for Preparation Click here

FUNCTION OF MAIN COMPONENT

Components	Function
Multiplex network master switch	The door control switch on the master switch locks/unlocks all doors.
Door courtesy light switch	Turns on when the door is open and off when the door is closed. Outputs the door status (open or closed) to the main body ECU.
Driver side door lock	• The built-in motor locks/unlocks the door. • The built-in door control switch position (key-linked) detects the door key cylinder status (lock or unlock) and outputs the data to the main body ECU. • The built-in position switch detects the door status (locked or unlocked) and outputs the data to the main body ECU. This switch turns off when the door is locked and on when the door is unlocked.
Front passenger side door lock Rear door lock LH Rear door lock RH Back door lock	• The built-in motor locks/unlocks the door. • The built-in position switch detects the door status (locked or unlocked) and outputs the data to the main body ECU. This switch turns off when the door is locked and on when the door is unlocked.

SYSTEM DESCRIPTION

a. The power door lock system locks/unlocks all doors.

- The door control switch of the master switch uses the LIN line to send lock/unlock request signals to the main body ECU.
- The driver door key cylinder lock/unlock request signals are sent to the main body ECU from the driver side door lock.
- The main body ECU receives the request signals and locks/unlocks each door.

The door control system has the following functions:

Function	Outline
Manual lock and unlock function	Locks/unlocks all doors by the door control switch lock operation (manual operation).
Key-linked lock and unlock function	Linked with the door key cylinder. Locks/unlocks all doors when the lock/unlock operation is possible.
Key lock-in prevention function	When the door control transmitter is in the vehicle, performing the door lock operation with the lock switch on the outer handle will not lock the door and will sound a buzzer.
Manual unlock prohibition function	When the doors are locked using the transmitter or key with the engine switch on (IG) and the driver side seat belt fastened, unlock operations using the door control switches are prohibited.
2-step unlock function	Unlocks only the driver side door by turning the key cylinder once and unlocks the other doors by turning it twice. **HINT:** This function is OFF by default.
Double locking function	Prevents the doors from being unlocked through the operation of the inside door knobs and also from the outside of the vehicle.

CHECK POWER DOOR LOCK OPERATION

a. Check the basic function.

i. Check that all doors lock when the door lock control switch (for manual operation) is turned to lock and all doors unlock when turned to unlock.

ii. Check that all doors lock when the driver side door lock key cylinder is turned to lock using the key.

iii. When the engine switch is on (IG) and the driver seat belt is fastened, check that the manual unlock prohibition function operates when the doors are locked using the transmitter or key.

iv. Check that only the driver side door unlocks when turned to unlock once again within 3 seconds using the key (2-step unlocking function).

b. Check the key lock-in prevention function.

NOTICE:

In order to prevent the key from being locked in, the inspection should be made with the driver side door glass open.

i. Turn the engine switch on (IG) or on (ACC).

ii. With the driver side door open, check that all doors unlock immediately after the door lock knob for the driver side door is locked.

iii. With the driver side door open, check that all doors unlock immediately after the door control switch (for manual operation) is turned to lock.

iv. With the driver side door open, lock the driver side door lock knob and hold it for 2 seconds or more, and then close the driver side door then check that all doors unlock.

c. Check the security function.

i. Close all doors with the driver side door glass open so that the door control switch can be operated from outside the vehicle.

ii. Remove the key from the inside of the vehicle, open the driver side door and then close and lock the door without using the key. Then, check that all doors do not unlock when the door control switch (for manual operation) is turned to unlock from outside the vehicle.

iii. Remove the key from the inside of the vehicle, then close and lock the driver side door with the key operation. Under this condition, check that all doors do not unlock when the door control switch (for manual operation) is turned to unlock from outside the vehicle.

iv. Remove the key from the inside of the vehicle, close the driver side door and lock the door with the wireless door lock operation. Then, check that all doors do not unlock when the door control switch (for manual operation) is turned to unlock from outside the vehicle.

HINT:

Check that the security function is canceled under the following conditions:

- The engine switch is turned on (IG).
- The driver side door is unlocked using the key.
- The door control switch (for manual operation) is turned to unlock after the door lock knob is unlocked manually.
- The doors are unlocked by wireless operation.

d. Check the illumination function.

i. Set the map light switch to the DOOR position.

ii. With all the doors locked, check that all doors unlock when the driver side door lock cylinder is turned to unlock using the key and that the map light turns on.

iii. Check that the map light turns off in approximately 15 seconds after the doors have not been opened.

CHECK DOUBLE LOCKING FUNCTION

CAUTION:

Do not activate the double locking function when there are people in the vehicle because the doors cannot be opened from the inside of the vehicle.

Under emergency conditions, such as if the power has been cut, this function can be cancelled by inserting the key (mechanical key) into the driver door key cylinder and turning it to the unlock side.

a. Check that the double locking function is set.

   i. Open all the windows.

   ii. Turn the engine switch off.

   iii. Open and close the driver side door, and make sure that all doors, including the back door, are closed securely.

   iv. Press the transmitter lock switch twice within 5 seconds, and check that the hazard warning lights flash once at this time to indicate that the double locking function has been set.

   HINT:

   The double locking function can be turned on by pressing the lock switch on the outside handle 2 times within 3 seconds.

   v. Try to unlock each door using the inside handle, and check that none of the doors unlock.

   NOTICE:

   The double locking function does not affect the back door.

b. Check that the double locking function is canceled.

   i. Press the transmitter unlock switch while the double locking function is set, and check that the hazard warning lights flash twice at this time to indicate that the system is canceled.

   ii. Check that the doors can be opened by using both the inside and outside handles.

   NOTICE:

   If the battery of the transmitter is depleted, only the driver side door can be opened using the key. However, the theft deterrent system still remains on. The theft alarm will sound when the door is opened without using the transmitter.

CUSTOMIZING FUNCTION WITH INTELLIGENT TESTER

HINT:

The following items can be customized.

NOTICE:

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Be sure to make a note of the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the tester on.

d. Enter the following menus: Select: Body / Door Lock / Utility / Customize /

e. Select the setting by referring to the table below.

Door Lock

Display	Default	Contents	Setting
Unlock Key Twice	OFF	Function that unlocks only the driver side door when the driver side door key cylinder is turned to unlock once, and unlock all doors when it is turned to unlock twice. For the OFF setting, turning it once unlocks all doors.	ON/OFF

for Preparation Click here

HINT:

Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

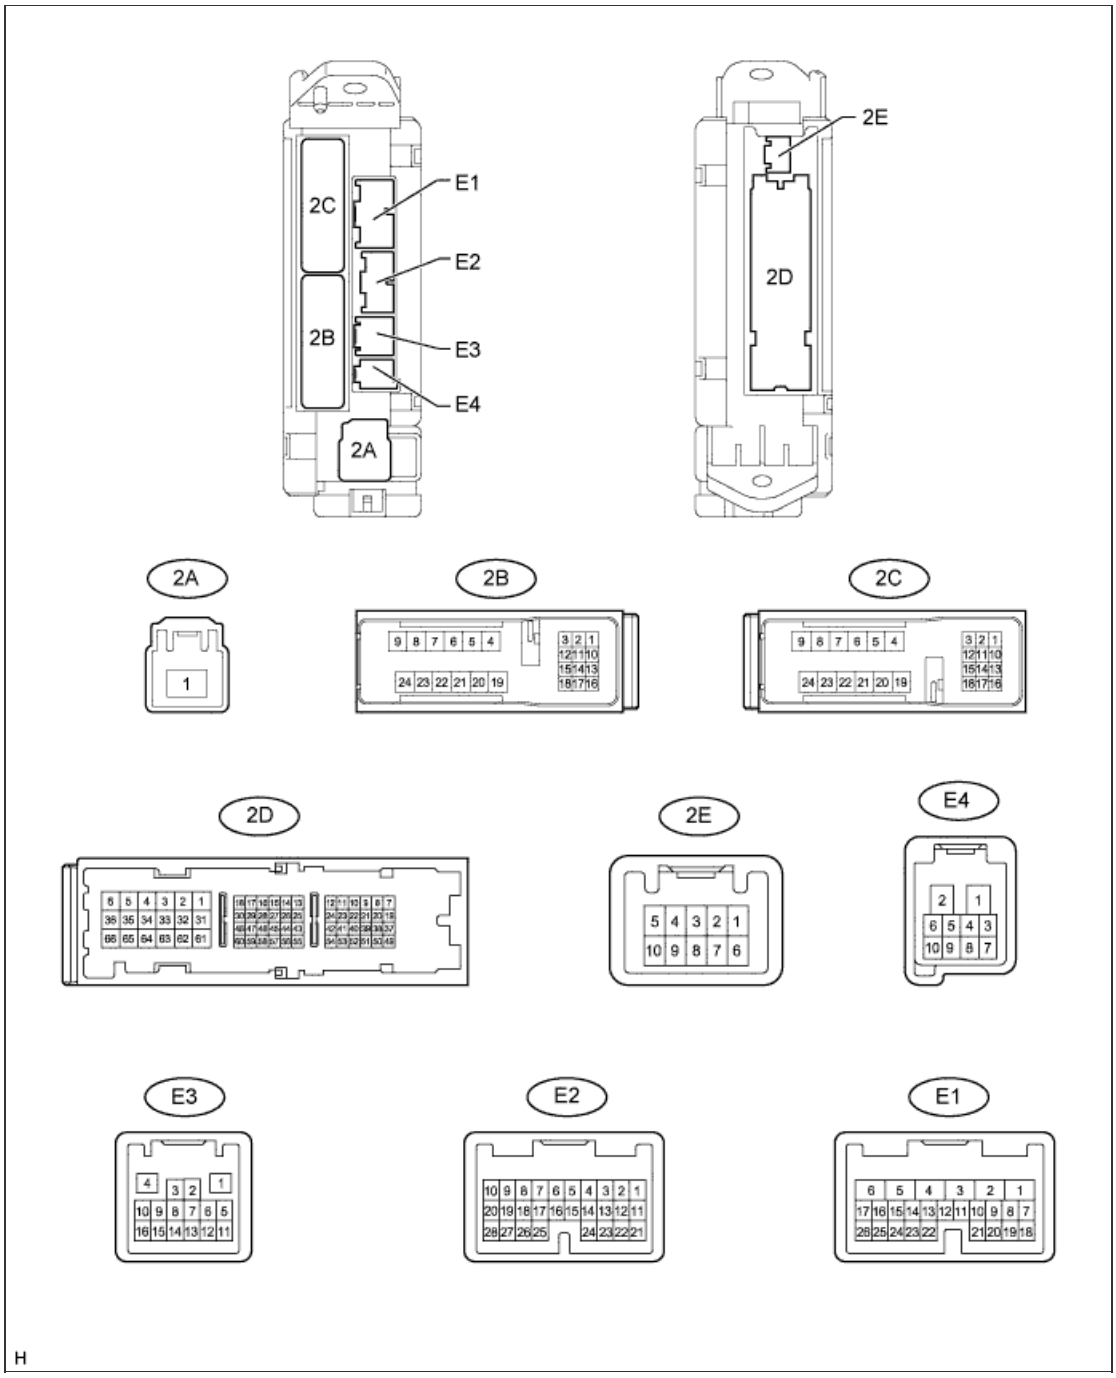
CHECK MULTIPLEX NETWORK MASTER SWITCH ASSEMBLY

a. Disconnect the I11 switch connector.

b. Measure the voltage and resistance according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
I11-12 (GND) - Body ground*1	W-B - Body ground	Ground	Always	Below 1 Ω
I11-11 (B) - I11-12 (GND)*1	L - W-B	Battery power supply	Always	11 to 14 V
I22-12 (GND) - Body ground*2	W-B - Body ground	Ground	Always	Below 1 Ω
I22-11 (B) - I22-12 (GND)*2	L - W-B	Battery power supply	Always	11 to 14 V



HINT:

*1: for LHD

*2: for RHD

If the result is not as specified, there may be a malfunction on the wire harness side.

CHECK MAIN BODY ECU (COWL SIDE JUNCTION BLOCK LH)

a. Disconnect the 2A, 2B, 2D and E3 ECU connectors.

b. Measure the voltage and resistance according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
2B-20 (BATB) - Body ground	L - Body ground	Battery power supply	Always	11 to 14 V
2A-1 (ACC) - Body ground	B - Body ground	ACC power supply	Engine switch on (ACC)	11 to 14 V
2A-1 (ACC) - Body ground	B - Body ground	ACC power supply	Engine switch off	Below 1 Ω
2D-62 (GND2) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

c. Reconnect the 2A, 2B, 2D and E3 ECU connectors.

d. Measure the voltage according to the value(s) in the table below.

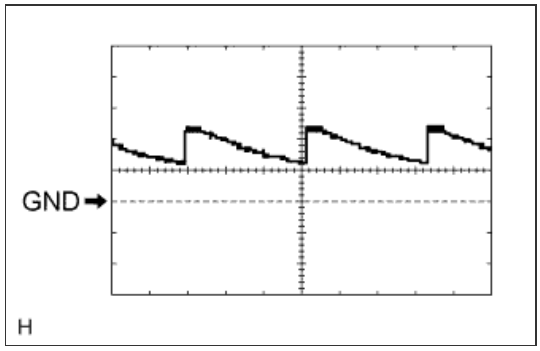
Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E1-24 (DCTY) - Body ground	L*1 - Body ground Y*2 - Body ground	Driver side door courtesy switch input	Driver side door open	Below 1 V
			Engine switch off, and	

E1-24 (DCTY) - Body ground	L*1 - Body ground Y*2 - Body ground	Driver side door courtesy switch input	driver side door courtesy switch off	Pulse generation (see waveform 1 or 2)
E2-21 (PCTY) - Body ground	Y*1 - Body ground L*2 - Body ground	Front passenger side door courtesy switch input	Front passenger side door open	Below 1 V
E2-21 (PCTY) - Body ground	Y*1 - Body ground L*2 - Body ground	Front passenger side door courtesy switch input	Engine switch off, and passenger side door courtesy switch off	Pulse generation (see waveform 3 or 4)
2C-2 (LCTY) - Body ground	W - Body ground	Rear door LH courtesy light switch input	Rear door LH open	Below 1 V
2C-2 (LCTY) - Body ground	W - Body ground	Rear door LH courtesy light switch input	Engine switch off, and rear LH side door courtesy switch off	Pulse generation (see waveform 5 or 6)
E2-7 (RCTY) - Body ground	G - Body ground	Rear door RH courtesy light switch input	Rear door RH open	Below 1 V
E2-7 (RCTY) - Body ground	G - Body ground	Rear door RH courtesy light switch input	Engine switch off, and rear RH side door courtesy switch off	Pulse generation (see waveform 7 or 8)
E2-25 (BCTY) - Body ground	W - Body ground	Back door courtesy light switch input	Back door open	Below 1 V
E2-25 (BCTY) - Body ground	W - Body ground	Back door courtesy light switch input	Engine switch off, and back door closed	Pulse generation (see waveform 9 or 10)
2D-3 (ACT+) - Body ground	L - Body ground	Door lock motor LOCK drive output	Master switch (door control switch) or driver side door key cylinder off	Below 1 V
2D-3 (ACT+) - Body ground	L - Body ground	Door lock motor LOCK drive output	Master switch (door control switch) or driver side door key cylinder lock	11 to 14 V
2C-24 (ACT+) - Body ground	L - Body ground	Door lock motor LOCK drive output	Master switch (door control switch) or driver side door key cylinder off	Below 1 V
2C-24 (ACT+) - Body ground	L - Body ground	Door lock motor LOCK drive output	Master switch (door control switch) or driver side door key cylinder lock	11 to 14 V
E1-5 (ACTD) - Body ground	B - Body ground	Driver side door lock motor UNLOCK drive output	Master switch (door control switch) or driver side door key cylinder off	Below 1 V
E1-5 (ACTD) - Body ground	B - Body ground	Driver side door lock motor UNLOCK drive output	Master switch (door control switch) or driver side door key cylinder unlock	11 to 14 V
2D-2 (ACT-) - Body ground	B - Body ground	Front passenger side and rear door LH and RH door lock motor UNLOCK drive output	Master switch (door control switch) or driver side door key cylinder off	Below 1 V
2D-2 (ACT-) - Body ground	B - Body ground	Front passenger side and rear door LH and RH door lock motor UNLOCK drive output	Master switch (door control switch) or driver side door key cylinder unlock	11 to 14 V
2D-23 (ACT-) - Body ground	B - Body ground	Front passenger side and rear door LH and RH door lock motor UNLOCK drive output	Master switch (door control switch) or driver side door key cylinder off	Below 1 V
2D-23 (ACT-) - Body ground	B - Body ground	Front passenger side and rear door LH and RH door lock motor UNLOCK drive output	Master switch (door control switch) or driver side door key cylinder unlock	11 to 14 V
E1-10 (UL3) - Body ground	Y*1 - Body ground L*2 - Body ground	Driver side door lock key switch input	Driver side door key cylinder unlock	Below 1 V
E1-10 (UL3) - Body ground	Y*1 - Body ground L*2 - Body ground	Driver side door lock key switch input	Engine switch off, all doors closed and driver side door key cylinder neutral position	Pulse generation (see waveform 11 or 12)
2D-53 (L2) - Body ground	LG - Body ground	Driver side door lock key switch input	Driver side door key cylinder lock	Below 1 V
2D-53 (L2) - Body		Driver side door lock key	Engine switch off, all doors closed and driver	Pulse generation

ground	LG - Body ground	switch input	side door key cylinder neutral position	(see waveform 13 or 14)
E1-1 (TR+) - Body ground	L - Body ground	Back door lock motor UNLOCK drive output	Master switch (door control switch) or driver side door key cylinder off	Below 1 V
E1-1 (TR+) - Body ground	L - Body ground	Back door lock motor UNLOCK drive output	Master switch (door control switch) or driver side door key cylinder unlock	11 to 14 V
E1-9 (LSWD) - Body ground	BR - Body ground	Driver side door lock position switch input	Driver side door unlock	Below 1 V
E1-9 (LSWD) - Body ground	BR - Body ground	Driver side door lock position switch input	Engine switch off, all doors closed and driver side door lock	Pulse generation (see waveform 15 or 16)
E2-27 (LSWP) - Body ground	Y*1 - Body ground BR*2 - Body ground	Front passenger side door lock position switch input	Front passenger side door unlock	Below 1 V
E2-27 (LSWP) - Body ground	Y*1 - Body ground BR*2 - Body ground	Front passenger side door lock position switch input	Engine switch off, all doors closed and passenger side door lock	Pulse generation (see waveform 17 or 18)
2C-1 (LSWL) - Body ground	BR - Body ground	Rear door LH lock position switch input	Rear door LH unlock	Below 1 V
2C-1 (LSWL) - Body ground	BR - Body ground	Rear door LH lock position switch input	Engine switch off, all doors closed and rear door LH lock	Pulse generation (see waveform 19 or 20)
E2-5 (LSWR) - Body ground	BR - Body ground	Rear door RH lock position switch input	Rear door RH unlock	Below 1 V
E2-5 (LSWR) - Body ground	BR - Body ground	Rear door RH lock position switch input	Engine switch off, all doors closed and rear door RH lock	Pulse generation (see waveform 21 or 22)
E1-26 (BDSU) - Body ground	L - Body ground	Back door opener switch input	Back door lock opener switch off	Below 1 V
E1-26 (BDSU) - Body ground	L - Body ground	Back door opener switch input	Back door lock opener switch on	Pulse generation (see waveform 23 or 24)

HINT:

*1: for LHD



*2: for RHD

If the result is not as specified, the ECU may have a malfunction.

CHECK DOUBLE LOCK DOOR CONTROL RELAY

a. Disconnect the E86 double lock door control relay connector.

b. Measure the voltage according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E86-1 (+B) - E86-14 (GND)	B - W-B	Battery power supply	Always	11 to 14 V
E86-7 (CPUB) - E86-14 (GND)	R - W-B	ECU power supply	Always	11 to 14 V
E86-14 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 V

If the result is not as specified, there may be a malfunction on the wire harness side.

c. Reconnect the E86 double lock door control relay connector.

d. Measure the voltage and resistance according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition

E86-4 (ACTR) - E86-14 (GND)	P - W-B	All door double lock motor set off output	Door lock set → unset	Below 1 V → 11 to 14 V → Below 1 V
E86-3 (ACTS) - E86-14 (GND)	G - W-B	All door double lock motor set on output	Door lock unset → set	Below 1 V → 11 to 14 V → Below 1 V
E86-5 (DLPD) - E86-14 (GND)	BR - W-B	Double lock position switch signal	Double lock set	Below 1 Ω
E86-5 (DLPD) - E86-14 (GND)	BR - W-B	Double lock position switch signal	Double lock unset	10 kΩ or higher
E86-6 (DLPP) - E86-14 (GND)	GR - W-B	Double lock position switch signal	Double lock set	Below 1 Ω
E86-6 (DLPP) - E86-14 (GND)	GR - W-B	Double lock position switch signal	Double lock unset	10 kΩ or higher
E86-11 (DLPR) - E86-14 (GND)	Y - W-B	Double lock position switch signal	Double lock set	Below 1 Ω
E86-11 (DLPR) - E86-14 (GND)	Y - W-B	Double lock position switch signal	Double lock unset	10 kΩ or higher
E86-12 (DLPL) - E86-14 (GND)	LG - W-B	Double lock position switch signal	Double lock set	Below 1 Ω
E86-12 (DLPL) - E86-14 (GND)	LG - W-B	Double lock position switch signal	Double lock unset	10 kΩ or higher

If the result is not as specified, the ECU may have a malfunction.

DATA LIST

HINT:

Using the intelligent tester to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the tester on.

d. Enter the following menus:
Body / (desired system) / Data List.

e. According to the display on the tester, read the Data List.

Main Body

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
D Door Courtesy SW	Driver side door courtesy light switch signal / ON or OFF	ON: Driver side door opened OFF: Driver side door closed	-
D Door Lock Pos SW	Driver side door lock position switch signal / ON or OFF	ON: Driver side door unlocked OFF: Driver side door locked	-
Door Key SW-Lock	Door key linked lock switch signal / ON or OFF	ON: Driver side door key cylinder turned to lock position OFF: Driver side door key cylinder not turned	-

ACTIVE TEST

HINT:

Using the intelligent tester to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the tester on.

d. Enter the following menus:
Body / Main Body / Active Test.

e. According to the display on the tester, perform the Active Test.

Trunk and Back-Door Open	Operate back door opener	ON or OFF	-

for Preparation Click here

DESCRIPTION

The main body ECU receives switch signals from the multiplex network master switch, and driver side door key cylinder switch signals from the front door lock. The main body ECU activates the door lock motor on each door according to these signals.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.CHECK DOOR LOCK OPERATION

Result

Result	Proceed to
All doors cannot be locked through multiplex network master switch and driver side door key cylinder	A
All doors cannot be locked through multiplex network master switch	B
All doors cannot be locked through driver side door key cylinder	C

B → Go to step 4

C → Go to step 5

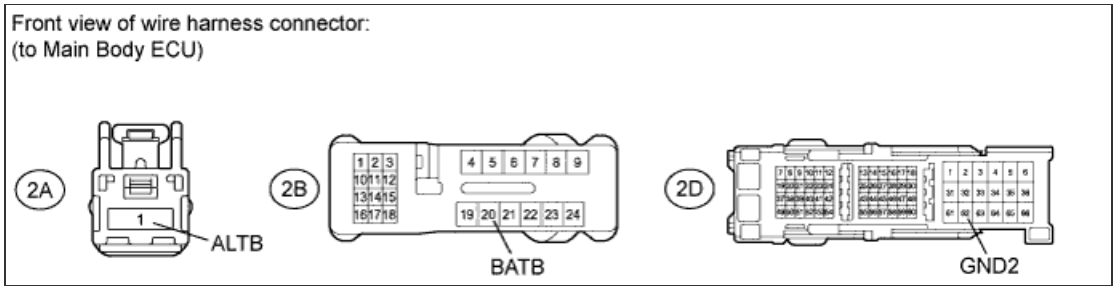
A

2.INSPECT FUSE (DOOR NO. 1, DOOR NO. 2)

a. Remove the DOOR NO. 1 fuse from the cowl side junction block LH.

b. Remove the DOOR NO. 2 fuse from the engine room No. 1 relay block.

c. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
DOOR NO. 1 fuse	Always	Below 1 Ω
DOOR NO. 2 fuse	Always	Below 1 Ω

NG → REPLACE FUSE

OK

3.CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - BATTERY AND BODY GROUND)

a. Disconnect the 2A, 2B and 2D ECU connectors.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage :

Tester Connection	Condition	Specified Condition
2A-1 (ALTB) - Body ground	Always	11 to 14 V
2B-20 (BATB) - Body ground	Always	11 to 14 V

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
2D-62 (GND2) - Body ground	Always	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE MAIN BODY ECU (COWL SIDE JUNCTION BLOCK LH)

4.CHECK MULTIPLEX NETWORK MASTER SWITCH ASSEMBLY (OPERATION)

a. Replace the multiplex network master switch with a normally functioning one (Click here).

b. Check that all doors can be locked and unlocked by using the multiplex network master switch.

OK:

All doors can be locked and unlocked with multiplex network master switch.

REPLACE MAIN BODY ECU (COWL SIDE JUNCTION BLOCK

NG → LH)

OK

END (MULTIPLEX NETWORK MASTER SWITCH ASSEMBLY IS DEFECTIVE)

5.READ VALUE USING INTELLIGENT TESTER (DOOR KEY LINKED LOCK AND UNLOCK SWITCH)

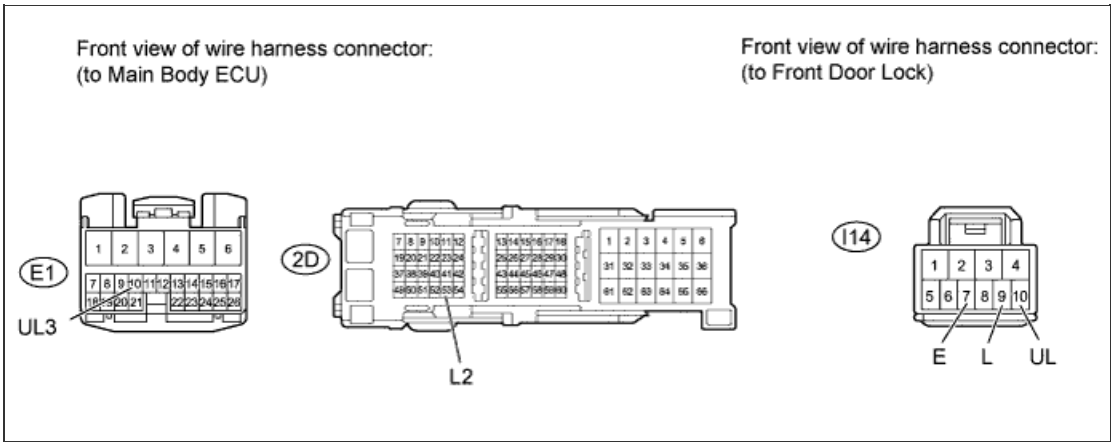
a. Use the Data List to check if the door key linked lock and unlock switches are functioning properly.

Main Body ECU

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Door Key Linked Lock SW	Door key linked lock switch signal / ON or OFF	ON: Driver side door key cylinder turned to lock position OFF: Driver side door key cylinder not turned	-
Door Key Linked Unlock SW	Door key linked unlock switch signal / ON or OFF	ON: Driver side door key cylinder turned to unlock position OFF: Driver side door key cylinder not turned	-

OK:

On tester screen, each item changes between ON and OFF according to above chart.



NG → Go to step 6

OK

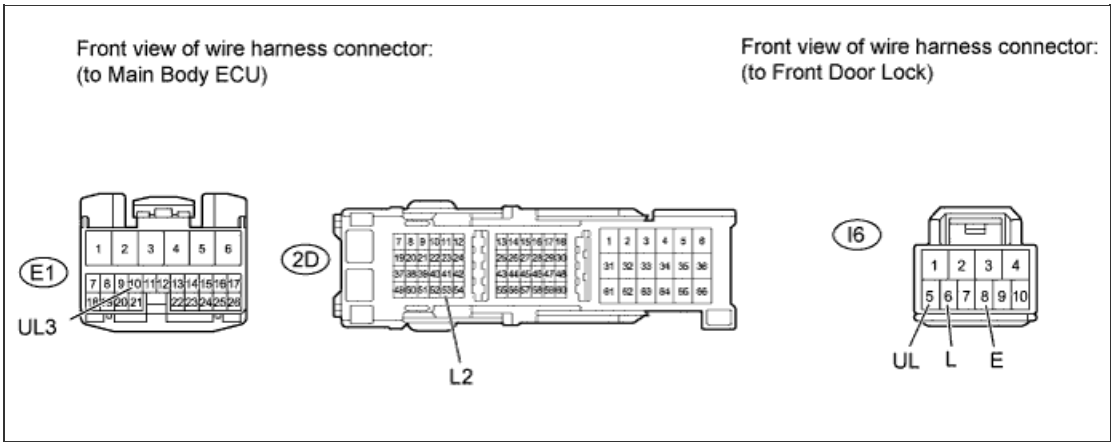
REPLACE MAIN BODY ECU (COWL SIDE JUNCTION BLOCK LH)

6.CHECK HARNESS AND CONNECTOR (FRONT DOOR LOCK - MAIN BODY ECU AND BODY GROUND)

a. for LHD:

i. Disconnect the I14 door lock connector.

ii. Disconnect the E1 and 2D ECU connectors.



iii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
I14-10 (UL) - E1-10 (UL3)	Always	Below 1 Ω
I14-9 (L) - 2D-53 (L2)	Always	Below 1 Ω
I14-7 (E) - Body ground	Always	Below 1 Ω
I14-10 (UL) -	Always	10 kΩ or higher

Body ground I14-9 (L) - Body ground	Always	10 kΩ or higher

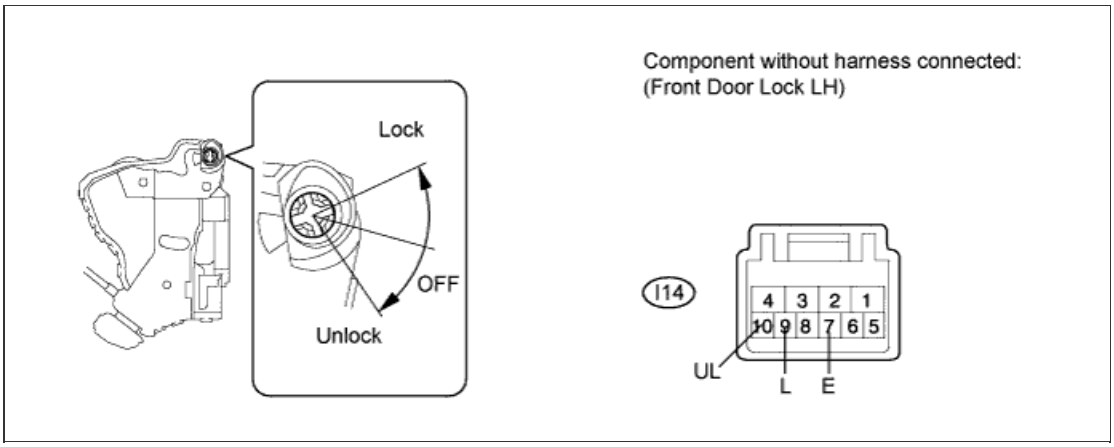
b. for RHD:

i. Disconnect the I6 door lock connector.

ii. Disconnect the E1 and 2D ECU connectors.

iii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:



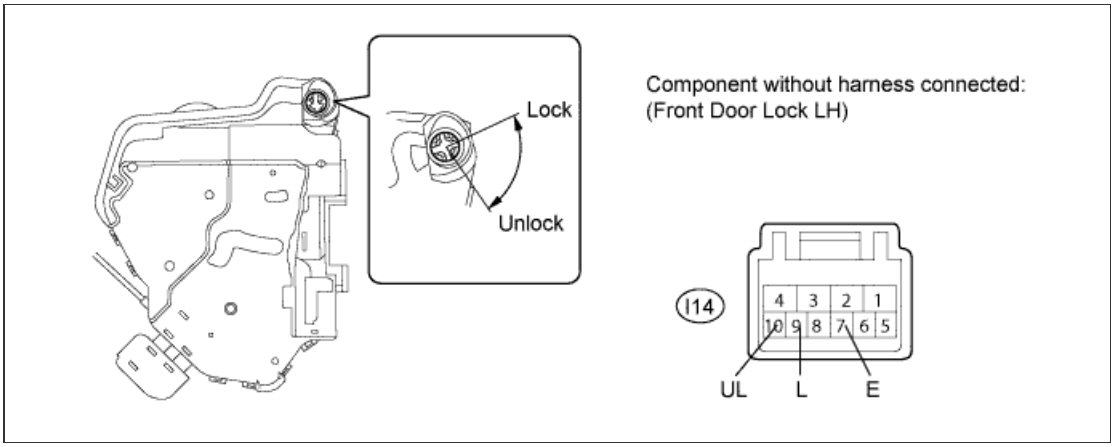
Tester Connection	Condition	Specified Condition
I6-5 (UL) - E1-10 (UL3)	Always	Below 1 Ω
I6-6 (L) - 2D-53 (L2)	Always	Below 1 Ω
I6-8 (E) - Body ground	Always	Below 1 Ω
I6-5 (UL) - Body ground	Always	10 kΩ or higher
I6-6 (L) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

7.INSPECT FRONT DOOR LOCK ASSEMBLY (DOOR KEY LINKED LOCK AND UNLOCK SWITCH)

a. for LHD (w/o Double Locking Function):



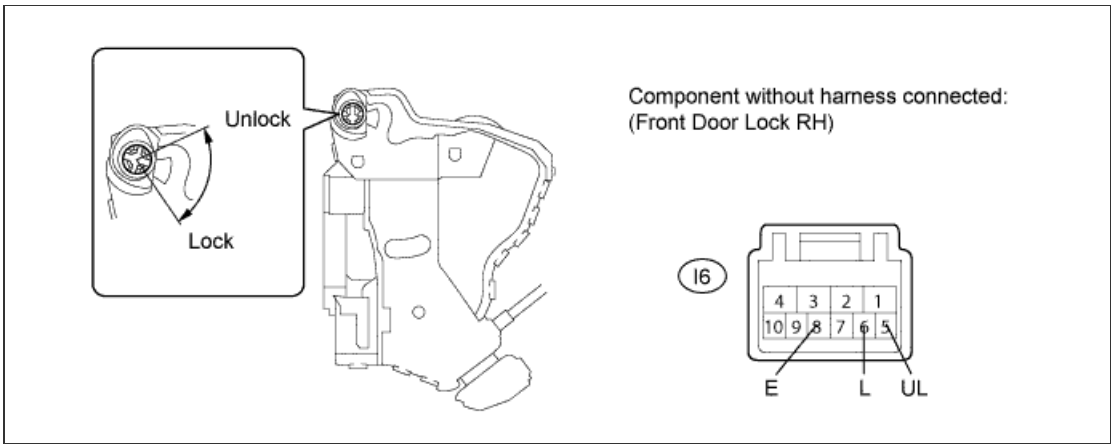
i. Remove the front door lock LH (Click here).

ii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
9 (L) - 7 (E)	Lock	Below 1 Ω
9 (L) - 7 (E)	Off	10 kΩ or higher
10 (UL) - 7 (E)	Unlock	Below 1 Ω
10 (UL) - 7 (E)	Off	10 kΩ or higher

b. for LHD (w/ Double Locking Function):



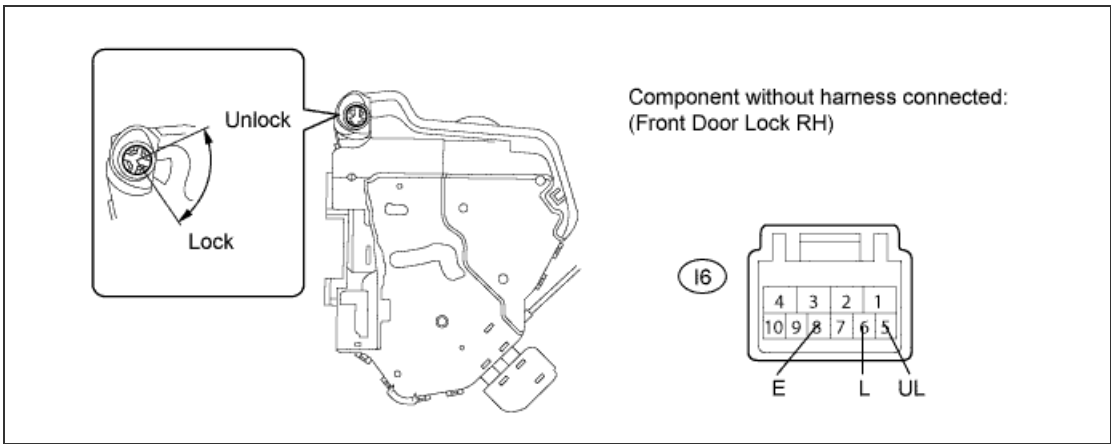
i. Remove the front door lock LH (Click here).

ii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
9 (L) - 7 (E)	Lock	Below 1 Ω
9 (L) - 7 (E)	Off	10 kΩ or higher
10 (UL) - 7 (E)	Unlock	Below 1 Ω
10 (UL) - 7 (E)	Off	10 kΩ or higher

c. for RHD (w/o Double Locking Function):



i. Remove the front door lock RH (Click here).

ii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
5 (UL) - 8 (E)	Unlock	Below 1 Ω
5 (UL) - 8 (E)	Off	10 kΩ or higher
6 (L) - 8 (E)	Lock	Below 1 Ω
6 (L) - 8 (E)	Off	10 kΩ or higher

d. for RHD (w/ Double Locking Function):

i. Remove the front door lock LH (Click here).

ii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
5 (UL) - 8 (E)	Unlock	Below 1 Ω
5 (UL) - 8 (E)	Off	10 kΩ or higher
6 (L) - 8 (E)	Lock	Below 1 Ω
6 (L) - 8 (E)	Off	10 kΩ or higher

NG → REPLACE FRONT DOOR LOCK ASSEMBLY (Click here)

OK → REPLACE MAIN BODY ECU (COWL SIDE JUNCTION BLOCK LH)

for Preparation Click here

1.PRECAUTIONS FOR EACH FUNCTION

a. Precautions for the key:

The key is a precision instrument. Be sure to observe the following:

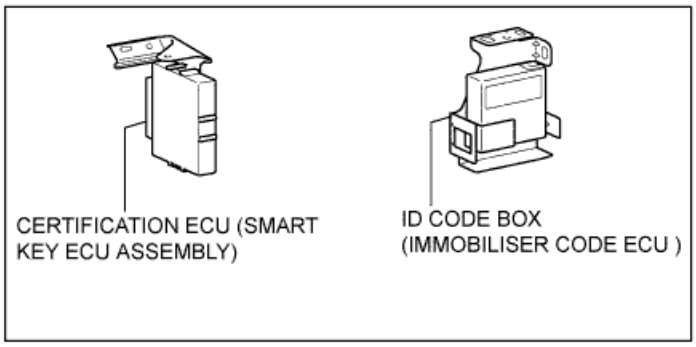
i. Do not drop or strike the key.

ii. Do not keep the key in a high temperature area for a long time.

iii. Do not use an ultrasonic washing machine to clean the key.

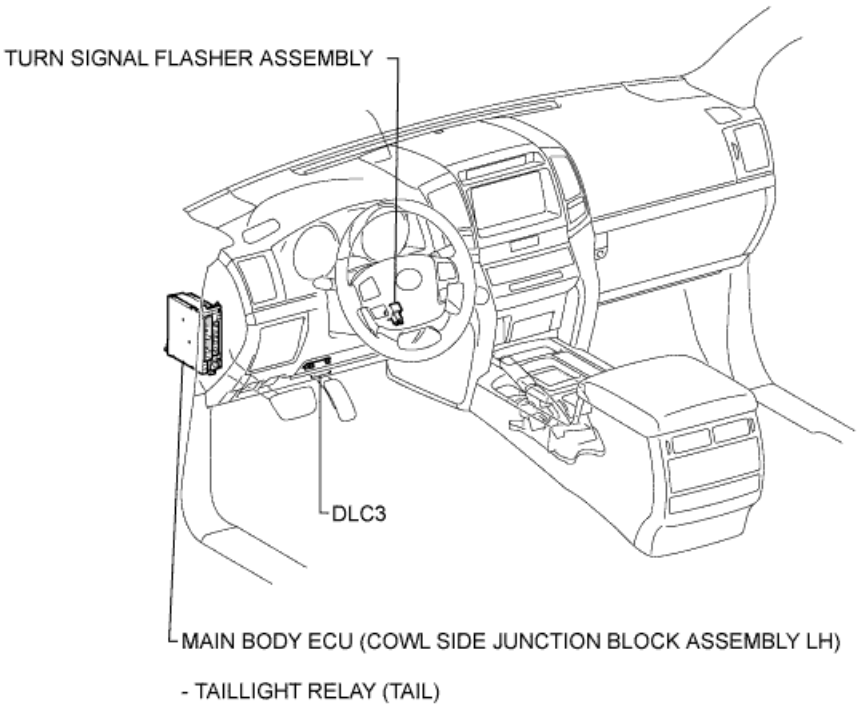
iv. Keep the key away from magnets or magnetized items during use.

v. Do not attach any stickers to the key.



b. Precautions for the battery built into the key and the vehicle battery:

i. When the door is being locked, the vehicle battery is used to transmit a radio wave. The battery may be fully depleted if the vehicle remains stopped for a long time. If the vehicle is not used for a long time, replace the transmitter battery (Click here) or cancel the smart key system (for Entry Function) (Click here).



ii. When the door is being locked with the key in the detection area of the door oscillator, the battery is used to regulate communication between the key and vehicle. If the vehicle is not used, keep the key away from the vehicle (more than 2 m (6.56 ft.)).

Communication table:

Sender	Receiver	Signal	Line
Certification ECU (smart key ECU assembly)	Main body ECU (Cowl side junction block LH)	• Door unlock standby control signal • Hazard answer back signal • Map light answer back signal	CAN
Main body ECU (Cowl side junction block LH)	Certification ECU (smart key ECU assembly)	• Door lock/unlock output request signal • Wireless door lock buzzer sound request signal • Door lock position signal	
Main body ECU (Cowl side junction block LH)	• Master switch • Front power window regulator motor LH • Front power window regulator motor RH • Rear power window regulator motor LH • Rear power window regulator motor RH	Wireless power window up signal	LIN
Main body ECU (Cowl side junction block LH)	Sliding roof ECU*	Wireless sliding roof open signal*	LIN

HINT:

*: w/ Sliding Roof System

for Preparation Click here

This system lock/unlocks the doors remotely. The wireless door lock control system has the following features:

- The certification ECU (smart key ECU assembly) performs the code identification process and the main body ECU (cowl side junction block LH) controls the door lock. A serial data link is provided for communication between the certification ECU (smart key ECU assembly) and main body ECU (cowl side junction block LH).
- A key-integrated type transmitter is used and it contains the following 3 switches: lock switch, unlock switch and panic switch*.

  HINT:

  *: w/ Panic Switch

- An LED is mounted on the transmitter to show if the battery is depleted.

FUNCTION OF MAIN COMPONENTS

Component	Function
Door control transmitter	• Contains lock, unlock, and panic switches*1. • Transmits weak electric waves (recognition codes and function codes) to door control receiver. • Illuminates indicator light (LED) during transmission.
Door control receiver	Receives weak electric waves (recognition codes and function codes) from door control transmitter via electrical key antenna and changes waves to code data.
Front door courtesy light switch Rear door courtesy light switch Back door courtesy light switch	Turns on when door is open and off when door is closed. Outputs door status (open or closed) to main body ECU (cowl side junction block LH).
Door lock position switch	Transmits door lock positions of each door to main body ECU (cowl side junction block LH).
Wireless door lock buzzer*2	Emits beep (answer-back) when doors are locked or unlocked by wireless operation
Certification ECU (smart key ECU assembly)	Matches code data with registered code and outputs code data to main body ECU (cowl side junction block LH).

HINT:

*1: w/ Panic Switch

*2: Except Europe and China

SYSTEM FUNCTION

a. The wireless door lock control system has the following functions:

Function	Outline
All door lock function	Pressing the lock switch locks all the doors and retracts the outer mirrors.
All door unlock function	Pressing unlock switch unlocks all the doors and returns the outer mirrors.
2-step unlock function*1	Pressing the unlock switch once unlocks only the driver side door and returns the outer mirrors. Pressing the unlock switch twice within 3 seconds unlocks all the doors.
Power window (and sliding roof*2) open function*7	After locking all the doors with the door control transmitter operation, pressing the unlock switch for 3 seconds or more opens all the power windows (and the sliding roof*2).
Power window (and sliding roof*2) close function*7	After locking all the doors with the door control transmitter operation, pressing the unlock switch for 3 seconds or more closes all the power windows (and the sliding roof*2).
Chattering prevention function	If a switch is pressed, the corresponding switch operation is performed once. If a switch is held down, the corresponding switch operation occurs only once and does not repeatedly activate. Lastly, when pressing a switch at 1 second intervals, the corresponding operation activates once for every press of

	the switch.
Answer-back function - Buzzer answer-back*3 - Hazard answer-back	• When the doors are locked, the turn signal lights flash once. When the doors are unlocked, the turn signal lights flash twice and the wireless warning buzzer sounds twice. • When the transmitter is used for opening the power windows and sliding roof, this function causes the buzzer to sound to indicate that the operation begins.
Automatic lock function	If no doors are opened within 30 seconds after they are unlocked by the door control transmitter, all the doors will lock again automatically.
Panic alarm function*4	Holding down the panic switch for more than 1 second sets off the theft deterrent alarm (the horn and security horn sounds, the hazard warning lights, headlights, and taillights flash, and the map light and spot light illuminate).
Fail-safe function	When the key is in the vehicle, the doors cannot be locked by the lock switch.
Illuminated entry function	• Pressing the unlock switch causes dome light (map light and rear map light), illumination and all the door unlock operation to occur simultaneously. • If the doors have not been opened, the dome light (map light and rear map light) turns off in approximately 15 seconds.
Door ajar warning function*5	If any door is open or ajar, pressing the lock switch will cause the wireless door lock buzzer to sound for about 10 seconds.
Memory call function*6	If the unlock switch of a memory call registered transmitter is pressed and the driver door is opened, the following parts move to the memory call position: front seat, front seat belt anchor, steering wheel and outer mirrors.
Transmitter recognition code registration function	Enables 7 modes for registering (writing and storing) transmitter recognition codes in the EEPROM.

HINT:

*1: This function can be enabled by changing the customize parameter.

*2: w/ Sliding Roof System

*3: Except Europe and China

*4: w/ Panic Switch

*5: Except China

*6: w/ Memory Call Function

*7: w/ Remote Function

NOTICES WHEN CHECKING

a. Wireless door lock/unlock function:
The wireless door lock control function operates only when the following 5 conditions are met:

- The engine switch is off.
- All the doors are closed.

HINT:

The unlock function operates even when one of the doors is open.

- There is no door control transmitter in the cabin.
- The power door lock system is functioning normally.
- The function is not disabled by customization.

b. The wireless transmitter operational area differs depending on the situation.

- The operational area differs depending on the user, the way the transmitter is held and the location.
- In certain areas, the operational area will be reduced due to the vehicle body shape and the influence of the surrounding environment.
- The transmitter's weak electric waves may be affected if the area has strong electric waves or noise. The transmitter operational area may be shortened or the transmitter may not function.
- When the battery weakens, the operational area is reduced or the transmitter may not function.

HINT:

The battery may weaken or other problems may occur if one of the following occurs: 1) it has had prolonged exposure to direct sunlight, such as on the instrument panel; or 2) it is placed within 1 m (3.28 ft) of electrical products, such as TVs, computers, cordless phones, cell phone recharger stands (with the cell phone recharging), etc.

CHECK WIRELESS DOOR LOCK CONTROL SYSTEM

HINT:

- **The switches described below transmit signals and are built into the door control transmitter.**
- **The transmitter operational area must be taken into account while checks are being made.**

a. Make sure the vehicle is in a condition in which the wireless door lock control functions can be operated (see previous step).

b. Check the basic functions:

- Check that the transmitter LED lights up 3 times when each switch is pressed 3 times.

HINT:

If the LED does not illuminate when the switch has been pressed 3 times or more, the battery may be depleted.

- Check that when the lock switch is pressed, all the doors lock and the outer mirrors retract.
- Check that when the unlock switch is pressed, all doors unlock and the outer mirrors return.
- When the transmitter is within 1 m (3.28 ft) of the driver seat, check that when the unlock switch is held down for 3 seconds or more, all the power windows and the sliding roof* open. Also check that the open operation stops when the switch is released.

HINT:

*: w/ Sliding Roof System

c. Check the chattering prevention function:

- If a switch is pressed, check that the corresponding operation is performed only once. If the switch is held down, check that the corresponding operation occurs only once and does not repeatedly activate. Lastly, if a switch is pressed at 1 second intervals, check that the corresponding operation activates once for every press of the switch.

d. Check the answer-back function:

- When the lock switch is pressed, check that the turn signal lights flash once, the wireless door lock buzzer sounds* once and all the doors lock.
- When the unlock switch is pressed, check that the turn signal lights flash twice, the wireless door lock buzzer sounds* twice and all the doors unlock.

HINT:

*: Except Europe and China

e. Check the automatic lock function:

- When all of the doors are unlocked with the unlock switch and none of the doors are opened or locked within 30 seconds*, check that the doors lock again.

HINT:

*: The automatic lock function time (30 seconds) applies only if the setting of this function is the default.

f. Check the panic alarm function (w/ Panic Switch):

- When the panic switch is held down for 1 second or more, check that the security horn and vehicle horn sound, the headlights, taillights, and turn signal lights flash, and the map light and spot light illuminate.

g. Check the switch operation fail-safe function:

- If the key is in the vehicle, check that the doors cannot be locked by the lock switch. However, this does not apply when the system is in the recognition code registration mode.

h. Check the illuminated entry function:

- When the map light DOOR switch is on and all the doors are locked, pressing the unlock switch causes the dome light (map light, rear map light) to illuminate and all doors to unlock simultaneously.
- If the doors have not been opened, the map light and dome light turn off in approximately 15 seconds.

i. Check the door ajar warning function (Except China):

- If a door is open or not completely closed, check that the doors cannot be locked by the lock switch and the buzzer sounds for 10 seconds.

HINT:

The buzzer stops sounding if either of the following conditions is met:

- **The buzzer has sounded for 10 seconds.**
- **The engine switch is on (ACC or IG).**
- **All the doors are closed.**

j. Check the memory call function (Click here).

for Preparation Click here

NOTICES WHEN CHECKING

a. Wireless door lock/unlock function:
The wireless door lock control function operates only when the following 5 conditions are met:

- The engine switch is off.
- All the doors are closed.

HINT:

The unlock function operates even when one of the doors is open.

- There is no door control transmitter in the cabin.
- The power door lock system is functioning normally.
- The function is not disabled by customization.

b. The wireless transmitter operational area differs depending on the situation.

- The operational area differs depending on the user, the way the transmitter is held and the location.
- In certain areas, the operational area will be reduced due to the vehicle body shape and the influence of the surrounding environment.
- The transmitter's weak electric waves may be affected if the area has strong electric waves or noise. The transmitter operational area may be shortened or the transmitter may not function.
- When the battery weakens, the operational area is reduced or the transmitter may not function.

HINT:

The battery may weaken or other problems may occur if one of the following occurs: 1) it has had prolonged exposure to direct sunlight, such as on the instrument panel; or 2) it is placed within 1 m (3.28 ft) of electrical products, such as TVs, computers, cordless phones, cell phone recharger stands (with the cell phone recharging), etc.

CHECK WIRELESS DOOR LOCK CONTROL SYSTEM

HINT:

- **The switches described below transmit signals and are built into the door control transmitter.**
- **The transmitter operational area must be taken into account while checks are being made.**

a. Make sure the vehicle is in a condition in which the wireless door lock control functions can be operated (see previous step).

b. Check the basic functions:

- Check that the transmitter LED lights up 3 times when each switch is pressed 3 times.

HINT:

If the LED does not illuminate when the switch has been pressed 3 times or more, the battery may be depleted.

- Check that when the lock switch is pressed, all the doors lock and the outer mirrors retract.
- Check that when the unlock switch is pressed, all doors unlock and the outer mirrors return.
- When the transmitter is within 1 m (3.28 ft) of the driver seat, check that when the unlock switch is held down for 3 seconds or more, all the power windows and the sliding roof* open. Also check that the open operation stops when the switch is released.

HINT:

*: w/ Sliding Roof System

c. Check the chattering prevention function:

- If a switch is pressed, check that the corresponding operation is performed only once. If the switch is held down, check that the corresponding operation occurs only once and does not repeatedly activate. Lastly, if a switch is pressed at 1 second intervals, check that the corresponding operation activates once for every press of the switch.

d. Check the answer-back function:

- When the lock switch is pressed, check that the turn signal lights flash once, the wireless door lock buzzer sounds* once and all the doors lock.
- When the unlock switch is pressed, check that the turn signal lights flash twice, the wireless door lock buzzer sounds* twice and all the doors unlock.

HINT:

*: Except Europe and China

e. Check the automatic lock function:

- When all of the doors are unlocked with the unlock switch and none of the doors are opened or locked within 30 seconds*, check that the doors lock again.

HINT:

*: The automatic lock function time (30 seconds) applies only if the setting of this function is the default.

f. Check the panic alarm function (w/ Panic Switch):

- When the panic switch is held down for 1 second or more, check that the security horn and vehicle horn sound, the headlights, taillights, and turn signal lights flash, and the map light and spot light illuminate.

g. Check the switch operation fail-safe function:

- If the key is in the vehicle, check that the doors cannot be locked by the lock switch. However, this does not apply when the system is in the recognition code registration mode.

h. Check the illuminated entry function:

- When the map light DOOR switch is on and all the doors are locked, pressing the unlock switch causes the dome light (map light, rear map light) to illuminate and all doors to unlock simultaneously.
- If the doors have not been opened, the map light and dome light turn off in approximately 15 seconds.

i. Check the door ajar warning function (Except China):

- If a door is open or not completely closed, check that the doors cannot be locked by the lock switch and the buzzer sounds for 10 seconds.

HINT:

The buzzer stops sounding if either of the following conditions is met:

- **The buzzer has sounded for 10 seconds.**
- **The engine switch is on (ACC or IG).**
- **All the doors are closed.**

j. Check the memory call function (Click here).

for Preparation Click here

CUSTOMIZING FUNCTION WITH INTELLIGENT TESTER (REFERENCE)

NOTICE:

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Be sure to make a note of the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Customize Setting.

e. Select the setting by referring to the table below.

Wireless Door Lock

Display	Default	Contents	Setting
Hazard Answer Back	ON	When the lock switch on the transmitter is pressed, this function illuminates the hazard warning lights once. When the unlock switch is pressed, the hazard warning lights illuminate twice.	ON/OFF
Wireless Control	ON	Function that turns the wireless door lock function ON or OFF.	ON/OFF
Open Door Warning*1	ON	If a door is not completely closed and the transmitter lock switch is pressed, this function makes the buzzer sound for 10 seconds.	ON/OFF
Panic Alarm Function*2	ON	Function to operate the theft deterrent system by continuously pressing the panic switch on transmitter for 2.5 seconds.	ON/OFF
Unlock 2 Operation	OFF	Function that unlocks the driver side door when the unlock switch on the transmitter is pressed once, and unlocks all doors when the switch is pressed twice. If the setting is OFF, pressing the unlock switch once makes all the doors unlock.	ON/OFF
Auto Lock Time	30 s	Function to change the time until relocking after unlocking with the wireless door lock function.	30 s/60 s/120 s
Wireless Auto Lock	ON	Function to control the automatic relocking of doors after unlocking with the wireless door lock function.	ON/OFF
Wireless Buzzer Resp	ON*3	Wireless buzzer response function.	ON/OFF
Wireless Buzzer Volume	Level 7	This function changes the wireless buzzer volume.	Level 0/Level 1/Level 2/Level 3/Level 4/Level 5/Level6/Level 7

HINT:

*1: Except China

*2: w/ Panic Switch

*3: Except Europe and China

CHECK MAIN BODY ECU (COWL SIDE JUNCTION BLOCK LH)

a. Disconnect the 2A, 2D and E3 ECU connectors.

b. Measure the resistance and voltage according to value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
2D-62 (GND2) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
E3-1 (GND3) - Body ground	BR - Body ground	Ground	Always	Below 1 Ω
2A-1 (ACC) - 2D-62 (GND2)	GR - W-B	ACC power supply	Engine switch on (ACC)	11 to 14 V
2A-1 (IG) - 2D-62 (GND2)	B - W-B	IG power supply	Engine switch on (IG)	11 to 14 V

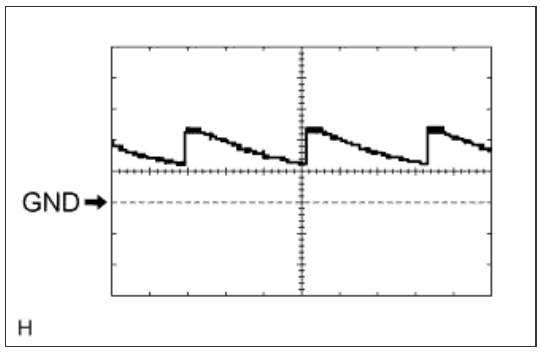
If the result is not as specified, there may be a malfunction on the wire harness side.

c. Reconnect the 2A, 2D and E3 ECU connectors.

d. Measure the voltage according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E1-24 (DCTY) - Body ground	L - Body ground	Driver side door courtesy light switch input	Driver side door open	Below 1 Ω
			Driver side door closed	10 kΩ or higher
E2-21 (PCTY) - Body ground	Y - Body ground	Passenger side door courtesy light switch input	Passenger side door open	Below 1 Ω
			Passenger side door closed	10 kΩ or higher
2C-2 (LCTY) - Body ground	W - Body ground	Rear side door LH courtesy light switch input	Rear side door LH open	Below 1 Ω
			Rear side door LH closed	10 kΩ or higher
E2-7 (RCTY) - Body ground	G - Body ground	Rear side door RH courtesy light switch input	Rear side door RH open	Below 1 Ω
			Rear side door RH closed	10 kΩ or higher
E2-25 (BCTY) - Body ground	w - Body ground	Back door courtesy light switch input	Back door open	Below 1 Ω
			Back door closed	10 kΩ or higher
E3-4 (HAZ) - Body ground	O - Body ground	Turn signal light drive	Hazard warning signal switch on	Pulse generation
			Hazard warning signal switch off	Below 1 V
2B-16 (DIM) - 2D-62 (GND2)*	R-G - W-B	Headlight low drive	Headlight dimmer switch low	11 to 14 V
2B-18 (HRLY) - 2D-62 (GND2)*	L - W-B	Headlight (high) drive	Headlight dimmer switch high	11 to 14 V
2A-1 (TRLY) - 2D-62 (GND2)*	B - W-B	Taillight drive	Headlight dimmer switch tail	11 to 14 V

HINT:

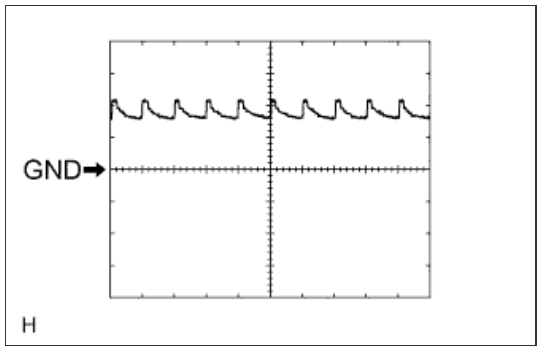


*: w/ Panic Switch

If the result is not as specified, the ECU may have a malfunction.

e. Using an oscilloscope, check waveform 1.

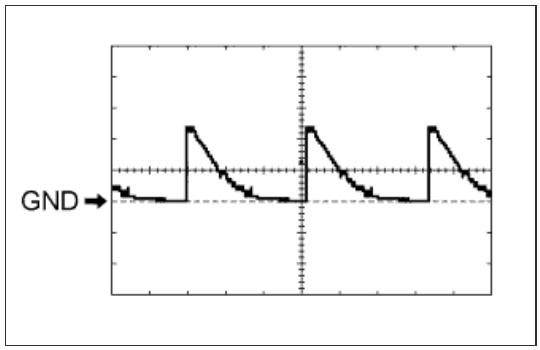
Waveform 1 (Reference)



Item	Content
Terminal No. (Symbol)	E1-24 (DCTY) - Body ground
Tool Setting	5 V/DIV., 20 ms/DIV.
Condition	Engine switch off, and driver side door courtesy switch off

f. Using an oscilloscope, check waveform 2.

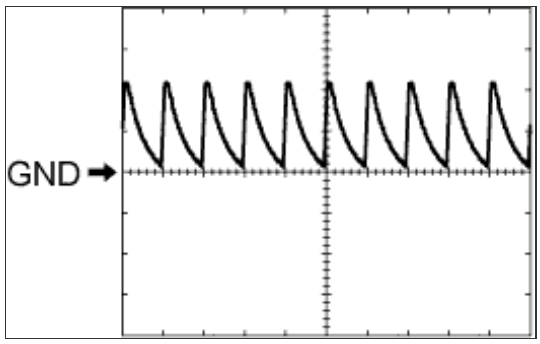
Waveform 2 (Reference)



Item	Content
Terminal No. (Symbol)	E1-24 (DCTY) - Body ground
Tool Setting	5 V/DIV., 20 ms/DIV.
Condition	Engine switch off, and driver side door courtesy switch off

g. Using an oscilloscope, check waveform 3.

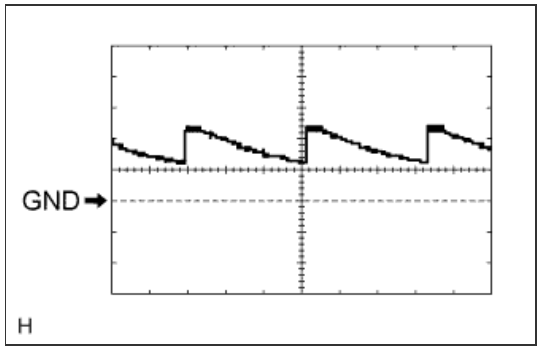
Waveform 3 (Reference)



Item	Content
Terminal No. (Symbol)	E2-21 (PCTY) - Body ground
Tool Setting	5 V/DIV., 20 ms/DIV.
Condition	Engine switch off, and passenger side door courtesy switch off

h. Using an oscilloscope, check waveform 4.

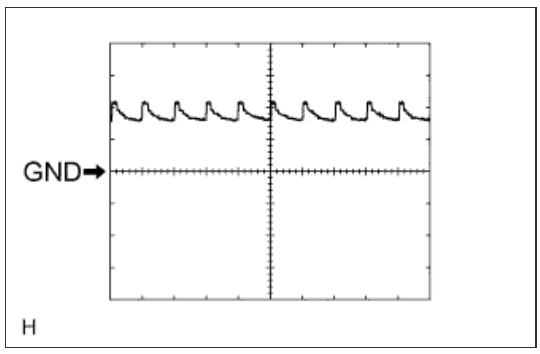
Waveform 4 (Reference)



Item	Content
Terminal No. (Symbol)	E2-21 (PCTY) - Body ground
Tool Setting	5 V/DIV., 20 ms/DIV.
Condition	Engine switch off, and passenger side door courtesy switch off

i. Using an oscilloscope, check waveform 5.

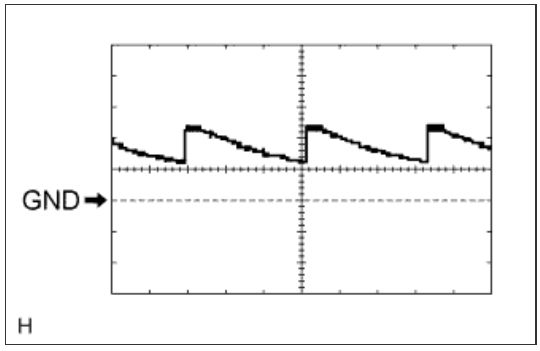
Waveform 5 (Reference)



Item	Content
Terminal No. (Symbol)	2C-2 (LCTY) - Body ground
Tool Setting	5 V/DIV., 20 ms/DIV.
Condition	Engine switch off, and rear LH side door courtesy switch off

j. Using an oscilloscope, check waveform 6.

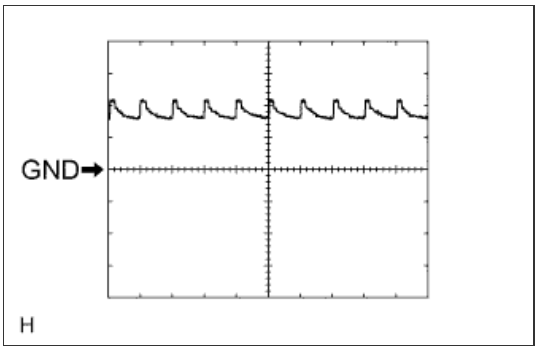
Waveform 6 (Reference)



Item	Content
Terminal No. (Symbol)	2C-2 (LCTY) - Body ground
Tool Setting	5 V/DIV., 20 ms/DIV.
Condition	Engine switch off, and rear LH side door courtesy switch off

k. Using an oscilloscope, check waveform 7.

Waveform 7 (Reference)



Item	Content
Terminal No. (Symbol)	E2-7 (RCTY) - Body ground
Tool Setting	5 V/DIV., 20 ms/DIV.
Condition	Engine switch off, and rear RH side door courtesy switch off

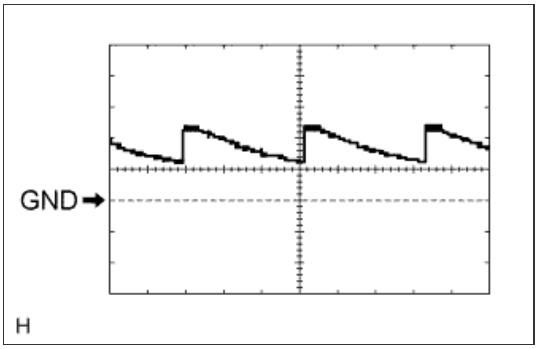
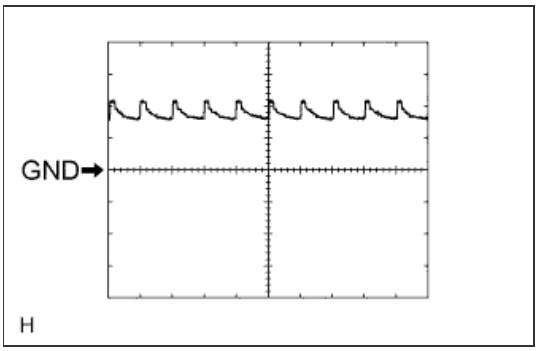
Waveform 8 (Reference)



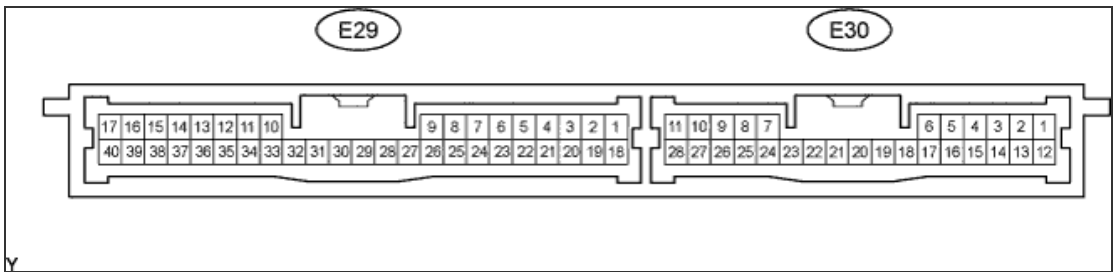
Item	Content
Terminal No. (Symbol)	E2-7 (RCTY) - Body ground
Tool Setting	5 V/DIV., 20 ms/DIV.
Condition	Engine switch off, and rear RH side door courtesy switch off

m. Using an oscilloscope, check waveform 9.

Waveform 9 (Reference)



Item	Content
Terminal No. (Symbol)	E2-25 (BCTY) - Body ground
Tool Setting	5 V/DIV., 20 ms/DIV.
Condition	Engine switch off, and Back door closed



n. Using an oscilloscope, check waveform 10.

Waveform 10 (Reference)

Item	Content
Terminal No. (Symbol)	E2-25 (BCTY) - Body ground
Tool Setting	5 V/DIV., 20 ms/DIV.
Condition	Engine switch off, and Back door closed

CHECK CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

a. Disconnect the E29 and E30 ECU connectors.

b. Measure the resistance and voltage according to the value(s) in the table below.

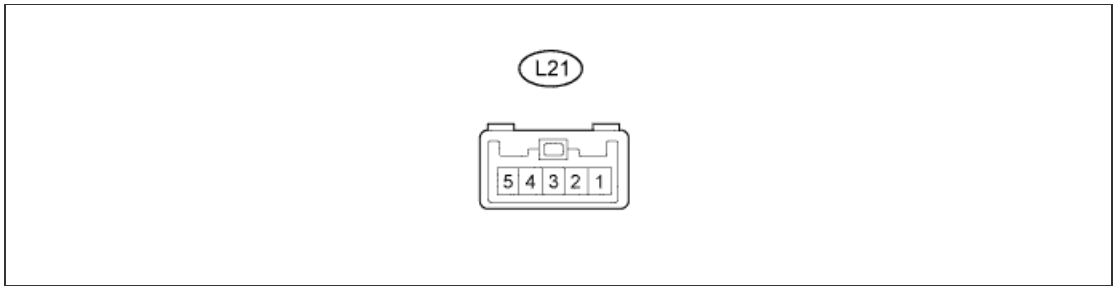
Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E29-17 (E) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
E29-1 (+B1) - L15-17 (E)	B - W-B	Battery power supply	Always	11 to 14 V
E29-18 (IG) - L15-17 (E)	B - W-B	IG power supply	Engine switch on (IG)	11 to 14 V
			Engine switch off	Below 1 V

If the result is not as specified, there may be a malfunction on the wire harness side.

c. Reconnect the E29 and E30 ECU connectors.

d. Measure the voltage according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition



E29-39 (RSSI) - L29-17 (E)	L - W-B	Door control receiver electric wave existence signal	Engine switch off, all doors closed and transmitter switch not pressed → pressed	11 to 14 V → Below 1 V
E29-38 (RDA) - L15-17 (E)	LG - W-B	Door control receiver data input signal	Engine switch off, all doors closed and transmitter switch not pressed → pressed	Below 1 V → 11 to 14 V → Below 1 V
E29-29 (RCO) - L15-17 (E)	B - W-B	Door control receiver power source	Engine switch off, all doors closed and transmitter switch not pressed → pressed	Below 1 V → 4.6 to 5.4 V → Below 1 V
E29-21 (BZR) - Body ground*	LG - Body ground	Wireless door lock buzzer output	Wireless door lock buzzer ON	11 to 14 V
E29-21 (BZR) - Body ground*	LG - Body ground	Wireless door lock buzzer output	Wireless door lock buzzer OFF	Below 1 V

HINT:

*: Except Europe and China

If the result is not as specified, the ECU may have a malfunction.

CHECK DOOR CONTROL RECEIVER

a. Disconnect the L21 receiver connector.

b. Measure the resistance and voltage according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
L21-1 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
L21-4 (+5) - Body ground	B - Body ground	Battery power supply	Always	4.6 to 5.4 V

If the result is not as specified, there may be a malfunction on the wire harness side.

for Preparation Click here

CHECK DTC

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / (desired system) / Trouble Codes.

e. Read the DTCs.

CLEAR DTC

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / (desired system) / Trouble Codes.

e. Clear the DTCs.

for Preparation Click here

READ DATA LIST

HINT:

Using the intelligent tester to read the Data List allows values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Main Body / Data List.

e. According to the display on the intelligent tester, read the Data List.

Main Body

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
D Door Courtesy SW	Driver side door courtesy switch signal / ON or OFF	ON: Driver side door is open OFF: Driver side door is closed	-
P Door Courtesy SW	Passenger side door courtesy switch signal / ON or OFF	ON: Passenger side door is open OFF: Passenger side door is closed	-
RL Door Courtesy SW	Rear door courtesy switch LH signal / ON or OFF	ON: Rear side door LH is open OFF: Rear side door LH is closed	-
RR Door Courtesy SW	Rear door courtesy switch RH signal / ON or OFF	ON: Rear side door RH is open OFF: Rear side door RH is closed	-
Back Door Courtesy SW	Back door courtesy switch signal / ON or OFF	ON: Back door is open OFF: Back door is closed	-
D Lock Pos switch	Driver side door lock position switch signal / ON or OFF	ON: Driver side door lock is unlocked OFF: Driver side door lock is locked	-
P Lock Pos switch	Passenger side door lock position switch signal / ON or OFF	ON: Passenger side door is unlocked OFF: Passenger side door is locked	-
RL Lock Pos switch	Rear door LH lock position switch signal / ON or OFF	ON: Rear side door LH is unlocked OFF: Rear side door LH is locked	-
RR Lock Pos switch	Rear door RH lock position switch signal / ON or OFF	ON: Rear side door RH is unlocked OFF: Rear side door RH is locked	-
Back Lock Pos switch	Back door lock position switch signal / ON or OFF	ON: Back door is unlocked OFF: Back door is locked	-

ACTIVE TEST

HINT:

Using the intelligent tester to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Main Body / Active Test.

e. According to the display on the intelligent tester, perform the Active Test.

Main Body

Tester Display	Test Part	Control Range	Diagnostic Note
Hazard	Turn signal flasher relay	ON or OFF	-
Door Lock	All door lock motors	OFF or LOCK	-
D-Door Unlock	Driver side door unlock motor	OFF or UNLOCK	-

for Preparation Click here

HINT:

If a trouble code is output during the DTC check, inspect the trouble areas listed for that code. For details of the code, refer to the "See page" below.

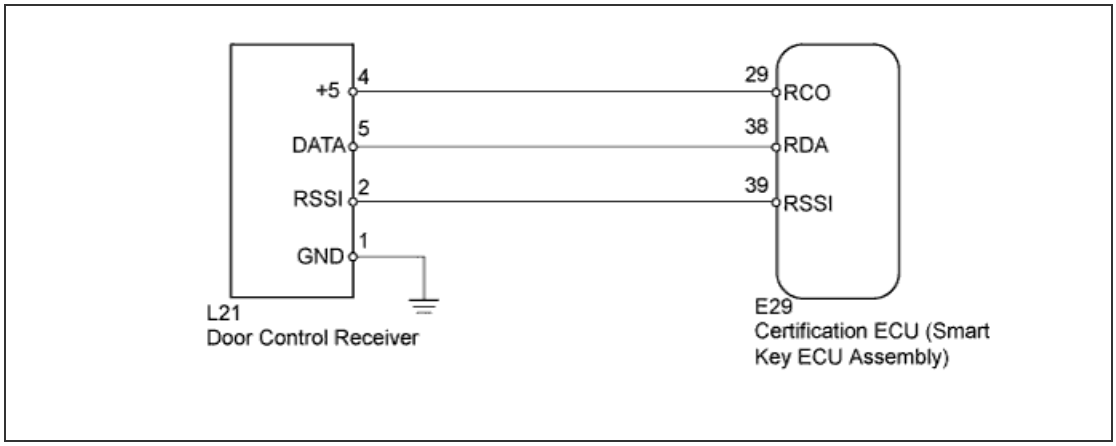
Wireless Door Lock Control System

DTC Code	Detection Item	Trouble Area	See page
B1242	Wireless Door Lock Tuner Circuit Malfunction	- Harness or connector - Door control receiver - Certification ECU (smart key ECU assembly)	Click here

DTC B1242 Wireless Door Lock Tuner Circuit Malfunction

for Preparation Click here

DESCRIPTION



The door lock receiver is used to receive electrical waves relating to the entry functions of the entry and start system (for Entry Function). The certification ECU (smart key ECU assembly) decodes the requested smart key system (for Entry Function) operation by identifying a key code based on the electric waves received via the door control receiver. The door control receiver receives a signal from the door control transmitter and sends signals to the main body ECU through the certification ECU (smart key ECU assembly). The certification ECU (smart key ECU assembly) then sends a command, according to the requested operation, to each ECU (ex. if door lock operation is requested, the certification ECU (smart key ECU assembly) sends a door lock command to the main body ECU).
This DTC is output when one of the following occurs: 1) a short in RDA or RSSI to ground between the certification ECU and the door control receiver, or 2) a short in RDA or RSSI to ground when RCO (5 V) output from the ECU is off.

NOTICE:

- **When replacing or inspecting the door control receiver and wire harness, do not change the position or length of the wire harness. If the wire harness is too close to the door control receiver, entry and wireless function performance may be affected.**
- **Before performing the inspection, check that there are no problems related to the CAN communication system and LIN communication system.**
- **When using the intelligent tester with the engine switch off to troubleshoot: Connect the intelligent tester to the vehicle, and turn the front door courtesy light switch LH on and off at 1.5 second intervals until communication between the intelligent tester and vehicle begins.**

DTC Code	DTC Detection Condition	Trouble Area
B1242	One of following conditions is met: • Short in RDA or RSSI to ground between the certification ECU (smart key ECU assembly) and the door control receiver. • Short in RDA or RSSI to ground when RCO (5 V) output from the ECU is off.	• Harness or connector • Door control receiver • Certification ECU (smart key ECU assembly)

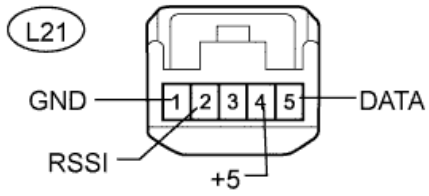
WIRING DIAGRAM

INSPECTION PROCEDURE

1.CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - DOOR CONTROL RECEIVER)

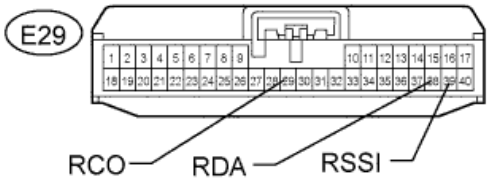
a. Disconnect the E29 ECU connector.

b. Disconnect the L21 receiver connector.



c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:



Tester Connection	Condition	Specified Condition

E29-39 (RSSI) - L21-2 (RSSI)	Always	Below 1 Ω
E29-38 (RDA) - L21-5 (DATA)		
E29-29 (RCO) - L21-4 (+5)		
E29-17 (E) - Body ground		
L21-1 (GND) - Body ground		
E29-39 (RSSI) or L21-2 (RSSI) - Body ground	Always	10 kΩ or higher
E29-38 (RDA) or L21-5 (DATA) - Body ground		
E29-29 (RCO) or L21-4 (+5) - Body ground		

Front view of harness side connector:
(to Door Control Receiver)

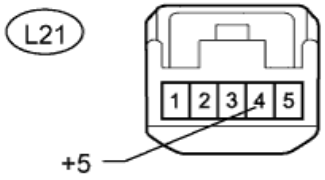
Front view of harness side connector:
(to Certification ECU)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

2.CHECK CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

a. Disconnect the L21 receiver connector.



b. Reconnect the E29 ECU connector.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
L21-4 (+5) - Body ground	Always	4.5 to 5.4 V

Front view of harness side connector:
(to Door Control Receiver)

NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK

3.REPLACE DOOR CONTROL RECEIVER

a. Temporarily replace the door control receiver with a new one (Click here).

NEXT

4.CHECK FOR DTC

a. Clear the DTC (Click here).

b. Recheck for DTC (Click here).

OK:

DTC B1242 is not output.

NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

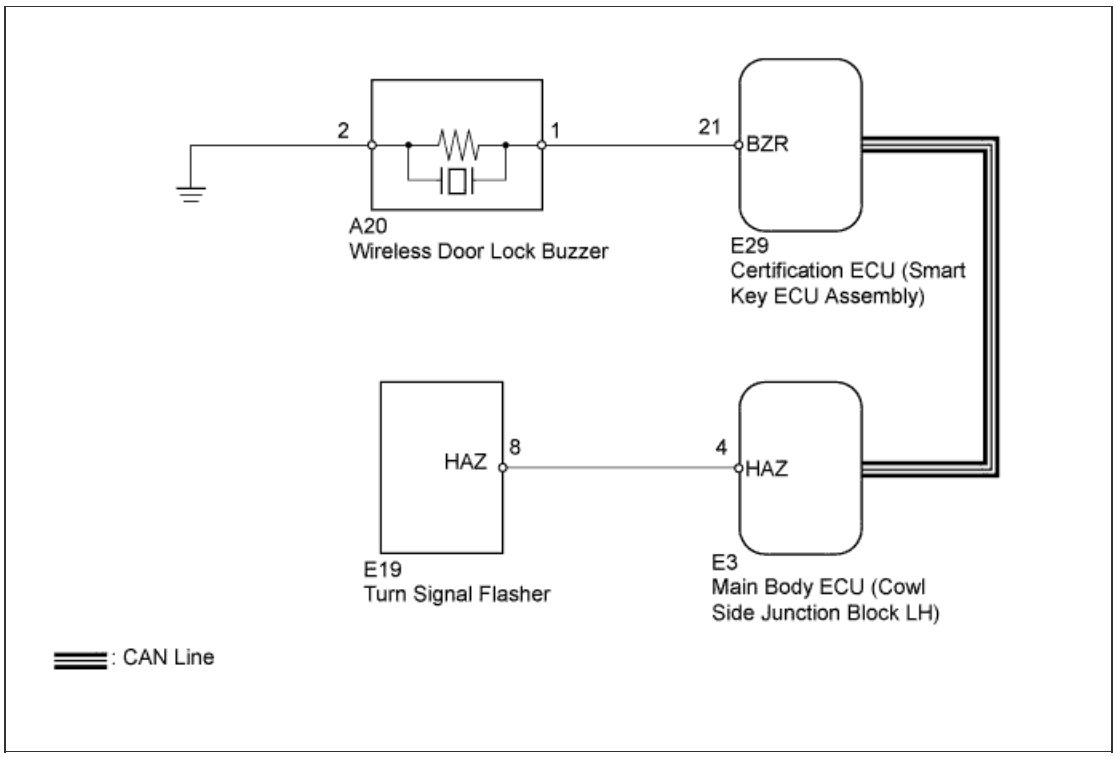
OK

END (DOOR CONTROL RECEIVER IS DEFECTIVE)

for Preparation Click here

DESCRIPTION

In some cases, wireless door lock control functions are normal but the turn signal lights and wireless door lock buzzer are not. Malfunctions may be present in the main body ECU, certification ECU (smart key ECU assembly), turn signal lights, and/or wireless door lock buzzer signal outputs.*



NOTICE:

- **Before performing the inspection, check that there are no problems related to the CAN communication system and LIN communication system.**
- **When troubleshooting a function, first make sure that the answer-back function is set to the default setting.**
- **Check that DTC B1242 is not output.**
- **When troubleshooting a function, first make sure that the open door warning function is set to the default setting.**

HINT:

*: For Europe and China, there is no buzzer sound answer-back function.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.READ VALUE USING INTELLIGENT TESTER (DOOR LOCK POSITION SWITCH)

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Main Body / Data List.

e. Read the Data List according to the display on the intelligent tester.

Main Body

Tester Display	Measurement Item / Range	Normal Condition	Diagnostic Note
D Lock Pos switch	Driver side door lock position switch signal / ON or OFF	ON: Driver side door lock is unlocked OFF: Driver side door lock is locked	-

P Lock Pos switch	Passenger side door lock position switch signal / ON or OFF	ON: Passenger side door is unlocked OFF: Passenger side door is locked	-
RL Lock Pos switch	Rear door LH lock position switch signal / ON or OFF	ON: Rear side door LH is unlocked OFF: Rear side door LH is locked	-
RR Lock Pos switch	Rear door RH lock position switch signal / ON or OFF	ON: Rear side door RH is unlocked OFF: Rear side door RH is locked	-
Back Lock Pos switch	Back door lock position switch signal / ON or OFF	ON: Back door is unlocked OFF: Back door is locked	-

OK:

On the intelligent tester screen, the display changes between LOCK and UNLOCK as shown in the chart above.

HINT:

- **Go to POWER DOOR LOCK CONTROL SYSTEM (Proceed to Only Driver Door LOCK/UNLOCK Functions do not Operate) (Click here).**
- **Go to POWER DOOR LOCK CONTROL SYSTEM (Proceed to Only Passenger Door LOCK/UNLOCK Functions do not Operate) (Click here).**
- **Go to POWER DOOR LOCK CONTROL SYSTEM (Proceed to Only Rear Door LH LOCK/UNLOCK Functions do not Operate) (Click here).**
- **Go to POWER DOOR LOCK CONTROL SYSTEM (Proceed to Only Rear Door RH LOCK/UNLOCK Functions do not Operate) (Click here).**
- **Go to POWER DOOR LOCK CONTROL SYSTEM (Proceed to Only Back Door LOCK/UNLOCK Functions do not Operate) (Click here).**

NG → **Go to POWER DOOR LOCK CONTROL SYSTEM**

OK

2.CHECK WIRELESS DOOR LOCK FUNCTION

a. Check that the wireless door lock control functions operate with a transmitter (Click here).

Result

Result	Proceed to
Wireless door lock control functions operate normally but turn signal light answer-back does not occur	A
Wireless door lock control functions operate normally but wireless door lock buzzer answer-back does not occur	B

B → **Go to step 4**

A

3.CHECK HAZARD WARNING LIGHT

a. Check that the turn signal lights flash continuously when the hazard warning signal switch is pressed (Click here).

OK:

Hazard warning lights flash continuously.

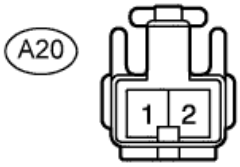
NG → **Go to PROBLEM SYMPTOMS TABLE (LIGHTING SYSTEM) (Click here)**

OK

REPLACE MAIN BODY ECU (COWL SIDE JUNCTION BLOCK LH)

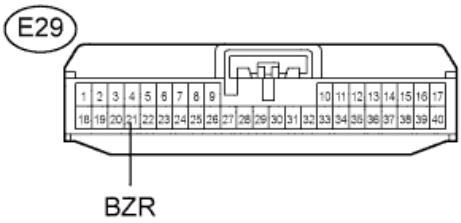
4.CHECK HARNESS AND CONNECTOR (WIRELESS DOOR LOCK BUZZER - CERTIFICATION ECU AND BODY GROUND)

a. Disconnect the E29 ECU connector.



b. Disconnect the A20 buzzer connector.

c. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
A20-1 - E29-21 (BZR)	Always	Below 1 Ω
A20-2 - Body ground		
A20-1 - Body ground	Always	10 kΩ or higher

Front view of wire harness connector:
(to Wireless Door Lock Buzzer)

Front view of wire harness connector:
(to Certification ECU)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

5.CHECK WIRELESS DOOR LOCK BUZZER (OPERATION)

a. Temporarily replace the wireless door lock buzzer with a new one (Click here).

b. Check that the wireless door lock buzzer sounds by using the transmitter lock/unlock switch.

OK:
Wireless door lock buzzer sounds.

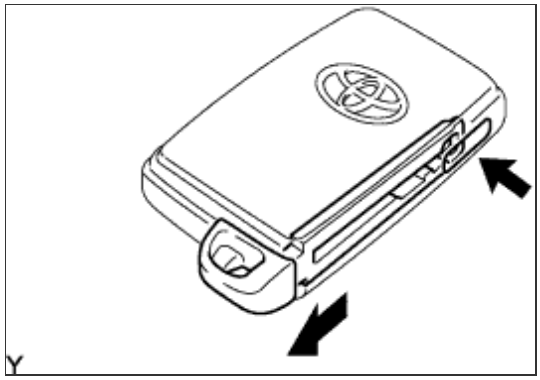
NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK

END (WIRELESS DOOR LOCK BUZZER IS DEFECTIVE)

for Preparation Click here

1. REMOVE TRANSMITTER BATTERY

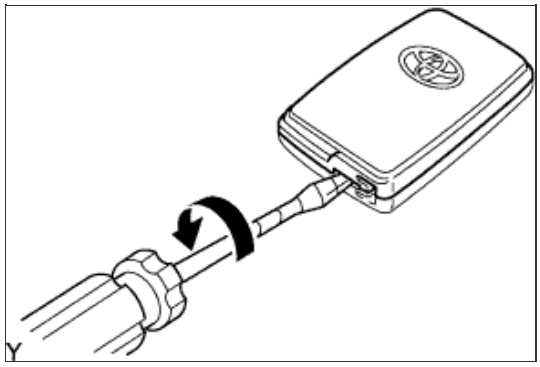


NOTICE:

Take extra care when handling these precision electronic components.

HINT:

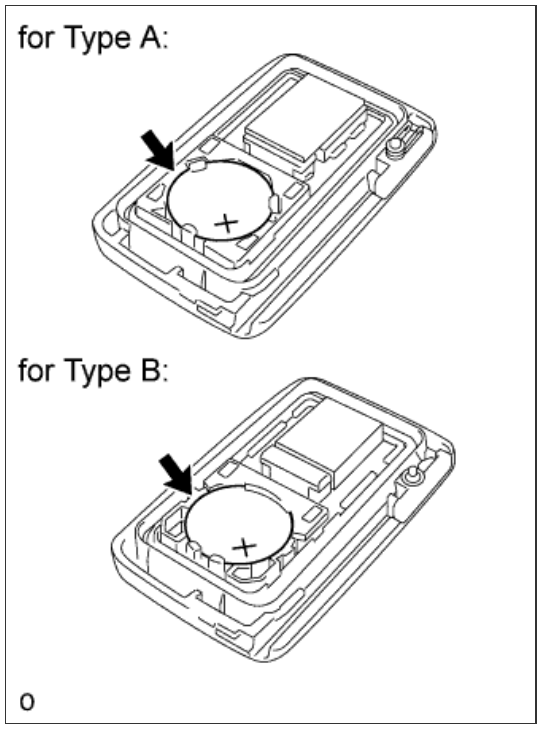
- **Type A: for Australia.**
- **Type B: except Australia.**



a. Push the release hook knob and extract the emergency key.

b. Insert a precision screwdriver into the gap, and turn the screwdriver to detach the transmitter housing cover.

HINT:

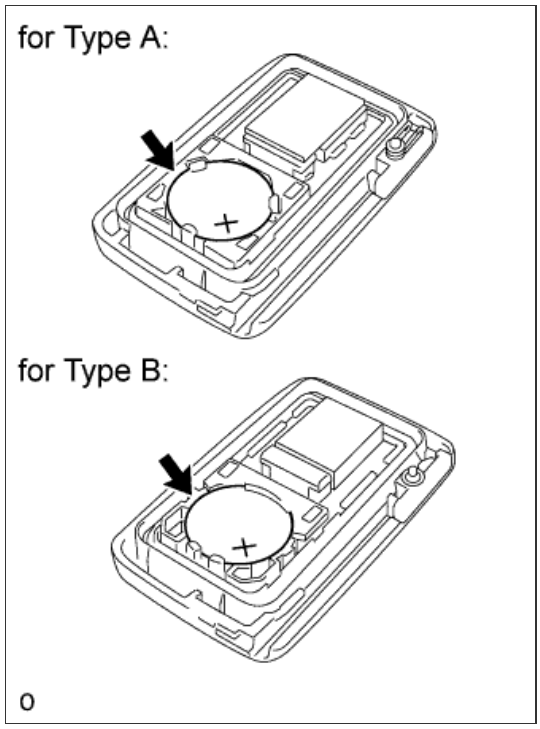


Tape the screwdriver tip before use.

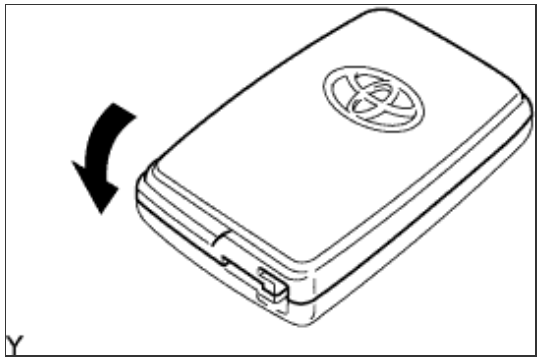
c. Remove the battery (lithium battery: CR1632).

NOTICE:

- **Do not push the terminals with your finger.**
- **Do not forcibly pry up the battery. The terminals may be damaged.**
- **Do not touch the battery with wet hands. Water may cause rust.**
- **Do not touch or move any components inside the transmitter. It may interfere with proper operation.**



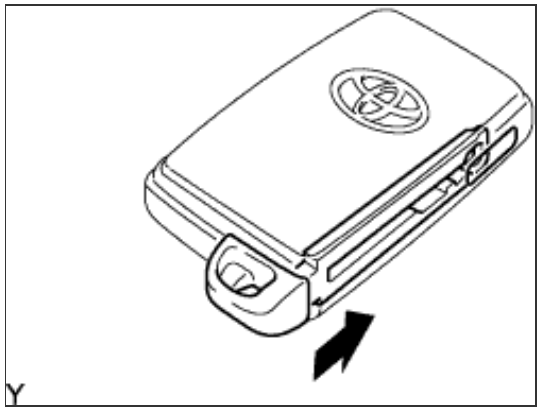
2. INSTALL TRANSMITTER BATTERY



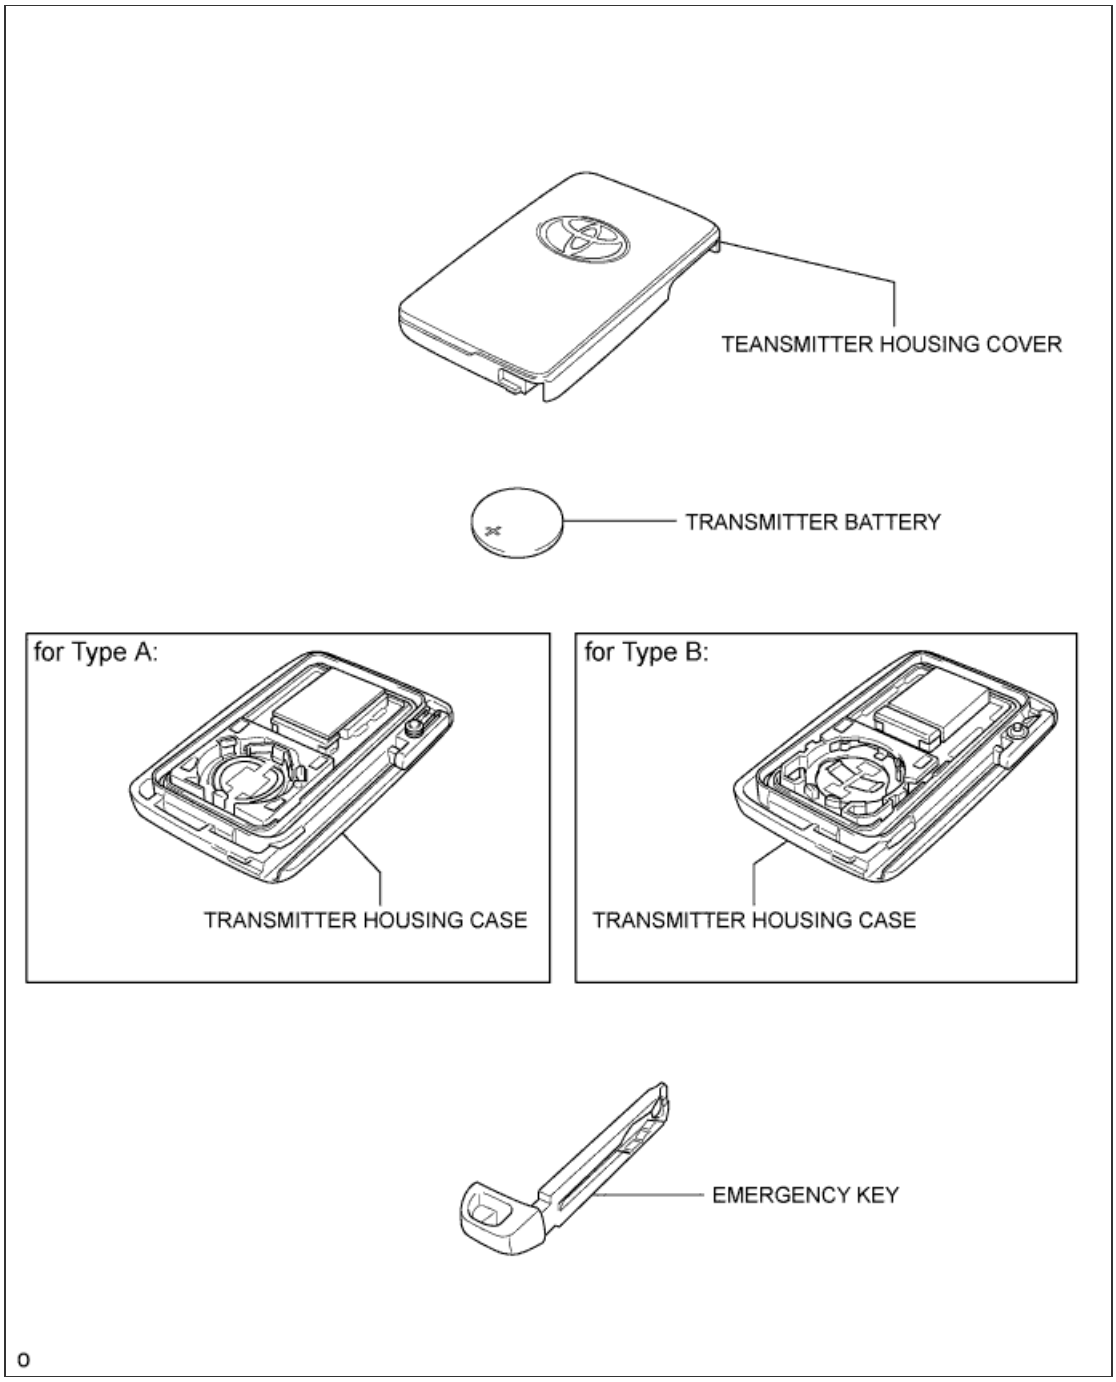
a. Install a new battery (lithium battery: CR1632) with the positive (+) side facing upward, as shown in the illustration.

NOTICE:

- **Do not bend the transmitter battery electrode during insertion.**
- **Keep the transmitter cover interior free of dust and oil.**



b. Install the transmitter housing cover by pressing down on it as shown in the illustration.



c. Insert the mechanical key into the transmitter.

d. Press one of the transmitter switches and check that the LED illuminates.

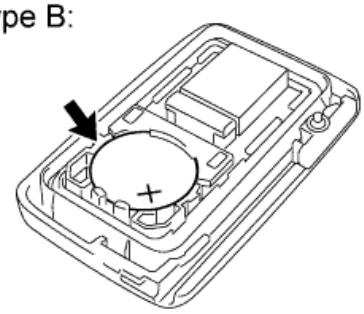
c. Remove the battery (lithium battery: CR1632).



NOTICE:

- **Do not push the terminals with your finger.**
- **Do not forcibly pry up the battery. The terminals may be damaged.**
- **Do not touch the battery with wet hands. Water may cause rust.**
- **Do not touch or move any components inside the transmitter. It may interfere with proper operation.**

for Type A:

for Type B:

o

for Preparation Click here

1. INSPECT TRANSMITTER BATTERY

HINT:

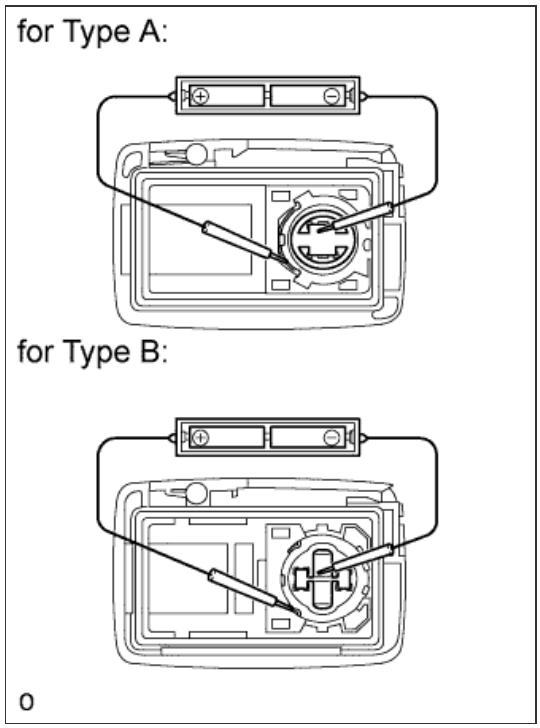
- **Type A: for Australia.**
- **Type B: except Australia.**

a. Inspect the operation of the transmitter.

i. Remove the battery (lithium battery) from the transmitter (Click here).

ii. Install a new or normal battery (lithium battery).

HINT:



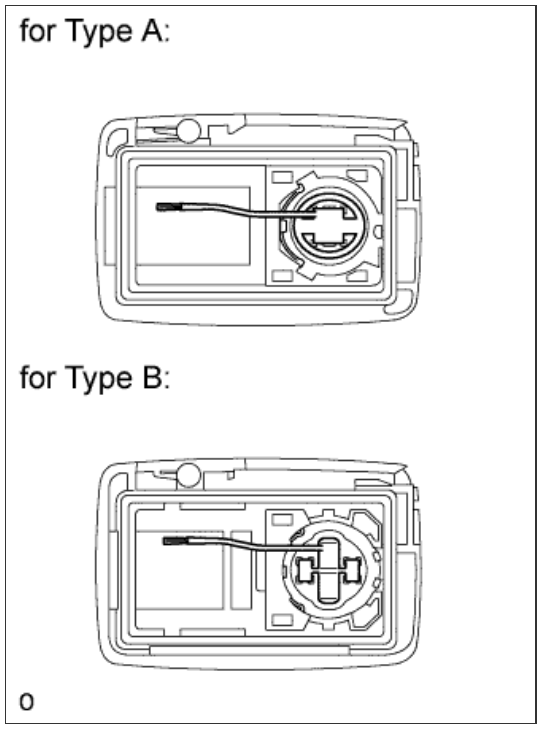
If a new or normal battery is not available, first connect 2 new 1.5 V batteries in series. Then connect leads to the batteries and apply 3 V to the transmitter, as shown in the illustration.

iii. From outside the vehicle, approximately 1 m (3.28 ft) away from the driver side outside door handle, test the transmitter by pointing its key plate at the vehicle and pressing a transmitter switch, or while carrying the transmitter touch the inside of the handle and pull it.

OK:
The door lock can be operated via the transmitter.
The LED comes on more than once.

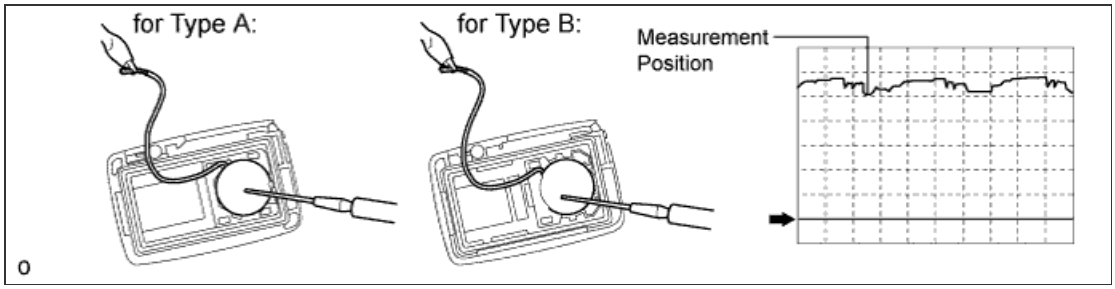
HINT:

- **The operational area differs depending on the user, the way the transmitter is held, and the location.**
- **The weak electric waves from the transmitter may be affected if the area has strong electric waves or noise. The transmitter operational area may be shortened or the transmitter may not function.**



b. Inspect the battery capacity.

i. Remove the battery from the electrical key transmitter that does not operate. Attach a lead wire (0.6 mm (0.0236 in.) in diameter or less including wire sheath) with tape or equivalent to the negative terminal (Click here).



NOTICE:

Do not wrap the lead wire around a terminal, wedge it between terminals, or solder it. A terminal may be deformed or damaged, and the battery will not be able to be installed correctly.

ii. Carefully extend the lead wire from the position shown in the illustration and install the previously removed transmitter battery.

iii. Using an oscilloscope, check the transmitter battery voltage waveform.

HINT:

When measuring the battery voltage, bring the electrical key transmitter within the smart access system operating range and operating the lock switch of a door handle to perform the measurement. For the smart access system operating range, refer to System Description (Click here).

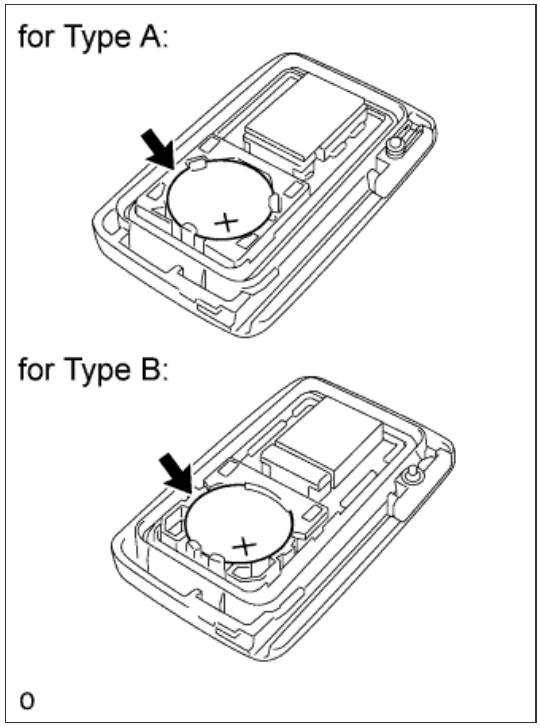
Standard Voltage:

Tester Condition	Tool Setting	Condition	Specified Condition
Battery positive (+) - Battery negative (-)	0.5 V/DIV, 100 ms/DIV.	Engine switch off, all doors closed and lock switch pushed	2.2 to 3.2 V (Refer to waveform)

If the result is not as specified, replace the transmitter battery.

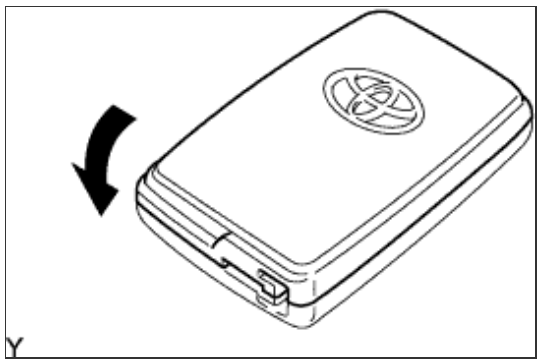
for Preparation Click here

1. INSTALL TRANSMITTER BATTERY



HINT:

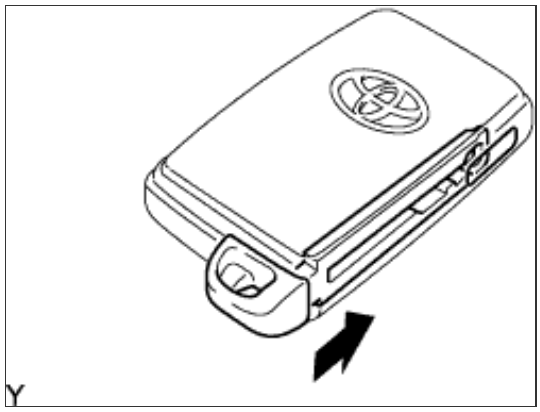
- **Type A: for Australia.**
- **Type B: except Australia.**



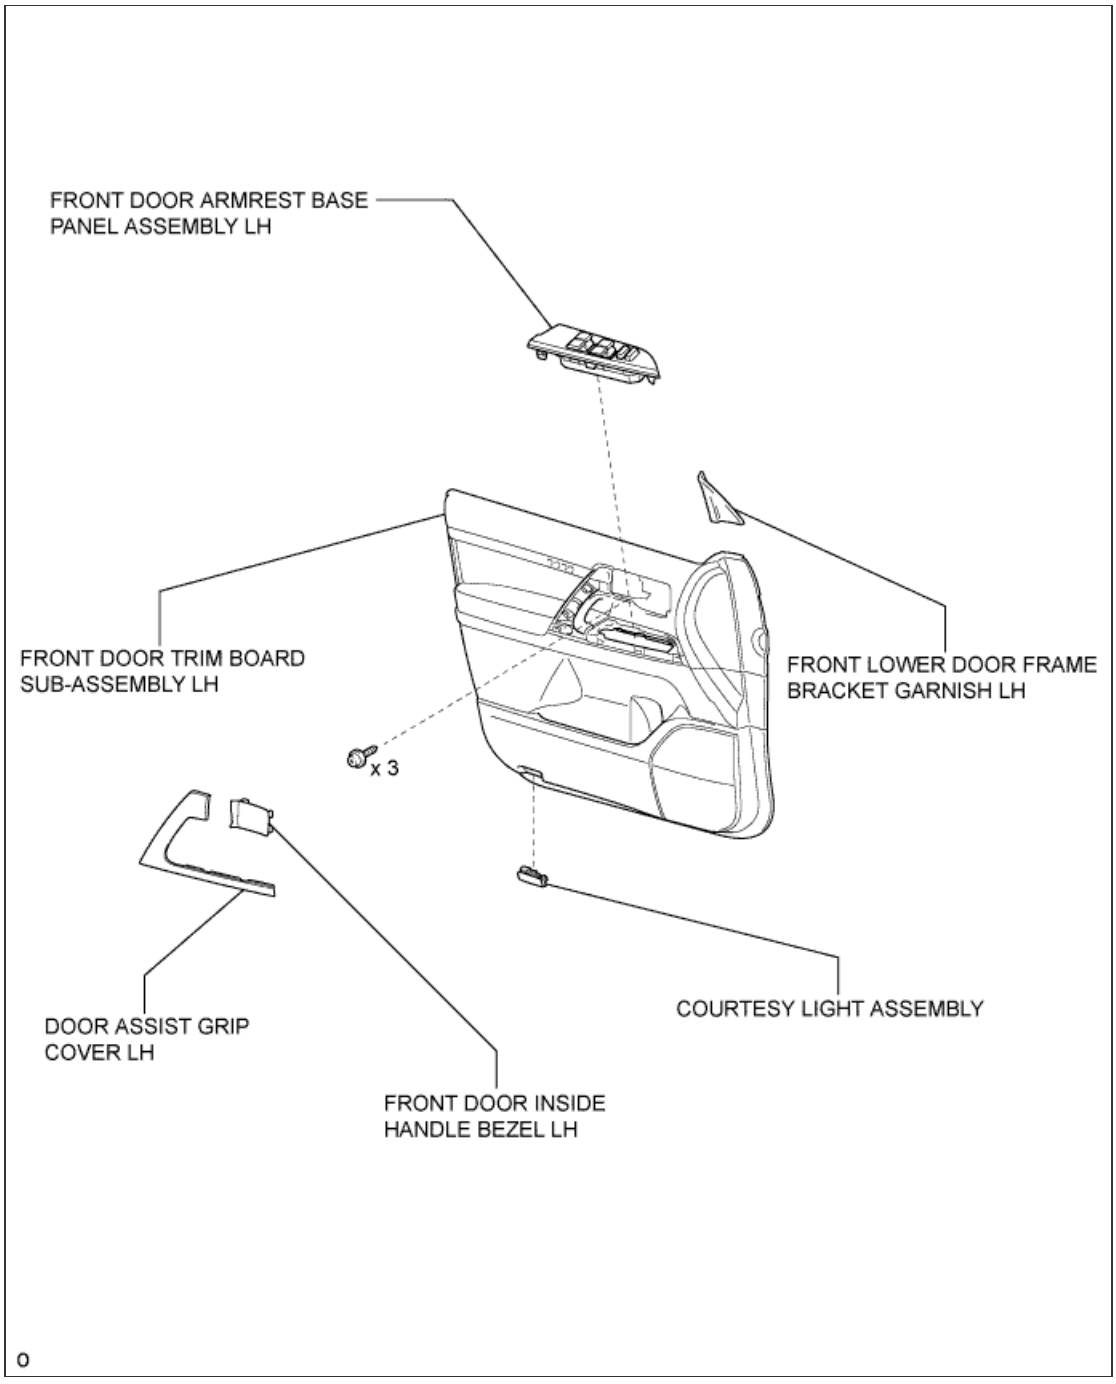
a. Install the battery (lithium battery: CR1632) with the positive (+) side facing upward, as shown in the illustration.

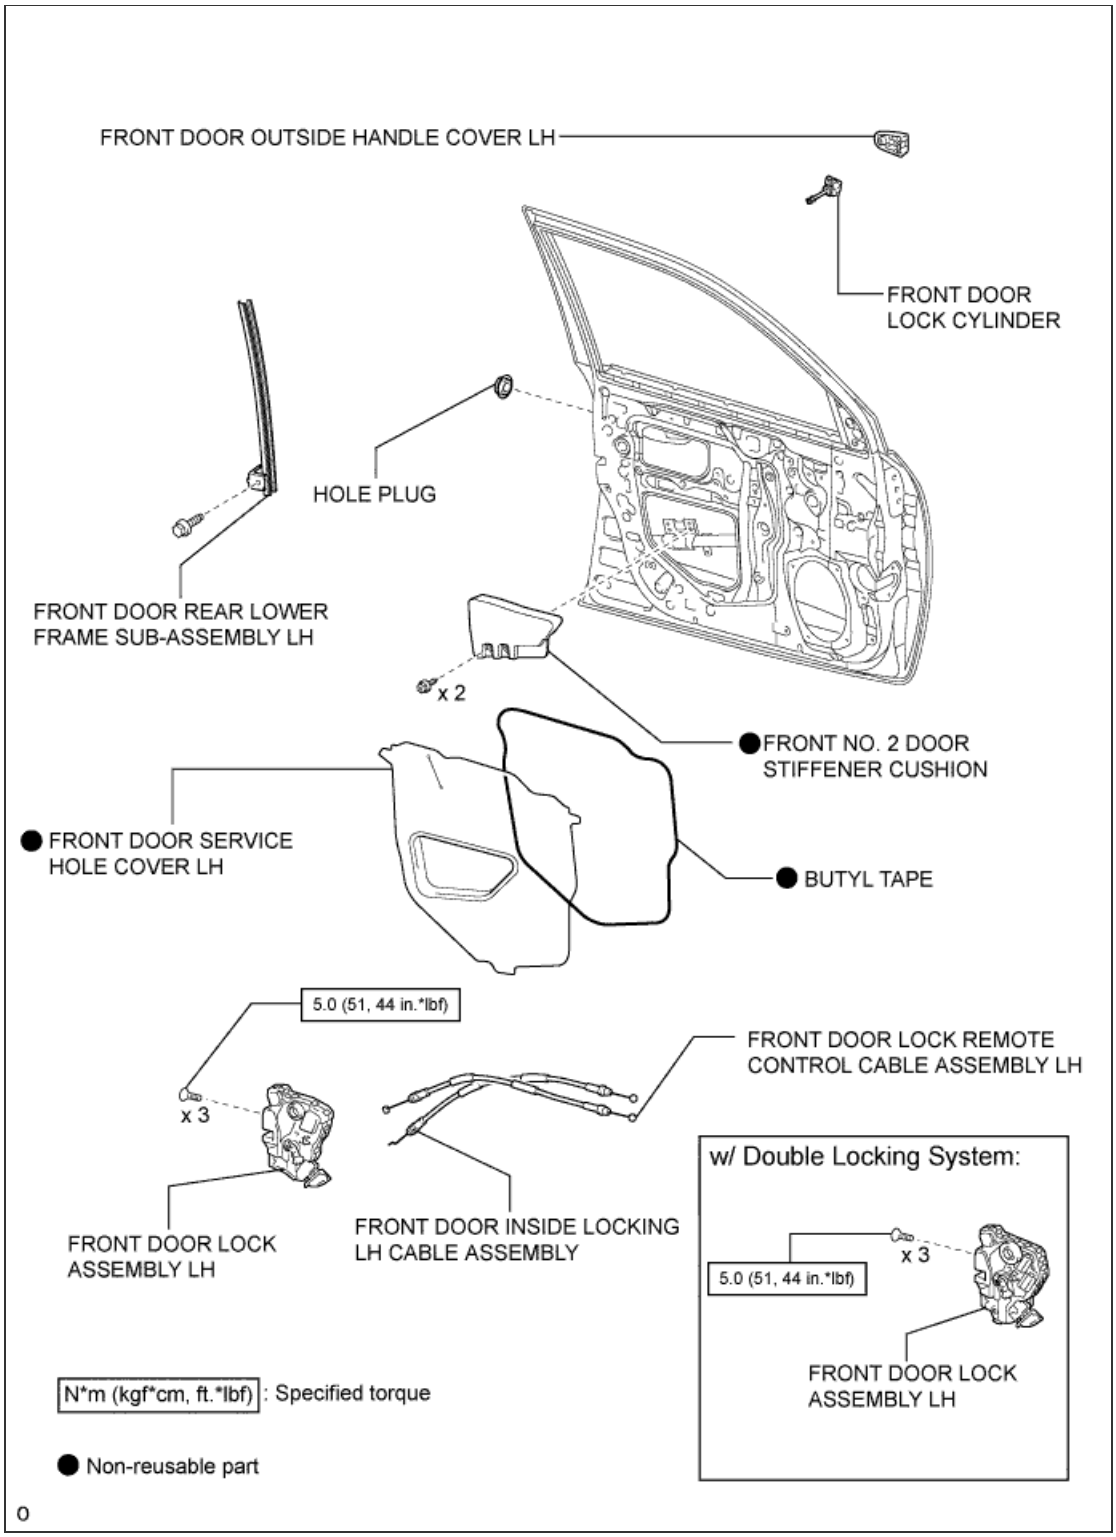
NOTICE:

- **Do not bend the transmitter battery electrode during insertion.**
- **Keep the transmitter cover interior free of dust and oil.**



b. Install the transmitter housing cover by pressing down on it as shown in the illustration.





c. Insert the Emergency key into the transmitter.

d. Press one of the transmitter switches and check that the LED illuminates.

for Preparation Click here

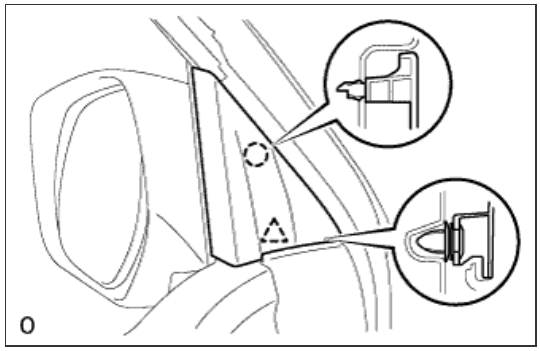
HINT:

- **Use the same procedures for the LH side and RH side.**
- **The procedures listed below are for the LH side.**

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:



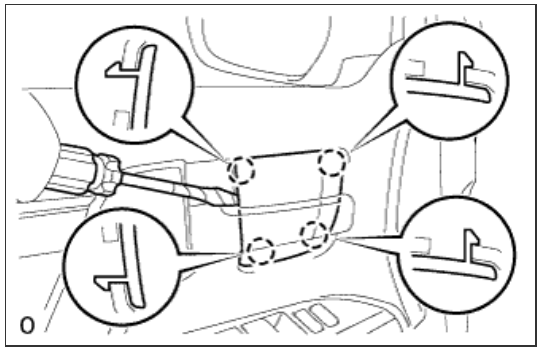
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE FRONT LOWER DOOR FRAME BRACKET GARNISH LH

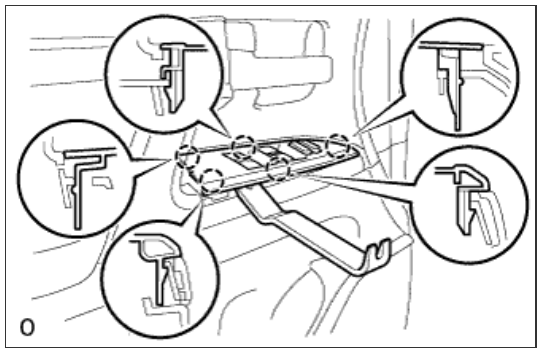
a. Detach the clip and claw, remove the front lower door frame bracket garnish.



3. REMOVE FRONT DOOR INSIDE HANDLE BEZEL LH

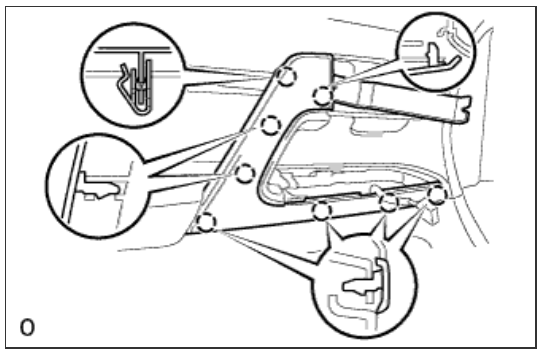
a. Using a screwdriver, detach the 4 claws and remove the inside handle bezel.

HINT:



Tape the screwdriver tip before use.

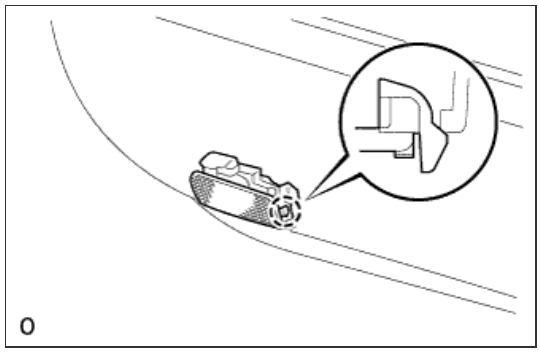
4. REMOVE FRONT DOOR ARMREST BASE PANEL ASSEMBLY LH



a. Using a moulding remover, detach the 5 claws.

b. Disconnect the connector and remove the front door armrest base panel and multiplex network master switch.

5. REMOVE DOOR ASSIST GRIP COVER LH

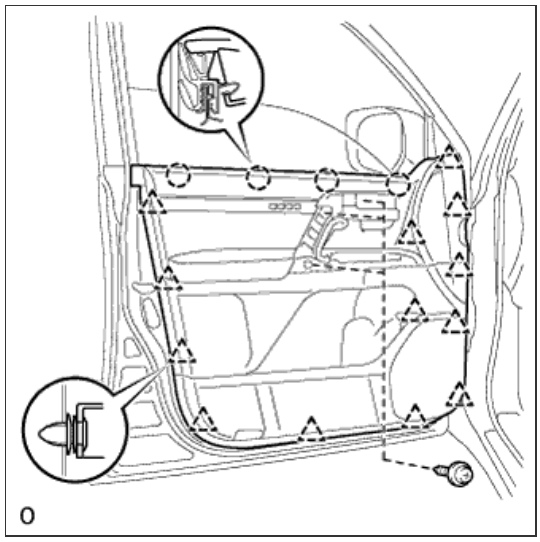


a. Using a moulding remover, detach the 8 claws and remove the door assist grip cover.

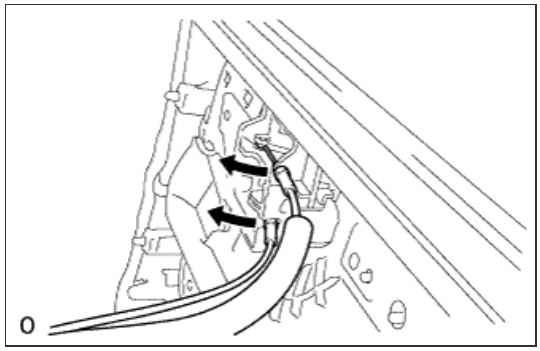
6. REMOVE COURTESY LIGHT ASSEMBLY (w/ Courtesy Light)

a. Detach the claw.

b. Remove the courtesy light and then disconnect the connector.



7. REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY LH



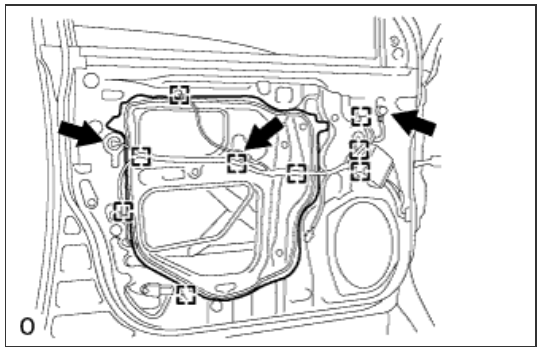
a. Remove the 3 screws.

b. Remove the 13 clips, 4 claws and trim board.

c. Disconnect the connector.

d. Disconnect the 2 cables from the inside handle.

8. REMOVE FRONT DOOR SERVICE HOLE COVER LH

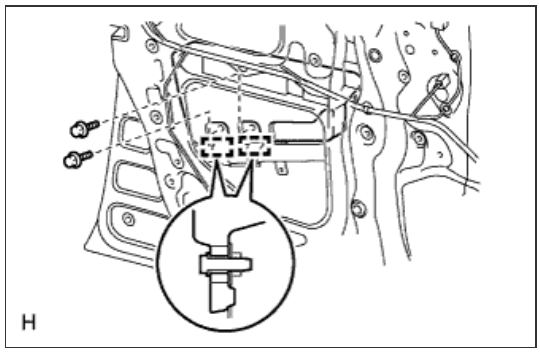


a. Using a clip remover, detach the 9 clamps.

b. Remove the bolt and disconnect the 2 connectors.

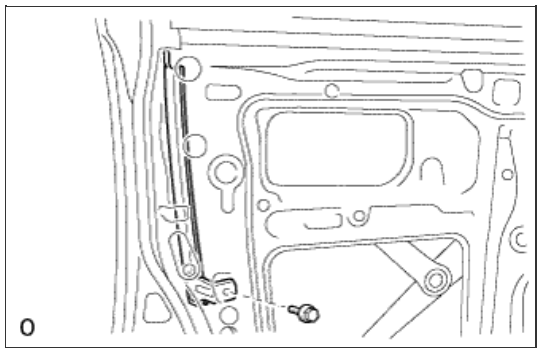
c. Remove the service hole cover.

HINT:



Remove the remaining tape on the door.

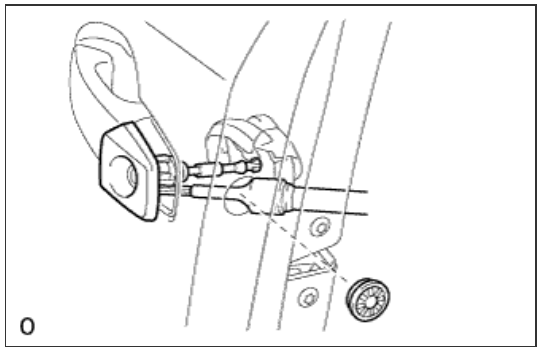
9. REMOVE FRONT NO. 2 DOOR STIFFENER CUSHION



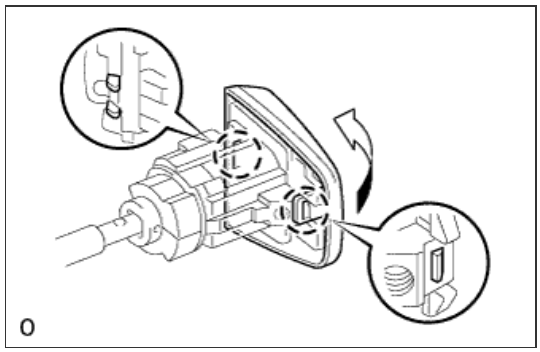
a. Remove the 2 bolts.

b. Detach the 2 clamps and door stiffener cushion.

10. REMOVE FRONT DOOR REAR LOWER FRAME SUB-ASSEMBLY LH



a. Remove the bolt and rear lower frame.



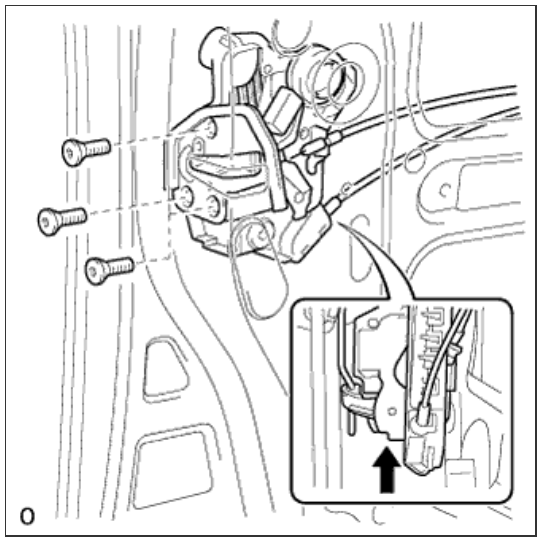
11. REMOVE FRONT DOOR OUTSIDE HANDLE COVER LH

a. Remove the hole plug.

b. Using a T30 "TORX" wrench, loosen the screw and remove the cover with the door lock cylinder installed.

c. Detach the 2 claws and remove the front door outside handle cover.

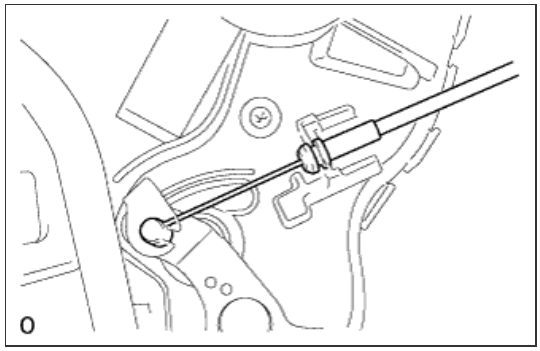
12. REMOVE FRONT DOOR LOCK ASSEMBLY LH



a. Using a T30 "TORX" wrench, remove the 3 screws.

HINT:

Remove the door lock through the service hole.

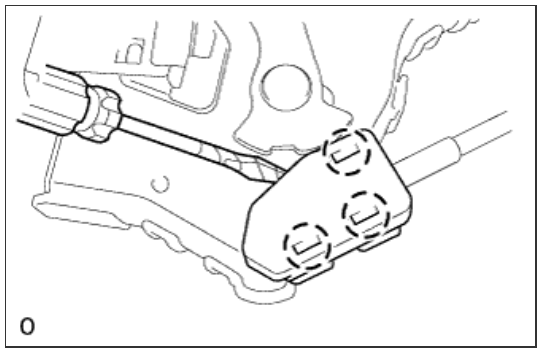


NOTICE:

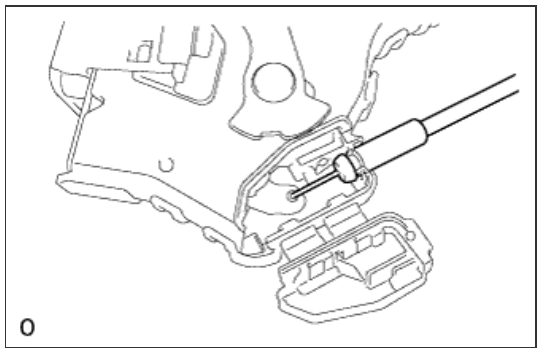
Be careful when removing the screws as the door lock may fall and become damaged.

13. REMOVE FRONT DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY LH

a. Remove the front door lock remote control cable assembly.



14. REMOVE FRONT DOOR INSIDE LOCKING LH CABLE ASSEMBLY



a. Using a screwdriver, detach the 3 claws.

HINT:

Tape the screwdriver tip before use.

b. Remove the front door inside locking cable assembly.

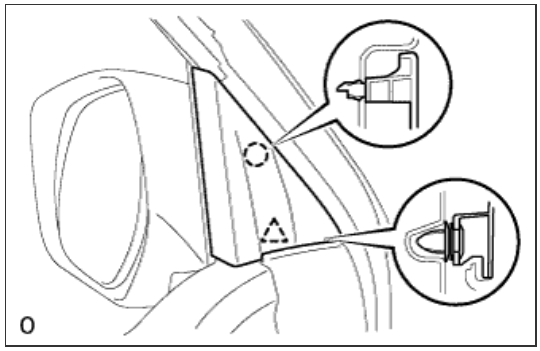
for Preparation Click here

HINT:

- **Use the same procedures for the LH side and RH side.**
- **The procedures listed below are for the LH side.**

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:



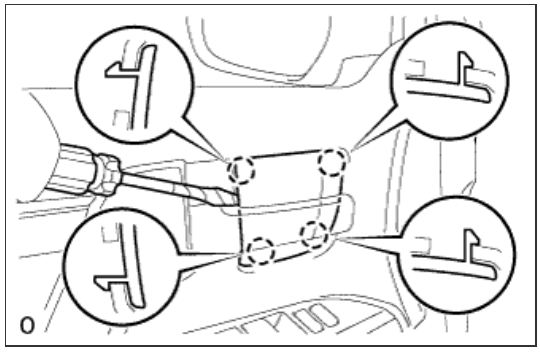
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE FRONT LOWER DOOR FRAME BRACKET GARNISH LH

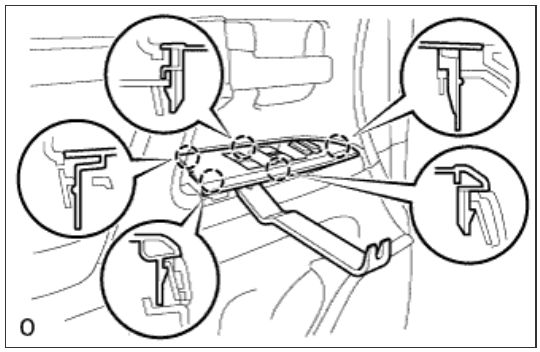
a. Detach the clip and claw, remove the front lower door frame bracket garnish.



3. REMOVE FRONT DOOR INSIDE HANDLE BEZEL LH

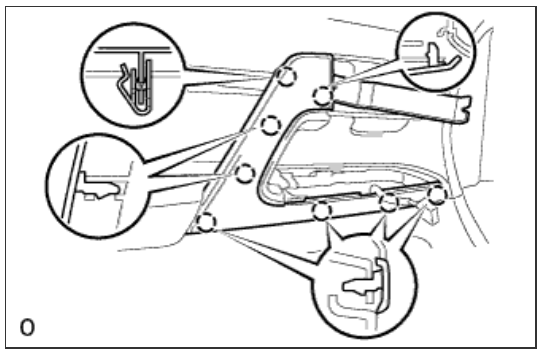
a. Using a screwdriver, detach the 4 claws and remove the inside handle bezel.

HINT:



Tape the screwdriver tip before use.

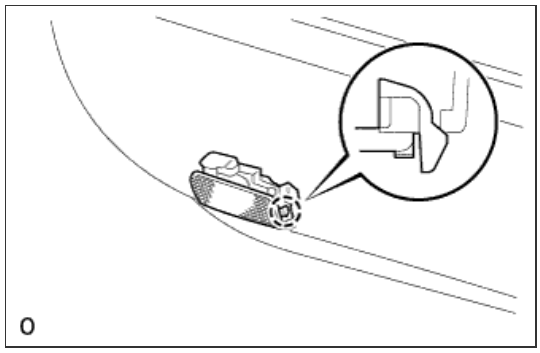
4. REMOVE FRONT DOOR ARMREST BASE PANEL ASSEMBLY LH



a. Using a moulding remover, detach the 5 claws.

b. Disconnect the connector and remove the armrest base panel.

5. REMOVE DOOR ASSIST GRIP COVER LH

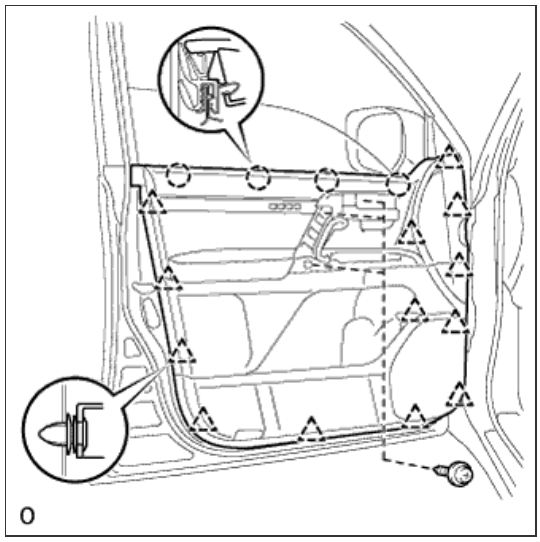


a. Using a moulding remover, detach the 8 claws and remove the door assist grip cover.

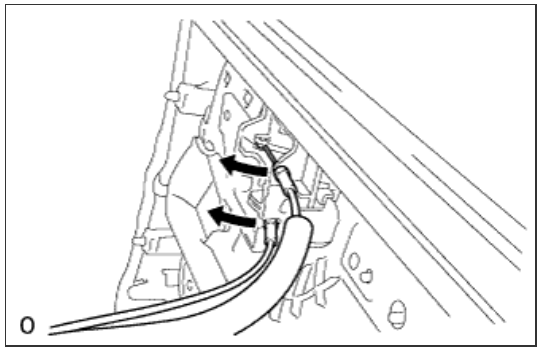
6. REMOVE COURTESY LIGHT ASSEMBLY (w/ Courtesy Light)

a. Detach the claw.

b. Remove the courtesy light and then disconnect the connector.



7. REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY LH



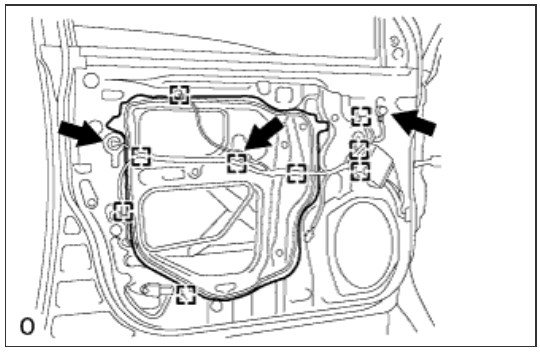
a. Remove the 3 screws.

b. Remove the 13 clips, 4 claws and trim board.

c. Disconnect the connector.

d. Disconnect the 2 cables from the inside handle.

8. REMOVE FRONT DOOR SERVICE HOLE COVER LH

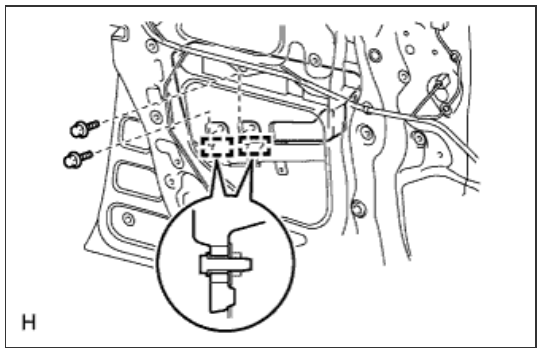


a. Using a clip remover, detach the 9 clamps.

b. Remove the bolt and disconnect the 2 connectors.

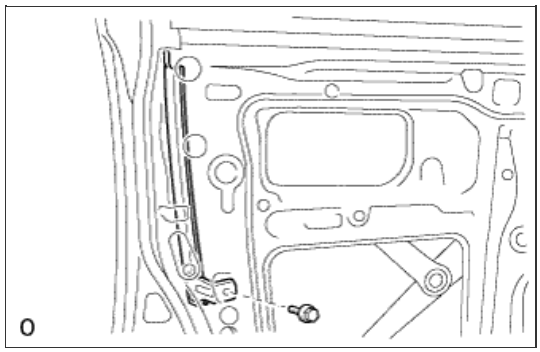
c. Remove the service hole cover.

HINT:



Remove the remaining tape on the door.

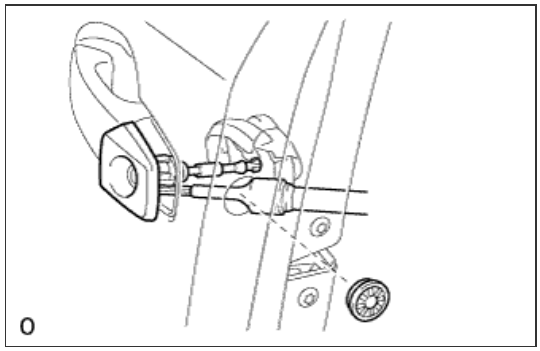
9. REMOVE FRONT NO. 2 DOOR STIFFENER CUSHION



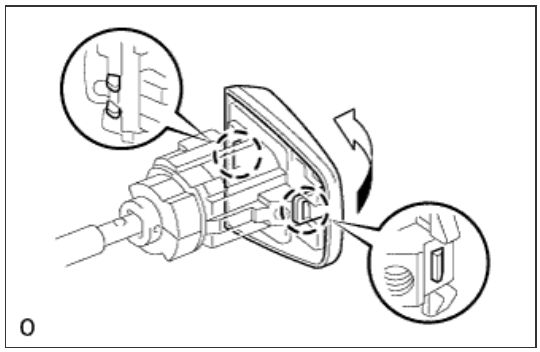
a. Remove the 2 bolts.

b. Detach the 2 clamps and door stiffener cushion.

10. REMOVE FRONT DOOR REAR LOWER FRAME SUB-ASSEMBLY LH



a. Remove the bolt and rear lower frame.



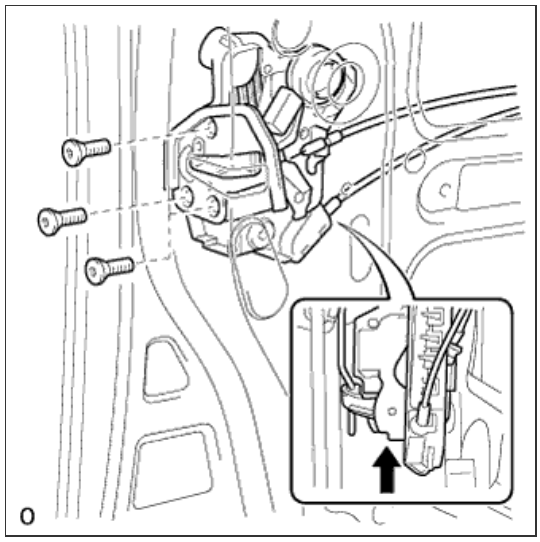
11. REMOVE FRONT DOOR OUTSIDE HANDLE COVER LH

a. Remove the hole plug.

b. Using a T30 "TORX" wrench, loosen the screw and remove the cover with the door lock cylinder installed.

c. Detach the 2 claws and remove the front door outside handle cover.

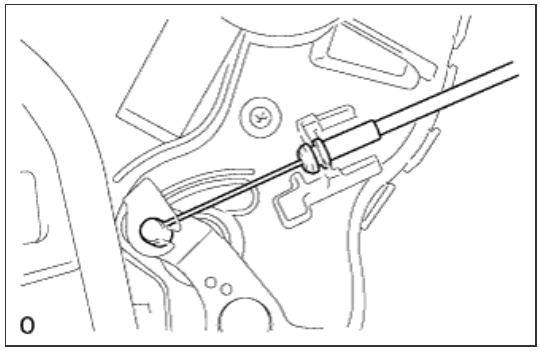
12. REMOVE FRONT DOOR LOCK ASSEMBLY LH



a. Using a T30 "TORX" wrench, remove the 3 screws.

HINT:

Remove the door lock through the service hole.

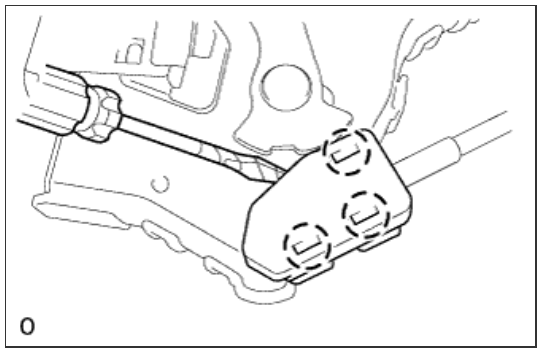


NOTICE:

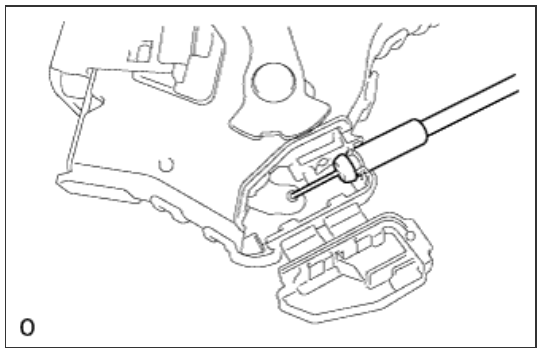
Be careful when removing the screws as the door lock may fall and become damaged.

13. REMOVE FRONT DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY LH

a. Remove the front door lock remote control cable assembly.



14. REMOVE FRONT DOOR INSIDE LOCKING LH CABLE ASSEMBLY



a. Using a screwdriver, detach the 3 claws.

HINT:

Tape the screwdriver tip before use.

b. Remove the front door inside locking cable assembly.

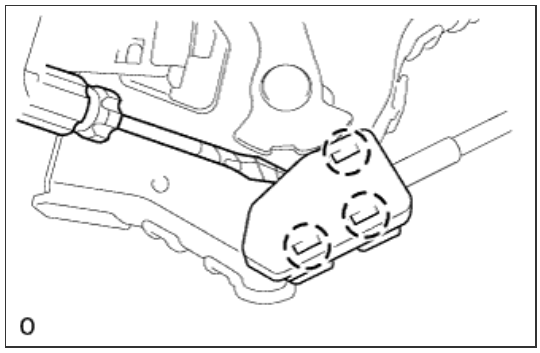
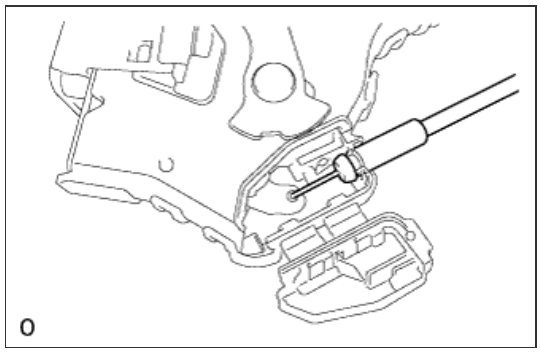
Be careful when removing the screws as the door lock may fall and become damaged.

13. REMOVE FRONT DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY LH

a. Remove the front door lock remote control cable assembly.



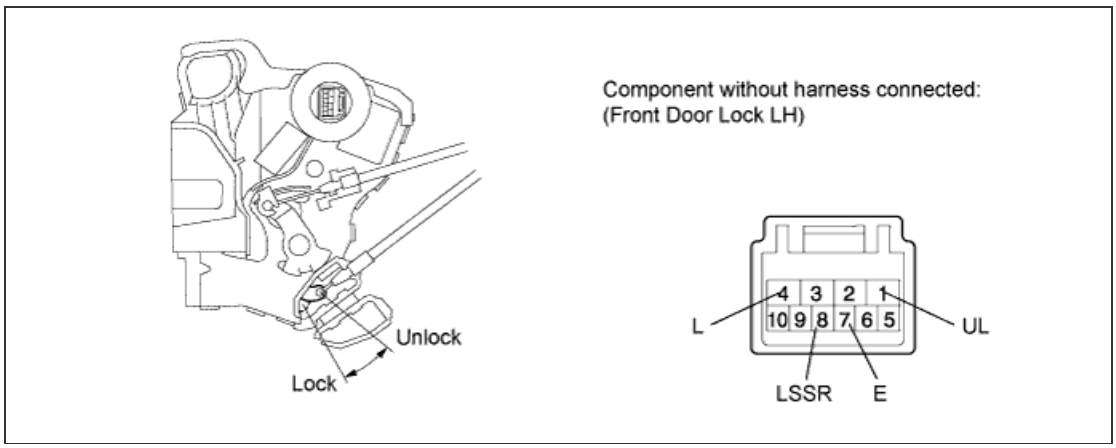
14. REMOVE FRONT DOOR INSIDE LOCKING LH CABLE ASSEMBLY



a. Using a screwdriver, detach the 3 claws.

HINT:

Tape the screwdriver tip before use.



b. Remove the front door inside locking cable assembly.

for Preparation Click here

1. INSPECT FRONT DOOR LOCK ASSEMBLY LH (w/o Double Locking System)

a. Check the door lock motor operation.

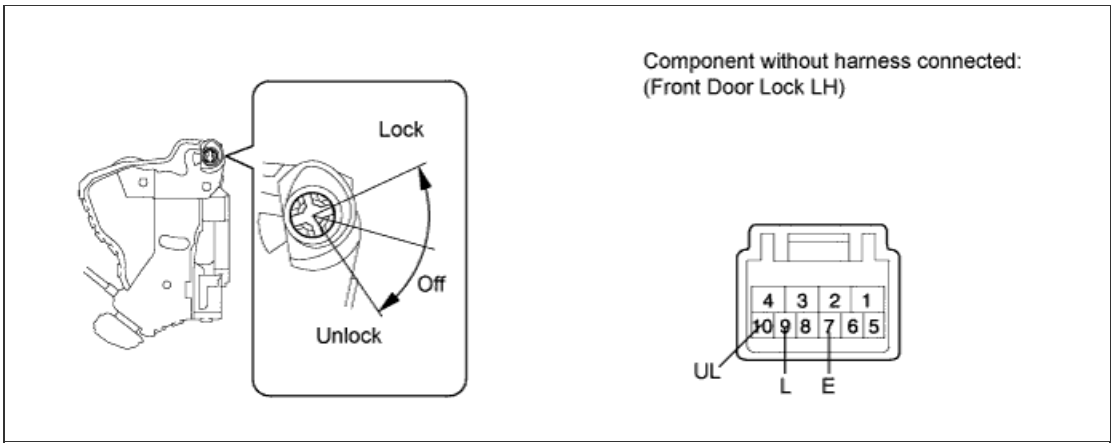
i. Apply battery voltage to the motor connector and check the operation of the door lock motor.

OK:

Measurement Condition	Specified Condition
Battery positive (+) → 4 (L) Battery negative (-) → 1 (UL)	Lock
Battery positive (+) → 1 (UL) Battery negative (-) → 4 (L)	Unlock

If the result is not as specified, replace the door lock assembly.

b. Check the detection switch.



i. Measure the resistance according to the value(s) in the table below.

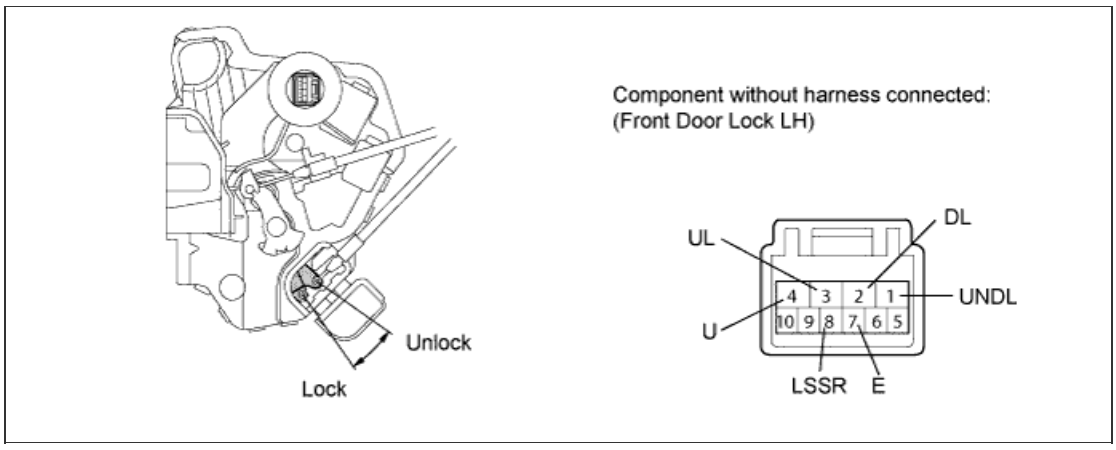
Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
8 (LSSR) - 7 (E)	Lock	10 kΩ or higher
8 (LSSR) - 7 (E)	Unlock	Below 1 Ω

If the result is not as specified, replace the door lock assembly.

c. for LHD:

i. Check the door lock and unlock switch.



1. Measure the resistance according to the value(s) in the table below.

Stan a Resistance:

Tester Connection	Switch Condition	Specified Condition
9 (L) - 7 (E)	Lock	Below 1 Ω
9 (L) - 7 (E) 10 (UL) - 7 (E)	OFF	10 kΩ or higher
10 (UL) - 7 (E)	Unlock	Below 1 Ω

If the result is not as specified, replace the door lock assembly.

2. INSPECT FRONT DOOR LOCK ASSEMBLY LH (w/ Double Locking System)

a. Check the door lock motor operation.

i. Apply battery voltage to the motor connector and check the operation of the door lock motor.

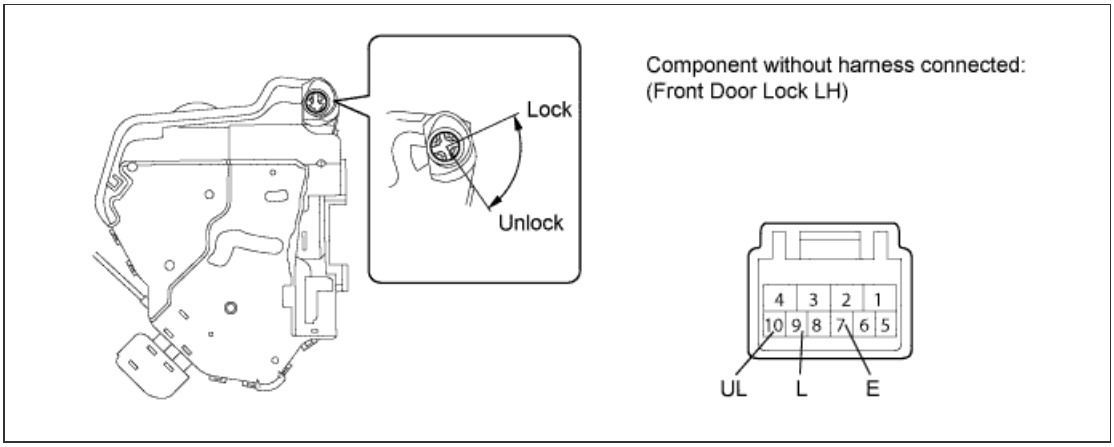
OK:

Measurement Condition	Specified Condition
Battery positive (+) → 4 (L) Battery negative (-) → 3 (UL)	Lock
Battery positive (+) → 3 (UL) Battery negative (-) → 4 (L)	Unlock
Battery positive (+) → 2	

(DL) Battery negative (-) → 1 (UNDL)	Set
Battery positive (+) → 1 (UNDL) Battery negative (-) → 2 (DL)	Unset

If the result is not as specified, replace the door lock assembly.

b. Check the detection switch.



i. Measure the resistance according to the value(s) in the table below.

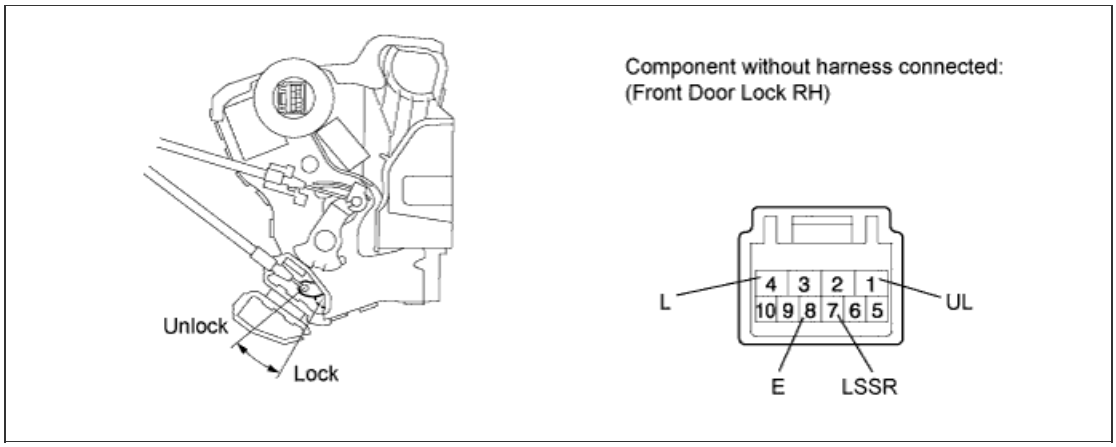
Stan a Resistance:

Tester Connection	Switch Condition	Specified Condition
8 (LSSR) - 7 (E)	Lock	10 kΩ or higher
8 (LSSR) - 7 (E)	Unlock	Below 1 Ω

If the result is not as specified, replace the door lock assembly.

c. for LHD:

i. Check the door lock and unlock switch.



1. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
9 (L) - 7 (E)	Lock	Below 1 Ω
9 (L) - 7 (E) 10 (UL) - 7 (E)	OFF	10 kΩ or higher
10 (UL) - 7 (E)	Unlock	Below 1 Ω

If the result is not as specified, replace the door lock assembly.

3. INSPECT FRONT DOOR LOCK ASSEMBLY RH (w/o Double Locking System)

a. Check the door lock motor operation.

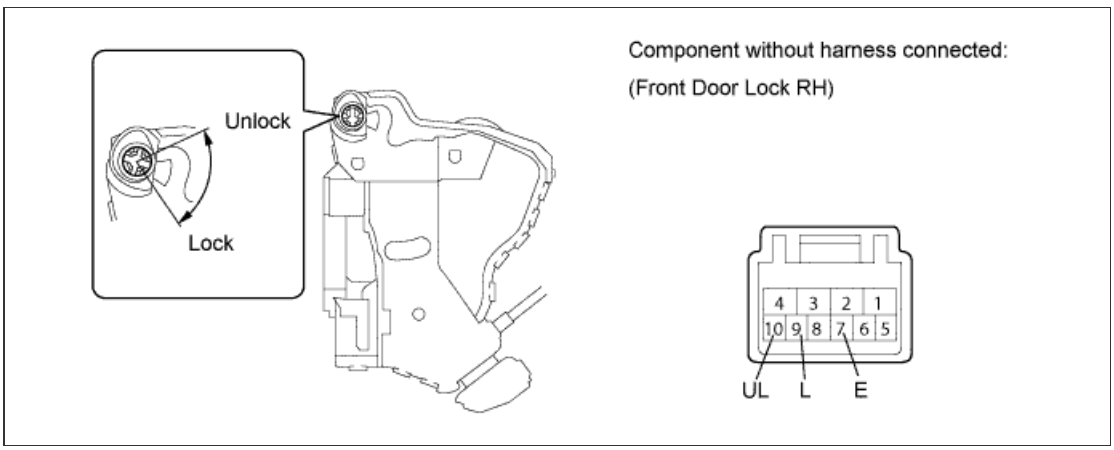
i. Apply battery voltage to the door lock motor connector and check the operation of the door lock motor.

OK:

Measurement Condition	Specified Condition
Battery positive (+) → 4 (L) Battery negative (-) → 1 (UL)	Lock
Battery positive (+) → 1 (UL) Battery negative (-) → 4 (L)	Unlock

If the result is not as specified, replace the door lock assembly.

b. Check the detection switch.



i. Measure the resistance according to the value(s) in the table below.

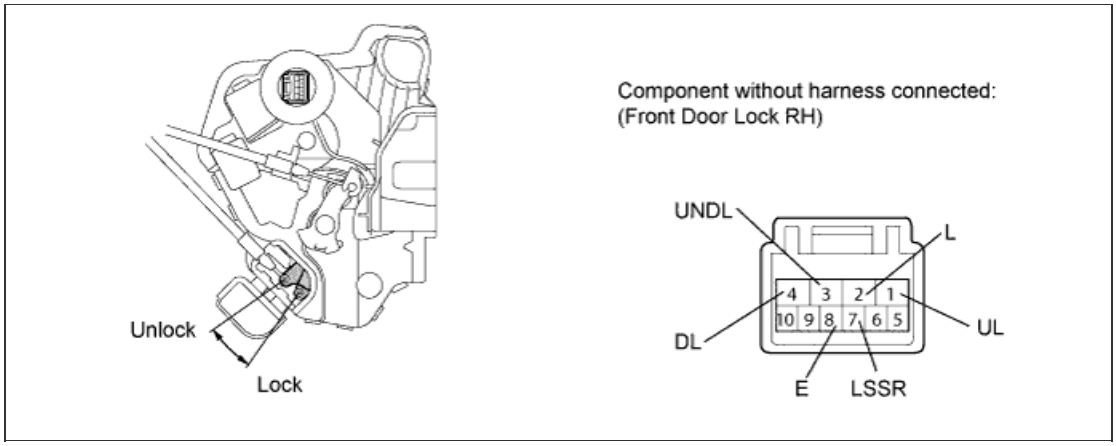
Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
7 (LSSR) - 8 (E)	Lock	10 kΩ or higher
7 (LSSR) - 8 (E)	Unlock	Below 1 Ω

If the result is not as specified, replace the door lock assembly.

c. for RHD:

i. Check the door lock and unlock switch.



1. Measure the resistance according to the value(s) in the table below.

Stan a Resistance:

Tester Connection	Switch Condition	Specified Condition
9 (L) - 7 (E)	Lock	Below 1 Ω
9 (L) - 7 (E) 10 (UL) - 7 (E)	OFF	10 kΩ or higher
10 (UL) - 7 (E)	Unlock	Below 1 Ω

If the result is not as specified, replace the door lock assembly.

4. INSPECT FRONT DOOR LOCK ASSEMBLY RH (w/ Double Locking System)

a. Check the door lock motor operation.

i. Apply battery voltage to the door lock motor connector and check the operation of the door lock motor.

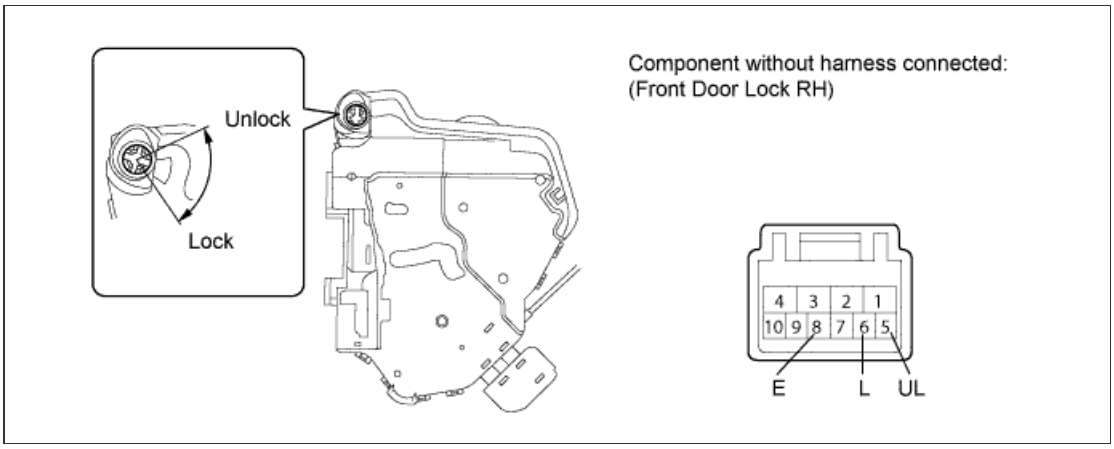
OK:

Measurement Condition	Specified Condition
Battery positive (+) → 2 (L) Battery negative (-) → 1 (UL)	Lock
Battery positive (+) → 1 (UL) Battery negative (-) → 2 (L)	Unlock
Battery positive (+) → 4 (DL) Battery negative (-) → 3 (UNDL)	Set
Battery positive (+) → 3 (UNDL) Battery negative (-) → 4 (DL)	Unset

If the result is not as specified, replace the door lock assembly.

b. Check the detection switch.

i. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
7 (LSSR) - 8 (E)	Lock	10 kΩ or higher

7 (LSSR) - 8 (E)	Unlock	Below 1 Ω

If the result is not as specified, replace the door lock assembly.

c. for RHD:

i. Check the door lock and unlock switch.

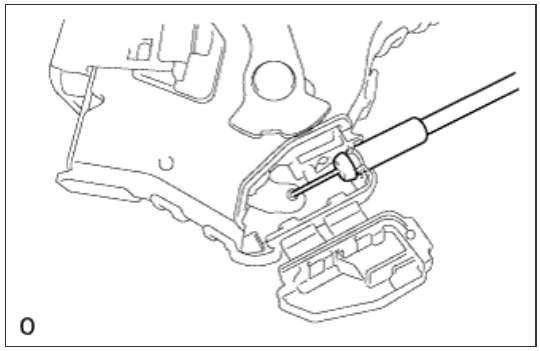
1. Measure the resistance according to the value(s) in the table below.

Stan a Resistance:

Tester Connection	Switch Condition	Specified Condition
6 (L) - 8 (E)	Lock	Below 1 Ω
6 (L) - 8 (E) 5 (UL) - 8 (E)	OFF	10 kΩ or higher
5 (UL) - 8 (E)	Unlock	Below 1 Ω

If the result is not as specified, replace the door lock assembly.

for Preparation Click here

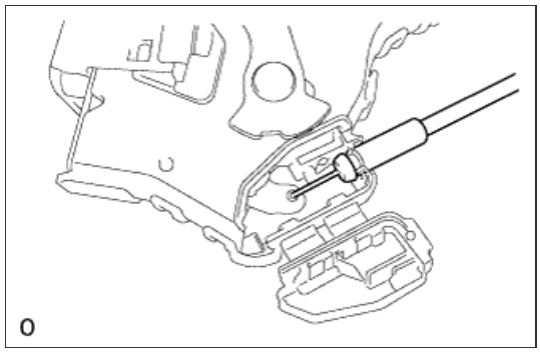


HINT:

- **Use the same procedures for the LH side and RH side.**
- **The procedures listed below are for the LH side.**

1. INSTALL FRONT DOOR INSIDE LOCKING LH CABLE ASSEMBLY

a. Install the front door inside locking cable.



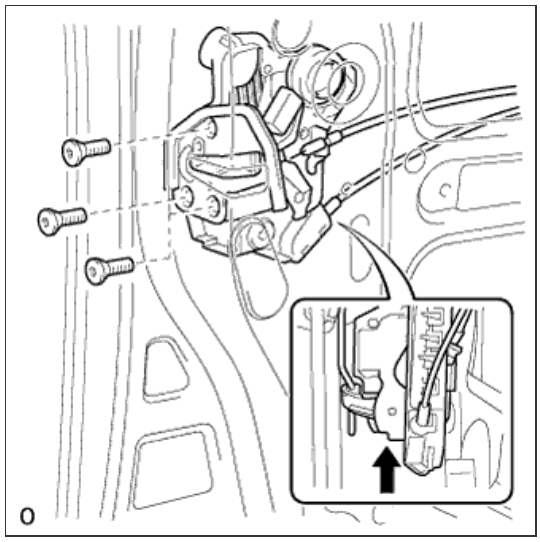
b. Attach the 3 claws.

2. INSTALL FRONT DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY LH

a. Install the front door inside locking cable.

b. Attach the 3 claws.

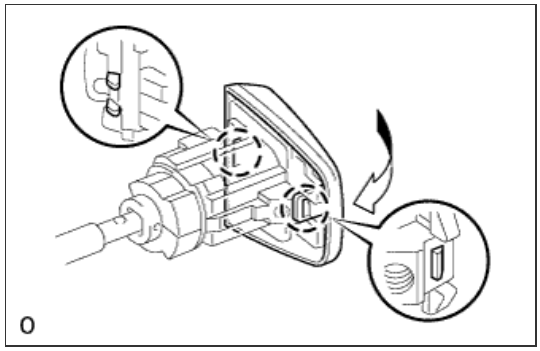
3. INSTALL FRONT DOOR LOCK ASSEMBLY LH



a. Apply MP grease to the sliding parts of the front door lock assembly.

b. Insert the front door lock open rod to the front door lock assembly.

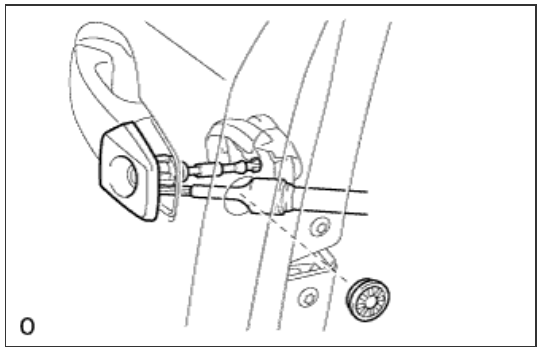
c. Make sure that the front door lock open rod is securely connected to the front door lock assembly.



d. Using a T30 "TORX" wrench, install the door lock with the 3 screws.

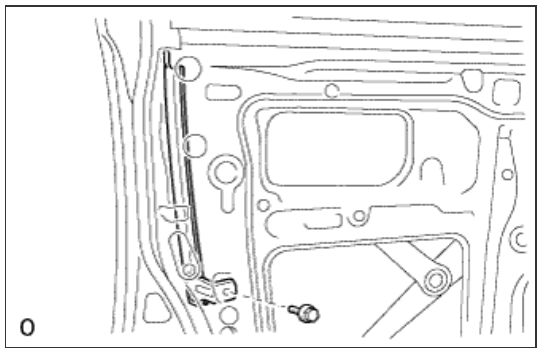
Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

4. INSTALL FRONT DOOR OUTSIDE HANDLE COVER LH



a. Attach the 2 claws to install the front door outside handle cover to the front door lock cylinder.

b. Using a T30 "TORX" socket, install the cover (with the door lock cylinder) with the screw.



Torque:
4.0 N*m{ 41 kgf*cm , 35 in.*lbf }

c. Install the hole plug.

5. INSTALL FRONT DOOR REAR LOWER FRAME SUB-ASSEMBLY LH

a. Install the frame with the bolt.

6. INSTALL FRONT NO. 2 DOOR STIFFENER CUSHION

a. Clean the installation surface.

i. Using a heat light, heat the installation surface.

HINT:

When installing the door stiffener cushion, heat the vehicle body and door stiffener cushion using a heat light.

Standard Heating Temperature:

Item	Temperature
Door Stiffener Cushion	20 to 30°C (68 to 86°F)
Vehicle Body	40 to 60°C (104 to 140°F)

NOTICE:

Do not heat the back door garnish and vehicle body excessively.

ii. Remove the double-sided tape from the installation surface.

iii. Wipe off any tape adhesive residue with cleaner.

b. Install a new door stiffener cushion.

i. Using a heat light, heat a new door stiffener cushion and the installation surface.

HINT:

When installing the door stiffener cushion, heat the vehicle body and door stiffener cushion using a heat light.

Standard Heating Temperature:

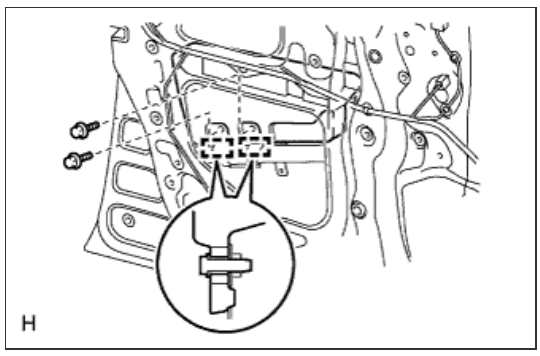
Item	Temperature
Door Stiffener Cushion	20 to 30°C (68 to 86°F)
Vehicle Body	40 to 60°C (104 to 140°F)

NOTICE:

Do not heat the back door garnish and vehicle body excessively.

ii. Remove the peeling paper from the face of the door stiffener cushion.

HINT:



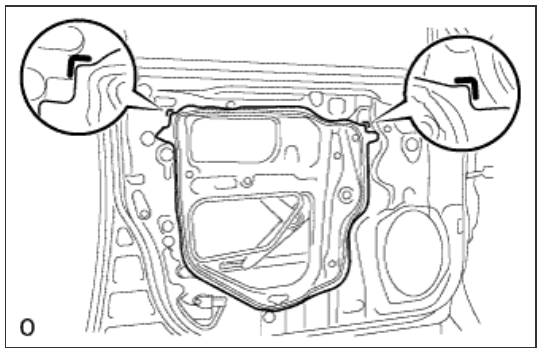
After removing the peeling paper, keep the exposed adhesive free from foreign matter.

iii. Attach the 2 clamps and double-sided tape to install the door stiffener cushion.

HINT:

Press the door stiffener firmly to install it.

iv. Install the 2 bolts.



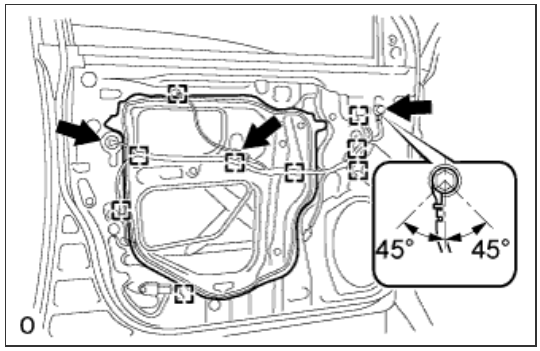
7. INSTALL FRONT DOOR SERVICE HOLE COVER LH

a. Apply butyl tape to the door.

b. Pass the front door lock remote control cable and front door inside locking cable through a new front door service hole cover.

NOTICE:

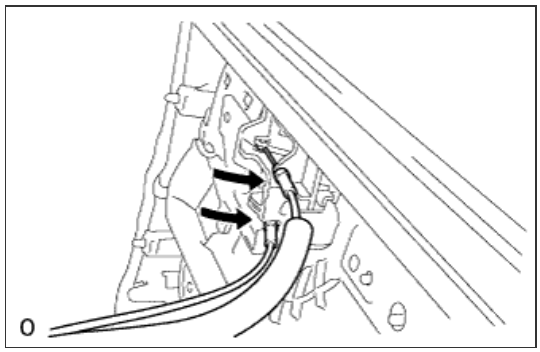
- **When installing the service hole cover, pull the links and connectors through the service hole cover.**
- **There should be no wrinkles or folds after attaching the service hole cover.**
- **After attaching the service hole cover, check the sealing quality.**



c. Connect the 2 connectors.

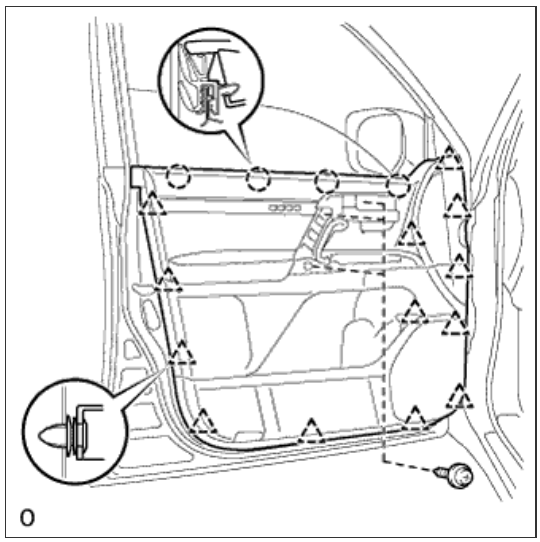
d. Attach the 9 clamps.

e. Install the bolt as shown in the illustration.



Torque:
8.4 N*m{ 86 kgf*cm , 74 in.*lbf }

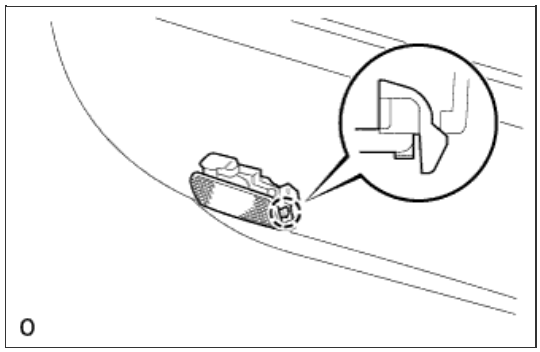
8. INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY LH



a. Connect the connector.

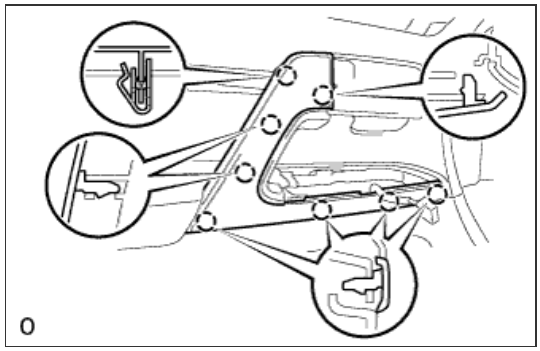
b. Connect the front door lock remote control cable and front door inside locking cable to the front door inside handle sub-assembly.

c. Attach the 4 claws and 13 clips to install the front door trim board sub-assembly.



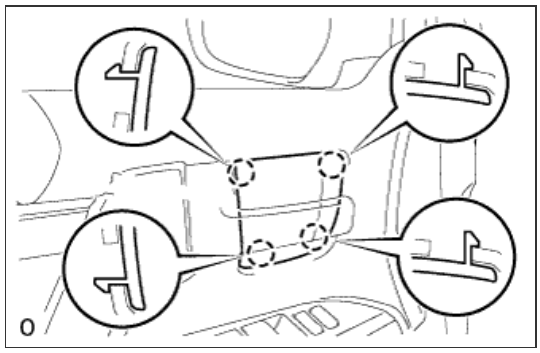
d. Install the 3 screws.

9. INSTALL COURTESY LIGHT ASSEMBLY (w/ Courtesy Light)



a. Connect the connector.

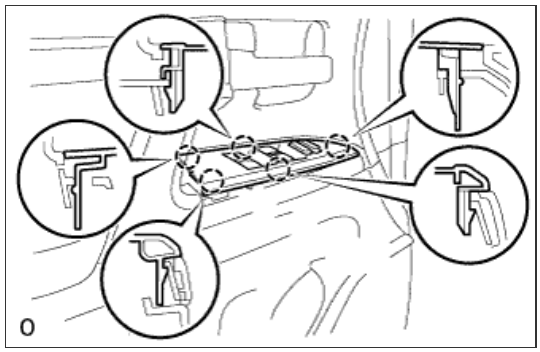
b. Attach the claw of the courtesy light to the front door trim.



10. INSTALL DOOR ASSIST GRIP COVER LH

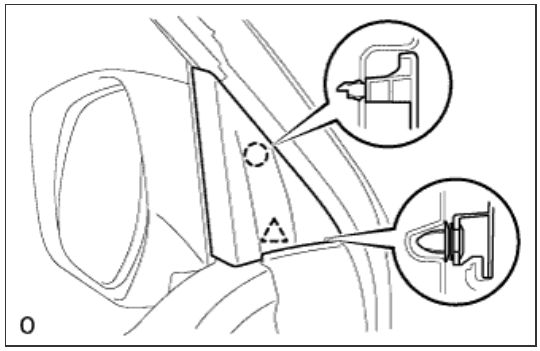
a. Attach the 8 claws to install the door assist grip cover to the door trim panel.

11. INSTALL FRONT DOOR INSIDE HANDLE BEZEL LH



a. Attach the 4 claws to install the bezel.

12. INSTALL FRONT DOOR ARMREST BASE PANEL ASSEMBLY LH



a. Connect the connector.

b. Attach the 5 claws and install the front door armrest base panel.

13. INSTALL FRONT LOWER DOOR FRAME BRACKET GARNISH LH

a. Attach the clip and claw, and install the front door lower frame bracket garnish.

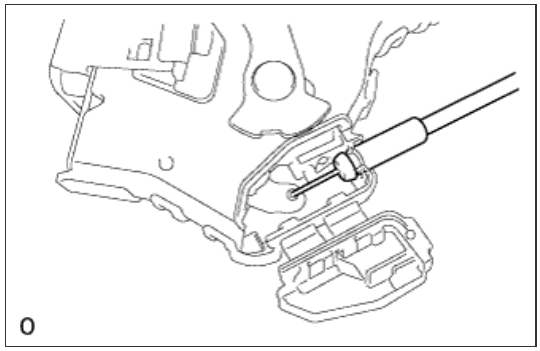
14. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

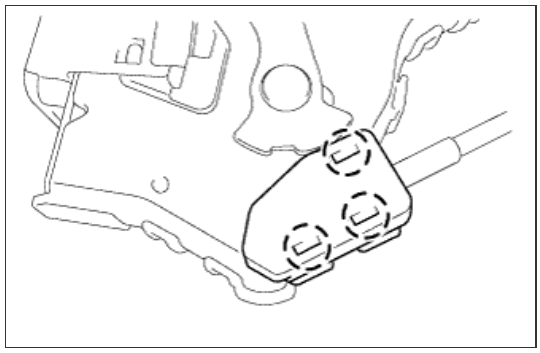
15. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).



for Preparation Click here

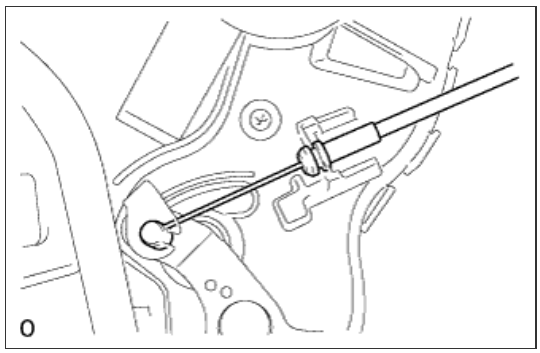
HINT:



- **Use the same procedures for the LH side and RH side.**
- **The procedures listed below are for the LH side.**

1. INSTALL FRONT DOOR INSIDE LOCKING LH CABLE ASSEMBLY

a. Install the front door inside locking cable.

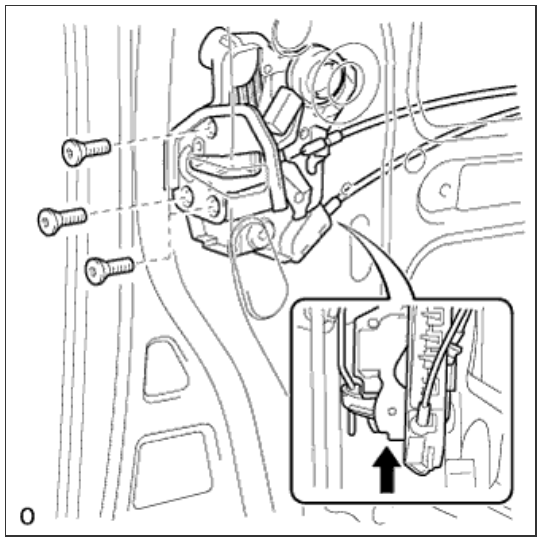


b. Attach the 3 claws.

2. INSTALL FRONT DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY LH

a. Install the front door lock remote control cable.

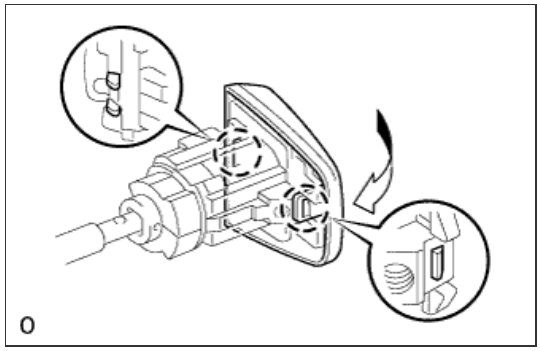
3. INSTALL FRONT DOOR LOCK ASSEMBLY LH



a. Apply MP grease to the sliding parts of the front door lock assembly.

b. Insert the front door lock open rod to the front door lock assembly.

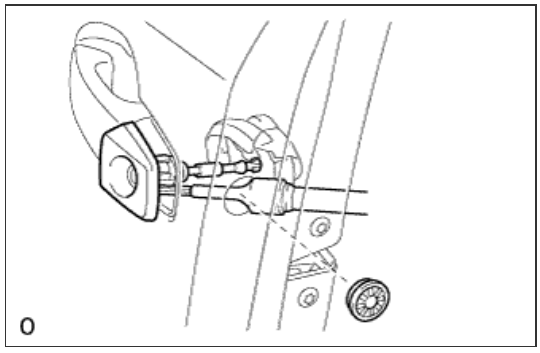
c. Make sure that the front door lock open rod is securely connected to the front door lock assembly.



d. Using a T30 "TORX" wrench, install the door lock with the 3 screws.

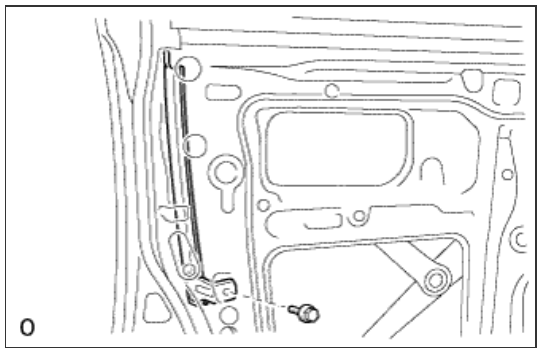
Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }

4. INSTALL FRONT DOOR OUTSIDE HANDLE COVER LH



a. Attach the 2 claws to install the front door outside handle cover to the front door lock cylinder.

b. Using a T30 "TORX" socket, install the cover (with the door lock cylinder) with the screw.



Torque:
4.0 N*m{ 41 kgf*cm , 35 in.*lbf }

c. Install the hole plug.

5. INSTALL FRONT DOOR REAR LOWER FRAME SUB-ASSEMBLY LH

a. Install the frame with the bolt.

6. INSTALL FRONT NO. 2 DOOR STIFFENER CUSHION

a. Clean the installation surface.

i. Using a heat light, heat the installation surface.

HINT:

When installing the door stiffener cushion, heat the vehicle body and door stiffener cushion using a heat light.

Standard Heating Temperature:

Item	Temperature
Door Stiffener Cushion	20 to 30°C (68 to 86°F)
Vehicle Body	40 to 60°C (104 to 140°F)

NOTICE:

Do not heat the back door garnish and vehicle body excessively.

ii. Remove the double-sided tape from the installation surface.

iii. Wipe off any tape adhesive residue with cleaner.

b. Install a new door stiffener cushion.

i. Using a heat light, heat a new door stiffener cushion and the installation surface.

HINT:

When installing the door stiffener cushion, heat the vehicle body and door stiffener cushion using a heat light.

Standard Heating Temperature:

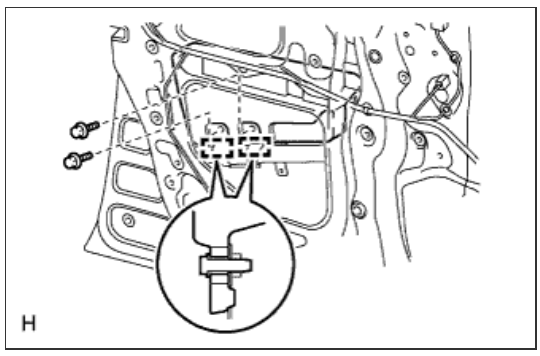
Item	Temperature
Door Stiffener Cushion	20 to 30°C (68 to 86°F)
Vehicle Body	40 to 60°C (104 to 140°F)

NOTICE:

Do not heat the back door garnish and vehicle body excessively.

ii. Remove the peeling paper from the face of the door stiffener cushion.

HINT:



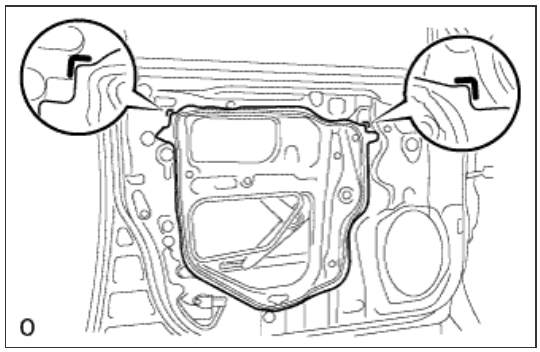
After removing the peeling paper, keep the exposed adhesive free from foreign matter.

iii. Attach the 2 clamps and double-sided tape to install the door stiffener cushion.

HINT:

Press the door stiffener firmly to install it.

iv. Install the 2 bolts.



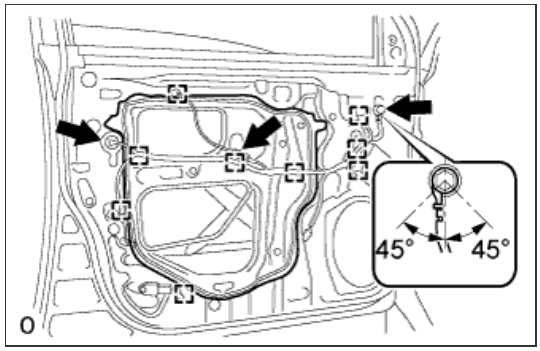
7. INSTALL FRONT DOOR SERVICE HOLE COVER LH

a. Apply butyl tape to the door.

b. Pass the front door lock remote control cable and front door inside locking cable through a new front door service hole cover.

NOTICE:

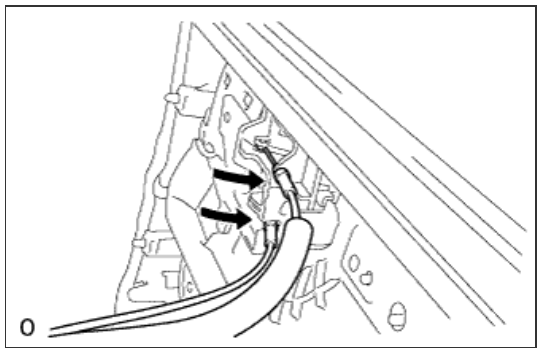
- **When installing the service hole cover, pull the links and connectors through the service hole cover.**
- **There should be no wrinkles or folds after attaching the service hole cover.**
- **After attaching the service hole cover, check the sealing quality.**



c. Connect the 2 connectors.

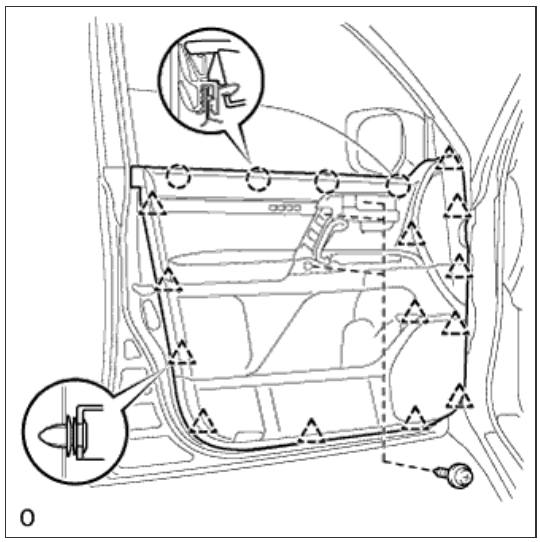
d. Attach the 9 clamps.

e. Install the bolt as shown in the illustration.



Torque:
8.4 N*m{ 86 kgf*cm , 74 in.*lbf }

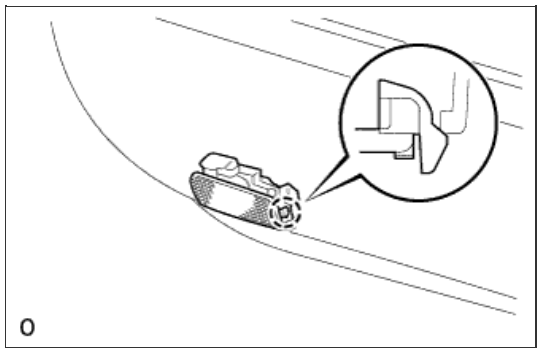
8. INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY LH



a. Connect the connector.

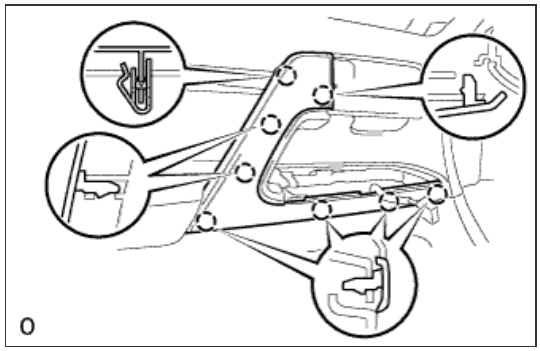
b. Connect the front door lock remote control cable and front door inside locking cable to the front door inside handle sub-assembly.

c. Attach the 4 claws and 13 clips to install the front door trim board sub-assembly.



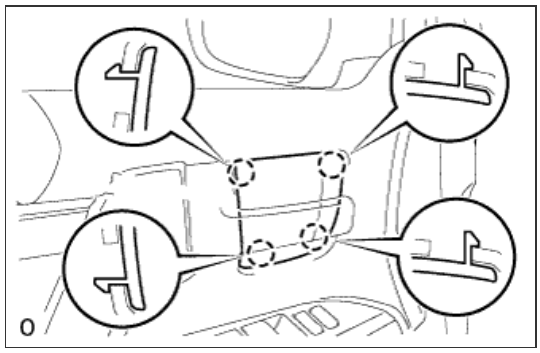
d. Install the 3 screws.

9. INSTALL COURTESY LIGHT ASSEMBLY (w/ Courtesy Light)



a. Connect the connector.

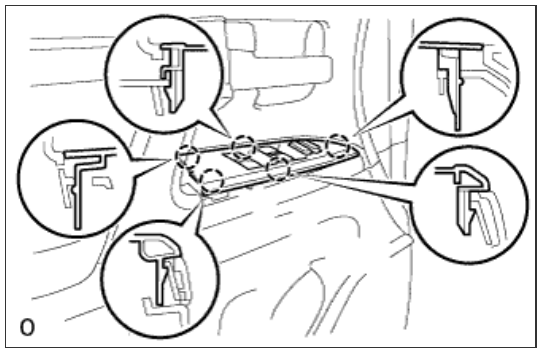
b. Attach the claw of the courtesy light to the front door trim.



10. INSTALL DOOR ASSIST GRIP COVER LH

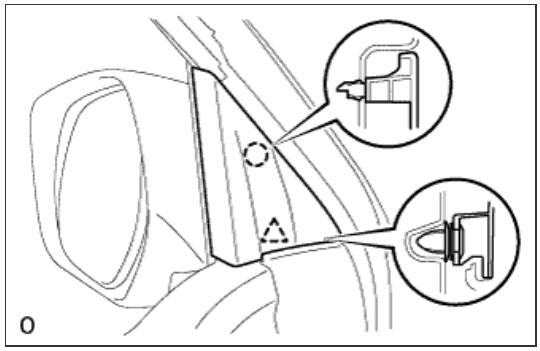
a. Attach the 8 claws to install the door assist grip cover to the door trim panel.

11. INSTALL FRONT DOOR INSIDE HANDLE BEZEL LH



a. Attach the 4 claws to install the bezel.

12. INSTALL FRONT DOOR ARMREST BASE PANEL ASSEMBLY LH



a. Connect the connector.

b. Attach the 5 claws to install the armrest base panel.

13. INSTALL FRONT LOWER DOOR FRAME BRACKET GARNISH LH

a. Attach the clip and claw, and install the front door lower frame bracket garnish.

14. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

15. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).

Do not heat the back door garnish and vehicle body excessively.

ii. Remove the double-sided tape from the installation surface.

iii. Wipe off any tape adhesive residue with cleaner.

b. Install a new door stiffener cushion.

i. Using a heat light, heat a new door stiffener cushion and the installation surface.

HINT:

When installing the door stiffener cushion, heat the vehicle body and door stiffener cushion using a heat light.

Standard Heating Temperature:

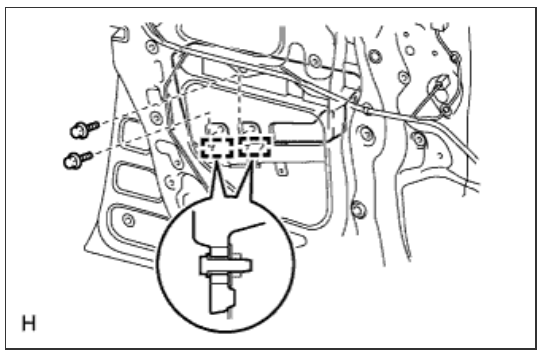
Item	Temperature
Door Stiffener Cushion	20 to 30°C (68 to 86°F)
Vehicle Body	40 to 60°C (104 to 140°F)

NOTICE:

Do not heat the back door garnish and vehicle body excessively.

ii. Remove the peeling paper from the face of the door stiffener cushion.

HINT:



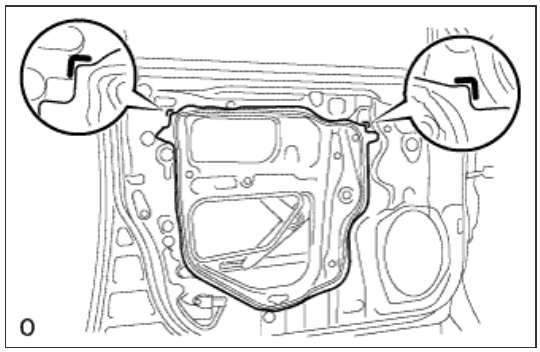
After removing the peeling paper, keep the exposed adhesive free from foreign matter.

iii. Attach the 2 clamps and double-sided tape to install the door stiffener cushion.

HINT:

Press the door stiffener firmly to install it.

iv. Install the 2 bolts.



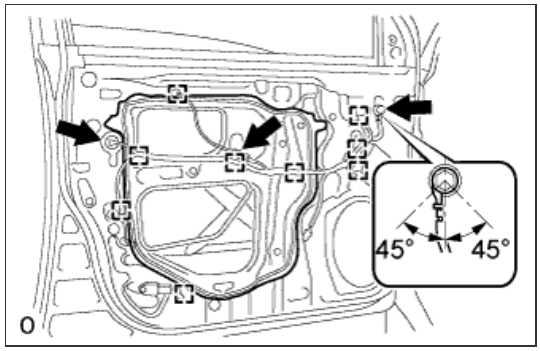
7. INSTALL FRONT DOOR SERVICE HOLE COVER LH

a. Apply butyl tape to the door.

b. Pass the front door lock remote control cable and front door inside locking cable through a new front door service hole cover.

NOTICE:

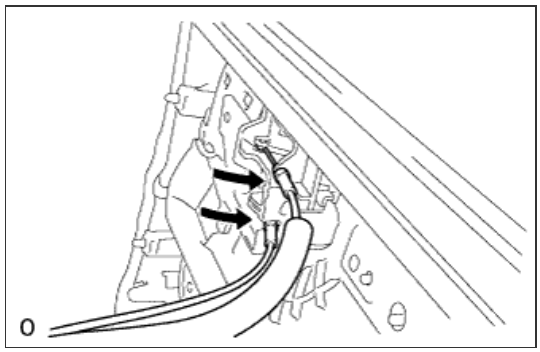
- **When installing the service hole cover, pull the links and connectors through the service hole cover.**
- **There should be no wrinkles or folds after attaching the service hole cover.**
- **After attaching the service hole cover, check the sealing quality.**



c. Connect the 2 connectors.

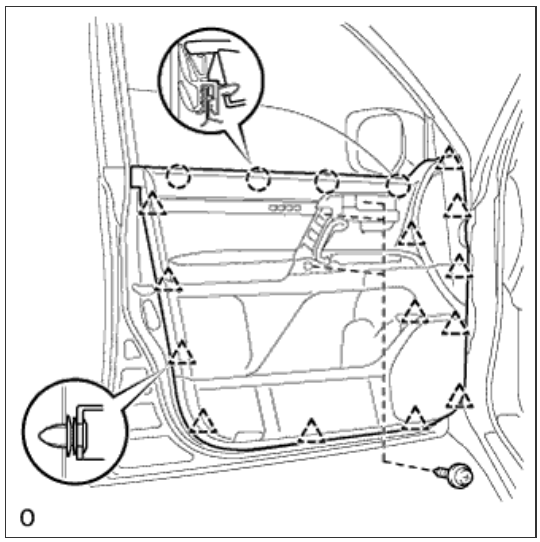
d. Attach the 9 clamps.

e. Install the bolt as shown in the illustration.



Torque:
8.4 N*m{ 86 kgf*cm , 74 in.*lbf }

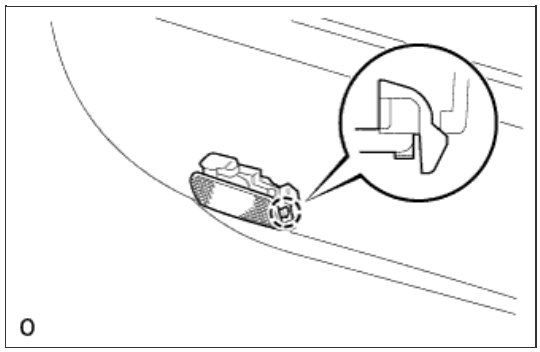
8. INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY LH



a. Connect the connector.

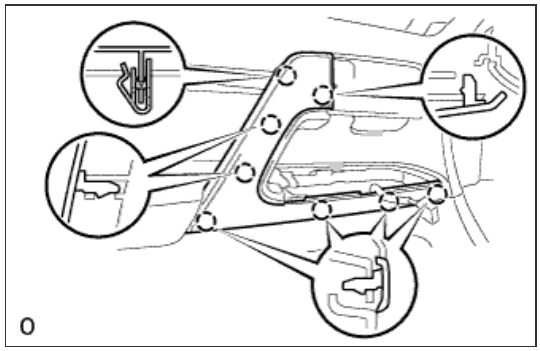
b. Connect the front door lock remote control cable and front door inside locking cable to the front door inside handle sub-assembly.

c. Attach the 4 claws and 13 clips to install the front door trim board sub-assembly.



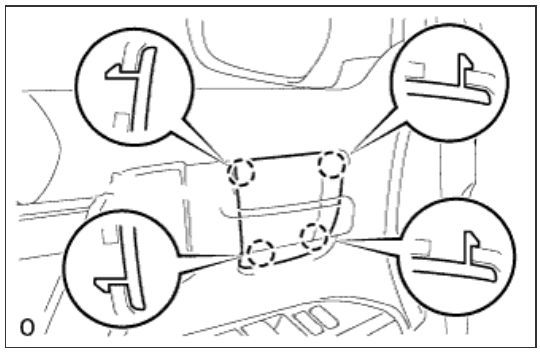
d. Install the 3 screws.

9. INSTALL COURTESY LIGHT ASSEMBLY (w/ Courtesy Light)



a. Connect the connector.

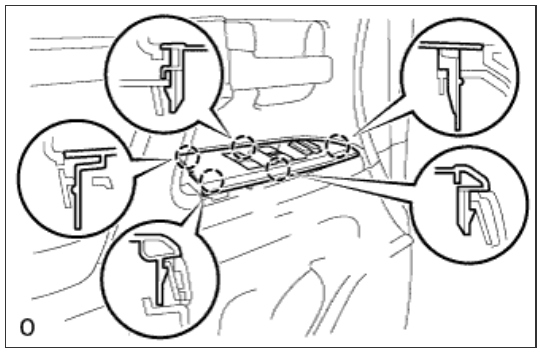
b. Attach the claw of the courtesy light to the front door trim.



10. INSTALL DOOR ASSIST GRIP COVER LH

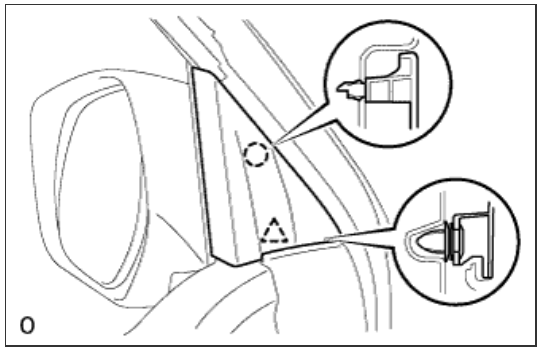
a. Attach the 8 claws to install the door assist grip cover to the door trim panel.

11. INSTALL FRONT DOOR INSIDE HANDLE BEZEL LH



a. Attach the 4 claws to install the bezel.

12. INSTALL FRONT DOOR ARMREST BASE PANEL ASSEMBLY LH



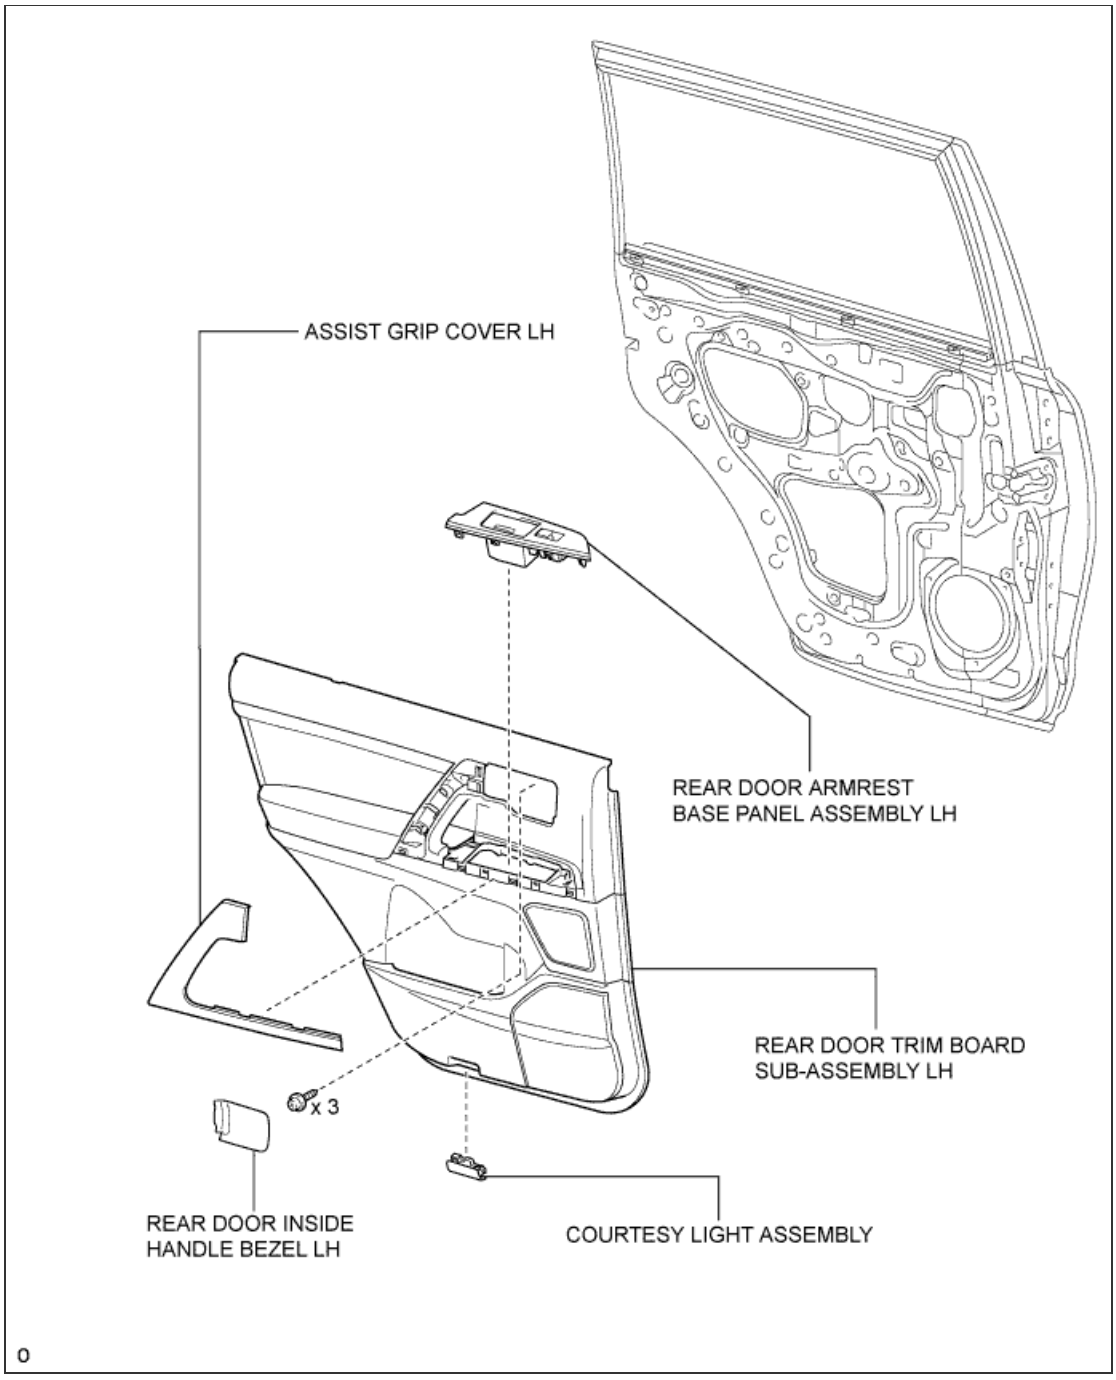
a. Connect the connector.

b. Attach the 5 claws to install the armrest base panel.

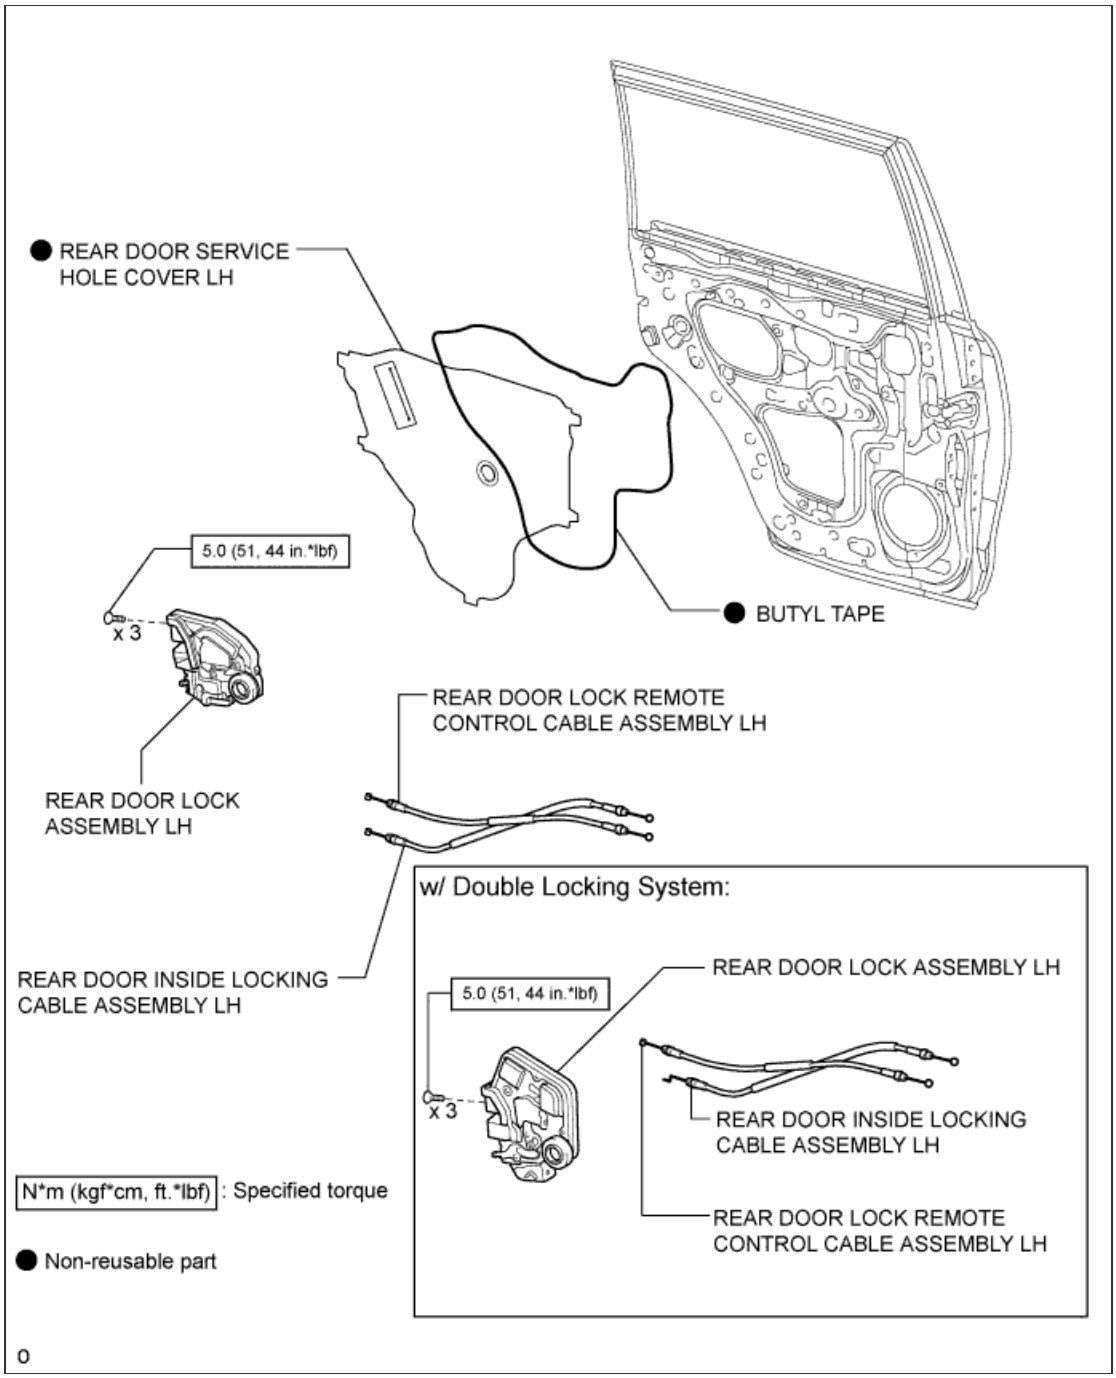
13. INSTALL FRONT LOWER DOOR FRAME BRACKET GARNISH LH

a. Attach the clip and claw, and install the front door lower frame bracket garnish.

14. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



NOTICE:



When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

15. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).

for Preparation Click here

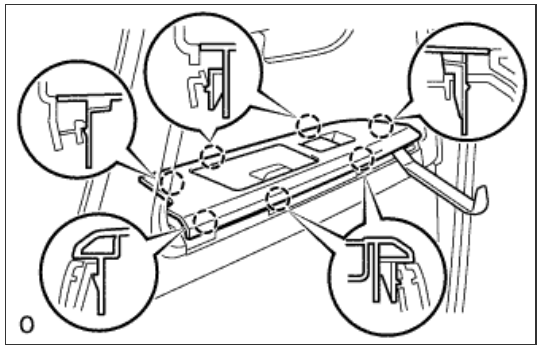
HINT:

- **Use the same procedures for the LH side and RH side.**
- **The procedures listed below are for the LH side.**

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL



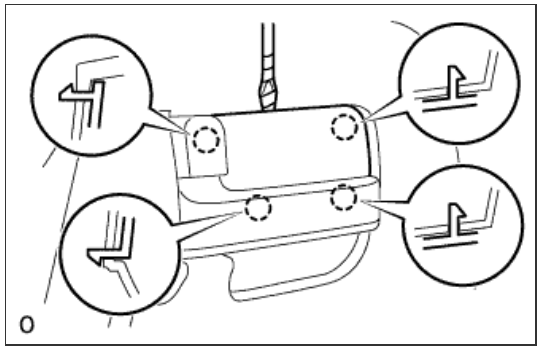
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE REAR DOOR ARMREST BASE PANEL ASSEMBLY LH

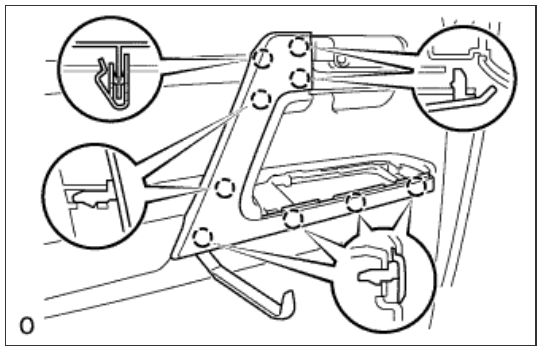
a. Using a moulding remover, detach the 7 claws.

b. Disconnect the connector and remove the rear door armrest base panel and rear power window regulator switch assembly.



3. REMOVE REAR DOOR INSIDE HANDLE BEZEL LH

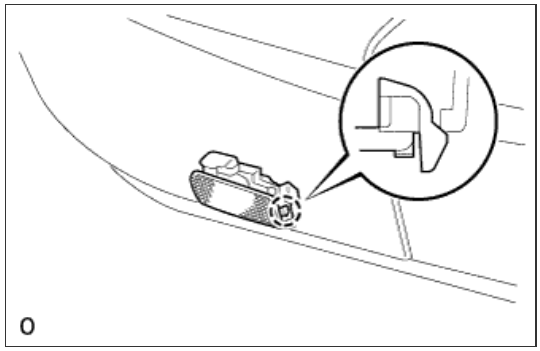
a. Using a screwdriver, detach the 4 claws and remove the bezel.



HINT:

Tape the screwdriver tip before use.

4. REMOVE ASSIST GRIP COVER LH

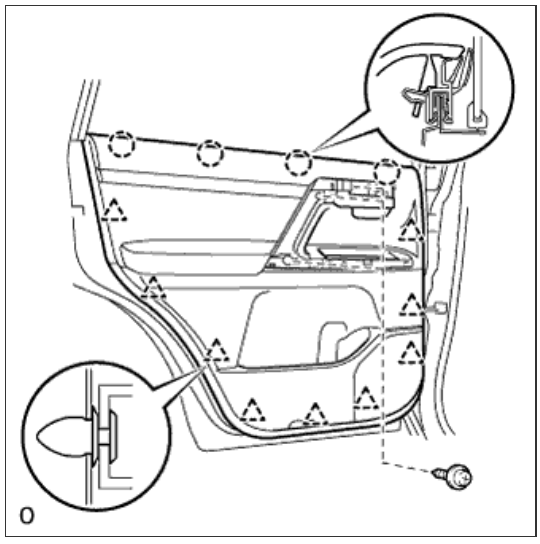


a. Using a moulding remover, detach the 9 claws and remove the door assist grip cover.

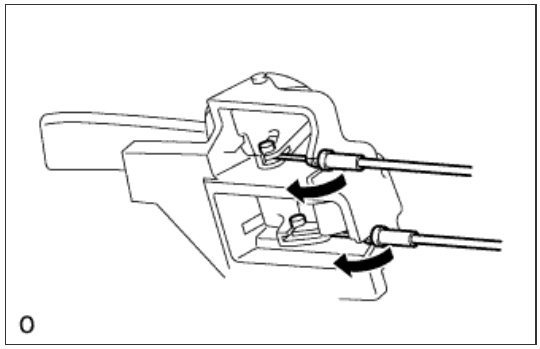
5. REMOVE COURTESY LIGHT ASSEMBLY (w/ Courtesy Light)

a. Detach the claw.

b. Remove the courtesy light and then disconnect the connector.



6. REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY LH



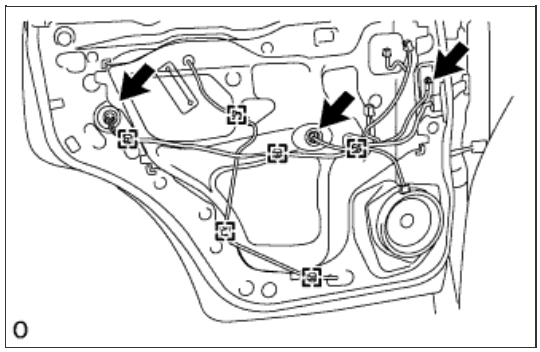
a. Remove the 3 screws.

b. Remove the 9 clips, 4 claws and trim board.

c. Disconnect the connector and remove the trim board.

d. Disconnect the 2 cables from the inside handle.

7. REMOVE REAR DOOR SERVICE HOLE COVER LH



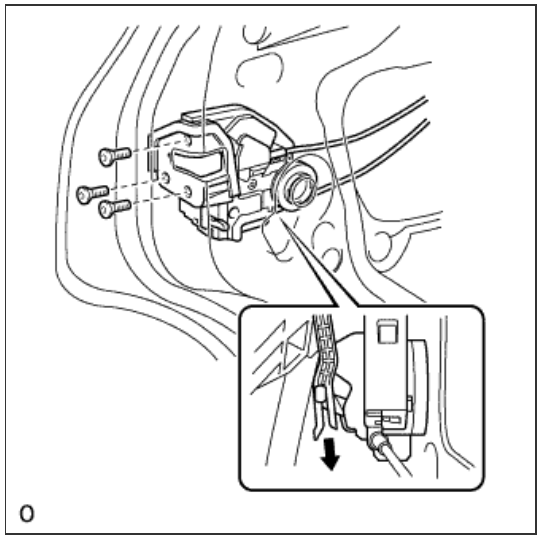
a. Using a clip remover, detach the 6 clamps.

b. Remove the bolt and disconnect the 2 connectors.

c. Remove the service hole cover.

HINT:

Remove the remaining tape on the door.

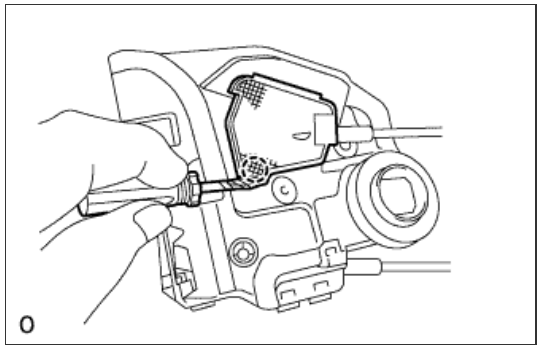


8. REMOVE REAR DOOR LOCK ASSEMBLY LH

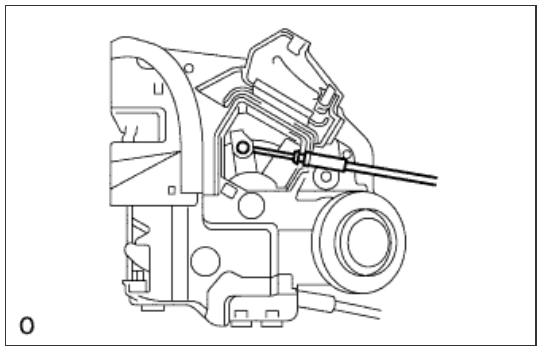
a. Using a T30 "TORX" socket, remove the 3 screws and door lock.

NOTICE:

Be careful when removing the screws as the door lock may fall and become damaged.



9. REMOVE REAR DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY LH

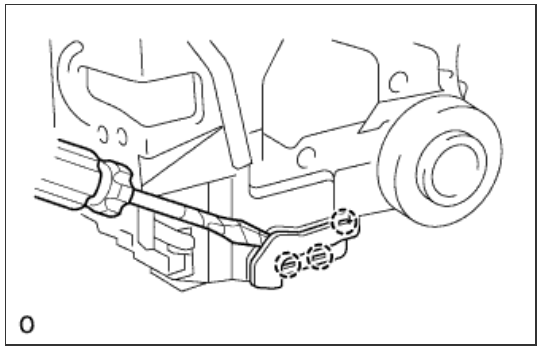


a. Using a screwdriver, detach the claw.

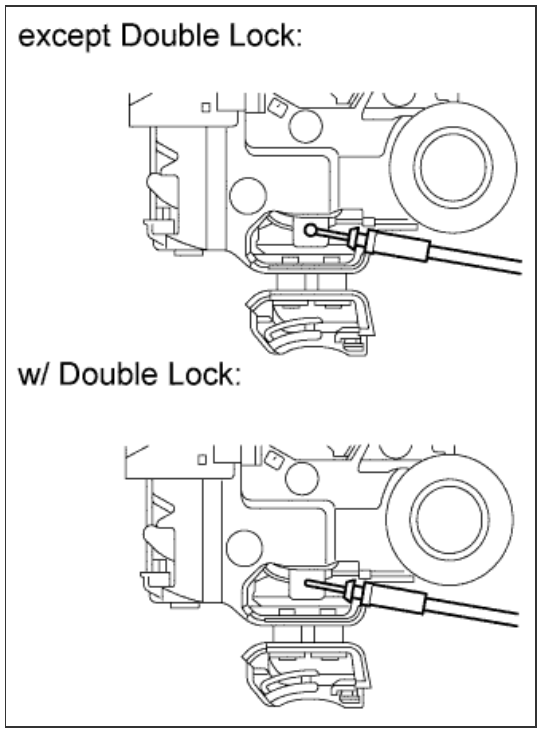
HINT:

Tape the screwdriver tip before use.

b. Remove the rear door lock remote control cable.



10. REMOVE REAR DOOR INSIDE LOCKING CABLE ASSEMBLY LH



a. Using a screwdriver, detach the 3 claws.

HINT:

Tape the screwdriver tip before use.

b. Remove the rear door inside locking cable.

for Preparation Click here

HINT:

- **Use the same procedures for the LH side and RH side.**

for Preparation Click here

1. INSPECT REAR DOOR LOCK ASSEMBLY LH (w/o Double Locking System)

a. Check the door lock motor operation.

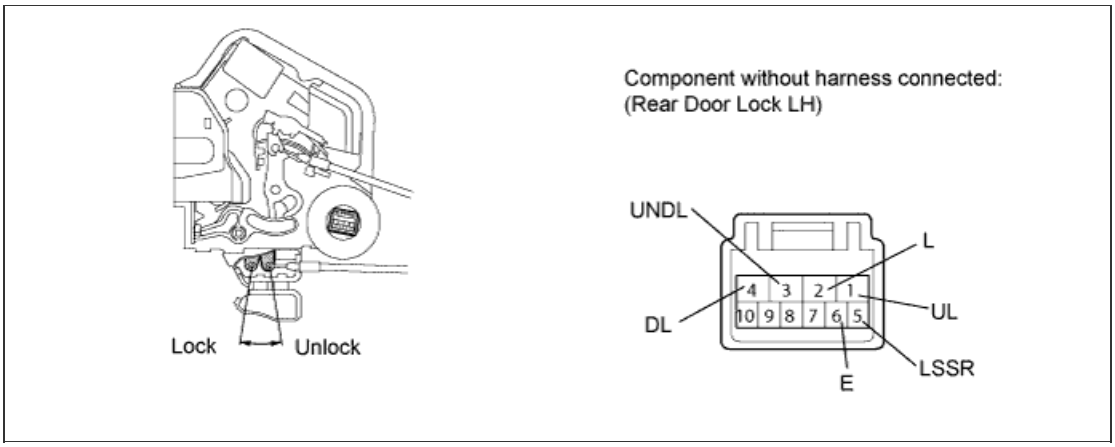
i. Apply battery voltage to the door lock motor connector and check the operation of the door lock motor.

OK:

Measurement Condition	Specified Condition
Battery positive (+) → 4 (L) Battery negative (-) → 1 (UL)	Lock
Battery positive (+) → 1 (UL) Battery negative (-) → 4 (L)	Unlock

If the result is not as specified, replace the door lock assembly.

b. Check the detection switch.



i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
6 (LSSR) - 9 (E)	Unlock	Below 1 Ω
6 (LSSR) - 9 (E)	Lock	10 kΩ or higher

If the result is not as specified, replace the door lock assembly.

2. INSPECT REAR DOOR LOCK ASSEMBLY LH (w/ Double Locking System)

a. Check the door lock motor operation.

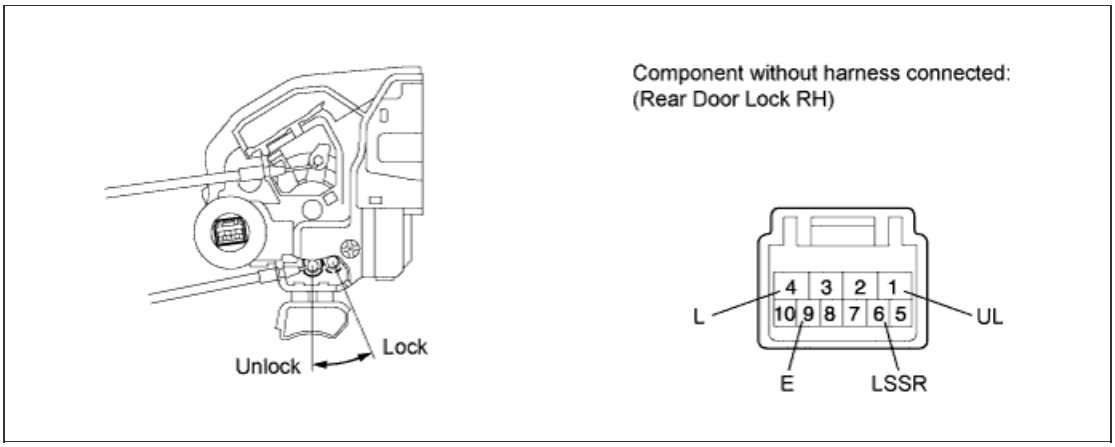
i. Apply battery voltage to the door lock motor connector and check the operation of the door lock motor.

OK

Measurement Condition	Specified Condition
Battery positive (+) → 2 (L) Battery negative (-) → 1 (UL)	Lock
Battery positive (+) → 1 (UL) Battery negative (-) → 2 (L)	Unlock
Battery positive (+) → 4 (DL) Battery negative (-) → 3 (UNDL)	Set
Battery positive (+) → 3 (UNDL) Battery negative (-) → 4 (DL)	Unset

If the result is not as specified, replace the door lock assembly.

b. Check the detection switch.



i. Measure the resistance according to the value(s) in the table below.

Stan ■ Resistance:

Tester Connection	Switch Condition	Specified Condition
5 (LSSR) - 6 (E)	Unlock	Below 1 Ω
5 (LSSR) - 6 (E)	Lock	10 kΩ or higher

If the result is not as specified, replace the door lock assembly.

3. INSPECT REAR DOOR LOCK ASSEMBLY RH (w/o Double Locking System)

a. Check the door lock motor operation.

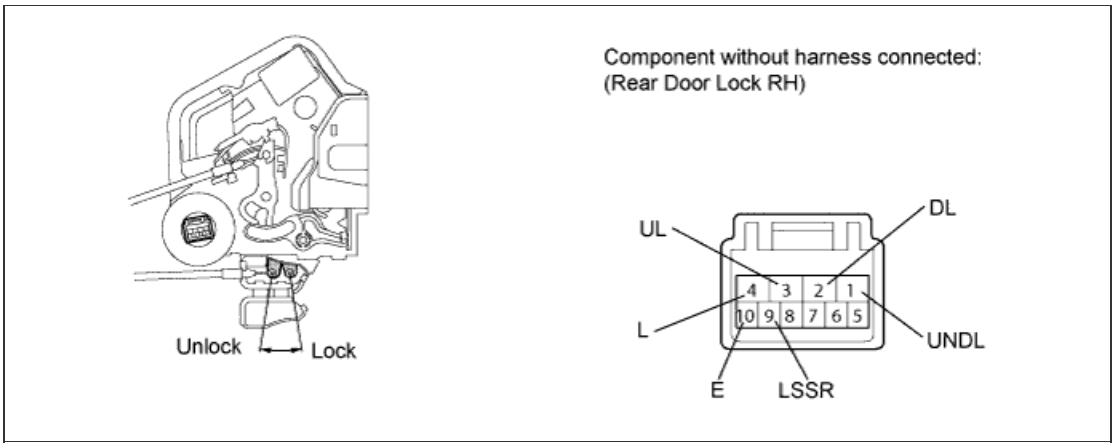
i. Apply battery voltage to the door lock motor connector and check the operation of the door lock motor.

OK

Measurement Condition	Specified Condition
Battery positive (+) → 4 (L) Battery negative (-) → 1 (UL)	Lock
Battery positive (+) → 1 (UL) Battery negative (-) → 4 (L)	Unlock

If the result is not as specified, replace the door lock assembly.

b. Check the detection switch.



i. Measure the resistance according to the value(s) in the table below.

Stan a Resistance:

Tester Connection	Switch Condition	Specified Condition
6 (LSSR) - 9 (E)	Unlock	Below 1 Ω
6 (LSSR) - 9 (E)	Lock	10 kΩ or higher

If the result is not as specified, replace the door lock assembly.

4. INSPECT REAR DOOR LOCK ASSEMBLY RH (w/ Double Locking System)

a. Check the door lock motor operation.

i. Apply battery voltage to the door lock motor connector and check the operation of the door lock motor.

OK

Measurement Condition	Specified Condition
Battery positive (+) → 4 (L) Battery negative (-) → 3 (UL)	Lock
Battery positive (+) → 3 (UL) Battery negative (-) → 4 (L)	Unlock
Battery positive (+) → 2 (DL) Battery negative (-) → 1 (UNDL)	Set
Battery positive (+) → 1 (UNDL) Battery negative (-) → 2 (DL)	Unset

If the result is not as specified, replace the door lock assembly.

b. Check the detection switch.

i. Measure the resistance according to the value(s) in the table below.

Stan a Resistance:

Tester Connection	Switch Condition	Specified Condition
6 (LSSR) - 9 (E)	Unlock	Below 1 Ω
6 (LSSR) - 9 (E)	Lock	10 kΩ or higher

If the result is not as specified, replace the door lock assembly.

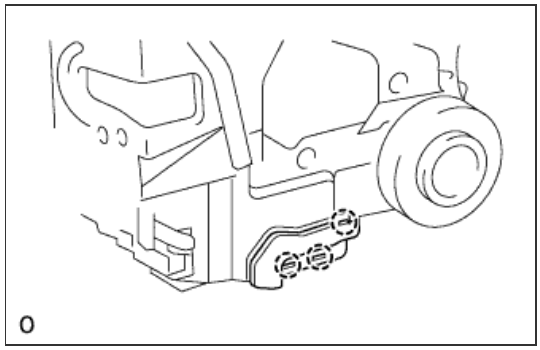
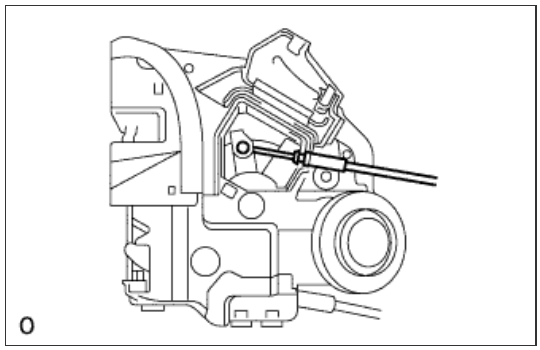
HINT:



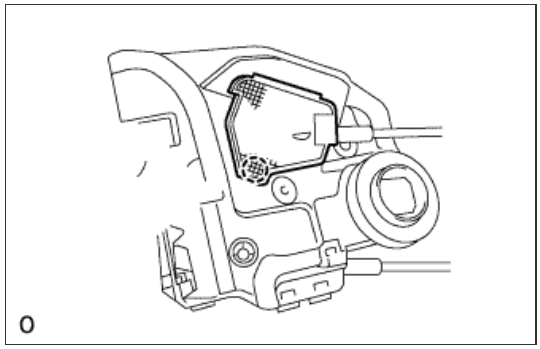
- **Use the same procedures for the LH side and RH side.**
- **The procedures listed below are for the LH side.**

1. INSTALL REAR DOOR INSIDE LOCKING CABLE ASSEMBLY LH

a. Install the rear door inside locking cable assembly.



b. Attach the 3 claws.

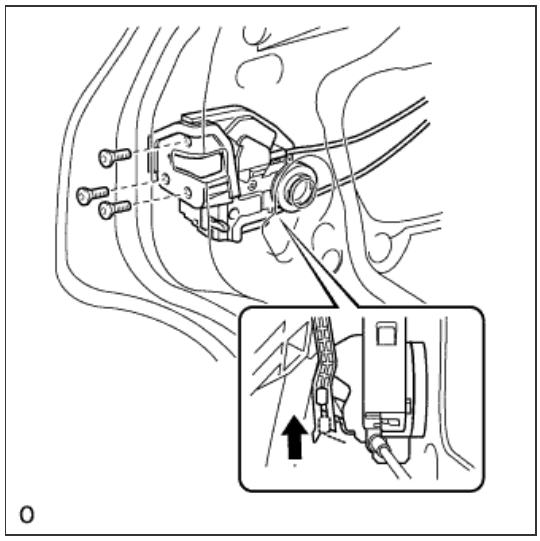


2. INSTALL REAR DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY LH

a. Install the rear door lock remote control cable assembly.

b. Attach the claw.

3. INSTALL REAR DOOR LOCK ASSEMBLY LH



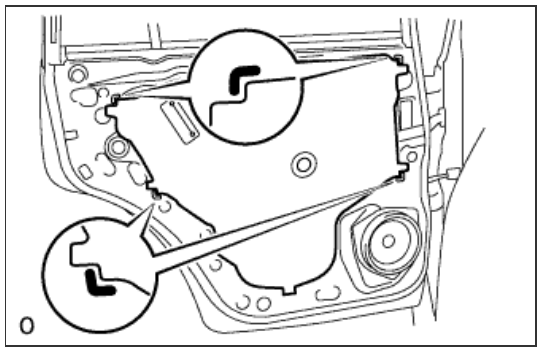
a. Apply MP grease to the sliding parts of the rear door lock assembly.

b. Insert the rear door lock assembly to the rear door outside handle release plate, and set it to the rear door panel.

c. Make sure that the rear door outside handle frame release plate is securely connected to the rear door lock assembly.

d. Using a T30 "TORX" wrench, the 3 screws.

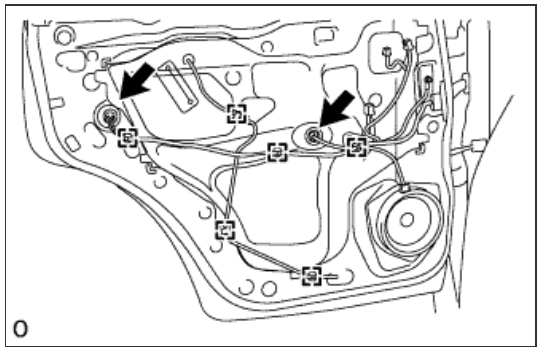
Torque:
5.0 N*m{ 51 kgf*cm , 44 in.*lbf }



4. INSTALL REAR DOOR SERVICE HOLE COVER LH

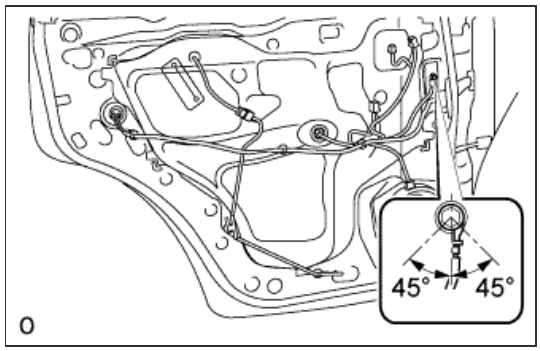
a. Apply butyl tape to the door.

b. Pass the rear door lock remote control cable and rear door inside locking cable through a new rear door service hole cover.



NOTICE:

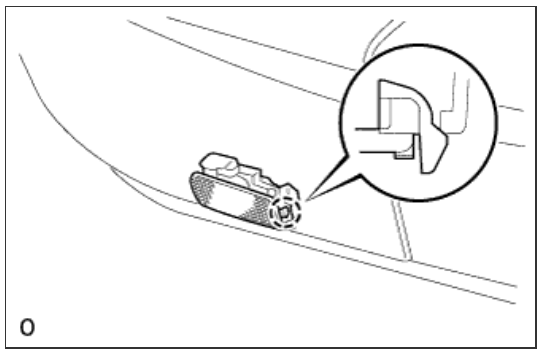
- **When installing the service hole cover, pull the links and connectors through the service hole cover.**
- **There should be no wrinkles or folds after attaching the service hole cover.**
- **After attaching the service hole cover, check the sealing quality.**



c. Connect the 2 connectors.

d. Attach the 6 clamps.

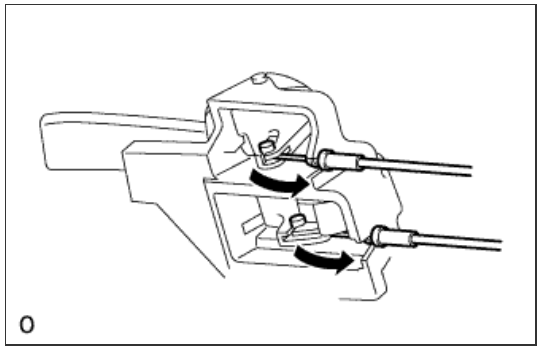
e. Install the bolt as shown in the illustration.



Torque:
8.4 N*m{ 86 kgf*cm , 74 in.*lbf }

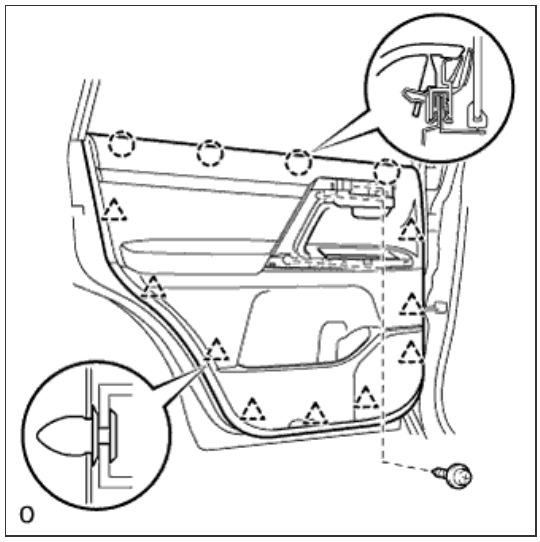
5. INSTALL COURTESY LIGHT ASSEMBLY (w/ Courtesy Light)

a. Connect the connector.



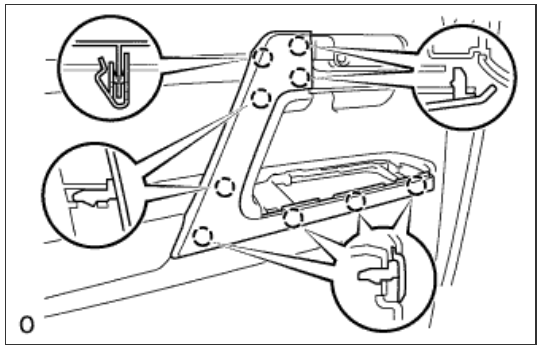
b. Attach the claw of the courtesy light to the rear door trim.

6. INSTALL REAR DOOR TRIM BOARD SUB-ASSEMBLY LH



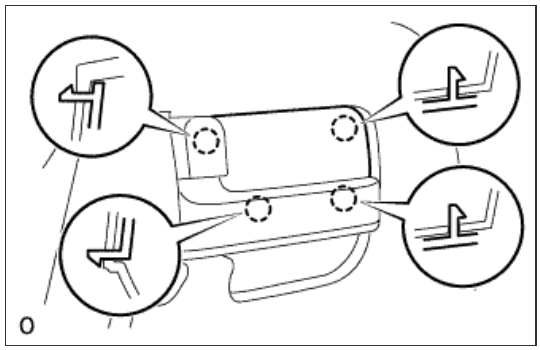
a. Connect the connector.

b. Connect the rear door lock remote control cable and rear door inside locking cable to the rear door inside handle sub-assembly.



c. Attach the 4 claws and 9 clips to install the rear door trim board sub-assembly.

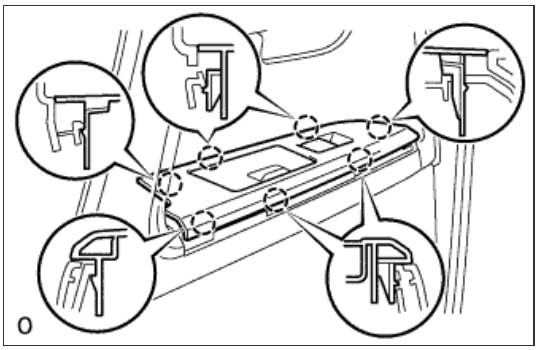
d. Install the 3 screws.



