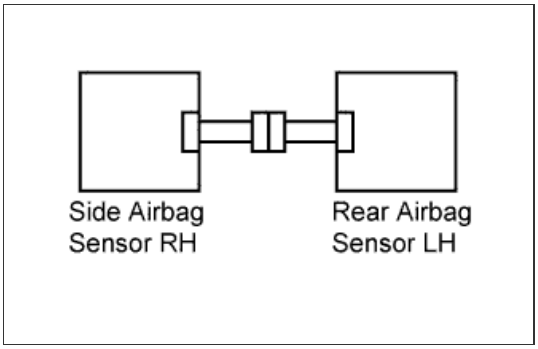
Codes other than DTC B1638 and B1648 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.



i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

NG → Go to step 20

OK

REPLACE REAR AIRBAG SENSOR LH (Click here)

20.CHECK SIDE AIRBAG SENSOR LH

a. Interchange the side airbag sensor RH with LH and connect the connectors to them.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 90 seconds.

g. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1638 or B1648 is output	A
DTC B1633 is output	B
DTC B1633, B1638 and B1648 are not output	C

HINT:

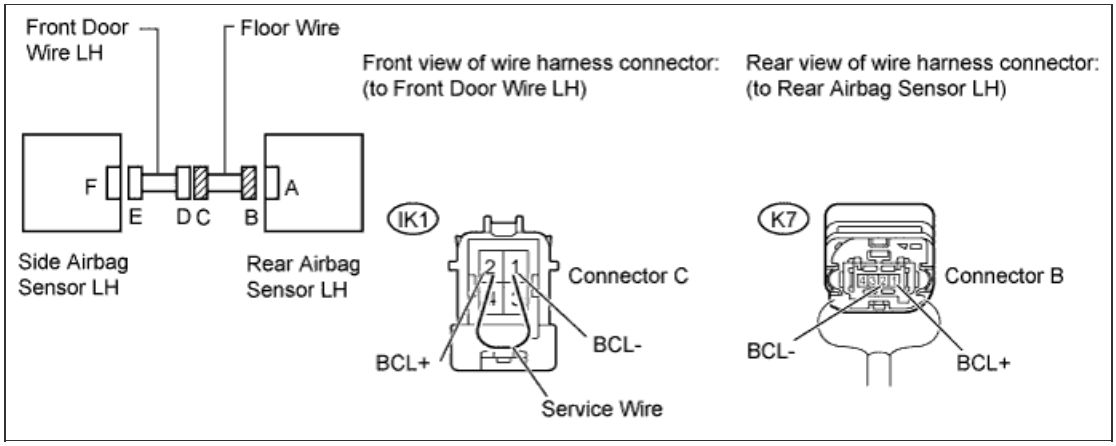
Codes other than DTC B1633, B1638 and B1648 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.

i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

j. Return the side airbag sensor RH and LH to their original positions and connect the connectors to them.



A → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

B → REPLACE SIDE AIRBAG SENSOR LH (Click here)

C

USE SIMULATION METHOD TO CHECK (Click here)

21.CHECK FLOOR WIRE (REAR AIRBAG SENSOR LH - FRONT DOOR WIRE LH)

a. Disconnect the floor wire from the front door wire LH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-1 (BCL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-2 (BCL-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	1 MΩ or higher
K7-1 (BCL+) - Body ground	Always	1 MΩ or higher
K7-2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK → REPLACE FRONT DOOR WIRE LH

DTC B1845/61 Short in Curtain Shield Squib LH 2nd Step Circuit

DTC B1846/61 Open in Curtain Shield Squib LH 2nd Step Circuit

DTC B1847/61 Short to GND in Curtain Shield Squib LH 2nd Step Circuit

DTC B1848/61 Short to B+ in Curtain Shield Squib LH 2nd Step Circuit

for Preparation Click here

DESCRIPTION

The curtain shield squib LH 2nd step circuit consists of the center airbag sensor and the curtain shield airbag LH.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the curtain shield squib LH 2nd step circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1845/61	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the curtain shield squib LH 2nd step circuit during the primary check. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH 2nd step) • Center airbag sensor assembly
B1846/61	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the curtain shield squib LH 2nd step circuit for 2 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH 2nd step) • Center airbag sensor assembly
B1847/61	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the curtain shield squib LH 2nd step circuit for 0.5 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH 2nd step) • Center airbag sensor assembly
B1848/61	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the curtain shield squib LH 2nd step circuit for 0.5 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH 2nd step) • Center airbag sensor assembly

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK CURTAIN SHIELD AIRBAG LH (CURTAIN SHIELD SQUIB LH 2ND STEP)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

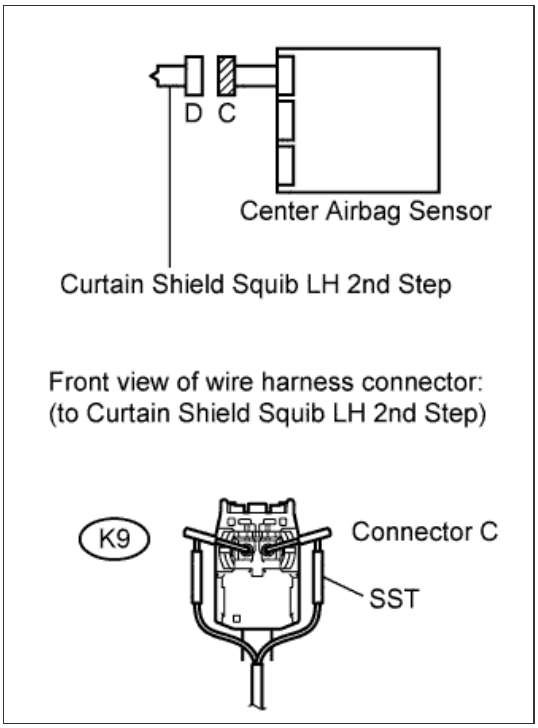
c. Disconnect the connectors from the curtain shield squib LH 2nd step.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.



CAUTION:

Never connect the tester to the curtain shield airbag LH (curtain shield squib LH 2nd step) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST
09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1845, B1846, B1847 or B1848 is not output.

HINT:

Codes other than DTC B1845, B1846, B1847 and B1848 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK

REPLACE CURTAIN SHIELD AIRBAG ASSEMBLY LH (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the floor wire connectors (on the curtain shield squib LH 2nd step side) are not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE FLOOR WIRE

OK

3.CHECK FLOOR WIRE (CURTAIN SHIELD SQUIB LH 2ND STEP CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K9-1 (CL2+) - Body ground	Engine switch on (IG)	Below 1 V
K9-2 (CL2-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K9-1 (CL2+) - K9-2 (CL2-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K9-1 (CL2+) - K9-2 (CL2-)	Always	1 MΩ or higher
K9-1 (CL2+) - Body ground	Always	1 MΩ or higher
K9-2 (CL2-) - Body	Always	1 MΩ or higher

ground		

NG → REPLACE FLOOR WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the curtain shield squib LH 2nd step and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1845, B1846, B1847 or B1848 is not output.

HINT:

Codes other than DTC B1845, B1846, B1847 and B1848 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (**Click here**)

OK

USE SIMULATION METHOD TO CHECK (**Click here**)

DTC B1638/82 Rear Airbag Sensor Assembly LH Initialization Incomplete

DTC B1643/81 Side Satellite Sensor Bus RH Initialization Incomplete

DTC B1648/82 Side Satellite Sensor Bus LH Initialization Incomplete

DTC B1693/81 Door Side Airbag Sensor RH Initialization Incomplete

for Preparation Click here

DESCRIPTION

HINT:

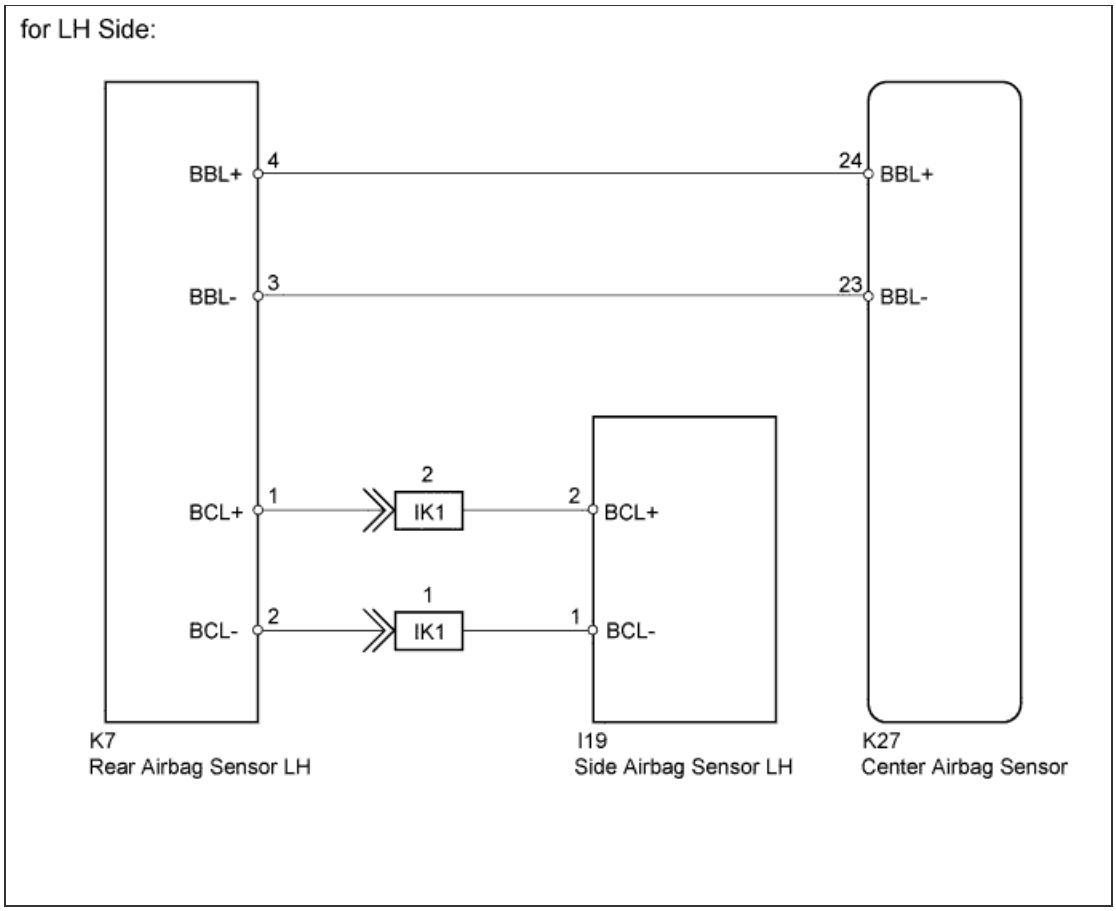
"Door side airbag sensor RH" refer to the side airbag sensor RH.



- The circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH, rear seat side airbag LH or RH and curtain shield airbag LH or RH) is composed of the center airbag sensor, side airbag sensor LH or RH, and rear airbag sensor LH or RH.
  The side airbag sensor LH or RH and rear airbag sensor LH or RH detect impacts to the vehicle and send signals to the center airbag sensor to determine if the airbag should be deployed.
  DTC B1693/81 or B1648/82 is stored when a malfunction is detected in the circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH and curtain shield airbag LH or RH).
  DTC B1643/81 or B1638/82 is stored when a malfunction is detected in the circuit for the rear collision sensor LH or RH (to determine deployment of the rear seat side airbag LH or RH and curtain shield airbag LH or RH).

DTC Code	DTC Detection Condition	Trouble Area
B1638/82	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the rear collision sensor LH (to determine deployment of the rear side seat airbag LH and curtain shield airbag LH) for 2 seconds. • A rear airbag sensor LH malfunction. • A side airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear airbag sensor LH • Side airbag sensor LH • Center airbag sensor assembly
B1643/81	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the rear collision sensor RH (to determine deployment of the rear seat side airbag RH and curtain shield airbag RH) for 2 seconds. • A rear airbag sensor RH malfunction. • A side airbag sensor RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear airbag sensor RH • Side airbag sensor RH • Center airbag sensor assembly
B1648/82	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH and curtain shield airbag LH) for 2 seconds.	• No. 2 floor wire • Front door wire LH • Side airbag sensor LH • Rear airbag sensor LH • Center airbag sensor assembly

	• A side airbag sensor LH malfunction. • A rear airbag sensor LH malfunction. • A center airbag sensor malfunction.	
B1693/81	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A rear airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front door wire RH • Side airbag sensor RH • Rear airbag sensor RH • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK PAST DTC

a. Turn the engine switch on (IG), and wait for at least 60 seconds.

b. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1637 or B1692 is output	A
DTC B1632 or B1697 is output	B
DTC B1632, B1637, B1692 and B1697 are not output	C

A → GO TO DTC B1637 (Click here)

B → GO TO DTC B1632 (Click here)

C

2.CHECK FOR DTC

a. Turn the engine switch off.

HINT:

If a communication error occurs, DTCs for both the LH and RH sides will be stored simultaneously. The malfunctioning area can be identified by turning the engine switch off and then on (IG) again.

b. Turn the engine switch on (IG), and wait for at least 60 seconds.

c. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1638, B1643, B1648 and B1693 are not output	A
DTC B1638 or B1648 is output	B
DTC B1643 or B1693 is output	C

HINT:

Codes other than DTC B1638, B1643,B1648 and B1693 may be output at this time, but they are not related to this check.

A → USE SIMULATION METHOD TO CHECK (Click here)

B → Go to step 13

C

3.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and side airbag sensor RH.

OK:

The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

4.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and side airbag sensor RH.

b. Check that the connectors (on the center airbag sensor side and side airbag sensor RH side) are not damaged.

OK:

The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

5.CHECK SIDE AIRBAG SENSOR RH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-4 (BBR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-3 (BBR-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 17 (BBR+) and 18 (BBR-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-4 (BBR+) - I9-3 (BBR-)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-4 (BBR+) - I9-3 (BBR-)	Always	1 MΩ or higher
I9-4 (BBR+) - Body ground	Always	1 MΩ or higher
I9-3 (BBR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 11

OK

6.CHECK CONNECTION OF CONNECTORS

a. Check that the connector is properly connected to the rear airbag sensor RH.

OK:
The connector is properly connected.

NG → CONNECT CONNECTOR PROPERLY

OK

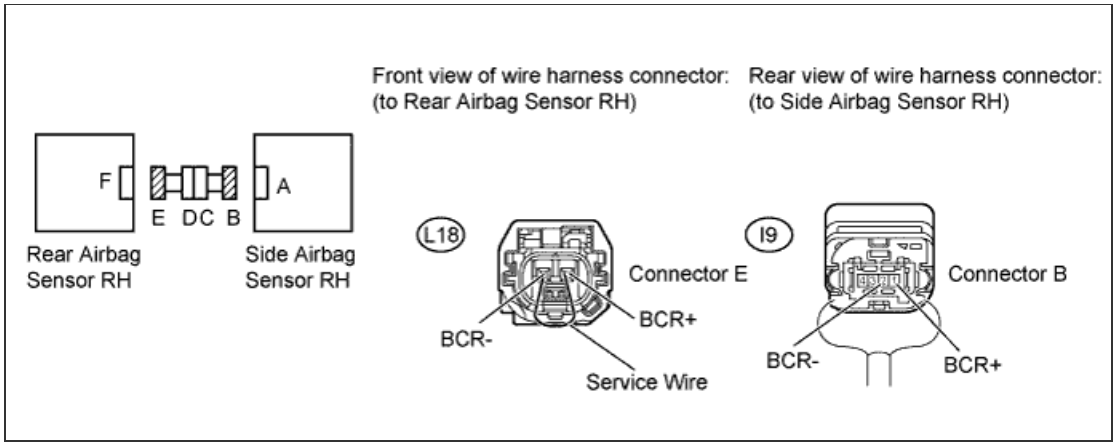
7.CHECK CONNECTORS

a. Disconnect the connectors from the side airbag sensor RH and rear airbag sensor RH.



b. Check that the connector (on the rear airbag sensor RH side) is not damaged.

OK:
The connector is not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

8.CHECK REAR AIRBAG SENSOR RH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector E.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

g. Disconnect the service wire from connector E.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 12

OK

9.CHECK SIDE AIRBAG SENSOR RH

a. Connect the connector to the center airbag sensor.

b. Interchange the side airbag sensor LH with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1643, B1693 and B1698 are not output	A
DTC B1698 is output	B
DTC B1643 and B1693 are output	C

HINT:

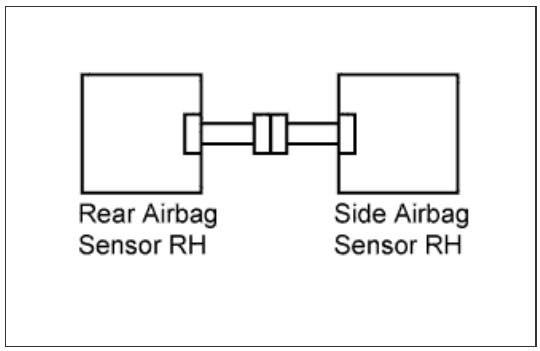
Codes other than DTC B1643,B1693 and B1698 may be output at this time, but they are not related to this check.

i. Turn the engine switch off.

j. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.



k. Return the side airbag sensor LH and RH to their original positions and connect the connectors to them.

A → USE SIMULATION METHOD TO CHECK (Click here)

B → REPLACE SIDE AIRBAG SENSOR RH (Click here)

C

10.CHECK REAR AIRBAG SENSOR RH

a. Temporarily replace the rear airbag sensor RH with a new one.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1643 or B1693 is not output.

HINT:

Codes other than DTC B1643 and B1693 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.

i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

REPLACE REAR AIRBAG SENSOR RH (Click here)

11.CHECK NO. 2 FLOOR WIRE (CENTER AIRBAG SENSOR - FRONT DOOR WIRE RH)

a. Disconnect the No. 2 floor wire from the front door wire RH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
IL1-4 (BBR+) - Body ground	Engine switch on (IG)	Below 1 V
IL1-3 (BBR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 17 (BBR+) and 18 (BBR-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
IL1-4 (BBR+) - IL1-3 (BBR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector B.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
IL1-4 (BBR+) - IL1-3 (BBR-)	Always	1 MΩ or higher
IL1-4 (BBR+) - Body ground	Always	1 MΩ or higher
IL1-3 (BBR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK → REPLACE FRONT DOOR WIRE RH

12.CHECK FRONT DOOR WIRE RH (SIDE AIRBAG SENSOR RH - NO. 2 FLOOR WIRE)

a. Disconnect the front door wire RH from the No. 2 floor wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FRONT DOOR WIRE RH

OK

REPLACE NO. 2 FLOOR WIRE

13.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and rear airbag sensor LH.

OK:

The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

14.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and rear airbag sensor LH.

b. Check that the connectors (on the center airbag sensor side and rear airbag sensor LH side) are not damaged.

OK:

The connectors are not deformed or damaged.

NG → REPLACE FLOOR WIRE

OK

15.CHECK FLOOR WIRE (CENTER AIRBAG SENSOR - REAR AIRBAG SENSOR LH)

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-4 (BBL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-3 (BBL-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 24 (BBL+) and 23 (BBL-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

		Specified

Tester Connection	Condition	Condition
K7-4 (BBL+) - K7-3 (BBL-)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-4 (BBL+) - K7-3 (BBL-)	Always	1 MΩ or higher
K7-4 (BBL+) - Body ground	Always	1 MΩ or higher
K7-3 (BBL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK

16.CHECK CONNECTION OF CONNECTOR

a. Check that the connector is properly connected to the side airbag sensor LH.

OK:
The connector is properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

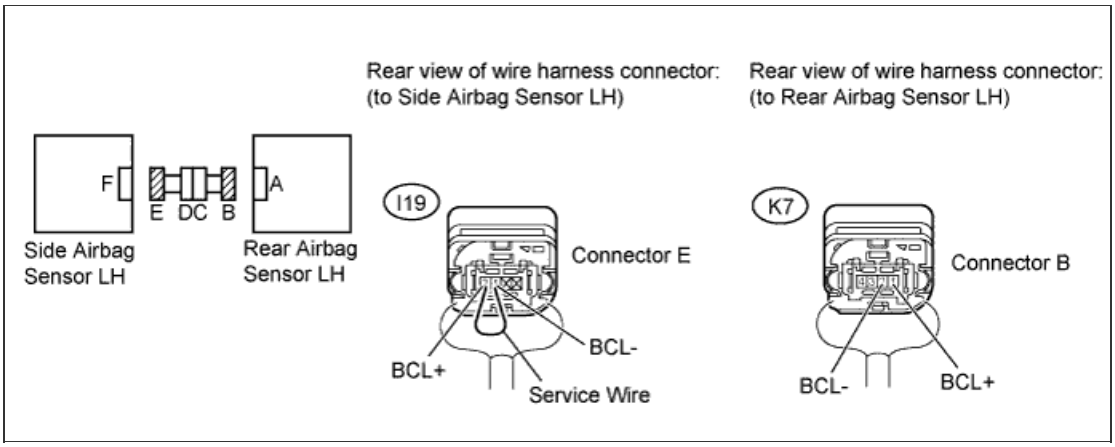
17.CHECK CONNECTORS

a. Disconnect the connectors from the rear airbag sensor LH and side airbag sensor LH.



b. Check that the connector (on the side airbag sensor LH side) is not damaged.

OK:
The connector is not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

18.CHECK SIDE AIRBAG SENSOR LH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-1 (BCL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-2 (BCL-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector E.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	Below 1 Ω

g. Disconnect the service wire from connector E.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	1 MΩ or higher
K7-1 (BCL+) - Body ground	Always	1 MΩ or higher
K7-2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → Go to step 21

OK

19.CHECK REAR AIRBAG SENSOR LH

a. Temporarily replace the side airbag sensor LH with a new one.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:
DTC B1638 or B1648 is not output.

HINT:

Codes other than DTC B1638 and B1648 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.

i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

NG → Go to step 20

OK

REPLACE REAR AIRBAG SENSOR LH (Click here)

20.CHECK SIDE AIRBAG SENSOR LH

a. Interchange the side airbag sensor RH with LH and connect the connectors to them.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 90 seconds.

g. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1638 or B1648 is output	A
DTC B1633 is output	B
DTC B1633, B1638 and B1648 are not output	C

HINT:

Codes other than DTC B1633, B1638 and B1648 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.

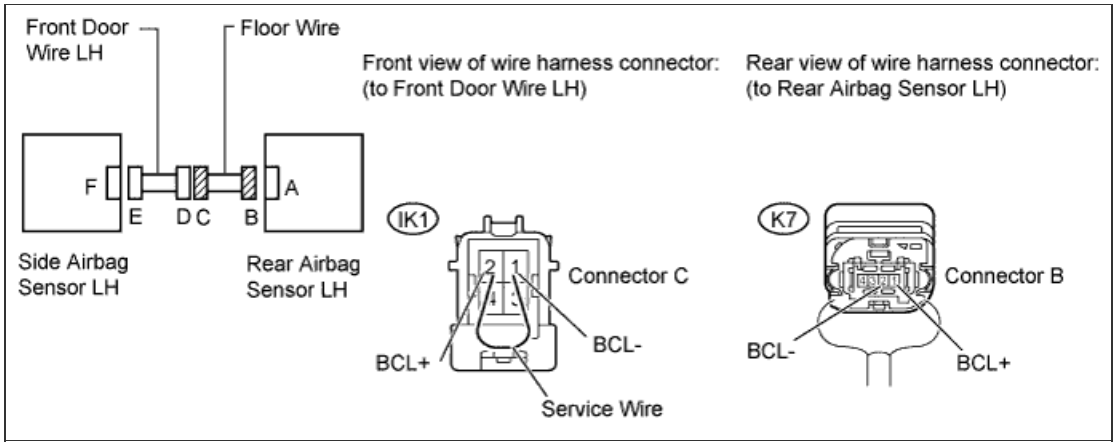
i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

j. Return the side airbag sensor RH and LH to their original positions and connect the connectors to them.



A → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

B → REPLACE SIDE AIRBAG SENSOR LH (Click here)

C

USE SIMULATION METHOD TO CHECK (Click here)

21.CHECK FLOOR WIRE (REAR AIRBAG SENSOR LH - FRONT DOOR WIRE LH)

a. Disconnect the floor wire from the front door wire LH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-1 (BCL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-2 (BCL-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	1 MΩ or higher
K7-1 (BCL+) - Body ground	Always	1 MΩ or higher
K7-2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK → REPLACE FRONT DOOR WIRE LH

DTC B1845/61 Short in Curtain Shield Squib LH 2nd Step Circuit

DTC B1846/61 Open in Curtain Shield Squib LH 2nd Step Circuit

DTC B1847/61 Short to GND in Curtain Shield Squib LH 2nd Step Circuit

DTC B1848/61 Short to B+ in Curtain Shield Squib LH 2nd Step Circuit

for Preparation Click here

DESCRIPTION

The curtain shield squib LH 2nd step circuit consists of the center airbag sensor and the curtain shield airbag LH.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the curtain shield squib LH 2nd step circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1845/61	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the curtain shield squib LH 2nd step circuit during the primary check. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH 2nd step) • Center airbag sensor assembly
B1846/61	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the curtain shield squib LH 2nd step circuit for 2 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH 2nd step) • Center airbag sensor assembly
B1847/61	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the curtain shield squib LH 2nd step circuit for 0.5 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH 2nd step) • Center airbag sensor assembly
B1848/61	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the curtain shield squib LH 2nd step circuit for 0.5 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH 2nd step) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK CURTAIN SHIELD AIRBAG LH (CURTAIN SHIELD SQUIB LH 2ND STEP)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

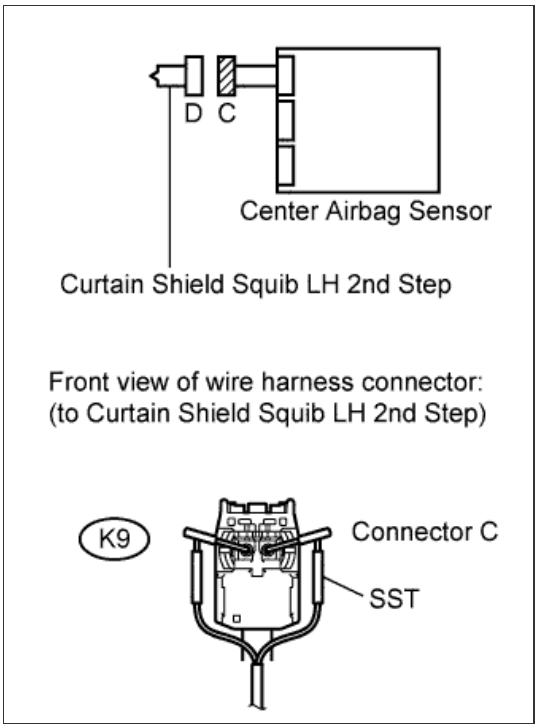
c. Disconnect the connectors from the curtain shield squib LH 2nd step.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.



CAUTION:

Never connect the tester to the curtain shield airbag LH (curtain shield squib LH 2nd step) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST
09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1845, B1846, B1847 or B1848 is not output.

HINT:

Codes other than DTC B1845, B1846, B1847 and B1848 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK

REPLACE CURTAIN SHIELD AIRBAG ASSEMBLY LH (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the floor wire connectors (on the curtain shield squib LH 2nd step side) are not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE FLOOR WIRE

OK

3.CHECK FLOOR WIRE (CURTAIN SHIELD SQUIB LH 2ND STEP CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K9-1 (CL2+) - Body ground	Engine switch on (IG)	Below 1 V
K9-2 (CL2-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K9-1 (CL2+) - K9-2 (CL2-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K9-1 (CL2+) - K9-2 (CL2-)	Always	1 MΩ or higher
K9-1 (CL2+) - Body ground	Always	1 MΩ or higher
K9-2 (CL2-) - Body	Always	1 MΩ or higher

ground		

NG → REPLACE FLOOR WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the curtain shield squib LH 2nd step and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1845, B1846, B1847 or B1848 is not output.

HINT:

Codes other than DTC B1845, B1846, B1847 and B1848 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (**Click here**)

OK

USE SIMULATION METHOD TO CHECK (**Click here**)

DTC B1638/82 Rear Airbag Sensor Assembly LH Initialization Incomplete

DTC B1643/81 Side Satellite Sensor Bus RH Initialization Incomplete

DTC B1648/82 Side Satellite Sensor Bus LH Initialization Incomplete

DTC B1693/81 Door Side Airbag Sensor RH Initialization Incomplete

for Preparation Click here

DESCRIPTION

HINT:

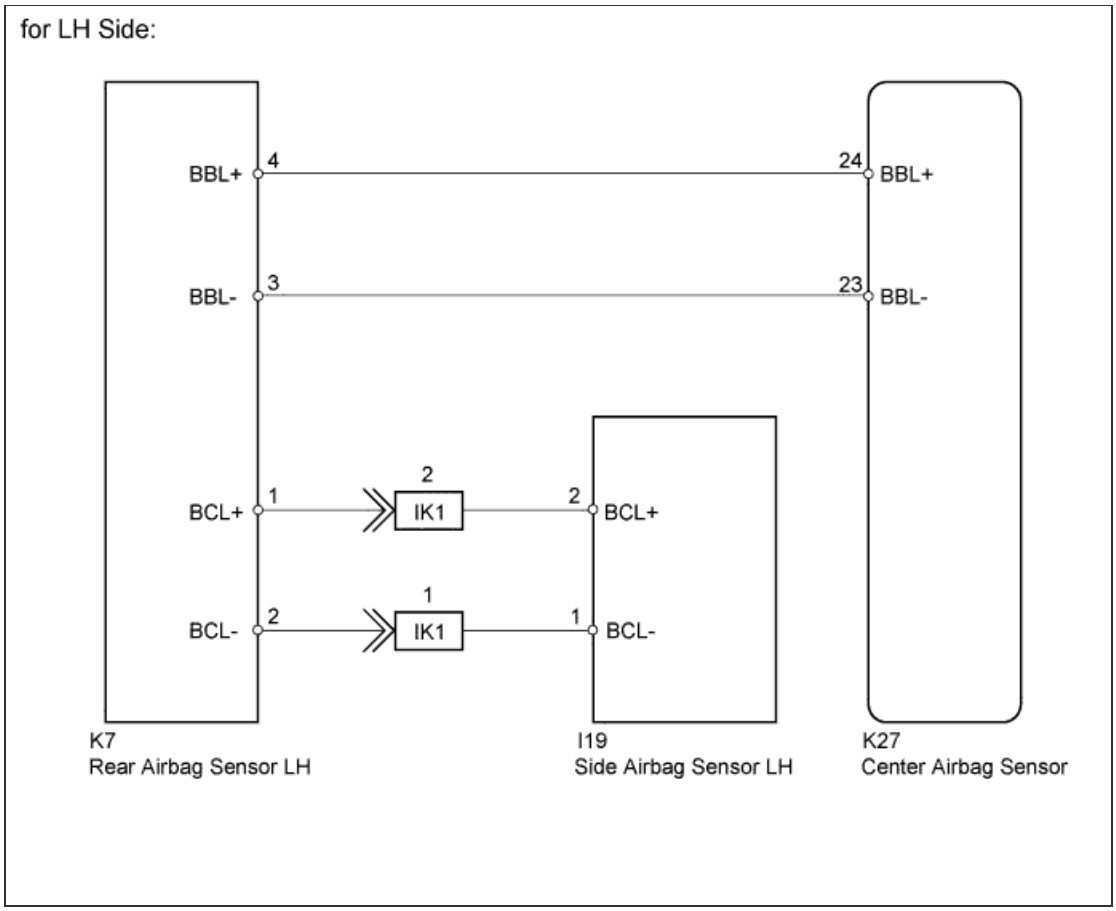
"Door side airbag sensor RH" refer to the side airbag sensor RH.



- The circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH, rear seat side airbag LH or RH and curtain shield airbag LH or RH) is composed of the center airbag sensor, side airbag sensor LH or RH, and rear airbag sensor LH or RH.
  The side airbag sensor LH or RH and rear airbag sensor LH or RH detect impacts to the vehicle and send signals to the center airbag sensor to determine if the airbag should be deployed.
  DTC B1693/81 or B1648/82 is stored when a malfunction is detected in the circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH and curtain shield airbag LH or RH).
  DTC B1643/81 or B1638/82 is stored when a malfunction is detected in the circuit for the rear collision sensor LH or RH (to determine deployment of the rear seat side airbag LH or RH and curtain shield airbag LH or RH).

DTC Code	DTC Detection Condition	Trouble Area
B1638/82	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the rear collision sensor LH (to determine deployment of the rear side seat airbag LH and curtain shield airbag LH) for 2 seconds. • A rear airbag sensor LH malfunction. • A side airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear airbag sensor LH • Side airbag sensor LH • Center airbag sensor assembly
B1643/81	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the rear collision sensor RH (to determine deployment of the rear seat side airbag RH and curtain shield airbag RH) for 2 seconds. • A rear airbag sensor RH malfunction. • A side airbag sensor RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear airbag sensor RH • Side airbag sensor RH • Center airbag sensor assembly
B1648/82	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH and curtain shield airbag LH) for 2 seconds.	• No. 2 floor wire • Front door wire LH • Side airbag sensor LH • Rear airbag sensor LH • Center airbag sensor assembly

	• A side airbag sensor LH malfunction. • A rear airbag sensor LH malfunction. • A center airbag sensor malfunction.	
B1693/81	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A rear airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front door wire RH • Side airbag sensor RH • Rear airbag sensor RH • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK PAST DTC

a. Turn the engine switch on (IG), and wait for at least 60 seconds.

b. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1637 or B1692 is output	A
DTC B1632 or B1697 is output	B
DTC B1632, B1637, B1692 and B1697 are not output	C

A → GO TO DTC B1637 (Click here)

B → GO TO DTC B1632 (Click here)

C

2.CHECK FOR DTC

a. Turn the engine switch off.

HINT:

If a communication error occurs, DTCs for both the LH and RH sides will be stored simultaneously. The malfunctioning area can be identified by turning the engine switch off and then on (IG) again.

b. Turn the engine switch on (IG), and wait for at least 60 seconds.

c. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1638, B1643, B1648 and B1693 are not output	A
DTC B1638 or B1648 is output	B
DTC B1643 or B1693 is output	C

HINT:

Codes other than DTC B1638, B1643,B1648 and B1693 may be output at this time, but they are not related to this check.

A → USE SIMULATION METHOD TO CHECK (Click here)

B → Go to step 13

C

3.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and side airbag sensor RH.

OK:

The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

4.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and side airbag sensor RH.

b. Check that the connectors (on the center airbag sensor side and side airbag sensor RH side) are not damaged.

OK:

The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

5.CHECK SIDE AIRBAG SENSOR RH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-4 (BBR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-3 (BBR-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 17 (BBR+) and 18 (BBR-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-4 (BBR+) - I9-3 (BBR-)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-4 (BBR+) - I9-3 (BBR-)	Always	1 MΩ or higher
I9-4 (BBR+) - Body ground	Always	1 MΩ or higher
I9-3 (BBR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 11

OK

6.CHECK CONNECTION OF CONNECTORS

a. Check that the connector is properly connected to the rear airbag sensor RH.

OK:
The connector is properly connected.

NG → CONNECT CONNECTOR PROPERLY

OK

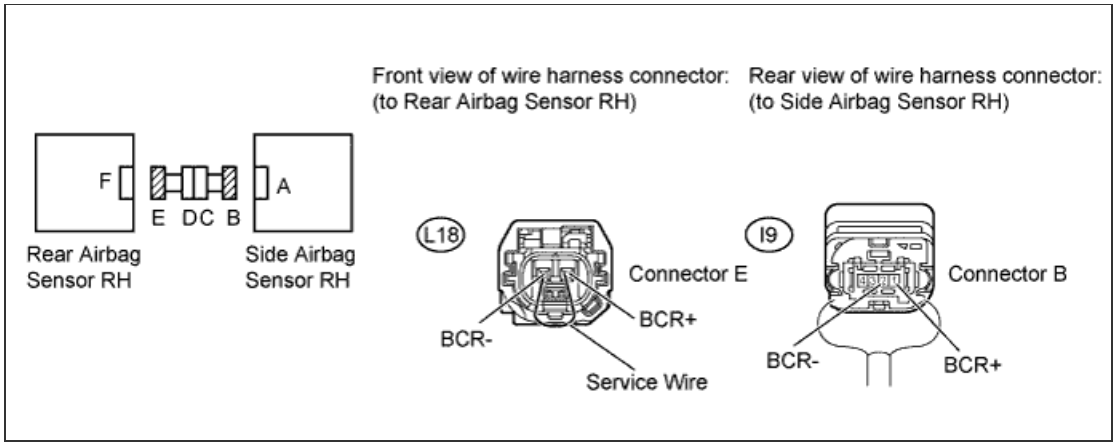
7.CHECK CONNECTORS

a. Disconnect the connectors from the side airbag sensor RH and rear airbag sensor RH.



b. Check that the connector (on the rear airbag sensor RH side) is not damaged.

OK:
The connector is not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

8.CHECK REAR AIRBAG SENSOR RH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector E.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

g. Disconnect the service wire from connector E.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 12

OK

9.CHECK SIDE AIRBAG SENSOR RH

a. Connect the connector to the center airbag sensor.

b. Interchange the side airbag sensor LH with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1643, B1693 and B1698 are not output	A
DTC B1698 is output	B
DTC B1643 and B1693 are output	C

HINT:

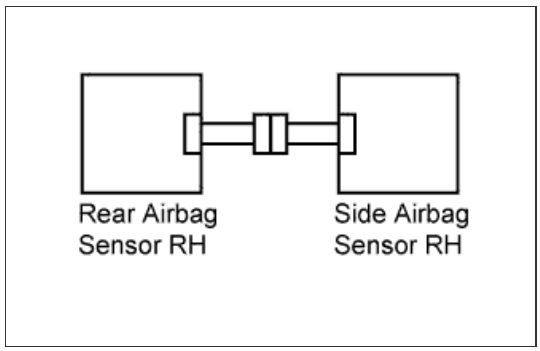
Codes other than DTC B1643,B1693 and B1698 may be output at this time, but they are not related to this check.

i. Turn the engine switch off.

j. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.



k. Return the side airbag sensor LH and RH to their original positions and connect the connectors to them.

A → USE SIMULATION METHOD TO CHECK (Click here)

B → REPLACE SIDE AIRBAG SENSOR RH (Click here)

C

10.CHECK REAR AIRBAG SENSOR RH

a. Temporarily replace the rear airbag sensor RH with a new one.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1643 or B1693 is not output.

HINT:

Codes other than DTC B1643 and B1693 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.

i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

REPLACE REAR AIRBAG SENSOR RH (Click here)

11.CHECK NO. 2 FLOOR WIRE (CENTER AIRBAG SENSOR - FRONT DOOR WIRE RH)

a. Disconnect the No. 2 floor wire from the front door wire RH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
IL1-4 (BBR+) - Body ground	Engine switch on (IG)	Below 1 V
IL1-3 (BBR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 17 (BBR+) and 18 (BBR-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
IL1-4 (BBR+) - IL1-3 (BBR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector B.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
IL1-4 (BBR+) - IL1-3 (BBR-)	Always	1 MΩ or higher
IL1-4 (BBR+) - Body ground	Always	1 MΩ or higher
IL1-3 (BBR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK → REPLACE FRONT DOOR WIRE RH

12.CHECK FRONT DOOR WIRE RH (SIDE AIRBAG SENSOR RH - NO. 2 FLOOR WIRE)

a. Disconnect the front door wire RH from the No. 2 floor wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FRONT DOOR WIRE RH

OK

REPLACE NO. 2 FLOOR WIRE

13.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and rear airbag sensor LH.

OK:

The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

14.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and rear airbag sensor LH.

b. Check that the connectors (on the center airbag sensor side and rear airbag sensor LH side) are not damaged.

OK:

The connectors are not deformed or damaged.

NG → REPLACE FLOOR WIRE

OK

15.CHECK FLOOR WIRE (CENTER AIRBAG SENSOR - REAR AIRBAG SENSOR LH)

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-4 (BBL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-3 (BBL-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 24 (BBL+) and 23 (BBL-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

		Specified

Tester Connection	Condition	Condition
K7-4 (BBL+) - K7-3 (BBL-)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-4 (BBL+) - K7-3 (BBL-)	Always	1 MΩ or higher
K7-4 (BBL+) - Body ground	Always	1 MΩ or higher
K7-3 (BBL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK

16.CHECK CONNECTION OF CONNECTOR

a. Check that the connector is properly connected to the side airbag sensor LH.

OK:
The connector is properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

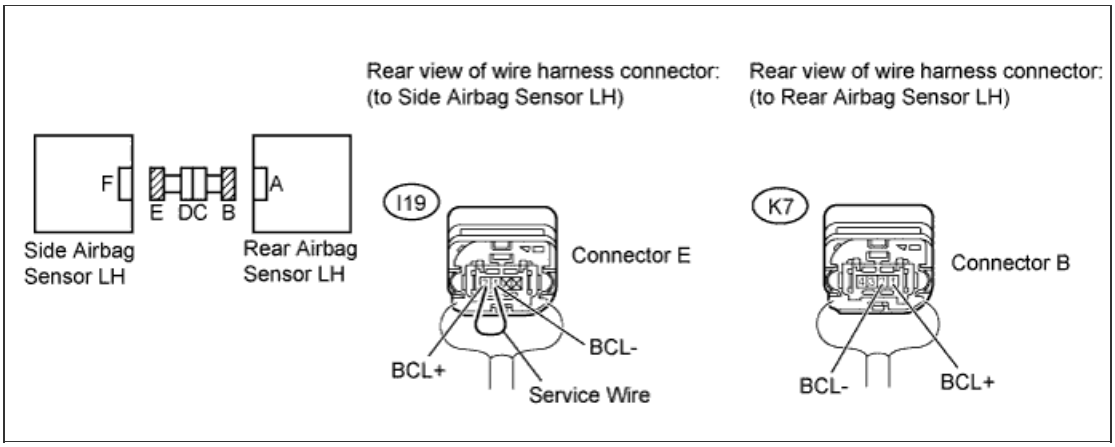
17.CHECK CONNECTORS

a. Disconnect the connectors from the rear airbag sensor LH and side airbag sensor LH.



b. Check that the connector (on the side airbag sensor LH side) is not damaged.

OK:
The connector is not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

18.CHECK SIDE AIRBAG SENSOR LH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-1 (BCL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-2 (BCL-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector E.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	Below 1 Ω

g. Disconnect the service wire from connector E.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	1 MΩ or higher
K7-1 (BCL+) - Body ground	Always	1 MΩ or higher
K7-2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → Go to step 21

OK

19.CHECK REAR AIRBAG SENSOR LH

a. Temporarily replace the side airbag sensor LH with a new one.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:
DTC B1638 or B1648 is not output.

HINT:

Codes other than DTC B1638 and B1648 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.

i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

NG → Go to step 20

OK

REPLACE REAR AIRBAG SENSOR LH (Click here)

20.CHECK SIDE AIRBAG SENSOR LH

a. Interchange the side airbag sensor RH with LH and connect the connectors to them.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 90 seconds.

g. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1638 or B1648 is output	A
DTC B1633 is output	B
DTC B1633, B1638 and B1648 are not output	C

HINT:

Codes other than DTC B1633, B1638 and B1648 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.

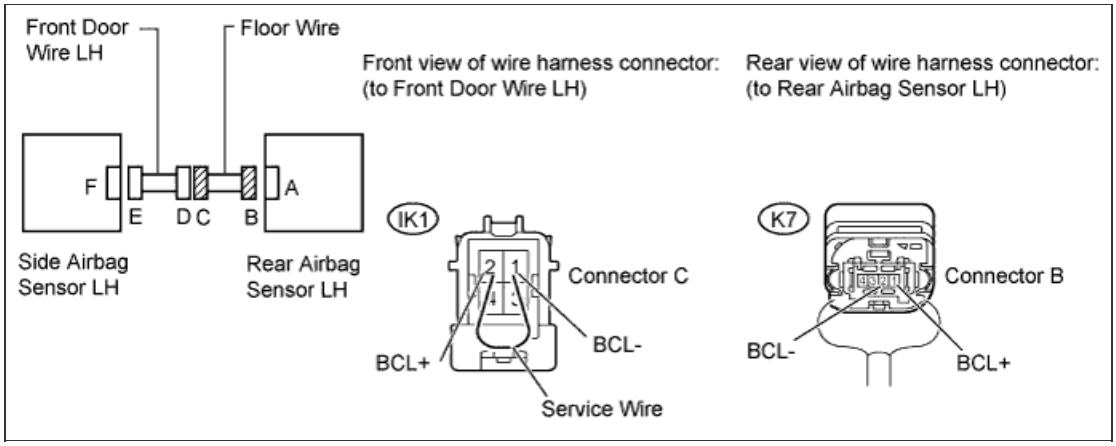
i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

j. Return the side airbag sensor RH and LH to their original positions and connect the connectors to them.



A → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

B → REPLACE SIDE AIRBAG SENSOR LH (Click here)

USE SIMULATION METHOD TO CHECK (Click here)

21.CHECK FLOOR WIRE (REAR AIRBAG SENSOR LH - FRONT DOOR WIRE LH)

a. Disconnect the floor wire from the front door wire LH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-1 (BCL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-2 (BCL-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	1 MΩ or higher
K7-1 (BCL+) - Body ground	Always	1 MΩ or higher
K7-2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK → REPLACE FRONT DOOR WIRE LH

DTC B1845/61 Short in Curtain Shield Squib LH 2nd Step Circuit

DTC B1846/61 Open in Curtain Shield Squib LH 2nd Step Circuit

DTC B1847/61 Short to GND in Curtain Shield Squib LH 2nd Step Circuit

DTC B1848/61 Short to B+ in Curtain Shield Squib LH 2nd Step Circuit

for Preparation Click here

DESCRIPTION

The curtain shield squib LH 2nd step circuit consists of the center airbag sensor and the curtain shield airbag LH.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the curtain shield squib LH 2nd step circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1845/61	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the curtain shield squib LH 2nd step circuit during the primary check. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH 2nd step) • Center airbag sensor assembly
B1846/61	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the curtain shield squib LH 2nd step circuit for 2 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH 2nd step) • Center airbag sensor assembly
B1847/61	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the curtain shield squib LH 2nd step circuit for 0.5 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH 2nd step) • Center airbag sensor assembly
B1848/61	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the curtain shield squib LH 2nd step circuit for 0.5 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH 2nd step) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK CURTAIN SHIELD AIRBAG LH (CURTAIN SHIELD SQUIB LH 2ND STEP)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

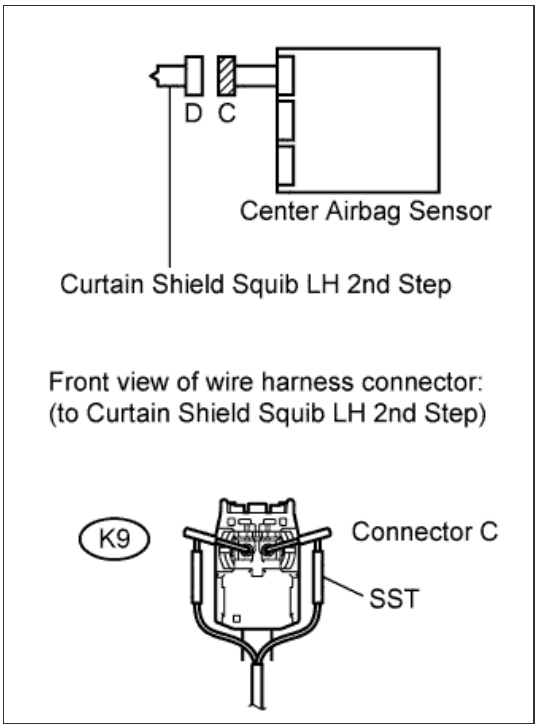
c. Disconnect the connectors from the curtain shield squib LH 2nd step.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.



CAUTION:

Never connect the tester to the curtain shield airbag LH (curtain shield squib LH 2nd step) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST
09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1845, B1846, B1847 or B1848 is not output.

HINT:

Codes other than DTC B1845, B1846, B1847 and B1848 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK

REPLACE CURTAIN SHIELD AIRBAG ASSEMBLY LH (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the floor wire connectors (on the curtain shield squib LH 2nd step side) are not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE FLOOR WIRE

OK

3.CHECK FLOOR WIRE (CURTAIN SHIELD SQUIB LH 2ND STEP CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K9-1 (CL2+) - Body ground	Engine switch on (IG)	Below 1 V
K9-2 (CL2-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K9-1 (CL2+) - K9-2 (CL2-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K9-1 (CL2+) - K9-2 (CL2-)	Always	1 MΩ or higher
K9-1 (CL2+) - Body ground	Always	1 MΩ or higher
K9-2 (CL2-) - Body	Always	1 MΩ or higher

ground		

NG → REPLACE FLOOR WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the curtain shield squib LH 2nd step and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1845, B1846, B1847 or B1848 is not output.

HINT:

Codes other than DTC B1845, B1846, B1847 and B1848 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (**Click here**)

OK

USE SIMULATION METHOD TO CHECK (**Click here**)

DTC B1638/82 Rear Airbag Sensor Assembly LH Initialization Incomplete

DTC B1643/81 Side Satellite Sensor Bus RH Initialization Incomplete

DTC B1648/82 Side Satellite Sensor Bus LH Initialization Incomplete

DTC B1693/81 Door Side Airbag Sensor RH Initialization Incomplete

for Preparation Click here

DESCRIPTION

HINT:

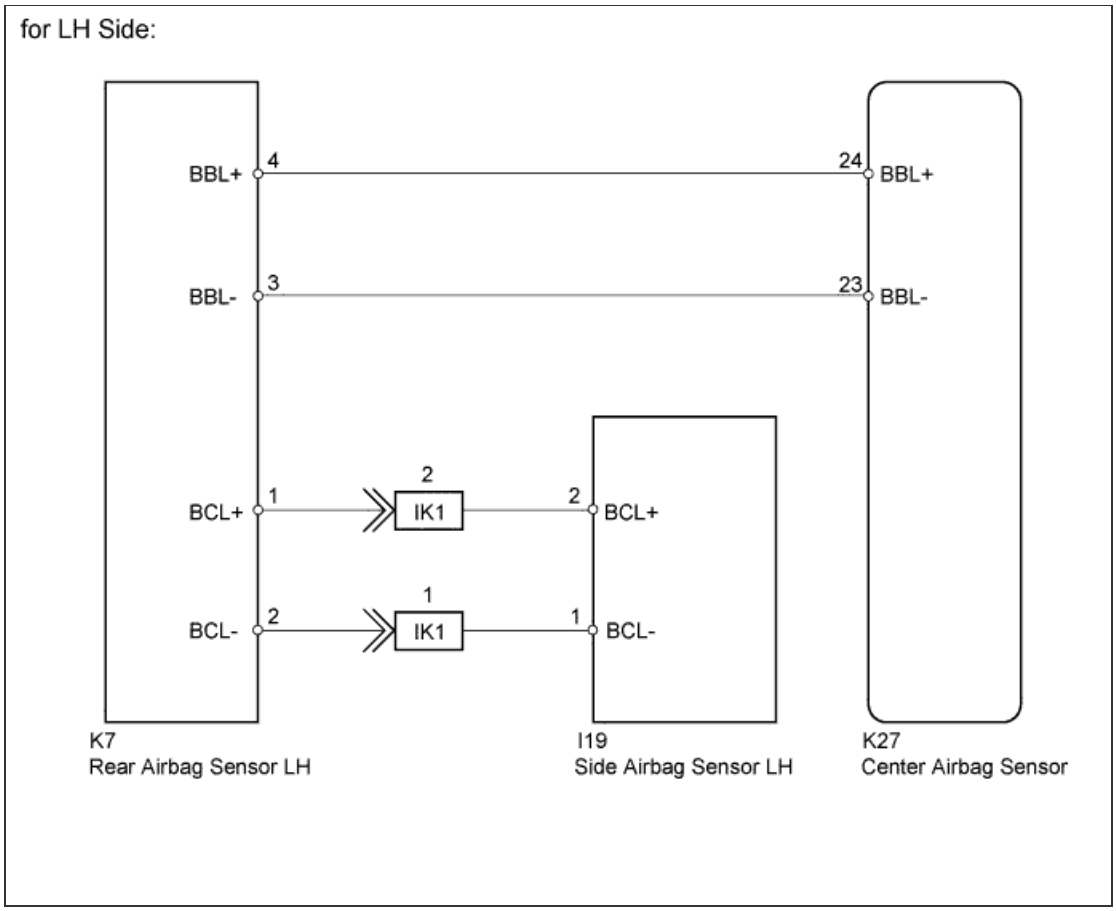
"Door side airbag sensor RH" refer to the side airbag sensor RH.



- The circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH, rear seat side airbag LH or RH and curtain shield airbag LH or RH) is composed of the center airbag sensor, side airbag sensor LH or RH, and rear airbag sensor LH or RH.
  The side airbag sensor LH or RH and rear airbag sensor LH or RH detect impacts to the vehicle and send signals to the center airbag sensor to determine if the airbag should be deployed.
  DTC B1693/81 or B1648/82 is stored when a malfunction is detected in the circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH and curtain shield airbag LH or RH).
  DTC B1643/81 or B1638/82 is stored when a malfunction is detected in the circuit for the rear collision sensor LH or RH (to determine deployment of the rear seat side airbag LH or RH and curtain shield airbag LH or RH).

DTC Code	DTC Detection Condition	Trouble Area
B1638/82	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the rear collision sensor LH (to determine deployment of the rear side seat airbag LH and curtain shield airbag LH) for 2 seconds. • A rear airbag sensor LH malfunction. • A side airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear airbag sensor LH • Side airbag sensor LH • Center airbag sensor assembly
B1643/81	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the rear collision sensor RH (to determine deployment of the rear seat side airbag RH and curtain shield airbag RH) for 2 seconds. • A rear airbag sensor RH malfunction. • A side airbag sensor RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear airbag sensor RH • Side airbag sensor RH • Center airbag sensor assembly
B1648/82	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH and curtain shield airbag LH) for 2 seconds.	• No. 2 floor wire • Front door wire LH • Side airbag sensor LH • Rear airbag sensor LH • Center airbag sensor assembly

	• A side airbag sensor LH malfunction. • A rear airbag sensor LH malfunction. • A center airbag sensor malfunction.	
B1693/81	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A rear airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front door wire RH • Side airbag sensor RH • Rear airbag sensor RH • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK PAST DTC

a. Turn the engine switch on (IG), and wait for at least 60 seconds.

b. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1637 or B1692 is output	A
DTC B1632 or B1697 is output	B
DTC B1632, B1637, B1692 and B1697 are not output	C

A → GO TO DTC B1637 (Click here)

B → GO TO DTC B1632 (Click here)

C

2.CHECK FOR DTC

a. Turn the engine switch off.

HINT:

If a communication error occurs, DTCs for both the LH and RH sides will be stored simultaneously. The malfunctioning area can be identified by turning the engine switch off and then on (IG) again.

b. Turn the engine switch on (IG), and wait for at least 60 seconds.

c. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1638, B1643, B1648 and B1693 are not output	A
DTC B1638 or B1648 is output	B
DTC B1643 or B1693 is output	C

HINT:

Codes other than DTC B1638, B1643,B1648 and B1693 may be output at this time, but they are not related to this check.

A → USE SIMULATION METHOD TO CHECK (Click here)

B → Go to step 13

C

3.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and side airbag sensor RH.

OK:

The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

4.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and side airbag sensor RH.

b. Check that the connectors (on the center airbag sensor side and side airbag sensor RH side) are not damaged.

OK:

The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

5.CHECK SIDE AIRBAG SENSOR RH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-4 (BBR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-3 (BBR-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 17 (BBR+) and 18 (BBR-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-4 (BBR+) - I9-3 (BBR-)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-4 (BBR+) - I9-3 (BBR-)	Always	1 MΩ or higher
I9-4 (BBR+) - Body ground	Always	1 MΩ or higher
I9-3 (BBR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 11

OK

6.CHECK CONNECTION OF CONNECTORS

a. Check that the connector is properly connected to the rear airbag sensor RH.

OK:
The connector is properly connected.

NG → CONNECT CONNECTOR PROPERLY

OK

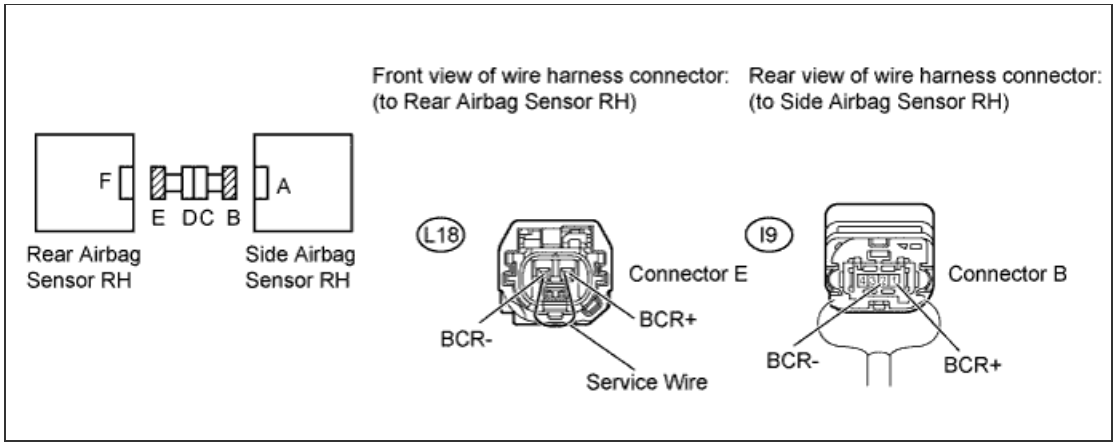
7.CHECK CONNECTORS

a. Disconnect the connectors from the side airbag sensor RH and rear airbag sensor RH.



b. Check that the connector (on the rear airbag sensor RH side) is not damaged.

OK:
The connector is not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

8.CHECK REAR AIRBAG SENSOR RH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector E.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

g. Disconnect the service wire from connector E.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 12

OK

9.CHECK SIDE AIRBAG SENSOR RH

a. Connect the connector to the center airbag sensor.

b. Interchange the side airbag sensor LH with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1643, B1693 and B1698 are not output	A
DTC B1698 is output	B
DTC B1643 and B1693 are output	C

HINT:

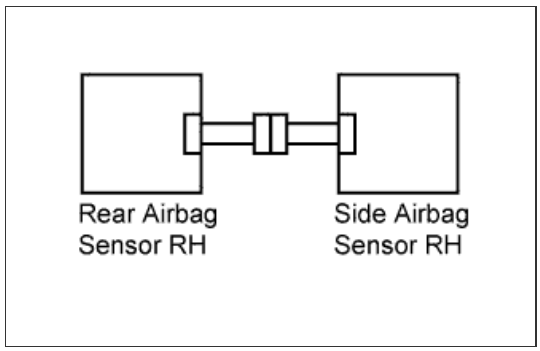
Codes other than DTC B1643,B1693 and B1698 may be output at this time, but they are not related to this check.

i. Turn the engine switch off.

j. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.



k. Return the side airbag sensor LH and RH to their original positions and connect the connectors to them.

A → USE SIMULATION METHOD TO CHECK (Click here)

B → REPLACE SIDE AIRBAG SENSOR RH (Click here)

C

10.CHECK REAR AIRBAG SENSOR RH

a. Temporarily replace the rear airbag sensor RH with a new one.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1643 or B1693 is not output.

HINT:

Codes other than DTC B1643 and B1693 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.

i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

REPLACE REAR AIRBAG SENSOR RH (Click here)

11.CHECK NO. 2 FLOOR WIRE (CENTER AIRBAG SENSOR - FRONT DOOR WIRE RH)

a. Disconnect the No. 2 floor wire from the front door wire RH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
IL1-4 (BBR+) - Body ground	Engine switch on (IG)	Below 1 V
IL1-3 (BBR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 17 (BBR+) and 18 (BBR-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
IL1-4 (BBR+) - IL1-3 (BBR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector B.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
IL1-4 (BBR+) - IL1-3 (BBR-)	Always	1 MΩ or higher
IL1-4 (BBR+) - Body ground	Always	1 MΩ or higher
IL1-3 (BBR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK → REPLACE FRONT DOOR WIRE RH

12.CHECK FRONT DOOR WIRE RH (SIDE AIRBAG SENSOR RH - NO. 2 FLOOR WIRE)

a. Disconnect the front door wire RH from the No. 2 floor wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FRONT DOOR WIRE RH

OK

REPLACE NO. 2 FLOOR WIRE

13.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and rear airbag sensor LH.

OK:

The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

14.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and rear airbag sensor LH.

b. Check that the connectors (on the center airbag sensor side and rear airbag sensor LH side) are not damaged.

OK:

The connectors are not deformed or damaged.

NG → REPLACE FLOOR WIRE

OK

15.CHECK FLOOR WIRE (CENTER AIRBAG SENSOR - REAR AIRBAG SENSOR LH)

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-4 (BBL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-3 (BBL-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 24 (BBL+) and 23 (BBL-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

		Specified

Tester Connection	Condition	Condition
K7-4 (BBL+) - K7-3 (BBL-)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-4 (BBL+) - K7-3 (BBL-)	Always	1 MΩ or higher
K7-4 (BBL+) - Body ground	Always	1 MΩ or higher
K7-3 (BBL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK

16.CHECK CONNECTION OF CONNECTOR

a. Check that the connector is properly connected to the side airbag sensor LH.

OK:
The connector is properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

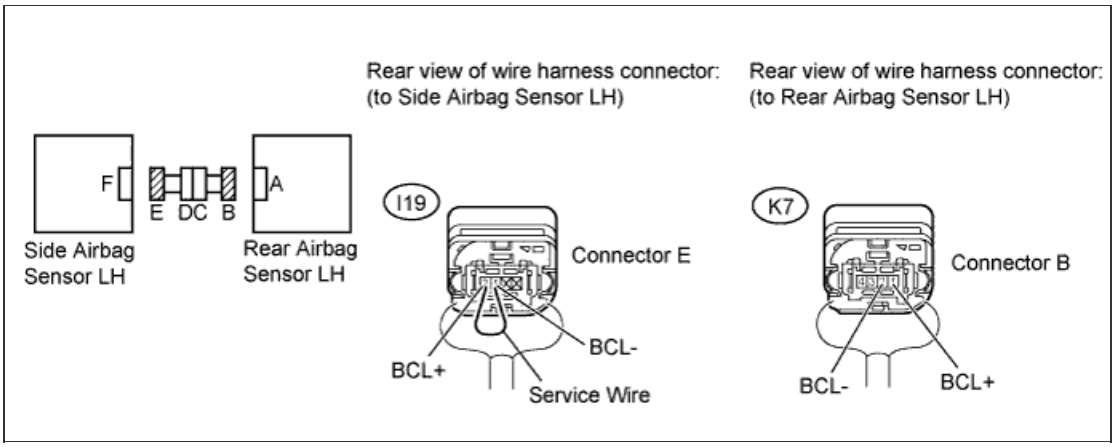
17.CHECK CONNECTORS

a. Disconnect the connectors from the rear airbag sensor LH and side airbag sensor LH.



b. Check that the connector (on the side airbag sensor LH side) is not damaged.

OK:
The connector is not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

18.CHECK SIDE AIRBAG SENSOR LH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-1 (BCL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-2 (BCL-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector E.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	Below 1 Ω

g. Disconnect the service wire from connector E.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	1 MΩ or higher
K7-1 (BCL+) - Body ground	Always	1 MΩ or higher
K7-2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → Go to step 21

OK

19.CHECK REAR AIRBAG SENSOR LH

a. Temporarily replace the side airbag sensor LH with a new one.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:
DTC B1638 or B1648 is not output.

HINT:

Codes other than DTC B1638 and B1648 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.

i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

NG → Go to step 20

OK

REPLACE REAR AIRBAG SENSOR LH (Click here)

20.CHECK SIDE AIRBAG SENSOR LH

a. Interchange the side airbag sensor RH with LH and connect the connectors to them.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 90 seconds.

g. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1638 or B1648 is output	A
DTC B1633 is output	B
DTC B1633, B1638 and B1648 are not output	C

HINT:

Codes other than DTC B1633, B1638 and B1648 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.

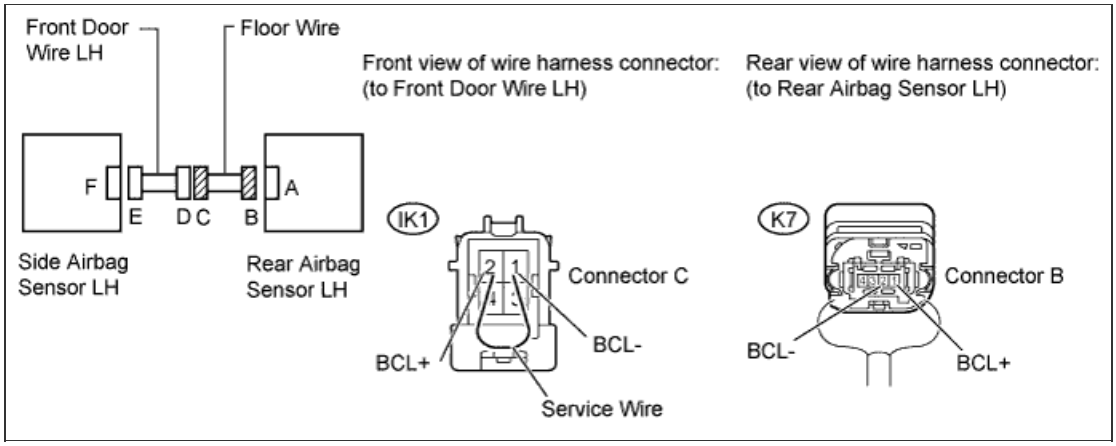
i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

j. Return the side airbag sensor RH and LH to their original positions and connect the connectors to them.



A → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

B → REPLACE SIDE AIRBAG SENSOR LH (Click here)

C

USE SIMULATION METHOD TO CHECK (Click here)

21.CHECK FLOOR WIRE (REAR AIRBAG SENSOR LH - FRONT DOOR WIRE LH)

a. Disconnect the floor wire from the front door wire LH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-1 (BCL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-2 (BCL-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	1 MΩ or higher
K7-1 (BCL+) - Body ground	Always	1 MΩ or higher
K7-2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK → REPLACE FRONT DOOR WIRE LH

DTC B1845/61 Short in Curtain Shield Squib LH 2nd Step Circuit

DTC B1846/61 Open in Curtain Shield Squib LH 2nd Step Circuit

DTC B1847/61 Short to GND in Curtain Shield Squib LH 2nd Step Circuit

DTC B1848/61 Short to B+ in Curtain Shield Squib LH 2nd Step Circuit

for Preparation Click here

DESCRIPTION

The curtain shield squib LH 2nd step circuit consists of the center airbag sensor and the curtain shield airbag LH.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the curtain shield squib LH 2nd step circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1845/61	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the curtain shield squib LH 2nd step circuit during the primary check. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH 2nd step) • Center airbag sensor assembly
B1846/61	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the curtain shield squib LH 2nd step circuit for 2 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH 2nd step) • Center airbag sensor assembly
B1847/61	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the curtain shield squib LH 2nd step circuit for 0.5 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH 2nd step) • Center airbag sensor assembly
B1848/61	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the curtain shield squib LH 2nd step circuit for 0.5 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH 2nd step) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK CURTAIN SHIELD AIRBAG LH (CURTAIN SHIELD SQUIB LH 2ND STEP)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

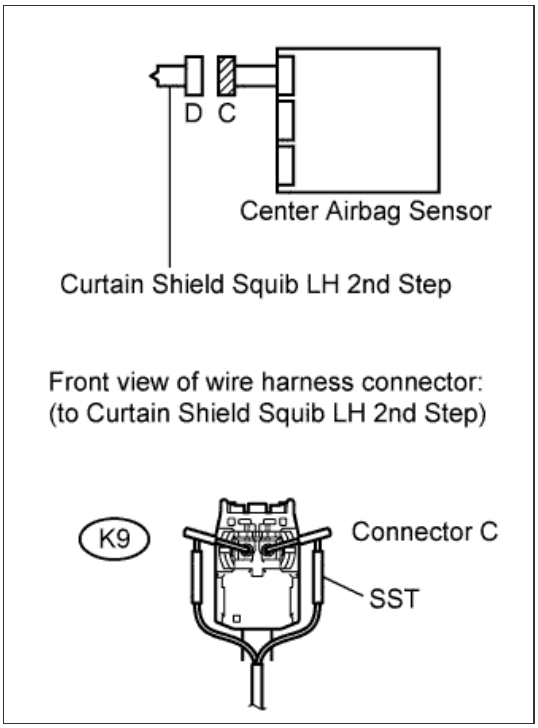
c. Disconnect the connectors from the curtain shield squib LH 2nd step.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.



CAUTION:

Never connect the tester to the curtain shield airbag LH (curtain shield squib LH 2nd step) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST
09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1845, B1846, B1847 or B1848 is not output.

HINT:

Codes other than DTC B1845, B1846, B1847 and B1848 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK

REPLACE CURTAIN SHIELD AIRBAG ASSEMBLY LH (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the floor wire connectors (on the curtain shield squib LH 2nd step side) are not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE FLOOR WIRE

OK

3.CHECK FLOOR WIRE (CURTAIN SHIELD SQUIB LH 2ND STEP CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K9-1 (CL2+) - Body ground	Engine switch on (IG)	Below 1 V
K9-2 (CL2-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K9-1 (CL2+) - K9-2 (CL2-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K9-1 (CL2+) - K9-2 (CL2-)	Always	1 MΩ or higher
K9-1 (CL2+) - Body ground	Always	1 MΩ or higher
K9-2 (CL2-) - Body	Always	1 MΩ or higher

ground		

NG → REPLACE FLOOR WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the curtain shield squib LH 2nd step and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1845, B1846, B1847 or B1848 is not output.

HINT:

Codes other than DTC B1845, B1846, B1847 and B1848 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (**Click here**)

OK

DTC B1638/82 Rear Airbag Sensor Assembly LH Initialization Incomplete

DTC B1643/81 Side Satellite Sensor Bus RH Initialization Incomplete

DTC B1648/82 Side Satellite Sensor Bus LH Initialization Incomplete

DTC B1693/81 Door Side Airbag Sensor RH Initialization Incomplete

for Preparation Click here

DESCRIPTION

HINT:

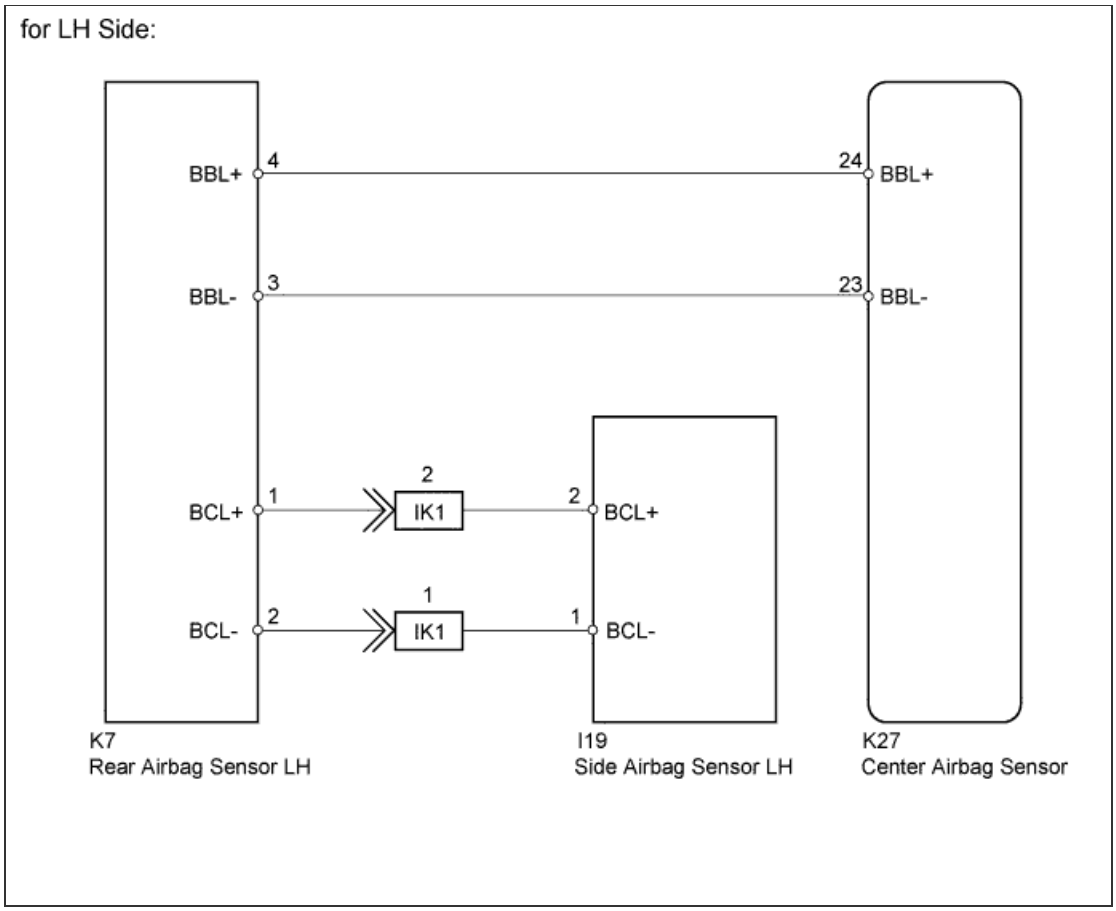
"Door side airbag sensor RH" refer to the side airbag sensor RH.



- The circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH, rear seat side airbag LH or RH and curtain shield airbag LH or RH) is composed of the center airbag sensor, side airbag sensor LH or RH, and rear airbag sensor LH or RH.
  The side airbag sensor LH or RH and rear airbag sensor LH or RH detect impacts to the vehicle and send signals to the center airbag sensor to determine if the airbag should be deployed.
  DTC B1693/81 or B1648/82 is stored when a malfunction is detected in the circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH and curtain shield airbag LH or RH).
  DTC B1643/81 or B1638/82 is stored when a malfunction is detected in the circuit for the rear collision sensor LH or RH (to determine deployment of the rear seat side airbag LH or RH and curtain shield airbag LH or RH).

DTC Code	DTC Detection Condition	Trouble Area
B1638/82	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the rear collision sensor LH (to determine deployment of the rear side seat airbag LH and curtain shield airbag LH) for 2 seconds. • A rear airbag sensor LH malfunction. • A side airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear airbag sensor LH • Side airbag sensor LH • Center airbag sensor assembly
B1643/81	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the rear collision sensor RH (to determine deployment of the rear seat side airbag RH and curtain shield airbag RH) for 2 seconds. • A rear airbag sensor RH malfunction. • A side airbag sensor RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear airbag sensor RH • Side airbag sensor RH • Center airbag sensor assembly
B1648/82	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH and curtain shield airbag LH) for 2 seconds.	• No. 2 floor wire • Front door wire LH • Side airbag sensor LH • Rear airbag sensor LH • Center airbag sensor assembly

	• A side airbag sensor LH malfunction. • A rear airbag sensor LH malfunction. • A center airbag sensor malfunction.	
B1693/81	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A rear airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front door wire RH • Side airbag sensor RH • Rear airbag sensor RH • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK PAST DTC

a. Turn the engine switch on (IG), and wait for at least 60 seconds.

b. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1637 or B1692 is output	A
DTC B1632 or B1697 is output	B
DTC B1632, B1637, B1692 and B1697 are not output	C

A → GO TO DTC B1637 (Click here)

B → GO TO DTC B1632 (Click here)

C

2.CHECK FOR DTC

a. Turn the engine switch off.

HINT:

If a communication error occurs, DTCs for both the LH and RH sides will be stored simultaneously. The malfunctioning area can be identified by turning the engine switch off and then on (IG) again.

b. Turn the engine switch on (IG), and wait for at least 60 seconds.

c. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1638, B1643, B1648 and B1693 are not output	A
DTC B1638 or B1648 is output	B
DTC B1643 or B1693 is output	C

HINT:

Codes other than DTC B1638, B1643,B1648 and B1693 may be output at this time, but they are not related to this check.

A → USE SIMULATION METHOD TO CHECK (Click here)

B → Go to step 13

C

3.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and side airbag sensor RH.

OK:

The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

4.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and side airbag sensor RH.

b. Check that the connectors (on the center airbag sensor side and side airbag sensor RH side) are not damaged.

OK:

The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

5.CHECK SIDE AIRBAG SENSOR RH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-4 (BBR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-3 (BBR-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 17 (BBR+) and 18 (BBR-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-4 (BBR+) - I9-3 (BBR-)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-4 (BBR+) - I9-3 (BBR-)	Always	1 MΩ or higher
I9-4 (BBR+) - Body ground	Always	1 MΩ or higher
I9-3 (BBR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 11

OK

6.CHECK CONNECTION OF CONNECTORS

a. Check that the connector is properly connected to the rear airbag sensor RH.

OK:
The connector is properly connected.

NG → CONNECT CONNECTOR PROPERLY

OK

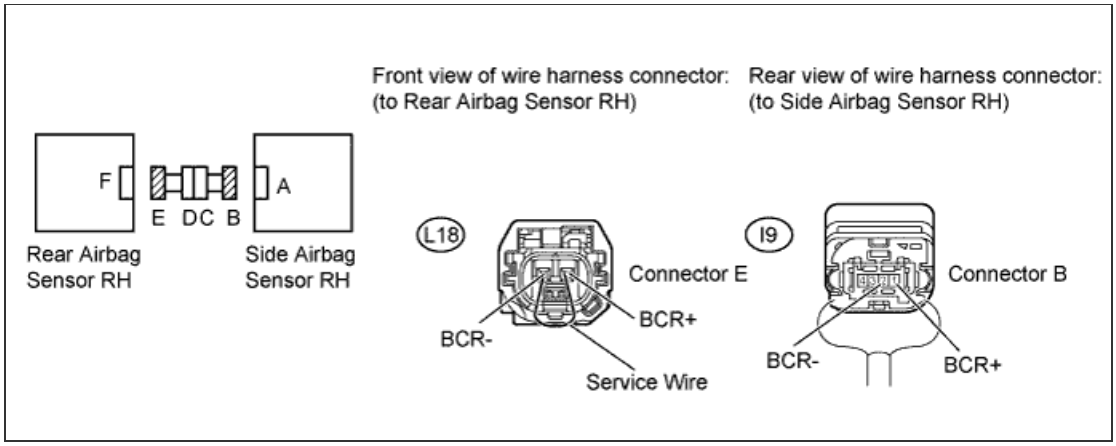
7.CHECK CONNECTORS

a. Disconnect the connectors from the side airbag sensor RH and rear airbag sensor RH.



b. Check that the connector (on the rear airbag sensor RH side) is not damaged.

OK:
The connector is not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

8.CHECK REAR AIRBAG SENSOR RH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector E.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

g. Disconnect the service wire from connector E.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 12

OK

9.CHECK SIDE AIRBAG SENSOR RH

a. Connect the connector to the center airbag sensor.

b. Interchange the side airbag sensor LH with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1643, B1693 and B1698 are not output	A
DTC B1698 is output	B
DTC B1643 and B1693 are output	C

HINT:

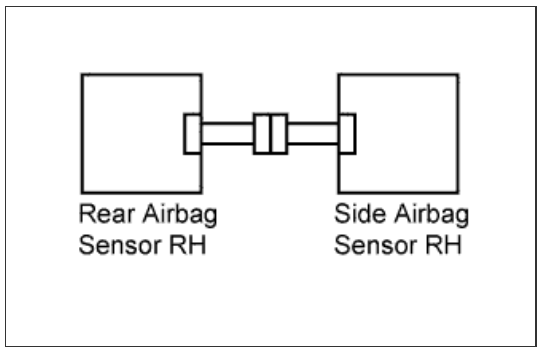
Codes other than DTC B1643,B1693 and B1698 may be output at this time, but they are not related to this check.

i. Turn the engine switch off.

j. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.



k. Return the side airbag sensor LH and RH to their original positions and connect the connectors to them.

A → USE SIMULATION METHOD TO CHECK (Click here)

B → REPLACE SIDE AIRBAG SENSOR RH (Click here)

C

10.CHECK REAR AIRBAG SENSOR RH

a. Temporarily replace the rear airbag sensor RH with a new one.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1643 or B1693 is not output.

HINT:

Codes other than DTC B1643 and B1693 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.

i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

REPLACE REAR AIRBAG SENSOR RH (Click here)

11.CHECK NO. 2 FLOOR WIRE (CENTER AIRBAG SENSOR - FRONT DOOR WIRE RH)

a. Disconnect the No. 2 floor wire from the front door wire RH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
IL1-4 (BBR+) - Body ground	Engine switch on (IG)	Below 1 V
IL1-3 (BBR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 17 (BBR+) and 18 (BBR-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
IL1-4 (BBR+) - IL1-3 (BBR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector B.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
IL1-4 (BBR+) - IL1-3 (BBR-)	Always	1 MΩ or higher
IL1-4 (BBR+) - Body ground	Always	1 MΩ or higher
IL1-3 (BBR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK → REPLACE FRONT DOOR WIRE RH

12.CHECK FRONT DOOR WIRE RH (SIDE AIRBAG SENSOR RH - NO. 2 FLOOR WIRE)

a. Disconnect the front door wire RH from the No. 2 floor wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FRONT DOOR WIRE RH

OK

REPLACE NO. 2 FLOOR WIRE

13.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and rear airbag sensor LH.

OK:

The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

14.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and rear airbag sensor LH.

b. Check that the connectors (on the center airbag sensor side and rear airbag sensor LH side) are not damaged.

OK:

The connectors are not deformed or damaged.

NG → REPLACE FLOOR WIRE

OK

15.CHECK FLOOR WIRE (CENTER AIRBAG SENSOR - REAR AIRBAG SENSOR LH)

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-4 (BBL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-3 (BBL-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 24 (BBL+) and 23 (BBL-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

		Specified

Tester Connection	Condition	Condition
K7-4 (BBL+) - K7-3 (BBL-)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-4 (BBL+) - K7-3 (BBL-)	Always	1 MΩ or higher
K7-4 (BBL+) - Body ground	Always	1 MΩ or higher
K7-3 (BBL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK

16.CHECK CONNECTION OF CONNECTOR

a. Check that the connector is properly connected to the side airbag sensor LH.

OK:
The connector is properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

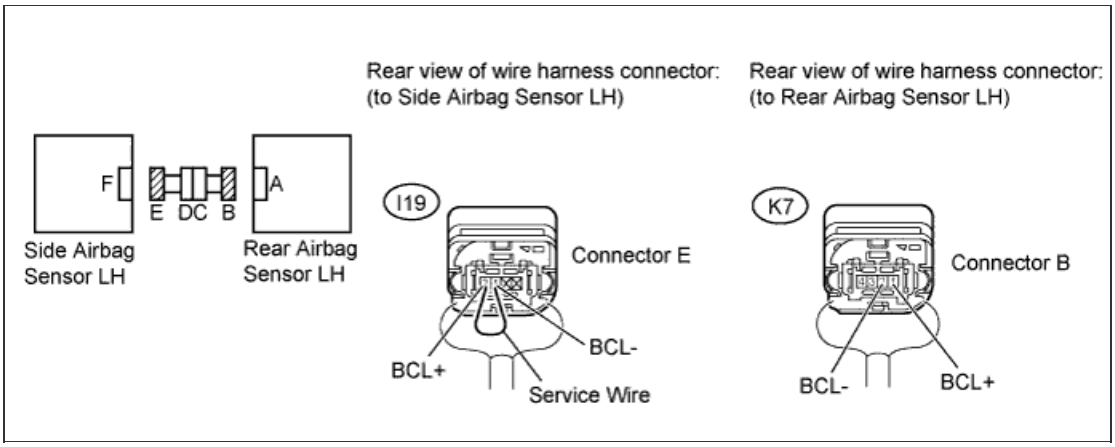
17.CHECK CONNECTORS

a. Disconnect the connectors from the rear airbag sensor LH and side airbag sensor LH.



b. Check that the connector (on the side airbag sensor LH side) is not damaged.

OK:
The connector is not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

18.CHECK SIDE AIRBAG SENSOR LH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-1 (BCL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-2 (BCL-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector E.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	Below 1 Ω

g. Disconnect the service wire from connector E.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	1 MΩ or higher
K7-1 (BCL+) - Body ground	Always	1 MΩ or higher
K7-2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → Go to step 21

OK

19.CHECK REAR AIRBAG SENSOR LH

a. Temporarily replace the side airbag sensor LH with a new one.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:
DTC B1638 or B1648 is not output.

HINT:

Codes other than DTC B1638 and B1648 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.

i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

NG → Go to step 20

OK

REPLACE REAR AIRBAG SENSOR LH (Click here)

20.CHECK SIDE AIRBAG SENSOR LH

a. Interchange the side airbag sensor RH with LH and connect the connectors to them.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 90 seconds.

g. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1638 or B1648 is output	A
DTC B1633 is output	B
DTC B1633, B1638 and B1648 are not output	C

HINT:

Codes other than DTC B1633, B1638 and B1648 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.

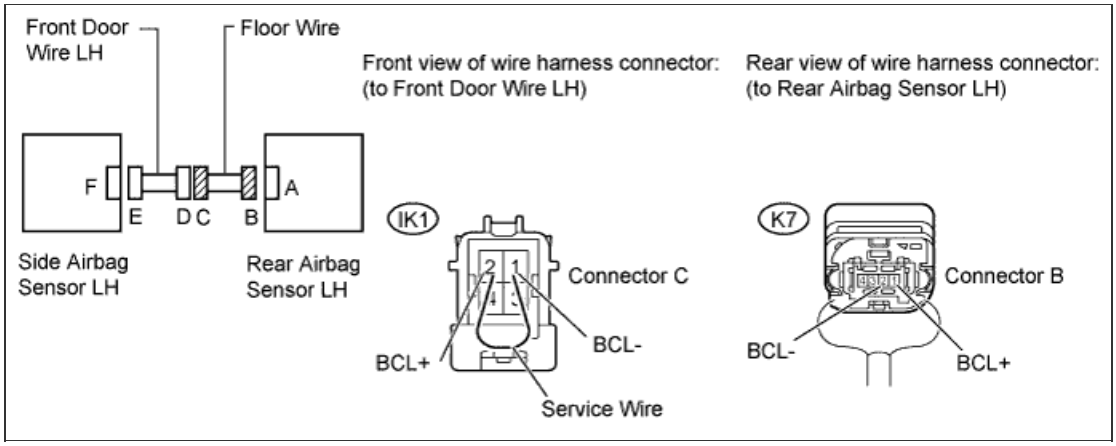
i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

j. Return the side airbag sensor RH and LH to their original positions and connect the connectors to them.



A → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

B → REPLACE SIDE AIRBAG SENSOR LH (Click here)

C

USE SIMULATION METHOD TO CHECK (Click here)

21.CHECK FLOOR WIRE (REAR AIRBAG SENSOR LH - FRONT DOOR WIRE LH)

a. Disconnect the floor wire from the front door wire LH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-1 (BCL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-2 (BCL-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	1 MΩ or higher
K7-1 (BCL+) - Body ground	Always	1 MΩ or higher
K7-2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK → REPLACE FRONT DOOR WIRE LH

DTC B1850/62 Short in Rear Side Squib RH Circuit

DTC B1851/62 Open in Rear Side Squib RH Circuit

DTC B1852/62 Short to GND in Rear Side Squib RH Circuit

DTC B1853/62 Short to B+ in Rear Side Squib RH Circuit

for Preparation Click here

DESCRIPTION

The rear side squib RH circuit consists of the center airbag sensor and the rear seat side airbag RH.
This circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the rear side squib RH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1850/62	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the rear side squib RH circuit during the primary check. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly
B1851/62	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the rear side squib RH circuit for 2 seconds. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly
B1852/62	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the rear side squib RH circuit for 0.5 seconds. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly
B1853/62	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the rear side squib RH circuit for 0.5 seconds. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK REAR SEAT SIDE AIRBAG RH (REAR SIDE SQUIB RH)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

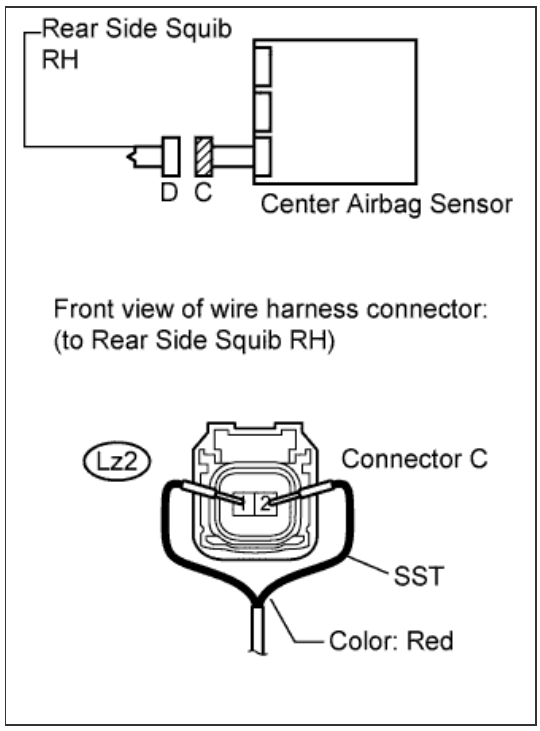
c. Disconnect the connector from the rear seat side airbag RH.

d. Connect the red wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:



Never connect the tester to the rear seat side airbag RH (rear side squib RH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1850 B1851 B1852 or B1853 is not output.

HINT:

Codes other than DTC B1850, B1851, B1852 and B1853 may be output at this time, but they are not related to this check.

Result

Result	Proceed to
OK (for LHD)	A
OK (for RHD)	B
NG	C

B → REPLACE REAR NO. 1 SEAT ASSEMBLY RH (Click here)

C → Go to step 2

A

REPLACE REAR NO. 1 SEAT ASSEMBLY RH (Click here)

2.CHECK NO. 2 FLOOR WIRE (REAR SIDE SQUIB RH CIRCUIT)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST (resistance: 2.1 Ω) from connector C.

d. Disconnect the connectors from the center airbag sensor.

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
Lz2-1 (SRR+) - Body ground	Engine switch on (IG)	Below 1 V
Lz2-2 (SRR-) - Body ground	Engine switch on (IG)	Below 1 V

g. Turn the engine switch off.

h. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Lz2-1 (SRR+) - Lz2-2 (SRR-)	Always	Below 1 Ω

j. Release the activation prevention mechanism built into connector B (Click here).

k. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Lz2-1 (SRR+) - Lz2-2 (SRR-)	Always	1 MΩ or higher
Lz2-1 (SRR+) - Body ground	Always	1 MΩ or higher
Lz2-2 (SRR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK

3.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the rear seat side airbag RH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1850, B1851, B1852 or B1853 is not output.

HINT:

Codes other than DTC B1850, B1851, B1852 and B1853 may be output at this time, but they are not related to this check.

DTC B1638/82 Rear Airbag Sensor Assembly LH Initialization Incomplete

DTC B1643/81 Side Satellite Sensor Bus RH Initialization Incomplete

DTC B1648/82 Side Satellite Sensor Bus LH Initialization Incomplete

DTC B1693/81 Door Side Airbag Sensor RH Initialization Incomplete

for Preparation Click here

DESCRIPTION

HINT:

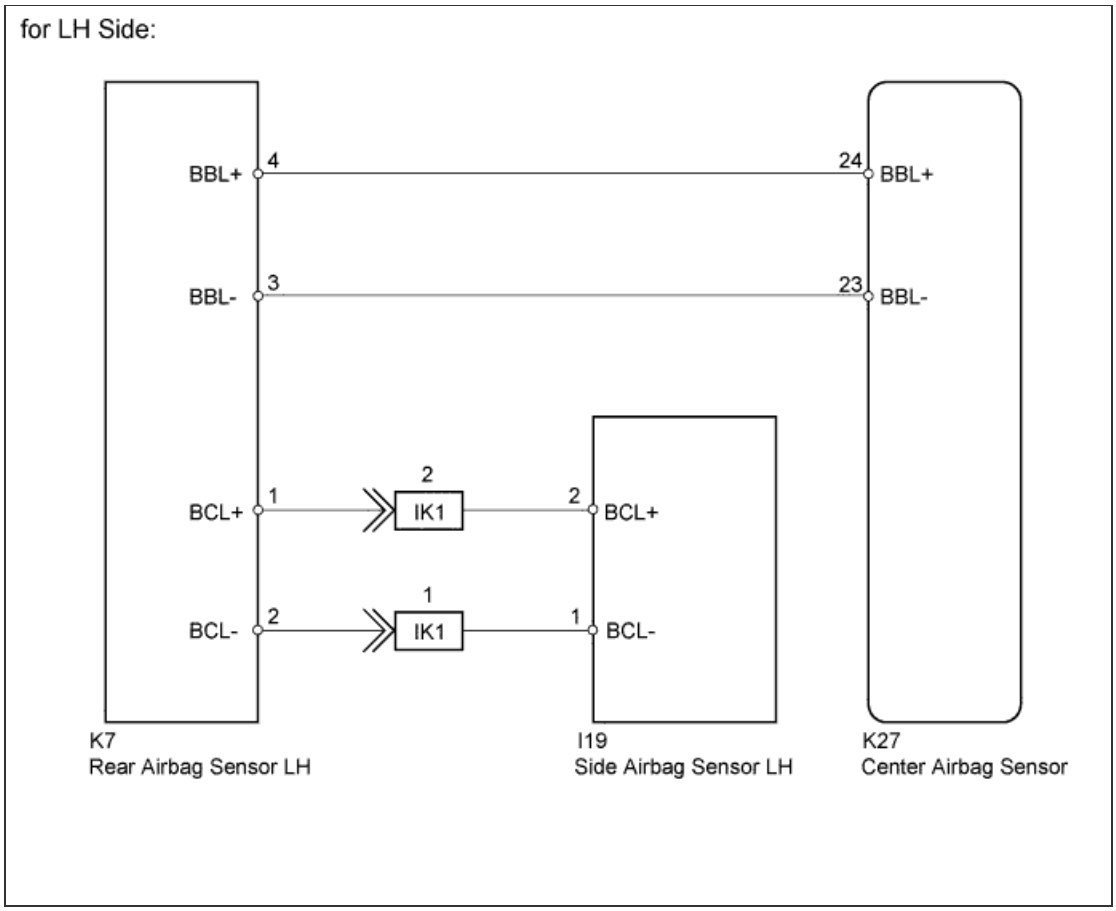
"Door side airbag sensor RH" refer to the side airbag sensor RH.



- The circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH, rear seat side airbag LH or RH and curtain shield airbag LH or RH) is composed of the center airbag sensor, side airbag sensor LH or RH, and rear airbag sensor LH or RH.
  The side airbag sensor LH or RH and rear airbag sensor LH or RH detect impacts to the vehicle and send signals to the center airbag sensor to determine if the airbag should be deployed.
  DTC B1693/81 or B1648/82 is stored when a malfunction is detected in the circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH and curtain shield airbag LH or RH).
  DTC B1643/81 or B1638/82 is stored when a malfunction is detected in the circuit for the rear collision sensor LH or RH (to determine deployment of the rear seat side airbag LH or RH and curtain shield airbag LH or RH).

DTC Code	DTC Detection Condition	Trouble Area
B1638/82	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the rear collision sensor LH (to determine deployment of the rear side seat airbag LH and curtain shield airbag LH) for 2 seconds. • A rear airbag sensor LH malfunction. • A side airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear airbag sensor LH • Side airbag sensor LH • Center airbag sensor assembly
B1643/81	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the rear collision sensor RH (to determine deployment of the rear seat side airbag RH and curtain shield airbag RH) for 2 seconds. • A rear airbag sensor RH malfunction. • A side airbag sensor RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear airbag sensor RH • Side airbag sensor RH • Center airbag sensor assembly
B1648/82	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH and curtain shield airbag LH) for 2 seconds.	• No. 2 floor wire • Front door wire LH • Side airbag sensor LH • Rear airbag sensor LH • Center airbag sensor assembly

	• A side airbag sensor LH malfunction. • A rear airbag sensor LH malfunction. • A center airbag sensor malfunction.	
B1693/81	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A rear airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front door wire RH • Side airbag sensor RH • Rear airbag sensor RH • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK PAST DTC

a. Turn the engine switch on (IG), and wait for at least 60 seconds.

b. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1637 or B1692 is output	A
DTC B1632 or B1697 is output	B
DTC B1632, B1637, B1692 and B1697 are not output	C

A → GO TO DTC B1637 (Click here)

B → GO TO DTC B1632 (Click here)

C

2.CHECK FOR DTC

a. Turn the engine switch off.

HINT:

If a communication error occurs, DTCs for both the LH and RH sides will be stored simultaneously. The malfunctioning area can be identified by turning the engine switch off and then on (IG) again.

b. Turn the engine switch on (IG), and wait for at least 60 seconds.

c. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1638, B1643, B1648 and B1693 are not output	A
DTC B1638 or B1648 is output	B
DTC B1643 or B1693 is output	C

HINT:

Codes other than DTC B1638, B1643,B1648 and B1693 may be output at this time, but they are not related to this check.

A → USE SIMULATION METHOD TO CHECK (Click here)

B → Go to step 13

C

3.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and side airbag sensor RH.

OK:

The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

4.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and side airbag sensor RH.

b. Check that the connectors (on the center airbag sensor side and side airbag sensor RH side) are not damaged.

OK:

The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

5.CHECK SIDE AIRBAG SENSOR RH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-4 (BBR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-3 (BBR-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 17 (BBR+) and 18 (BBR-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-4 (BBR+) - I9-3 (BBR-)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-4 (BBR+) - I9-3 (BBR-)	Always	1 MΩ or higher
I9-4 (BBR+) - Body ground	Always	1 MΩ or higher
I9-3 (BBR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 11

OK

6.CHECK CONNECTION OF CONNECTORS

a. Check that the connector is properly connected to the rear airbag sensor RH.

OK:
The connector is properly connected.

NG → CONNECT CONNECTOR PROPERLY

OK

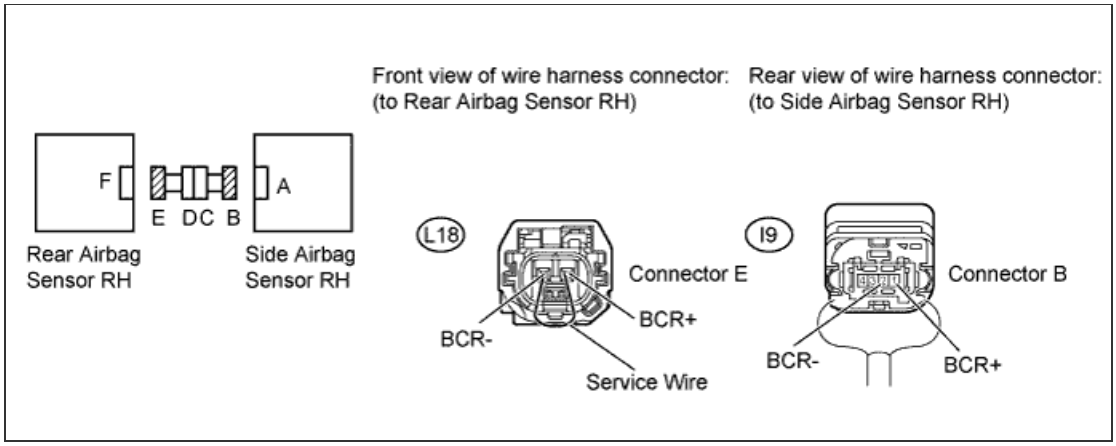
7.CHECK CONNECTORS

a. Disconnect the connectors from the side airbag sensor RH and rear airbag sensor RH.



b. Check that the connector (on the rear airbag sensor RH side) is not damaged.

OK:
The connector is not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

8.CHECK REAR AIRBAG SENSOR RH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector E.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

g. Disconnect the service wire from connector E.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 12

OK

9.CHECK SIDE AIRBAG SENSOR RH

a. Connect the connector to the center airbag sensor.

b. Interchange the side airbag sensor LH with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1643, B1693 and B1698 are not output	A
DTC B1698 is output	B
DTC B1643 and B1693 are output	C

HINT:

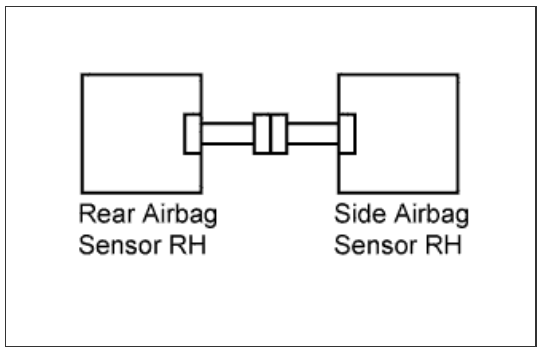
Codes other than DTC B1643,B1693 and B1698 may be output at this time, but they are not related to this check.

i. Turn the engine switch off.

j. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.



k. Return the side airbag sensor LH and RH to their original positions and connect the connectors to them.

A → USE SIMULATION METHOD TO CHECK (Click here)

B → REPLACE SIDE AIRBAG SENSOR RH (Click here)

C

10.CHECK REAR AIRBAG SENSOR RH

a. Temporarily replace the rear airbag sensor RH with a new one.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1643 or B1693 is not output.

HINT:

Codes other than DTC B1643 and B1693 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.

i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

REPLACE REAR AIRBAG SENSOR RH (Click here)

11.CHECK NO. 2 FLOOR WIRE (CENTER AIRBAG SENSOR - FRONT DOOR WIRE RH)

a. Disconnect the No. 2 floor wire from the front door wire RH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
IL1-4 (BBR+) - Body ground	Engine switch on (IG)	Below 1 V
IL1-3 (BBR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 17 (BBR+) and 18 (BBR-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
IL1-4 (BBR+) - IL1-3 (BBR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector B.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
IL1-4 (BBR+) - IL1-3 (BBR-)	Always	1 MΩ or higher
IL1-4 (BBR+) - Body ground	Always	1 MΩ or higher
IL1-3 (BBR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK → REPLACE FRONT DOOR WIRE RH

12.CHECK FRONT DOOR WIRE RH (SIDE AIRBAG SENSOR RH - NO. 2 FLOOR WIRE)

a. Disconnect the front door wire RH from the No. 2 floor wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FRONT DOOR WIRE RH

OK

REPLACE NO. 2 FLOOR WIRE

13.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and rear airbag sensor LH.

OK:

The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

14.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and rear airbag sensor LH.

b. Check that the connectors (on the center airbag sensor side and rear airbag sensor LH side) are not damaged.

OK:

The connectors are not deformed or damaged.

NG → REPLACE FLOOR WIRE

OK

15.CHECK FLOOR WIRE (CENTER AIRBAG SENSOR - REAR AIRBAG SENSOR LH)

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-4 (BBL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-3 (BBL-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 24 (BBL+) and 23 (BBL-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

		Specified

Tester Connection	Condition	Condition
K7-4 (BBL+) - K7-3 (BBL-)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-4 (BBL+) - K7-3 (BBL-)	Always	1 MΩ or higher
K7-4 (BBL+) - Body ground	Always	1 MΩ or higher
K7-3 (BBL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK

16.CHECK CONNECTION OF CONNECTOR

a. Check that the connector is properly connected to the side airbag sensor LH.

OK:
The connector is properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

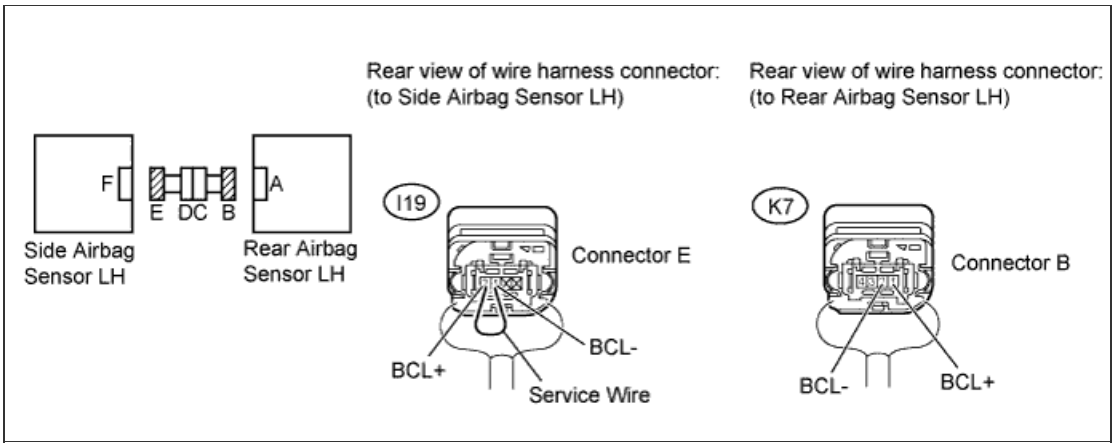
17.CHECK CONNECTORS

a. Disconnect the connectors from the rear airbag sensor LH and side airbag sensor LH.



b. Check that the connector (on the side airbag sensor LH side) is not damaged.

OK:
The connector is not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

18.CHECK SIDE AIRBAG SENSOR LH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-1 (BCL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-2 (BCL-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector E.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	Below 1 Ω

g. Disconnect the service wire from connector E.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	1 MΩ or higher
K7-1 (BCL+) - Body ground	Always	1 MΩ or higher
K7-2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → Go to step 21

OK

19.CHECK REAR AIRBAG SENSOR LH

a. Temporarily replace the side airbag sensor LH with a new one.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:
DTC B1638 or B1648 is not output.

HINT:

Codes other than DTC B1638 and B1648 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.

i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

NG → Go to step 20

OK

REPLACE REAR AIRBAG SENSOR LH (Click here)

20.CHECK SIDE AIRBAG SENSOR LH

a. Interchange the side airbag sensor RH with LH and connect the connectors to them.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 90 seconds.

g. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1638 or B1648 is output	A
DTC B1633 is output	B
DTC B1633, B1638 and B1648 are not output	C

HINT:

Codes other than DTC B1633, B1638 and B1648 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.

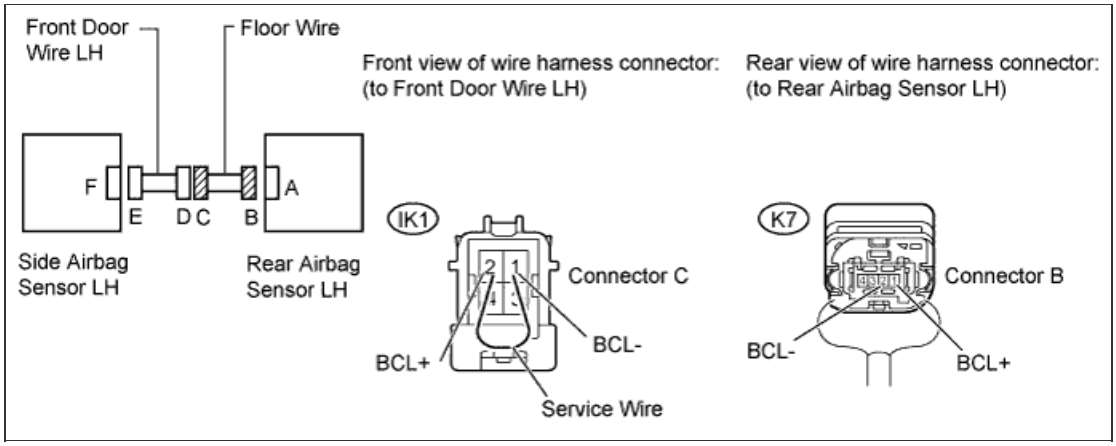
i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

j. Return the side airbag sensor RH and LH to their original positions and connect the connectors to them.



A → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

B → REPLACE SIDE AIRBAG SENSOR LH (Click here)

C

USE SIMULATION METHOD TO CHECK (Click here)

21.CHECK FLOOR WIRE (REAR AIRBAG SENSOR LH - FRONT DOOR WIRE LH)

a. Disconnect the floor wire from the front door wire LH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-1 (BCL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-2 (BCL-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	1 MΩ or higher
K7-1 (BCL+) - Body ground	Always	1 MΩ or higher
K7-2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK → REPLACE FRONT DOOR WIRE LH

DTC B1850/62 Short in Rear Side Squib RH Circuit

DTC B1851/62 Open in Rear Side Squib RH Circuit

DTC B1852/62 Short to GND in Rear Side Squib RH Circuit

DTC B1853/62 Short to B+ in Rear Side Squib RH Circuit

for Preparation Click here

DESCRIPTION

The rear side squib RH circuit consists of the center airbag sensor and the rear seat side airbag RH.
This circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the rear side squib RH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1850/62	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the rear side squib RH circuit during the primary check. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly
B1851/62	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the rear side squib RH circuit for 2 seconds. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly
B1852/62	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the rear side squib RH circuit for 0.5 seconds. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly
B1853/62	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the rear side squib RH circuit for 0.5 seconds. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK REAR SEAT SIDE AIRBAG RH (REAR SIDE SQUIB RH)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

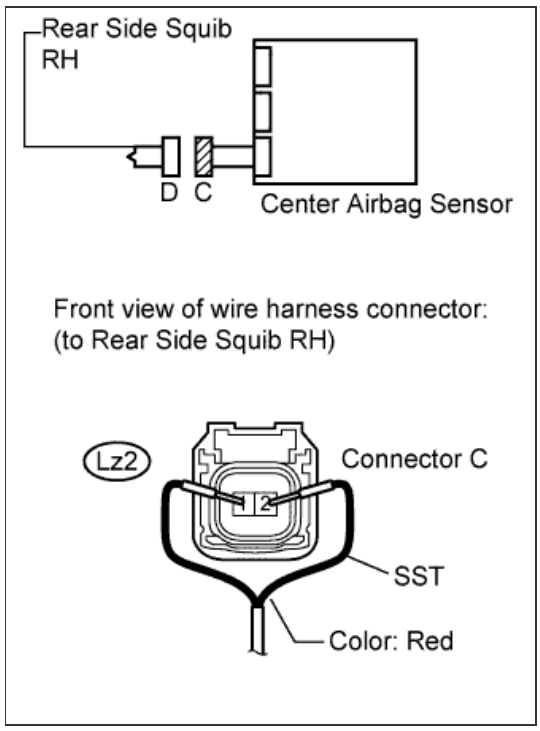
c. Disconnect the connector from the rear seat side airbag RH.

d. Connect the red wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:



Never connect the tester to the rear seat side airbag RH (rear side squib RH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1850 B1851 B1852 or B1853 is not output.

HINT:

Codes other than DTC B1850, B1851, B1852 and B1853 may be output at this time, but they are not related to this check.

Result

Result	Proceed to
OK (for LHD)	A
OK (for RHD)	B
NG	C

B → REPLACE REAR NO. 1 SEAT ASSEMBLY RH (Click here)

C → Go to step 2

A

REPLACE REAR NO. 1 SEAT ASSEMBLY RH (Click here)

2.CHECK NO. 2 FLOOR WIRE (REAR SIDE SQUIB RH CIRCUIT)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST (resistance: 2.1 Ω) from connector C.

d. Disconnect the connectors from the center airbag sensor.

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
Lz2-1 (SRR+) - Body ground	Engine switch on (IG)	Below 1 V
Lz2-2 (SRR-) - Body ground	Engine switch on (IG)	Below 1 V

g. Turn the engine switch off.

h. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Lz2-1 (SRR+) - Lz2-2 (SRR-)	Always	Below 1 Ω

j. Release the activation prevention mechanism built into connector B (Click here).

k. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Lz2-1 (SRR+) - Lz2-2 (SRR-)	Always	1 MΩ or higher
Lz2-1 (SRR+) - Body ground	Always	1 MΩ or higher
Lz2-2 (SRR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK

3.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the rear seat side airbag RH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1850, B1851, B1852 or B1853 is not output.

HINT:

Codes other than DTC B1850, B1851, B1852 and B1853 may be output at this time, but they are not related to this check.

OK

USE SIMULATION METHOD TO CHECK (Click here)

DTC B1638/82 Rear Airbag Sensor Assembly LH Initialization Incomplete

DTC B1643/81 Side Satellite Sensor Bus RH Initialization Incomplete

DTC B1648/82 Side Satellite Sensor Bus LH Initialization Incomplete

DTC B1693/81 Door Side Airbag Sensor RH Initialization Incomplete

for Preparation Click here

DESCRIPTION

HINT:

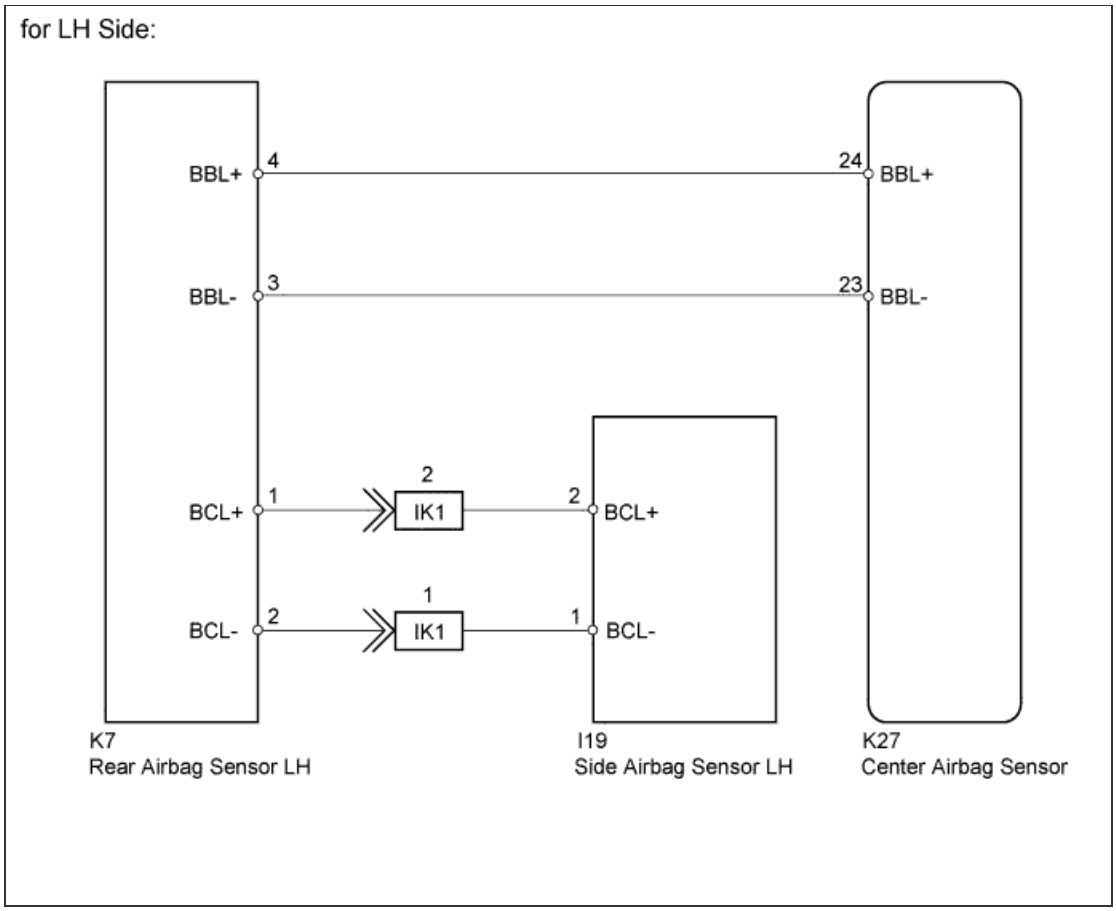
"Door side airbag sensor RH" refer to the side airbag sensor RH.



- The circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH, rear seat side airbag LH or RH and curtain shield airbag LH or RH) is composed of the center airbag sensor, side airbag sensor LH or RH, and rear airbag sensor LH or RH.
  The side airbag sensor LH or RH and rear airbag sensor LH or RH detect impacts to the vehicle and send signals to the center airbag sensor to determine if the airbag should be deployed.
  DTC B1693/81 or B1648/82 is stored when a malfunction is detected in the circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH and curtain shield airbag LH or RH).
  DTC B1643/81 or B1638/82 is stored when a malfunction is detected in the circuit for the rear collision sensor LH or RH (to determine deployment of the rear seat side airbag LH or RH and curtain shield airbag LH or RH).

DTC Code	DTC Detection Condition	Trouble Area
B1638/82	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the rear collision sensor LH (to determine deployment of the rear side seat airbag LH and curtain shield airbag LH) for 2 seconds. • A rear airbag sensor LH malfunction. • A side airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear airbag sensor LH • Side airbag sensor LH • Center airbag sensor assembly
B1643/81	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the rear collision sensor RH (to determine deployment of the rear seat side airbag RH and curtain shield airbag RH) for 2 seconds. • A rear airbag sensor RH malfunction. • A side airbag sensor RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear airbag sensor RH • Side airbag sensor RH • Center airbag sensor assembly
B1648/82	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH and curtain shield airbag LH) for 2 seconds.	• No. 2 floor wire • Front door wire LH • Side airbag sensor LH • Rear airbag sensor LH • Center airbag sensor assembly

	• A side airbag sensor LH malfunction. • A rear airbag sensor LH malfunction. • A center airbag sensor malfunction.	
B1693/81	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A rear airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front door wire RH • Side airbag sensor RH • Rear airbag sensor RH • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK PAST DTC

a. Turn the engine switch on (IG), and wait for at least 60 seconds.

b. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1637 or B1692 is output	A
DTC B1632 or B1697 is output	B
DTC B1632, B1637, B1692 and B1697 are not output	C

A → GO TO DTC B1637 (Click here)

B → GO TO DTC B1632 (Click here)

C

2.CHECK FOR DTC

a. Turn the engine switch off.

HINT:

If a communication error occurs, DTCs for both the LH and RH sides will be stored simultaneously. The malfunctioning area can be identified by turning the engine switch off and then on (IG) again.

b. Turn the engine switch on (IG), and wait for at least 60 seconds.

c. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1638, B1643, B1648 and B1693 are not output	A
DTC B1638 or B1648 is output	B
DTC B1643 or B1693 is output	C

HINT:

Codes other than DTC B1638, B1643,B1648 and B1693 may be output at this time, but they are not related to this check.

A → USE SIMULATION METHOD TO CHECK (Click here)

B → Go to step 13

C

3.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and side airbag sensor RH.

OK:

The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

4.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and side airbag sensor RH.

b. Check that the connectors (on the center airbag sensor side and side airbag sensor RH side) are not damaged.

OK:

The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

5.CHECK SIDE AIRBAG SENSOR RH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-4 (BBR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-3 (BBR-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 17 (BBR+) and 18 (BBR-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-4 (BBR+) - I9-3 (BBR-)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-4 (BBR+) - I9-3 (BBR-)	Always	1 MΩ or higher
I9-4 (BBR+) - Body ground	Always	1 MΩ or higher
I9-3 (BBR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 11

OK

6.CHECK CONNECTION OF CONNECTORS

a. Check that the connector is properly connected to the rear airbag sensor RH.

OK:
The connector is properly connected.

NG → CONNECT CONNECTOR PROPERLY

OK

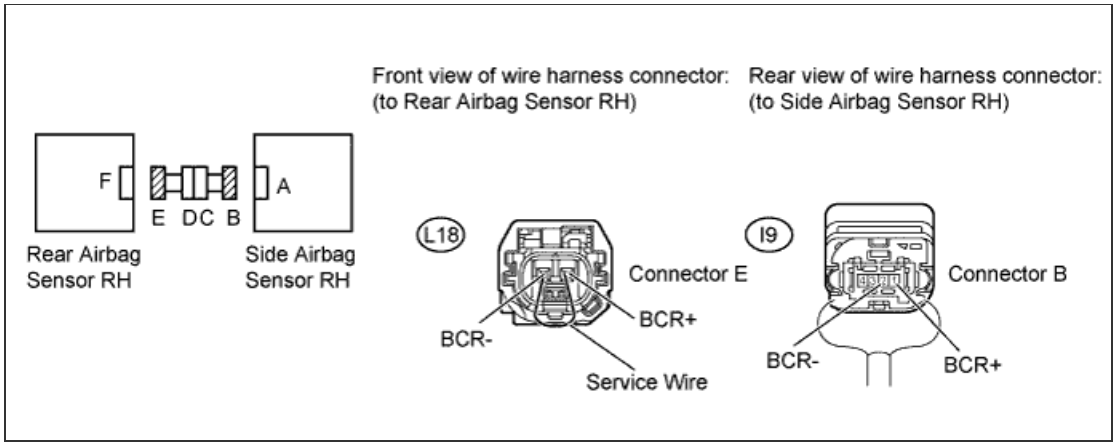
7.CHECK CONNECTORS

a. Disconnect the connectors from the side airbag sensor RH and rear airbag sensor RH.



b. Check that the connector (on the rear airbag sensor RH side) is not damaged.

OK:
The connector is not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

8.CHECK REAR AIRBAG SENSOR RH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector E.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

g. Disconnect the service wire from connector E.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 12

OK

9.CHECK SIDE AIRBAG SENSOR RH

a. Connect the connector to the center airbag sensor.

b. Interchange the side airbag sensor LH with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1643, B1693 and B1698 are not output	A
DTC B1698 is output	B
DTC B1643 and B1693 are output	C

HINT:

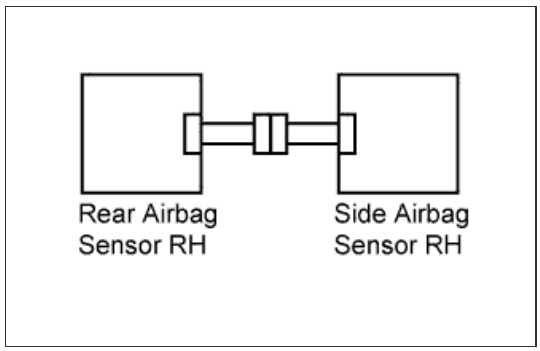
Codes other than DTC B1643,B1693 and B1698 may be output at this time, but they are not related to this check.

i. Turn the engine switch off.

j. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.



k. Return the side airbag sensor LH and RH to their original positions and connect the connectors to them.

A → USE SIMULATION METHOD TO CHECK (Click here)

B → REPLACE SIDE AIRBAG SENSOR RH (Click here)

C

10.CHECK REAR AIRBAG SENSOR RH

a. Temporarily replace the rear airbag sensor RH with a new one.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1643 or B1693 is not output.

HINT:

Codes other than DTC B1643 and B1693 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.

i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

REPLACE REAR AIRBAG SENSOR RH (Click here)

11.CHECK NO. 2 FLOOR WIRE (CENTER AIRBAG SENSOR - FRONT DOOR WIRE RH)

a. Disconnect the No. 2 floor wire from the front door wire RH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
IL1-4 (BBR+) - Body ground	Engine switch on (IG)	Below 1 V
IL1-3 (BBR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 17 (BBR+) and 18 (BBR-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
IL1-4 (BBR+) - IL1-3 (BBR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector B.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
IL1-4 (BBR+) - IL1-3 (BBR-)	Always	1 MΩ or higher
IL1-4 (BBR+) - Body ground	Always	1 MΩ or higher
IL1-3 (BBR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK → REPLACE FRONT DOOR WIRE RH

12.CHECK FRONT DOOR WIRE RH (SIDE AIRBAG SENSOR RH - NO. 2 FLOOR WIRE)

a. Disconnect the front door wire RH from the No. 2 floor wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FRONT DOOR WIRE RH

OK

REPLACE NO. 2 FLOOR WIRE

13.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and rear airbag sensor LH.

OK:

The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

14.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and rear airbag sensor LH.

b. Check that the connectors (on the center airbag sensor side and rear airbag sensor LH side) are not damaged.

OK:

The connectors are not deformed or damaged.

NG → REPLACE FLOOR WIRE

OK

15.CHECK FLOOR WIRE (CENTER AIRBAG SENSOR - REAR AIRBAG SENSOR LH)

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-4 (BBL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-3 (BBL-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 24 (BBL+) and 23 (BBL-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

		Specified

Tester Connection	Condition	Condition
K7-4 (BBL+) - K7-3 (BBL-)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-4 (BBL+) - K7-3 (BBL-)	Always	1 MΩ or higher
K7-4 (BBL+) - Body ground	Always	1 MΩ or higher
K7-3 (BBL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK

16.CHECK CONNECTION OF CONNECTOR

a. Check that the connector is properly connected to the side airbag sensor LH.

OK:
The connector is properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

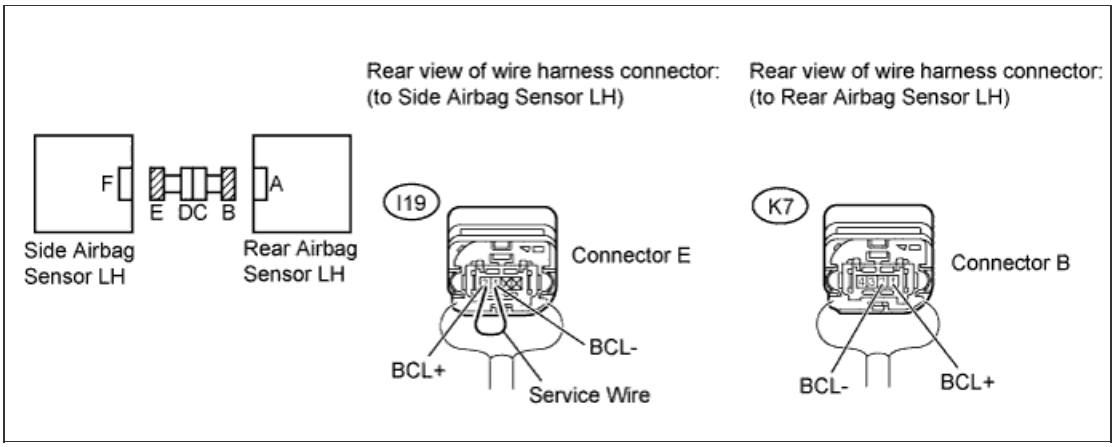
17.CHECK CONNECTORS

a. Disconnect the connectors from the rear airbag sensor LH and side airbag sensor LH.



b. Check that the connector (on the side airbag sensor LH side) is not damaged.

OK:
The connector is not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

18.CHECK SIDE AIRBAG SENSOR LH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-1 (BCL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-2 (BCL-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector E.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	Below 1 Ω

g. Disconnect the service wire from connector E.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	1 MΩ or higher
K7-1 (BCL+) - Body ground	Always	1 MΩ or higher
K7-2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → Go to step 21

OK

19.CHECK REAR AIRBAG SENSOR LH

a. Temporarily replace the side airbag sensor LH with a new one.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:
DTC B1638 or B1648 is not output.

HINT:

Codes other than DTC B1638 and B1648 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.

i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

NG → Go to step 20

OK

REPLACE REAR AIRBAG SENSOR LH (Click here)

20.CHECK SIDE AIRBAG SENSOR LH

a. Interchange the side airbag sensor RH with LH and connect the connectors to them.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 90 seconds.

g. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1638 or B1648 is output	A
DTC B1633 is output	B
DTC B1633, B1638 and B1648 are not output	C

HINT:

Codes other than DTC B1633, B1638 and B1648 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.

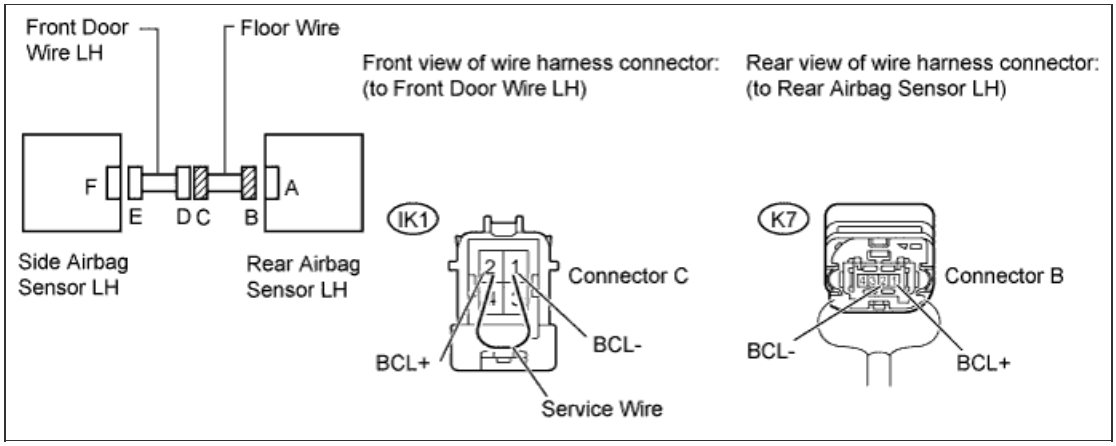
i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

j. Return the side airbag sensor RH and LH to their original positions and connect the connectors to them.



A → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

B → REPLACE SIDE AIRBAG SENSOR LH (Click here)

C

USE SIMULATION METHOD TO CHECK (Click here)

21.CHECK FLOOR WIRE (REAR AIRBAG SENSOR LH - FRONT DOOR WIRE LH)

a. Disconnect the floor wire from the front door wire LH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-1 (BCL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-2 (BCL-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	1 MΩ or higher
K7-1 (BCL+) - Body ground	Always	1 MΩ or higher
K7-2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK → REPLACE FRONT DOOR WIRE LH

DTC B1850/62 Short in Rear Side Squib RH Circuit

DTC B1851/62 Open in Rear Side Squib RH Circuit

DTC B1852/62 Short to GND in Rear Side Squib RH Circuit

DTC B1853/62 Short to B+ in Rear Side Squib RH Circuit

for Preparation Click here

DESCRIPTION

The rear side squib RH circuit consists of the center airbag sensor and the rear seat side airbag RH.
This circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the rear side squib RH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1850/62	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the rear side squib RH circuit during the primary check. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly
B1851/62	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the rear side squib RH circuit for 2 seconds. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly
B1852/62	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the rear side squib RH circuit for 0.5 seconds. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly
B1853/62	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the rear side squib RH circuit for 0.5 seconds. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK REAR SEAT SIDE AIRBAG RH (REAR SIDE SQUIB RH)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

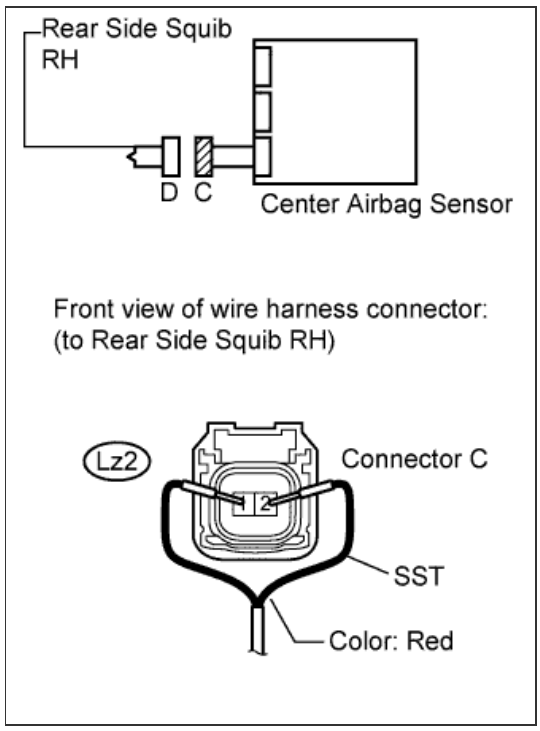
c. Disconnect the connector from the rear seat side airbag RH.

d. Connect the red wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:



Never connect the tester to the rear seat side airbag RH (rear side squib RH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1850 B1851 B1852 or B1853 is not output.

HINT:

Codes other than DTC B1850, B1851, B1852 and B1853 may be output at this time, but they are not related to this check.

Result

Result	Proceed to
OK (for LHD)	A
OK (for RHD)	B
NG	C

B → REPLACE REAR NO. 1 SEAT ASSEMBLY RH (Click here)

C → Go to step 2

A

REPLACE REAR NO. 1 SEAT ASSEMBLY RH (Click here)

2.CHECK NO. 2 FLOOR WIRE (REAR SIDE SQUIB RH CIRCUIT)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST (resistance: 2.1 Ω) from connector C.

d. Disconnect the connectors from the center airbag sensor.

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
Lz2-1 (SRR+) - Body ground	Engine switch on (IG)	Below 1 V
Lz2-2 (SRR-) - Body ground	Engine switch on (IG)	Below 1 V

g. Turn the engine switch off.

h. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Lz2-1 (SRR+) - Lz2-2 (SRR-)	Always	Below 1 Ω

j. Release the activation prevention mechanism built into connector B (Click here).

k. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Lz2-1 (SRR+) - Lz2-2 (SRR-)	Always	1 MΩ or higher
Lz2-1 (SRR+) - Body ground	Always	1 MΩ or higher
Lz2-2 (SRR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK

3.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the rear seat side airbag RH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1850, B1851, B1852 or B1853 is not output.

HINT:

Codes other than DTC B1850, B1851, B1852 and B1853 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

USE SIMULATION METHOD TO CHECK (Click here)

DTC B1642/81 Lost Communication with Side Satellite Sensor Bus RH

DTC B1647/82 Lost Communication with Side Satellite Sensor Bus LH

for Preparation Click here

DESCRIPTION

The circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH, rear seat side airbag LH or RH and curtain shield airbag LH or RH) is composed of the center airbag sensor, side airbag sensor LH or RH, and rear airbag sensor LH or RH.
The side airbag sensor LH or RH and rear airbag sensor LH or RH detect impacts to the vehicle and send signals to the center airbag sensor to determine if the airbag should be deployed.
DTC B1642/81 or B1647/82 is stored when a malfunction is detected in the circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH, rear seat side airbag LH or RH and curtain shield airbag LH or RH).

DTC Code	DTC Detection Condition	Trouble Area
B1642/81	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A rear airbag sensor RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Front door wire RH • Side airbag sensor RH • Rear airbag sensor RH • Center airbag sensor assembly
B1647/82	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH and curtain shield airbag LH) for 2 seconds. • A side airbag sensor LH malfunction. • A rear airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front door wire LH • Side airbag sensor LH • Rear airbag sensor LH • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK FOR DTC

a. Turn the engine switch off.

b. Turn the engine switch on (IG), and wait for at least 60 seconds.

c. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1642 and B1647 are not output	A
DTC B1647 is output	B
DTC B1642 is output	C

HINT:

Code other than DTC B1642 and B1647 may be output at this time, but they are not related to this check.

A → USE SIMULATION METHOD TO CHECK (Click here)

B → Go to step 12

C

2.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and side airbag sensor RH.

OK:

The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

3.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and side airbag sensor RH.

b. Check that the connectors (on the center airbag sensor side and side airbag sensor RH side) are not damaged.

OK:

The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

4.CHECK SIDE AIRBAG SENSOR RH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-4 (BBR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-3 (BBR-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 17 (BBR+) and 18 (BBR-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-4 (BBR+) - I9-3 (BBR-)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-4 (BBR+) - I9-3 (BBR-)	Always	1 MΩ or higher
I9-4 (BBR+) - Body ground	Always	1 MΩ or higher
I9-3 (BBR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 10

OK

5.CHECK CONNECTION OF CONNECTORS

a. Check that the connector is properly connected to the rear airbag sensor RH.

OK:

The connector is properly connected.

NG → CONNECT CONNECTOR PROPERLY

OK

6.CHECK CONNECTORS

a. Disconnect the connectors from the side airbag sensor RH and rear airbag sensor RH.

b. Check that the connector (on the rear airbag sensor RH side) is not damaged.

OK:

The connector is not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

7.CHECK REAR AIRBAG SENSOR RH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector E.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

g. Disconnect the service wire from connector E.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 11

OK

8.CHECK SIDE AIRBAG SENSOR RH

a. Connect the connector to the center airbag sensor.

b. Interchange the side airbag sensor LH with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1642 and B1647 are not output	A
DTC B1647 is output	B
DTC B1642 is output	C

HINT:

Codes other than DTC B1642 and B1647 may be output at this time, but they are not related to this check.

i. Turn the engine switch off.

j. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

k. Return the side airbag sensor LH and RH to their original positions and connect the connectors to them.

A → USE SIMULATION METHOD TO CHECK (Click here)

B → REPLACE SIDE AIRBAG SENSOR ASSEMBLY RH (Click here)

C

9.CHECK REAR AIRBAG SENSOR RH

a. Temporarily replace the rear airbag sensor RH with a new one.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:
DTC B1642 is not output.

HINT:

Codes other than DTC B1642 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.

i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

REPLACE REAR AIRBAG SENSOR RH (Click here)

10.CHECK NO. 2 FLOOR WIRE (CENTER AIRBAG SENSOR - FRONT DOOR WIRE RH)

a. Disconnect the No. 2 floor wire connector from the front door wire RH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
IL1-4 (BBR+) - Body ground	Engine switch on (IG)	Below 1 V
IL1-3 (BBR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 17 (BBR+) and 18 (BBR-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
IL1-4 (BBR+) - IL1-3 (BBR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector B.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
IL1-4 (BBR+) - IL1-3 (BBR-)	Always	1 MΩ or higher
IL1-4 (BBR+) - Body ground	Always	1 MΩ or higher
IL1-3 (BBR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK

REPLACE FRONT DOOR WIRE RH

11.CHECK FRONT DOOR WIRE RH (SIDE AIRBAG SENSOR RH - NO. 2 FLOOR WIRE)

a. Disconnect the front door wire RH connector from the No. 2 floor wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FRONT DOOR WIRE RH

OK

REPLACE NO. 2 FLOOR WIRE

12.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and rear airbag sensor LH.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

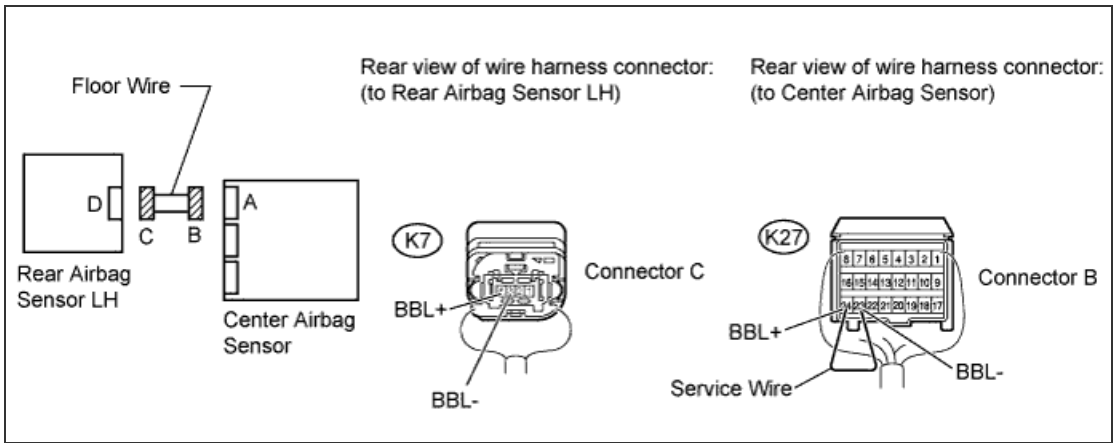
13.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and rear airbag sensor LH.



b. Check that the connectors (on the center airbag sensor side and rear airbag sensor LH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE FLOOR WIRE

OK

14.CHECK FLOOR WIRE (CENTER AIRBAG SENSOR - REAR AIRBAG SENSOR LH)

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-4 (BBL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-3 (BBL-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 24 (BBL+) and 23 (BBL-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-4 (BBL+) - K7-3 (BBL-)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-4 (BBL+) - K7-3 (BBL-)	Always	1 MΩ or higher
K7-4 (BBL+) - Body ground	Always	1 MΩ or higher
K7-3 (BBL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK ↓

15.CHECK CONNECTION OF CONNECTOR

a. Check that the connector is properly connected to the side airbag sensor LH.

OK:
The connector is properly connected.

NG → CONNECT CONNECTORS PROPERLY

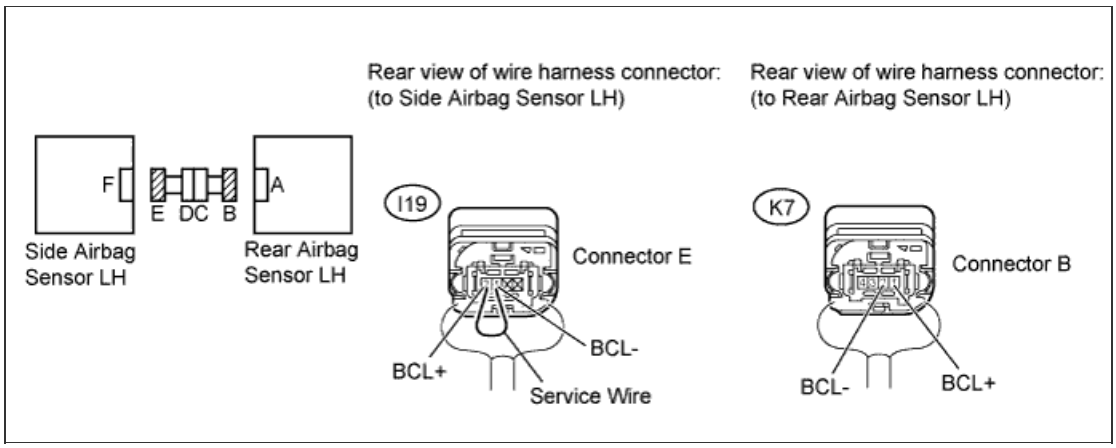
OK ↓

16.CHECK CONNECTORS

a. Disconnect the connectors from the rear airbag sensor LH and side airbag sensor LH.



b. Check that the connector (on the side airbag sensor LH side) is not damaged.

OK:
The connector is not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK ↓

17.CHECK SIDE AIRBAG SENSOR LH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-1 (BCL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-2 (BCL-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector E.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	Below 1 Ω

g. Disconnect the service wire from connector E.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	1 MΩ or higher
K7-1 (BCL+) - Body ground	Always	1 MΩ or higher
K7-2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → Go to step 20

OK

18.CHECK REAR AIRBAG SENSOR LH

a. Temporarily replace the side airbag sensor LH with a new one.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:
DTC B1642 or B1647 is not output.

HINT:

Codes other than DTC B1642 and B1647 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.

i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

NG → Go to step 19

OK →

REPLACE REAR AIRBAG SENSOR LH (Click here)

19.CHECK SIDE AIRBAG SENSOR LH

a. Interchange the side airbag sensor RH with LH and connect the connectors to them.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

USE SIMULATION METHOD TO CHECK (Click here)

20.CHECK FLOOR WIRE (REAR SIDE AIRBAG SENSOR LH - FRONT DOOR WIRE LH)

a. Disconnect the floor wire connector from the front door wire LH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-1 (BCL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-2 (BCL-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	1 MΩ or higher
K7-1 (BCL+) - Body ground	Always	1 MΩ or higher
K7-2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK → REPLACE FRONT DOOR WIRE LH

DTC B1850/62 Short in Rear Side Squib RH Circuit

DTC B1851/62 Open in Rear Side Squib RH Circuit

DTC B1852/62 Short to GND in Rear Side Squib RH Circuit

DTC B1853/62 Short to B+ in Rear Side Squib RH Circuit

for Preparation Click here

DESCRIPTION

The rear side squib RH circuit consists of the center airbag sensor and the rear seat side airbag RH.
This circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the rear side squib RH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1850/62	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the rear side squib RH circuit during the primary check. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly
B1851/62	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the rear side squib RH circuit for 2 seconds. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly
B1852/62	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the rear side squib RH circuit for 0.5 seconds. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly
B1853/62	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the rear side squib RH circuit for 0.5 seconds. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK REAR SEAT SIDE AIRBAG RH (REAR SIDE SQUIB RH)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connector from the rear seat side airbag RH.

d. Connect the red wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the rear seat side airbag RH (rear side squib RH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1850 B1851 B1852 or B1853 is not output.

HINT:

Codes other than DTC B1850, B1851, B1852 and B1853 may be output at this time, but they are not related to this check.

OK (for RHD)	B
NG	C

B → REPLACE REAR NO. 1 SEAT ASSEMBLY RH (Click here)

C → Go to step 2

A

REPLACE REAR NO. 1 SEAT ASSEMBLY RH (Click here)

2.CHECK NO. 2 FLOOR WIRE (REAR SIDE SQUIB RH CIRCUIT)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST (resistance: 2.1 Ω) from connector C.

d. Disconnect the connectors from the center airbag sensor.

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
Lz2-1 (SRR+) - Body ground	Engine switch on (IG)	Below 1 V
Lz2-2 (SRR-) - Body ground	Engine switch on (IG)	Below 1 V

g. Turn the engine switch off.

h. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Lz2-1 (SRR+) - Lz2-2 (SRR-)	Always	Below 1 Ω

j. Release the activation prevention mechanism built into connector B (Click here).

k. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Lz2-1 (SRR+) - Lz2-2 (SRR-)	Always	1 MΩ or higher
Lz2-1 (SRR+) - Body ground	Always	1 MΩ or higher
Lz2-2 (SRR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK

3.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the rear seat side airbag RH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1850, B1851, B1852 or B1853 is not output.

HINT:

OK

USE SIMULATION METHOD TO CHECK (Click here)

DTC B1642/81 Lost Communication with Side Satellite Sensor Bus RH

DTC B1647/82 Lost Communication with Side Satellite Sensor Bus LH

for Preparation Click here

DESCRIPTION

The circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH, rear seat side airbag LH or RH and curtain shield airbag LH or RH) is composed of the center airbag sensor, side airbag sensor LH or RH, and rear airbag sensor LH or RH.
The side airbag sensor LH or RH and rear airbag sensor LH or RH detect impacts to the vehicle and send signals to the center airbag sensor to determine if the airbag should be deployed.
DTC B1642/81 or B1647/82 is stored when a malfunction is detected in the circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH, rear seat side airbag LH or RH and curtain shield airbag LH or RH).

DTC Code	DTC Detection Condition	Trouble Area
B1642/81	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A rear airbag sensor RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Front door wire RH • Side airbag sensor RH • Rear airbag sensor RH • Center airbag sensor assembly
B1647/82	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH and curtain shield airbag LH) for 2 seconds. • A side airbag sensor LH malfunction. • A rear airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front door wire LH • Side airbag sensor LH • Rear airbag sensor LH • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK FOR DTC

a. Turn the engine switch off.

b. Turn the engine switch on (IG), and wait for at least 60 seconds.

c. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1642 and B1647 are not output	A
DTC B1647 is output	B
DTC B1642 is output	C

HINT:

Code other than DTC B1642 and B1647 may be output at this time, but they are not related to this check.

A → USE SIMULATION METHOD TO CHECK (Click here)

B → Go to step 12

C

2.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and side airbag sensor RH.

OK:

The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

3.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and side airbag sensor RH.

b. Check that the connectors (on the center airbag sensor side and side airbag sensor RH side) are not damaged.

OK:

The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

4.CHECK SIDE AIRBAG SENSOR RH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-4 (BBR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-3 (BBR-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 17 (BBR+) and 18 (BBR-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-4 (BBR+) - I9-3 (BBR-)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-4 (BBR+) - I9-3 (BBR-)	Always	1 MΩ or higher
I9-4 (BBR+) - Body ground	Always	1 MΩ or higher
I9-3 (BBR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 10

OK

5.CHECK CONNECTION OF CONNECTORS

a. Check that the connector is properly connected to the rear airbag sensor RH.

OK:

The connector is properly connected.

NG → CONNECT CONNECTOR PROPERLY

OK

6.CHECK CONNECTORS

a. Disconnect the connectors from the side airbag sensor RH and rear airbag sensor RH.

b. Check that the connector (on the rear airbag sensor RH side) is not damaged.

OK:

The connector is not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

7.CHECK REAR AIRBAG SENSOR RH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector E.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

g. Disconnect the service wire from connector E.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 11

OK

8.CHECK SIDE AIRBAG SENSOR RH

a. Connect the connector to the center airbag sensor.

b. Interchange the side airbag sensor LH with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:
DTC B1642 is not output.

HINT:

Codes other than DTC B1642 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.

i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

REPLACE REAR AIRBAG SENSOR RH (Click here)

10.CHECK NO. 2 FLOOR WIRE (CENTER AIRBAG SENSOR - FRONT DOOR WIRE RH)

a. Disconnect the No. 2 floor wire connector from the front door wire RH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
IL1-4 (BBR+) - Body ground	Engine switch on (IG)	Below 1 V
IL1-3 (BBR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 17 (BBR+) and 18 (BBR-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
IL1-4 (BBR+) - IL1-3 (BBR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector B.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
IL1-4 (BBR+) - IL1-3 (BBR-)	Always	1 MΩ or higher
IL1-4 (BBR+) - Body ground	Always	1 MΩ or higher
IL1-3 (BBR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK

REPLACE FRONT DOOR WIRE RH

11.CHECK FRONT DOOR WIRE RH (SIDE AIRBAG SENSOR RH - NO. 2 FLOOR WIRE)

a. Disconnect the front door wire RH connector from the No. 2 floor wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FRONT DOOR WIRE RH

OK

REPLACE NO. 2 FLOOR WIRE

12.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and rear airbag sensor LH.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

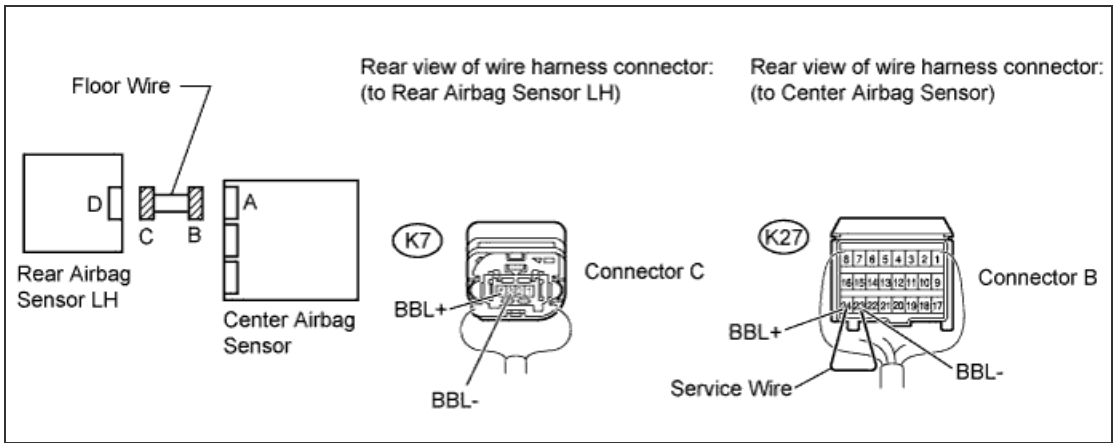
13.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and rear airbag sensor LH.



b. Check that the connectors (on the center airbag sensor side and rear airbag sensor LH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE FLOOR WIRE

OK

14.CHECK FLOOR WIRE (CENTER AIRBAG SENSOR - REAR AIRBAG SENSOR LH)

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-4 (BBL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-3 (BBL-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 24 (BBL+) and 23 (BBL-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-4 (BBL+) - K7-3 (BBL-)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-4 (BBL+) - K7-3 (BBL-)	Always	1 MΩ or higher
K7-4 (BBL+) - Body ground	Always	1 MΩ or higher
K7-3 (BBL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK ↓

15.CHECK CONNECTION OF CONNECTOR

a. Check that the connector is properly connected to the side airbag sensor LH.

OK:
The connector is properly connected.

NG → CONNECT CONNECTORS PROPERLY

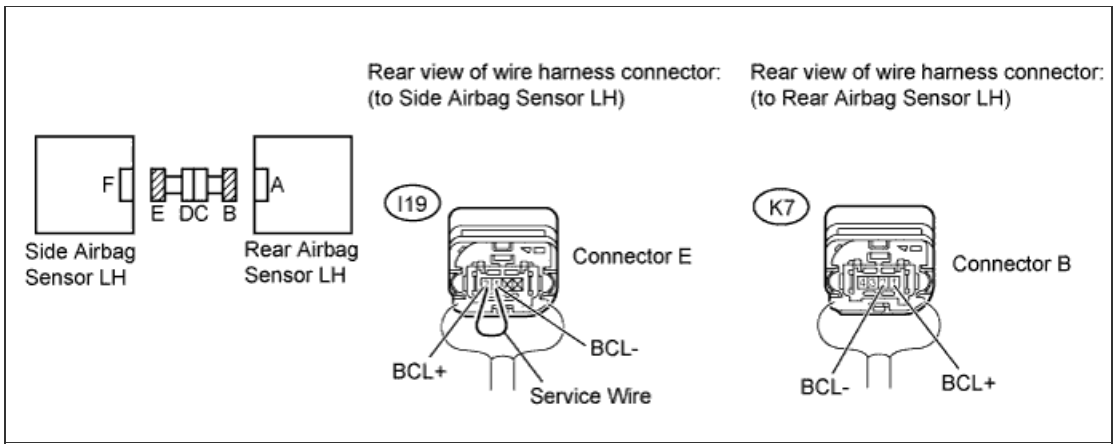
OK ↓

16.CHECK CONNECTORS

a. Disconnect the connectors from the rear airbag sensor LH and side airbag sensor LH.



b. Check that the connector (on the side airbag sensor LH side) is not damaged.

OK:
The connector is not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK ↓

17.CHECK SIDE AIRBAG SENSOR LH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-1 (BCL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-2 (BCL-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector E.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	Below 1 Ω

g. Disconnect the service wire from connector E.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	1 MΩ or higher
K7-1 (BCL+) - Body ground	Always	1 MΩ or higher
K7-2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → Go to step 20

OK

18.CHECK REAR AIRBAG SENSOR LH

a. Temporarily replace the side airbag sensor LH with a new one.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:
DTC B1642 or B1647 is not output.

HINT:

Codes other than DTC B1642 and B1647 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.

i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

NG → Go to step 19

OK →

REPLACE REAR AIRBAG SENSOR LH (Click here)

19.CHECK SIDE AIRBAG SENSOR LH

a. Interchange the side airbag sensor RH with LH and connect the connectors to them.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1647 is output	A
DTC B1642 is output	B
DTC B1642 and B1647 are not output	C

HINT:

Codes other than DTC B1642 and B1647 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.

i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

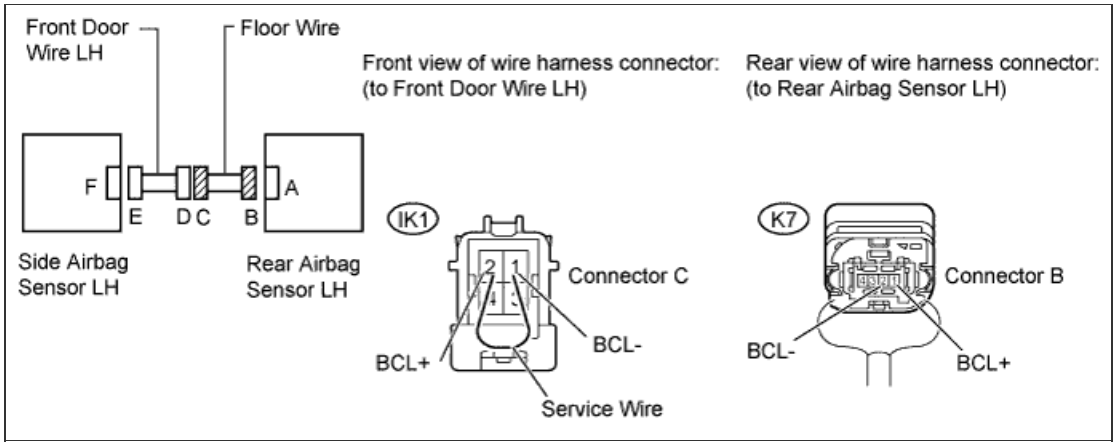
j. Return the rear airbag sensor RH and LH to their original positions and connect the connectors to them.



A → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

B → REPLACE SIDE AIRBAG SENSOR LH (Click here)

C →

USE SIMULATION METHOD TO CHECK (Click here)

20.CHECK FLOOR WIRE (REAR SIDE AIRBAG SENSOR LH - FRONT DOOR WIRE LH)

a. Disconnect the floor wire connector from the front door wire LH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-1 (BCL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-2 (BCL-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	1 MΩ or higher
K7-1 (BCL+) - Body ground	Always	1 MΩ or higher
K7-2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK → REPLACE FRONT DOOR WIRE LH

DTC B1850/62 Short in Rear Side Squib RH Circuit

DTC B1851/62 Open in Rear Side Squib RH Circuit

DTC B1852/62 Short to GND in Rear Side Squib RH Circuit

DTC B1853/62 Short to B+ in Rear Side Squib RH Circuit

for Preparation Click here

DESCRIPTION

The rear side squib RH circuit consists of the center airbag sensor and the rear seat side airbag RH.
This circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the rear side squib RH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1850/62	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the rear side squib RH circuit during the primary check. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly
B1851/62	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the rear side squib RH circuit for 2 seconds. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly
B1852/62	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the rear side squib RH circuit for 0.5 seconds. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly
B1853/62	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the rear side squib RH circuit for 0.5 seconds. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK REAR SEAT SIDE AIRBAG RH (REAR SIDE SQUIB RH)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connector from the rear seat side airbag RH.

d. Connect the red wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the rear seat side airbag RH (rear side squib RH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1850 B1851 B1852 or B1853 is not output.

HINT:

Codes other than DTC B1850, B1851, B1852 and B1853 may be output at this time, but they are not related to this check.

Result

Result	Proceed to
OK (for LHD)	A
OK (for RHD)	B
NG	C

B → REPLACE REAR NO. 1 SEAT ASSEMBLY RH (Click here)

C → Go to step 2

A

REPLACE REAR NO. 1 SEAT ASSEMBLY RH (Click here)

2.CHECK NO. 2 FLOOR WIRE (REAR SIDE SQUIB RH CIRCUIT)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST (resistance: 2.1 Ω) from connector C.

d. Disconnect the connectors from the center airbag sensor.

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
Lz2-1 (SRR+) - Body ground	Engine switch on (IG)	Below 1 V
Lz2-2 (SRR-) - Body ground	Engine switch on (IG)	Below 1 V

g. Turn the engine switch off.

h. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Lz2-1 (SRR+) - Lz2-2 (SRR-)	Always	Below 1 Ω

j. Release the activation prevention mechanism built into connector B (Click here).

k. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Lz2-1 (SRR+) - Lz2-2 (SRR-)	Always	1 MΩ or higher
Lz2-1 (SRR+) - Body ground	Always	1 MΩ or higher
Lz2-2 (SRR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK

3.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the rear seat side airbag RH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1850, B1851, B1852 or B1853 is not output.

Codes other than DTC B1850, B1851, B1852 and B1853 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

USE SIMULATION METHOD TO CHECK (Click here)

DTC B1642/81 Lost Communication with Side Satellite Sensor Bus RH

DTC B1647/82 Lost Communication with Side Satellite Sensor Bus LH

for Preparation Click here

DESCRIPTION

The circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH, rear seat side airbag LH or RH and curtain shield airbag LH or RH) is composed of the center airbag sensor, side airbag sensor LH or RH, and rear airbag sensor LH or RH.
The side airbag sensor LH or RH and rear airbag sensor LH or RH detect impacts to the vehicle and send signals to the center airbag sensor to determine if the airbag should be deployed.
DTC B1642/81 or B1647/82 is stored when a malfunction is detected in the circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH, rear seat side airbag LH or RH and curtain shield airbag LH or RH).

DTC Code	DTC Detection Condition	Trouble Area
B1642/81	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A rear airbag sensor RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Front door wire RH • Side airbag sensor RH • Rear airbag sensor RH • Center airbag sensor assembly
B1647/82	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH and curtain shield airbag LH) for 2 seconds. • A side airbag sensor LH malfunction. • A rear airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front door wire LH • Side airbag sensor LH • Rear airbag sensor LH • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK FOR DTC

a. Turn the engine switch off.

b. Turn the engine switch on (IG), and wait for at least 60 seconds.

c. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1642 and B1647 are not output	A
DTC B1647 is output	B
DTC B1642 is output	C

HINT:

Code other than DTC B1642 and B1647 may be output at this time, but they are not related to this check.

A → USE SIMULATION METHOD TO CHECK (Click here)

B → Go to step 12

C

2.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and side airbag sensor RH.

OK:

The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

3.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and side airbag sensor RH.

b. Check that the connectors (on the center airbag sensor side and side airbag sensor RH side) are not damaged.

OK:

The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

4.CHECK SIDE AIRBAG SENSOR RH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-4 (BBR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-3 (BBR-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 17 (BBR+) and 18 (BBR-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-4 (BBR+) - I9-3 (BBR-)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-4 (BBR+) - I9-3 (BBR-)	Always	1 MΩ or higher
I9-4 (BBR+) - Body ground	Always	1 MΩ or higher
I9-3 (BBR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 10

OK

5.CHECK CONNECTION OF CONNECTORS

a. Check that the connector is properly connected to the rear airbag sensor RH.

OK:

The connector is properly connected.

NG → CONNECT CONNECTOR PROPERLY

OK

6.CHECK CONNECTORS

a. Disconnect the connectors from the side airbag sensor RH and rear airbag sensor RH.

b. Check that the connector (on the rear airbag sensor RH side) is not damaged.

OK:

The connector is not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

7.CHECK REAR AIRBAG SENSOR RH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector E.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

g. Disconnect the service wire from connector E.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 11

OK

8.CHECK SIDE AIRBAG SENSOR RH

a. Connect the connector to the center airbag sensor.

b. Interchange the side airbag sensor LH with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

Result

Result	Proceed to

OK

REPLACE REAR AIRBAG SENSOR RH (Click here)

10.CHECK NO. 2 FLOOR WIRE (CENTER AIRBAG SENSOR - FRONT DOOR WIRE RH)

a. Disconnect the No. 2 floor wire connector from the front door wire RH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
IL1-4 (BBR+) - Body ground	Engine switch on (IG)	Below 1 V
IL1-3 (BBR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 17 (BBR+) and 18 (BBR-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
IL1-4 (BBR+) - IL1-3 (BBR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector B.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
IL1-4 (BBR+) - IL1-3 (BBR-)	Always	1 MΩ or higher
IL1-4 (BBR+) - Body ground	Always	1 MΩ or higher
IL1-3 (BBR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK

REPLACE FRONT DOOR WIRE RH

11.CHECK FRONT DOOR WIRE RH (SIDE AIRBAG SENSOR RH - NO. 2 FLOOR WIRE)

a. Disconnect the front door wire RH connector from the No. 2 floor wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FRONT DOOR WIRE RH

OK

REPLACE NO. 2 FLOOR WIRE

12.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and rear airbag sensor LH.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

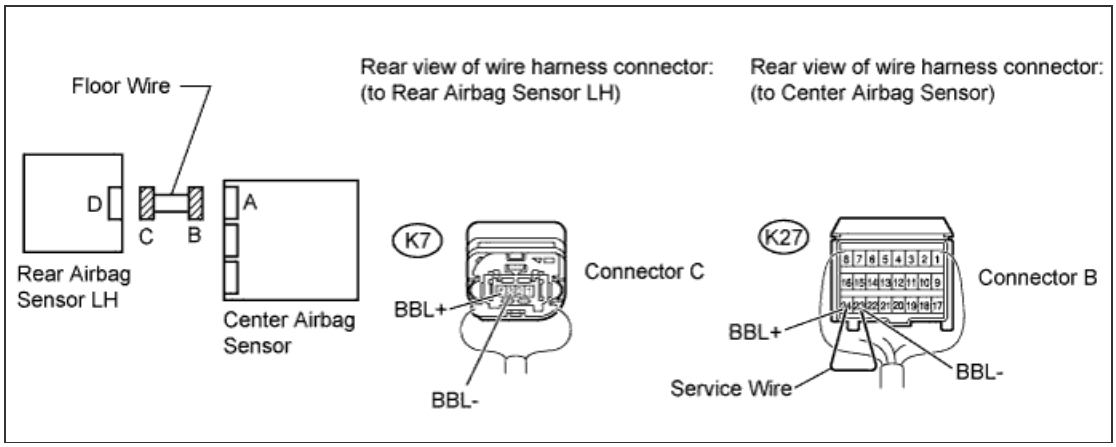
13.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and rear airbag sensor LH.



b. Check that the connectors (on the center airbag sensor side and rear airbag sensor LH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE FLOOR WIRE

OK

14.CHECK FLOOR WIRE (CENTER AIRBAG SENSOR - REAR AIRBAG SENSOR LH)

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-4 (BBL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-3 (BBL-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 24 (BBL+) and 23 (BBL-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-4 (BBL+) - K7-3 (BBL-)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-4 (BBL+) - K7-3 (BBL-)	Always	1 MΩ or higher
K7-4 (BBL+) - Body ground	Always	1 MΩ or higher
K7-3 (BBL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK ↓

15.CHECK CONNECTION OF CONNECTOR

a. Check that the connector is properly connected to the side airbag sensor LH.

OK:
The connector is properly connected.

NG → CONNECT CONNECTORS PROPERLY

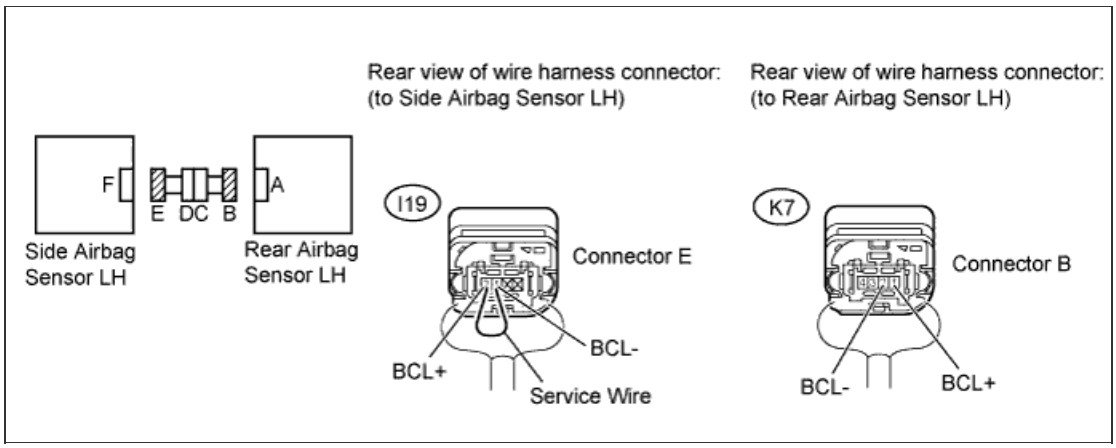
OK ↓

16.CHECK CONNECTORS

a. Disconnect the connectors from the rear airbag sensor LH and side airbag sensor LH.



b. Check that the connector (on the side airbag sensor LH side) is not damaged.

OK:
The connector is not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK ↓

17.CHECK SIDE AIRBAG SENSOR LH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-1 (BCL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-2 (BCL-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector E.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	Below 1 Ω

g. Disconnect the service wire from connector E.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	1 MΩ or higher
K7-1 (BCL+) - Body ground	Always	1 MΩ or higher
K7-2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → Go to step 20

OK

18.CHECK REAR AIRBAG SENSOR LH

a. Temporarily replace the side airbag sensor LH with a new one.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:
DTC B1642 or B1647 is not output.

HINT:

Codes other than DTC B1642 and B1647 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.

i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

NG → Go to step 19

OK →

REPLACE REAR AIRBAG SENSOR LH (Click here)

19.CHECK SIDE AIRBAG SENSOR LH

a. Interchange the side airbag sensor RH with LH and connect the connectors to them.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1647 is output	A
DTC B1642 is output	B
DTC B1642 and B1647 are not output	C

HINT:

Codes other than DTC B1642 and B1647 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.

i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

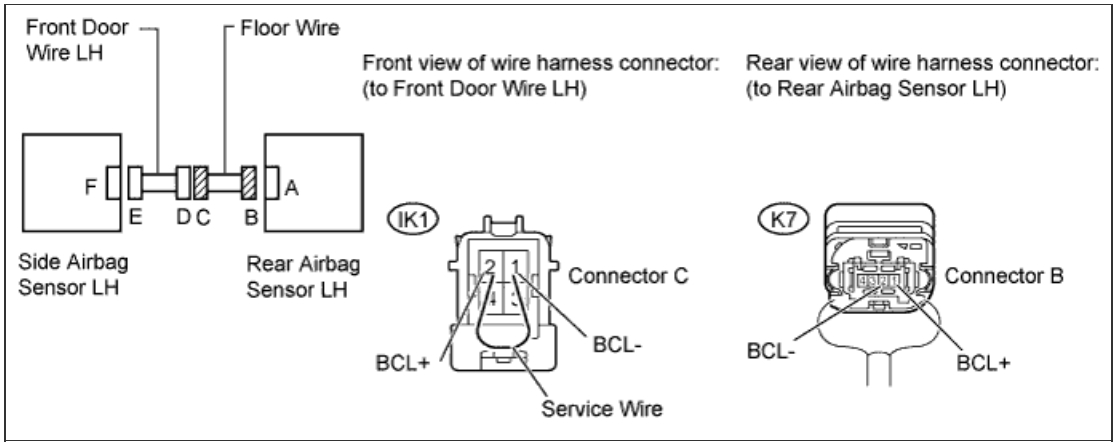
j. Return the rear airbag sensor RH and LH to their original positions and connect the connectors to them.



A → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

B → REPLACE SIDE AIRBAG SENSOR LH (Click here)

C →

USE SIMULATION METHOD TO CHECK (Click here)

20.CHECK FLOOR WIRE (REAR SIDE AIRBAG SENSOR LH - FRONT DOOR WIRE LH)

a. Disconnect the floor wire connector from the front door wire LH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-1 (BCL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-2 (BCL-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	1 MΩ or higher
K7-1 (BCL+) - Body ground	Always	1 MΩ or higher
K7-2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK → REPLACE FRONT DOOR WIRE LH

DTC B1850/62 Short in Rear Side Squib RH Circuit

DTC B1851/62 Open in Rear Side Squib RH Circuit

DTC B1852/62 Short to GND in Rear Side Squib RH Circuit

DTC B1853/62 Short to B+ in Rear Side Squib RH Circuit

for Preparation Click here

DESCRIPTION

The rear side squib RH circuit consists of the center airbag sensor and the rear seat side airbag RH.
This circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the rear side squib RH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1850/62	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the rear side squib RH circuit during the primary check. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly
B1851/62	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the rear side squib RH circuit for 2 seconds. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly
B1852/62	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the rear side squib RH circuit for 0.5 seconds. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly
B1853/62	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the rear side squib RH circuit for 0.5 seconds. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK REAR SEAT SIDE AIRBAG RH (REAR SIDE SQUIB RH)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connector from the rear seat side airbag RH.

d. Connect the red wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the rear seat side airbag RH (rear side squib RH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1850 B1851 B1852 or B1853 is not output.

HINT:

Codes other than DTC B1850, B1851, B1852 and B1853 may be output at this time, but they are not related to this check.

Result

Result	Proceed to

OK (for RHD)	B
NG	C

B → REPLACE REAR NO. 1 SEAT ASSEMBLY RH (Click here)

C → Go to step 2

A

REPLACE REAR NO. 1 SEAT ASSEMBLY RH (Click here)

2.CHECK NO. 2 FLOOR WIRE (REAR SIDE SQUIB RH CIRCUIT)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST (resistance: 2.1 Ω) from connector C.

d. Disconnect the connectors from the center airbag sensor.

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
Lz2-1 (SRR+) - Body ground	Engine switch on (IG)	Below 1 V
Lz2-2 (SRR-) - Body ground	Engine switch on (IG)	Below 1 V

g. Turn the engine switch off.

h. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Lz2-1 (SRR+) - Lz2-2 (SRR-)	Always	Below 1 Ω

j. Release the activation prevention mechanism built into connector B (Click here).

k. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Lz2-1 (SRR+) - Lz2-2 (SRR-)	Always	1 MΩ or higher
Lz2-1 (SRR+) - Body ground	Always	1 MΩ or higher
Lz2-2 (SRR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK

3.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the rear seat side airbag RH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1850, B1851, B1852 or B1853 is not output.

Codes other than DTC B1850, B1851, B1852 and B1853 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

USE SIMULATION METHOD TO CHECK (Click here)

DTC B1642/81 Lost Communication with Side Satellite Sensor Bus RH

DTC B1647/82 Lost Communication with Side Satellite Sensor Bus LH

for Preparation Click here

DESCRIPTION

The circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH, rear seat side airbag LH or RH and curtain shield airbag LH or RH) is composed of the center airbag sensor, side airbag sensor LH or RH, and rear airbag sensor LH or RH.
The side airbag sensor LH or RH and rear airbag sensor LH or RH detect impacts to the vehicle and send signals to the center airbag sensor to determine if the airbag should be deployed.
DTC B1642/81 or B1647/82 is stored when a malfunction is detected in the circuit for the side collision sensor LH or RH (to determine deployment of the front seat airbag LH or RH, rear seat side airbag LH or RH and curtain shield airbag LH or RH).

DTC Code	DTC Detection Condition	Trouble Area
B1642/81	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat airbag RH and curtain shield airbag RH) for 2 seconds. • A side airbag sensor RH malfunction. • A rear airbag sensor RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Front door wire RH • Side airbag sensor RH • Rear airbag sensor RH • Center airbag sensor assembly
B1647/82	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat airbag LH and curtain shield airbag LH) for 2 seconds. • A side airbag sensor LH malfunction. • A rear airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front door wire LH • Side airbag sensor LH • Rear airbag sensor LH • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK FOR DTC

a. Turn the engine switch off.

b. Turn the engine switch on (IG), and wait for at least 60 seconds.

c. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1642 and B1647 are not output	A
DTC B1647 is output	B
DTC B1642 is output	C

HINT:

Code other than DTC B1642 and B1647 may be output at this time, but they are not related to this check.

A → USE SIMULATION METHOD TO CHECK (Click here)

B → Go to step 12

C

2.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and side airbag sensor RH.

OK:

The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

3.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and side airbag sensor RH.

b. Check that the connectors (on the center airbag sensor side and side airbag sensor RH side) are not damaged.