7. INSTALL ASSIST GRIP COVER LH

a. Attach the 9 claws to install the door assist grip cover to the door trim panel.

8. INSTALL REAR DOOR INSIDE HANDLE BEZEL LH



a. Attach the 4 claws to install the bezel.

9. INSTALL REAR DOOR ARMREST BASE PANEL ASSEMBLY LH

a. Connect the connector.

b. Attach the 7 claws to install the rear door armrest base panel.

10. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

a. Connect the connector.

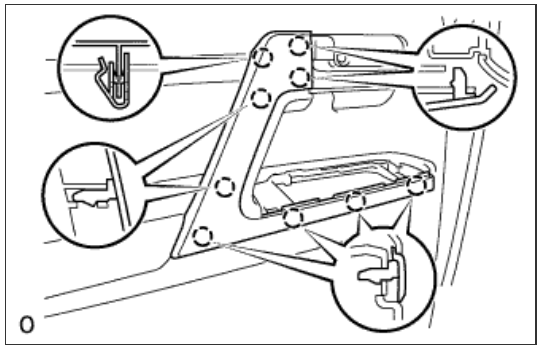
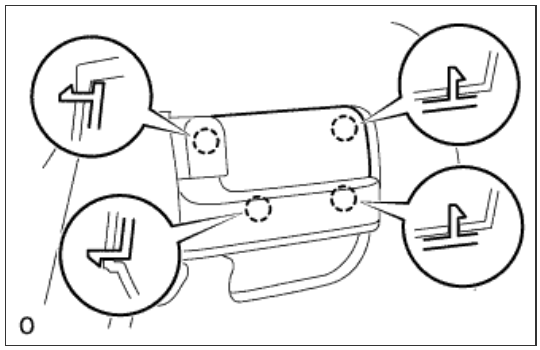
b. Connect the rear door lock remote control cable and rear door inside locking cable to the rear door inside handle sub-assembly.



c. Attach the 4 claws and 9 clips to install the rear door trim board sub-assembly.

d. Install the 3 screws.



7. INSTALL ASSIST GRIP COVER LH

a. Attach the 9 claws to install the door assist grip cover to the door trim panel.

8. INSTALL REAR DOOR INSIDE HANDLE BEZEL LH

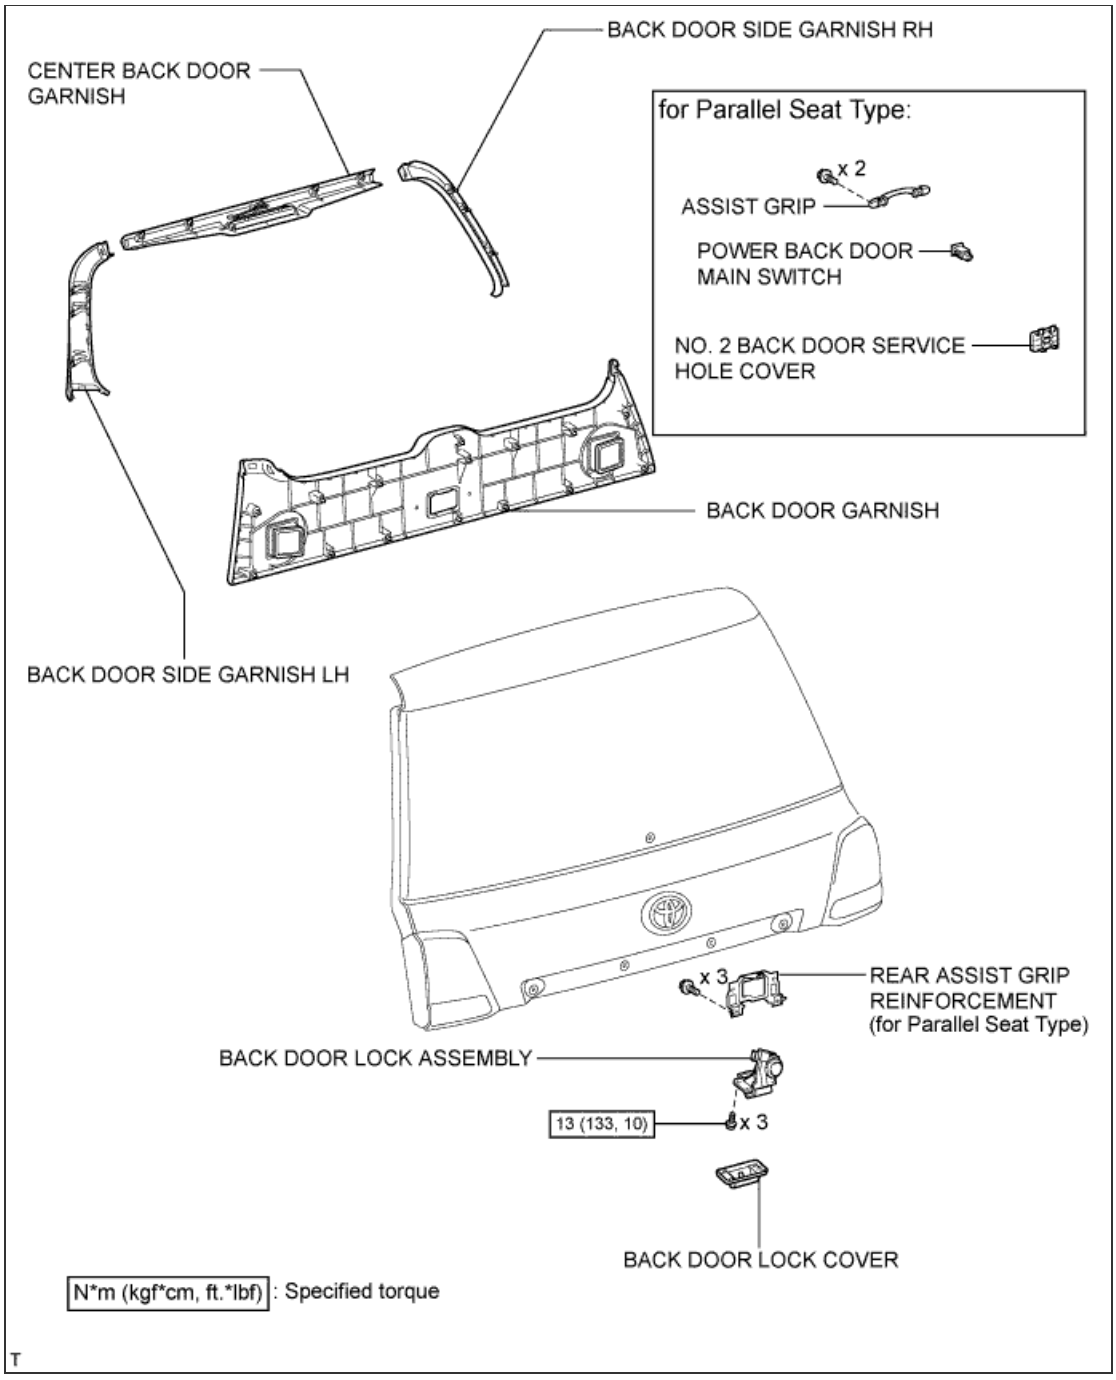
a. Install the rear door inside handle bezel to the trim board with the 6 screws.

9. INSTALL REAR DOOR ARMREST BASE PANEL ASSEMBLY LH

a. Connect the connector.

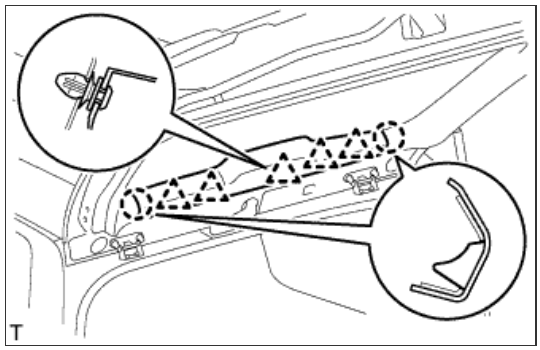
b. Attach the 7 claws to install the armrest base panel.



10. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

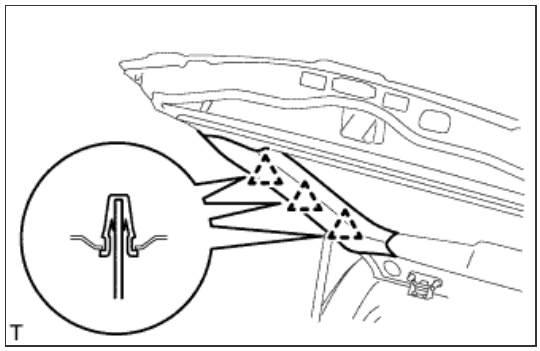
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).



for Preparation Click here

for Preparation Click here

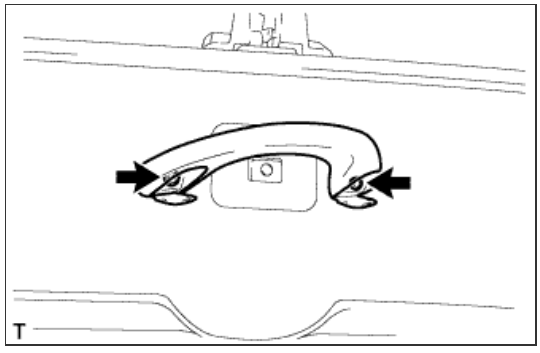


1. REMOVE CENTER BACK DOOR GARNISH

a. Detach the 5 clips and 2 claws, and remove the back door garnish.

2. REMOVE BACK DOOR SIDE GARNISH LH

a. Detach the 3 clips and remove the back door side garnish.

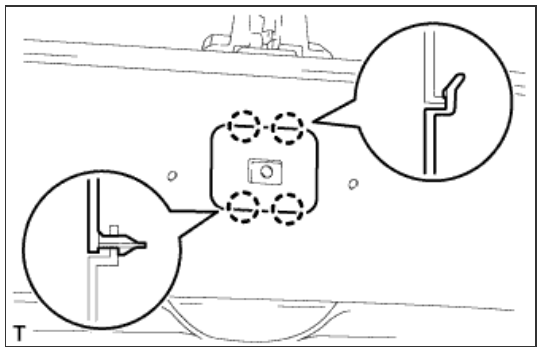


3. REMOVE BACK DOOR SIDE GARNISH RH

HINT:

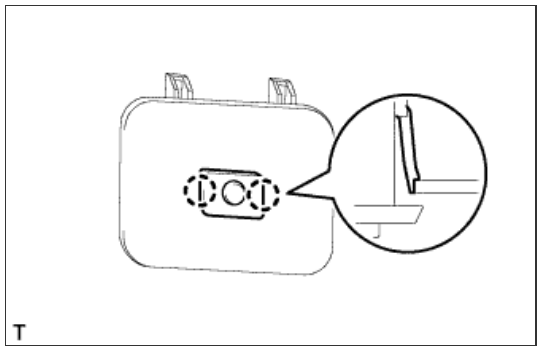
Use the same procedures described for the LH side.

4. REMOVE ASSIST GRIP (for Parallel Seat Type)



a. Remove the 2 screws and assist grip.

5. REMOVE NO. 2 BACK DOOR SERVICE HOLE COVER (for Parallel Seat Type)

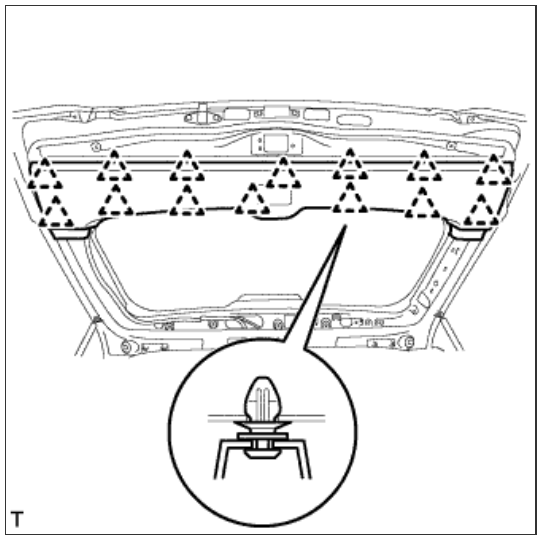


a. Using a screwdriver, detach the 4 claws and remove the back door service hole cover.

b. Disconnect connector.

6. REMOVE POWER BACK DOOR MAIN SWITCH (for Parallel Seat Type)

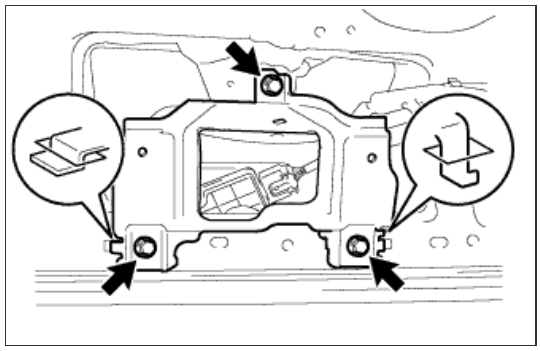
a. Detach the 2 claws and remove the power back door main switch.



7. REMOVE BACK DOOR GARNISH

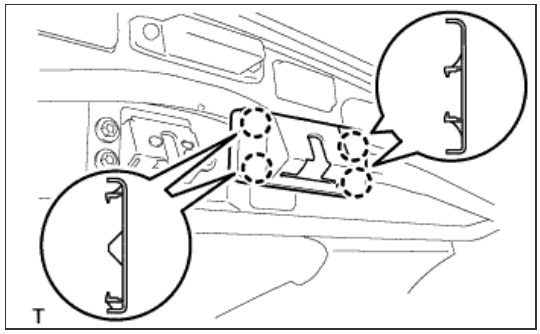
a. Using a screwdriver, detach the 14 clips and remove the back door garnish.

HINT:



Tape the screwdriver tip before use.

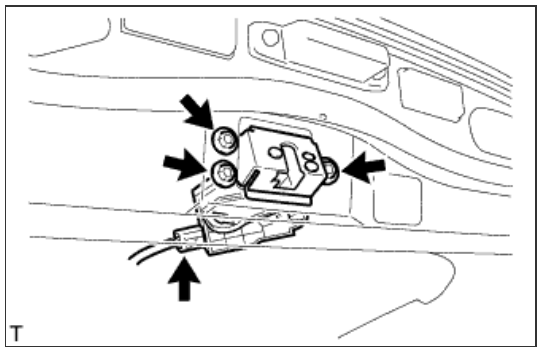
8. REMOVE REAR ASSIST GRIP REINFORCEMENT (for Parallel Seat Type)



a. Remove the 3 bolts.

b. Detach the 2 claws and remove the rear assist grip reinforcement.

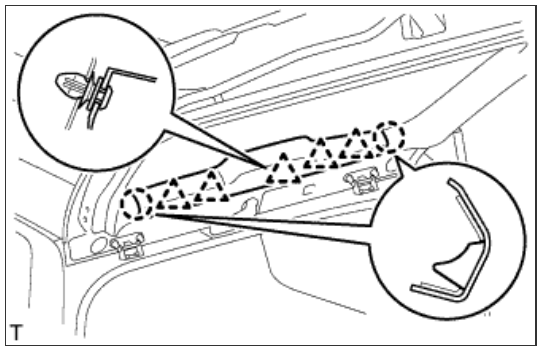
9. REMOVE BACK DOOR LOCK COVER



a. Detach the 4 claws and remove the cover.

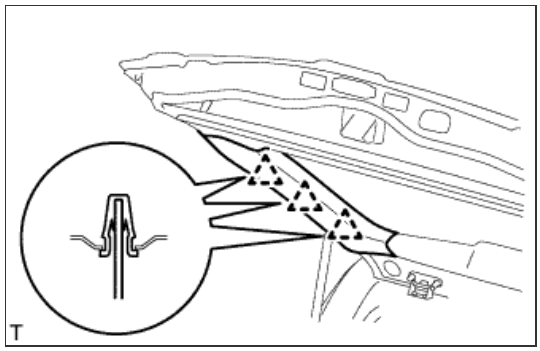
10. REMOVE BACK DOOR LOCK ASSEMBLY

a. Disconnect the connector.



b. Remove the 3 bolts and door lock.

for Preparation Click here

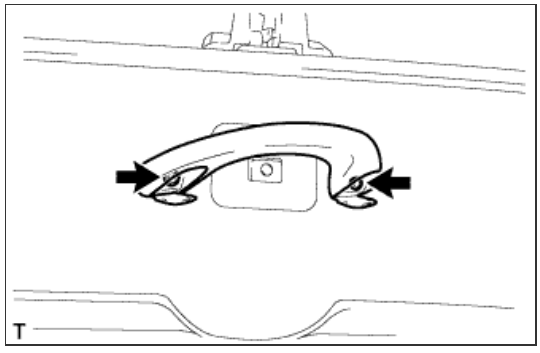


1. REMOVE CENTER BACK DOOR GARNISH

a. Detach the 5 clips and 2 claws, and remove the back door garnish.

2. REMOVE BACK DOOR SIDE GARNISH LH

a. Detach the 3 clips and remove the back door side garnish.

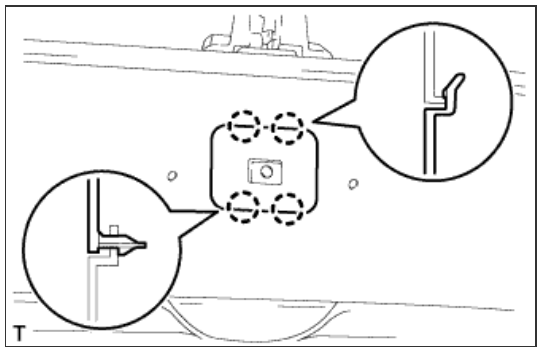


3. REMOVE BACK DOOR SIDE GARNISH RH

HINT:

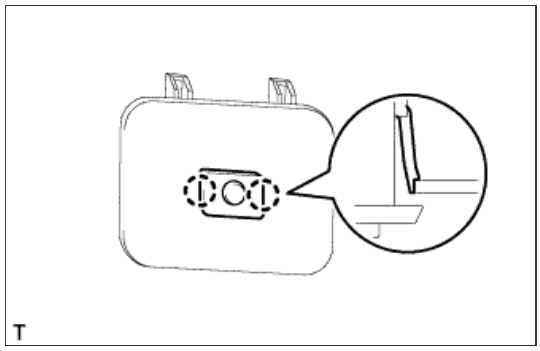
Use the same procedures described for the LH side.

4. REMOVE ASSIST GRIP (for Parallel Seat Type)



a. Remove the 2 screws and assist grip.

5. REMOVE NO. 2 BACK DOOR SERVICE HOLE COVER (for Parallel Seat Type)

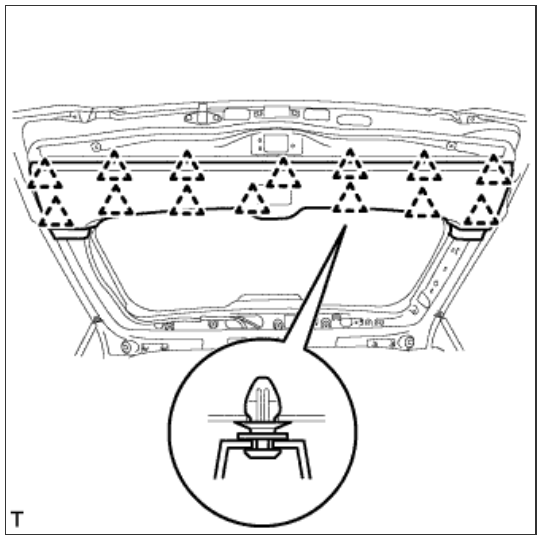


a. Using a screwdriver, detach the 4 claws and remove the back door service hole cover.

b. Disconnect connector.

6. REMOVE POWER BACK DOOR MAIN SWITCH (for Parallel Seat Type)

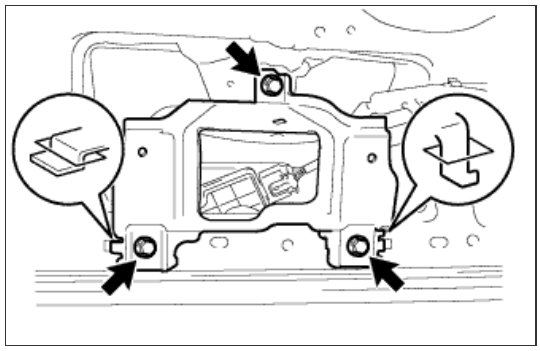
a. Detach the 2 claws and remove the power back door main switch.



7. REMOVE BACK DOOR GARNISH

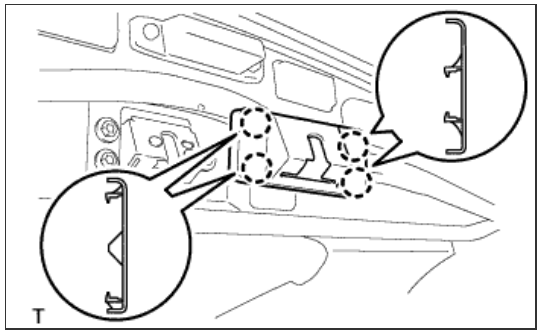
a. Using a screwdriver, detach the 14 clips and remove the back door garnish.

HINT:



Tape the screwdriver tip before use.

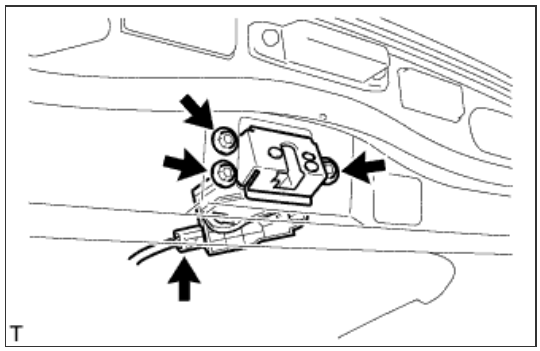
8. REMOVE REAR ASSIST GRIP REINFORCEMENT (for Parallel Seat Type)



a. Remove the 3 bolts.

b. Detach the 2 claws and remove the rear assist grip reinforcement.

9. REMOVE BACK DOOR LOCK COVER

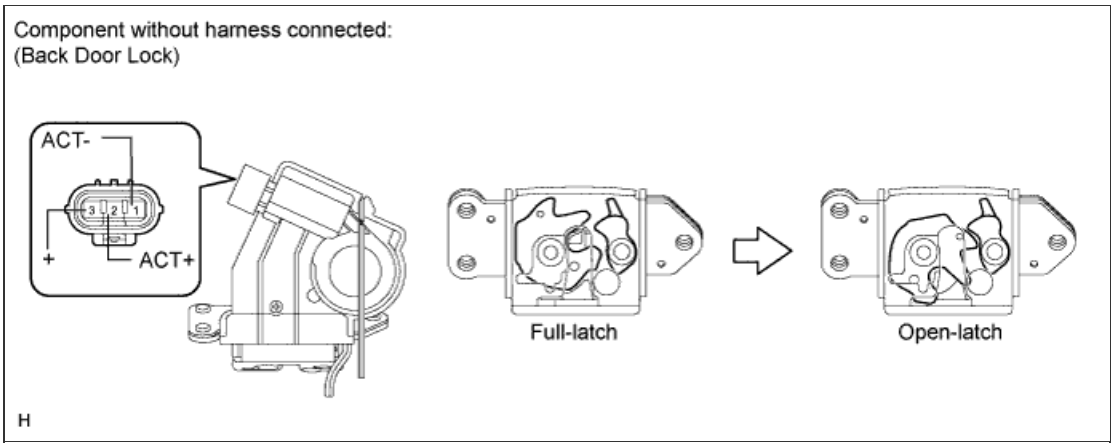


a. Detach the 4 claws and remove the cover.

10. REMOVE BACK DOOR LOCK ASSEMBLY

a. Disconnect the connector.

b. Remove the 3 bolts and door lock.



for Preparation Click here

1. INSPECT BACK DOOR LOCK ASSEMBLY

a. Set the back door lock to the full-latch position.

b. Apply battery voltage to the door motor terminals and check the operation of the door lock motor.

OK:

Measurement Condition	Specified Condition
Battery positive (+) → 2 (ACT+) Battery negative (-) → 1 (ACT-)	Moves to open-latch position

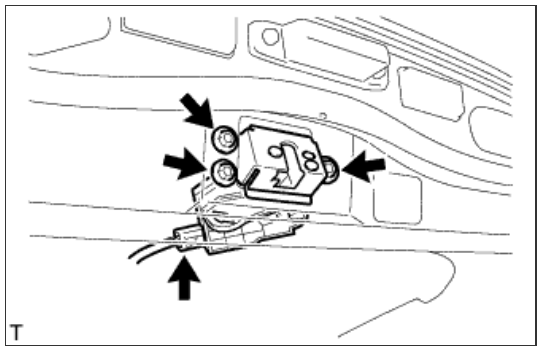
If the result is not as specified, replace the back door lock assembly.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (ACT-) - 3 (+)	Open-latch	Below 1 Ω
1 (ACT-) - 3 (+)	Full-latch	10 kΩ or higher

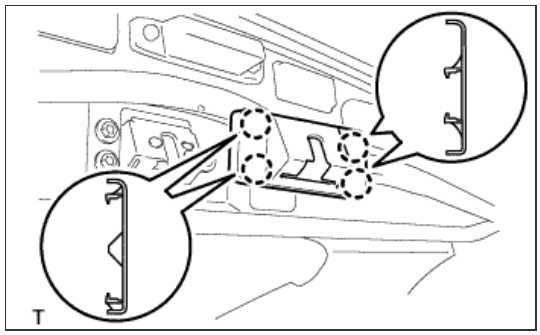
If the result is not as specified, replace the back door lock assembly.



for Preparation Click here

1. INSTALL BACK DOOR LOCK ASSEMBLY

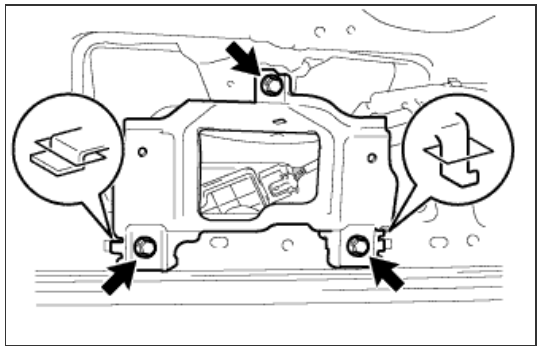
a. Install the door lock with the 3 bolts.



Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }

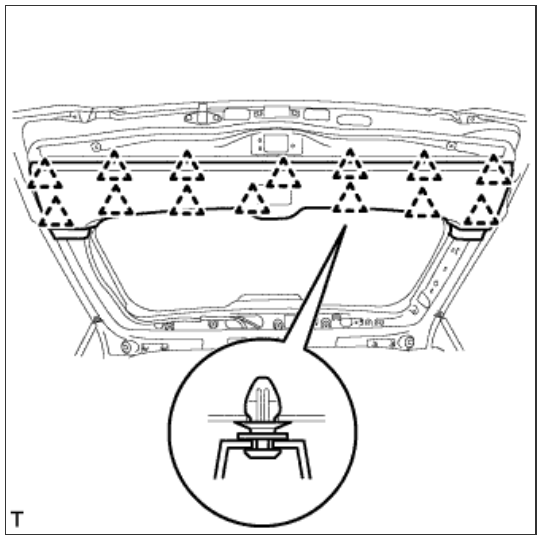
b. Connect the connector.

2. INSTALL BACK DOOR LOCK COVER



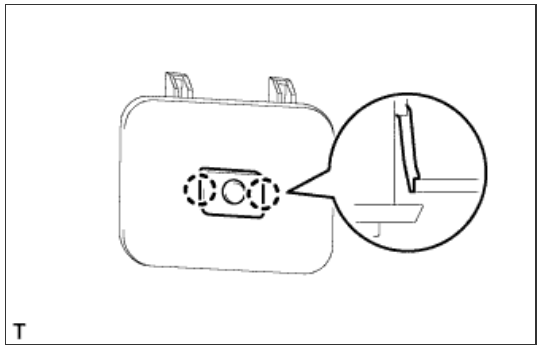
a. Attach the 4 claws to install the cover.

3. INSTALL REAR ASSIST GRIP REINFORCEMENT (for Parallel Seat Type)



a. Attach the 2 claws to install the rear assist grip reinforcement.

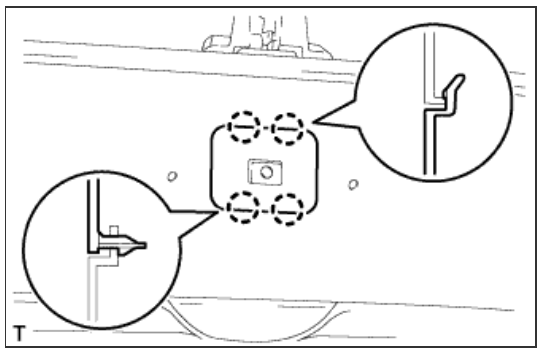
b. Install the 3 bolts.



4. INSTALL BACK DOOR GARNISH

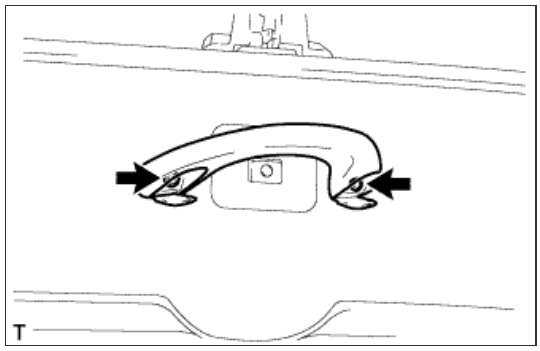
a. Attach the 14 clips to install the back door garnish.

5. INSTALL POWER BACK DOOR MAIN SWITCH (for Parallel Seat Type)



a. Attach the 2 claws to install the power back door main switch.

6. INSTALL NO. 2 BACK DOOR SERVICE HOLE COVER (for Parallel Seat Type)

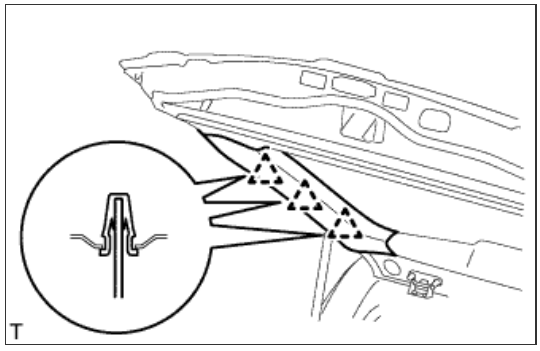


a. Connect the connector.

b. Attach the 4 claws to install service hole cover.

7. INSTALL ASSIST GRIP (for Parallel Seat Type)

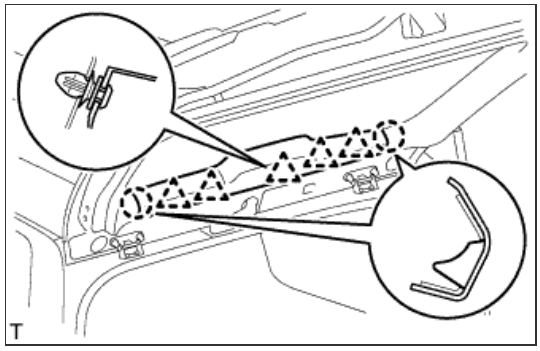
a. Install the assist grip with the 2 screws.



8. INSTALL BACK DOOR SIDE GARNISH RH

HINT:

Use the same procedures described for the LH side.

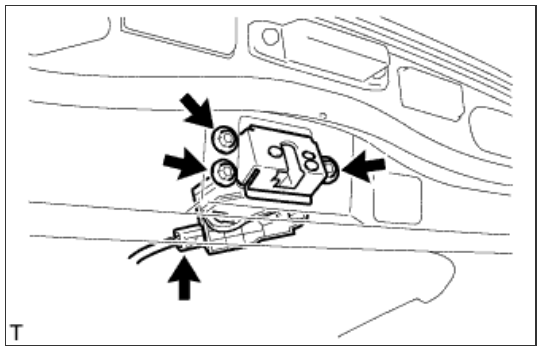


9. INSTALL BACK DOOR SIDE GARNISH LH

a. Attach the 3 clips to install the back door side garnish.

10. INSTALL CENTER BACK DOOR GARNISH

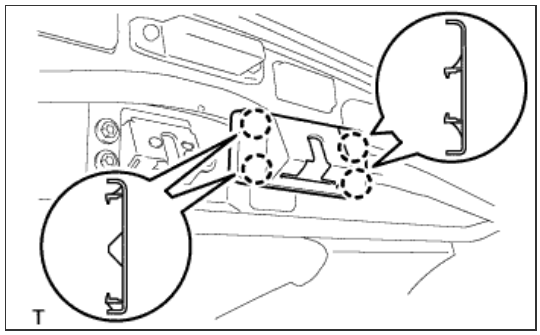
a. Attach the 5 clips and 2 claws to install the back door garnish.



for Preparation Click here

1. INSTALL BACK DOOR LOCK ASSEMBLY

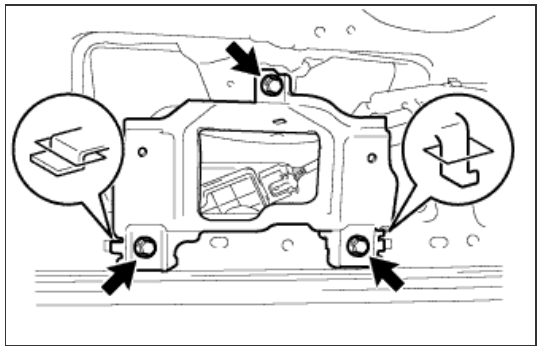
a. Install the door lock with the 3 bolts.



Torque:
13 N*m{ 133 kgf*cm , 10 ft.*lbf }

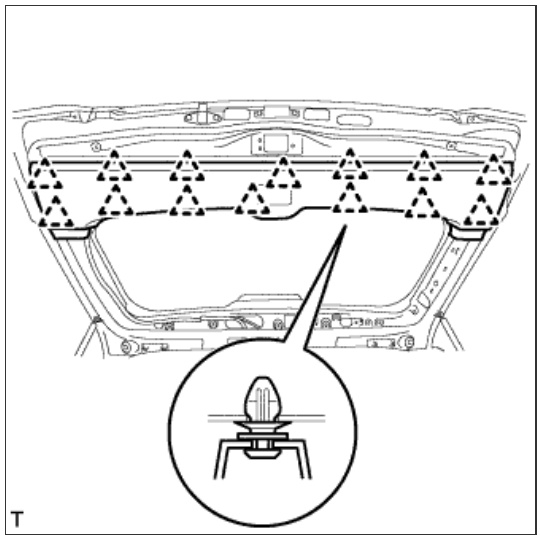
b. Connect the connector.

2. INSTALL BACK DOOR LOCK COVER



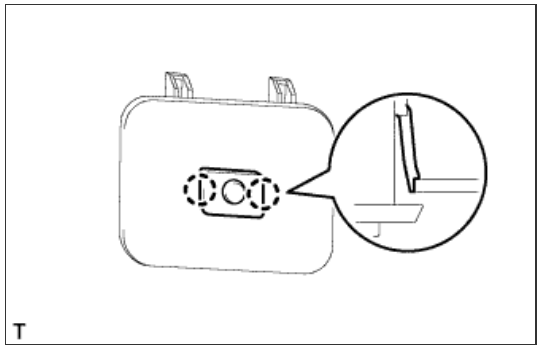
a. Attach the 4 claws to install the cover.

3. INSTALL REAR ASSIST GRIP REINFORCEMENT (for Parallel Seat Type)



a. Attach the 2 claws to install the rear assist grip reinforcement.

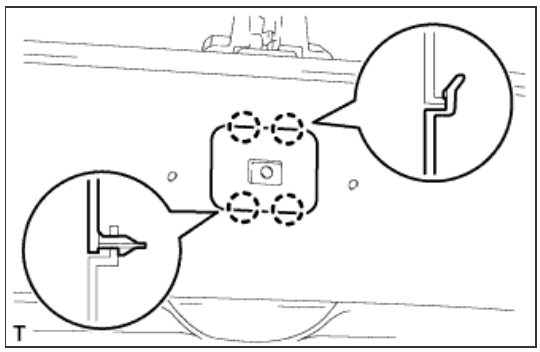
b. Install the 3 bolts.



4. INSTALL BACK DOOR GARNISH

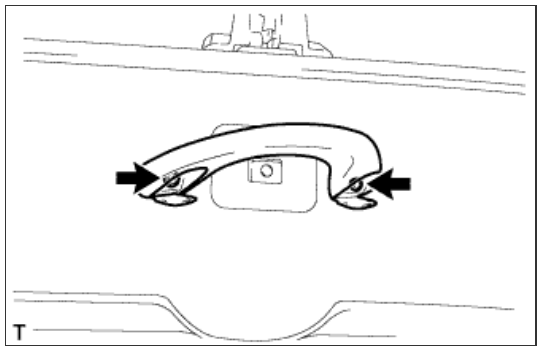
a. Attach the 14 clips to install the back door garnish.

5. INSTALL POWER BACK DOOR MAIN SWITCH (for Parallel Seat Type)



a. Attach the 2 claws to install the power back door main switch.

6. INSTALL NO. 2 BACK DOOR SERVICE HOLE COVER (for Parallel Seat Type)

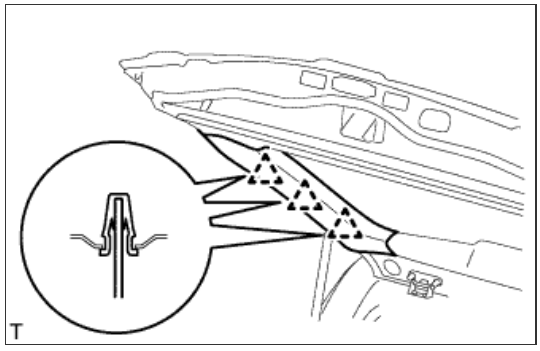


a. Connect the connector.

b. Attach the 4 claws to install service hole cover.

7. INSTALL ASSIST GRIP (for Parallel Seat Type)

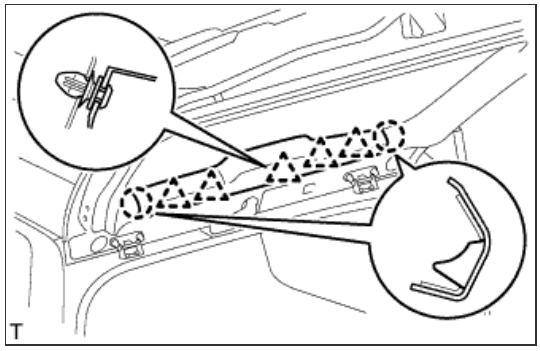
a. Install the assist grip with the 2 screws.



8. INSTALL BACK DOOR SIDE GARNISH RH

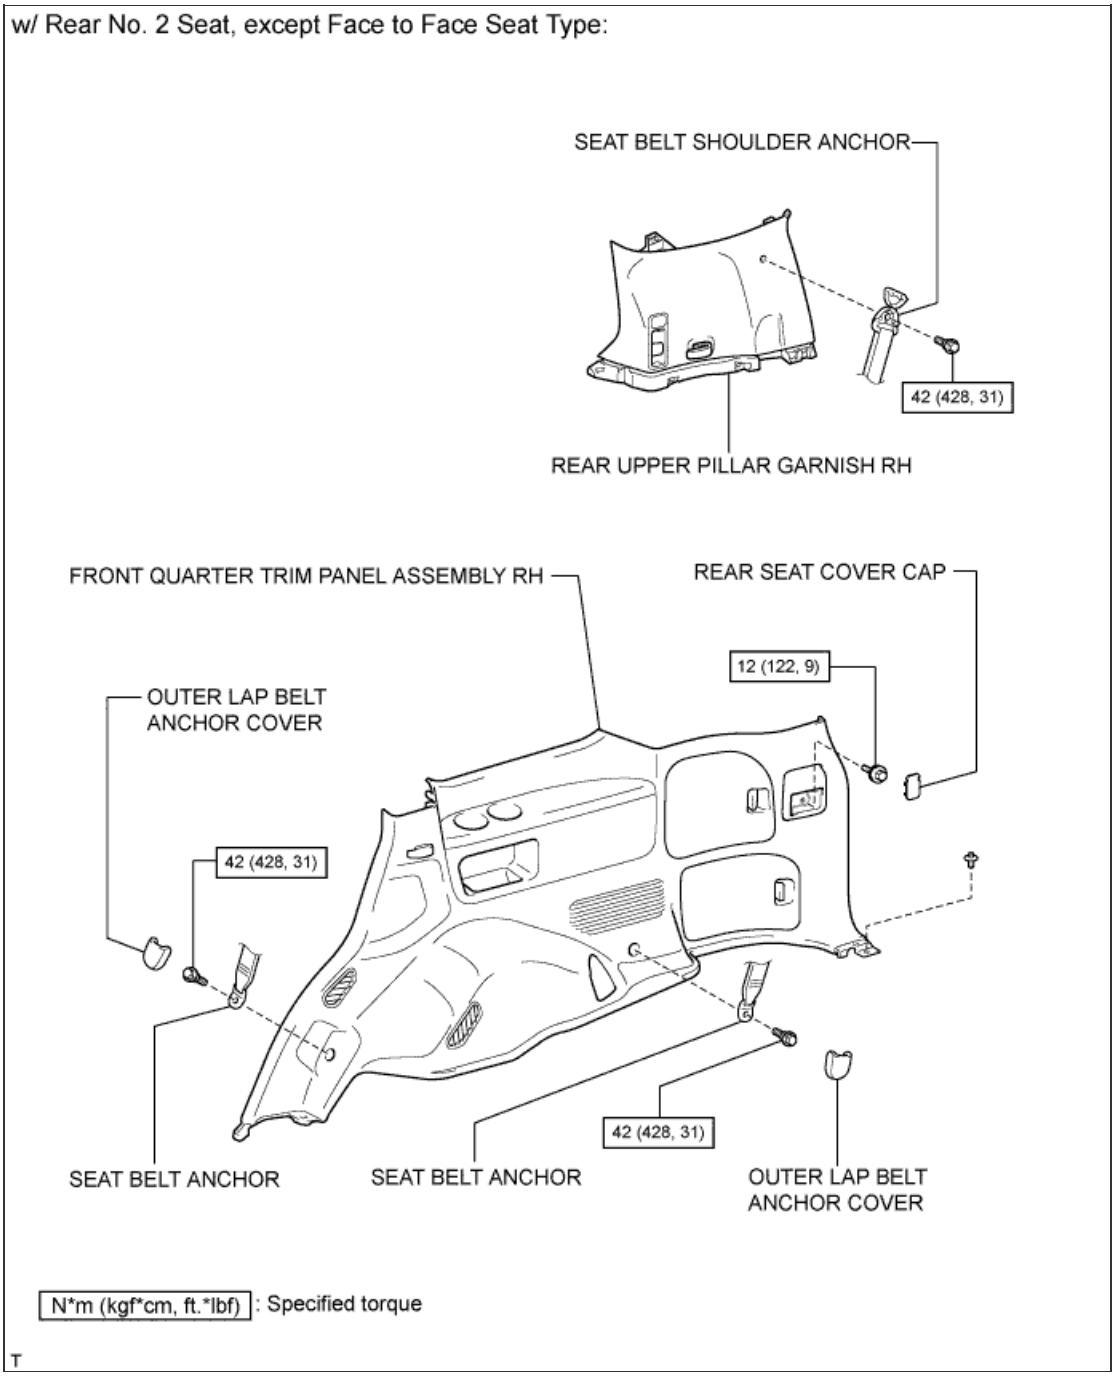
HINT:

Use the same procedures described for the LH side.



9. INSTALL BACK DOOR SIDE GARNISH LH

a. Attach the 3 clips to install the back door side garnish.



10. INSTALL CENTER BACK DOOR GARNISH

a. Attach the 5 clips and 2 claws to install the back door garnish.

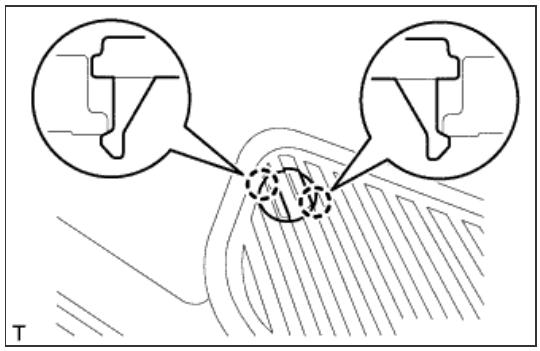
a. Remove the rear No. 2 seat assembly RH (Click here).

2. REMOVE REAR NO. 2 SEAT ASSEMBLY RH (for Face to Face Seat Type)



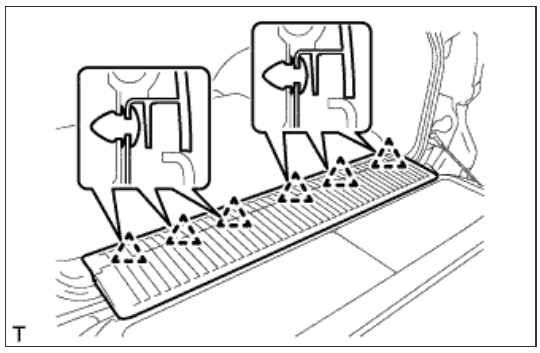
a. Remove the rear No. 2 seat assembly RH (Click here).

3. REMOVE REAR STEP COVER

HINT:

Use the same procedure to remove the step cover on the other side.

a. Detach the 2 claws and remove the step cover.



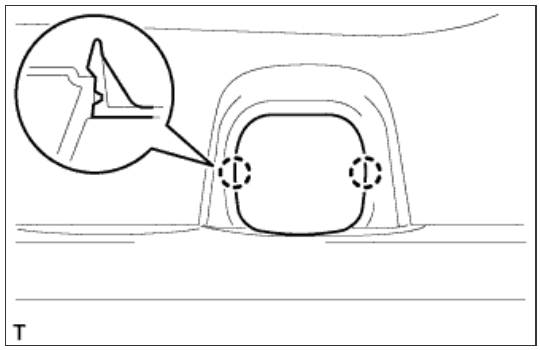
4. REMOVE REAR DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

5. REMOVE REAR FLOOR MAT REAR SUPPORT PLATE

a. Detach the 6 clips and remove the support plate.



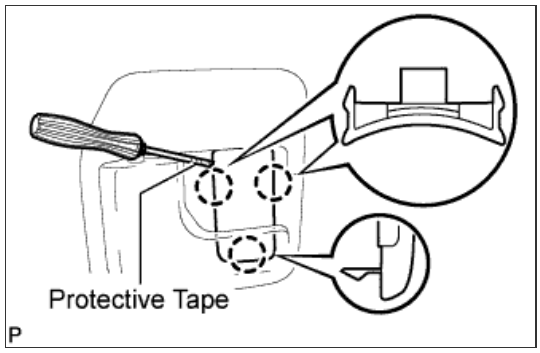
6. REMOVE NO. 1 TONNEAU COVER HOLDER CAP (w/ Tonneau Cover)

HINT:

Use the same procedure to remove the tonneau cover holder cap on the other side.

a. Detach the 2 claws and remove the tonneau cover holder cap.

7. REMOVE REAR SEAT COVER CAP (w/ Rear No. 2 Seat, except Face to Face Seat Type)

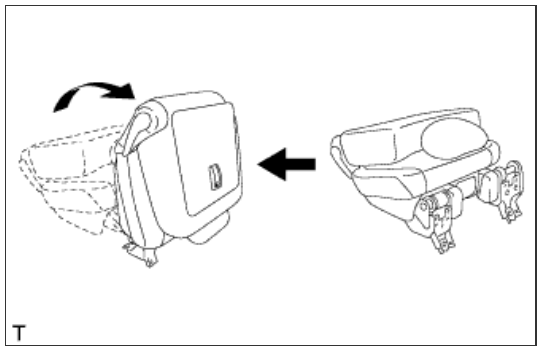


HINT:

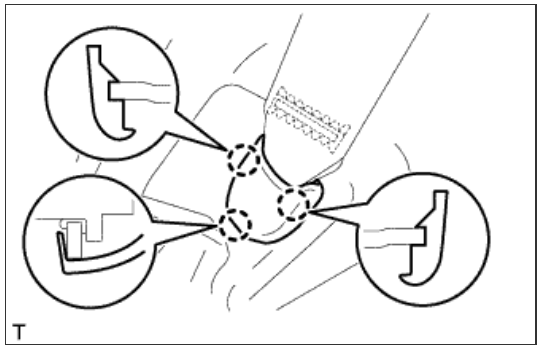
Use the same procedure to remove the rear seat cover cap on the other side.

a. Using a screwdriver, detach the 3 claws and remove the rear seat cover cap.

HINT:

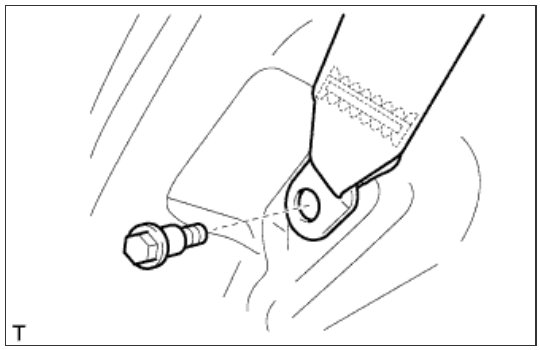


Tape the screwdriver tip before use.



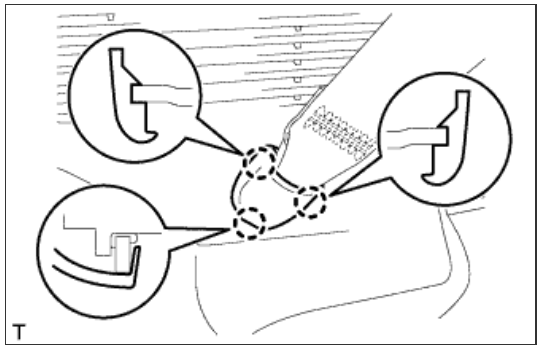
8. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY RH

HINT:

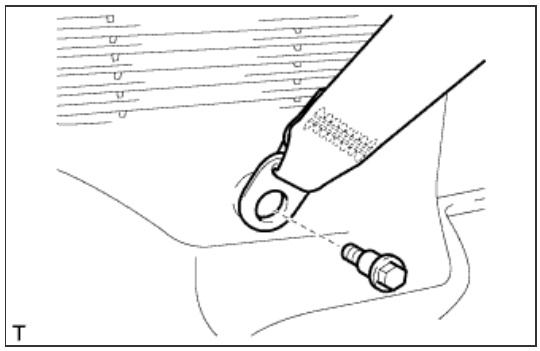


When removing the front quarter trim panel, operate the reclining adjuster release handle and move the No. 1 rear seat to the position shown in the illustration.

a. Detach the 3 claws and remove the cover.



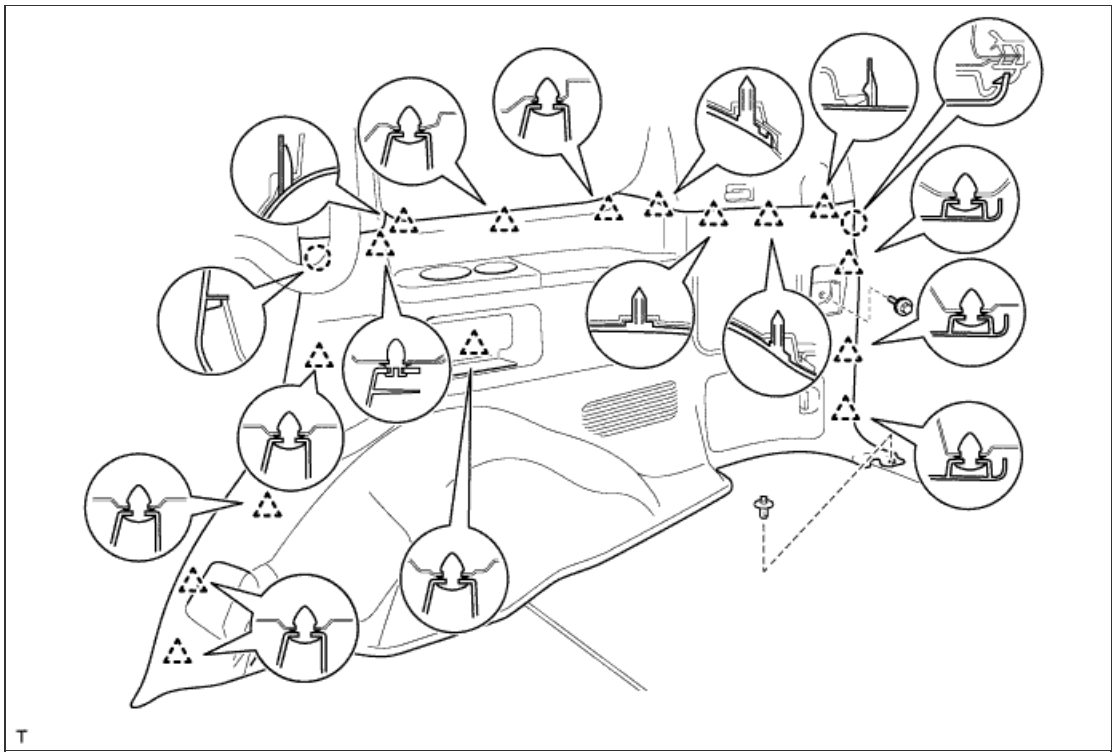
b. Remove the bolt and rear No. 1 seat belt anchor.



c. w/ Rear No. 2 Seat, except Face to Face Seat Type:

i. Detach the 3 claws and remove the cover.

ii. Remove the bolt and rear No. 2 seat belt anchor.

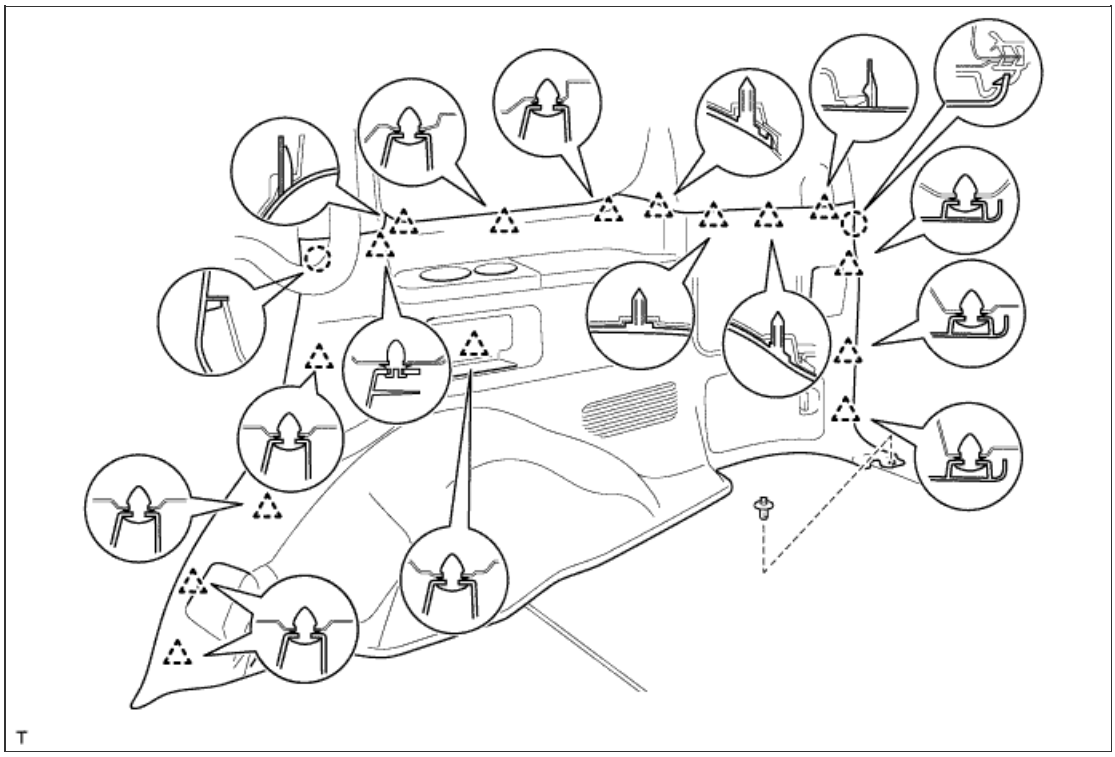


d. w/ Rear No. 2 Seat, except Face to Face Seat Type:

i. Remove the clip and bolt.

ii. Detach the 16 clips and 2 claws.

iii. w/o Rear Air Conditioning System:
Disconnect the rear seat lock control lever cable and then remove the quarter trim panel.



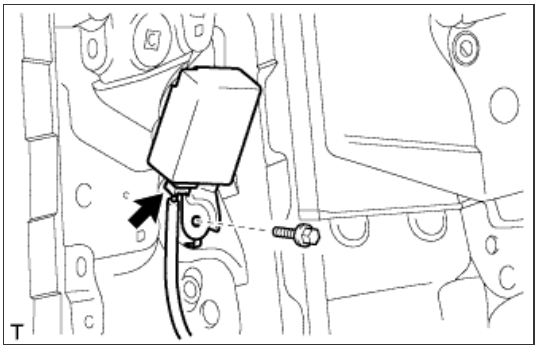
iv. w/ Rear Air Conditioning System:
Disconnect the thermistor connector and rear seat lock control lever cable, and then remove the quarter trim panel.

e. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat Type:

i. Remove the clip.

ii. Detach the 16 clips and 2 claws, and remove the quarter trim panel.

9. REMOVE REAR UPPER PILLAR GARNISH RH



HINT:

Use the same procedures described for the LH side.

10. REMOVE DOOR CONTROL RECEIVER

a. Disconnect the connector.

b. Remove the bolt and receiver.

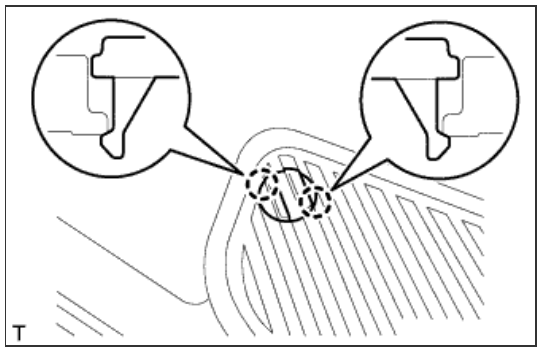
a. Remove the rear No. 2 seat assembly RH (Click here).

2. REMOVE REAR NO. 2 SEAT ASSEMBLY RH (for Face to Face Seat Type)



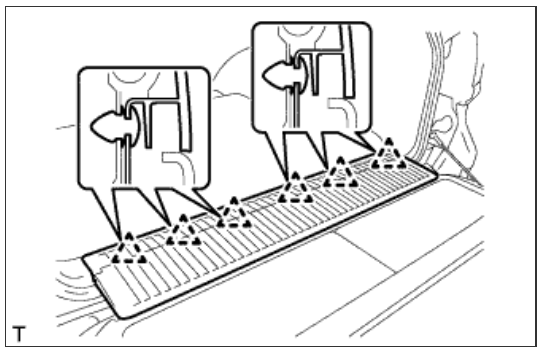
a. Remove the rear No. 2 seat assembly RH (Click here).

3. REMOVE REAR STEP COVER

HINT:

Use the same procedure to remove the step cover on the other side.

a. Detach the 2 claws and remove the step cover.



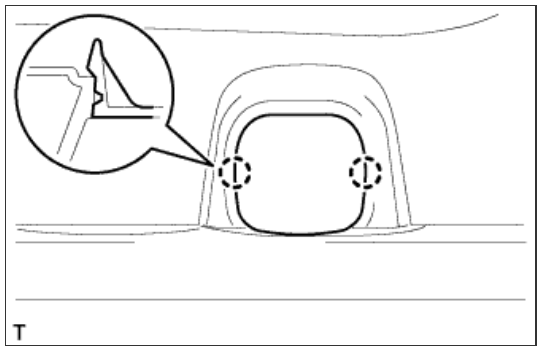
4. REMOVE REAR DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

5. REMOVE REAR FLOOR MAT REAR SUPPORT PLATE

a. Detach the 6 clips and remove the support plate.



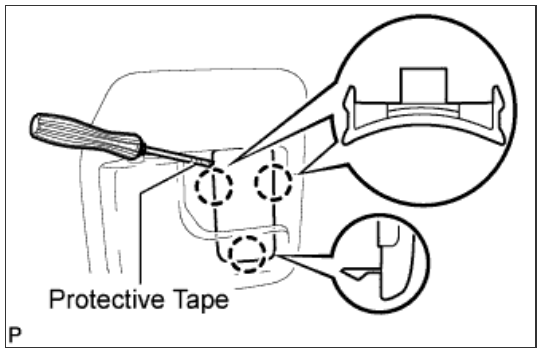
6. REMOVE NO. 1 TONNEAU COVER HOLDER CAP (w/ Tonneau Cover)

HINT:

Use the same procedure to remove the tonneau cover holder cap on the other side.

a. Detach the 2 claws and remove the tonneau cover holder cap.

7. REMOVE REAR SEAT COVER CAP (w/ Rear No. 2 Seat, except Face to Face Seat Type)

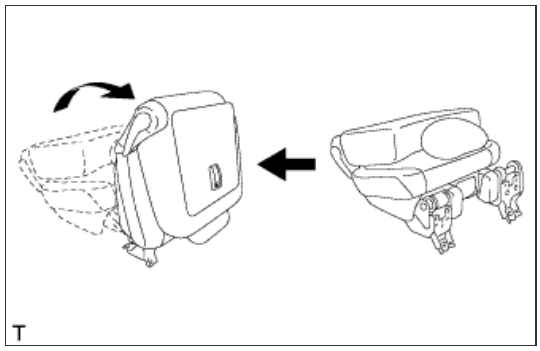


HINT:

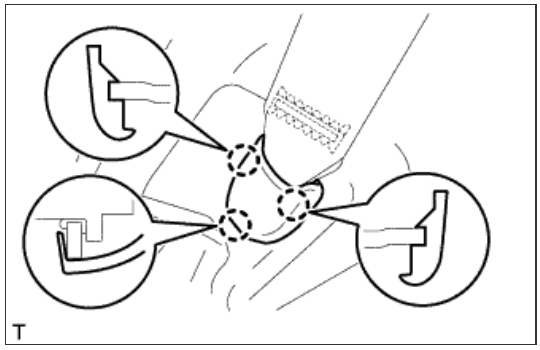
Use the same procedure to remove the rear seat cover cap on the other side.

a. Using a screwdriver, detach the 3 claws and remove the rear seat cover cap.

HINT:

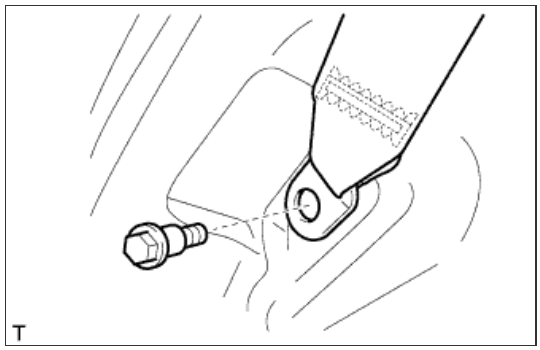


Tape the screwdriver tip before use.



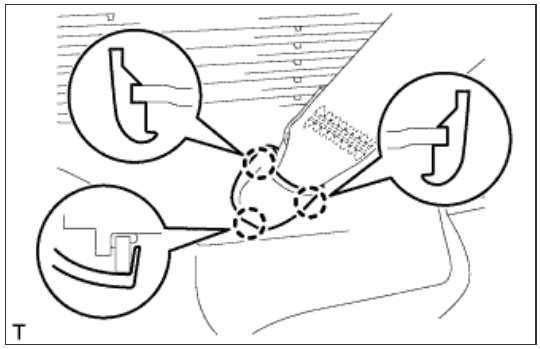
8. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY RH

HINT:

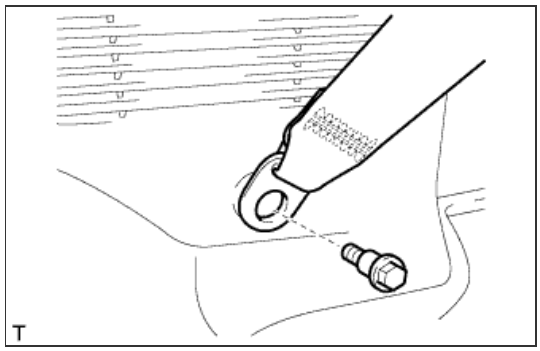


When removing the front quarter trim panel, operate the reclining adjuster release handle and move the No. 1 rear seat to the position shown in the illustration.

a. Detach the 3 claws and remove the cover.



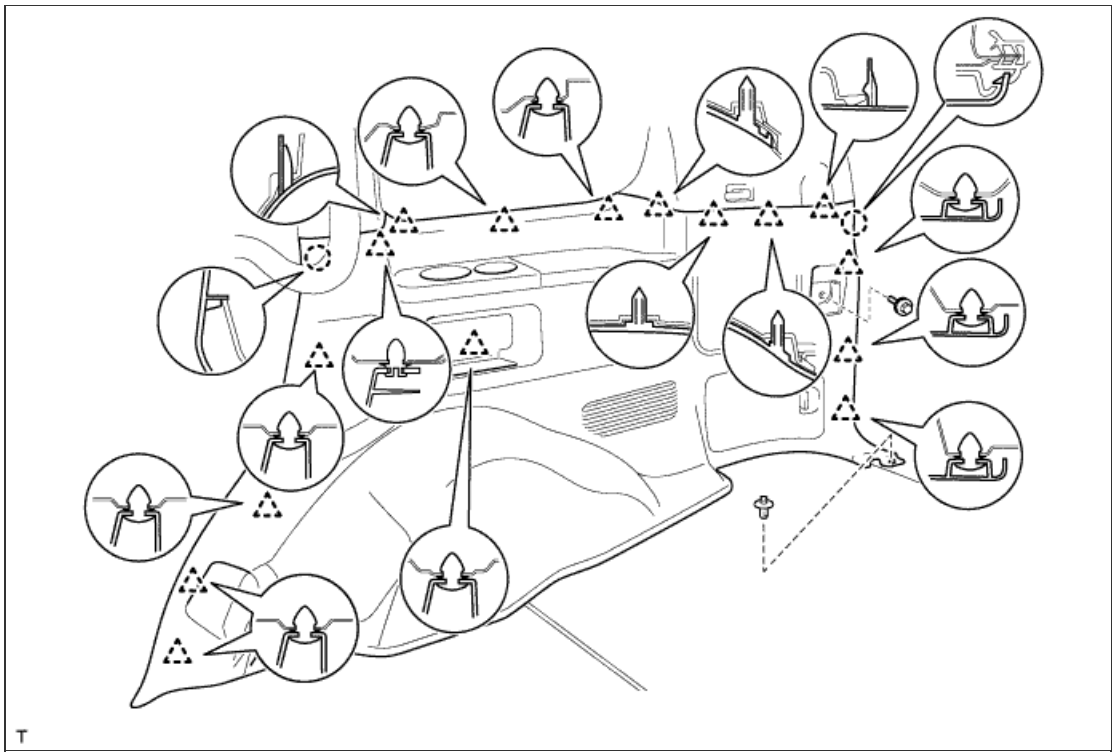
b. Remove the bolt and rear No. 1 seat belt anchor.



c. w/ Rear No. 2 Seat, except Face to Face Seat Type:

i. Detach the 3 claws and remove the cover.

ii. Remove the bolt and rear No. 2 seat belt anchor.

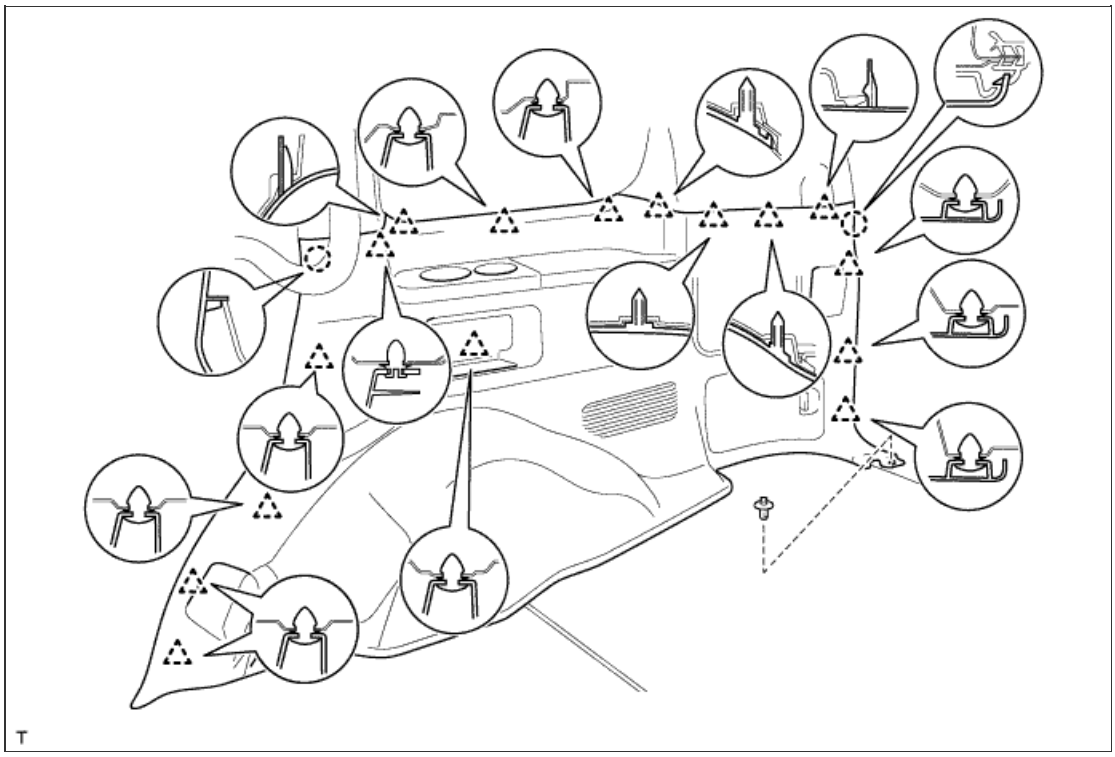


d. w/ Rear No. 2 Seat, except Face to Face Seat Type:

i. Remove the clip and bolt.

ii. Detach the 16 clips and 2 claws.

iii. w/o Rear Air Conditioning System:
Disconnect the rear seat lock control lever cable and then remove the quarter trim panel.



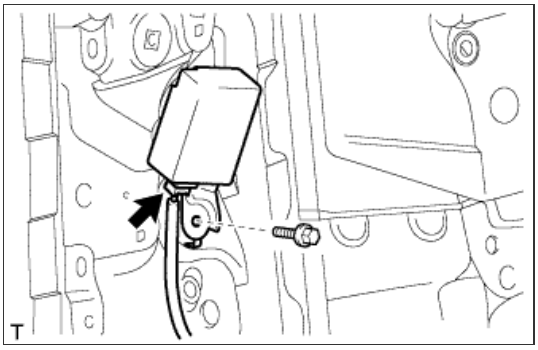
iv. w/ Rear Air Conditioning System:
Disconnect the thermistor connector and rear seat lock control lever cable, and then remove the quarter trim panel.

e. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat Type:

i. Remove the clip.

ii. Detach the 16 clips and 2 claws, and remove the quarter trim panel.

9. REMOVE REAR UPPER PILLAR GARNISH RH



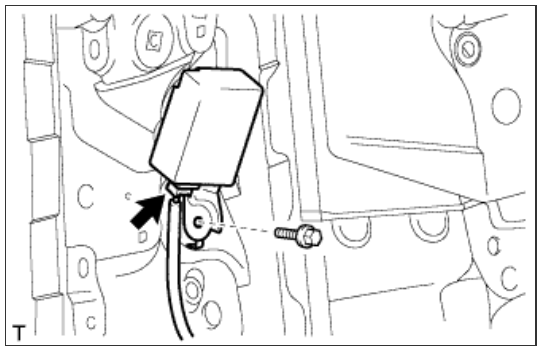
HINT:

Use the same procedures described for the LH side.

10. REMOVE DOOR CONTROL RECEIVER

a. Disconnect the connector.

b. Remove the bolt and receiver.



for Preparation Click here

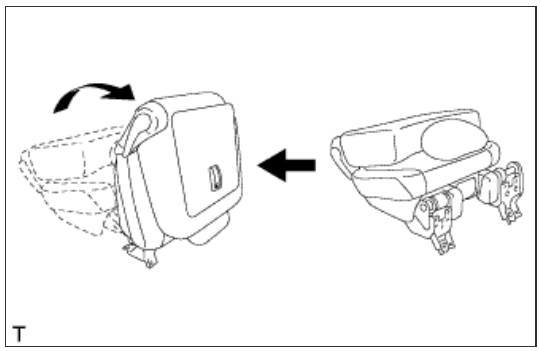
1. INSTALL DOOR CONTROL RECEIVER

a. Install the receiver with the bolt.

Torque:
15 N*m{ 153 kgf*cm , 11 ft.*lbf }

b. Connect the connector.

2. INSTALL REAR UPPER PILLAR GARNISH RH



HINT:

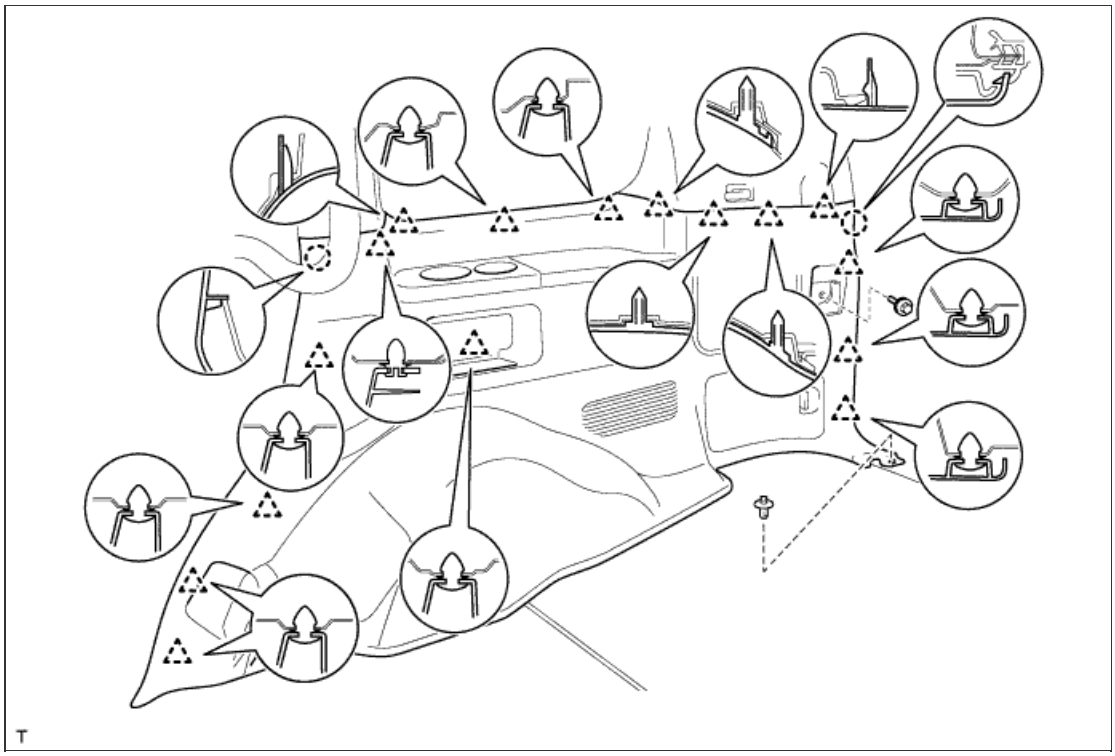
Use the same procedures described for the LH side.

3. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY RH

HINT:

When installing the front quarter trim panel, operate the reclining adjuster release handle and move the No. 1 rear seat to the position shown in the illustration.

a. w/ Rear No. 2 Seat, except Face to Face Seat Type:

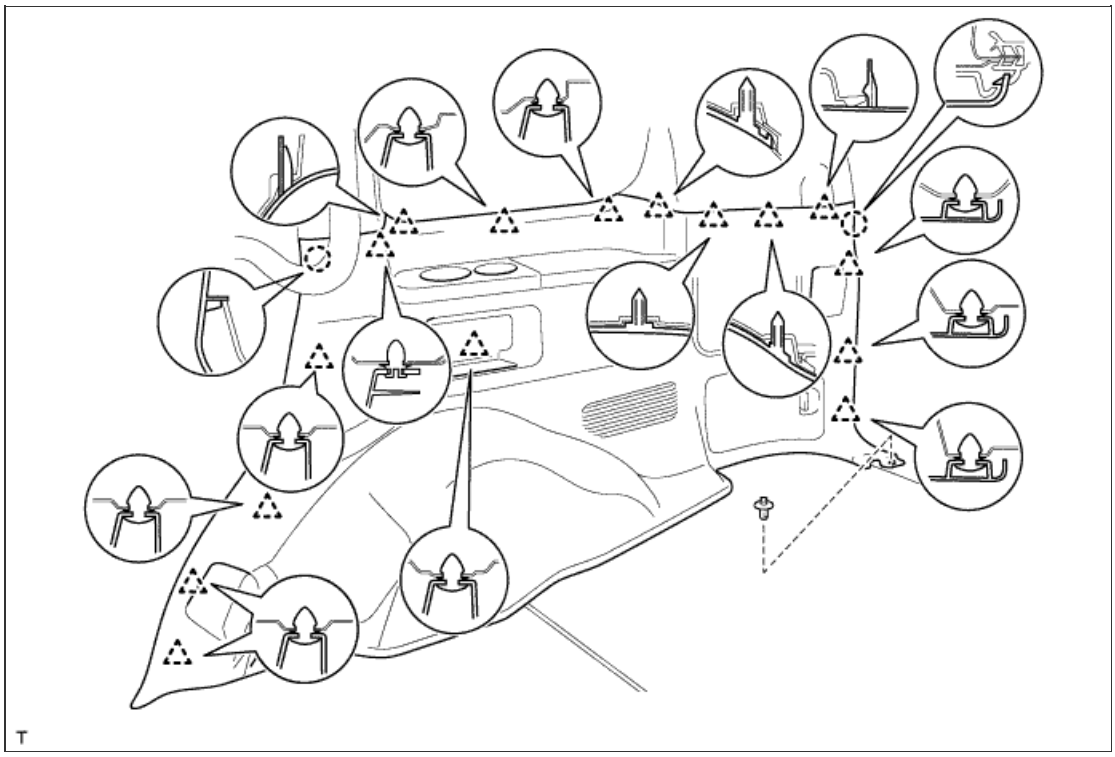


i. w/o Rear Air Conditioning System:
Connect the rear seat lock control lever cable.

ii. w/ Rear Air Conditioning System:
Connect the thermistor connector and rear seat lock control lever cable.

iii. Attach the 16 clips and 2 claws to install the quarter trim panel.

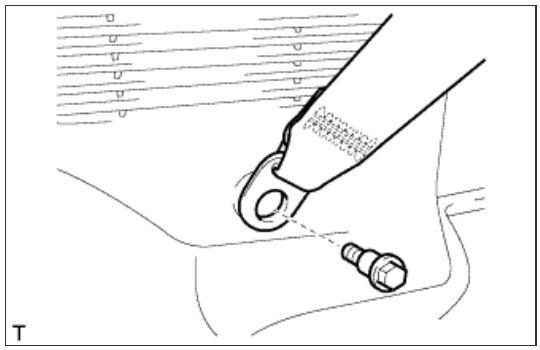
iv. Install the clip and bolt.



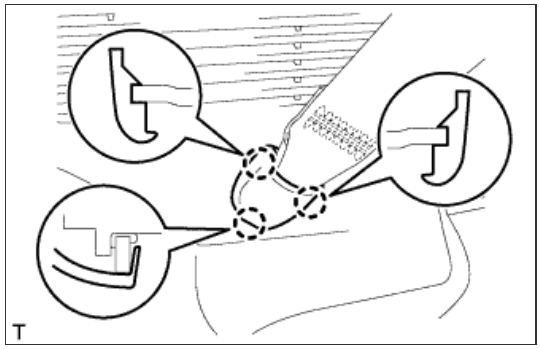
Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

b. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat Type:

i. Attach the 16 clips and 2 claws to install the quarter trim panel.



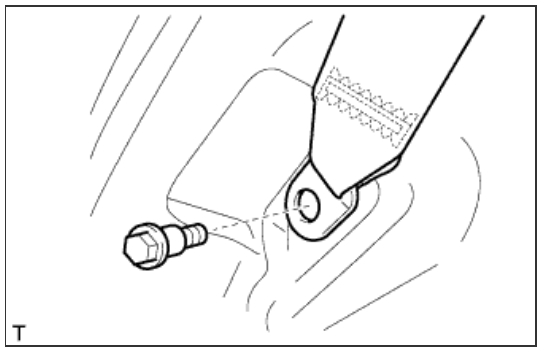
ii. Install the clip.



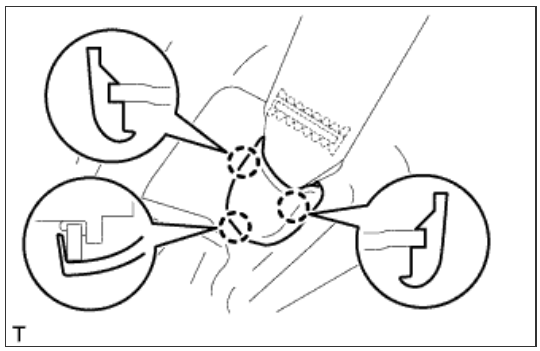
c. w/ Rear No. 2 Seat, except Face to Face Seat Type:

i. Install the rear No. 2 seat belt anchor with the bolt.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }



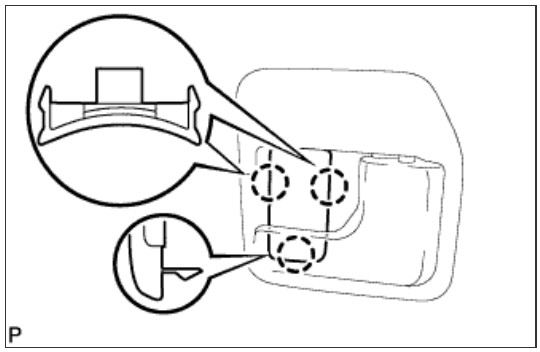
ii. Attach the 3 claws to install the cover.



d. Install the rear No. 1 seat belt anchor with the bolt.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }

e. Attach the 3 claws to install the cover.

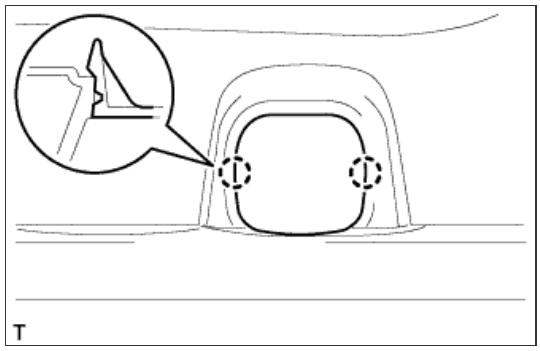


4. INSTALL REAR SEAT COVER CAP (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

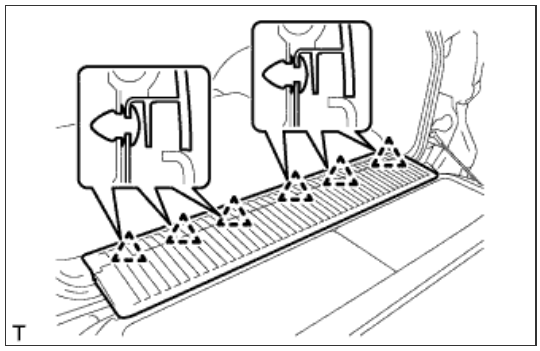
Use the same procedure to install the rear seat cover cap on the other side.

a. Attach the 3 claws to install the rear seat cover cap.



5. INSTALL NO. 1 TONNEAU COVER HOLDER CAP (w/ Tonneau Cover)

HINT:



Use the same procedure to install the tonneau cover holder cap on the other side.

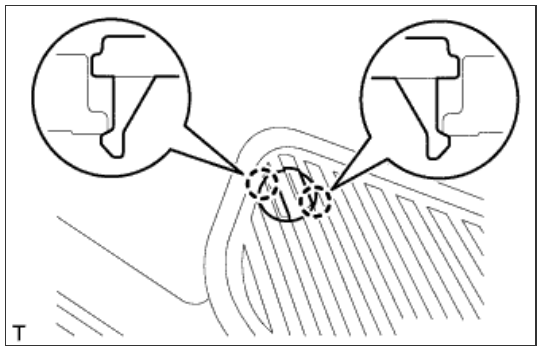
a. Attach the 2 claws to install the tonneau cover holder cap.

6. INSTALL REAR FLOOR MAT REAR SUPPORT PLATE

a. Attach the 6 clips to install the support plate.

7. INSTALL REAR DOOR SCUFF PLATE RH

HINT:



Use the same procedures described for the LH side.

8. INSTALL REAR STEP COVER

HINT:

Use the same procedure to install the step cover on the other side.

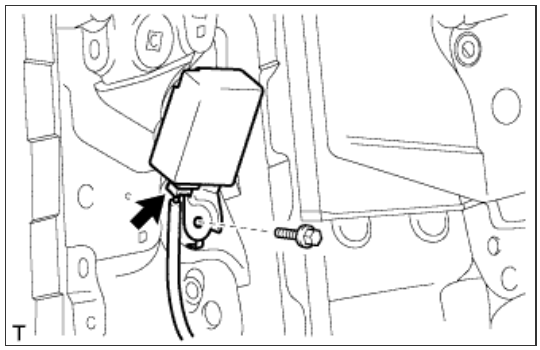
a. Attach the 2 claws to install the step cover.

9. INSTALL REAR NO. 2 SEAT ASSEMBLY RH (for Face to Face Seat Type)

a. Install the rear No. 2 seat assembly RH (Click here).

10. INSTALL REAR NO. 2 SEAT ASSEMBLY RH (except Face to Face Seat Type)

a. Install the rear No. 2 seat assembly RH (Click here).



for Preparation Click here

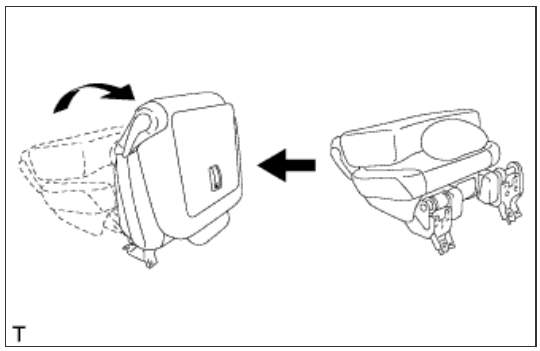
1. INSTALL DOOR CONTROL RECEIVER

a. Install the receiver with the bolt.

Torque:
15 N*m{ 153 kgf*cm , 11 ft.*lbf }

b. Connect the connector.

2. INSTALL REAR UPPER PILLAR GARNISH RH



HINT:

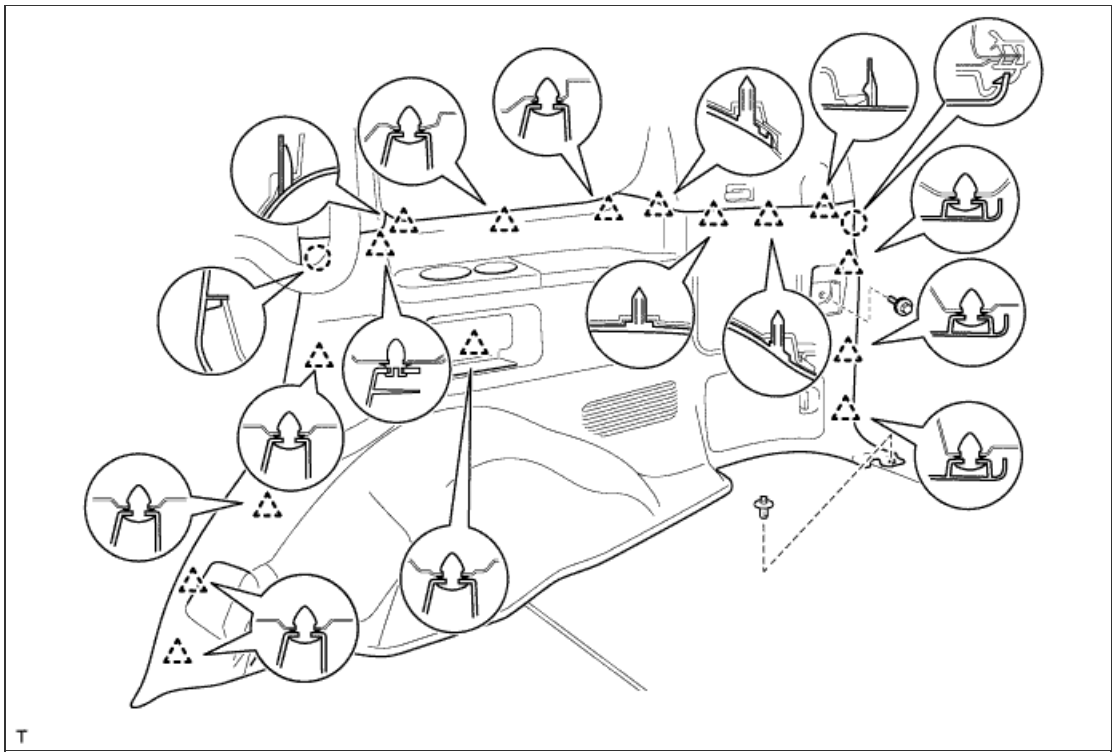
Use the same procedures described for the LH side.

3. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY RH

HINT:

When installing the front quarter trim panel, operate the reclining adjuster release handle and move the No. 1 rear seat to the position shown in the illustration.

a. w/ Rear No. 2 Seat, except Face to Face Seat Type:

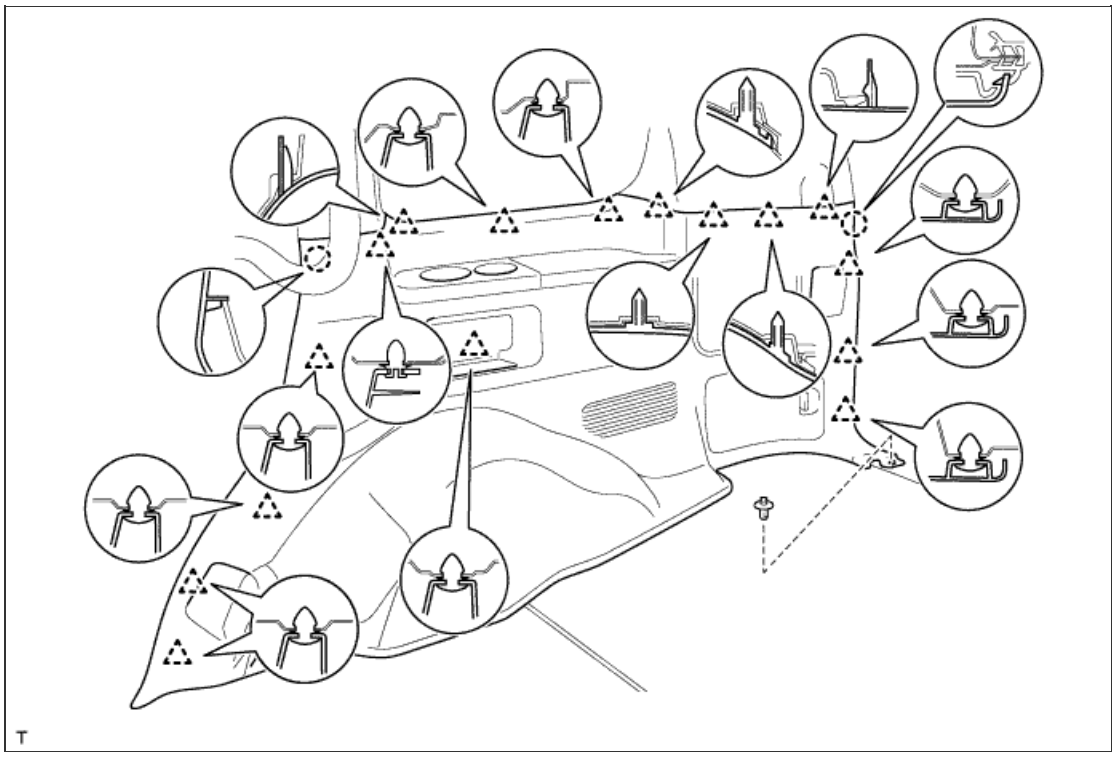


i. w/o Rear Air Conditioning System:
Connect the rear seat lock control lever cable.

ii. w/ Rear Air Conditioning System:
Connect the thermistor connector and rear seat lock control lever cable.

iii. Attach the 16 clips and 2 claws to install the quarter trim panel.

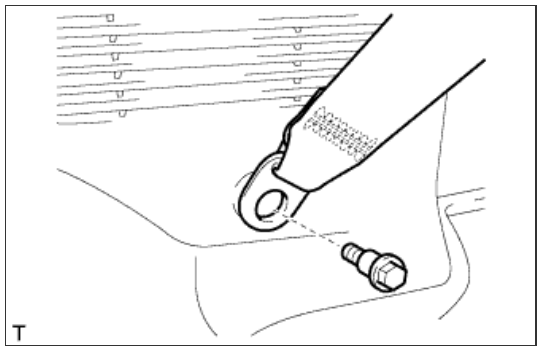
iv. Install the clip and bolt.



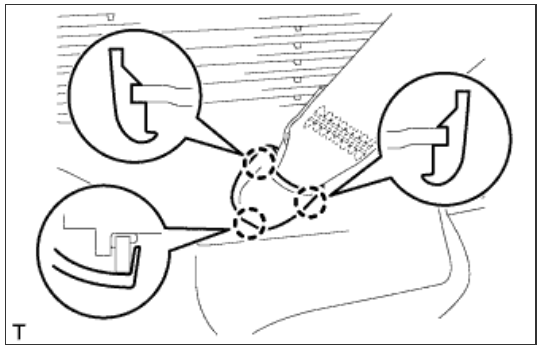
Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

b. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat Type:

i. Attach the 16 clips and 2 claws to install the quarter trim panel.



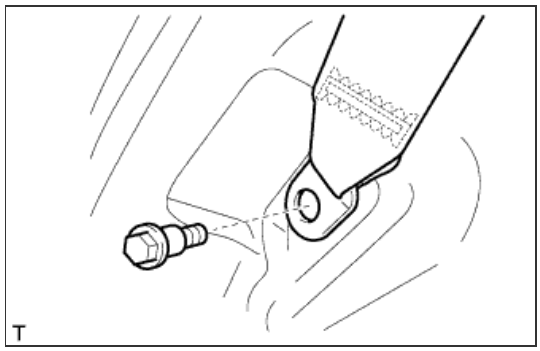
ii. Install the clip.



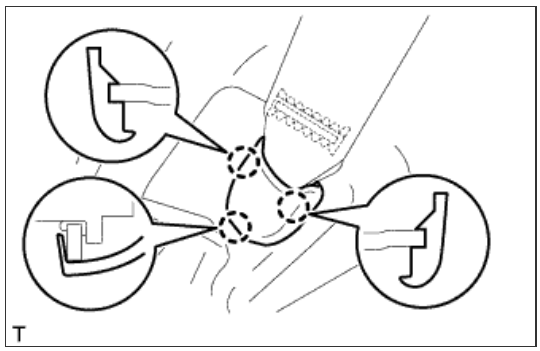
c. w/ Rear No. 2 Seat, except Face to Face Seat Type:

i. Install the rear No. 2 seat belt anchor with the bolt.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }



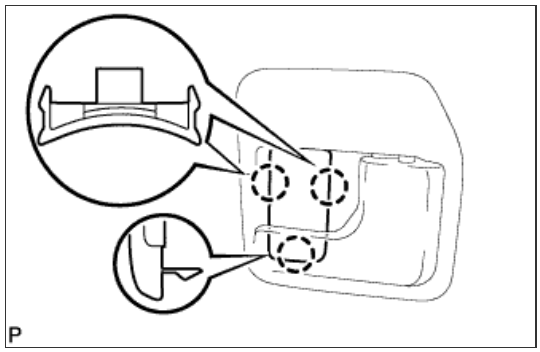
ii. Attach the 3 claws to install the cover.



d. Install the rear No. 1 seat belt anchor with the bolt.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }

e. Attach the 3 claws to install the cover.



4. INSTALL REAR SEAT COVER CAP (w/ Rear No. 2 Seat, except Face to Face Seat Type)

HINT:

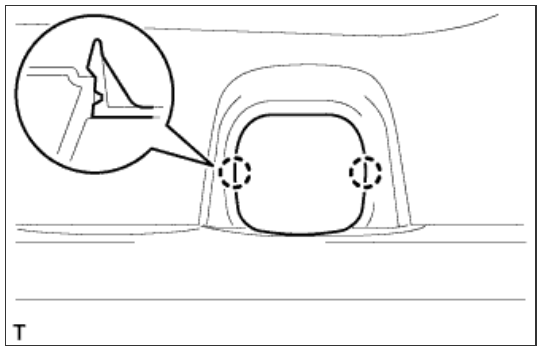
Use the same procedure to install the rear seat cover cap on the other side.

a. Attach the 3 claws to install the rear seat cover cap.



5. INSTALL NO. 1 TONNEAU COVER HOLDER CAP (w/ Tonneau Cover)

HINT:

Use the same procedure to install the tonneau cover holder cap on the other side.

a. Attach the 2 claws to install the tonneau cover holder cap.

6. INSTALL REAR FLOOR MAT REAR SUPPORT PLATE

a. Attach the 6 clips to install the support plate.

7. INSTALL REAR DOOR SCUFF PLATE RH

HINT:

Use the same procedures described for the LH side.

8. INSTALL REAR STEP COVER

HINT:

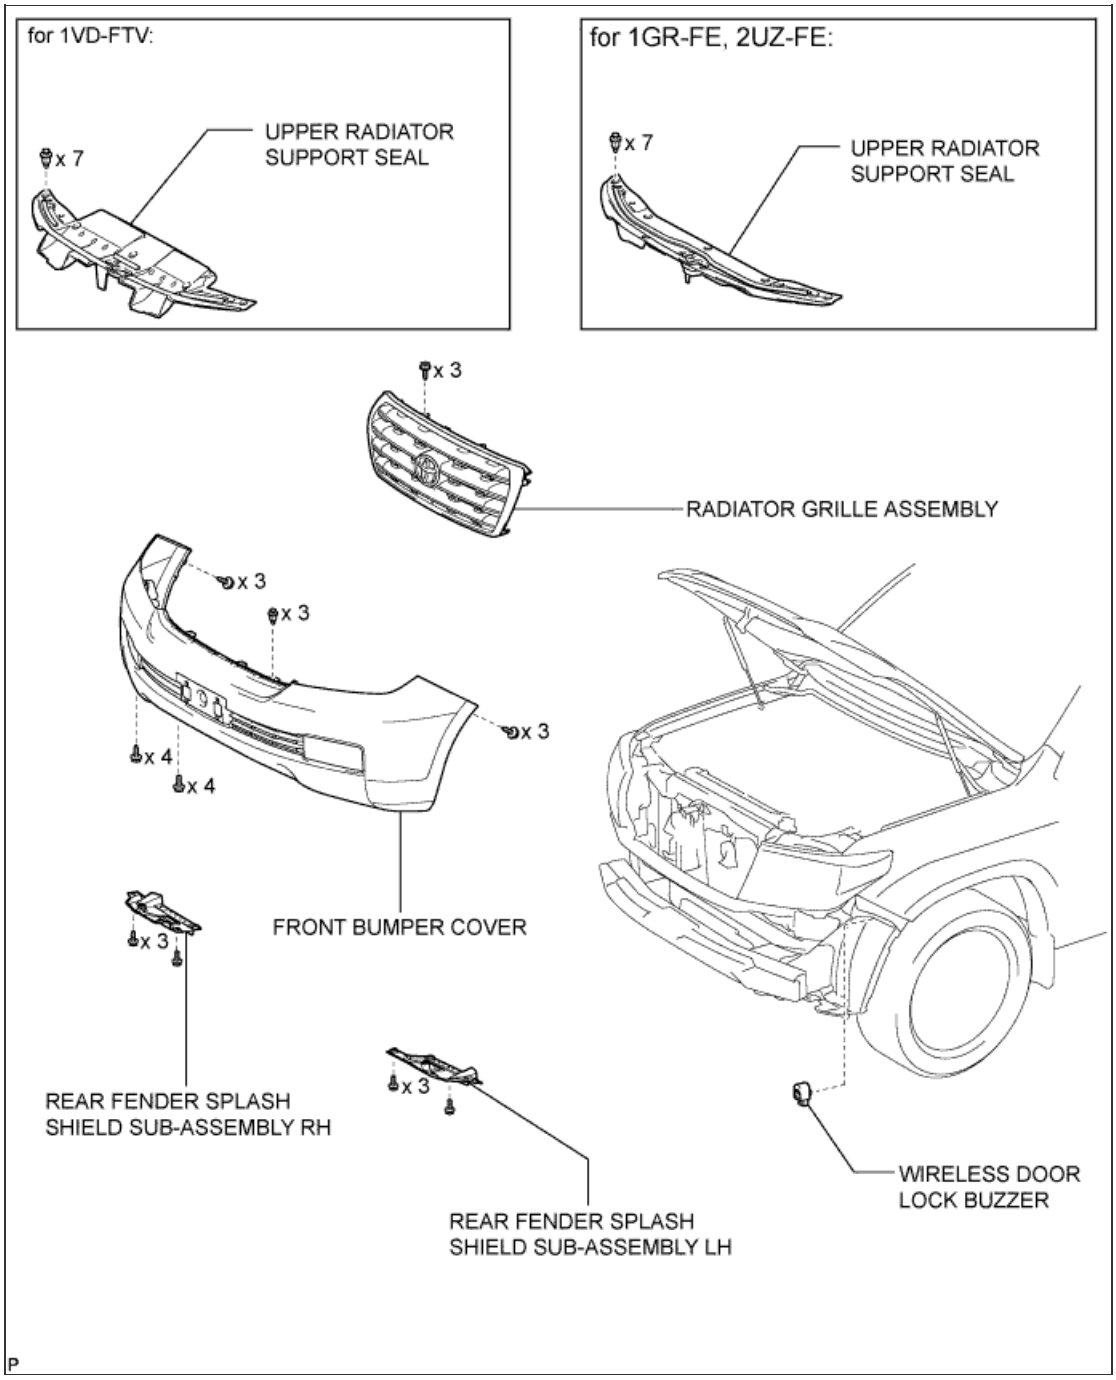
Use the same procedure to install the step cover on the other side.

a. Attach the 2 claws to install the step cover.



9. INSTALL REAR NO. 2 SEAT ASSEMBLY RH (for Face to Face Seat Type)

a. Install the rear No. 2 seat assembly RH (Click here).

10. INSTALL REAR NO. 2 SEAT ASSEMBLY RH (except Face to Face Seat Type)

a. Install the rear No. 2 seat assembly RH (Click here).

for Preparation Click here

HINT:

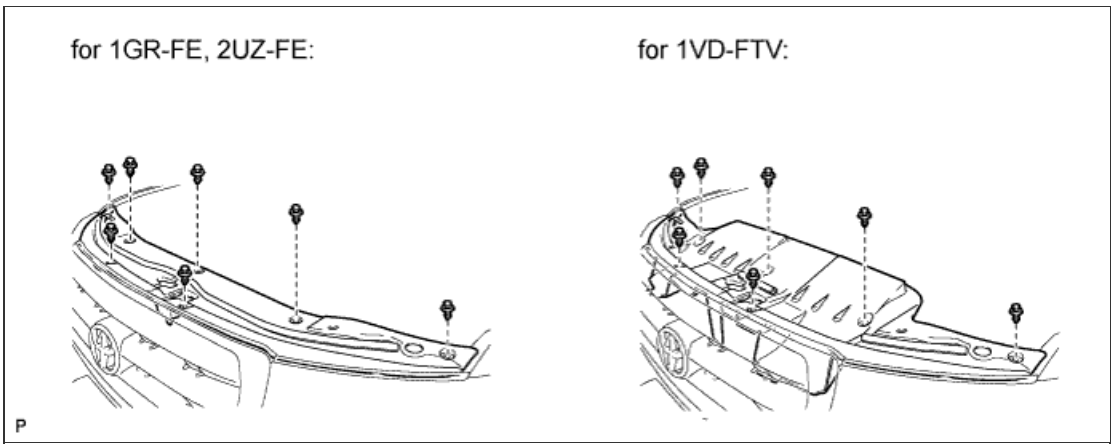
- **Use the same procedures for LHD and RHD vehicles.**
- **The procedures listed below are for LHD vehicles.**

1. REMOVE REAR FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and screw.

b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



2. REMOVE REAR FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

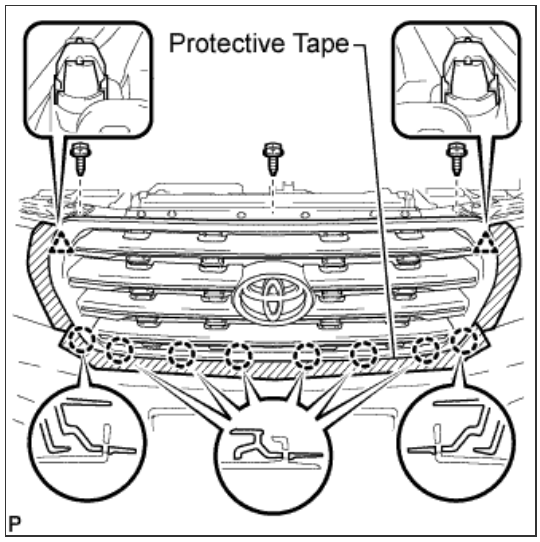
Use the same procedures described for the LH side.

3. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 7 clips and radiator support seal.

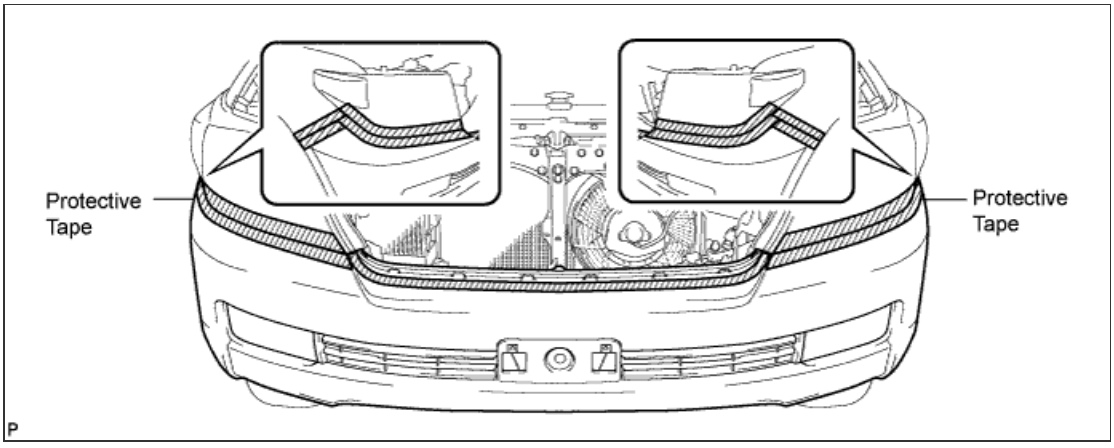


4. REMOVE RADIATOR GRILLE ASSEMBLY

a. Put protective tape around the radiator grille.

b. Remove the 3 screws.

c. Detach the 2 clips and 8 claws, and remove the radiator grille.



5. REMOVE FRONT BUMPER COVER

HINT:

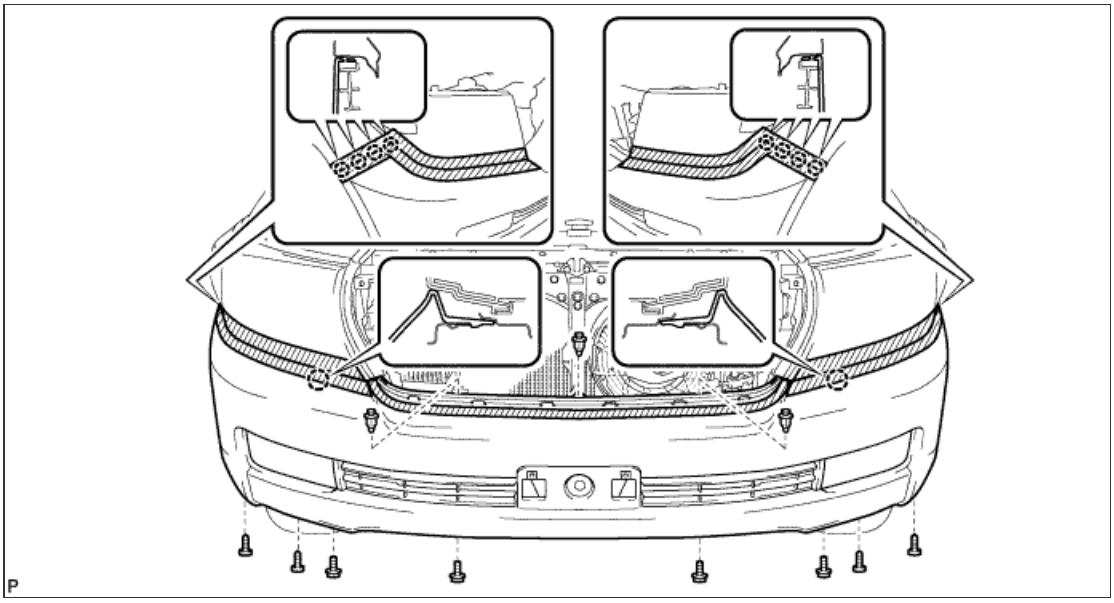
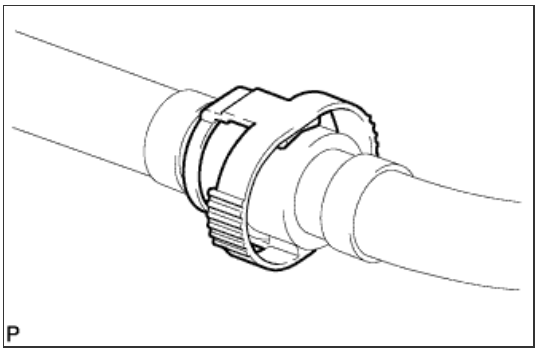
For the front bumper cover with garnish, use the procedures described below.

a. Put protective tape around the bumper cover.



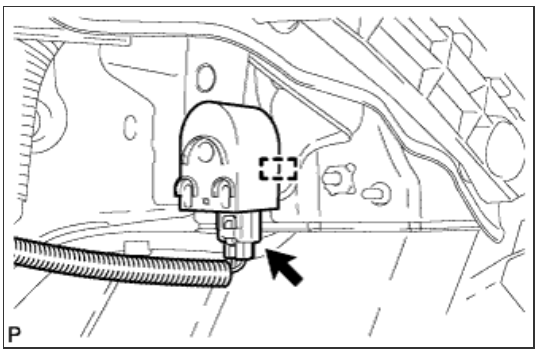
b. Using a T30 "TORX" socket, remove the 6 screws.



c. Remove the 3 clips, 4 screws and 4 bolts.

d. w/o TOYOTA Parking Assist-sensor System, w/o Fog Light:
Detach the 10 claws and remove the bumper cover.

e. w/ TOYOTA Parking Assist-sensor System or w/ Fog Light:
Detach the 10 claws, disconnect the No. 4 engine room wire connector and remove the bumper cover.



f. w/ Headlight Cleaner System:
Disconnect the headlight cleaner hose and remove the bumper cover.

6. REMOVE WIRELESS DOOR LOCK BUZZER

a. Disconnect the connector.

b. Detach the clamp and remove the buzzer.

for Preparation Click here

HINT:

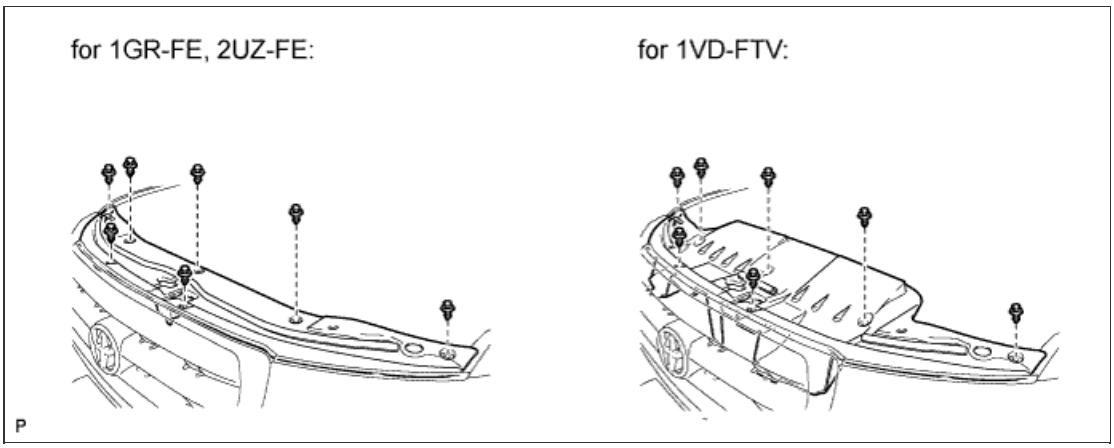
- **Use the same procedures for LHD and RHD vehicles.**
- **The procedures listed below are for LHD vehicles.**

1. REMOVE REAR FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Remove the 3 bolts and screw.

b. Turn the clip indicated by the arrow in the illustration to remove the fender splash shield.



2. REMOVE REAR FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

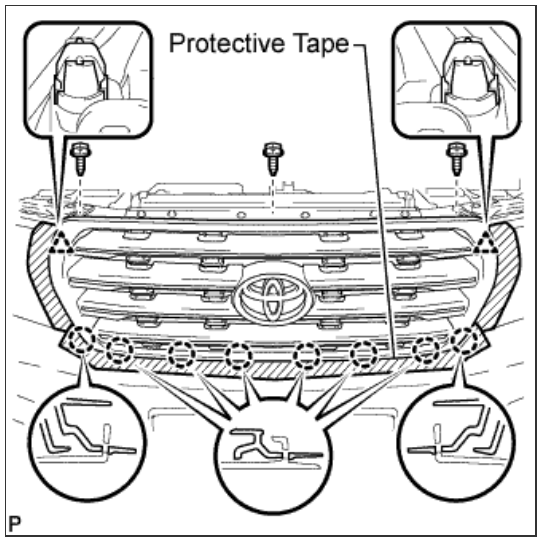
Use the same procedures described for the LH side.

3. REMOVE UPPER RADIATOR SUPPORT SEAL

a. Remove the 7 clips and radiator support seal.

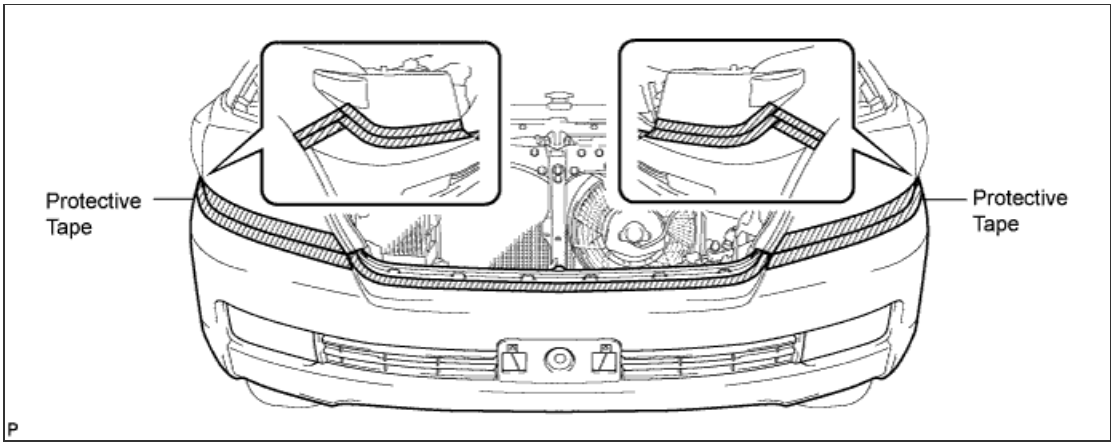


4. REMOVE RADIATOR GRILLE ASSEMBLY

a. Put protective tape around the radiator grille.

b. Remove the 3 screws.

c. Detach the 2 clips and 8 claws, and remove the radiator grille.



5. REMOVE FRONT BUMPER COVER

HINT:

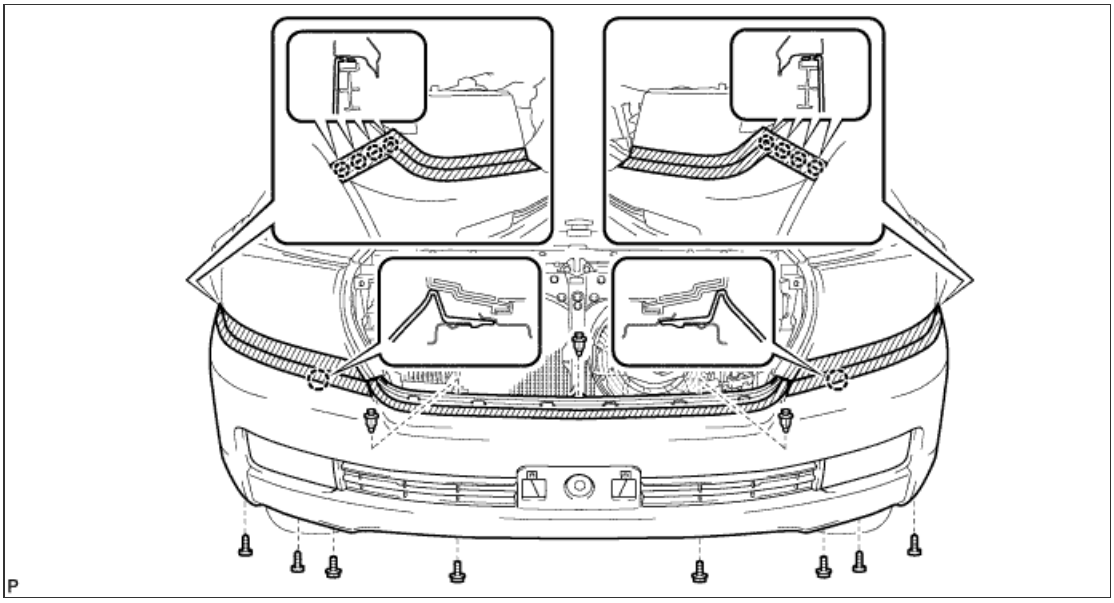
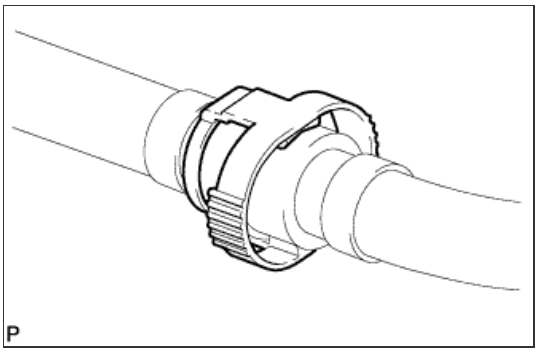
For the front bumper cover with garnish, use the procedures described below.

a. Put protective tape around the bumper cover.



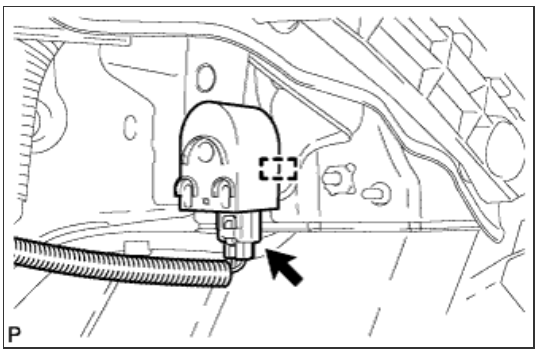
b. Using a T30 "TORX" socket, remove the 6 screws.



c. Remove the 3 clips, 4 screws and 4 bolts.

d. w/o TOYOTA Parking Assist-sensor System, w/o Fog Light:
Detach the 10 claws and remove the bumper cover.

e. w/ TOYOTA Parking Assist-sensor System or w/ Fog Light:
Detach the 10 claws, disconnect the No. 4 engine room wire connector and remove the bumper cover.



f. w/ Headlight Cleaner System:
Disconnect the headlight cleaner hose and remove the bumper cover.

6. REMOVE WIRELESS DOOR LOCK BUZZER

a. Disconnect the connector.

b. Detach the clamp and remove the buzzer.

for Preparation Click here

HINT:

- **Use the same procedures for LHD and RHD vehicles.**
- **The procedures listed below are for LHD vehicles.**

1. INSTALL WIRELESS DOOR LOCK BUZZER

a. Connect the connector.

b. Attach the clamp to install the buzzer.

2. INSTALL FRONT BUMPER COVER

HINT:

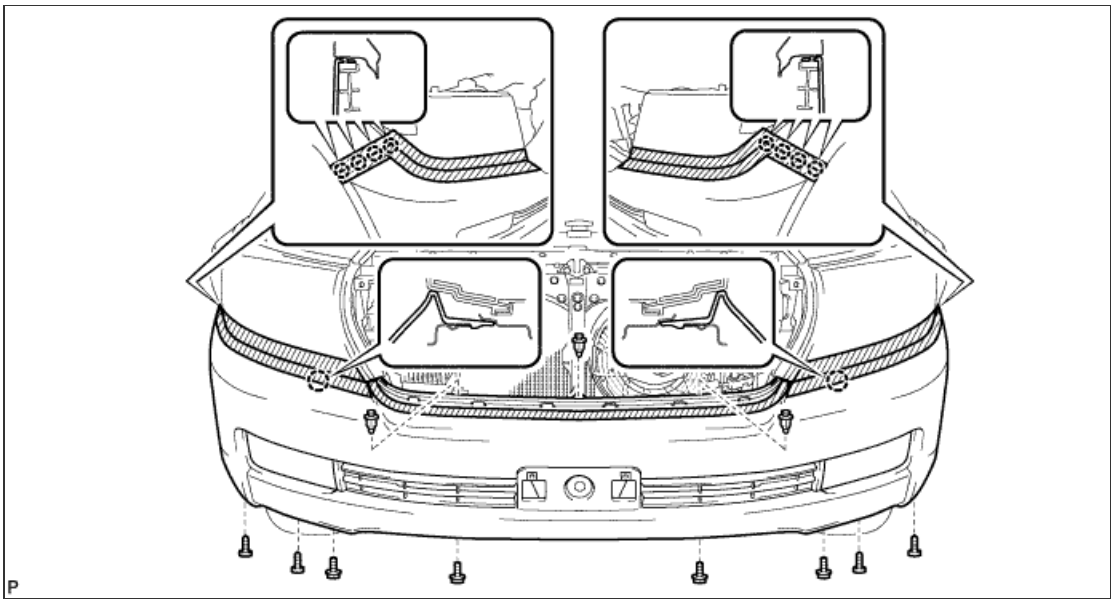
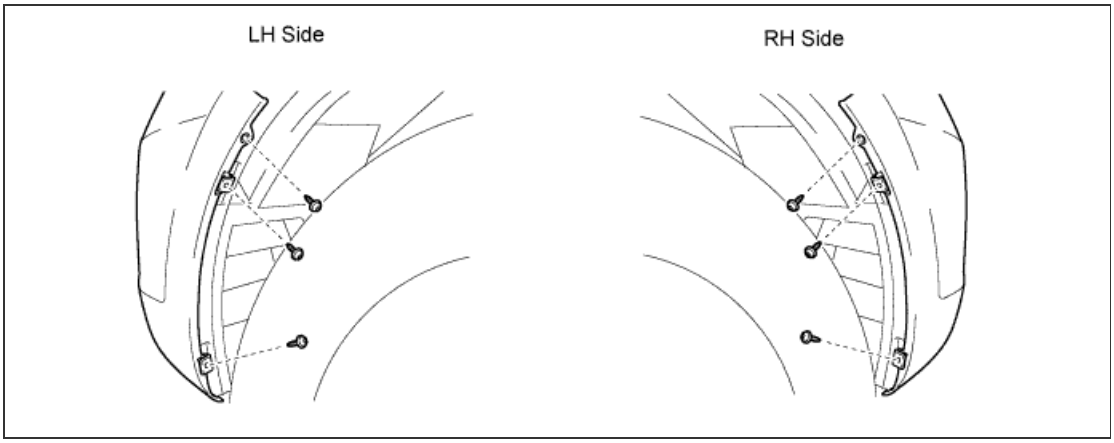
For the front bumper cover with garnish, use the procedures described below.



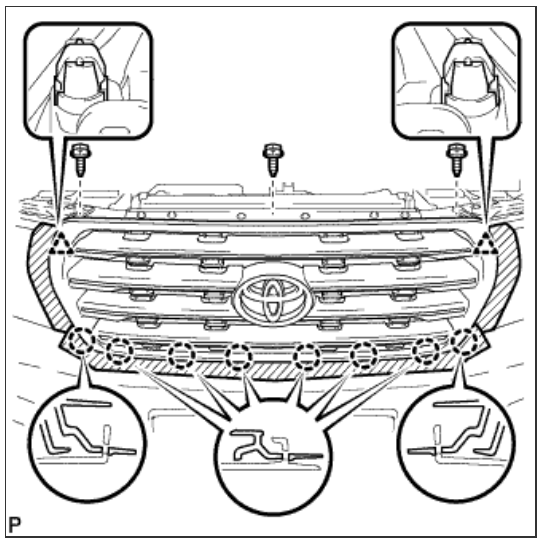
a. w/ Headlight Cleaner System:
Connect the headlight cleaner hose.

b. w/o TOYOTA Parking Assist-sensor System, w/o Fog Light:
Attach the 10 claws to install the bumper cover.



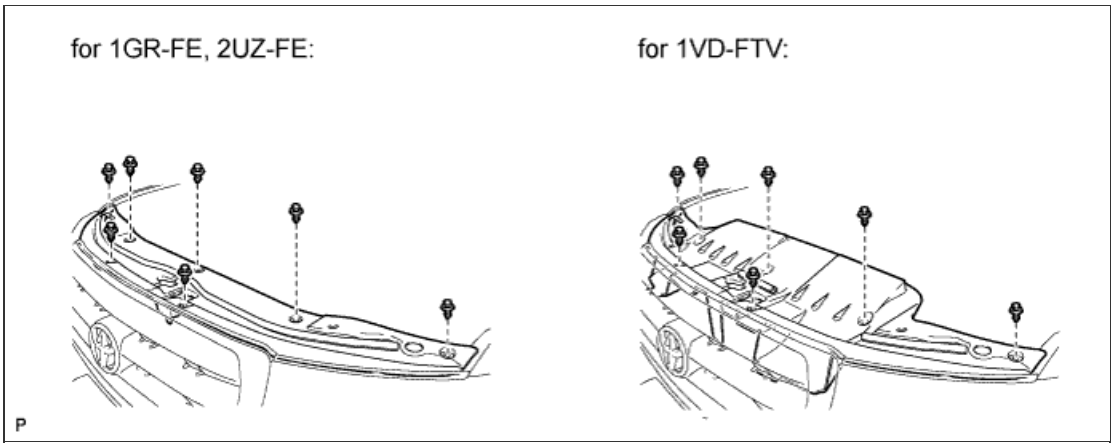
c. w/ TOYOTA Parking Assist-sensor System or w/ Fog Light:
Connect the No. 4 engine room wire connector and attach the 10 claws to install the bumper cover.

d. Install the 3 clips, 4 screws and 4 bolts.



e. Using a T30 "TORX" socket, install the 6 screws.

3. INSTALL RADIATOR GRILLE ASSEMBLY



a. Attach the 2 clips and 8 claws to install the radiator grille.

b. Install the 3 screws.

4. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the radiator support seal with the 7 clips.

5. INSTALL REAR FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

Use the same procedures described for the LH side.

6. INSTALL REAR FENDER SPLASH SHIELD SUB-ASSEMBLY LH

a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the 3 bolts and screw.

for Preparation Click here

HINT:

- **Use the same procedures for LHD and RHD vehicles.**
- **The procedures listed below are for LHD vehicles.**

1. INSTALL WIRELESS DOOR LOCK BUZZER

a. Connect the connector.

b. Attach the clamp to install the buzzer.

2. INSTALL FRONT BUMPER COVER

HINT:

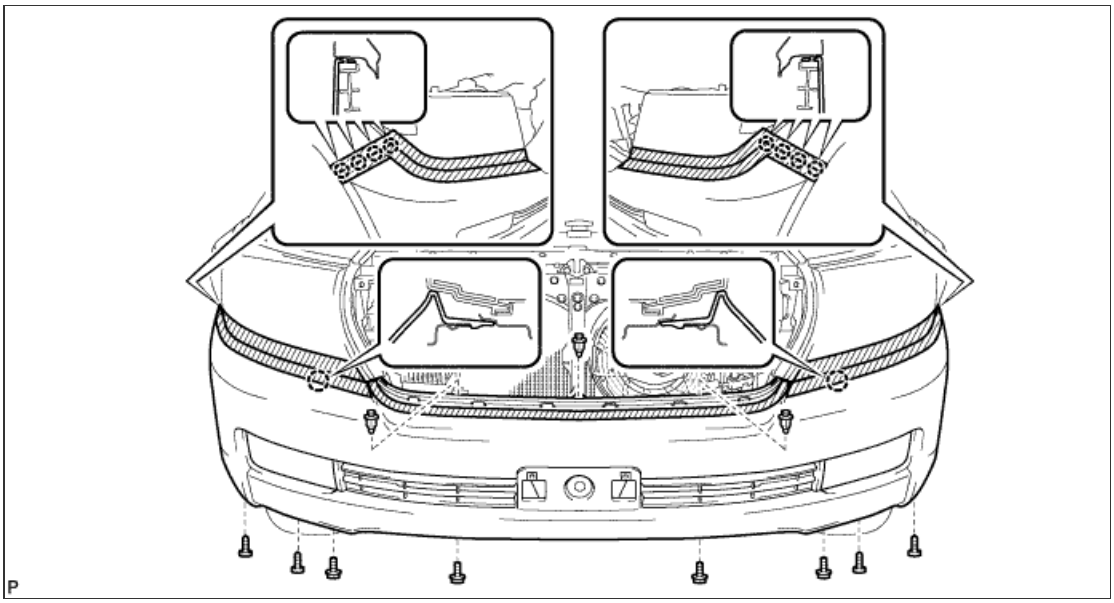
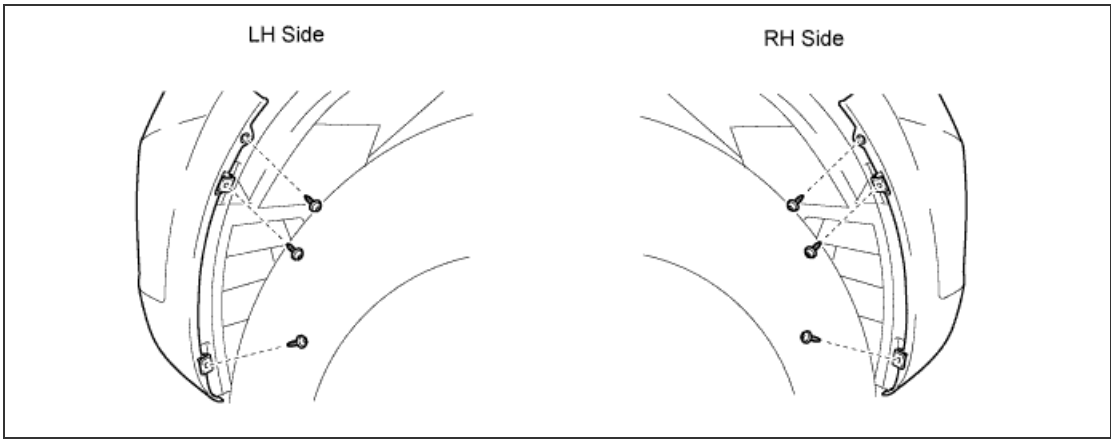
For the front bumper cover with garnish, use the procedures described below.



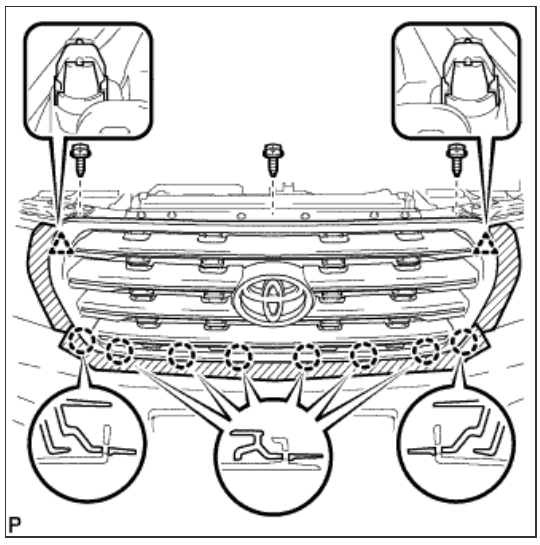
a. w/ Headlight Cleaner System:
Connect the headlight cleaner hose.

b. w/o TOYOTA Parking Assist-sensor System, w/o Fog Light:
Attach the 10 claws to install the bumper cover.



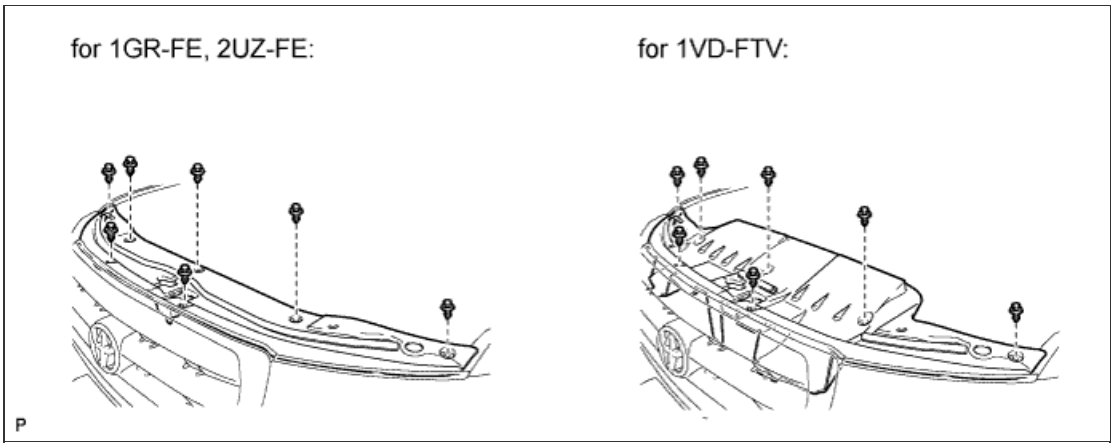
c. w/ TOYOTA Parking Assist-sensor System or w/ Fog Light:
Connect the No. 4 engine room wire connector and attach the 10 claws to install the bumper cover.

d. Install the 3 clips, 4 screws and 4 bolts.



e. Using a T30 "TORX" socket, install the 6 screws.

3. INSTALL RADIATOR GRILLE ASSEMBLY



a. Attach the 2 clips and 8 claws to install the radiator grille.

b. Install the 3 screws.

4. INSTALL UPPER RADIATOR SUPPORT SEAL

a. Install the radiator support seal with the 7 clips.

5. INSTALL REAR FENDER SPLASH SHIELD SUB-ASSEMBLY RH

HINT:

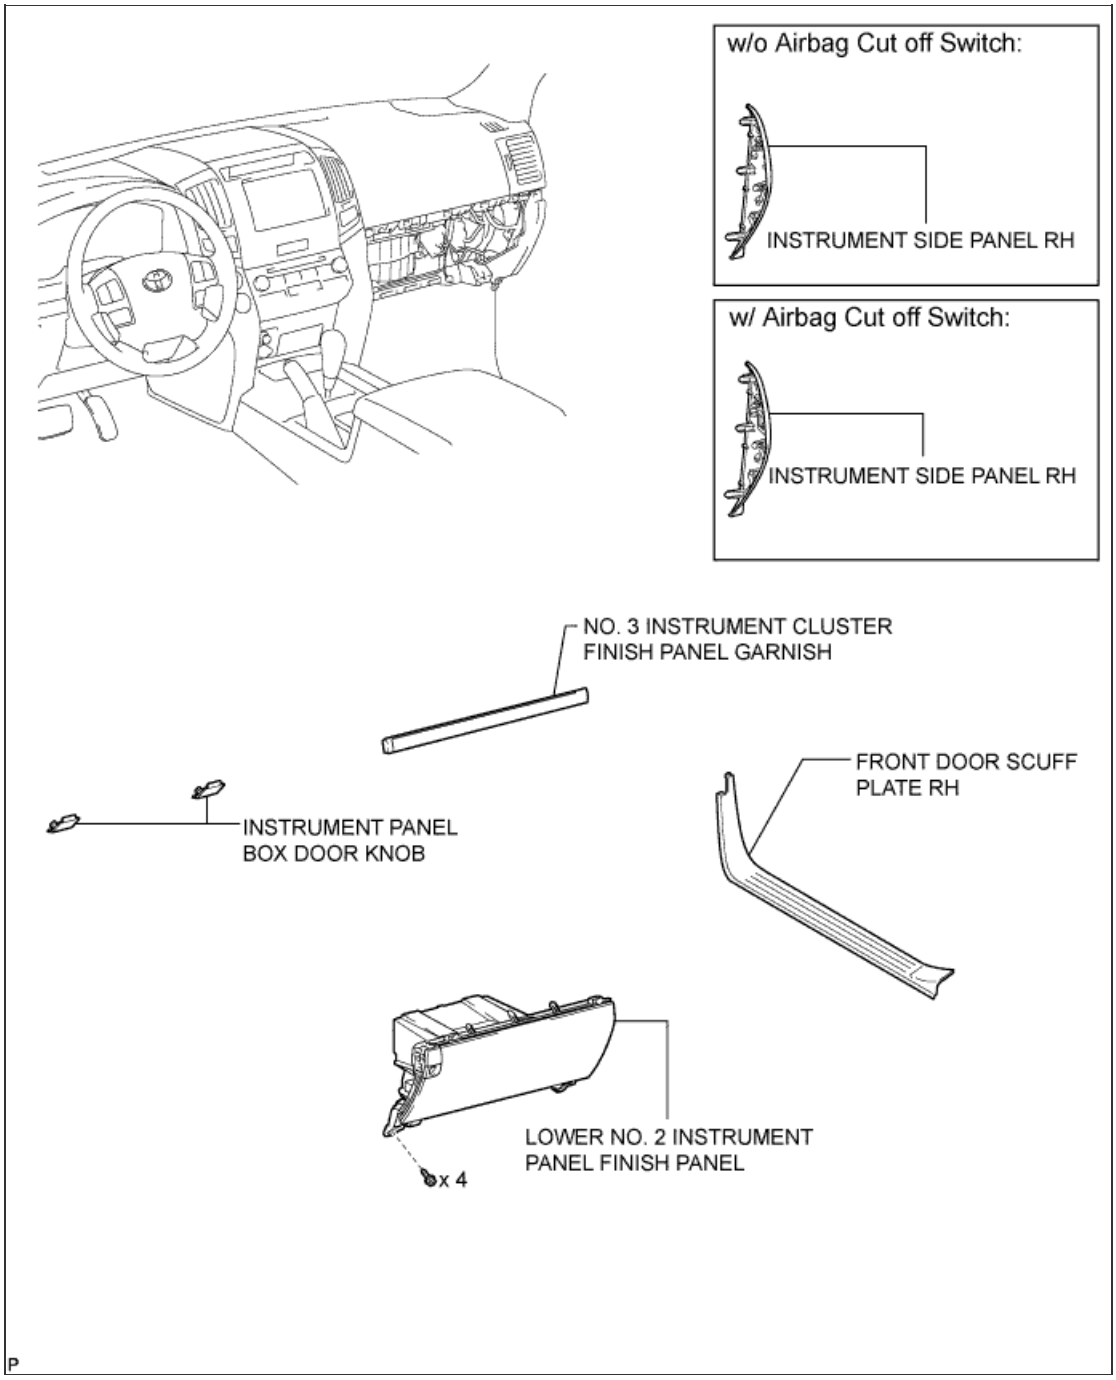
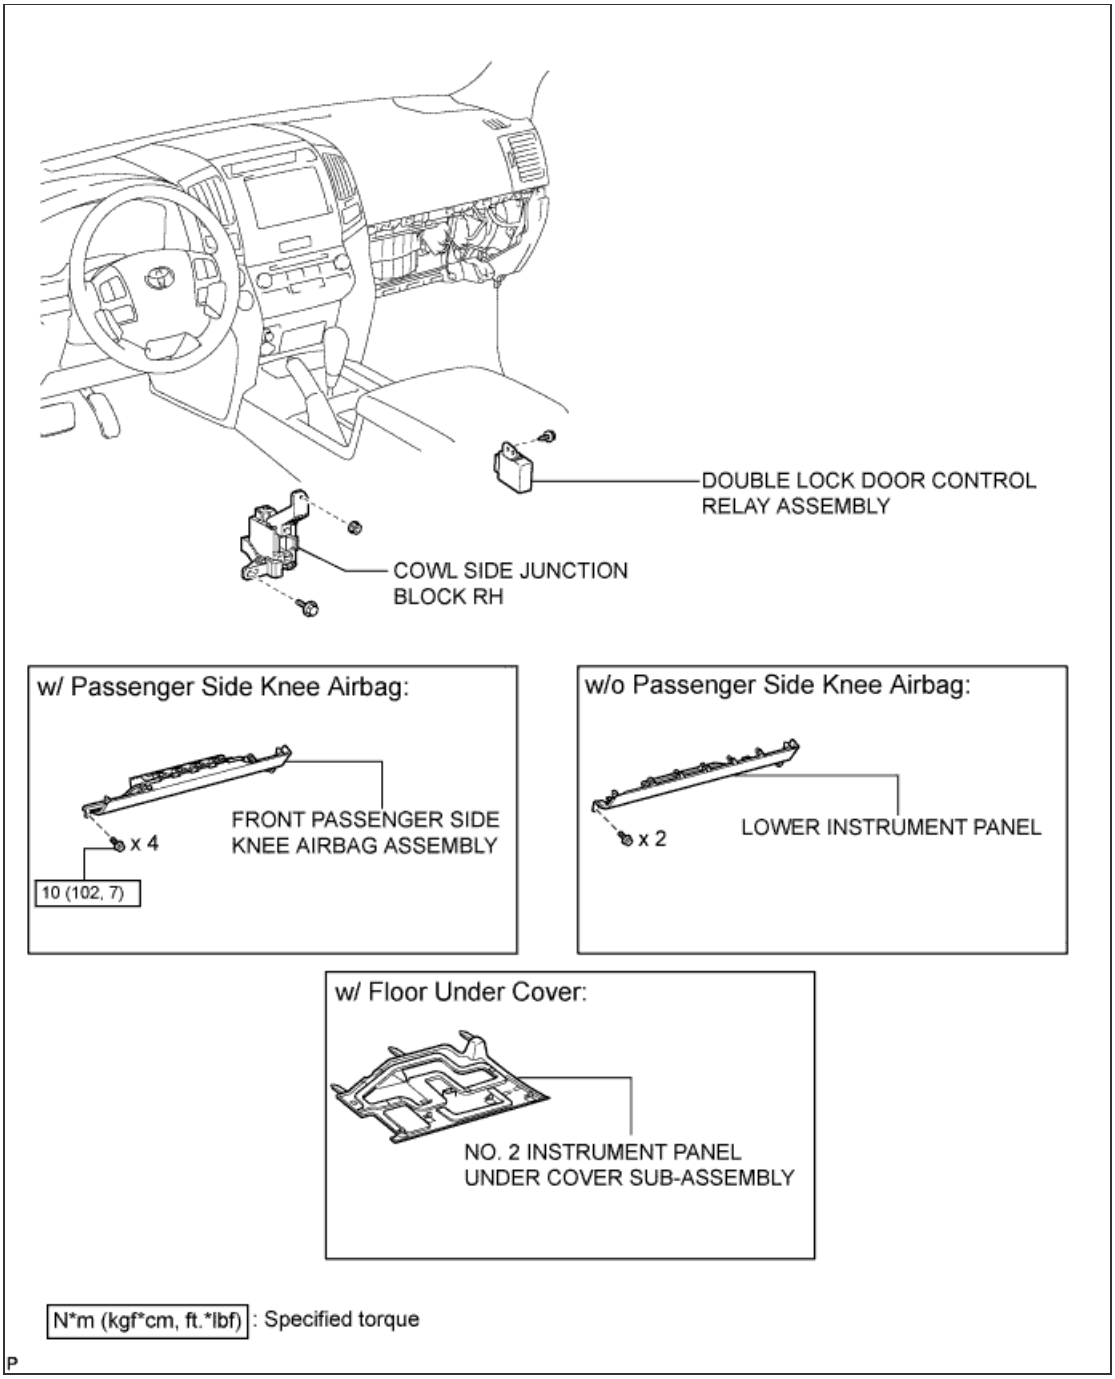
Use the same procedures described for the LH side.



6. INSTALL REAR FENDER SPLASH SHIELD SUB-ASSEMBLY LH



a. Push in the clip indicated by the arrow in the illustration to install the fender splash shield.

b. Install the 3 bolts and screw.

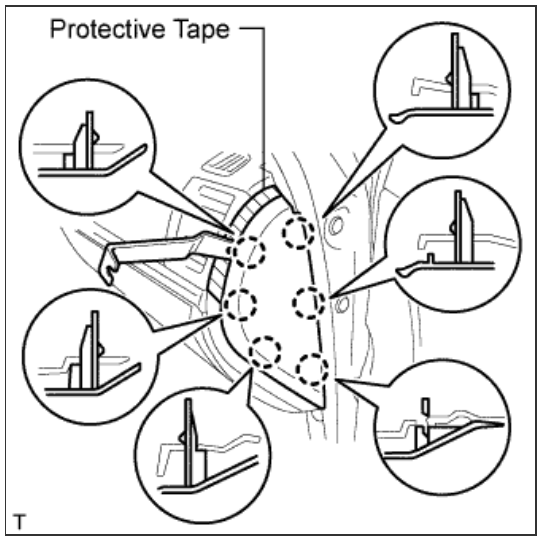
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.



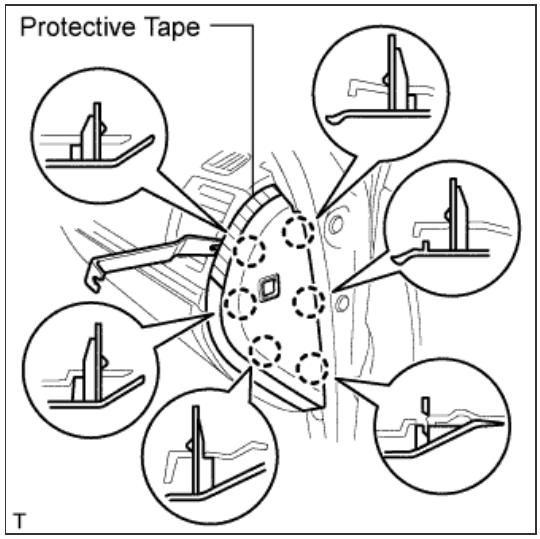
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE INSTRUMENT SIDE PANEL RH (w/o Airbag Cut Off Switch)

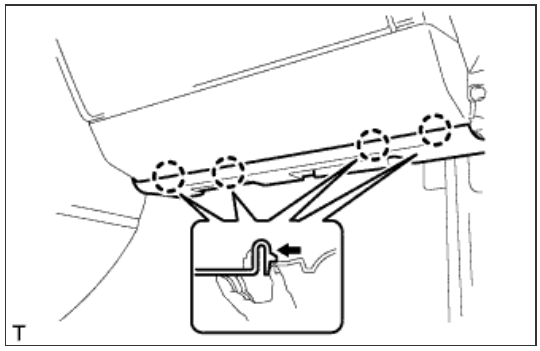
a. Place protective tape as shown in the ill stration.

b. sing a mo ding remover, detach the claws and remove the side panel.



3. REMOVE INSTRUMENT SIDE PANEL RH (w/ Airbag Cut Off Switch)

a. Place protective tape as shown in the ill stration.



b. sing a mo ding remover, detach the claws.

c. Remove the side panel and disconnect the connector.

4. REMOVE NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Floor Under Cover)

a. etach the claws and remove the nder cover.

5. REMOVE FRONT DOOR SCUFF PLATE RH

HINT:

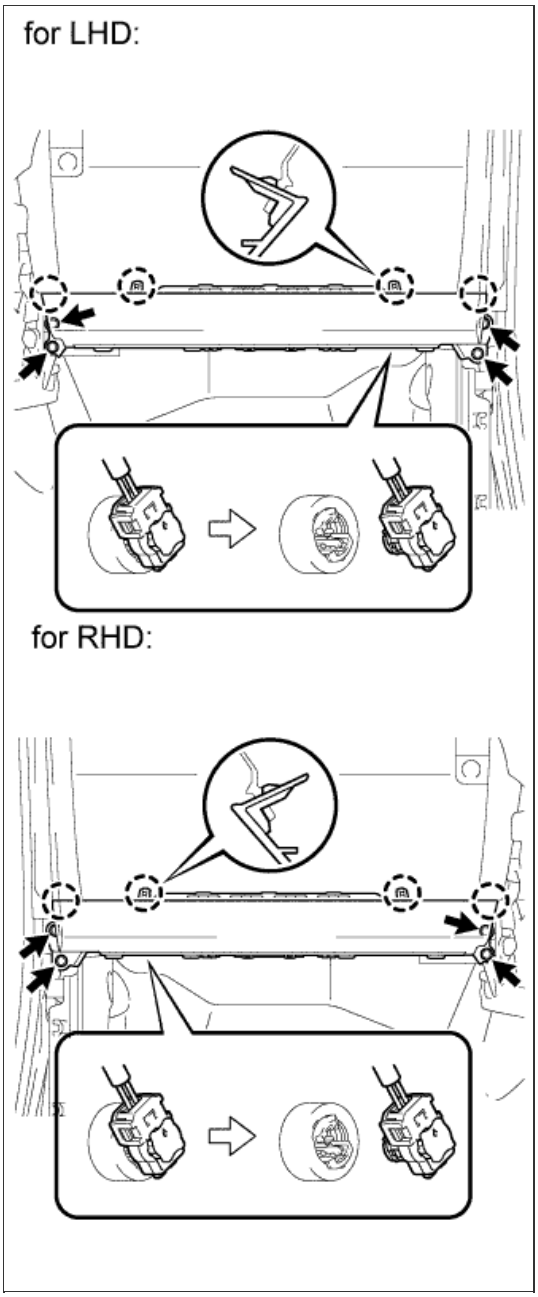
se the same proced res described for the L side.

6. REMOVE FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (w/ Passenger Side Knee Airbag)

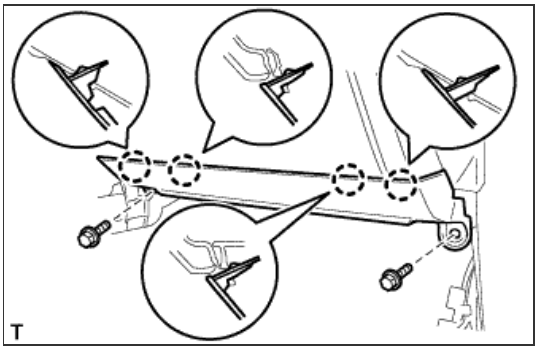


a. Remove the bolts.

b. etach the claws and remove the front passenger side knee airbag.

c. isconnect the connector.

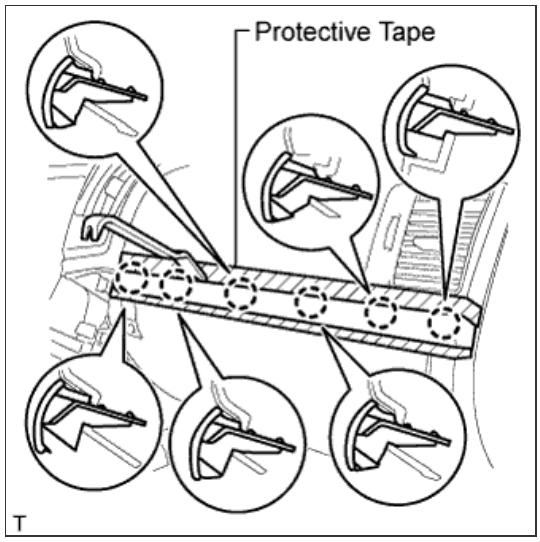
NOTICE:



When handling the airbag connector, take care not to damage the airbag wire harness.

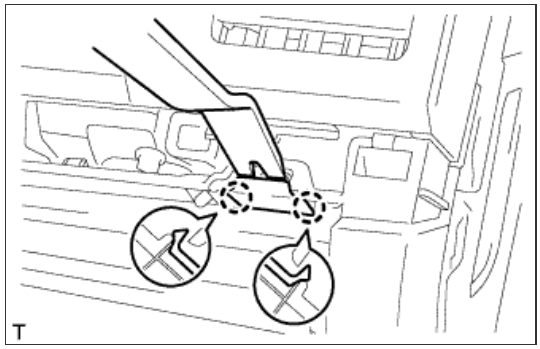
7. REMOVE LOWER INSTRUMENT PANEL (w/o Passenger Side Knee Airbag)

a. Remove the bolts.



b. etach the claws and remove the instr ment panel.

8. REMOVE NO. 3 INSTRUMENT CLUSTER FINISH PANEL GARNISH

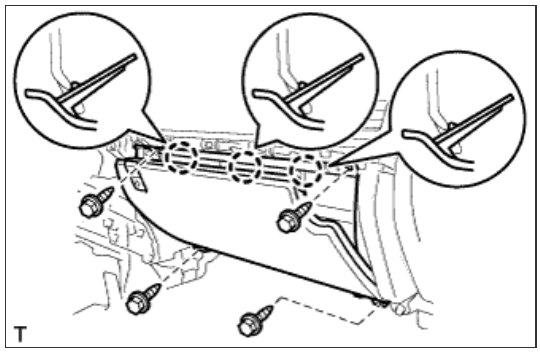


a. Place protective tape as shown in the ill stration.

b. sing a mo ding remover, detach the claws and remove the panel garnish.

9. REMOVE INSTRUMENT PANEL BOX DOOR KNOB

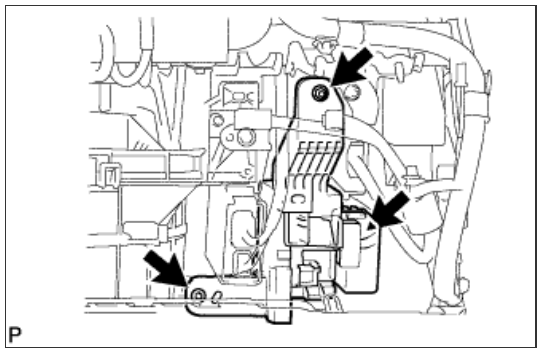
a. sing a mo ding remover, detach the claws and remove the knob.



10. REMOVE LOWER NO. 2 INSTRUMENT PANEL FINISH PANEL

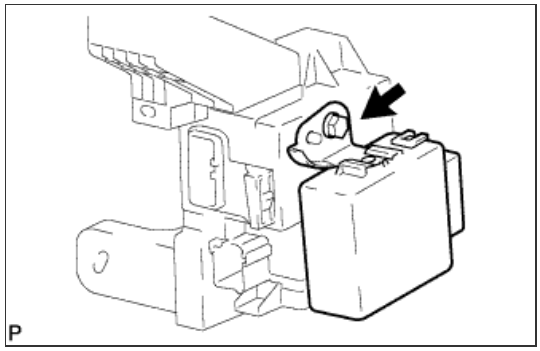
a. Remove the bolts.

b. etach the claws.



c. Remove the finish panel and then disconnect the connector.

11. REMOVE COWL SIDE JUNCTION BLOCK RH



a. Remove the bolt and n .t

b. isconnect the connector and remove the cowl side j nction block R .

12. REMOVE DOUBLE LOCK DOOR CONTROL RELAY ASSEMBLY

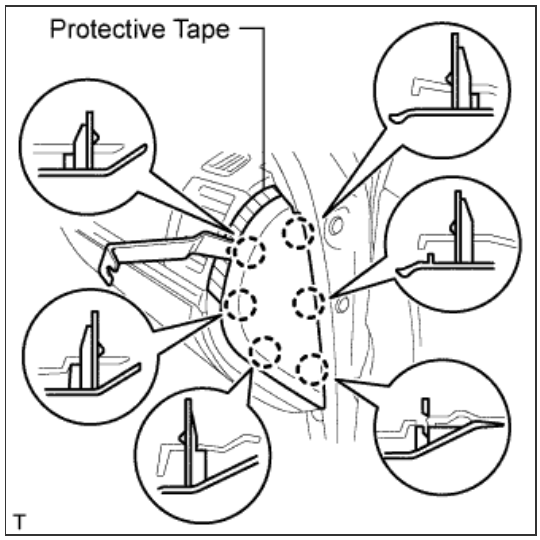
a. Remove the screw and do ble lock door control relay assembly.

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.



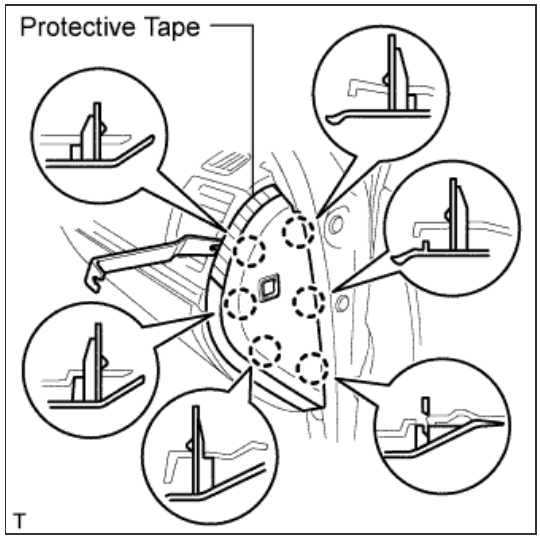
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE INSTRUMENT SIDE PANEL RH (w/o Airbag Cut Off Switch)

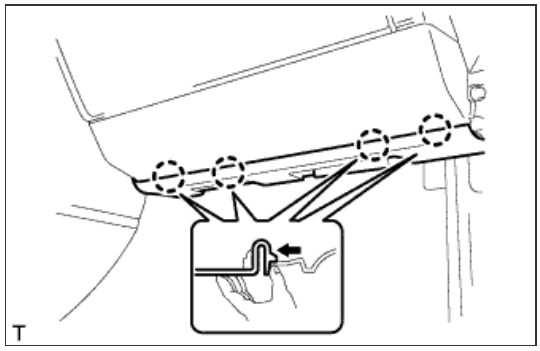
a. Place protective tape as shown in the ill stration.

b. sing a mo ding remover, detach the claws and remove the side panel.



3. REMOVE INSTRUMENT SIDE PANEL RH (w/ Airbag Cut Off Switch)

a. Place protective tape as shown in the ill stration.



b. sing a mo ding remover, detach the claws.

c. Remove the side panel and disconnect the connector.

4. REMOVE NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Floor Under Cover)

a. etach the claws and remove the nder cover.

5. REMOVE FRONT DOOR SCUFF PLATE RH

HINT:

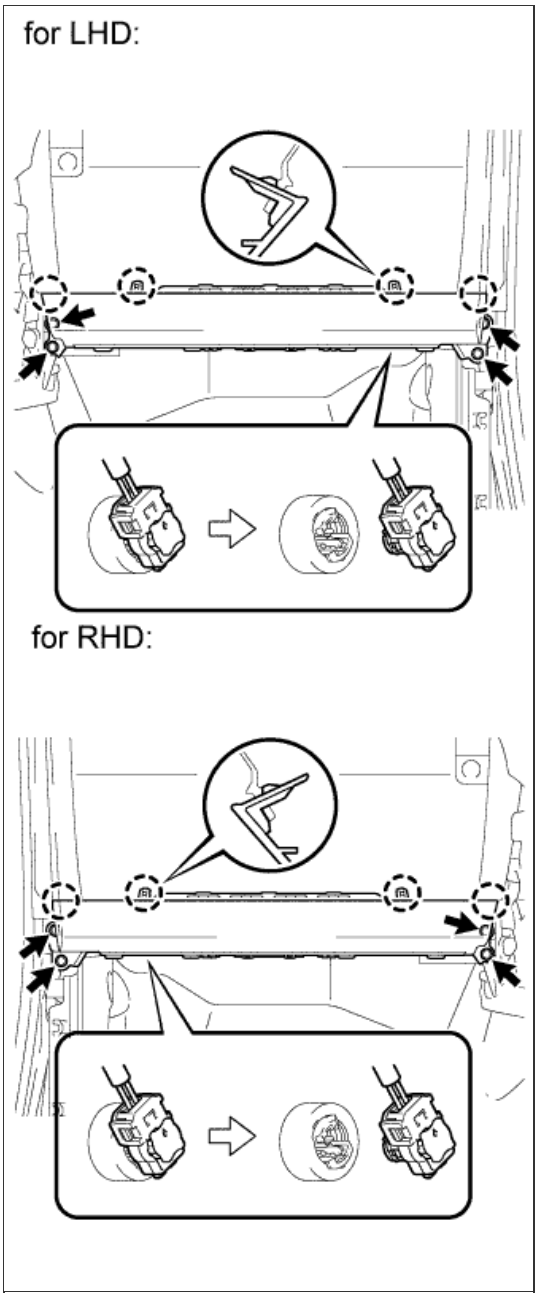
se the same proced res described for the L side.

6. REMOVE FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (w/ Passenger Side Knee Airbag)

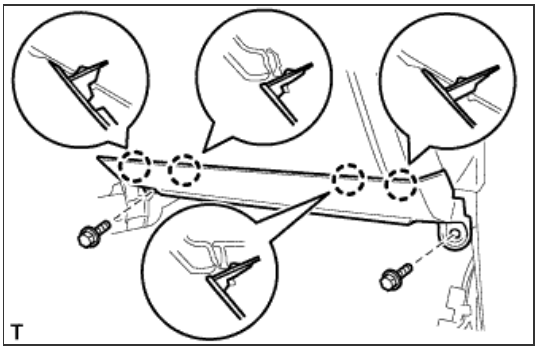


a. Remove the bolts.

b. etach the claws and remove the front passenger side knee airbag.

c. isconnect the connector.

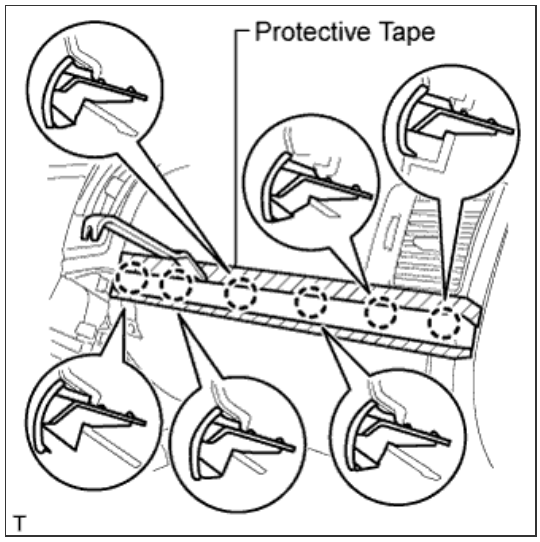
NOTICE:



When handling the airbag connector, take care not to damage the airbag wire harness.

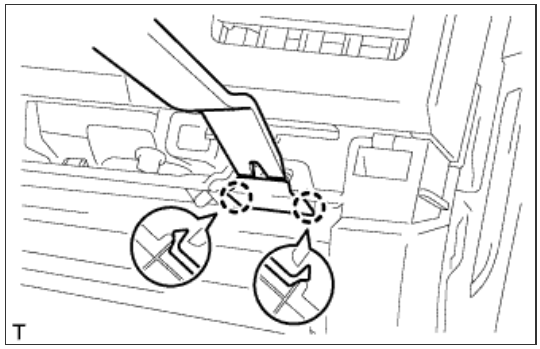
7. REMOVE LOWER INSTRUMENT PANEL (w/o Passenger Side Knee Airbag)

a. Remove the bolts.



b. etach the claws and remove the instr ment panel.

8. REMOVE NO. 3 INSTRUMENT CLUSTER FINISH PANEL GARNISH

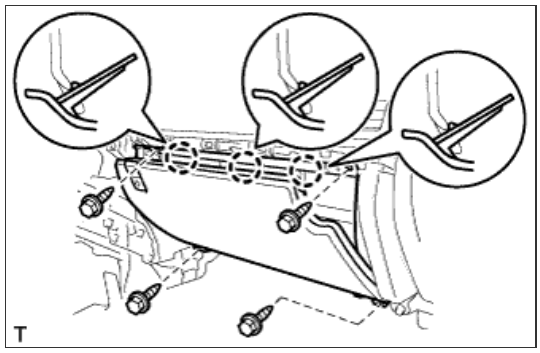


a. Place protective tape as shown in the ill stration.

b. sing a mo ding remover, detach the claws and remove the panel garnish.

9. REMOVE INSTRUMENT PANEL BOX DOOR KNOB

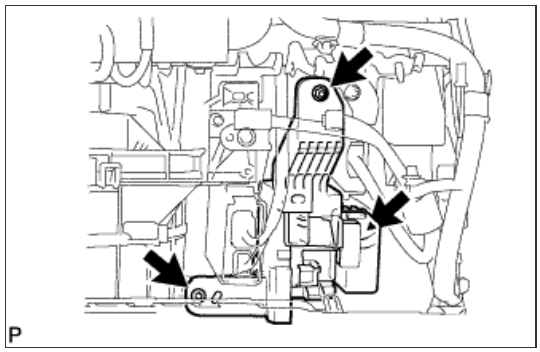
a. sing a mo ding remover, detach the claws and remove the knob.



10. REMOVE LOWER NO. 2 INSTRUMENT PANEL FINISH PANEL

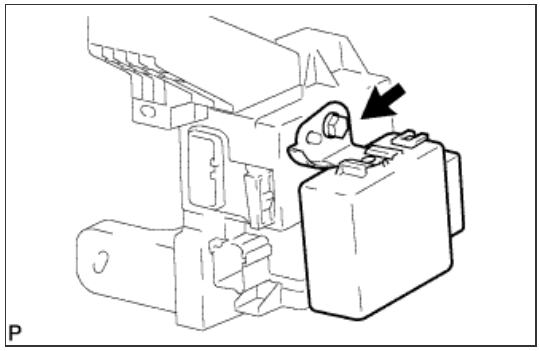
a. Remove the bolts.

b. etach the claws.



c. Remove the finish panel and then disconnect the connector.

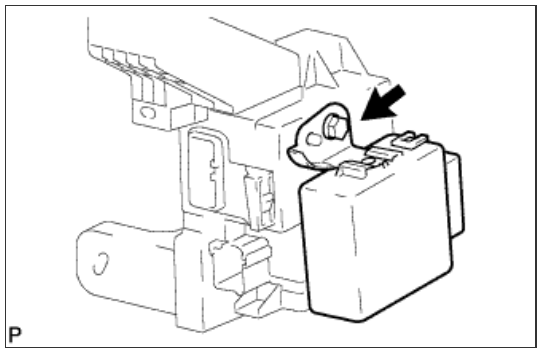
11. REMOVE COWL SIDE JUNCTION BLOCK RH



a. Remove the bolt and n .t

b. isconnect the connector and remove the cowl side j nction block R .

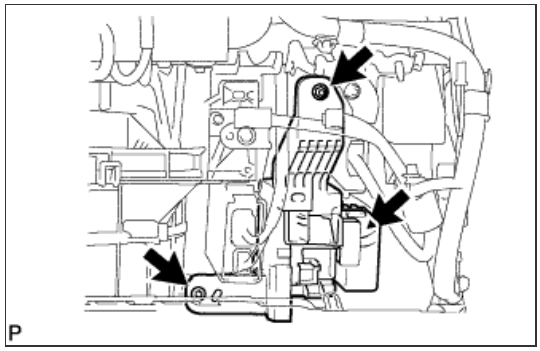
12. REMOVE DOUBLE LOCK DOOR CONTROL RELAY ASSEMBLY



a. Remove the screw and do ble lock door control relay assembly.

for Preparation Click here

1. INSTALL DOUBLE LOCK DOOR CONTROL RELAY ASSEMBLY

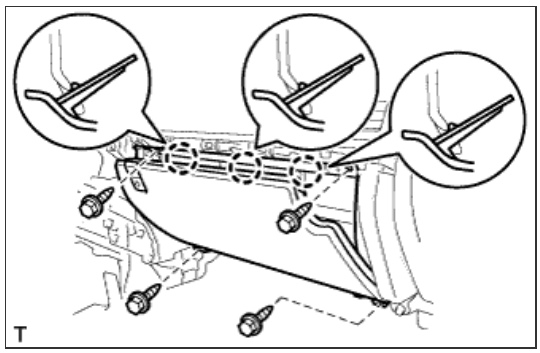


a. Install the double door lock control relay assembly with the screw.

2. INSTALL COWL SIDE JUNCTION BLOCK RH

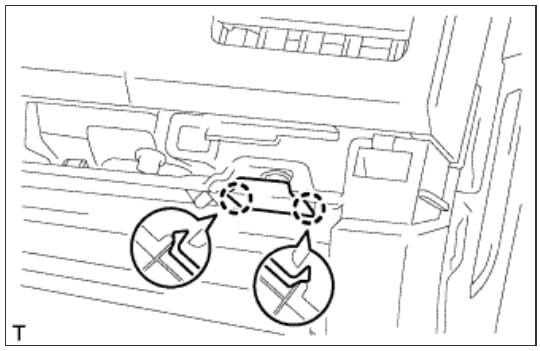
a. Install the cowl side junction block RH with the bolt and nut.

b. Connect the connector.



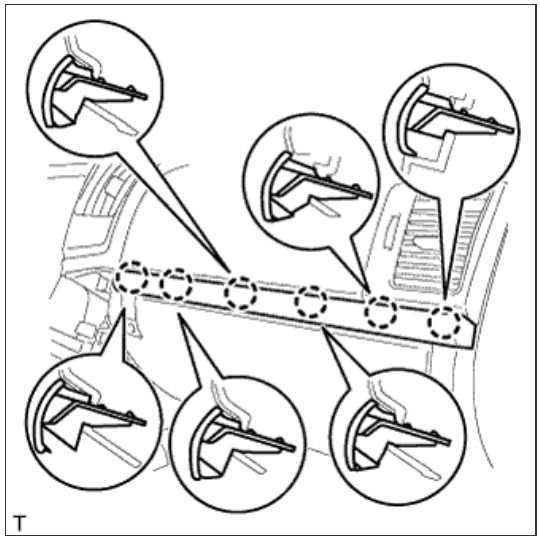
3. INSTALL LOWER NO. 2 INSTRUMENT PANEL FINISH PANEL

a. Connect the connector.



b. Attach the 3 claws to install the finish panel.

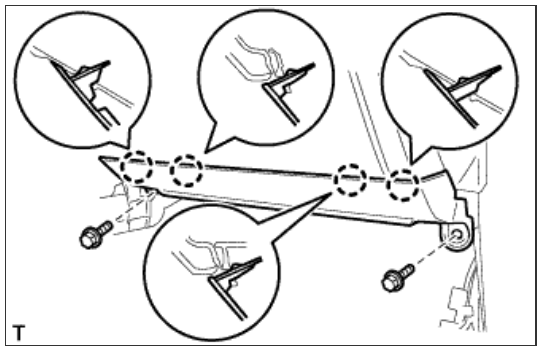
c. Install the 4 bolts.



4. INSTALL INSTRUMENT PANEL BOX DOOR KNOB

a. Attach the 2 claws to install the knob.

5. INSTALL NO. 3 INSTRUMENT CLUSTER FINISH PANEL GARNISH



a. Attach the 6 claws to install the panel garnish.

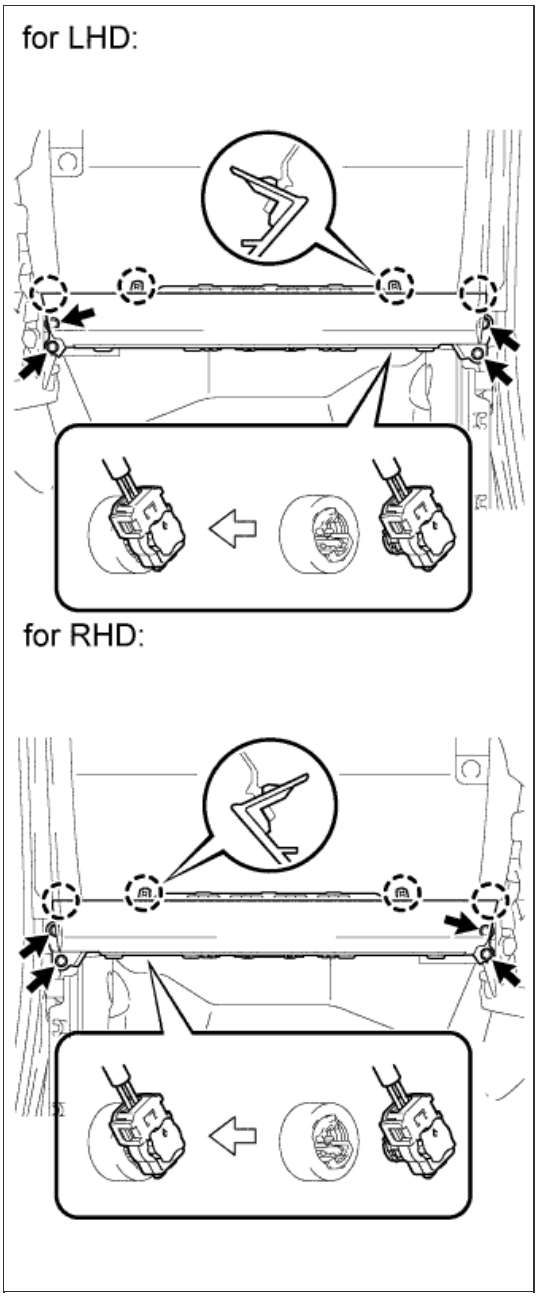
6. INSTALL LOWER INSTRUMENT PANEL (w/o Passenger Side Knee Airbag)

a. Attach the 4 claws to install the instrument panel.

b. Install the 2 bolts.

7. INSTALL FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (w/ Passenger Side Knee Airbag)

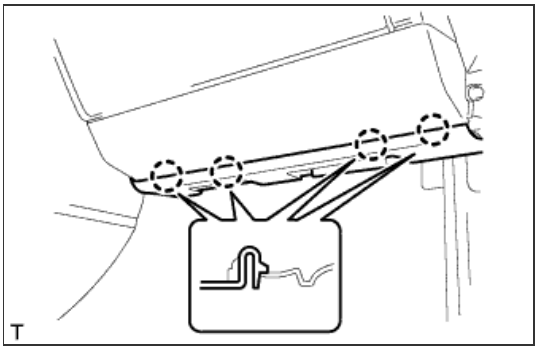
a. Connect the connector.



NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

b. Attach the 4 claws to install the front passenger side knee airbag.



c. Install the 4 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

8. INSTALL NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Floor Under Cover)

a. Attach the 4 claws to install the under cover.

9. INSTALL FRONT DOOR SCUFF PLATE RH

HINT:

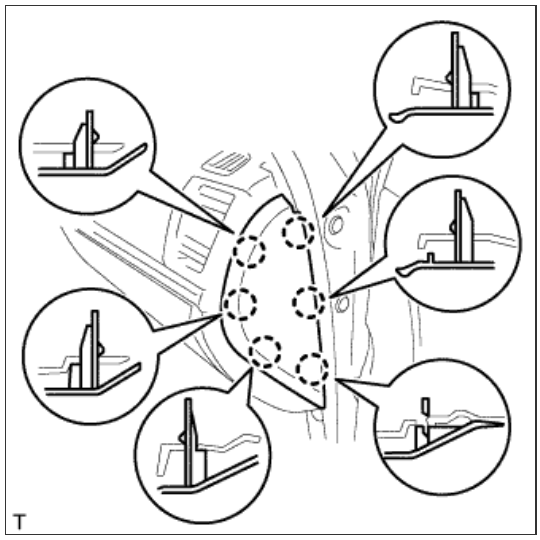
Use the same procedures described for the LH side.

10. INSTALL INSTRUMENT SIDE PANEL RH (w/ Airbag Cut Off Switch)



a. Connect the connector.

b. Attach the 6 claws to install the side panel.

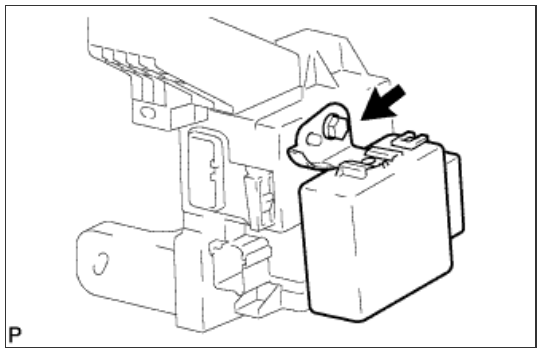
11. INSTALL INSTRUMENT SIDE PANEL RH (w/o Airbag Cut Off Switch)

a. Attach the 6 claws to install the side panel.

12. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

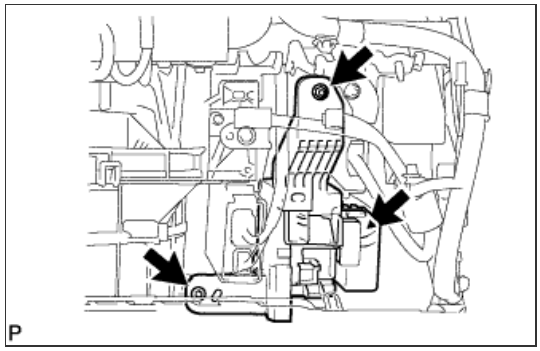


13. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).

for Preparation Click here

1. INSTALL DOUBLE LOCK DOOR CONTROL RELAY ASSEMBLY

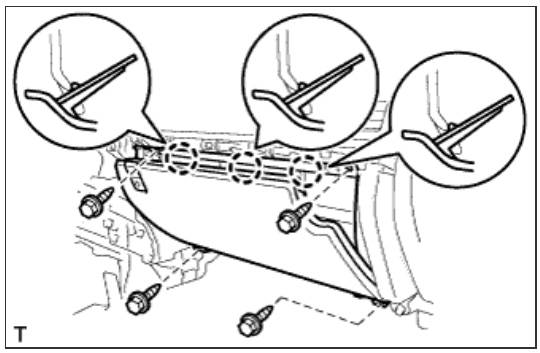


a. Install the double door lock control relay assembly with the screw.

2. INSTALL COWL SIDE JUNCTION BLOCK RH

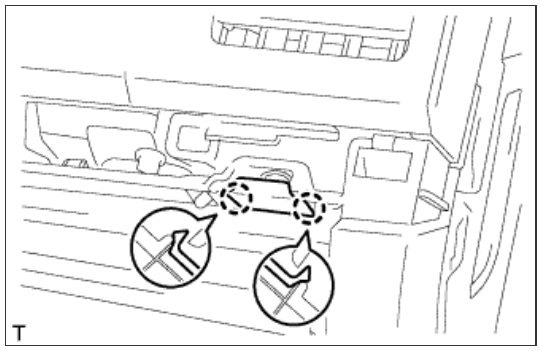
a. Install the cowl side junction block RH with the bolt and nut.

b. Connect the connector.



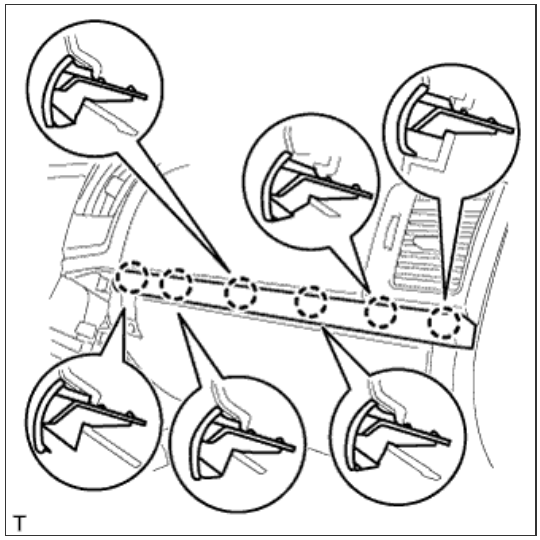
3. INSTALL LOWER NO. 2 INSTRUMENT PANEL FINISH PANEL

a. Connect the connector.



b. Attach the 3 claws to install the finish panel.

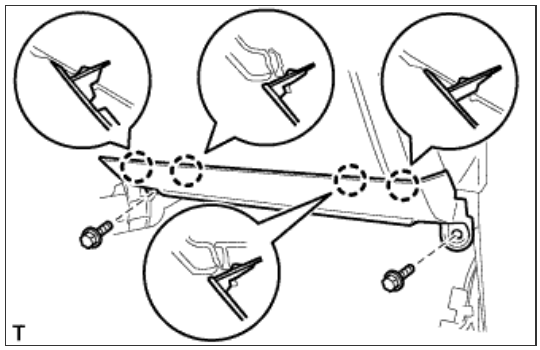
c. Install the 4 bolts.



4. INSTALL INSTRUMENT PANEL BOX DOOR KNOB

a. Attach the 2 claws to install the knob.

5. INSTALL NO. 3 INSTRUMENT CLUSTER FINISH PANEL GARNISH



a. Attach the 6 claws to install the panel garnish.

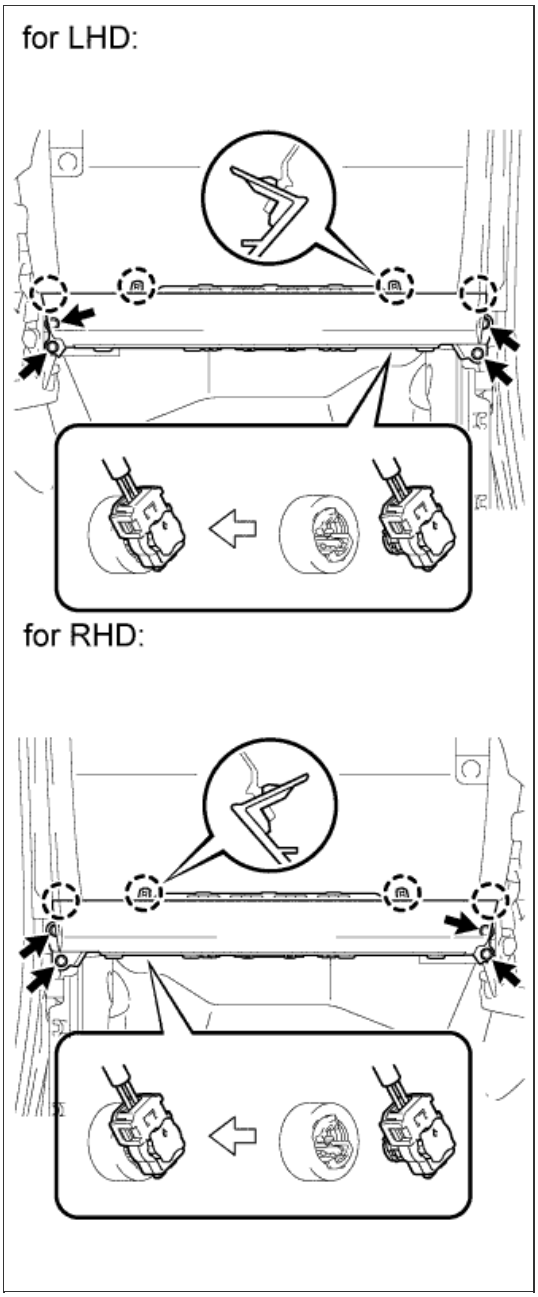
6. INSTALL LOWER INSTRUMENT PANEL (w/o Passenger Side Knee Airbag)

a. Attach the 4 claws to install the instrument panel.

b. Install the 2 bolts.

7. INSTALL FRONT PASSENGER SIDE KNEE AIRBAG ASSEMBLY (w/ Passenger Side Knee Airbag)

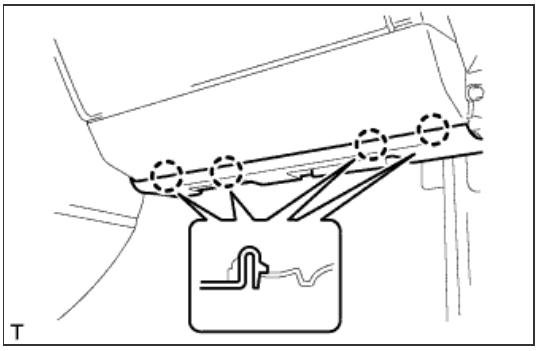
a. Connect the connector.



NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

b. Attach the 4 claws to install the front passenger side knee airbag.



c. Install the 4 bolts.

Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

8. INSTALL NO. 2 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Floor Under Cover)

a. Attach the 4 claws to install the under cover.

9. INSTALL FRONT DOOR SCUFF PLATE RH

HINT:

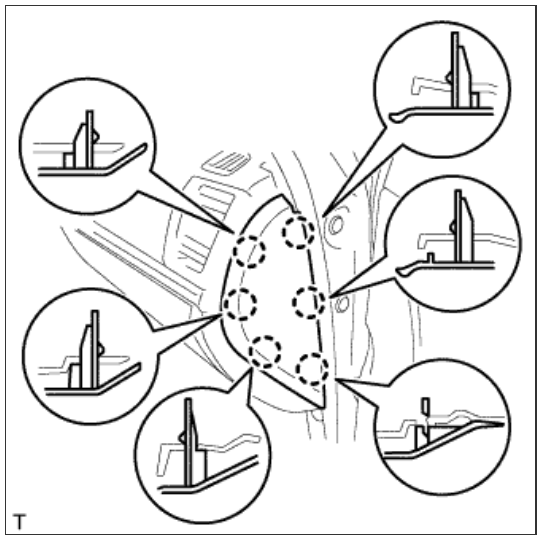
Use the same procedures described for the LH side.

10. INSTALL INSTRUMENT SIDE PANEL RH (w/ Airbag Cut Off Switch)



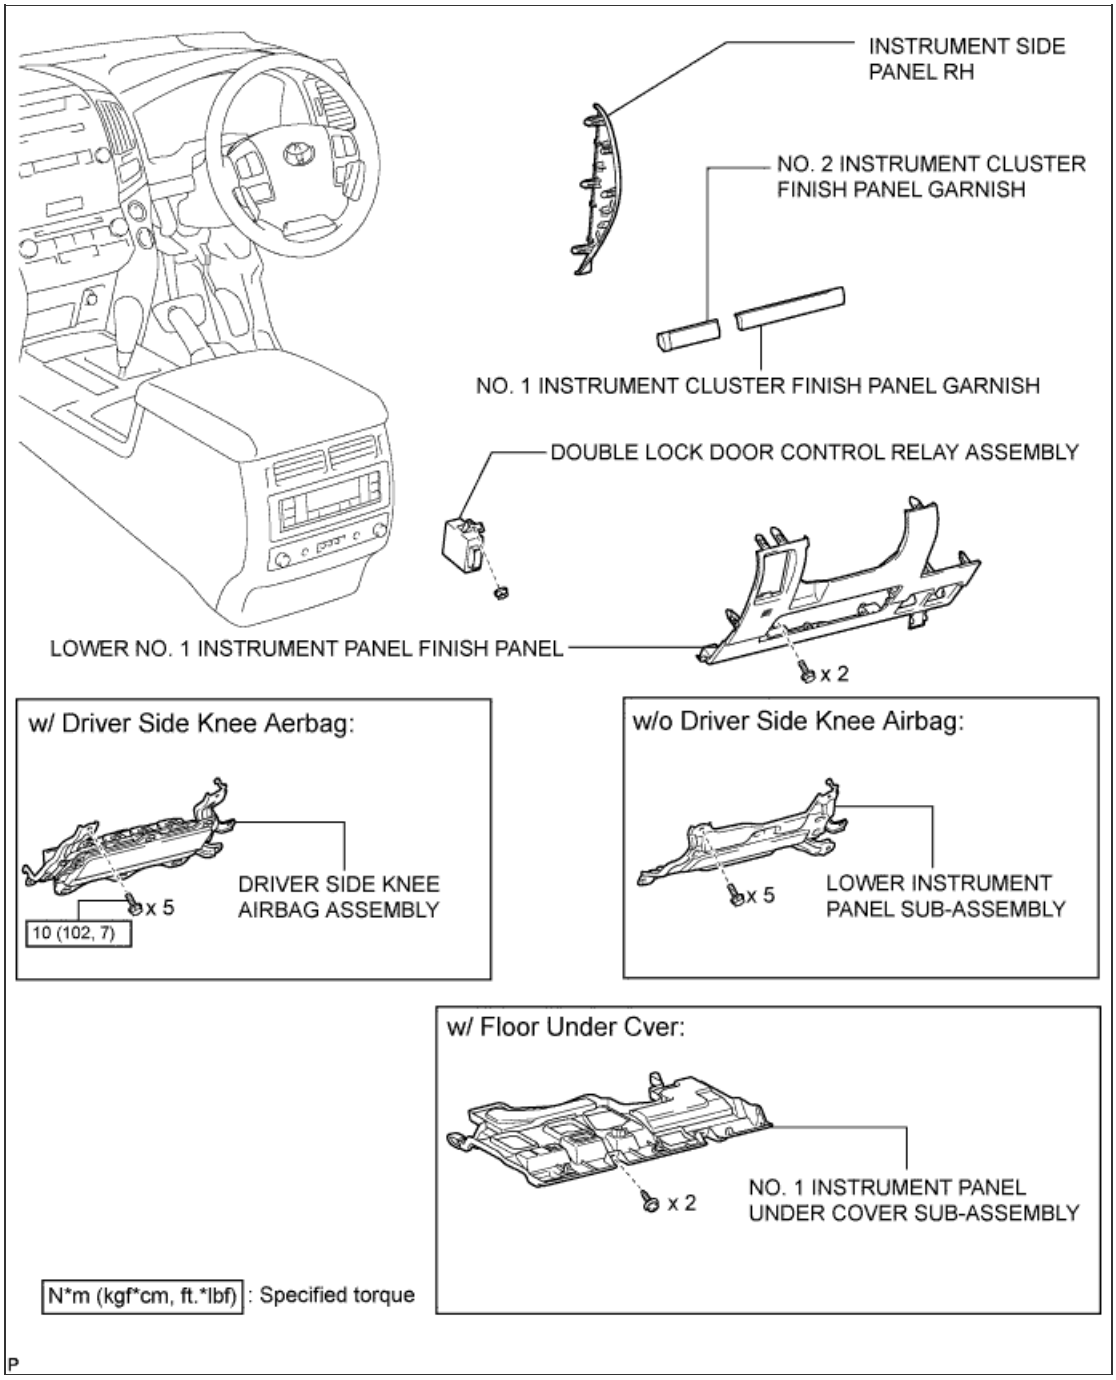
a. Connect the connector.

b. Attach the 6 claws to install the side panel.

11. INSTALL INSTRUMENT SIDE PANEL RH (w/o Airbag Cut Off Switch)

a. Attach the 6 claws to install the side panel.

12. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

13. CHECK SRS WARNING LIGHT

a. Check the SRS warning light (Click here).

for Preparation Click here

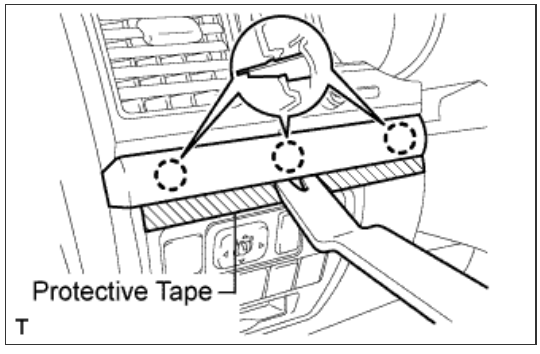
2. REMOVE INSTRUMENT SIDE PANEL RH

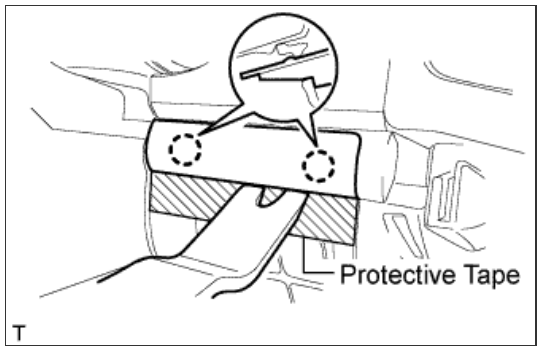
a. Place protective tape as shown in the ill stration.



b. Using a mo ding remover, detach the claws and remove the side panel.

3. REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Place protective tape as shown in the ill stration.

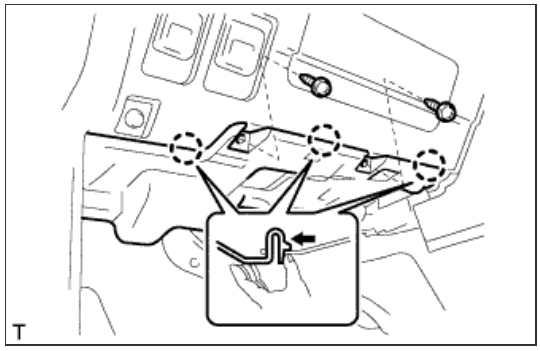


b. Using a mo ding remover, detach the 3 claws and remove the panel garnish.

4. REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Place protective tape as shown in the ill stration.

b. Using a mo ding remover, detach the 2 claws and remove the panel garnish.

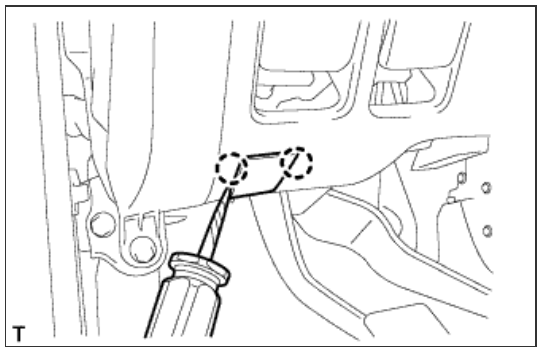


5. REMOVE NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Floor Under Cover)

a. Remove the 2 screws.

b. Detach the 3 claws.

c. Remove the nder cover and disconnect the connectors.



6. REMOVE LOWER NO. 1 INSTRUMENT PANEL FINISH PANEL

a. Using a screwdriver, detach the 2 claws.

HINT:

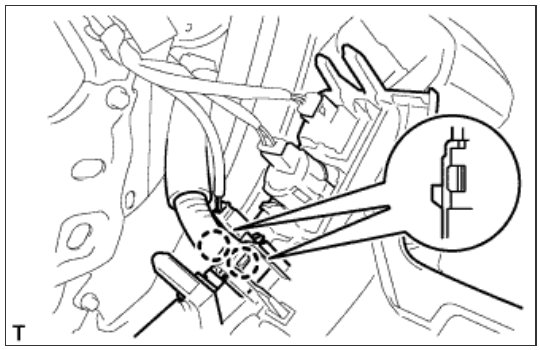
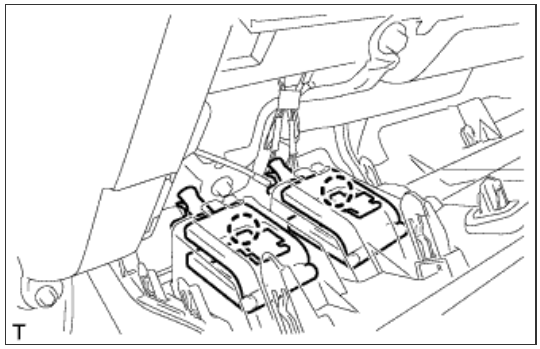
ape the screwdriver tip before se.

b. Open the hole cover.



c. Remove the 2 bolts.

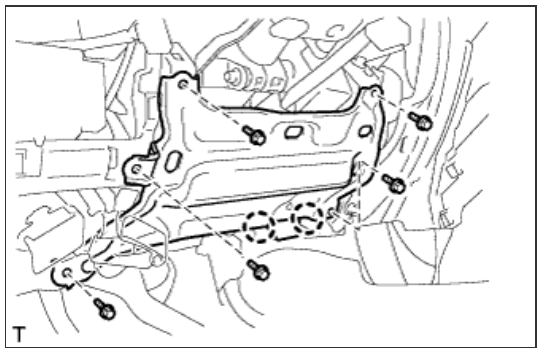
d. Detach the 14 claws.



e. Detach the 2 claws and remove the sensor.

e. Detach the 2 claws and remove the sensor.

f. Detach the 2 claws and disconnect the 2 control cables.

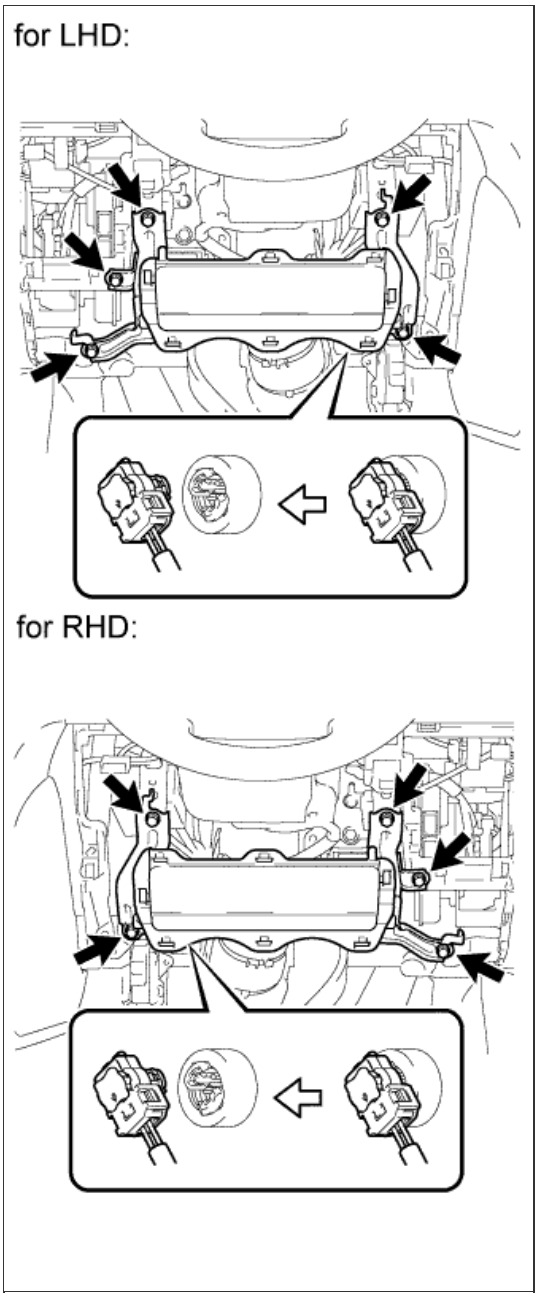


g. Remove the finish panel and then disconnect the connectors.

7. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (w/o Driver Side Knee Airbag)

a. Detach the 2 claws and disconnect the DLC3.

b. Remove the bolts and instr ment panel.

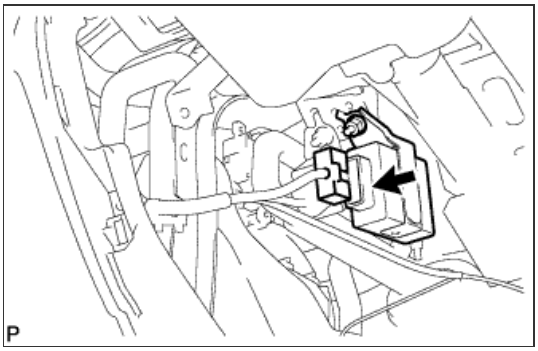


8. REMOVE DRIVER SIDE KNEE AIRBAG ASSEMBLY (w/ Driver Side Knee Airbag)

a. Remove the bolts and driver side knee airbag.

b. Disconnect the connector.

NOTICE:



When handling the airbag connector, take care not to damage the airbag wire harness.

9. REMOVE DOUBLE LOCK DOOR CONTROL RELAY ASSEMBLY

a. Disconnect the connector.

b. Remove the n and do ble lock door control relay assembly.

for Preparation Click here

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

a. Place protective tape as shown in the ill stration.

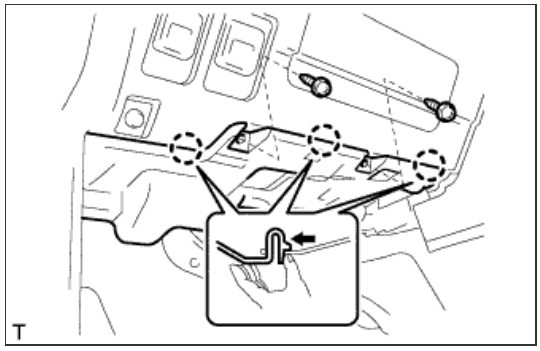
b. Using a mo ding remover, detach the 3 claws and remove the panel garnish.

4. REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Place protective tape as shown in the ill stration.

b. Using a mo ding remover, detach the 2 claws and remove the panel garnish.

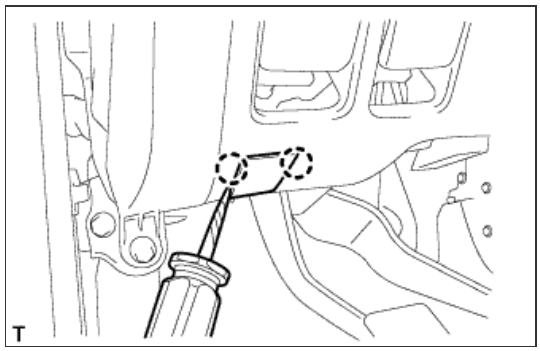


5. REMOVE NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Floor Under Cover)

a. Remove the 2 screws.

b. Detach the 3 claws.

c. Remove the nder cover and disconnect the connectors.



6. REMOVE LOWER NO. 1 INSTRUMENT PANEL FINISH PANEL

a. Using a screwdriver, detach the 2 claws.

HINT:

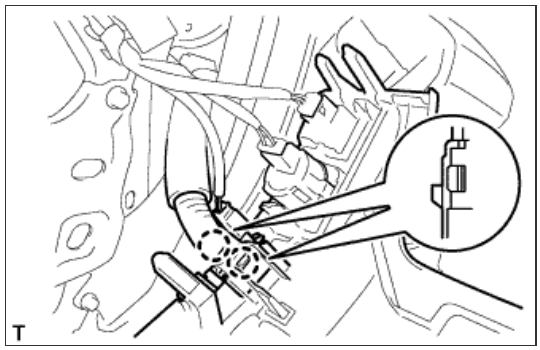
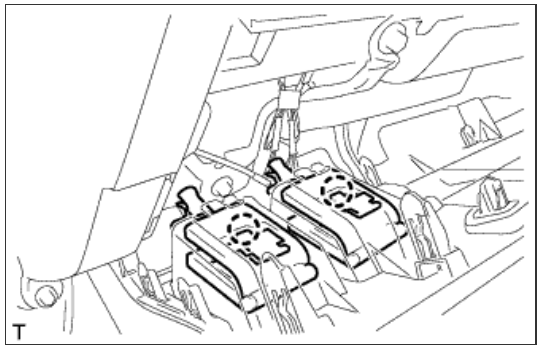
ape the screwdriver tip before se.

b. Open the hole cover.



c. Remove the 2 bolts.

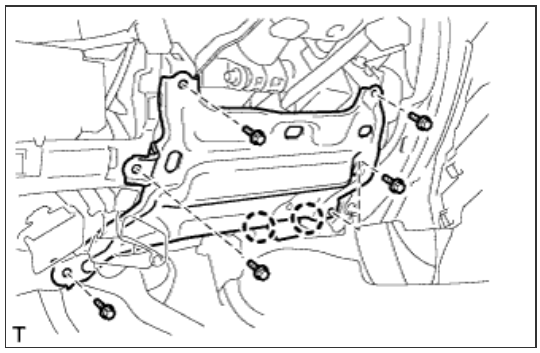
d. Detach the 14 claws.



e. Detach the 2 claws and remove the sensor.

e. Detach the 2 claws and remove the sensor.

f. Detach the 2 claws and disconnect the 2 control cables.

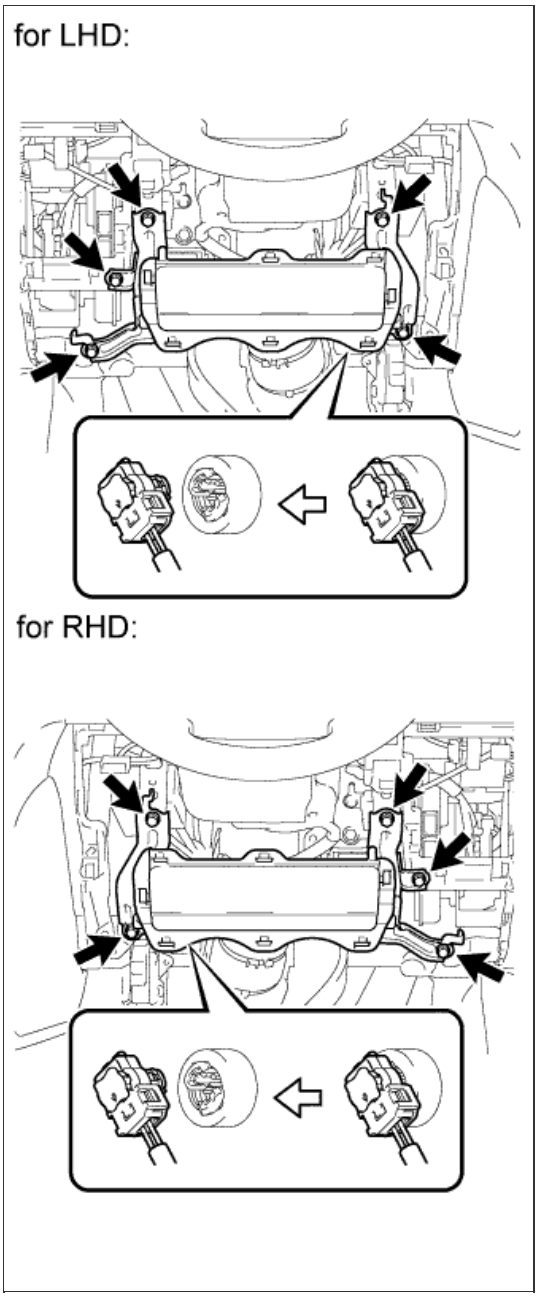


g. Remove the finish panel and then disconnect the connectors.

7. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (w/o Driver Side Knee Airbag)

a. Detach the 2 claws and disconnect the DLC3.

b. Remove the bolts and instr ment panel.

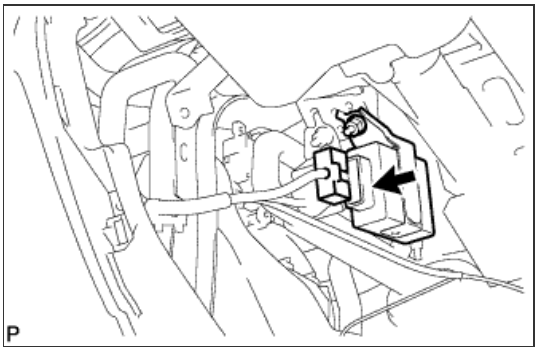


8. REMOVE DRIVER SIDE KNEE AIRBAG ASSEMBLY (w/ Driver Side Knee Airbag)

a. Remove the bolts and driver side knee airbag.

b. Disconnect the connector.

NOTICE:

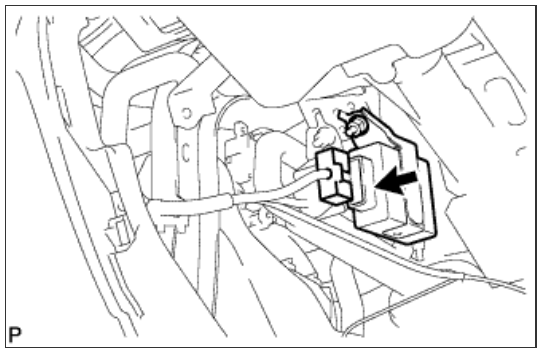


When handling the airbag connector, take care not to damage the airbag wire harness.

9. REMOVE DOUBLE LOCK DOOR CONTROL RELAY ASSEMBLY

a. Disconnect the connector.

b. Remove the n and do ble lock door control relay assembly.



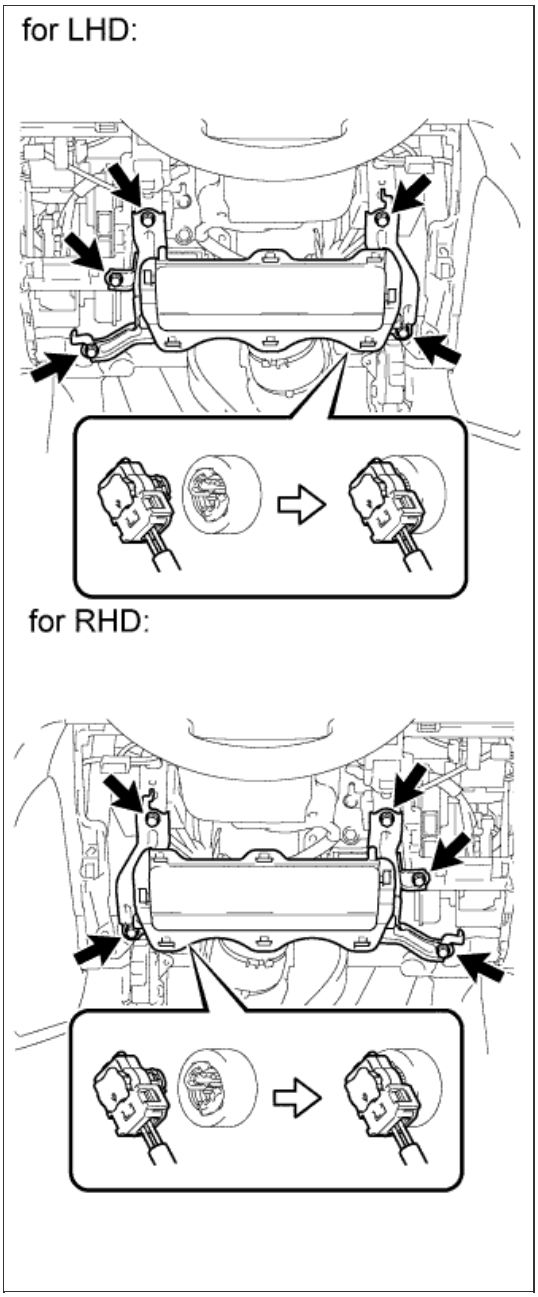
for Preparation Click here

1. INSTALL DOUBLE LOCK DOOR CONTROL RELAY ASSEMBLY

a. Install the double lock door control relay assembly with the nut.

b. Connect the connector.

2. INSTALL DRIVER SIDE KNEE AIRBAG ASSEMBLY (w/ Driver Side Knee Airbag)

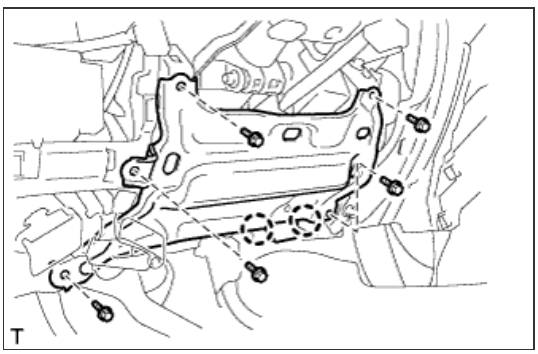


a. Connect the connector.

NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

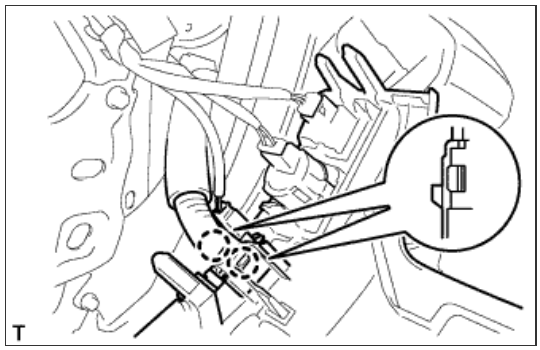
b. Install the driver side knee airbag with the 5 bolts.



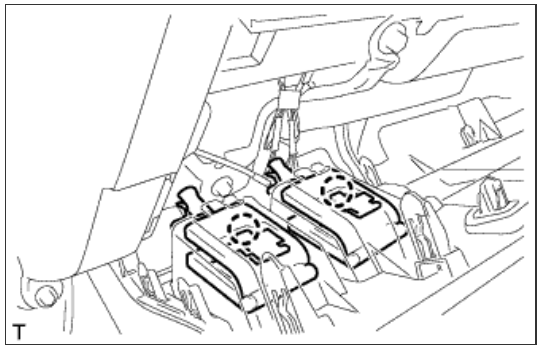
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

3. INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (w/o Driver Side Knee Airbag)

a. Attach the 4 claws and connect the DLC3.



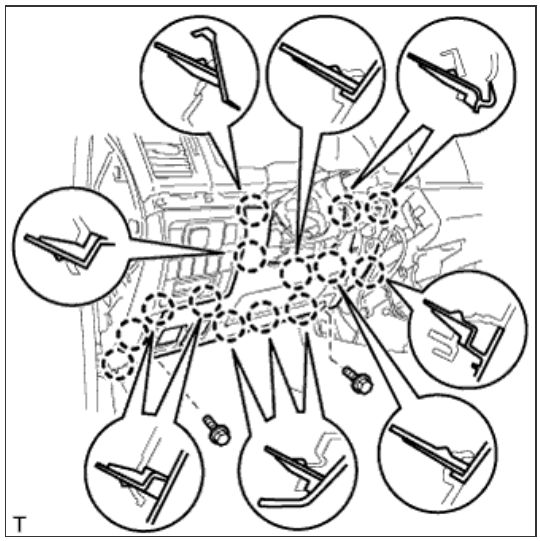
b. Install the instrument panel with the 5 bolts.



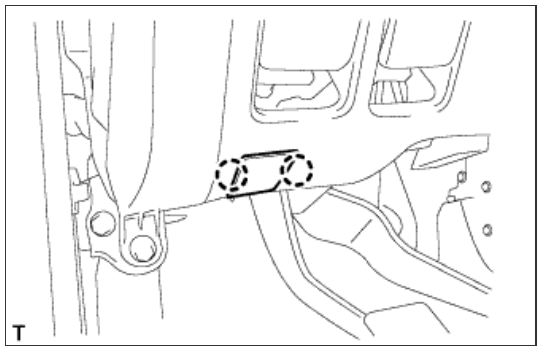
4. INSTALL LOWER NO. 1 INSTRUMENT PANEL FINISH PANEL

a. Connect the connectors.

b. Attach the 2 claws to install the sensor.



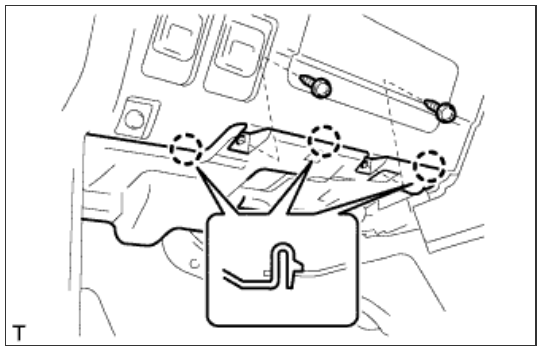
c. Attach the 2 claws to connect the 2 control cables.



d. Attach the 14 claws to install the finish panel.

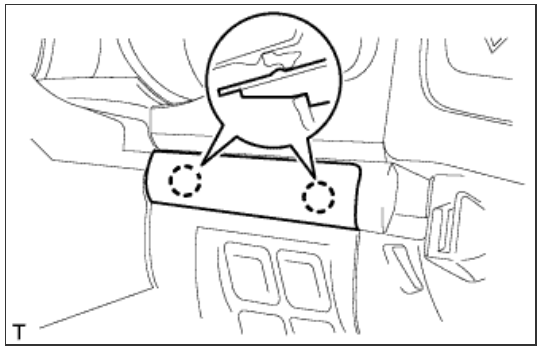
e. Install the 2 bolts.

f. Attach the 2 claws to close the hole cover.



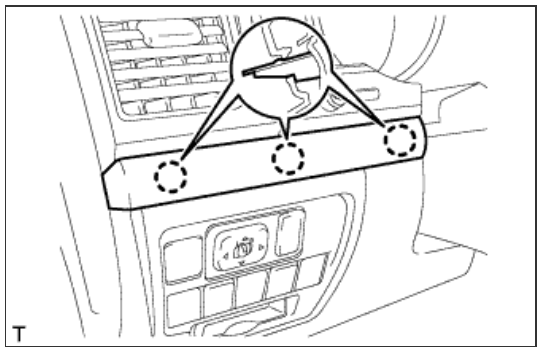
5. INSTALL NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Floor Under Cover)

a. Connect the connectors.



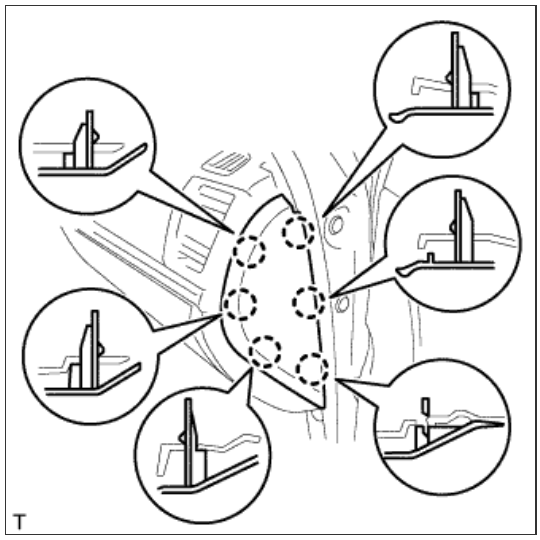
b. Attach the 3 claws to install the under cover.

c. Install the 2 screws.



6. INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Attach the 2 claws to install the panel garnish.



7. INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Attach the 3 claws to install the panel garnish.

8. INSTALL INSTRUMENT SIDE PANEL RH

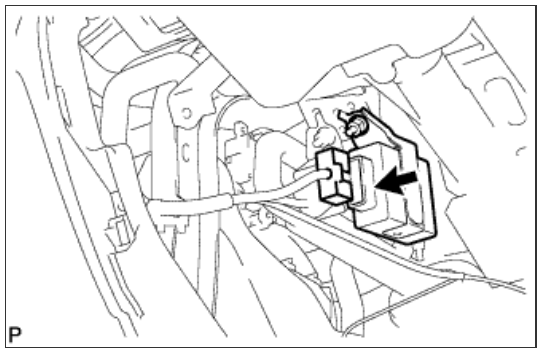
a. Attach the 6 claws to install the side panel.

9. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

10. CHECK SRS WARNING LIGHT



a. Check the SRS warning light (Click here).

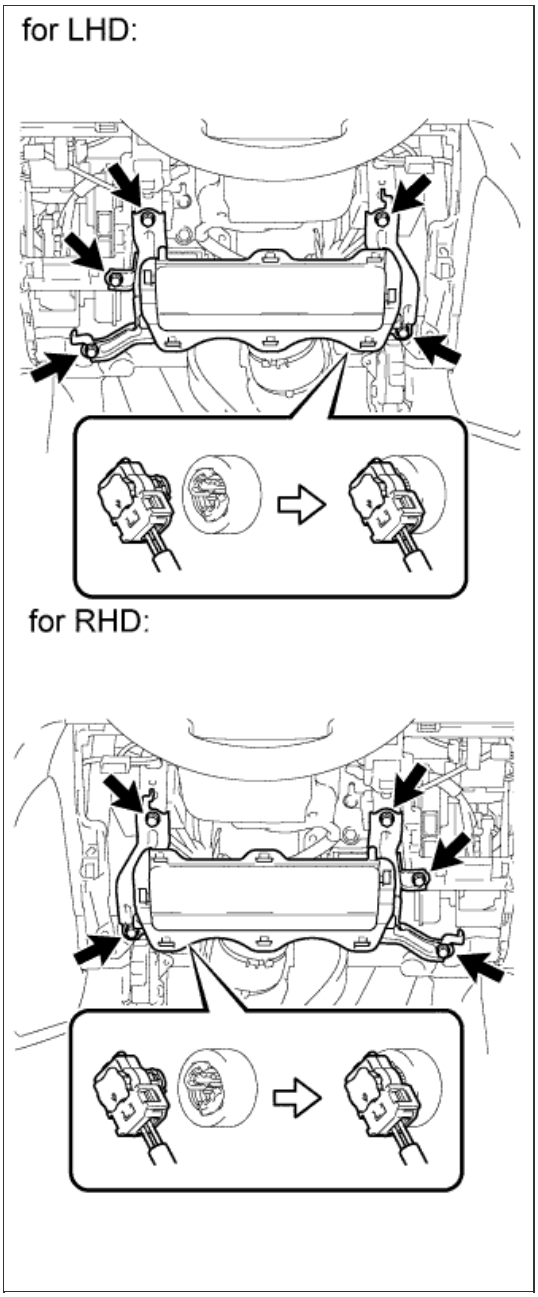
for Preparation Click here

1. INSTALL DOUBLE LOCK DOOR CONTROL RELAY ASSEMBLY

a. Install the double lock door control relay assembly with the nut.

b. Connect the connector.

2. INSTALL DRIVER SIDE KNEE AIRBAG ASSEMBLY (w/ Driver Side Knee Airbag)

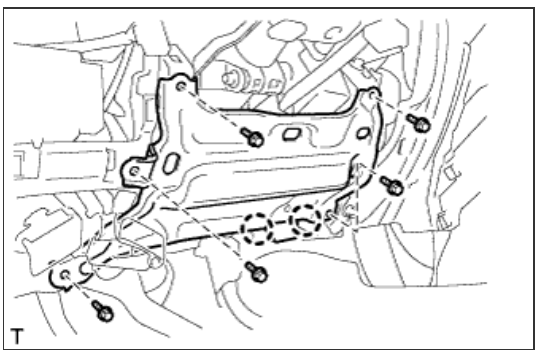


a. Connect the connector.

NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

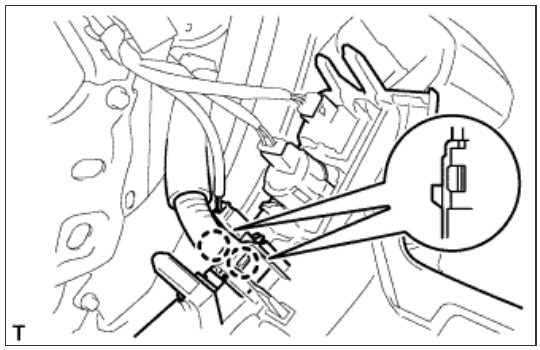
b. Install the driver side knee airbag with the 5 bolts.



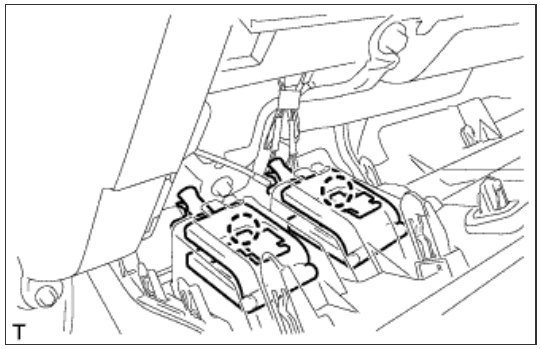
Torque:
10 N*m{ 102 kgf*cm , 7 ft.*lbf }

3. INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (w/o Driver Side Knee Airbag)

a. Attach the 4 claws and connect the DLC3.



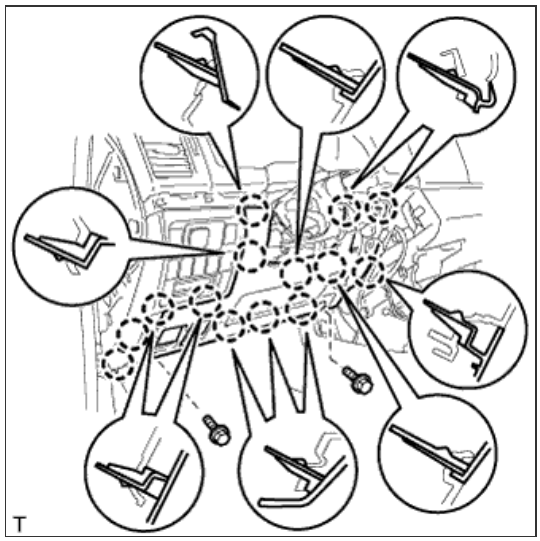
b. Install the instrument panel with the 5 bolts.



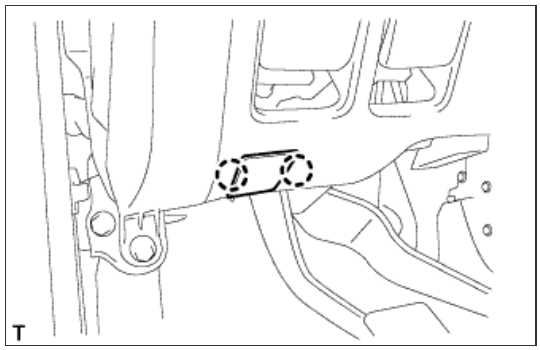
4. INSTALL LOWER NO. 1 INSTRUMENT PANEL FINISH PANEL

a. Connect the connectors.

b. Attach the 2 claws to install the sensor.



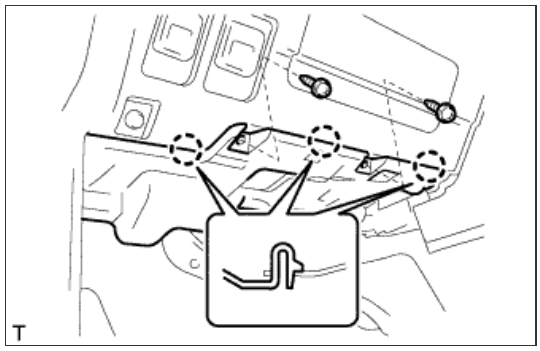
c. Attach the 2 claws to connect the 2 control cables.



d. Attach the 14 claws to install the finish panel.

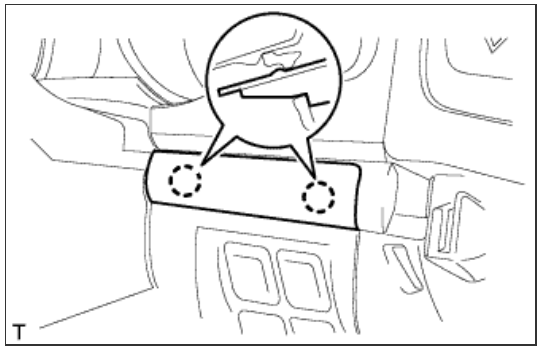
e. Install the 2 bolts.

f. Attach the 2 claws to close the hole cover.



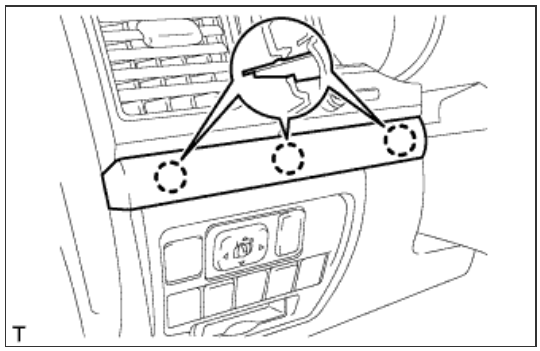
5. INSTALL NO. 1 INSTRUMENT PANEL UNDER COVER SUB-ASSEMBLY (w/ Floor Under Cover)

a. Connect the connectors.



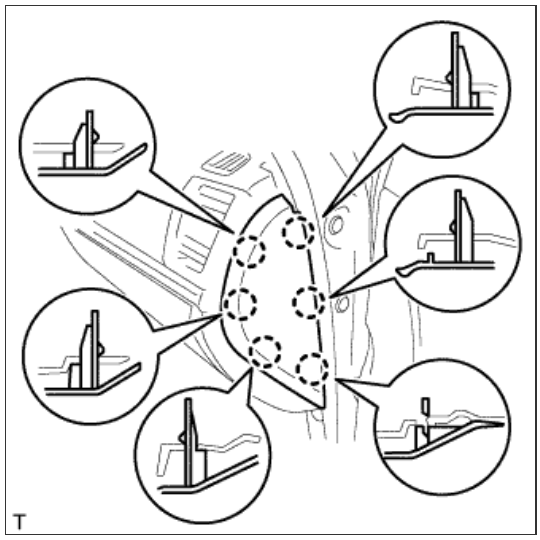
b. Attach the 3 claws to install the under cover.

c. Install the 2 screws.



6. INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Attach the 2 claws to install the panel garnish.



7. INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Attach the 3 claws to install the panel garnish.

8. INSTALL INSTRUMENT SIDE PANEL RH

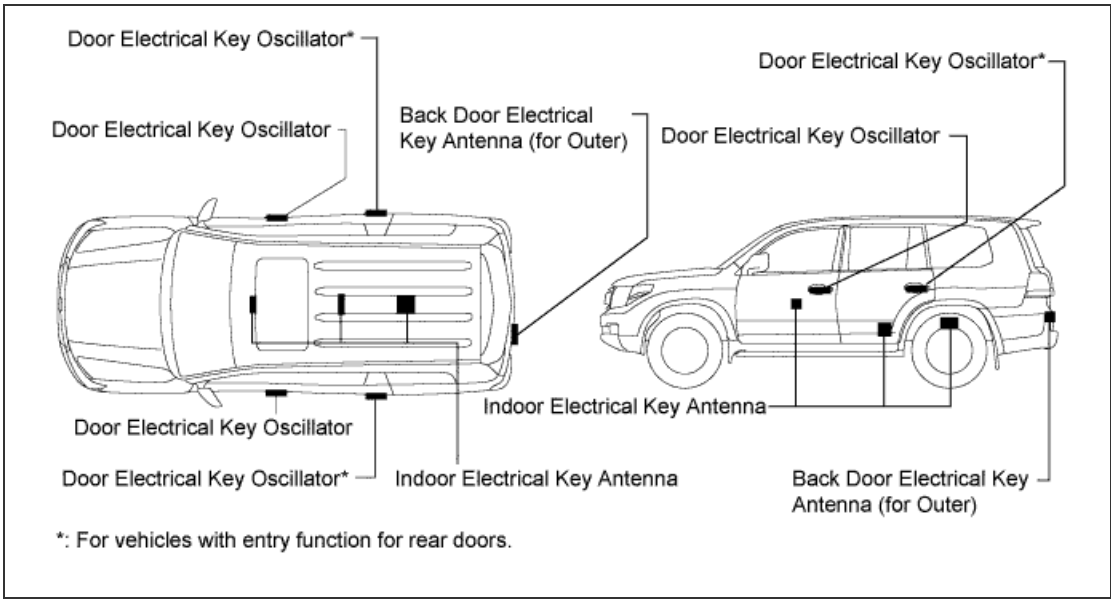
a. Attach the 6 claws to install the side panel.

9. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

10. CHECK SRS WARNING LIGHT



a. Check the SRS warning light (Click here).

for Preparation Click here

1.PRECAUTIONS FOR USERS WITH PACEMAKERS

a. Weak electric waves are emitted from the key. If a pacemaker is being used, read the pacemaker instruction manual before using the entry and start system.

- If implanted pacemakers or cardioverter defibrillators are being used, make sure they are not brought near the electrical key antenna and electrical key oscillator. The electric waves may affect them.
- If electric devices (for medical purposes) other than an implantable pacemaker or implantable cardioverter defibrillator are used, confirm with the manufacturer if electric waves affect their operation. Electric waves may affect the electric devices.
- The entry and start system can be set so that it does not operate. Refer to Key Cancel for more information (Click here).

2.PRECAUTIONS FOR ENTRY AND START SYSTEM AND KEY

a. The entry and start system does not operate in the following situations. If it does not operate at all, check that the following is not the cause.

i. The key cancel operation has been performed.

ii. There is no key battery.
(Key indicator does not blink when key switches are pressed).

b. The key must be in the possession of the user.
(A requirement of the entry and start system. This is to make sure the user maintains a habit of carrying the key).

c. As the key only emits weak electric waves, if any of the following conditions are met, the detection area of the key may become smaller or the key may become undetectable.

i. The battery is depleted.

ii. There are TV towers, electric power plants, broadcasting stations, gas stations or other areas of strong electric wave output nearby.

iii. Wireless products such as cell phones, etc. are carried with the key.

iv. The key is covered by or in contact with metal.

v. Electric wave type keyless entry systems are being operated nearby.

vi. The key is placed near high-voltage, electric noise emitting equipment.

vii. Film with some metallic content is stuck to the back glass.

HINT:

In this case, remove the cause or unlock the door using the mechanical key.

d. Even if the key is in the vehicle exterior key detection area, the key may not operate properly due to the vehicle body design.

e. Even if the key is in the vehicle exterior key detection area, the key may not be properly detected if the key is near a window, a door handle or the center of a bumper.

f. Even if the key is in the vehicle interior key detection area, the key may not be properly detected if the key is on the instrument panel, on the rear tray, in the glove box or on the floor.

g. Depending on the way the key is held, the key may not operate properly.

3.PRECAUTIONS WHEN USING INTELLIGENT TESTER

a. When troubleshooting the entry and start system using the intelligent tester with the engine switch off, connect the intelligent tester to the vehicle and turn any of the courtesy light switches on and off until communication between the intelligent tester and the vehicle begins (the interval between on and off should be less than 1.5 seconds).
(The reason the above procedure is necessary is that when the engine switch is off, the main body ECU may be in sleep mode. When the main body ECU is in sleep mode, communication with the intelligent tester is not possible).

b. After DTCs are all cleared, check if the trouble occurs again 6 seconds after the engine switch is turned on (IG).

4.PRECAUTIONS FOR EACH FUNCTION

a. Precautions for the key:
The key is a precision instrument. Be sure to observe the following:

i. Do not drop or strike the key.

ii. Do not keep the key in a high temperature area for a long time.

iii. Do not use an ultrasonic washing machine to clean the key.

iv. Keep the key away from magnets or magnetized items during use.

v. Do not attach any stickers to the key.

vi. If a key is lost, clear all registered key ID codes and then reregister the remaining keys.

b. Precautions for the entry unlock function:

i. As the sensor is built into the backside of the outside door handle, the user must touch the backside part of the handle when performing the unlock function.

ii. If the sensor is touched with gloved hands, the response of the door may be delayed.

iii. During the entry unlock operation, if the door handle is pulled before the door unlocks, the unlock function cannot be completed. Confirm that the door has been unlocked before pulling the door handle to open the door.

iv. Make sure that the doors are unlocked when touching the touch sensor on the outside door handle while the key is being carried. If the doors cannot be unlocked, the certification ECU (smart key ECU assembly) orders the main body ECU to perform the door unlock operation 4 times at intervals of 0.75 seconds.
At this time, the door may not be unlocked because the handle is being pulled due to some mechanical reasons.
Be sure to return the door handle to its original position.
If the door cannot be opened by pulling the handle, perform the entry unlock operation again.

v. If the key is too close to the oscillator on the outside of the vehicle, the door may not be unlocked because the key cannot react to the strong wave output from the transmitter.

vi. If the key is within the vehicle exterior detection area, the door can be unlocked even when a person other than the person carrying the key holds the door handle.
However, the doors other than the door that the codes match will not be unlocked.
(If the key is within the detection area of the driver side door outside the vehicle, the doors will be unlocked when the person carrying the key holds the driver side door handle. However, if any door handle other than that of the driver side door is held, the doors will not be unlocked).

vii. If a door is not opened after the door unlock operation, the doors automatically lock after approximately 30 seconds.

viii. If a large amount of water is applied to the door handle due to a car wash or heavy rain, the key being within the vehicle exterior detection area may cause the doors to be unlocked.
However, the doors will be locked again after approximately 30 seconds if a door is not opened.

ix. If the key of the entry and start system is used while it is being carried with the key of another entry and start system, the time before the entry unlock operation will become more than usual. This is not a malfunction.

c. Precautions for the entry lock function:

i. When performing the entry lock operation, firmly press the lock switch on the outside door handle.
If pressed too quickly or lightly, the entry lock may not operate.

ii. It is possible that signals output from the indoor electrical key antenna may leak through the window. Also, if the key is too close to a door oscillator, the oscillator output signals are too strong and the key cannot respond. As a result, when the key is near the vehicle interior (window, door handle), the entry lock function may not operate. Also, the key reminder warning buzzer may sound and the entry unlock operation may stop functioning. In this situation, move the key away from the vehicle interior (window, door handle), perform the entry lock operation and then perform the entry unlock operation.

iii. Do not touch the lock switch while opening or closing the door.
If the lock switch is pressed when opening or closing the door while the key is being carried, the door ajar warning buzzer sounds (beeps outside the vehicle for 10 seconds).

iv. If the key is on the instrument panel, rear package tray or floor, or in the glove box, the key reminder function may not operate and the key may be locked in the vehicle. Always carry the key.

v. If the key is outside the vehicle but is very close to a window or door handle (the ECU determines that the key is inside the vehicle) and the transmitter or mechanical key is used to lock the doors (entry lock is not used), entry unlock will not operate. To unlock the doors, perform a wireless door unlock operation. The entry lock function operates in this way to prevent the doors from being unlocked by the door oscillator (vehicle exterior) without the knowledge of the user. For example, when a user operates the wireless door lock operation from inside the vehicle, radio waves from a door oscillator may leak into the vehicle interior and the doors may unlock.

vi. To allow the user enough time to check if the doors are locked after performing a door lock operation (entry lock function or wireless door lock operation), the entry unlock function will not be permitted for 3 seconds after the door lock operation.

d. Precautions for the entry ignition function:

i. To start the engine system, first depress the brake pedal firmly until the engine switch indicator illuminates green, and then press the engine switch.
Also, after performing the engine start operation, continue depressing the brake pedal until the engine has completely started.

ii. When operating the engine switch, firmly press the switch. If the switch is pressed too quickly, power source control and engine system starting may not operate.

iii. While driving the vehicle, continuously pressing the engine switch for 3 seconds or more will turn off the engine system. Do not touch the engine switch while driving, except in an emergency.

iv. Do not touch the engine switch with oily hands.

v. If the vehicle has been in a hot location for an extended period of time, be careful when touching the engine switch. It may be very hot and lead to burns.

vi. Take care to avoid spilling beverages on the engine switch. Keep all liquids away from the engine switch.

vii. Do not use the engine switch if it seems to be sticking or feels abnormal.

viii. The vehicle continually records the power source mode (off, on (ACC), on (IG), start). When the battery cable is disconnected and reconnected, the power source mode will return to the mode it was in before disconnecting the battery cable. Always turn the engine switch off before disconnecting the battery cable. When the vehicle battery is fully depleted, power is cut, and the power source mode before the power was cut is unknown, so be extremely careful.

ix. Do not connect any electronic products to the ACC, IG1 or IG2 coil side wiring, as the vehicle power supply may be unable to be turned on, or other problems may occur.

x. When the key battery is depleted and the key is held up to the engine switch to start the engine system, the following warning alarms will sound.

- Driver side door is opened and closed:
  - Shift lever in P power source cut reminder exit warning
  - Shift lever not in P power source cut reminder exit warning
- Door other than driver side door is opened and closed:
  Occupant leaves with key warning

The warning alarms do not indicate an actual malfunction. The alarms sound because the key battery is depleted and the system cannot determine if the key is inside the vehicle or not.

xi. With the engine switch on (ACC), the engine can be started by pressing the engine switch for 15 seconds without depressing the brake pedal.

e. Precautions for back door entry unlock function:
Even if the key is within the back electrical key antenna (for outer) detection area, the back door cannot be opened if the key is in the following areas:

- Near the center of the bumper
- Too close to the ground or in a high place

f. Precautions for the battery built into the key and the vehicle battery:

i. The key is constantly checking for signals from the vehicle, which requires power from the built-in battery. The life of the battery is approximately 1 to 2 years depending on the usage conditions. Also, if the key is in contact with a cell phone while the user walks

around (by putting them together into a pocket, etc.), the battery may significantly deplete. Be sure to replace the battery when its power is low. When replacing the battery, do not touch the inner circuit board or other inner parts.

ii. The key is constantly checking for signals from the vehicle and using battery power, whether the key is being used or not. Even if the user is carrying 2 keys and only 1 key is used, both keys will consume battery power.

iii. In order to communicate with the vehicle, the key is constantly checking for signals. Therefore if the key is in contact with a cell phone while the user walks around (by putting them together into a pocket, etc.), the battery may significantly deplete.

iv. The key receives radio waves at approximately 134 kHz. If the key continuously receives strong, identical frequency waves, this may drain the key battery. Store the key at least 1 m (3.28 ft.) from TVs, personal computers, chargers for cell phone, etc. or other electrical products.

v. When the door is being locked, the vehicle battery is used to transmit radio waves. The battery may be fully depleted if the vehicle remains stopped for a long time. If the vehicle is not used for a long time, remove the battery from the vehicle or cancel the entry and start system.

vi. When the door is being locked with the key in the detection area of a door oscillator, the battery is used for regular communication between the key and vehicle. If the vehicle is not used, keep the key away from the vehicle (more than 2 m (6.56 ft.)).

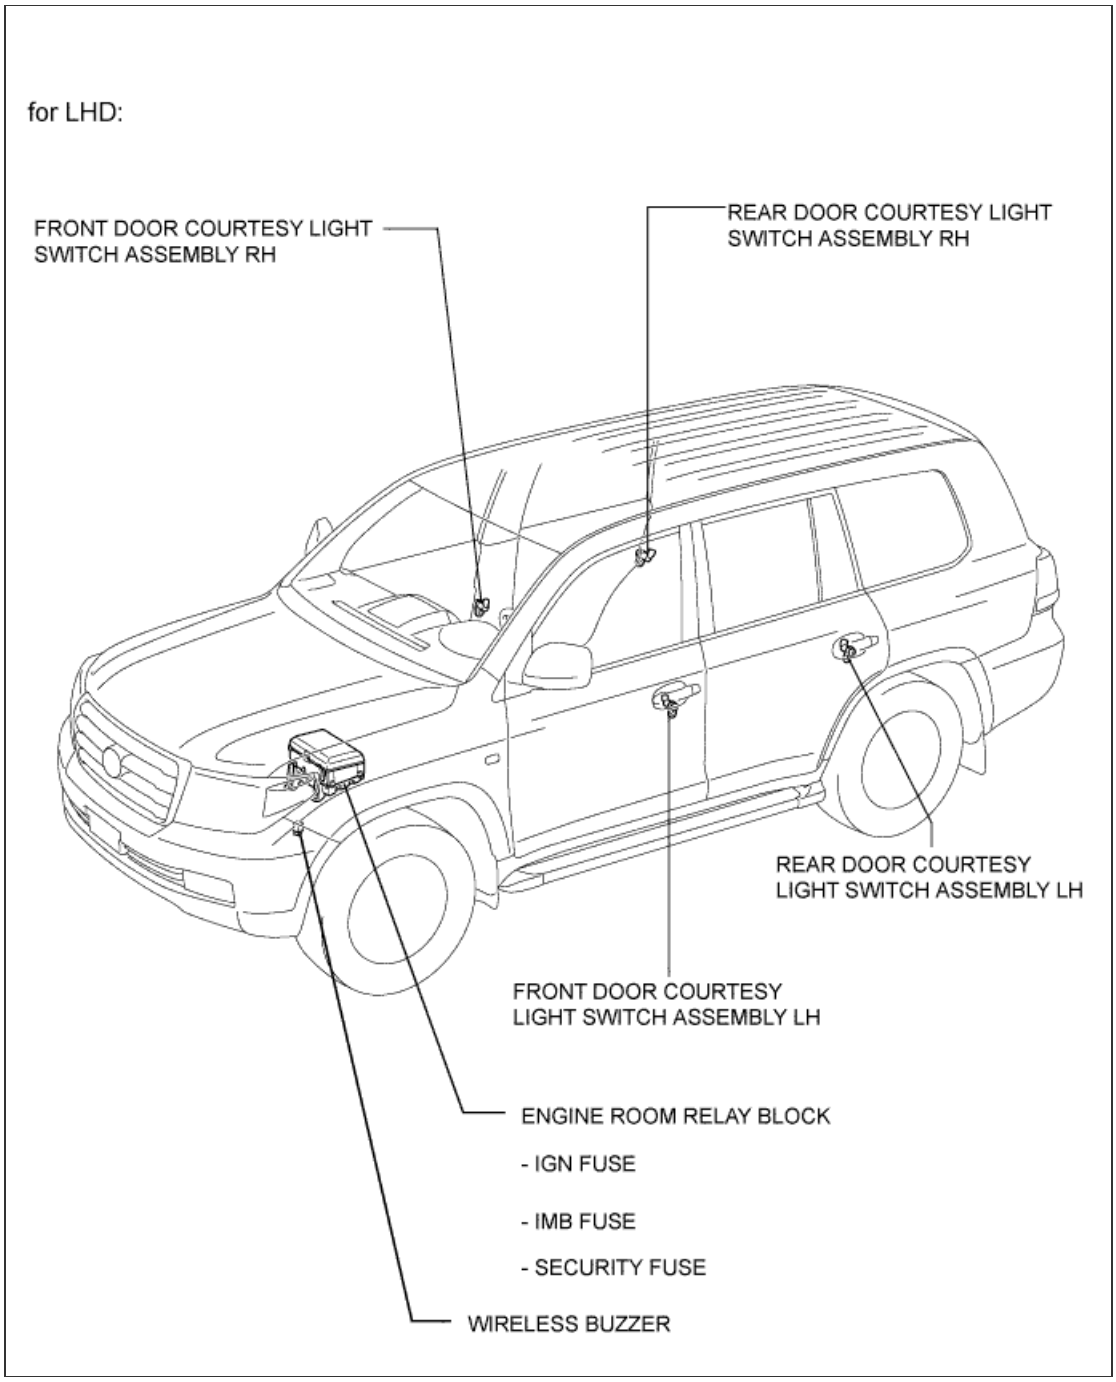
vii. After disconnecting and reconnecting the battery cable, the entry unlock function may not operate. If this occurs, perform a wireless door unlock and lock operation.

viii. When the battery is fully depleted and the engine does not start even after recharging, perform the following: 1) move the shift lever to P; 2) turn the engine switch off, and 3) open and close the driver door. Then start the engine.

ix. When starting the engine system after the removal and installation of the vehicle battery, first perform the following: 1) open and close the driver door; and 2) wait 10 seconds or more. When an engine system start is attempted after the above procedures, the engine system will not start. However, this is not a malfunction. The engine system will start normally starting from the second attempt.

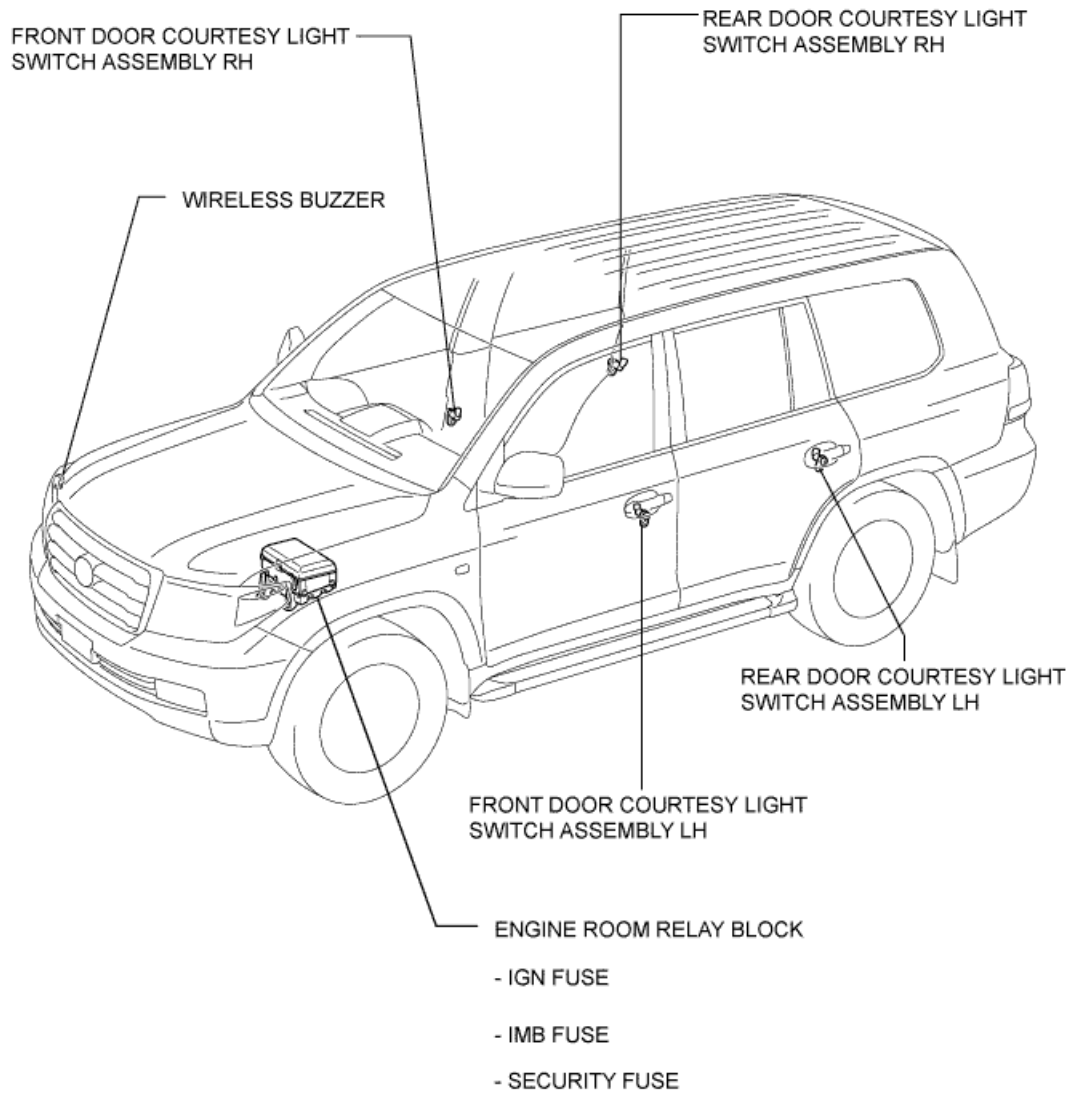
g. Precautions when using the remote start function:

i. When using the remote start, the entry unlock function can be operated. However, depending on the amount of engine noise and other factors, the door oscillator detection area may become smaller.

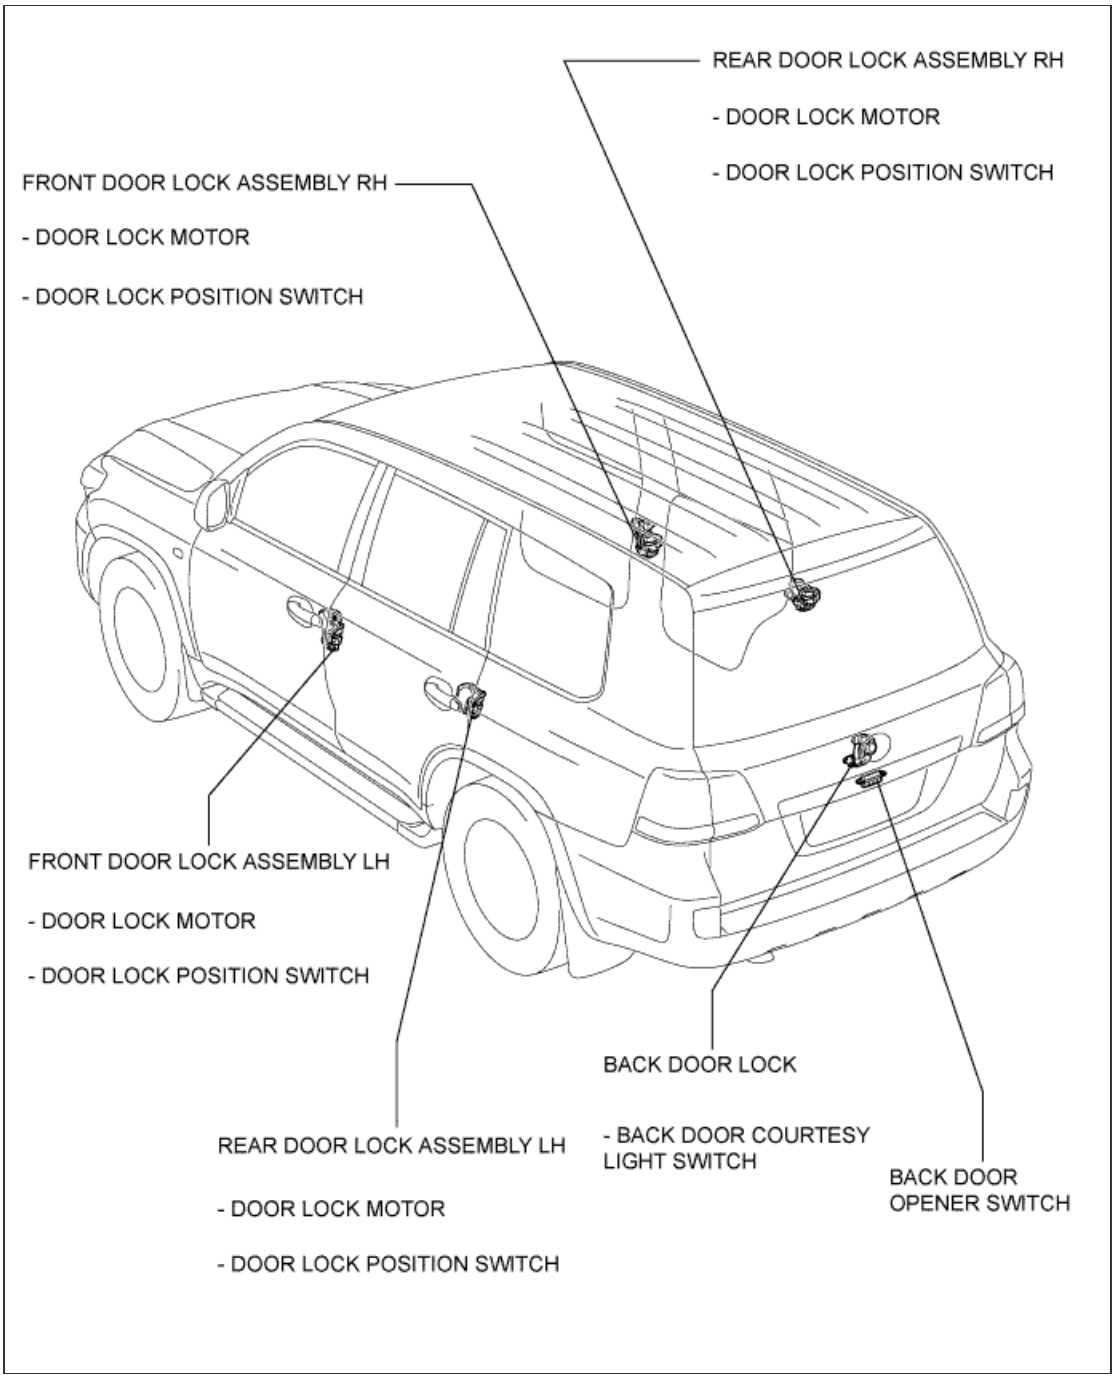


ii. If the remote start is used, a door is unlocked, and the user enters the vehicle, the engine system will automatically turn off. After the engine system turns off, the engine system cannot be started for approximately 5 seconds.

h. Precautions for the entry unlock mode switching function:



i. Perform the entry unlock mode switching function within a 1 m (3.28 ft.) area around the vehicle or from inside the vehicle.



ii. After changing modes, holding down the switch for 5 seconds or more will not change the mode. The switch must be released and then pressed again to change modes.

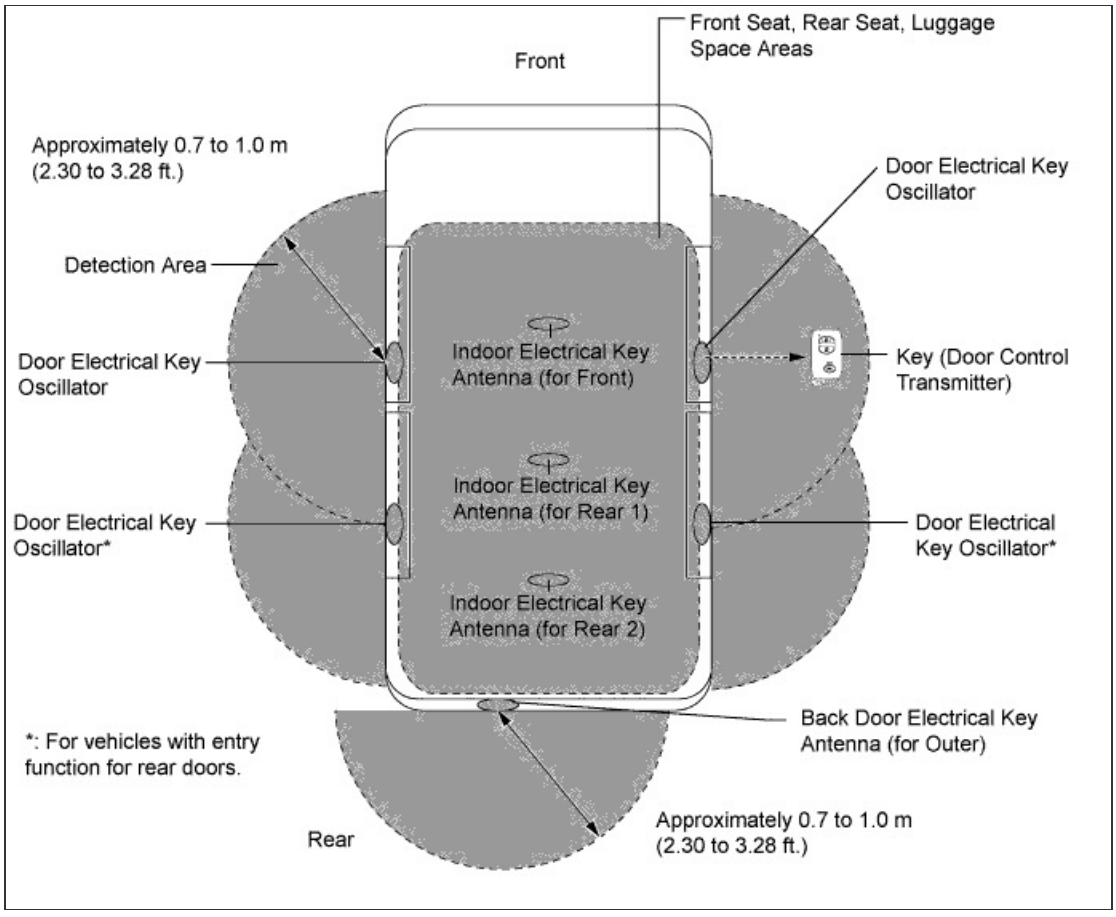
CAUTION:



If using a pacemaker, be sure to read the manual of the pacemaker before using the key, as the radio waves of the key may affect the pacemaker.

ENTRY AND START SYSTEM DESCRIPTION

a. In addition to conventional mechanical key and wireless door lock control functions, the entry and start system enables door locking/unlocking, steering lock releasing, engine control system starting and back door opening without operating the key. The only requirement is that the key is in the possession of the user.

- This system is controlled by the certification ECU (smart key ECU assembly). When the certification ECU (smart key ECU assembly) detects the presence of the key in one of the detection areas, it identifies and checks the ID code, and outputs operation signals to the related ECU in accordance with their functions.
- For vehicle with rear entry function:
  The detection areas are formed by 4 oscillators and 4 antenna (4 door oscillators, back door antenna and 3 indoor antennas).
- For vehicle without rear entry function:
  The detection areas are formed by 2 oscillators and 4 antenna (2 door oscillators, back door antenna and 3 indoor antennas).

DETECTION AREA

a. Precautions for the entire system:

- Be sure to carry the key during inspection of the entry and start system.
- As weak radio waves are used to detect the key, the key detection area may decrease, or the key may not be detected correctly in the following situations.
  1. The key battery is depleted.
  2. Any facilities that generate strong radio waves, such as a TV tower, power plant, a broadcast station or gas station, are located near the inspection site.
  3. A wireless device, such as a cell phone, is carried with the key.
  4. The key is in contact with or covered with metal.
  5. Electric wave type keyless entry systems are being operated nearby.
  6. The key is located near a device that generates high voltage or noise.

7. Film with some metallic content is stuck to the back glass.

HINT:

In this case, remove the cause or unlock the door using the mechanical key.

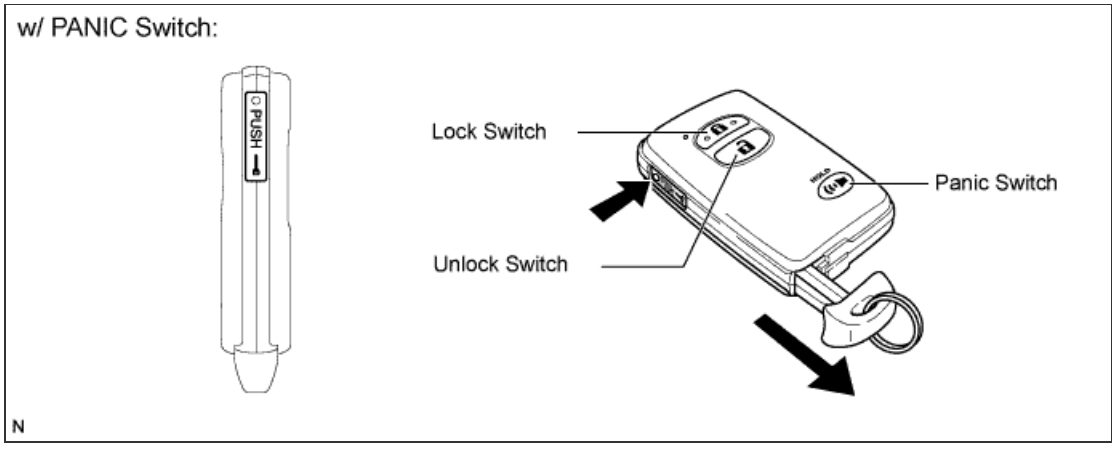
- Even if the key is in the vehicle exterior key detection area, the key may not operate properly due to the vehicle body design.
- The key may not be detected correctly if it is around the vehicle's windows, the door handle or center of the bumper, even when it is in the detection area outside the vehicle.
- The key may not be detected correctly if it is on the instrument panel, rear package tray or floor, or in the glove box, even when it is in the detection area inside the vehicle.
- The key may not operate if the key is not held properly.
- The entry and start system does not operate in the following conditions:
    1. The entry and start system is canceled.
    2. The key battery is completely depleted (the indicator does not blink when pushing any of the switches on the key).

FUNCTION OF MAIN COMPONENTS

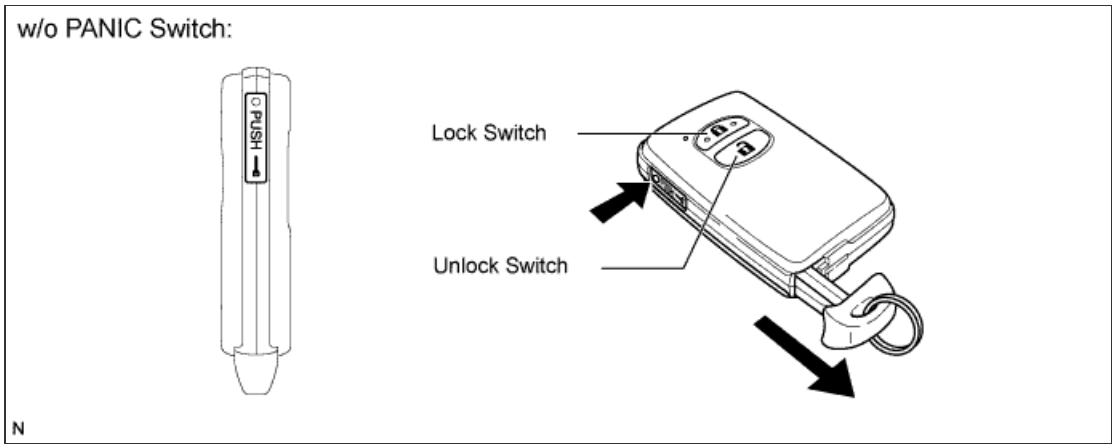
Component	Function
Certification ECU (Smart key ECU assembly)	Controls the entry and start system in accordance with signals from each oscillator, various switches, ECUs and the key. • Performs key verification. • Performs vehicle interior/exterior transmission. • Performs occupant sensor control. • Sends lock/unlock commands during entry function. • Sends steering lock/unlock commands. • Sends immobiliser set/unset commands. • Records verification codes.
Main body ECU	Controls the power source mode function in accordance with signals from various switches, ECUs and the combination meter. • Controls the ACC/IG power source by turning it on/off. • Sends an engine start command to the ECM. • Controls the indicator and word illumination of the engine switch. • Activates starter relay.
ID code box (Immobiliser code ECU)	• Receives a command from the certification ECU (smart key ECU assembly), and sends an immobiliser set/unset command to the ECM. • Records verification codes.
Indoor electrical key antenna (for front, rear 1 and rear 2)	Receives a request signal from certification ECU (smart key ECU assembly), and forms the detection area in the vehicle interior.
Door control receiver	Receives the ID code from the key in the actuation area and transmits it to the certification ECU (smart key ECU assembly).
Back door electrical key antenna (for outer)	Receives a request signal from the certification ECU (smart key ECU assembly), and forms the actuation area around the back door.
Back door opener switch	Transmits a back door open request signal to the main body ECU.
Back door lock switch	Transmits a back door lock request signal to the certification ECU (smart key ECU assembly).
Door electrical key oscillator (for driver, front passenger, rear LH*3, rear RH*3 side doors)	Receives a request signal from the certification ECU (smart key ECU assembly), and forms the detection area around each door.
Outside door handle (for driver, front passenger, rear LH*3, rear RH*3 side doors) (antenna)	Transmits request signals.
Outside door handle (for driver, front passenger, rear LH*3, rear RH*3 side doors) (touch sensor)	Detects when a person touches the inside of the outside handle.
Outside door handle (for driver, front passenger, rear LH*3, rear RH*3 side doors) (lock switch)	Transmits door lock request signals to the certification ECU (smart key ECU assembly).
Key	• When an LF wave*1 that is output from the vehicle interior/exterior antenna is received, RF wave*2 format conversion is performed on the key ID, vehicle ID and other information, and an RF wave*2 is then output. • When the lock/unlock switch on the key is pressed, the signal is converted to an RF wave*2 and is then output. • When the wave output from the engine switch immobiliser amplifier is received, the key ID, vehicle ID and other information is output through immobiliser communication. • The key is equipped with a mechanical key for unlocking doors when the battery is fully depleted.

Wireless door lock buzzer Combination meter • Multi-information Display • Buzzer	When the certification ECU (smart key ECU assembly) detects human errors such as those below, it warns the driver by sounding the wireless door lock buzzer*, displays information and sounds the buzzer in accordance with the request signal from the ECU. **HINT:** *: Except China Example: • Key is taken outside the vehicle. • Driver leaves the vehicle while the engine is still running. • Driver leaves the vehicle while the shift lever is in a position other than P.

HINT:



- ***1: LF waves (134 KHz) check if the key is in the vehicle interior or not.**
- ***2: RF waves (314.35 MHz for Australia, 433.92 MHz for Europe and the Middle and Near East, and 315.12 MHz for China) are emitted from the key in response to the LF waves, and are sent to the door control receiver.**
- ***3: For vehicles with entry function for rear doors.**



CONSTRUCTION AND OPERATION

a. Key:
A total of 7 keys can be registered.

i. Electrical key transmitter:
The electrical key transmitter consists of a mechanical key, a transmitter function for the wireless door lock control and a transceiver for the entry and start system.

- The transceiver function for the entry and start system receives the signals from the oscillators and sends the ID code to the door control receiver.
- The transmitter function for the wireless door lock control has a lock switch, unlock switch and panic switch.
- This mechanical key can lock/unlock all the doors. To lock or unlock the doors, remove the cap from the driver door outside handle, insert the key into the door key cylinder, and then turn it to the lock or unlock position.

b. Oscillator (each door oscillator, front, rear 1 and rear 2 indoor antenna, and back door antenna)
Each oscillator transmits the request signal received from the certification ECU (smart key ECU assembly), and forms a key detection area to detect the presence of a key. The detection area formed by each door oscillator and back door outer antenna is approximately 0.7 to 1.0 m (2.30 to 3.28 ft.) from the outside handle of each door or the center of the rear bumper.

- The detection area of each door oscillator is formed by transmitting a request signal every 0.25 seconds while the engine switch is off and each door is locked. In this way, it detects the proximity of a key. During entry lock, the detection area is formed with the lock switch on.
- The detection area of the back door antenna is formed when the back door opener switch is on.
- The detection area of the indoor antenna (for front, rear 1 and rear 2) is formed when the driver door is opened or closed, during starting, when a warning is activated, or when the lock switch is on.

ENTRY FUNCTION OPERATION

a. The entry and start system has the following functions.

Function	Outline
Mechanical Key	Operation is the same as a conventional mechanical key.
Wireless Door Lock Control	This function remotely locks and unlocks all doors and the back door. Operation is the same as the wireless door lock control system. However, receiver in the certification ECU (smart key ECU assembly) uses the entry door control receiver to control locking and unlocking.
Entry Illumination	When a person carrying the key enters the detection area, the door will enter unlock standby mode and room light will illuminate.
Entry Unlock	When the key is located in the detection area of the door oscillator, the door will unlock by touching the inside of the outside door handle.
Entry Unlock Mode Switching (Click here)	Changes the doors that can be unlocked with the entry unlock function between 2 modes. • Driver door unlock mode • All door unlock mode
Entry Lock	When the key is located in the detection area of the door oscillator and the engine switch is off, the door can be locked by pressing the lock switch on the outside door handle.
Entry Back Door Open	When the key is in the detection area of the back door antenna (outer), the back door opens by pressing the back door opener switch.
Memory Call	This function operates the driving position memory system in accordance with the key ID code.
• Power Window Close Function*1 • Sliding Roof Close Function*1	Pressing the door handle entry lock switch for approximately 3 seconds or more causes all power windows and the sliding roof to close while sounding the wireless buzzer*2.
Key Lock-in Prevention	Prevents lock-in of the key if the door is locked using the outside door handle while the key is still inside the vehicle.
Warning	When any of the situations below occur, the entry and start system causes the certification ECU (smart key ECU assembly) to sound the buzzer in the combination meter and the wireless door lock buzzer*2, and display information in order to alert the driver. • Shift lever not in P (power source cut reminder) vehicle exit warning • Key reminder warning

	• Shift lever in P (power source cut reminder) vehicle exit warning • Entry door ajar warning • Passenger has brought key out of vehicle warning • Key is not within detection area warning • Key lock-in prevention function buzzer • Key battery low warning
Battery Saving	If the key is constantly located within the actuation area of the door oscillator, the system maintains periodic communication with the key. Therefore, if the vehicle remains parked in that state for a long time, key battery and vehicle battery could be drained. For this reason, the vehicle has controls for saving battery power.
Key Cancel (Click here)	The following key functions can be canceled: • Entry Unlock/Lock • Entry Ignition • Memory Call • Entry Back Door Open • Key Lock-in Prevention • Warning

HINT:

*1: w/ Remote Function

*2: except China

WIRELESS DOOR LOCK AND UNLOCK AND PANIC* FUNCTION

Push the lock/unlock/panic switch on the key to operate each function.

HINT:

*: w/ PANIC Switch

ENTRY UNLOCK FUNCTION

a. The detection area is formed by communication between a door oscillator and the certification ECU (smart key ECU assembly) when the door is locked in order to detect the person carrying the key.

b. When the person carrying the key enters the detection area around the vehicle, the matching of the ID codes for a door oscillator and key will automatically be performed. After the matching is completed, the door will enter unlock standby mode.

c. In unlock standby mode, the antenna built into the outside handle starts sensing. If the outside handle is held (the back side of the handle is touched), the door unlock operation will be performed. At this time, the hazard warning light blinks twice and the wireless door lock buzzer sounds twice*.

HINT:

*: except Europe and China

d. If any of the doors are not opened after a door unlock operation, all doors will automatically lock after 30 seconds.

ENTRY LOCK FUNCTION

a. After leaving the vehicle carrying the key, push the lock switch on the outside handle when all the doors are closed.

b. The certification ECU (smart key ECU assembly) determines whether the key is located inside or outside of the cabin based on the information from a door oscillator and indoor antenna. Then matching of the ID codes is performed.

c. When the matching result shows that the ID codes of the key and indoor antenna do not match and the ID codes of the key and door oscillator match, the door lock function will operate. At this time, the hazard warning lights blink once and the wireless door lock buzzer sounds once*.

HINT:

*: except Europe and China

d. If the key is located inside of the cabin, the door lock function will not operate and the alarm buzzer (beep sound) will sound for 2 seconds*.

HINT:

*: except China

ENTRY BACK DOOR OPEN FUNCTION

Stand in front of the back door with the key and push the back door opener switch to start the matching of the ID codes for the back door antenna. If the ID codes match, the back door open operation will be performed.

PREVENTION OF KEY LOCK-IN FUNCTION

a. If you attempt to lock the door through keyless operation (move the lock knob to the lock position and then close the door) with the key in the cabin, the system determines that the key is located in the cabin and unlocks the door.

b. If the back door is closed with the key in it, the alarm will sound and the back door can be opened only when all the doors are locked in order to prevent key lock-in in the vehicle.

ENTRY ILLUMINATION FUNCTION

In order to improve ease of entering and exiting the vehicle at night, the vehicle lights illuminate when the key is brought near the vehicle.

ENTRY POWER WINDOW FUNCTION* [REMOTE FUNCTION] (DOOR WINDOW AND SLIDING ROOF CLOSE OPERATION ONLY)

a. Pressing the door handle lock switch for 3 seconds or more operates the door window close operation of all of the windows and the sliding roof close operation.

b. If the entry power window function is operating and the door handle lock switch is released, the entry power window operation will stop.

HINT:

- **For more information about the entry power window function, refer to the Power Window Control System (Click here).**
- ***: w/ Remote Function**

MEMORY CALL FUNCTION (w/ Seat Position Memory System)

a. After unlocking the driver door using the key ID and opening the driver door, the seat automatically moves to the position associated with the key ID.

HINT:

For more information about the memory call function, refer to the Front Power Seat Control System (Click here).

WARNING FUNCTION

a. General:
When any of the situations below occur, the entry and start system responds to alert the driver.

Warning Function Operation Condition	Situation
Shift lever not in P (power source cut reminder) vehicle exit warning	A
Key reminder warning	B
Shift lever in P (power source cut reminder) vehicle exit warning	C
Entry door ajar warning	D
Passenger has brought key out of vehicle warning	E
Key is not within detection area warning	F
Key lock-in prevention function buzzer	G
Key battery low warning	H

b. Situation A:
Shift lever not in P (power source cut reminder) vehicle exit warning

i. With shift lever not in P, door is opened and vehicle exit (while holding key) is attempted

<table>
<tr><td colspan="4">Reason for warning: Sudden vehicle start prevention, vehicle theft prevention, vehicle roll-away prevention</td></tr>
<tr><td colspan="4">Warning start condition: Shift lever is not in P, engine switch is on (ACC) or on (IG), driver side door is opened and vehicle speed is 0 km/h (0 mph)</td></tr>
<tr><td colspan="4">Warning stop condition: Engine switch is off, shift lever is in P, vehicle speed is above 0 km/h (0 mph), or driver side door is closed</td></tr>
<tr><td rowspan="4">Warning description</td><td>Combination meter buzzer</td><td>Multi-buzzer</td><td>Sounds continuously (beep)</td></tr>
<tr><td rowspan="2">Combination meter display</td><td>Combination meter information</td><td>"Shift to P Range"</td></tr>
<tr><td>Telltale</td><td>None</td></tr>
<tr><td></td><td colspan="2">Sounds continuously (beep)*</td></tr>
</table>

	Wireless buzzer	**HINT:** *: except China
Recommended user action		Move shift lever to P

ii. With shift lever not in P, door is opened, key is brought out of vehicle, door is closed, and movement away from vehicle is attempted

Reason for warning: Sudden vehicle start prevention, vehicle theft prevention, vehicle roll-away prevention			
Warning start condition: Shift lever is not in P, engine switch is on (ACC) or on (IG), opened driver side door is closed, vehicle speed is 0 km/h (0 mph) and key is not in detected in vehicle interior and luggage interior			
Warning stop condition: • Key is detected in vehicle interior and luggage interior: Buzzer stops and "Shift to P Range" is displayed on combination meter • Vehicle speed is more than 0 km/h (0 mph): Buzzer stops, "Key is not detected" - "Check key position" is displayed on combination meter • Engine switch off: All warnings are turned off			
Warning description	Combination meter buzzer	Multi-buzzer	Sounds continuously (beep)
	Combination meter display	Combination meter information	Information below is displayed alternately on combination meter "Shift to P Range" "Key is not detected" - "Check key position"
		Telltale	None
	Wireless buzzer	Sounds continuously (beep)* **HINT:** *: except China	
Recommended user action		Move shift lever to P	

c. Situation B:
Key reminder warning

i. Steering lock/unlock set, driver door is opened and movement away from vehicle is attempted

Reason for warning: Vehicle theft prevention, required by law			
Precondition: Remote start is not operating			
Warning start condition: One of following conditions is met 1. Engine switch on (ACC) or off, and driver door opened 2. Engine switch off, steering lock/unlock set and driver door opened			
Warning stop condition: One of following conditions is met 1. Engine switch is on (IG) or driver door is closed 2. Engine switch on (ACC) or off, and steering lock/unlock is set			
Warning description	Combination meter buzzer	Multi-buzzer	Sounds intermittently (several "pon" sounds)
	Combination meter display	Combination meter information	None
		Telltale	None
	Wireless buzzer	None	
Recommended user action		If engine switch is on (ACC) or on (IG), turn engine switch off and close driver door	

d. Situation C:
Shift lever in P (power source cut reminder) vehicle exit warning

i. With shift lever in P, driver door is opened, key is brought out of vehicle, driver door is closed, and movement away from vehicle is attempted

Reason for warning: Vehicle theft prevention, "Engine control system cannot be restarted" prevention, battery depletion prevention
Warning start condition: Shift lever is in P, engine switch is on (ACC) or on (IG), opened driver side door is closed and key is not in detected in vehicle interior and luggage interior
Warning stop condition: Engine switch on (ACC) or off, or key is detected in vehicle interior and luggage interior

Warning description	Combination meter buzzer	Multi-buzzer	Sounds once (1 "pon" sound) (when key is not detected continuously, sounds again when vehicle is first driven)
	Combination meter display	Combination meter information	"Key is not detected" - "Check key position"
		Telltale	None
	Wireless buzzer	Sounds 3 times (short beeps)* **HINT:** *: except China	
Recommended user action		Turn engine switch off and exit vehicle while holding key	

ii. With shift lever in P and either engine switch on (ACC) or steering lock/unlock set, driver door is opened, user moves away from vehicle, and door handle lock switch is pressed in an attempt to perform entry lock operation

Reason for warning: Vehicle theft prevention, battery depletion prevention			
Precondition: Change door control lock switch from off to on			
Warning start condition: Shift lever is in P, engine switch is on (ACC) or on (IG), all doors closed and key is detected in vehicle exterior, key is not detected in vehicle interior, vehicle speed is 0km/h.			
Warning stop condition: One of following conditions is met 1. Engine switch off. 2. Key is detected in vehicle interior and luggage interior. 3. Vehicle speed is more than 0km/h. 4. Shift lever is not in P.			
Warning description	Combination meter buzzer	Multi-buzzer	None
	Combination meter display	Combination meter information	None
		Telltale	None
	Wireless buzzer	Sounds for 60 seconds (long beep)* **HINT:** *: except China	
Recommended user action		Turn engine switch off and perform entry lock operation	

e. Situation D:
Entry door ajar warning

i. With one vehicle door open, entry lock operation is attempted

Reason for warning: Vehicle theft prevention			
Precondition: Engine switch on (ACC) or off, and one door open			
Warning start condition: After preconditions are met, entry lock operation is performed			
Warning stop condition: Engine switch is on (ACC) or on (IG), all doors are closed, wireless unlock is performed, entry unlock operation is performed or 10 seconds have passed after warning start			
Warning description	Combination meter buzzer	Multi-buzzer	None
	Combination meter display	Combination meter information	None
		Telltale	None
	Wireless buzzer	Sounds continuously (beep)* **HINT:** *: except China	
Recommended user action		Close all doors and perform entry lock operation	

f. Situation E:
Passenger has brought key out of vehicle warning

i. With engine switch in condition other than off, key is brought out of vehicle by passenger

Reason for warning: "Engine control system cannot be started" prevention
Warning start condition: Engine switch is on (ACC) or on (IG), opened door other than driver side door is closed,

<table>
<tr><td colspan="4">vehicle speed is 0 km/h (0 mph) and key is not in detected in vehicle interior and luggage interior</td></tr>
<tr><td colspan="4">Warning stop condition: Engine switch on (ACC) or off, or key is detected in vehicle interior and luggage interior or vehicle speed is more than 0 km/h (0 mph)</td></tr>
<tr><td rowspan="4">Warning description</td><td>Combination meter buzzer</td><td>Multi-buzzer</td><td>Sounds once (1 "pon" sound) (when key is not detected continuously, sounds again when vehicle is first driven)</td></tr>
<tr><td rowspan="2">Combination meter display</td><td>Combination meter information</td><td>"Key is not detected" - "Check key position"</td></tr>
<tr><td>Telltale</td><td>Illuminates</td></tr>
<tr><td>Wireless buzzer</td><td colspan="2">Sounds 3 times (short beeps)*

HINT:

*: except China</td></tr>
<tr><td colspan="2">Recommended user action</td><td colspan="2">Check if the passenger who exited the vehicle has the key or not</td></tr>
</table>

g. Situation F:
Key is not within detection area warning

i. With key not in vehicle cabin or key battery depleted, engine switch on (ACC) or on (IG) operation is attempted

<table>
<tr><td colspan="4">Reason for warning: User confusion prevention</td></tr>
<tr><td colspan="4">Warning condition: Engine switch is not off and key is not detected in vehicle interior</td></tr>
<tr><td rowspan="3">Warning description</td><td>Combination meter buzzer</td><td>Multi-buzzer</td><td>Sounds once (1 "pon" sound)</td></tr>
<tr><td rowspan="2">Combination meter display</td><td>Combination meter information</td><td>"Key is not detected" - "Check key position" is displayed for 10 seconds, then display ends</td></tr>
<tr><td>Telltale</td><td>None</td></tr>
<tr><td>Wireless buzzer</td><td colspan="2">None</td></tr>
<tr><td colspan="2">Recommended user action</td><td colspan="2">Check if the key is within the detection area of the vehicle cabin
If key is within the vehicle interior, built-in battery may be depleted
If wireless door lock switch on key is pressed, check if indicator on key illuminates
If indicator does not illuminate, replace the built-in battery
It is recommended that battery be bought at dealer, but battery can be replaced according to user preference</td></tr>
</table>

h. Situation G:
Key lock-in prevention function buzzer (for cabin)

i. With key in vehicle cabin, vehicle is exited and door handle lock switch is pressed in an attempt to perform entry lock operation

<table>
<tr><td colspan="4">Reason for warning: Key reminder vehicle theft warning prevention</td></tr>
<tr><td colspan="4">Warning condition: Engine switch off, all doors closed, door handle lock switch on and key is detected in vehicle interior</td></tr>
<tr><td rowspan="4">Warning description</td><td>Combination meter buzzer</td><td>Multi-buzzer</td><td>None</td></tr>
<tr><td rowspan="2">Combination meter display</td><td>Combination meter information</td><td>None</td></tr>
<tr><td>Telltale</td><td>None</td></tr>
<tr><td>Wireless buzzer</td><td colspan="2">Sounds for 2 seconds (long beep)*

HINT:

*: except China</td></tr>
<tr><td colspan="2">Recommended user action</td><td colspan="2">Pick up key that is in vehicle interior and perform entry lock operation again</td></tr>
</table>

i. Situation H:
Key battery low warning

i. Key with almost depleted battery is used to drive vehicle

Reason for warning: Helpful function			
Warning condition: After engine switch not off condition continues for 20 minutes or more, engine switch is changed from not off to off, key battery is low and key is detected in vehicle interior			
Warning description	Combination meter buzzer	Multi-buzzer	Sound once (1 "pon" sound)
	Combination meter display	Combination meter information	"Low Key Battery" - "Have your vehicle checked by a dealer"
		Telltale	None
	Wireless buzzer	None	
Recommended user action		Replace key built-in battery with new one It is recommended that battery be bought at dealer, but battery can be replaced according to user preference	

BATTERY SAVING

a. Vehicle battery saving function:
In the entry and start system, signals are emitted outside of the vehicle at a prescribed interval (0.25 seconds) when the doors are locked. Therefore, the vehicle battery could be drained if the vehicle remains parked for a long time. For this reason, the controls listed below exist.

Condition	Control
Both conditions below are met for 10 days: • Key is not in detection area • Touch sensor or lock switch operation is not performed	Signal transmission interval is extended from 0.25 to 0.75 seconds
Both conditions below are met for 15 days: • Key is not in detection area • Touch sensor or lock switch operation is not performed	Signal transmission interval is extended from 0.75 to 2.25 seconds
Both conditions below are met for 30 days: • Key is not in detection area • Touch sensor or lock switch operation is not performed	Automatically deactivates the entry and start system

Reinstatement Conditions:

- A wireless door lock control signal (lock, unlock) is input and the ID matches.
- A user carries the key and pushes a lock switch on an outside door handle.
- The driver door is locked or unlocked by the mechanical key.

b. Key battery and vehicle battery saving function:
In the entry and start system, if the key is constantly located within the vehicle exterior detection area of the doors, the system maintains periodic communication with the key. Therefore, if the vehicle remains parked in that state for a long time, the key battery and the vehicle battery could be drained. For this reason, if this state continues for more than 10 minutes, the entry and start system automatically becomes deactivated.
Reinstatement Conditions:

- A wireless door lock control signal (lock, unlock) is input and the ID code matches.
- A user carries the key and pushes a lock switch on an outside handle.
- The driver door is locked or unlocked by the mechanical key.

KEY DIAGNOSTIC MODE (Using the intelligent tester)

HINT:

Key diagnostic mode checks if the electrical key transmitter within a selected oscillator/antenna detection area is operating normally. The results are output through the wireless door lock buzzer (in the right front fender).

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Entry & Start / Key Communication Check.

e. Check the values by referring to the table below.

Entry & Start

Tester Display	Inspection Range

Overhead + Driver Side [*1]	Door electrical key oscillator (for Driver Side)
Overhead + Passenger Side [*2]	Door electrical key oscillator (for Front Passenger Side)
Overhead + Driver Side Rear [*3]*	Door electrical key oscillator (for Driver Side Rear)
Overhead + Passenger Side Rear [*4]*	Door electrical key oscillator (for Passenger Side Rear)
Overhead + Front Room [*5]	Indoor electrical key antenna (for Front Floor)
Overhead + Rear 1 Room [*6]	Indoor electrical key antenna (for Rear 1 Floor)
Overhead + Back Door (inside) [*7]	Indoor electrical key antenna (for Rear 2 Floor)
Overhead + Back Door (outside) [*8]	Back door electrical key antenna (for Outer)

HINT:

*: For vehicles with entry function for rear doors.

f. When the electrical key transmitter is brought near the selected oscillator/antenna, check that the wireless door lock buzzer sounds.

i. *1: Door electrical key oscillator (for Driver Side)

HINT:

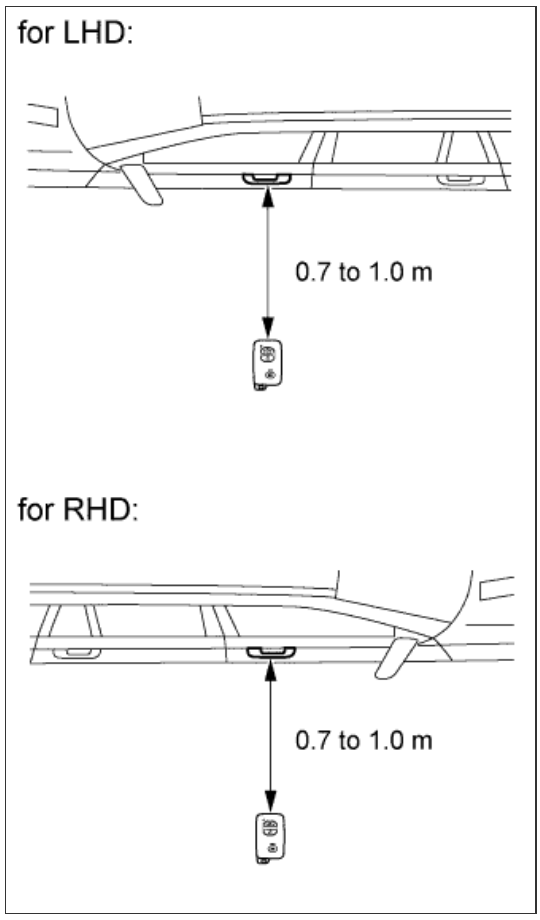
- **Hold the key at the same height as the door outside handle (0.7 to 1.0 m (2.30 to 3.28 ft.)). Pay attention to the direction of the key in the illustration.**
- ***2: Perform the same inspection above for the door electrical key oscillator (front passenger seat outside transmitter).**
- ***3: Perform the same inspection above for the door electrical key oscillator (driver side rear seat outside transmitter).**
- ***4: Perform the same inspection above for the door electrical key oscillator (passenger side rear seat outside transmitter).**

ii. *5: Indoor electrical key antenna (front inside transmitter)

HINT:

Place the electrical key transmitter on the driver or front passenger seat cushion.

iii. *6: Indoor electrical key antenna (rear 1 inside transmitter)

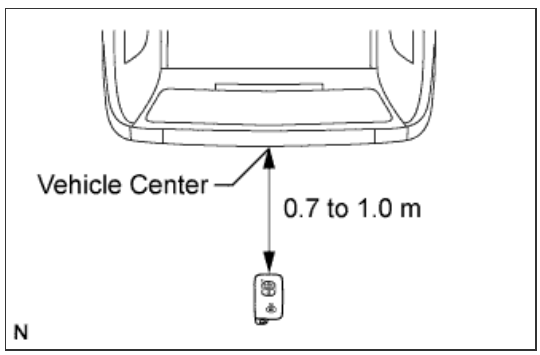


HINT:

Place the electrical key transmitter on the rear 1 seat cushion.

iv. *7: Indoor electrical key antenna (for rear 2 inside transmitter)

HINT:



Place the electrical key transmitter on the rear 2 seat cushion.

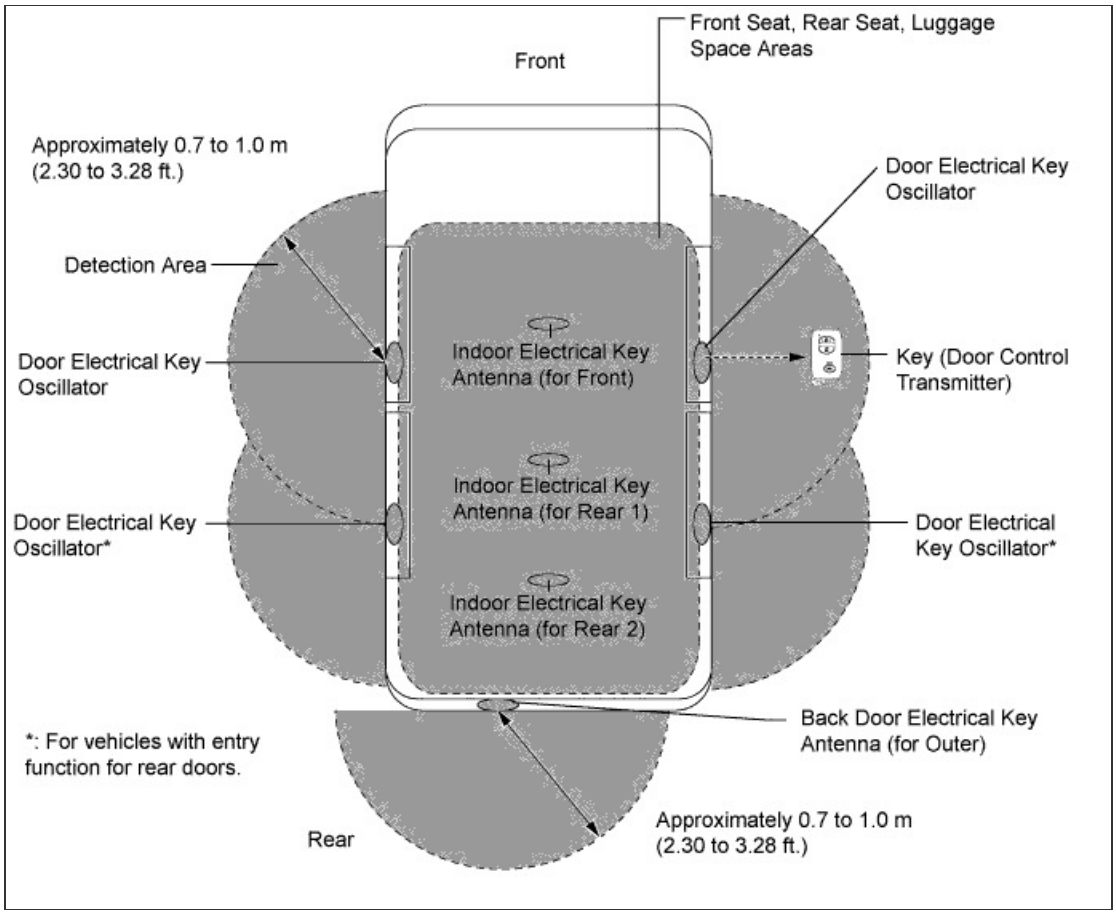
v. *8: Back door electrical key antenna (for Outer)

HINT:

Hold the electrical key transmitter at the same height as the rear bumper upper surface and aligned with the center of the rear of the vehicle, as shown in the illustration.

for Preparation Click here

CAUTION:



If using a pacemaker, be sure to read the manual of the pacemaker before using the key, as the radio waves of the key may affect the pacemaker.

ENTRY AND START SYSTEM DESCRIPTION

a. In addition to conventional mechanical key and wireless door lock control functions, the entry and start system enables door locking/unlocking, steering lock releasing, engine control system starting and back door opening without operating the key. The only requirement is that the key is in the possession of the user.

- This system is controlled by the certification ECU (smart key ECU assembly). When the certification ECU (smart key ECU assembly) detects the presence of the key in one of the detection areas, it identifies and checks the ID code, and outputs operation signals to the related ECU in accordance with their functions.
- For vehicle with rear entry function:
  The detection areas are formed by 4 oscillators and 4 antenna (4 door oscillators, back door antenna and 3 indoor antennas).
- For vehicle without rear entry function:
  The detection areas are formed by 2 oscillators and 4 antenna (2 door oscillators, back door antenna and 3 indoor antennas).

DETECTION AREA

a. Precautions for the entire system:

- Be sure to carry the key during inspection of the entry and start system.
- As weak radio waves are used to detect the key, the key detection area may decrease, or the key may not be detected correctly in the following situations.
  1. The key battery is depleted.
  2. Any facilities that generate strong radio waves, such as a TV tower, power plant, a broadcast station or gas station, are located near the inspection site.
  3. A wireless device, such as a cell phone, is carried with the key.
  4. The key is in contact with or covered with metal.
  5. Electric wave type keyless entry systems are being operated nearby.
  6. The key is located near a device that generates high voltage or noise.

7. Film with some metallic content is stuck to the back glass.

HINT:

In this case, remove the cause or unlock the door using the mechanical key.

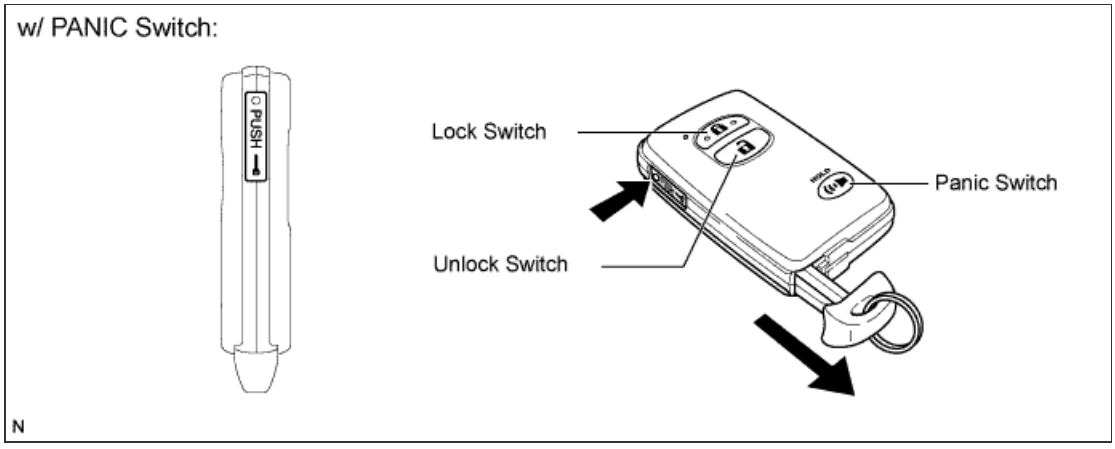
- Even if the key is in the vehicle exterior key detection area, the key may not operate properly due to the vehicle body design.
- The key may not be detected correctly if it is around the vehicle's windows, the door handle or center of the bumper, even when it is in the detection area outside the vehicle.
- The key may not be detected correctly if it is on the instrument panel, rear package tray or floor, or in the glove box, even when it is in the detection area inside the vehicle.
- The key may not operate if the key is not held properly.
- The entry and start system does not operate in the following conditions:
    1. The entry and start system is canceled.
    2. The key battery is completely depleted (the indicator does not blink when pushing any of the switches on the key).

FUNCTION OF MAIN COMPONENTS

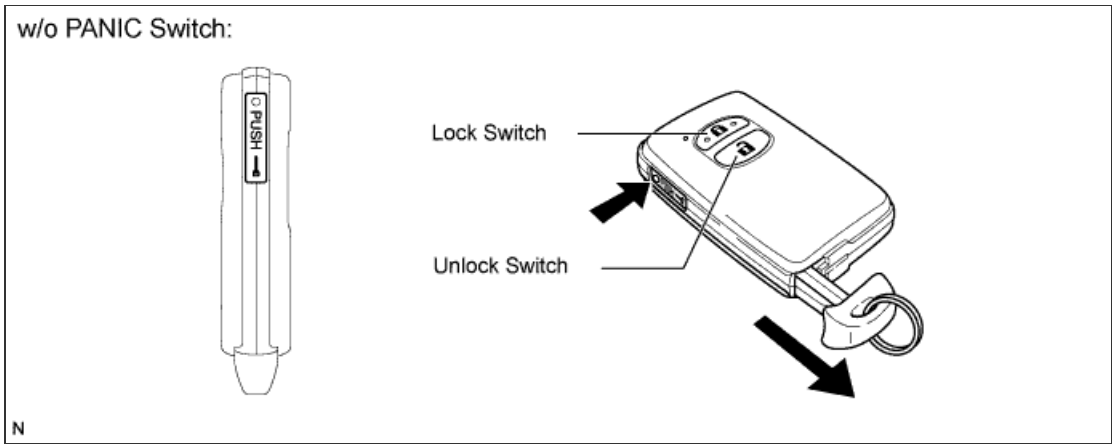
Component	Function
Certification ECU (Smart key ECU assembly)	Controls the entry and start system in accordance with signals from each oscillator, various switches, ECUs and the key. • Performs key verification. • Performs vehicle interior/exterior transmission. • Performs occupant sensor control. • Sends lock/unlock commands during entry function. • Sends steering lock/unlock commands. • Sends immobiliser set/unset commands. • Records verification codes.
Main body ECU	Controls the power source mode function in accordance with signals from various switches, ECUs and the combination meter. • Controls the ACC/IG power source by turning it on/off. • Sends an engine start command to the ECM. • Controls the indicator and word illumination of the engine switch. • Activates starter relay.
ID code box (Immobiliser code ECU)	• Receives a command from the certification ECU (smart key ECU assembly), and sends an immobiliser set/unset command to the ECM. • Records verification codes.
Indoor electrical key antenna (for front, rear 1 and rear 2)	Receives a request signal from certification ECU (smart key ECU assembly), and forms the detection area in the vehicle interior.
Door control receiver	Receives the ID code from the key in the actuation area and transmits it to the certification ECU (smart key ECU assembly).
Back door electrical key antenna (for outer)	Receives a request signal from the certification ECU (smart key ECU assembly), and forms the actuation area around the back door.
Back door opener switch	Transmits a back door open request signal to the main body ECU.
Back door lock switch	Transmits a back door lock request signal to the certification ECU (smart key ECU assembly).
Door electrical key oscillator (for driver, front passenger, rear LH*3, rear RH*3 side doors)	Receives a request signal from the certification ECU (smart key ECU assembly), and forms the detection area around each door.
Outside door handle (for driver, front passenger, rear LH*3, rear RH*3 side doors) (antenna)	Transmits request signals.
Outside door handle (for driver, front passenger, rear LH*3, rear RH*3 side doors) (touch sensor)	Detects when a person touches the inside of the outside handle.
Outside door handle (for driver, front passenger, rear LH*3, rear RH*3 side doors) (lock switch)	Transmits door lock request signals to the certification ECU (smart key ECU assembly).
Key	• When an LF wave*1 that is output from the vehicle interior/exterior antenna is received, RF wave*2 format conversion is performed on the key ID, vehicle ID and other information, and an RF wave*2 is then output. • When the lock/unlock switch on the key is pressed, the signal is converted to an RF wave*2 and is then output. • When the wave output from the engine switch immobiliser amplifier is received, the key ID, vehicle ID and other information is output through immobiliser communication. • The key is equipped with a mechanical key for unlocking doors when the battery is fully depleted.

Wireless door lock buzzer Combination meter • Multi-information Display • Buzzer	When the certification ECU (smart key ECU assembly) detects human errors such as those below, it warns the driver by sounding the wireless door lock buzzer*, displays information and sounds the buzzer in accordance with the request signal from the ECU. **HINT:** *: Except China Example: • Key is taken outside the vehicle. • Driver leaves the vehicle while the engine is still running. • Driver leaves the vehicle while the shift lever is in a position other than P.

HINT:



- ***1: LF waves (134 KHz) check if the key is in the vehicle interior or not.**
- ***2: RF waves (314.35 MHz for Australia, 433.92 MHz for Europe and the Middle and Near East, and 315.12 MHz for China) are emitted from the key in response to the LF waves, and are sent to the door control receiver.**
- ***3: For vehicles with entry function for rear doors.**



CONSTRUCTION AND OPERATION

a. Key:
A total of 7 keys can be registered.

i. Electrical key transmitter:
The electrical key transmitter consists of a mechanical key, a transmitter function for the wireless door lock control and a transceiver for the entry and start system.

- The transceiver function for the entry and start system receives the signals from the oscillators and sends the ID code to the door control receiver.
- The transmitter function for the wireless door lock control has a lock switch, unlock switch and panic switch.
- This mechanical key can lock/unlock all the doors. To lock or unlock the doors, remove the cap from the driver door outside handle, insert the key into the door key cylinder, and then turn it to the lock or unlock position.

b. Oscillator (each door oscillator, front, rear 1 and rear 2 indoor antenna, and back door antenna)
Each oscillator transmits the request signal received from the certification ECU (smart key ECU assembly), and forms a key detection area to detect the presence of a key. The detection area formed by each door oscillator and back door outer antenna is approximately 0.7 to 1.0 m (2.30 to 3.28 ft.) from the outside handle of each door or the center of the rear bumper.

- The detection area of each door oscillator is formed by transmitting a request signal every 0.25 seconds while the engine switch is off and each door is locked. In this way, it detects the proximity of a key. During entry lock, the detection area is formed with the lock switch on.
- The detection area of the back door antenna is formed when the back door opener switch is on.
- The detection area of the indoor antenna (for front, rear 1 and rear 2) is formed when the driver door is opened or closed, during starting, when a warning is activated, or when the lock switch is on.

ENTRY FUNCTION OPERATION

a. The entry and start system has the following functions.

Function	Outline
Mechanical Key	Operation is the same as a conventional mechanical key.
Wireless Door Lock Control	This function remotely locks and unlocks all doors and the back door. Operation is the same as the wireless door lock control system. However, receiver in the certification ECU (smart key ECU assembly) uses the entry door control receiver to control locking and unlocking.
Entry Illumination	When a person carrying the key enters the detection area, the door will enter unlock standby mode and room light will illuminate.
Entry Unlock	When the key is located in the detection area of the door oscillator, the door will unlock by touching the inside of the outside door handle.
Entry Unlock Mode Switching (Click here)	Changes the doors that can be unlocked with the entry unlock function between 2 modes. • Driver door unlock mode • All door unlock mode
Entry Lock	When the key is located in the detection area of the door oscillator and the engine switch is off, the door can be locked by pressing the lock switch on the outside door handle.
Entry Back Door Open	When the key is in the detection area of the back door antenna (outer), the back door opens by pressing the back door opener switch.
Memory Call	This function operates the driving position memory system in accordance with the key ID code.
• Power Window Close Function*1 • Sliding Roof Close Function*1	Pressing the door handle entry lock switch for approximately 3 seconds or more causes all power windows and the sliding roof to close while sounding the wireless buzzer*2.
Key Lock-in Prevention	Prevents lock-in of the key if the door is locked using the outside door handle while the key is still inside the vehicle.
Warning	When any of the situations below occur, the entry and start system causes the certification ECU (smart key ECU assembly) to sound the buzzer in the combination meter and the wireless door lock buzzer*2, and display information in order to alert the driver. • Shift lever not in P (power source cut reminder) vehicle exit warning • Key reminder warning

	• Shift lever in P (power source cut reminder) vehicle exit warning • Entry door ajar warning • Passenger has brought key out of vehicle warning • Key is not within detection area warning • Key lock-in prevention function buzzer • Key battery low warning
Battery Saving	If the key is constantly located within the actuation area of the door oscillator, the system maintains periodic communication with the key. Therefore, if the vehicle remains parked in that state for a long time, key battery and vehicle battery could be drained. For this reason, the vehicle has controls for saving battery power.
Key Cancel (Click here)	The following key functions can be canceled: • Entry Unlock/Lock • Entry Ignition • Memory Call • Entry Back Door Open • Key Lock-in Prevention • Warning

HINT:

*1: w/ Remote Function

*2: except China

WIRELESS DOOR LOCK AND UNLOCK AND PANIC* FUNCTION

Push the lock/unlock/panic switch on the key to operate each function.

HINT:

*: w/ PANIC Switch

ENTRY UNLOCK FUNCTION

a. The detection area is formed by communication between a door oscillator and the certification ECU (smart key ECU assembly) when the door is locked in order to detect the person carrying the key.

b. When the person carrying the key enters the detection area around the vehicle, the matching of the ID codes for a door oscillator and key will automatically be performed. After the matching is completed, the door will enter unlock standby mode.

c. In unlock standby mode, the antenna built into the outside handle starts sensing. If the outside handle is held (the back side of the handle is touched), the door unlock operation will be performed. At this time, the hazard warning light blinks twice and the wireless door lock buzzer sounds twice*.

HINT:

*: except Europe and China

d. If any of the doors are not opened after a door unlock operation, all doors will automatically lock after 30 seconds.

ENTRY LOCK FUNCTION

a. After leaving the vehicle carrying the key, push the lock switch on the outside handle when all the doors are closed.

b. The certification ECU (smart key ECU assembly) determines whether the key is located inside or outside of the cabin based on the information from a door oscillator and indoor antenna. Then matching of the ID codes is performed.

c. When the matching result shows that the ID codes of the key and indoor antenna do not match and the ID codes of the key and door oscillator match, the door lock function will operate. At this time, the hazard warning lights blink once and the wireless door lock buzzer sounds once*.

HINT:

*: except Europe and China

d. If the key is located inside of the cabin, the door lock function will not operate and the alarm buzzer (beep sound) will sound for 2 seconds*.

HINT:

*: except China

ENTRY BACK DOOR OPEN FUNCTION

Stand in front of the back door with the key and push the back door opener switch to start the matching of the ID codes for the back door antenna. If the ID codes match, the back door open operation will be performed.

PREVENTION OF KEY LOCK-IN FUNCTION

a. If you attempt to lock the door through keyless operation (move the lock knob to the lock position and then close the door) with the key in the cabin, the system determines that the key is located in the cabin and unlocks the door.

b. If the back door is closed with the key in it, the alarm will sound and the back door can be opened only when all the doors are locked in order to prevent key lock-in in the vehicle.

ENTRY ILLUMINATION FUNCTION

In order to improve ease of entering and exiting the vehicle at night, the vehicle lights illuminate when the key is brought near the vehicle.

ENTRY POWER WINDOW FUNCTION* [REMOTE FUNCTION] (DOOR WINDOW AND SLIDING ROOF CLOSE OPERATION ONLY)

a. Pressing the door handle lock switch for 3 seconds or more operates the door window close operation of all of the windows and the sliding roof close operation.

b. If the entry power window function is operating and the door handle lock switch is released, the entry power window operation will stop.

HINT:

- **For more information about the entry power window function, refer to the Power Window Control System (Click here).**
- ***: w/ Remote Function**

MEMORY CALL FUNCTION (w/ Seat Position Memory System)

a. After unlocking the driver door using the key ID and opening the driver door, the seat automatically moves to the position associated with the key ID.

HINT:

For more information about the memory call function, refer to the Front Power Seat Control System (Click here).

WARNING FUNCTION

a. General:
When any of the situations below occur, the entry and start system responds to alert the driver.

Warning Function Operation Condition	Situation
Shift lever not in P (power source cut reminder) vehicle exit warning	A
Key reminder warning	B
Shift lever in P (power source cut reminder) vehicle exit warning	C
Entry door ajar warning	D
Passenger has brought key out of vehicle warning	E
Key is not within detection area warning	F
Key lock-in prevention function buzzer	G
Key battery low warning	H

b. Situation A:
Shift lever not in P (power source cut reminder) vehicle exit warning

i. With shift lever not in P, door is opened and vehicle exit (while holding key) is attempted

<table>
<tr><td colspan="4">Reason for warning: Sudden vehicle start prevention, vehicle theft prevention, vehicle roll-away prevention</td></tr>
<tr><td colspan="4">Warning start condition: Shift lever is not in P, engine switch is on (ACC) or on (IG), driver side door is opened and vehicle speed is 0 km/h (0 mph)</td></tr>
<tr><td colspan="4">Warning stop condition: Engine switch is off, shift lever is in P, vehicle speed is above 0 km/h (0 mph), or driver side door is closed</td></tr>
<tr><td rowspan="4">Warning description</td><td>Combination meter buzzer</td><td>Multi-buzzer</td><td>Sounds continuously (beep)</td></tr>
<tr><td rowspan="2">Combination meter display</td><td>Combination meter information</td><td>"Shift to P Range"</td></tr>
<tr><td>Telltale</td><td>None</td></tr>
<tr><td></td><td colspan="2">Sounds continuously (beep)*</td></tr>
</table>

	Wireless buzzer	**HINT:** *: except China
Recommended user action		Move shift lever to P

ii. With shift lever not in P, door is opened, key is brought out of vehicle, door is closed, and movement away from vehicle is attempted

Reason for warning: Sudden vehicle start prevention, vehicle theft prevention, vehicle roll-away prevention			
Warning start condition: Shift lever is not in P, engine switch is on (ACC) or on (IG), opened driver side door is closed, vehicle speed is 0 km/h (0 mph) and key is not in detected in vehicle interior and luggage interior			
Warning stop condition: • Key is detected in vehicle interior and luggage interior: Buzzer stops and "Shift to P Range" is displayed on combination meter • Vehicle speed is more than 0 km/h (0 mph): Buzzer stops, "Key is not detected" - "Check key position" is displayed on combination meter • Engine switch off: All warnings are turned off			
Warning description	Combination meter buzzer	Multi-buzzer	Sounds continuously (beep)
	Combination meter display	Combination meter information	Information below is displayed alternately on combination meter "Shift to P Range" "Key is not detected" - "Check key position"
		Telltale	None
	Wireless buzzer	Sounds continuously (beep)* **HINT:** *: except China	
Recommended user action		Move shift lever to P	

c. Situation B:
Key reminder warning

i. Steering lock/unlock set, driver door is opened and movement away from vehicle is attempted

Reason for warning: Vehicle theft prevention, required by law			
Precondition: Remote start is not operating			
Warning start condition: One of following conditions is met 1. Engine switch on (ACC) or off, and driver door opened 2. Engine switch off, steering lock/unlock set and driver door opened			
Warning stop condition: One of following conditions is met 1. Engine switch is on (IG) or driver door is closed 2. Engine switch on (ACC) or off, and steering lock/unlock is set			
Warning description	Combination meter buzzer	Multi-buzzer	Sounds intermittently (several "pon" sounds)
	Combination meter display	Combination meter information	None
		Telltale	None
	Wireless buzzer	None	
Recommended user action		If engine switch is on (ACC) or on (IG), turn engine switch off and close driver door	

d. Situation C:
Shift lever in P (power source cut reminder) vehicle exit warning

i. With shift lever in P, driver door is opened, key is brought out of vehicle, driver door is closed, and movement away from vehicle is attempted

Reason for warning: Vehicle theft prevention, "Engine control system cannot be restarted" prevention, battery depletion prevention
Warning start condition: Shift lever is in P, engine switch is on (ACC) or on (IG), opened driver side door is closed and key is not in detected in vehicle interior and luggage interior
Warning stop condition: Engine switch on (ACC) or off, or key is detected in vehicle interior and luggage interior

Warning description	Combination meter buzzer	Multi-buzzer	Sounds once (1 "pon" sound) (when key is not detected continuously, sounds again when vehicle is first driven)
	Combination meter display	Combination meter information	"Key is not detected" - "Check key position"
		Telltale	None
	Wireless buzzer	Sounds 3 times (short beeps)* **HINT:** *: except China	
Recommended user action		Turn engine switch off and exit vehicle while holding key	

ii. With shift lever in P and either engine switch on (ACC) or steering lock/unlock set, driver door is opened, user moves away from vehicle, and door handle lock switch is pressed in an attempt to perform entry lock operation

Reason for warning: Vehicle theft prevention, battery depletion prevention			
Precondition: Change door control lock switch from off to on			
Warning start condition: Shift lever is in P, engine switch is on (ACC) or on (IG), all doors closed and key is detected in vehicle exterior, key is not detected in vehicle interior, vehicle speed is 0km/h.			
Warning stop condition: One of following conditions is met 1. Engine switch off. 2. Key is detected in vehicle interior and luggage interior. 3. Vehicle speed is more than 0km/h. 4. Shift lever is not in P.			
Warning description	Combination meter buzzer	Multi-buzzer	None
	Combination meter display	Combination meter information	None
		Telltale	None
	Wireless buzzer	Sounds for 60 seconds (long beep)* **HINT:** *: except China	
Recommended user action		Turn engine switch off and perform entry lock operation	

e. Situation D:
Entry door ajar warning

i. With one vehicle door open, entry lock operation is attempted

Reason for warning: Vehicle theft prevention			
Precondition: Engine switch on (ACC) or off, and one door open			
Warning start condition: After preconditions are met, entry lock operation is performed			
Warning stop condition: Engine switch is on (ACC) or on (IG), all doors are closed, wireless unlock is performed, entry unlock operation is performed or 10 seconds have passed after warning start			
Warning description	Combination meter buzzer	Multi-buzzer	None
	Combination meter display	Combination meter information	None
		Telltale	None
	Wireless buzzer	Sounds continuously (beep)* **HINT:** *: except China	
Recommended user action		Close all doors and perform entry lock operation	

f. Situation E:
Passenger has brought key out of vehicle warning

i. With engine switch in condition other than off, key is brought out of vehicle by passenger

Reason for warning: "Engine control system cannot be started" prevention
Warning start condition: Engine switch is on (ACC) or on (IG), opened door other than driver side door is closed,

<table>
<tr><td colspan="4">vehicle speed is 0 km/h (0 mph) and key is not in detected in vehicle interior and luggage interior</td></tr>
<tr><td colspan="4">Warning stop condition: Engine switch on (ACC) or off, or key is detected in vehicle interior and luggage interior or vehicle speed is more than 0 km/h (0 mph)</td></tr>

g. Situation F:
Key is not within detection area warning

i. With key not in vehicle cabin or key battery depleted, engine switch on (ACC) or on (IG) operation is attempted

<table>
<tr><td colspan="4">Reason for warning: User confusion prevention</td></tr>
<tr><td colspan="4">Warning condition: Engine switch is not off and key is not detected in vehicle interior</td></tr>
<tr><td rowspan="3">Warning description</td><td>Combination meter buzzer</td><td>Multi-buzzer</td><td>Sounds once (1 "pon" sound)</td></tr>
<tr><td rowspan="2">Combination meter display</td><td>Combination meter information</td><td>"Key is not detected" - "Check key position" is displayed for 10 seconds, then display ends</td></tr>
<tr><td>Telltale</td><td>None</td></tr>
<tr><td>Wireless buzzer</td><td colspan="2">None</td></tr>
<tr><td colspan="2">Recommended user action</td><td colspan="2">Check if the key is within the detection area of the vehicle cabin
If key is within the vehicle interior, built-in battery may be depleted
If wireless door lock switch on key is pressed, check if indicator on key illuminates
If indicator does not illuminate, replace the built-in battery
It is recommended that battery be bought at dealer, but battery can be replaced according to user preference</td></tr>
</table>

h. Situation G:
Key lock-in prevention function buzzer (for cabin)

i. With key in vehicle cabin, vehicle is exited and door handle lock switch is pressed in an attempt to perform entry lock operation

<table>
<tr><td colspan="4">Reason for warning: Key reminder vehicle theft warning prevention</td></tr>
<tr><td colspan="4">Warning condition: Engine switch off, all doors closed, door handle lock switch on and key is detected in vehicle interior</td></tr>
<tr><td rowspan="4">Warning description</td><td>Combination meter buzzer</td><td>Multi-buzzer</td><td>None</td></tr>
<tr><td rowspan="2">Combination meter display</td><td>Combination meter information</td><td>None</td></tr>
<tr><td>Telltale</td><td>None</td></tr>
<tr><td>Wireless buzzer</td><td colspan="2">Sounds for 2 seconds (long beep)*

HINT:

*: except China</td></tr>
<tr><td colspan="2">Recommended user action</td><td colspan="2">Pick up key that is in vehicle interior and perform entry lock operation again</td></tr>
</table>

i. Situation H:
Key battery low warning

i. Key with almost depleted battery is used to drive vehicle

Reason for warning: Helpful function			
Warning condition: After engine switch not off condition continues for 20 minutes or more, engine switch is changed from not off to off, key battery is low and key is detected in vehicle interior			
Warning description	Combination meter buzzer	Multi-buzzer	Sound once (1 "pon" sound)
	Combination meter display	Combination meter information	"Low Key Battery" - "Have your vehicle checked by a dealer"
		Telltale	None
	Wireless buzzer	None	
Recommended user action		Replace key built-in battery with new one It is recommended that battery be bought at dealer, but battery can be replaced according to user preference	

BATTERY SAVING

a. Vehicle battery saving function:
In the entry and start system, signals are emitted outside of the vehicle at a prescribed interval (0.25 seconds) when the doors are locked. Therefore, the vehicle battery could be drained if the vehicle remains parked for a long time. For this reason, the controls listed below exist.

Condition	Control
Both conditions below are met for 10 days: • Key is not in detection area • Touch sensor or lock switch operation is not performed	Signal transmission interval is extended from 0.25 to 0.75 seconds
Both conditions below are met for 15 days: • Key is not in detection area • Touch sensor or lock switch operation is not performed	Signal transmission interval is extended from 0.75 to 2.25 seconds
Both conditions below are met for 30 days: • Key is not in detection area • Touch sensor or lock switch operation is not performed	Automatically deactivates the entry and start system

Reinstatement Conditions:

- A wireless door lock control signal (lock, unlock) is input and the ID matches.
- A user carries the key and pushes a lock switch on an outside door handle.
- The driver door is locked or unlocked by the mechanical key.

b. Key battery and vehicle battery saving function:
In the entry and start system, if the key is constantly located within the vehicle exterior detection area of the doors, the system maintains periodic communication with the key. Therefore, if the vehicle remains parked in that state for a long time, the key battery and the vehicle battery could be drained. For this reason, if this state continues for more than 10 minutes, the entry and start system automatically becomes deactivated.
Reinstatement Conditions:

- A wireless door lock control signal (lock, unlock) is input and the ID code matches.
- A user carries the key and pushes a lock switch on an outside handle.
- The driver door is locked or unlocked by the mechanical key.

KEY DIAGNOSTIC MODE (Using the intelligent tester)

HINT:

Key diagnostic mode checks if the electrical key transmitter within a selected oscillator/antenna detection area is operating normally. The results are output through the wireless door lock buzzer (in the right front fender).

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Entry & Start / Key Communication Check.

e. Check the values by referring to the table below.

Entry & Start

Tester Display	Inspection Range

Overhead + Driver Side [*1]	Door electrical key oscillator (for Driver Side)
Overhead + Passenger Side [*2]	Door electrical key oscillator (for Front Passenger Side)
Overhead + Driver Side Rear [*3]*	Door electrical key oscillator (for Driver Side Rear)
Overhead + Passenger Side Rear [*4]*	Door electrical key oscillator (for Passenger Side Rear)
Overhead + Front Room [*5]	Indoor electrical key antenna (for Front Floor)
Overhead + Rear 1 Room [*6]	Indoor electrical key antenna (for Rear 1 Floor)
Overhead + Back Door (inside) [*7]	Indoor electrical key antenna (for Rear 2 Floor)
Overhead + Back Door (outside) [*8]	Back door electrical key antenna (for Outer)

HINT:

*: For vehicles with entry function for rear doors.

f. When the electrical key transmitter is brought near the selected oscillator/antenna, check that the wireless door lock buzzer sounds.

i. *1: Door electrical key oscillator (for Driver Side)

HINT:

- **Hold the key at the same height as the door outside handle (0.7 to 1.0 m (2.30 to 3.28 ft.)). Pay attention to the direction of the key in the illustration.**
- ***2: Perform the same inspection above for the door electrical key oscillator (front passenger seat outside transmitter).**
- ***3: Perform the same inspection above for the door electrical key oscillator (driver side rear seat outside transmitter).**
- ***4: Perform the same inspection above for the door electrical key oscillator (passenger side rear seat outside transmitter).**

ii. *5: Indoor electrical key antenna (front inside transmitter)

HINT:

Place the electrical key transmitter on the driver or front passenger seat cushion.

iii. *6: Indoor electrical key antenna (rear 1 inside transmitter)

HINT:

Place the electrical key transmitter on the rear 1 seat cushion.

iv. *7: Indoor electrical key antenna (for rear 2 inside transmitter)

HINT:

Place the electrical key transmitter on the rear 2 seat cushion.

v. *8: Back door electrical key antenna (for Outer)

HINT:

Hold the electrical key transmitter at the same height as the rear bumper upper surface and aligned with the center of the rear of the vehicle, as shown in the illustration.

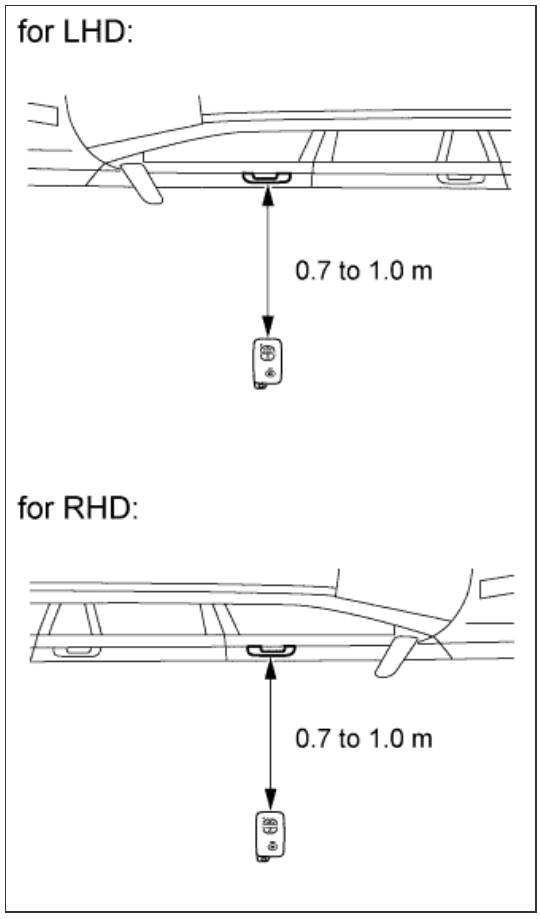
ENTRY AND START SYSTEM OPERATION INSPECTION

a. Check the entry unlock function.

i. Use the wireless lock operation to lock the doors. With the key in your possession, touch a door outside handle (touch sensor) and check that the door unlocks.



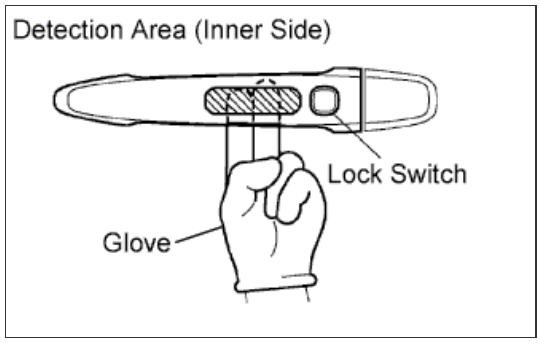
b. Check the entry unlock operation detection area.

i. Step 1: Hold the key at the same height as the door outside handle (approximately 0.8 m (2.62 ft.)). Pay attention to the direction of the key in the illustration.

ii. Step 2: Check that when the key is brought within 0.7 to 1.0 m (2.30 to 3.28 ft.) of the vehicle, the system enters unlock standby mode.

HINT:

Unlock standby mode is signified by the red LED of the key illuminating.



iii. Step 3: After the system enters unlock standby mode, touch the sensor on the outside handle within 3 seconds. Check that the door unlocks.

NOTICE:

The key may not be able to communicate with the system within a 0.2 m (0.656 ft.) radius of each outside handle.

iv. Step 4: Repeat step 2 and step 3 for the remaining doors.

v. Step 5: Inspect the door electrical key oscillator response sensitivity. Wear protective gloves, set the system to unlock standby mode, and check that touching the inner side of the outside handle (the

highlighted area in the illustration) with your finger causes the door to unlock.

NOTICE:

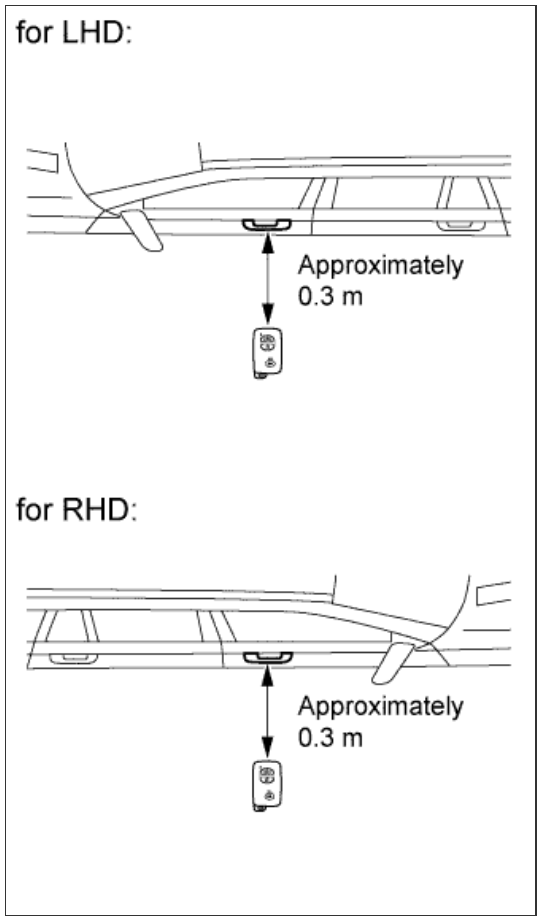
When touching the highlighted area, tapping too quickly or having extended contact may not trigger the sensor. In such a case, the door will not unlock.

vi. Step 6: Repeat step 5 for the remaining doors*.

HINT:

*: For vehicles with entry function for rear doors.

c. Check the entry lock function.



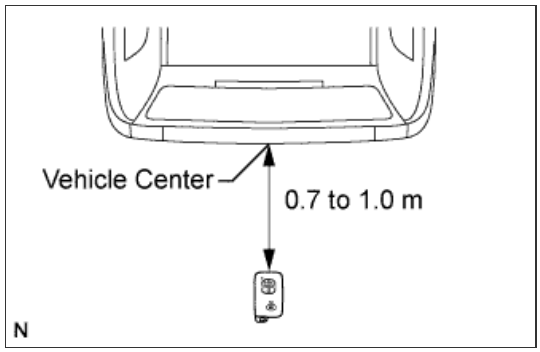
i. Step 1: Close all of the vehicle doors. With the key in your possession outside of the vehicle, check that pressing the lock switch locks the doors.

HINT:

- **When pressing the lock switch, hold the electrical key transmitter about 1 m (3.28 ft.) above the ground and about 0.3 m (0.984 ft.) away from the vehicle as shown in the illustration.**
- **Due to the key being unable to communicate with the system within a 0.2 m (0.656 ft.) distance from the outside handle, do not press the lock switch with the same hand that is holding the key. The doors may not lock.**
- **If the key lock-in prevention function buzzer sounds*, radio waves from the indoor electrical key antenna may be leaking from the vehicle.**

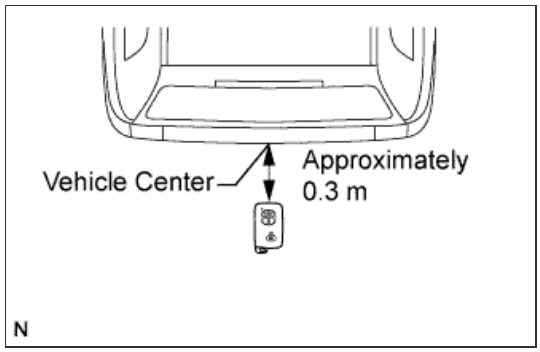
HINT:

*: except China



ii. Step 2: Repeat step 1 for the remaining doors.

d. Check the entry back door unlatch function.



i. Close all the doors and the back door. With the key in your possession, check that pressing the back door opener switch unlocks all the doors and unlatches the back door.

ii. Inspect the detection area of the entry back door open operation. Hold the key at the same height as the back door opener switch (approximately 0.8 m (2.62 ft.)) and aligned with the center of the rear of the vehicle. Pay attention to the direction of the key shown in the illustration. Check that the when the key is brought within 0.7 to 1.0 m (2.30 to 3.28 ft.) of the vehicle, pressing the back door opener switch unlocks all the doors and unlatches the back door.

e. Check the entry back door lock function.

i. Step 1: Close all of the vehicle doors. With the key in your possession outside of the vehicle, check that pressing the back door lock switch locks all the doors.

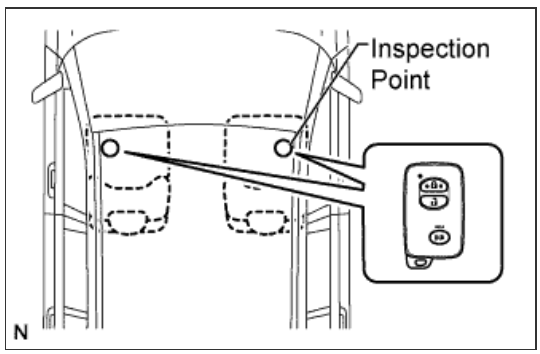
HINT:

- **When pressing the lock switch, hold the electrical key transmitter about 1 m (3.28 ft.) above the ground and about 0.3 m (0.984 ft.) away from the vehicle as shown in the illustration.**
- **Due to the key being unable to communicate with the system within a 0.2 m (0.656 ft.) distance from the center of the rear of the vehicle, do not press the lock switch with the same hand that is holding the key. The doors may not lock.**
- **If the key lock-in prevention function buzzer sounds, radio waves from the indoor electrical key antenna may be leaking from the vehicle.**

f. Check the entry ignition function.

i. When the engine control system is off: With the key in your possession and the brake pedal depressed, check that pressing the engine switch releases the steering wheel lock and starts the engine control system.

HINT:

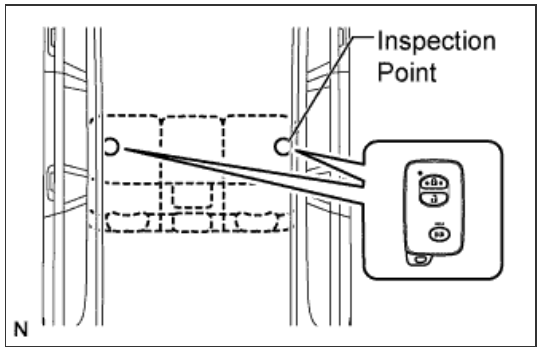


- **The engine control system can be started only when the engine switch indicator illumination in green.**
- **Even when not depressing the brake pedal, continually pressing the engine switch for 15 seconds when the engine switch is on (ACC) can start the engine control system.**

ii. When the engine control system is running: With the key in your possession, check that pressing the engine switch stops the engine control system and activates the steering wheel lock.

HINT:

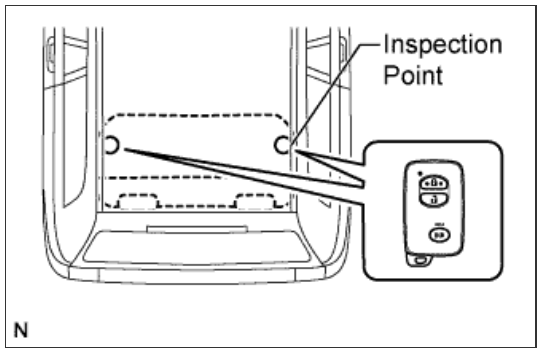
The shift lever must be in P to be able to stop the engine control system.



iii. Inspect the detection area of the entry ignition operation (front seat). Pay attention to the direction of the key in the illustration. When the key is in either of the 2 locations in the illustration, check that the engine control system can start.

NOTICE:

The engine control system cannot be started when the key is on the instrument panel or rear package tray, or in the glove box.



iv. Inspect the detection area of the entry ignition operation (rear 1 seat). Pay attention to the direction of the key in the illustration. When the key is in either of the 2 locations in the illustration, check that the engine control system can start.

NOTICE:

The engine control system cannot be started when the key is on the instrument panel or rear package tray, or in the glove box.

v. Inspect the detection area of the entry ignition operation (rear 2 seat). Pay attention to the direction of the key in the illustration. When the key is in either of the 2 locations in the illustration, check that the engine control system can start.

NOTICE:

The engine control system cannot be started when the key is on the instrument panel or rear package tray, or in the glove box.

g. Check the key lock-in prevention function.

NOTICE:

To prevent key lock-in, perform the inspection with one of the door windows open.

i. Place the key in the vehicle with all doors locked. Check that, when all the doors are locked through keyless operation (move the lock knob to the lock position and then close the door), the wireless buzzer sounds* for seconds and all the doors are unlocked.

HINT:

*: except China

NOTICE:

If the key in inside a metal storage item, such as a metal briefcase or metal box, the key will not be able to be detected by the system.

h. Check the key cancel function.

i. While the engine switch is on (IG), check that the back door opener switch is the only switch in the entry and start system that can be operated.

ii. While the key cancel function (entry and start system cancel function) is on, check that all functions in the entry and start system cannot be operated.

i. Check the answer-back function (hazard warning light flashing and buzzer sounding).

Entry Operation	Hazard Warning Light	Buzzer*
Entry Door Lock	Flashes once	Sounds once
Entry Door Unlock	Flashes twice	Sounds twice
Entry Back Door Open	Flashes twice	Sounds twice

HINT:

*: except Europe and China

j. Check that the key reminder warning buzzer sounds.

i. Carry the key in the vehicle and close the driver side door. Then turn the engine switch off or on (ACC).

ii. Open the driver side door and check that the buzzer sounds intermittently.

k. Check that the key reminder warning buzzer stops.

i. When the buzzer is sounding, check that the buzzer stops sounding if either of the following are performed:

- Close the driver side door (front door courtesy light switch is off).
- Turn the engine switch on (IG).

for Preparation Click here

CUSTOMIZING FUNCTION WITH INTELLIGENT TESTER

HINT:

The following items can be customized.

NOTICE:

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Be sure to make a note of the current setting before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Customize Setting.

e. Select the setting by referring to the table below.

Entry & Start

Display	Default	Contents	Setting
Ignition Area (Entry ignition available area)	ALL	Function to choose the available area for the key to start the engine and cancel the steering lock.	FRONT/ALL*
Park Wait Time (Waiting time to permit unlocking door after locking)	2.5s	Function that sets the waiting time to permit unlocking the door after the door is locked with the entry lock function.	0.5s/1.5s/2.5s/5s
Back Door Opening Operation (Back door open mode when vehicle is locked)	LONG	Back door opening the operation.	LONG/TWICE/OFF

Warning

Display	Default	Contents	Setting
Passenger Take Key	ON	Warn a key is taken out by fellow passengers	ON/OFF
Key Low Battery Warning (Warn when key battery becomes weak)	ON	Function that warns the driver that the key battery power is low.	ON/OFF
Key Out Range Warning	ON	Warn Starting E/G when the key is out of range	ON/OFF

HINT:

*: "FRONT" means front, and "ALL" means front, rear 1 and rear 2.

ENTRY UNLOCK MODE SWITCHING FUNCTION

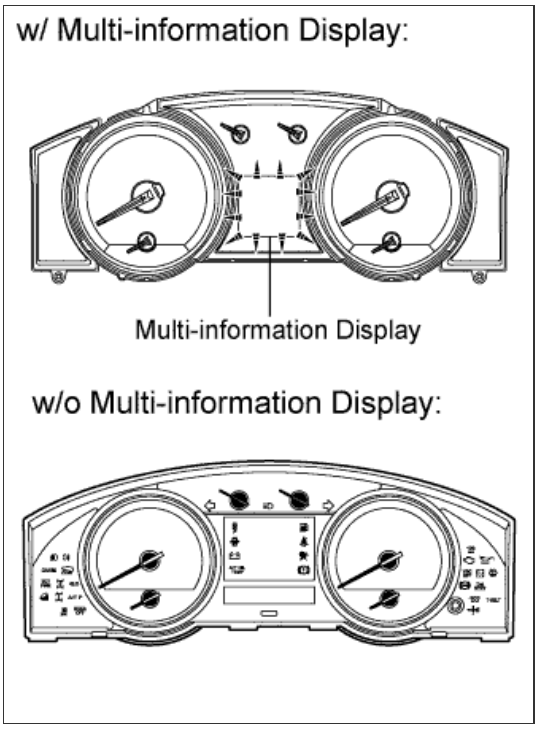
a. To use the entry unlock mode switching function, make sure the engine switch is off and simultaneously press and hold the lock switch on the key and another key switch for 5 seconds.

When the switches are pressed and held for 5 seconds, the entry door unlock mode changes in the following order: all door unlock mode, driver door unlock mode.

NOTICE:

After pressing and holding the switches for 5 seconds, wait 5 seconds before performing the same procedure again.

- All door unlock mode (default):
  When a touch sensor is touched, all doors unlock.
- Driver door unlock mode:
  When the driver door touch sensor is touched, only the driver door unlocks. When another touch sensor is touched, all doors unlock.



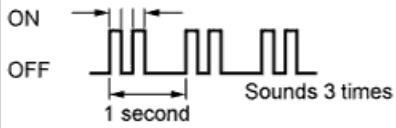
b. The certification ECU (smart key ECU assembly) receives this signal from the door control receiver and changes the entry and start system to the entry unlock mode.

c. The certification ECU (smart key ECU assembly) sounds the wireless door lock

buzzer and combination meter buzzer to inform the user that the mode has been switched.

HINT:

The function only changes the entry unlock mode of the entry and start system. It does not switch the unlocking of the wireless door lock control.



- All door unlock mode:

Mode		All Doors (Default)
Wireless Door Lock Buzzer*1		ON / OFF — Sounds 2 times
Combination Meter	Multi-information Display*2	Displayed for 4 seconds
	Buzzer	Sounds once

HINT:

- ***1: except China.**
- ***2: For vehicles with the multi-information display.**

- Driver door unlock mode:

Mode		Driver Door (Customized)
Wireless Door Lock Buzzer*1		Each interval approximately 0.13 seconds 
Combination Meter	Multi-information Display*2	 Displayed for 4 seconds
	Buzzer	Sounds once

HINT:

- ***1: except China.**
- ***2: For vehicles with the multi-information display.**
- **The above illustration is for LHD vehicles. For RHD vehicles, the left side and right side are reversed.**

KEY CANCEL

The key cancel operation disables the following functions:

- Entry Unlock/Lock
- Key Lock-in Prevention
- Memory Call
- Entry Back Door Open
- Warning
- Entry Ignition

a. The operation procedures are as follows:
Precondition:
Engine switch off, driver side door closed and unlocked.

i. Unlock the driver side door once with the unlock switch of the key.

ii. Open the driver door within 5 seconds.

iii. Unlock the driver side door twice with the unlock switch of the key within 5 seconds.

iv. Perform close → open twice for the driver door within 30 seconds.
(Driver door: Open condition → Close → Open → Close → Open)

v. Unlock the driver side door twice with the unlock switch of the key within 5 seconds.

vi. Perform close → open once for the driver door within 30 seconds.
(Driver door: Open condition → Close → Open)

vii. Close the driver door within 5 seconds.
When key cancel is activated, the wireless door lock buzzer sounds twice.
To return to the original condition, perform the procedures again. When the original condition is returned, the wireless door lock buzzer sounds once.

WIRELESS BUZZER VOLUME ADJUSTMENT (Click here).

HINT:

- **Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.**
- **Inspect the fuses and relays related to this system before inspecting the suspected areas below.**

CHECK CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

a. Disconnect the E29 ECU connector.

b. Measure the resistance and voltage of the wire harness side connector.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E29-17 (E) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
E29-1 (+B) - Body ground	B - Body ground	+B power supply	Always	11 to 14 V
E29-18 (IG) - Body ground	B - Body ground	Ignition power supply	Engine switch off	Below 1 V
			Engine switch on (IG)	11 to 14 V
E29-3 (TSW1) - E29-17 (E)	G - W-B	Door outside handle (driver side) lock switch signal	Switch released	10 kΩ or higher
			Switch pressed in	Below 1 Ω
E29-4 (TSW2) - E29-17 (E)	BR - W-B	Door outside handle (front passenger side) lock switch signal	Switch released	10 kΩ or higher
			Switch pressed in	Below 1 Ω
E30-25 (TSW3) - E29-17 (E)*3	G - W-B	• Door outside handle (rear LH) lock switch signal*1 • Door outside handle (rear RH) lock switch signal*2	Switch released	10 kΩ or higher
			Switch pressed in	Below 1 Ω
E30-26 (TSW4) - E29-17 (E)*3	G - W-B	• Door outside handle (rear RH) lock switch signal*1 • Door outside handle (rear LH) lock switch signal*2	Switch released	10 kΩ or higher
			Switch pressed in	Below 1 Ω
E29-7 (TSW5) - E29-17 (E)	L - W-B	Back door lock switch signal	Switch released	10 kΩ or higher
			Switch pressed in	Below 1 Ω
E29-10 (LIN) - E29-17 (E)	GR - W-B	LIN line	Always	10 kΩ or higher
E29-27 (CANH) - E29-17 (E)	LG - W-B	CAN line	Always	10 kΩ or higher
E29-28 (CANL) - E29-17 (E)	R - W-B	CAN line	Always	10 kΩ or higher

HINT:

- ***1: for LHD**
- ***2: for RHD**

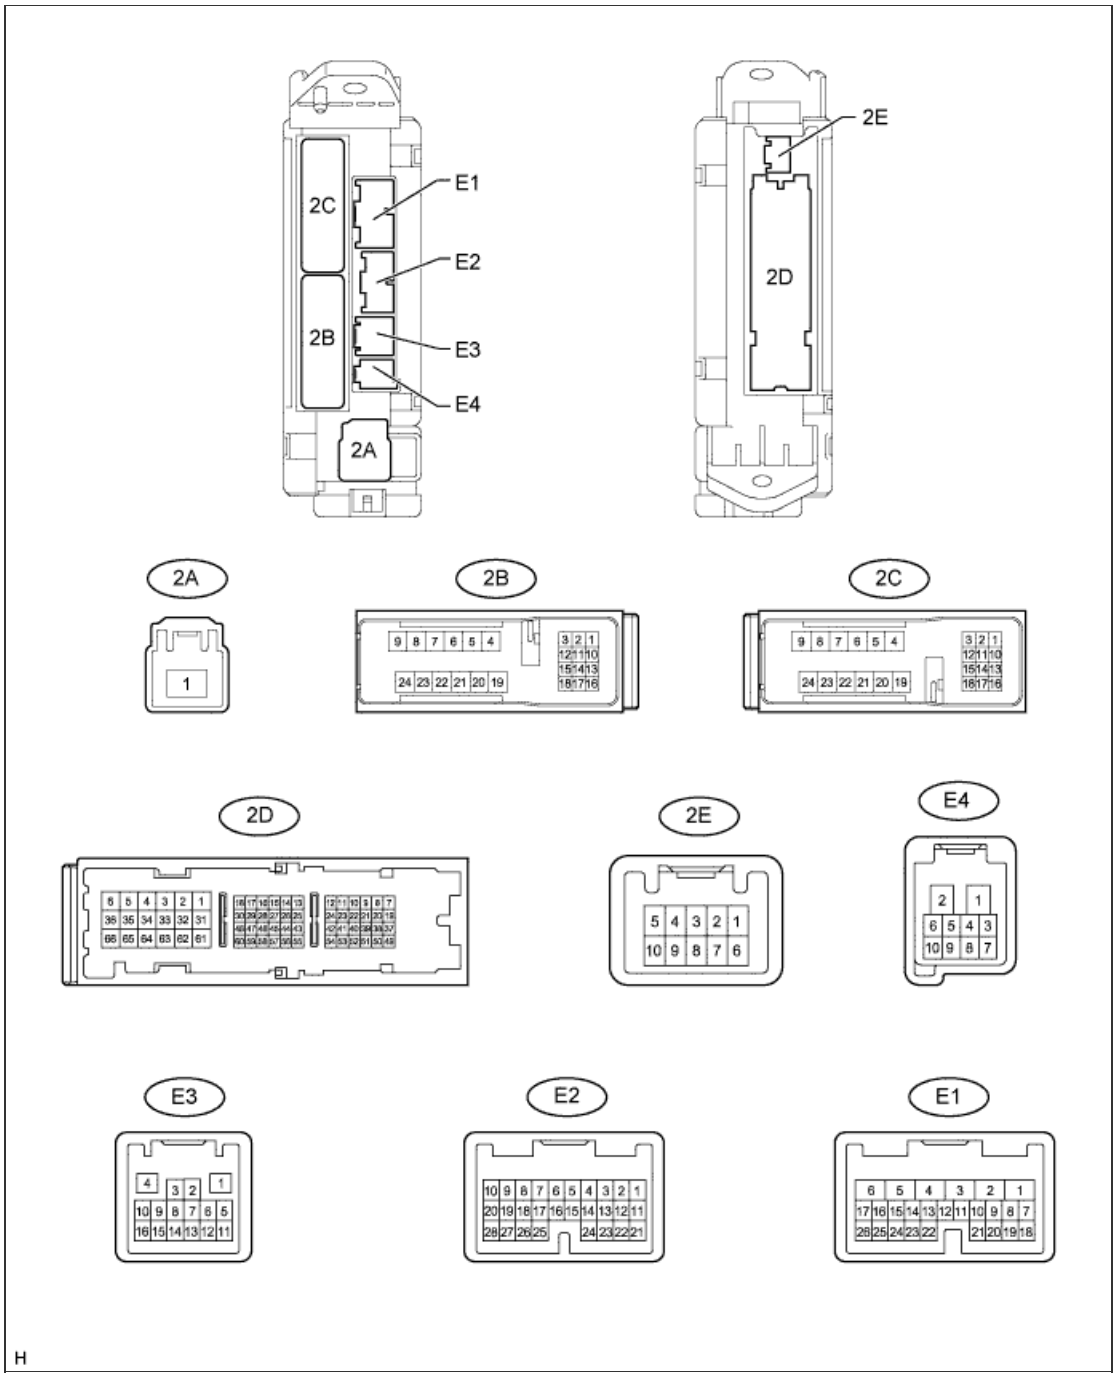
- ***3: For vehicles with entry function for rear doors.**

  If the result is not as specified, the wire harness side may have a malfunction.

c. Reconnect the E29 ECU connector.

d. Measure the voltage of the connector.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E29-33 (CLG1) - E29-34 (CG1B)	L - W	Door electrical key oscillator (driver side) sensor signal	All doors closed, all doors locked and engine switch off	Alternating between 5 V and below 1 V
			Door unlocked or door open	Below 1 V
E29-22 (SEN1) - E29-17 (E)	R - W-B	Touch sensor detection signal	Door outside handle touched	11 to 14 V
			Door outside handle not touched	Below 1 V
E29-5 (SEL1) - E29-17 (E)	Y - W-B	Touch sensor activation control signal	Key at least 5 m (16.4 ft.) away from door	11 to 14 V
			Key moved near outside door handle	Below 1 V
E29-35 (CLG2) - E29-36 (CG2B)	L - R	Door electrical key oscillator (front passenger side) sensor signal	All doors closed, all doors locked and engine switch off	Alternating between 5 V and below 1 V
			Door unlocked or door open	Below 1 V
E29-23 (SEN2) - E29-17 (E)	R - W-B	Touch sensor detection signal	Door outside handle touched	11 to 14 V
			Door outside handle not touched	Below 1 V
E29-6 (SEL2) - E29-17 (E)	Y - W-B	Touch sensor activation control signal	Key at least 5 m (16.4 ft.) away from door	11 to 14 V
			Key moved near outside door handle	Below 1 V
E30-8 (CLG3) - E30-9 (CG3B)*3	L - W	• Door electrical key oscillator (rear LH) sensor signal*1 • Door electrical key oscillator (rear RH) sensor signal*2	All doors closed, all doors locked and engine switch off	Alternating between 5 V and below 1 V
			Door unlocked or door open	Below 1 V
E30-28 (SEN3) - E29-17 (E)*3	R - W-B	Touch sensor detection signal	Door outside handle touched	11 to 14 V
			Door outside handle not touched	Below 1 V
E30-1 (SEL3) - E29-17 (E)*3	Y - W-B	Touch sensor activation control signal	Key at least 5 m (16.4 ft.) away from door	11 to 14 V
			Key moved near outside door handle	Below 1 V
E30-10 (CLG4) - E30-11 (CG4B)*3	L - W	• Door electrical key oscillator (rear RH) sensor signal*1 • Door electrical key oscillator (rear LH) sensor signal*2	All doors closed, all doors locked and engine switch off	Alternating between 5 V and below 1 V
			Door unlocked or door open	Below 1 V



E30-27 (SEN4) - E29-17 (E)*3	R - W-B	Touch sensor detection signal	Door outside handle touched	11 to 14 V
			Door outside handle not touched	Below 1 V
E30-2 (SEL4) - E29-17 (E)*3	Y - W-B	Touch sensor activation control signal	Key at least 5 m (16.4 ft.) away from door	11 to 14 V
			Key moved near outside door handle	Below 1 V
E29-11 (CLG5) - E29-12 (CG5B)	SB - V	Indoor electrical key antenna (for front) sensor signal	30 seconds after driver side door opened and closed, engine switch off	Alternating between 5 V and below 1 V
			Within 30 seconds after driver side door opened and closed, engine switch off	Below 1 V
E29-13 (CLG6) - E29-14 (CG6B)	R - SB	Indoor electrical key antenna (for rear 1) sensor signal	30 seconds after driver side door opened and closed, engine switch off	Alternating between 5 V and below 1 V
			Within 30 seconds after driver side door opened and closed, engine switch off	Below 1 V
E29-15 (CLG7) - E29-16 (CG7B)	GR - W	Indoor electrical key antenna (for rear 2) sensor signal	30 seconds after driver side door opened and closed, engine switch off	Alternating between 5 V and below 1 V
			Within 30 seconds after driver side door opened and closed, engine switch off	Below 1 V
E29-31 (CLG8) - E29-32 (CG8B)	G - GR	Back door electrical key antenna (for outer) sensor signal	Back door opener switch off	Alternating between 5 V and below 1 V
			Back door opener switch on	Below 1 V
E29-29 (RCO) - E29-17 (E)	B - W-B	Door control receiver power source	Engine switch off, all doors closed and transmitter switch not pressed → pressed	Below 1 V → 4.6 to 5.4 V → Below 1 V
E29-39 (RSSI) - E29-17 (E)	L - W-B	Door control receiver electric wave existence signal	Engine switch off, all doors closed and transmitter switch not pressed → pressed	11 to 14 V → Below 1 V
E29-38 (RDA) - E29-17 (E)	LG - W-B	Door control receiver data input signal	Engine switch off, all doors closed and transmitter switch not pressed → pressed	Below 1 V → 11 to 14 V → Below 1 V
E29-21 (BZR) - E29-17 (E)	LG - W-B	Wireless door lock buzzer signal	Answer-back on	Pulse generation
			Answer-back off	Below 1 V

HINT:

- ***1: for LHD**
- ***2: for RHD**
- ***3: For vehicles with entry function for rear doors.**

If the result is not as specified, the ECU may have a malfunction.

CHECK MAIN BODY ECU (COWL SIDE JUNCTION BLOCK LH)

a. Disconnect the E1, E2, E3, 2A, 2B and 2D ECU connectors.

b. Measure the resistance and voltage of the wire harness side connectors.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
2D-62 (GND2) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
E3-1 (GND3) - Body ground	BR - Body ground	Ground	Always	Below 1 Ω
2A-1 (ALTB) - Body ground	B - Body ground	ALTB power supply	Always	11 to 14 V
2B-20 (BATB) - Body ground	L - Body ground	BATB power supply	Always	11 to 14 V
E1-6 (AM1) - Body ground	W - Body ground	AM1 power supply	Always	11 to 14 V
E2-1 (AM2) - Body ground	W - Body ground	AM2 power supply	Always	11 to 14 V
2D-7 (IG) - Body ground	G - Body ground	IG1 signal	Engine switch on (IG)	11 to 14 V
			Engine switch off	Below 1 V
2D-8 (ACC) - Body ground	GR - Body ground	ACC signal	Engine switch on (ACC)	11 to 14 V
			Engine switch off	Below 1 V

E3-5 (CANH) - Body ground	SB - Body ground	CAN communication line	Always	10 kΩ or higher
E3-6 (CANL) - Body ground	B - Body ground	CAN communication line	Always	10 kΩ or higher
E3-15 (CANN) - Body ground	R - Body ground	CAN communication line	Always	10 kΩ or higher
E3-16 (CANP) - Body ground	GR - Body ground	CAN communication line	Always	10 kΩ or higher
2B-20 (LIN1) - Body ground	GR - Body ground	LIN communication line	Always	10 kΩ or higher
E3-10 (LIN2) - Body ground	G - Body ground	LIN communication line	Always	10 kΩ or higher

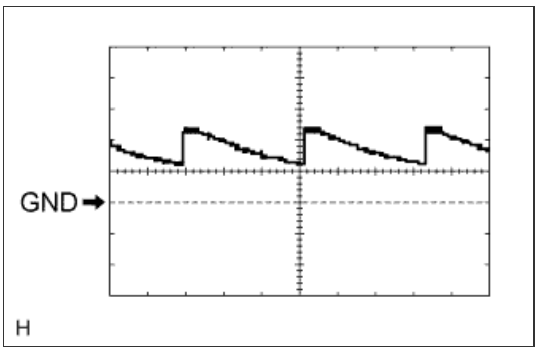
If the result is not as specified, the wire harness side may have a malfunction.

c. Reconnect the E1, E2, E3, 2A, 2B and 2D ECU connectors.

d. Measure the voltage of the connectors.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E1-24 (DCTY) - Body ground	L - Body ground*1 Y - Body ground*2	Driver side door courtesy switch input	Driver side door open	Below 1 V
			Engine switch off, and driver side door courtesy switch off	Pulse generation (see waveform 1 or 2)
E2-21 (PCTY) - Body ground	Y - Body ground*1 L - Body ground*2	Front passenger side door courtesy switch input	Front passenger side door open	Below 1 V
			Engine switch off, and passenger side door courtesy switch off	Pulse generation (see waveform 3 or 4)
2C-2 (LCTY) - Body ground	W - Body ground	Rear door LH courtesy light switch input	Rear door LH open	Below 1 V
			Engine switch off, and rear LH side door courtesy switch off	Pulse generation (see waveform 5 or 6)
E2-7 (RCTY) - Body ground	G - Body ground	Rear door RH courtesy light switch input	Rear door RH open	Below 1 V
			Engine switch off, and rear RH side door courtesy switch off	Pulse generation (see waveform 7 or 8)
E2-25 (BCTY) - Body ground	W - Body ground	Back door courtesy light switch input	Back door open	Below 1 V
			Engine switch off, and back door closed	Pulse generation (see waveform 9 or 10)
E3-4 (HAZ) - Body ground	O - Body ground	Hazard warning light signal	Answer-back on	Below 1 V
			Answer-back off	11 to 14 V
E1-26 (BDSU) - Body ground	L - Body ground	Back door opener switch input	Back door lock opener switch off	Below 1 V
			Back door lock opener switch on	Pulse generation (see waveform 11 or 12)

HINT:

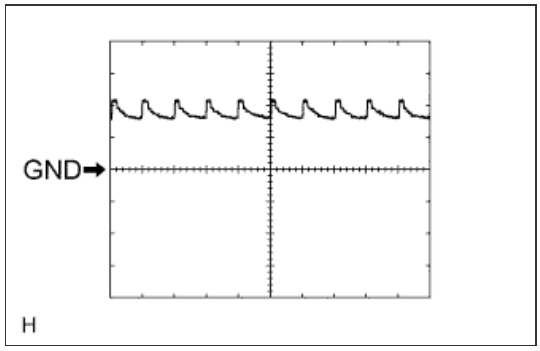


- ***1: for LHD**
- ***2: for RHD**

If the result is not as specified, the ECU may have a malfunction.

e. Using an oscilloscope, check waveform 1.

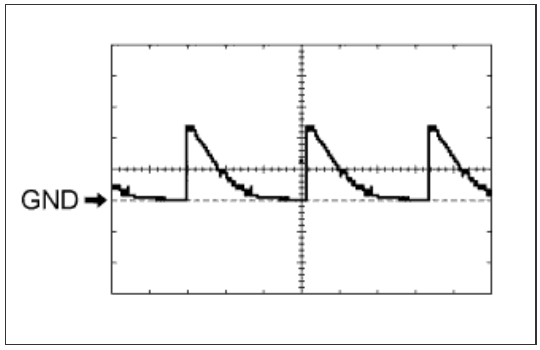
Waveform 1 (Reference)



Item	Content
Terminal No. (Symbol)	E1-24 (DCTY) - Body ground
Tool Setting	5 V/DIV., 20 ms/DIV.
Condition	Engine switch off, and driver side door courtesy switch off

f. Using an oscilloscope, check waveform 2.

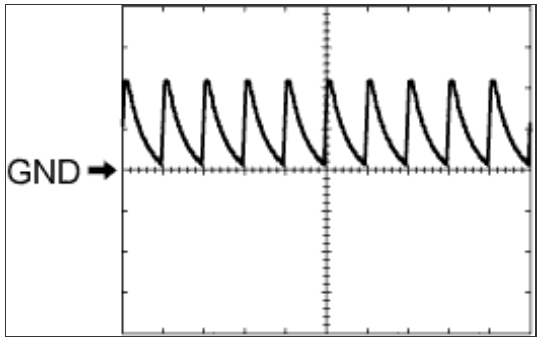
Waveform 2 (Reference)



Item	Content
Terminal No. (Symbol)	E1-24 (DCTY) - Body ground
Tool Setting	5 V/DIV., 20 ms/DIV.
Condition	Engine switch off, and driver side door courtesy switch off

g. Using an oscilloscope, check waveform 3.

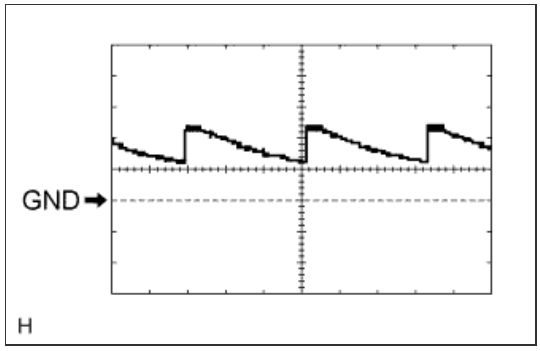
Waveform 3 (Reference)



Item	Content
Terminal No. (Symbol)	E2-21 (PCTY) - Body ground
Tool Setting	5 V/DIV., 20 ms/DIV.
Condition	Engine switch off, and passenger side door courtesy switch off

h. Using an oscilloscope, check waveform 4.

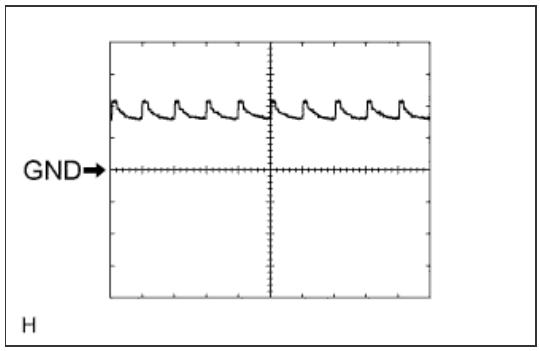
Waveform 4 (Reference)



Item	Content
Terminal No. (Symbol)	E2-21 (PCTY) - Body ground
Tool Setting	5 V/DIV., 20 ms/DIV.
Condition	Engine switch off, and passenger side door courtesy switch off

i. Using an oscilloscope, check waveform 5.

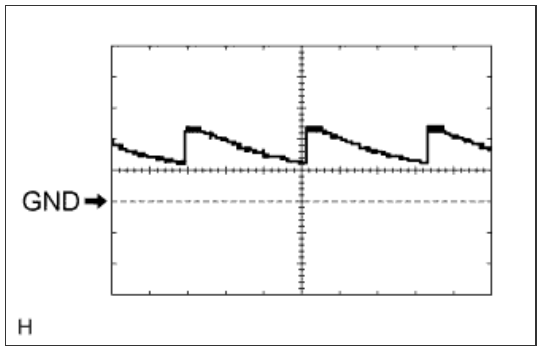
Waveform 5 (Reference)



Item	Content
Terminal No. (Symbol)	2C-2 (LCTY) - Body ground
Tool Setting	5 V/DIV., 20 ms/DIV.
Condition	Engine switch off, and rear LH side door courtesy switch off

j. Using an oscilloscope, check waveform 6.

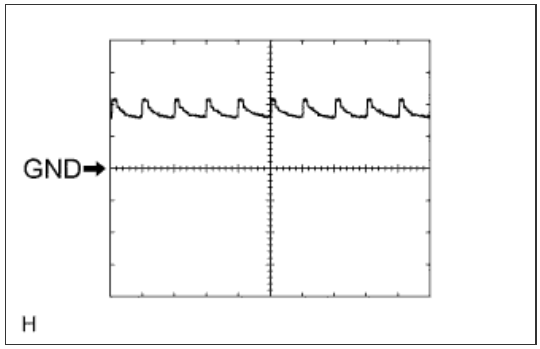
Waveform 6 (Reference)



Item	Content
Terminal No. (Symbol)	2C-2 (LCTY) - Body ground
Tool Setting	5 V/DIV., 20 ms/DIV.
Condition	Engine switch off, and rear LH side door courtesy switch off

k. Using an oscilloscope, check waveform 7.

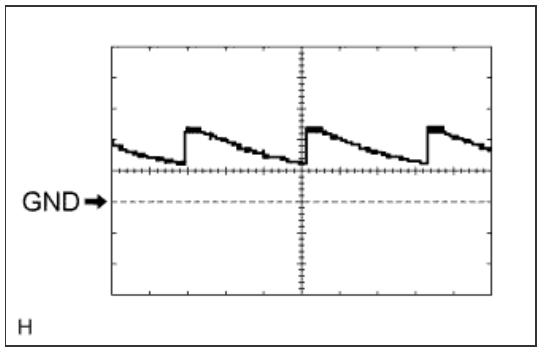
Waveform 7 (Reference)



Item	Content
Terminal No. (Symbol)	E2-7 (RCTY) - Body ground
Tool Setting	5 V/DIV., 20 ms/DIV.
Condition	Engine switch off, and rear RH side door courtesy switch off

l. Using an oscilloscope, check waveform 8.

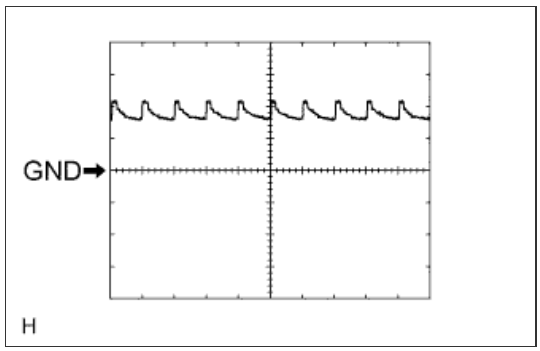
Waveform 8 (Reference)



Item	Content
Terminal No. (Symbol)	E2-7 (RCTY) - Body ground
Tool Setting	5 V/DIV., 20 ms/DIV.
Condition	Engine switch off, and rear RH side door courtesy switch off

m. Using an oscilloscope, check waveform 9.

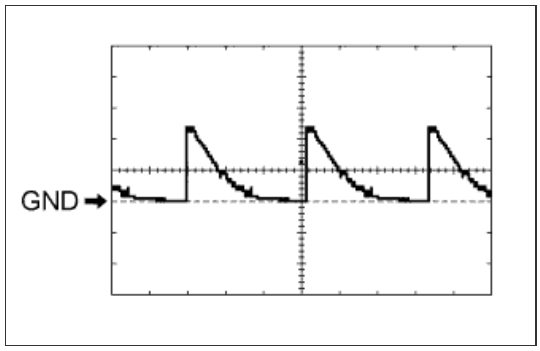
Waveform 9 (Reference)



Item	Content
Terminal No. (Symbol)	E2-25 (BCTY) - Body ground
Tool Setting	5 V/DIV., 20 ms/DIV.
Condition	Engine switch off, and back door closed

n. Using an oscilloscope, check waveform 10.

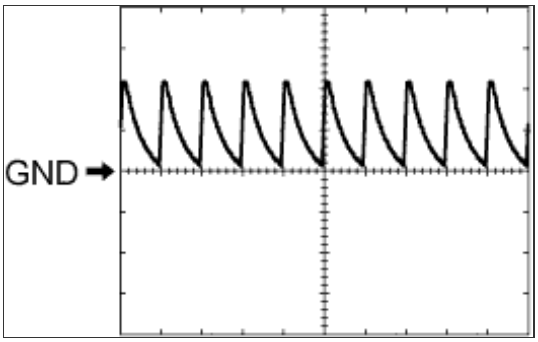
Waveform 10 (Reference)



Item	Content
Terminal No. (Symbol)	E2-25 (BCTY) - Body ground
Tool Setting	5 V/DIV., 20 ms/DIV.
Condition	Engine switch off, and back door closed

o. Using an oscilloscope, check waveform 11.

Waveform 11 (Reference)



Item	Content
Terminal No. (Symbol)	E1-26 (BDSU) - Body ground
Tool Setting	5 V/DIV., 20 ms/DIV.
Condition	Engine switch off, all doors closed and Back door lock opener switch on

p. Using an oscilloscope, check waveform 12.

Waveform 12 (Reference)

Item	Content
Terminal No. (Symbol)	E1-26 (BDSU) - Body ground
Tool Setting	5 V/DIV., 20 ms/DIV.
Condition	Engine switch off, all doors closed and Back door lock opener switch on

READ DATA LIST

HINT:

Using the intelligent tester to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / (desired system) / Data List.

e. According to the display on the intelligent tester, read the Data List.

Entry & Start

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Power Save Cnt 10 Min.	Power save counter - 10 minutes / Min: 0, Max: 225	Within range from 0 to 225	-
Power Save Cnt 9 Days	Power save counter - 9 days / Min: 0, Max: 225	Within range from 0 to 225	-
Power Save Cnt 14 Days	Power save counter - 14 days / Min: 0, Max: 225	Within range from 0 to 225	-
Power Save Cnt 30 Days	Power save counter - 30 days / Min: 0, Max: 225	Within range from 0 to 225	-
Unmatched Vehicle-ID	No communication condition between vehicle and electrical key transmitter (vehicle-ID) / Yes or No	Yes: Key ID code not matched to vehicle No: Key ID code matched to vehicle	-
No Response	No communication condition between vehicle and electrical key transmitter (response) / Yes or No	Yes: Key ID code not matched to vehicle No: Key ID code matched to vehicle	-
Unmatch Code or Form	No communication condition between vehicle and electrical key transmitter (response code and format) / Yes or No	Yes: Key ID code not matched to vehicle No: Key ID code matched to vehicle	-
Key Low Battery	Key low battery / Yes or No	Yes: Key battery voltage low No: Key battery voltage normal	-
ID Code Difference(Resp)	No communication condition between vehicle and electrical key transmitter (ID code) / Yes or No	Yes: Key ID code not matched to vehicle No: Key ID code matched to vehicle	-
C Code Difference	No communication condition between vehicle and electrical key transmitter (challenge code) / Yes or No	Yes: Key ID code not matched to vehicle No: Key ID code matched to vehicle	-
Door Unlock Mode	Door unlock mode / All, Each, D_Door, Side	Mode status displayed	-
Auto Entry Cancel SW	Entry door lock function cancel / ON or OFF	Mode status displayed	-
Trunk Open Mode	Luggage compartment door open mode with vehicle locked / ON or OFF	Customization status displayed	-
Ignition Available Area	Ignition available area / Front or All	Customization status displayed	-
D-Door Touch Sensor	Driver side door touch sensor / ON or OFF	ON: Driver side door sensor touched OFF: Driver side door sensor not touched	-
D-Door Trigger	Driver side door outside handle lock switch / ON or OFF	ON: Driver side door outside handle lock switch pushed	-

Switch		OFF: Driver side door outside handle lock switch not pushed	
P-Door Touch Sensor	Front passenger side door touch sensor / ON or OFF	ON: Front passenger side door sensor touched OFF: Front passenger side door sensor not touched	-
P-Door Trigger Switch	Front passenger side door outside handle lock switch / ON or OFF	ON: Front passenger side door outside handle lock switch pushed OFF: Front passenger side door outside handle lock switch not pushed	-
Dr-Door Touch Sensor*	Driver side rear door touch sensor / ON or OFF	ON: Driver side rear door sensor touched OFF: Driver side rear door sensor not touched	-
Dr-Door Trigger Switch*	Driver side rear door outside handle lock switch / ON or OFF	ON: Driver side rear door outside handle lock switch pushed OFF: Driver side rear door outside handle lock switch not pushed	-
Pr-Door Touch Sensor*	Passenger side rear door touch sensor / ON or OFF	ON: Passenger side rear door sensor touched OFF: Passenger side rear door sensor not touched	-
Pr-Door Trigger Switch*	Passenger side rear door outside handle lock switch / ON or OFF	ON: Passenger side rear door outside handle lock switch pushed OFF: Passenger side rear door outside handle lock switch not pushed	-
Tr/B-Door Lock SW	Back door lock switch / ON or OFF	ON: Back door lock switch pushed OFF: Back door lock switch not pushed	-

HINT:

*: For vehicles with entry function for rear doors.

Main Body

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
IG SW	Engine switch on (IG) / ON or OFF	ON: Engine switch on (IG) OFF: Engine switch off	-
ACC SW	Engine switch on (ACC) / ON or OFF	ON: Engine switch on (ACC) OFF: Engine switch off	-
D Door Courtesy SW	Driver side door courtesy light switch signal / ON or OFF	ON: Driver side door opened OFF: Driver side door closed	-
P Door Courtesy SW	Front passenger side door courtesy light switch signal / ON or OFF	ON: Front passenger side door opened OFF: Front passenger side door closed	-
RL Door Courtesy SW	Rear LH side door courtesy light switch signal / ON or OFF	ON: Rear side door LH opened OFF: Rear side door LH closed	-
RR Door Courtesy SW	Rear RH side door courtesy light switch signal / ON or OFF	ON: Rear side door RH opened OFF: Rear side door RH closed	-
D Door Lock Position SW	Driver side door lock position switch signal / ON or OFF	ON: Driver side door unlocked OFF: Driver side door locked	-
P Door Lock Position SW	Front passenger side door lock position switch signal / ON or OFF	ON: Front passenger side door unlocked OFF: Front passenger side door locked	-
DR Door Lock Position SW	Driver side rear door lock position switch signal / ON or OFF	ON: Driver side rear door unlocked OFF: Driver side rear door locked	-
PR Door Lock Position SW	Passenger side rear door lock position switch signal / ON or OFF	ON: Passenger side rear door unlocked OFF: Passenger side rear door locked	-
Back Door Handle SW	Back door opener switch / ON or OFF	ON: Back door opener switch pushed OFF: Back door opener switch not pushed	-

Back Door Courtesy SW	Back door courtesy light switch signal / ON or OFF	ON: Back door opened OFF: Back door closed	-

PERFORM ACTIVE TEST

HINT:

Using the intelligent tester to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Entry & Start / Active Test.

e. According to the display on the intelligent tester, perform the Active Test.

Entry & Start

Tester Display	Test Part	Control Range	Diagnostic Note
Overhead Tuner Power Supply ON	Door control receiver	ON or OFF	-
D-Seat Outside Transmitter	Door electrical key oscillator (for Driver Side)	ON or OFF	-
P-Seat Outside Transmitter	Door electrical key oscillator (for Front Passenger Side)	ON or OFF	-
DR-Seat Outside Transmitter*	Door electrical key oscillator (for Driver Side Rear)	ON or OFF	-
PR-Seat Outside Transmitter*	Door electrical key oscillator (for Passenger Side Rear)	ON or OFF	-
Fr-Seat Inside Transmitter	Indoor electrical key antenna (for Front Floor)	ON or OFF	-
Rr-Seat Inside Transmitter	Indoor electrical key antenna (for Rear 1 Floor)	ON or OFF	-
Inside Trunk/Backdoor Transmitter	Indoor electrical key antenna (for Rear 2 Floor)	ON or OFF	-
Outside Trunk/Backdoor Transmitter	Back door electrical key antenna (for Outer)	ON or OFF	-
D-Seat Select	Driver side select	ON or OFF	-
P-Seat Select	Front passenger side select	ON or OFF	-
Dr-Seat Select*	Driver side rear select	ON or OFF	-
Pr-Seat Select*	Passenger side rear select	ON or OFF	-
Wireless Buzzer Operation	Wireless buzzer	ON or OFF	-

HINT:

*: For vehicles with entry function for rear doors.

for Preparation Click here

DESCRIPTION

The entry and start system uses the wireless door lock buzzer to perform various vehicle exterior warnings. When the conditions of each warning are met, the certification ECU (smart key ECU assembly) sends a buzzer signal to the wireless buzzer, and the wireless door lock buzzer sounds*.

HINT:

*: For Europe and China, the wireless door lock buzzer does not sound.

INSPECTION PROCEDURE

NOTICE:

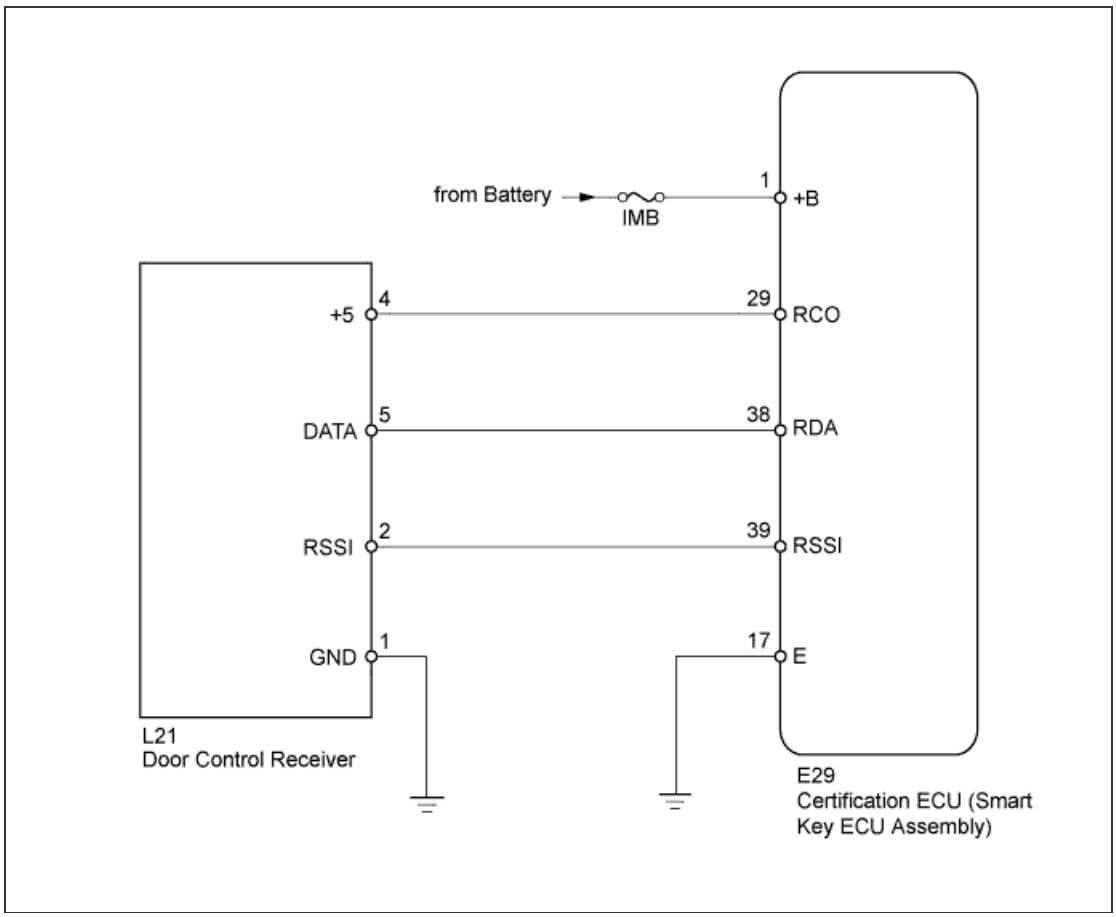
Before performing the inspection, check that there are no problems related to the "CAN Communication System" and "LIN Communication System".

1.CHECK WIRELESS DOOR LOCK BUZZER OPERATION

a. When the wireless operation is used to lock and unlock the doors, check that the wireless door lock buzzer sounds normally (Click here).

NG → GO TO WIRELESS DOOR LOCK CONTROL SYSTEM (Click here)

OK



REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

for Preparation Click here

DESCRIPTION

When the entry operation and wireless operation door lock function does not operate, a malfunction or wave interference may be occurring in either of the following: 1) the signal communication line between the door control receiver and certification ECU (smart key ECU assembly) (line is used by entry and wireless); or 2) the door control transmitter.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- **Before performing the inspection, check that there are no problems related to the "CAN Communication System" and "LIN Communication System".**
- **Check that there are no door control transmitters in the vehicle.**
- **Before performing the inspection, check that DTC B1242 is not output (Click here).**

1.CHECK POWER DOOR LOCK CONTROL SYSTEM

a. When the master switch door control switch is operated, check that the locked doors unlock (Click here).

OK:
Locked doors unlock.

NG → GO TO POWER DOOR LOCK CONTROL SYSTEM (Click here)

OK

2.CHECK DOOR CONTROL TRANSMITTER

a. When another registered door control transmitter is used, check that the wireless and entry function operates normally (Click here).

Result

Result	Proceed to
Entry function operates and door control transmitter that did not operate is electrical key transmitter	A
Entry function does not operate	B

B → Go to step 5

A

3.CHECK DOOR CONTROL TRANSMITTER (LED)

a. Check that the transmitter LED illuminates 3 times when a switch is pressed 3 times.

Result

Result	Proceed to
Transmitter LED does not illuminate 3 times when switch is pressed 3 times	A
Transmitter LED illuminates 3 times when switch is pressed 3 times	B
Transmitter LED does not illuminate second or third time	C

HINT:

If the transmitter LED does not illuminate the second or third time, replace the transmitter battery as it is depleted.

B → REPLACE DOOR CONTROL TRANSMITTER

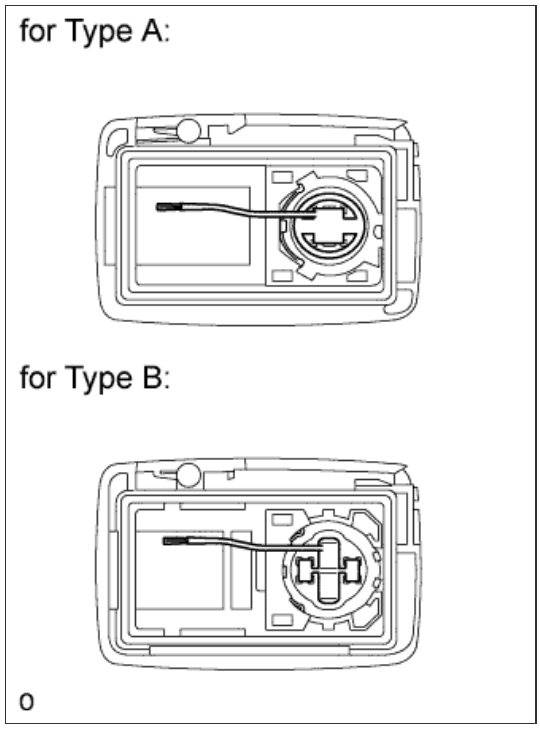
C → REPLACE TRANSMITTER BATTERY (Click here)

A

4.INSPECT TRANSMITTER BATTERY (VOLTAGE)

a. Electrical key transmitter

HINT:

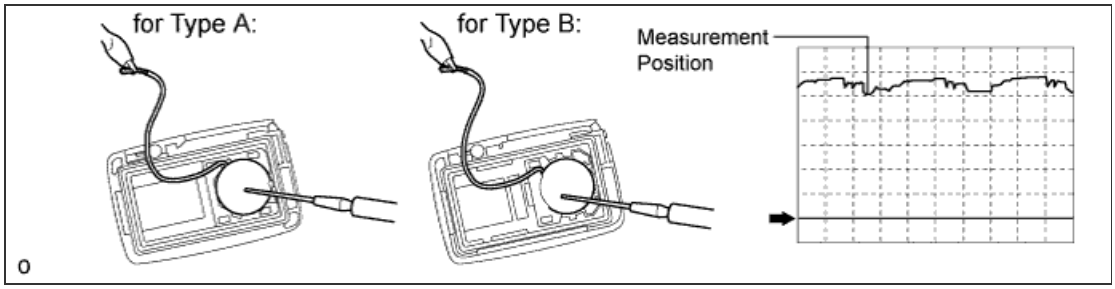


- **Type A: for Australia**
- **Type B: except Australia**

i. Remove the battery from the electrical key transmitter that does not operate. Attach a lead wire (0.6 mm (0.0236 in.) or less in diameter including wire sheath) with tape or equivalent to the negative terminal (Click here).

NOTICE:

Do not wrap the lead wire around a terminal, wedge it between terminals, or solder it. A terminal may be deformed or damaged, and the battery will not be able to be installed correctly.



ii. Carefully pull the lead wire out from the position shown in the illustration and install the previously removed transmitter battery.

iii. Using an oscilloscope, check the transmitter battery voltage waveform.

HINT:

When measuring the battery voltage, while operating the lock switch of a door handle, bring the electrical key transmitter within the entry operating range to perform the measurement. For the entry operating range, refer to System Description (Click here).

OK:

Tester Connection	Tool Setting	Condition	Specified Condition
Battery positive (+) - Battery negative (-)	0.5 V/DIV., 100 ms/DIV.	Engine switch off, all doors closed and lock switch pushed	2.5 to 3.2 V (Refer to the waveform)

NG → REPLACE TRANSMITTER BATTERY (Click here)

OK

REPLACE DOOR CONTROL TRANSMITTER

5.CHECK WAVE ENVIRONMENT

a. Bring the door control transmitter near the door control receiver, and perform a wireless and entry function operation check.

HINT:

- **When the door control transmitter is brought near the door control receiver, the possibility of wave interference decreases, and it can be determined if wave interference is causing the problem symptom.**
- **If the inspection result is that the problem only occurs in certain locations or times of day, the possibility of wave**

interference is high. Also, added vehicle components may cause wave interference. If installed, remove them and perform the operation check.

OK:
Wireless and entry functions operate normally.

NG → Go to step 6

OK →

AFFECTED BY WAVE INTERFERENCE

6.INSPECT FUSE (IMB)

a. Remove the IMB fuse from the engine room relay block.

b. Measure the resistance according to the value(s) in the table below.

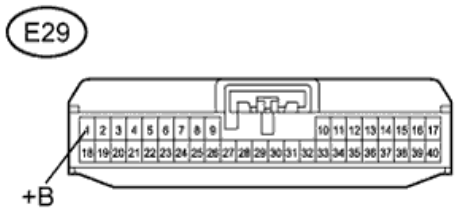
Standard Resistance:

Tester Connection	Condition	Specified Condition
IMB fuse	Always	Below 1 Ω

NG → **REPLACE FUSE**

OK →

7.CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU [SMART KEY ECU ASSEMBLY] - BATTERY)

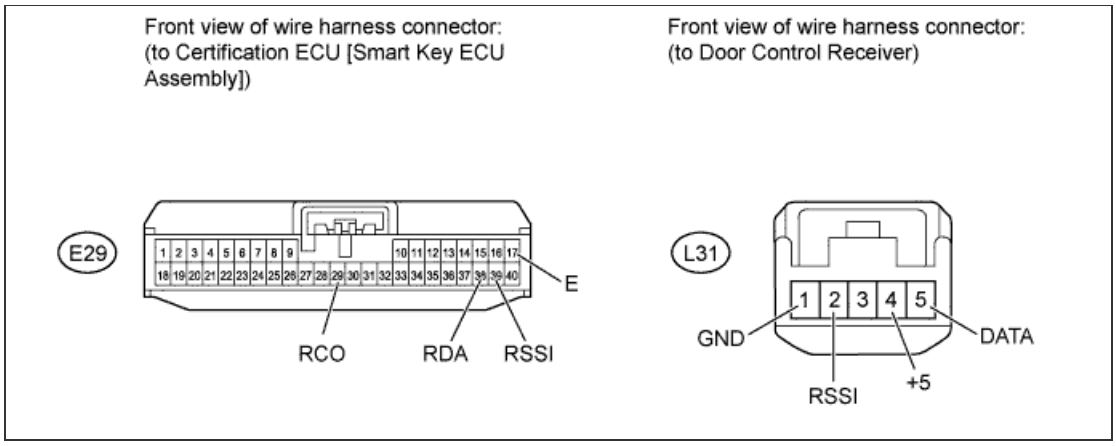


a. Disconnect the E29 ECU connector.

b. Measure the voltage according to the value(s) in the tables below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
E29-1 (+B) - Body ground	Always	11 to 14 V



Front view of wire harness connector:
(to Certification ECU [Smart Key ECU Assembly])

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK →

8.CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU [SMART KEY ECU ASSEMBLY] - DOOR CONTROL RECEIVER AND BODY GROUND)

a. Disconnect the L31 receiver connector.

b. Disconnect the E29 ECU connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E29-29 (RCO) - L31-4 (+5)	Always	Below 1 Ω
E29-38 (RDA) - L31-5 (DATA)	Always	Below 1 Ω
E29-39 (RSSI) - L31-2 (RSSI)	Always	Below 1 Ω
E29-17(E) - Body ground	Always	Below 1 Ω
L31-1 (GND) - Body ground	Always	Below 1 Ω
E29-29 (RCO) or L31-4 (+5) - Body ground	Always	10 kΩ or higher
E29-38 (RDA) or L31-5 (DATA) - Body ground	Always	10 kΩ or higher
E29-39 (RSSI) or L31-2 (RSSI) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

9.CHECK DOOR CONTROL RECEIVER (OPERATION)

a. Temporarily replace the door control receiver with a new one (Click here).

b. Check that the wireless and entry functions operate normally.

OK:
Wireless and entry functions operate normally.

NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK

END (DOOR CONTROL RECEIVER IS DEFECTIVE)

for Preparation Click here

DESCRIPTION

When the wireless operation can be used to lock and unlock the doors, the communication line between the door control receiver and certification ECU (smart key ECU assembly) is normal. When the entry operation does not operate, one of the following may be the cause: 1) entry cancel function is set through customization; 2) malfunction in entry and start system communication line (electrical key transmitter and vehicle); or 3) wave interference.

INSPECTION PROCEDURE

NOTICE:

Before performing the inspection, check that there are no problems related to the "Can Communication System" and "LIN Communication System"

1.READ VALUE USING INTELLIGENT TESTER (KEY CANCEL SWITCH)

a. Using the intelligent tester, read the Data List.

Entry & Start

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Auto Entry Cancel SW	Entry function cancel/ON or OFF	Mode status displayed	-

Result

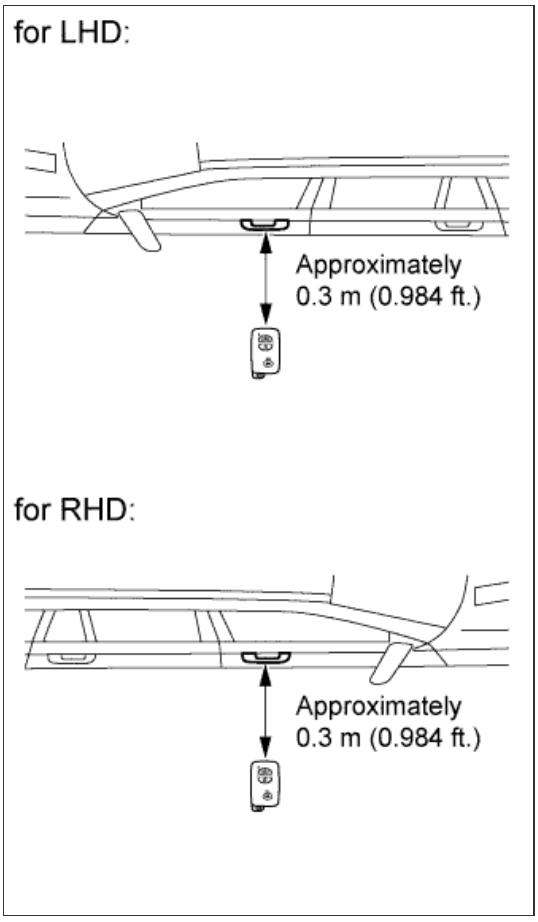
Result	Proceed to
Entry function cancel is OFF	A
Entry function cancel is ON	B

B → PERFORM CANCELLATION OF ENTRY KEY CANCEL FUNCTION (Click here)

A

2.CHECK WAVE ENVIRONMENT

a. Move the electrical key transmitter as described below and perform the operation inspection (Click here).

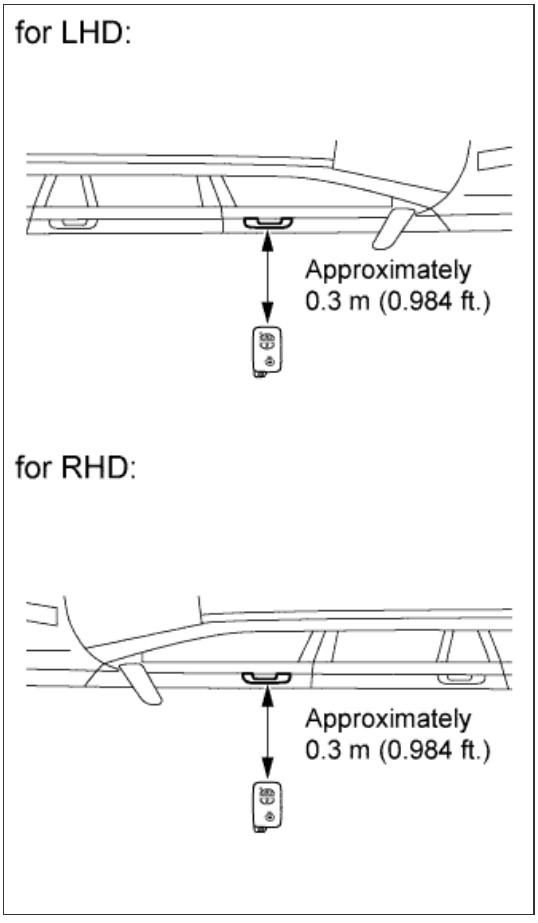


HINT:

- **When the electrical key transmitter is brought near the door outside handle or electrical key antenna, the possibility of wave interference decreases, and it can be determined if wave interference is causing the problem symptom.**
- **The transmitting wave of the wireless function and entry function are the same, but the wave logic is different. As a result, it is possible that only the wireless function or only the entry function is affected by wave interference.**

i. Bring the electrical key transmitter near the door outside handle (for driver side), and perform a driver door entry lock and unlock operation check.

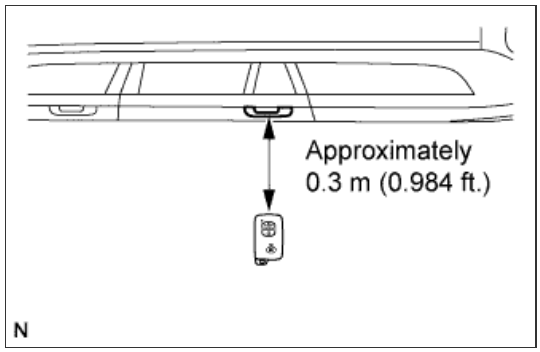
NOTICE:



If the key is brought within 0.2 m (0.656 ft.) of the door handle, communication may not possible.

ii. Bring the electrical key transmitter near the door outside handle (for front passenger side), and perform a front passenger door entry lock and unlock operation check.

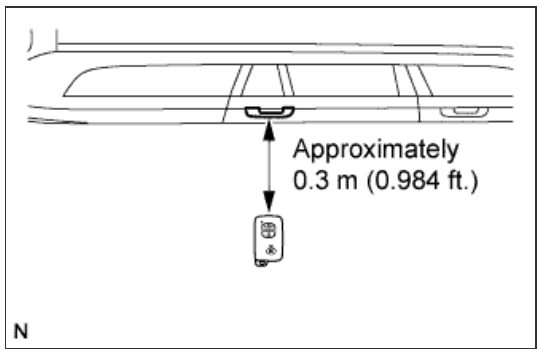
NOTICE:



If the key is brought within 0.2 m (0.656 ft.) of the door handle, communication may not possible.

iii. Bring the electrical key transmitter near the rear door outside handle LH, and perform a rear left door entry lock and unlock operation check.

NOTICE:



If the key is brought within 0.2 m (0.656 ft.) of the door handle, communication may not possible.

iv. Bring the electrical key transmitter near the rear door outside handle RH, and perform a rear right door entry lock and unlock operation check.

NOTICE:

If the key is brought within 0.2 m (0.656 ft.) of the door handle, communication may not possible.

v. Bring the electrical key transmitter near the indoor electrical key antenna (in center console), and perform an engine start check.

NOTICE:

If the key is brought within 0.2 m (0.656 ft.) of the center console, communication may not possible.

vi. Bring the electrical key transmitter near the indoor electrical key antenna (in rear No. 1 seat cushion), and perform an engine start check.

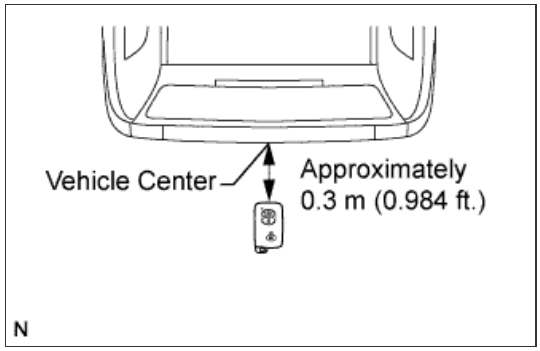
NOTICE:

If the key is brought within 0.2 m (0.656 ft.) of the rear No. 1 seat cushion, communication may not possible.

vii. Bring the electrical key transmitter near the indoor electrical key antenna (in rear No. 2 seat cushion), and perform an engine start check.

NOTICE:

If the key is brought within 0.2 m (0.656 ft.) of the rear No. 2 seat cushion, communication may not possible.



viii. Bring the electrical key transmitter near the electrical key antenna (in rear bumper), and perform an entry back door open function check.

NOTICE:

If the key is brought within 0.2 m (0.656 ft.) of the rear bumper, communication may not possible.

HINT:

If the inspection result is that the problem only occurs in certain locations or times of day, the possibility of wave interference is high. Also, added vehicle components may cause wave interference. If installed, remove them and perform the operation check.

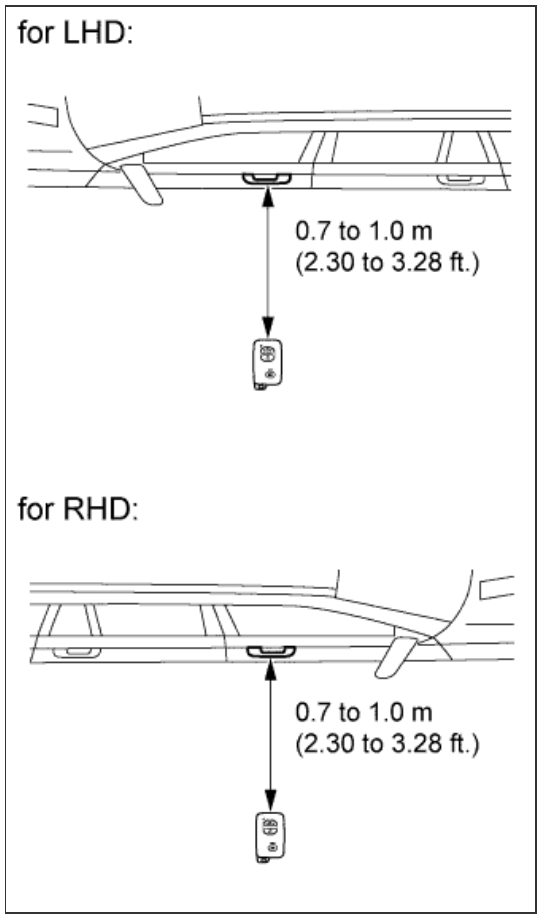
Result

Result	Proceed to
All operation checks fail	A
Some operation checks are normal	B

B → AFFECTED BY WAVE INTERFERENCE

A → 3.KEY DIAGNOSTIC MODE

a. Diagnostic mode inspection (door electrical key oscillator).



i. Connect the intelligent tester to the DLC3.

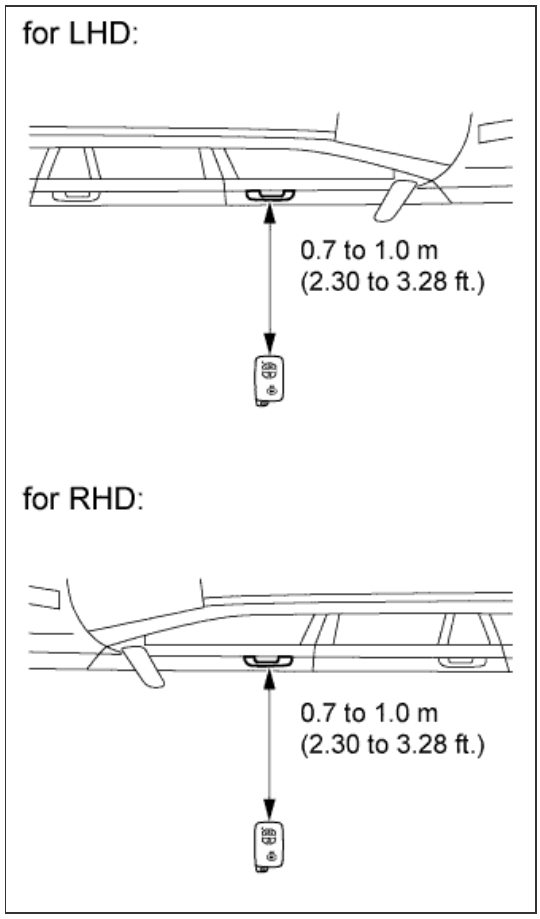
ii. Turn the engine switch on (IG).

iii. Turn the intelligent tester on.

iv. Enter the following menus: Body / Entry & Start / Key Communication Check / Overhead + Driver Side.

v. When the electrical key transmitter is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

b. Diagnostic mode inspection (door electrical key oscillator).



i. Connect the intelligent tester to the DLC3.

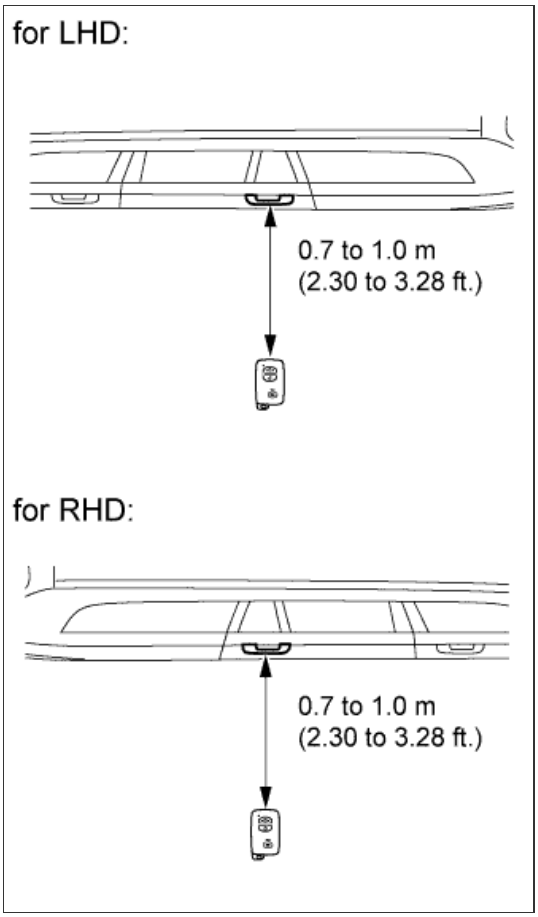
ii. Turn the engine switch on (IG).

iii. Turn the intelligent tester on.

iv. Enter the following menus: Body / Entry & Start / Key Communication Check / Overhead + Passenger Side.

v. When the electrical key transmitter is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

c. Diagnostic mode inspection (door electrical key oscillator).



i. Connect the intelligent tester to the DLC3.

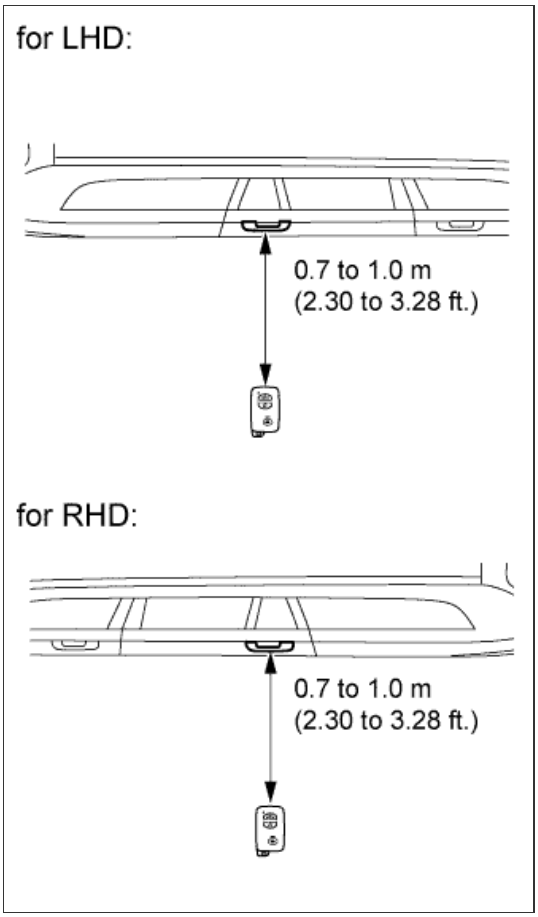
ii. Turn the engine switch on (IG).

iii. Turn the intelligent tester on.

iv. Enter the following menus: Body / Entry & Start / Key Communication Check / Overhead + Driver Side Rear.

v. When the electrical key transmitter is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

d. Diagnostic mode inspection (door electrical key oscillator).



i. Connect the intelligent tester to the DLC3.

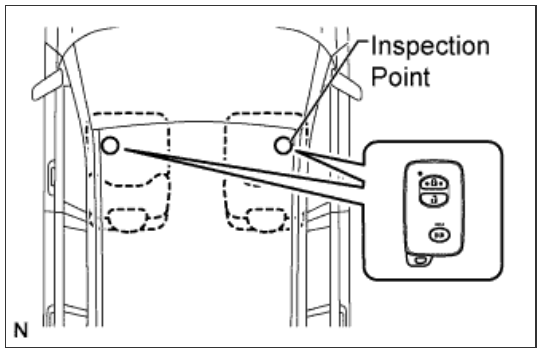
ii. Turn the engine switch on (IG).

iii. Turn the intelligent tester on.

iv. Enter the following menus: Body / Entry & Start / Key Communication Check / Overhead + Passenger Side Rear.

v. When the electrical key transmitter is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

e. Diagnostic mode inspection (indoor electrical key antenna (for Front Floor)).



i. Connect the intelligent tester to the DLC3.

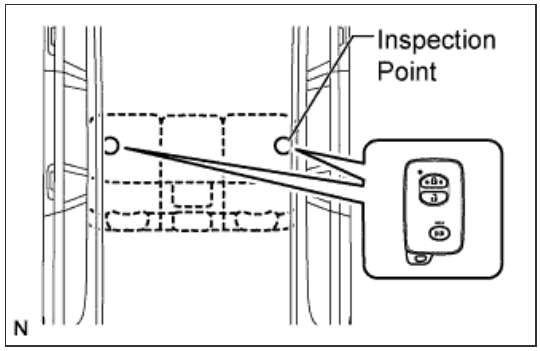
ii. Turn the engine switch on (IG).

iii. Turn the intelligent tester on.

iv. Enter the following menus: Body / Entry & Start / Key Communication Check / Overhead + Front Room.

v. When the electrical key transmitter is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

f. Diagnostic mode inspection (indoor electrical key antenna (for Rear 1 Floor)).



i. Connect the intelligent tester to the DLC3.

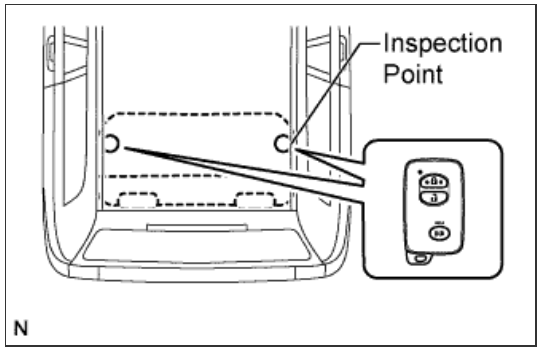
ii. Turn the engine switch on (IG).

iii. Turn the intelligent tester on.

iv. Enter the following menus: Body / Entry & Start / Key Communication Check / Overhead + Rear Room.

v. When the electrical key transmitter is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

g. Diagnostic mode inspection (indoor electrical key antenna (for Rear 2 Floor)).



i. Connect the intelligent tester to the DLC3.

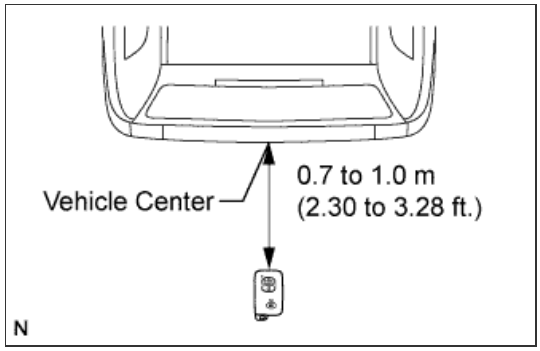
ii. Turn the engine switch on (IG).

iii. Turn the intelligent tester on.

iv. Enter the following menus: Body / Entry & Start / Key Communication Check / Overhead + Back Door (inside).

v. When the electrical key transmitter is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

h. Diagnostic mode inspection (electrical key antenna).



i. Connect the intelligent tester to the DLC3.

ii. Turn the engine switch on (IG).

iii. Turn the intelligent tester on.

iv. Enter the following menus: Body / Entry & Start / Key Communication Check / Overhead + Back Door (outside).

v. When the electrical key transmitter is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

Result

Result	Proceed to
All diagnostic mode inspections fail	A
Some diagnostic mode inspections fail (door)	B
Some diagnostic mode inspections fail (interior)	C
Some diagnostic mode inspections fail (back door)	D
All diagnostic mode inspections are normal	E

GO TO DTC OF OTHER COMPONENTS (PROCEED TO PROBLEM SYMPTOM FLOWCHART FOR EACH DOOR) (Click

E → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

A

4.REPLACE ELECTRICAL KEY TRANSMITTER

a. Replace the electrical key transmitter with a new one.

b. Perform the registration procedure (Refer to Service Bulletin for registration).

NEXT

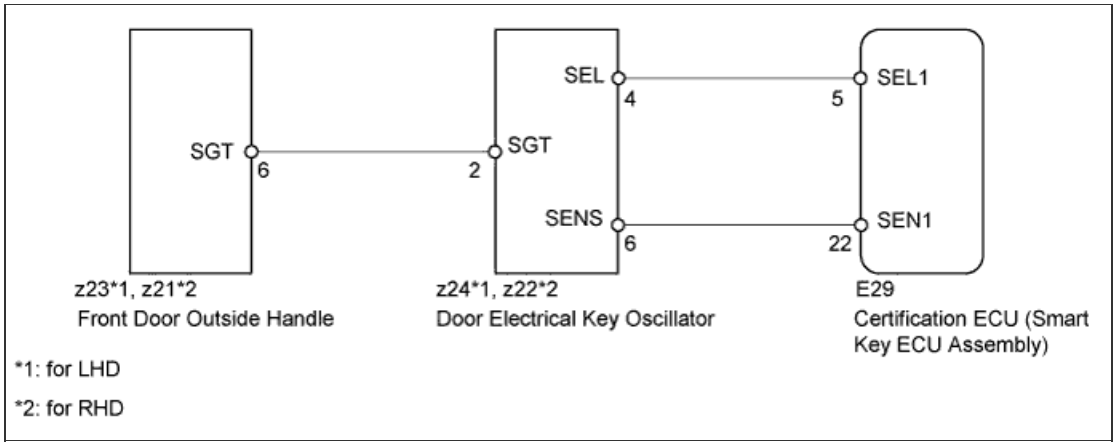
5.CHECK OPERATION

a. Check the operation of the entry lock function (Click here).

OK:
Operates normally.

NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK



END (ELECTRICAL KEY TRANSMITTER IS DEFECTIVE)

for Preparation Click here

DESCRIPTION

If the driver side door entry unlock function does not operate but the entry lock function operates, the communication line between the vehicle and electrical key transmitter is normal. The part at fault may be a touch sensor circuit (certification ECU (smart key ECU assembly) → driver side door outside handle → driver side door electrical key oscillator).

WIRING DIAGRAM

INSPECTION PROCEDURE

1.CHECK POWER DOOR LOCK OPERATION

a. When the master switch assembly door control switch is operated, check that the locked doors unlock.

OK:
Door locks operate normally.

NG → GO TO POWER DOOR LOCK CONTROL SYSTEM (Click here)

OK

2.READ VALUE USING INTELLIGENT TESTER (DOOR LOCK POSITION SWITCH)

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Main Body / Data List.

e. Read the Data List according to the display on the intelligent tester.

Main Body

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
D Door Lock Position SW	Driver side door lock position switch signal / ON or OFF	ON: Driver side door unlocked OFF: Driver side door locked	-

OK:
On the intelligent tester screen, the display changes between ON and OFF as shown in the chart above.

NG → GO TO POWER DOOR LOCK CONTROL SYSTEM (Proceed to Only Driver Door LOCK/UNLOCK Functions do not Operate) (Click here)

OK

3.READ VALUE USING INTELLIGENT TESTER (TOUCH SENSOR)

a. Using the intelligent tester, read the Data List.

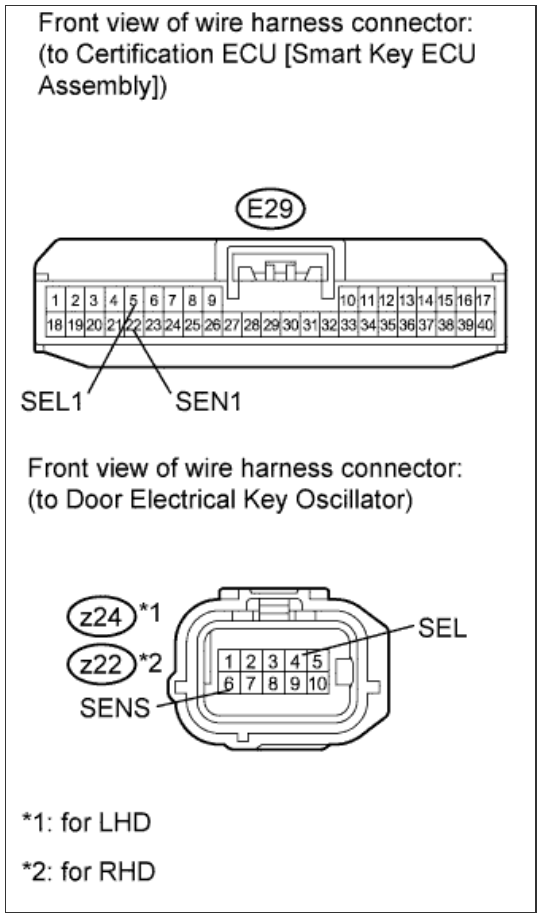
Entry & Start

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
D-Door Touch Sensor	Driver side door touch sensor / ON or OFF	ON: Touch sensor touched OFF: Touch sensor not touched	-

OK:
"ON" (sensor is touched) and "OFF" (sensor is not touched) appears on the screen.

NG → Go to step 4

OK →



REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

4.CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU [SMART KEY ECU ASSEMBLY] - DOOR ELECTRICAL KEY OSCILLATOR)

a. Disconnect the E29 ECU connector.

b. Disconnect the z24 or z22 oscillator connector.

c. Measure the resistance according to the value(s) in the table below.

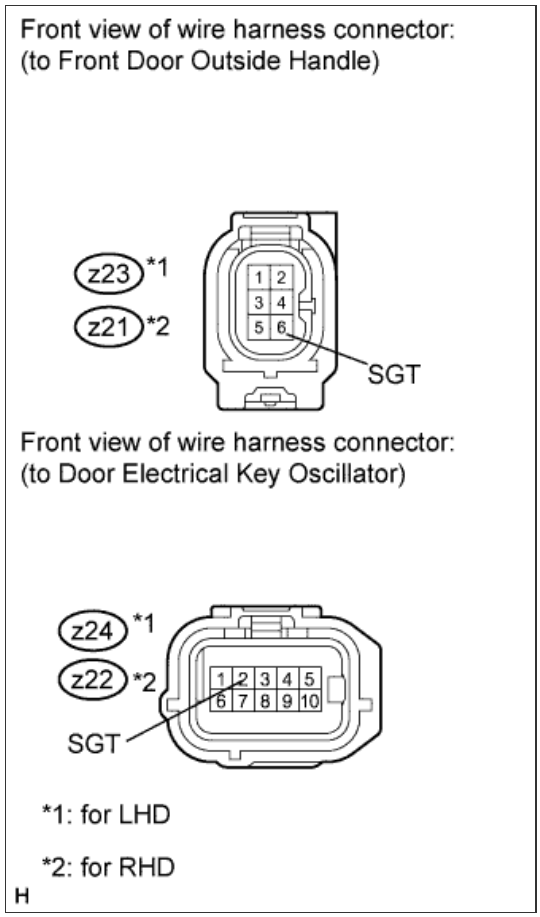
Standard Resistance:
for LHD:

Tester Connection	Condition	Specified Condition
E29-5 (SEL1) - z24-4 (SEL)	Always	Below 1 Ω
E29-22 (SEN1) - z24-6 (SENS)	Always	Below 1 Ω
E29-5 (SEL1) - Body ground	Always	10 kΩ or higher
E29-22 (SEN1) - Body ground	Always	10 kΩ or higher

for RHD:

Tester Connection	Condition	Specified Condition
E29-5 (SEL1) - z22-4 (SEL)	Always	Below 1 Ω
E29-22 (SEN1) - z22-6 (SENS)	Always	Below 1 Ω
E29-5 (SEL1) - Body ground	Always	10 kΩ or higher
E29-22 (SEN1) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR



OK

5.CHECK HARNESS AND CONNECTOR (DOOR ELECTRICAL KEY OSCILLATOR - FRONT DOOR OUTSIDE HANDLE)

a. Disconnect the z23 or z21 handle connector.

b. Disconnect the z24 or z22 oscillator connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

for LHD:

Tester Connection	Condition	Specified Condition
z23-6 (SGT) - z24-2 (SGT)	Always	Below 1 Ω
z23-6 (SGT) - Body ground	Always	10 kΩ or higher

for RHD:

Tester Connection	Condition	Specified Condition
z21-6 (SGT) - z22-2 (SGT)	Always	Below 1 Ω
z21-6 (SGT) - Body		

ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

6.REPLACE DOOR ELECTRICAL KEY OSCILLATOR

a. Replace the door electrical key oscillator (Click here).

NEXT

7.CHECK DOOR ELECTRICAL KEY OSCILLATOR (OPERATION)

a. Check that the entry function operates normally.

OK:
Operates normally.

NG → Go to step 8

OK

END (DOOR ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)

8.REPLACE FRONT DOOR OUTSIDE HANDLE

a. Replace the front door outside handle (Click here).

NEXT

9.CHECK FRONT DOOR OUTSIDE HANDLE (OPERATION)

a. Check that the entry function operates normally.

OK:
Operates normally.

On the intelligent tester screen, the display changes between ON and OFF as shown in the chart above.

NG → GO TO POWER DOOR LOCK CONTROL SYSTEM (Proceed to Only Passenger Door LOCK/UNLOCK Functions do not

Operate) (Click here)

OK

3.READ VALUE USING INTELLIGENT TESTER (TOUCH SENSOR)

a. Using the intelligent tester, read the Data List.

Entry & Start

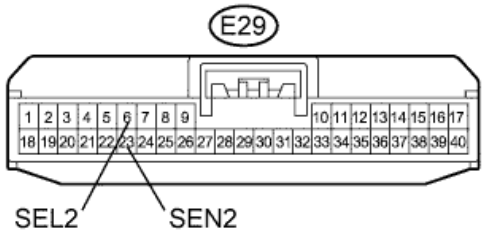
Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
P-Door Touch Sensor	Front passenger side door touch sensor / ON or OFF	ON: Touch sensor touched OFF: Touch sensor not touched	-

OK:
"ON" (sensor is touched) and "OFF" (sensor is not touched) appears on the screen.

NG → Go to step 4

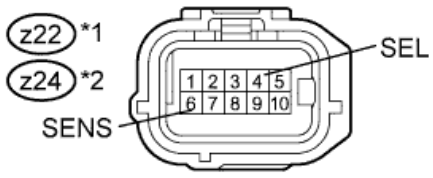
OK

REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)



4.CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU [SMART KEY ECU ASSEMBLY] - DOOR ELECTRICAL KEY OSCILLATOR)

a. Disconnect the E29 ECU connector.



b. Disconnect the z22 or z24 oscillator connector.

c. Measure the resistance according to the value(s) in the table below.

Front view of wire harness connector:
(to Certification ECU [Smart Key ECU Assembly])

Front view of wire harness connector:
(to Door Electrical Key Oscillator)

*1: for LHD

*2: for RHD

Standard Resistance:
for LHD:

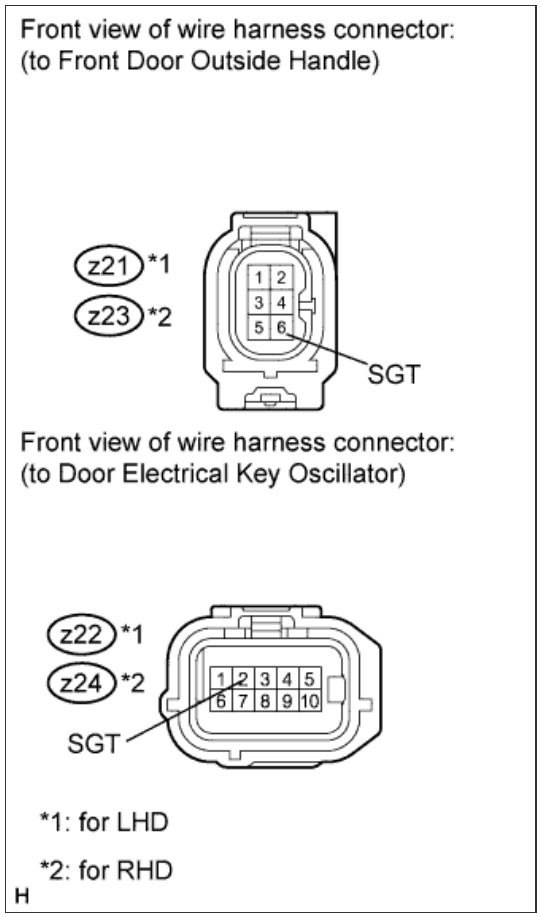
Tester Connection	Condition	Specified Condition
E29-6 (SEL2) - z22-4 (SEL)	Always	Below 1 Ω
E29-23 (SEN2) - z22-6 (SENS)	Always	Below 1 Ω

E29-6 (SEL2) - Body ground	Always	10 kΩ or higher
E29-23 (SEN2) - Body ground	Always	10 kΩ or higher

for RHD:

Tester Connection	Condition	Specified Condition
E29-6 (SEL2) - z24-4 (SEL)	Always	Below 1 Ω
E29-23 (SEN2) - z24-6 (SENS)	Always	Below 1 Ω
E29-6 (SEL2) - Body ground	Always	10 kΩ or higher
E29-23 (SEN2) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR



OK

5.CHECK HARNESS AND CONNECTOR (DOOR ELECTRICAL KEY OSCILLATOR - FRONT DOOR OUTSIDE HANDLE)

a. Disconnect the z21 or z23 handle connector.

b. Disconnect the z22 or z24 oscillator connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

for LHD:

Tester Connection	Condition	Specified Condition
z21-6 (SGT) - z22-2 (SGT)	Always	Below 1 Ω
z21-6 (SGT) - Body ground	Always	10 kΩ or higher

for RHD:

Tester Connection	Condition	Specified

		Condition
z23-6 (SGT) - z24-2 (SGT)	Always	Below 1 Ω
z23-6 (SGT) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

6.REPLACE DOOR ELECTRICAL KEY OSCILLATOR

a. Replace the door electrical key oscillator (Click here).

NEXT

7.CHECK DOOR ELECTRICAL KEY OSCILLATOR (OPERATION)

a. Check that the entry function operates normally.

OK:
Operates normally.

NG → Go to step 8

OK

END (DOOR ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)

8.REPLACE FRONT DOOR OUTSIDE HANDLE

a. Replace the front door outside handle (Click here).

NEXT

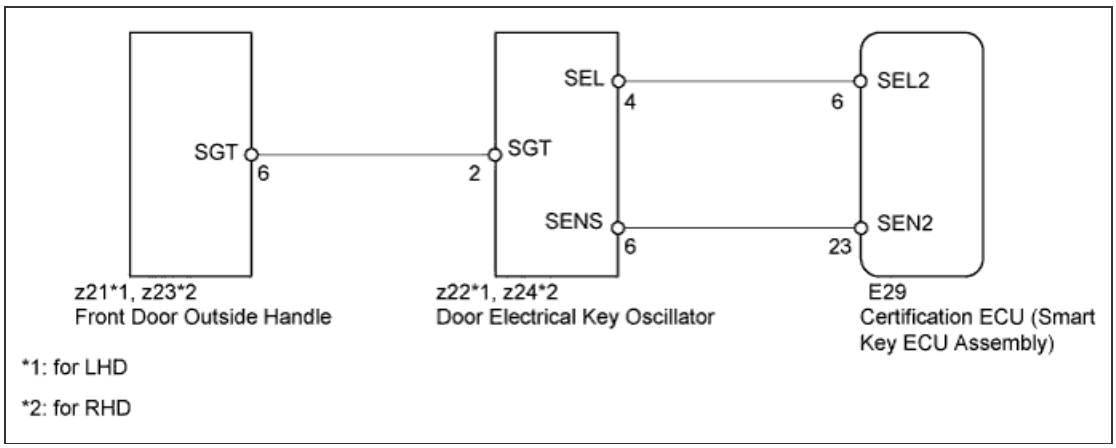
9.CHECK FRONT DOOR OUTSIDE HANDLE (OPERATION)

a. Check that the entry function operates normally.

OK:
Operates normally.

NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK



END (FRONT DOOR OUTSIDE HANDLE IS DEFECTIVE)

for Preparation Click here

DESCRIPTION

If the rear door LH entry unlock function does not operate but the entry lock function operates, the communication line between the vehicle and electrical key transmitter is normal. The part at fault may be a touch sensor circuit (certification ECU (smart key ECU assembly) → rear door outside handle LH → rear door electrical key oscillator LH).

HINT:

For vehicles with entry function for rear doors.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.CHECK POWER DOOR LOCK OPERATION

a. When the master switch assembly door control switch is operated, check that the locked doors unlock.

OK:
Door locks operate normally.

NG → GO TO POWER DOOR LOCK CONTROL SYSTEM (Click here)

OK

2.READ VALUE USING INTELLIGENT TESTER (DOOR LOCK POSITION SWITCH)

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Main Body / Data List.

e. Read the Data List according to the display on the intelligent tester.

i. for LHD

Main Body

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
DR Door Lock Position SW	Driver side rear door lock position switch signal / ON or OFF	ON: Driver side rear door unlocked OFF: Driver side rear door locked	-

OK:
On the intelligent tester screen, the display changes between ON and OFF as shown in the chart above.

ii. for RHD

Main Body

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
PR Door Lock Position SW	Passenger side rear door lock position switch signal / ON or OFF	ON: Passenger side rear door unlocked OFF: Passenger side rear door locked	-

OK:
On the intelligent tester screen, the display changes between ON and OFF as shown in the chart above.

NG → GO TO POWER DOOR LOCK CONTROL SYSTEM (Proceed to Only Rear Door LH LOCK/UNLOCK Functions do not Operate) (Click here)

OK

3.READ VALUE USING INTELLIGENT TESTER (TOUCH SENSOR)

a. Using the intelligent tester, read the Data List.

i. for LHD

Entry & Start

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Dr-Door Touch Sensor	Driver side rear door touch sensor / ON or OFF	ON: Touch sensor touched OFF: Touch sensor not touched	-

OK:
"ON" (sensor is touched) and "OFF" (sensor is not touched) appears on the screen.

ii. for RHD

Entry & Start

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Pr-Door Touch Sensor	Passenger side rear door touch sensor / ON or OFF	ON: Touch sensor touched OFF: Touch sensor not touched	-

OK:
"ON" (sensor is touched) and "OFF" (sensor is not touched) appears on the screen.

NG → Go to step 4

OK

REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

4.CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU [SMART KEY ECU ASSEMBLY] - DOOR ELECTRICAL KEY OSCILLATOR)

a. Disconnect the E30 ECU connector.

b. Disconnect the z28 oscillator connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

for LHD:

Tester Connection	Condition	Specified Condition
E30-1 (SEL3) - z28-4 (SEL)	Always	Below 1 Ω
E30-28 (SEN3) - z28-6 (SENS)	Always	Below 1 Ω
E30-1 (SEL3) - Body ground	Always	10 kΩ or higher
E30-28 (SEN3) - Body ground	Always	10 kΩ or higher

for RHD:

Tester Connection	Condition	Specified Condition
E30-2 (SEL4) - z28-4 (SEL)	Always	Below 1 Ω
E30-27 (SEN4) - z28-6 (SENS)	Always	Below 1 Ω
E30-2 (SEL4) - Body ground	Always	10 kΩ or higher
E30-27 (SEN4) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

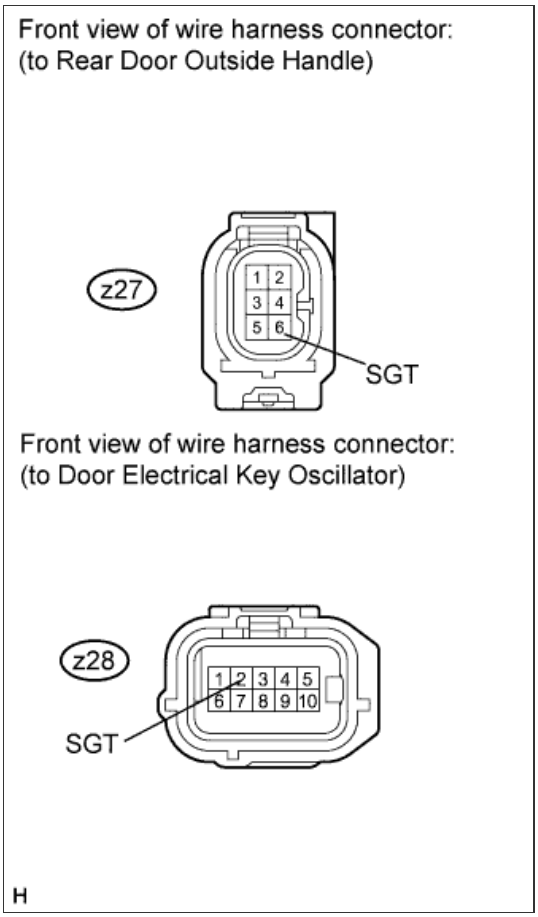
5.CHECK HARNESS AND CONNECTOR (DOOR ELECTRICAL KEY OSCILLATOR - REAR DOOR OUTSIDE HANDLE)



a. Disconnect the z27 handle connector.

b. Disconnect the z28 oscillator connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z27-6 (SGT) - z28-2 (SGT)	Always	Below 1 Ω
z27-6 (SGT) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

6.REPLACE DOOR ELECTRICAL KEY OSCILLATOR

a. Replace the door electrical key oscillator (Click here).

NEXT

7.CHECK DOOR ELECTRICAL KEY OSCILLATOR (OPERATION)

a. Check that the entry function operates normally.

OK:
Operates normally.

NG → Go to step 8

OK

END (DOOR ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)

8.REPLACE REAR DOOR OUTSIDE HANDLE

a. Replace the rear door outside handle (Click here).

NEXT

9.CHECK REAR DOOR OUTSIDE HANDLE (OPERATION)

a. Check that the entry function operates normally.

OK:
Operates normally.

NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK

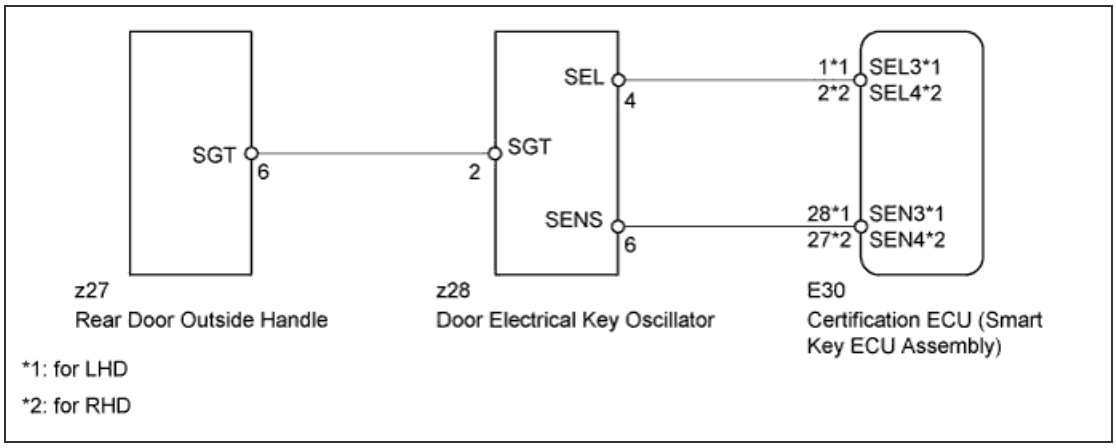
END (REAR DOOR OUTSIDE HANDLE IS DEFECTIVE)

for Preparation Click here



DESCRIPTION

If the rear door LH entry unlock function does not operate but the entry lock function operates, the communication line between the vehicle and electrical key transmitter is normal. The part at fault may be a touch sensor circuit (certification ECU (smart key ECU assembly) → rear door outside handle LH → rear door electrical key oscillator LH).

HINT:

For vehicles with entry function for rear doors.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.CHECK POWER DOOR LOCK OPERATION

a. When the master switch assembly door control switch is operated, check that the locked doors unlock.

OK:
Door locks operate normally.

NG → GO TO POWER DOOR LOCK CONTROL SYSTEM (Click here)

e. Read the Data List according to the display on the intelligent tester.

i. for LHD

Main Body

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
DR Door Lock Position SW	Driver side rear door lock position switch signal / ON or OFF	ON: Driver side rear door unlocked OFF: Driver side rear door locked	-

OK:
On the intelligent tester screen, the display changes between ON and OFF as shown in the chart above.

ii. for RHD

Main Body

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
PR Door Lock Position SW	Passenger side rear door lock position switch signal / ON or OFF	ON: Passenger side rear door unlocked OFF: Passenger side rear door locked	-

OK:
On the intelligent tester screen, the display changes between ON and OFF as shown in the chart above.

NG → GO TO POWER DOOR LOCK CONTROL SYSTEM (Proceed to Only Rear Door LH LOCK/UNLOCK Functions do not Operate) (Click here)

OK

3.READ VALUE USING INTELLIGENT TESTER (TOUCH SENSOR)

a. Using the intelligent tester, read the Data List.

i. for LHD

Entry & Start

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Dr-Door Touch Sensor	Driver side rear door touch sensor / ON or OFF	ON: Touch sensor touched OFF: Touch sensor not touched	-

OK:
"ON" (sensor is touched) and "OFF" (sensor is not touched) appears on the screen.

ii. for RHD

Entry & Start

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Pr-Door Touch Sensor	Passenger side rear door touch sensor / ON or OFF	ON: Touch sensor touched OFF: Touch sensor not touched	-

OK:
"ON" (sensor is touched) and "OFF" (sensor is not touched) appears on the screen.

NG → Go to step 4

OK

REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

4.CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU [SMART KEY ECU ASSEMBLY] - DOOR ELECTRICAL KEY OSCILLATOR)

a. Disconnect the E30 ECU connector.

b. Disconnect the z28 oscillator connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

for LHD:

Tester Connection	Condition	Specified Condition
E30-1 (SEL3) - z28-4 (SEL)	Always	Below 1 Ω
E30-28 (SEN3) - z28-6 (SENS)	Always	Below 1 Ω
E30-1 (SEL3) - Body ground	Always	10 kΩ or higher
E30-28 (SEN3) - Body ground	Always	10 kΩ or higher

for RHD:

Tester Connection	Condition	Specified Condition
E30-2 (SEL4) - z28-4 (SEL)	Always	Below 1 Ω
E30-27 (SEN4) - z28-6 (SENS)	Always	Below 1 Ω
E30-2 (SEL4) - Body ground	Always	10 kΩ or higher
E30-27 (SEN4) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

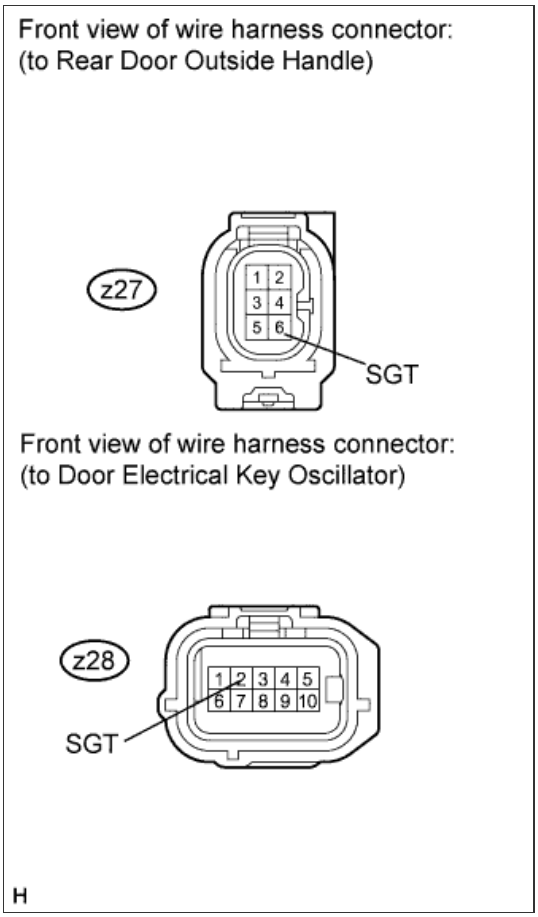
5.CHECK HARNESS AND CONNECTOR (DOOR ELECTRICAL KEY OSCILLATOR - REAR DOOR OUTSIDE HANDLE)



a. Disconnect the z27 handle connector.

b. Disconnect the z28 oscillator connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z27-6 (SGT) - z28-2 (SGT)	Always	Below 1 Ω
z27-6 (SGT) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

6.REPLACE DOOR ELECTRICAL KEY OSCILLATOR

a. Replace the door electrical key oscillator (Click here).

NEXT

7.CHECK DOOR ELECTRICAL KEY OSCILLATOR (OPERATION)

a. Check that the entry function operates normally.

OK:
Operates normally.

NG → Go to step 8

OK

END (DOOR ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)

8.REPLACE REAR DOOR OUTSIDE HANDLE

a. Replace the rear door outside handle (Click here).

NEXT

9.CHECK REAR DOOR OUTSIDE HANDLE (OPERATION)

a. Check that the entry function operates normally.

OK:
Operates normally.

NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK

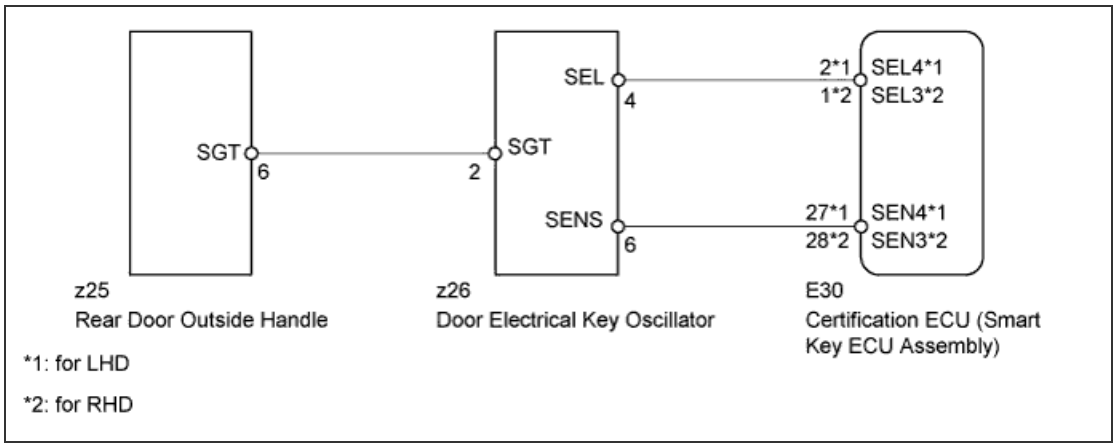
END (REAR DOOR OUTSIDE HANDLE IS DEFECTIVE)

for Preparation Click here



DESCRIPTION

If the rear door RH entry unlock function does not operate but the entry lock function operates, the communication line between the vehicle and electrical key transmitter is normal. The part at fault may be a touch sensor circuit (certification ECU (smart key ECU assembly) → rear door outside handle RH → rear door electrical key oscillator RH).

HINT:

For vehicles with entry function for rear doors.

E30-1 (SEL3) - z26-4 (SEL)	Always	Below 1 Ω
E30-28 (SEN3) - z26-6 (SENS)	Always	Below 1 Ω
E30-1 (SEL3) - Body ground	Always	10 kΩ or higher
E30-28 (SEN3) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

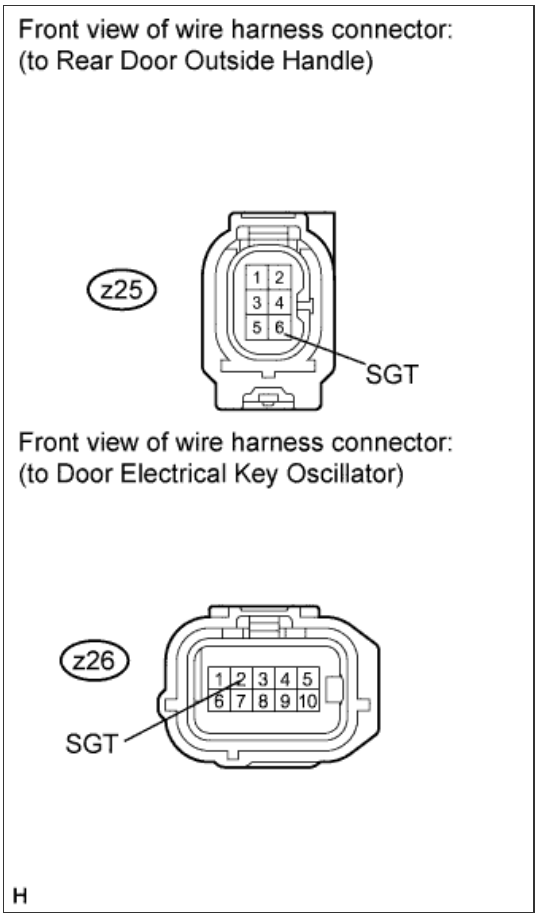
5.CHECK HARNESS AND CONNECTOR (DOOR ELECTRICAL KEY OSCILLATOR - REAR DOOR OUTSIDE HANDLE)



a. Disconnect the z25 handle connector.

b. Disconnect the z26 oscillator connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z25-6 (SGT) - z26-2 (SGT)	Always	Below 1 Ω
z25-6 (SGT) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

6.REPLACE DOOR ELECTRICAL KEY OSCILLATOR

a. Replace the door electrical key oscillator (Click here).

NEXT

7.CHECK DOOR ELECTRICAL KEY OSCILLATOR (OPERATION)

a. Check that the entry function operates normally.

OK:
Operates normally.

NG → Go to step 8

OK

END (DOOR ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)

8.REPLACE REAR DOOR OUTSIDE HANDLE

a. Replace the rear door outside handle (Click here).

NEXT

9.CHECK REAR DOOR OUTSIDE HANDLE (OPERATION)

a. Check that the entry function operates normally.

OK:
Operates normally.

NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK

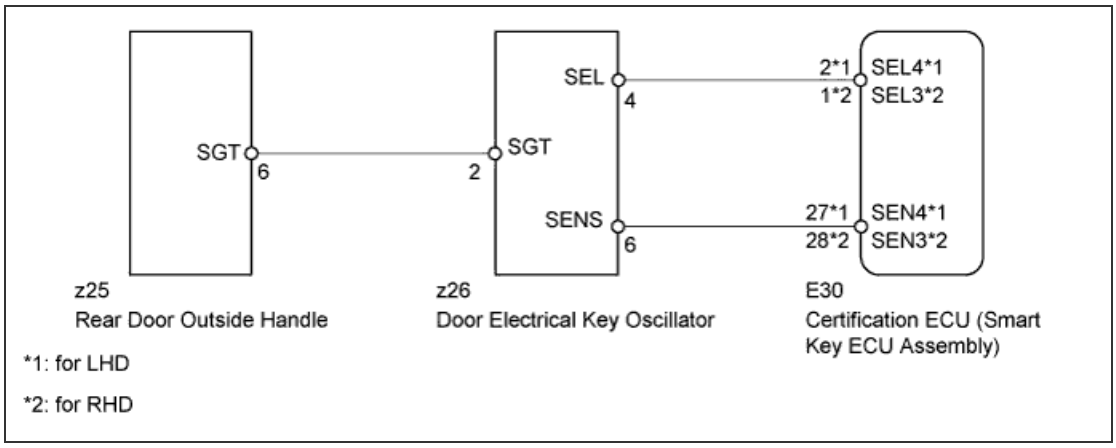
END (REAR DOOR OUTSIDE HANDLE IS DEFECTIVE)

for Preparation Click here



DESCRIPTION

If the rear door RH entry unlock function does not operate but the entry lock function operates, the communication line between the vehicle and electrical key transmitter is normal. The part at fault may be a touch sensor circuit (certification ECU (smart key ECU assembly) → rear door outside handle RH → rear door electrical key oscillator RH).

HINT:

For vehicles with entry function for rear doors.

OK

REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

4.CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU [SMART KEY ECU ASSEMBLY] - DOOR ELECTRICAL KEY OSCILLATOR)

a. Disconnect the E30 ECU connector.

b. Disconnect the z26 oscillator connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

for LHD:

Tester Connection	Condition	Specified Condition
E30-2 (SEL4) - z26-4 (SEL)	Always	Below 1 Ω
E30-27 (SEN4) - z26-6 (SENS)	Always	Below 1 Ω
E30-2 (SEL4) - Body ground	Always	10 kΩ or higher
E30-27 (SEN4) - Body ground	Always	10 kΩ or higher

for RHD:

Tester Connection	Condition	Specified Condition
E30-1 (SEL3) - z26-4 (SEL)	Always	Below 1 Ω
E30-28 (SEN3) - z26-6 (SENS)	Always	Below 1 Ω
E30-1 (SEL3) - Body ground	Always	10 kΩ or higher
E30-28 (SEN3) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

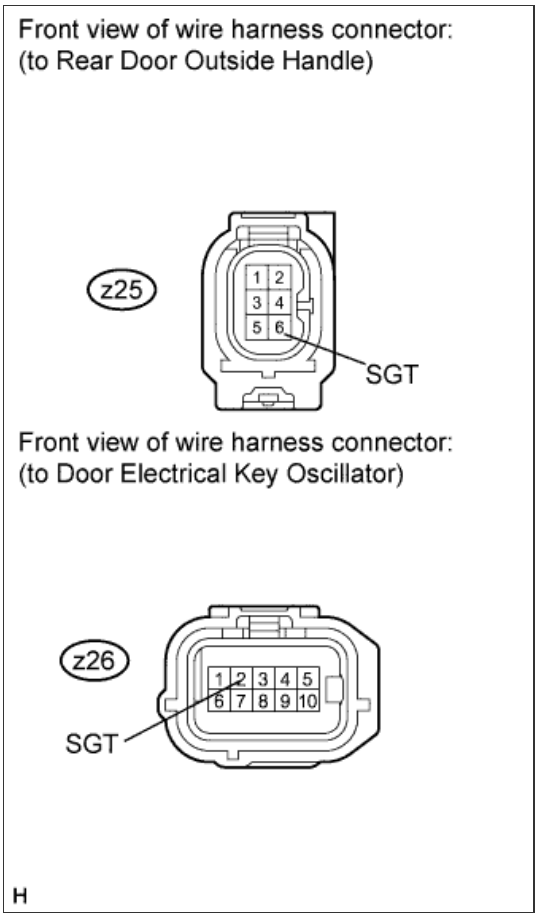
5.CHECK HARNESS AND CONNECTOR (DOOR ELECTRICAL KEY OSCILLATOR - REAR DOOR OUTSIDE HANDLE)



a. Disconnect the z25 handle connector.

b. Disconnect the z26 oscillator connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z25-6 (SGT) - z26-2 (SGT)	Always	Below 1 Ω
z25-6 (SGT) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

6.REPLACE DOOR ELECTRICAL KEY OSCILLATOR

a. Replace the door electrical key oscillator (Click here).

NEXT

7.CHECK DOOR ELECTRICAL KEY OSCILLATOR (OPERATION)

a. Check that the entry function operates normally.

OK:
Operates normally.

NG → Go to step 8

OK

END (DOOR ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)

8.REPLACE REAR DOOR OUTSIDE HANDLE

a. Replace the rear door outside handle (Click here).

NEXT

9.CHECK REAR DOOR OUTSIDE HANDLE (OPERATION)

a. Check that the entry function operates normally.

OK:
Operates normally.

NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK

END (REAR DOOR OUTSIDE HANDLE IS DEFECTIVE)

for Preparation Click here

DESCRIPTION

When the driver side door entry lock and unlock functions do not operate, one of the following may be malfunctioning: 1) power door lock system, 2) driver side door electrical key oscillator, or 3) certification ECU (smart key ECU assembly).

WIRING DIAGRAM

INSPECTION PROCEDURE

1.CHECK POWER DOOR LOCK OPERATION

a. When the master switch assembly door control switch is operated, check that the locked doors unlock.

OK:
Door locks operate normally.

NG → GO TO POWER DOOR LOCK CONTROL SYSTEM (Click here)

OK

2.READ VALUE USING INTELLIGENT TESTER (DOOR LOCK POSITION SWITCH)

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Main Body / Data List.

e. Read the Data List according to the display on the intelligent tester.

Main Body

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
D Door Lock Position SW	Driver side door lock position switch signal / ON or OFF	ON: Driver side door unlocked OFF: Driver side door locked	-

OK:
On the intelligent tester screen, the display changes between ON and OFF as shown in the chart above.

GO TO POWER DOOR LOCK CONTROL SYSTEM (Proceed to

NG → Only Driver Door LOCK/UNLOCK Functions do not Operate) (Click here)

OK

3.READ VALUE USING INTELLIGENT TESTER (TOUCH SENSOR)

a. Using the intelligent tester, read the Data List.

Entry & Start

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
D-Door Touch Sensor	Driver side door touch sensor / ON or OFF	ON: Touch sensor touched OFF: Touch sensor not touched	-
D-Door Trigger Switch	Driver side door outside handle lock switch / ON or OFF	ON: Entry lock switch pushed OFF: Entry lock switch not pushed	-

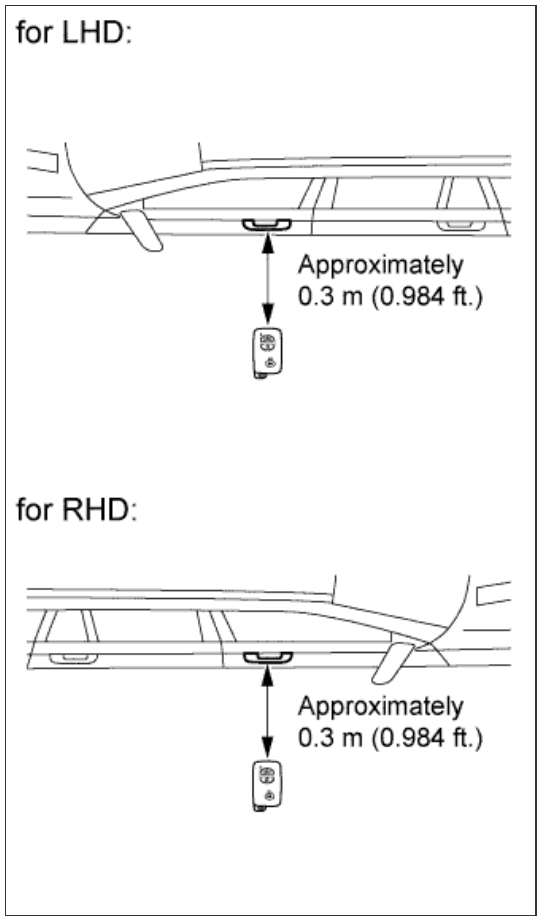
Result

Result	Proceed to
Display changes according to manual operation	A
Display does not change according to manual operation	B

B → REPLACE FRONT DOOR OUTSIDE HANDLE (Click here)

A

4.CHECK WAVE ENVIRONMENT



a. Bring the electrical key transmitter near the driver side door outside handle, and perform a driver side door entry lock and unlock operation check.

NOTICE:

If the key is brought within 0.2 m (0.656 ft.) of the door handle, communication is not possible.

HINT:

- **When the electrical key transmitter is brought near the driver side door outside handle, the possibility of wave interference decreases, and it can be determined if wave interference is causing the problem symptom.**
- **If the operation check is normal, the possibility of wave interference is high. Also, added vehicle components may cause wave interference. If installed, remove them and perform the operation check.**

Result

Result	Proceed to
Operation check fails	A
Operation check is normal	B

B → AFFECTED BY WAVE INTERFERENCE

A

5.PERFORM KEY DIAGNOSTIC MODE INSPECTION

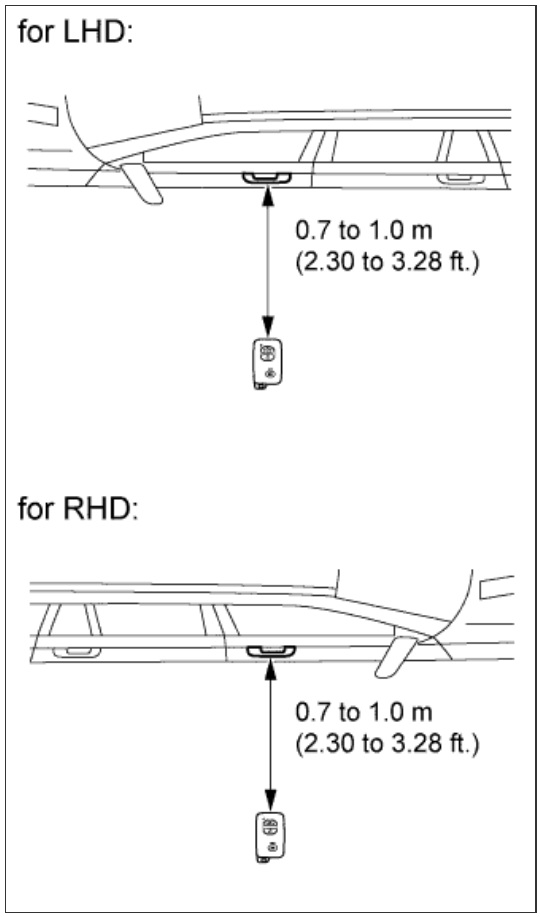
a. Diagnostic mode inspection (driver side door electrical key oscillator).

i. Connect the intelligent tester to the DLC3.

ii. Turn the engine switch on (IG).

iii. Turn the intelligent tester on.

iv. Enter the following menus: Body / Entry & Start / Key Communication Check / Overhead + Driver Side.



v. When the electrical key transmitter is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

HINT:

If the buzzer sounds, it can be determined that the driver seat outside transmitter is operating normally.

OK:

Wireless door lock buzzer sounds.

NG → Go to step 6

OK

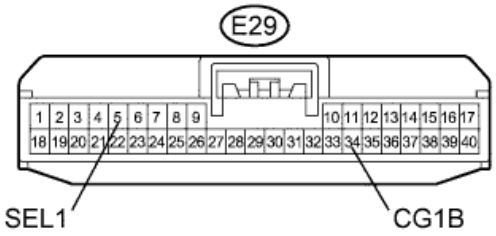
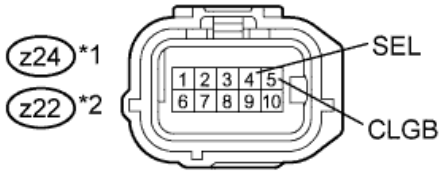
REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)



6.CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU [SMART KEY ECU ASSEMBLY] - DOOR ELECTRICAL KEY OSCILLATOR)

a. Disconnect the E29 ECU connector.



b. Disconnect the z24 or z22 oscillator connector.

c. Measure the resistance according to the value(s) in the table below.

Front view of wire harness connector:
(to Certification ECU [Smart Key ECU Assembly])

Front view of wire harness connector:
(to Door Electrical Key Oscillator)

*1: for LHD

*2: for RHD

Standard Resistance:

for LHD:

Tester Connection	Condition	Specified Condition
E29-5 (SEL1) - z24-4 (SEL)	Always	Below 1 Ω
E29-34 (CG1B) - z24-5 (CLGB)	Always	Below 1 Ω
E29-5 (SEL1) - Body ground	Always	10 kΩ or higher
E29-34 (CG1B) - Body ground	Always	10 kΩ or higher

for RHD:

Tester Connection	Condition	Specified Condition
E29-5 (SEL1) - z22-4 (SEL)	Always	Below 1 Ω
E29-34 (CG1B) - z22-5 (CLGB)	Always	Below 1 Ω
E29-5 (SEL1) - Body ground	Always	10 kΩ or higher
E29-34 (CG1B) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

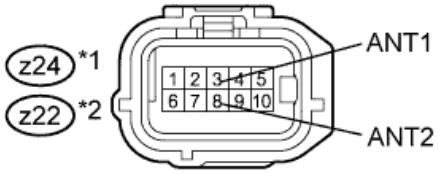
7.CHECK HARNESS AND CONNECTOR (DOOR ELECTRICAL KEY OSCILLATOR - FRONT DOOR OUTSIDE HANDLE)

a. Disconnect the z23 or z21 handle connector.



b. Disconnect the z24 or z22 oscillator connector.

c. Measure the resistance according to the value(s) in the table below.

Front view of wire harness connector:
(to Front Door Outside Handle)

Front view of wire harness connector:
(to Door Electrical Key Oscillator)

*1: for LHD

*2: for RHD

H

Standard Resistance:

for LHD:

Tester Connection	Condition	Specified Condition
z23-2 (ANT2) - z24-8 (ANT2)	Always	Below 1 Ω
z23-5 (ANT1) - z24-3 (ANT1)	Always	Below 1 Ω
z23-2 (ANT2) - Body ground	Always	10 kΩ or higher
z23-5 (ANT1) - Body ground	Always	10 kΩ or higher

for RHD:

Tester Connection	Condition	Specified Condition
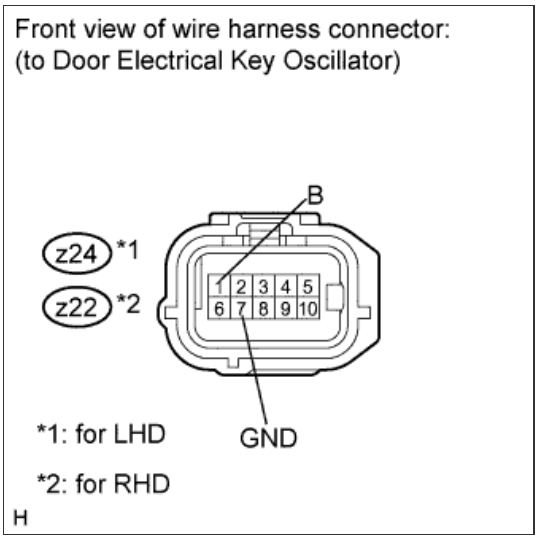
z21-2 (ANT2) - z22-8 (ANT2)	Always	Below 1 Ω
z21-5 (ANT1) - z22-3 (ANT1)	Always	Below 1 Ω
z21-2 (ANT2) - Body ground	Always	10 kΩ or higher
z21-5 (ANT1) - Body ground	Always	10 kΩ or higher



NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

8.CHECK HARNESS AND CONNECTOR (DOOR ELECTRICAL KEY OSCILLATOR - BATTERY AND BODY GROUND)

a. Disconnect the z24 or z22 oscillator connector.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

for LHD:

Tester Connection	Condition	Specified Condition
z24-1 (B) - z24-7 (GND)	Always	11 to 14 V

for RHD:

Tester Connection	Condition	Specified Condition
z22-1 (B) - z22-7 (GND)	Always	11 to 14 V

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

9.REPLACE DOOR ELECTRICAL KEY OSCILLATOR

a. Replace the door electrical key oscillator (Click here).

NEXT

10.CHECK DOOR ELECTRICAL KEY OSCILLATOR (OPERATION)

a. Check that the entry function operates normally.

OK:

Operates normally.

NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK

END (DOOR ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)

for Preparation Click here

DESCRIPTION

When the driver side door entry lock and unlock functions do not operate, one of the following may be malfunctioning: 1) power door lock system, 2) driver side door electrical key oscillator, or 3) certification ECU (smart key ECU assembly).

WIRING DIAGRAM

INSPECTION PROCEDURE

1.CHECK POWER DOOR LOCK OPERATION

a. When the master switch assembly door control switch is operated, check that the locked doors unlock.

OK:
Door locks operate normally.

NG → GO TO POWER DOOR LOCK CONTROL SYSTEM (Click here)

OK

2.READ VALUE USING INTELLIGENT TESTER (DOOR LOCK POSITION SWITCH)

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Main Body / Data List.

e. Read the Data List according to the display on the intelligent tester.

Main Body

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
D Door Lock Position SW	Driver side door lock position switch signal / ON or OFF	ON: Driver side door unlocked OFF: Driver side door locked	-

OK:
On the intelligent tester screen, the display changes between ON and OFF as shown in the chart above.

GO TO POWER DOOR LOCK CONTROL SYSTEM (Proceed to

NG → Only Driver Door LOCK/UNLOCK Functions do not Operate) (Click here)

OK

3.READ VALUE USING INTELLIGENT TESTER (TOUCH SENSOR)

a. Using the intelligent tester, read the Data List.

Entry & Start

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
D-Door Touch Sensor	Driver side door touch sensor / ON or OFF	ON: Touch sensor touched OFF: Touch sensor not touched	-
D-Door Trigger Switch	Driver side door outside handle lock switch / ON or OFF	ON: Entry lock switch pushed OFF: Entry lock switch not pushed	-

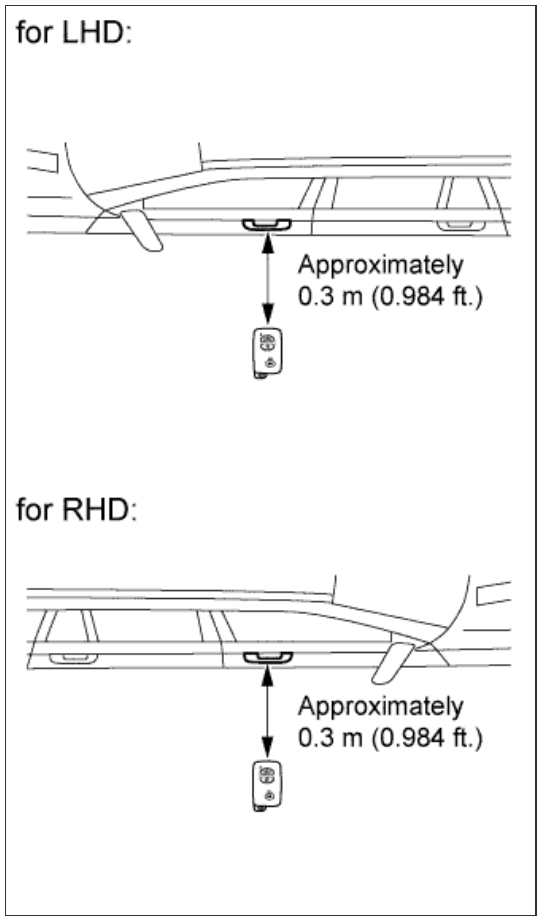
Result

Result	Proceed to
Display changes according to manual operation	A
Display does not change according to manual operation	B

B → REPLACE FRONT DOOR OUTSIDE HANDLE (Click here)

A

4.CHECK WAVE ENVIRONMENT



a. Bring the electrical key transmitter near the driver side door outside handle, and perform a driver side door entry lock and unlock operation check.

NOTICE:

If the key is brought within 0.2 m (0.656 ft.) of the door handle, communication is not possible.

HINT:

- **When the electrical key transmitter is brought near the driver side door outside handle, the possibility of wave interference decreases, and it can be determined if wave interference is causing the problem symptom.**
- **If the operation check is normal, the possibility of wave interference is high. Also, added vehicle components may cause wave interference. If installed, remove them and perform the operation check.**

Result

Result	Proceed to
Operation check fails	A
Operation check is normal	B

B → AFFECTED BY WAVE INTERFERENCE

A

5.PERFORM KEY DIAGNOSTIC MODE INSPECTION

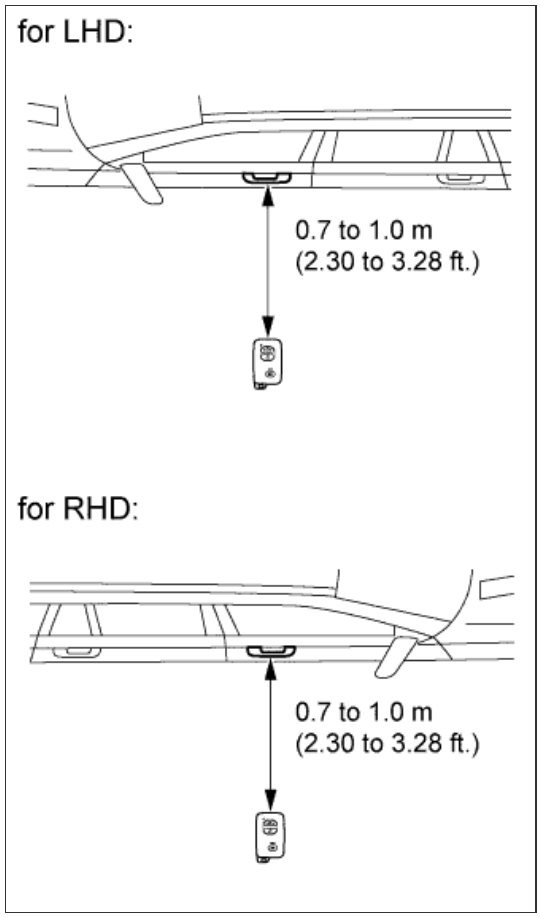
a. Diagnostic mode inspection (driver side door electrical key oscillator).

i. Connect the intelligent tester to the DLC3.

ii. Turn the engine switch on (IG).

iii. Turn the intelligent tester on.

iv. Enter the following menus: Body / Entry & Start / Key Communication Check / Overhead + Driver Side.



v. When the electrical key transmitter is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

HINT:

If the buzzer sounds, it can be determined that the driver seat outside transmitter is operating normally.

OK:

Wireless door lock buzzer sounds.

NG → Go to step 6

OK

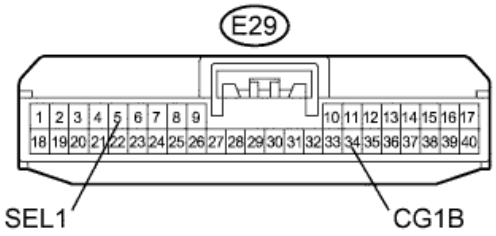
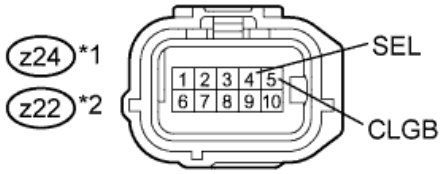
REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)



6.CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU [SMART KEY ECU ASSEMBLY] - DOOR ELECTRICAL KEY OSCILLATOR)

a. Disconnect the E29 ECU connector.



b. Disconnect the z24 or z22 oscillator connector.

c. Measure the resistance according to the value(s) in the table below.

Front view of wire harness connector:
(to Certification ECU [Smart Key ECU Assembly])

Front view of wire harness connector:
(to Door Electrical Key Oscillator)

*1: for LHD

*2: for RHD

Standard Resistance:

for LHD:

Tester Connection	Condition	Specified Condition
E29-5 (SEL1) - z24-4 (SEL)	Always	Below 1 Ω
E29-34 (CG1B) - z24-5 (CLGB)	Always	Below 1 Ω
E29-5 (SEL1) - Body ground	Always	10 kΩ or higher
E29-34 (CG1B) - Body ground	Always	10 kΩ or higher

for RHD:

Tester Connection	Condition	Specified Condition
E29-5 (SEL1) - z22-4 (SEL)	Always	Below 1 Ω
E29-34 (CG1B) - z22-5 (CLGB)	Always	Below 1 Ω
E29-5 (SEL1) - Body ground	Always	10 kΩ or higher
E29-34 (CG1B) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

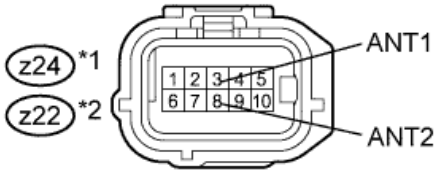
7.CHECK HARNESS AND CONNECTOR (DOOR ELECTRICAL KEY OSCILLATOR - FRONT DOOR OUTSIDE HANDLE)

a. Disconnect the z23 or z21 handle connector.



b. Disconnect the z24 or z22 oscillator connector.

c. Measure the resistance according to the value(s) in the table below.

Front view of wire harness connector:
(to Front Door Outside Handle)

Front view of wire harness connector:
(to Door Electrical Key Oscillator)

*1: for LHD

*2: for RHD

H

Standard Resistance:

for LHD:

Tester Connection	Condition	Specified Condition
z23-2 (ANT2) - z24-8 (ANT2)	Always	Below 1 Ω
z23-5 (ANT1) - z24-3 (ANT1)	Always	Below 1 Ω
z23-2 (ANT2) - Body ground	Always	10 kΩ or higher
z23-5 (ANT1) - Body ground	Always	10 kΩ or higher

for RHD:

Tester Connection	Condition	Specified Condition
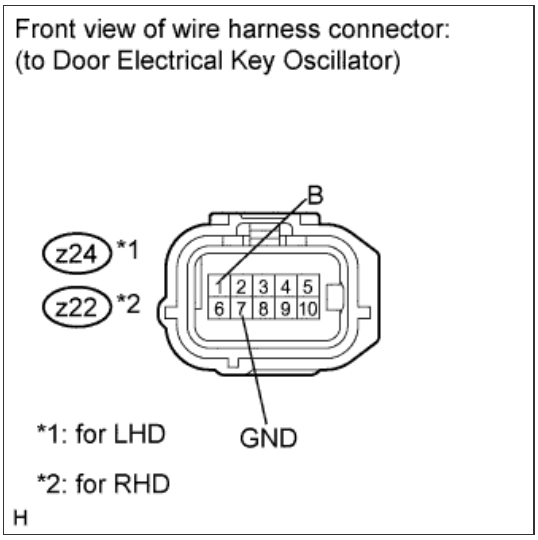
z21-2 (ANT2) - z22-8 (ANT2)	Always	Below 1 Ω
z21-5 (ANT1) - z22-3 (ANT1)	Always	Below 1 Ω
z21-2 (ANT2) - Body ground	Always	10 kΩ or higher
z21-5 (ANT1) - Body ground	Always	10 kΩ or higher



NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

8.CHECK HARNESS AND CONNECTOR (DOOR ELECTRICAL KEY OSCILLATOR - BATTERY AND BODY GROUND)

a. Disconnect the z24 or z22 oscillator connector.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

for LHD:

Tester Connection	Condition	Specified Condition
z24-1 (B) - z24-7 (GND)	Always	11 to 14 V

for RHD:

Tester Connection	Condition	Specified Condition
z22-1 (B) - z22-7 (GND)	Always	11 to 14 V

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

9.REPLACE DOOR ELECTRICAL KEY OSCILLATOR

a. Replace the door electrical key oscillator (Click here).

NEXT

10.CHECK DOOR ELECTRICAL KEY OSCILLATOR (OPERATION)

a. Check that the entry function operates normally.

OK:

Operates normally.

NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK

END (DOOR ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)

for Preparation Click here

DESCRIPTION

When the front passenger side door entry lock and unlock functions do not operate, one of the following may be malfunctioning: 1) power door lock system, 2) front passenger side door electrical key oscillator, or 3) certification ECU (smart key ECU assembly).

WIRING DIAGRAM

INSPECTION PROCEDURE

1.CHECK POWER DOOR LOCK OPERATION

i. Connect the intelligent tester to the DLC3.

ii. Turn the engine switch on (IG).

iii. Turn the intelligent tester on.

iv. Enter the following menus:
for LHD
Select: Body / Entry & Start / Key Communication Check / Overhead + Driver Side Rear.
for RHD
Select: Body / Entry & Start / Key Communication Check / Overhead + Passenger Side Rear.

v. When the electrical key transmitter is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

HINT:

If the buzzer sounds, it can be determined that the rear LH seat outside transmitter is operating normally.

OK:
Wireless door lock buzzer sounds.

NG → Go to step 6

OK

REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

6.CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU [SMART KEY ECU ASSEMBLY] - DOOR ELECTRICAL KEY OSCILLATOR)

a. Disconnect the E30 ECU connector.

b. Disconnect the z28 oscillator connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

for LHD:

Tester Connection	Condition	Specified Condition
E30-1 (SEL3) - z28-4 (SEL)	Always	Below 1 Ω
E30-9 (CG3B) - z28-5 (CLGB)	Always	Below 1 Ω
E30-1 (SEL3) - Body ground	Always	10 kΩ or higher
E30-9 (CG3B) - Body ground	Always	10 kΩ or higher

for RHD:

Tester Connection	Condition	Specified Condition
E30-2 (SEL4) - z28-4 (SEL)	Always	Below 1 Ω
E30-11 (CG4B) - z28-5 (CLGB)	Always	Below 1 Ω
E30-2 (SEL4) - Body ground	Always	10 kΩ or higher
E30-11 (CG4B) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

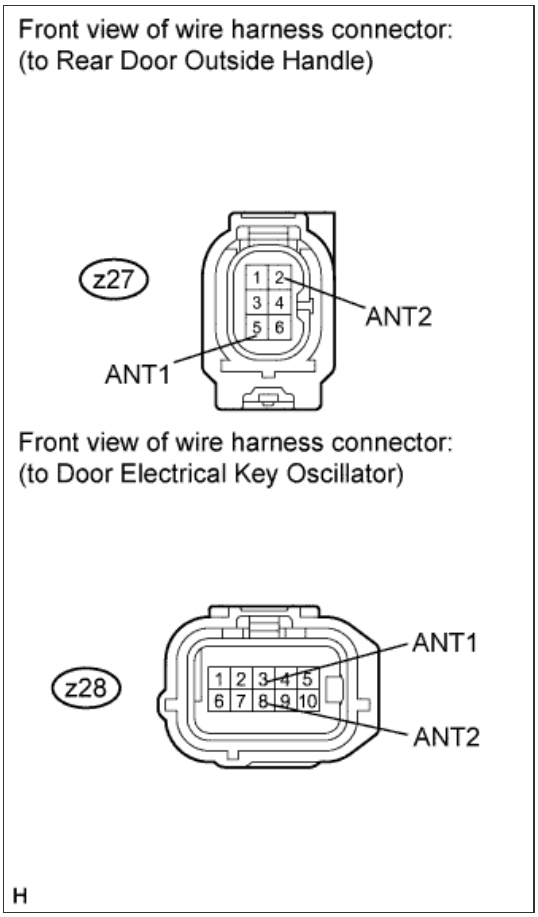
7.CHECK HARNESS AND CONNECTOR (DOOR ELECTRICAL KEY OSCILLATOR - REAR DOOR OUTSIDE HANDLE)



a. Disconnect the z27 handle connector.

b. Disconnect the z28 oscillator connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z27-2 (ANT2) - z28-8 (ANT2)	Always	Below 1 Ω
z27-5 (ANT1) - z28-3 (ANT1)	Always	Below 1 Ω
z27-2 (ANT2) - Body ground	Always	10 kΩ or higher
z27-5 (ANT1) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

8.CHECK HARNESS AND CONNECTOR (DOOR ELECTRICAL KEY OSCILLATOR - BATTERY AND BODY GROUND)

a. Disconnect the z28 oscillator connector.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
z28-1 (B) - z28-7 (GND)	Always	11 to 14 V

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

9.REPLACE DOOR ELECTRICAL KEY OSCILLATOR

a. Replace the door electrical key oscillator (Click here).

NEXT

1 .CHECK DOOR ELECTRICAL KEY OSCILLATOR (OPERATION)

a. Check that the entry function operates normally.

OK:
Operates normally.

NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK

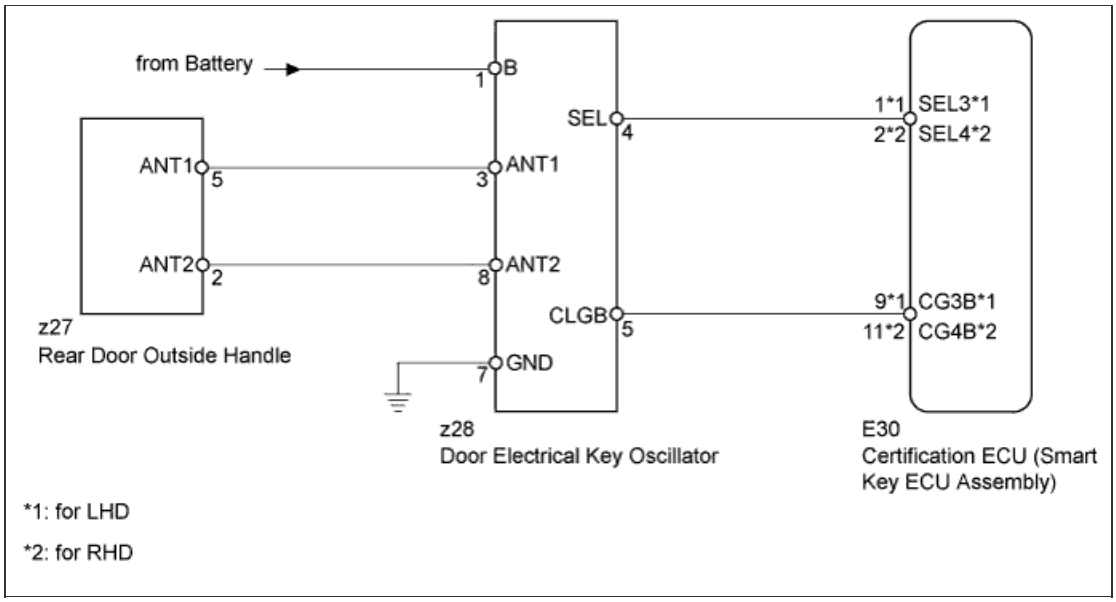
END (DOOR ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)

for Preparation Click here



DESCRIPTION

When the rear door LH entry lock and unlock functions do not operate, one of the following may be malfunctioning: 1) power door lock system, 2) rear door electrical key oscillator LH, or 3) certification ECU (smart key ECU assembly).

HINT:

For vehicles with entry function for rear doors.

Result	Proceed to
Display changes according to manual operation	A
Display does not change according to manual operation	B

B → **REPLACE REAR DOOR OUTSIDE HANDLE (Click here)**

A

4.CHECK WAVE ENVIRONMENT

a. Bring the electrical key transmitter near the rear door outside handle LH, and perform a rear door LH entry lock and unlock operation check.

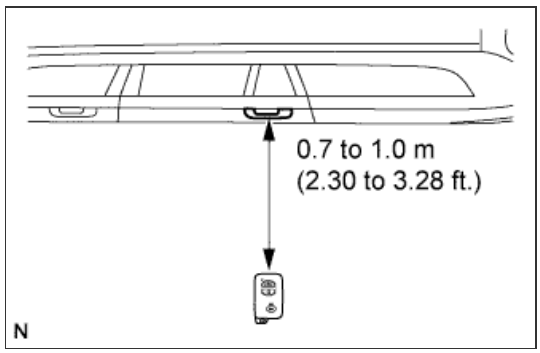
NOTICE:

If the key is brought within 0.2 m (0.656 ft.) of the door handle, communication is not possible.

HINT:

- **When the electrical key transmitter is brought near the rear door outside handle LH, the possibility of wave interference decreases, and it can be determined if wave interference is causing the problem symptom.**
- **If the operation check is normal, the possibility of wave interference is high. Also, added vehicle components may cause wave interference. If installed, remove them and perform the operation check.**

Result



Result	Proceed to
Operation check fails	A
Operation check is normal	B

B → AFFECTED BY WAVE INTERFERENCE

A

5.PERFORM KEY DIAGNOSTIC MODE INSPECTION

a. Diagnostic mode inspection (rear door electrical key oscillator LH).

i. Connect the intelligent tester to the DLC3.

ii. Turn the engine switch on (IG).

iii. Turn the intelligent tester on.

iv. Enter the following menus:
for LHD
Select: Body / Entry & Start / Key Communication Check / Overhead + Driver Side Rear.
for RHD
Select: Body / Entry & Start / Key Communication Check / Overhead + Passenger Side Rear.

v. When the electrical key transmitter is in the position shown in the illustration, check that the wireless door lock buzzer sounds.

HINT:

If the buzzer sounds, it can be determined that the rear LH seat outside transmitter is operating normally.

OK:
Wireless door lock buzzer sounds.

NG → Go to step 6

OK

REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

6.CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU [SMART KEY ECU ASSEMBLY] - DOOR ELECTRICAL KEY OSCILLATOR)

a. Disconnect the E30 ECU connector.

b. Disconnect the z28 oscillator connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

for LHD:

Tester Connection	Condition	Specified Condition
E30-1 (SEL3) - z28-4 (SEL)	Always	Below 1 Ω
E30-9 (CG3B) - z28-5 (CLGB)	Always	Below 1 Ω
E30-1 (SEL3) - Body ground	Always	10 kΩ or higher
E30-9 (CG3B) - Body ground	Always	10 kΩ or higher

for RHD:

Tester Connection	Condition	Specified Condition
E30-2 (SEL4) - z28-4 (SEL)	Always	Below 1 Ω
E30-11 (CG4B) - z28-5 (CLGB)	Always	Below 1 Ω
E30-2 (SEL4) - Body ground	Always	10 kΩ or higher
E30-11 (CG4B) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

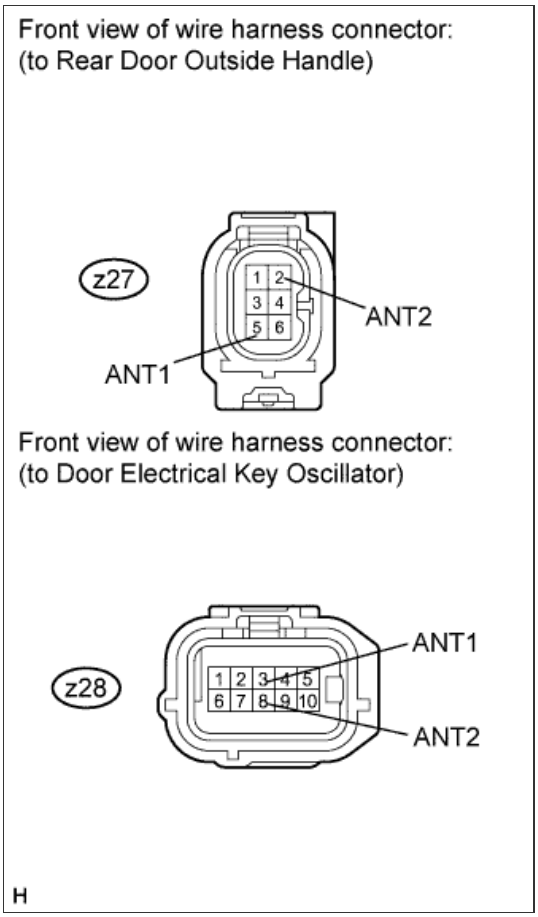
7.CHECK HARNESS AND CONNECTOR (DOOR ELECTRICAL KEY OSCILLATOR - REAR DOOR OUTSIDE HANDLE)



a. Disconnect the z27 handle connector.

b. Disconnect the z28 oscillator connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
z27-2 (ANT2) - z28-8 (ANT2)	Always	Below 1 Ω
z27-5 (ANT1) - z28-3 (ANT1)	Always	Below 1 Ω
z27-2 (ANT2) - Body ground	Always	10 kΩ or higher
z27-5 (ANT1) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

8.CHECK HARNESS AND CONNECTOR (DOOR ELECTRICAL KEY OSCILLATOR - BATTERY AND BODY GROUND)

a. Disconnect the z28 oscillator connector.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
z28-1 (B) - z28-7 (GND)	Always	11 to 14 V

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

9.REPLACE DOOR ELECTRICAL KEY OSCILLATOR

a. Replace the door electrical key oscillator (Click here).

NEXT

1 .CHECK DOOR ELECTRICAL KEY OSCILLATOR (OPERATION)

a. Check that the entry function operates normally.

OK:
Operates normally.

NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK

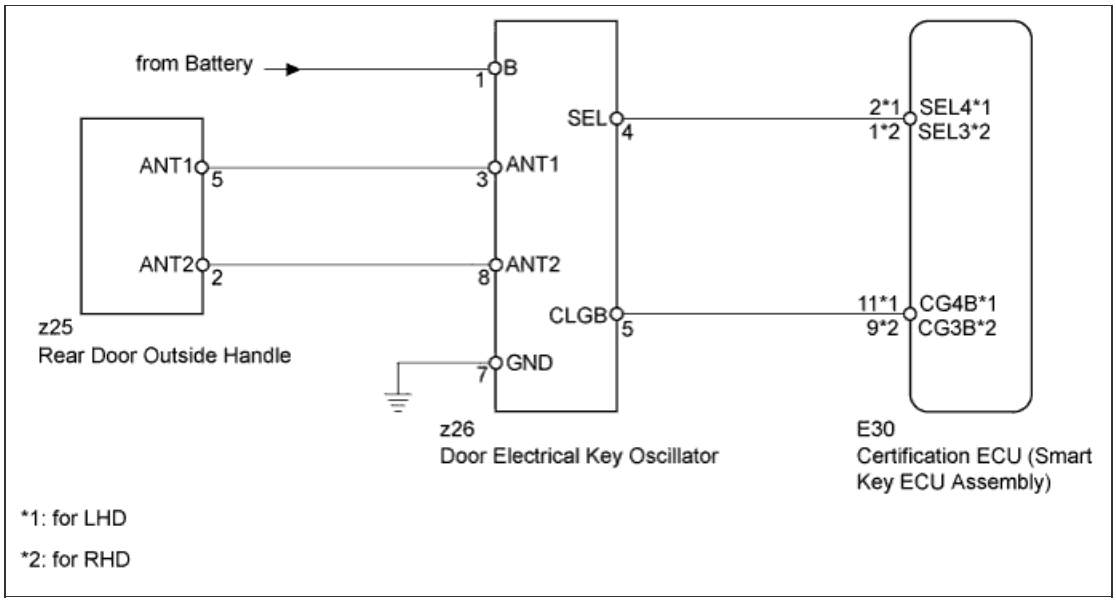
END (DOOR ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)

for Preparation Click here



DESCRIPTION

When the rear door RH entry lock and unlock functions do not operate, one of the following may be malfunctioning: 1) power door lock system, 2) rear door electrical key oscillator RH, or 3) certification ECU (smart key ECU assembly).