OK:

The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

4.CHECK SIDE AIRBAG SENSOR RH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-4 (BBR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-3 (BBR-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 17 (BBR+) and 18 (BBR-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-4 (BBR+) - I9-3 (BBR-)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-4 (BBR+) - I9-3 (BBR-)	Always	1 MΩ or higher
I9-4 (BBR+) - Body ground	Always	1 MΩ or higher
I9-3 (BBR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 10

OK

5.CHECK CONNECTION OF CONNECTORS

a. Check that the connector is properly connected to the rear airbag sensor RH.

OK:

The connector is properly connected.

NG → CONNECT CONNECTOR PROPERLY

OK

6.CHECK CONNECTORS

a. Disconnect the connectors from the side airbag sensor RH and rear airbag sensor RH.

b. Check that the connector (on the rear airbag sensor RH side) is not damaged.

OK:

The connector is not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

7.CHECK REAR AIRBAG SENSOR RH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector E.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

g. Disconnect the service wire from connector E.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → Go to step 11

OK

8.CHECK SIDE AIRBAG SENSOR RH

a. Connect the connector to the center airbag sensor.

b. Interchange the side airbag sensor LH with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

REPLACE REAR AIRBAG SENSOR RH (Click here)

10.CHECK NO. 2 FLOOR WIRE (CENTER AIRBAG SENSOR - FRONT DOOR WIRE RH)

a. Disconnect the No. 2 floor wire connector from the front door wire RH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
IL1-4 (BBR+) - Body ground	Engine switch on (IG)	Below 1 V
IL1-3 (BBR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 17 (BBR+) and 18 (BBR-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
IL1-4 (BBR+) - IL1-3 (BBR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector B.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
IL1-4 (BBR+) - IL1-3 (BBR-)	Always	1 MΩ or higher
IL1-4 (BBR+) - Body ground	Always	1 MΩ or higher
IL1-3 (BBR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK

REPLACE FRONT DOOR WIRE RH

11.CHECK FRONT DOOR WIRE RH (SIDE AIRBAG SENSOR RH - NO. 2 FLOOR WIRE)

a. Disconnect the front door wire RH connector from the No. 2 floor wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
I9-1 (BCR+) - Body ground	Engine switch on (IG)	Below 1 V
I9-2 (BCR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I9-1 (BCR+) - I9-2 (BCR-)	Always	1 MΩ or higher
I9-1 (BCR+) - Body ground	Always	1 MΩ or higher
I9-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FRONT DOOR WIRE RH

OK

REPLACE NO. 2 FLOOR WIRE

12.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and rear airbag sensor LH.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

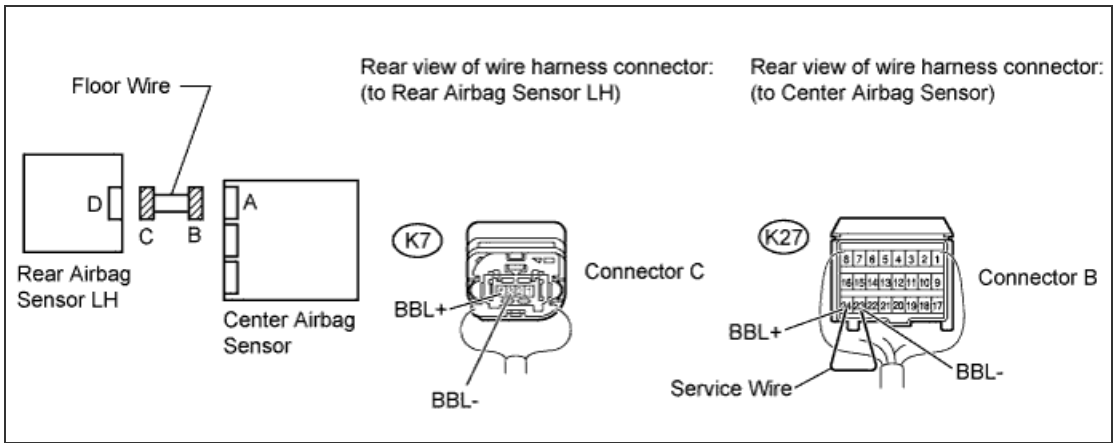
13.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and rear airbag sensor LH.



b. Check that the connectors (on the center airbag sensor side and rear airbag sensor LH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE FLOOR WIRE

OK

14.CHECK FLOOR WIRE (CENTER AIRBAG SENSOR - REAR AIRBAG SENSOR LH)

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-4 (BBL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-3 (BBL-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 24 (BBL+) and 23 (BBL-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-4 (BBL+) - K7-3 (BBL-)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-4 (BBL+) - K7-3 (BBL-)	Always	1 MΩ or higher
K7-4 (BBL+) - Body ground	Always	1 MΩ or higher
K7-3 (BBL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK ↓

15.CHECK CONNECTION OF CONNECTOR

a. Check that the connector is properly connected to the side airbag sensor LH.

OK:
The connector is properly connected.

NG → CONNECT CONNECTORS PROPERLY

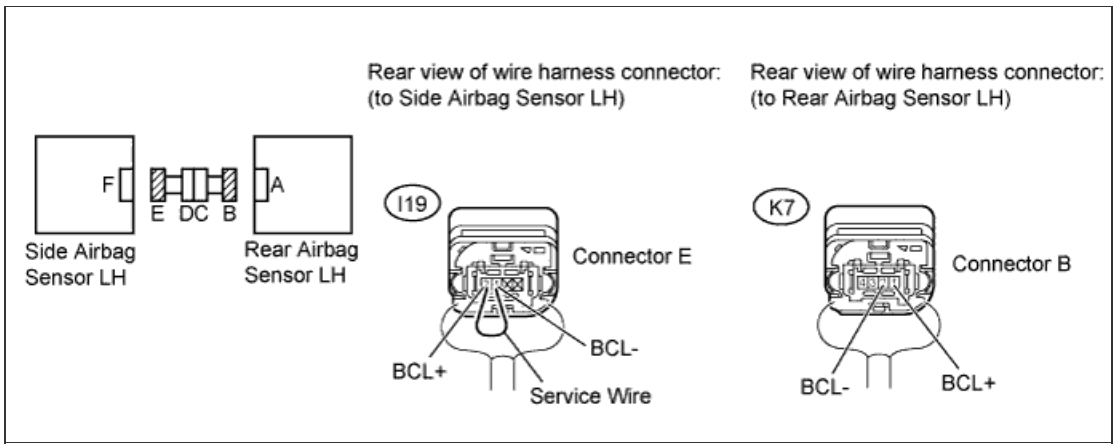
OK ↓

16.CHECK CONNECTORS

a. Disconnect the connectors from the rear airbag sensor LH and side airbag sensor LH.



b. Check that the connector (on the side airbag sensor LH side) is not damaged.

OK:
The connector is not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK ↓

17.CHECK SIDE AIRBAG SENSOR LH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-1 (BCL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-2 (BCL-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector E.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	Below 1 Ω

g. Disconnect the service wire from connector E.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	1 MΩ or higher
K7-1 (BCL+) - Body ground	Always	1 MΩ or higher
K7-2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → Go to step 20

OK

18.CHECK REAR AIRBAG SENSOR LH

a. Temporarily replace the side airbag sensor LH with a new one.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:
DTC B1642 or B1647 is not output.

HINT:

Codes other than DTC B1642 and B1647 may be output at this time, but they are not related to this check.

h. Turn the engine switch off.

i. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

NG → Go to step 19

OK →

REPLACE REAR AIRBAG SENSOR LH (Click here)

19.CHECK SIDE AIRBAG SENSOR LH

a. Interchange the side airbag sensor RH with LH and connect the connectors to them.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1647 is output	A
DTC B1642 is output	B

USE SIMULATION METHOD TO CHECK (Click here)

20.CHECK FLOOR WIRE (REAR SIDE AIRBAG SENSOR LH - FRONT DOOR WIRE LH)

a. Disconnect the floor wire connector from the front door wire LH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K7-1 (BCL+) - Body ground	Engine switch on (IG)	Below 1 V
K7-2 (BCL-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector C.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	Below 1 Ω

h. Disconnect the service wire from connector C.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K7-1 (BCL+) - K7-2 (BCL-)	Always	1 MΩ or higher
K7-1 (BCL+) - Body ground	Always	1 MΩ or higher
K7-2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK → REPLACE FRONT DOOR WIRE LH

DTC B1850/62 Short in Rear Side Squib RH Circuit

DTC B1851/62 Open in Rear Side Squib RH Circuit

DTC B1852/62 Short to GND in Rear Side Squib RH Circuit

DTC B1853/62 Short to B+ in Rear Side Squib RH Circuit

for Preparation Click here

DESCRIPTION

The rear side squib RH circuit consists of the center airbag sensor and the rear seat side airbag RH.
This circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the rear side squib RH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1850/62	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the rear side squib RH circuit during the primary check. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly
B1851/62	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the rear side squib RH circuit for 2 seconds. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly
B1852/62	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the rear side squib RH circuit for 0.5 seconds. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly
B1853/62	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the rear side squib RH circuit for 0.5 seconds. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK REAR SEAT SIDE AIRBAG RH (REAR SIDE SQUIB RH)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connector from the rear seat side airbag RH.

d. Connect the red wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the rear seat side airbag RH (rear side squib RH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1850 B1851 B1852 or B1853 is not output.

HINT:

Codes other than DTC B1850, B1851, B1852 and B1853 may be output at this time, but they are not related to this check.

Result

REPLACE REAR NO. 1 SEAT ASSEMBLY RH (Click here)

2.CHECK NO. 2 FLOOR WIRE (REAR SIDE SQUIB RH CIRCUIT)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST (resistance: 2.1 Ω) from connector C.

d. Disconnect the connectors from the center airbag sensor.

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
Lz2-1 (SRR+) - Body ground	Engine switch on (IG)	Below 1 V
Lz2-2 (SRR-) - Body ground	Engine switch on (IG)	Below 1 V

g. Turn the engine switch off.

h. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Lz2-1 (SRR+) - Lz2-2 (SRR-)	Always	Below 1 Ω

j. Release the activation prevention mechanism built into connector B (Click here).

k. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Lz2-1 (SRR+) - Lz2-2 (SRR-)	Always	1 MΩ or higher
Lz2-1 (SRR+) - Body ground	Always	1 MΩ or higher
Lz2-2 (SRR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK

3.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the rear seat side airbag RH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1850, B1851, B1852 or B1853 is not output.

USE SIMULATION METHOD TO CHECK (Click here)

DTC B1651/33 Manual Cut off Switch Trouble

for Preparation Click here

DESCRIPTION

HINT:

"Manual cut off switch" refers to the airbag cut-off switch.

- The airbag cut-off switch circuit consists of the center airbag sensor and the airbag cut-off switch.
  The front passenger airbag can be optionally deactivated via this circuit by turning the airbag cut-off switch to the "OFF" position.
  If the front passenger airbag is deactivated, the passenger airbag "OFF" indicator comes on to inform the passengers.
  DTC B1651/33 is recorded when a malfunction is detected in the airbag cut-off switch circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1651/33	When all the conditions below are met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the airbag cut-off switch circuit for 2 seconds. • A airbag cut-off switch malfunction • A center airbag sensor malfunction	• Instrument panel wire • No. 2 instrument panel wire • Airbag cut-off switch • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

The E47-11 (MSW+) and E47-12 (MSW-) terminals in this circuit have an activation prevention mechanism. This mechanism can be used to check for an open circuit in the wire harness. In case of other checks (check for short, short to ground or short to B+), this mechanism should be released.

1.CHECK INSTRUMENT PANEL WIRE (CENTER AIRBAG SENSOR - AIRBAG CUT-OFF SWITCH)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connectors from the center airbag sensor and airbag cut-off switch.

d. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

e. Turn the engine switch on (IG).

f. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
F38-2 (PMC+) - Body ground	Engine switch on (IG)	Below 1 V
F38-1 (PMC-) - Body ground	Engine switch on (IG)	Below 1 V

g. Turn the engine switch off.

h. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

i. Using a service wire, connector terminals 11 (MSW+) and 12 (MSW-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

j. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
F38-2 (PMC+) - F38-1 (PMC-)	Always	Below 1 Ω

k. Disconnect a service wire from connector B.

l. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
F38-2 (PMC+) - F38-1 (PMC-)	Always	1 MΩ or higher
F38-2 (PMC+) - Body ground	Always	1 MΩ or higher
F38-1 (PMC-) - Body ground	Always	1 MΩ or higher

NG → Go to step 4

OK

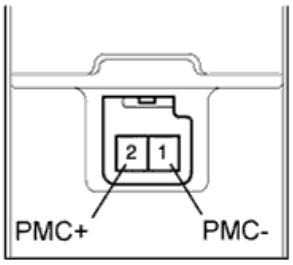
.INSPECT AIRBAG CUT-OFF SWITCH



a. Remove the airbag cut-off switch (Click here).

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
2 (PMC+) - 1 (PMC-)	Cut off switch is in "ON" position (Front passenger side airbag is active)	360 to 440 Ω
2 (PMC+) - 1 (PMC-)	Cut off switch is in "OFF" position (Front passenger side airbag is not active)	90 to 110 Ω

Component without harness connected:
(Airbag Cut-off Switch)

NG → REPLACE AIRBAG CUT-OFF SWITCH (Click here)

OK

3.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the center airbag sensor and the airbag cut-off switch.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check the DTCs (Click here).

OK:
DTC B1651 is not output.

HINT:

Codes other than DTC B1651 may be output at this time, but they are not related to this check.

OK

USE SIMULATION METHOD TO CHECK (Click here)

4.CHECK INSTRUMENT PANEL WIRE (CENTER AIRBAG SENSOR - NO. 2 INSTRUMENT PANEL WIRE)

a. Disconnect the instrument panel wire connector from the No. 2 instrument panel wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG).

d. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
FE4-3 (MSW+) - Body ground	Engine switch on (IG)	Below 1 V
FE4-2 (MSW-) - Body ground	Engine switch on (IG)	Below 1 V

e. Turn the engine switch off.

f. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

g. Using a service wire, connector terminals 11 (MSW+) and 12 (MSW-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
FE4-3 (MSW+) - FE4-2 (MSW-)	Always	Below 1 Ω

i. Disconnect the service wire from connector B.

j. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
FE4-3 (MSW+) - FE4-2 (MSW-)	Always	1 MΩ or higher
FE4-3 (MSW+) - Body ground	Always	1 MΩ or higher
FE4-2 (MSW-) - Body ground	Always	1 MΩ or higher

NG → REPLACE INSTRUMENT PANEL WIRE

OK

REPLACE NO. 2 INSTRUMENT PANEL WIRE

DTC B1850/62 Short in Rear Side Squib RH Circuit

DTC B1851/62 Open in Rear Side Squib RH Circuit

DTC B1852/62 Short to GND in Rear Side Squib RH Circuit

DTC B1853/62 Short to B+ in Rear Side Squib RH Circuit

for Preparation Click here

DESCRIPTION

The rear side squib RH circuit consists of the center airbag sensor and the rear seat side airbag RH.
This circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the rear side squib RH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1850/62	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the rear side squib RH circuit during the primary check. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly
B1851/62	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the rear side squib RH circuit for 2 seconds. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly
B1852/62	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the rear side squib RH circuit for 0.5 seconds. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly
B1853/62	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the rear side squib RH circuit for 0.5 seconds. • A rear side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat side airbag assembly RH (Rear side squib RH) • Center airbag sensor assembly

DTC B1651/33 Manual Cut off Switch Trouble

for Preparation Click here

DESCRIPTION

HINT:

"Manual cut off switch" refers to the airbag cut-off switch.

- The airbag cut-off switch circuit consists of the center airbag sensor and the airbag cut-off switch.
  The front passenger airbag can be optionally deactivated via this circuit by turning the airbag cut-off switch to the "OFF" position.
  If the front passenger airbag is deactivated, the passenger airbag "OFF" indicator comes on to inform the passengers.
  DTC B1651/33 is recorded when a malfunction is detected in the airbag cut-off switch circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1651/33	When all the conditions below are met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the airbag cut-off switch circuit for 2 seconds. • A airbag cut-off switch malfunction • A center airbag sensor malfunction	• Instrument panel wire • No. 2 instrument panel wire • Airbag cut-off switch • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

The E47-11 (MSW+) and E47-12 (MSW-) terminals in this circuit have an activation prevention mechanism. This mechanism can be used to check for an open circuit in the wire harness. In case of other checks (check for short, short to ground or short to B+), this mechanism should be released.

1.CHECK INSTRUMENT PANEL WIRE (CENTER AIRBAG SENSOR - AIRBAG CUT-OFF SWITCH)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connectors from the center airbag sensor and airbag cut-off switch.

d. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

e. Turn the engine switch on (IG).

f. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
F38-2 (PMC+) - Body ground	Engine switch on (IG)	Below 1 V
F38-1 (PMC-) - Body ground	Engine switch on (IG)	Below 1 V

g. Turn the engine switch off.

h. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

i. Using a service wire, connector terminals 11 (MSW+) and 12 (MSW-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

j. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
F38-2 (PMC+) - F38-1 (PMC-)	Always	Below 1 Ω

k. Disconnect a service wire from connector B.

l. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
F38-2 (PMC+) - F38-1 (PMC-)	Always	1 MΩ or higher
F38-2 (PMC+) - Body ground	Always	1 MΩ or higher
F38-1 (PMC-) - Body ground	Always	1 MΩ or higher

NG → Go to step 4

OK

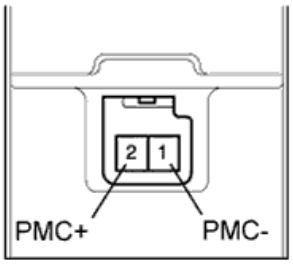
.INSPECT AIRBAG CUT-OFF SWITCH



a. Remove the airbag cut-off switch (Click here).

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
2 (PMC+) - 1 (PMC-)	Cut off switch is in "ON" position (Front passenger side airbag is active)	360 to 440 Ω
2 (PMC+) - 1 (PMC-)	Cut off switch is in "OFF" position (Front passenger side airbag is not active)	90 to 110 Ω

Component without harness connected:
(Airbag Cut-off Switch)

NG → REPLACE AIRBAG CUT-OFF SWITCH (Click here)

OK

3.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the center airbag sensor and the airbag cut-off switch.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check the DTCs (Click here).

OK:
DTC B1651 is not output.

HINT:

4.CHECK INSTRUMENT PANEL WIRE (CENTER AIRBAG SENSOR - NO. 2 INSTRUMENT PANEL WIRE)

a. Disconnect the instrument panel wire connector from the No. 2 instrument panel wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG).

d. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
FE4-3 (MSW+) - Body ground	Engine switch on (IG)	Below 1 V
FE4-2 (MSW-) - Body ground	Engine switch on (IG)	Below 1 V

e. Turn the engine switch off.

f. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

g. Using a service wire, connector terminals 11 (MSW+) and 12 (MSW-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
FE4-3 (MSW+) - FE4-2 (MSW-)	Always	Below 1 Ω

i. Disconnect the service wire from connector B.

j. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
FE4-3 (MSW+) - FE4-2 (MSW-)	Always	1 MΩ or higher
FE4-3 (MSW+) - Body ground	Always	1 MΩ or higher
FE4-2 (MSW-) - Body ground	Always	1 MΩ or higher

REPLACE NO. 2 INSTRUMENT PANEL WIRE

DTC B1855/63 Short in Rear Side Squib LH Circuit

DTC B1856/63 Open in Rear Side Squib LH Circuit

DTC B1857/63 Short to GND in Rear Side Squib LH Circuit

DTC B1858/63 Short to B+ in Rear Side Squib LH Circuit

for Preparation Click here

DESCRIPTION

The rear side squib LH circuit consists of the center airbag sensor and the rear seat side airbag LH.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the rear side squib LH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1855/63	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the rear side squib LH circuit during the primary check. • A rear side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat side airbag assembly LH (Rear side squib LH) • Center airbag sensor assembly
B1856/63	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the rear side squib LH circuit for 2 seconds. • A rear side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat side airbag assembly LH (Rear side squib LH) • Center airbag sensor assembly
B1857/63	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the rear side squib LH circuit for 0.5 seconds. • A rear side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat side airbag assembly LH (Rear side squib LH) • Center airbag sensor assembly
B1858/63	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the rear side squib LH circuit for 0.5 seconds. • A rear side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat side airbag assembly LH (Rear side squib LH) • Center airbag sensor assembly

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK REAR SEAT SIDE AIRBAG LH (REAR SIDE SQUIB LH)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connector from the rear seat side airbag LH.

d. Connect the red wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the rear seat side airbag LH (rear side squib LH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1855, B1856, B1857 or B1858 is not output.

HINT:

Codes other than DTC B1855, B1856, B1857 and B1858 may be output at this time, but they are not related to this check.

Result

Result	Proceed to

B → REPLACE REAR NO. 1 SEAT ASSEMBLY LH (Click here)

C → Go to step 2

A

REPLACE REAR NO. 1 SEAT ASSEMBLY LH (Click here)

2.CHECK FLOOR WIRE (REAR SIDE SQUIB LH CIRCUIT)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Disconnect the connectors from the center airbag sensor.

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
Kz5-1 (SRL+) - Body ground	Engine switch on (IG)	Below 1 V
Kz5-2 (SRL-) - Body ground	Engine switch on (IG)	Below 1 V

g. Turn the engine switch off.

h. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Kz5-1 (SRL+) - Kz5-2 (SRL-)	Always	Below 1 Ω

j. Release the activation prevention mechanism built into connector B (Click here).

k. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Kz5-1 (SRL+) - Kz5-2 (SRL-)	Always	1 MΩ or higher
Kz5-1 (SRL+) - Body ground	Always	1 MΩ or higher
Kz5-2 (SRL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK

3.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the rear seat side airbag LH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1855, B1856, B1857 or B1858 is not output.

HINT:

Codes other than DTC B1855, B1856, B1857 and B1858 may be output at this time, but they are not related to this check.

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK VEHICLE CONDITION

a. Check vehicle condition.

Result

Result	Proceed to
for LHD	A
for RHD	B

B → Go to step 9

A

2.CHECK FOR DTC

a. Turn the engine switch on (IG), and wait for at least 60 seconds.

b. Clear the DTCs (Click here).

c. Turn the engine switch off.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Check for DTCs (Click here).

OK:

DTC B1653 is not output.

HINT:

Codes other than DTC B1653 may be output at this time, but they are not related to this check.

NG → Go to step 3

OK

USE SIMULATION METHOD TO CHECK (Click here)

3.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and the seat position sensor.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

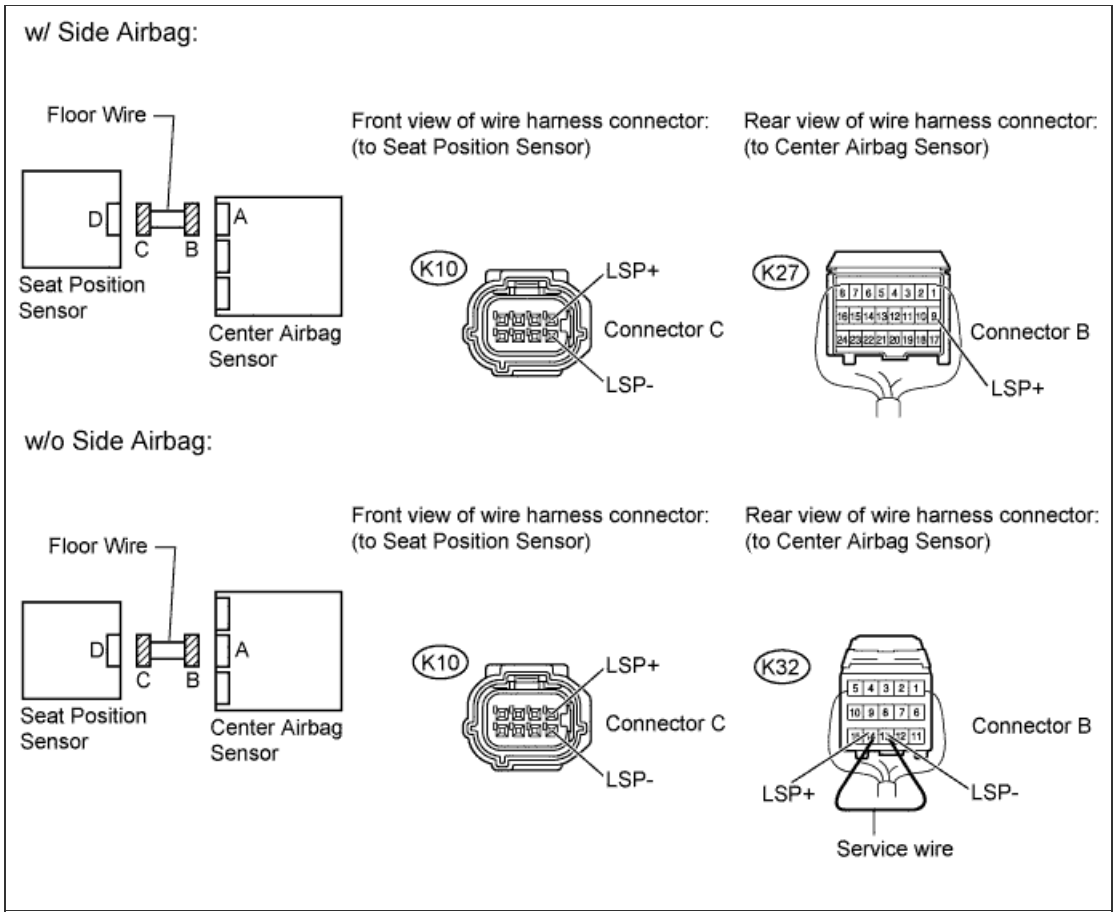
4.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and the seat position sensor.



b. Check that the connectors (on the center airbag sensor side and seat position sensor side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE FLOOR WIRE

OK

5.CHECK FLOOR WIRE (CENTER AIRBAG SENSOR - SEAT POSITION SENSOR)

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K10-4 (LSP+) - Body ground	Engine switch on (IG)	Below 1 V
K10-8 (LSP-) - Body ground	Engine switch on (IG)	Below 1 V

c. w/ Side Airbag:

i. Turn the engine switch off.

ii. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

iii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K10-4 (LSP+) - K27-9 (LSP+)	Always	Below 1 Ω
K10-4 (LSP+) - Body ground	Always	1 MΩ or higher
K10-8 (LSP-) - Body ground	Always	Below 1 Ω

d. w/o Side Airbag:

i. Turn the engine switch off.

ii. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

iii. Using a service wire, connect terminals 14 (LSP+) and 13 (LSP-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

iv. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K10-4 (LSP+) - K10-8 (LSP-)	Always	Below 1 Ω

v. Disconnect the service wire from connector B.

vi. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K10-4 (LSP+) - K10-8 (LSP-)	Always	1 MΩ or higher
K10-4 (LSP+) - Body ground	Always	1 MΩ or higher
K10-8 (LSP-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK

6.CHECK SEAT POSITION SENSOR (FRONT SEAT INNER BELT LH)

a. Connect the connectors to the center airbag sensor and the seat position sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1653 is not output.

HINT:

Codes other than DTC B1653 may be output at this time, but they are not related to this check.

NG → Go to step 7

OK

USE SIMULATION METHOD TO CHECK (**Click here**)

7.REPLACE SEAT POSITION SENSOR (FRONT SEAT INNER BELT LH)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Replace the front seat inner belt LH (Click here).

HINT:

Perform the inspection using parts from a normally functioning vehicle if possible.

NEXT

8.CHECK CENTER AIRBAG SENSOR

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Turn the engine switch on (IG), and wait for at least 60 seconds.

c. Clear the DTCs (Click here).

d. Turn the engine switch off.

e. Turn the engine switch on (IG), and wait for at least 60 seconds.

f. Check for DTCs (Click here).

OK:
DTC B1653 is not output.

HINT:

Codes other than DTC B1653 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

REPLACE FRONT SEAT INNER BELT ASSEMBLY LH (Click here)

9.CHECK FOR DTC

a. Turn the engine switch on (IG), and wait for at least 60 seconds.

b. Clear the DTCs (Click here).

c. Turn the engine switch off.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Check for DTCs (Click here).

OK:
DTC B1653/35 is not output.

HINT:

Codes other than DTC B1653/35 may be output at this time, but they are not related to this check.

NG → Go to step 10

OK

USE SIMULATION METHOD TO CHECK (Click here)

10.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and the seat position sensor.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

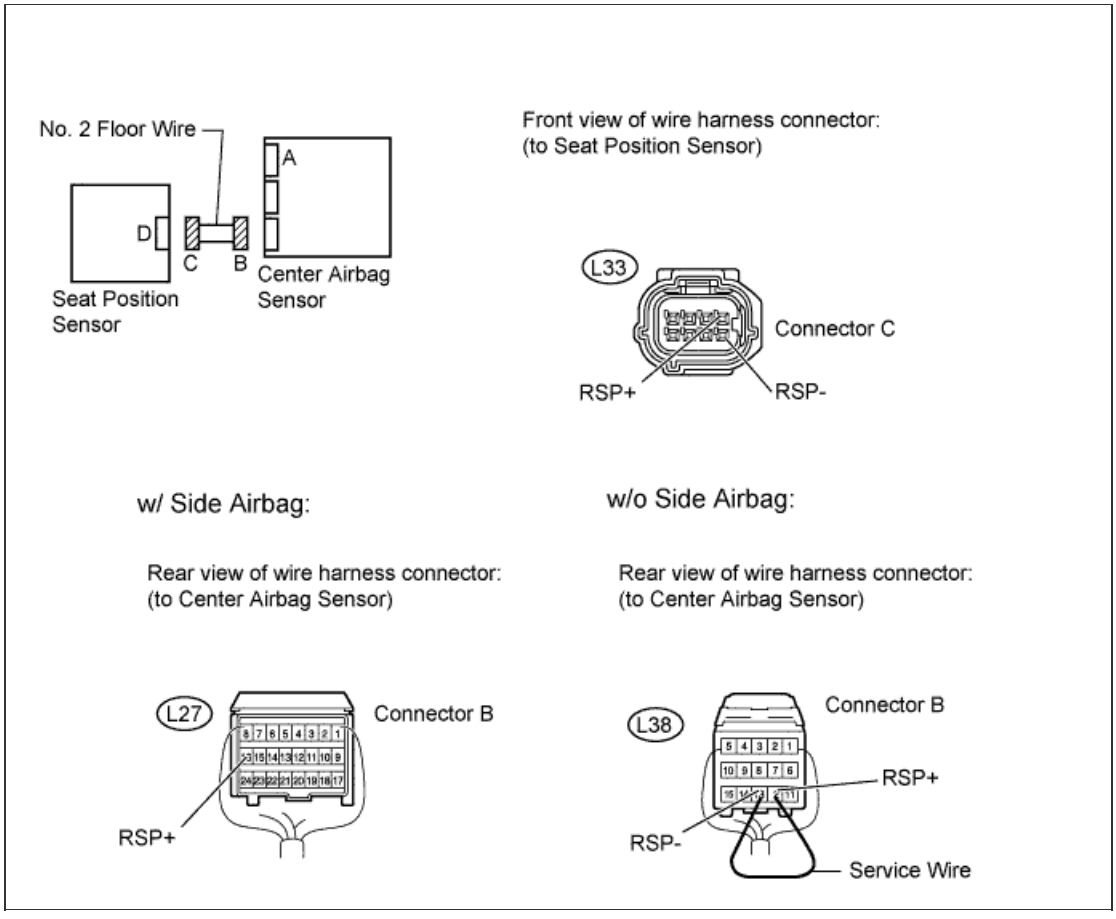
OK ↓

11.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and the seat position sensor.



b. Check that the connectors (on the center airbag sensor side and seat position sensor side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE NO. 2 FLOOR WIRE

OK ↓

12.CHECK NO. 2 FLOOR WIRE (CENTER AIRBAG SENSOR - SEAT POSITION SENSOR)

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
L33-4 (RSP+) - Body ground	Engine switch on (IG)	Below 1 V
L33-8 (RSP-) - Body ground	Engine switch on (IG)	Below 1 V

c. w/ Side Airbag:

i. Turn the engine switch off.

ii. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

iii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L33-4 (RSP+) - L27-16 (RSP+)	Always	Below 1 Ω
L33-4 (RSP+) - Body ground	Always	1 MΩ or higher
L33-8 (RSP-) - Body ground	Always	Below 1 Ω

d. w/o Side Airbag:

i. Turn the engine switch off.

ii. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

iii. Using a service wire, connect terminals 12 (RSP+) and 13 (RSP-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

iv. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L33-4 (RSP+) - L33-8 (RSP-)	Always	Below 1 Ω

v. Disconnect the service wire from connector B.

vi. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L33-4 (RSP+) - Body ground	Always	1 MΩ or higher
L33-8 (RLSP-) - Body ground	Always	Below 1 Ω

NG → REPLACE NO. 2 FLOOR WIRE

OK

13.CHECK SEAT POSITION SENSOR (FRONT SEAT INNER BELT RH)

a. Connect the connectors to the center airbag sensor and the seat position sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:
DTC B1653/35 is not output.

HINT:

Codes other than DTC B1653/35 may be output at this time, but they are not related to this check.

NG → Go to step 14

OK

USE SIMULATION METHOD TO CHECK (Click here)

14.REPLACE SEAT POSITION SENSOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Replace the seat position sensor (Click here).

HINT:

Perform inspection using parts from a normal vehicle if possible.

NEXT

15.CHECK CENTER AIRBAG SENSOR

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Turn the engine switch on (IG), and wait for at least 60 seconds.

c. Clear the DTCs (Click here).

d. Turn the engine switch off.

e. Turn the engine switch on (IG), and wait for at least 60 seconds.

f. Check for DTCs (Click here).

OK:
DTC B1653/35 is not output.

HINT:

Codes other than DTC B1653/35 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

REPLACE FRONT SEAT INNER BELT ASSEMBLY RH

DTC B1855/63 Short in Rear Side Squib LH Circuit

DTC B1856/63 Open in Rear Side Squib LH Circuit

DTC B1857/63 Short to GND in Rear Side Squib LH Circuit

DTC B1858/63 Short to B+ in Rear Side Squib LH Circuit

for Preparation Click here

DESCRIPTION

The rear side squib LH circuit consists of the center airbag sensor and the rear seat side airbag LH.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the rear side squib LH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1855/63	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the rear side squib LH circuit during the primary check. • A rear side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat side airbag assembly LH (Rear side squib LH) • Center airbag sensor assembly
B1856/63	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the rear side squib LH circuit for 2 seconds. • A rear side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat side airbag assembly LH (Rear side squib LH) • Center airbag sensor assembly
B1857/63	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the rear side squib LH circuit for 0.5 seconds. • A rear side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat side airbag assembly LH (Rear side squib LH) • Center airbag sensor assembly
B1858/63	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the rear side squib LH circuit for 0.5 seconds. • A rear side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat side airbag assembly LH (Rear side squib LH) • Center airbag sensor assembly

NG → Go to step 10

OK

USE SIMULATION METHOD TO CHECK (Click here)

10.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and the seat position sensor.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

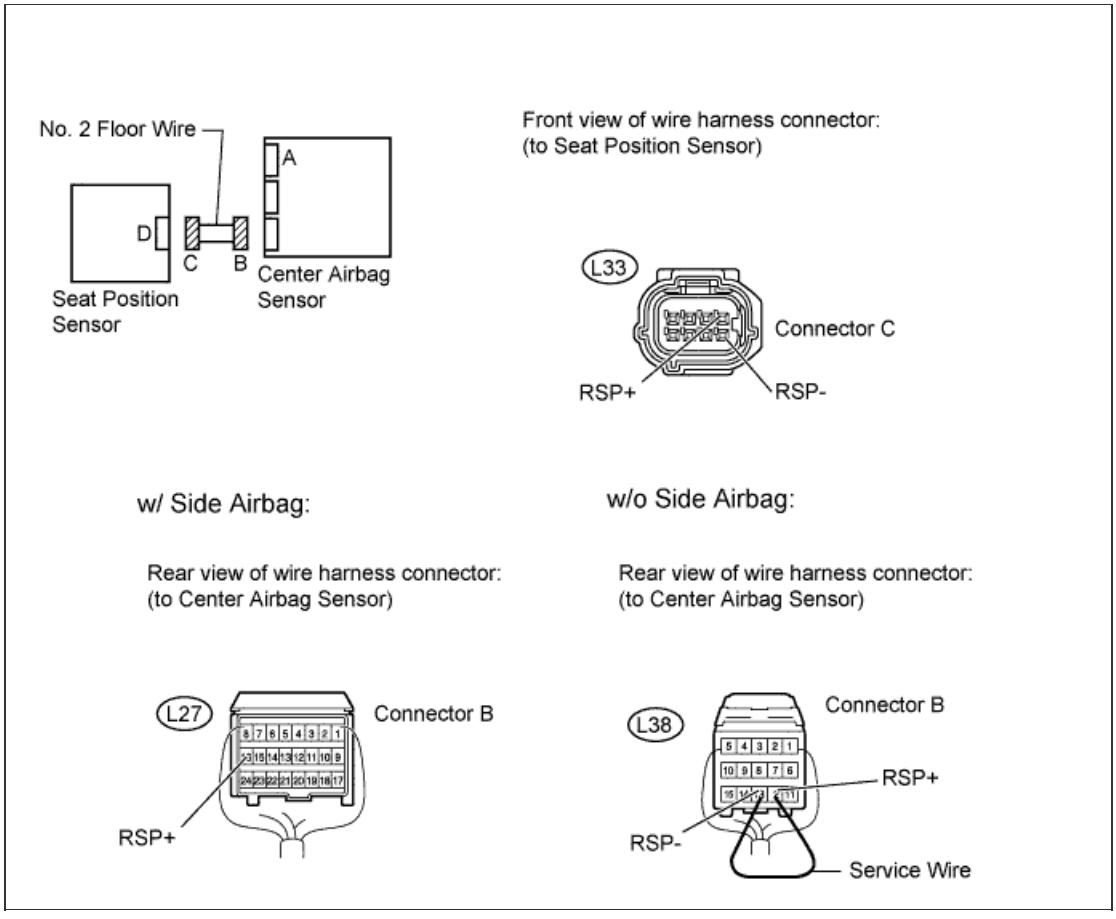
OK ↓

11.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and the seat position sensor.



b. Check that the connectors (on the center airbag sensor side and seat position sensor side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE NO. 2 FLOOR WIRE

OK ↓

12.CHECK NO. 2 FLOOR WIRE (CENTER AIRBAG SENSOR - SEAT POSITION SENSOR)

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
L33-4 (RSP+) - Body ground	Engine switch on (IG)	Below 1 V
L33-8 (RSP-) - Body ground	Engine switch on (IG)	Below 1 V

c. w/ Side Airbag:

i. Turn the engine switch off.

ii. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

iii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L33-4 (RSP+) - L27-16 (RSP+)	Always	Below 1 Ω
L33-4 (RSP+) - Body ground	Always	1 MΩ or higher
L33-8 (RSP-) - Body ground	Always	Below 1 Ω

d. w/o Side Airbag:

i. Turn the engine switch off.

ii. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

iii. Using a service wire, connect terminals 12 (RSP+) and 13 (RSP-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

iv. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L33-4 (RSP+) - L33-8 (RSP-)	Always	Below 1 Ω

v. Disconnect the service wire from connector B.

vi. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L33-4 (RSP+) - Body ground	Always	1 MΩ or higher
L33-8 (RLSP-) - Body ground	Always	Below 1 Ω

NG → REPLACE NO. 2 FLOOR WIRE

OK

13.CHECK SEAT POSITION SENSOR (FRONT SEAT INNER BELT RH)

a. Connect the connectors to the center airbag sensor and the seat position sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:
DTC B1653/35 is not output.

HINT:

Codes other than DTC B1653/35 may be output at this time, but they are not related to this check.

NG → Go to step 14

OK

USE SIMULATION METHOD TO CHECK (Click here)

14.REPLACE SEAT POSITION SENSOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Replace the seat position sensor (Click here).

HINT:

Perform inspection using parts from a normal vehicle if possible.

NEXT

15.CHECK CENTER AIRBAG SENSOR

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Turn the engine switch on (IG), and wait for at least 60 seconds.

c. Clear the DTCs (Click here).

d. Turn the engine switch off.

e. Turn the engine switch on (IG), and wait for at least 60 seconds.

f. Check for DTCs (Click here).

OK:
DTC B1653/35 is not output.

HINT:

Codes other than DTC B1653/35 may be output at this time, but they are not related to this check.

REPLACE FRONT SEAT INNER BELT ASSEMBLY RH

DTC B1855/63 Short in Rear Side Squib LH Circuit

DTC B1856/63 Open in Rear Side Squib LH Circuit

DTC B1857/63 Short to GND in Rear Side Squib LH Circuit

DTC B1858/63 Short to B+ in Rear Side Squib LH Circuit

for Preparation Click here

DESCRIPTION

The rear side squib LH circuit consists of the center airbag sensor and the rear seat side airbag LH.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the rear side squib LH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1855/63	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the rear side squib LH circuit during the primary check. • A rear side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat side airbag assembly LH (Rear side squib LH) • Center airbag sensor assembly
B1856/63	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the rear side squib LH circuit for 2 seconds. • A rear side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat side airbag assembly LH (Rear side squib LH) • Center airbag sensor assembly
B1857/63	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the rear side squib LH circuit for 0.5 seconds. • A rear side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat side airbag assembly LH (Rear side squib LH) • Center airbag sensor assembly
B1858/63	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the rear side squib LH circuit for 0.5 seconds. • A rear side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat side airbag assembly LH (Rear side squib LH) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK REAR SEAT SIDE AIRBAG LH (REAR SIDE SQUIB LH)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connector from the rear seat side airbag LH.

d. Connect the red wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the rear seat side airbag LH (rear side squib LH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1855, B1856, B1857 or B1858 is not output.

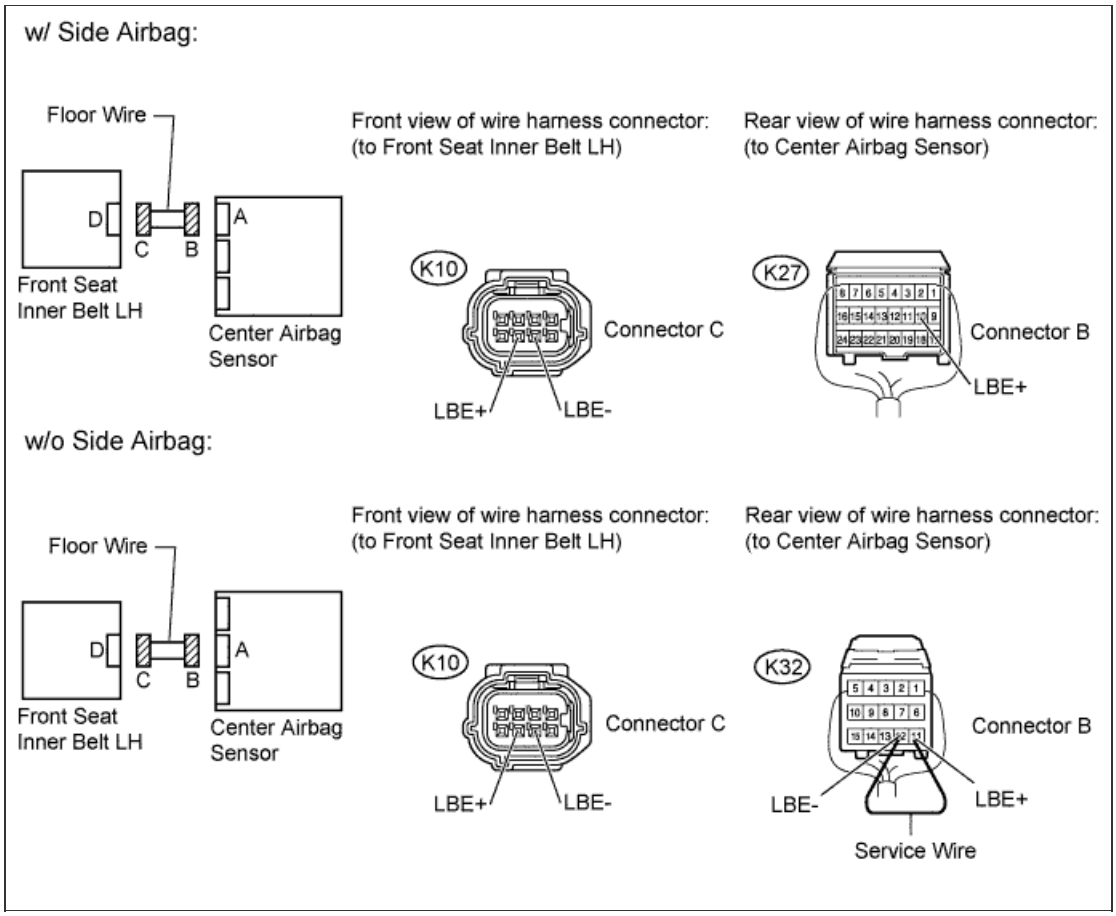
4.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and the front seat inner belt LH.



b. Check that the connectors (on the center airbag sensor side and front seat inner belt LH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE FLOOR WIRE

OK

5.CHECK FLOOR WIRE (CENTER AIRBAG SENSOR - FRONT SEAT INNER BELT LH)

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K10-6 (LBE+) - Body ground	Engine switch on (IG)	Below 1 V
K10-7 (LBE-) - Body ground	Engine switch on (IG)	Below 1 V

c. w/ Side Airbag:

i. Turn the engine switch off.

ii. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

iii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K10-6 (LBE+) - K27-10 (LBE+)	Always	Below 1 Ω
K10-6 (LBE+) - Body ground	Always	1 MΩ or higher
K10-7 (LBE-) - Body ground	Always	Below 1 Ω

d. w/o Side airbag:

i. Turn the engine switch off.

ii. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

iii. Using a service wire, connect terminals 11 (LBE+) and 12 (LBE-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

iv. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K10-6 (LBE+) - K10-7 (LBE-)	Always	Below 1 Ω

v. Disconnect a service wire from connector B.

vi. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K10-6 (LBE+) - K10-7 (LBE-)	Always	1 MΩ or higher
K10-6 (LBE+) - Body ground	Always	1 MΩ or higher
K10-7 (LBE-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK

6.CHECK FRONT SEAT INNER BELT LH (SEAT BELT BUCKLE SWITCH)

a. Connect the connector to the center airbag sensor and the front seat inner belt LH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

OK:
The connectors are not deformed or damaged.

NG → REPLACE NO. 2 FLOOR WIRE

OK

12.CHECK NO. 2 FLOOR WIRE (CENTER AIRBAG SENSOR - FRONT SEAT INNER BELT RH)

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Turn the engine switch on (IG).

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
L33-6 (RBE+) - Body ground	Engine switch on (IG)	Below 1 V
L33-7 (RBE-) - Body ground	Engine switch on (IG)	Below 1 V

d. w/ Side Airbag:

i. Turn the engine switch off.

ii. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

iii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L33-6 (RBE+) - L27-15 (RBE+)	Always	Below 1 Ω
L33-6 (RBE+) - Body ground	Always	1 MΩ or higher
L33-7 (RBE-) - Body ground	Always	Below 1 Ω

e. w/o Side airbag:

i. Turn the engine switch off.

ii. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

iii. Using a service wire, connect terminals 15 (RBE+) and 14 (RBE-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

iv. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L33-6 (RBE+) - L33-7 (RBE-)	Always	Below 1 Ω

v. Disconnect a service wire from connector B.

vi. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L33-6 (RBE+) - L33-7 (RBE-)	Always	1 MΩ or higher
L33-6 (RBE+) - Body ground	Always	1 MΩ or higher
L33-7 (RBE-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

DTC B1855/63 Short in Rear Side Squib LH Circuit

DTC B1856/63 Open in Rear Side Squib LH Circuit

DTC B1857/63 Short to GND in Rear Side Squib LH Circuit

DTC B1858/63 Short to B+ in Rear Side Squib LH Circuit

for Preparation Click here

DESCRIPTION

The rear side squib LH circuit consists of the center airbag sensor and the rear seat side airbag LH.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the rear side squib LH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1855/63	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the rear side squib LH circuit during the primary check. • A rear side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat side airbag assembly LH (Rear side squib LH) • Center airbag sensor assembly
B1856/63	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the rear side squib LH circuit for 2 seconds. • A rear side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat side airbag assembly LH (Rear side squib LH) • Center airbag sensor assembly
B1857/63	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the rear side squib LH circuit for 0.5 seconds. • A rear side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat side airbag assembly LH (Rear side squib LH) • Center airbag sensor assembly
B1858/63	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the rear side squib LH circuit for 0.5 seconds. • A rear side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat side airbag assembly LH (Rear side squib LH) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK REAR SEAT SIDE AIRBAG LH (REAR SIDE SQUIB LH)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connector from the rear seat side airbag LH.

d. Connect the red wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the rear seat side airbag LH (rear side squib LH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK VEHICLE CONDITION

a. Check vehicle condition.

Result

Result	Proceed to
for LHD	A
for RHD	B

B → Go to step 9

A

2.CHECK FOR DTC

a. Turn the engine switch on (IG), and wait for at least 60 seconds.

b. Clear the DTCs (Click here).

c. Turn the engine switch off.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Check for DTCs (Click here).

OK:

DTC B1655 is not output.

HINT:

Codes other than DTC B1655 may be output at this time, but they are not related to this check.

NG → Go to step 3

OK

USE SIMULATION METHOD TO CHECK (Click here)

3.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and front seat inner belt LH.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

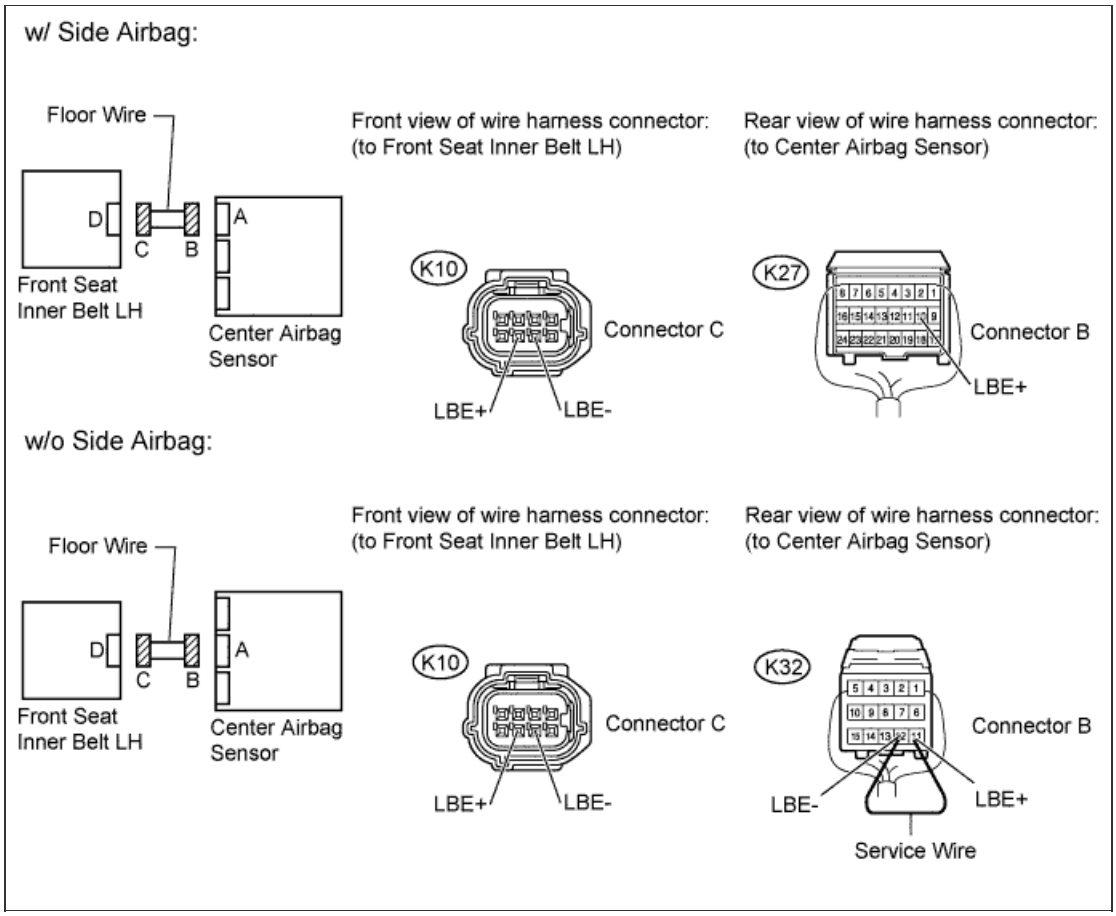
4.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and the front seat inner belt LH.



b. Check that the connectors (on the center airbag sensor side and front seat inner belt LH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE FLOOR WIRE

OK

5.CHECK FLOOR WIRE (CENTER AIRBAG SENSOR - FRONT SEAT INNER BELT LH)

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K10-6 (LBE+) - Body ground	Engine switch on (IG)	Below 1 V
K10-7 (LBE-) - Body ground	Engine switch on (IG)	Below 1 V

c. w/ Side Airbag:

i. Turn the engine switch off.

ii. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

iii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K10-6 (LBE+) - K27-10 (LBE+)	Always	Below 1 Ω
K10-6 (LBE+) - Body ground	Always	1 MΩ or higher
K10-7 (LBE-) - Body ground	Always	Below 1 Ω

d. w/o Side airbag:

i. Turn the engine switch off.

ii. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

iii. Using a service wire, connect terminals 11 (LBE+) and 12 (LBE-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

iv. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K10-6 (LBE+) - K10-7 (LBE-)	Always	Below 1 Ω

v. Disconnect a service wire from connector B.

vi. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K10-6 (LBE+) - K10-7 (LBE-)	Always	1 MΩ or higher
K10-6 (LBE+) - Body ground	Always	1 MΩ or higher
K10-7 (LBE-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK

6.CHECK FRONT SEAT INNER BELT LH (SEAT BELT BUCKLE SWITCH)

a. Connect the connector to the center airbag sensor and the front seat inner belt LH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:
DTC B1655 is not output.

HINT:

Codes other than DTC B1655 may be output at this time, but they are not related to this check.

NG → Go to step 7

OK

USE SIMULATION METHOD TO CHECK (**Click here**)

7.REPLACE FRONT SEAT INNER BELT LH

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Replace the front seat inner belt LH (Click here).

HINT:

Perform the inspection using parts from a normally functioning vehicle if possible.

NEXT

8.CHECK CENTER AIRBAG SENSOR

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Turn the engine switch on (IG), and wait for at least 60 seconds.

c. Clear the DTCs (Click here).

d. Turn the engine switch off.

e. Turn the engine switch on (IG), and wait for at least 60 seconds.

f. Check for DTCs (Click here).

OK:
DTC B1655 is not output.

HINT:

Codes other than DTC B1655 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

REPLACE FRONT SEAT INNER BELT ASSEMBLY LH (Click here)

9.CHECK FOR DTC

a. Turn the engine switch on (IG), and wait for at least 60 seconds.

b. Clear the DTCs (Click here).

c. Turn the engine switch off.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Check for DTCs (Click here).

OK:
DTC B1655 is not output.

HINT:

Code other than DTC B1655 may be output at this time, but they are not related to this check.

NG → Go to step 10

OK

USE SIMULATION METHOD TO CHECK (Click here)

10.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and front seat inner belt RH.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

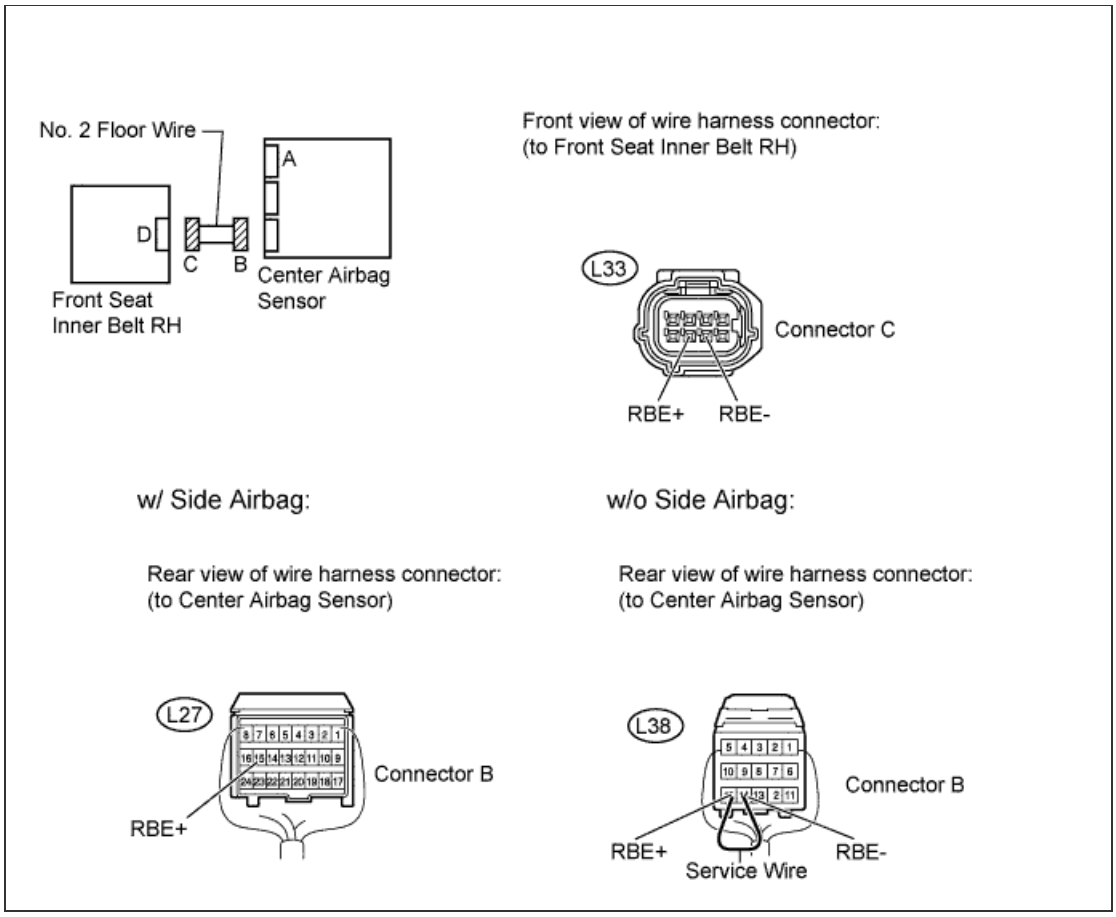
11.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and the front seat inner belt RH.



b. Check that the connectors (on the center airbag sensor side and front seat inner belt RH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE NO. 2 FLOOR WIRE

OK

12.CHECK NO. 2 FLOOR WIRE (CENTER AIRBAG SENSOR - FRONT SEAT INNER BELT RH)

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Turn the engine switch on (IG).

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
L33-6 (RBE+) - Body ground	Engine switch on (IG)	Below 1 V
L33-7 (RBE-) - Body ground	Engine switch on (IG)	Below 1 V

d. w/ Side Airbag:

i. Turn the engine switch off.

ii. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

iii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L33-6 (RBE+) - L27-15 (RBE+)	Always	Below 1 Ω
L33-6 (RBE+) - Body ground	Always	1 MΩ or higher
L33-7 (RBE-) - Body ground	Always	Below 1 Ω

e. w/o Side airbag:

i. Turn the engine switch off.

ii. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

iii. Using a service wire, connect terminals 15 (RBE+) and 14 (RBE-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

iv. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L33-6 (RBE+) - L33-7 (RBE-)	Always	Below 1 Ω

v. Disconnect a service wire from connector B.

vi. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L33-6 (RBE+) - L33-7 (RBE-)	Always	1 MΩ or higher
L33-6 (RBE+) - Body ground	Always	1 MΩ or higher
L33-7 (RBE-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK

13.CHECK FRONT SEAT INNER BELT RH (SEAT BELT BUCKLE SWITCH)

a. Connect the connector to the center airbag sensor and the front seat inner belt RH.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:
DTC B1655 is not output.

HINT:

Codes other than DTC B1655 may be output at this time, but they are not related to this check.

NG → Go to step 14

OK

USE SIMULATION METHOD TO CHECK (Click here)

14.REPLACE FRONT SEAT INNER BELT RH

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Replace the front seat inner belt RH (Click here).

HINT:

Perform the inspection using parts from a normally functioning vehicle if possible.

NEXT

15.CHECK CENTER AIRBAG SENSOR

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Turn the engine switch on (IG), and wait for at least 60 seconds.

c. Clear the DTCs (Click here).

d. Turn the engine switch off.

e. Turn the engine switch on (IG), and wait for at least 60 seconds.

f. Check for DTCs (Click here).

OK:
DTC B1655 is not output.

HINT:

Codes other than DTC B1655 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

REPLACE FRONT SEAT INNER BELT ASSEMBLY RH

DTC B1855/63 Short in Rear Side Squib LH Circuit

DTC B1856/63 Open in Rear Side Squib LH Circuit

DTC B1857/63 Short to GND in Rear Side Squib LH Circuit

DTC B1858/63 Short to B+ in Rear Side Squib LH Circuit

for Preparation Click here

DESCRIPTION

The rear side squib LH circuit consists of the center airbag sensor and the rear seat side airbag LH.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the rear side squib LH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1855/63	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the rear side squib LH circuit during the primary check. • A rear side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat side airbag assembly LH (Rear side squib LH) • Center airbag sensor assembly
B1856/63	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the rear side squib LH circuit for 2 seconds. • A rear side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat side airbag assembly LH (Rear side squib LH) • Center airbag sensor assembly
B1857/63	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the rear side squib LH circuit for 0.5 seconds. • A rear side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat side airbag assembly LH (Rear side squib LH) • Center airbag sensor assembly
B1858/63	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the rear side squib LH circuit for 0.5 seconds. • A rear side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat side airbag assembly LH (Rear side squib LH) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK REAR SEAT SIDE AIRBAG LH (REAR SIDE SQUIB LH)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connector from the rear seat side airbag LH.

d. Connect the red wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the rear seat side airbag LH (rear side squib LH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1855, B1856, B1857 or B1858 is not output.

HINT:

Codes other than DTC B1855, B1856, B1857 and B1858 may be output at this time, but they are not related to this check.

Result

Result	Proceed to
OK (for LHD)	A
OK (for RHD)	B
NG	C

B → REPLACE REAR NO. 1 SEAT ASSEMBLY LH (Click here)

C → Go to step 2

A

REPLACE REAR NO. 1 SEAT ASSEMBLY LH (Click here)

2.CHECK FLOOR WIRE (REAR SIDE SQUIB LH CIRCUIT)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Disconnect the connectors from the center airbag sensor.

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
Kz5-1 (SRL+) - Body ground	Engine switch on (IG)	Below 1 V
Kz5-2 (SRL-) - Body ground	Engine switch on (IG)	Below 1 V

g. Turn the engine switch off.

h. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Kz5-1 (SRL+) - Kz5-2 (SRL-)	Always	Below 1 Ω

j. Release the activation prevention mechanism built into connector B (Click here).

k. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Kz5-1 (SRL+) - Kz5-2 (SRL-)	Always	1 MΩ or higher
Kz5-1 (SRL+) - Body ground	Always	1 MΩ or higher
Kz5-2 (SRL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK

3.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the rear seat side airbag LH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1855, B1856, B1857 or B1858 is not output.

HINT:

Codes other than DTC B1855, B1856, B1857 and B1858 may be output at this time, but they are not related to this check.

USE SIMULATION METHOD TO CHECK (Click here)

DTC B1660/43 Passenger Airbag ON/OFF Indicator Circuit Malfunction

for Preparation Click here

DESCRIPTION

The passenger airbag ON/OFF indicator circuit consists of the center airbag sensor and the passenger airbag ON/OFF indicator.
The passenger airbag ON/OFF indicator indicates the operation condition of the front passenger airbag, front passenger side knee airbag, front seat airbag RH and front seat outer belt RH.
DTC B1660/43 is stored when a malfunction is detected in the passenger airbag ON/OFF indicator circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1660/43	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the passenger airbag ON/OFF indicator circuit for 2 seconds. • A passenger airbag ON/OFF indicator malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Multi-display*1 • Clock*2 • Center airbag sensor assembly • No. 2 instrument panel wire • No. 5 instrument panel wire*2

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK PASSENGER AIRBAG ON/OFF INDICATOR CONDITION

a. Turn the engine switch on (IG).

b. Check the passenger airbag ON/OFF indicator operation.

HINT:

Refer to the normal condition of the passenger airbag ON/OFF indicator (Click here).

Result

Result	Proceed to
Always On	A
Off	B

B → Go to step 9

A

2.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and the multi-display or clock.

OK:

The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

3.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and the multi-display or clock.

b. Check that the connectors (on the center airbag sensor side and multi-display side or clock side) are not damaged.

OK:

The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

4.CHECK PASSENGER AIRBAG ON/OFF INDICATOR

a. Connect the connector to the multi-display or clock.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG).

d. Check the passenger airbag ON/OFF indicator operation.

OK:
The passenger airbag ON/OFF indicator does not come on.

NG → Go to step 6

OK

5.CHECK CENTER AIRBAG SENSOR

a. Connect the connector to the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:
DTC B1660 is not output.

HINT:

Codes other than DTC B1660 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

USE SIMULATION METHOD TO CHECK (Click here)

6.CHECK PASSENGER AIRBAG ON/OFF INDICATOR CIRCUIT

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connector from the center airbag sensor and multi-display or clock.

d. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

e. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

w/ Multi-display

Tester Connection	Switch Condition	Specified Condition
F28-9 (ARON) - Body ground	Engine switch on (IG)	Below 1 V
F28-20 (AIR) - Body ground	Engine switch on (IG)	Below 1 V

w/o Multi-display

Tester Connection	Switch Condition	Specified Condition
g1-3 (PAON) - Body ground	Engine switch on (IG)	Below 1 V
g1-2 (P-AB) - Body ground	Engine switch on (IG)	Below 1 V

f. Turn the engine switch off.

g. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

h. Using a service wire, connect terminals 23 (PAON) and 17 (P-AB) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

w/ Multi-display

Tester Connection	Condition	Specified Condition
F28-9 (ARON) - F28-20 (AIR)	Always	Below 1 Ω

w/o Multi-display

Tester Connection	Condition	Specified Condition
g1-3 (PAON) - g1-2 (P-AB)	Always	Below 1 Ω

j. Disconnect the service wire from connector B.

k. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

w/ Multi-display

Tester Connection	Condition	Specified Condition
F28-9 (ARON) - F28-20 (AIR)	Always	1 MΩ or higher
F28-9 (ARON) - Body ground	Always	1 MΩ or higher
F28-20 (AIR) - Body ground	Always	1 MΩ or higher

w/o Multi-display

Tester Connection	Condition	Specified Condition
g1-3 (PAON) - g1-2 (P-AB)	Always	1 MΩ or higher
g1-3 (PAON) - Body ground	Always	1 MΩ or higher
g1-2 (P-AB) - Body ground	Always	1 MΩ or higher

7.CHECK INSTRUMENT PANEL WIRE (CENTER AIRBAG SENSOR - NO. 2 INSTRUMENT PANEL WIRE)

a. Disconnect the instrument panel wire connector from the No. 2 instrument panel wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
FE4-13 (PAON) - Body ground	Engine switch on (IG)	Below 1 V
FE4-12 (P-AB) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 23 (PAON) and 17 (P-AB) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
FE4-13 (PAON) - FE4-12 (P-AB)	Always	Below 1 Ω

h. Disconnect the service wire from connector B.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
FE4-13 (PAON) - FE4-12 (P-AB)	Always	1 MΩ or higher
FE4-13 (PAON) -	Always	1 MΩ or higher

Body ground		
FE4-12 (P-AB) - Body ground	Always	1 MΩ or higher

C → REPLACE INSTRUMENT PANEL WIRE

A

REPLACE NO. 2 INSTRUMENT PANEL WIRE

8.CHECK NO. 2 INSTRUMENT PANEL WIRE (INSTRUMENT PANEL WIRE - NO. 5 INSTRUMENT PANEL WIRE)

a. Disconnect the No. 2 instrument panel wire connector from the No. 5 instrument panel wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

w/o Cassette Type Player

Tester Connection	Switch Condition	Specified Condition
gF1-3 (PAON) - Body ground	Engine switch on (IG)	Below 1 V
gF1-4 (P-AB) - Body ground	Engine switch on (IG)	Below 1 V

w/ Cassette Type Player

Tester Connection	Switch Condition	Specified Condition
Fg1-3 (PAON) - Body ground	Engine switch on (IG)	Below 1 V
Fg1-2 (P-AB) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 13 (PAON) and 12 (P-AB) of connector D.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

w/o Cassette Type Player

Tester Connection	Condition	Specified Condition
gF1-3 (PAON) - gF1-4 (P-AB)	Always	Below 1 Ω

w/ Cassette Type Player

Tester Connection	Condition	Specified Condition
Fg1-3 (PAON) - Fg1-2 (P-AB)	Always	Below 1 Ω

h. Disconnect the service wire from connector D.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

w/o Cassette Type Player

Tester Connection	Condition	Specified Condition
gF1-3 (PAON) - gF1-4 (P-AB)	Always	1 MΩ or higher
gF1-3 (PAON) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 INSTRUMENT PANEL WIRE

OK

REPLACE NO. 5 INSTRUMENT PANEL WIRE

9.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and the multi-display or clock.

OK:

The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

10.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and the multi-display or clock.

b. Check that the connectors (on the center airbag sensor side and multi-display side or clock side) are not damaged.

OK:

The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

11.CHECK PASSENGER AIRBAG ON/OFF INDICATOR CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

w/ Multi-display

Tester Connection	Switch Condition	Specified Condition
F28-9 (ARON) - Body ground	Engine switch on (IG)	Below 1 V
F28-20 (AIR) - Body ground	Engine switch on (IG)	Below 1 V

w/o Multi-display

Tester Connection	Switch Condition	Specified Condition
g1-3 (PAON) - Body	Engine switch on	

ground	(IG)	Below 1 V
g1-2 (P-AB) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 23 (PAON) and 17 (P-AB) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

w/ Multi-display

Tester Connection	Condition	Specified Condition
F28-9 (ARON) - F28-20 (AIR)	Always	Below 1 Ω

w/o Multi-display

Tester Connection	Condition	Specified Condition
g1-3 (PAON) - g1-2 (P-AB)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

w/ Multi-display

Tester Connection	Condition	Specified Condition
F28-9 (ARON) - F28-20 (AIR)	Always	1 MΩ or higher
F28-9 (ARON) - Body ground	Always	1 MΩ or higher
F28-20 (AIR) - Body ground	Always	1 MΩ or higher

w/o Multi-display

Tester Connection	Condition	Specified Condition
g1-3 (PAON) - g1-2 (P-AB)	Always	1 MΩ or higher
g1-3 (PAON) - Body ground	Always	1 MΩ or higher
g1-2 (P-AB) - Body ground	Always	1 MΩ or higher

NG → Go to step 15

OK

12.CHECK PASSENGER AIRBAG ON/OFF INDICATOR (SOURCE VOLTAGE)

a. Turn the engine switch off.

b. Connect the connectors to the center airbag sensor.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Measure the voltage according to the value(s) in the table below.

Front view of wire harness connector:
(to Multi-display)

Front view of wire harness connector:
(to Clock)

Standard Voltage:

w/ Multi-display

Tester Connection	Switch Condition	Specified Condition
F28-3 (IG) - Body ground	Engine switch on (IG)	11 to 14 V

w/o Multi-display

Tester Connection	Switch Condition	Specified Condition
g1-10 (IG+) - Body ground	Engine switch on (IG)	11 to 14 V

15.CHECK INSTRUMENT PANEL WIRE (CENTER AIRBAG SENSOR - NO. 2 INSTRUMENT PANEL WIRE)

a. Disconnect the instrument panel wire connector from the No. 2 instrument panel wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
FE4-13 (PAON) - Body ground	Engine switch on (IG)	Below 1 V
FE4-12 (P-AB) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 23 (PAON) and 17 (P-AB) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
FE4-13 (PAON) - FE4-12 (P-AB)	Always	Below 1 Ω

h. Disconnect the service wire from connector B.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
FE4-13 (PAON) - FE4-12 (P-AB)	Always	1 MΩ or higher
FE4-13 (PAON) -	Always	1 MΩ or higher

Body ground		
FE4-12 (P-AB) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 INSTRUMENT PANEL WIRE

OK → REPLACE NO. 5 INSTRUMENT PANEL WIRE

DTC B1855/63 Short in Rear Side Squib LH Circuit

DTC B1856/63 Open in Rear Side Squib LH Circuit

DTC B1857/63 Short to GND in Rear Side Squib LH Circuit

DTC B1858/63 Short to B+ in Rear Side Squib LH Circuit

for Preparation Click here

DESCRIPTION

The rear side squib LH circuit consists of the center airbag sensor and the rear seat side airbag LH.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the rear side squib LH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1855/63	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the rear side squib LH circuit during the primary check. • A rear side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat side airbag assembly LH (Rear side squib LH) • Center airbag sensor assembly
B1856/63	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the rear side squib LH circuit for 2 seconds. • A rear side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat side airbag assembly LH (Rear side squib LH) • Center airbag sensor assembly
B1857/63	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the rear side squib LH circuit for 0.5 seconds. • A rear side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat side airbag assembly LH (Rear side squib LH) • Center airbag sensor assembly
B1858/63	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the rear side squib LH circuit for 0.5 seconds. • A rear side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat side airbag assembly LH (Rear side squib LH) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK REAR SEAT SIDE AIRBAG LH (REAR SIDE SQUIB LH)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connector from the rear seat side airbag LH.

d. Connect the red wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the rear seat side airbag LH (rear side squib LH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1855, B1856, B1857 or B1858 is not output.

HINT:

Codes other than DTC B1855, B1856, B1857 and B1858 may be output at this time, but they are not related to this check.

A

REPLACE REAR NO. 1 SEAT ASSEMBLY LH (Click here)

2.CHECK FLOOR WIRE (REAR SIDE SQUIB LH CIRCUIT)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Disconnect the connectors from the center airbag sensor.

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
Kz5-1 (SRL+) - Body ground	Engine switch on (IG)	Below 1 V
Kz5-2 (SRL-) - Body ground	Engine switch on (IG)	Below 1 V

g. Turn the engine switch off.

h. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Kz5-1 (SRL+) - Kz5-2 (SRL-)	Always	Below 1 Ω

j. Release the activation prevention mechanism built into connector B (Click here).

k. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Kz5-1 (SRL+) - Kz5-2 (SRL-)	Always	1 MΩ or higher
Kz5-1 (SRL+) - Body ground	Always	1 MΩ or higher
Kz5-2 (SRL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK

3.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the rear seat side airbag LH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1855, B1856, B1857 or B1858 is not output.

HINT:

Codes other than DTC B1855, B1856, B1857 and B1858 may be output at this time, but they are not related to this check.

USE SIMULATION METHOD TO CHECK (Click here)

DTC B1660/43 Passenger Airbag ON/OFF Indicator Circuit Malfunction

for Preparation Click here

DESCRIPTION

The passenger airbag ON/OFF indicator circuit consists of the center airbag sensor and the passenger airbag ON/OFF indicator.
The passenger airbag ON/OFF indicator indicates the operation condition of the front passenger airbag, front passenger side knee airbag, front seat airbag RH and front seat outer belt RH.
DTC B1660/43 is stored when a malfunction is detected in the passenger airbag ON/OFF indicator circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1660/43	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the passenger airbag ON/OFF indicator circuit for 2 seconds. • A passenger airbag ON/OFF indicator malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Multi-display*1 • Clock*2 • Center airbag sensor assembly • No. 2 instrument panel wire • No. 5 instrument panel wire*2

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK PASSENGER AIRBAG ON/OFF INDICATOR CONDITION

a. Turn the engine switch on (IG).

b. Check the passenger airbag ON/OFF indicator operation.

HINT:

Refer to the normal condition of the passenger airbag ON/OFF indicator (Click here).

Result

Result	Proceed to
Always On	A
Off	B

B → Go to step 9

A

2.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and the multi-display or clock.

OK:

The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

3.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and the multi-display or clock.

b. Check that the connectors (on the center airbag sensor side and multi-display side or clock side) are not damaged.

OK:

The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

4.CHECK PASSENGER AIRBAG ON/OFF INDICATOR

a. Connect the connector to the multi-display or clock.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG).

d. Check the passenger airbag ON/OFF indicator operation.

OK:
The passenger airbag ON/OFF indicator does not come on.

NG → Go to step 6

OK

5.CHECK CENTER AIRBAG SENSOR

a. Connect the connector to the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:
DTC B1660 is not output.

HINT:

Codes other than DTC B1660 may be output at this time, but they are not related to this check.

USE SIMULATION METHOD TO CHECK (Click here)

6.CHECK PASSENGER AIRBAG ON/OFF INDICATOR CIRCUIT

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connector from the center airbag sensor and multi-display or clock.

d. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

e. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

w/ Multi-display

Tester Connection	Switch Condition	Specified Condition
F28-9 (ARON) - Body ground	Engine switch on (IG)	Below 1 V
F28-20 (AIR) - Body ground	Engine switch on (IG)	Below 1 V

w/o Multi-display

Tester Connection	Switch Condition	Specified Condition
g1-3 (PAON) - Body ground	Engine switch on (IG)	Below 1 V
g1-2 (P-AB) - Body ground	Engine switch on (IG)	Below 1 V

f. Turn the engine switch off.

g. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

h. Using a service wire, connect terminals 23 (PAON) and 17 (P-AB) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

w/ Multi-display

Tester Connection	Condition	Specified Condition
F28-9 (ARON) - F28-20 (AIR)	Always	Below 1 Ω

w/o Multi-display

Tester Connection	Condition	Specified Condition
g1-3 (PAON) - g1-2 (P-AB)	Always	Below 1 Ω

j. Disconnect the service wire from connector B.

k. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

w/ Multi-display

Tester Connection	Condition	Specified Condition
F28-9 (ARON) - F28-20 (AIR)	Always	1 MΩ or higher
F28-9 (ARON) - Body ground	Always	1 MΩ or higher
F28-20 (AIR) - Body ground	Always	1 MΩ or higher

w/o Multi-display

Tester Connection	Condition	Specified Condition
g1-3 (PAON) - g1-2 (P-AB)	Always	1 MΩ or higher
g1-3 (PAON) - Body ground	Always	1 MΩ or higher
g1-2 (P-AB) - Body ground	Always	1 MΩ or higher

7.CHECK INSTRUMENT PANEL WIRE (CENTER AIRBAG SENSOR - NO. 2 INSTRUMENT PANEL WIRE)

a. Disconnect the instrument panel wire connector from the No. 2 instrument panel wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
FE4-13 (PAON) - Body ground	Engine switch on (IG)	Below 1 V
FE4-12 (P-AB) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 23 (PAON) and 17 (P-AB) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
FE4-13 (PAON) - FE4-12 (P-AB)	Always	Below 1 Ω

h. Disconnect the service wire from connector B.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
FE4-13 (PAON) - FE4-12 (P-AB)	Always	1 MΩ or higher
FE4-13 (PAON) -	Always	1 MΩ or higher

Body ground

15.CHECK INSTRUMENT PANEL WIRE (CENTER AIRBAG SENSOR - NO. 2 INSTRUMENT PANEL WIRE)

a. Disconnect the instrument panel wire connector from the No. 2 instrument panel wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
FE4-13 (PAON) - Body ground	Engine switch on (IG)	Below 1 V
FE4-12 (P-AB) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 23 (PAON) and 17 (P-AB) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
FE4-13 (PAON) - FE4-12 (P-AB)	Always	Below 1 Ω

h. Disconnect the service wire from connector B.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
FE4-13 (PAON) - FE4-12 (P-AB)	Always	1 MΩ or higher
FE4-13 (PAON) -	Always	1 MΩ or higher

Body ground		
FE4-12 (P-AB) - Body ground	Always	1 MΩ or higher

DTC B1856/63 Open in Rear Side Squib LH Circuit

DTC B1857/63 Short to GND in Rear Side Squib LH Circuit

DTC B1858/63 Short to B+ in Rear Side Squib LH Circuit

for Preparation Click here

DESCRIPTION

The rear side squib LH circuit consists of the center airbag sensor and the rear seat side airbag LH.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the rear side squib LH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1855/63	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the rear side squib LH circuit during the primary check. • A rear side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat side airbag assembly LH (Rear side squib LH) • Center airbag sensor assembly
B1856/63	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the rear side squib LH circuit for 2 seconds. • A rear side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat side airbag assembly LH (Rear side squib LH) • Center airbag sensor assembly
B1857/63	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the rear side squib LH circuit for 0.5 seconds. • A rear side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat side airbag assembly LH (Rear side squib LH) • Center airbag sensor assembly
B1858/63	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the rear side squib LH circuit for 0.5 seconds. • A rear side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat side airbag assembly LH (Rear side squib LH) • Center airbag sensor assembly

DTC B1661/44 Roll Over Cut Off Indicator Malfunction

for Preparation Click here

DESCRIPTION

The curtain shield airbag cutoff switch is a mechanism that operates both the right and left sides of the curtain shield airbag and the front seat outer belt when the center airbag sensor detects a roll-over.
The RSCA OFF indicator is installed in the combination meter.
If the curtain shield airbag cutoff switch is operated, the indicator comes on to inform the drive that the roll-over detection system is not working.
The initial setting of the roll-over detection system is on. It automatically operates every time the engine switch is turned on (IG).

DTC Code	DTC Detection Condition	Trouble Area
B1661/44	When one of the following conditions is met: • The center airbag sensor receives an open signal or short to ground in the RSCA OFF indicator circuit. • An RSCA OFF indicator malfunction. • A center airbag sensor malfunction.	• Combination meter assembly • curtain shield airbag cutoff switch • Center airbag sensor assembly • Instrument panel wire • No. 3 instrument panel wire • Floor wire • No. 2 floor wire

3.INSPECT CURTAIN SHIELD AIRBAG CUTOFF SWITCH

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Remove the curtain shield airbag cutoff switch (Click here).

d. easure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
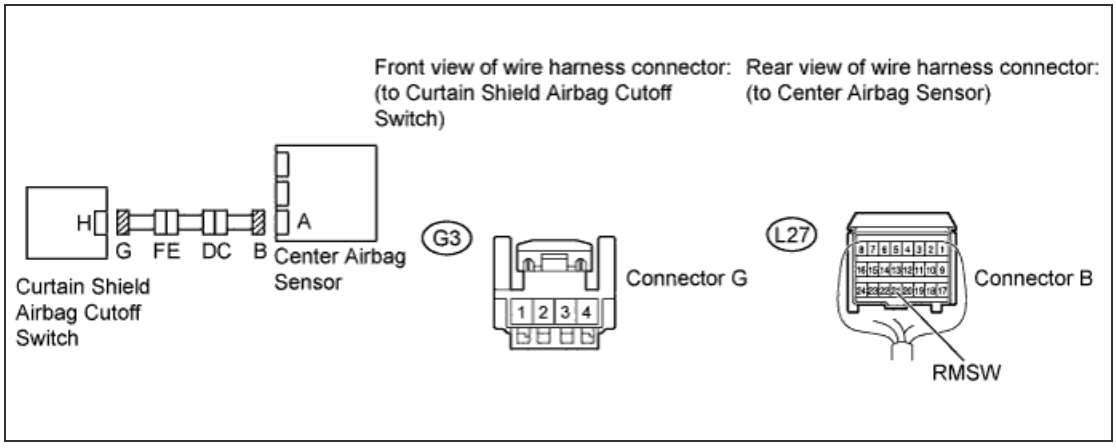
4 - 1	Curtain shield airbag cutoff switch is in on position	Below 1 Ω
4 - 1	Curtain shield airbag cutoff switch is in off position	1 Ω or higher



Component without harness connected:
(Curtain Shield Airbag Cutoff Switch)

NG → REPLACE CURTAIN SHIELD AIRBAG CUTOFF SWITCH (Click here)

OK

4.CHECK CURTAIN SHIELD AIRBAG CUTOFF SWITCH CIRCUIT

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connector from the center airbag sensor and curtain shield airbag cutoff switch.

d. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

e. easure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
G3-4 - Body ground	ngine switch on (IG)	Below 1 V
G3-1 - Body ground	ngine switch on (IG)	Below 1 V

f. Turn the engine switch off.

g. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

h. easure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L27-21 (R SW) - G3-4	Always	Below 1 Ω
G3-4 - Body ground	Always	1 Ω or higher
G3-1 - Body ground	Always	Below 1 Ω

NG → Go to step 7

OK

REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

5.CHECK FLOOR WIRE (CENTER AIRBAG SENSOR - INSTRUMENT PANEL WIRE)

a. Disconnect the floor wire connector from the instrument panel wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. easure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
-3 - Body ground	ngine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. easure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
-3 - K27-19 (R IL)	Always	Below 1 Ω
-3 - Body ground	Always	1 Ω or higher

NG → REPLACE FLOOR WIRE

OK →

REPLACE INSTRUMENT PANEL WIRE

6.CHECK NO. 2 FLOOR WIRE (CENTER AIRBAG SENSOR - INSTRUMENT PANEL WIRE)

a. Disconnect the No. 2 floor wire connector from the instrument panel wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. easure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
-3 - Body ground	ngine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. easure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
-3 - L27-22 (R IL)	Always	Below 1 Ω
-3 - Body ground	Always	1 Ω or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK →

REPLACE INSTRUMENT PANEL WIRE

7.CHECK NO. 2 FLOOR WIRE (CENTER AIRBAG SENSOR - INSTRUMENT PANEL WIRE)

a. Disconnect the No. 2 floor wire connector from the instrument panel wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. easure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
-4 - Body ground	ngine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. easure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L27-21 (R SW) - -4	Always	Below 1 Ω
-4 - Body ground	Always	1 Ω or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK

8.CHECK INSTRUMENT PANEL WIRE (NO. 2 FLOOR WIRE - NO. 3 INSTRUMENT PANEL WIRE AND BODY GROUND)

a. Disconnect the instrument panel wire connector from the No. 3 instrument panel wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG).

d. easure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
G -20 - Body ground	ngine switch on (IG)	Below 1 V

e. Turn the engine switch off.

f. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

g. easure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
-4 - G -20	Always	Below 1 Ω
G -20 - Body ground	Always	1 Ω or higher

NG → REPLACE INSTRUMENT PANEL WIRE

OK → REPLACE NO. 3 INSTRUMENT PANEL WIRE

DTC B1860/64 Short in Driver Side Knee Airbag Squib Circuit

DTC B1861/64 Open in Driver Side Knee Airbag Squib Circuit

DTC B1862/64 Short to GND in Driver Side Knee Airbag Squib Circuit

DTC B1863/64 Short to B+ in Driver Side Knee Airbag Squib Circuit

for Preparation Click here

DESCRIPTION

The driver side knee airbag squib circuit consists of the center airbag sensor and the driver side knee airbag.
This circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the driver side knee airbag squib circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1860/64	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the driver side knee airbag squib circuit during the primary check. • A driver side knee airbag squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Driver side knee airbag assembly (Driver side knee squib) • Center airbag sensor assembly
B1861/64	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the driver side knee airbag squib circuit for 2 seconds. • A driver side knee airbag squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Driver side knee airbag assembly (Driver side knee squib) • Center airbag sensor assembly
B1862/64	When one of the following conditions is met: • The airbag sensor center receives a short circuit to ground signal in the knee airbag (Driver side squib) circuit for 0.5 seconds. • A driver side knee airbag squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Driver side knee airbag assembly (Driver side knee squib) • Center airbag sensor assembly
B1863/64	When one of the following conditions is met: • The airbag sensor center receives a short circuit to B+ signal in the knee airbag (Driver side squib) circuit for 0.5 seconds. • A driver side knee airbag squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Driver side knee airbag assembly (Driver side knee squib) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK DRIVER SIDE KNEE AIRBAG (DRIVER SIDE KNEE SQUIB)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connector from the driver side knee airbag.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the driver side knee airbag (driver side knee squib) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1860, B1861, B1862 or B1863 is not output.

HINT:

Codes other than DTC B1860, B1861, B1862 and B1863 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK

REPLACE DRIVER SIDE KNEE AIRBAG ASSEMBLY (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the instrument panel wire connector (on the driver side knee airbag side) is not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE INSTRUMENT PANEL WIRE

OK

3.CHECK INSTRUMENT PANEL WIRE (DRIVER SIDE KNEE AIRBAG CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E24-1 (DK+) - Body ground	Engine switch on (IG)	Below 1 V
E24-2 (DK-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E24-1 (DK+) - E24-2 (DK-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E24-1 (DK+) - E24-2 (DK-)	Always	1 MΩ or higher
E24-1 (DK+) - Body ground	Always	1 MΩ or higher
E24-2 (DK-) - Body	Always	1 MΩ or higher

ground		

NG → REPLACE INSTRUMENT PANEL WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the driver side knee airbag and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1860, B1861, B1862 or B1863 is not output.

HINT:

Codes other than DTC B1860, B1861, B1862 and B1863 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

USE SIMULATION METHOD TO CHECK (Click here)

DTC B1662/45 Indicator Light Circuit Malfunction

for Preparation Click here

DESCRIPTION

The indicator light circuit consists of the center airbag sensor and the combination meter.
When the center airbag sensor detects a malfunction in the SRS airbag system, the SRS warning light comes on to inform the driver. It also comes on when the source voltage drops, and automatically goes off in approximately 10 seconds after the source voltage returns to normal (DTC is not stored).
The SRS warning light comes on for 6 seconds after the engine switch is turned on (IG) and goes off if the system is normal.
When an open circuit is detected, such as when the connector between the combination meter and the center airbag sensor is disconnected, the SRS warning light remains on even when approximately 6 seconds elapsed after the engine switch is turned on (IG).
DTC B1662/45 is stored when a malfunction is detected in the indicator light circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1662/45	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal, a short to ground signal or a short circuit to ground signal or a short circuit to B+ signal in the indicator light circuit for 2 seconds. • A combination meter malfunction. • A center airbag sensor malfunction.	• Combination meter assembly (SRS warning light) • Center airbag sensor assembly • Instrument panel wire

2.CHECK BATTERY

a. Measure the voltage of the battery.

Standard Voltage:
11 to 14 V

NG → CHECK AND REPLACE BATTERY OR CHARGING SYSTEM

OK

3.CHECK CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and combination meter.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

4.CHECK HARNESS AND CONNECTOR (SOURCE VOLTAGE OF CENTER AIRBAG SENSOR)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

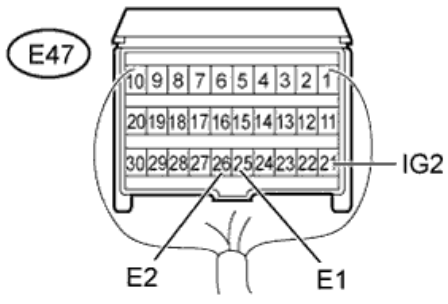
c. Turn the engine switch on (IG).



d. Operate all the components of the electrical system (defogger, wipers, headlights, heater blower, etc.).

e. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E47-21 (IG2) - E47-25 (E1)	Engine switch on (IG)	11 to 14 V
E47-21 (IG2) - E47-26 (E2)	Engine switch on (IG)	11 to 14 V

Rear view of wire harness connector:
(to Center Airbag Sensor)

NG → REPLACE HARNESS AND CONNECTOR

OK

5.CHECK HARNESS AND CONNECTOR (SOURCE VOLTAGE OF COMBINATION METER)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the E7 connector from the combination meter.

d. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

e. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E7-18 (IG+) - E7-15 (ET)	Engine switch on (IG)	11 to 14 V

NG → REPLACE HARNESS AND CONNECTOR

OK

6.CHECK SRS WARNING LIGHT (SHORT TO GROUND)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Connect the connector to the combination meter.

d. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

e. Turn the engine switch on (IG).

f. Check the SRS warning light condition.

OK:

After the primary check period, SRS warning light goes off for approximately 10 seconds and then remains on.

HINT:

The primary check period is approximately 6 seconds after the engine switch is turned on (IG).

NG → GO TO METER / GAUGE SYSTEM (Click here)

OK

REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1860, B1861, B1862 or B1863 is not output.

HINT:

Codes other than DTC B1860, B1861, B1862 and B1863 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK

REPLACE DRIVER SIDE KNEE AIRBAG ASSEMBLY (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the instrument panel wire connector (on the driver side knee airbag side) is not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE INSTRUMENT PANEL WIRE

OK

3.CHECK INSTRUMENT PANEL WIRE (DRIVER SIDE KNEE AIRBAG CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E24-1 (DK+) - Body ground	Engine switch on (IG)	Below 1 V
E24-2 (DK-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E24-1 (DK+) - E24-2 (DK-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E24-1 (DK+) - E24-2 (DK-)	Always	1 MΩ or higher
E24-1 (DK+) - Body ground	Always	1 MΩ or higher
E24-2 (DK-) - Body	Always	1 MΩ or higher

ground		

NG → REPLACE INSTRUMENT PANEL WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the driver side knee airbag and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1860, B1861, B1862 or B1863 is not output.

HINT:

Codes other than DTC B1860, B1861, B1862 and B1863 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

USE SIMULATION METHOD TO CHECK (Click here)

DTC B1662/45 Indicator Light Circuit Malfunction

for Preparation Click here

DESCRIPTION

The indicator light circuit consists of the center airbag sensor and the combination meter.
When the center airbag sensor detects a malfunction in the SRS airbag system, the SRS warning light comes on to inform the driver. It also comes on when the source voltage drops, and automatically goes off in approximately 10 seconds after the source voltage returns to normal (DTC is not stored).
The SRS warning light comes on for 6 seconds after the engine switch is turned on (IG) and goes off if the system is normal.
When an open circuit is detected, such as when the connector between the combination meter and the center airbag sensor is disconnected, the SRS warning light remains on even when approximately 6 seconds elapsed after the engine switch is turned on (IG).
DTC B1662/45 is stored when a malfunction is detected in the indicator light circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1662/45	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal, a short to ground signal or a short circuit to ground signal or a short circuit to B+ signal in the indicator light circuit for 2 seconds. • A combination meter malfunction. • A center airbag sensor malfunction.	• Combination meter assembly (SRS warning light) • Center airbag sensor assembly • Instrument panel wire

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK CAN COMMUNICATION SYSTEM

a. Check if a CA communication DTC is output.

Result

Result	Proceed to
DTC is not output	A
DTC is output (for D)	B
DTC is output (for RHD)	C

B → REPAIR CIRCUITS INDICATED BY OUTPUT DTCS (Click here)

C → REPAIR CIRCUITS INDICATED BY OUTPUT DTCS (Click here)

A

2.CHECK BATTERY

a. Measure the voltage of the battery.

Standard Voltage:
11 to 14 V

NG → CHECK AND REPLACE BATTERY OR CHARGING SYSTEM

OK

3.CHECK CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and combination meter.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

4.CHECK HARNESS AND CONNECTOR (SOURCE VOLTAGE OF CENTER AIRBAG SENSOR)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

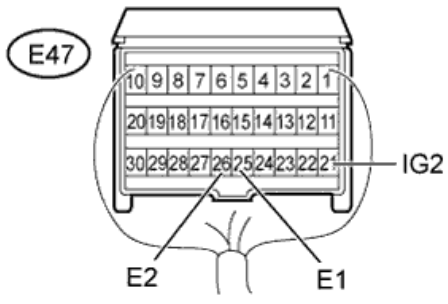
c. Turn the engine switch on (IG).



d. Operate all the components of the electrical system (defogger, wipers, headlights, heater blower, etc.).

e. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E47-21 (IG2) - E47-25 (E1)	Engine switch on (IG)	11 to 14 V
E47-21 (IG2) - E47-26 (E2)	Engine switch on (IG)	11 to 14 V

Rear view of wire harness connector:
(to Center Airbag Sensor)

NG → REPLACE HARNESS AND CONNECTOR

OK

5.CHECK HARNESS AND CONNECTOR (SOURCE VOLTAGE OF COMBINATION METER)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the E7 connector from the combination meter.

d. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

e. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E7-18 (IG+) - E7-15 (ET)	Engine switch on (IG)	11 to 14 V

NG → REPLACE HARNESS AND CONNECTOR

OK

6.CHECK SRS WARNING LIGHT (SHORT TO GROUND)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Connect the connector to the combination meter.

d. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

e. Turn the engine switch on (IG).

f. Check the SRS warning light condition.

OK:

After the primary check period, SRS warning light goes off for approximately 10 seconds and then remains on.

HINT:

The primary check period is approximately 6 seconds after the engine switch is turned on (IG).

NG → GO TO METER / GAUGE SYSTEM (Click here)

OK

REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

DTC B1860/64 Short in Driver Side Knee Airbag Squib Circuit

DTC B1861/64 Open in Driver Side Knee Airbag Squib Circuit

DTC B1862/64 Short to GND in Driver Side Knee Airbag Squib Circuit

DTC B1863/64 Short to B+ in Driver Side Knee Airbag Squib Circuit

for Preparation Click here

DESCRIPTION

The driver side knee airbag squib circuit consists of the center airbag sensor and the driver side knee airbag.
This circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the driver side knee airbag squib circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1860/64	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the driver side knee airbag squib circuit during the primary check. • A driver side knee airbag squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Driver side knee airbag assembly (Driver side knee squib) • Center airbag sensor assembly
B1861/64	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the driver side knee airbag squib circuit for 2 seconds. • A driver side knee airbag squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Driver side knee airbag assembly (Driver side knee squib) • Center airbag sensor assembly
B1862/64	When one of the following conditions is met: • The airbag sensor center receives a short circuit to ground signal in the knee airbag (Driver side squib) circuit for 0.5 seconds. • A driver side knee airbag squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Driver side knee airbag assembly (Driver side knee squib) • Center airbag sensor assembly
B1863/64	When one of the following conditions is met: • The airbag sensor center receives a short circuit to B+ signal in the knee airbag (Driver side squib) circuit for 0.5 seconds. • A driver side knee airbag squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Driver side knee airbag assembly (Driver side knee squib) • Center airbag sensor assembly

DTC B1676/85 Lost Communication with Rear Floor Airbag Sensor RH

DTC B1677/85 Rear Floor Airbag Sensor RH Initialization Incomplete

DTC B1694/85 Side Satellite Sensor No. 2 Bus RH Initialization Incomplete

for Preparation Click here

DESCRIPTION

HINT:

"Rear floor airbag sensor RH" refer to the rear floor airbag sensor.

- The rear floor airbag sensor circuit consists of the center airbag sensor and rear floor airbag sensor.
  The rear floor airbag sensor detects impacts to the vehicle and sends signals to the center airbag sensor to determine if the airbag should be deployed.
  DTC B1676/85, B1677/85 or B1694/85 is stored when a malfunction is detected in the rear floor airbag sensor circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1676/85	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the rear floor airbag sensor circuit for 2 seconds. • A rear floor airbag sensor malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear floor airbag sensor • Center airbag sensor assembly
B1677/85	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the rear floor airbag sensor circuit for 2 seconds. • A rear floor airbag sensor malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear floor airbag sensor • Center airbag sensor assembly
B1694/85	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the rear floor airbag sensor circuit for 2 seconds. • A rear floor airbag sensor malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear floor airbag sensor • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and the rear floor airbag sensor.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

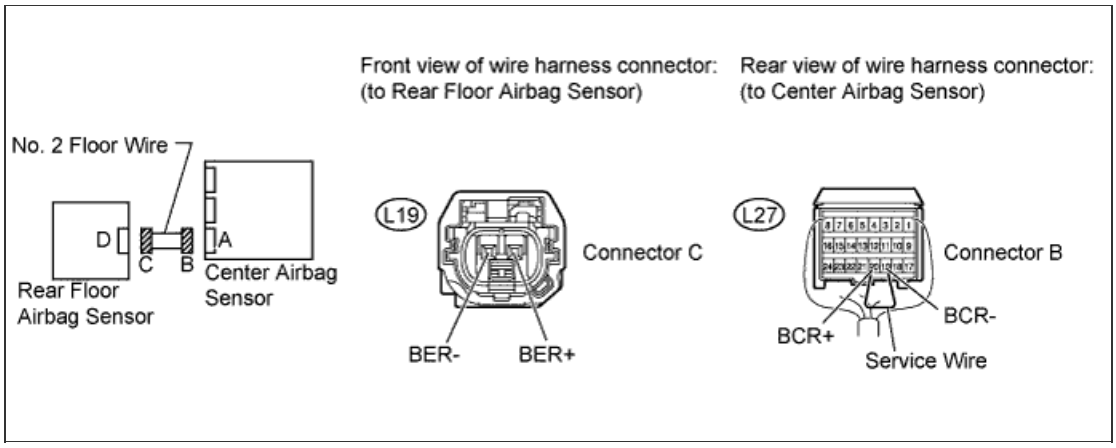
2.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and rear floor airbag sensor.



b. Check that the connectors (on the center airbag sensor side and rear floor airbag sensor side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

3.CHECK REAR FLOOR AIRBAG SENSOR CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
L19-2 (BER+) - Body ground	Engine switch on (IG)	Below 1 V
L19-1 (BER-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 20 (BCR+) and 19 (BCR-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L19-2 (BER+) - L19-1 (BER-)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L19-2 (BER+) - L19-1 (BER-)	Always	1 MΩ or higher
L19-2 (BER+) - Body ground	Always	1 MΩ or higher
L19-1 (BER-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK

4.CHECK REAR FLOOR AIRBAG SENSOR

a. Connect the connectors to the center airbag sensor.

b. Temporarily replace the rear floor airbag sensor with a new one.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2

seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

i. Check for DTCs (Click here).

OK:

DTC B1676, B1677 and B1694 are not output.

HINT:

Codes other than DTC B1676, B1677 and B1694 may be output at this time, but they are not related to this check.

DTC B1860/64 Short in Driver Side Knee Airbag Squib Circuit

DTC B1861/64 Open in Driver Side Knee Airbag Squib Circuit

DTC B1862/64 Short to GND in Driver Side Knee Airbag Squib Circuit

DTC B1863/64 Short to B+ in Driver Side Knee Airbag Squib Circuit

for Preparation Click here

DESCRIPTION

The driver side knee airbag squib circuit consists of the center airbag sensor and the driver side knee airbag.
This circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the driver side knee airbag squib circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1860/64	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the driver side knee airbag squib circuit during the primary check. • A driver side knee airbag squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Driver side knee airbag assembly (Driver side knee squib) • Center airbag sensor assembly
B1861/64	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the driver side knee airbag squib circuit for 2 seconds. • A driver side knee airbag squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Driver side knee airbag assembly (Driver side knee squib) • Center airbag sensor assembly
B1862/64	When one of the following conditions is met: • The airbag sensor center receives a short circuit to ground signal in the knee airbag (Driver side squib) circuit for 0.5 seconds. • A driver side knee airbag squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Driver side knee airbag assembly (Driver side knee squib) • Center airbag sensor assembly
B1863/64	When one of the following conditions is met: • The airbag sensor center receives a short circuit to B+ signal in the knee airbag (Driver side squib) circuit for 0.5 seconds. • A driver side knee airbag squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Driver side knee airbag assembly (Driver side knee squib) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK DRIVER SIDE KNEE AIRBAG (DRIVER SIDE KNEE SQUIB)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connector from the driver side knee airbag.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the driver side knee airbag (driver side knee squib) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1860, B1861, B1862 or B1863 is not output.

HINT:

Codes other than DTC B1860, B1861, B1862 and B1863 may be output at this time, but they are not related to this check.

OK

REPLACE DRIVER SIDE KNEE AIRBAG ASSEMBLY (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the instrument panel wire connector (on the driver side knee airbag side) is not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE INSTRUMENT PANEL WIRE

OK

3.CHECK INSTRUMENT PANEL WIRE (DRIVER SIDE KNEE AIRBAG CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E24-1 (DK+) - Body ground	Engine switch on (IG)	Below 1 V
E24-2 (DK-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E24-1 (DK+) - E24-2 (DK-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E24-1 (DK+) - E24-2 (DK-)	Always	1 MΩ or higher
E24-1 (DK+) - Body ground	Always	1 MΩ or higher
E24-2 (DK-) - Body	Always	1 MΩ or higher

ground		

NG → REPLACE INSTRUMENT PANEL WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the driver side knee airbag and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK FRONT PASSENGER SIDE KNEE AIRBAG (FRONT PASSENGER SIDE KNEE SQUIB)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connector from the front passenger side knee airbag.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the front passenger side knee airbag (front passenger side knee squib) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1865, B1866, B1867 or B1868 is not output.

HINT:

Codes other than DTC B1865, B1866, B1867 and B1868 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK

REPLACE FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the instrument panel wire connector (on the front passenger side knee airbag side) is not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE INSTRUMENT PANEL WIRE

OK

3.CHECK INSTRUMENT PANEL WIRE (FRONT PASSENGER KNEE SQUIB CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E40-1 (PK+) - Body ground	Engine switch on (IG)	Below 1 V
E40-2 (PK-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E40-1 (PK+) - E40-2 (PK-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E40-1 (PK+) - E40-2 (PK-)	Always	1 MΩ or higher
E40-1 (PK+) - Body ground	Always	1 MΩ or higher
E40-2 (PK-) - Body	Always	1 MΩ or higher

ground		

NG → REPLACE INSTRUMENT PANEL WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the front passenger side knee airbag and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1865, B1866, B1867 or B1868 is not output.

HINT:

Codes other than DTC B1865, B1866, B1867 and B1868 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

DTC B1676/85 Lost Communication with Rear Floor Airbag Sensor RH

DTC B1677/85 Rear Floor Airbag Sensor RH Initialization Incomplete

DTC B1694/85 Side Satellite Sensor No. 2 Bus RH Initialization Incomplete

for Preparation Click here

DESCRIPTION

HINT:

"Rear floor airbag sensor RH" refer to the rear floor airbag sensor.

- The rear floor airbag sensor circuit consists of the center airbag sensor and rear floor airbag sensor.
  The rear floor airbag sensor detects impacts to the vehicle and sends signals to the center airbag sensor to determine if the airbag should be deployed.
  DTC B1676/85, B1677/85 or B1694/85 is stored when a malfunction is detected in the rear floor airbag sensor circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1676/85	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the rear floor airbag sensor circuit for 2 seconds. • A rear floor airbag sensor malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear floor airbag sensor • Center airbag sensor assembly
B1677/85	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the rear floor airbag sensor circuit for 2 seconds. • A rear floor airbag sensor malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear floor airbag sensor • Center airbag sensor assembly
B1694/85	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the rear floor airbag sensor circuit for 2 seconds. • A rear floor airbag sensor malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear floor airbag sensor • Center airbag sensor assembly

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and the rear floor airbag sensor.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

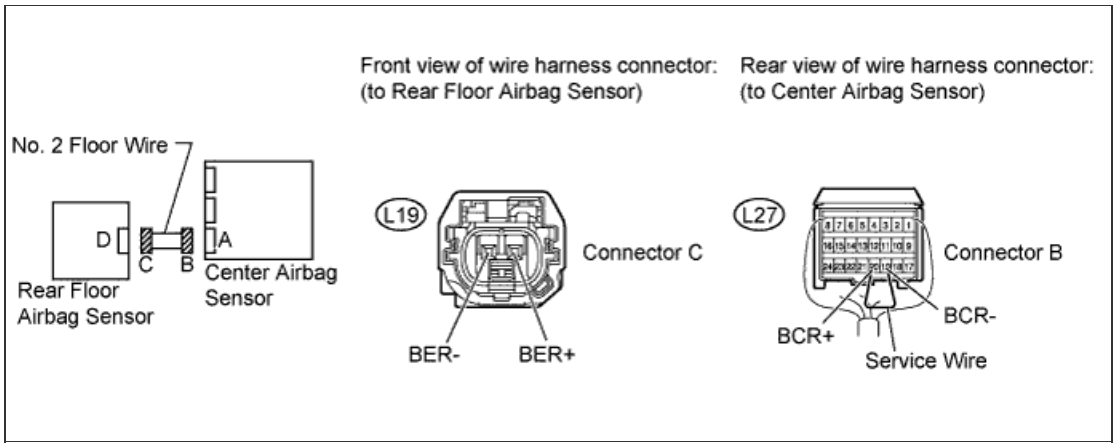
2.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and rear floor airbag sensor.



b. Check that the connectors (on the center airbag sensor side and rear floor airbag sensor side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

3.CHECK REAR FLOOR AIRBAG SENSOR CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
L19-2 (BER+) - Body ground	Engine switch on (IG)	Below 1 V
L19-1 (BER-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 20 (BCR+) and 19 (BCR-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L19-2 (BER+) - L19-1 (BER-)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L19-2 (BER+) - L19-1 (BER-)	Always	1 MΩ or higher
L19-2 (BER+) - Body ground	Always	1 MΩ or higher
L19-1 (BER-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK

4.CHECK REAR FLOOR AIRBAG SENSOR

a. Connect the connectors to the center airbag sensor.

b. Temporarily replace the rear floor airbag sensor with a new one.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2

seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

i. Check for DTCs (Click here).

OK:

DTC B1676, B1677 and B1694 are not output.

HINT:

Codes other than DTC B1676, B1677 and B1694 may be output at this time, but they are not related to this check.

DTC B1866/65 Open in Front Passenger Side Knee Airbag Squib Circuit

DTC B1867/65 Short to GND in Front Passenger Side Knee Airbag Squib Circuit

DTC B1868/65 Short to B+ in Front Passenger Side Knee Airbag Squib Circuit

for Preparation Click here

DESCRIPTION

The front passenger side knee airbag squib circuit consists of the center airbag sensor and the front passenger side knee airbag.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the front passenger side knee airbag squib circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1865/65	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the front passenger side knee airbag squib circuit during the primary check. • A front passenger side knee airbag squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Front passenger side knee airbag assembly (Front passenger side knee squib) • Center airbag sensor assembly
B1866/65	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the front passenger side knee airbag squib circuit for 2 seconds. • A front passenger side knee airbag squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Front passenger side knee airbag assembly (Front passenger side knee squib) • Center airbag sensor assembly
B1867/65	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the front passenger side knee airbag squib circuit for 0.5 seconds. • A front passenger side knee airbag squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Front passenger side knee airbag assembly (Front passenger side knee squib) • Center airbag sensor assembly
B1868/65	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the front passenger side knee airbag squib circuit for 0.5 seconds. • A front passenger side knee airbag squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Front passenger side knee airbag assembly (Front passenger side knee squib) • Center airbag sensor assembly

3.CHECK REAR FLOOR AIRBAG SENSOR CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
L19-2 (BER+) - Body ground	Engine switch on (IG)	Below 1 V
L19-1 (BER-) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 20 (BCR+) and 19 (BCR-) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L19-2 (BER+) - L19-1 (BER-)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L19-2 (BER+) - L19-1 (BER-)	Always	1 MΩ or higher
L19-2 (BER+) - Body ground	Always	1 MΩ or higher
L19-1 (BER-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK

4.CHECK REAR FLOOR AIRBAG SENSOR

a. Connect the connectors to the center airbag sensor.

b. Temporarily replace the rear floor airbag sensor with a new one.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2

seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

i. Check for DTCs (Click here).

OK:

DTC B1676, B1677 and B1694 are not output.

HINT:

Codes other than DTC B1676, B1677 and B1694 may be output at this time, but they are not related to this check.

DTC B1867/65 Short to GND in Front Passenger Side Knee Airbag Squib Circuit

DTC B1868/65 Short to B+ in Front Passenger Side Knee Airbag Squib Circuit

for Preparation Click here

DESCRIPTION

The front passenger side knee airbag squib circuit consists of the center airbag sensor and the front passenger side knee airbag.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the front passenger side knee airbag squib circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1865/65	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the front passenger side knee airbag squib circuit during the primary check. • A front passenger side knee airbag squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Front passenger side knee airbag assembly (Front passenger side knee squib) • Center airbag sensor assembly
B1866/65	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the front passenger side knee airbag squib circuit for 2 seconds. • A front passenger side knee airbag squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Front passenger side knee airbag assembly (Front passenger side knee squib) • Center airbag sensor assembly
B1867/65	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the front passenger side knee airbag squib circuit for 0.5 seconds. • A front passenger side knee airbag squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Front passenger side knee airbag assembly (Front passenger side knee squib) • Center airbag sensor assembly
B1868/65	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the front passenger side knee airbag squib circuit for 0.5 seconds. • A front passenger side knee airbag squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Front passenger side knee airbag assembly (Front passenger side knee squib) • Center airbag sensor assembly

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK FRONT PASSENGER SIDE KNEE AIRBAG (FRONT PASSENGER SIDE KNEE SQUIB)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connector from the front passenger side knee airbag.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the front passenger side knee airbag (front passenger side knee squib) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

DTC B1865/65 Short in Front Passenger Side Knee Airbag Squib Circuit

DTC B1866/65 Open in Front Passenger Side Knee Airbag Squib Circuit

DTC B1867/65 Short to GND in Front Passenger Side Knee Airbag Squib Circuit

DTC B1868/65 Short to B+ in Front Passenger Side Knee Airbag Squib Circuit

for Preparation Click here

DESCRIPTION

The front passenger side knee airbag squib circuit consists of the center airbag sensor and the front passenger side knee airbag.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the front passenger side knee airbag squib circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1865/65	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the front passenger side knee airbag squib circuit during the primary check. • A front passenger side knee airbag squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Front passenger side knee airbag assembly (Front passenger side knee squib) • Center airbag sensor assembly
B1866/65	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the front passenger side knee airbag squib circuit for 2 seconds. • A front passenger side knee airbag squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Front passenger side knee airbag assembly (Front passenger side knee squib) • Center airbag sensor assembly
B1867/65	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the front passenger side knee airbag squib circuit for 0.5 seconds. • A front passenger side knee airbag squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Front passenger side knee airbag assembly (Front passenger side knee squib) • Center airbag sensor assembly
B1868/65	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the front passenger side knee airbag squib circuit for 0.5 seconds. • A front passenger side knee airbag squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Front passenger side knee airbag assembly (Front passenger side knee squib) • Center airbag sensor assembly

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK FRONT PASSENGER SIDE KNEE AIRBAG (FRONT PASSENGER SIDE KNEE SQUIB)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connector from the front passenger side knee airbag.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the front passenger side knee airbag (front passenger side knee squib) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

OK

REPLACE FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the instrument panel wire connector (on the front passenger side knee airbag side) is not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE INSTRUMENT PANEL WIRE

OK

3.CHECK INSTRUMENT PANEL WIRE (FRONT PASSENGER KNEE SQUIB CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E40-1 (PK+) - Body ground	Engine switch on (IG)	Below 1 V
E40-2 (PK-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E40-1 (PK+) - E40-2 (PK-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E40-1 (PK+) - E40-2 (PK-)	Always	1 MΩ or higher
E40-1 (PK+) - Body ground	Always	1 MΩ or higher
E40-2 (PK-) - Body	Always	1 MΩ or higher

ground		

NG → REPLACE INSTRUMENT PANEL WIRE

DTC Code	DTC Detection Condition	Trouble Area
B1865/65	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the front passenger side knee airbag squib circuit during the primary check. • A front passenger side knee airbag squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Front passenger side knee airbag assembly (Front passenger side knee squib) • Center airbag sensor assembly
B1866/65	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the front passenger side knee airbag squib circuit for 2 seconds. • A front passenger side knee airbag squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Front passenger side knee airbag assembly (Front passenger side knee squib) • Center airbag sensor assembly
B1867/65	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the front passenger side knee airbag squib circuit for 0.5 seconds. • A front passenger side knee airbag squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Front passenger side knee airbag assembly (Front passenger side knee squib) • Center airbag sensor assembly
B1868/65	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the front passenger side knee airbag squib circuit for 0.5 seconds. • A front passenger side knee airbag squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Front passenger side knee airbag assembly (Front passenger side knee squib) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK FRONT PASSENGER SIDE KNEE AIRBAG (FRONT PASSENGER SIDE KNEE SQUIB)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connector from the front passenger side knee airbag.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the front passenger side knee airbag (front passenger side knee squib) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1865, B1866, B1867 or B1868 is not output.

HINT:

Codes other than DTC B1865, B1866, B1867 and B1868 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK

REPLACE FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the instrument panel wire connector (on the front passenger side knee airbag side) is not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE INSTRUMENT PANEL WIRE

OK

3.CHECK INSTRUMENT PANEL WIRE (FRONT PASSENGER KNEE SQUIB CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E40-1 (PK+) - Body ground	Engine switch on (IG)	Below 1 V
E40-2 (PK-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E40-1 (PK+) - E40-2 (PK-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E40-1 (PK+) - E40-2 (PK-)	Always	1 MΩ or higher
E40-1 (PK+) - Body ground	Always	1 MΩ or higher
E40-2 (PK-) - Body	Always	1 MΩ or higher

ground		

NG → REPLACE INSTRUMENT PANEL WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the front passenger side knee airbag and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1865, B1866, B1867 or B1868 is not output.

HINT:

Codes other than DTC B1865, B1866, B1867 and B1868 may be output at this time, but they are not related to this check.

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK FRONT SEAT OUTER BELT RH (FRONT PRETENSIONER SQUIB RH)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connectors from the front seat outer belt RH.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the front seat outer belt RH (front pretensioner squib RH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST
09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:
DTC B1900, B1901, B1902 or B1903 is not output.

HINT:

Codes other than DTC B1900, B1901, B1902 and B1903 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK →

REPLACE FRONT SEAT OUTER BELT ASSEMBLY RH (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the No. 2 floor wire connector (on the front seat outer belt RH side) is not damaged.

OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE NO. 2 FLOOR WIRE

OK →

3.CHECK NO. 2 FLOOR WIRE (FRONT PRETENSIONER SQUIB RH CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
L13-1 (R+) - Body ground	Engine switch on (IG)	Below 1 V

L13-2 (R-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L13-1 (R+) - L13-2 (R-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L13-1 (R+) - L13-2 (R-)	Always	1 MΩ or higher
L13-1 (R+) - Body ground	Always	1 MΩ or higher
L13-2 (R-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the front seat outer belt RH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:
DTC B1900, B1901, B1902 or B1903 is not output.

HINT:

Codes other than DTC B1900, B1901, B1902 and B1903 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

DTC B1800/51 Short in Driver Side Squib Circuit

DTC B1801/51 Open in Driver Side Squib Circuit

DTC B1802/51 Short to GND in Driver Side Squib Circuit

DTC B1803/51 Short to B+ in Driver Side Squib Circuit

for Preparation Click here

DESCRIPTION

The driver side squib circuit consists of the center airbag sensor, the spiral cable, and the steering pad.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the driver side squib circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1800/51	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the driver side squib circuit during the primary check. • A driver side squib malfunction. • A spiral cable malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor assembly
B1801/51	When one of the following conditions is met: • The A center airbag sensor receives an open circuit signal in the driver side squib circuit for 2 seconds. • A driver side squib malfunction. • A spiral cable malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor assembly
B1802/51	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the driver side squib circuit for 0.5 seconds. • A driver side squib malfunction. • A spiral cable malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor assembly
B1803/51	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the driver side squib circuit for 0.5 seconds. • A driver side squib malfunction. • A spiral cable malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor assembly

NG → Go to step 2

OK →

REPLACE STEERING PAD (**Click here**)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

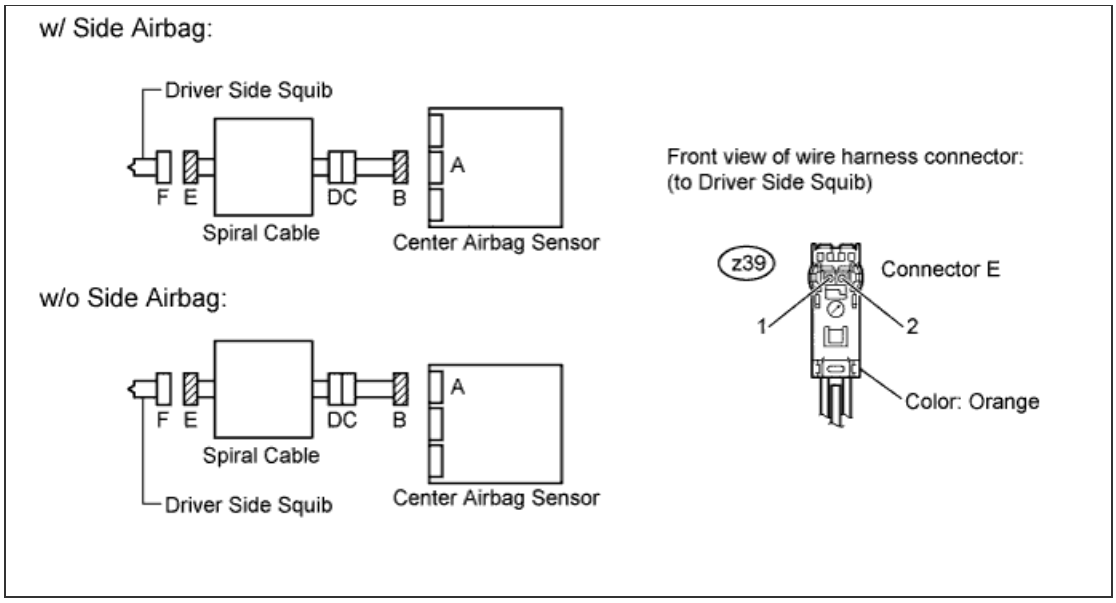
c. Disconnect SST from connector E.



d. Check that the spiral cable connectors (on the steering pad side) are not damaged.

OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE SPIRAL CABLE (**Click here**)

OK →

3.CHECK DRIVER SIDE SQUIB CIRCUIT

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
z39-1 - Body ground	Engine switch on (IG)	Below 1 V
z39-2 - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z39-1 - z39-2	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z39-1 - z39-2	Always	1 MΩ or higher
z39-1 - Body ground	Always	1 MΩ or higher
z39-2 - Body ground	Always	1 MΩ or higher

NG → Go to step 5

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the steering pad and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1800, B1801, B1802 or B1803 is not output.

HINT:

Codes other than DTC B1800, B1801, B1802 and B1803 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

USE SIMULATION METHOD TO CHECK (Click here)

5.CHECK INSTRUMENT PANEL WIRE (CENTER AIRBAG SENSOR - SPIRAL CABLE)

a. Restore the released activation prevention mechanism of connector B to its original condition.

b. Disconnect the instrument panel wire connector from the spiral cable.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E13-1 (D+) - Body ground	Engine switch on (IG)	Below 1 V
E13-2 (D-) - Body ground	Engine switch on (IG)	Below 1 V

e. Turn the engine switch off.

f. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E13-1 (D+) - E13-2 (D-)	Always	Below 1 Ω

h. Release the activation prevention mechanism built into connector B (Click here).

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E13-1 (D+) - E13-2 (D-)	Always	1 MΩ or higher
E13-1 (D+) - Body ground	Always	1 MΩ or higher
E13-2 (D-) - Body ground	Always	1 MΩ or higher

REPLACE FRONT SEAT OUTER BELT ASSEMBLY RH (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the No. 2 floor wire connector (on the front seat outer belt RH side) is not damaged.

OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE NO. 2 FLOOR WIRE

OK →

3.CHECK NO. 2 FLOOR WIRE (FRONT PRETENSIONER SQUIB RH CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
L13-1 (R+) - Body ground	Engine switch on (IG)	Below 1 V

L13-2 (R-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L13-1 (R+) - L13-2 (R-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L13-1 (R+) - L13-2 (R-)	Always	1 MΩ or higher
L13-1 (R+) - Body ground	Always	1 MΩ or higher
L13-2 (R-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the front seat outer belt RH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:
DTC B1900, B1901, B1902 or B1903 is not output.

HINT:

Codes other than DTC B1900, B1901, B1902 and B1903 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

USE SIMULATION METHOD TO CHECK (Click here)

DTC B1805/52 Short in Front Passenger Side Squib Circuit

DTC B1806/52 Open in Front Passenger Side Squib Circuit

DTC B1807/52 Short to GND in Front Passenger Side Squib Circuit

DTC B1808/52 Short to B+ in Front Passenger Side Squib Circuit

for Preparation Click here

DESCRIPTION

The front passenger side squib circuit consists of the center airbag sensor and the front passenger airbag.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the front passenger side squib circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1805/52	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the front passenger side squib circuit during the primary check. • A front passenger side squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly
B1806/52	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the front passenger side squib circuit for 2 seconds. • A front passenger side squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly
B1807/52	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the front passenger side squib circuit for 0.5 seconds. • A front passenger side squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly
B1808/52	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the front passenger side squib circuit for 0.5 seconds. • A front passenger side squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK FRONT PASSENGER AIRBAG (FRONT PASSENGER SIDE SQUIB)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connectors from the front passenger airbag.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector E (orange connector).

CAUTION:

Never connect the tester to the front passenger airbag (front passenger side squib) for measurement, as this may lead to a serious injury

due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST
09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:
DTC B1805, B1806, B1807 or B1808 is not output.

HINT:

Codes other than DTC B1805, B1806, B1807 and B1808 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK →

REPLACE FRONT PASSENGER AIRBAG ASSEMBLY (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

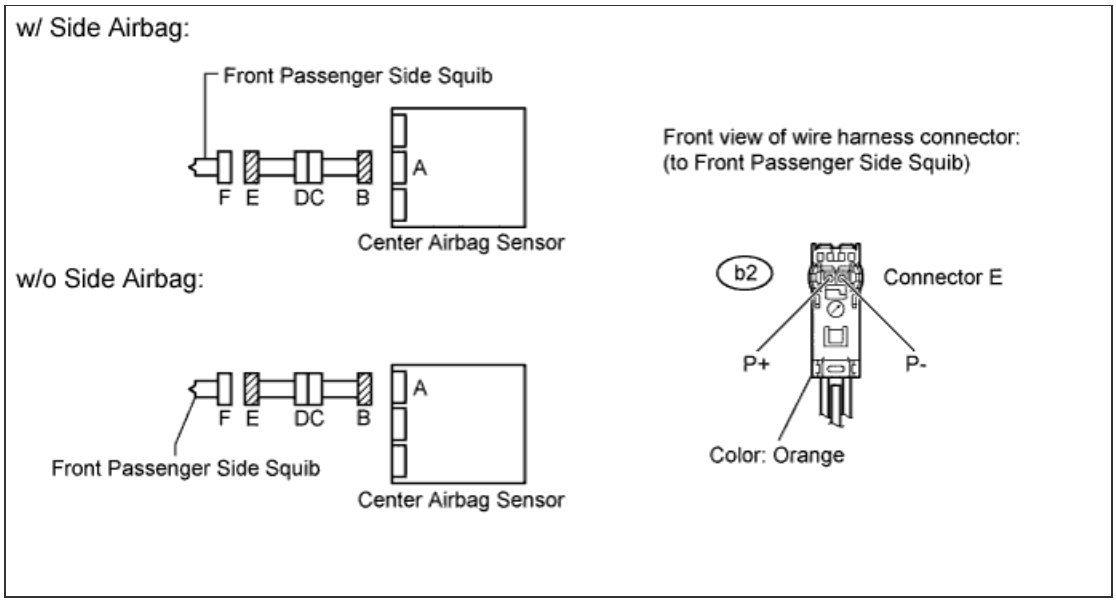
c. Disconnect SST from connector E.



d. Check that the instrument panel wire connectors (on the front passenger airbag side) are not damaged.

OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE INSTRUMENT PANEL WIRE ASSEMBLY

OK →

3.CHECK FRONT PASSENGER SIDE SQUIB CIRCUIT

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
b2-1 (P+) - Body ground	Engine switch on (IG)	Below 1 V
b2-2 (P-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
b2-1 (P+) - b2-2 (P-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
b2-1 (P+) - b2-2 (P-)	Always	1 MΩ or higher
b2-1 (P+) - Body ground	Always	1 MΩ or higher
b2-2 (P-) - Body ground	Always	1 MΩ or higher

NG → Go to step 5

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the front passenger airbag and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2

seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1805, B1806, B1807 or B1808 is not output.

HINT:

Codes other than DTC B1805, B1806, B1807 and B1808 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

USE SIMULATION METHOD TO CHECK (Click here)

5.CHECK INSTRUMENT PANEL WIRE (CENTER AIRBAG SENSOR - INSTRUMENT PANEL WIRE ASSEMBLY)

a. Restore the released activation prevention mechanism of connector B to its original condition.

b. Disconnect the instrument panel wire connector from the instrument panel wire assembly.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
Eb1-3 - Body ground	Engine switch on (IG)	Below 1 V
Eb1-4 - Body ground	Engine switch on (IG)	Below 1 V

e. Turn the engine switch off.

f. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Eb1-3 - Eb1-4	Always	Below 1 Ω

h. Release the activation prevention mechanism built into connector B (Click here).

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Eb1-3 - Eb1-4	Always	1 MΩ or higher
Eb1-3 - Body ground	Always	1 MΩ or higher
Eb1-4 - Body ground	Always	1 MΩ or higher

NG → REPLACE INSTRUMENT PANEL WIRE

Tester Connection	Condition	Specified Condition
L13-1 (R+) - L13-2 (R-)	Always	1 MΩ or higher
L13-1 (R+) - Body ground	Always	1 MΩ or higher
L13-2 (R-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the front seat outer belt RH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:
DTC B1900, B1901, B1902 or B1903 is not output.

HINT:

Codes other than DTC B1900, B1901, B1902 and B1903 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

USE SIMULATION METHOD TO CHECK (Click here)

DTC B1805/52 Short in Front Passenger Side Squib Circuit

DTC B1806/52 Open in Front Passenger Side Squib Circuit

DTC B1807/52 Short to GND in Front Passenger Side Squib Circuit

DTC B1808/52 Short to B+ in Front Passenger Side Squib Circuit

for Preparation Click here

DESCRIPTION

The front passenger side squib circuit consists of the center airbag sensor and the front passenger airbag.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the front passenger side squib circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1805/52	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the front passenger side squib circuit during the primary check. • A front passenger side squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly
B1806/52	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the front passenger side squib circuit for 2 seconds. • A front passenger side squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly
B1807/52	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the front passenger side squib circuit for 0.5 seconds. • A front passenger side squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly
B1808/52	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the front passenger side squib circuit for 0.5 seconds. • A front passenger side squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK FRONT PASSENGER AIRBAG (FRONT PASSENGER SIDE SQUIB)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connectors from the front passenger airbag.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector E (orange connector).

CAUTION:

Never connect the tester to the front passenger airbag (front passenger side squib) for measurement, as this may lead to a serious injury

due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST
09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:
DTC B1805, B1806, B1807 or B1808 is not output.

HINT:

Codes other than DTC B1805, B1806, B1807 and B1808 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK →

REPLACE FRONT PASSENGER AIRBAG ASSEMBLY (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

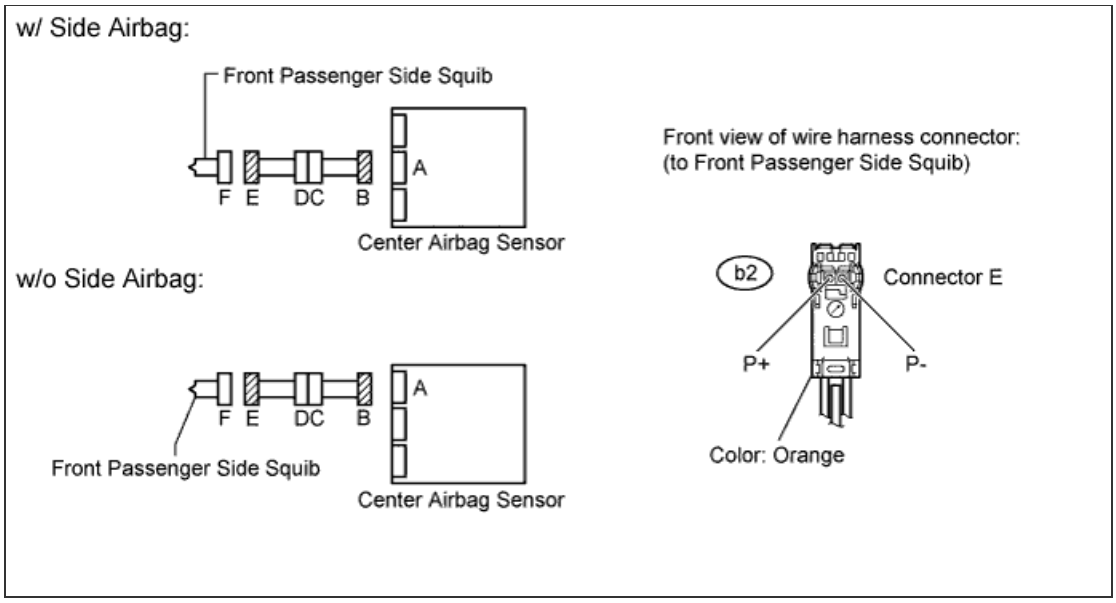
c. Disconnect SST from connector E.



d. Check that the instrument panel wire connectors (on the front passenger airbag side) are not damaged.

OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE INSTRUMENT PANEL WIRE ASSEMBLY

OK →

3.CHECK FRONT PASSENGER SIDE SQUIB CIRCUIT

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
b2-1 (P+) - Body ground	Engine switch on (IG)	Below 1 V
b2-2 (P-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
b2-1 (P+) - b2-2 (P-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
b2-1 (P+) - b2-2 (P-)	Always	1 MΩ or higher
b2-1 (P+) - Body ground	Always	1 MΩ or higher
b2-2 (P-) - Body ground	Always	1 MΩ or higher

NG → Go to step 5

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the front passenger airbag and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2

seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1805, B1806, B1807 or B1808 is not output.

HINT:

Codes other than DTC B1805, B1806, B1807 and B1808 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

USE SIMULATION METHOD TO CHECK (Click here)

5.CHECK INSTRUMENT PANEL WIRE (CENTER AIRBAG SENSOR - INSTRUMENT PANEL WIRE ASSEMBLY)

a. Restore the released activation prevention mechanism of connector B to its original condition.

b. Disconnect the instrument panel wire connector from the instrument panel wire assembly.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
Eb1-3 - Body ground	Engine switch on (IG)	Below 1 V
Eb1-4 - Body ground	Engine switch on (IG)	Below 1 V

e. Turn the engine switch off.

f. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Eb1-3 - Eb1-4	Always	Below 1 Ω

h. Release the activation prevention mechanism built into connector B (Click here).

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Eb1-3 - Eb1-4	Always	1 MΩ or higher
Eb1-3 - Body ground	Always	1 MΩ or higher
Eb1-4 - Body ground	Always	1 MΩ or higher

NG → REPLACE INSTRUMENT PANEL WIRE

OK → REPLACE INSTRUMENT PANEL WIRE ASSEMBLY

DESCRIPTION

The front passenger side squib circuit consists of the center airbag sensor and the front passenger airbag.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the front passenger side squib circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1805/52	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the front passenger side squib circuit during the primary check. • A front passenger side squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly
B1806/52	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the front passenger side squib circuit for 2 seconds. • A front passenger side squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly
B1807/52	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the front passenger side squib circuit for 0.5 seconds. • A front passenger side squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly
B1808/52	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the front passenger side squib circuit for 0.5 seconds. • A front passenger side squib malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK FRONT PASSENGER AIRBAG (FRONT PASSENGER SIDE SQUIB)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connectors from the front passenger airbag.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector E (orange connector).

CAUTION:

Never connect the tester to the front passenger airbag (front passenger side squib) for measurement, as this may lead to a serious injury

due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST
09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:
DTC B1805, B1806, B1807 or B1808 is not output.

HINT:

Codes other than DTC B1805, B1806, B1807 and B1808 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK →

REPLACE FRONT PASSENGER AIRBAG ASSEMBLY (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

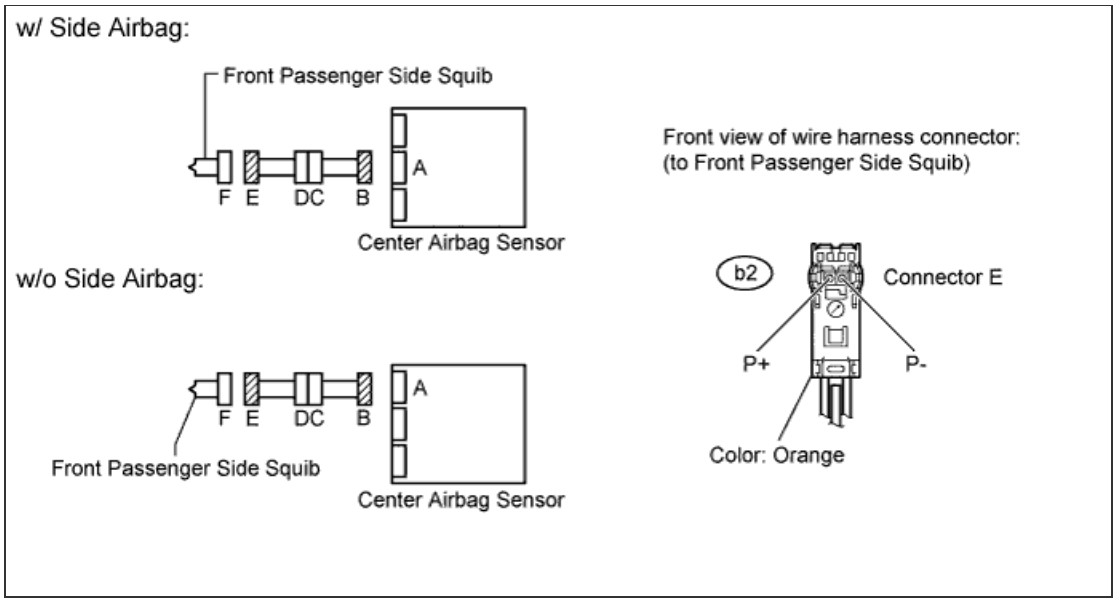
c. Disconnect SST from connector E.



d. Check that the instrument panel wire connectors (on the front passenger airbag side) are not damaged.

OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE INSTRUMENT PANEL WIRE ASSEMBLY

OK →

3.CHECK FRONT PASSENGER SIDE SQUIB CIRCUIT

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
b2-1 (P+) - Body ground	Engine switch on (IG)	Below 1 V
b2-2 (P-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
b2-1 (P+) - b2-2 (P-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
b2-1 (P+) - b2-2 (P-)	Always	1 MΩ or higher
b2-1 (P+) - Body ground	Always	1 MΩ or higher
b2-2 (P-) - Body ground	Always	1 MΩ or higher

NG → Go to step 5

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the front passenger airbag and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2

seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1805, B1806, B1807 or B1808 is not output.

HINT:

Codes other than DTC B1805, B1806, B1807 and B1808 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

USE SIMULATION METHOD TO CHECK (Click here)

5.CHECK INSTRUMENT PANEL WIRE (CENTER AIRBAG SENSOR - INSTRUMENT PANEL WIRE ASSEMBLY)

a. Restore the released activation prevention mechanism of connector B to its original condition.

b. Disconnect the instrument panel wire connector from the instrument panel wire assembly.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
Eb1-3 - Body ground	Engine switch on (IG)	Below 1 V
Eb1-4 - Body ground	Engine switch on (IG)	Below 1 V

e. Turn the engine switch off.

f. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Eb1-3 - Eb1-4	Always	Below 1 Ω

h. Release the activation prevention mechanism built into connector B (Click here).

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Eb1-3 - Eb1-4	Always	1 MΩ or higher
Eb1-3 - Body ground	Always	1 MΩ or higher
Eb1-4 - Body ground	Always	1 MΩ or higher

NG → REPLACE INSTRUMENT PANEL WIRE

OK → REPLACE INSTRUMENT PANEL WIRE ASSEMBLY

1.CHECK FRONT PASSENGER AIRBAG (FRONT PASSENGER SIDE SQUIB)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connectors from the front passenger airbag.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector E (orange connector).

CAUTION:

Never connect the tester to the front passenger airbag (front passenger side squib) for measurement, as this may lead to a serious injury

due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST
09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:
DTC B1805, B1806, B1807 or B1808 is not output.

HINT:

Codes other than DTC B1805, B1806, B1807 and B1808 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK →

REPLACE FRONT PASSENGER AIRBAG ASSEMBLY (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

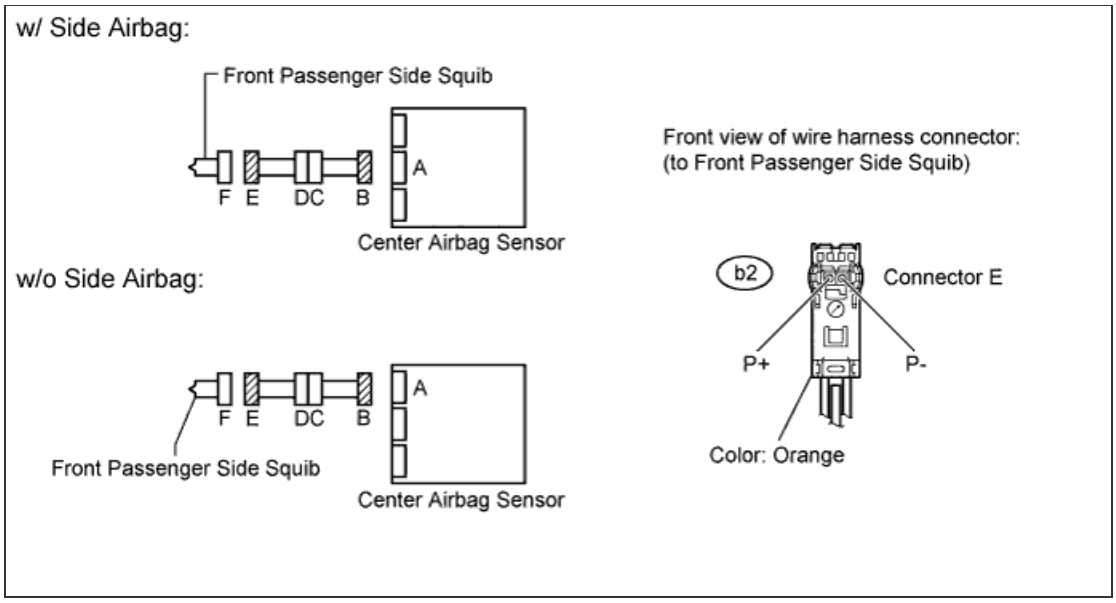
c. Disconnect SST from connector E.



d. Check that the instrument panel wire connectors (on the front passenger airbag side) are not damaged.

OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE INSTRUMENT PANEL WIRE ASSEMBLY

OK →

3.CHECK FRONT PASSENGER SIDE SQUIB CIRCUIT

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
b2-1 (P+) - Body ground	Engine switch on (IG)	Below 1 V
b2-2 (P-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
b2-1 (P+) - b2-2 (P-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
b2-1 (P+) - b2-2 (P-)	Always	1 MΩ or higher
b2-1 (P+) - Body ground	Always	1 MΩ or higher
b2-2 (P-) - Body ground	Always	1 MΩ or higher

NG → Go to step 5

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the front passenger airbag and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2

seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1805, B1806, B1807 or B1808 is not output.

HINT:

Codes other than DTC B1805, B1806, B1807 and B1808 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

USE SIMULATION METHOD TO CHECK (Click here)

5.CHECK INSTRUMENT PANEL WIRE (CENTER AIRBAG SENSOR - INSTRUMENT PANEL WIRE ASSEMBLY)

a. Restore the released activation prevention mechanism of connector B to its original condition.

b. Disconnect the instrument panel wire connector from the instrument panel wire assembly.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
Eb1-3 - Body ground	Engine switch on (IG)	Below 1 V
Eb1-4 - Body ground	Engine switch on (IG)	Below 1 V

e. Turn the engine switch off.

f. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Eb1-3 - Eb1-4	Always	Below 1 Ω

h. Release the activation prevention mechanism built into connector B (Click here).

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Eb1-3 - Eb1-4	Always	1 MΩ or higher
Eb1-3 - Body ground	Always	1 MΩ or higher
Eb1-4 - Body ground	Always	1 MΩ or higher

NG → REPLACE INSTRUMENT PANEL WIRE

OK → REPLACE INSTRUMENT PANEL WIRE ASSEMBLY

DTC B1905/74 Short in Front Pretensioner Squib LH Circuit

DTC B1906/74 Open in Front Pretensioner Squib LH Circuit

DTC B1907/74 Short to GND in Front Pretensioner Squib LH Circuit

DTC B1908/74 Short to B+ in Front Pretensioner Squib LH Circuit

for Preparation Click here

DESCRIPTION

The front pretensioner squib LH circuit consists of the center airbag sensor and the front seat outer belt LH.
This circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the front pretensioner squib LH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1905/74	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the front pretensioner squib LH circuit during the primary check. • A front pretensioner squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat outer belt assembly LH (Front pretensioner squib LH) • Center airbag sensor assembly
B1906/74	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the front pretensioner squib LH circuit for 2 seconds. • A front pretensioner squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat outer belt assembly LH (Front pretensioner squib LH) • Center airbag sensor assembly
B1907/74	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the front pretensioner squib LH circuit for 0.5 seconds. • A front pretensioner squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat outer belt assembly LH (Front pretensioner squib LH) • Center airbag sensor assembly
B1908/74	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the front pretensioner squib LH circuit for 0.5 seconds. • A front pretensioner squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat outer belt assembly LH (Front pretensioner squib LH) • Center airbag sensor assembly

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the floor wire connector (on the front seat outer belt LH side) is not damaged.

OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE FLOOR WIRE

OK

3.CHECK FLOOR WIRE (FRONT PRETENSIONER SQUIB LH CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K1-1 (L+) - Body ground	Engine switch on (IG)	Below 1 V
K1-2 (L-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K1-1 (L+) - K1-2 (L-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K1-1 (L+) - K1-2 (L-)	Always	1 MΩ or higher
K1-1 (L+) - Body ground	Always	1 MΩ or higher
K1-2 (L-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the front seat outer belt LH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

c. Disconnect SST from connector E.

d. Check that the spiral cable connectors (on the steering pad side) are not damaged.

OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE SPIRAL CABLE (**Click here**)

OK →

3.CHECK DRIVER SIDE SQUIB 2ND STEP CIRCUIT

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
z38-1 - Body ground	Engine switch on (IG)	Below 1 V
z38-2 - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z38-1 - z38-2	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z38-1 - z38-2	Always	1 MΩ or higher
z38-1 - Body ground	Always	1 MΩ or higher
z38-2 - Body ground	Always	1 MΩ or higher

NG → Go to step 5

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the steering pad and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1810, B1811, B1812 or B1813 is not output.

HINT:

Codes other than DTC B1810, B1811, B1812 and B1813 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

USE SIMULATION METHOD TO CHECK (Click here)

5.CHECK INSTRUMENT PANEL WIRE (CENTER AIRBAG SENSOR - SPIRAL CABLE)

a. Restore the released activation prevention mechanism of connector B to its original condition.

b. Disconnect the instrument panel wire connector from the spiral cable.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E13-4 (D2+) - Body ground	Engine switch on (IG)	Below 1 V
E13-3 (D2-) - Body ground	Engine switch on (IG)	Below 1 V

e. Turn the engine switch off.

f. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E13-4 (D2+) - E13-3 (D2-)	Always	Below 1 Ω

h. Release the activation prevention mechanism built into connector B (Click here).

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E13-4 (D2+) - E13-3 (D2-)	Always	1 MΩ or higher
E13-4 (D2+) - Body ground	Always	1 MΩ or higher
E13-3 (D2-) - Body ground	Always	1 MΩ or higher

NG → REPLACE INSTRUMENT PANEL WIRE

OK → REPLACE SPIRAL CABLE (Click here)

DTC B1905/74 Short in Front Pretensioner Squib LH Circuit

DTC B1906/74 Open in Front Pretensioner Squib LH Circuit

DTC B1907/74 Short to GND in Front Pretensioner Squib LH Circuit

DTC B1908/74 Short to B+ in Front Pretensioner Squib LH Circuit

for Preparation Click here

DESCRIPTION

The front pretensioner squib LH circuit consists of the center airbag sensor and the front seat outer belt LH.
This circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the front pretensioner squib LH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1905/74	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the front pretensioner squib LH circuit during the primary check. • A front pretensioner squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat outer belt assembly LH (Front pretensioner squib LH) • Center airbag sensor assembly
B1906/74	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the front pretensioner squib LH circuit for 2 seconds. • A front pretensioner squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat outer belt assembly LH (Front pretensioner squib LH) • Center airbag sensor assembly
B1907/74	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the front pretensioner squib LH circuit for 0.5 seconds. • A front pretensioner squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat outer belt assembly LH (Front pretensioner squib LH) • Center airbag sensor assembly
B1908/74	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the front pretensioner squib LH circuit for 0.5 seconds. • A front pretensioner squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat outer belt assembly LH (Front pretensioner squib LH) • Center airbag sensor assembly

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK FRONT SEAT OUTER BELT LH (FRONT PRETENSIONER SQUIB LH)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connectors from the front seat outer belt LH.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the front seat outer belt LH (front pretensioner squib LH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST
09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:
DTC B1905, B1906, B1907 or B1908 is not output.

HINT:

Codes other than DTC B1905, B1906, B1907 and B1908 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK

REPLACE FRONT SEAT OUTER BELT ASSEMBLY LH (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the floor wire connector (on the front seat outer belt LH side) is not damaged.

OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE FLOOR WIRE

OK

3.CHECK FLOOR WIRE (FRONT PRETENSIONER SQUIB LH CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K1-1 (L+) - Body ground	Engine switch on (IG)	Below 1 V
K1-2 (L-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K1-1 (L+) - K1-2 (L-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K1-1 (L+) - K1-2 (L-)	Always	1 MΩ or higher
K1-1 (L+) - Body ground	Always	1 MΩ or higher
K1-2 (L-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the front seat outer belt LH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1905, B1906, B1907 or B1908 is not output.

HINT:

Codes other than DTC B1905, B1906, B1907 and B1908 may be output at this time, but they are not related to this check.

3.CHECK DRIVER SIDE SQUIB 2ND STEP CIRCUIT

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
z38-1 - Body ground	Engine switch on (IG)	Below 1 V
z38-2 - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z38-1 - z38-2	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z38-1 - z38-2	Always	1 MΩ or higher
z38-1 - Body ground	Always	1 MΩ or higher
z38-2 - Body ground	Always	1 MΩ or higher

NG → Go to step 5

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the steering pad and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1810, B1811, B1812 or B1813 is not output.

3.CHECK DRIVER SIDE SQUIB 2ND STEP CIRCUIT

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
z38-1 - Body ground	Engine switch on (IG)	Below 1 V
z38-2 - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z38-1 - z38-2	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z38-1 - z38-2	Always	1 MΩ or higher
z38-1 - Body ground	Always	1 MΩ or higher
z38-2 - Body ground	Always	1 MΩ or higher

NG → Go to step 5

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the steering pad and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1810, B1811, B1812 or B1813 is not output.

HINT:

Codes other than DTC B1810, B1811, B1812 and B1813 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

USE SIMULATION METHOD TO CHECK (Click here)

5.CHECK INSTRUMENT PANEL WIRE (CENTER AIRBAG SENSOR - SPIRAL CABLE)

a. Restore the released activation prevention mechanism of connector B to its original condition.

b. Disconnect the instrument panel wire connector from the spiral cable.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E13-4 (D2+) - Body ground	Engine switch on (IG)	Below 1 V
E13-3 (D2-) - Body ground	Engine switch on (IG)	Below 1 V

e. Turn the engine switch off.

f. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E13-4 (D2+) - E13-3 (D2-)	Always	Below 1 Ω

h. Release the activation prevention mechanism built into connector B (Click here).

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E13-4 (D2+) - E13-3 (D2-)	Always	1 MΩ or higher
E13-4 (D2+) - Body ground	Always	1 MΩ or higher
E13-3 (D2-) - Body ground	Always	1 MΩ or higher

NG → REPLACE INSTRUMENT PANEL WIRE

OK → REPLACE SPIRAL CABLE (Click here)

DTC B1905/74 Short in Front Pretensioner Squib LH Circuit

DTC B1906/74 Open in Front Pretensioner Squib LH Circuit

DTC B1907/74 Short to GND in Front Pretensioner Squib LH Circuit

DTC B1908/74 Short to B+ in Front Pretensioner Squib LH Circuit

for Preparation Click here

DESCRIPTION

The front pretensioner squib LH circuit consists of the center airbag sensor and the front seat outer belt LH.
This circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the front pretensioner squib LH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1905/74	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the front pretensioner squib LH circuit during the primary check. • A front pretensioner squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat outer belt assembly LH (Front pretensioner squib LH) • Center airbag sensor assembly
B1906/74	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the front pretensioner squib LH circuit for 2 seconds. • A front pretensioner squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat outer belt assembly LH (Front pretensioner squib LH) • Center airbag sensor assembly
B1907/74	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the front pretensioner squib LH circuit for 0.5 seconds. • A front pretensioner squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat outer belt assembly LH (Front pretensioner squib LH) • Center airbag sensor assembly
B1908/74	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the front pretensioner squib LH circuit for 0.5 seconds. • A front pretensioner squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat outer belt assembly LH (Front pretensioner squib LH) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK FRONT SEAT OUTER BELT LH (FRONT PRETENSIONER SQUIB LH)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connectors from the front seat outer belt LH.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the front seat outer belt LH (front pretensioner squib LH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST
09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:
DTC B1905, B1906, B1907 or B1908 is not output.

HINT:

Codes other than DTC B1905, B1906, B1907 and B1908 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK

REPLACE FRONT SEAT OUTER BELT ASSEMBLY LH (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the floor wire connector (on the front seat outer belt LH side) is not damaged.

OK:
The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE FLOOR WIRE

OK

3.CHECK FLOOR WIRE (FRONT PRETENSIONER SQUIB LH CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K1-1 (L+) - Body ground	Engine switch on (IG)	Below 1 V
K1-2 (L-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K1-1 (L+) - K1-2 (L-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K1-1 (L+) - K1-2 (L-)	Always	1 MΩ or higher
K1-1 (L+) - Body ground	Always	1 MΩ or higher
K1-2 (L-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the front seat outer belt LH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1905, B1906, B1907 or B1908 is not output.

HINT:

Codes other than DTC B1905, B1906, B1907 and B1908 may be output at this time, but they are not related to this check.

3.CHECK DRIVER SIDE SQUIB 2ND STEP CIRCUIT

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
z38-1 - Body ground	Engine switch on (IG)	Below 1 V
z38-2 - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z38-1 - z38-2	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z38-1 - z38-2	Always	1 MΩ or higher
z38-1 - Body ground	Always	1 MΩ or higher
z38-2 - Body ground	Always	1 MΩ or higher

NG → Go to step 5

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the steering pad and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

5.CHECK INSTRUMENT PANEL WIRE (CENTER AIRBAG SENSOR - SPIRAL CABLE)

a. Restore the released activation prevention mechanism of connector B to its original condition.

b. Disconnect the instrument panel wire connector from the spiral cable.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E13-4 (D2+) - Body ground	Engine switch on (IG)	Below 1 V
E13-3 (D2-) - Body ground	Engine switch on (IG)	Below 1 V

e. Turn the engine switch off.

f. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E13-4 (D2+) - E13-3 (D2-)	Always	Below 1 Ω

h. Release the activation prevention mechanism built into connector B (Click here).

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E13-4 (D2+) - E13-3 (D2-)	Always	1 MΩ or higher
E13-4 (D2+) - Body ground	Always	1 MΩ or higher
E13-3 (D2-) - Body ground	Always	1 MΩ or higher

DTC B1920/77 Short in Rear Pretensioner Squib RH Circuit

DTC B1921/77 Open in Rear Pretensioner Squib RH Circuit

DTC B1922/77 Short to GND in Rear Pretensioner Squib RH Circuit

DTC B1923/77 Short to B+ in Rear Pretensioner Squib RH Circuit

for Preparation Click here

DESCRIPTION

The rear pretensioner squib RH circuit consists of the center airbag sensor and the rear seat outer belt RH.
This circuit instructs the SRS to deploy when deployment conditions are met.
Theses DTCs are stored when a malfunction is detected in the rear pretensioner squib RH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1920/77	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the rear pretensioner squib RH circuit during the primary check. • A rear pretensioner squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat outer belt assembly RH (Rear pretensioner squib RH) • Center airbag sensor assembly
B1921/77	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the rear pretensioner squib RH circuit for 2 seconds. • A rear pretensioner squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat outer belt assembly RH (Rear pretensioner squib RH) • Center airbag sensor assembly
B1922/77	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the rear pretensioner squib RH circuit for 0.5 seconds. • A rear pretensioner squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat outer belt assembly RH (Rear pretensioner squib RH) • Center airbag sensor assembly
B1923/77	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the rear pretensioner squib RH circuit for 0.5 seconds. • A rear pretensioner squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat outer belt assembly RH (Rear pretensioner squib RH) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK REAR SEAT OUTER BELT RH (REAR PRETENSIONER SQUIB RH)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connectors from the rear seat outer belt RH.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the rear seat outer belt RH (rear pretensioner squib RH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs stored in the memory (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1920, B1921, B1922 or B1923 is not output.

HINT:

Codes other than DTC B1920, B1921, B1922 and B1923 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK

REPLACE REAR SEAT OUTER BELT ASSEMBL RH (Click here)

2.CHECK CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the No. 2 floor wire connector (on the rear seat outer belt RH side) is not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE NO. 2 FLOOR WIRE

OK

3.CHECK NO. 2 FLOOR WIRE (REAR PRETENSIONER SQUIB RH CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 90 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
L14-1 (RR+) - Body ground	Engine switch on (IG)	Below 1 V
L14-2 (RR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L14-1 (RR+) - L14-2 (RR-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L14-1 (RR+) - L14-2 (RR-)	Always	1 MΩ or higher
L14-1 (RR+) - Body ground	Always	1 MΩ or higher

L14-2 (RR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the rear seat outer belt RH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 90 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1920, B1921, B1922 or B1923 is not output.

HINT:

Codes other than DTC B1920, B1921, B1922 and B1923 may be output at this time, but they are not related to this check.

DTC B1920/77 Short in Rear Pretensioner Squib RH Circuit

DTC B1921/77 Open in Rear Pretensioner Squib RH Circuit

DTC B1922/77 Short to GND in Rear Pretensioner Squib RH Circuit

DTC B1923/77 Short to B+ in Rear Pretensioner Squib RH Circuit

for Preparation Click here

DESCRIPTION

The rear pretensioner squib RH circuit consists of the center airbag sensor and the rear seat outer belt RH.
This circuit instructs the SRS to deploy when deployment conditions are met.
Theses DTCs are stored when a malfunction is detected in the rear pretensioner squib RH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1920/77	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the rear pretensioner squib RH circuit during the primary check. • A rear pretensioner squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat outer belt assembly RH (Rear pretensioner squib RH) • Center airbag sensor assembly
B1921/77	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the rear pretensioner squib RH circuit for 2 seconds. • A rear pretensioner squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat outer belt assembly RH (Rear pretensioner squib RH) • Center airbag sensor assembly
B1922/77	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the rear pretensioner squib RH circuit for 0.5 seconds. • A rear pretensioner squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat outer belt assembly RH (Rear pretensioner squib RH) • Center airbag sensor assembly
B1923/77	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the rear pretensioner squib RH circuit for 0.5 seconds. • A rear pretensioner squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat outer belt assembly RH (Rear pretensioner squib RH) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK REAR SEAT OUTER BELT RH (REAR PRETENSIONER SQUIB RH)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connectors from the rear seat outer belt RH.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the rear seat outer belt RH (rear pretensioner squib RH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs stored in the memory (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1920, B1921, B1922 or B1923 is not output.

HINT:

Codes other than DTC B1920, B1921, B1922 and B1923 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK

REPLACE REAR SEAT OUTER BELT ASSEMBL RH (Click here)

2.CHECK CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the No. 2 floor wire connector (on the rear seat outer belt RH side) is not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE NO. 2 FLOOR WIRE

OK

3.CHECK NO. 2 FLOOR WIRE (REAR PRETENSIONER SQUIB RH CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 90 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
L14-1 (RR+) - Body ground	Engine switch on (IG)	Below 1 V
L14-2 (RR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L14-1 (RR+) - L14-2 (RR-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L14-1 (RR+) - L14-2 (RR-)	Always	1 MΩ or higher
L14-1 (RR+) - Body ground	Always	1 MΩ or higher

L14-2 (RR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the rear seat outer belt RH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 90 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1920, B1921, B1922 or B1923 is not output.

HINT:

Codes other than DTC B1920, B1921, B1922 and B1923 may be output at this time, but they are not related to this check.

3.CHECK DRIVER SIDE SQUIB 2ND STEP CIRCUIT

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
z38-1 - Body ground	Engine switch on (IG)	Below 1 V
z38-2 - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z38-1 - z38-2	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z38-1 - z38-2	Always	1 MΩ or higher
z38-1 - Body ground	Always	1 MΩ or higher
z38-2 - Body ground	Always	1 MΩ or higher

NG → Go to step 5

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the steering pad and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1810, B1811, B1812 or B1813 is not output.

DTC B1923/77 Short to B+ in Rear Pretensioner Squib RH Circuit

for Preparation Click here

DESCRIPTION

The rear pretensioner squib RH circuit consists of the center airbag sensor and the rear seat outer belt RH.
This circuit instructs the SRS to deploy when deployment conditions are met.
Theses DTCs are stored when a malfunction is detected in the rear pretensioner squib RH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1920/77	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the rear pretensioner squib RH circuit during the primary check. • A rear pretensioner squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat outer belt assembly RH (Rear pretensioner squib RH) • Center airbag sensor assembly
B1921/77	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the rear pretensioner squib RH circuit for 2 seconds. • A rear pretensioner squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat outer belt assembly RH (Rear pretensioner squib RH) • Center airbag sensor assembly
B1922/77	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the rear pretensioner squib RH circuit for 0.5 seconds. • A rear pretensioner squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat outer belt assembly RH (Rear pretensioner squib RH) • Center airbag sensor assembly
B1923/77	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the rear pretensioner squib RH circuit for 0.5 seconds. • A rear pretensioner squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat outer belt assembly RH (Rear pretensioner squib RH) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK REAR SEAT OUTER BELT RH (REAR PRETENSIONER SQUIB RH)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connectors from the rear seat outer belt RH.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the rear seat outer belt RH (rear pretensioner squib RH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs stored in the memory (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1920, B1921, B1922 or B1923 is not output.

HINT:

Codes other than DTC B1920, B1921, B1922 and B1923 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK

REPLACE REAR SEAT OUTER BELT ASSEMBL RH (Click here)

2.CHECK CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the No. 2 floor wire connector (on the rear seat outer belt RH side) is not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE NO. 2 FLOOR WIRE

OK

3.CHECK NO. 2 FLOOR WIRE (REAR PRETENSIONER SQUIB RH CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 90 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
L14-1 (RR+) - Body ground	Engine switch on (IG)	Below 1 V
L14-2 (RR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L14-1 (RR+) - L14-2 (RR-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L14-1 (RR+) - L14-2 (RR-)	Always	1 MΩ or higher
L14-1 (RR+) - Body ground	Always	1 MΩ or higher

L14-2 (RR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the rear seat outer belt RH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 90 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1920, B1921, B1922 or B1923 is not output.

HINT:

Codes other than DTC B1920, B1921, B1922 and B1923 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBL (Click here)

OK

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector E.

d. Check that the instrument panel wire connectors (on the front passenger airbag side) are not damaged.

OK:
The lock button is not disengaged, and the claw of the lock is not damaged or deformed.

NG → REPLACE INSTRUMENT PANEL WIRE ASSEMBLY

OK →

3.CHECK FRONT PASSENGER SIDE SQUIB 2ND STEP CIRCUIT

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
b1-1 (P2+) - Body ground	Engine switch on (IG)	Below 1 V
b1-2 (P2-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
b1-1 (P2+) - b1-2 (P2-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
b1-1 (P2+) - b1-2 (P2-)	Always	1 MΩ or higher
b1-1 (P2+) - Body ground	Always	1 MΩ or higher
b1-2 (P2-) - Body ground	Always	1 MΩ or higher

NG → Go to step 5

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the front passenger airbag and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2

seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1815, B1816, B1817 or B1818 is not output.

HINT:

Codes other than DTC B1815, B1816, B1817 and B1818 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

USE SIMULATION METHOD TO CHECK (Click here)

5.CHECK INSTRUMENT PANEL WIRE (CENTER AIRBAG SENSOR - INSTRUMENT PANEL WIRE ASSEMBLY)

a. Restore the released activation prevention mechanism of connector B to its original condition.

b. Disconnect the instrument panel wire connector from the instrument panel wire assembly.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
Eb1-1 - Body ground	Engine switch on (IG)	Below 1 V
Eb1-2 - Body ground	Engine switch on (IG)	Below 1 V

e. Turn the engine switch off.

f. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Eb1-1 - Eb1-2	Always	Below 1 Ω

h. Release the activation prevention mechanism built into connector B (Click here).

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Eb1-1 - Eb1-2	Always	1 MΩ or higher
Eb1-1 - Body ground	Always	1 MΩ or higher
Eb1-2 - Body ground	Always	1 MΩ or higher

DTC Code	DTC Detection Condition	Trouble Area
B1920/77	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the rear pretensioner squib RH circuit during the primary check. • A rear pretensioner squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat outer belt assembly RH (Rear pretensioner squib RH) • Center airbag sensor assembly
B1921/77	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the rear pretensioner squib RH circuit for 2 seconds. • A rear pretensioner squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat outer belt assembly RH (Rear pretensioner squib RH) • Center airbag sensor assembly
B1922/77	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the rear pretensioner squib RH circuit for 0.5 seconds. • A rear pretensioner squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat outer belt assembly RH (Rear pretensioner squib RH) • Center airbag sensor assembly
B1923/77	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the rear pretensioner squib RH circuit for 0.5 seconds. • A rear pretensioner squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Rear seat outer belt assembly RH (Rear pretensioner squib RH) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK REAR SEAT OUTER BELT RH (REAR PRETENSIONER SQUIB RH)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connectors from the rear seat outer belt RH.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the rear seat outer belt RH (rear pretensioner squib RH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs stored in the memory (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1920, B1921, B1922 or B1923 is not output.

HINT:

Codes other than DTC B1920, B1921, B1922 and B1923 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK

REPLACE REAR SEAT OUTER BELT ASSEMBL RH (Click here)

2.CHECK CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the No. 2 floor wire connector (on the rear seat outer belt RH side) is not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE NO. 2 FLOOR WIRE

OK

3.CHECK NO. 2 FLOOR WIRE (REAR PRETENSIONER SQUIB RH CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 90 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
L14-1 (RR+) - Body ground	Engine switch on (IG)	Below 1 V
L14-2 (RR-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L14-1 (RR+) - L14-2 (RR-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
L14-1 (RR+) - L14-2 (RR-)	Always	1 MΩ or higher
L14-1 (RR+) - Body ground	Always	1 MΩ or higher

L14-2 (RR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the rear seat outer belt RH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 90 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs stored in the memory (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1920, B1921, B1922 or B1923 is not output.

HINT:

Codes other than DTC B1920, B1921, B1922 and B1923 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBL (Click here)

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK REAR SEAT OUTER BELT LH (REAR PRETENSIONER SQUIB LH)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connectors from the rear seat outer belt LH.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the rear seat outer belt LH (rear pretensioner squib LH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1925, B1926, B1927 or B1928 is not output.

HINT:

Codes other than DTC B1925, B1926, B1927 and B1928 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK

REPLACE REAR SEAT OUTER BELT ASSEMBLY LH (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the floor wire connector (on the rear seat outer belt LH side) is not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not damaged or deformed.

NG → REPLACE FLOOR WIRE

OK

3.CHECK FLOOR WIRE (REAR PRETENSIONER SQUIB LH CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K13-1 (RL+) - Body ground	Engine switch on (IG)	Below 1 V
K13-2 (RL-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K13-1 (RL+) - K13-2 (RL-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K13-1 (RL+) - K13-2 (RL-)	Always	1 MΩ or higher
K13-1 (RL+) - Body ground	Always	1 MΩ or higher
K13-2 (RL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the rear seat outer belt LH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1925, B1926, B1927 or B1928 is not output.

HINT:

Codes other than DTC B1925, B1926, B1927 or B1928 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK REAR SEAT OUTER BELT LH (REAR PRETENSIONER SQUIB LH)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connectors from the rear seat outer belt LH.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the rear seat outer belt LH (rear pretensioner squib LH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1925, B1926, B1927 or B1928 is not output.

HINT:

Codes other than DTC B1925, B1926, B1927 and B1928 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK

REPLACE REAR SEAT OUTER BELT ASSEMBLY LH (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the floor wire connector (on the rear seat outer belt LH side) is not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not damaged or deformed.

NG → REPLACE FLOOR WIRE

OK

3.CHECK FLOOR WIRE (REAR PRETENSIONER SQUIB LH CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K13-1 (RL+) - Body ground	Engine switch on (IG)	Below 1 V
K13-2 (RL-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K13-1 (RL+) - K13-2 (RL-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K13-1 (RL+) - K13-2 (RL-)	Always	1 MΩ or higher
K13-1 (RL+) - Body ground	Always	1 MΩ or higher
K13-2 (RL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the rear seat outer belt LH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1925, B1926, B1927 or B1928 is not output.

HINT:

Codes other than DTC B1925, B1926, B1927 or B1928 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

USE SIMULATION METHOD TO CHECK (Click here)

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the floor wire connector (on the rear seat outer belt LH side) is not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not damaged or deformed.

NG → REPLACE FLOOR WIRE

OK

3.CHECK FLOOR WIRE (REAR PRETENSIONER SQUIB LH CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
K13-1 (RL+) - Body ground	Engine switch on (IG)	Below 1 V
K13-2 (RL-) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K13-1 (RL+) - K13-2 (RL-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
K13-1 (RL+) - K13-2 (RL-)	Always	1 MΩ or higher
K13-1 (RL+) - Body ground	Always	1 MΩ or higher
K13-2 (RL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK

4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the rear seat outer belt LH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1925, B1926, B1927 or B1928 is not output.

HINT:

Codes other than DTC B1925, B1926, B1927 or B1928 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

DTC B1820/55 Short in Side Squib RH Circuit

DTC B1821/55 Open in Side Squib RH Circuit

DTC B1822/55 Short to GND in Side Squib RH Circuit

DTC B1823/55 Short to B+ in Side Squib RH Circuit

for Preparation Click here

DESCRIPTION

The side squib RH circuit consists of the center airbag sensor and the front seat airbag RH.
This circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the side squib RH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1820/55	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the side squib RH circuit during the primary check. • A side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Front seat airbag assembly RH (Side squib RH) • Center airbag sensor assembly
B1821/55	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the side squib RH circuit for 2 seconds. • A side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Front seat airbag assembly RH (Side squib RH) • Center airbag sensor assembly
B1822/55	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the side squib RH circuit for 0.5 seconds. • A side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Front seat airbag assembly RH (Side squib RH) • Center airbag sensor assembly
B1823/55	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the side squib RH circuit for 0.5 seconds. • A side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Front seat airbag assembly RH (Side squib RH) • Center airbag sensor assembly

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK FRONT SEAT AIRBAG RH (SIDE SQUIB RH)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connector from the front seat airbag RH.

d. Connect the red wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the front seat airbag RH (side squib RH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK FRONT SEAT AIRBAG RH (SIDE SQUIB RH)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connector from the front seat airbag RH.

d. Connect the red wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:

Never connect the tester to the front seat airbag RH (side squib RH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

2.CHECK NO. 2 FLOOR WIRE (SIDE SQUIB RH CIRCUIT)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Disconnect the connectors from the center airbag sensor.

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
Lz1-1 (SFR+) - Body ground	Engine switch on (IG)	Below 1 V
Lz1-2 (SFR-) - Body ground	Engine switch on (IG)	Below 1 V

g. Turn the engine switch off.

h. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Lz1-1 (SFR+) - Lz1-2 (SFR-)	Always	Below 1 Ω

j. Release the activation prevention mechanism built into connector B (Click here).

k. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Lz1-1 (SFR+) - Lz1-2 (SFR-)	Always	1 MΩ or higher
Lz1-1 (SFR+) - Body ground	Always	1 MΩ or higher
Lz1-2 (SFR-) - Body ground	Always	1 MΩ or higher

NG → REPLACE NO. 2 FLOOR WIRE

OK

3.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the front seat airbag RH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1925/78 Short in Rear Pretensioner Squib LH Circuit

DTC B1926/78 Open in Rear Pretensioner Squib LH Circuit

DTC B1927/78 Short to GND in Rear Pretensioner Squib LH Circuit

DTC B1928/78 Short to B+ in Rear Pretensioner Squib LH Circuit

for Preparation Click here

DESCRIPTION

The rear pretensioner squib LH circuit consists of the center airbag sensor and the rear seat outer belt LH.
This circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the rear pretensioner squib LH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1925/78	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the rear pretensioner squib LH circuit during the primary check. • A rear pretensioner squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat outer belt assembly LH (Rear pretensioner squib LH) • Center airbag sensor assembly
B1926/78	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the rear pretensioner squib LH circuit for 2 seconds. • A rear pretensioner squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat outer belt assembly LH (Rear pretensioner squib LH) • Center airbag sensor assembly
B1927/78	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the rear pretensioner squib LH circuit for 0.5 seconds. • A rear pretensioner squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat outer belt assembly LH (Rear pretensioner squib LH) • Center airbag sensor assembly
B1928/78	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the rear pretensioner squib LH circuit for 0.5 seconds. • A rear pretensioner squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Rear seat outer belt assembly LH (rear pretensioner squib LH) • Center airbag sensor assembly

DESCRIPTION

The SRS warning light is located on the combination meter.
When the SRS is normal, the SRS warning light comes on for approximately 6 seconds after the engine switch is turned from off to on (IG), and then goes off automatically.
If there is a malfunction in the SRS, the SRS warning light comes on to inform the driver of a problem.
When terminals TC and CG of the DLC3 are connected, DTCs are output by the blinking of the SRS warning light.
The SRS is equipped with a voltage-increase circuit (DC-DC converter) in the center airbag sensor in case the source voltage drops.
When the battery voltage drops, the voltage-increase circuit (DC-DC converter) functions to increase the voltage of the SRS to normal voltage.
A malfunction in this circuit is not recorded in the center airbag sensor. The SRS warning light automatically goes off when the source voltage returns to normal.
The signal to illuminate the SRS warning light is transmitted from the center airbag sensor to the combination meter through the CAN communication system.