HINT:

For vehicles with entry function for rear doors.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.CHECK POWER DOOR LOCK OPERATION

a. When the master switch assembly door control switch is operated, check that the locked doors unlock.

OK:

Door locks operate normally.

NG → GO TO POWER DOOR LOCK CONTROL SYSTEM (Click here)

OK

2.READ VALUE USING INTELLIGENT TESTER (DOOR LOCK POSITION SWITCH)

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Main Body / Data List.

e. Read the Data List according to the display on the intelligent tester.

i. for LHD

Main Body

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
		ON: Passenger side rear door	

PR Door Lock Position SW	Passenger side rear door lock position switch signal / ON or OFF	unlocked OFF: Passenger side rear door locked	-

OK:

On the intelligent tester screen, the display changes between ON and OFF as shown in the chart above.

ii. for RHD

Main Body

for RHD:

Tester Connection	Condition	Specified Condition
-9 (TRG-) - 3-(TRG-)	Always	Below Ω
-9 (TRG-) - Body ground	Always	kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

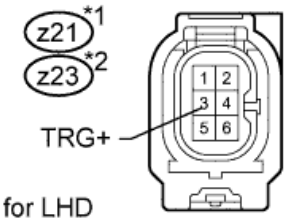
5.CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU [SMART KEY ECU ASSEMBLY - FRONT DOOR OUTSIDE HANDLE)

a. Disconnect the E29 ECU connector.



b. Disconnect the or 3 handle connector.

c. Measure the resistance according to the value(s) in the table below.

Front view of wire harness connector: (to Certification ECU [Smart Key ECU Assembly])

Front view of wire harness connector: (to Front Door Outside Handle)

*1: for LHD

*2: for RHD

Standard Resistance:

for LHD:

Tester Connection	Condition	Specified Condition
E29- (TSW2) - -3 (TRG)	Always	Below Ω
E29- (TSW2) - Body ground	Always	kΩ or higher

for RHD:

Tester Connection	Condition	Specified Condition
E29- (TSW2) - 3-3 (TRG)	Always	Below Ω
E29- (TSW2) - Body ground	Always	kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

.INSPECT FRONT DOOR OUTSIDE HANDLE (for Front Passenger Side)

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

for LHD:

Tester Connection	Switch Condition	Specified Condition
- (TRG-) - -3 (TRG)	Lock switch not pushed	kΩ or higher
	Lock switch pushed	Below Ω

for RHD:

Tester Connection	Switch Condition	Specified Condition
3- (TRG-) - 3-3 (TRG)	Lock switch not pushed	kΩ or higher
	Lock switch pushed	Below Ω

NG → REPLACE FRONT DOOR OUTSIDE HANDLE (Click here)

OK

.REPLACE DOOR ELECTRICAL KEY OSCILLATOR

a. Replace the door electrical key oscillator (Click here).

NEXT

8.CHECK DOOR ELECTRICAL KEY OSCILLATOR (OPERATION)

a. Check that the entry function operates normally.

OK:
Operates normally.

NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK

END (DOOR ELECTRICAL OSCILLATOR IS DEFECTIVE)

for Preparation Click here

DESCRIPTION

If the front passenger side door entry lock function does not operate but the entry unlock function operates, the communication line between the vehicle and electrical key transmitter is normal. The part at fault may be an entry lock switch circuit (certification ECU (smart key ECU assembly) → front passenger side door outside handle (entry lock switch) → front passenger side door electrical key oscillator).

WIRING DIAGRAM

INSPECTION PROCEDURE

1.CHECK POWER DOOR LOCK OPERATION

a. When the master switch assembly door control switch is operated, check that the locked doors unlock.

OK:
Door locks operate normally.

NG → GO TO POWER DOOR LOCK CONTROL SYSTEM (Click here)

OK

2.READ VALUE USING INTELLIGENT TESTER (DOOR LOCK POSITION SWITCH)

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Main Body / Data List.

e. Read the Data List according to the display on the intelligent tester.

Main Body

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
P Door Lock Position SW	Front passenger side door lock position switch signal / ON or OFF	ON: Front passenger side door unlocked OFF: Front passenger side door locked	-

OK:
On the intelligent tester screen, the display changes between ON and OFF as shown in the chart above.

NG → GO TO POWER DOOR LOCK CONTROL SYSTEM (Proceed to Only Passenger Door LOCK/UNLOCK Functions do not

Operate) (Click here)

OK

3.READ VALUE USING INTELLIGENT TESTER (LOCK SWITCH)

a. Using the intelligent tester, read the Data List.

Entry & Start

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
P-Door Trigger Switch	Front passenger side door outside handle lock switch / ON or OFF	ON: Entry lock switch pushed OFF: Entry lock switch not pushed	-

OK:

On tester screen, item changes between ON and OFF according to above chart.

NG → Go to step 4

OK

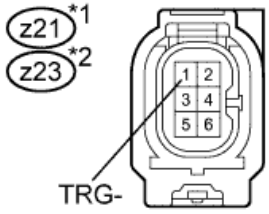
REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)



4.CHECK HARNESS AND CONNECTOR (FRONT DOOR OUTSIDE HANDLE - DOOR ELECTRICAL KEY OSCILLATOR)

a. Disconnect the or oscillator connector.

b. Disconnect the or 3 handle connector.

c. Measure the resistance according to the value(s) in the table below.

Front view of wire harness connector:
(to Front Door Outside Handle)

Front view of wire harness connector:
(to Door Electrical Key Oscillator)

*1: for LHD

*2: for RHD

H

Standard Resistance:

for LHD:

Tester Connection	Condition	Specified Condition
-9 (TRG-) - - (TRG-)	Always	Below Ω
-9 (TRG-) - Body	Always	kΩ or higher

ground		

for RHD:

Tester Connection	Condition	Specified Condition
-9 (TRG-) - 3-(TRG-)	Always	Below Ω
-9 (TRG-) - Body ground	Always	kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

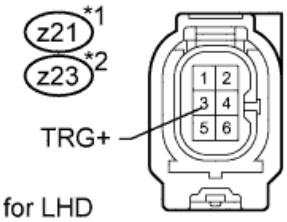
5.CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU [SMART KEY ECU ASSEMBLY - FRONT DOOR OUTSIDE HANDLE)

a. Disconnect the E29 ECU connector.



b. Disconnect the or 3 handle connector.

c. Measure the resistance according to the value(s) in the table below.

Front view of wire harness connector: (to Certification ECU [Smart Key ECU Assembly])

Front view of wire harness connector: (to Front Door Outside Handle)

*1: for LHD

*2: for RHD

Standard Resistance:

for LHD:

Tester Connection	Condition	Specified Condition
E29- (TSW2) - -3 (TRG)	Always	Below Ω
E29- (TSW2) - Body ground	Always	kΩ or higher

for RHD:

Tester Connection	Condition	Specified Condition
E29- (TSW2) - 3-3 (TRG)	Always	Below Ω
E29- (TSW2) - Body ground	Always	kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

.INSPECT FRONT DOOR OUTSIDE HANDLE (for Front Passenger Side)

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

for LHD:

Tester Connection	Switch Condition	Specified Condition
- (TRG-) - -3 (TRG)	Lock switch not pushed	kΩ or higher
	Lock switch pushed	Below Ω

for RHD:

Tester Connection	Switch Condition	Specified Condition
3- (TRG-) - 3-3 (TRG)	Lock switch not pushed	kΩ or higher
	Lock switch pushed	Below Ω

NG → REPLACE FRONT DOOR OUTSIDE HANDLE (Click here)

OK

.REPLACE DOOR ELECTRICAL KEY OSCILLATOR

a. Replace the door electrical key oscillator (Click here).

NEXT

8.CHECK DOOR ELECTRICAL KEY OSCILLATOR (OPERATION)

a. Check that the entry function operates normally.

OK:
Operates normally.

NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK

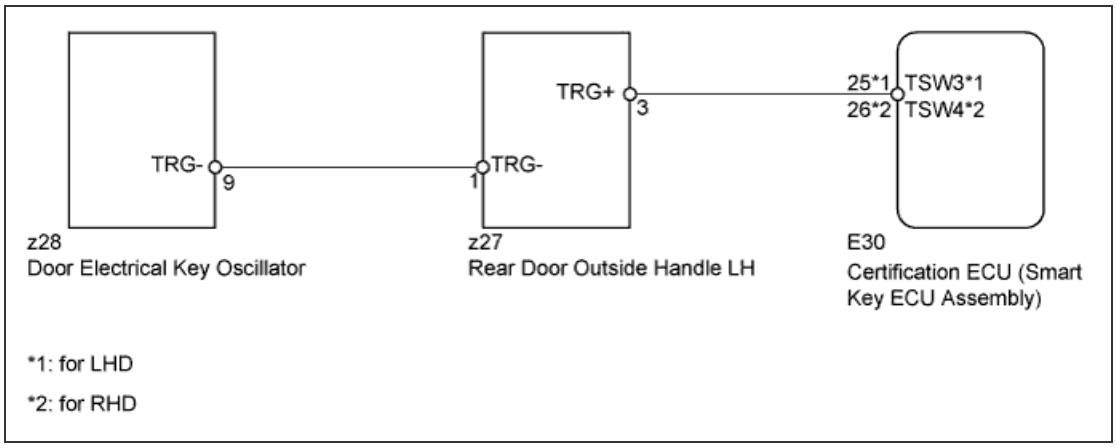
END (DOOR ELECTRICAL OSCILLATOR IS DEFECTIVE)

for Preparation Click here



DESCRIPTION

If the rear door LH entry lock function does not operate but the entry unlock function operates, the communication line between the vehicle and electrical key transmitter is normal. The part at fault may be an entry lock switch circuit (certification ECU (smart key ECU assembly) → rear door outside handle LH (entry lock switch) → rear door electrical key oscillator LH).

HINT:

For vehicles with entry function for rear doors.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.CHECK POWER DOOR LOCK OPERATION

a. When the master switch assembly door control switch is operated, check that the locked doors unlock.

OK:
Door locks operate normally.

NG → GO TO POWER DOOR LOCK CONTROL SYSTEM (Click here)

OK

2.READ VALUE USING INTELLIGENT TESTER (DOOR LOCK POSITION SWITCH)

a. Connect the intelligent tester to the DLC3.

OK

5.CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU [SMART KEY ECU ASSEMBLY] - REAR DOOR OUTSIDE HANDLE)

a. Disconnect the E3 ECU connector.

b. Disconnect the z2 handle connector.

c. Measure the resistance according to the value(s) in the table below.

Front view of wire harness connector: (to Certification ECU [Smart Key ECU Assembly])

Front view of wire harness connector: (to Rear Door Outside Handle)

*1: for LHD

*2: for RHD

Standard Resistance:

for LHD:

Tester Connection	Condition	Specified Condition
E3 (TSW) - z2 3 (TRG)	Always	Below 1 Ω
E3 (TSW) - Body ground	Always	1 kΩ or higher

for RHD:

Tester Connection	Condition	Specified Condition
E3 (TSW3) - z2 3 (TRG)	Always	Below 1 Ω
E3 (TSW3) - Body ground	Always	1 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

6.INSPECT REAR DOOR OUTSIDE HANDLE RH

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
z2 (TRG-) - z2 3 (TRG)	Lock switch not pushed	1 kΩ or higher
	Lock switch pushed	Below 1 Ω

NG → REPLACE REAR DOOR OUTSIDE HANDLE (Click here)

OK

7.REPLACE DOOR ELECTRICAL KEY OSCILLATOR

a. Replace the door electrical key oscillator (Click here).

NEXT

8.CHECK DOOR ELECTRICAL KEY OSCILLATOR (OPERATION)

a. Check that the entry function operates normally.

OK:
Operates normally.

NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK

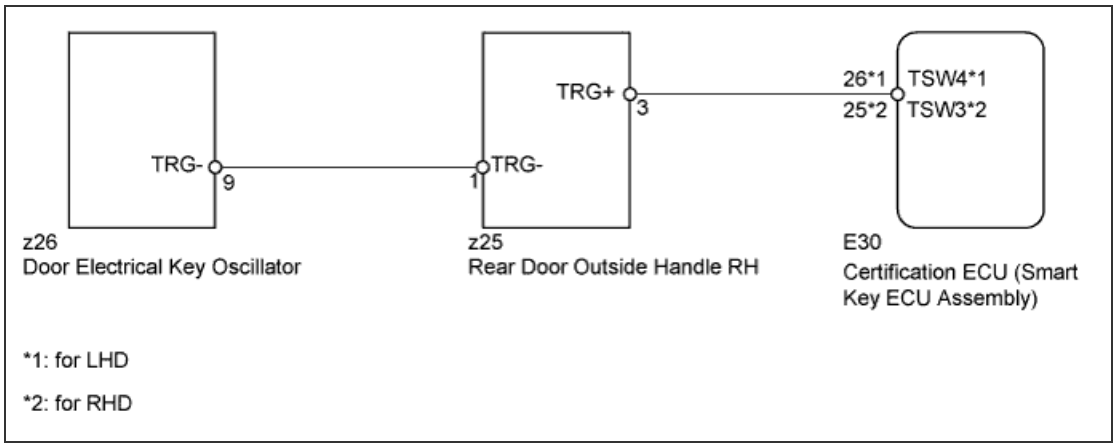
END (DOOR ELECTRICAL OSCILLATOR IS DEFECTIVE)

for Preparation Click here



DESCRIPTION

If the room oscillator does not recognize the key, one of the following may be the cause: 1) communication between the indoor electrical key antenna (for Front) and electrical key transmitter cannot be performed; or 2) communication between the indoor electrical key antenna (for Rear 1) and electrical key transmitter cannot be performed; or 3) communication between the indoor electrical key antenna (for Rear 2) and electrical key transmitter cannot be performed.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- **Before performing the inspection, check that there are no problems related to the "CAN Communication System" and "LIN Communication System".**
- **When using the intelligent tester with the engine switch off to troubleshoot: Connect the intelligent tester to the vehicle, and turn a courtesy light switch on and off at 1.5 second intervals until communication between the tester and vehicle begins.**

1.CHECK ENTRY AND START SYSTEM (ENTRY FUNCTION)

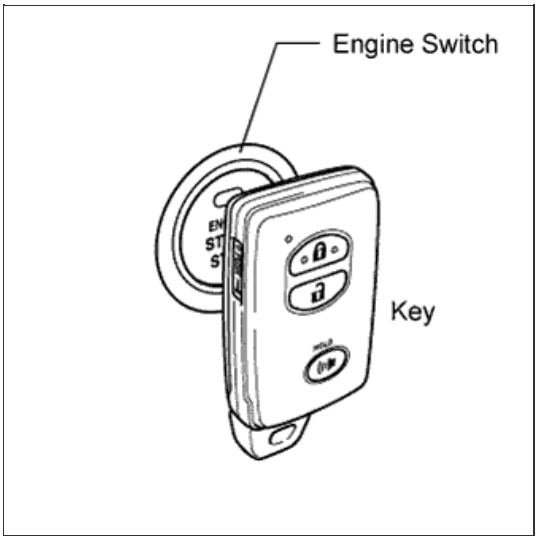
a. Check that the entry lock and unlock function can be operated at each door (Click here).

NG → Go to DTC OF OTHER COMPONENTS (PROCEED TO PROBLEM SYMPTOM FLOWCHART FOR EACH DOOR) (Click here)

OK

2.CHECK ENTRY AND START SYSTEM (START FUNCTION)

a. Remove the battery of the electrical key transmitter (Click here).



b. With the brake pedal depressed, touch the TOYOTA mark of the key to the engine switch.

c. When operating the engine switch, check whether the power source mode changes.

OK:
Power source mode changes.

HINT:

- **When the electrical key transmitter cannot be verified even though it is in the operating range of the start function, the engine start check can be performed by removing the transmitter battery from the electrical key transmitter and holding the transmitter against the engine switch.**
- **When performing the check, if the power source mode changes, there is a problem with key certification inside the cabin.**

NG → **Go to ENTRY AND START SYSTEM (Power Source Mode does not Change) (Click here)**

OK

3.CHECK WAVE ENVIRONMENT

a. Install the battery to the electrical key transmitter (Click here).

b. Bring the electrical key transmitter near the indoor electrical key antenna (in center console), and perform an engine control system start check.

NOTICE:

If the key is brought within 0.2 m (0.656 ft.) of the center console, communication is not possible.

OK:
Engine starts.

c. Bring the electrical key transmitter near the indoor electrical key antenna (in rear No. 1 seat cushion), and perform an engine control system start check.

NOTICE:

If the key is brought within 0.2 m (0.656 ft.) of the rear No. 1 seat cushion, communication is not possible.

OK:
Engine starts.

d. Bring the electrical key transmitter near the indoor electrical key antenna (in rear No. 2 seat cushion), and perform an engine control system start check.

NOTICE:

If the key is brought within 0.2 m (0.656 ft.) of the rear No. 2 seat cushion, communication is not possible.

HINT:

- **When the electrical key transmitter is brought near the indoor electrical key antenna, the possibility of wave interference decreases, and it can be determined if wave interference is causing the problem symptom.**
- **If the inspection result is that the operation check is normal, the possibility of wave interference is high. Also, added vehicle components may cause wave interference, If installed, remove them and perform the operation check.**

OK:
Engine starts.

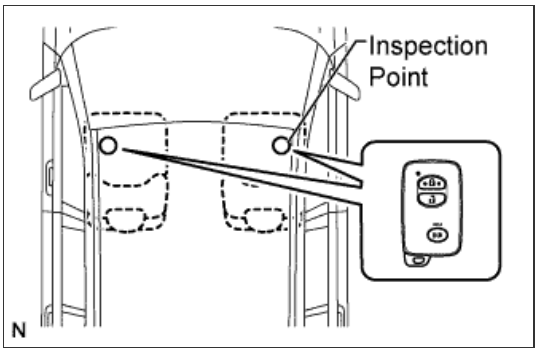
NG → **Go to step 4**

OK

AFFECTED BY WAVE INTERFERENCE

4.KEY DIAGNOSTIC MODE

a. Diagnostic mode inspection (indoor electrical key antenna (for Front)).



i. Connect the intelligent tester to the DLC3.

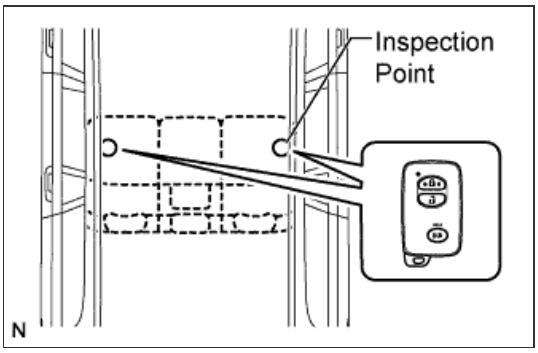
ii. Turn the engine switch on (IG).

iii. Turn the intelligent tester on.

iv. Enter the following menus: Body / Entry & Start / Key Communication Check / Overhead + Front Room.

v. When the electrical key transmitter is placed on the driver seat or front passenger seat cushion, check that the wireless door lock buzzer sounds.

b. Diagnostic mode inspection (indoor electrical key antenna (for Rear 1)).



i. Connect the intelligent tester to the DLC3.

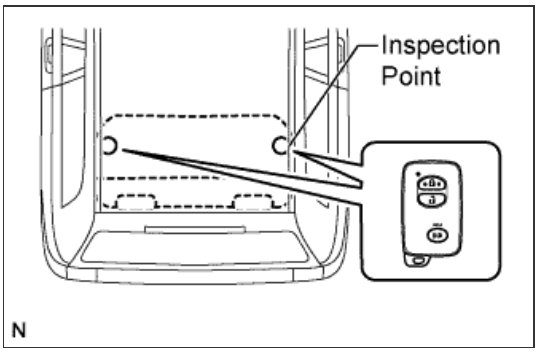
ii. Turn the engine switch on (IG).

iii. Turn the intelligent tester on.

iv. Enter the following menus: Body / Entry & Start / Key Communication Check / Overhead + Rear Room.

v. When the electrical key transmitter is placed on the rear seat cushion, check that the wireless door lock buzzer sounds.

c. Diagnostic mode inspection (indoor electrical key antenna (for Rear 2)).



i. Connect the intelligent tester to the DLC3.

ii. Turn the engine switch on (IG).

iii. Turn the intelligent tester on.

iv. Enter the following menus: Body / Entry & Start / Key Communication Check / Overhead + Back Door (inside) Room.

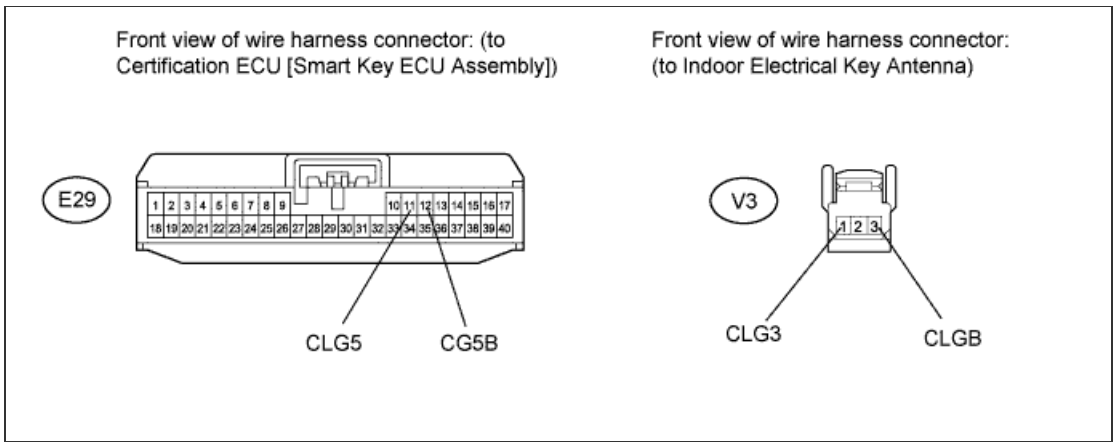
v. When the electrical key transmitter is placed on the rear seat cushion, check that the wireless door lock buzzer sounds.

HINT:

- **If the buzzer sounds, it can be determined that the vehicle interior transmitters are operating normally.**
- **It is possible to check which indoor electrical key antenna (front, rear 1 or rear 2) is operating by sounding the buzzer.**
- **If the buzzer does not sound for any indoor electrical key antennas, the certification ECU (smart key ECU assembly) circuit may have a malfunction.**

Result

Result	Proceed to
Front operation check fails	A
Rear 1 operation check fails	B
Rear 2 operation check fails	C
Front, rear 1 and rear 2 operation checks are normal or fail	D



B → Go to step 7

C → Go to step 9

D → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

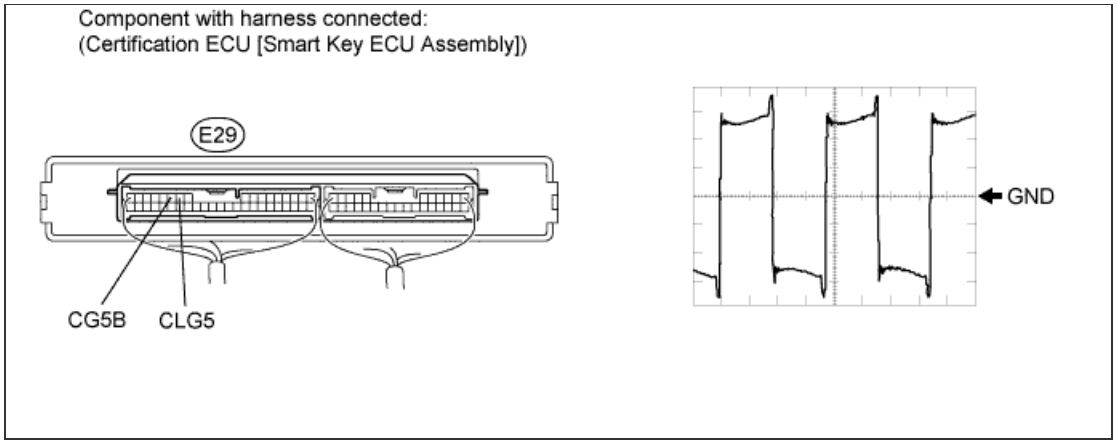
A

5.CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU [SMART KEY ECU ASSEMBLY] - INDOOR ELECTRICAL KEY ANTENNA)

a. Disconnect the E29 ECU connector.

b. Disconnect the V3 antenna connector.

c. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
V3-1 (CLG3) - E29-11 (CLG5)	Always	Below 1 Ω
V3-3 (CLGB) - E29-12 (CG5B)	Always	Below 1 Ω
V3-1 (CLG3) - Body ground	Always	10 kΩ or higher
V3-3 (CLGB) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

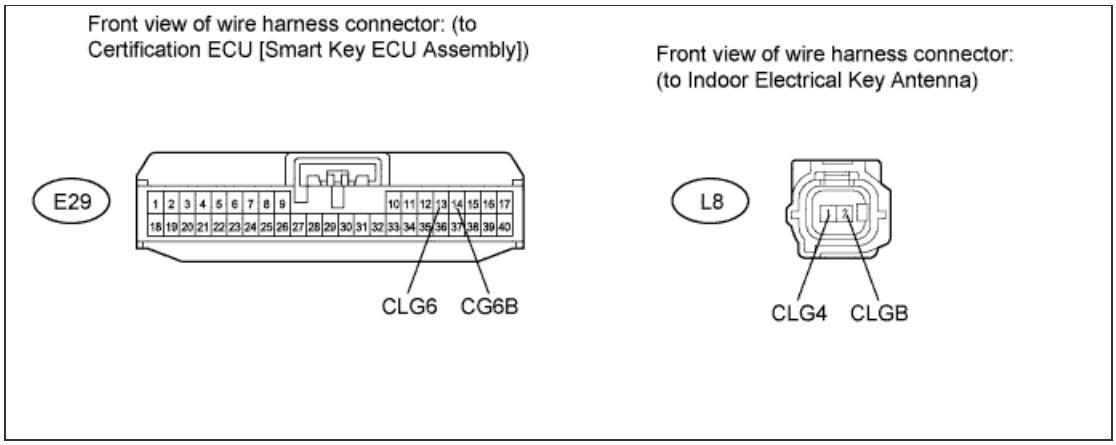
OK

6.CHECK INDOOR ELECTRICAL KEY ANTENNA (for Front Floor)

a. Measure the voltage according to the value(s) in the table below.

OK:

Tester		Switch	Specified



Connection	Tool Setting	Condition	Condition
E29-11 (CLG5) - E29-12 (CG5B)	2 V/DIV, 2 µsec./DIV. (Reference)	Engine switch on (IG)	Pulse generation

NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK

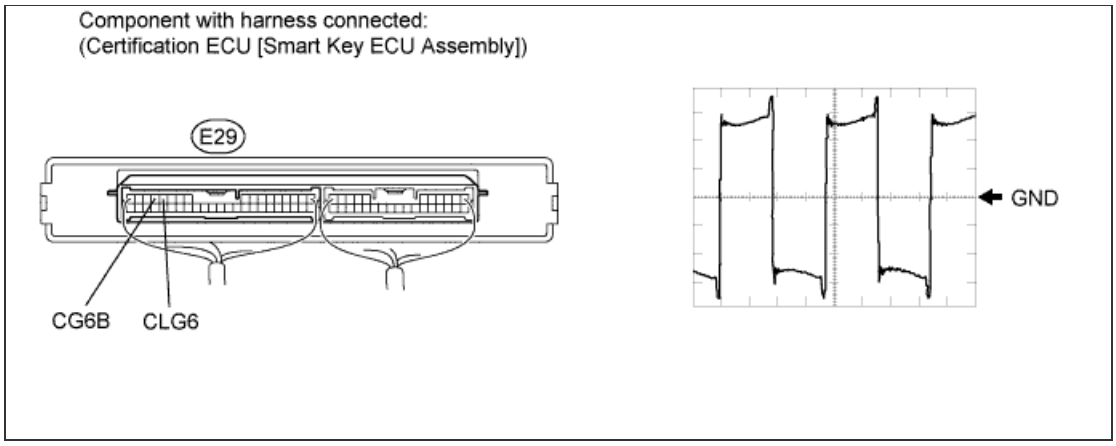
REPLACE INDOOR ELECTRICAL KEY ANTENNA (for Front Floor) (Click here)

7.CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU [SMART KEY ECU ASSEMBLY] - INDOOR ELECTRICAL KEY ANTENNA)

a. Disconnect the E29 ECU connector.

b. Disconnect the L8 antenna connector.

c. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
L8-1 (CLG4) - E29-13 (CLG6)	Always	Below 1 Ω
L8-2 (CLGB) - E29-14 (CG6B)	Always	Below 1 Ω
L8-1 (CLG4) - Body ground	Always	10 kΩ or higher
L8-2 (CLGB) - Body ground	Always	10 kΩ or higher

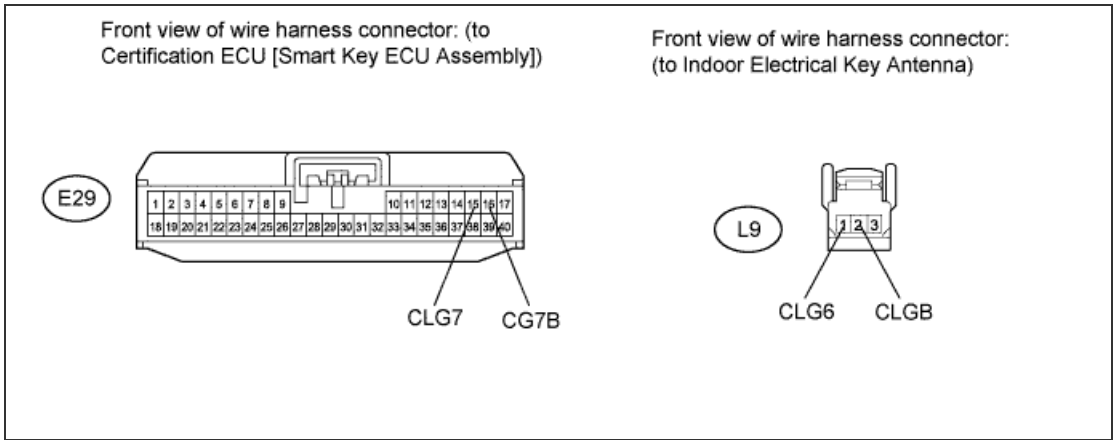
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

8.CHECK INDOOR ELECTRICAL KEY ANTENNA (for Rear 1 Floor)

a. Measure the voltage according to the value(s) in the table below.

OK:



Tester Connection	Tool Setting	Switch Condition	Specified Condition
E29-13 (CLG6) - E29-14 (CG6B)	2 V/DIV., 2 µsec./DIV. (Reference)	Engine switch on (IG)	Pulse generation

NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK

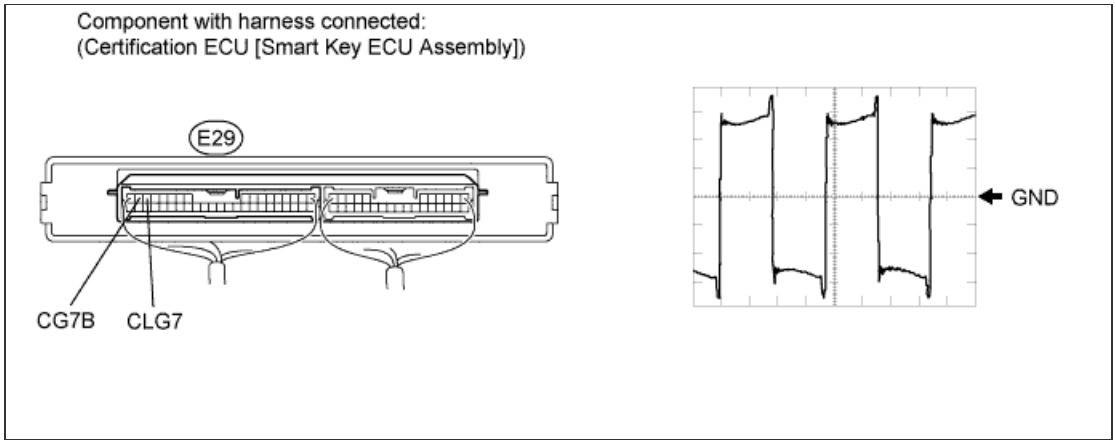
REPLACE INDOOR ELECTRICAL KEY ANTENNA (for Rear 1 Floor) (Click here)

9.CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU [SMART KEY ECU ASSEMBLY] - INDOOR ELECTRICAL KEY ANTENNA)

a. Disconnect the E29 ECU connector.

b. Disconnect the L9 antenna connector.

c. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
L9-1 (CLG6) - E29-15 (CLG)	Always	Below 1 Ω
L9-2 (CLGB) - E29-16 (CG7B)	Always	Below 1 Ω
L9-1 (CLG6) - Body ground	Always	10 kΩ or higher
L9-2 (CLGB) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

10.CHECK INDOOR ELECTRICAL KEY ANTENNA (for Rear 2 Floor)

a. Measure the voltage according to the value(s) in the table below.

OK:

Tester Connection	Tool Setting	Switch Condition	Specified Condition
E29-15 (CLG7) - E29-16 (CG7B)	2 V/DIV., 2 µsec./DIV. (Reference)	Engine switch on (IG)	Pulse generation

NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK

REPLACE INDOOR ELECTRICAL KEY ANTENNA (for Rear 2 Floor) (Click here)

for Preparation Click here

DESCRIPTION

The entry and start system uses the combination meter buzzer to perform various vehicle interior warnings. When the conditions of each warning are met, the certification ECU (smart key ECU assembly) sends a buzzer signal to the meter ECU, and the combination meter buzzer sounds.

INSPECTION PROCEDURE

1.CHECK COMBINATION METER ASSEMBLY (OPERATION)

a. Turn the engine switch on (IG). Place luggage on the passenger seat to cause the passenger seat belt warning light to blink.

b. When driving the vehicle at 15 km/h (9.3 mph) or more, check that the seat belt warning buzzer sounds to inform that the passenger seat belt is not fastened.

HINT:

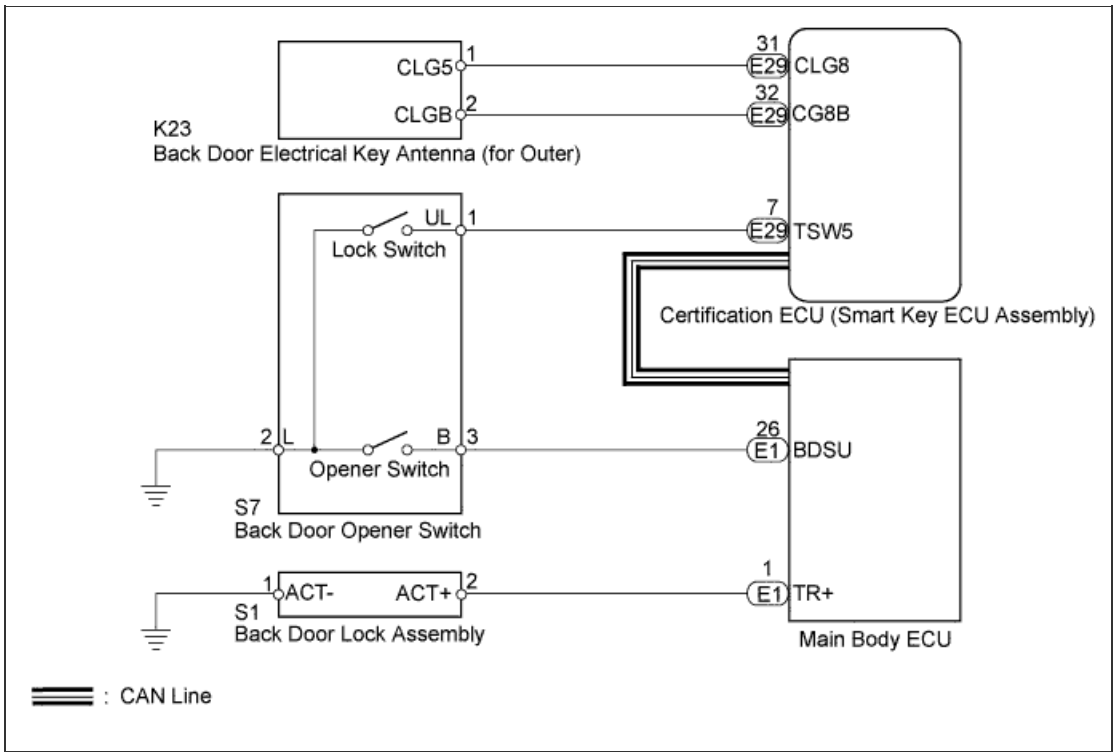
The entry and start system sounds the buzzer built into the combination meter for indoor warnings. This buzzer is also used for the seat belt warning system. Therefore, check the operation of the combination meter buzzer by checking if the buzzer sounds to inform that the seat belt is not fastened.

OK:

Combination meter buzzer sounds.

NG → GO TO METER / GAUGE SYSTEM (Click here)

OK ↓



REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

for Preparation Click here

DESCRIPTION

When the back door opener switch is turned on, the certification ECU (smart key ECU assembly) uses the back door electrical key antenna (for outer) and antenna to output a request signal to the outside of the vehicle for a distance of approximately 1.0 m (3.28 ft.) from the back door. A key near the back door detects this request and transmits its ID code. The door control receiver receives the ID code and sends this ID code to the certification ECU (smart key ECU assembly). The certification ECU (smart key ECU assembly) checks if the ID code is valid. When the ID code is valid, the certification ECU (smart key ECU assembly) sends a back door open signal to the main body ECU using the CAN communication line and stops outputting request signals. The main body ECU then unlocks the back door.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.CHECK POWER DOOR LOCK OPERATION

a. When the door control switch of the master switch assembly is operated, check that the locked doors unlock.

OK:
Door locks operate normally.

NG → GO TO POWER DOOR LOCK CONTROL SYSTEM (Click here)

OK

2.READ VALUE USING INTELLIGENT TESTER (DOOR LOCK POSITION SWITCH)

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Main Body / Data List.

e. Read the Data List according to the display on the intelligent tester.

Main Body

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note

Back Lock Pos switch	Back door lock position switch signal / ON or OFF	ON: Back door is unlocked OFF: Back door is locked	-

OK:
On the intelligent tester screen, the display changes between ON and OFF as shown in the chart above.

NG → GO TO POWER DOOR LOCK CONTROL SYSTEM (Proceed to Only Back Door LOCK/UNLOCK Functions do not Operate) (Click here)

OK

3.READ VALUE USING INTELLIGENT TESTER (BACK DOOR HANDLE SW)

a. Using the intelligent tester, read the Data List.

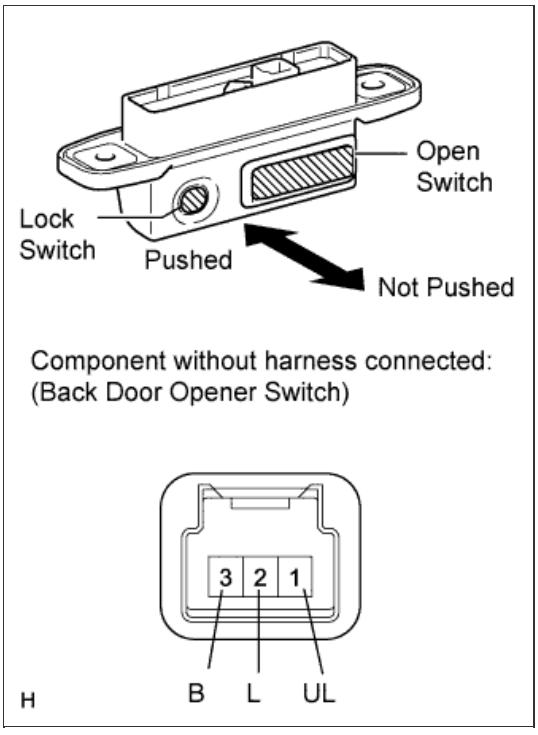
Main Body

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Back Door Handle SW	Back door opener switch / ON or OFF	ON: Back door opener switch is pushed OFF: Back door opener switch is not pushed	-

OK:
"ON" (switch is pushed) or "OFF" (switch is not pushed) appears on the screen.

NG → Go to step 4

OK



REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

4.CHECK BACK DOOR OPENER SWITCH

a. Measure the resistance according to the value(s) in the table below.

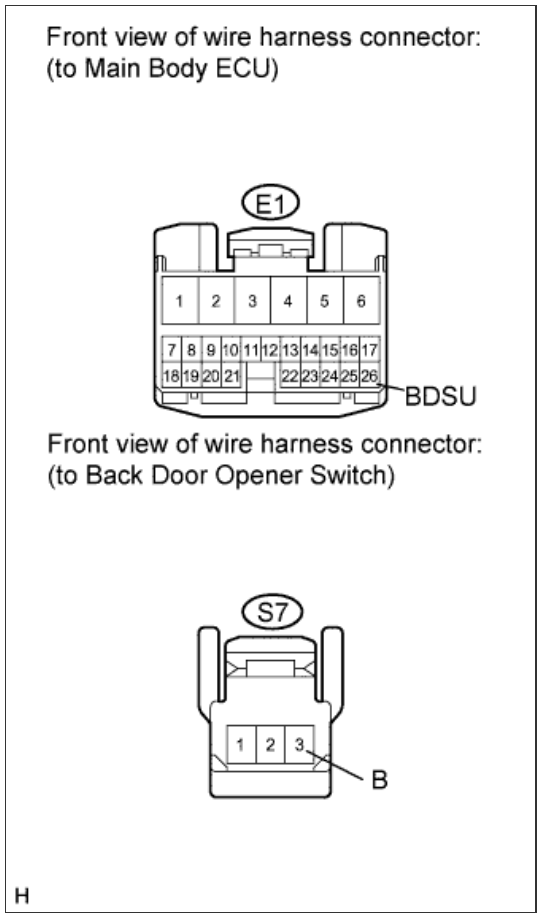
Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
1 (UL) - 2 (L) 3 (B) - 2 (L)	Not pushed	10 kΩ or higher
1 (UL) - 2 (L)	Lock switch pushed	Below 1 Ω
3 (B) - 2 (L)	Open switch pushed	Below 1 Ω

NG → REPLACE BACK DOOR OPENER SWITCH (Click here)

OK

5.CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - BACK DOOR OPENER SWITCH)



a. Disconnect the E1 ECU connector.

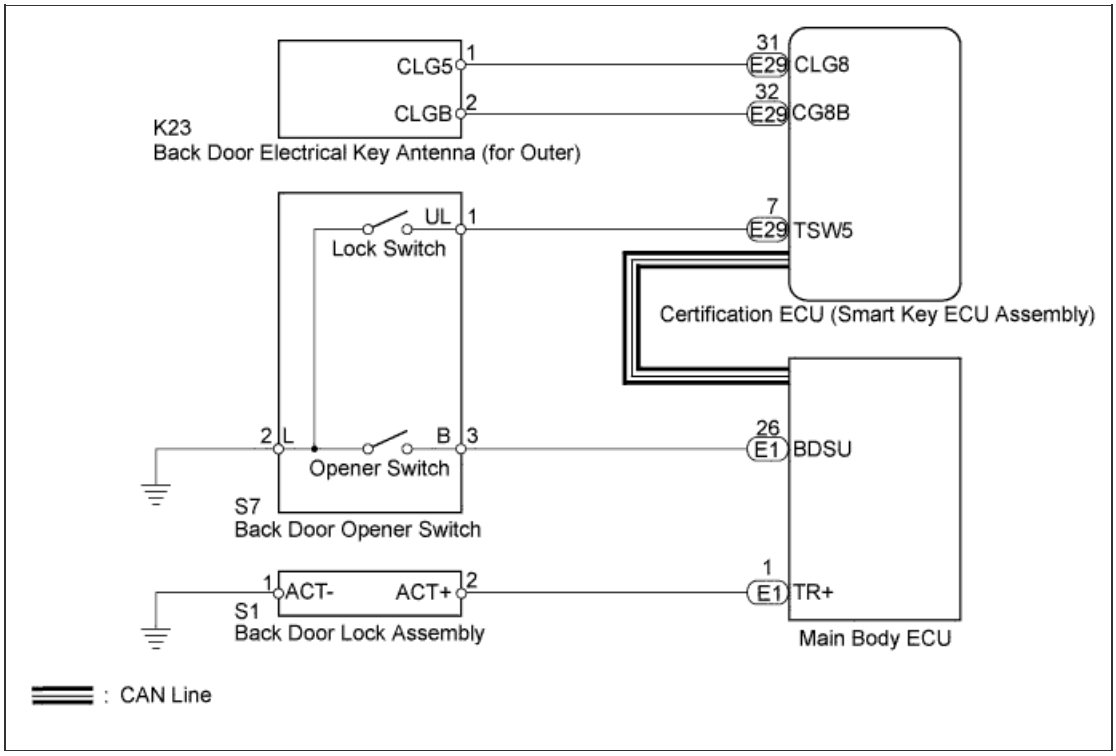
b. Disconnect the S7 switch connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E1-26 (BDSU) - S7-3 (B)	Always	Below 1 Ω
E1-26 (BDSU) or S7-3 (B) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR



OK → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

for Preparation Click here

DESCRIPTION

When the back door entry lock and unlock functions do not operate, one of the following may be malfunctioning: 1) power door lock control system, or 2) back door electrical key antenna (for outer), or 3) main body ECU (cowl side junction block LH), or 4) certification ECU (smart key ECU assembly).

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Before performing the inspection, check that there are no problems related to "CAN COMMUNICATION SYSTEM" and "LIN COMMUNICATION SYSTEM".

1.CHECK POWER DOOR LOCK OPERATION

a. When the door control switch of the master switch assembly is operated, check that the locked doors unlock.

OK:
Door locks operate normally.

NG → GO TO POWER DOOR LOCK CONTROL SYSTEM (Click here)

OK

2.READ VALUE USING INTELLIGENT TESTER (DOOR LOCK POSITION SWITCH)

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Main Body / Data List.

e. Read the Data List according to the display on the intelligent tester.

Main Body

ster Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Back Lock Pos switch	Back door lock position switch signal / ON or OFF	ON: Back door is unlocked OFF: Back door is locked	-

OK:

On the intelligent tester screen, the display changes between ON and OFF as shown in the chart above.

NG → GO TO POWER DOOR LOCK CONTROL SYSTEM (Proceed to Only Back Door LOCK/UNLOCK Functions do not Operate) (Click here)

OK ↓

3.READ VALUE USING INTELLIGENT TESTER (BACK DOOR LOCK SWITCH, BACK DOOR OPENER SWITCH)

a. Using the intelligent tester, read the Data List.

Main Body

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Back Door Handle SW	Back door opener switch / ON or OFF	ON: Back door opener switch is pushed OFF: Back door opener switch is not pushed	-

Entry & Start

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Tr/B-Door Lock SW	Back door lock switch / ON or OFF	ON: Back door lock switch is pushed OFF: Back door lock switch is not pushed	-

OK:

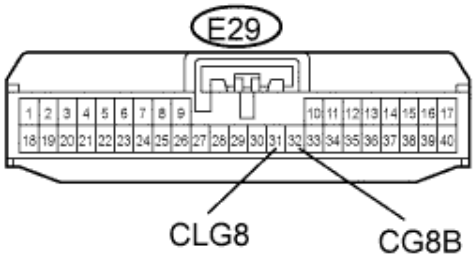
"ON" (switch is pushed) or "OFF" (switch is not pushed) appears on the screen.

NG → Go to step 7

OK ↓

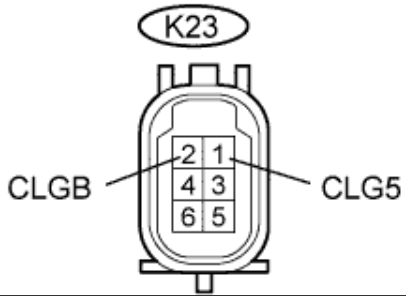
4.CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU [SMART KEY ECU ASSEMBLY] - BACK DOOR ELECTRICAL KEY ANTENNA [for Outer])

a. Disconnect the E29 ECU connector.



b. Disconnect the K23 antenna connector.

c. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
E29-31 (CLG8) - K23-1 (CLG5)	Always	Below 1 Ω
E29-32 (CG8B) - K23-2 (CLGB)	Always	Below 1 Ω
E29-31 (CLG8) - Body ground	Always	10 kΩ or higher
E29-32 (CG8B) - Body ground	Always	10 kΩ or higher

Front view of wire harness connector:
(to Certification ECU [Smart Key ECU Assembly])

Front view of wire harness connector:
(to Electrical Key Antenna [for Outside Luggage Compartment])

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

5.REPLACE BACK DOOR ELECTRICAL KEY ANTENNA (for Outer)

a. eplace the back door electrical key antenna (Click here).

NEXT

6.CHECK BACK DOOR ELECTRICAL KEY ANTENNA [for Outer] (OPERATION)

a. Check that the entry functions operate normally.

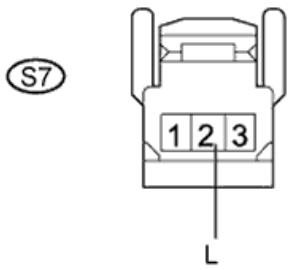
OK:
Entry functions operate normally.

NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK

END (BACK DOOR ELECTRICAL KEY ANTENNA IS DEFECTIVE)

7.CHECK HARNESS AND CONNECTOR (BACK DOOR OPENER SWITCH - BODY GROUND)



a. Disconnect the S7 switch connector.

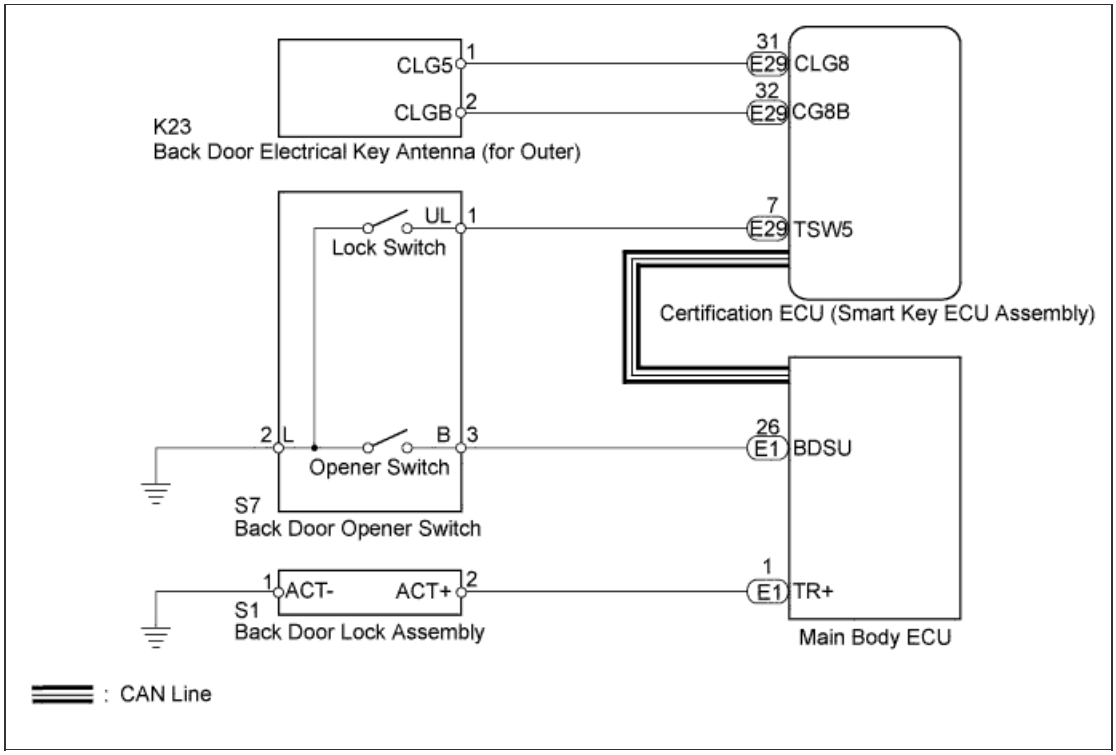
b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
S7-2 (L) - Body ground	Always	Below 1 Ω

Front view of wire harness connector:
(to Back Door Opener Switch)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR



OK → REPLACE BACK DOOR OPENER SWITCH (Click here)

for Preparation Click here

DESCRIPTION

If the back door entry lock function does not operate but the back door open function operates, the communication line between the vehicle and electrical key transmitter is normal. As a faulty part, the entry lock switch circuit (certification ECU (smart key ECU assembly) → back door opener switch) can be considered.

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

Before performing the inspection, check that there are no problems related to "CAN COMMUNICATION SYSTEM" and "LIN COMMUNICATION SYSTEM".

1.CHECK POWER DOOR LOCK OPERATION

a. When the door control switch of the master switch assembly is operated, check that the locked doors unlock.

OK:
Door locks operate normally.

NG → GO TO POWER DOOR LOCK CONTROL SYSTEM (Click here)

OK

2.READ VALUE USING INTELLIGENT TESTER (DOOR LOCK POSITION SWITCH)

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Main Body / Data List.

e. Read the Data List according to the display on the intelligent tester.

Main Body

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Back Lock Pos switch	Back door lock position switch signal / ON or OFF	ON: Back door is unlocked OFF: Back door is locked	-

OK:

On the intelligent tester screen, the display changes between ON and OFF as shown in the chart above.

NG → GO TO POWER DOOR LOCK CONTROL SYSTEM (Proceed to Only Back Door LOCK/UNLOCK Functions do not Operate) (Click here)

OK

3.READ VALUE USING INTELLIGENT TESTER (BACK DOOR LOCK SWITCH)

a. Using the intelligent tester, read the Data List.

Entry & Start

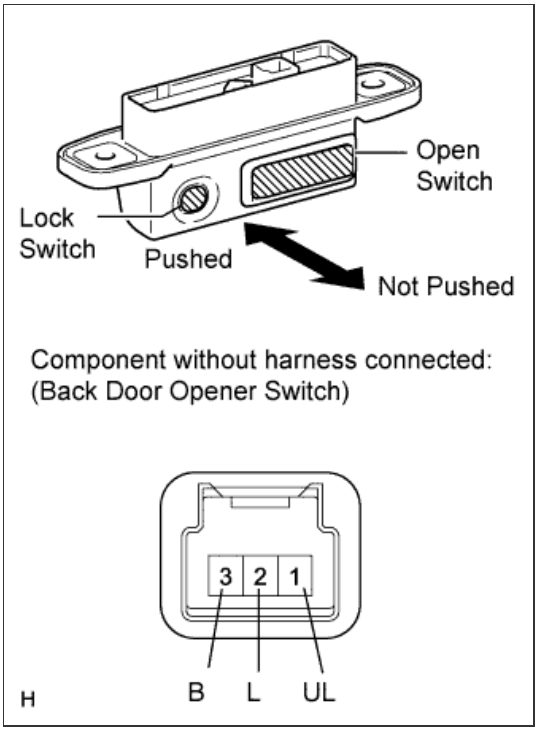
Tester Display	Measurement Item/Display	Normal Condition	Diagnostic Note
Tr/B-Door Lock SW	Back door lock switch / ON or OFF	ON: Back door lock switch is pushed OFF: Back door lock switch is not pushed	-

OK:

"ON" (switch is pushed) or "OFF" (switch is not pushed) appears on the screen.

NG → Go to step 4

OK



REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

4.CHECK BACK DOOR OPENER SWITCH

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

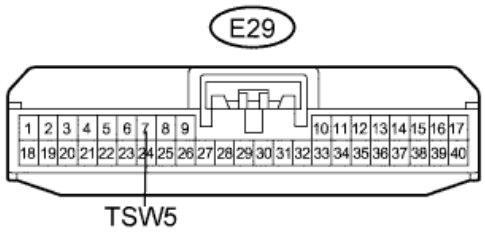
Tester Connection	Switch Condition	Specified Condition
1 (UL) - 2 (L)	Lock switch pushed	Below 1 Ω
1 (UL) - 2 (L)	Lock switch not pushed	10 kΩ or higher

NG → REPLACE BACK DOOR OPENER SWITCH (Click here)

OK

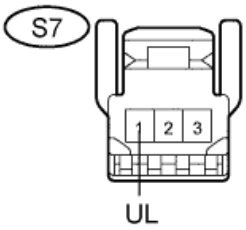
5.CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU [SMART KEY ECU ASSEMBLY] - BACK DOOR OPENER SWITCH)

a. Disconnect the E29 ECU connector.



b. Disconnect the S7 switch connector.

c. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
E29-7 (TSW5) - S7-1 (UL)	Always	Below 1 Ω
E29-7 (TSW5) - Body ground	Always	10 kΩ or higher

Front view of wire harness connector:
(to Certification ECU [Smart Key ECU Assembly])

Front view of wire harness connector:
(to Back Door Opener Switch)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

for Preparation Click here

1.PRECAUTIONS FOR PUSH-BUTTON START FUNCTION:

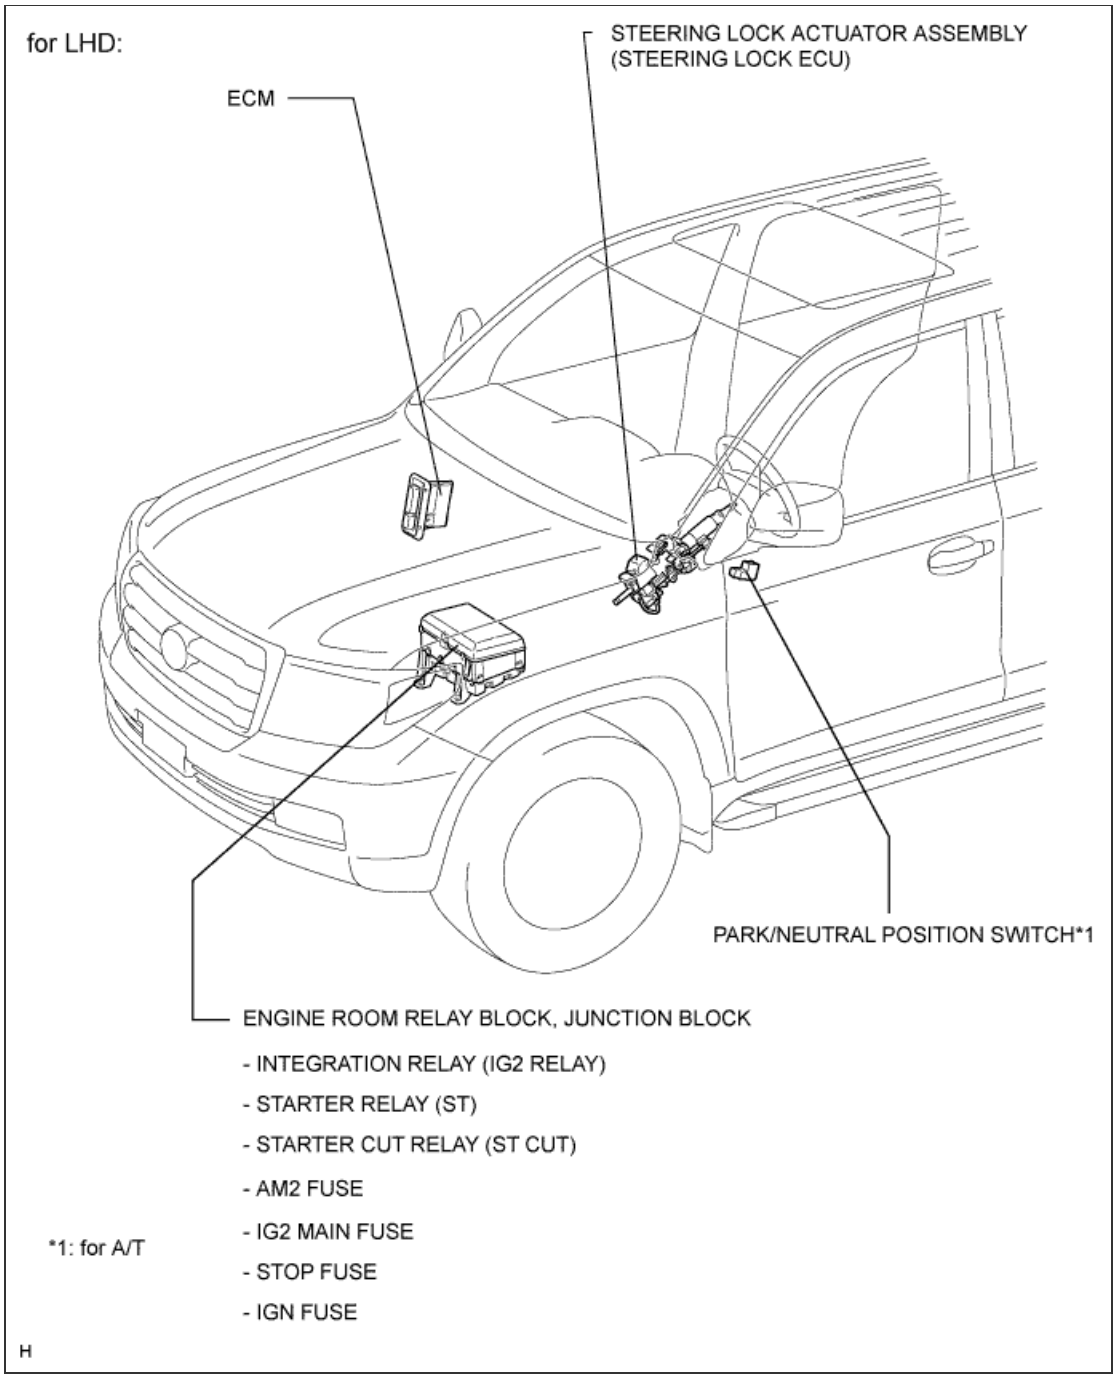
a. Before starting the engine, firmly depress the brake pedal (for A/T) or clutch pedal (for M/T) until the indicator in the engine switch turns green.

b. The power source mode (off, on (ACC), on (IG)) is always retained in memory by the vehicle. If the battery is disconnected, the power source mode that was present before the disconnection will be restored after the battery is reconnected. Be sure to turn the engine switch off before disconnecting the cable from the negative battery terminal. Be careful if the power source mode of a vehicle with a discharged battery is not known.

c. After the battery is reconnected, be sure to wait 10 seconds or more before attempting to start the engine. The engine may not start immediately after the battery is reconnected.

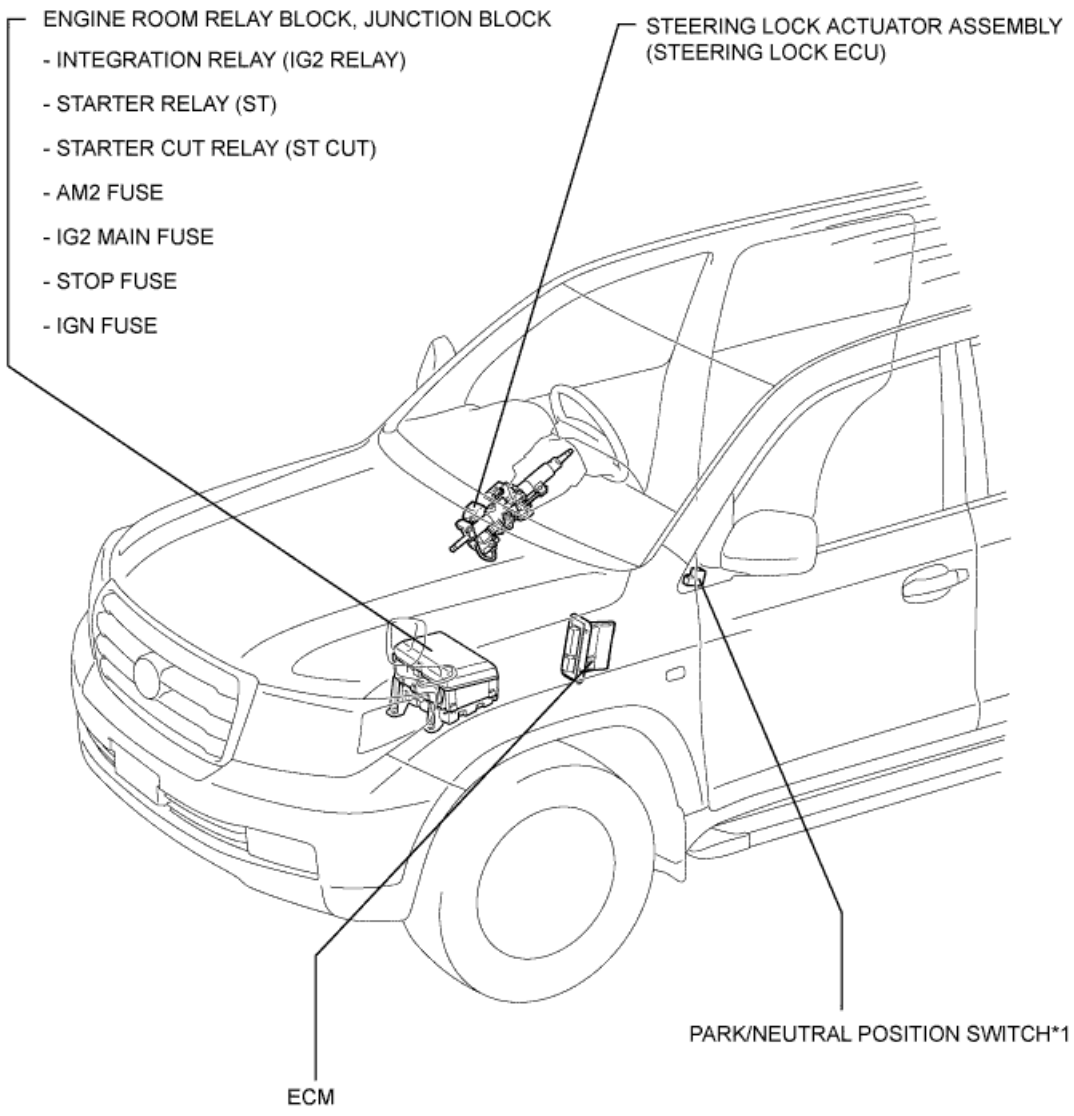
d. If the TOYOTA mark of the key is touched to the engine switch to start the engine when the key battery is depleted or affected by wave noise, etc., the following warnings will sound:

i. for A/T:
Driver door open → closed



- An exit warning will sound if the shift lever is in a position other than P and the power source is in a mode other than off.
- An exit warning will sound if the shift lever is in P and the power source is in a mode other than off.

ii. Doors other than the driver door open → closed



- A warning will sound to indicate that the key has been taken out of the vehicle.

These warnings will sound because it is not possible for the vehicle to determine if the key is present in the vehicle due to the depleted key battery. These warnings do not indicate system malfunctions.

PUSH-BUTTON START DESCRIPTION

a. The push-button start uses a push-type engine switch, which the driver can operate by merely carrying the key. This system consists primarily of the main body ECU, engine switch, ID code box (immobiliser code ECU), steering lock ECU, key, ACC relay, IG1 No. 3 relay, integration relay (IG2 relay) and certification ECU (smart key ECU assembly). The main body ECU controls the system. This function operates in cooperation with the entry and start system. The table below shows the transition of the engine switch, which depends on whether the brake pedal (for A/T) or clutch pedal (for M/T) is depressed or released.

PUSH-BUTTON START FUNCTION OPERATION

a. for A/T:
This system has different power source mode patterns depending on the brake pedal condition and shift lever position.

Brake Pedal	Shift Lever	Power Source Mode Pattern
Depressed	P or N position	When the engine switch is pushed once. • off → engine start • on (ACC) → engine start • on (IG) → engine start
Not depressed	P position	Each time the engine switch is pushed. • off → on (ACC) → on (IG) → off
	Except P position	Each time the engine switch is pushed. • off → on (ACC) → on (IG) → on (ACC)
-	P position	When the engine switch is pushed in the on (IG) condition (engine running). • on (IG) → off
-	Except P position	When the engine switch is pushed in the on (IG) condition (engine running). • on (IG) → on (ACC)

When the battery of the key is low, the push-button start function can be operated by touching the key to the engine switch.

b. for M/T:
The start function has different power source patterns depending onthe clutch pedal condition.

Clutch Pedal	Power Source Mode Pattern
Depressed	When the engine switch is pushed once. • off → engine start • on (ACC) → engine start • on (IG) → engine start
Not depressed	Each time the engine switch is pushed. • off → on (ACC) → on (IG) → off
-	When the engine switch is pushed in the on (IG) condition (engine running). • on (IG) → off

When the battery of the key is low, the push-button start function can be operated by touching the key to the engine switch.

FUNCTION OF COMPONENT

Component	Function
Engine Switch (Transponder Key Amplifier)	• Transmits engine switch signal to main body ECU. • Informs driver of power source mode or system abnormality with indicator light illumination. • Receives ID code and transmits it to certification ECU (smart key ECU assembly) when key battery is low or affected by wave noise, etc.
Key	Receives signals from oscillators and returns ID code to entry door control receiver.
Indoor Key Oscillator	Receives request signal from certification ECU (smart key ECU assembly) and forms detection area in vehicle interior.
Door Control Receiver	Receives ID code from key and transmits it to certification ECU (smart key ECU assembly).
	• Changes power source mode in 4 stages (off, on (ACC), on (IG), start) in accordance with state of park/neutral position switch.

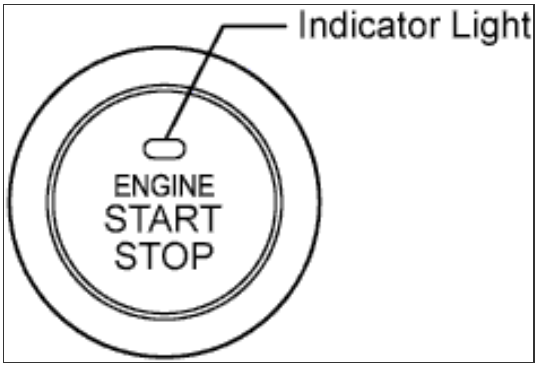
Main Body ECU	• Controls push-button start function in accordance with signals received from switches and each ECU.
Certification ECU (Smart Key ECU Assembly)	Certifies ID code received from entry door control receiver and transmits certification results to ID code box (immobiliser code ECU) and steering lock ECU.
Shift Lock Control ECU*1	Outputs state of shift position to main body ECU.
Stop Light Switch	Outputs state of brake pedal to main body ECU.
Clutch Start Switch*2	Outputs state of clutch pedal to main body ECU.
ID Code Box (Immobiliser Code ECU)	Receives steering unlock or engine immobiliser unset signals from certification ECU (smart key ECU assembly), certifies them, and transmits each unset signal to steering lock ECU or ECM.
ECM	• Receives engine start request signal from main body ECU, turns on ST relay, and starts engine. • Receives signal from ID code box (immobiliser code ECU) and performs engine ignition and fuel injection.

HINT:

*1: for A/T

*2: for M/T

SYSTEM FUNCTION



The electric controls of the push-button start function are described below:

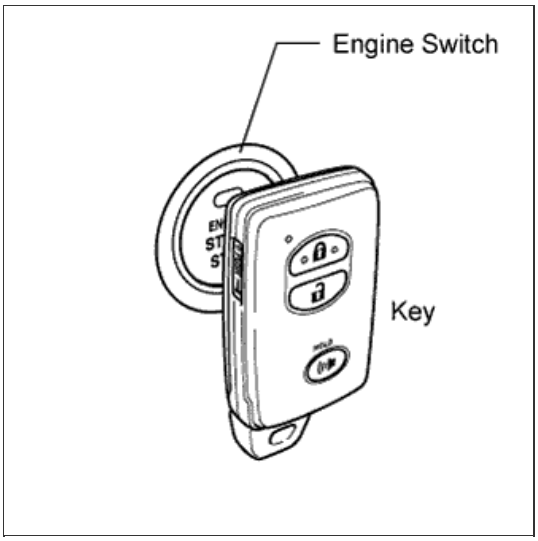
Control	Outline
Engine Switch Control	• When the driver operates the engine switch with a key in driver possession, the certification ECU (smart key ECU assembly) starts the indoor key oscillator, which transmits a request signal to the key. Upon receiving this signal, the key transmits an ID code signal to the door control receiver. • The ID code box (immobiliser code ECU) verifies the check results received from the certification ECU (smart key ECU assembly) via the LIN line and sends them to the main body ECU. Based on these results, the main body ECU authorizes operation of the engine switch.
Diagnosis	When the main body ECU detects a malfunction, the main body ECU diagnoses and memorizes which section failed.

CONSTRUCTION AND OPERATION

a. Engine switch:
The engine switch consists of a momentary type switch, 3 color (amber, green, greenish white) LEDs, and the transponder key amplifier.

- The greenish white LED is for illumination.
- The amber and green LEDs are for the indicator light. The driver can check the present power source mode and whether the engine can start or not in accordance with the illumination state of the indicator light.
- When the main body ECU detects an abnormality in the entry and start system, it makes the amber indicator light flash. If the engine is stopped in this state, it might not be possible to restart it.

b. Indicator Light Condition



Engine Switch Indicator Light Condition

Power Source Mode/Condition	Indicator Light Condition		
	Brake pedal released (for A/T) Clutch pedal released (for M/T)	Brake pedal depressed, shift lever in P or N (for A/T)	Clutch pedal depressed (for M/T)
Off	Off	Illuminates (Green)	Illuminates (Green)
On (ACC, IG)	Illuminates (Amber)	Illuminates (Green)	Illuminates (Green)
Engine running	Off	Off	Off
Steering lock not unlocked	Flashes (Green) for 30 sec.	Flashes (Green) for 30 sec.	Flashes (Green) for 30 sec.
System malfunction	Flashes (Amber) for 15 sec.	Flashes (Amber) for 15 sec.	Flashes (Amber) for 15 sec.

Clutch start switch malfunction (for M/T)	Flashes (Green) for 15 sec.	Flashes (Green) for 15 sec.	Flashes (Green) for 15 sec.

c. Main body ECU:
The main body ECU consists of the IG1 No. 3 relay and ACC relay actuation circuits and CPU.

SYSTEM NOT OPERATING NORMALLY (DUE TO KEY BATTERY DEPLETION, ELECTRICAL NOISE, ETC.)

a. To operate the push-button start function when the key battery is low or affected by wave noise, etc., touch the TOYOTA mark of the key to the engine switch while depressing the brake pedal with the shift lever in P (for A/T), or depressing the clutch pedal (for M/T).

b. The main body ECU transmits a key verification request signal from the stop light switch to the certification ECU (smart key ECU assembly).

c. The certification ECU (smart key ECU assembly) does not receive an ID code response from the door control receiver, so it activates the transponder key amplifier built into the engine switch.

d. The transponder key amplifier outputs an engine immobiliser radio wave to the key.

e. The key receives the radio wave, and returns a radio wave response to the transponder key amplifier.

f. The transponder key amplifier combines the key ID codes with the radio wave response, and transmits it to the certification ECU (smart key ECU assembly).

g. The certification ECU (smart key ECU assembly) judges and verifies the ID code, and transmits a key verification OK signal to the main body ECU. The buzzer in the combination meter sounds at the same time.

h. After the buzzer sounds, with the shift lever in P (for A/T), if the engine switch is pressed within 10 seconds with the brake pedal (for A/T) or clutch pedal (for M/T) not depressed, the power source mode changes to on (ACC) or on (IG), as in the normal condition.

DIAGNOSIS

The main body ECU can detect malfunctions in the push-button start function when the power source mode is on (IG).
When the ECU detects a malfunction, the amber indicator light of the engine switch flashes to warn the driver. At the same time, the ECU stores the 5-digit DTC (Diagnostic Trouble Code) in memory.

- The indicator light warning continues for 15 seconds even after the power source mode is changed to off.
- The DTC can be read by connecting the intelligent tester to the DLC3.
- The push-button start function cannot be operated if a malfunction occurs.

for Preparation Click here

HINT:

- **Use these procedures to troubleshoot the push-button start function.**
- ***: Use the intelligent tester.**

1.VEHICLE BROUGHT TO WORKSHOP

NEXT

2.INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

3.INSPECT COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*

a. Using the intelligent tester, check if the CAN communication system is functioning normally.

- For LHD vehicles, use the following procedures (Click here).
- For RHD vehicles, use the following procedures (Click here).

Result

Result	Proceed to
DTC is not output	A
DTC is output (for LHD)	B
DTC is output (for RHD)	C

B. → GO TO CAN COMMUNICATION SYSTEM (DIAGNOSTIC TROUBLE CODE CHART) (**Click here**)

C. → GO TO CAN COMMUNICATION SYSTEM (DIAGNOSTIC TROUBLE CODE CHART) (**Click here**)

A

4.CHECK FOR DTC*

a. Check for DTCs and note any stored DTCs (Click here).

b. Clear the DTCs.

c. Check whether the same DTC(s) relevant to the SFI system, EDU system or entry and start system recurs by reproducing the symptoms indicated by the noted DTC(s) in the first step above.

Result

Result	Proceed to
DTC output does not reoccur	A
SFI system DTC output reoccurs (for 1GR-FE)	B

CUSTOMIZING FUNCTION WITH INTELLIGENT TESTER (REFERENCE)

NOTICE:

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Be sure to make a note of the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Utility / Customize.

e. Select the setting by referring to the table below.

Entry & Start

Display	Default	Content	Setting
Ignition Available Area	All	Function to choose the available area for the key to start the engine and cancel the steering lock.	Front/All

for Preparation Click here

HINT:

Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

CHECK MAIN BODY ECU (COWL SIDE JUNCTION BLOCK LH)

a. Disconnect the E1, E2 and 2D main body ECU connectors.

b. Measure the voltage and resistance according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E1-6 (AM1) - Body ground	W - Body ground	+B power supply	Always	11 to 14 V
E2-1 (AM2) - Body ground	W - Body ground	+B power supply	Always	11 to 14 V
E1-17 (SSW1) - Body ground	B - Body ground	Engine switch 1 input	Engine switch pushed	Below 1 Ω
E1-17 (SSW1) - Body ground	B - Body ground	Engine switch 1 input	Engine switch not pushed	10 kΩ or higher

E1-16 (SSW2) - Body ground	B - Body ground	Engine switch 2 input	Engine switch pushed	Below 1 Ω
E1-16 (SSW2) - Body ground	B - Body ground	Engine switch 2 input	Engine switch not pushed	10 kΩ or higher
2D-62 (GND2) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
2D-20 (LIN) - Body ground	GR - Body ground	LIN line	Always	10 kΩ or higher

If the result is not as specified, there may be a malfunction on the wire harness side.

c. Reconnect the E1, E2 and 2D main body ECU connectors.

d. Measure the voltage according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E1-22 (ACCD) - 2D-62 (GND2)	P - W-B	ACC relay drive signal	Engine switch on (ACC)	11 to 14 V
E1-22 (ACCD) - 2D-62 (GND2)	P - W-B	ACC relay drive signal	Engine switch off	Below 1 V
E1-3 (IG1D) - 2D-62 (GND2)	G - W-B	IG1 No. 3 relay drive signal	Engine switch on (IG)	11 to 14 V
E1-3 (IG1D) - 2D-62 (GND2)	G - W-B	IG1 No. 3 relay drive signal	Engine switch on (ACC)	Below 1 V
E2-11 (IG2D) - 2D-62 (GND2)	B - W-B	Integration relay (IG2 relay) drive signal	Engine switch on (IG)	11 to 14 V
E2-11 (IG2D) - 2D-62 (GND2)	B - W-B	Integration relay (IG2 relay) drive signal	Engine switch on (ACC)	Below 1 V
E1-19 (SLR+) - 2D-62 (GND2)	G - W-B	Steering lock power supply	Steering lock motor operating	Below 1 V
E1-19 (SLR+) - 2D-62 (GND2)	G - W-B	Steering lock power supply	Steering lock motor not operating	11 to 14 V
E1-8 (STR) - 2D-62 (GND2)	L - W-B	Park/neutral position switch signal*1 Clutch pedal switch signal*2	Engine switch on (IG), shift lever not in P or N → P or N*1 Engine switch on (IG), Clutch pedal switch released → Depressed*2	Below 2 V → Pulse generation*3
E1-18 (SLP) - 2D-62 (GND2)	SB - W-B	Steering lock actuator position signal	Steering lock locked	11 to 14 V
E1-18 (SLP) - 2D-62 (GND2)	SB - W-B	Steering lock actuator position signal	Steering lock released	Below 1 V
E3-9 (SPD) - 2D-62 (GND2)	V - W-B	Speed signal from combination meter	Engine switch on (IG), driving wheel rotating slowly	Pulse generation (see waveform 1)
E3-8 (TACH) - 2D-62 (GND2)	W - W-B	Tachometer signal	Engine running	Pulse generation (see waveform 2)
E4-2 (P) - 2D-62 (GND2)*1	L - W-B	Shift lock signal	Shift lever in P	Pulse generation (see waveform 3)
E4-2 (P) - 2D-62 (GND2)*1	L - W-B	Shift lock signal	Shift lever not in P	Below 1 V
E4-4 (STSW) - 2D-62 (GND2)	R - W-B	Starter activation request signal	Brake pedal depressed, engine switch depressed*1 Clutch pedal depressed, engine switch depressed*2	11 to 14 V
E1-15 (INDS) - 2D-62 (GND2)	W - W-B	Vehicle condition signal	Brake pedal released with shift lever in P or N, engine switch off, on (ACC), or on (IG)*1 Clutch pedal released, engine switch off, on (ACC), or on (IG)*2	9 to 14 V
E1-14 (INDW) - 2D-62 (GND2)	W - W-B	Vehicle condition signal	Brake pedal released with shift lever in P or N, engine switch off, on (ACC), or on (IG)*1 Clutch pedal released,	9 to 14 V

			engine switch off, on (ACC), or on (IG)*2	
E1-25 (SWIL) - 2D-62 (GND2)	R - W-B	Illumination signal	Light control switch tail or head	11 to 14 V
2B-22 (STP) - 2D-62 (GND2)	R - W-B	Stop light switch signal	Brake pedal depressed	11 to 14 V
2B-22 (STP) - 2D-62 (GND2)	R - W-B	Stop light switch signal	Brake pedal released	Below 1 V

HINT:

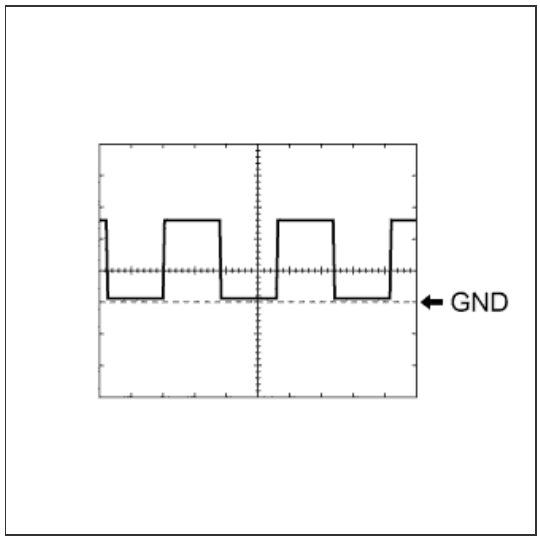
*1: for A/T

*2: for M/T

*3: Remove the ST CUT relay before measuring the voltage.

If the result is not as specified, the ECU may have a malfunction.

e. Using an oscilloscope, check the signal waveform of the ECU.

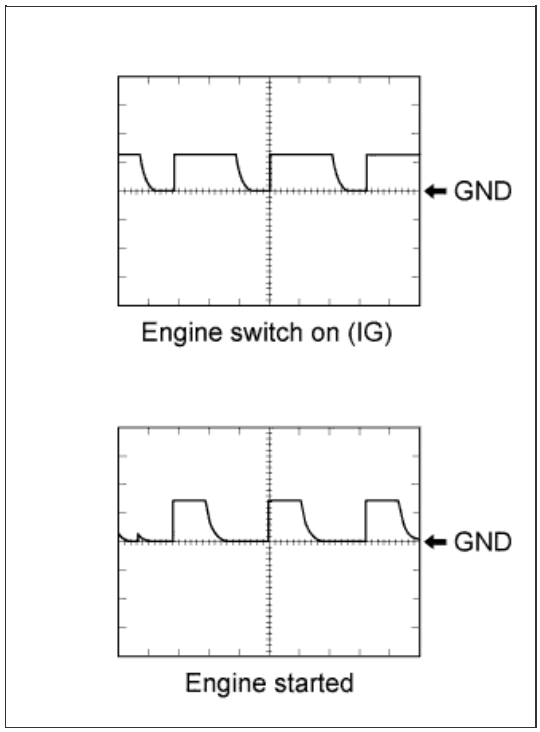


i. Waveform 1

Reference

Terminal No. (Symbol)	Tool Setting	Condition
E3-9 (SPD) - 2D-62 (GND2)	5 V/DIV., 100 msec./DIV.	Driving at approx. 20 km/h (12 mph)

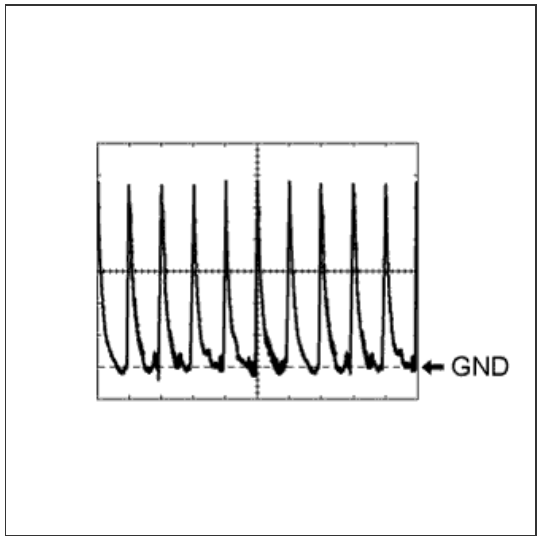
HINT:



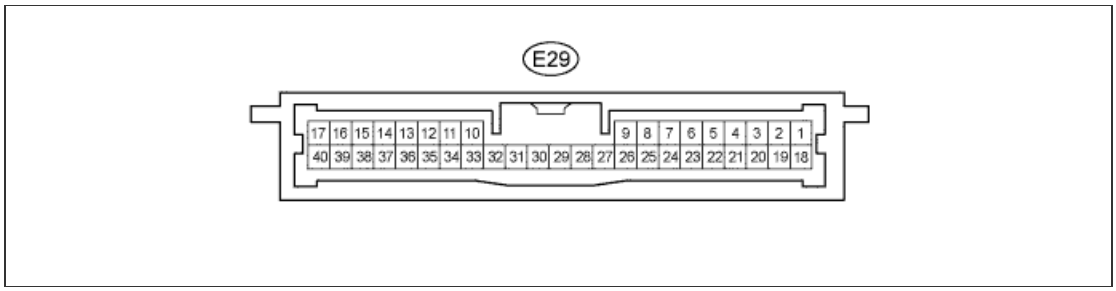
As the vehicle speed increases, the wavelength shortens.

ii. Waveform 2

Reference



Terminal No. (Symbol)	Tool Setting	Condition
E3-8 (TACH) - 2D-62 (GND2)	10 V/DIV., 10 msec./DIV.	Engine switch on (IG) or engine started



iii. Waveform 3

Reference

Terminal No. (Symbol)	Tool Setting	Condition
E4-2 (P) - 2D-62 (GND2)	2 V/DIV., 20 msec./DIV.	Shift lever in P

CHECK CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

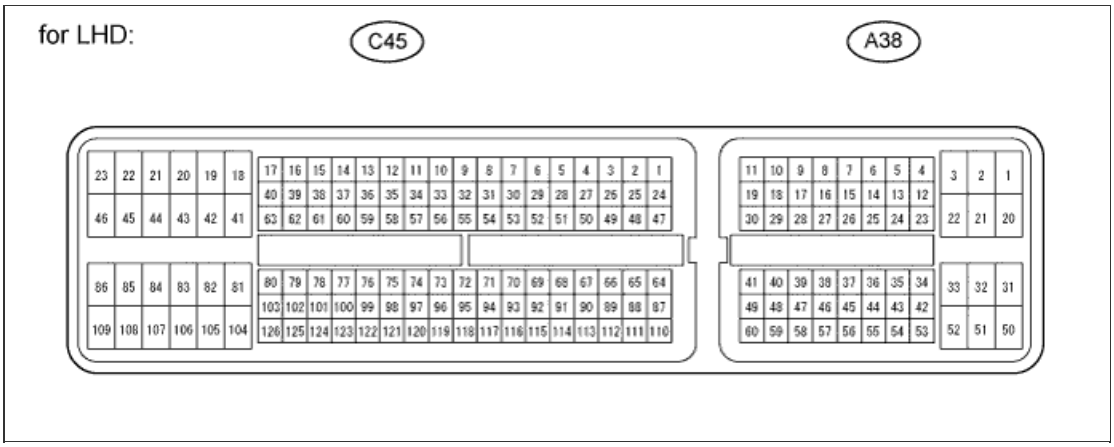
a. Disconnect the E29 certification ECU (smart key ECU assembly) connector.

b. Measure the voltage and resistance according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E29-1 (+B) - Body ground	B - Body ground	+B power supply	Always	11 to 14 V
E29-10 (LIN) - Body ground	GR - Body ground	LIN line	Always	10 kΩ or higher
E29-17 (E) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

c. Reconnect the E29 certification ECU (smart key ECU assembly) connector.



d. Measure the voltage according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E29-18 (IG) - Body ground	B - Body ground	Ignition power supply	Engine switch on (IG)	11 to 14 V
E29-18 (IG) - Body ground	B - Body ground	Ignition power supply	Engine switch off	Below 1 V

If the result is not as specified, the certification ECU (smart key ECU assembly) may have a malfunction.

CHECK ECM

a. for LHD:
Disconnect the A38 and C45 ECM connectors.

b. Measure the voltage and resistance according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
A38-1 (BATT) - C45-81 (E1)*1 A38-20 (BATT) - C45-81 (E1)*2, *3	L - BR	Battery (for measuring battery voltage and for ECM memory)	Always	11 to 14 V
A38-3 (+B) - C45-81 (E1)*1 A38-2 (+B) - C45-81 (E1)*2, *3	B - BR	Power source of ECM	Engine switch on (IG)	11 to 14 V
A38-28 (IGSW) - C45-81 (E1)	B - BR	Engine switch signal	Always	11 to 14 V
C45-81 (E1) - Body ground	BR - Body ground	Ground	Always	Below 1 Ω
C45-43 (E01) - Body ground*1 C45-22 (E01) - Body ground*2, *3	W-B - Body ground	Ground	Always	Below 1 Ω
C45-42 (E02) - Body ground*1 C45-21 (E02) - Body ground*2, *3	BR - Body ground	Ground	Always	Below 1 Ω
C45-46 (E03) - Body ground*1 C45-104 (E03) - Body ground*2	W-B - Body ground	Ground	Always	Below 1 Ω
C45-23 (E04) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
C45-21 (E05) - Body ground*1 C45-46 (E05) - Body ground*2	W-B - Body ground	Ground	Always	Below 1 Ω

HINT:

*1: for 2UZ-FE

*2: for 1GR-FE

*3: for 1VD-FTV

If the result is not as specified, there may be a malfunction on the wire harness side.

c. Reconnect the ECM connectors.

d. Measure the voltage according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
A38-46 (STA) - C45-81 (E1)*1 A38-48 (STA) - C45-81 (E1)*2, *3	R-B - BR	ST relay operation signal	Cranking	5.5 V or more
A38-14 (STSW) - C45-81 (E1)	R - BR	Starter activation request signal	Brake pedal depressed, engine switch on (IG)	Output voltage at terminal AM1 or AM2 is - 2 V or more

A -41 (ACCR) - C45-81 (E1)*1 A38-13 (ACCR) - C45-81 (E1)*2, *3	L-Y - BR	ACC relay cut signal (output)	Engine switch on (IG) → Cranking	11 to 14 V → Below 1 V
A38-15 (TACH) - C45-81 (E1)	W-G - BR	Engine speed signal (output)	Idling	Pulse generation (see waveform 1)
C45-16 (STAR) - C45-81 (E1)*1 C45-63 (STAR) - C45-81 (E1)*2 C45-51 (STAR) - C45-81 (E1)*3	L - BR	ST relay drive signal	Cranking	11 to 14 V

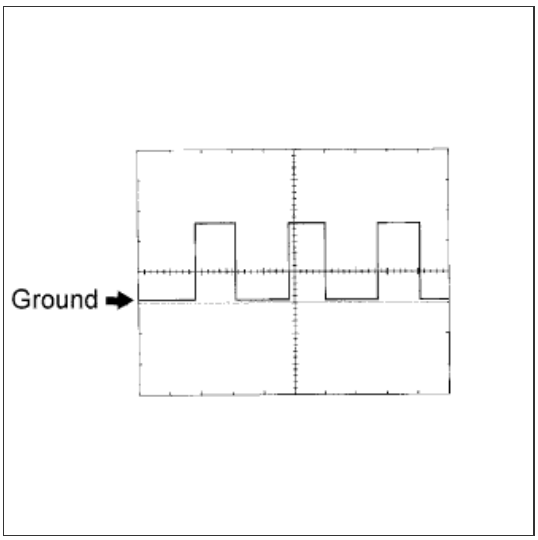
HINT:

*1: for 2UZ-FE

*2: for 1GR-FE

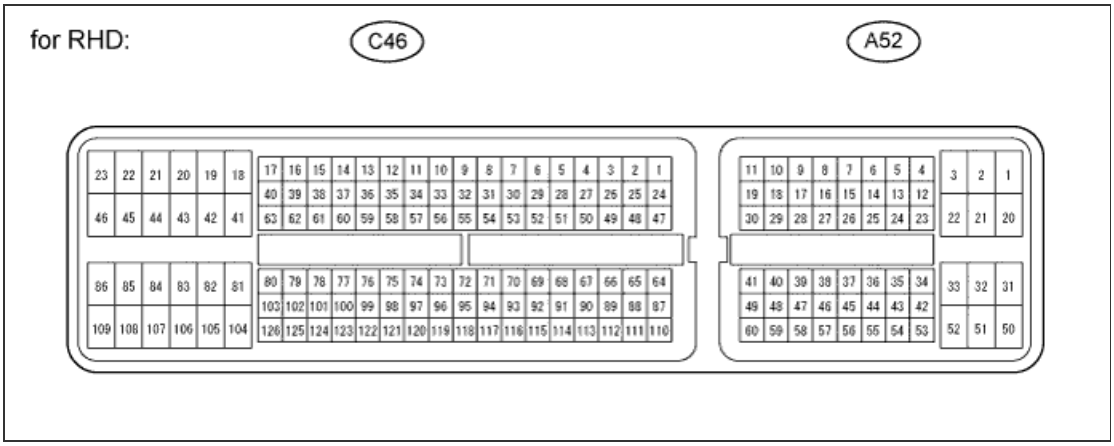
*3: for 1VD-FTV

If the result is not as specified, the ECM may have a malfunction.



e. Using an oscilloscope, check the signal waveform of the ECM.

Reference



Terminal No. (Symbol)	Tool Setting	Condition
A38-15 (TACH) - C45-81 (E1)	5 V/DIV., 10 ms./DIV.	Engine idling

HINT:

As the engine speed increases, the wavelength shortens.

f. for RHD:
Disconnect the A52 and C46 ECM connectors.

g. Measure the voltage and resistance according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
A52-1 (BATT) - C46-81 (E1)*1 A52-20 (BATT) - C46-81 (E1)*2, *3	L - BR	Battery (for measuring battery voltage and for ECM memory)	Always	11 to 14 V

A52-3 (+B) - C46-81 (E1)*1 A52-2 (+B) - C46-81 (E1)*2, *3	B - BR	Power source of ECM	Engine switch on (IG)	11 to 14 V
A52-28 (IGSW) - C46-81 (E1)	B - BR	Engine switch signal	Always	11 to 14 V
C46-81 (E1) - Body ground	BR - Body ground	Ground	Always	Below 1 Ω
C46-43 (E01) - Body ground*1 C46-22 (E01) - Body ground*2, *3	W-B - Body ground	Ground	Always	Below 1 Ω
C46-42 (E02) - Body ground*1 C46-21 (E02) - Body ground*2, *3	BR - Body ground	Ground	Always	Below 1 Ω
C46-46 (E03) - Body ground*1 C46-104 (E03) - Body ground*2	W-B - Body ground	Ground	Always	Below 1 Ω
C46-23 (E04) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
C46-21 (E05) - Body ground*1 C46-46 (E05) - Body ground*2	W-B - Body ground	Ground	Always	Below 1 Ω

HINT:

*1: for 2UZ-FE

*2: for 1GR-FE

*3: for 1VD-FTV

If the result is not as specified, there may be a malfunction on the wire harness side.

h. Reconnect the ECM connectors.

i. Measure the voltage according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
A52-46 (STA) - C46-81 (E1)*1 A52-48 (STA) - C46-81 (E1)*2, *3	R-B - BR	ST relay operation signal	Cranking	5.5 V or more
A52-14 (STSW) - C46-81 (E1)	R - BR	Starter activation request signal	Brake pedal depressed, engine switch on (IG)	Output voltage at terminal AM1 or AM2 is - 2 V or more
A52-41 (ACCR) - C46-81 (E1)*1 A52-13 (ACCR) - C46-81 (E1)*2, *3	L-Y - BR	ACC relay cut signal (output)	Engine switch on (IG) → Cranking	11 to 14 V → Below 1 V
A52-15 (TACH) - C46-81 (E1)	W-G - BR	Engine speed signal (output)	Idling	Pulse generation (see waveform 1)
C46-16 (STAR) - C46-81 (E1)*1 C46-63 (STAR) - C46-81 (E1)*2 C46-51 (STAR) - C46-81 (E1)*3	L - BR	ST relay drive signal	Cranking	11 to 14 V

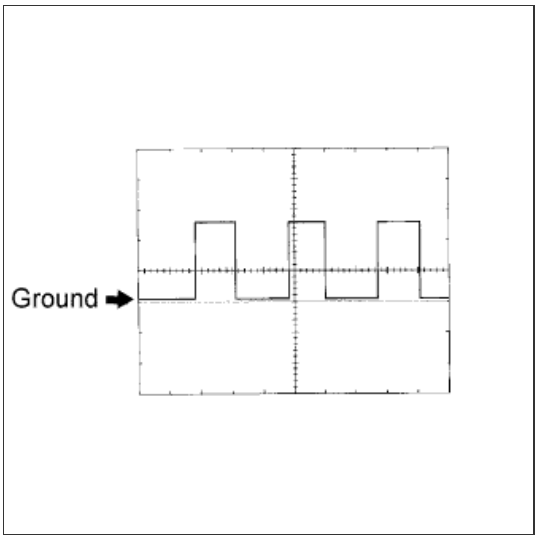
HINT:

*1: for 2UZ-FE

*2: for 1GR-FE

*3: for 1VD-FTV

If the result is not as specified, the ECM may have a malfunction.



j. Using an oscilloscope, check the signal waveform of the ECM.

Reference

A52-15 (TACH) - C46-81 (E1)	5 V/DIV., 10 ms./DIV.	Engine idling

HINT:

As the engine speed increases, the wavelength shortens.

CHECK STEERING LOCK ECU

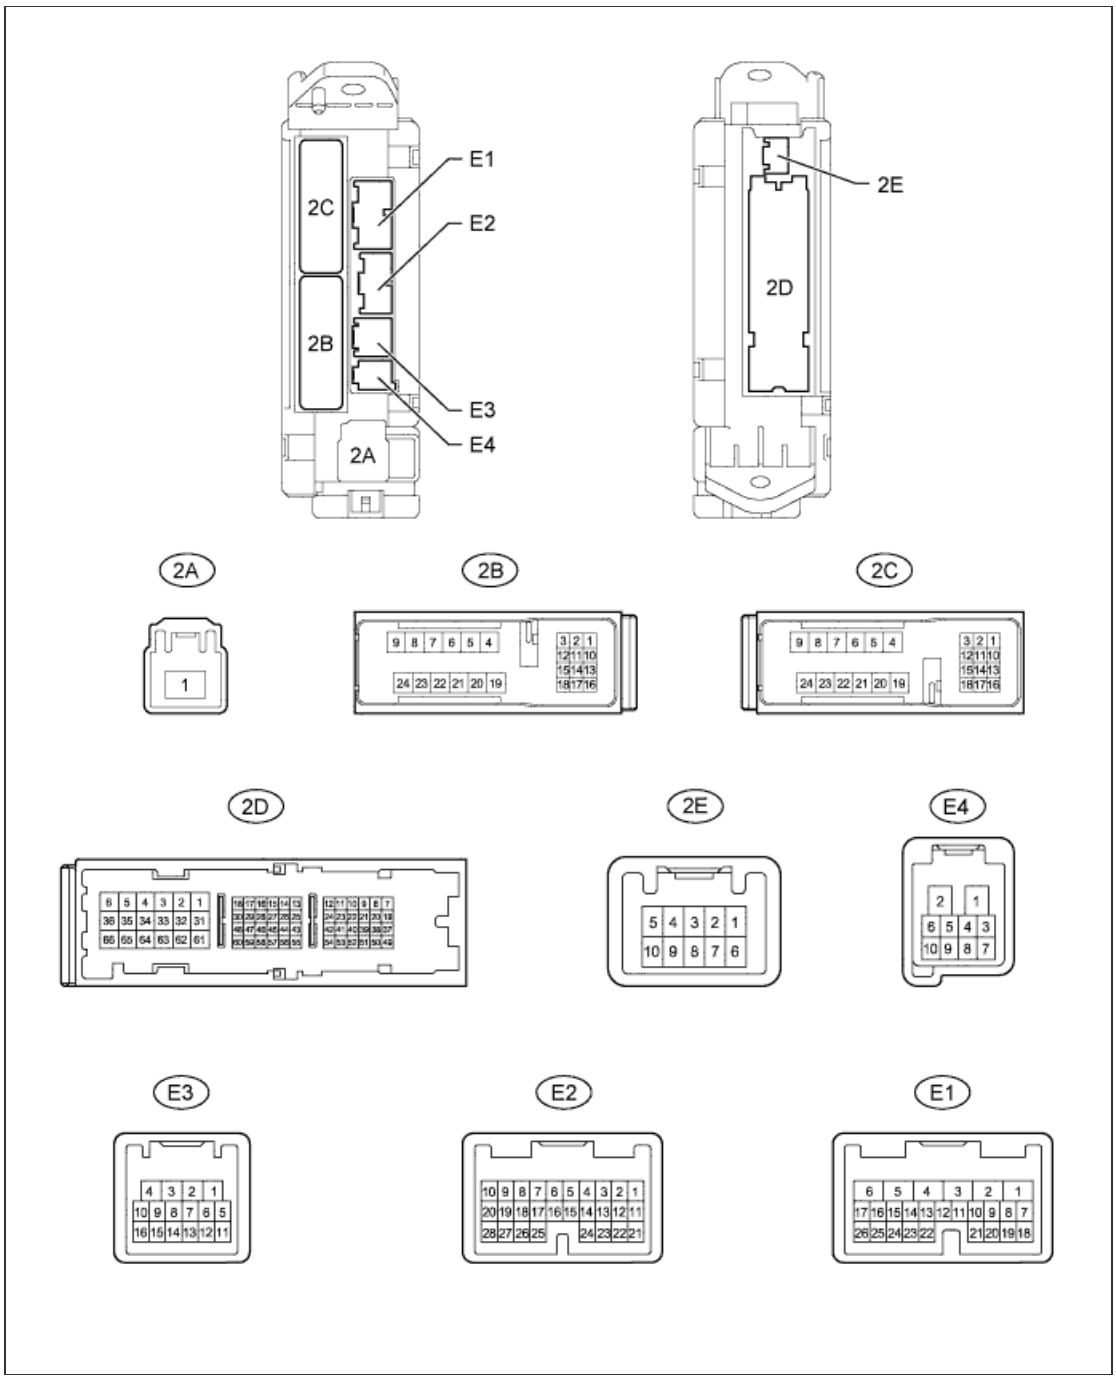
a. Disconnect the E26 steering lock ECU connector.

b. Measure the voltage and resistance according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E26-7 (B) - Body ground	R - Body ground	+B power supply	Always	11 to 14 V
E26-6 (IG2) - Body ground	B - Body ground	Ignition power supply	Engine switch on (IG)	11 to 14 V
E26-6 (IG2) - Body ground	B - Body ground	Ignition power supply	Engine switch off	Below 1 V
E26-1 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
E26-2 (SGND) - Body ground	BR - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

c. Reconnect the E26 steering lock ECU connector.



d. Measure the voltage according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E26-4 (SLP1) - E26-1 (GND)	SB - W-B	Steering lock actuator position signal	Steering locked	11 to 14 V
E26-4 (SLP1) - E26-1 (GND)	SB - W-B	Steering lock actuator position signal	Steering released	Below 1 V

If the result is not as specified, the ECU may have a malfunction.

for Preparation Click here

CHECK MAIN BODY ECU (COWL SIDE JUNCTION BLOCK LH)

a. Disconnect the E1, E2 and 2D main body ECU connectors.

b. Measure the voltage and resistance according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E1-6 (AM1) - Body ground	W - Body ground	+B power supply	Always	11 to 14 V
E2-1 (AM2) - Body ground	W - Body ground	+B power supply	Always	11 to 14 V
E1-17 (SSW1) - Body ground	B - Body ground	Engine switch 1 input	Engine switch pushed	Below 1 Ω
E1-17 (SSW1) - Body ground	B - Body ground	Engine switch 1 input	Engine switch not pushed	10 kΩ or higher

E1-16 (SSW2) - Body ground	B - Body ground	Engine switch 2 input	Engine switch pushed	Below 1 Ω
E1-16 (SSW2) - Body ground	B - Body ground	Engine switch 2 input	Engine switch not pushed	10 kΩ or higher
2D-62 (GND2) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
2D-20 (LIN) - Body ground	GR - Body ground	LIN line	Always	10 kΩ or higher

If the result is not as specified, there may be a malfunction on the wire harness side.

c. Reconnect the E1, E2 and 2D main body ECU connectors.

d. Measure the voltage according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E1-22 (ACCD) - 2D-62 (GND2)	P - W-B	ACC relay drive signal	Engine switch on (ACC)	11 to 14 V
E1-22 (ACCD) - 2D-62 (GND2)	P - W-B	ACC relay drive signal	Engine switch off	Below 1 V
E1-3 (IG1D) - 2D-62 (GND2)	G - W-B	IG1 No. 3 relay drive signal	Engine switch on (IG)	11 to 14 V
E1-3 (IG1D) - 2D-62 (GND2)	G - W-B	IG1 No. 3 relay drive signal	Engine switch on (ACC)	Below 1 V
E2-11 (IG2D) - 2D-62 (GND2)	B - W-B	Integration relay (IG2 relay) drive signal	Engine switch on (IG)	11 to 14 V
E2-11 (IG2D) - 2D-62 (GND2)	B - W-B	Integration relay (IG2 relay) drive signal	Engine switch on (ACC)	Below 1 V
E1-19 (SLR+) - 2D-62 (GND2)	G - W-B	Steering lock power supply	Steering lock motor operating	Below 1 V
E1-19 (SLR+) - 2D-62 (GND2)	G - W-B	Steering lock power supply	Steering lock motor not operating	11 to 14 V
E1-8 (STR) - 2D-62 (GND2)	L - W-B	Park/neutral position switch signal*1 Clutch pedal switch signal*2	Engine switch on (IG), shift lever not in P or N → P or N*1 Engine switch on (IG), Clutch pedal switch released → Depressed*2	Below 2 V → Pulse generation*3
E1-18 (SLP) - 2D-62 (GND2)	SB - W-B	Steering lock actuator position signal	Steering lock locked	11 to 14 V
E1-18 (SLP) - 2D-62 (GND2)	SB - W-B	Steering lock actuator position signal	Steering lock released	Below 1 V
E3-9 (SPD) - 2D-62 (GND2)	V - W-B	Speed signal from combination meter	Engine switch on (IG), driving wheel rotating slowly	Pulse generation (see waveform 1)
E3-8 (TACH) - 2D-62 (GND2)	W - W-B	Tachometer signal	Engine running	Pulse generation (see waveform 2)
E4-2 (P) - 2D-62 (GND2)*1	L - W-B	Shift lock signal	Shift lever in P	Pulse generation (see waveform 3)
E4-2 (P) - 2D-62 (GND2)*1	L - W-B	Shift lock signal	Shift lever not in P	Below 1 V
E4-4 (STSW) - 2D-62 (GND2)	R - W-B	Starter activation request signal	Brake pedal depressed, engine switch depressed*1 Clutch pedal depressed, engine switch depressed*2	11 to 14 V
E1-15 (INDS) - 2D-62 (GND2)	W - W-B	Vehicle condition signal	Brake pedal released with shift lever in P or N, engine switch off, on (ACC), or on (IG)*1 Clutch pedal released, engine switch off, on (ACC), or on (IG)*2	9 to 14 V
E1-14 (INDW) - 2D-62 (GND2)	W - W-B	Vehicle condition signal	Brake pedal released with shift lever in P or N, engine switch off, on (ACC), or on (IG)*1 Clutch pedal released,	9 to 14 V

			engine switch off, on (ACC), or on (IG)*2	
E1-25 (SWIL) - 2D-62 (GND2)	R - W-B	Illumination signal	Light control switch tail or head	11 to 14 V
2B-22 (STP) - 2D-62 (GND2)	R - W-B	Stop light switch signal	Brake pedal depressed	11 to 14 V
2B-22 (STP) - 2D-62 (GND2)	R - W-B	Stop light switch signal	Brake pedal released	Below 1 V

HINT:

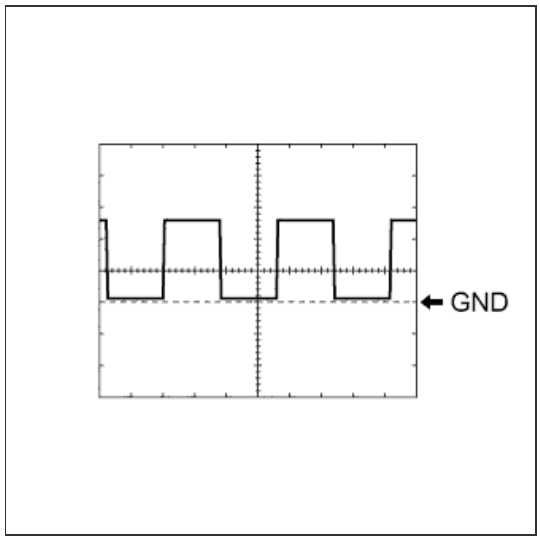
*1: for A/T

*2: for M/T

*3: Remove the ST CUT relay before measuring the voltage.

If the result is not as specified, the ECU may have a malfunction.

e. Using an oscilloscope, check the signal waveform of the ECU.

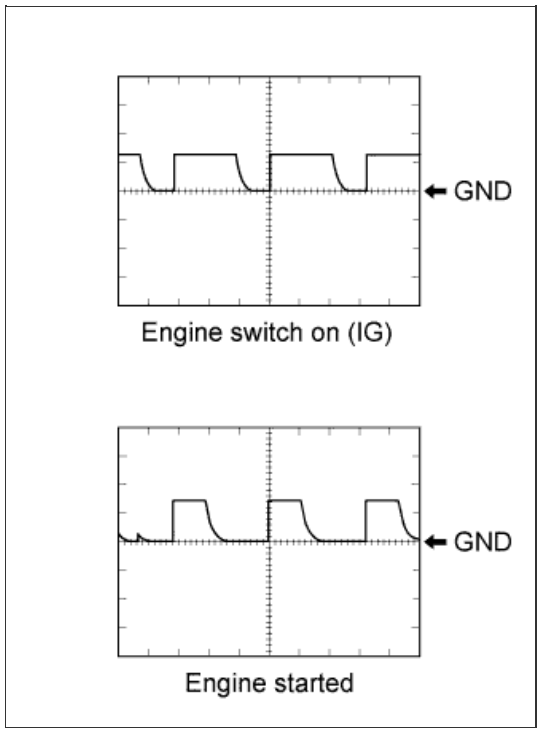


i. Waveform 1

Reference

Terminal No. (Symbol)	Tool Setting	Condition
E3-9 (SPD) - 2D-62 (GND2)	5 V/DIV., 100 msec./DIV.	Driving at approx. 20 km/h (12 mph)

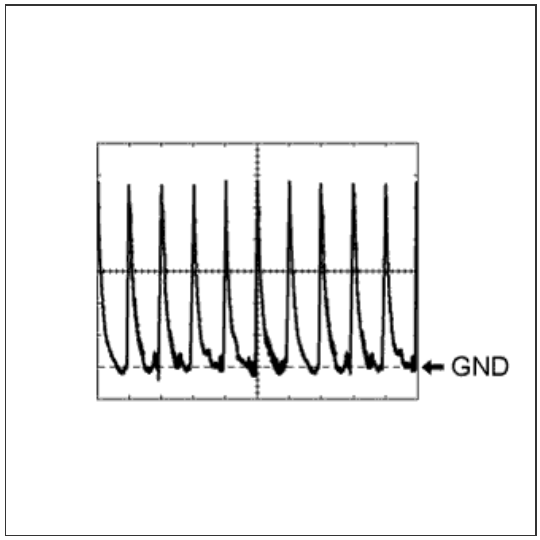
HINT:



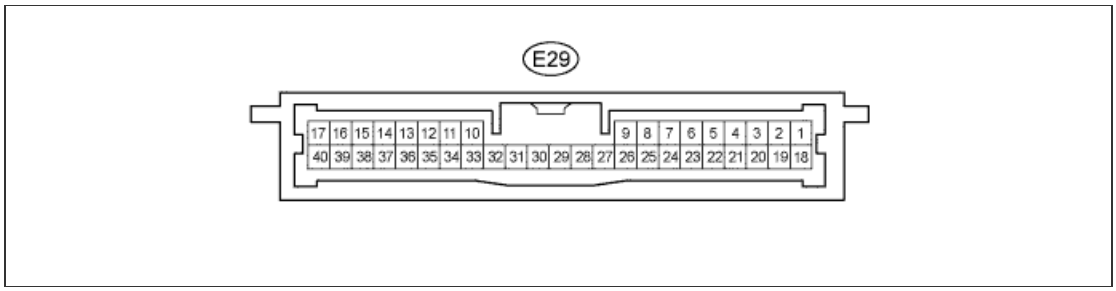
As the vehicle speed increases, the wavelength shortens.

ii. Waveform 2

Reference



Terminal No. (Symbol)	Tool Setting	Condition
E3-8 (TACH) - 2D-62 (GND2)	10 V/DIV., 10 msec./DIV.	Engine switch on (IG) or engine started



iii. Waveform 3

Reference

Terminal No. (Symbol)	Tool Setting	Condition
E4-2 (P) - 2D-62 (GND2)	2 V/DIV., 20 msec./DIV.	Shift lever in P

CHECK CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

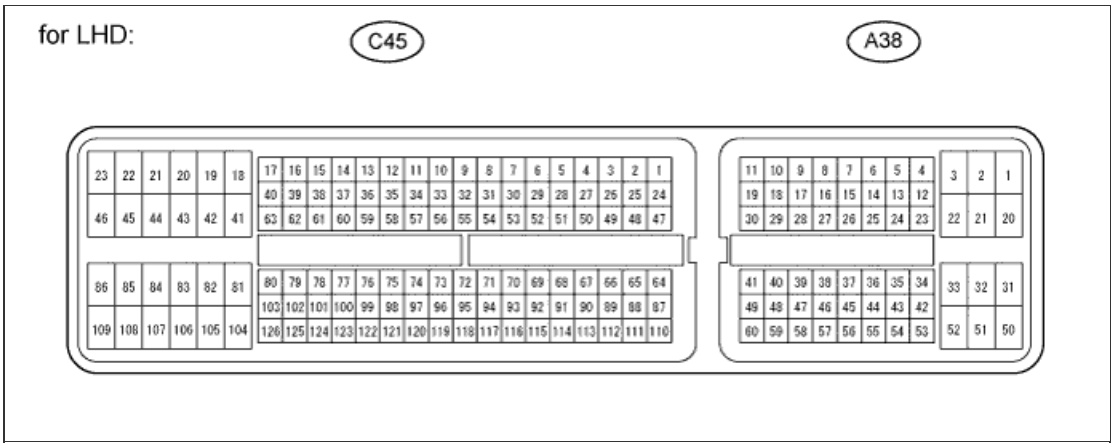
a. Disconnect the E29 certification ECU (smart key ECU assembly) connector.

b. Measure the voltage and resistance according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E29-1 (+B) - Body ground	B - Body ground	+B power supply	Always	11 to 14 V
E29-10 (LIN) - Body ground	GR - Body ground	LIN line	Always	10 kΩ or higher
E29-17 (E) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

c. Reconnect the E29 certification ECU (smart key ECU assembly) connector.



d. Measure the voltage according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E29-18 (IG) - Body ground	B - Body ground	Ignition power supply	Engine switch on (IG)	11 to 14 V
E29-18 (IG) - Body ground	B - Body ground	Ignition power supply	Engine switch off	Below 1 V

If the result is not as specified, the certification ECU (smart key ECU assembly) may have a malfunction.

CHECK ECM

a. for LHD:
Disconnect the A38 and C45 ECM connectors.

b. Measure the voltage and resistance according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
A38-1 (BATT) - C45-81 (E1)*1, *4 A38-20 (BATT) - C45-81 (E1)*2, *3	L - BR*1, *2, *3 L - W-B*4	Battery (for measuring battery voltage and for ECM memory)	Always	11 to 14 V
A38-3 (+B) - C45-81 (E1)*1, *4 A38-2 (+B) - C45-81 (E1)*2, *3	B - BR*1, *2, *3 B - W-B*4	Power source of ECM	Engine switch on (IG)	11 to 14 V
A38-28 (IGSW) - C45-81 (E1)	B - BR*1, *2, *3 B - W-B*4	Engine switch signal	Always	11 to 14 V
C45-81 (E1) - Body ground	BR - Body ground*1, *2, *3 W-B - Body ground*4	Ground	Always	Below 1 Ω
C45-43 (E01) - Body ground*1, *4 C45-22 (E01) - Body ground*2, *3	W-B - Body ground	Ground	Always	Below 1 Ω
C45-42 (E02) - Body ground*1, *4 C45-21 (E02) - Body ground*2, *3	BR - Body ground	Ground	Always	Below 1 Ω
C45-46 (E03) - Body ground*1, *4 C45-104 (E03) - Body ground*2	W-B - Body ground	Ground	Always	Below 1 Ω
C45-23 (E04) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
C45-21 (E05) - Body ground*1, *4 C45-46 (E05) - Body ground*2	W-B - Body ground	Ground	Always	Below 1 Ω

HINT:

*1: for 2UZ-FE

*2: for 1GR-FE

*3: for 1VD-FTV

*4: for 3UR-FE

If the result is not as specified, there may be a malfunction on the wire harness side.

c. Reconnect the ECM connectors.

d. Measure the voltage according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
A38-46 (STA) - C45-81 (E1)*1, *4 A38-48 (STA) - C45-81 (E1)*2, *3	R-B - BR*1, *2, *3 R-B - W-B*4	ST relay operation signal	Cranking	5.5 V or more
				Output voltage at

A -14 (STSW) - C45-81 (E1)	R - BR*1, *2, *3 R - W-B*4	Starter activation request signal	Brake pedal depressed, engine switch on (IG)	terminal AM1 or AM2 is - 2 V or more
A38-41 (ACCR) - C45-81 (E1)*1, *4 A38-13 (ACCR) - C45-81 (E1)*2, *3	L-Y - BR*1, *2, *3 L-Y - W-B*4	ACC relay cut signal (output)	Engine switch on (IG) → Cranking	11 to 14 V → Below 1 V
A38-15 (TACH) - C45-81 (E1)	W-G - BR*1, *2, *3 W-G - W-B*4	Engine speed signal (output)	Idling	Pulse generation (see waveform 1)
C45-16 (STAR) - C45-81 (E1)*1, *4 C45-63 (STAR) - C45-81 (E1)*2 C45-51 (STAR) - C45-81 (E1)*3	L - BR*1, *2, *3 L - W-B*4	ST relay drive signal	Cranking	11 to 14 V

HINT:

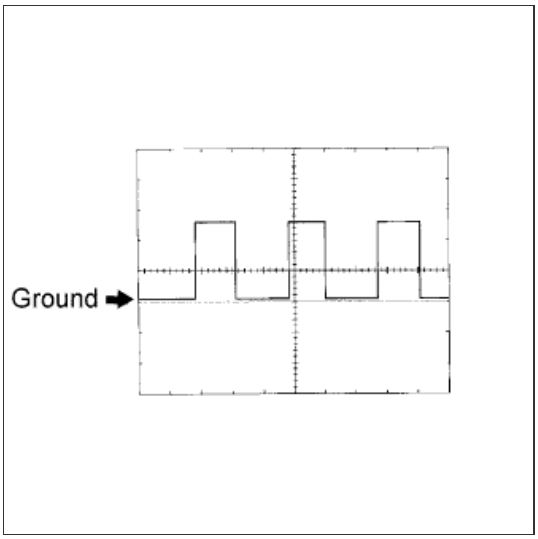
*1: for 2UZ-FE

*2: for 1GR-FE

*3: for 1VD-FTV

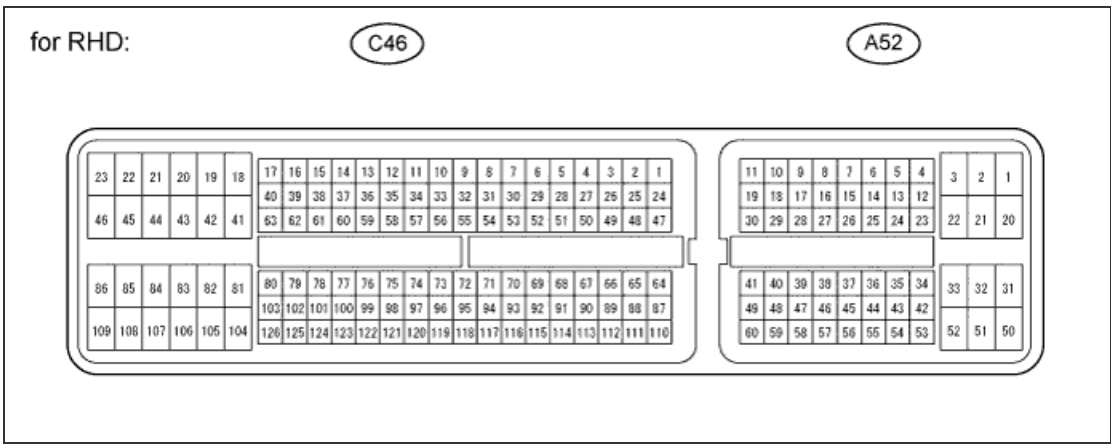
*4: for 3UR-FE

If the result is not as specified, the ECM may have a malfunction.



e. Using an oscilloscope, check the signal waveform of the ECM.

Reference



Terminal No. (Symbol)	Tool Setting	Condition
A38-15 (TACH) - C45-81 (E1)	5 V/DIV., 10 ms./DIV.	Engine idling

HINT:

As the engine speed increases, the wavelength shortens.

f. for RHD:
Disconnect the A52 and C46 ECM connectors.

g. Measure the voltage and resistance according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition

A52-1 (BATT) - C46-81 (E1)*1 A52-20 (BATT) - C46-81 (E1)*2, *3	L - BR	Battery (for measuring battery voltage and for ECM memory)	Always	11 to 14 V
A52-3 (+B) - C46-81 (E1)*1 A52-2 (+B) - C46-81 (E1)*2, *3	B - BR	Power source of ECM	Engine switch on (IG)	11 to 14 V
A52-28 (IGSW) - C46-81 (E1)	B - BR	Engine switch signal	Always	11 to 14 V
C46-81 (E1) - Body ground	BR - Body ground	Ground	Always	Below 1 Ω
C46-43 (E01) - Body ground*1 C46-22 (E01) - Body ground*2, *3	W-B - Body ground	Ground	Always	Below 1 Ω
C46-42 (E02) - Body ground*1 C46-21 (E02) - Body ground*2, *3	BR - Body ground	Ground	Always	Below 1 Ω
C46-46 (E03) - Body ground*1 C46-104 (E03) - Body ground*2	W-B - Body ground	Ground	Always	Below 1 Ω
C46-23 (E04) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
C46-21 (E05) - Body ground*1 C46-46 (E05) - Body ground*2	W-B - Body ground	Ground	Always	Below 1 Ω

HINT:

*1: for 2UZ-FE

*2: for 1GR-FE

*3: for 1VD-FTV

If the result is not as specified, there may be a malfunction on the wire harness side.

h. Reconnect the ECM connectors.

i. Measure the voltage according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
A52-46 (STA) - C46-81 (E1)*1 A52-48 (STA) - C46-81 (E1)*2, *3	R-B - BR	ST relay operation signal	Cranking	5.5 V or more
A52-14 (STSW) - C46-81 (E1)	R - BR	Starter activation request signal	Brake pedal depressed, engine switch on (IG)	Output voltage at terminal AM1 or AM2 is - 2 V or more
A52-41 (ACCR) - C46-81 (E1)*1 A52-13 (ACCR) - C46-81 (E1)*2, *3	L-Y - BR	ACC relay cut signal (output)	Engine switch on (IG) → Cranking	11 to 14 V → Below 1 V
A52-15 (TACH) - C46-81 (E1)	W-G - BR	Engine speed signal (output)	Idling	Pulse generation (see waveform 1)
C46-16 (STAR) - C46-81 (E1)*1 C46-63 (STAR) - C46-81 (E1)*2 C46-51 (STAR) - C46-81 (E1)*3	L - BR	ST relay drive signal	Cranking	11 to 14 V

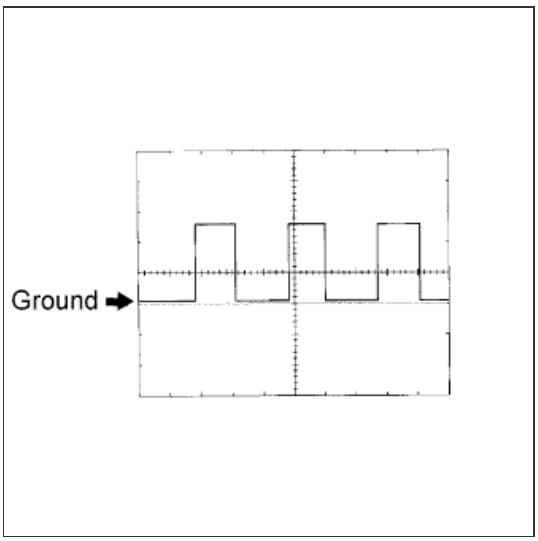
HINT:

*1: for 2UZ-FE

*2: for 1GR-FE

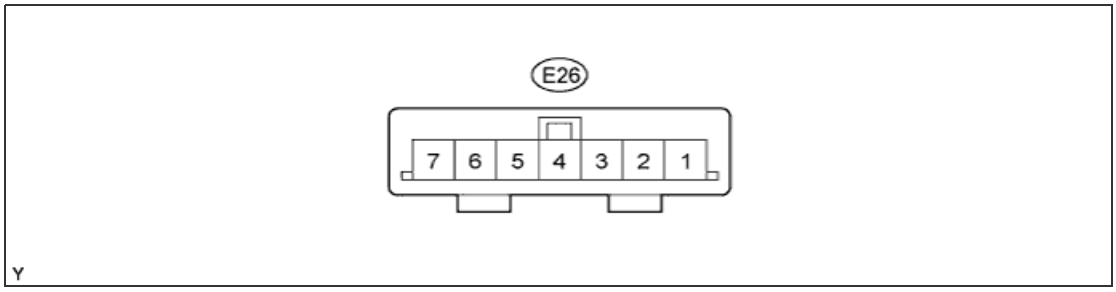
*3: for 1VD-FTV

f the result is not as specified, the ECM may have a malfunction.



j. Using an oscilloscope, check the signal waveform of the ECM.

Reference



Terminal No. (Symbol)	Tool Setting	Condition
A52-15 (TACH) - C46-81 (E1)	5 V/DIV., 10 ms./DIV.	Engine idling

HINT:

As the engine speed increases, the wavelength shortens.

CHECK STEERING LOCK ECU

a. Disconnect the E26 steering lock ECU connector.

b. Measure the voltage and resistance according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E26-7 (B) - Body ground	R - Body ground	+B power supply	Always	11 to 14 V
E26-6 (IG2) - Body ground	B - Body ground	Ignition power supply	Engine switch on (IG)	11 to 14 V
E26-6 (IG2) - Body ground	B - Body ground	Ignition power supply	Engine switch off	Below 1 V
E26-1 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
E26-2 (SGND) - Body ground	BR - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

c. Reconnect the E26 steering lock ECU connector.

d. Measure the voltage according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E26-4 (SLP1) - E26-1 (GND)	SB - W-B	Steering lock actuator position signal	Steering locked	11 to 14 V
E26-4 (SLP1) - E26-1 (GND)	SB - W-B	Steering lock actuator position signal	Steering released	Below 1 V

If the result is not as specified, the ECU may have a malfunction.

for Preparation Click here

CHECK DTC

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Main Body / DTC.

e. Read the DTCs.

CLEAR DTC

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Main Body / DTC.

e. Clear the DTCs.

for Preparation Click here

READ DATA LIST

HINT:

Using the intelligent tester to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / (desired system) / Data List.

e. According to the display on the intelligent tester, read the Data List.

Main Body

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
ACC SW	Engine switch on (ACC)/ON or O	N: Engine switch on (ACC) O : Engine switch off	-
IG SW	Engine switch on (IG)/ON or O	N: Engine switch on (IG) O : Engine switch off	-
Stop Light SW	Stop light switch/ON or O	N: Brake pedal depressed O : Brake pedal released	-
Start Switch1	Start switch 1/ON or O	N: Engine switch on (IG) O : Engine switch off	-
Start Switch2	Start switch 2/ON or O	N: Engine switch on (IG) O : Engine switch off	-
Steering Unlock Switch	Steering lock condition/ON or O	N: Steering unlocked O : Steering locked	-
Neutral SW/ Clutch SW	ark/neutral position switch (A/T), clutch start switch (M/T)/ON or O	N: Shift lever in or N (A/T), clutch pedal depressed (M/T) O : Shift lever not in or N (A/T), clutch pedal released (M/T)	-
Shift Signal	Shift position signal/ON or O	N: Shift lever in : Shift lever not in	-
ehicle Speed Signal	ehicle speed signal/STO or RUN	STO : ehicle stopped RUN: ehicle running	-
Engine Condition	Engine condition/STO or RUN	STO : Engine stopped RUN: Engine running	-
IG1 Relay Monitor(Outside)	IG1 No. 3 relay outer relay monitor/ON or O	N: Engine switch on (IG) O : Engine switch off	-
IG2 Relay Monitor(Outside)	Integration relay (IG2 relay) outer relay monitor/ON or O	N: Engine switch on (IG) O : Engine switch off	-
IG1 Relay Monitor(Inside)	IG1 No. 3 relay inner relay monitor/ON or O	N: Engine switch on (IG) O : Engine switch off	-
IG2 Relay Monitor(Inside)	Integration relay (IG2 relay) inner relay monitor/ON or O	N: Engine switch on (IG) O : Engine switch off	-
ACC Relay Monitor	ACC relay monitor/ON or O	N: Engine switch on (ACC) O : Engine switch off	-
Latch Circuit	Latch circuit/ON or O	N: Engine switch on (ACC) O : Engine switch off, on (ACC)	-
Starter Request Signal	Starter request signal/ON or O	N: ST relay ON O : ST relay O	-
		ALL O : All relays O	

ower Supply Condition	ower supply condition/ALL O , ACC ON, IG2 ON, ST ON	ACC ON: ACC relay ON IG2 ON: Integration relay (IG2 relay) ON ST ON: STSW signal ON	-
ACC Relay Cut Signal	ACC relay cut signal/ON or O	N: Engine cranking O : Engine not cranking	-
Starter Relay Monitor	ST relay monitor/ON or O	N: Engine cranking O : Engine not cranking	-
Communication Smart/Wireless	Communication to certification ECU (smart key ECU assembly)/O or STO	: Communication STO : No communication	-
The Number of DTC	Number of diagnostic trouble codes/Min: 0, Ma : 255	-	-

Entry & Start

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Ignition Switch	Engine switch/ON or O	N: Engine switch on (IG) O : Engine switch off	-
Unmatched ehicle-ID	ey ID/ ES or NO	ES: ey ID matches NO: ey ID differs	-
No Response	No Communication condition between vehicle and electrical key transmitter (response) / es or No	es: ey ID code not matched to vehicle No: ey ID code matched to vehicle	-
Unmatch Code or orm	Code format/ ES or NO	ES: Code format matches NO: Code format differs	-
ey Low Battery	ey battery conditions/ es or No	es: ey battery voltage low No: ey battery voltage normal	-
Codes	Number of diagnostic trouble codes/Min: 0, Ma : 255	-	-
ID Code Difference(Resp)	ID code/ ES or NO	ES: ID code matches NO: ID code differs	-
C Code Difference	Challenge code/ ES or NO	ES: Challenge code matches NO: Challenge code differs	-
Engine Start Condition	Engine start condition by certification ECU (smart key ECU assembly)/O or NG	O : Engine start permitted NG: Engine start prohibited	-
S Code Check	S code certification result/NG or O	: S code certification result normal NG: S code certification result abnormal	-
L Code Check	L code certification result/NG or O	: L code certification result normal NG: L code certification result abnormal	-
Ignition Available Area	ey area where engine start is possible/All or ront	All: All areas ront: ront only	-

PERFORM ACTIVE TEST

HINT:

Using the intelligent tester to perform Active Tests allows relays, s, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. erforming Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / (desired system) / Active Test.

e. According to the display on the intelligent tester, perform the Active Test.

Main Body

Tester Display	Test art	Control Range	Diagnostic Note
Indicator for Lighting	Indicator illumination	ON/O	-

Indicator Condition	Indicator light illumination pattern	Green/Amber/No Sig	-
Supply for Steering Lock	Steering lock ECU power supply	ON/O	-

Entry & Start

Tester Display	Test art	Control Range	Diagnostic Note
r-Seat Inside Transmitter	Indoor key antenna (for front)	ON/O	-
Rr-Seat Inside Transmitter	Indoor key antenna (for rear1)	ON/O	-
Inside Trunk/Backdoor Transmitter	Indoor key antenna (for rear2)	ON/O	-
Outside Trunk/Backdoor Transmitter	Electrical key antenna	ON/O	-

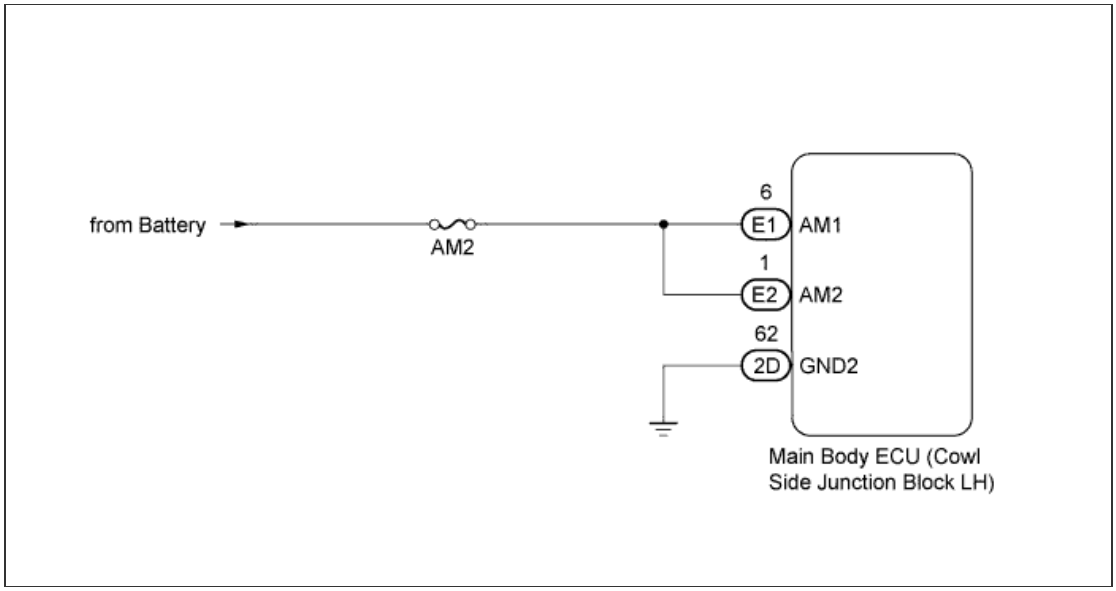
DTC B2271 Ignition Hold Monitor Malfunction



for Preparation Click here

DESCRIPTION

This DTC is stored when the IG output circuits inside the main body ECU are open or shorted.

DTC Code	Detection Condition	Trouble Area
B2271	The IG1 No. 3 relay actuation circuit or integration relay (IG2 relay) actuation circuit inside the main body ECU is abnormal.	• Main body ECU • AM2 fuse • Harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

1.CHECK WHETHER DTC OUTPUT RECURS

a. Clear the DTCs (Click here).

b. Check whether DTC B2271 is output.

Result

Result	Proceed to
DTC B2271 output	A
No DTC output	B

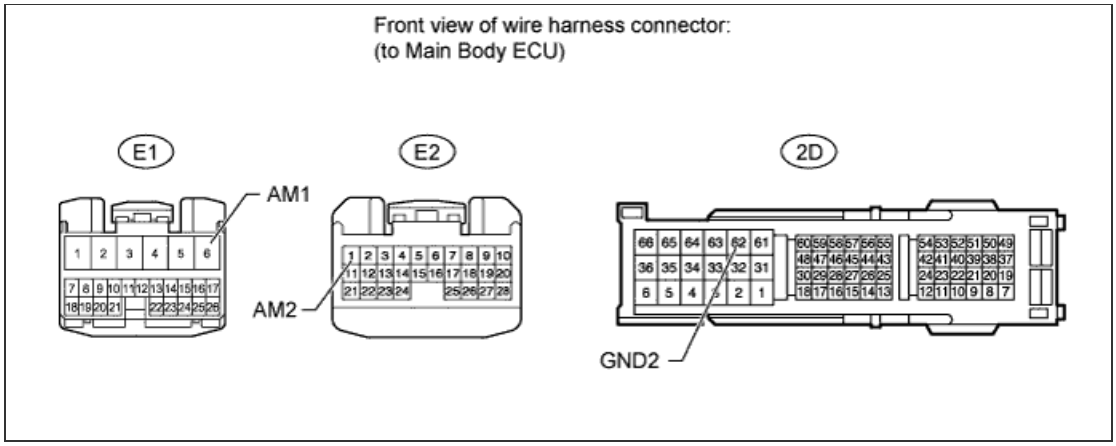
B → USE SIMULATION METHOD TO CHECK (Click here)

A

2.INSPECT FUSE (AM2)

a. Remove the AM2 fuse from the engine room relay block.

b. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
AM2 fuse	Always	Below 1 Ω

NG → REPLACE FUSE

OK

3.CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - BATTERY AND BODY GROUND)

a. Disconnect the E1, E2 and 2D main body ECU connectors.

b. Measure the voltage and resistance according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
E1-6 (AM1) - Body ground	Always	11 to 14 V
E2-1 (AM2) - Body ground	Always	11 to 14 V

Standard Resistance:

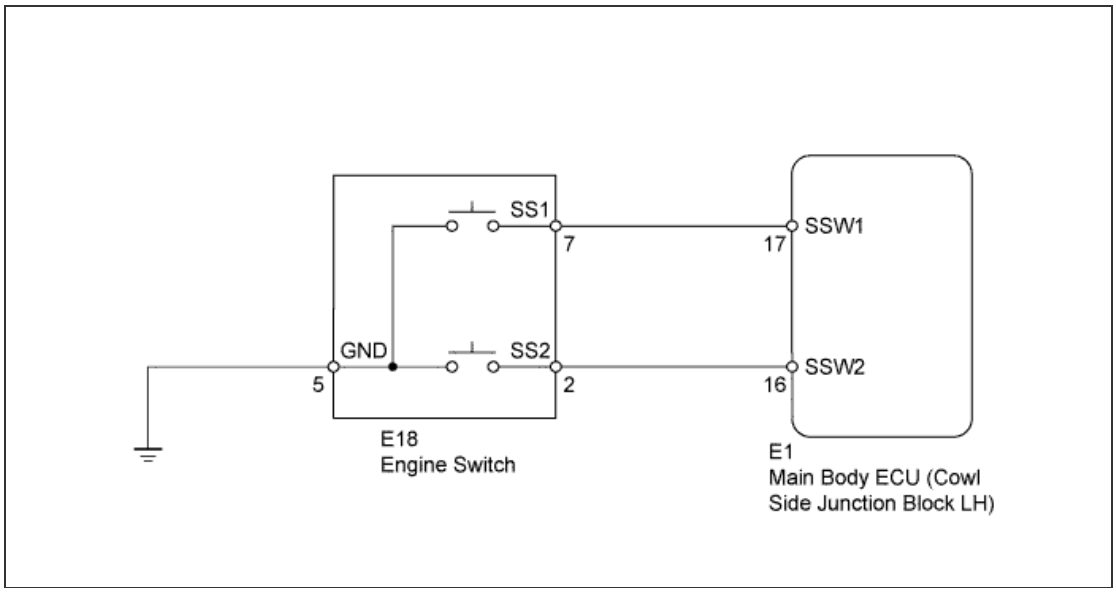
Tester Connection	Condition	Specified Condition
2D-62 (GND2) - Body ground	Always	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE MAIN BODY ECU

DTC B2278 Engine Switch Circuit Malfunction



for Preparation Click here

DESCRIPTION

This DTC is stored when: 1) a malfunction is detected between the main body ECU and the engine switch; or 2) either of the switches inside the engine switch is malfunctioning.

DTC Code	Detection Condition	Trouble Area
B2278	Communication is abnormal between the main body ECU and engine switch or the engine switch is defective.	• Main body ECU • Engine switch • Harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

1.READ VALUE USING INTELLIGENT TESTER (START SWITCH 1, 2)

a. Use the Data List to check if the engine switch is functioning properly.

Main Body

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Start Switch 1	Start Switch 1/ON or OFF	ON: Engine switch on (IG) OFF: Engine switch off	-
Start Switch 2	Start Switch 2/ON or OFF	ON: Engine switch on (IG) OFF: Engine switch off	-

OK:

When the engine switch is turned on (IG), ON is displayed on the intelligent tester.

NG → Go to step 3

OK

2.CHECK WHETHER DTC OUTPUT RECURS

a. Clear the DTCs (Click here).

b. Turn the engine switch on (IG), and check whether DTC B2278 is output.

Result

Result	Proceed to
No DTC output	A

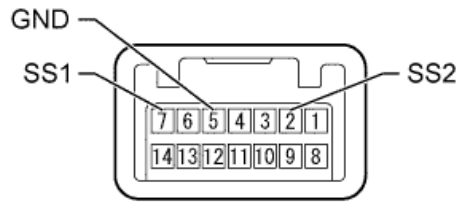
DTC B2278 output	B

B → REPLACE MAIN BODY ECU

A

USE SIMULATION METHOD TO CHECK (Click here)

3.INSPECT ENGINE SWITCH



a. Disconnect the E18 engine switch connector.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
7 (SS1) - 5 (GND)	Pushed	Below 1 Ω
2 (SS2) - 5 (GND)	Pushed	Below 1 Ω
7 (SS1) - 5 (GND)	Not pushed	10 kΩ or higher
2 (SS2) - 5 (GND)	Not pushed	10 kΩ or higher

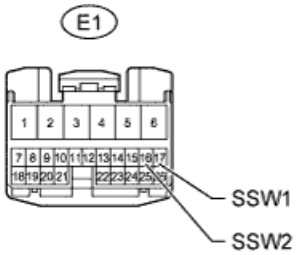
Component without harness connected:
(Engine Switch)

Result

Result	Proceed to
Within specified range	A
Outside specified range (for 1GR-FE)	B
Outside specified range (for 2UZ-FE)	C
Outside specified range (for 3UR-FE)	D
Outside specified range (for 1VD-FTV)	E

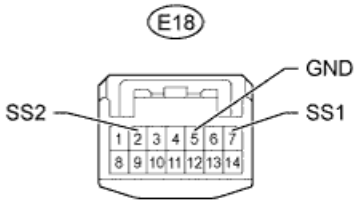
B → REPLACE ENGINE SWITCH (Click here)

C → REPLACE ENGINE SWITCH (Click here)



D → REPLACE ENGINE SWITCH (Click here)

E → REPLACE ENGINE SWITCH (Click here)



A

4.CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - ENGINE SWITCH AND BODY GROUND)

Front view of wire harness connector:
(to Main Body ECU)

Front view of wire harness connector:
(to Engine Switch)

a. Disconnect the E1 main body ECU connector.

b. Disconnect the E18 engine switch connector.

c. Measure the resistance according to the value(s) in the table below.

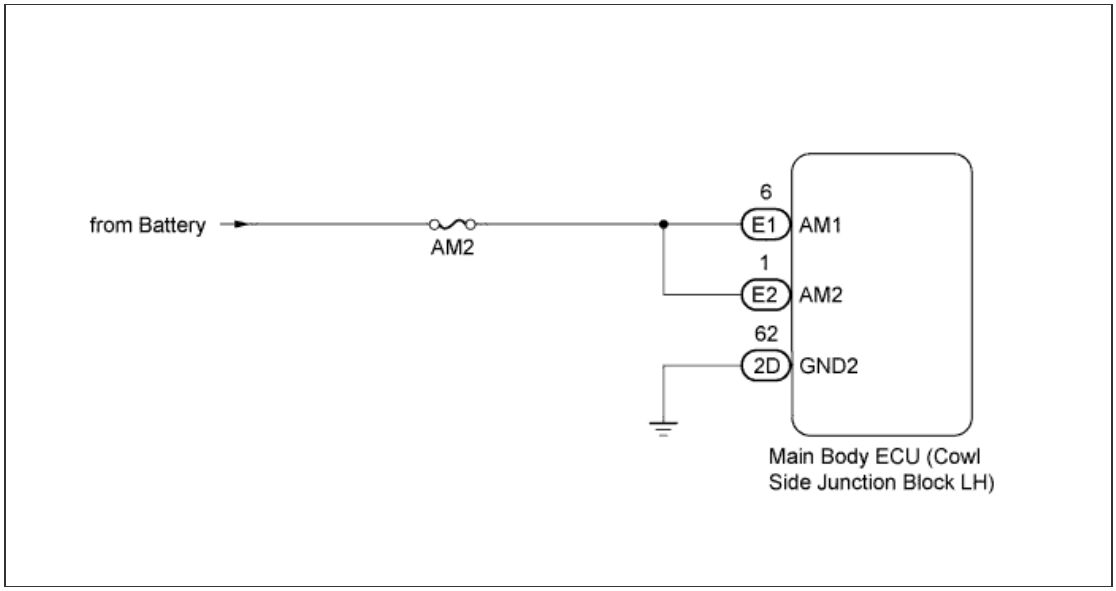
Standard Resistance:

Tester Connection	Condition	Specified Condition
E1-17 (SSW1) - E18-7 (SS1)	Always	Below 1 Ω
E1-16 (SSW2) - E18-2 (SS2)	Always	Below 1 Ω
E18-5 (GND) - Body ground	Always	Below 1 Ω
E1-17 (SSW1) or E18-7 (SS1) - Body ground	Always	10 kΩ or higher
E1-16 (SSW2) or E18-2 (SS2) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK → REPLACE MAIN BODY ECU

DTC B2271 Ignition Hold Monitor Malfunction



for Preparation Click here

DESCRIPTION

This DTC is stored when the IG output circuits inside the main body ECU are open or shorted.

DTC Code	Detection Condition	Trouble Area
B2271	The IG1 No. 3 relay actuation circuit or integration relay (IG2 relay) actuation circuit inside the main body ECU is abnormal.	• Main body ECU • AM2 fuse • Harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

1.CHECK WHETHER DTC OUTPUT RECURS

a. Clear the DTCs (Click here).

b. Check whether DTC B2271 is output.

Result

Result	Proceed to
DTC B2271 output	A
No DTC output	B

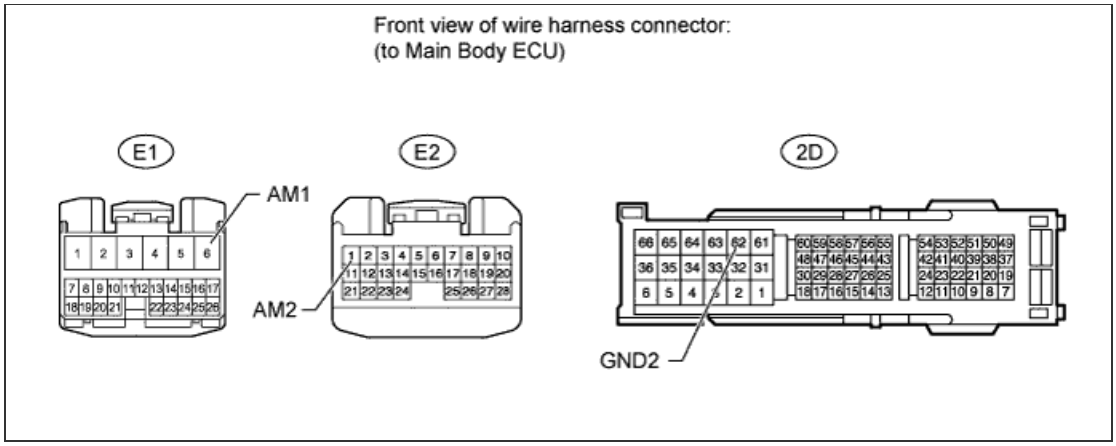
B → USE SIMULATION METHOD TO CHECK (Click here)

A

2.INSPECT FUSE (AM2)

a. Remove the AM2 fuse from the engine room relay block.

b. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
AM2 fuse	Always	Below 1 Ω

NG → REPLACE FUSE

OK

3.CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - BATTERY AND BODY GROUND)

a. Disconnect the E1, E2 and 2D main body ECU connectors.

b. Measure the voltage and resistance according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
E1-6 (AM1) - Body ground	Always	11 to 14 V
E2-1 (AM2) - Body ground	Always	11 to 14 V

Standard Resistance:

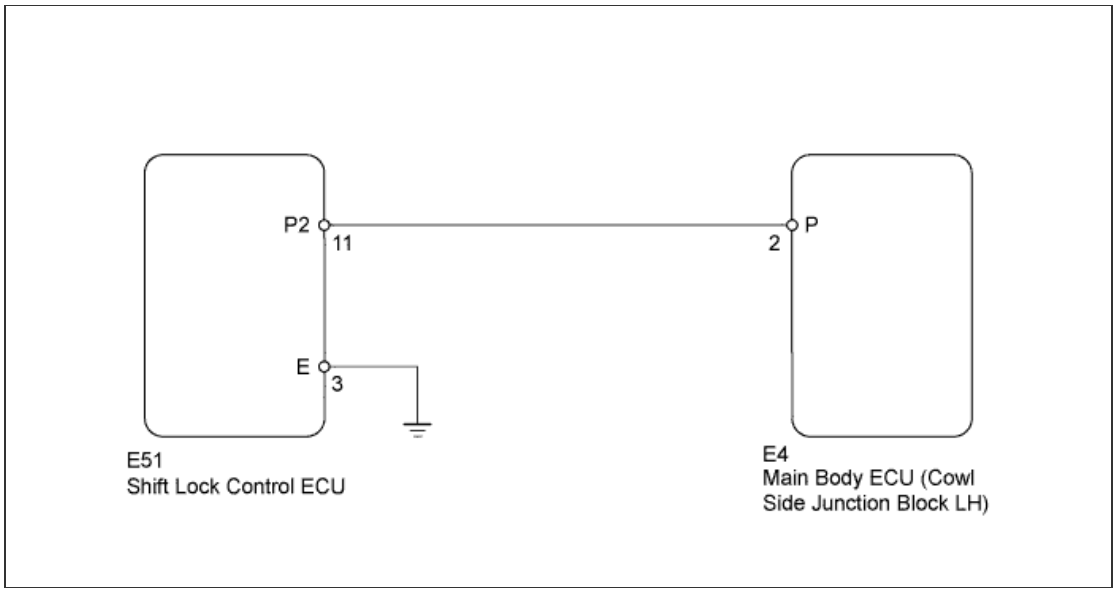
Tester Connection	Condition	Specified Condition
2D-62 (GND2) - Body ground	Always	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE MAIN BODY ECU

DTC B2281 "P" Signal Malfunction



for Preparation Click here

DESCRIPTION

This DTC is stored when there is an abnormal circuit between the main body ECU and the shift lock control ECU.

DTC Code	Detection Condition	Trouble Area
B2281	Communication or the communication line is abnormal between the main body ECU and shift lock control ECU.	• Main body ECU • Shift lock control ECU • Harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

1.READ VALUE USING INTELLIGENT TESTER (SHIFT P SIGNAL)

a. Use the Data List to check if the shift position signal is functioning properly.

Main Body

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Shift P Signal	Shift P position signal/ON or OFF	ON: Shift lever in P OFF: Shift lever not in P	-

Result

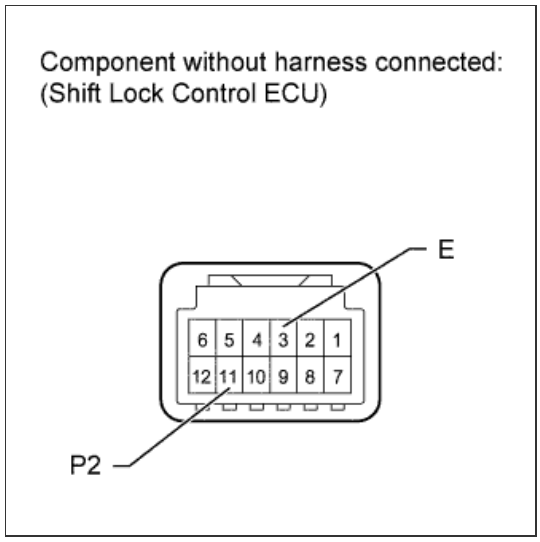
Result	Proceed to
Display on the intelligent tester does not change according to shift lever operation	A
Display on the intelligent tester changes according to shift lever operation	B

B → REPLACE MAIN BODY ECU

A

2.INSPECT SHIFT LOCK CONTROL ECU

a. Disconnect the E51 shift lock control ECU connector.



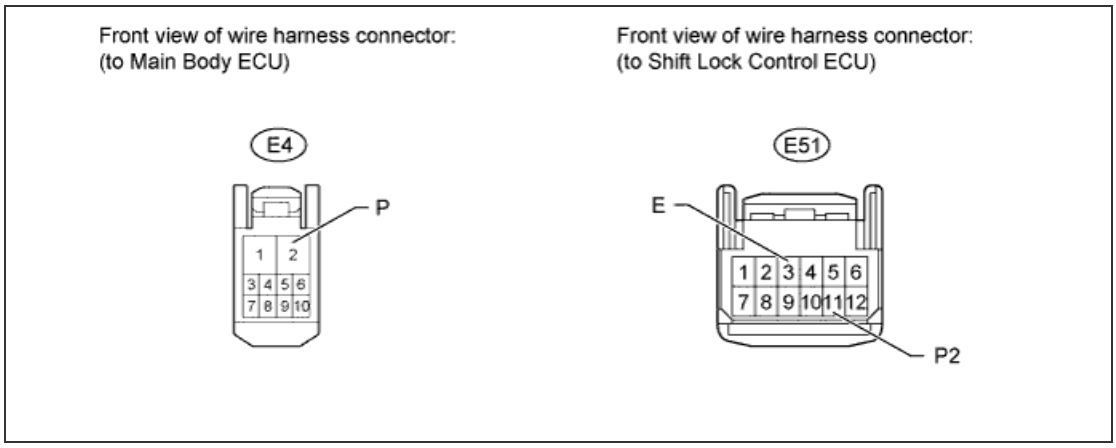
b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
11 (P2) - 3 (E)	Shift lever not in P	Below 1 Ω
11 (P2) - 3 (E)	Shift lever in P	10 kΩ or higher

Result

Result	Proceed to
Within specified range	A
Outside specified range (for 1GR-FE, 2UZ-FE)	B
Outside specified range (for 1VD-FTV)	C



B → REPLACE SHIFT LOCK CONTROL ECU (Click here)

C → REPLACE SHIFT LOCK CONTROL ECU (Click here)

A

3.CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - SHIFT LOCK CONTROL ECU AND BODY GROUND)

a. Disconnect the E4 main body ECU connector.

b. Disconnect the E51 shift lock control ECU connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

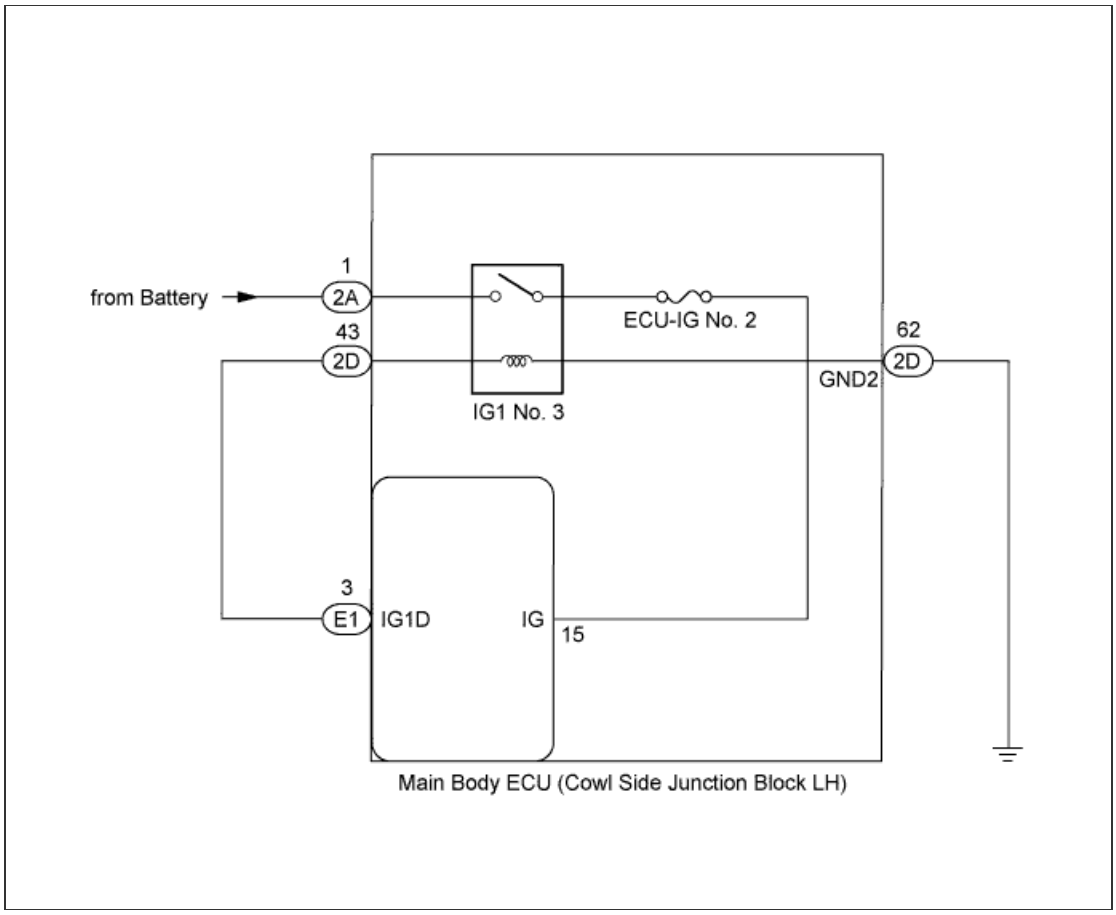
Tester Connection	Condition	Specified Condition
E4-2 (P) - E51-11 (P2)	Always	Below 1 Ω
E51-3 (E) - Body ground	Always	Below 1 Ω
E4-2 (P) or E51-11 (P2) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE MAIN BODY ECU

DTC B2272 Ignition 1 Monitor Malfunction



for Preparation Click here

DESCRIPTION

This DTC is stored when a malfunction occurs in the IG1D output circuit, which is between the IG1 No. 3 relay actuation circuit inside the main body ECU and the IG1 No. 3 relay.

DTC Code	Detection Condition	Trouble Area
B2272	The IG1 No. 3 relay actuation circuit inside the main body ECU or other related circuit is malfunctioning.	• Main body ECU • Harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

1.READ VALUE USING INTELLIGENT TESTER (IG1 RELAY MONITOR (OUTSIDE))

a. Use the Data List to check if the IG1 No. 3 relay is functioning properly.

Main Body

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
IG1 Relay Monitor (Outside)	IG1 No. 3 relay outer relay monitor/ON or OFF	ON: Engine switch on (IG) OFF: Engine switch off	-

OK:

When the engine switch is turned on (IG), ON is displayed on the intelligent tester.

NG → Go to step 3

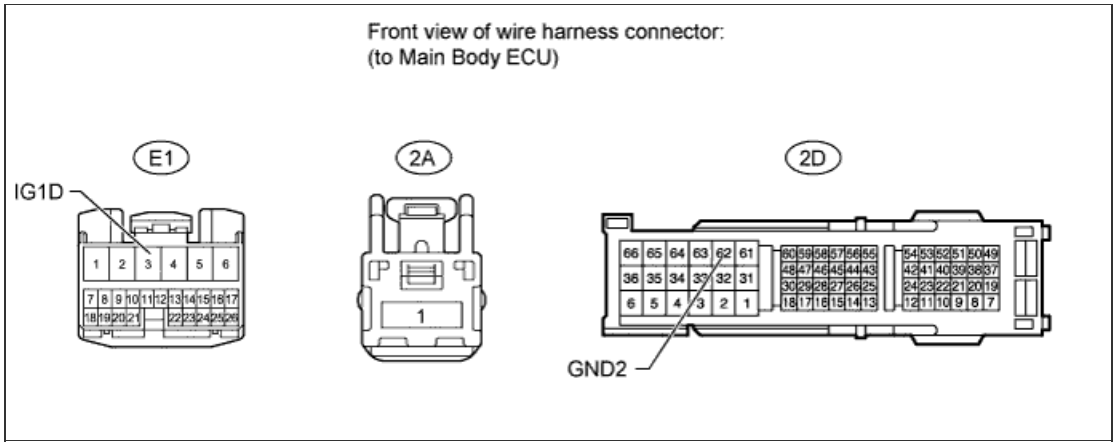
OK

2.CHECK WHETHER DTC OUTPUT RECURS

a. Clear the DTCs (Click here).

b. Turn the engine switch on (IG), wait at least 10 seconds, and check whether DTC B2272 is output.

Result



Result	Proceed to
No DTC output	A
DTC B2272 output	B

B → REPLACE MAIN BODY ECU

A

USE SIMULATION METHOD TO CHECK (**Click here**)

3.CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - BATTERY AND BODY GROUND)

a. Disconnect the E1, 2A and 2D main body ECU connectors.

b. Measure the voltage and resistance according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
2A-1 - Body ground	Always	11 to 14 V

Standard Resistance:

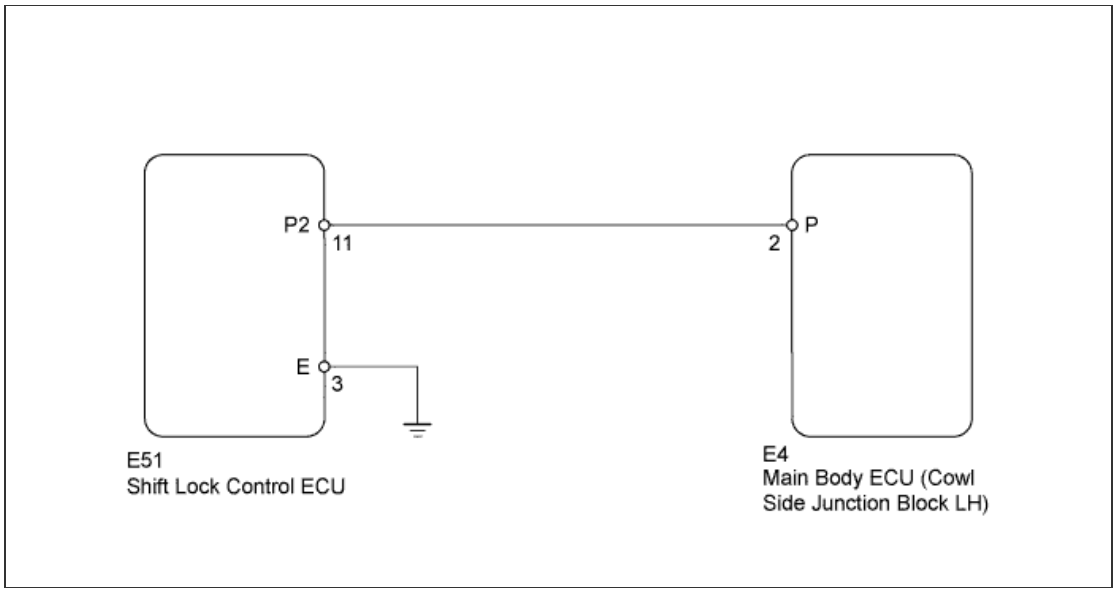
Tester Connection	Condition	Specified Condition
E1-3 (IG1D) - 2D-43	Always	Below 1 Ω
2D-62 (GND2) - Body ground	Always	Below 1 Ω
E1-3 (IG1D) or 2D-43 - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE MAIN BODY ECU

DTC B2281 "P" Signal Malfunction



for Preparation Click here

DESCRIPTION

This DTC is stored when there is an abnormal circuit between the main body ECU and the shift lock control ECU.

REPLACE MAIN BODY ECU

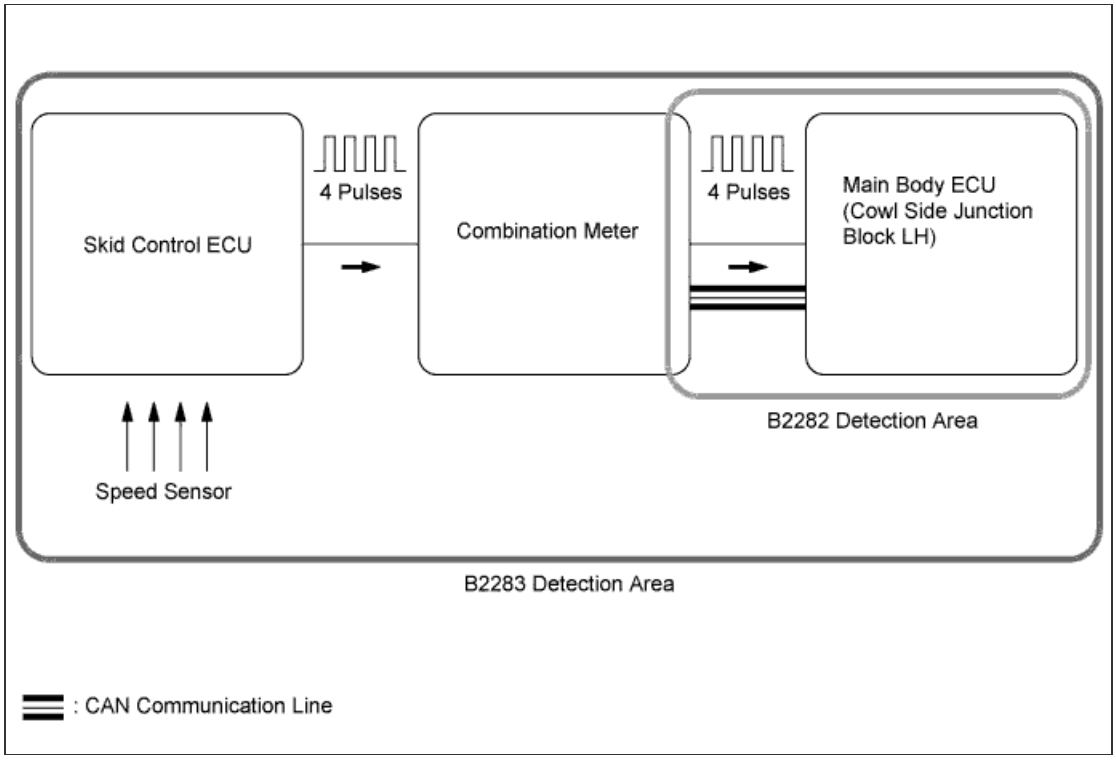
DTC B2282 Vehicle Speed Signal Malfunction

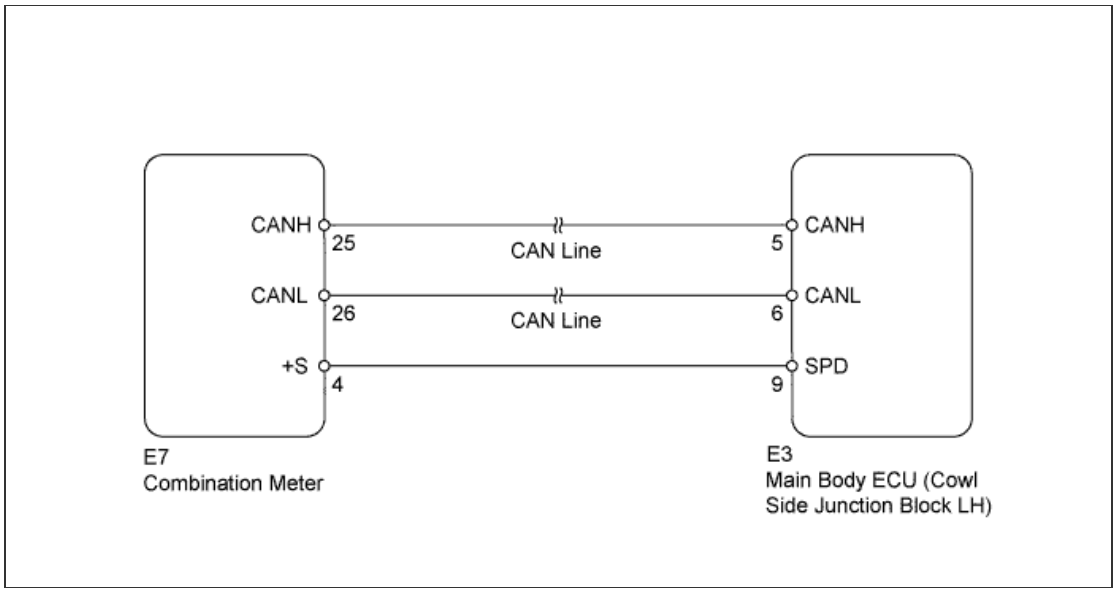
DTC B2283 Vehicle Speed Sensor Malfunction

for Preparation Click here



DESCRIPTION

The main body ECU and the combination meter are connected with a cable and the CAN communication line. DTC B2282 is stored when signals, transmitted through the cable and communication line, do not match.



DTC Code	Detection Condition	Trouble Area
B2282	When the following conditions are met: • Signals between the main body ECU and combination meter are inconsistent. • A malfunction is detected in the circuit between the vehicle speed sensor and combination meter.	• Main body ECU • Combination meter assembly • Harness or connector

The skid control ECU converts signals from the speed sensor into 4-pulse signals and sends them to the combination meter. After these signals are converted into a more precise rectangular waveform by the waveform shaping circuit inside the combination meter, they are then transmitted to the main body ECU. The main body ECU determines the vehicle speed based on the frequencies of these pulse signals.

DTC Code	Detection Condition	Trouble Area
B2283	When both of the conditions below are met: • Vehicle speed decreases significantly. • Vehicle speed does not correspond with engine speed.	• Main body ECU • Combination meter assembly • Speed sensor • Skid control ECU • Harness or connector

WIRING DIAGRAM

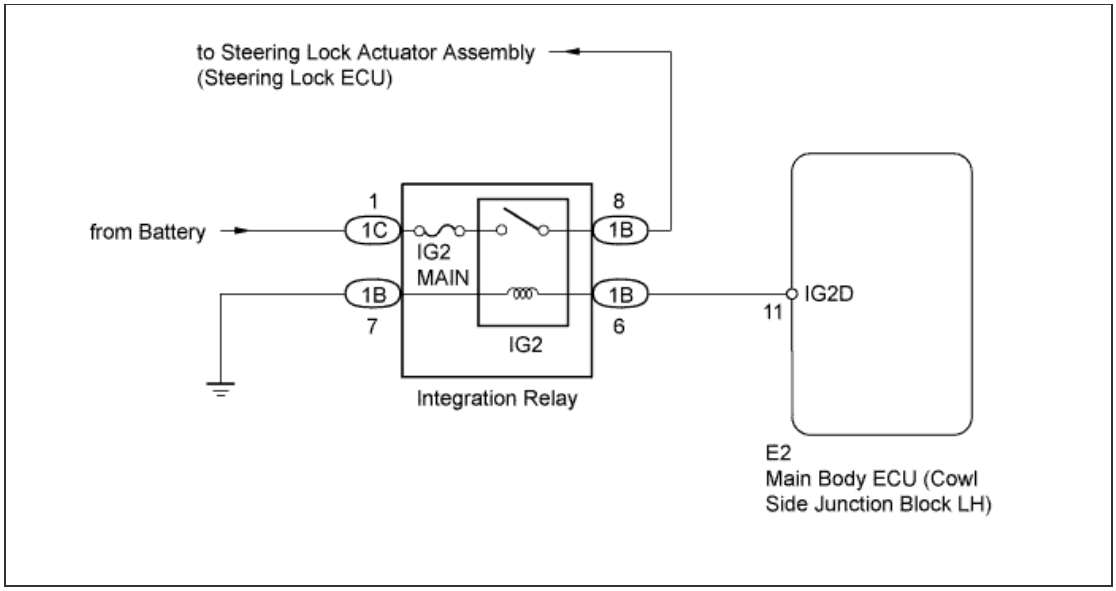
DTC B2273 Ignition 2 Monitor Malfunction



for Preparation Click here

DESCRIPTION

This DTC is stored when a malfunction occurs in the IG2D output circuit, which is between the integration relay (IG2 relay) actuation circuit inside the main body ECU and the integration relay (IG2 relay).

DTC Code	Detection Condition	Trouble Area
B2273	The integration relay (IG2 relay) actuation circuit inside the main body ECU or other related circuit is malfunctioning.	• Main body ECU • IG2 MAIN fuse • Integration relay (IG2 relay) • Harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

1.READ VALUE USING INTELLIGENT TESTER (IG2 RELAY MONITOR (INSIDE))

a. Use the Data List to check if the integration relay (IG2 relay) is functioning properly.

Main Body

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
IG2 Relay Monitor (Inside)	Integration relay (IG2 relay) inner relay monitor/ON or OFF	ON: Engine switch on (IG) OFF: Engine switch off	-

OK:

When the engine switch is turned on (IG), ON is displayed on the tester.

NG → Go to step 3

OK

2.CHECK WHETHER DTC OUTPUT RECURS

a. Clear the DTCs (Click here).

b. Turn the engine switch on (IG), wait at least 10 seconds, and check whether DTC B2273 is output.

Result

Result	Proceed to
No DTC output	A
DTC B2273 output	B

B → REPLACE MAIN BODY ECU

A

USE SIMULATION METHOD TO CHECK (Click here)

3.INSPECT FUSE (IG2 MAIN)

a. Remo e the IG2 MAIN fuse from the integration relay.

b. Measure the resistance according to the value(s) in the table below.

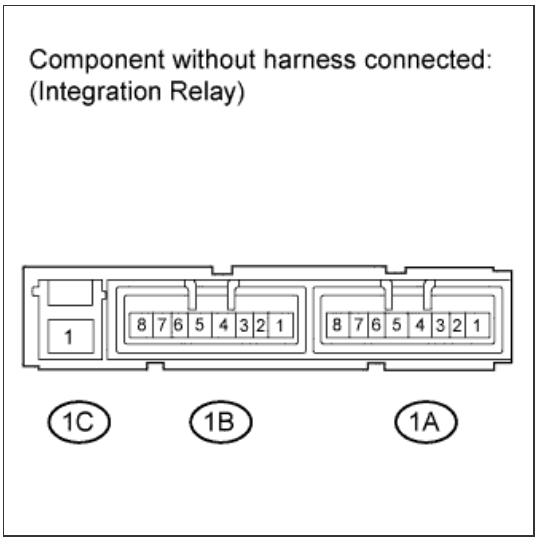
Standard Resistance:

Tester Connection	Condition	Specified Condition
IG2 MAIN fuse	Always	Below 1 Ω

NG → REPLACE FUSE (IG2 MAIN)

OK

4.INSPECT INTEGRATION NO.1 RELAY (IG2 RELAY)

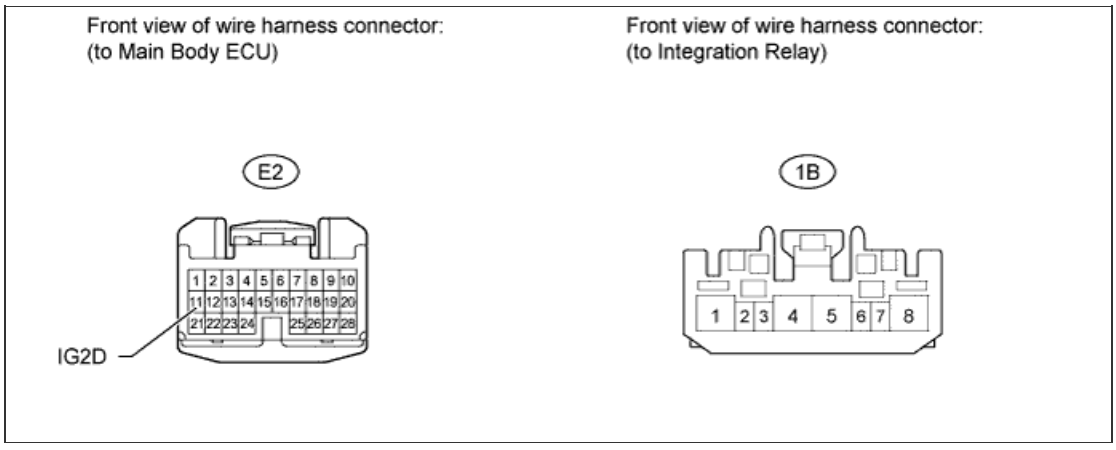


a. Install the IG2 MAIN fuse to the integration relay.

b. Remove the integration relay from the engine room relay block.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:



Tester Connection	Condition	Specified Condition
1B-8 - 1C-1	Battery voltage applied to terminals 1B-6 and 1B-7	Below 1 Ω
1B-8 - 1C-1	Battery voltage not applied to terminals 1B-6 and 1B-7	10 kΩ or higher

NG → REPLACE INTEGRATION NO.1 RELAY (IG2 RELAY)

OK

5.CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - INTEGRATION RELAY (IG2 RELAY) AND BODY GROUND)

a. Disconnect the E2 main body ECU connector.

b. Disconnect the B integration relay connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E2-11 (IG2D) - 1B-6	Always	Below 1 Ω
1B-7 - Body ground	Always	Below 1 Ω
E2-11 (IG2D) or 1B-6 - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK → REPLACE MAIN BODY ECU

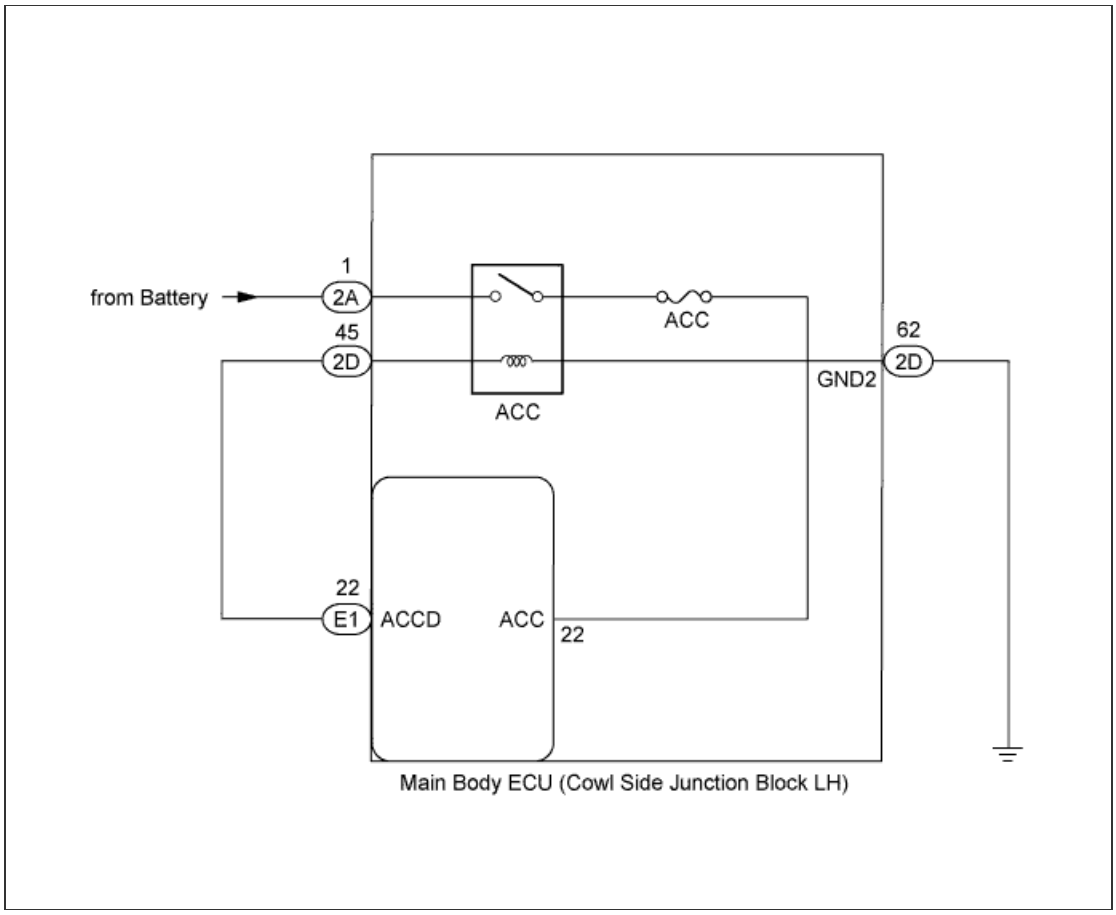
DTC B2274 ACC Monitor Malfunction



for Preparation Click here

DESCRIPTION

This DTC is stored when a malfunction occurs in the ACCD output circuit, which is between the ACC relay actuation circuit inside the main body ECU and the ACC relay.

DTC Code	Detection Condition	Trouble Area
B2274	The ACC relay actuation circuit inside the main body ECU or other related circuit is malfunctioning.	• Main body ECU • Harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

1.READ VALUE USING INTELLIGENT TESTER (ACC RELAY MONITOR)

a. Use the Data List to check if the ACC relay is functioning properly.

Main Body

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
ACC Relay Monitor	ACC relay monitor/ON or OFF	ON: Engine switch on (IG) OFF: Engine switch off	-

OK:

When the engine switch is turned on (IG), ON is displayed on the intelligent tester.

NG → Go to step 3

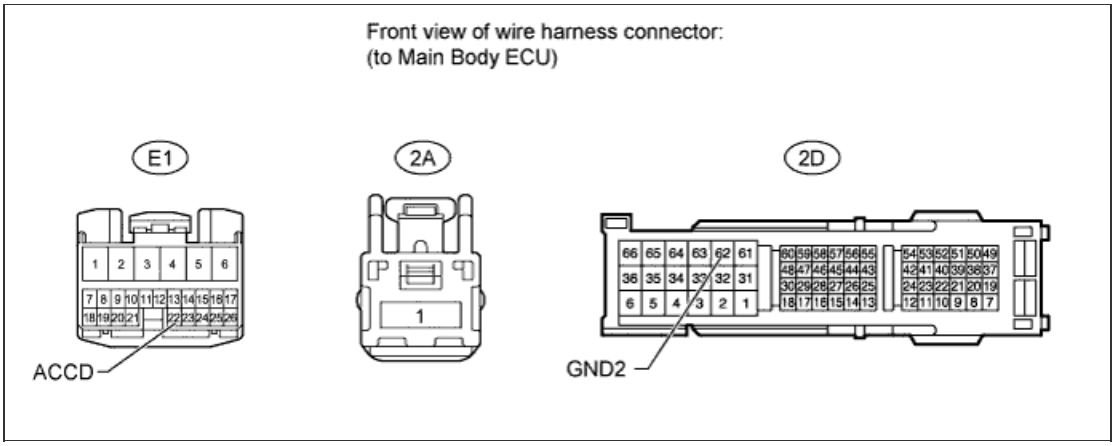
OK

2.C ECK WHETHER DTC OUTPUT RECURS

a. Clear the DTCs Click here .

b. Turn the engine switch on I , wait at least seconds, and check whether DTC B2274 is output.

Result



Result	Proceed to
No DTC output	A
DTC B2274 output	B

B → REPLACE MAIN BODY ECU

A

USE SIMULATION METHOD TO CHECK (Click here)

3.CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - BATTERY AND BODY GROUND)

a. Disconnect the E , 2A and 2D main body ECU connectors.

b. Measure the voltage and resistance according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
2A-1 - Body ground	Always	11 to 14 V

Standard Resistance:

Tester Connection	Condition	Specified Condition
E1-22 (ACCD) - 2D-45	Always	Below 1 Ω
2D-62 (GND2) - Body ground	Always	Below 1 Ω
E1-22 (ACCD) or 2D-45 - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

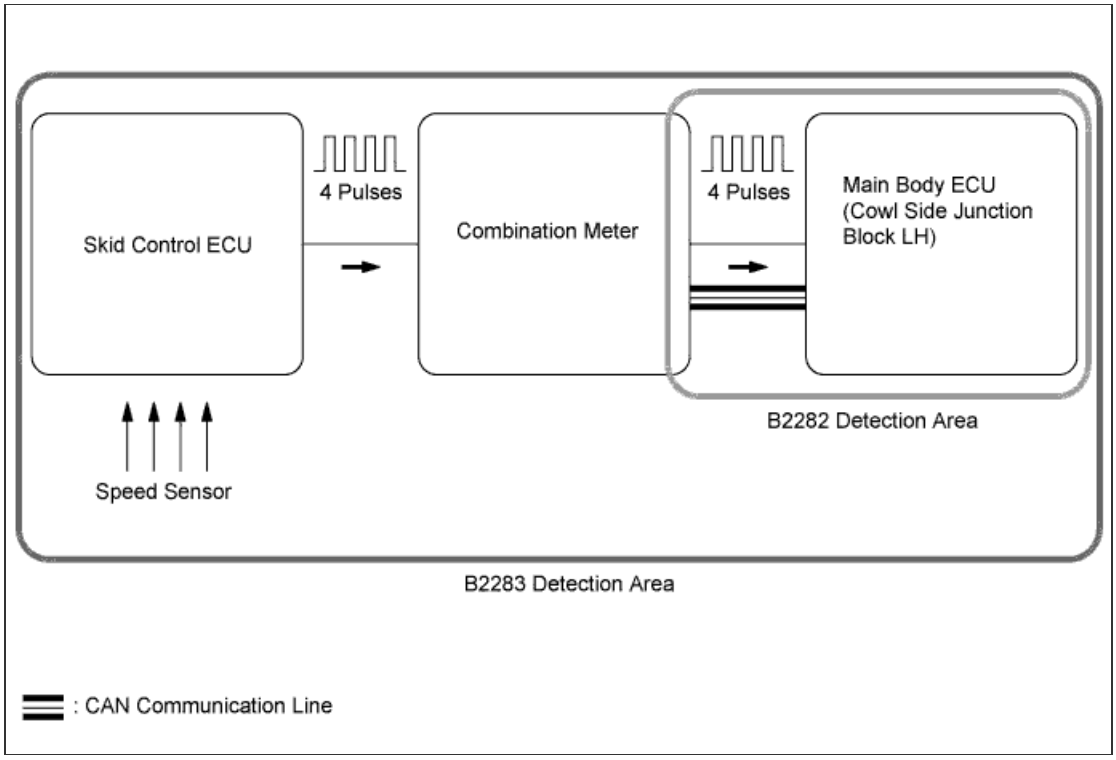
OK

REPLACE MAIN BODY ECU

DTC B2282 Vehicle Speed Signal Malfunction

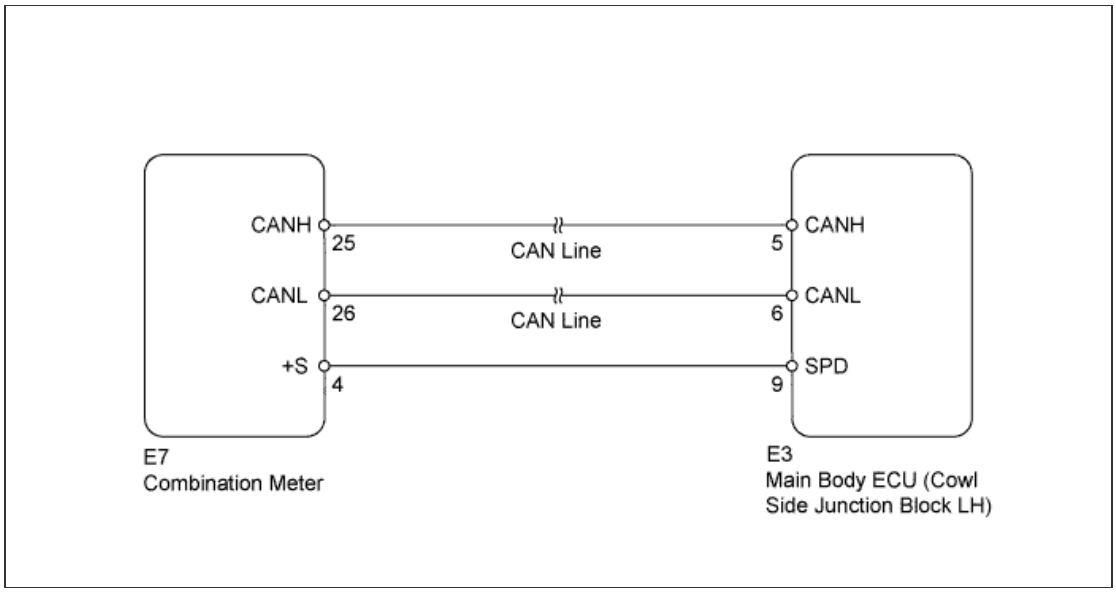
DTC B2283 Vehicle Speed Sensor Malfunction

for Preparation Click here



DESCRIPTION

The main body ECU and the combination meter are connected with a cable and the CAN communication line. DTC B2282 is stored when signals, transmitted through the cable and communication line, do not match.



DTC Code	Detection Condition	Trouble Area
B2282	When the following conditions are met: • Signals between the main body ECU and combination meter are inconsistent. • A malfunction is detected in the circuit between the vehicle speed sensor and combination meter.	• Main body ECU • Combination meter assembly • Harness or connector

The skid control ECU converts signals from the speed sensor into 4-pulse signals and sends them to the combination meter. After these signals are converted into a more precise rectangular waveform by the waveform shaping circuit inside the combination meter, they are then transmitted to the main body ECU. The main body ECU determines the vehicle speed based on the frequencies of these pulse signals.

DTC Code	Detection Condition	Trouble Area
B2283	When both of the conditions below are met: • Vehicle speed decreases significantly. • Vehicle speed does not correspond with engine speed.	• Main body ECU • Combination meter assembly • Speed sensor • Skid control ECU • Harness or connector

WIRING DIAGRAM

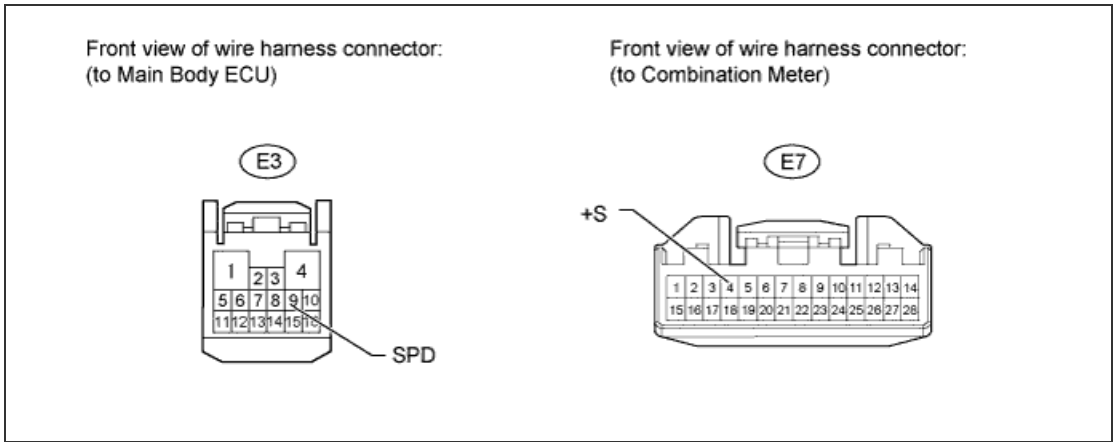
INSPECTION PROCEDURE

1.READ VALUE USING INTELLIGENT TESTER (VEHICLE SPEED SIGNAL)

a. Use the Data List to check if the vehicle speed signal is functioning properly.

Main Body

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Vehicle Speed Signal	Vehicle speed signal/STOP or RUN	STOP: Vehicle stopped RUN: Vehicle running	-



Result

Result	Proceed to
Display on the intelligent tester does not change according to vehicle condition	A
Display on the intelligent tester changes according to vehicle condition	B

B → REPLACE MAIN BODY ECU

A

2.CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - COMBINATION METER)

a. Disconnect the E3 main body ECU connector.

b. Disconnect the E7 combination meter connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E3-9 (SPD) - E7-10 (+S)	Always	Below 1 Ω
E3-9 (SPD) or E7-10 (+S) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3.REPLACE MAIN BODY ECU

a. Temporarily replace the main body ECU with a new or normally functioning one.

b. Check whether DTC B2282 and B2283 are output.

Result

Result	Proceed to
DTC not output	A
DTC output (w/ Multi-information Display)	B

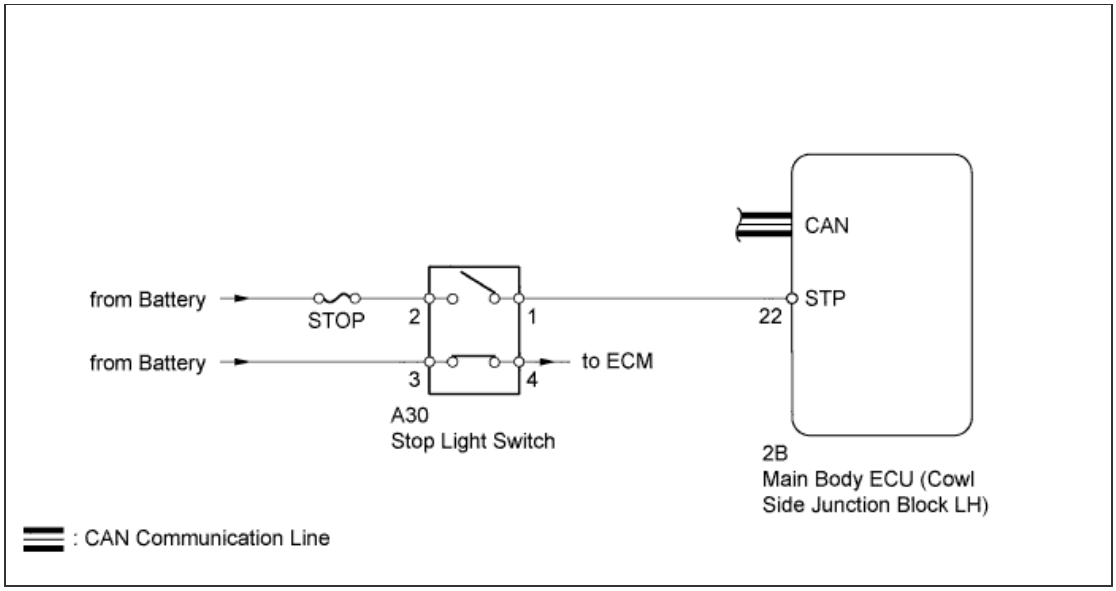
REPLACE MAIN BODY ECU

DTC B2284 Brake Signal Malfunction



for Preparation Click here

DESCRIPTION

This DTC is stored when there is an inconsistency between the circuit between the main body ECU and stop light switch, and the CAN communication signal between the main body ECU and ECM.

DTC No.	Detection Condition	Trouble Area
B2284	The circuit between the main body ECU and stop light switch, and the CAN communication signal between the main body ECU and ECM are inconsistent.	• Main body ECU • Stop light switch • STOP fuse • Harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

1.READ VALUE USING INTELLIGENT TESTER (STOP LIGHT SWITCH)

a. Use the Data List to check if the stop light switch is functioning properly.

Main Body

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Stop Light SW	Stop light switch/ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-

Result

Result	Proceed to
Display on the intelligent tester does not change according to brake pedal operation	A
Display on the intelligent tester changes according to brake pedal operation	B

B → REPLACE MAIN BODY ECU

A

2.INSPECT FUSE (STOP)

a. Remove the STOP fuse from the engine room relay block.

b. Measure the resistance according to the alue s in the table below.

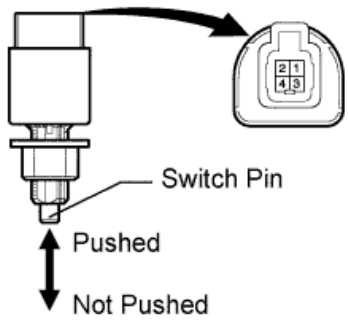
Standard Resistance:

Tester Connection	Condition	Specified Condition
STOP fuse	Always	Below 1 Ω

NG → REPLACE FUSE

OK

3.INSPECT STOP LIGHT SWITCH



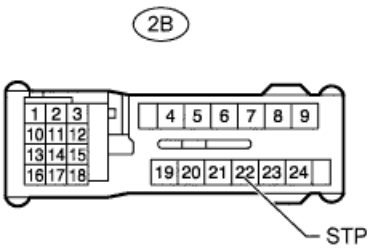
a. Disconnect the A30 stop light switch connector.

b. Measure the resistance according to the value(s) in the table below.

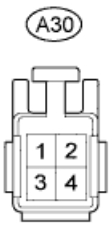
Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
1 - 2	Stop light switch pin not pushed	Below 1 Ω
3 - 4	Stop light switch pin pushed	Below 1 Ω
1 - 2	Stop light switch pin pushed	10 kΩ or higher
3 - 4	Stop light switch pin not pushed	10 kΩ or higher

Component without harness connected:
(Stop Light Switch)



NG → REPLACE STOP LIGHT SWITCH (Click here)



OK

4.CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - BATTERY AND STOP LIGHT SWITCH)

Front view of wire harness connector:
(to Main Body ECU)

Front view of wire harness connector:
(to Stop Light Switch)

a. Disconnect the 2B main body ECU connector.

b. Disconnect the A30 stop light switch connector.

c. Measure the voltage and resistance according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
A30-2 - Body ground	Always	11 to 14 V

Standard Resistance:

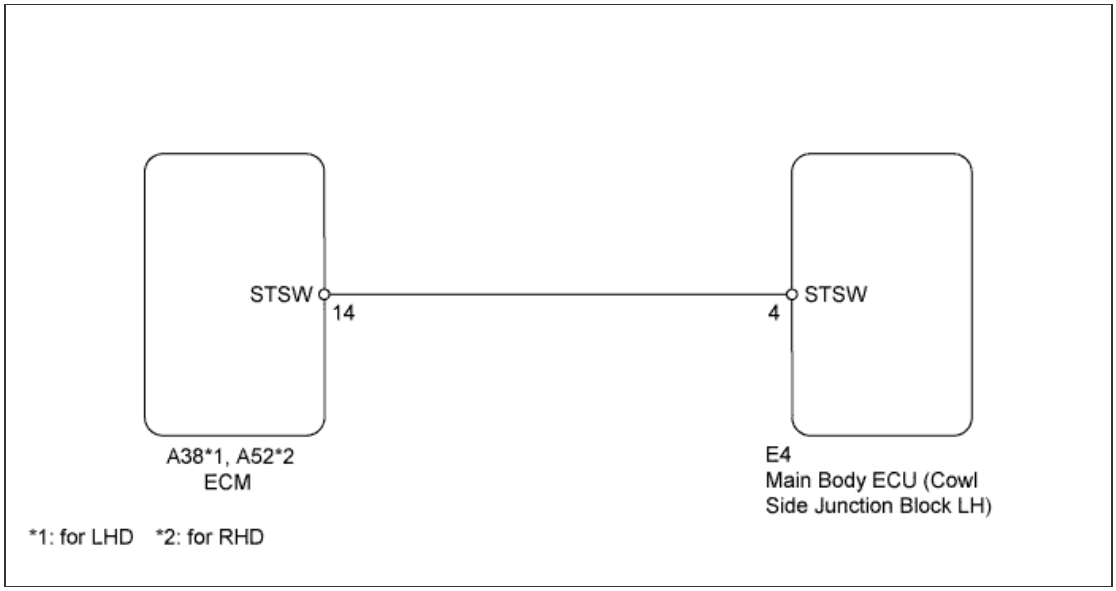
Tester Connection	Condition	Specified Condition
2B-22 (STP) -		

A	lwayAs	Below 1 Ω
2B-22 (STP) or A30-1 - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK → REPLACE MAIN BODY ECU

DTC B2275 STSW Monitor Malfunction



for Preparation Click here

DESCRIPTION

This DTC is stored when the engine start request signal circuit inside the main body ECU is open or shorted.

DTC Code	Detection Condition	Trouble Area
B2275	The engine start request signal circuit inside the main body ECU or other related circuit is malfunctioning.	• Main body ECU • ECM • Harness or connector

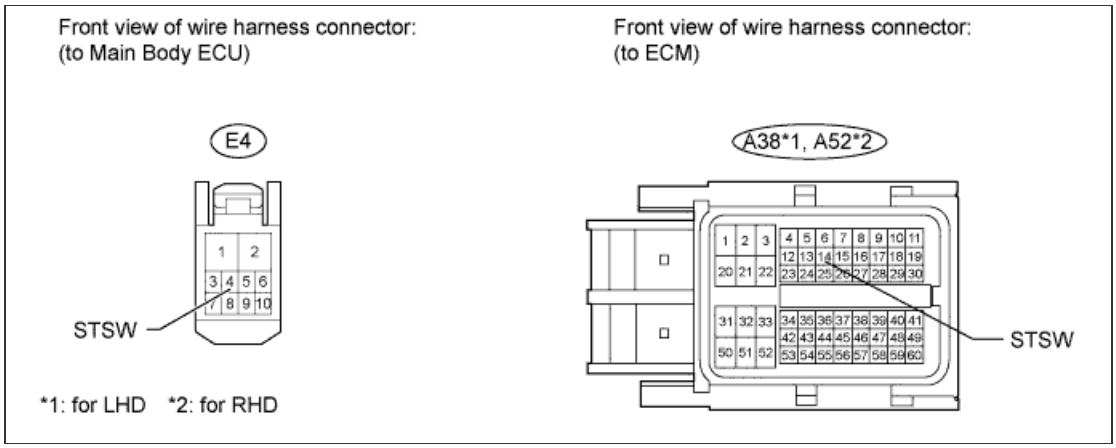
WIRING DIAGRAM

INSPECTION PROCEDURE

1.CHECK WHETHER DTC OUTPUT RECURS

a. Clear the DTCs (Click here).

b. Depress the brake pedal (for A/T) or clutch pedal (for M/T) with the engine switch on (IG), wait at least 15 seconds, and check whether DTC B2275 is output.



Result

Result	Proceed to
DTC B2275 output	A
No DTC output	B

B → USE SIMULATION METHOD TO CHECK (Click here)

A

2.CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - ECM)

a. Disconnect the E main body ECU connector.

b. Disconnect the A38 (for LHD) or A52 (for RHD) ECM connector.

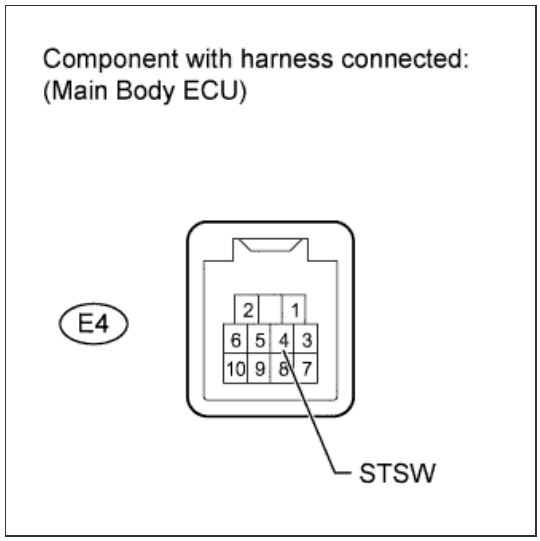
c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E4-4 (STSW) - A38-14 (STSW)*1 E4-4 (STSW) - A52-14 (STSW)*2	Always	Below 1 Ω
E4-4 (STSW) or A38-14 (STSW) - Body ground*1 E4-4 (STSW) or A52-14 (STSW) - Body ground*2	Always	10 kΩ or higher

HINT:

*1: for LHD



*2: for RHD

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3.INSPECT MAIN BODY ECU

a. Measure the voltage according to the value(s) in the table below.

HINT:

The voltage is generated at terminal STSW for 0.3 seconds when the engine cranks.

Standard Voltage (for A/T):

Tester Connection	Condition	Specified Condition
E4-4 (STSW) - Body ground	Brake pedal depressed with shift lever in P, engine switch pushed once	11 to 14 V

Standard Voltage (for M/T):

Tester Connection	Condition	Specified Condition
E4-4 (STSW) - Body ground	Clutch pedal depressed, engine switch pushed once	11 to 14 V

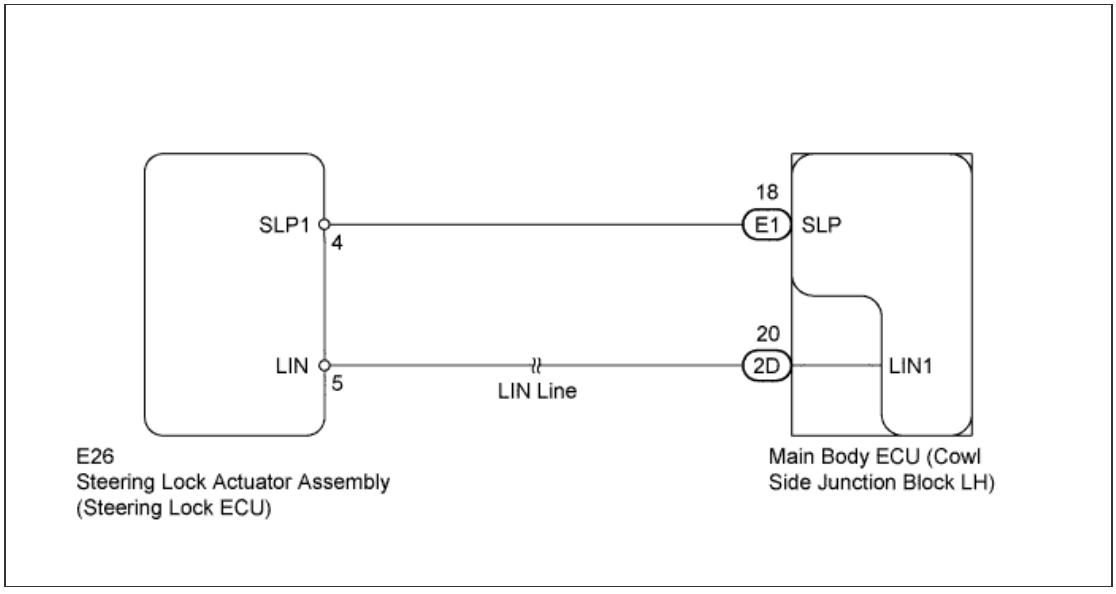
DTC B2285 Steering Lock Position Signal Circuit Malfunction

DTC B2288 Steering Lock Signal Circuit Malfunction



for Preparation Click here

DESCRIPTION

The main body ECU and the steering lock ECU are connected by a cable and the LIN communication line. These DTCs are stored when: 1) signals, transmitted through the cable and the communication line, do not match; or 2) a malfunction is detected in the circuit between the main body ECU and the steering lock ECU.

DTC Code	Detection Condition	Trouble Area
B2285	The cable and LIN information between the main body ECU and steering lock ECU is inconsistent.	• Main body ECU • Steering lock actuator assembly (steering lock ECU) • Harness or connector
B2288	After turning the engine switch from off to on (IG), the steering wheel does not unlock for a certain period of time (the ECU unlocks the steering wheel only when it receives an unlock signal from LIN communication and the cable).	• Main body ECU • Steering lock actuator assembly (steering lock ECU) • Harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

1.READ VALUE USING INTELLIGENT TESTER (STEERING UNLOCK SWITCH)

a. Use the Data List to check if the steering lock is functioning properly.

Main Body

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note

DTC B2277 Detecting Vehicle Submersion

for Preparation Click here

DESCRIPTION

This DTC is stored when the submersion circuit monitor inside the main body ECU detects that the vehicle has been submerged in water.

DTC Code	Detection Condition	Trouble Area
B2277	The submersion circuit monitor inside the main body ECU detects that the vehicle is submerged in water.	Main body ECU

INSPECTION PROCEDURE

HINT:

Before commencing troubleshooting, check if the main body ECU is wet. If it is, replace the main body ECU.

1.CHECK WHETHER DTC OUTPUT RECURS

a. Clear the DTCs (Click here).

b. Check whether DTC B2277 is output 30 seconds or more after the engine switch is turned on (IG).

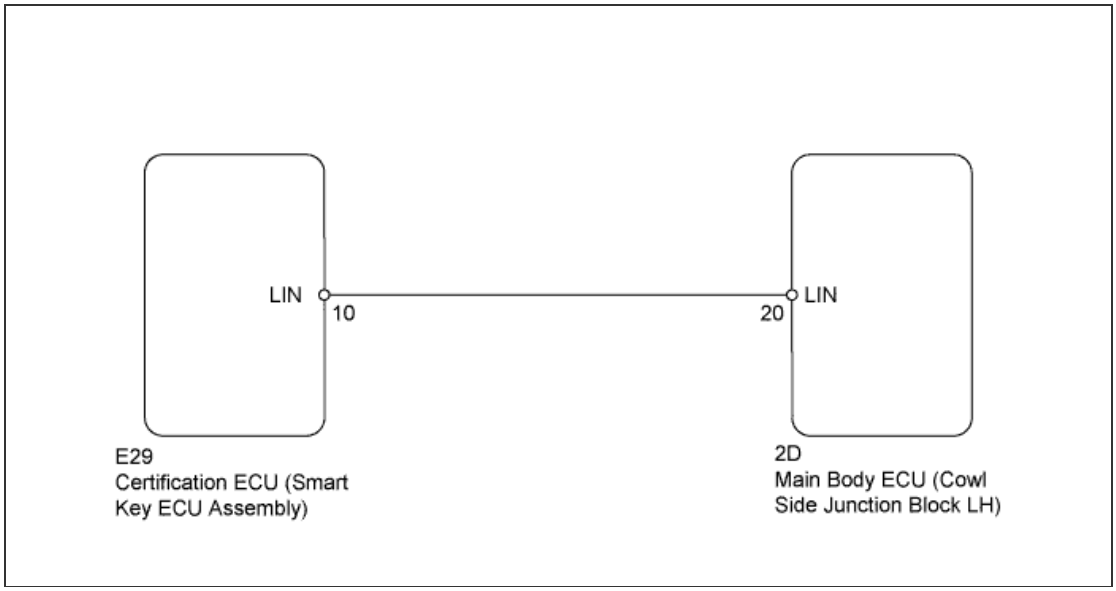
OK:
No DTC is output.

NG → **REPLACE MAIN BODY ECU**

OK ↓

USE SIMULATION METHOD TO CHECK (Click here)

DTC B2289 Key Collation Waiting Time Over



for Preparation Click here

DESCRIPTION

This DTC is stored when there is a LIN communication problem between the main body ECU and certification ECU (smart key ECU assembly) or when there is a problem in the engine immobiliser system.

DTC Code	Detection Condition	Trouble Area
B2289	When either of the following conditions is met: • Communication or the communication line is abnormal among the main body ECU, certification ECU (smart key ECU assembly), steering lock ECU and ID code box (immobiliser code ECU). • The immobiliser system malfunctions.	• Main body ECU • Engine switch • Certification ECU (smart key ECU assembly) • Key • Engine immobiliser system • Harness or connector

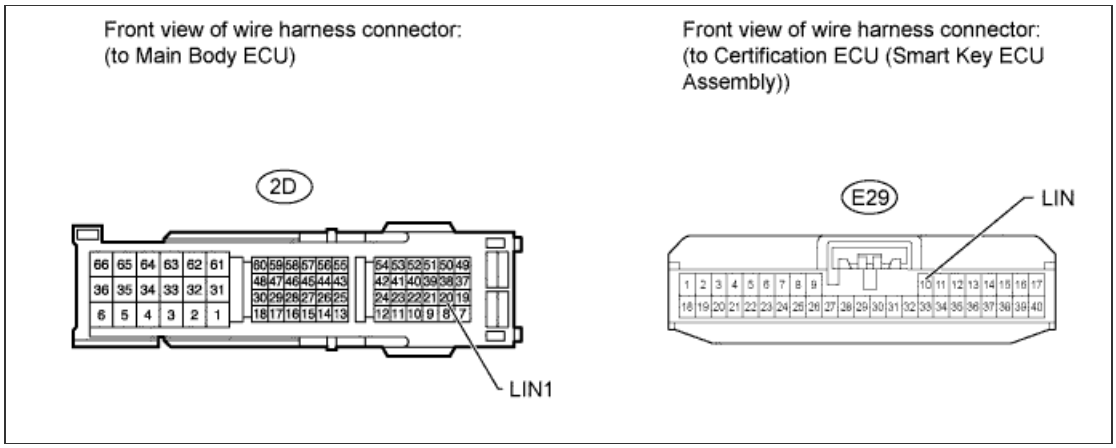
WIRING DIAGRAM

INSPECTION PROCEDURE

1.CHECK WHETHER DTC OUTPUT RECURS

a. Clear the DTCs (Click here).

b. Check whether DTC B2289 is output.



Result

Result	Proceed to
DTC B2289 output	A
No DTC output	B

B → USE SIMULATION METHOD TO CHECK (Click here)

A

2.CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - CERTIFICATION ECU (SMART KEY ECU ASSEMBLY))

a. Disconnect the 2D main body ECU connector.

b. Disconnect the E29 certification ECU (smart key ECU assembly) connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
2D-20 (LIN1) - E29-10 (LIN)	Always	Below 1 Ω
2D-20 (LIN) or E29-10 (LIN) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3.REPLACE MAIN BODY ECU

a. Temporarily replace the main body ECU with a new or normally functioning one.

b. Check whether DTC B2289 is output.

OK:
No DTC is output.

NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK

END

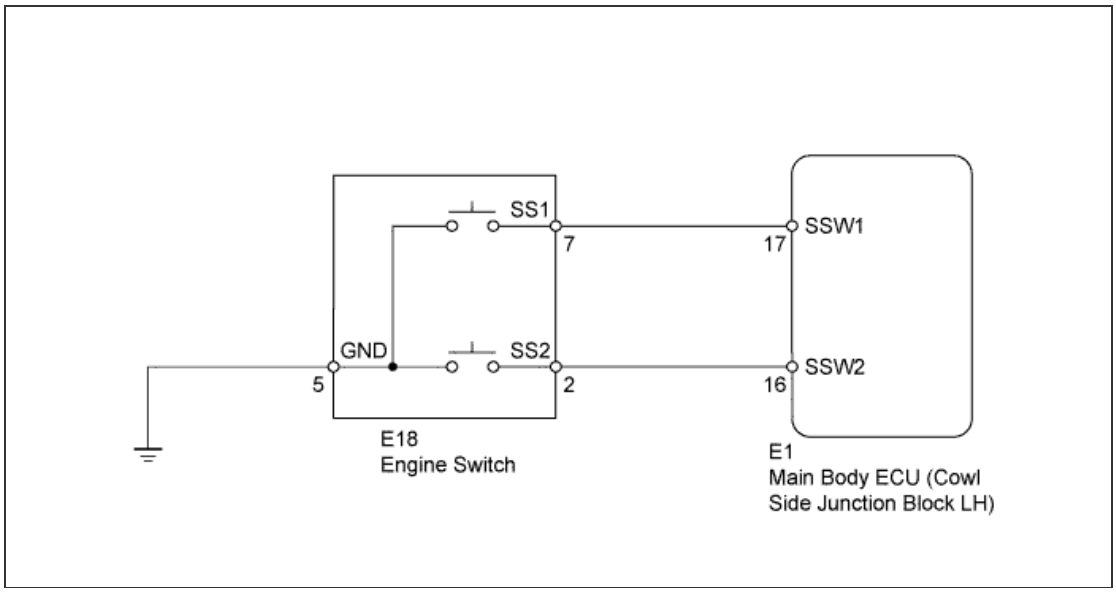
DTC B2278 Engine Switch Circuit Malfunction



for Preparation Click here

DESCRIPTION

This DTC is stored when: 1) a malfunction is detected between the main body ECU and the engine switch; or 2) either of the switches inside the engine switch is malfunctioning.

DTC Code	Detection Condition	Trouble Area
B2278	Communication is abnormal between the main body ECU and engine switch or the engine switch is defective.	• Main body ECU • Engine switch • Harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

1.READ VALUE USING INTELLIGENT TESTER (START SWITCH 1, 2)

a. Use the Data List to check if the engine switch is functioning properly.

Main Body

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Start Switch 1	Start Switch 1/ON or OFF	ON: Engine switch on (IG) OFF: Engine switch off	-
Start Switch 2	Start Switch 2/ON or OFF	ON: Engine switch on (IG) OFF: Engine switch off	-

OK:

When the engine switch is turned on (IG), ON is displayed on the intelligent tester.

NG → Go to step 3

OK

2.CHECK WHETHER DTC OUTPUT RECURS

a. Clear the DTCs (Click here).

b. Turn the engine switch on (IG), and check whether DTC B2278 is output.

Front view of wire harness connector:
(to Engine Switch)

a. Disconnect the E1 main body ECU connector.

b. Disconnect the E18 engine switch connector.

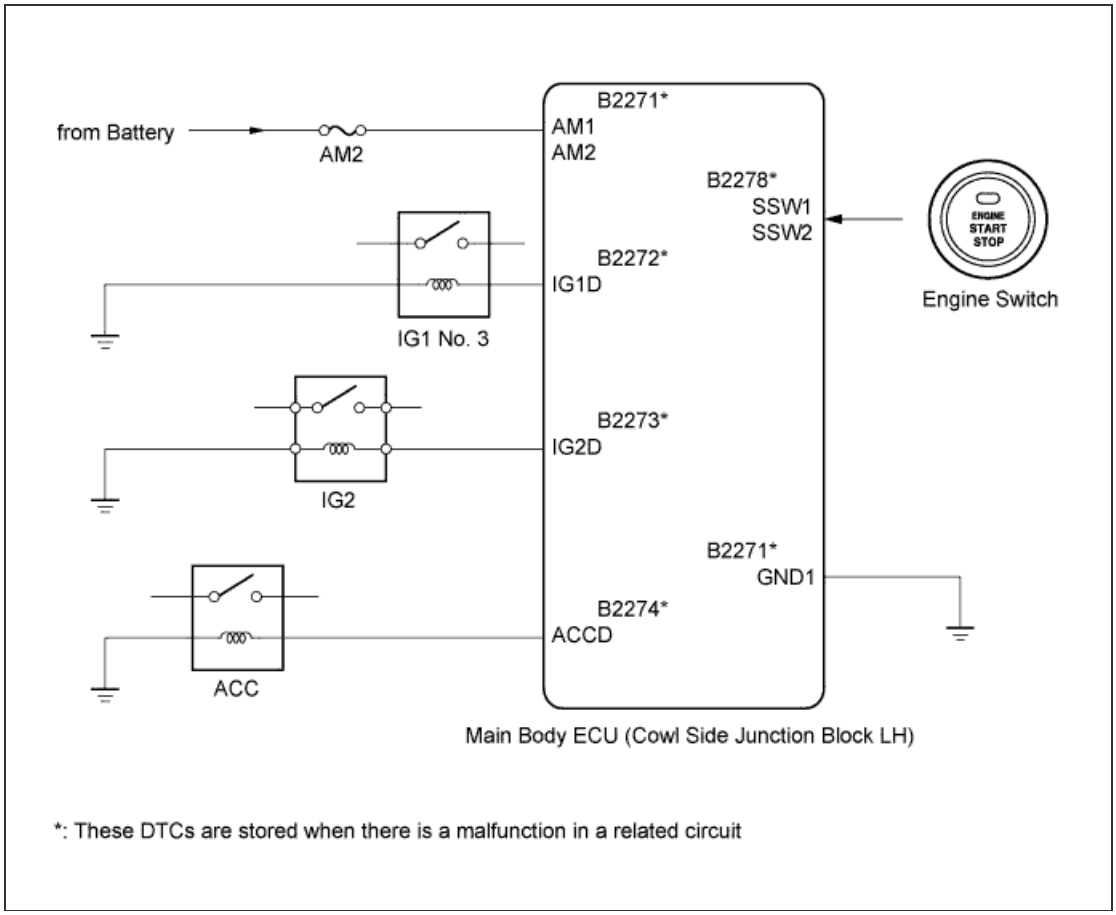
c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E1-17 (SSW1) - E18-7 (SS1)	Always	Below 1 Ω

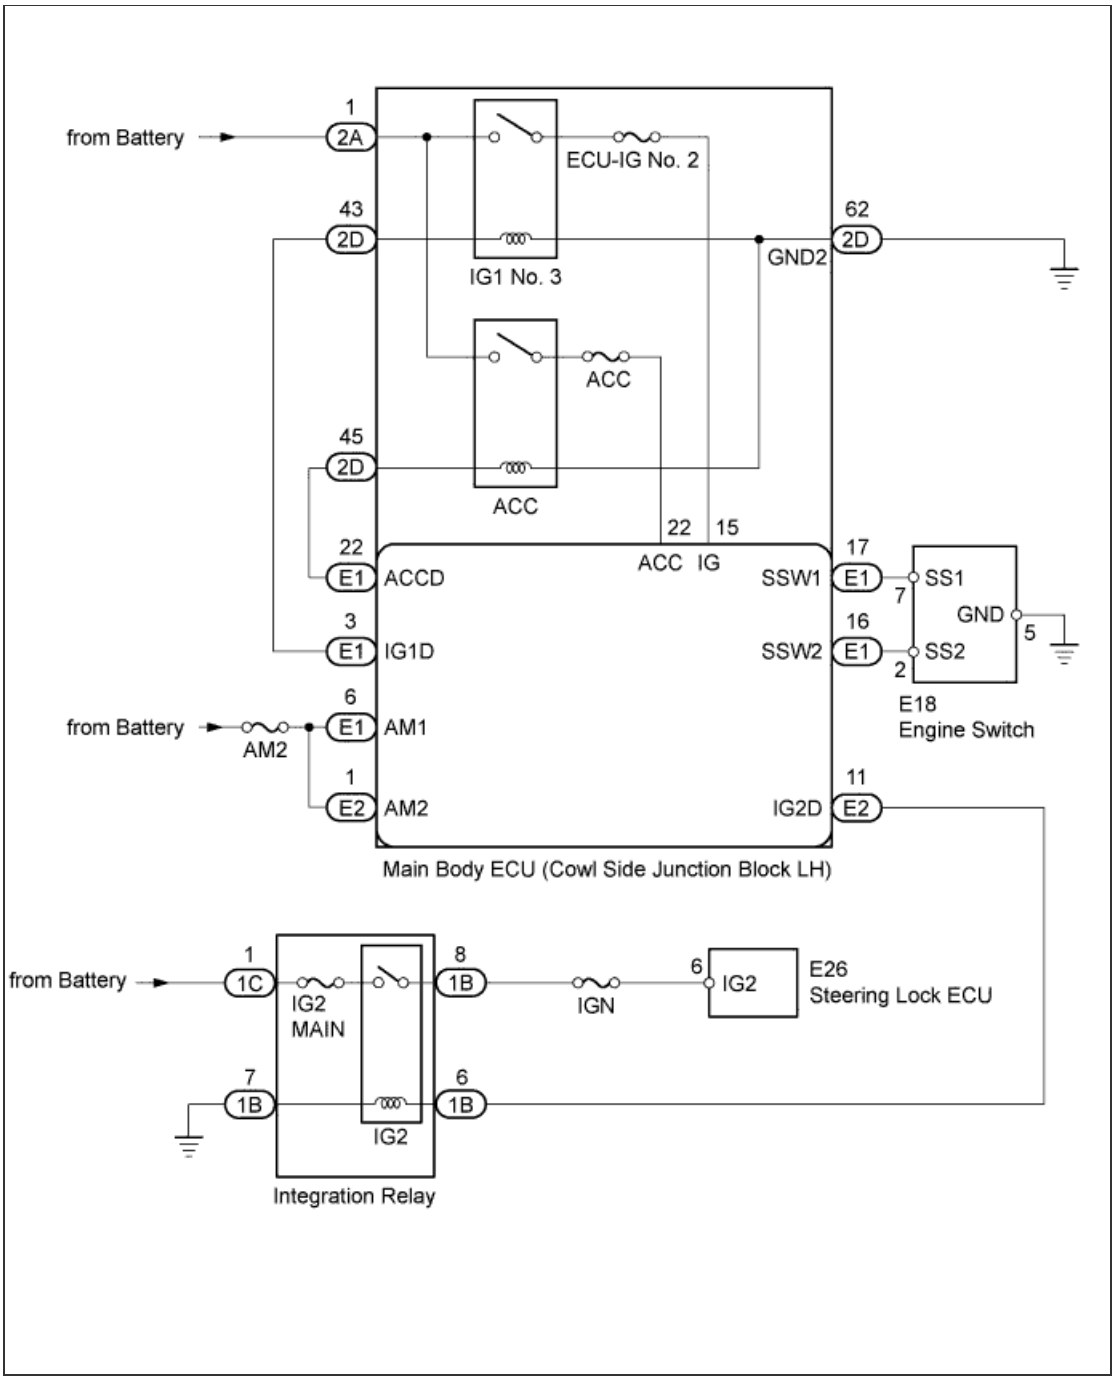
E1-16 (SSW2) - E18-2 (SS2)	Always	Below 1 Ω
E18-5 (GND) - Body ground	Always	Below 1 Ω
E1-17 (SSW1) or E18-7 (SS1) - Body ground	Always	10 kΩ or higher
E1-16 (SSW2) or E18-2 (SS2) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR



OK → REPLACE MAIN BODY ECU

for Preparation Click here



DESCRIPTION

When the certification ECU (smart key ECU assembly) has detected the key inside the cabin before the brake pedal (for A/T) or clutch pedal (for M/T) is depressed, the power source mode can be changed in the following order sequentially by pressing the engine switch: off → on (ACC) → on (IG) → off. When one of the DTCs shown in the illustration below is detected, troubleshoot the DTC(s) by following the troubleshooting procedure relevant to the DTC(s). If the power source mode still cannot be changed normally, despite troubleshooting, one of the following may have occurred:

- The LIN communication line is malfunctioning.
- The certification ECU (smart key ECU assembly) has determined that no key is inside the cabin.
- The engine switch is malfunctioning.
- The main body ECU is malfunctioning.

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:

If the vehicle is in key cancel mode, change to normal mode (Click here).

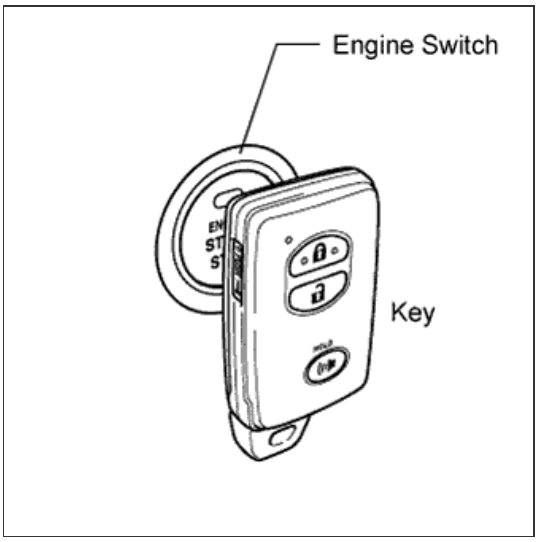
1.CHECK DTC OUTPUT

a. Check whether a DTC is output (Click here).

Result

Result	Proceed to
No DTC output	A
DTC output	B

B → GO TO ENTRY AND START SYSTEM (FOR START FUNCTION) (DIAGNOSTIC TROUBLE CODE CHART) (Click here)



A

2.CHECK ENTRY AND START SYSTEM

a. Remove the battery of the electrical key transmitter (Click here).

b. With the brake pedal (for A/T) or clutch pedal (for M/T) depressed, touch the TOYOTA mark of the key to the engine switch.

c. When operating the engine switch, check whether the engine switch changes to on (ACC) or on (IG).

HINT:

- **When the electrical key transmitter cannot be verified even when it is in the operational area, the engine start check can be performed by removing the transmitter battery from the electrical key transmitter and holding the transmitter against the engine switch.**
- **When performing the check, if the engine switch turns on (ACC) or on (IG), there is a problem with key certification inside the cabin.**

Result

Result	Proceed to
Does not change to on (ACC)	A
Does not change to on (IG)	B
Does not change to on (ACC) and on (IG)	C
Changes to on (ACC) and on (IG)	D

C → Go to step 11

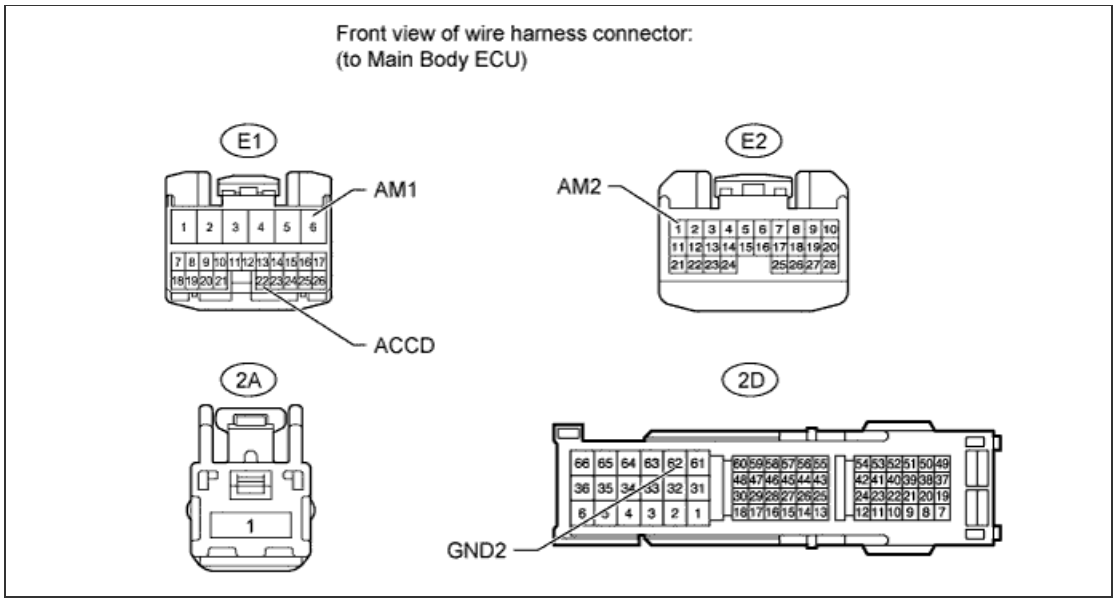
D → GO TO ENTRY AND START SYSTEM (FOR ENTRY FUNCTION) (ROOM OSCILLATOR DOES NOT RECOGNIZE KEY) (Click here)

A

3.INSPECT FUSE (AM2)

a. Remove the AM2 fuse from the engine room relay block.

b. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
AM2 fuse	Always	Below 1 Ω

NG → REPLACE FUSE

OK

4.CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - BATTERY AND BODY GROUND)

a. Disconnect the E1, E2, 2A and 2D main body ECU connectors.

b. Measure the voltage and resistance according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
E1-6 (AM1) - Body ground	Always	11 to 14 V
E2-1 (AM2) - Body ground	Always	11 to 14 V
2A-1 - Body ground	Always	11 to 14 V

Standard Resistance:

Tester Connection	Condition	Specified Condition
E1-22 (ACCD) - 2D-45	Always	Below 1 Ω
2D-62 (GND2) - Body ground	Always	Below 1 Ω
E1-22 (ACCD) or 2D-45 - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

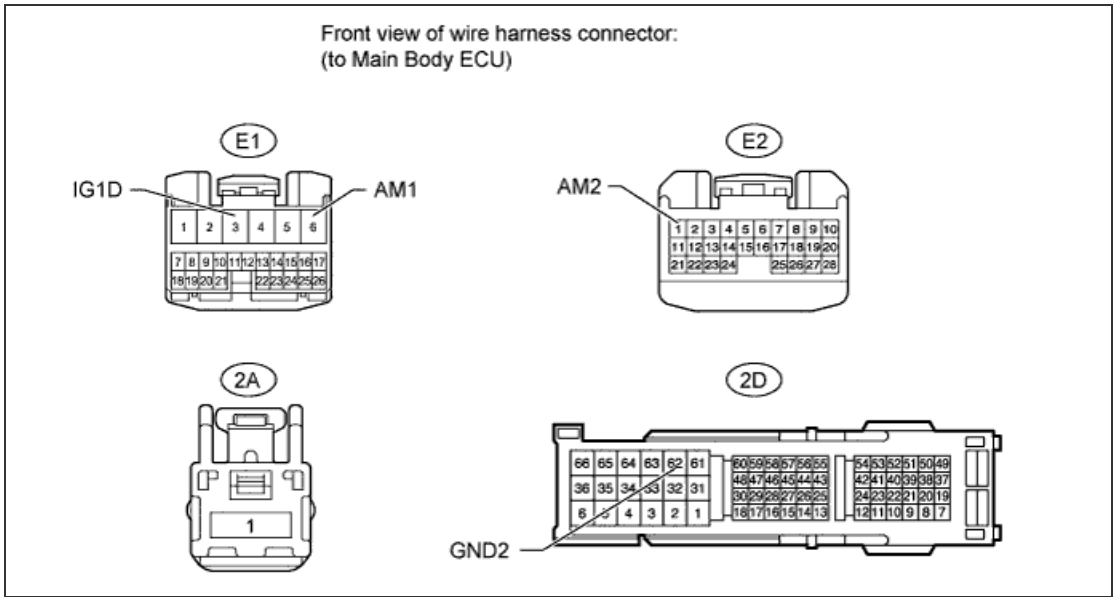
OK

REPLACE MAIN BODY ECU

5.INSPECT FUSE (AM2)

a. Remove the AM2 fuse from the engine room relay block.

b. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
AM2 fuse	Always	Below 1 Ω

NG → REPLACE FUSE

OK

6.CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - BATTERY AND BODY GROUND)

a. Disconnect the E1, E2, 2A and 2D main body ECU connectors.

b. Measure the voltage and resistance according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
E1-6 (AM1) - Body ground	Always	11 to 14 V
E2-1 (AM2) - Body ground	Always	11 to 14 V
2A-1 - Body ground	Always	11 to 14 V

Standard Resistance:

Tester Connection	Condition	Specified Condition
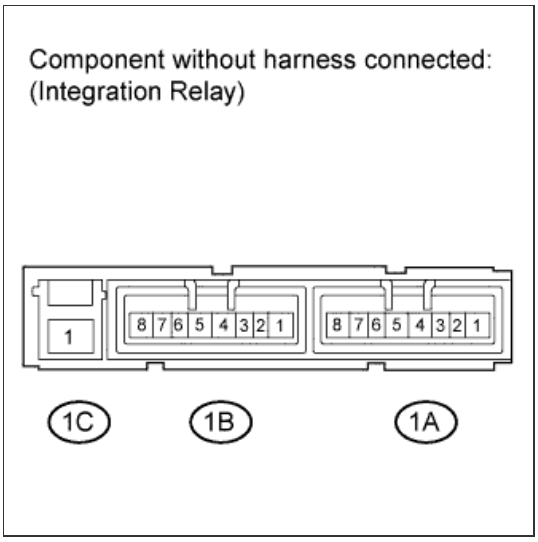
E1-3 (IG1D) - 2D-43	Always	Below 1 Ω
2D-62 (GND2) - Body ground	Always	Below 1 Ω
E1-3 (IG1D) or 2D-43 - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



7.INSPECT INTEGRATION RELAY (IG2 RELAY)

a. Remove the integration relay from the engine room relay block.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1B-8 - 1C-1	Battery voltage applied to terminals 1B-6 and 1B-7	Below 1 Ω
1B-8 - 1C-1	Battery voltage not applied to terminals 1B-6 and 1B-7	10 kΩ or higher

NG → REPLACE INTEGRATION NO.1 RELAY (IG2 RELAY)

OK

8.CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - INTEGRATION RELAY (IG2 RELAY))

a. Disconnect the E2 main body ECU connector.

b. Disconnect the 1B integration relay connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E2-11 (IG2D) - 1B-6	Always	Below 1 Ω
1B-7 - Body ground	Always	Below 1 Ω
E2-11 (IG2D) or 1B-6 - Body ground	Always	10 kΩ or higher

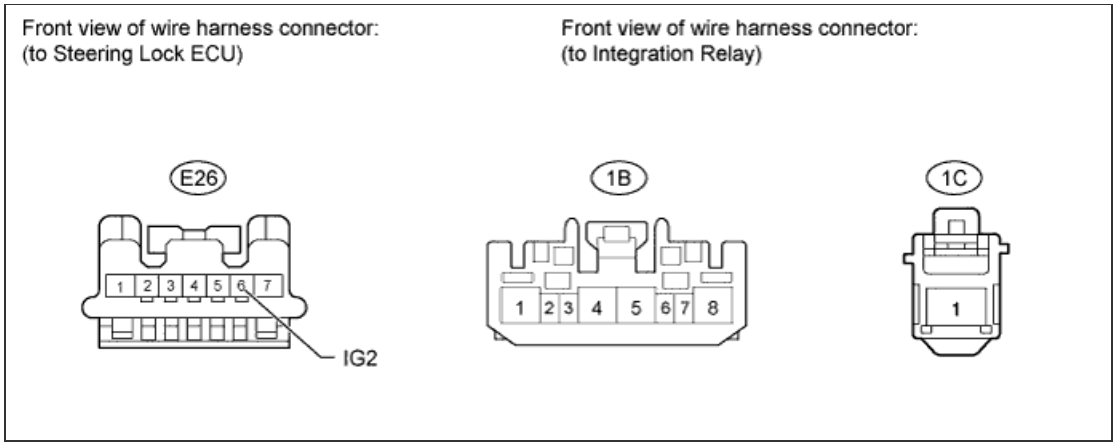
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

9.INSPECT FUSE (IGN, IG2 MAIN)

a. Remove the IGN fuse and IG2 MAIN fuse from the engine room relay block.

b. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
IGN fuse	Always	Below 1 Ω
IG2 MAIN fuse	Always	Below 1 Ω

NG → REP CE FUSE

OK

10.CHECK HARNESS AND CONNECTOR (STEERING LOCK ECU - INTEGRATION RELAY (IG2 RELAY))

a. Disconnect the E26 steering lock ECU connector.

b. Disconnect the 1B and 1C integration relay connectors.

c. Measure the voltage and resistance according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
1C-1 - Body ground	Always	11 to 14 V

Standard Resistance:

Tester Connection	Condition	Specified Condition
E26-6 (IG2) - 1B-8	Always	Below 1 Ω
E26-6 (IG2) or 1B-8 - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

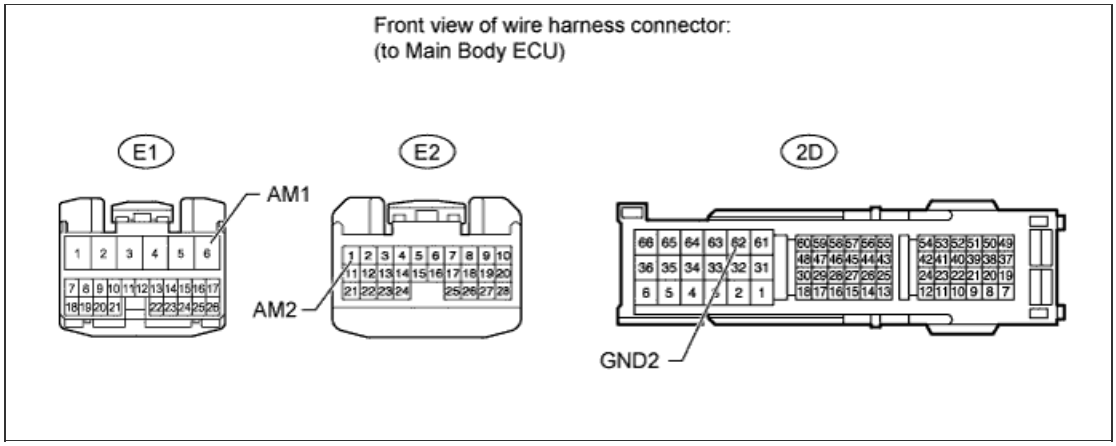
OK

→ REPLACE MAIN BODY ECU

11.INSPECT FUSE (AM2)

a. Remove the AM2 fuse from the engine room relay block.

b. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
AM2 fuse	Always	Below 1 Ω

NG → REPLACE FUSE

OK

12.CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - BATTERY AND BODY GROUND)

a. Disconnect the E1, E2 and 2D main body ECU connectors.

b. Measure the voltage and resistance according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
E1-6 (AM1) - Body ground	Always	11 to 14 V
E2-1 (AM2) - Body ground	Always	11 to 14 V

Standard Resistance:

Tester Connection	Condition	Specified Condition
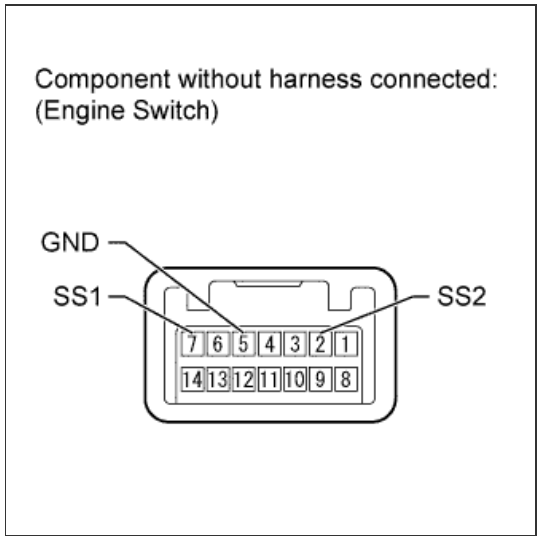
2D-62 (GND2) - Body ground	Always	Below 1 Ω



NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

13.INSPECT ENGINE SWITCH

a. Disconnect the E18 engine switch connector.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
7 (SS1) - 5 (GND)	Pushed	Below 1 Ω
2 (SS2) - 5 (GND)	Pushed	Below 1 Ω
7 (SS1) - 5 (GND)	Not pushed	10 kΩ or higher
2 (SS2) - 5 (GND)	Not pushed	10 kΩ or higher

Tester Connection	Condition	Specified Condition
AM2 fuse	Always	Below 1 Ω

NG → REPLACE FUSE

OK

6.CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - BATTERY AND BODY GROUND)

a. Disconnect the E1, E2, 2A and 2D main body ECU connectors.

b. Measure the voltage and resistance according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
E1-6 (AM1) - Body ground	Always	11 to 14 V
E2-1 (AM2) - Body ground	Always	11 to 14 V
2A-1 - Body ground	Always	11 to 14 V

Standard Resistance:

Tester Connection	Condition	Specified Condition
E1-3 (IG1D) - 2D-43	Always	Below 1 Ω
2D-62 (GND2) - Body ground	Always	Below 1 Ω
E1-3 (IG1D) or 2D-43 - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

7.INSPECT INTEGRATION RELAY (IG2 RELAY)

a. Remove the integration relay from the engine room relay block.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1B-8 - 1C-1	Battery voltage applied to terminals 1B-6 and 1B-7	Below 1 Ω
1B-8 - 1C-1	Battery voltage not applied to terminals 1B-6 and 1B-7	10 kΩ or higher

NG → REPLACE INTEGRATION NO.1 RELAY (IG2 RELAY)

OK

8.CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - INTEGRATION RELAY (IG2 RELAY))

a. Disconnect the E2 main body ECU connector.

b. Disconnect the 1B integration relay connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E2-11 (IG2D) - 1B-6	Always	Below 1 Ω
1B-7 - Body ground	Always	Below 1 Ω
E2-11 (IG2D) or 1B-6 - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

9.INSPECT FUSE (IGN, IG2 MAIN)

a. Remove the IGN fuse and IG2 MAIN fuse from the engine room relay block.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
IGN fuse	Always	Below 1 Ω
IG2 MAIN fuse	Always	Below 1 Ω

NG → REP CE FUSE

OK

10.CHECK HARNESS AND CONNECTOR (STEERING LOCK ECU - INTEGRATION RELAY (IG2 RELAY))

a. Disconnect the E26 steering lock ECU connector.

b. Disconnect the 1B and 1C integration relay connectors.

c. Measure the voltage and resistance according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
1C-1 - Body ground	Always	11 to 14 V

Standard Resistance:

Tester Connection	Condition	Specified Condition
E26-6 (IG2) - 1B-8	Always	Below 1 Ω
E26-6 (IG2) or 1B-8 - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

→ REPLACE MAIN BODY ECU

11.INSPECT FUSE (AM2)

a. Remove the AM2 fuse from the engine room relay block.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
AM2 fuse	Always	Below 1 Ω

NG → REPLACE FUSE

OK

12.CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - BATTERY AND BODY GROUND)

a. Disconnect the E1, E2 and 2D main body ECU connectors.

b. Measure the voltage and resistance according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
E1-6 (AM1) - Body ground	Always	11 to 14 V
E2-1 (AM2) - Body ground	Always	11 to 14 V

Standard Resistance:

Tester Connection	Condition	Specified Condition
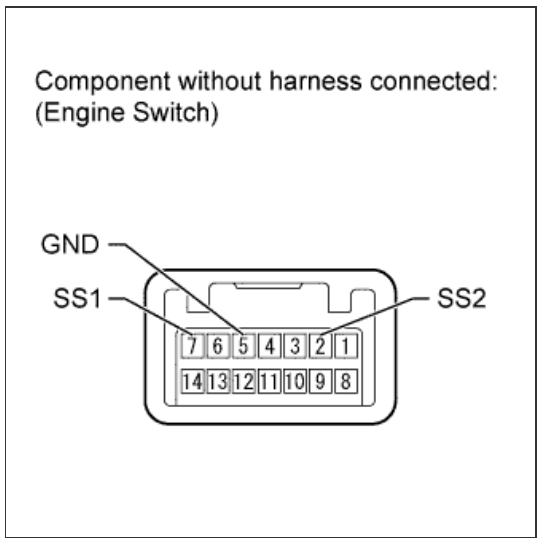
2D-62 (GND2) - Body ground	Always	Below 1 Ω



NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

13.INSPECT ENGINE SWITCH

a. Disconnect the E18 engine switch connector.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
7 (SS1) - 5 (GND)	Pushed	Below 1 Ω
2 (SS2) - 5 (GND)	Pushed	Below 1 Ω

DESCRIPTION

Engine switch condition (power source mode) or system malfunctions can be checked by observing the status of the engine switch indicator light.