2.C EC ONNECTOR

a. Turn the engine switch off.

. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the combination meter.

OK:
The connectors are properl connected.

NG → CONNECT CONNECTOR PROPERLY

OK ↓

3.C EC ARNESS DA CONNECTOR (SOURCE OLTAGE O COMBINATION METER)

a. Turn the engine switch off.

. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the E7 connector from the combination meter.

d. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

e. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E7-18 (IG+) - E7-17 (B)	Engine switch on (IG)	11 to 14 V
E7-17 (B) - E7-15 (ET)	Always	11 to 14 V

Front view of wire harness connector:
(to Combination Meter)

NG → REPAIR OR REPLACE ARNESS OR CONNECTOR

OK

4.C EC SRS WARNING LIGHT (SHORT TO GROUND)

a. Turn the engine switch off.

. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Connect the connector to the combination meter.

d. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

e. Turn the engine switch on (IG).

f. Check the SRS warning light condition.

NOTICE:

Make sure that nobody is in the vehicle.

OK:

After the primar check period the SRS warning light goes off for approximatel 1 seconds and then remains on.

HINT:

The primary check period is approximately 6 seconds after the engine switch is turned on (IG).

NG → GO TO METER GAUGE SYSTEM (Click here)

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.C EC BATTERY

a. Measure the voltage of the battery.

Standard Voltage:
11 to 14 V

NG → REPLACE OR REC ARGE BATTERY

OK ↓

2.C EC ONNECTOR

a. Turn the engine switch off.

. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the combination meter.

OK:
The connectors are properl connected.

NG → CONNECT CONNECTOR PROPERLY

OK ↓

3.C EC ARNESS DA CONNECTOR (SOURCE OLTAGE O COMBINATION METER)

a. Turn the engine switch off.

. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the E7 connector from the combination meter.

d. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

e. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
E7-18 (IG+) - E7-17 (B)	Engine switch on (IG)	11 to 14 V
E7-17 (B) - E7-15 (ET)	Always	11 to 14 V

Front view of wire harness connector:
(to Combination Meter)

NG → REPAIR OR REPLACE ARNESS OR CONNECTOR

OK

4.C EC SRS WARNING LIGHT (SHORT TO GROUND)

a. Turn the engine switch off.

. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Connect the connector to the combination meter.

d. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

e. Turn the engine switch on (IG).

f. Check the SRS warning light condition.

NOTICE:

Make sure that nobody is in the vehicle.

OK:

After the primar check period the SRS warning light goes off for approximatel 1 seconds and then remains on.

HINT:

The primary check period is approximately 6 seconds after the engine switch is turned on (IG).

DESCRIPTION

DTC output mode is set by connecting terminals TC and CG of the DLC3.
DTCs are output by the blinking of the SRS warning light.

HINT:

- **When each warning light stays blinking a ground short in the wiring of ter inal TC of the D C3 or an internal ground short in each ECU is suspected.**
- **A DTC output ode signal is trans itted through the CAN co unication syste to each ECU including the center airbag sensor. Thus when all syste s do not enter DTC output ode there ay be an ECM alfunction.**

for Preparation Click here

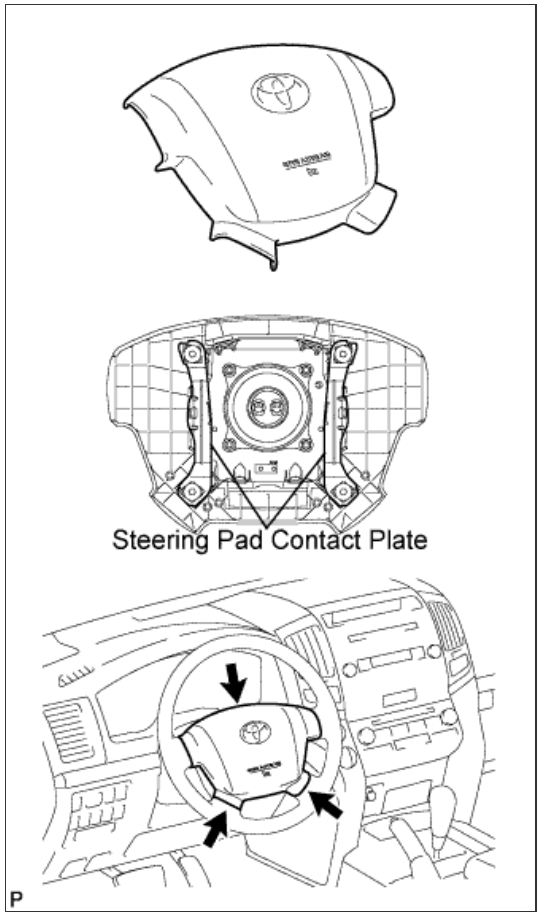
1. CHECK STEERING PAD (VEHICLE NOT INVOLVED IN COLLISION)

a. Perform a diagnostic system check (Click here).

b. With the steering pad installed on the vehicle, perform a visual check. If there are any defects as mentioned below, replace the steering pad with a new one:
Cuts, minute cracks or marked discoloration on the steering pad top surface or in the grooved portion.

2. CHECK STEERING PAD (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED)



a. Perform a diagnostic system check (Click here).

b. With the steering pad removed from the vehicle, perform a visual check. If there are any defects as mentioned below, replace the steering pad or steering wheel with a new one:

- Cuts, minute cracks or marked discoloration on the steering pad top surface or in the grooved portion.
- Cracks or other damage to the connectors.
- Deformation of the steering pad contact plate.
- Deformation of the steering wheel.
- There should be no interference between the steering pad and steering wheel, and the clearance should be uniform all the way around when the new steering pad is installed on the steering wheel.

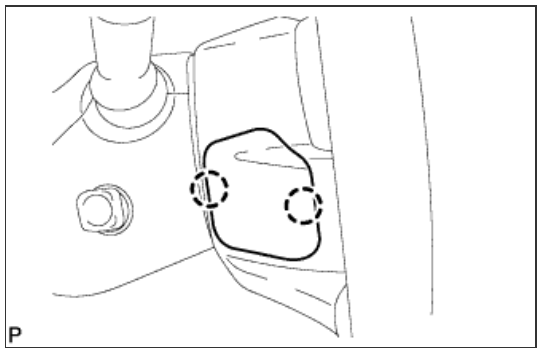
CAUTION:

For removal and installation procedures of the steering pad, be sure to follow the correct procedure.

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

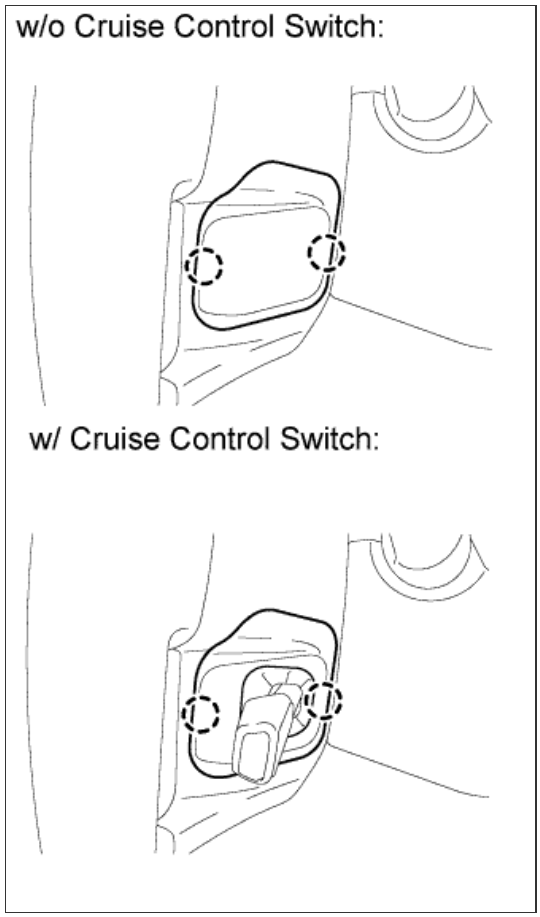
CAUTION:



Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

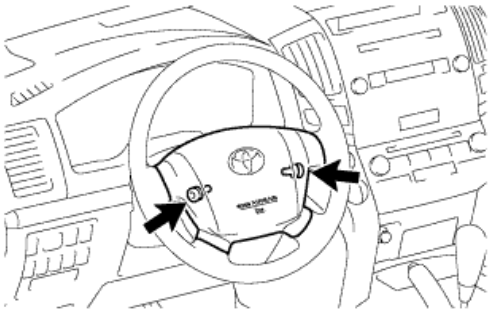
When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).



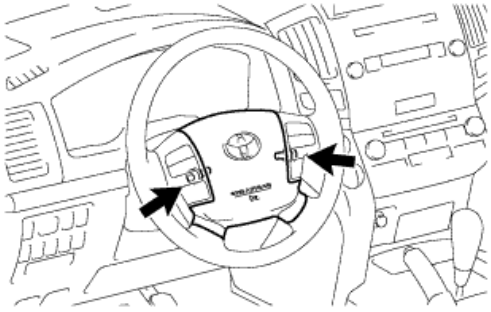
2. REMOVE LOWER NO. STEERING WHEEL COVER

a. Detach the 2 claws and remove the steering wheel cover.

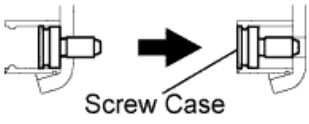
REMOVE LOWER NO. 2 STEERING WHEEL COVER



a. Detach the 2 claws and remove the steering wheel cover.



REMOVE STEERING PAD



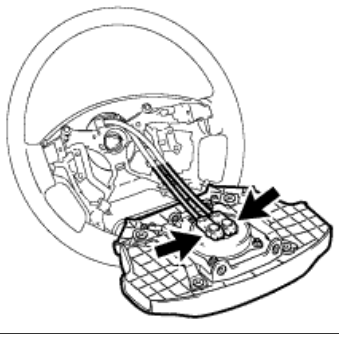
a. Using a T30 R socket wrench, loosen the 2 screws ntil the groove along the screw circ mference catches on the screw case.

w/o Steering Pad Switch:

w/ Steering Pad Switch:

b. P lb the steering ad from the steering wheel, as shown in the ill stration. Then s rt the steering ad with one hand.

NOTICE:



When removing the steering ad, do not the airbag wire harness.

c. Disconnect the horn connector.

d. Disconnect the 2 connectors and remove the steering ad.

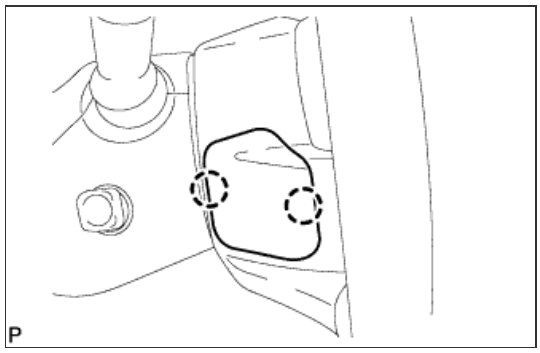
NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

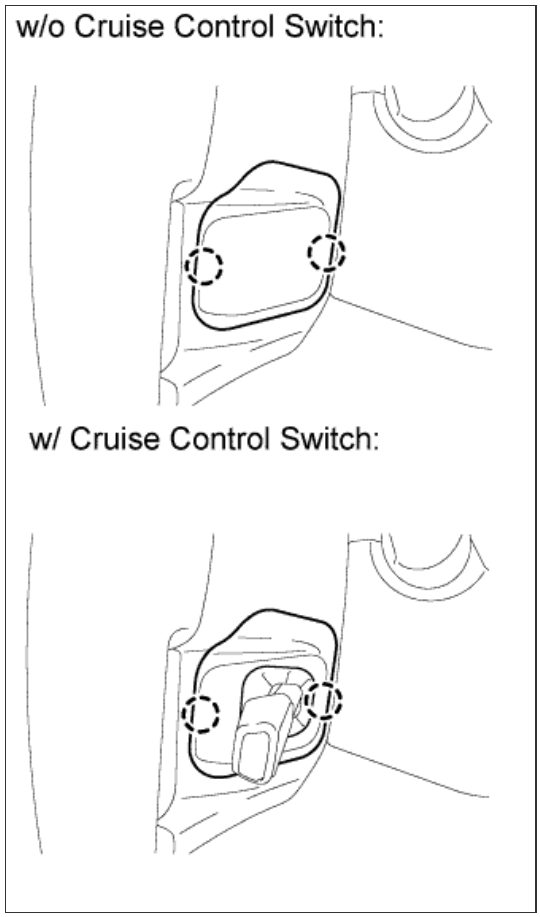
CAUTION:



Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

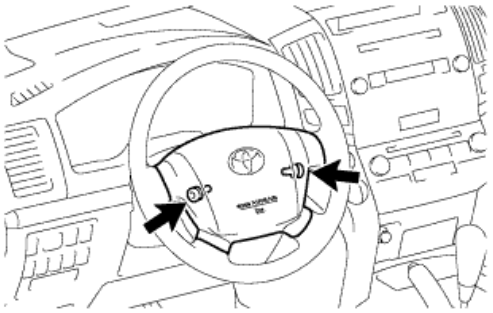
When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).



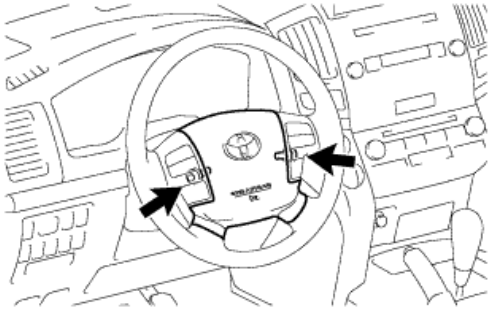
2. REMOVE LOWER NO. STEERING WHEEL COVER

a. Detach the 2 claws and remove the steering wheel cover.

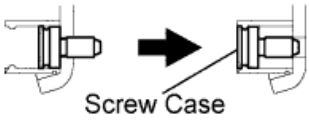
REMOVE LOWER NO. 2 STEERING WHEEL COVER



a. Detach the 2 claws and remove the steering wheel cover.



REMOVE STEERING PAD



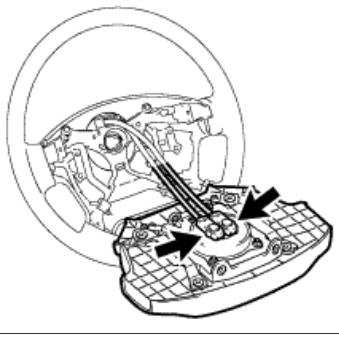
a. Using a T30 socket wrench, loosen the 2 screws ntil the groove along the screw circ mference catches on the screw case.

w/o Steering Pad Switch:

w/ Steering Pad Switch:

b. P lb the steering ad from the steering wheel, as shown in the ill stration. Then s rt the steering ad with one hand.

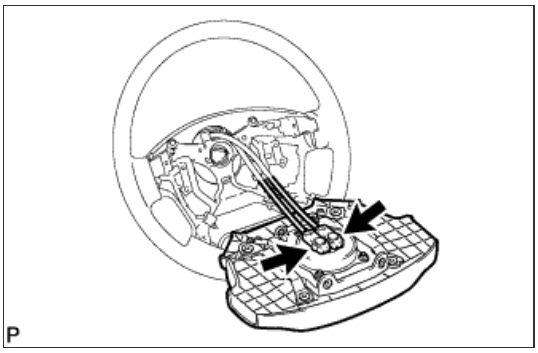
NOTICE:



When removing the steering ad, do not the airbag wire harness.

c. Disconnect the horn connector.

d. Disconnect the 2 connectors and remove the steering ad.



NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

for Preparation Click here

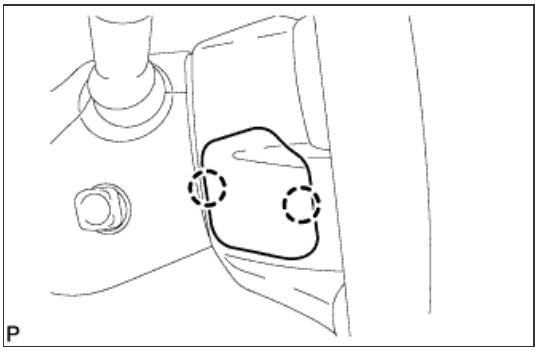
1. INSTALL STEERING PAD

a. Support the steering pad with one hand.

b. Connect the 2 connectors to the steering pad.

NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

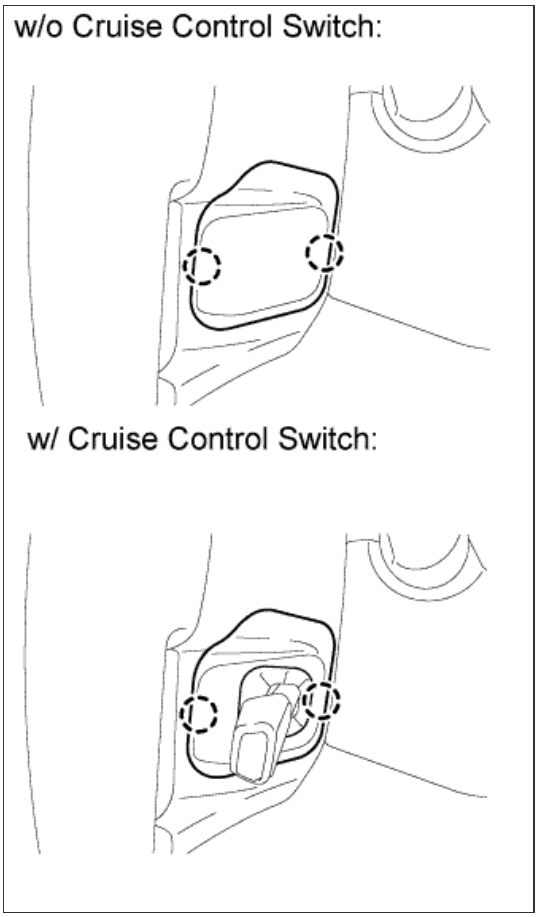


c. Connect the horn connector.

d. Confirm that the circumference groove of the "TORX" screw fits in the screw case, and place the steering pad onto the steering wheel.

e. Using a T30 "TORX" socket wrench, tighten the 2 screws.

Torque:
8.8 N*m{ 90 kgf*cm , 78 in.*lbf }



2. INSTALL LOWER NO. 3 STEERING WHEEL COVER

a. Attach the 2 claws to install the cover.

3. INSTALL LOWER NO. 2 STEERING WHEEL COVER

a. Attach the 2 claws to install the cover.

4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

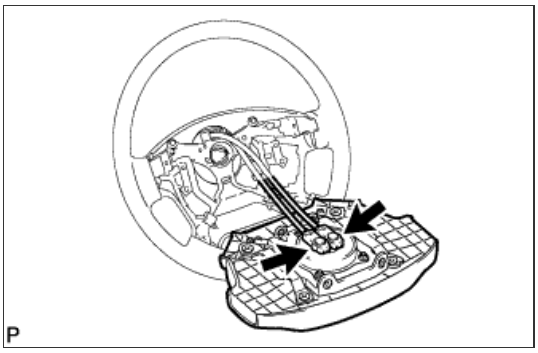
When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

5. INSPECT STEERING PAD

a. With the steering pad installed on the vehicle, perform a visual check. If there are any defects as mentioned below, replace the steering pad with a new one:
Cuts, minute cracks or marked discoloration on the steering pad top surface or in the grooved portion.

b. Make sure that the horn sounds.

HINT:



If the horn does not sound, inspect the horn system.

6. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).

for Preparation Click here

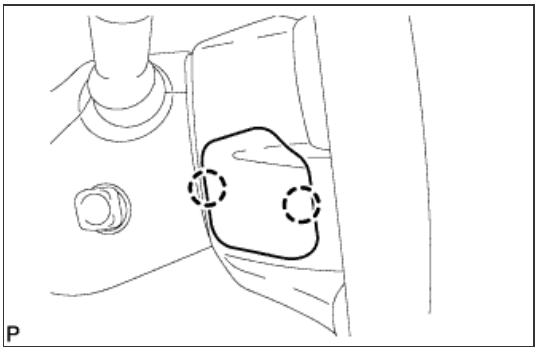
1. INSTALL STEERING PAD

a. Support the steering pad with one hand.

b. Connect the 2 connectors to the steering pad.

NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

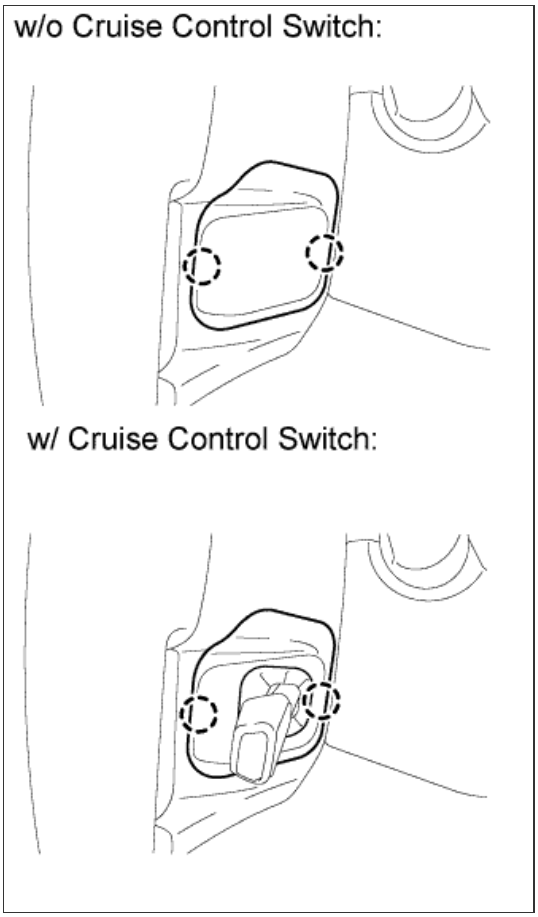


c. Connect the horn connector.

d. Confirm that the circumference groove of the "TORX" screw fits in the screw case, and place the steering pad onto the steering wheel.

e. Using a T30 "TORX" socket wrench, tighten the 2 screws.

Torque:
8.8 N*m{ 90 kgf*cm , 78 in.*lbf }



2. INSTALL LOWER NO. 3 STEERING WHEEL COVER

a. Attach the 2 claws to install the cover.

3. INSTALL LOWER NO. 2 STEERING WHEEL COVER

a. Attach the 2 claws to install the cover.

4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

5. INSPECT STEERING PAD

a. With the steering pad installed on the vehicle, perform a visual check. If there are any defects as mentioned below, replace the steering pad with a new one:
Cuts, minute cracks or marked discoloration on the steering pad top surface or in the grooved portion.

b. Make sure that the horn sounds.

HINT:

If the horn does not sound, inspect the horn system.

6. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).

for Preparation Click here

HINT:

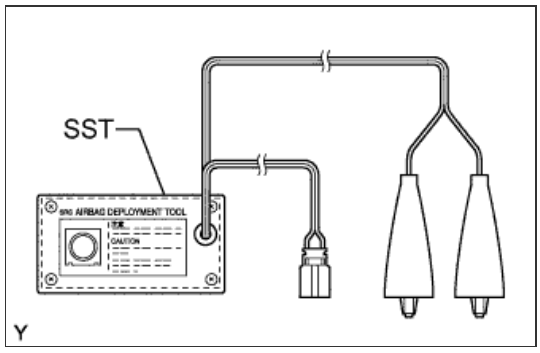
When scrapping a vehicle equipped with the SRS or disposing of the steering pad, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of the DISTRIBUTOR..

CAUTION:

- **Never dispose of a steering pad that has an unactivated airbag.**
- **The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.**
- **When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- **When deploying the airbag, perform the operation at least 10 m (32.8 ft.) away from the steering pad.**
- **The steering pad becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a steering pad with a deployed airbag.**
- **Do not apply water, etc. to a steering pad with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**
- **An airbag or pretensioner may be activated by static electricity. To prevent this, be sure to touch a metal surface with bare hands to discharge static electricity before performing this procedure.**

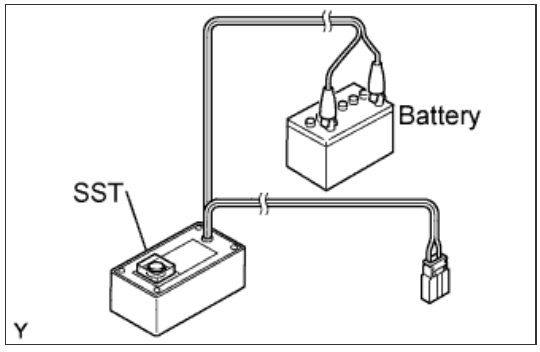
1. DISPOSE OF STEERING PAD (WHEN INSTALLED IN VEHICLE)

HINT:



Prepare a battery as the power source to deploy the airbag.

a. Check the function of SST.

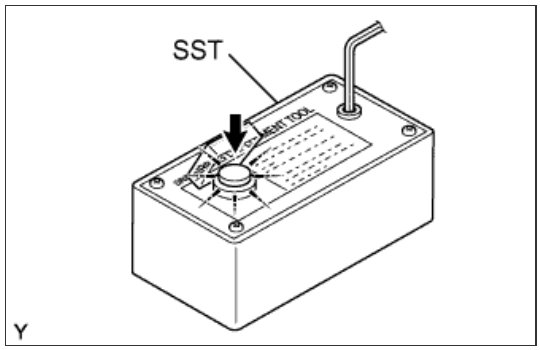


SST
09082-00700

CAUTION:

When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool).

i. Connect SST to the battery. Connect the red clip of SST to the battery positive (+) terminal and the black clip of SST to the battery negative (-) terminal.



ii. Check the function of SST. Press SST activation switch, and check that the LED of SST activation switch comes on.

CAUTION:

- **Do not connect SST connector (yellow colored) to the airbag.**
- **If the LED comes on when the activation switch is not being pressed, SST malfunction is possible, so**

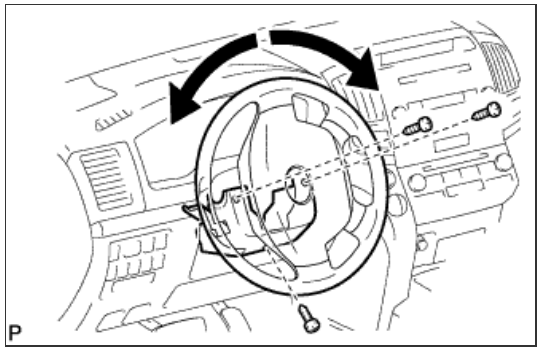
replace SST with a new one.

iii. Disconnect SST from the battery.

b. Read the precaution (Click here).

c. Disconnect the cable from the negative (-) battery terminal.

CAUTION:



Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

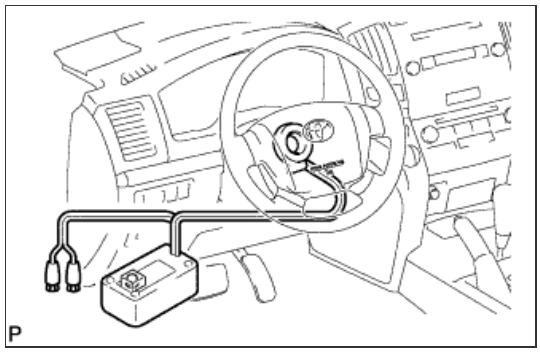
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

d. Remove the steering column cover lower.

i. While turning the steering wheel to the right and left, remove the 3 screws and steering column cover lower.

e. Install SST.



CAUTION:

Check that there is no looseness in the steering wheel assembly and steering pad.

i. Disconnect the airbag connector (yellow colored) from the spiral cable with steering sensor.

NOTICE:

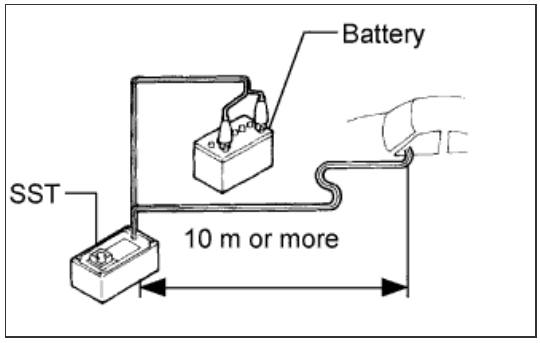
When handling the airbag connector, take care not to damage the airbag wire harness.

ii. Connect SST connector to the airbag connector of the spiral cable with steering sensor.

SST
09082-00780

NOTICE:

To avoid damaging SST connector and wire harness, do not lock the secondary lock of the twin lock.



iii. Move SST at least 10 m (32.8 ft.) away from the vehicle front side window.

iv. Maintaining enough clearance for SST wire harness in the front side window, close all doors and windows of the vehicle.

NOTICE:

Take care not to damage SST wire harness.

v. Connect the red clip of SST to the battery positive (+) terminal and the black clip of SST to the negative (-) terminal.

f. Deploy the airbag.

i. Check that no one is inside the vehicle or within a 10 m (32.8 ft.) radius of the vehicle.

ii. Press SST activation switch to deploy the airbag.

CAUTION:

- **When deploying the airbag, make sure that no one is near the vehicle.**
- **The steering pad becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a steering pad with a deployed airbag.**
- **Do not apply water to a steering pad with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

HINT:

The airbag is deployed as the LED of SST activation switch comes on.

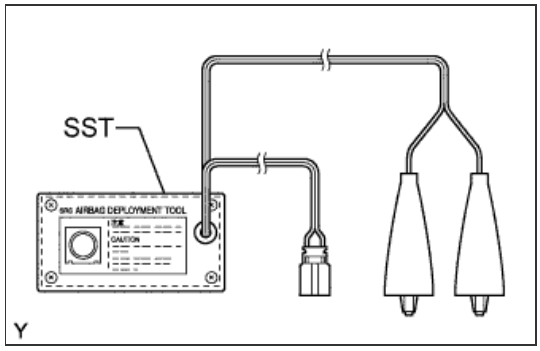
2. DISPOSE OF STEERING PAD (WHEN NOT INSTALLED IN VEHICLE)

CAUTION:

Be sure to follow the procedure detailed below when deploying the airbag.

HINT:

Prepare a battery as the power source to deploy the airbag.



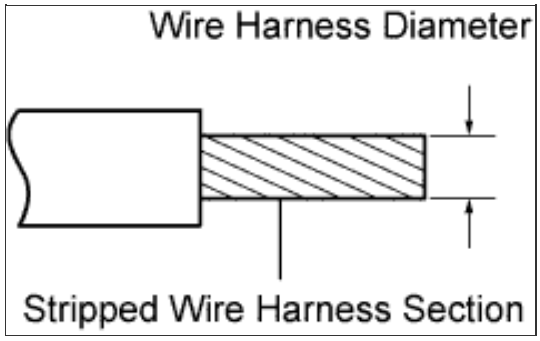
a. Check the function of SST.

SST
09082-00700

b. Remove the steering pad (Click here).

CAUTION:

- **When removing the steering pad, wait at least 90 seconds after the engine switch is turned off and the cable is disconnected from the negative (-) battery terminal before starting work.**
- **When storing the steering pad, keep the airbag deployment side facing upward.**



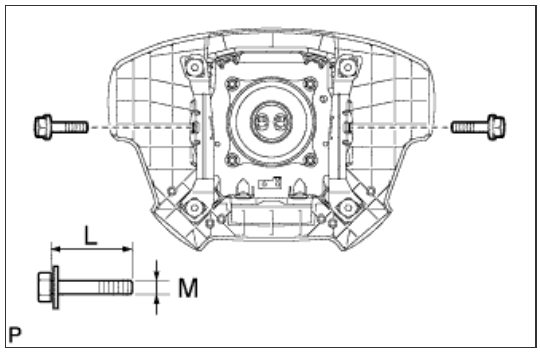
c. Using a service-purpose wire harness for the vehicle, tie down the steering pad to a disc wheel.

Cross-sectional area of stripped wire harness section:
1.25 mm^2 (0.00192 in.^{2})

CAUTION:

If the wire harness is too thin or an alternative object is used to tie down the steering pad, it may be snapped by the shock when the airbag is deployed. Always use a wire harness for vehicle use with a cross-sectional area of at least 1.25 mm^2 (0.00192 in.^{2}).

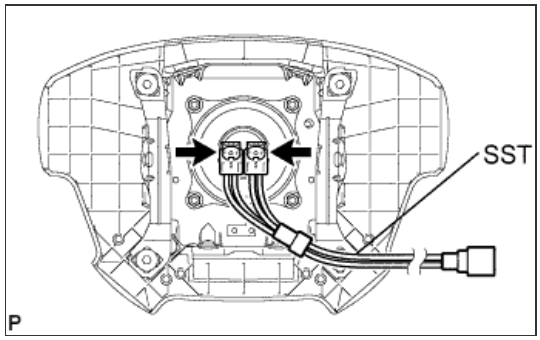
HINT:



To calculate the cross-sectional area of the stripped wire harness section: Area = 3.14 x (Diameter) ^{2} divided by 4

i. Install 2 bolts with washers into the 2 bolt holes on the steering pad.

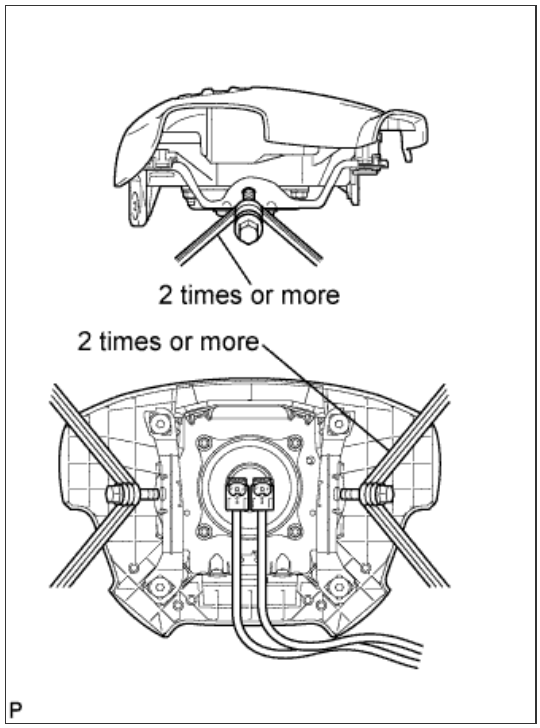
Bolt:
L: 35.0 mm (1.38 in.)
M: 6.0 mm (0.236 in.)
Pitch: 1.0 mm (0.0393 in.)



NOTICE:

- **Tighten the bolts by hand until they become difficult to turn.**
- **Do not tighten the bolts excessively.**

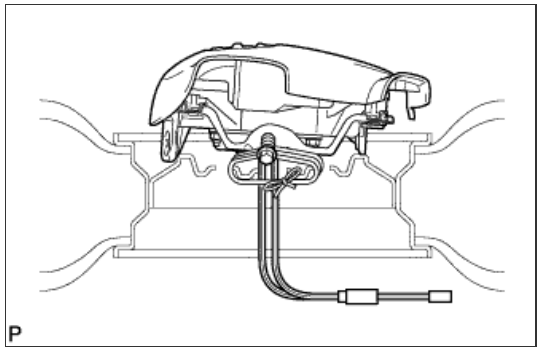
ii. After connecting SST to each other, connect them to the steering pad.



SST
09082-00820

iii. Wind 3 wire harnesses at least 2 times each around the bolts installed on the left and right sides of the steering pad.

CAUTION:

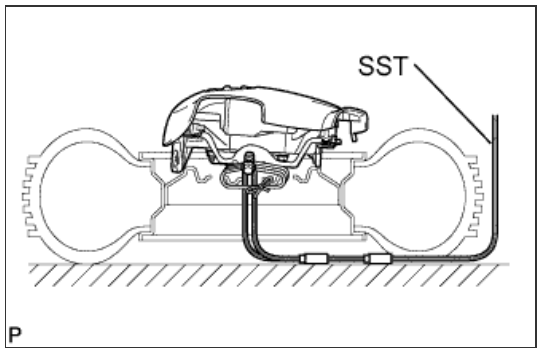


- **Tightly wind the wire harnesses around the bolts so that there is no slack.**
- **Make sure that the wire harnesses are tight. If there is slack in the wire harnesses, the steering pad may become loose due to the shock when the airbag is deployed.**

iv. Face the airbag deployment side of the steering pad upward. Separately tie the left and right sides of the steering pad to a disc wheel through the hub nut holes. Position SST connector so that it hangs downward through the hub hole of the disc wheel.

CAUTION:

- **Make sure that the wire harnesses are tight. If there is slack in the wire harnesses, the steering pad may become loose due to the shock when the airbag is deployed.**
- **Always tie down the steering pad with the airbag deployment side facing upward.**



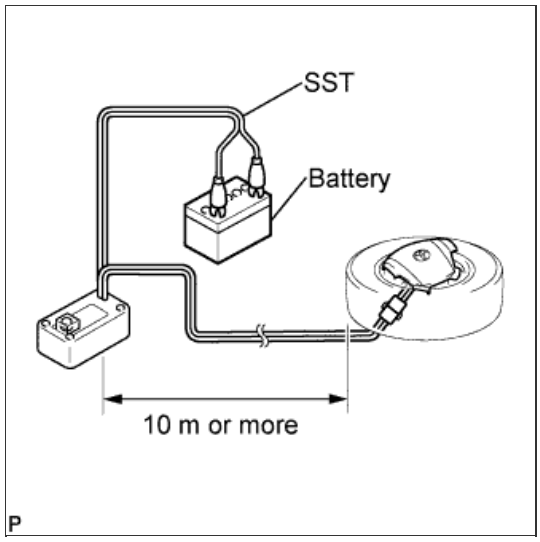
NOTICE:

As the disc wheel may be damaged by the airbag deployment, use a disc wheel that you are planning to throw away.

d. Install SST.

CAUTION:

Place the disc wheel on level ground.



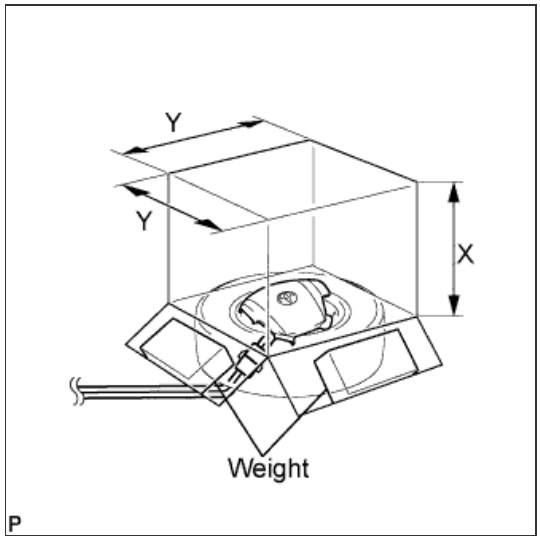
i. Connect SST connector.

SST
09082-00700

NOTICE:

To avoid damaging SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for SST wire harness inside the disc wheel.

ii. Move SST at least 10 m (32.8 ft.) away from the steering pad tied down to the disc wheel.



e. Cover the steering pad with a cardboard box or tires.

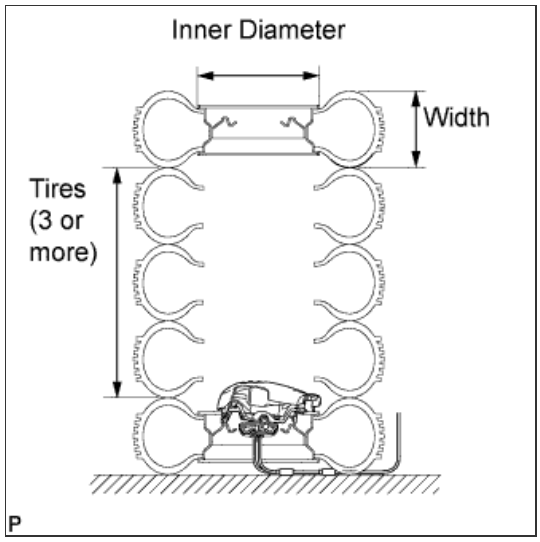
i. Covering method using a cardboard box: Cover the steering pad with the cardboard box and place weights on the cardboard box in 4 places with a total of at least 190 N (19 kgf, 41.8 lbf).

Cardboard box size:
Must exceed the following dimensions
X: 460 mm (18.1 in.)
Y: 650 mm (25.6 in.)

NOTICE:

- **When dimension Y of the cardboard box exceeds the diameter of the tire with disc wheel which the steering pad is tied to, X should be the following size. X = 460 mm (18.1 in.) + width of tire**
- **If a cardboard box which is smaller than the specified size is used, the cardboard box will be damaged by the shock from the airbag deployment.**

ii. Covering method using tires: Place at least 3 tires without disc wheels on the tire with disc wheel which the steering pad is tied to. Place another tire with disc wheel on them.

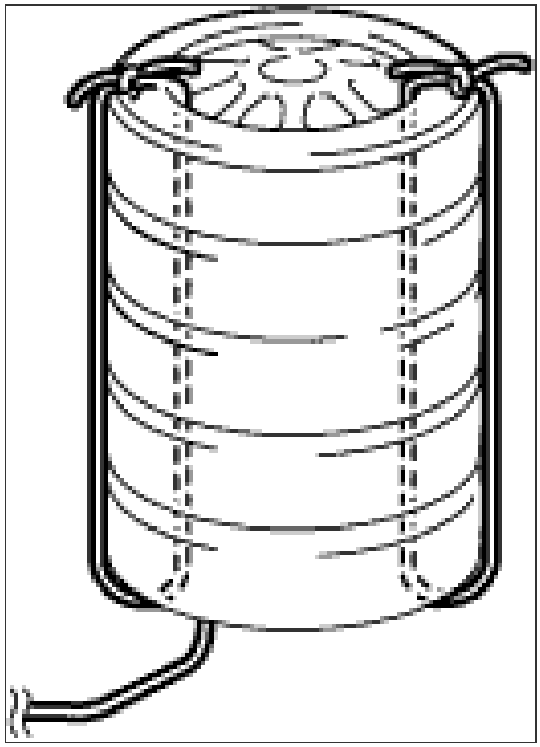


Tire size:
Must exceed the following dimensions
Width: 185 mm (7.28 in.)
Inner diameter: 360 mm (14.2 in.)

CAUTION:

Do not use tires with disc wheels e cept on the top and bottom.

NOTICE:



- **As the tires may be damaged by the airbag deployment, use tires that you are planning to throw away.**
- **Do not place SST connector under the tire because it could be damaged.**

iii. Tie the tires together with 2 wire harnesses.

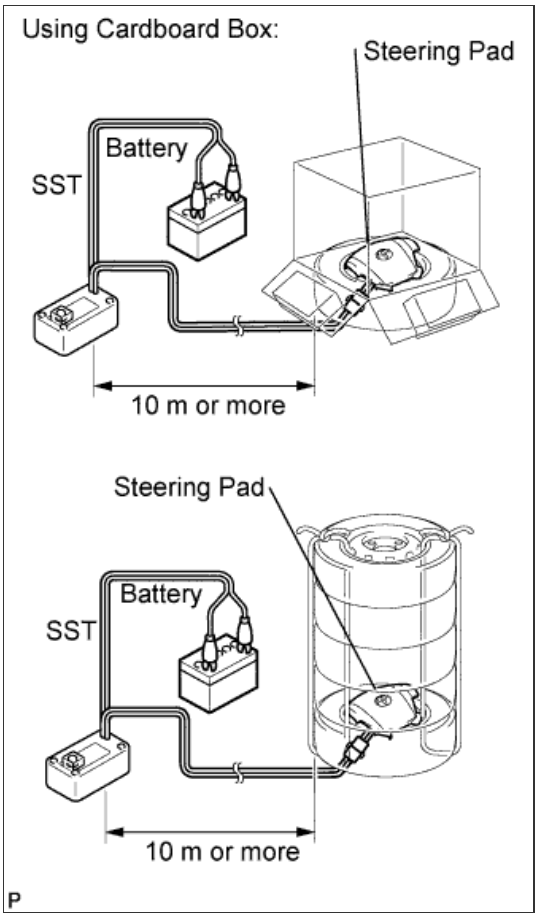
CAUTION:

Make sure that the wire harnesses are tight. Looseness in the wire harnesses results in the tires coming free due to the shock when the airbag is deployed.

f. Deploy the airbag.

i. Connect the red clip of SST to the battery positive (+) terminal and the black clip of SST to the battery negative (-) terminal.

ii. Check that no one is within a 10 m (32.8 ft.) radius of the disc wheel which the steering pad is tied to.

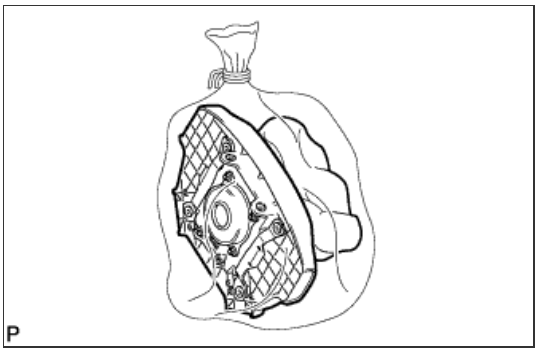


iii. Press SST activation switch to deploy the airbag.

CAUTION:

When deploying the airbag, make sure that no one is near the tire.

HINT:



The airbag is deployed as the LED of SST activation switch comes on.

g. Dispose of the steering pad.

CAUTION:

- **The steering pad becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a steering pad with a deployed airbag.**
- **Do not apply water to a steering pad with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

i. Remove the steering pad from the disc wheel.

ii. Place the steering pad in a plastic bag, tie it tightly and dispose of it in the same way as other general parts.

for Preparation Click here

HINT:

When scrapping a vehicle equipped with the SRS or disposing of the steering pad, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of the DISTRIBUTOR..

CAUTION:

- **Never dispose of a steering pad that has an unactivated airbag.**
- **The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.**
- **When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- **When deploying the airbag, perform the operation at least 10 m (32.8 ft.) away from the steering pad.**

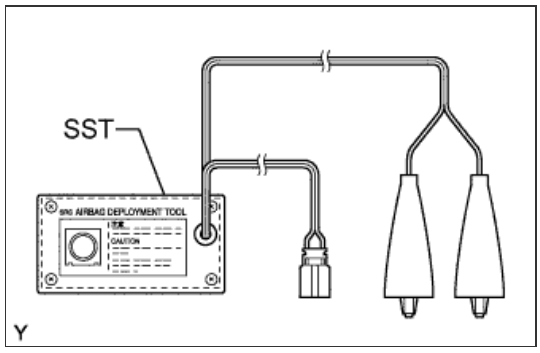
- **Do not apply water, etc. to a steering pad with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**
- **An airbag or pretensioner may be activated by static electricity. To prevent this, be sure to touch a metal surface with bare hands to discharge static electricity before performing this procedure.**

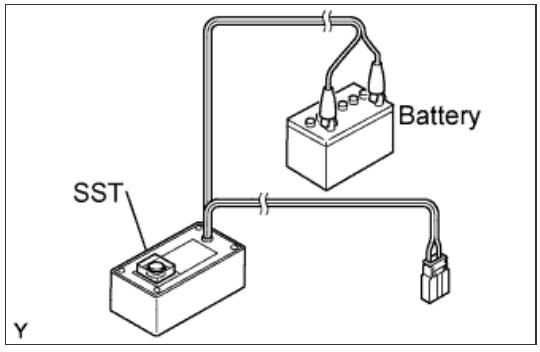
1. DISPOSE OF STEERING PAD (WHEN INSTALLED IN VEHICLE)

HINT:



Prepare a battery as the power source to deploy the airbag.

a. Check the function of SST.

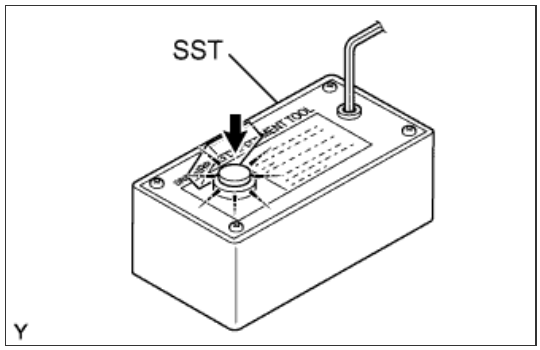


SST
09082-00700

CAUTION:

When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool).

i. Connect SST to the battery. Connect the red clip of SST to the battery positive (+) terminal and the black clip of SST to the battery negative (-) terminal.



ii. Check the function of SST. Press SST activation switch, and check that the LED of SST activation switch comes on.

CAUTION:

- **Do not connect SST connector (yellow colored) to the airbag.**
- **If the LED comes on when the activation switch is not being pressed, SST malfunction is possible, so**

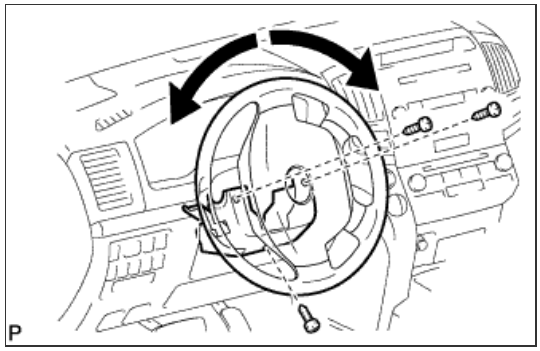
replace SST with a new one.

iii. Disconnect SST from the battery.

b. Read the precaution (Click here).

c. Disconnect the cable from the negative (-) battery terminal.

CAUTION:



Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

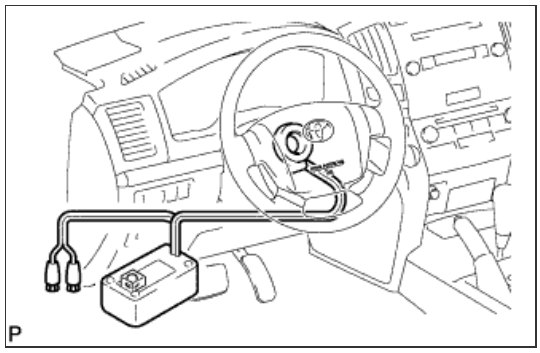
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

d. Remove the steering column cover lower.

i. While turning the steering wheel to the right and left, remove the 3 screws and steering column cover lower.

e. Install SST.



CAUTION:

Check that there is no looseness in the steering wheel assembly and steering pad.

i. Disconnect the airbag connector (yellow colored) from the spiral cable with steering sensor.

NOTICE:

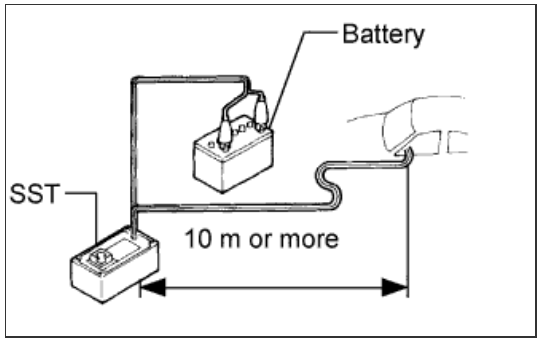
When handling the airbag connector, take care not to damage the airbag wire harness.

ii. Connect SST connector to the airbag connector of the spiral cable with steering sensor.

SST
09082-00780

NOTICE:

To avoid damaging SST connector and wire harness, do not lock the secondary lock of the twin lock.



iii. Move SST at least 10 m (32.8 ft.) away from the vehicle front side window.

iv. Maintaining enough clearance for SST wire harness in the front side window, close all doors and windows of the vehicle.

NOTICE:

Take care not to damage SST wire harness.

v. Connect the red clip of SST to the battery positive (+) terminal and the black clip of SST to the negative (-) terminal.

f. Deploy the airbag.

i. Check that no one is inside the vehicle or within a 10 m (32.8 ft.) radius of the vehicle.

ii. Press SST activation switch to deploy the airbag.

CAUTION:

- **When deploying the airbag, make sure that no one is near the vehicle.**
- **The steering pad becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a steering pad with a deployed airbag.**
- **Do not apply water to a steering pad with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

HINT:

The airbag is deployed as the LED of SST activation switch comes on.

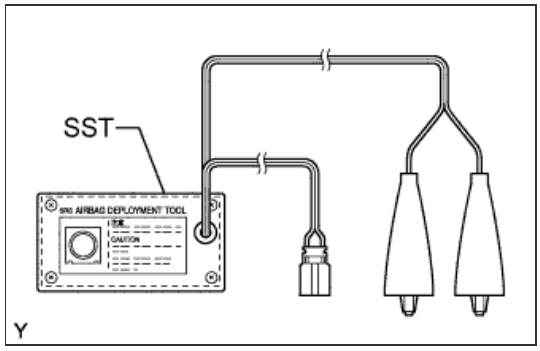
2. DISPOSE OF STEERING PAD (WHEN NOT INSTALLED IN VEHICLE)

CAUTION:

Be sure to follow the procedure detailed below when deploying the airbag.

HINT:

Prepare a battery as the power source to deploy the airbag.



a. Check the function of SST.

SST
09082-00700

b. Remove the steering pad (Click here).

CAUTION:

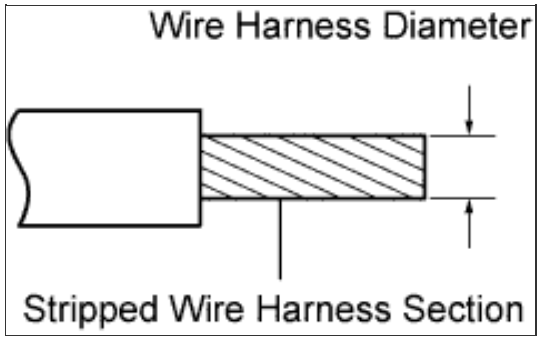
- **When removing the steering pad, wait at least 90 seconds after the engine switch is turned off and the cable is disconnected from the negative (-) battery terminal before starting work.**
- **When storing the steering pad, keep the airbag deployment side facing upward.**



c. Using a service-purpose wire harness for the vehicle, tie down the steering pad to a disc wheel.

Cross-sectional area of stripped wire harness section:
1.25 mm^2 (0.00192 in.^{2})

CAUTION:

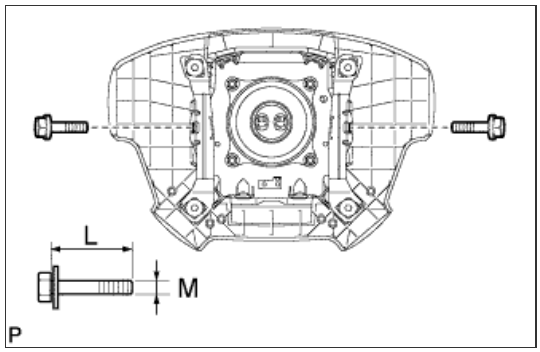
If the wire harness is too thin or an alternative object is used to tie down the steering pad, it may be snapped by the shock when the airbag is deployed. Always use a wire harness for vehicle use with a cross-sectional area of at least 1.25 mm^2 (0.00192 in.^{2}).

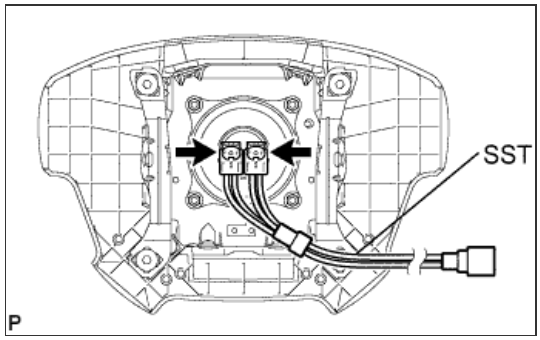
HINT:



To calculate the cross-sectional area of the stripped wire harness section: Area = 3.14 x (Diameter) ^{2} divided by 4

i. Install 2 bolts with washers into the 2 bolt holes on the steering pad.

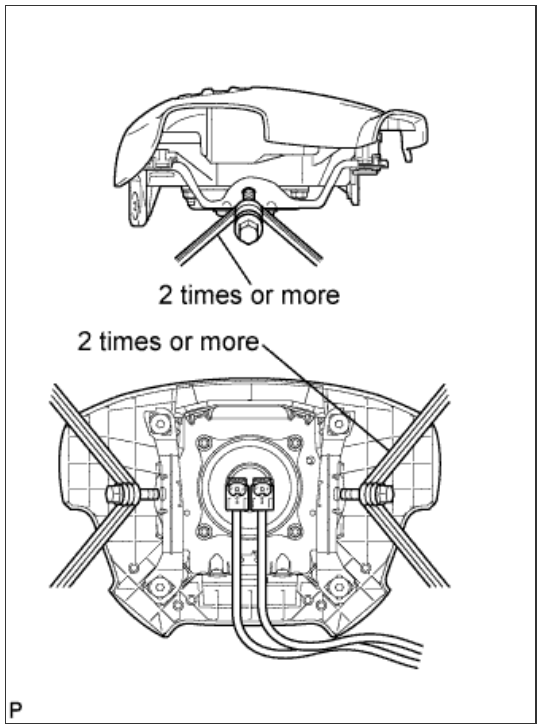
Bolt:
L: 35.0 mm (1.38 in.)
M: 6.0 mm (0.236 in.)
Pitch: 1.0 mm (0.0393 in.)



NOTICE:

- **Tighten the bolts by hand until they become difficult to turn.**
- **Do not tighten the bolts excessively.**

ii. After connecting SST to each other, connect them to the steering pad.



SST
09082-00820

iii. Wind 3 wire harnesses at least 2 times each around the bolts installed on the left and right sides of the steering pad.

CAUTION:

- **Tightly wind the wire harnesses around the bolts so that there is no slack.**
- **Make sure that the wire harnesses are tight. If there is slack in the wire harnesses, the steering pad may become loose due to the shock when the airbag is deployed.**

iv. Face the airbag deployment side of the steering pad upward. Separately tie the left and right sides of the steering pad to a disc wheel through the hub nut holes. Position SST connector so that it hangs downward through the hub hole of the disc wheel.

CAUTION:

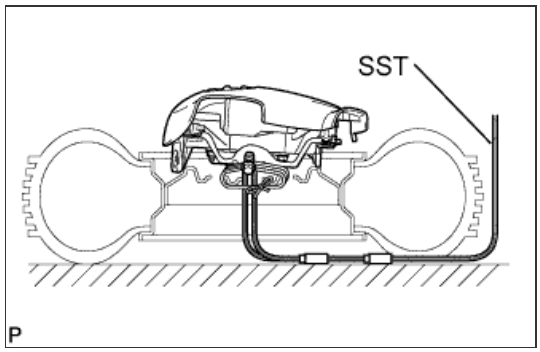
- **Make sure that the wire harnesses are tight. If there is slack in the wire harnesses, the steering pad may become loose due to the shock when the airbag is deployed.**
- **Always tie down the steering pad with the airbag deployment side facing upward.**



NOTICE:

As the disc wheel may be damaged by the airbag deployment, use a disc wheel that you are planning to throw away.

d. Install SST.

CAUTION:

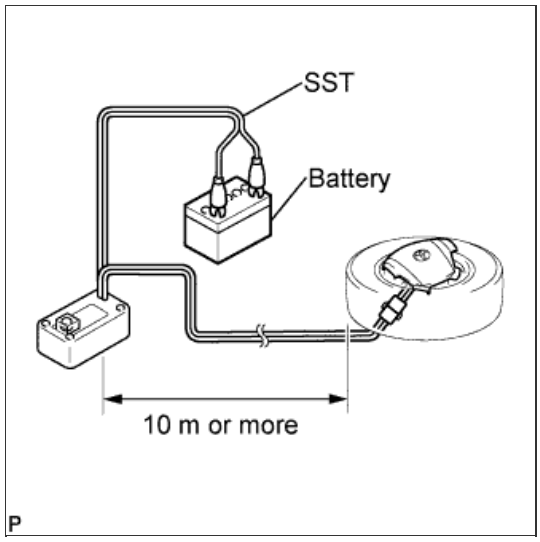
Place the disc wheel on level ground.



i. Connect SST connector.

SST
09082-00700

NOTICE:

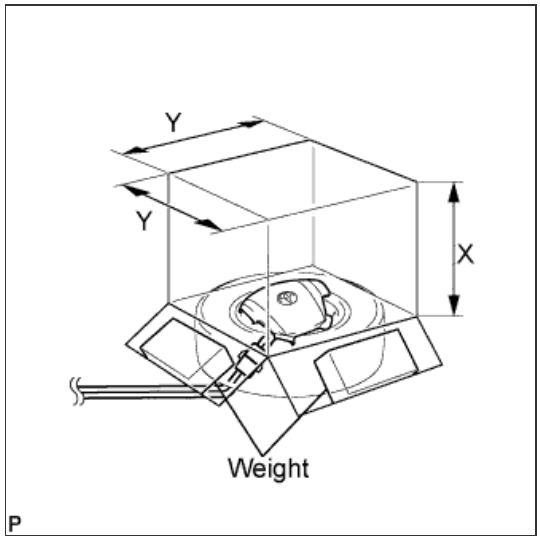
To avoid damaging SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for SST wire harness inside the disc wheel.

ii. Move SST at least 10 m (32.8 ft.) away from the steering pad tied down to the disc wheel.



e. Cover the steering pad with a cardboard box or tires.

i. Covering method using a cardboard box: Cover the steering pad with the cardboard box and place weights on the cardboard box in 4 places with a total of at least 190 N (19 kgf, 41.8 lbf).

Cardboard box size:
Must exceed the following dimensions
X: 460 mm (18.1 in.)
Y: 650 mm (25.6 in.)

NOTICE:

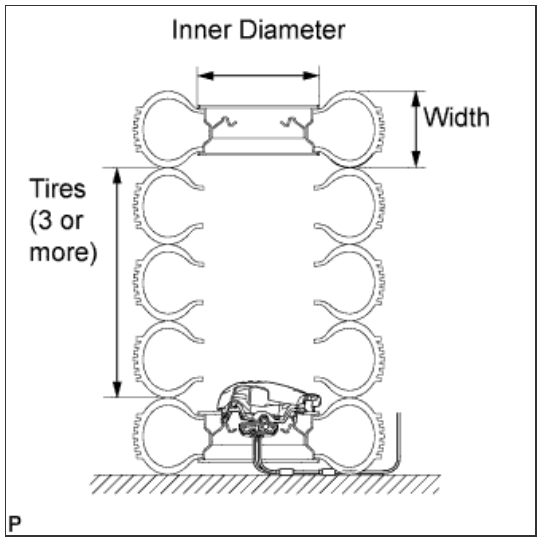
- **When dimension Y of the cardboard box exceeds the diameter of the tire with disc wheel which the steering pad is tied to, X should be the following size. X = 460 mm (18.1 in.) + width of tire**
- **If a cardboard box which is smaller than the specified size is used, the cardboard box will be damaged by the shock from the airbag deployment.**

ii. Covering method using tires: Place at least 3 tires without disc wheels on the tire with disc wheel which the steering pad is tied to. Place another tire with disc wheel on them.



Tire size:
Must exceed the following dimensions
Width: 185 mm (7.28 in.)
Inner diameter: 360 mm (14.2 in.)

CAUTION:

Do not use tires with disc wheels e cept on the top and bottom.

NOTICE:

- **As the tires may be damaged by the airbag deployment, use tires that you are planning to throw away.**
- **Do not place SST connector under the tire because it could be damaged.**

iii. Tie the tires together with 2 wire harnesses.

CAUTION:

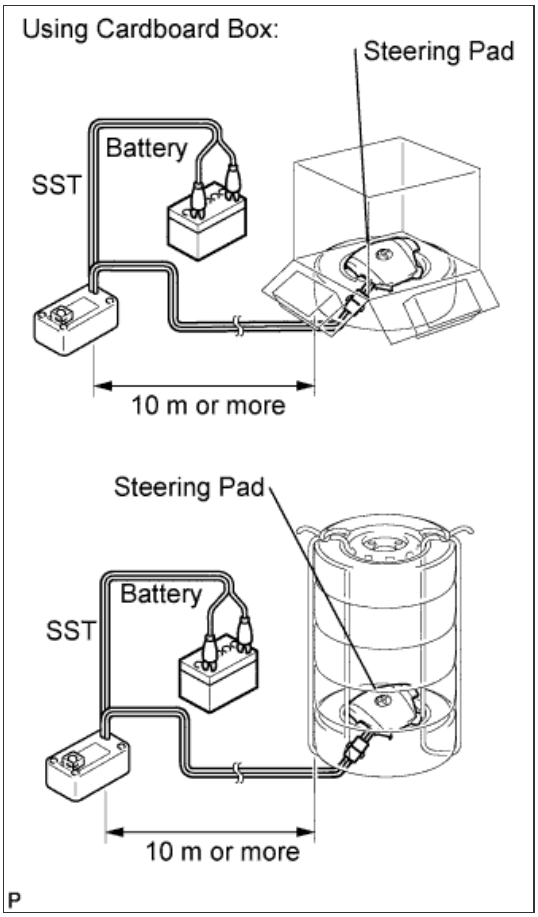
Make sure that the wire harnesses are tight. Looseness in the wire harnesses results in the tires coming free due to the shock when the airbag is deployed.

f. Deploy the airbag.

i. Connect the red clip of SST to the battery positive (+) terminal and the black clip of SST to the battery negative (-) terminal.

ii. Check that no one is within a 10 m (32.8 ft.) radius of the disc wheel which the steering pad is tied to.



iii. Press SST activation switch to deploy the airbag.

CAUTION:

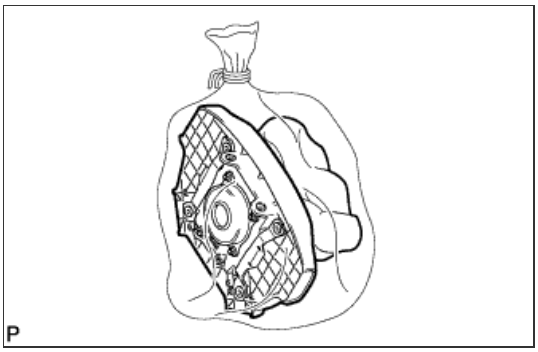
When deploying the airbag, make sure that no one is near the tire.

HINT:



The airbag is deployed as the LED of SST activation switch comes on.

g. Dispose of the steering pad.

CAUTION:

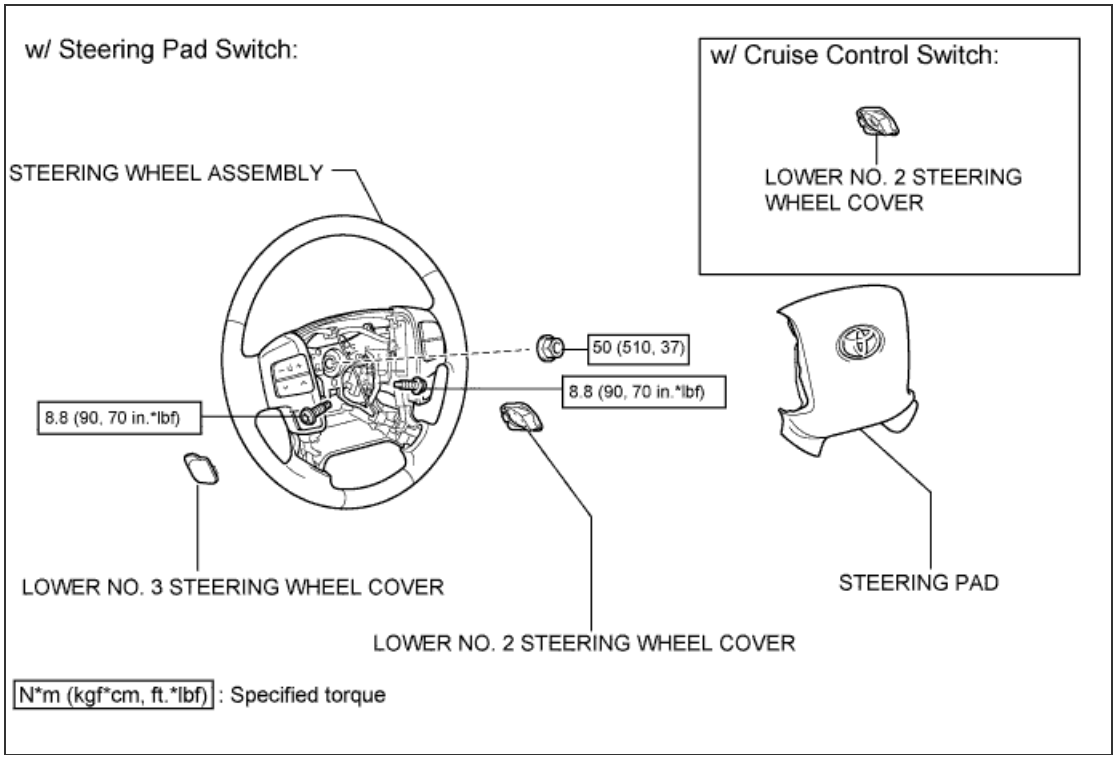
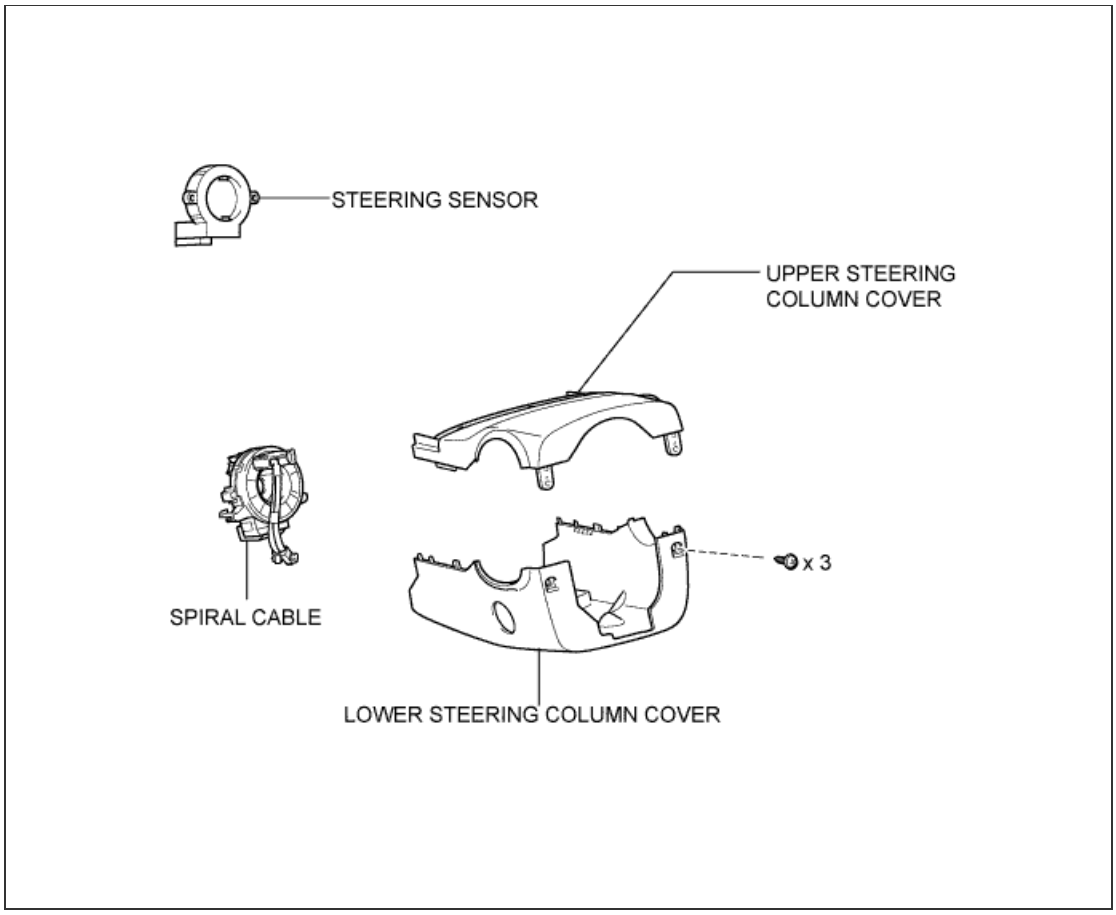
- **The steering pad becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a steering pad with a deployed airbag.**
- **Do not apply water to a steering pad with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**





i. Remove the steering pad from the disc wheel.

ii. Place the steering pad in a plastic bag, tie it tightly and dispose of it in the same way as other general parts.

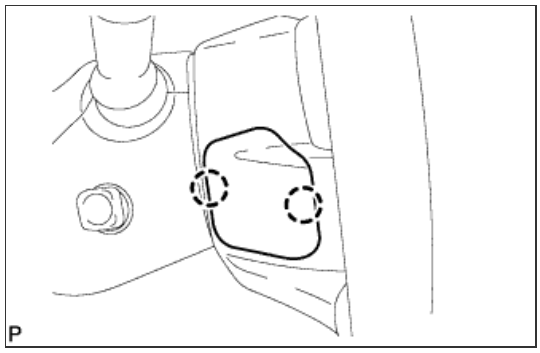
SPIRAL CABLE
x 3
LOWER STEERING COLUMN COVER

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

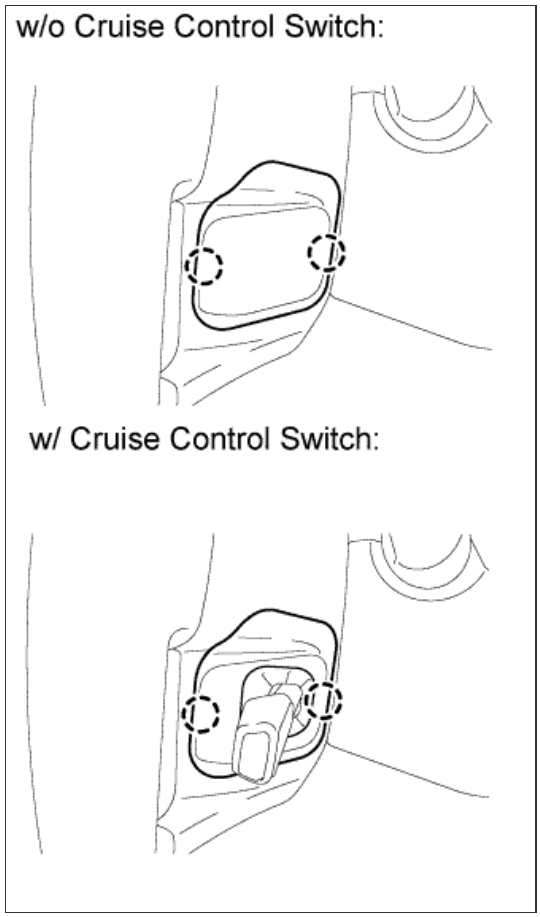
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.



NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

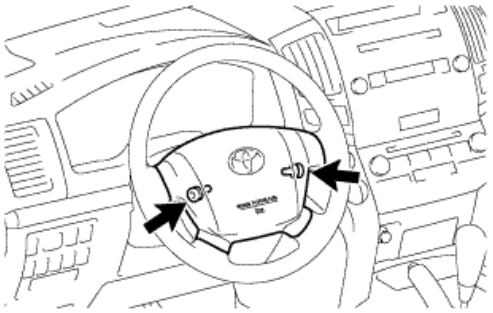
2. PLACE FRONT WHEELS FACING STRAIGHT AHEAD



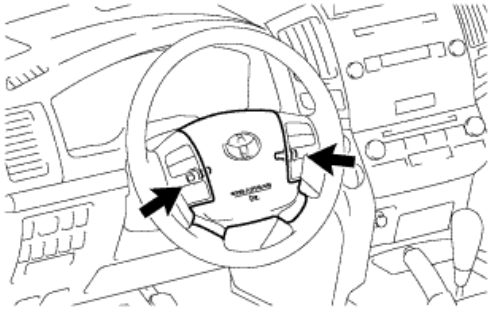
3. REMOVE LOWER NO. 3 STEERING WHEEL COVER

a. Detach the 2 claws and remove the steering wheel cover.

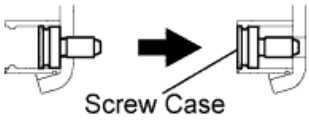
4. REMOVE LOWER NO. 2 STEERING WHEEL COVER



a. Detach the 2 claws and remove the steering wheel cover.



5. REMOVE STEERING PAD



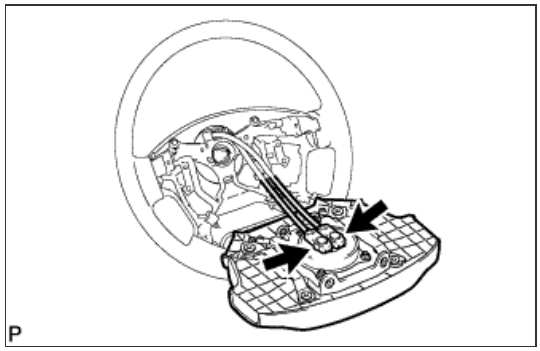
a. Using a T30 socket wrench, loosen the 2 screws ntil the groove along the screw circ mference catches on the screw case.

w/o Steering Pad Switch:

w/ Steering Pad Switch:

b. P lb the steering ad from the steering wheel, as shown in the ill stration. Then s rt the steering ad with one hand.

NOTICE:



When removing the steering ad, do not the airbag wire harness.

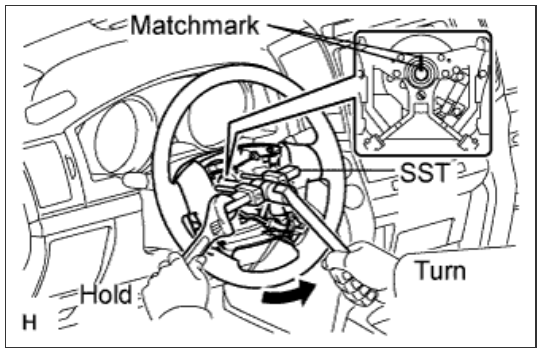
c. Disconnect the horn connector.

d. Disconnect the 2 connectors and remove the steering ad.

NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

6. REMOVE STEERING WHEEL ASSEMBLY



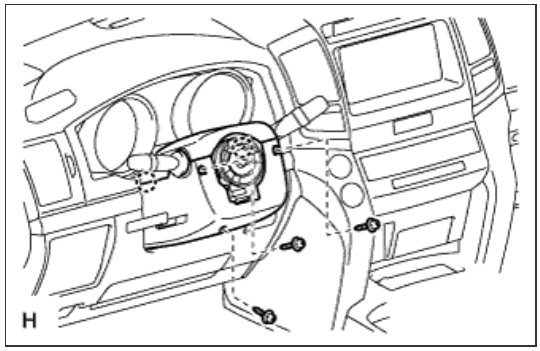
a. Remove the steering wheel set n t

b. matchmarks on the steering wheel and main shaft.

c. Using SST, remove the steering wheel assembly.

SST

09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05011)

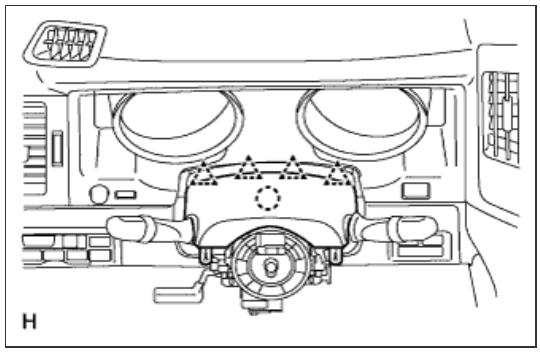


7. REMOVE LOWER STEERING COLUMN COVER

a. Remove the 3 screws.

b. Detach the 2 claws to remove the lower steering col mn cover.

NOTICE:

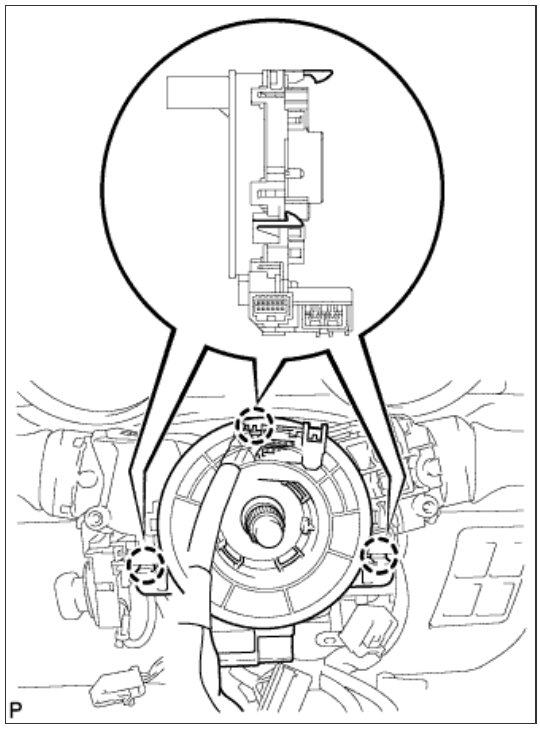


Do not damage the tilt and telesco ic switch.

8. REMOVE UPPER STEERING COLUMN COVER

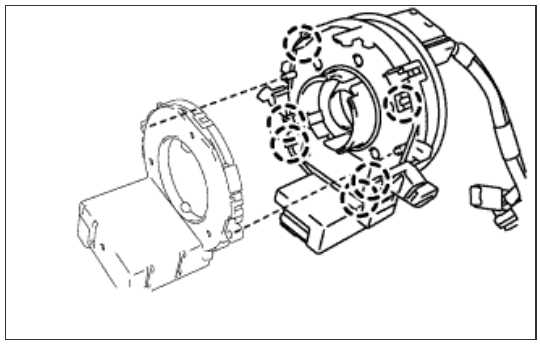
a. Detach the cli s.

b. Detach the claw to remove the er steering col mn cover.



9. REMOVE SPIRAL CABLE

a. Disconnect the connectors from the s iral cable with steering sensor.



NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

b. Detach the 3 claws and remove the s iral cable with steering sensor.

c. Detach the 6 claws and remove the s iral cable from the steering sensor.

1. INSPECT SPIRAL CABLE

a. If there are any defects as mentioned below, replace the spiral cable with a new one:
Scratches, cracks, dents or chips on the connector or the spiral cable.

b. Check the spiral cable.

i. Set the spiral cable to the center position (Click here).

ii. Measure the resistance between each terminal of the spiral cable according to the table below.

iii. After setting the spiral cable to the center position, rotate the spiral cable 2.5 times clockwise, and measure the resistance as shown. Then rotate the spiral cable 5 times counterclockwise, and measure the resistance as shown.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E13-1 - B2	Always	Below 1 Ω
E13-2 - B1	Always	Below 1 Ω
E13-3 - A1	Always	Below 1 Ω
E13-4 - A2	Always	Below 1 Ω
E12-6 - z36-10	Always	Below 1 Ω
E12-5 - z36-9	Always	Below 1 Ω
E12-4 - z36-8	Always	Below 1 Ω
E12-3 - z36-7	Always	Below 1 Ω
E12-2 - z36-6	Always	Below 1 Ω
E12-2 - z37-4	Always	Below 1 Ω
E12-1 - z37-3	Always	Below 1 Ω
E12-12 - z36-5	Always	Below 1 Ω
E12-11 - z36-4	Always	Below 1 Ω
E12-10 - z36-3	Always	Below 1 Ω
E12-9 - z36-2	Always	Below 1 Ω
E12-8 - z36-1	Always	Below 1 Ω
E12-8 - z37-2	Always	Below 1 Ω
E12-7 - z37-1	Always	Below 1 Ω

iv. After setting the spiral cable to the center position, rotate the spiral cable 2.5 times clockwise. Then while rotating the spiral cable 5 times counterclockwise, measure the resistance as shown.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E13-1 - B2	Always	Below 1 Ω
E13-2 - B1	Always	Below 1 Ω
E13-3 - A1	Always	Below 1 Ω
E13-4 - A2	Always	Below 1 Ω

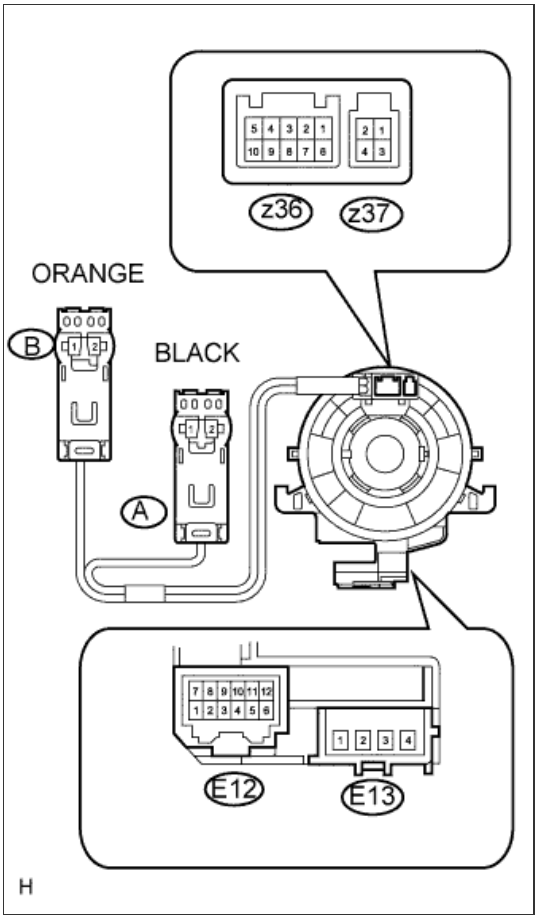
NOTICE:



As the spiral cable may break, do not rotate the spiral cable more than the specified amount.

for Preparation Click here

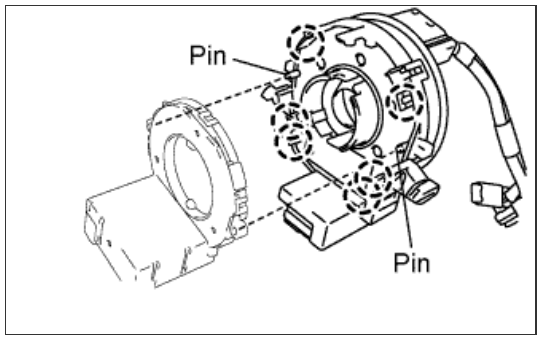
1. INSTALL SPIRAL CABLE

a. Align the pins on the spiral cable with the installation holes on the steering sensor.



b. Attach the 6 claws and install the spiral cable to the steering sensor.

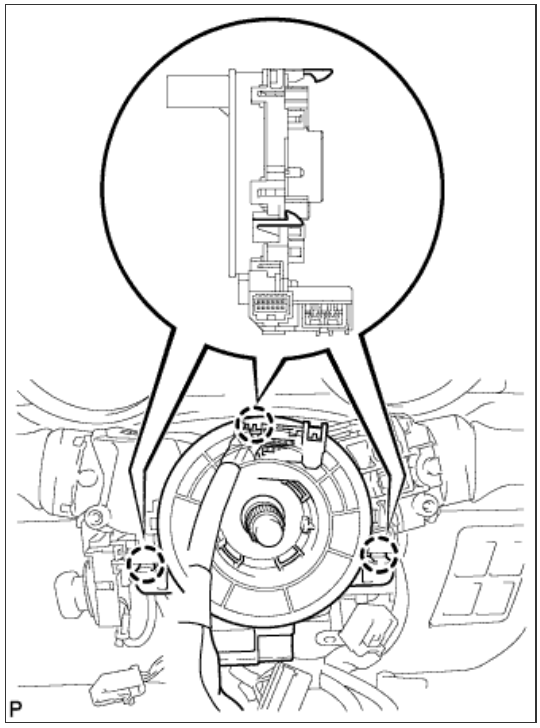
c. Check that the front wheels are facing straight ahead.

d. Set the turn signal switch to the neutral position.