Engine Switch Indicator Light Condition

Power Source Mode/Condition	Indicator Light Condition		
	Brake pedal released (for A/T) Clutch pedal released (for M/T)	Brake pedal depressed, shift lever in P or N (for A/T)	Clutch pedal depressed (for M/T)
Off	Off	Illuminates (Green)	Illuminates (Green)
On (ACC, IG)	Illuminates (Amber)	Illuminates (Green)	Illuminates (Green)
Engine running	Off	Off	Off
Steering lock not unlocked	Flashes (Green) for 30 sec.	Flashes (Green) for 30 sec.	Flashes (Green) for 30 sec.
System malfunction	Flashes (Amber) for 15 sec.	Flashes (Amber) for 15 sec.	Flashes (Amber) for 15 sec.
Clutch start switch malfunction (for M/T)	Flashes (Green) for 15 sec.	Flashes (Green) for 15 sec.	Flashes (Green) for 15 sec.

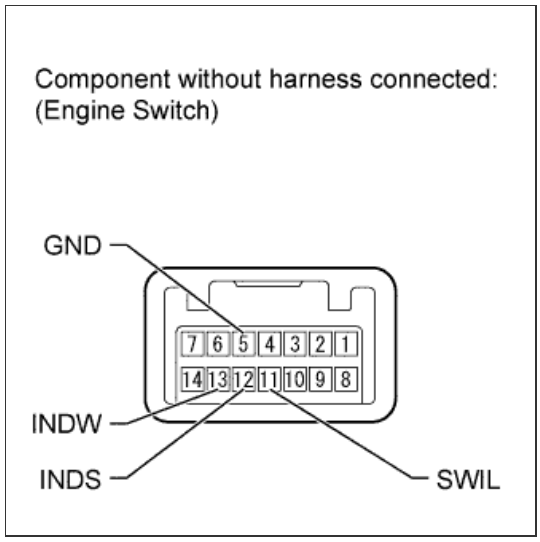
WIRING DIAGRAM

INSPECTION PROCEDURE

1.INSPECT ENGINE SWITCH

a. Disconnect the E18 engine switch connector.

b. Apply battery voltage between the terminals of the engine switch, and check the illumination condition of the engine switch indicator light.



NOTICE:

- **If the positive (+) lead and the negative (-) lead are incorrectly connected, the engine switch indicator light will not illuminate.**
- **If the voltage is too low, the indicator light will not illuminate.**

OK:

Measurement Condition	Condition	Specified Condition
Battery terminal (+) → Terminal 11 (SWIL) - Battery terminal (-) → Terminal 5 (GND)		

Battery terminal (+) → Terminal 12 (INDS) - Battery terminal (-) → Terminal 5 (GND)	Battery voltage is applied to the terminals	Illuminates
Battery terminal (+) → Terminal 13 (INDW) - Battery terminal (-) → Terminal 5 (GND)		

Result

Result	Proceed to
Illuminates	A
Does not illuminate (for 1GR-FE)	B

A

2.CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - ENGINE SWITCH AND BODY GROUND)

a. Disconnect the E1 main body ECU connector.

b. Disconnect the E18 engine switch connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E1-25 (SWIL) - E18-11 (SWIL)	Always	Below 1 Ω
E1-15 (INDS) - E18-12 (INDS)	Always	Below 1 Ω
E1-14 (INDW) - E18-13 (INDW)	Always	Below 1 Ω
E18-5 (GND) - Body ground	Always	Below 1 Ω
E1-25 (SWIL) or E18-11 (SWIL) - Body ground	Always	10 kΩ or higher
E1-15 (INDS) or E18-12 (INDS) - Body ground	Always	10 kΩ or higher

E1-14 (INDW) or E18-13 (INDW) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

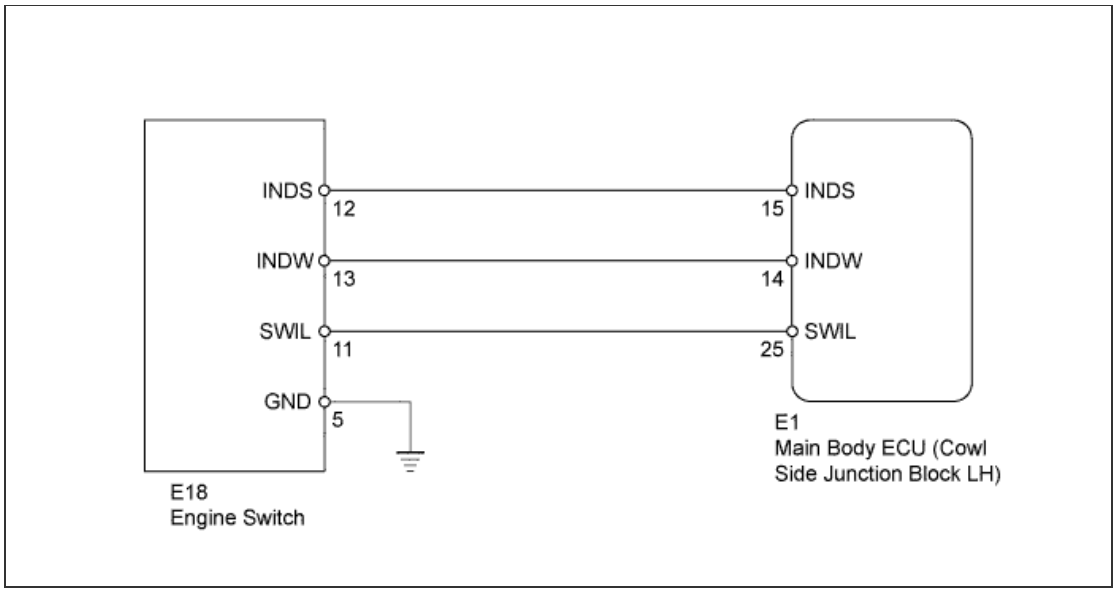
REPLACE MAIN BODY ECU

for Preparation Click here



DESCRIPTION

Engine switch condition (power source mode) or system malfunctions can be checked by observing the status of the engine switch indicator light.

Engine Switch Indicator Light Condition

Power Source Mode/Condition	Indicator Light Condition		
	Brake pedal released (for A/T) Clutch pedal released (for M/T)	Brake pedal depressed, shift lever in P or N (for A/T)	Clutch pedal depressed (for M/T)
Off	Off	Illuminates (Green)	Illuminates (Green)
On (ACC, IG)	Illuminates (Amber)	Illuminates (Green)	Illuminates (Green)
Engine running	Off	Off	Off
Steering lock not unlocked	Flashes (Green) for 30 sec.	Flashes (Green) for 30 sec.	Flashes (Green) for 30 sec.
System malfunction	Flashes (Amber) for 15 sec.	Flashes (Amber) for 15 sec.	Flashes (Amber) for 15 sec.
Clutch start switch malfunction (for M/T)	Flashes (Green) for 15 sec.	Flashes (Green) for 15 sec.	Flashes (Green) for 15 sec.

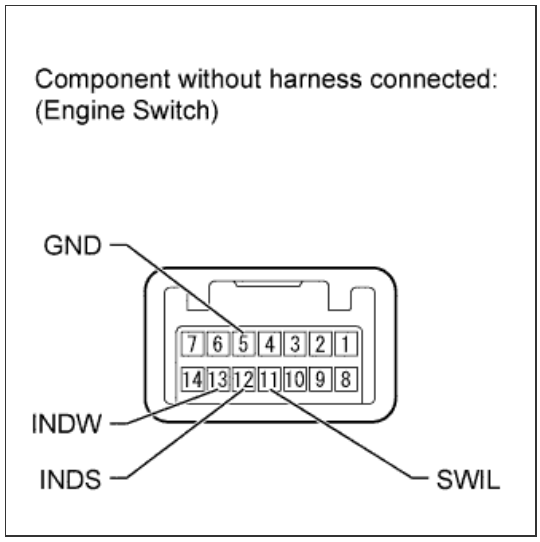
WIRING DIAGRAM

INSPECTION PROCEDURE

1.INSPECT ENGINE SWITCH

a. Disconnect the E18 engine switch connector.

b. Apply battery voltage between the terminals of the engine switch, and check the illumination condition of the engine switch indicator light.



NOTICE:

- **If the positive (+) lead and the negative (-) lead are incorrectly connected, the engine switch indicator light will not illuminate.**
- **If the voltage is too low, the indicator light will not illuminate.**

OK:

Measurement Condition	Condition	Specified Condition
Battery terminal (+) → Terminal 11 (SWIL) - Battery terminal (-) → Terminal 5 (GND)		

Battery terminal (+) → Terminal 12 (INDS) - Battery terminal (-) → Terminal 5 (GND)	Battery voltage is applied to the terminals	Illuminates
Battery terminal (+) → Terminal 13 (INDW) - Battery terminal (-) → Terminal 5 (GND)		

Result

Result	Proceed to
Illuminates	A
Does not illuminate (for 1GR-FE)	B
Does not illuminate (for 2UZ-FE)	C
Does not illuminate (for 3UR-FE)	D
Does not illuminate (for 1VD-FTV)	E

	REPLACE ENGINE SWITCH (Click here)
C	REPLACE ENGINE SWITCH (Click here)
D	REPLACE ENGINE SWITCH (Click here)
E	REPLACE ENGINE SWITCH (Click here)

A

2.CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - ENGINE SWITCH AND BODY GROUND)

a. Disconnect the E1 main body ECU connector.

b. Disconnect the E18 engine switch connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E1-25 (SWIL) - E18-11 (SWIL)	Always	Below 1 Ω
E1-15 (INDS) - E18-12 (INDS)	Always	Below 1 Ω
E1-14 (INDW) - E18-13 (INDW)	Always	Below 1 Ω
E18-5 (GND) - Body ground	Always	Below 1 Ω
E1-25 (SWIL) or E18-11 (SWIL) - Body ground	Always	10 kΩ or higher

E1-15 (INDS) or E18-12 (INDS) - Body ground	Always	10 kΩ or higher
E1-14 (INDW) or E18-13 (INDW) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK → REPLACE MAIN BODY ECU

1.PRECAUTIONS WHEN USING THE INTELLIGENT TESTER

a. When using the intelligent tester with the engine switch off to troubleshoot: Connect the intelligent tester to the vehicle, and turn a courtesy light switch on and off at 1.5 second intervals until communication between the intelligent tester and vehicle begins.

b. After all DTCs are cleared, check if the trouble occurs again 6 seconds after turning the engine switch on (IG).

PRECAUTIONS FOR EACH FUNCTION

a. Precautions for the key:

The key is a precision instrument. Be sure to observe the following:

i. Do not drop or strike the key.

ii. Do not keep the key in a high temperature area for a long time.

iii. Do not use an ultrasonic washing machine to clean the key.

i . Keep the key away from magnets or magnetized items during use.

. Do not attach any stickers to the key.

b. Precautions for the engine start function:

i. Before starting the engine, firmly depress the brake pedal until the indicator of the engine switch illuminates in green.

ii. Be sure to turn the engine switch off before disconnecting the cable from the negative (-) battery terminal. When the battery cable is disconnected, the power source mode (off, on (ACC), on (IG)) is memorized. When battery depletion causes the vehicle power to be cut, be careful to remember the power source mode.

iii. After the battery is removed and reinstalled, be sure to wait 10 seconds or more before the next engine start. The engine may not start immediately after the battery is reinstalled.

i . When the key battery is depleted, affected by wave noise, etc. and it is held close to the engine switch to start the engine, several warnings may sound. However, the warnings most likely sound because the vehicle cannot determine if the key is in the vehicle or not, and not because there is an actual malfunction. The following warnings may sound:

1. Driver side door open → closed:
   - Warning to inform that the shift lever is in a position other than P, and the power source mode is not off.
   - Warning to inform that the shift lever is in P but the power source mode is not off.
2. Door other than the driver side door open → closed:
   - Warning to inform that a passenger is carrying the key out of the vehicle.

c. Precautions for the battery built into the key and the vehicle battery:

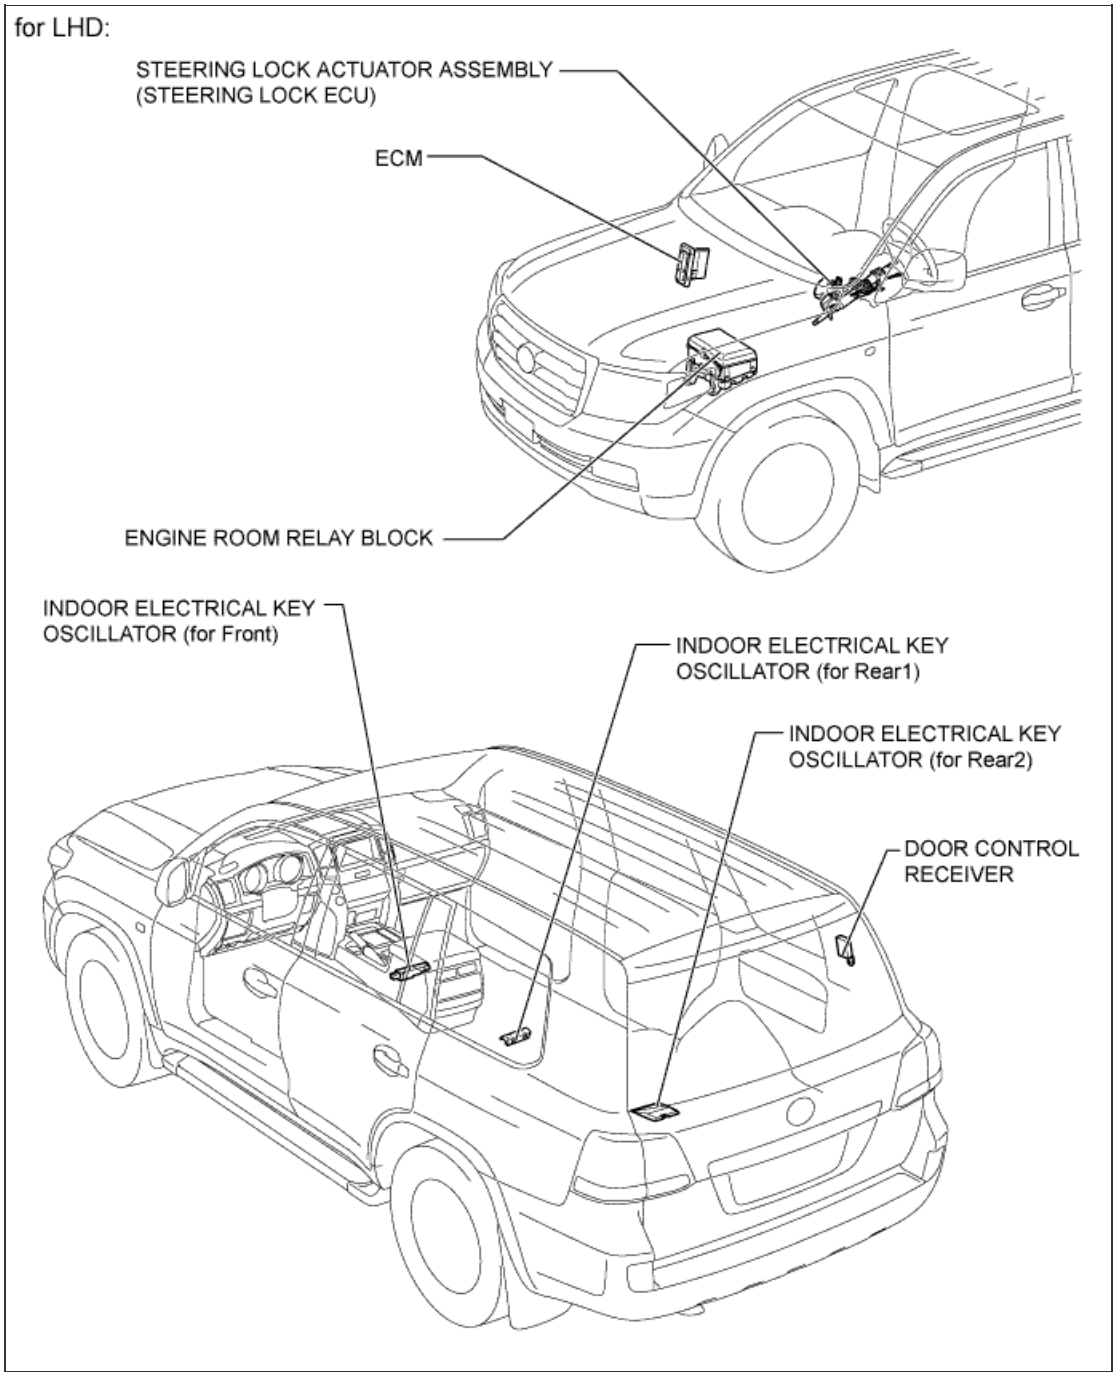
i. When the door is being locked, the vehicle battery is used to transmit a radio wave. The battery may be fully depleted if the vehicle remains stopped for a long time. If the vehicle is not used for a long time, recharge or replace the battery or cancel the entry and start system (for Entry Function) (Click here).

ii. When the door is being locked with the key in the detection area of the door oscillator, the battery is used to regulate communication between the key and vehicle. If the vehicle is not used, keep the key away from the vehicle (more than 2 m (6.56 ft.)).

.PRECAUTIONS FOR BATTERY

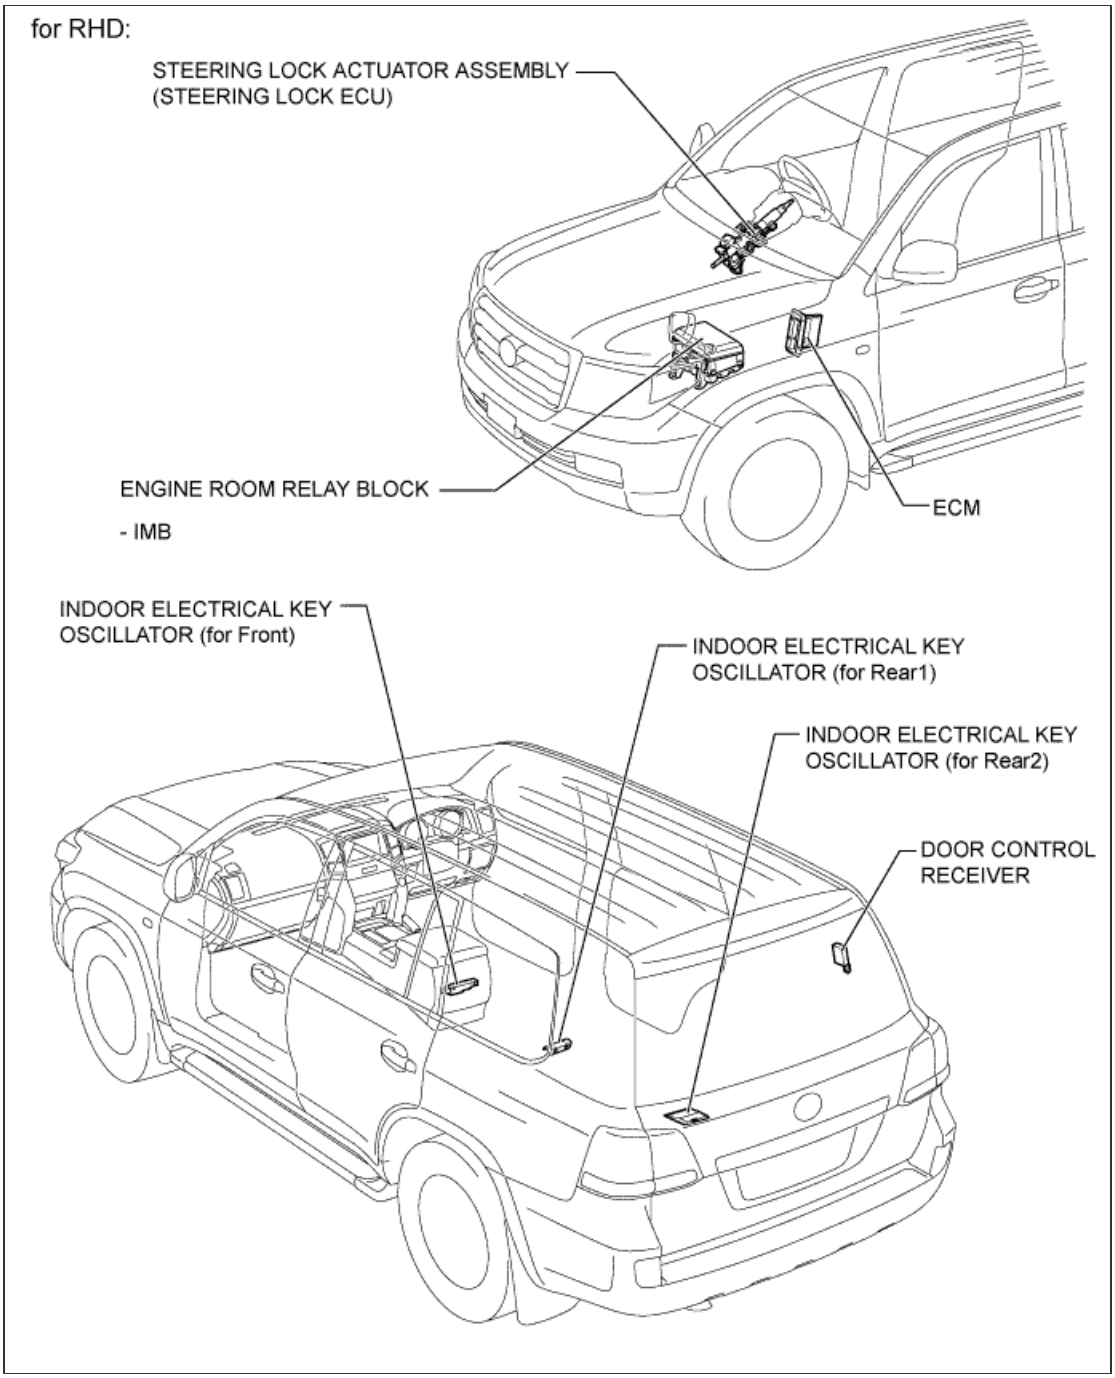
a. Immediately after removing and installing the battery, door unlock by the entry and start system (for Entry Function) may not operate. In that case, after performing a door unlock/lock operation with the door control transmitter, door unlock operation by the smart key system returns.

b. When the battery is fully depleted and it is recharged using another vehicle battery, start the engine by performing the following: (1) Put the shift lever in P; (2) with the engine switch off, open and close the driver door once; and (3) start the engine.



c. When starting the engine after removing and installing the battery, open and close the driver door and wait 10 seconds before starting the system.

HINT:



If the engine does not start the first time after removing and installing the battery, the engine will start normally from the second time

onward.

ENGINE IMMOBILISER SYSTEM DESCRIPTION

a. The engine immobiliser system determines whether or not to disable starting of the SFI system*1 or ECD system*2 based on a comparison of the key ID code and the vehicle pre-registered code. The engine immobiliser system compares the vehicle certification ECU (smart key ECU assembly) pre-registered ID code with the key-embedded transponder chip ID code. If the ID codes do not match, the engine immobiliser system activates and the SFI system*1 or ECD system*2 cannot be started. The certification ECU (smart key ECU assembly) manages communication with the SFI system*1 or ECD system*2, main body ECU, steering lock ECU and ID code box (immobiliser code ECU). When the ID codes of the transponder chip and certification ECU (smart key ECU assembly) match, the certification ECU (smart key ECU assembly) authorizes the starting of the SFI system*1 or ECD system*2.

HINT:

- ***1: for 1GR E E**
- **for 1 D T**

FUNCTION OF MAIN COMPONENT

Component	Outline
Transponder key coil/amplifier (built into engine switch)	Receives the key ID code, amplifies the ID code and outputs it to the certification ECU (smart key ECU assembly).
Indoor electrical key oscillator	Transmits the key detection signals within the detection area in the vehicle interior upon receiving a transmission request signal from the certification ECU (smart key ECU assembly). The certification ECU (smart key ECU assembly) request signal is activated when the key is brought into the vehicle interior and the engine switch is pushed.
Door control receiver	Receives the ID code from the key in the actuation area and transmits it to the certification ECU (smart key ECU assembly).
Security indicator light	Illuminates or starts blinking. The Illumination is controlled by the certification ECU (smart key ECU assembly).

SYSTEM FUNCTION

a. Using the entry function (for Manual Transmission)

i. When the driver (or an occupant) gets in the vehicle and depresses the brake pedal and clutch pedal while carrying the key, the main body ECU recognizes that the brake pedal and clutch pedal have been depressed and sends a key certification request signal to the certification ECU (smart key ECU assembly). Then the certification ECU (smart key ECU assembly) generates a request signal and sends it to the indoor electrical key oscillator. When the request signal is received, the indoor electrical key oscillator sends another request signal in order to detect whether the key is inside the vehicle. When the key receives this request signal, it sends back an ID code which includes a response code. The ID code sent from the key is sent to the certification ECU (smart key ECU assembly) via the door control receiver. When the ID code is received, the certification ECU (smart key ECU assembly) analyzes the code. If the certification result is normal, the certification ECU (smart key ECU assembly) sends a key certification compatible response signal to the main body ECU. At this time, the engine switch indicator illuminates in green. When the indicator illuminates in green and the driver presses the engine switch, the main body ECU recognizes the engine start signal, changes the ACC relay to on, and changes the IG1 and IG2 relays to on in that order after 0.025 seconds. At this time, the certification ECU (smart key ECU assembly) confirms that the power source mode has changed, and sends a steering unlock command signal to the main body ECU. After this signal is received, the main body ECU supplies the steering lock actuator with power. Then (via the ID code box (immobiliser code ECU)) the steering lock ECU confirms that the certification ECU (smart key ECU assembly) is the proper ECU, and drives the steering actuator motor until the steering lock is unlocked. After the steering lock is unlocked, the steering lock ECU sends an unlock completion signal to the certification ECU (smart key ECU assembly) and main body ECU. When this signal is received, the certification ECU (smart key ECU assembly) sends an immobiliser unset command signal to the ID code box (immobiliser code ECU). Once this signal is received, the ID code box (immobiliser code ECU) sends an immobiliser unset command signal to the SFI system*1 or ECD system*2 after confirming that the certification ECU (smart key ECU assembly) is the proper ECU. Then the certification ECU (smart key ECU assembly) sends a security indicator light off signal to the clock*3 or multi-display*4.

. Using the entry function (for Automatic Transmission)

i. When the driver (or an occupant) gets in the vehicle and depresses the brake pedal while carrying the key, the main body ECU recognizes that the brake pedal has been depressed and sends a key certification request signal to the certification ECU (smart key ECU assembly). Then the certification ECU (smart key ECU assembly) generates a request signal and sends it to the indoor electrical key oscillator. When the request signal is received, the indoor electrical key oscillator sends another request signal in order to detect whether the key is inside the vehicle. When the key receives this request signal, it sends back an ID code which includes a response code. The ID code sent from the key is sent to the certification ECU (smart key ECU assembly) via the door control receiver. When the ID code is received, the certification ECU (smart key ECU assembly) analyzes the code. If the certification result is normal, the certification ECU (smart key ECU assembly) sends a key certification compatible response signal to the main body ECU. At this time, the engine switch indicator illuminates in green. When the indicator illuminates in green and the driver presses the engine switch, the main body ECU recognizes the engine start signal, changes the ACC relay to on, and changes the IG1 and IG2 relays to on in that order after 0.025 seconds. At this time, the certification ECU (smart key ECU assembly) confirms that the power source mode has changed, and sends a steering unlock command signal to the main body ECU. After this signal is received, the main body ECU supplies the steering lock actuator with power. Then (via the ID code box (immobiliser code ECU)) the steering lock ECU confirms that the certification ECU (smart key ECU assembly) is the proper ECU, and drives the steering actuator motor until the steering lock is unlocked. After the steering lock is unlocked, the steering lock ECU sends an unlock completion signal to the certification ECU (smart key ECU assembly) and main body ECU. When this signal is received, the certification ECU (smart key ECU assembly) sends an immobiliser unset command signal to the ID code box (immobiliser code ECU). Once this signal is received, the ID code box (immobiliser code ECU) sends an immobiliser unset command signal to the SFI system*1 or ECD system*2 after confirming that the certification ECU (smart key ECU assembly) is the proper ECU. Then the certification ECU (smart key ECU assembly) sends a security indicator light off signal to the clock*3 or multi-display*4.

HINT:

for 1 D T
*** : o M lti i play**
*** : M lti i play**

c. Not using the entry function (when battery is depleted, transmitter is affected by wave noise, etc.) (for Manual Transmission)

i. When the driver is sitting in the vehicle while carrying the key and the brake pedal and the clutch pedal are depressed, the main body ECU recognizes that the stop light switch is on and sends a key confirmation request signal to the certification ECU (smart key ECU assembly). Upon receipt of this signal, the certification ECU (smart key ECU assembly) drives the motor of the engine switch built-in immobiliser amplifier. At this time, the engine switch outputs an RF (Radio Frequency) wave communication signal. If the driver holds the key up to the engine switch at this time, the key receives the immobiliser RF (Radio Frequency) wave signal and responds by sending a radio wave signal. When the engine switch receives the radio wave signal from the key, it duplicates the signal and sends an ID code to the certification ECU (smart key ECU assembly). Upon receipt of the ID code, the code is analyzed. If the certification passes, a key certification pass response signal is sent to the main body ECU while simultaneously sending a sound buzzer request signal to the meter ECU. When the main body ECU receives this signal, the ACC relay is switched on and the IG1 and IG2 relays are switched on in sequence after 0.025 seconds. At this time, the engine switch indicator illuminates in green. Then the certification ECU (smart key ECU assembly) checks that the power source mode has been changed and sends a steering lock command signal to the main body ECU. After receiving this signal, the main body ECU supplies power to the steering lock actuator. Then (via the ID code box (immobiliser code ECU)) the steering lock ECU confirms that the certification ECU (smart key ECU assembly) is certified and drives the steering actuator motor until the steering lock is unlocked. After unlocking the steering lock, an unlock completed signal is sent to the certification ECU (smart key ECU assembly). Upon receipt of this signal, the certification ECU (smart key ECU assembly) sends an unset command signal to the ID code box (immobiliser code ECU). Once this signal is received, the ID code box (immobiliser code ECU) confirms that the certification ECU (smart key ECU assembly) is certified, sends an immobiliser unset command signal to the SFI system*1 or ECD system*2, and then the certification ECU (smart key ECU assembly) sends a security indicator light off signal to the clock*3 or multi-display*4.

HINT:

. Not using the entry function (when battery is depleted, transmitter is affected by wave noise, etc.) (for Automatic Transmission)

i. When the driver is sitting in the vehicle while carrying the key and the brake pedal is depressed, the main body ECU recognizes that the stop light switch is on and sends a key confirmation request signal to the certification ECU (smart key ECU assembly). Upon receipt of this signal, the certification ECU (smart key ECU assembly) drives the motor of the engine switch built-in immobiliser amplifier. At this time, the engine switch outputs an RF (Radio Frequency) wave communication signal. If the driver holds the key up to the engine switch at this time, the key receives the immobiliser RF (Radio Frequency) wave signal and responds by sending a radio wave signal. When the engine switch receives the radio wave signal from the key, it duplicates the signal and sends an ID code to the certification ECU (smart key ECU assembly). Upon receipt of the ID code, the code is analyzed. If the certification passes, a key certification pass response signal is sent to the main body ECU while simultaneously sending a sound buzzer request signal to the meter ECU. When the main body ECU receives this signal, the ACC relay is switched on and the IG1 and IG2 relays are switched on in sequence after 0.025 seconds. At this time, the engine switch indicator illuminates in green. Then the certification ECU (smart key ECU assembly) checks that the power source mode has been changed and sends a steering lock command signal to the main body ECU. After receiving this signal, the main body ECU supplies power to the steering lock actuator. Then (via the ID code box (immobiliser code ECU)) the steering lock ECU confirms that the certification ECU (smart key ECU assembly) is certified and drives the steering actuator motor until the steering lock is unlocked.

After unlocking the steering lock, an unlock completed signal is sent to the certification ECU (smart key ECU assembly). Upon receipt of this signal, the certification ECU (smart key ECU assembly) sends an unset command signal to the ID code box (immobiliser code ECU). Once this signal is received, the ID code box (immobiliser code ECU) confirms that the certification ECU (smart key ECU assembly) is certified, sends an immobiliser unset command signal to the SFI system*1 or ECD system*2, and then the certification ECU (smart key ECU assembly) sends a security indicator light off signal to the clock*3 or multi-display*4.

CHECK ENGINE SWITCH

a. Disconnect the E18 switch connector.

b. Measure the resistance according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E18-5 (GND) - Body ground	BR - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

c. Reconnect the E18 switch connector.

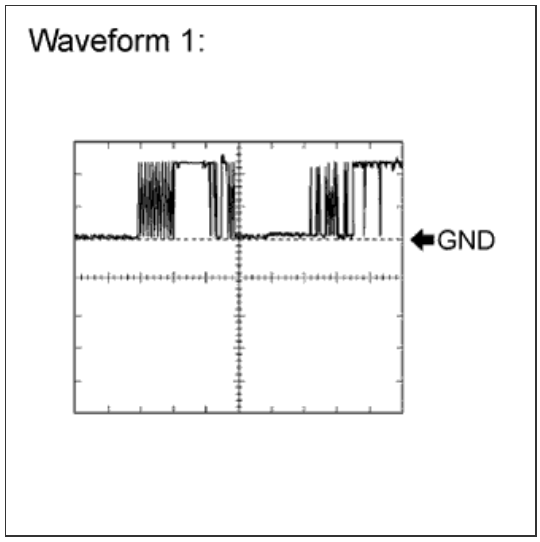
d. Measure the resistance and voltage according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E18-8 (AGND) - Body ground	L - Body ground	Ground	Always	Below 1 Ω
E18-14 (VC5) - E18-8 (AGND)	P - L	Power supply	Key not in cabin	Below 1 V
			Engine switch pressed*	4.6 to 5.4 V
E18-10 (CODE) - E18-8 (AGND)	G - L	Demodulated signal of key code output	Key not in cabin	Below 1 V
			Engine switch pressed and key held close to engine switch*	Pulse generation (see waveform 1)
E18-9 (TXCT) - E18-8 (AGND)	SB - L	Key code input signal	Key not in cabin	Below 1 V
			Engine switch pressed and key held close to engine switch*	Pulse generation (see waveform 2)

HINT:

*: Remove the key battery before performing this inspection.

If the result is not as specified, the switch may have a malfunction.



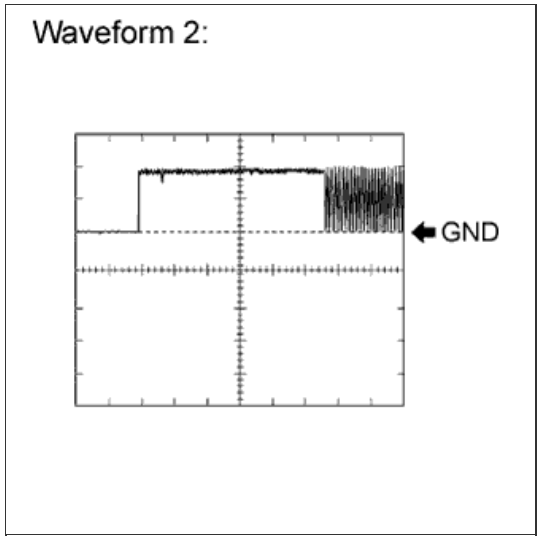
e. Using an oscilloscope, check waveform 1.

Waveform 1 (Reference)

Item	Content
Terminal No. (Symbol)	E18-10 (CODE) - E18-8 (AGND)
Tool Setting	2 V/DIV., 20 msec./DIV.
Condition	Engine switch pressed and key held close to engine switch*

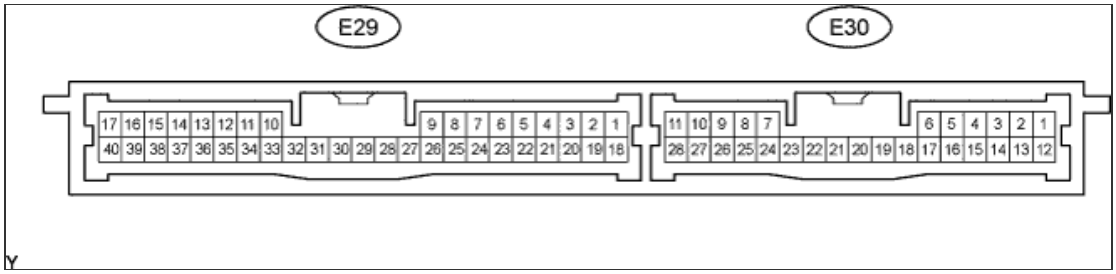
HINT:

*: Remove the key battery before performing this inspection.



f. sing an oscilloscope, check waveform 2.

Wa form 2 (Reference)



Item	Content
Terminal No. (Symbol)	E18-9 (TXCT) - E18-8 (AGND)
Tool Setting	2 V/DIV., 20 msec./DIV.
Condition	Engine switch pressed and key held close to engine switch*

HINT:

*: Remove the key battery before performing this inspection.

CHECK CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

a. Disconnect the E29 ECU connector.

b. Measure the resistance and voltage according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E29 -17 (E) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
E29-1 (+B) - E29-17 (E)	B - W-B	+B power supply	Always	11 to 14 V
E29-18 (IG) - E29-17 (E)	B - W-B	Ignition power supply	Engine switch off	Below 1 V
			Engine switch on	11 to 14 V

If the result is not as specified, there may be a malfunction on the wire harness side.

c. Reconnect the E29 ECU connector.

d. Measure the resistance and voltage according to the value(s) in the table below.

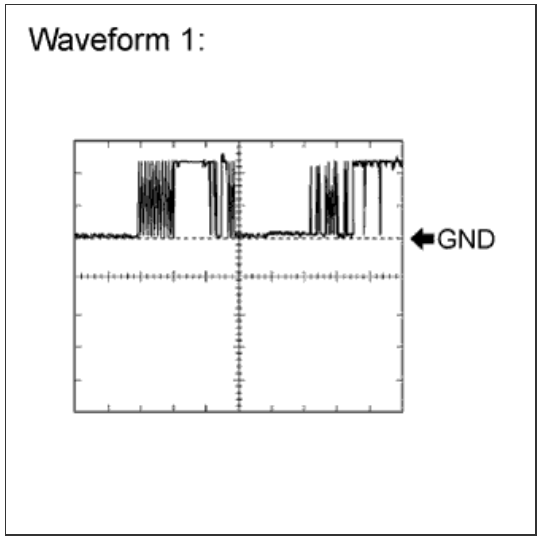
Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E29-40 (AGND) - Body				

ground	L - Body ground	Engine switch ground	Always	Below 1 Ω
E29-30 (VC5) - E29-40 (AGND)	P - L	Engine switch power supply	Key not in cabin	Below 1 V
			Engine switch pressed*	4.6 to 5.4 V
E29-9 (CODE) - E29-40 (AGND)	G- L	Engine switch CODE input	Key not in cabin	Below 1 V
			Engine switch pressed and key held close to engine switch*	Pulse generation (see waveform 1)
E29-8 (TXCT) - E29-40 (AGND)	SB - L	Engine switch TX output	Key not in cabin	Below 1 V
			Engine switch pressed and key held close to engine switch*	Pulse generation (see waveform 2)

HINT:

*: Remove the key battery before performing this inspection.

If the result is not as specified, the ECU may have a malfunction.



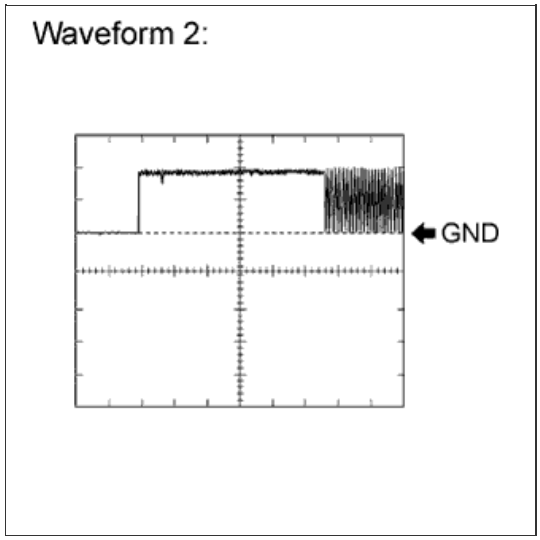
e. Using an oscilloscope, check waveform 1.

Waveform 1 (Reference)

Item	Content
Terminal No. (Symbol)	E29-9 (CODE) - E29-40 (AGND)
Tool Setting	2 V/DIV., 20 msec./DIV.
Condition	Engine switch pressed and key held close to engine switch*

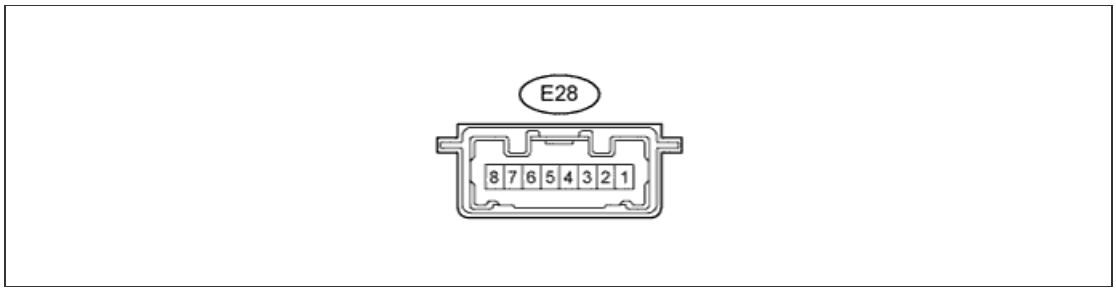
HINT:

*: Remove the key battery before performing this inspection.



f. Using an oscilloscope, check waveform 2.

Waveform 2 (Reference)



Item	Content
Terminal No. (Symbol)	E29-8 (TXCT) - E29-40 (AGND)
Tool Setting	2 V/DIV., 20 msec./DIV.
Condition	Engine switch pressed and key held close to engine switch*

HINT:

*: Remove the key battery before performing this inspection.

CHECK IMMOBILISER COMMUNICATION BETWEEN IMMOBILISER COIL AND ECU

a. Disconnect the E28 box connector.

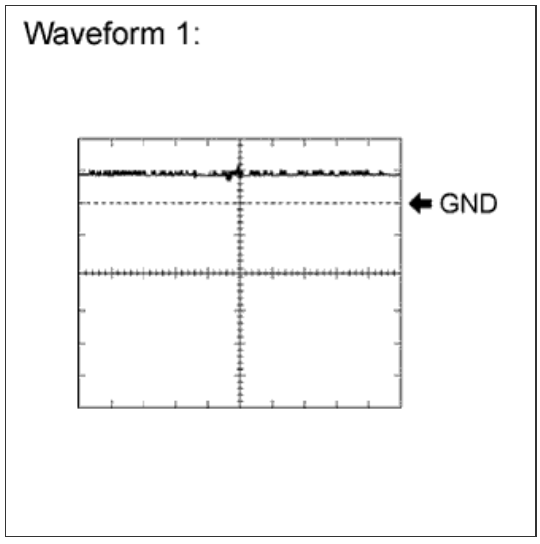
b. Measure the resistance and voltage according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E28-8 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
E28-1 (+B) - E28-8 (GND)	B - W-B	+B power supply	Always	11 to 14 V

If the result is not as specified, there may be a malfunction on the wire harness side.

c. Reconnect the E28 box connector.

d. Measure the voltage according to the value(s) in the table below.

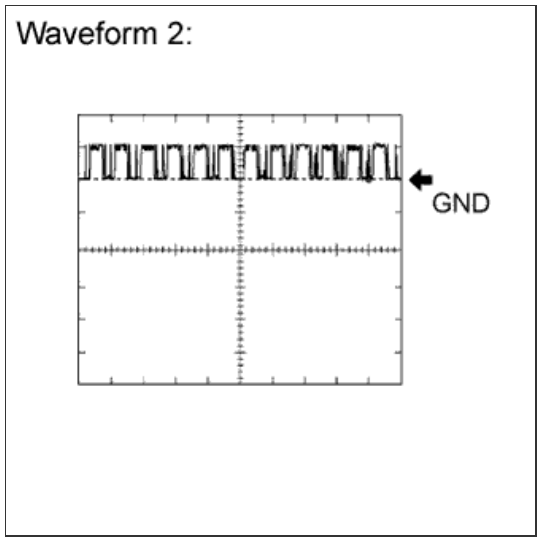


Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E28-5 (EFII) - E28-8 (GND)	W - W-B	ECM input signal	Engine switch off	Below 1 V
			Engine switch on (IG)	Pulse generation (see waveform 1)
E28-6 (EFIO) - E28-8 (GND)	R - W-B	ECM output signal	Engine switch off	Below 1 V
			Engine switch on (IG)	Pulse generation (see waveform 2)

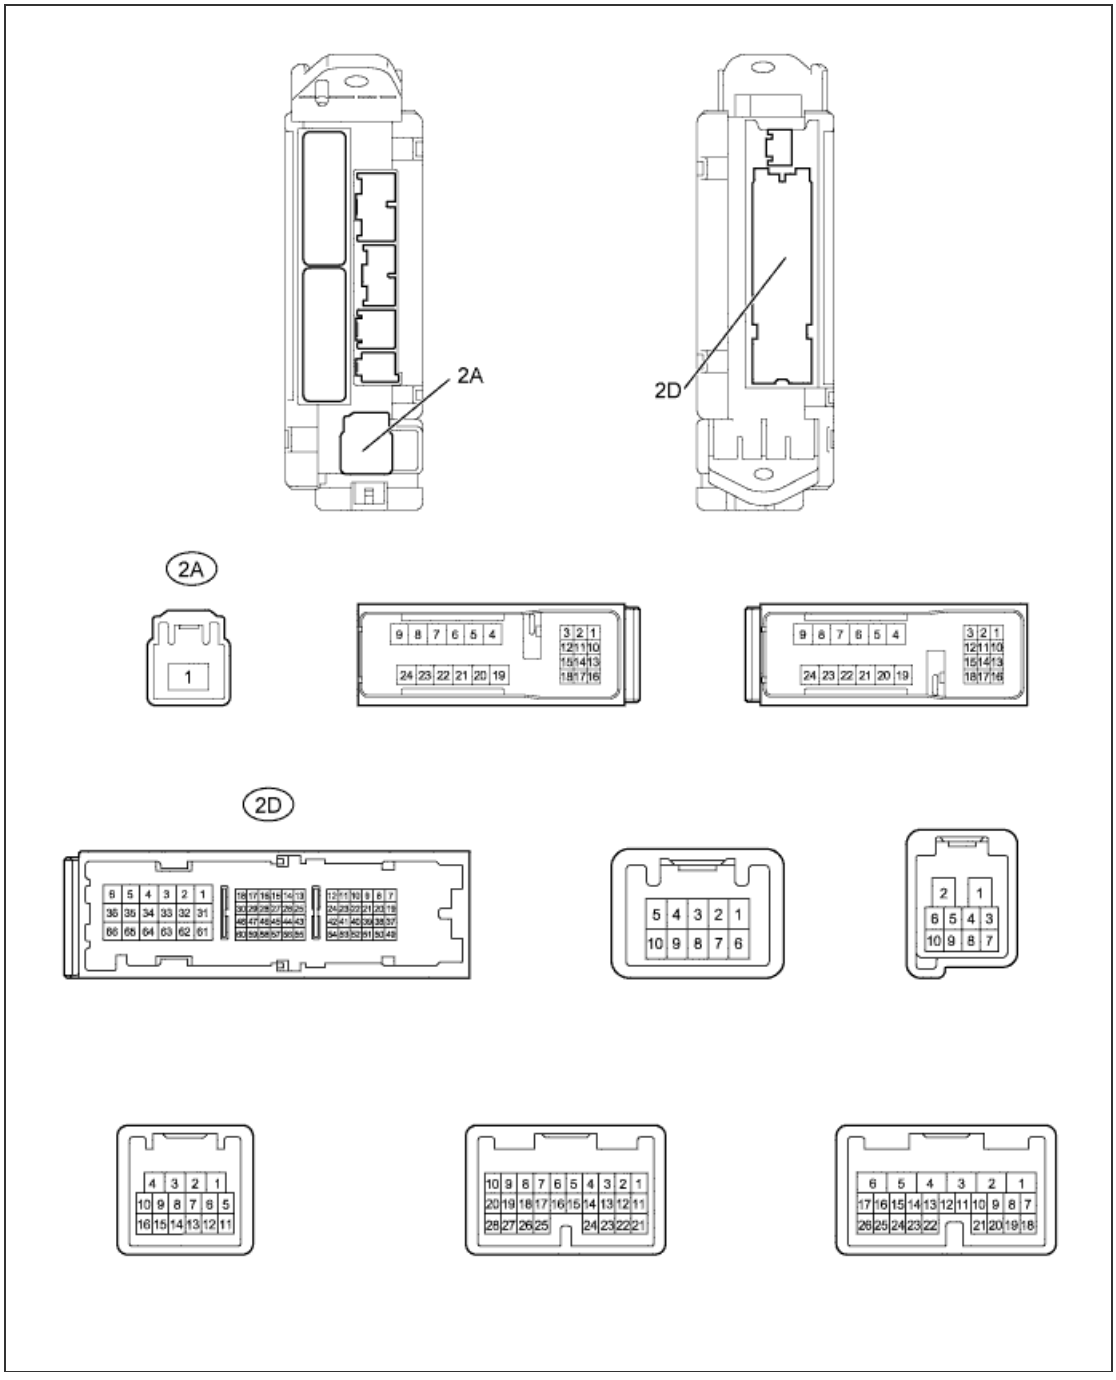
If the result is not as specified, the ID code box (immobiliser code ECU) may have a malfunction.

e. Using an oscilloscope, check waveform 1.

Waveform 1 (Reference)



Item	Content
Terminal No. (Symbol)	E28-5 (EFII) - E28-8 (GND)
Tool Setting	10 V/DIV., 100 msec./DIV.
Condition	Engine switch on (IG)

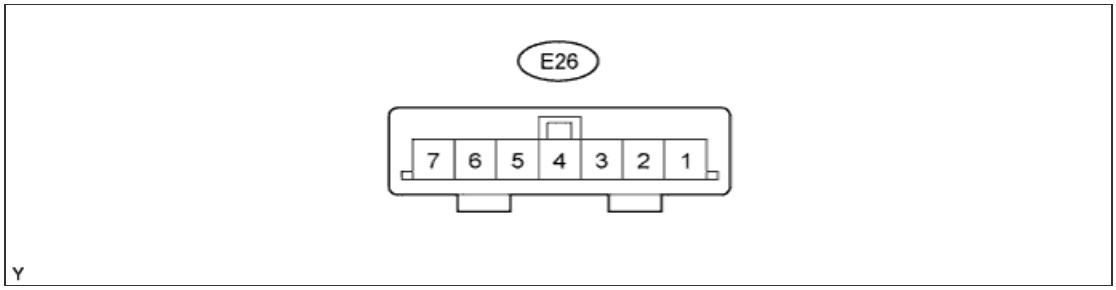


f. Using an oscilloscope, check waveform 2.

Waveform 2 (Reference)

Item	Content
Terminal No. (Symbol)	E28-6 (EFIO) - E28-8 (GND)
Tool Setting	10 V/DIV., 100 msec./DIV.
Condition	Engine switch on (IG)

CHECK MAIN BO Y ECU (COWL SI E UNCTION BLOCK LH)



a. Disconnect the 2D and 2A ECU connectors.

b. Measure the resistance and voltage according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
2D-62 (GND2) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
2D-8 (ACC) - 2D-62 (GND2)	GR - W-B	ACC power supply	Engine switch off	Below 1 V
			Engine switch on (ACC)	11 to 14 V
2A-1 (IG) - 2D-62 (GND2)	B - W-B	IG power supply	Engine switch off	Below 1 V
			Engine switch on (IG)	11 to 14 V

If the result is not as specified, there may be a malfunction on the wire harness side.

CHECK STEERING LOCK ACTUATOR (STEERING LOCK ECU)

a. Disconnect the E26 ECU connector.

b. Measure the resistance and voltage according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E26-2 (SGND) - Body ground	BR - Body ground	Ground	Always	Below 1 Ω
E26-1 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
E26-7 (B) - Body ground	R - Body ground	+B power supply	Always	11 to 14 V
E26-6 (IG2) - Body ground	B - Body ground	Ignition power supply	Engine switch off	Below 1 V
			Engine switch on (IG)	11 to 14 V

If the result is not as specified, there may be a malfunction on the wire harness side.

CHECK DTC

HINT:

- **When using the intelligent tester with the engine switch off to troubleshoot: Connect the intelligent tester to the vehicle, and turn a courtesy light switch on and off at 1.5 second intervals until communication between the intelligent tester and vehicle begins.**
- **Refer to the intelligent tester operator manual for further details.**

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body or Powertrain / (desired system) / Trouble Codes.

e. Check the DTCs.

CLEAR DTC

HINT:

- **When using the intelligent tester with the engine switch off to troubleshoot: Connect the intelligent tester to the vehicle, and turn a courtesy light switch on and off at 1.5 second intervals until communication between the intelligent tester and vehicle begins.**
- **Refer to the intelligent tester operator manual for further details.**

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body or Powertrain / (desired system) / Trouble Codes.

e. Clear the DTCs.

for Preparation Click here

READ DATA LIST

HINT:

Using the intelligent tester to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Entry&Start / Data List.

e. According to the display on the intelligent tester, read the Data List.

Entry&Start

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Ignition Switch	Engine switch on (IG) signal / ON or OFF	ON: Engine switch on (IG) OFF: Engine switch off	-
#Codes	Number of trouble codes / Min: 0, Max: 255	-	-
Immobiliser	Engine immobiliser system status / Set or Unset	Set: Key not in cabin Unset: Key in cabin	-

PERFORM ACTIVE TEST

HINT:

Using the intelligent tester to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Entry&Start / Active Test.

e. According to the display on the intelligent tester, perform the Active Test.

Entry&Start

Tester Display	Test Part	Control Range	Diagnostic Note
Security Indicator	Security indicator light	ON or OFF	-

for Preparation Click here

HINT:

If a trouble code is output during the DTC check, check the circuit listed for that code in the table below. Then proceed to the "See page" below.

DTC B2784 Antenna Coil Open / Short

for Preparation Click here

DESCRIPTION

This DTC is output when there is an open or short malfunction in the transponder key coil (built into the engine switch).

DTC Code	DTC Detection Condition	Trouble Area
B2784	The antenna coil is open/shorted.	• Certification ECU (Smart key ECU assembly) • Engine switch

INSPECTION PROCEDURE

1.CLEAR DTC

a. Clear the DTCs (Click here).

NEXT

2.CHECK FOR DTC

a. Check for DTCs (Click here).

OK:
DTC B2784 is not output.

NG → Go to step 3

OK

USE SIMULATION METHOD TO CHECK (Click here)

3.REPLACE ENGINE SWITCH

a. for 1GR-FE

i. Temporarily replace the engine switch with a new one (Click here).

b. for 2UZ-FE

i. Temporarily replace the engine switch with a new one (Click here).

c. for 1VD-FTV

i. Temporarily replace the engine switch with a new one (Click here).

NEXT

4.CLEAR DTC

a. Clear the DTCs (Click here).

NEXT

5.CHECK FOR DTC

a. Recheck for DTCs (Click here).

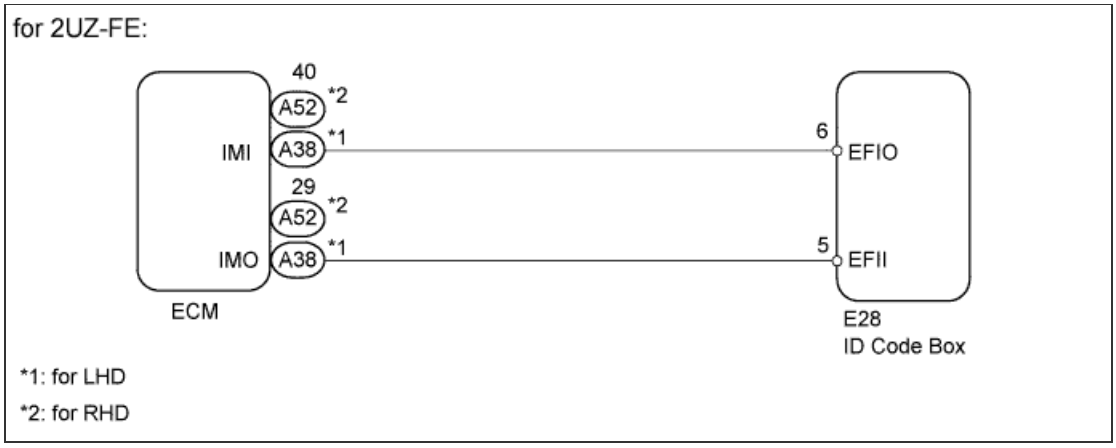
OK:
DTC B2784 is not output.

NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

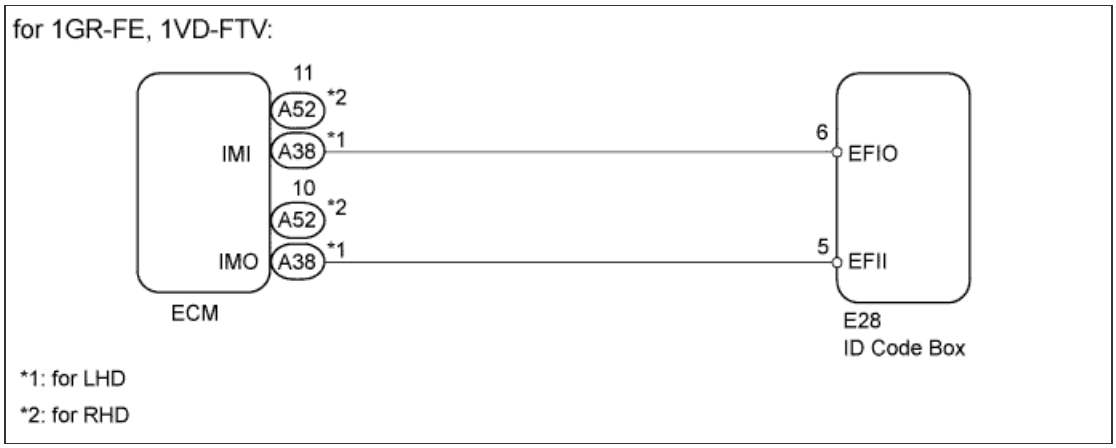
OK

END (ENGINE SWITCH IS DEFECTIVE)

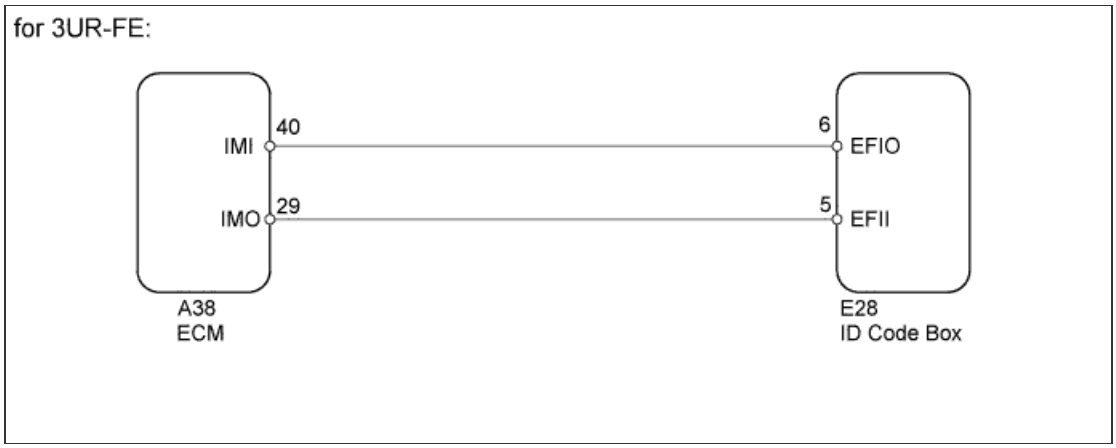
DTC B2799 Engine Immobiliser System Malfunction



for Preparation Click here



DESCRIPTION



This DTC is output when one of the following occurs: 1) the ECM detected errors in its own communications with the ID code box (immobiliser code ECU); 2) the ECM detects errors in the communication lines; or 3) the ECU communication ID between the ID code box (immobiliser code ECU) and ECM is different and an engine start is attempted.
Before troubleshooting for this DTC, make sure no certification ECU DTCs are stored. If stored, troubleshoot the certification ECU DTCs first.

DTC Code	DTC Detection Condition	Trouble Area
B2799	One of following conditions is met: • Error in the communication between the ECM and the ID code box (immobiliser code ECU). • Error in the communication lines. • The communication ID is different during communication with the ID code box (immobiliser code ECU).	• Harness or connector • ECM • ID code box (immobiliser code ECU)

WIRING DIAGRAM

INSPECTION PROCEDURE

1.CLEAR DTC

a. Clear the DTCs (Click here).

NEXT

2.CHECK FOR DTC

a. Check for DTCs (Click here).

OK:
DTC B2799 is not output.

NG → **Go to step 3**

OK

USE SIMULATION METHOD TO CHECK (Click here)

3.REREGISTER ECU CODE

a. Reregister the recognition codes in the ECUs.

NEXT

4.CLEAR DTC

a. Clear the DTCs (Click here).

NEXT

5.CHECK FOR DTC

a. Check for DTCs (Click here).

OK:
DTC B2799 is not output.

NG → **Go to step 6**

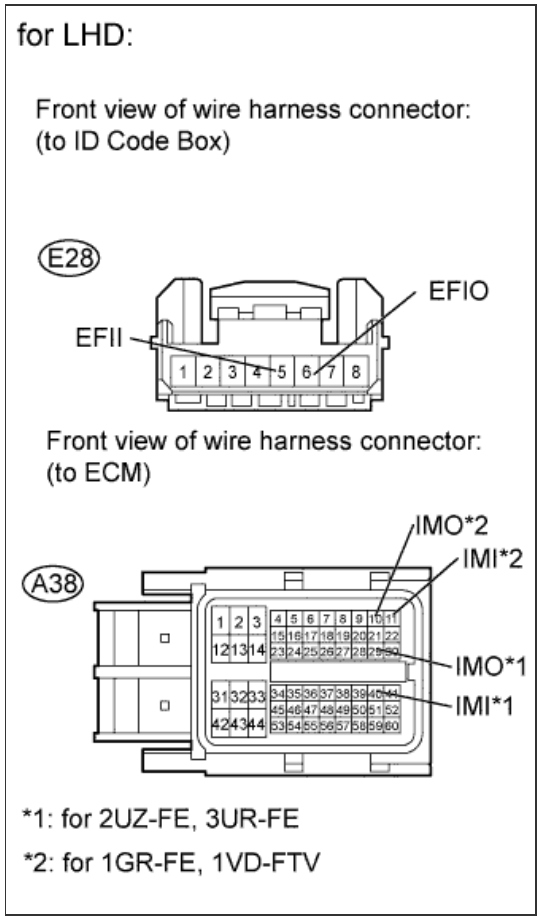
OK

END (RECOGNITION CODE IN ECU IS DEFECTIVE)

6.CHECK CONNECTION OF CONNECTOR

a. Turn the engine switch off.

b. Check that the connectors are properly connected to the ECM and the ID code box.



OK:
Connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

7.CHECK HARNESS AND CONNECTOR (ID CODE BOX (IMMOBILISER CODE ECU) - ECM)

a. Disconnect the E28 box connector.

b. Disconnect the A38*1 or A52*2 ECU connector.

HINT:

- ***1: for LHD**
- ***2: for RHD**

c. Measure the resistance according to the value(s) in the table below.

i. for 2UZ-FE

Standard Resistance:

Tester Connection	Condition	Specified Condition
E28-5 (EFII) - A38*1-29 (IMO)	Always	Below 1 Ω
E28-6 (EFIO) - A38*1-40 (IMI)		
E28-5 (EFII) or A38*1-29 (IMO) - Body ground	Always	10 kΩ or higher

E28-6 (EFIO) or A38*1-40 (IMI) - Body ground		
E28-5 (EFII) - A52*2-29 (IMO)	Always	Below 1 Ω
E28-6 (EFIO) - A52*2-40 (IMI)		
E28-5 (EFII) or A52*2-29 (IMO) - Body ground	Always	10 kΩ or higher
E28-6 (EFIO) or A52*2-40 (IMI) - Body ground		

INT:

- ***1: for LHD**
- ***2: for RHD**

ii. for 1GR-FE, 1VD-FTV

Standard Resistance:

Tester Connection	Condition	Specified Condition
E28-5 (EFII) - A38*1-10 (IMO)	Always	Below 1 Ω
E28-6 (EFIO) - A38*1-11 (IMI)

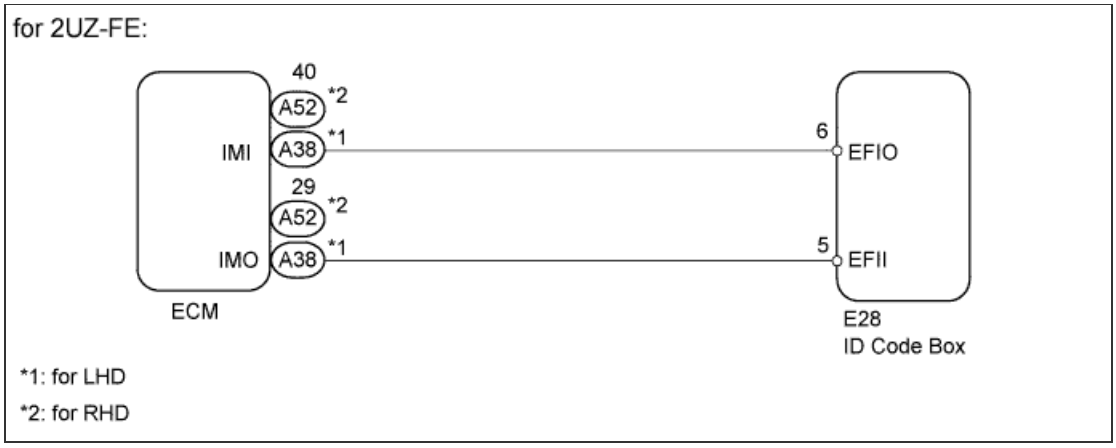
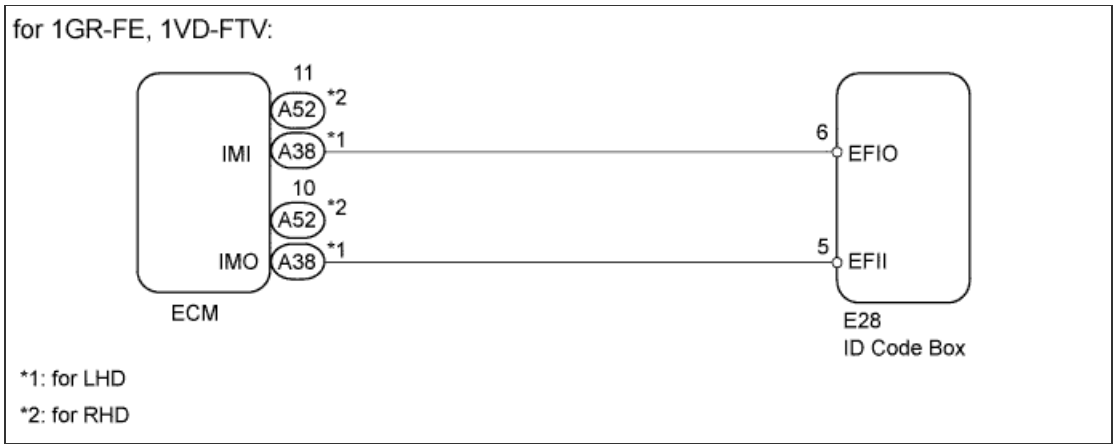
DTC B2799 Engine Immobiliser System Malfunction



for Preparation Click here



DESCRIPTION

This DTC is output when one of the following occurs: 1) the ECM detected errors in its own communications with the ID code box (immobiliser code ECU); 2) the ECM detects errors in the communication lines; or 3) the ECU communication ID between the ID code box (immobiliser code ECU) and ECM is different and an engine start is attempted.
Before troubleshooting for this DTC, make sure no certification ECU DTCs are stored. If stored, troubleshoot the certification ECU DTCs first.

DTC Code	DTC Detection Condition	Trouble Area
B2799	One of following conditions is met: • Error in the communication between the ECM and the ID code box (immobiliser code ECU). • Error in the communication lines. • The communication ID is different during communication with the ID code box (immobiliser code ECU).	• Harness or connector • ECM • ID code box (immobiliser code ECU)

THEFT DETERRENT SYSTEM DESCRIPTION

The theft deterrent system is designed to deter vehicle break-ins and theft. If an attempted break-in or theft is detected, the vehicle horns and security horn*1 or theft warning siren (self power siren)*2 will sound, the room light will illuminate, and the headlights*3, taillights*3 and hazard warning lights will flash. The system detects an attempted break-in or theft when any of the following occurs: 1) the vehicle is forcibly entered; 2) the engine hood is forcibly opened; 3) the doors are unlocked without the use of a key; or 4) the cable from the negative (-) battery terminal is disconnected and reconnected.
If the system enters the alarm sounding state, any unlocked doors will automatically lock.
The system has 4 states: disarmed state, arming preparation state, armed and alarm sounding state.

HINT:

- ***1: w/ Security Horn**
- ***2: w/ Theft Warning Siren (Self Power Siren)**
- ***3: For vehicles with a theft warning siren (self power siren), this part is not related to the theft deterrent system.**

FUNCTION OF MAIN COMPONENT

Function	Outline
Security indicator	Informs driver of the theft deterrent system status.
Security horn*1	Sounds when an attempted break-in or theft is detected. Located in the engine compartment.
Theft warning siren (Self power siren)*2	Sounds when an attempted break-in or theft is detected. Located on the quarter inner LH.
Taillight*3	Flashes when an attempted break-in or theft is detected.
Map light and rear map light	Illuminates when an attempted break-in or theft is detected. The map light has intrusion sensor cancel switch. For vehicles equipped with a tilt sensor, the intrusion sensor cancel switch also functions as tilt sensor OFF switch.
Headlight*3	Begins flashing when an attempted break-in or theft is detected.
Hazard warning light	Begins flashing when an attempted break-in or theft is detected.
Vehicle horns	Sounds when an attempted break-in or theft is detected.
Door courtesy light switch	Detects the door open status (open or closed).
Door lock position switch	Detects the door lock status (locked or unlocked).
Engine hood courtesy switch	Detects the engine hood open status (open or closed).
Back door courtesy switch	Detects the back door open status (open or closed).
Main body ECU	Detects the engine switch condition (off, on (ACC), or on (IG)).
Intrusion sensor*4	If an intrusion is detected, the alarm is activated.
Yaw rate sensor*4	After the theft deterrent system is set, detects vehicle tilt. If vehicle tilt changes, the certification ECU (smart key ECU assembly) determines there was theft.
Glass breakage sensor*5	Sounds alarm when the left or right rear side glass or back door glass is broken, or when there is short in the wire harness.

HINT:

*1: w/ Security Horn

*2: w/ Theft Warning Siren (Self Power Siren)

*3: For vehicles with a theft warning siren (self power siren), this part is not related to the theft deterrent system.

*4: w/ Intrusion Sensor

*5: w/ Glass Breakage Sensor

SYSTEM FUNCTION

a. Disarmed state:

- The alarm function is not operating.
- The theft deterrent system is not operating.

b. Arming preparation state:

The theft deterrent system is not operating.

c. Armed state:

The theft deterrent system is operating.

d. Alarm sounding state:

The alarm function is operating (30 +/-5 seconds).

for Preparation Click here

HINT:

- **Use these procedures to troubleshoot the theft deterrent system.**
- ***: Use the intelligent tester.**
- **Troubleshooting of the theft deterrent system is based on the premise that the door lock control system, the wireless door lock control system, the lighting system, the horn system, the engine immobiliser system and the entry and start system are operating normally. Check these systems first before troubleshooting the theft deterrent system.**

1.VEHICLE BROUGHT TO WORKSHOP

NEXT

2.INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

3.INSPECT COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*

a. Use the intelligent tester to check if the CAN communication system is functioning normally.

Result

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output (for LHD)	B
CAN DTC is output (for RHD)	C

B. → Go to CAN COMMUNICATION SYSTEM (Click here)

C. → Go to CAN COMMUNICATION SYSTEM (Click here)

A

4.CHECK LIN COMMUNICATION SYSTEM*

a. The theft deterrent system uses the LIN communication system to communicate. Check that the LIN communication system is functioning normally.

Result

Result	Proceed to
LIN communication system is normal	A
LIN communication system is malfunctioning	B

B. → Go to LIN COMMUNICATION SYSTEM (Click here)

A

5.CHECK FOR DTC*

a. Check for DTCs (Click here) and note any codes that are output.

b. Clear the DTC (Click here).

c. Based on the DTCs output above, try to force output of the same DTC by simulating the symptoms indicated by the DTC. Then recheck for DTCs.

Result

Result	Proceed to
DTC output does not reoccur	A
DTC output reoccurs	B

B. → Go to step 7

A

6.PROBLEM SYMPTOMS TABLE

a. Refer to Problem Symptoms Table (Click here).

Result

Result	Proceed to
Fault is not listed in problem symptoms table	A
Fault is listed in problem symptoms table	B

HINT:

- **Before checking the theft deterrent system function, cancel the entry and start system.**
- **If the battery is reconnected during the armed state, the system may enter the alarm sounding state and the alarm may sound. If so, perform a wireless unlock operation to stop the alarm.**
- **For vehicles with a theft warning siren (self power siren), if the battery is disconnected during the armed state, the system may enter the alarm sounding state and the alarm may sound. If so, perform a wireless unlock operation to stop the alarm.**

OUTLINE OF THEFT DETERRENT SYSTEM

a. When the theft deterrent system detects that the vehicle is being tampered with, the horns sound and lights flash continuously. For vehicles with a siren, the theft warning siren (self power siren) sounds simultaneously.

b. The system has active arming mode (refer to "Active Arming Mode").

c. Active arming mode has 4 states: disarmed state, arming preparation state, armed state and alarm sounding state.

i. Disarmed state:

- The alarm function is not operating.
- The theft deterrent system is not operating.

ii. Arming preparation state:

- The theft deterrent system is not operating.

iii. Armed state:

- The theft deterrent system is operating.

iv. Alarm sounding state:

- The alarm function is operating (30 +/-5 seconds).

Alarm Method and Time

Alarm Method	Hazard Warning Light	Blinking (cycle of flasher relay)
	Vehicle Horn	Sounding (cycle of 0.4 seconds)
	Security Horn*1	Sounding (cycle of 0.4 seconds)
	Headlight*1	Flashing
	Taillight*1	Flashing
	Room Light	Illuminating
	Theft Warning Siren (Self Power Siren)*2	Sounding (cycle of 0.4 seconds)
	Security Indicator	Illuminating
Alarm Time	30 +/-5 seconds	

HINT:

- **If during the alarm sounding state, one of the doors is unlocked without using a proper key, a forced door lock signal will be output (refer to "Forced Door Lock Control").**
- ***1: w/ Security Horn**
- ***2: w/ Theft Warning Siren (Self Power Siren)**

ACTIVE ARMING MODE

HINT:

- **Active arming mode starts the alarm control immediately after the doors are locked.**
- **Before checking the theft deterrent system, cancel the entry and start system.**

System State	State Switching Condition	Transfer to
	Perform one of following, and system will go on to "Arming preparation state":	

1. Disarmed state	1. With all doors and engine hood closed, lock all doors by wireless operation. 2. With all doors and engine hood closed, lock all doors using mechanical key.*1 3. With any door or engine hood open, lock all doors and close all doors and engine hood.*1	2. Arming preparation state
2. Arming preparation state	Perform one of following, and system will go on to "Disarmed state": 1. Unlock all doors by wireless operation. 2. Unlock all doors using mechanical key.*1 3. Unlock door. 4. Open engine hood. 5. With brake pedal depressed, put and hold key 10 mm (0.393 in.) from engine switch with key ornament facing engine switch for 5 seconds, and turn engine switch on (ACC) or on (IG). 6. Reconnect battery.	1. Disarmed state
	Perform one of following, and system will go on to "Armed state": 1. Allow 30 (+/-1.5) seconds to elapse.	3. Armed state
3. Armed State	Perform one of following, and system will go on to "Disarmed state": 1. Unlock all doors by wireless operation. 2. Unlock all doors using mechanical key.*1 3. With brake pedal depressed, put and hold key 10 mm (0.393 in.) from engine switch with key ornament facing engine switch for 5 seconds, and turn engine switch on (IG).	1. Disarmed state
	Perform one of following, and system will go on to "Alarm sounding state": 1. Open engine hood. 2. Open door. 3. Unlock door without using wireless operation.*2 4. Unlock door without using mechanical key.*1 5. Disconnect and reconnect battery negative (-) cable.*3 6. Force engine ignition system to turn on without proper engine start method. 7. Intrusion sensor detects movement within vehicle.*4	4. Alarm sounding state
4. Alarm sounding state	Perform one of following, and system will go on to "Disarmed state": 1. Unlock all doors using wireless operation.*2 2. Unlock all doors using mechanical key.*1 3. With brake pedal depressed, put and hold key 10 mm (0.393 in.) from engine switch with key ornament facing engine switch for 5 seconds, and turn engine switch ON (IG).	1. Disarmed state
	Perform one of following, and system will go on to "Armed state":	

	1. Allow 30 (+/-5) seconds to elapse.	3. Armed state (alarm stops sounding)

HINT:

*1: w/ Security Horn

*2: w/ Theft Warning Siren (Self Power Siren)

*3: For vehicles with a theft warning siren (self power siren), the siren begins to sound as soon as the battery cable is disconnected.

*4: w/ Intrusion sensor

FORCED DOOR OCK CONTRO

a. The forced door lock control also helps to prevent the vehicle from being tampered with. When a door is unlocked and the alarm starts, the door is forced to lock by a forced door lock signal.

i. Conditions that force the doors to lock:

- 0.4 seconds have elapsed after the previous output of a forced door lock signal.
- The theft deterrent system is in the alarm sounding state of active arming mode.
- A door is unlocked.

PANIC ALARM CONTROL (w/ Panic Switch)

a. The panic alarm control activates the panic alarm when the wireless transmitter panic switch is pressed. The panic alarm control operates independently from the change of the theft deterrent system alarm control from the armed state to the alarm sounding state.

i. Conditions that cause the panic alarm control to set off the panic alarm:
The panic alarm is activated when the panic switch on the wireless transmitter is pressed and held for 1.0 seconds or more under the following conditions.

- The engine switch is off.
- The theft deterrent system is not in the alarm sounding state.
- The panic alarm control is not operating (the alarm is not set off).

ii. Conditions that cause the panic alarm control to shut off the alarm:
The panic alarm is deactivated when any of the following conditions is fulfilled during panic alarm operation.

- The engine switch is turned on (IG).
- The wireless transmitter lock/unlock switch is pressed.
- 60 +/-5 seconds have passed and the panic alarm has ended.
- The theft deterrent system changes to the alarm sounding state. However, the alarm still sounds, because the theft deterrent system has changed to the alarm sounding state.
  Conditions for canceling the panic alarm are the same as for the alarm control.

HINT:

For more information about active mode, refer to "Active Arming Mode".

SECURITY INDICATOR OUTPUT

a. The security indicator turns on and off based on output signals from the certification ECU (smart key ECU assembly). However, in some cases, the actual status of the security indicator is different from the output signals of the certification ECU (smart key ECU assembly).

Output

State of Theft Deterrent System	Security Indicator	
	Output Signals from ECU	Actual Lighting Condition
Disarmed state	Off	Off (Immobiliser system not set) Blinking (Immobiliser system set)
Arming preparation state	On	On
Armed state	Off	Blinking
Alarm sounding state	On	On

Blinking Cycle

Time	Security Indicator
0.125 seconds	On
1.875 seconds	Off

HINT:

When the immobiliser system is set, the security indicator blinks during the disarmed state and the armed state due to the output signals from the immobiliser system.

for Preparation Click here

CUSTOMIZING FUNCTION WITH INTELLIGENT TESTER (REFERENCE)

NOTICE:

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Be sure to make a note of the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Utility / Customize.

e. Select the setting by referring to the table below.

Security:

Display	Default	Contents	Setting
Warning by Horn*1	ON	Function that allows vehicle horns and security horn to be used as warning device.	ON/OFF
Warning by Glass Broken Sensor*2	ON	Function that turns the glass breakage sensor on/off.	ON/OFF

HINT:

- ***1: w/ Security Horn**
- ***2: w/ Glass Breakage Sensor**

for Preparation Click here

HINT:

- **Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.**
- **Troubleshooting of the theft deterrent system is based on the premise that the door lock control system, the wireless door lock control system, the lighting system, the horn system, the engine immobiliser system and the entry and start system are operating normally. Check these systems first before troubleshooting the theft deterrent system.**

for Preparation Click here

CHECK CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

a. Disconnect the E29 and E30 ECU connectors.

b. Measure the resistance and voltage according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E29-1 (+B) - Body ground	B - Body ground	+B power supply	Always	11 to 14 V
E29-18 (IG) - Body ground	B - Body ground	IG power supply	Engine switch on (IG)	11 to 14 V
			Engine switch off	Below 1 Ω
E29-17 (E) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

c. Reconnect the E29 and E30 ECU connectors.

d. Measure the voltage according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E29-2 (IND) - Body ground	V - Body ground	Security indicator signal	Security indicator illuminates (illuminates only for 60 sec. in alarm sounding state (blinking when system in armed state))	6 to 11 V
E30-20 (SH-) - Body ground*1	LG - Body ground	Security horn signal	Security horn not sounding (theft deterrent system in alarm sounding state)	11 to 14 V
			Security horn sounding (theft deterrent system in alarm sounding state)	0.5 to 4 V
E30-24 (HSW) - Body ground	W - Body ground	Engine hood courtesy switch signal	Engine hood closed	10 kΩ or higher
			Engine hood open	Below 1 Ω
E30-7 (SSCL) - Body ground*2	L - Body ground	Theft warning siren (self power siren) signal	Theft warning siren (self power siren) sounding (theft warning system in alarm sounding state)	Below 2 V
			Theft warning siren (self power siren) not sounding (theft warning system in alarm sounding state)	4.5 to 14 V
E30-4 (IOUT) - Body ground*3	P - Body ground	Intrusion sensor signal input	No moving object detected	9 to 14 V
			Moving object detected during arming preparation state or armed state	Pulse generation (see waveform 1)
			Intrusion sensor cancel	

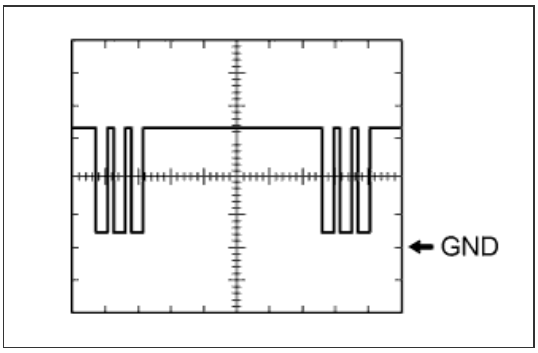
E30-5 (SSW1) - Body ground*3	V - Body ground	Intrusion sensor cancel switch signal	switch on	Below 1.5 V
			Intrusion sensor cancel switch off	4.5 to 14 V
E30-21 (CSIF) - Body ground*3	P - Body ground	Tilt sensor signal input	Vehicle tilt not detected	9 to 14 V
			Vehicle tilt detected during arming preparation state or armed state	Pulse generation (see waveform 2)
E30-23 (GBS) - Body ground*4	V - Body ground	Glass breakage sensor signal	Glass breakage sensor normal	Below 2 V
			Glass breakage sensor malfunctioning	4.5 to 14 V

HINT:

*1: w/ Security Horn

*2: w/ Theft Warning Siren (Self Power Siren)

*3: w/ Intrusion Sensor

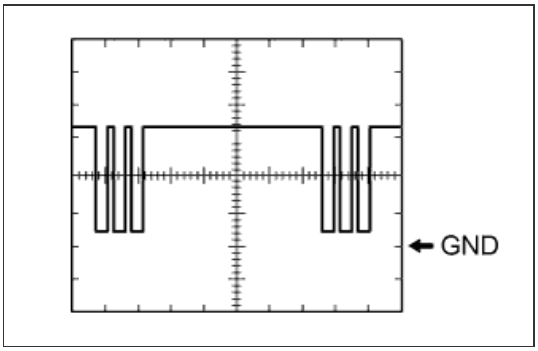


*4: w/ Glass Breakage Sensor

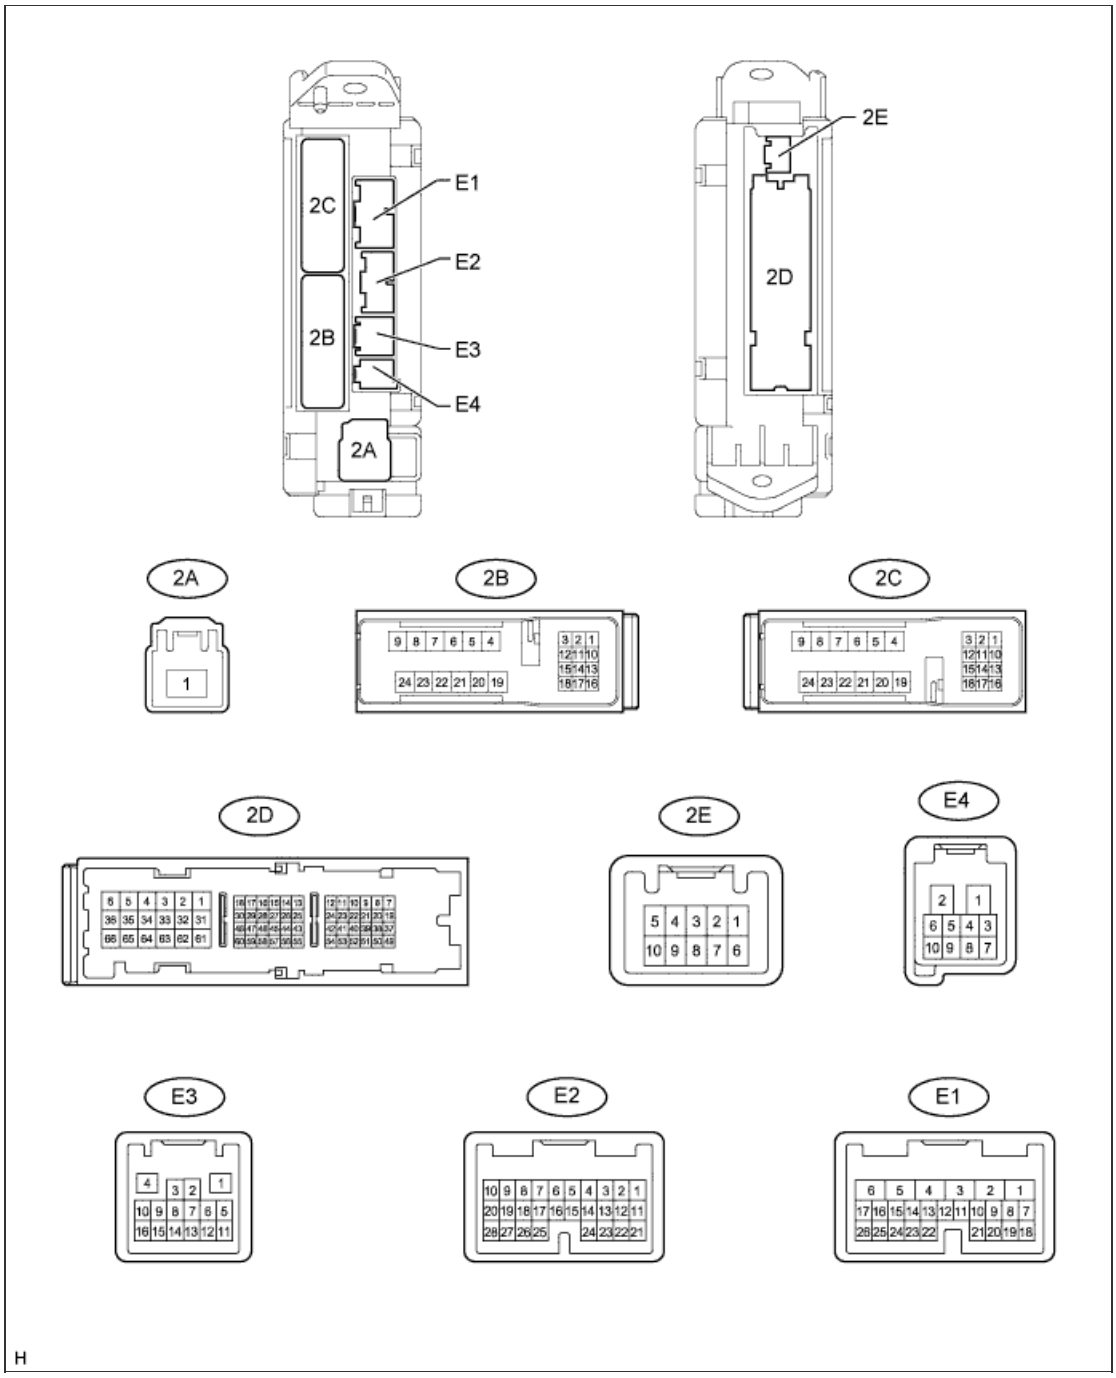
If the result is not as specified, the ECU may have a malfunction.

e. Using an oscilloscope, check waveform 1.

Waveform 1 (Reference)



Item	Content
Terminal No. (Symbol)	E30-4 (IOUT) - Body ground
Tool Setting	2 V/DIV., 500 ms/DIV.
Condition	Moving object detected during arming preparation state or armed state



f. Using an oscilloscope, check waveform 2.

Waveform 2 (Reference)

Item	Content
Terminal No. (Symbol)	E30-21 (CSIF) - Body ground
Tool Setting	2 V/DIV., 500 ms/DIV.
Condition	Vehicle tilt detected during arming preparation state or armed state

CHECK MAIN BODY ECU (COWL SIDE JUNCTION BLOCK LH)

a. Disconnect the 2A, 2B, 2D and E3 ECU connectors.

b. Measure the voltage and resistance according to the value(s) in the table below.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
2A-1 (ALTB) - Body ground	B - Body ground	Battery power supply	Always	11 to 14 V
2B-20 (BATB) - Body ground	L - Body ground	Battery power supply	Always	11 to 14 V
2D-7 (IG) - Body ground	G - Body ground	IG power supply	Engine switch on (IG)	11 to 14 V
			Engine switch off	Below 1 V
2D-8 (ACC) - Body ground	GR - Body ground	ACC power supply	Engine switch on (ACC)	11 to 14 V
			Engine switch off	Below 1 V
2D-62 (GND2) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
E3-1 (GND3) - Body ground	BR - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction in the wire harness.

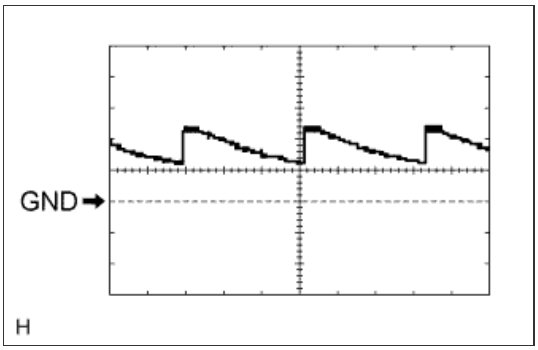
c. Reconnect the 2A, 2B, 2D and E3 ECU connectors.

d. Measure the voltage of the connectors.

Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E1-24 (DCT) - Body ground	L - Body ground*1 - Body ground*2	Driver side door courtesy switch input	Driver side door open	Below 1 V
			Engine switch off, and driver side door courtesy switch off	Pulse generation (see waveform 1 or 2)
E2-21 (PCTY) - Body ground	Y - Body ground*1 L - Body ground*2	Front passenger side door courtesy switch input	Front passenger side door open	Below 1 V
			Engine switch off, and passenger side door courtesy switch off	Pulse generation (see waveform 3 or 4)
2C-2 (LCTY) - Body ground	W - Body ground	Rear door LH courtesy light switch input	Rear door LH open	Below 1 V
			Engine switch off, and rear LH side door courtesy switch off	Pulse generation (see waveform 5 or 6)
E2-7 (RCTY) - Body ground	G - Body ground	Rear door RH courtesy light switch input	Rear door RH open	Below 1 V
			Engine switch off, and rear RH side door courtesy switch off	Pulse generation (see waveform 7 or 8)
E2-25 (BCTY) - Body ground	W - Body ground	Back door courtesy light switch input	Back door open	Below 1 V
			Engine switch off, and back door closed	Pulse generation (see waveform 9 or 10)
2D-3 (ACT+) - Body ground	L - Body ground	Driver side door lock motor lock drive output	Master switch (door control switch) or driver side door key cylinder off	Below 1 V
			Master switch (door control switch) or driver side door key cylinder lock	11 to 14 V
E1-5 (ACTD) - Body ground	B - Body ground	Driver side door lock motor unlock drive output	Master switch (door control switch) or driver side door key cylinder off	Below 1 V
			Master switch (door control switch) or driver side door key cylinder unlock	11 to 14 V
2D-3 (ACT+) - Body ground	L - Body ground	Front passenger side door lock motor lock drive output	Master switch (door control switch) or driver side door key cylinder off	Below 1 V
			Master switch (door control switch) or driver side door key cylinder lock	11 to 14 V
2D-2 (ACT-) - Body ground	B - Body ground	Front passenger side door lock motor unlock drive output	Master switch (door control switch) or driver side door key cylinder off	Below 1 V
			Master switch (door control switch) or driver side door key cylinder unlock	11 to 14 V
2D-3 (ACT+) - Body ground	L - Body ground	Rear door LH lock motor lock drive output	Master switch (door control switch) or driver side door key cylinder off	Below 1 V
			Master switch (door control switch) or driver side door key cylinder lock	11 to 14 V
2C-23 (ACT-) - Body ground	BR - Body ground	Rear door LH lock motor unlock drive output	Master switch (door control switch) or driver side door key cylinder off	Below 1 V
			Master switch (door control switch) or driver side door key cylinder unlock	11 to 14 V
2D-3 (ACT+) - Body ground	L - Body ground	Rear door RH lock motor lock drive output	Master switch (door control switch) or driver side door key cylinder off	Below 1 V
			Master switch (door control switch) or driver	11 to 14 V

			side door key cylinder lock	
2D-2 (ACT-) - Body ground	B - Body ground	Rear door RH lock motor unlock drive output	Master switch (door control switch) or driver side door key cylinder off	Below 1 V
			Master switch (door control switch) or driver side door key cylinder unlock	11 to 14 V
E1-10 (UL3) - Body ground	Y - Body ground	Driver side door lock key switch input	Driver side door key cylinder unlock	Below 1 V
			Engine switch off, all doors closed and driver side door key cylinder neutral position	Pulse generation (see waveform 11 or 12)
2D-53 (L2) - Body ground	LG - Body ground	Driver side door lock key switch input	Driver side door key cylinder lock	Below 1 V
			Engine switch off, all doors closed and driver side door key cylinder neutral position	Pulse generation (see waveform 13 or 14)
E1-9 (LSWD) - Body ground	BR - Body ground	Driver side door lock position switch input	Driver side door unlock	Below 1 V
			Engine switch off, all doors closed and driver side door lock	Pulse generation (see waveform 15 or 16)
E2-27 (LSWP) - Body ground	Y - Body ground	Passenger side door lock position switch input	Passenger side door unlock	Below 1 V
			Engine switch off, all doors closed and passenger side door lock	Pulse generation (see waveform 17 or 18)
2C-1 (LSWL) - Body ground	BR - Body ground	Rear door LH lock position switch input	Rear door LH unlock	Below 1 V
			Engine switch off, all doors closed and rear door LH lock	Pulse generation (see waveform 19 or 20)
E2-5 (LSWR) - Body ground	BR - Body ground	Rear door RH lock position switch input	Rear door RH unlock	Below 1 V
			Engine switch off, all doors closed and rear door RH lock	Pulse generation (see waveform 21 or 22)
E1-26 (BDSU) - Body ground	L - Body ground	Back door opener switch input	Back door lock opener switch off	Below 1 V
			Back door lock opener switch on	Pulse generation (see waveform 23 or 24)

HINT:



- ***1: for LHD**
- ***2: for RHD**

If the result is not as specified, the ECU may have a malfunction.

for Preparation Click here

CHECK DTC

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / (desired system) / DTC.

e. Read the DTCs.

CLEAR DTC

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / (desired system) / DTC.

e. Clear the DTCs.

for Preparation Click here

DATA LIST

HINT:

Using the intelligent tester to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / (desired system) / Data List.

e. According to the display on intelligent tester, read the "Data List".

Entry&Start

ACTIVE TEST

HINT:

Using the intelligent tester to perform the Active Test allows relays, VSVs and actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body / Entry&Start / Active Test.

e. According to the display on intelligent tester, perform the "Active Test".

Entry&Start

Tester Display	Test Part	Control Range	Diagnostic Note
Security Indicator	Security indicator	ON / OFF	-

HINT:

If a trouble code is output during the DTC check, inspect the trouble areas listed for that code. For details of the code, refer to the "See page" below.

Certification ECU [Entry&Start]

DTC Code	Detection Item	Trouble Area	See page
B2761	Intrusion Sensor Internal Circuit Malfunction	- Intrusion sensor - Map light assembly - Certification ECU (Smart key ECU assembly)	Click here
B2762	Intrusion Sensor Signal Circuit Malfunction	- Intrusion sensor - Map light assembly - Certification ECU (Smart key ECU assembly) - Harness or connector	Click here
B2764	Short to GND in Intrusion Sensor Signal Circuit	- Intrusion sensor - Map light assembly - Certification ECU (Smart key ECU assembly) - Harness or connector	Click here
B2768	Tilt Sensor Internal Circuit Malfunction	- Yaw rate sensor - Certification ECU (Smart key ECU assembly)	Click here
B2769	Tilt Sensor Signal Circuit Malfunction	- Yaw rate sensor - Certification ECU (Smart key ECU assembly) - Harness or connector	Click here
B276A	Short to GND in Tilt Sensor Signal Circuit	- Yaw rate sensor - Certification ECU (Smart key ECU assembly) - Harness or connector	Click here

DTC B2761 Intrusion Sensor Internal Circuit Malfunction

for Preparation Click here

DESCRIPTION

The intrusion sensor conducts a self-diagnosis immediately after the power is supplied to the sensor (when the theft deterrent system is set).
If a malfunction is detected in the intrusion wave transmission or wave reception, or the intrusion sensor wave transmission or wave reception circuit, the intrusion sensor sends a signal to the certification ECU (smart key ECU assembly). The ECU then outputs this DTC.

DTC Code	DTC Detection Condition	Trouble Area
B2761	The intrusion sensor outputs a signal for a sensor malfunction.	• Intrusion sensor • Map light assembly • Certification ECU (Smart key ECU assembly)

INSPECTION PROCEDURE

1.CHECK FOR DTC

a. Set the theft deterrent system and check if the same DTC is not output.

OK:
DTC B2761 is not output.

NG → **Go to step 2**

OK →

USE SIMULATION METHOD TO CHECK (Click here)

2.CHECK INTRUSION SENSOR (OPERATION)

a. Temporarily replace the intrusion sensor with a new or normally functioning sensor (Click here).

b. Check if DTC B2761 is not output.

OK:
DTC B2761 is not output.

NG → **Go to step 3**

OK →

END (INTRUSION SENSOR IS FAULTY)

3.CHECK MAP LIGHT ASSEMBLY (OPERATION)

a. Temporarily replace the map light with a new or normally functioning one (Click here).

b. Check if DTC B2761 is not output.

OK:
DTC B2761 is not output.

NG → **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**

OK →

END (MAP LIGHT ASSEMBLY IS FAULTY)

DTC B2768 Tilt Sensor Internal Circuit Malfunction

for Preparation Click here

DESCRIPTION

This DTC is stored when one of the following occurs: 1) yaw rate sensor power supply malfunction; 2) yaw rate sensor open malfunction; or 3) EEPROM malfunction.

DTC Code	DTC Detection Condition	Trouble Area
B2768	If one of the following is detected: • A yaw rate sensor power supply malfunction. • A yaw rate sensor open malfunction. • An EEPROM malfunction.	• Yaw rate sensor • Certification ECU (Smart key ECU assembly)

INSPECTION PROCEDURE

1.CHECK FOR DTC (OPERATION)

a. Clear DTCs (Click here).

b. Turn the engine switch on (IG), then off.

c. Set the theft deterrent system to the armed state.

d. Check that the security indicator changes from illuminated to flashing.

e. Set the theft deterrent system to the disarmed state.

f. Check for DTCs (Click here).

OK:
DTC B2768 is not output.

NG → **Go to step 2**

OK

USE SIMULATION METHOD TO CHECK (Click here)

2.CHECK YAW RATE SENSOR (OPERATION)

a. Temporarily replace the yaw rate sensor that has a tilt determining function with a new or normally functioning one (Click here).

b. Check that the system operates normally.

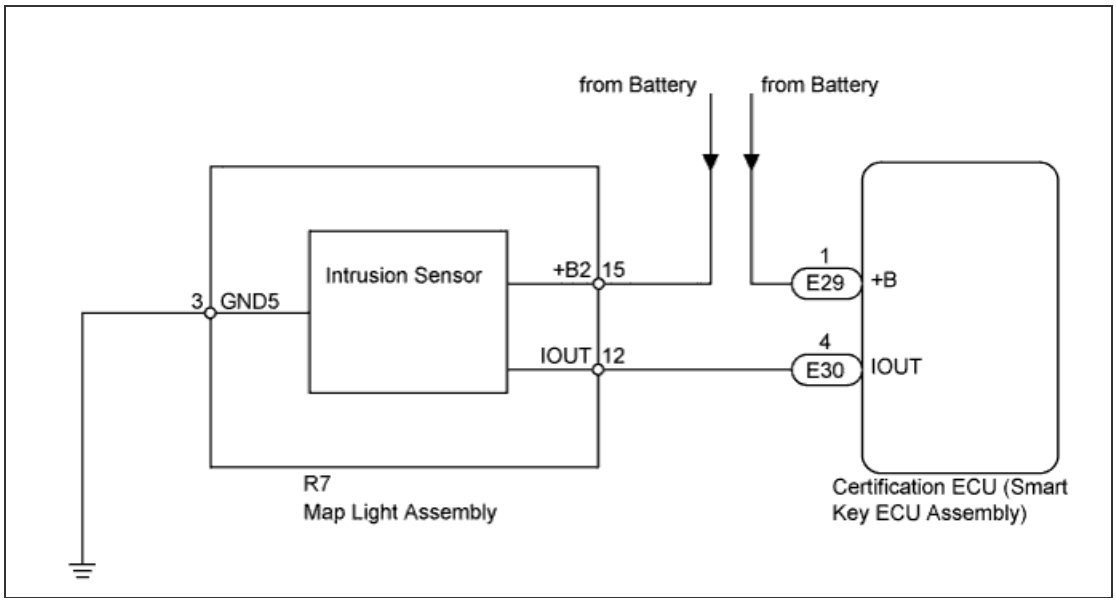
OK:
DTC B2768 is not output.

NG → **REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)**

OK

END (YAW RATE SENSOR IS FAULTY)

DTC B2762 Intrusion Sensor Signal Circuit Malfunction



for Preparation Click here

DESCRIPTION

The intrusion sensor conducts a self-diagnosis immediately after power is supplied to the sensor (when the theft deterrent system is set). If a malfunction is detected in the IOUT line, the certification ECU (smart key ECU assembly) stores this DTC.

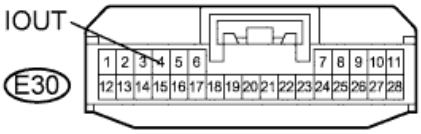
DTC Code	DTC Detection Condition	Trouble Area
B2762	After a normal/trouble signal is output from the intrusion sensor as result of self-diagnosis, either of the following malfunctions is detected: 1. The IOUT line circuit is open. 2. Reception of signals other than a normal/trouble signal.	• Intrusion sensor • Map light assembly • Certification ECU (Smart key ECU assembly) • Harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

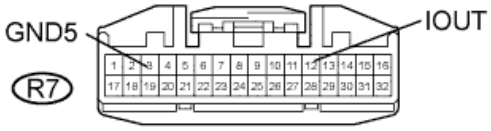
1.CHECK HARNESS AND CONNECTOR (MAP LIGHT - CERTIFICATION ECU [SMART KEY ECU ASSEMBLY] AND BODY GROUND)

a. Disconnect the R7 light connector.



b. Disconnect the E30 ECU connector.

c. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
R7-12 (IOUT) - E30- (IOUT)	Always	Below 1 Ω
R7-12 (IOUT) or E30- (IOUT) - Body ground	Always	10 kΩ or higher
R7-3 (D) - Body ground	Always	Below 1 Ω

Front view of wire harness connector:
(to Certification ECU [Smart Key ECU Assembly])

Front view of wire harness connector:
(to Map Light)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

2.CHECK INTRUSION SENSOR (OPERATION)

a. Temporarily replace the intrusion sensor with a new or normally functioning sensor (Click here).

b. Check if DTC B2762 is not output.

OK:
DTC B2762 is not output.

NG → Go to step 3

OK

END (INTRUSION SENSOR IS FAULTY)

3.CHECK MAP LIGHT ASSEMBLY (OPERATION)

a. Temporarily replace the map light with a new or normally functioning one (Click here).

b. Check if DTC B2762 is not output.

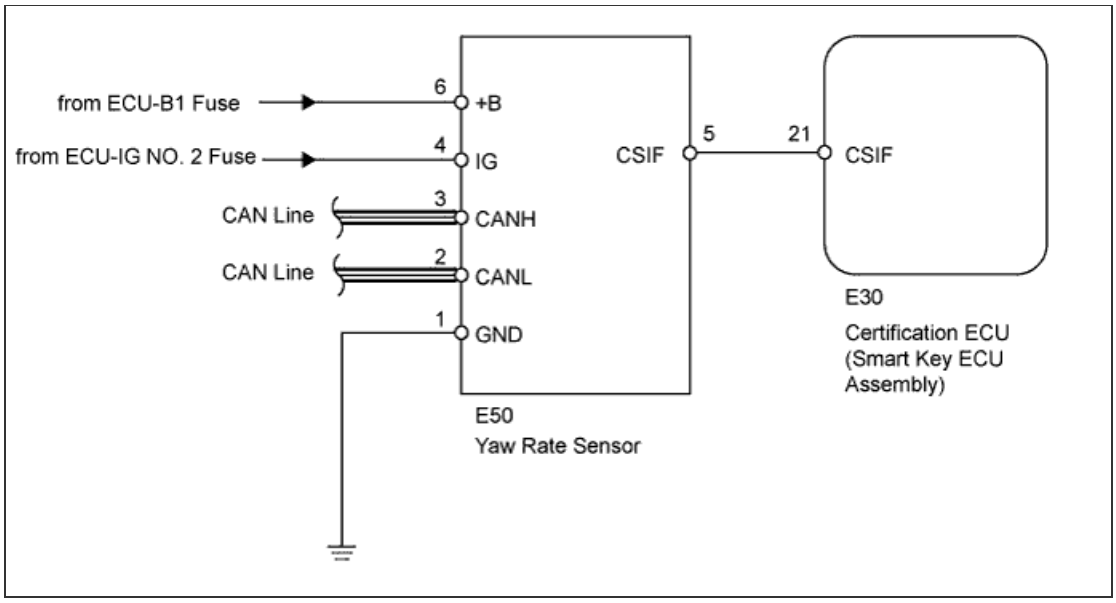
OK:
DTC B2762 is not output.

NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK

END (MAP LIGHT ASSEMBLY IS FAULTY)

DTC B2769 Tilt Sensor Signal Circuit Malfunction



for Preparation Click here

DESCRIPTION

The yaw rate sensor conducts a self-diagnosis immediately after power is supplied to the sensor (when the theft deterrent system is set).
If a malfunction is detected in the CSIF-CSIF line, the certification ECU (smart key ECU assembly) stores this DTC.

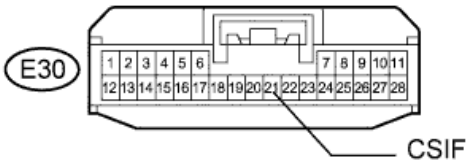
DTC Code	DTC Detection Condition	Trouble Area
B2769	After a normal/trouble signal is output from the yaw rate sensor as the result of self-diagnosis, either of the following malfunctions is detected: • The CSIF-CSIF line circuit is open. • Reception of signals other than a normal/trouble signal.	• Yaw rate sensor • Certification ECU (Smart key ECU assembly) • Harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

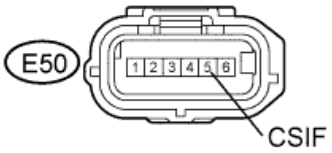
1.CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU [SMART KEY ECU ASSEMBLY] - YAW RATE SENSOR)

a. Disconnect the E30 ECU connector.



b. Disconnect the E50 sensor connector.

c. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
E30-21 (CSIF) - E50-5 (CSIF)	Always	Below 1 Ω
E30-21 (CSIF) or E50-5 (CSIF) - Body ground	Always	10 kΩ or higher

Front view of wire harness connector:
(to Certification ECU [Smart Key ECU Assembly])

Front view of wire harness connector:
(to Yaw Rate Sensor)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

2.CHECK YAW RATE SENSOR (OPERATION)

a. Temporarily replace the yaw rate sensor that has a tilt determining function with a new or normally functioning one (Click here).

b. Check that the system operates normally.

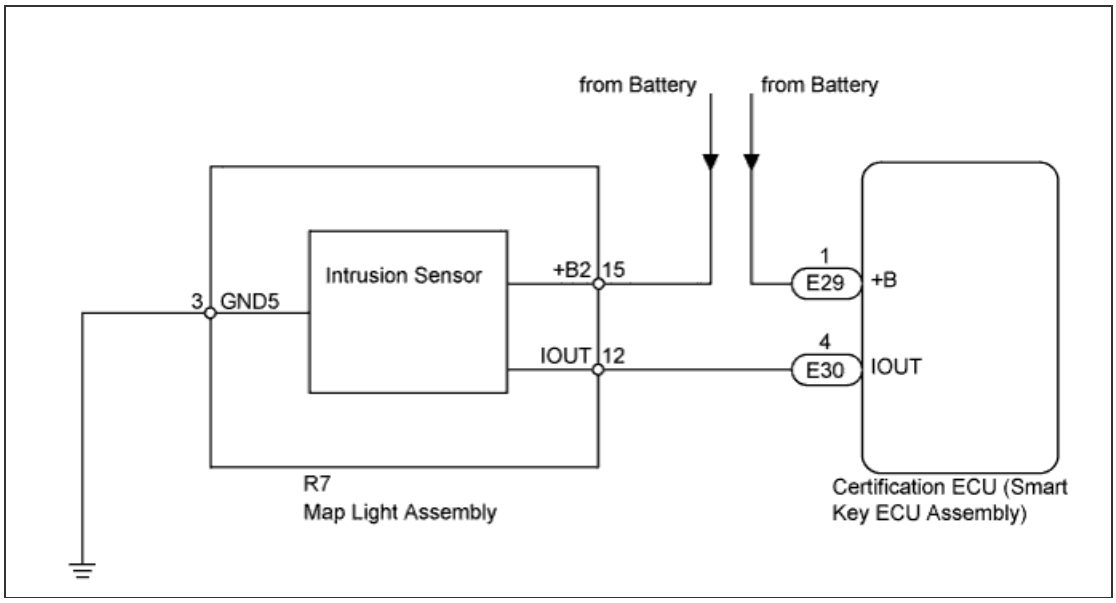
OK:
DTC B2769 is not output.

NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK

END (YAW RATE SENSOR IS FAULTY)

DTC B2764 Short to GND in Intrusion Sensor Signal Circuit



for Preparation Click here

DESCRIPTION

The intrusion sensor conducts a self-diagnosis immediately after power is supplied to the sensor (when the theft deterrent system is set). This DTC is stored when terminal IOUT of the intrusion sensor has not received a signal for 5 seconds or more.

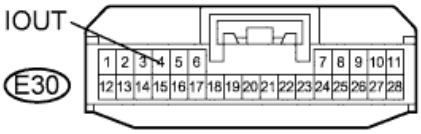
DTC Code	DTC Detection Condition	Trouble Area
B2764	After normal/trouble signal is output from the intrusion sensor as result of self-diagnosis, the following malfunction is detected: Terminal IOUT of the intrusion sensor has not received signal for 5 seconds or more.	• Intrusion sensor • Map light assembly • Certification ECU (Smart key ECU assembly) • Harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

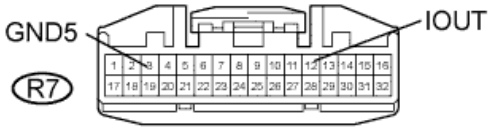
1.CHECK HARNESS AND CONNECTOR (MAP LIGHT - CERTIFICATION ECU [SMART KEY ECU ASSEMBLY] AND BODY GROUND)

a. Disconnect the R7 light connector.



b. Disconnect the E30 ECU connector.

c. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
R7-12 (IOUT) - E30-4 (IOUT)	Always	Below 1 Ω
R7-12 (IOUT) or E30-4 (IOUT) - Body ground	Always	10 kΩ or higher
R7-3 (GND5) - Body ground	Always	Below 1 Ω

Front view of wire harness connector:
(to Certification ECU [Smart Key ECU Assembly])

Front view of wire harness connector:
(to Map Light)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

2.CHECK INTRUSION SENSOR (OPERATION)

a. Temporarily replace the intrusion sensor with a new or normally functioning sensor (Click here).

b. Check if DTC B2764 is not output.

OK:
DTC B2764 is not output.

NG → Go to step 3

OK

END (INTRUSION SENSOR IS FAULTY)

3.CHECK MAP LIGHT ASSEMBLY (OPERATION)

a. Temporarily replace the map light with a new or normally functioning one (Click here).

b. Check if DTC B2764 is not output.

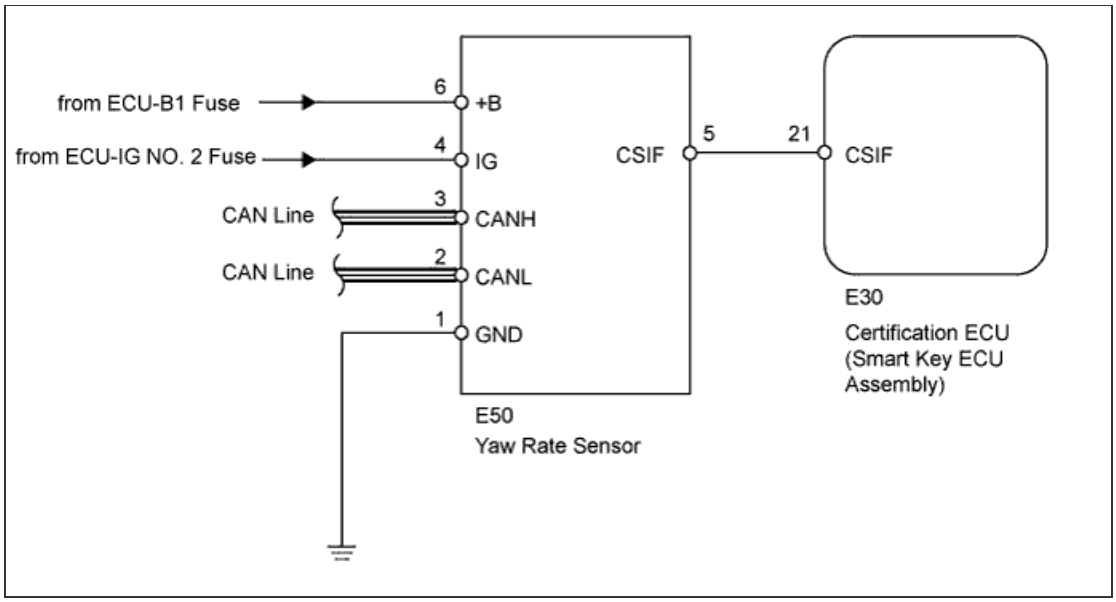
OK:
DTC B2764 is not output.

NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK

END (MAP LIGHT ASSEMBLY IS FAULTY)

DTC B276A Short to GND in Tilt Sensor Signal Circuit



for Preparation Click here

DESCRIPTION

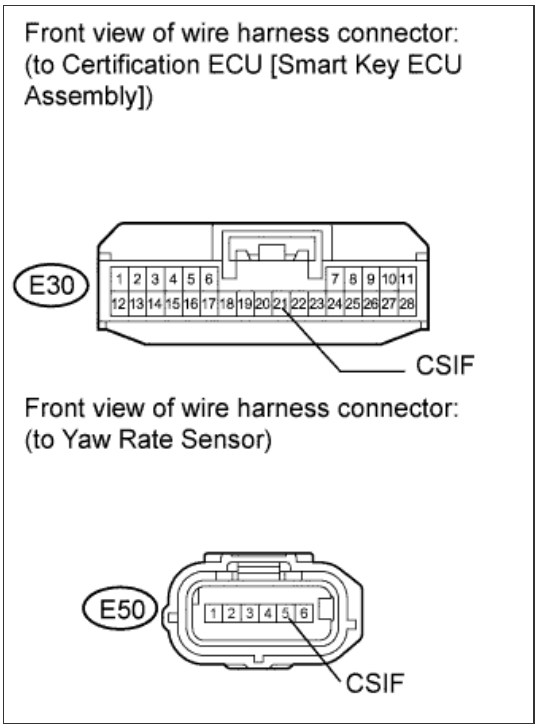
The yaw rate sensor conducts a self-diagnosis immediately after power is supplied to the sensor (when the theft deterrent system is set).
This DTC is stored when terminal CSIF of the yaw rate sensor has not received a signal for 5 seconds or more.

DTC Code	DTC Detection Condition	Trouble Area
B276A	After normal/trouble signal is output from the yaw rate sensor as result of self-diagnosis, the following malfunction is detected: Terminal CSIF of the yaw rate sensor has not received signal for 5 seconds or more	• Yaw rate sensor • Certification ECU (Smart key ECU assembly) • Harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

1.CHECK HARNESS OR CONNECTOR (CERTIFICATION ECU [SMART KEY ECU ASSEMBLY] - YAW RATE SENSOR)



a. Disconnect the E30 ECU connector.

b. Disconnect the E50 sensor connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E30-21 (CSIF) - E50-5 (CSIF)	Always	Below 1 Ω
E30-21 (CSIF) or E50-5 (CSIF) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

2.CHECK YAW RATE SENSOR (OPERATION)

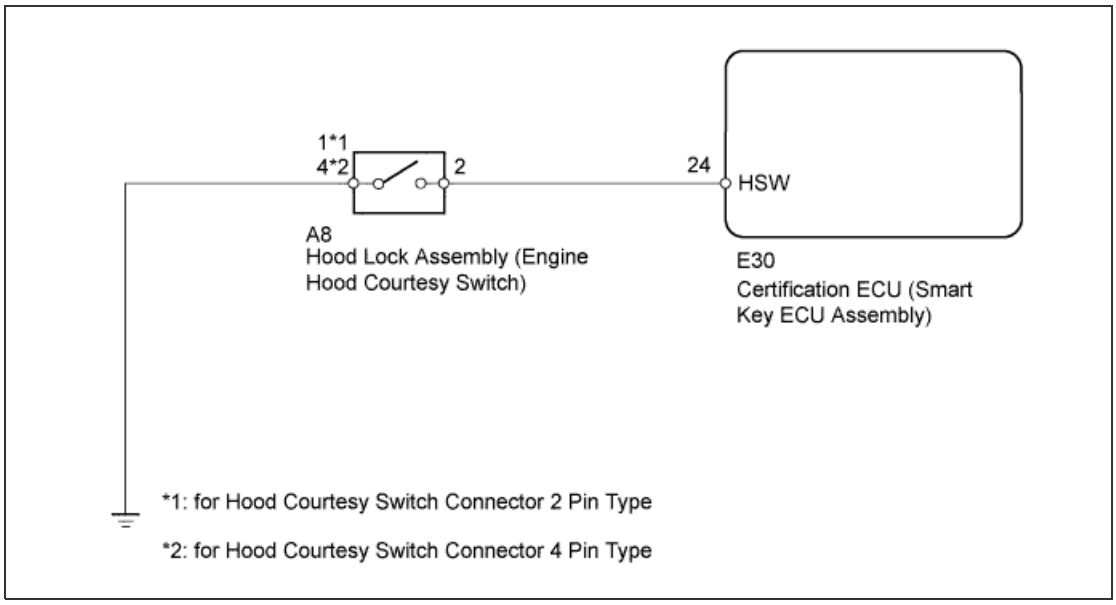
a. Temporarily replace the yaw rate sensor that has a tilt determining function with a new or normally functioning one (Click here).

b. Check that the system operates normally.

OK:
DTC B276A is not output.

NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK



END (YAW RATE SENSOR IS FAULTY)

for Preparation Click here

DESCRIPTION

The engine hood courtesy switch is built into the hood lock. This switch turns on when the engine hood is opened and turns off when the engine hood is closed.

WIRING DIAGRAM

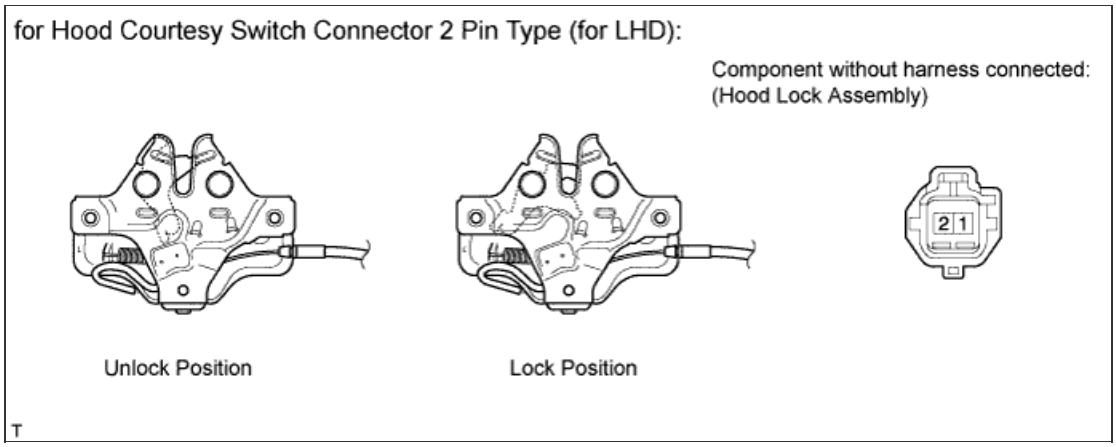
INSPECTION PROCEDURE

1.READ VALUE USING INTELLIGENT TESTER (ENGINE HOOD COURTESY SWITCH)

a. Using the intelligent tester, read the Data List.

Entry&Start

Tester Display	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
Hood Courtesy Switch	Engine hood courtesy switch / ON or OFF	ON: Engine hood is open OFF: Engine hood is closed	-



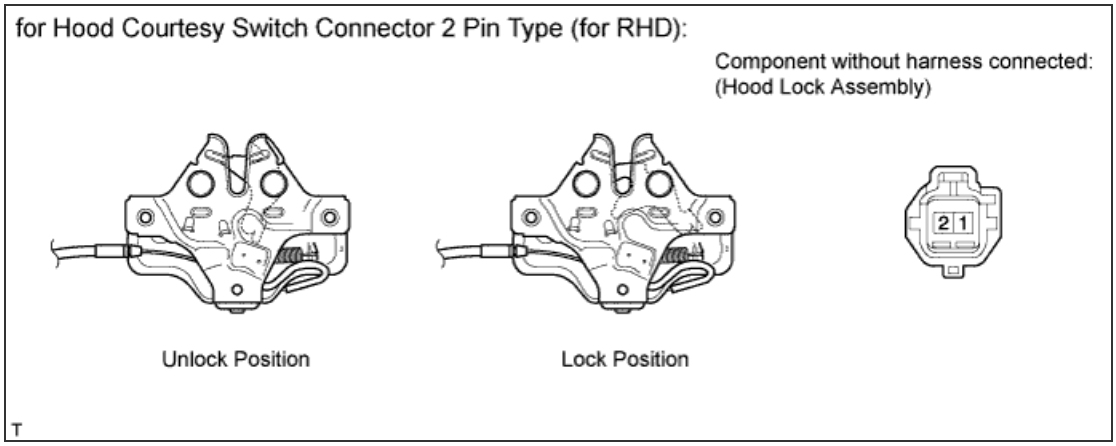
OK:
ON (engine hood is open) appears on screen.

NG → Go to step 2

OK

REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

2.INSPECT HOOD LOCK ASSEMBLY (ENGINE HOOD COURTESY SWITCH)



a. for Hood Courtesy Switch Connector 2 Pin Type (for LHD):

i. Remove the hood lock (Click here).

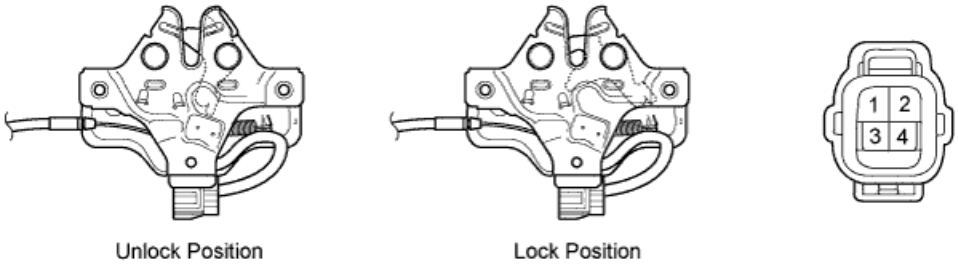
ii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	Unlock position	10 kΩ or higher
1 - 2	Lock position	Below 1 Ω

b. for Hood Courtesy Switch Connector 2 Pin Type (for RHD):

i. Remove the hood lock (Click here).



ii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	Unlock position	10 kΩ or higher
1 - 2	Lock position	Below 1 Ω

for Hood Courtesy Switch Connector 4 Pin Type:

Component without harness connected:
(Hood Lock Assembly)

c. for Hood Courtesy Switch Connector 4 Pin Type:

i. Remove the hood lock (Click here).

ii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
2 - 4	Unlock position	10 kΩ or higher
2 - 4	Lock position	Below 1 Ω

NG → REPLACE HOOD LOCK ASSEMBLY (ENGINE HOOD COURTESY SWITCH)

OK

3.CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU [SMART KEY ECU ASSEMBLY] - HOOD LOCK AND BODY GROUND)

a. for Hood Courtesy Switch Connector 2 Pin Type:

i. Disconnect the E30 ECU connector.

ii. Disconnect the A8 switch connector.

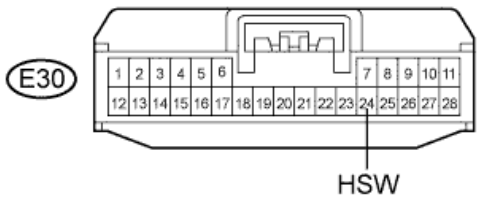
iii. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E30-24 (HSW) - A8-2	Always	Below 1 Ω
A8-1 - Body ground	Always	Below 1 Ω
E30-24 (HSW) or A8-2 - Body ground	Always	10 kΩ or higher

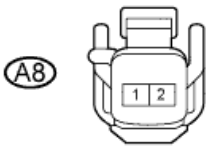
b. for Hood Courtesy Switch Connector 4 Pin Type:

i. Disconnect the E30 ECU connector.



ii. Disconnect the A8 switch connector.

iii. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
E30-24 (HSW) - A8-2	Always	Below 1 Ω
A8-4 - Body ground	Always	Below 1 Ω
E30-24 (HSW) or A8-2 - Body	Always	10 kΩ or higher

Front view of wire harness connector:

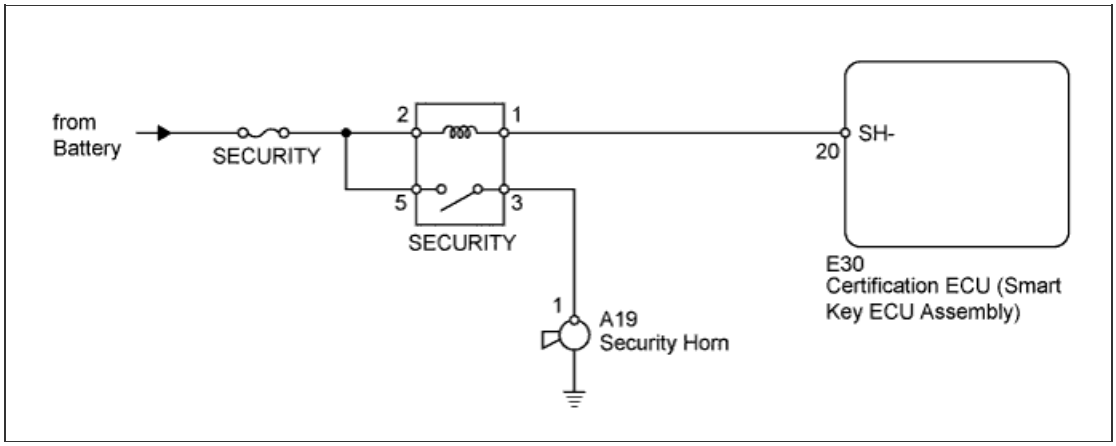
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR



OK → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

for Preparation Click here

DESCRIPTION

When the theft deterrent system is operating, the certification ECU (smart key ECU assembly) outputs a signal continuously at 0.4 second intervals, causing the security horn to sound.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.PERFORM ACTIVE TEST USING INTELLIGENT TESTER (SECURITY HORN)

a. Operate the intelligent tester according to the steps on the display and select "Active Test".

Entry&Start

Tester Display	Test Part	Control Range	Diagnostic Note
Security Horn	Security horn	ON/OFF	-

OK:

Security horn operates normally.

NG → Go to step 2

OK →

REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

2.INSPECT FUSE (SECURITY)

a. Remove the SECURITY fuse from the engine room relay block.

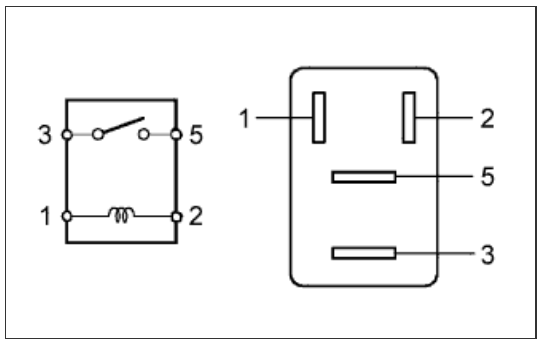
b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
SECURITY fuse	Always	Below 1 Ω

NG → REPLACE FUSE

OK →



3.INSPECT SECURITY RELAY

a. Remove the security relay from the engine room relay block.

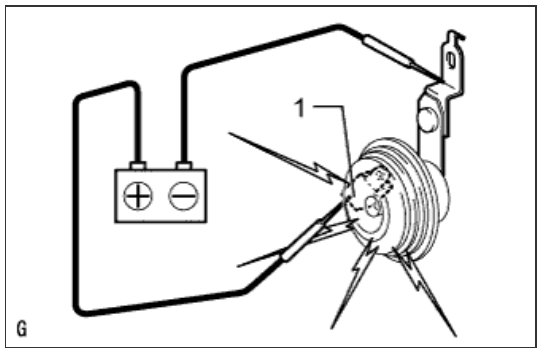
b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
3 - 5	Battery voltage is not applied to terminals 1 and 2	10 kΩ or higher
3 - 5	Battery voltage is applied to terminals 1 and 2	Below 1 Ω

NG → REPLACE SECURITY RELAY

OK

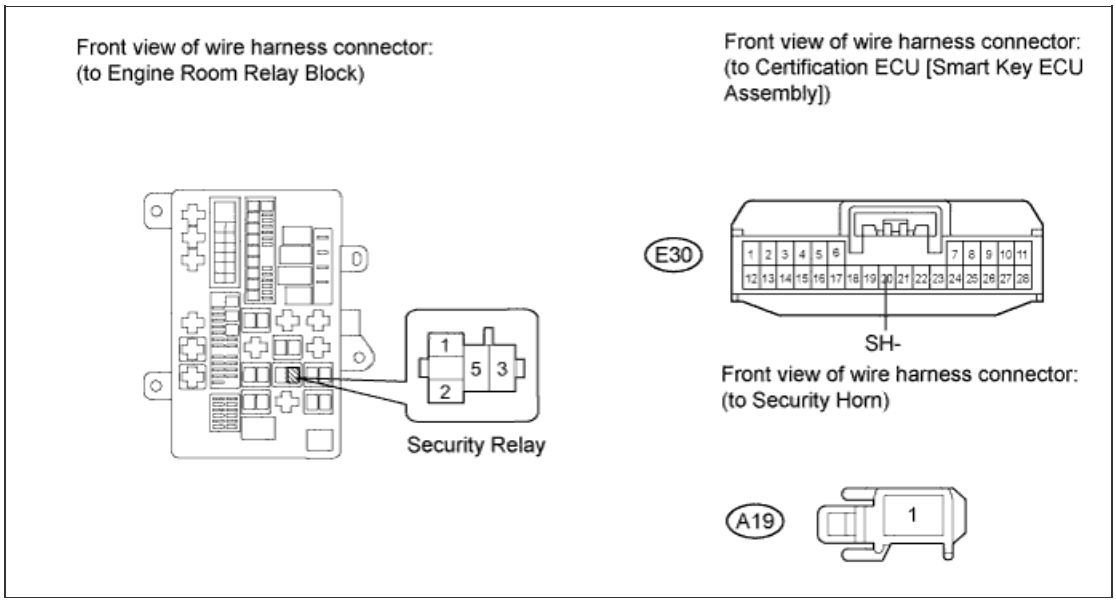


4.INSPECT SECURITY HORN ASSEMBLY

a. Remove the security horn (Click here).

b. Apply battery voltage to the horn connector and check the operation of the horn.

OK:



Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Horn bracket	Horn sounds

NG → REPLACE SECURITY HORN ASSEMBLY (Click here)

OK

5.CHECK HARNESS AND CONNECTOR (ENGINE ROOM RELAY BLOCK - CERTIFICATION ECU [SMART KEY ECU ASSEMBLY] AND SECURITY HORN)

a. Remove the SECURITY relay from the engine room relay block.

b. Disconnect the E30 ECU connector.

c. Disconnect the A19 horn connector.

d. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

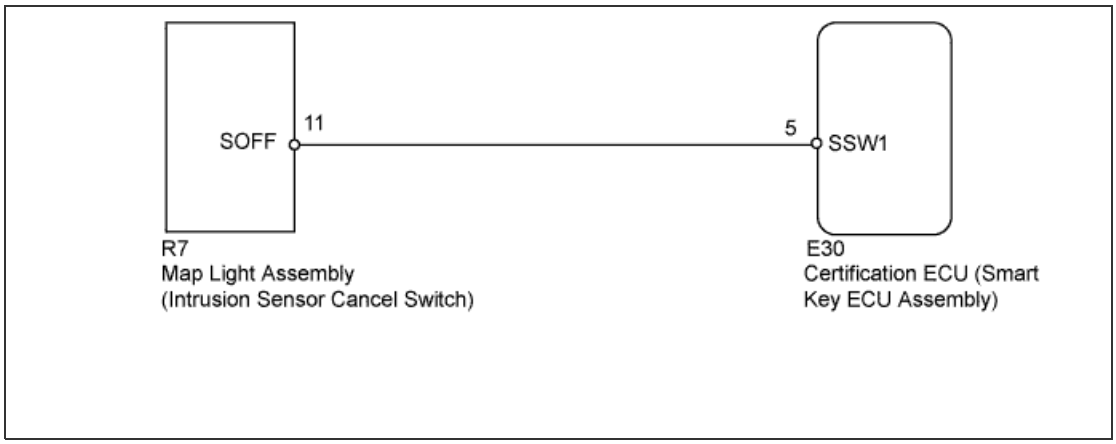
Tester Connection	Condition	Specified Condition
Relay block security relay terminal 1 - E30-20 (SH-)	Always	Below 1 Ω
Relay block security relay terminal 3 - A19-1	Always	Below 1 Ω
E30-20 (SH-) Body ground	Always	10 kΩ or higher
A19-1 - Body ground	Always	10 kΩ or higher

e. Measure the voltage according to value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
Relay block security relay terminal 2 - Body ground	Always	11 to 14 V
Relay block security relay terminal 5 - Body ground	Always	11 to 14 V

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR



OK → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

for Preparation Click here

DESCRIPTION

When the intrusion sensor cancel switch on the map light is pressed, the sensor off signal is sent to the certification ECU (smart key ECU assembly) which causes the intrusion sensor to stop operating.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.READ VALUE USING INTELLIGENT TESTER (INTRUSION SENSOR CANCEL SWITCH)

a. Using the intelligent tester, read the Data List.

Entry&Start

Tester Display	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
Intrusion sensor OFF	Intrusion sensor cancel switch / ON or OFF	ON: Intrusion sensor active (switch off) OFF: Intrusion sensor not active (switch on)	-

OK:

ON (intrusion sensor active [switch off]) appears on screen.

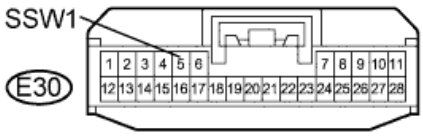
NG → Go to step 2

OK

REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

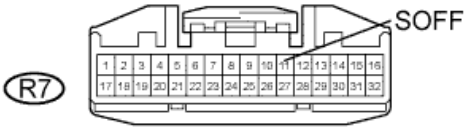
2.CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU [SMART KEY ECU ASSEMBLY] - MAP LIGHT ASSEMBLY)

a. Disconnect the E30 ECU connector.



b. Disconnect the R7 light connector.

c. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
E30-5 (SSW1) - R7-11 (SOFF)	Always	Below 1 Ω
E30-5 (SSW1) or R7-11 (SOFF) - Body ground	Always	10 kΩ or higher

Front view of wire harness connector:
(to Certification ECU [Smart Key ECU Assembly])

Front view of wire harness connector:
(to Map Light)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3.CHECK MAP LIGHT ASSEMBLY (INTRUSION SENSOR CANCEL SWITCH [OPERATION])

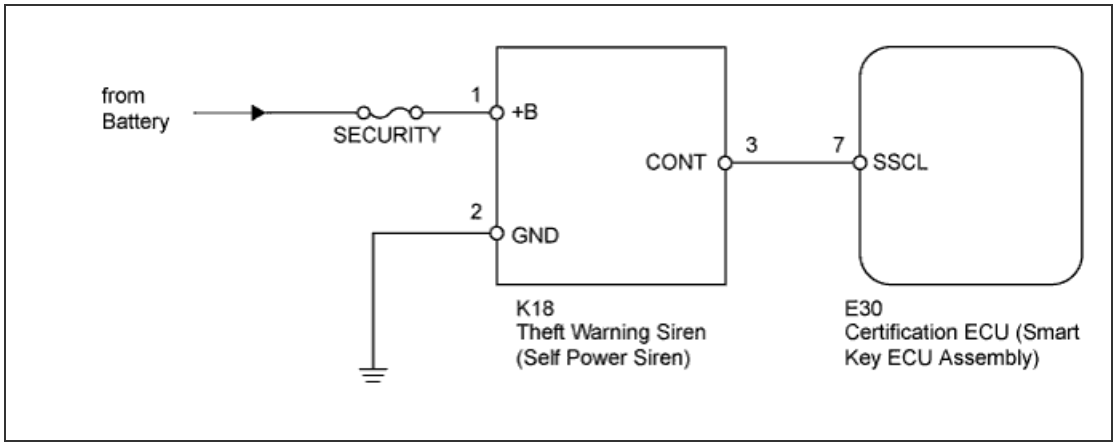
a. Temporarily replace the map light assembly (intrusion sensor cancel switch) with a new or normally functioning one (Click here).

b. Turn the intrusion sensor off by pressing the intrusion sensor cancel switch. Check if the switch operates normally by checking that the theft deterrent system does not operate when you move your hand in front of the sensor.

OK:
Intrusion sensor cancel switch operates normally.

NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK



END (MAP LIGHT [INTRUSION SENSOR CANCEL SWITCH] IS FAULTY)

for Preparation Click here

DESCRIPTION

The theft warning siren (self power siren) has an internal battery. If the vehicle battery cable is disconnected or any of the communication lines are open, the theft warning siren (self power siren) detects this and sounds its siren.
Although the theft warning siren (self power siren) usually sounds by receiving a signal from the certification ECU (smart key ECU assembly), the theft warning siren (self power siren) can sound by its internal battery in case the vehicle battery cable is disconnected.
The certification ECU (smart key ECU assembly) sends an arming signal to the theft warning siren (self power siren) while transferring to the armed state, and it also sends a disarming signal to the siren while switching to the disarmed state. Also, the certification ECU (smart key ECU assembly) can cause the theft warning siren (self power siren) to sound by sending an alarm signal during the alarm sounding state.

WIRING DIAGRAM

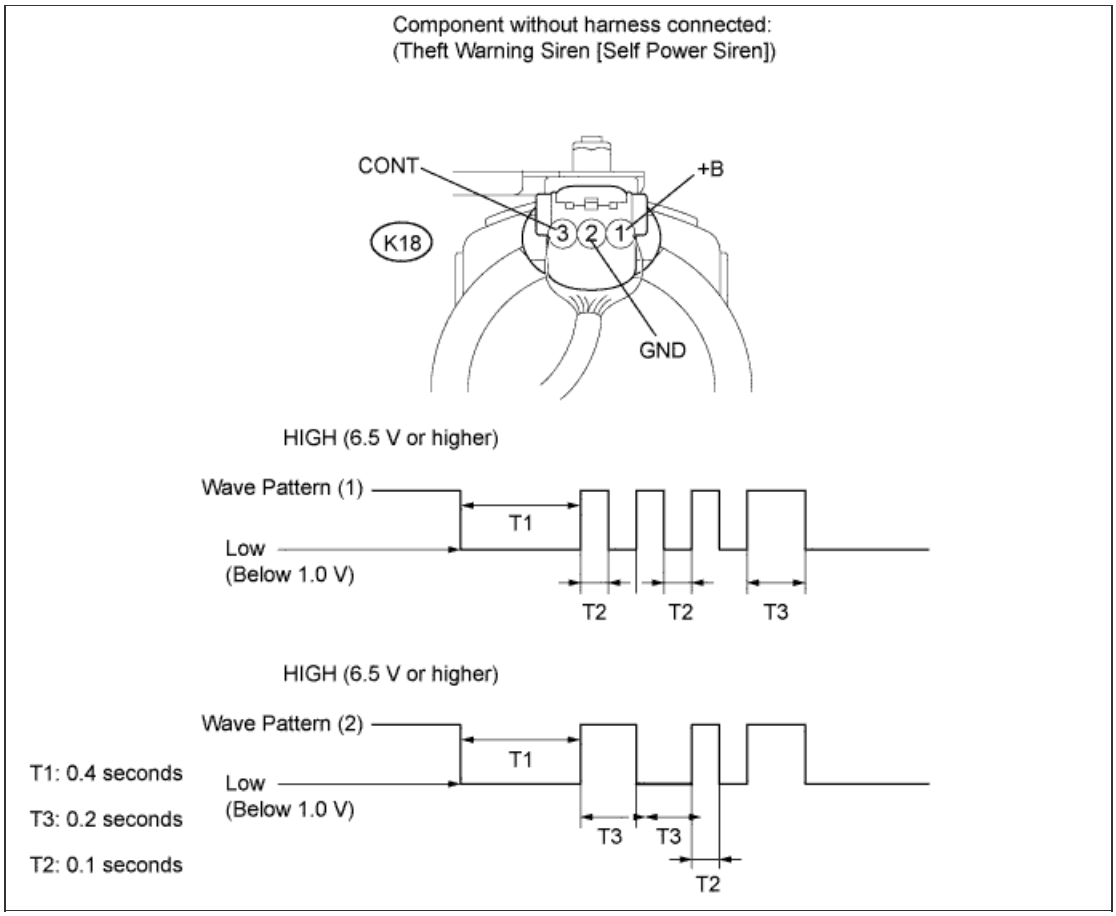
INSPECTION PROCEDURE

1.PERFORM ACTIVE TEST USING INTELLIGENT TESTER (THEFT WARNING SIREN [SELF POWER SIREN])

a. Operate the intelligent tester according to the steps on the display and select "Active Test".

Entry&Start

Tester Display	Test Part	Control Range	Diagnostic Note
Security Horn2	Theft warning siren (self power siren)	ON / OFF	-



OK:
Siren operates normally.

NG → Go to step 2

OK

REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

2.CHECK THEFT WARNING SIREN (SELF POWER SIREN)

a. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
K18-1 (+B) - Body ground	Always	11 to 14 V
K18-2 (GND) - Body ground	Always	Below 1 V
K18-3 (CONT) - Body ground	Switched from armed state or arming preparation state to disarmed state (1)	Wave pattern (1) shown in chart below
	Switched from arming preparation state to armed state (2)	Wave pattern (2) shown in chart below
	Normal condition (Except (1) and (2))	1 to 2 V

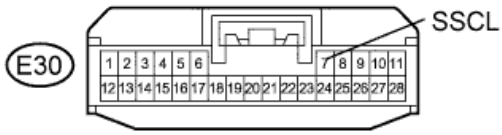
NG → Go to step 3

OK

REPLACE THEFT WARNING SIREN (SELF POWER SIREN) (Click here)

3.CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU [SMART KEY ECU ASSEMBLY] - THEFT WARNING SIREN [SELF POWER SIREN])

a. Disconnect the E30 ECU connector.



b. Disconnect the K18 siren connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E30-7 (SSCL) - K18-3 (CONT)	Always	Below 1 Ω
E30-7 (SSCL) or K18-3 (CONT) - Body ground	Always	10 kΩ or higher

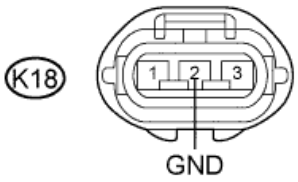
Front view of wire harness connector:
(to Certification ECU [Smart Key ECU Assembly])

Front view of wire harness connector:
(to Theft Warning Siren [Self Power Siren])

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

4.CHECK HARNESS AND CONNECTOR (THEFT WARNING SIREN [SELF POWER SIREN] - BODY GROUND)



a. Disconnect the K18 siren connector.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

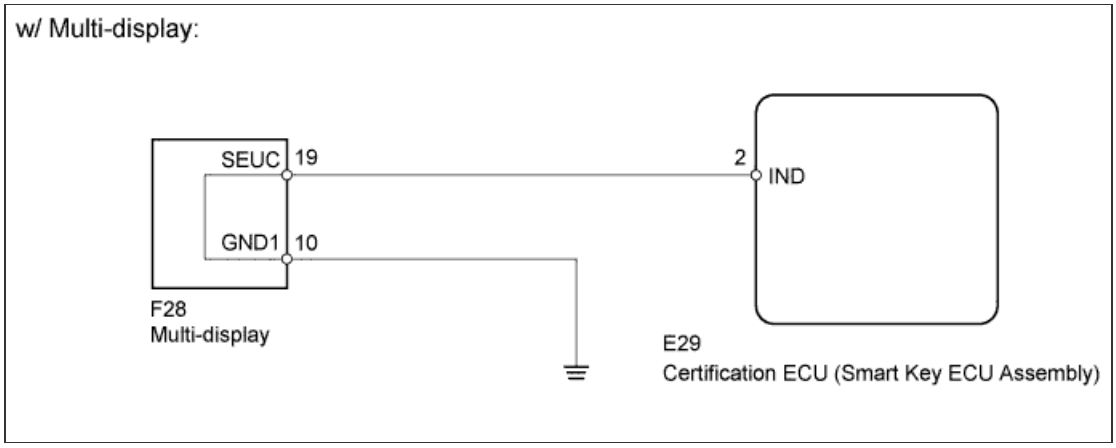
Tester Connection	Condition	Specified Condition
K18-2 (GND) - Body ground	Always	Below 1 Ω

Front view of wire harness connector:
(to Theft Warning Siren [Self Power Siren])

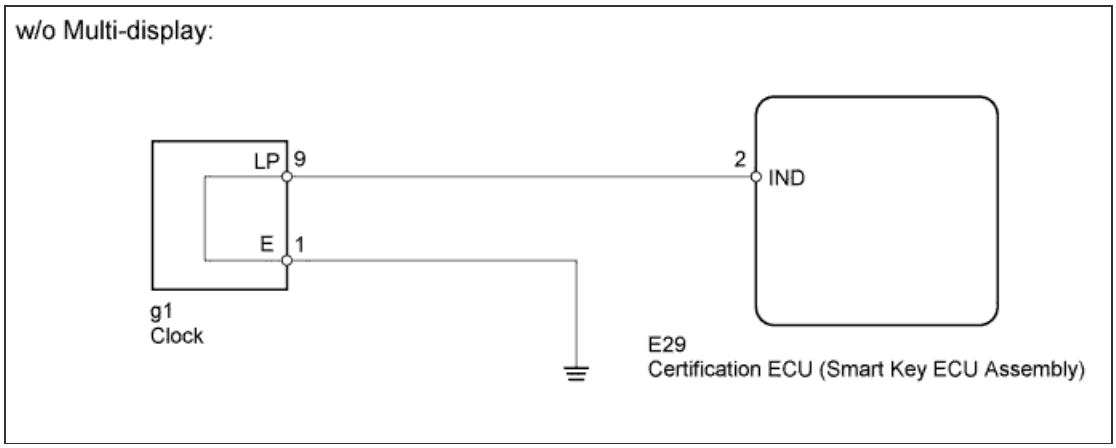
Y

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)



for Preparation Click here

DESCRIPTION

When the theft deterrent system is in the disarmed state, the security indicator will flash continuously if the immobiliser system is set, or not illuminate if the immobiliser system is not set.
When the theft deterrent system is in the armed state, the immobiliser system is automatically set and the security indicator will flash continuously.
When the theft deterrent system is in the arming preparation state and alarm sounding state, the certification ECU (smart key ECU assembly) causes the security indicator to be illuminated.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.PERFORM ACTIVE TEST USING INTELLIGENT TESTER (SECURITY INDICATOR)

a. Operate the intelligent tester according to the steps on the display and select "Active Test".

Entry&Start

Tester Display	Test Part	Control Range	Diagnostic Note
Security Indicator	Security indicator	ON / OFF	-

OK:
Security indicator illuminates.

NG → Go to step 2

OK

REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

2.CHECK VEHICLE EQUIPMENT

a. Check if the multi-display is equipped on the vehicle.

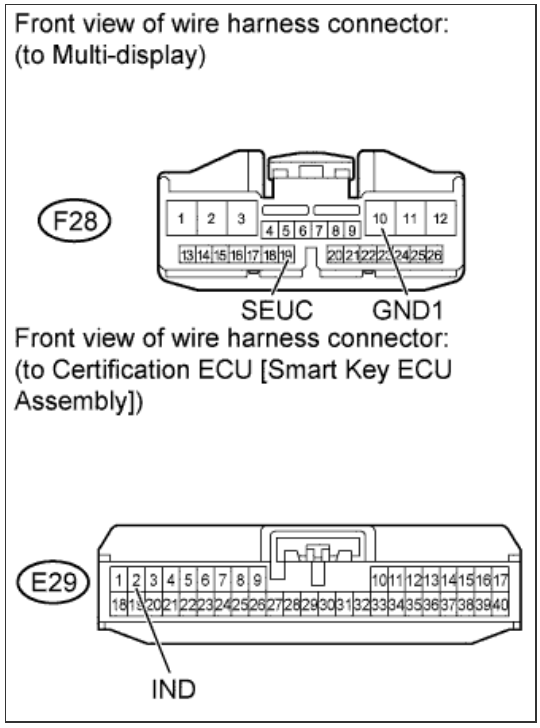
Result

Result	Proceed to
w/ Multi-display	A
w/o Multi-display	B

B → Go to step 4

A

3.CHECK HARNESS AND CONNECTOR (MULTI-DISPLAY - CERTIFICATION ECU [SMART KEY ECU ASSEMBLY] AND BODY GROUND)



a. Disconnect the F28 display connector.

b. Disconnect the E29 ECU connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
F28-19 (SEUC) - E29-2 (IND)	Always	Below 1 Ω
F28-10 (GND1) - Body ground	Always	Below 1 Ω
F28-19 (SEUC) or E29-2 (IND) - Body ground	Always	10 kΩ or higher

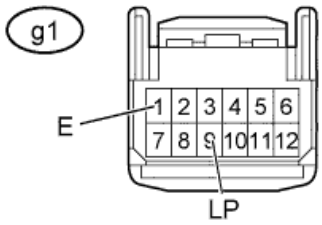
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE MULTI-DISPLAY (Click here)

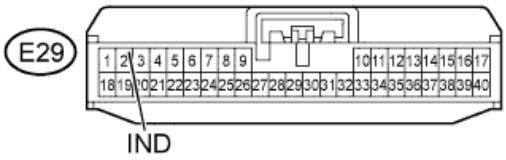
4.CHECK HARNESS AND CONNECTOR (CLOCK - CERTIFICATION ECU [SMART KEY ECU ASSEMBLY] AND BODY GROUND)

a. Disconnect the g1 clock connector.



b. Disconnect the E29 ECU connector.

c. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition
g1-9 (LP) - E29-2 (IND)	Always	Below 1 Ω
g1-1 (E) - Body ground	Always	Below 1 Ω
g1-9 (LP) or E29-2 (IND) - Body ground	Always	10 kΩ or higher

DESCRIPTION

When the glass breakage sensor detects that the back door glass, quarter window glass LH or quarter window glass RH is tapped or broken, the sensor will set off the alarm for 30 seconds.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.READ VALUE USING INTELLIGENT TESTER (GLASS BREAK SENSOR)

a. Using the intelligent tester, read the Data List.

Entry&Start

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Glass break sensor detection	Glass breakage sensor detection / ON or OFF	ON: Glass breakage sensor operates OFF: Glass breakage sensor does not operate	-

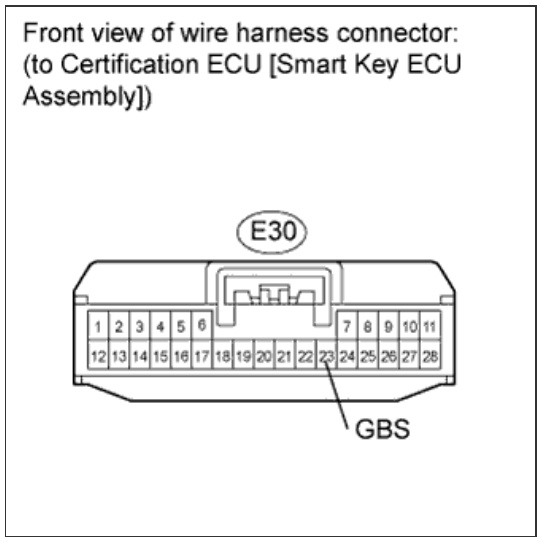
OK:

ON (glass breakage sensor operates) appears on screen.

NG → Go to step 2

OK

REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)



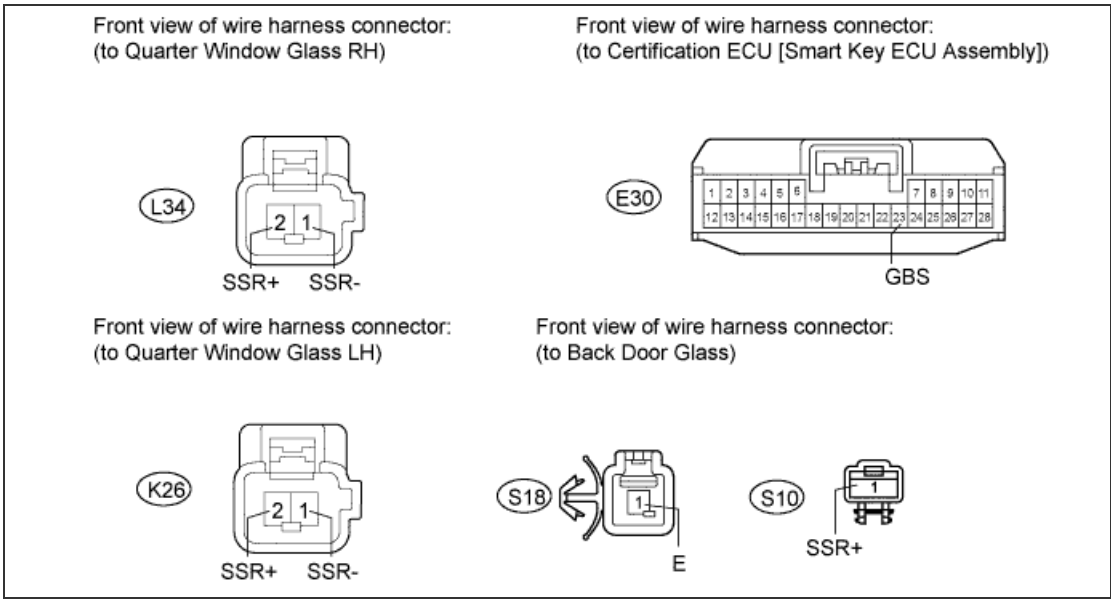
2.INSPECT CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

a. Disconnect the E30 ECU connector.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Condition	Specified Condition
E30-23 (GBS) - Body ground	Always	Below 1.5 V



NG → REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

OK

3.CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU [SMART KEY ECU ASSEMBLY] - GLASS BREAKAGE SENSOR)

a. Disconnect the E30 ECU connector.

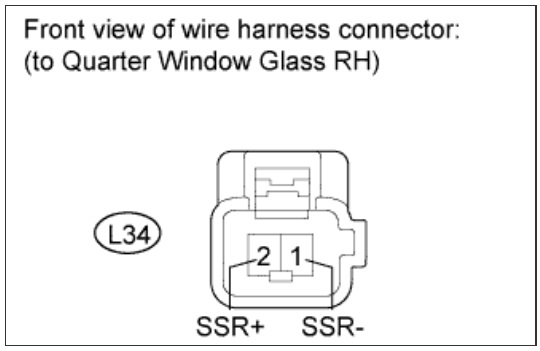
b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E30-23 (GBS) - L34-2 (SSR+)	Always	Below 1 Ω
L34-1 (SSR-) - K26-2 (SSR+)	Always	Below 1 Ω
K26-1 (SSR-) - S10-1 (SSR+)	Always	Below 1 Ω
S18-1 (E) - Body ground	Always	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



4.INSPECT QUARTER WINDOW GLASS RH

a. Disconnect the L34 sensor connector.

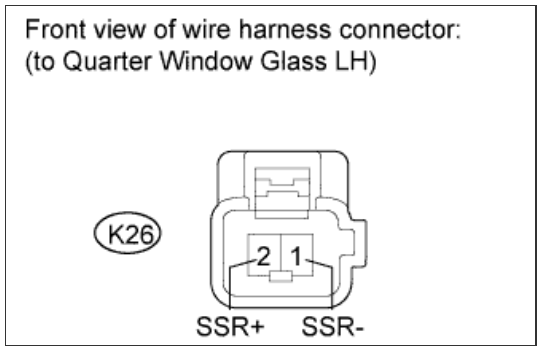
b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (SSR-) - 2 (SSR+)	Always	Below 1 Ω

NG → REPLACE REAR DOOR QUARTER WINDOW GLASS RH

OK



5.INSPECT QUARTER WINDOW GLASS LH

a. Disconnect the K26 sensor connector.

b. Measure the resistance according to the value(s) in the table below.

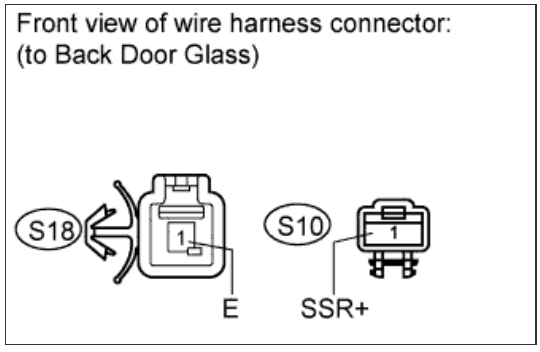
Standard Resistance:

Tester Connection	Condition	Specified Condition
1 (SSR-) - 2 (SSR+)	Always	Below 1 Ω

NG → REPLACE REAR DOOR QUARTER WINDOW GLASS LH

OK

6.INSPECT BACK DOOR GLASS



a. Disconnect the S10 sensor connector.

b. Disconnect the S18 defogger connector.

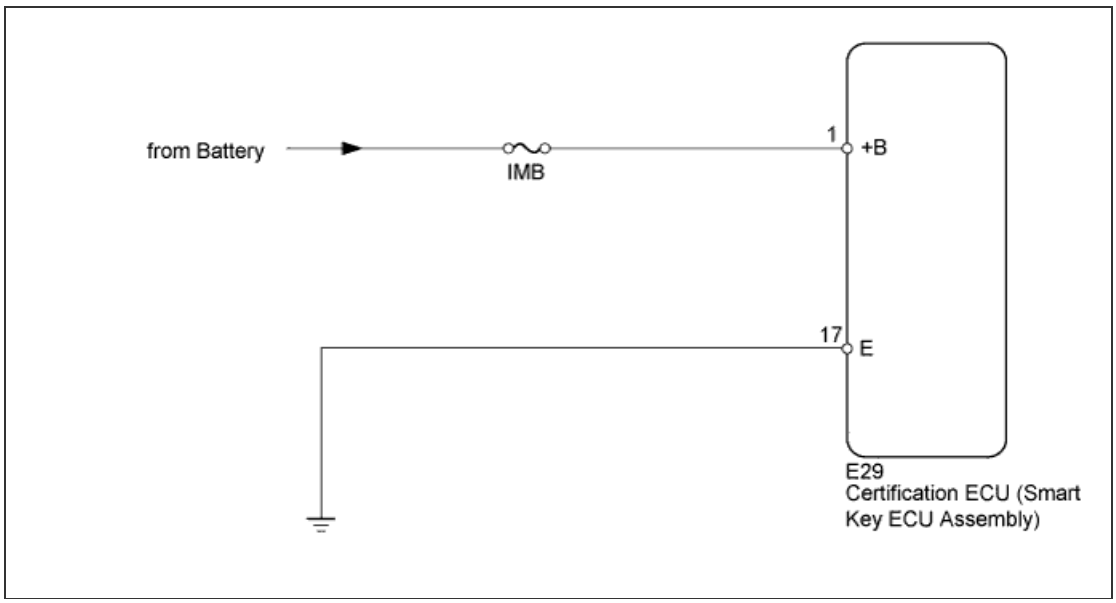
c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
S10-1 (SSR+) - S18-1 (E)	Always	Below 1 Ω

NG → REPLACE BACK DOOR GLASS

OK



REPLACE CERTIFICATION ECU (SMART KEY ECU ASSEMBLY)

for Preparation Click here

DESCRIPTION

This circuit provides power to operate the certification ECU (smart key ECU assembly).

WIRING DIAGRAM

INSPECTION PROCEDURE

1.INSPECT FUSE (IMB)

a. Remove the IMB fuse from the engine room relay block.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
IMB fuse	Always	Below 1 Ω

NG → REPLACE FUSE

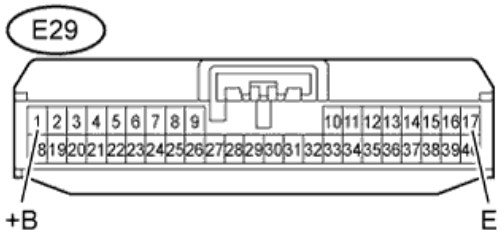
OK

2.CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU [SMART KEY ECU ASSEMBLY] - BATTERY AND BODY GROUND)

a. Disconnect the E29 ECU connector.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:



Tester Connection	Condition	Specified Condition
E29-17 (E) - Body ground	Always	Below 1 Ω

c. Measure the voltage according to the value(s) in the table below.

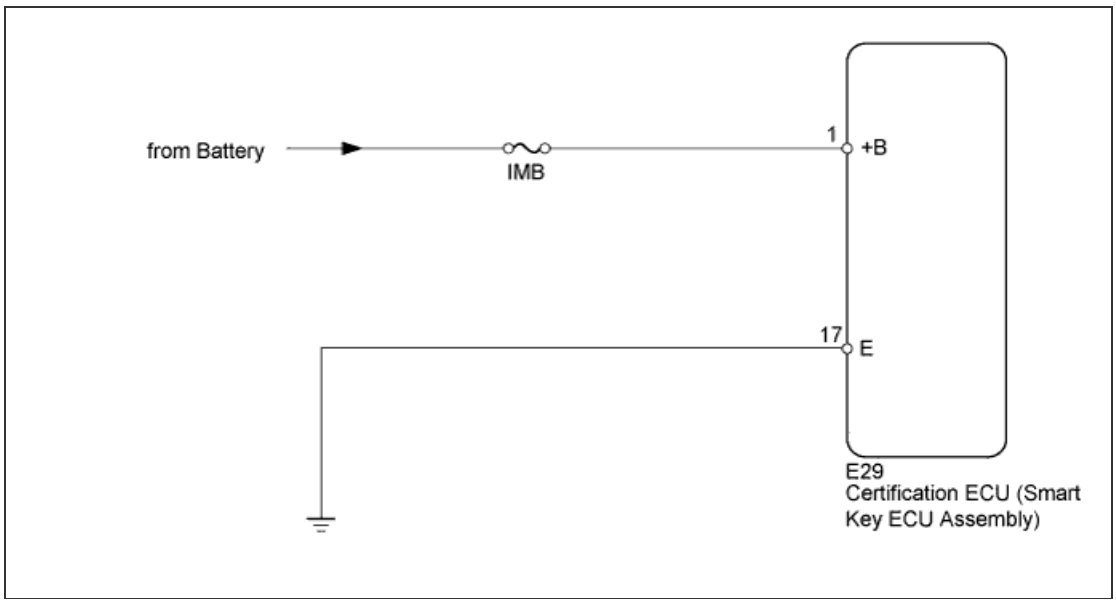
Standard Voltage:

Tester Connection	Condition	Specified Condition
E29-1 (+B) - Body ground	Always	11 to 14 V

Front view of wire harness connector:
(to Certification ECU [Smart Key ECU Assembly])

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



PROCEED TO NE T CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

DESCRIPTION

When the engine switch is turned on (IG), positive (+) battery voltage is applied to the certification ECU (smart key ECU assembly).

WIRING DIAGRAM

INSPECTION PROCEDURE

1.CHECK BASIC FUNCTION (POWER SOURCE MODE FUNCTION)

a. Check the basic function of the power source mode function.

OK:
Basic function operates normally.

NG → GO TO ENTRY AND START SYSTEM (for Start Function) (Click here)

OK

2.INSPECT FUSE (IGN)

a. Remove the IGN fuse from the engine room relay block.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
IGN fuse	Always	Below 1 Ω

NG → REPLACE FUSE

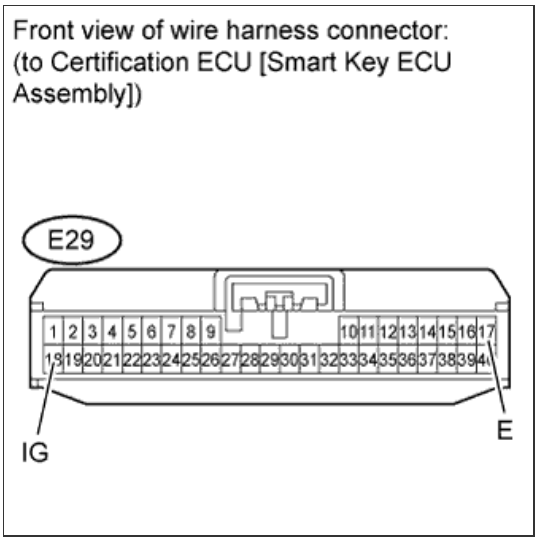
OK

3.CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU [SMART KEY ECU ASSEMBLY] - BATTERY AND BODY GROUND)

a. Disconnect the E29 ECU connector.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:



Tester Connection	Condition	Specified Condition

E29-1 (E) - Body ground	Always	Below 1 Ω

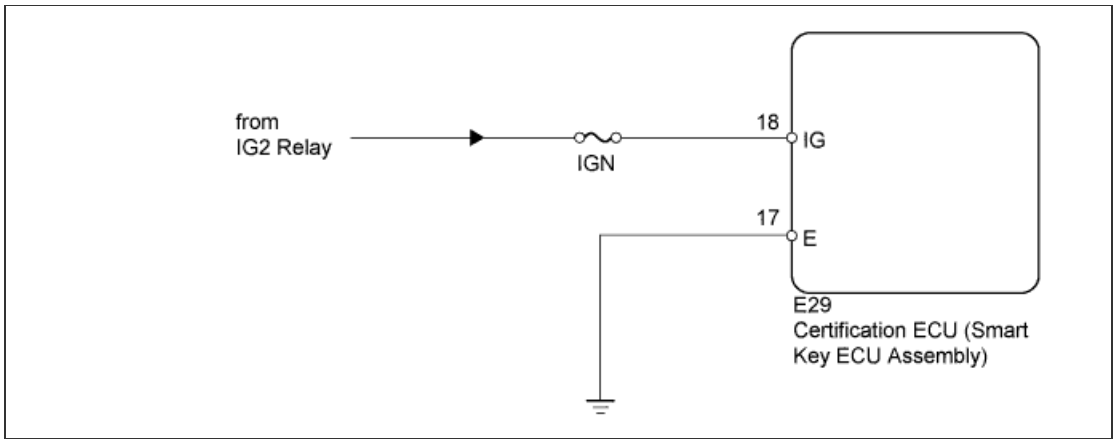
c. Measure the voltage according to the value(s) in the table below.

Standard olta e:

Tester Connection	Switch Condition	Specified Condition
E29-18 (IG) - Body ground	Engine switch on (IG)	11 to 14 V

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (Click here)

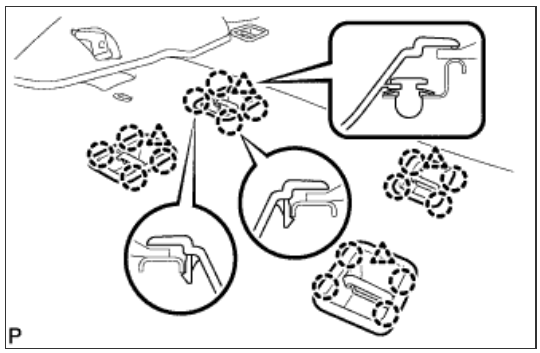
1. INSTALL INDOOR ELECTRICAL KEY OSCILLATOR



a. Install the electrical key oscillator with the bolt.

b. Connect the connector.

2. INSTALL NO. 3 SEAT CUSHION COVER

a. Attach the 16 claws and 4 clips to install the 4 seat cushion covers.

3. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY RH

a. Install the front quarter trim panel assembly RH (Click here).

4. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY LH

a. Install the front quarter trim panel assembly LH (Click here).

5. INSTALL REAR NO. 2 SEAT ASSEMBLY RH (for Face to Face Seat Type)

a. Install the rear No. 2 seat assembly RH (Click here).

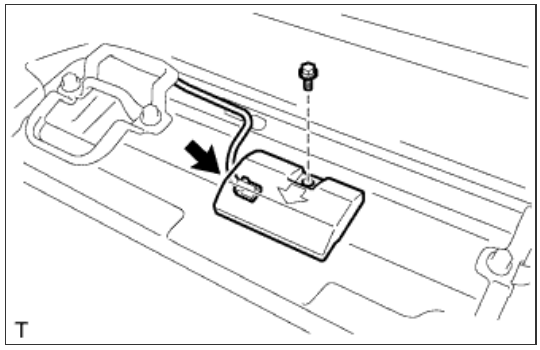
6. INSTALL REAR NO. 2 SEAT ASSEMBLY LH (for Face to Face Seat Type)

a. Install the rear No. 2 seat assembly LH (Click here).

7. INSTALL REAR NO. 2 SEAT ASSEMBLY RH (except Face to Face Seat Type)

a. Install the rear No. 2 seat assembly RH (Click here).

8. INSTALL REAR NO. 2 SEAT ASSEMBLY LH (except Face to Face Seat Type)



a. Install the rear No. 2 seat assembly LH (Click here).

for Preparation Click here

1. INSTALL INDOOR ELECTRICAL KEY OSCILLATOR

a. Install the electrical key oscillator with the bolt.

b. Connect the connector.

2. INSTALL NO. 3 SEAT CUSHION COVER

a. Attach the 16 claws and 4 clips to install the 4 seat cushion covers.

3. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY RH

a. Install the front quarter trim panel assembly RH (Click here).

4. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY LH

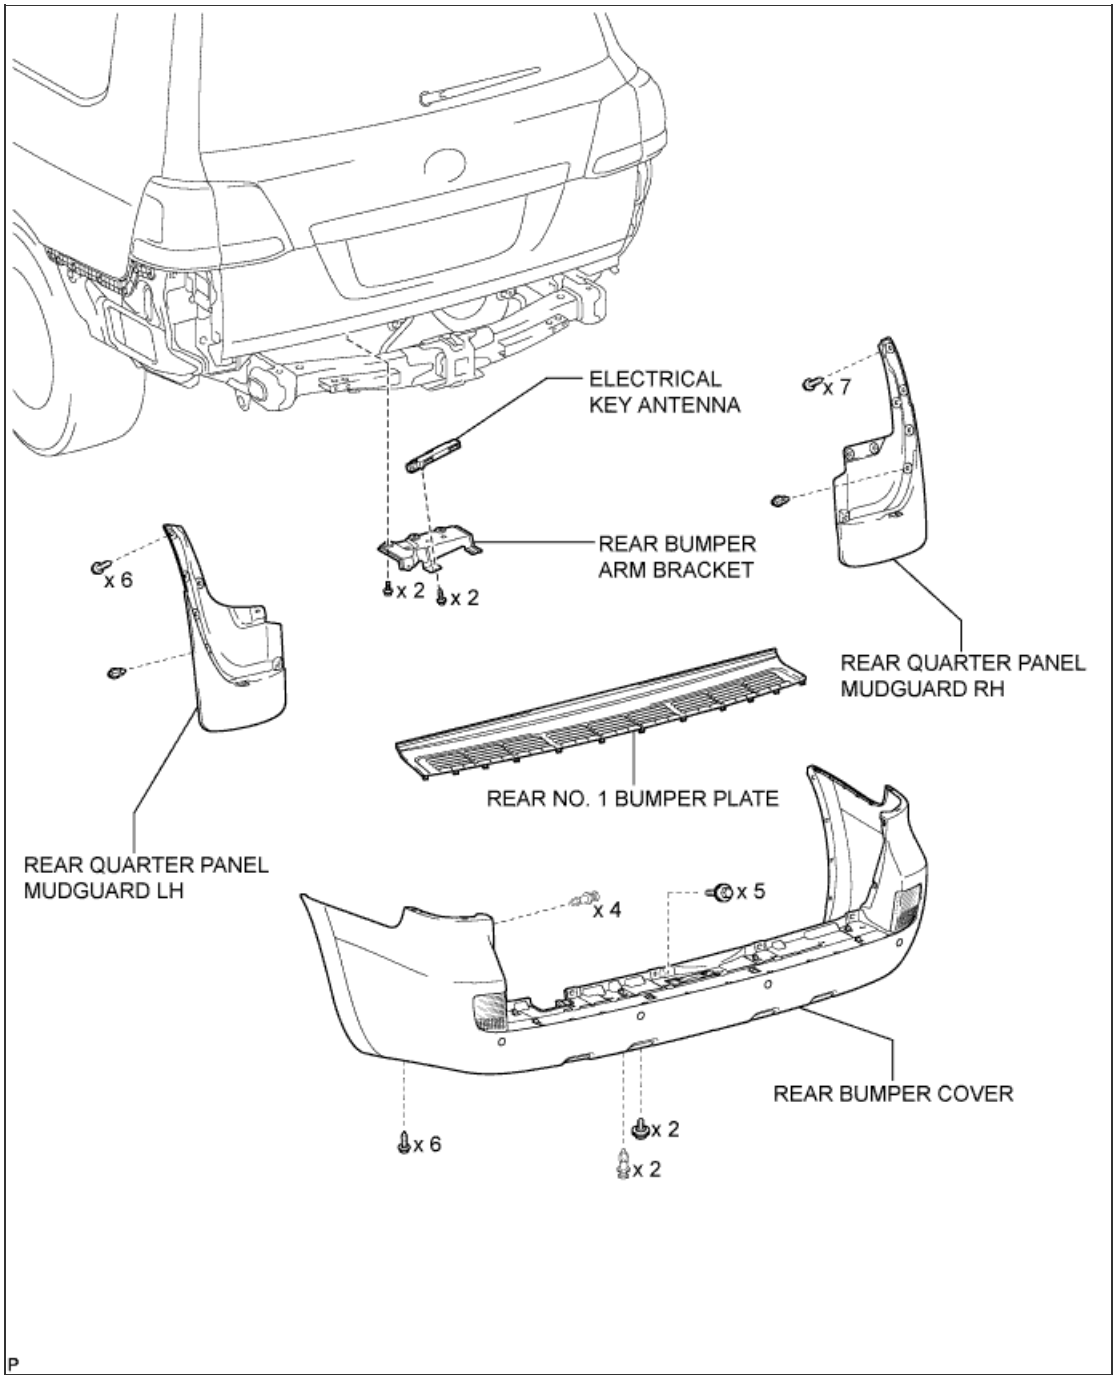
a. Install the front quarter trim panel assembly LH (Click here).

5. INSTALL REAR NO. 2 SEAT ASSEMBLY RH (for Face to Face Seat Type)

a. Install the rear No. 2 seat assembly RH (Click here).

6. INSTALL REAR NO. 2 SEAT ASSEMBLY LH (for Face to Face Seat Type)

a. Install the rear No. 2 seat assembly LH (Click here).



7. INSTALL REAR NO. 2 SEAT ASSEMBLY RH (except Face to Face Seat Type)

a. Install the rear No. 2 seat assembly RH (Click here).

8. INSTALL REAR NO. 2 SEAT ASSEMBLY LH (except Face to Face Seat Type)

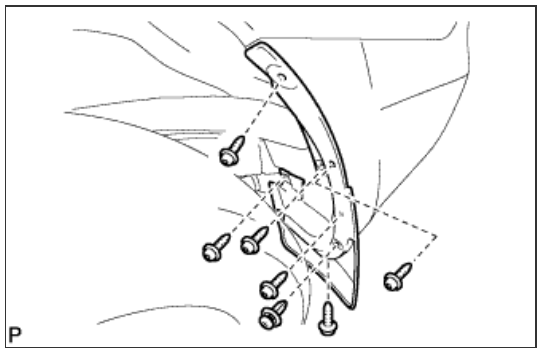
a. Install the rear No. 2 seat assembly LH (Click here).

for Preparation Click here

for Preparation Click here

1. REMOVE PINTLE HOOK ASSEMBLY (w/ Pintle Hook)

a. Remove the pintle hook assembly (Click here).

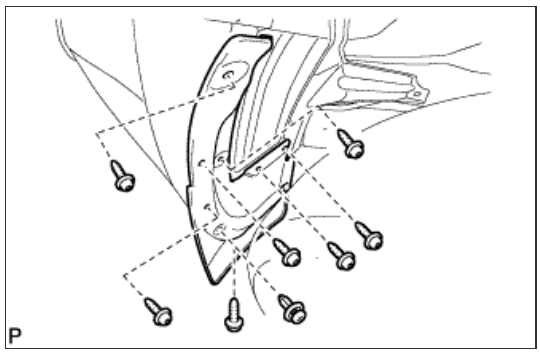


2. REMOVE SPARE WHEEL CARRIER SUB-ASSEMBLY (w/ Tire Carrier)

a. Remove the spare wheel carrier sub-assembly (Click here).

3. REMOVE REAR QUARTER PANEL MUDGUARD LH

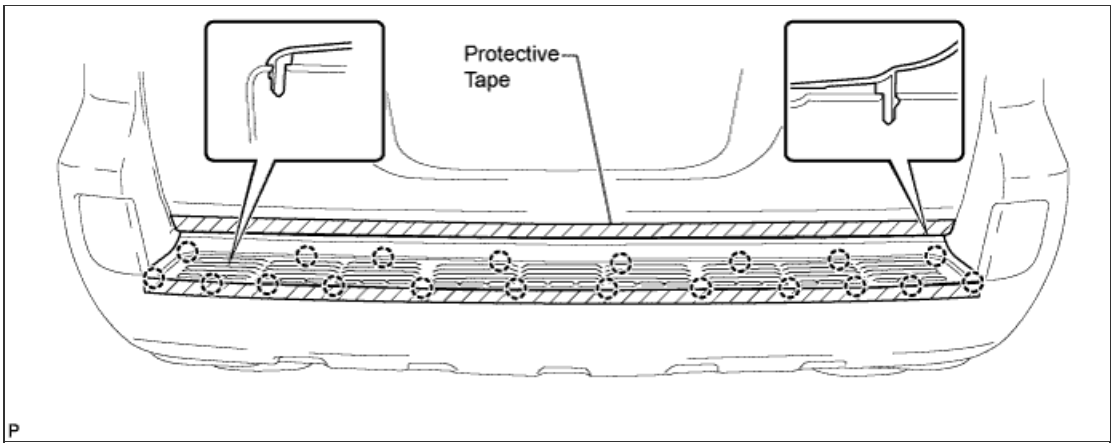
a. Remove the clip.



b. Using a T30 "TORX" socket, remove the 6 screws and mudguard.

4. REMOVE REAR QUARTER PANEL MUDGUARD RH

a. Remove the clip.

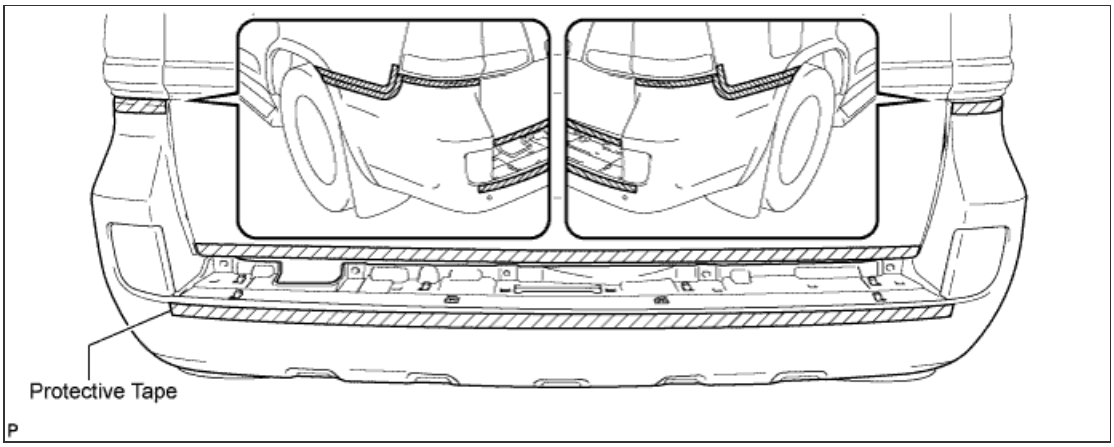


b. Using a T30 "TORX" socket, remove the 7 screws and mudguard.

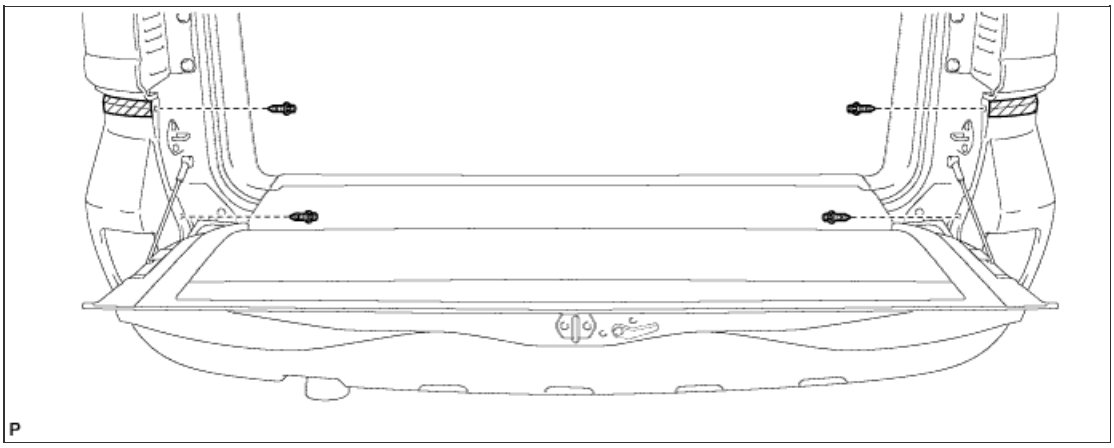
5. REMOVE REAR NO. 1 BUMPER PLATE

a. Put protective tape around the bumper plate.

b. Detach the 20 claws and remove the bumper plate.



6. REMOVE REAR BUMPER COVER

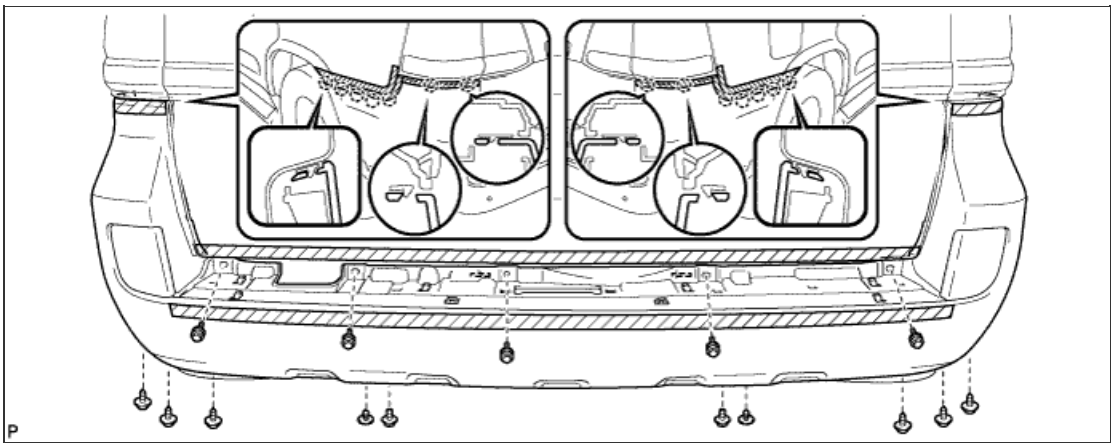


HINT:

For the rear bumper cover with tire carrier, use the procedures described below.

a. Put protective tape around the bumper cover.

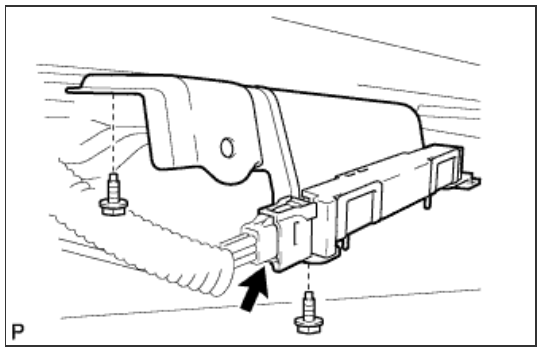
b. Open the tail gate and remove the 4 clips.



c. Close the tail gate.

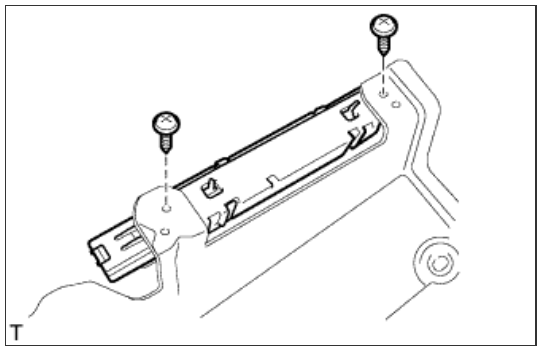
d. Remove the 7 bolts, 6 screws and 2 clips.

e. w/o TOYOTA Parking Assist-sensor System, w/o Rear Fog Light:
Detach the 14 claws and remove the bumper cover.



f. w/ TOYOTA Parking Assist-sensor System or w/ Rear Fog Light:
Detach the 14 claws, disconnect the No. 2 frame wire connector and remove the bumper cover.

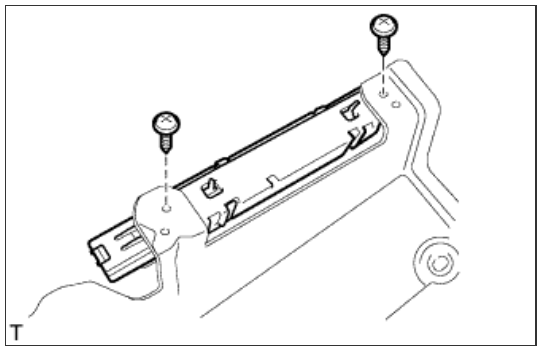
7. REMOVE REAR BUMPER ARM BRACKET LH



a. Disconnect the connector.

b. Remove the 2 bolts and bumper arm bracket.

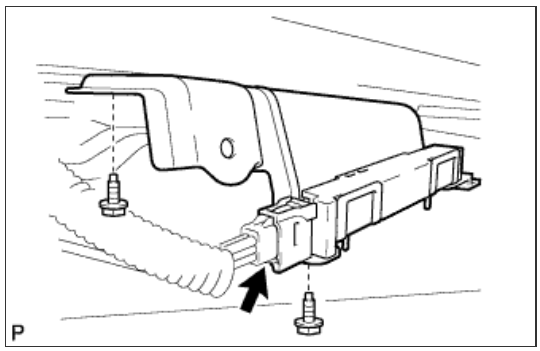
8. REMOVE ELECTRICAL KEY ANTENNA



a. Remove the 2 screws and antenna.

for Preparation Click here

1. INSTALL ELECTRICAL KEY ANTENNA



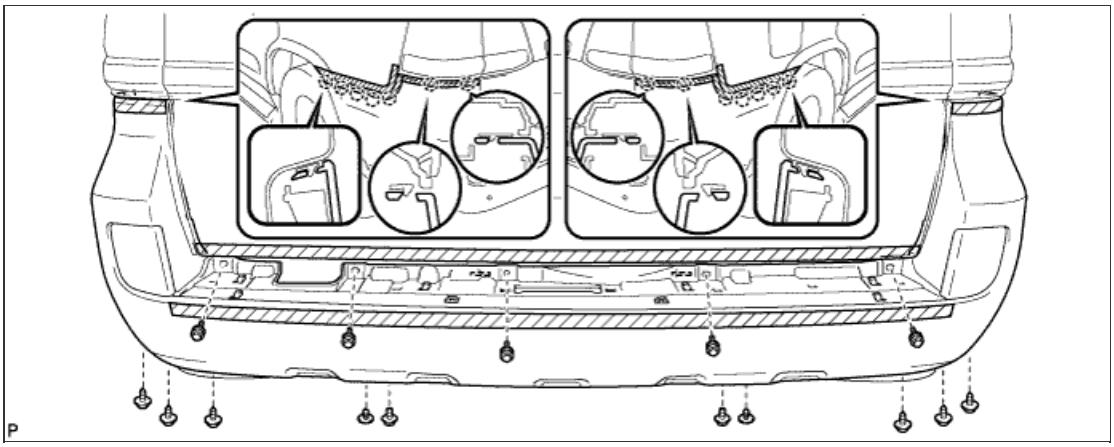
a. Install the antenna with the 2 screws.

2. INSTALL REAR BUMPER ARM BRACKET LH

a. Install the bumper arm bracket with the 2 bolts.

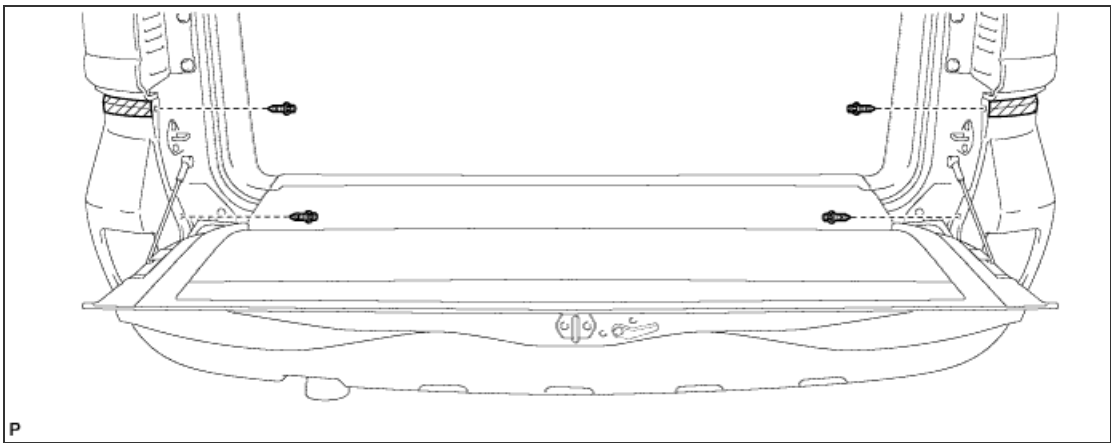
b. Connect the connector.

3. INSTALL REAR BUMPER COVER



HINT:

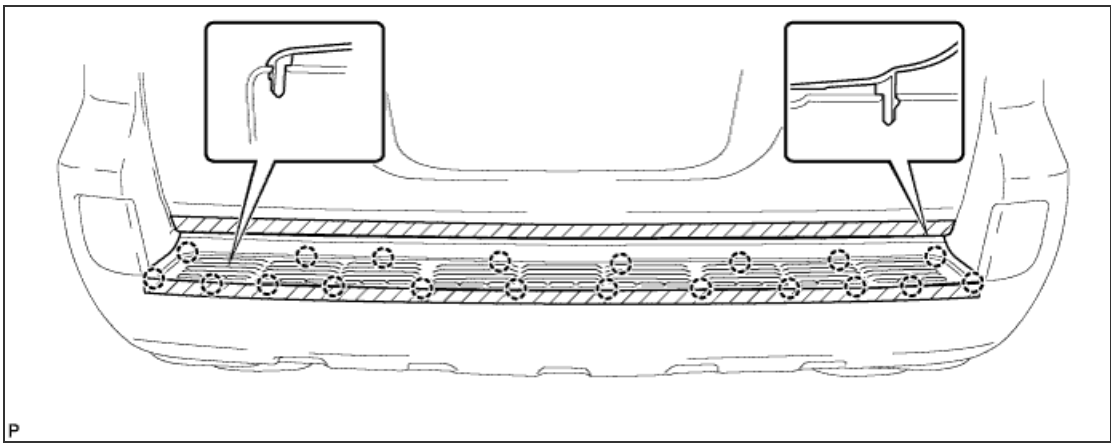
For the rear bumper cover with tire carrier, use the procedures described below.



a. w/o TOYOTA Parking Assist-sensor S ste n, w/o Rear Fog Light:
Attach the 14 claws to install the bumper cover.

b. w/ TOYOTA Parking Assist-sensor S ste n or w/ Rear Fog Light:
Connect the No. 2 rame wire connector and attach the 14 claws to install the bumper cover.

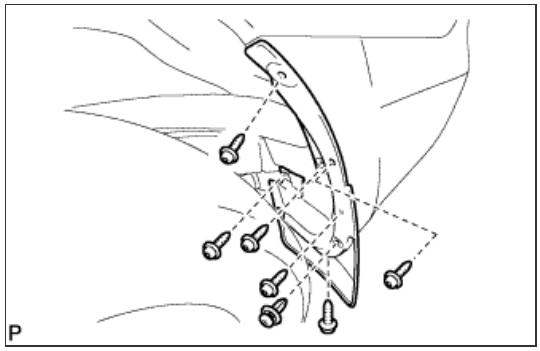
c. Install the bolts, 6 screws and 2 clips.



d. Open the tail gate and install the 4 clips.

e. Close the tail gate.

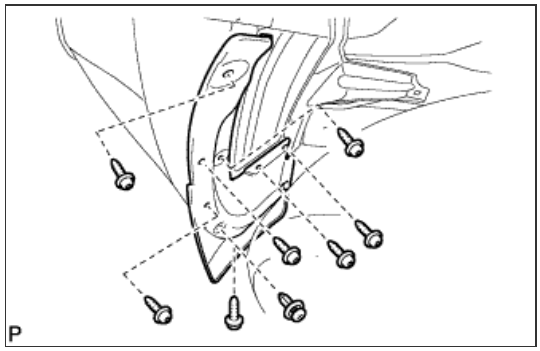
4. INSTALL REAR NO. 1 BUMPER PLATE



a. Attach the 2 claws to install the bumper plate.

5. INSTALL REAR QUARTER PANEL MUDGUARD LH

a. Install the mudguard with the clip.

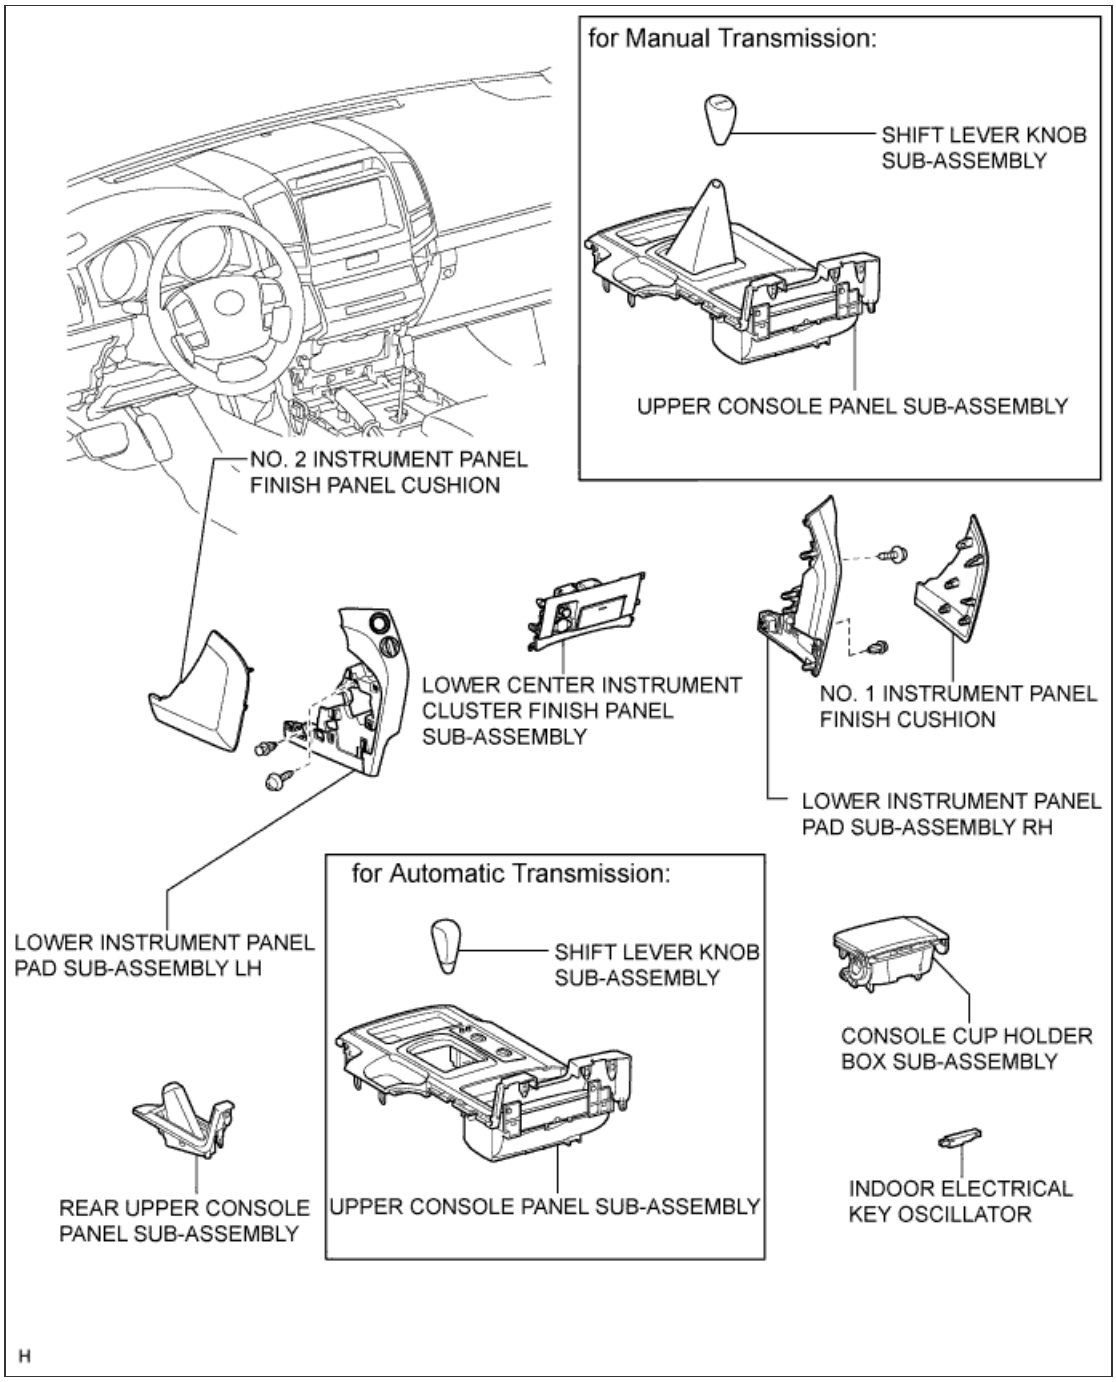


b. Using a T3 TOR sket, install the 6 screws.

6. INSTALL REAR QUARTER PANEL MUDGUARD RH

a. Install the mudguard with the clip.

b. Using a T3 TOR sket, install the crews.



7. INSTALL SPARE WHEEL CARRIER SUB-ASSEMBLY (w/ Tire Carrier)

a. Install the spare wheel carrier sub-assembl Click here .

8. INSTALL PINTLE HOOK ASSEMBLY (w/ Pintle Hook)

a. Install the pintle hook assembl Click here .

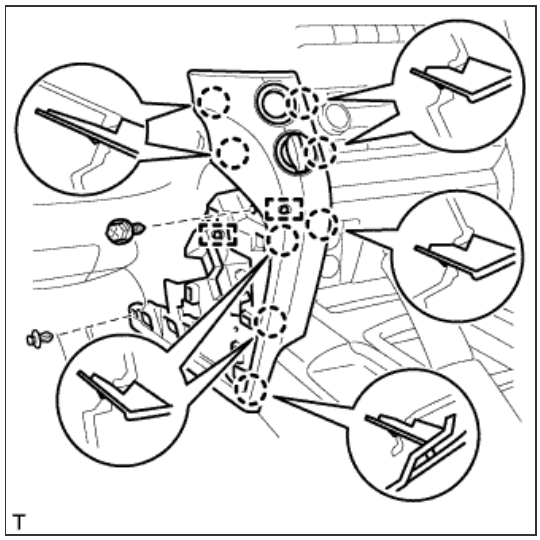
HINT:

- **Use the same procedures for LHD and RHD vehicles.**
- **The procedures listed below are for LHD vehicles.**

1. REMOVE NO. 2 INSTRUMENT PANEL FINISH PANEL CUSHION

a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 7 claws and remove the panel cushion.



2. REMOVE LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

a. Remove the clip.

b. Remove the screw.

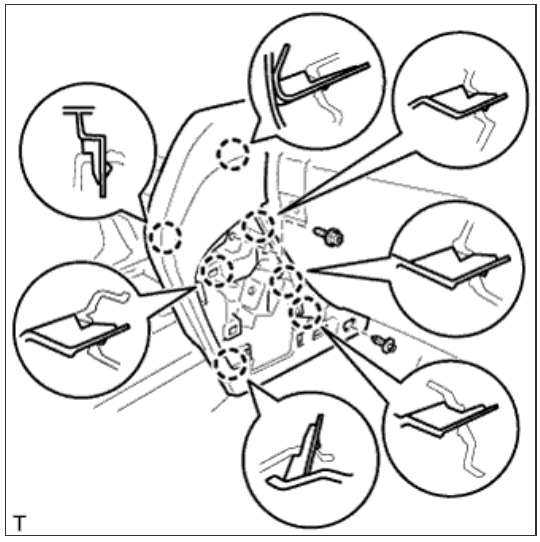
c. Detach the 8 claws.

d. Remove the panel pad and disconnect the connectors and 2 clamps.

3. REMOVE NO. 1 INSTRUMENT PANEL FINISH CUSHION

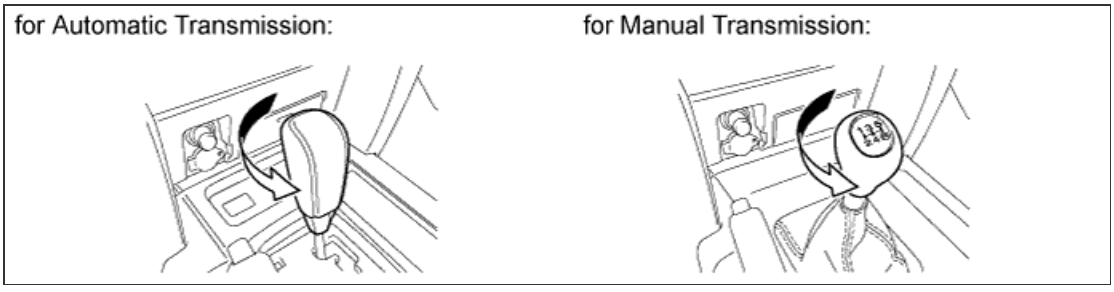
a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 7 claws and remove the panel cushion.



4. REMOVE LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY RH

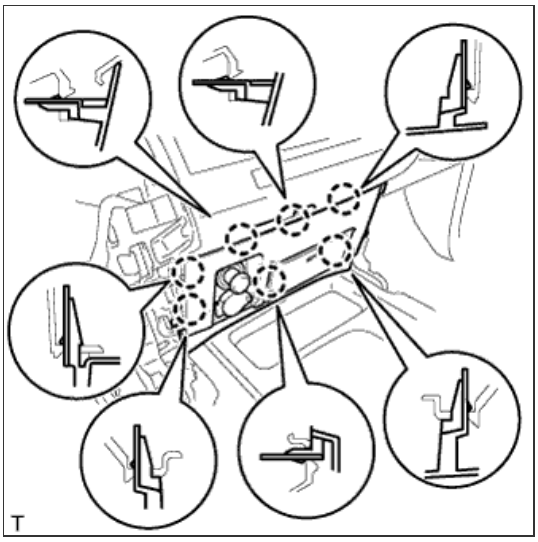
a. Remove the clip.



b. Remove the screw.

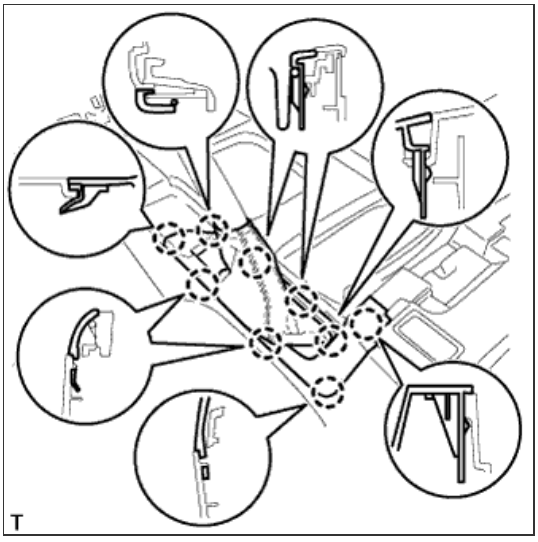
c. Detach the 7 claws and remove the panel.

5. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY



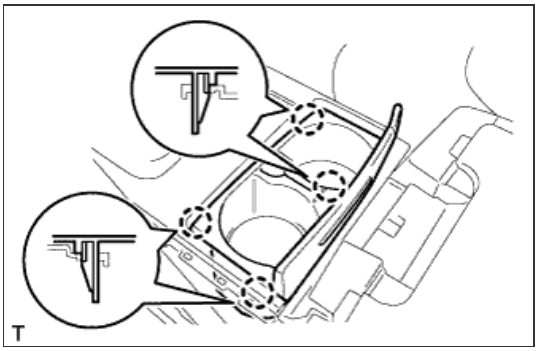
a. Twist the shift lever knob in the direction indicated by the arrow and remove it.

6. REMOVE LOWER CENTER INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY



a. Detach the 7 claws.

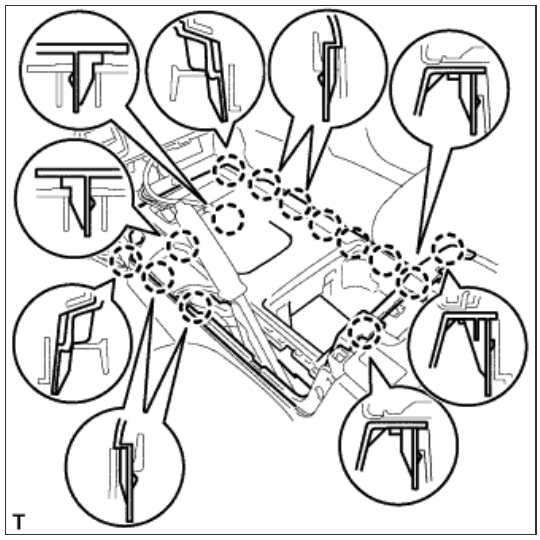
b. Disconnect the connectors and remove the panel.



7. REMOVE REAR UPPER CONSOLE PANEL SUB-ASSEMBLY

a. Detach the 9 claws and remove the panel.

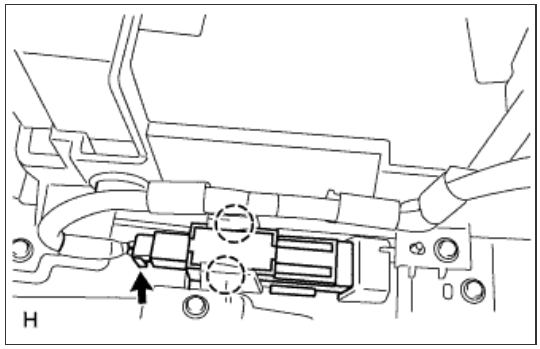
8. REMOVE CONSOLE CUP HOLDER BOX SUB-ASSEMBLY



a. Detach the 4 claws and remove the box.

9. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY

a. Detach the 14 claws.



b. Disconnect the connectors and remove the console panel.

1 . REMOVE INDOOR ELECTRICAL KEY OSCILLATOR

a. Disconnect the connector.

b. Detach the 2 claws and remove the electrical key oscillator.

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

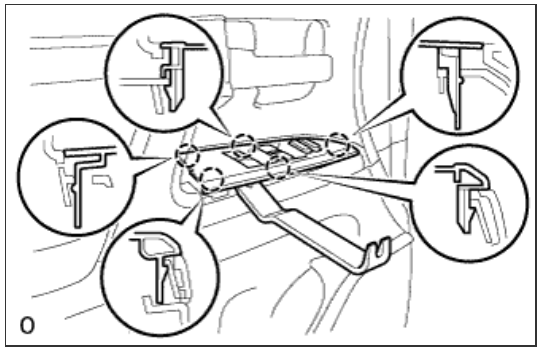
2. REMOVE FRONT LOWER DOOR FRAME BRACKET GARNISH LH

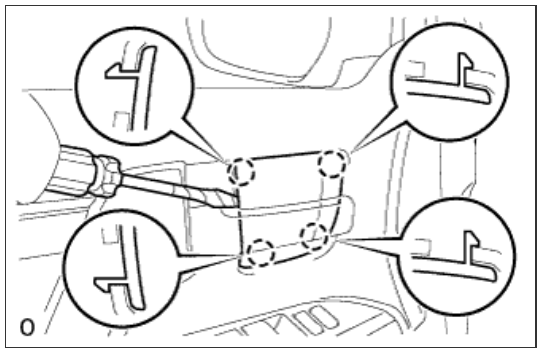


a. Detach the clip and claw, remove the front lower door frame bracket garnish.

3. REMOVE FRONT DOOR ARMREST BASE PANEL ASSEMBLY LH

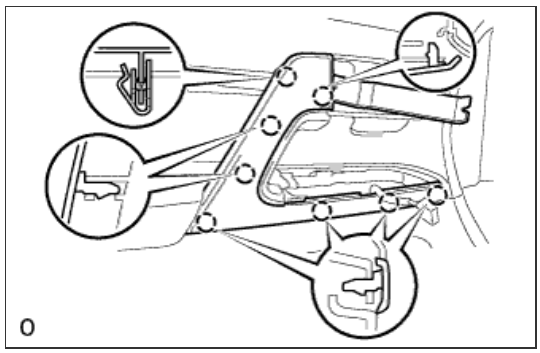
a. Using a moulding remover, detach the 5 claws.

b. Disconnect the connector and remove the front door armrest base panel and multiplex network master switch.



4. REMOVE FRONT DOOR INSIDE HANDLE BEZEL LH

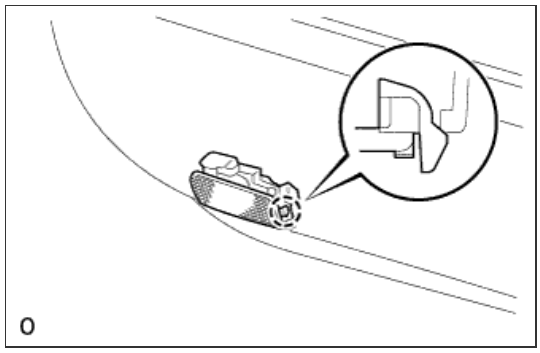
a. Using a screwdriver, detach the 4 claws and remove the inside handle bezel.



HINT:

Tape the screwdriver tip before use.

5. REMOVE DOOR ASSIST GRIP COVER LH

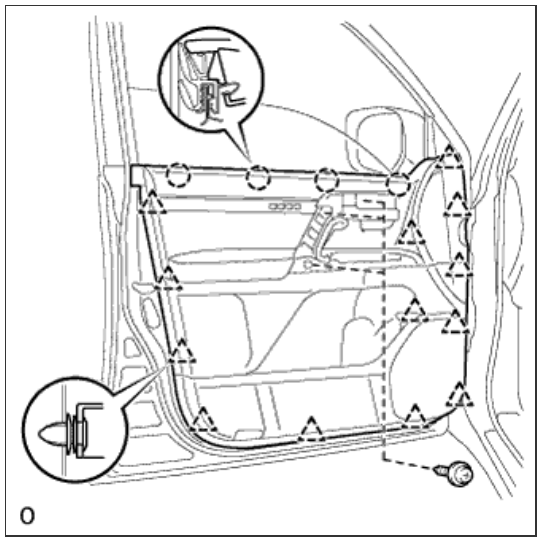


a. Using a moulding remover, detach the 8 claws and remove the door assist grip cover.

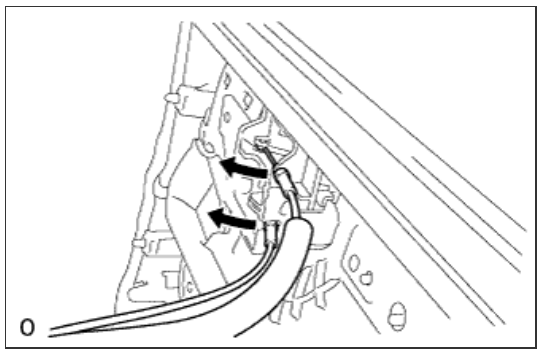
6. REMOVE COURTESY LIGHT ASSEMBLY (w/ Courtesy Light)

a. Detach the claw.

b. Remove the courtesy light and then disconnect the connector.



7. REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY LH



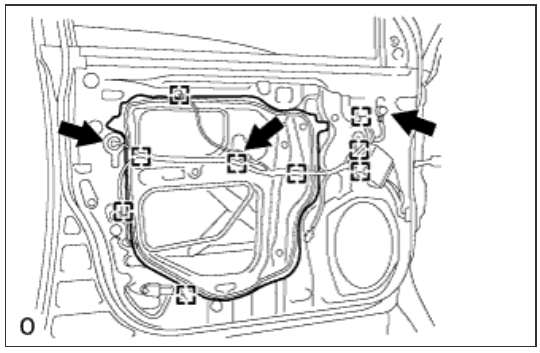
a. Remove the 3 screws.

b. Remove the 13 clips, 4 claws and trim board.

c. Disconnect the connector.

d. Disconnect the 2 cables from the inside handle.

8. REMOVE FRONT DOOR SERVICE HOLE COVER LH

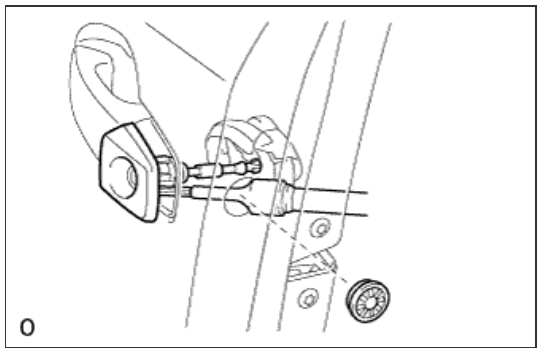


a. Using a clip remover, detach the 9 clamps.

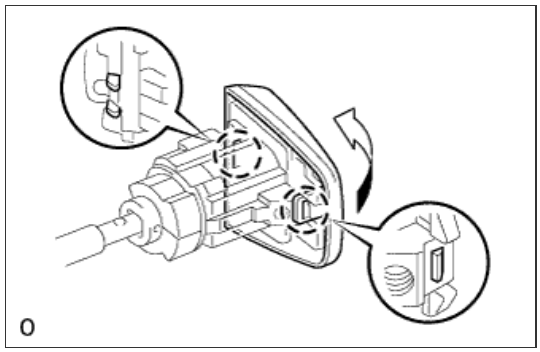
b. Remove the bolt and disconnect the 2 connectors.

c. Remove the service hole cover.

HINT:



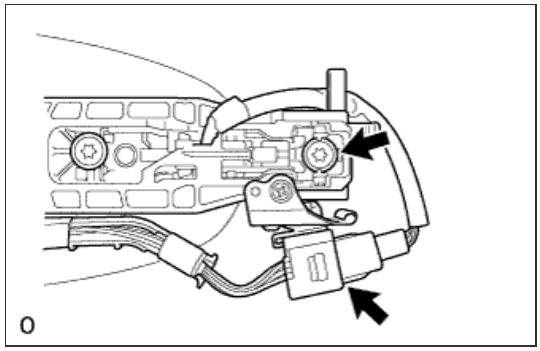
Remove the remaining tape on the door.



9. REMOVE FRONT DOOR OUTSIDE HANDLE COVER LH

a. Remove the hole plug.

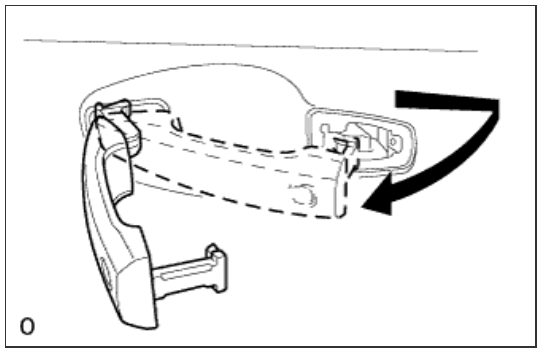
b. Using a T30 "TORX" wrench, loosen the screw and remove the cover with the door lock cylinder installed.



c. Detach the 2 claws and remove the front door outside handle cover.

10. REMOVE FRONT DOOR HANDLE ASSEMBLY OUTSIDE LH

a. Disconnect the connector.



b. Using a T30 "TORX" wrench, loosen the screw.

c. Remove the handle by sliding and pulling it in the direction indicated by the arrow in the illustration.

NOTICE:

If the release plate is not pulled and held when removing the handle, the release plate will interfere with the handle and become damaged.

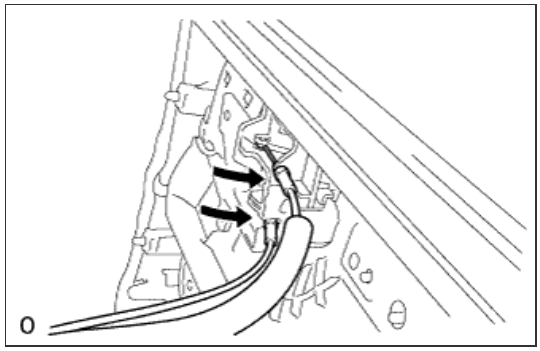
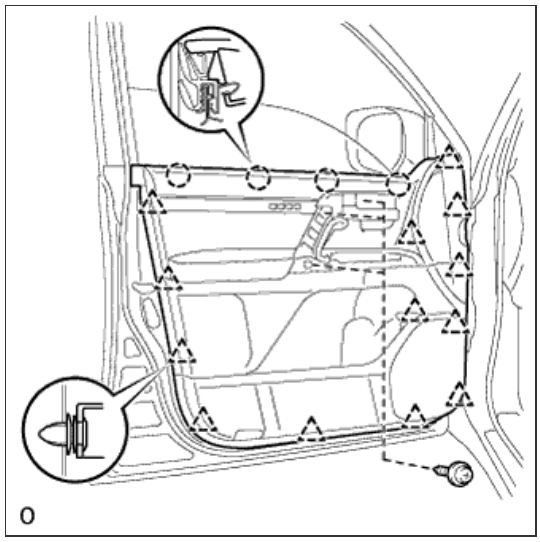
e. Install the bolt as shown in the illustration.



Tor e:
.4 N m{ 8 kgf cm 4 in. lbf

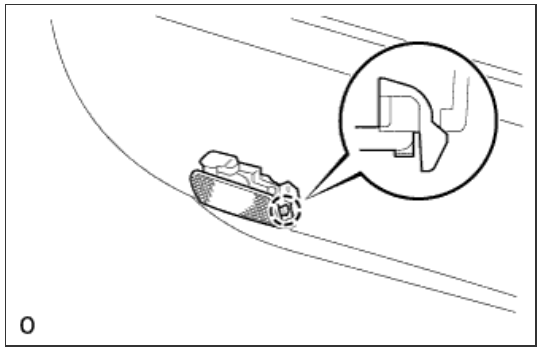
4. INSTALL FRONT DOOR TRIM BOARD SUB ASSEMBLY LH



a. Connect the connector.

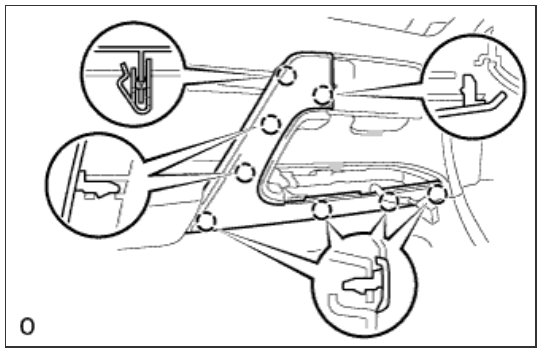
b. Connect the front door lock remote control cable and front door inside locking cable to the front door inside handle sub-assembly.

c. Attach the 4 claws and 13 clips to install the front door trim board sub-assembly.



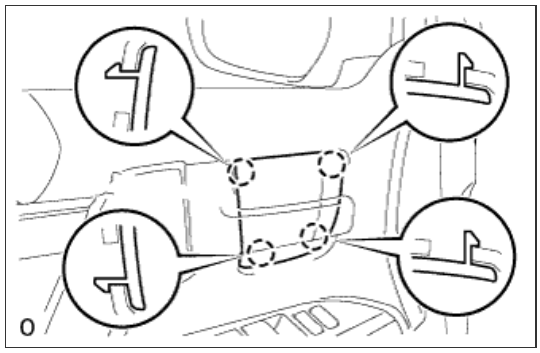
d. Install the 3 screws.

INSTALL COURTESY LI HT ASSEMBLY (w Co rtes Light)



a. Connect the connector.

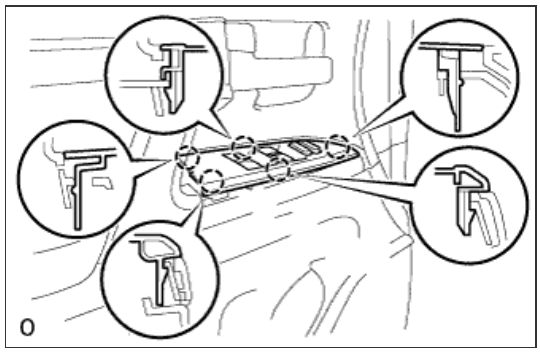
b. Attach the claw of the courtesy light to the front door trim.



. INSTALL DOOR ASSIST RIP COVER LH

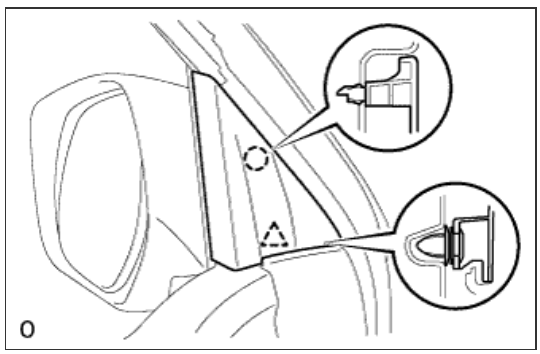
a. Attach the 8 claws to install the door assist grip cover to the door trim panel.

. INSTALL FRONT DOOR INSIDE HANDLE BEZEL LH



a. Attach the 4 claws to install the bezel.

8. INSTALL FRONT DOOR ARMREST BASE PANEL ASSEMBLY LH



a. Connect the connector.

b. Attach the 5 claws to install the armrest base panel.

9. INSTALL FRONT LOWER DOOR FRAME BRACKET ARNISH LH

a. Attach the clip and claw, and install the front door lower frame bracket garnish.

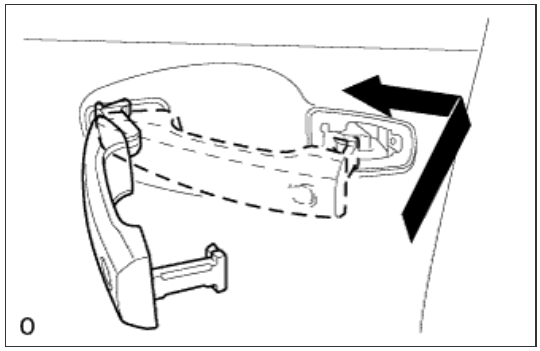
10. CONNECT CABLE TO NE ATIVE BATTERY TERMINAL

NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

. CHECK SRS WARNIN LI HT

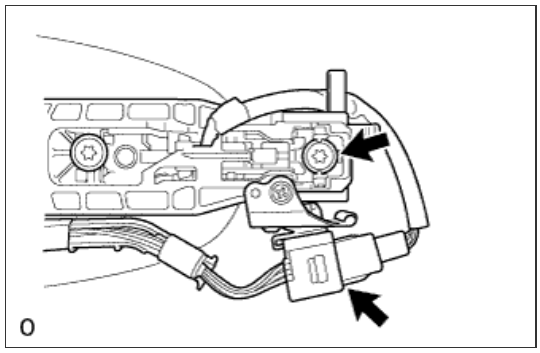
a. Check the SRS warning light (Click here).



for Preparation Click here

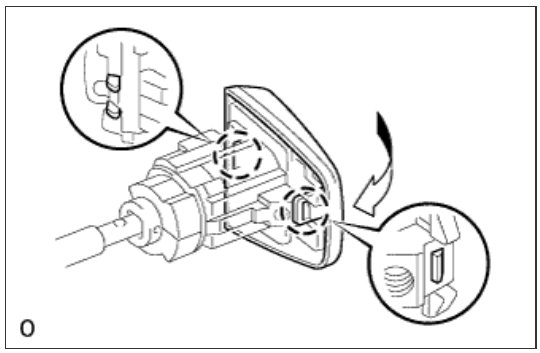
HINT:

- **Use the same proced res for the LH side and RH side.**
- **The proced res listed below are for the LH side.**



1. INSTALL FRONT DOOR HANDLE ASSEMBLY OUTSIDE LH

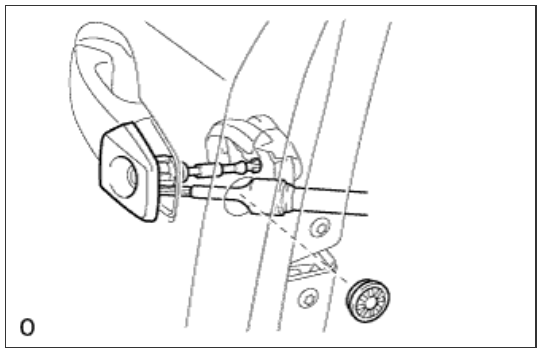
a. Install the handle by pushing it in the direction of the arrow in the illustration.



b. Using a T30 "TORX" socket, install the screw.

c. Connect the connector.

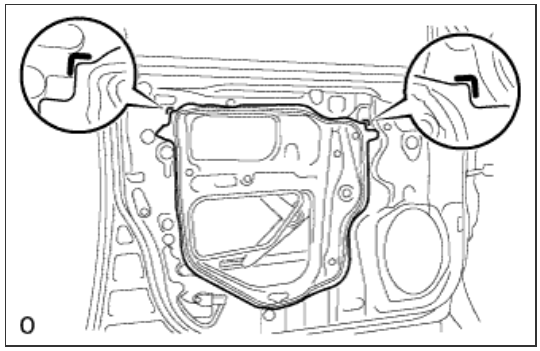
2. INSTALL FRONT DOOR OUTSIDE HANDLE COVER LH



a. Attach the 2 claws to install the front door outside handle cover to the front door lock cylinder.

b. Using a T30 "TORX" socket, install the cover (with the door lock cylinder) with the screw.

Tor e:
.0 N m{ 41 kgf cm 3 in. lbf

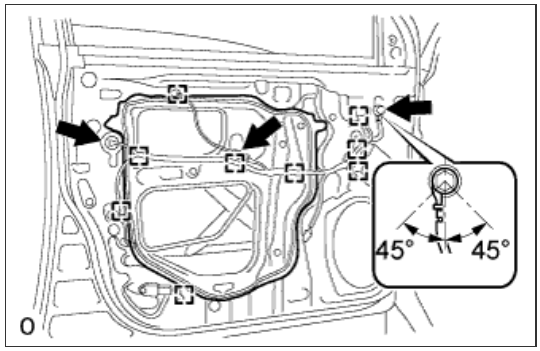


c. Install the hole plug.

3. INSTALL FRONT DOOR SERVICE HOLE COVER LH

a. Apply butyl tape to the door.

b. Pass the front door lock remote control cable and front door inside locking cable through a new front door service hole cover.



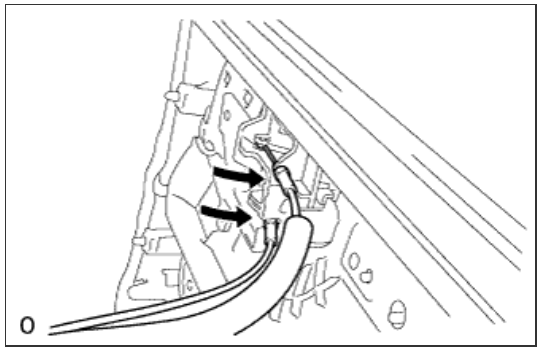
NOTICE:

- **When installing the ser ice hole co er p ll the links and connectors thro h the ser ice hole co er.**
- **There sho ld be no wrinkles or folds after attaching the ser ice hole co er.**
- **After attaching the ser ice hole co er check the sealing alit .**

c. Connect the 2 connectors.

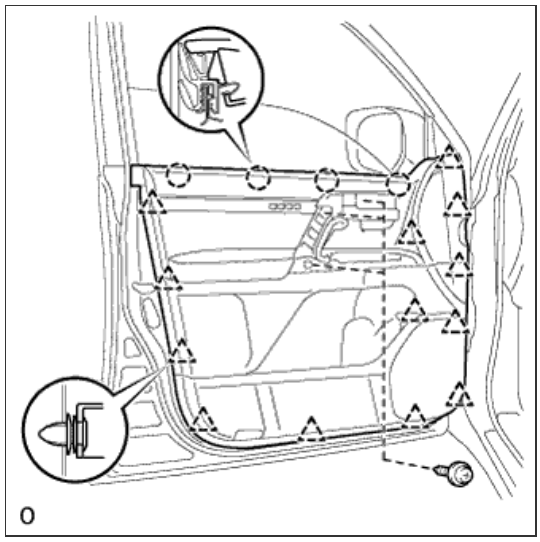
d. Attach the 9 clamps.

e. Install the bolt as shown in the illustration.



Tor e:
.4 N m{ 8 kgf cm 4 in. lbf

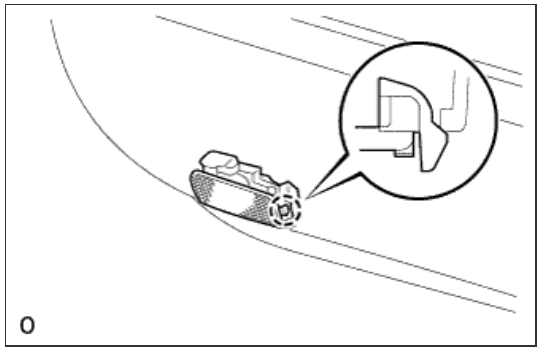
4. INSTALL FRONT DOOR TRIM BOARD SUB ASSEMBLY LH



a. Connect the connector.

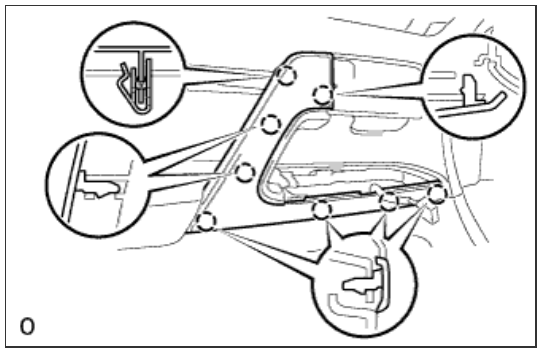
b. Connect the front door lock remote control cable and front door inside locking cable to the front door inside handle sub-assembly.

c. Attach the 4 claws and 13 clips to install the front door trim board sub-assembly.



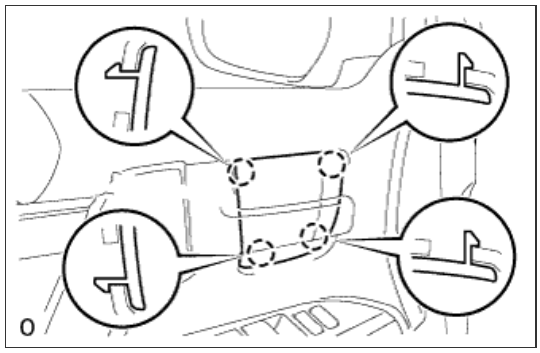
d. Install the 3 screws.

INSTALL COURTESY LI HT ASSEMBLY (w Co rtes Light)



a. Connect the connector.

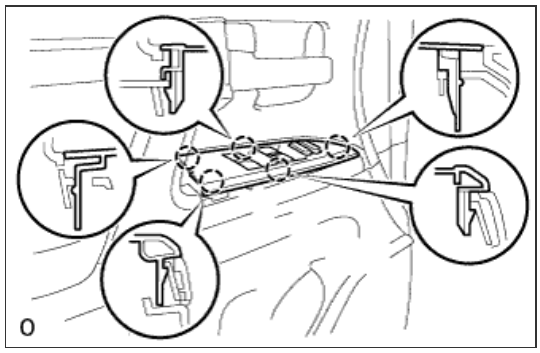
b. Attach the claw of the courtesy light to the front door trim.



. INSTALL DOOR ASSIST RIP COVER LH

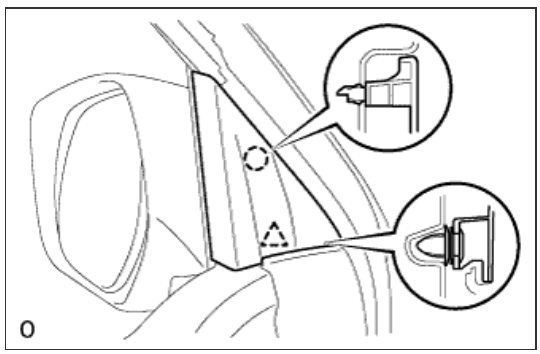
a. Attach the 8 claws to install the door assist grip cover to the door trim panel.

. INSTALL FRONT DOOR INSIDE HANDLE BEZEL LH



a. Attach the 4 claws to install the bezel.

8. INSTALL FRONT DOOR ARMREST BASE PANEL ASSEMBLY LH



a. Connect the connector.

b. Attach the 5 claws to install the armrest base panel.

9. INSTALL FRONT LOWER DOOR FRAME BRACKET ARNISH LH

a. Attach the clip and claw, and install the front door lower frame bracket garnish.

10. CONNECT CABLE TO NE ATIVE BATTERY TERMINAL

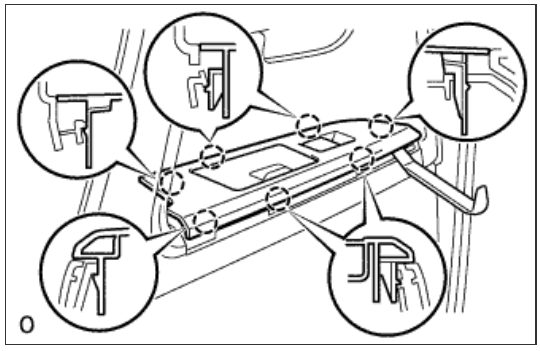
HINT:

- **Use the same procedures for the LH side and RH side.**
- **The procedures listed below are for the LH side.**

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL



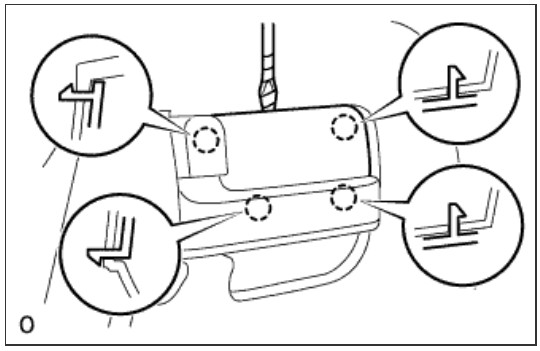
NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

2. REMOVE REAR DOOR ARMREST BASE PANEL ASSEMBLY LH

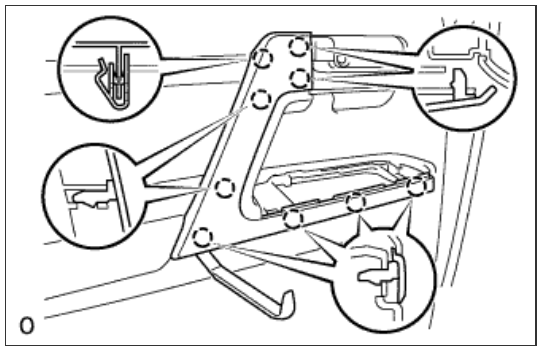
a. Using a moulding remover, detach the 7 claws.

b. Disconnect the connector and remove the rear door armrest base panel and rear power window regulator switch assembly.



3. REMOVE REAR DOOR INSIDE HANDLE BEZEL LH

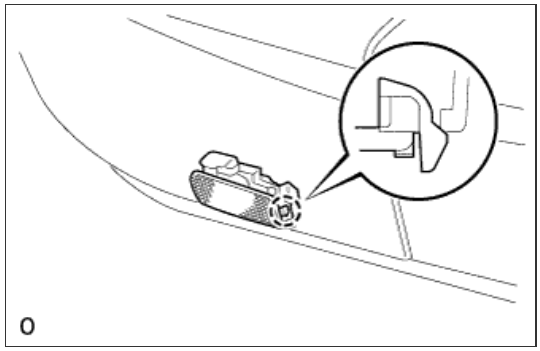
a. Using a screwdriver, detach the 4 claws and remove the bezel.



HINT:

Tape the screwdriver tip before use.

4. REMOVE ASSIST GRIP COVER LH

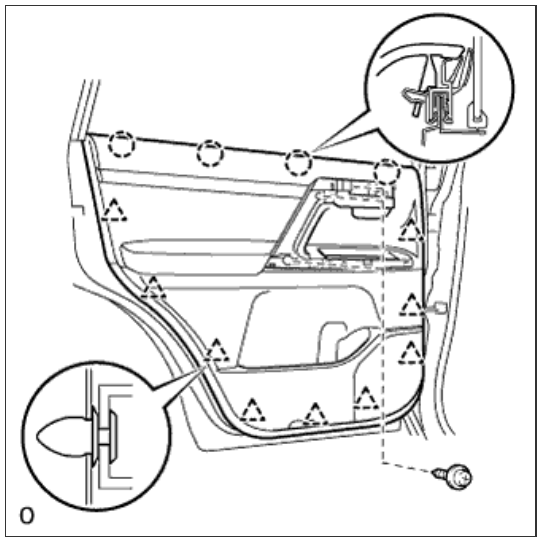


a. Using a moulding remover, detach the 9 claws and remove the door assist grip cover.

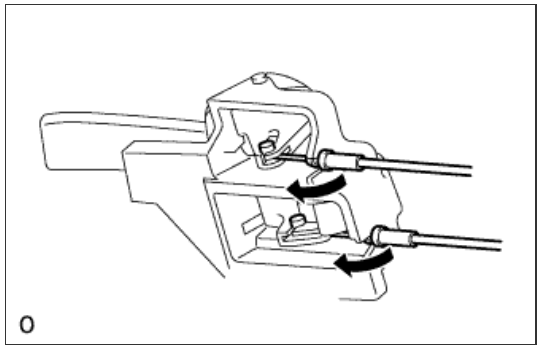
5. REMOVE COURTESY LIGHT ASSEMBLY (w/ Courtesy Light)

a. Detach the claw.

b. Remove the courtesy light and then disconnect the connector.



6. REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY LH



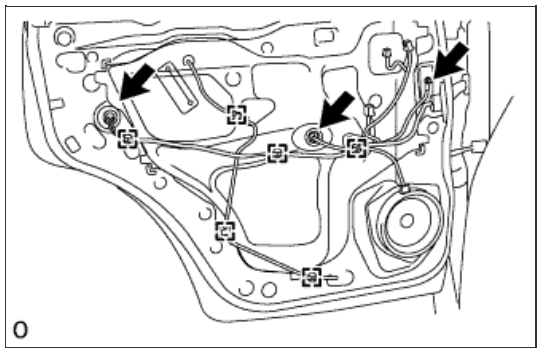
a. Remove the 3 screws.

b. Remove the 9 clips, 4 claws and trim board.

c. Disconnect the connector and remove the trim board.

d. Disconnect the 2 cables from the inside handle.

7. REMOVE REAR DOOR SERVICE HOLE COVER LH



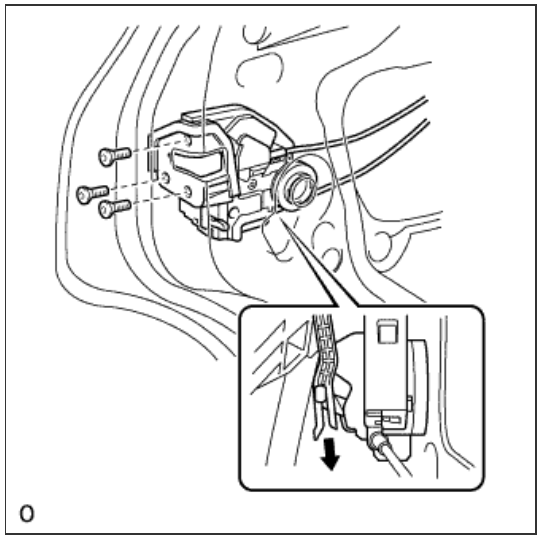
a. Using a clip remover, detach the 6 clamps.

b. Remove the bolt and disconnect the 2 connectors.

c. Remove the service hole cover.

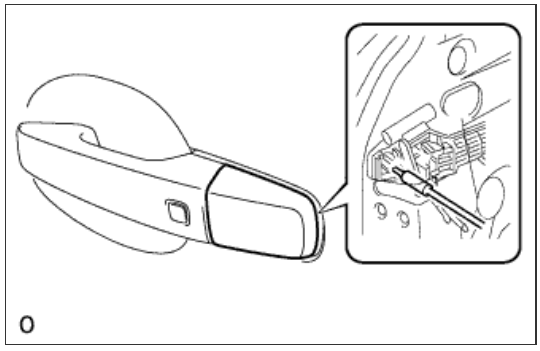
HINT:

Remove the remaining tape on the door.



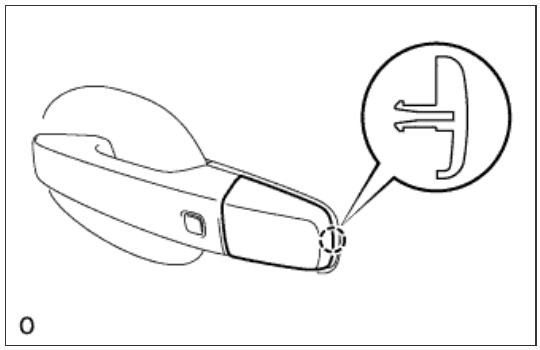
8. REMOVE REAR DOOR LOCK ASSEMBLY LH

a. Using a T30 "TORX" socket, remove the 3 screws and door lock.



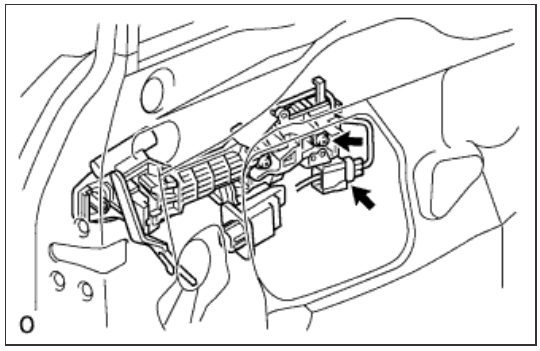
NOTICE:

Be careful when removing the screws as the door lock may fall and become damaged.

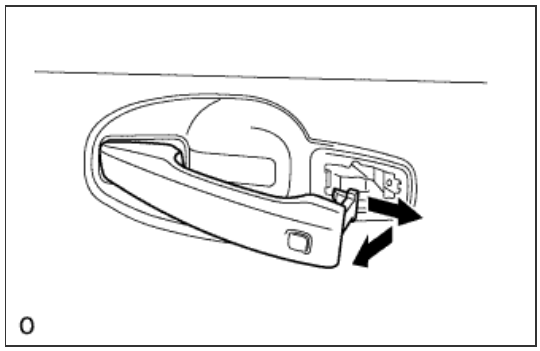


9. REMOVE REAR DOOR OUTSIDE HANDLE COVER LH

a. Using a T30 "TORX" socket, loosen the screw.



b. Detach the claw and remove the rear door outside handle cover.



1 . REMOVE REAR DOOR OUTSIDE HANDLE ASSEMBLY LH

a. Using a T30 "TORX" wrench, loosen the screw.

b. Disconnect the connector.

c. Remove the handle by sliding and pulling it in the direction indicated by the arrow in the illustration.

a. Remove the hood lock nut cap.

b. Remove the 2 bolts and nut.

c. Disconnect the connector.

d. Disconnect the hood lock control cable and remove the hood lock.

for Preparation Click here

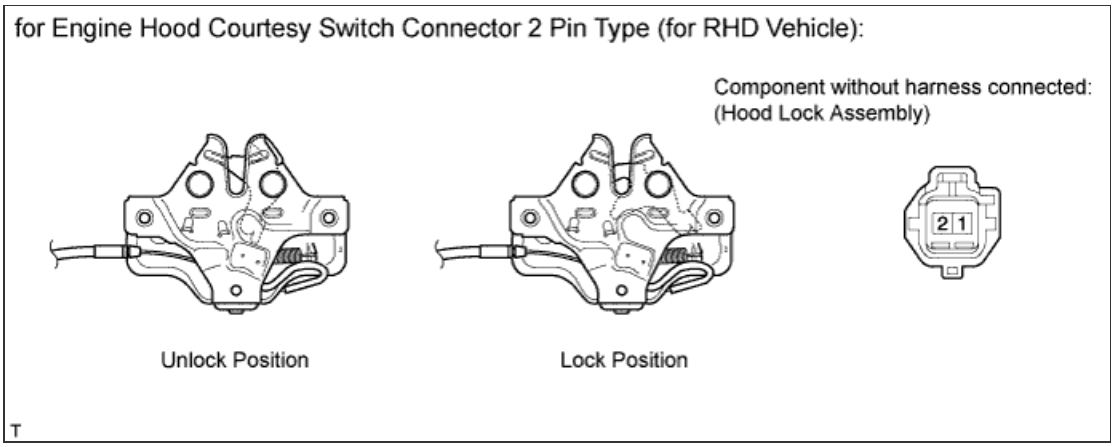
1. INSPECT HOOD LOCK ASSEMBLY (ENGINE HOOD COURTESY SWITCH)

a. for Engine Hood Courtesy Switch Connector 2 Pin Type (for LHD Vehicle):



i. Measure the resistance according to the value(s) in the table below.

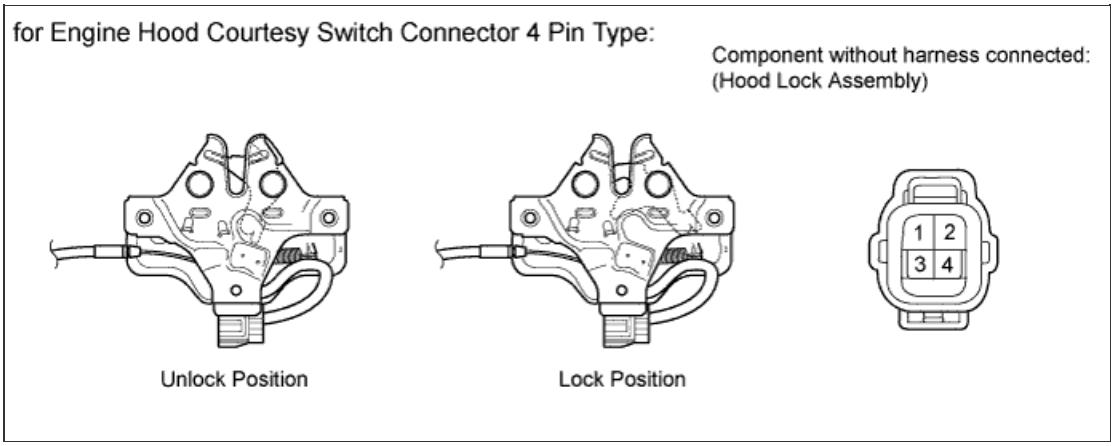
Standard Resistance:

Tester Connection	Condition	Specified Condition
1 - 2	Unlock	10 kΩ or higher
1 - 2	Lock	Below 1 Ω

If the result is not as specified, replace the hood lock assembly.

b. for Engine Hood Courtesy Switch Connector 2 Pin Type (for RHD Vehicle):

i. Measure the resistance according to the value(s) in the table below.



Standard Resistance:

Tester Connection	Condition	Specified Condition

1 - 2	Unlock	10 kΩ or higher
1 - 2	Lock	Below 1 Ω

If the result is not as specified, replace the hood lock assembly.

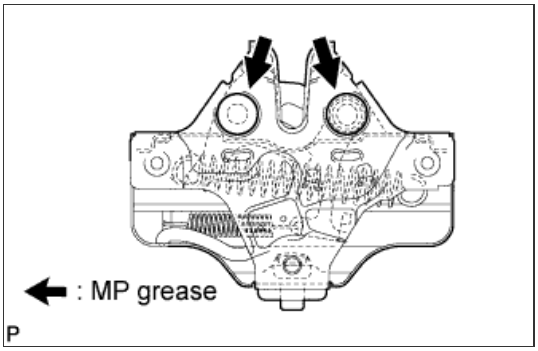
c. for Engine Hood Courtesy Switch Connector 4 Pin Type:

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

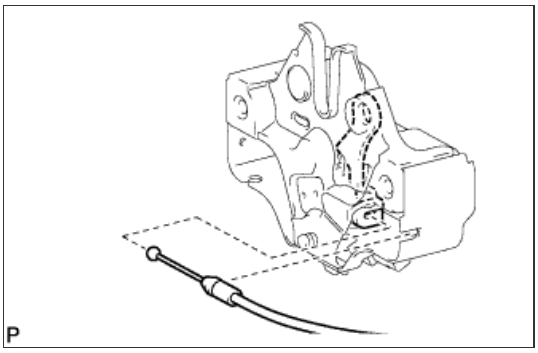
Tester Connection	Condition	Specified Condition
1 - 3	Always	Below 1 Ω
2 - 4	Unlock	10 kΩ or higher
2 - 4	Lock	Below 1 Ω

If the result is not as specified, replace the hood lock assembly.



for Preparation Click here

HINT:

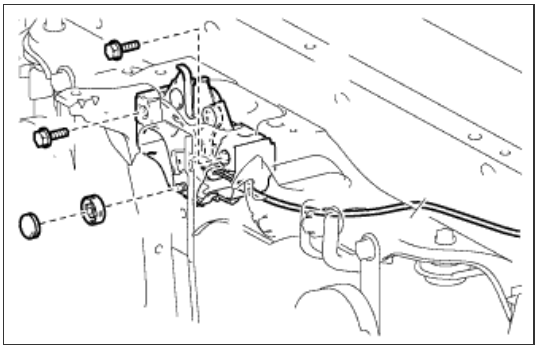


- **Use the same procedures for LHD and RHD vehicles.**
- **The procedures listed below are for LHD vehicles.**

1. INSTALL HOOD LOCK ASSEMBLY

a. Apply MP grease to the sliding areas of the lock.

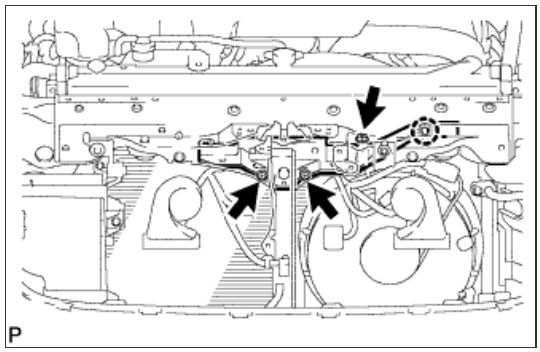
b. Connect the hood lock control cable.



c. Connect the connector.

d. Install the hood lock with the 2 bolts and nut.

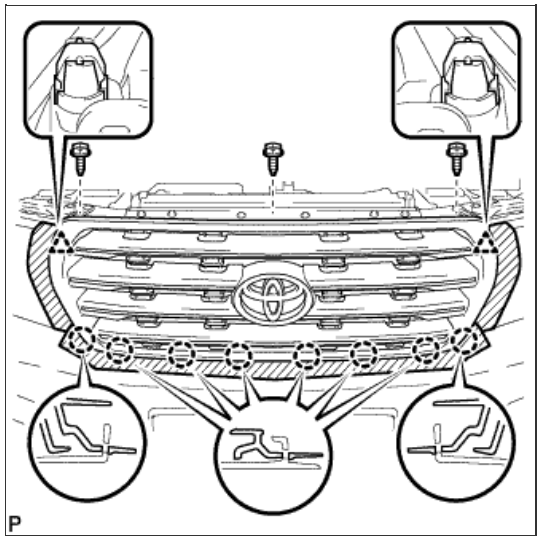
Torque:
5.5 N*m{ 57 kgf*cm , 49 in.*lbf }



e. Install a new hood lock nut cap.

2. INSTALL HOOD LOCK CONTROL CABLE COVER

a. Attach the claw to install the cover.



b. Install the 3 screws.

. INSTALL RADIATOR GRILLE

a. Attach the 2 clips and 8 claws to install the radiator grille.

b. Install the 3 screws.

4. INSTALL UPPER RADIATOR SUPPORT SEAL

a. for Gasoline Engine:
Install the upper radiator support seal (Click here).

b. for Diesel Engine:
Install the upper radiator support seal (Click here).

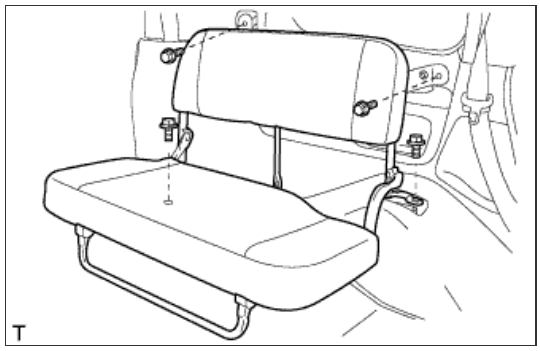
1. REMOVE REAR SIDE SEAT LEG PROTECTOR LH (for Face to Face Seat Type)

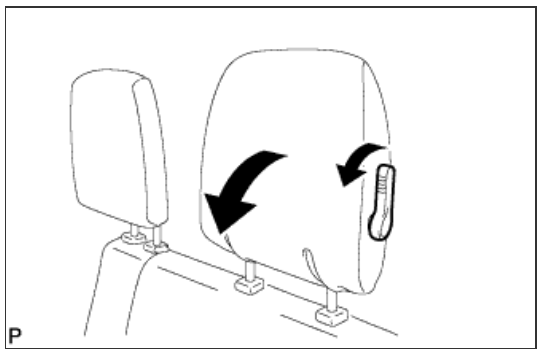
a. Using a screwdriver, detach the 2 claws and remove the protector.



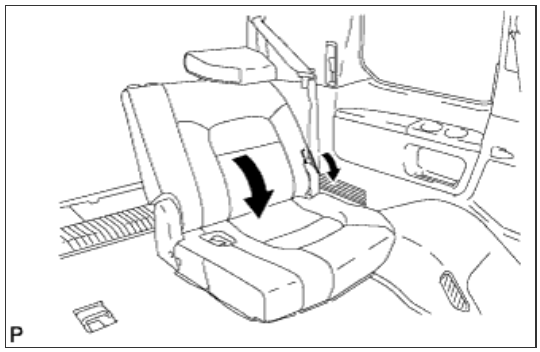
HINT:

Tape the screwdriver tip before use.

2. REMOVE REAR NO. 2 SEAT ASSEMBLY (for Face to Face Seat Type)

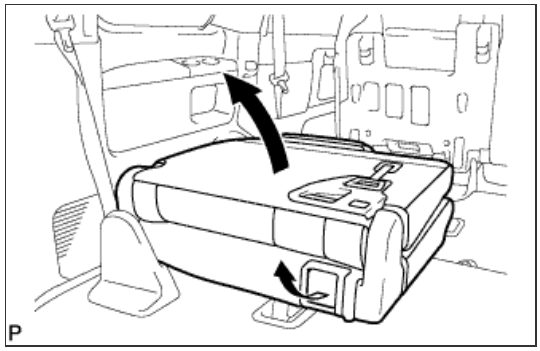


a. Remove the 4 bolts and rear No. 2 seat.



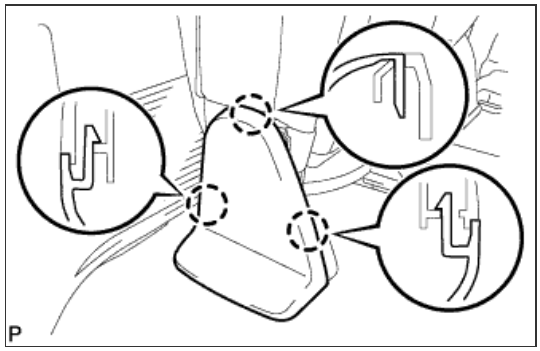
3. REMOVE REAR NO. 2 SEAT HEADREST ASSEMBLY LH (except Face to Face Seat Type)

4. REMOVE REAR SEAT CUSHION HINGE COVER LH (except Face to Face Seat Type)



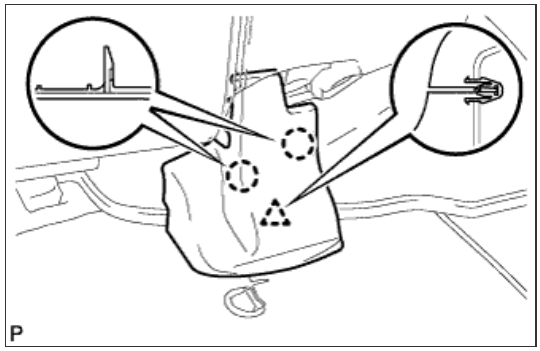
a. Operate the rear seat headrest handle and lower the headrest.

b. Operate the reclining adjuster release handle and fold down the seat.



c. Operate the seat cushion lock release lever and move the seat to the storage position.

d. Using a screwdriver, detach the 3 claws and remove the cover.

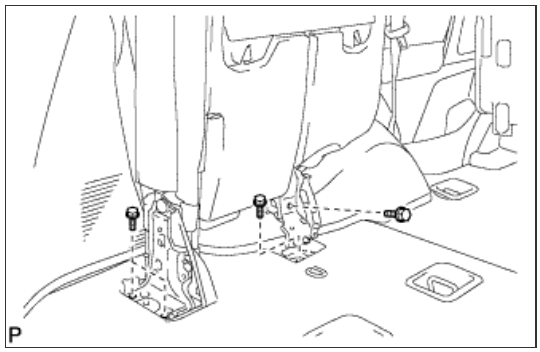


HINT:

Tape the screwdriver tip before use.

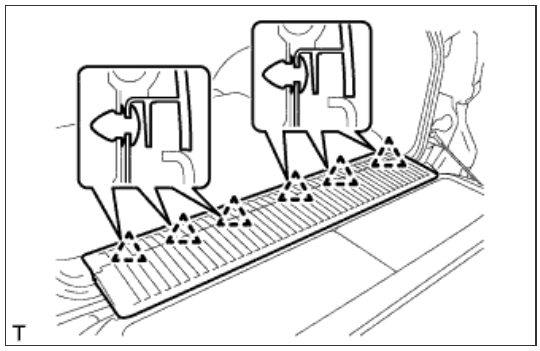
5. REMOVE REAR NO. 2 SEAT HINGE COVER LH (except Face to Face Seat Type)

a. Detach the 2 claws and clip, and then remove the cover.



6. REMOVE REAR NO. 2 SEAT ASSEMBLY (except Face to Face Seat Type)

a. Remove the 4 bolts and seat assembly.

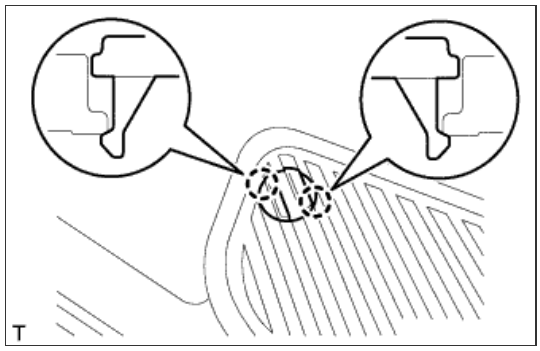


NOTICE:

Be careful not to damage the vehicle body.

7. REMOVE REAR FLOOR MAT REAR SUPPORT PLATE

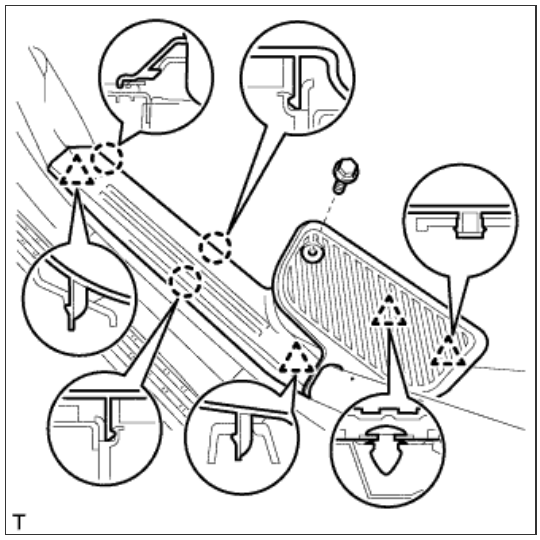
a. Detach the 6 clips and remove the support plate.



8. REMOVE REAR STEP COVER

HINT:

Use the same procedure to remove the step cover on the other side.

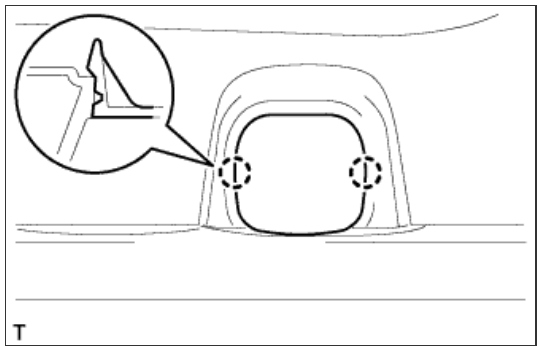


a. Detach the 2 claws and remove the step cover.

9. REMOVE REAR DOOR SCUFF PLATE LH

a. Remove the screw.

b. Detach the 3 claws and 4 clips, and remove the scuff plate.



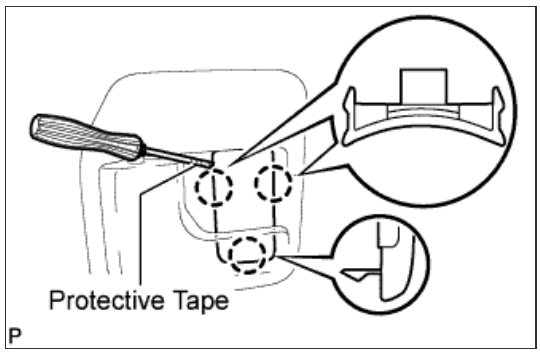
1 REMOVE NO. 1 TONNEAU COVER HOLDER CAP (w/ Tonneau Cover)

HINT:

Use the same procedure to remove the tonneau cover holder cap on the other side.

a. Detach the 2 claws and remove the tonneau cover holder cap.

11. REMOVE REAR SEAT COVER CAP (w/ Rear No. 2 Seat)

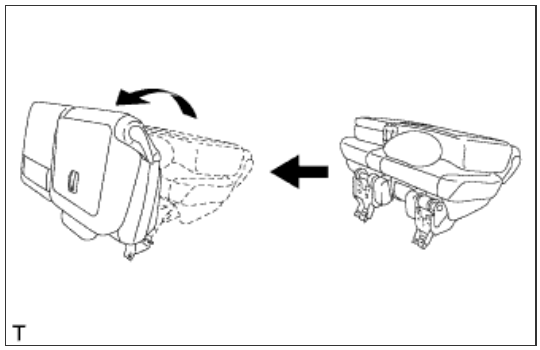


HINT:

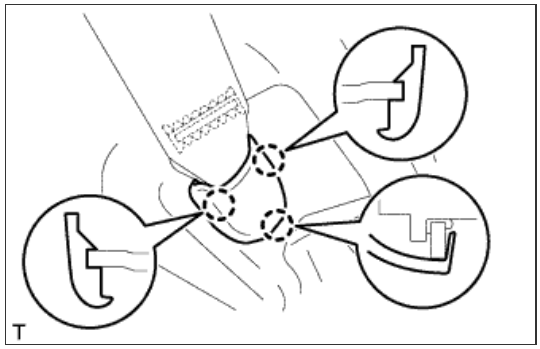
Use the same procedure to remove the rear seat cover cap on the other side.

a. Using a screwdriver, detach the 3 claws and remove the rear seat cover cap.

HINT:

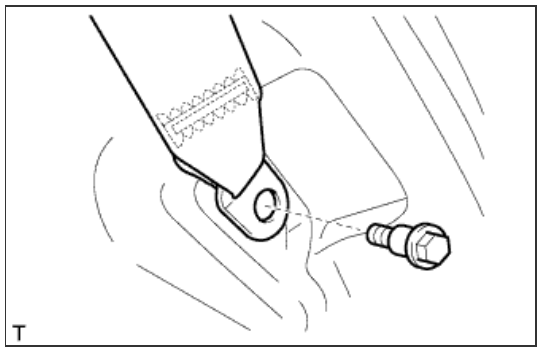


Tape the screwdriver tip before use.

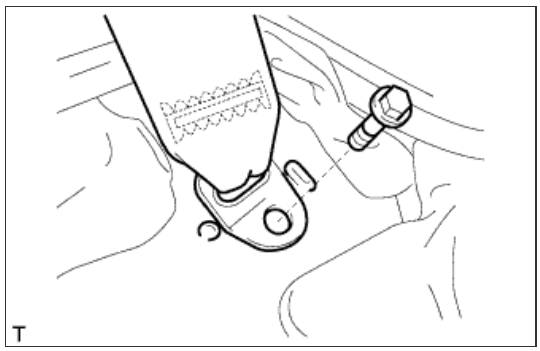


12. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY LH

HINT:



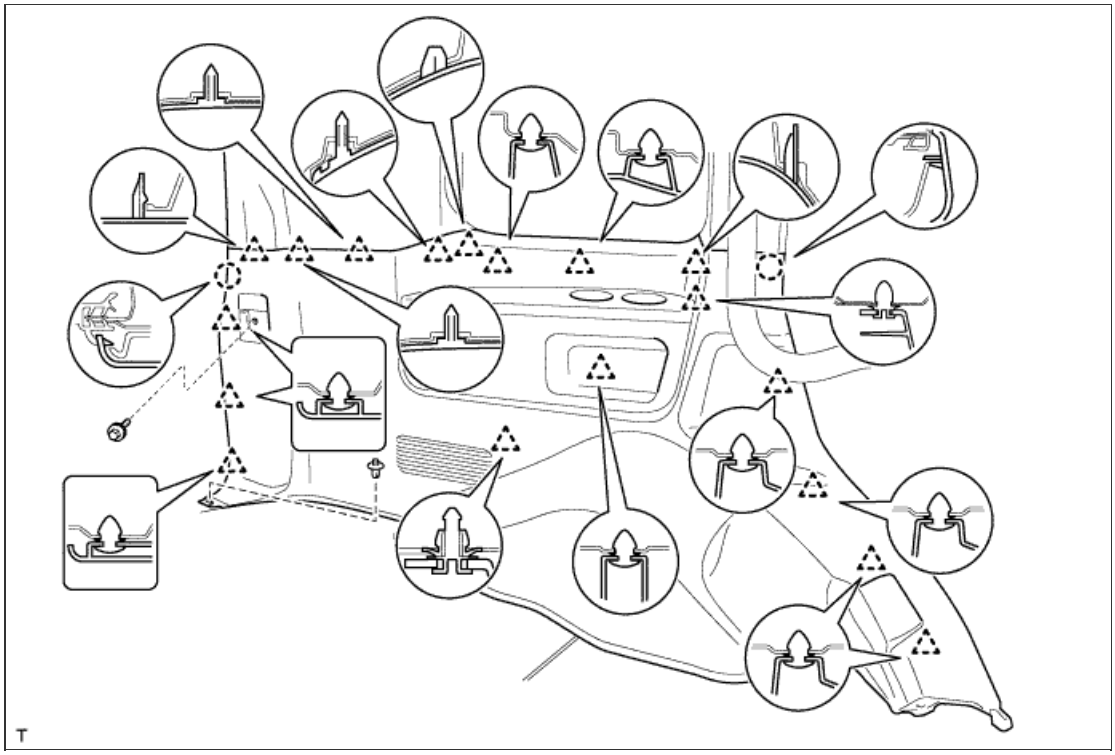
When removing the front quarter trim panel, operate the reclining adjuster release handle and move the No. 1 rear seat to the position shown in the illustration.



a. Detach the 3 claws and remove the cover.

b. Remove the bolt and rear No. 1 seat belt anchor.

c. w/ Rear No. 2 Seat, except Face to Face Seat Type:
Remove the bolt and rear No. 2 seat belt anchor.

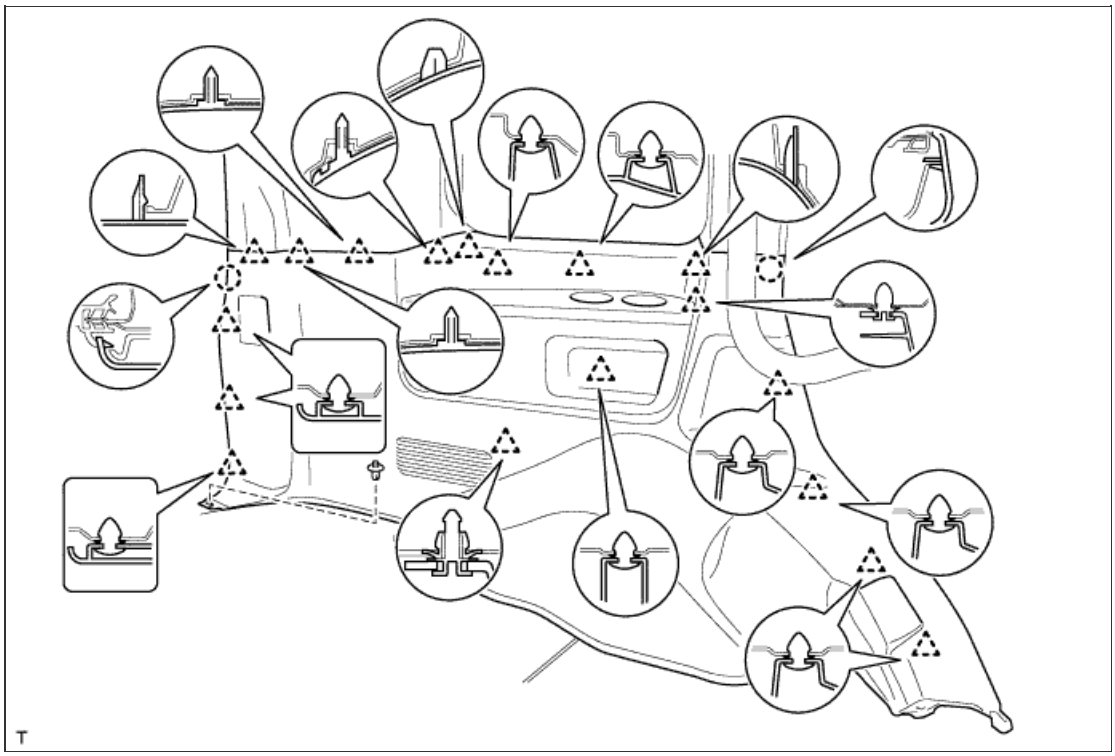


d. w/ Rear No. 2 Seat, except Face to Face Seat Type:

i. Remove the clip and bolt.

ii. Detach the 18 clips and 2 claws.

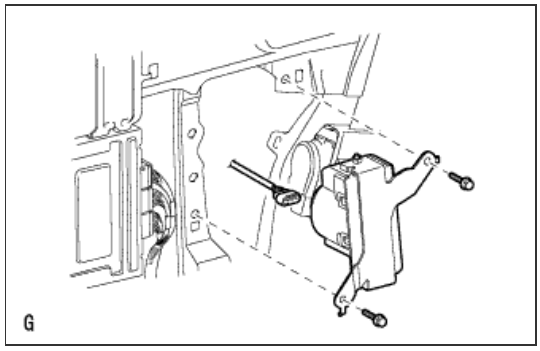
iii. w/o Rear Air Conditioning System:
Disconnect the rear seat lock control lever cable and then remove the quarter trim panel.



iv. w/ Rear Air Conditioning System:
Disconnect the thermistor connector and rear seat lock control lever cable, and then remove the quarter trim panel.

e. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat Type:

i. Remove the clip.

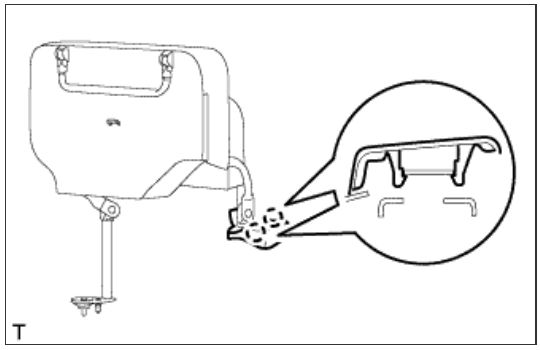


ii. Detach the 18 clips and 2 claws, and remove the quarter trim panel.

13. REMOVE SELF POWER SIREN ASSEMBLY

a. Disconnect the connector.

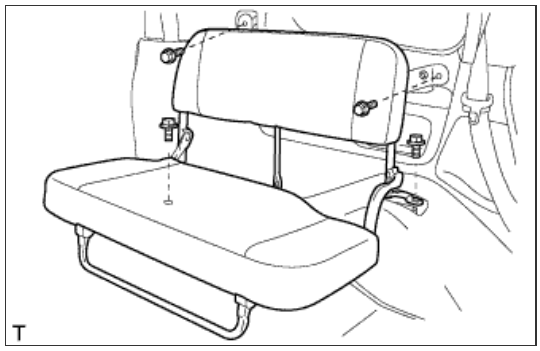
b. Remove the 2 bolts and siren.



for Preparation Click here

1. REMOVE REAR SIDE SEAT LEG PROTECTOR LH (for Face to Face Seat Type)

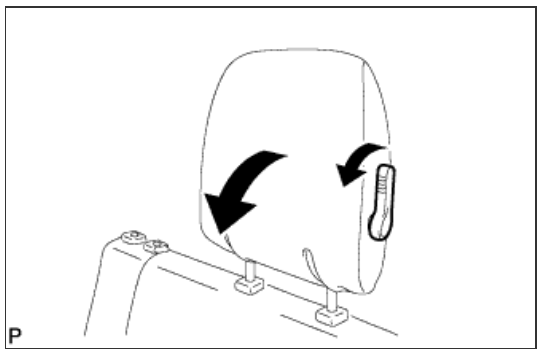
a. Using a screwdriver, detach the 2 claws and remove the protector.



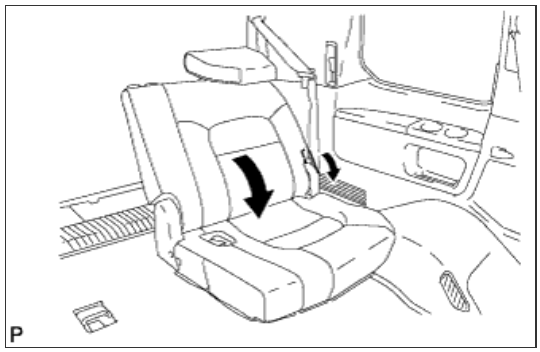
HINT:

Tape the screwdriver tip before use.

2. REMOVE REAR NO. 2 SEAT ASSEMBLY (for Face to Face Seat Type)

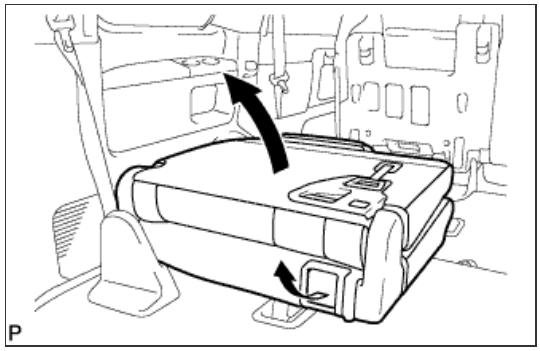


a. Remove the 4 bolts and rear No. 2 seat.



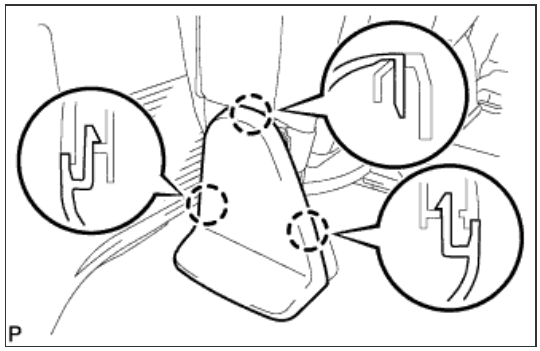
3. REMOVE REAR NO. 2 SEAT HEADREST ASSEMBLY LH (except Face to Face Seat Type)

4. REMOVE REAR SEAT CUSHION HINGE COVER LH (except Face to Face Seat Type)



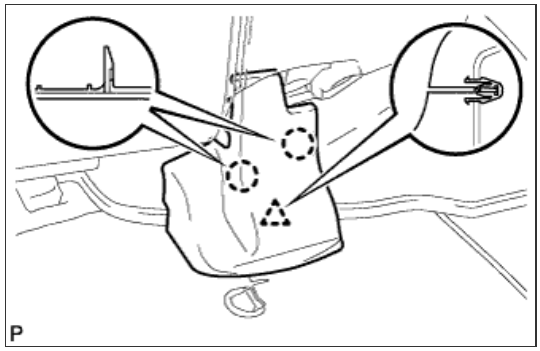
a. Operate the rear seat headrest handle and lower the headrest.

b. Operate the reclining adjuster release handle and fold down the seat.



c. Operate the seat cushion lock release lever and move the seat to the storage position.

d. Using a screwdriver, detach the 3 claws and remove the cover.

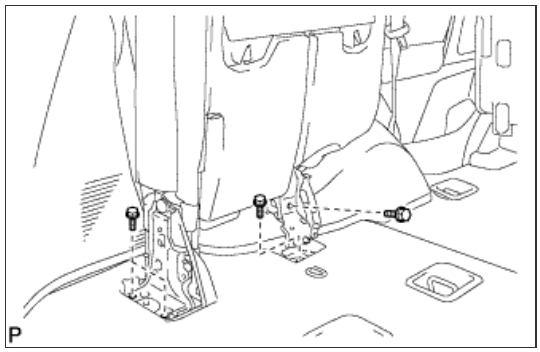


HINT:

Tape the screwdriver tip before use.

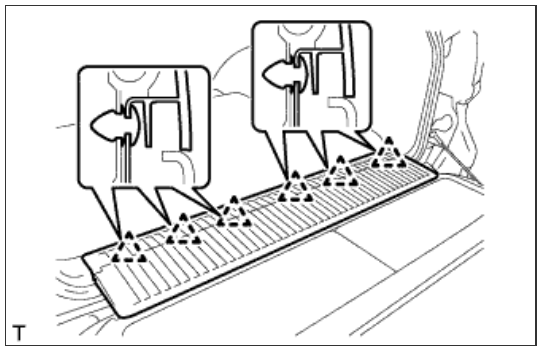
5. REMOVE REAR NO. 2 SEAT HINGE COVER LH (except Face to Face Seat Type)

a. Detach the 2 claws and clip, and then remove the cover.



6. REMOVE REAR NO. 2 SEAT ASSEMBLY (except Face to Face Seat Type)

a. Remove the 4 bolts and seat assembly.

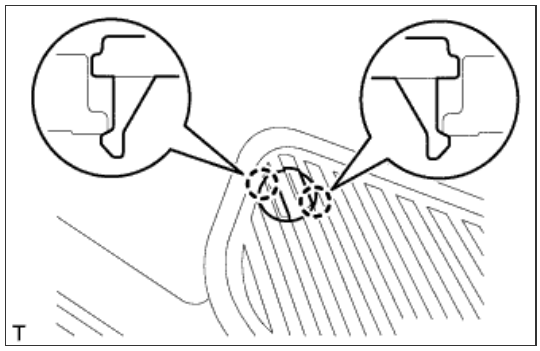


NOTICE:

Be careful not to damage the vehicle body.

7. REMOVE REAR FLOOR MAT REAR SUPPORT PLATE

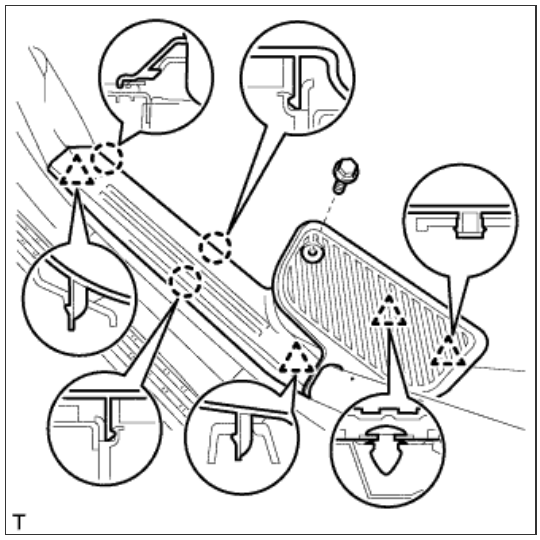
a. Detach the 6 clips and remove the support plate.



8. REMOVE REAR STEP COVER

HINT:

Use the same procedure to remove the step cover on the other side.

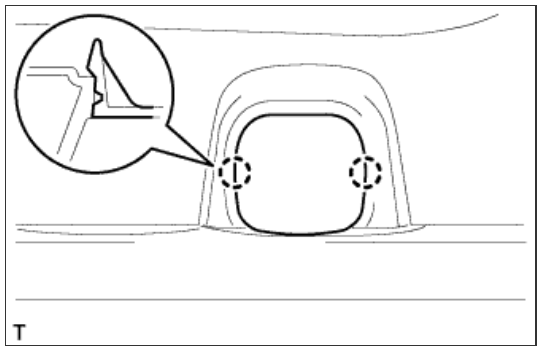


a. Detach the 2 claws and remove the step cover.

9. REMOVE REAR DOOR SCUFF PLATE LH

a. Remove the screw.

b. Detach the 3 claws and 4 clips, and remove the scuff plate.



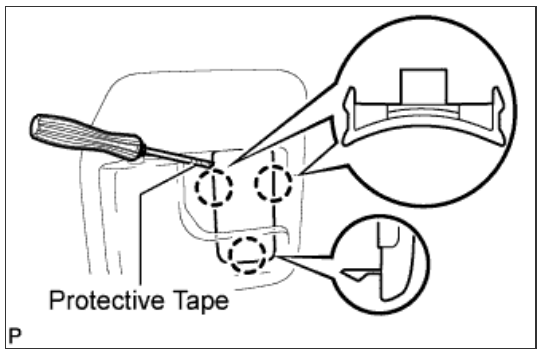
1 REMOVE NO. 1 TONNEAU COVER HOLDER CAP (w/ Tonneau Cover)

HINT:

Use the same procedure to remove the tonneau cover holder cap on the other side.

a. Detach the 2 claws and remove the tonneau cover holder cap.

11. REMOVE REAR SEAT COVER CAP (w/ Rear No. 2 Seat)

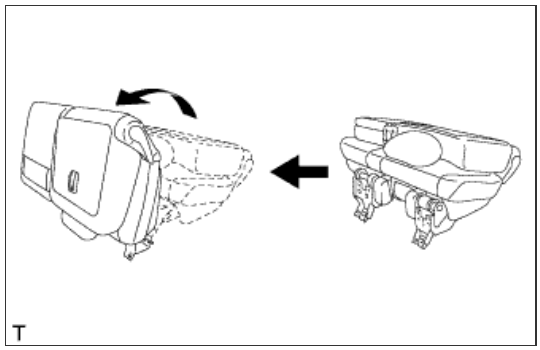


HINT:

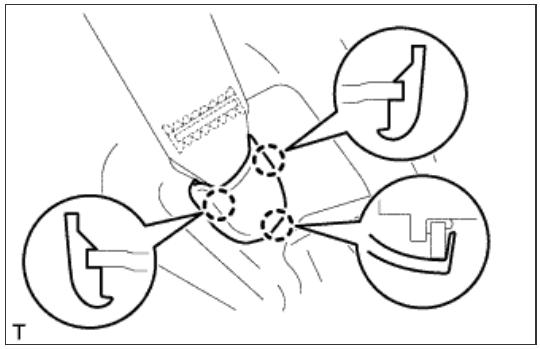
Use the same procedure to remove the rear seat cover cap on the other side.

a. Using a screwdriver, detach the 3 claws and remove the rear seat cover cap.

HINT:

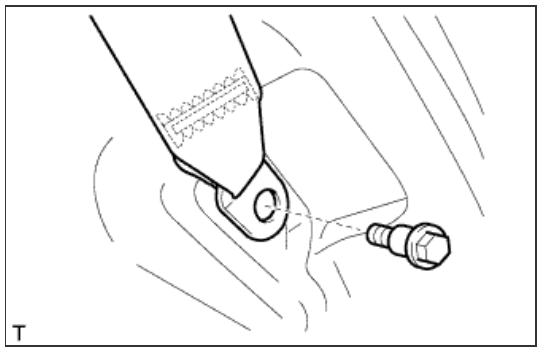


Tape the screwdriver tip before use.

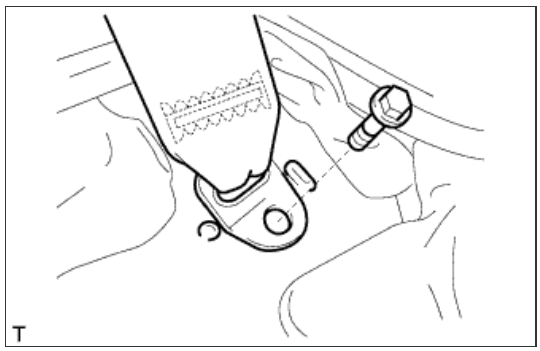


12. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY LH

HINT:



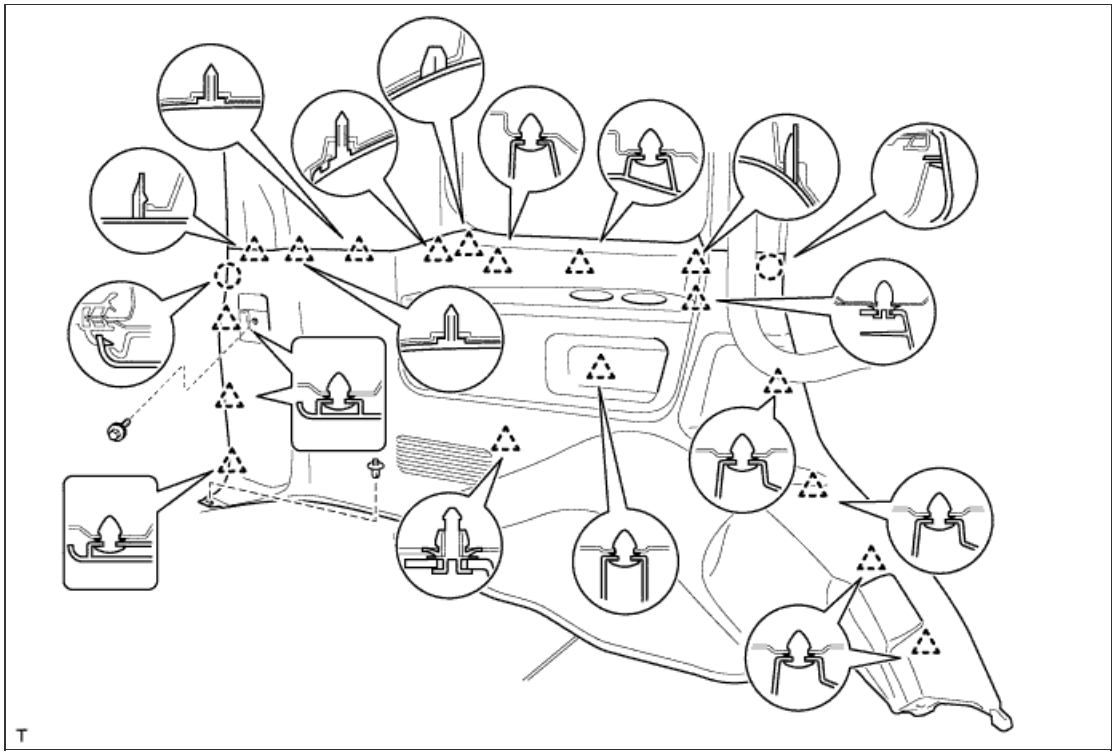
When removing the front quarter trim panel, operate the reclining adjuster release handle and move the No. 1 rear seat to the position shown in the illustration.



a. Detach the 3 claws and remove the cover.

b. Remove the bolt and rear No. 1 seat belt anchor.

c. w/ Rear No. 2 Seat, except Face to Face Seat Type:
Remove the bolt and rear No. 2 seat belt anchor.

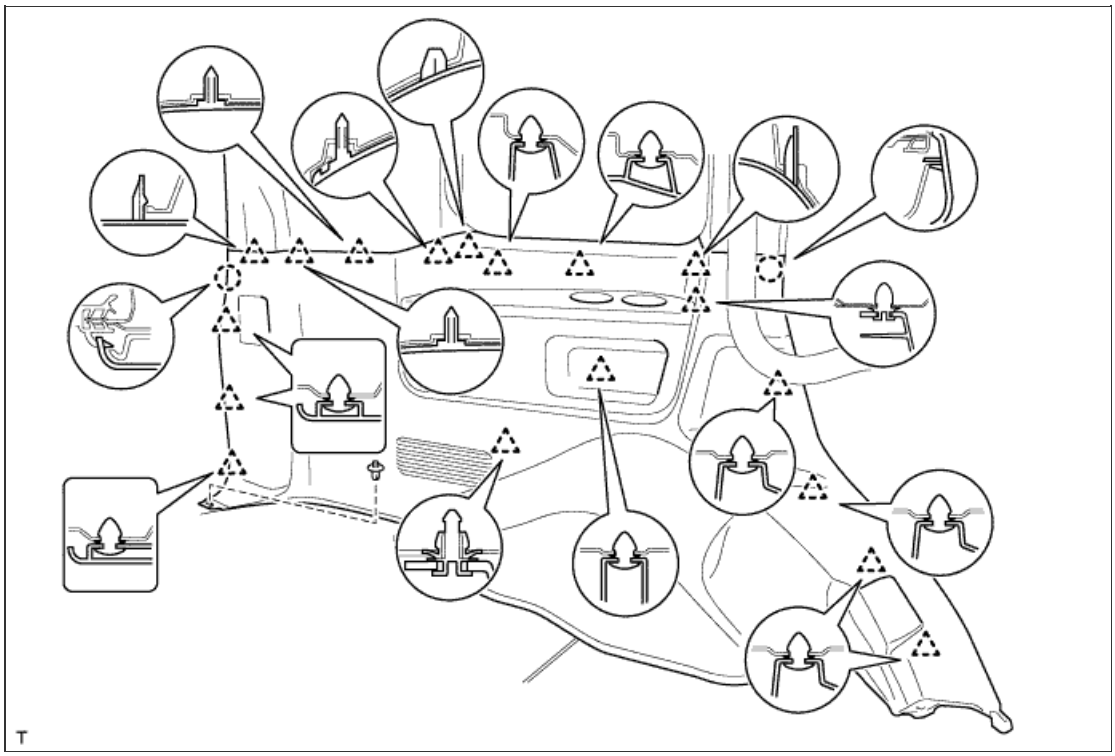


d. w/ Rear No. 2 Seat, except Face to Face Seat Type:

i. Remove the clip and bolt.

ii. Detach the 18 clips and 2 claws.

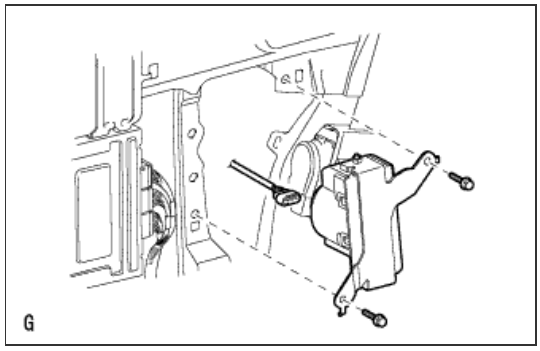
iii. w/o Rear Air Conditioning System:
Disconnect the rear seat lock control lever cable and then remove the quarter trim panel.



iv. w/ Rear Air Conditioning System:
Disconnect the thermistor connector and rear seat lock control lever cable, and then remove the quarter trim panel.

e. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat Type:

i. Remove the clip.

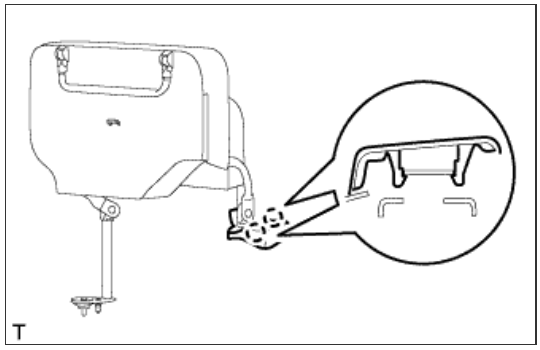


ii. Detach the 18 clips and 2 claws, and remove the quarter trim panel.

13. REMOVE SELF POWER SIREN ASSEMBLY

a. Disconnect the connector.

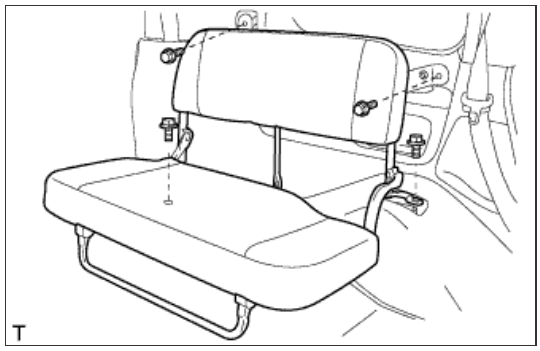
b. Remove the 2 bolts and siren.



for Preparation Click here

1. REMOVE REAR SIDE SEAT LEG PROTECTOR LH (for Face to Face Seat Type)

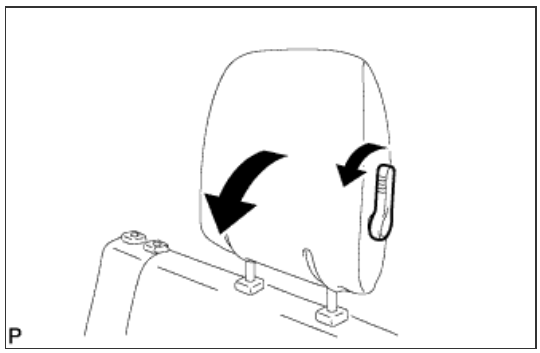
a. Using a screwdriver, detach the 2 claws and remove the protector.



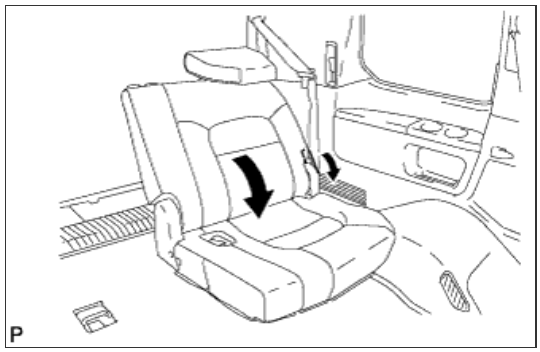
HINT:

Tape the screwdriver tip before use.

2. REMOVE REAR NO. 2 SEAT ASSEMBLY (for Face to Face Seat Type)

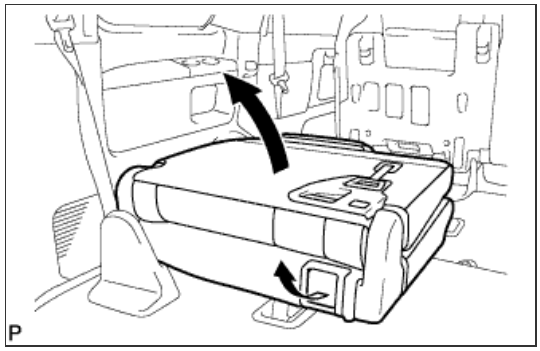


a. Remove the 4 bolts and rear No. 2 seat.



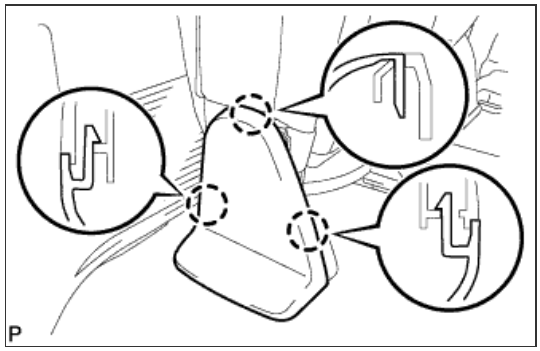
3. REMOVE REAR NO. 2 SEAT HEADREST ASSEMBLY LH (except Face to Face Seat Type)

4. REMOVE REAR SEAT CUSHION HINGE COVER LH (except Face to Face Seat Type)



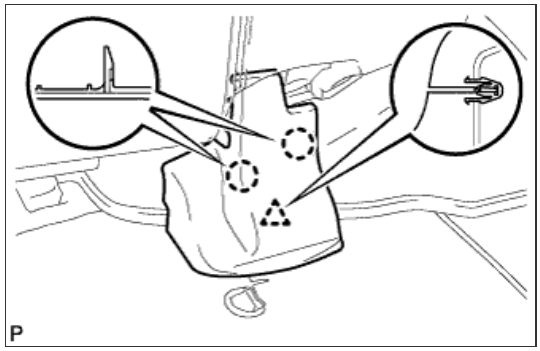
a. Operate the rear seat headrest handle and lower the headrest.

b. Operate the reclining adjuster release handle and fold down the seat.



c. Operate the seat cushion lock release lever and move the seat to the storage position.

d. Using a screwdriver, detach the 3 claws and remove the cover.

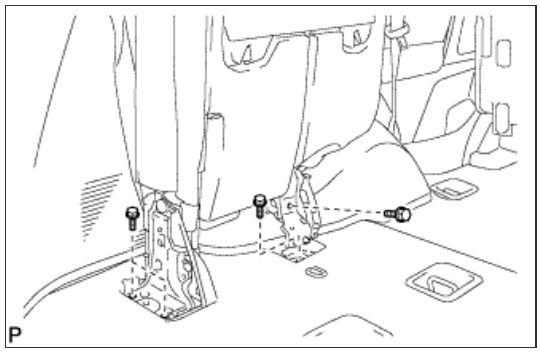


HINT:

Tape the screwdriver tip before use.

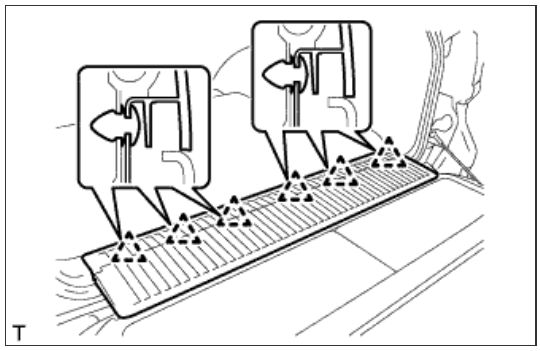
5. REMOVE REAR NO. 2 SEAT HINGE COVER LH (except Face to Face Seat Type)

a. Detach the 2 claws and clip, and then remove the cover.



6. REMOVE REAR NO. 2 SEAT ASSEMBLY (except Face to Face Seat Type)

a. Remove the 4 bolts and seat assembly.

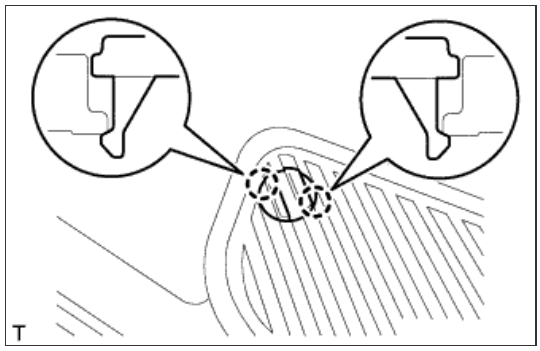


NOTICE:

Be careful not to damage the vehicle body.

7. REMOVE REAR FLOOR MAT REAR SUPPORT PLATE

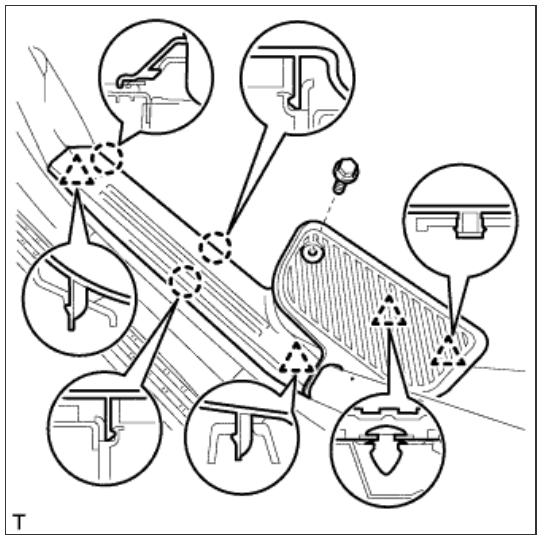
a. Detach the 6 clips and remove the support plate.



8. REMOVE REAR STEP COVER

HINT:

Use the same procedure to remove the step cover on the other side.

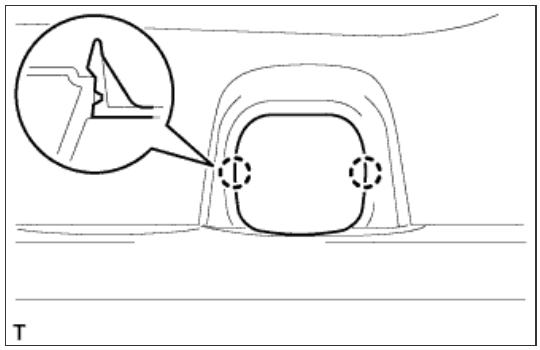


a. Detach the 2 claws and remove the step cover.

9. REMOVE REAR DOOR SCUFF PLATE LH

a. Remove the screw.

b. Detach the 3 claws and 4 clips, and remove the scuff plate.



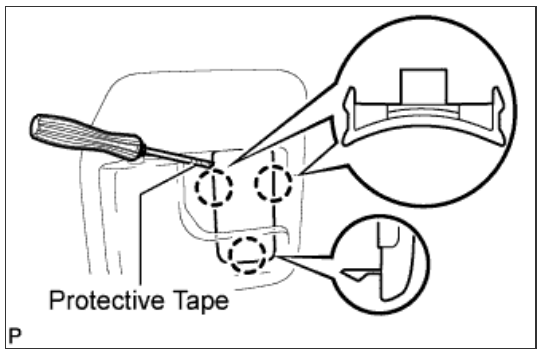
1 REMOVE NO. 1 TONNEAU COVER HOLDER CAP (w/ Tonneau Cover)

HINT:

Use the same procedure to remove the tonneau cover holder cap on the other side.

a. Detach the 2 claws and remove the tonneau cover holder cap.

11. REMOVE REAR SEAT COVER CAP (w/ Rear No. 2 Seat)

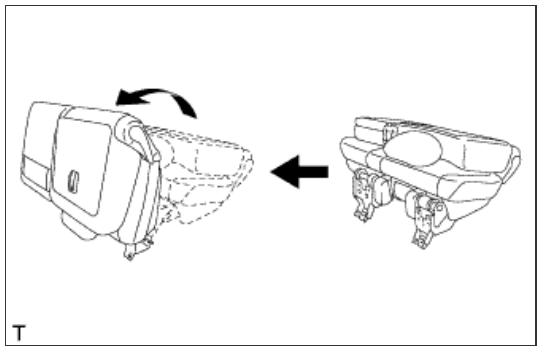


HINT:

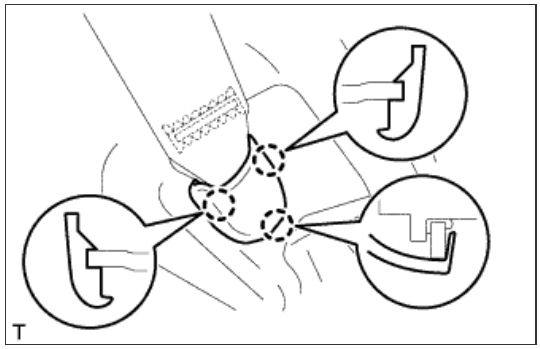
Use the same procedure to remove the rear seat cover cap on the other side.

a. Using a screwdriver, detach the 3 claws and remove the rear seat cover cap.

HINT:

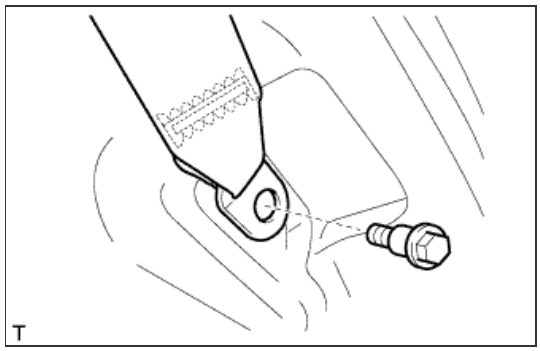


Tape the screwdriver tip before use.

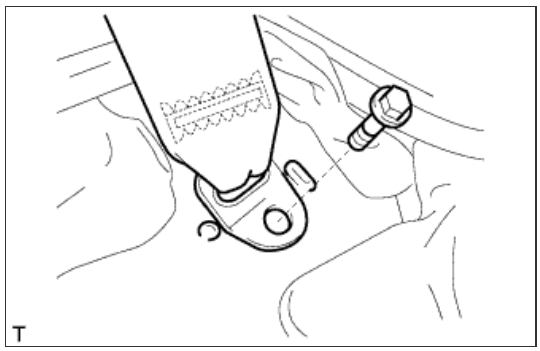


12. REMOVE FRONT QUARTER TRIM PANEL ASSEMBLY LH

HINT:



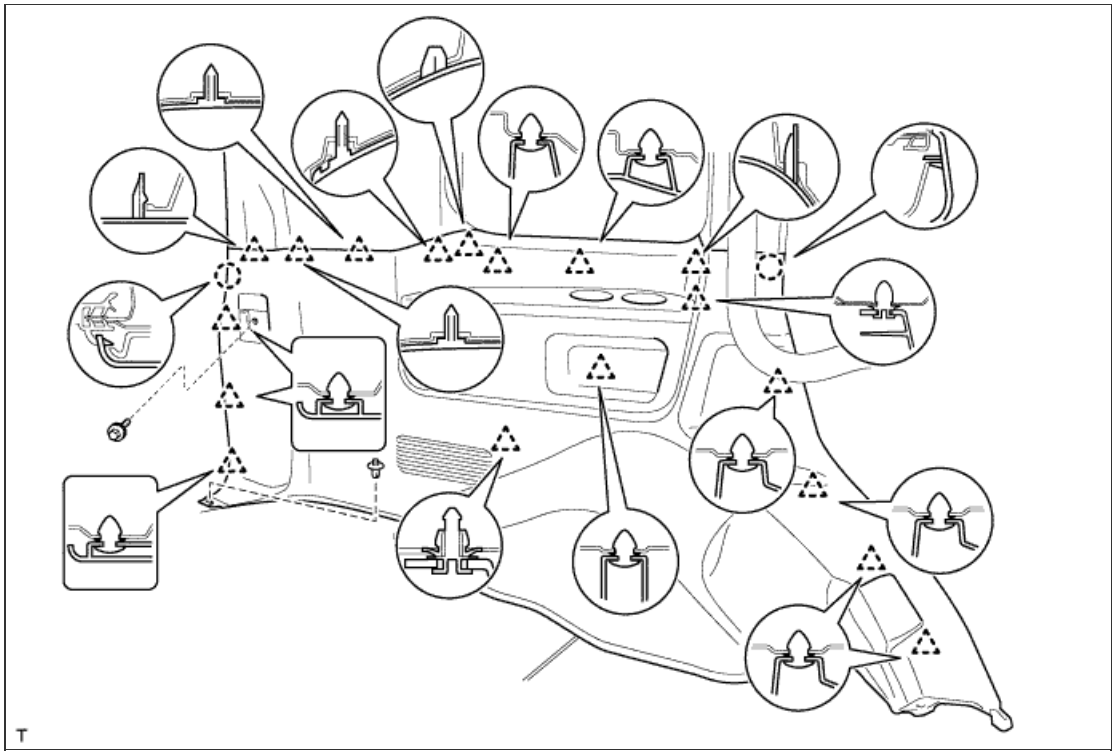
When removing the front quarter trim panel, operate the reclining adjuster release handle and move the No. 1 rear seat to the position shown in the illustration.



a. Detach the 3 claws and remove the cover.

b. Remove the bolt and rear No. 1 seat belt anchor.

c. w/ Rear No. 2 Seat, except Face to Face Seat Type:
Remove the bolt and rear No. 2 seat belt anchor.

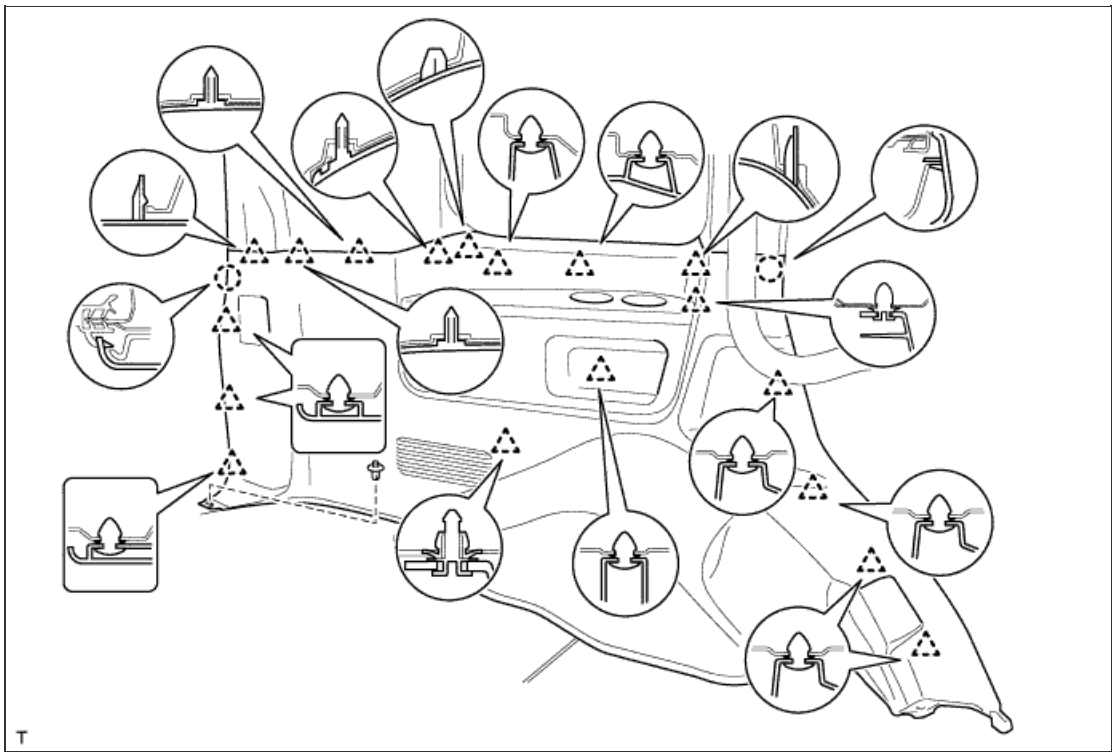


d. w/ Rear No. 2 Seat, except Face to Face Seat Type:

i. Remove the clip and bolt.

ii. Detach the 18 clips and 2 claws.

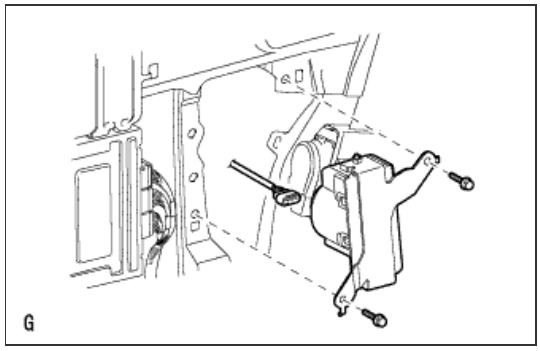
iii. w/o Rear Air Conditioning System:
Disconnect the rear seat lock control lever cable and then remove the quarter trim panel.



iv. w/ Rear Air Conditioning System:
Disconnect the thermistor connector and rear seat lock control lever cable, and then remove the quarter trim panel.

e. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat Type:

i. Remove the clip.



ii. Detach the 18 clips and 2 claws, and remove the quarter trim panel.

13. REMOVE SELF POWER SIREN ASSEMBLY

a. Disconnect the connector.

b. Remove the 2 bolts and siren.

for Preparation Click here

HINT:

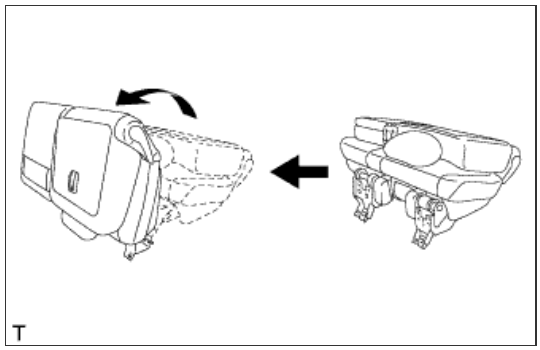
A bolt without a torque specification is shown in the standard bolt chart (Click here).

1. INSTALL SELF POWER SIREN ASSEMBLY

a. Connect the connector.



b. Install the siren with the 2 bolts.

2. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY LH

HINT:

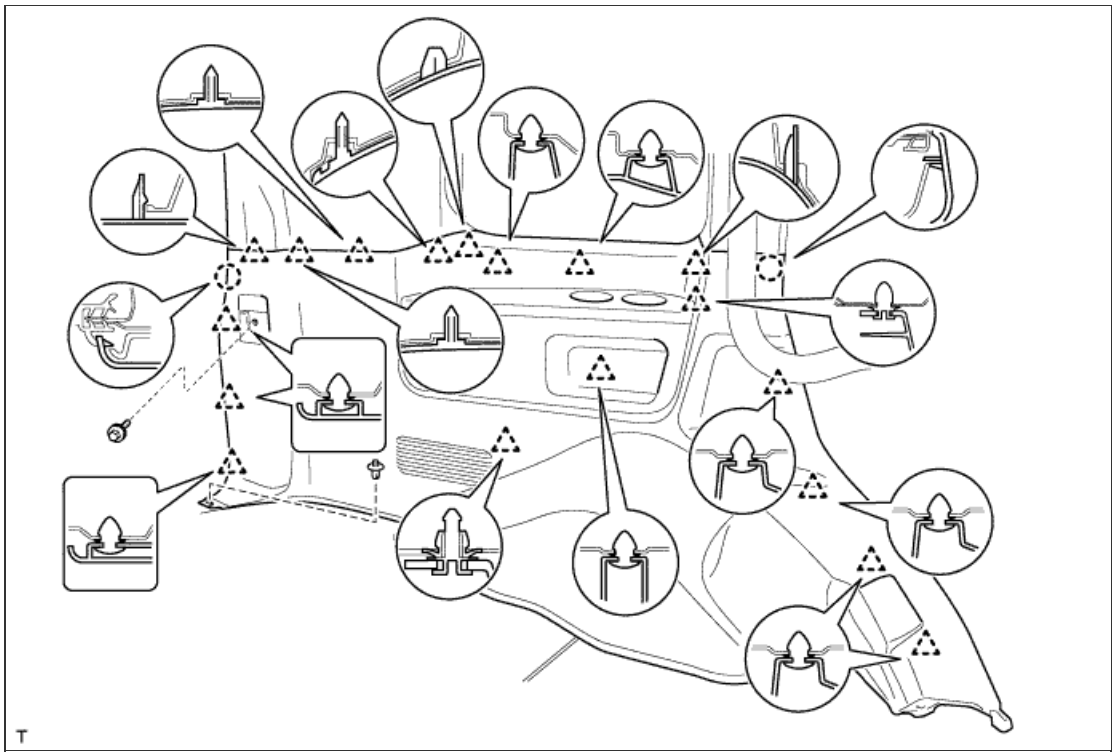
When installing the front quarter trim panel, operate the reclining adjuster release handle and move the No. 1 rear seat to the position shown in the illustration.

a. w/ Rear No. 2 Seat, except Face to Face Seat Type:

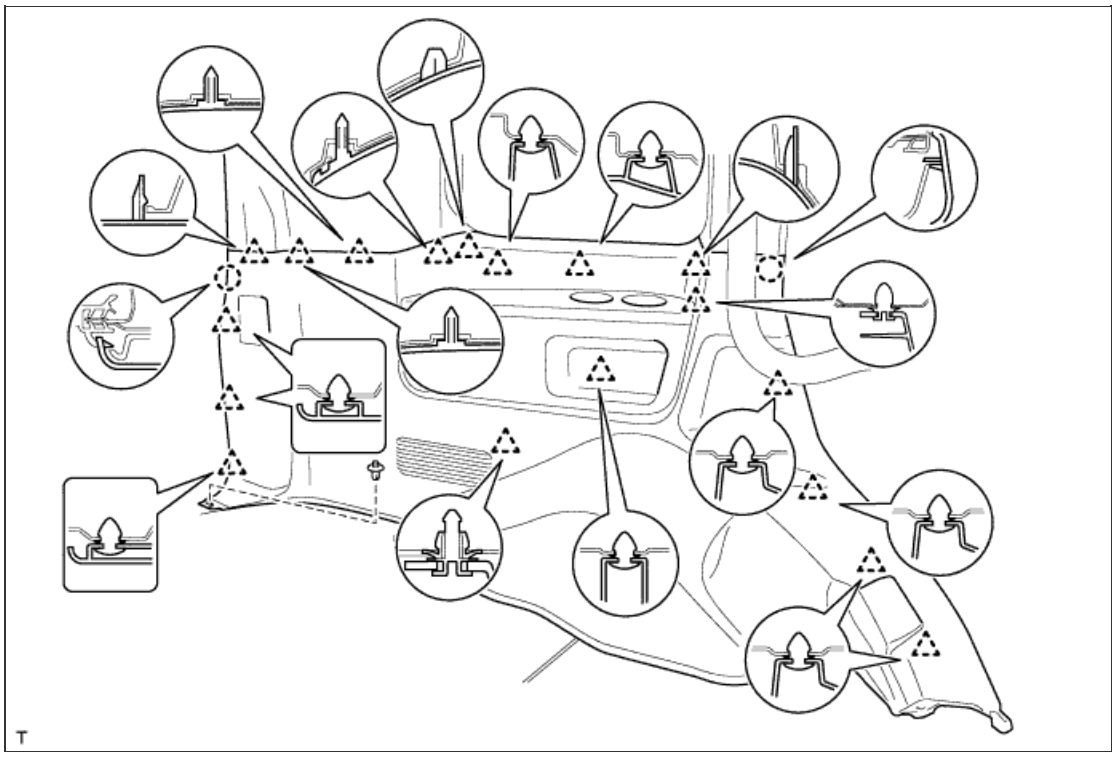


i. w/o Rear Air Conditioning System:
Connect the rear seat lock control lever cable.

ii. w/ Rear Air Conditioning System:
Connect the thermistor connector and rear seat lock control lever cable.

iii. Attach the 18 clips and 2 claws to install the quarter trim panel.

iv. Install the clip and bolt.

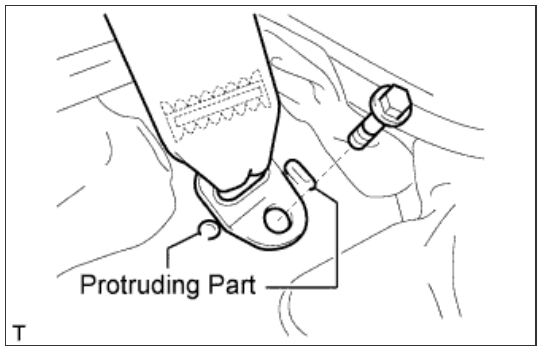


Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

b. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat Type:

i. Attach the 18 clips and 2 claws to install the quarter trim panel.

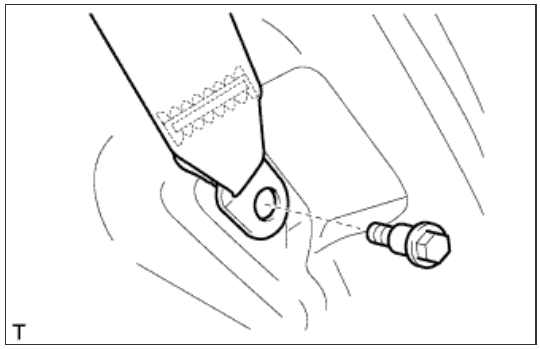
ii. Install the clip.



c. w/ Rear No. 2 Seat, except Face to Face Seat Type:

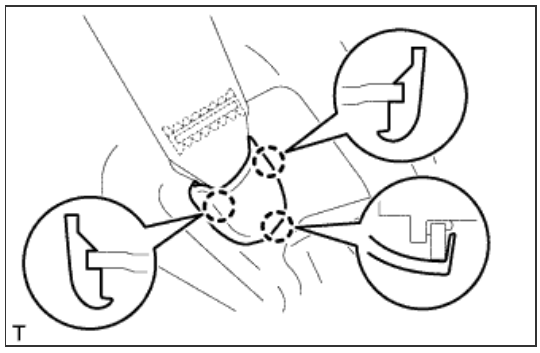
Install the rear No. 2 seat belt anchor with the bolt.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }



NOTICE:

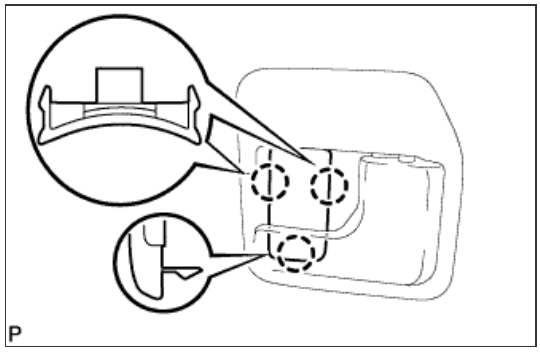
Do not overlap the anchor part of the seat belt and protruding parts of the vehicle body.



d. Install the rear No. 1 seat belt anchor with the bolt.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }

e. Attach the 3 claws to install the cover.



3. INSTALL REAR SEAT COVER CAP (w/ Rear No. 2 Seat)

HINT:

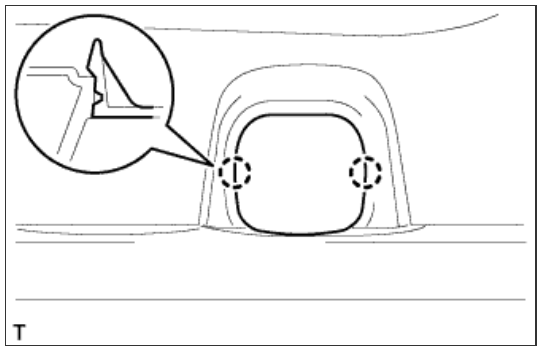
Use the same procedure to install the rear seat cover cap on the other side.

a. Attach the 3 claws to install the rear seat cover cap.



4. INSTALL NO. 1 TONNEAU COVER HOLDER CAP (w/ Tonneau Cover)

HINT:

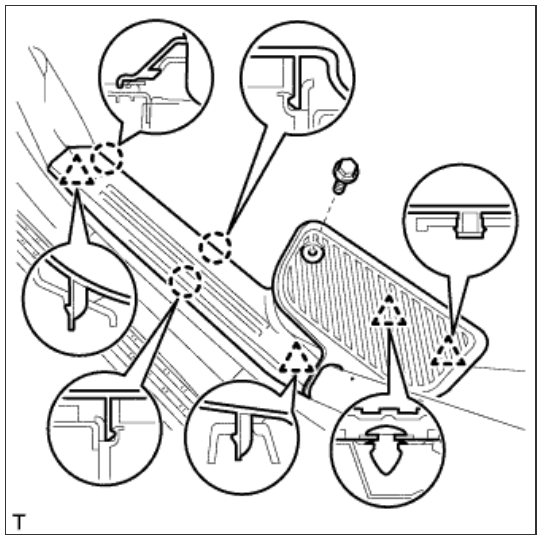
Use the same procedure to install the tonneau cover holder cap on the other side.

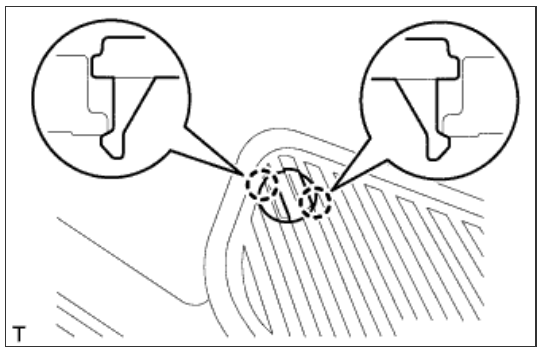


a. Attach the 2 claws to install the tonneau cover holder cap.

5. INSTALL REAR DOOR SCUFF PLATE LH

a. Attach the 3 claws and 4 clips to install the scuff plate.

b. Install the screw.



6. INSTALL REAR STEP COVER

HINT:

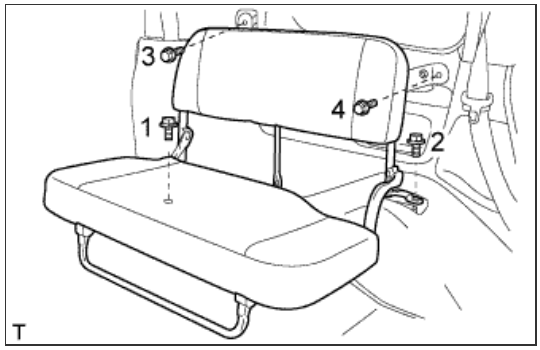
Use the same procedure to install the step cover on the other side.

a. Attach the 2 claws to install the step cover.

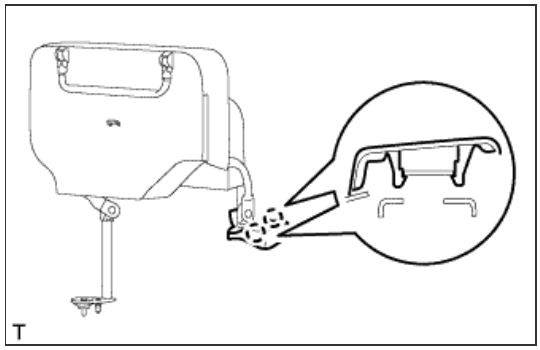
7. INSTALL REAR FLOOR MAT REAR SUPPORT PLATE

a. Attach the 6 clips to install the support plate.



8. INSTALL REAR NO. 2 SEAT ASSEMBLY (for Face to Face Seat Type)

a. Temporarily install the rear No. 2 seat with the 4 bolts.



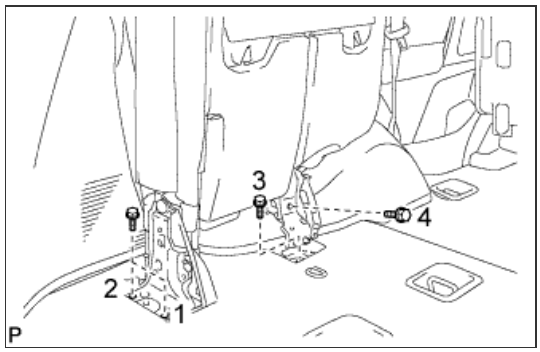
b. Tighten the bolts in the order shown in the illustration.

Torque:
37 N*m{ 377 kgf*cm , 27 ft.*lbf }

9. INSTALL REAR SIDE SEAT LEG PROTECTOR LH (for Face to Face Seat Type)

a. Attach the 2 claws to install the protector.

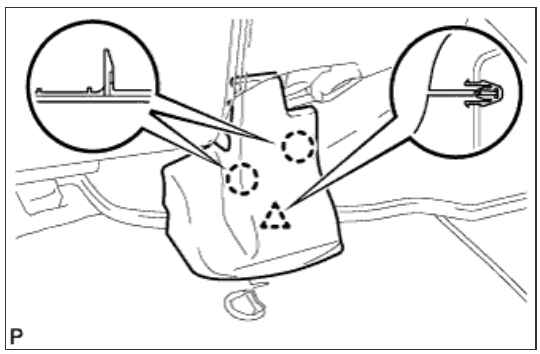
10. INSTALL REAR NO. 2 SEAT ASSEMBLY (except Face to Face Seat Type)



a. Temporarily install the seat assembly with the 4 bolts.

NOTICE:

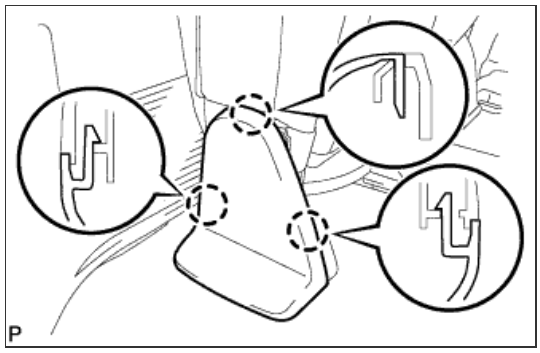
Be careful not to damage the vehicle body.



b. Tighten the bolts in the order shown in the illustration.

Torque:
37 N*m{ 377 kgf*cm , 27 ft.*lbf }

11. INSTALL REAR NO. 2 SEAT HINGE COVER LH (except Face to Face Seat Type)



a. Attach the clip and 2 claws to install the cover.

12. INSTALL REAR SEAT CUSHION HINGE COVER LH (except Face to Face Seat Type)

a. Attach the 3 claws to install the cover.

b. Return the seat to the upright position.

13. INSTALL REAR NO. 2 SEAT HEADREST ASSEMBLY LH (except Face to Face Seat Type)

for Preparation Click here

HINT:

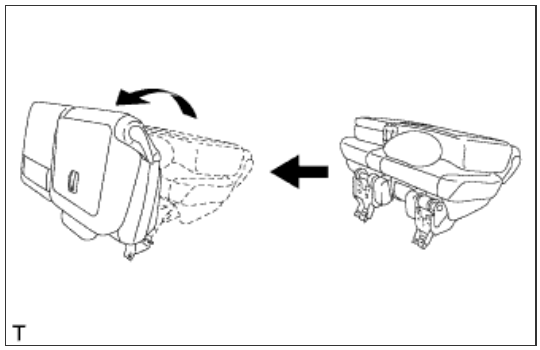
A bolt without a torque specification is shown in the standard bolt chart (Click here).

1. INSTALL SELF POWER SIREN ASSEMBLY

a. Connect the connector.



b. Install the siren with the 2 bolts.

2. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY LH

HINT:

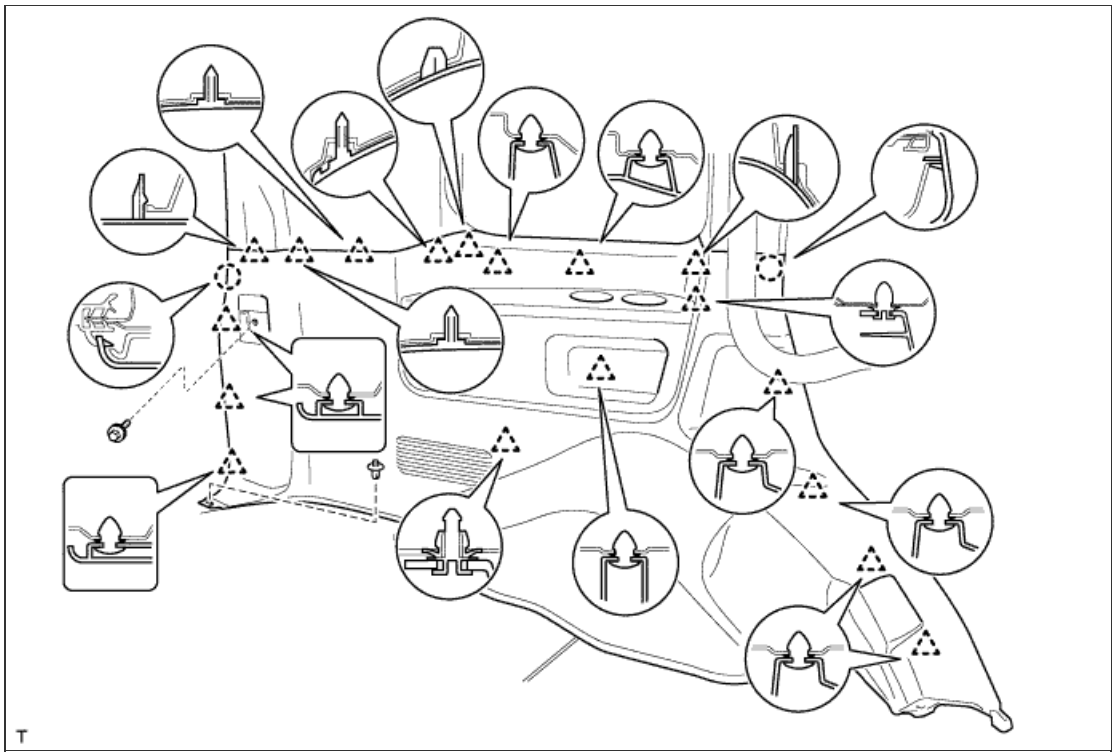
When installing the front quarter trim panel, operate the reclining adjuster release handle and move the No. 1 rear seat to the position shown in the illustration.

a. w/ Rear No. 2 Seat, except Face to Face Seat Type:

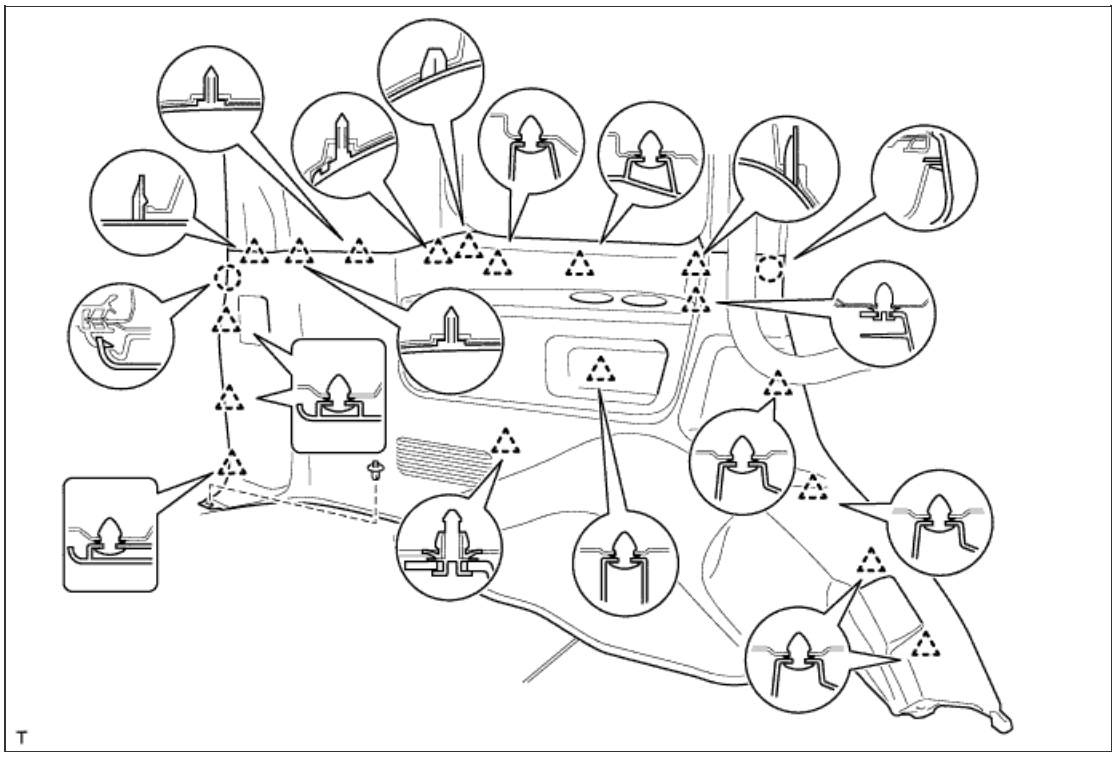


i. w/o Rear Air Conditioning System:
Connect the rear seat lock control lever cable.

ii. w/ Rear Air Conditioning System:
Connect the thermistor connector and rear seat lock control lever cable.

iii. Attach the 18 clips and 2 claws to install the quarter trim panel.

iv. Install the clip and bolt.

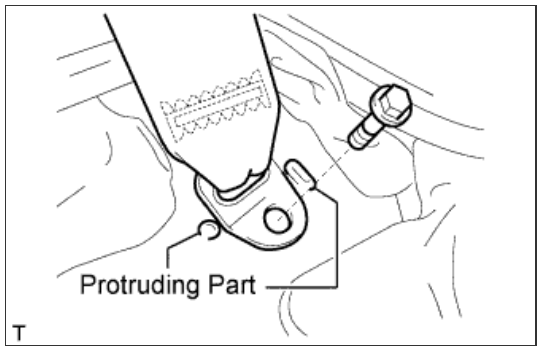


Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

b. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat Type:

i. Attach the 18 clips and 2 claws to install the quarter trim panel.

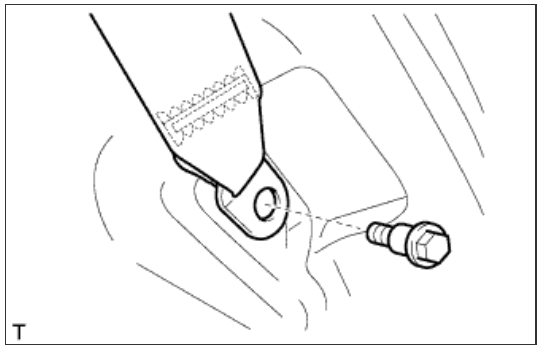
ii. Install the clip.



c. w/ Rear No. 2 Seat, except Face to Face Seat Type:

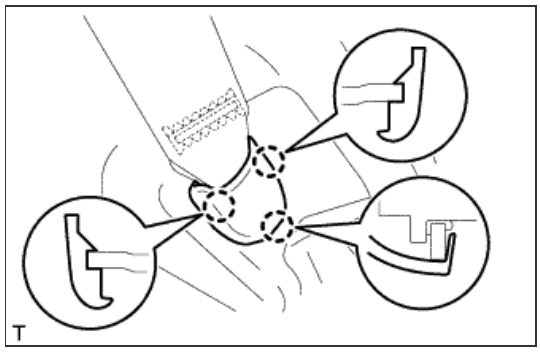
Install the rear No. 2 seat belt anchor with the bolt.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }



NOTICE:

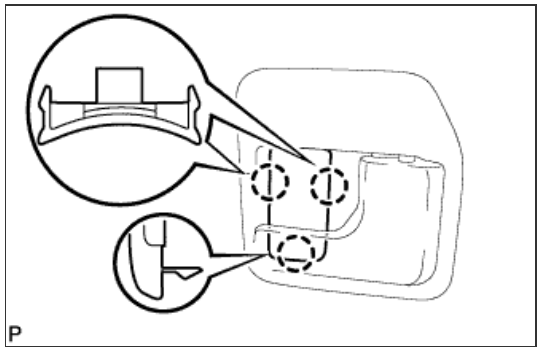
Do not overlap the anchor part of the seat belt and protruding parts of the vehicle body.



d. Install the rear No. 1 seat belt anchor with the bolt.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }

e. Attach the 3 claws to install the cover.



3. INSTALL REAR SEAT COVER CAP (w/ Rear No. 2 Seat)

HINT:

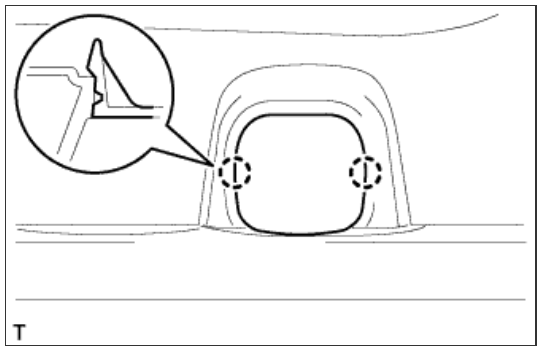
Use the same procedure to install the rear seat cover cap on the other side.

a. Attach the 3 claws to install the rear seat cover cap.



4. INSTALL NO. 1 TONNEAU COVER HOLDER CAP (w/ Tonneau Cover)

HINT:

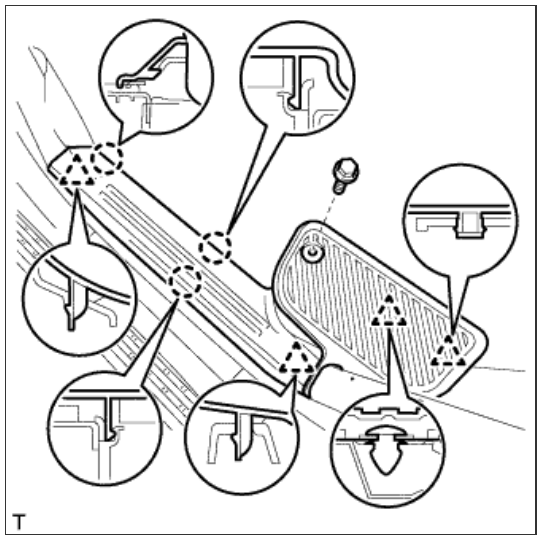
Use the same procedure to install the tonneau cover holder cap on the other side.

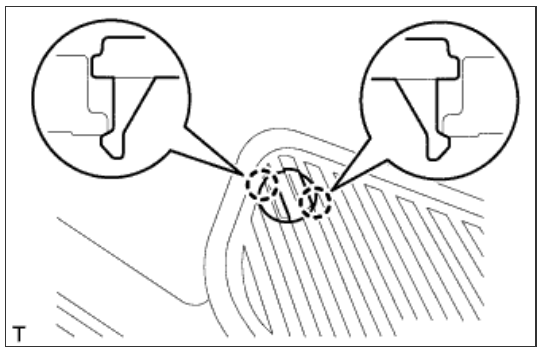


a. Attach the 2 claws to install the tonneau cover holder cap.

5. INSTALL REAR DOOR SCUFF PLATE LH

a. Attach the 3 claws and 4 clips to install the scuff plate.

b. Install the screw.



6. INSTALL REAR STEP COVER

HINT:

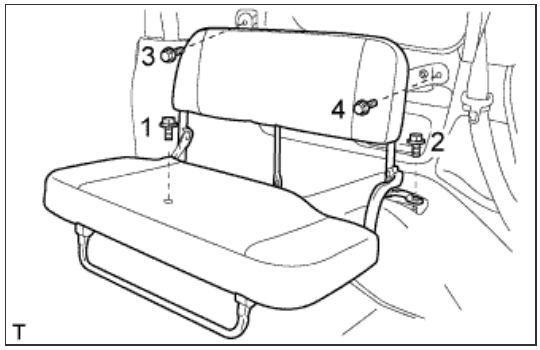
Use the same procedure to install the step cover on the other side.

a. Attach the 2 claws to install the step cover.

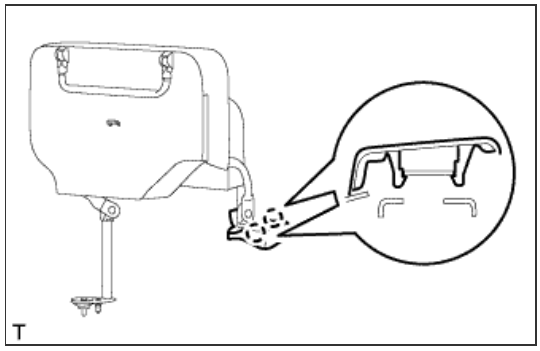
7. INSTALL REAR FLOOR MAT REAR SUPPORT PLATE

a. Attach the 6 clips to install the support plate.



8. INSTALL REAR NO. 2 SEAT ASSEMBLY (for Face to Face Seat Type)

a. Temporarily install the rear No. 2 seat with the 4 bolts.



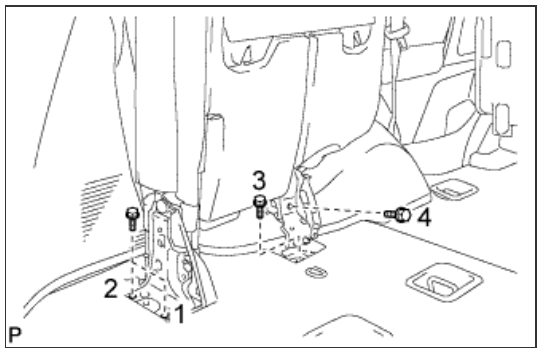
b. Tighten the bolts in the order shown in the illustration.

Torque:
37 N*m{ 377 kgf*cm , 27 ft.*lbf }

9. INSTALL REAR SIDE SEAT LEG PROTECTOR LH (for Face to Face Seat Type)

a. Attach the 2 claws to install the protector.

10. INSTALL REAR NO. 2 SEAT ASSEMBLY (except Face to Face Seat Type)



a. Temporarily install the seat assembly with the 4 bolts.

NOTICE:

Be careful not to damage the vehicle body.

b. Tighten the bolts in the order shown in the illustration.

Torque:
37 N*m{ 377 kgf*cm , 27 ft.*lbf }

11. INSTALL REAR NO. 2 SEAT HINGE COVER LH (except Face to Face Seat Type)

a. Attach the clip and 2 claws to install the cover.

12. INSTALL REAR SEAT CUSHION HINGE COVER LH (except Face to Face Seat Type)

a. Attach the 3 claws to install the cover.

b. Return the seat to the upright position.

13. INSTALL REAR NO. 2 SEAT HEADREST ASSEMBLY LH (except Face to Face Seat Type)

for Preparation Click here

HINT:

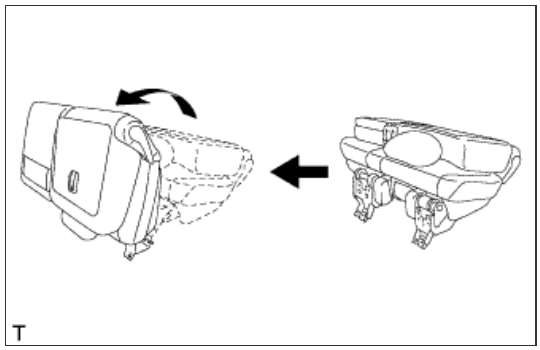
A bolt without a torque specification is shown in the standard bolt chart (Click here).

1. INSTALL SELF POWER SIREN ASSEMBLY

a. Connect the connector.



b. Install the siren with the 2 bolts.

2. INSTALL FRONT QUARTER TRIM PANEL ASSEMBLY LH

HINT:

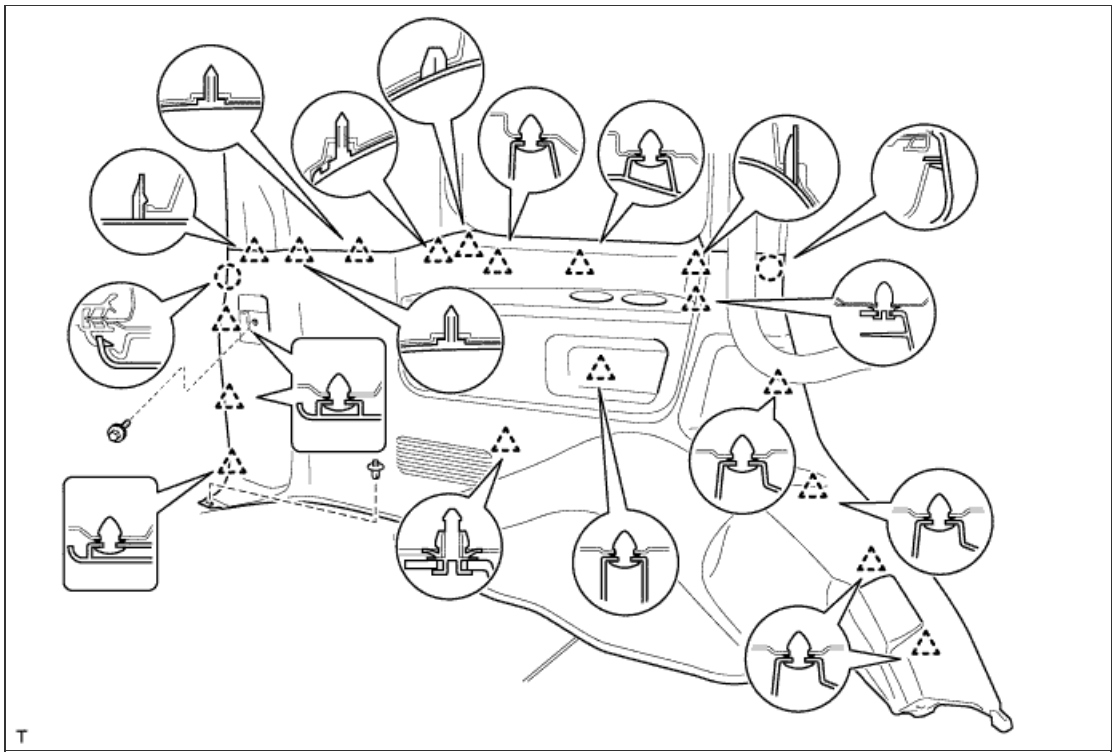
When installing the front quarter trim panel, operate the reclining adjuster release handle and move the No. 1 rear seat to the position shown in the illustration.

a. w/ Rear No. 2 Seat, except Face to Face Seat Type:

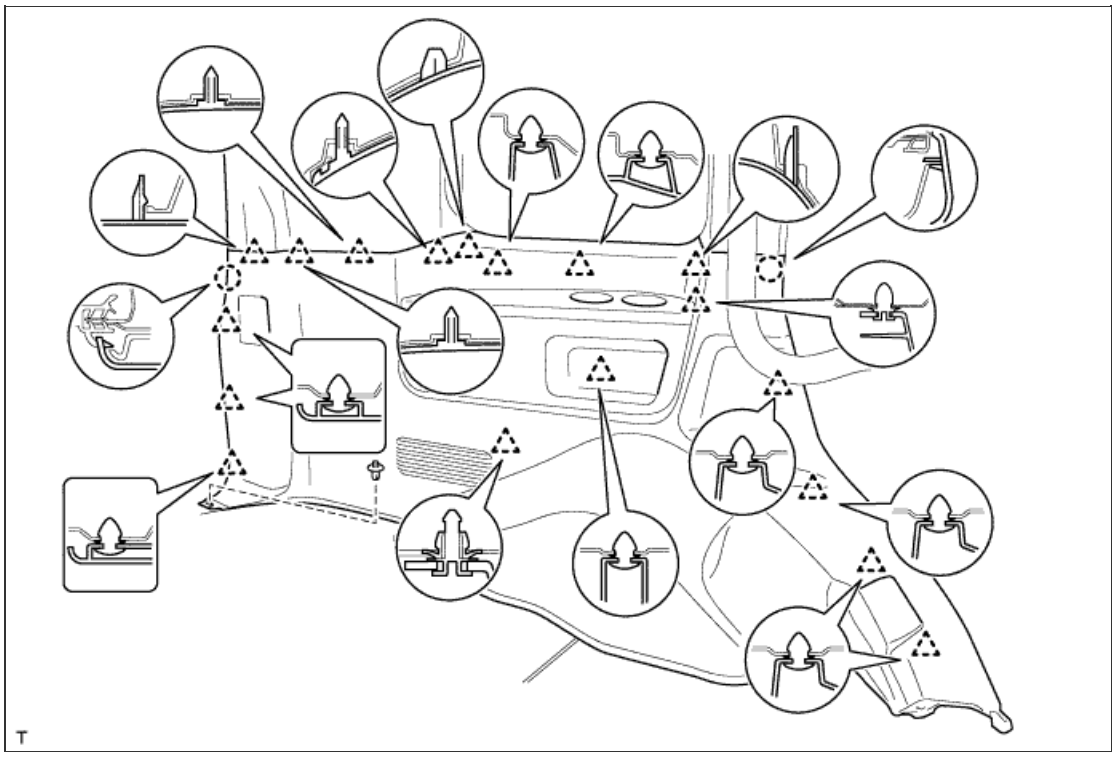


i. w/o Rear Air Conditioning System:
Connect the rear seat lock control lever cable.

ii. w/ Rear Air Conditioning System:
Connect the thermistor connector and rear seat lock control lever cable.

iii. Attach the 18 clips and 2 claws to install the quarter trim panel.

iv. Install the clip and bolt.

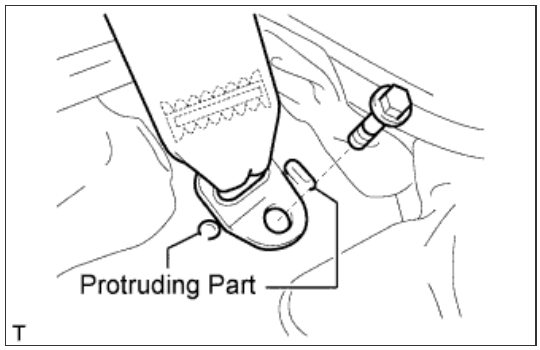


Torque:
12 N*m{ 122 kgf*cm , 9 ft.*lbf }

b. w/o Rear No. 2 Seat or w/ Rear No. 2 Seat, for Face to Face Seat Type:

i. Attach the 18 clips and 2 claws to install the quarter trim panel.

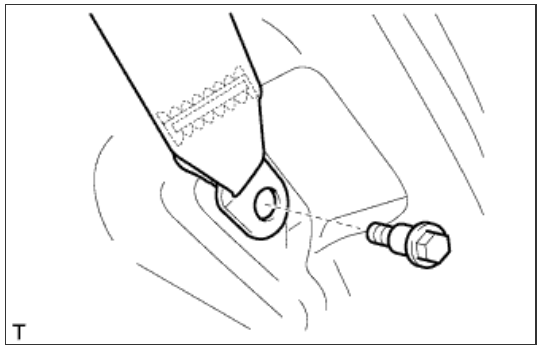
ii. Install the clip.



c. w/ Rear No. 2 Seat, except Face to Face Seat Type:

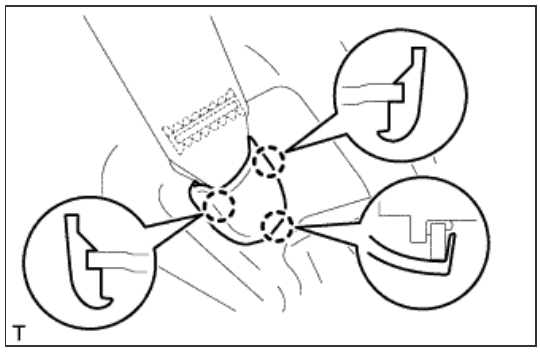
Install the rear No. 2 seat belt anchor with the bolt.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }



NOTICE:

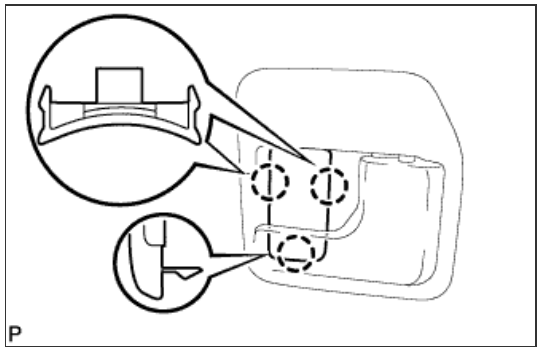
Do not overlap the anchor part of the seat belt and protruding parts of the vehicle body.



d. Install the rear No. 1 seat belt anchor with the bolt.

Torque:
42 N*m{ 428 kgf*cm , 31 ft.*lbf }

e. Attach the 3 claws to install the cover.



3. INSTALL REAR SEAT COVER CAP (w/ Rear No. 2 Seat)

HINT:

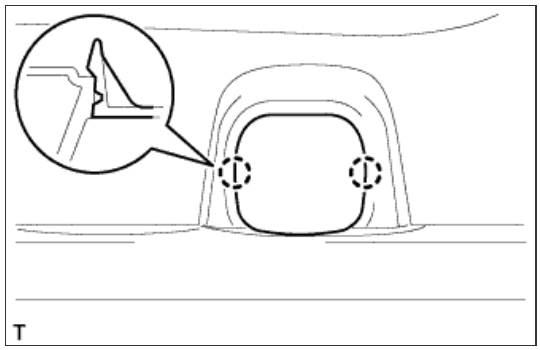
Use the same procedure to install the rear seat cover cap on the other side.

a. Attach the 3 claws to install the rear seat cover cap.



4. INSTALL NO. 1 TONNEAU COVER HOLDER CAP (w/ Tonneau Cover)

HINT:

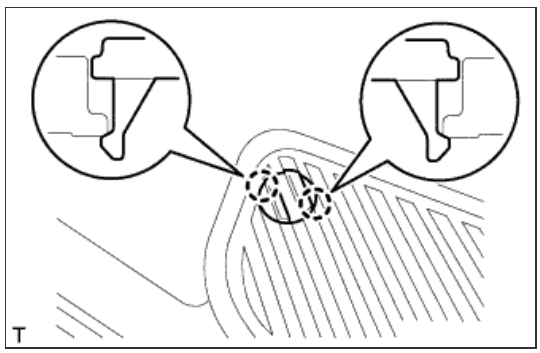
Use the same procedure to install the tonneau cover holder cap on the other side.

a. Attach the 2 claws to install the tonneau cover holder cap.

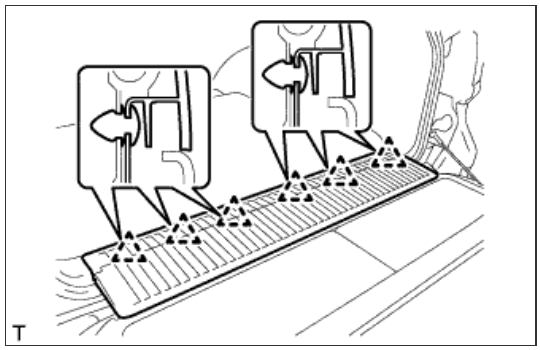
5. INSTALL REAR DOOR SCUFF PLATE LH

a. Attach the claws and 4 clips to install the scuff plate.



6. INSTALL REAR STEP COVER

HINT:

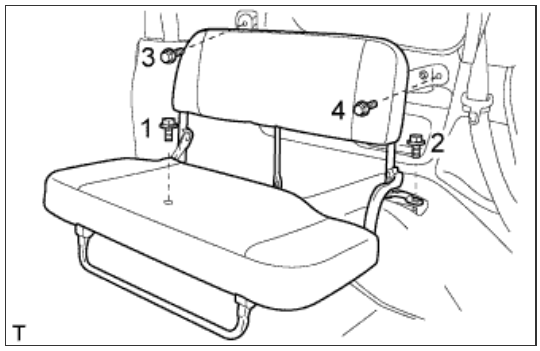


Use the same procedure to install the step cover on the other side.

a. Attach the 2 claws to install the step cover.

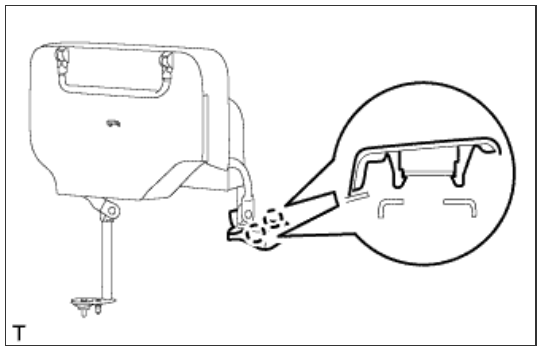
7. INSTALL REAR FLOOR MAT REAR SUPPORT PLATE

a. Attach the 6 clips to install the support plate.



8. INSTALL REAR NO. 2 SEAT ASSEMBLY (for Face to Face Seat Type)

a. Temporarily install the rear No. 2 seat with the 4 bolts.



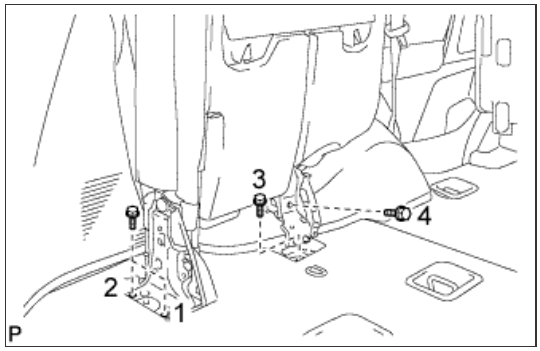
b. Tighten the bolts in the order shown in the illustration.

Torque:
37 N*m{ 377 kgf*cm , 27 ft.*lbf }

9. INSTALL REAR SIDE SEAT LEG PROTECTOR LH (for Face to Face Seat Type)

a. Attach the 2 claws to install the protector.

10. INSTALL REAR NO. 2 SEAT ASSEMBLY (except Face to Face Seat Type)



a. Temporarily install the seat assembly with the 4 bolts.

NOTICE:

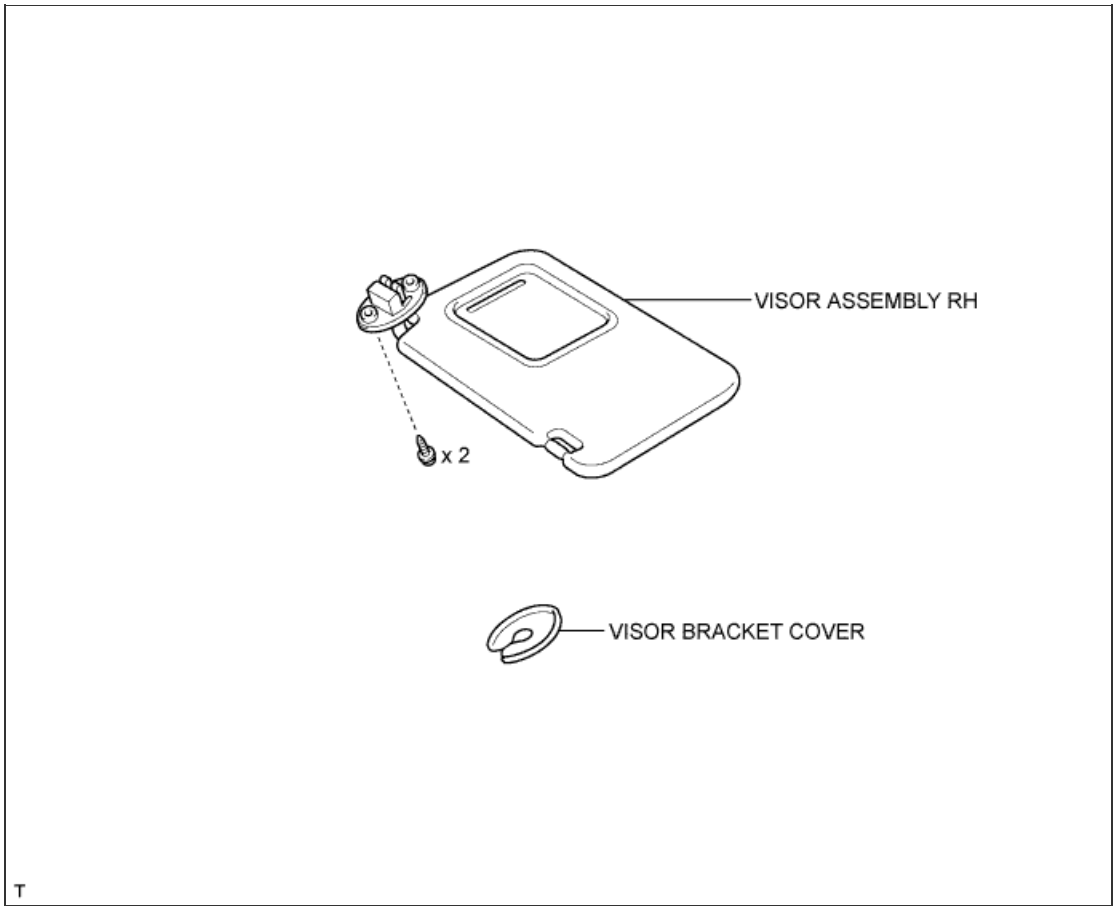
Be careful not to damage the vehicle body.

b. Tighten the bolts in the order shown in the illustration.

Torque:
37 N*m{ 377 kgf*cm , 27 ft.*lbf }

11. INSTALL REAR NO. 2 SEAT HINGE COVER LH (except Face to Face Seat Type)

a. Attach the clip and 2 claws to install the cover.



12. INSTALL REAR SEAT CUSHION HINGE COVER LH (except Face to Face Seat Type)

a. Attach the 3 claws to install the cover.

b. Return the seat to the upright position.

13. INSTALL REAR NO. 2 SEAT HEADREST ASSEMBLY LH (except Face to Face Seat Type)

for Preparation Click here

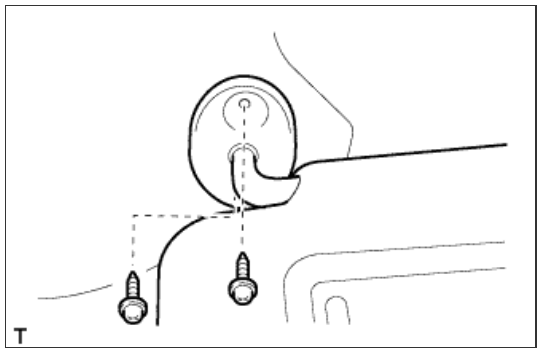
HINT:

- **Use the same procedures for the RH and LH side.**
- **The procedures listed below are for the RH side.**

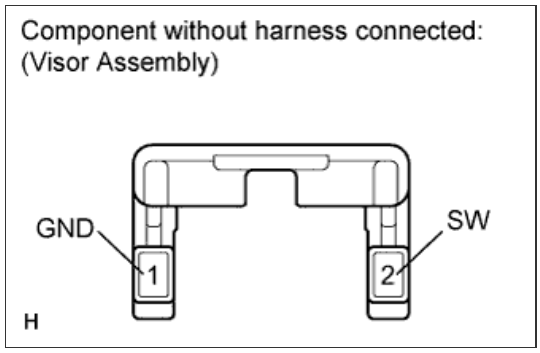


1. REMOVE VISOR BRACKET COVER

a. Detach the 4 claws and remove the visor bracket cover.

2. REMOVE VISOR ASSEMBLY RH

a. Remove the 2 screws and visor.



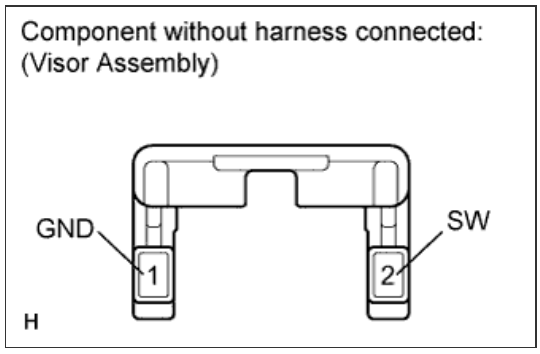
for Preparation Click here

1. INSPECT VISOR ASSE YLRH

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
2 (SW) - 1 (GND)	Visor raised	10 kΩ or higher
2 (SW) - 1 (GND)	Visor lowered and mirror cover closed	10 kΩ or higher
2 (SW) - 1 (GND)	Visor lowered and mirror cover open	Below 1 Ω



If the result is not as specified, there may be a malfunction in the visor assembly.

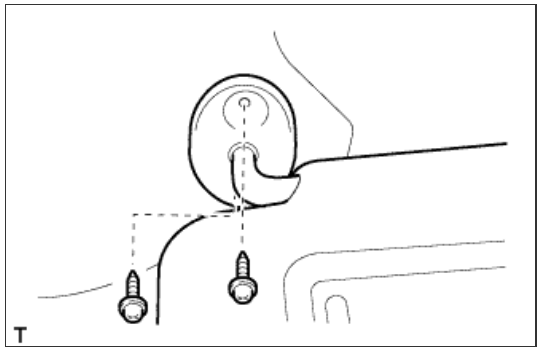
2. INSPECT VISOR ASSE YLLH

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
2 (SW) - 1 (GND)	Visor raised	10 kΩ or higher
2 (SW) - 1 (GND)	Visor lowered and mirror cover closed	10 kΩ or higher
2 (SW) - 1 (GND)	Visor lowered and mirror cover open	Below 1 Ω

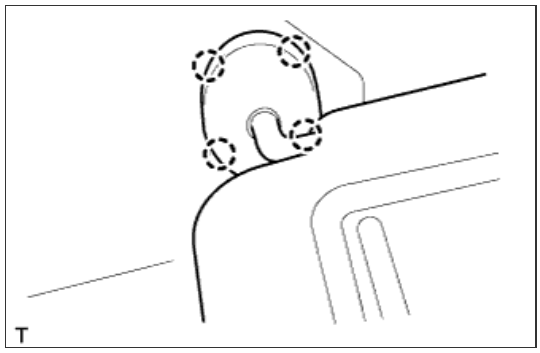
If the result is not as specified, there may be a malfunction in the visor assembly.



for Preparation Click here

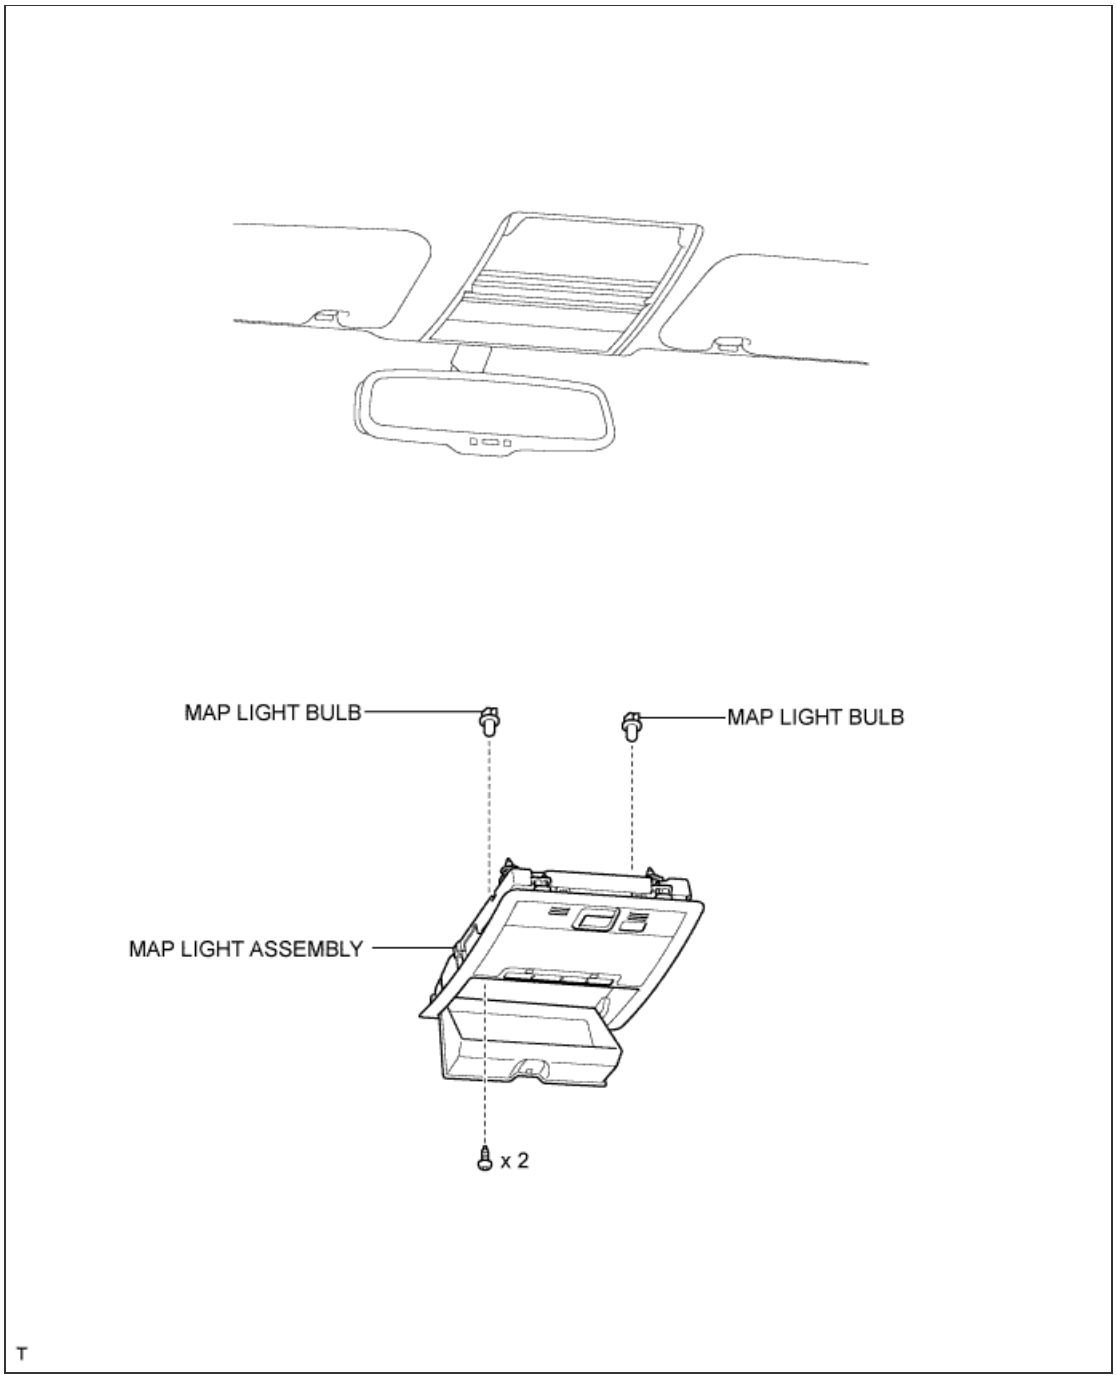
HINT:

- **Use the same procedures for the RH and LH side.**
- **The procedures listed below are for the RH side.**



1. INSTALL VISOR ASSEMBLY RH

a. Install the visor with the 2 screws.

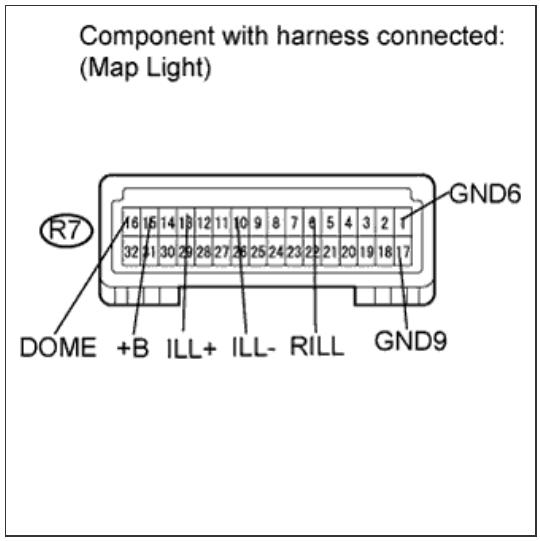


2. INSTALL VISOR BRACKET COVER

a. Attach the 4 claws to install the visor bracket cover.

for Preparation Click here

for Preparation Click here



1. CHECK MAP LIGHT ASSEMBLY

a. Remove the map light with the connector connected.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
R7-6 (RILL) - R7-17 (GND9)	Rear dome light off	11 to 14 V
	Rear dome light on	Below 1 V
R7-10 (ILL-) - R7-17 (GND9)	Headlight dimmer switch off	11 to 14 V
	Headlight dimmer switch on	Below 1 V
R7-13 (ILL+) - R7-17 (GND9)	Engine switch on (ACC)	11 to 14 V
R7-15 (+B) - R7-17 (GND9)	Always	11 to 14 V
R7-16 (DOME) - R7-17 (GND9)	Always	11 to 14 V

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
R7-1 (GND6) - Body ground	Always	Below 1 Ω
R7-17 (GND9) - Body ground	Always	Below 1 Ω

If the result is not as specified, replace the map light assembly.

HINT:

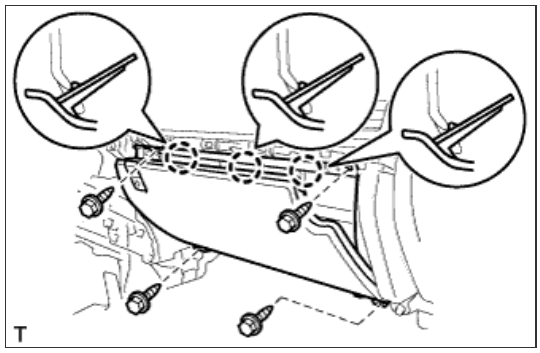
- **Use the same procedures for the H and LH**
- **The procedures listed below are the LH side.**

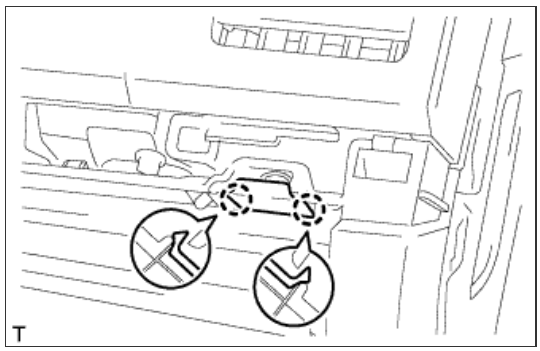
1. INSTALL GLOVE BOX LIGHT ASSE BLY

a. Install the glove box light with the 2 screws.



2. INSTALL LO E NO. 2 INST U ENT PANEL INISH PANEL

a. Connect the connector.



b. Attach the 3 claws to install the finish panel.

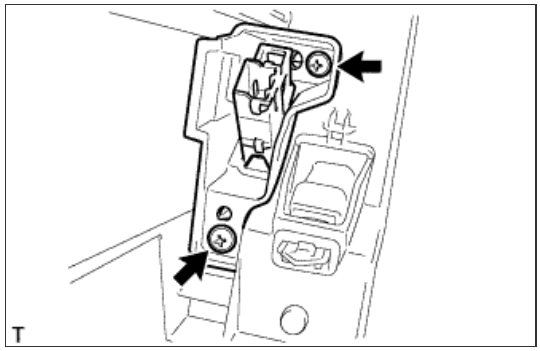
c. Install the 4 bolts.

3. INSTALL INST U ENT PANEL BOX OO KNOB

a. Attach the 2 claws to install the knob.

. INSTALL ONT PASSENGE SI E KNEE AI BAG ASSE BLY

a. Install the front passenger side knee airbag assembly (Click here).



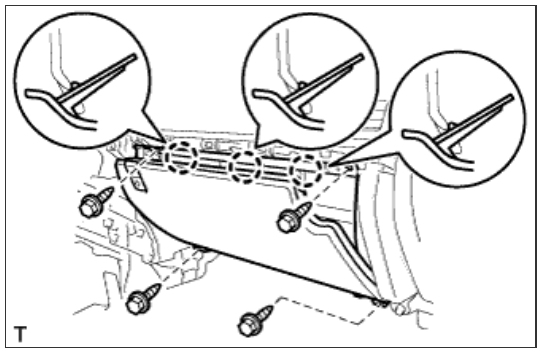
for Preparation Click here

HINT:

- **Use the same procedures for the H and LH**
- **The procedures listed below are the LH side.**

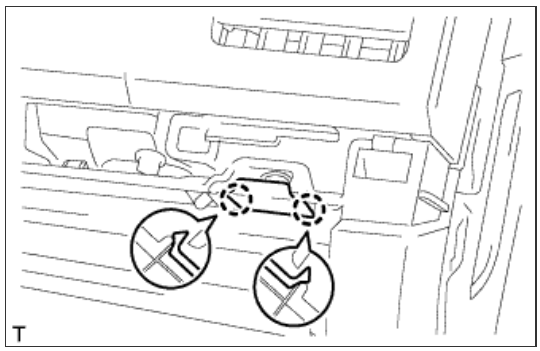
1. INSTALL GLOVE BOX LIGHT ASSE BLY

a. Install the glove box light with the 2 screws.



2. INSTALL LO E NO. 2 INST U ENT PANEL INISH PANEL

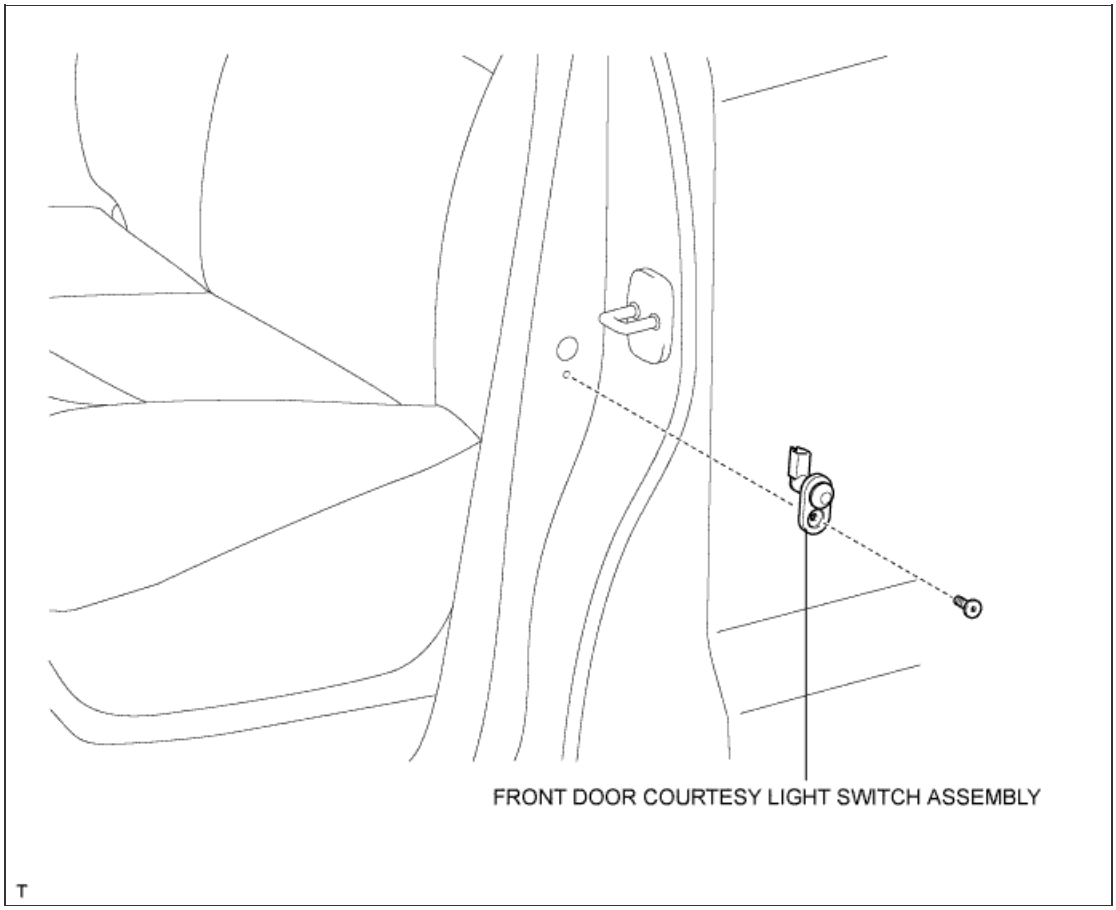
a. Connect the connector.



b. Attach the 3 claws to install the finish panel.

c. Install the 4 bolts.

3. INSTALL INST U ENT PANEL BOX OO KNOB



a. Attach the 2 claws to install the knob.

. INSTALL ONT PASSENGE SI E KNEE AI BAG ASSE BLY

a. Install the front passenger side knee airbag assembly (Click here).

for Preparation Click here

for Preparation Click here

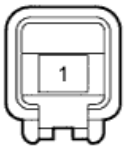
1. REMOVE FRONT DOOR COURTESY LIGHT SWITCH ASSEMBLY

a. Using a T30 "TORX" socket wrench, remove the screw and switch.

b. Disconnect the connector.

for Preparation Click here

1. INSPECT FRONT DOOR COURTESY LIGHT SWITCH ASSEMBLY



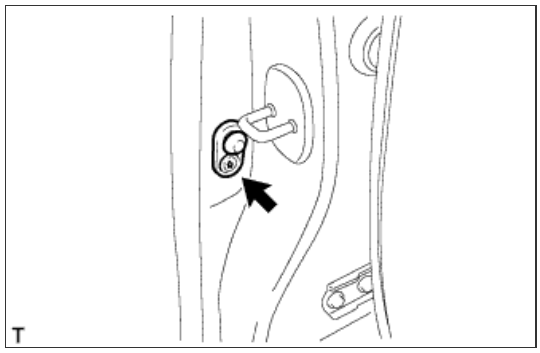
a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

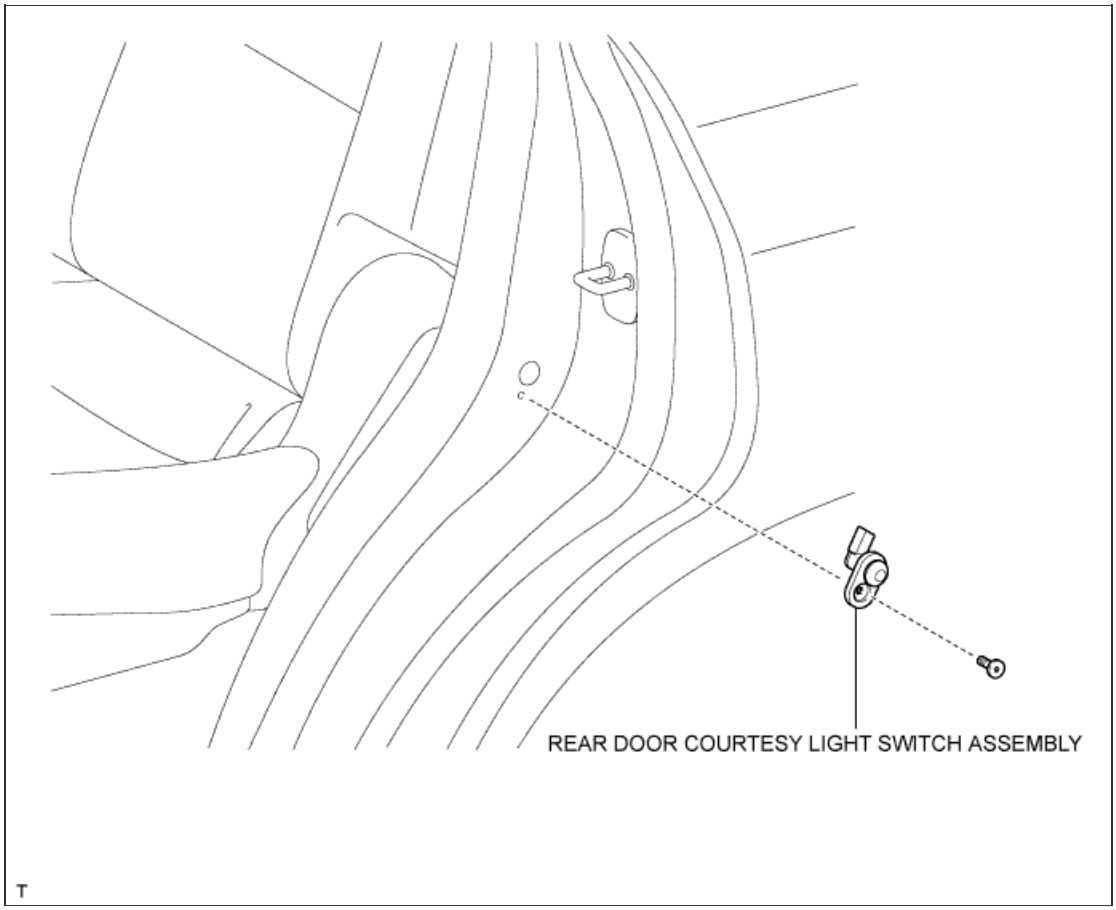
Tester Connection	Switch Condition	Specified Condition
1 - Body ground	Pin not pushed	Below 1 Ω
1 - Body ground	Pin pushed	10 kΩ or higher

If the result is not as specified, there may be a malfunction in the front door courtesy switch assembly.

Component without harness connected:
(Front Door Courtesy Switch)



for Preparation Click here

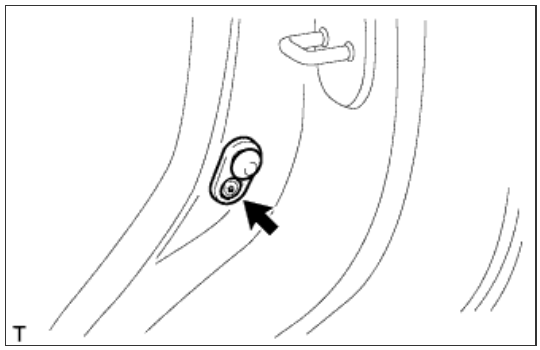


1. INSTALL FRONT DOOR COURTESY LIGHT SWITCH ASSEMBLY

a. Connect the connector.

b. Using a T30 "TORX" socket wrench, install the switch with the screw.

for Preparation [Click here]



for Preparation Click here

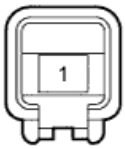
1. REMOVE REAR DOOR COURTESY LIGHT SWITCH ASSEMBLY

a. Using a T30 "TORX" socket wrench, remove the screw and switch.

b. Disconnect the connector.

for Preparation Click here

1. INSPECT REAR DOOR COURTESY LIGHT SWITCH ASSEMBLY



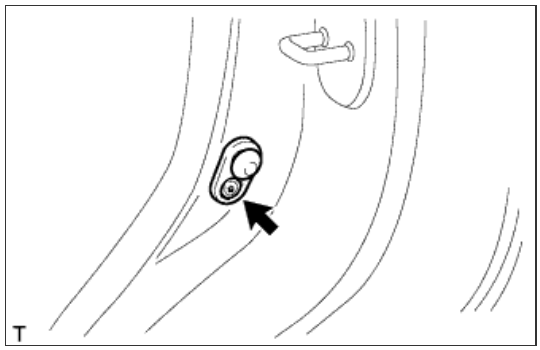
a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

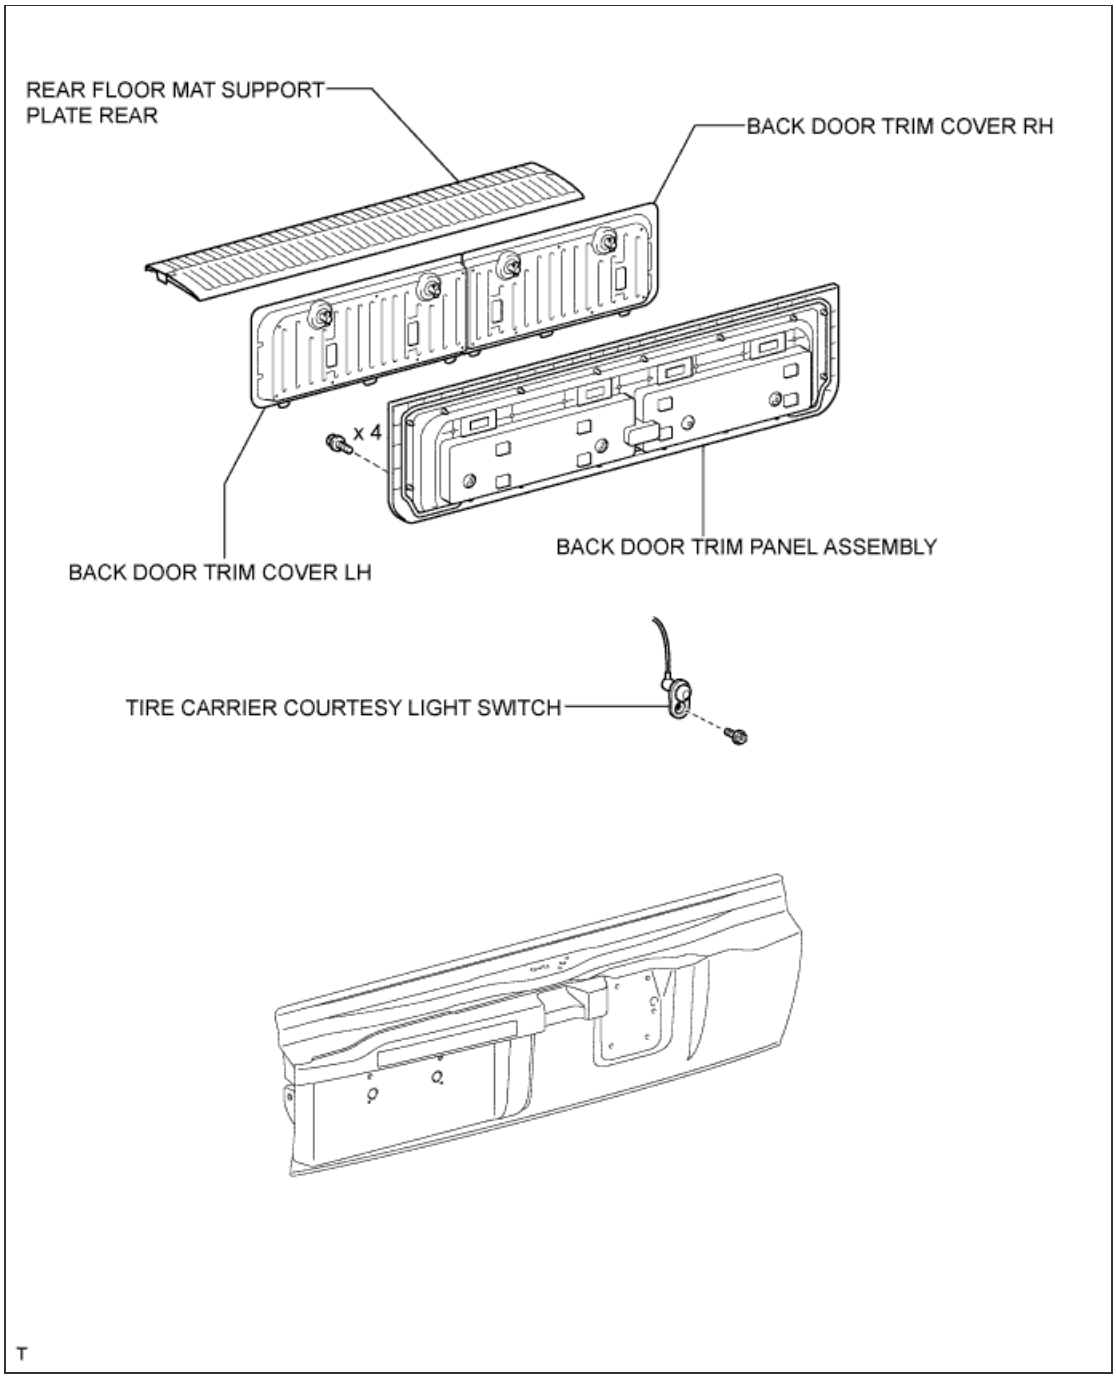
Tester Connection	Switch Condition	Specified Condition
1 - Body ground	Pin not pushed	Below 1 Ω
1 - Body ground	Pin pushed	10 kΩ or higher

If the result is not as specified, there may be a malfunction in the rear door courtesy switch assembly.

Component without harness connected:
(Rear Door Courtesy Switch)



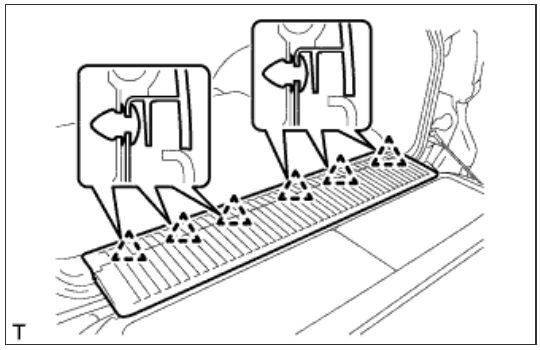
for Preparation Click here



1. INSTALL REAR DOOR COURTESY LIGHT SWITCH ASSEMBLY

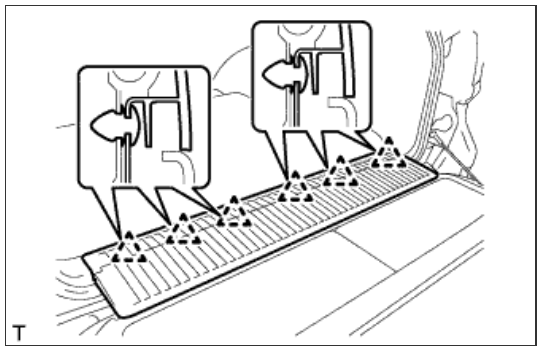
a. Connect the connector.

b. Using a T30 "TORX" socket wrench, install the switch with the screw.



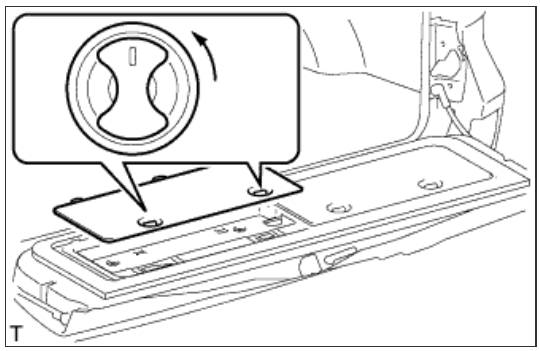
for Preparation Click here

for Preparation Click here



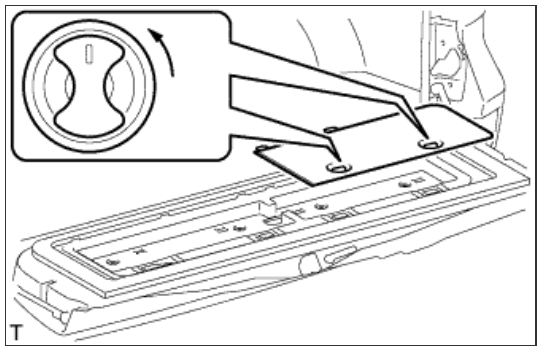
1. REMOVE REAR FLOOR MAT SUPPORT PLATE REAR (w/ Sliding Roof)

a. Detach the 6 clips and remove the support plate.



2. REMOVE REAR FLOOR MAT SUPPORT PLATE REAR (w/o Sliding Roof)

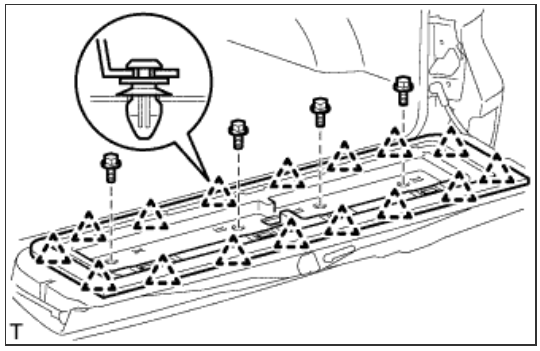
a. Detach the 6 clips and remove the support plate.



3. REMOVE BACK DOOR TRIM COVER LH

a. Remove the back door trim cover LH as shown in the illustration.

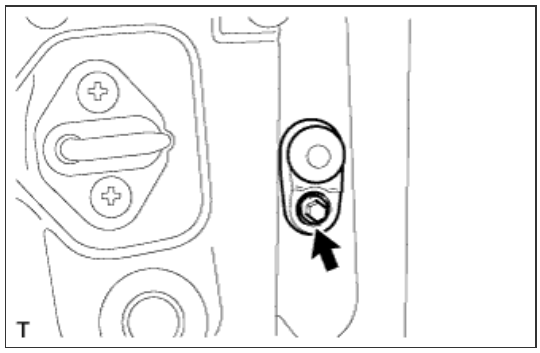
4. REMOVE BACK DOOR TRIM COVER RH



a. Remove the back door trim cover RH as shown in the illustration.

5. REMOVE BACK DOOR TRIM PANEL ASSEMBLY

a. Remove the bolts.



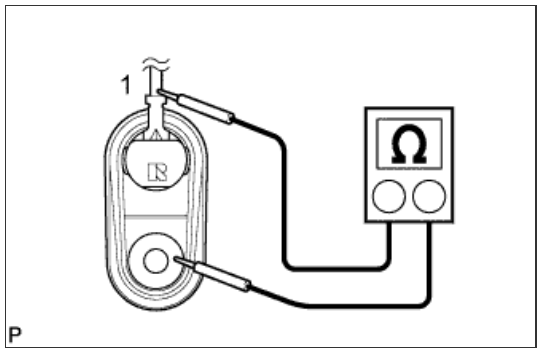
b. Detach the 6 clips and remove the back door trim panel.

6. REMOVE TIRE CARRIER COURTESY LIGHT SWITCH

a. Disconnect the connector

b. Remove the bolt and switch.

for Preparation Click here



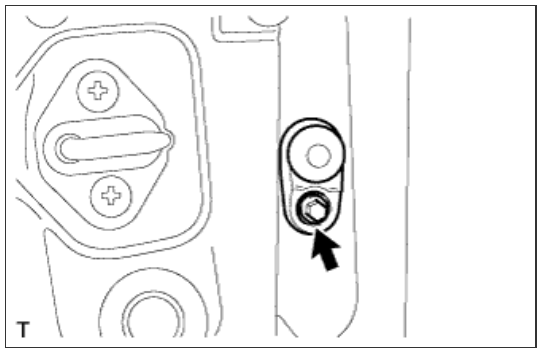
1. INSPECT TIRE CARRIER COURTESY LIGHT SWITCH

a. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
1 - Body ground	Pin not pushed	Below 1 Ω
1 - Ω	Pin pushed	10 kΩ or higher

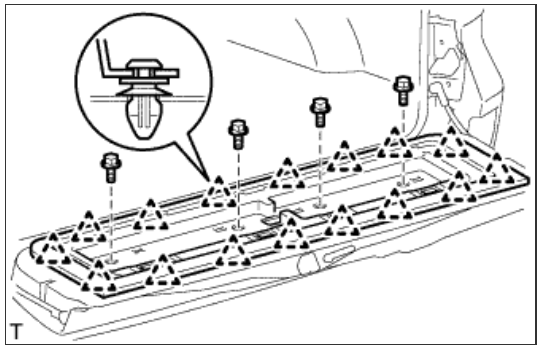
If the result is not as specified, there may be a malfunction on the tire carrier courtesy switch.



for Preparation Click here

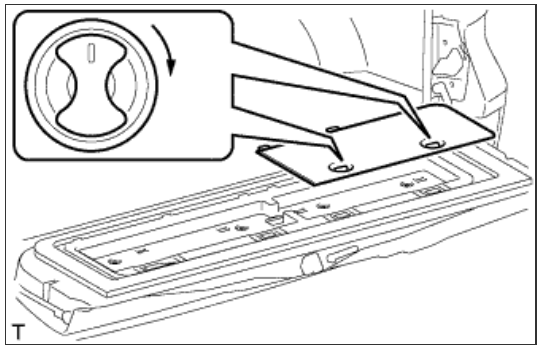
1. INSTALL TIRE CARRIER COURTESY LIGHT SWITCH

a. Connect the connector.



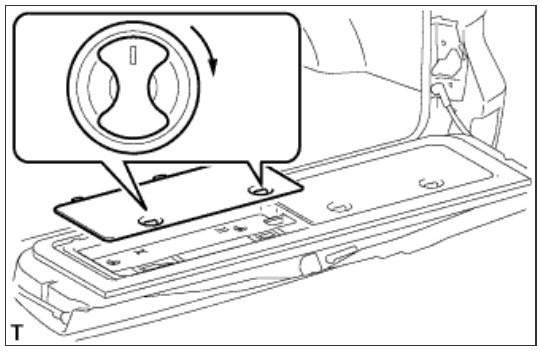
b. Install the switch with the bolt.

2. INSTALL BACK DOOR TRIM PANEL ASSEMBLY



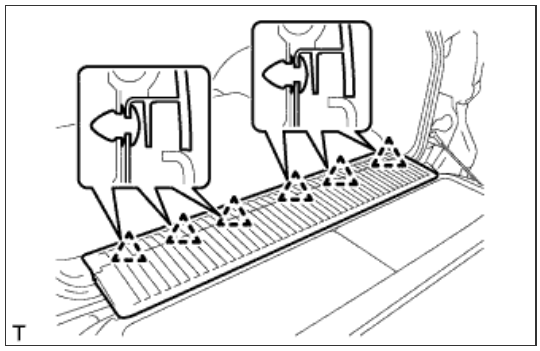
a. Attach the 16 clips to install the back door trim panel.

b. Install the 4 bolts.



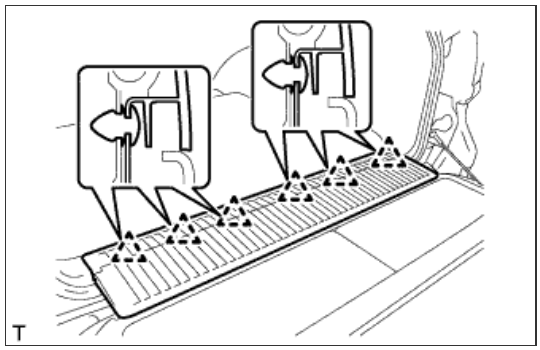
3. INSTALL BACK DOOR TRIM COVER RH

a. Install the back door trim cover RH as shown in the illustration.



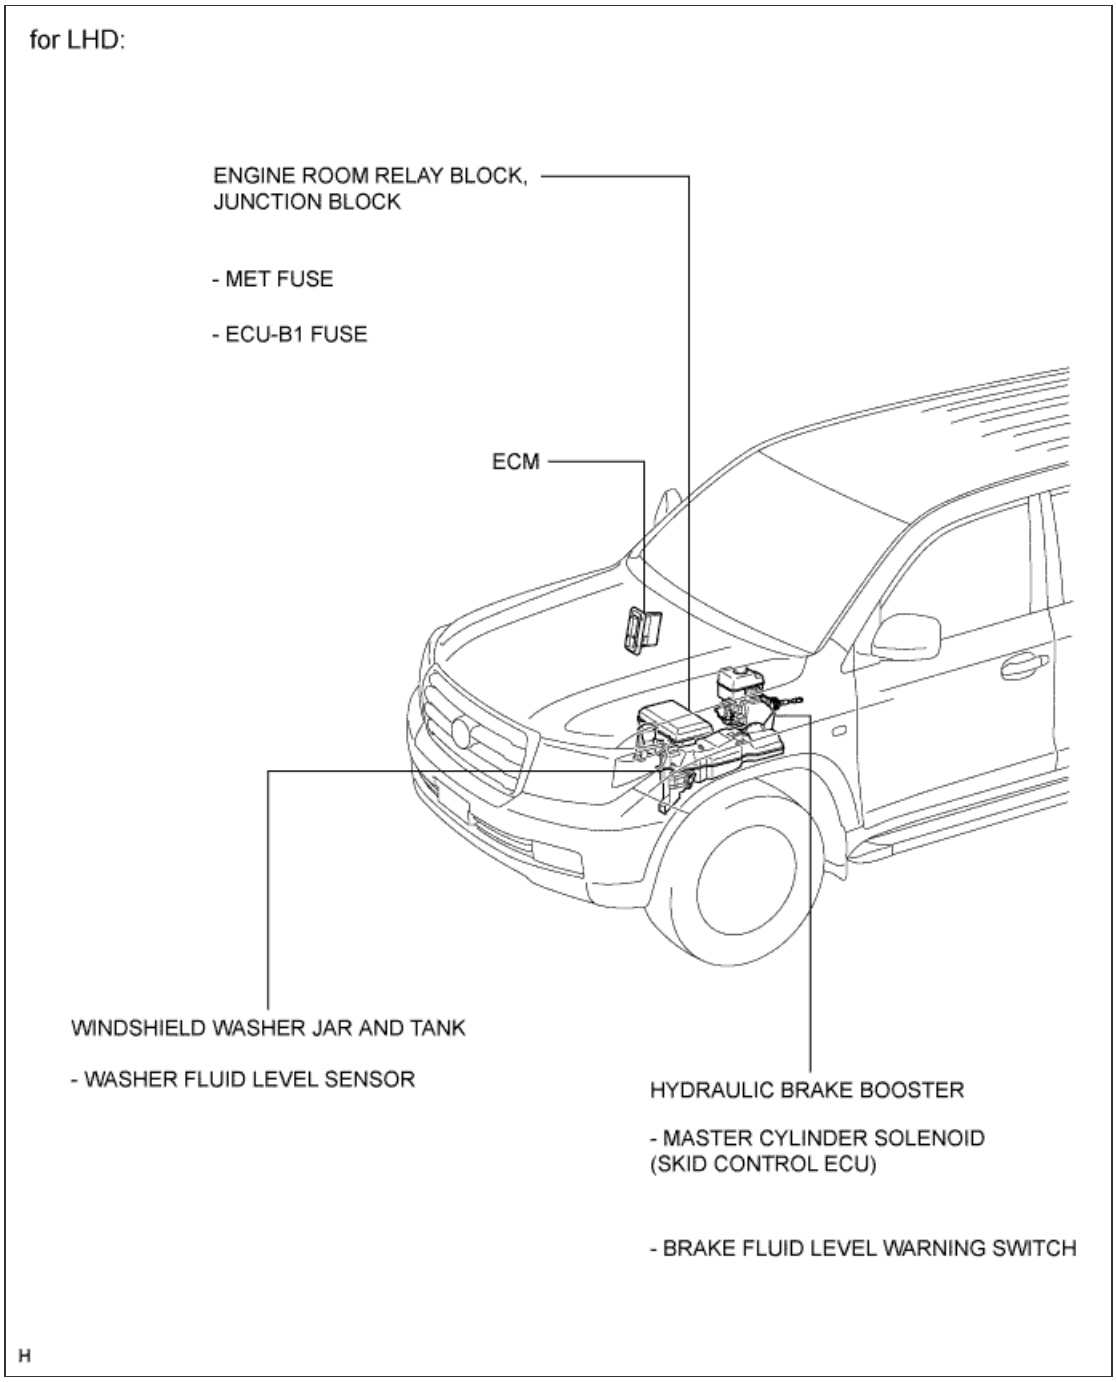
4. INSTALL BACK DOOR TRIM COVER LH

a. Install the back door trim cover LH as shown in the illustration.

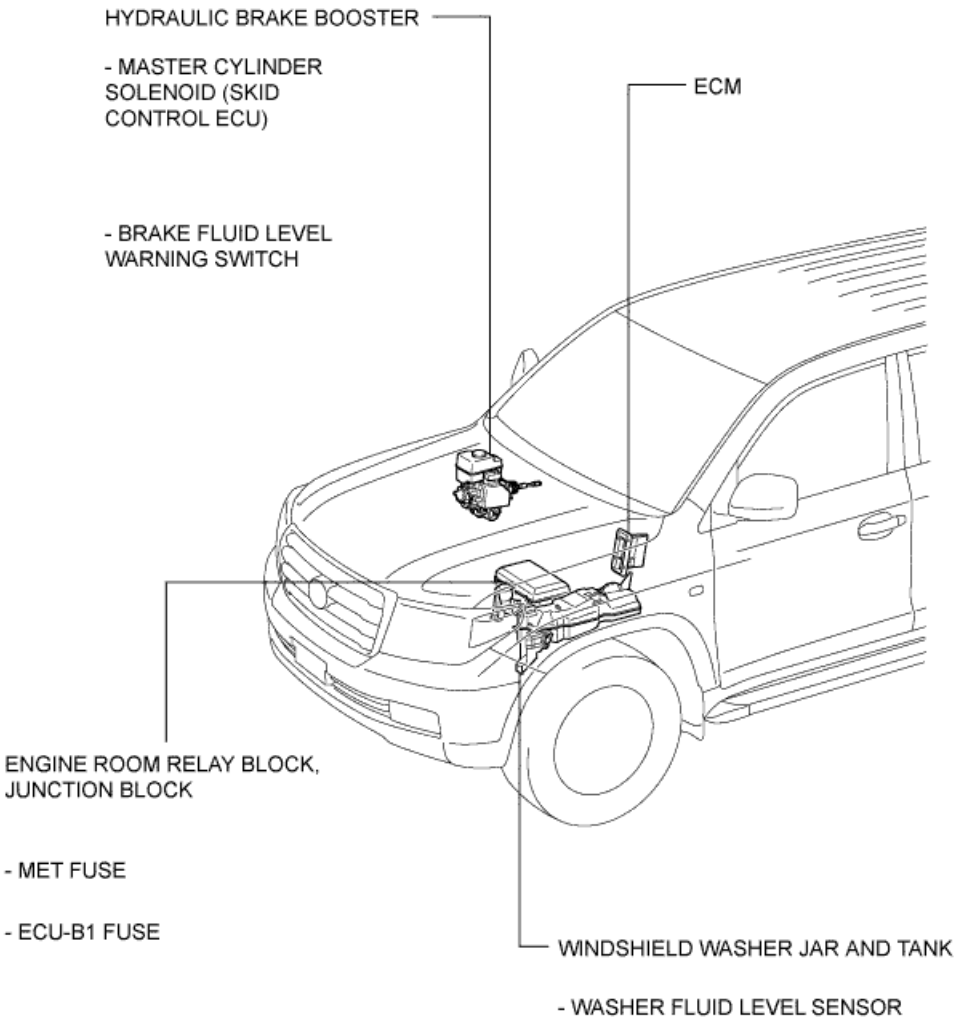


5. INSTALL REAR FLOOR MAT SUPPORT PLATE REAR (w/ Sliding Roof)

a. Attach the 6 clips to install the support plate.



6. INSTALL REAR FLOOR MAT SUPPORT PLATE REAR (w/o Sliding Roof)



a. Attach the 6 clips to install the support plate.

METER GAUGE AND WARNING/INDICATOR (w/o Multi-information Display)

Meter/Gauge

Item	Details
Speedometer	Based on a signal received from the wheel speed sensor, the skid control ECU calculates the vehicle speed and transmits data to the combination meter (CAN).
Tachometer	The combination meter receives a speed signal from the ECM, and the gauge needle operates (CAN).
ODO/TRIP meter	• The combination meter receives a vehicle speed pulse integration signal from the skid control ECU, and the ODO/TRIP meter display operates. (CAN) • Using the trip meter reset knob, the ODO/TRIP meter display changes.
Fuel receiver gauge	The combination meter receives fuel amount information measured by the fuel sender gauge, and the gauge needle operates (Direct line).
Engine coolant temperature gauge	The combination meter receives an engine coolant temperature signal from the ECM, and the gauge needle operates (CAN).
Oil pressure receiver gauge	The combination meter receives an engine speed signal from the ECM (CAN), and receives an oil pressure sender signal from the oil pressure sender (Direct line). Then the meter measures signals and the gauge needle operates.
Voltage meter	Monitors IG voltage and the gauge needle operates (Direct line).

Warning/Indicator

Item	Details
BEAM indicator light	Receives signals from the main body ECU (CAN).
FRONT FOG indicator light	The indicator turns on when a FRONT FOG illumination command signal is received (CAN).
REAR FOG indicator light*1	

	The indicator turns on when a REAR FOG illumination command signal is received (CAN).
A/T OIL TEMP warning light*2 A/T OIL TEMP	Warning is displayed when the oil temperature is high (CAN).
A/T P warning light*2 A/T P	The indicator turns on when a shift position P signal or transfer neutral switch signal are received (CAN).
SRS warning light 	Receives malfunction signals from the center airbag sensor (CAN).
SMART KEY indicator light 	The indicator turns on when a key not in cabin warning signal is received (CAN).
DOOR warning light 	The open door indicator comes on when a signal is received from the main body ECU (CAN).
TIRE CARRIER warning light*3 	The indicator turns on based on the TIRE CARRIER illumination command signal (Direct line).
Driver side seat belt warning light 	Receives driver seat belt signals (Unfastened) from the main body ECU (CAN).
Brake warning light 	• Comes on when the parking brake switch is ON (CAN). • Brake fluid level warning switch is ON (Direct line). • Vehicle stability control system is malfunctioning.
CHARGE warning light 	Receives malfunction signals from the generator (Direct line).
4LO indicator light 4LO	Receives 4LO indicator signals from the Four WHEEL DRIVE control ECU (CAN).
ABS warning light 	Receives malfunction signals from the skid control ECU (CAN).
MIL 	Receives malfunction signals from the ECM (Direct line).
T-BELT indicator light*4	

T-BELT	Depending on the distance the timing belt warning is displayed on the meter. Only applies to diesel vehicles (Direct line).
GLOW indicator light*5 	The indicator turns on when a GLOW indicator signal is received (CAN).
OIL LEVEL indicator light 	The indicator turns on when an oil level signal is received (Direct line).
FUEL warning light 	Receives fuel empty signals from the fuel sender gauge (Direct line).
FUEL FILTER & SEDIMENTER indicator light*5 	The indicator turns on when a fuel filter clogged malfunction signal is received, or blinks when a fuel sedimenter malfunction signal is received (Direct line).
SLIP indicator light*6 	Receives malfunction signals from the skid control ECU (CAN).
VSC OFF indicator light*6 VSC OFF	The VSC OFF indicator turns on when a VSC warning signal is received (CAN).
CRUISE main indicator light CRUISE	Receives a CRUISE on signal or malfunction signal from the ECM (CAN).
Turn signal indicator light (LH/RH) 	Receives a turn signal from the FLASHER relay (Direct line).
WASHER indicator light 	The indicator turns on when a washer fluid level signal is received (Direct line).
RSCA OFF indicator light*7 RSCA OFF	Receives an RSCA OFF signal from the center airbag sensor (Direct line).
CRAWL indicator light 	Receives a CRAWL switch ON signal from the skid control ECU (CAN).
Downhill assist control indicator light 	The indicator turns on when a downhill assist control indicator signal is received (CAN).

ECT PWR indicator light*2 	Receives an ECT PWR switch ON signal from the ECM (CAN).
2nd START indicator light*2 	Receives a 2nd START switch ON signal from the ECM (CAN).
CENTER differential lock indicator light 	Receives a center differential lock switch ON signal from the Four WHEEL DRIVE control ECU (CAN).
REAR differential lock warning light 	The indicator turns on when a REAR differential lock indicator signal is received (CAN).
SPEED LIMIT indicator light 	The indicator turns on when a vehicle speed signal is received (CAN).
A/T P shift position indicator*2	Receives a P signal from the ECM (CAN).
A/T R shift position indicator*2	Receives an R signal from the ECM (CAN).
A/T N shift position indicator*2	Receives an N signal from the ECM (CAN).
A/T D shift position indicator*2	Receives a D signal from the ECM (CAN).
A/T S (1 to 5) shift position indicator*8	Receives a (1 to 5) signal from the ECM (CAN).
A/T S (1 to 6) shift position indicator*9	Receives a (1 to 6) signal from the ECM (CAN).

METER GAUGE AND WARNING/INDICATOR (w/ Multi-information Display)

Meter/Gauge

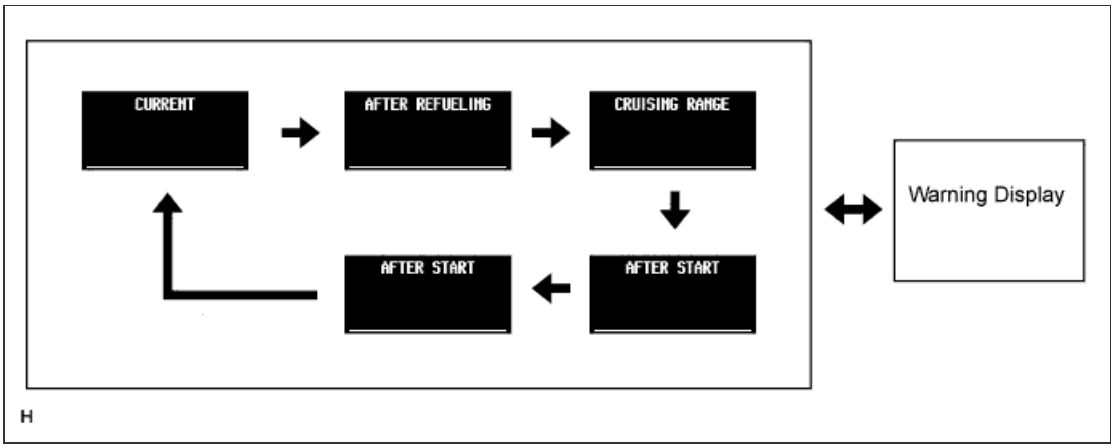
Item	Details
Speedometer	Based on a signal received from the wheel speed sensor, the skid control ECU calculates the vehicle speed and transmits data to the combination meter (CAN).
Tachometer	The combination meter receives a speed signal from the ECM, and the gauge needle operates (CAN).
ODO/TRIP meter	• The combination meter receives a vehicle speed pulse integration signal from the skid control ECU, and the ODO/TRIP meter display operates. (CAN) • Using the trip meter reset knob, the ODO/TRIP meter display changes.
Fuel receiver gauge	The combination meter receives fuel amount information measured by the fuel sender gauge, and the gauge needle operates (Direct line).
Engine coolant temperature gauge	The combination meter receives an engine coolant temperature signal from the ECM, and the gauge needle operates (CAN).
Oil pressure receiver gauge	The combination meter receives an engine speed signal from the ECM (CAN), and receives an oil pressure sender signal from the oil pressure sender (Direct line). Then the meter measures signals and the gauge needle operates.
Voltage meter	Monitors IG voltage and the gauge needle operates (Direct line).

Warning/Indicator

Item	Details
BEAM indicator light 	Receives signals from the main body ECU (CAN).
FRONT FOG indicator light 	The indicator turns on when a FRONT FOG light illumination signal is received (CAN).
TAIL LIGHT indicator light 	The indicator turns on when a taillight illumination signal is received (CAN).
REAR FOG indicator light*1 	The indicator turns on when a REAR FOG light illumination signal is received (CAN).

A/T P warning light A/T P	The indicator turns on when a shift position P signal or transfer neutral switch signal are received (CAN).
SRS warning light 	Receives malfunction signals from the center airbag sensor (CAN).
DOOR warning light 	The open door indicator comes on when a signal is received from the main body ECU (CAN).
TIRE CARRIER warning light*2 	The indicator turns on based on the TIRE CARRIER illumination command signal (Direct line).
Driver side seat belt warning light 	Receives driver seat belt signals (Unfastened) from the main body ECU (CAN).
Brake warning light 	• Comes on when the parking brake switch is ON (CAN). • Brake fluid level warning switch is ON (Direct line). • Vehicle stability control system is malfunctioning.
CHARGE warning light 	Receives malfunction signals from the generator (Direct line).
4LO indicator light 4LO	Receives 4LO indicator light signal from the Four WHEEL DRIVE control ECU (CAN).
ABS warning light 	Receives malfunction signals from the skid control ECU (CAN).
MIL 	Receives malfunction signals from the ECM (Direct line).
GLOW indicator light*3 	The indicator turns on when a GLOW indicator signal is received (CAN).
FUEL warning light 	Receives fuel empty signals from the fuel sender gauge (Direct line).
SLIP indicator light 	Receives malfunction signals from the skid control ECU (CAN).

CRUISE main indicator light CRUISE	Receives a CRUISE on signal or malfunction signal from the ECM (CAN).
Turn signal indicator light (LH/RH) 	Receives a turn signal from the FLASHER relay (Direct line).
RSCA OFF indicator light*4 RSCA OFF	Receives an RSCA OFF signal from the center airbag sensor (Direct line).
Master warning light 	Receives a warning signal from each sensor and ECU (Direct line and CAN).
CRAWL indicator light 	Receives a CRAWL switch ON signal from the skid control ECU (CAN).
Downhill assist control indicator light 	The indicator turns on when a downhill assist control indicator signal is received (CAN).
ECT PWR indicator light ECT PWR	Receives an ECT PWR switch ON signal from the ECM (CAN).
2nd START indicator light 2nd STRT	Receives a 2nd START switch ON signal from the ECM (CAN).
Center Differential Lock indicator light 	Receives a center differential lock switch ON signal from the Four WHEEL DRIVE ECU (CAN).
Rear Differential Lock warning light*5 	The indicator turns on when a REAR differential lock indicator signal is received (CAN).
SPEED LIMIT indicator light 120 km/h	The indicator turns on when a vehicle speed signal is received (CAN).
PCS indicator light*6 PCS	Receives a PCS indicator light signal from the seat belt control ECU (CAN).
A/T P shift position indicator	Receives a P signal from the ECM (CAN).
A/T R shift position indicator	Receives an R signal from the ECM (CAN).
A/T N shift position indicator	Receives an N signal from the ECM (CAN).
A/T D shift position indicator	Receives a D signal from the ECM (CAN).
A/T S (1 to 5) shift position indicator*7	Receives a (1 to 5) signal from the ECM (CAN).



A/T S (1 to 6) shift position indicator*8	Receives a (1 to 6) signal from the ECM (CAN).

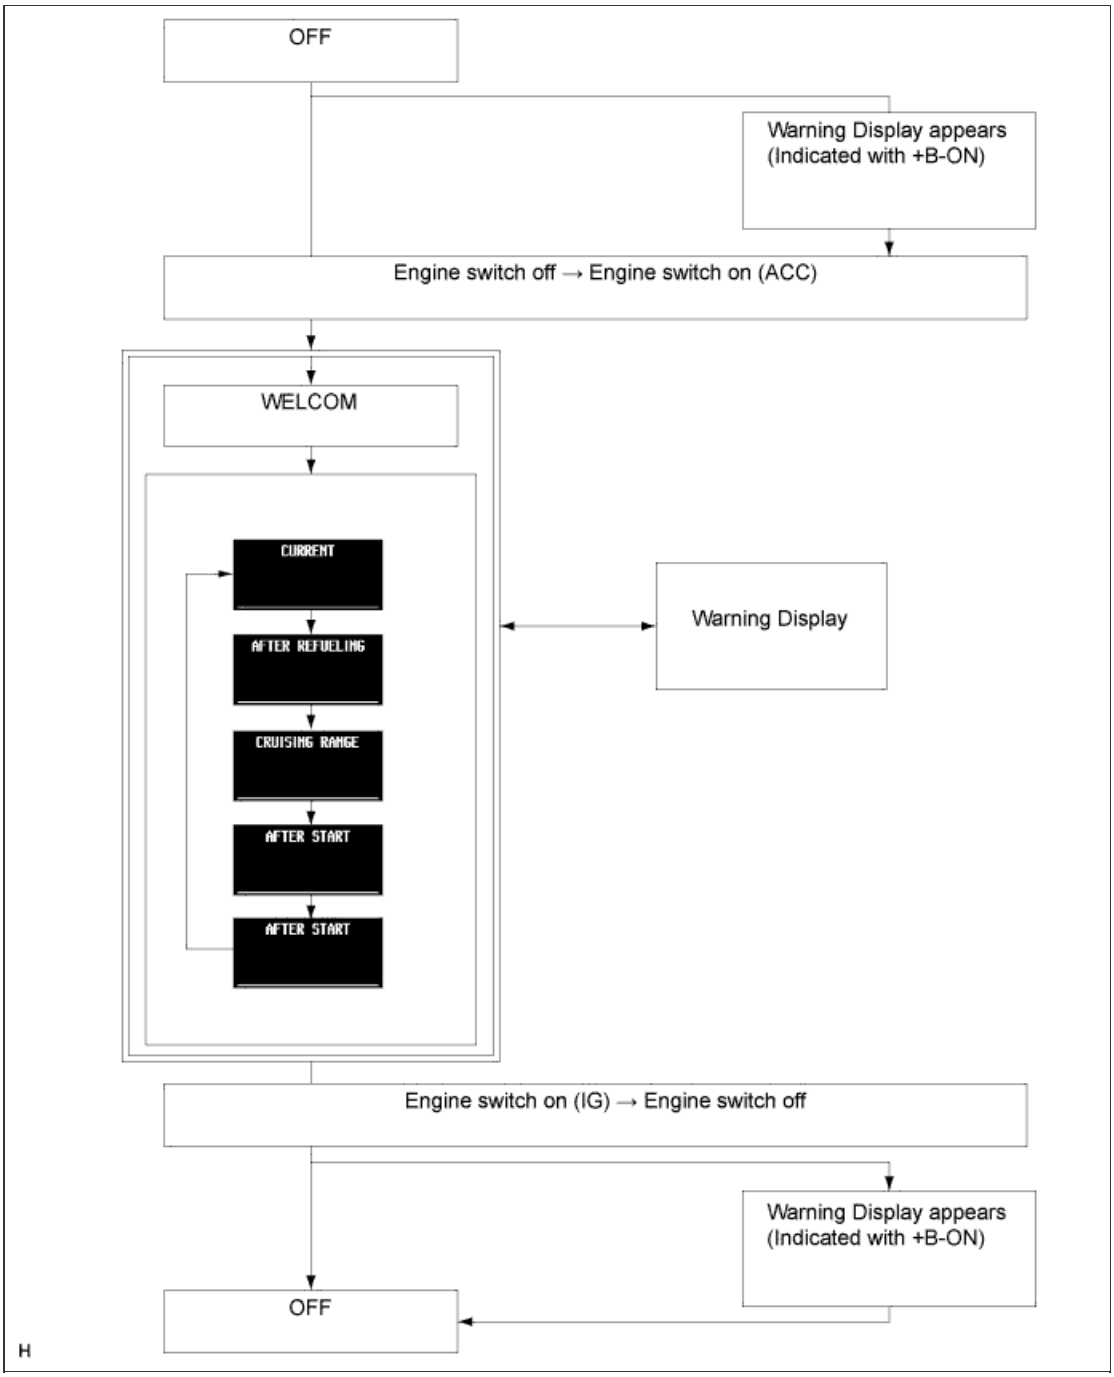
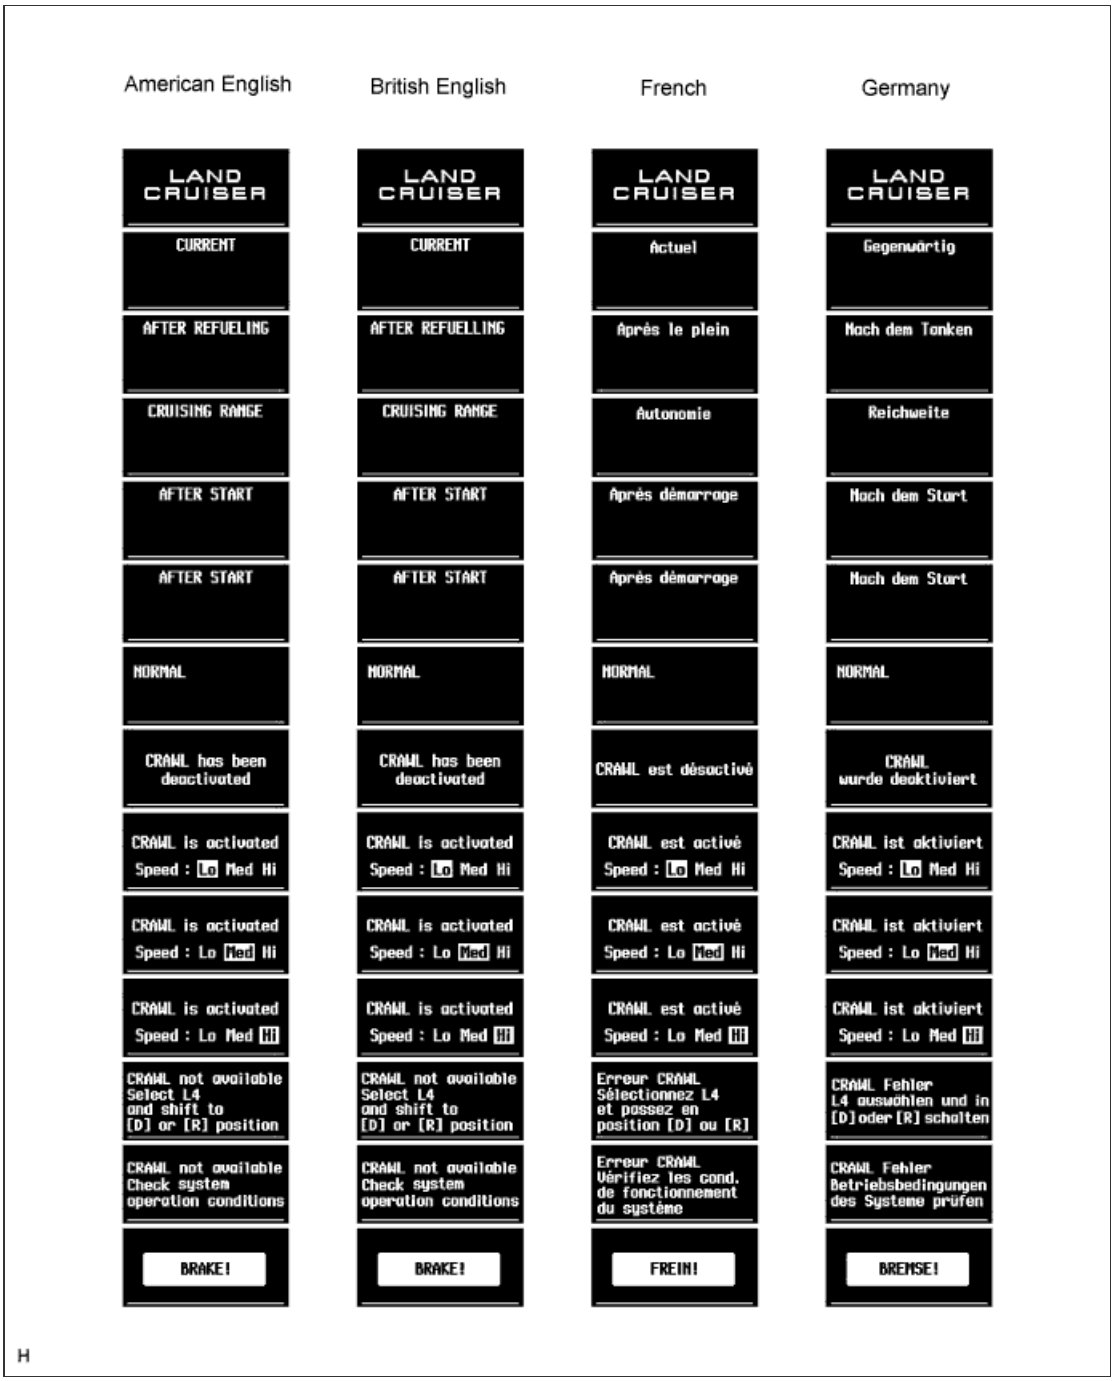
MULTI-INFORMATION DISPLAY (w/ Multi-information Display)

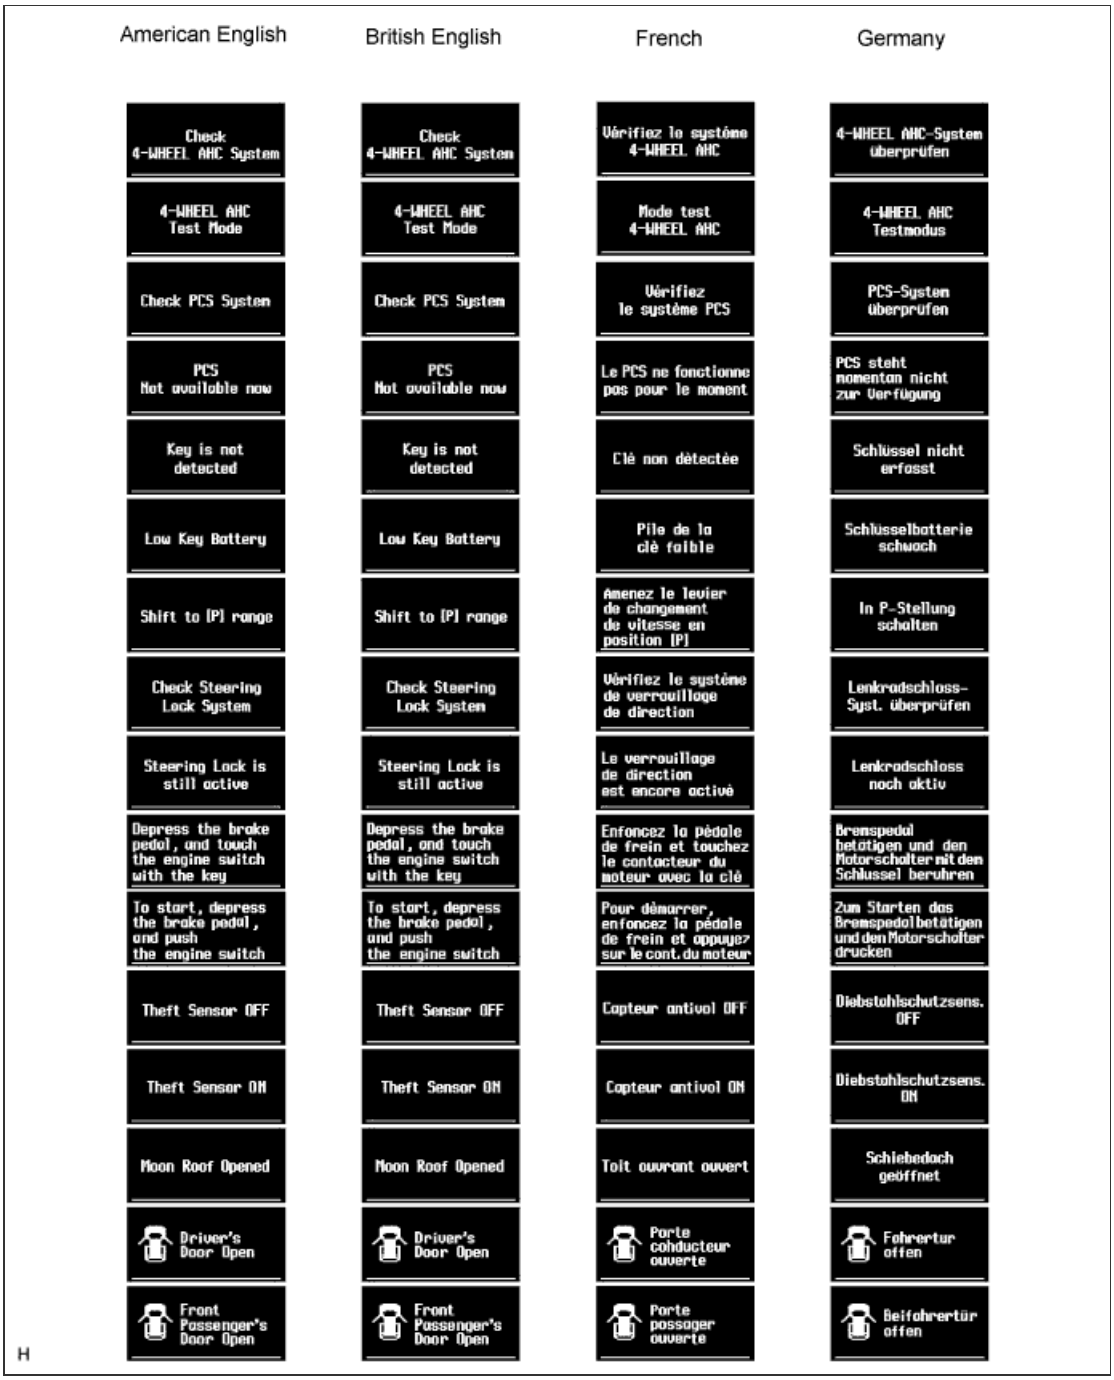


When the DISP switch is pressed, the multi-information display is changed between the following: cruise information display and warning display.

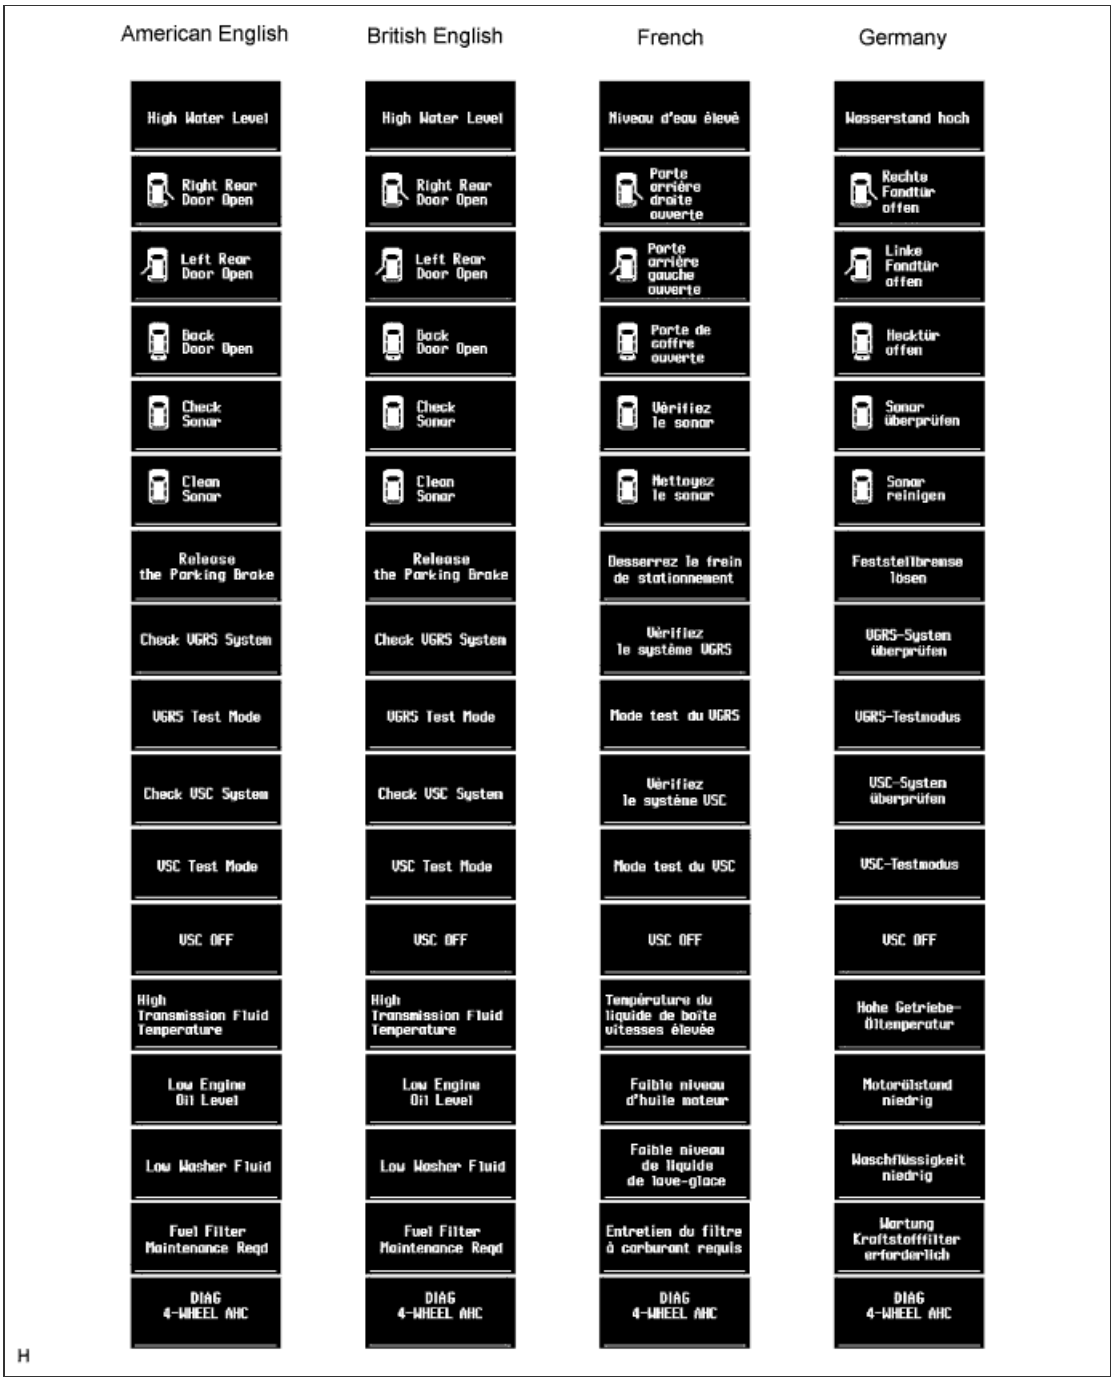
a. Cruise information display:
The cruise information is displayed in the following order each time the DISP switch is pressed.



Display	Outline
CURRENT	Receives vehicle speed pulse signals (via the direct line and CAN) and fuel consumption data, and measures the instant fuel consumption.
AFTER REFUELING	Receives vehicle speed pulse signals (via CAN) and fuel consumption data, and measures the average fuel consumption from the time the vehicle was refueled.
CRUISING RANGE	• Calculates the estimated distance to empty. • The distance is calculated using the fuel gauge value and long-term learned fuel consumption value.
AFTER START (Average speed)	Receives vehicle speed pulse signals (via the direct line and CAN) and fuel consumption data, and measures the average vehicle speed from the time the engine was started.
AFTER START (Travel distance)	Receives vehicle speed pulse signals (via the direct line and CAN) and fuel consumption data, and measures the distance driven from the time the engine was started.



b. Basic Flowchart.



c. Multi-information Display:
When a warning is necessary, the warning display interrupts the multi-information display. The master warning light may illuminate or blink and buzzer may sound depending on the item in the multi-information display.

MIL		

*1: w/ Curtain Shield Airbag
*2: w/ Pre-crash Safety System

INSPECT SPEEDOMETER

a. Using a speedometer tester, check that the speedometer reading is within the allowable range shown in the table below. Also, check for proper operation of the odometer.

Reference:

mph

Standard Indication	Acceptable Range
20 mph	18.5 to 22 mph
40 mph	39.5 to 42.5 mph
60 mph	59.5 to 63 mph
80 mph	80.5 to 84.5 mph
100 mph	100.5 to 105.5 mph
120 mph	119.5 to 126 mph
140 mph	141 to 147 mph

km/h (except Australia)

Standard Indication	Acceptable Range
20 km/h	21 to 25 km/h
40 km/h	41.7 to 46.2 km/h
60 km/h	62.7 to 67.2 km/h
80 km/h	83.4 to 88.4 km/h
100 km/h	104.3 to 109.3 km/h
120 km/h	125.1 to 130.6 km/h
140 km/h	145.8 to 151.8 km/h
160 km/h	166.2 to 173.2 km/h
180 km/h	186.9 to 194.5 km/h
200 km/h	207.7 to 215.7 km/h
220 km/h	228.4 to 236.8 km/h
240 km/h	249.2 to 258 km/h

km/h (for Australia)

Standard Indication	Acceptable Range
20 km/h	17.5 to 21.5 km/h
40 km/h	38 to 42 km/h
60 km/h	58 to 63 km/h
80 km/h	78 to 84 km/h
100 km/h	98.5 to 104.5 km/h
120 km/h	119 to 125 km/h
140 km/h	139 to 146 km/h
160 km/h	159 to 167 km/h
180 km/h	186.9 to 194.5 km/h
200 km/h	199 to 209 km/h
220 km/h	219 to 230 km/h
240 km/h	239 to 251 km/h

If the result is not as specified, the speedometer may have a malfunction.

NOTICE:

Do not use worn, underinflated or overinflated tires, as the speedometer reading will be inaccurate.

b. Check the deflection width of the speedometer indicator.

Reference:
Within 0.3°

INSPECT TACHOMETER

a. Connect a tune-up tachometer, and start the engine.

b. Compare the test results with the tachometer indicator.

DC 13.5 V, at 25°C (77°F):
1GR-FE:

Standard indication (rpm)	Acceptable range Data in ( ) is for reference
700	630 to 770
1000	(900 to 1100)
2000	(1850 to 2150)
3000	2800 to 3200
4000	(3800 to 4200)
5000	4800 to 5200
6000	(5750 to 6250)

2UZ-FE, 1VD-FTV:

Standard indication (rpm)	Acceptable range Data in ( ) is for reference
700	630 to 770
1000	(900 to 1100)
2000	(1850 to 2150)
3000	2800 to 3200
4000	(3800 to 4200)
5000	4800 to 5200
6000	(5750 to 6250)

If the result is not as specified, the tachometer may have a malfunction.

INSPECT METER/GAUGE

a. Connect the intelligent tester to the DLC3.

b. Perform Active Test (Click here).

OK:
Each meter/gauge needle indication is normal.

INSPECT WARNING/INDICATOR LIGHT

a. Connect the intelligent tester to the DLC3.

b. Perform Active Test (Click here).

OK:
Each warning/indicator light turns on and off using the intelligent tester.

INSPECT ENGINE OIL LEVEL WARNING

a. Turn the engine switch on (IG) and warm up the engine at an engine speed of 2000 rpm or less until the coolant temperature reaches approximately 80°C (176°F) or more.

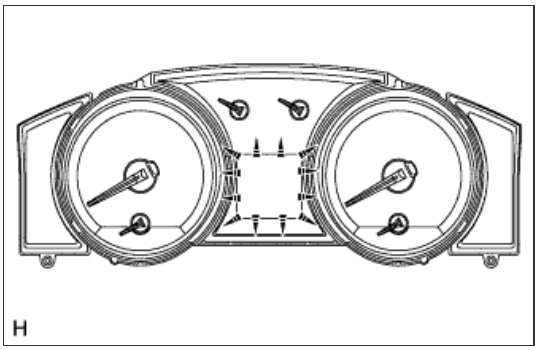
b. Disconnect the engine oil level sensor connector for 40 seconds or more.

c. Turn the engine switch on (IG) and check the multi-information display.

OK:
Low engine oil level message is displayed.

INSPECT MULTI-INFORMATION DISPLAY (w/ Multi-information Display)

a. Connect the intelligent tester to the DLC3.



b. Perform Active Test (Click here).

HINT:

If this Active Test is being performed and the engine switch is turned off and then on (IG), the A/T and ODO/TRIP display background may turn white. If this occurs, end Active Test and turn the engine switch off.

OK:

All dots in the multi-information display turn on and off using the intelligent tester.

for Preparation Click here

INSPECT INDICATOR/WARNING LIGHT

a. Check the following indicators and warning lights.

w/o Multi-information Display

Indicator/Warning Light	Switch Condition	Specified Condition

INSPECT SPEEDOMETER

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Powertrain / Engine and ECT / Data List.

Reference:

mph

Standard Indication	Acceptable Range
20 mph	18.5 to 22 mph
40 mph	39.5 to 42.5 mph
60 mph	59.5 to 63 mph
80 mph	80.5 to 84.5 mph
100 mph	100.5 to 105.5 mph
120 mph	119.5 to 126 mph
140 mph	141 to 147 mph

km/h (except Australia)

Standard Indication	Acceptable Range
20 km/h	21 to 25 km/h
40 km/h	41.7 to 46.2 km/h
60 km/h	62.7 to 67.2 km/h
80 km/h	83.4 to 88.4 km/h
100 km/h	104.3 to 109.3 km/h
120 km/h	125.1 to 130.6 km/h
140 km/h	145.8 to 151.8 km/h
160 km/h	166.2 to 173.2 km/h
180 km/h	186.9 to 194.5 km/h
200 km/h	207.7 to 215.7 km/h
220 km/h	228.4 to 236.8 km/h
240 km/h	249.2 to 258 km/h

km/h (for Australia)

Standard Indication	Acceptable Range
20 km/h	17.5 to 21.5 km/h
40 km/h	38 to 42 km/h
60 km/h	58 to 63 km/h
80 km/h	78 to 84 km/h
100 km/h	98.5 to 104.5 km/h
120 km/h	119 to 125 km/h
140 km/h	139 to 146 km/h
160 km/h	159 to 167 km/h
180 km/h	186.9 to 194.5 km/h
200 km/h	199 to 209 km/h
220 km/h	219 to 230 km/h
240 km/h	239 to 251 km/h

If the result is not as specified, the speedometer may have a malfunction.

NOTICE:

Do not use worn, underinflated or overinflated tires, as the speedometer reading will be inaccurate.

e. Check the deflection width of the speedometer indicator.

Reference:
Within 0.3

INSPECT TACHOMETER

a. Connect a tune-up tachometer, and start the engine.

b. Compare the test results with the tachometer indicator.

DC 13. at C (77
GR- E:

Standard indication (rpm)	Acceptable range Data in ( ) is for reference
700	630 to 770
1000	(900 to 1100)
2000	(1850 to 2150)
3000	2800 to 3200
4000	(3800 to 4200)
5000	4800 to 5200
6000	(5750 to 6250)

U- E D- T 3UR- E:

Standard indication (rpm)	Acceptable range Data in ( ) is for reference
700	630 to 770
1000	(900 to 1100)
2000	(1850 to 2150)
3000	2800 to 3200
4000	(3800 to 4200)
5000	4800 to 5200
6000	(5750 to 6250)

If the result is not as specified, the tachometer may have a malfunction.

INSPECT METER/GAUGE

a. Connect the intelligent tester to the DLC3.

b. Perform Active Test (Click here).

OK:
Each meter/ au e needle indication is normal.

INSPECT WARNING/INDICATOR LIGHT

a. Connect the intelligent tester to the DLC3.

b. Perform Active Test (Click here).

OK:
Each warnin /indicator li ht turns on and off usin the intelli en tester.

INSPECT ENGINE OIL LE EL WARNING (except for 3UR- E)

a. Turn the engine switch on (IG) and warm up the engine at an engine speed of 2000 rpm or less until the coolant temperature reaches approximately 80°C (176°F) or more.

b. Disconnect the engine oil level sensor connector for 40 seconds or more.

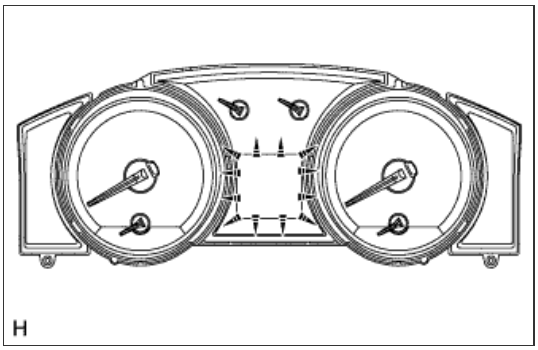
c. Turn the engine switch on (IG) and check the multi-information display.

OK:
Low en ine oil level messa es displayed.

INSPECT MULTI-IN ORMATION DISPLAY (w/ Multi-information Display)

a. Connect the intelligent tester to the DLC3.

b. Perform Active Test (Click here).



HINT:

If this Active Test is being performed and the engine switch is turned off and

then on (IG), the A/T and ODO/TRIP display background may turn white. If this occurs, end Active Test and turn the engine switch off.

OK:

All dots in the multi-information display turn on and off usin the intelli en tester.

CUSTOMIZING FUNCTION WITH INTELLIGENT TESTER

NOTICE:

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Be sure to make a note of the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

a. Connect the Intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Customize Setting.

e. Select the setting by referring to the table below.

Warning

Display (Item)	Default	Contents	Setting
Driver Side Seatbelt Warning Buzzer	ON	To change the seat-belt warning buzzer.	ON / OFF
Front Passenger Side Seatbelt Warning Buzzer	ON	To change the seat-belt warning buzzer.	ON / OFF

Unit Conversion

Display (Item)	Default	Contents	Setting
Units By Region	Different for each vehicle	To change the units of the display.	Km/l JP / Km/l / Ml/g US / Ml/g UK

Display

Display (Item)	Default	Contents	Setting
Language	None	To change the language of the display.	Eng US / Eng UK / French / German / Spanish / Italian / Japanes / CHN Sim / CHN Trd

for Preparation Click here

OIL MAINTENANCE INFORMATION MODE RESET OPERATION (for 1VD-FTV, w/ Multi-information Display)

NOTICE:

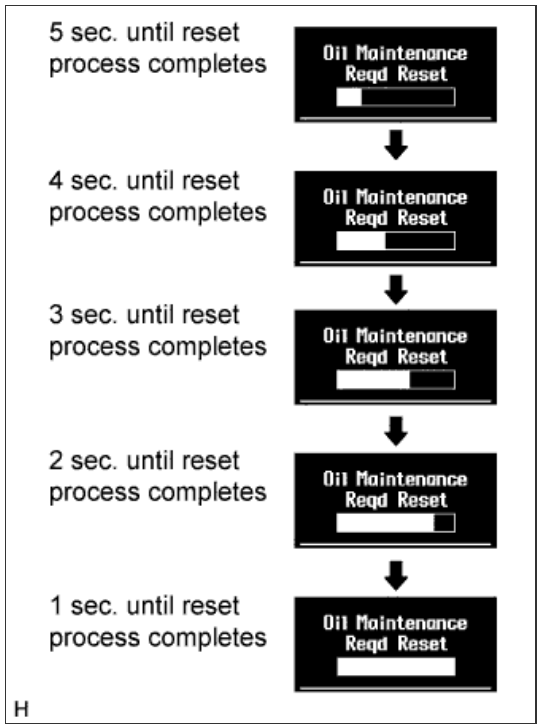
- **When "Oil Maintenance Reqd" or "Oil Maintenance Reqd Soon" is displayed, change the engine oil and perform this procedure.**
- **After the engine oil is changed, perform this procedure so that "Oil Maintenance Reqd" or "Oil Maintenance Reqd Soon" does not display.**

HINT:

- **The oil change maintenance system displays "Oil Maintenance Reqd" or "Oil Maintenance Reqd Soon" in the multi-information display to inform the driver that it is time to change the oil based on the distance driven**
- **The ODO/TRIP switch is in the light control rheostat.**

a. Turn the engine switch on (IG), and use the ODO/TRIP switch to change the screen display to TRIP A.

b. Turn the engine switch off.



c. While holding in the ODO/TRIP switch, turn the engine switch on (IG).

d. After a 5 second count, reset will end

NOTICE:

- **If the engine switch is turned off during the reset operation, reset mode will be canceled.**
- **If the ODO/TRIP switch is turned off during the reset operation, reset mode will be canceled.**

i. Reset flow chart

TIMING BELT INFORMATION MODE RESET OPERATION (for 2UZ-FE, w/ Multi-information Display)

NOTICE:

- **When "T-BELT Maintenance Reqd" is displayed, replace the timing belt and perform this procedure.**
- **After the timing belt is replaced, perform this procedure so that "T-BELT Maintenance Reqd" does not display.**

HINT:

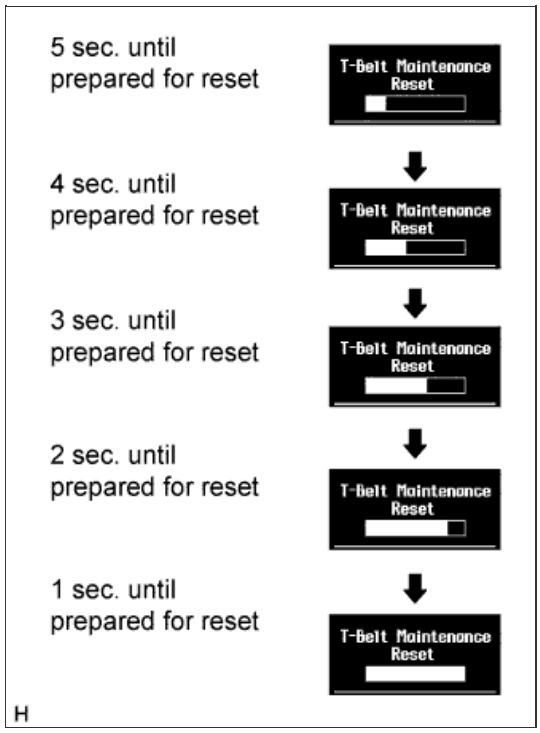
- **The timing belt maintenance system displays "Maintenance Reqd" in the multi-information display to inform the driver that it is time to replace the timing belt based on the distance driven.**
- **The ODO/TRIP switch is in the light control rheostat.**

a. Turn the engine switch on (IG), and use the ODO/TRIP switch to change the screen display to TRIP B.

b. Turn the engine switch off.

c. While holding in the ODO/TRIP switch, turn the engine switch on (IG).

HINT:



"T-Belt Maintenance Reset" will be displayed.

d. Press and hold the ODO/TRIP switch for 5 seconds or more.

HINT:

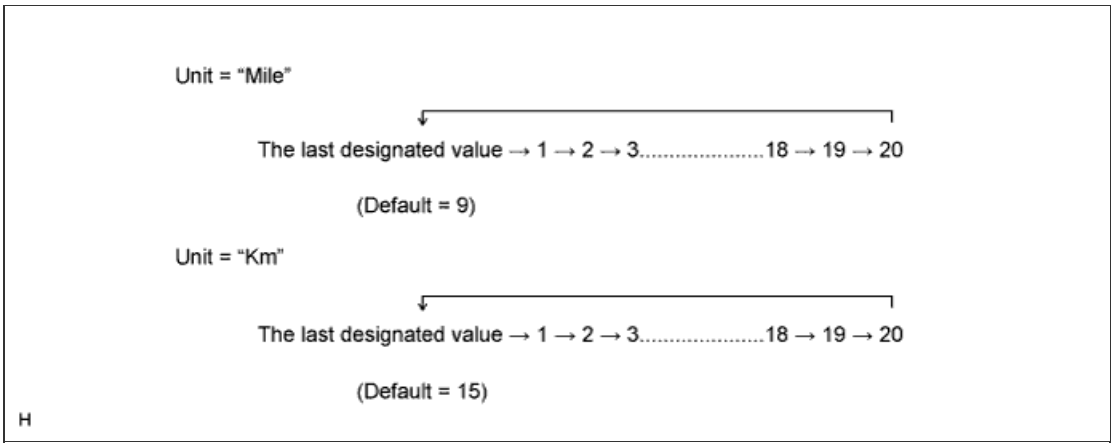
A 5 second count will begin on the display.

e. After the 5 second count finishes, "T-Belt Maintenance Reset OK" is displayed and T-BELT reset mode is complete.

f. While "T-Belt Maintenance Reset OK" is displayed, turn the ODO/TRIP switch from off to on.

HINT:

While "T-Belt Maintenance Reset OK" is displayed, if the ODO/TRIP switch is not turned from off to on, the normal display will return.



g. After the ODO/TRIP switch is turned on, enter the setting mode and change to T-BELT display mode.

HINT:

The T-BELT display mode will display the previously set value (the interval until the next time the timing belt needs to be replaced). However, the first time this is performed, the default setting from when the vehicle is delivered (150,000 km or 90,000 miles) is displayed.

h. Change the set value by repeatedly turning the ODO/TRIP switch on and off (the value must be changed within 5 seconds). (procedure A)

HINT:

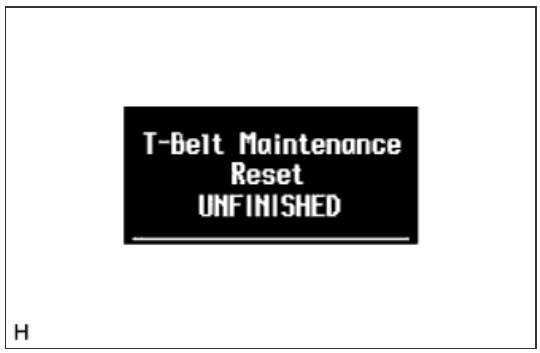
Perform this procedure only when changing the previously set value.

NOTICE:

If the ODO/TRIP switch is not turned from on to off for 30 seconds or more during this step, the previously set value will be maintained and the TRIP B display will return (reset will not complete).

i. When the display changes to the desired setting, press the ODO/TRIP switch for 5 seconds or more to finish setting mode. (procedure B)

j. The set value is stored in the EEPROM, "T-Belt Maintenance Reset COMPLETE" is displayed (for 1 second), the buzzer (multi-display warning) sounds simultaneously, and reset mode is completed. (procedure C)



HINT:

If the set value is not stored in the EEPROM, "T-Belt Maintenance Reset UNFINISHED" is displayed for 6 seconds, and the normal display returns.

NOTICE:

- **When not changing the previously set value, do not perform the operations in procedure A above, only perform procedures B and C.**
- **If the starter signal is received during the reset operation, reset mode is canceled and cannot be resumed until the engine switch is turned off and on (IG) again.**

TIMING BELT INFORMATION MODE RESET OPERATION (for 2UZ-FE, w/o Multi-information)

NOTICE:

- **When the T-BELT indicator light is illuminated, replace the timing belt and perform this procedure.**
- **After the timing belt is replaced, perform this procedure so that the T-BELT indicator light does not turn on.**

HINT:

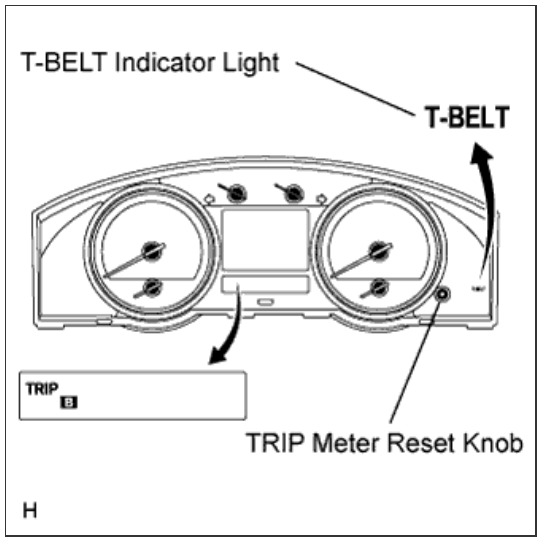
- **The timing belt maintenance system turns on the T-BELT indicator light to inform the driver that it is time to replace the timing belt based on the distance driven.**
- **The TRIP meter reset knob is on the bottom right side of the combination meter.**

a. Turn the engine switch on (IG), and use the TRIP meter reset knob to change

the screen display to TRIP B.

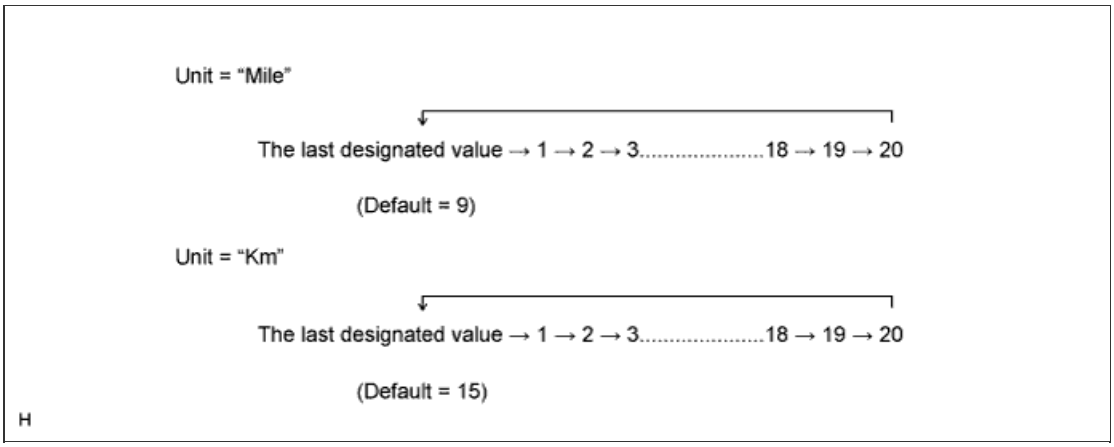
b. Turn the engine switch off.

c. While holding in the TRIP meter reset knob, turn the engine switch on (IG).



d. Press and hold the TRIP meter reset knob (on) for 5 seconds or more.

HINT:



If the TRIP meter reset knob is released (off is detected) within 5 seconds, the ODO/TRIP display, indicator display, and the integrated value will return to the state before the reset operation began.

e. After the TRIP meter reset knob is turned off, turn the TRIP meter reset knob on again within 5 seconds.

f. After the TRIP meter reset knob is turned on, enter the setting mode and change to T-BELT display mode.

g. Change the set value in increments by turning the TRIP meter reset knob (the value must be changed within 5 seconds). (procedure A)

HINT:

Perform this procedure only when changing the previously set value.

NOTICE:

If the TRIP meter reset knob is not turned from on to off for 30 seconds or more during this step, the previously set value will be maintained and the TRIP B display will return (reset will not complete).

h. When the display changes to the desired setting, press the TRIP meter reset knob for 5 seconds or more to finish setting mode. (procedure B)

i. The ODO display area changes to the TRIP B display, the warning indicator turns off simultaneously and reset mode is completed. (procedure C)

NOTICE:

When not changing the previously set value, do not perform the operations in procedure A above, only perform procedures B and C.

HINT:

Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

HINT:

Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

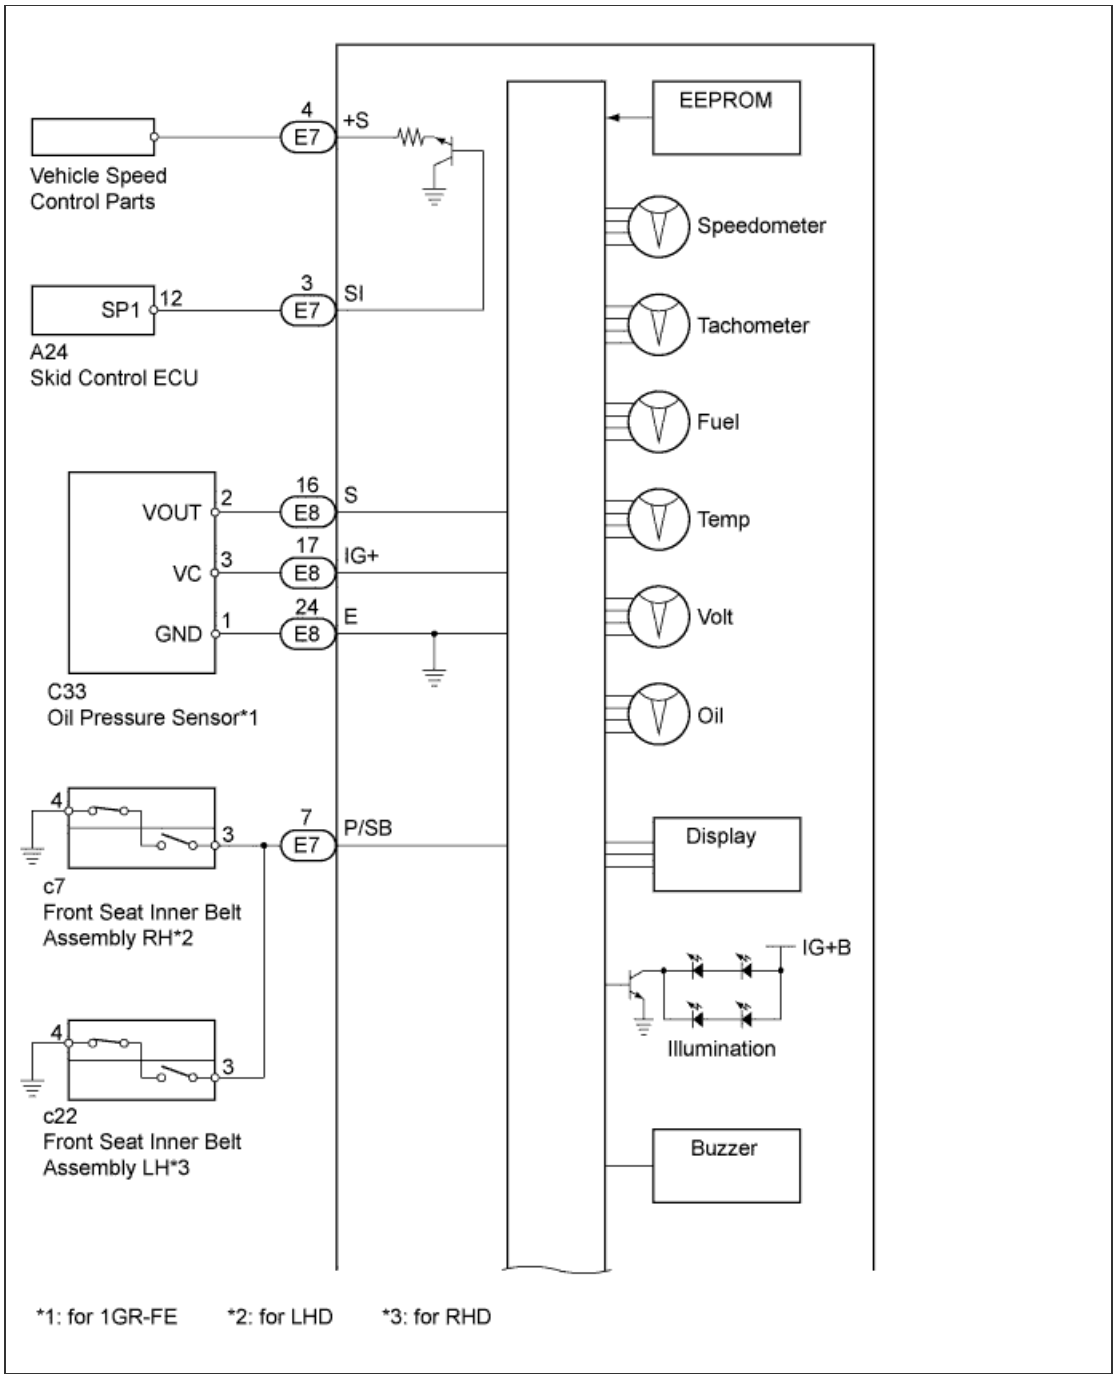
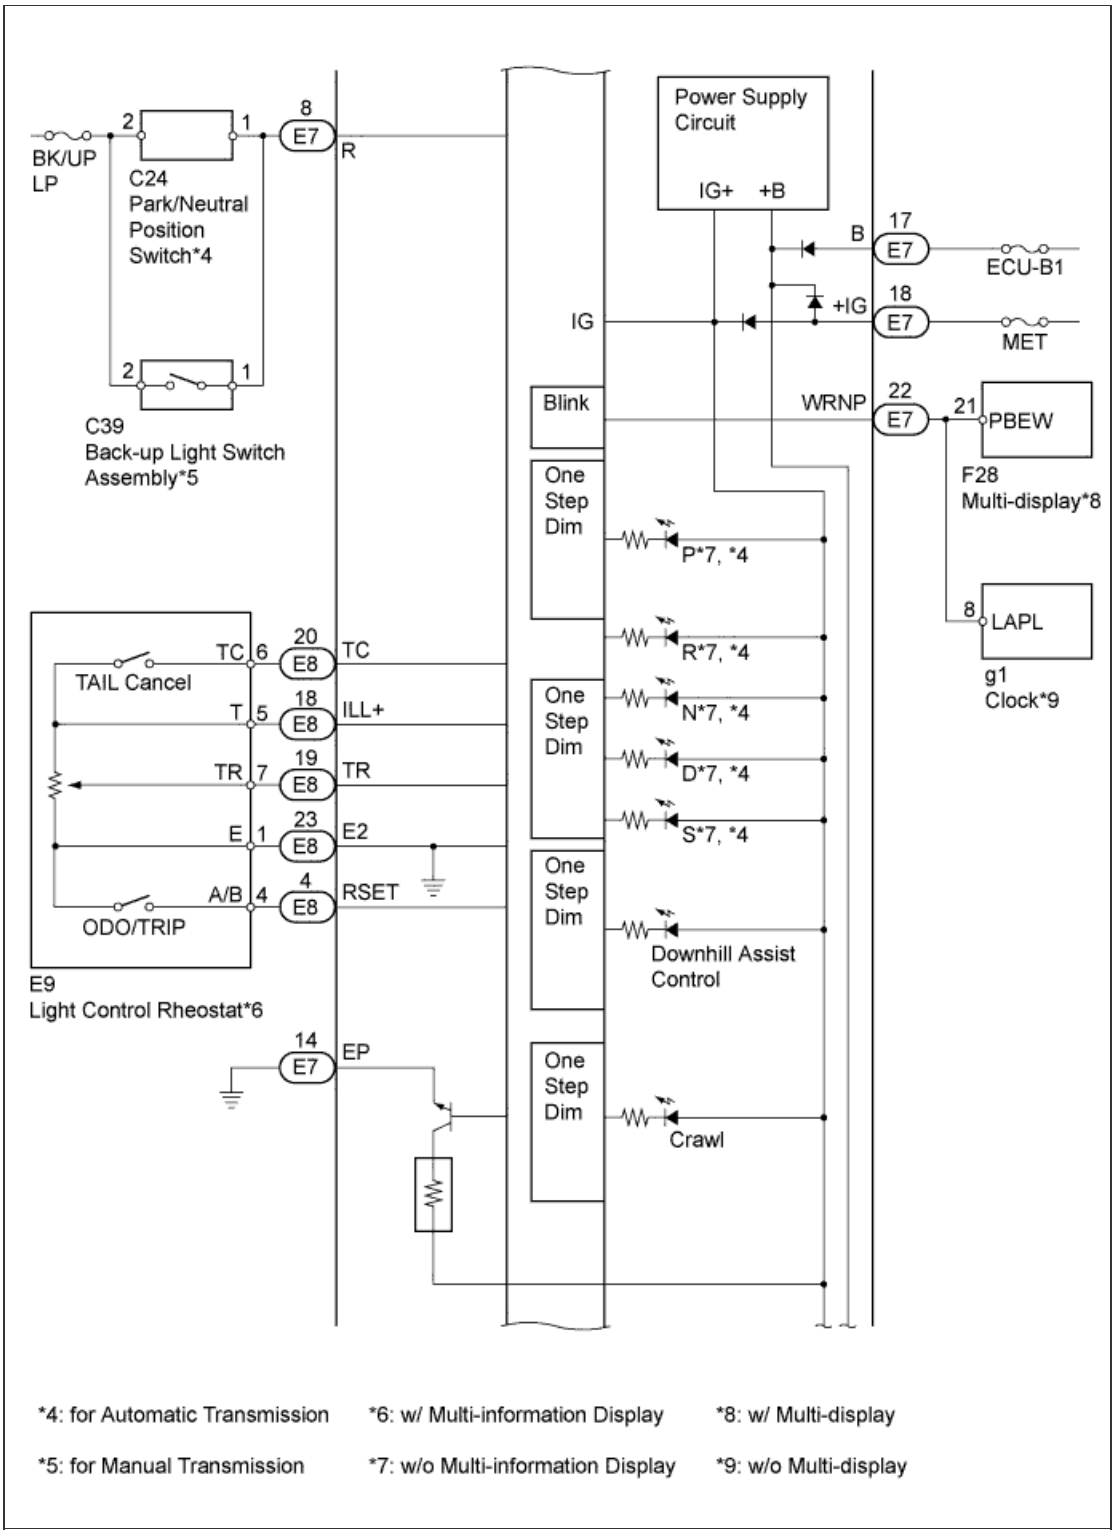
CHECK COMBINATION METER

a. Measure the resistance and voltage according to the value(s) in the table below.