CAUTION:

If it is not in the neutral position, the pin of the turn signal switch may be snapped.

e. Attach the 3 claws to install the spiral cable with steering sensor.

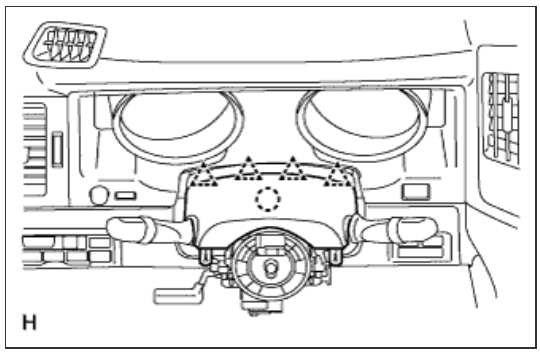


CAUTION:

When replacing the spiral cable with a new one, remove the lock pin before installing the steering wheel assembly.

f. Connect the connectors to the spiral cable with steering sensor.

NOTICE:



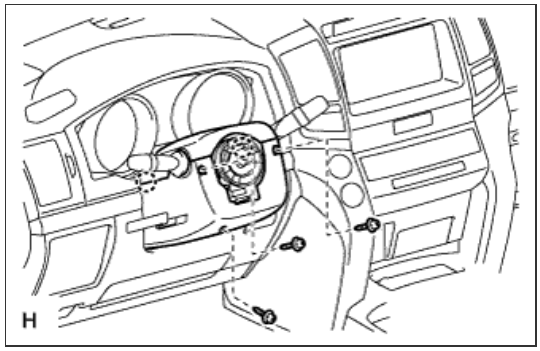
When handling the airbag connector, take care not to damage the airbag wire harness.

2. INSTALL UPPER STEERING COLUMN COVER

a. Attach the claw to install the upper steering column cover.

b. Attach the 4 clips to install the upper steering column cover onto the instrument cluster finish panel.

3. INSTALL LOWER STEERING COLUMN COVER



a. Attach the 2 claws to install the lower steering column cover.

NOTICE:

Do not damage the tilt and telescopic switch.

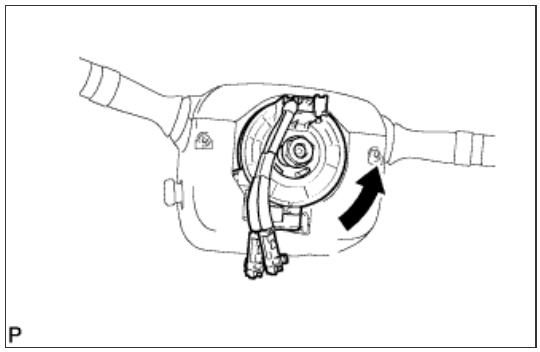
b. Install the 3 screws.

Torque:
2.0 N*m{ 20 kgf*cm , 18 in.*lbf }

4. ADJUST SPIRAL CABLE

a. Check that the engine switch is off.

b. Check that the cable is disconnected from the battery negative (-) terminal.



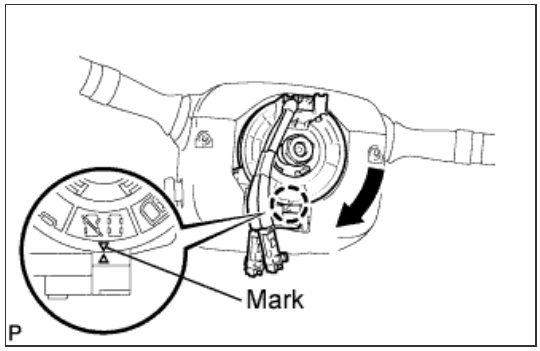
CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

c. Rotate the spiral cable with steering sensor counterclockwise slowly by hand until it feels firm.

CAUTION:

Do not turn the spiral cable with steering sensor by the airbag wire harness.



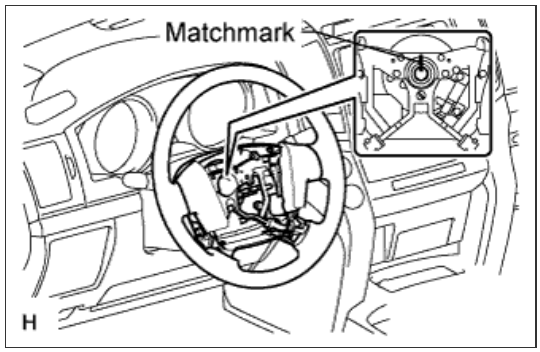
d. Rotate the spiral cable with steering sensor clockwise approximately 2.5 turns to align the marks.

CAUTION:

Do not turn the spiral cable with spiral sensor by the airbag wire harness.

HINT:

The spiral cable with steering sensor will rotate approximately 2.5 turns to both the left and right from the center.



5. INSTALL STEERING WHEEL ASSEMBLY

a. Align the matchmarks on the steering wheel assembly and steering main shaft assembly.

b. Install the steering wheel assembly set nut.

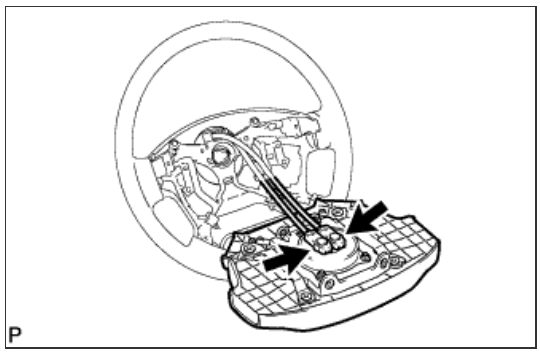
Torque:
50 N*m{ 510 kgf*cm , 37 ft.*lbf }

6. INSTALL STEERING PAD

a. Support the steering pad with one hand.

b. Connect the 2 connectors to the steering pad.

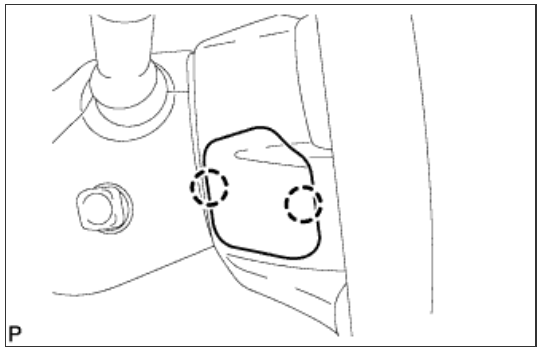
NOTICE:



When handling the airbag connector, take care not to damage the airbag wire harness.

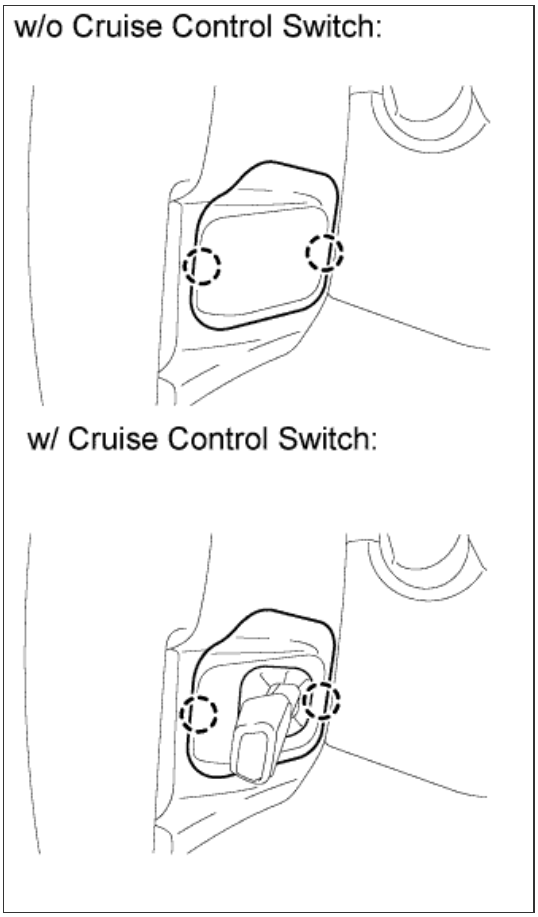
c. Connect the horn connector.

d. Confirm that the circumference groove of the "TORX" screw fits in the screw case, and place the steering pad onto the steering wheel.



e. Using a T30 "TORX" socket wrench, tighten the 2 screws.

Torque:
8.8 N*m{ 90 kgf*cm , 78 in.*lbf }



7. INSTALL LOWER NO. 3 STEERING WHEEL COVER

a. Attach the 2 claws to install the cover.

8. INSTALL LOWER NO. 2 STEERING WHEEL COVER

a. Attach the 2 claws to install the cover.

9. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

- hø disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

10. INSPECT STEERING PAD

a. With the steering pad installed on the vehicle, perform a visual check. If there are any defects as mentioned below, replace the steering pad with a new one:
Cuts, minute cracks or marked discoloration on the steering pad top surface or in the grooved portion.

b. Make sure that the horn sounds.

HINT:

If the horn does not sound, inspect the horn system.

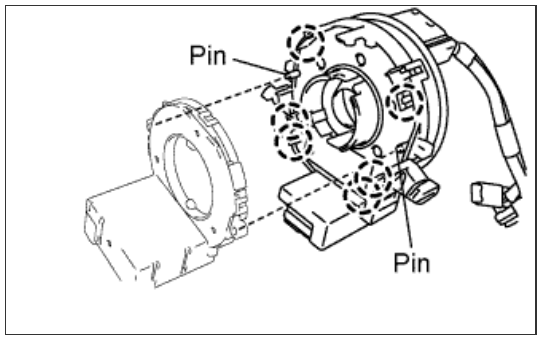
11. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).

for Preparation Click here

1. INSTALL SPIRAL CABLE

a. Align the pins on the spiral cable with the installation holes on the steering sensor.



b. Attach the 6 claws and install the spiral cable to the steering sensor.

c. Check that the front wheels are facing straight ahead.

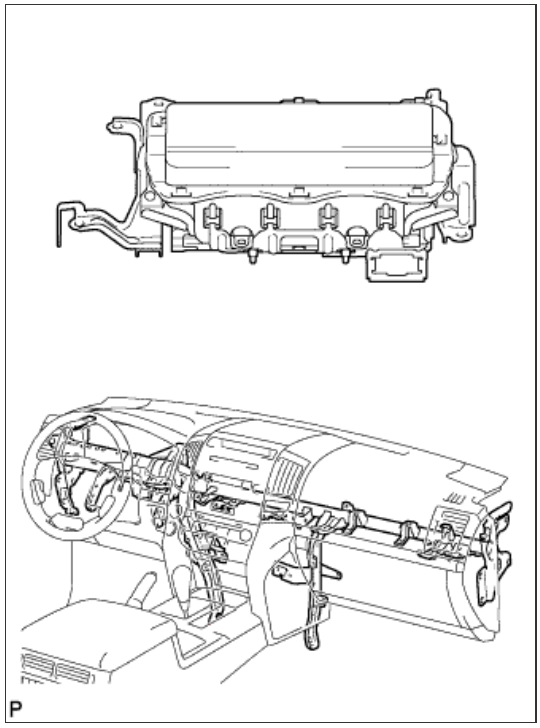
1. CHECK DRIVER SIDE KNEE AIRBAG ASSEMBLY (VEHICLE NOT INVOLVED IN COLLISION)

a. Perform a diagnostic system check (Click here).

b. With the driver side knee airbag installed on the vehicle, perform a visual check. If there are any defects as mentioned below, replace the driver side knee airbag with a new one:
Cuts, minute cracks or marked discoloration on the driver side knee airbag.

2. CHECK DRIVER SIDE KNEE AIRBAG ASSEMBLY (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED)



a. Perform a diagnostic system check (Click here).

b. With the driver side knee airbag removed from the vehicle, perform a visual check. If there are any defects as mentioned below, replace the driver side knee airbag with a new one:

- Cuts, minute cracks or marked discoloration on the driver side knee airbag.
- Cracks or other damage to the connector.
- Deformation or cracks on the instrument panel reinforcement.

NOTICE:

For removal and installation procedures of the driver side knee airbag, be sure to follow the correct procedure.

for Preparation Click here

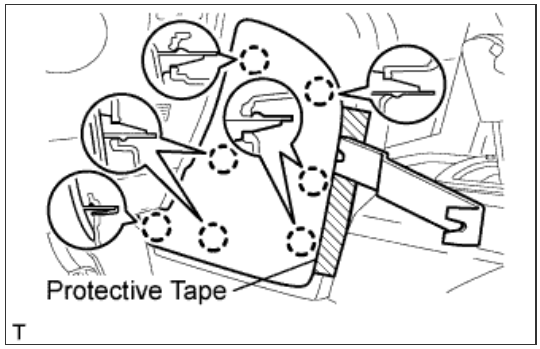
HINT:

- **Use the same procedures for the RHD and LHD.**
- **The procedures listed below are the LHD side.**

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.



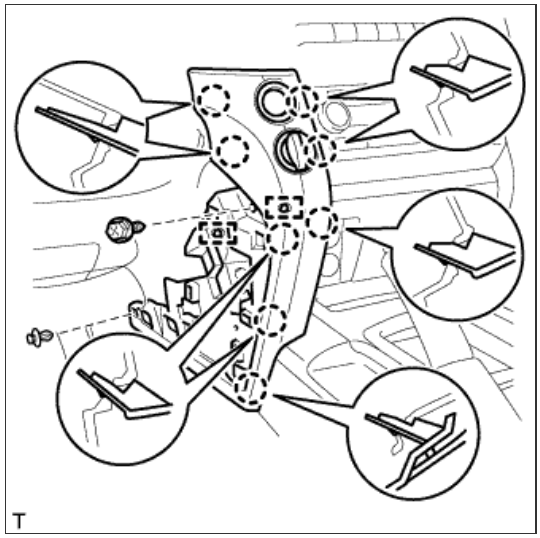
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE NO. 2 INSTRUMENT PANEL FINISH PANEL CUSHION

a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 7 claws and remove the panel cushion.

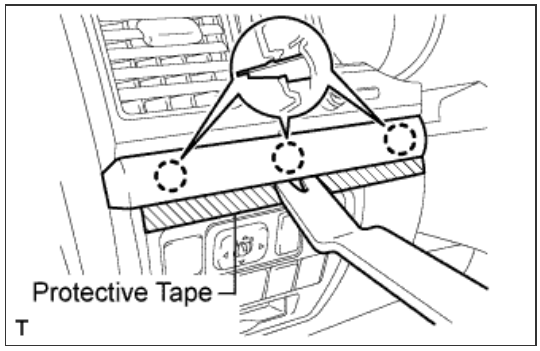


3. REMOVE LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

a. Remove the clip.

b. Remove the screw.

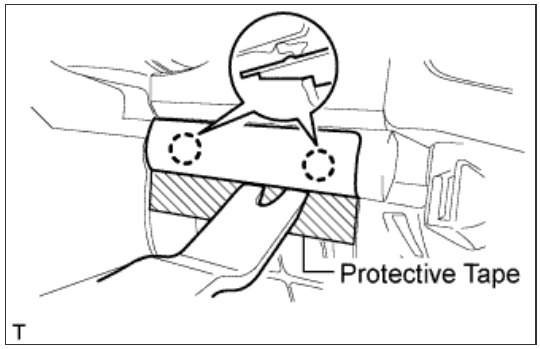
c. Detach the 8 claws.



d. Remove the panel pad and disconnect the connectors and 2 clamps.

4. REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Place protective tape as shown in the illustration.

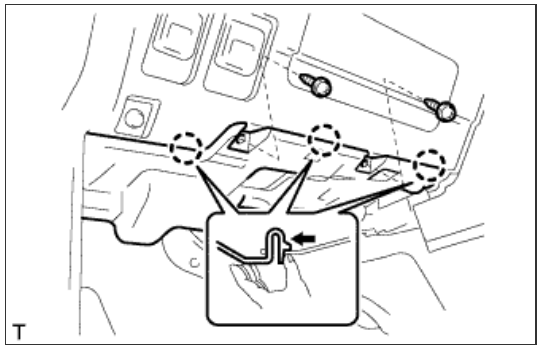


b. Using a moulding remover, detach the 3 claws and remove the panel garnish.

5. REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 2 claws and remove the panel garnish.

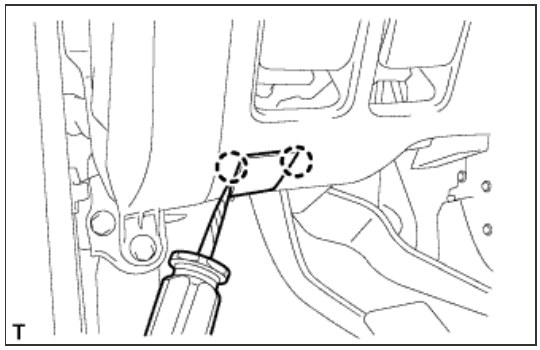


6. REMOVE NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Floor Under Cover)

a. Remove the 2 screws.

b. Detach the 3 claws.

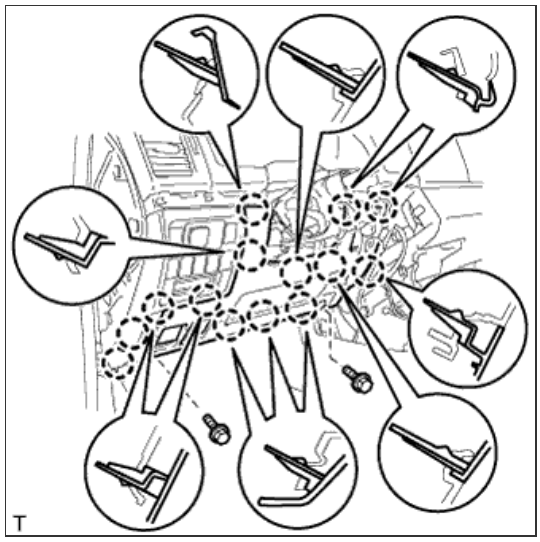
c. Remove the under cover and disconnect the connectors.



7. REMOVE LOWER NO. 1 INSTRUMENT PANEL FINISH PANEL

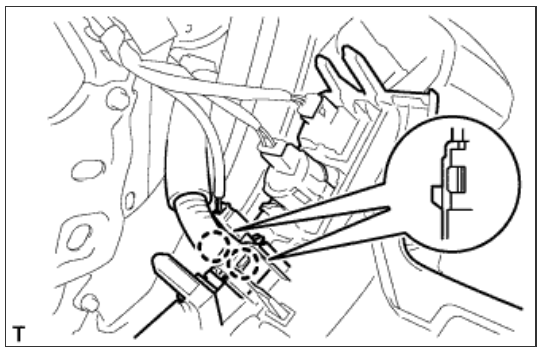
a. Using a screwdriver, detach the 2 claws.

HINT:



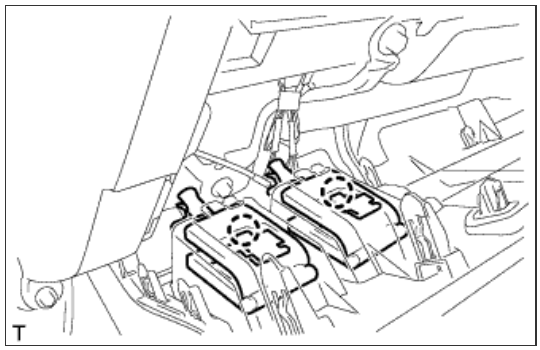
Tape the screwdriver tip before use.

b. Open the hole cover.



c. Remove the 2 bolts.

d. Detach the 14 claws.

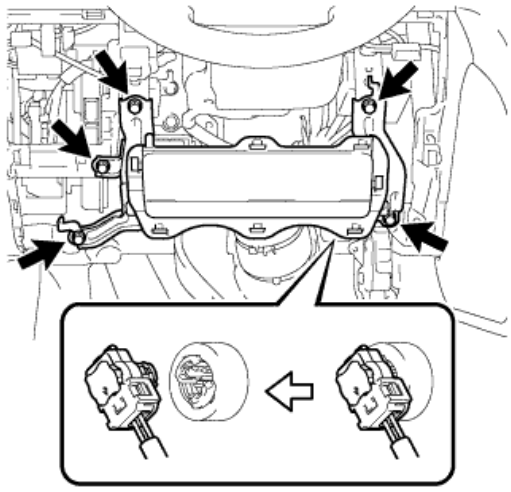


e. Detach the 2 claws and remove the sensor.

f. Detach the 2 claws and disconnect the 2 control cables.

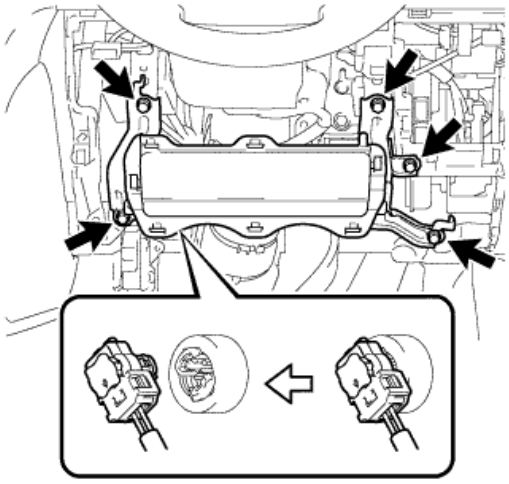
g. Remove the finish panel and then disconnect the connectors.

8. REMOVE DRIVER SIDE KNEE AIRBAG ASSEMBLY



a. Remove the 5 bolts and driver side knee airbag.

b. Disconnect the connector.



NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

for LHD:

for RHD:

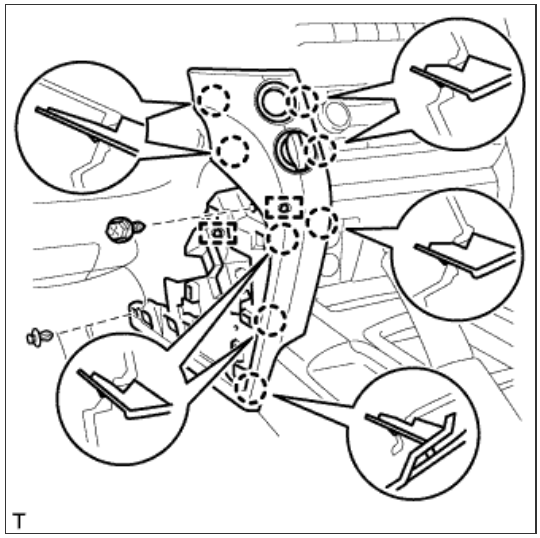
a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 7 claws and remove the panel cushion.

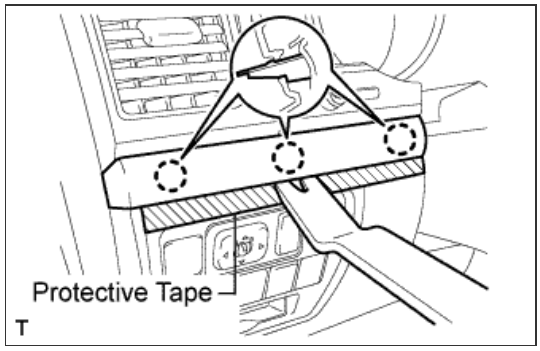


3. REMOVE LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

a. Remove the clip.

b. Remove the screw.

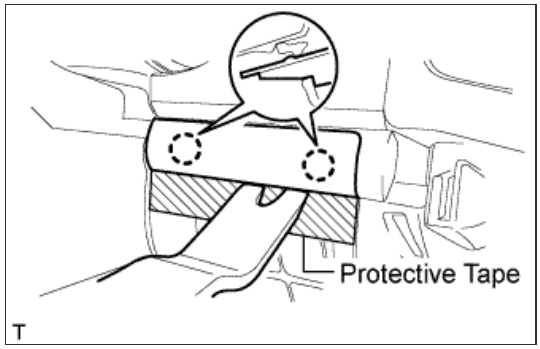
c. Detach the 8 claws.



d. Remove the panel pad and disconnect the connectors and 2 clamps.

4. REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Place protective tape as shown in the illustration.

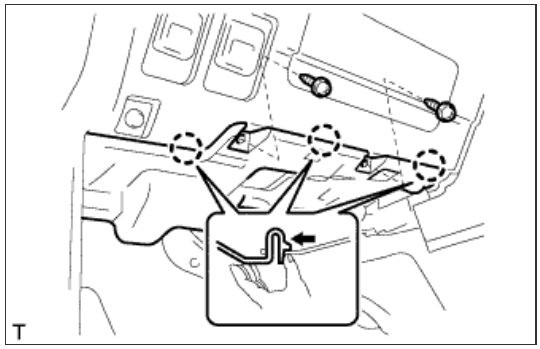


b. Using a moulding remover, detach the 3 claws and remove the panel garnish.

5. REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 2 claws and remove the panel garnish.

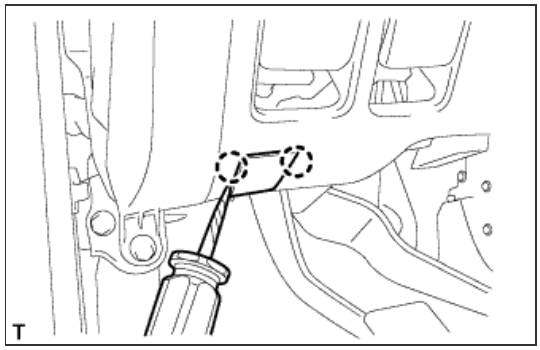


6. REMOVE NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Floor Under Cover)

a. Remove the 2 screws.

b. Detach the 3 claws.

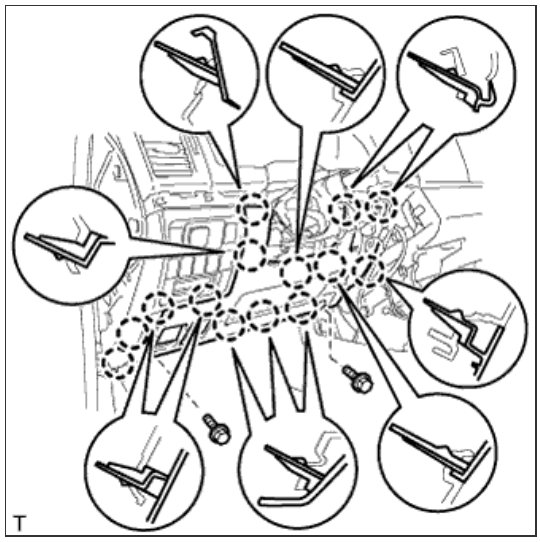
c. Remove the under cover and disconnect the connectors.



7. REMOVE LOWER NO. 1 INSTRUMENT PANEL FINISH PANEL

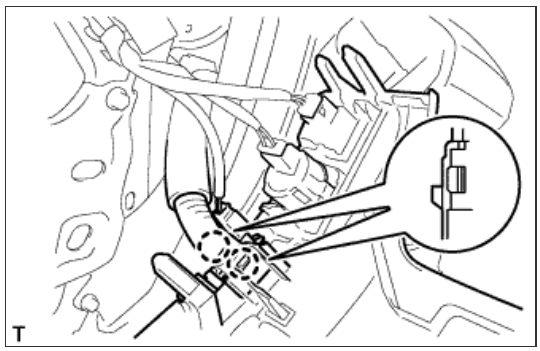
a. Using a screwdriver, detach the 2 claws.

HINT:



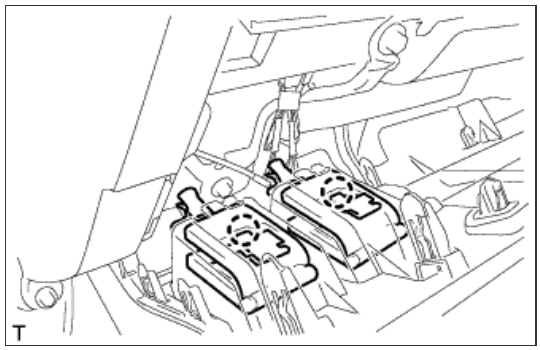
Tape the screwdriver tip before use.

b. Open the hole cover.



c. Remove the 2 bolts.

d. Detach the 14 claws.

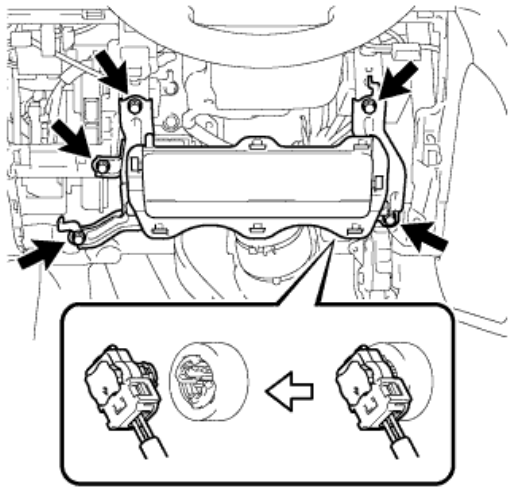


e. Detach the 2 claws and remove the sensor.

f. Detach the 2 claws and disconnect the 2 control cables.

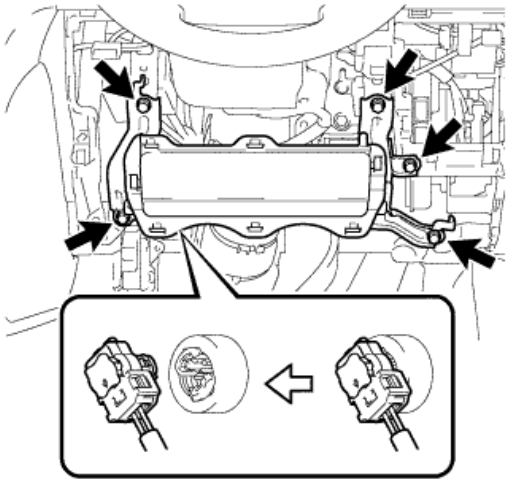
g. Remove the finish panel and then disconnect the connectors.

8. REMOVE DRIVER SIDE KNEE AIRBAG ASSEMBLY



a. Remove the 5 bolts and driver side knee airbag.

b. Disconnect the connector.



NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

for LHD:

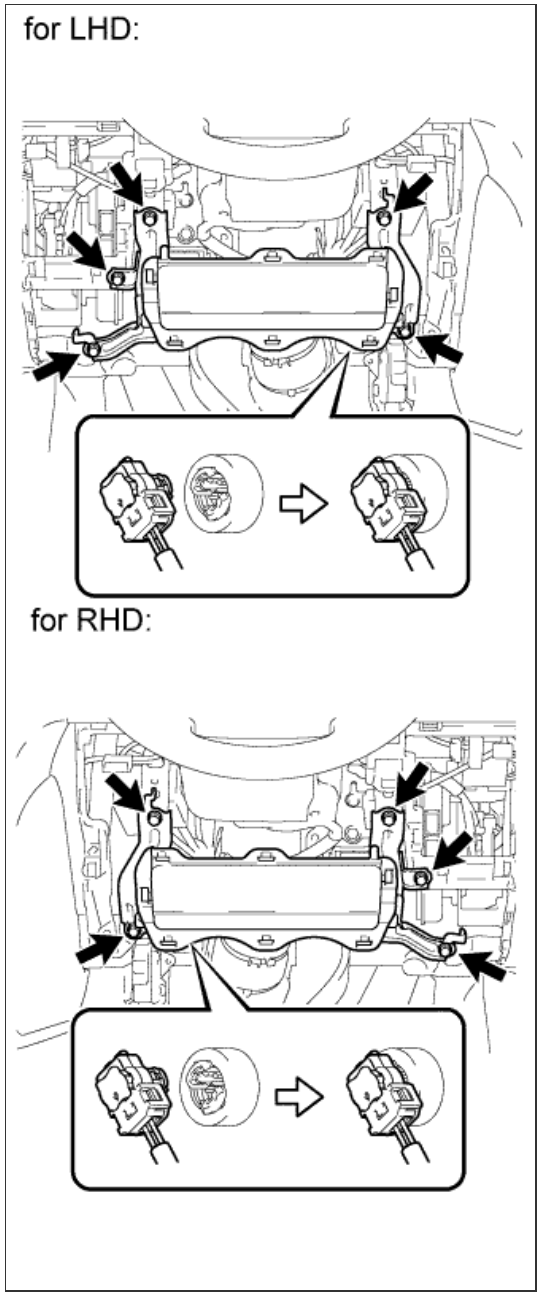
for RHD:

for Preparation Click here

HINT:

- **Use the same procedures for the RHD and LHD.**
- **The procedures listed below are the LHD side.**

1. INSTALL DRIVER SIDE KNEE AIRBAG ASSEMBLY

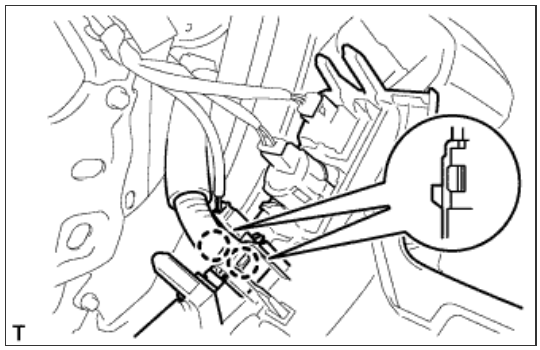


a. Connect the connector.

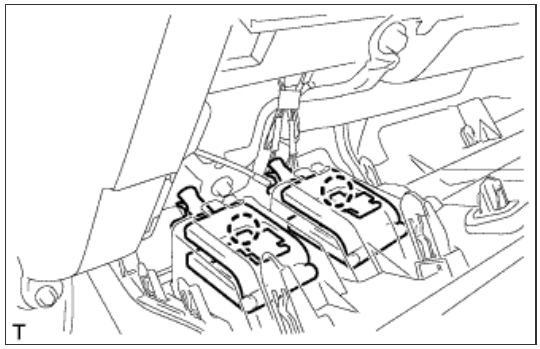
NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

b. Install the driver side knee airbag with the 5 bolts.



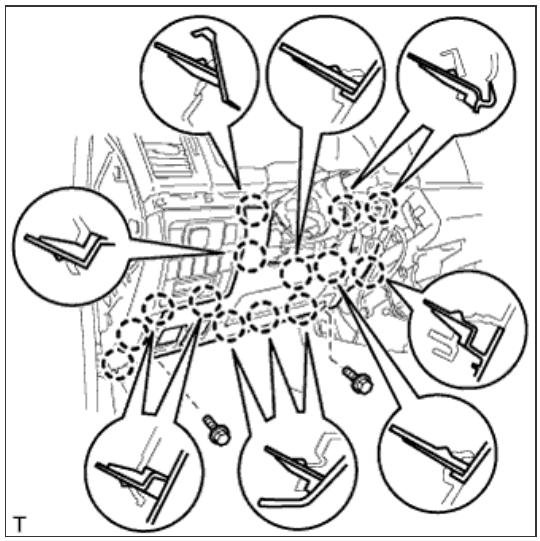
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



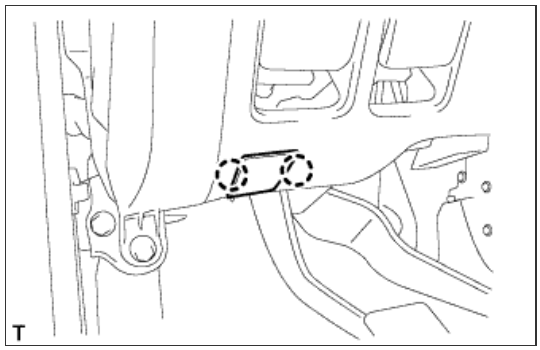
2. INSTALL LOWER NO. 1 INSTRUMENT PANEL FINISH PANEL

a. Connect the connectors.

b. Attach the 2 claws to install the sensor.



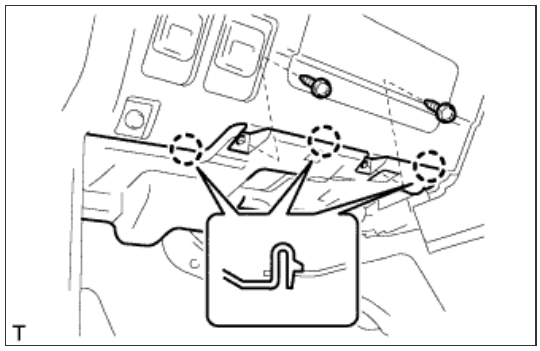
c. Attach the 2 claws to connect the 2 control cables.



d. Attach the 14 claws to install the finish panel.

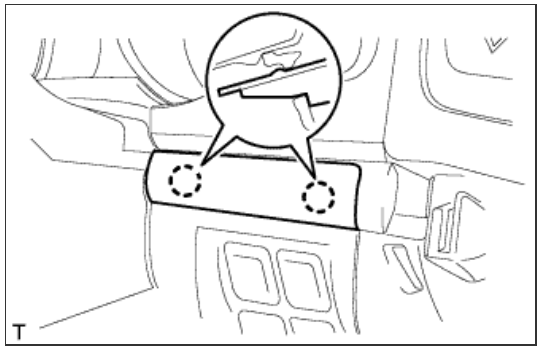
e. Install the 2 bolts.

f. Attach the 2 claws to close the hole cover.



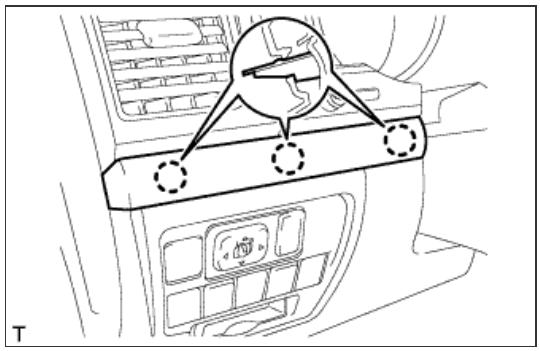
3. INSTALL NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Floor Under Cover)

a. Connect the connectors.



b. Attach the 3 claws to install the under cover.

c. Install the 2 screws.

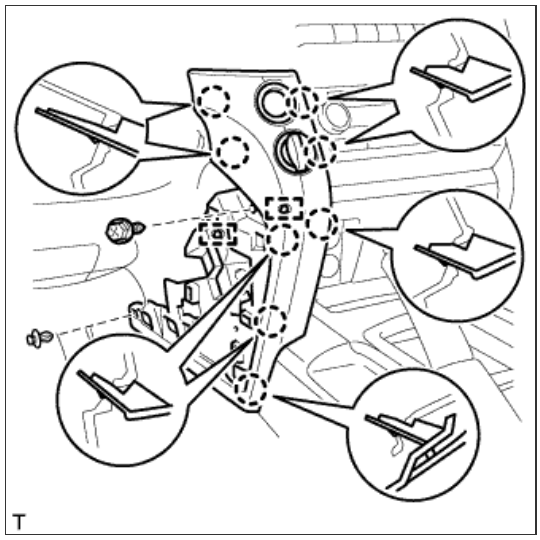


. INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Attach the 2 claws to install the panel garnish.

5. INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH

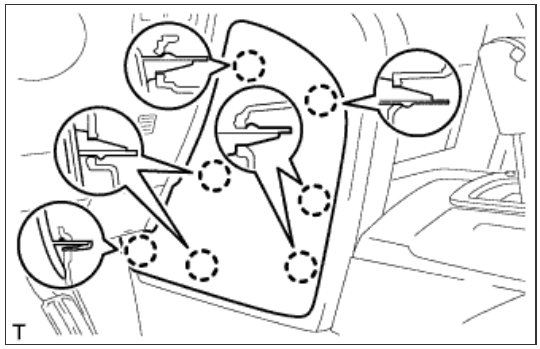
a. Attach the 3 claws to install the panel garnish.



6. INSTALL LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

a. Connect the connectors and 2 clamps.

b. Attach the 8 claws to install the panel pad.



c. Install the screw.

d. Install the clip.

7. INSTALL NO. 2 INSTRUMENT PANEL FINISH PANEL CUSHION

a. Attach the 7 claws to install the panel cushion.

8. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

9. CHECK SRS WARNING LIGHT

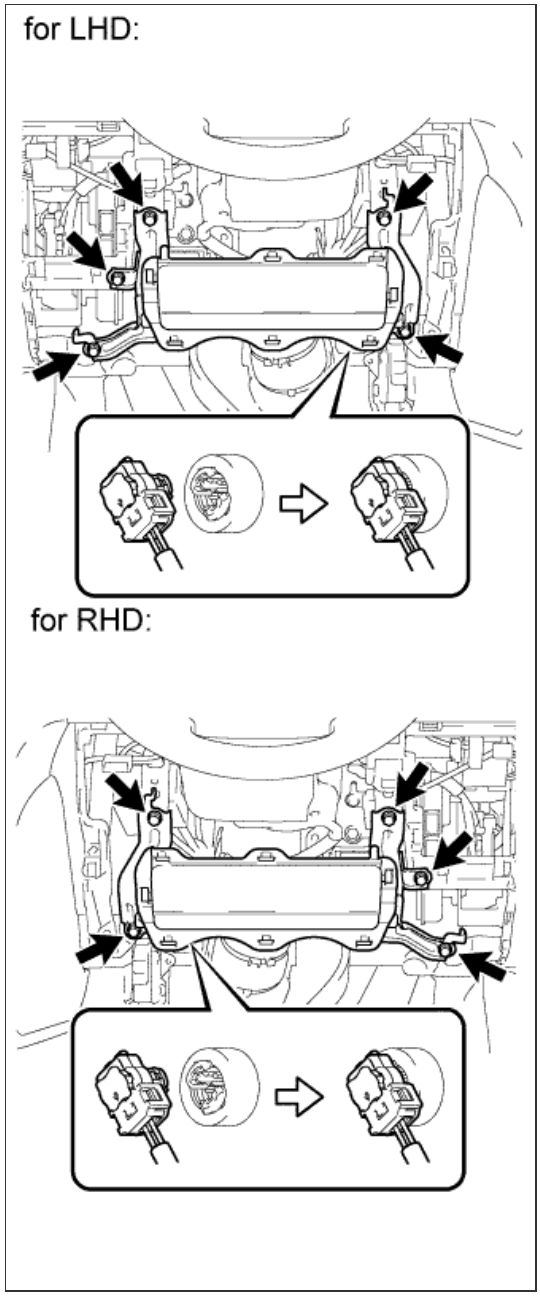
a. Check the SRS warning light (Click here).

for Preparation Click here

HINT:

- **Use the same procedures for the RHD and LHD.**
- **The procedures listed below are the LHD side.**

1. INSTALL DRIVER SIDE KNEE AIRBAG ASSEMBLY

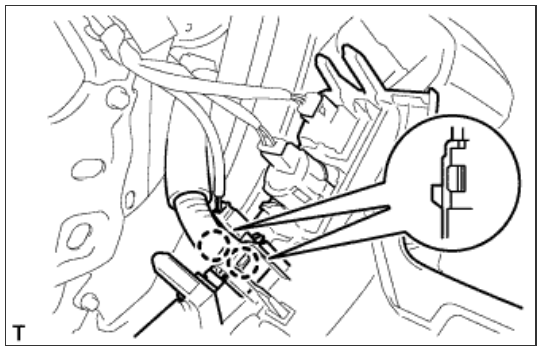


a. Connect the connector.

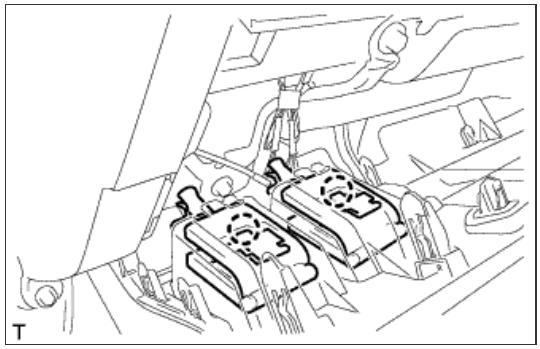
NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

b. Install the driver side knee airbag with the 5 bolts.



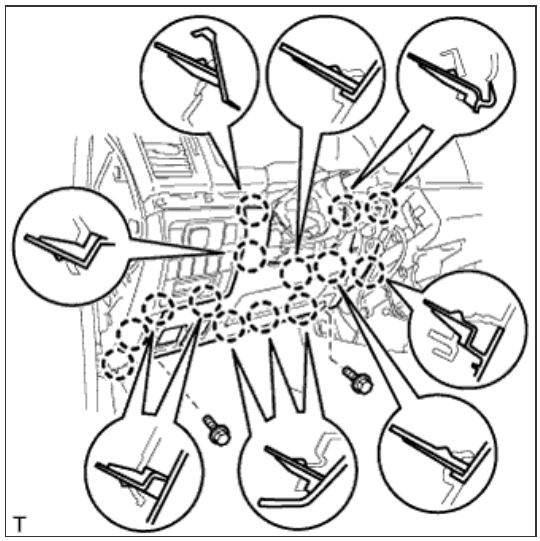
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }



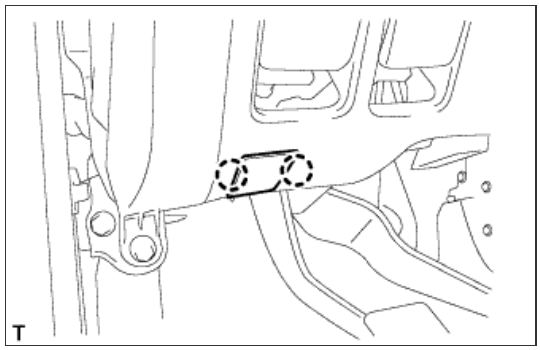
2. INSTALL LOWER NO. 1 INSTRUMENT PANEL FINISH PANEL

a. Connect the connectors.

b. Attach the 2 claws to install the sensor.



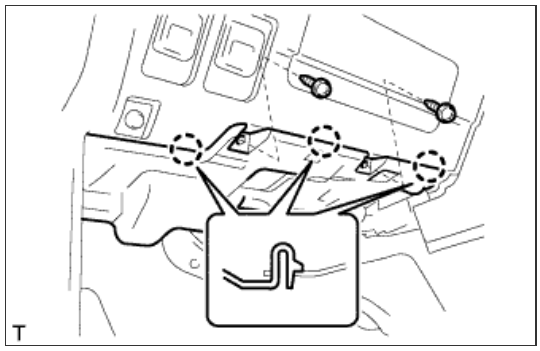
c. Attach the 2 claws to connect the 2 control cables.



d. Attach the 14 claws to install the finish panel.

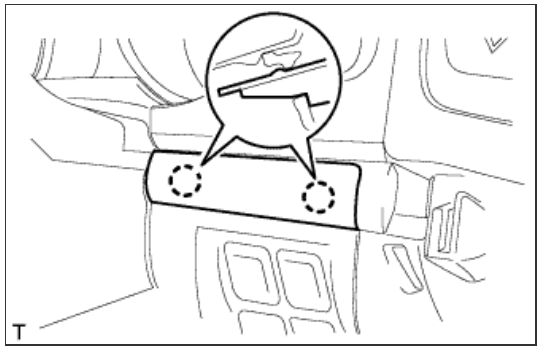
e. Install the 2 bolts.

f. Attach the 2 claws to close the hole cover.



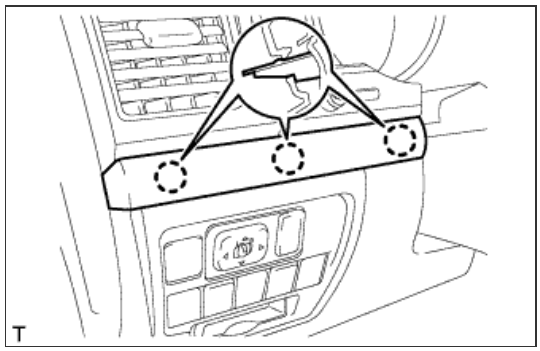
3. INSTALL NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Floor Under Cover)

a. Connect the connectors.



b. Attach the 3 claws to install the under cover.

c. Install the 2 screws.

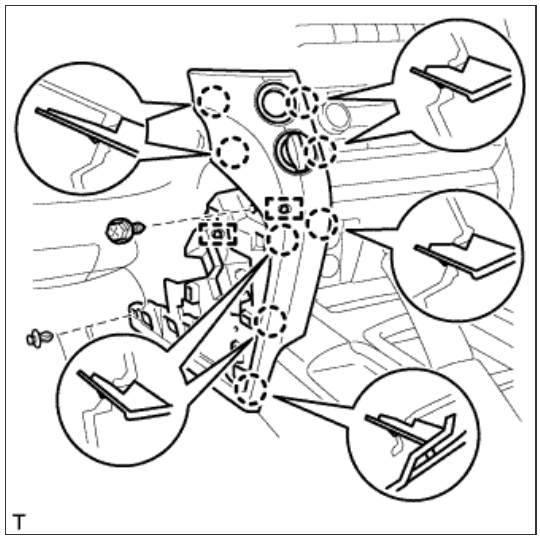


. INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Attach the 2 claws to install the panel garnish.

5. INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH

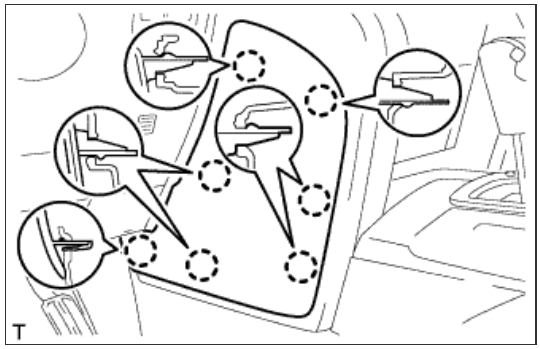
a. Attach the 3 claws to install the panel garnish.



6. INSTALL LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

a. Connect the connectors and 2 clamps.

b. Attach the 8 claws to install the panel pad.



c. Install the screw.

d. Install the clip.

7. INSTALL NO. 2 INSTRUMENT PANEL FINISH PANEL CUSHION

a. Attach the 7 claws to install the panel cushion.

8. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

9. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).

for Preparation Click here

HINT:

When scrapping a vehicle equipped with the SRS or disposing of the steering pad, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of the DISTRIBUTOR..

CAUTION:

- **Never dispose of a driver side knee airbag assembly that has an unactivated airbag.**
- **The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.**
- **When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- **When deploying the airbag, perform the operation at least 10 m (32.8 ft.) away from the driver side knee airbag.**
- **The driver side knee airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a driver side knee airbag with a deployed airbag.**
- **Do not apply water to a driver side knee airbag assembly with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**
- **An airbag or pretensioner may be activated by static electricity. To prevent this, be sure to touch a metal surface with bare hands to discharge static electricity before performing this procedure.**

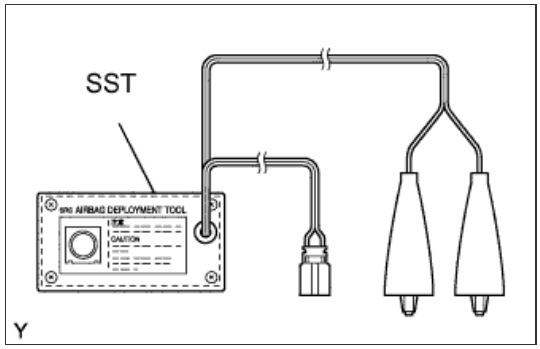
1. DISPOSE OF DRIVER SIDE KNEE AIRBAG ASSEMBLY (WHEN INSTALLED IN VEHICLE)

HINT:

Prepare a battery as the power source to deploy the airbag.

a. Check the function of SST (Click here).

b. Read the precaution (Click here).



c. Disconnect the cable from the negative (-) battery terminal.

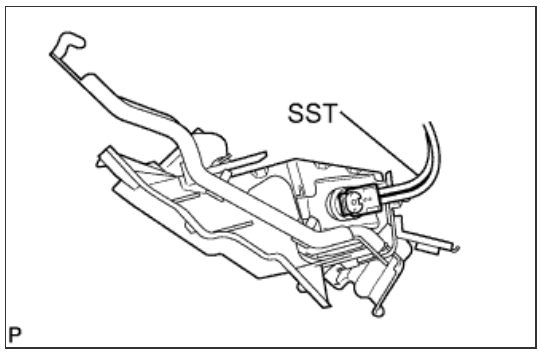
CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

d. Remove the driver side knee airbag (Click here).



e. Install SST.

i. Connect SST connector to the driver side knee airbag.

SST
09082-00700
09082-00780

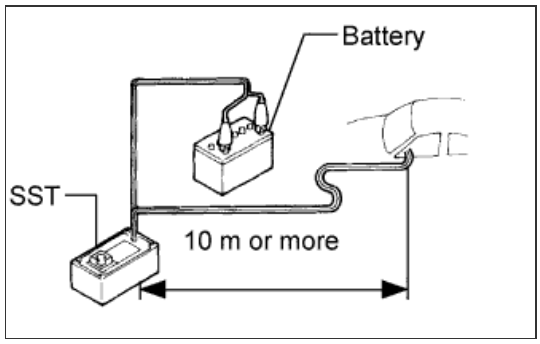
NOTICE:

To avoid damaging SST connector and wire harness, do not lock the secondary lock of the twin lock.

ii. Install the driver side knee airbag (Click here).

NOTICE:

Take care not to damage SST wire harness.



iii. Move SST at least 10 m (32.8 ft.) away from the vehicle front side window.

iv. Maintaining enough clearance for SST wire harness in the front side window, close all doors and windows of the vehicle.

NOTICE:

Take care not to damage SST wire harness.

v. Connect the red clip of SST to the battery positive ( ) terminal and the black clip of SST to the battery negative (-) terminal.

f. Deploy the airbag.

i. Check that no one is inside the vehicle or within a 10 m (32.8 ft.) radius of the vehicle.

ii. Press SST activation switch to deploy the airbag.

CAUTION:

- **When deploying the airbag, make sure that no one is near the vehicle.**
- **The driver side knee airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a driver side knee airbag with a deployed airbag.**
- **Do not apply water to a driver side knee airbag with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

HINT:

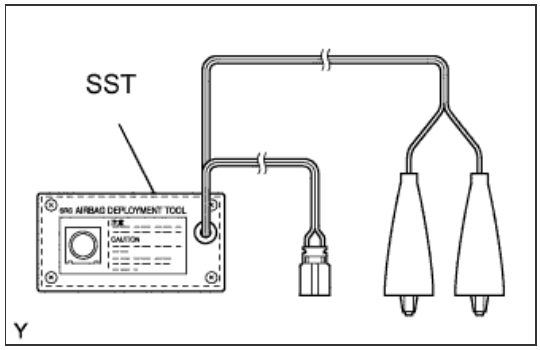
The airbag is deployed as the ED of SST activation switch comes on.

2. DISPOSE OF DRIVER SIDE KNEE AIRBAG ASSEMBLY (WHEN NOT INSTALLED IN VEHICLE)

NOTICE:

Be sure to follow the procedure detailed below when deploying the airbag.

HINT:



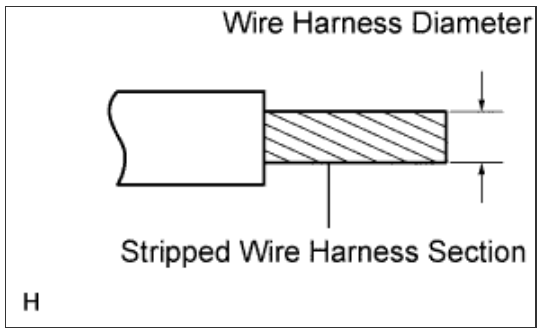
Prepare a battery as the power source to deploy the airbag.

a. Check the function of SST (Click here).

b. Remove the driver side knee airbag (Click here).

CAUTION:

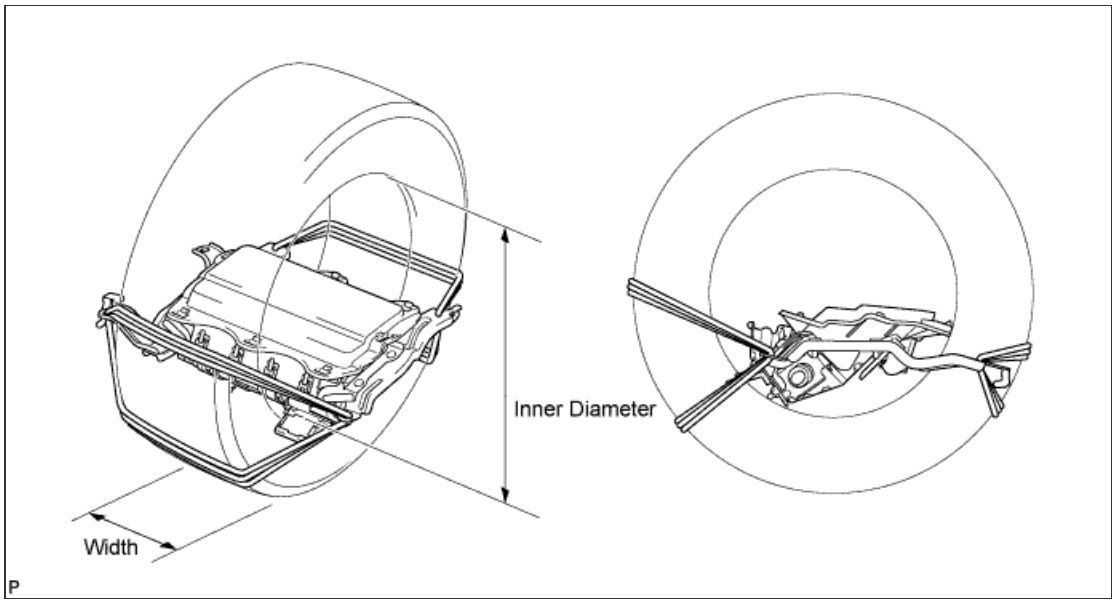
- **When removing the driver side knee airbag, wait at least 90 seconds after the engine switch is turned off and the cable is disconnected from the negative (-) battery terminal before starting work.**
- **When storing the driver side knee airbag, keep the airbag deployment side facing upward.**



c. Using a service-purpose wire harness for the vehicle, tie down the driver side knee airbag to a tire.

Cross-sectional area of stripped wire harness section:
1.25 mm^2 or more (0.00192 $in.^2$ or more)

CAUTION:



If the wire harness is too thin or an alternative object is used to tie down the driver side knee airbag, it may be snapped by the shock when the airbag is deployed. Always use a wire harness for vehicle use with a cross-sectional area of at least 1.25 mm^2 (0.00192 $in.^2$).

HINT:

To calculate the cross-sectional area of the stripped wire harness section Cross-sectional area 3.1 (Diameter) ^{2} divided by 4

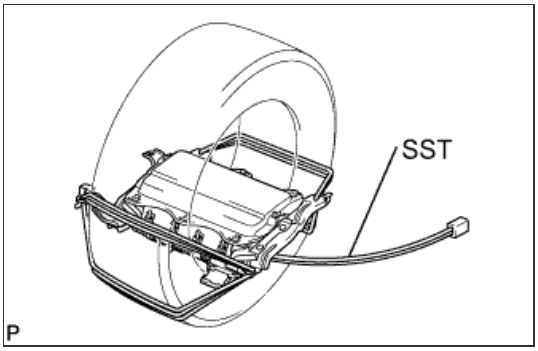
i. Position the driver side knee airbag inside a tire with the airbag deployment side facing inside.

Tire size:
Must exceed the following dimensions
Width:
185 mm (7.28 in.)
Inner diameter:
360 mm (14.2 in.)

ii. Tie the driver side knee airbag to the tire with several wire harnesses.

CAUTION:

- **Make sure that the wire harnesses are tight. If there is slack in the wire harnesses, the driver side knee airbag may become loose due to the shock when the airbag is deployed.**
- **Always tie down the driver side knee airbag with the airbag deployment side facing inside the tire.**

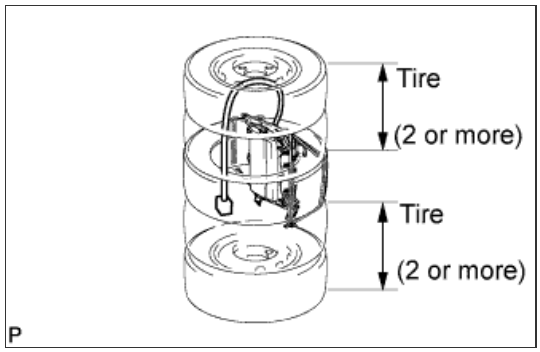


NOTICE:

As the tire may be damaged by the airbag deployment, use a tire that you are planning to throw away.

d. Install SST.

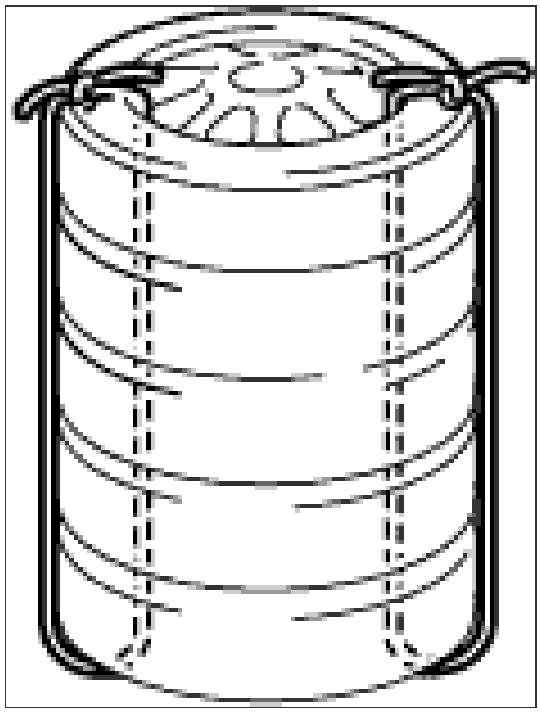
i. Connect SST connector to the driver side knee airbag.



SST
09082-00780

e. Place tires.

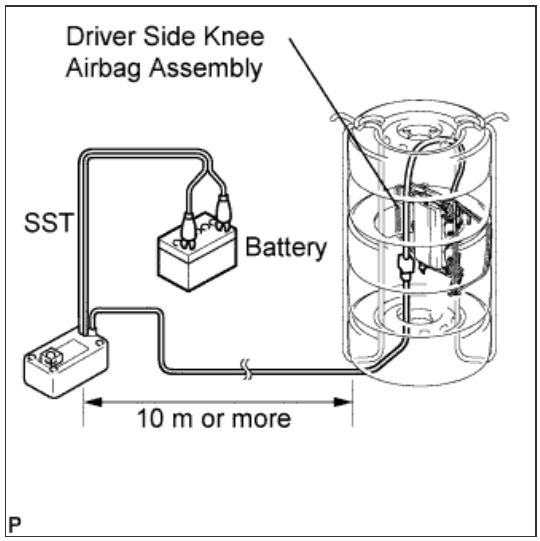
i. Place at least 2 tires under the tire which the driver side knee airbag is tied to.



ii. Place at least 2 tires over the tire which the driver side knee airbag is tied to. The top tire should have a disc wheel installed.

NOTICE:

- **Do not place SST connector under the tire because it could be damaged.**
- **As the disc wheel may be damaged by the airbag deployment, use a disc wheel that you are planning to throw away.**
- **As the tires may be damaged by the airbag deployment, use tires that you are planning to throw away.**



iii. Tie the tires together with 2 wire harnesses.

CAUTION:

Make sure that the wire harnesses are tight. ooseness in the wire harnesses results in the tires coming free due to the shock when the airbag is deployed.

f. Install SST.

i. Connect SST connector.

SST
09082-00700

NOTICE:

To avoid damaging SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for SST wire harness inside the tire.

g. Deploy the airbag.

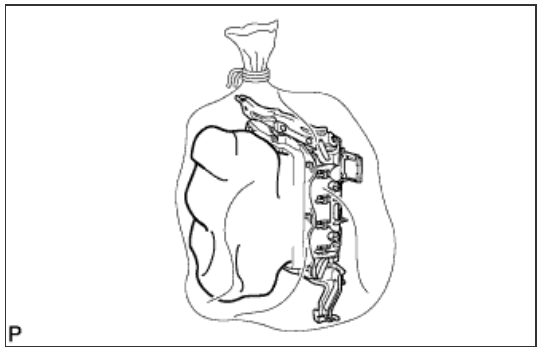
i. Connect the red clip of SST to the battery positive ( ) terminal and the black clip of SST to the battery negative (-) terminal.

ii. Check that no one is within a 10 m (32.8 ft.) radius of the tire which the driver side knee airbag is tied to.

iii. Press SST activation switch to deploy the airbag.

CAUTION:

When deploying the airbag, make sure that no one is near the tire.



HINT:

The airbag is deployed as the ED of SST activation switch comes on.

h. Dispose of the driver side knee airbag.

CAUTION:

- **The driver side knee airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a driver side knee airbag with a deployed airbag.**
- **Do not apply water to a driver side knee airbag with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

i. Remove the driver side knee airbag from the tire.

ii. Place the driver side knee airbag in a plastic bag, tie it tightly and dispose of it in the same way as other general parts.

for Preparation Click here

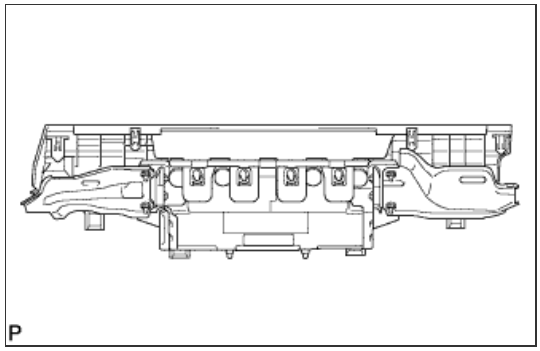
1. CHECK FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (VEHICLE NOT INVOLVED IN COLLISION)

a. Perform a diagnostic system check (Click here).

b. With the front passenger side knee airbag installed on the vehicle, perform a visual check. If there are any defects as mentioned below, replace the front passenger side knee airbag with a new one:
Cuts, minute cracks or marked discoloration on the front passenger side knee airbag.

2. CHECK FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED)



a. Perform a diagnostic system check (Click here).

b. With the front passenger side knee airbag removed from the vehicle, perform a visual check. If there are any defects as mentioned below, replace the front passenger side knee airbag with a new one:

- Cuts, minute cracks or marked discoloration on the front passenger side knee airbag.
- Cracks or other damage to the connector.
- Deformation or cracks on the instrument panel reinforcement.

NOTICE:

For removal and installation procedures of the front passenger side knee airbag, be sure to follow the correct procedure.

for Preparation Click here

HINT:

- **Use the same procedures for the RHD and LHD.**
- **The procedures listed below are the LHD side.**

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE FRONT DOOR SCUFF PLATE RH

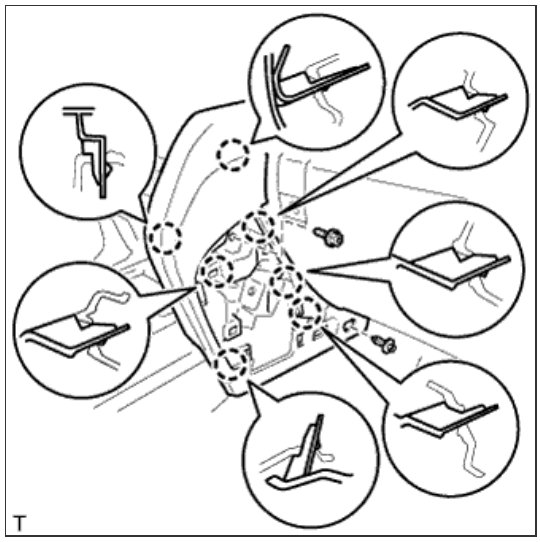
HINT:

Use the same proced res described for the L side.

3. REMOVE NO. 1 INSTRUMENT PANEL FINISH CUSHION

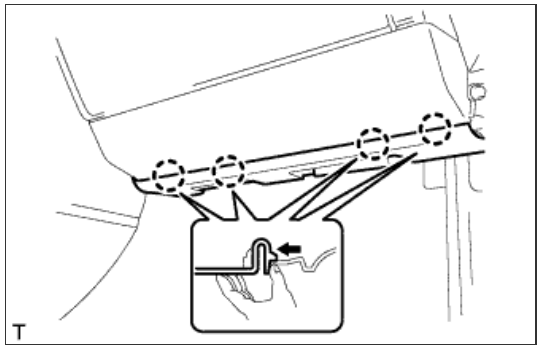
a. Place protective tape as shown in the ill stration.

b. Using a mo ding remover, detach the 7 claws and remove the panel c shion.



4. REMOVE LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY RH

a. Remove the clip.



b. Remove the screw.

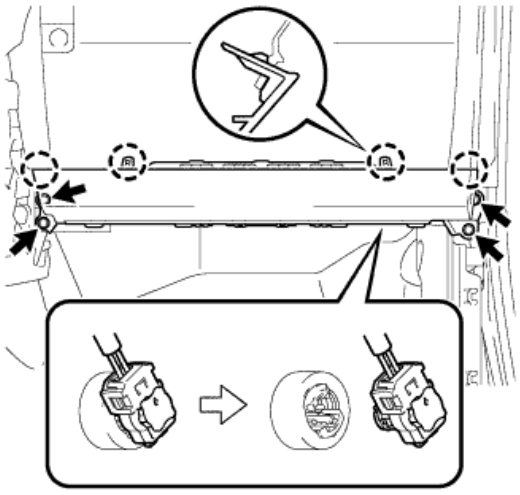
c. Detach the 7 claws and remove the panel.

5. REMOVE NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Floor Under Cover)

a. Detach the 4 claws and remove the nder cover.

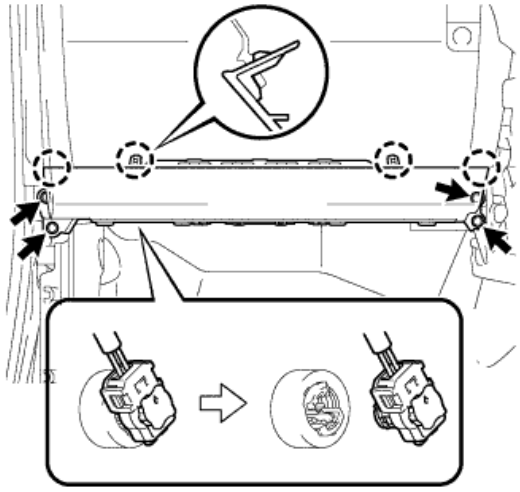
6. REMOVE FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY

a. Remove the 4 bolts.



b. Detach the 4 claws and remove the front passenger side knee airbag.

c. Disconnect the connector.



NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

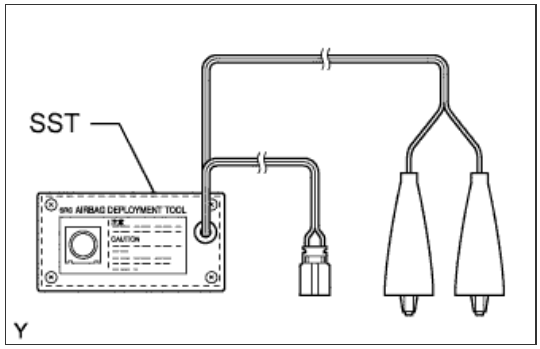
1. DISPOSE OF FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (WHEN INSTALLED IN VEHICLE)

HINT:

Prepare a battery as the power source to deploy the airbag.

a. Check the function of SST (Click here).

b. Read the precaution (Click here).



c. Disconnect the cable from the negative (-) battery terminal.

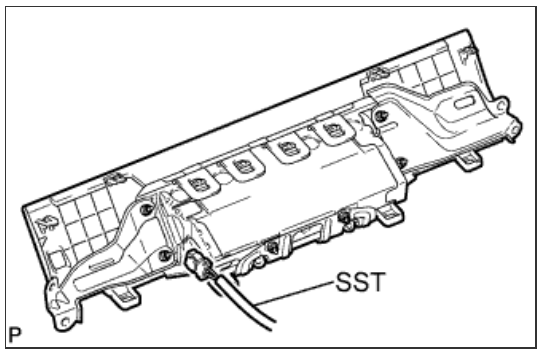
CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

d. Remove the front passenger side knee airbag (Click here).



e. Install SST.

i. Connect SST connector to the front passenger side knee airbag.

SST
09082-00700
09082-00770

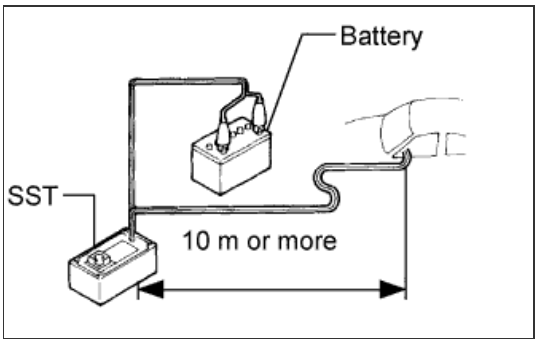
NOTICE:

To avoid damaging SST connector and wire harness, do not lock the secondary lock of the twin lock.

ii. Install the front passenger side knee airbag (Click here).

NOTICE:

Take care not to damage SST wire harness.



iii. Move SST at least 10 m (32.8 ft.) away from the vehicle front side window.

iv. Maintaining enough clearance for SST wire harness in the front side window, close all doors and windows of the vehicle.

NOTICE:

Take care not to damage SST wire harness.

v. Connect the red clip of SST to the battery positive ( ) terminal and the black clip of SST to the battery negative (-) terminal.

f. Deploy the airbag.

i. Check that no one is inside the vehicle or within a 10 m (32.8 ft.) radius of the vehicle.

ii. Press SST activation switch to deploy the airbag.

CAUTION:

- **When deploying the airbag, make sure that no one is near the vehicle.**
- **The front passenger side knee airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front passenger side knee airbag assembly with a deployed airbag.**
- **Do not apply water to a front passenger side knee airbag with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

HINT:

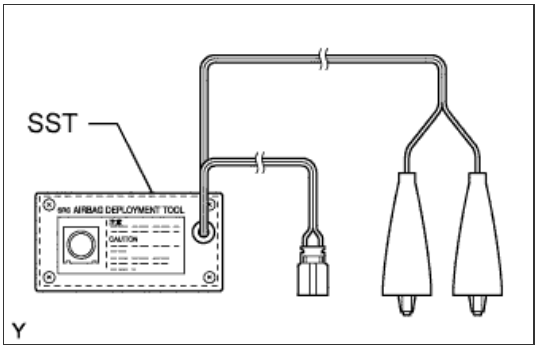
The airbag is deployed as the ED of SST activation switch comes on.

2. DISPOSE OF FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (WHEN NOT INSTALLED IN VEHICLE)

NOTICE:

Be sure to follow the procedure detailed below when deploying the airbag.

HINT:



Prepare a battery as the power source to deploy the airbag.

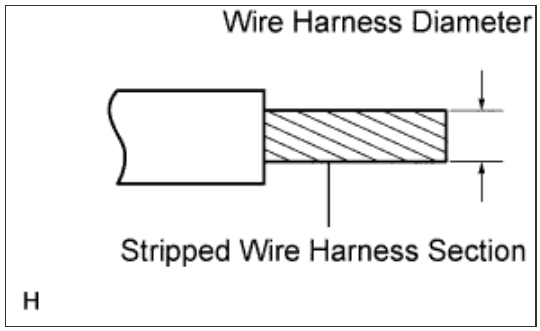
a. Check the function of SST (Click here).

b. Remove the front passenger side knee airbag (Click here).

CAUTION:

- **When removing the front passenger side knee airbag, wait at least 90 seconds after the engine switch is turned off and the cable is disconnected from the negative (-) battery terminal before starting work.**
- **When storing the front passenger side knee airbag, keep the airbag deployment side facing upward.**

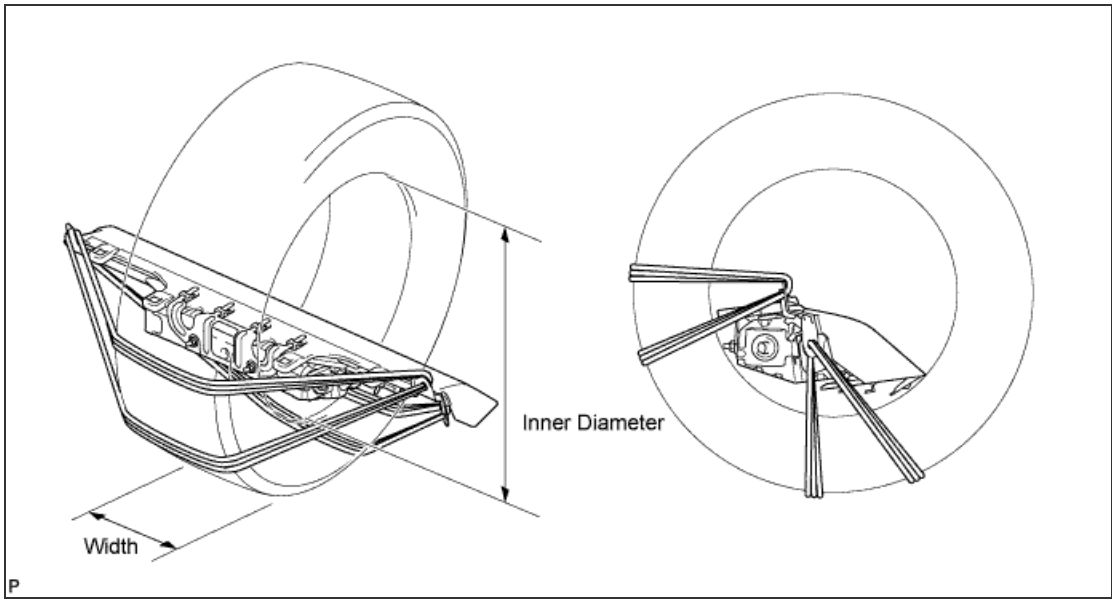
c. Using a service-purpose wire harness for the vehicle, tie down the front passenger side knee airbag to a tire.



Cross-sectional area of stripped wire harness section:
1.25 mm^2 or more (0.00192 $in.^2$ or more)

CAUTION:

If the wire harness is too thin or an alternative object is used to tie down the front passenger side knee airbag, it may be snapped by the shock when the airbag is deployed. Always use a wire harness for vehicle use with a cross-sectional area of at least 1.25 mm^2 (0.00192 $in.^2$).



HINT:

To calculate the cross-sectional area of the stripped wire harness section
Cross-sectional area 3.1 (Diameter)^2 divided by 4

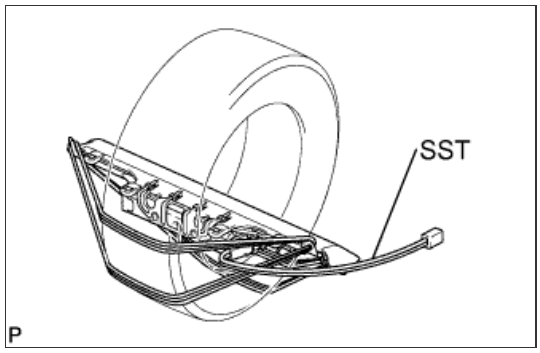
i. Position the front passenger side knee airbag inside a tire with the airbag deployment side facing inside.

Tire size:
Must exceed the following dimensions
Width:
185 mm (7.28 in.)
Inner diameter:
360 mm (14.2 in.)

ii. Tie the front passenger side knee airbag to the tire with several wire harnesses.

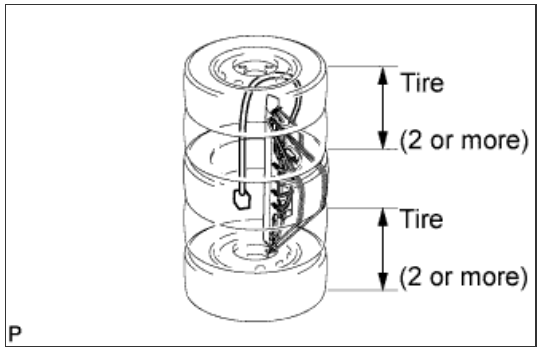
CAUTION:

- **Make sure that the wire harnesses are tight. If there is slack in the wire harnesses, the front passenger side knee airbag may become loose due to the shock when the airbag is deployed.**
- **Always tie down the front passenger side knee airbag with the airbag deployment side facing inside the tire.**



NOTICE:

As the tire may be damaged by the airbag deployment, use a tire that you are planning to throw away.

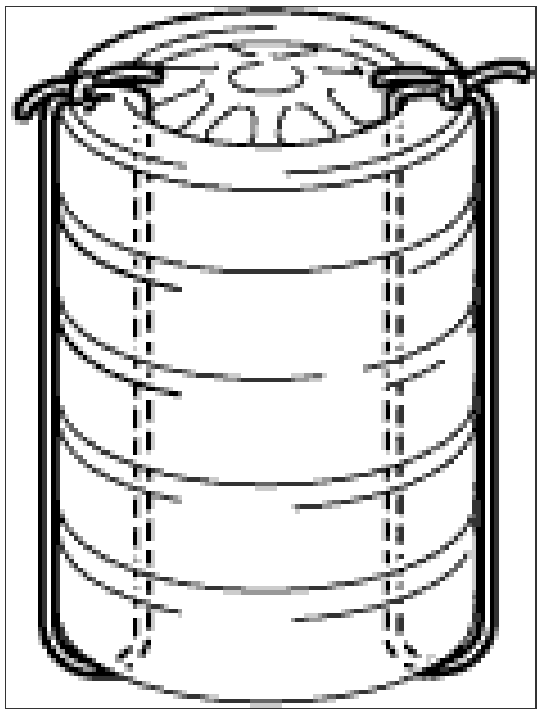


d. Install SST.

i. Connect SST connector to the front passenger side knee airbag.

SST
09082-00770

e. Place tires.

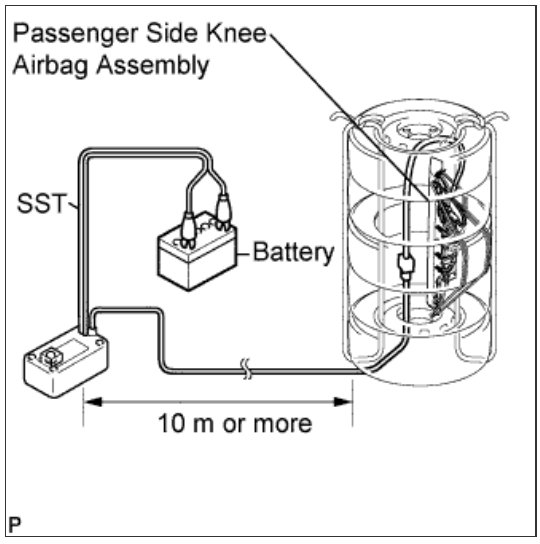


i. Place at least 2 tires under the tire which the front passenger side knee airbag is tied to.

ii. Place at least 2 tires over the tire which the front passenger side knee airbag is tied to. The top tire should have a disc wheel installed.

NOTICE:

- **Do not place SST connector under the tire because it could be damaged.**
- **As the disc wheel may be damaged by the airbag deployment, use a disc wheel that you are planning to throw away.**
- **As the tires may be damaged by the airbag deployment, use tires that you are planning to throw away.**



iii. Tie the tires together with 2 wire harnesses.

CAUTION:

Make sure that the wire harnesses are tight. ooseness in the wire harnesses results in the tires coming free due to the shock when the airbag is deployed.

f. Install SST.

i. Connect SST connector.

SST
09082-00700

NOTICE:

To avoid damaging SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for SST wire harness inside the tire.

g. Deploy the airbag.

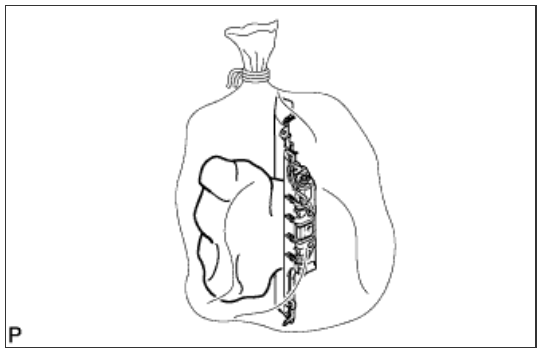
i. Connect the red clip of SST to the battery positive ( ) terminal and the black clip of SST to the battery negative (-) terminal.

ii. Check that no one is within a 10 m (32.8 ft.) radius of the tire which the front passenger side knee airbag is tied to.

iii. Press SST activation switch to deploy the airbag.

CAUTION:

When deploying the airbag, make sure that no one is near the tire.



HINT:

The airbag is deployed as the ED of SST activation switch comes on.

h. Dispose of the front passenger side knee airbag.

CAUTION:

- **The front passenger side knee airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front passenger side knee airbag with a deployed airbag.**
- **Do not apply water to a front passenger side knee airbag with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

i. Remove the front passenger side knee airbag from the tire.

ii. Place the front passenger side knee airbag in a plastic bag, tie it tightly and dispose of it in the same way as other general parts.

for Preparation Click here

HINT:

When scrapping a vehicle equipped with the SRS or disposing of the steering pad, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of the DISTRIBUTOR..

CAUTION:

- **Never dispose of a front passenger side knee airbag that has an unactivated airbag.**
- **The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.**
- **When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- **When deploying the airbag, perform the operation at least 10 m (32.8 ft.) away from the front passenger side knee airbag.**
- **The front passenger side knee airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front passenger side knee airbag with a deployed airbag.**
- **Do not apply water to a front passenger side knee airbag assembly with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**
- **An airbag or pretensioner may be activated by static electricity. To prevent this, be sure to touch a metal surface with bare hands to discharge static electricity before performing this procedure.**

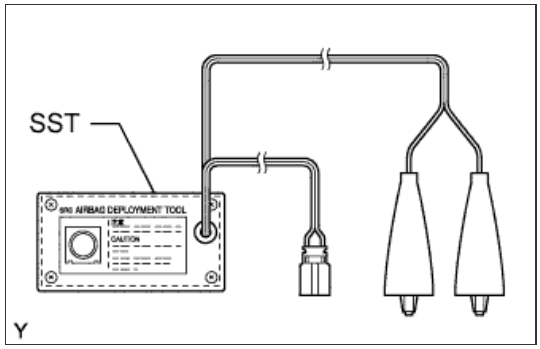
1. DISPOSE OF FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (WHEN INSTALLED IN VEHICLE)

HINT:

Prepare a battery as the power source to deploy the airbag.

a. Check the function of SST (Click here).

b. Read the precaution (Click here).



c. Disconnect the cable from the negative (-) battery terminal.

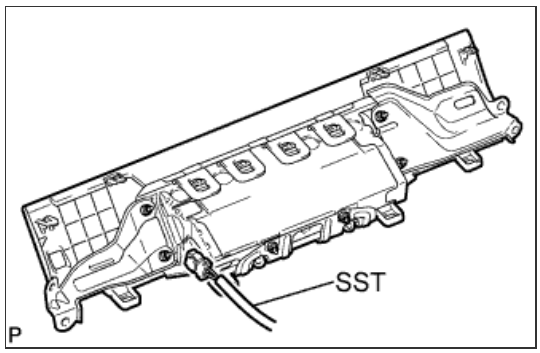
CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

d. Remove the front passenger side knee airbag (Click here).



e. Install SST.

i. Connect SST connector to the front passenger side knee airbag.