Terminal No. (Symbol)	Wiring Color	Terminal Description	Condition	Specified Condition
E7-3 (SI) - Body ground	V - Body ground	Speed signal (input)	Engine switch on (IG), wheel turned slowly	Pulse generation
E7-4 (+S) - Body ground	V - Body ground	Speed signal (output)	Engine switch on (IG), wheel turned slowly	Pulse generation
E7-5 (WLVL) - Body ground	V - Body ground	Washer level warning signal	Washer fluid level sensor ON	Below 1 V
			Washer fluid level sensor OFF	11 to 14 V
E7-6 (OIL) - Body ground	L - Body ground	Oil level signal	Oil level sensor ON	Below 1 V
			Oil level sensor OFF	11 to 14 V
E7-7 (P/SB) - Body ground	B - Body ground*1	Seat belt warning signal	Engine switch on (IG), seat occupied, seat belt unfastened → fastened	Alternating between below 1 and 11 to 14 V
	G - Body ground*2			
E7-8 (R) - Body ground	L - Body ground	Park/neutral signal*3	Park/neutral switch on	11 to 14 V
		Reverse signal*4	Back-up light switch on	
E7-9 (L A/B) - Body ground	GR - Body ground	Ground	Always	Below 1 V
E7-11 (R/O) - Body ground*5	P - Body ground	RSCA OFF indicator light input signal	Engine switch on (IG), RSCA OFF indicator light on	Below 1 V
			Engine switch on (IG), RSCA OFF indicator light off	8 to 14 V
			Engine switch on (IG),	

E7-12 (CHG-) - Body ground	B - Body ground	CHARGE warning light	CHARGE warning light on	Below 1 V
			Engine switch on (IG), CHARGE warning light off	11 to 14 V
E7-13 (IND) - Body ground*6	R - Body ground	TIRE CARRIER warning light	Back door open	Below 1 V
			Back door closed	11 to 14 V
E7-14 (EP) - Body ground	W - B	Ground	Always	Below 1 V
E7-15 (ET) - Body ground	BR - Body ground	Ground	Always	Below 1 V
E7-17 (B) - Body ground	R - Body ground	Power source	Always	11 to 14 V
E7-18 (IG+) - Body ground	B - Body ground	Engine switch signal	Engine switch off	Below 1 V
			Engine switch on (IG)	11 to 14 V
E7-22 (WRNP) - Body ground	Y - Body ground	Passenger seat belt warning light signal	Engine switch on (IG), passenger seat occupied, seat belt unfastened → fastened	Alternating between below 1 and 11 to 14 V
E7-27 (B) - Body ground	R - Body ground	Turn signal R	Engine switch on (IG), turn signal switch neutral position	Below 1 V
			Engine switch on (IG), turn signal switch turned to left	Alternating between below 1 and 11 to 14 V
E7-28 (B) - Body ground	L - Body ground	Turn signal L	Engine switch on (IG), turn signal switch neutral position	Below 1 V
			Engine switch on (IG), turn signal switch turned to right	Alternating between below 1 and 11 to 14 V
E8-3 (MSSL) - Body ground	L - Body ground	Spiral cable signal	Engine switch on (IG), steering pad switch signal DISP OFF	Below 1 V
			Engine switch on (IG), steering pad switch signal DISP ON	11 to 14 V
E8-4 (RSET) - Body ground*7	B - Body ground	Light control rheostat signal	Engine switch on (IG), light control rheostat trip switch off	Below 1 V
			Engine switch on (IG), light control rheostat trip switch on	11 to 14 V
E8-9 (L) - Body ground	Y - Body ground	Fuel sender gauge signal	Fuel F (full tank) → E (empty)	4.5 to 9 V
E8-10 (L) - Body ground*8	BR - Body ground	Fuel sender gauge signal	Fuel F (full tank) → E (empty)	4.5 to 9 V
E8-11 (S) - Body ground*9, *10	L - Body ground	Engine oil pressure warning signal	Engine oil pressure warning light illuminated → not illuminated	Alternating between below 1 and 11 to 14 V
E8-12 (CHK) - Body ground	R - Body ground	MIL input signal	Engine switch on (IG), MIL on	Below 3 V
			Engine switch on (IG), MIL off	11 to 14 V
E8-14 (S) - Body ground*10	G - Body ground	Fuel filter warning signal	Engine switch on (IG), clogging switch on	Alternating between below 1 and 11 to 14 V
E8-15 (FFTR) - Body ground*10	V - Body ground	Fuel filter warning signal	Engine switch on (IG), level warning switch on	Alternating between below 1 and 11 to 14 V
E8-16 (S) - Body ground*11	LG - Body ground	Engine oil pressure warning signal	Engine oil pressure warning light illuminated → not illuminated	Alternating between below 1 and 11 to 14 V
E8-17 (IG+) - Body ground*11	B - Body ground	Engine oil pressure warning signal	Engine oil pressure warning light illuminated → not illuminated	Alternating between below 1 and 11 to 14 V
E8-18 (ILL+) - Body ground*7	G - Body ground	Light control rheostat signal	Engine switch on (IG)	4.6 to 5.4 V
E8-19 (TR) - Body		Light control rheostat	Light control rheostat knob fully turned left	Below 1 V



ground*7	W - Body ground	knob input	Light control rheostat knob fully turned right	10 kΩ or higher
E8-20 (TC) - Body ground*7	B - Body ground	Light control rheostat signal	Engine switch on (IG), light control rheostat TAIL, cancel switch off	Below 1 V
			Engine switch on (IG), light control rheostat TAIL, cancel switch on	10 kΩ or higher
E8-21 (E) - Body ground	B - Body ground	Fuel sender gauge ground	Always	Below 1 Ω
E8-22 (FE) - Body ground*8	G - Body ground	Fuel sender gauge ground	Always	Below 1 Ω
E8-23 (E2) - Body ground*7	L - Body ground	Light control rheostat ground	Always	Below 1 V
E8-24 (E) - Body ground*11	W - Body ground	Oil pressure sensor ground	Always	Below 1 Ω

CHECK DTC

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body Electrical / (desired system) / Trouble Codes.

e. Read the DTCs.

CLEAR DTC

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body Electrical / (desired system) / Trouble Codes.

e. Clear the DTCs.

for Preparation Click here

DATA LIST

HINT:

Using the intelligent tester to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body Electrical, Powertrain or Chassis / (desired system) / Data List.

e. According to the display on the intelligent tester, read the Data List.

Combination Meter

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
ODO/TRIP Change SW	Trip switch (ODO/TRIP switch) condition/ON or OFF	ON: Trip switch (ODO/TRIP switch) pushed OFF: Trip switch (ODO/TRIP switch) not pushed	-
Tail Cancel SW	TAIL cancel switch condition/ON or OFF	ON: TAIL cancel switch on OFF: TAIL cancel switch off	-

ACTIVE TEST

HINT:

Using the intelligent tester to perform Active Tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non-intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing Active Tests early in troubleshooting is one way to save diagnostic time. Data List information can be displayed while performing Active Tests.

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Turn the intelligent tester on.

d. Enter the following menus: Body Electrical / (Combination Meter) / Active Test.

e. According to the display on the intelligent tester, perform the Active Test.

Combination Meter

Tester Display	Test Part	Control Range	Diagnostic Note
Speed Meter Operation*1	Speedometer	0, 40, 80, 120, 160, 200, 240 or 280	Perform the test with the vehicle stopped and engine idling.
Tachometer operation	Tachometer	0, 1000, 2000, 3000, 4000, 5000, 6000 or 7000	Perform the test with the vehicle stopped and engine idling.
Fuel Meter Operation	Fuel receiver gauge	EMPTY, 1/4, FULL	Perform the test with the vehicle stopped and engine idling.
Volt Meter Operation	Voltmeter	0, 3, 6, 9, 12, 15 or 18	Perform the test with the vehicle stopped and engine idling.
Oil Pressure Meter Operation	Oil pressure receiver gauge	LOW, 1/4, 1/2, 3/4 or HIGH	Perform the test with the vehicle stopped and engine idling.
A/T Indicator operation (1)	A/T indicator (normal mode)	P, R, N, D, 4, 3, 2, L	Perform the test with the vehicle stopped and engine idling.
A/T Indicator operation (2)	A/T indicator (sequential mode)	Es, 5 or 6	Perform the test with the vehicle stopped and engine idling.
Meter Display 1*2	All dots in the multi-information display	ALL, 0, 1, 2, 3, 4, 5 or 6	Perform the test with the vehicle stopped and engine idling.
Meter Display 2*2	All dots in the multi-information display	7, 8 or 9	Perform the test with the vehicle stopped and engine idling.
Indicat. Lamp Beam	BEAM indicator light	ON or OFF	Perform the test with the vehicle stopped and engine idling.
Indicat. Lamp Head	HEAD indicator light	ON or OFF	Perform the test with the vehicle stopped and engine idling.
Indicat. Lamp Tail	TAIL indicator light	ON or OFF	Perform the test with the vehicle stopped and engine idling.
Indicat. Lamp Fr FOG	FRONT FOG indicator light	ON or OFF	Perform the test with the vehicle stopped and engine idling.
Indicat. Lamp Airbag	SRS warning light	ON or OFF	Perform the test with the vehicle stopped and engine idling.
Indicat. Precrash	PCS indicator light	ON or OFF	Perform the test with the vehicle stopped and engine idling.
Driver Side Seat Belt	Driver side seat belt warning light	ON or OFF	Perform the test with the vehicle stopped and engine idling.
Front Passenger Side Seat Belt	Passenger side seat belt warning light	ON or OFF	Perform the test with the vehicle stopped and engine idling.
Indicat. Lamp Doors All Open	All doors open light	ON or OFF	Perform the test with the vehicle stopped and engine idling.
Indicat. Lamp Washer	Multi-information display	ON or OFF	Perform the test with the vehicle stopped and engine idling.
Indicat. Lamp Fuel	Low fuel warning light	ON or OFF	Perform the test with the vehicle stopped and engine idling.

Indicat. Lamp Charge	CHARGE warning light	ON or OFF	Perform the test with the vehicle stopped and engine idling.
Indicat. Lamp ABS	ABS warning light	ON or OFF	Perform the test with the vehicle stopped and engine idling.
Indicat. Lamp Slip	SLIP indicator light	ON or OFF	Perform the test with the vehicle stopped and engine idling.
Indicat. Lamp Brake	Brake warning light	ON or OFF	Perform the test with the vehicle stopped and engine idling.
Indicat. Lamp oil Level	Multi-information display	ON or OFF	Perform the test with the vehicle stopped and engine idling.
Indicat. Lamp ECT PWR	ECT PWR indicator light	ON or OFF	Perform the test with the vehicle stopped and engine idling.
A/T Oil Temperature Operation	Multi-information display	ON or OFF	Perform the test with the vehicle stopped and engine idling.
Indicat. Lamp Cruise	CRUISE main indicator light	ON or OFF	Perform the test with the vehicle stopped and engine idling.
Indicat. KEY	Multi-information display	ON or OFF	Perform the test with the vehicle stopped and engine idling.
Master Warning	Master warning light	ON or OFF	Perform the test with the vehicle stopped and engine idling.
Indicat. Clearance Sonar LCD	Multi-information display	ON or OFF	Perform the test with the vehicle stopped and engine idling.
Indicat. INTUITIVE P/A LCD	Multi-information display	ON or OFF	Perform the test with the vehicle stopped and engine idling.
Indicat. Lamp VSC OFF	Multi-information display	ON or OFF	Perform the test with the vehicle stopped and engine idling.
Indicat. 2nd START	2nd START indicator light	ON or OFF	Perform the test with the vehicle stopped and engine idling.
Indicat. Ctr DIFF LOCK	Center differential lock indicator light	ON or OFF	Perform the test with the vehicle stopped and engine idling.
Indicat. 4LO	4LO indicator light	ON or OFF	Perform the test with the vehicle stopped and engine idling.
Indicat. CRAWL	CRAWL indicator light	ON or OFF	Perform the test with the vehicle stopped and engine idling.
Indicat. A/T P	A/T P indicator light	ON or OFF	Perform the test with the vehicle stopped and engine idling.
Water Temperature Meter Operation	Engine coolant temperature receiver gauge	LOW, NORMAL or HIGH	Perform the test with the vehicle stopped and engine idling.
Indicat. GLOW	Glow indicator light	ON or OFF	Perform the test with the vehicle stopped and engine idling.
Indicat. Lamp Water Level	Fuel filter and sedimenter indicator light	ON or OFF	Perform the test with the vehicle stopped and engine idling.
Indicat. Timing Belt	T-belt indicator light	ON or OFF	Perform the test with the vehicle stopped and engine idling.
Indicat. Over Speed	Speed limit indicator light	ON or OFF	Perform the test with the vehicle stopped and engine idling.

HINT:

*1:

- **The doors will be locked automatically when performing the speedometer Active Test. This is a normal function.**
- **The displayed value has the same units (km/h, mph) as the main scale of the vehicle speedometer.**
- **The needle position should be within the acceptable range.**

*2: If this Active Test is being performed and the engine switch is turned off and then on (IG), the A/T and ODO/TRIP display background may turn white. If this occurs, end this Active Test and turn the engine switch off.

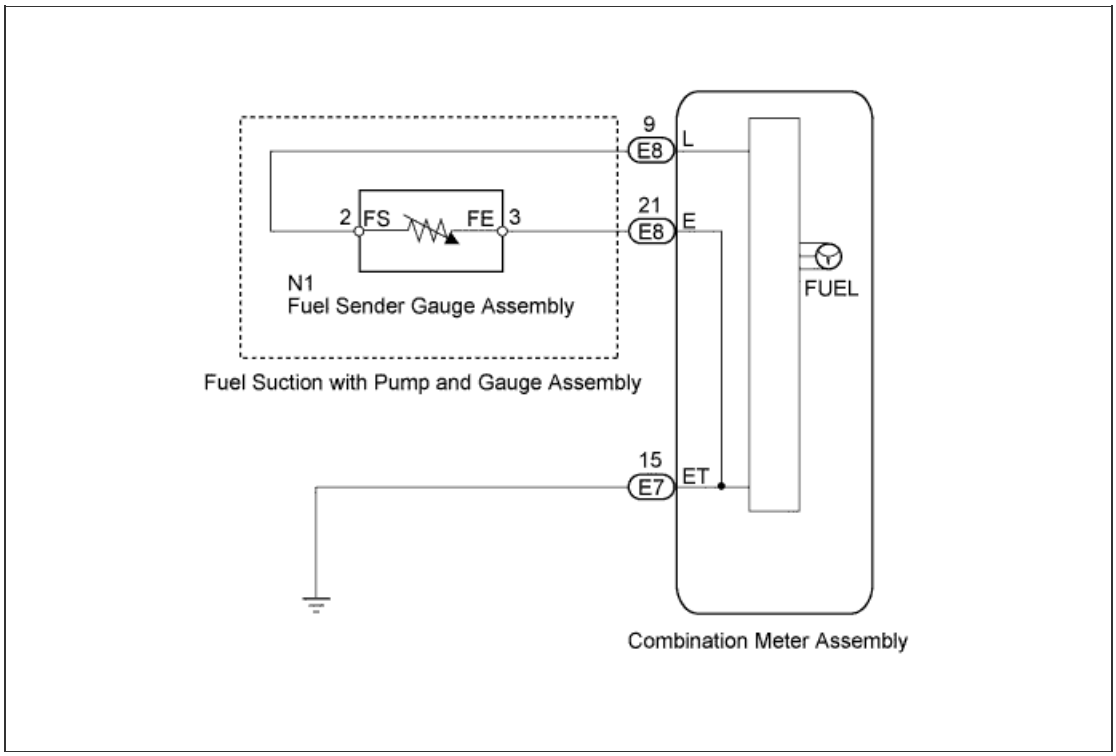
DTC B1500 Fuel Sender Open Detected



for Preparation Click here

DESCRIPTION

This DTC is output when the combination meter detects a fuel sender gauge malfunction via the CAN.

DTC Code	DTC Detection Condition	Trouble Area
B1500	When the combination meter detects a fuel sender gauge malfunction.	• Harness or connector • Combination meter assembly • Fuel suction with pump and gauge tube assembly • Fuel sender gauge assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

1.READ VALUE USING INTELLIGENT TESTER (FUEL SENDER GAUGE)

a. Operate the intelligent tester according to the display and select the Data List (Click here).

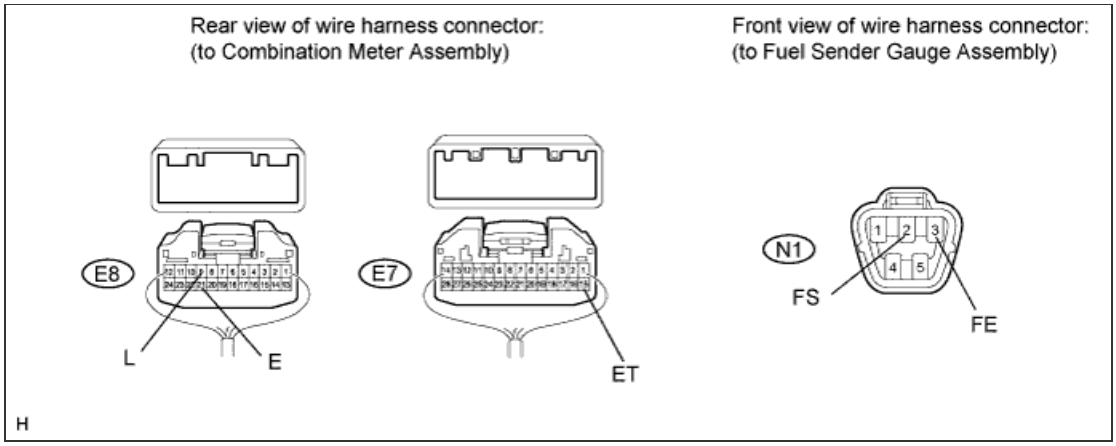
Combination Meter

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Fuel Input	Fuel sender gauge (main) input signal/Min.: 0, Max.: 127.5	Fuel sender input value	Unit: L

OK:

Fuel value displayed on the intelligent tester is almost the same as needle indication.

Result



Result	Proceed to
NG	A
OK (w/ Multi-information Display)	B
OK (w/o Multi-information Display)	C

B	REPLACE COMBINATION METER ASSEMBLY (Click here)

C → REPLACE COMBINATION METER ASSEMBLY (Click here)

A

2.CHECK HARNESS AND CONNECTOR (COMBINATION METER - FUEL SENDER GAUGE AND BODY GROUND)

a. Disconnect the 7 and meter connectors.

b. Disconnect the N1 gauge connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance

Tester Connection	Condition	Specified Condition
E8-9 (L) - N1-2 (FS)	Always	Below 1 Ω
E8-21 (E) - N1-3 (FE)		
E7-15 (ET) - Body ground		
E8-9 (L) or N1-2 (FS) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

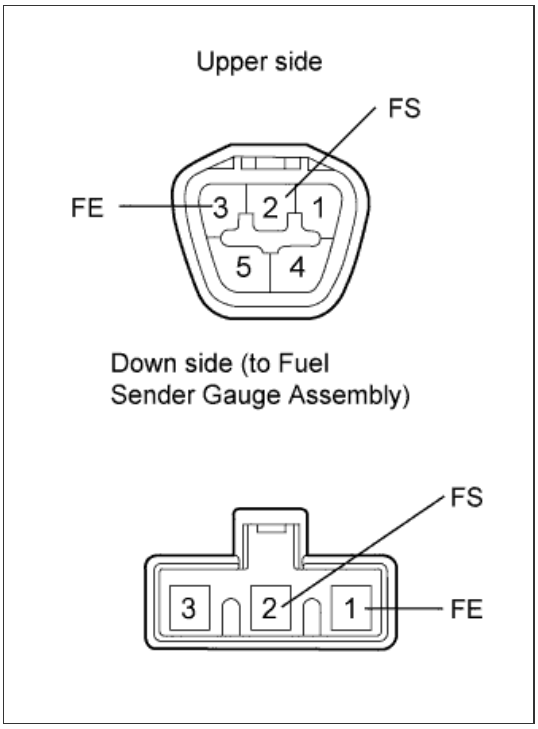
OK

3.INSPECT FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY

a. for 1GR-FE:
Remove the fuel sender gauge (Click here).

b. for 2UZ-FE:
Remove the fuel sender gauge (Click here).

c. for 1VD-DTV:
Remove the fuel sender gauge (Click here).

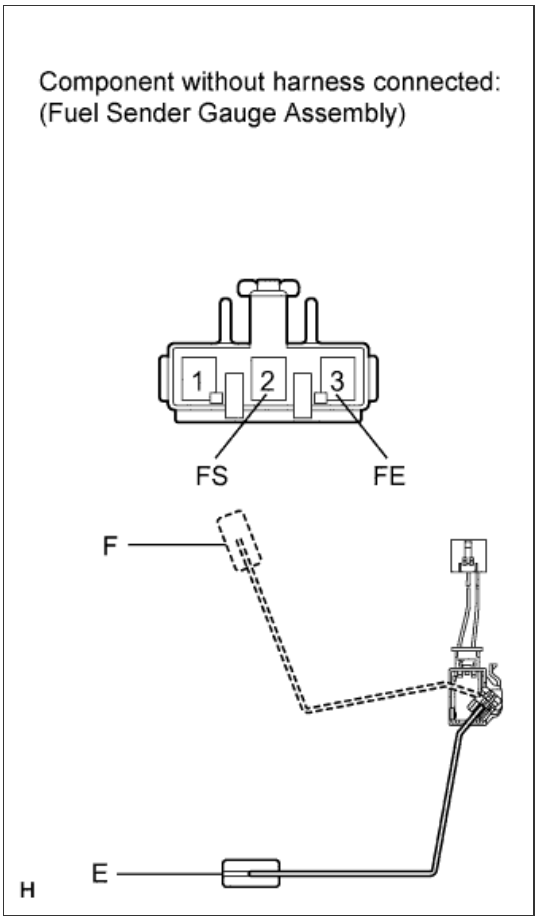


d. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
2 (FS) - 2 (FS)	Always	Below 1 Ω
3 (FE) - 1 (FE)		

Result



Result	Proceed to

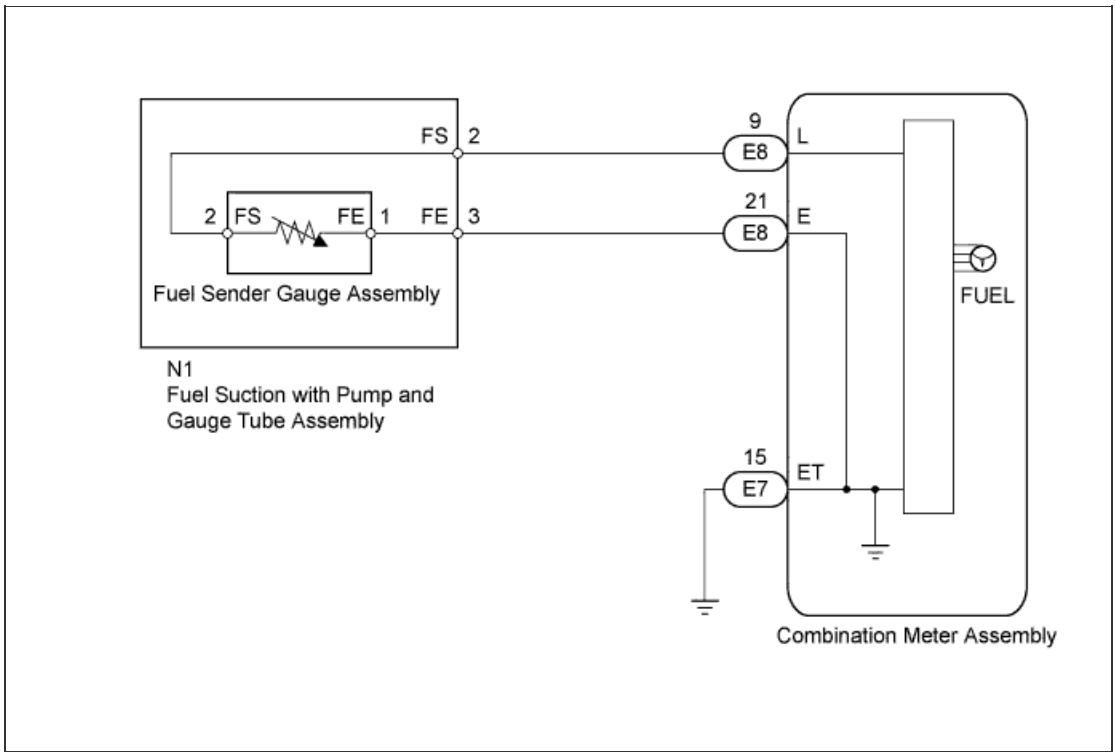
DTC B1500 Fuel Sender Open Detected



for Preparation Click here

DESCRIPTION

This DTC is output when the combination meter detects a fuel sender gauge malfunction via the CAN.

DTC Code	DTC Detection Condition	Trouble Area
B1500	When the combination meter detects a fuel sender gauge malfunction.	• Harness or connector • Combination meter assembly • Fuel suction with pump and gauge tube assembly • Fuel sender gauge assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

1.READ VALUE USING INTELLIGENT TESTER (FUEL SENDER GAUGE)

a. Operate the intelligent tester according to the display and select the Data List (Click here).

Combination Meter

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Fuel Input	Fuel sender gauge (main) input signal/Min.: 0, Max.: 127.5	Fuel sender input value	Unit: L

OK:

Fuel value displayed on the intelligent tester is almost the same as needle indication.

Result

Result	Proceed to
NG	A
OK (w/ Multi-information Display)	B
OK (w/o Multi-information Display)	C

B	REPLACE COMBINATION METER ASSEMBLY (Click here)

C → REPLACE COMBINATION METER ASSEMBLY (Click here)

A

2.CHECK HARNESS AND CONNECTOR (COMBINATION METER - PUMP AND GAUGE AND BODY GROUND)

a. Disconnect the E7 and E8 combination meter assembly connectors.

b. Disconnect the N1 fuel suction with pump and gauge tube assembly connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E8-9 (L) - N1-2 (FS)	Always	Below 1 Ω
E8-21 (E) - N1-3 (FE)	Always	Below 1 Ω
E7-15 (ET) - Body ground	Always	Below 1 Ω
E8-9 (L) or N1-2 (FS) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3.INSPECT FUEL SUCTION WITH PUMP AND GAUGE TUBE ASSEMBLY

a. Remove the fuel sender gauge assembly.

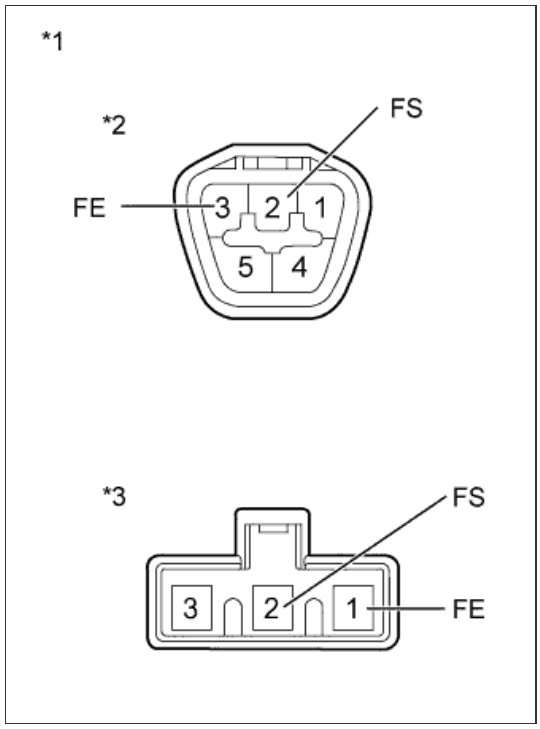
HINT:

- **for 1GR-FE (Click here)**
- **for 2U FE (Click here)**
- **for 3UR-FE (Click here)**
- **for 1VD-FTV (Click here)**

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A-2 (FS) - B-2 (FS)	Always	Below 1 Ω
A-3 (FE) - B-1 (FE)	Always	Below 1 Ω



Text in Illustration

1	Component without harness connected (Fuel Suction with Pump and Gauge Tube Assembly)

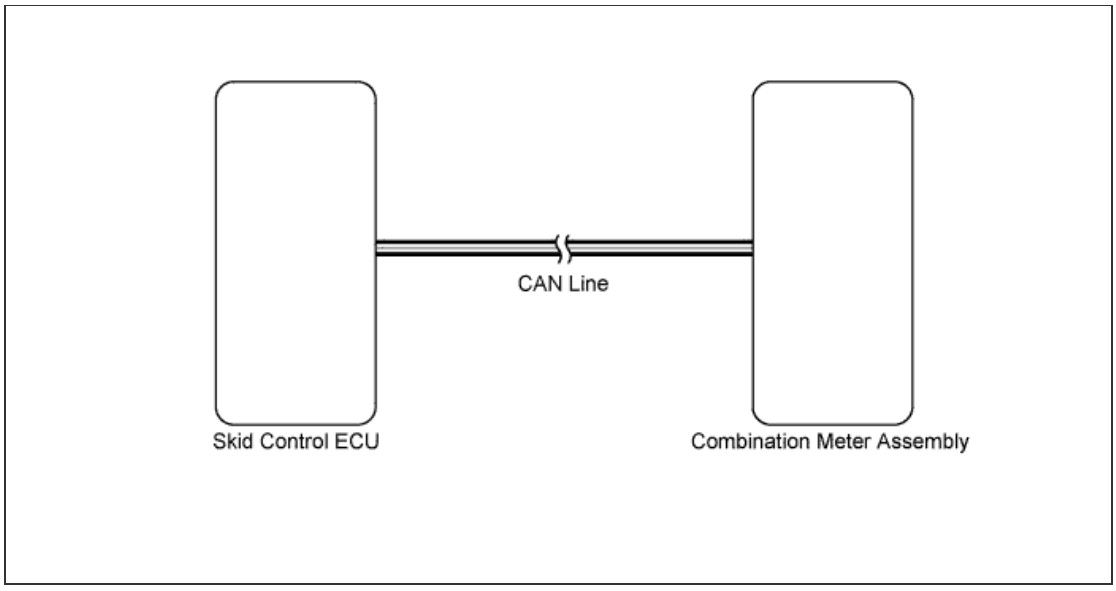
DTC U0129 Lost Communication with Brake System Control Module



for Preparation Click here

DESCRIPTION

The combination meter communicates with the skid control ECU via the CAN line.

DTC Code	DTC Detection Condition	Trouble Area
U0129	When 15 seconds have elapsed after the engine is started and IG voltage is 10.5 V or more while no communication with the skid control ECU continues for 3 seconds or more (no communication with the ECM or skid control ECU continues for 60 seconds or more).	CAN communication system

WIRING DIAGRAM

for Preparation Click here

DESCRIPTION

This circuit is the power source circuit for the combination meter. This circuit provides 2 power source types: one is a constant power source mainly used as a backup power source, and the other is a power source mainly used for signal transmission. The constant power source is mainly used as a backup power source for the meter CPU. However, it is also used for communication. If a voltage of 12 V is not applied to terminal IG+ when the engine switch is on (IG), indicators will not operate.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.INSPECT FUSE (MET, ECU-B1)

a. Remove the MET and ECU-B1 fuses from the engine room relay block.

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
MET fuse	Always	Below 1 Ω
ECU-B1 fuse		

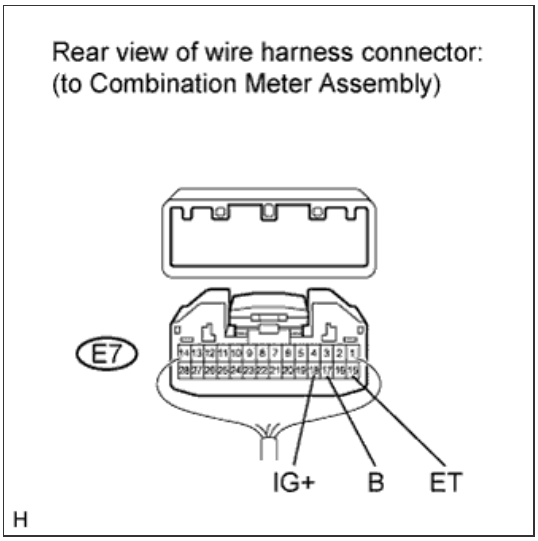
NG → REPLACE FUSE

OK

2.CHECK HARNESS AND CONNECTOR (COMBINATION METER ASSEMBLY - BATTERY AND BODY GROUND)

a. Disconnect the E7 meter connector.

b. Measure the resistance and voltage according to the value(s) in the tables below.



Standard Resistance:

Tester Connection	Condition	Specified Condition

E7-15 (ET) - Body ground	Always	Below 1 Ω

Standard Voltage:

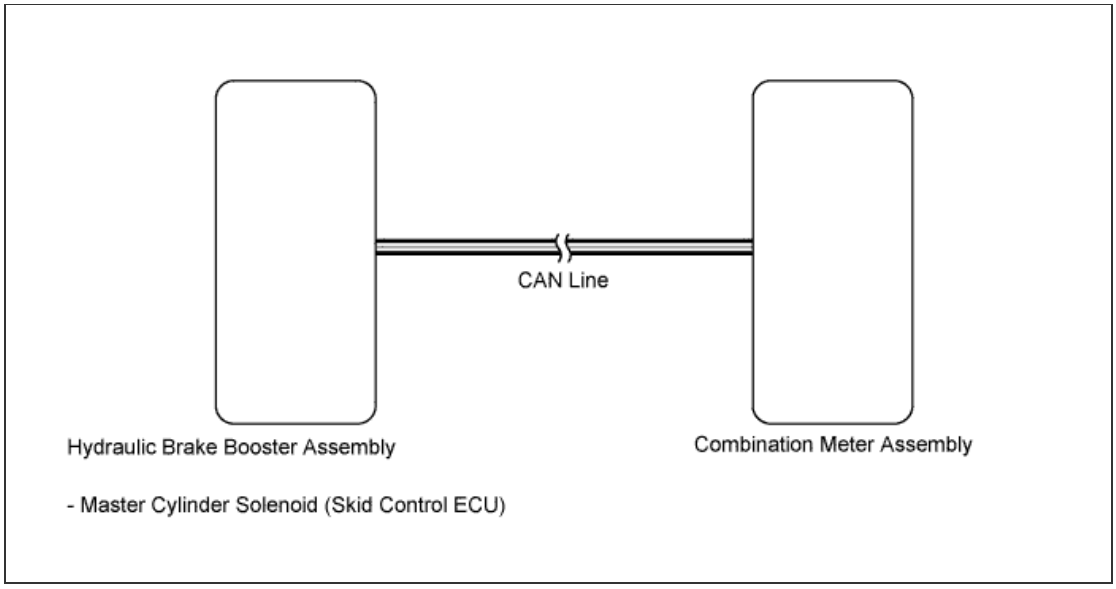
Tester Connection	Switch Condition	Specified Condition
E7-17 (B) - Body ground	Always	11 to 14 V
E7-18 (IG+) - Body ground	Engine switch on (IG)	

Result

Result	Proceed to
NG	A
OK (w/ Multi-information Display)	B
OK (w/o Multi-information Display)	C

B → REPLACE COMBINATION METER ASSEMBLY (Click here)

C → REPLACE COMBINATION METER ASSEMBLY (Click here)



A → REPAIR OR REPLACE HARNESS OR CONNECTOR

for Preparation Click here

DESCRIPTION

The combination meter receives vehicle speed signals from the skid control ECU via the CAN line. The vehicle speed sensor detects the voltage that varies according to the vehicle speed. The skid control ECU supplies power to the vehicle speed sensor. The skid control ECU detects vehicle speed signals based on the pulses of the voltage.

INSPECTION PROCEDURE

HINT:

If there is an open or short in the engine coolant temperature sensor circuit, an SFI system DTC is output. If output, perform troubleshooting on the SFI system first.

1.CHECK CAN COMMUNICATION SYSTEM

a. Check for DTCs (Click here).

Result

Result	Proceed to
CAN communication system DTC is not output	A
CAN communication system (for LHD) DTC is output	B
CAN communication system (for RHD) DTC is output	C

B → Go to CAN COMMUNICATION SYSTEM (Click here)

C → Go to CAN COMMUNICATION SYSTEM (Click here)

A

2.PERFORM ACTIVE TEST USING INTELLIGENT TESTER (COOLANT TEMP)

a. Operate the intelligent tester according to the display and select Active Test.

Combination Meter

Tester Display	Test Part	Control Range	Diagnostic Note
Water Temperature Meter Operation	Engine coolant temperature receiver gauge	LOW, NORMAL or HIGH	Perform the test with the vehicle stopped and engine idling.

HINT:

Confirm that the vehicle is stopped and the engine is idling.

OK:

Needle indication is normal.

Result

Result	Proceed to
OK	A
NG (w/ Multi-information Display)	B
NG (w/o Multi-information Display)	C

B → REPLACE COMBINATION METER ASSEMBLY (Click here)

C → REPLACE COMBINATION METER ASSEMBLY (Click here)

A

3.READ VALUE USING INTELLIGENT TESTER (COOLANT TEMPERATURE)

a. Operate the intelligent tester according to the display and select Data List.

Combination Meter

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Coolant Temperature	Engine coolant temperature/Min.: -40 (-40), Max.: 140 (284)	After warming up: 80 to 105 (176 to 221)	• Unit: °C (°F) • If the value is -40 (-40): The sensor circuit is open • If the value is 140 (284): The sensor circuit is shorted.

OK:

Coolant temperature displayed on the intelligent tester is between 80°C (176°F) and 95°C (203°F) after warming up.

Result

Result Result	Proceed to
OK	A
NG (w/ Multi-information Display)	B
NG (w/o Multi-information Display)	C

B → REPLACE COMBINATION METER ASSEMBLY (Click here)

C → REPLACE COMBINATION METER ASSEMBLY (Click here)

A

4.READ VALUE USING INTELLIGENT TESTER (ENGINE COOLANT)

a. Operate the intelligent tester according to the display and select Data List.

Engine*1, *2, *3

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Coolant Temp	Engine coolant temperature: Min.: -40°C, Max.:140°C	80 to 100°C (176 to 212°F): After warming up	• If the value is -40°C (-40°F), the sensor circuit is open. • If the value is 140°C (284°F), the sensor circuit is shorted.

Engine*4

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
			• If the value is -40°C (-40°F) or 140°C (284°F), the sensor

Coolant Temp	Engine coolant temperature/ Min.: -40°C, Max.:140°C	After warming up engine: 75 to 90°C (167 to 194°F)	circuit is open or shorted. • After a long soak, the coolant temperature, intake air temperature, and ambient air temperature are approximately equal.

*1: for 1GR-FE
*2: for 2UZ-FE
*3: for 3UR-FE
*4: for 1VD-FTV

OK:
Engine coolant temperature value displayed on the intelligent tester is almost the same as actual engine coolant temperature.

Result

Result	Proceed to
OK	A
NG (for 1GR-FE)	B
NG (for 2UZ-FE)	C
NG (for 3UR-FE)	D
NG (for 1VD-FTV)	E

B	Go to SFI SYSTEM (Click here)
C	Go to SFI SYSTEM (Click here)
D	Go to SFI SYSTEM (Click here)
E	Go to ECD SYSTEM (Click here)

A

5.REPLACE COMBINATION METER ASSEMBLY

a. w/ Multi-information Display:

i. Temporarily replace the combination meter with a new one (Click here).

b. w/o Multi-information Display:

i. Temporarily replace the combination meter with a new one (Click here).

NEXT

6.CHECK COMBINATION METER ASSEMBLY

a. w/ Multi-information Display:

i. Check that the operation of the combination meter returns to normal (Click here).

b. w/o Multi-information Display:

i. Check that the operation of the combination meter returns to normal (Click here).

OK:
Operation of combination meter returns to normal.

Result

Result	Proceed to
OK	A
NG (for 1GR-FE)	B
NG (for 2UZ-FE)	C
NG (for 3UR-FE)	D
NG (for 1VD-FTV)	E

B	REPLACE ECM (Click here)

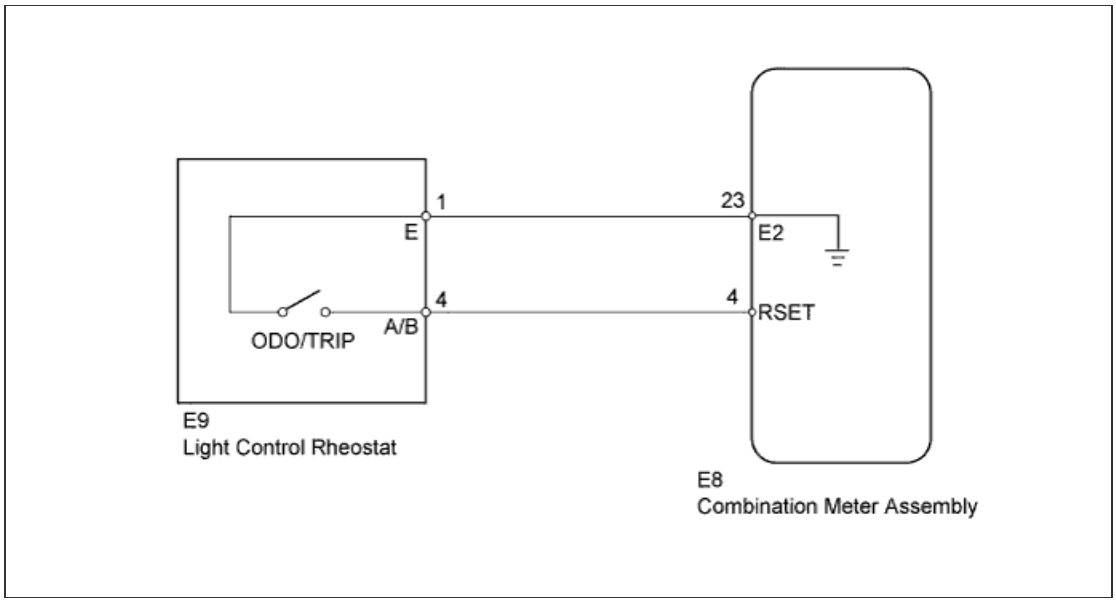
END (COMBINATION METER IS DEFECTIVE)

for Preparation Click here



DESCRIPTION

w/ Multi-information Display:
The ODO/TRIP display of the meter changes each time the ODO/TRIP switch on the light control rheostat is pressed.

HINT:

For more information about changing between displays, refer to the owner's manual.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.READ VALUE USING INTELLIGENT TESTER (LIGHT CONTROL RHEOSTAT)

a. Operate the intelligent tester according to the display and select Data List.

Combination Meter

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
ODO/TRIP Change SW	Trip switch (ODO/TRIP switch) condition/ON or OFF	ON: Trip switch pushed OFF: Trip switch not pushed	-

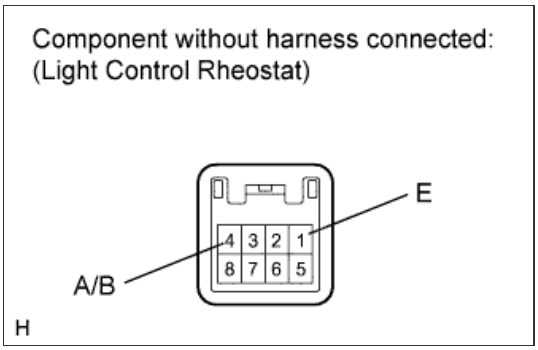
OK:
Switch condition (ON/OFF) can be switched by actual operation.

NG → Go to step 2

OK →

REPLACE COM INATION METER ASSEM LY (Click here)

2.INSPECT LIGHT CONTROL RHEOSTAT (TRIP SWITCH)



a. Remove the light control rheostat (Click here).

b. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

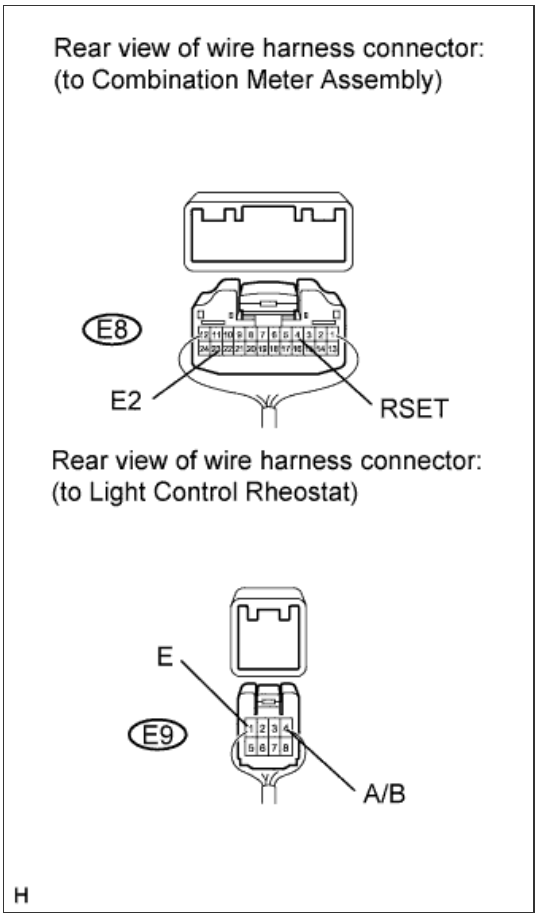
		Specified

Tester Connection	Switch Condition	Condition
4 (A/B) - 1 (E)	TRIP switch ON (Pushed)	Below 200 Ω
	TRIP switch OFF (Not pushed)	1 MΩ or higher

NG → REPLACE LIGHT CONTROL RHEOSTAT (Click here)

OK

3.CHECK HARNESS AND CONNECTOR (COM INATION METER - LIGHT CONTROL RHEOSTAT AND ODY GROUND)



a. Disconnect the E8 ECU connector.

b. Disconnect the E9 switch connector.

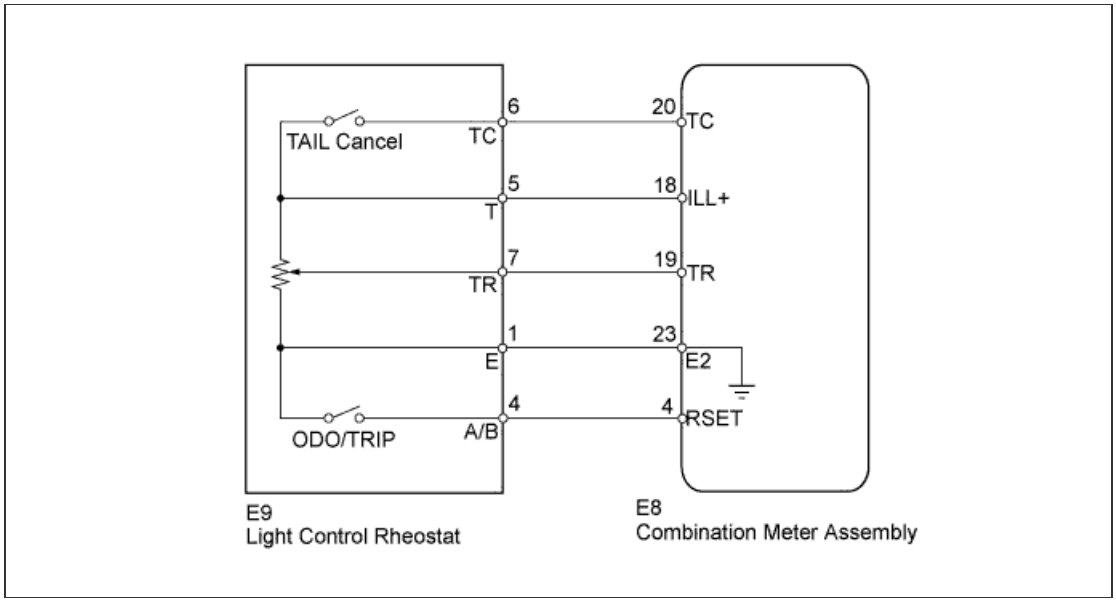
c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E8-4 (RSET) - E9-4 (A/B)	Always	Below 1 Ω
E8-23 (E2) - E9-1 (E)		
E8-23 (E2) - Body ground		
E8-4 (RSET) or E9-4 (A/B) - Body ground		10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK



REPLACE COM INATION METER ASSEM LY (Click here)

for Preparation Click here

DESCRIPTION

w/ Multi-information Display:
When the light control rheostat knob is turned to the left, the combination meter and vehicle interior illumination will become brighter. When the light control rheostat knob is turned to the right, the combination meter and vehicle illumination will dim.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.READ VALUE USING INTELLIGENT TESTER (LIGHT CONTROL RHEOSTAT)

a. Operate the intelligent tester according to the display and select Data List (Click here).

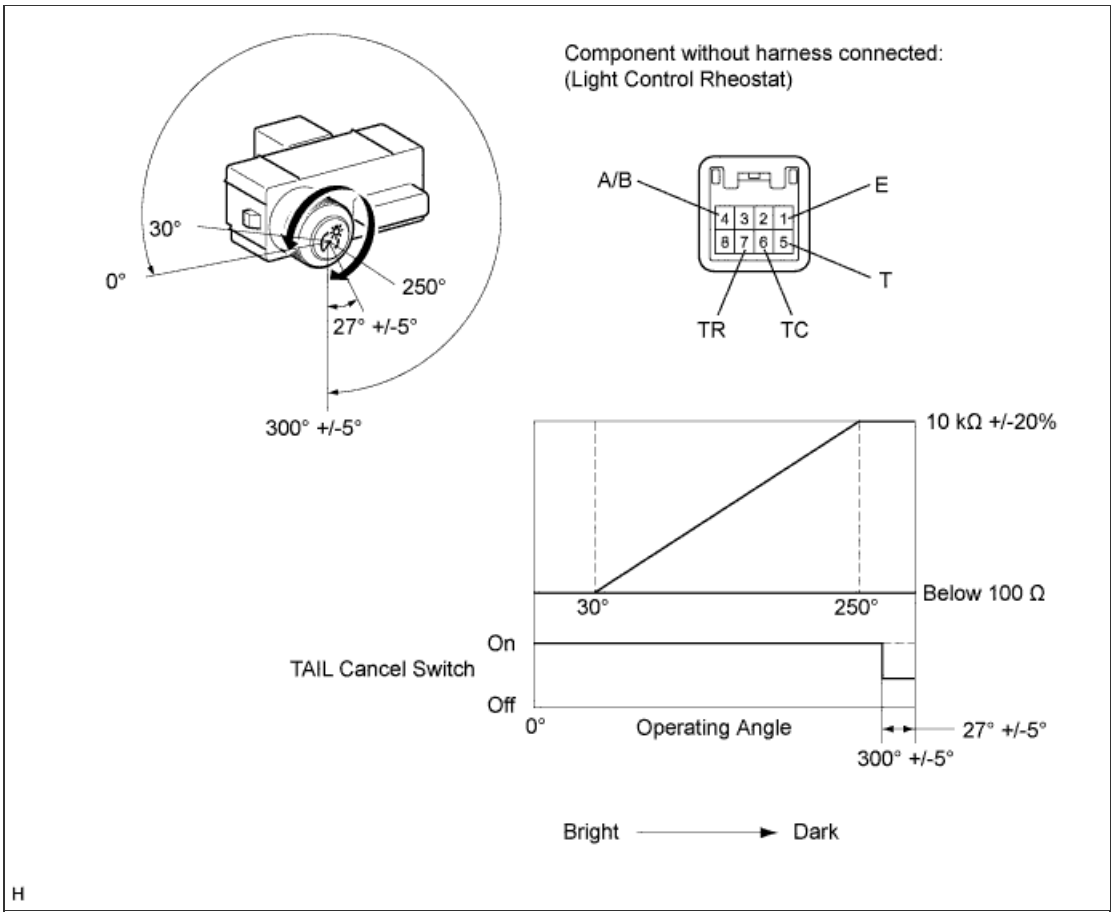
Combination Meter

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
Tail Cancel SW*	TAIL cancel switch condition/ON or OFF	ON: TAIL cancel switch ON OFF: TAIL cancel switch OFF	-
Rheostat value	Light control rheostat switch input/Min.: 0, Max.: 100	Light control rheostat switch is fully turned right (0) → fully turned left (100)	Unit: %

HINT:

*: w/ TAIL Cancel Switch

OK:
Light brightness can be changed within specified range by manual operation.



NG → Go to step 2

OK

REPLACE COMBINATION METER ASSEMBLY (Click here)

2.INSPECT LIGHT CONTROL RHEOSTAT

a. Inspect the light control rheostat.

i. Remove the light control rheostat (Click here).

ii. Measure the resistance according to the table below.

Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
6 (TC) - 1 (E)	TAIL cancel switch off → on	10 kΩ or higher → Below 1 Ω
5 (T) - 1 (E)	Always	10 kΩ or higher
7 (TR) - 1 (E)	Light control rheostat fully turned right → fully turned left	10 kΩ or higher → Below 100 Ω

b. Inspect the trip switch.

i. Measure the resistance according to the table below.

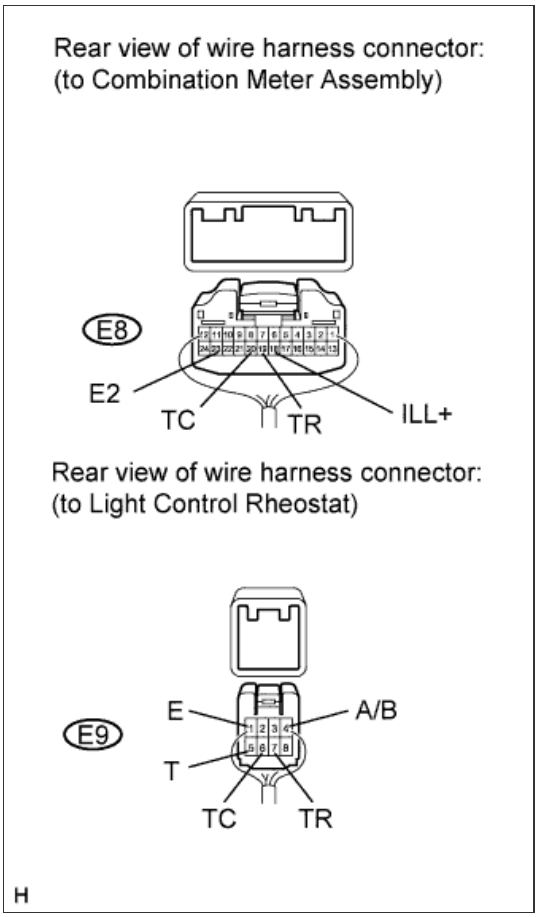
Standard Resistance:

Tester Connection	Switch Condition	Specified Condition
4 (A/B) - 1 (E)	TRIP switch on (Pushed)	Below 200 Ω
	TRIP switch off (Not Pushed)	1 MΩ or higher

NG → REPLACE LIGHT CONTROL RHEOSTAT (Click here)

OK

3.CHECK HARNESS AND CONNECTOR (COMBINATION METER - LIGHT CONTROL RHEOSTAT)



a. Disconnect the E8 meter connector.

b. Disconnect the E9 rheostat connector.

c. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
E8-18 (ILL+) - E9-5 (T)	Always	Below 1 Ω
E8-19 (TR) - E9-7 (TR)		
E8-23 (E2) - E9-1 (E)		
E8-20 (TC) - E9-6 (TC)		

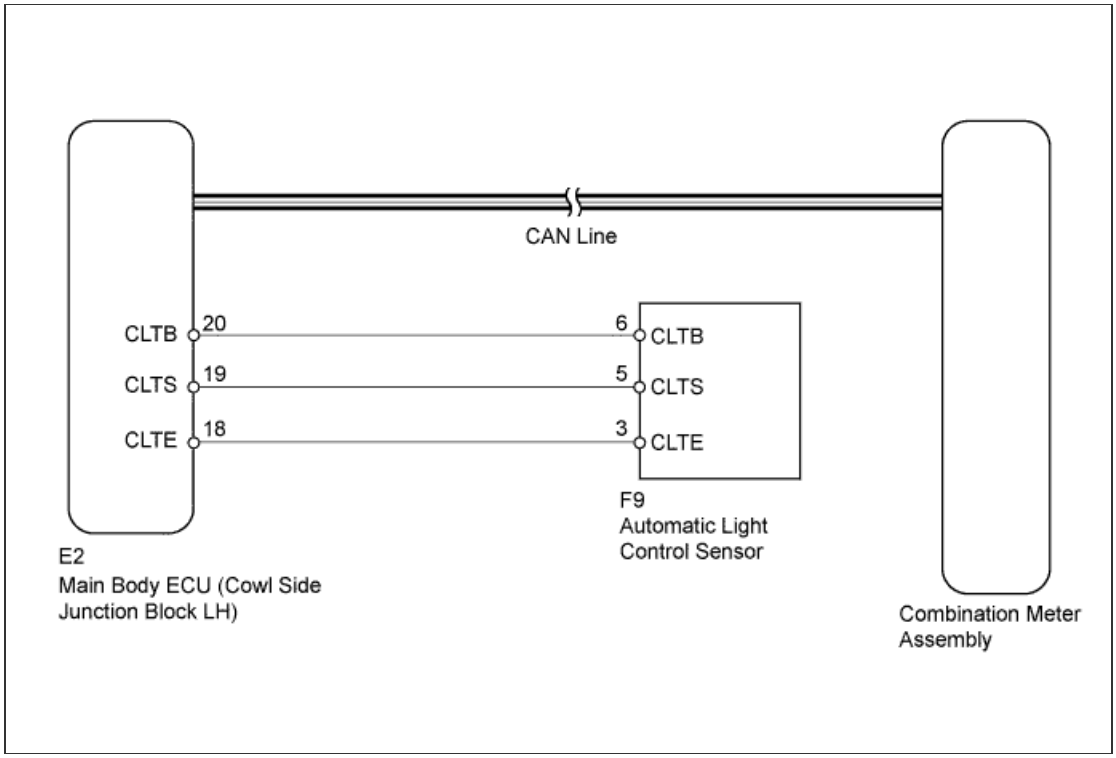
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE COMBINATION METER ASSEMBLY (Click here)

for Preparation Click here

DESCRIPTION



w/ Multi-information Display:

In this circuit, the combination meter assembly receives auto dimmer signals from the main body ECU using the CAN communication lines. When the combination meter assembly receives an auto dimmer signal, it dims the meter illumination. The main body ECU determines whether it is daytime, twilight or nighttime based on the waveform transmitted from the automatic light control sensor. If the main body ECU determines that it is daytime, the ECU does not send auto dimmer signals. Therefore, the meter illumination (warning and indicator lights) will not dim even if the driver accidentally turns the light control switch to the TAIL or HEAD position in the daytime.

HINT:

When the meter illumination does not dim at night, the light control rheostat position is in the TAIL cancel position, or there may be a malfunction in the automatic light control sensor, main body ECU, CAN communication system, wire harness or connector, or combination meter.

WIRING DIAGRAM

INSPECTION PROCEDURE

1.CHECK CAN COMMUNICATION SYSTEM

a. Check for DTCs (Click here).

Result

Result	Proceed to
DTC is not output	A
CAN communication system (for LHD) DTC is output	B
CAN communication system (for RHD) DTC is output	C
Lighting system DTC (B1244) is output	D

B	Go to CAN COMMUNICATION SYSTEM (Click here)
C	Go to CAN COMMUNICATION SYSTEM (Click here)

D → Go to LIGHTING SYSTEM (Click here)

A

2.PER ORM ACTIVE TEST USING INTELLIGENT TESTER (DIMMER SWITCH)

a. Operate the intelligent tester according to the display and select Active Test.

Main Body

Tester Display	Test Part	Control Range	Diagnostic Note
Dimmer Signal	Illumination dimming operation	ON or OFF	-

OK:

Meter illumination is dimmed when the dimmer switch is ON.

HINT:

Refer to the sensitivity setting in the customization table of the automatic light control system (Click here).

NG → Go to step 3

OK

CHECK LIGHTING SETTING (Click here)

3.REPLACE COMBINATION METER ASSEMBLY

a. Temporarily replace the combination meter with a new one (Click here).

NEXT

4.CHECK COMBINATION METER ASSEMBLY

a. Check that the operation of the combination meter returns to normal (Click here).

OK:

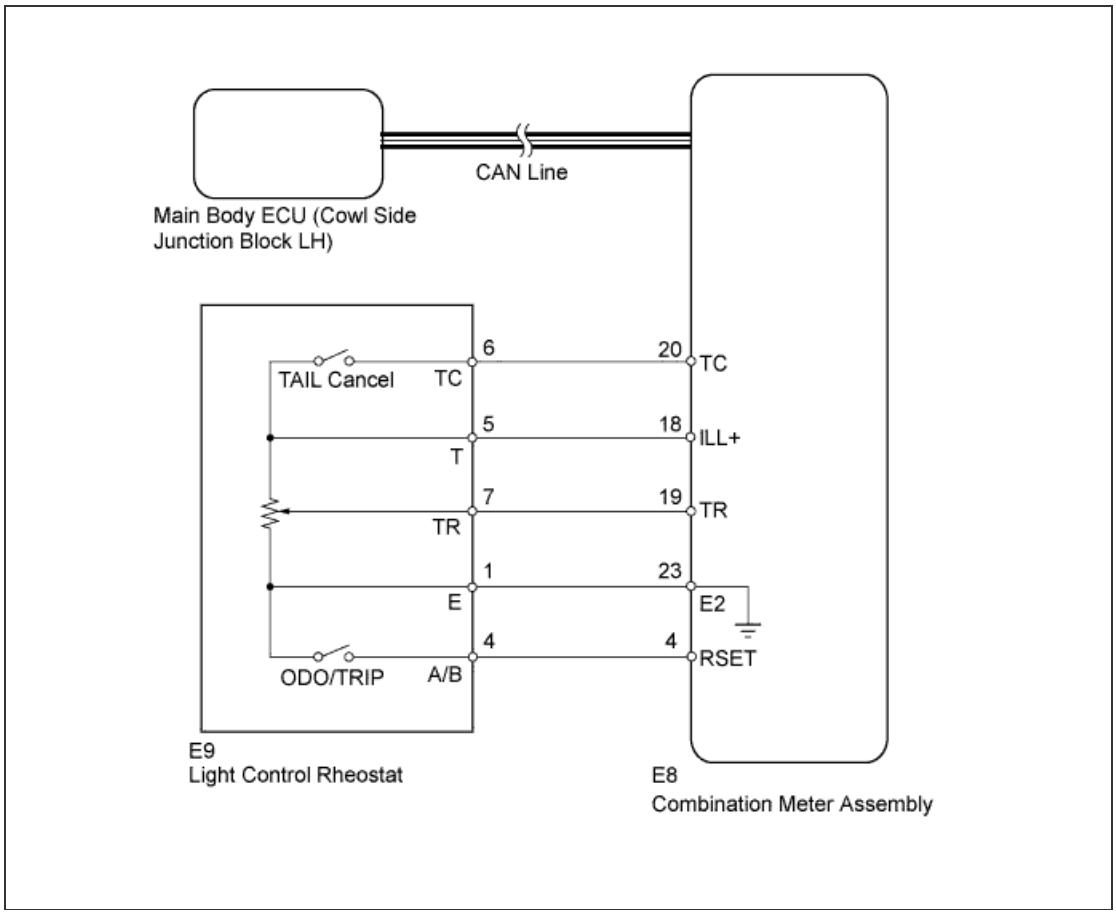
Operation of combination meter returns to normal.

NG → REPLACE MAIN BODY ECU (COWL SIDE UNCTION BLOCK LH)

OK

END COMBINATION METER IS DE ECTIVE)

for Preparation Click here



DESCRIPTION

w/ Multi-information Display:
If the dimmer switch is turned to TAIL, HEAD or AUTO, the main body ECU sends a TAIL relay signal, panel light illumination signal, panel relay signal, and TAIL cancel switch off signal to the combination meter. Then the meter and accessory meter become dim.

HINT:

TAIL cancel switch: When the headlights are illuminated and the TAIL cancel switch is turned on, the meter does not dim.

WIRING DIAGRAM

INSPECTION PROCEDURE

REPLACE COMBINATION METER ASSEMBLY (Click here)

for Preparation Click here

DESCRIPTION

The oil pressure sender detects the oil pressure generated when the engine is started. The combination meter determines that the engine is running when the engine speed is 400 rpm or more, and determines that the engine is cranking when the engine speed is 200 rpm or less. The oil pressure receiver gauge detects and indicates the oil pressure applied to the oil pressure sender.

1. DISABLE AUTO TILT AWAY FUNCTION

a. Disable the function by changing the customize parameter (Click here).

NOTICE:

Record the current customize parameter setting (whether the Autoaway/Return function is enabled or disabled) in order to restore the current setting after finishing the operation.

HINT:

Performing the above operation causes the Autoaway/Return function to be disabled when the engine switch is turned off.

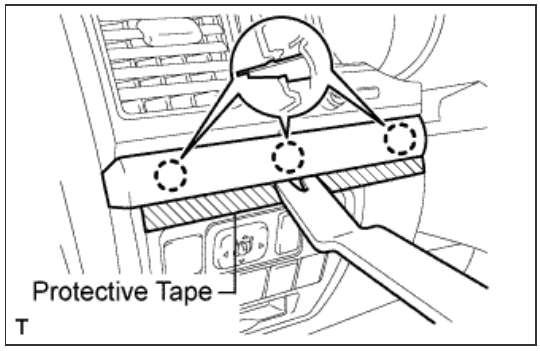
b. Turn the engine switch on (IG). Operate the tilt and telescopic switch to fully e tend and lower the steering column assembly.

c. Turn the engine switch off.

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

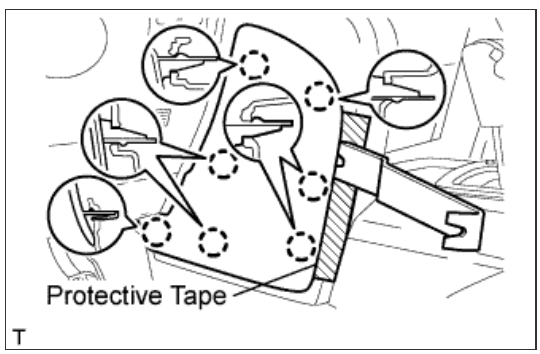


NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

3. REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Place protective tape as shown in the illustration.

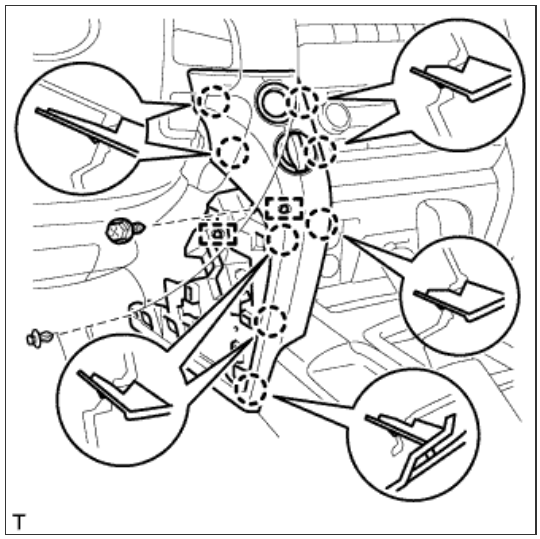


b. Using a moulding remover, detach the 3 claws and remove the panel garnish.

4. REMOVE NO. 2 INSTRUMENT PANEL FINISH PANEL CUSHION

a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 7 claws and remove the panel cushion.

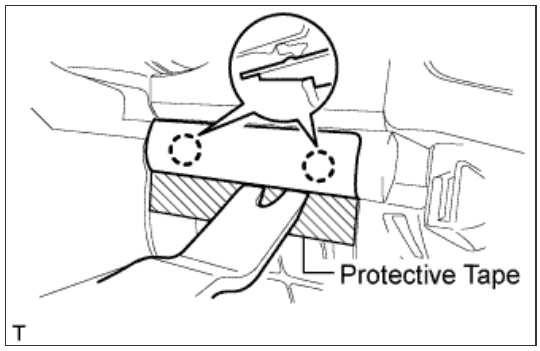


5. REMOVE LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

a. Remove the clip.

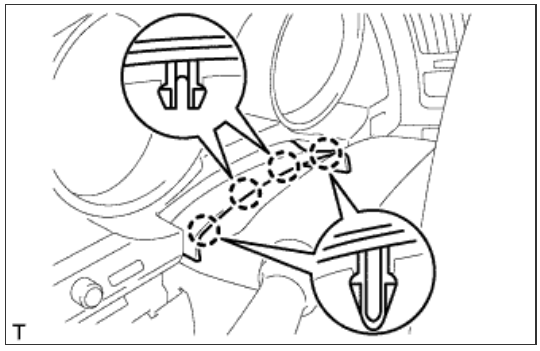
b. Remove the screw.

c. Detach the 8 claws.



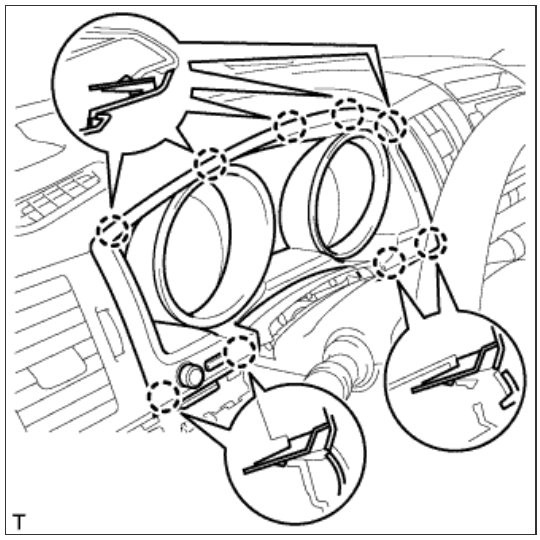
d. Remove the panel pad and disconnect the connectors and 2 clamps.

6. REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH

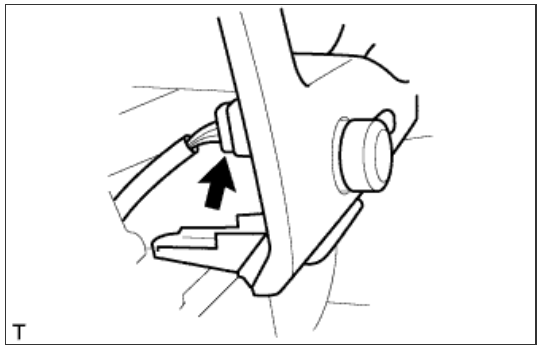


a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 2 claws and remove the panel garnish.

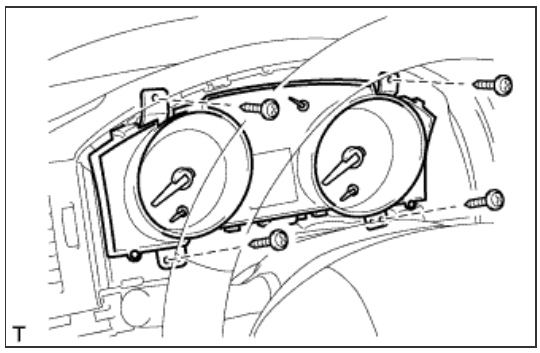


7. REMOVE INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY

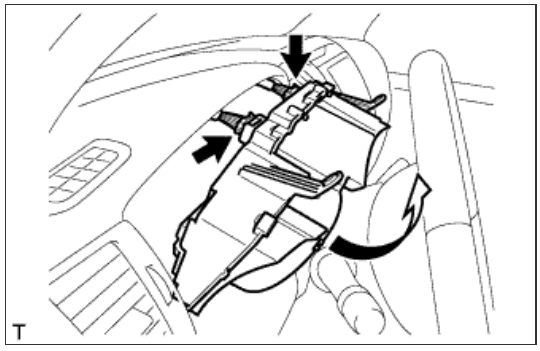


a. Detach the 4 claws.

b. Detach the 9 claws.



c. Remove the finish panel and disconnect the connector.



8. REMOVE COMBINATION METER ASSEMBLY

a. Remove the 4 screws.

b. Disconnect the connectors, and remove the combination meter by pulling it up in the direction of the arrow in the illustration.

for Preparation Click here

1. DISABLE AUTO TILT AWAY FUNCTION

a. Disable the function by changing the customize parameter (Click here).

NOTICE:

Record the current customize parameter setting (whether the Autoaway/Return function is enabled or disabled) in order to restore the current setting after finishing the operation.

HINT:

Performing the above operation causes the Autoaway/Return function to be disabled when the engine switch is turned off.

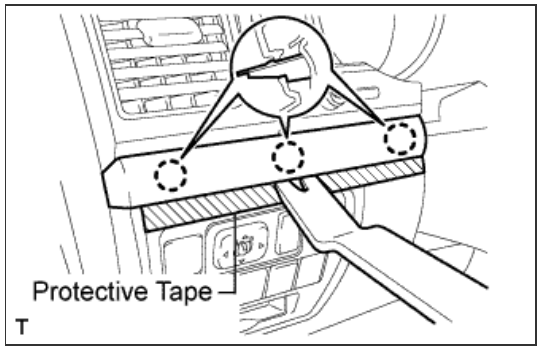
b. Turn the engine switch on (IG). Operate the tilt and telescopic switch to fully e tend and lower the steering column assembly.

c. Turn the engine switch off.

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

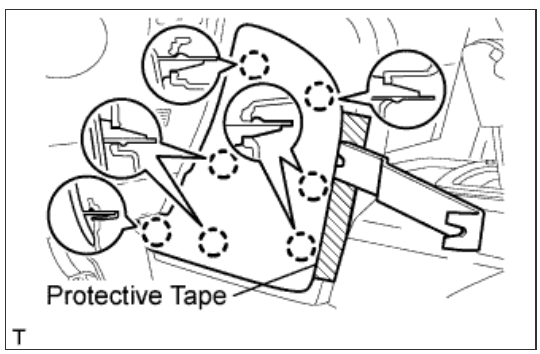


NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

3. REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Place protective tape as shown in the illustration.

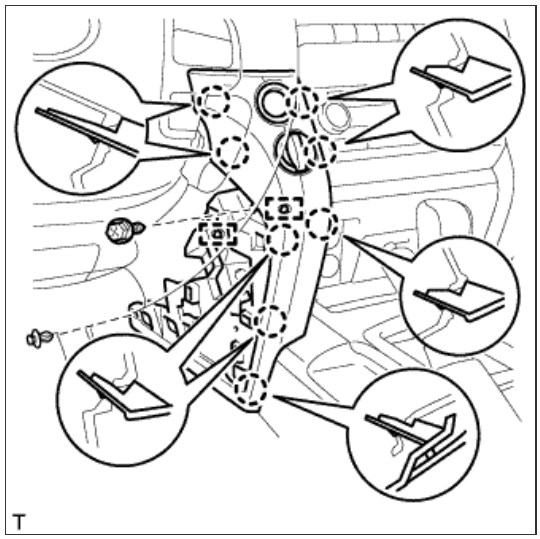


b. Using a moulding remover, detach the 3 claws and remove the panel garnish.

4. REMOVE NO. 2 INSTRUMENT PANEL FINISH PANEL CUSHION

a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 7 claws and remove the panel cushion.

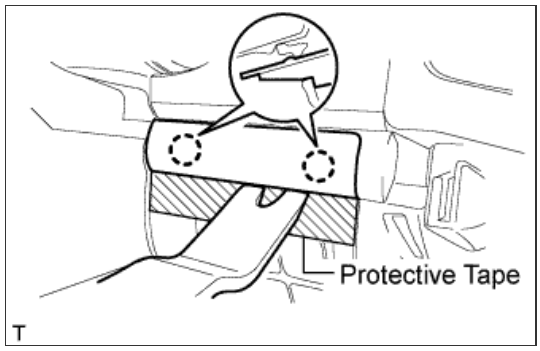


5. REMOVE LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

a. Remove the clip.

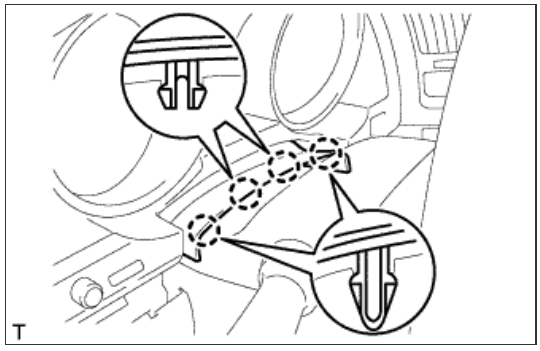
b. Remove the screw.

c. Detach the 8 claws.



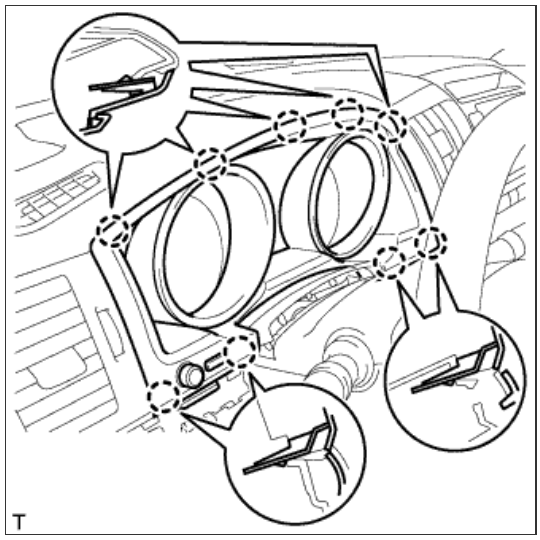
d. Remove the panel pad and disconnect the connectors and 2 clamps.

6. REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH

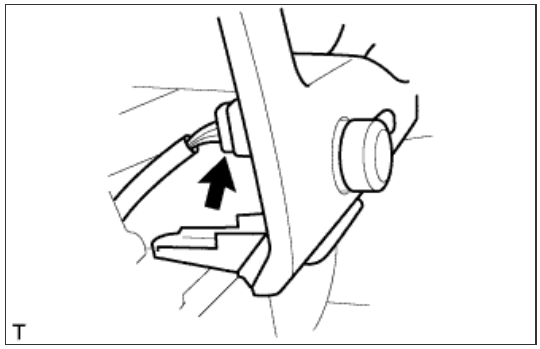


a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 2 claws and remove the panel garnish.

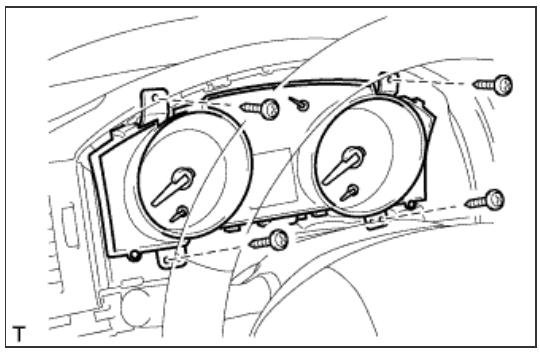


7. REMOVE INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY

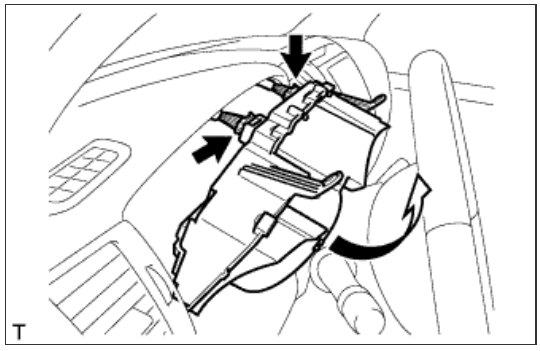


a. Detach the 4 claws.

b. Detach the 9 claws.



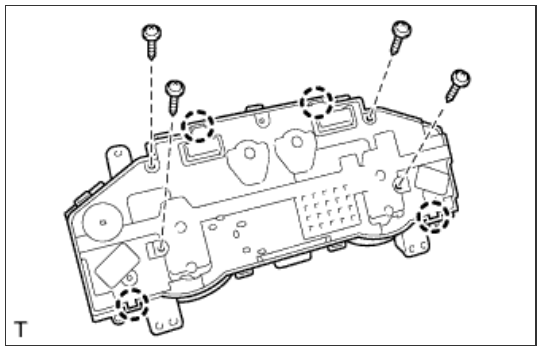
c. Remove the finish panel and disconnect the connector.



8. REMOVE COMBINATION METER ASSEMBLY

a. Remove the 4 screws.

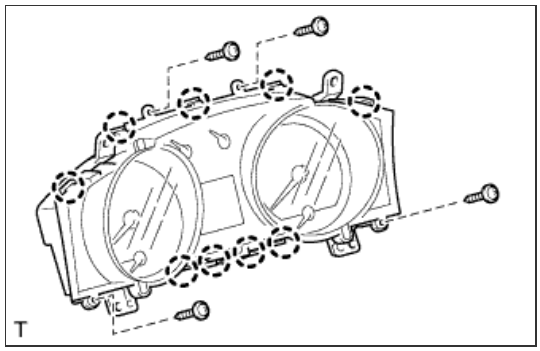
b. Disconnect the connectors, and remove the combination meter by pulling it up in the direction of the arrow in the illustration.



for Pr paration Cli h r

REMOVE NO. 2 COMBINATION METER COVER

a. Remove the 4 screws.

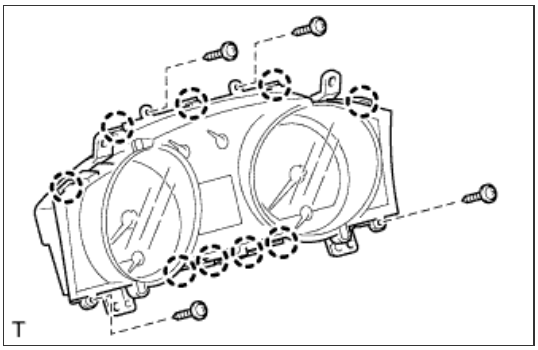


b. Detach the 4 claws and remove the cover.

2. REMOVE NO. 1 COMBINATION METER COVER

a. Remove the 4 screws.

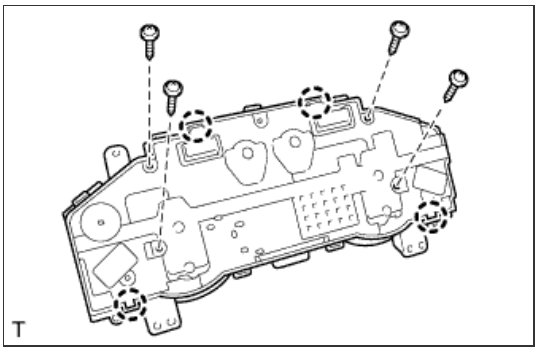
b. Detach the 9 claws and remove the cover.



for Pr paration Cli h r

INSTALL NO. 1 COMBINATION METER COVER

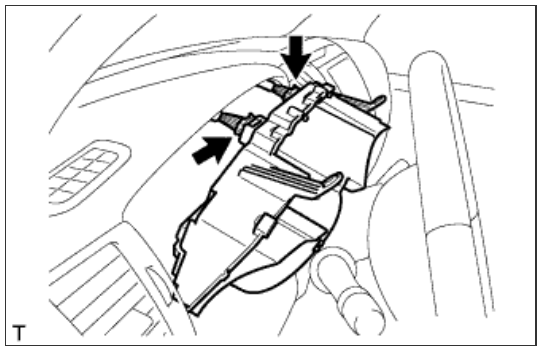
a. Attach the 9 claws to install the cover.



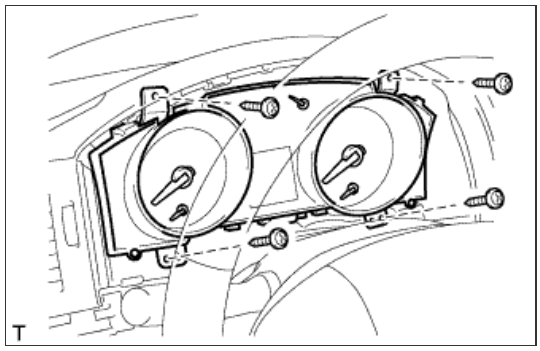
b. Install the 4 screws.

2. INSTALL NO. 2 COMBINATION METER COVER

a. Attach the 4 claws to install the cover.



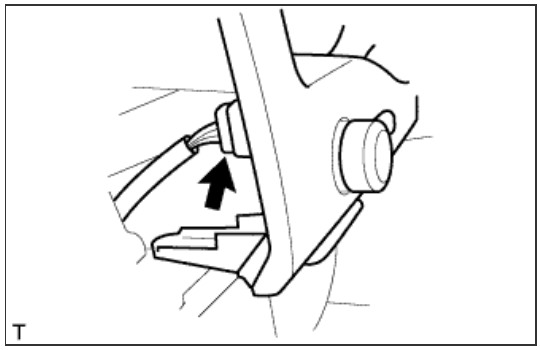
b. Install the 4 screws.



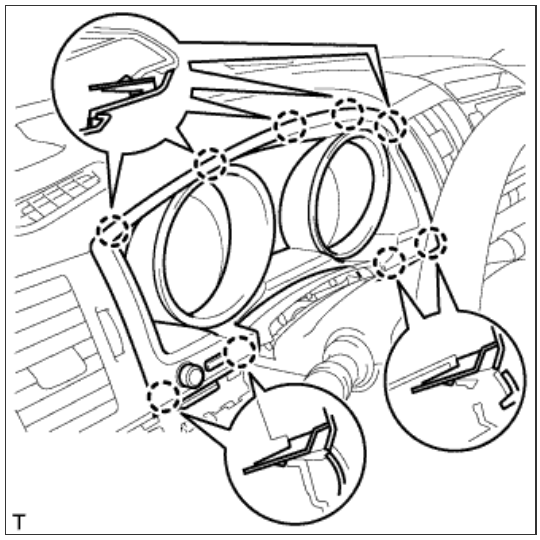
for Preparation Click here

1. INSTALL COMBINATION METER ASSEMBLY

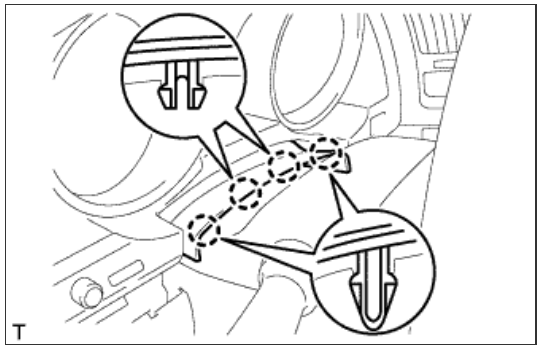
a. Connect the connectors.



b. Install the combination meter with the 4 screws.

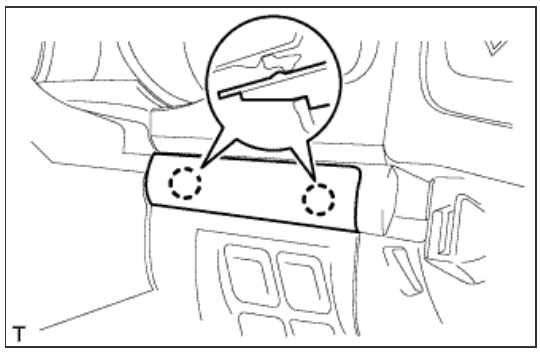


2. INSTALL INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY



a. Connect the connector.

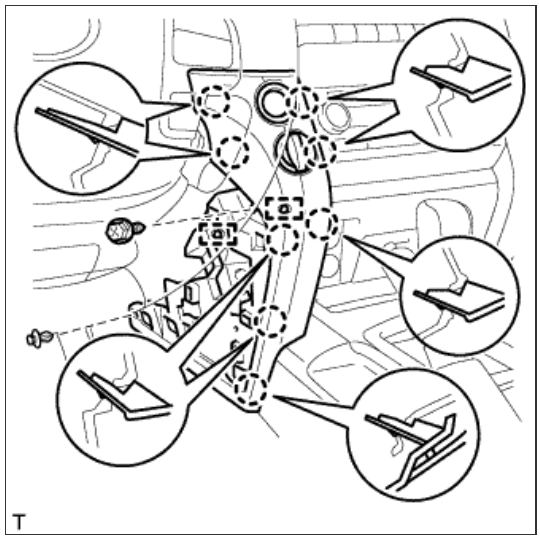
b. Attach the 9 claws to install the finish panel.



c. Attach the 4 claws.

3. INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH

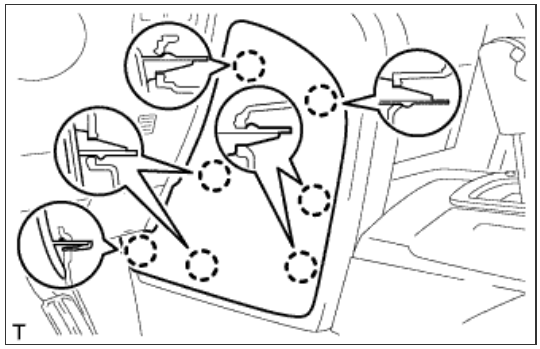
a. Attach the 2 claws to install the panel garnish.



4. INSTALL LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

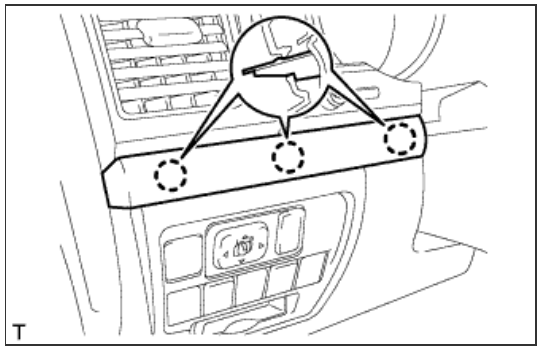
a. Connect the connectors and 2 clamps.

b. Attach the 8 claws to install the panel pad.



c. Install the screw.

d. Install the clip.



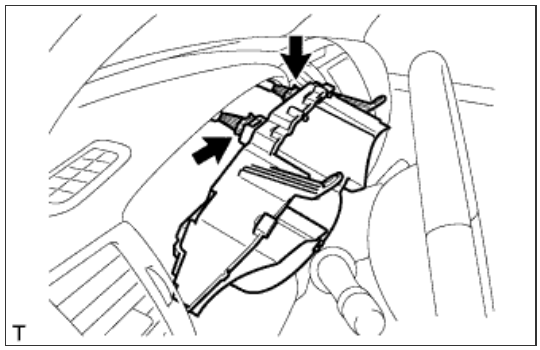
5. INSTALL NO. 2 INSTRUMENT PANEL FINISH PANEL CUSHION

a. Attach the 7 claws to install the panel cushion.

6. INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH

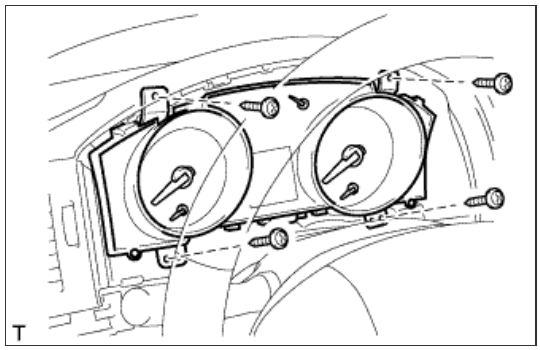
a. Attach the 3 claws to install the panel garnish.

7. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL



NOTICE:

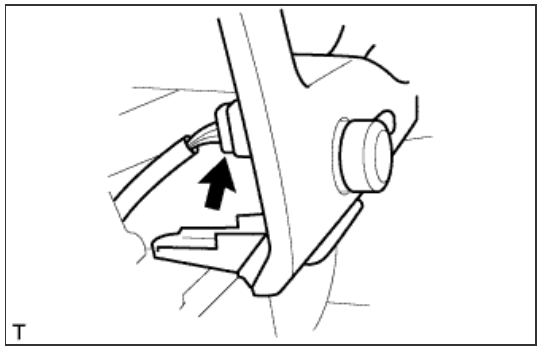
- **Reset the Autoaway/Return function setting to the previous condition by changing the customize parameter (Click here).**
- **When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).**



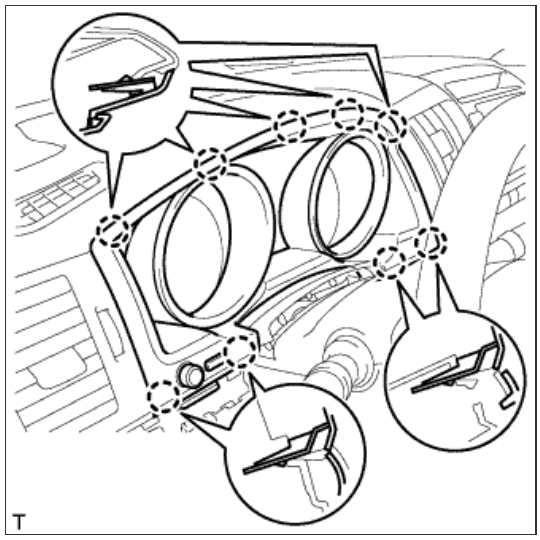
for Preparation Click here

1. INSTALL COMBINATION METER ASSEMBLY

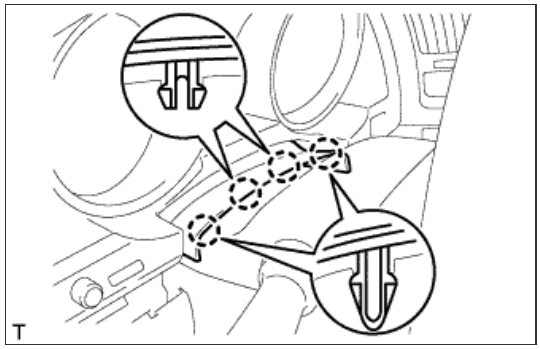
a. Connect the connectors.



b. Install the combination meter with the 4 screws.

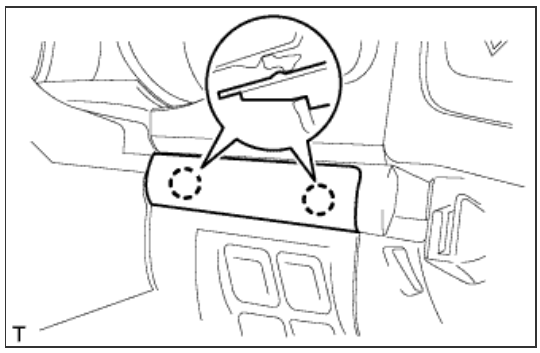


2. INSTALL INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY



a. Connect the connector.

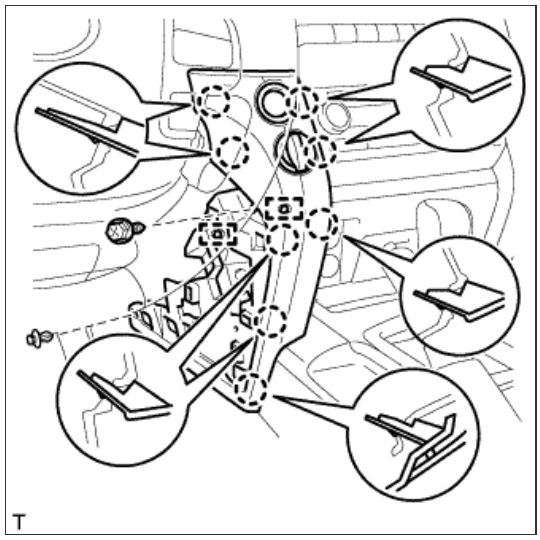
b. Attach the 9 claws to install the finish panel.



c. Attach the 4 claws.

3. INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH

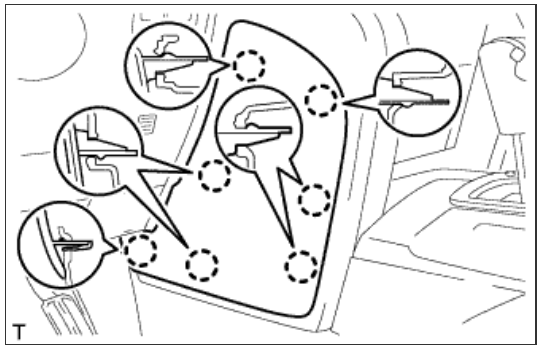
a. Attach the 2 claws to install the panel garnish.



4. INSTALL LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

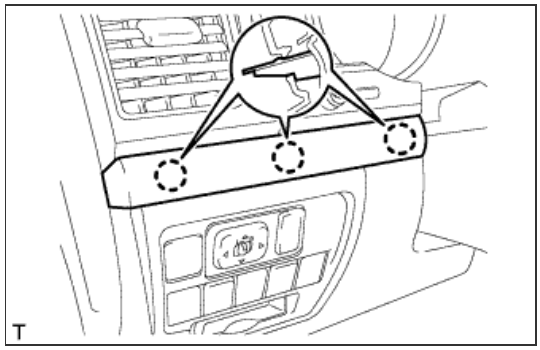
a. Connect the connectors and 2 clamps.

b. Attach the 8 claws to install the panel pad.



c. Install the screw.

d. Install the clip.

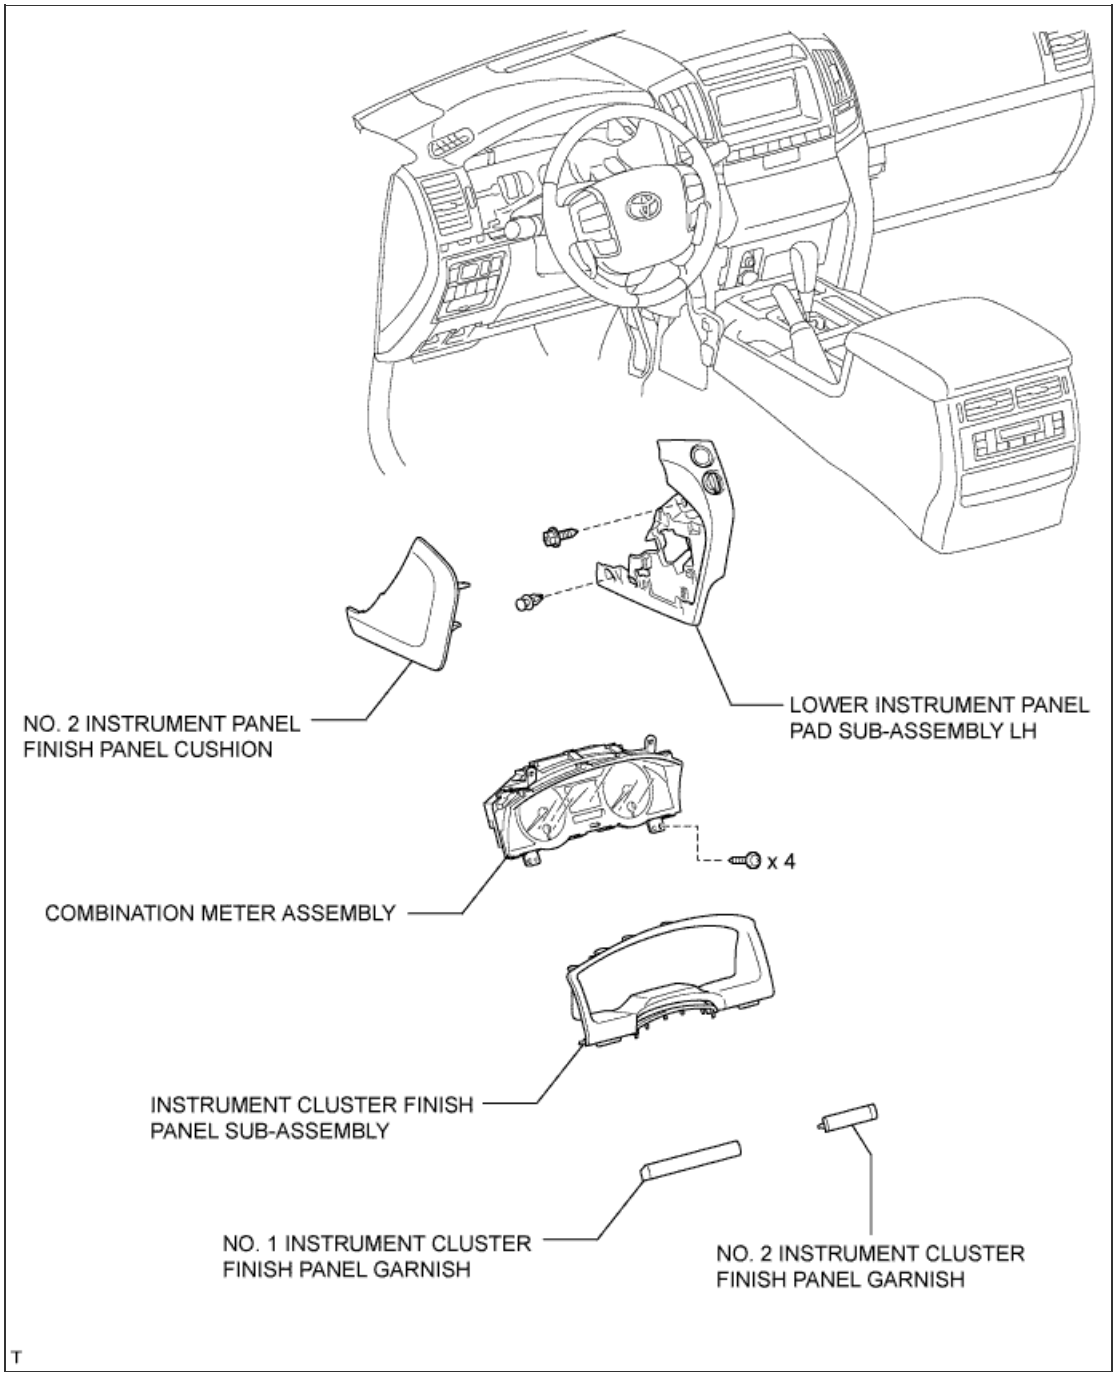


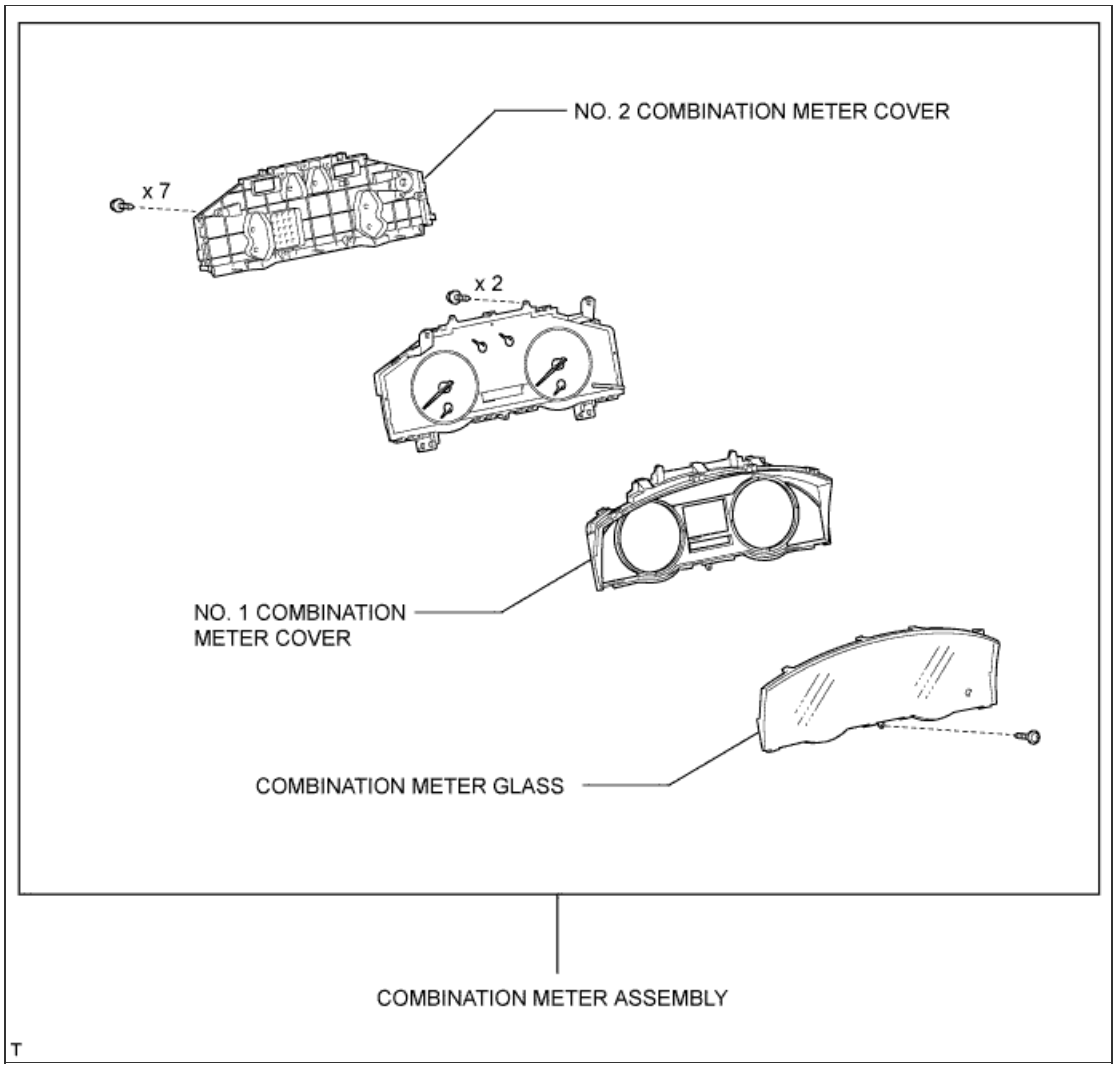
5. INSTALL NO. 2 INSTRUMENT PANEL FINISH PANEL CUSHION

a. Attach the 7 claws to install the panel cushion.

6. INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Attach the 3 claws to install the panel garnish.





7. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

1. REMOVE DISABLE AUTO TILT AWAY FUNCTION

a. for Power Tilt and Power Telescopic Steering Column:

i. Disable the Autoaway/Return function by changing the customize parameter (Click here).

NOTICE:

Record the current customize parameter setting (whether the Autoaway/Return function is enabled or disabled) in order to restore the current setting after finishing the operation.

HINT:

Performing the above operation causes the Autoaway/Return function to be disabled when the engine switch is turned off.

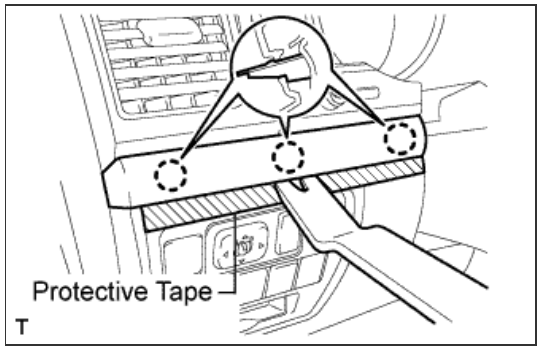
ii. Turn the engine switch on (IG). Operate the tilt and telescopic switch to fully extend and lower the steering column assembly.

iii. Turn the engine switch off .

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to disable the SRS system.

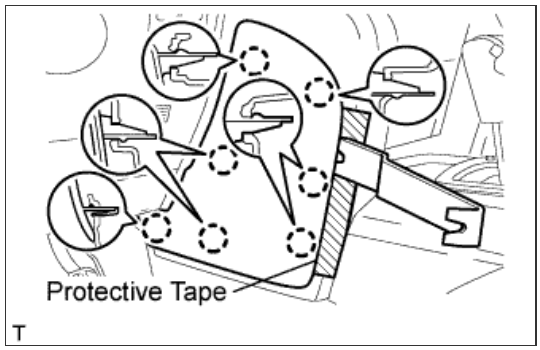


NOTICE:

When disconnecting the cable, some systems need to be initialized after the cable is reconnected (Click here).

3. REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Place protective tape as shown in the illustration.

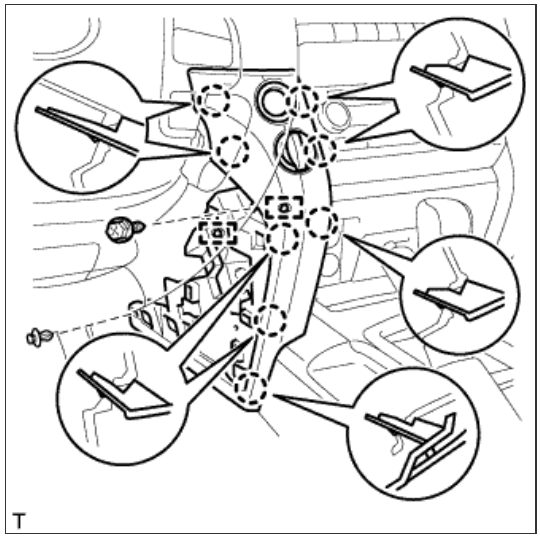


b. Using a moulding remover, detach the 3 claws and remove the panel garnish.

4. REMOVE NO. 2 INSTRUMENT PANEL FINISH PANEL CUSHION

a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 7 claws and remove the panel cushion.

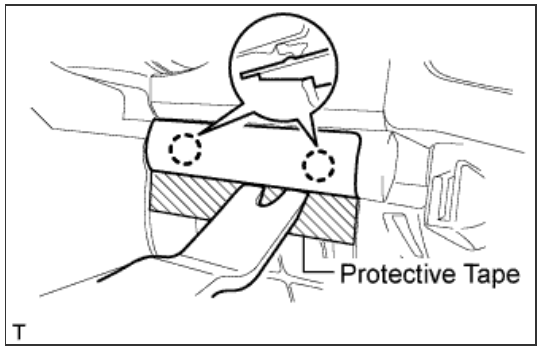


5. REMOVE LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

a. Remove the clip.

b. Remove the screw.

c. Detach the 8 claws.

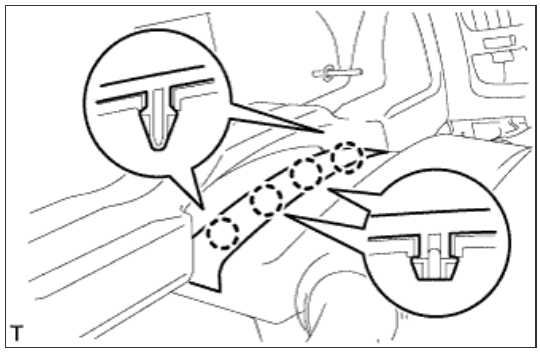


d. Remove the panel pad and disconnect the connectors and 2 clamps.

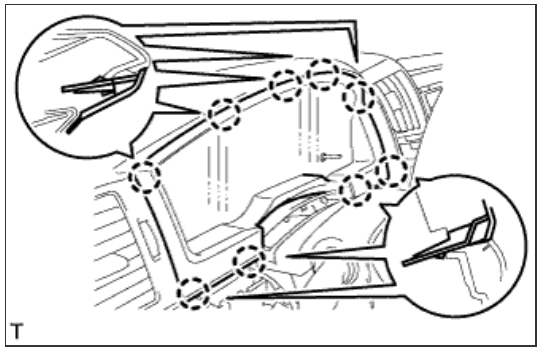
6. REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 2 claws and remove the panel garnish.



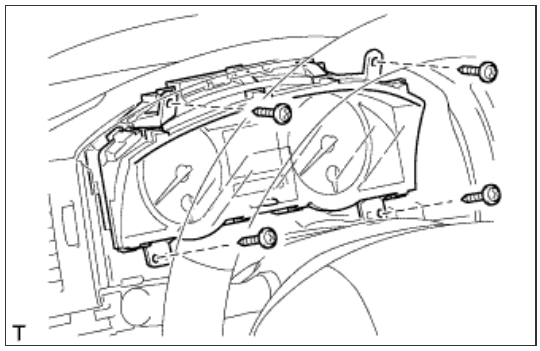
7. REMOVE INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY



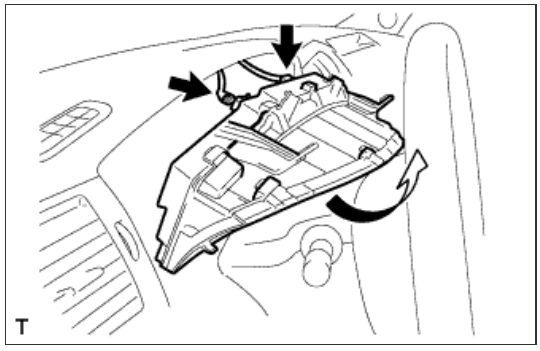
a. for Manual Tilt and Manual Telescopic Steering Column:

i. Operate the tilt and telescopic lever to fully extend and lower the steering column assembly.

b. Detach the 4 claws.



c. Detach the 9 claws and remove the finish panel.



8. REMOVE COMBINATION METER ASSEMBLY

a. Remove the 4 screws.

b. Disconnect the connectors, and remove the combination meter by pulling it up in the direction of the arrow in the illustration.

for Preparation Click here

1. REMOVE DISABLE AUTO TILT AWAY FUNCTION

a. for Power Tilt and Power Telescopic Steering Column:

i. Disable the Autoaway/Return function by changing the customize parameter (Click here).

- **Use the same procedures for LHD and RHD vehicles.**
- **The procedures listed below are for LHD vehicles.**

1. REMOVE NO. 1 SPEAKER OPENING COVER ASSEMBLY

a. Detach the 8 claws and remove the opening cover.

2. REMOVE NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY

a. Place protective tape as shown in the illustration.

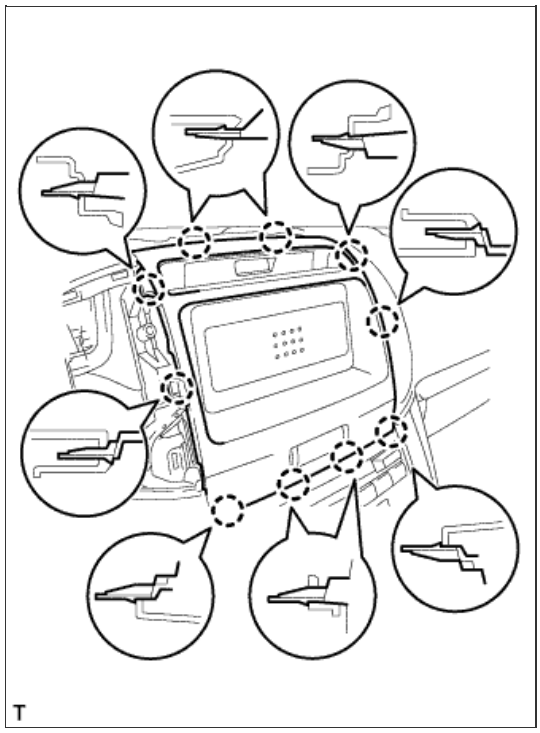
b. Using a moulding remover, detach the 6 claws.

c. Remove the register and then disconnect the connector.

3. REMOVE NO. 4 INSTRUMENT PANEL REGISTER ASSEMBLY

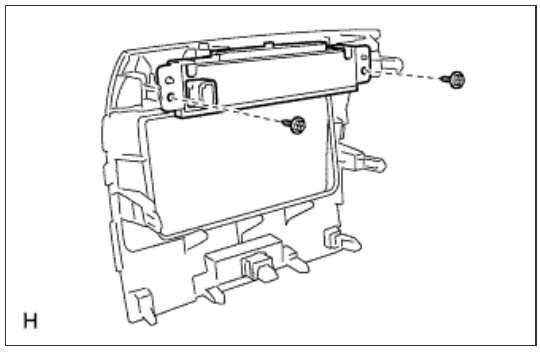
a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 6 claws.



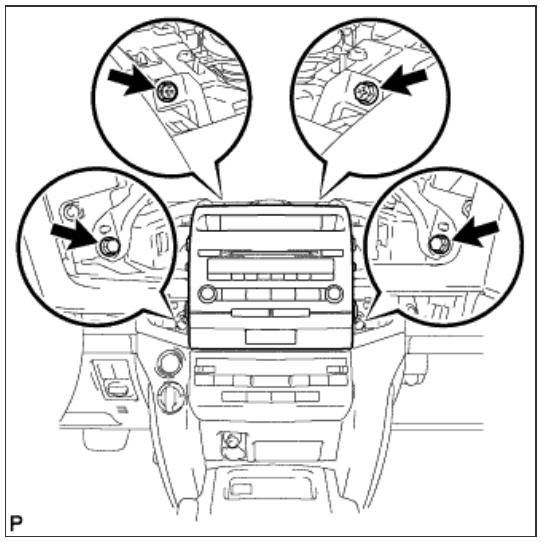
c. Remove the register and then disconnect the connector.

4. REMOVE NO. 1 CENTER INSTRUMENT CLUSTER FINISH PANEL



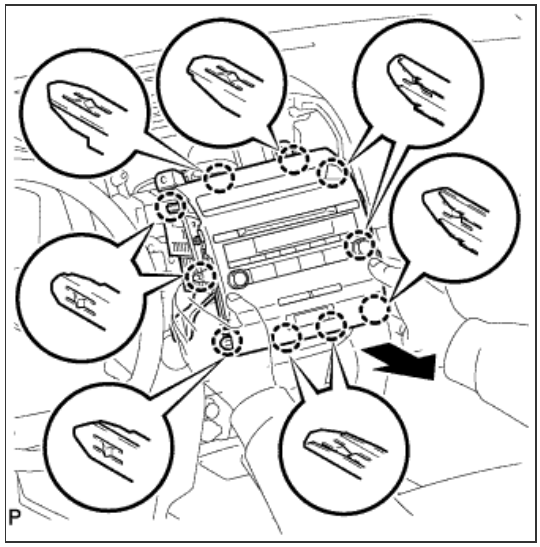
a. Detach the 10 claws.

b. Remove the finish panel and then disconnect the connectors.



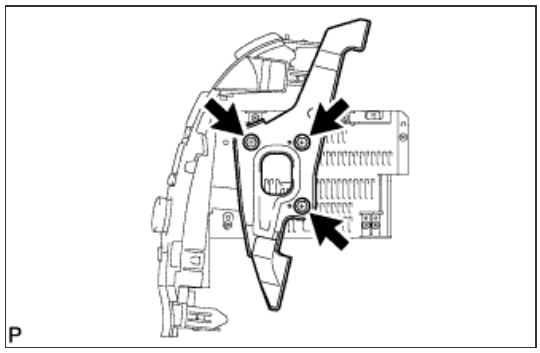
5. REMOVE CLOCK ASSEMBLY

a. Remove the 2 screws and clock.



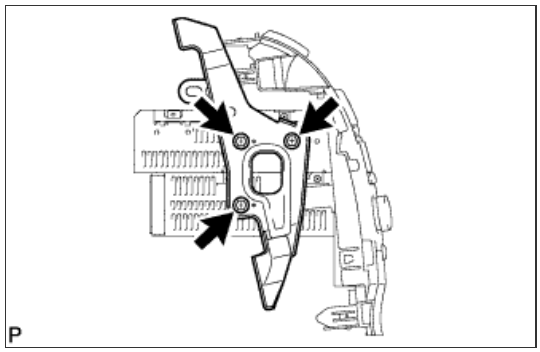
6. REMOVE RADIO RECEIVER ASSEMBLY (w/o Multi-display)

a. Remove the 2 screws and 2 bolts.



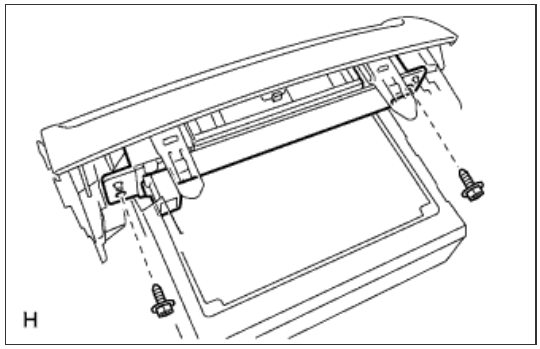
b. Pull the radio receiver to detach the 10 claws on the backside of the radio receiver.

c. Disconnect the connectors and remove the radio receiver.



7. REMOVE NO. 2 RADIO BRACKET (w/o Multi-display)

a. Remove the 3 bolts and bracket.

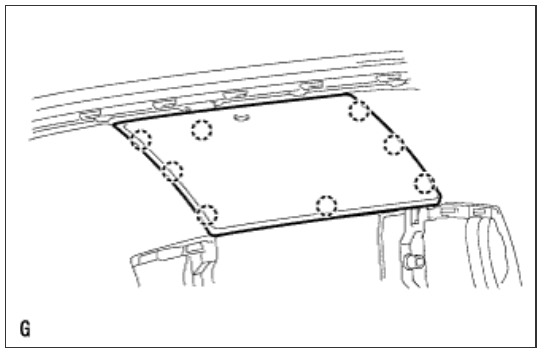


8. REMOVE NO. 1 RADIO BRACKET (w/o Multi-display)

a. Remove the 3 bolts and bracket.

9. REMOVE CLOCK ASSEMBLY (w/o Multi-display)

a. Remove the 2 screws and clock.



for Preparation Click here

HINT:

- **Use the same procedures for LHD and RHD vehicles.**
- **The procedures listed below are for LHD vehicles.**

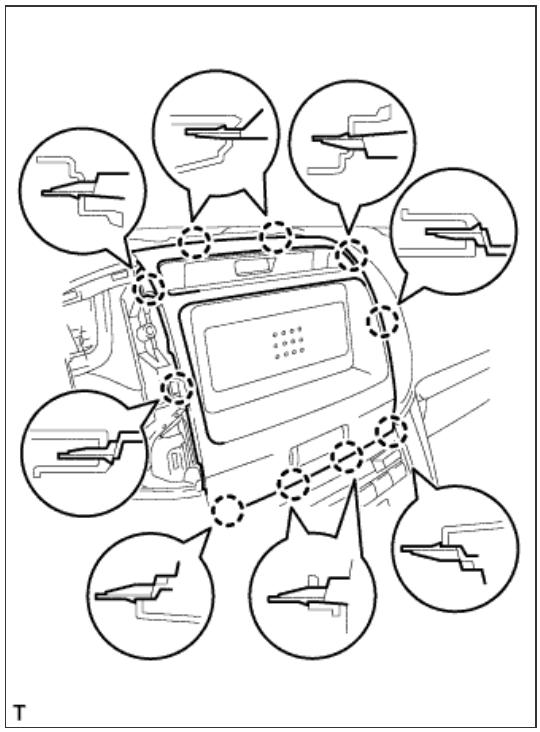
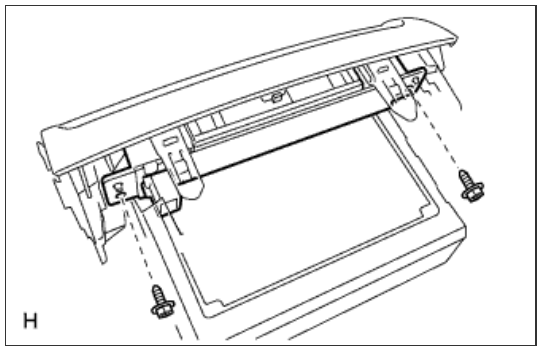
1. INSTALL CLOCK ASSEMBLY



a. Install the clock with the 2 screws.

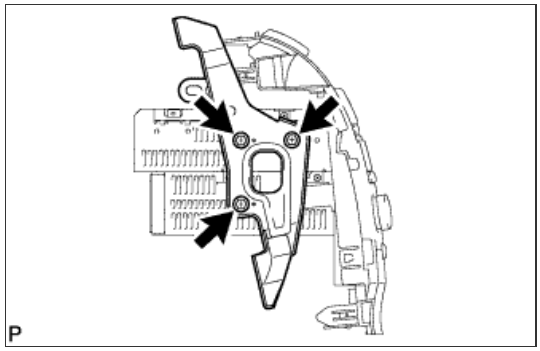
2. INSTALL NO. 1 CENTER INSTRUMENT CLUSTER FINISH PANEL



a. Connect the connector.

b. Attach the 10 claws to install the finish panel.

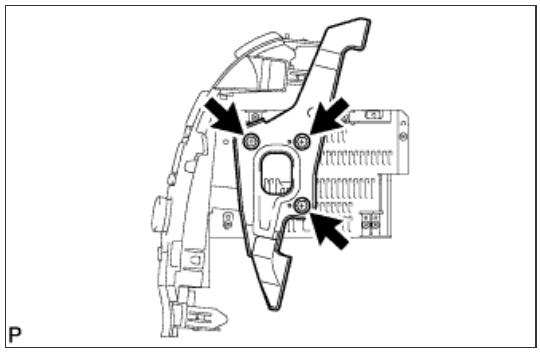
3. INSTALL CLOCK ASSEMBLY (w/o Multi-display)



a. Install the clock with the 2 screws.

4. INSTALL NO. 1 RADIO BRACKET (w/o Multi-display)

a. Install the bracket with the 3 bolts.

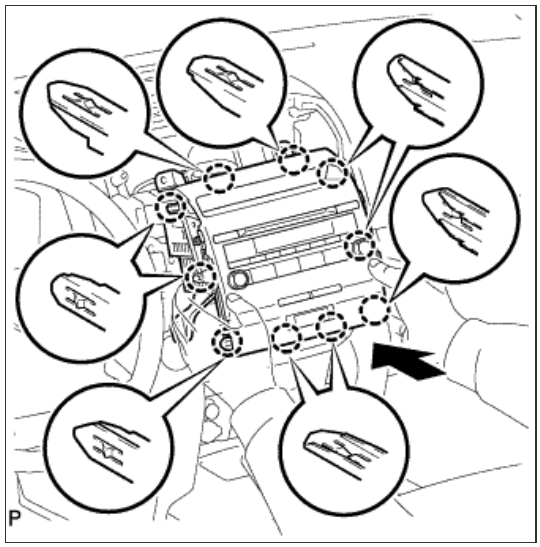


Torque:
3.0 N*m{ 30 kgf*cm , 26 in.*lbf }

5. INSTALL NO. 2 RADIO BRACKET (w/o Multi-display)

a. Install the bracket with the 3 bolts.

Torque:
3.0 N*m{ 30 kgf*cm , 26 in.*lbf }



6. INSTALL RADIO RECEIVER ASSEMBLY (w/o Multi-display)

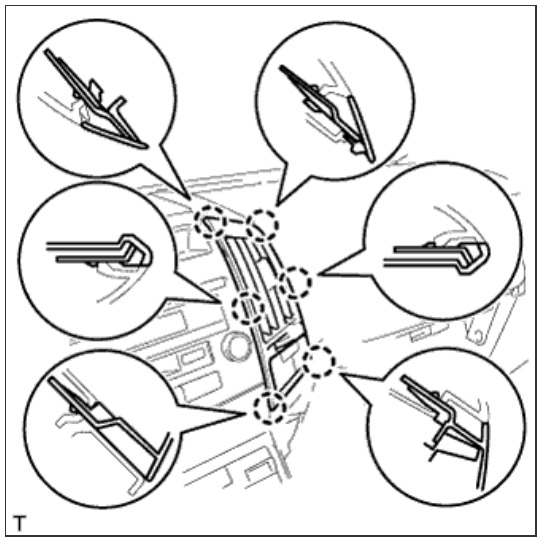
a. Connect the connectors.

b. Insert the radio receiver to attach the 10 claws on its backside.

NOTICE:

When inserting the radio receiver, do not press the knobs on it.

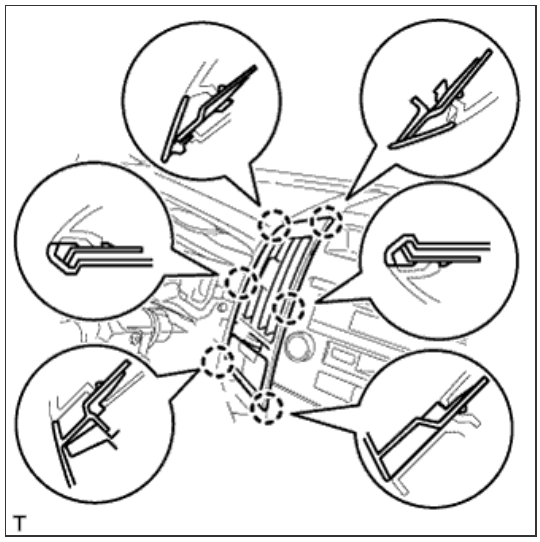
c. Install the radio receiver with the 2 screws and 2 bolts.



Torque:
Bolt:
12 N*m{ 122 kgf*cm , 8 ft.*lbf }

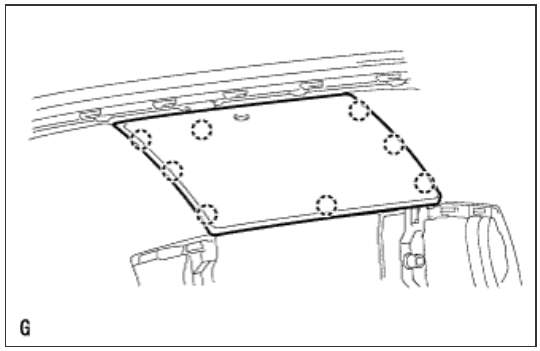
7. INSTALL NO. 4 INSTRUMENT PANEL REGISTER ASSEMBLY

a. Connect the connector.



b. Attach the 6 claws to install the register.

8. INSTALL NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY



a. Connect the connector.

b. Attach the 6 claws to install the register.

9. INSTALL NO. 1 SPEAKER OPENING COVER ASSEMBLY

a. Attach the 8 claws to install the opening cover.

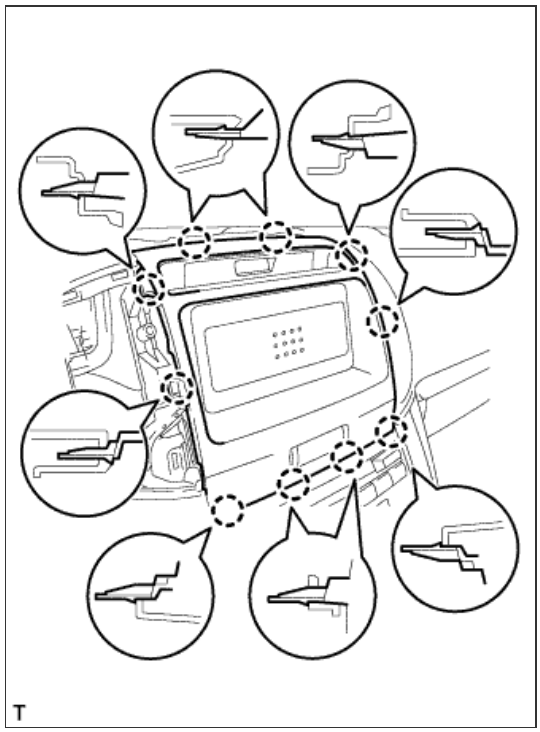
HINT:

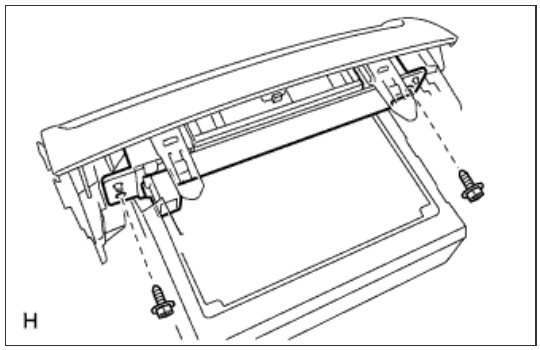
- **Use the same procedures for LHD and RHD vehicles.**
- **The procedures listed below are for LHD vehicles.**

1. INSTALL CLOCK ASSEMBLY



a. Install the clock with the 2 screws.

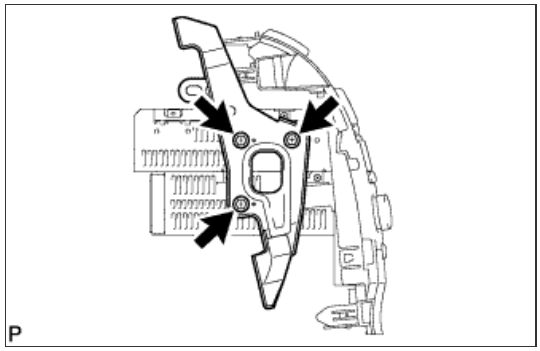
2. INSTALL NO. 1 CENTER INSTRUMENT CLUSTER FINISH PANEL



a. Connect the connector.

b. Attach the 10 claws to install the finish panel.

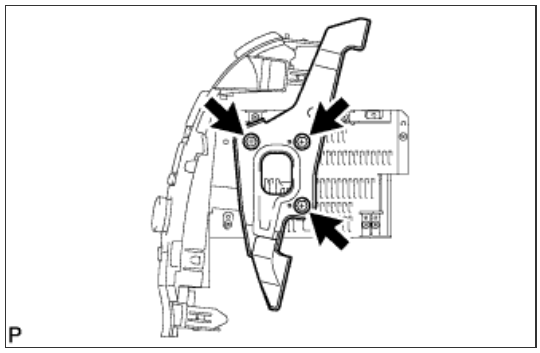
3. INSTALL CLOCK ASSEMBLY (w/o Multi-display)



a. Install the clock with the 2 screws.

4. INSTALL NO. 1 RADIO BRACKET (w/o Multi-display)

a. Install the bracket with the 3 bolts.

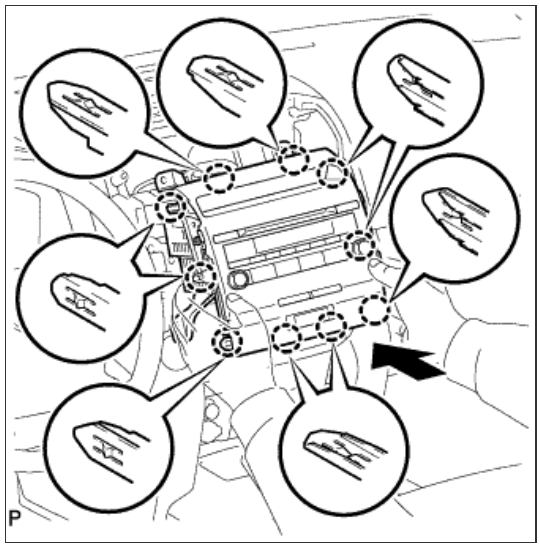


Torque:
3.0 N*m{ 30 kgf*cm , 26 in.*lbf }

5. INSTALL NO. 2 RADIO BRACKET (w/o Multi-display)

a. Install the bracket with the 3 bolts.

Torque:
3.0 N*m{ 30 kgf*cm , 26 in.*lbf }



6. INSTALL RADIO RECEIVER ASSEMBLY (w/o Multi-display)

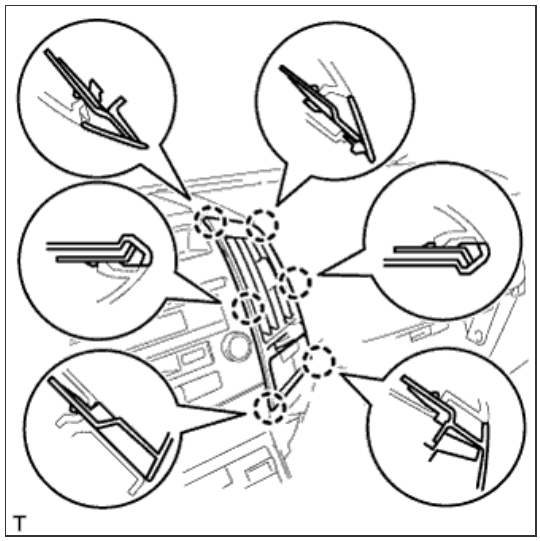
a. Connect the connectors.

b. Insert the radio receiver to attach the 10 claws on its backside.

NOTICE:

When inserting the radio receiver, do not press the knobs on it.

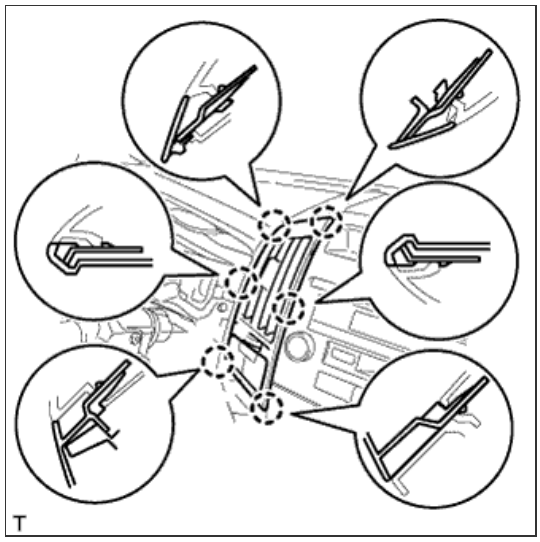
c. Install the radio receiver with the 2 screws and 2 bolts.



Torque:
Bolt:
12 N*m{ 122 kgf*cm , 8 ft.*lbf }

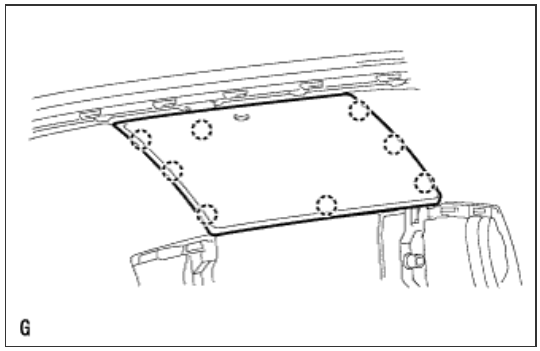
7. INSTALL NO. 4 INSTRUMENT PANEL REGISTER ASSEMBLY

a. Connect the connector.



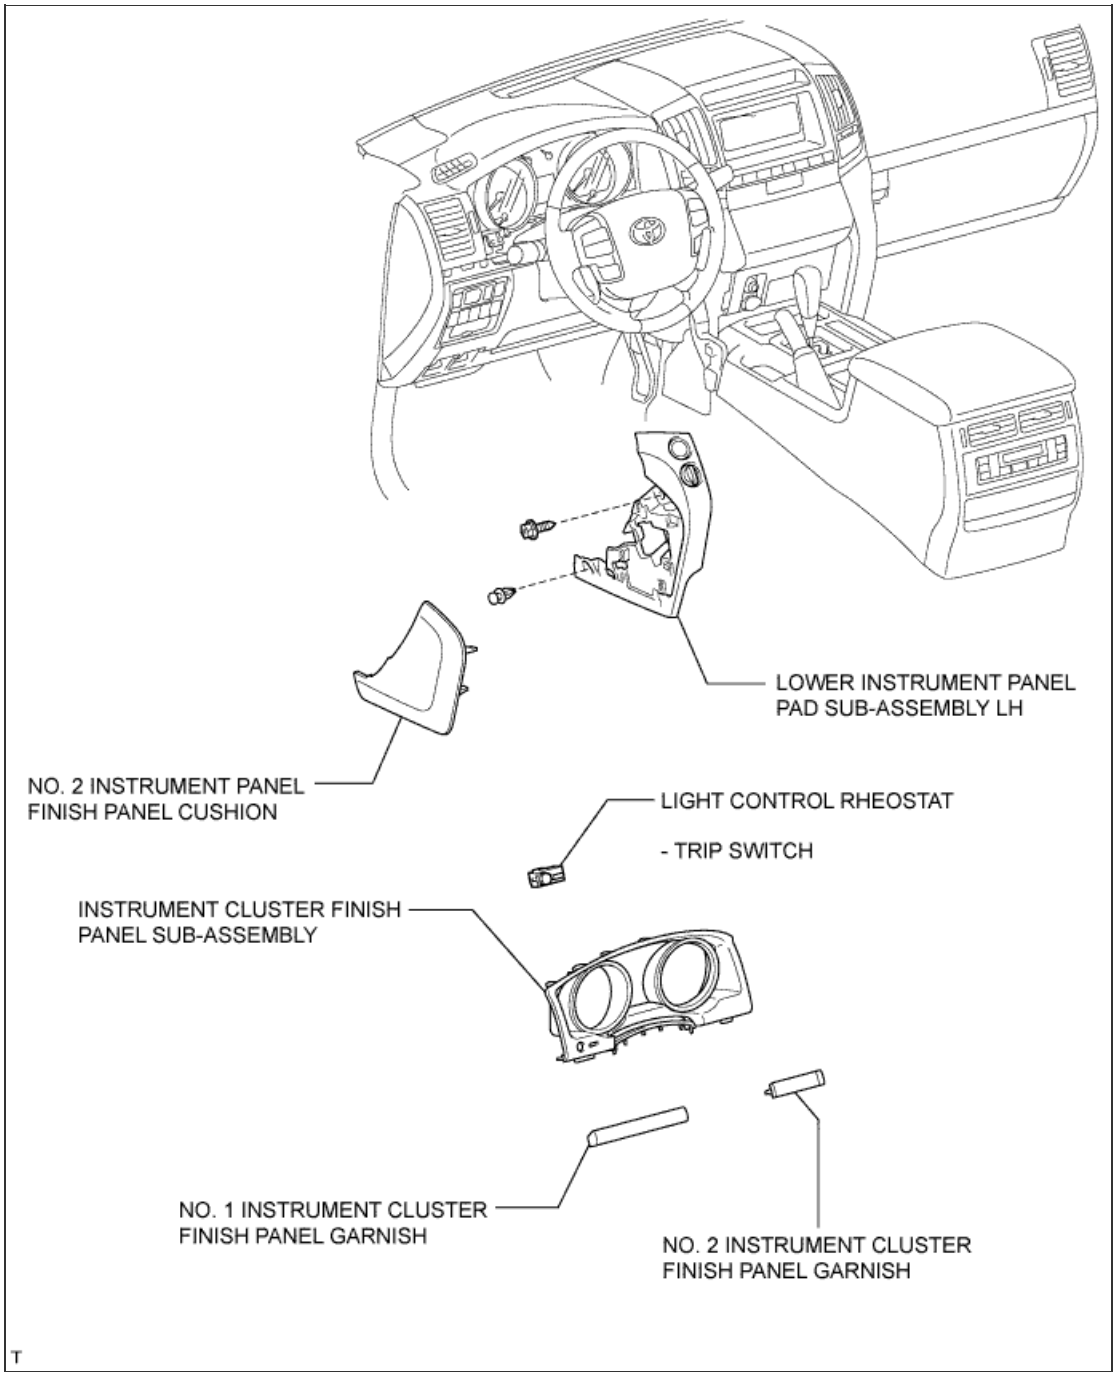
b. Attach the 6 claws to install the register.

8. INSTALL NO. 3 INSTRUMENT PANEL REGISTER ASSEMBLY



a. Connect the connector.

b. Attach the 6 claws to install the register.



9. INSTALL NO. 1 SPEAKER OPENING COVER ASSEMBLY

a. Attach the 8 claws to install the opening cover.

for Preparation Click here

for Preparation Click here

1. DISABLE AUTO TILT AWAY FUNCTION

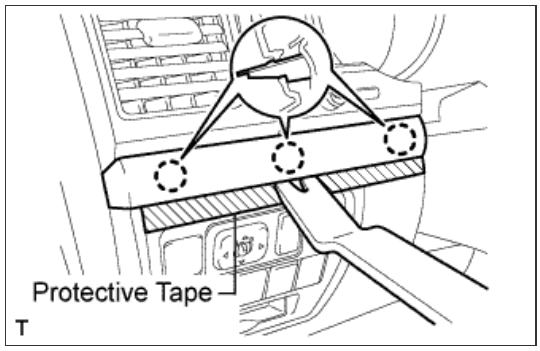
a. Disable the Autoaway/Return function by changing the customize parameter (Click here).

NOTICE:

Record the current customize parameter setting (whether the Autoaway/Return function is enabled or disabled) in order to restore the current setting after finishing the operation.

HINT:

Performing the above operation causes the Autoaway/Return function to be disabled when the engine switch is turned off.

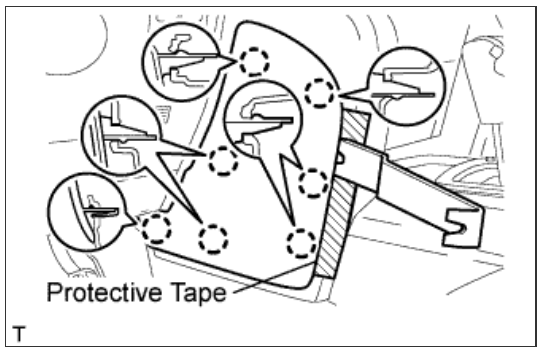


b. Turn the engine switch on (IG). Operate the tilt and telescopic switch to fully e tend and lower the steering column.

c. Turn the engine switch off.

2. REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Place protective tape as shown in the illustration.

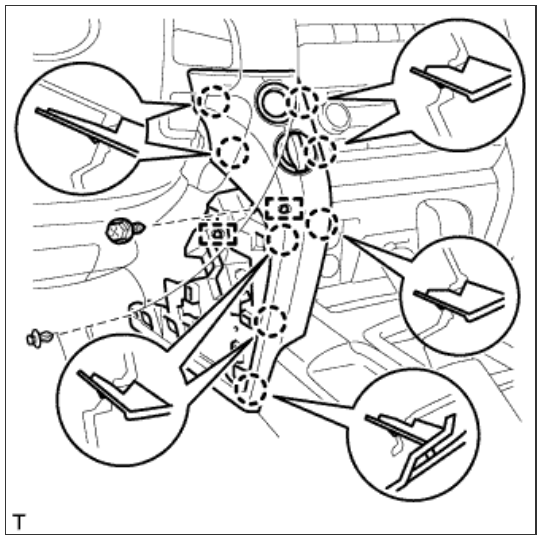


b. Using a moulding remover, detach the 3 claws and remove the panel garnish.

3. REMOVE NO. 2 INSTRUMENT PANEL FINISH PANEL CUSHION

a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the claws and remove the panel cushion.

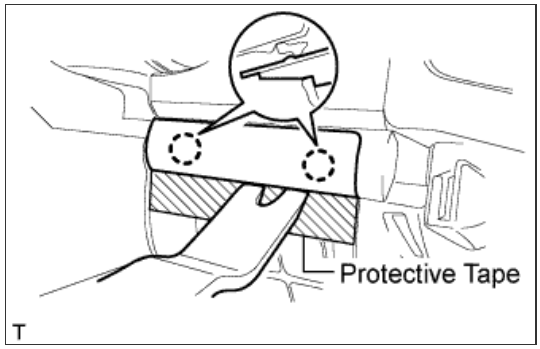


4. REMOVE LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

a. Remove the clip.

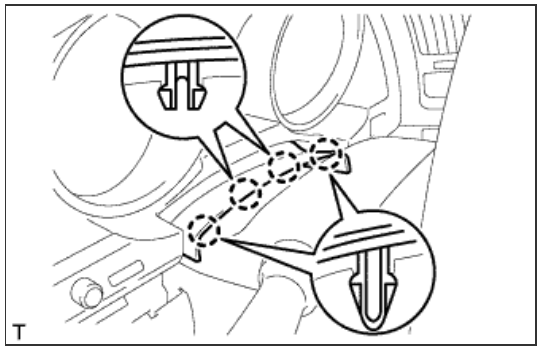
b. Remove the screw.

c. Detach the 8 claws.



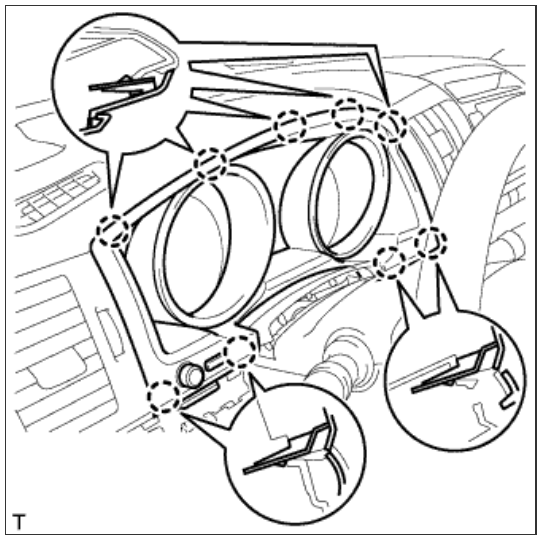
d. Remove the panel pad and disconnect the connectors and 2 clamps.

5. REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH

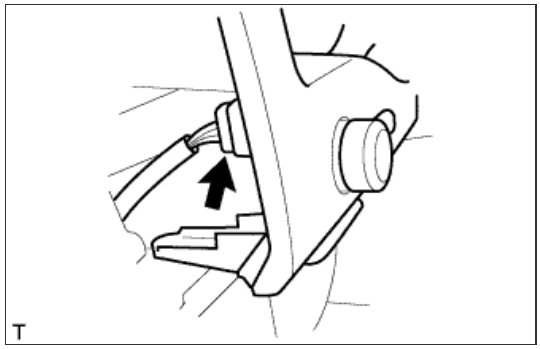


a. Place protective tape as shown in the illustration.

b. Using a moulding remover, detach the 2 claws and remove the panel garnish.

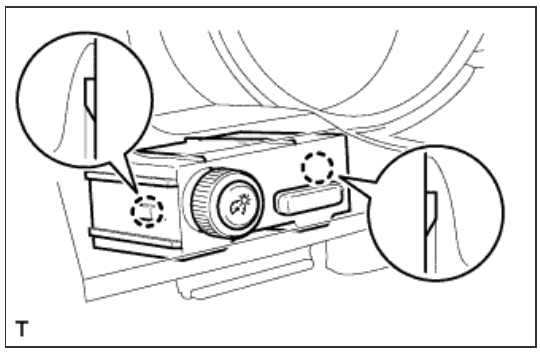


6. REMOVE INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY



a. Detach the 4 claws.

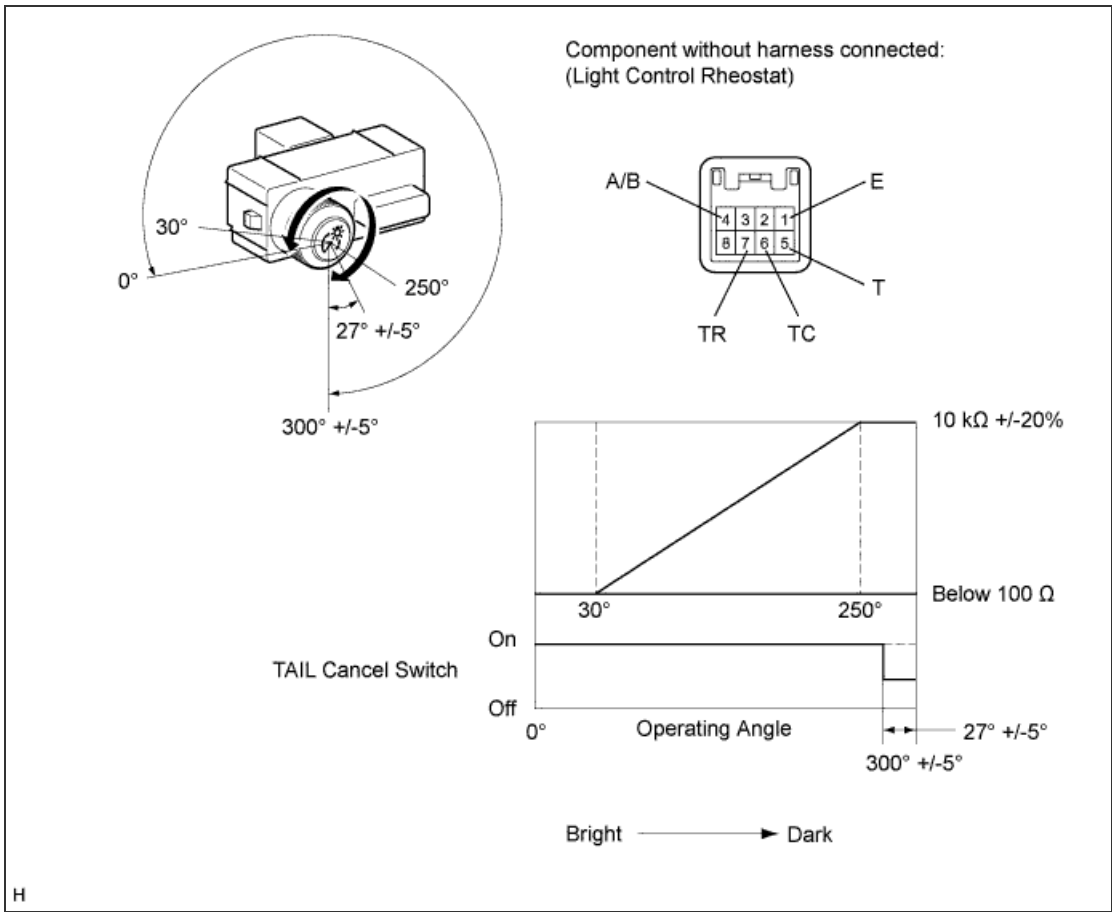
b. Detach the claws.



c. Remove the finish panel and disconnect the connector.

7. REMOVE LIGHT CONTROL RHEOSTAT

a. Detach the 2 claws and remove the rheostat.



for Preparation Click here

1. INSPECT LIGHT CONTROL RHEOSTAT

a. Inspect the light control rheostat.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

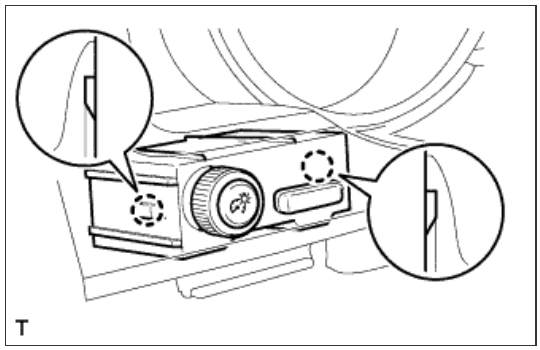
Tester Connection	Switch Condition	Specified Condition
6 (TC) - 1 (E)	TAIL cancel switch off → on	10 kΩ or higher → Below 1 Ω
5 (T) - 1 (E)	Always	10 kΩ or higher
7 (TR) - 1 (E)	Light control rheostat fully turned right → fully turned left	10 kΩ or higher → Below 100 Ω

. Inspect the trip switch.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

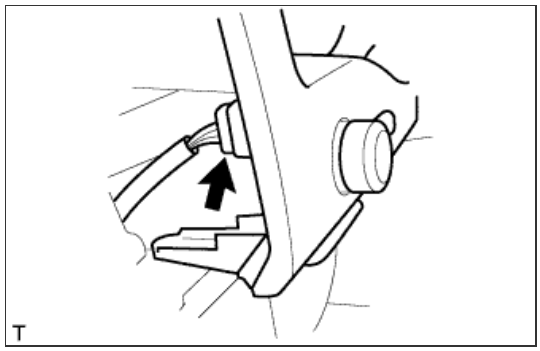
Tester	Switch	Specified



Connection	Condition	Condition
4 (A/B) - 1 (E)	Trip switch on (Pushed)	Below 200 Ω
	Trip switch off (Not Pushed)	1 MΩ or higher

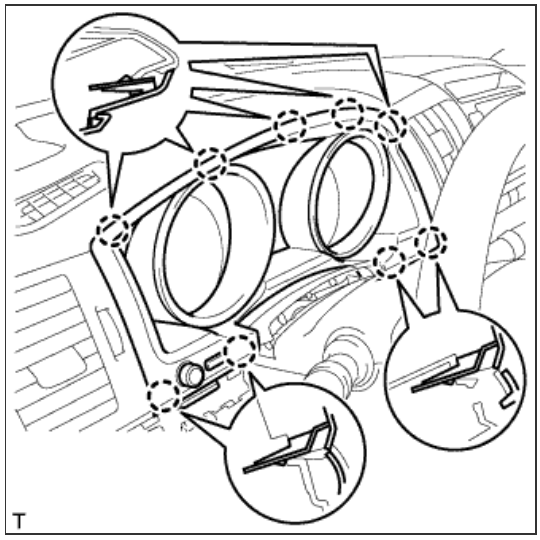
If the result is not as specified, replace the rheostat.

for Preparation Click here

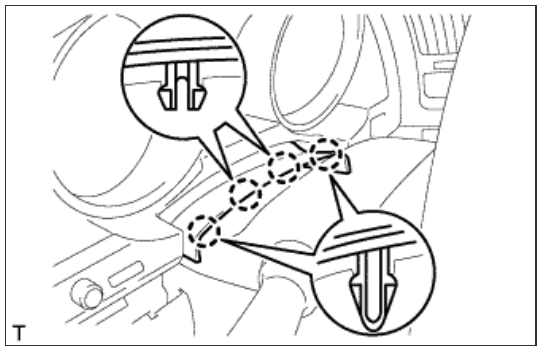


1. INSTALL LIGHT CONTROL RHEOSTAT

a. Attach the 2 claws to install the rheostat.

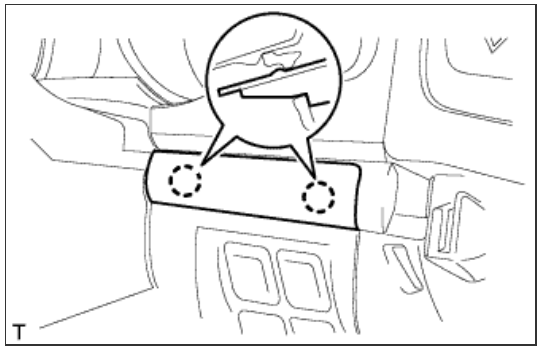


2. INSTALL INSTRUMENT CLUSTER FINISH PANEL SUB-ASSEMBLY



a. Connect the connector.

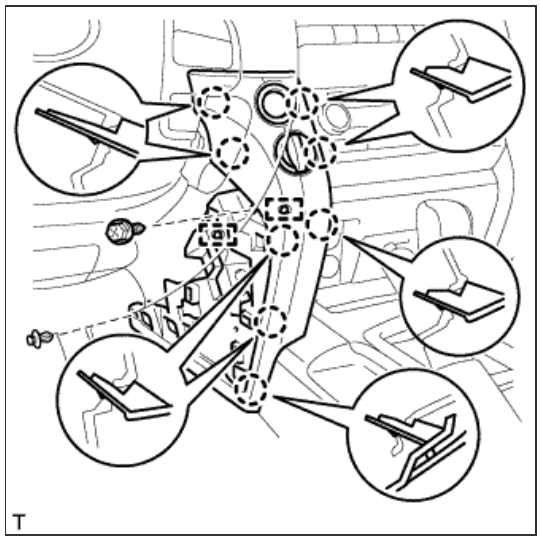
b. Attach the 9 claws to install the finish panel.



c. Attach the 4 claws.

3. INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH

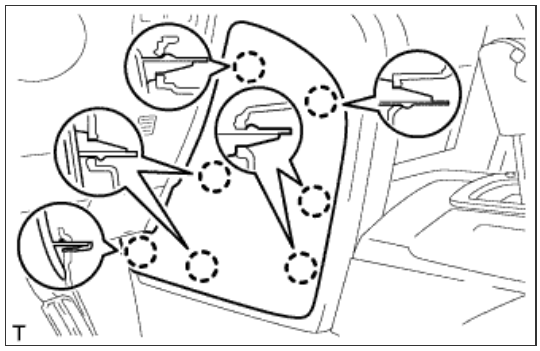
a. Attach the 2 claws to install the panel garnish.



4. INSTALL LOWER INSTRUMENT PANEL PAD SUB-ASSEMBLY LH

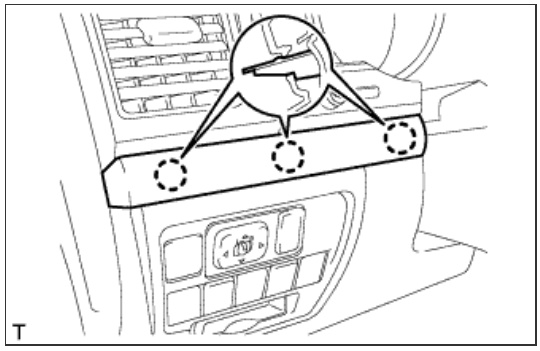
a. Connect the connectors and 2 clamps.

b. Attach the 8 claws to install the panel pad.



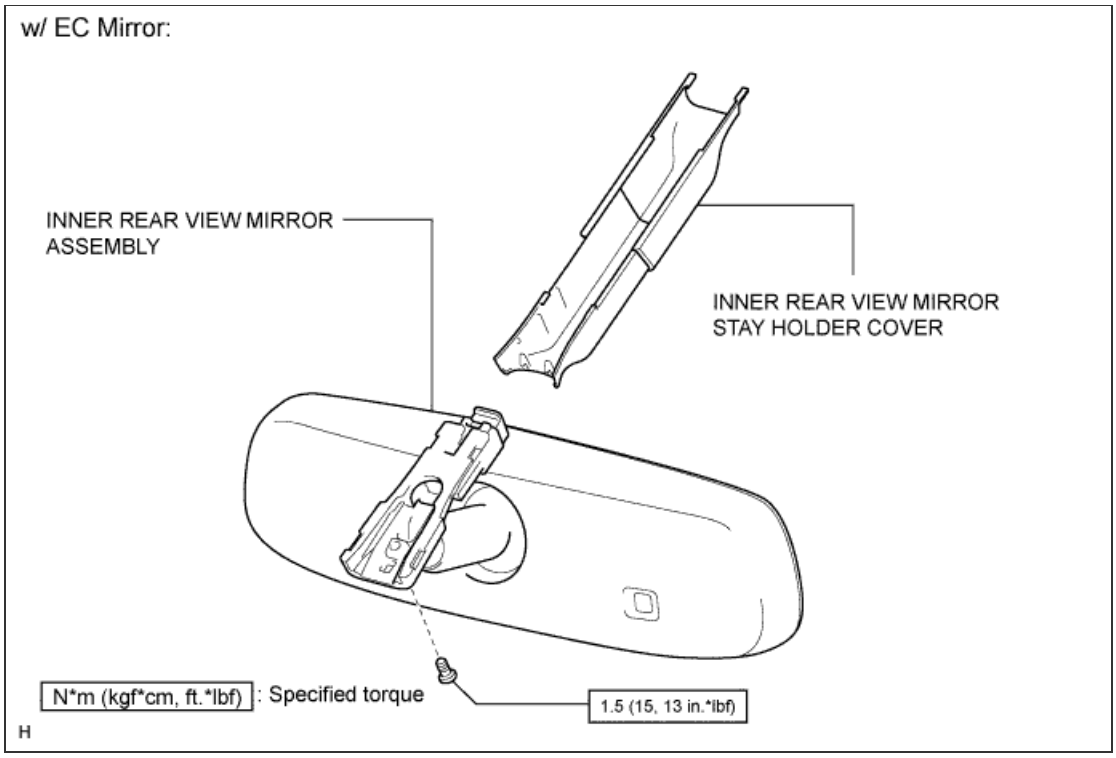
c. Install the screw.

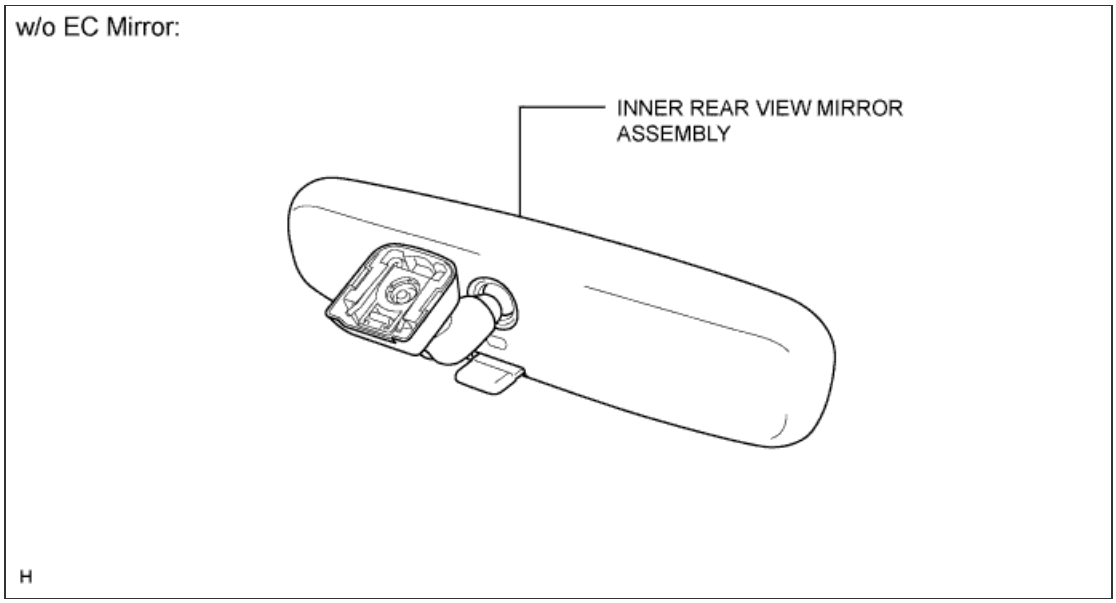
d. Install the clip.



5. INSTALL NO. 2 INSTRUMENT PANEL FINISH PANEL CUSHION

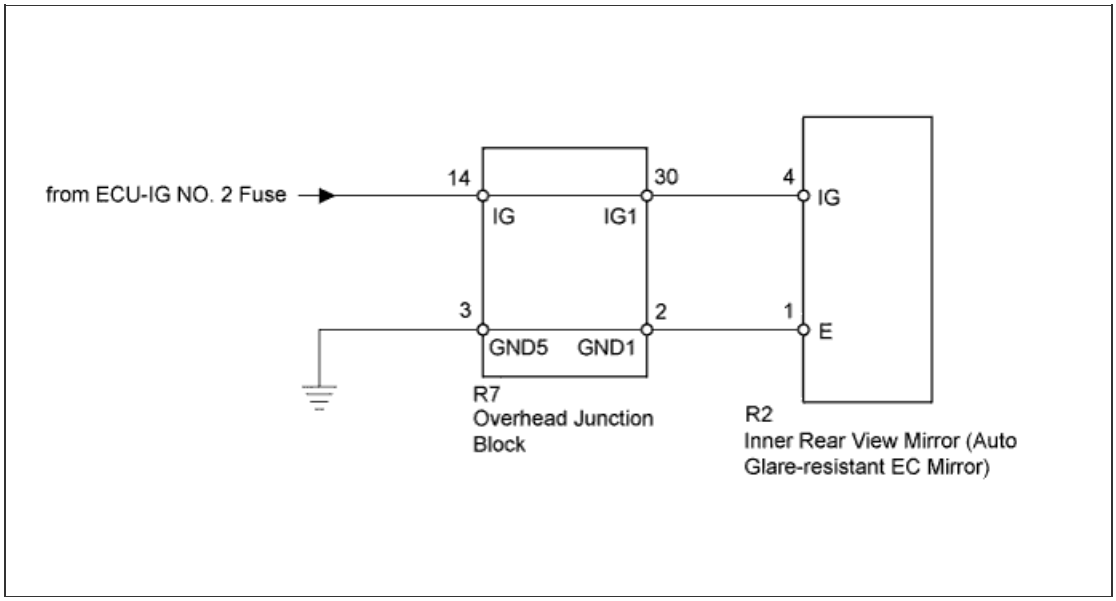
a. Attach the 7 claws to install the panel cushion.





6. INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH

a. Attach the 3 claws to install the panel garnish.



for Preparation Click here

for Preparation Click here

for Preparation Click here

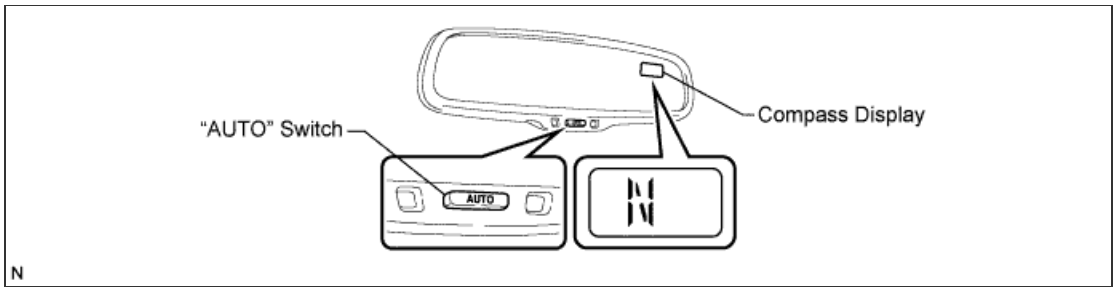
HINT:

Refer to the Owner's Manual for more information.

SELECT COMPASS DISPLAY MODE

a. The compass switch allows you to select the Display or Non-display mode of the compass.

SET ZONE



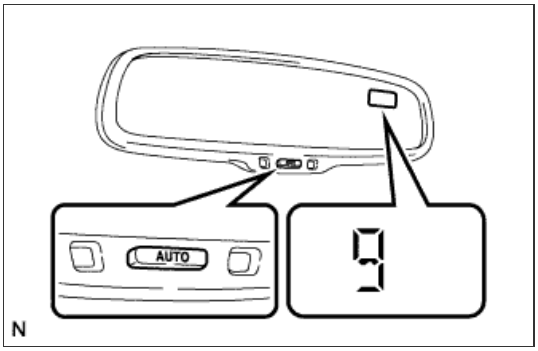
a. Deviation between the "magnetic north" and "actual north" differs depending on the location. Therefore, adjustment of the magnetism is required. Because the magnetic condition differs depending on the area where the vehicle is used, it is necessary for each user to set the zone (refer to Compass Zone Map). The zone setting can be changed using the compass switch of the inner mirror.

PERFORM CALIBRATION

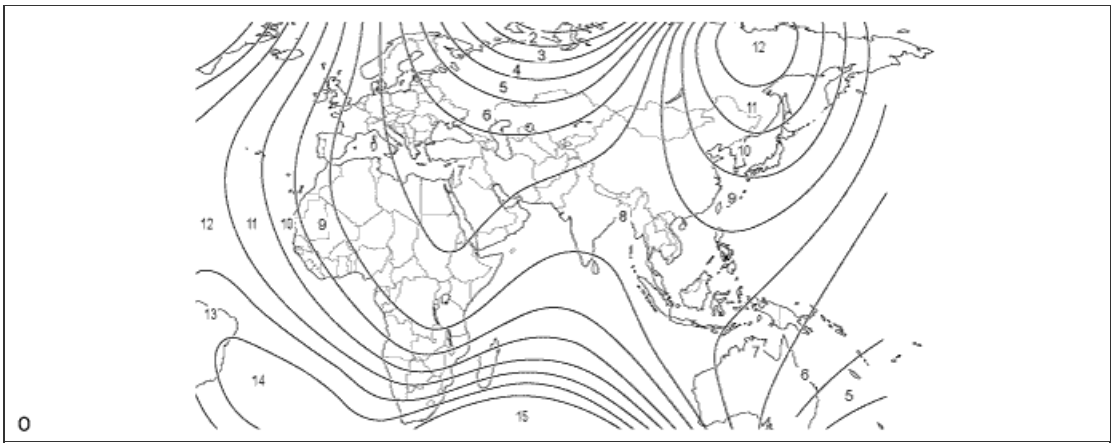
a. Because each vehicle has its own magnetic field, calibration should be performed for each individual vehicle. This compass function is used when storing the record of the vehicle's magnetic field.

WHEN COMPASS IS MAGNETIZED

a. The compass could be magnetized during shipping by vessels or freight cars. Therefore, ensure that calibration is performed properly before delivery. If driving the vehicle in a circle several times does not complete the calibration procedure, there may be a compass magnetization problem.



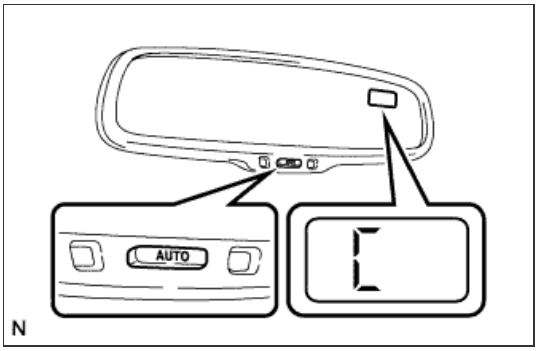
Deviation Calibration Procedure



a. Turn the ignition switch to the "IG-ON" position and push and hold the "AUTO" switch for 6 seconds until the zone number appears on the display.

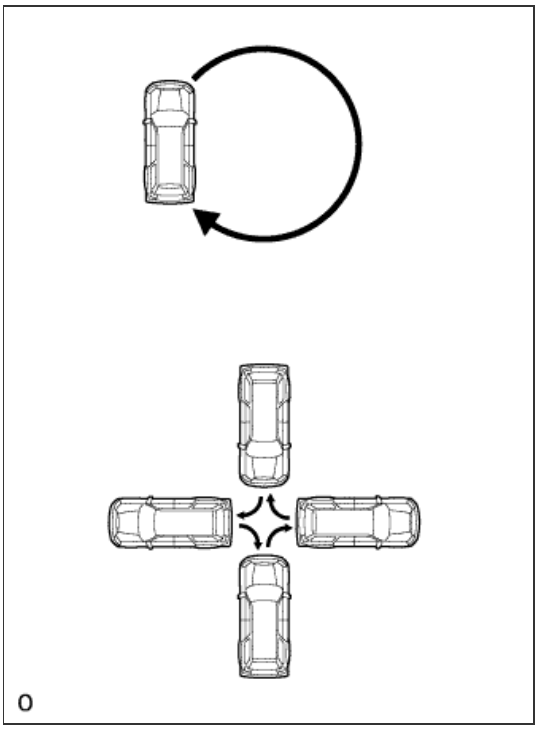
HINT:

Pushing the "AUTO" switch for 3 seconds turns on or off the compass display.



b. Push the "AUTO" switch to select the number of the zone where the vehicle is located.
See the map for zone reference.

Circling Calibration Procedure



a. Start the engine and push and hold the "AUTO" switch for 9 seconds until "C" appears on the display.

b. Drive the vehicle slowly at 8 km/h (5 mph) or lower in a circle.
If there is not enough space to drive in a circle, turn the car around in the following manner, doing two three-point turns in succession.
After driving in 1 to 3 circles in the above method, calibration is completed with the direction is shown on the display.

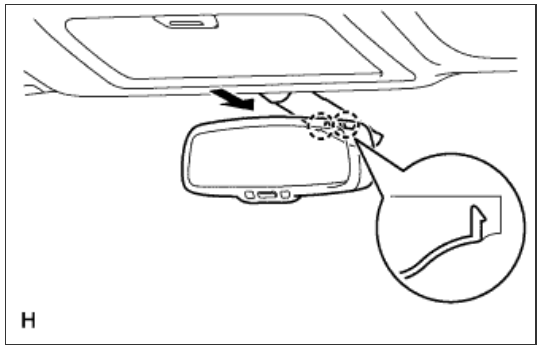
HINT:

- **Do not perform calibration of the compass in a place where the earth's magnetic field is subject to interference by artificial magnetic fields (underground parking, under a steel tower, between buildings, roof parking, near a crossing, near a large vehicle, etc.).**
- **During calibration, do not operate electric systems (sliding roof, power windows, etc.) as they may interfere with the calibration.**

for Preparation Click here

HINT:

Use the table below to help determine the cause of problem symptoms. If multiple suspected areas are listed, the potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.

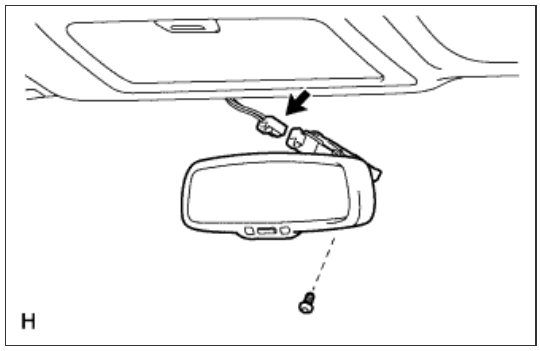


Automatic Glare-resistant EC Mirror

Symptom	Suspected Area	See page
Automatic glare-resistant EC mirror does not operate	ECU-I NO. 2 fuse	-
	Inner rear view mirror	Click here
	Overhead unction block	-
	Harness or connector	-

for Preparation Click here

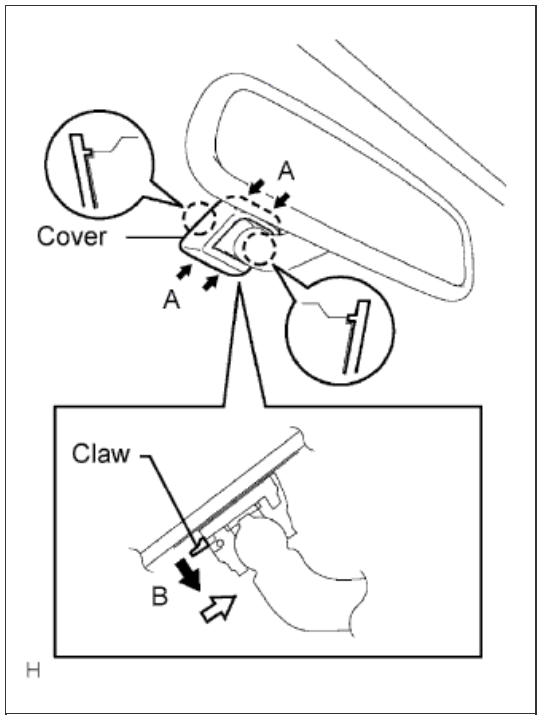
1. REMOVE INNER REAR VIEW MIRROR STAY HOLDER COVER EC Mirror)



a. Detach the 2 claws and remove the cover as shown in the illustration.

2. REMOVE INNER REAR VIEW MIRROR ASSEMBLY EC Mirror)

a. Disconnect the connector.



b. Using a T20 "TORX" socket wrench, remove the screw and inner rear view mirror.

3. REMOVE INNER REAR VIEW MIRROR ASSEMBLY o EC Mirror)

a. Push the cover in the direction indicated by the arrows labeled A and remove it.

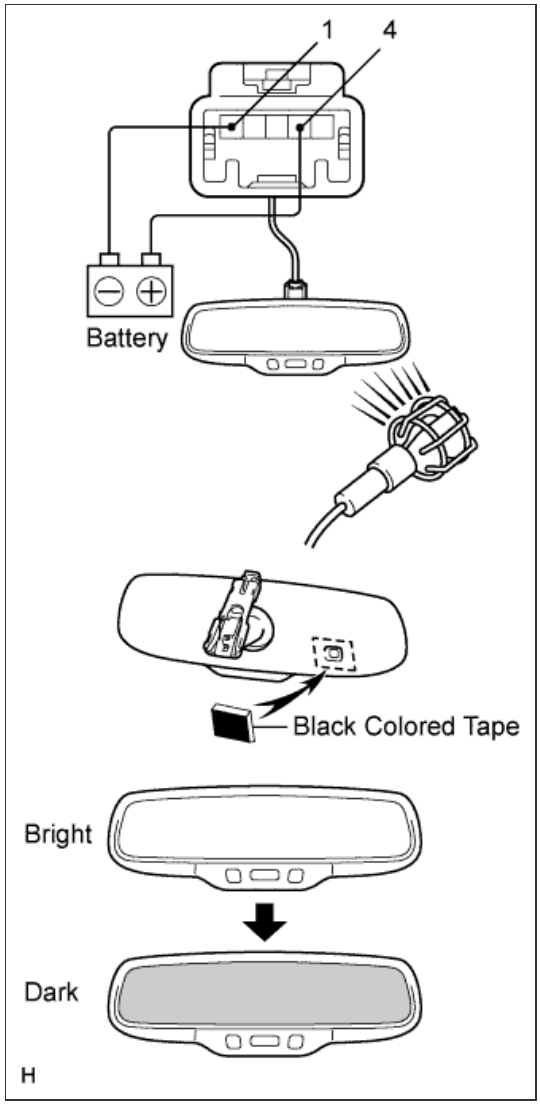
b. While holding down the claw in the direction of the black arrow labeled B, slide the mirror in the direction of the white arrow and remove it.

for Preparation Click here

1. INSPECT INNER REAR VIEW MIRROR ASSEMBLY (w EC Mirror)

a. Check the operation of the electrochromic inner mirror.

i. Connect the battery positive (lead to terminal 4 and the negative (lead to terminal 1.



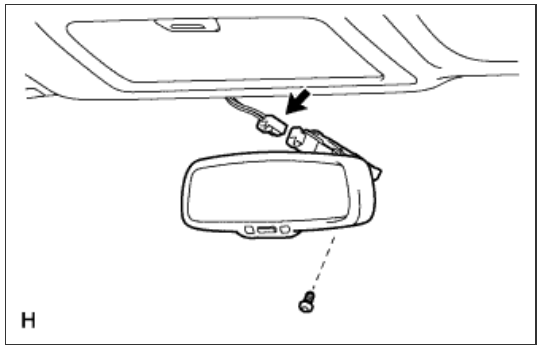
ii. Attach black colored tape to the for ard sensor to prevent it from sensing.

iii. hine an electric light on the mirror. Check that the mirror s rface changes from bright to dark.

HINT:

hen the environment is very bright, the anti lare operation may occ r immediately after the tape is applied.

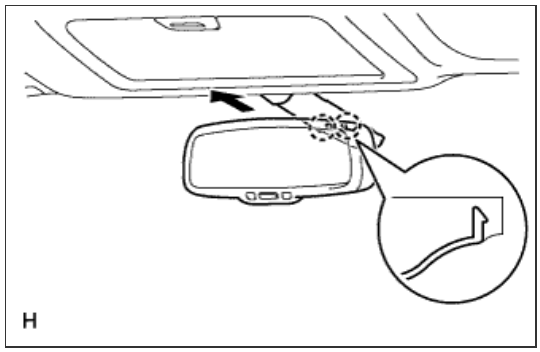
If the res lt is not as specified, replace the inner rear vie mirror assembly.



for Preparation Click here

1. INSTALL INNER REAR VIEW MIRROR ASSEMBLY (w/ EC Mirror)

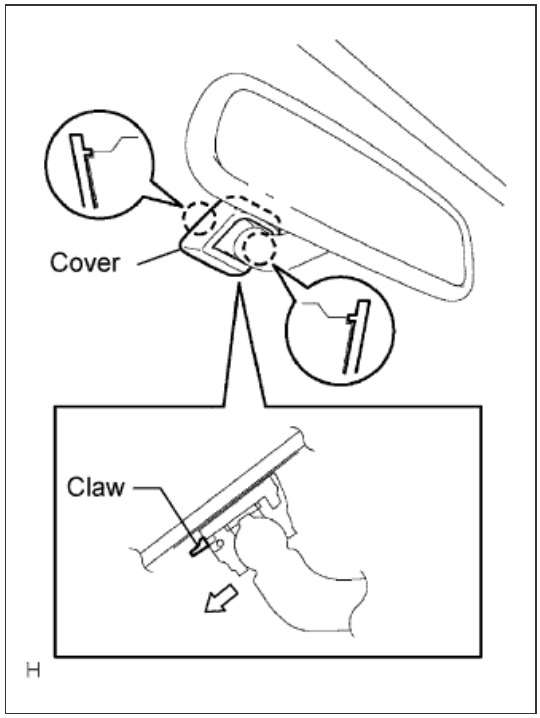
a. Using a T20 "TORX" socket wrench, install the inner rear view mirror with the screw.



Torque:
1.5 N*m{ 15 kgf*cm , 13 in.*lbf }

b. Connect the connector.

2. INSTALL INNER REAR VIEW MIRROR STAY HOLDER COVER (w/ EC Mirror)



a. Attach the 2 claws to install the cover.

3. INSTALL INNER REAR VIEW MIRROR ASSEMBLY (w/o EC Mirror)

a. Install the mirror in the direction of the white arrow.

b. Install the cover with the 2 claws.

for Preparation Click here

CAUTION:

- **The vehicle is equipped with a Supplemental Restraint System (SRS), which consists of a steering pad, front passenger airbag, curtain shield airbag, front seat airbag, driver side knee airbag, front passenger side knee airbag, rear seat side airbag, rear floor airbag sensor, seat belt pretensioner, center airbag sensor, front airbag sensor, side airbag sensor, rear airbag sensor and seat position sensor. Failure to carry out service procedures in the correct sequence could cause SRS parts to unexpectedly deploy and possibly lead to serious injuries. Furthermore, if a mistake is made when servicing SRS parts, they may fail to operate when required. Before performing servicing (including installation/removal, inspection and replacement of parts), be sure to read the following precautions.**
- **Before starting work, wait at least 90 seconds after the engine switch is turned off and after the cable is disconnected from the negative (-) battery terminal (SRS parts are equipped with a backup power source. If work is started within 90 seconds of turning the engine switch off and disconnecting the cable from the negative (-) battery terminal, SRS parts may deploy).**
- **Do not expose SRS parts directly to hot air or flames.**

NOTICE:

- **Malfunction symptoms of SRS parts are difficult to confirm. DTCs are the most important source of information when troubleshooting. During troubleshooting, always confirm DTCs before disconnecting the cable from the negative (-) battery terminal.**
- **For minor collisions where SRS parts do not deploy, always inspect the SRS parts.**
- **Before performing repairs, remove the airbag sensors if any kind of impact is likely to occur to an airbag sensor during repairs.**
- **Never use SRS parts from another vehicle. When replacing SRS parts, replace them with new ones.**
- **Never disassemble or attempt to repair SRS parts.**
- **If an SRS part has been dropped, or if there are any cracks, dents or other defects in the case, bracket or connector, replace the SRS part with a new one.**
- **Use an ohmmeter/voltmeter with high impedance (10 kΩ/V minimum) for troubleshooting the electrical circuits.**
- **Information labels are attached to the periphery of SRS parts. Follow the cautions and instructions on the labels.**
- **After work on the SRS is completed, perform the SRS warning light check (Click here).**
- **When the cable is disconnected from the negative (-) battery terminal, the memory settings of each system will be cleared. Because of this, be sure to write down the settings of each system before starting work. When work is finished, reset the settings of each system as before. Never use a backup power supply from outside the vehicle to avoid erasing the memory in a system.**
- **If the vehicle is equipped with a mobile communication system, refer to the Precaution in the Introduction section.**

HINT:

In the airbag system, the center airbag sensor, front airbag sensor LH and RH, side airbag sensor LH and RH, rear airbag sensor LH and RH, rear floor airbag sensor are collectively referred to as the airbag sensors.

1.HANDLING PRECAUTIONS FOR AIRBAG SENSORS

a. Before starting the following operations, wait for at least 90 seconds after disconnecting the cable from the negative (-) battery terminal:

   i. Replacement of the airbag sensors.

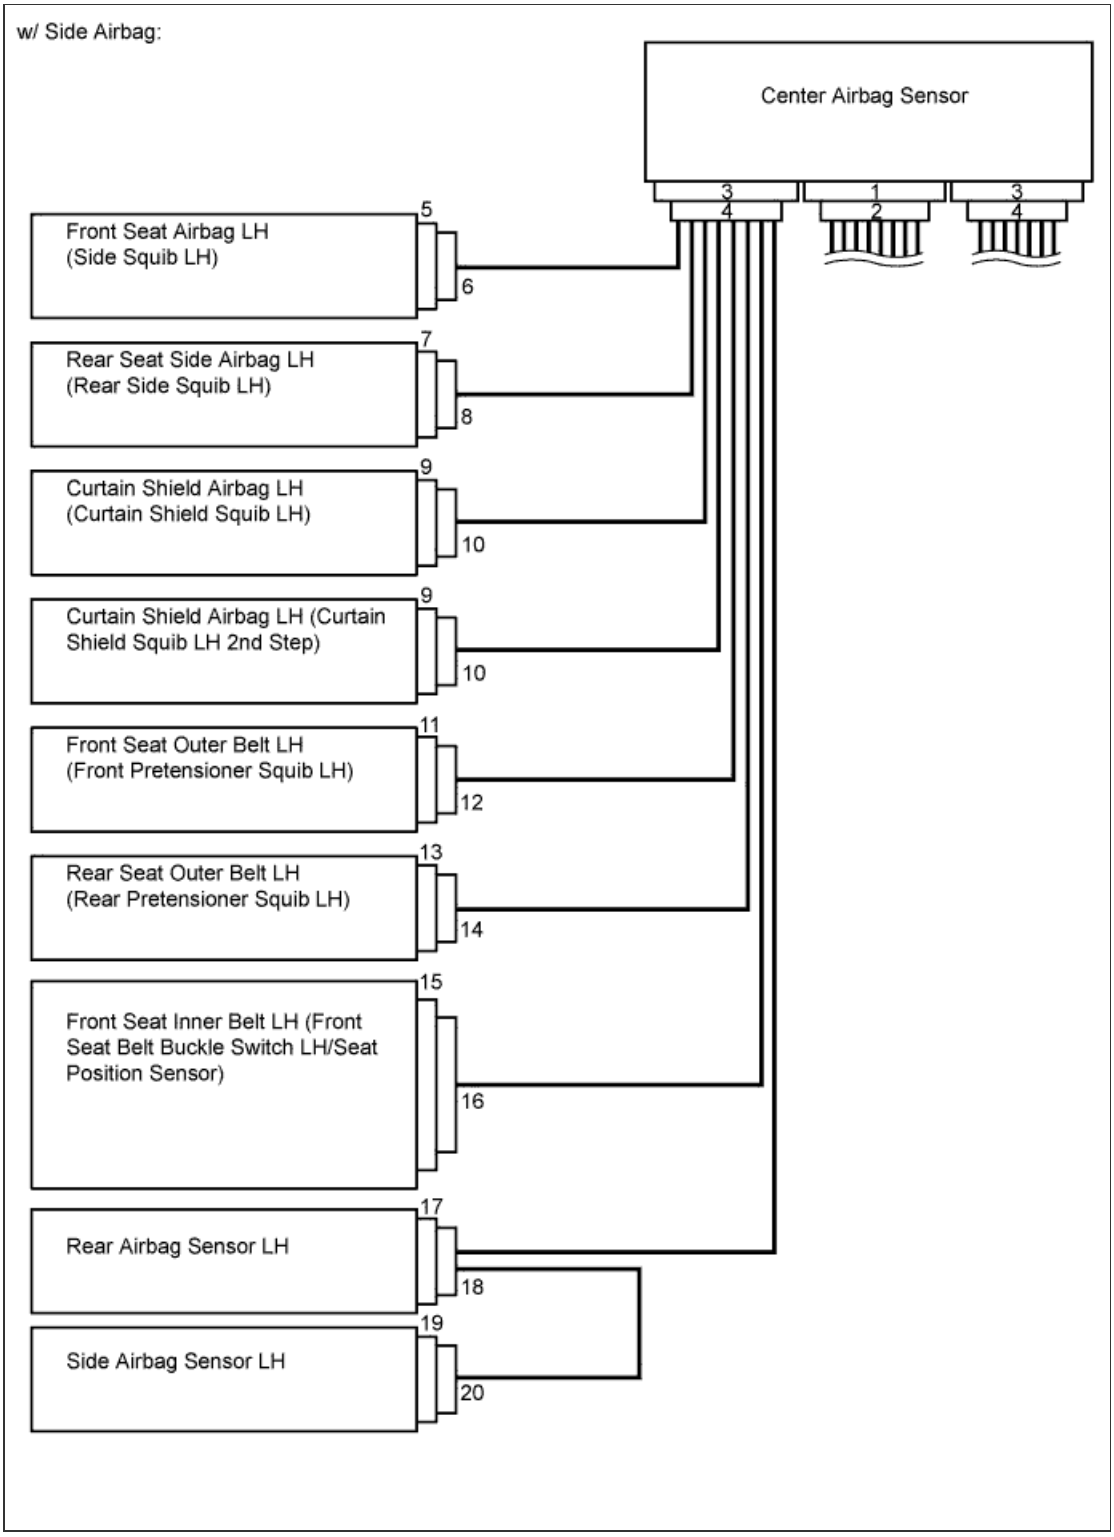
   ii. Adjustment of the front/rear doors of the vehicle equipped with side airbags and curtain shield airbags (fitting adjustment).

b. When connecting or disconnecting the airbag sensor connectors, ensure that each sensor is installed in the vehicle.

c. Do not use airbag sensors which have been dropped during operation or transportation.

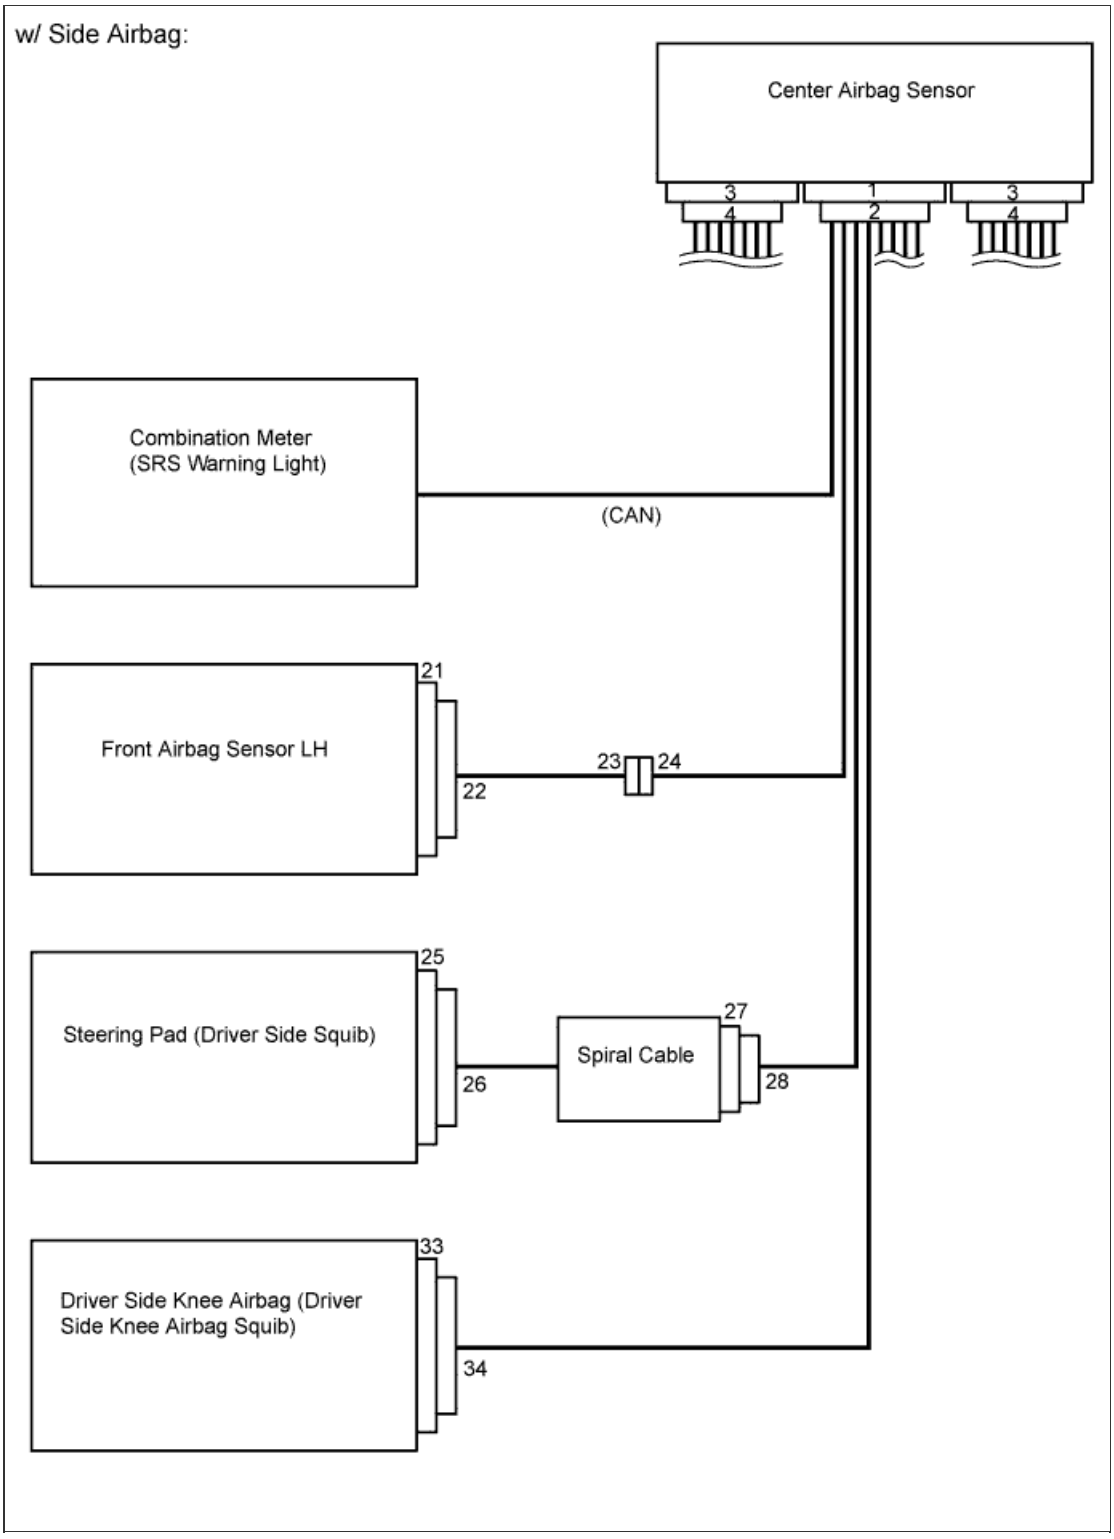
d. Do not disassemble the airbag sensors.

2.INSPECTION PROCEDURE FOR VEHICLE INVOLVED IN ACCIDENT



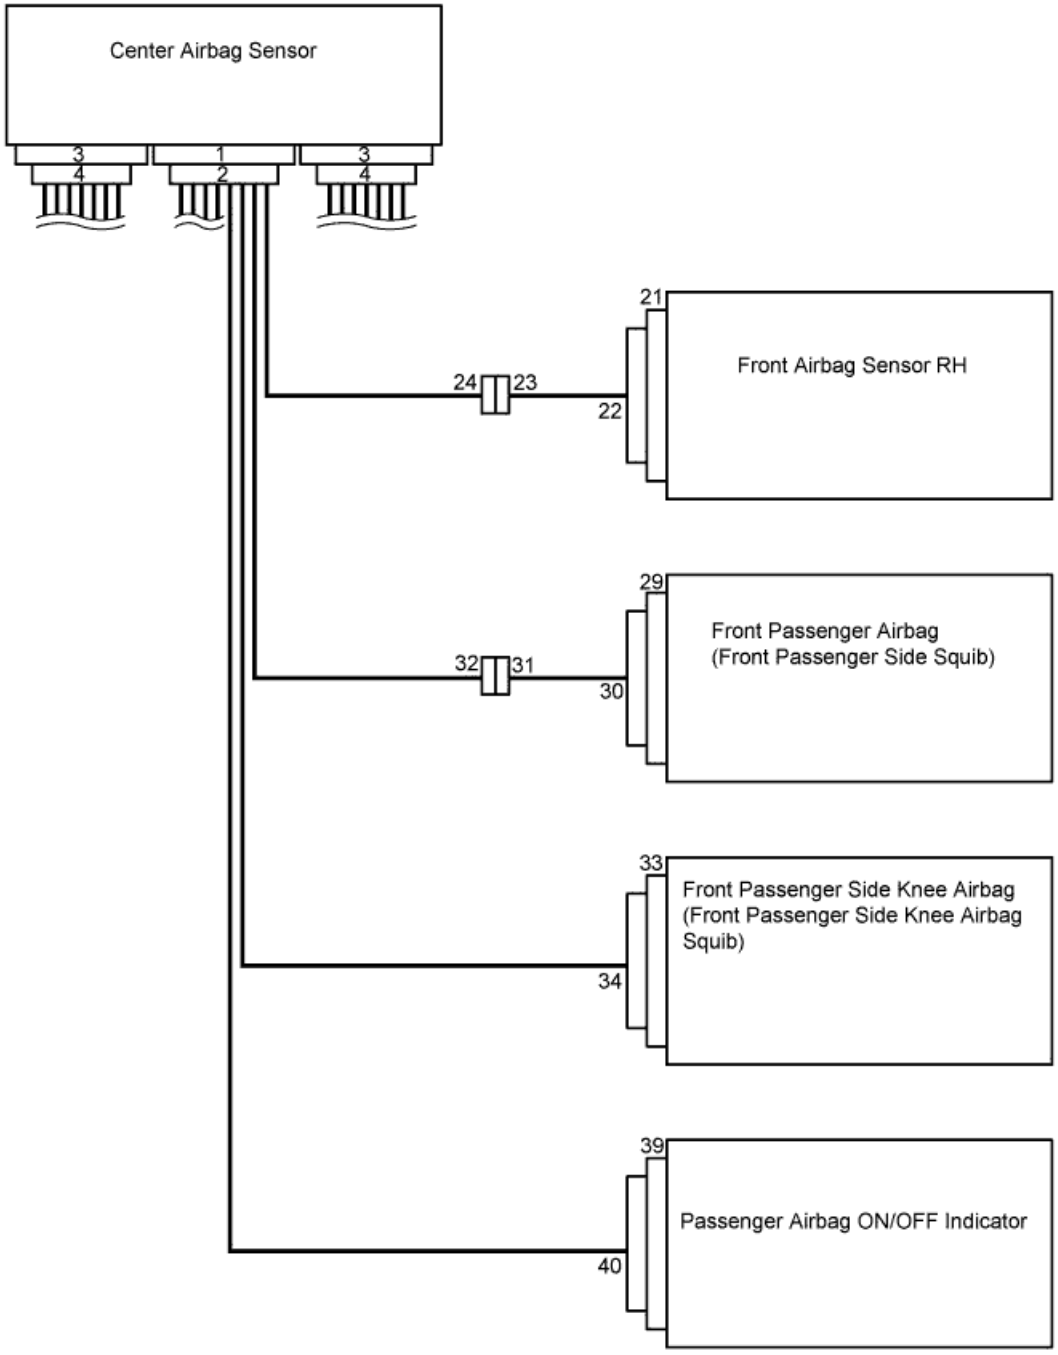
a. When the airbag has not deployed, confirm the DTCs by checking the SRS warning light. If there is any malfunction in the SRS airbag system, perform troubleshooting.

b. When any of the airbags have deployed, replace the airbag sensors and check the installation condition.

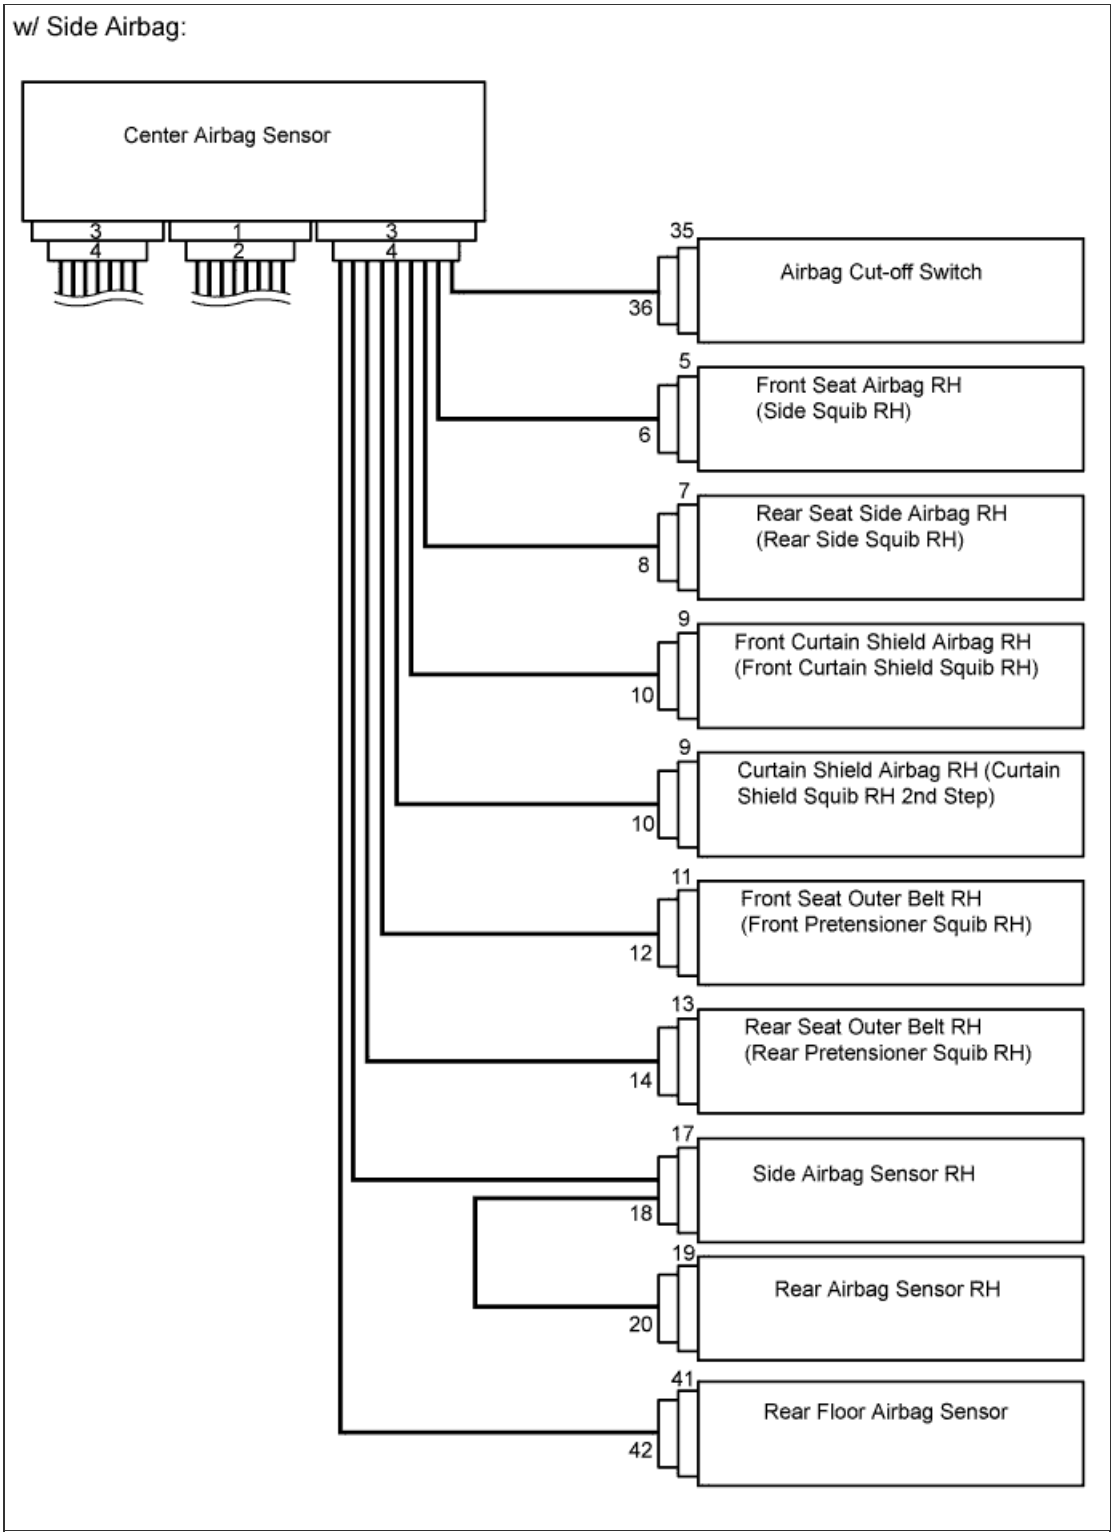


3.SRS CONNECTORS

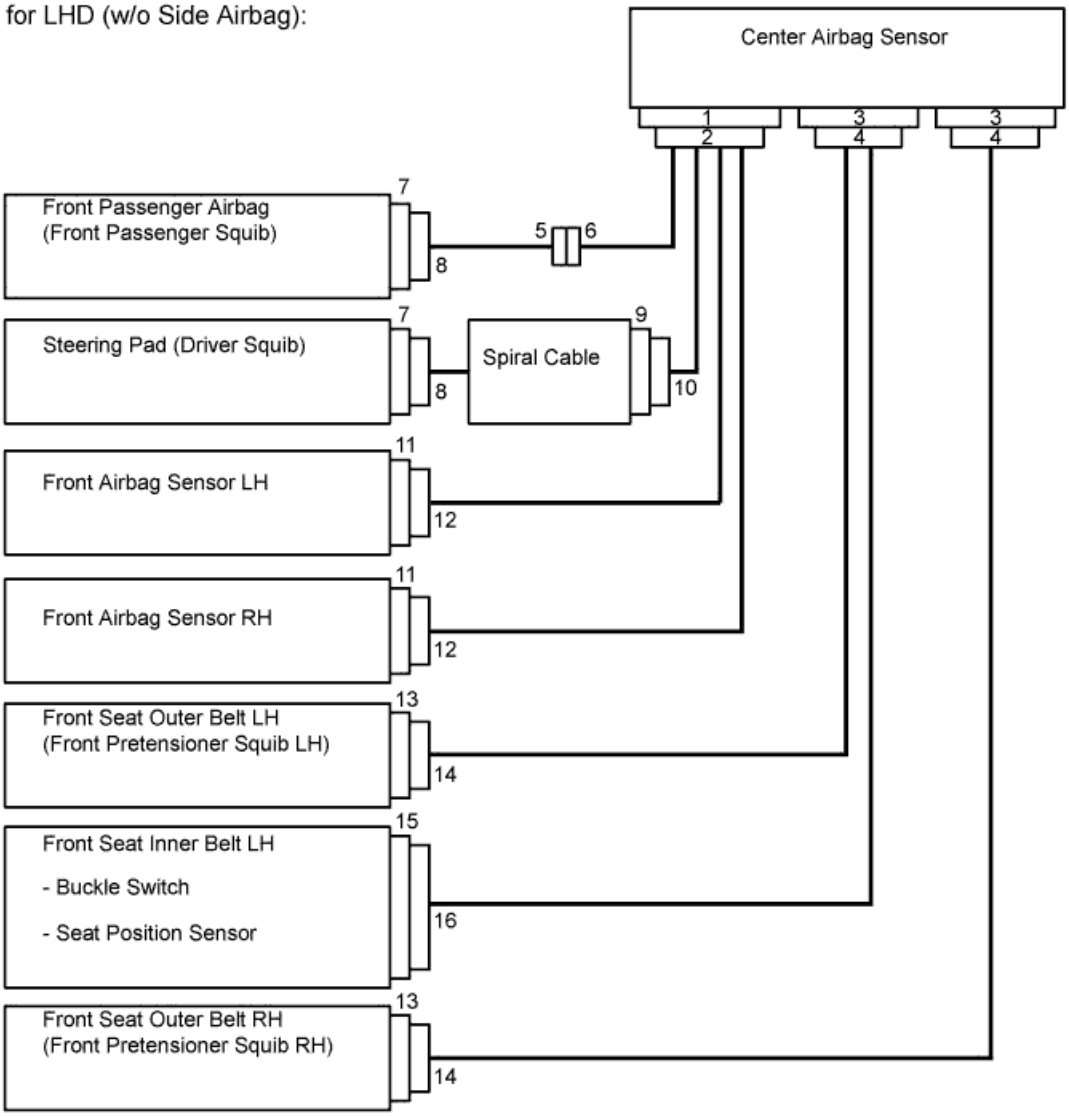
a. SRS connectors are located as shown in the following illustration.



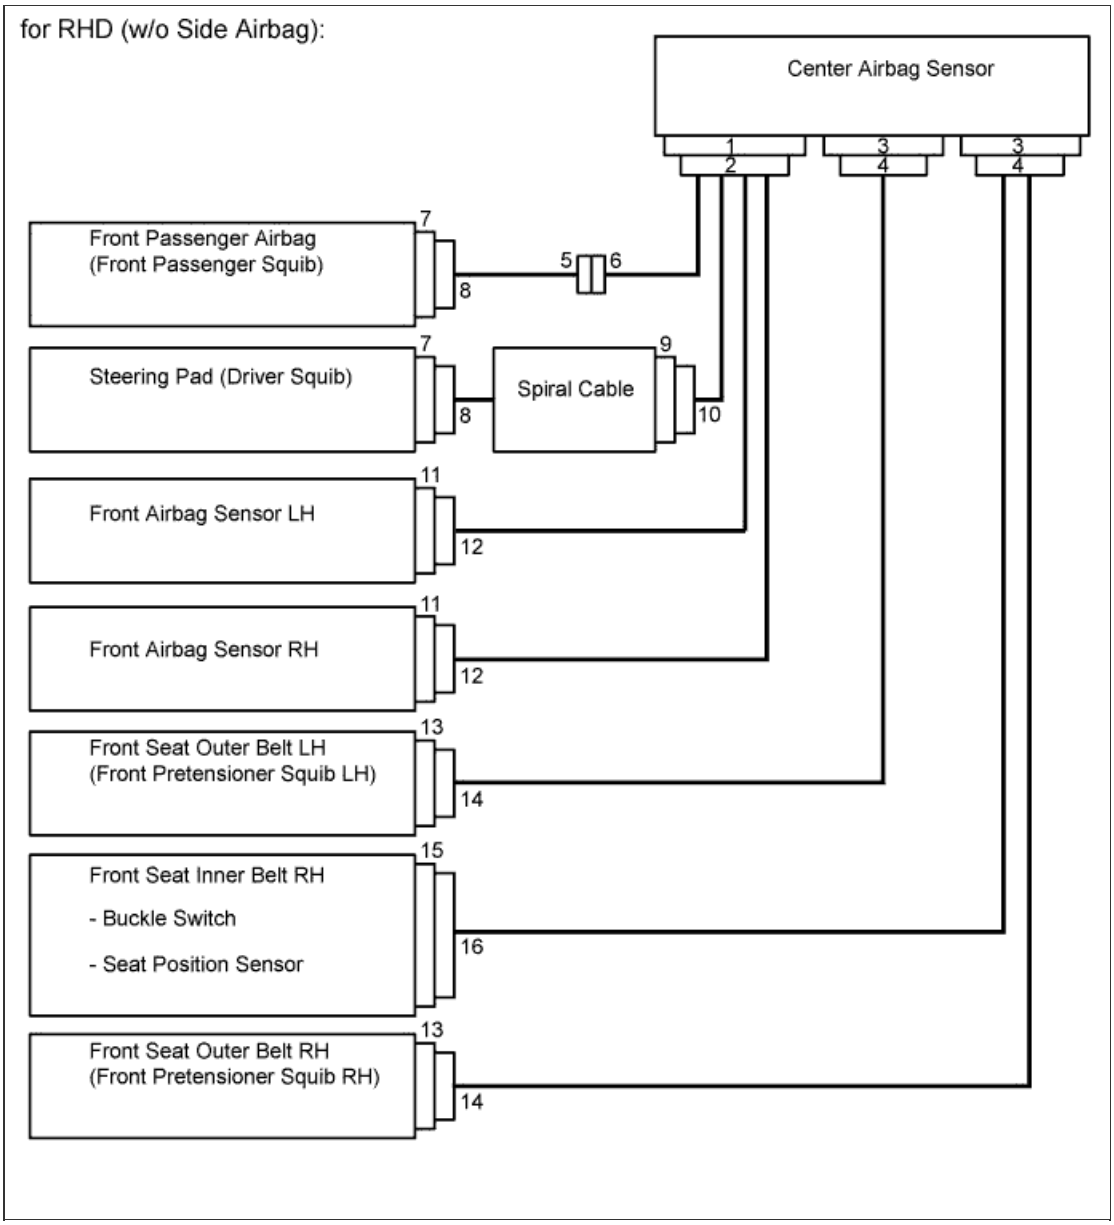
w/ Side Airbag:



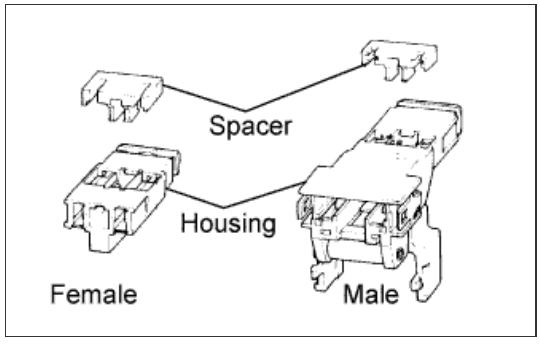
w/ Side Airbag:



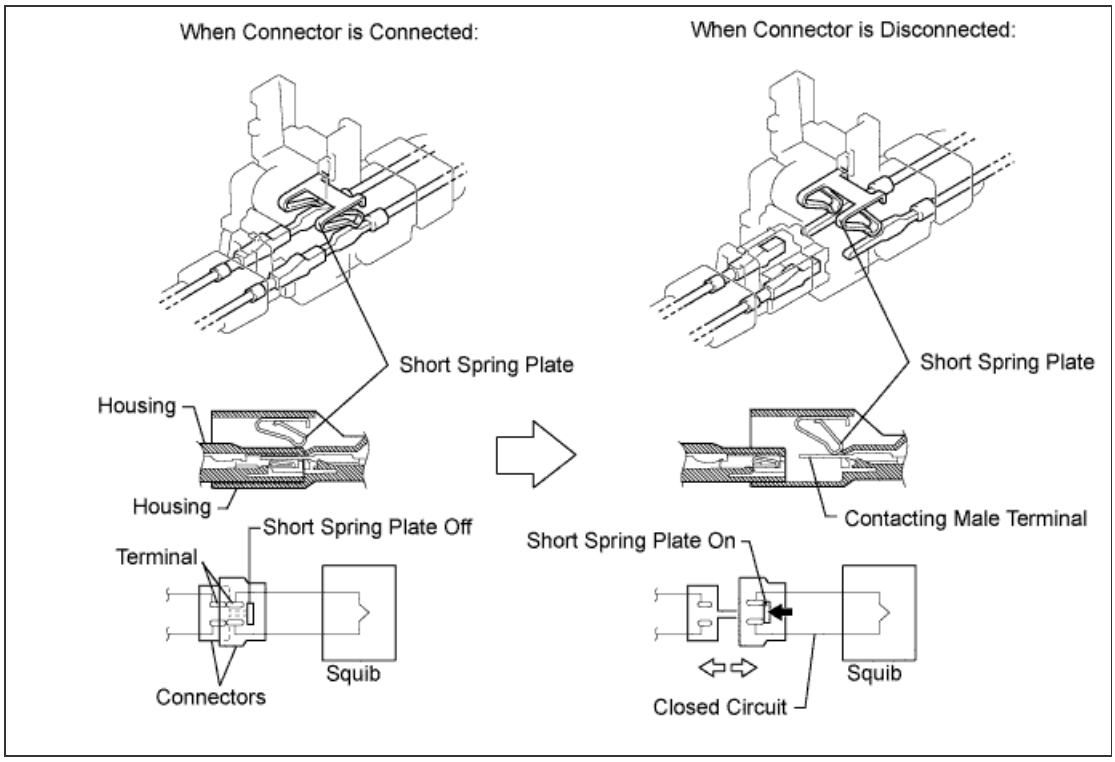
w/ Side Airbag:



w/ Side Airbag:

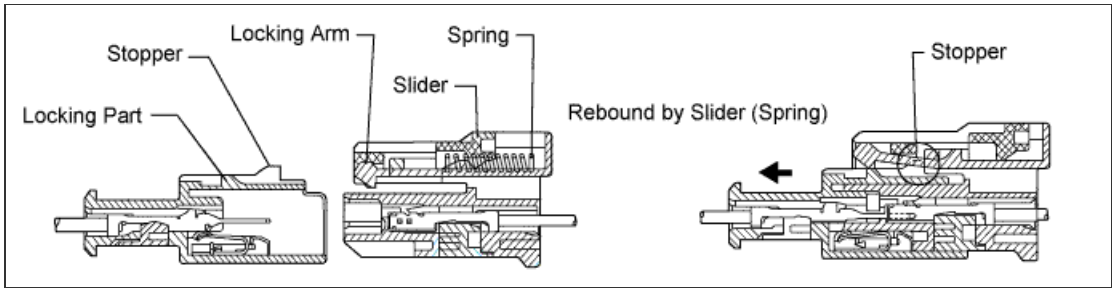


for LHD (w/o Side Airbag):

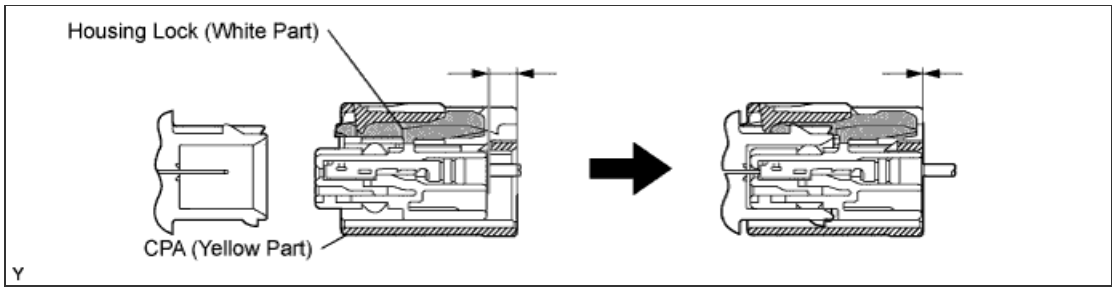


Item	Application
Terminal Twin-lock Mechanism	Connectors 5, 6, 7, 8, 18, 20, 23, 24, 27, 28, 31, 32, 37, 38, 41, 42
Activation Prevention Mechanism	Connectors 5, 7, 27, 31, 37, 41
Half Connection Prevention Mechanism	Connectors 6, 8, 23, 28, 32, 38, 42
Connector Position Assurance Mechanism	Connectors 18, 20, 22
Connector Lock Mechanism (1)	Connectors 10, 12, 14, 26, 30, 34
Connector Lock Mechanism (2)	Connectors 2, 4
Improper Connection Prevention Lock Mechanism	Connectors 1, 3

b. All connectors in the SRS, except the seat position sensor connector, are colored yellow to distinguish them from other connectors. These connectors have special functions, and are specially designed for the SRS. All SRS connectors use durable gold-plated terminals which are placed in the locations shown below to ensure high reliability.

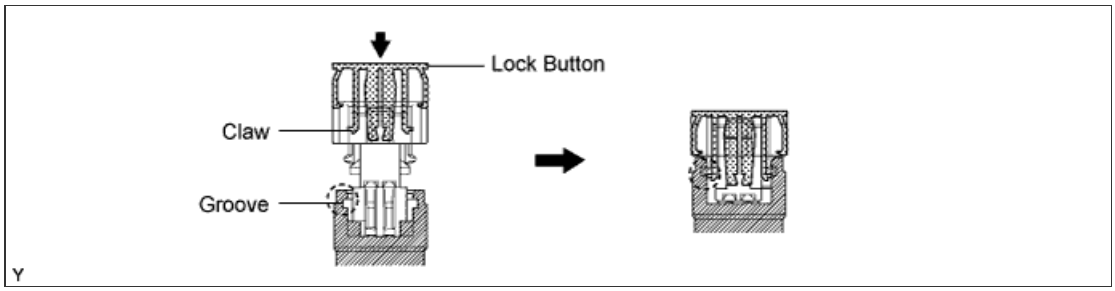


i. Terminal twin-lock mechanism:
All connectors with a terminal twin-lock mechanism have a two-piece component consisting of a housing and a spacer. This design enables the terminal to be locked securely by two locking devices (the retainer and the lance) to prevent terminals from coming out.

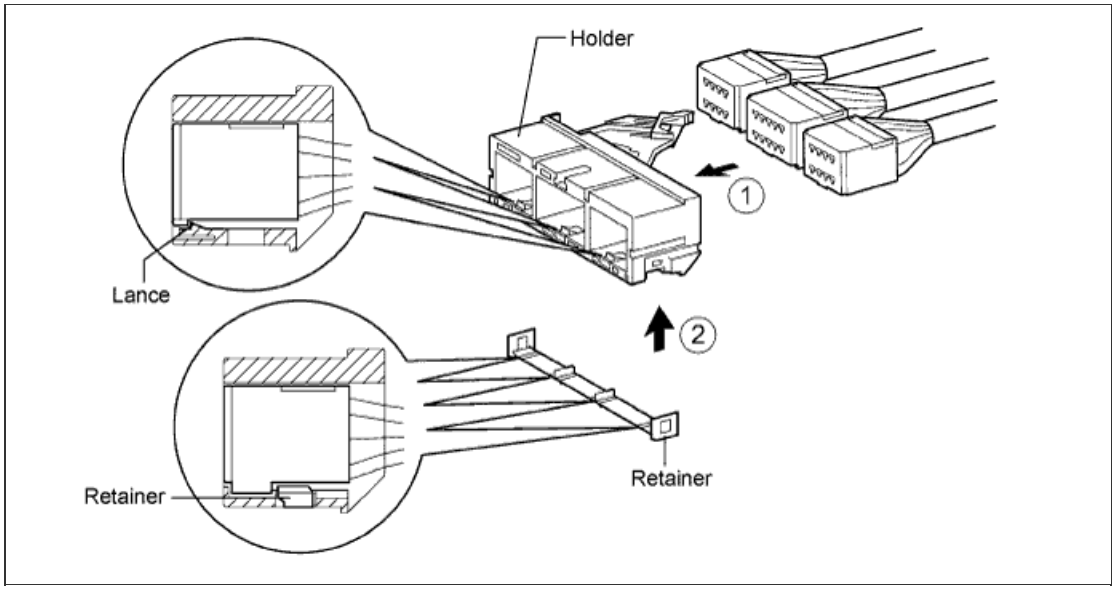


ii. Activation prevention mechanism:
All connectors with an activation prevention mechanism contain a short spring plate. When these connectors are disconnected, the short spring plate creates a short circuit by automatically connecting the positive (+) and negative (-) terminals of the squib.

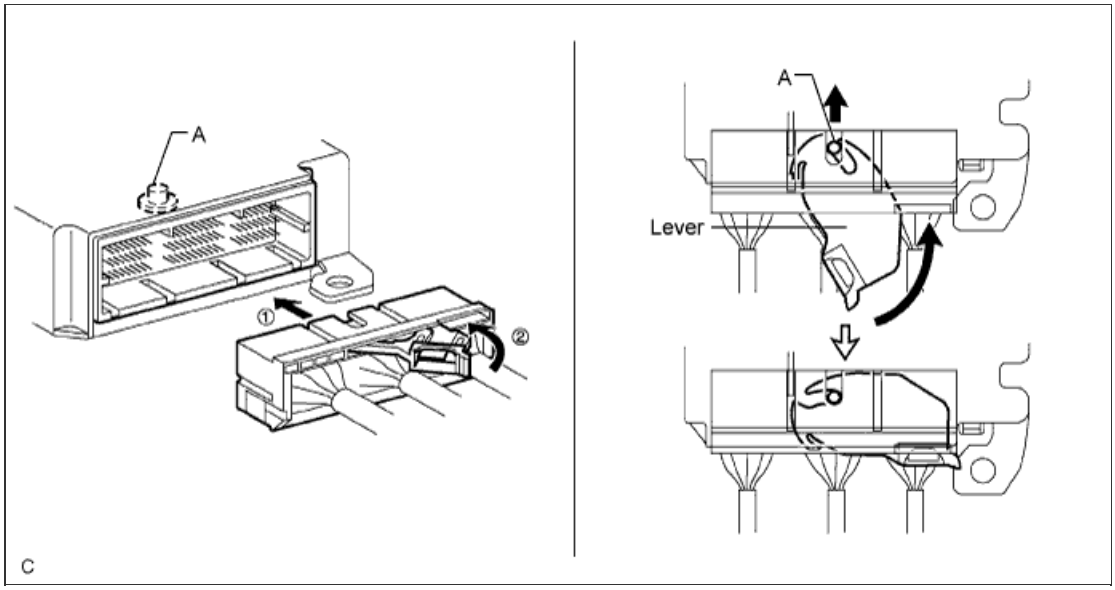
iii. Half connection prevention mechanism:
If the connector is not completely connected, the connector is disconnected due to the spring force so that no continuity exists.



iv. Connector position assurance mechanism:
Only when the housing lock (white part) is completely engaged, the CPA (yellow part) slides, which completes the connector engagement.



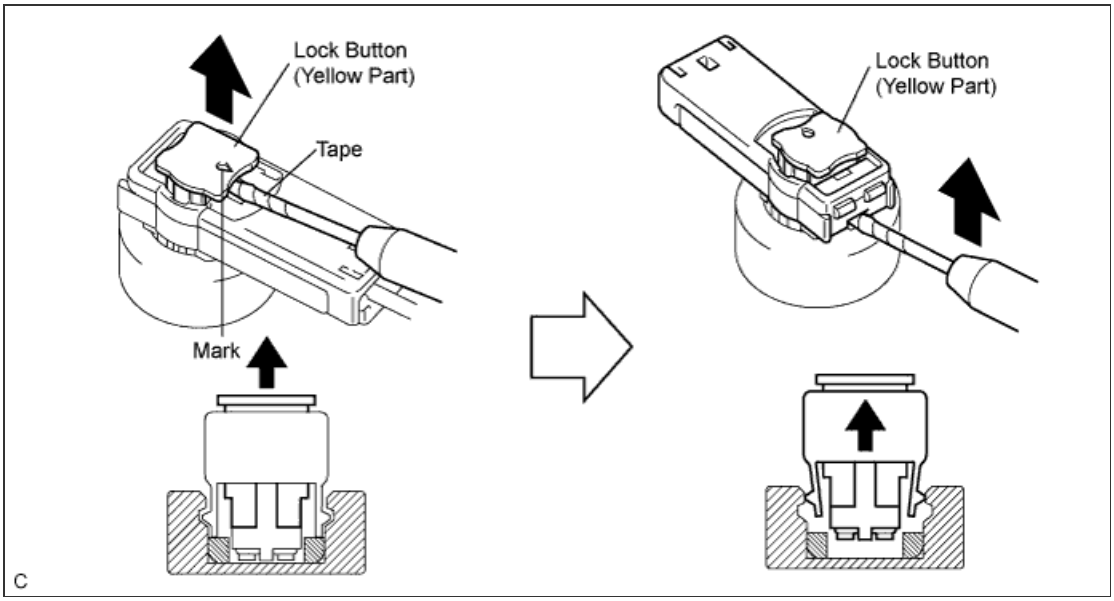
v. Connector lock mechanism (1):



Locking the connector lock button connects the connector securely.

vi. Connector lock mechanism (2):
Both the primary lock with holder lances and the secondary lock with retainer prevent the connectors from becoming disconnected.

vii. Improper connection prevention lock mechanism:
When connecting the holder, the lever is pushed into the lock position by rotating around the A axis to lock the holder securely.

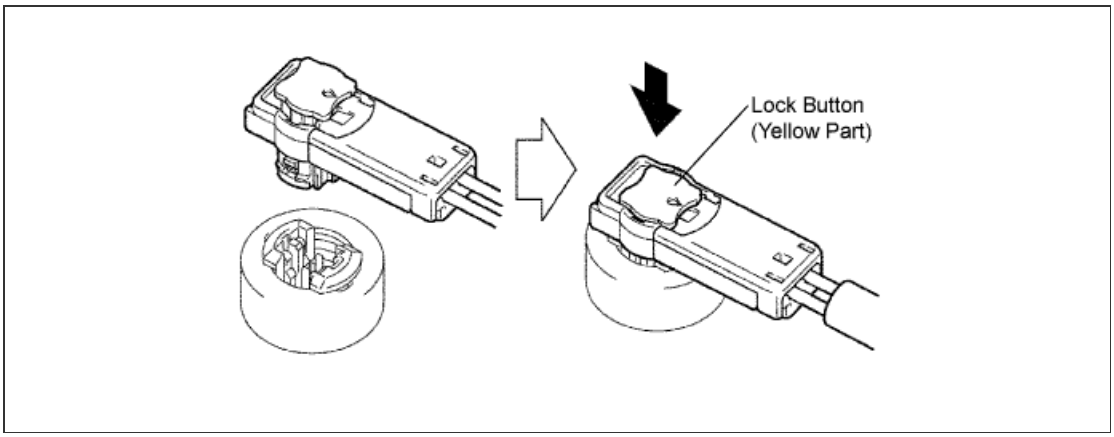


4. ISCONNECTION OF CONNECTORS FOR STEERING PAD, FRONT PASSENGER AIRBAG (SQUIB SIDE), DRIVER SIDE KNEE AIRBAG, FRONT PASSENGER SIDE KNEE AIRBAG, CURTAIN SHIELD AIRBAG, FRONT SEAT AIRBAG (SQUIB SIDE) AND REAR SEAT SIDE AIRBAG (SQUIB SIDE)

HINT:

Tape the screwdriver tip before use.

a. Release the lock button (yellow part) of the connector using a screwdriver.

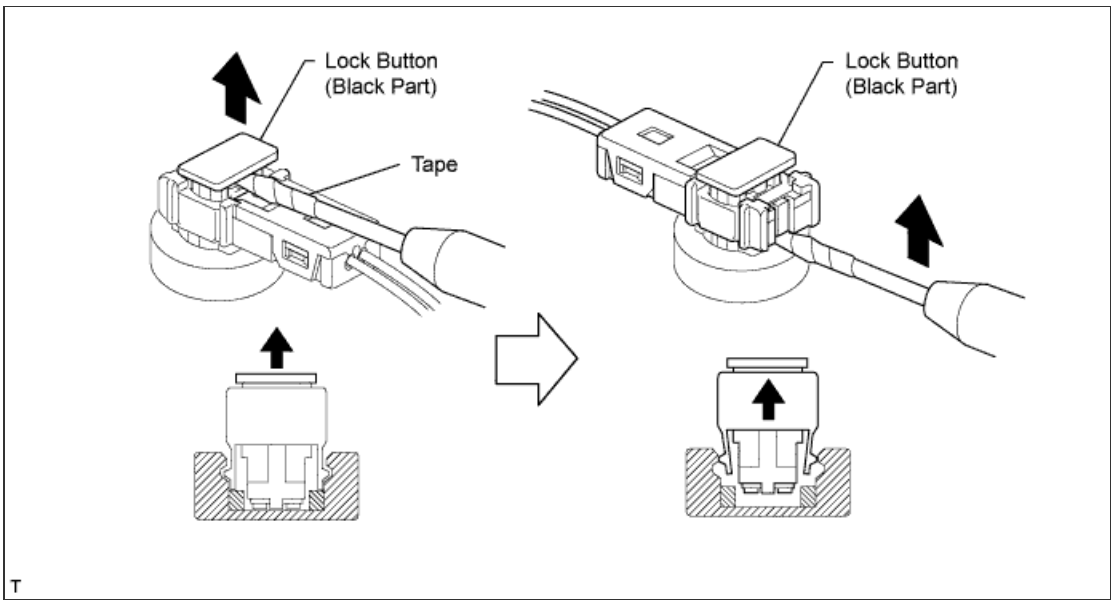


b. Insert the screwdriver tip between the connector and the base, and then raise the connector.

5.CONNECTION OF CONNECTORS FOR STEERING PAD, FRONT PASSENGER AIRBAG (SQUIB SIDE), DRIVER SIDE KNEE AIRBAG, FRONT PASSENGER SIDE KNEE AIRBAG, CURTAIN SHIELD AIRBAG, FRONT SEAT AIRBAG (SQUIB SIDE) AND REAR SEAT SIDE AIRBAG (SQUIB SIDE)

a. Connect the connector.

b. Push down securely on the lock button (yellow part) of the connector (when locked, a click sound can be heard).

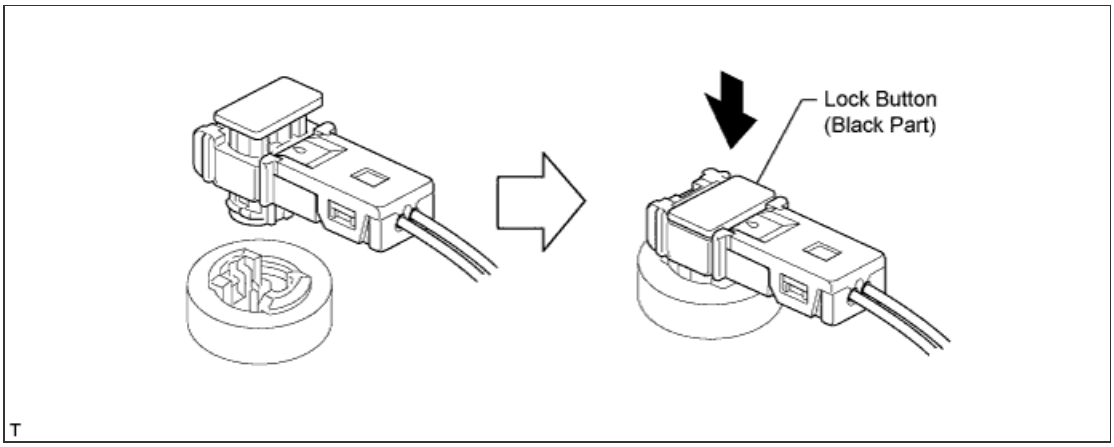


6.DISCONNECTION OF CONNECTORS FOR FRONT SEAT OUTER BELT AND REAR SEAT OUTER BELT

HINT:

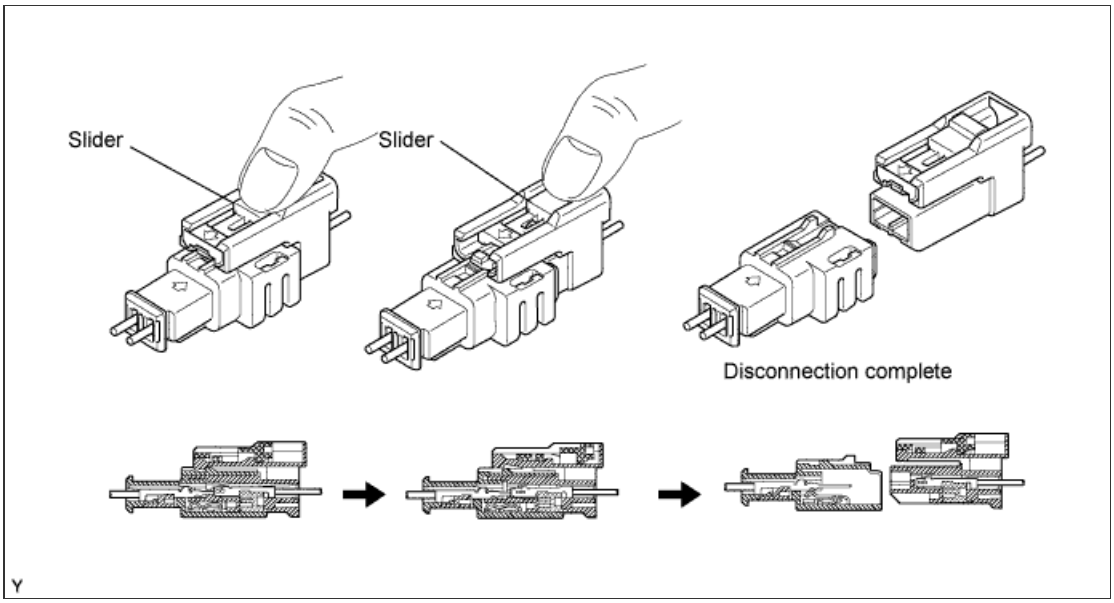
Tape the screwdriver tip before use.

a. Release the lock button (black part) of the connector using a screwdriver.



b. Insert the screwdriver tip between the connector and the base, and then raise the connector.

7.CONNECTION OF CONNECTORS FOR FRONT SEAT OUTER BELT AND REAR SEAT OUTER BELT

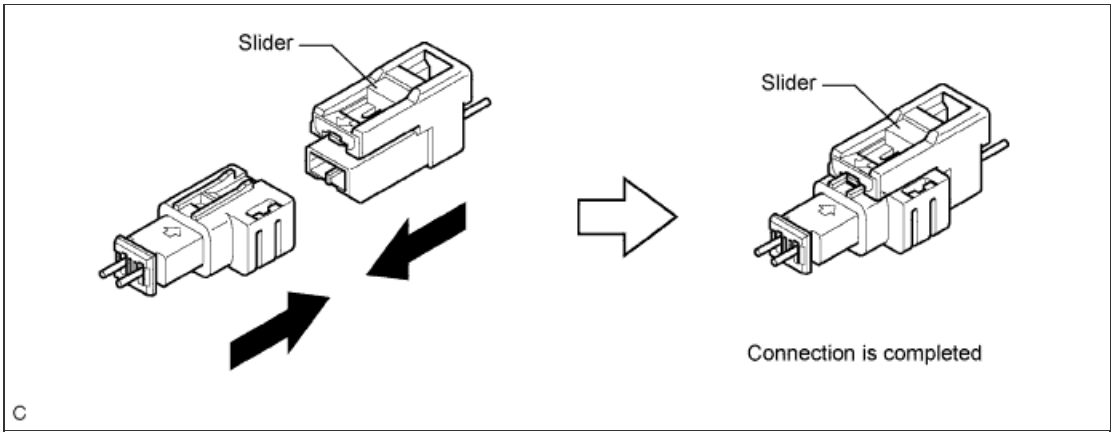


a. Connect the connector.

b. Push down security on the lock button (black part) of the connector (when locked, a click sound can be heard).

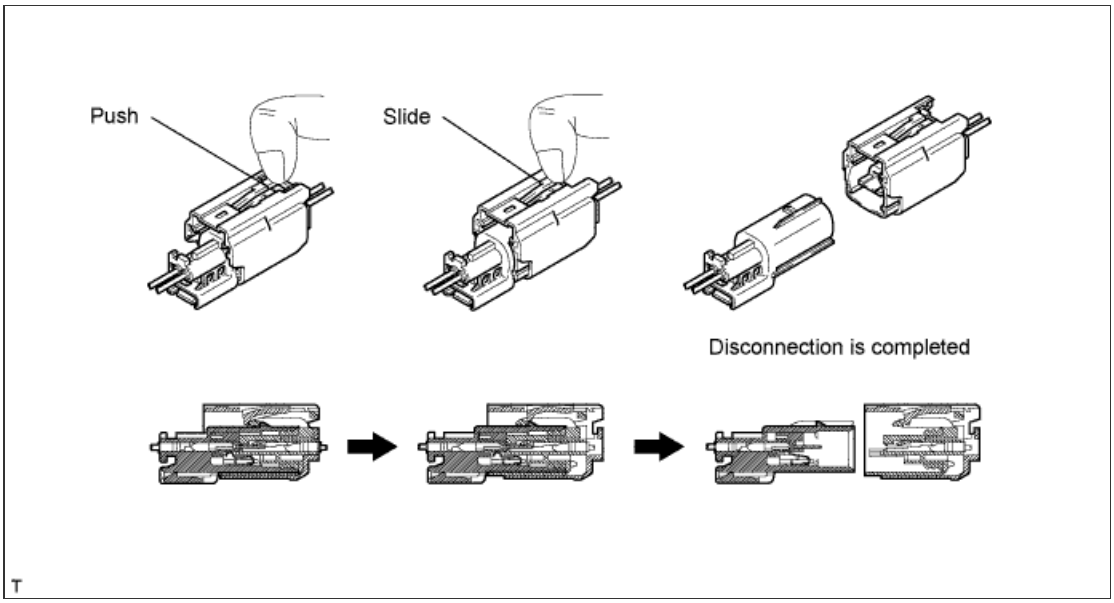
8.DISCONNECTION OF CONNECTOR FOR SPIRAL CABLE (INSTRUMENT PANEL WIRE SIDE) AND FRONT PASSENGER AIRBAG (INSTRUMENT PANEL WIRE SIDE)

a. Place a finger on the slider, slide the slider to release the lock, and then disconnect the connector.



9.CONNECTION OF CONNECTOR FOR SPIRAL CABLE (INSTRUMENT PANEL WIRE SIDE) AND FRONT PASSENGER AIRBAG (INSTRUMENT PANEL WIRE ASSEMBLY SIDE)

a. Connect the connector as shown in the illustration (when locking, make sure that the slider returns to its original position and a click sound can be heard).

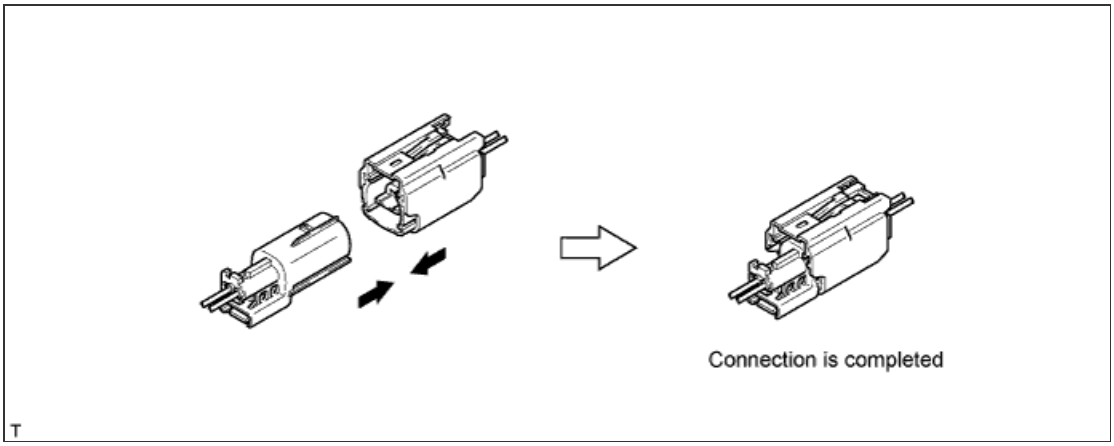


HINT:

When connecting, the slider will slide. Be sure not to touch the slider while connecting, as it may result in an insecure fit.

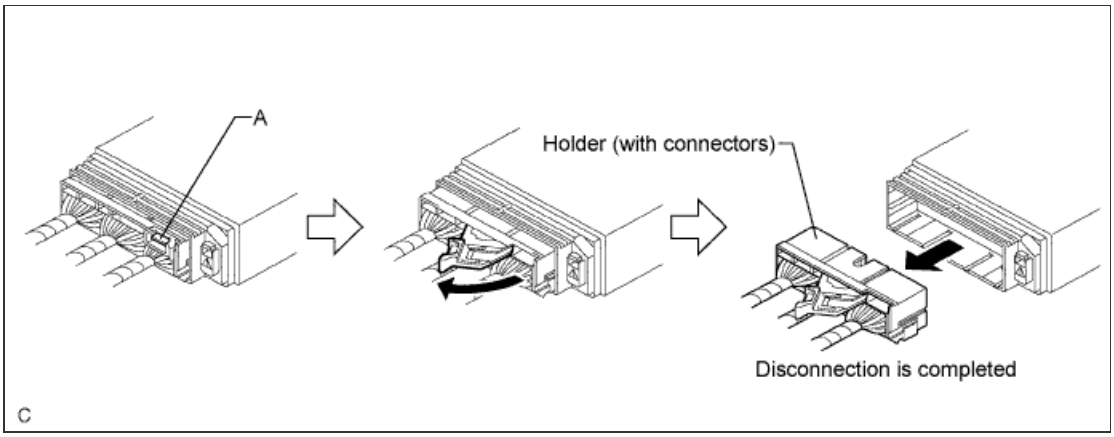
10.DISCONNECTION OF CONNECTORS FOR FRONT SEAT AIRBAG (FLOOR WIRE SIDE) AND REAR SEAT SIDE AIRBAG (FLOOR WIRE SIDE)

a. Push the slider with a finger to detach the first claw. Without releasing your finger, slide the slider to detach the second claw and disconnect the connector.



CONNECTION OF CONNECTORS FOR FRONT SEAT AIRBAG (FLOOR WIRE SIDE) AND REAR SEAT SIDE AIRBAG (FLOOR WIRE SIDE)

a. Connect the connector as shown in the illustration (when locking, make sure that the slider returns to its original position and click sounds can be heard).

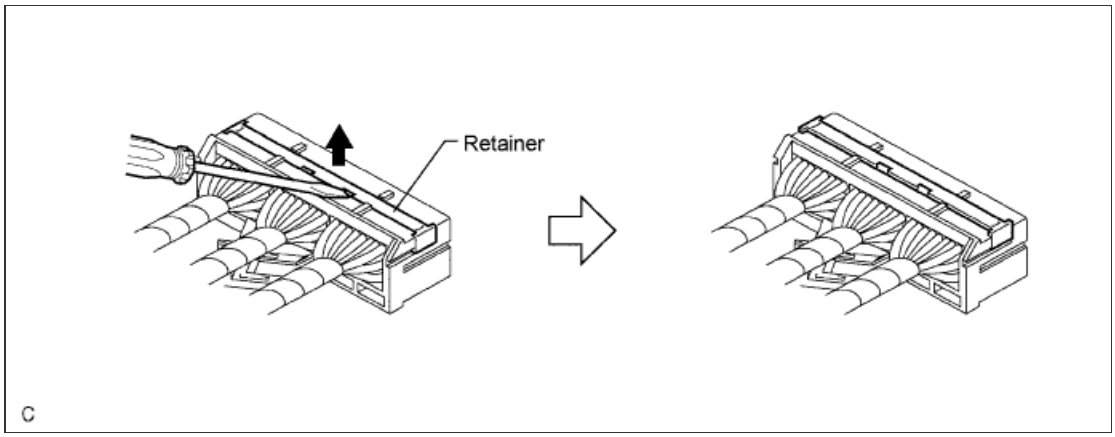


HINT:

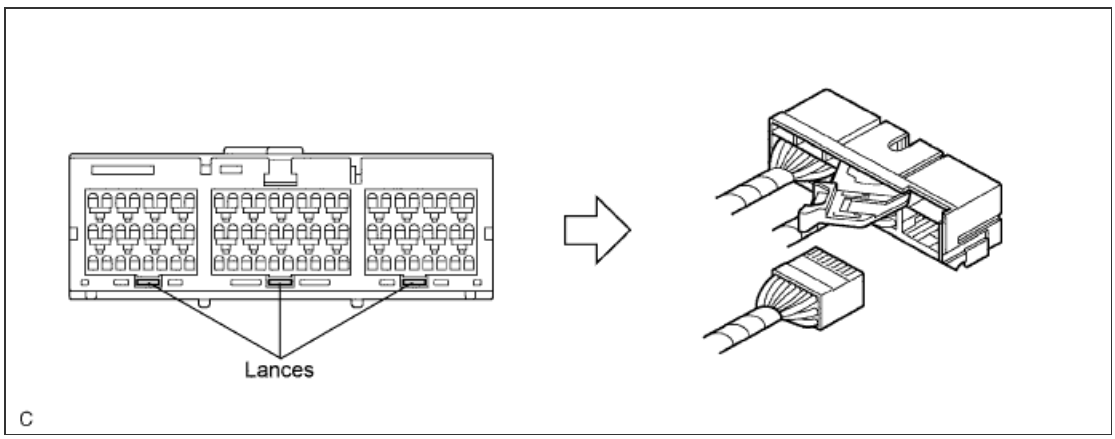
When connecting, the slider will slide. Be sure not to touch the slider while connecting, as it may result in an insecure fit.

12.DISCONNECTION OF CONNECTOR FOR CENTER AIRBAG SENSOR

a. Pull the lever by pushing part A as shown in the illustration and disconnect the holder (with connectors).



HINT:

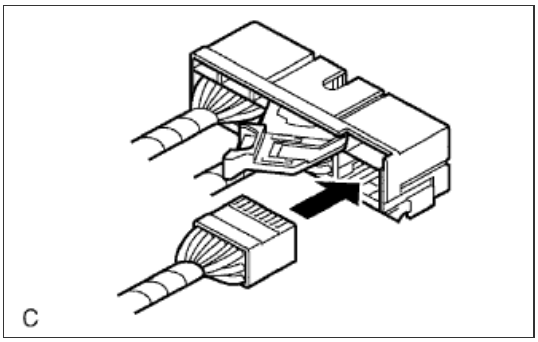


Perform the following procedures when replacing the holder.

b. Remove the holder.

i. Using a screwdriver, unlock the retainer.

ii. Release the fitting lances and remove the holder.

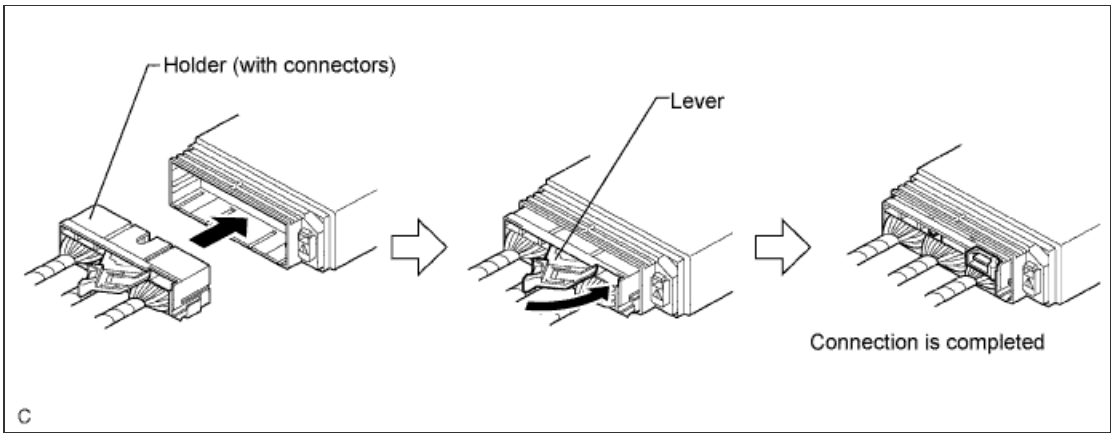


c. Install the holder.

i. Install the connectors to the holder (when locked, a click sound can be heard).

HINT:

The retainer is locked when the holder is connected.



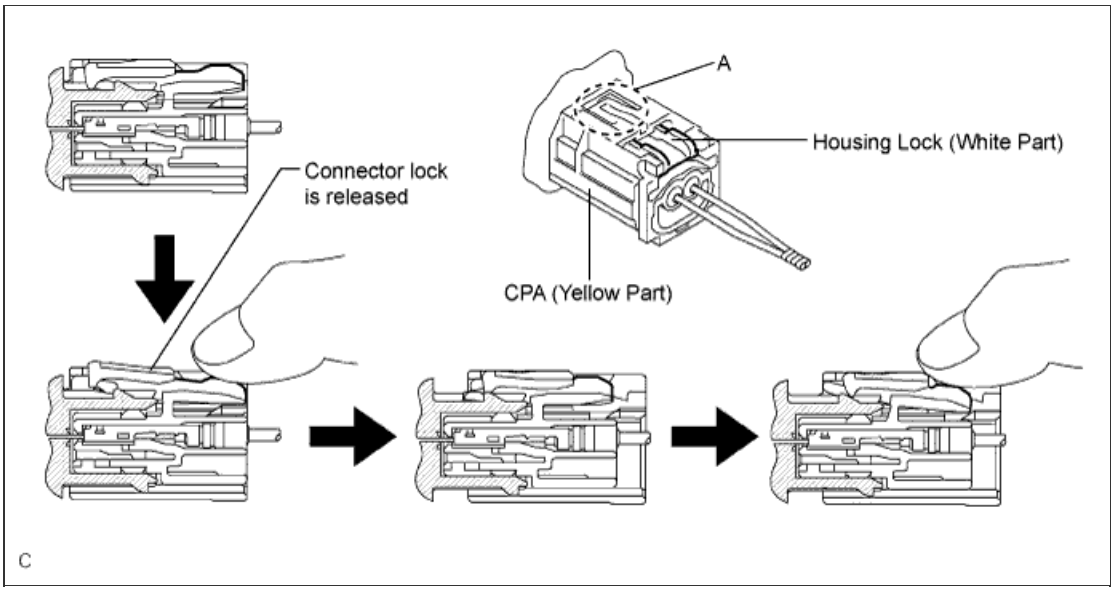
13.CONNECTION OF CONNECTOR FOR CENTER AIRBAG SENSOR

a. Firmly insert the holder (with connectors) into the center airbag sensor until it cannot be pushed any further.

b. Push the lever to connect the holder (with connectors) (when locked, a click sound can be heard).

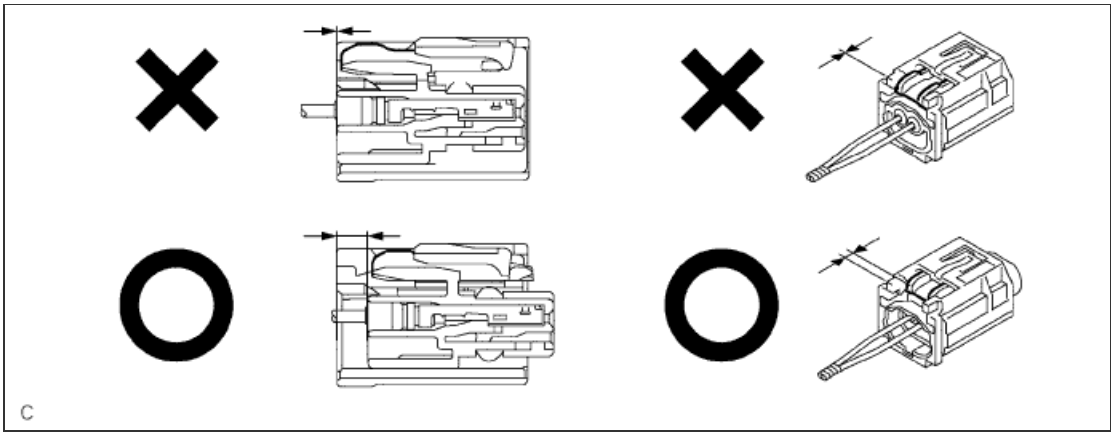
HINT:

The holder slides into the center airbag sensor when it is being connected. Be sure not to hold the holder while connecting, as it may result in an insecure fit.



14.DISCONNECTION OF CONNECTOR FOR FRONT AIRBAG SENSOR, REAR AIRBAG SENSOR RH AND REAR FLOOR AIRBAG SENSOR

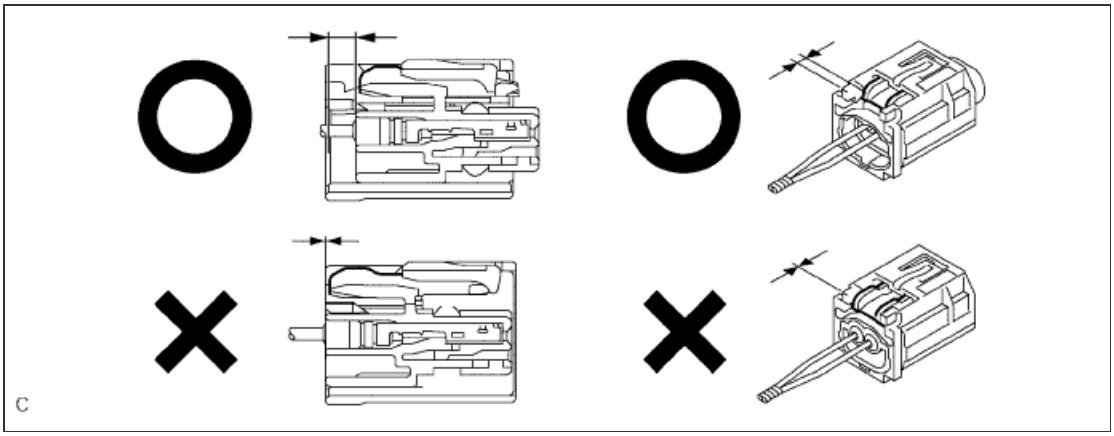
a. Push down the housing lock (white part) and slide the CPA (yellow part) (at this time, the connector cannot be disconnected yet).



b. Push down the housing lock (white part) again and disconnect the connector.

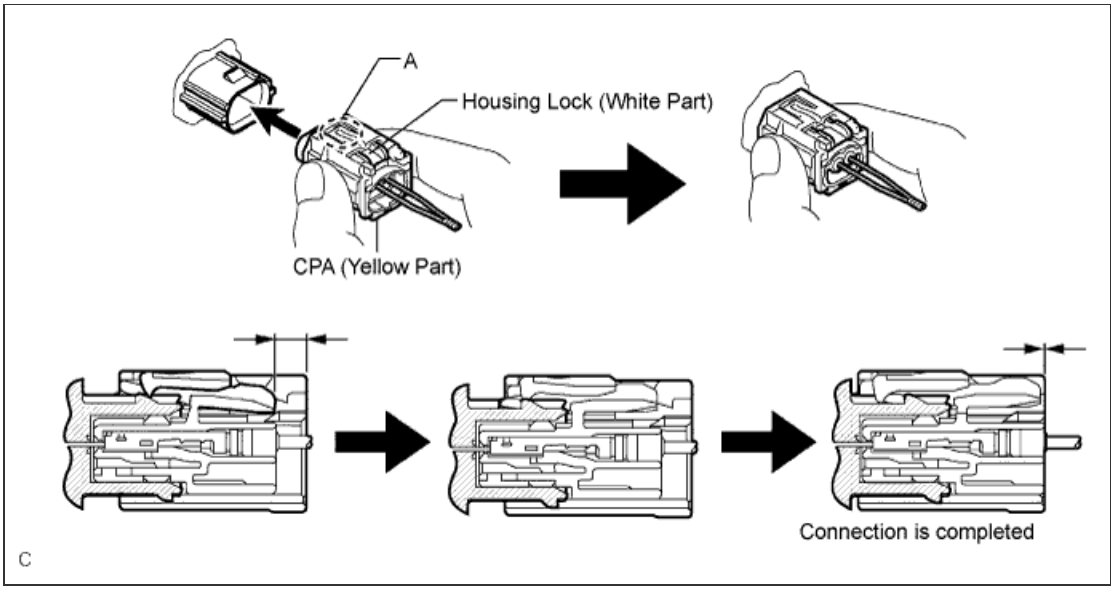
HINT:

Do not push down the part labeled A shown in the illustration when disconnecting.



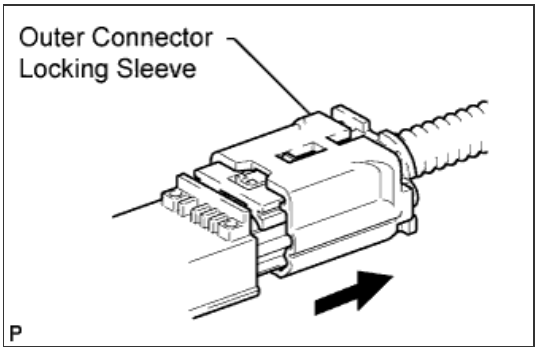
c. After disconnecting the connector, check that the position of the housing lock (white part) is as shown in the illustration.

15.CONNECTION OF CONNECTOR FOR FRONT AIRBAG SENSOR, REAR AIRBAG SENSOR RH AND REAR FLOOR AIRBAG SENSOR



a. Before connecting the connectors, check that the position of the housing lock (white part) is as shown in the illustration.

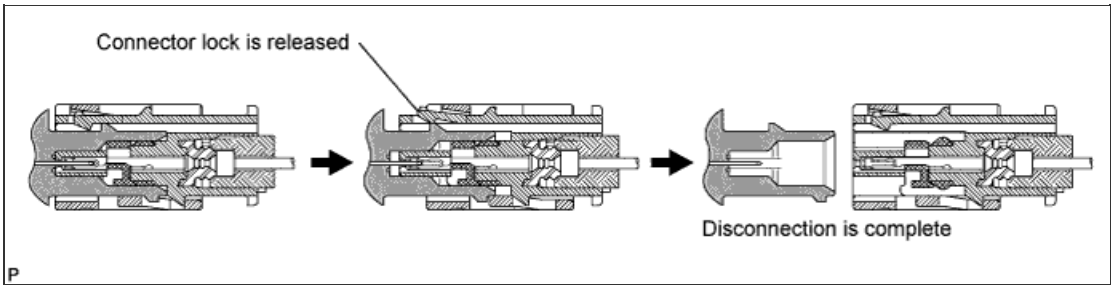
b. Be sure to engage the connectors until they are locked (when locking, make sure that a click sound can be heard).



HINT:

When connecting the connectors, the housing lock (white part) slides. Be sure not to hold the housing lock (white part) and the part labeled A, as it may result in an insecure fit.

16.DISCONNECTION OF CONNECTORS FOR SIDE AIRBAG SENSOR AND REAR AIRBAG SENSOR LH

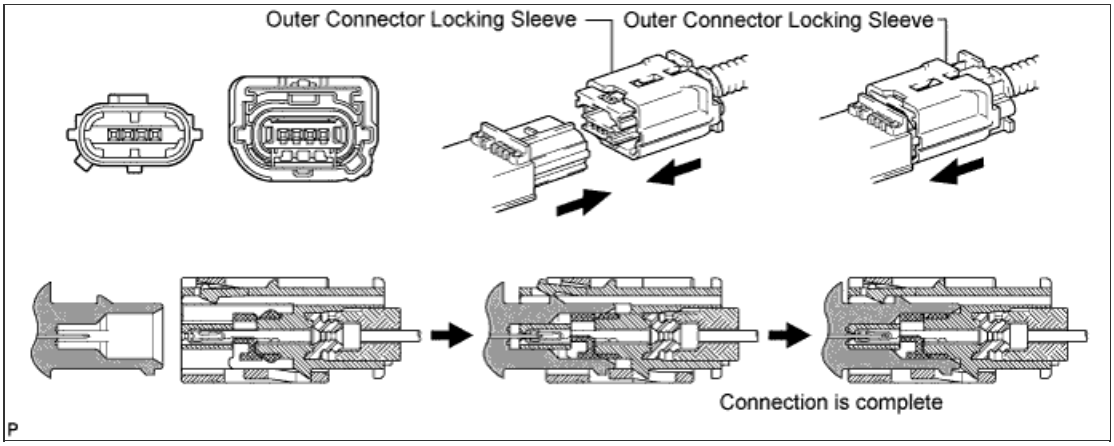


a. While holding the sides of the outer connector locking sleeve, slide the sleeve in the direction shown by the arrow.

b. When the connector lock is released, the connectors are disconnected.

HINT:

Be sure to hold both sides of the sleeve. Holding the top and bottom will make disconnection difficult.



17.CONNECTION OF CONNECTORS FOR SIDE AIRBAG SENSOR AND REAR AIRBAG SENSOR LH

a. Connect the connector as shown in the illustration (when locking, make sure that the outer connector locking sleeve returns to its original

position and a click sound can be heard).

HINT:

When connecting, the sleeve will slide. Be sure not to hold the sleeve while connecting, as it may result in an insecure fit.

CAUTION:

- **The vehicle is equipped with a Supplemental Restraint System (SRS), which consists of a steering pad, front passenger airbag, curtain shield airbag, front seat airbag, driver side knee airbag, front passenger side knee airbag, rear seat side airbag, rear floor airbag sensor, seat belt pretensioner, center airbag sensor, front airbag sensor, side airbag sensor, rear airbag sensor and seat position sensor. Failure to carry out service procedures in the correct sequence could cause SRS parts to unexpectedly deploy and possibly lead to serious injuries. Furthermore, if a mistake is made when servicing SRS parts, they may fail to operate when required. Before performing servicing (including installation/removal, inspection and replacement of parts), be sure to read the following precautions.**
- **Before starting work, wait at least 90 seconds after the engine switch is turned off and after the cable is disconnected from the negative (-) battery terminal (SRS parts are equipped with a backup power source. If work is started within 90 seconds of turning the engine switch off and disconnecting the cable from the negative (-) battery terminal, SRS parts may deploy).**
- **Do not expose SRS parts directly to hot air or flames.**

NOTICE:

- **Malfunction symptoms of SRS parts are difficult to confirm. DTCs are the most important source of information when troubleshooting. During troubleshooting, always confirm DTCs before disconnecting the cable from the negative (-) battery terminal.**
- **For minor collisions where SRS parts do not deploy, always inspect the SRS parts.**
- **Before performing repairs, remove the airbag sensors if any kind of impact is likely to occur to an airbag sensor during repairs.**
- **Never use SRS parts from another vehicle. When replacing SRS parts, replace them with new ones.**
- **Never disassemble or attempt to repair SRS parts.**
- **If an SRS part has been dropped, or if there are any cracks, dents or other defects in the case, bracket or connector, replace the SRS part with a new one.**
- **Use an ohmmeter/voltmeter with high impedance (10 kΩ/V minimum) for troubleshooting the electrical circuits.**
- **Information labels are attached to the periphery of SRS parts. Follow the cautions and instructions on the labels.**
- **After work on the SRS is completed, perform the SRS warning light check (Click here).**
- **When the cable is disconnected from the negative (-) battery terminal, the memory settings of each system will be cleared. Because of this, be sure to write down the settings of each system before starting work. When work is finished, reset the settings of each system as before. Never use a backup power supply from outside the vehicle to avoid erasing the memory in a system.**
- **If the vehicle is equipped with a mobile communication system, refer to the Precaution in the Introduction section.**

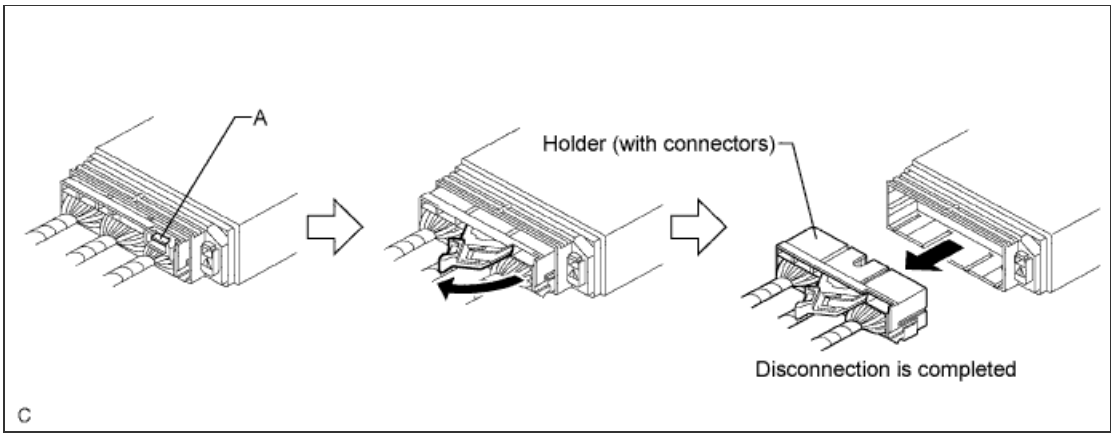
a. Connect the connector as shown in the illustration (when locking, make sure that the slider returns to its original position and click sounds can be heard).

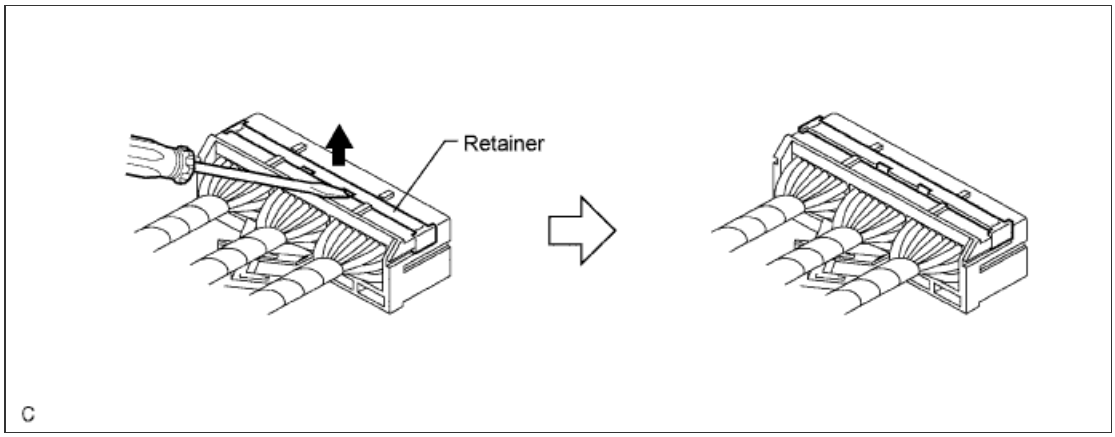


HINT:

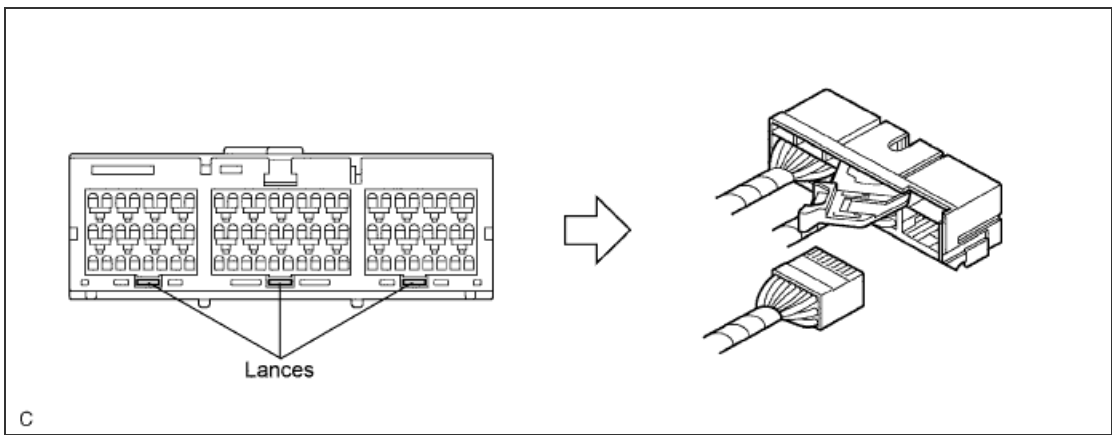
When connecting, the slider will slide. Be sure not to touch the slider while connecting, as it may result in an insecure fit.

12.DISCONNECTION OF CONNECTOR FOR CENTER AIRBAG SENSOR

a. Pull the lever by pushing part A as shown in the illustration and disconnect the holder (with connectors).



HINT:

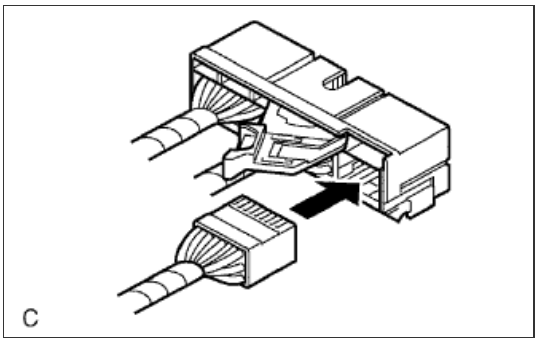


Perform the following procedures when replacing the holder.

b. Remove the holder.

i. Using a screwdriver, unlock the retainer.

ii. Release the fitting lances and remove the holder.

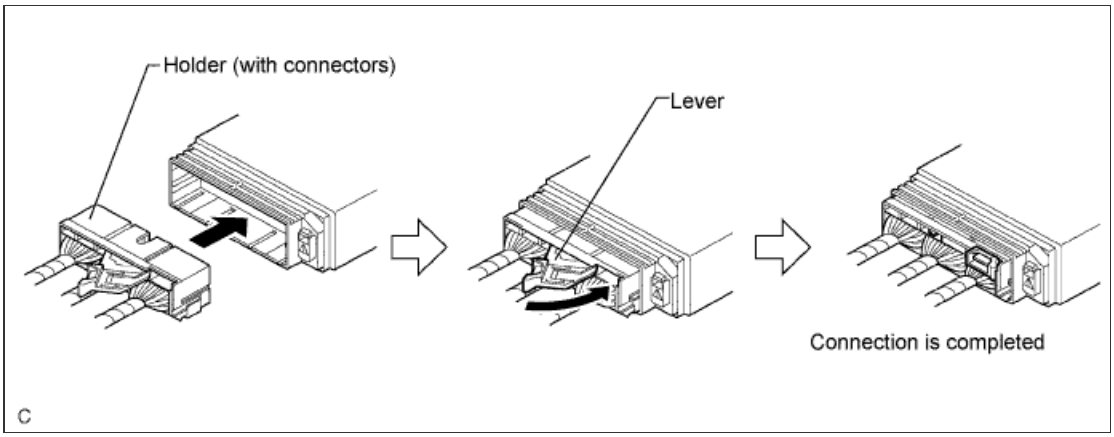


c. Install the holder.

i. Install the connectors to the holder (when locked, a click sound can be heard).

HINT:

The retainer is locked when the holder is connected.



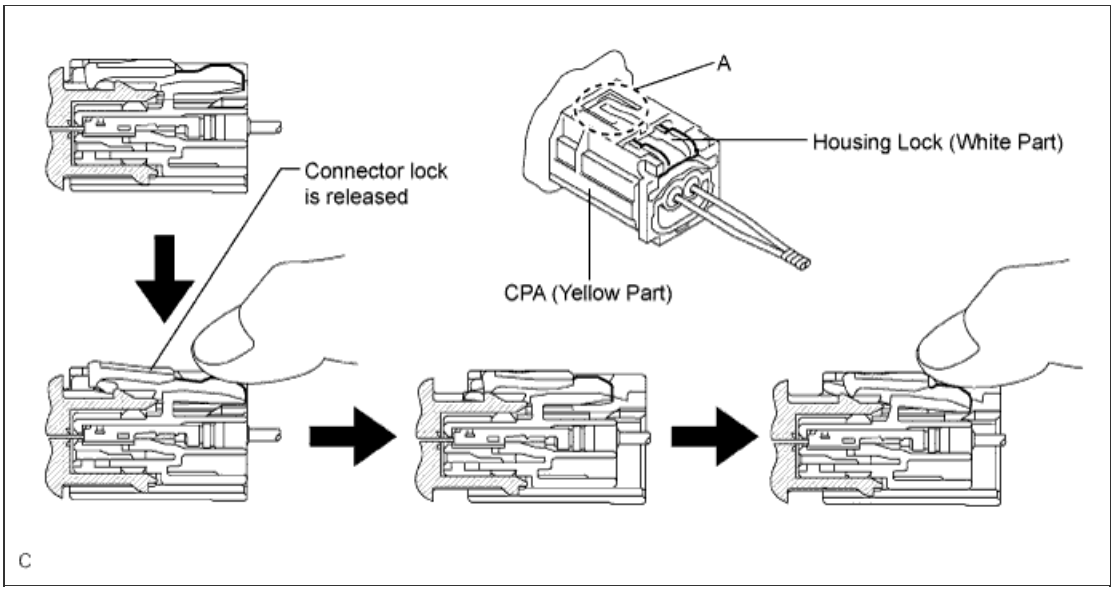
13.CONNECTION OF CONNECTOR FOR CENTER AIRBAG SENSOR

a. Firmly insert the holder (with connectors) into the center airbag sensor until it cannot be pushed any further.

b. Push the lever to connect the holder (with connectors) (when locked, a click sound can be heard).

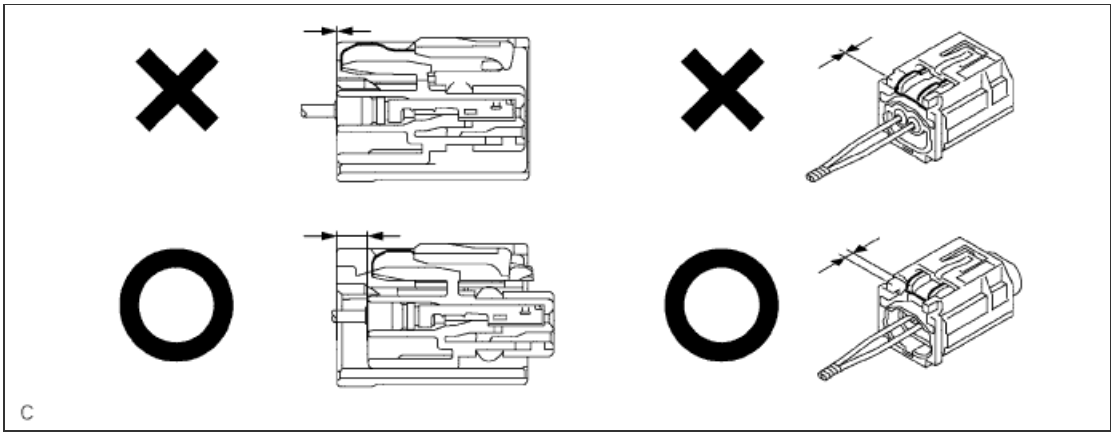
HINT:

The holder slides into the center airbag sensor when it is being connected. Be sure not to hold the holder while connecting, as it may result in an insecure fit.



14.DISCONNECTION OF CONNECTOR FOR FRONT AIRBAG SENSOR, REAR AIRBAG SENSOR RH AND REAR FLOOR AIRBAG SENSOR

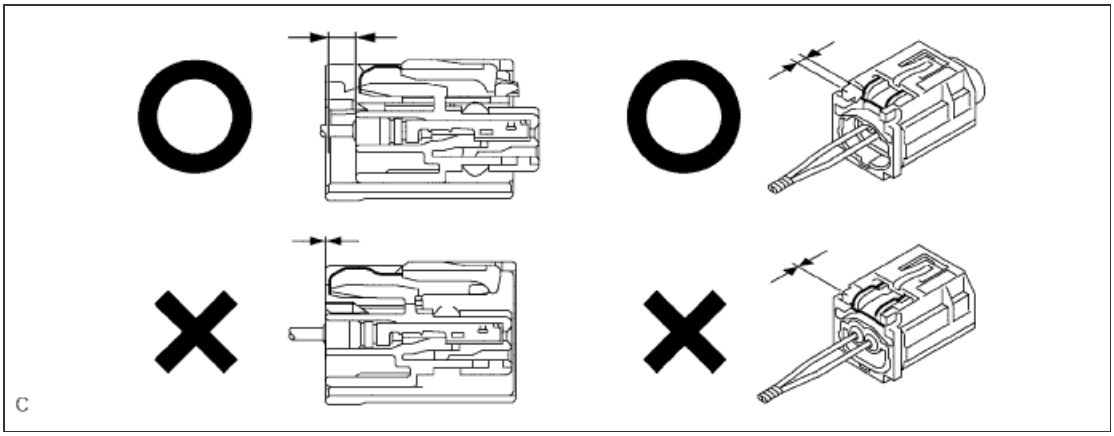
a. Push down the housing lock (white part) and slide the CPA (yellow part) (at this time, the connector cannot be disconnected yet).



b. Push down the housing lock (white part) again and disconnect the connector.

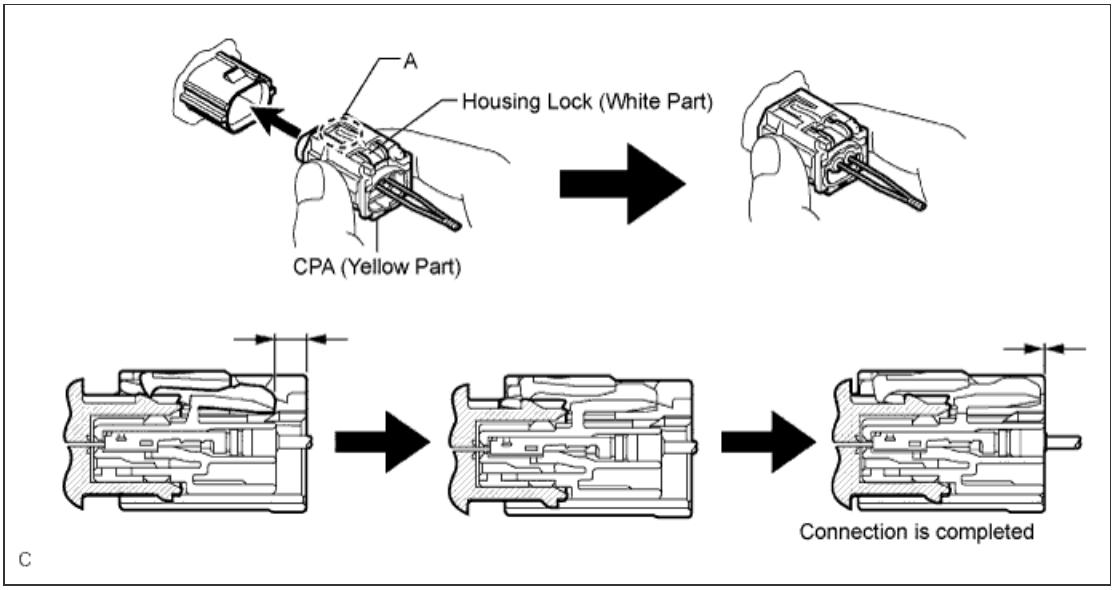
HINT:

Do not push down the part labeled A shown in the illustration when disconnecting.



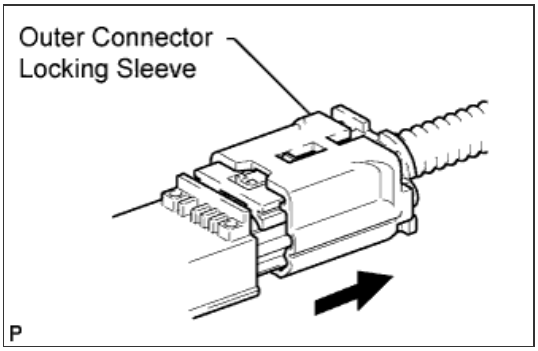
c. After disconnecting the connector, check that the position of the housing lock (white part) is as shown in the illustration.

15.CONNECTION OF CONNECTOR FOR FRONT AIRBAG SENSOR, REAR AIRBAG SENSOR RH AND REAR FLOOR AIRBAG SENSOR



a. Before connecting the connectors, check that the position of the housing lock (white part) is as shown in the illustration.

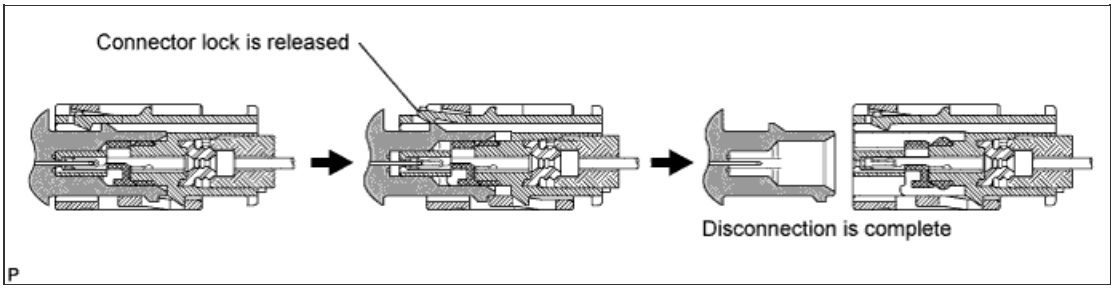
b. Be sure to engage the connectors until they are locked (when locking, make sure that a click sound can be heard).



HINT:

When connecting the connectors, the housing lock (white part) slides. Be sure not to hold the housing lock (white part) and the part labeled A, as it may result in an insecure fit.

16.DISCONNECTION OF CONNECTORS FOR SIDE AIRBAG SENSOR AND REAR AIRBAG SENSOR LH

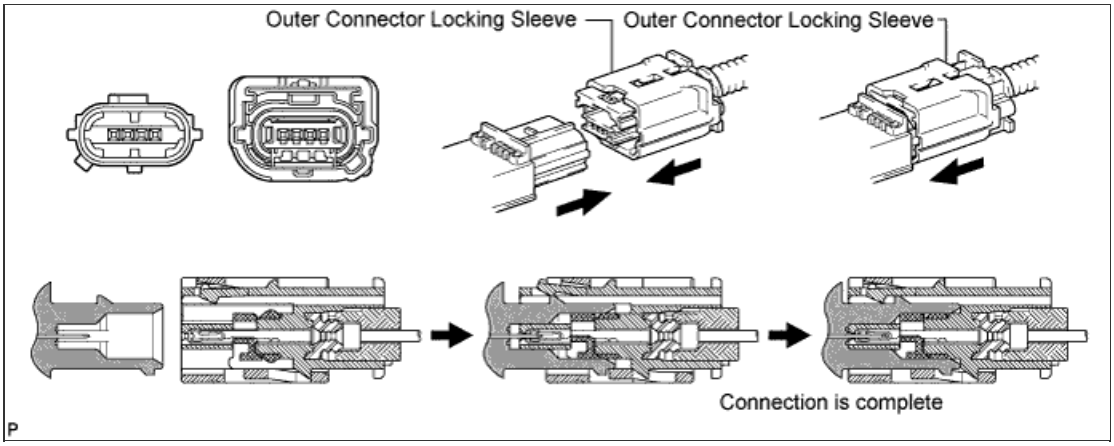


a. While holding the sides of the outer connector locking sleeve, slide the sleeve in the direction shown by the arrow.

b. When the connector lock is released, the connectors are disconnected.

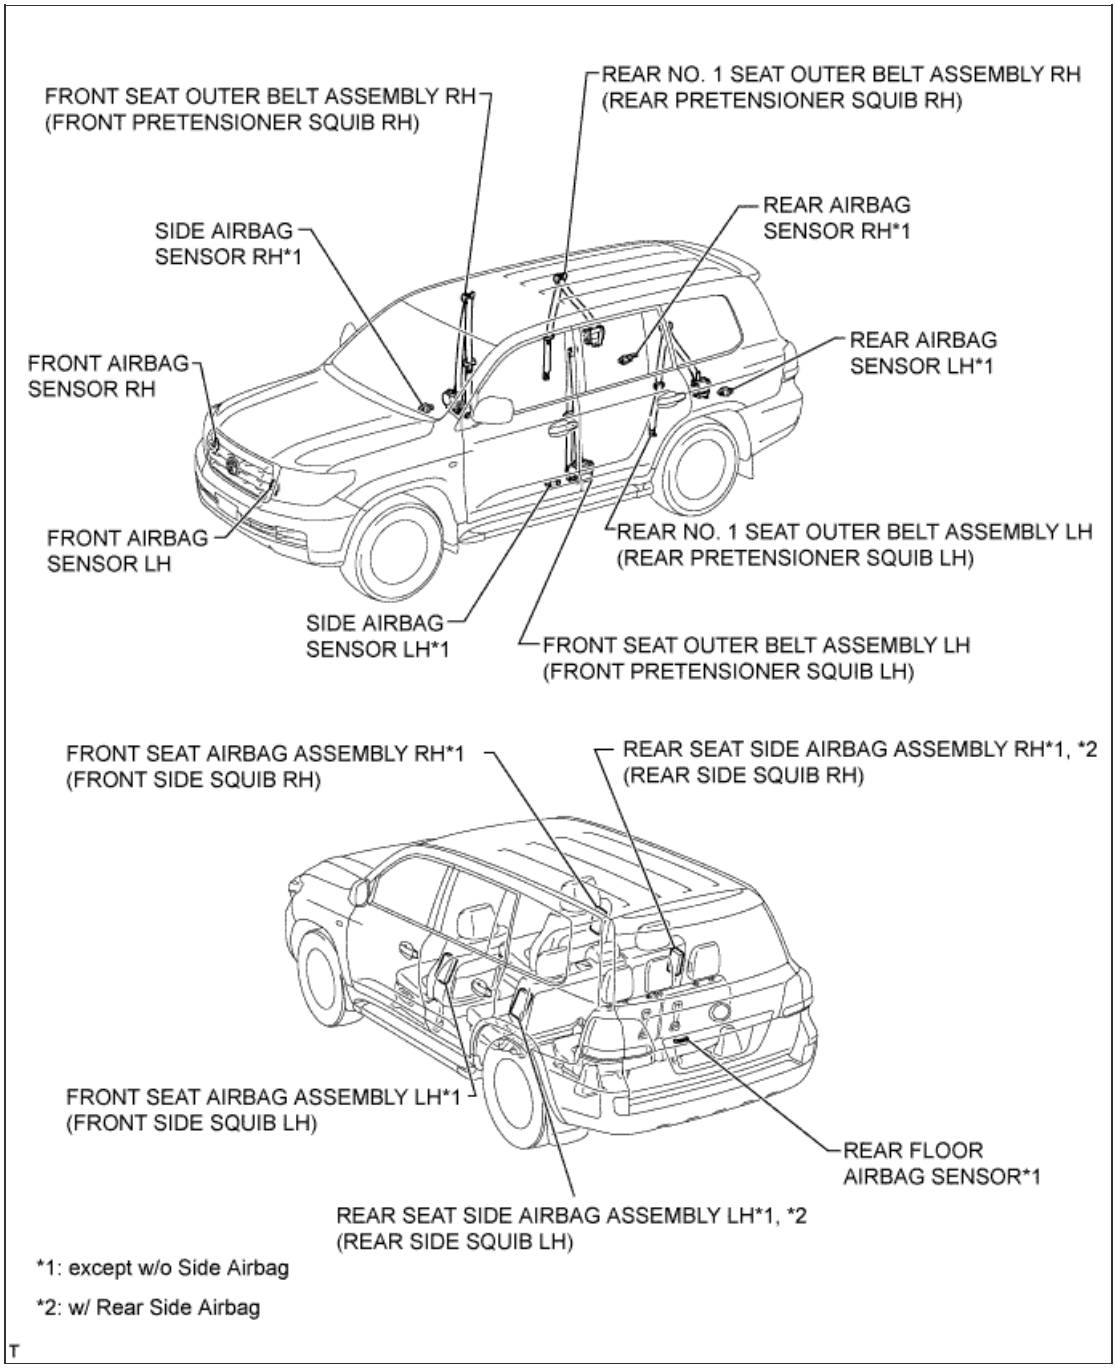
HINT:

Be sure to hold both sides of the sleeve. Holding the top and bottom will make disconnection difficult.



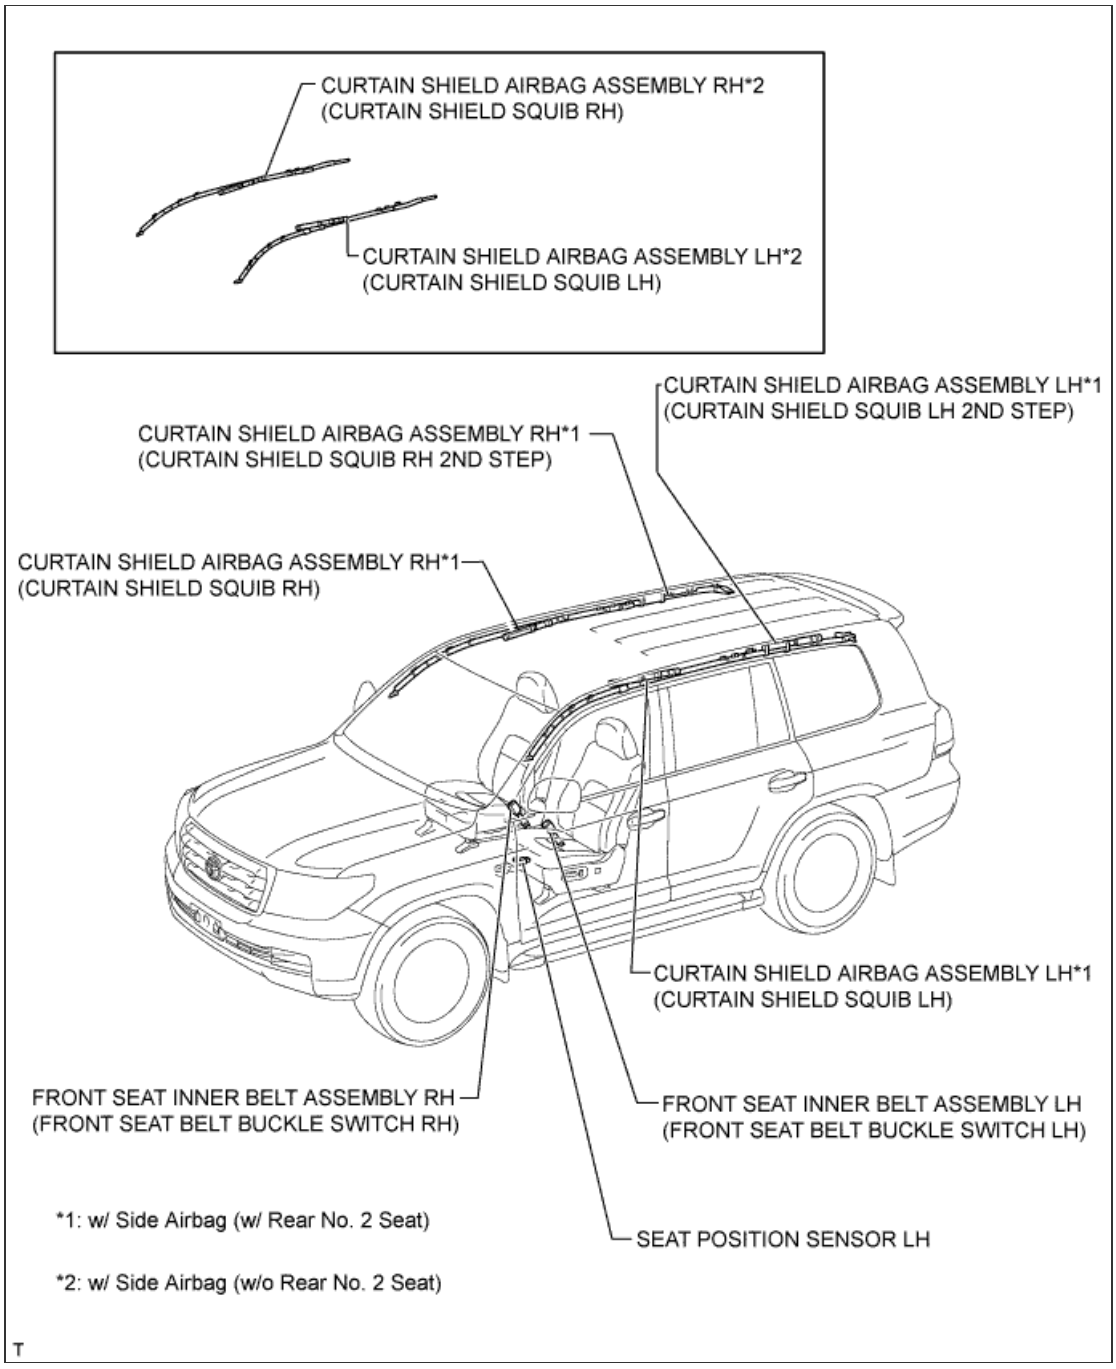
17.CONNECTION OF CONNECTORS FOR SIDE AIRBAG SENSOR AND REAR AIRBAG SENSOR LH

a. Connect the connector as shown in the illustration (when locking, make sure that the outer connector locking sleeve returns to its original



position and a click sound can be heard).

HINT:



When connecting, the sleeve will slide. Be sure not to hold the sleeve while connecting, as it may result in an insecure fit.

GENERAL

a. In conjunction with the impact absorbing structure for a front collision, the SRS (Supplemental Restraint System) driver airbag, front passenger airbag, driver side knee airbag, and front passenger side knee airbag are designed to supplement seat belts in the event of a front collision in order to help reduce shock to the head, chest, and knees of the driver and front passenger. This system is a 3-sensor type airbag system which detects the impact during a front collision using the center airbag sensor and front airbag sensors. It also operates the airbag system and seat belt pretensioners.

b. This vehicle is equipped with electrical type deceleration sensors for the front airbags in order to detect details about the extent of a collision during the initial stages of the collision. Therefore, the deployment of the driver airbag and front passenger airbag is controlled in two stages according to the severity of the impact.

c. In conjunction with the impact absorbing structure for a side collision, the side airbag and curtain shield airbag are designed to help reduce shock to the driver, front passenger, and rear outer passengers in the event of a side collision.

d. The curtain shield airbag helps reduce shock to the front and rear seat occupants. In conjunction with the curtain shield airbag, side airbag sensors are installed at the bottom of the center pillars and rear airbag sensors are installed at the bottom of the rear pillars.

e. In this system, a front side collision is detected by the side airbag sensor in order to simultaneously deploy the front seat, rear seat side, and curtain shield airbags. A rear side collision is detected by the rear airbag sensor and the center airbag sensor in order to deploy the rear seat side airbags, and curtain shield airbag.

f. The center airbag sensor sends the airbag deployment signal to the ECM through the CAN (Controller Area Network) to operate the fuel pump control.

g. The center airbag sensor sends the airbag deployment signal to the main body ECU via the discrete line to operate collision door lock release control.

CONSTRUCTION AND OPERATION

a. FRONT AIRBAG SENSOR

   i. The front airbag sensors are installed on the right and left radiator supports respectively.

   ii. The front airbag sensor consists of a deceleration sensor.

   iii. The deceleration sensor is built into the front airbag sensor, and the distortion that is created in the sensor is converted into an electric signal based on the vehicle deceleration rate during a front collision. Accordingly, the extent of the initial collision can be detected in detail.

b. SIDE AIRBAG SENSOR

   i. The side airbag sensors are installed on the bottom of the right and left center pillars respectively.

   ii. The side airbag sensor consists of a deceleration sensor.

   iii. The deceleration sensor is built into the side airbag sensor, and the distortion that is created in the sensor is converted into an electric signal based on the vehicle deceleration rate during a front side collision. Accordingly, the extent of the initial collision can be detected in detail.

c. REAR AIRBAG SENSOR

   i. The rear airbag sensors are installed on the right and left rear pillars respectively.

   ii. The rear airbag sensor consists of a deceleration sensor.

   iii. The deceleration sensor is built into the rear airbag sensor, and the distortion that is created in the sensor is converted into an electric signal based on the vehicle deceleration rate during a rear side collision. Accordingly, the extent of the initial collision can be detected in detail.

d. REAR FLOOR AIRBAG SENSOR

   i. The floor airbag sensor is installed in the center of the floor between the rear pillars.

   ii. The floor airbag sensor consists of the deceleration sensor.

   iii. The deceleration sensor is built into the floor airbag sensor, and the distortion that is created in the sensor is converted into an electric signal based on the vehicle deceleration rate during a side collision. Accordingly, the extent of the initial collision can be

detected in detail.

e. CENTER AIR A S S R

i. eneral

- The center airbag sensor is installed in the center floor under the instrument panel.
- The center airbag sensor consists of a deceleration sensor, safing sensor, electronic safing sensor, ignition control circuit, and diagnostic circuit.
- The center airbag sensor receives signals from the deceleration sensor and safing sensor built into the center airbag sensor and front airbag sensor. Then the center airbag sensor determines whether the driver airbag, front passenger airbag, driver side knee airbag, front passenger side knee airbag, front seat belt pretensioners and rear seat belt pretensioners should be activated, and diagnoses system malfunctions.
- The center airbag sensor causes the front side, rear side, and curtain shield airbags to deploy when receiving signals from the side airbag sensors (w/ Side Airbag).
- The center airbag sensor receives signals from the deceleration sensor and the electronic safing sensor built into the center airbag sensor and the rear airbag sensor, and determines whether the rear seat side curtain shield airbag should be activated, and diagnoses system malfunctions (w/ Side Airbag).
- The center airbag sensor sends the airbag deployment signal to the ECM through the CAN to operate the fuel pump control.
- The center airbag sensor sends the airbag deployment signal to the main body ECU through the discrete line to operate collision door lock release control.

ii. Deceleration sensor and ignition control circuit

- The deceleration sensor is built into the center airbag sensor.
- The ignition control circuit performs calculations based on the signal output from the deceleration sensors of the center airbag sensor and front airbag sensor. If the calculated values are more than the specified values, it activates an ignition operation.

iii. Safing sensor

The safing sensor is built into the center airbag sensor. During a front collision, the sensor turns on and outputs an ON signal to the center airbag sensor if a deceleration rate sent to the safing sensor is more than the specified value.

iv. Electronic safing sensor

The electronic safing sensor is built into the center airbag sensor. During a side collision, the sensor turns on and outputs an ON signal to the center airbag sensor if a deceleration rate sent to the electronic safing sensor is more than the specified value.

v. Backup power source

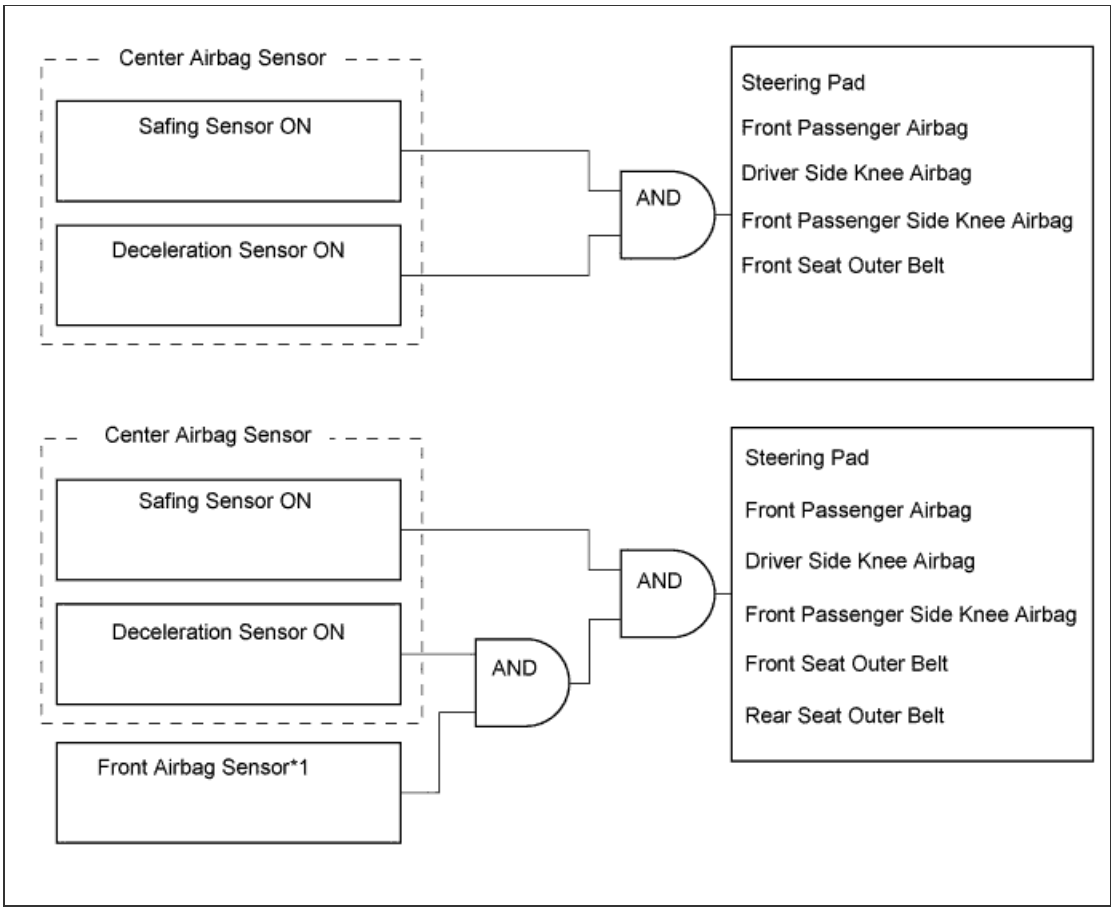
The backup power source consists of a power supply capacitor and a DC-DC converter. When the power system does not function during a collision, the power supply capacitor discharges and supplies electric power to the system. The DC-DC converter operates as a boosting transformer when the battery voltage falls below a predetermined level.

vi. Diagnostic circuit

This circuit constantly diagnoses system malfunctions. When a malfunction is detected, it turns on the SRS warning light on the combination meter to inform the driver.

vii. Memory circuit

When a malfunction is detected in the diagnostic circuit, it is coded and stored in the memory circuit.

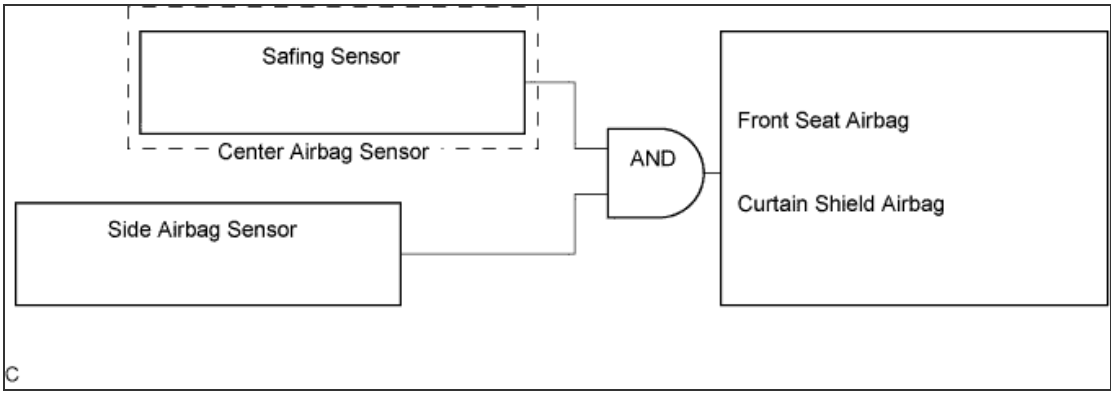


f. SRS Warning Light

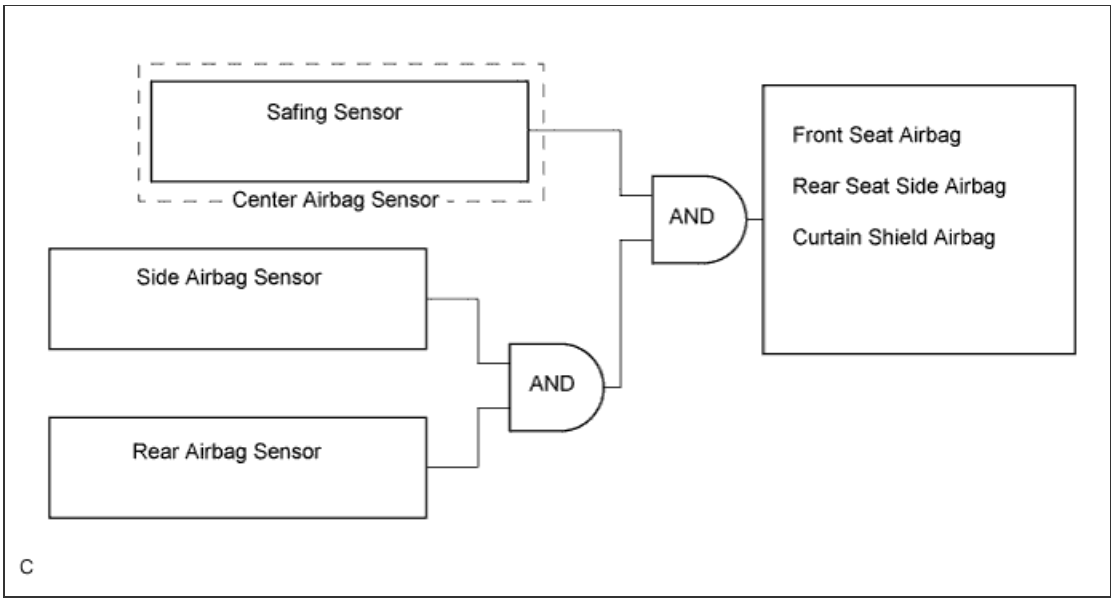
i. The SRS warning light is located on the combination meter. It comes on to inform the driver of system trouble when a malfunction is detected in the self-diagnosis of the center airbag sensor. Under normal operating conditions when the engine switch is turned on (IG), it comes on for approximately 6 seconds and then goes off.

DEPLOYMENT CONDITION

If the vehicle is in a collision and the shock is more than the specified value, the SRS is activated automatically. The center airbag sensor includes the safing sensor and deceleration sensor. The safing sensor is designed to turn on at a lower deceleration rate than the deceleration sensor.

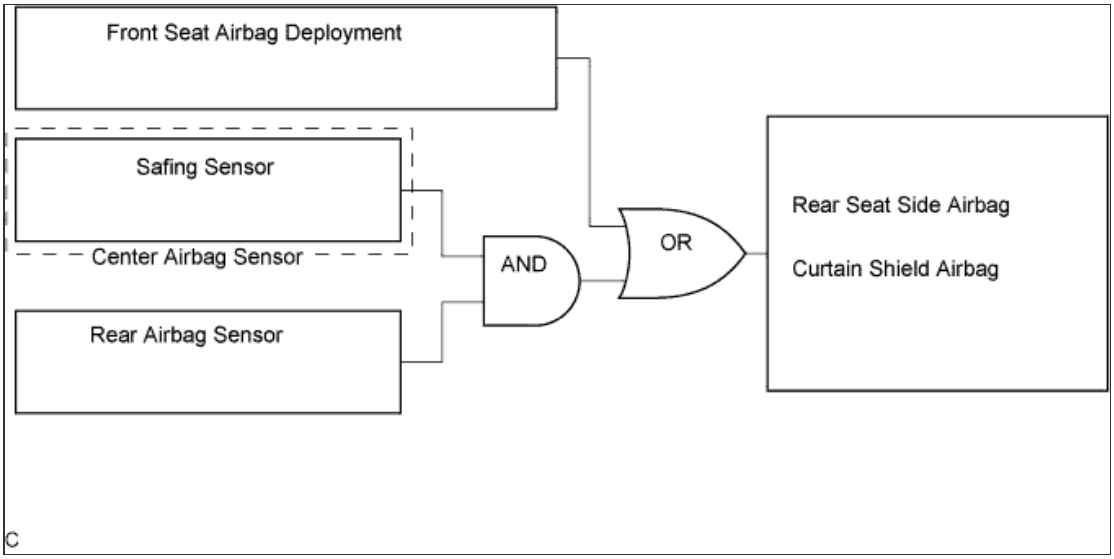


a. The center airbag sensor determines whether ignition is necessary based on signals from the deceleration sensor and the front airbag sensor*1. If the safing sensor turns on simultaneously, current flows to the squibs to deploy the SRS as shown in the illustration below.



HINT:

*1: In case of a front collision, the ignition signal could be output with the deceleration sensor ON signal even without a signal from the front airbag sensor.



b. The center airbag sensor determines whether ignition is necessary based on signals from the side airbag sensor. If the safing sensor turns on simultaneously, current flows to the squib to deploy the SRS as shown in the illustration below.

c. The center airbag sensor determines whether ignition is necessary based on signals from the side airbag sensor and rear airbag sensor. If the safing sensor turns on simultaneously, current flows to the squib to deploy the SRS as shown in the illustration below.

d. The center airbag sensor determines whether ignition is necessary based on signals from the rear airbag sensor. If the safing sensor turns on simultaneously, current flows to the squib to deploy the SRS as shown in the illustration below.

HINT:

If the front seat airbag deploys, the rear seat side airbag, and the curtain shield airbag will also deploy, regardless of whether the signal is output from the rear airbag sensor.

SYMPTOM SIMULATION

HINT:

The most difficult case in troubleshooting is when no problem symptoms occur. n such a case, a thorough problem analysis must be carried out. A simulation of the same or similar conditions and environment in which the problem occurred in the customer s vehicle should be carried out. No matter how much skill or e perience a technician has, troubleshooting without confirming the problem symptoms will lead to important repairs being overlooked and mistakes or delays.

a. ibration method hen vibration seems to be the ma or cause.

HINT:

Perform the simulation method only during the primary check period (for appro imately 6 seconds after the engine switch is turned on (

i. lightly vibrate the part of the sensor considered to be the cause of the problem with your fingers and check whether the malfunction occurs.

NOTICE:

haking the relays too strongly may result in open relays.

ii. ightly shake the connector vertically and horizontally.

iii. ightly shake the wire harness vertically and horizontally.

HINT:

The connector oint and fulcrum of the vibration are the ma or areas to be checked thoroughly.

FUNCTION OF SRS WARNING LIGHT

a. Primary check.

i. Turn the engine switch off. ait for at least 2 seconds, then turn the engine switch on (The warning light comes on for appro imately 6 seconds and the diagnosis of the airbag system (including the seat belt pretensioners) is performed.

HINT:

f trouble is detected during the primary check, the warning light remains on even after the primary check period (of appro imately 6 seconds) has elapsed.

b. onstant check.

i. After the primary check, the center airbag sensor constantly monitors the airbag system for trouble.

HINT:

f trouble is detected during the constant check, the center airbag sensor functions as follows

- **The SRS warning light comes on.**
- **The SRS warning light goes off, and then comes on. This blinking pattern indicates a source voltage drop. The SRS warning light goes off 10 seconds after the source voltage returns to normal.**

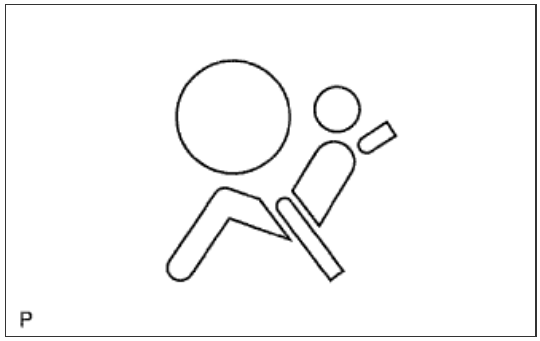
c. eview.

i. hen the airbag system is normal
The warning light comes on only during the primary check period (for appro imately 6 seconds after the engine switch is turned on (

ii. hen the airbag system has trouble

- The warning light remains on even after the primary check period has elapsed.
- The warning light goes off after the primary check, but comes on again during the constant check.

- The warning light does not come on when turning the engine switch from off to on (



HINT:

The center airbag sensor functions to keep the warning light on if the airbag has been deployed.

CHECK SRS WARNING LIGHT

a. Turn the engine switch on (and check that the warning light comes on for appro imately 6 seconds (primary check).

b. heck that the warning light goes off appro imately 6 seconds after the engine switch is turned on ((constant check).

HINT:

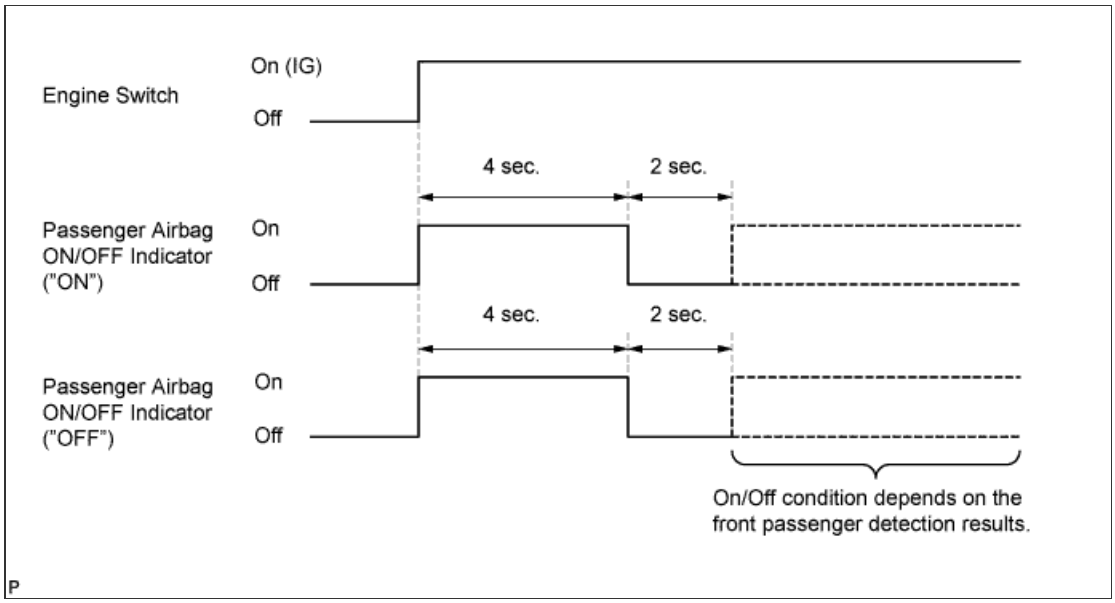
hen any of the following symptoms occur, refer to the "Problem ymptoms Table" (lick here).

- **The SRS warning light comes on occasionally, after the primary check period has elapsed.**
- **The SRS warning light comes on, but a DTC is not output.**
- **The engine switch is turned from off to on (IG), but the SRS warning light does not come on.**

FUNCTION OF PASSENGER AIRBAG ON/OFF INDICATOR

a. nitial check

i. Turn the engine switch on (



ii. The passenger airbag ON/OFF indicator comes on for appro imately 4 seconds, then goes off for appro imately 2 seconds.

iii. Appro imately 6 seconds after the engine switch is turned on (the passenger airbag ON/OFF indicator will be ON or OFF depending on the conditions listed below.

ondition	"ON" indicator	"OFF" indicator
acant	Off	Off
Adult is seated	On	Off
hild is seated	Off	On
hild restraint system is set	Off	On
Front passenger occupant classification failure	Off	On

HINT:

- **The timing chart below shows the operation of the passenger airbag ON/OFF indicator. Use the chart to check the indicator light circuit.**
- **When the occupant classification system has trouble, both the SRS warning light and the passenger airbag ON/OFF indicator ("OFF") come on. In this case, check the DTCs for "Airbag System" first. Then troubleshoot the occupant classification system if DTC B1650/32 is output, and troubleshoot the passenger airbag ON/OFF indicator if DTC B1660/43 is output.**

CHECK PASSENGER AIRBAG ON/OFF INDICATOR

a. Turn the engine switch on (

b. heck that the passenger airbag ON/OFF indicator ("ON" and "OFF") comes on for appro imately 4 seconds, then goes off for appro imately 2 seconds.

HINT:

Refer to the table in the previous step regarding the passenger airbag ON/OFF indicator when the engine switch is turned on (and appro imately 6 seconds have passed.

ACTIVATION PREVENTION MECHANISM

a. F N T OF A T T PR T AN

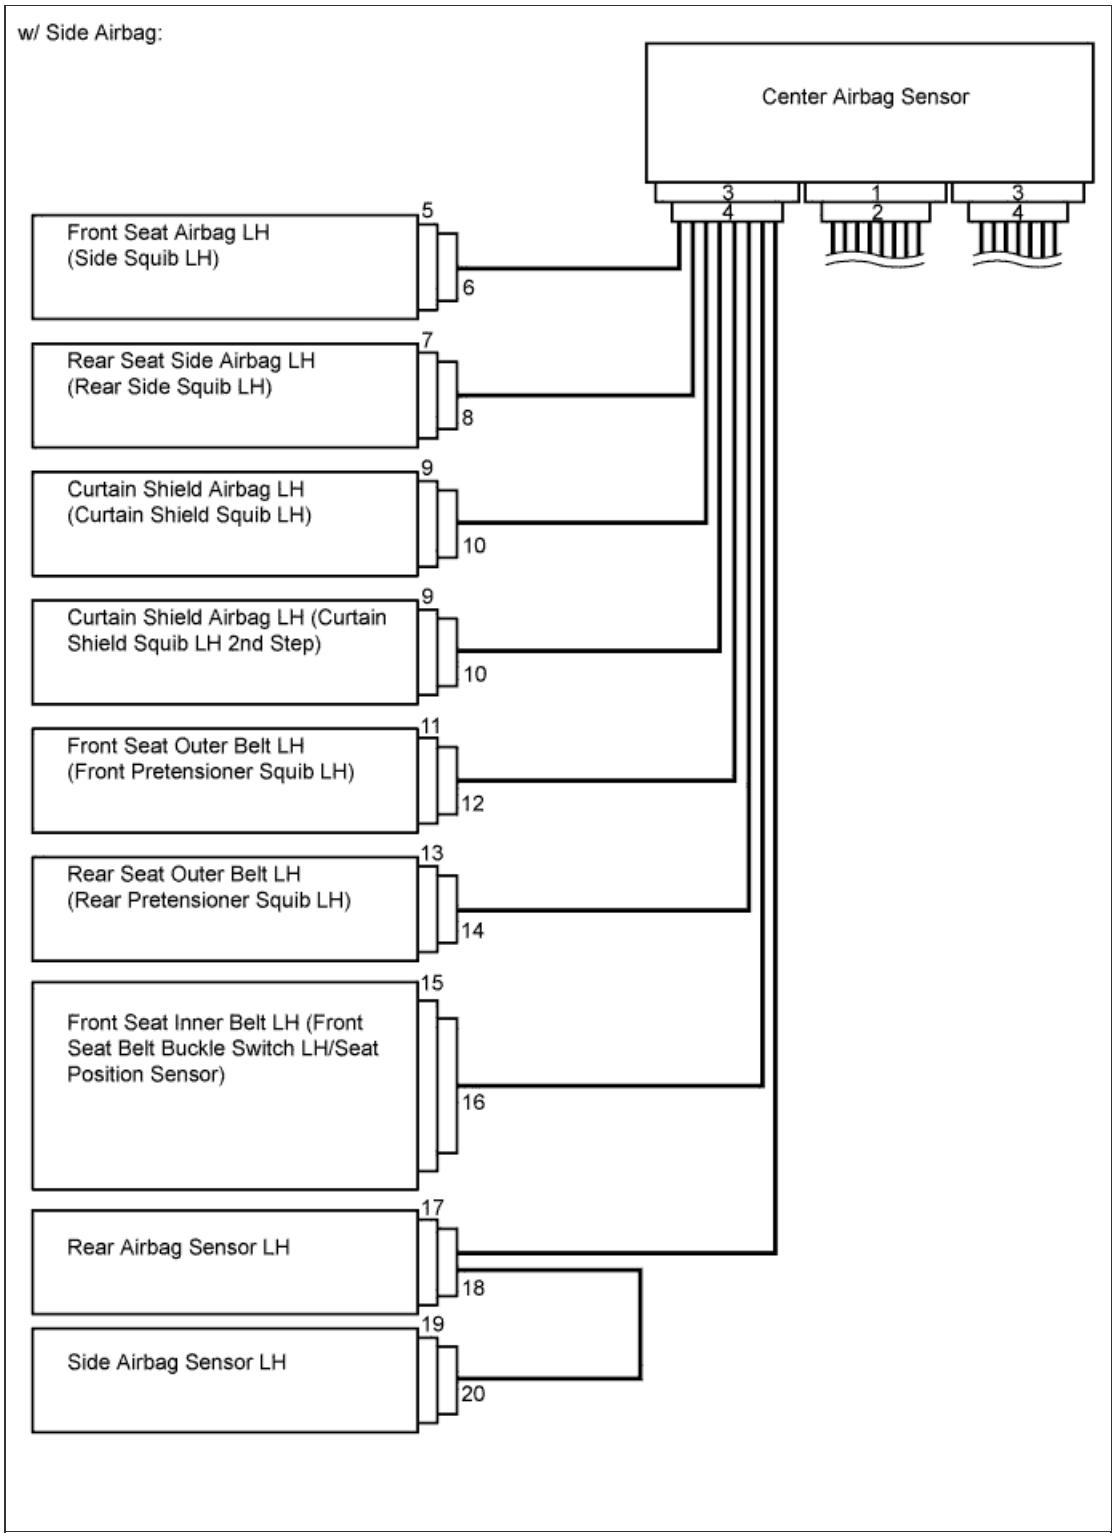
i. n activation prevention mechanism is built into the connector (on the center airbag sensor side) of the airbag system s uib circuit to prevent accidental airbag activation.

ii. This mechanism closes the circuit when the connector is disconnected by bringing the short spring into contact with the terminals and shutting off e ternal electricity to prevent accidental airbag activation.

b. R A OF A T T PR T AN

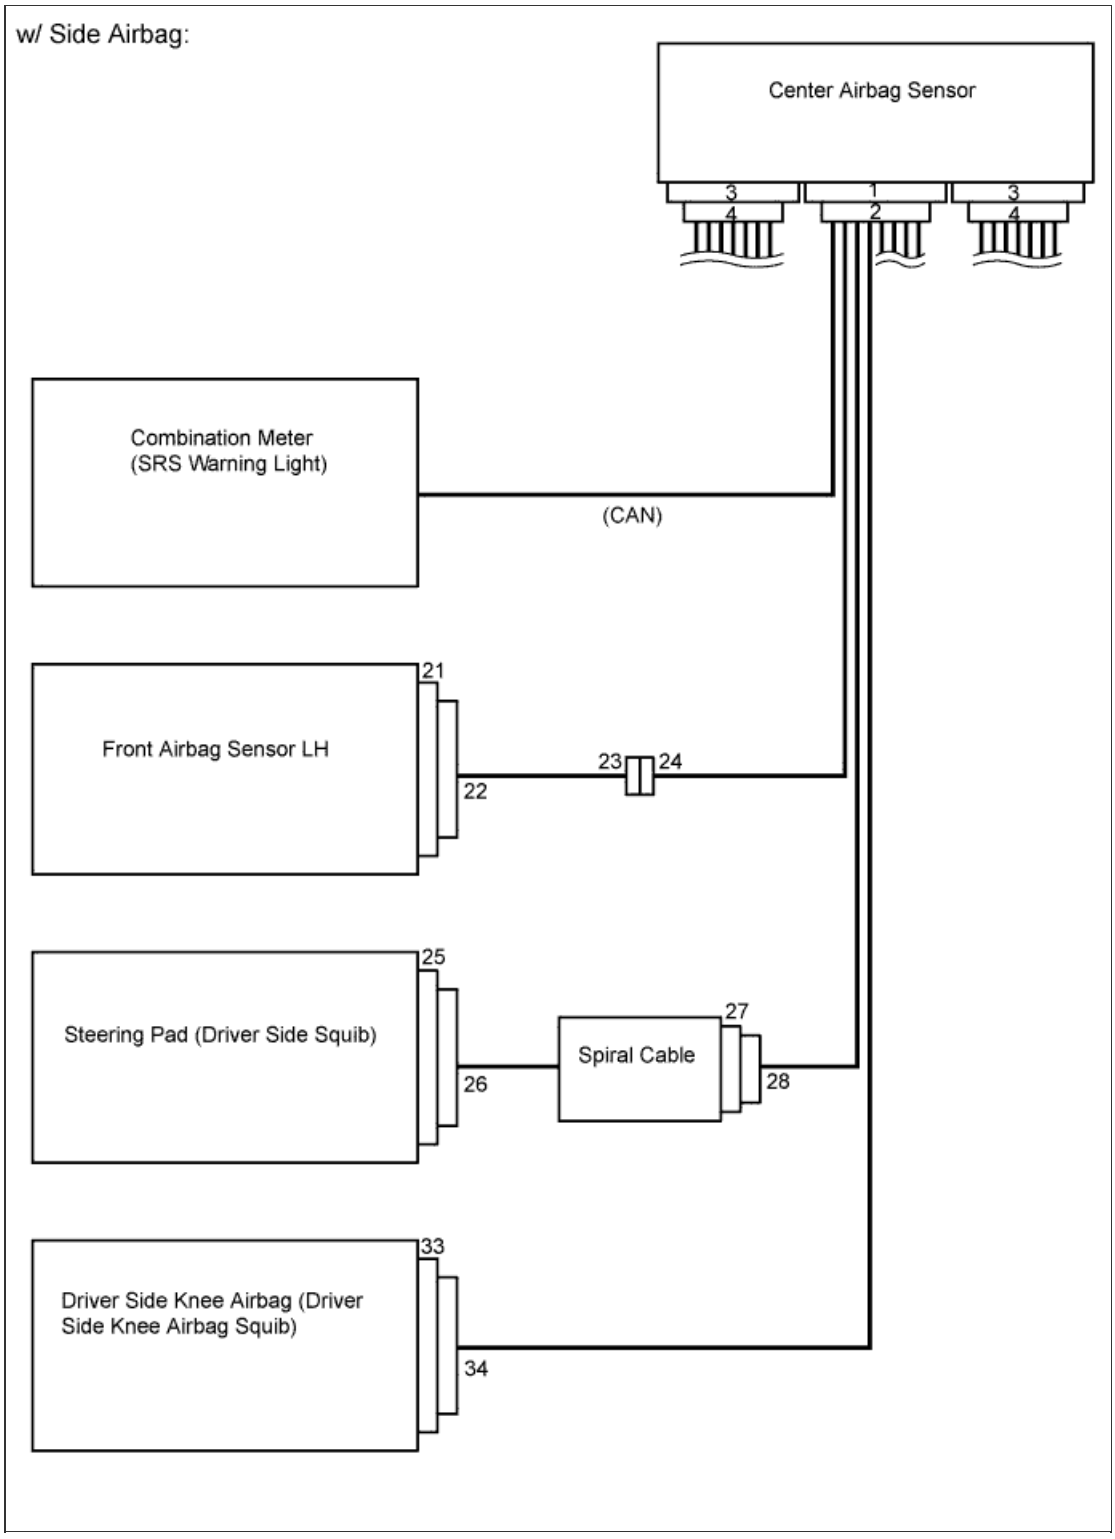
i. To release the activation prevention mechanism, insert a piece of paper with the same thickness as the male terminal (appro imately 0. mm (0. 20 in.)) between the terminals and the short spring to break the connection.

ii. Refer to the following illustrations concerning connectors utilizing the activation prevention mechanism and its release method.



CAUTION:

Never release the activation prevention mechanism on the s uib connector even when inspecting with the s uib disconnected.



NOTICE:

- **Do not release the activation prevention mechanism unless specially directed by the troubleshooting procedure.**
- **To prevent the terminal and the short spring from being damaged, always use a piece of paper with the same thickness as the male terminal.**

CHECK DTC (Using SST Check Wire)

a. Check the DTCs (Present trouble code).

i. Turn the engine switch on (IG), and wait for approximately 60 seconds.

ii. Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.

SST
09843-18040

NOTICE:

Connect the correct terminals to avoid a malfunction.

b. Check the DTCs (Past trouble code).

i. Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.

SST
09843-18040

NOTICE:

Connect the correct terminals to avoid a malfunction.

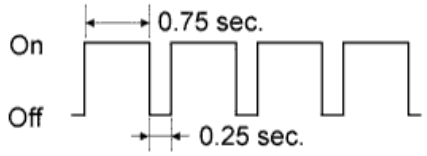
ii. Turn the engine switch on (IG), and wait for approximately 60 seconds.

c. Read the DTCs.

i. Read the blinking patterns of the DTCs. As examples, the blinking patterns for the normal system code and trouble codes 11 and 31 are shown in the illustration.

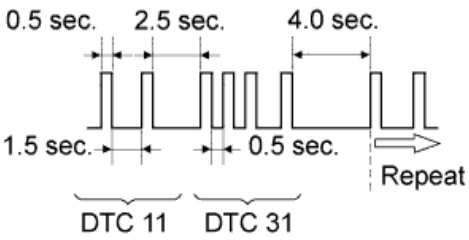
- Normal system code indication (without past trouble code):
  The light blinks twice per second.
- Normal system code indication (with past trouble code):
  When a past trouble code is stored in the center airbag sensor, the light blinks only once per second.
- Trouble code indication:
  Each digit of a DTC is separated by a 1.5 second pause.

If there is more than 1 code, there will be a 2.5 second pause between each code. After all codes are shown, there will be a 4.0 second pause, and then all codes will be repeated.



HINT:

- **If 2 or more malfunctions are found, the indication begins with the smaller-numbered code.**
- **If DTCs are output without connecting the terminals, proceed to "Diagnosis Circuit" (Click here).**



Normal System Code (without Past Trouble Code):

Normal System Code (with Past Trouble Code):

Trouble Code (Example Codes 11 and 31):

CLEAR DTC (Using SST Check Wire)

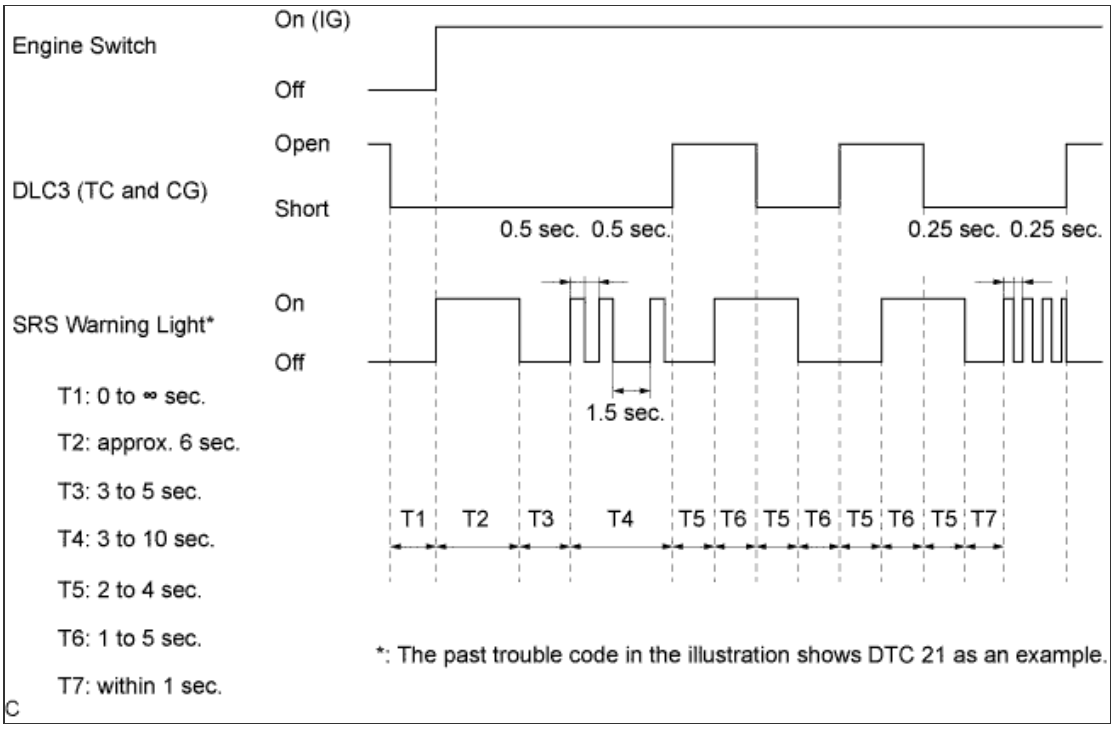
a. hen the engine switch is turned off, the DTCs are cleared.

HINT:

Depending on the DTC, the code may not be cleared by turning off the engine switch. In this case, proceed to the next procedure.

b. Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3, and then turn the engine switch on (IG).

SST
09843-18040



c. Disconnect terminal TC of the DLC3 within 3 to 10 seconds after the DTCs are output, and check if the SRS warning light comes on after 3 seconds.

d. Within 2 to 4 seconds after the SRS warning light comes on, connect terminals 13 (TC) and 4 (CG) of the DLC3.

e. The SRS warning light should go off within 2 to 4 seconds after connecting terminals 13 (TC) and 4 (CG) of the DLC3. Then, disconnect terminal 13 (TC) within 2 to 4 seconds after the SRS warning light goes off.

f. The SRS warning light comes on again within 2 to 4 seconds after disconnecting terminal 13 (TC). Then, reconnect terminals 13 (TC) and 4 (CG) within 2 to 4 seconds after the SRS warning light comes on.

g. Check if the SRS warning light goes off within 2 to 4 seconds after connecting terminals 13 (TC) and 4 (CG) of the DLC3. Also check if the normal system code is output within 1 second after the SRS warning light goes off.
If DTCs are not cleared, repeat this procedure until the codes are cleared.

CHECK DTC (Using the Intelligent Tester)

a. Connect the intelligent tester to the D C3.

b. Turn the engine switch on (IG).

c. Check the DTCs by following the prompts on the tester screen.

HINT:

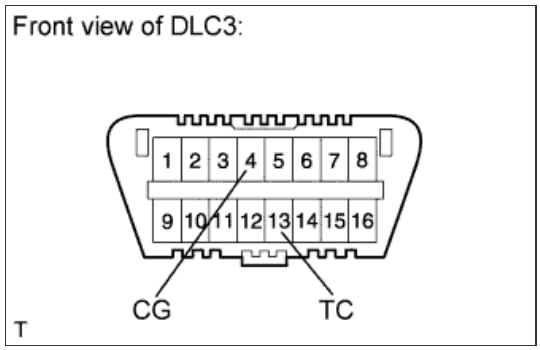
Refer to the intelligent tester operator's manual for further details.

CLEAR DTC (Using the Intelligent Tester)

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Clear the DTCs by following the prompts on the tester screen.



HINT:

Refer to the intelligent tester operator's manual for further details.

for Preparation Click here

CHECK DTC (Using SST Check Wire)

a. Check the DTCs (Present trouble code).

i. Turn the engine switch on (IG), and wait for approximately 60 seconds.

ii. Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.

SST
09843-18040

NOTICE:

Connect the correct terminals to avoid a malfunction.

b. Check the DTCs (Past trouble code).

i. Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3.

SST
09843-18040

NOTICE:

Connect the correct terminals to avoid a malfunction.

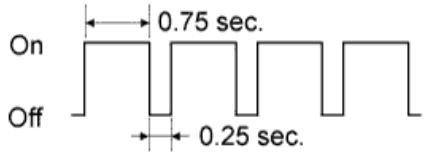
ii. Turn the engine switch on (IG), and wait for approximately 60 seconds.

c. Read the DTCs.

i. Read the blinking patterns of the DTCs. As examples, the blinking patterns for the normal system code and trouble codes 11 and 31 are shown in the illustration.

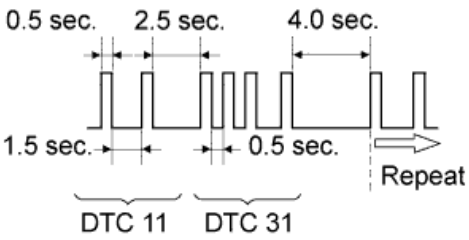
- Normal system code indication (without past trouble code):
  The light blinks twice per second.
- Normal system code indication (with past trouble code):
  When a past trouble code is stored in the center airbag sensor, the light blinks only once per second.
- Trouble code indication:
  Each digit of a DTC is separated by a 1.5 second pause.

If there is more than 1 code, there will be a 2.5 second pause between each code. After all codes are shown, there will be a 4.0 second pause, and then all codes will be repeated.



HINT:

- **If 2 or more malfunctions are found, the indication begins with the smaller-numbered code.**
- **If DTCs are output without connecting the terminals, proceed to "Diagnosis Circuit" (Click here).**



Normal System Code (without Past Trouble Code):

Normal System Code (with Past Trouble Code):

Trouble Code (Example Codes 11 and 31):

CLEAR DTC (Using SST Check Wire)

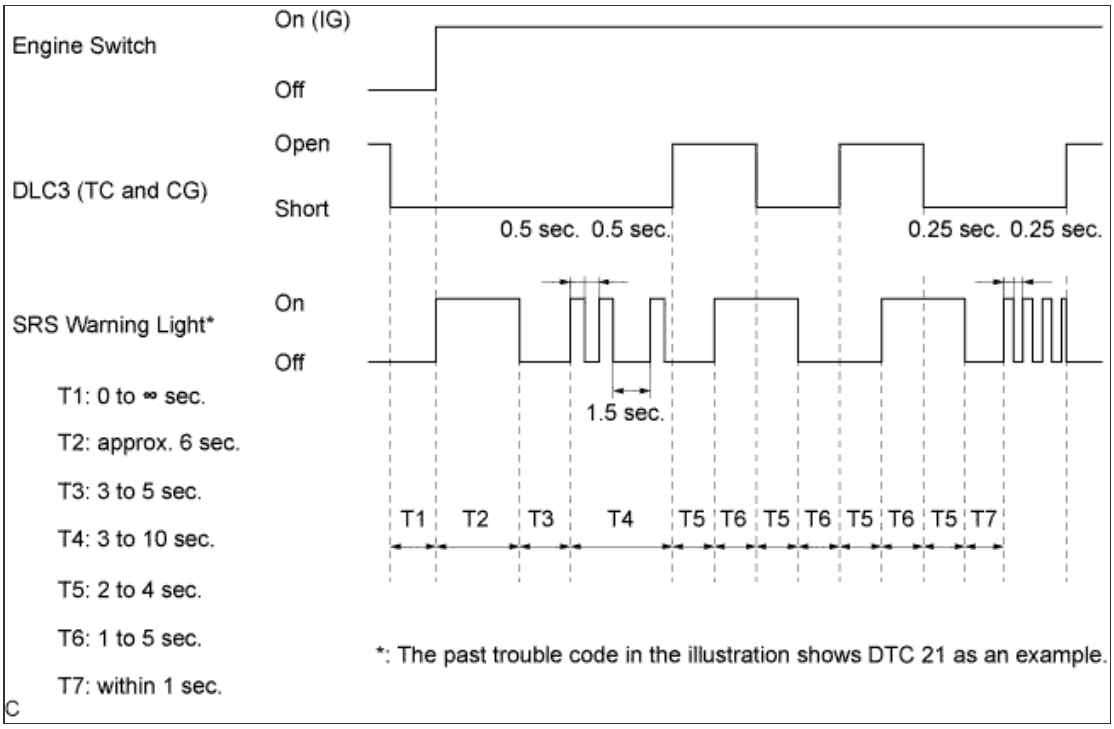
a. hen the engine switch is turned off, the DTCs are cleared.

HINT:

Depending on the DTC, the code may not be cleared by turning off the engine switch. In this case, proceed to the next procedure.

b. Using SST, connect terminals 13 (TC) and 4 (CG) of the DLC3, and then turn the engine switch on (IG).

SST
09843-18040



c. Disconnect terminal TC of the DLC3 within 3 to 10 seconds after the DTCs are output, and check if the SRS warning light comes on after 3 seconds.

d. Within 2 to 4 seconds after the SRS warning light comes on, connect terminals 13 (TC) and 4 (CG) of the DLC3.

e. The SRS warning light should go off within 2 to 4 seconds after connecting terminals 13 (TC) and 4 (CG) of the DLC3. Then, disconnect terminal 13 (TC) within 2 to 4 seconds after the SRS warning light goes off.

f. The SRS warning light comes on again within 2 to 4 seconds after disconnecting terminal 13 (TC). Then, reconnect terminals 13 (TC) and 4 (CG) within 2 to 4 seconds after the SRS warning light comes on.

g. Check if the SRS warning light goes off within 2 to 4 seconds after connecting terminals 13 (TC) and 4 (CG) of the DLC3. Also check if the normal system code is output within 1 second after the SRS warning light goes off.
If DTCs are not cleared, repeat this procedure until the codes are cleared.

CHECK DTC (Using the Intelligent Tester)

a. Connect the intelligent tester to the D C3.

b. Turn the engine switch on (IG).

c. Check the DTCs by following the prompts on the tester screen.

HINT:

Refer to the intelligent tester operator's manual for further details.

CLEAR DTC (Using the Intelligent Tester)

a. Connect the intelligent tester to the DLC3.

b. Turn the engine switch on (IG).

c. Clear the DTCs by following the prompts on the tester screen.

HINT:

Refer to the intelligent tester operator's manual for further details.

for Preparation Click here

NOTICE:

Enter "Signal Check" from the "DTC CHECK" screen displayed on the intelligent tester to clear the output DTCs (both present and past).

HINT:

- **DTCs can be stored more sensitively in check mode than in normal diagnosis mode.**
- **Perform the check mode inspection when a malfunction in each squib circuit is suspected even after the normal system code is output through normal diagnosis mode inspection.**

CHECK MODE PROCEDURE (for Using an Intelligent Tester)

a. Turn the engine switch off.

b. Connect the intelligent tester to the DLC3.

c. Turn the engine switch on (IG).

d. Turn the intelligent tester on.

e. Enter the following menus: Body / SRS Airbag / Utility / Signal Check / *.

HINT:

*: Follow the directions on the tester screen.

for Preparation Click here

READ DATA LIST

HINT:

Using the intelligent tester to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the Data List information early in troubleshooting is one way to save diagnostic time.

NOTICE:

In the table below, the values listed under "Normal Condition" are reference values. Do not depend solely on these reference values when deciding whether a part is faulty or not.

a. Warm up the engine.

b. Turn the engine switch off.

c. Connect the intelligent tester to the DLC3.

d. Turn the engine switch on (IG).

e. Turn the intelligent tester on.

f. Enter the following menus: Body / SRS Airbag / Data List.

g. According to the display on tester, read the Data List.

Center Airbag Sensor

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note

- If a trouble code is output during the DTC check, inspect the trouble areas listed for that code. For details of the code, refer to the "See page" below.
- When the SRS warning light remains on and the DTC output is the normal system code, a voltage source drop is likely to occur. This malfunction is not stored in the memory by the center airbag sensor.
- If the power source voltage returns to normal, the SRS warning light will automatically go off. When 2 or more codes are output, the code with the lower number is output first.
- When 2 or more codes are output, the code with the lower number is output first.
- If a code not listed in the chart is output, the center airbag sensor may have a malfunction.
- If a DTC is output indicating a short to ground, short to B+ or open in an airbag squib circuit area, other DTCs may not be output. First replace or repair the malfunctioning area indicated by the current DTC, and then check for DTCs again to output the other DTCs.
- ck in the check mode column:
  * DTC is not output in check mode.
  *2: DTC is output in check mode.
  *3: DTC is only for rear side airbag equipped vehicles.
- *4: w/ Side Airbag
  *5: w/ Rear Side Airbag
  *6: w/ Rear No. 2 Seat
  * except w/o Side Airbag
  *8: w/ Knee Airbag

DTC B1000/31 Center Airbag Sensor Assembly Malfunction

for Preparation Click here

DESCRIPTION

The center airbag sensor consists of the airbag sensor, the safing sensor, the drive circuit, the diagnosis circuit, the ignition control, etc.
If the center airbag sensor receives signals from the airbag sensor, it determines whether the SRS should be activated.
DTC B1000/31 is output when a malfunction is detected in the center airbag sensor.

DTC Code	DTC Detection Condition	Trouble Area
B1000/31	A center airbag sensor malfunction.	Center airbag sensor assembly

HINT:

When a trouble code is output simultaneously with B1000/31, repair the malfunction indicated by the other code first.

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK CENTER AIRBAG SENSOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

OK:
DTC B1000 is not output.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)**

OK ↓

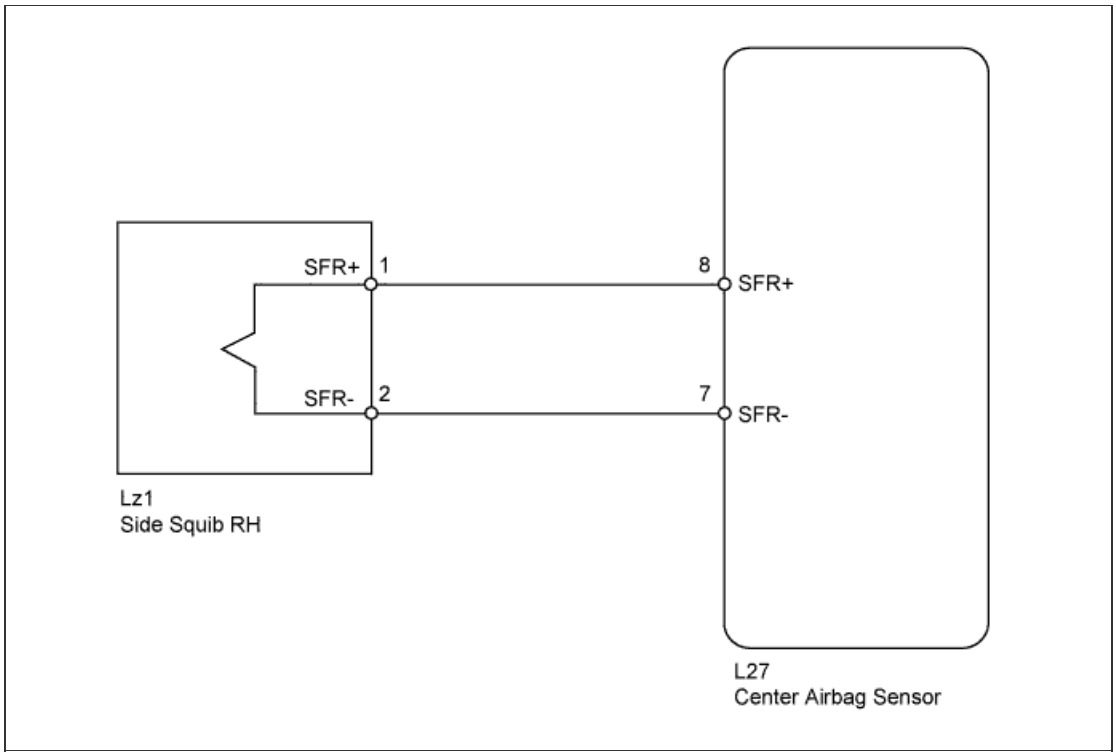
USE SIMULATION METHOD TO CHECK (Click here)

DTC B1820/55 Short in Side Squib RH Circuit

DTC B1821/55 Open in Side Squib RH Circuit

DTC B1822/55 Short to GND in Side Squib RH Circuit

DTC B1823/55 Short to B+ in Side Squib RH Circuit



for Preparation Click here

DESCRIPTION

The side squib RH circuit consists of the center airbag sensor and the front seat airbag RH.
This circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the side squib RH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1820/55	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the side squib RH circuit during the primary check. • A side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Front seat airbag assembly RH (Side squib RH) • Center airbag sensor assembly
B1821/55	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the side squib RH circuit for 2 seconds. • A side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Front seat airbag assembly RH (Side squib RH) • Center airbag sensor assembly
B1822/55	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the side squib RH circuit for 0.5 seconds. • A side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Front seat airbag assembly RH (Side squib RH) • Center airbag sensor assembly
B1823/55	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the side squib RH circuit for 0.5 seconds. • A side squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Front seat airbag assembly RH (Side squib RH) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK FRONT SEAT AIRBAG RH (SIDE SQUIB RH)

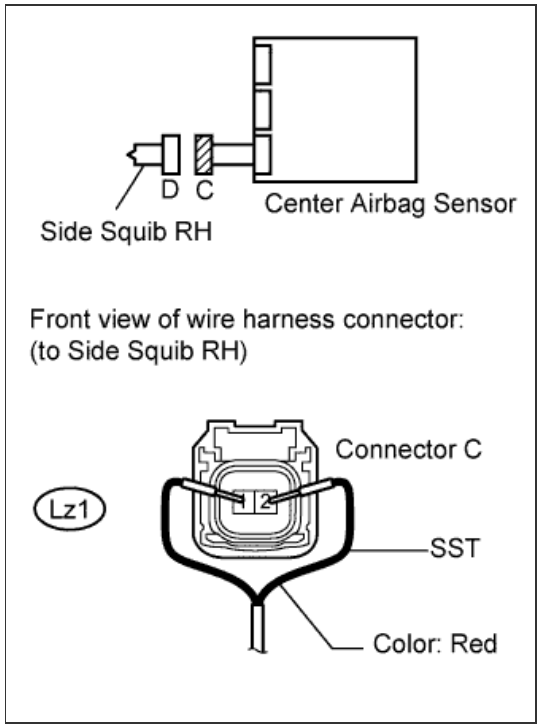
a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connector from the front seat airbag RH.

d. Connect the red wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:



Never connect the tester to the front seat airbag RH (side squib RH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1820, B1821, B1822 or B1823 is not output.

HINT:

Codes other than DTC B1820, B1821, B1822 and B1823 may be output at this time, but they are not related to this check.

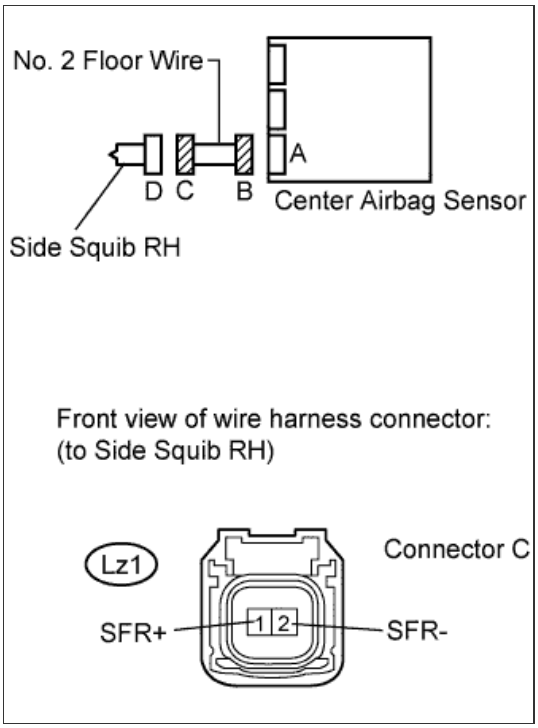
A

REPLACE FRONT SEAT AIRBAG ASSEMBLY RH (Click here)

2.CHECK NO. 2 FLOOR WIRE (SIDE SQUIB RH CIRCUIT)

a. Turn the engine switch off.



b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Disconnect the connectors from the center airbag sensor.

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
Lz1-1 (SFR+) - Body ground	Engine switch on (IG)	Below 1 V
Lz1-2 (SFR-) - Body ground	Engine switch on (IG)	Below 1 V

g. Turn the engine switch off.

h. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Lz1-1 (SFR+) - Lz1-2 (SFR-)	Always	Below 1 Ω

j. Release the activation prevention mechanism built into connector B (Click here).

k. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Lz1-1 (SFR+) - Lz1-2 (SFR-)	Always	1 MΩ or higher
Lz1-1 (SFR+) - Body ground	Always	1 MΩ or higher
Lz1-2 (SFR-) - Body ground	Always	1 MΩ or higher

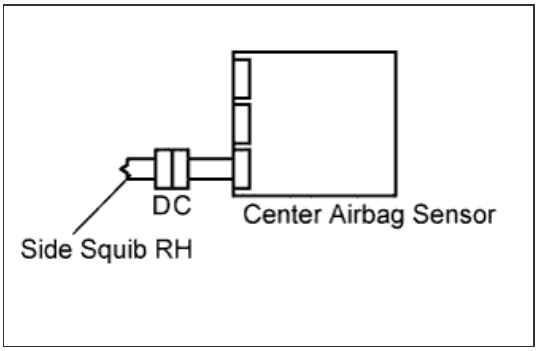
NG → REPLACE NO. 2 FLOOR WIRE

OK

3.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the front seat airbag RH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.



c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1820, B1821, B1822 or B1823 is not output.

HINT:

Codes other than DTC B1820, B1821, B1822 and B1823 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (**Click here**)

OK

USE SIMULATION METHOD TO CHECK (**Click here**)

DTC B1000/31 Center Airbag Sensor Assembly Malfunction

for Preparation Click here

DESCRIPTION

The center airbag sensor consists of the airbag sensor, the safing sensor, the drive circuit, the diagnosis circuit, the ignition control, etc.
If the center airbag sensor receives signals from the airbag sensor, it determines whether the SRS should be activated.
DTC B1000/31 is output when a malfunction is detected in the center airbag sensor.

DTC Code	DTC Detection Condition	Trouble Area
B1000/31	A center airbag sensor malfunction.	Center airbag sensor assembly

HINT:

When a trouble code is output simultaneously with B1000/31, repair the malfunction indicated by the other code first.

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK CENTER AIRBAG SENSOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

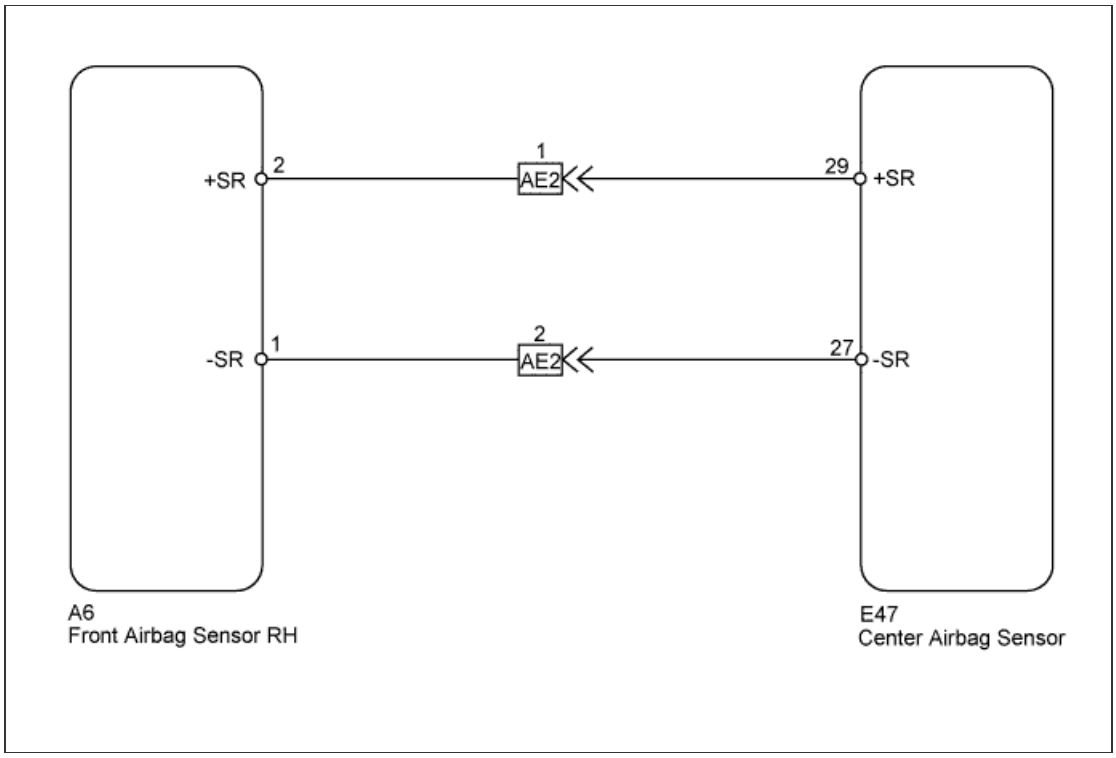
DTC B1603/83 Front Satellite Sensor Bus RH Initialization Incomplete

DTC B1612/83 Lost Communication with Front Airbag Sensor RH

DTC B1613/83 Front Airbag Sensor RH Initialization Incomplete



for Preparation Click here

DESCRIPTION

The front airbag sensor RH circuit consists of the center airbag sensor and front airbag sensor RH.
The front airbag sensor RH detects impacts to the vehicle and sends signals to the center airbag sensor to determine if the airbag should be deployed.
DTC B1603/83, B1612/83 or B1613/83 is stored when a malfunction is detected in the front airbag sensor RH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1603/83	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor RH circuit for 2 seconds. • A front airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Engine room main wire • Front airbag sensor RH • Center airbag sensor assembly
B1612/83	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor RH circuit for 2 seconds. • A front airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Engine room main wire • Front airbag sensor RH • Center airbag sensor assembly
B1613/83	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor RH circuit for 2 seconds. • A front airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Engine room main wire • Front airbag sensor RH • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (- battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and the front airbag sensor RH.

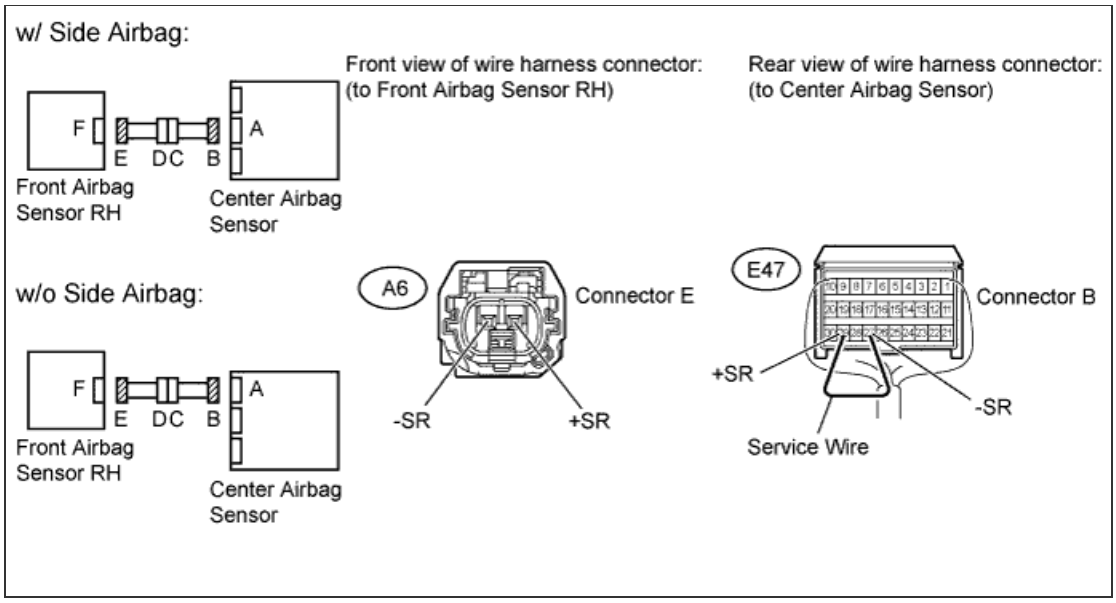
OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

2.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and front airbag sensor RH.



b. Check that the connectors (on the center airbag sensor side and front airbag sensor RH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

3.CHECK FRONT AIRBAG SENSOR RH CIRCUIT

a. Connect the cable to the negative (- battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
A6-2 (+SR) - Body ground	Engine switch on (IG)	Below 1 V
A6-1 (-SR) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 29 (+SR) and 27 (-SR) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A6-2 (+SR) - A6-1 (-SR)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A6-2 (+SR) - A6-1 (-SR)	Always	1 MΩ or higher
A6-2 (+SR) - Body ground	Always	1 MΩ or higher
A6-1 (-SR) - Body ground	Always	1 MΩ or higher

NG → Go to step 5

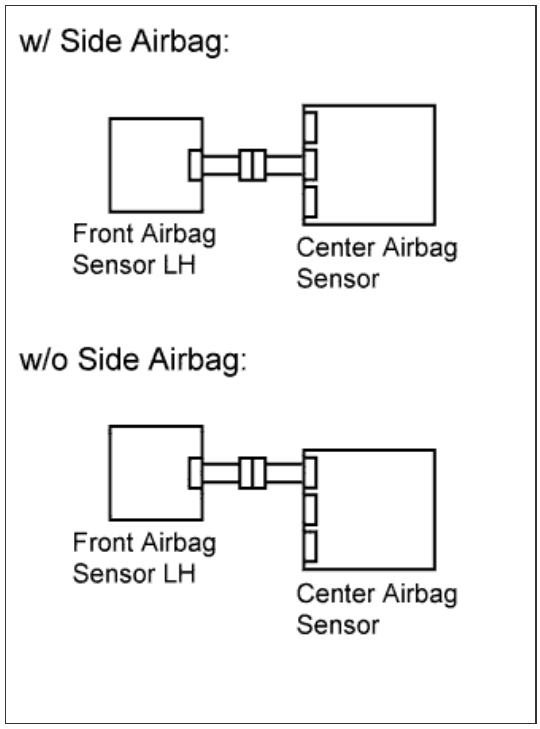
OK

4.CHECK FRONT AIRBAG SENSOR RH

a. Connect the connectors to the center airbag sensor.

b. Interchange the front airbag sensor H with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.



d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1612, B1613, B1617 and B1618 are not output	A

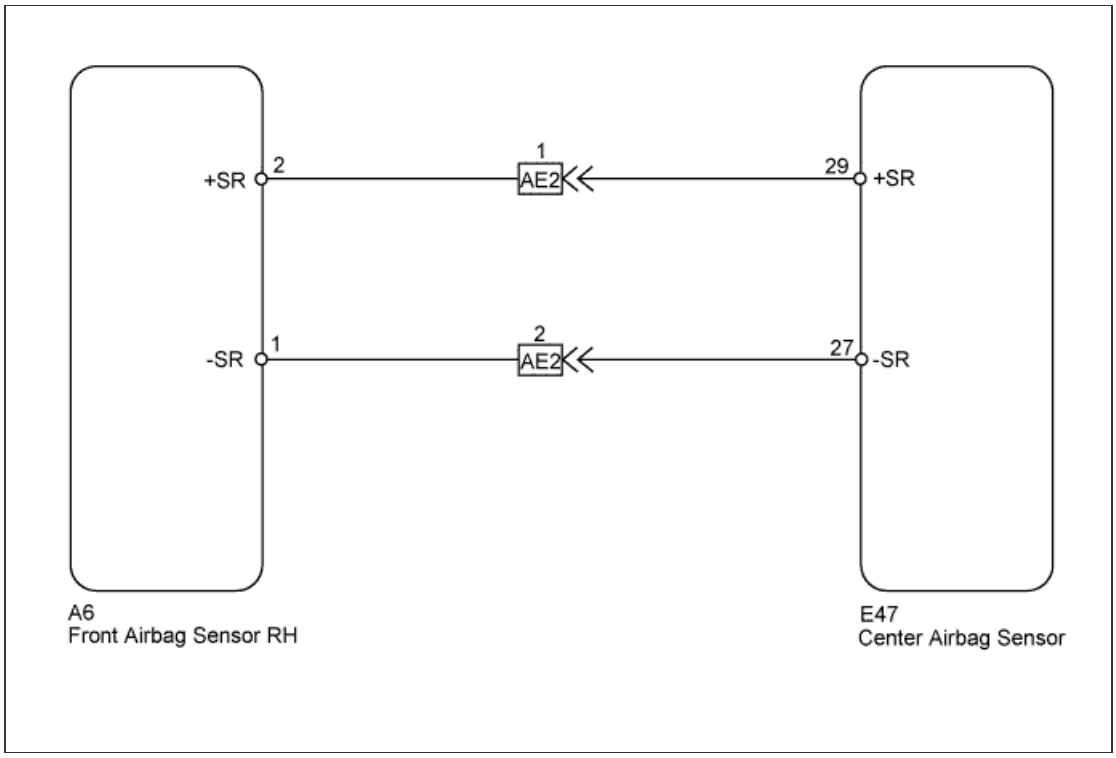
DTC B1603/83 Front Satellite Sensor Bus RH Initialization Incomplete

DTC B1612/83 Lost Communication with Front Airbag Sensor RH

DTC B1613/83 Front Airbag Sensor RH Initialization Incomplete



for Preparation Click here

DESCRIPTION

The front airbag sensor RH circuit consists of the center airbag sensor and front airbag sensor RH.
The front airbag sensor RH detects impacts to the vehicle and sends signals to the center airbag sensor to determine if the airbag should be deployed.
DTC B1603/83, B1612/83 or B1613/83 is stored when a malfunction is detected in the front airbag sensor RH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1603/83	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor RH circuit for 2 seconds. • A front airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Engine room main wire • Front airbag sensor RH • Center airbag sensor assembly
B1612/83	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor RH circuit for 2 seconds. • A front airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Engine room main wire • Front airbag sensor RH • Center airbag sensor assembly
B1613/83	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor RH circuit for 2 seconds. • A front airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Engine room main wire • Front airbag sensor RH • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (- battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and the front airbag sensor RH.

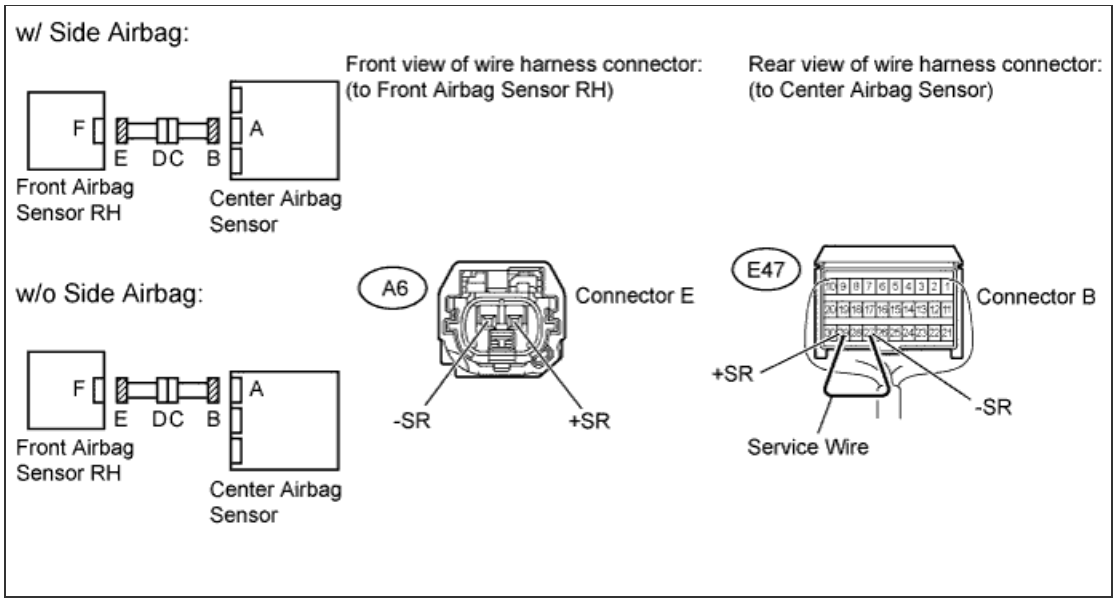
OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

2.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and front airbag sensor RH.



b. Check that the connectors (on the center airbag sensor side and front airbag sensor RH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

3.CHECK FRONT AIRBAG SENSOR RH CIRCUIT

a. Connect the cable to the negative (- battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
A6-2 (+SR) - Body ground	Engine switch on (IG)	Below 1 V
A6-1 (-SR) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 29 (+SR) and 27 (-SR) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A6-2 (+SR) - A6-1 (-SR)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A6-2 (+SR) - A6-1 (-SR)	Always	1 MΩ or higher
A6-2 (+SR) - Body ground	Always	1 MΩ or higher
A6-1 (-SR) - Body ground	Always	1 MΩ or higher

NG → Go to step 5

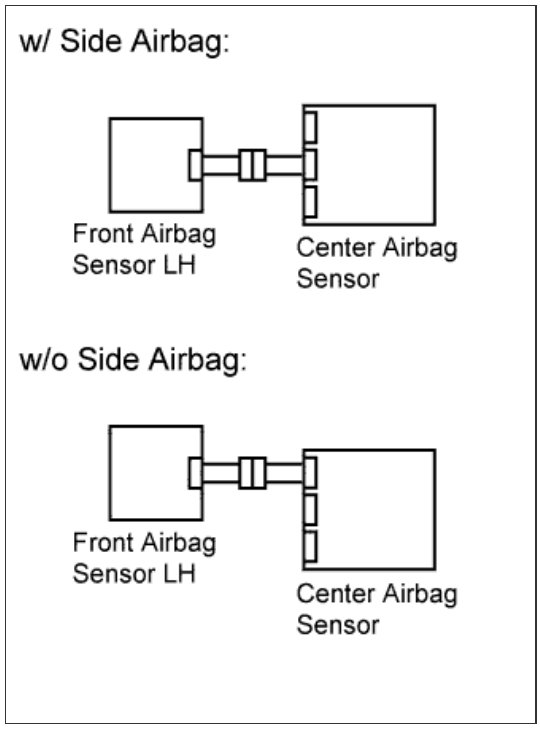
OK

4.CHECK FRONT AIRBAG SENSOR RH

a. Connect the connectors to the center airbag sensor.

b. Interchange the front airbag sensor H with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.



d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1612, B1613, B1617 and B1618 are not output	A
DTC B1617 or B1618 is output	B
DTC B1612 or B1613 is output	C

HINT:

Codes other than DTC B1612, B1613, B1617 and B1618 may be output at this time, but they are not related to this check.

REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

5.CHECK INSTRUMENT PANEL WIRE (CENTER AIRBAG SENSOR - ENGINE ROOM MAIN WIRE)

a. Disconnect the instrument panel wire connector from the engine room main wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
AE2-1 (+SR) - Body ground	Engine switch on (IG)	Below 1 V
AE2-2 (-SR) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminal 29 (+SR) and 27 (-SR) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminal of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
AE2-1 (+SR) - AE2-2 (-SR)	Always	Below 1 Ω

h. Disconnect the service wire from connector B.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
AE2-1 (+SR) - AE2-2 (-SR)	Always	1 MΩ or higher
AE2-1 (+SR) - Body ground	Always	1 MΩ or higher
AE2-2 (-SR) - Body ground	Always	1 MΩ or higher

NG → REPLACE INSTRUMENT PANEL WIRE

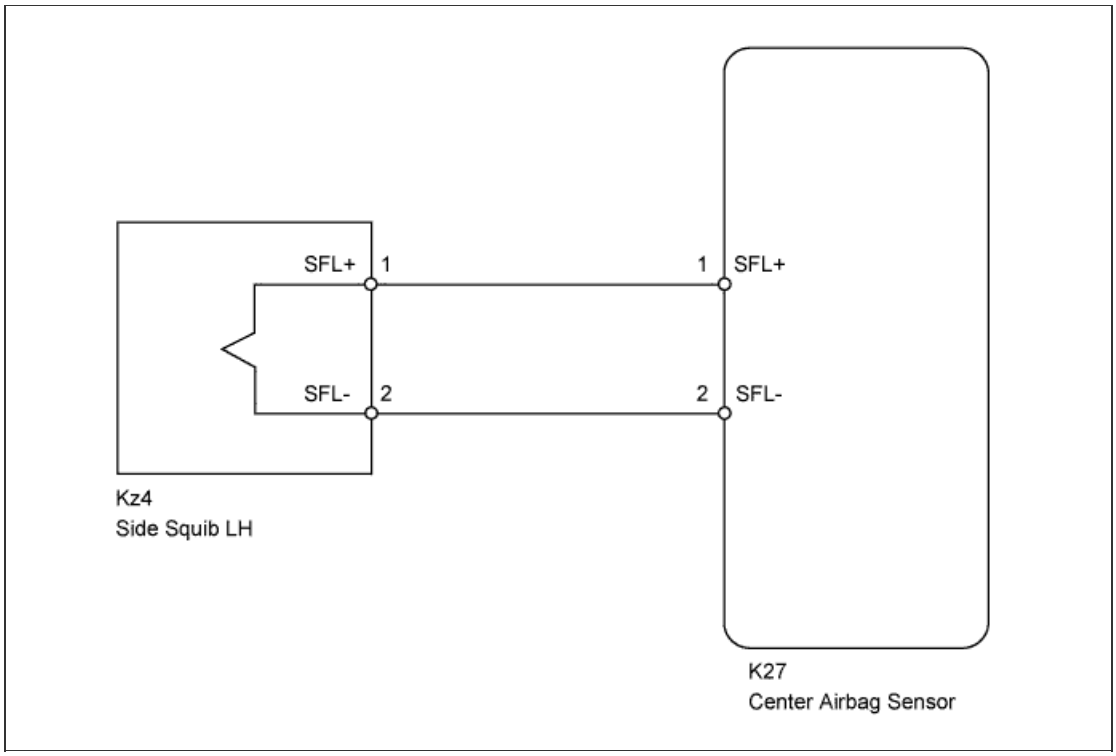
OK → REPLACE ENGINE ROOM MAIN WIRE

DTC B1825/56 Short in Side Squib LH Circuit

DTC B1826/56 Open in Side Squib LH Circuit

DTC B1827/56 Short to GND in Side Squib LH Circuit

DTC B1828/56 Short to B+ in Side Squib LH Circuit



for Preparation Click here

DESCRIPTION

The side squib LH circuit consists of the center airbag sensor and the front seat airbag LH.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the side squib LH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1825/56	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the side squib LH circuit during the primary check. • A side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat airbag assembly LH (Side squib LH) • Center airbag sensor assembly
B1826/56	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the side squib LH circuit for 2 seconds. • A side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat airbag assembly LH (Side squib LH) • Center airbag sensor assembly
B1827/56	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the side squib LH circuit for 0.5 seconds. • A side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat airbag assembly LH (Side squib LH) • Center airbag sensor assembly
B1828/56	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the side squib LH circuit for 0.5 seconds. • A side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat airbag assembly LH (Side squib LH) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK FRONT SEAT AIRBAG LH (SIDE SQUIB LH)

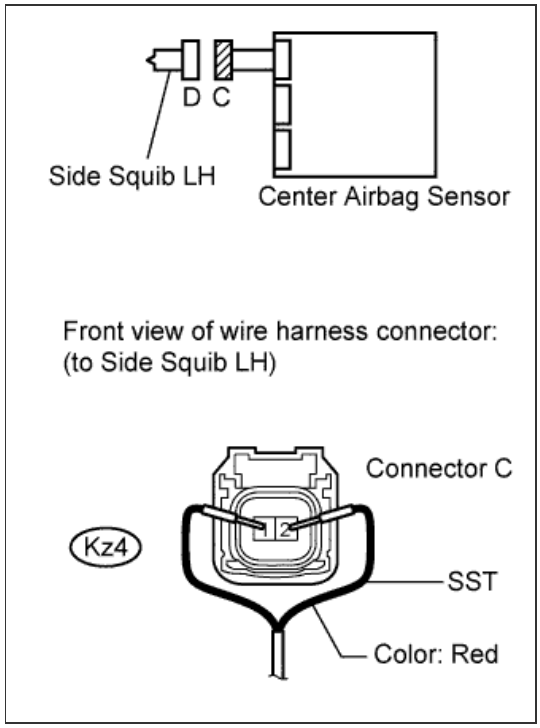
a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connector from the front seat airbag LH.

d. Connect the red wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:



Never connect the tester to the front seat airbag LH (side squib LH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1825, B1826, B1827 or B1828 is not output.

HINT:

Codes other than DTC B1825, B1826, B1827 and B1828 may be output at this time, but they are not related to this check.

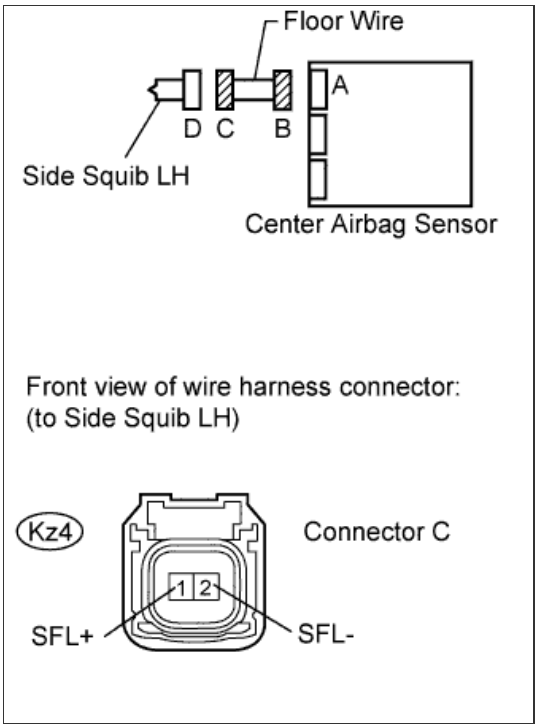
2.CHECK FLOOR WIRE (SIDE SQUIB LH CIRCUIT)

a. Turn the engine switch off.



b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Disconnect the connectors from the center airbag sensor.

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
Kz4-1 (SFL+) - Body ground	Engine switch on (IG)	Below 1 V
Kz4-2 (SFL-) - Body ground	Engine switch on (IG)	Below 1 V

g. Turn the engine switch off.

h. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Kz4-1 (SFL+) - Kz4-2 (SFL-)	Always	Below 1 Ω

j. Release the activation prevention mechanism built into connector B (Click here).

k. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Kz4-1 (SFL+) - Kz4-2 (SFL-)	Always	1 MΩ or higher
Kz4-1 (SFL+) - Body ground	Always	1 MΩ or higher
Kz4-2 (SFL-) - Body ground	Always	1 MΩ or higher

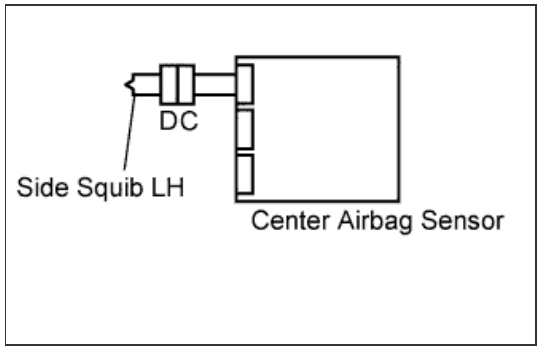
NG → REPLACE FLOOR WIRE

OK

3.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the front seat airbag LH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.



c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1825, B1826, B1827 or B1828 is not output.

HINT:

Codes other than DTC B1825, B1826, B1827 and B1828 may be output at this time, but they are not related to this check.

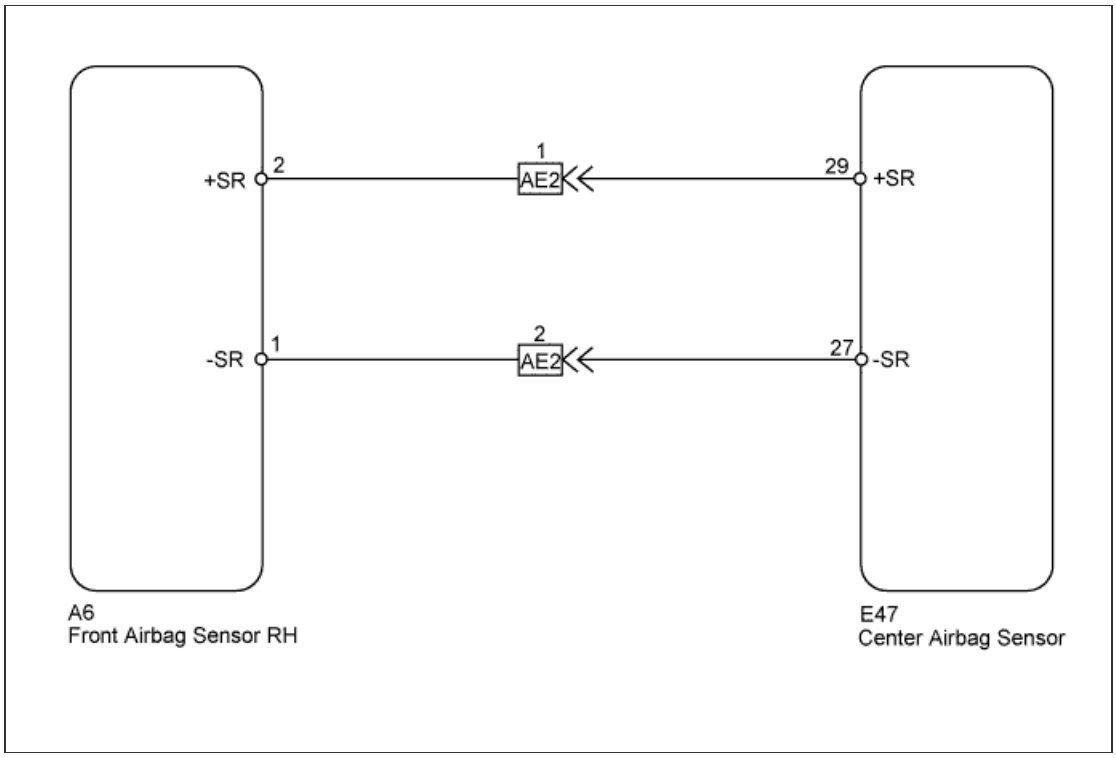
DTC B1603/83 Front Satellite Sensor Bus RH Initialization Incomplete

DTC B1612/83 Lost Communication with Front Airbag Sensor RH

DTC B1613/83 Front Airbag Sensor RH Initialization Incomplete



for Preparation Click here

DESCRIPTION

The front airbag sensor RH circuit consists of the center airbag sensor and front airbag sensor RH.
The front airbag sensor RH detects impacts to the vehicle and sends signals to the center airbag sensor to determine if the airbag should be deployed.
DTC B1603/83, B1612/83 or B1613/83 is stored when a malfunction is detected in the front airbag sensor RH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1603/83	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor RH circuit for 2 seconds. • A front airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Engine room main wire • Front airbag sensor RH • Center airbag sensor assembly
B1612/83	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor RH circuit for 2 seconds. • A front airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Engine room main wire • Front airbag sensor RH • Center airbag sensor assembly
B1613/83	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor RH circuit for 2 seconds. • A front airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Engine room main wire • Front airbag sensor RH • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (- battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and the front airbag sensor RH.

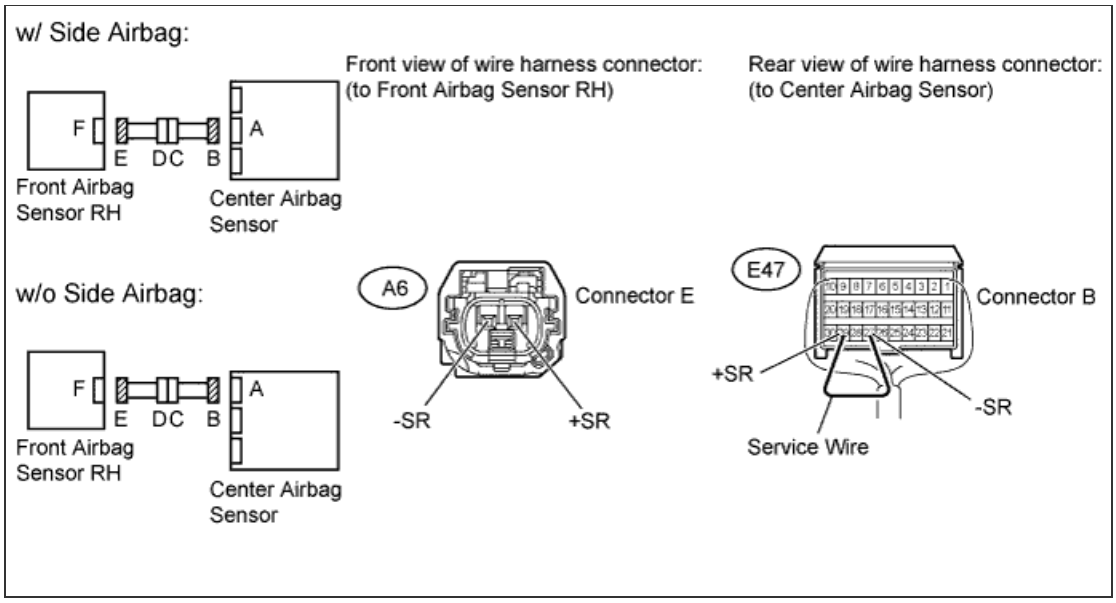
OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

2.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and front airbag sensor RH.



b. Check that the connectors (on the center airbag sensor side and front airbag sensor RH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

3.CHECK FRONT AIRBAG SENSOR RH CIRCUIT

a. Connect the cable to the negative (- battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
A6-2 (+SR) - Body ground	Engine switch on (IG)	Below 1 V
A6-1 (-SR) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 29 (+SR) and 27 (-SR) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A6-2 (+SR) - A6-1 (-SR)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A6-2 (+SR) - A6-1 (-SR)	Always	1 MΩ or higher
A6-2 (+SR) - Body ground	Always	1 MΩ or higher
A6-1 (-SR) - Body ground	Always	1 MΩ or higher

NG → Go to step 5

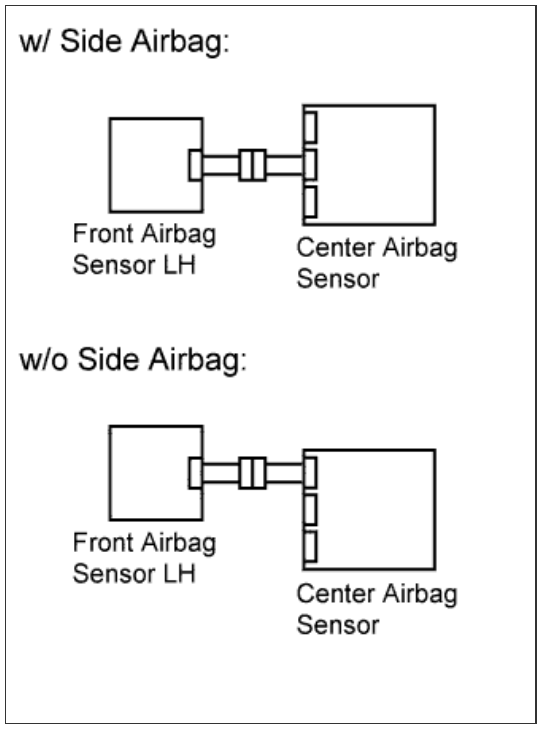
OK

4.CHECK FRONT AIRBAG SENSOR RH

a. Connect the connectors to the center airbag sensor.

b. Interchange the front airbag sensor H with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.



d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

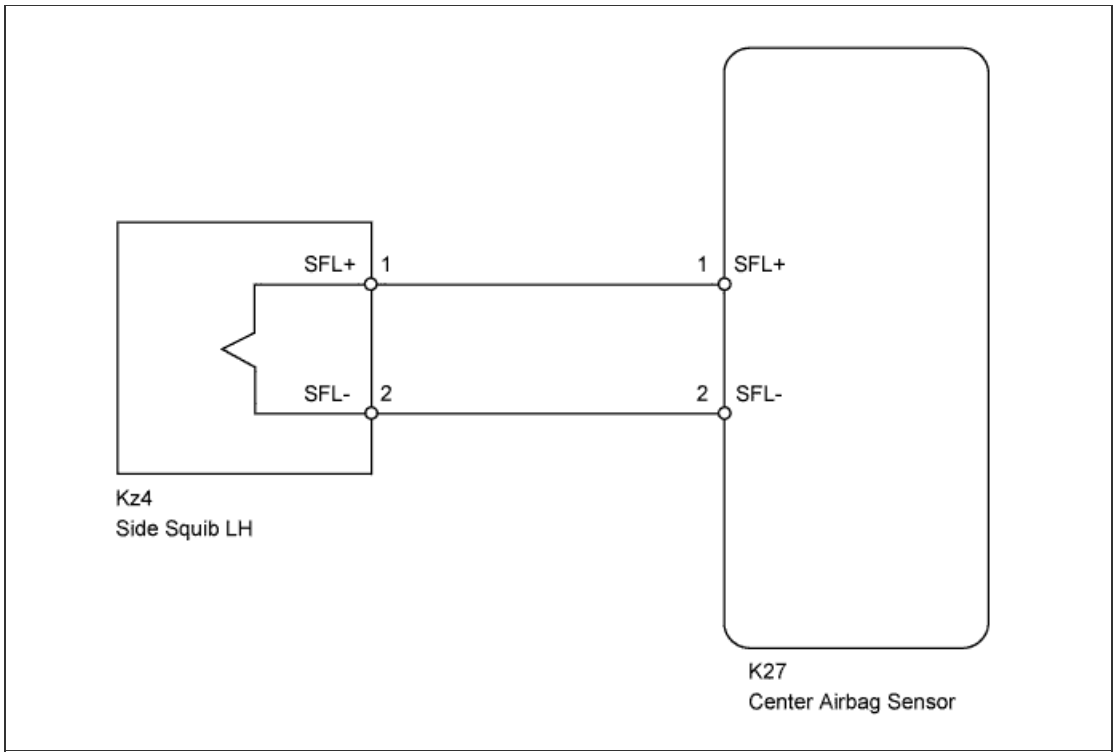
DTC B1825/56 Short in Side Squib LH Circuit

DTC B1826/56 Open in Side Squib LH Circuit

DTC B1827/56 Short to GND in Side Squib LH Circuit

DTC B1828/56 Short to B+ in Side Squib LH Circuit



for Preparation Click here

DESCRIPTION

The side squib LH circuit consists of the center airbag sensor and the front seat airbag LH.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the side squib LH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1825/56	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the side squib LH circuit during the primary check. • A side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat airbag assembly LH (Side squib LH) • Center airbag sensor assembly
B1826/56	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the side squib LH circuit for 2 seconds. • A side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat airbag assembly LH (Side squib LH) • Center airbag sensor assembly
B1827/56	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the side squib LH circuit for 0.5 seconds. • A side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat airbag assembly LH (Side squib LH) • Center airbag sensor assembly
B1828/56	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the side squib LH circuit for 0.5 seconds. • A side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat airbag assembly LH (Side squib LH) • Center airbag sensor assembly

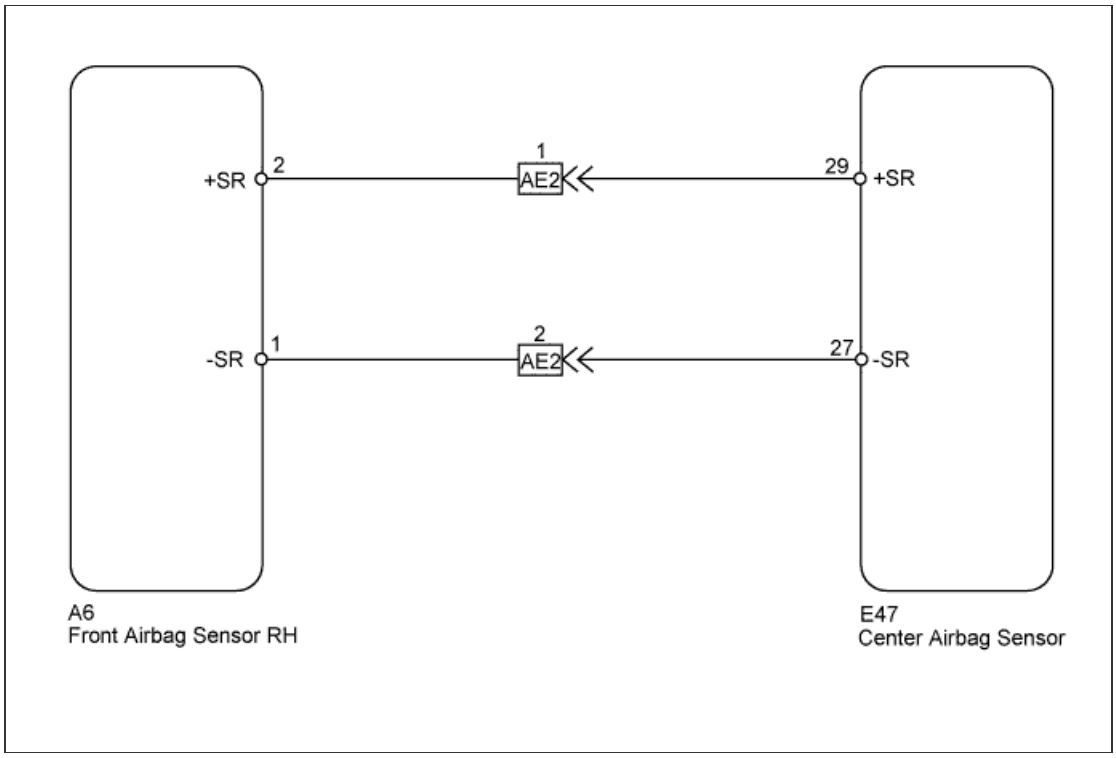
DTC B1603/83 Front Satellite Sensor Bus RH Initialization Incomplete

DTC B1612/83 Lost Communication with Front Airbag Sensor RH

DTC B1613/83 Front Airbag Sensor RH Initialization Incomplete



for Preparation Click here

DESCRIPTION

The front airbag sensor RH circuit consists of the center airbag sensor and front airbag sensor RH.
The front airbag sensor RH detects impacts to the vehicle and sends signals to the center airbag sensor to determine if the airbag should be deployed.
DTC B1603/83, B1612/83 or B1613/83 is stored when a malfunction is detected in the front airbag sensor RH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1603/83	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor RH circuit for 2 seconds. • A front airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Engine room main wire • Front airbag sensor RH • Center airbag sensor assembly
B1612/83	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor RH circuit for 2 seconds. • A front airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Engine room main wire • Front airbag sensor RH • Center airbag sensor assembly
B1613/83	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor RH circuit for 2 seconds. • A front airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Engine room main wire • Front airbag sensor RH • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (- battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and the front airbag sensor RH.

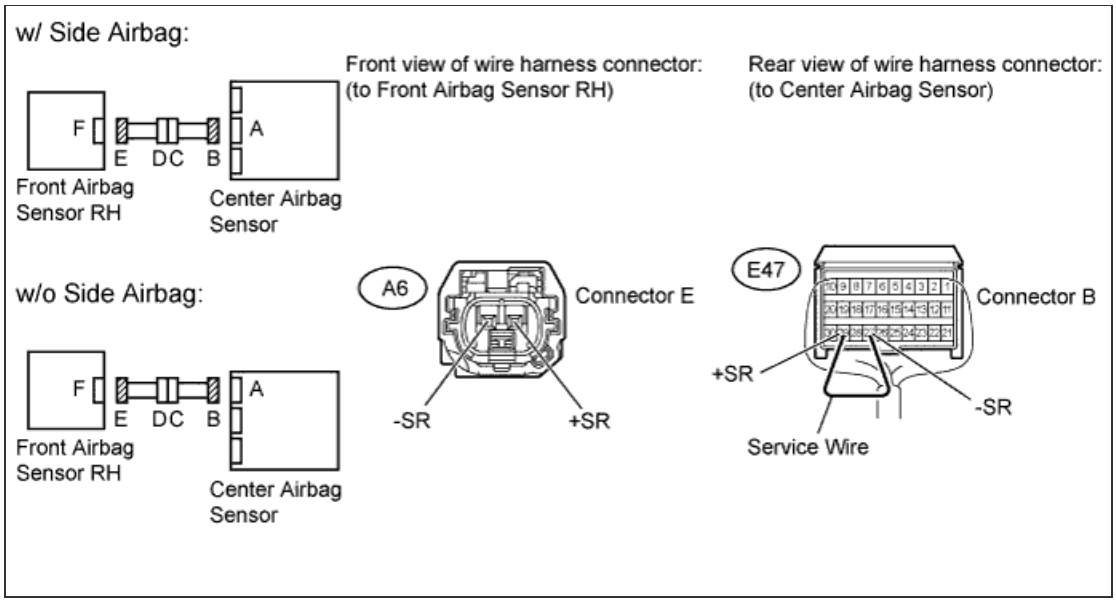
OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

2.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and front airbag sensor RH.



b. Check that the connectors (on the center airbag sensor side and front airbag sensor RH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

3.CHECK FRONT AIRBAG SENSOR RH CIRCUIT

a. Connect the cable to the negative (- battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
A6-2 (+SR) - Body ground	Engine switch on (IG)	Below 1 V
A6-1 (-SR) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 29 (+SR) and 27 (-SR) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A6-2 (+SR) - A6-1 (-SR)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A6-2 (+SR) - A6-1 (-SR)	Always	1 MΩ or higher
A6-2 (+SR) - Body ground	Always	1 MΩ or higher
A6-1 (-SR) - Body ground	Always	1 MΩ or higher

NG → Go to step 5

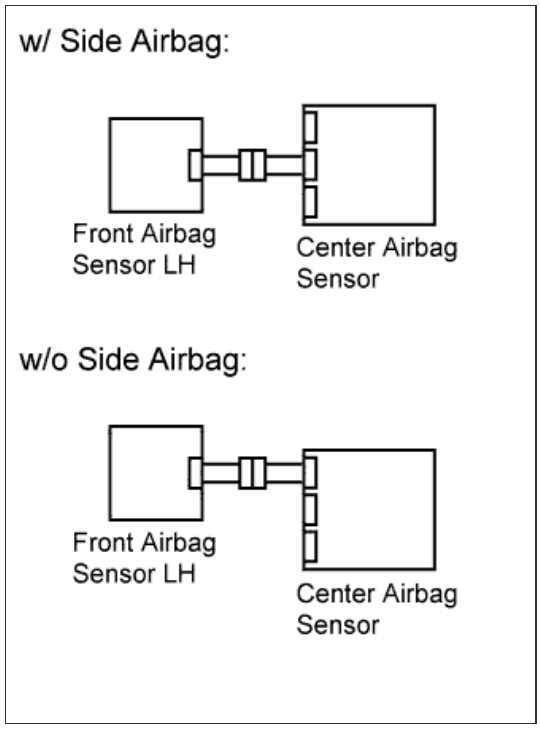
OK

4.CHECK FRONT AIRBAG SENSOR RH

a. Connect the connectors to the center airbag sensor.

b. Interchange the front airbag sensor H with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.



d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK FRONT SEAT AIRBAG LH (SIDE SQUIB LH)

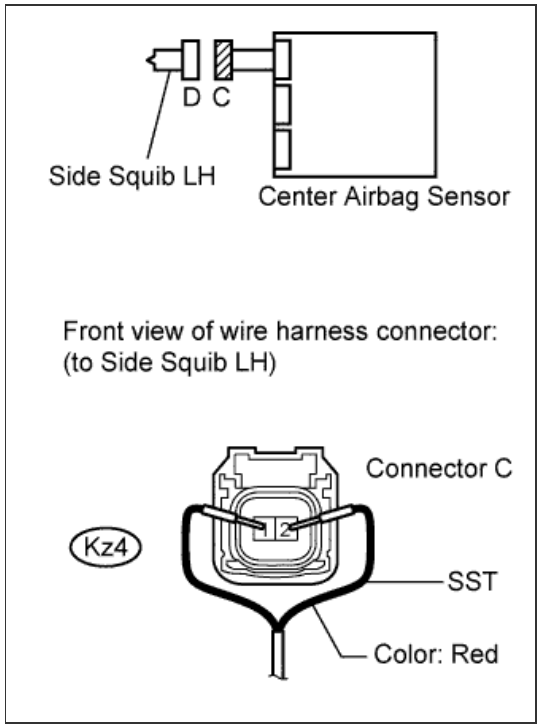
a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect the connector from the front seat airbag LH.

d. Connect the red wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:



Never connect the tester to the front seat airbag LH (side squib LH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1825, B1826, B1827 or B1828 is not output.

HINT:

Codes other than DTC B1825, B1826, B1827 and B1828 may be output at this time, but they are not related to this check.

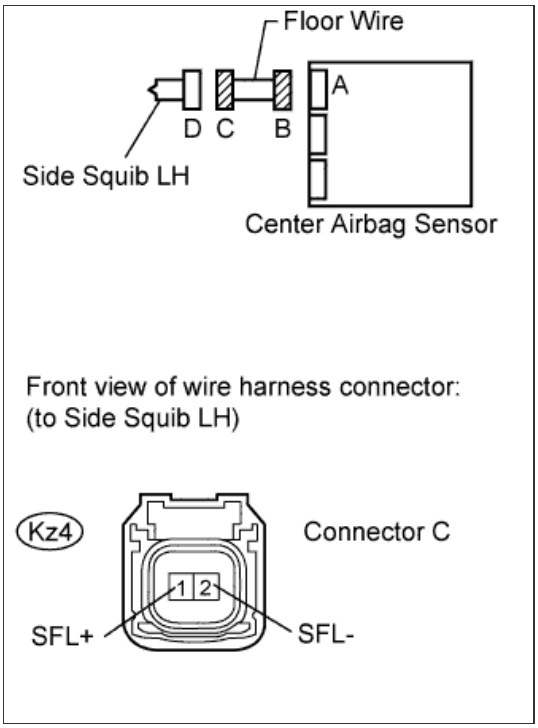
A

REPLACE FRONT SEAT AIRBAG ASSEMBLY LH (Click here)

2.CHECK FLOOR WIRE (SIDE SQUIB LH CIRCUIT)

a. Turn the engine switch off.



b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Disconnect the connectors from the center airbag sensor.

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
Kz4-1 (SFL+) - Body ground	Engine switch on (IG)	Below 1 V
Kz4-2 (SFL-) - Body ground	Engine switch on (IG)	Below 1 V

g. Turn the engine switch off.

h. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Kz4-1 (SFL+) - Kz4-2 (SFL-)	Always	Below 1 Ω

j. Release the activation prevention mechanism built into connector B (Click here).

k. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Kz4-1 (SFL+) - Kz4-2 (SFL-)	Always	1 MΩ or higher
Kz4-1 (SFL+) - Body ground	Always	1 MΩ or higher
Kz4-2 (SFL-) - Body ground	Always	1 MΩ or higher

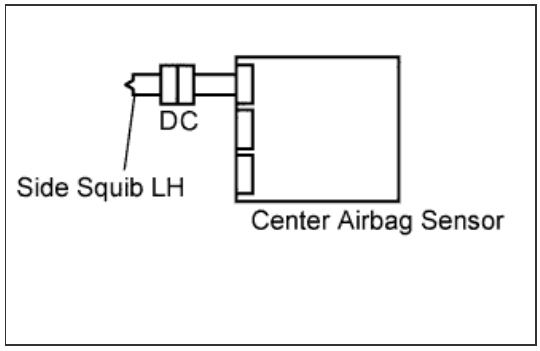
NG → REPLACE FLOOR WIRE

OK

3.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the front seat airbag LH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.



c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1825, B1826, B1827 or B1828 is not output.

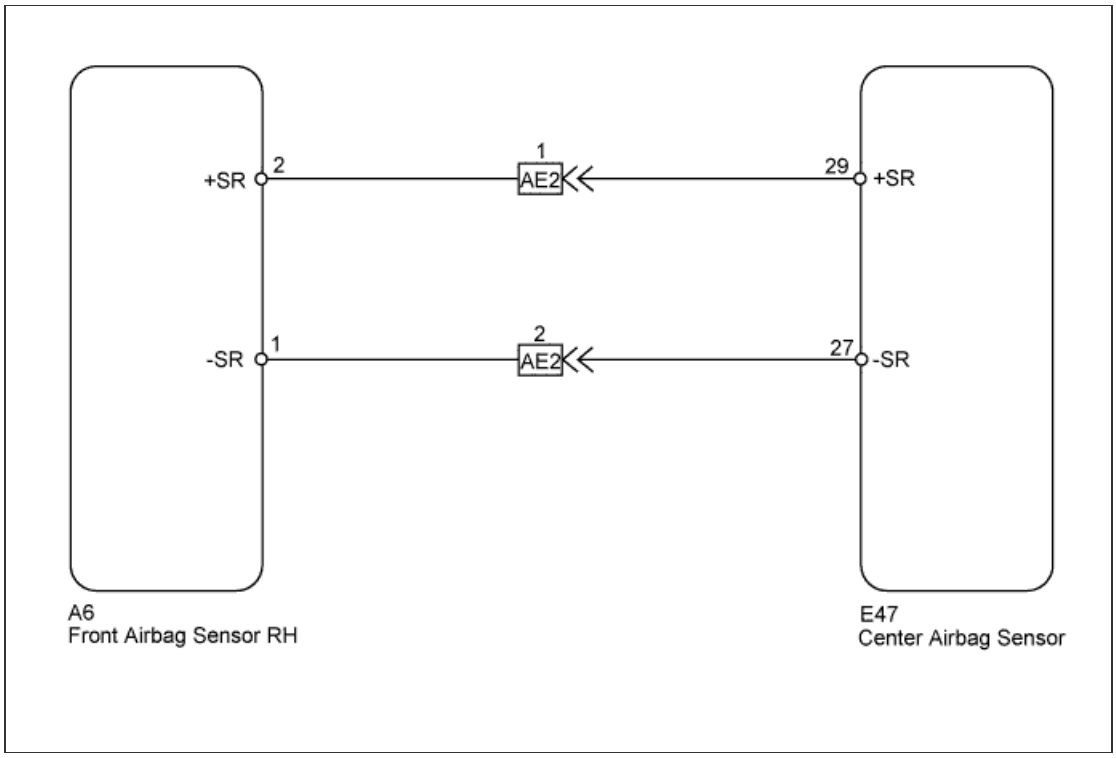
DTC B1603/83 Front Satellite Sensor Bus RH Initialization Incomplete

DTC B1612/83 Lost Communication with Front Airbag Sensor RH

DTC B1613/83 Front Airbag Sensor RH Initialization Incomplete



for Preparation Click here

DESCRIPTION

The front airbag sensor RH circuit consists of the center airbag sensor and front airbag sensor RH.
The front airbag sensor RH detects impacts to the vehicle and sends signals to the center airbag sensor to determine if the airbag should be deployed.
DTC B1603/83, B1612/83 or B1613/83 is stored when a malfunction is detected in the front airbag sensor RH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1603/83	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor RH circuit for 2 seconds. • A front airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Engine room main wire • Front airbag sensor RH • Center airbag sensor assembly
B1612/83	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor RH circuit for 2 seconds. • A front airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Engine room main wire • Front airbag sensor RH • Center airbag sensor assembly
B1613/83	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor RH circuit for 2 seconds. • A front airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Engine room main wire • Front airbag sensor RH • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (- battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and the front airbag sensor RH.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

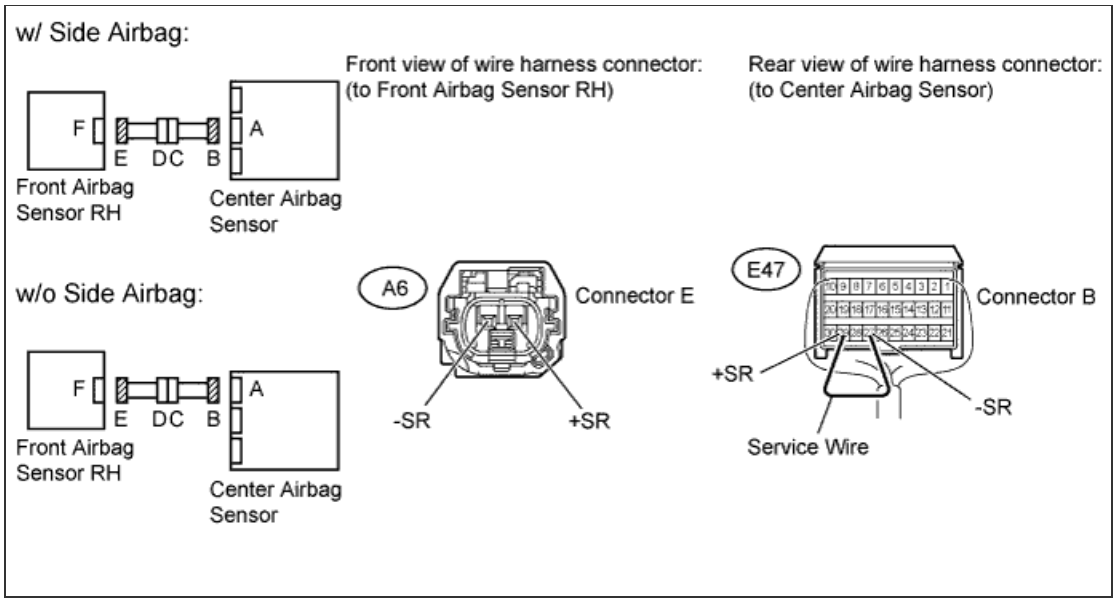
2.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and front airbag sensor RH.



b. Check that the connectors (on the center airbag sensor side and front airbag sensor RH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

3.CHECK FRONT AIRBAG SENSOR RH CIRCUIT

a. Connect the cable to the negative (- battery terminal, and wait for at least 2 seconds.

b. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
A6-2 (+SR) - Body ground	Engine switch on (IG)	Below 1 V
A6-1 (-SR) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 29 (+SR) and 27 (-SR) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A6-2 (+SR) - A6-1 (-SR)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A6-2 (+SR) - A6-1 (-SR)	Always	1 MΩ or higher
A6-2 (+SR) - Body ground	Always	1 MΩ or higher
A6-1 (-SR) - Body ground	Always	1 MΩ or higher

NG → Go to step 5

OK

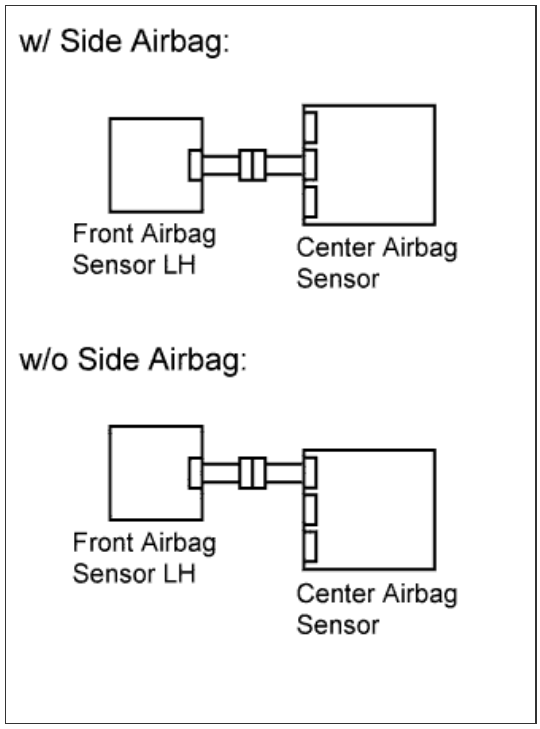
4.CHECK FRONT AIRBAG SENSOR RH

a. Connect the connectors to the center airbag sensor.

b. Interchange the front airbag sensor H with RH and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.



d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Click here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1612, B1613, B1617 and B1618 are not output	A

REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

5.CHECK INSTRUMENT PANEL WIRE (CENTER AIRBAG SENSOR - ENGINE ROOM MAIN WIRE)

a. Disconnect the instrument panel wire connector from the engine room main wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
AE2-1 (+SR) - Body ground	Engine switch on (IG)	Below 1 V
AE2-2 (-SR) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminal 29 (+SR) and 27 (-SR) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminal of the connector when connecting a service wire.

g. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
AE2-1 (+SR) - AE2-2 (-SR)	Always	Below 1 Ω

h. Disconnect the service wire from connector B.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
AE2-1 (+SR) - AE2-2 (-SR)	Always	1 MΩ or higher
AE2-1 (+SR) - Body ground	Always	1 MΩ or higher
AE2-2 (-SR) - Body ground	Always	1 MΩ or higher

NG → REPLACE INSTRUMENT PANEL WIRE

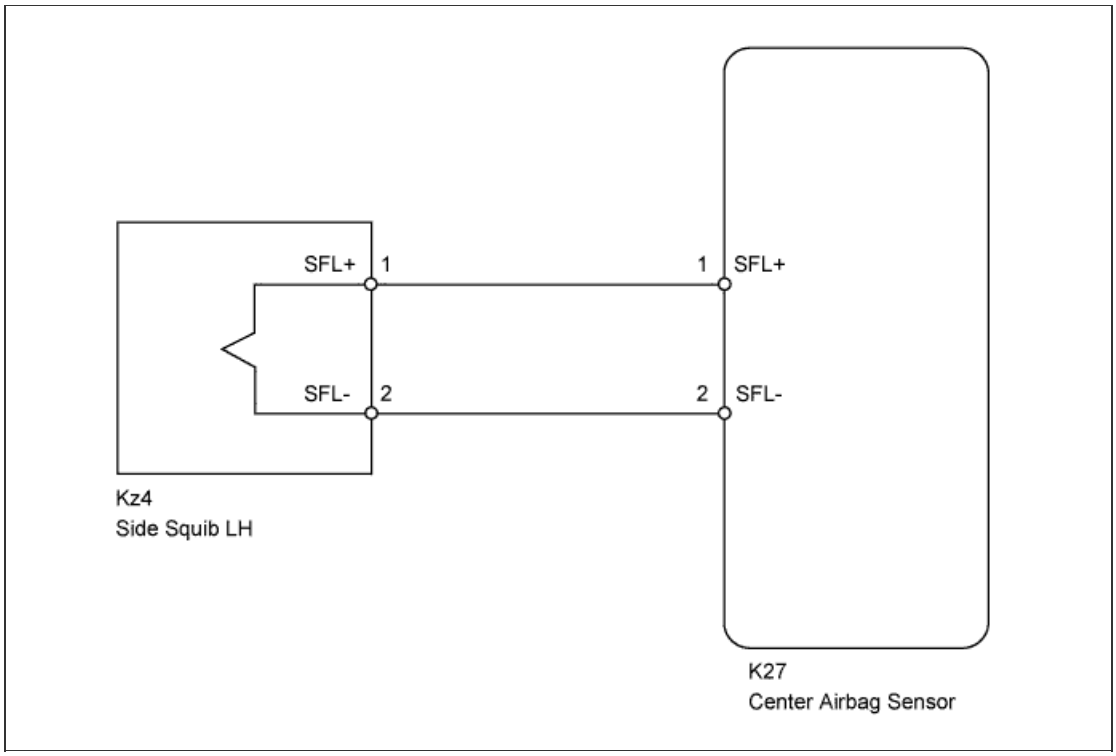
OK → REPLACE ENGINE ROOM MAIN WIRE

DTC B1825/56 Short in Side Squib LH Circuit

DTC B1826/56 Open in Side Squib LH Circuit

DTC B1827/56 Short to GND in Side Squib LH Circuit

DTC B1828/56 Short to B+ in Side Squib LH Circuit



for Preparation Click here

DESCRIPTION

The side squib LH circuit consists of the center airbag sensor and the front seat airbag LH.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the side squib LH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1825/56	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the side squib LH circuit during the primary check. • A side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat airbag assembly LH (Side squib LH) • Center airbag sensor assembly
B1826/56	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the side squib LH circuit for 2 seconds. • A side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat airbag assembly LH (Side squib LH) • Center airbag sensor assembly
B1827/56	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the side squib LH circuit for 0.5 seconds. • A side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat airbag assembly LH (Side squib LH) • Center airbag sensor assembly
B1828/56	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the side squib LH circuit for 0.5 seconds. • A side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat airbag assembly LH (Side squib LH) • Center airbag sensor assembly

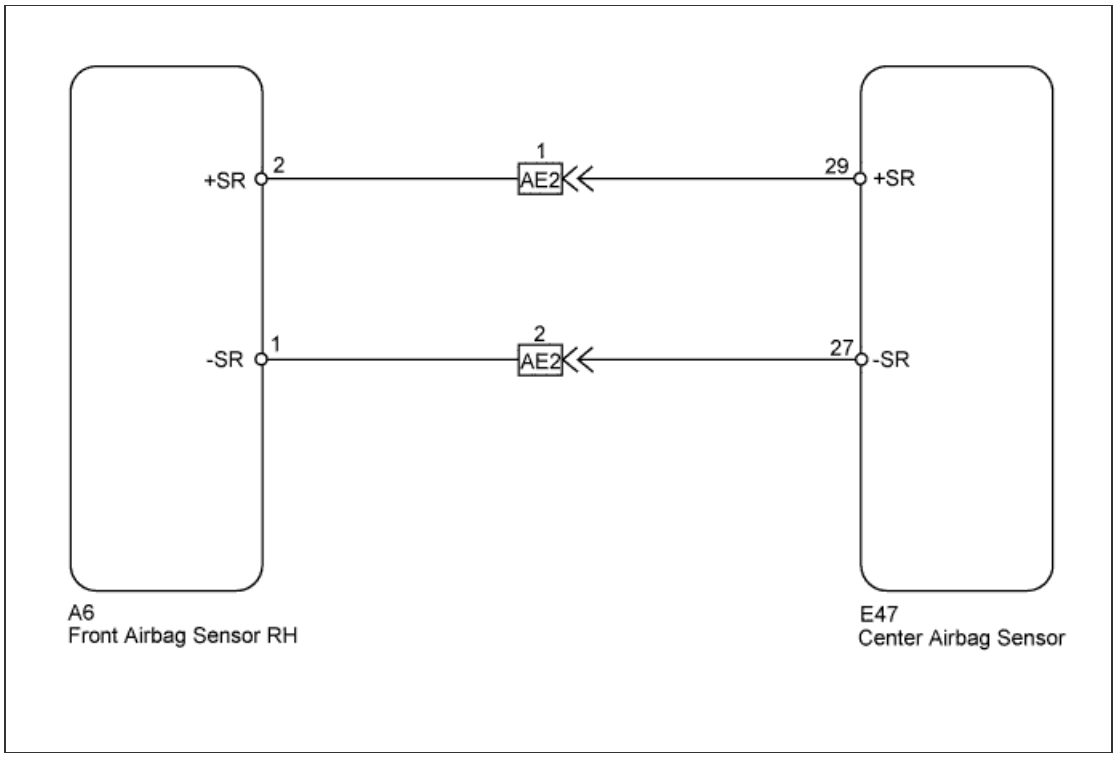
DTC B1603/83 Front Satellite Sensor Bus RH Initialization Incomplete

DTC B1612/83 Lost Communication with Front Airbag Sensor RH

DTC B1613/83 Front Airbag Sensor RH Initialization Incomplete



for Preparation Click here

DESCRIPTION

The front airbag sensor RH circuit consists of the center airbag sensor and front airbag sensor RH.
The front airbag sensor RH detects impacts to the vehicle and sends signals to the center airbag sensor to determine if the airbag should be deployed.
DTC B1603/83, B1612/83 or B1613/83 is stored when a malfunction is detected in the front airbag sensor RH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1603/83	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor RH circuit for 2 seconds. • A front airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Engine room main wire • Front airbag sensor RH • Center airbag sensor assembly
B1612/83	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor RH circuit for 2 seconds. • A front airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Engine room main wire • Front airbag sensor RH • Center airbag sensor assembly
B1613/83	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor RH circuit for 2 seconds. • A front airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Engine room main wire • Front airbag sensor RH • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (- battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Check that the connectors are properly connected to the center airbag sensor and the front airbag sensor RH.

OK:

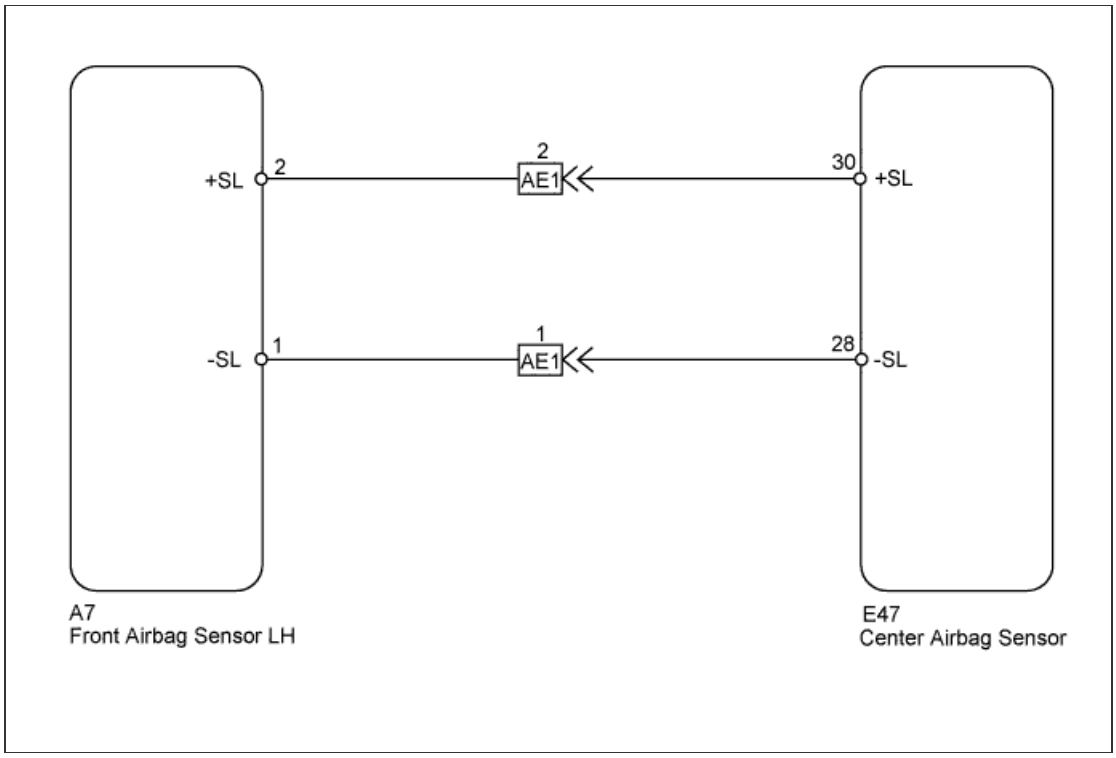
DTC B1608/84 Front Satellite Sensor Bus LH Initialization Incomplete

DTC B1617/84 Lost Communication with Front Airbag Sensor LH

DTC B1618/84 Front Airbag Sensor LH Initialization Incomplete



for Preparation Click here

DESCRIPTION

The front airbag sensor LH circuit consists of the center airbag sensor and front airbag sensor LH.
The front airbag sensor LH detects impacts to the vehicle and sends signals to the center airbag sensor to determine if the airbag should be deployed.
DTC B1608/84, B1617/84 or B1618/84 is stored when a malfunction is detected in the front airbag sensor LH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1608/84	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor LH circuit for 2 seconds. • A front airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Engine room main wire • Front airbag sensor LH • Center airbag sensor assembly
B1617/84	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor LH circuit for 2 seconds. • A front airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Engine room main wire • Front airbag sensor LH • Center airbag sensor assembly
B1618/84	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor LH circuit for 2 seconds. • A front airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Engine room main wire • Front airbag sensor LH • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initiali ed after the cable is reconnected (Clic here).

1.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Chec that the connectors are properly connected to the center airbag sensor and the front airbag sensor LH.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

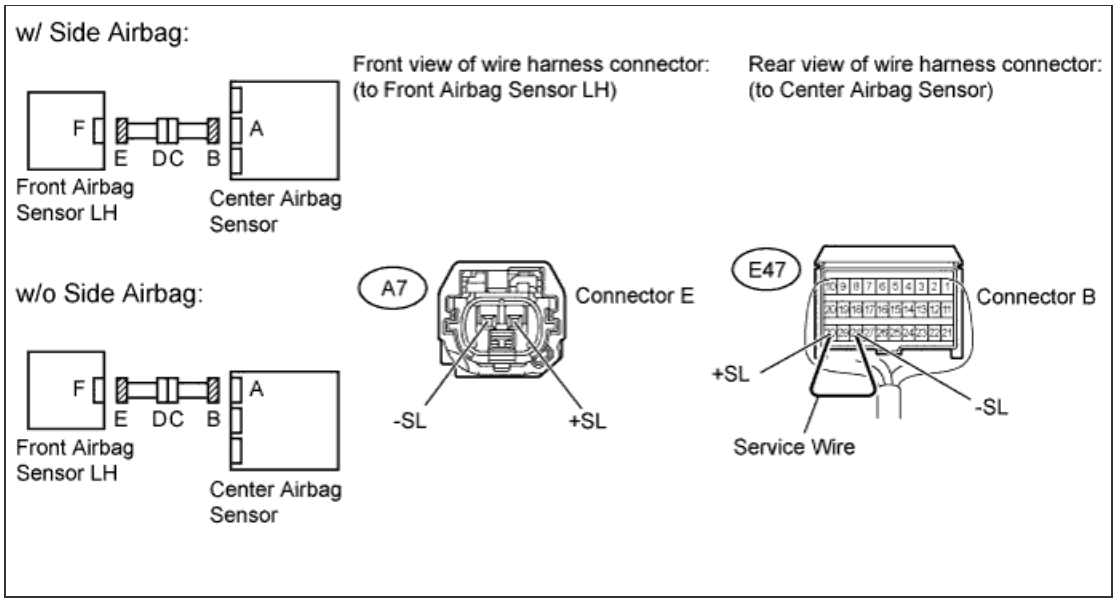
2.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and front airbag sensor LH.



b. Chec that the connectors (on the center airbag sensor side and front airbag sensor LH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

3.CHECK FRONT AIRBAG SENSOR LH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. easure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
A7-2 (L) - Body ground	Engine switch on (IG)	Below 1 V
A7-1 (-SL) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 30 (L) and 28 (-SL) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. easure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A7-2 (L) - A7-1 (-SL)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. easure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A7-2 (L) - A7-1 (-SL)	Always	1 Ω or higher
A7-2 (L) - Body ground	Always	1 Ω or higher
A7-1 (-SL) - Body ground	Always	1 Ω or higher

NG → Go to step 5

OK

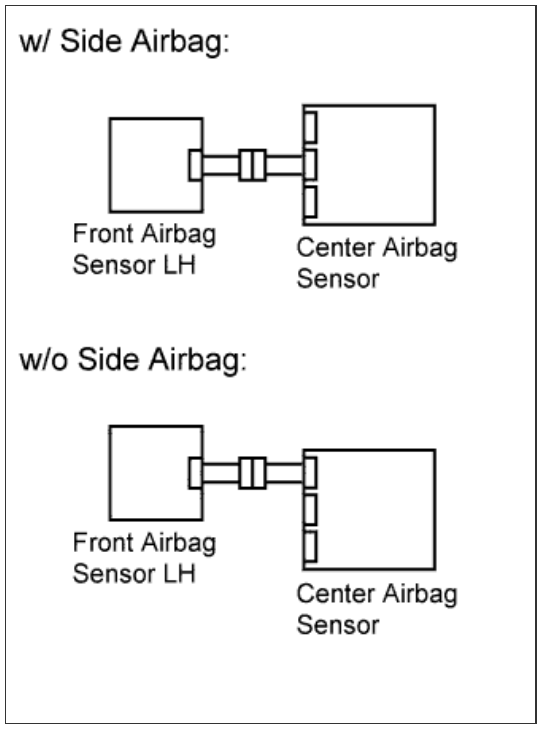
4.CHECK FRONT AIRBAG SENSOR LH

a. Connect the connectors to the center airbag sensor.

b. Interchange the front airbag sensor LH with H and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.



d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Clic here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Chec for DTCs (Clic here).

Result

esult	roceed to
DTC B1617 or B1618 is output	A
DTC B1612 or B1613 is output	B
DTC B1612, B1613, B1617 and B1618 are not output	C

HINT:

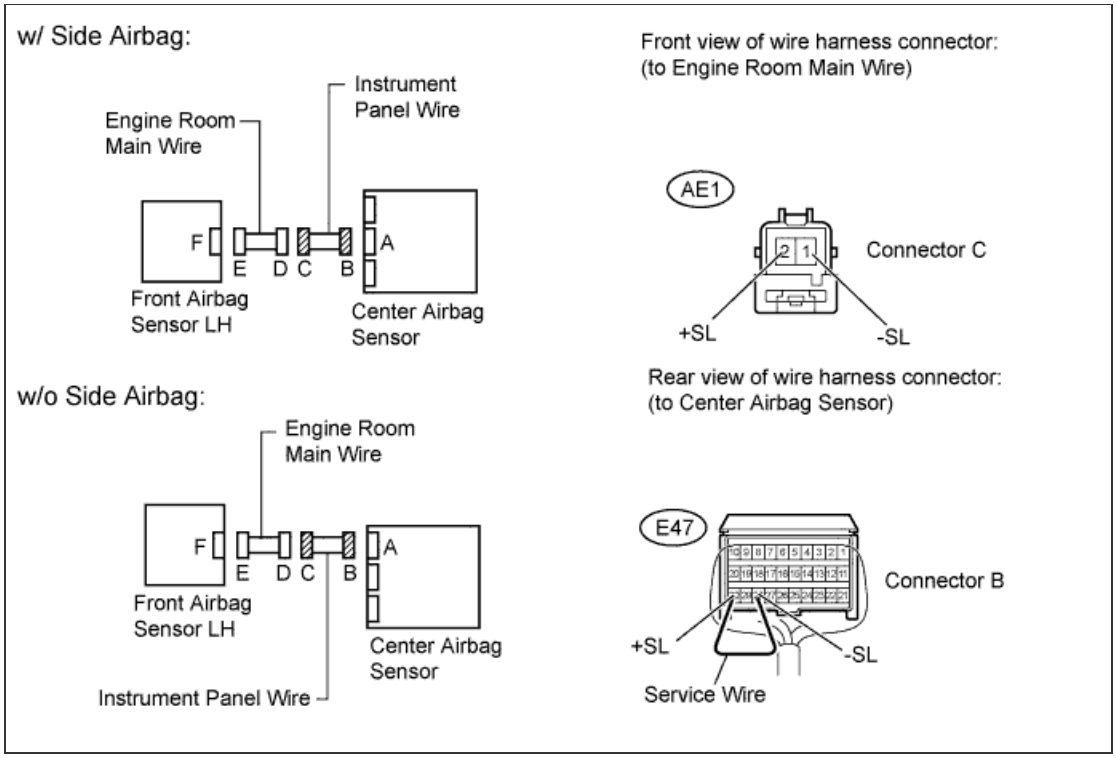
Codes other than DTC B1612, B1613, B1617 and B1618 may be output at this time, but they are not related to this chec .



A → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

B → REPLACE FRONT AIRBAG SENSOR LH (Click here)

C

USE SIMULATION METHOD TO CHECK (Click here)

5.CHECK INSTRUMENT PANEL WIRE (CENTER AIRBAG SENSOR - ENGINE ROOM MAIN WIRE)

a. Disconnect the instrument panel wire connector from the engine room main wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. easure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
AE1-2 (L) - Body ground	Engine switch on (IG)	Below 1 V
AE1-1 (-SL) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 30 (L) and 28 (-SL) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. easure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
AE1-2 (L) - AE1-1 (-SL)	Always	Below 1 Ω

h. Disconnect the service wire from connector B.

i. easure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
AE1-2 (L) - AE1-1 (-SL)	Always	1 Ω or higher
AE1-2 (L) - Body ground	Always	1 Ω or higher
AE1-1 (-SL) - Body ground	Always	1 Ω or higher

NG → REPLACE INSTRUMENT PANEL WIRE

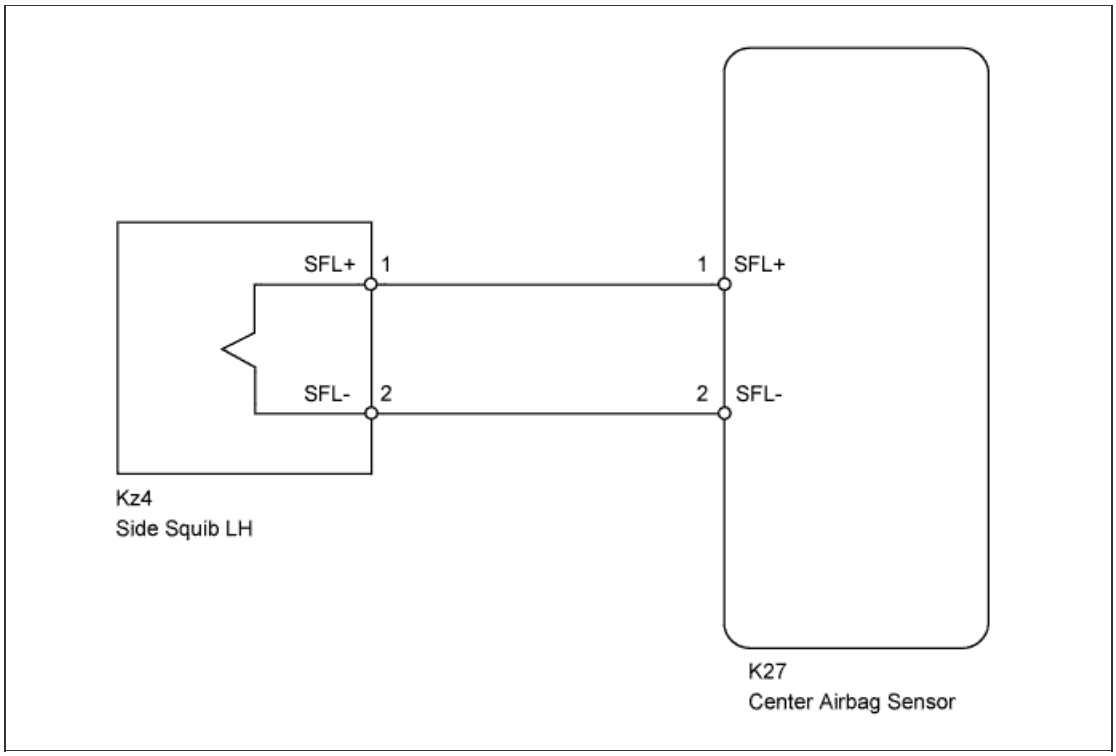
OK → REPLACE ENGINE ROOM MAIN WIRE

DTC B1825/56 Short in Side Squib LH Circuit

DTC B1826/56 Open in Side Squib LH Circuit

DTC B1827/56 Short to GND in Side Squib LH Circuit

DTC B1828/56 Short to B+ in Side Squib LH Circuit



for Preparation Click here

DESCRIPTION

The side squib LH circuit consists of the center airbag sensor and the front seat airbag LH.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the side squib LH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1825/56	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the side squib LH circuit during the primary check. • A side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat airbag assembly LH (Side squib LH) • Center airbag sensor assembly
B1826/56	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the side squib LH circuit for 2 seconds. • A side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat airbag assembly LH (Side squib LH) • Center airbag sensor assembly
B1827/56	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the side squib LH circuit for 0.5 seconds. • A side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat airbag assembly LH (Side squib LH) • Center airbag sensor assembly
B1828/56	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the side squib LH circuit for 0.5 seconds. • A side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat airbag assembly LH (Side squib LH) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK FRONT SEAT AIRBAG LH (SIDE SQUIB LH)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

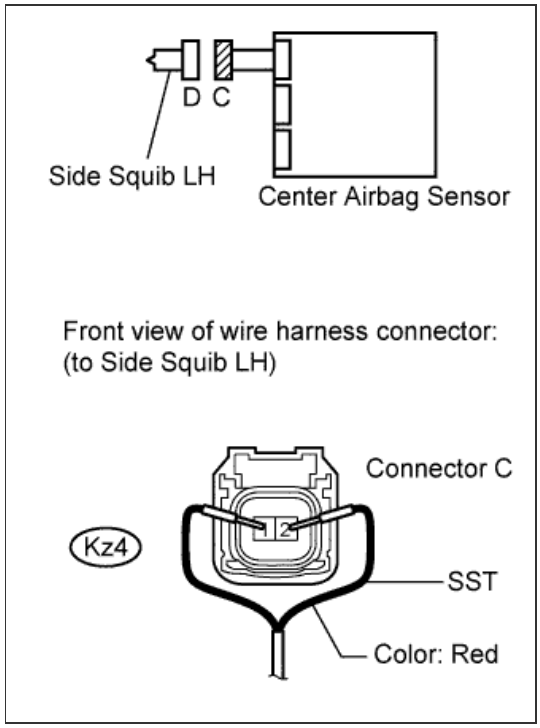
c. Disconnect the connector from the front seat airbag LH.

d. Connect the red wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:



Never connect the tester to the front seat airbag LH (side squib LH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1825, B1826, B1827 or B1828 is not output.

HINT:

Codes other than DTC B1825, B1826, B1827 and B1828 may be output at this time, but they are not related to this check.

REPLACE FRONT SEAT AIRBAG ASSEMBLY LH (Click here)

2.CHECK FLOOR WIRE (SIDE SQUIB LH CIRCUIT)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Disconnect the connectors from the center airbag sensor.

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
Kz4-1 (SFL+) - Body ground	Engine switch on (IG)	Below 1 V
Kz4-2 (SFL-) - Body ground	Engine switch on (IG)	Below 1 V

g. Turn the engine switch off.

h. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Kz4-1 (SFL+) - Kz4-2 (SFL-)	Always	Below 1 Ω

j. Release the activation prevention mechanism built into connector B (Click here).

k. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Kz4-1 (SFL+) - Kz4-2 (SFL-)	Always	1 MΩ or higher
Kz4-1 (SFL+) - Body ground	Always	1 MΩ or higher
Kz4-2 (SFL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK

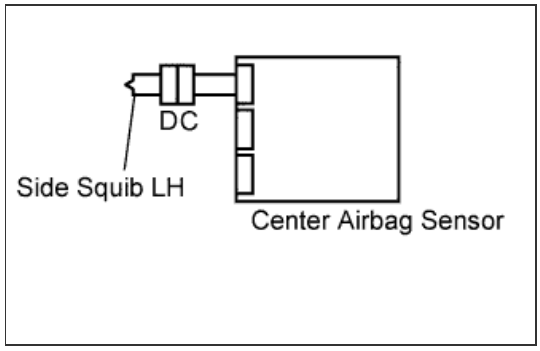
3.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the front seat airbag LH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.



c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1825, B1826, B1827 or B1828 is not output.

HINT:

Codes other than DTC B1825, B1826, B1827 and B1828 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (**Click here**)

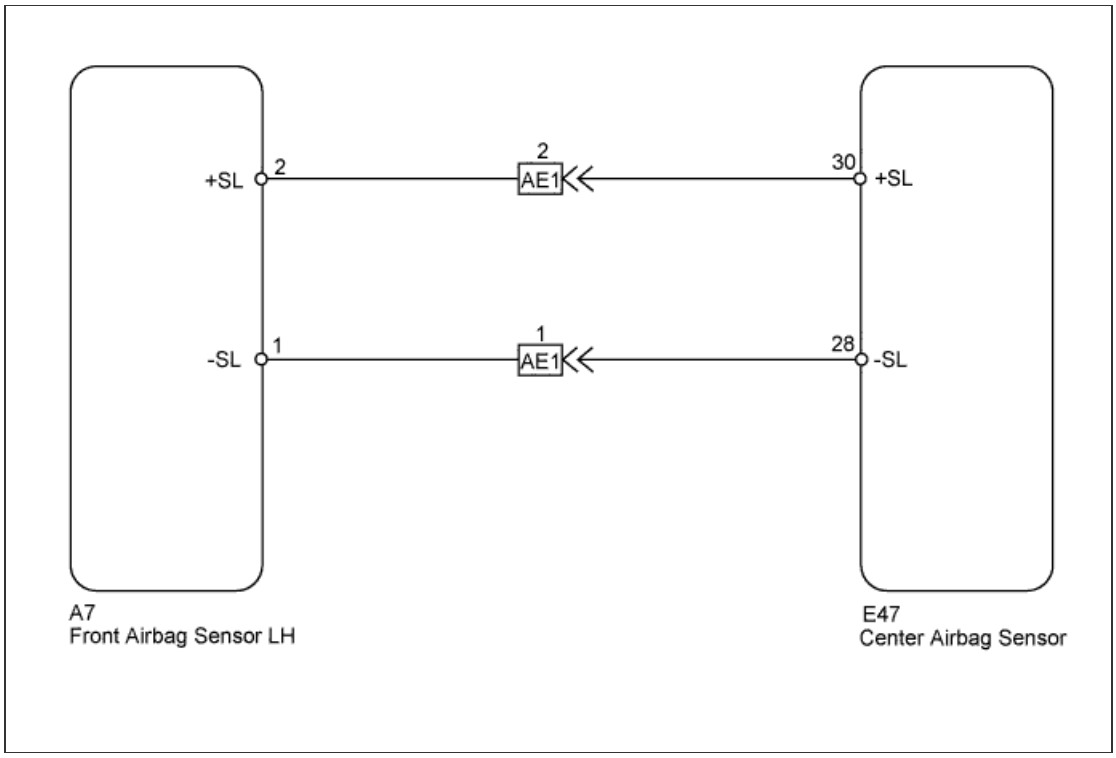
DTC B1608/84 Front Satellite Sensor Bus LH Initialization Incomplete

DTC B1617/84 Lost Communication with Front Airbag Sensor LH

DTC B1618/84 Front Airbag Sensor LH Initialization Incomplete



for Preparation Click here

DESCRIPTION

The front airbag sensor LH circuit consists of the center airbag sensor and front airbag sensor LH.
The front airbag sensor LH detects impacts to the vehicle and sends signals to the center airbag sensor to determine if the airbag should be deployed.
DTC B1608/84, B1617/84 or B1618/84 is stored when a malfunction is detected in the front airbag sensor LH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1608/84	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor LH circuit for 2 seconds. • A front airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Engine room main wire • Front airbag sensor LH • Center airbag sensor assembly
B1617/84	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor LH circuit for 2 seconds. • A front airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Engine room main wire • Front airbag sensor LH • Center airbag sensor assembly
B1618/84	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor LH circuit for 2 seconds. • A front airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Engine room main wire • Front airbag sensor LH • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initiali ed after the cable is reconnected (Clic here).

1.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Chec that the connectors are properly connected to the center airbag sensor and the front airbag sensor LH.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

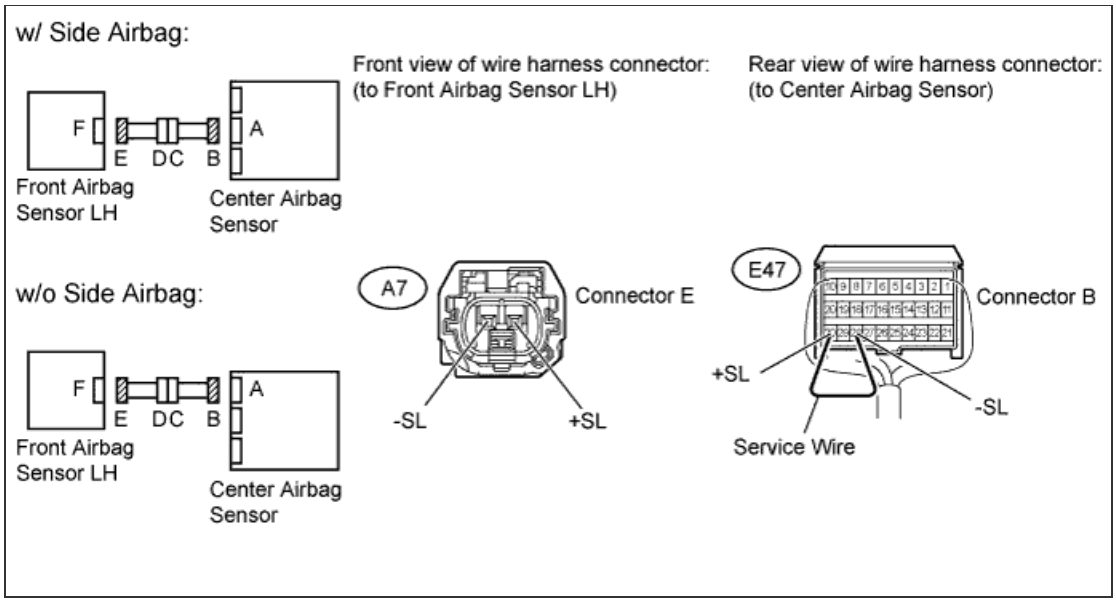
2.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and front airbag sensor LH.



b. Chec that the connectors (on the center airbag sensor side and front airbag sensor LH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

3.CHECK FRONT AIRBAG SENSOR LH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. easure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
A7-2 (L) - Body ground	Engine switch on (IG)	Below 1 V
A7-1 (-SL) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 30 (L) and 28 (-SL) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. easure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A7-2 (L) - A7-1 (-SL)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. easure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A7-2 (L) - A7-1 (-SL)	Always	1 Ω or higher
A7-2 (L) - Body ground	Always	1 Ω or higher
A7-1 (-SL) - Body ground	Always	1 Ω or higher

NG → Go to step 5

OK

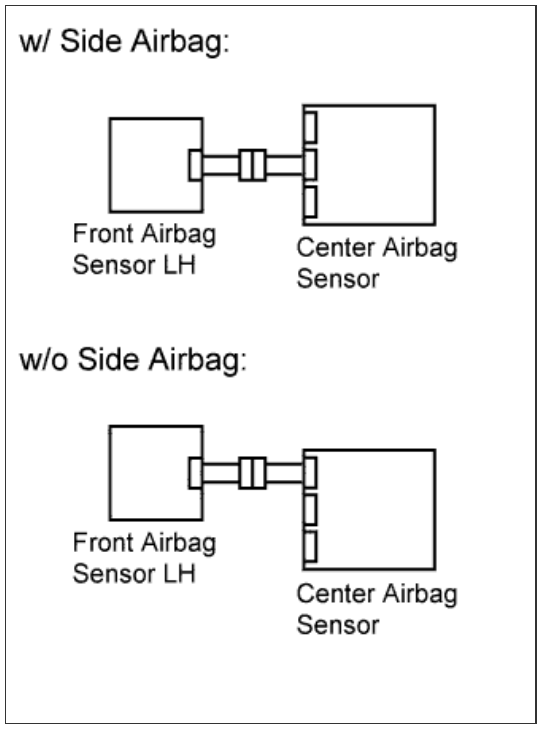
4.CHECK FRONT AIRBAG SENSOR LH

a. Connect the connectors to the center airbag sensor.

b. Interchange the front airbag sensor LH with H and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.



d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Clic here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Chec for DTCs (Clic here).

Result

esult	roceed to

USE SIMULATION METHOD TO CHECK (Click here)

5.CHECK INSTRUMENT PANEL WIRE (CENTER AIRBAG SENSOR - ENGINE ROOM MAIN WIRE)

a. Disconnect the instrument panel wire connector from the engine room main wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. easure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
AE1-2 (L) - Body ground	Engine switch on (IG)	Below 1 V
AE1-1 (-SL) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 30 (L) and 28 (-SL) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. easure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
AE1-2 (L) - AE1-1 (-SL)	Always	Below 1 Ω

h. Disconnect the service wire from connector B.

i. easure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
AE1-2 (L) - AE1-1 (-SL)	Always	1 Ω or higher
AE1-2 (L) - Body ground	Always	1 Ω or higher
AE1-1 (-SL) - Body ground	Always	1 Ω or higher

NG → REPLACE INSTRUMENT PANEL WIRE

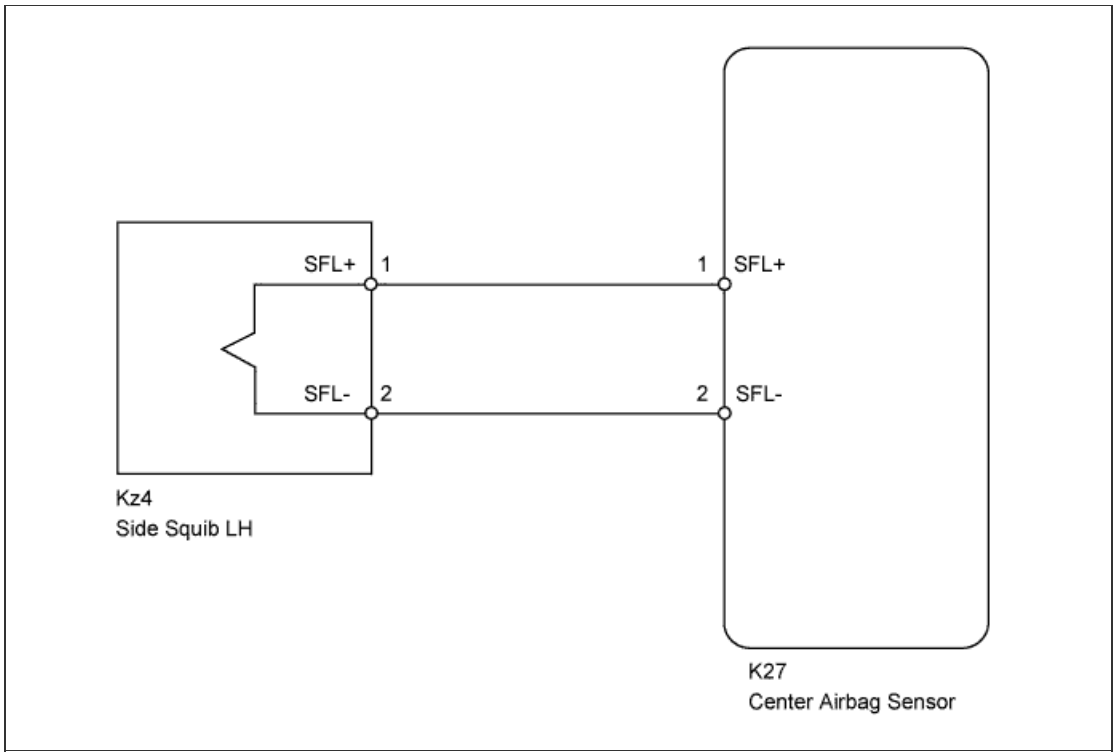
OK → REPLACE ENGINE ROOM MAIN WIRE

DTC B1825/56 Short in Side Squib LH Circuit

DTC B1826/56 Open in Side Squib LH Circuit

DTC B1827/56 Short to GND in Side Squib LH Circuit

DTC B1828/56 Short to B+ in Side Squib LH Circuit



for Preparation Click here

DESCRIPTION

The side squib LH circuit consists of the center airbag sensor and the front seat airbag LH.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the side squib LH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1825/56	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the side squib LH circuit during the primary check. • A side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat airbag assembly LH (Side squib LH) • Center airbag sensor assembly
B1826/56	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the side squib LH circuit for 2 seconds. • A side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat airbag assembly LH (Side squib LH) • Center airbag sensor assembly
B1827/56	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the side squib LH circuit for 0.5 seconds. • A side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat airbag assembly LH (Side squib LH) • Center airbag sensor assembly
B1828/56	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the side squib LH circuit for 0.5 seconds. • A side squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Front seat airbag assembly LH (Side squib LH) • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

HINT:

To perform the simulation method, enter the check mode (signal check) with the intelligent tester (Click here), and then wiggle each connector of the airbag system or drive the vehicle on various type of road (Click here).

1.CHECK FRONT SEAT AIRBAG LH (SIDE SQUIB LH)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

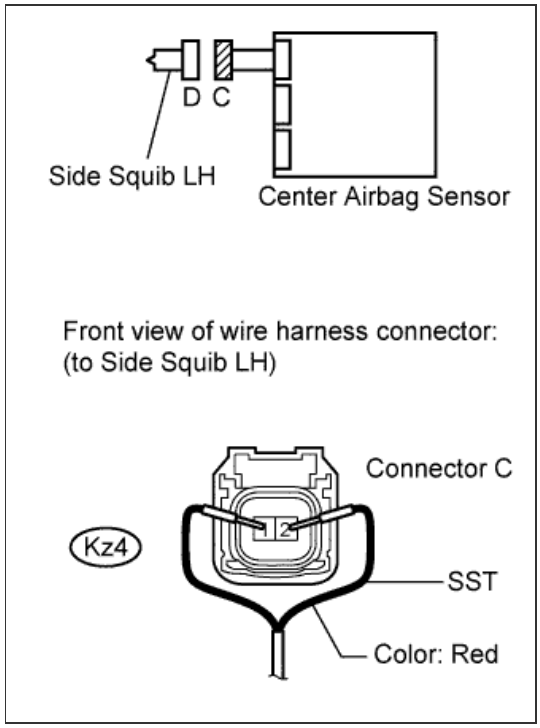
c. Disconnect the connector from the front seat airbag LH.

d. Connect the red wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:



Never connect the tester to the front seat airbag LH (side squib LH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1825, B1826, B1827 or B1828 is not output.

HINT:

Codes other than DTC B1825, B1826, B1827 and B1828 may be output at this time, but they are not related to this check.

A

REPLACE FRONT SEAT AIRBAG ASSEMBLY LH (Click here)

2.CHECK FLOOR WIRE (SIDE SQUIB LH CIRCUIT)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Disconnect the connectors from the center airbag sensor.

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Measure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
Kz4-1 (SFL+) - Body ground	Engine switch on (IG)	Below 1 V
Kz4-2 (SFL-) - Body ground	Engine switch on (IG)	Below 1 V

g. Turn the engine switch off.

h. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

i. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Kz4-1 (SFL+) - Kz4-2 (SFL-)	Always	Below 1 Ω

j. Release the activation prevention mechanism built into connector B (Click here).

k. Measure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
Kz4-1 (SFL+) - Kz4-2 (SFL-)	Always	1 MΩ or higher
Kz4-1 (SFL+) - Body ground	Always	1 MΩ or higher
Kz4-2 (SFL-) - Body ground	Always	1 MΩ or higher

NG → REPLACE FLOOR WIRE

OK

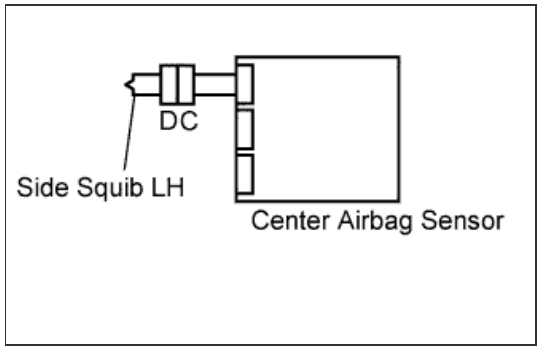
3.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the front seat airbag LH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.



c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1825, B1826, B1827 or B1828 is not output.

HINT:

Codes other than DTC B1825, B1826, B1827 and B1828 may be output at this time, but they are not related to this check.

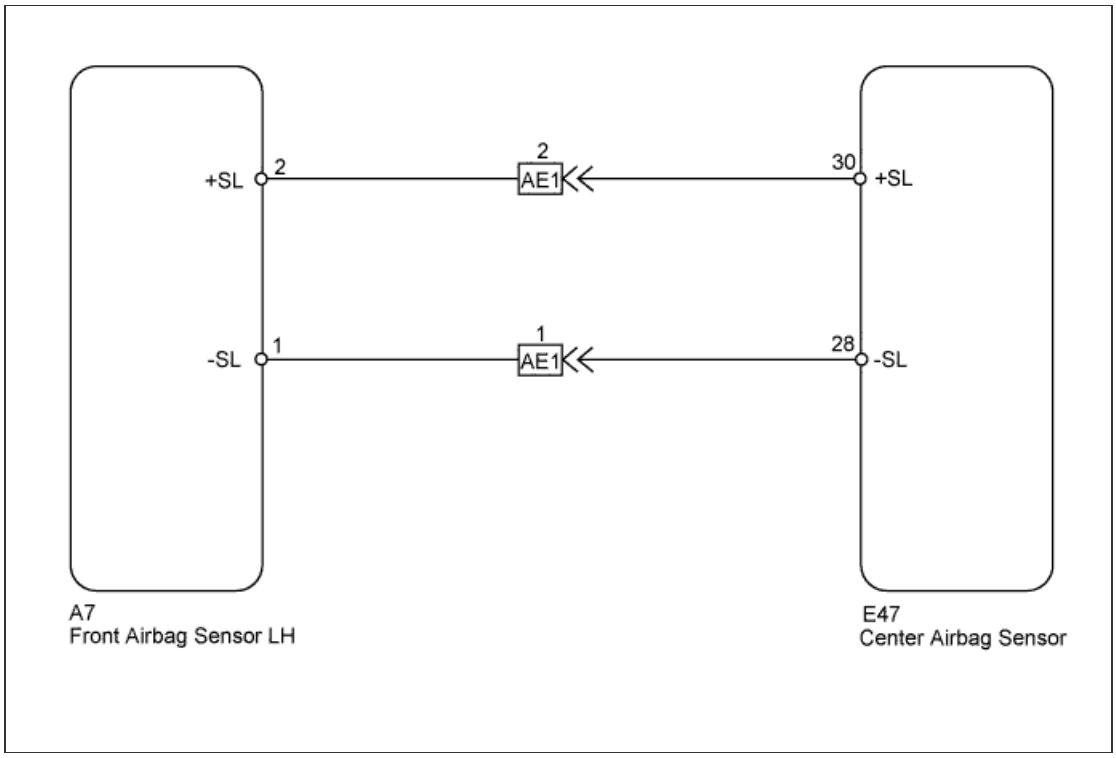
DTC B1608/84 Front Satellite Sensor Bus LH Initialization Incomplete

DTC B1617/84 Lost Communication with Front Airbag Sensor LH

DTC B1618/84 Front Airbag Sensor LH Initialization Incomplete



for Preparation Click here

DESCRIPTION

The front airbag sensor LH circuit consists of the center airbag sensor and front airbag sensor LH.
The front airbag sensor LH detects impacts to the vehicle and sends signals to the center airbag sensor to determine if the airbag should be deployed.
DTC B1608/84, B1617/84 or B1618/84 is stored when a malfunction is detected in the front airbag sensor LH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1608/84	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor LH circuit for 2 seconds. • A front airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Engine room main wire • Front airbag sensor LH • Center airbag sensor assembly
B1617/84	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor LH circuit for 2 seconds. • A front airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Engine room main wire • Front airbag sensor LH • Center airbag sensor assembly
B1618/84	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor LH circuit for 2 seconds. • A front airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Engine room main wire • Front airbag sensor LH • Center airbag sensor assembly

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initiali ed after the cable is reconnected (Clic here).

1.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Chec that the connectors are properly connected to the center airbag sensor and the front airbag sensor LH.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

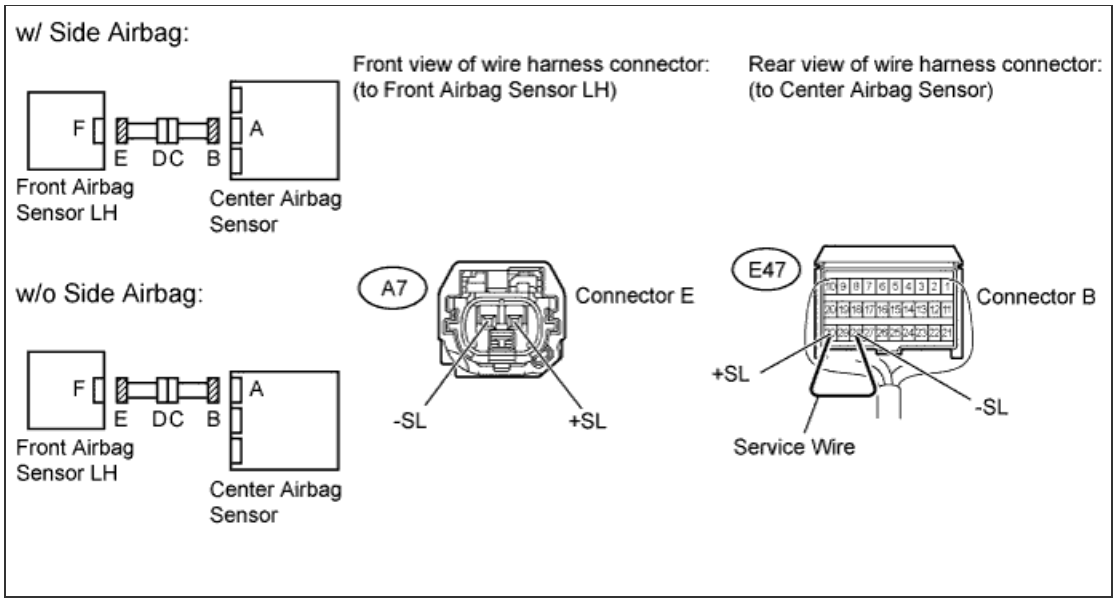
2.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and front airbag sensor LH.



b. Chec that the connectors (on the center airbag sensor side and front airbag sensor LH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

3.CHECK FRONT AIRBAG SENSOR LH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. easure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
A7-2 (L) - Body ground	Engine switch on (IG)	Below 1 V
A7-1 (-SL) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 30 (L) and 28 (-SL) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. easure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A7-2 (L) - A7-1 (-SL)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. easure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A7-2 (L) - A7-1 (-SL)	Always	1 Ω or higher
A7-2 (L) - Body ground	Always	1 Ω or higher
A7-1 (-SL) - Body ground	Always	1 Ω or higher

NG → Go to step 5

OK

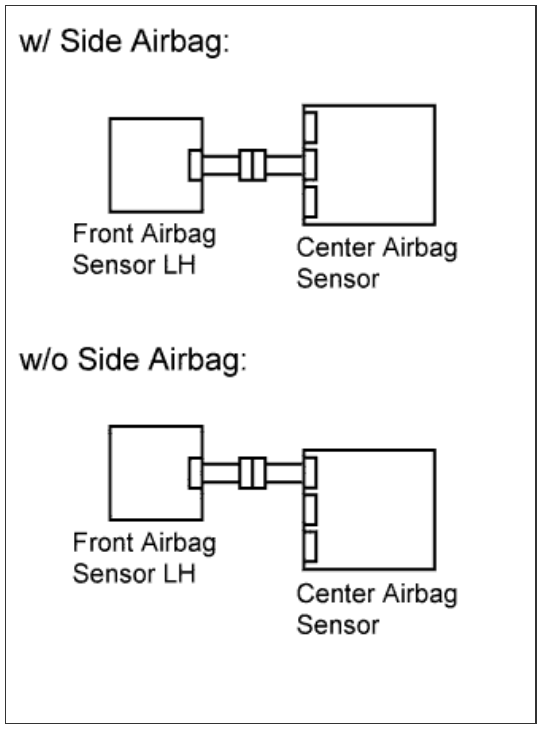
4.CHECK FRONT AIRBAG SENSOR LH

a. Connect the connectors to the center airbag sensor.

b. Interchange the front airbag sensor LH with H and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.



d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Clic here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Chec for DTCs (Clic here).

1.CHECK CURTAIN SHIELD AIRBAG RH (CURTAIN SHIELD SQUIB RH)

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

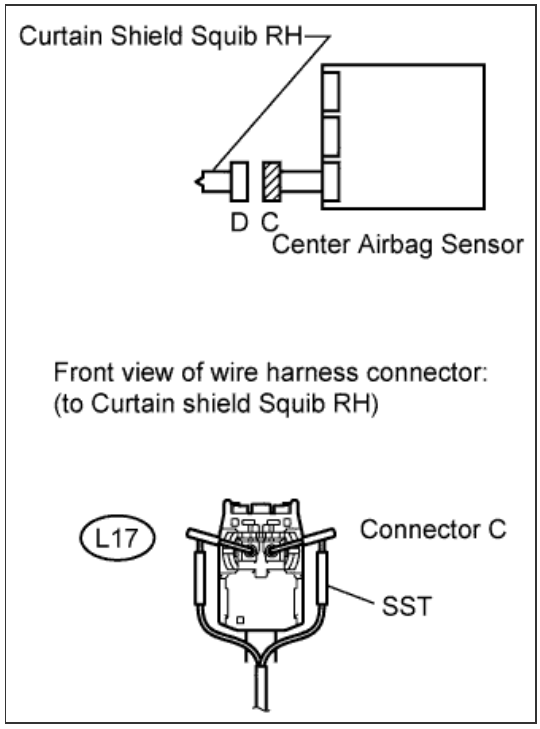
c. Disconnect the connector from the curtain shield airbag RH.

d. Connect the white wire side of SST (resistance: 2.1 Ω) to connector C.

CAUTION:



Never connect the tester to the curtain shield airbag RH (curtain shield squib RH) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:

- **Do not forcibly insert SST into the terminals of the connector when connecting SST.**
- **Insert SST straight into the terminals of the connector.**

SST

09843-18061

e. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Clear the DTCs (Click here).

h. Turn the engine switch off.

i. Turn the engine switch on (IG), and wait for at least 60 seconds.

j. Check for DTCs (Click here).

OK:

DTC B1830, B1831, B1832 or B1833 is not output.

HINT:

Codes other than DTC B1830, B1831, B1832 and B1833 may be output at this time, but they are not related to this check.

NG → Go to step 2

OK

REPLACE CURTAIN SHIELD AIRBAG ASSEMBLY RH (Click here)

2.CHECK CONNECTOR

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Disconnect SST from connector C.

d. Check that the No. 2 floor wire connector (on the curtain shield airbag RH side) is not damaged.

OK:

The lock button is not disengaged, and the claw of the lock is not deformed or damaged.

NG → REPLACE NO. 2 FLOOR WIRE

OK

3.CHECK NO. 2 FLOOR WIRE (CURTAIN SHIELD AIRBAG RH CIRCUIT)

a. Disconnect the connectors from the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. easure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
17-1 (ICR+) - Body ground	ngine switch on (IG)	Below 1 V
17-2 (ICR-) - Body ground	ngine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. easure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
17-1 (ICR+) - 17-2 (ICR-)	Always	Below 1 Ω

g. Release the activation prevention mechanism built into connector B (Click here).

h. easure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
17-1 (ICR+) - 17-2 (ICR-)	Always	1 Ω or higher
17-1 (ICR+) - Body ground	Always	1 Ω or higher
17-2 (ICR-) -	Always	1 Ω or higher

Body ground		

NG → REPLACE NO. 2 FLOOR WIRE

OK

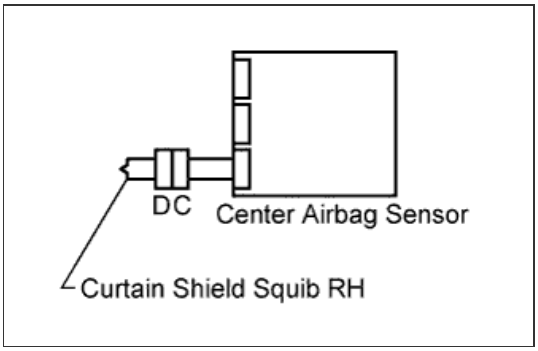
4.CHECK CENTER AIRBAG SENSOR

a. Connect the connectors to the curtain shield airbag RH and the center airbag sensor.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.



c. Turn the engine switch on (IG), and wait for at least 60 seconds.

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1830, B1831, B1832 or B1833 is not output.

HINT:

Codes other than DTC B1830, B1831, B1832 and B1833 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (**Click here**)

DTC B1608/84 Front Satellite Sensor Bus LH Initialization Incomplete

DTC B1617/84 Lost Communication with Front Airbag Sensor LH

DTC B1618/84 Front Airbag Sensor LH Initialization Incomplete

for Preparation Click here

DESCRIPTION

The front airbag sensor LH circuit consists of the center airbag sensor and front airbag sensor LH.
The front airbag sensor LH detects impacts to the vehicle and sends signals to the center airbag sensor to determine if the airbag should be deployed.
DTC B1608/84, B1617/84 or B1618/84 is stored when a malfunction is detected in the front airbag sensor LH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1608/84	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor LH circuit for 2 seconds. • A front airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Engine room main wire • Front airbag sensor LH • Center airbag sensor assembly
B1617/84	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor LH circuit for 2 seconds. • A front airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Engine room main wire • Front airbag sensor LH • Center airbag sensor assembly
B1618/84	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor LH circuit for 2 seconds. • A front airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Instrument panel wire • Engine room main wire • Front airbag sensor LH • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initiali ed after the cable is reconnected (Clic here).

1.CHECK CONNECTION OF CONNECTORS

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Chec that the connectors are properly connected to the center airbag sensor and the front airbag sensor LH.

OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

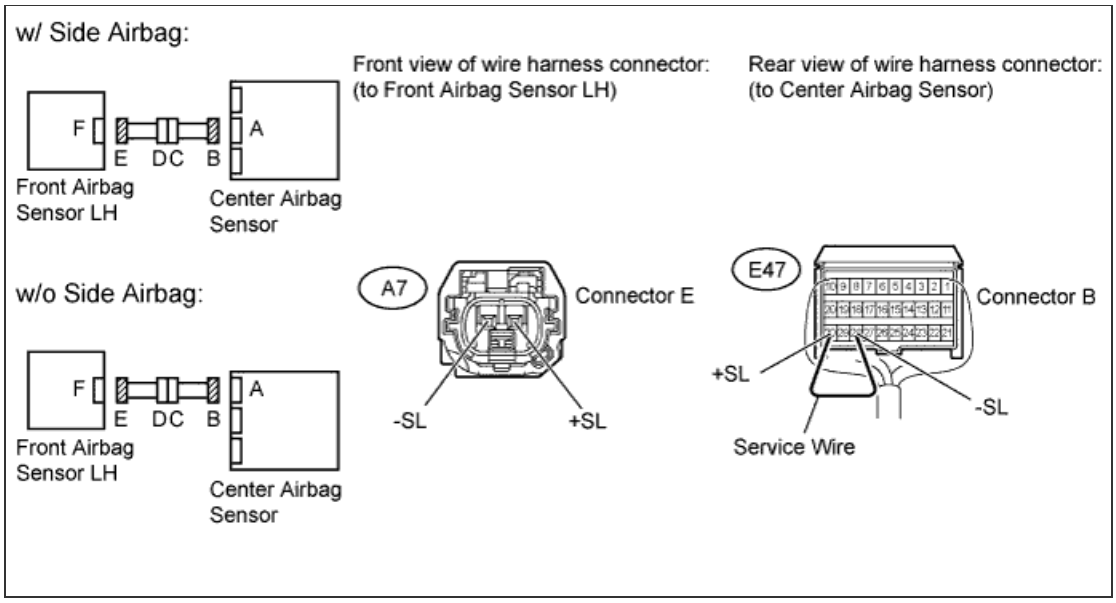
2.CHECK CONNECTORS

a. Disconnect the connectors from the center airbag sensor and front airbag sensor LH.



b. Chec that the connectors (on the center airbag sensor side and front airbag sensor LH side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → REPLACE HARNESS AND CONNECTOR

OK

3.CHECK FRONT AIRBAG SENSOR LH CIRCUIT

a. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

b. easure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
A7-2 (L) - Body ground	Engine switch on (IG)	Below 1 V
A7-1 (-SL) - Body ground	Engine switch on (IG)	Below 1 V

c. Turn the engine switch off.

d. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

e. Using a service wire, connect terminals 30 (L) and 28 (-SL) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

f. easure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A7-2 (L) - A7-1 (-SL)	Always	Below 1 Ω

g. Disconnect the service wire from connector B.

h. easure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
A7-2 (L) - A7-1 (-SL)	Always	1 Ω or higher
A7-2 (L) - Body ground	Always	1 Ω or higher
A7-1 (-SL) - Body ground	Always	1 Ω or higher

NG → Go to step 5

OK

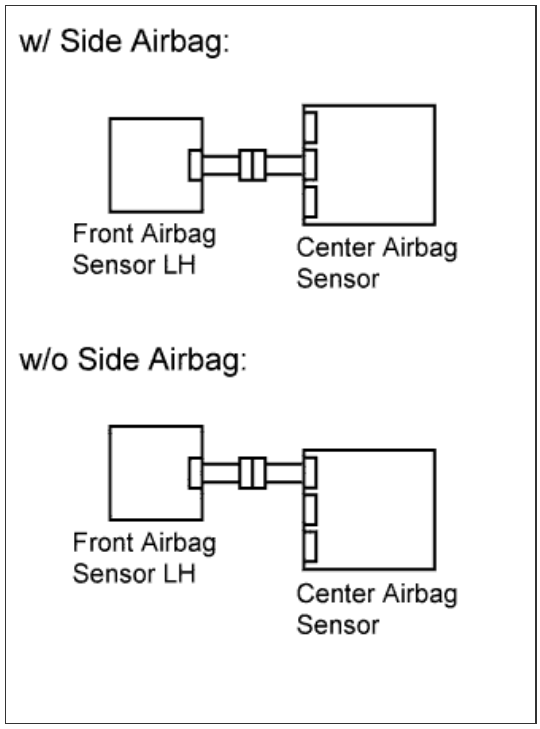
4.CHECK FRONT AIRBAG SENSOR LH

a. Connect the connectors to the center airbag sensor.

b. Interchange the front airbag sensor LH with H and connect the connectors to them.

c. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.



d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Clear the DTCs stored in the memory (Clic here).

f. Turn the engine switch off.

g. Turn the engine switch on (IG), and wait for at least 60 seconds.

h. Chec for DTCs (Clic here).

Result

esult	roceed to

USE SIMULATION METHOD TO CHECK (Click here)

5.CHECK INSTRUMENT PANEL WIRE (CENTER AIRBAG SENSOR - ENGINE ROOM MAIN WIRE)

a. Disconnect the instrument panel wire connector from the engine room main wire.

b. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

c. easure the voltage according to the value(s) in the table below.

Standard Voltage:

Tester Connection	Switch Condition	Specified Condition
AE1-2 (L) - Body ground	Engine switch on (IG)	Below 1 V
AE1-1 (-SL) - Body ground	Engine switch on (IG)	Below 1 V

d. Turn the engine switch off.

e. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

f. Using a service wire, connect terminals 30 (L) and 28 (-SL) of connector B.

NOTICE:

Do not forcibly insert the service wire into the terminals of the connector when connecting a service wire.

g. easure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
AE1-2 (L) - AE1-1 (-SL)	Always	Below 1 Ω

h. Disconnect the service wire from connector B.

i. easure the resistance according to the value(s) in the table below.

Standard Resistance:

Tester Connection	Condition	Specified Condition
AE1-2 (L) - AE1-1 (-SL)	Always	1 Ω or higher
AE1-2 (L) - Body ground	Always	1 Ω or higher
AE1-1 (-SL) - Body ground	Always	1 Ω or higher

NG → REPLACE INSTRUMENT PANEL WIRE

OK → REPLACE ENGINE ROOM MAIN WIRE

DTC B1830/57 Short in Curtain Shield Squib RH Circuit

DTC B1831/57 Open in Curtain Shield Squib RH Circuit

DTC B1832/57 Short to GND in Curtain Shield Squib RH Circuit

DTC B1833/57 Short to B+ in Curtain Shield Squib RH Circuit

for Preparation Click here

DESCRIPTION

The curtain shield squib RH circuit consists of the center airbag sensor and the curtain shield airbag RH.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the curtain shield squib RH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1830/57	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the curtain shield squib RH circuit during the primary check. • A curtain shield squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Curtain shield airbag assembly RH (Curtain shield squib RH) • Center airbag sensor assembly
B1831/57	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the curtain shield squib RH circuit for 2 seconds. • A curtain shield squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Curtain shield airbag assembly RH (Curtain shield squib RH) • Center airbag sensor assembly
B1832/57	When one of the following conditions is met: • The center airbag sensor receives a short circuit to ground signal in the curtain shield squib RH circuit for 0.5 seconds. • A curtain shield squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Curtain shield airbag assembly RH (Curtain shield squib RH) • Center airbag sensor assembly
B1833/57	When one of the following conditions is met: • The center airbag sensor receives a short circuit to B+ signal in the curtain shield squib RH circuit for 0.5 seconds. • A curtain shield squib RH malfunction. • A center airbag sensor malfunction.	• No. 2 floor wire • Curtain shield airbag assembly RH (Curtain shield squib RH) • Center airbag sensor assembly

DTC B1615/14 Front Airbag Sensor LH Malfunction

for Preparation Click here

DESCRIPTION

The front airbag sensor LH consists of the diagnostic circuit and the frontal deceleration sensor, etc.
If the center airbag sensor receives signals from the frontal deceleration sensor, it determines whether the SRS should be activated.
DTC B1615/14 is stored when a malfunction is detected in the front airbag sensor LH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1615/14	When one of the following conditions is met: • A front airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Front airbag sensor LH • Center airbag sensor assembly

DTC B1630/23 Rear Airbag Sensor RH Circuit Malfunction

DTC B1695/16 Door Side Airbag Sensor LH Malfunction

for Preparation Click here

DESCRIPTION

HINT:

"Door side airbag sensor LH" refer to the side airbag sensor LH.

- The side airbag sensor LH or rear airbag sensor RH consists of the safing sensor, the diagnostic circuit, the lateral deceleration sensor, etc. If the center airbag sensor receives signals from the lateral deceleration sensor, it determines whether the SRS should be activated. DTC B1630/23 or B1695/16 is stored when a malfunction is detected in the side airbag sensor LH or rear airbag sensor RH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1630/23	When one of the following conditions is met: • A rear airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Rear airbag sensor RH • Center airbag sensor assembly
B1695/16	When one of the following conditions is met: • A side airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Side airbag sensor LH • Center airbag sensor assembly

d. Clear the DTCs (Click here).

e. Turn the engine switch off.

f. Turn the engine switch on (IG), and wait for at least 60 seconds.

g. Check for DTCs (Click here).

OK:

DTC B1830, B1831, B1832 or B1833 is not output.

HINT:

Codes other than DTC B1830, B1831, B1832 and B1833 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (**Click here**)

OK

USE SIMULATION METHOD TO CHECK (**Click here**)

DTC B1630/23 Rear Airbag Sensor RH Circuit Malfunction

DTC B1695/16 Door Side Airbag Sensor LH Malfunction

for Preparation Click here

DESCRIPTION

HINT:

"Door side airbag sensor LH" refer to the side airbag sensor LH.

- The side airbag sensor LH or rear airbag sensor RH consists of the safing sensor, the diagnostic circuit, the lateral deceleration sensor, etc. If the center airbag sensor receives signals from the lateral deceleration sensor, it determines whether the SRS should be activated. DTC B1630/23 or B1695/16 is stored when a malfunction is detected in the side airbag sensor LH or rear airbag sensor RH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1630/23	When one of the following conditions is met: • A rear airbag sensor RH malfunction. • A center airbag sensor malfunction.	• Rear airbag sensor RH • Center airbag sensor assembly
B1695/16	When one of the following conditions is met: • A side airbag sensor LH malfunction. • A center airbag sensor malfunction.	• Side airbag sensor LH • Center airbag sensor assembly

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

When disconnecting the cable from the negative (-) battery terminal while performing repairs, some systems need to be initialized after the cable is reconnected (Click here).

1.CHECK FOR DTC

a. Turn the engine switch on (IG).

b. Clear the DTCs stored in the memory (Click here).

c. Turn the engine switch off.

d. Turn the engine switch on (IG), and wait for at least 60 seconds.

e. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1630 and B1695 are not output	A
DTC B1695 is output	B
DTC B1630 is output	C

A	USE SIMULATION METHOD TO CHECK (Click here)
B	Go to step 3
C	

2.CHECK REAR AIRBAG SENSOR RH

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

c. Temporarily replace the rear airbag sensor RH with a new one.

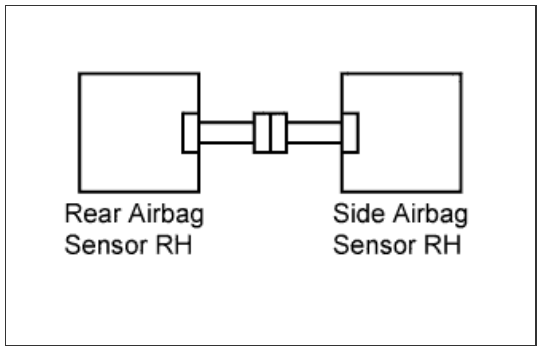
d. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.

e. Turn the engine switch on (IG), and wait for at least 60 seconds.

f. Clear the DTCs stored in the memory (Click here).

g Turn the engine switch off.

h Turn the engine switch on (IG), and wait for at least 60 seconds.



i Check for DTCs (Click here).

OK:

DTC B1630 is not output.

HINT:

Codes other than DTC B1630 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

OK

REPLACE REAR AIRBAG SENSOR RH (Click here)

3.CHECK SIDE AIRBAG SENSOR LH

a. Turn the engine switch off.

b. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

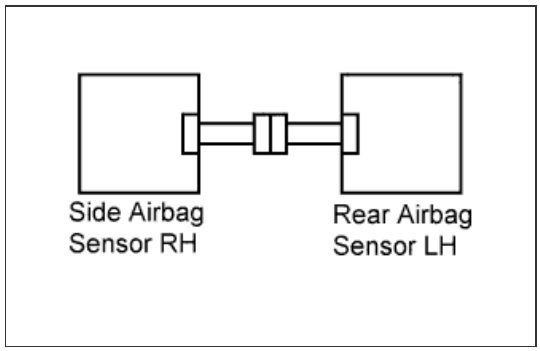
c. Interchange the side airbag sensor RH with LH and connect the connectors to them.

d. Connect the cable to the negative (-) battery terminal, and wait for at least 2 seconds.



e. Turn the engine switch on (IG), and wait for at least 60 seconds.

f. Clear the DTCs stored in the memory (Click here).

g. Turn the engine switch off.

h. Turn the engine switch on (IG), and wait for at least 60 seconds.

i. Check for DTCs (Click here).

Result

Result	Proceed to
DTC B1690 and B1695 are not output	A
DTC B1695 is output	B
DTC B1690 is output	C

HINT:

Codes other than DTC B1690 and B1695 may be output at this time, but they are not related to this check.

j. Turn the engine switch off.

k. Disconnect the cable from the negative (-) battery terminal, and wait for at least 90 seconds.

l. Return the side airbag sensor RH and LH to their original positions and connect the connectors to them.

A → USE SIMULATION METHOD TO CHECK (Click here)

B → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (Click here)

C

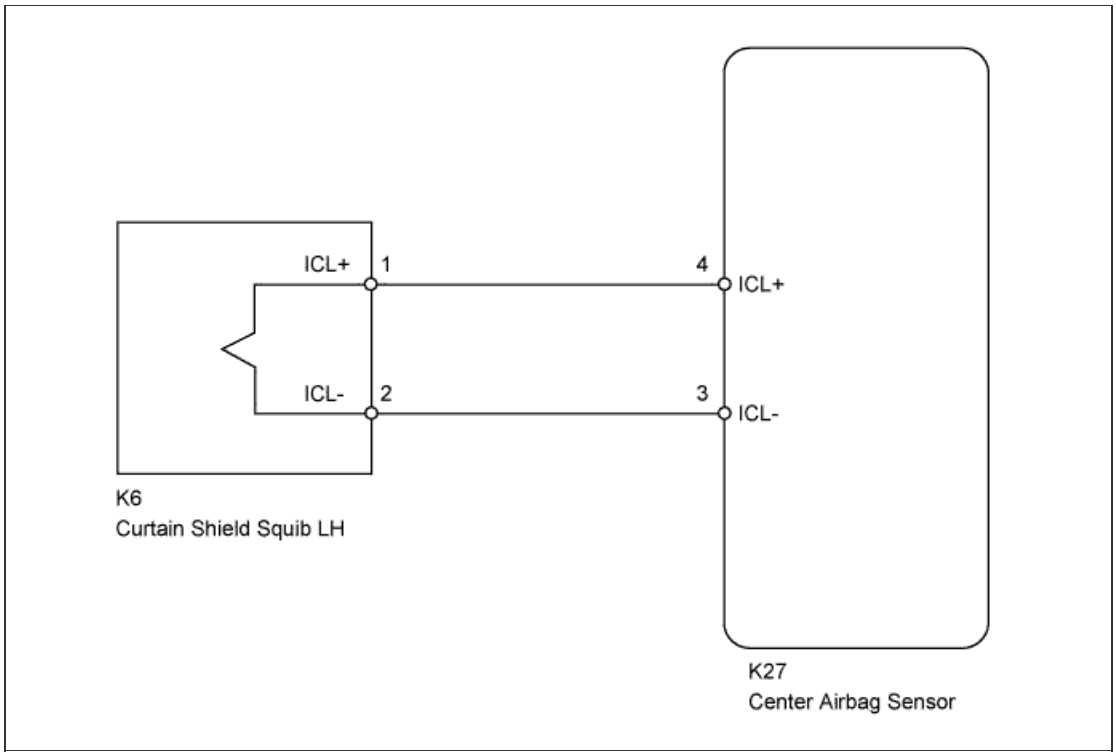
REPLACE SIDE AIRBAG SENSOR LH (Click here)

DTC B1835/58 Short in Curtain Shield Squib LH Circuit

DTC B1836/58 Open in Curtain Shield Squib LH Circuit

DTC B1837/58 Short to GND in Curtain Shield Squib LH Circuit

DTC B1838/58 Short to B+ in Curtain Shield Squib LH Circuit



for Preparation Click here

DESCRIPTION

The curtain shield squib LH circuit consists of the center airbag sensor and the curtain shield airbag LH.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are stored when a malfunction is detected in the curtain shield squib LH circuit.

DTC Code	DTC Detection Condition	Trouble Area
B1835/58	When one of the following conditions is met: • The center airbag sensor receives a line short circuit signal 5 times in the curtain shield squib LH circuit during the primary check. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH) • Center airbag sensor assembly
B1836/58	When one of the following conditions is met: • The center airbag sensor receives an open circuit signal in the curtain shield squib LH circuit for 2 seconds. • A curtain shield squib LH malfunction. • A center airbag sensor malfunction.	• Floor wire • Curtain shield airbag assembly LH (Curtain shield squib LH) • Center airbag sensor assembly