SST
09082-00700
09082-00770

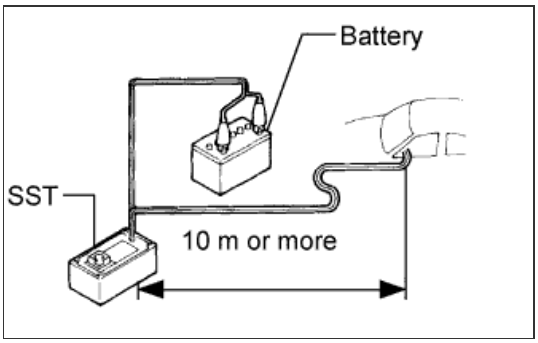
NOTICE:

To avoid damaging SST connector and wire harness, do not lock the secondary lock of the twin lock.

ii. Install the front passenger side knee airbag (Click here).

NOTICE:

Take care not to damage SST wire harness.



iii. Move SST at least 10 m (32.8 ft.) away from the vehicle front side window.

iv. Maintaining enough clearance for SST wire harness in the front side window, close all doors and windows of the vehicle.

NOTICE:

Take care not to damage SST wire harness.

v. Connect the red clip of SST to the battery positive ( ) terminal and the black clip of SST to the battery negative (-) terminal.

f. Deploy the airbag.

i. Check that no one is inside the vehicle or within a 10 m (32.8 ft.) radius of the vehicle.

ii. Press SST activation switch to deploy the airbag.

CAUTION:

- **When deploying the airbag, make sure that no one is near the vehicle.**
- **The front passenger side knee airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front passenger side knee airbag assembly with a deployed airbag.**
- **Do not apply water to a front passenger side knee airbag with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

HINT:

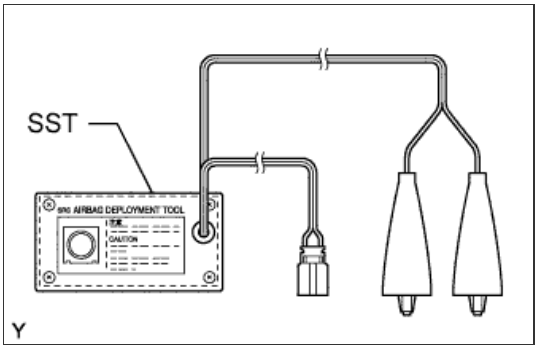
The airbag is deployed as the ED of SST activation switch comes on.

2. DISPOSE OF FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (WHEN NOT INSTALLED IN VEHICLE)

NOTICE:

Be sure to follow the procedure detailed below when deploying the airbag.

HINT:



Prepare a battery as the power source to deploy the airbag.

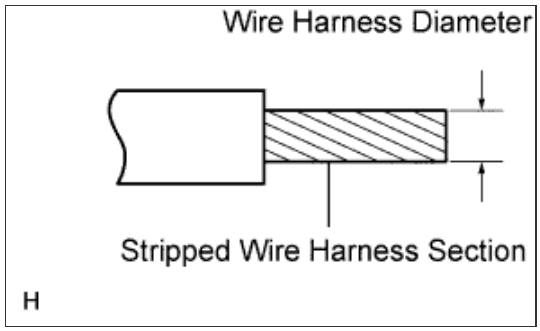
a. Check the function of SST (Click here).

b. Remove the front passenger side knee airbag (Click here).

CAUTION:

- **When removing the front passenger side knee airbag, wait at least 90 seconds after the engine switch is turned off and the cable is disconnected from the negative (-) battery terminal before starting work.**
- **When storing the front passenger side knee airbag, keep the airbag deployment side facing upward.**

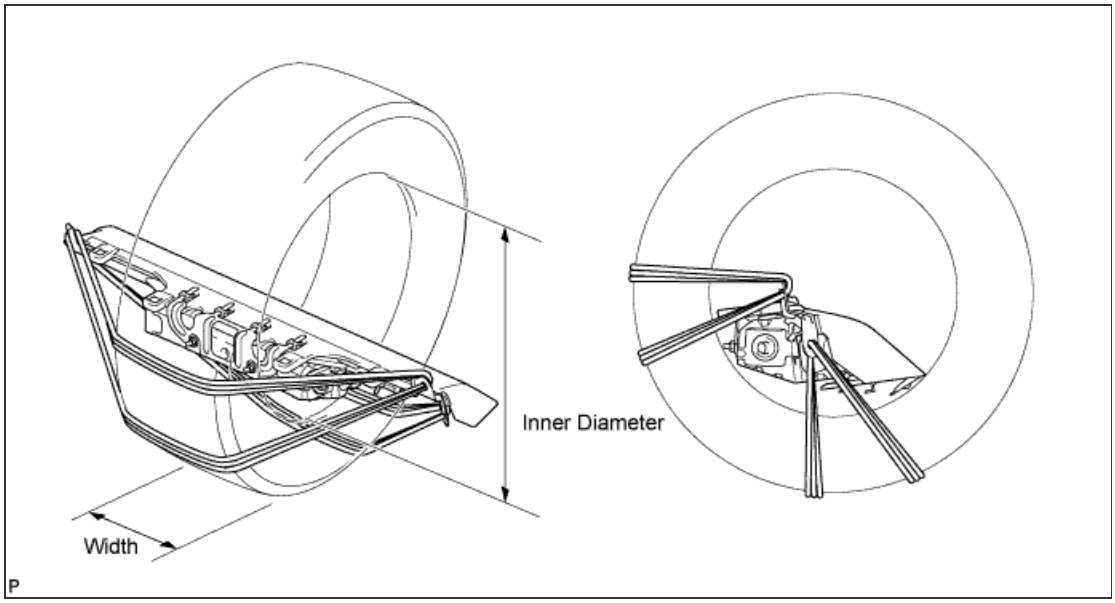
c. Using a service-purpose wire harness for the vehicle, tie down the front passenger side knee airbag to a tire.



Cross-sectional area of stripped wire harness section:
1.25 mm^2 or more (0.00192 $in.^2$ or more)

CAUTION:

If the wire harness is too thin or an alternative object is used to tie down the front passenger side knee airbag, it may be snapped by the shock when the airbag is deployed. Always use a wire harness for vehicle use with a cross-sectional area of at least 1.25 mm^2 (0.00192 $in.^2$).



HINT:

To calculate the cross-sectional area of the stripped wire harness section
Cross-sectional area 3.1 (Diameter)^2 divided by 4

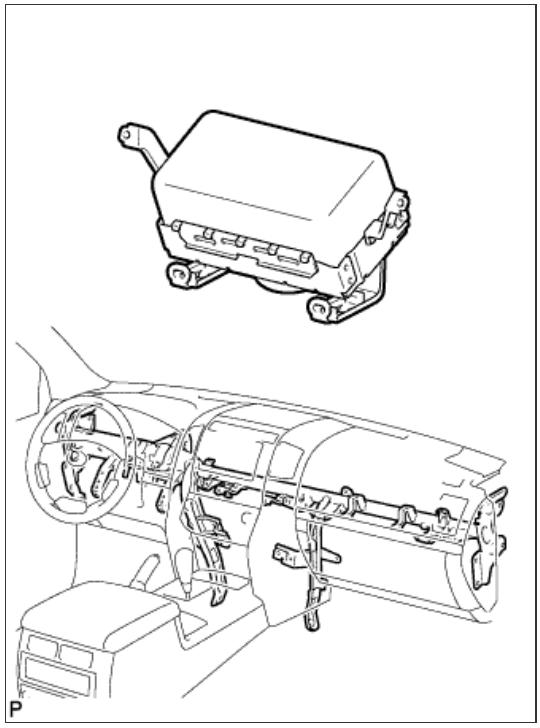
for Preparation Click here

1. CHECK FRONT PASSENGER AIRBAG ASSEMBLY (VEHICLE NOT INVOLVED IN COLLISION

a. Perform a diagnostic system check (Click here).

b. With the front passenger airbag installed on the vehicle, perform a visual check. If there are any defects as mentioned below, replace the instrument panel with a new one:
Cuts, minute cracks or marked discoloration on the instrument panel around the front passenger airbag.

. CHECK FRONT PASSENGER AIRBAG ASSEMBLY (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED



a. Perform a diagnostic system check (Click here).

b. With the front passenger airbag removed from the vehicle, perform a visual check. If there are any defects as mentioned below, replace the front passenger airbag, instrument panel or instrument panel reinforcement with a new one:

- Cuts, minute cracks or marked discoloration on the front passenger airbag.
- Cracks or other damage to the connectors.
- Deformation or cracks on the instrument panel or instrument panel reinforcement.

NOTICE:

For removal and installation procedures of the front passenger airbag, be sure to follow the correct procedure.

for Preparation Click here

HINT:

- **Use the same procedures for the RHD and LHD.**
- **The procedures listed below are the LHD side.**

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

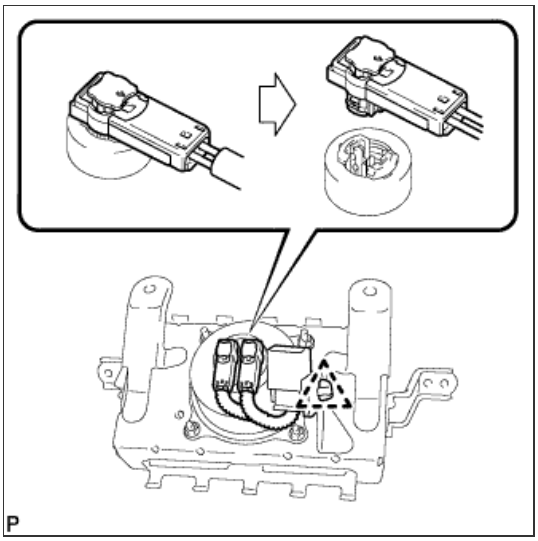
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

- **After the engine switch is turned off, the navigation system requires approximately 90 seconds to record various types of memory and settings. As a result, after turning the engine switch off, wait 90 seconds or more before disconnecting the cable from the negative (-) battery terminal.**
- **When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).**

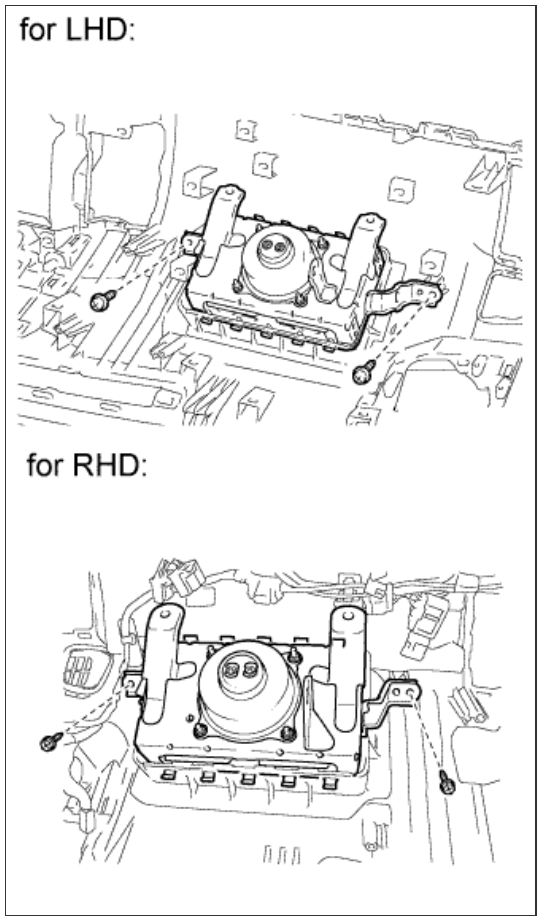
2. REMOVE INSTRUMENT PANEL SAFETY PAD

a. Remove the instrument panel safety pad (Click here).



3. REMOVE FRONT PASSENGER AIRBAG ASSEMBLY

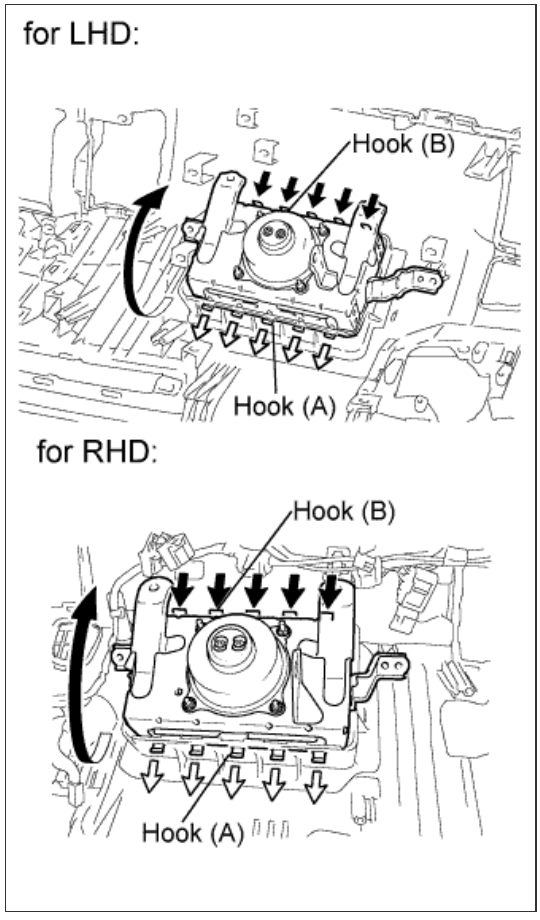
a. Detach the claw and remove the wire.



b. Disconnect the 2 connectors and remove the instrument panel wire from the front passenger airbag.

NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.



c. Remove the 2 screws.

d. Detach the 5 hooks (A).

e. Detach the 5 hooks (B) and remove the front passenger airbag from the instrument panel.

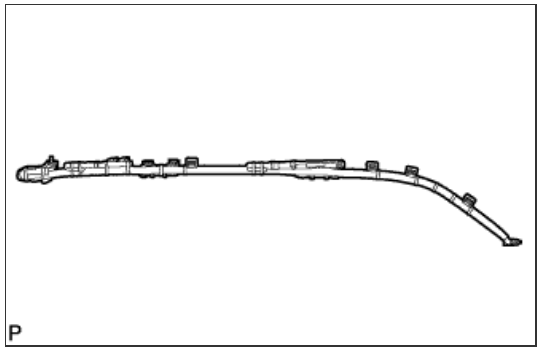
2. CHECK VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED



a. Perform a diagnostic system check (Click here).

b. With the curtain shield airbag removed from the vehicle, perform a visual check. If there are any defects as mentioned below, replace the curtain shield airbag with a new one:

- Cuts, minute cracks or marked discoloration on the curtain shield airbag.
- Cracks or other damage to the connectors.

NOTICE

For removal and installation procedures of the curtain shield airbag, be sure to follow the correct procedure.

for Preparation Click here

HINT:

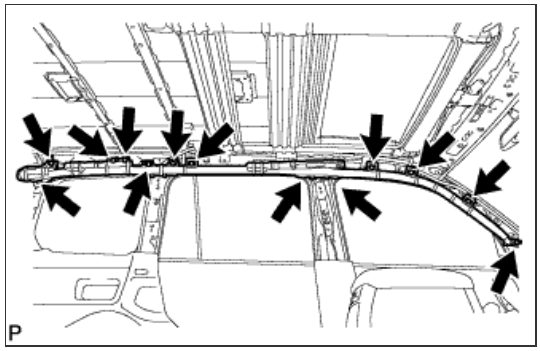
- **Use the same procedures for the LH side and RH side.**
- **The procedures listed below are for the LH side.**

1. REMOVE ROOF HEADLINING ASSEMBLY (w/ Sliding Roof)

a. Remove the roof headlining (Click here).

2. REMOVE ROOF HEADLINING ASSEMBLY (w/o Sliding Roof)

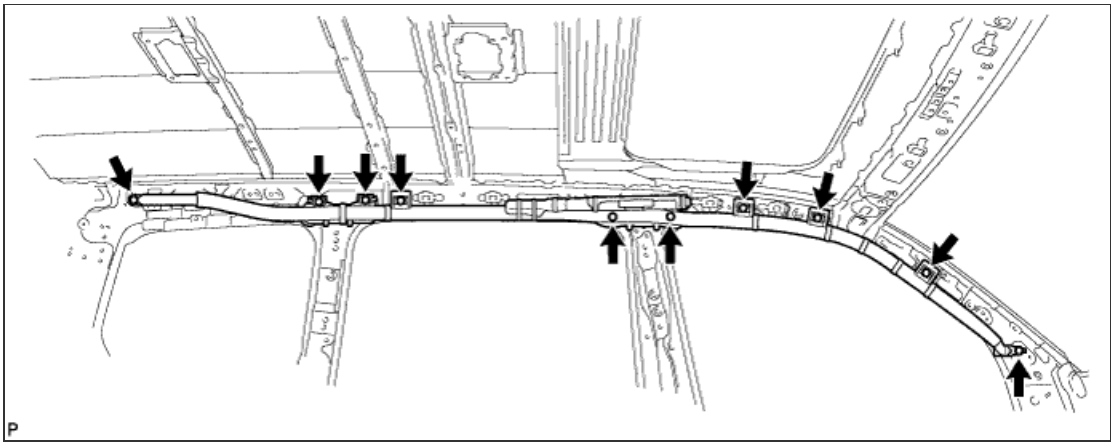
a. Remove the roof headlining (Click here).



3. REMOVE CURTAIN SHIELD AIRBAG ASSEMBLY (w/ Rear No. 2 Seat)

a. Disconnect the connector.

NOTICE:



In handling the airbag connector, take care not to damage the airbag wire harness.

b. Remove the 13 bolts and curtain shield airbag.

4. REMOVE CURTAIN SHIELD AIRBAG ASSEMBLY (w/o Rear No. 2 Seat)

a. Disconnect the connector.

NOTICE:

In handling the airbag connector, take care not to damage the airbag wire harness.

b. Remove the 10 bolts and curtain shield airbag.

for Preparation Click here

HINT:

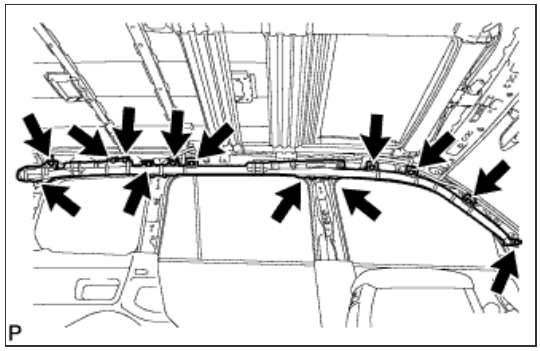
- **Use the same procedures for the LH side and RH side.**
- **The procedures listed below are for the LH side.**

1. REMOVE ROOF HEADLINING ASSEMBLY (w/ Sliding Roof)

a. Remove the roof headlining (Click here).

2. REMOVE ROOF HEADLINING ASSEMBLY (w/o Sliding Roof)

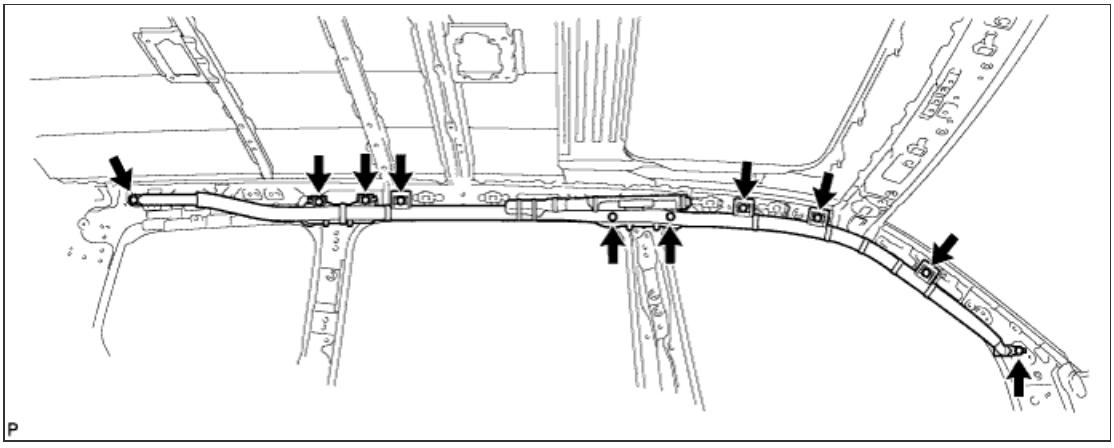
a. Remove the roof headlining (Click here).



3. REMOVE CURTAIN SHIELD AIRBAG ASSEMBLY (w/ Rear No. 2 Seat)

a. Disconnect the connector.

NOTICE:



In handling the airbag connector, take care not to damage the airbag wire harness.

b. Remove the 13 bolts and curtain shield airbag.

4. REMOVE CURTAIN SHIELD AIRBAG ASSEMBLY (w/o Rear No. 2 Seat)

a. Disconnect the connector.

NOTICE:

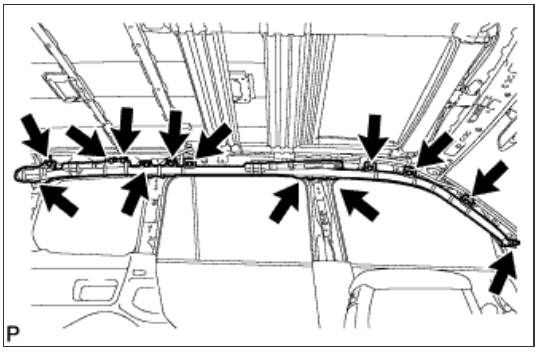
In handling the airbag connector, take care not to damage the airbag wire harness.

b. Remove the 10 bolts and curtain shield airbag.

for Preparation Click here

HINT:

- **Use the same procedures for the LH side and RH side.**
- **The procedures listed below are for the LH side.**



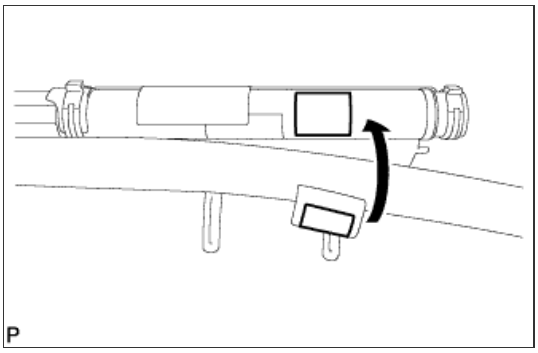
1. INSTALL CURTAIN SHIELD AIRBAG ASSEMBLY (w/ Rear No. 2 Seat)

a. Install the curtain shield airbag with the 13 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

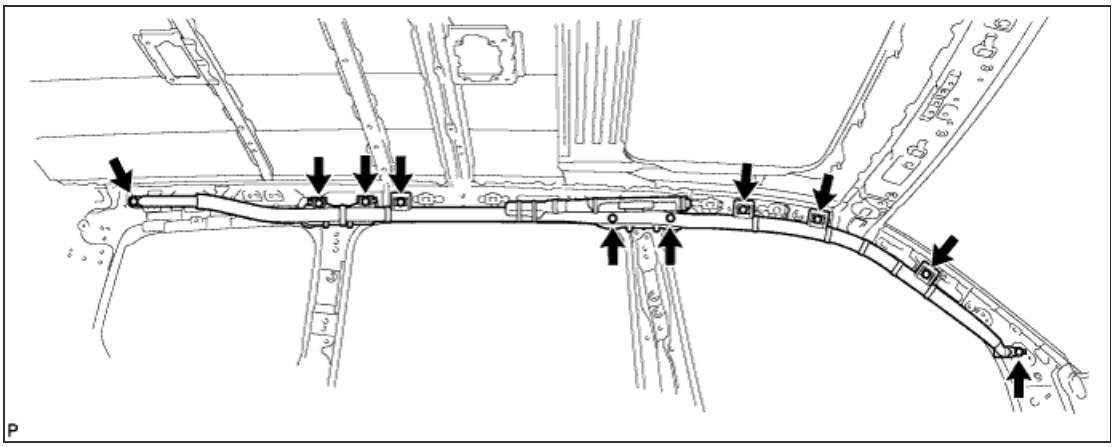
NOTICE:

Do not twist the curtain shield airbag when installing it.



b. After installing the bolts, put the curtain shield airbag onto the bracket and close the dual lock fastener.

c. Connect the connector.



NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

2. INSTALL CURTAIN SHIELD AIRBAG ASSEMBLY (w/o Rear No. 2 Seat)

a. Install the curtain shield airbag with the 10 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

NOTICE:

Do not twist the curtain shield airbag when installing it.

b. Connect the connector.

NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

3. INSTALL ROOF HEADLINING ASSEMBLY (w/ Sliding Roof)

a. Install the roof headlining (Click here).

4. INSTALL ROOF HEADLINING ASSEMBLY (w/o Sliding Roof)

a. Install the roof headlining (Click here).

5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initiali ed after the cable is reconnected (Click here).

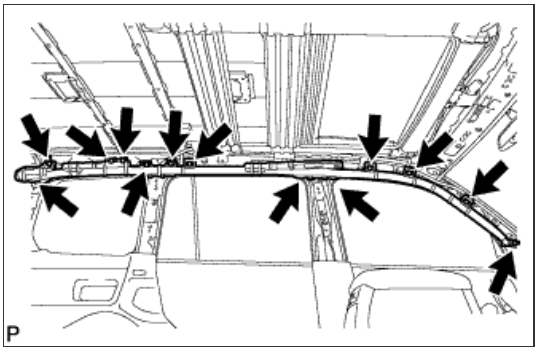
6. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).

for Preparation Click here

HINT:

- **Use the same procedures for the LH side and RH side.**
- **The procedures listed below are for the LH side.**



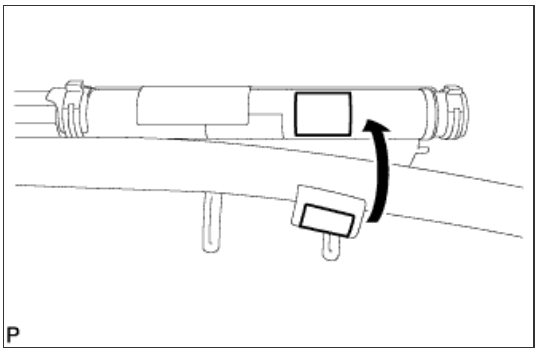
1. INSTALL CURTAIN SHIELD AIRBAG ASSEMBLY (w/ Rear No. 2 Seat)

a. Install the curtain shield airbag with the 13 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

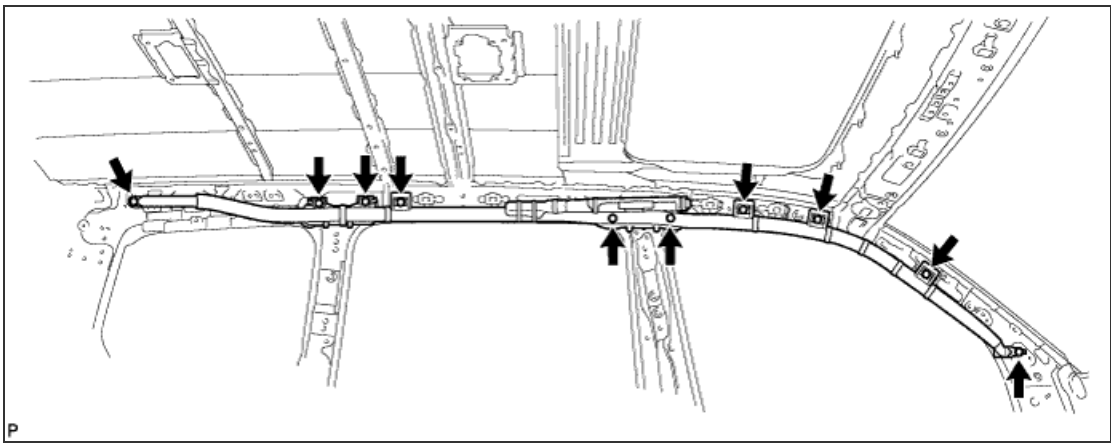
NOTICE:

Do not twist the curtain shield airbag when installing it.



b. After installing the bolts, put the curtain shield airbag onto the bracket and close the dual lock fastener.

c. Connect the connector.



NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

2. INSTALL CURTAIN SHIELD AIRBAG ASSEMBLY (w/o Rear No. 2 Seat)

a. Install the curtain shield airbag with the 10 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

NOTICE:

Do not twist the curtain shield airbag when installing it.

b. Connect the connector.

NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

3. INSTALL ROOF HEADLINING ASSEMBLY (w/ Sliding Roof)

a. Install the roof headlining (Click here).

4. INSTALL ROOF HEADLINING ASSEMBLY (w/o Sliding Roof)

a. Install the roof headlining (Click here).

5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initiali ed after the cable is reconnected (Click here).

6. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).

for Preparation Click here

HINT:

When scrapping a vehicle equipped with the SRS or disposing of the steering pad, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of the DISTRIBUTOR..

CAUTION:

- **Never dispose of a curtain shield airbag that has an unactivated airbag.**
- **The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.**
- **When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- **When deploying the airbag, perform the operation at least 10 m (32.8 ft.) away from the curtain shield airbag.**
- **The curtain shield airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a curtain shield airbag with a deployed airbag.**
- **Do not apply water to a curtain shield airbag with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**
- **An airbag or pretensioner may be activated by static electricity. To prevent this, be sure to touch a metal surface with bare hands to discharge static electricity before performing this procedure.**

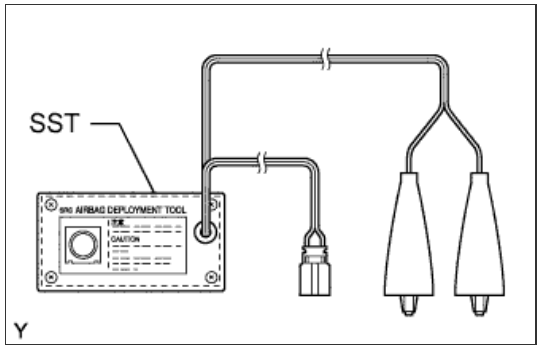
1. DISPOSE OF CURTAIN SHIELD AIRBAG ASSEMBLY (WHEN INSTALLED IN VEHICLE)

HINT:

Prepare a battery as the power source to deploy the airbag.

a. Check the function of SST (Click here).

b. Read the precaution (Click here).



c. Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

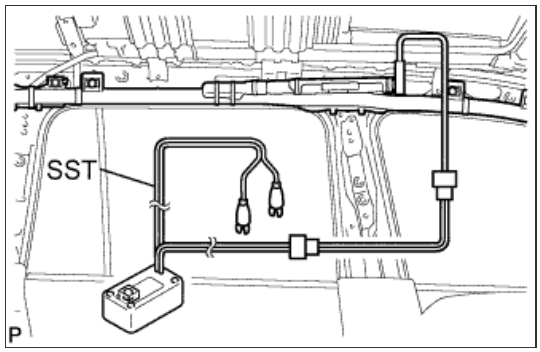
When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

d. Remove the roof headlining (w/ Sliding Roof) (Click here).

e. Remove the roof headlining (w/o Sliding Roof) (Click here).

f. Install SST.

i. Disconnect the connector from the curtain shield airbag.



NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

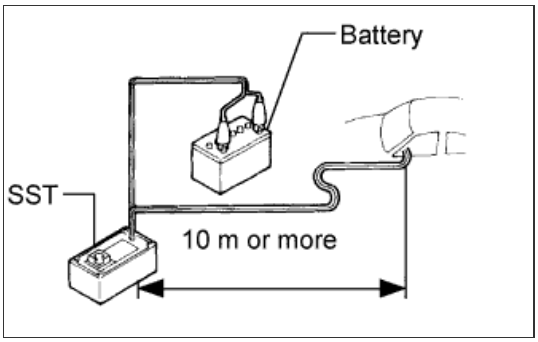
ii. After connecting SST to each other, connect them to the curtain shield airbag.

SST

09082-00700
09082-00802 (09082-10801, 09082-40800)

NOTICE:

To avoid damaging SST connector and wire harness, do not lock the secondary lock of the twin lock.



iii. Move SST at least 10 m (.8 ft.) away from the vehicle rear side window.

iv. Maintaining enough clearance for SST wire harness in the rear side window, close all doors and windows of the vehicle.

NOTICE:

Take care not to damage SST wire harness.

v. Connect the red clip of SST to the battery positive ( ) terminal and black clip of SST to the battery negative (-) terminal.

g. Deploy the airbag.

i. Check that no one is inside the vehicle or within a 10 m (.8 ft.) radius of the vehicle.

ii. Press SST activation switch to deploy the airbag.

CAUTION:

- **When deploying the airbag, make sure that no one is near the vehicle.**
- **The curtain shield airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a curtain shield airbag with a deployed airbag.**
- **Do not apply water to a curtain shield airbag with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

HINT:

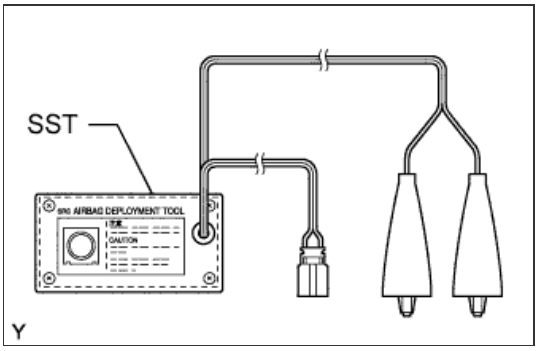
The airbag is deployed as the LED of SST activation switch comes on.

2. DISPOSE OF CURTAIN SHIELD AIRBAG ASSEMBLY (WHEN NOT INSTALLED IN VEHICLE)

CAUTION:

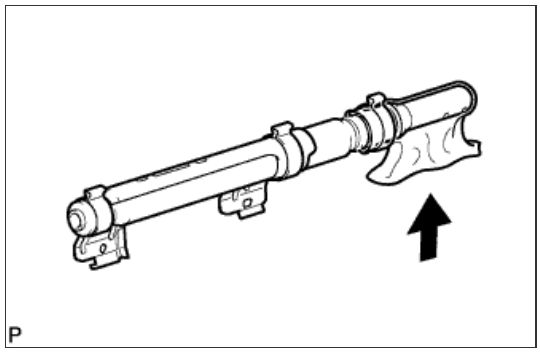
Be sure to follow the procedure detailed below when deploying the airbag.

HINT:



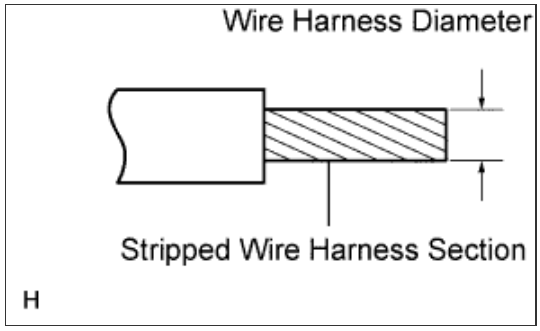
Prepare a battery as the power source to deploy the airbag.

a. Check the function of SST (Click here).



b. Remove the curtain shield airbag (Click here).

CAUTION:



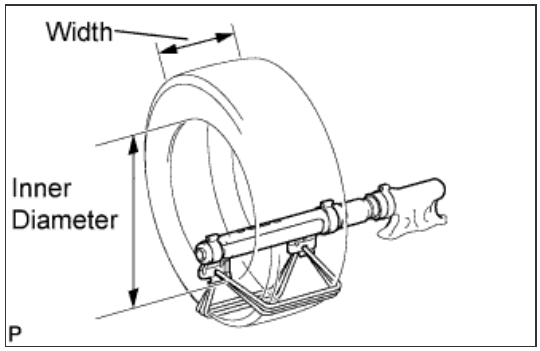
When removing the curtain shield airbag, wait at least 90 seconds after the engine switch is turned off and the cable is disconnected from the negative (-) battery terminal before starting work.

c. Cut off the deployment section of the curtain shield airbag.

d. Using a service-purpose wire harness for the vehicle, tie down the curtain shield airbag to a tire.

Cross-sectional area of stripped wire harness section:
1.25 mm^2 (0.00192 in.^{2}) or more

CAUTION:



If the wire harness is too thin or an alternative object is used to tie down the curtain shield airbag, it may be snapped by the shock when the airbag is deployed. Always use a wire harness for vehicle use with a cross-sectional area of at least 1.2 mm^2 (0.00192 in.^{2}).

HINT:

To calculate the cross-sectional area of the stripped wire harness section

Cross-sectional area .14 (Diameter)^2 divided by 4

i. Position the curtain shield airbag inside a tire as shown in the illustration.

Tire size:
Must exceed the following dimensions
Width:
185 mm (7.28 in.)
Inner diameter:
360 mm (14.2 in.)

ii. Tie the curtain shield airbag to the tire with several wire harnesses.

CAUTION:

Make sure that the wire harnesses are tight. If there is slack in the wire harnesses, the curtain shield airbag may become loose due to the shock when the airbag is deployed.

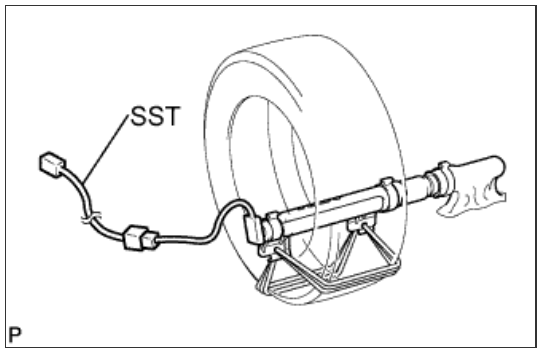
NOTICE:

As the tire may be damaged by the airbag deployment, use a tire that you are planning to throw away.

e. Install SST.

i. After connecting SST to each other, connect them to the curtain shield airbag.

SST
09082-00802 (09082-10801, 09082-40800)

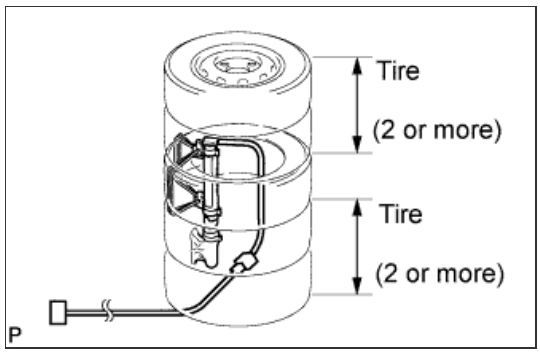


f. Place tires.

NOTICE:

Do not place the curtain shield airbag with the deployment direction facing the ground.

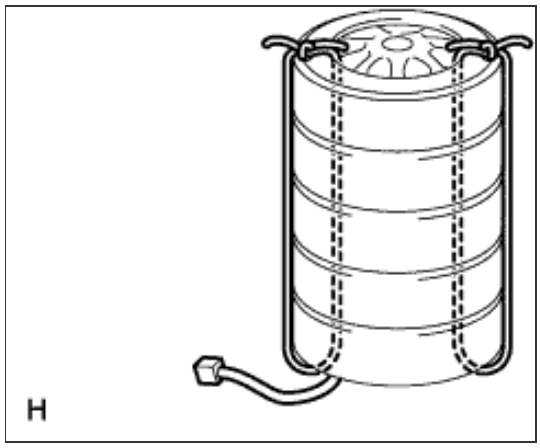
i. Place at least 2 tires under the tire which the curtain shield airbag is



tied to.

ii. Place at least 2 tires over the tire which the curtain shield airbag is tied to. The top tire should have a disc wheel installed.

NOTICE:

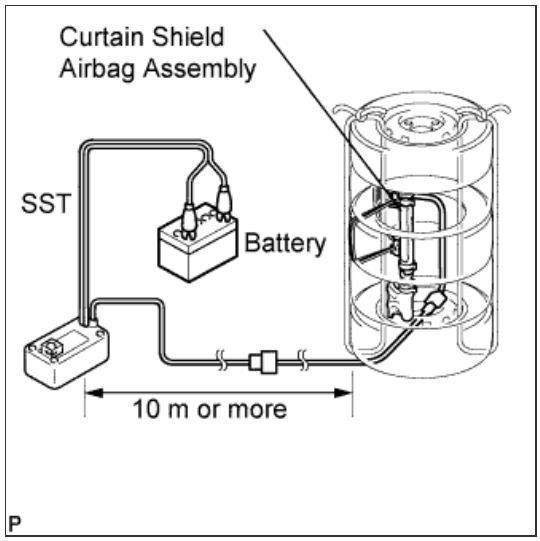


- **Do not place SST connector under the tire because it could be damaged.**
- **As the disc wheel may be damaged by the airbag deployment, use a disc wheel that you are planning to throw away.**
- **As the tires may be damaged by the airbag deployment, use tires that you are planning to throw away.**

iii. Tie the tires together with 2 wire harnesses.

NOTICE:

Make sure that the wire harnesses are tight. Looseness in the wire harnesses results in the tires coming free due to the shock when the airbag is deployed.



g. Install SST.

i. Connect SST connector.

SST
09082-00700

NOTICE:

To avoid damaging SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for SST wire harness inside the tire.

h. Deploy the airbag.

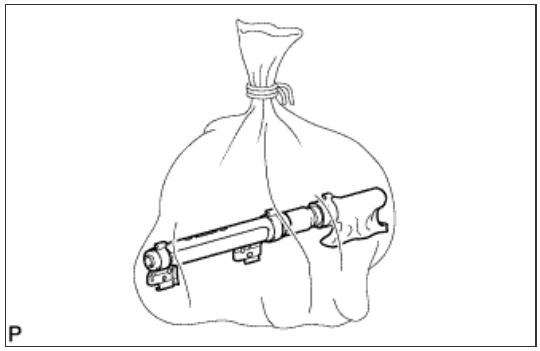
i. Connect the red clip of SST to the battery positive ( ) terminal and the black clip of SST to the battery negative (-) terminal.

ii. Check that no one is within a 10 m (.8 ft.) radius of the tire which the curtain shield airbag is tied to.

iii. Press SST activation switch to deploy the airbag.

CAUTION:

When deploying the airbag, make sure that no one is near the tire.



HINT:

The airbag is deployed as the LED of SST activation switch comes on.

i. Dispose of the curtain shield airbag.

CAUTION:

- **The curtain shield airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a curtain shield airbag with a deployed airbag.**
- **Do not apply water to a curtain shield airbag with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

i. Remove the curtain shield airbag from the tire.

ii. Place the curtain shield airbag in a plastic bag, tie it tightly and dispose of it in the same way as other general parts.

for Preparation Click here

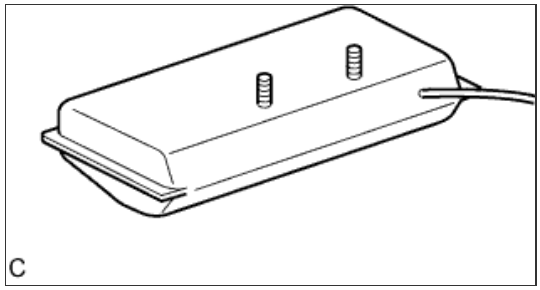
1. CHECK FRONT SEAT SIDE AIRBAG ASSEMBLY (VEHICLE NOT INVOLVED IN COLLISION)

a. Perform a diagnostic system check (Click here).

b. With the front seat side airbag installed on the vehicle, perform a visual check. If there are any defects as mentioned below, replace the front seat with a new one: Cuts, minute cracks or marked discoloration on the front seatback around the front seat side airbag.



2. CHECK FRONT SEAT SIDE AIRBAG ASSEMBLY (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED)

a. Perform a diagnostic system check (Click here).

b. With the front seat side airbag removed from the vehicle, perform a visual check. If there are any defects as mentioned below, replace the front seat side airbag with a new one:

- Cuts, minute cracks or marked discoloration on the front seat side airbag.
- Cracks or other damage to the wire harness or connector.

NOTICE:

For removal and installation procedures of the front seat side airbag, be sure to follow the correct procedure.

for Preparation Click here

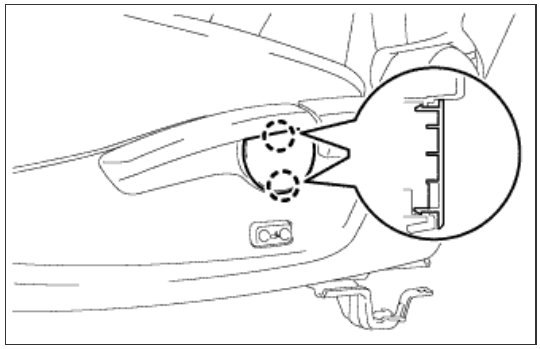
CAUTION:

Wear protective gloves. Sharp areas on the parts may injure your hands.

HINT:

- **Use the same procedures for LHD and RHD vehicles.**
- **The procedures listed below are for LHD vehicles.**

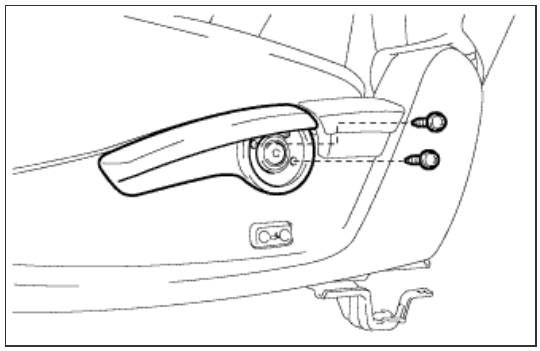
1. REMOVE FRONT SEAT ASSEMBLY LH



a. Remove the front seat assembly LH (Click here).

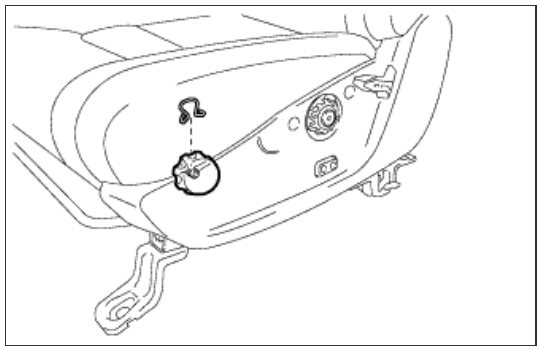
2. REMOVE VERTICAL ADJUSTER COVER LH (for 8 Way Seat Type)

a. Using a screwdriver, detach the 2 claws and remove the vertical adjuster cover.



HINT:

Tape the screwdriver tip before use.

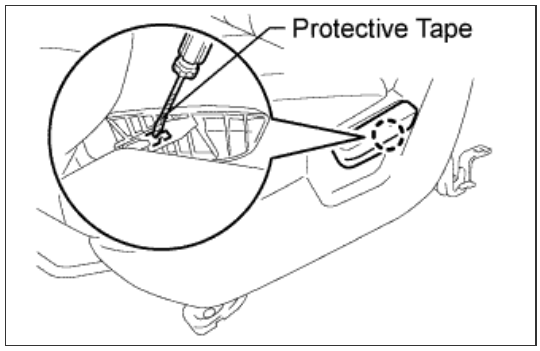


3. REMOVE VERTICAL ADJUSTING HANDLE LH (for 8 Way Seat Type)

a. Remove the 2 screws and vertical adjusting handle.

4. REMOVE VERTICAL SEAT ADJUSTER KNOB (for 8 Way Seat Type)

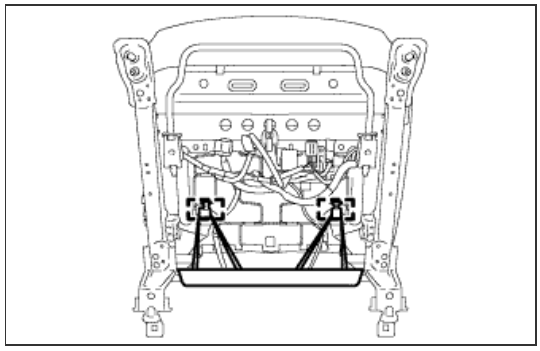
a. Remove the snap ring and vertical seat adjuster knob.



5. REMOVE RECLINING ADJUSTER RELEASE HANDLE LH

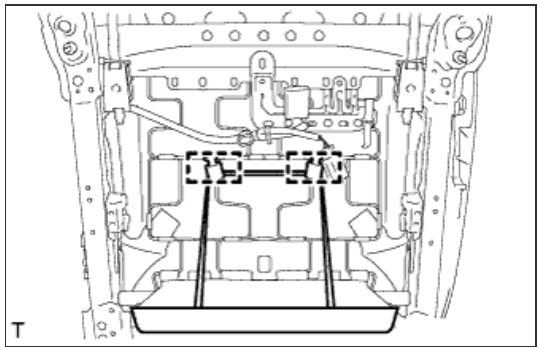
a. Lift the reclining adjuster release handle.

b. Using a screwdriver, detach the claw and remove the reclining adjuster release handle.



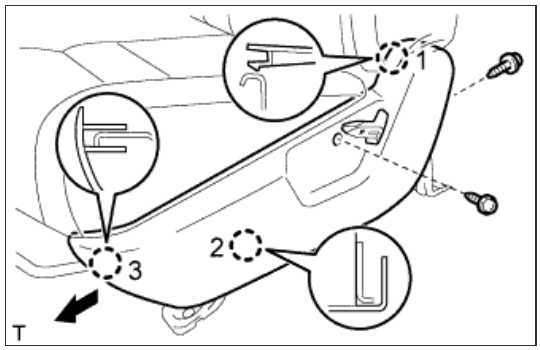
HINT:

Tape the screwdriver tip before use.



6. REMOVE FRONT SEAT CUSHION SHIELD LH

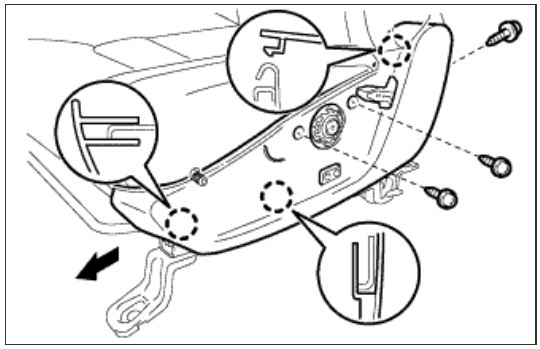
a. w/ Seatback Board:
Remove the 2 rubber bands from the hooks.



b. w/o Seatback Board:
Remove the 2 rubber bands from the hooks.

c. for 4 Way Seat Type:

i. Remove the 2 screws.

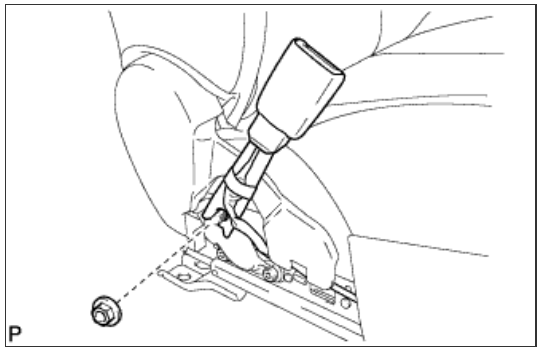


ii. Detach the 3 claws in the order shown in the illustration, and then remove the cushion shield.

d. for 8 Way Seat Type:

i. Remove the 3 screws.

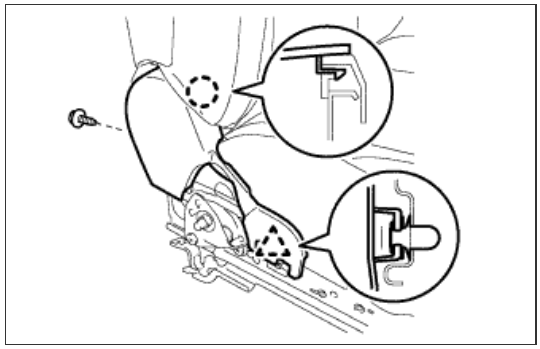
ii. Detach the 3 claws in the order shown in the illustration, and then remove the cushion shield.



e. w/ Lumbar Support:
Disconnect the lumbar switch connector.

7. REMOVE FRONT SEAT INNER BELT ASSEMBLY LH

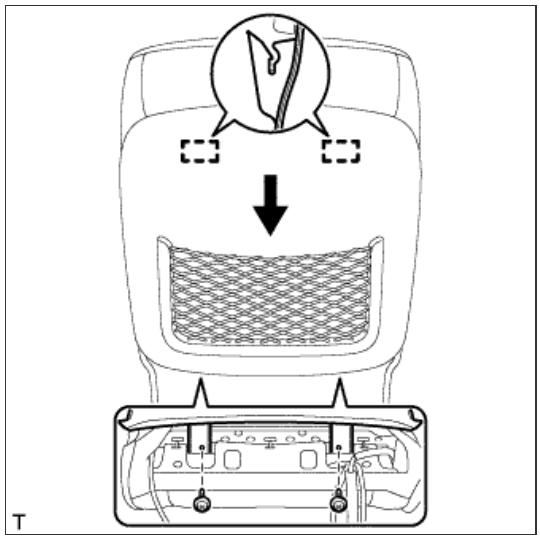
a. Disconnect the connectors and detach the clamps.



b. Remove the nut and front seat inner belt assembly.

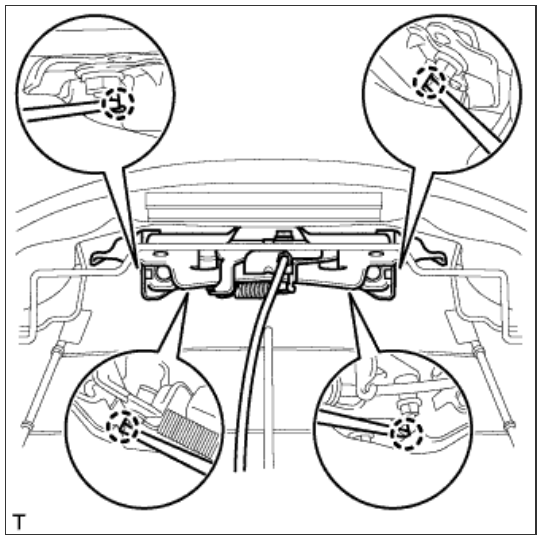
8. REMOVE FRONT INNER SEAT CUSHION SHIELD LH

a. Remove the screw.



b. Detach the claw and clip, and then remove the cushion shield.

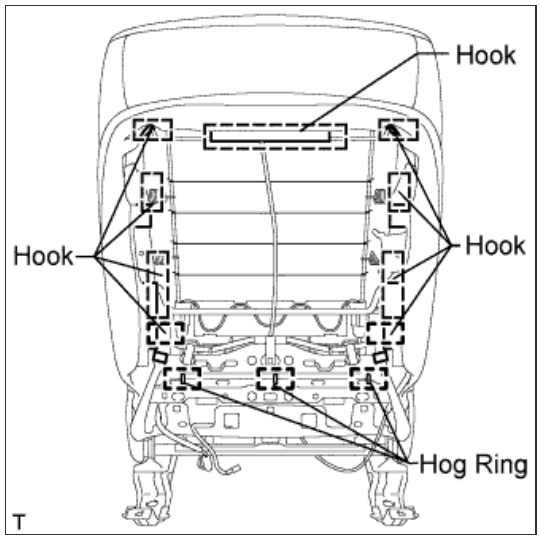
9. REMOVE FRONT SEATBACK BOARD SUB-ASSEMBLY LH (w/ Seatback Board)



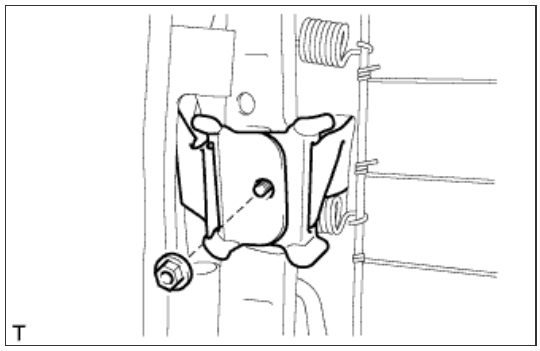
a. Remove the 2 screws.

b. Move the seatback board in the direction of the arrow to detach the 2 hooks and remove the seatback board.

10. REMOVE FRONT SEAT HEADREST SUPPORT (w/ Active Headrest)



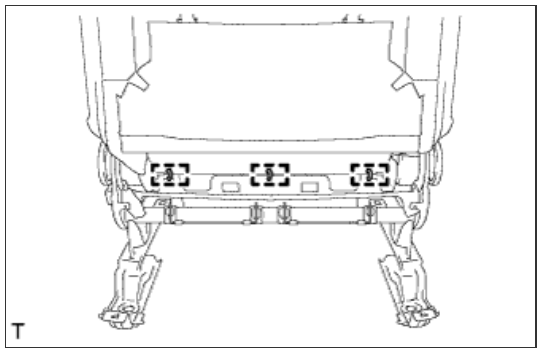
a. Detach the 4 claws and remove the 2 headrest supports.



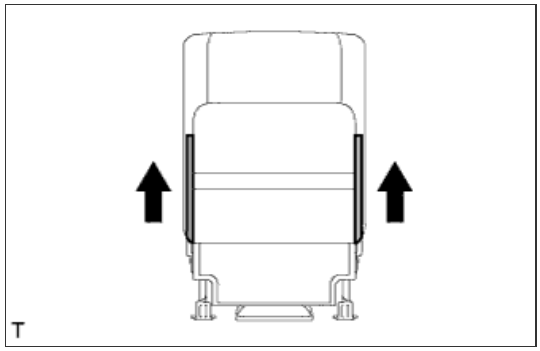
11. REMOVE SEATBACK COVER WITH PAD

a. w/ Seatback Board:

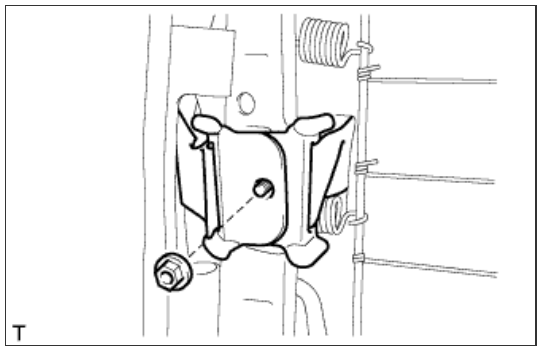
i. Remove the 3 hog rings and detach the 9 hooks.



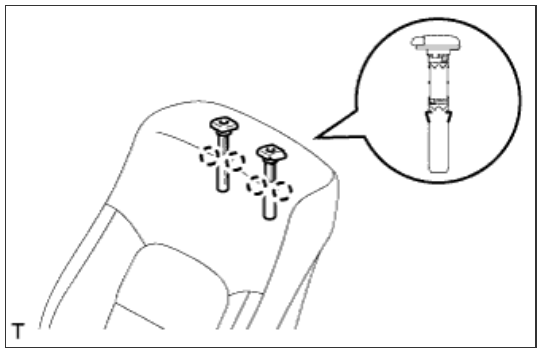
ii. w/ Front Seat Side Airbag:
Remove the nut and seatback cover bracket from the seat frame.



b. w/o Seatback Board:

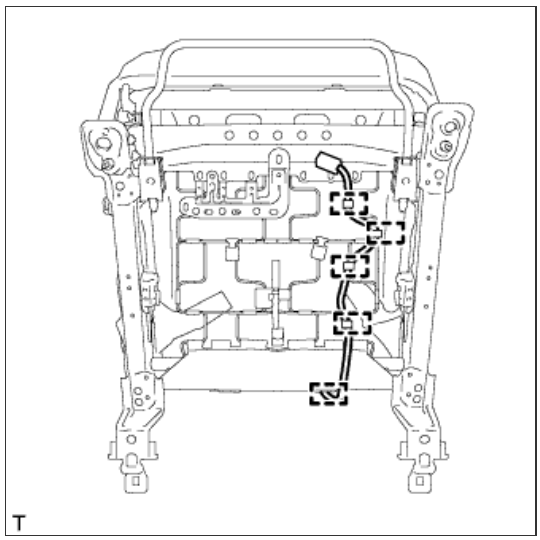


i. Remove the 3 hog rings.



ii. Open the 2 fasteners, and then open the seatback cover.

iii. w/ Front Seat Side Airbag:
Remove the nut and seatback cover bracket from the seat frame.

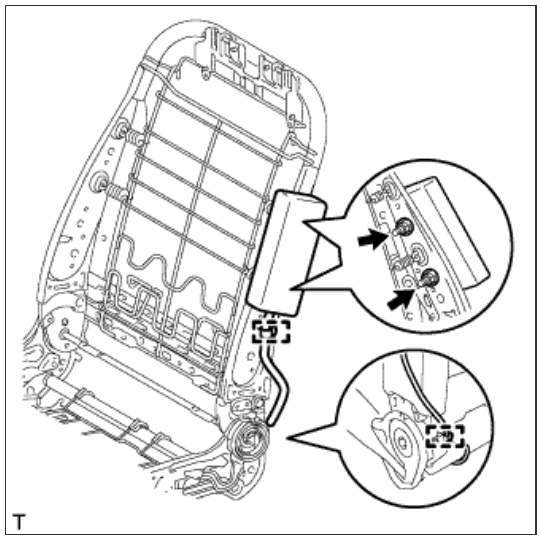


iv. Detach the 4 claws and remove the 2 headrest supports.

c. Remove the seatback cover with pad from the seatback frame.

12. REMOVE FRONT SEAT SIDE AIRBAG ASSEMBLY LH

a. Detach the 5 clamps and disconnect the wire harness.



b. Detach the 2 clamps and disconnect the wire harness.

c. Remove the 2 nuts and front seat side airbag assembly LH.

CAUTION:

Make sure that the seat frame assembly is not deformed. If it is, replace it with a new one.

T

ii. Detach the 3 claws in the order shown in the illustration, and then remove the cushion shield.

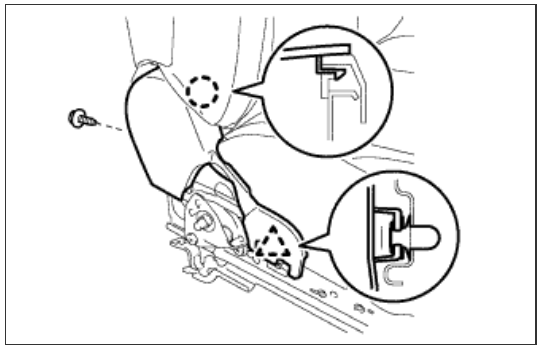
e. w/ Lumbar Support:
Disconnect the lumbar switch connector.

7. REMOVE FRONT SEAT INNER BELT ASSEMBLY LH

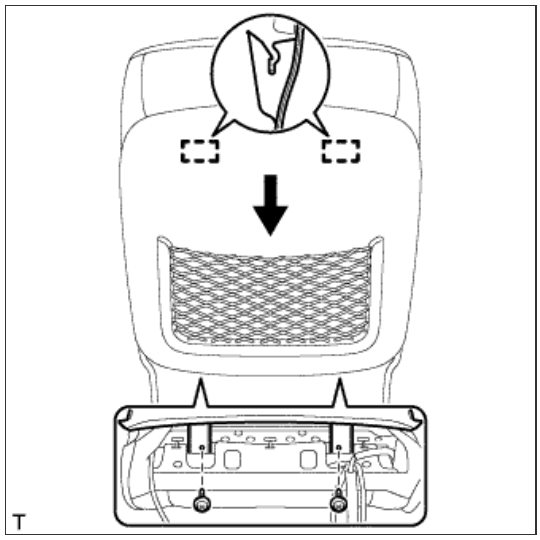
a. Disconnect the connectors and detach the clamps.



b. Remove the nut and front seat inner belt assembly.

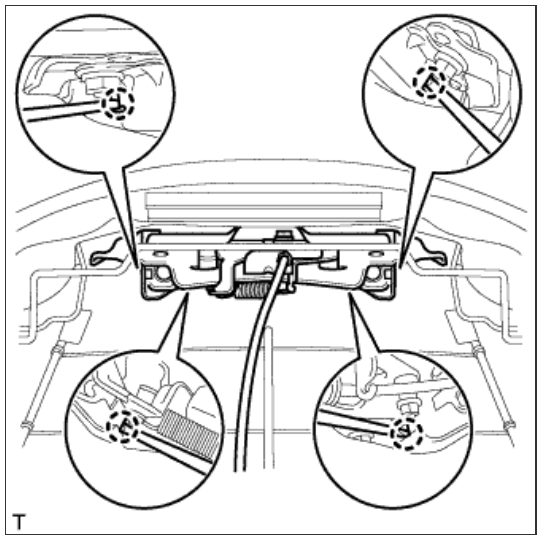
8. REMOVE FRONT INNER SEAT CUSHION SHIELD LH

a. Remove the screw.



b. Detach the claw and clip, and then remove the cushion shield.

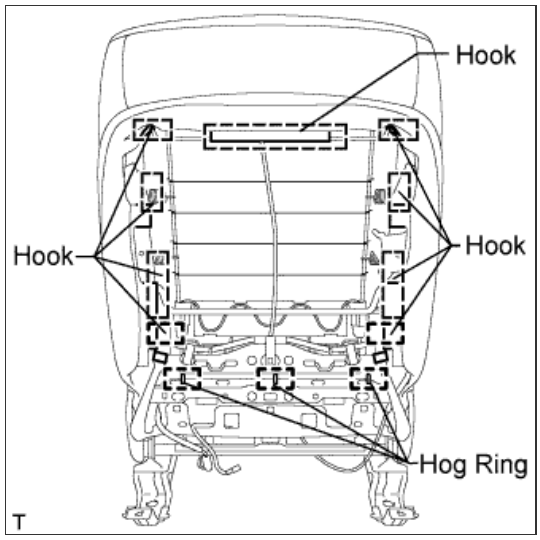
9. REMOVE FRONT SEATBACK BOARD SUB-ASSEMBLY LH (w/ Seatback Board)



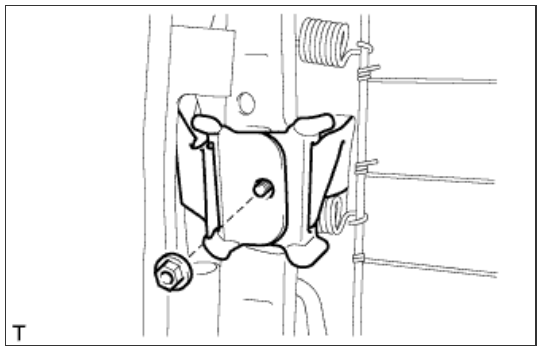
a. Remove the 2 screws.

b. Move the seatback board in the direction of the arrow to detach the 2 hooks and remove the seatback board.

10. REMOVE FRONT SEAT HEADREST SUPPORT (w/ Active Headrest)



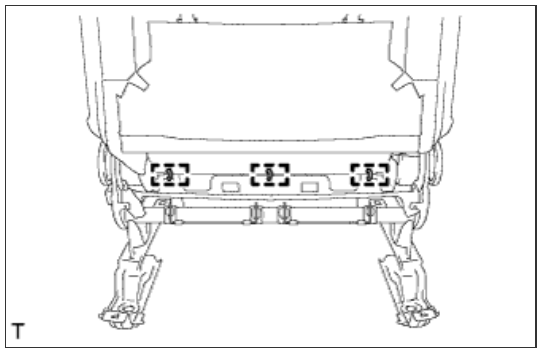
a. Detach the 4 claws and remove the 2 headrest supports.



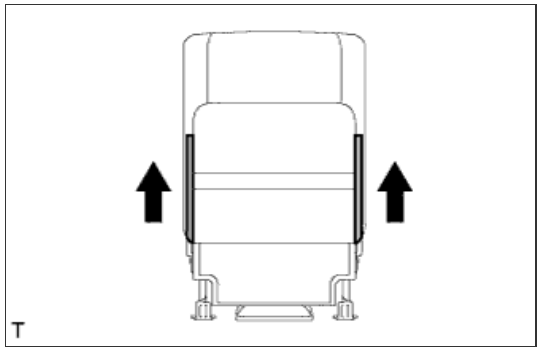
11. REMOVE SEATBACK COVER WITH PAD

a. w/ Seatback Board:

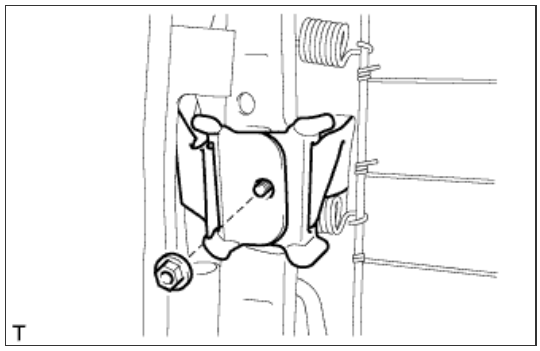
i. Remove the 3 hog rings and detach the 9 hooks.



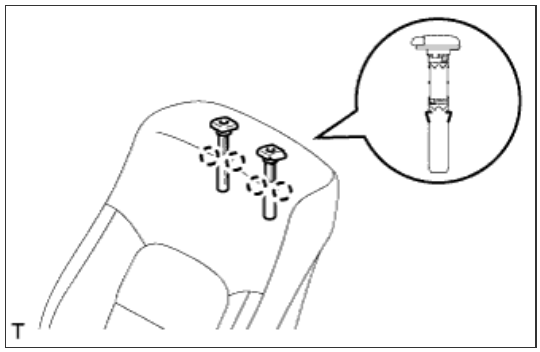
ii. w/ Front Seat Side Airbag:
Remove the nut and seatback cover bracket from the seat frame.



b. w/o Seatback Board:

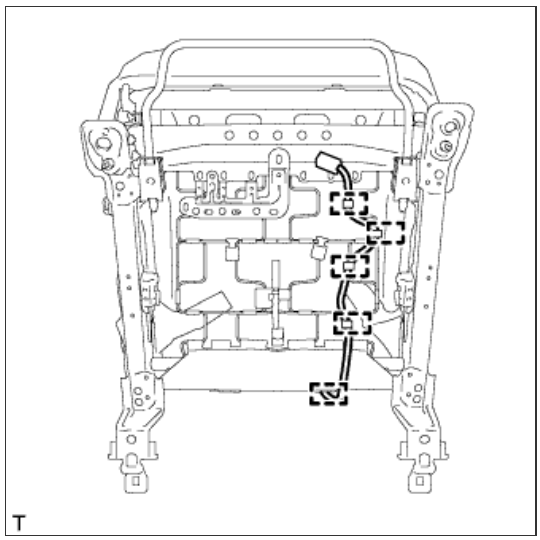


i. Remove the 3 hog rings.



ii. Open the 2 fasteners, and then open the seatback cover.

iii. w/ Front Seat Side Airbag:
Remove the nut and seatback cover bracket from the seat frame.

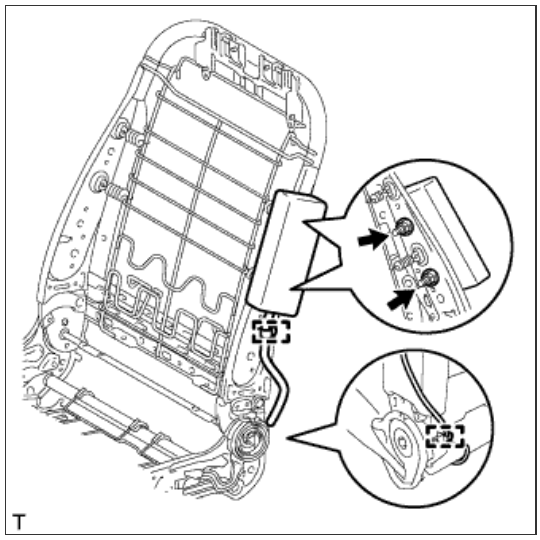


iv. Detach the 4 claws and remove the 2 headrest supports.

c. Remove the seatback cover with pad from the seatback frame.

12. REMOVE FRONT SEAT SIDE AIRBAG ASSEMBLY LH

a. Detach the 5 clamps and disconnect the wire harness.



b. Detach the 2 clamps and disconnect the wire harness.

c. Remove the 2 nuts and front seat side airbag assembly LH.

CAUTION:

Make sure that the seat frame assembly is not deformed. If it is, replace it with a new one.

T

for Preparation Click here

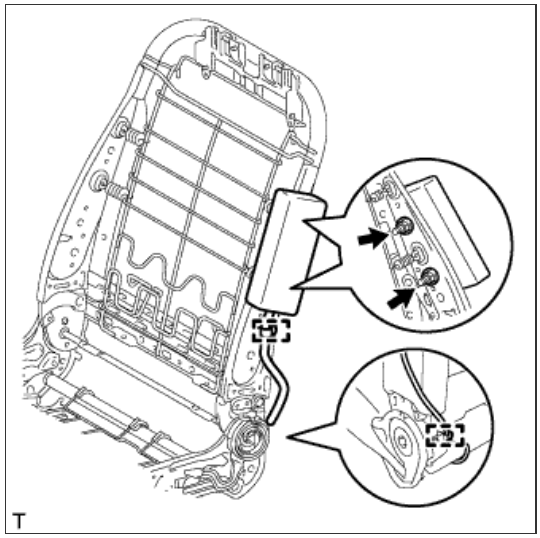
CAUTION:

Wear protective gloves. Sharp areas on the parts may injure your hands.

HINT:

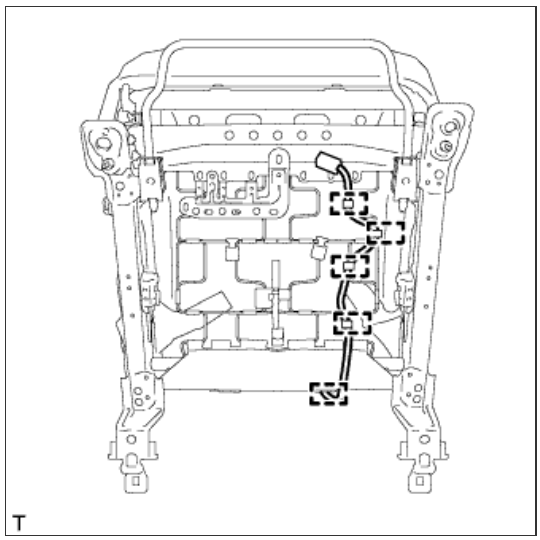
- **Use the same procedures for LHD and RHD vehicles.**
- **The procedures listed below are for LHD vehicles.**

1. INSTALL FRONT SEAT SIDE AIRBAG ASSEMBLY LH



CAUTION:

Make sure that the seat frame assembly is not deformed. If it is, replace it with a new one.



a. Install the front seat side airbag assembly with 2 nuts.

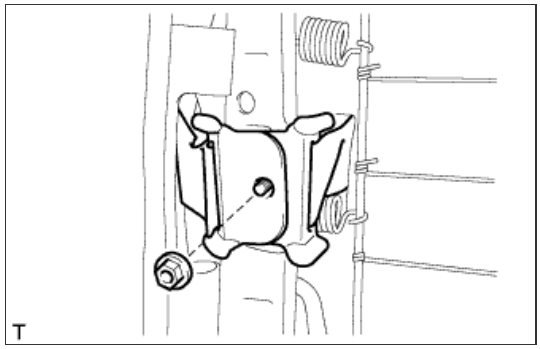
Torque:
5.5 N*m{ 56 kgf*cm , 49 in.*lbf }

b. Attach the 2 clamps to connect the wire harness.

c. Attach the 5 clamps to connect the wire harness.

2. INSTALL SEATBAC COVER ITH PAD

a. Install the seatback cover with pad to the seatback frame.



b. w/ Seatback Board:

i. w/ Front Seat Side Airbag:
Install the seatback cover bracket to the seat frame with the nut.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

CAUTION:

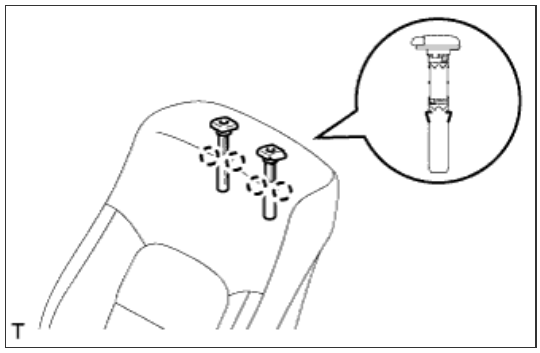
After the seatback trim cover is assembled, make sure the side airbag strap is not twisted.

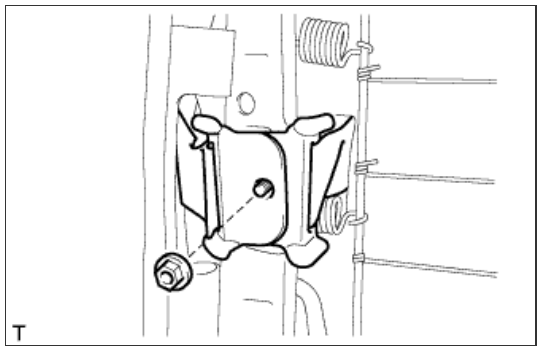


ii. Attach the hooks.

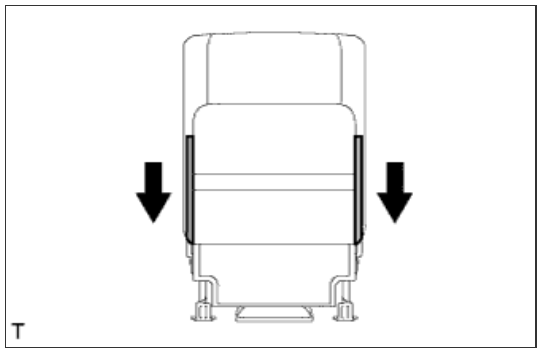
iii. Using hog ring pliers, install new hog rings to the seat frame.

c. w/o Seatback Board:

i. Attach the 4 claws to install the 2 headrest supports.



ii. w/ Front Seat Side Airbag:
Install the seatback cover bracket to the seat frame with the nut.



Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

CAUTION:

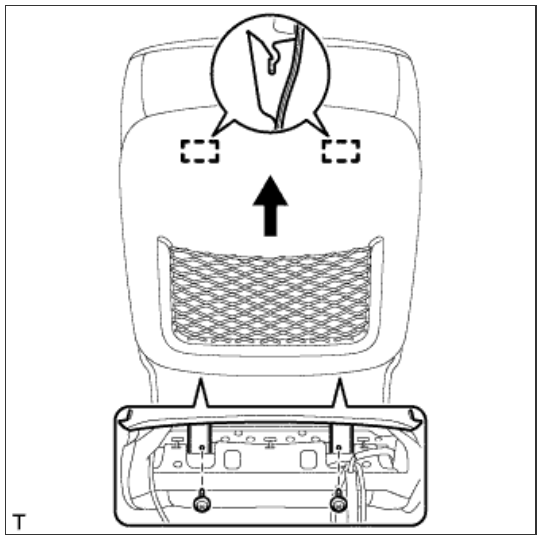
After the seatback trim cover is assembled, make sure the side airbag strap is not twisted.

iii. Close the 2 fasteners, and then close the seatback cover.

iv. Using hog ring pliers, install new hog rings to the seat frame.

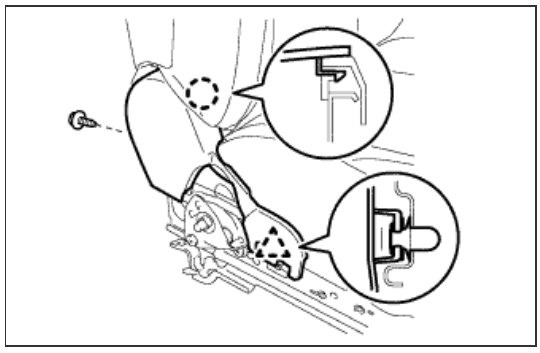


3. INSTALL FRONT SEAT HEADREST SUPPORT

a. Attach the 4 claws to install the 2 headrest supports.

4. INSTALL FRONT SEATBAC BOARD SUB-ASSEMBLY LH

a. Move the seatback board in the direction of the arrow to attach the 2 hooks and install the seatback board.



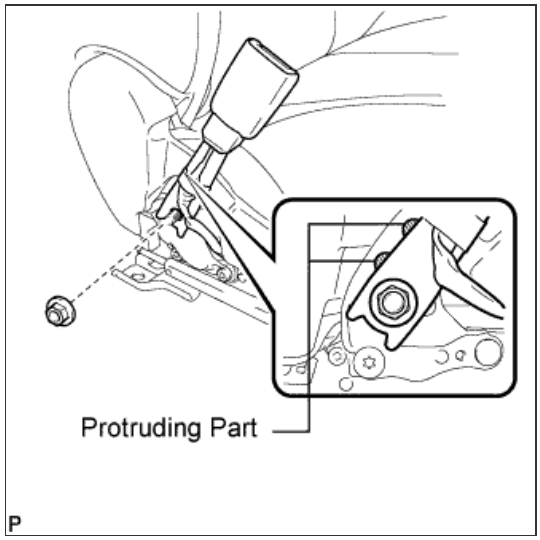
b. Install the 2 screws.

5. INSTALL FRONT INNER SEAT CUSHION SHIELD LH

a. Attach the claw and clip to install the cushion shield.

b. Install the screw.

6. INSTALL FRONT SEAT INNER BELT ASSEMBLY LH



a. Install the front seat inner belt assembly with the nut.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }

NOTICE:

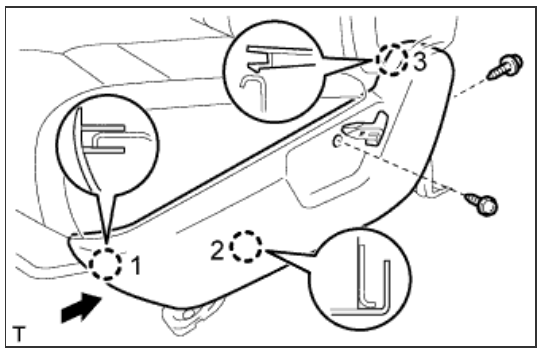
Do not allow the anchor part of the front seat inner belt assembly to overlap the protruding part of the front seat adjuster.

b. Connect the connectors and attach the clamps.

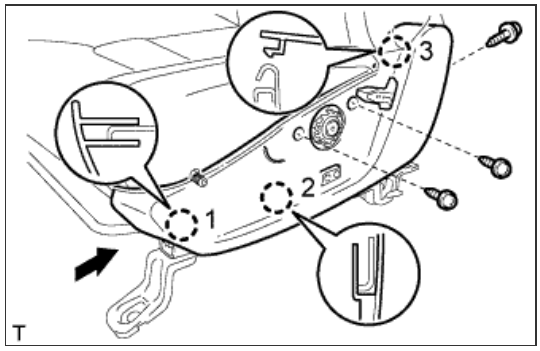


7. INSTALL FRONT SEAT CUSHION SHIELD LH

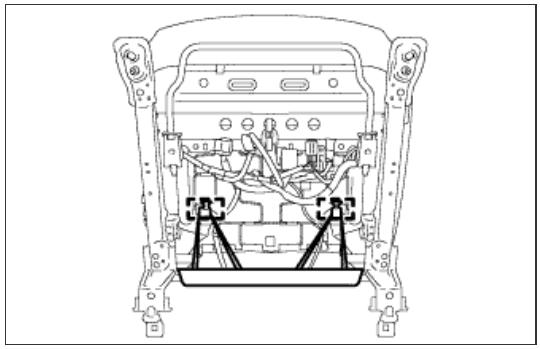
a. for 4 Way Seat Type:

i. Attach the 3 claws in the order shown in the illustration to install the cushion shield.

ii. Install the 2 screws.

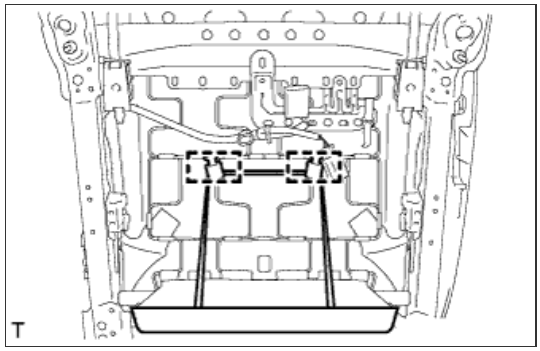


b. w/ Lumbar Support:
Connect the lumbar switch connector.



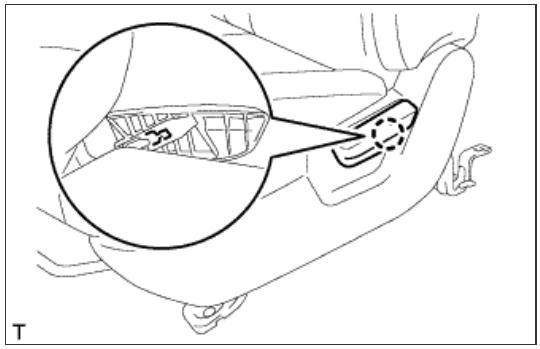
c. for 8 Way Seat Type:

i. Attach the 3 claws in the order shown in the illustration to install the cushion shield.



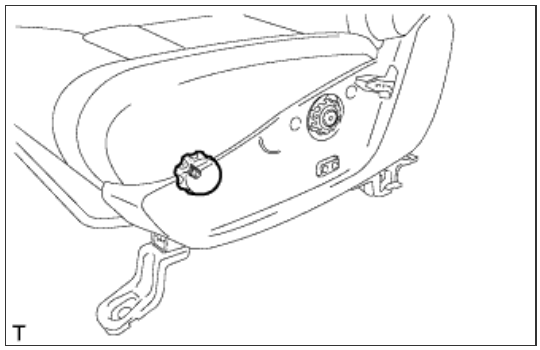
ii. Install the 3 screws.

d. w/ Seatback Board:
Attach the 2 rubber bands to the hooks.



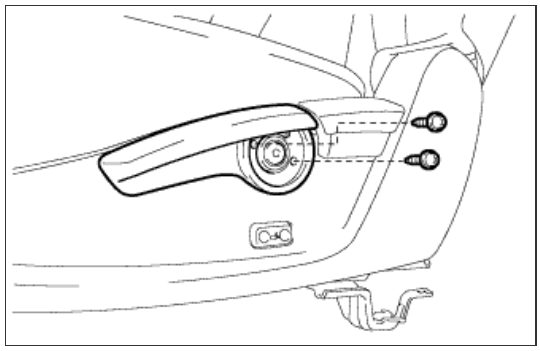
e. w/o Seatback Board:
Attach the 2 rubber bands to the hooks.

8. INSTALL RECLINING AD USTER RELEASE HANDLE LH



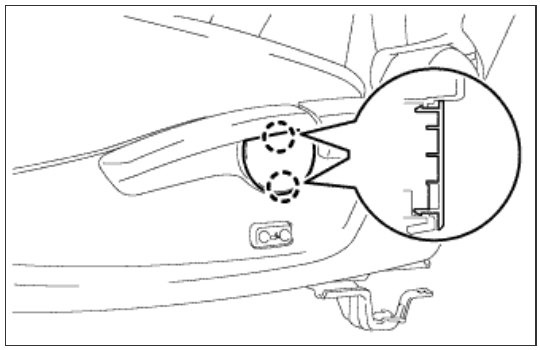
a. Attach the claw to install the reclining adjuster release handle.

9. INSTALL VERTICAL SEAT AD USTER NOB (for 8 a Seat T pe)



a. Install the snap ring to the vertical seat adjuster knob.

b. Install the vertical seat adjuster knob to the front seat.



10. INSTALL VERTICAL AD USTING HANDLE LH (for 8 a Seat T pe)

a. Install the vertical adjusting handle with the 2 screws.

11. INSTALL VERTICAL AD USTER COVER LH (for 8 a Seat T pe)

a. Attach the 2 claws to install the vertical adjuster cover.

12. INSTALL FRONT SEAT ASSEMBLY LH

a. Install the front seat assembly LH (Click here).

for Preparation Click here

CAUTION:

Wear protective gloves. Sharp areas on the parts may injure your hands.

HINT:

- **Use the same procedures for LHD and RHD vehicles.**
- **The procedures listed below are for LHD vehicles.**

1. INSTALL FRONT SEAT SIDE AIRBAG ASSEMBLY LH

CAUTION:

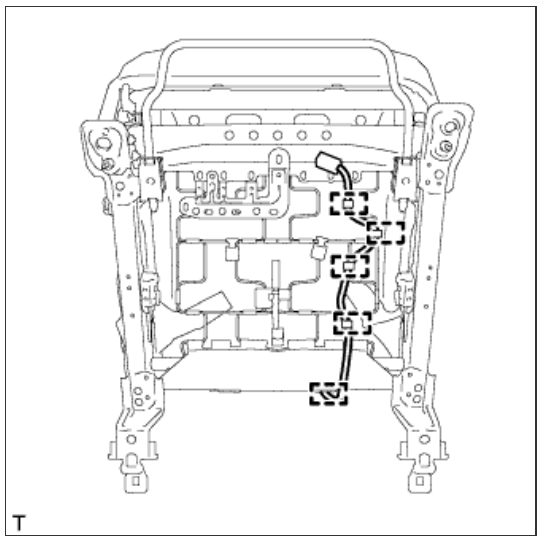
Make sure that the seat frame assembly is not deformed. If it is, replace it with a new one.



a. Install the front seat side airbag assembly with 2 nuts.

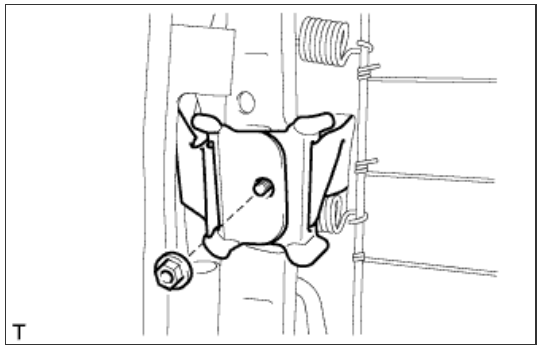
Torque:
5.5 N*m{ 56 kgf*cm , 49 in.*lbf }

b. Attach the 2 clamps to connect the wire harness.

c. Attach the 5 clamps to connect the wire harness.

2. INSTALL SEATBAC COVER ITH PAD

a. Install the seatback cover with pad to the seatback frame.



b. w/ Seatback Board:

i. w/ Front Seat Side Airbag:
Install the seatback cover bracket to the seat frame with the nut.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

CAUTION:

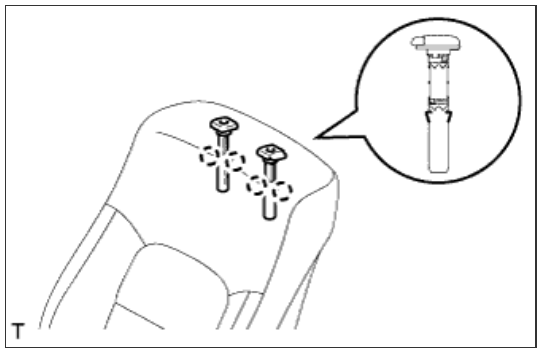
After the seatback trim cover is assembled, make sure the side airbag strap is not twisted.

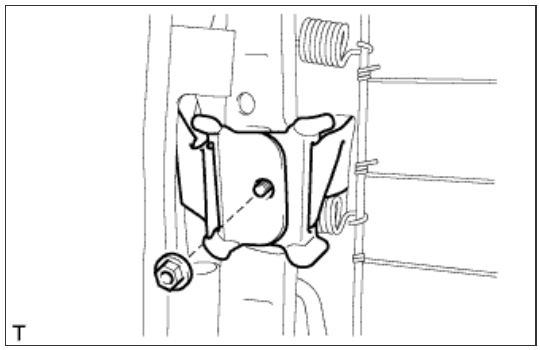


ii. Attach the hooks.

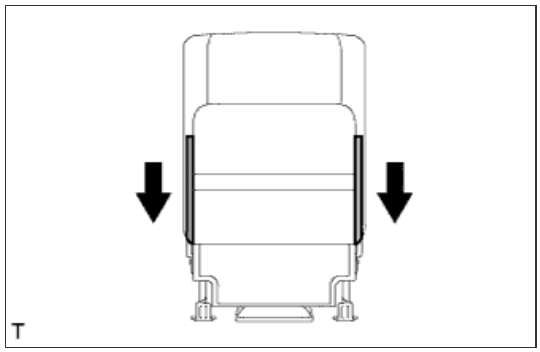
iii. Using hog ring pliers, install new hog rings to the seat frame.

c. w/o Seatback Board:

i. Attach the 4 claws to install the 2 headrest supports.



ii. w/ Front Seat Side Airbag:
Install the seatback cover bracket to the seat frame with the nut.



Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

CAUTION:

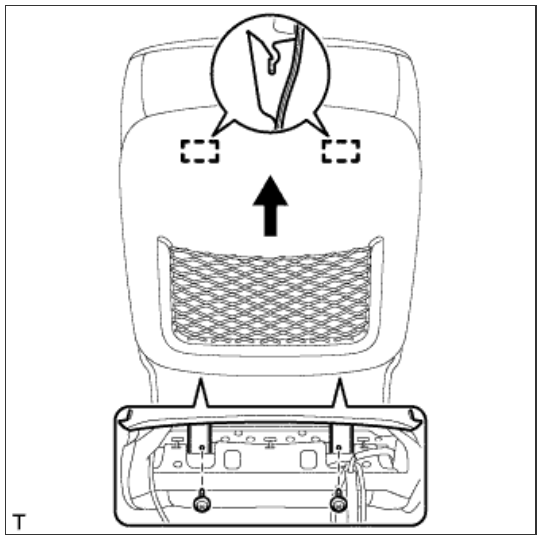
After the seatback trim cover is assembled, make sure the side airbag strap is not twisted.

iii. Close the 2 fasteners, and then close the seatback cover.

iv. Using hog ring pliers, install new hog rings to the seat frame.

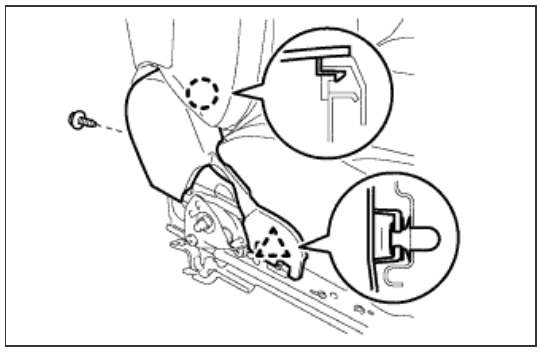


3. INSTALL FRONT SEAT HEADREST SUPPORT

a. Attach the 4 claws to install the 2 headrest supports.

4. INSTALL FRONT SEATBAC BOARD SUB-ASSEMBLY LH

a. Move the seatback board in the direction of the arrow to attach the 2 hooks and install the seatback board.



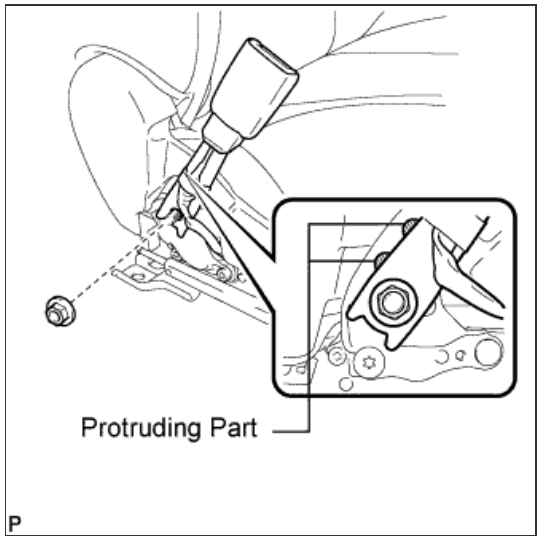
b. Install the 2 screws.

5. INSTALL FRONT INNER SEAT CUSHION SHIELD LH

a. Attach the claw and clip to install the cushion shield.

b. Install the screw.

6. INSTALL FRONT SEAT INNER BELT ASSEMBLY LH



a. Install the front seat inner belt assembly with the nut.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }

NOTICE:

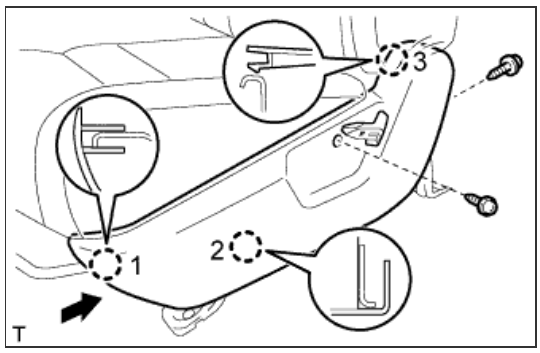
Do not allow the anchor part of the front seat inner belt assembly to overlap the protruding part of the front seat adjuster.

b. Connect the connectors and attach the clamps.

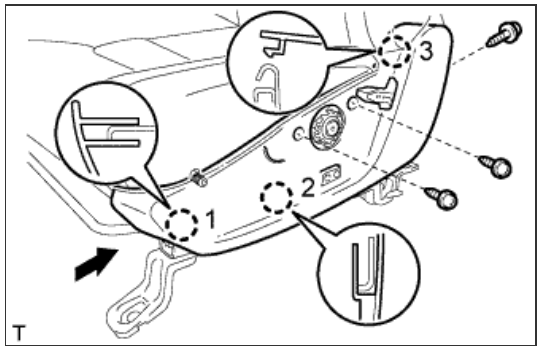


7. INSTALL FRONT SEAT CUSHION SHIELD LH

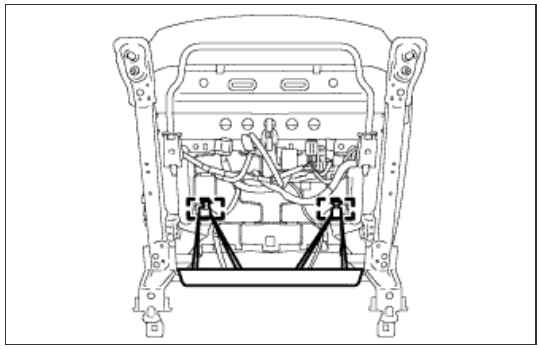
a. for 4 Way Seat Type:

i. Attach the 3 claws in the order shown in the illustration to install the cushion shield.

ii. Install the 2 screws.

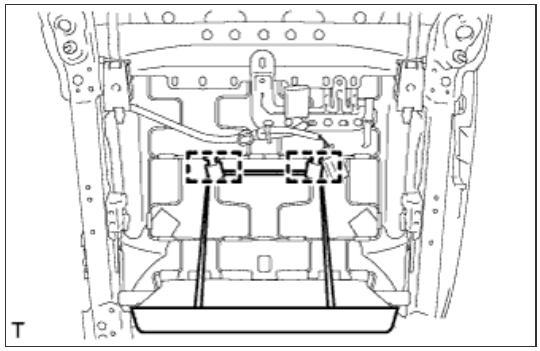


b. w/ Lumbar Support:
Connect the lumbar switch connector.



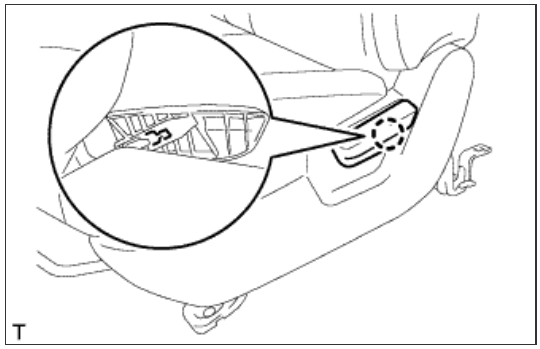
c. for 8 Way Seat Type:

i. Attach the 3 claws in the order shown in the illustration to install the cushion shield.



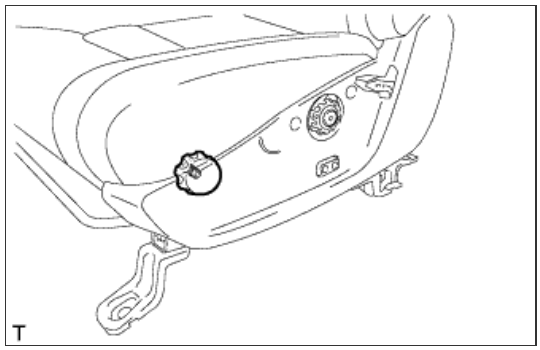
ii. Install the 3 screws.

d. w/ Seatback Board:
Attach the 2 rubber bands to the hooks.



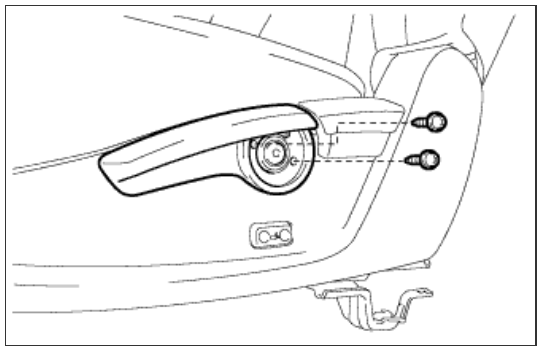
e. w/o Seatback Board:
Attach the 2 rubber bands to the hooks.

8. INSTALL RECLINING AD USTER RELEASE HANDLE LH



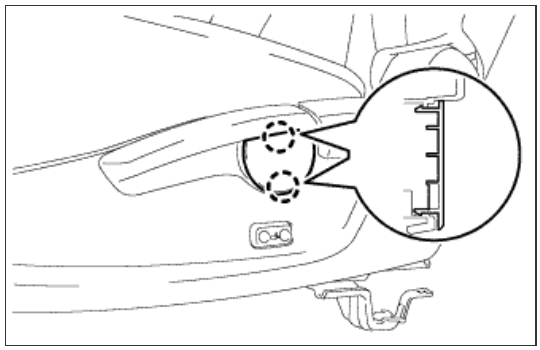
a. Attach the claw to install the reclining adjuster release handle.

9. INSTALL VERTICAL SEAT AD USTER NOB (for 8 a Seat T pe)



a. Install the snap ring to the vertical seat adjuster knob.

b. Install the vertical seat adjuster knob to the front seat.



10. INSTALL VERTICAL AD USTING HANDLE LH (for 8 a Seat T pe)

a. Install the vertical adjusting handle with the 2 screws.

11. INSTALL VERTICAL AD USTER COVER LH (for 8 a Seat T pe)

a. Attach the 2 claws to install the vertical adjuster cover.

12. INSTALL FRONT SEAT ASSEMBLY LH

a. Install the front seat assembly LH (Click here).

for Preparation Click here

HINT:

When scrapping a vehicle equipped with the SRS or disposing of the steering pad, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of the DISTRIBUTOR..

CAUTION:

- **Never dispose of a front seat side airbag that has an unactivated airbag.**
- **The airbag produces an exploding sound when it is deplo ed, so perform the operation outdoors and where it will not create a nuisance to nearb residents.**
- **When deplo ing the airbag, alwa s use the specified SST (SRS Airbag Deplo ent Tool). Perform the operation in a place awa from electrical noise.**
- **When deplo ing the airbag, perform the operation at least 10 m (32.8 ft.) awa from the airbag.**
- **The front seat side airbag becomes extremel hot when the airbag is deplo ed, so do not touch it for at least 30 minutes after deplo ent.**
- **Use gloves and safet glasses when handling a front seat side airbag with a deplo ed airbag.**
- **Do not appl ater to a front seat side airbag with a deplo ed airbag.**
- **Alwa s wash our hands with water after completing the operation.**
- **An airbag or pretensioner ma be activated b static electricit To prevent this, be sure to touch a metal surface with bare hands to discharge static electricit before performing this procedure.**

1. DISPOSE OF FRONT SEAT SIDE AIRBAG ASSEMBLY (WHEN INSTALLED IN VEHICLE)

HINT:

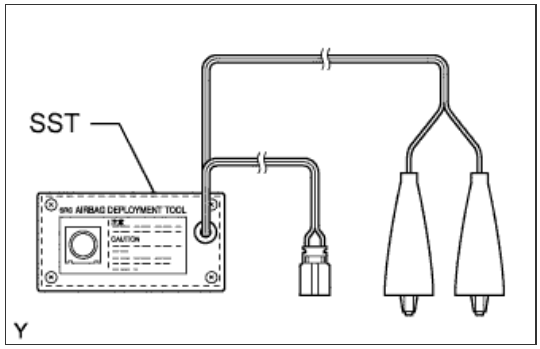
Prepare a battery as the power source to deploy the airbag.

a. Check the function of SST (Click here).

b. Read the precaution (Click here).



c. Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

d. Remove the front seat (Click here).

HINT:

Keep the front seat in the cabin.

e. Install SST.

i. Disconnect the connector (yellow colored) from the front seat side airbag.

NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

ii. Connect SST connector to the front seat side airbag connector.

SST

09082-00700

09082-00820

NOTICE:

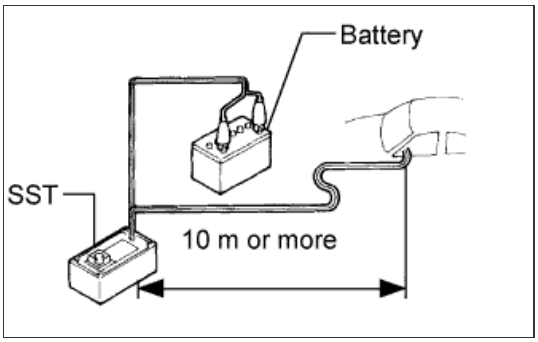
To avoid damaging SST connector and wire harness, do not lock the secondary lock of the twin lock.

iii. Install the front seat (Click here).



iv. Move SST at least 10 m (32.8 ft.) away from the vehicle front side window.

v. Maintaining enough clearance for SST wire harness in the front side window, close all doors and windows of the vehicle.

NOTICE:

Take care not to damage SST wire harness.

vi. Connect the red clip of SST to the battery positive ( ) terminal and the black clip of SST to the battery negative (-) terminal.

f. Deploy the airbag.

i. Check that no one is inside the vehicle or within a 10 m (32.8 ft.) radius of the vehicle.

ii. Press SST activation switch to deploy the airbag.

CAUTION:

- **When deplo ing the airbag, make sure that no one is near the vehicle.**
- **The front seat side airbag becomes extremel bt when the airbag is deplo ed, so do not touch it for at least 30 minutes after deplo ent.**
- **Use gloves and safet glasses when handling a front seat side airbag with a deplo ed airbag.**
- **Do not appl ater to a front seat side airbag with a deplo ed airbag.**
- **Alwa s wash our hands with water after completing the operation.**

HINT:

The airbag is deployed as the ED of SST activation switch comes on.

2. DISPOSE OF FRONT SEAT SIDE AIRBAG ASSEMBLY (WHEN NOT INSTALLED IN VEHICLE)

NOTICE:

Be sure to follow the procedure detailed below when deploying the airbag.

HINT:

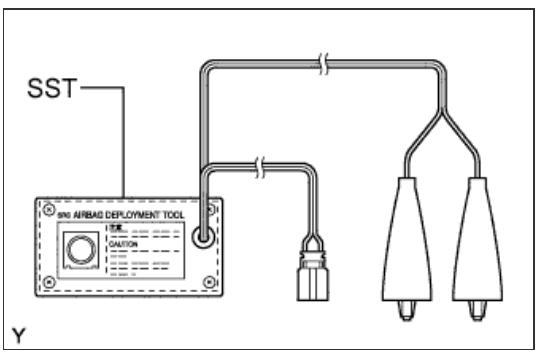
Prepare a battery as the power source to deploy the airbag.

a. Check the function of SST (Click here).



b. Remove the front seat side airbag.

i. Remove the front seat (Click here).

ii. Remove the 2 nuts and the front seat side airbag from the seatback.

CAUTION:

- **When removing the front seat side airbag, wait at least 90 seconds after the engine switch is turned off and the cable is disconnected from the negative (-) batter terminal before starting work.**
- **When storing the front seat side airbag, keep the airbag deplo ent side facing upward.**

c. Using a service-purpose wire harness for the vehicle, tie down the front seat side airbag to a tire.

Cross-sectional area of stripped wire harness section:
1.25 mm^2 (0.00192 in.^{2}) or more

HINT:

To calculate the cross-sectional area of the stripped wire harness section:

Cross-sectional area 3.1 (Diameter)^2 divided by

CAUTION:

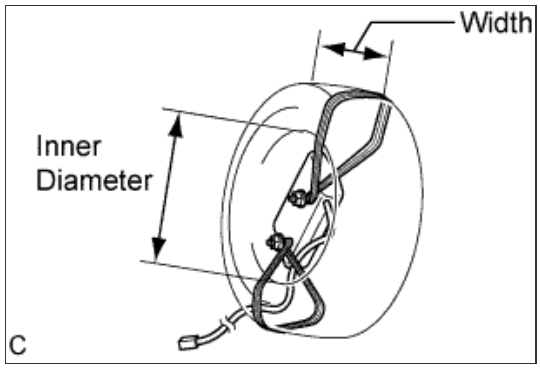
If the wire harness is too thin or an alternative ob ect is used to tie down the front seat side airbag, it may be snapped by the shock when the airbag is deployed. Always use a wire harness for vehicle use with a cross-sectional area of at least 1.25 mm^2 (0.00192 in.^{2}).

i. Install the 2 nuts to the front seat side airbag.



ii. Wind the wire harness around the stud bolts of the front seat side airbag as shown in the illustration.

iii. Position the front seat side airbag inside a tire.

Tire size:
Must exceed the following dimensions
Width:
185 mm (7.28 in.)
Inner diameter:
360 mm (14.2 in.)

CAUTION:

- **Make sure that the wire harnesses are tight. If there is slack in the wire harnesses, the front seat side airbag ma become loose due to the shock when the airbag is deplo ed.**
- **Alwa s tie down the front seat side airbag with the airbag deplo ent direction facing inside the tire.**

NOTICE:

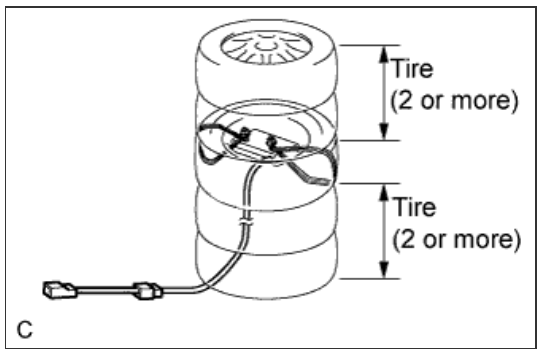
As the tire may be damaged by the airbag deployment, use a tire that you are planning to throw away.

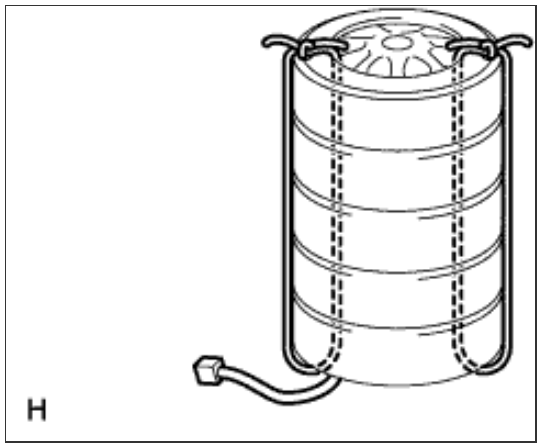


d. Install SST.

i. Connect SST connector to the front seat side airbag connector.

SST
09082-00820

e. Place tires.



i. Place at least 2 tires under the tire which the front seat side airbag is tied to.

ii. Place at least 2 tires over the tire which the front seat side airbag is tied to. The top tire should have a disc wheel installed.

NOTICE:

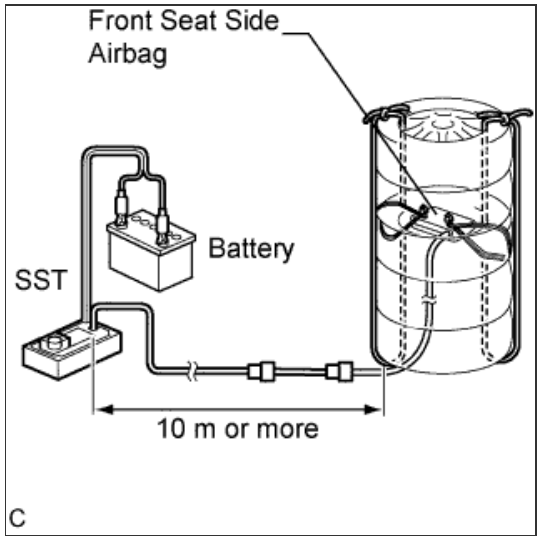
- **Do not place SST connector under the tire because it could be damaged.**
- **As the disc wheel may be damaged by the airbag deployment, use a disc wheel that you are planning to throw away**
- **As the tires may be damaged by the airbag deployment, use tires that you are planning to throw away**



iii. Tie the tires together with 2 wire harnesses.

CAUTION:

Make sure that the wire harnesses are tight. Looseness in the wire harnesses results in the tires coming free due to the shock when the airbag is deployed.

f. Install SST.

i. Connect SST connector.

SST
09082-00700

NOTICE:

To avoid damaging SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for SST wire harness inside the tire.

g. Deploy the airbag.

i. Connect the red clip of SST to the battery positive ( ) terminal and the black clip of SST to the battery negative (-) terminal.

ii. Check that no one is within a 10 m (32.8 ft.) radius of the tire which the front seat side airbag is tied to.

iii. Press SST activation switch to deploy the airbag.

CAUTION:

When deploying the airbag, make sure that no one is near the tire.

HINT:

The airbag is deployed as the ED of SST activation switch comes on.

h. Dispose of the front seat side airbag.

CAUTION:

- **The front seat side airbag becomes extremel bt when the airbag is deplo ed, so do not touch it for at least 30 minutes after deplo ent.**
- **Use gloves and safet glasses when handling a front seat side airbag with a deplo ed airbag.**
- **Do not appl ater to a front seat side airbag with a deplo ed airbag.**
- **Alwa s wash our hands with water after completing the operation.**

i. Remove the front seat side airbag from the tire.

ii. Place the front seat side airbag in a plastic bag, tie it tightly and dispose of it in the same way as other general parts.

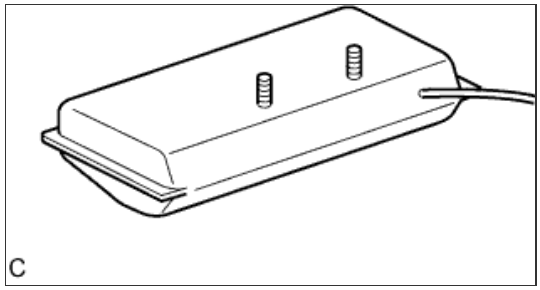
1. CHECK FRONT SEAT SIDE AIRBAG ASSEMBLY (VEHICLE NOT INVOLVED IN COLLISION)

a. Perform a diagnostic system check (Click here).

b. With the front seat side airbag installed on the vehicle, perform a visual check. If there are any defects as mentioned below, replace the front seat with a new one: Cuts, minute cracks or marked discoloration on the front seatback around the front seat side airbag.



2. CHECK FRONT SEAT SIDE AIRBAG ASSEMBLY (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED)

a. Perform a diagnostic system check (Click here).

b. With the front seat side airbag removed from the vehicle, perform a visual check. If there are any defects as mentioned below, replace the front seat side airbag with a new one:

- Cuts, minute cracks or marked discoloration on the front seat side airbag.
- Cracks or other damage to the wire harness or connector.

NOTICE:

For removal and installation procedures of the front seat side airbag, be sure to follow the correct procedure.

FRONT SEAT SIDE AIRBAG ASSEMBLY (for Power Seat) > REMOVAL

for Preparation Click here

CAUTION:

Wear protective gloves. Sharp areas on the parts may injure your hands.

HINT:

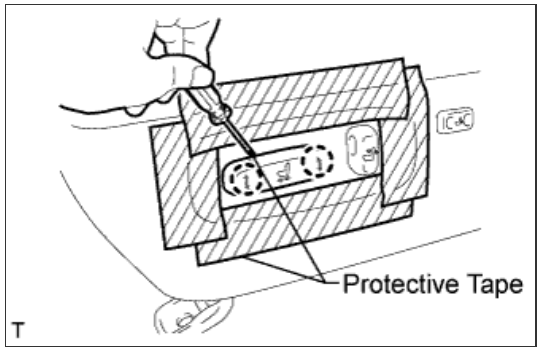
- **Use the same procedures for LHD and RHD vehicles.**
- **The procedures listed below are for LHD vehicles.**

1. REMOVE FRONT SEAT ASSEMBLY LH

a. Remove the front seat assembly LH (Click here).



2. REMOVE SLIDE AND VERTICAL POWER SEAT SWITCH KNOB

a. Apply protective tape around the cushion shield.

b. Using a screwdriver, detach the 2 claws and remove the knob.

HINT:

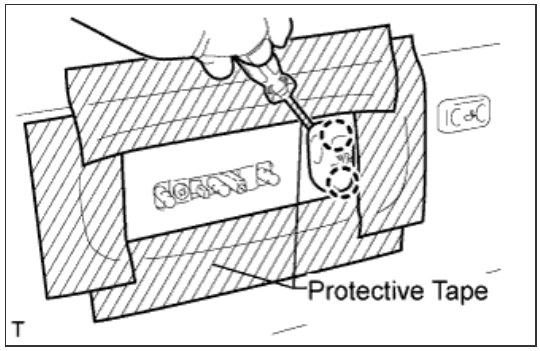
Tape the screwdriver tip before use.



3. REMOVE RECLINING POWER SEAT SWITCH KNOB

a. Using a screwdriver, detach the 2 claws and remove the knob.

HINT:

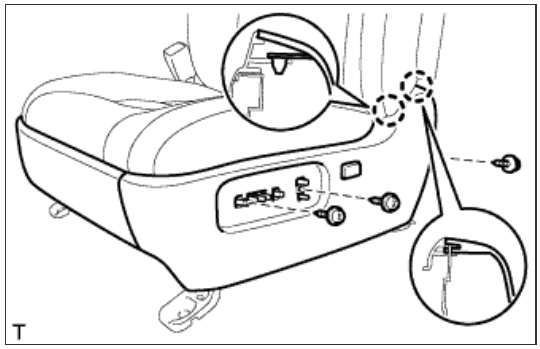
Tape the screwdriver tip before use.

4. REMOVE FRONT SEAT CUSHION SHIELD LH

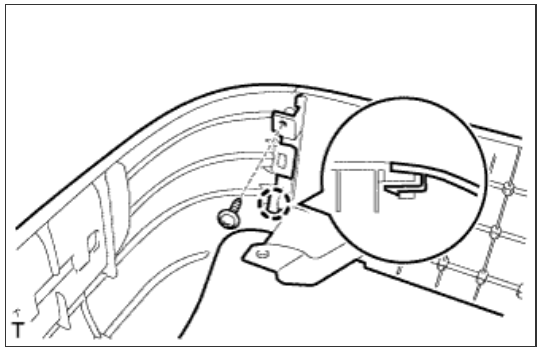
a. Remove the 2 rubber bands from the hooks.



b. Remove the 2 screws.

c. Remove the 3 screws.

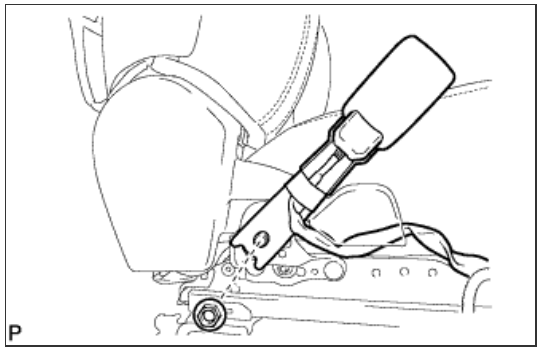
d. Detach the 2 claws and remove the cushion shield.



e. for Driver Side:
Disconnect the power seat lumbar switch connectors.

5. REMOVE FRONT INNER NO. 1 SEAT CUSHION SHIELD LH

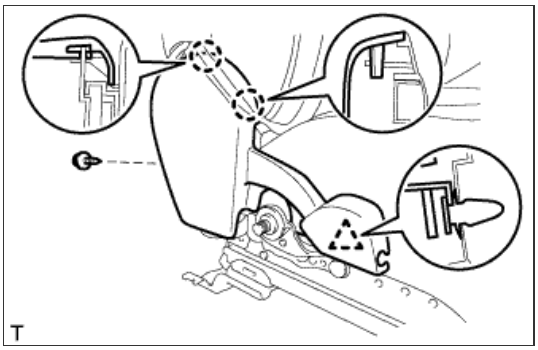
a. Remove the screw.



b. Detach the claw and remove the cushion shield.

6. REMOVE FRONT SEAT INNER BELT ASSEMBLY LH

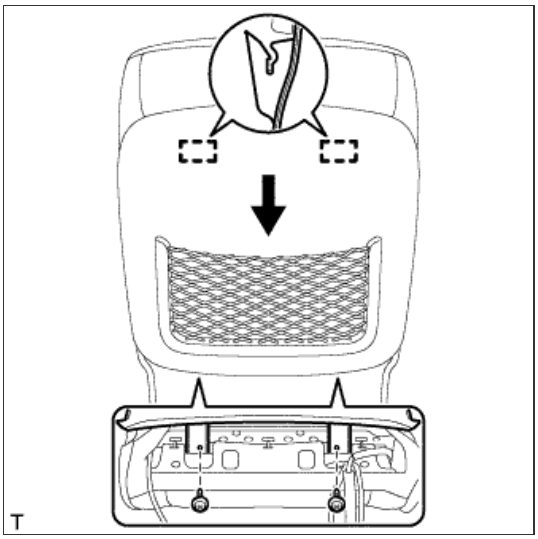
a. Disconnect the connectors and detach the clamps.



b. Remove the nut and front seat inner belt assembly.

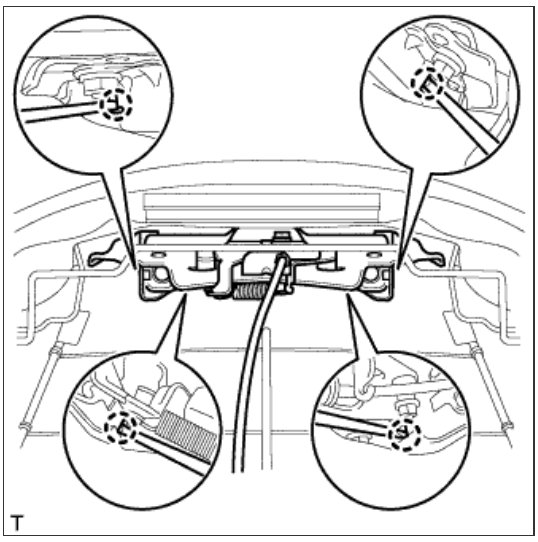
7. REMOVE FRONT INNER SEAT CUSHION SHIELD LH

a. Remove the screw.



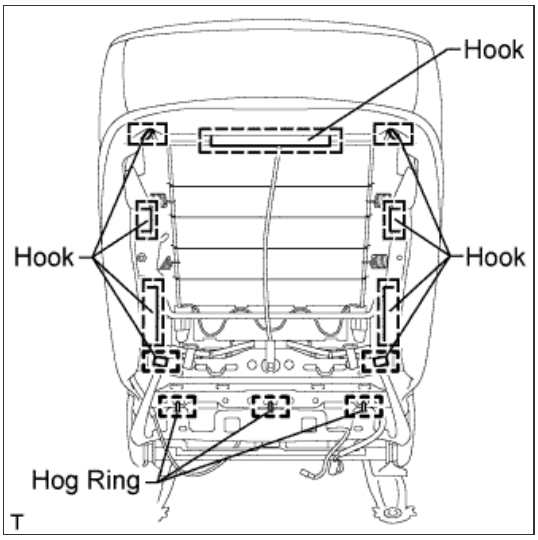
b. Detach the 2 claws and clip, and then remove the cushion shield.

8. REMOVE FRONT SEATBACK BOARD SUB-ASSEMBLY LH



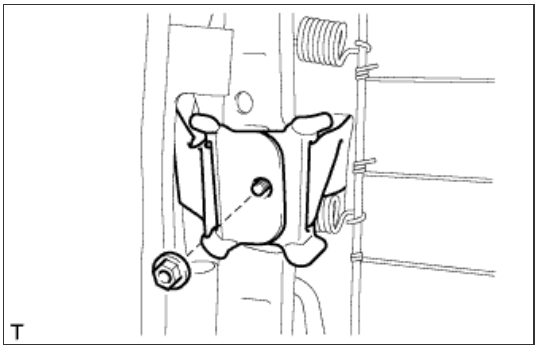
a. Remove the 2 screws.

b. Move the seatback board in the direction of the arrow to detach the 2 hooks and remove the seatback board.



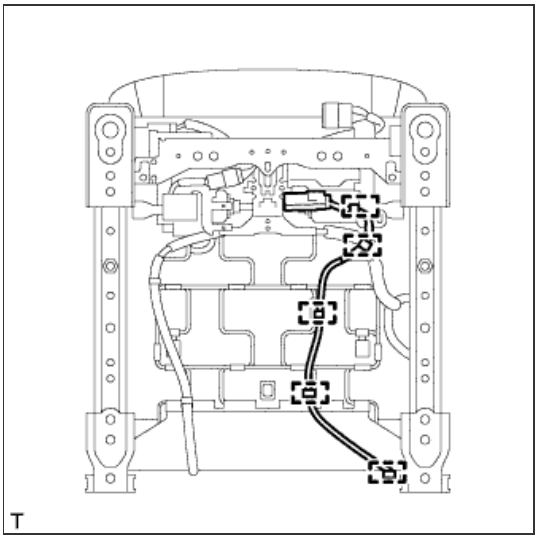
9. REMOVE FRONT SEAT HEADREST SUPPORT

a. Using a screwdriver, detach the 4 claws and remove the 2 headrest supports.



10. REMOVE SEATBACK COVER WITH PAD

a. Remove the 3 hog rings and detach the 9 hooks.

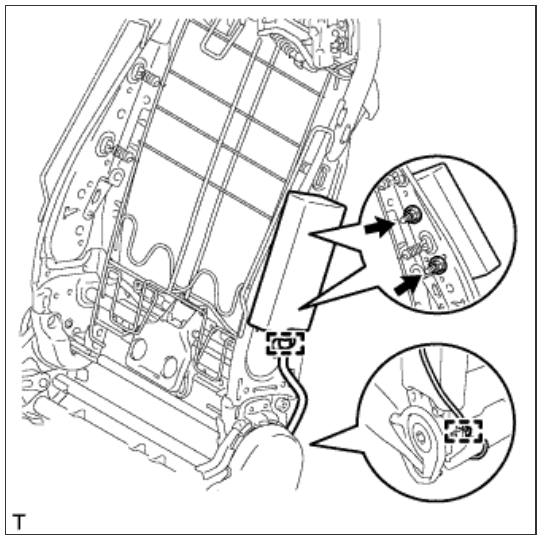


b. Remove the nut and seatback cover bracket from the seat frame.

c. Remove the seatback cover with pad.

11. REMOVE FRONT SEAT SIDE AIRBAG ASSEMBLY LH

a. Detach the 5 clamps and disconnect the wire harness.



b. Detach the 2 clamps and disconnect the wire harness.

c. Remove the 2 nuts and front seat side airbag assembly LH.

CAUTION:

Make sure that the seat frame assembly is not deformed. If it is, replace it with a new one.

- **Use the same procedures for LHD and RHD vehicles.**
- **The procedures listed below are for LHD vehicles.**

1. INSTALL FRONT SEAT SIDE AIRBAG ASSEMBLY LH

CAUTION:

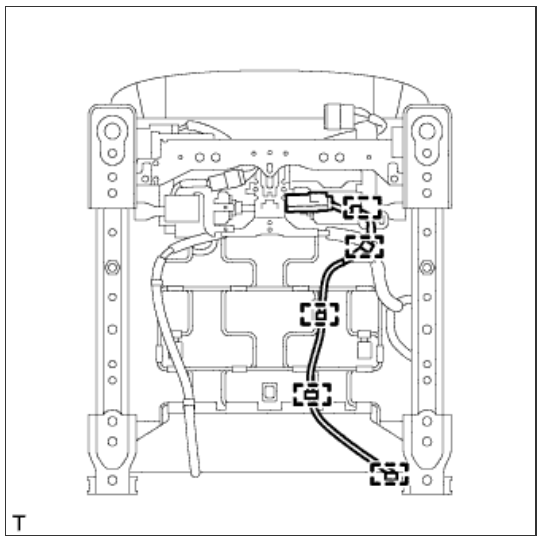
Make sure that the seat frame assembly is not deformed. If it is, replace it with a new one.



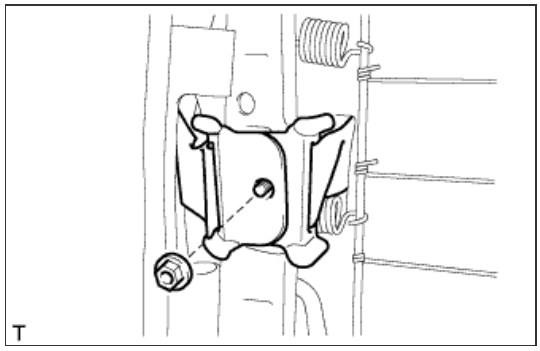
a. Install the front seat side airbag assembly with nuts.

Torque:
5.5 N*m{ 56 kgf*cm , 49 in.*lbf }

b. Attach the clamps to connect the wire harness.

c. Attach the 5 clamps to connect the wire harness.

2. INSTALL SEATBAC COVER ITH PAD



a. Install the seatback cover with pad to the seatback frame.

b. Install the seatback cover bracket to the seat frame with the nut.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

CAUTION:

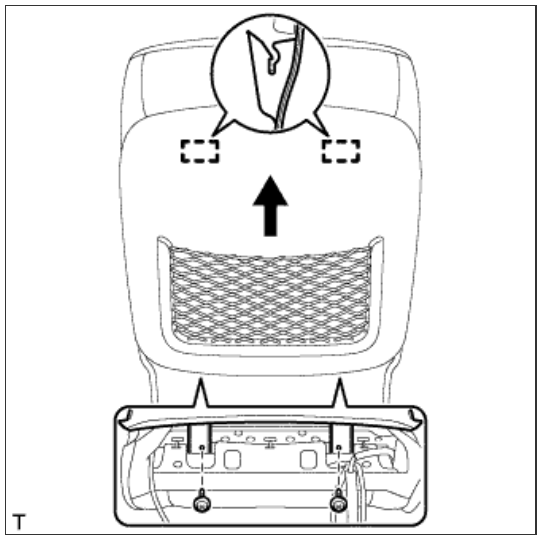
After the seatback trim cover is assembled, make sure the side airbag strap is not twisted.

c. Attach the 9 hooks.

d. Using hog ring pliers, install 3 new hog rings to the seat frame.

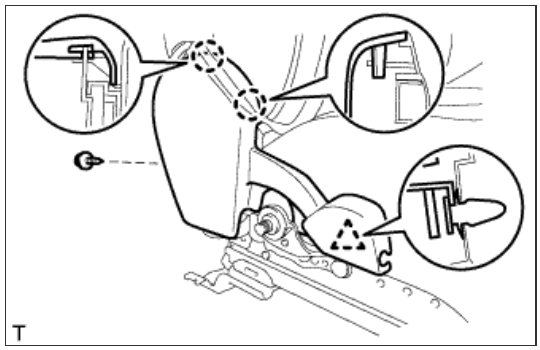


3. INSTALL FRONT SEAT HEADREST SUPPORT

a. Attach the 4 claws to install the headrest supports.

4. INSTALL FRONT SEATBAC BOARD SUB-ASSEMBLY LH

a. Move the seatback board in the direction of the arrow to attach the hooks and install the seatback board.



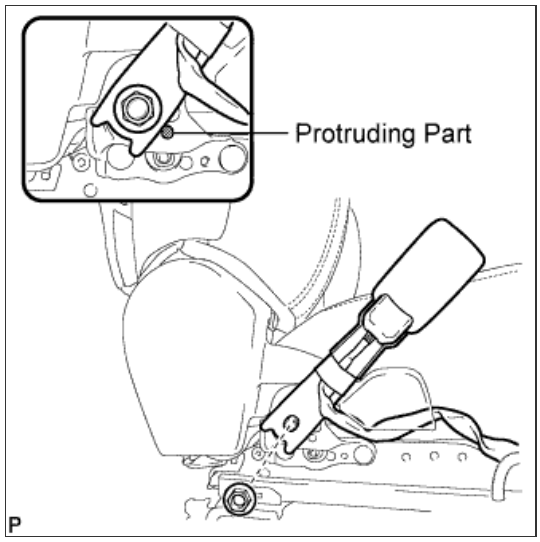
b. Install the screws.

5. INSTALL FRONT INNER SEAT CUSHION SHIELD LH

a. Attach the claws and clip to install the cushion shield.

b. Install the screw.

6. INSTALL FRONT SEAT INNER BELT ASSEMBLY LH



a. Install the front seat inner belt assembly with the nut.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }

NOTICE:

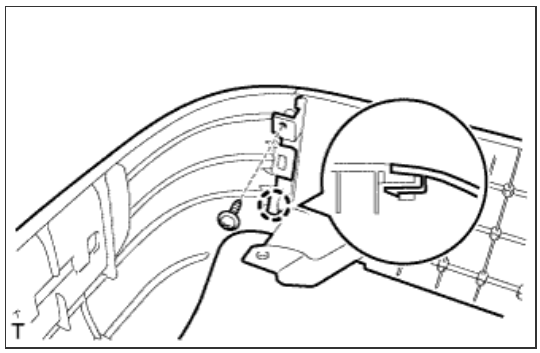
Do not allow the anchor part of the front seat inner belt assembly to overlap the protruding parts of the front seat adjuster.

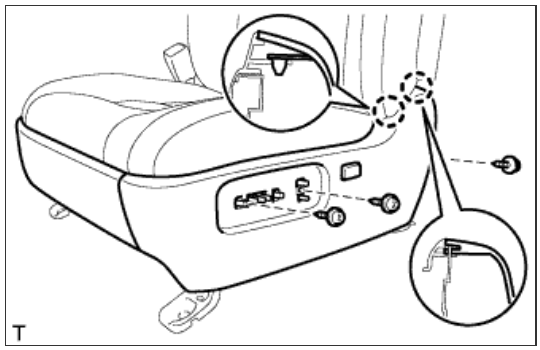


b. Connect the connectors and attach the clamps.

7. INSTALL FRONT INNER NO. 1 SEAT CUSHION SHIELD LH

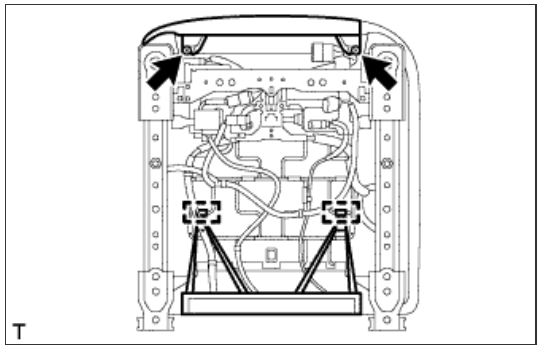
a. Attach the claw to install the cushion shield.

b. Install the screw.



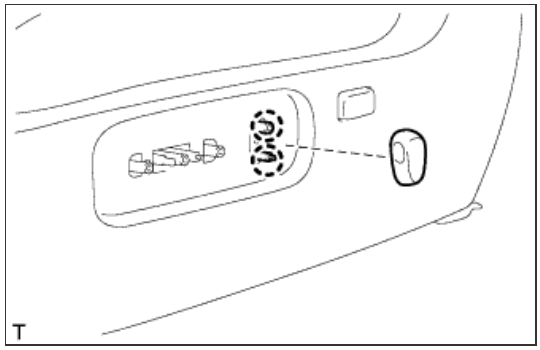
8. INSTALL FRONT SEAT CUSHION SHIELD LH

a. for Driver Side:
Connect the lumbar switch connectors.



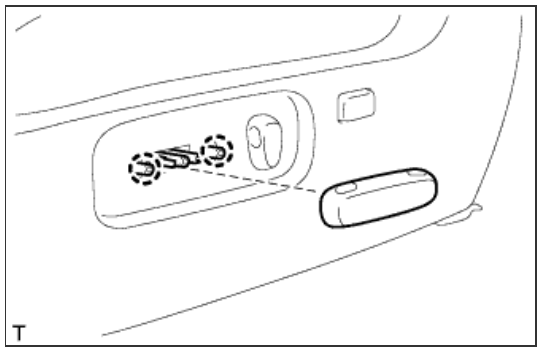
b. Attach the claws to install the cushion shield.

c. Install the 3 screws.



d. Install the screws.

e. Attach the rubber bands to the hooks.



9. INSTALL RECLINING PO ER SEAT S ITCH NOB

a. Attach the claws to install the knob.

10. INSTALL SLIDE AND VERTICAL PO ER SEAT S ITCH NOB

a. Attach the claws to install the knob.

11. INSTALL FRONT SEAT ASSEMBLY LH

a. Install the front seat assembly LH (Click here).

for Preparation Click here

CAUTION:

Wear protective gloves. Sharp areas on the parts may injure your hands.

HINT:

- **Use the same procedures for LHD and RHD vehicles.**
- **The procedures listed below are for LHD vehicles.**

1. INSTALL FRONT SEAT SIDE AIRBAG ASSEMBLY LH

CAUTION:

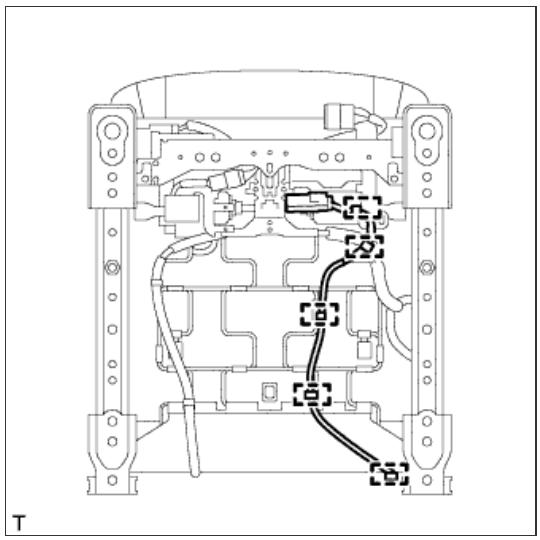
Make sure that the seat frame assembly is not deformed. If it is, replace it with a new one.



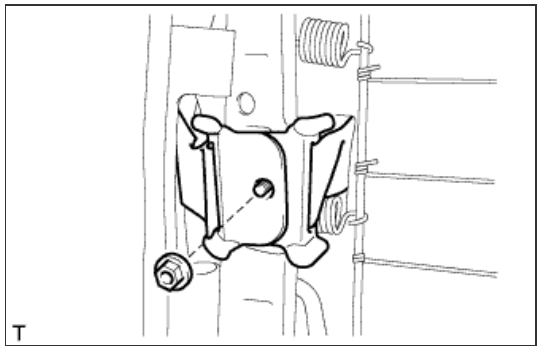
a. Install the front seat side airbag assembly with nuts.

Torque:
5.5 N*m{ 56 kgf*cm , 49 in.*lbf }

b. Attach the clamps to connect the wire harness.

c. Attach the 5 clamps to connect the wire harness.

2. INSTALL SEATBAC COVER ITH PAD



a. Install the seatback cover with pad to the seatback frame.

b. Install the seatback cover bracket to the seat frame with the nut.

Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

CAUTION:

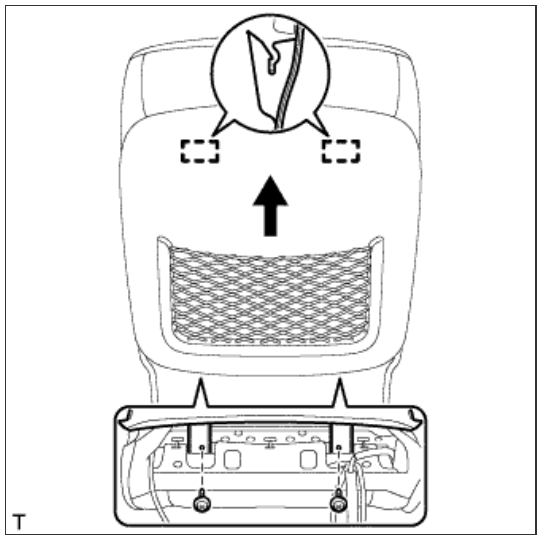
After the seatback trim cover is assembled, make sure the side airbag strap is not twisted.

c. Attach the 9 hooks.

d. Using hog ring pliers, install 3 new hog rings to the seat frame.

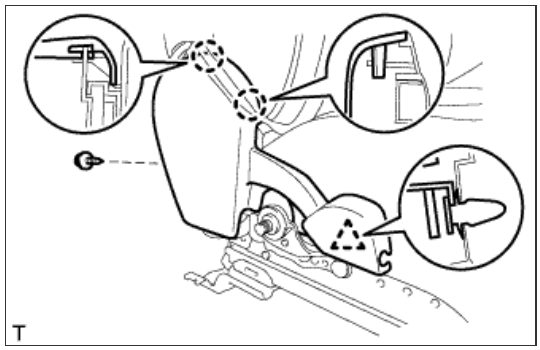


3. INSTALL FRONT SEAT HEADREST SUPPORT

a. Attach the 4 claws to install the headrest supports.

4. INSTALL FRONT SEATBAC BOARD SUB-ASSEMBLY LH

a. Move the seatback board in the direction of the arrow to attach the hooks and install the seatback board.



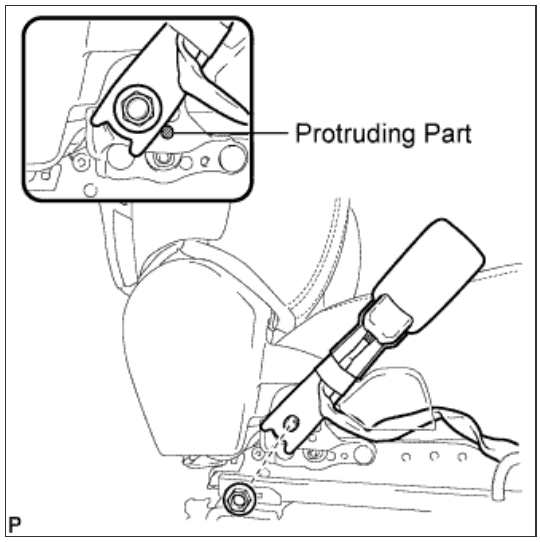
b. Install the screws.

5. INSTALL FRONT INNER SEAT CUSHION SHIELD LH

a. Attach the claws and clip to install the cushion shield.

b. Install the screw.

6. INSTALL FRONT SEAT INNER BELT ASSEMBLY LH



a. Install the front seat inner belt assembly with the nut.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }

NOTICE:

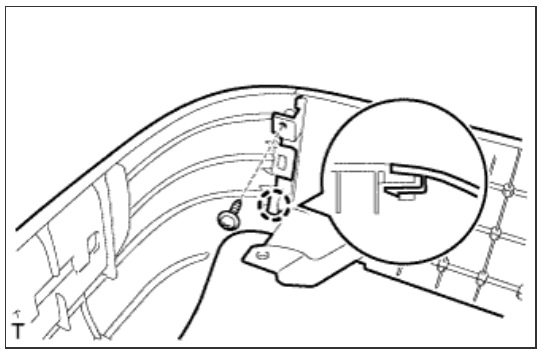
Do not allow the anchor part of the front seat inner belt assembly to overlap the protruding parts of the front seat adjuster.

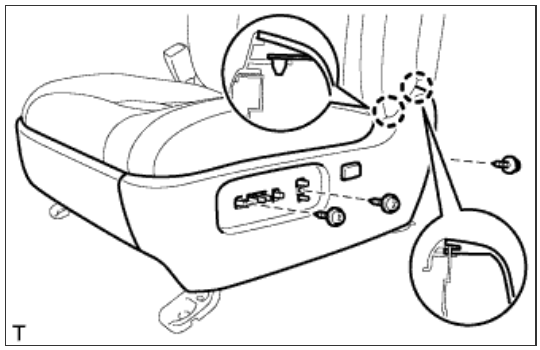


b. Connect the connectors and attach the clamps.

7. INSTALL FRONT INNER NO. 1 SEAT CUSHION SHIELD LH

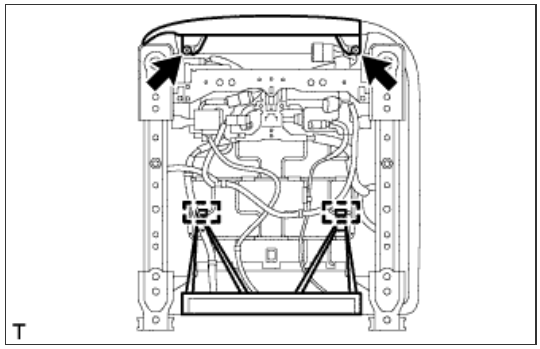
a. Attach the claw to install the cushion shield.

b. Install the screw.



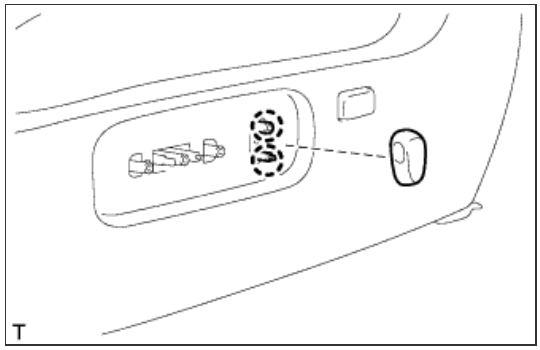
8. INSTALL FRONT SEAT CUSHION SHIELD LH

a. for Driver Side:
Connect the lumbar switch connectors.



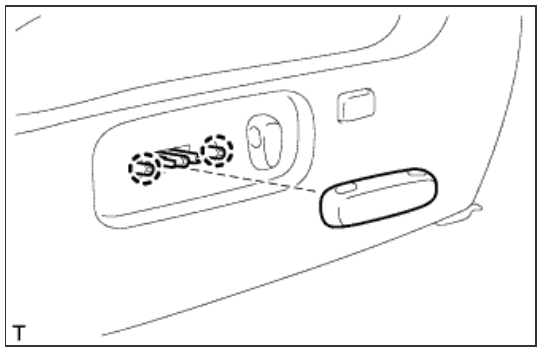
b. Attach the claws to install the cushion shield.

c. Install the 3 screws.



d. Install the screws.

e. Attach the rubber bands to the hooks.



9. INSTALL RECLINING PO ER SEAT S ITCH NOB

a. Attach the claws to install the knob.

10. INSTALL SLIDE AND VERTICAL PO ER SEAT S ITCH NOB

a. Attach the claws to install the knob.

11. INSTALL FRONT SEAT ASSEMBLY LH

a. Install the front seat assembly LH (Click here).

for Preparation Click here

HINT:

When scrapping a vehicle equipped with the SRS or disposing of the steering pad, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of the DISTRIBUTOR..

CAUTION:

- **Never dispose of a front seat side airbag that has an unactivated airbag.**
- **The airbag produces an exploding sound when it is deployed, so perform the operation outdoors and where it will not create a nuisance to nearby residents.**
- **When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- **When deploying the airbag, perform the operation at least 10 m (32.8 ft.) away from the airbag.**
- **The front seat side airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front seat side airbag with a deployed airbag.**
- **Do not apply water to a front seat side airbag with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**
- **An airbag or pretensioner may be activated by static electricity. To prevent this, be sure to touch a metal surface with bare hands to discharge static electricity before performing this procedure.**

1. DISPOSE OF FRONT SEAT SIDE AIRBAG ASSEMBLY (WHEN INSTALLED IN VEHICLE)

HINT:

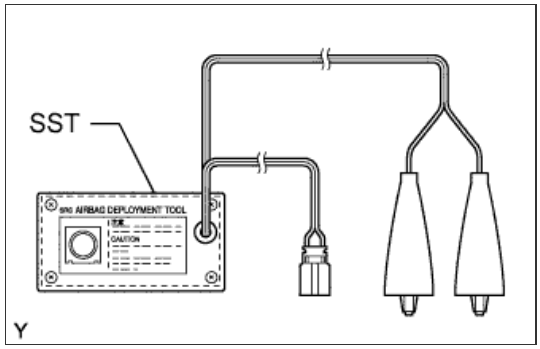
Prepare a battery as the power source to deploy the airbag.

a. Check the function of SST (Click here).

b. Read the precaution (Click here).



c. Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

d. Remove the front seat (Click here).

HINT:

Keep the front seat in the cabin.

e. Install SST.

i. Disconnect the connector (yellow colored) from the front seat side airbag.

NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

ii. Connect SST connector to the front seat side airbag connector.

SST

09082-00700

09082-00820

NOTICE:

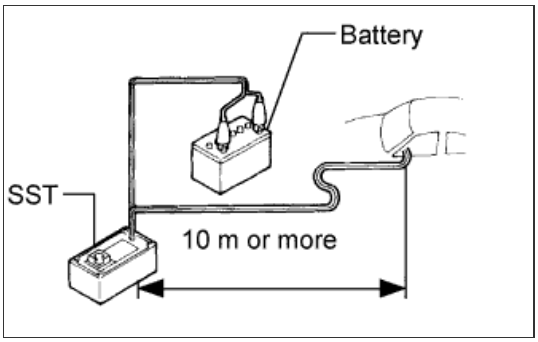
To avoid damaging SST connector and wire harness, do not lock the secondary lock of the twin lock.

iii. Install the front seat (Click here).



iv. Move SST at least 10 m (32.8 ft.) away from the vehicle front side window.

v. Maintaining enough clearance for SST wire harness in the front side window, close all doors and windows of the vehicle.

NOTICE:

Take care not to damage SST wire harness.

vi. Connect the red clip of SST to the battery positive (+) terminal and the black clip of SST to the battery negative (-) terminal.

f. Deploy the airbag.

i. Check that no one is inside the vehicle or within a 10 m (32.8 ft.) radius of the vehicle.

ii. Press SST activation switch to deploy the airbag.

CAUTION:

- **When deploying the airbag, make sure that no one is near the vehicle.**
- **The front seat side airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front seat side airbag with a deployed airbag.**
- **Do not apply water to a front seat side airbag with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

HINT:

The airbag is deployed as the ED of SST activation switch comes on.

2. DISPOSE OF FRONT SEAT SIDE AIRBAG ASSEMBLY (WHEN NOT INSTALLED IN VEHICLE)

NOTICE:

Be sure to follow the procedure detailed below when deploying the airbag.

HINT:

Prepare a battery as the power source to deploy the airbag.

a. Check the function of SST (Click here).

b. Remove the front seat side airbag.

i. Remove the front seat (Click here).

ii. Remove the 2 nuts and the front seat side airbag from the seatback.

CAUTION:

- **When removing the front seat side airbag, wait at least 90 seconds after the engine switch is turned off and the cable is disconnected from the negative (-) battery terminal before starting work.**
- **When storing the front seat side airbag, keep the airbag deployment side facing upward.**

c. Using a service-purpose wire harness for the vehicle, tie down the front seat side airbag to a tire.

Cross-sectional area of stripped wire harness section:
1.25 mm^2 (0.00192 in.^{2}) or more

HINT:

To calculate the cross-sectional area of the stripped wire harness section:

Cross-sectional area 3.14 (Diameter)^2 divided by 4

CAUTION:

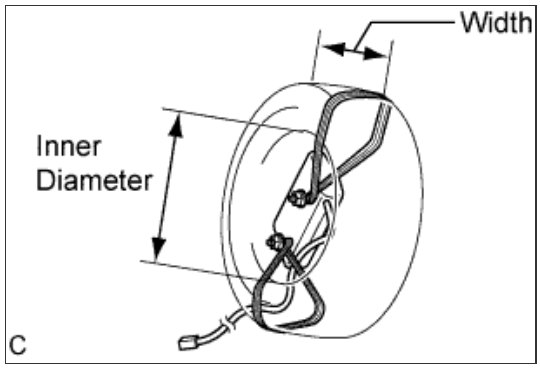
If the wire harness is too thin or an alternative ob ect is used to tie down the front seat side airbag, it may be snapped by the shock when the airbag is deployed. Always use a wire harness for vehicle use with a cross-sectional area of at least 1.25 mm^2 (0.00192 in.^{2}).

i. Install the 2 nuts to the front seat side airbag.



ii. Wind the wire harness around the stud bolts of the front seat side airbag as shown in the illustration.

iii. Position the front seat side airbag inside a tire.

Tire size:
Must exceed the following dimensions
Width:
185 mm (7.28 in.)
Inner diameter:
360 mm (14.2 in.)

CAUTION:

- **Make sure that the wire harnesses are tight. If there is slack in the wire harnesses, the front seat side airbag may become loose due to the shock when the airbag is deployed.**
- **Always tie down the front seat side airbag with the airbag deployment direction facing inside the tire.**

NOTICE:

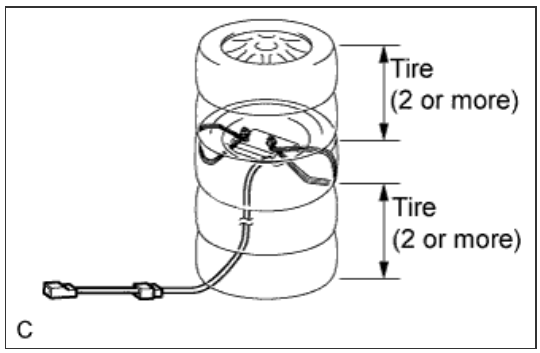
As the tire may be damaged by the airbag deployment, use a tire that you are planning to throw away.



d. Install SST.

i. Connect SST connector to the front seat side airbag connector.

SST
09082-00820

e. Place tires.

i. Place at least 2 tires under the tire which the front seat side airbag is tied to.

ii. Place at least 2 tires over the tire which the front seat side airbag is tied to. The top tire should have a disc wheel installed.

NOTICE:

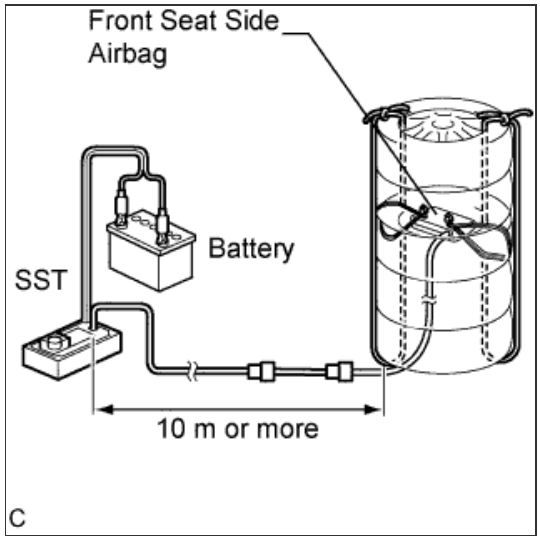
- **Do not place SST connector under the tire because it could be damaged.**
- **As the disc wheel may be damaged by the airbag deployment, use a disc wheel that you are planning to throw away.**
- **As the tires may be damaged by the airbag deployment, use tires that you are planning to throw away.**



iii. Tie the tires together with 2 wire harnesses.

CAUTION:

Make sure that the wire harnesses are tight. ooseness in the wire harnesses results in the tires coming free due to the shock when the airbag is deployed.

f. Install SST.

i. Connect SST connector.

SST
09082-00700

NOTICE:

To avoid damaging SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for SST wire harness inside the tire.

g. Deploy the airbag.

i. Connect the red clip of SST to the battery positive (+) terminal and the black clip of SST to the battery negative (-) terminal.

ii. Check that no one is within a 10 m (32.8 ft.) radius of the tire which the front seat side airbag is tied to.

iii. Press SST activation switch to deploy the airbag.

CAUTION:

When deploying the airbag, make sure that no one is near the tire.

HINT:

The airbag is deployed as the ED of SST activation switch comes on.

h. Dispose of the front seat side airbag.

CAUTION:

- **The front seat side airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front seat side airbag with a deployed airbag.**
- **Do not apply water to a front seat side airbag with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

i. Remove the front seat side airbag from the tire.

ii. Place the front seat side airbag in a plastic bag, tie it tightly and dispose of it in the same way as other general parts.

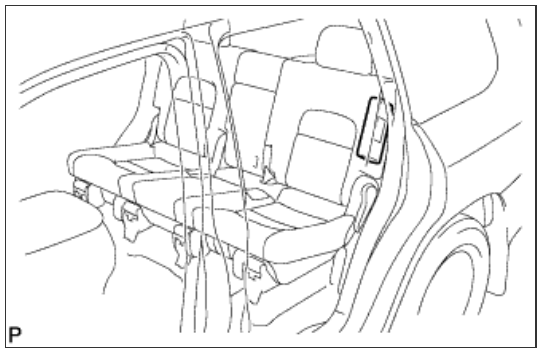
i. Remove the front seat side airbag from the tire.



ii. Place the front seat side airbag in a plastic bag, tie it tightly and dispose of it in the same way as other general parts.

for Preparation Click here

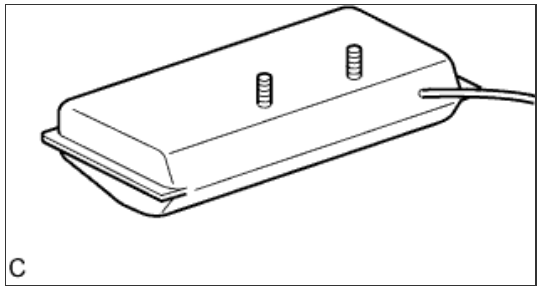
1. CHECK REAR SEAT SIDE AIRBAG ASSEMBLY (VEHICLE NOT INVOLVED IN COLLISION)

a. Perform a diagnostic system check (Click here).

b. With the rear seat side airbag installed on the vehicle, perform a visual check. If there are any defects as mentioned below, replace the rear seat with a new one: Cuts, minute cracks or marked discoloration on the rear seatback around the rear seat side airbag.



2. CHECK REAR SEAT SIDE AIRBAG ASSEMBLY (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED)

a. Perform a diagnostic system check (Click here).

b. With the rear seat side airbag removed from the vehicle, perform a visual check. If there are any defects as mentioned below, replace the rear seat side airbag with a new one:

- Cuts, minute cracks or marked discoloration on the rear seat side airbag.
- Cracks or other damage to the wire harness or connector.

NOTICE:

For removal and installation procedures of the rear seat side airbag, be sure to follow the correct procedure.

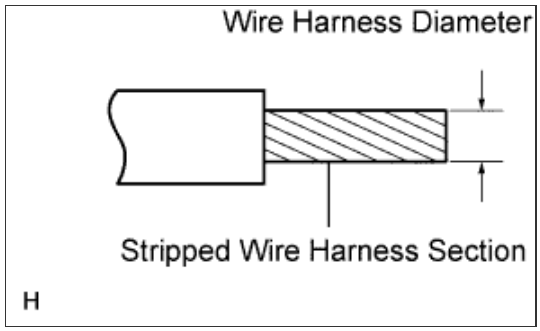
ii. Remove the 2 nuts and the rear seat side airbag from the seatback.



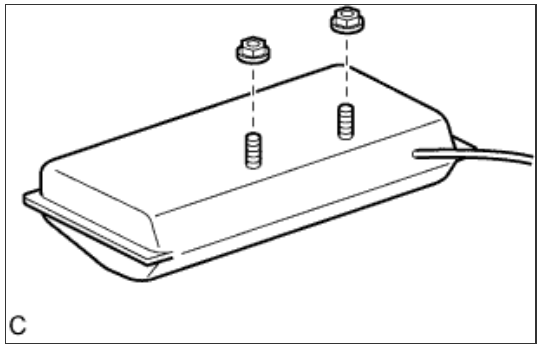
CAUTION:

- **When removing the rear seat airbag, wait at least 90 seconds after the engine switch is turned off and the cable is disconnected from the negative (-) battery terminal before starting work.**
- **When storing the rear seat side airbag, keep the airbag deployment side facing upward.**

c. Using a service-purpose wire harness for the vehicle, tie down the rear seat side airbag to a tire.

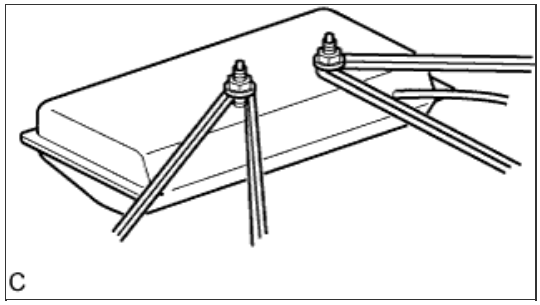
Cross-sectional area of stripped wire harness section:
1.25 mm^2 (0.00192 in.^{2}) or more

HINT:



To calculate the cross-sectional area of the stripped wire harness section:

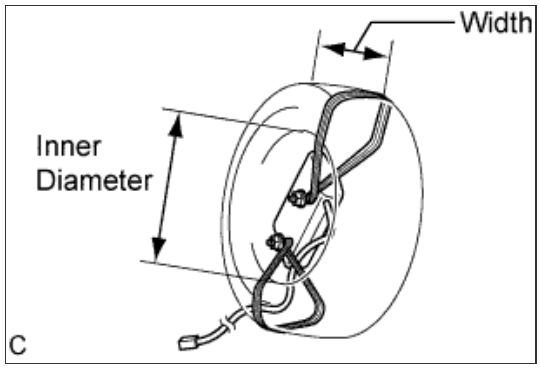
Cross-sectional area 3.14 (Diameter)^2 divided by 4



CAUTION:

If the wire harness is too thin or an alternative ob ect is used to tie down the rear seat side airbag, it may be snapped by the shock when the airbag is deployed. Always use a wire harness for vehicle use with a cross-sectional area of at least 1.25 mm^2 (0.00192 in.^{2}).

i. Install the 2 nuts to the rear seat side airbag.



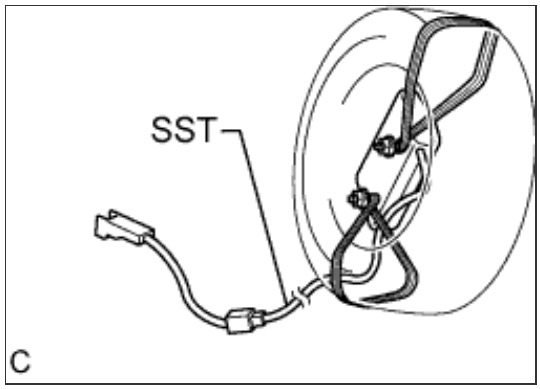
ii. Wind the wire harness around the stud bolts of the rear seat side airbag as shown in the illustration.

iii. Position the rear seat side airbag inside a tire.

Tire size:
Must exceed the following dimensions
Width:
185 mm (7.28 in.)
Inner diameter:
360 mm (14.2 in.)

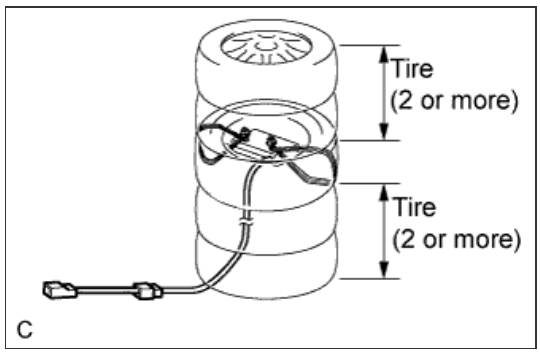
CAUTION:

- **Make sure that the wire harnesses are tight. If there is slack in the wire harnesses, the rear seat side airbag may become loose due to the shock when the airbag is deployed.**
- **Always tie down the rear seat side airbag with the airbag deployment direction facing inside the tire.**



NOTICE:

As the tire may be damaged by the airbag deployment, use a tire that you are planning to throw away.



d. Install SST.

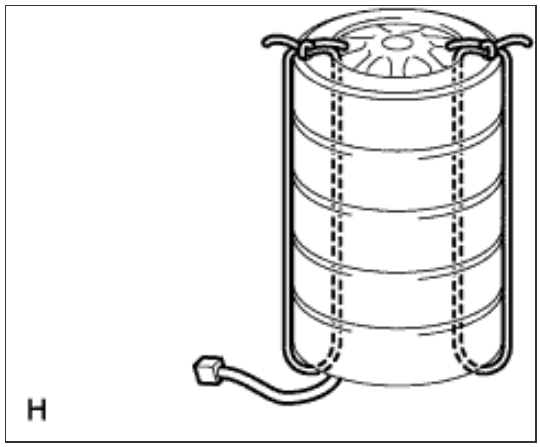
i. Connect SST connector to the rear seat side airbag connector.

SST
09082-00820

e. Place tires.

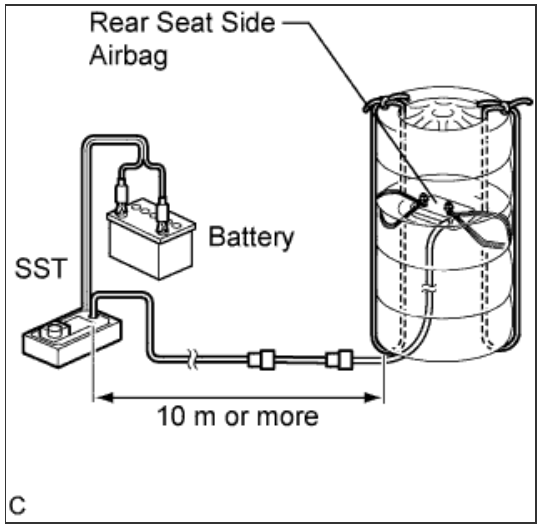
i. Place at least 2 tires under the tire which the rear seat side airbag is tied to.

ii. Place at least 2 tires over the tire which the rear seat side airbag is tied to. The top tire should have a disc wheel installed.



NOTICE:

- **Do not place SST connector under the tire because it could be damaged.**
- **As the disc wheel may be damaged by the airbag deployment, use a disc wheel that you are planning to throw away.**
- **As the tires may be damaged by the airbag deployment, use tires that you are planning to throw away.**



iii. Tie the tires together with 2 wire harnesses.

CAUTION:

Make sure that the wire harnesses are tight. ooseness in the wire harnesses results in the tires coming free due to the shock when the airbag is deployed.

f. Install SST.

i. Connect SST connector.

SST
09082-00700

NOTICE:

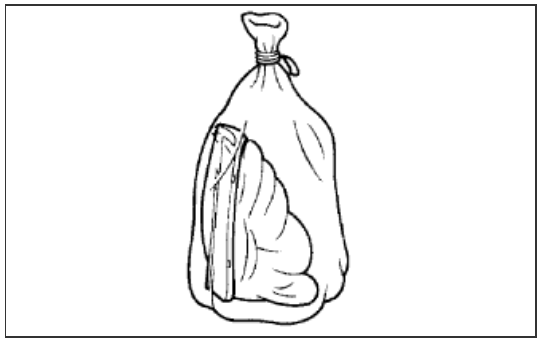
To avoid damaging SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for SST wire harness inside the tire.

g. Deploy the airbag.

i. Connect the red clip of SST to the battery positive (+) terminal and the black clip of SST to the battery negative (-) terminal.

ii. Check that no one is within a 10 m (32.8 ft.) radius of the tire which the rear seat side airbag is tied to.

iii. Press SST activation switch to deploy the airbag.



CAUTION:

When deploying the airbag, make sure that no one is near the tire.

HINT:

The airbag is deployed as the ED of SST activation switch comes on.

h. Dispose of the rear seat side airbag.

CAUTION:

- **The rear seat side airbag becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a rear seat side airbag with a deployed airbag.**
- **Do not apply water to a rear seat side airbag with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

i. Remove the rear seat side airbag from the tire.

ii. Place the rear seat side airbag in a plastic bag, tie it tightly and dispose of it in the same way as other general parts.

for Preparation Click here

1. CHECK CENTER AIRBAG SENSOR ASSEMBLY VEHICLE NOT INVOLVE IN COLLISION)

a. Perform a diagnostic system check (Click here).

2. CHECK CENTER AIRBAG SENSOR ASSEMBLY VEHICLE INVOLVE IN COLLISION AN AIRBAG HAS NOT EPLOYE

a. Perform a diagnostic system check (Click here).

3. CHECK CENTER AIRBAG SENSOR ASSEMBLY VEHICLE INVOLVE IN COLLISION AN AIRBAG IS EPLOYE

a. Replace the center airbag sensor.

CAUTION:

For removal and installation procedures of the center airbag sensor, be sure to follow the correct procedure.

HINT:

The center airbag sensor should be replaced after any of the airbags have deployed, as it has been sub ected to the impact.

CENTER AIRBAG SENSOR ASSEMBLY > REMOVAL

for Preparation Click here

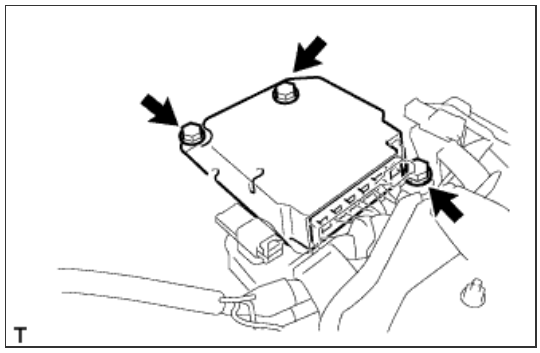
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).



2. REMOVE FRONT AIR CONDITIONING UNIT

a. Remove the front air conditioning nit (Click here).

3. REMOVE CENTER AIRBAG SENSOR ASSEMBLY

a. Disconnect the holder (with connectors).

b. Remove the 3 bolts and airbag sensor.

CENTER AIRBAG SENSOR ASSEMBLY > REMOVAL

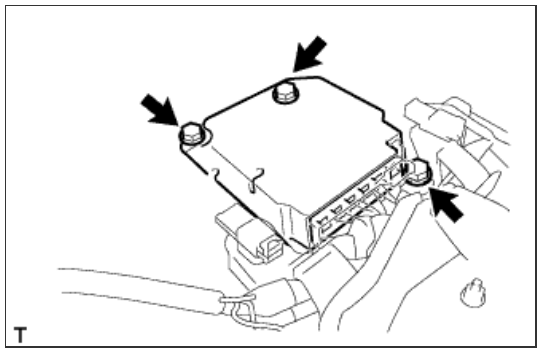
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

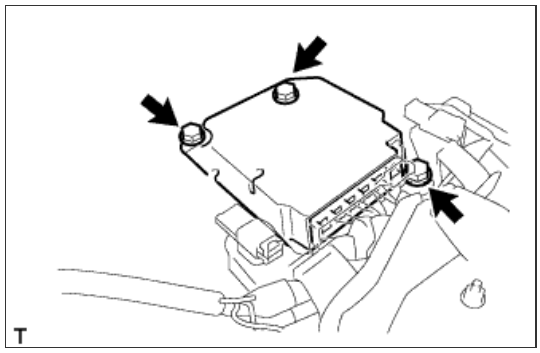
When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).



2. REMOVE FRONT AIR CONDITIONING UNIT

a. Remove the front air conditioning nit (Click here).

3. REMOVE CENTER AIRBAG SENSOR ASSEMBLY



a. Disconnect the holder (with connectors).

b. Remove the 3 bolts and airbag sensor.

for Preparation Click here

1. INSTALL CENTER AIRBAG SENSOR ASSEMBLY

a. Check that the engine switch is off.

b. Check that the cable is disconnected from the battery negative (terminal.

CAUTION:

ait at least seconds after disconnecting the cable from the negative (battery terminal to disable the SRS system.

c. nstall the airbag sensor with the bolts.

Torque:
18 N*m{ 184 kgf*cm , 13 ft.*lbf }

NOTICE:

- **If the center airbag sensor has been dropped, or there are any cracks, dents or other defects in the case, bracket or connector, replace it with a new one.**
- **When installing the center airbag sensor, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.**

d. Check that there is no looseness in the installation parts of the center airbag sensor.

e. Connect the holder (with connectors).

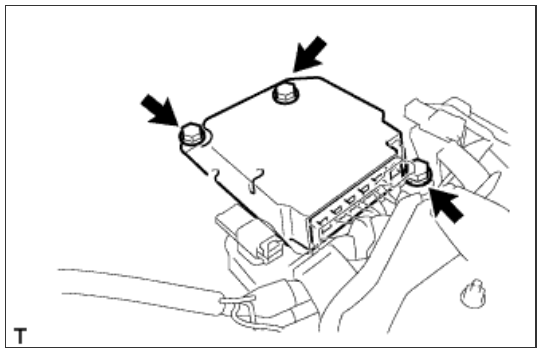
f. Check that the waterproof sheet is properly set.

2. INSTALL FRONT AIR CONDITIONING UNIT

a. nstall the front air conditioning nit (Click here).

3. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:



hen disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

4. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).

1. CHECK FRONT AIRBAG SENSOR (VEHICLE NOT INVOLVE IN COLLISION)

a. Perform a diagnostic system check (Click here).

2. CHECK FRONT AIRBAG SENSOR (VEHICLE INVOLVE IN COLLISION AN AIRBAG HAS NOT EPLOYE

a. Perform a diagnostic system check (Click here).

b. When the front bumper of the vehicle or its area is damaged, check if there is any damage to the front airbag sensor. If the front airbag sensor has defects as mentioned below, replace it with a new one:

- Cracks, dents or chips on the sensor housing.
- Cracks or other damage to the connector.
- Peeling off of the label or damage to the serial number.

CAUTION:

For removal and installation procedures of the front airbag sensor, be sure to follow the correct procedure.

3. CHECK FRONT AIRBAG SENSOR (VEHICLE INVOLVE IN COLLISION AN AIRBAG IS EPLOYE

a. When airbags have deployed as the result of a collision, be certain to replace the front airbag sensor when it is in the damaged area (anywhere in need of repair). Furthermore, it is also necessary to replace the front airbag sensor in an undamaged area that has registered a ma or collision, or which e hibits any of the following abnormalities:

- Cracks, dents or chips on the sensor housing.
- Cracks or other damage to the connector.
- Peeling off of the label or damage to the serial number.

CAUTION:

For removal and installation procedures of the front airbag sensor, be sure to follow the correct procedure.
